Consumer Financial Protection, commonly known as the Consumer Financial Protection Bureau (CFPB), was created in July 2010 and assumed responsibility for certain consumer financial protection functions in 2011; workforce diversity data for the agency to show trends from 2007 through 2011 were unavailable.[7] Additionally, our trend analysis excluded FHFA, as the agency was created in 2008 and did not report on diversity employment statistics for 2007, 2008, or 2009. Further, our senior management-level trend analysis excluded SEC, as the agency revised how it reported officials and managers during the 5-year period. To review changes in the representation of minorities and women in the workforces of Reserve Banks, we obtained from banks their annual EEO-1 reports from 2007 through 2011.[8] For agencies and Reserve Banks, we reviewed workplace employment data by occupational categories, distributed by race/ethnicity and gender.[9] In our analyses, we considered all categories other than white as race/ethnic minorities and analyzed trends in diversity

[7]On July 21, 2010, the Consumer Financial Protection Act established CFPB as an independent bureau within the Federal Reserve System to be headed by a director. Effective July 21, 2011, CFPB assumed responsibility for certain consumer financial protection functions formerly the responsibilities of the Board of Governors of the Federal Reserve System, the Comptroller of the Currency, the Director of the Office of Thrift Supervision, FDIC, the Federal Trade Commission, NCUA, and the Secretary of the Department of Housing and Urban Development.

[8]We obtained annual EEO-1 reports from all 12 Reserve Banks, which are located in Atlanta, Boston, Chicago, Cleveland, Dallas, Kansas City, Minneapolis, New York, Philadelphia, Richmond, San Francisco, and St. Louis.

[9]These data are organized in table A3 of each MD-715 report and as part of the consolidated employer information reports for Reserve Bank EEO-1 data. For both data sets, race and ethnicity categories included Hispanic or Latino, White, Black or African American, Asian American, Native Hawaiian or Other Pacific Islander, American Indian or Alaskan Native, and Two or More Races. Our analysis included as an Other category: Native Hawaiian or Other Pacific Islander, American Indian or Alaskan Native, and Two or More Races.

at both the senior management-level and agency- and bankwide.[10] We analyzed senior management-level and overall diversity trends across all agencies and all Reserve Banks, as well as diversity trends for each agency when trend information was available.

To assess the reliability of MD-715 and EEO-1 data we received from agencies and Reserve Banks, we interviewed EEOC officials on both types of data as well as agency officials on MD-715 data and Reserve Bank officials on EEO-1 data about how the data are collected and verified as well as to identify potential data limitations. We found that while agencies and banks rely on employees to provide their race and ethnicity information, agencies and banks had measures in place to verify and correct missing or erroneous data prior to reporting them and officials with whom we spoke generally agreed these data were generally accurate. Based on our analysis, we concluded that the MD-715 and EEO-1 data were sufficiently reliable for our purposes.

To assess how federal financial agencies and Reserve Banks are implementing workforce diversity practices under section 342 of the Dodd-Frank Act, we reviewed agency and bank documentation of efforts to respond to the act's requirements. Sources included annual Office of Minority and Women Inclusion (OMWI) reports to Congress by agencies and banks, annual agency MD-715 reports, and other documentation provided to us by agency and bank OMWI officials. Additionally, we gathered testimonial information from agency and Reserve Bank OMWI officials on changes in the inclusion of women and minorities in their workforces and any changes in the practices used to further workforce diversity goals. Through our review of agency and Reserve Bank documentation and interviews with OMWI officials, we assessed agency

[10]We defined senior management-level as employees reported in the most senior job category by federal financial agencies and Reserve Banks. For agency MD-715 data, we considered senior management-level as officials and managers reported as "Executive/Senior Level," in each agency's A3 data tables. For Reserve Bank EEO-1 data, we considered senior management-level as "Executive/Senior Officials and Managers," reported by each Reserve Bank. Our analysis of agencywide data included all job categories reported by each agency: Executive/Senior Level, Mid-level, First-level, and Other Officials and Managers, Professionals, Technicians, Sales Workers, Administrative Support Workers, Craft Workers, Operatives, Laborers and Helpers, and Service Workers. Our analysis of bankwide data included all job categories reported by each Reserve Bank: Executive/Senior Officials and Managers, First/Mid Officials and Managers, Professionals, Technicians, Sales Workers, Administrative Support Workers, Craft Workers, Operatives, Laborers and Helpers, and Service Workers.

and Reserve Bank efforts to measure and report on the progress of their diversity practices, as measurement was one of the nine leading diversity practices we previously identified.

To determine the extent to which agencies and Reserve Banks are implementing the requirements of the Dodd-Frank Act regarding the inclusion of women and minorities in contracting, we reviewed 2011 OMWI reports submitted to Congress and interviewed officials on their efforts in this area. We also reviewed OMWI reports to determine the dollar amount and percentage of total contracts federal financial agencies reported awarding to minority- and women-owned businesses (MWOB), and the dollar amount and percentage of total contracts Reserve Banks reporting paying MWOBs in 2011. We verified these figures and our presentation of the information with each agency and Reserve Bank, and we determined that these data were sufficiently reliable for our purposes. We interviewed agency officials on their efforts to coordinate with the Small Business Administration and other federal agencies to provide technical assistance to minority- and women-owned businesses. We collected and reviewed agency documentation of procedures developed to address the act's requirements, such as policy manuals, process workflows, and technical assistance materials. We also collected and reviewed examples of fair inclusion provisions used in agency and Reserve Bank contracts as required in section 342 of the Dodd-Frank Act.

We conducted this performance audit from January 2012 to March 2013 in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

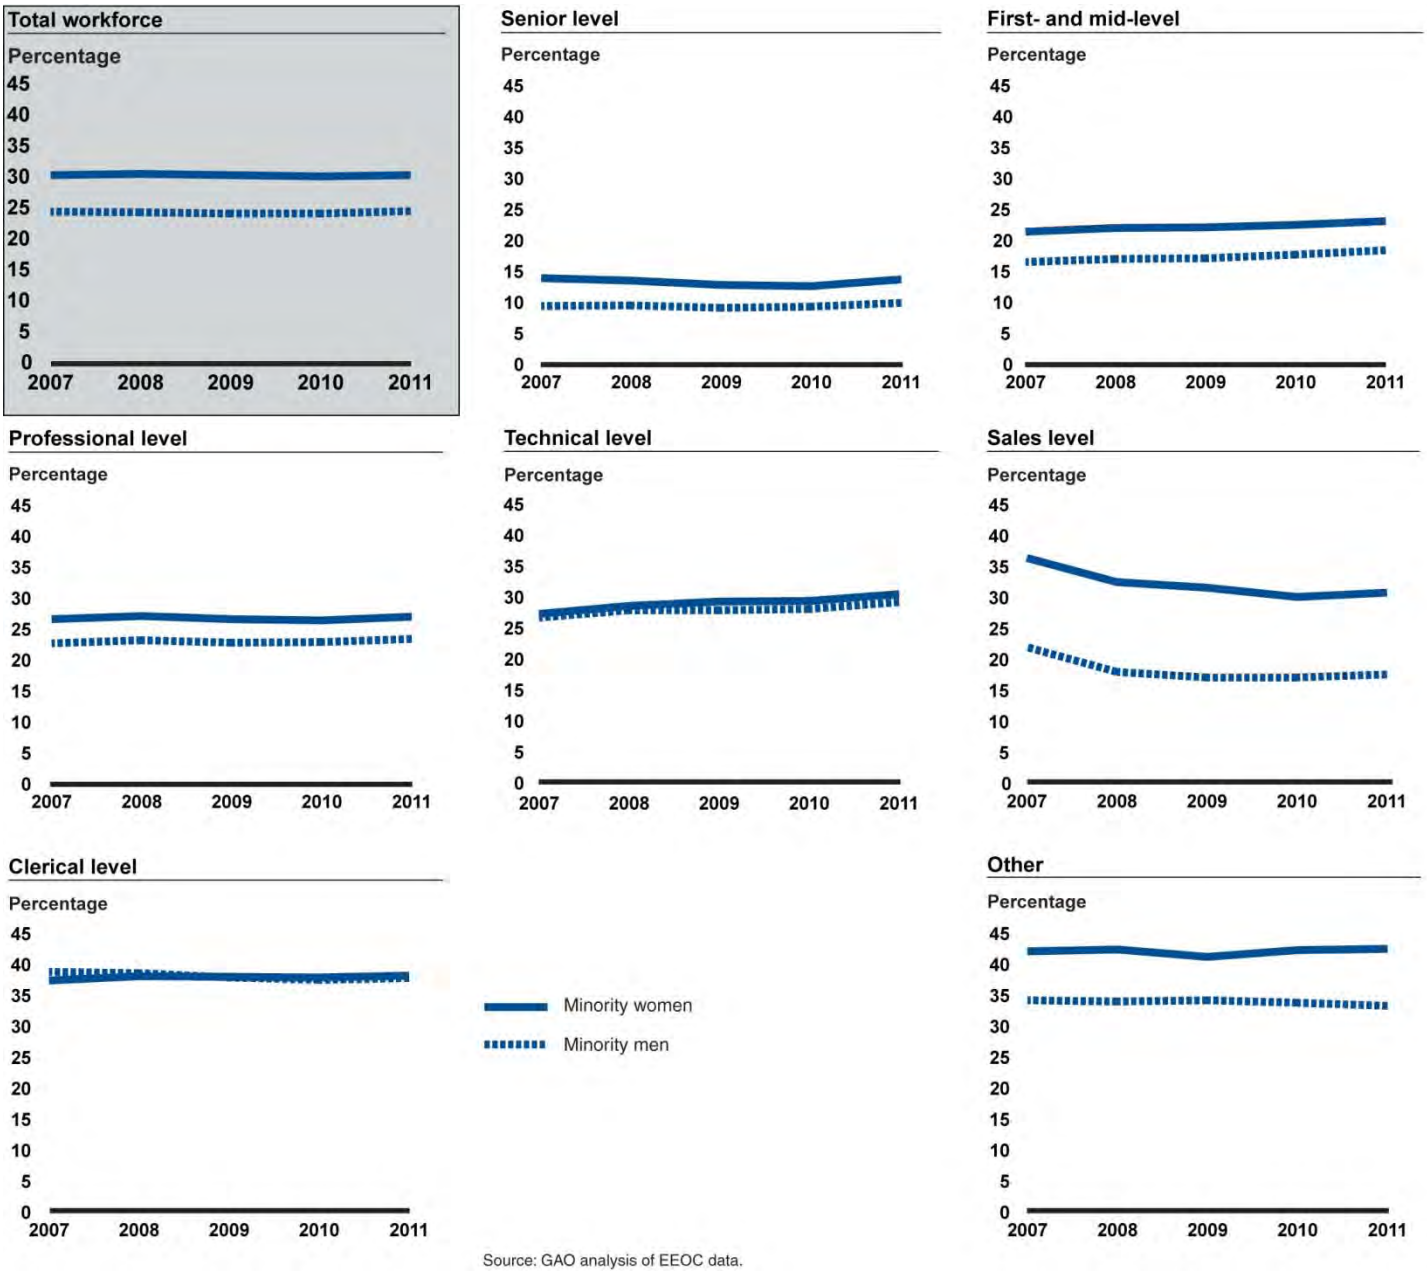
Appendix II: Additional Analysis of the Financial Services Industry

This appendix provides additional detailed analysis of EEOC data on the financial services industry by workforce position and industry sector from 2007 through 2011.

Analysis by Workforce Positions

The representation of minorities by gender was below 45 percent across all the positions throughout the same 5-year period (see fig. 16). For example, in sales positions, the representation of minorities was higher among women (about 31 percent) than among men (about 17 percent). Similarly, at the professional level, the representation of minority women was about 27 percent, compared to about 23 percent for minority men.

Figure 16: Percentage of Minority Women and Minority Men in Various Industry Workforce Positions in the Financial Services Industry, 2007-2011



Source: GAO analysis of EEOC data.

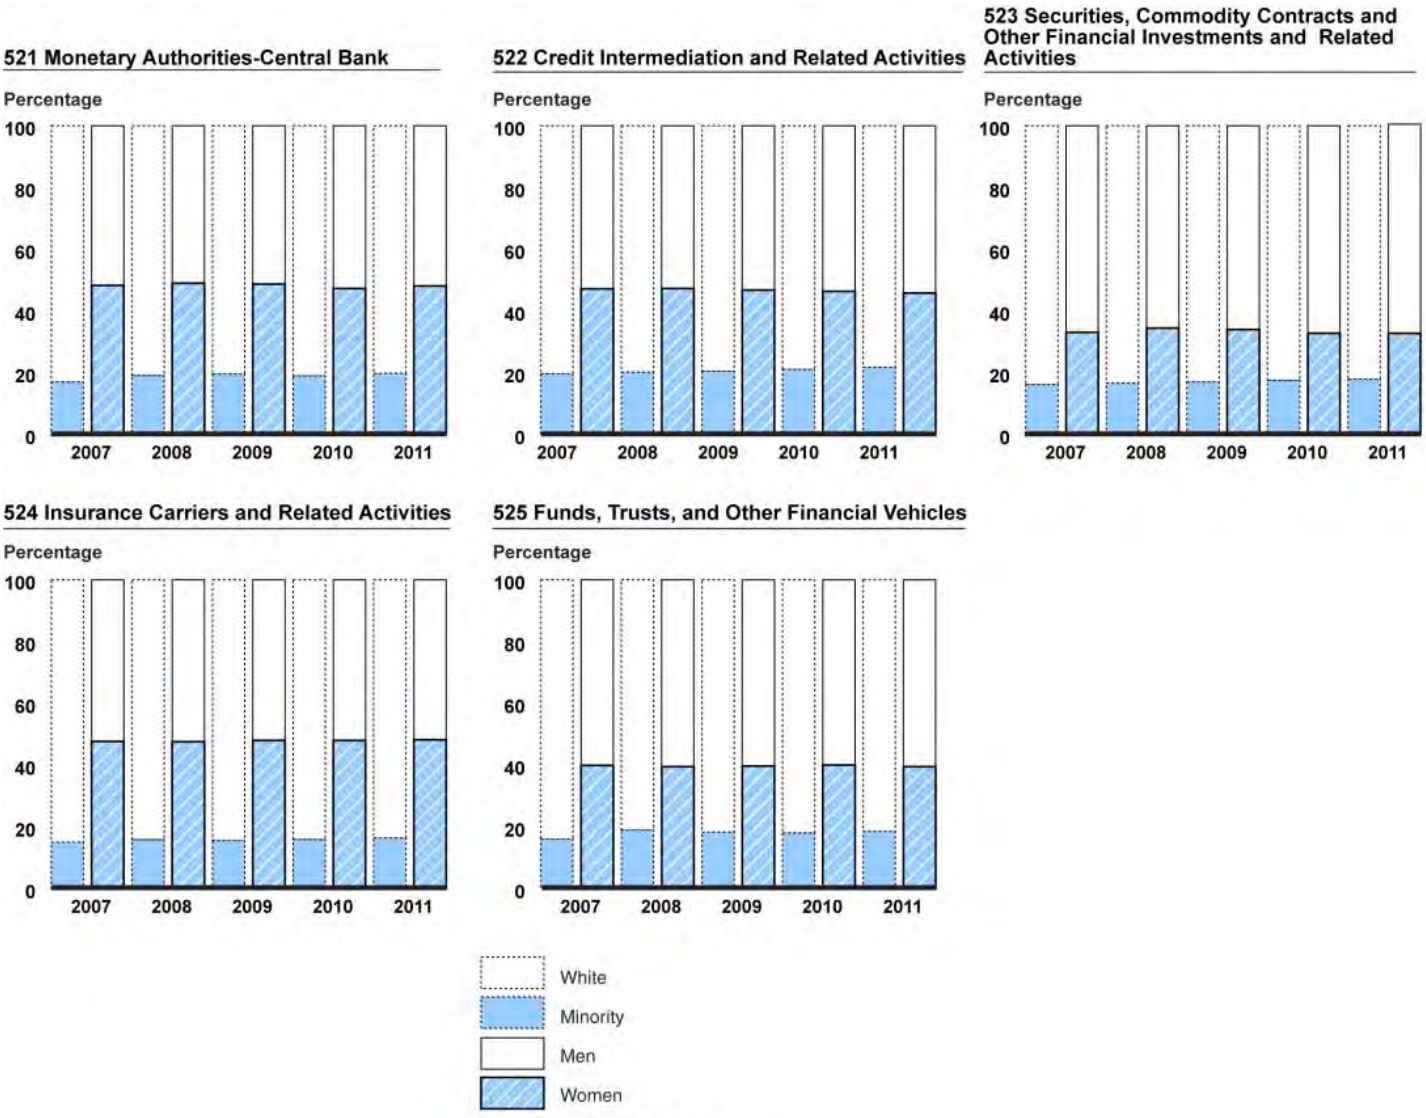
Note: The category "other" includes craft workers, operatives, laborers, and service workers.

Analysis by Industry Sectors

Diversity remained about the same across all industry sectors in terms of both the representation of women and minorities.[1] From 2007 through 2011, the representation of women decreased slightly in most industry sectors and remained below 50 percent in all sectors (see fig. 17). The "insurance carriers and related activities" sector was the only sector that showed an increase in the representation of women, from 47.7 percent to 48.2 percent. In contrast, the representation of minorities increased across all sectors. Specifically, from 2007 through 2011 the representation of minorities in the "monetary authorities-central bank" sector increased from 17 percent to 19.8 percent, and the "funds, trusts, and other financial vehicle" sector increased from 16 percent to 18.5 percent.

[1]These industry sectors under the financial services industry are split according to the NAICS.

Figure 17: Percentage of Whites/Minorities and Men/Women in Various Sectors of the Financial Services Industry, 2007-2011



Source: GAO analysis of EEOC data.

Note: Industry sector numbers are defined as follows: Sector 521, Monetary Authorities-Central Bank; Sector 522, Credit Intermediation and Related Activities; Sector 523, Securities, Commodity Contracts, and Other Financial Investments and Related Activities; Sector 524, Insurance Carriers and Related Activities; Sector 525, Funds, Trusts, and Other Financial Vehicles.

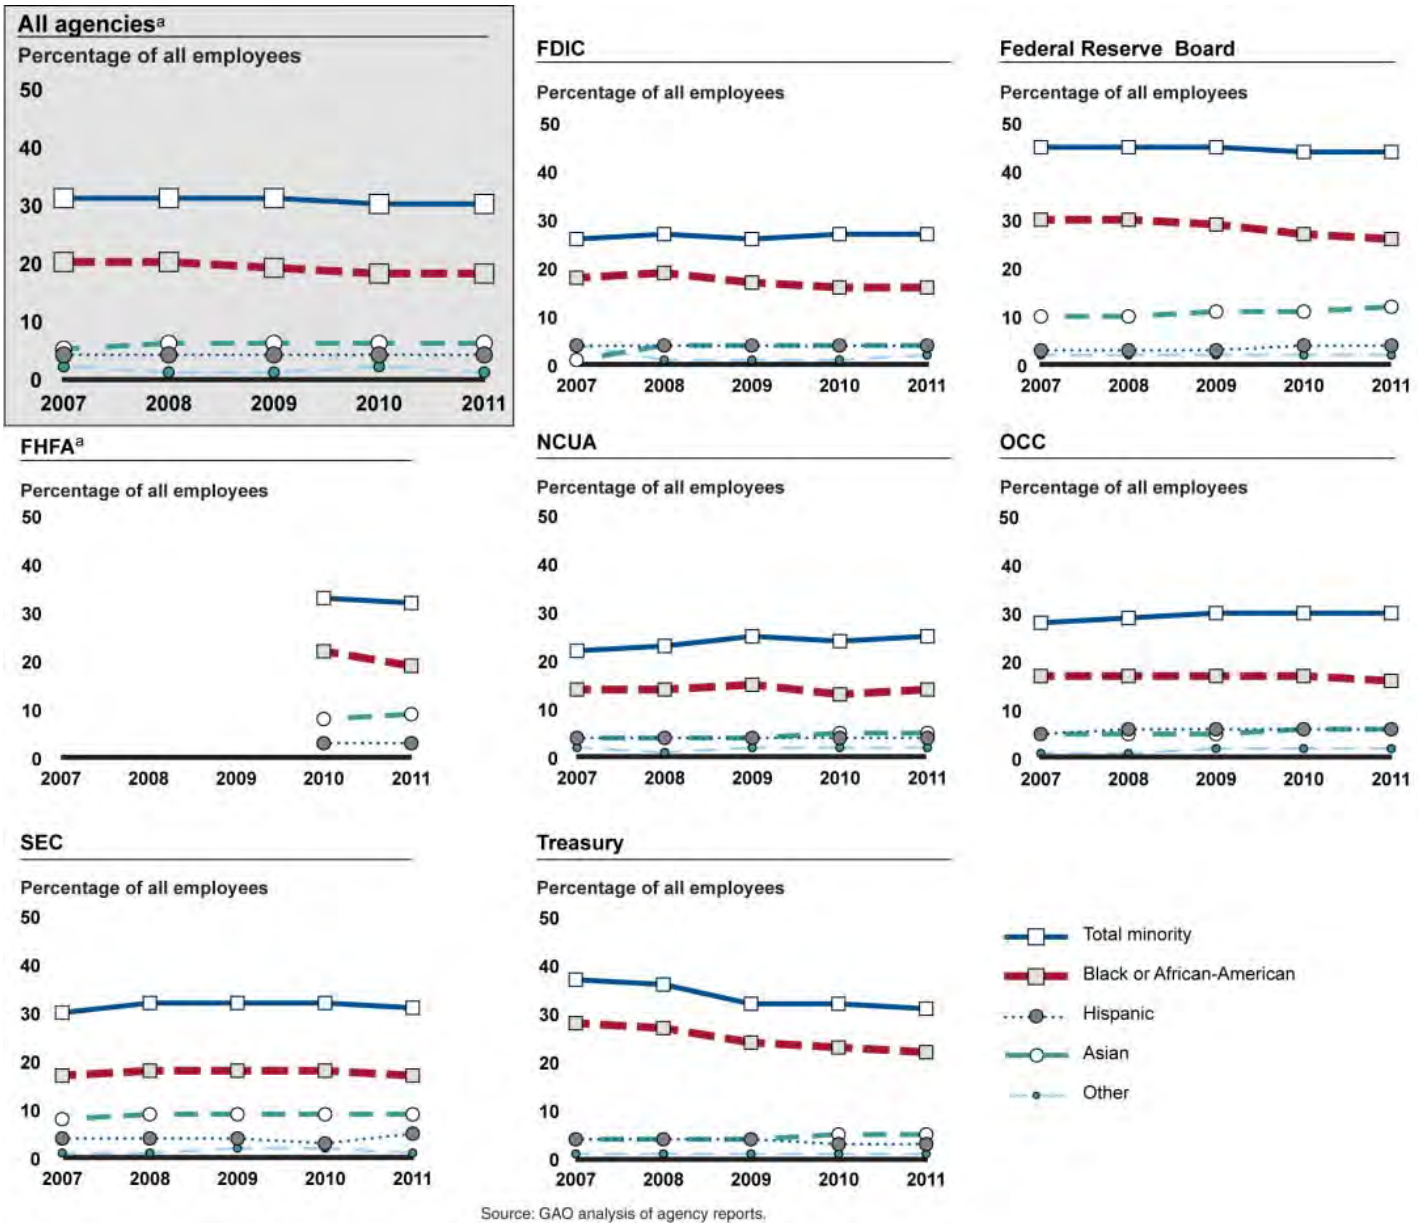
Appendix III: Additional Analysis of Overall Workforce Diversity at Agencies and Reserve Banks

This appendix provides information accompanying our review of changes in overall workforce diversity at federal financial agencies and the 12 Reserve Banks from 2007 through 2011.[1] Tables 11 through 14 in appendix IV provide data supporting the figures in this appendix.

According to MD-715 data, the representation of minorities in the overall workforce of the agencies, in aggregate, changed little from 2007 through 2011. Percentage point changes in the representation of minorities at FDIC, the Federal Reserve Board, NCUA, OCC, SEC, and Treasury varied from a 5 percentage point decrease at Treasury to a 3 percentage point increase at NCUA. In 2011, the representation of minorities in the overall workforce of the agencies and FHFA ranged from 25 percent at NCUA to 44 percent at the Federal Reserve Board.

[1]The agencies included FDIC, the Federal Reserve Board, NCUA, OCC, SEC, and Treasury. FHFA was established in 2008 and started reporting workforce data for 2010, and is excluded from our trend analysis. Additionally, CFPB was established in July 2011 and trend data were not available.

Figure 18: Percentage of Minorities among All Employees at Seven Federal Financial Agencies, 2007-2011



Source: GAO analysis of agency reports.

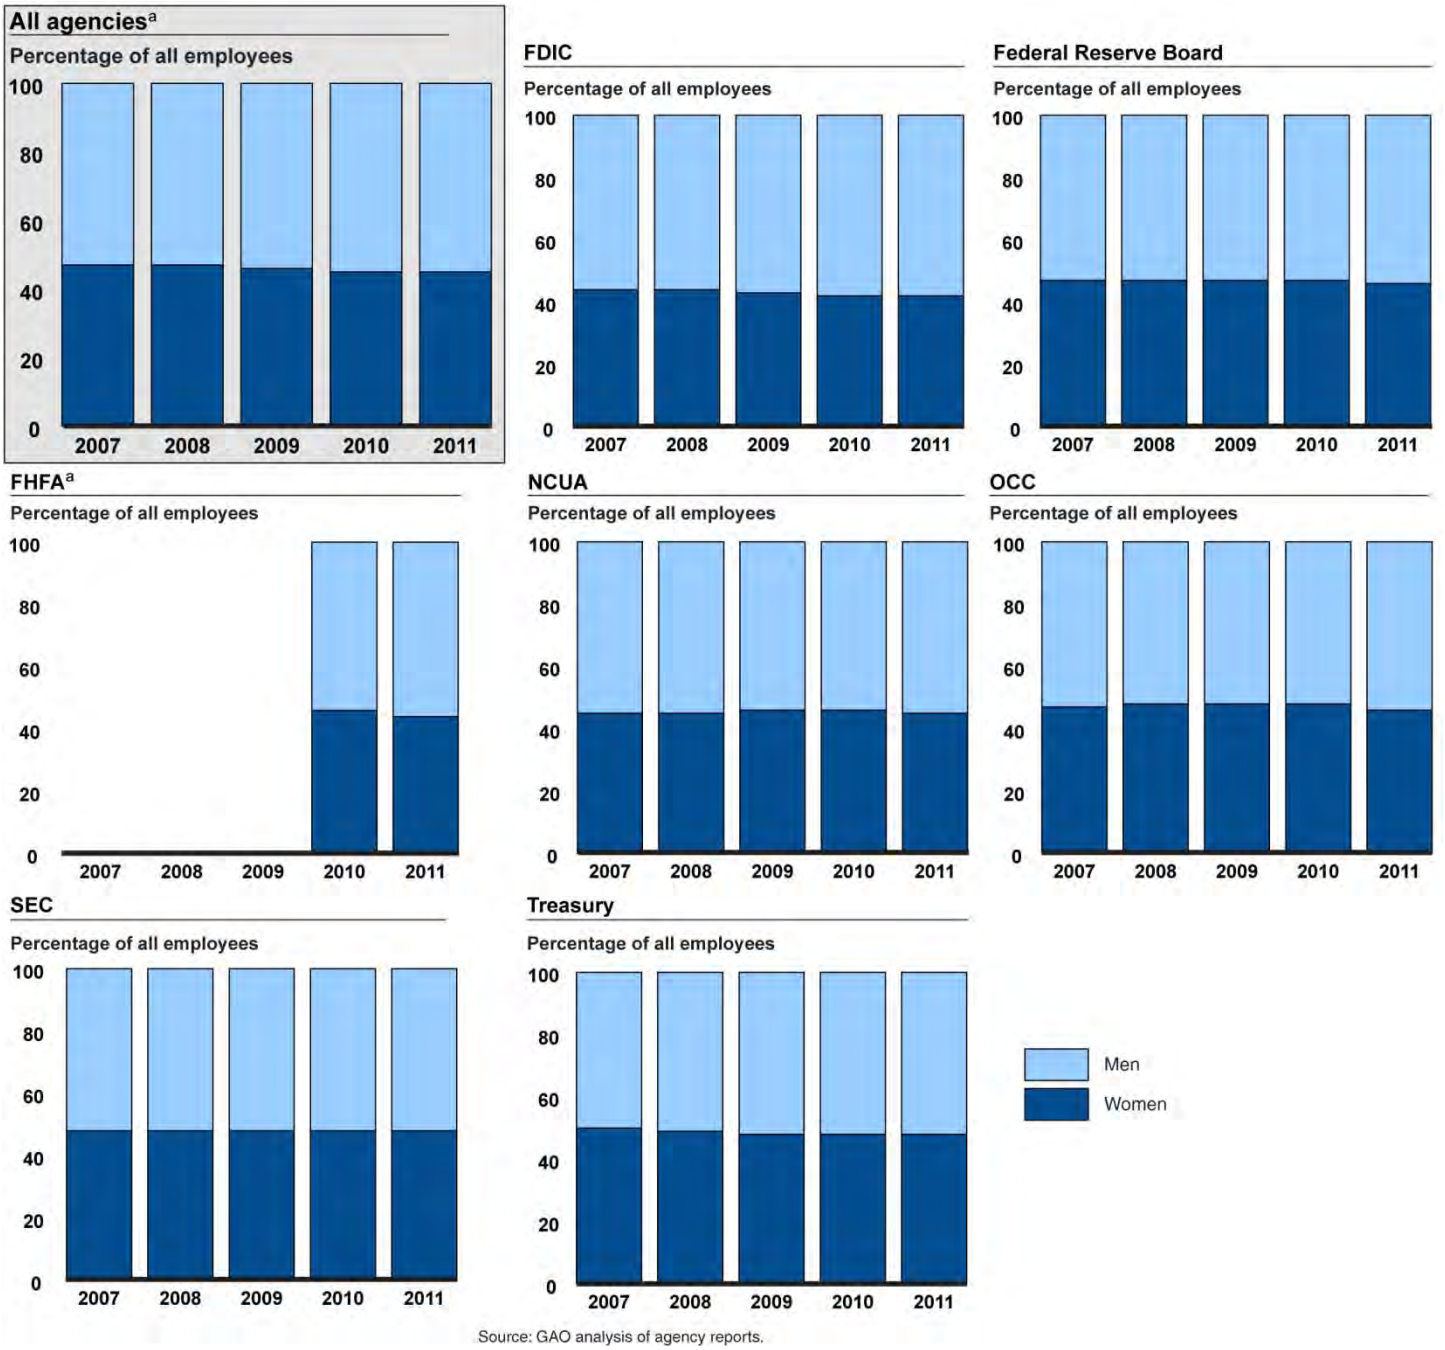
Note: Figures are rounded to the nearest percent.

For our analysis, we reviewed the numbers of employees the agencies reported according to race/ethnicity and gender in table A3 of their MD-715 reports from 2007 through 2011. These data are based on information self-reported by employees to each agency and there were some differences in reporting across the agencies. In some years, some agencies reported all employees—permanent and temporary—in their A3 tables while others reported permanent employees only.

[a]Our trend analysis for "all agencies" excludes CFPB and FHFA. CFPB assumed responsibility for certain consumer financial protection functions in July 2011 and has not yet reported workforce information to EEOC. FHFA was established in 2008 and started reporting workforce data for 2010.

Similarly, we found that the representation of women in the overall workforce of the agencies did not change significantly from 2007 through 2011. Percentage point changes in the representation of women at the agencies from 2007 through 2011 varied from a 2 percentage point decrease at FDIC, the Federal Reserve Board, and Treasury to no percentage point change at NCUA and SEC. In 2011, the representation of minorities in the overall workforce of the agencies and FHFA ranged from 42 percent at FDIC to 48 percent at SEC and Treasury.

Figure 19: Percentage of Women among All Employees at Seven Federal Financial Agencies, 2007-2011



Source: GAO analysis of agency reports.

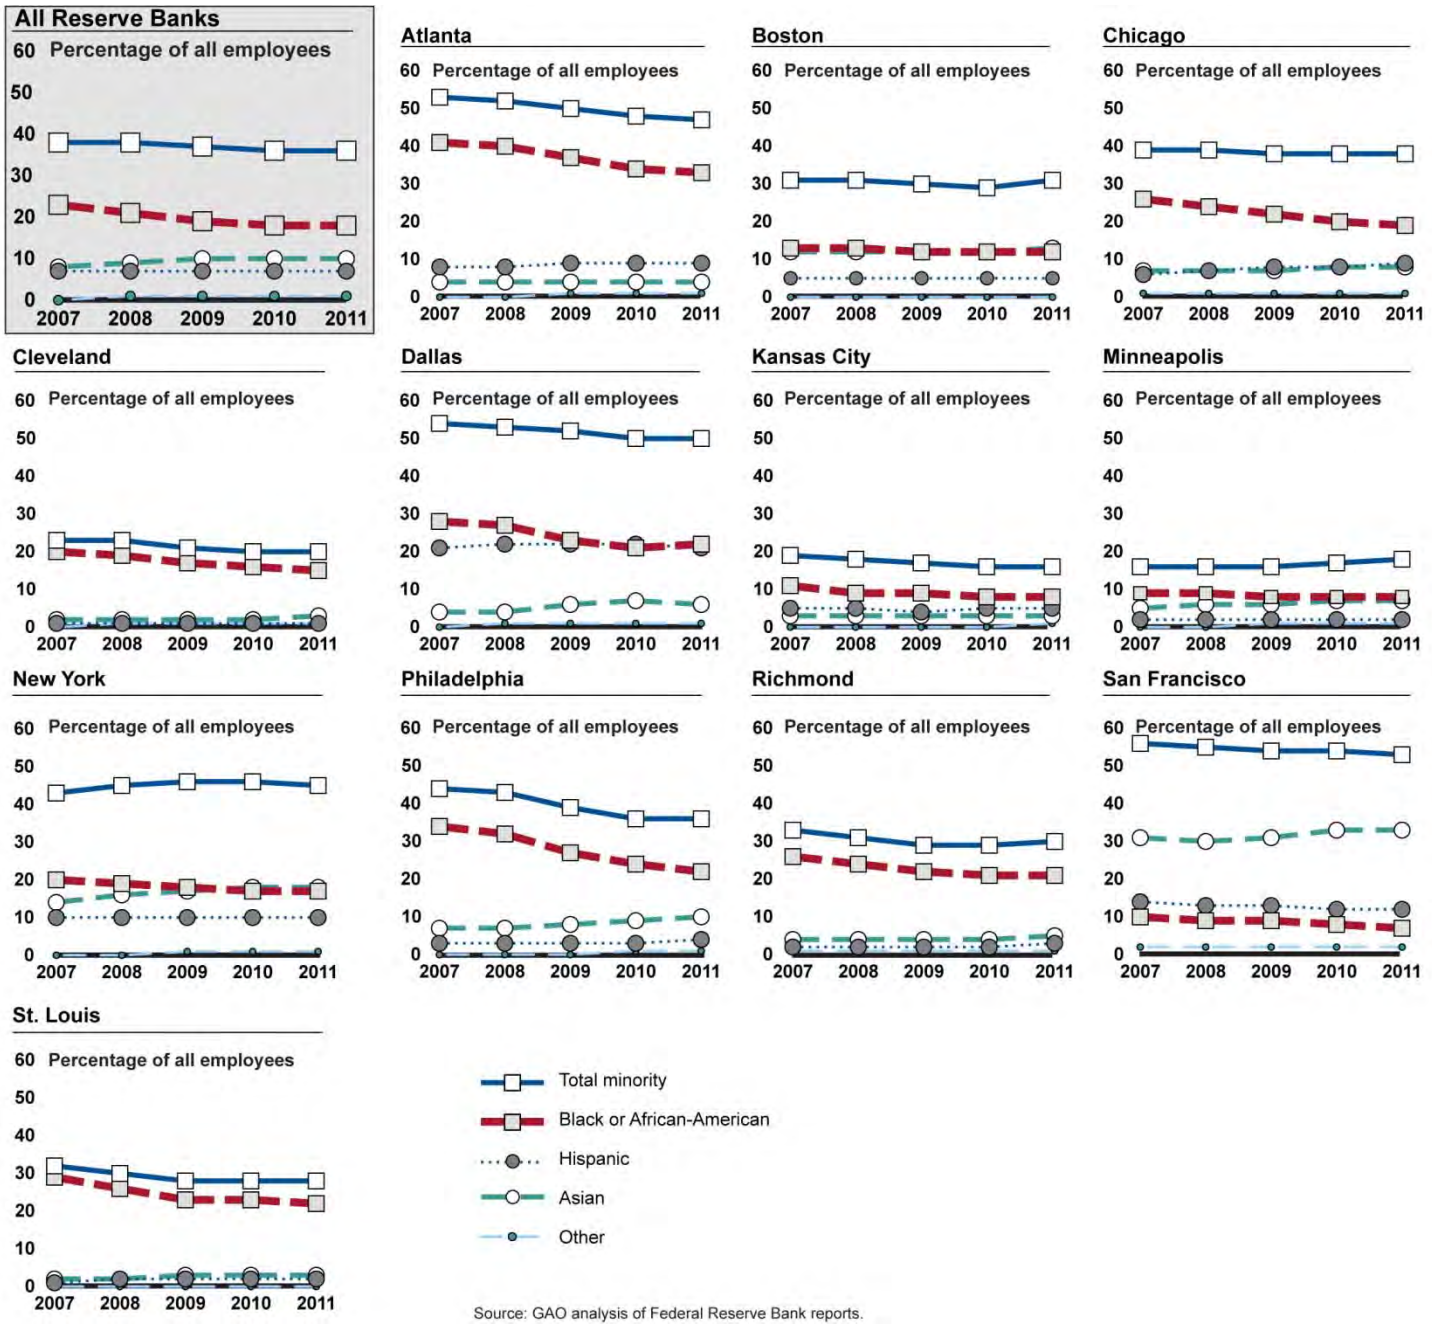
Note: Figures are rounded to the nearest percent.

For our analysis, we reviewed the numbers of employees the agencies reported according to race/ethnicity and gender in table A3 of their MD-715 reports from 2007 through 2011. These data are based on information self-reported by employees to each agency and there were some differences in reporting across the agencies. In some years, some agencies reported all employees—permanent and temporary—in their A3 tables while others reported permanent employees only.

[a]Our trend analysis for "all agencies" excludes CFPB and FHFA. CFPB assumed responsibility for certain consumer financial protection functions in July 2011 and has not yet reported workforce information to EEOC. FHFA was established in 2008 and started reporting workforce data for 2010.

According to EEO-1 data provided by the Reserve Banks, the representation of minorities in the overall workforce of the Reserve Banks decreased somewhat from 2007 through 2011. The banks showed changes in the representation of minorities from 2007 through 2011, from an 8 percentage point decrease at the Reserve Bank of Philadelphia, to a 2 percentage point increase at the Reserve Banks of Minneapolis and New York. The Reserve Bank of Boston showed no percentage point change from 2007 through 2011. In 2011, the representation of minorities in the overall workforce of the Reserve Banks ranged from 16 percent at the Reserve Bank of Kansas City to 53 percent at the Reserve Bank of San Francisco.

Figure 20: Percentage of Minorities among All Employees at the 12 Reserve Banks, 2007-2011

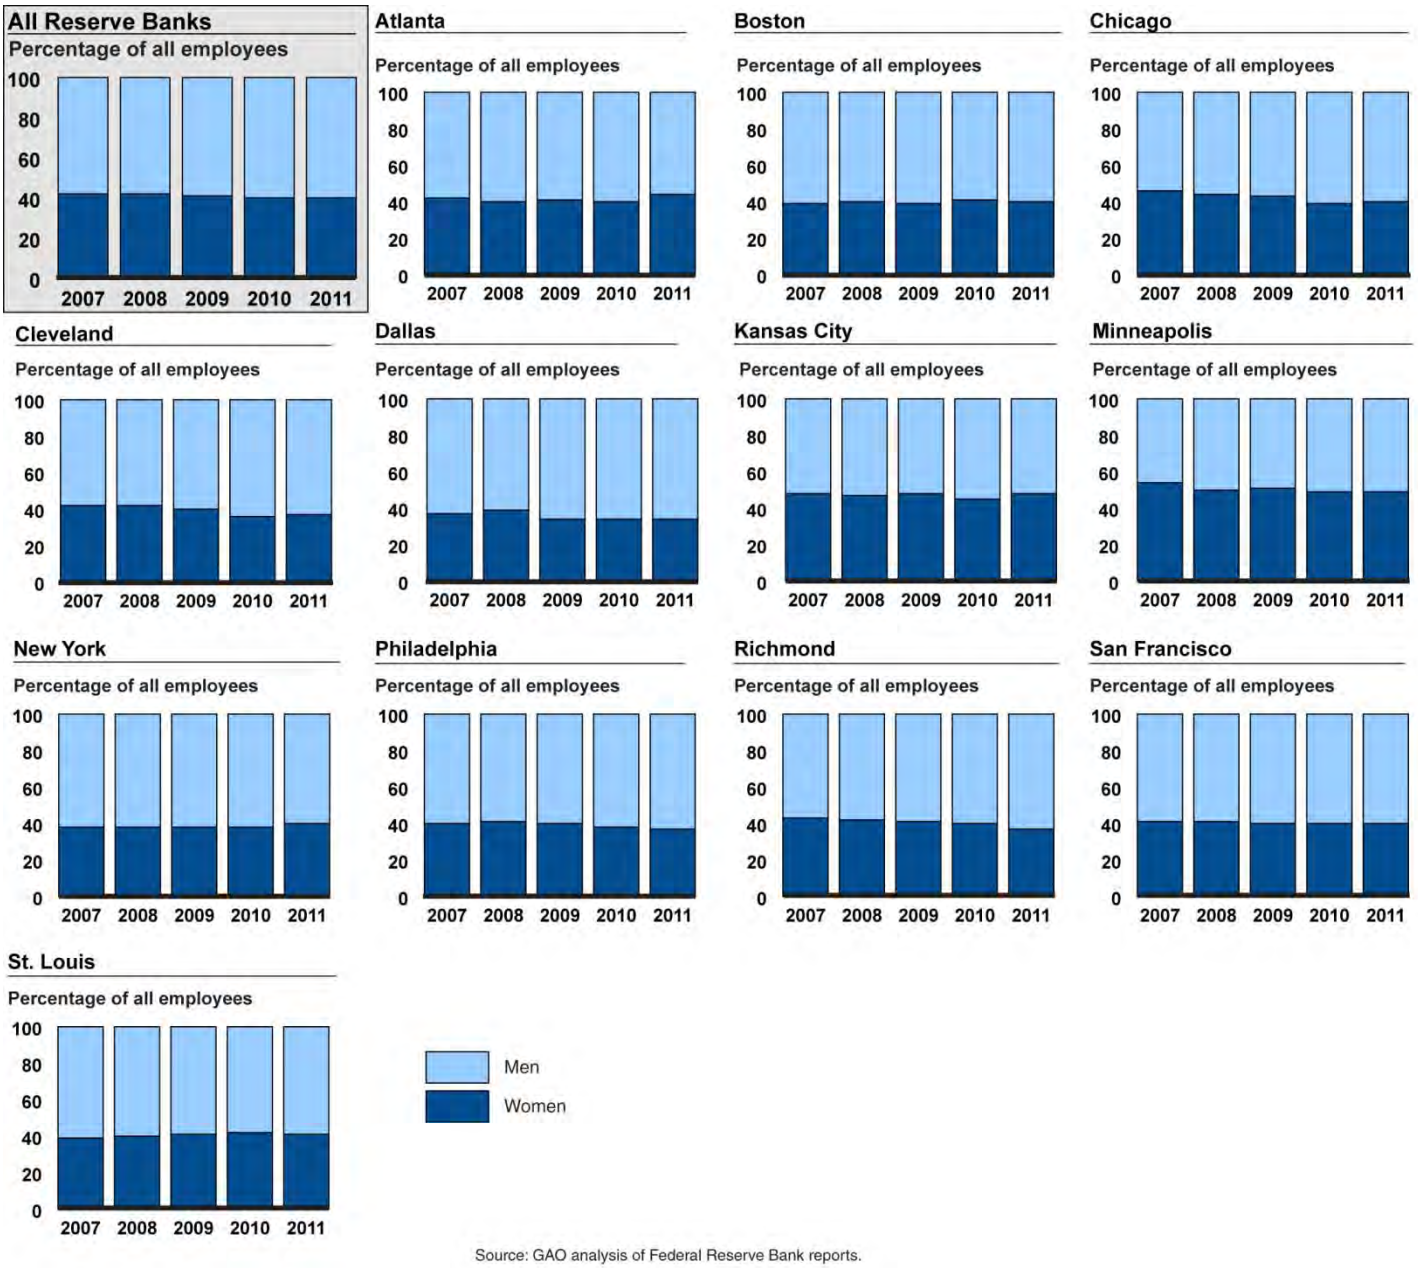


Source: GAO analysis of Federal Reserve Bank reports.

Note: Figures are rounded to the nearest percent.

In addition, we found that from 2007 through 2011, the representation of women in the overall workforce of the Reserve Banks also declined slightly according to EEO-1 data provided by the Reserve Banks. The Reserve Banks showed decreases in the representation of women in the overall workforce from 1 percentage point at the Reserve Bank of New York to 7 percentage points at the Reserve Bank of Cleveland. The representation of women in the overall workforce in 2011 ranged from 40 percent at the Reserve Banks of Philadelphia and Richmond to 53 percent at the Reserve Bank of Minneapolis.

Figure 21: Percentage of Women among All Employees at the 12 Reserve Banks, 2007-2011



Source: GAO analysis of Federal Reserve Bank reports.

Note: Figures are rounded to the nearest percent.

Appendix IV: Representation of Minorities and Women at Federal Financial Agencies and Reserve Banks

We reviewed agency and Reserve Bank reports and found that since the financial crisis, senior management-level minority and gender diversity at the agencies and Reserve Banks has varied across individual entities. We also found the representation of minorities and women in the overall workforce of the agencies changed little from 2007 through 2011, while the representation of minorities and women in the overall workforce of the Reserve Banks declined slightly. The following tables provide data supporting the senior management-level and total workforce figures in this report.

Table 7: Percentage of Minorities among Senior Management-Level Employees at Seven Federal Financial Agencies, 2007-2011

Source: GAO analysis of agency reports.

Notes: Percentages are rounded to the nearest percent.

For our analysis, we reviewed the numbers of employees the agencies reported according to race/ethnicity and gender in table A3 of their MD-715 reports from 2007 through 2011. These data are based on information self-reported by employees to each agency and there were some differences in reporting across the agencies. In some years, some agencies reported all employees—permanent and temporary—in their A3 tables while others reported permanent employees only. We considered employees reported by agencies in the category "Executive/Senior Level" as senior management-level employees. Though the MD-715 report guidelines instruct agencies to identify employees Grades 15 and above who have supervisory responsibility in this category, agencies have discretion to include employees who have significant policymaking responsibilities but do not supervise employees. As a result, the composition of the "Executive/Senior Level" category may vary among the different agencies and does not necessarily involve the same set of managers at each agency.

[a]FHFA was established in 2008 and started reporting workforce data for 2010.

[b]SEC revised how it reported officials and managers between 2007 and 2011. While our analysis includes 2011 management-level data for SEC, we excluded previous years from our trend analysis.

Source: GAO analysis of EEO-1 reports provided by Reserve Banks.

Notes: Percentages are rounded to the nearest percent.

For our analysis of the representation of minorities and women at the senior management level for Reserve Banks, we reviewed the numbers of employees the banks reported as “Executive/Senior Level Officials and Managers” from 2007 through 2011. While EEOC provides instructions on reporting job categories based on the skill levels, knowledge, and responsibilities involved in occupations identified within each job category, employers have discretion to decide which positions they report as Executive/Senior Level Officials and Managers versus those at lower levels of management. Therefore, comparisons of a given management level between the Reserve Banks do not necessarily involve the same set of managers at each bank. For example, the Reserve Bank of Atlanta revised how it reported officials and managers for 2011. From 2007 through 2010, the bank reported all officers as Executive/Senior Level Officials and Managers, and for 2011, the bank reported as Executive/Senior Level Officials and Managers those employees that have strategic roles and/or report to the Reserve Bank’s President. According to Reserve Bank officials, recent efforts have been made to align reporting of officials and managers across the Federal Reserve System.

Source: GAO analysis of agency reports.

Notes: Percentages are rounded to the nearest percent.

For our analysis, we reviewed the numbers of employees the agencies reported according to race/ethnicity and gender in table A3 of their MD-715 reports from 2007 through 2011. These data are based on information self-reported by employees to each agency and there were some differences in reporting across the agencies. In some years, some agencies reported all employees—permanent and temporary—in their A3 tables while others reported permanent employees only. We considered employees reported by agencies in the category "Executive/Senior Level" as senior management-level employees. Though the MD-715 report guidelines instruct agencies to identify employees Grades 15 and above who have supervisory responsibility in this category, agencies have discretion to include employees who have significant policymaking responsibilities but do not supervise employees. As a result, the composition of the "Executive/Senior Level" category may vary among the different agencies and does not necessarily involve the same set of managers at each agency.

[a]FHFA was established in 2008 and started reporting workforce data for 2010.

[b]SEC revised how it reported officials and managers between 2007 and 2011. While our analysis includes 2011 management-level data for SEC, we excluded previous years from our trend analysis.

Source: GAO analysis of EEO-1 reports provided by Reserve Banks.

Notes: Percentages are rounded to the nearest percent.

For our analysis of the representation of minorities and women at the senior management level for Reserve Banks, we reviewed the numbers of employees the banks reported as “Executive/Senior Level Officials and Managers” from 2007 through 2011. While EEOC provides instructions on reporting job categories based on the skill levels, knowledge, and responsibilities involved in occupations identified within each job category, employers have discretion to decide which positions they report as Executive/Senior Level Officials and Managers versus those at lower levels of management. Therefore, comparisons of a given management level between the Reserve Banks do not necessarily involve the same set of managers at each bank. For example, the Reserve Bank of Atlanta revised how it reported officials and managers for 2011. From 2007 through 2010, the bank reported all officers as Executive/Senior Level Officials and Managers, and for 2011,

the bank reported as Executive/Senior Level Officials and Managers those employees that have strategic roles and/or report to the Reserve Bank's President. According to Reserve Bank officials, recent efforts have been made to align reporting of officials and managers across the Federal Reserve System.

Source: GAO analysis of agency reports.

Note: Percentages are rounded to the nearest percent.

For our analysis, we reviewed the numbers of employees the agencies reported according to race/ethnicity and gender in table A3 of their MD-715 reports from 2007 through 2011. These data are based on information self-reported by employees to each agency and there were some differences in reporting across the agencies. In some years, some agencies reported all employees—permanent and temporary—in their A3 tables while others reported permanent employees only.

[a]FHFA was established in 2008 and started reporting workforce data for 2010.

Appendix V: Comments from the Consumer Financial Protection Bureau

cfpb Consumer Financial Protection Bureau

1700 G Street NW, Washington, DC 20552

March 25, 2013

Mr. Daniel Garcia-Diaz
Director
Financial Markets and Community Investment
U.S. Government Accountability Office
441 G Street, N.W.
Washington, D.C. 20548

Dear Mr. Garcia-Diaz:

Thank you for the opportunity to comment on the Government Accountability Office's (GAO) draft report, *Diversity Management, Trends and Practices in the Financial Services Industry and Agencies After the Recent Financial Crisis*, GAO-13-238.

This report examines workforce diversity in the financial services industry and in the financial regulatory agencies from 2007 through 2011 and also efforts by the financial regulatory agencies to implement workforce and contractor diversity practices under the Dodd-Frank Act. The Consumer Financial Protection Bureau (CFPB or Bureau) opened its doors for business in July 2011, and its Office of Minority and Women Inclusion (OMWI) was established in January 2012. As the report notes, the Director of OMWI assumed his duties on April 30, 2012.

The report contains one recommendation:

> To enhance the availability of information on the progress and impact of agency and reserve bank diversity practices, we are recommending to CFPB…that each OMWI report on efforts to measure the progress of its employment diversity and inclusion practices, including measurement outcomes as appropriate, to indicate areas for improvement as part of its annual report to Congress.

CFPB concurs with the recommendation.

As we discussed during our meetings, the OMWI at CFPB is the newest OMWI to open following the creation of the Bureau in the Dodd-Frank Act. Because the Bureau was formed after the period 2007-11, the report does not contain workforce information from that period. The CFPB did provide demographic information about its workforce as of May 2012.

Since I began my tenure as the OMWI Director on April 30, 2012, the office has been building capacity to address the three primary responsibilities of the office: promoting

diversity and inclusion in the Bureau's workforce, in the Bureau's procurement, and working with our fellow financial regulators and their OMWI offices to create standards for diversity and inclusion at regulated entities. The office has made good progress during these opening months in addressing these disparate challenges, and has set a solid foundation for the work that lies ahead.

We agree that reporting on appropriate measures to improve diversity and inclusion in employment would be a valuable addition to the annual report to Congress. Much of our work in this first year is obtaining and understanding the baselines for measurements. We expect in future reports to build out this reporting, as appropriate, and to address areas for improvement.

Thank you for the opportunity to comment on the report.

Sincerely,

Stuart J. Ishimaru
Director
Office of Minority and Women Inclusion

Dear Mr. Garcia-Diaz:

Thank you for the opportunity to respond to the GAO's draft report on "Diversity Management: Trends and Practices in the Financial Services Industry and Agencies after the Recent Financial Crisis" (GAO-13-238). This letter represents a consolidated response from all twelve Directors of the Office of Minority and Women Inclusion (OMWI) at the Reserve Banks.

The Reserve Banks are committed to promoting workforce diversity and increasing contracting opportunities for minority-owned and women-owned businesses. As the GAO report recognizes, significant efforts have been undertaken to satisfy the requirements of Section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. The report contains one recommendation to the agencies and Reserve Banks: that each OMWI report on its efforts to measure the progress of diversity and inclusion practices in its annual report to Congress. The Reserve Banks currently include some measurements in the annual reports. We will evaluate these current efforts and consider additional ways to measure and report on the progress of our diversity practices.

We appreciate the attention of the GAO to this important topic and wish to thank the GAO staff for the courtesy and professionalism demonstrated during the review.

Appendix VII: Comments from the Federal Reserve Board

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM
WASHINGTON, DC 20551

March 26, 2013

Mr. Daniel Garcia-Diaz
Director, Financial Markets
and Community Investment
Government Accountability Office
441 G Street, NW
Washington, DC 20548

Dear Mr. Garcia-Diaz:

Thank you for the opportunity to comment on your draft report entitled "Diversity Management: Trends and Practices in the Financial Services Industry and Agencies After the Recent Financial Crisis". The Federal Reserve Board takes seriously its efforts to encourage and promote diversity in its workforce and contracting decisions. As the draft report shows, the Federal Reserve Board's representation of both minorities and women at the senior management-level increased from 2007 through 2011. In addition, the report determined that the representation of both minorities and women among mid-level officials and managers at the Federal Reserve Board in 2011 was highest among the agencies the GAO reviewed.

The report includes one recommendation to the agencies and reserve banks, which is:
To enhance the availability of information on the progress and impact of agency and Reserve Bank diversity practices, we are recommending to CFPB, FDIC, the Federal Reserve Board, FHFA, NCUA, OCC, SEC, Treasury, and the Reserve Banks that each OMWI report on efforts to measure the progress of its employment diversity and inclusion practices, including measurement outcomes as appropriate, to indicate areas for improvement as part of its annual report to Congress.

www.federalreserve.gov

As we have discussed with the GAO, this recommendation is consistent with our ongoing practices. We will look for additional ways to measure and report on the progress of our diversity practices.

We appreciate the thorough and comprehensive analysis the GAO has provided.

Sheila Clark
Director
Office of Minority and Women and Inclusion

Appendix VIII: Comments from the Federal Deposit Insurance Corporation

FDIC
Federal Deposit Insurance Corporation
3501 Fairfax Drive, Arlington, VA 22226-3500
Office of Minority and Women Inclusion

March 29, 2013

Mr. Daniel Garcia-Diaz
Director, Financial Markets and Community Investment
United States Government Accountability Office
Washington, DC 20548

Dear Mr. Garcia-Diaz:

The Federal Deposit Insurance Corporation (FDIC) reviewed the GAO report *Diversity Management: Trends and Practices in the Financial Services Industry and Agencies After the Recent Financial Crisis* (Report) (GAO-13-238). The Report stated each agency should include in its annual OMWI report to Congress efforts to measure the progress of its diversity practices. The FDIC agrees with the Report's recommendation and will include efforts to measure the progress of our diversity practices in annual OMWI report to Congress. We believe this recommendation is important to not only meeting the requirements of Section 342 of the Dodd-Frank Act, but to the success of the FDIC in carrying out its mission responsibilities.

The FDIC is committed to providing all employees with a work environment that embodies excellence, and acknowledges and honors the diversity of its employees. In 2012, the FDIC Acting Chairman established a number of Performance Goals designed to enhance the FDIC's commitment to diversity, inclusion, and equal employment opportunity, including asking the Corporation's senior leaders to update the FDIC's Diversity Strategic Plan and directing each division and major office to develop its own strategic plans to identify steps to increase diversity through the FDIC's recruiting and hiring.

The FDIC's updated 2013 Diversity and Inclusion Strategic Plan addresses the goals of Executive Order 13583, dated August 18, 2011, which calls for federal agencies to develop and implement a more comprehensive, integrated, and strategic focus on diversity and inclusion. The plan lays out a course for achieving workforce diversity by recruiting from a diverse, qualified group of potential applicants; cultivating workplace inclusion through collaboration, flexibility, and fairness; and ensuring sustainability of diversity and inclusion achievements by equipping leaders with the ability to manage diversity, measure results, and refine approaches based on available data. The updated plan issued on March 1, 2013, follows the guidance issued by the U.S. Office of Personnel Management (OPM) in November 2011, and identifies a number of strategies and action plans to address workforce diversity, workplace inclusion, and sustainability.

Specifically, under sustainability, the FDIC will develop structures and strategies to equip leaders with the ability to manage diversity, be accountable, measure results, refine approaches on the basis of such data, and institutionalize a culture of inclusion. This objective will improve

diversity and inclusion analytics and reporting by using a strategy to make diversity and inclusion reporting more actionable through improvements in data collection, presentation, and reporting frequency.

Further, in 2012, the FDIC contracted for a third party review of diversity and inclusion programs and activities to help us identify additional initiatives to strengthen our diversity practices.

Thank you for the opportunity to review the Report.

Sincerely,

D. Michael Collins
Director

Mr. Daniel Garcia-Diaz
Director
Financial Markets and Community Investment
Government Accountability Office (GAO)
441 G Street, NW
Washington, DC 20548

Dear Mr. Garcia-Diaz:

Thank you for the opportunity to review and comment on the Government Accountability Office (GAO) Report, *Diversity Management; Trends and Practices in the Financial Services Industry and Agencies After the Recent Financial Crisis*.

During the review GAO examined diversity in the financial services industry, the federal financial agencies, and the Federal Reserve Banks (Reserve Banks) and efforts of the agencies and Reserve Banks to implement diversity practices under the Dodd-Frank Act. The GAO has recommended that the agencies and Reserve Banks, including the Federal Housing Finance Agency (FHFA), should include in its annual Office of Minority and Women Inclusion (OMWI) report to Congress efforts to measure the progress of its diversity practices, including measurement outcomes as appropriate, to indicate areas for improvement as part of their annual reports to Congress.

FHFA agrees with the recommendation to include in our annual OMWI report to Congress our efforts to measure the progress of our diversity efforts, and will include this information in FHFA's 2013 OMWI Annual Report to Congress.

If you have any questions, please do not hesitate to contact me.

Sincerely,

Nancy

March 26, 2013

Ms. Kay D. Kuhlman
Assistant Director
Financial Markets and Community Investment
U. S. Government Accountability Office
441 G Street, NW
Washington, DC 20548

Dear Ms. Kuhlman:

Thank you for the opportunity to review and comment on the draft GAO report for the Committee on Financial Services of the U.S. House of Representatives. The report, titled "Diversity Management: Trends and Practice in the Financial Services Industry and Agencies After the Recent Financial Crisis" is comprehensive and appropriately outlines the changes in the agencies' workforce and in the industry from 2007 to 2011.

Overall, your report indicates the financial services agencies made some progress in diversity although additional progress needs to be made. In 2012, NCUA continues to make strides and address challenges in achieving its goal of "cultivating a diverse, well trained, and motivated workforce." The establishment of the Office of Minority and Women Inclusion, in 2011, helped NCUA focus its diversity efforts. Our 2012 Annual Report to Congress highlights many of the accomplishments achieved in diversity of the workforce and contracting as well as the challenges.

We agree with your recommendation and will work towards reporting on our efforts to measure the progress of the workforce diversity and inclusion practices, including measurement outcomes as appropriate, as part of the annual reports to Congress.

Sincerely,

Mark A. Treichel

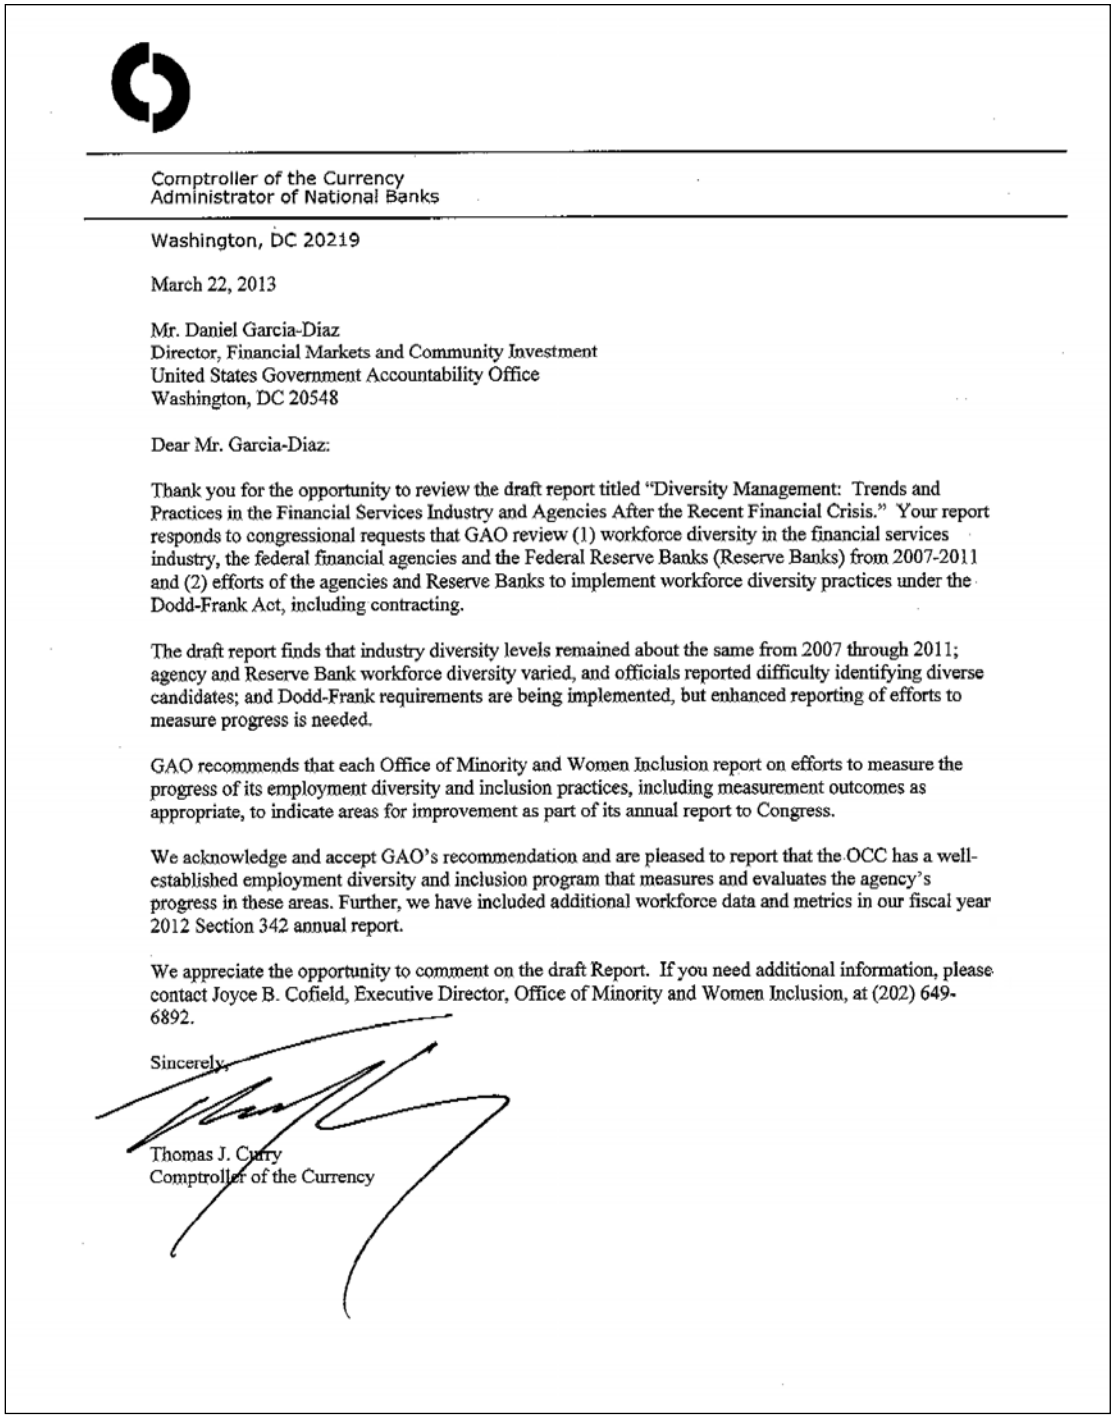
Appendix XI: Comments from the Comptroller of the Currency



Comptroller of the Currency
Administrator of National Banks

Washington, DC 20219

March 22, 2013

Mr. Daniel Garcia-Diaz
Director, Financial Markets and Community Investment
United States Government Accountability Office
Washington, DC 20548

Dear Mr. Garcia-Diaz:

Thank you for the opportunity to review the draft report titled "Diversity Management: Trends and Practices in the Financial Services Industry and Agencies After the Recent Financial Crisis." Your report responds to congressional requests that GAO review (1) workforce diversity in the financial services industry, the federal financial agencies and the Federal Reserve Banks (Reserve Banks) from 2007-2011 and (2) efforts of the agencies and Reserve Banks to implement workforce diversity practices under the Dodd-Frank Act, including contracting.

The draft report finds that industry diversity levels remained about the same from 2007 through 2011; agency and Reserve Bank workforce diversity varied, and officials reported difficulty identifying diverse candidates; and Dodd-Frank requirements are being implemented, but enhanced reporting of efforts to measure progress is needed.

GAO recommends that each Office of Minority and Women Inclusion report on efforts to measure the progress of its employment diversity and inclusion practices, including measurement outcomes as appropriate, to indicate areas for improvement as part of its annual report to Congress.

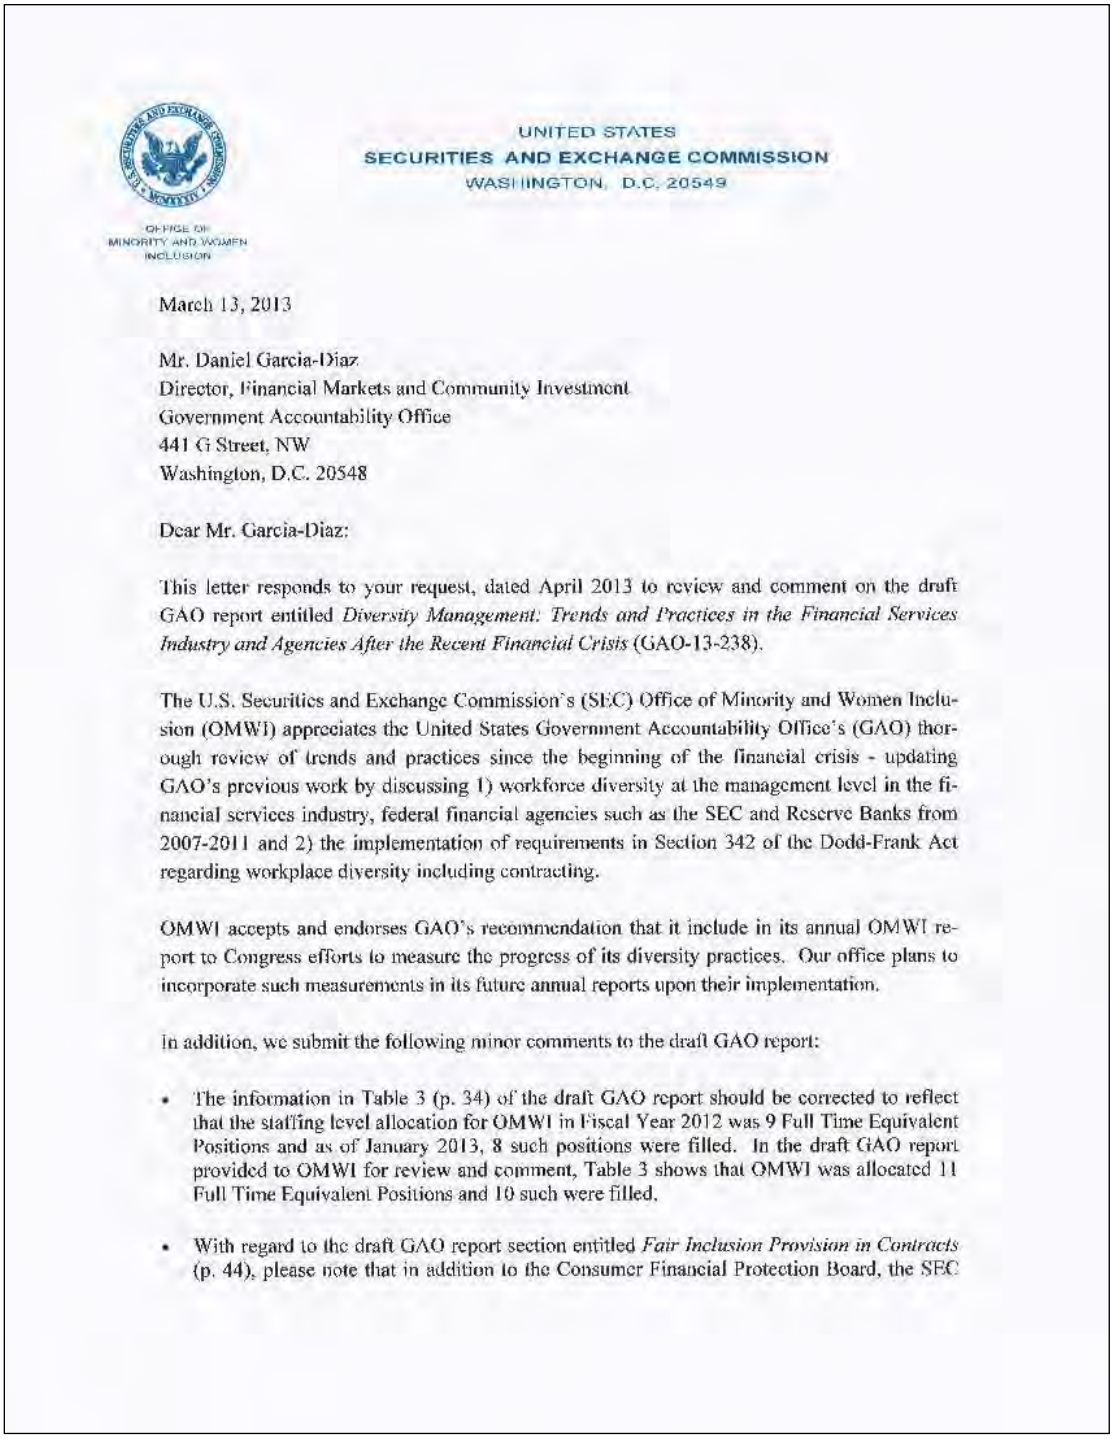
We acknowledge and accept GAO's recommendation and are pleased to report that the OCC has a well-established employment diversity and inclusion program that measures and evaluates the agency's progress in these areas. Further, we have included additional workforce data and metrics in our fiscal year 2012 Section 342 annual report.

We appreciate the opportunity to comment on the draft Report. If you need additional information, please contact Joyce B. Cofield, Executive Director, Office of Minority and Women Inclusion, at (202) 649-6892.

Sincerely,

Thomas J. Curry
Comptroller of the Currency

Appendix XII: Comments from the Securities and Exchange Commission



UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, D.C. 20549

OFFICE OF
MINORITY AND WOMEN
INCLUSION

March 13, 2013

Mr. Daniel Garcia-Diaz
Director, Financial Markets and Community Investment
Government Accountability Office
441 G Street, NW
Washington, D.C. 20548

Dear Mr. Garcia-Diaz:

This letter responds to your request, dated April 2013 to review and comment on the draft GAO report entitled *Diversity Management: Trends and Practices in the Financial Services Industry and Agencies After the Recent Financial Crisis* (GAO-13-238).

The U.S. Securities and Exchange Commission's (SEC) Office of Minority and Women Inclusion (OMWI) appreciates the United States Government Accountability Office's (GAO) thorough review of trends and practices since the beginning of the financial crisis - updating GAO's previous work by discussing 1) workforce diversity at the management level in the financial services industry, federal financial agencies such as the SEC and Reserve Banks from 2007-2011 and 2) the implementation of requirements in Section 342 of the Dodd-Frank Act regarding workplace diversity including contracting.

OMWI accepts and endorses GAO's recommendation that it include in its annual OMWI report to Congress efforts to measure the progress of its diversity practices. Our office plans to incorporate such measurements in its future annual reports upon their implementation.

In addition, we submit the following minor comments to the draft GAO report:

- The information in Table 3 (p. 34) of the draft GAO report should be corrected to reflect that the staffing level allocation for OMWI in Fiscal Year 2012 was 9 Full Time Equivalent Positions and as of January 2013, 8 such positions were filled. In the draft GAO report provided to OMWI for review and comment, Table 3 shows that OMWI was allocated 11 Full Time Equivalent Positions and 10 such were filled.

- With regard to the draft GAO report section entitled *Fair Inclusion Provision in Contracts* (p. 44), please note that in addition to the Consumer Financial Protection Board, the SEC

has also been using the equal employment opportunity statement contained in the Federal Acquisition Regulation in executed contracts while the SEC develops an inclusion statement pursuant to Section 342(c)(2).

- Under the same section entitled *Fair Inclusion Provision in Contracts* and in relation to Section 342 (c)(1) and (2), OMWI suggests restating the second sentence to provide as follows: "Section 342 of the Dodd-Frank Act requires agencies and Reserve Banks to develop procedures for review and evaluation of contract proposals and for hiring service providers that include a written statement that a contractor shall ensure, to the maximum extent possible, the fair inclusion of women and minorities in the workforce of the contractor and, as applicable, subcontractors."

Thank you for the consideration that you and your staff have shown our staff and for the opportunity to comment on this draft report. If you have any questions or would like to further discuss this letter, please feel free to contact me at (202) 551-6503.

Sincerely,

Pamela A. Gibbs
Director

Government Accountability Office
441 G Street NW
Washington, DC 20548

Sent via email to trinderj@gao.gov

Dear Mr. Garcia-Diaz,

Thank you for providing the Department of the Treasury an opportunity to review your draft report entitled *Diversity Management: Trends and Practices in the Financial Services Industry and Agencies After the Recent Financial Crisis*. Covering 2007 to 2011, the report provides important workforce trends leading up to the FY 2011 baseline year for the Treasury's Departmental Offices, Office of Minority and Women Inclusion (OMWI). While the workforce of Treasury's Departmental Offices is comprised of a different range of critical occupations than those of the financial services industry, the federal reserve banks and the other federal financial agencies, the data in the draft report are relevant to our analysis of that segment of common occupations in our workforce.

We welcome the GAO recommendation to incorporate one of the nine leading diversity practices as part of the analysis in future OMWI annual reports to Congress. This recommendation is consistent with the efforts of Treasury's Departmental Offices to move beyond using only demographic representation to gauge the status and progress of diversity and inclusion within the Departmental Offices.

While there is still much more work to be done, we value the important strides that have been made in workforce and business diversity within Treasury's Departmental Offices.

Sincerely,

Lorraine Cole

DISCIPLINARY BEST PRACTICES AND ADVISORY GUIDELINES UNDER THE NO FEAR ACT

September 2008

UNITED STATES OFFICE OF PERSONNEL MANAGEMENT

Working for America

A MESSAGE FROM THE ACTING DIRECTOR OF THE OFFICE OF PERSONNEL MANAGEMENT

I am pleased to release the report *Disciplinary Best Practices and Advisory Guidelines Under the No FEAR Act*. This report discusses the results of a study by OPM of agency best practices for taking disciplinary action for conduct inconsistent with "Antidiscrimination Laws" and "Whistleblower Protection Laws" as those terms are defined in 5 CFR 724.102. The report also provides advisory guidelines agencies may follow in taking such disciplinary actions. The study and the advisory guidelines were required by the Notification and Federal Employee Antidiscrimination and Retaliation Act of 2002 (No FEAR Act).

The No FEAR Act and OPM's regulations at 5 CFR 724.404 require each agency to provide a written statement to the Speaker of the U.S. House of Representatives; the President Pro Tempore of the U.S. Senate; the Chair, Equal Employment Opportunity Commission (EEOC); the Attorney General; and the Director, OPM describing in detail the extent to which the agency will follow the advisory guidelines. The specific content of the written statements is prescribed in the regulations. The statements must be submitted within 30 working days of the date of this report.

I strongly encourage agencies to draw on the best practices discussed in the report and follow the advisory guidelines to strengthen compliance with the Antidiscrimination Laws and the Whistleblower Protection Laws. As Congress noted in enacting the No FEAR Act: "Federal agencies cannot be run effectively if those agencies practice or tolerate discrimination."

The report also is available on the OPM Web site at www.opm.gov.

Michael W. Hager
Acting Director

DISCIPLINARY BEST PRACTICES AND ADVISORY GUIDELINES UNDER THE NO FEAR ACT

TABLE OF CONTENTS

EXECUTIVE SUMMARY

This report provides the results of a study of agency best practices for taking disciplinary action for employee conduct inconsistent with "Antidiscrimination Laws" and "Whistleblower Protection Laws" as those terms are defined in 5 CFR 724.102. The report also provides advisory guidelines agencies may follow when taking appropriate disciplinary action for such conduct. The study and the advisory guidelines are required by the Notification and Federal Employee Antidiscrimination and Retaliation Act of 2002 (No FEAR Act).

Methodology

The U.S. Office of Personnel Management (OPM) conducted the study. As part of the study, OPM reviewed and analyzed annual reports required by the No FEAR Act and provided by 48 agencies. In addition, OPM conducted interviews with officials from 11 agencies and five major agency components concerning their practices in taking disciplinary actions. In selecting the agencies to interview, OPM took into account which agencies reported taking disciplinary actions in their No FEAR reports, which did not, and how agencies scored under the 2006 Federal Human Capital Survey (FHCS) concerning their employees' views on their leadership.

Best Practices

The best practices for taking appropriate disciplinary actions address a number of key components of an effective disciplinary process. Among the topics discussed are the development of disciplinary policies; the roles of supervisors, managers, and others; and the communication of information required to recognize and correct inappropriate conduct. Also discussed are preventive measures such as training that agencies have used to help create workplace environments conducive to reducing or preventing improper conduct.

Advisory Guidelines

There are six advisory guidelines agencies may follow to ensure appropriate disciplinary actions are taken for conduct inconsistent with Antidiscrimination Laws and Whistleblower Protection Laws. These guidelines address the development and communication of disciplinary policies, procedures for ensuring improper conduct is addressed, the necessary ingredients for taking appropriate discipline, the importance of agency officials working together to take action, the importance of good communications in dealing with inappropriate conduct, and the need to prepare staff to provide good advice to supervisors and managers. Agencies are required under the No FEAR Act and OPM's regulations to report to Congress and others within 30 working days of this report on the extent to which they will follow the advisory guidelines.

BACKGROUND

The United States and its citizens are best served when the Federal workplace is free of discrimination and retaliation. In order to maintain a productive workforce that is fully engaged in the many important missions of the Government, the rights of employees, former employees and applicants for Federal employment must be steadfastly protected and those who violate these rights must be held accountable. Agencies and departments ("agencies") should take appropriate and timely steps, including discipline, if appropriate, to address conduct inconsistent with "Antidiscrimination Laws" and "Whistleblower Protection Laws" (hereinafter "Antidiscrimination and Whistleblower Protection Laws" or "applicable laws") as defined in 5 CFR 724.102.

Title II of the Notification and Federal Employee Antidiscrimination and Retaliation Act of 2002 (No FEAR Act) requires a comprehensive study of best practices in the Executive branch for taking disciplinary action for conduct inconsistent with Antidiscrimination and Whistleblower Protection Laws. The Act also requires the issuance of advisory guidelines agencies may follow when taking disciplinary action for such conduct. OPM has completed the required study and is issuing this report on best practices and advisory guidelines.

Methodology

To identify agency best practices for addressing conduct inconsistent with Antidiscrimination and Whistleblower Protection Laws, OPM began its study by analyzing agencies' Fiscal Year (FY) 2006 No FEAR reports to identify which agencies took disciplinary action (as well as the conduct on which the action was based), reviewing their disciplinary policies where publicly available, and reviewing the results of the 2006 Federal Human Capital Survey (FHCS) to identify agencies having the most favorable employee perceptions about how effectively they manage their workforce.

From that review and analysis, OPM selected 11 agencies and five components for in-depth interviews to find out more about their practices for addressing inappropriate conduct. Specifically, OPM interviewed five of the six agencies which reported taking disciplinary action in FY 2006, as well as five agency components that had taken disciplinary action. In addition, OPM interviewed six agencies which reported no disciplinary action taken in their FY 2006 No FEAR reports and were among the 2006 FHCS Top-10 agencies where employees hold their leadership in high regard, both overall and on specific facets of leadership.

When possible, OPM interviewed both the Equal Employment Opportunity (EEO) and Employee Relations (ER) Directors to discuss the agency's disciplinary process and practices concerning antidiscrimination and whistleblower protection. In one

instance, OPM interviewed Office of General Counsel staff. OPM reviewed additional materials provided by agencies interviewed, including training and resource materials provided on agency Intranet sites, brochures, and CD-ROMs.

No FEAR Reports from Agencies

The FY 2006 No FEAR reports from agencies showed that six agencies took disciplinary action. Some of the agency reports provided detailed discussions of trends, causal analysis, and practical knowledge gained through experience with taking discipline. These discussions contributed to the identification of best practices for taking disciplinary action and preventive measures.

Federal Human Capital Survey Results

OPM reviewed the 2006 FHCS results for the agencies that took discipline and other agencies that were highly rated by their employees on leadership (i.e., the extent employees hold their leadership in high regard, both overall and on certain aspects of leadership). The leadership category of the FHCS includes the questions most relevant to successful antidiscrimination and whistleblower protection practices. These questions cover the employee's trust and confidence in his or her supervisor, the employee's level of respect for the organization's senior leaders, and whether leaders in an organization generate high levels of motivation and commitment in the workforce. For example, employees were asked to rate this statement: "I can disclose a suspected violation of any law, rule or regulation without fear of reprisal." The agencies which reported taking disciplinary action in FY 2006 ranked at the higher end of agencies scoring well for this question. Another FHCS item is: "Prohibited Personnel Practices (for example, illegally discriminating for or against any employee/applicant, obstructing a person's right to compete for employment, knowingly violating veterans' preference requirements) are not tolerated." All except one of the agencies taking disciplinary action were above the government-wide average for this FHCS item.

Agency Interviews

As noted above, five agencies and five agency components OPM interviewed took disciplinary actions for conduct inconsistent with Antidiscrimination Laws during FY 2006. Overall, the types of conduct on which discipline was based included creating a hostile work environment, harassment, sexual harassment, making ethnic slurs toward another employee, and other inappropriate conduct based upon race, gender, or some other protected category. The level of discipline agencies took included removal, demotion, and suspension. In some instances, employees resigned or retired to avoid discipline.

Agencies also used alternative means for correcting behavior. For example, some employees who could have been disciplined were reassigned or transferred. In addition, lesser penalties of written and oral counseling were used by one agency for misconduct by employees in certain circumstances. In another agency, alternative discipline was used where the collective bargaining agreement provided it could be initiated by the employee being disciplined. While alternative dispute resolution processes were available in some agencies, those agencies generally did not use them. No agencies reported taking discipline for conduct inconsistent with Whistleblower Protection Laws in FY 2006.

DISCIPLINARY BEST PRACTICES

In accordance with existing law (typically chapter 75 of title 5, United States Code), Federal employees may be disciplined for conduct inconsistent with applicable laws, up to and including removal from the Federal service. This study identified the following best practices to follow in considering such disciplinary actions.

Develop or modify disciplinary policy through joint effort of relevant agency program offices and senior staff

Agency disciplinary policies are likely to be effective if they are developed or modified collaboratively by the various offices involved in taking disciplinary actions and subsequently defending them before third parties when they are challenged. In this manner, technical and legal requirements could be reflected in the disciplinary policy. OPM found at least one agency that generally used a collaborative approach to craft policy and this agency created a No FEAR task force to propose revisions to the agency's disciplinary policy. The task force consisted of senior officials from the agency's offices of Human Resources (HR), EEO, Inspector General, legal counsel, and information and technology. The task force submitted its proposals to the agency's leadership for its joint review and approval. The revisions were fully implemented in FY 2007. Using this approach, the agency was able to generate commitment and buy-in from program offices and agency leadership before the policy was effected.

Provide written guidance to supervisors and managers on their responsibility to take appropriate steps to address conduct inconsistent with Antidiscrimination and Whistleblower Protection Laws, and on selecting the appropriate penalty

Supervisors and managers are responsible for observing and enforcing applicable laws. A disciplinary policy and any other written disciplinary guidance communicates

the agency's expectations with respect to correcting misconduct, including conduct inconsistent with antidiscrimination and whistleblower protection, and taking disciplinary action, when appropriate. Providing instruction on selecting an appropriate penalty is a critical part of any disciplinary policy or guidance because the application of appropriate penalties discourages behavior that undermines the efficiency of the civil service, while ensuring consistency of penalty selection. For that reason, it also helps ensure the action taken is legally defensible. Ideally, the policy and guidance should be drafted to be unambiguous to any reader regardless of his or her level of experience in dealing with misconduct and should set forth the steps supervisors and managers must take, including identifying which agency officials should be notified or consulted, and requiring disciplinary actions be taken promptly.

We found several agencies' disciplinary policies addressed the specific responsibility of supervisors and managers, and most policies clearly stated how supervisors and managers should determine the penalty. Some policies advised supervisors they are to keep employees informed of rules, regulations and standards of conduct and to take disciplinary action when appropriate. Several policies required supervisors to gather and carefully consider all relevant facts and circumstances, to include reviewing prior similar cases within the agency, before proposing or recommending disciplinary action. These instructions help ensure equity and consistency in the agency's imposition of discipline. Employee Relations (ER) staff and legal counsel can advise the supervisor or manager on the right charge to bring based on the conduct at issue, what is required to prove the charge and the penalties the agency has imposed in similar cases, if any, to assist in determining the appropriate penalty in his or her case.

One FHCS top-ranked agency recently modified its disciplinary policy to incorporate specific procedures for taking disciplinary actions against employees for conduct inconsistent with applicable laws. The revised policy now requires its EEO Director to notify a designated agency official in writing when he or she learns an employee may have engaged in this prohibited behavior. That official is then required to advise appropriate senior management who would be responsible for taking disciplinary action if warranted. The policy provides the specific content of the written notification and the steps for determining whether disciplinary action is warranted, including making an inquiry as soon as possible to gather and analyze facts. An unambiguous policy like any of the policies discussed here helps to affirm the agency's commitment to uphold Antidiscrimination and Whistleblower Protection Laws and will aid managers and supervisors in taking appropriate disciplinary action.

In addition to the disciplinary policy, other agency guidance can effectively inform supervisors of their responsibility in this area. For example, one agency issued a memorandum recently from its Deputy Director to senior management on disciplinary and adverse actions. The communication emphasized the responsibility of executive managers to ensure employees receive their due process rights in all disciplinary and

adverse actions. Managers were reminded discipline must promote the efficiency of the service, their decisions must reflect a conscientious application of all relevant factors, and they should use all available resources to properly take disciplinary action.

Another agency guide warned that any personnel action intended to punish an employee for whistleblowing may be investigated by the Office of Inspector General or the Office of Special Counsel as a reprisal, which is a prohibited personnel practice under 5 U.SC. 2302(b)(8)(A) and (B). Further, the guide stated a supervisor (or other employee) who is found to have reprised against an employee is subject to serious sanctions including, but not limited to, reduction in grade or removal from Federal employment. This and the other types of advisories provide support to an agency's disciplinary policy.

Require supervisors and managers to work with ER staff and legal counsel to take appropriate disciplinary action

Sound disciplinary actions are based on advice and guidance the supervisor or manager receives from those with expertise in taking and defending disciplinary actions. OPM found several agencies require supervisors and managers to consult with the ER office before taking disciplinary action, including obtaining their concurrence on all adverse action proposals and decision letters. In one agency, a similar requirement was supplemented by an instruction for the personnel officer to consult with an appropriate staff attorney or the organization involved in litigating appeals or grievances on behalf of the agency. When the supervisor or manager relies on advice from ER staff and legal counsel in taking disciplinary action, agencies can better ensure consistency in their disciplinary practices and the legal sufficiency of their cases.

Provide ER staff with the knowledge and tools necessary to provide managers sound advice and to elevate issues within the management chain if necessary

Agency ER offices are generally responsible for advising managers on how and when to take appropriate disciplinary action. A good working relationship between ER staff and the managers they advise is critical to ensuring the agency takes appropriate and defensible disciplinary action so employees know they will be held accountable for engaging in misconduct. Providing ER staff with adequate training, mentoring, and supervision to ensure they communicate accurate and well-reasoned advice to managers is the first step in establishing a good working relationship with management. Agency ER offices interviewed generally have good working relationships with management, because they have invested the time and resources

to ensure their staff provide managers with high-quality ER advice. In such cases, managers tend to respect and follow the advice provided. When managers are resistant to taking appropriate discipline, particularly in cases involving supervisory misconduct, ER offices indicated they elevate matters within the supervisory chain as needed and seek the assistance of legal counsel. By authorizing ER offices to notify higher-level agency officials if they believe management is not taking appropriate discipline, the agency can take steps to ensure misconduct is properly addressed.

Develop effective working relationships among the agency's ER office, EEO office, and legal counsel through periodic discussions or meetings

Encouraging regular communication between these offices (whether they are at headquarters, field offices or components) facilitates the appropriate exchange of information while establishing good working relationships among agency organizations. Several agencies have informal, periodic updates between two or more of these offices regarding new or ongoing issues within the agency. At one agency, in addition to meeting with colleagues from the other offices, the EEO office has appointed a member of its staff as a liaison with the agency's ER office. An audio-conference is used to bring ER and EEO staffs together at an agency where the discussion includes noticeable trends. The offices which hold these periodic meetings and communications have developed a level of trust which has allowed them to better understand each other's respective roles in addressing conduct inconsistent with applicable laws. These work relations are enhanced over time and, with the continued efforts by all parties, help the agency effectively address these cases of misconduct.

Use alternative discipline when appropriate

Alternative discipline is a tool available to managers and supervisors in correcting improper behavior. Working with ER and legal counsel, supervisors can use their discretion based on all of the information available to assess whether alternative discipline would result in correcting improper behavior. Few agencies use alternative discipline for conduct inconsistent with Antidiscrimination and Whistleblower Protection Laws. However, alternative discipline could be successfully used in some cases by giving an employee a last chance agreement, i.e., holding in abeyance appropriate disciplinary action pending successful completion of some requirement intended to correct inappropriate conduct. In such cases, if the terms of the last chance agreement are not met, the discipline would be imposed immediately, typically without further recourse by the employee disciplined. This alternative means of discipline may be appropriate, for example, when the employee has many years of service free of any previous disciplinary actions or allegations of improper conduct and demonstrates good potential for rehabilitation. Again, a careful analysis of the

facts and circumstances of the case and the employee's work record would be required to successfully utilize alternative discipline as a way to correct improper behavior.

PREVENTIVE MEASURES

Many agencies recognize the necessity for all responsible offices to work with managers and supervisors to address workplace issues before they develop into misconduct requiring disciplinary action. Several agencies, especially the FHCS top-performing organizations, focus on preventing misconduct. A number of approaches were helpful in efforts to deter misconduct. The following is a discussion of preventive measures.

Provide effective training and otherwise raise awareness of supervisors and managers about EEO and ER services and how to handle potential disciplinary issues early

Deliver training specifically for supervisors and managers

As part of an overall training strategy, training targeted toward supervisors and managers allows them to discuss issues, questions and solutions concerning disciplinary issues with their peers. Several agencies have found a variety of vehicles useful in delivering their supervisory training, such as agency leadership institutes or development programs, online training, conferences and classroom training. Through training dedicated to them, supervisors and managers are better able to identify conduct inconsistent with applicable laws and to understand their responsibilities with respect to addressing inappropriate conduct.

Several agencies provided training on taking disciplinary actions as part of a broader HR training program for supervisors and managers. One agency provided training as part of a forum to discuss various human capital issues while another agency's field office required all managers to attend an annual two-day retreat for EEO training. Another agency took advantage of the opportunity presented by a lengthy training program for supervisors and incorporated classroom training on issues such as diversity and anti-harassment.

An advantage of including training in taking disciplinary actions as part of a broader HR curriculum is supervisors are more likely to make time in their busy schedules to attend. Such events lead to increased awareness of antidiscrimination and whistleblower protection issues. In addition, they are opportunities for managers and supervisors to become familiar with who to contact for assistance.

Use a combination of computer-based training and in-person training

While there are pros and cons to using computer-based training versus classroom training, agencies are starting to use more online training. The benefits to using face-to-face training include the potential to increase the participants' understanding of covered materials through classroom questions and answers. The benefits of online computer-based training include ensuring an agency-wide audience receives the same message and its delivery to employees is cost effective.

Several agencies deliver in-person training to small groups to allow more interaction between the trainer and the audience. In addition, attendees learn a great deal through discussion of issues. A few agencies conduct training with a combination of online and at least a simulation of in-person delivery through computer interaction techniques, if not actual face-to-face classes. To give participants a more dynamic learning experience, one agency complemented the online training with audio-visual scenarios to continually engage participants. In another instance, an agency used a combination of online training (on antidiscrimination issues) followed by a panel discussion to receive questions. Such designs can assist agencies to effectively exploit the benefits of both types of training. Moreover, training that is fresh, interesting and diversified in delivery will help keep the audience engaged and attentive.

Include legal counsel as a presenter in training and awareness sessions for supervisors and managers

Agency legal counsel typically is an integral partner in advising management on addressing misconduct and how and when to take disciplinary action. Because it represents the agency before third-party adjudicators when disciplinary actions are challenged, it is important for supervisors and managers to understand when they should seek the advice of agency legal counsel to avoid potential legal liabilities.

Provide training on interpersonal and conflict resolution skills

Supervisors and managers must be able to work and communicate effectively with their employees to ensure workplace issues do not escalate into large problems requiring more formal action. This is a challenging skill to master. Supervisors must learn how to recognize early warning signs and not allow issues to fester and become more serious. To gain these skills, supervisors should be trained in interpersonal communications and related areas. Some agencies offer training opportunities for supervisors and managers on preventive tools and techniques in the areas of team building, emotional intelligence, and conflict resolution in the workplace.

Some agencies characterize on-site conflict resolution training as performing interventions or facilitated discussions. Some agencies have found this type of training to be very productive. At one agency, for example, a one-day session on team building was so helpful to the office, it requested the trainers to provide additional training, and a two-day session on the topic was provided. Follow-up one year later indicated success was sustained beyond the immediate intervention. At another agency, a Conflict-Management Initiative was successfully piloted and will be implemented as ongoing training. It is a one-day session on dealing with interpersonal conflict. Supervisors and managers are trained separately from employees in this program. Sometimes referred to as "soft" skills, interpersonal communication and associated proficiencies are essential components of strong, effective supervision and management.

Use a variety of media to communicate agency policy regarding conduct inconsistent with Antidiscrimination and Whistleblower Protection Laws

To reach the maximum number of employees, it is helpful to use various forms of communication. A multi-media effort, along with other types of outreach to employees, helps promote awareness of agency policies concerning improper conduct. The No FEAR Act requires agencies to ensure employees are trained in the agency's policies concerning antidiscrimination and whistleblower protection. A clearly defined antidiscrimination policy that defines prohibited behaviors was evident at all of the agencies interviewed. Typically, they provided this information on their Intranet or Internet site. Several agencies list the individual names and contact information for EEO counselors on their web sites. Downloadable fact sheets and brochures, EEO training, and agency guidelines were among the online resources agencies made available. Another issues a quarterly EEO newsletter. Yet another agency reaches its employees at remote locations by providing training on a CD-ROM. By communicating the message of equal employment opportunity in multiple ways, agencies are able to better reinforce their policies against conduct inconsistent with applicable laws.

Issue periodic policy statements or endorsements from the agency head

Ideally, the responsibility for setting the tone for agency compliance with anti-discrimination and whistleblower protection laws starts with the agency's top leader. Senior staff, in turn, take their cue from the agency head about the priorities and goals of the organization. While it is important for agencies to post their policies online, it is extremely valuable for the agency head to demonstrate an active involvement in the prevention of conduct inconsistent with Antidiscrimination and

Whistleblower Protection Laws. Over one-half of the agencies' EEO policies were issued and/or signed by the agency head. Many agencies found issuances by the agency head let everyone know, from senior leadership through all employee ranks, discrimination is not tolerated at the agency. When statements or endorsements come from an agency head and are highly visible, they also help signal everyone will be held accountable.

CONCLUSION

The study has identified a wide range of activities and initiatives by agencies to address conduct inconsistent with Antidiscrimination and Whistleblower Protection Laws. Some are unique to individual agencies and some are employed by a number of agencies. Taken together, the best of these activities and initiatives serve as the basis for advisory guidelines intended under the No FEAR Act of 2002 to help all agencies more efficiently and effectively take appropriate disciplinary actions.

ADVISORY GUIDELINES

The No FEAR Act requires the issuance of advisory guidelines incorporating best practices Federal agencies may follow to take appropriate disciplinary actions against employees for conduct inconsistent with Antidiscrimination and Whistleblower Protection Laws. The Act further requires each agency to provide a written statement to the Speaker of the U.S. House of Representatives; the President Pro Tempore of the U.S. Senate; the Chair, Equal Employment Opportunity Commission (EEOC); and the Attorney General stating the extent to which each agency will follow the guidelines. The specific content of the written statements is prescribed in OPM's regulations at 5 CFR 724.404 and must be submitted within 30 working days of date of this report. This government-wide regulation requires the statements also be provided to OPM. The advisory guidelines for taking disciplinary action are:

1. Ensure each agency's disciplinary policy addresses conduct inconsistent with Antidiscrimination and Whistleblower Protection Laws and the agency's human resources office, EEO office, and legal counsel are involved in future modifications to the policy. The policy should clearly set forth the responsibility of managers and supervisors to take appropriate action, should address the sanctions for this type of misconduct, and accurately reflect current developments in law, including case law.

2. Ensure procedures are in place to promptly inform agency management of potential employee conduct inconsistent with Antidiscrimination and Whistleblower Protection Laws which may be the basis for disciplinary action, including an appropriate mechanism by which the EEO office can report potentially inconsistent conduct to an appropriate agency official.

3. Ensure such conduct, if its occurrence is supported by the facts and evidence, is addressed promptly in a manner that is reasonable, based on the circumstances of the case, and, to the extent feasible, consistent, based on any other similar cases (and the degree of similarity).

4. Ensure supervisors and managers, when taking disciplinary actions, work with the employee relations (ER) office as appropriate, as well as the agency's legal counsel or whatever office is responsible for representing the agency in third-party appeals.

5. Ensure ongoing communications among appropriate agency offices such as ER, EEO, and legal counsel concerning new developments in employee misconduct cases and any systemic problems.

6. Ensure ER staff receives adequate training, mentoring, and supervision in order to communicate accurate and well-reasoned advice to supervisors and managers on taking disciplinary action.

Audits provide essential accountability and transparency over government programs. Given the current challenges facing governments and their programs, the oversight provided through auditing is more critical than ever. Government auditing provides objective analysis and information needed to make the decisions necessary to help create a better future. The professional standards presented in this 2011 revision of Government Auditing Standards provide a framework for performing high-quality audit work with competence, integrity, objectivity, and independence to provide accountability and to help improve government operations and services. These standards provide the foundation for government auditors to lead by example in the areas of independence, transparency, accountability, and quality through the audit process.

The 2011 revision of Government Auditing Standards represents a modernized version of the standards, taking into account recent changes in other auditing standards, including international standards. This revision supersedes the 2007 revision. It contains the following major changes from the 2007 revision that reinforce the principles of transparency and accountability and provide the framework for high-quality government audits that add value.

- A conceptual framework for independence was added to provide a means for auditors to assess their independence for activities that are not expressly prohibited in the standards. This more principles-based approach to analyzing independence provides the framework for auditors to assess the unique facts and circumstances that arise during their work.

- This revision drops discussion surrounding certain AICPA Statements on Auditing Standards (SAS) and

Statements on Standards for Attestation Engagements (SSAE) requirements that were incorporated by reference and included in the 2007 revision, as the standards have converged in those areas.

- The definition of validity as an aspect of the quality of evidence has been clarified for performance audits.

Effective with the implementation dates for the 2011 revision of Government Auditing Standards, GAO is also retiring Government Auditing Standards: Answers to Independence Standard Questions (GAO-02-870G, July 2002).

This revision of the standards has gone through an extensive deliberative process, including public comments and input from the Comptroller General's Advisory Council on Government Auditing Standards. The Advisory Council generally consists of about 25 experts in financial and performance auditing and reporting drawn from federal, state, and local government; the private sector; and academia. The views of all parties were thoroughly considered in finalizing the standards.

The 2011 revision of Government Auditing Standards will be effective for financial audits and attestation engagements for periods ending on or after December 15, 2012, and for performance audits beginning on or after December 15, 2011. Early implementation is not permitted.

An electronic version of this document and any interpretive publications can be accessed at http://www.gao.gov/yellowbook.

I extend special thanks to the members of the Advisory Council for their extensive input and feedback through the entire process of developing and finalizing the standards.

Government Auditing: Foundation and Ethical Principles

Introduction

1.01 The concept of accountability for use of public resources and government authority is key to our nation's governing processes. Management and officials entrusted with public resources are responsible for carrying out public functions and providing service to the public effectively, efficiently, economically, ethically, and equitably within the context of the statutory boundaries of the specific government program.

1.02 As reflected in applicable laws, regulations, agreements, and standards, management and officials of government programs are responsible for providing reliable, useful, and timely information for transparency and accountability of these programs and their operations.[1] Legislators, oversight bodies, those charged with governance,[2] and the public need to know whether (1) management and officials manage government resources and use their authority properly and in compliance with laws and regulations; (2) government programs are achieving their objectives and desired outcomes; and (3) government services are provided effectively, efficiently, economically, ethically, and equitably.

1.03 Government auditing is essential in providing accountability to legislators, oversight bodies, those charged with governance, and the public. Audits[3] provide an independent, objective, nonpartisan assessment of the stewardship, performance, or cost of government policies, programs, or operations, depending upon the type and scope of the audit.

[1]See paragraph A1.08 for additional information on management's responsibilities.

[2]See paragraphs A1.05 through A1.07 for additional discussion on the role of those charged with governance.

[3]See paragraph 1.07c for discussion of the term "audit" as it is used in chapters 1 through 3 and corresponding sections of the Appendix.

Purpose and Applicability of GAGAS

1.04 The professional standards and guidance contained in this document, commonly referred to as generally accepted government auditing standards (GAGAS), provide a framework for conducting high quality audits with competence, integrity, objectivity, and independence. These standards are for use by auditors of government entities and entities that receive government awards and audit organizations performing GAGAS audits. Overall, GAGAS contains standards for audits, which are comprised of individual requirements that are identified by terminology as discussed in paragraphs 2.14 through 2.18. GAGAS contains requirements and guidance dealing with ethics, independence, auditors' professional judgment and competence, quality control, performance of the audit, and reporting.

1.05 Audits performed in accordance with GAGAS provide information used for oversight, accountability, transparency, and improvements of government programs and operations. GAGAS contains requirements and guidance to assist auditors in objectively acquiring and evaluating sufficient, appropriate evidence and reporting the results. When auditors perform their work in this manner and comply with GAGAS in reporting the results, their work can lead to improved government management, better decision making and oversight, effective and efficient operations, and accountability and transparency for resources and results.

1.06 Provisions of laws, regulations, contracts, grant agreements, or policies frequently require audits be conducted in accordance with GAGAS. In addition, many auditors and audit organizations voluntarily choose to perform their work in accordance with GAGAS. The requirements and guidance in GAGAS apply to audits of government entities, programs, activities, and functions, and of government assistance administered by contractors, nonprofit entities, and other nongovernmental entities when the use of GAGAS is required or is voluntarily followed.[4]

1.07 This paragraph describes the use of the following terms in GAGAS.

a. The term "auditor" as it is used throughout GAGAS describes individuals performing work in accordance with GAGAS (including audits and attestation engagements) regardless of job title. Therefore, individuals who may have the titles auditor, analyst, practitioner, evaluator, inspector, or other similar titles are considered auditors in GAGAS.

b. The term "audit organization" as it is used throughout GAGAS refers to government audit organizations as well as public accounting or other firms that perform audits and attestation engagements using GAGAS.

c. The term "audit" as it is used in chapters 1 through 3 and corresponding sections of the Appendix refers to financial audits, attestation engagements, and performance audits conducted in accordance with GAGAS.

[4]See paragraphs A1.02 through A1.04 for discussion of laws, regulations, and guidelines that require use of GAGAS.

1.08 A government audit organization can be structurally located within or outside the audited entity.[5] Audit organizations that are external to the audited entity and report to third parties are considered to be external audit organizations. Audit organizations that are accountable to senior management and those charged with governance of the audited entity, and do not generally issue their reports to third parties external to the audited entity, are considered internal audit organizations.

1.09 Some government audit organizations represent a unique hybrid of external auditing and internal auditing in their oversight role for the entities they audit. These audit organizations have external reporting requirements consistent with the reporting requirements for external auditors while at the same time being part of their respective agencies. These audit organizations often have a dual reporting responsibility to their legislative body as well as to the agency head and management.

Ethical Principles

1.10 The ethical principles presented in this section provide the foundation, discipline, and structure, as well as the climate that influence the application of GAGAS. This section sets forth fundamental principles rather than establishing specific standards or requirements.

1.11 Because auditing is essential to government accountability to the public, the public expects audit organizations and auditors who conduct their work in accordance with GAGAS to follow ethical principles. Management of the audit organization sets the tone for

[5]See paragraph 1.19 for a discussion of objectivity and paragraphs 3.27 through 3.32 for requirements related to independence considerations for government auditors and audit organization structure.

ethical behavior throughout the organization by maintaining an ethical culture, clearly communicating acceptable behavior and expectations to each employee, and creating an environment that reinforces and encourages ethical behavior throughout all levels of the organization. The ethical tone maintained and demonstrated by management and staff is an essential element of a positive ethical environment for the audit organization.

1.12 Conducting audit work in accordance with ethical principles is a matter of personal and organizational responsibility. Ethical principles apply in preserving auditor independence,[6] taking on only work that the audit organization is competent[7] to perform, performing high-quality work, and following the applicable standards cited in the auditors' report. Integrity and objectivity are maintained when auditors perform their work and make decisions that are consistent with the broader interest of those relying on the auditors' report, including the public.

1.13 Other ethical requirements or codes of professional conduct may also be applicable to auditors who conduct audits in accordance with GAGAS. For example, individual auditors who are members of professional organizations or are licensed or certified professionals may also be subject to ethical requirements of those professional organizations or licensing bodies. Auditors employed by government entities may also be subject to government ethics laws and regulations.

[6]See paragraphs 3.02 through 3.59 for requirements related to independence.

[7]See paragraphs 3.69 through 3.81 for additional information on competence.

1.14 The ethical principles that guide the work of auditors who conduct audits in accordance with GAGAS are

a. the public interest;

b. integrity;

c. objectivity;

d. proper use of government information, resources, and positions; and

e. professional behavior.

The Public Interest

1.15 The public interest is defined as the collective well-being of the community of people and entities the auditors serve. Observing integrity, objectivity, and independence in discharging their professional responsibilities assists auditors in meeting the principle of serving the public interest and honoring the public trust. The principle of the public interest is fundamental to the responsibilities of auditors and critical in the government environment.

1.16 A distinguishing mark of an auditor is acceptance of responsibility to serve the public interest. This responsibility is critical when auditing in the government environment. GAGAS embodies the concept of accountability for public resources, which is fundamental to serving the public interest.

Integrity

1.17 Public confidence in government is maintained and strengthened by auditors performing their professional responsibilities with integrity. Integrity includes auditors conducting their work with an attitude that is objective, fact-based, nonpartisan, and nonideological with regard

to audited entities and users of the auditors' reports. Within the constraints of applicable confidentiality laws, rules, or policies, communications with the audited entity, those charged with governance, and the individuals contracting for or requesting the audit are expected to be honest, candid, and constructive.

1.18 Making decisions consistent with the public interest of the program or activity under audit is an important part of the principle of integrity. In discharging their professional responsibilities, auditors may encounter conflicting pressures from management of the audited entity, various levels of government, and other likely users. Auditors may also encounter pressures to inappropriately achieve personal or organizational gain. In resolving those conflicts and pressures, acting with integrity means that auditors place priority on their responsibilities to the public interest.

Objectivity

1.19 The credibility of auditing in the government sector is based on auditors' objectivity in discharging their professional responsibilities. Objectivity includes independence of mind and appearance when providing audits, maintaining an attitude of impartiality, having intellectual honesty, and being free of conflicts of interest. Maintaining objectivity includes a continuing assessment of relationships with audited entities and other stakeholders in the context of the auditors' responsibility to the public. The concepts of objectivity and independence are closely related. Independence impairments impact objectivity.[8]

[8]See independence standards at paragraphs 3.02 through 3.59.

Proper Use of Government Information, Resources, and Positions

1.20 Government information, resources, and positions are to be used for official purposes and not inappropriately for the auditor's personal gain or in a manner contrary to law or detrimental to the legitimate interests of the audited entity or the audit organization. This concept includes the proper handling of sensitive or classified information or resources.

1.21 In the government environment, the public's right to the transparency of government information has to be balanced with the proper use of that information. In addition, many government programs are subject to laws and regulations dealing with the disclosure of information. To accomplish this balance, exercising discretion in the use of information acquired in the course of auditors' duties is an important part in achieving this goal. Improperly disclosing any such information to third parties is not an acceptable practice.

1.22 Accountability to the public for the proper use and prudent management of government resources is an essential part of auditors' responsibilities. Protecting and conserving government resources and using them appropriately for authorized activities is an important element in the public's expectations for auditors.

1.23 Misusing the position of an auditor for financial gain or other benefits violates an auditor's fundamental responsibilities. An auditor's credibility can be damaged by actions that could be perceived by an objective third party with knowledge of the relevant information as improperly benefiting an auditor's personal financial interests or those of an immediate or close family member; a general partner; an organization for which the auditor serves as an officer, director, trustee, or employee; or an organization with which the auditor is negotiating concerning future employment.

Professional Behavior

1.24 High expectations for the auditing profession include compliance with all relevant legal, regulatory, and professional obligations and avoidance of any conduct that might bring discredit to auditors' work, including actions that would cause an objective third party with knowledge of the relevant information to conclude that the auditors' work was professionally deficient. Professional behavior includes auditors putting forth an honest effort in performance of their duties and professional services in accordance with the relevant technical and professional standards.

Standards for Use and Application of GAGAS

Introduction

2.01 This chapter establishes requirements and provides guidance for audits[9] performed in accordance with generally accepted government auditing standards (GAGAS). This chapter also identifies the types of audits that may be performed in accordance with GAGAS, explains the terminology that GAGAS uses to identify requirements, explains the relationship between GAGAS and other professional standards, and provides requirements for stating compliance with GAGAS in the auditors' report.

Types of GAGAS Audits and Attestation Engagements

2.02 This section describes the types of audits that audit organizations may perform in accordance with GAGAS. This description is not intended to limit or require the types of audits that may be performed in accordance with GAGAS.

2.03 All audits begin with objectives, and those objectives determine the type of audit to be performed and the applicable standards to be followed. The types of audits that are covered by GAGAS, as defined by their objectives, are classified in this document as financial audits, attestation engagements, and performance audits.

2.04 In some audits, the standards applicable to the specific objective will be apparent. For example, if the objective is to express an opinion on financial statements, the standards for financial audits apply. However, some audits may have multiple or overlapping objectives. For example, if the objectives are to determine the reliability of performance measures, this work can be done in accordance with either the standards for attestation engagements or performance

[9]See paragraph 1.07c for discussion of the term "audit" as it is used in chapters 1 through 3 and corresponding sections of the Appendix.

audits. In cases in which there is a choice between applicable standards, auditors should evaluate users' needs and the auditors' knowledge, skills, and experience in deciding which standards to follow.

2.05 GAGAS requirements apply to the types of audits that may be performed in accordance with GAGAS as follows:

a. Financial audits: the requirements and guidance in chapters 1 through 4 apply.

b. Attestation engagements: the requirements and guidance in chapters 1 through 3, and 5 apply.

c. Performance audits: the requirements and guidance in chapters 1 through 3, 6, and 7 apply.

2.06 Appendix I includes supplemental guidance for auditors and audited entities to assist in the implementation of GAGAS. Appendix I does not establish auditor requirements but instead is intended to facilitate implementation of the standards contained in chapters 2 through 7. Appendix II includes a flowchart which may assist in the application of the conceptual framework for independence.[10]

Financial Audits

2.07 Financial audits provide an independent assessment of whether an entity's reported financial information (e.g., financial condition, results, and use of resources) are presented fairly in accordance with recognized criteria. Financial audits performed in accordance with GAGAS include financial statement audits and other related financial audits:

[10]See paragraphs 3.07 through 3.32 for discussion of the conceptual framework.

a. Financial statement audits: The primary purpose of a financial statement audit is to provide an opinion about whether an entity's financial statements are presented fairly in all material respects in conformity with an applicable financial reporting framework. Reporting on financial statement audits performed in accordance with GAGAS also includes reports on internal control over financial reporting and on compliance with provisions of laws, regulations, contracts, and grant agreements that have a material effect on the financial statements.

b. Other types of financial audits: Other types of financial audits conducted in accordance with GAGAS entail various scopes of work, including: (1) obtaining sufficient, appropriate evidence to form an opinion on single financial statements, specified elements, accounts, or items of a financial statement;[11] (2) issuing letters for underwriters and certain other requesting parties;[12] and (3) auditing compliance with applicable compliance requirements relating to one or more government programs.[13]

2.08 GAGAS incorporates by reference the American Institute of Certified Public Accountants (AICPA)

[11]See American Institute of Certified Public Accountants (AICPA) *Codification of Statements on Auditing Standards* for Auditing (AU-C) Section 805, *Special Considerations – Audits of Single Financial Statements and Specific Elements, Accounts, or Items of a Financial Statement*.

[12]See AICPA AU-C Section 920, *Letters for Underwriters and Certain Other Requesting Parties.*

[13]See AICPA AU-C Section 935, *Compliance Audits.*

Statements on Auditing Standards (SAS).[14] Additional requirements for performing financial audits in accordance with GAGAS are contained in chapter 4. For financial audits performed in accordance with GAGAS, auditors should also comply with chapters 1 through 3.

Attestation Engagements

2.09 Attestation engagements can cover a broad range of financial or nonfinancial objectives about the subject matter or assertion depending on the users' needs.[15] GAGAS incorporates by reference the AICPA's Statements on Standards for Attestation Engagements (SSAE).[16] Additional requirements for performing attestation engagements in accordance with GAGAS are contained in chapter 5. The AICPA's standards recognize attestation engagements that result in an examination, a review, or an agreed-upon procedures report on a subject matter or on an assertion about a subject matter that is the responsibility of another party.[17] The three types of attestation engagements are:

a. Examination: Consists of obtaining sufficient, appropriate evidence to express an opinion on whether the subject matter is based on (or in conformity with) the

[14]See AICPA *Codification of Statements on Auditing Standards* and paragraph 2.20 for additional discussion on the relationship between GAGAS and other professional standards. References to the AICPA *Codification of Statements on Auditing Standards* use an "AU-C" identifier to refer to the clarified SASs instead of an "AU" identifier. "AU-C" is a temporary identifier to avoid confusion with references to existing "AU" sections, which remain effective through 2013. The "AU-C" identifier will revert to "AU" in 2014 AICPA *Codification of Statements on Auditing Standards*, by which time the clarified SASs become fully effective for all engagements.

[15]See A2.01 for examples of objectives for attestation engagements.

[16]See the AICPA *Codification of Statements on Standards for Attestation Engagements* (AT) Sections.

[17]See AICPA AT Section 101, *Attest Engagements* and AT Section 201, *Agreed-Upon Procedures Engagements*.

criteria in all material respects or the assertion is presented (or fairly stated), in all material respects, based on the criteria.

b. Review: Consists of sufficient testing to express a conclusion about whether any information came to the auditors' attention on the basis of the work performed that indicates the subject matter is not based on (or not in conformity with) the criteria or the assertion is not presented (or not fairly stated) in all material respects based on the criteria. Auditors should not perform review-level work for reporting on internal control or compliance with provisions of laws and regulations.[18]

c. Agreed-Upon Procedures: Consists of auditors performing specific procedures on the subject matter and issuing a report of findings based on the agreed-upon procedures. In an agreed-upon procedures engagement, the auditor does not express an opinion or conclusion, but only reports on agreed-upon procedures in the form of procedures and findings related to the specific procedures applied.

Performance Audits

2.10 Performance audits are defined as audits that provide findings or conclusions based on an evaluation of sufficient, appropriate evidence against criteria.[19] Performance audits provide objective analysis to assist management and those charged with governance and oversight in using the information to improve program performance and operations, reduce costs, facilitate decision making by parties with responsibility to oversee or initiate corrective action, and contribute to public accountability. The term "program" is used in

[18]See AICPA AT Sections 501, *Reporting on an Entity's Internal Control Over Financial Reporting* and 601, *Compliance Attestation.*

[19]See paragraphs 6.37 and A6.02 for discussion of criteria.

GAGAS to include government entities, organizations, programs, activities, and functions.

2.11 Performance audit objectives vary widely and include assessments of program effectiveness, economy, and efficiency; internal control; compliance; and prospective analyses. These overall objectives are not mutually exclusive. Thus, a performance audit may have more than one overall objective. For example, a performance audit with an objective of determining or evaluating program effectiveness may also involve an additional objective of evaluating internal controls to determine the reasons for a program's lack of effectiveness or how effectiveness can be improved. Examples of the various types of the performance audit objectives discussed below are included in Appendix I.[20]

a. Program effectiveness and results audit objectives are frequently interrelated with economy and efficiency objectives. Audit objectives that focus on program effectiveness and results typically measure the extent to which a program is achieving its goals and objectives. Audit objectives that focus on economy and efficiency address the costs and resources used to achieve program results.

b. Internal control audit objectives relate to an assessment of one or more components of an organization's system of internal control that is designed to provide reasonable assurance of achieving effective and efficient operations, reliable financial and performance reporting, or compliance with applicable laws and regulations. Internal control objectives also may be relevant when determining the cause of unsatisfactory program performance. Internal control

[20]See paragraphs A2.02 through A2.05 for discussion of performance audit objectives.

comprises the plans, policies, methods, and procedures used to meet the organization's mission, goals, and objectives. Internal control includes the processes and procedures for planning, organizing, directing, and controlling program operations, and management's system for measuring, reporting, and monitoring program performance.[21]

c. Compliance audit objectives relate to an assessment of compliance with criteria established by provisions of laws, regulations, contracts, or grant agreements, or other requirements that could affect the acquisition, protection, use, and disposition of the entity's resources and the quantity, quality, timeliness, and cost of services the entity produces and delivers. Compliance requirements can be either financial or nonfinancial.

d. Prospective analysis audit objectives provide analysis or conclusions about information that is based on assumptions about events that may occur in the future, along with possible actions that the entity may take in response to the future events.

Nonaudit Services Provided by Audit Organizations

2.12 GAGAS does not cover nonaudit services, which are defined as professional services other than audits or attestation engagements. Therefore, auditors do not report that the nonaudit services were conducted in accordance with GAGAS. When performing nonaudit services for an entity for which the audit organization performs a GAGAS audit, audit organizations should communicate with requestors and those charged with governance to clarify that the work performed does not constitute an audit conducted in accordance with GAGAS.

[21]See paragraphs A.03 through A.04 for additional discussion of internal control.

2.13 When audit organizations provide nonaudit services to entities for which they also provide GAGAS audits, they should assess the impact that providing those nonaudit services may have on auditor and audit organization independence and respond to any identified threats to independence in accordance with the GAGAS independence standard.[22]

Use of Terminology to Define GAGAS Requirements

2.14 GAGAS contains requirements together with related guidance in the form of application and other explanatory material. The terminology is consistent with the terminology defined in the AICPA's *Codification of Statements on Auditing Standards*.[23] Auditors have a responsibility to consider the entire text of GAGAS in carrying out their work and in understanding and applying the requirements in GAGAS. Not every paragraph of GAGAS carries a requirement that auditors and audit organizations are expected to fulfill. Rather, the requirements are identified through use of specific language.

2.15 GAGAS uses two categories of requirements, identified by specific terms, to describe the degree of responsibility they impose on auditors and audit organizations, as follows:

a. Unconditional requirements: Auditors and audit organizations must comply with an unconditional requirement in all cases where such requirement is relevant. GAGAS uses the word *must* to indicate an unconditional requirement.

[22]See paragraphs 3.02 through 3.59 for the GAGAS independence standard.

[23]See AICPA AU-C Section 200, *Overall Objectives of the Independent Auditor and the Conduct of an Audit in Accordance With Generally Accepted Auditing Standards*.

b. Presumptively mandatory requirements: Auditors and audit organizations must comply with a presumptively mandatory requirement in all cases where such a requirement is relevant except in rare circumstances discussed in paragraph 2.16. GAGAS uses the word *should* to indicate a presumptively mandatory requirement.[24]

2.16 In rare circumstances, auditors and audit organizations may determine it necessary to depart from a relevant presumptively mandatory requirement. In such rare circumstances, auditors should perform alternative procedures to achieve the intent of that requirement. The need for the auditors to depart from a relevant presumptively mandatory requirement is expected to arise only when the requirement is for a specific procedure to be performed and, in the specific circumstances of the audit, that procedure would be ineffective in achieving the intent of the requirement. If, in rare circumstances, auditors judge it necessary to depart from a relevant presumptively mandatory requirement, they must document their justification for the departure and how the alternative procedures performed in the circumstances were sufficient to achieve the intent of that requirement.

2.17 In addition to requirements as identified in paragraph 2.15, GAGAS contains related guidance in the form of application and other explanatory material. The application and other explanatory material provides further explanation of the requirements and guidance for carrying them out. In particular, it may explain more precisely what a requirement means or is intended to cover or include examples of procedures that may be appropriate in the circumstances. Although such guidance does not in itself impose a requirement, it is

[24]See paragraph 2.25 for additional documentation requirements for departures from GAGAS requirements.

relevant to the proper application of the requirements. Auditors should have an understanding of the application and other explanatory material; how auditors apply the guidance in the audit depends on the exercise of professional judgment in the circumstances consistent with the objective of the requirement. The words "may," "might," and "could" are used to describe these actions and procedures. The application and other explanatory material may also provide background information on matters addressed in GAGAS.

2.18 Auditors also use "interpretive publications" in planning and performing GAGAS audits. Interpretive publications are recommendations on the application of GAGAS in specific circumstances, including audits for entities in specialized industries. Interpretive publications, such as related GAGAS guidance documents and interpretations, are issued under the authority of the Government Accountability Office (GAO) to provide additional guidance on the application of GAGAS.[25] Interpretive publications are not auditing standards, but have the same level of authority as application and other explanatory material in GAGAS.

Relationship between GAGAS and Other Professional Standards

2.19 Auditors may use GAGAS in conjunction with professional standards issued by other authoritative bodies.

2.20 The relationship between GAGAS and other professional standards for financial audits and attestation engagements is as follows:

[25]See http://www.gao.gov/yellowbook for a listing of related GAGAS interpretive publications.

a. The AICPA has established professional standards that apply to financial audits and attestation engagements for nonissuers (entities other than issuers[26] under the Sarbanes-Oxley Act of 2002, such as privately held companies, nonprofit entities, and government entities) performed by certified public accountants (CPA). For financial audits and attestation engagements, GAGAS incorporates by reference AICPA standards, as discussed in paragraph 2.08.

b. The International Auditing and Assurance Standards Board (IAASB) has established professional standards that apply to financial audits and assurance engagements. Auditors may elect to use the IAASB standards and the related International Standards on Auditing (ISA) and International Standards on Assurance Engagements (ISAE) in conjunction with GAGAS.

c. The Public Company Accounting Oversight Board (PCAOB) has established professional standards that apply to financial audits and attestation engagements for issuers (generally, publicly traded companies with a reporting obligation under the Securities Exchange Act of 1934). Auditors may elect to use the PCAOB standards in conjunction with GAGAS.

2.21 For performance audits, GAGAS does not incorporate other standards by reference, but recognizes that auditors may use or may be required to use other professional standards in conjunction with GAGAS, such as the following:

[26]See the Sarbanes-Oxley Act of 2002 (Public Law 107-204) for discussion of issuers.

a. *International Standards for the Professional Practice of Internal Auditing*, The Institute of Internal Auditors, Inc.;

b. *Guiding Principles for Evaluators*, American Evaluation Association;

c. *The Program Evaluation Standards*, Joint Committee on Standards for Education Evaluation;

d. *Standards for Educational and Psychological Testing*, American Psychological Association; and

e. *IT Standards, Guidelines, and Tools and Techniques for Audit and Assurance and Control Professionals*, ISACA.

2.22 When auditors cite compliance with both GAGAS and another set of standards, such as those listed in paragraphs 2.20 and 2.21, auditors should refer to paragraph 2.24 for the requirements for citing compliance with GAGAS. In addition to citing GAGAS, auditors may also cite the use of other standards in their reports when they have also met the requirements for citing compliance with the other standards.[27] Auditors should refer to the other set of standards for the basis for citing compliance with those standards.

Stating Compliance with GAGAS in the Auditors' Report

2.23 When auditors are required to perform an audit in accordance with GAGAS or are representing to others that they did so, they should cite compliance with GAGAS in the auditors' report as set forth in paragraphs 2.24 through 2.25.

[27]See paragraphs 4.18, 5.19, 5.51, and 5.61 for additional requirements for citing compliance with standards of the AICPA.

2.24 Auditors should include one of the following types of GAGAS compliance statements in reports on GAGAS audits, as appropriate.[28]

a. Unmodified GAGAS compliance statement: Stating that the auditor performed the audit in accordance with GAGAS. Auditors should include an unmodified GAGAS compliance statement in the auditors' report when they have (1) followed unconditional and applicable presumptively mandatory GAGAS requirements, or (2) have followed unconditional requirements, and documented justification for any departures from applicable presumptively mandatory requirements and have achieved the objectives of those requirements through other means.

b. Modified GAGAS compliance statement: Stating either that (1) the auditor performed the audit in accordance with GAGAS, except for specific applicable requirements that were not followed, or (2) because of the significance of the departure(s) from the requirements, the auditor was unable to and did not perform the audit in accordance with GAGAS. Situations when auditors use modified compliance statements also include scope limitations, such as restrictions on access to records, government officials, or other individuals needed to conduct the audit. When auditors use a modified GAGAS statement, they should disclose in the report the applicable requirement(s) not followed, the reasons for not following the requirement(s), and how not following the requirement(s) affected, or could have affected, the audit and the assurance provided.

[28]See paragraph A2.06 for additional discussion of GAGAS compliance statements.

2.25 When auditors do not comply with applicable requirement(s), they should (1) assess the significance of the noncompliance to the audit objectives, (2) document the assessment, along with their reasons for not following the requirement(s), and (3) determine the type of GAGAS compliance statement. The auditors' determination is a matter of professional judgment, which is affected by the significance of the requirement(s) not followed in relation to the audit objectives.

General Standards

Introduction

3.01 This chapter establishes general standards and provides guidance for performing financial audits, attestation engagements, and performance audits under generally accepted government auditing standards (GAGAS). These general standards, along with the overarching ethical principles presented in chapter 1, establish a foundation for the credibility of auditors' work. These general standards emphasize the importance of the independence of the audit organization and its individual auditors; the exercise of professional judgment in the performance of work and the preparation of related reports; the competence of staff; and quality control and assurance.

Independence

3.02 In all matters relating to the audit work, the audit organization and the individual auditor, whether government or public, must be independent.

3.03 Independence comprises:

a. Independence of Mind
The state of mind that permits the performance of an audit without being affected by influences that compromise professional judgment, thereby allowing an individual to act with integrity and exercise objectivity and professional skepticism.

b. Independence in Appearance
The absence of circumstances that would cause a reasonable and informed third party, having knowledge of the relevant information, to reasonably conclude that the integrity, objectivity, or professional skepticism of an audit organization or member of the audit team had been compromised.

3.04 Auditors and audit organizations maintain independence so that their opinions, findings,

conclusions, judgments, and recommendations will be impartial and viewed as impartial by reasonable and informed third parties. Auditors should avoid situations that could lead reasonable and informed third parties to conclude that the auditors are not independent and thus are not capable of exercising objective and impartial judgment on all issues associated with conducting the audit and reporting on the work.

3.05 Except under the limited circumstances discussed in paragraphs 3.47 and 3.48, auditors should be independent from an audited entity during:

a. any period of time that falls within the period covered by the financial statements or subject matter of the audit, and

b. the period of the professional engagement, which begins when the auditors either sign an initial engagement letter or other agreement to perform an audit or begin to perform an audit, whichever is earlier. The period lasts for the entire duration of the professional relationship (which, for recurring audits, could cover many periods) and ends with the formal or informal notification, either by the auditors or the audited entity, of the termination of the professional relationship or by the issuance of a report, whichever is later. Accordingly, the period of professional engagement does not necessarily end with the issuance of a report and recommence with the beginning of the following year's audit or a subsequent audit with a similar objective.

3.06 GAGAS's practical consideration of independence consists of four interrelated sections, providing:

a. a conceptual framework for making independence determinations based on facts and circumstances that are often unique to specific environments;

b. requirements for and guidance on independence for audit organizations that are structurally located within the entities they audit;

c. requirements for and guidance on independence for auditors performing nonaudit services, including indication of specific nonaudit services that always impair independence and others that would not normally impair independence; and

d. requirements for and guidance on documentation necessary to support adequate consideration of auditor independence.

GAGAS Conceptual Framework Approach to Independence

3.07 Many different circumstances, or combinations of circumstances, are relevant in evaluating threats to independence. Therefore, GAGAS establishes a conceptual framework that auditors use to identify, evaluate, and apply safeguards to address threats to independence.[29] The conceptual framework assists auditors in maintaining both independence of mind and independence in appearance. It can be applied to many variations in circumstances that create threats to independence and allows auditors to address threats to independence that result from activities that are not specifically prohibited by GAGAS.

3.08 Auditors should apply the conceptual framework at the audit organization, audit, and individual auditor levels to:

a. identify threats to independence;

[29]See Appendix II for a flowchart to assist in the application of the conceptual framework for independence.

b. evaluate the significance of the threats identified, both individually and in the aggregate; and

c. apply safeguards as necessary to eliminate the threats or reduce them to an acceptable level.

3.09 If no safeguards are available to eliminate an unacceptable threat or reduce it to an acceptable level, independence would be considered impaired.

3.10 The use of the term “audit organization” in GAGAS is described in paragraph 1.07. For consideration of auditor independence, offices or units of an audit organization, or related or affiliated entities under common control, are not differentiated from one another. Consequently, for the purposes of independence evaluation using the conceptual framework, an audit organization that includes multiple offices or units, or includes multiple entities related or affiliated through common control, is considered to be one audit organization. Common ownership may also affect independence in appearance regardless of the level of control.

3.11 The GAGAS section on nonaudit services in paragraphs 3.33 through 3.58 provides requirements and guidance on evaluating threats to independence related to nonaudit services provided by auditors to audited entities. That section also enumerates specific nonaudit services that always impair auditor independence with respect to audited entities and that auditors are prohibited from providing to audited entities.

3.12 The following sections discuss threats to independence, safeguards or controls to eliminate or reduce threats, and application of the conceptual framework for independence.

Threats

3.13 Threats to independence are circumstances that could impair independence. Whether independence is impaired depends on the nature of the threat, whether the threat is of such significance that it would compromise an auditor's professional judgment or create the appearance that the auditor's professional judgment may be compromised, and on the specific safeguards applied to eliminate the threat or reduce it to an acceptable level. Threats are conditions to be evaluated using the conceptual framework. Threats do not necessarily impair independence.

3.14 Threats to independence may be created by a wide range of relationships and circumstances. Auditors should evaluate the following broad categories of threats to independence when threats are being identified and evaluated:[30]

a. Self-interest threat - the threat that a financial or other interest will inappropriately influence an auditor's judgment or behavior;

b. Self-review threat - the threat that an auditor or audit organization that has provided nonaudit services will not appropriately evaluate the results of previous judgments made or services performed as part of the nonaudit services when forming a judgment significant to an audit;

c. Bias threat - the threat that an auditor will, as a result of political, ideological, social, or other convictions, take a position that is not objective;

d. Familiarity threat - the threat that aspects of a relationship with management or personnel of an

[30]See A3.02 through A3.09 for further discussion and examples of threats.

audited entity, such as a close or long relationship, or that of an immediate or close family member, will lead an auditor to take a position that is not objective;

e. Undue influence threat - the threat that external influences or pressures will impact an auditor's ability to make independent and objective judgments;

f. Management participation threat - the threat that results from an auditor's taking on the role of management or otherwise performing management functions on behalf of the entity undergoing an audit; and

g. Structural threat - the threat that an audit organization's placement within a government entity, in combination with the structure of the government entity being audited, will impact the audit organization's ability to perform work and report results objectively.

3.15 Circumstances that result in a threat to independence in one of the above categories may result in other threats as well. For example, a circumstance resulting in a structural threat to independence may also expose auditors to undue influence and management participation threats.

Safeguards

3.16 Safeguards are controls designed to eliminate or reduce to an acceptable level threats to independence. Under the conceptual framework, the auditor applies safeguards that address the specific facts and circumstances under which threats to independence exist. In some cases, multiple safeguards may be necessary to address a threat. The list of safeguards in this section provides examples that may be effective under certain circumstances. The list cannot provide safeguards for all circumstances. It may, however, provide a starting point for auditors who have identified threats to independence and are considering what

safeguards could eliminate those threats or reduce them to an acceptable level.

3.17 Examples of safeguards include:

a. consulting an independent third party, such as a professional organization, a professional regulatory body, or another auditor;

b. involving another audit organization to perform or reperform part of the audit;

c. having a professional staff member who was not a member of the audit team review the work performed; and

d. removing an individual from an audit team when that individual's financial or other interests or relationships pose a threat to independence.

3.18 Depending on the nature of the audit, an auditor may also be able to place limited reliance on safeguards that the entity has implemented. It is not possible to rely solely on such safeguards to eliminate threats or reduce them to an acceptable level.

3.19 Examples of safeguards within the entity's systems and procedures include:

a. an entity requirement that persons other than management ratify or approve the appointment of an audit organization to perform an audit;

b. internal procedures at the entity that ensure objective choices in commissioning nonaudit services; and

c. a governance structure at the entity that provides appropriate oversight and communications regarding the audit organization's services.

Application of the Conceptual Framework

3.20 Auditors should evaluate threats to independence using the conceptual framework when the facts and circumstances under which the auditors perform their work may create or augment threats to independence. Auditors should evaluate threats both individually and in the aggregate because threats can have a cumulative effect on an auditor's independence.

3.21 Facts and circumstances that create threats to independence can result from events such as the start of a new audit; assignment of new staff to an ongoing audit; and acceptance of a nonaudit service at an audited entity. Many other events can result in threats to independence. Auditors use professional judgment to determine whether the facts and circumstances created by an event warrant use of the conceptual framework. Whenever relevant new information about a threat to independence comes to the attention of the auditor during the audit, the auditor should evaluate the significance of the threat in accordance with the conceptual framework.

3.22 Auditors should determine whether identified threats to independence are at an acceptable level or have been eliminated or reduced to an acceptable level. A threat to independence is not acceptable if it either (a) could impact the auditor's ability to perform an audit without being affected by influences that compromise professional judgment or (b) could expose the auditor or audit organization to circumstances that would cause a reasonable and informed third party to conclude that the integrity, objectivity, or professional skepticism of the audit organization, or a member of the audit team, had been compromised.

3.23 When an auditor identifies threats to independence and, based on an evaluation of those threats, determines that they are not at an acceptable level, the auditor should determine whether appropriate

safeguards are available and can be applied to eliminate the threats or reduce them to an acceptable level. The auditor should exercise professional judgment in making that determination, and should take into account whether both independence of mind and independence in appearance are maintained. The auditor should evaluate both qualitative and quantitative factors when determining the significance of a threat.

3.24 In cases where threats to independence are not at an acceptable level, thereby requiring the application of safeguards, the auditors should document the threats identified and the safeguards applied to eliminate the threats or reduce them to an acceptable level.

3.25 Certain conditions may lead to threats that are so significant that they cannot be eliminated or reduced to an acceptable level through the application of safeguards, resulting in impaired independence. Under such conditions, auditors should decline to perform a prospective audit or terminate an audit in progress.[31]

3.26 If a threat to independence is initially identified after the auditors' report is issued, the auditor should evaluate the threat's impact on the audit and on GAGAS compliance. If the auditors determine that the newly identified threat had an impact on the audit that would have resulted in the auditors' report being different from the report issued had the auditors been aware of it, they should communicate in the same manner as that used to originally distribute the report to those charged with governance, the appropriate officials of the audited entity, the appropriate officials of the

[31]See paragraph 3.44 for a discussion of conditions under which an auditor may be required by law or regulation to perform both an audit and a nonaudit service and cannot decline to perform or terminate the service. See the discussion of nonaudit services beginning in paragraph 3.45 for consideration of threats related to nonaudit services that cannot be eliminated or reduced to an appropriate level.

organizations requiring or arranging for the audits, and other known users, so that they do not continue to rely on findings or conclusions that were impacted by the threat to independence. If the report was previously posted to the auditors' publicly accessible website, the auditors should remove the report and post a public notification that the report was removed. The auditors should then determine whether to conduct additional audit work necessary to reissue the report, including any revised findings or conclusions or repost the original report if the additional audit work does not result in a change in findings or conclusions.

Government Auditors and Audit Organization Structure

3.27 The ability of audit organizations in government entities to perform work and report the results objectively can be affected by placement within government and the structure of the government entity being audited. The independence standard applies to auditors in government entities whether they report to third parties externally (external auditors), to senior management within the audited entity (internal auditors), or to both.

External Auditor Independence

3.28 Audit organizations that are structurally located within government entities are often subject to constitutional or statutory safeguards that mitigate the effects of structural threats to independence. For external audit organizations, such safeguards may include governmental structures under which a government audit organization is:

a. at a level of government other than the one of which the audited entity is part (federal, state, or local); for example, federal auditors auditing a state government program; or

b. placed within a different branch of government from that of the audited entity; for example, legislative auditors auditing an executive branch program.

3.29 Safeguards other than those described above may mitigate threats resulting from governmental structures. For external auditors or auditors who report both externally and internally, structural threats may be mitigated if the head of an audit organization meets any of the following criteria in accordance with constitutional or statutory requirements:

a. directly elected by voters of the jurisdiction being audited;

b. elected or appointed by a legislative body, subject to removal by a legislative body, and reports the results of audits to and is accountable to a legislative body;

c. appointed by someone other than a legislative body, so long as the appointment is confirmed by a legislative body and removal from the position is subject to oversight or approval by a legislative body, and reports the results of audits to and is accountable to a legislative body; or

d. appointed by, accountable to, reports to, and can only be removed by a statutorily created governing body, the majority of whose members are independently elected or appointed and are outside the organization being audited.

3.30 In addition to the criteria in paragraphs 3.28 and 3.29, GAGAS recognizes that there may be other organizational structures under which external audit organizations in government entities could be considered to be independent. If appropriately designed and implemented, these structures provide safeguards that prevent the audited entity from interfering with the

audit organization's ability to perform the work and report the results impartially. For an external audit organization or one that reports both externally and internally to be considered independent under a structure different from the ones listed in paragraphs 3.28 and 3.29, the audit organization should have all of the following safeguards. In such situations, the audit organization should document how each of the following safeguards was satisfied and provide the documentation to those performing quality control monitoring and to the external peer reviewers to determine whether all the necessary safeguards are in place. The following safeguards may also be used to augment those listed in paragraphs 3.28 and 3.29:

a. statutory protections that prevent the audited entity from abolishing the audit organization;

b. statutory protections that require that if the head of the audit organization is removed from office, the head of the agency reports this fact and the reasons for the removal to the legislative body;

c. statutory protections that prevent the audited entity from interfering with the initiation, scope, timing, and completion of any audit;

d. statutory protections that prevent the audited entity from interfering with audit reporting, including the findings and conclusions or the manner, means, or timing of the audit organization's reports;

e. statutory protections that require the audit organization to report to a legislative body or other independent governing body on a recurring basis;

f. statutory protections that give the audit organization sole authority over the selection, retention, advancement, and dismissal of its staff; and

g. statutory access to records and documents related to the agency, program, or function being audited and access to government officials or other individuals as needed to conduct the audit.

Internal Auditor Independence

3.31 Certain entities employ auditors to work for entity management. These auditors may be subject to administrative direction from persons involved in the entity management process. Such audit organizations are internal audit functions and are encouraged to use the Institute of Internal Auditors (IIA) *International Standards for the Professional Practice of Internal Auditing* in conjunction with GAGAS. In accordance with GAGAS, internal auditors who work under the direction of the audited entity's management are considered independent for the purposes of reporting internally if the head of the audit organization meets all of the following criteria:

a. is accountable to the head or deputy head of the government entity or to those charged with governance;

b. reports the audit results both to the head or deputy head of the government entity and to those charged with governance;

c. is located organizationally outside the staff or line-management function of the unit under audit;

d. has access to those charged with governance; and

e. is sufficiently removed from political pressures to conduct audits and report findings, opinions, and conclusions objectively without fear of political reprisal.

3.32 When internal audit organizations perform audits of external parties such as auditing contractors or outside party agreements, and no impairments to independence exist, the audit organization can be

considered independent as an external audit organization of those external parties.

Provision of Nonaudit Services to Audited Entities

3.33 Auditors have traditionally provided a range of nonaudit services that are consistent with their skills and expertise to entities at which they perform audits. Providing such nonaudit services may create threats to an auditor's independence.

Requirements for Performing Nonaudit Services

3.34 Before an auditor agrees to provide a nonaudit service to an audited entity, the auditor should determine whether providing such a service would create a threat to independence, either by itself or in aggregate with other nonaudit services provided, with respect to any GAGAS audit it performs. A critical component of this determination is consideration of management's ability to effectively oversee the nonaudit service to be performed. The auditor should determine that the audited entity has designated an individual who possesses suitable skill, knowledge, or experience, and that the individual understands the services to be performed sufficiently to oversee them. The individual is not required to possess the expertise to perform or reperform the services. The auditor should document consideration of management's ability to effectively oversee nonaudit services to be performed.

3.35 If an auditor were to assume management responsibilities for an audited entity, the management participation threats created would be so significant that no safeguards could reduce them to an acceptable level. Management responsibilities involve leading and directing an entity, including making decisions regarding the acquisition, deployment and control of human, financial, physical, and intangible resources.

3.36 Whether an activity is a management responsibility depends on the facts and circumstances and auditors

exercise professional judgment in identifying these activities. Examples of activities that are considered management responsibilities and would therefore impair independence if performed for an audited entity include:

a. setting policies and strategic direction for the audited entity;

b. directing and accepting responsibility for the actions of the audited entity's employees in the performance of their routine, recurring activities;

c. having custody of an audited entity's assets;

d. reporting to those charged with governance on behalf of management;

e. deciding which of the auditor's or outside third party's recommendations to implement;

f. accepting responsibility for the management of an audited entity's project;

g. accepting responsibility for designing, implementing, or maintaining internal control;

h. providing services that are intended to be used as management's primary basis for making decisions that are significant to the subject matter of the audit;

i. developing an audited entity's performance measurement system when that system is material or significant to the subject matter of the audit; and

j. serving as a voting member of an audited entity's management committee or board of directors.

3.37 Auditors performing nonaudit services for entities for which they perform audits should obtain assurance that audited entity management performs the following functions in connection with the nonaudit services:

a. assumes all management responsibilities;

b. oversees the services, by designating an individual, preferably within senior management, who possess suitable skill, knowledge, or experience;[32]

c. evaluates the adequacy and results of the services performed; and

d. accepts responsibility for the results of the services.

3.38 In cases where the audited entity is unable or unwilling to assume these responsibilities (for example, the audited entity does not have an individual with suitable skill, knowledge, or experience to oversee the nonaudit services provided, or is unwilling to perform such functions due to lack of time or desire), the auditor's provision of these services would impair independence.

3.39 In connection with nonaudit services, auditors should establish and document their understanding with the audited entity's management or those charged with governance, as appropriate, regarding the following:

a. objectives of the nonaudit service;

b. services to be performed;

c. audited entity's acceptance of its responsibilities;

[32]See paragraph 3.34 for additional discussion of management's ability to effectively oversee the nonaudit service.

d. the auditor's responsibilities; and

e. any limitations of the nonaudit service.

3.40 Routine activities performed by auditors that relate directly to the performance of an audit, such as providing advice and responding to questions as part of an audit, are not considered nonaudit services under GAGAS. Such routine activities generally involve providing advice or assistance to the entity on an informal basis as part of an audit. Routine activities typically are insignificant in terms of time incurred or resources expended and generally do not result in a specific project or engagement or in the auditors producing a formal report or other formal work product. However, activities such as financial statement preparation, cash to accrual conversions, and reconciliations are considered nonaudit services under GAGAS, not routine activities related to the performance of an audit, and are evaluated using the conceptual framework as discussed in paragraph 3.46.

3.41 Routine activities directly related to an audit include the following:

a. providing advice to the audited entity on an accounting matter as an ancillary part of the overall financial audit;

b. researching and responding to the audited entity's technical questions on relevant tax laws as an ancillary part of providing tax services;

c. providing advice to the audited entity on routine business matters;

d. educating the audited entity on matters within the technical expertise of the auditors; and

e. providing information to the audited entity that is readily available to the auditors, such as best practices and benchmarking studies.

3.42 An auditor who previously performed nonaudit services for an entity that is a prospective subject of an audit should evaluate the impact of those nonaudit services on independence before accepting an audit. If the nonaudit services were performed in the period to be covered by the audit, the auditor should (1) determine if the nonaudit service is expressly prohibited by GAGAS and, if not, (2) determine whether a threat to independence exists and address any threats noted in accordance with the conceptual framework.

3.43 Nonaudit services provided by auditors can impact independence of mind and in appearance in periods subsequent to the period in which the nonaudit service was provided. For example, if auditors have designed and implemented an accounting and financial reporting system that is expected to be in place for many years, a threat to independence in appearance for future financial audits or attestation engagements performed by those auditors may exist in subsequent periods. For recurring audits, having another independent audit organization perform an audit of the areas affected by the nonaudit service may provide a safeguard that allows the audit organization that provided the nonaudit service to mitigate the threat to its independence. Auditors use professional judgment to determine whether the safeguards adequately mitigate the threats.

3.44 An auditor in a government entity may be required to perform a nonaudit service that could impair the auditor's independence with respect to a required audit. If the auditor cannot, as a consequence of constitutional or statutory requirements over which the auditor has no control, implement safeguards to reduce the resulting

threat to an acceptable level, or decline to perform or terminate a nonaudit service that is incompatible with audit responsibilities, the auditor should disclose the nature of the threat that could not be eliminated or reduced to an acceptable level and modify the GAGAS compliance statement accordingly.[33]

Consideration of Specific Nonaudit Services

3.45 By their nature, certain nonaudit services directly support the entity's operations and impair auditors' ability to maintain independence in mind and appearance. The nonaudit services discussed below are among those frequently requested of auditors working in a government environment. Some aspects of these services will impair an auditor's ability to perform audits for the entities for which the services are provided. The specific services indicated are not the only nonaudit services that would impair an auditor's independence.

3.46 Auditors may be able to provide nonaudit services in the broad areas indicated in paragraphs 3.49 through 3.58 without impairing independence if (1) the nonaudit services are not expressly prohibited, (2) the auditor has determined that the requirements for performing nonaudit services in paragraphs 3.34 through 3.44 have been met, and (3) any significant threats to independence have been eliminated or reduced to an acceptable level through the application of safeguards. Auditors should use the conceptual framework to evaluate independence given the facts and circumstances of individual services not specifically prohibited in this section.

3.47 For performance audits and agreed-upon procedures engagements, nonaudit services that are

[33]See paragraphs 2.24 and 2.25 for the discussion of modifications to the GAGAS compliance statement.

otherwise prohibited by GAGAS may be provided when such services do not relate to the specific subject matter of the engagement.

3.48 For financial statement audits and examination or review engagements, a nonaudit service performed during the period covered by the financial statements may not impair an auditor's independence with respect to those financial statements provided that the following conditions exist:

a. the nonaudit service was provided prior to the period of professional engagement;

b. the nonaudit service related only to periods prior to the period covered by the financial statements; and

c. the financial statements for the period to which the nonaudit service did relate were audited by another auditor (or in the case of an examination or review engagement, examined, reviewed, or audited by another auditor as appropriate).

Management Responsibilities

3.49 If performed on behalf of an audited entity by the entity's auditor, management responsibilities such as those listed in paragraph 3.36 would create management participation threats so significant that no safeguards could reduce them to an acceptable level. Consequently the auditor's independence would be impaired with respect to that entity.

Preparing Accounting Records and Financial Statements

3.50 Some services involving preparation of accounting records always impair an auditor's independence with respect to an audited entity. These services include:

a. determining or changing journal entries, account codes or classifications for transactions, or other accounting records for the entity without obtaining management's approval;

b. authorizing or approving the entity's transactions; and

c. preparing or making changes to source documents without management approval. Source documents include those providing evidence that transactions have occurred (for example, purchase orders, payroll time records, customer orders, and contracts). Such records also include an audited entity's general ledger and subsidiary records or equivalent.

3.51 Management is responsible for the preparation and fair presentation of the financial statements in accordance with the applicable financial reporting framework, even if the auditor assisted in drafting those financial statements. Consequently, an auditor's acceptance of responsibility for the preparation and fair presentation of financial statements that the auditor will subsequently audit would impair the auditor's independence.

3.52 Services related to preparing accounting records and financial statements that an auditor may be able to provide to an audited entity if the conditions in paragraph 3.46 are met include:

a. recording transactions for which management has determined or approved the appropriate account classification, or posting coded transactions to an audited entity's general ledger;

b. preparing financial statements based on information in the trial balance;

c. posting entries that have been approved by an audited entity's management to the entity's trial balance;

d. preparing account reconciliations that identify reconciling items for the audited entity management's evaluation; and

e. proposing standard, adjusting, or correcting journal entries or other changes affecting the financial statements to an audited entity's management provided management reviews and accepts the entries and the auditor is satisfied that management understands the nature of the proposed entries and the impact the entries have on the financial statements.

Internal Audit Assistance Services Provided by External Auditors

3.53 Internal audit assistance services involve assisting an entity in the performance of its internal audit activities. Certain internal audit assistance activities always impair an external auditor's independence with respect to an audited entity. These activities include:

a. setting internal audit policies or the strategic direction of internal audit activities;

b. performing procedures that form part of the internal control, such as reviewing and approving changes to employee data access privileges; and

c. determining the scope of the internal audit function and resulting work.

Internal Control Monitoring as a Nonaudit Service

3.54 Accepting responsibility for designing, implementing or maintaining internal control includes accepting responsibility for designing, implementing, or maintaining monitoring procedures.[34] Monitoring involves the use of either ongoing monitoring procedures or separate evaluations to gather and analyze persuasive information supporting conclusions about the effectiveness of the internal control system.

[34]See A.03 and A.04 for a discussion of internal control.

Ongoing monitoring procedures performed on behalf of management are built into the routine, recurring operating activities of an organization. Therefore, the management participation threat created if an auditor performs or supervises ongoing monitoring procedures is so significant that no safeguards could reduce the threat to an acceptable level.

3.55 Separate evaluations are sometimes performed as nonaudit services by individuals who are not directly involved in the operation of the controls being monitored. As such, it is possible for an auditor to provide an objective analysis of control effectiveness by performing separate evaluations without creating a management participation threat that would impair independence. However, in all such cases, the significance of the threat created by performing separate evaluations should be evaluated and safeguards applied when necessary to eliminate the threat or reduce it to an acceptable level. Auditors should assess the frequency of the separate evaluations as well as the scope or extent of the controls (in relation to the scope of the audit performed) being tested when evaluating the significance of the threat. An evaluation prepared as a nonaudit service is not a substitute for audit procedures in a GAGAS audit.

Information Technology Systems Services

3.56 Services related to information technology (IT) systems include the design or implementation of hardware or software systems. The systems may aggregate source data, form part of the internal control over the subject matter of the audit, or generate information that affects the subject matter of the audit. IT services that would impair independence if provided by an audit organization to an audited entity include:

a. designing or developing a financial or other IT system that will play a significant role in the management of an

area of operations that is or will be the subject matter of an audit;

b. providing services that entail making other than insignificant modifications to the source code underlying such a system; and

c. operating or supervising the operation of such a system.

Valuation Services

3.57 A valuation comprises the making of assumptions with regard to future developments, the application of appropriate methodologies and techniques, and the combination of both to compute a certain value, or range of values, for an asset, a liability, or an entity as a whole. If an audit organization provides valuation services to an audited entity and the valuations would have a material effect, separately or in the aggregate, on the financial statements or other information on which it is reporting, and the valuation involves a significant degree of subjectivity, the audit organization's independence would be impaired.

Other Nonaudit Services

3.58 Provision of certain other nonaudit services always impairs an external auditor's independence with respect to an audited entity. These activities include:

a. Non tax disbursement – prohibited nonaudit services

(1) Accepting responsibility to authorize payment of audited entity funds, electronically or otherwise.

(2) Accepting responsibility for signing or cosigning audited entity checks, even if only in emergency situations.

(3) Maintaining an audited entity's bank account or otherwise having custody of an audited entity's funds or

making credit or banking decisions for the audited entity.

(4) Approving vendor invoices for payment.

b. Benefit plan administration – prohibited nonaudit services

(1) Making policy decisions on behalf of audited entity management.

(2) When dealing with plan participants, interpreting the plan document on behalf of management without first obtaining management's concurrence.

(3) Making disbursements on behalf of the plan.

(4) Having custody of a plan's assets.

(5) Serving a plan as a fiduciary as defined by the Employee Retirement Income Security Act (ERISA).

c. Investment—advisory or management—prohibited nonaudit services

(1) Making investment decisions on behalf of audited entity management or otherwise having discretionary authority over an audited entity's investments.

(2) Executing a transaction to buy or sell an audited entity's investment.

(3) Having custody of an audited entity's assets, such as taking temporary possession of securities purchased by an audited entity.

d. Corporate finance—consulting or advisory – prohibited nonaudit services

(1) Committing the audited entity to the terms of a transaction or consummating a transaction on behalf of the audited entity.

(2) Acting as a promoter, underwriter, broker-dealer, or guarantor of audited entity securities, or distributor of private placement memoranda or offering documents.

(3) Maintaining custody of an audited entity's securities.

e. Executive or employee personnel matters – prohibited nonaudit services

(1) Committing the audited entity to employee compensation or benefit arrangements.

(2) Hiring or terminating audited entity employees.

f. Business risk consulting – prohibited nonaudit services

(1) Making or approving business risk decisions.

(2) Presenting business risk considerations to those charged with governance or others on behalf of management.

Documentation

3.59 Documentation of independence considerations provides evidence of the auditor's judgments in forming conclusions regarding compliance with independence requirements. GAGAS contains specific requirements for documentation related to independence which may be in addition to the documentation that auditors have previously maintained. While insufficient documentation of an auditor's compliance with the independence standard does not impair independence, appropriate documentation is required under the GAGAS quality

control and assurance requirements.[35] The independence standard includes the following documentation requirements:

a. document threats to independence that require the application of safeguards, along with safeguards applied, in accordance with the conceptual framework for independence as required by paragraph 3.24;

b. document the safeguards required by paragraph 3.30 if an audit organization is structurally located within a government entity and is considered independent based on those safeguards;

c. document consideration of audited entity management's ability to effectively oversee a nonaudit service to be provided by the auditor as indicated in paragraph 3.34; and

d. document the auditor's understanding with an audited entity for which the auditor will perform a nonaudit service as indicated in paragraph 3.39.

Professional Judgment

3.60 Auditors must use professional judgment in planning and performing audits and in reporting the results.

3.61 Professional judgment includes exercising reasonable care and professional skepticism. Reasonable care includes acting diligently in accordance with applicable professional standards and ethical principles. Professional skepticism is an attitude that includes a questioning mind and a critical

[35]See paragraph 3.84 for additional discussion of documenting compliance with quality control policies and procedures and paragraph 3.88 for additional discussion of policies and procedures on independence, legal, and ethical requirements.

assessment of evidence. Professional skepticism includes a mindset in which auditors assume neither that management is dishonest nor of unquestioned honesty.

3.62 Using the auditors' professional knowledge, skills, and experience to diligently perform, in good faith and with integrity, the gathering of information and the objective evaluation of the sufficiency and appropriateness of evidence is a critical component of audits. Professional judgment and competence are interrelated because judgments made are dependent upon the auditors' competence.

3.63 Professional judgment represents the application of the collective knowledge, skills, and experiences of all the personnel involved with an audit, as well as the professional judgment of individual auditors. In addition to personnel directly involved in the audit, professional judgment may involve collaboration with other stakeholders, external specialists, and management in the audit organization.

3.64 Using professional judgment is important to auditors in carrying out all aspects of their professional responsibilities, including following the independence standards and related conceptual framework; maintaining objectivity and credibility; assigning competent staff to the audit; defining the scope of work; evaluating, documenting, and reporting the results of the work; and maintaining appropriate quality control over the audit process.

3.65 Using professional judgment is important to auditors in applying the conceptual framework to determine independence in a given situation. This includes the consideration of any threats to the auditor's independence and related safeguards which may mitigate the identified threats. Auditors use professional

judgment in identifying and evaluating any threats to independence, including threats to the appearance of independence.[36]

3.66 Using professional judgment is important to auditors in determining the required level of understanding of the audit subject matter and related circumstances. This includes consideration about whether the audit team's collective experience, training, knowledge, skills, abilities, and overall understanding are sufficient to assess the risks that the subject matter of the audit may contain a significant inaccuracy or could be misinterpreted.

3.67 An auditor's consideration of the risk level of each audit, including the risk of arriving at improper conclusions, is also important. Within the context of audit risk, exercising professional judgment in determining the sufficiency and appropriateness of evidence to be used to support the findings and conclusions based on the audit objectives and any recommendations reported is an integral part of the audit process.

3.68 While this standard places responsibility on each auditor and audit organization to exercise professional judgment in planning and performing an audit, it does not imply unlimited responsibility, nor does it imply infallibility on the part of either the individual auditor or the audit organization. Absolute assurance is not attainable due to factors such as the nature of evidence and characteristics of fraud. Professional judgment does not mean eliminating all possible limitations or weaknesses associated with a specific audit, but rather identifying, assessing, mitigating, and explaining them.

[36]See paragraph 3.03 for a description of independence in appearance.

Competence

3.69 The staff assigned to perform the audit must collectively possess adequate professional competence needed to address the audit objectives and perform the work in accordance with GAGAS.

3.70 The audit organization's management should assess skill needs to consider whether its workforce has the essential skills that match those necessary to perform the particular audit. Accordingly, audit organizations should have a process for recruitment, hiring, continuous development, assignment, and evaluation of staff to maintain a competent workforce. The nature, extent, and formality of the process will depend on various factors such as the size of the audit organization, its structure, and its work.

3.71 Competence is derived from a blending of education and experience. Competencies are not necessarily measured by years of auditing experience because such a quantitative measurement may not accurately reflect the kinds of experiences gained by an auditor in any given time period. Maintaining competence through a commitment to learning and development throughout an auditor's professional life is an important element for auditors. Competence enables an auditor to make sound professional judgments.

Technical Knowledge

3.72 The staff assigned to conduct an audit in accordance with GAGAS should collectively possess the technical knowledge, skills, and experience necessary to be competent for the type of work being performed before beginning work on that audit. The staff assigned to a GAGAS audit should collectively possess

a. knowledge of GAGAS applicable to the type of work they are assigned and the education, skills, and

experience to apply this knowledge to the work being performed;

b. general knowledge of the environment in which the audited entity operates and the subject matter;

c. skills to communicate clearly and effectively, both orally and in writing; and

d. skills appropriate for the work being performed; for example, skills in

(1) statistical or nonstatistical sampling if the work involves use of sampling;

(2) information technology if the work involves review of information systems;

(3) engineering if the work involves review of complex engineering data;

(4) specialized audit methodologies or analytical techniques, such as the use of complex survey instruments, actuarial-based estimates, or statistical analysis tests, as applicable; or

(5) specialized knowledge in subject matters, such as scientific, medical, environmental, educational, or any other specialized subject matter, if the work calls for such expertise.

Additional Qualifications for Financial Audits and Attestation Engagements

3.73 Auditors performing financial audits should be knowledgeable in U.S. generally accepted accounting principles (GAAP), or with the applicable financial reporting framework being used, and the American Institute of Certified Public Accountants' (AICPA)

Statements on Auditing Standards (SAS)[37] and they should be competent in applying these SASs to the audit work.

3.74 Similarly, auditors performing attestation engagements should be knowledgeable in the AICPA general attestation standard related to criteria, the AICPA attestation standards for field work and reporting, and the related Statements on Standards for Attestation Engagements (SSAE),[38] and they should be competent in applying these standards and SSAE to the attestation work.[39]

3.75 Auditors engaged to perform financial audits or attestation engagements should be licensed certified public accountants, persons working for a licensed certified public accounting firm or for a government auditing organization, or licensed accountants in states that have multi-class licensing systems that recognize licensed accountants other than certified public accountants.

Continuing Professional Education

3.76 Auditors performing work in accordance with GAGAS, including planning, directing, performing audit procedures, or reporting on an audit conducted in accordance with GAGAS, should maintain their professional competence through continuing professional education (CPE). Therefore, each auditor performing work in accordance with GAGAS should complete, every 2 years, at least 24 hours of CPE that

[37]See paragraph 2.08 and 4.01 for discussion of the AICPA standards incorporated into GAGAS for financial audits.

[38]See paragraphs 2.09 and 5.01 for discussion of the AICPA standards incorporated into GAGAS for attestation engagements.

[39]See paragraphs 2.19 through 2.22 for additional information on the relationship between GAGAS and other professional standards for financial audits and attestation engagements.

directly relates to government auditing, the government environment, or the specific or unique environment in which the audited entity operates. Auditors who are involved in any amount of planning, directing, or reporting on GAGAS audits and auditors who are not involved in those activities but charge 20 percent or more of their time annually to GAGAS audits should also obtain at least an additional 56 hours of CPE (for a total of 80 hours of CPE in every 2-year period) that enhances the auditor's professional proficiency to perform audits. Auditors required to take the total 80 hours of CPE should complete at least 20 hours of CPE in each year of the 2-year periods. Auditors hired or initially assigned to GAGAS audits after the beginning of an audit organization's 2-year CPE period should complete a prorated number of CPE hours.

3.77 CPE programs are structured educational activities with learning objectives designed to maintain or enhance participants' knowledge, skills, and abilities in areas applicable to performing audits. Determining what subjects are appropriate for individual auditors to satisfy both the 80-hour and the 24-hour requirements is a matter of professional judgment to be exercised by auditors in consultation with appropriate officials in their audit organizations. Among the considerations in exercising that judgment are the auditors' experience, the responsibilities they assume in performing GAGAS audits, and the operating environment of the audited entity.

3.78 Meeting CPE requirements is primarily the responsibility of individual auditors. The audit organization should have quality control procedures to help ensure that auditors meet the continuing education requirements, including documentation of the CPE completed. The Government Accountability Office (GAO) has developed guidance pertaining to CPE requirements to assist auditors and audit organizations

in exercising professional judgment in complying with the CPE requirements.[40]

CPE Requirements for Specialists

3.79 The audit team should determine that external specialists assisting in performing a GAGAS audit are qualified and competent in their areas of specialization; however, external specialists are not required to meet the GAGAS CPE requirements.

3.80 The audit team should determine that internal specialists consulting on a GAGAS audit who are not involved in directing, performing audit procedures, or reporting on a GAGAS audit, are qualified and competent in their areas of specialization; however, these internal specialists are not required to meet the GAGAS CPE requirements.

3.81 The audit team should determine that internal specialists, who are performing work in accordance with GAGAS as part of the audit team, including directing, performing audit procedures, or reporting on a GAGAS audit, comply with GAGAS, including the CPE requirements.[41] The GAGAS CPE requirements become effective for internal specialists when an audit organization first assigns an internal specialist to an audit. Because internal specialists apply specialized knowledge in government audits, training in their areas of specialization qualify under the requirement for 24 hours of CPE that directly relates to government auditing, the government environment, or the specific or unique environment in which the audited entity operates.

[40]*Government Auditing Standards: Guidance on GAGAS Requirements for Continuing Professional Education*, GAO-05-568G (Washington, D.C.: April 2005), http://www.gao.gov/yellowbook.

[41]See paragraphs 3.76 through 3.81 for discussion of the CPE requirements.

Quality Control and Assurance

3.82 Each audit organization performing audits in accordance with GAGAS must:

a. establish and maintain a system of quality control that is designed to provide the audit organization with reasonable assurance that the organization and its personnel comply with professional standards and applicable legal and regulatory requirements,[42] and

b. have an external peer review performed by reviewers independent of the audit organization being reviewed at least once every 3 years.

System of Quality Control

3.83 An audit organization's system of quality control encompasses the audit organization's leadership, emphasis on performing high quality work, and the organization's policies and procedures designed to provide reasonable assurance of complying with professional standards and applicable legal and regulatory requirements. The nature, extent, and formality of an audit organization's quality control system will vary based on the audit organization's circumstances, such as the audit organization's size, number of offices and geographic dispersion, knowledge and experience of its personnel, nature and complexity of its audit work, and cost-benefit considerations.

3.84 Each audit organization should document its quality control policies and procedures and communicate those policies and procedures to its personnel. The audit organization should document compliance with its quality control policies and procedures and maintain such documentation for a

[42]See paragraph A3.10 for additional discussion of the system of quality control.

period of time sufficient to enable those performing monitoring procedures and peer reviews to evaluate the extent of the audit organization's compliance with its quality control policies and procedures. The form and content of such documentation are a matter of professional judgment and will vary based on the audit organization's circumstances.

3.85 An audit organization should establish policies and procedures in its system of quality control that collectively address

a. leadership responsibilities for quality within the audit organization,

b. independence, legal, and ethical requirements,

c. initiation, acceptance, and continuance of audits,

d. human resources,

e. audit performance, documentation, and reporting, and

f. monitoring of quality.

Leadership Responsibilities for Quality within the Audit Organization

3.86 Audit organizations should establish policies and procedures on leadership responsibilities for quality within the audit organization that include the designation of responsibility for quality of audits performed in accordance with GAGAS and communication of policies and procedures relating to quality. Appropriate policies and communications encourage a culture that recognizes that quality is essential in performing GAGAS audits and that leadership of the audit organization is ultimately responsible for the system of quality control.

3.87 The audit organization should establish policies and procedures designed to provide it with reasonable assurance that those assigned operational responsibility for the audit organization's system of quality control have sufficient and appropriate experience and ability, and the necessary authority, to assume that responsibility.

Independence, Legal, and Ethical Requirements

3.88 Audit organizations should establish policies and procedures on independence, legal, and ethical requirements that are designed to provide reasonable assurance that the audit organization and its personnel maintain independence and comply with applicable legal and ethical requirements.[43] Such policies and procedures assist the audit organization to

a. communicate its independence requirements to its staff, and

b. identify and evaluate circumstances and relationships that create threats to independence, and take appropriate action to eliminate those threats or reduce them to an acceptable level by applying safeguards, or, if considered appropriate, withdraw from the audit where withdrawal is not prohibited by law or regulation.

Initiation, Acceptance, and Continuance of Audits

3.89 Audit organizations should establish policies and procedures for the initiation, acceptance, and continuance of audits that are designed to provide reasonable assurance that the audit organization will undertake audits only if it can comply with professional standards, legal requirements, and ethical principles

[43]See paragraphs 3.02 through 3.59 for GAGAS independence requirements. See chapter 1 for GAGAS ethical principles.

and is acting within the legal mandate or authority of the audit organization.[44]

Human Resources

3.90 Audit organizations should establish policies and procedures for human resources that are designed to provide the audit organization with reasonable assurance that it has personnel with the capabilities and competence to perform its audits in accordance with professional standards and legal and regulatory requirements.[45]

Audit Performance, Documentation, and Reporting

3.91 Audit organizations should establish policies and procedures for audit performance, documentation, and reporting that are designed to provide the audit organization with reasonable assurance that audits are performed and reports are issued in accordance with professional standards and legal and regulatory requirements.[46]

3.92 When performing GAGAS audits, audit organizations should have policies and procedures for the safe custody and retention of audit documentation for a time sufficient to satisfy legal, regulatory, and administrative requirements for records retention. Whether audit documentation is in paper, electronic, or other media, the integrity, accessibility, and retrievability of the underlying information could be compromised if the documentation is altered, added to, or deleted without the auditors' knowledge, or if the documentation is lost or damaged. For audit documentation that is retained electronically, the audit organization should

[44]See paragraph A3.10a for discussion of initiation of audits by government audit organizations.

[45]See paragraphs 3.69 through 3.81 for requirements related to professional competence.

[46]For financial audits, chapters 2 through 4 apply; for attestation engagements, chapters 2, 3 and 5 apply; for performance audits, chapters 2, 3, 6, and 7 apply.

establish effective information systems controls concerning accessing and updating the audit documentation.

Monitoring of Quality

3.93 Audit organizations should establish policies and procedures for monitoring of quality in the audit organization.[47] Monitoring of quality is an ongoing, periodic assessment of work completed on audits designed to provide management of the audit organization with reasonable assurance that the policies and procedures related to the system of quality control are suitably designed and operating effectively in practice. The purpose of monitoring compliance with quality control policies and procedures is to provide an evaluation of whether the:

a. professional standards and legal and regulatory requirements have been followed,

b. quality control system has been appropriately designed, and

c. quality control policies and procedures are operating effectively and complied with in practice.

3.94 Monitoring procedures will vary based on the audit organization's facts and circumstances. The audit organization should perform monitoring procedures that enable it to assess compliance with applicable professional standards and quality control policies and procedures for GAGAS audits. Individuals performing monitoring should collectively have sufficient expertise and authority for this role.

3.95 The audit organization should analyze and summarize the results of its monitoring process at least

[47]See paragraph A3.10c for additional discussion of monitoring.

annually, with identification of any systemic or repetitive issues needing improvement, along with recommendations for corrective action. The audit organization should communicate to appropriate personnel any deficiencies noted during the monitoring process and make recommendations for appropriate remedial action.

External Peer Review

3.96 The audit organization should obtain an external peer review at least once every 3 years that is sufficient in scope to provide a reasonable basis for determining whether, for the period under review, the reviewed audit organization's system of quality control was suitably designed and whether the audit organization is complying with its quality control system in order to provide the audit organization with reasonable assurance of conforming with applicable professional standards.

3.97 The first peer review for an audit organization not already subject to a peer review requirement covers a review period ending no later than 3 years from the date an audit organization begins its first audit in accordance with GAGAS. The period under review generally covers 1 year, although peer review programs may choose a longer review period. Generally, the deadlines for peer review reports are established by the entity that administers the peer review program. Extensions of the deadlines for submitting the peer review report exceeding 3 months beyond the due date are granted by the entity that administers the peer review program and GAO.

3.98 The peer review team should include the following elements in the scope of the peer review:

a. review of the audit organization's quality control policies and procedures;

b. consideration of the adequacy and results of the audit organization's internal monitoring procedures;

c. review of selected auditors' reports and related documentation;

d. review of other documents necessary for assessing compliance with standards, for example, independence documentation, CPE records, and relevant human resource management files; and

e. interviews with a selection of the reviewed audit organization's professional staff at various levels to assess their understanding of and compliance with relevant quality control policies and procedures.

3.99 The peer review team should perform an assessment of peer review risk to help determine the number and types of audits to select for review.[48] Based on the risk assessment, the team should use one or a combination of the following approaches to select individual audits for review with greater emphasis on those audits with higher assessed levels of peer review risk: (1) select GAGAS audits that provide a reasonable cross-section of the GAGAS audits performed by the reviewed audit organization; or (2) select audits that provide a reasonable cross-section from all types of work subject to the reviewed audit organization's quality control system, including one or more audits performed in accordance with GAGAS. The second approach is generally applicable to audit organizations that perform only a small number of GAGAS audits in relation to other types of audits. In these cases, one or more GAGAS audits may represent more than what would be

[48]See paragraph A3.11 for examples of factors to consider in assessing peer review risk.

selected when looking at a cross-section of the audit organization's work as a whole.

3.100 The peer review team should prepare one or more written reports communicating the results of the peer review, including the following:

a. a description of the scope of the peer review, including any limitations;

b. an opinion on whether the system of quality control of the reviewed audit organization's audit practices was adequately designed and complied with during the period reviewed to provide the audit organization with reasonable assurance of conforming with applicable professional standards;

c. specification of the professional standards to which the reviewed audit organization is being held; and

d. reference to a separate written communication, if issued under the peer review program.

3.101 The peer review team uses professional judgment in deciding the type of peer review report. The following are the types of peer review reports.

a. Peer Review Rating of Pass: A conclusion that the audit organization's system of quality control has been suitably designed and complied with to provide the audit organization with reasonable assurance of performing and reporting in conformity with applicable professional standards in all material respects.

b. Peer Review Rating of Pass with Deficiencies: A conclusion that the audit organization's system of quality control has been suitably designed and complied with to provide the audit organization with reasonable assurance of performing and reporting in conformity

with applicable professional standards in all material respects with the exception of a certain deficiency or deficiencies that are described in the report.

c. Peer Review Rating of Fail: A conclusion, based on the significant deficiencies that are described in the report, that the audit organization's system of quality control is not suitably designed to provide the audit organization with reasonable assurance of performing and reporting in conformity with applicable professional standards in all material respects, or the audit organization has not complied with its system of quality control to provide the audit organization with reasonable assurance of performing and reporting in conformity with applicable professional standards in all material respects.

3.102 When the scope of the review is limited by conditions that preclude the application of one or more peer review procedures considered necessary in the circumstances and the peer reviewer cannot accomplish the objectives of those procedures through alternative procedures, the types of reports described in paragraphs 3.101 a-c are modified by including statements in the report's scope paragraph, body and opinion paragraph. These statements describe the relationship of the excluded audit(s) or functional area(s) to the reviewed organization's full scope of practice and system of quality control and the effects of the exclusion on the scope and results of the review.

3.103 For any deficiencies or significant deficiencies included in the peer review report or other written communication, the peer review team should include, either in the peer review report or in a separate written communication, a detailed description of the findings, conclusions, and recommendations related to the deficiencies or significant deficiencies.

3.104 The peer review team should meet the following criteria:

a. The review team collectively has current knowledge of GAGAS and government auditing.

b. The organization conducting the peer review and individual review team members are independent (as defined in GAGAS)[49] of the audit organization being reviewed, its staff, and the audits selected for the peer review.

c. The review team collectively has sufficient knowledge of how to perform a peer review. Such knowledge may be obtained from on-the-job training, training courses, or a combination of both. Having personnel on the peer review team with prior experience on a peer review or internal inspection team is desirable.

3.105 An external audit organization[50] should make its most recent peer review report publicly available.[51] For example, an audit organization may satisfy this requirement by posting the peer review report on a publicly available web site or to a publicly available file designed for public transparency of peer review results. Alternatively, if neither of these options is available to the audit organization, then it should use the same transparency mechanism it uses to make other information public. The audit organization should provide the peer review report to others upon request. If a separate communication detailing findings, conclusions, and recommendations is issued, public

[49]See paragraphs 3.02 through 3.32 for discussion of independence.

[50]See paragraph 1.07b for the definition of "audit organizations" and paragraph 1.08 for discussion of external audit organizations.

[51]See paragraph A3.12 for additional discussion of peer review report transparency.

availability of that communication is not required. Internal audit organizations that report internally to management and those charged with governance should provide a copy of the peer review report to those charged with governance.

3.106 Information in peer review reports may be relevant to decisions on procuring audits. Therefore, audit organizations seeking to enter into a contract to perform an audit in accordance with GAGAS should provide the following to the party contracting for such services when requested:

a. the audit organization's most recent peer review report, and

b. any subsequent peer review reports received during the period of the contract.

3.107 Auditors who are using another audit organization's work should request a copy of the audit organization's latest peer review report and any other written communication issued, and the audit organization should provide these documents when requested.[52]

[52]See paragraphs 6.40 through 6.44 for additional discussion on using the work of other auditors.

Standards for Financial Audits

Introduction

4.01 This chapter contains requirements, guidance, and considerations for performing and reporting on financial audits conducted in accordance with generally accepted government auditing standards (GAGAS). GAGAS incorporates by reference the American Institute of Certified Public Accountants (AICPA) Statements on Auditing Standards (SAS), as discussed in paragraph 2.08.[53] All sections of the SASs are incorporated, including the introduction, objectives, definitions, requirements, and application and other explanatory material. Auditors performing financial audits in accordance with GAGAS should comply with the incorporated SASs and the additional requirements in this chapter. The requirements and guidance contained in chapters 1 through 3 also apply to financial audits performed in accordance with GAGAS.

Additional GAGAS Requirements for Performing Financial Audits

4.02 GAGAS establishes requirements for performing financial audits in addition to the requirements contained in the AICPA standards. Auditors should comply with these additional requirements, along with the incorporated SASs, when citing GAGAS in their reports. The additional requirements for performing financial audits relate to:

a. auditor communication;

b. previous audits and attestation engagements;

[53]See the AICPA *Codification of Statements on Auditing Standards* and paragraph 2.20 for additional discussion on the relationship between GAGAS and other professional standards. References to the AICPA *Codification of Statements on Auditing Standards* use an "AU-C" identifier to refer to the clarified SASs instead of an "AU" identifier. "AU-C" is a temporary identifier to avoid confusion with references to existing "AU" sections, which remain effective through 2013. The "AU-C" identifier will revert to "AU" in 2014 AICPA *Codification of Statements on Auditing Standards*, by which time the clarified SASs become fully effective for all engagements.

c. fraud, noncompliance with provisions of laws, regulations, contracts, and grant agreements, and abuse;

d. developing elements of a finding; and

e. audit documentation.[54]

Auditor Communication

4.03 In addition to the AICPA requirements for auditor communication,[55] when performing a GAGAS financial audit, auditors should communicate pertinent information that in the auditors' professional judgment needs to be communicated to individuals contracting for or requesting the audit, and to cognizant legislative committees when auditors perform the audit pursuant to a law or regulation, or they conduct the work for the legislative committee that has oversight of the audited entity. This requirement does not apply if the law or regulation requiring an audit of the financial statements does not specifically identify the entities to be audited, such as audits required by the Single Audit Act Amendments of 1996.

4.04 In those situations where there is not a single individual or group that both oversees the strategic direction of the audited entity and the fulfillment of its accountability obligations or in other situations where the identity of those charged with governance is not clearly evident, auditors should document the process followed and conclusions reached for identifying the appropriate individuals to receive the required auditor communications.

[54]See paragraphs 4.03 through 4.16 for additional discussion of paragraph 4.02 a-e.

[55]See AICPA AU-C Section 260, *The Auditor's Communication With Those Charged With Governance.*

Previous Audits and Attestation Engagements

4.05 When performing a GAGAS audit, auditors should evaluate whether the audited entity has taken appropriate corrective action to address findings and recommendations from previous engagements that could have a material effect on the financial statements or other financial data significant to the audit objectives. When planning the audit, auditors should ask management of the audited entity to identify previous audits, attestation engagements, and other studies that directly relate to the objectives of the audit, including whether related recommendations have been implemented. Auditors should use this information in assessing risk and determining the nature, timing, and extent of current audit work, including determining the extent to which testing the implementation of the corrective actions is applicable to the current audit objectives.

Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

4.06 In addition to the AICPA requirements concerning fraud[56] and noncompliance with provisions of laws and regulations,[57] when performing a GAGAS financial audit, auditors should extend the AICPA requirements pertaining to the auditors' responsibilities for laws and regulations to also apply to consideration of compliance with provisions of contracts or grant agreements.

4.07 Abuse involves behavior that is deficient or improper when compared with behavior that a prudent person would consider reasonable and necessary business practice given the facts and circumstances. Abuse also includes misuse of authority or position for personal financial interests or those of an immediate or

[56]See AICPA AU-C Section 240, *Consideration of Fraud in a Financial Statement Audit*.

[57]See AICPA AU-C Section 250, *Consideration of Laws and Regulations in an Audit of Financial Statements.*

close family member or business associate.[58] Abuse does not necessarily involve fraud, or noncompliance with provisions of laws, regulations, contracts, or grant agreements.

4.08 Because the determination of abuse is subjective, auditors are not required to detect abuse in financial audits. However, as part of a GAGAS audit, if auditors become aware of abuse that could be quantitatively or qualitatively material to the financial statements or other financial data significant to the audit objectives, auditors should apply audit procedures specifically directed to ascertain the potential effect on the financial statements or other financial data significant to the audit objectives. After performing additional work, auditors may discover that the abuse represents potential fraud or noncompliance with provisions of laws, regulations, contracts, or grant agreements.

4.09 Avoiding interference with investigations or legal proceedings is important in pursuing indications of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse. Laws, regulations, or policies may require auditors to report indications of certain types of fraud, noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse to law enforcement or investigatory authorities before performing additional audit procedures. When investigations or legal proceedings are initiated or in process, auditors should evaluate the impact on the current audit. In some cases, it may be appropriate for the auditors to work with investigators or legal authorities, or withdraw from or defer further work on the audit engagement or a portion of the engagement to

[58]See paragraph A.08 for additional examples of abuse.

avoid interfering with an ongoing investigation or legal proceeding.

Developing Elements of a Finding

4.10 In a financial audit, findings may involve deficiencies in internal control; noncompliance with provisions of laws, regulations, contracts, or grant agreements; fraud; or abuse. As part of a GAGAS audit, when auditors identify findings, auditors should plan and perform procedures to develop the elements of the findings that are relevant and necessary to achieve the audit objectives. The elements of a finding are discussed in paragraphs 4.11 through 4.14 below.

4.11 Criteria: The laws, regulations, contracts, grant agreements, standards, measures, expected performance, defined business practices, and benchmarks against which performance is compared or evaluated. Criteria identify the required or desired state or expectation with respect to the program or operation. Criteria provide a context for evaluating evidence and understanding the findings.

4.12 Condition: Condition is a situation that exists. The condition is determined and documented during the audit.

4.13 Cause: The cause identifies the reason or explanation for the condition or the factor or factors responsible for the difference between the situation that exists (condition) and the required or desired state (criteria), which may also serve as a basis for recommendations for corrective actions. Common factors include poorly designed policies, procedures, or criteria; inconsistent, incomplete, or incorrect implementation; or factors beyond the control of program management. Auditors may assess whether the evidence provides a reasonable and convincing argument for why the stated cause is the key factor or

factors contributing to the difference between the condition and the criteria.

4.14 Effect or potential effect: The effect is a clear, logical link to establish the impact or potential impact of the difference between the situation that exists (condition) and the required or desired state (criteria). The effect or potential effect identifies the outcomes or consequences of the condition. When the audit objectives include identifying the actual or potential consequences of a condition that varies (either positively or negatively) from the criteria identified in the audit, "effect" is a measure of those consequences. Effect or potential effect may be used to demonstrate the need for corrective action in response to identified problems or relevant risks.

Audit Documentation

4.15 In addition to the AICPA requirements for audit documentation,[59] auditors should comply with the following additional requirements when performing a GAGAS financial audit.[60]

a. Document supervisory review, before the report release date, of the evidence that supports the findings, conclusions, and recommendations contained in the auditors' report.

b. Document any departures from the GAGAS requirements and the impact on the audit and on the auditors' conclusions when the audit is not in compliance with applicable GAGAS requirements due to law, regulation, scope limitations, restrictions on access to records, or other issues impacting the audit.

[59]See AICPA AU-C Section 230, *Audit Documentation.*

[60]See paragraphs 4.04, 4.06, 4.26, and 4.45 for additional documentation requirements regarding financial audits.

This applies to departures from unconditional requirements and presumptively mandatory requirements when alternative procedures performed in the circumstances were not sufficient to achieve the objectives of the requirements.[61]

4.16 When performing GAGAS financial audits and subject to applicable provisions of laws and regulations, auditors should make appropriate individuals, as well as audit documentation, available upon request and in a timely manner to other auditors or reviewers. Underlying GAGAS audits is the premise that audit organizations in federal, state, and local governments and public accounting firms engaged to perform a financial audit in accordance with GAGAS cooperate in auditing programs of common interest so that auditors may use others' work and avoid duplication of efforts. The use of auditors' work by other auditors may be facilitated by contractual arrangements for GAGAS audits that provide for full and timely access to appropriate individuals, as well as audit documentation.

Additional GAGAS Requirements for Reporting on Financial Audits

4.17 In addition to the AICPA requirements for reporting,[62] auditors should comply with the following additional requirements when citing GAGAS in their reports. The additional requirements relate to

a. reporting auditors' compliance with GAGAS;

[61]See paragraphs 2.24 and 2.25 for additional requirements on citing compliance with GAGAS.

[62]See AICPA AU-C Sections 700 *Forming an Opinion and Reporting on Financial Statements;* 705 *Modifications to the Opinion in the Independent Auditor's Report,* and 706 *Emphasis-of-Matter Paragraphs and Other-Matter Paragraphs in the Independent Auditor's Report.*

b. reporting on internal control and compliance with provisions of laws, regulations, contracts, and grant agreements;

c. communicating deficiencies in internal control, fraud, noncompliance with provisions of laws, regulations, contracts, and grant agreements, and abuse;

d. reporting views of responsible officials;

e. reporting confidential or sensitive information; and

f. distributing reports.[63]

Reporting Auditors' Compliance with GAGAS

4.18 When auditors comply with all applicable GAGAS requirements for financial audits, they should include a statement in the auditors' report that they performed the audit in accordance with GAGAS.[64] Because GAGAS incorporates by reference the AICPA SASs,[65] GAGAS does not require auditors to cite compliance with the AICPA standards when citing compliance with GAGAS. Additionally, an entity receiving a GAGAS auditors' report may also request auditors to issue a financial audit report for purposes other than complying with requirements for a GAGAS audit. GAGAS does not prohibit auditors from issuing a separate report conforming only to AICPA or other standards.[66]

[63]See paragraphs 4.18 through 4.45 for additional discussion paragraph of 4.17 a-f.

[64]See paragraphs 2.24 and 2.25 for additional requirements on citing compliance with GAGAS.

[65]See paragraph 2.08 for a discussion of the AICPA SASs incorporated into GAGAS.

[66]See AICPA AU-C Section 700, *Forming an Opinion and Reporting on Financial Statements.*

Reporting on Internal Control and Compliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements

4.19 When providing an opinion or a disclaimer on financial statements, auditors should also report on internal control over financial reporting[67] and on compliance with provisions of laws, regulations, contracts, or grant agreements that have a material effect on the financial statements.[68] Auditors report on internal control and compliance, regardless of whether or not they identify internal control deficiencies or instances of noncompliance.

4.20 Auditors should include either in the same or in separate report(s) a description of the scope of the auditors' testing of internal control over financial reporting and of compliance with provisions of laws, regulations, contracts, or grant agreements. Auditors should also state in the reports whether the tests they performed provided sufficient, appropriate evidence to support opinions on the effectiveness of internal control and on compliance with provisions of laws, regulations, contracts, or grant agreements.

4.21 The objective of the GAGAS requirement for reporting on internal control over financial reporting differs from the objective of an examination of internal control in accordance with the AICPA Statement on Standards for Attestation Engagements (SSAE), which is to express an opinion on the design or the design and operating effectiveness of an entity's internal control, as applicable. To form a basis for expressing such an opinion, the auditor would need to plan and perform the examination to provide a high level of assurance about whether the entity maintained, in all material respects, effective internal control over financial reporting as of a

[67]See paragraph A.05 for examples of deficiencies in internal control.

[68]See paragraph A.11 for additional discussion of laws, regulations, and provisions of contract and grant agreements.

point in time or for a specified period of time.[69] If auditors issue an opinion on internal control, the opinion would satisfy the GAGAS requirement for reporting on internal control.

4.22 If auditors report separately (including separate reports bound in the same document) on internal control over financial reporting and on compliance with provisions of laws, regulations, contracts, and grant agreements, they should state in the auditors' report on the financial statements that they are issuing those additional reports. They should include a reference to the separate reports and also state that the reports on internal control over financial reporting and on compliance with provisions of laws, regulations, contracts, and grant agreements are an integral part of a GAGAS audit in considering the audited entity's internal control over financial reporting and compliance.

Communicating Deficiencies in Internal Control, Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

4.23 When performing GAGAS financial audits, auditors should communicate in the report on internal control over financial reporting and compliance, based upon the work performed, (1) significant deficiencies and material weaknesses in internal control; (2) instances of fraud and noncompliance with provisions of laws or regulations that have a material effect on the audit and any other instances that warrant the attention of those charged with governance; (3) noncompliance with provisions of contracts or grant agreements that has a material effect on the audit; and (4) abuse that has a material effect on the audit.

Deficiencies in Internal Control

4.24 The AICPA requirements to communicate in writing significant deficiencies and material weaknesses

[69]See AICPA AT Section 501, *An Examination of an Entity's Internal Control Over Financial Reporting That Is Integrated With an Audit of Its Financial Statements.*

identified during an audit[70] form the basis for reporting significant deficiencies and material weaknesses in the GAGAS report on internal control over financial reporting when deficiencies are identified during the audit.

Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

4.25 When performing a GAGAS financial audit, and auditors conclude, based on sufficient, appropriate evidence, that any of the following either has occurred or is likely to have occurred, they should include in their report on internal control and compliance the relevant information about

a. fraud[71] and noncompliance with provisions of laws or regulations that have a material effect on the financial statements or other financial data significant to the audit objectives and any other instances that warrant the attention of those charged with governance;

b. noncompliance with provisions of contracts or grant agreements that has a material effect on the determination of financial statement amounts or other financial data significant to the audit objectives; or

c. abuse[72] that is material, either quantitatively or qualitatively.[73]

4.26 When auditors detect instances of noncompliance with provisions of contracts or grant agreements or abuse that have an effect on the financial statements or other financial data significant to the audit objectives

[70]See AICPA AU-C Section 265, *Communicating Internal Control Related Matters Identified in an Audit.*

[71]See paragraph A.10 for examples of indicators of fraud risk.

[72]See paragraph A.08 for examples of abuse.

[73]See paragraphs 4.07 and 4.08 for a discussion of abuse.

that are less than material but warrant the attention of those charged with governance, they should communicate those findings in writing to audited entity officials. When auditors detect any instances of fraud, noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse that do not warrant the attention of those charged with governance, the auditors' determination of whether and how to communicate such instances to audited entity officials is a matter of professional judgment.

4.27 When fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse either have occurred or are likely to have occurred, auditors may consult with authorities or legal counsel about whether publicly reporting such information would compromise investigative or legal proceedings. Auditors may limit their public reporting to matters that would not compromise those proceedings, and for example, report only on information that is already a part of the public record.

Presenting Findings in the Auditors' Report

4.28 When performing a GAGAS financial audit and presenting findings such as deficiencies in internal control, fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse, auditors should develop the elements of the findings to the extent necessary, including findings related to deficiencies from the previous year that have not been remediated. Clearly developed findings, as discussed in paragraphs 4.10 through 4.14, assist management or oversight officials of the audited entity in understanding the need for taking corrective action, and assist auditors in making recommendations for corrective action. If auditors sufficiently develop the elements of a finding, they may provide recommendations for corrective action.

4.29 Auditors should place their findings in perspective by describing the nature and extent of the issues being reported and the extent of the work performed that resulted in the finding. To give the reader a basis for judging the prevalence and consequences of these findings, auditors should, as appropriate, relate the instances identified to the population or the number of cases examined and quantify the results in terms of dollar value or other measures. If the results cannot be projected, auditors should limit their conclusions appropriately.

Reporting Findings Directly to Parties Outside the Audited Entity

4.30 Auditors should report known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse directly to parties outside the audited entity in the following two circumstances.

a. When entity management fails to satisfy legal or regulatory requirements to report such information to external parties specified in law or regulation, auditors should first communicate the failure to report such information to those charged with governance. If the audited entity still does not report this information to the specified external parties as soon as practicable after the auditors' communication with those charged with governance, then the auditors should report the information directly to the specified external parties.

b. When entity management fails to take timely and appropriate steps to respond to known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that (1) is likely to have a material effect on the financial statements and (2) involves funding received directly or indirectly from a government agency, auditors should first report management's failure to take timely and appropriate steps to those charged with governance. If the audited entity still does not take timely and

appropriate steps as soon as practicable after the auditors' communication with those charged with governance, then the auditors should report the entity's failure to take timely and appropriate steps directly to the funding agency.

4.31 The reporting in paragraph 4.30 is in addition to any legal requirements to report such information directly to parties outside the audited entity. Auditors should comply with these requirements even if they have resigned or been dismissed from the audit prior to its completion.

4.32 Auditors should obtain sufficient, appropriate evidence, such as confirmation from outside parties, to corroborate assertions by management of the audited entity that it has reported such findings in accordance with laws, regulations, or funding agreements. When auditors are unable to do so, they should report such information directly as discussed in paragraphs 4.30 and 4.31.

Reporting Views of Responsible Officials

4.33 When performing a GAGAS financial audit, if the auditors' report discloses deficiencies in internal control, fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse, auditors should obtain and report the views of responsible officials of the audited entity concerning the findings, conclusions, and recommendations, as well as any planned corrective actions.

4.34 Providing a draft report with findings for review and comment by responsible officials of the audited entity and others helps the auditors develop a report that is fair, complete, and objective. Including the views of responsible officials results in a report that presents not only the auditors' findings, conclusions, and recommendations, but also the perspectives of the

responsible officials of the audited entity and the corrective actions they plan to take. Obtaining the comments in writing is preferred, but oral comments are acceptable.

4.35 When auditors receive written comments from the responsible officials, they should include in their report a copy of the officials' written comments, or a summary of the comments received. When the responsible officials provide oral comments only, auditors should prepare a summary of the oral comments and provide a copy of the summary to the responsible officials to verify that the comments are accurately stated.

4.36 Auditors should also include in the report an evaluation of the comments, as appropriate. In cases in which the audited entity provides technical comments in addition to its written or oral comments on the report, auditors may disclose in the report that such comments were received.

4.37 Obtaining oral comments may be appropriate when, for example, there is a reporting date critical to meeting a user's needs; auditors have worked closely with the responsible officials throughout the work and the parties are familiar with the findings and issues addressed in the draft report; or the auditors do not expect major disagreements with findings, conclusions, or recommendations in the draft report, or major controversies with regard to the issues discussed in the draft report.

4.38 When the audited entity's comments are inconsistent or in conflict with the findings, conclusions, or recommendations in the draft report, or when planned corrective actions do not adequately address the auditors' recommendations, the auditors should evaluate the validity of the audited entity's comments. If the auditors disagree with the comments, they should

explain in the report their reasons for disagreement. Conversely, the auditors should modify their report as necessary if they find the comments valid and supported with sufficient, appropriate evidence.

4.39 If the audited entity refuses to provide comments or is unable to provide comments within a reasonable period of time, the auditors may issue the report without receiving comments from the audited entity. In such cases, the auditors should indicate in the report that the audited entity did not provide comments.

Reporting Confidential and Sensitive Information

4.40 When performing a GAGAS financial audit, if certain pertinent information is prohibited from public disclosure or is excluded from a report due to the confidential or sensitive nature of the information, auditors should disclose in the report that certain information has been omitted and the reason or other circumstances that make the omission necessary.

4.41 Certain information may be classified or may otherwise be prohibited from general disclosure by federal, state, or local laws or regulations. In such circumstances, auditors may issue a separate, classified, or limited use report containing such information and distribute the report only to persons authorized by law or regulation to receive it.

4.42 Additional circumstances associated with public safety, privacy, or security concerns could also justify the exclusion of certain information from a publicly available or widely distributed report. For example, detailed information related to computer security for a particular program may be excluded from publicly available reports because of the potential damage that could be caused by the misuse of this information. In such circumstances, auditors may issue a limited use report containing such information and distribute the

report only to those parties responsible for acting on the auditors' recommendations. In some instances, it may be appropriate to issue both a publicly available report with the sensitive information excluded and a limited use report. The auditors may consult with legal counsel regarding any requirements or other circumstances that may necessitate the omission of certain information.

4.43 Considering the broad public interest in the program or activity under audit assists auditors when deciding whether to exclude certain information from publicly available reports. When circumstances call for omission of certain information, auditors should evaluate whether this omission could distort the audit results or conceal improper or illegal practices.

4.44 When audit organizations are subject to public records laws, auditors should determine whether public records laws could impact the availability of classified or limited use reports and determine whether other means of communicating with management and those charged with governance would be more appropriate. For example, the auditors may communicate general information in a written report and communicate detailed information orally. The auditors may consult with legal counsel regarding applicable public records laws.

Distributing Reports

4.45 Distribution of reports completed in accordance with GAGAS depends on the relationship of the auditors to the audited organization and the nature of the information contained in the report. Auditors should document any limitation on report distribution.[74] The following discussion outlines distribution for reports completed in accordance with GAGAS:

[74]See paragraphs 4.41 and 4.42 for discussion of limited use reports containing confidential or sensitive information.

a. Audit organizations in government entities should distribute auditors' reports to those charged with governance, to the appropriate audited entity officials, and to the appropriate oversight bodies or organizations requiring or arranging for the audits. As appropriate, auditors should also distribute copies of the reports to other officials who have legal oversight authority or who may be responsible for acting on audit findings and recommendations, and to others authorized to receive such reports.

b. Internal audit organizations in government entities may also follow the Institute of Internal Auditors (IIA) *International Standards for the Professional Practice of Internal Auditing*.[75] In accordance with GAGAS and IIA standards, the head of the internal audit organization should communicate results to the parties who can ensure that the results are given due consideration. If not otherwise mandated by statutory or regulatory requirements, prior to releasing results to parties outside the organization, the head of the internal audit organization should: (1) assess the potential risk to the organization, (2) consult with senior management or legal counsel as appropriate, and (3) control dissemination by indicating the intended users in the report.

c. Public accounting firms contracted to perform an audit in accordance with GAGAS should clarify report distribution responsibilities with the engaging organization. If the contracting firm is responsible for the distribution, it should reach agreement with the party contracting for the audit about which officials or

[75]See paragraph 2.21 for additional discussion about using the IIA standards in conjunction with GAGAS and paragraph 2.22 for additional discussion about citing compliance with another set of standards.

organizations will receive the report and the steps being taken to make the report available to the public.

Additional GAGAS Considerations for Financial Audits

4.46 Due to the objectives and public accountability of GAGAS audits, additional considerations for financial audits completed in accordance with GAGAS may apply. These considerations relate to

a. materiality in GAGAS financial audits; and

b. early communication of deficiencies.[76]

Materiality in GAGAS Financial Audits

4.47 The AICPA standards require the auditor to apply the concept of materiality appropriately in planning and performing the audit.[77] Additional considerations may apply to GAGAS financial audits of government entities or entities that receive government awards. For example, in audits performed in accordance with GAGAS, auditors may find it appropriate to use lower materiality levels as compared with the materiality levels used in non-GAGAS audits because of the public accountability of government entities and entities receiving government funding, various legal and regulatory requirements, and the visibility and sensitivity of government programs.

[76]See paragraphs 4.47 through 4.48 for additional discussion of paragraph 4.46 a-b.

[77]See AICPA AU-C Section 320, *Materiality in Planning and Performing an Audit.*

Early Communication of Deficiencies

4.48 For some matters, early communication to those charged with governance or management may be important because of the relative significance and the urgency for corrective follow-up action.[78] Further, when a control deficiency results in noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse, early communication is important to allow management to take prompt corrective action to prevent further noncompliance. When a deficiency is communicated early, the reporting requirements in paragraphs 4.19 through 4.23 still apply.

[78]See AICPA AU-C Section 265, *Communicating Internal Control Related Matters Identified in an Audit.*

Standards for Attestation Engagements

Introduction

5.01 This chapter contains requirements, guidance, and considerations for performing and reporting on attestation engagements conducted in accordance with generally accepted government auditing standards (GAGAS). Auditors performing attestation engagements in accordance with GAGAS should comply with the American Institute of Certified Public Accountants (AICPA) general attestation standard on criteria, the field work and reporting attestation standards, and the corresponding statements on standards for attestation engagements (SSAEs), which are incorporated in this chapter by reference.[79] Auditors performing attestation engagements in accordance with GAGAS should also comply with the additional requirements in this chapter. The requirements and guidance contained in chapters 1 through 3 also apply to attestation engagements performed in accordance with GAGAS.

5.02 An attestation engagement can provide one of three levels of service as defined by the AICPA, namely an examination engagement, a review engagement, or an agreed-upon procedures engagement.[80] Auditors performing an attestation engagement should determine which of the three levels of service apply to that engagement and refer to the appropriate AICPA standards and GAGAS section below for applicable requirements and considerations.

[79]See AICPA AT Section 50, *SSAE Hierarchy.*

[80]See paragraph 2.09 and AICPA AT Section 101, *Attest Engagements*.

Examination Engagements

Additional Field Work Requirements for Examination Engagements

5.03 GAGAS establishes field work requirements for performing examination engagements in addition to the requirements contained in the AICPA standards. Auditors should comply with these additional requirements, along with the relevant AICPA standards for examination attestation engagements, when citing GAGAS in their examination reports. The additional field work requirements relate to:

a. auditor communication;

b. previous audits and attestation engagements;

c. fraud, noncompliance with provisions of laws, regulations, contracts, and grant agreements, and abuse;

d. developing elements of a finding; and

e. examination engagement documentation.[81]

Auditor Communication

5.04 In addition to the AICPA requirements for auditor communication,[82] when performing a GAGAS examination engagement, auditors should communicate pertinent information that in the auditors' professional judgment needs to be communicated to individuals contracting for or requesting the examination engagement, and to cognizant legislative committees

[81]See paragraphs 5.04 through 5.17 for additional discussion of 5.03 a-e.

[82]See AICPA AT Section 101.14 and 101.46, *Attest Engagements.*

when auditors perform the examination engagement pursuant to a law or regulation, or they conduct the work for the legislative committee that has oversight of the audited entity.

5.05 In those situations where there is not a single individual or group that both oversees the strategic direction of the audited entity and the fulfillment of its accountability obligations or in other situations where the identity of those charged with governance is not clearly evident, auditors should document the process followed and conclusions reached for identifying the appropriate individuals to receive the required auditor communications.

Previous Audits and Attestation Engagements

5.06 When performing a GAGAS examination engagement, auditors should evaluate whether the audited entity has taken appropriate corrective action to address findings and recommendations from previous engagements that could have a material effect on the subject matter, or an assertion about the subject matter, of the examination engagement. When planning the engagement, auditors should ask audited entity management to identify previous audits, attestation engagements, and other studies that directly relate to the subject matter or an assertion about the subject matter of the examination engagement being undertaken, including whether related recommendations have been implemented. Auditors should use this information in assessing risk and determining the nature, timing, and extent of current work, including determining the extent to which testing the implementation of the corrective actions is applicable to the current examination engagement objectives.

Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

5.07 In addition to the AICPA requirements concerning fraud,[83] when performing a GAGAS examination engagement, auditors should design the engagement to detect instances of fraud and noncompliance with provisions of laws, regulations, contracts, and grant agreements that may have a material effect on the subject matter or the assertion thereon of the examination engagement. Auditors should assess the risk and possible effects of fraud and noncompliance with provisions of laws, regulations, contracts, and grant agreements that could have a material effect on the subject matter or an assertion about the subject matter of the examination engagement. When risk factors are identified, auditors should document the risk factors identified, the auditors' response to those risk factors individually or in combination, and the auditors' conclusions.[84]

5.08 Abuse involves behavior that is deficient or improper when compared with behavior that a prudent person would consider a reasonable and necessary business practice given the facts and circumstances. Abuse also includes misuse of authority or position for personal financial interests or those of an immediate or close family member or business associate.[85] Abuse does not necessarily involve fraud, or noncompliance with provisions of laws, regulations, contracts, or grant agreements.

[83]See AICPA AT Sections 501.27, *An Examination of an Entity's Internal Control Over Financial Reporting That Is Integrated With an Audit of Its Financial Statements*, 601.33, *Compliance Attestation*, and 701.42, *Management's Discussion and Analysis*.

[84]See paragraphs A.09 through A.13 for additional discussion of indicators of fraud risk and significance of provisions of laws, regulations, and contracts and grant agreements.

[85]See A.08 for additional examples of abuse.

5.09 Because the determination of abuse is subjective, auditors are not required to detect abuse in examination engagements. However, as part of a GAGAS examination engagement, if auditors become aware of abuse that could be quantitatively or qualitatively material, auditors should apply procedures specifically directed to ascertain the potential effect on the subject matter, or the assertion thereon, or other data significant to the objective of the examination engagement. After performing additional work, auditors may discover that the abuse represents potential fraud or noncompliance with provisions of laws, regulations, contracts, or grant agreements.

5.10 Avoiding interference with investigations or legal proceedings is important in pursuing indications of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse. Laws, regulations, or policies may require auditors to report indications of certain types of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse to law enforcement or investigatory authorities before performing additional audit procedures. When investigations or legal proceedings are initiated or in process, auditors should evaluate the impact on the current examination engagement. In some cases, it may be appropriate for the auditors to work with investigators or legal authorities, or withdraw from or defer further work on the examination engagement or a portion of the examination engagement to avoid interfering with an ongoing investigation or legal proceeding.

Developing Elements of a Finding

5.11 In an examination engagement, findings may involve deficiencies in internal control; noncompliance with provisions of laws, regulations, contracts, or grant agreements; fraud; or abuse. As part of a GAGAS examination engagement, when auditors identify

findings, auditors should plan and perform procedures to develop the elements of the findings that are relevant and necessary to achieve the examination engagement objectives. The elements of a finding are discussed in paragraphs 5.12 through 5.15 below.

5.12 Criteria: The laws, regulations, contracts, grant agreements, standards, measures, expected performance, defined business practices, and benchmarks against which performance is compared or evaluated. Criteria identify the required or desired state or expectation with respect to the program or operation. Criteria provide a context for evaluating evidence and understanding the findings.

5.13 Condition: Condition is a situation that exists. The condition is determined and documented during the engagement.

5.14 Cause: The cause identifies the reason or explanation for the condition or the factor or factors responsible for the difference between the situation that exists (condition) and the required or desired state (criteria), which may also serve as a basis for recommendations for corrective actions. Common factors include poorly designed policies, procedures, or criteria; inconsistent, incomplete, or incorrect implementation; or factors beyond the control of program management. Auditors may assess whether the evidence provides a reasonable and convincing argument for why the stated cause is the key factor or factors contributing to the difference between the condition and the criteria.

5.15 Effect or potential effect: The effect is a clear, logical link to establish the impact or potential impact of the difference between the situation that exists (condition) and the required or desired state (criteria). The effect or potential effect identifies the outcomes or

consequences of the condition. When the engagement objectives include identifying the actual or potential consequences of a condition that varies (either positively or negatively) from the criteria identified in the engagement, "effect" is a measure of those consequences. Effect or potential effect may be used to demonstrate the need for corrective action in response to identified problems or relevant risks.

Examination Engagement Documentation

5.16 In addition to AICPA requirements for audit documentation,[86] auditors should comply with the following additional requirements when performing a GAGAS examination engagement.[87]

a. Prepare attest documentation in sufficient detail to enable an experienced auditor, having no previous connection to the examination engagement, to understand from the documentation the nature, timing, extent, and results of procedures performed and the evidence obtained and its source and the conclusions reached, including evidence that supports the auditors' significant judgments and conclusions. An experienced auditor means an individual (whether internal or external to the audit organization) who possesses the competencies and skills to be able to perform the examination engagement. These competencies and skills include an understanding of (1) examination engagement processes and related SSAEs,[88] (2) GAGAS and applicable legal and regulatory requirements, (3) the subject matter that the auditors are engaged to report on, (4) the suitability and

[86]See AICPA AT Section 101.100–101.107, *Attest Engagements.*

[87]See paragraphs 5.05, 5.07, 5.25, and 5.44 for additional documentation requirements regarding attestation engagements.

[88]See paragraphs 3.74 and 3.75 for additional discussion of qualifications for attestation engagements.

availability of criteria, and (5) issues related to the audited entity's environment.

b. Document supervisory review, before the date of the examination report, of the evidence that supports findings, conclusions, and recommendations contained in the examination report.

c. Document any departures from the GAGAS requirements and the impact on the engagement and on the auditors' conclusions when the examination engagement is not in compliance with applicable GAGAS requirements due to law, regulation, scope limitations, restrictions on access to records, or other issues impacting the audit. This applies to departures from unconditional requirements and from presumptively mandatory requirements when alternative procedures performed in the circumstances were not sufficient to achieve the objectives of the requirement.[89]

5.17 When performing GAGAS examination engagements and subject to applicable laws and regulations, auditors should make appropriate individuals, as well as attest documentation, available upon request and in a timely manner to other auditors or reviewers. Underlying GAGAS engagements is the premise that audit organizations in federal, state, and local governments and public accounting firms engaged to perform an engagement in accordance with GAGAS cooperate in performing examination engagements of programs of common interest so that auditors may use others' work and avoid duplication of efforts. The use of auditors' work by other auditors may be facilitated by contractual arrangements for GAGAS engagements

[89]See paragraph 2.15 for a definition of GAGAS requirements.

that provide for full and timely access to appropriate individuals, as well as attest documentation.

Additional GAGAS Reporting Requirements for Examination Engagements

5.18 In addition to the AICPA requirements for reporting on examination engagements,[90] auditors should comply with the following additional requirements when citing GAGAS in their examination reports. The additional reporting requirements relate to

a. reporting auditors' compliance with GAGAS;

b. reporting deficiencies in internal control, fraud, noncompliance with provisions of laws, regulations, contracts, and grant agreements, and abuse;

c. reporting views of responsible officials;

d. reporting confidential or sensitive information; and

e. distributing reports.[91]

Reporting Auditors' Compliance with GAGAS

5.19 When auditors comply with all applicable GAGAS requirements for examination engagements, they should include a statement in the examination report that they performed the examination engagement in accordance with GAGAS.[92] Because GAGAS incorporates by reference the AICPA's general attestation standard on criteria, the field work and reporting attestation standards, and the corresponding SSAEs, GAGAS does not require auditors to cite

[90]See AICPA AT Section 101.63-101.87, *Attest Engagements*.

[91]See paragraphs 5.19 through 5.44 for additional discussion of paragraph 5.18 a-e.

[92]See paragraphs 2.24 and 2.25 for additional requirements on citing compliance with GAGAS.

compliance with the AICPA standards when citing compliance with GAGAS. GAGAS does not prohibit auditors from issuing a separate report conforming only to the requirements of AICPA or other standards.[93]

Reporting Deficiencies in Internal Control, Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

5.20 When performing GAGAS examination engagements, auditors should report, based upon the work performed, (1) significant deficiencies and material weaknesses in internal control;[94] (2) instances of fraud[95] and noncompliance with provisions of laws or regulations that have a material effect on the subject matter or an assertion about the subject matter and any other instances that warrant the attention of those charged with governance; (3) noncompliance with provisions of contracts or grant agreements that has a material effect on the subject matter or an assertion about the subject matter of the examination engagement; and (4) abuse that has a material effect on the subject matter or an assertion about the subject matter of the examination engagement. Auditors should include this information either in the same or in separate report(s).

5.21 If auditors report separately (including separate reports bound in the same document) on the items discussed in paragraph 5.20, they should state in the examination report that they are issuing those additional reports. They should include a reference to the separate reports and also state that the reports are an integral part of a GAGAS examination engagement.

[93]See AICPA AT Sections 101.85e, *Attest Engagements.*

[94]See paragraph A.06 for examples of deficiencies in internal control.

[95]See paragraph A.10 for examples of indicators of fraud risk.

Deficiencies in Internal Control

5.22 In addition to the AICPA requirements concerning internal control, [96] when performing GAGAS examination engagements, including attestation engagements related to internal control,[97] auditors should include in the examination report all deficiencies, even those communicated early,[98] that are considered to be significant deficiencies or material weaknesses.

5.23 Determining whether and how to communicate to officials of the audited entity internal control deficiencies that warrant the attention of those charged with governance, but are not considered significant deficiencies or material weaknesses, is a matter of professional judgment.

Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

5.24 When performing a GAGAS examination engagement, and auditors conclude, based on sufficient, appropriate evidence, that any of the following either has occurred or is likely to have occurred, they should include in their examination report the relevant information about

a. fraud[99] and noncompliance with provisions of laws or regulations that have a material effect on the subject matter or an assertion about the subject matter and any other instances that warrant the attention of those charged with governance,

[96]See AICPA AT Section 101.52 through 101.53, *Attest Engagements*.

[97]See AICPA AT Section 501.07, *An Examination of an Entity's Internal Control Over Financial Reporting That Is Integrated With an Audit of Its Financial Statements*.

[98]See paragraph 5.47 for a discussion of early communication of deficiencies.

[99]See paragraph A.10 for examples of indicators of fraud risk.

b. noncompliance with provisions of contracts or grant agreements that has a material effect on the subject matter or an assertion about the subject matter, or

c. abuse[100] that is material to the subject matter or an assertion about the subject matter, either quantitatively or qualitatively.[101]

5.25 When auditors detect instances of noncompliance with provisions of contracts or grant agreements, or abuse that have an effect on the subject matter or an assertion about the subject matter that are less than material but warrant the attention of those charged with governance, they should communicate those findings in writing to audited entity officials. When auditors detect any instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that do not warrant the attention of those charged with governance, the auditors' determination of whether and how to communicate such instances to audited entity officials is a matter of professional judgment.

5.26 When fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse either have occurred or are likely to have occurred, auditors may consult with authorities or legal counsel about whether publicly reporting such information would compromise investigative or legal proceedings. Auditors may limit their public reporting to matters that would not compromise those proceedings and, for example, report only on information that is already a part of the public record.

[100]See paragraph A.08 for examples of abuse.

[101]See paragraphs 5.08 and 5.09 for a discussion of abuse.

Presenting Findings in the Examination Report

5.27 When performing a GAGAS examination engagement and presenting findings such as deficiencies in internal control, fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse, auditors should develop the elements of the findings to the extent necessary. Clearly developed findings, as discussed in paragraphs 5.11 through 5.15, assist management or oversight officials of the audited entity in understanding the need for taking corrective action, and assist auditors in making recommendations for corrective action. If auditors sufficiently develop the elements of a finding, they may provide recommendations for corrective action.

5.28 Auditors should place their findings in perspective by describing the nature and extent of the issues being reported and the extent of the work performed that resulted in the finding. To give the reader a basis for judging the prevalence and consequences of these findings, auditors should, as appropriate, relate the instances identified to the population or the number of cases examined and quantify the results in terms of dollar value or other measures. If the results cannot be projected, auditors should limit their conclusions appropriately.

Reporting Findings Directly to Parties Outside the Audited Entity

5.29 Auditors should report known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse directly to parties outside the audited entity in the following two circumstances.

a. When entity management fails to satisfy legal or regulatory requirements to report such information to external parties specified in law or regulation, auditors should first communicate the failure to report such information to those charged with governance. If the audited entity still does not report this information to the specified external parties as soon as practicable after

the auditors' communication with those charged with governance, then the auditors should report the information directly to the specified external parties.

b. When entity management fails to take timely and appropriate steps to respond to known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that (1) is likely to have a material effect on the subject matter or an assertion about the subject matter and (2) involves funding received directly or indirectly from a government agency, auditors should first report management's failure to take timely and appropriate steps to those charged with governance. If the audited entity still does not take timely and appropriate steps as soon as practicable after the auditors' communication with those charged with governance, then the auditors should report the entity's failure to take timely and appropriate steps directly to the funding agency.

5.30 The reporting in paragraph 5.29 is in addition to any legal requirements to report such information directly to parties outside the audited entity. Auditors should comply with these requirements even if they have resigned or been dismissed from the engagement prior to its completion.

5.31 Auditors should obtain sufficient, appropriate evidence, such as confirmation from outside parties, to corroborate assertions by management of the audited entity that it has reported such findings in accordance with laws, regulations, or funding agreements. When auditors are unable to do so, they should report such information directly as discussed in paragraph 5.29.

Reporting Views of Responsible Officials

5.32 When performing a GAGAS examination engagement, if the examination report discloses deficiencies in internal control, fraud, noncompliance

with provisions of laws, regulations, contracts, or grant agreements, or abuse, auditors should obtain and report the views of responsible officials of the audited entity concerning the findings, conclusions, and recommendations, as well as any planned corrective actions.

5.33 Providing a draft report with findings for review and comment by responsible officials of the audited entity and others helps the auditors develop a report that is fair, complete, and objective. Including the views of responsible officials results in a report that presents not only the auditors' findings, conclusions, and recommendations, but also the perspectives of the responsible officials of the audited entity and the corrective actions they plan to take. Obtaining the comments in writing is preferred, but oral comments are acceptable.

5.34 When auditors receive written comments from the responsible officials, they should include in their report a copy of the officials' written comments, or a summary of the comments received. When the responsible officials provide oral comments only, auditors should prepare a summary of the oral comments and provide a copy of the summary to the responsible officials to verify that the comments are accurately stated.

5.35 Auditors should also include in the report an evaluation of the comments, as appropriate. In cases in which the audited entity provides technical comments in addition to its written or oral comments on the report, auditors may disclose in the report that such comments were received.

5.36 Obtaining oral comments may be appropriate when, for example, there is a reporting date critical to meeting a user's needs; auditors have worked closely with the responsible officials throughout the work and

the parties are familiar with the findings and issues addressed in the draft report; or the auditors do not expect major disagreements with findings, conclusions, or recommendations in the draft report, or major controversies with regard to the issues discussed in the draft report.

5.37 When the audited entity's comments are inconsistent or in conflict with the findings, conclusions, or recommendations in the draft report, or when planned corrective actions do not adequately address the auditors' recommendations, the auditors should evaluate the validity of the audited entity's comments. If the auditors disagree with the comments, they should explain in the report their reasons for disagreement. Conversely, the auditors should modify their report as necessary if they find the comments valid and supported with sufficient, appropriate evidence.

5.38 If the audited entity refuses to provide comments or is unable to provide comments within a reasonable period of time, the auditors may issue the report without receiving comments from the audited entity. In such cases, the auditors should indicate in the report that the audited entity did not provide comments.

Reporting Confidential and Sensitive Information

5.39 When performing a GAGAS examination engagement, if certain pertinent information is prohibited from public disclosure or is excluded from a report due to the confidential or sensitive nature of the information, auditors should disclose in the report that certain information has been omitted and the reason or other circumstances that make the omission necessary.

5.40 Certain information may be classified or may be otherwise prohibited from general disclosure by federal, state, or local laws or regulations. In such circumstances, auditors may issue a separate classified

or limited use report containing such information and distribute the report only to persons authorized by law or regulation to receive it.

5.41 Additional circumstances associated with public safety, privacy, or security concerns could also justify the exclusion of certain information from a publicly available or widely distributed report. For example, detailed information related to computer security for a particular program may be excluded from publicly available reports because of the potential damage that could be caused by the misuse of this information. In such circumstances, auditors may issue a limited use report containing such information and distribute the report only to those parties responsible for acting on the auditors' recommendations. In some instances, it may be appropriate to issue both a publicly available report with the sensitive information excluded and a limited use report. The auditors may consult with legal counsel regarding any requirements or other circumstances that may necessitate the omission of certain information.

5.42 Considering the broad public interest in the program or activity under review assists auditors when deciding whether to exclude certain information from publicly available reports. When circumstances call for omission of certain information, auditors should evaluate whether this omission could distort the examination engagement results or conceal improper or illegal practices.

5.43 When audit organizations are subject to public records laws, auditors should determine whether public records laws could impact the availability of classified or limited use reports and determine whether other means of communicating with management and those charged with governance would be more appropriate. For example, the auditors may communicate general information in a written report and communicate

detailed information orally. The auditors may consult with legal counsel regarding applicable public records laws.

Distributing Reports

5.44 Distribution of reports completed in accordance with GAGAS depends on the relationship of the auditors to the audited organization and the nature of the information contained in the report. Auditors should document any limitation on report distribution.[102] The following discussion outlines distribution for reports completed in accordance with GAGAS:

a. Audit organizations in government entities should distribute reports to those charged with governance, to the appropriate audited entity officials, and to the appropriate oversight bodies or organizations requiring or arranging for the engagements. As appropriate, auditors should also distribute copies of the reports to other officials who have legal oversight authority or who may be responsible for acting on engagement findings and recommendations, and to others authorized to receive such reports.

b. Internal audit organizations in government entities may also follow the Institute of Internal Auditors (IIA) *International Standards for the Professional Practice of Internal Auditing*.[103] In accordance with GAGAS and IIA standards, the head of the internal audit organization should communicate results to the parties who can ensure that the results are given due consideration. If not otherwise mandated by statutory or regulatory

[102]See paragraphs 5.40 and 5.41 for discussion of limited use reports containing confidential or sensitive information.

[103]See paragraph 2.21 for additional discussion about using the IIA standards in conjunction with GAGAS and paragraph 2.22 for additional discussion about citing compliance with another set of standards.

requirements, prior to releasing results to parties outside the organization, the head of the internal audit organization should: (1) assess the potential risk to the organization, (2) consult with senior management or legal counsel as appropriate, and (3) control dissemination by indicating the intended users in the report.

c. Public accounting firms contracted to perform an examination engagement in accordance with GAGAS should clarify report distribution responsibilities with the engaging organization. If the contracting firm is responsible for the distribution, it should reach agreement with the party contracting for the engagement about which officials or organizations will receive the report and the steps being taken to make the report available to the public.

Additional GAGAS Considerations for Examination Engagements

5.45 Due to the objectives and public accountability of GAGAS examination engagements, additional considerations for examination engagements completed in accordance with GAGAS may apply. These considerations relate to

a. Materiality in GAGAS examination engagements, and

b. Early communication of deficiencies.[104]

Materiality in GAGAS Examination Engagements

5.46 The AICPA standards require that one of the factors to be considered when planning an attest engagement includes preliminary judgments about attestation risk and materiality for attest purposes.[105]

[104]See paragraphs 5.46 and 5.47 for additional discussion of paragraph 5.45 a-b.

[105]See AICPA AT Section 101.45b and 101.67, *Attest Engagements.*

Additional considerations may apply to GAGAS examination engagements of government entities or entities that receive government awards. For example, in engagements performed in accordance with GAGAS, auditors may find it appropriate to use lower materiality levels as compared with the materiality levels used in non-GAGAS engagements because of the public accountability of government entities and entities receiving government funding, various legal and regulatory requirements, and the visibility and sensitivity of government programs.

Early Communication of Deficiencies

5.47 For some matters, early communication to those charged with governance or management may be important because of the relative significance and the urgency for corrective follow-up action.[106] Further, when a control deficiency results in noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse, early communication is important to allow management to take prompt corrective action to prevent further noncompliance. When a deficiency is communicated early, the reporting requirements in paragraph 5.20 still apply.

[106]See AICPA AT Section 501.103, *An Examination of an Entity's Internal Control Over Financial Reporting That Is Integrated With an Audit of Its Financial Statements*.

Review Engagements

Additional GAGAS Field Work Requirements for Review Engagements

5.48 GAGAS establishes a field work requirement for review engagements in addition to the requirements contained in the AICPA standards. Auditors should comply with this additional requirement, along with the relevant AICPA standards for review engagements, when citing GAGAS in their review engagement reports. The additional requirement relates to communicating significant deficiencies, material weaknesses, instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that come to the auditors' attention during a review engagement.

Communicating Significant Deficiencies, Material Weaknesses, Instances of Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

5.49 If, on the basis of conducting the procedures necessary to perform a review, significant deficiencies; material weaknesses; instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements; or abuse come to the auditors' attention that warrant the attention of those charged with governance, GAGAS requires that auditors should communicate such matters to audited entity officials. When auditors detect any instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that do not warrant the attention of those charged with governance, the auditors' determination of whether and how to communicate such instances to audited entity officials is a matter of professional judgment. Additionally, auditors should determine whether the existence of such matters affects the auditors' ability to conduct or report on the review.

Additional GAGAS Reporting Requirements for Review Engagements

5.50 GAGAS establishes reporting requirements for review engagements in addition to the requirements contained in the AICPA standards.[107] Auditors should comply with these additional requirements when citing GAGAS in their review engagement reports. The additional requirements relate to

a. reporting auditors' compliance with GAGAS; and

b. distributing reports.[108]

Reporting Auditors' Compliance with GAGAS

5.51 When auditors comply with all applicable requirements for a review engagement conducted in accordance with GAGAS, they should include a statement in the review report that they performed the engagement in accordance with GAGAS.[109] Because GAGAS incorporates by reference the general standard on criteria, and the field work and reporting standards of the AICPA SSAEs, GAGAS does not require auditors to cite compliance with the AICPA standards when citing compliance with GAGAS. GAGAS does not prohibit auditors from issuing a separate report conforming only to the requirements of AICPA or other standards.[110]

Distributing Reports

5.52 Distribution of reports completed in accordance with GAGAS depends on the relationship of the auditors to the audited organization and the nature of the

[107]See AICPA AT Section 101.63-101.83 and 101.88-101.90, *Attest Engagements*.

[108]See paragraphs 5.51 and 5.52 for additional discussion of paragraph 5.50 a-b.

[109]See paragraphs 2.24 and 2.25 for additional requirements on citing compliance with GAGAS.

[110]See AICPA AT Section 101.89d, *Attest Engagements.*

information contained in the report. For GAGAS review engagements, if the subject matter or the assertion involves material that is classified for security purposes or contains confidential or sensitive information, auditors should limit the report distribution. Auditors should document any limitation on report distribution. The following discussion outlines distribution for reports completed in accordance with GAGAS:

a. Audit organizations in government entities should distribute reports to those charged with governance, to the appropriate audited entity officials, and to the appropriate oversight bodies or organizations requiring or arranging for the engagements. As appropriate, auditors should also distribute copies of the reports to other officials who have legal oversight authority, and to others authorized to receive such reports.

b. Internal audit organizations in government entities may also follow the Institute of Internal Auditors (IIA) *International Standards for the Professional Practice of Internal Auditing*.[111] In accordance with GAGAS and IIA standards, the head of the internal audit organization should communicate results to the parties who can ensure that the results are given due consideration. If not otherwise mandated by statutory or regulatory requirements, prior to releasing results to parties outside the organization, the head of the internal audit organization should: (1) assess the potential risk to the organization, (2) consult with senior management or legal counsel as appropriate, and (3) control dissemination by indicating the intended users in the report.

[111]See paragraph 2.21 for additional discussion about using the IIA standards in conjunction with GAGAS and paragraph 2.22 for additional discussion about citing compliance with another set of standards.

c. Public accounting firms contracted to perform a review engagement in accordance with GAGAS should clarify report distribution responsibilities with the engaging organization. If the contracting firm is responsible for the distribution, it should reach agreement with the party contracting for the engagement about which officials or organizations will receive the report and the steps being taken to make the report available to the public.

Additional GAGAS Considerations for Review Engagements

5.53 Due to the objectives and public accountability of GAGAS review engagements, additional considerations for review engagements performed in accordance with GAGAS may apply. These considerations relate to

a. establishing an understanding regarding services to be performed; and

b. reporting on review engagements.[112]

Establishing an Understanding Regarding Services to be Performed

5.54 The AICPA standards require auditors to establish an understanding with the audited entity (client) regarding the services to be performed for each attestation engagement. Such an understanding reduces the risk that either the auditors (practitioner) or the audited entity may misinterpret the needs or expectations of the other party. The understanding includes the objectives of the engagement, responsibilities of entity management, responsibilities of auditors, and limitations of the engagement.[113]

[112]See paragraphs 5.54 through 5.57 for additional discussion of 5.53 a-b.

[113]See AICPA AT Section 101.46, *Attest Engagements*.

5.55 Auditors often perform GAGAS engagements under a contract with a party other than the officials of the audited entity or pursuant to a third-party request. In such cases, auditors may also find it appropriate to communicate information regarding the services to be performed to the individuals contracting for or requesting the engagement. Such an understanding can help auditors avoid any misunderstandings regarding the nature of the review engagement. For example, review engagements only provide a moderate level of assurance expressed as a conclusion in the form of negative assurance, and, as a result, auditors do not perform sufficient work to be able to develop elements of a finding or provide recommendations that are common in other types of GAGAS engagements. Under such circumstances, for example, requesting parties may find that a different type of attestation engagement or a performance audit may provide the appropriate level of assurance to meet their needs.

Reporting on Review Engagements

5.56 The AICPA standards require that the auditors' review report be in the form of a conclusion expressed in the form of negative assurance.[114]

5.57 Because reviews are substantially less in scope than audits and examination engagements, it is important to include all required reporting elements contained in the SSAEs.[115] For example, a required element of the review report is a statement that a review engagement is substantially less in scope than an examination, the objective of which is an expression of opinion on the subject matter, and accordingly, review reports express no such opinion. Including only those elements that the AICPA reporting standards for review

[114]See AICPA AT Section 101.68, *Attest Engagements*.

[115]See AICPA AT Section 101.89, *Attest Engagements.*

engagements require or permit ensures that auditors comply with the AICPA standards and that users of GAGAS reports have an understanding of the nature of the work performed and the results of the review engagement.

Agreed-Upon Procedures Engagements

Additional GAGAS Field Work Requirements for Agreed-Upon Procedures Engagements

5.58 GAGAS establishes a field work requirement for agreed-upon procedures engagements in addition to the requirements contained in the AICPA standards. Auditors should comply with this additional requirement, along with the relevant AICPA standards for agreed-upon procedures engagements, when citing GAGAS in their agreed-upon procedures engagement reports. The additional requirement relates to communicating significant deficiencies, material weaknesses, instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that comes to the auditors' attention during an agreed-upon procedures engagement.

Communicating Significant Deficiencies, Material Weaknesses, Instances of Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

5.59 If, on the basis of conducting the procedures necessary to perform an agreed-upon procedures engagement,[116] significant deficiencies, material weaknesses, instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse come to the auditors' attention that warrant the attention of those charged with governance, GAGAS requires that auditors should communicate such matters to audited entity officials. When auditors detect any instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that do not warrant the attention of those charged with governance, the auditors' determination of whether and how to communicate such instances to audited entity officials is a matter of professional judgment. Additionally, auditors should determine whether the existence of such matters affects the auditors' ability to conduct or report on the agreed-upon procedures engagement.

Additional GAGAS Reporting Requirements for Agreed-Upon Procedures Engagements

5.60 GAGAS establishes reporting requirements for agreed-upon procedures engagements in addition to the requirements contained in the AICPA standards.[117] Auditors should comply with these additional requirements when citing GAGAS in their agreed-upon procedures engagement reports. The additional requirements relate to

a. reporting auditors' compliance with GAGAS; and

[116]See AICPA AT Section 201.03, *Agreed-Upon Procedures Engagements*.

[117]See AICPA AT Section 201.31-201.36, *Agreed-Upon Procedures Engagements*.

b. distributing reports.[118]

Reporting Auditors' Compliance with GAGAS

5.61 When auditors comply with all applicable GAGAS requirements for agreed-upon procedures engagements, they should include a statement in the agreed-upon procedures engagement report that they performed the engagement in accordance with GAGAS.[119] Because GAGAS incorporates by reference the AICPA's general attestation standard on criteria, the field work and reporting attestation standards, and the corresponding SSAEs, GAGAS does not require auditors to cite compliance with the AICPA standards when citing compliance with GAGAS. GAGAS does not prohibit auditors from issuing a separate report conforming only to the requirements of AICPA or other standards.[120]

Distributing Reports

5.62 Distribution of reports completed in accordance with GAGAS depends on the relationship of the auditors to the audited organization and the nature of the information contained in the report. For GAGAS agreed-upon procedures engagements, if the subject matter or the assertion involves material that is classified for security purposes or contains confidential or sensitive information, auditors should limit the report distribution. Auditors should document any limitation on report distribution. The following discussion outlines distribution for reports completed in accordance with GAGAS:

[118]See paragraphs 5.61 and 5.62 for additional discussion of paragraph 5.60 a-b.

[119]See paragraphs 2.24 and 2.25 for additional requirements on citing compliance with GAGAS.

[120]See AICPA AT Section 201.31 g, *Agreed-Upon Procedures Engagements.*

a. Audit organizations in government entities should distribute reports to those charged with governance, to the appropriate audited entity officials, and to the appropriate oversight bodies or organizations requiring or arranging for the engagements. As appropriate, auditors should also distribute copies of the reports to other officials who have legal oversight authority, and to others authorized to receive such reports.

b. Internal audit organizations in government entities may also follow the Institute of Internal Auditors (IIA) *International Standards for the Professional Practice of Internal Auditing*.[121] In accordance with GAGAS and IIA standards, the head of the internal audit organization should communicate results to the parties who can ensure that the results are given due consideration. If not otherwise mandated by statutory or regulatory requirements, prior to releasing results to parties outside the organization, the head of the internal audit organization should: (1) assess the potential risk to the organization, (2) consult with senior management or legal counsel as appropriate, and (3) control dissemination by indicating the intended users in the report.

c. Public accounting firms contracted to perform an agreed-upon procedures engagement in accordance with GAGAS should clarify report distribution responsibilities with the engaging organization. If the contracting firm is responsible for the distribution, it should reach agreement with the party contracting for the engagement about which officials or organizations will receive the report and the steps being taken to make the report available to the public.

[121]See paragraph 2.21 for additional discussion about using the IIA standards in conjunction with GAGAS and paragraph 2.22 for additional discussion about citing compliance with another set of standards.

Additional GAGAS Considerations for Agreed-Upon Procedures Engagements

5.63 Due to the objectives and public accountability of GAGAS agreed-upon procedures engagements, additional considerations for agreed-upon procedures engagements performed in accordance with GAGAS may apply. These considerations relate to

a. establishing an understanding regarding services to be performed; and

b. reporting on agreed-upon procedures engagements.[122]

Establishing an Understanding Regarding Services to be Performed

5.64 The AICPA standards require auditors to establish an understanding with the audited entity (client) regarding the services to be performed for each attestation engagement. Such an understanding reduces the risk that either the auditors (practitioner) or the audited entity may misinterpret the needs or expectations of the other party. The understanding includes the objectives of the engagement, responsibilities of entity management, responsibilities of auditors, and limitations of the engagement.[123]

5.65 Auditors often perform GAGAS engagements under a contract with a party other than the officials of the audited entity or pursuant to a third-party request. In such cases, auditors may also find it appropriate to communicate information regarding the services to be performed to the individuals contracting for or requesting the engagement. Such an understanding can help auditors avoid any misunderstandings regarding the nature of the agreed-upon procedures

[122]See paragraphs 5.64 through 5.67 for additional discussion of paragraph 5.63 a-b.

[123]See AICPA AT Sections 101.46, *Attest Engagements,* and 201.10, *Agreed-Upon Procedures Engagements*.

engagement. For example, agreed-upon procedures engagements provide neither a high nor moderate level of assurance, and, as a result, auditors do not perform sufficient work to be able to develop elements of a finding or provide recommendations that are common in other types of GAGAS engagements. Under such circumstances, for example, requesting parties may find that a different type of attestation engagement or a performance audit may provide the appropriate level of assurance to meet their needs.

Reporting on Agreed-Upon Procedures Engagements

5.66 The AICPA standards require that the auditors' report on agreed-upon procedures engagements be in the form of procedures and findings and specifies the required elements to be contained in the report.[124]

5.67 Because GAGAS agreed-upon procedures engagements are substantially less in scope than audits and examination engagements, it is important not to deviate from the required reporting elements contained in the SSAEs. For example, a required element of the report on agreed-upon procedures is a statement that the auditors were not engaged to and did not conduct an examination or a review of the subject matter, the objectives of which would be the expression of an opinion or limited assurance and that if the auditors had performed additional procedures, other matters might have come to their attention that would have been reported.[125] Another required element is a statement that the sufficiency of the procedures is solely the responsibility of the specified parties and a disclaimer of

[124]See AICPA AT Section 201.31, *Agreed-Upon Procedures Engagements*.

[125]See AICPA AT Section 201.31k, *Agreed-Upon Procedures Engagements*.

responsibility for the sufficiency of those procedures.[126] Including only those elements that the AICPA reporting standards for agreed-upon procedure engagements require or permit ensures that auditors comply with the AICPA standards and that users of GAGAS reports have an understanding of the nature of the work performed and the results of the agreed-upon procedures engagement.

[126]See AICPA AT Section 201.31h and 201.11-201.14, *Agreed-Upon Procedures Engagements*.

Field Work Standards for Performance Audits

Introduction

6.01 This chapter contains field work requirements and guidance for performance audits conducted in accordance with generally accepted government auditing standards (GAGAS). The purpose of field work requirements is to establish an overall approach for auditors to apply in obtaining reasonable assurance that the evidence is sufficient and appropriate to support the auditors' findings and conclusions. The field work requirements for performance audits relate to planning the audit; supervising staff; obtaining sufficient, appropriate evidence; and preparing audit documentation. The concepts of reasonable assurance, significance, and audit risk form a framework for applying these requirements and are included throughout the discussion of performance audits.

6.02 For performance audits conducted in accordance with GAGAS, the requirements and guidance in chapters 1 through 3, 6, and 7 apply.

Reasonable Assurance

6.03 In performance audits that comply with GAGAS, auditors obtain reasonable assurance that evidence is sufficient and appropriate to support the auditors' findings and conclusions in relation to the audit objectives.[127] Thus, the sufficiency and appropriateness of evidence needed and tests of evidence will vary based on the audit objectives, findings, and conclusions. Objectives for performance audits range from narrow to broad and involve varying types and quality of evidence. In some engagements, sufficient, appropriate evidence is available, but in others, information may have limitations. Professional judgment assists auditors in determining the audit scope and methodology needed to address the audit objectives,

[127]See paragraphs 2.11 and A2.02 for additional discussion of performance audit objectives.

and in evaluating whether sufficient, appropriate evidence has been obtained to address the audit objectives.

Significance in a Performance Audit

6.04 The concept of significance assists auditors throughout a performance audit, including when deciding the type and extent of audit work to perform, when evaluating results of audit work, and when developing the report and related findings and conclusions. Significance is defined as the relative importance of a matter within the context in which it is being considered, including quantitative and qualitative factors. Such factors include the magnitude of the matter in relation to the subject matter of the audit, the nature and effect of the matter, the relevance of the matter, the needs and interests of an objective third party with knowledge of the relevant information, and the impact of the matter to the audited program or activity. Professional judgment assists auditors when evaluating the significance of matters within the context of the audit objectives. In the performance audit requirements, the term “significant” is comparable to the term “material” as used in the context of financial statement engagements.

Audit Risk

6.05 Audit risk is the possibility that the auditors’ findings, conclusions, recommendations, or assurance may be improper or incomplete, as a result of factors such as evidence that is not sufficient and/or appropriate, an inadequate audit process, or intentional omissions or misleading information due to misrepresentation or fraud. The assessment of audit risk involves both qualitative and quantitative considerations. Factors impacting audit risk include the time frames, complexity, or sensitivity of the work; size of the program in terms of dollar amounts and number of citizens served; adequacy of the audited entity’s

systems and processes to detect inconsistencies, significant errors, or fraud; and auditors' access to records. Audit risk includes the risk that auditors will not detect a mistake, inconsistency, significant error, or fraud in the evidence supporting the audit. Audit risk can be reduced by taking actions such as increasing the scope of work; adding specialists, additional reviewers, and other resources to perform the audit; changing the methodology to obtain additional evidence, higher quality evidence, or alternative forms of corroborating evidence; or aligning the findings and conclusions to reflect the evidence obtained.

Planning

6.06 Auditors must adequately plan and document the planning of the work necessary to address the audit objectives.

6.07 Auditors must plan the audit to reduce audit risk to an appropriate level for the auditors to obtain reasonable assurance that the evidence is sufficient and appropriate[128] to support the auditors' findings and conclusions. This determination is a matter of professional judgment. In planning the audit, auditors should assess significance and audit risk and apply these assessments in defining the audit objectives and the scope and methodology to address those objectives. Planning is a continuous process throughout the audit. Therefore, auditors may need to adjust the audit objectives, scope, and methodology as work is being completed. In situations where the audit objectives are established by statute or legislative oversight, auditors may not have latitude to define or adjust the audit objectives or scope.

[128]See paragraphs 6.56 through 6.72 for a discussion about assessing the sufficiency and appropriateness of evidence.

6.08 The objectives are what the audit is intended to accomplish. They identify the audit subject matter and performance aspects to be included, and may also include the potential findings and reporting elements that the auditors expect to develop. Audit objectives can be thought of as questions about the program that the auditors seek to answer based on evidence obtained and assessed against criteria. The term “program” is used in GAGAS to include government entities, organizations, programs, activities, and functions.

6.09 Scope is the boundary of the audit and is directly tied to the audit objectives. The scope defines the subject matter that the auditors will assess and report on, such as a particular program or aspect of a program, the necessary documents or records, the period of time reviewed, and the locations that will be included.

6.10 The methodology describes the nature and extent of audit procedures for gathering and analyzing evidence to address the audit objectives. Audit procedures are the specific steps and tests auditors perform to address the audit objectives. Auditors should design the methodology to obtain reasonable assurance that the evidence is sufficient and appropriate to support the auditors’ findings and conclusions in relation to the audit objectives and to reduce audit risk to an acceptable level.

6.11 Auditors should assess audit risk and significance within the context of the audit objectives by gaining an understanding of the following:

a. the nature and profile of the programs and the needs of potential users of the audit report;

b. internal control as it relates to the specific objectives and scope of the audit;

c. information systems controls for purposes of assessing audit risk and planning the audit within the context of the audit objectives;

d. provisions of laws, regulations, contracts, and grant agreements, and potential fraud, and abuse that are significant within the context of the audit objectives;

e. ongoing investigations or legal proceedings within the context of the audit objectives; and

f. the results of previous audits and attestation engagements that directly relate to the current audit objectives.[129]

6.12 During planning, auditors should also

a. identify the potential criteria needed to evaluate matters subject to audit;

b. identify sources of audit evidence and determine the amount and type of evidence needed given audit risk and significance;

c. evaluate whether to use the work of other auditors and specialists to address some of the audit objectives;

d. assign sufficient staff and specialists with adequate collective professional competence and identify other resources needed to perform the audit;

e. communicate about planning and performance of the audit to management officials, those charged with governance, and others as applicable; and

[129]See paragraphs 6.13 through 6.36 for additional discussion of 6.11 a-f.

f. prepare a written audit plan.[130]

Nature and Profile of the Program and User Needs

6.13 Auditors should obtain an understanding of the nature of the program or program component under audit and the potential use that will be made of the audit results or report as they plan a performance audit. The nature and profile of a program include

a. visibility, sensitivity, and relevant risks associated with the program under audit;

b. age of the program or changes in its conditions;

c. the size of the program in terms of total dollars, number of citizens affected, or other measures;

d. level and extent of review or other forms of independent oversight;

e. program's strategic plan and objectives; and

f. external factors or conditions that could directly affect the program.

6.14 One group of users of the auditors' report is government officials who may have authorized or requested the audit. Other important users of the auditors' report are the audited entity, those responsible for acting on the auditors' recommendations, oversight organizations, and legislative bodies. Other potential users of the auditors' report include government legislators or officials (other than those who may have authorized or requested the audit), the media, interest groups, and individual citizens. In addition to an interest

[130]See paragraphs 6.37 through 6.52 for additional discussion of 6.12 a-f.

in the program, potential users may have an ability to influence the conduct of the program. An awareness of these potential users' interests and influence can help auditors judge whether possible findings could be significant to relevant users.

6.15 Obtaining an understanding of the program under audit helps auditors to assess the relevant risks associated with the program and the impact of the risks on the audit objectives, scope, and methodology. The auditors' understanding may come from knowledge they already have about the program or knowledge they gain from inquiries, observations, and reviewing documents while planning the audit. The extent and breadth of those inquiries and observations will vary among audits based on the audit objectives, as will the need to understand individual aspects of the program, such as the following:

a. Provisions of laws, regulations, contracts and grant agreements: Government programs are usually created by law and are subject to specific laws and regulations. Laws and regulations usually set forth what is to be done, who is to do it, the purpose to be achieved, the population to be served, and related funding guidelines or restrictions. Government programs may also be subject to contracts or grant agreements. Thus, understanding the laws and legislative history establishing a program and the provisions of any contracts or grant agreements is essential to understanding the program itself. Obtaining that understanding is also a necessary step in identifying the provisions of laws, regulations, contracts, or grant agreements that are significant within the context of the audit objectives.

b. Purpose and goals: Purpose is the result or effect that is intended or desired from a program's operation. Legislatures usually establish the program's purpose

when they provide authority for the program. Entity officials may provide more detailed information on the program's purpose to supplement the authorizing legislation. Entity officials are sometimes asked to set goals for program performance and operations, including both output and outcome goals. Auditors may use the stated program purpose and goals as criteria for assessing program performance or may develop additional criteria to use when assessing performance.

c. Internal control: Internal control, sometimes referred to as management control, in the broadest sense includes the plan, policies, methods, and procedures adopted by management to meet its missions, goals, and objectives. Internal control includes the processes for planning, organizing, directing, and controlling program operations. It includes the systems for measuring, reporting, and monitoring program performance. Internal control serves as a defense in safeguarding assets and in preventing and detecting errors; fraud; noncompliance with provisions of laws, regulations, contracts or grant agreements; or abuse.[131]

d. Inputs: Inputs are the amount of resources (in terms of money, material, personnel, etc.) that are put into a program. These resources may come from within or outside the entity operating the program. Measures of inputs can have a number of dimensions, such as cost, timing, and quality. Examples of measures of inputs are dollars spent, employee-hours expended, and square feet of building space.

e. Program operations: Program operations are the strategies, processes, and activities management uses

[131]See paragraphs 6.16 through 6.27 for guidance pertaining to internal control.

to convert inputs into outputs. Program operations may be subject to internal control.

f. Outputs: Outputs represent the quantity of goods or services produced by a program. For example, an output measure for a job training program could be the number of persons completing training, and an output measure for an aviation safety inspection program could be the number of safety inspections completed.

g. Outcomes: Outcomes are accomplishments or results of a program. For example, an outcome measure for a job training program could be the percentage of trained persons obtaining a job and still in the work place after a specified period of time. An example of an outcome measure for an aviation safety inspection program could be the percentage reduction in safety problems found in subsequent inspections or the percentage of problems deemed corrected in follow-up inspections. Such outcome measures show the progress made in achieving the stated program purpose of helping unemployable citizens obtain and retain jobs, and improving the safety of aviation operations. Outcomes may be influenced by cultural, economic, physical, or technological factors outside the program. Auditors may use approaches drawn from other disciplines, such as program evaluation, to isolate the effects of the program from these other influences. Outcomes also include unexpected and/or unintentional effects of a program, both positive and negative.

Internal Control

6.16 Auditors should obtain an understanding of internal control[132] that is significant within the context of the audit objectives. For internal control that is significant within the context of the audit objectives, auditors should assess whether internal control has been properly designed and implemented and should perform procedures designed to obtain sufficient, appropriate evidence to support their assessment about the effectiveness of those controls. Information systems controls are often an integral part of an entity's internal control. The effectiveness of significant internal controls is frequently dependent on the effectiveness of information systems controls. Thus, when obtaining an understanding of internal control significant to the audit objectives, auditors should also determine whether it is necessary to evaluate information systems controls.[133]

6.17 The effectiveness of internal control that is significant within the context of the audit objectives can affect audit risk. Consequently, auditors may determine that it is necessary to modify the nature, timing, or extent of the audit procedures based on the auditors' assessment of internal control and the results of internal control testing. For example, poorly controlled aspects of a program have a higher risk of failure, so auditors may choose to focus more efforts in these areas. Conversely, effective controls at the audited entity may enable the auditors to limit the extent and type of audit testing needed.

6.18 Auditors may obtain an understanding of internal control through inquiries, observations, inspection of documents and records, review of other auditors'

[132]See paragraphs A.03 and A.04 for additional discussion on internal control.

[133]See paragraphs 6.23 through 6.27 for additional discussion on evaluating the effectiveness of information systems controls.

reports, or direct tests. The nature and extent of procedures auditors perform to obtain an understanding of internal control may vary among audits based on audit objectives, audit risk, known or potential internal control deficiencies, and the auditors' knowledge about internal control gained in prior audits.

6.19 The following discussion of the principal types of internal control objectives is intended to help auditors better understand internal controls and determine whether or to what extent they are significant to the audit objectives.

a. Effectiveness and efficiency of program operations: Controls over program operations include policies and procedures that the audited entity has implemented to provide reasonable assurance that a program meets its objectives, while considering cost-effectiveness and efficiency. Understanding these controls can help auditors understand the program operations that convert inputs to outputs and outcomes.

b. Relevance and reliability of information: Controls over the relevance and reliability of information include policies and procedures that officials of the audited entity have implemented to provide themselves reasonable assurance that operational and financial information they use for decision making and reporting externally is relevant and reliable and fairly disclosed in reports. Understanding these controls can help auditors (1) assess the risk that the information gathered by the entity may not be relevant or reliable and (2) design appropriate tests of the information considering the audit objectives.

c. Compliance with applicable laws, regulations, contracts, and grant agreements: Controls over compliance include policies and procedures that the audited entity has implemented to provide reasonable

assurance that program implementation is in accordance with provisions of laws, regulations, contracts, and grant agreements. Understanding the relevant controls concerning compliance with those laws, regulations, contracts or grant agreements that the auditors have determined are significant within the context of the audit objectives can help them assess the risk of noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse.

6.20 A subset of these categories of internal control objectives is the safeguarding of assets and resources. Controls over the safeguarding of assets and resources include policies and procedures that the audited entity has implemented to reasonably prevent or promptly detect unauthorized acquisition, use, or disposition of assets and resources.

6.21 In performance audits, a deficiency in internal control[134] exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct (1) impairments of effectiveness or efficiency of operations, (2) misstatements in financial or performance information, or (3) noncompliance with provisions of laws, regulations, contracts, or grant agreements on a timely basis. A deficiency in design exists when (a) a control necessary to meet the control objective is missing or (b) an existing control is not properly designed so that, even if the control operates as designed, the control objective is not met. A deficiency in operation exists when a properly designed control does not operate as designed, or when the person performing the control does not possess the

[134]See paragraph A.05 for additional discussion of internal control deficiencies.

necessary authority or qualifications to perform the control effectively.

6.22 Internal auditing is an important part of overall governance, accountability, and internal control. A key role of many internal audit organizations is to provide assurance that internal controls are in place to adequately mitigate risks and achieve program goals and objectives. The auditor may determine that it is appropriate to use the work of the internal auditors in the auditor's assessment of the effectiveness of design or operation of internal controls that are significant within the context of the audit objectives.[135]

Information Systems Controls

6.23 Understanding information systems controls is important when information systems are used extensively throughout the program under audit and the fundamental business processes related to the audit objectives rely on information systems. Information systems controls consist of those internal controls that are dependent on information systems processing and include general controls, application controls, and user controls.

a. Information systems general controls (entitywide, system, and application levels) are the policies and procedures that apply to all or a large segment of an entity's information systems. General controls help ensure the proper operation of information systems by creating the environment for proper operation of application controls. General controls include security management, logical and physical access, configuration management, segregation of duties, and contingency planning.

[135]See paragraphs 6.40 through 6.44 for standards and guidance for using the work of other auditors.

b. Application controls, sometimes referred to as business process controls, are those controls that are incorporated directly into computer applications to help ensure the validity, completeness, accuracy, and confidentiality of transactions and data during application processing. Application controls include controls over input, processing, output, master file, interface, and data management system controls.

c. User controls are portions of controls that are performed by people interacting with information system controls. A user control is an information system control if its effectiveness depends on information systems processing or the reliability (accuracy, completeness, and validity) of information processed by information systems.

6.24 An organization's use of information systems controls may be extensive; however, auditors are primarily interested in those information systems controls that are significant to the audit objectives. Information systems controls are significant to the audit objectives if auditors determine that it is necessary to evaluate the effectiveness of information systems controls in order to obtain sufficient, appropriate evidence. When information systems controls are determined to be significant to the audit objectives or when the effectiveness of significant controls is dependent on the effectiveness of information systems controls, auditors should then evaluate the design and operating effectiveness of such controls. This evaluation would include other information systems controls that impact the effectiveness of the significant controls or the reliability of information used in performing the significant controls. Auditors should obtain a sufficient understanding of information systems

controls necessary to assess audit risk and plan the audit within the context of the audit objectives.[136]

6.25 Audit procedures to evaluate the effectiveness of significant information systems controls include (1) gaining an understanding of the system as it relates to the information and (2) identifying and evaluating the general, application, and user controls that are critical to providing assurance over the reliability of the information required for the audit.

6.26 The evaluation of information systems controls may be done in conjunction with the auditors' consideration of internal control within the context of the audit objectives[137] or as a separate audit objective or audit procedure, depending on the objectives of the audit. Depending on the significance of information systems controls to the audit objectives, the extent of audit procedures to obtain such an understanding may be limited or extensive. In addition, the nature and extent of audit risk related to information systems controls are affected by the nature of the hardware and software used, the configuration of the entity's systems and networks, and the entity's information systems strategy.

6.27 Auditors should determine which audit procedures related to information systems controls are needed to obtain sufficient, appropriate evidence to support the audit findings and conclusions. The following factors may assist auditors in making this determination:

[136]Refer to additional criteria and guidance in *Federal Information System Controls Audit Manual* (FISCAM), GAO-09-232G (Washington, D.C.: February 2009) and *IT Standards, Guidelines, and Tools and Techniques for Audit and Assurance and Control Professionals*, published by ISACA.

[137]See paragraphs 6.16 through 6.22 for additional discussion on internal control.

a. The extent to which internal controls that are significant to the audit depend on the reliability of information processed or generated by information systems.

b. The availability of evidence outside the information system to support the findings and conclusions: It may not be possible for auditors to obtain sufficient, appropriate evidence without evaluating the effectiveness of relevant information systems controls. For example, if information supporting the findings and conclusions is generated by information systems or its reliability is dependent on information systems controls, there may not be sufficient supporting or corroborating information or documentary evidence that is available other than that produced by the information systems.

c. The relationship of information systems controls to data reliability: To obtain evidence about the reliability of computer-generated information, auditors may decide to evaluate the effectiveness of information systems controls as part of obtaining evidence about the reliability of the data. If the auditor concludes that information systems controls are effective, the auditor may reduce the extent of direct testing of data.

d. Evaluating the effectiveness of information systems controls as an audit objective: When evaluating the effectiveness of information systems controls is directly a part of an audit objective, auditors should test information systems controls necessary to address the audit objectives. For example, the audit may involve the effectiveness of information systems controls related to certain systems, facilities, or organizations.

Provisions of Laws, Regulations, Contracts, and Grant Agreements, Fraud, and Abuse

Provisions of Laws, Regulations, Contracts, and Grant Agreements

6.28 Auditors should identify any provisions of laws, regulations, contracts or grant agreements that are significant within the context of the audit objectives and assess the risk that noncompliance with provisions of laws, regulations, contracts or grant agreements could occur.[138] Based on that risk assessment, the auditors should design and perform procedures to obtain reasonable assurance of detecting instances of noncompliance with provisions of laws, regulations, contracts, or grant agreements that are significant within the context of the audit objectives.

6.29 The auditors' assessment of audit risk may be affected by such factors as the complexity or newness of the laws, regulations, contracts or grant agreements. The auditors' assessment of audit risk also may be affected by whether the entity has controls that are effective in preventing or detecting noncompliance with provisions of laws, regulations, contracts, or grant agreements. If auditors obtain sufficient, appropriate evidence of the effectiveness of these controls, they can reduce the extent of their tests of compliance.

Fraud

6.30 In planning the audit, auditors should assess risks of fraud occurring that is significant within the context of the audit objectives.[139] Fraud involves obtaining something of value through willful misrepresentation.

[138]See paragraphs A.11 through A.13 for additional discussion on the significance of provisions of laws, regulations, contracts, or grant agreements.

[139]See paragraph A.10 for examples of indicators of fraud risk.

Whether an act is, in fact, fraud is a determination to be made through the judicial or other adjudicative system and is beyond auditors' professional responsibility. Audit team members should discuss among the team fraud risks, including factors such as individuals' incentives or pressures to commit fraud, the opportunity for fraud to occur, and rationalizations or attitudes that could allow individuals to commit fraud. Auditors should gather and assess information to identify risks of fraud that are significant within the scope of the audit objectives or that could affect the findings and conclusions. For example, auditors may obtain information through discussion with officials of the audited entity or through other means to determine the susceptibility of the program to fraud, the status of internal controls the audited entity has established to prevent and detect fraud, or the risk that officials of the audited entity could override internal control. An attitude of professional skepticism in assessing these risks assists auditors in assessing which factors or risks could significantly affect the audit objectives.

6.31 When auditors identify factors or risks related to fraud that has occurred or is likely to have occurred that they believe are significant within the context of the audit objectives, they should design procedures to obtain reasonable assurance of detecting any such fraud. Assessing the risk of fraud is an ongoing process throughout the audit and relates not only to planning the audit but also to evaluating evidence obtained during the audit.

6.32 When information comes to the auditors' attention indicating that fraud, significant within the context of the audit objectives, may have occurred, auditors should extend the audit steps and procedures, as necessary, to (1) determine whether fraud has likely occurred and (2) if so, determine its effect on the audit findings. If the fraud that may have occurred is not significant within the context of the audit objectives, the auditors may

conduct additional audit work as a separate engagement, or refer the matter to other parties with oversight responsibility or jurisdiction.

Abuse

6.33 Abuse involves behavior that is deficient or improper when compared with behavior that a prudent person would consider reasonable and necessary business practice given the facts and circumstances. Abuse also includes misuse of authority or position for personal financial interests or those of an immediate or close family member or business associate.[140] Abuse does not necessarily involve fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements.

6.34 Because the determination of abuse is subjective, auditors are not required to detect abuse in performance audits. However, as part of a GAGAS audit, if auditors become aware of abuse that could be quantitatively or qualitatively significant to the program under audit, auditors should apply audit procedures specifically directed to ascertain the potential effect on the program under audit within the context of the audit objectives. After performing additional work, auditors may discover that the abuse represents potential fraud or noncompliance with provisions of laws, regulations, contracts, or grant agreements.

Ongoing Investigations and Legal Proceedings

6.35 Avoiding interference with investigations or legal proceedings is important in pursuing indications of fraud, noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse. Laws, regulations, and policies may require auditors to report indications of certain types of fraud, noncompliance with provisions of laws, regulations,

[140]See A.08 for additional examples of abuse.

contracts, or grant agreements, or abuse to law enforcement or investigatory authorities before performing additional audit procedures. When investigations or legal proceedings are initiated or in process, auditors should evaluate the impact on the current audit. In some cases, it may be appropriate for the auditors to work with investigators or legal authorities, or withdraw from or defer further work on the audit or a portion of the audit to avoid interfering with an ongoing investigation or legal proceeding.

Previous Audits and Attestation Engagements

6.36 Auditors should evaluate whether the audited entity has taken appropriate corrective action to address findings and recommendations from previous engagements that are significant within the context of the audit objectives. When planning the audit, auditors should ask management of the audited entity to identify previous audits, attestation engagements, performance audits, or other studies that directly relate to the objectives of the audit, including whether related recommendations have been implemented. Auditors should use this information in assessing risk and determining the nature, timing, and extent of current audit work, including determining the extent to which testing the implementation of the corrective actions is applicable to the current audit objectives.

Identifying Audit Criteria

6.37 Auditors should identify criteria. Criteria represent the laws, regulations, contracts, grant agreements, standards, specific requirements, measures, expected performance, defined business practices, and benchmarks against which performance is compared or evaluated. Criteria identify the required or desired state or expectation with respect to the program or operation. Criteria provide a context for evaluating evidence and understanding the findings, conclusions, and recommendations included in the report. Auditors should use criteria that are relevant to the audit

objectives and permit consistent assessment of the subject matter.[141]

Identifying Sources of Evidence and the Amount and Type of Evidence Required

6.38 Auditors should identify potential sources of information that could be used as evidence. Auditors should determine the amount and type of evidence needed to obtain sufficient, appropriate evidence to address the audit objectives and adequately plan audit work.

6.39 If auditors believe that it is likely that sufficient, appropriate evidence will not be available, they may revise the audit objectives or modify the scope and methodology and determine alternative procedures to obtain additional evidence or other forms of evidence to address the current audit objectives. Auditors should also evaluate whether the lack of sufficient, appropriate evidence is due to internal control deficiencies or other program weaknesses, and whether the lack of sufficient, appropriate evidence could be the basis for audit findings.[142]

Using the Work of Others

6.40 Auditors should determine whether other auditors have conducted, or are conducting, audits of the program that could be relevant to the current audit objectives. The results of other auditors' work may be useful sources of information for planning and performing the audit. If other auditors have identified areas that warrant further audit work or follow-up, their work may influence the auditors' selection of objectives, scope, and methodology.

[141]See paragraph A6.02 for examples of criteria.

[142]See paragraphs 6.56 through 6.72 for standards concerning evidence.

6.41 If other auditors have completed audit work related to the objectives of the current audit, the current auditors may be able to use the work of the other auditors to support findings or conclusions for the current audit and, thereby, avoid duplication of efforts. If auditors use the work of other auditors, they should perform procedures that provide a sufficient basis for using that work. Auditors should obtain evidence concerning the other auditors' qualifications and independence and should determine whether the scope, quality, and timing of the audit work performed by the other auditors is adequate for reliance in the context of the current audit objectives. Procedures that auditors may perform in making this determination include reviewing the other auditors' report, audit plan, or audit documentation, and/or performing tests of the other auditors' work. The nature and extent of evidence needed will depend on the significance of the other auditors' work to the current audit objectives and the extent to which the auditors will use that work.[143]

6.42 Some audits may necessitate the use of specialized techniques or methods that require the skills of a specialist. Specialists to whom this section applies include, but are not limited to, actuaries, appraisers, attorneys, engineers, environmental consultants, medical professionals, statisticians, geologists, and information technology experts. If auditors intend to use the work of specialists, they should assess the professional qualifications and independence of the specialists.

6.43 Auditors' assessment of professional qualifications of the specialist involves the following:

[143]See paragraph 3.107 for additional discussion on using the work of other auditors and peer review reports.

a. the professional certification, license, or other recognition of the competence of the specialist in his or her field, as appropriate;

b. the reputation and standing of the specialist in the views of peers and others familiar with the specialist's capability or performance;

c. the specialist's experience and previous work in the subject matter; and

d. the auditors' prior experience in using the specialist's work.

6.44 Auditors' assessment of the independence of specialists who perform audit work includes identifying threats and applying any necessary safeguards in the same manner as they would for auditors performing work on those audits.[144]

Assigning Staff and Other Resources

6.45 Audit management should assign sufficient staff and specialists with adequate collective professional competence to perform the audit.[145] Staffing an audit includes, among other things:

a. assigning staff and specialists with the collective knowledge, skills, and experience appropriate for the job,

b. assigning a sufficient number of staff and supervisors to the audit,

[144]See paragraphs 3.02 through 3.26 for additional discussion related to independence and applying the conceptual framework approach to independence.

[145]See paragraphs 3.72 and 3.79 through 3.81 for additional discussion of using specialists in a GAGAS audit.

c. providing for on-the-job training of staff, and

d. engaging specialists when necessary.

6.46 If planning to use the work of a specialist, auditors should document the nature and scope of the work to be performed by the specialist, including

a. the objectives and scope of the specialist's work,

b. the intended use of the specialist's work to support the audit objectives,

c. the specialist's procedures and findings so they can be evaluated and related to other planned audit procedures, and

d. the assumptions and methods used by the specialist.

Communicating with Management, Those Charged with Governance, and Others

6.47 Auditors should communicate an overview of the objectives, scope, and methodology and the timing of the performance audit and planned reporting (including any potential restrictions on the report), unless doing so could significantly impair the auditors' ability to obtain sufficient, appropriate evidence to address the audit objectives, such as when the auditors plan to conduct unannounced cash counts or perform procedures related to indications of fraud. Auditors should communicate with the following parties, as applicable:

a. management of the audited entity, including those with sufficient authority and responsibility to implement corrective action in the program or activity being audited;

b. those charged with governance;[146]

c. the individuals contracting for or requesting audit services, such as contracting officials or grantees; and

d. the cognizant legislative committee, when auditors perform the audit pursuant to a law or regulation or they conduct the work for the legislative committee that has oversight of the audited entity.

6.48 In those situations where there is not a single individual or group that both oversees the strategic direction of the audited entity and the fulfillment of its accountability obligations or in other situations where the identity of those charged with governance is not clearly evident, auditors should document the process followed and conclusions reached for identifying the appropriate individuals to receive the required auditor communications.

6.49 Determining the form, content, and frequency of the communication is a matter of professional judgment, although written communication is preferred. Auditors may use an engagement letter to communicate the information. Auditors should document this communication.

6.50 If an audit is terminated before it is completed and an audit report is not issued, auditors should document the results of the work to the date of termination and why the audit was terminated. Determining whether and how to communicate the reason for terminating the audit to those charged with governance, appropriate officials of the audited entity, the entity contracting for or requesting the audit, and other appropriate officials will

[146]See paragraphs A1.05 through A1.07 for a discussion of the role of those charged with governance.

depend on the facts and circumstances and, therefore, is a matter of professional judgment.

Preparing a Written Audit Plan

6.51 Auditors must prepare a written audit plan for each audit. The form and content of the written audit plan may vary among audits and may include an audit strategy, audit program, project plan, audit planning paper, or other appropriate documentation of key decisions about the audit objectives, scope, and methodology and the auditors' basis for those decisions. Auditors should update the plan, as necessary, to reflect any significant changes to the plan made during the audit.

6.52 A written audit plan provides an opportunity for audit organization management to supervise audit planning and to determine whether

a. the proposed audit objectives are likely to result in a useful report;

b. the audit plan adequately addresses relevant risks;

c. the proposed audit scope and methodology are adequate to address the audit objectives;

d. available evidence is likely to be sufficient and appropriate for purposes of the audit; and

e. sufficient staff, supervisors, and specialists with adequate collective professional competence and other resources are available to perform the audit and to meet expected time frames for completing the work.

Supervision

6.53 Audit supervisors or those designated to supervise auditors must properly supervise audit staff.

6.54 Audit supervision involves providing sufficient guidance and direction to staff assigned to the audit to address the audit objectives and follow applicable requirements, while staying informed about significant problems encountered, reviewing the work performed, and providing effective on-the-job training.[147]

6.55 The nature and extent of the supervision of staff and the review of audit work may vary depending on a number of factors, such as the size of the audit organization, the significance of the work, and the experience of the staff.

Obtaining Sufficient, Appropriate Evidence

6.56 Auditors must obtain sufficient, appropriate evidence to provide a reasonable basis for their findings and conclusions.

6.57 The concept of sufficient, appropriate evidence is integral to an audit. Appropriateness is the measure of the quality of evidence that encompasses its relevance, validity, and reliability in providing support for findings and conclusions related to the audit objectives.[148] In assessing the overall appropriateness of evidence, auditors should assess whether the evidence is relevant, valid, and reliable. Sufficiency is a measure of the quantity of evidence used to support the findings and conclusions related to the audit objectives. In assessing the sufficiency of evidence, auditors should determine whether enough evidence has been obtained to persuade a knowledgeable person that the findings are reasonable.

[147]See paragraph 6.83c for the documentation requirement related to supervision.

[148]See paragraph A6.05 for additional discussion of the appropriateness of evidence.

6.58 In assessing evidence, auditors should evaluate whether the evidence taken as a whole is sufficient and appropriate for addressing the audit objectives and supporting findings and conclusions. Audit objectives may vary widely, as may the level of work necessary to assess the sufficiency and appropriateness of evidence to address the objectives. For example, in establishing the appropriateness of evidence, auditors may test its reliability by obtaining supporting evidence, using statistical testing, or obtaining corroborating evidence. The concepts of audit risk and significance assist auditors with evaluating the audit evidence.[149]

6.59 Professional judgment assists auditors in determining the sufficiency and appropriateness of evidence taken as a whole. Interpreting, summarizing, or analyzing evidence is typically used in the process of determining the sufficiency and appropriateness of evidence and in reporting the results of the audit work. When appropriate, auditors may use statistical methods to analyze and interpret evidence to assess its sufficiency.

Appropriateness

6.60 Appropriateness is the measure of the quality of evidence that encompasses the relevance, validity, and reliability of evidence used for addressing the audit objectives and supporting findings and conclusions.[150]

a. Relevance refers to the extent to which evidence has a logical relationship with, and importance to, the issue being addressed.

[149]See paragraphs 6.04 and 6.05 for a discussion of significance and audit risk.

[150]See paragraph A6.05 for additional guidance regarding assessing the appropriateness of evidence in relation to the audit objectives.

b. Validity refers to the extent to which evidence is a meaningful or reasonable basis for measuring what is being evaluated. In other words, validity refers to the extent to which evidence represents what it is purported to represent.

c. Reliability refers to the consistency of results when information is measured or tested and includes the concepts of being verifiable or supported.[151]

6.61 There are different types and sources of evidence that auditors may use, depending on the audit objectives. Evidence may be obtained by observation, inquiry, or inspection. Each type of evidence has its own strengths and weaknesses.[152] The following contrasts are useful in judging the appropriateness of evidence. However, these contrasts are not adequate in themselves to determine appropriateness. The nature and types of evidence to support auditors' findings and conclusions are matters of the auditors' professional judgment based on the audit objectives and audit risk.

a. Evidence obtained when internal control is effective is generally more reliable than evidence obtained when internal control is weak or nonexistent.

b. Evidence obtained through the auditors' direct physical examination, observation, computation, and inspection is generally more reliable than evidence obtained indirectly.

c. Examination of original documents is generally more reliable than examination of copies.

[151]See paragraph 6.66 for a discussion of computer-processed information and guidance on data reliability.

[152]See paragraph A6.04 for additional guidance regarding the types of evidence.

d. Testimonial evidence obtained under conditions in which persons may speak freely is generally more reliable than evidence obtained under circumstances in which the persons may be intimidated.

e. Testimonial evidence obtained from an individual who is not biased and has direct knowledge about the area is generally more reliable than testimonial evidence obtained from an individual who is biased or has indirect or partial knowledge about the area.

f. Evidence obtained from a knowledgeable, credible, and unbiased third party is generally more reliable than evidence obtained from management of the audited entity or others who have a direct interest in the audited entity.

6.62 Testimonial evidence may be useful in interpreting or corroborating documentary or physical information. Auditors should evaluate the objectivity, credibility, and reliability of the testimonial evidence. Documentary evidence may be used to help verify, support, or challenge testimonial evidence.

6.63 Surveys generally provide self-reported information about existing conditions or programs. Evaluation of the survey design and administration assists auditors in evaluating the objectivity, credibility, and reliability of the self-reported information.

6.64 When sampling is used, the method of selection that is appropriate will depend on the audit objectives. When a representative sample is needed, the use of statistical sampling approaches generally results in stronger evidence than that obtained from nonstatistical techniques. When a representative sample is not needed, a targeted selection may be effective if the auditors have isolated risk factors or other criteria to target the selection.

6.65 When auditors use information provided by officials of the audited entity as part of their evidence, they should determine what the officials of the audited entity or other auditors did to obtain assurance over the reliability of the information. The auditor may find it necessary to perform testing of management's procedures to obtain assurance or perform direct testing of the information. The nature and extent of the auditors' procedures will depend on the significance of the information to the audit objectives and the nature of the information being used.

6.66 Auditors should assess the sufficiency and appropriateness of computer-processed information regardless of whether this information is provided to auditors or auditors independently extract it. The nature, timing, and extent of audit procedures to assess sufficiency and appropriateness is affected by the effectiveness of the audited entity's internal controls over the information, including information systems controls, and the significance of the information and the level of detail presented in the auditors' findings and conclusions in light of the audit objectives.[153] The assessment of the sufficiency and appropriateness of computer-processed information includes considerations regarding the completeness and accuracy of the data for the intended purposes.[154]

Sufficiency

6.67 Sufficiency is a measure of the quantity of evidence used for addressing the audit objectives and supporting findings and conclusions. Sufficiency also depends on the appropriateness of the evidence. In

[153]See paragraphs 6.23 through 6.27 for additional discussion on assessing the effectiveness of information systems controls.

[154]Refer to additional guidance in *Assessing the Reliability of Computer-Processed Data*, GAO-09-680G (Washington, D.C.: July 2009).

determining the sufficiency of evidence, auditors should determine whether enough appropriate evidence exists to address the audit objectives and support the findings and conclusions.

6.68 The following presumptions are useful in judging the sufficiency of evidence. The sufficiency of evidence required to support the auditors' findings and conclusions is a matter of the auditors' professional judgment.

a. The greater the audit risk, the greater the quantity and quality of evidence required.

b. Stronger evidence may allow less evidence to be used.

c. Having a large volume of audit evidence does not compensate for a lack of relevance, validity, or reliability.

Overall Assessment of Evidence

6.69 Auditors should determine the overall sufficiency and appropriateness of evidence to provide a reasonable basis for the findings and conclusions, within the context of the audit objectives. Professional judgments about the sufficiency and appropriateness of evidence are closely interrelated, as auditors interpret the results of audit testing and evaluate whether the nature and extent of the evidence obtained is sufficient and appropriate. Auditors should perform and document an overall assessment of the collective evidence used to support findings and conclusions, including the results of any specific assessments conducted to conclude on the validity and reliability of specific evidence.

6.70 Sufficiency and appropriateness of evidence are relative concepts, which may be thought of in terms of a

continuum rather than as absolutes. Sufficiency and appropriateness are evaluated in the context of the related findings and conclusions. For example, even though the auditors may have some limitations or uncertainties about the sufficiency or appropriateness of some of the evidence, they may nonetheless determine that in total there is sufficient, appropriate evidence to support the findings and conclusions.

6.71 When assessing the sufficiency and appropriateness of evidence, auditors should evaluate the expected significance of evidence to the audit objectives, findings, and conclusions, available corroborating evidence, and the level of audit risk. The steps to assess evidence may depend on the nature of the evidence, how the evidence is used in the audit or report, and the audit objectives.

a. Evidence is sufficient and appropriate when it provides a reasonable basis for supporting the findings or conclusions within the context of the audit objectives.

b. Evidence is not sufficient or not appropriate when (1) using the evidence carries an unacceptably high risk that it could lead the auditor to reach an incorrect or improper conclusion, (2) the evidence has significant limitations, given the audit objectives and intended use of the evidence, or (3) the evidence does not provide an adequate basis for addressing the audit objectives or supporting the findings and conclusions. Auditors should not use such evidence as support for findings and conclusions.

6.72 Evidence has limitations or uncertainties when the validity or reliability of the evidence has not been assessed or cannot be assessed, given the audit objectives and the intended use of the evidence. Limitations also include errors identified by the auditors in their testing. When the auditors identify limitations or

uncertainties in evidence that is significant to the audit findings and conclusions, they should apply additional procedures, as appropriate. Such procedures include

a. seeking independent, corroborating evidence from other sources;

b. redefining the audit objectives or limiting the audit scope to eliminate the need to use the evidence;

c. presenting the findings and conclusions so that the supporting evidence is sufficient and appropriate and describing in the report the limitations or uncertainties with the validity or reliability of the evidence, if such disclosure is necessary to avoid misleading the report users about the findings or conclusions;[155] and

d. determining whether to report the limitations or uncertainties as a finding, including any related, significant internal control deficiencies.

Developing Elements of a Finding

6.73 Auditors should plan and perform procedures to develop the elements of a finding necessary to address the audit objectives.[156] In addition, if auditors are able to sufficiently develop the elements of a finding, they should develop recommendations for corrective action if they are significant within the context of the audit objectives. The elements needed for a finding are related to the objectives of the audit. Thus, a finding or set of findings is complete to the extent that the audit objectives are addressed and the report clearly relates those objectives to the elements of a finding. For

[155]See paragraph 7.15 for additional reporting requirements when there are limitations or uncertainties with the validity or reliability of evidence.

[156]See paragraph A6.06 for additional discussion on findings.

example, an audit objective may be to determine the current status or condition of program operations or progress in implementing legislative requirements, and not the related cause or effect. In this situation, developing the condition would address the audit objective and development of the other elements of a finding would not be necessary.

6.74 The element of criteria is discussed in paragraph 6.37, and the other elements of a finding—condition, effect, and cause—are discussed in paragraphs 6.75 through 6.77.

6.75 Condition: Condition is a situation that exists. The condition is determined and documented during the audit.

6.76 Cause: The cause identifies the reason or explanation for the condition or the factor or factors responsible for the difference between the situation that exists (condition) and the required or desired state (criteria), which may also serve as a basis for recommendations for corrective actions. Common factors include poorly designed policies, procedures, or criteria; inconsistent, incomplete, or incorrect implementation; or factors beyond the control of program management. Auditors may assess whether the evidence provides a reasonable and convincing argument for why the stated cause is the key factor or factors contributing to the difference between the condition and the criteria.[157]

6.77 Effect or potential effect: The effect is a clear, logical link to establish the impact or potential impact of the difference between the situation that exists (condition) and the required or desired state (criteria).

[157]See paragraph A6.06 for additional discussion on cause.

The effect or potential effect identifies the outcomes or consequences of the condition. When the audit objectives include identifying the actual or potential consequences of a condition that varies (either positively or negatively) from the criteria identified in the audit, "effect" is a measure of those consequences. Effect or potential effect may be used to demonstrate the need for corrective action in response to identified problems or relevant risks.[158]

Early Communication of Deficiencies

6.78 Auditors report deficiencies in internal control, fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse. For some matters, early communication to those charged with governance or management may be important because of their relative significance and the urgency for corrective follow-up action. Further, when a control deficiency results in noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse, early communication is important to allow management to take prompt corrective action to prevent further noncompliance. When a deficiency is communicated early, the reporting requirements in paragraphs 7.18 through 7.23 still apply.

Audit Documentation

6.79 Auditors must prepare audit documentation related to planning, conducting, and reporting for each audit. Auditors should prepare audit documentation in sufficient detail to enable an experienced auditor, having no previous connection to the audit, to understand from the audit documentation the nature, timing, extent, and results of audit procedures performed, the audit evidence obtained and its source

[158]See paragraph A6.07 for additional discussion on effect.

and the conclusions reached, including evidence that supports the auditors' significant judgments and conclusions. An experienced auditor means an individual (whether internal or external to the audit organization) who possesses the competencies and skills that would have enabled him or her to conduct the performance audit. These competencies and skills include an understanding of (1) the performance audit processes, (2) GAGAS and applicable legal and regulatory requirements, (3) the subject matter associated with achieving the audit objectives, and (4) issues related to the audited entity's environment.

6.80 Auditors should prepare audit documentation that contains evidence that supports the findings, conclusions, and recommendations before they issue their report.

6.81 Auditors should design the form and content of audit documentation to meet the circumstances of the particular audit. The audit documentation constitutes the principal record of the work that the auditors have performed in accordance with standards and the conclusions that the auditors have reached. The quantity, type, and content of audit documentation are a matter of the auditors' professional judgment.

6.82 Audit documentation is an essential element of audit quality. The process of preparing and reviewing audit documentation contributes to the quality of an audit. Audit documentation serves to (1) provide the principal support for the auditors' report, (2) aid auditors in conducting and supervising the audit, and (3) allow for the review of audit quality.

6.83 Auditors should document[159] the following:

a. the objectives, scope, and methodology of the audit;

b. the work performed and evidence obtained to support significant judgments and conclusions, including descriptions of transactions and records examined (for example, by listing file numbers, case numbers, or other means of identifying specific documents examined, but copies of documents examined or detailed listings of information from those documents are not required); and

c. supervisory review, before the audit report is issued, of the evidence that supports the findings, conclusions, and recommendations contained in the audit report.

6.84 When auditors do not comply with applicable GAGAS requirements due to law, regulation, scope limitations, restrictions on access to records, or other issues impacting the audit, the auditors should document the departure from the GAGAS requirements and the impact on the audit and on the auditors' conclusions. This applies to departures from unconditional requirements and from presumptively mandatory requirements when alternative procedures performed in the circumstances were not sufficient to achieve the objectives of the standard.[160]

6.85 Underlying GAGAS audits is the premise that audit organizations in federal, state, and local governments and public accounting firms engaged to perform audits in accordance with GAGAS cooperate in auditing

[159]See paragraphs 6.06, 6.46, 6.48, 6.49, 6.50, 6.69, 6.84, 7.19, 7.22, and 7.44 for additional documentation requirements regarding performance audits.

[160]See paragraphs 2.24 and 2.25 for additional requirements on citing compliance with GAGAS.

programs of common interest so that auditors may use others' work and avoid duplication of efforts. Subject to applicable laws and regulations, auditors should make appropriate individuals, as well as audit documentation, available upon request and in a timely manner to other auditors or reviewers to satisfy these objectives. The use of auditors' work by other auditors may be facilitated by contractual arrangements for GAGAS audits that provide for full and timely access to appropriate individuals, as well as audit documentation.

Reporting Standards for Performance Audits

Introduction

7.01 This chapter contains reporting requirements and guidance for performance audits conducted in accordance with generally accepted government auditing standards (GAGAS). The purpose of reporting requirements is to establish the overall approach for auditors to apply in communicating the results of the performance audit. The reporting requirements for performance audits relate to the form of the report, the report contents, and report issuance and distribution.[161]

7.02 For performance audits conducted in accordance with GAGAS, the requirements and guidance in chapters 1 through 3, 6, and 7 apply.

Reporting

7.03 Auditors must issue audit reports communicating the results of each completed performance audit.

7.04 Auditors should use a form of the audit report that is appropriate for its intended use and is in writing or in some other retrievable form.[162] For example, auditors may present audit reports using electronic media that are retrievable by report users and the audit organization. The users' needs will influence the form of the audit report. Different forms of audit reports include written reports, letters, briefing slides, or other presentation materials.

[161]See paragraph A7.02 for a description of report quality elements.

[162]See paragraph 7.43 for situations when audit organizations are subject to public records laws.

7.05 The purposes of audit reports are to (1) communicate the results of audits to those charged with governance, the appropriate officials of the audited entity, and the appropriate oversight officials; (2) make the results less susceptible to misunderstanding; (3) make the results available to the public, unless specifically limited;[163] and (4) facilitate follow-up to determine whether appropriate corrective actions have been taken.

7.06 If an audit is terminated before it is completed and an audit report is not issued, auditors should follow the guidance in paragraph 6.50.

7.07 If, after the report is issued, the auditors discover that they did not have sufficient, appropriate evidence to support the reported findings or conclusions, they should communicate in the same manner as that used to originally distribute the report to those charged with governance, the appropriate officials of the audited entity, the appropriate officials of the organizations requiring or arranging for the audits, and other known users, so that they do not continue to rely on the findings or conclusions that were not supported. If the report was previously posted to the auditors' publicly accessible website, the auditors should remove the report and post a public notification that the report was removed. The auditors should then determine whether to conduct additional audit work necessary to reissue the report, including any revised findings or conclusions or repost the original report if the additional audit work does not result in a change in findings or conclusions.

[163]See paragraph 7.40 for additional guidance on classified or limited use reports and paragraph 7.44b for distribution of reports for internal auditors.

Report Contents

7.08 Auditors should prepare audit reports that contain (1) the objectives, scope, and methodology of the audit; (2) the audit results, including findings, conclusions, and recommendations, as appropriate; (3) a statement about the auditors' compliance with GAGAS; (4) a summary of the views of responsible officials; and (5) if applicable, the nature of any confidential or sensitive information omitted.

Objectives, Scope, and Methodology

7.09 Auditors should include in the report a description of the audit objectives and the scope and methodology used for addressing the audit objectives. Report users need this information to understand the purpose of the audit, the nature and extent of the audit work performed, the context and perspective regarding what is reported, and any significant limitations in audit objectives, scope, or methodology.

7.10 Audit objectives for performance audits may vary widely. Auditors should communicate audit objectives in the audit report in a clear, specific, neutral, and unbiased manner that includes relevant assumptions. When audit objectives are limited but broader objectives could be inferred by users, auditors should state in the audit report that certain issues were outside the scope of the audit in order to avoid potential misunderstanding.

7.11 Auditors should describe the scope of the work performed and any limitations, including issues that would be relevant to likely users, so that they could reasonably interpret the findings, conclusions, and recommendations in the report without being misled. Auditors should also report any significant constraints imposed on the audit approach by information limitations or scope impairments, including denials or excessive delays of access to certain records or individuals.

7.12 In describing the work conducted to address the audit objectives and support the reported findings and conclusions, auditors should, as applicable, explain the relationship between the population and the items tested; identify organizations, geographic locations, and the period covered; report the kinds and sources of evidence; and explain any significant limitations or uncertainties based on the auditors' overall assessment of the sufficiency and appropriateness of the evidence in the aggregate.

7.13 In reporting audit methodology, auditors should explain how the completed audit work supports the audit objectives, including the evidence gathering and analysis techniques, in sufficient detail to allow knowledgeable users of their reports to understand how the auditors addressed the audit objectives. Auditors may include a description of the procedures performed as part of their assessment of the sufficiency and appropriateness of information used as audit evidence. Auditors should identify significant assumptions made in conducting the audit; describe comparative techniques applied; describe the criteria used; and, when sampling significantly supports the auditors' findings, conclusions, or recommendations, describe the sample design and state why the design was chosen, including whether the results can be projected to the intended population.

Reporting Findings

7.14 In the audit report, auditors should present sufficient, appropriate evidence to support the findings and conclusions in relation to the audit objectives. Clearly developed findings[164] assist management and oversight officials of the audited entity in understanding the need for taking corrective action. If auditors are able

[164]See paragraphs 6.73 through 6.77 for additional discussion on developing the elements of a finding.

to sufficiently develop the elements of a finding, they should provide recommendations for corrective action if they are significant within the context of the audit objectives. However, the extent to which the elements for a finding are developed depends on the audit objectives. Thus, a finding or set of findings is complete to the extent that the auditors address the audit objectives.

7.15 Auditors should describe in their report limitations or uncertainties with the reliability or validity of evidence if (1) the evidence is significant to the findings and conclusions within the context of the audit objectives and (2) such disclosure is necessary to avoid misleading the report users about the findings and conclusions. As discussed in paragraphs 6.69 through 6.72, even though the auditors may have some uncertainty about the sufficiency or appropriateness of some of the evidence, they may nonetheless determine that in total there is sufficient, appropriate evidence given the findings and conclusions. Auditors should describe the limitations or uncertainties regarding evidence in conjunction with the findings and conclusions, in addition to describing those limitations or uncertainties as part of the objectives, scope, and methodology. Additionally, this description provides report users with a clear understanding regarding how much responsibility the auditors are taking for the information.

7.16 Auditors should place their findings in perspective by describing the nature and extent of the issues being reported and the extent of the work performed that resulted in the finding. To give the reader a basis for judging the prevalence and consequences of these findings, auditors should, as appropriate, relate the instances identified to the population or the number of cases examined and quantify the results in terms of dollar value, or other measures. If the results cannot be

projected, auditors should limit their conclusions appropriately.

7.17 Auditors may provide background information to establish the context for the overall message and to help the reader understand the findings and significance of the issues discussed. Appropriate background information may include information on how programs and operations work; the significance of programs and operations (e.g., dollars, impact, purposes, and past audit work, if relevant); a description of the audited entity's responsibilities; and explanation of terms, organizational structure, and the statutory basis for the program and operations. When reporting on the results of their work, auditors should disclose significant facts relevant to the objectives of their work and known to them which, if not disclosed, could mislead knowledgeable users, misrepresent the results, or conceal significant improper or illegal practices.

7.18 Auditors should also report deficiencies in internal control, instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that have occurred or are likely to have occurred and are significant within the context of the audit objectives.

Deficiencies in Internal Control

7.19 Auditors should include in the audit report (1) the scope of their work on internal control and (2) any deficiencies in internal control that are significant within the context of the audit objectives and based upon the audit work performed.[165] When auditors detect deficiencies in internal control that are not significant to the objectives of the audit but warrant the attention of those charged with governance, they should include

[165]See paragraph 6.21 for a discussion of internal control deficiencies in performance audits and paragraph A.06 for examples of deficiencies in internal control.

those deficiencies either in the report or communicate those deficiencies in writing to audited entity officials. Auditors should refer to that written communication in the audit report if the written communication is separate from the audit report. When auditors detect deficiencies that do not warrant the attention of those charged with governance, the determination of whether and how to communicate such deficiencies to audited entity officials is a matter of professional judgment.

7.20 In a performance audit, auditors may conclude that identified deficiencies in internal control that are significant within the context of the audit objectives are the cause of deficient performance of the program or operations being audited. In reporting this type of finding, the internal control deficiency would be described as the cause.

Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

7.21 When auditors conclude, based on sufficient, appropriate evidence, that fraud,[166] noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse[167] either has occurred or is likely to have occurred which is significant within the context of the audit objectives, they should report the matter as a finding. Whether a particular act is, in fact, fraud or noncompliance with provisions of laws, regulations, contracts or grant agreements may have to await final determination by a court of law or other adjudicative body.

7.22 When auditors detect instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that are not significant within the context of the audit objectives but warrant the attention of those charged with governance,

[166]See paragraph A.10 for examples of indicators of fraud risk.

[167]See paragraph A.08 for examples of abuse.

they should communicate those findings in writing to audited entity officials. When auditors detect any instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that do not warrant the attention of those charged with governance, the auditors' determination of whether and how to communicate such instances to audited entity officials is a matter of professional judgment.

7.23 When fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse either have occurred or are likely to have occurred, auditors may consult with authorities or legal counsel about whether publicly reporting such information would compromise investigative or legal proceedings. Auditors may limit their public reporting to matters that would not compromise those proceedings and, for example, report only on information that is already a part of the public record.

Reporting Findings Directly to Parties Outside the Audited Entity

7.24 Auditors should report known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse directly to parties outside the audited entity in the following two circumstances.

a. When entity management fails to satisfy legal or regulatory requirements to report such information to external parties specified in law or regulation, auditors should first communicate the failure to report such information to those charged with governance. If the audited entity still does not report this information to the specified external parties as soon as practicable after the auditors' communication with those charged with governance, then the auditors should report the information directly to the specified external parties.

b. When entity management fails to take timely and appropriate steps to respond to known or likely fraud,

noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that (1) is significant to the findings and conclusions and (2) involves funding received directly or indirectly from a government agency, auditors should first report management's failure to take timely and appropriate steps to those charged with governance. If the audited entity still does not take timely and appropriate steps as soon as practicable after the auditors' communication with those charged with governance, then the auditors should report the entity's failure to take timely and appropriate steps directly to the funding agency.

7.25 The reporting in paragraph 7.24 is in addition to any legal requirements for the auditor to report such information directly to parties outside the audited entity. Auditors should comply with these requirements even if they have resigned or been dismissed from the audit prior to its completion. Internal audit organizations do not have a duty to report outside the audited entity unless required by law, rule, regulation, or policy.[168]

7.26 Auditors should obtain sufficient, appropriate evidence, such as confirmation from outside parties, to corroborate assertions by management of the audited entity that it has reported such findings in accordance with laws, regulations, or funding agreements. When auditors are unable to do so, they should report such information directly as discussed in paragraphs 7.24 and 7.25.

Conclusions

7.27 Auditors should report conclusions based on the audit objectives and the audit findings. Report conclusions are logical inferences about the program based on the auditors' findings, not merely a summary

[168]See paragraph 7.44b for reporting standards for internal audit organizations when reporting externally.

of the findings. The strength of the auditors' conclusions depends on the sufficiency and appropriateness of the evidence supporting the findings and the soundness of the logic used to formulate the conclusions. Conclusions are more compelling if they lead to the auditors' recommendations and convince the knowledgeable user of the report that action is necessary.

Recommendations

7.28 Auditors should recommend actions to correct deficiencies and other findings identified during the audit and to improve programs and operations when the potential for improvement in programs, operations, and performance is substantiated by the reported findings and conclusions. Auditors should make recommendations that flow logically from the findings and conclusions, are directed at resolving the cause of identified deficiencies and findings, and clearly state the actions recommended.

7.29 Effective recommendations encourage improvements in the conduct of government programs and operations. Recommendations are effective when they are addressed to parties that have the authority to act and when the recommended actions are specific, practical, cost effective, and measurable.

Reporting Auditors' Compliance with GAGAS

7.30 When auditors comply with all applicable GAGAS requirements, they should use the following language, which represents an unmodified GAGAS compliance statement, in the audit report to indicate that they performed the audit in accordance with GAGAS.[169]

[169]See paragraphs 2.24 and 2.25 for additional standards on citing compliance with GAGAS.

We conducted this performance audit in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

7.31 When auditors do not comply with all applicable GAGAS requirements, they should include a modified GAGAS compliance statement in the audit report. For performance audits, auditors should use a statement that includes either (1) the language in 7.30, modified to indicate the requirements that were not followed or (2) language that the auditor did not follow GAGAS.[170]

Reporting Views of Responsible Officials

7.32 Auditors should obtain and report the views of responsible officials of the audited entity concerning the findings, conclusions, and recommendations included in the audit report, as well as any planned corrective actions.

7.33 Providing a draft report with findings for review and comment by responsible officials of the audited entity and others helps the auditors develop a report that is fair, complete, and objective. Including the views of responsible officials results in a report that presents not only the auditors' findings, conclusions, and recommendations, but also the perspectives of the responsible officials of the audited entity and the corrective actions they plan to take. Obtaining the comments in writing is preferred, but oral comments are acceptable.

[170]See paragraphs 2.24 and 2.25 for additional standards on citing compliance with GAGAS.

7.34 When auditors receive written comments from the responsible officials, they should include in their report a copy of the officials' written comments, or a summary of the comments received. When the responsible officials provide oral comments only, auditors should prepare a summary of the oral comments and provide a copy of the summary to the responsible officials to verify that the comments are accurately stated.

7.35 Auditors should also include in the report an evaluation of the comments, as appropriate. In cases in which the audited entity provides technical comments in addition to its written or oral comments on the report, auditors may disclose in the report that such comments were received.

7.36 Obtaining oral comments may be appropriate when, for example, there is a reporting date critical to meeting a user's needs; auditors have worked closely with the responsible officials throughout the work and the parties are familiar with the findings and issues addressed in the draft report; or the auditors do not expect major disagreements with the findings, conclusions, and recommendations in the draft, or major controversies with regard to the issues discussed in the draft report.

7.37 When the audited entity's comments are inconsistent or in conflict with the findings, conclusions, or recommendations in the draft report, or when planned corrective actions do not adequately address the auditors' recommendations, the auditors should evaluate the validity of the audited entity's comments. If the auditors disagree with the comments, they should explain in the report their reasons for disagreement. Conversely, the auditors should modify their report as necessary if they find the comments valid and supported with sufficient, appropriate evidence.

7.38 If the audited entity refuses to provide comments or is unable to provide comments within a reasonable period of time, the auditors may issue the report without receiving comments from the audited entity. In such cases, the auditors should indicate in the report that the audited entity did not provide comments.

Reporting Confidential and Sensitive Information

7.39 If certain pertinent information is prohibited from public disclosure or is excluded from a report due to the confidential or sensitive nature of the information, auditors should disclose in the report that certain information has been omitted and the reason or other circumstances that make the omission necessary.

7.40 Certain information may be classified or may be otherwise prohibited from general disclosure by federal, state, or local laws or regulations. In such circumstances, auditors may issue a separate, classified or limited use report containing such information and distribute the report only to persons authorized by law or regulation to receive it.

7.41 Additional circumstances associated with public safety, privacy, or security concerns could also justify the exclusion of certain information from a publicly available or widely distributed report. For example, detailed information related to computer security for a particular program may be excluded from publicly available reports because of the potential damage that could be caused by the misuse of this information. In such circumstances, auditors may issue a limited use report containing such information and distribute the report only to those parties responsible for acting on the auditors' recommendations. In some instances, it may be appropriate to issue both a publicly available report with the sensitive information excluded and a limited use report. The auditors may consult with legal counsel regarding any requirements or other circumstances that may necessitate the omission of certain information.

7.42 Considering the broad public interest in the program or activity under audit assists auditors when deciding whether to exclude certain information from publicly available reports. When circumstances call for omission of certain information, auditors should evaluate whether this omission could distort the audit results or conceal improper or illegal practices.

7.43 When audit organizations are subject to public records laws, auditors should determine whether public records laws could impact the availability of classified or limited use reports and determine whether other means of communicating with management and those charged with governance would be more appropriate. For example, the auditors may communicate general information in a written report and communicate detailed information orally. The auditor may consult with legal counsel regarding applicable public records laws.

Distributing Reports

7.44 Distribution of reports completed in accordance with GAGAS depends on the relationship of the auditors to the audited organization and the nature of the information contained in the report. Auditors should document any limitation on report distribution.[171] The following discussion outlines distribution for reports completed in accordance with GAGAS:

a. Audit organizations in government entities should distribute audit reports to those charged with governance, to the appropriate audited entity officials, and to the appropriate oversight bodies or organizations requiring or arranging for the audits. As appropriate, auditors should also distribute copies of the reports to other officials who have legal oversight authority or who

[171]See paragraphs 7.40 and 7.41 for discussion of limited use reports containing confidential or sensitive information.

may be responsible for acting on audit findings and recommendations, and to others authorized to receive such reports.

b. Internal audit organizations in government entities may also follow the Institute of Internal Auditors' (IIA) *International Standards for the Professional Practice of Internal Auditing*.[172] In accordance with GAGAS and IIA standards, the head of the internal audit organization should communicate results to parties who can ensure that the results are given due consideration. If not otherwise mandated by statutory or regulatory requirements, prior to releasing results to parties outside the organization, the head of the internal audit organization should: (1) assess the potential risk to the organization, (2) consult with senior management or legal counsel as appropriate, and (3) control dissemination by indicating the intended users of the report.

c. Public accounting firms contracted to perform an audit in accordance with GAGAS should clarify report distribution responsibilities with the engaging organization. If the contracting firm is responsible for the distribution, it should reach agreement with the party contracting for the audit about which officials or organizations will receive the report and the steps being taken to make the report available to the public.

[172]See paragraph 2.21 for additional discussion about using the IIA standards in conjunction with GAGAS and paragraph 2.22 for additional discussion about citing compliance with another set of standards.

Supplemental Guidance

Introduction

A.01 The following sections provide supplemental guidance for auditors and the audited entities to assist in the implementation of generally accepted government auditing standards (GAGAS). The guidance does not establish additional requirements but instead is intended to facilitate auditor implementation of GAGAS requirements in chapters 2 through 7. The supplemental guidance in the first section may be of assistance for all types of audits covered by GAGAS. Subsequent sections provide supplemental guidance for specific chapters of GAGAS, as indicated.

Overall Supplemental Guidance

A.02 Chapters 4 through 7 discuss the standards for financial audits, attestation engagements, and performance audits. The identification and communication of significant deficiencies and material weaknesses in internal control, fraud, noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse are important aspects of government auditing. The following discussion is provided to assist auditors in identifying significant deficiencies in internal control, abuse, and indicators of fraud risk and to assist auditors in determining whether noncompliance with provisions of laws, regulations, contracts or grant agreements are significant within the context of the audit objectives.

Internal Control

A.03 The *Internal Control—Integrated Framework*[173] published by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) provides guidance on internal control. As discussed in the COSO framework, internal control consists of five interrelated components, which are (1) control

[173]*Internal Control—Integrated Framework,* Committee of Sponsoring Organizations of the Treadway Commission, 1992.

environment, (2) risk assessment, (3) control activities, (4) information and communication, and (5) monitoring. The objectives of internal control relate to (1) financial reporting, (2) operations, and (3) compliance. Safeguarding of assets is a subset of these objectives. Management designs internal control to provide reasonable assurance that unauthorized acquisition, use, or disposition of assets will be prevented or timely detected and corrected.

A.04 In addition to the COSO framework, the publication, *Standards for Internal Control in the Federal Government*,[174] which incorporates the concepts developed by COSO, provides definitions and fundamental concepts pertaining to internal control at the federal level and may also be useful to auditors at other levels of government. The related *Internal Control Management and Evaluation Tool*,[175] based on the federal internal control standards, provides a systematic, organized, and structured approach to assessing the internal control structure.

Examples of Deficiencies in Internal Control

A.05 GAGAS contains requirements for reporting identified deficiencies in internal control.

a. For financial audits, see paragraphs 4.19 through 4.24.

b. For attestation engagements, see paragraphs 5.20 through 5.23.

[174] *Standards for Internal Control in the Federal Government*, GAO/AIMD-00-21.3.1 (Washington, D.C.: November 1999).

[175] *Internal Control Management and Evaluation Tool*, GAO-01-1008G (Washington, D.C.: August 2001).

c. For performance audits, see paragraphs 7.19 through 7.20.

A.06 The following are examples of control deficiencies:

a. Insufficient control consciousness within the organization. For example, the tone at the top and the control environment. Control deficiencies in other components of internal control could lead the auditor to conclude that weaknesses exist in the control environment.

b. Ineffective oversight by those charged with governance of the entity's financial reporting, performance reporting, or internal control, or an ineffective overall governance structure.

c. Control systems that did not prevent, or detect and correct material misstatements so that it was necessary to restate previously issued financial statements or operational results. Control systems that did not prevent or detect material misstatements in performance or operational results so that it was later necessary to make significant corrections to those results.

d. Control systems that did not prevent, or detect and correct material misstatements identified by the auditor. This includes misstatements involving estimation and judgment for which the auditor identifies potential material adjustments and corrections of the recorded amounts.

e. An ineffective internal audit function or risk assessment function at an entity for which such functions are important to the monitoring or risk assessment component of internal control, such as for a large or complex entity.

f. Identification of fraud of any magnitude on the part of senior management.

g. Failure by management or those charged with governance to assess the effect of a significant deficiency previously communicated to them and either to correct it or to conclude that it does not need to be corrected.

h. Inadequate controls for the safeguarding of assets.

i. Evidence of intentional override of internal control by those in authority to the detriment of the overall objectives of the system.

j. Deficiencies in the design or operation of internal control that could fail to prevent, or detect and correct, fraud, noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse having a material effect on the financial statements or the audit objective.

k. Inadequate design of information systems general, application, and user controls that prevent the information system from providing complete and accurate information consistent with financial, compliance, or performance reporting objectives or other current needs.

l. Failure of an application control caused by a deficiency in the design or operation of an information systems general control.

m. Employees or management who lack the qualifications and training to fulfill their assigned functions.

Examples of Abuse

A.07 GAGAS contains requirements for responding to indications of material abuse and reporting abuse that is material to the audit objectives.

a. For financial audits, see paragraphs 4.07 and 4.08 and 4.25 through 4.27.

b. For attestation engagements, see paragraphs 5.08 through 5.09 and 5.24 through 5.26.

c. For performance audits, see paragraphs 6.33 and 6.34 and 7.21 through 7.23.

A.08 The following are examples of abuse, depending on the facts and circumstances:

a. Creating unneeded overtime.

b. Requesting staff to perform personal errands or work tasks for a supervisor or manager.

c. Misusing the official's position for personal gain (including actions that could be perceived by an objective third party with knowledge of the relevant information as improperly benefiting an official's personal financial interests or those of an immediate or close family member; a general partner; an organization for which the official serves as an officer, director, trustee, or employee; or an organization with which the official is negotiating concerning future employment).

d. Making travel choices that are contrary to existing travel policies or are unnecessarily extravagant or expensive.

e. Making procurement or vendor selections that are contrary to existing policies or are unnecessarily extravagant or expensive.

Examples of Indicators of Fraud Risk

A.09 GAGAS contains requirements relating to evaluating fraud risk.

a. For financial audits, see paragraphs 4.06 and 4.25 through 4.27.

b. For attestation engagements, see paragraphs 5.07, 5.20, and 5.24 through 5.26.

c. For performance audits, see paragraphs 6.30 through 6.32 and 7.21 through 7.23.

A.10 In some circumstances, conditions such as the following might indicate a heightened risk of fraud:

a. economic, programmatic, or entity operating conditions threaten the entity's financial stability, viability, or budget;

b. the nature of the entity's operations provide opportunities to engage in fraud;

c. management's monitoring of compliance with policies, laws, and regulations is inadequate;

d. the organizational structure is unstable or unnecessarily complex;

e. communication and/or support for ethical standards by management is lacking;

f. management is willing to accept unusually high levels of risk in making significant decisions;

g. the entity has a history of impropriety, such as previous issues with fraud, waste, abuse, or questionable practices, or past audits or investigations with findings of questionable or criminal activity;

h. operating policies and procedures have not been developed or are outdated;

i. key documentation is lacking or does not exist;

j. asset accountability or safeguarding procedures is lacking;

k. improper payments;

l. false or misleading information;

m. a pattern of large procurements in any budget line with remaining funds at year end, in order to "use up all of the funds available;" and

n. unusual patterns and trends in contracting, procurement, acquisition, and other activities of the entity or program.

Determining Whether Provisions of Laws, Regulations, Contracts and Grant Agreements Are Significant within the Context of the Audit Objectives

A.11 GAGAS contains requirements for determining whether provisions of laws, regulations, contracts or grant agreements are significant within the context of the audit objectives.

a. For financial audits, see paragraphs 4.19 through 4.22.

b. For attestation engagements, see paragraphs 5.07 and 5.08.

c. For performance audits, see paragraphs 6.28 and 6.29.

A.12 Government programs are subject to many provisions of laws, regulations, contracts or grant agreements. At the same time, their significance within the context of the audit objectives varies widely,

depending on the objectives of the audit. Auditors may find the following approach helpful in assessing whether provisions of laws, regulations, contracts or grant agreements are significant within the context of the audit objectives:

a. Express each audit objective in terms of questions about specific aspects of the program being audited (that is, purpose and goals, internal control, inputs, program operations, outputs, and outcomes).

b. Identify provisions of laws, regulations, contracts or grant agreements that directly relate to specific aspects of the program within the context of the audit objectives.

c. Determine if the audit objectives or the auditors' conclusions could be significantly affected if noncompliance with those provisions of laws, regulations, contracts or grant agreements occurred. If the audit objectives or audit conclusions could be significantly affected, then those provisions of laws, regulations, contracts or grant agreements are likely to be significant to the audit objectives.

A.13 Auditors may consult with their own legal counsel to (1) determine those laws and regulations that are significant to the audit objectives, (2) design tests of compliance with laws and regulations, or (3) evaluate the results of those tests. Auditors also may consult with their own legal counsel when audit objectives require testing compliance with provisions of contracts or grant agreements. Depending on the circumstances of the audit, auditors may consult with others, such as investigative staff, other audit organizations or government entities that provided professional services to the audited entity, or applicable law enforcement authorities, to obtain information on compliance matters.

Information to Accompany Chapter 1

A1.01 Chapter 1 discusses the use and application of GAGAS and the role of auditing in government accountability. Those charged with governance and management of audited organizations also have roles in government accountability. The discussion that follows is provided to assist auditors in understanding the roles of others in accountability. The following section also contains background information on the laws, regulations, or other authoritative sources that require the use of GAGAS. This information is provided to place GAGAS within the context of overall government accountability.

Laws, Regulations, and Other Authoritative Sources That Require Use of GAGAS

A1.02 Laws, regulations, contracts, grant agreements, or policies frequently require the use of GAGAS.[176] The following are some of the laws, regulations, and or other authoritative sources that require the use of GAGAS:

a. The Inspector General Act of 1978, as amended, 5 U.S.C. App. requires that the statutorily appointed federal inspectors general comply with GAGAS for audits of federal establishments, organizations, programs, activities, and functions. The act further states that the inspectors general shall take appropriate steps to assure that any work performed by nonfederal auditors complies with GAGAS.

b. The Chief Financial Officers Act of 1990 (Public Law 101-576), as expanded by the Government Management Reform Act of 1994 (Public Law 103-356), requires that GAGAS be followed in audits of executive branch departments' and agencies' financial statements. The Accountability of Tax Dollars Act of 2002 (Public Law 107-289) generally extends this

[176]See paragraph 1.06 for additional discussion on the use of GAGAS.

requirement to most executive agencies not subject to the Chief Financial Officers Act unless they are exempted for a given year by the Office of Management and Budget (OMB).

c. The Single Audit Act Amendments of 1996 (Public Law 104-156) require that GAGAS be followed in audits of state and local governments and nonprofit entities that receive federal awards. OMB Circular No. A-133, *Audits of States, Local Governments, and Non-Profit Organizations*, which provides the governmentwide guidelines and policies on performing audits to comply with the Single Audit Act, also requires the use of GAGAS.

A1.03 Other laws, regulations, or authoritative sources may require the use of GAGAS. For example, auditors at the state and local levels of government may be required by state and local laws and regulations to follow GAGAS. Also, auditors may be required by the terms of an agreement or contract to follow GAGAS. Auditors may also be required to follow GAGAS by federal audit guidelines pertaining to program requirements, such as those issued for Housing and Urban Development programs and Student Financial Aid programs. Being alert to such other laws, regulations, or authoritative sources may assist auditors in performing their work in accordance with the required standards.

A1.04 Even if not required to do so, auditors may find it useful to follow GAGAS in performing audits of federal, state, and local government programs as well as audits of government awards administered by contractors, nonprofit entities, and other nongovernmental entities. Many audit organizations not formally required to do so, both in the United States of America and in other countries, voluntarily follow GAGAS.

The Role of Those Charged with Governance

A1.05 During the course of GAGAS audits, auditors communicate with those charged with governance.[177]

a. For financial audits, see paragraphs 4.03 and 4.04.

b. For attestation engagements, see paragraphs 5.04 and 5.05.

c. For performance audits, see paragraphs 6.47 through 6.50.

A1.06 Those charged with governance are responsible for overseeing the strategic direction of the entity and obligations related to the accountability of the entity. This includes overseeing the financial reporting process, subject matter, or program under audit including related internal controls. In certain entities covered by GAGAS, those charged with governance may also be part of the entity's management. In some audit entities, multiple parties may be charged with governance, including oversight bodies, members or staff of legislative committees, boards of directors, audit committees, or parties contracting for the audit.

A1.07 Because the governance structures of government entities and organizations can vary widely, it may not always be clearly evident who is charged with key governance functions. In these situations, auditors evaluate the organizational structure for directing and controlling operations to achieve the audited entity's objectives. This evaluation also includes how the audited entity delegates authority and establishes accountability for its management personnel.

[177]See paragraph 1.02 for additional discussion of those charged with governance.

Management's Role

A1.08 Managers have fundamental responsibilities for carrying out government functions.[178] Management of the audited entity is responsible for

a. using its financial, physical, and informational resources legally, effectively, efficiently, economically, ethically, and equitably to achieve the purposes for which the resources were furnished or the program was established;

b. complying with applicable laws and regulations (including identifying the requirements with which the entity and the official are responsible for compliance);

c. implementing systems designed to achieve compliance with applicable laws and regulations;

d. establishing and maintaining effective internal control to help ensure that appropriate goals and objectives are met; following laws and regulations; and ensuring that management and financial information is reliable and properly reported;

e. providing appropriate reports to those who oversee their actions and to the public in order to demonstrate accountability for the resources and authority used to carry out government programs and the results of these programs;

f. addressing the findings and recommendations of auditors, and for establishing and maintaining a process to track the status of such findings and recommendations;

[178]See paragraphs 1.01 and 1.02 for additional discussion of management and officials of government programs.

g. following sound procurement practices when contracting for audits, including ensuring procedures are in place for monitoring contract performance; and

h. taking timely and appropriate steps to remedy fraud, noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse that auditors report.

Information to Accompany Chapter 2

Attestation Engagements

A2.01 Examples of attestation engagements objectives[179] include

a. prospective financial or performance information;

b. management's discussion and analysis (MD&A) presentation;

c. an entity's internal control over financial reporting;

d. the effectiveness of an entity's internal control over compliance with specified requirements, such as those governing the bidding for, accounting for, and reporting on grants and contracts;

e. an entity's compliance with requirements of specified laws, regulations, policies, contracts, or grants;

f. the accuracy and reliability of reported performance measures;

[179]See paragraph 2.09 for additional discussion of attestation engagements.

g. whether incurred final contract costs are supported with required evidence and in compliance with the contract terms;

h. the allowability and reasonableness of proposed contract amounts that are based on detailed costs; and

i. the quantity, condition, or valuation of inventory or assets.

Performance Audit Objectives

A2.02 Examples of program effectiveness and results audit objectives[180] include:

a. assessing the extent to which legislative, regulatory, or organizational goals and objectives are being achieved;

b. assessing the relative ability of alternative approaches to yield better program performance or eliminate factors that inhibit program effectiveness;

c. analyzing the relative cost-effectiveness of a program or activity, focusing on combining cost information or other inputs with information about outputs or the benefit provided or with outcomes or the results achieved;

d. determining whether a program produced intended results or produced results that were not consistent with the program's objectives;

e. determining the current status or condition of program operations or progress in implementing legislative requirements;

[180]See paragraph 2.11a for additional discussion of program effectiveness and results audit objectives.

f. determining whether a program provides equitable access to or distribution of public resources within the context of statutory parameters;

g. assessing the extent to which programs duplicate, overlap, or conflict with other related programs;

h. evaluating whether the entity is following sound procurement practices;

i. assessing the reliability, validity, or relevance of performance measures concerning program effectiveness and results, or economy and efficiency;

j. assessing the reliability, validity, or relevance of financial information related to the performance of a program;

k. determining whether government resources (inputs) are obtained at reasonable costs while meeting timeliness and quality considerations;

l. determining whether appropriate value was obtained based on the cost or amount paid or based on the amount of revenue received;

m. determining whether government services and benefits are accessible to those individuals who have a right to access those services and benefits;

n. determining whether fees assessed cover costs;

o. determining whether and how the program's unit costs can be decreased or its productivity increased; and

p. assessing the reliability, validity, or relevance of budget proposals or budget requests to assist legislatures in the budget process.

A2.03 Examples of audit objectives related to internal control[181] include an assessment of the extent to which internal control provides reasonable assurance about whether

a. organizational missions, goals, and objectives are achieved effectively and efficiently;

b. resources are used in compliance with laws, regulations, or other requirements;

c. resources, including sensitive information accessed or stored outside the organization's physical perimeter, are safeguarded against unauthorized acquisition, use, or disposition;

d. management information, such as performance measures, and public reports are complete, accurate, and consistent to support performance and decision making;

e. the integrity of information from computerized systems is achieved; and

f. contingency planning for information systems provides essential back-up to prevent unwarranted disruption of the activities and functions that the systems support.

A2.04 Compliance objectives[182] include determining whether

[181]See paragraph 2.11b for additional discussion of internal control audit objectives.

[182]See paragraph 2.11c for additional discussion of compliance audit objectives.

a. the purpose of the program, the manner in which it is to be conducted, the services delivered, the outcomes, or the population it serves is in compliance with provisions of laws, regulations, contracts or grant agreements, or other requirements;

b. government services and benefits are distributed or delivered to citizens based on the individual's eligibility to obtain those services and benefits;

c. incurred or proposed costs are in compliance with applicable laws, regulations, contracts, or grant agreements; and

d. revenues received are in compliance with applicable laws, regulations, contracts or grant agreements.

A2.05 Examples of objectives pertaining to prospective analysis[183] include providing conclusions based on

a. current and projected trends and future potential impact on government programs and services;

b. program or policy alternatives, including forecasting program outcomes under various assumptions;

c. policy or legislative proposals, including advantages, disadvantages, and analysis of stakeholder views;

d. prospective information prepared by management;

e. budgets and forecasts that are based on (1) assumptions about expected future events and (2) management's expected reaction to those future events; and

[183]See paragraph 2.11d for additional discussion of prospective analysis audit objectives.

f. management's assumptions on which prospective information is based.

GAGAS Compliance Statements

A2.06 The determination of whether an unmodified or modified GAGAS compliance statement is appropriate is based on the consideration of the individual and aggregate effect of exceptions to GAGAS requirements.[184] Quantitative and qualitative factors that the auditor may consider include:

a. the likelihood that the exception(s) will affect the perceptions of report users about the audit findings, conclusions, and recommendations;

b. the magnitude of the effect of the exception(s) on the perceptions of report users about the audit findings, conclusions, and recommendations;

c. the pervasiveness of the exception(s);

d. the potential effect of the exception(s) on the sufficiency and appropriateness of evidence supporting the audit findings, conclusions, and recommendations; and

e. whether report users could be misled if the GAGAS compliance statement were not modified.

Information to Accompany Chapter 3

A3.01 Chapter 3 discusses the general standards applicable to financial audits, attestation engagements, and performance audits in accordance with GAGAS. The following supplemental guidance is provided to assist auditors and audited entities in avoiding

[184]See paragraphs 2.24 and 2.25 for additional discussion on citing compliance with GAGAS.

impairments to independence, establishing a system of quality control, and identifying peer review risk factors.

Threats to Independence

A3.02 This list is intended to illustrate by example the types of circumstances that create threats to independence that an auditor might identify when applying the conceptual framework.[185] It does not include all circumstances that create threats to independence; these circumstances will be unique to the conditions under which each evaluation takes place.

A3.03 Examples of circumstances that create self-interest threats for an auditor include:

a. A member of the audit team having a direct financial interest in the audited entity. This would not preclude auditors from auditing pension plans that they participate in if (1) the auditor has no control over the investment strategy, benefits, or other management issues associated with the pension plan and (2) the auditor belongs to such pension plan as part of his/her employment with the audit organization, provided that the plan is normally offered to all employees in equivalent employment positions.

b. An audit organization having undue dependence on income from a particular audited entity.

c. A member of the audit team entering into employment negotiations with an audited entity.

d. An auditor discovering a significant error when evaluating the results of a previous professional service performed by a member of the auditor's audit organization.

[185]See paragraphs 3.07 through 3.26.

A3.04 Examples of circumstances that create self-review threats for an auditor include:

a. An audit organization issuing a report on the effectiveness of the operation of financial or performance management systems after designing or implementing the systems.

b. An audit organization having prepared the original data used to generate records that are the subject matter of the audit.

c. An audit organization performing a service for an audited entity that directly affects the subject matter information of the audit.

d. A member of the audit team being, or having recently been, employed by the audited entity in a position to exert significant influence over the subject matter of the audit.

A3.05 Examples of circumstances that create bias threats for an auditor include:

a. An auditor's having preconceptions about the objectives of a program under audit that are sufficiently strong to impact the auditor's objectivity.

b. An auditor's having biases associated with political, ideological, or social convictions that result from membership or employment in, or loyalty to, a particular type of policy, group, organization, or level of government that could impact the auditor's objectivity.

A3.06 Examples of circumstances that create familiarity threats for an auditor include:

a. A member of the audit team having a close or immediate family member who is a principal or senior manager of the audited entity.

b. A member of the audit team having a close or immediate family member who is an employee of the audited entity and is in a position to exert significant influence over the subject matter of the audit.

c. A principal or employee of the audited entity in a position to exert significant influence over the subject matter of the audit having recently served on the audit team.

d. An auditor accepting gifts or preferential treatment from an audited entity, unless the value is trivial or inconsequential.

e. Senior audit personnel having a long association with the audited entity.

A3.07 Examples of circumstances that create undue influence threats for an auditor or audit organization include existence of:

a. External interference or influence that could improperly limit or modify the scope of an audit or threaten to do so, including exerting pressure to inappropriately reduce the extent of work performed in order to reduce costs or fees.

b. External interference with the selection or application of audit procedures or in the selection of transactions to be examined.

c. Unreasonable restrictions on the time allowed to complete an audit or issue the report.

d. External interference over the assignment, appointment, compensation, and promotion of audit personnel.

e. Restrictions on funds or other resources provided to the audit organization that adversely affect the audit organization's ability to carry out its responsibilities.

f. Authority to overrule or to inappropriately influence the auditors' judgment as to the appropriate content of the report.

g. Threat of replacing the auditors over a disagreement with the contents of an auditors' report, the auditors' conclusions, or the application of an accounting principle or other criteria.

h. Influences that jeopardize the auditors' continued employment for reasons other than incompetence, misconduct, or the need for audits or attestation engagements.

A3.08 Examples of circumstances that create management participation threats for an auditor include:

a. A member of the audit team being, or having recently been, a principal or senior manager of the audited entity.

b. An audit organization principal or employee serving as a voting member of an entity's management committee or board of directors, making policy decisions that affect future direction and operation of an entity's programs, supervising entity employees, developing or approving programmatic policy, authorizing an entity's transactions, or maintaining custody of an entity's assets.

c. An audit organization principal or employee recommending a single individual for a specific position that is key to the entity or program under audit, or otherwise ranking or influencing management's selection of the candidate.

d. An auditor preparing management's corrective action plan to deal with deficiencies detected in the audit.

A3.09 Examples of circumstances that create structural threats for an auditor include:

a. For both external and internal audit organizations, structural placement of the audit function within the reporting line of the areas under audit.

b. For internal audit organizations, administrative direction from the audited entity's management.

System of Quality Control

A3.10 Chapter 3 discusses the elements of an audit organization's system of quality control.[186] The following supplemental guidance is provided to assist auditors and audit organizations in establishing policies and procedures in its system of quality control to address the following elements: initiation, acceptance, and continuance of audits; audit performance, documentation, and reporting; and monitoring.

a. Government audit organizations initiate audits as a result of (1) legal mandates, (2) requests from legislative bodies or oversight bodies, and (3) the audit organization's discretion. In the case of legal mandates and requests, a government audit organization may be required to perform the audit and may not be permitted

[186]See paragraphs 3.82 through 3.95 for additional discussion of the system of quality control.

to make decisions about acceptance or continuance and may not be permitted to resign or withdraw from the audit.

b. GAGAS standards for audit performance, documentation, and reporting are in chapter 4 for financial audits, chapter 5 for attestation engagements, and chapters 6 and 7 for performance audits. Chapter 3 specifies that an audit organization's quality control system include policies and procedures designed to provide the audit organization with reasonable assurance that audits are performed and reports are issued in accordance with professional standards and legal and regulatory requirements.[187] Examples of such policies and procedures include the following:

(1) communication provided to team members so that they sufficiently understand the objectives of their work and the applicable professional standards;

(2) audit planning and supervision;

(3) appropriate documentation of the work performed;

(4) review of the work performed, the significant judgments made, and the resulting audit documentation and report;

(5) review of the independence and qualifications of any external specialists or contractors used, as well as a review of the scope and quality of their work;

(6) procedures for resolving difficult or contentious issues or disagreements among team members, including specialists;

[187]See paragraphs 3.82 through 3.95 for additional discussion of quality control policies and procedures.

(7) obtaining and addressing comments from the audited entity on draft reports; and

(8) reporting supported by the evidence obtained, and in accordance with applicable professional standards and legal or regulatory requirements.

c. Monitoring is an ongoing, periodic assessment of audits designed to provide management of the audit organization with reasonable assurance that the policies and procedures related to the system of quality control are suitably designed and operating effectively in practice.[188] The following guidance is provided to assist audit organizations with implementing and continuing its monitoring of quality:

(1) Who: Monitoring is most effective when performed by persons who do not have responsibility for the specific activity being monitored (e.g., for specific audits or specific centralized processes). The staff member or team of staff members assigned with responsibility for the monitoring process collectively need sufficient and appropriate competence and authority in the audit organization to assume that responsibility. Generally the staff member or the team of staff members performing the monitoring are apart from the normal audit supervision associated with individual audits.

(2) How much: The extent of monitoring procedures varies based on the audit organization's circumstances to enable the audit organization to assess compliance with applicable professional standards and the audit organization's quality control policies and procedures. Examples of specific monitoring procedures include

[188]See paragraphs 3.93 through 3.95 for additional discussion of monitoring.

(a) examination of selected administrative and personnel records pertaining to quality control;

(b) review of selected audit documentation and reports;

(c) discussions with the audit organization's personnel (as applicable and appropriate);

(d) periodic summarization of the findings from the monitoring procedures in writing (at least annually), and consideration of the systematic causes of findings that indicate improvements are needed;

(e) determination of any corrective actions to be taken or improvements to be made with respect to the specific audits reviewed or the audit organization's quality control policies and procedures;

(f) communication of the identified findings to appropriate audit organization management with subsequent follow-up; and

(g) consideration of findings by appropriate audit organization management personnel who also determine whether actions necessary, including necessary modifications to the quality control system, are performed on a timely basis.

(3) Review of selected administrative and personnel records: The review of selected administrative and personnel records pertaining to quality control may include tests of

(a) compliance with policies and procedures on independence;

(b) compliance with continuing professional development policies, including training;

(c) procedures related to recruitment and hiring of qualified personnel, including hiring of specialists or consultants when needed;

(d) procedures related to performance evaluation and advancement of personnel;

(e) procedures related to initiation, acceptance, and continuance of audits;

(f) audit organization personnel's understanding of the quality control policies and procedures, and implementation of these policies and procedures; and

(g) audit organization's process for updating its policies and procedures.

(4) Follow-up on previous findings: Monitoring procedures include an evaluation of whether the audit organization has taken appropriate corrective action to address findings and recommendations from previous monitoring and peer reviews. Personnel involved in monitoring use this information as part of the assessment of risk associated with the design and implementation of the audit organization's quality control system and in determining the nature, timing, and extent of monitoring procedures.

(5) Communication: The audit organization communicates internally the results of the monitoring of its quality control systems that allows the audit organization to take prompt and appropriate action where necessary. Information included in this communication includes:

(a) a description of the monitoring procedures performed;

(b) the conclusions drawn from the monitoring procedures; and

(c) where relevant, a description of the systemic, repetitive, or other significant deficiencies and of the actions taken to resolve those deficiencies.

Peer Review

A3.11 Examples of the factors to consider when performing an assessment of peer review risk for selecting audits for peer review[189] include:

a. scope of the audits including size of the audited entity or audits covering multiple locations;

b. functional area or type of government program;

c. types of audits provided, including the extent of nonaudit services provided to audited entities;

d. personnel (including use of new personnel or personnel not routinely assigned the types of audits provided);

e. initial audits;

f. familiarity resulting from a longstanding relationship with the audited entity;

g. political sensitivity of the audits;

h. budget constraints for the audit organization;

i. results of the peer review team's review of the design of system of quality control;

[189]See paragraph 3.99 for additional discussion of the assessment of peer review risk.

j. results of the audit organization's monitoring process; and

k. risk sensitivity of the audit organization.

A3.12 As discussed in paragraph 3.105, an external audit organization should make its most recent peer review report publicly available. Examples of how to achieve this transparency requirement include posting the peer review report on an external Web site or to a publicly available file. To help the public understand the peer review reports, an audit organization may also include a description of the peer review process and how it applies to its organization. The following provides examples of additional information that audit organizations may include to help users understand the meaning of the peer review report.

a. Explanation of the peer review process.

b. Description of the audit organization's system of quality control.

c. Explanation of the relationship of the peer review results to the audited organization's work.

d. If the peer review report that includes deficiencies or significant deficiencies is modified, explanation of the reviewed audit organization's plan for improving quality controls and the status of the improvements.

Information to Accompany Chapter 6

A6.01 Chapter 6 discusses the field work standards for performance audits. An integral concept for performance auditing is the use of sufficient, appropriate evidence based on the audit objectives to support a sound basis for audit findings, conclusions, and recommendations. The following discussion is provided to assist auditors in identifying criteria and the

various types of evidence, including assessing the appropriateness of evidence in relation to the audit objectives.

Types of Criteria

A6.02 The following are some examples of criteria:[190]

a. purpose or goals prescribed by law or regulation or set by officials of the audited entity,

b. policies and procedures established by officials of the audited entity,

c. technically developed standards or norms,

d. expert opinions,

e. prior periods' performance,

f. defined business practices,

g. contract or grant terms, and

h. performance of other entities or sectors used as defined benchmarks.

A6.03 Audit objectives may pertain to describing the current status or condition of a program or process. For this type of audit objective, criteria may also be represented by the assurance added by the auditor's (1) description of the status or condition, (2) evaluation of whether the status or condition meets certain characteristics, or (3) evaluation of whether management's description is verifiable, accurate, or supported.

[190]See paragraph 6.37 for additional discussion on identifying audit criteria.

Types of Evidence

A6.04 In terms of its form and how it is collected, evidence may be categorized as physical, documentary, or testimonial. Physical evidence is obtained by auditors' direct inspection or observation of people, property, or events. Such evidence may be documented in summary memos, photographs, videos, drawings, charts, maps, or physical samples. Documentary evidence is obtained in the form of already existing information such as letters, contracts, accounting records, invoices, spreadsheets, database extracts, electronically stored information, and management information on performance. Testimonial evidence is obtained through inquiries, interviews, focus groups, public forums, or questionnaires. Auditors frequently use analytical processes including computations, comparisons, separation of information into components, and rational arguments to analyze any evidence gathered to determine whether it is sufficient and appropriate.[191] The strength and weakness of each form of evidence depends on the facts and circumstances associated with the evidence and professional judgment in the context of the audit objectives.

Appropriateness of Evidence in Relation to the Audit Objectives

A6.05 One of the primary factors influencing the assurance associated with a performance audit is the appropriateness of the evidence in relation to the audit objectives.[192] For example:

a. The audit objectives might focus on verifying specific quantitative results presented by the audited entity. In these situations, the audit procedures would likely focus

[191]See paragraphs 6.67 and 6.60 for definitions of sufficient and appropriate.

[192]See paragraphs 6.60 through 6.66 for additional discussion on the appropriateness of evidence.

on obtaining evidence about the accuracy of the specific amounts in question. This work may include the use of statistical sampling.

b. The audit objectives might focus on the performance of a specific program or activity in the agency being audited. In these situations, the auditor may be provided with information compiled by the agency being audited in order to answer the audit objectives. The auditor may find it necessary to test the quality of the information, which includes both its validity and reliability.

c. The audit objectives might focus on information that is used for widely accepted purposes and obtained from sources generally recognized as appropriate. For example, economic statistics issued by government agencies for purposes such as adjusting for inflation, or other such information issued by authoritative organizations, may be the best information available. In such cases, it may not be practical or necessary for auditors to conduct procedures to verify the information. These decisions call for professional judgment based on the nature of the information, its common usage or acceptance, and how it is being used in the audit.

d. The audit objectives might focus on comparisons or benchmarking between various government functions or agencies. These types of audits are especially useful for analyzing the outcomes of various public policy decisions. In these cases, auditors may perform analyses, such as comparative statistics of different jurisdictions or changes in performance over time, where it would be impractical to verify the detailed data underlying the statistics. Clear disclosure as to what extent the comparative information or statistics were evaluated or corroborated will likely be necessary to place the evidence in context for report users.

e. The audit objectives might focus on trend information based on data provided by the audited entity. In this situation, auditors may assess the evidence by using overall analytical tests of underlying data, combined with a knowledge and understanding of the systems or processes used for compiling information.

f. The audit objectives might focus on the auditor identifying emerging and cross-cutting issues using information compiled or self-reported by agencies. In such cases, it may be helpful for the auditor to consider the overall appropriateness of the compiled information along with other information available about the program. Other sources of information, such as inspector general reports or other external audits, may provide the auditors with information regarding whether any unverified or self-reported information is consistent with or can be corroborated by these other external sources of information.

Findings

A6.06 When the audit objectives include explaining why a particular type of positive or negative program performance, output, or outcome identified in the audit occurred, they are referred to as "cause."[193] Identifying the cause of problems may assist auditors in making constructive recommendations for correction. Because deficiencies can result from a number of plausible factors or multiple causes, the recommendation can be more persuasive if auditors can clearly demonstrate and explain with evidence and reasoning the link between the deficiencies and the factor or factors they have identified as the cause or causes. Auditors may also identify deficiencies in program design or structure as the cause of deficient performance. Auditors may also identify deficiencies in internal control that are

[193]See paragraph 6.76 for additional discussion of "cause."

significant to the subject matter of the performance audit as the cause of deficient performance. In developing these types of findings, the deficiencies in program design or internal control would be described as the "cause." Often the causes of deficient program performance are complex and involve multiple factors, including fundamental, systemic root causes. Alternatively, when the audit objectives include estimating the program's effect on changes in physical, social, or economic conditions, auditors seek evidence of the extent to which the program itself is the "cause" of those changes.

A6.07 When the audit objectives include estimating the extent to which a program has caused changes in physical, social, or economic conditions, "effect" is a measure of the impact achieved by the program. In this case, "effect" is the extent to which positive or negative changes in actual physical, social, or economic conditions can be identified and attributed to the program.

Information to Accompany Chapter 7

A7.01 Chapter 7 discusses the reporting standards for performance audits. The following discussion is provided to assist auditors in developing and writing their audit report for performance audits.

Report Quality Elements

A7.02 The auditor may use the report quality elements of timely, complete, accurate, objective, convincing, clear, and concise when developing and writing the audit report as the subject permits.[194]

a. Accurate: An accurate report is supported by sufficient, appropriate evidence with key facts, figures,

[194]See paragraph 7.08 for additional discussion of report contents.

and findings being traceable to the audit evidence. Reports that are fact-based, with a clear statement of sources, methods, and assumptions so that report users can judge how much weight to give the evidence reported, assist in achieving accuracy. Disclosing data limitations and other disclosures also contribute to producing more accurate audit reports. Reports also are more accurate when the findings are presented in the broader context of the issue. One way to help audit organizations prepare accurate audit reports is to use a quality control process such as referencing. Referencing is a process in which an experienced auditor who is independent of the audit checks that statements of facts, figures, and dates are correctly reported, that the findings are adequately supported by the evidence in the audit documentation, and that the conclusions and recommendations flow logically from the evidence.

b. Objective: Objective means that the presentation of the report is balanced in content and tone. A report's credibility is significantly enhanced when it presents evidence in an unbiased manner and in the proper context. This means presenting the audit results impartially and fairly. The tone of reports may encourage decision makers to act on the auditors' findings and recommendations. This balanced tone can be achieved when reports present sufficient, appropriate evidence to support conclusions while refraining from using adjectives or adverbs that characterize evidence in a way that implies criticism or unsupported conclusions. The objectivity of audit reports is enhanced when the report explicitly states the source of the evidence and the assumptions used in the analysis. The report may recognize the positive aspects of the program reviewed if applicable to the audit objectives. Inclusion of positive program aspects may lead to improved performance by other government organizations that read the report. Audit reports are more objective when they demonstrate that the work

has been performed by professional, unbiased, independent, and knowledgeable staff.

c. Complete: Being complete means that the report contains sufficient, appropriate evidence needed to satisfy the audit objectives and promote an understanding of the matters reported. It also means the report states evidence and findings without omission of significant relevant information related to the audit objectives. Providing report users with an understanding means providing perspective on the extent and significance of reported findings, such as the frequency of occurrence relative to the number of cases or transactions tested and the relationship of the findings to the entity's operations. Being complete also means clearly stating what was and was not done and explicitly describing data limitations, constraints imposed by restrictions on access to records, or other issues.

d. Convincing: Being convincing means that the audit results are responsive to the audit objectives, that the findings are presented persuasively, and that the conclusions and recommendations flow logically from the facts presented. The validity of the findings, the reasonableness of the conclusions, and the benefit of implementing the recommendations are more convincing when supported by sufficient, appropriate evidence. Reports designed in this way can help focus the attention of responsible officials on the matters that warrant attention and can provide an incentive for taking corrective action.

e. Clear: Clarity means the report is easy for the intended user to read and understand. Preparing the report in language as clear and simple as the subject permits assists auditors in achieving this goal. Use of straightforward, nontechnical language is helpful to simplify presentation. Defining technical terms,

abbreviations, and acronyms that are used in the report is also helpful. Auditors may use a highlights page or summary within the report to capture the report user's attention and highlight the overall message. If a summary is used, it is helpful if it focuses on the specific answers to the questions in the audit objectives, summarizes the audit's most significant findings and the report's principal conclusions, and prepares users to anticipate the major recommendations. Logical organization of material, and accuracy and precision in stating facts and in drawing conclusions assist in the report's clarity and understanding. Effective use of titles and captions and topic sentences makes the report easier to read and understand. Visual aids (such as pictures, charts, graphs, and maps) may clarify and summarize complex material.

f. Concise: Being concise means that the report is not longer than necessary to convey and support the message. Extraneous detail detracts from a report, may even conceal the real message, and may confuse or distract the users. Although room exists for considerable judgment in determining the content of reports, those that are fact-based but concise are likely to achieve results.

g. Timely: To be of maximum use, providing relevant evidence in time to respond to officials of the audited entity, legislative officials, and other users' legitimate needs is the auditors' goal. Likewise, the evidence provided in the report is more helpful if it is current. Therefore, the timely issuance of the report is an important reporting goal for auditors. During the audit, the auditors may provide interim reports of significant matters to appropriate entity officials. Such communication alerts officials to matters needing immediate attention and allows them to take corrective action before the final report is completed.

GAO's Mission

The Government Accountability Office, the audit, evaluation, and investigative arm of Congress, exists to support Congress in meeting its constitutional responsibilities and to help improve the performance and accountability of the federal government for the American people. GAO examines the use of public funds; evaluates federal programs and policies; and provides analyses, recommendations, and other assistance to help Congress make informed oversight, policy, and funding decisions. GAO's commitment to good government is reflected in its core values of accountability, integrity, and reliability.

Obtaining Copies of GAO Reports and Testimony

The fastest and easiest way to obtain copies of GAO documents at no cost is through GAO's Web site (www.gao.gov). Each weekday afternoon, GAO posts on its Web site newly released reports, testimony, and correspondence. To have GAO e mail you a list of newly posted products, go to www.gao.gov and select "E-mail Updates."

Order Printed Copies

The printed version of the December 2011 revision of *Government Auditing Standards* can be ordered through the Government Printing Office (GPO) online or by calling 202-512-1800 or 1-866-512-1800 toll free.

STANDARDS FOR INTERNAL CONTROL IN THE FEDERAL GOVERNMENT

2013 Exposure Draft

GAO-13-830SP

U.S. GOVERNMENT ACCOUNTABILITY OFFICE
441 G St. N.W.
Washington, DC 20548

September 2013

To Federal Officials and Others Interested in *Standards for Internal Control in the Federal Government*

GAO invites your comments on the accompanying proposed changes to *Standards for Internal Control in the Federal Government*, commonly known as the "Green Book." This letter describes the process used by GAO for revising the Green Book, summarizes the proposed major changes, discusses proposed effective dates, and provides instructions for submitting comments on the proposed standards.

Process for Revising the Green Book

To help ensure that the standards continue to meet the needs of the federal community and the public it serves, the Comptroller General of the United States established the Advisory Council on Standards for Internal Control in the Federal Government (Green Book Advisory Council) to review GAO's revision of the standards and consider any other necessary changes. The Green Book Advisory Council includes experts in financial management drawn from federal, state, and local government; the private sector; public accounting; and academia. This exposure draft includes the Green Book Advisory Council's input regarding the proposed changes. We are currently requesting public comments on the proposed revisions in the exposure draft.

Summary of Major Changes

The proposed revision to the Green Book will be the third since GAO first issued the standards in 1983. The proposed changes contained in the 2013 Exposure Draft update the Green Book to reflect major developments in the accountability and financial management profession and emphasize specific considerations applicable to the government environment.

Enclosure I to this letter contains a discussion of the major changes.

Effective Dates

When issued in final form, this revision will supersede the November 1999 revision of the standards. The effective date for this revision, as well as transition guidance to help officials implement the revised standards, will be included when the Green Book is issued in final form.

Instructions for Commenting

The draft of the proposed changes to *Standards for Internal Control in the Federal Government*, 2013 Exposure Draft, is only available in electronic format and can be downloaded from GAO's Green Book web page at: http://www.gao.gov/greenbook.

- - - - -

We are requesting comments on this draft from federal officials; managers and auditors at all levels of government; the public accounting profession; academia; professional organizations; public interest groups; and other interested parties. To assist you in developing your comments, specific issues are presented in enclosure II to this letter. We encourage you to comment on these issues and any additional issues that you note. Please associate your comments with specific references to question numbers in the enclosure and/or paragraph numbers in the proposed standards and provide your rationale for any suggested changes, along with suggested revised language. All comments received from the public will be considered a matter of public record and will ultimately be posted on the GAO website.

Please send your comment letters to our Green Book inbox: GreenBook@gao.gov no later than December 2, 2013.

If you need additional information please contact me at (202) 512-3133 or dalkinj@gao.gov.

James Dalkin
Director, Financial Management and Assurance

Enclosures - 2

Enclosure I: Summary of Major Changes

The 2013 revision of the *Standards for Internal Control in the Federal Government* represents a modernized version of the standards. These standards take into account the developments made in government in the area of internal control. These standards provide management criteria for designing, implementing, and operating an internal control system and reinforce management's accountability for internal control.

This revision does not change the previous standards on a conceptual level. The revised standards retain the five components of internal control, but introduce 17 principles to assist management in achieving an effective internal control system. These principles were adopted from the Committee of Sponsoring Organizations of the Treadway Commission's revision of its *Internal Control: Integrated Framework* and adapted for the government environment. The revised standards also introduce attributes that support these principles and further define the requirements for an effective internal control system.

Enclosure II: Questions for Commenters

The following questions are provided to guide users in commenting on the 2013 Exposure Draft of the *Standards for Internal Control in the Federal Government*. We encourage you to comment on these issues and any additional issues that you note. Please associate your comments with specific references to question numbers, paragraph numbers, or both in the proposed standards and provide your rationale for any proposed changes, along with suggested revised language.

1. Is the hierarchy of components, principles, and attributes clearly explained?

2. Are there any internal control concepts unique to the government environment that should be in the Green Book that are not currently included?

3. Does the framework provide the necessary information to allow program managers to evaluate the internal controls for their programs?

4. Does the Green Book provide adequate criteria for auditors?

5. Are the requirements for management to design, implement, and operate an internal control system clear, understandable, and adequate?

6. Is the evaluation of deficiencies discussion clear, understandable, and adequate?

7. Are the roles, divisions, and overlaps of responsibility for the oversight body, management, and personnel clear, understandable, and adequate?

8. Are the documentation requirements included in the Green Book clear, understandable, and adequate?

9. Is there a need for additional internal control implementation guidance? If so, what form should it take?

10. Is this Green Book written in such a way to allow state, local, and quasi-governmental entities, as well as not-for-profit organizations, to adapt it for their own use?

Contents

Overview

Foreword

Policymakers and program managers are continually seeking ways to improve accountability in achieving an entity's mission. A key factor in improving accountability in achieving an entity's mission is to implement an effective internal control system. An effective internal control system helps an entity adapt to shifting environments, evolving demands, and new priorities. As programs change and entities strive to improve operational processes and implement new technology, management continually evaluates its internal control system to ensure that it is effective and updated when necessary.

Section 3512 (c) and (d) of Title 31 of the United States Code (commonly known as the Federal Managers' Financial Integrity Act (FMFIA)) requires the Comptroller General to issue standards for internal control in government. These standards, known as the *Standards for Internal Control in the Federal Government* (Green Book), provide the overall framework for establishing and maintaining an effective internal control system. Office of Management and Budget (OMB) Circular No. A-123, *Management's Responsibility for Internal Control*, provides specific requirements for assessing and reporting on controls in the federal government. The term "internal control" in this document covers all aspects of an entity's objectives (operations, reporting, and compliance).

The Green Book may also be applied by state, local, and quasi-governmental entities, as well as not-for-profit organizations, as a framework for an internal control system. Management of these entities determines, based on applicable laws and regulations, how to appropriately adapt the framework presented in the Green Book for an entity.

The Committee of Sponsoring Organizations of the Treadway Commission (COSO) updated its internal control guidance in 2013 with the issuance of a revised *Internal Control - Integrated Framework*.[1] COSO has introduced the concept of principles related to the five components of internal control.

[1] See Committee of Sponsoring Organizations of the Treadway Commission (COSO) *Internal Control – Integrated Framework* (May 2013)

We have adapted these principles in developing this update. When finalized, the updated Green Book will supersede those previously issued.[2]

[2] See GAO *Standards for Internal Control in the Federal Government,* GAO/AIMD-00-21.3.1 (Washington, D.C.: November 1999)

How to Use the Green Book

We are issuing the Green Book to provide managers with internal control criteria to help them design, implement, and operate an effective internal control system. Our goal is to define the standards of internal control through the components, principles, and relevant attributes of internal control and explain why they are integral to an entity's internal control system. We recognize that in discussing internal control, we are separating internal control from the operational processes in which it occurs. We have done so to clarify what processes management considers part of internal control. In a mature and highly effective internal control system, internal control may be indistinguishable from day-to-day activities personnel perform.

We have structured the Green Book as follows:

1. An overview, including:

- Section 1: an overview of the fundamental concepts of internal control
- Section 2: a discussion of internal control components, principles, and attributes; how these relate to an entity's objectives; and the three categories of objectives
- Section 3: a discussion of how management evaluates the internal control system's design, implementation, and operation
- Section 4: additional considerations that apply to all components in an internal control system

2. A discussion of the requirements for each of the five components, 17 principles, and related attributes as well as additional discussion of the requirements

We have clearly marked the requirements for the Green Book through the use of "must" and "should." For further discussion of the requirements, please refer to sections 2 and 3 of the Overview.

Section 1 - Fundamental Concepts of Internal Control

Definition of Internal Control

O1.01 Internal control is an integral component of an entity's management that provides reasonable assurance that the objectives of an entity are being achieved. These objectives and related risks can be broadly classified into one or more of the three following categories:

- Operations - Effectiveness and efficiency of operations
- Reporting - Reliability of reporting for internal and external use
- Compliance - Compliance with applicable laws and regulations

O1.02 These are distinct but overlapping categories. A particular objective can fall under more than one category, can address different needs, and may be the direct responsibility of different individuals.

O1.03 Internal control comprises the plans, methods, policies, and procedures used to fulfill the mission, strategic plan, goals, and objectives of the organization. Internal control serves as the first line of defense in safeguarding assets. In short, internal control helps federal managers achieve desired results through effective stewardship of public resources.

An Internal Control System

O1.04 An internal control system is a continuous built-in component of operations, effected by people, that provides reasonable assurance, not absolute assurance, that an organization's objectives will be achieved.

O1.05 Internal control is not one event, but a series of actions that occur throughout an entity's operations. Internal control is recognized as an integral part of the operational processes management uses to regulate and guide its operations rather than as a separate system within an entity. In this sense, internal control is built into the entity as a part of the organizational structure to help managers achieve the entity's objectives on an ongoing basis.

O1.06 People are what make internal control work. Management is responsible for an effective internal control system. As part of this responsibility, management sets the entity's objectives, implements

controls, and evaluates the internal control system. However, personnel throughout an organization play important roles in implementing and operating an effective internal control system.

O1.07 An effective internal control system increases the likelihood that an entity will achieve its objectives. However, no matter how well designed, implemented, or operated, an internal control system cannot provide absolute assurance that all of an organization's objectives will be met. Factors outside the control or influence of management can affect the entity's ability to achieve all of its objectives. For example, a natural disaster can affect an organization's ability to achieve its objectives. Therefore, once in place, effective internal control provides reasonable, not absolute, assurance that an organization will achieve its objectives.

Section 2 - Establishing an Effective Internal Control System

Presentation of Standards

O2.01 The Green Book defines the standards for internal control in the federal government. FMFIA requires federal executive branch entities to establish internal control in accordance with these standards. The standards provide criteria for assessing the design, implementation, and operating effectiveness of internal control in federal government entities to determine if an internal control system is effective. An entity must have an effective internal control system to comply with the standards.

O2.02 The Green Book applies to all aspects of an entity's objectives: operations, reporting, and compliance. However, these standards are not intended to limit or interfere with duly granted authority related to legislation, rule-making, or other discretionary policy-making in an organization. In implementing the Green Book, management is responsible for designing the policies and procedures to fit an entity's operations and building them in as an integral part of the entity's operations.

Components, Principles, and Attributes

O2.03 An entity determines its mission, sets a strategic plan, establishes entity objectives, and formulates plans to achieve its objectives. Management, with oversight from the entity's oversight body, may set objectives for an entity as a whole, or target activities within the entity.

Management uses internal control to help the organization achieve these objectives. While there are different ways to present internal control, the Green Book approaches internal control through a hierarchical structure of five components, 17 principles, and relevant attributes.

O2.04 The five components of internal control are:

- Control Environment - The foundation for an internal control system. It provides the discipline and structure to help an entity achieve its objectives.
- Risk Assessment - Assesses the risks facing the entity as it seeks to achieve its objectives. This assessment provides the basis for developing appropriate risk responses.
- Control Activities - The actions management establishes through policies and procedures to achieve objectives and respond to risks in the internal control system, which includes the entity's information system.
- Information and Communication - The quality information management uses to support the internal control system. Communicating quality information is vital for an entity to run and control its operations.
- Monitoring - Assesses the quality of performance over time and ensures that the findings of audits and other reviews are promptly resolved.

O2.05 These five components represent the highest level of the hierarchy of standards for internal control in the federal government. The principles and underlying attributes represent the requirements necessary to achieve the standards of internal control. In the Green Book, these requirements are identified through use of specific language. The Green Book uses the word "should" to denote a principle or attribute statement.

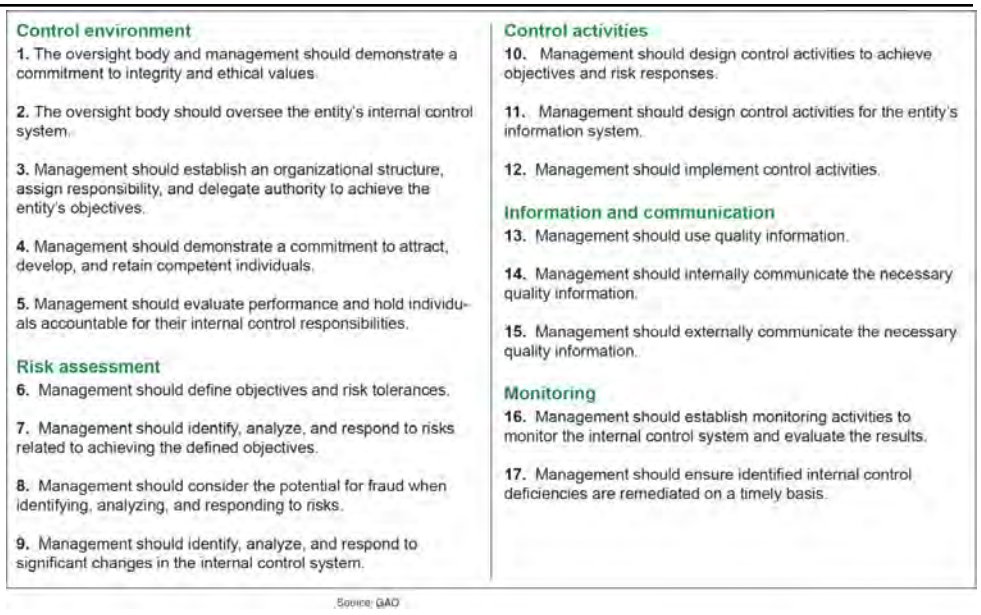
O2.06 In general, all components, principles, and attributes are relevant for an effective internal control system. However, there may be an operating or regulatory situation in which management has determined that a principle or attribute is not relevant for the entity to achieve its objectives and address related risks. Relevance refers to management's determination that each principle and attribute has a significant bearing on the design, implementation, and operation of its associated component. If management decides a principle or attribute is not relevant, management

supports that determination with documentation that includes the rationale of how, in the absence of that principle or attribute, the associated component could be designed, implemented, and operated effectively.

O2.07 In addition to principle and attribute requirements, the Green Book contains additional information in the form of application material. Application material provides further explanation of the principle and attribute requirements and may explain more precisely what a requirement means and what it is intended to cover, or include examples of procedures that may be appropriate for an entity. The words “may,” “might,” and “could” are used to describe these procedures. The application material may also provide background information on matters addressed in the Green Book. Although application material does not impose a requirement, it is relevant to the proper implementation of the requirements. Management has a responsibility to understand the application material and exercise judgment in fulfilling the requirements of the principles and attributes.

O2.08 Management has a responsibility to consider the entire text of the Green Book in designing, implementing, and operating an internal control system. The Green Book, however, does not prescribe the process for how management designs, implements, and operates its internal control system.

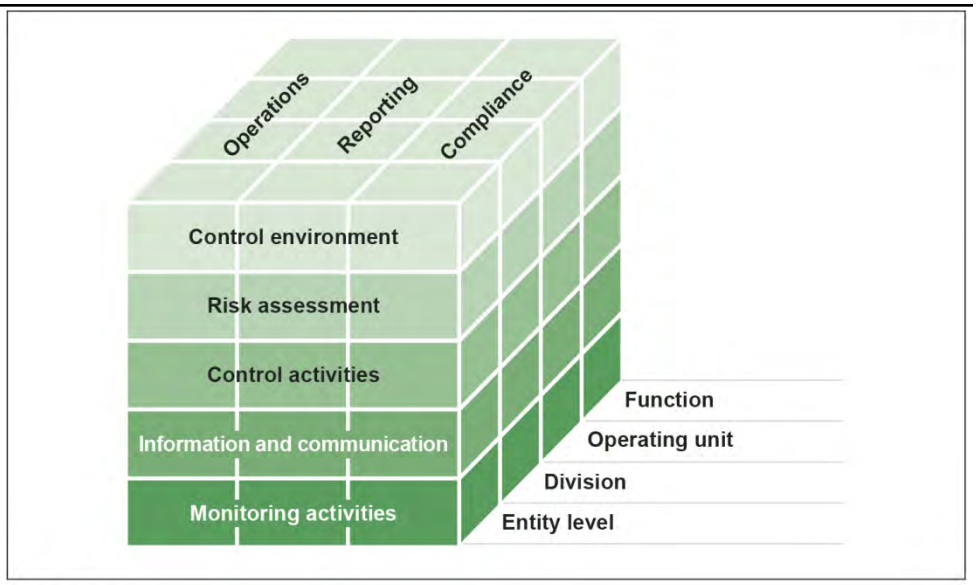
O2.09 Below are the five components of internal control and 17 related principles. The related attributes are covered in the respective component chapters.



Internal Control and the Entity

O2.10 A direct relationship exists among an entity's objectives, the five components of internal control, and the organizational structure of an entity. Objectives are what an entity wants to achieve. The five components of internal control are what is required of the entity to achieve the objectives. Organizational structure encompasses the operating units, operational processes, and other structures management uses to achieve the objectives. This relationship is depicted in the form of a cube developed by COSO.[3]

[3] See paras. 3.03 through 3.07 for further discussion of organizational structure.



Source: COSO.

O2.11 The three categories into which an entity's objectives can be classified are represented by the columns labelled on top of the cube. The five components of internal control are represented by the rows. The organizational structure is represented by the third dimension of the cube.

O2.12 Each component of internal control applies to all three categories of objectives and the organizational structure.

O2.13 Internal control is a dynamic, iterative, and integrated process in which components impact the design, implementation, and operating effectiveness of each other. No two entities will have an identical internal control system due to differences in factors such as mission, regulatory environment, strategic plan, entity size, risk tolerance, and information technology.

Roles in an Internal Control System

O2.14 Because internal control is a part of management's overall responsibility, the five components are discussed in the context of the management of the entity. However, everyone in the organization has a responsibility for internal control. In general, roles in an entity's internal control system can be categorized as follows:

- Oversight body - The oversight body is responsible for overseeing the strategic direction of the entity and obligations related to the

accountability of the entity. This includes overseeing management's design, implementation, and operation of an internal control system. For some entities, an oversight body might be one or a few members of senior management. For other entities, multiple parties may be members of the entity's oversight body. For the purpose of the Green Book, oversight by an oversight body is implicit in each principle and attribute.

- Management - Management is directly responsible for all activities of an organization, including the design, implementation, and operating effectiveness of an entity's internal control system. Managers' responsibilities vary depending on their functions in the organizational structure.
- Personnel - Personnel help management design, implement, and operate an internal control system and are responsible for reporting issues noted in the entity's operations, compliance, or reporting objectives.[4]

O2.15 External auditors and the Office of Inspector General (IG) are not considered a part of an entity's internal control system. While management may evaluate and incorporate recommendations by external auditors and the IG, responsibility for an entity's internal control system resides with management.

Objectives of an Entity

O2.16 Management, with oversight by an oversight body, sets objectives to meet the entity's mission, requirements of applicable laws and regulations, strategic plan, and goals. Management sets objectives before designing an entity's internal control system. Management may include setting objectives as part of the strategic planning process.

O2.17 Management, as part of designing an internal control system, defines the objectives in specific and measureable terms to enable management to identify, analyze, and respond to risks related to achieving those objectives.

Categories of Objectives

O2.18 Management groups objectives into one or more of the three categories of objectives:

[4] See paras. 16.01 through 17.10 for further discussion on identifying issues.

- Operations - Effectiveness and efficiency of operations
- Reporting - Reliability of reporting for internal and external use
- Compliance - Compliance with applicable laws and regulations

Operations Objectives

O2.19 Operations objectives relate to program operations that achieve an entity's mission. An entity's mission may be defined in a strategic plan. Such plans set the goals and objectives for an entity along with the effective and efficient operations necessary to fulfill those objectives. Effective operations produce the intended results from operational processes while efficient operations do so in a manner that minimizes the waste of resources.

O2.20 Management can set, from the objectives, related subobjectives for units within the organizational structure. Management, by linking objectives throughout the entity to the mission, improves the effectiveness and efficiency of program operations in achieving the mission.

Reporting Objectives

O2.21 Reporting objectives relate to the preparation of reports for use by the entity, its stakeholders, or other external parties. Reporting objectives may be grouped further into subcategories:

- External Financial Reporting Objectives - Objectives related to the release of the entity's financial performance in accordance with professional standards, applicable laws and regulations, as well as expectations of stakeholders.
- External Nonfinancial Reporting Objectives - Objectives related to the release of nonfinancial information in accordance with professional standards, applicable laws and regulations, as well as expectations of stakeholders.
- Internal Financial Reporting Objectives and Nonfinancial Reporting Objectives - Objectives related to gathering information needed by management to support decision making and evaluation of the entity's performance.

Compliance Objectives

O2.22 In the government sector, objectives related to compliance with applicable laws and regulations can be more significant than in the private sector. Laws and regulations often prescribe a government entity's objectives, structure, methods to achieve objectives, and reporting of performance relative to achieving objectives. Management considers objectives in the category of compliance comprehensively for the entity and determines what controls would be necessary to design, implement, and operate for the entity to achieve these objectives effectively.

O2.23 Management conducts activities in accordance with applicable laws and regulations. As part of specifying compliance objectives, the entity determines which laws and regulations apply to the entity. Management is expected to set objectives that incorporate these requirements. Some entities may set objectives to a higher level of performance than established by laws and regulations. In setting those objectives, management is able to exercise discretion relative to the performance of the entity.

Safeguarding of Assets

O2.24 A subset of the three categories of objectives is the safeguarding of assets. Management designs an internal control system to provide reasonable assurance regarding prevention or prompt detection of unauthorized acquisition, use, or disposition of an entity's assets.

Setting Subobjectives

O2.25 Management can develop from objectives more specific subobjectives throughout the organizational structure. Management needs to define subobjectives in specific and measurable terms that can be communicated to the personnel who are assigned responsibility to achieve these subobjectives. Both management and personnel require an understanding of an objective, its subobjectives, and defined levels of performance to ensure accountability in an internal control system.

Section 3 - Evaluation of an Effective Internal Control System

Requirements for Effective Internal Control

O3.01 An effective internal control system provides reasonable assurance that the organization will achieve its objectives. It requires that

- each of the five components, 17 principles, and relevant attributes of internal control are effectively designed, implemented, and operating and
- the five components are operating together in an integrated manner.

O3.02 To determine if an internal control system meets these requirements, management evaluates the effect of internal control deficiencies on the internal control system.

Evaluation of Deficiencies in Internal Control

O3.03 Management evaluates control deficiencies identified by management's ongoing monitoring of the internal control system as well as any separate evaluations performed by both internal and external sources. A deficiency in internal control exists when the design, implementation, or operation of a control does not allow management or personnel, in the normal course of performing their assigned functions, to achieve control objectives and address related risks.

O3.04 In the federal government FMFIA mandates that the head of each executive agency annually prepare a statement as to whether the agency's systems of internal accounting and administrative controls comply with the requirements of the act. If the systems do not comply, the head of the agency will include a report in which any material weaknesses in the agency's system of internal accounting and administrative control are identified and the plans and schedule for correcting any such weakness are described.

Design and Implementation

O3.05 When evaluating design of internal control, management determines if controls individually and in combination with other controls are capable of achieving an objective and addressing related risks. When evaluating implementation, management determines if the control exists

and if the entity has placed the control into operation. A control cannot be effectively implemented if it was not effectively designed. A deficiency in design exists when (a) a control necessary to meet a control objective is missing or (b) an existing control is not properly designed so that even if the control operates as designed, the control objective would not be met. A deficiency in implementation exists when a properly designed control is not implemented correctly in the internal control system.

Operation

O3.06 In evaluating operating effectiveness, management determines if controls were applied at relevant times during the period under evaluation, the consistency with which they were applied, and by whom or by what means they were applied. If substantially different controls were used at different times during the period under evaluation, management evaluates operating effectiveness separately for each unique control system. A control cannot be effectively operating if it was not effectively designed and implemented. A deficiency in operation exists when a properly designed control does not operate as designed, or when the person performing the control does not possess the necessary authority or competence to perform the control effectively.

Effect on the Internal Control System

O3.07 Management evaluates the significance of identified deficiencies. Significance refers to the relative importance of a deficiency in the entity achieving a defined objective. To evaluate the significance of the deficiency, management assesses its effect on achieving the defined objectives at both the entity and transaction level. Management evaluates the significance of a deficiency by considering the magnitude of impact, likelihood of occurrence, and nature of the deficiency. Magnitude of impact refers to the likely effect that the deficiency could have on the entity achieving its objectives and is affected by factors such as the size, pace, and duration of the deficiency's impact. A deficiency may be more significant to one objective than another. Likelihood of occurrence refers to the possibility of a deficiency impacting an entity's ability to achieve its objectives. The nature of the deficiency involves factors such as the degree of subjectivity involved with the deficiency and whether the deficiency arises from fraud or misconduct. The oversight body oversees management's evaluation of significance of deficiencies to ensure that deficiencies have been properly considered.

O3.08 Deficiencies are evaluated both on an individual basis and in the aggregate. Management considers the correlation among different deficiencies or groups of deficiencies when evaluating their significance. Deficiency evaluation varies by entity because of differences in entities' objectives.

O3.09 Generally, management first considers whether controls are designed, implemented, and operating effectively to achieve each relevant attribute. The Green Book describes each attribute in general terms. For each attribute, management considers the elements underlying the attribute and whether controls are properly designed, implemented, and operating effectively to achieve each element of the attribute. If one or more of the elements are not achieved, then a deficiency in internal control exists. In determining whether an attribute is achieved, management considers whether the design, implementation, and operation of the controls, in the aggregate, are sufficient to fully achieve the attribute. Such consideration includes an assessment of the impact of identified deficiencies on the achievement of the attribute.

O3.10 For each principle, management makes a summary determination as to whether the principle is designed, implemented, and operating effectively by considering whether the related attributes are achieved. If a principle is not designed, implemented, or operating effectively, then the respective component is not likely to be effective, and an internal control system is unlikely to be effective in helping the entity in achieving its objectives.

O3.11 Based on the results of this evaluation, management then evaluates the design, implementation, and operating effectiveness of each of the five components of internal control and whether they operate together effectively. If one or more of the five components are not effectively designed, implemented, or operating effectively, then an internal control system is ineffective. Judgment is used in making such determinations, which includes exercising reasonable care.

Section 4 - Additional Considerations

Service Organizations

O4.01 Management may engage external parties to perform certain operational processes for the entity, such as accounting and payroll

processing, security services, or healthcare claims processing. For the purpose of the Green Book, these external parties are referred to as "service organizations." Management, however, retains responsibility for the performance of processes assigned to service organizations. Therefore, management needs to understand the controls each service organization has designed, has implemented, and operates for the assigned operational process and how the service organization's internal control system impacts the entity's internal control system.

O4.02 Management also considers the complementary entity user controls identified by the service organization or its auditors. Management determines whether established internal controls are sufficient to ensure the entity achieves objectives and addresses risks related to the outsourced process or to incorporate the complementary user entity controls into the entity's internal control system.

O4.03 Management may consider the following when determining the extent of oversight controls for the service organization:

- The nature of services outsourced
- The service organization's standards of conduct
- Quality and frequency of the service organization's enforcement of adherence to standards of conduct by its personnel
- Magnitude and level of complexity of the entity's operations and organizational structure

Large versus Small Entities

O4.04 The 17 principles apply to both large and small entities. However, smaller entities may have different implementation approaches than larger entities. Smaller entities typically have unique advantages, which can contribute to an effective internal control system. These may include a higher level of involvement by management in operational processes and direct interaction with personnel. Smaller entities may find informal staff meetings effective for communicating quality information, where larger entities may need more formal mechanisms, such as written reports, intranet portals, or periodic formal meetings, to communicate with the organization.

O4.05 A smaller entity, however, faces greater challenges in segregating duties because of its concentration of responsibilities and authorities in the organizational structure.[5] Management, however, can respond to this increased risk through the design of the internal control system, such as by adding additional levels of review for key operational processes, reviewing randomly selected transactions and their supporting documentation, taking periodic asset counts, or checking supervisor reconciliations.

Benefits and Costs of Internal Control

O4.06 Internal control provides many benefits to an entity. It provides management with added confidence regarding the achievement of objectives, provides feedback on how effectively an entity is operating, and helps reduce risks related to achieving the entity's objectives. Management considers a variety of cost factors in relation to expected benefits when designing and implementing internal controls. The complexity of cost-benefit determination is compounded by the interrelationship of controls with operational processes. Where controls are integrated with operational processes, it is difficult to isolate either their costs or benefits.

O4.07 Management may decide how an entity evaluates the costs versus benefits of various approaches to implementing an effective internal control system. However, cost alone is not an acceptable reason to avoid implementing internal controls. Management is responsible for meeting internal control objectives. The cost versus benefits considerations support management's ability to design, implement, and operate effectively an internal control system that balances the allocation of human resources in relation to the areas of greatest risk, complexity, or other factors relevant to achieving the entity's objectives.

Documentation

O4.08 The Green Book has specified documentation requirements in five attributes in the framework, with discussion of these requirements in the accompanying application material. These are:

- Principle 3: Paragraph 3.12
- Principle 12: Paragraph 12.03

[5] See paras. 10.15 through 10.18 for further discussion of segregation of duties.

- Principle 16: Paragraph 16.12
- Principle 17: Paragraph 17.07
- Principle 17: Paragraph 17.09

O4.09 These attributes represent the minimum level of required documentation in an entity's internal control system. Management exercises judgment in determining what additional documentation may be required beyond these attributes for an effective internal control system.

Applicability to Other Entities

O4.10 The Green Book may be applied as a framework for an internal control system for state, local, and quasi-governmental entities, as well as not-for-profit organizations. Management of these entities determines, based on applicable laws and regulations, the applicable requirements for their entities. If management elects to use the Green Book as criteria, management follows all applicable requirements presented in these standards.

Control Environment

Overview

The control environment is the foundation for an internal control system. It provides the discipline and structure, which affect the overall quality of internal control. It influences how objectives are defined and how control activities are structured. The oversight body and management establish and maintain an environment throughout the organization that sets a positive attitude toward internal control.

Principles

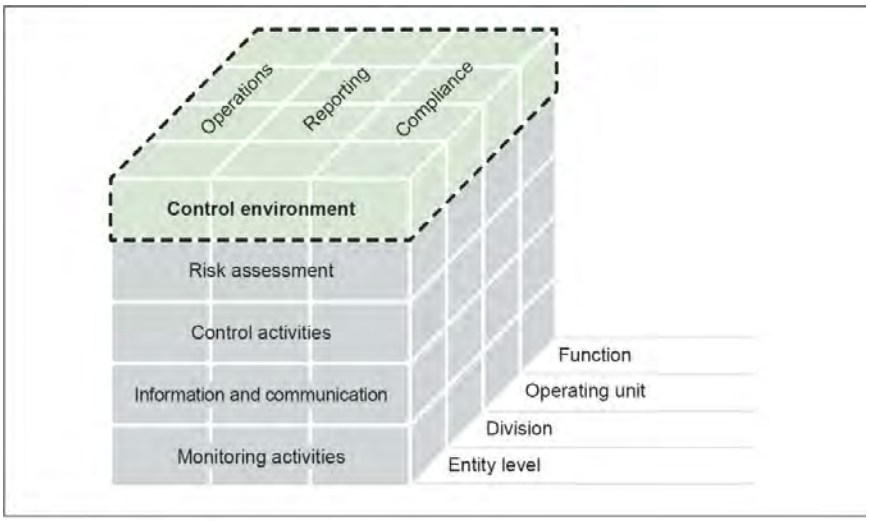
1. The oversight body and management should demonstrate a commitment to integrity and ethical values.

2. The oversight body should oversee the entity's internal control system.

3. Management should establish an organizational structure, assign responsibility, and delegate authority to achieve the entity's objectives.

4. Management should demonstrate a commitment to attract, develop, and retain competent individuals.

5. Management should evaluate performance and hold individuals accountable for their internal control responsibilities.



Source: COSO.

Principle 1 - Demonstrate Commitment to Integrity and Ethical Values

1.01 The oversight body and management should demonstrate a commitment to integrity and ethical values.

Attributes

1.02 The following attributes contribute to the design, implementation, and operating effectiveness of this principle:

a. Set the Tone at the Top - The oversight body and management should demonstrate the importance of integrity and ethical values through their directives, attitudes, and behavior.

b. Establish Standards of Conduct - Management should define expectations concerning integrity and ethical values in the entity's standards of conduct.

c. Evaluate Adherence to Standards of Conduct - Management should establish processes to evaluate performance against the organization's expected standards of conduct and address any deviations in a timely manner.

Set Tone at the Top

1.03 The oversight body and management should demonstrate the importance of integrity and ethical values through their directives, attitudes, and behavior.

1.04 The oversight body and management lead by an example that demonstrates the organization's values, philosophy, and operating style. The oversight body and management set the tone at the top and throughout the organization by their example, which is fundamental to an effective internal control system. In larger organizations, the various layers of management in the organizational structure can also set "tone in the middle."

1.05 The oversight body and management's directives, attitudes, and behaviors reflect the integrity and ethical values expected throughout the organization. The oversight body and management reinforce the commitment to doing what is right, not just maintaining a minimum level of performance necessary to comply with applicable laws and

regulations, so that these priorities are understood by all stakeholders, such as regulators, employees, and the general public.

1.06 Tone at the top can be either a driver, as shown in the preceding paragraphs, or a barrier to internal control. Without a strong tone at the top to support an internal control system, the organization's risk identification may be incomplete, risk responses may be inappropriate, control activities may not be appropriately designed or implemented, information and communication may falter, and results of monitoring may not be understood or acted upon to remediate deficiencies.

Establish Standards of Conduct

1.07 Management should define expectations concerning integrity and ethical values in the entity's standards of conduct.

1.08 Management establishes standards of conduct to communicate expectations concerning integrity and ethical values. The organization uses ethical values to balance the needs and concerns of different stakeholders, such as regulators, employees, and the general public. The standards of conduct guide the directives, attitudes, and behaviors of the organization in achieving the entity's objectives.

1.09 Management, with oversight from the oversight body, defines the organization's expectations of ethical values in the standards of conduct. Management may consider using policies, operating principles, or guidelines to communicate the standards of conduct to the organization.

Evaluate Adherence to Standards of Conduct

1.10 Management should establish processes to evaluate performance against the organization's expected standards of conduct and address any deviations in a timely manner.

1.11 Management uses established standards of conduct as the basis for evaluating adherence to integrity and ethical values across the organization. Management evaluates the adherence to standards of conduct across all levels of the organization. To gain assurance that the entity's standards of conduct are implemented effectively, management

evaluates the directives, attitudes, and behaviors of individuals and teams. Evaluations may consist of ongoing monitoring or separate evaluations.[6] Individual personnel can also report issues through reporting lines, such as regular staff meetings, upward feedback processes, a whistle-blowing program, or an ethics hotline.[7] The oversight body evaluates management's adherence to the standards of conduct as well as the overall adherence by the organization.

1.12 Management determines the tolerance level for deviations. Management may determine that the entity will have zero tolerance for deviations from certain expected standards of conduct, while deviations from others may be addressed with warnings to personnel. Management establishes a process for evaluations of individual and team adherence to standards of conduct that escalates and remediates deviations. Management addresses deviations from expected standards of conduct in a timely and consistent manner. Depending on the severity of the deviation determined through the evaluation process, management, with oversight from the oversight body, takes appropriate actions and may also need to consider applicable laws and regulations. The standards of conduct to which management holds personnel, however, remain consistent.

Principle 2 - Exercise Oversight Responsibility

2.01 The oversight body should oversee the entity's internal control system.

Attributes

2.02 The following attributes contribute to the design, implementation, and operating effectiveness of this principle:

a. Establish Oversight Structure - The entity should determine an appropriate oversight structure based on applicable laws and regulations, relevant government guidance, and feedback from key stakeholders.

[6] See paras. 16.06 through 16.11 for further discussion of ongoing monitoring and separate evaluations.

[7] See paras. 16.12 through 16.14 for further discussion of internal control issues.

b. Provide Oversight for the Internal Control System - The oversight body should oversee management's design, implementation, and operation of the internal control system.

c. Provide Input for Remediation of Deficiencies - The oversight body should provide input to management's plans for remediation of deficiencies in the internal control system as appropriate.

Establish Oversight Structure

2.03 The entity should determine an appropriate oversight structure based on applicable laws and regulations, relevant government guidance, and feedback from key stakeholders.

2.04 The entity determines an oversight structure to fulfill responsibilities set forth by applicable laws and regulations, relevant government guidance, and feedback from key stakeholders. The entity will select, or if mandated by law will have selected for it, an oversight body. When the oversight body is composed of entity management, activities referenced in the Green Book as performed by "management" exclude such management when in their role as the oversight body.

Responsibilities of an Oversight Body

2.05 When the oversight structure of an entity is led by senior management, senior management may distinguish itself from divisional or functional management through the establishment of an oversight body. An oversight body oversees the entity's operations, provides constructive criticism to management, and where appropriate, makes oversight decisions to ensure that the entity achieves its objectives in alignment with the entity's integrity and ethical values.

Qualifications for an Oversight Body

2.06 In selecting members for an oversight body, the entity or applicable body defines the entity knowledge, relevant expertise, number of members, and possible independence needed to fulfill the oversight responsibilities for the entity.

2.07 Members of an oversight body understand the entity's objectives, related risks, and expectations of its stakeholders. In addition to an oversight body, an organization within the federal government may have several bodies that are key stakeholders for the entity, such as the White House, Congress, OMB, and the Department of the Treasury. An oversight body works with key stakeholders to understand their expectations and help the entity fulfill these expectations if appropriate.

2.08 The entity or applicable body also considers the expertise needed by members to oversee, question, and evaluate management. Capabilities expected of all members of an oversight body include integrity and ethical values, leadership, critical thinking, and problem-solving.

2.09 Further, in determining the number of members of an oversight body, the entity or applicable body considers the need for more specialized skills to enable discussion, offer constructive criticism to management, and make appropriate oversight decisions. Some specialized skills may include:

- Internal control mindset (e.g., professional skepticism, perspectives on approaches for identifying and responding to risks, and assessing the effectiveness of the system of internal control)
- Programmatic expertise, including knowledge of the entity's mission, programs, and operational processes
- Financial expertise, including financial reporting (e.g., accounting standards, financial reporting requirements)
- Relevant systems and technology (e.g., understanding critical systems and technology risks and opportunities)

2.10 If authorized by applicable laws and regulations, the entity may also consider including independent members as part of an oversight body.[8] Members of an oversight body scrutinize and question management's activities, present alternative views, and act when faced with obvious or suspected wrongdoing. Independent members with relevant expertise provide value through their impartial evaluation of the entity and its operations in achieving objectives.

[8] See GAO, *Government Auditing Standards: 2011 Revision,* GAO-12-331G (Washington, D.C.: December 2011), paras. 3.02 through 3.59 for further discussion of independence.

Provide Oversight for the System of Internal Control

2.11 The oversight body should oversee management's design, implementation, and operation of the internal control system.

2.12 The oversight body oversees management's design, implementation, and operation of the entity's internal control system. The oversight body's responsibilities for the entity's internal control system include:

- Control Environment - Establish integrity and ethical values, establish oversight structure, develop expectations of competence, and maintain accountability to all members of the oversight body and key stakeholders.
- Risk Assessment - Oversee management's assessment of risks to the achievement of objectives, including the potential impact of significant changes, fraud, and management override of internal control.
- Control Activities - Provide oversight to management in the development and performance of control activities.
- Information and Communication - Analyze and discuss information relating to the entity's achievement of objectives.
- Monitoring - Scrutinize the nature and scope of management's monitoring activities as well as management's evaluation and remediation of identified deficiencies.

2.13 These responsibilities are supported by the organizational structure that management establishes.[9] The oversight body oversees management's design, implementation, and operation of the entity's organizational structure to ensure that the necessary processes to enable the oversight body to fulfill its responsibilities exist and are operating effectively.

Provide Input for Remediation of Deficiencies

2.14 The oversight body should provide input to management's plans for remediation of deficiencies in the internal control system as appropriate.

[9] See paras. 3.03 through 3.07 for further discussion of organizational structure.

2.15 Management reports deficiencies identified in the internal control system to the oversight body. The oversight body oversees and provides direction to management on the remediation of these deficiencies. The oversight body also provides direction when a deficiency crosses organizational boundaries or units, or when the interests of management may conflict with remediation efforts. When appropriate and authorized, the oversight body may direct the creation of teams to address or oversee specific matters critical to achieving the entity's objectives.

2.16 The oversight body is responsible for overseeing the remediation of deficiencies as appropriate and for providing direction to management on appropriate time frames for correcting these deficiencies.[10]

Principle 3 - Establish Structure, Responsibility, and Authority

3.01 Management should establish an organizational structure, assign responsibility, and delegate authority to achieve the entity's objectives.

Attributes

3.02 The following attributes contribute to the design, implementation, and operating effectiveness of this principle:

a. Establish Organizational Structure - Management should establish an organizational structure.

b. Assign Responsibility and Delegate Authority - Management should assign responsibility and delegate authority to key roles throughout the organization.

c. Document Internal Control System - Management should develop and maintain documentation of its internal control system.

Establish Organizational Structure

3.03 Management should establish an organizational structure.

[10] See paras. 17.09 through 17.10 for further discussion of timely remediation of findings.

3.04 Management establishes an organizational structure necessary to enable the entity to plan, execute, control, and assess the organization in achieving its objectives. Management develops the overall responsibilities from the entity's objectives that enable the entity to achieve its objectives and address related risks.

3.05 Management develops an organizational structure with an understanding of the overall responsibilities, and assigns these responsibilities to discrete units to enable the organization to operate in an efficient and effective manner, comply with applicable laws and regulations, and reliably report quality information.[11] Based on the nature of the assigned responsibility, management chooses the type and number of discrete units, such as divisions, offices, or their related subunits.

3.06 As part of establishing an organizational structure, management considers how units interact in order to fulfill their overall responsibilities. Management establishes reporting lines within an organizational structure so that units can communicate the necessary quality information for each unit to fulfill its overall responsibilities.[12] Reporting lines are defined at all levels of the organization and provide methods of communication that can flow down, across, up, and around the structure.[13] Management also considers the entity's overall responsibilities to external sources and establishes reporting lines that allow the entity to both communicate and receive information from external sources.[14]

3.07 Management periodically evaluates the organizational structure to ensure that it meets the entity's objectives and has adapted to any new objectives for the entity, such as a new regulation.

Assign Responsibility and Delegate Authority

3.08 Management should assign responsibility and delegate authority to key roles throughout the organization.

[11] See paras. 13.08 through 13.10 for further discussion of quality information.

[12] See paras. 13.03 through 13.10 for further discussion of quality information.

[13] See paras. 14.03 through 14.08 for further discussion of internal reporting lines.

[14] See paras. 15.03 through 15.08 for further discussion of external reporting lines.

3.09 To achieve the entity's objectives, management assigns responsibility and delegates authority to key roles throughout the organization. A key role is a position in the organizational structure that is assigned an overall responsibility of the entity. Generally, key roles relate to senior management positions within an organization.

3.10 Management considers the overall responsibilities assigned to each unit, determines what key roles are needed to fulfill the assigned responsibilities, and establishes the key roles. Those in key roles can further assign responsibility for internal control to roles below them in the organizational structure, but retain ownership for fulfilling the overall responsibilities assigned to the unit.

3.11 Management determines what level of authority the key role needs to fulfill that responsibility. Management delegates authority only to the extent required to achieve the entity's objectives. As part of delegating authority, management evaluates the delegation to ensure proper segregation of duties within the unit and in the organizational structure. Segregation of duties helps prevent fraud, waste, and abuse in the entity by considering the need to separate authority, custody, and accounting in the organizational structure.[15] As with assigning responsibility, those in key roles can delegate their authority for internal control to roles below them in the organizational structure.

Document Internal Control System

3.12 Management should develop and maintain documentation of its internal control system.

3.13 Management develops and maintains documentation of its internal control system for a number of reasons. Effective documentation assists in management's design of internal control by establishing and communicating the who, what, when, where, and why of internal control execution to personnel. Documentation also provides a means to retain organizational knowledge and mitigate the risk of having that knowledge limited to a few personnel, as well as a means to communicate that knowledge as needed to external parties such as external auditors.

[15] See paras. 10.15 through 10.18 for further discussion of segregation of duties.

3.14 Management documents internal control to meet operational needs. Documentation of controls, including changes to controls, is evidence that controls are identified, capable of being communicated to those responsible for their performance, and capable of being monitored and evaluated by the entity. The extent of documentation supporting the design, implementation, and operating effectiveness of the five components of internal control is a matter of judgment for management. Management considers the cost-benefit of documentation requirements for the entity as well as the size, nature, and complexity of the entity and its objectives. Some level of documentation, however, is necessary to ensure that the components of internal control are designed, implemented, and operating effectively.

Principle 4 - Demonstrate Commitment to Competence

4.01 Management should demonstrate a commitment to attract, develop, and retain competent individuals.

Attributes

4.02 The following attributes contribute to the design, implementation, and operating effectiveness of this principle:

a. Establish Expectations of Competence - Management should establish expectations of competence throughout the organization.

b. Attract, Develop, and Retain Individuals - Management should attract, develop, and retain competent personnel.

c. Plan and Prepare for Succession - Management should define succession and contingency plans for key roles in the organization.

Establish Expectations of Competence

4.03 Management should establish expectations of competence throughout the organization.

4.04 Management establishes expectations of competence for key roles, and other roles at management's discretion, to help the entity achieve its objectives. Competence is the qualification to carry out assigned responsibilities. It requires relevant knowledge, skills, and abilities, which are gained largely from professional experience, training, and

certifications. It is expressed in the attitude and behavior of individuals as they carry out their responsibilities.

4.05 Management considers standards of conduct, assigned responsibility, and delegated authority when establishing expectations. Management establishes expectations of competence for key roles. Management may also establish expectations of competence for all personnel through policies within the organization's internal control system.[16]

4.06 Personnel need to possess and maintain a level of competence that allows them to accomplish their assigned responsibilities, as well as understand the importance of effective internal control. Holding individuals accountable to established policies by evaluating personnel's competence is integral to attracting, developing, and retaining individuals. Management evaluates competence of personnel across the organization in relation to established policies. Management acts as necessary to address any deviations from the established policies. The oversight body evaluates the competence of management as well as the overall competence of the organization.

Attract, Develop, and Retain Individuals

4.07 Management should attract, develop, and retain competent personnel.

4.08 Management attracts, develops, and retains competent personnel to achieve the entity's objectives. Management may consider:

- Attract - Conduct procedures to determine whether a particular candidate fits the organizational needs and has the competence for the proposed role.
- Train - Enable individuals to develop competencies appropriate for key roles, reinforce standards of conduct, and tailor training based on the needs of the role.
- Mentor - Provide guidance on the individual's performance based on standards of conduct and expectations of competence, align the individual's skills and expertise with the entity's objectives, and help personnel adapt to an evolving environment.

[16] See paras. 12.03 through 12.05 for further discussion of policies.

- Retain – Provide incentives to motivate and reinforce expected levels of performance and desired conduct, including training and credentialing as appropriate.

Plan and Prepare for Succession

4.09 Management should define succession and contingency plans for key roles in the organization.

4.10 Management defines succession and contingency plans for key roles to help the organization continue achieving its objectives. Succession plans address the entity's need to replace competent personnel over the long term, whereas contingency plans address the organization's need to respond to sudden personnel changes impacting the organization that could compromise the internal control system.

4.11 Management defines succession plans for key roles, chooses succession candidates, and trains succession candidates to assume the key roles. If management relies on a service organization to fulfill the assigned responsibilities of key roles in the entity, management assesses whether the service organization can continue in these key roles, identifies other candidate organizations for the roles, and ensures that processes are in place to enable knowledge sharing with the succession candidate organization.

4.12 Management defines contingency plans for assigning responsibilities if a key role in the organization is vacated without advance notice. The importance of the key role in the internal control system and the impact to the organization of its vacancy dictates the formality and depth of the contingency plan.

Principle 5 - Enforce Accountability

5.01 Management should evaluate performance and hold individuals accountable for their internal control responsibilities.

Attributes

5.02 The following attributes contribute to the design, implementation, and operating effectiveness of this principle:

a. Enforce Accountability - Management should enforce accountability for performance of internal control responsibilities.

b. Consider Excessive Pressures - Management should evaluate and adjust pressures on personnel related to achieving objectives as they assign responsibilities and evaluate performance.

Enforce Accountability

5.03 Management should enforce accountability for performance of internal control responsibilities.

5.04 Management enforces accountability of individuals performing their internal control responsibilities. Accountability is driven by the tone at the top and supported by the commitment to integrity and ethical values, organizational structure, and expectations of competence, which influence the control culture of the organization. Accountability for performance of internal control responsibility supports day-to-day decision making, attitudes, and behaviors. Management holds personnel accountable through mechanisms such as performance appraisals and disciplinary actions.

5.05 Management holds entity personnel accountable for performing their assigned internal control responsibilities. The oversight body, in turn, holds management accountable as well as the organization as a whole for its internal control responsibilities.

5.06 If management establishes incentives, management recognizes that actions can yield unintended consequences and evaluates incentives to ensure that they align with the entity's standards of conduct.

5.07 Management holds service organizations accountable for their assigned internal control responsibilities. Management may contract service organizations to perform roles in the organizational structure. Management communicates to the service organization the objectives of the entity and their related risks, the entity's standards of conduct, the role of the service organization in the organizational structure, the assigned

responsibilities and authorities of the role, and the expectations of competence for its role that will enable the service organization to perform its internal control responsibilities.

5.08 Management, with oversight from the oversight body, takes corrective action as necessary to enforce accountability for internal control in the organization. These actions can range from informal feedback provided by the direct supervisor to disciplinary action taken by the oversight body depending on the significance of the deficiency to the internal control system.[17]

Consider Excessive Pressures

5.09 Management should evaluate and adjust pressures on personnel related to achieving objectives as they assign responsibilities and evaluate performance.

5.10 Management adjusts excessive pressures on personnel in the organization. Pressure can appear in an organization due to goals established by management to meet objectives or cyclical demands of various processes performed by the organization, such as year-end financial statement preparation. Excessive pressure can result in personnel "cutting corners" to meet the established goals.

5.11 Management is responsible for evaluating pressure on personnel to help personnel fulfill their assigned responsibilities in accordance with the entity's standards of conduct. Management can adjust excessive pressures using many different tools, such as rebalancing workloads or increasing resource levels.

[17] See Overview: Effect on the Internal Control System for further discussion of significance of deficiencies.

Risk Assessment

Overview

Having established an effective control environment, management assesses the risks facing the entity as it seeks to achieve its objectives. This assessment provides the basis for developing appropriate risk responses. Management assesses the risks the entity faces from both external and internal sources.

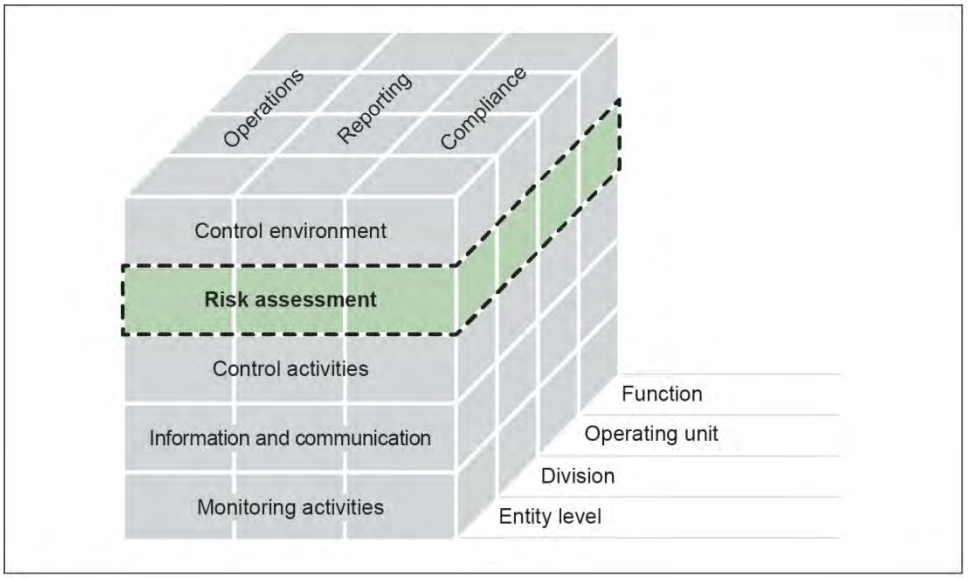
Principles

6. Management should define objectives and risk tolerances.

7. Management should identify, analyze, and respond to risks related to achieving the defined objectives.

8. Management should consider the potential for fraud when identifying, analyzing, and responding to risks.

9. Management should identify, analyze, and respond to significant changes in the internal control system.



Source: COSO.

Principle 6 - Define Objectives and Risk Tolerances

6.01 Management should define objectives and risk tolerances.

Attributes

6.02 The following attributes contribute to the design, implementation, and operating effectiveness of this principle:

a. Define Objectives - Management should define objectives in specific and measurable terms to enable the design of internal control for related risks.

b. Define Risk Tolerances - Management should define the risk tolerances for the defined objectives.

Define Objectives

6.03 Management should define objectives in specific and measurable terms to enable the design of internal control for related risks.

6.04 Management defines objectives in specific and measurable terms to enable the design of internal control for related risks. Specific terms are fully and clearly set forth so they can be easily understood. Measurable terms allow for the assessment of performance toward achieving objectives. Objectives are initially set as part of the objective-setting process and then refined as they are incorporated into the internal control system when management uses them to establish the control environment.

6.05 Management defines objectives in specific terms so they are understood at all levels of the entity. This involves clearly defining what is to be achieved, who is to achieve it, how it will be achieved, and the time frames for achievement. All objectives can be broadly classified into one or more of three categories: operations, reporting, or compliance. Reporting objectives are further categorized as being either internal or external, and financial or nonfinancial. Management ensures that the defined objectives align with the organization’s mission, strategic plan and performance goals.

6.06 Management defines objectives in measurable terms so that performance toward achieving those objectives can be assessed. Measurable objectives are generally free of bias and do not require subjective judgments to dominate their measurement. Measurable objectives are also stated in a quantitative or qualitative form that permits reasonably consistent measurement.

6.07 Management considers external requirements and internal expectations when defining objectives to enable the design of internal control. Legislators, regulators, and standard-setting bodies set external requirements by establishing the laws, regulations, and standards with which the organization is required to comply. Management identifies, understands, and incorporates these requirements into the entity's objectives. Management sets internal expectations and requirements through the established standards of conduct,[18] oversight structure,[19] organizational structure,[20] and expectations of competence[21] as part of the control environment.

6.08 Management evaluates and, if necessary, revises defined objectives to ensure that they are consistent with these requirements and expectations. This consistency enables management to identify and analyze risks associated with achieving the defined objectives.

6.09 Management determines whether performance measures for the defined objectives are appropriate for evaluating the entity's performance in achieving those objectives. For quantitative objectives, performance measures may be a targeted percentage or numerical value. For qualitative objectives, management may need to design performance measures that indicate a level or degree of performance, such as milestones.

Define Risk Tolerances

6.10 Management should define the risk tolerances for the defined objectives.

[18] See paras. 1.07 through 1.09 for further discussion of standards of conduct.

[19] See paras. 2.03 through 2.10 for further discussion of oversight structure.

[20] See paras. 3.03 through 3.07 for further discussion of organizational structure.

[21] See paras. 4.03 through 4.06 for further discussion of expectations of competence.

6.11 Management defines risk tolerances for the defined objectives. Risk tolerance is the acceptable level of variation in performance relative to the achievement of objectives. Risk tolerances are initially set as part of the objective-setting process. Management defines the risk tolerances for defined objectives by ensuring that the set levels of variation for performance measures are appropriate for the design of an internal control system.

6.12 Management defines risk tolerances in specific and measurable terms so they are clearly stated and can be measured. Risk tolerance is often measured in the same unit as the performance measures for the defined objectives. Depending on the category of objectives, risk tolerances may be expressed as follows:

- Operations and Compliance Objectives - Acceptable level of variation in performance in relation to risk.
- Nonfinancial Reporting Objectives - Required level of precision and accuracy suitable for user needs.
- Financial Reporting Objectives - Material misstatements, including omissions, are those that, either individually or in the aggregate, could reasonably be expected to influence the decisions of financial statement users. Judgments about materiality are made in light of surrounding circumstances, involve both qualitative and quantitative considerations, and are affected by the needs of financial statement users and size or nature of a misstatement.

6.13 Management also evaluates whether risk tolerances enable the appropriate design of internal control by considering whether they are consistent with requirements and expectations for the defined objectives. As in defining objectives, management considers the risk tolerances in the context of the entity's applicable laws, regulations, and standards as well as the entity's standards of conduct, oversight structure, organizational structure, and expectations of competence. If risk tolerances for defined objectives are not consistent with these requirements and expectations, management revises the risk tolerances to achieve consistency.

Principle 7 – Identify, Analyze, and Respond to Risk

7.01 Management should identify, analyze, and respond to risks related to achieving the defined objectives.

Attributes

7.02 The following attributes contribute to the design, implementation, and operating effectiveness of this principle:

a. Identify Risks - Management should identify risks throughout the entity.

b. Analyze Risks - Management should analyze the identified risks to estimate their significance.

c. Respond to Risks - Management should design responses to the analyzed risks.

Identify Risks

7.03 Management should identify risks throughout the entity.

7.04 Management identifies risks throughout the entity to provide a basis for analyzing risks. Risk assessment is the identification and analysis of risks related to achieving the defined objectives to form a basis for designing risk responses.

7.05 To identify risks, management considers the types of risks that impact the entity. This includes both inherent and residual risk. Inherent risk is the risk to an entity in the absence of management's response to the risk. Residual risk is the risk that remains after management's response to inherent risk. Both risks could cause deficiencies in the internal control system.

7.06 Management considers all significant interactions within the entity and with external parties, changes within the entity's internal and external environment,[22] and other internal and external factors to identify risks throughout the entity. Internal risk factors may include the complex nature of an entity's programs, its organizational structure, or the use of new technology in operational processes. External risk factors may include new or amended laws, regulations, or professional standards; economic instability; or potential natural disasters. Management considers these factors at both the entity and transaction level to comprehensively identify risks that affect defined objectives.[23] Risk identification methods may

[22] See paras. 9.03 through 9.05 for further discussion of changes in the internal control system.

[23] See paras. 10.10 through 10.14 for further discussion of level of controls.

include qualitative and quantitative ranking activities, management conferences, forecasting and strategic planning, and consideration of deficiencies identified through audits and other assessments.

Analyze Risks

7.07 Management should analyze the identified risks to estimate their significance.

7.08 Management analyzes the identified risks to estimate their significance, which provides a basis for responding to the risks. Significance refers to the effect on achieving a defined objective.

7.09 Management estimates the significance of the identified risks to assess their effect on achieving the defined objectives at both the entity and transaction level. Management estimates the significance of a risk by considering the magnitude of impact, likelihood of occurrence, and nature of the risk. Magnitude of impact refers to the likely magnitude of deficiency that could result from the risk and is affected by factors such as the size, pace, and duration of the risk's impact. Likelihood of occurrence refers to the possibility that a risk will occur. The nature of the risk involves factors such as the degree of subjectivity involved with the risk and whether the risk arises from fraud or from complex or unusual transactions. The oversight body may oversee management's estimates of significance to ensure that risk tolerances have been properly defined.

7.10 Risks may either be analyzed on an individual basis or grouped into categories with related risks and analyzed collectively. Regardless of whether risks are analyzed individually or collectively, management considers the correlation among different risks or groups of risks when estimating their significance. The specific risk analysis methodology used can vary by entity because of differences in entities' missions and the difficulty in qualitatively and quantitatively defining risk tolerances.

Respond to Risks

7.11 Management should design responses to the analyzed risks.

7.12 Management designs responses to the analyzed risks so that risks are within the defined risk tolerance for the defined objective. Management designs overall risk responses for the analyzed risks based on the significance of the risk and defined risk tolerance. These risk responses may include:

- Acceptance - No action is taken to respond to the risk.
- Avoidance - Action is taken to stop the operational process or the part of the operational process causing the risk.
- Reduction - Action is taken to reduce the likelihood or magnitude of the risk.
- Sharing - Action is taken to transfer or share risks across the entity or with external parties, such as insuring against losses.

7.13 Based on the selected risk response, management designs the specific actions to respond to the analyzed risks. The nature and extent of risk response actions depend on the defined risk tolerance. Operating within the defined risk tolerance provides greater assurance that the entity will achieve its objectives. Performance measures are used to assess whether risk response actions enable the entity to operate within the defined risk tolerances. When risk response actions do not enable the entity to operate within the defined risk tolerances, management may need to revise risk responses or reconsider defined risk tolerances.

Principle 8 - Assess Fraud Risk

8.01 Management should consider the potential for fraud when identifying, analyzing, and responding to risks.[24]

Attributes

8.02 The following attributes contribute to the design, implementation, and operating effectiveness of this principle:

a. Consider Types of Fraud - Management should consider the types of fraud that can occur within the organization.

[24] Fraud involves obtaining something of value through willful misrepresentation. Whether an act is in fact fraud is a determination to be made through the judicial or other adjudicative system and is beyond management's professional responsibility for assessing risk.

b. Consider Fraud Risk Factors - Management should consider fraud risk factors.

c. Respond to Fraud Risks - Management should analyze and respond to identified fraud risks.

Consider Types of Fraud

8.03 Management should consider the types of fraud that can occur within the organization.

8.04 Management considers the types of fraud that can occur within the organization to provide a basis for identifying fraud risks. Fraud can occur in:

- Fraudulent Financial Reporting - Intentional misstatements or omissions of amounts or disclosures in financial statements to deceive financial statement users. This could include intentional alteration of accounting records, misrepresentation of transactions, intentional misapplication of accounting principles, or other means.
- Misappropriation of Assets - Theft of an entity's assets. This could include theft of property, embezzlement of receipts, fraudulent payments, or other means.
- Corruption - Bribery and other illegal acts.

8.05 In addition to fraud, management considers other forms of misconduct that can occur, such as waste and abuse. Waste is the act of using or expending resources carelessly, extravagantly, or to no purpose. Abuse involves behavior that is deficient or improper when compared with behavior that a prudent person would consider reasonable and necessary operational practice given the facts and circumstances. This includes the misuse of authority or position for personal gain or for the benefit of another. Waste and abuse do not necessarily involve fraud or illegal acts. However, they may be an indication of potential fraud or illegal acts and may still impact the achievement of defined objectives.

Consider Fraud Risk Factors

8.06 Management should consider fraud risk factors.

8.07 Management considers fraud risk factors. Fraud risk factors do not necessarily indicate that fraud exists but are often present when fraud occurs. Fraud risk factors include:

- Incentive/pressure - Management or other personnel have an incentive or are under pressure, which provides a motive to commit fraud.[25]
- Opportunity - Circumstances exist, such as the absence of controls, ineffective controls, or the ability of management to override controls, that provide an opportunity to commit fraud.
- Attitude/rationalization - Individuals involved are able to rationalize committing fraud. Some individuals possess an attitude, character, or ethical values that allow them to knowingly and intentionally commit a dishonest act.

8.08 Management uses the fraud risk factors to identify fraud risks. While fraud risk may be greatest when all three risk factors are present, one or more of these factors may indicate a fraud risk. Other information provided by internal and external parties can also be used to identify fraud risks. This may include allegations of fraud or suspected fraud reported by the OIG or internal auditors, personnel, or external parties that interact with the organization.

Respond to Fraud Risks

8.09 Management should analyze and respond to identified fraud risks.

8.10 Management analyzes and responds to identified fraud risks to ensure that they are effectively mitigated. Fraud risks are analyzed through the same risk analysis process performed for all identified risks.[26] Management analyzes the identified fraud risks by estimating their significance, both individually and in the aggregate, to assess their effect on achieving the defined objectives. As part of analyzing fraud risk, management also assesses the risk of management override of controls.[27] The oversight body oversees management's assessments of fraud risk and the risk of management override of controls to ensure that they are appropriate.

[25] See paras. 5.09 through 5.11 for further discussion of pressure.

[26] See paras. 7.07 through 7.10 for further discussion of analyzing risks.

[27] See para. 10.17 for further discussion of management override.

8.11 Management responds to fraud risks through the same risk response process performed for all analyzed risks.[28] Management designs an overall risk response and specific actions for responding to fraud risks. It may be possible to reduce or eliminate certain fraud risks by making changes to the entity's activities and processes. These changes may include stopping or reorganizing certain operations and reallocating roles among personnel to enhance segregation of duties. In addition to responding to fraud risks, management may need to develop further responses to address the risk of management override of controls. Further, when fraud has been detected, it may be necessary to revise the risk assessment process going forward.

Principle 9 – Identify, Analyze, and Respond to Change

9.01 Management should identify, analyze, and respond to significant changes in the internal control system.

Attributes

9.02 The following attributes contribute to the design, implementation, and operating effectiveness of this principle:

a. Identify Change - Management should identify changes that could significantly impact the entity's internal control system.

b. Analyze and Respond to Change - Management should analyze and respond to identified changes that impact the entity's internal control system.

Identify Change

9.03 Management should identify changes that could significantly impact the entity's internal control system.

9.04 As part of risk assessment or a similar process, management identifies changes that could significantly impact the entity's internal control system. Identifying, analyzing, and responding to change is

[28] See paras. 7.11 through 7.13 for further discussion of responding to risks.

similar to, if not part of, the entity's regular risk assessment process. However, change is discussed separately because it is critical to an effective internal control system and can often be overlooked or inadequately addressed in the normal course of operations.

9.05 Conditions affecting the entity and its environment continually change. Management can anticipate and plan for significant changes by using a forward-looking process for identifying change. Management identifies, on a timely basis, significant changes to internal and external conditions that have already occurred or are expected to occur. Changes in internal conditions include changes to the entity's programs or activities, oversight structure, organizational structure, personnel, and technology. Changes in external conditions include changes in the governmental, economic, technological, legal, regulatory, and physical environments. Identified significant changes are communicated across the organization through established reporting lines to appropriate personnel.[29]

Analyze and Respond to Change

9.06 Management should analyze and respond to identified changes that impact the entity's internal control system.

9.07 As part of risk assessment or a similar process, management analyzes and responds to identified changes and related risks to ensure the effectiveness of the internal control system. Changes in conditions affecting the entity and its environment often require changes to the entity's internal control system, as existing controls may not be effective for meeting objectives or addressing risks under changed conditions. Management analyzes the effect of identified changes on the internal control system and responds by revising the internal control system on a timely basis, when necessary, to ensure its effectiveness.

9.08 Further, changing conditions often prompt new risks or changes to existing risks that need to be assessed. As part of analyzing and responding to change, management performs a risk assessment to identify, analyze, and respond to any new risks prompted by the changes. Additionally, existing risks may require further assessment to determine whether the defined risk tolerances and risk responses need to be revised.

[29] See paras. 14.03 through 14.08 for further discussion of internal reporting lines.

Control Activities

Overview

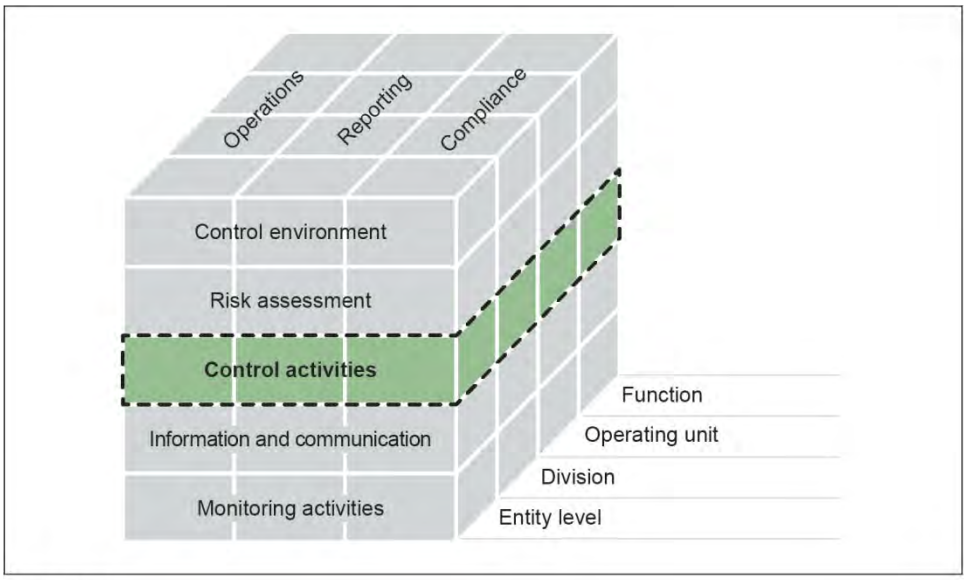
Control activities are the actions management establishes through policies and procedures to achieve objectives and respond to risks in the internal control system, which includes the entity's information system.

Principles

10. Management should design control activities to achieve objectives and risk responses.

11. Management should design control activities for the entity's information system.

12. Management should implement control activities.



Source: COSO.

Principle 10 - Design Control Activities

10.01 Management should design control activities to achieve objectives and risk responses.

Attributes

10.02 The following attributes contribute to the design, implementation, and operating effectiveness of this principle:

a. Respond to Objectives and Risks - Management should design control activities that respond to the entity's objectives and risks.

b. Design the Types of Control Activities - Management should design appropriate types of control activities needed for the entity's internal control system.

c. Design Control Activities at Various Levels - Management should design control activities at appropriate levels in the organizational structure.

d. Consider Segregation of Duties - Management should consider segregation of duties in designing the assignment of control activity responsibilities.

Respond to Objectives and Risks

10.03 Management should design control activities that respond to the entity's objectives and risks.

10.04 Management designs control activities in response to the entity's objectives and risks to achieve an effective internal control system. Control activities are the policies, procedures, techniques, and mechanisms that enforce management's directives to achieve the entity's objectives and address related risks. As part of the control environment component, management defines responsibilities, assigns them to key roles, and delegates authority to achieve the entity's objectives. As part of the risk assessment component, management identifies the risks related to the entity and its objectives including its service organizations, the entity's risk tolerance, and risk responses. Management designs control activities to fulfill defined responsibilities and address identified risk responses.

Design Appropriate Types of Control Activities

10.05 Management should design appropriate types of control activities needed for the entity's internal control system.

10.06 Management designs appropriate types of control activities for the entity's internal control system. Control activities help management fulfill responsibilities and address identified risk responses in the internal control system.

Common Categories of Internal Control

Examples of common categories of control activities include the following:

- Top Level Reviews of Actual Performance
- Reviews by Management at the Functional or Activity Level
- Management of Human Capital
- Controls over Information Processing
- Physical control over vulnerable assets
- Establishment and Review of Performance Measures and Indicators
- Segregation of Duties
- Proper Execution of Transactions and Events
- Accurate and Timely Recording of Transactions and Events
- Access Restrictions to and Accountability for Resources and Records
- Appropriate Documentation of Transactions and Internal Control

Top Level Reviews of Actual Performance

Management tracks major entity achievements and compares these to the plans, goals, and objectives set by the entity.

Reviews by Management at the Functional or Activity Level

Management compares actual performance to planned or expected results throughout the organization and analyzes significant differences.

Management of Human Capital

Effective management of an organization's workforce, its human capital, is essential to achieving results and an important part of internal control. Only when the right personnel for the job are on board and are provided the right training, tools, structure, incentives, and responsibilities is operational success possible. Management ensures that the knowledge, skills, and ability needs are continually assessed and that the organization is able to obtain a workforce that has the required knowledge, skills, and

abilities necessary to achieve organizational goals. Training should be aimed at developing and retaining employee knowledge, skills, and abilities to meet changing organizational needs. Management provides qualified and continuous supervision to ensure that internal control objectives are achieved. Management designs performance evaluation and feedback, supplemented by an effective reward system, to help employees understand the connection between their performance and the entity's success. As a part of its human capital planning, management also considers how best to retain valuable employees, plan for their eventual succession, and ensure continuity of needed skills and abilities.

Controls over Information Processing

A variety of control activities are used in information processing. Examples include edit checks of data entered, accounting for transactions in numerical sequences, comparing file totals with control accounts, and controlling access to data, files, and programs. Further guidance on control activities for information processing is provided below under "Control Activities Specific for Information Systems" and in Principle 11.

Physical Control over Vulnerable Assets

Management establishes physical control to secure and safeguard vulnerable assets. Examples include security for and limited access to assets such as cash, securities, inventories, and equipment that might be vulnerable to risk of loss or unauthorized use. Management periodically counts and compares such assets to control records.

Establishment and Review of Performance Measures and Indicators

Management establishes activities to monitor performance measures and indicators. These may include comparisons and assessments relating different sets of data to one another so that analyses of the relationships can be made and appropriate actions taken. Management designs controls aimed at validating the propriety and integrity of both entity and individual performance measures and indicators.

Segregation of Duties

Management divides or segregates key duties and responsibilities among different people to reduce the risk of error, misuse, or fraud. This includes separating the responsibilities for authorizing transactions, processing and recording them, reviewing the transactions, and handling any related

assets. Management ensures that no one individual controls all key aspects of a transaction or event.

Proper Execution of Transactions and Events

Transactions and other significant events are authorized and executed only by persons acting within the scope of their authority. This is the principal means of assuring that only valid transactions to exchange, transfer, use, or commit resources and other events are initiated or entered into. Management clearly communicates authorizations to personnel.

Accurate and Timely Recording of Transactions and Events

Management ensures that transactions are promptly recorded to maintain their relevance and value to management in controlling operations and making decisions. This applies to the entire process or life cycle of a transaction or event from its initiation and authorization through its final classification in summary records. In addition, management designs control activities to help ensure that all transactions are completely and accurately recorded.

Access Restrictions to and Accountability for Resources and Records

Management limits access to resources and records to authorized individuals, and assigns and maintains accountability for their custody and use. Management may periodically compare resources with the recorded accountability to help reduce the risk of errors, fraud, misuse, or unauthorized alteration.

Appropriate Documentation of Transactions and Internal Control

Management clearly documents internal control and all transactions and other significant events, and ensures that the documentation is readily available for examination. The documentation may appear in management directives, administrative policies, or operating manuals, in either paper or electronic form. Documentation and records are properly managed and maintained.

10.07 Control activities can be either preventive or detective. The main difference between preventive and detective control activities is when the control activity occurs in an entity's operations. A preventive control

activity prevents an entity from failing to achieve an objective or addressing a risk. A detective control activity discovers when an entity is not achieving an objective or addressing a risk before the entity's operation has concluded and corrects the actions so that the entity achieves the objective or addresses the risk.

10.08 Management evaluates the purpose of the control activity as well as the effect a deficiency would have on the entity in achieving its objectives. If the control activity is for a significant purpose or the impact of a deficiency would be significant to achieving the entity's objectives, management may design both preventive and detective control activities.

10.09 Control activities can be implemented in either an automated or a manual manner. Automated control activities are either wholly or partially automated through the entity's information technology. Manual control activities are performed by individuals with minor use of the entity's information technology. Automated control activities tend to be more reliable because they are less susceptible to human error and are typically more efficient.[30] If the entity relies on information technology in its operations, management designs control activities to ensure that the information technology continues to operate properly.

Design Control Activities at Various Levels

10.10 Management should design control activities at the appropriate levels in the organizational structure.

10.11 Management designs control activities to ensure the appropriate coverage of objectives and risks in the operations. Operational processes transform inputs into outputs to achieve the organization's objectives. Management designs entity-level control activities, transaction control activities, or both depending on the level of precision needed to ensure that the entity meets its objectives and addresses related risks.

10.12 Entity-level controls are controls that have a pervasive effect on an organization's internal control system and may pertain to multiple components. Entity-level controls may include controls related to the entity's risk assessment process, control environment, service

[30] See paras. 11.07 through 11.10 for further discussion of control activities.

organizations, management override, monitoring, and year-end financial reporting.

10.13 Transaction control activities are actions built directly into operational processes to support the organization in achieving its objectives and addressing related risks. The term “transactions” tends to be associated with financial processes (e.g., payables transactions), while the term “activities” is more generally applied to operational or compliance processes. For the purposes of this standard, “transactions” covers both definitions. Management may design a variety of transaction control activities for operational processes, which may include verifications, reconciliations, authorizations and approvals, physical control activities, and supervisory control activities.

10.14 When choosing between entity-level and transaction control activities, management evaluates the level of precision needed for the operational processes to meet the organization’s objectives and address related risks. In determining the necessary level of precision for a control activity, management evaluates:

- Purpose of the control activity - A control activity that functions to prevent or detect generally is more precise than a control activity that merely identifies and explains differences.
- Level of aggregation - A control activity that is performed at a more granular level generally is more precise than one performed at a higher level. For example, an analysis of obligations by budget object class normally is more precise than an analysis of total obligations for the organization.
- Consistency of performance - A control activity that is performed routinely and consistently generally is more precise than one performed sporadically.
- Correlation to relevant operational processes - A control activity that is directly related to an operational process generally is more likely to prevent or detect than a control activity that is only indirectly related.

Consider Segregation of Duties

10.15 Management should consider segregation of duties in designing the assignment of control activity responsibilities.

10.16 Management considers segregation of duties in designing control activity responsibilities to ensure that incompatible duties are segregated and, where such segregation is not practical, designs alternative control activities to address the risk.

10.17 Segregation of duties helps prevent fraud, waste, and abuse in the internal control system.[31] Management considers the need to separate control activities related to authority, custody, and accounting of operations to achieve adequate segregation of duties. In particular, segregation of duties can address the risk of management override. Management override circumvents existing control activities and is a means of committing fraud. Management addresses this risk through segregation of duties, but cannot absolutely prevent it due to the risk of collusion, where two employees collude to commit fraud.

10.18 If segregation of duties is not practical within an operational process due to limited personnel or other factors, management designs alternative control activities to address the risk of fraud, waste, or abuse in the operational process.

Principle 11 – Design Activities for the Information System

11.01 Management should design control activities for the entity's information system.

Attributes

11.02 The following attributes contribute to the design, implementation, and operating effectiveness of this principle:

a. Design the Entity's Information System - Management should design the entity's information system to respond to the entity's objectives and risks.

b. Design Appropriate Types of Control Activities - Management should design appropriate types of control activities in the entity's information system.

[31] See paras. 8.03 through 8.05 for further discussion of fraud, waste, and abuse.

c. Design the Information Technology Infrastructure - Management should design control activities over the information technology infrastructure.

d. Design Security Management - Management should design control activities for security management over the entity's information system.

e. Design Information Technology Acquisition, Development, and Maintenance - Management should design control activities over the acquisition, development, and maintenance of information technology.

Design the Entity's Information System

11.03 Management should design the entity's information system to respond to the entity's objectives and risks.

11.04 Management designs the entity's information system to obtain and process information to meet each operational process's information requirements and to respond to the entity's objectives and risks. An information system is the people, processes, data, and technology management organizes to obtain, communicate, or dispose of information. An information system represents the life cycle of information used for the entity's operational processes that enables the entity to obtain, store, and process quality information. An information system includes both manual and technology-enabled information processes. Technology-enabled information processes are commonly referred to as information technology. As part of the control environment component, management defines responsibilities, assigns them to key roles, and delegates authority to achieve the entity's objectives. As part of the risk assessment component, management identifies the risks related to the entity and its objectives including its service organizations, the entity's risk tolerance, and risk responses. Management designs control activities to fulfill defined responsibilities and address the identified risk responses for the entity's information system.

11.05 Management designs the entity's information system and the use of information technology by considering the defined information requirements for each of the entity's operational processes.[32] Information technology enables information related to operational processes to become more available to the entity on a timely basis. Additionally, information technology may enhance internal control over

[32] See paras. 13.03 through 13.05 for further discussion of defined information requirements.

security and confidentiality of information by appropriately restricting access. Although information technology implies specific types of control activities, information technology is not a “stand-alone” control consideration. It is an integral part of most control activities.

11.06 Management also evaluates information processing objectives to meet the defined information requirements. Information processing objectives may include:

- Completeness - Transactions that occur are recorded and not understated.
- Accuracy - Transactions are recorded at the correct amount in the right account (and on a timely basis) at each stage of processing.
- Validity - Recorded transactions represent economic events that actually occurred and were executed according to prescribed procedures.

Design Appropriate Types of Control Activities

11.07 Management should design appropriate types of control activities in the entity’s information system.

11.08 Management designs appropriate types of control activities in the entity’s information system to ensure coverage of information processing objectives for operational processes. For information systems, there are two main types of control activities: general and application control activities.

11.09 Information system general controls (entity-wide, system, and application levels) are the policies and procedures that apply to all or a large segment of an entity’s information systems. General controls help ensure the proper operation of information systems by creating the environment for proper operation of application controls. General controls include security management, logical and physical access, configuration management, segregation of duties, and contingency planning.

11.10 Application controls, sometimes referred to as business process controls, are those controls that are incorporated directly into computer applications to help ensure the validity, completeness, accuracy, and confidentiality of transactions and data during application processing.

Application controls include controls over input, processing, output, master file, interface, and data management system controls.

Design the Information Technology Infrastructure

11.11 Management should design control activities over the information technology infrastructure.

11.12 Management designs control activities over the information technology infrastructure to support the completeness, accuracy, and validity of information processing by information technology. Information technology requires an infrastructure in which to operate, including communication networks for linking information technologies, computing resources for applications to operate, and electricity to power the information technology. An entity's information technology infrastructure can be complex. It may be shared by different units within the entity or outsourced either to service organizations or to location-independent technology services (e.g., cloud computing). Management evaluates the objectives of the entity and related risks in designing control activities over the information technology infrastructure.

11.13 Management continues to evaluate changes in the use of information technology and designs new control activities when these changes are incorporated into the entity's information technology infrastructure. Management also designs control activities needed to maintain the information technology infrastructure. Maintaining technology often includes backup and recovery procedures, as well as continuity of operations plans, depending on the risks and consequences of a full or partial power systems outage.

Design Security Management

11.14 Management should design control activities for security management over the entity's information system.

11.15 Management designs control activities for security management over the entity's information system to ensure appropriate access by internal and external sources to protect the entity's information system. Objectives for security management include confidentiality, integrity

and availability. Confidentiality means that data, reports and other outputs are safeguarded against unauthorized access. Integrity means that information is guarded against improper modification or destruction, which includes ensuring information's nonrepudiation and authenticity. Availability means that data, reports, and other relevant information are readily available to users when needed.

11.16 Security management includes the information processes and control activities related to access rights in an entity's information technology, including who has the ability to execute transactions. Security management includes access rights across various levels of data, operating system (system software), network, application, and physical layers. Management designs control activities over access to protect an entity from inappropriate access and unauthorized use of the system. These control activities support appropriate segregation of duties. By preventing unauthorized use of and changes to the system, data and program integrity are protected from malicious intent (e.g., someone breaking into the technology to commit fraud, vandalism, or terrorism) or error.

11.17 Management evaluates security threats to information technology, which can be from both internal and external sources. External threats are particularly important for entities that depend on telecommunications networks and the Internet. External threats have become prevalent in today's highly interconnected business environments, and continual effort is required to address these risks. Internal threats may come from former or disgruntled employees. They pose unique risks because they may be both motivated to work against the entity and better equipped to succeed in carrying out a malicious act as they have greater access to and knowledge of the entity's security management systems and processes.

11.18 Management designs control activities to limit user access to information technology through authorization control activities where a unique user identification or token is authorized by an approved list. These control activities may restrict authorized users to the applications or functions commensurate with their assigned responsibilities, supporting an appropriate segregation of duties. Management designs other control activities to update access rights when employees change job functions or leave the entity. Management also designs control

activities for access rights when different information technology elements are connected to each other.

Design Information Technology Acquisition, Development, and Maintenance

11.19 Management should design control activities over the acquisition, development, and maintenance of information technology.

11.20 Management designs control activities over the acquisition, development, and maintenance of information technology. Management may use the Systems Development Life Cycle (SDLC) framework in designing control activities. An SDLC provides a structure for a new information technology design by outlining specific phases and documenting requirements, approvals, and checkpoints within control activities over the acquisition, development, and maintenance of technology. Through the SDLC, management designs control activities over changes to technology. This may involve requiring authorization of change requests, reviewing the changes, approvals, testing results, and designing protocols to determine whether changes are made properly. Depending on the size and complexity of the entity, development of information technology and changes to the information technology may be included in one SDLC or two separate methodologies. Management evaluates the objectives and risks of the new technology in designing control activities over its SDLC.

11.21 Management may also acquire information technology through packaged software from vendors. Management incorporates into its information technology development methodologies for the acquisition of vendor packages and designs control activities over their selection, ongoing development, and maintenance. Control activities on the development, maintenance, and change of application software prevent unauthorized programs or modifications to existing programs.

11.22 Another alternative is outsourcing the development of information technology to service organizations. As for an SDLC developed internally, management designs control activities to meet objectives and address related risks. Management also evaluates the unique risks that utilizing a service organization presents for the completeness, accuracy, and validity of information submitted to and received from the service organization.

Principle 12 – Implement Control Activities

12.01 Management should implement control activities.

Attributes

12.02 The following attributes contribute to the design, implementation, and operating effectiveness of this principle:

a. Document Responsibilities through Policies - Management should document in policies the internal control responsibilities of the organization.

b. Perform Periodic Review - Management should periodically review the implementation of control activities to determine their continued relevance, redesign them when necessary, and communicate them as appropriate.

Document Responsibilities through Policies

12.03 Management should document in policies the internal control responsibilities of the organization.

12.04 Management documents in policies for each unit its responsibility for an operational process's objectives and related risks, control activity design, implementation, and operating effectiveness.[33] Each unit, with guidance from management, determines based on the objectives and related risks the number of policies necessary for the operational process. Each unit also documents policies in the appropriate level of detail to allow management to effectively monitor the control activity.

[33] See paras. 3.03 through 3.07 for further discussion of units.

Elements of a written policy may include:

- **Timeliness** – Management documents when a control activity and any follow-up corrective actions are performed.

- **Corrective actions** – Management documents the need for appropriate follow-up when matters are identified that require investigation, and establishes responsibility for any corrective actions taken.

- **Competence** – Management documents the level of competency required to perform a control activity. Requirements depend on factors such as the complexity of the control activity and the complexity and volume of the underlying transactions.

12.05 Those in key roles for the unit may further define policies through day-to-day procedures, depending on the rate of change in the operating environment and complexity of the operational process. Procedures may include the timing of when a control activity occurs, and any follow-up corrective actions to be performed by competent personnel if deficiencies are identified.[34] Management communicates to personnel the policies and procedures so that personnel can implement the control activities for their assigned responsibilities.

Perform Periodic Review

12.06 Management should periodically review the implementation of control activities to determine their continued relevance, redesign them when necessary, and communicate them as appropriate.

12.07 Management periodically reviews policies, procedures, and related control activities for continued relevance and effectiveness in achieving the entity's objectives or addressing related risks. If there is a significant change in an entity's process, management reviews this process in a timely manner after the change to ensure the control activities are designed and implemented appropriately. Changes may occur in personnel, operational processes, or information technology. Regulators, Congress, and OMB, may also change either an entity's objectives or how an entity is to achieve an objective. Management considers these changes in its periodic review.

[34] See paras. 17.09 through 17.10 for further discussion of corrective actions.

Information and Communication

Overview

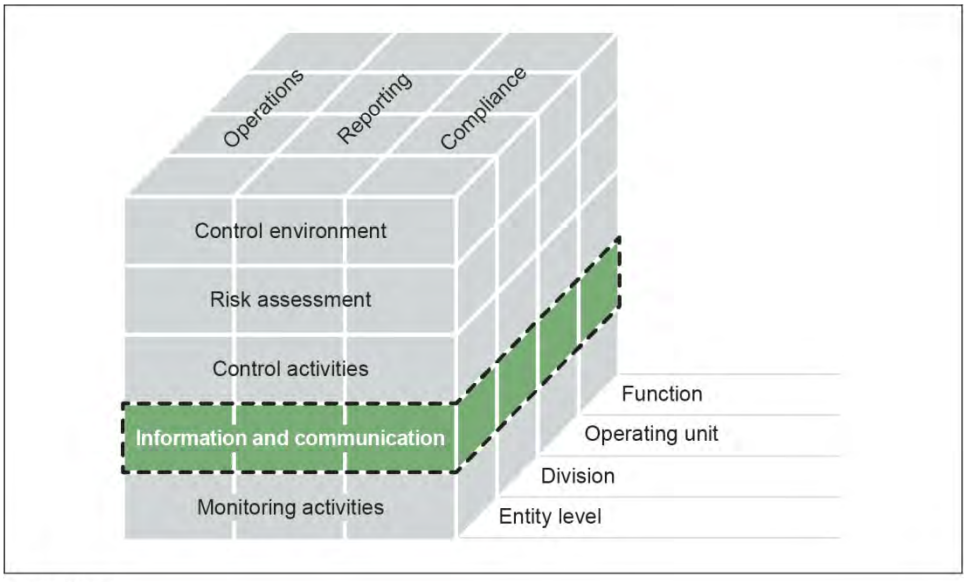
Management uses quality information to support the internal control system. Effective information and communication is vital for an entity to run and control its operations. Entity management needs access to relevant and reliable communication related to internal as well as external events.

Principles

13. Management should use quality information.

14. Management should internally communicate the necessary quality information.

15. Management should externally communicate the necessary quality information.



Source: COSO.

Principle 13 - Use Quality Information

13.01 Management should use quality information.

Attributes

13.02 The following attributes contribute to the design, implementation and operating effectiveness of this principle:

a. Identify Information Requirements - Management should design a process to identify information requirements.

b. Obtain Relevant Data from Reliable Sources - Management should obtain relevant data from reliable internal and external sources on a timely basis based on the identified information requirements.

c. Process Data into Quality Information - Management should process the obtained data into quality information.

Identify Information Requirements

13.03 Management should design a process to identify information requirements.

13.04 Management designs a process that uses the entity's objectives and related risks to identify the information requirements needed to achieve the objectives and address the risks. Information requirements consider the expectations of both internal and external users. Management defines the identified information requirements at the relevant level and requisite specificity for appropriate personnel.

13.05 Management identifies information requirements in an iterative and ongoing process that occurs throughout the performance of an effective internal control system. As change in the entity and its objectives and risks occur, management changes information requirements as needed to meet these modified objectives and address these modified risks.

Obtain Relevant Data from Reliable Sources

13.06 Management should obtain relevant data from reliable internal and external sources on a timely basis based on the identified information requirements.

13.07 Management obtains relevant data from reliable internal and external sources on a timely basis based on the identified information requirements. Relevant data has a logical connection with, or bearing upon, the identified information requirements. Reliable internal and external sources provide data that are reasonably free from error and bias and faithfully represent what they purport to represent. Management evaluates both internal and external sources of data to ensure that they are reliable. Sources of data can be operational, financial, or compliance related. Management obtains data on a timely basis to allow it to be used for effective monitoring.

Process Data into Quality Information

13.08 Management should process the obtained data into quality information.

13.09 Management processes the obtained data into quality information that supports the internal control system. This involves processing data into information and then evaluating the processed information to ensure that it is quality information. Quality information meets the identified information requirements by using relevant data from reliable sources. Quality information is appropriate, current, accurate, accessible, and provided on a timely basis. Management considers these characteristics as well as the information processing objectives in evaluating processed information and makes revisions when necessary to ensure that the information is quality information.[35] Management uses the quality information to make informed decisions and evaluate the entity's performance in achieving key objectives and addressing risks.

13.10 Management processes relevant data from reliable sources into quality information within the organization's information system. An information system is the people, processes, data, and technology

[35] See paras. 11.03 through 11.06 for further discussion of information processing objectives.

management organizes to obtain, communicate, or dispose of information.[36]

Principle 14 - Communicate Internally

14.01 Management should internally communicate the necessary quality information.

Attributes

14.02 The following attributes contribute to the design, implementation and operating effectiveness of this principle:

a. Communicate throughout the Entity - Management should communicate quality information throughout the entity utilizing established reporting lines.

b. Select Appropriate Method of Communication - Management should select appropriate methods to communicate internally.

Communicate throughout the Entity

14.03 Management should communicate quality information throughout the entity utilizing established reporting lines.

14.04 Management communicates quality information throughout the entity utilizing established reporting lines. Quality information is communicated down, across, up, and around reporting lines to all levels of the entity.

14.05 Management communicates quality information down and across reporting lines to enable personnel to perform key roles in achieving objectives, addressing risks, and supporting the internal control system. In these communications, management assigns the internal control responsibilities for key roles.

14.06 Management receives quality information about the entity's operational processes that flows up the reporting lines from personnel to help management achieve the entity's objectives.

[36] See paras. 11.03 through 11.06 for further discussion of information systems.

14.07 The oversight body receives quality information that flows up the reporting lines from management and personnel. Information relating to internal control communicated to the oversight body includes significant matters about the adherence to, changes in, or issues arising from the internal control system. This upward communication is necessary for the effective oversight of internal control.

14.08 Personnel utilize separate reporting lines to go around upward reporting lines when these lines are compromised. Laws and regulations may require entities to establish separate lines of communication, such as whistleblower and ethics hotlines, for communicating confidential information. Management informs employees of these separate reporting lines, how they operate, how they are to be used, and how the information will remain confidential.

Select Appropriate Methods of Communication

14.09 Management should select appropriate methods to communicate internally.

14.10 Management selects appropriate methods to communicate internally. Management considers a variety of factors in selecting an appropriate method of communication. Some factors to consider:

- Audience - The intended recipients of the communication
- Nature of Information - The purpose and type of information being communicated
- Availability - Information readily available to the audience when needed
- Cost - The resources used to communicate the information
- Legal or Regulatory requirements - Requirements by laws and regulations that may impact communication, such as retention requirements

14.11 Based on the consideration of the factors, management selects appropriate methods of communication, such as a written document, whether in hard copy or electronic format, or a face-to-face meeting. Management periodically evaluates the organization's methods of communication to ensure that the organization has the appropriate tools to communicate quality information throughout the entity on a timely basis.

Principle 15 - Communicate Externally

15.01 The organization should externally communicate the necessary quality information.

Attributes

15.02 The following attributes contribute to the design, implementation and operating effectiveness of this principle:

a. Communicate with External Parties - Management should communicate with, and obtain quality information from, external parties utilizing established reporting lines.

b. Select Appropriate Method of Communication - Management should select appropriate methods to communicate externally.

Communicate with External Parties

15.03 Management should communicate with, and obtain quality information from, external parties utilizing established reporting lines.

15.04 Management communicates with, and obtains quality information from, external parties utilizing established reporting lines. Open two-way external reporting lines allow for this communication. External parties include stakeholders,[37] suppliers, contractors, service organizations, regulators, external auditors, government entities, and the general public.

15.05 Management communicates quality information externally through reporting lines so that external parties can help the entity achieve its objectives and address related risks. Management includes in these communications information relating to the organization's events and activities that impact the internal control system.

15.06 Management receives information through reporting lines from external parties. Information communicated to management includes significant matters relating to risks, changes, or issues that impact the entity's internal control system. This communication is necessary for the effective operation of internal control. Management evaluates external

[37] See paras. 2.03 through 2.10 for further discussion of stakeholders.

information received against the characteristics of quality information and information processing objectives and takes any necessary actions to ensure that the information is quality information.[38]

15.07 The oversight body receives information through reporting lines from external parties. Information communicated to the oversight body includes significant matters relating to risks, changes, or issues that impact the entity's internal control system. This communication is necessary for the effective oversight of internal control.

15.08 External parties utilize separate reporting lines when external reporting lines are compromised. Laws and regulations may require entities to establish separate lines of communication, such as whistleblower and ethics hotlines, for communicating confidential information. Management informs external parties of these separate reporting lines, how they operate, how they are to be used, and how the information will remain confidential.

Select Appropriate Methods of Communication

15.09 Management should select appropriate methods to communicate externally.

15.10 Management selects appropriate methods to communicate externally. Management considers a variety of factors in selecting an appropriate method of communication. Some factors to consider:

- Audience - The intended recipients of the communication
- Nature of Information - The purpose and type of information being communicated
- Availability - Information readily available to the audience when needed
- Cost - The resources used to communicate the information
- Legal or Regulatory requirements - Requirements by laws and regulations that may impact communication

[38] See paras. 11.03 through 11.06 for further discussion of information processing objectives.

15.11 Based on the consideration of the factors, management selects appropriate methods of communication, such as a written document, whether in paper or electronic format, or a face-to-face meeting. Management periodically evaluates the organization's methods of communication to ensure that the organization has the appropriate tools to communicate quality information throughout and outside of the entity on a timely basis.

15.12 In the federal government, organizations not only report to Congress and the President but to the general public as well. Organizations need to consider appropriate methods when communicating with such a broad audience.

Monitoring

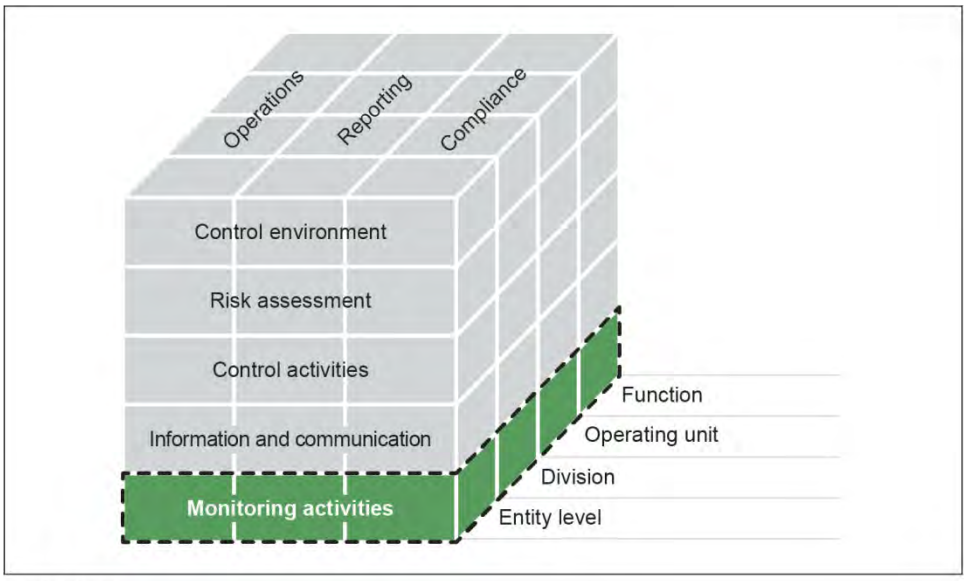
Overview

Finally, since internal control is a dynamic process that has to be adapted continuously to the risks and changes an organization faces, monitoring of the internal control system is essential to help ensure that internal control remains aligned with changing objectives, environment, laws, resources, and risks. Internal control monitoring assesses the quality of performance over time and ensures that the findings of audits and other reviews are promptly resolved. Corrective actions are a necessary complement to control activities in order to achieve objectives.

Principles

16. Management should establish monitoring activities to monitor the internal control system and evaluate the results.

17. Management should ensure identified internal control deficiencies are remediated on a timely basis.



Source: COSO.

Principle 16 - Perform Monitoring Activities

16.01 Management should establish monitoring activities to monitor the internal control system and evaluate the results.

Attributes

16.02 The following attributes contribute to the design, implementation, and operating effectiveness of this principle:

a. Establish a Baseline - Management should establish a baseline for monitoring the internal control system.

b. Monitor Internal Control System - Management should monitor the internal control system through ongoing monitoring and separate evaluations.

c. Evaluate Results - Management should document and evaluate the results of ongoing monitoring and separate evaluations to identify internal control issues.

Establish a Baseline

16.03 Management should establish a baseline for monitoring the internal control system.

16.04 Management establishes a baseline to monitor the internal control system in supporting the entity in achieving its objectives. The baseline is the current state of the internal control system compared against management's design of the internal control system. The baseline represents the difference between the criteria of the design of the internal control system and condition of the internal control system at a specific point in time. In other words, the baseline consists of issues and deficiencies identified in an entity's internal control system.

16.05 Once established, management can use the baseline as criteria in evaluating the internal control system and make changes to reduce the difference between the criteria and condition. Management reduces this difference in one of two ways. Management either changes the design of the internal control system to better address the objectives and risks of the entity or improves the operating effectiveness of the internal control

system. As part of monitoring, management determines when to revise the baseline to reflect changes in the internal control system.

Monitor Internal Control System

16.06 Management should monitor the internal control system through ongoing monitoring and separate evaluations.

16.07 Management monitors the internal control system through the monitoring activities of ongoing monitoring and separate evaluations. Ongoing monitoring is built into the entity's operations, performed continually, and responsive to change. Separate evaluations are used periodically and may provide feedback on the effectiveness of ongoing monitoring.

16.08 Management performs ongoing monitoring of the design and operating effectiveness of the internal control system as part of the normal course of operations. Ongoing monitoring includes regular management and supervisory activities, comparisons, reconciliations, and other routine actions. Ongoing monitoring may include automated tools, which can increase objectivity and efficiency by electronically evaluating controls and transactions.

16.09 Management uses separate evaluations to monitor the design and operating effectiveness of the internal control system at a specific time or of a specific function or process. The scope and frequency of separate evaluations depend primarily on the assessment of risks, effectiveness of ongoing monitoring, and rate of change within the entity and its environment. Separate evaluations may take the form of self-assessments, which include cross operating unit or cross functional evaluations.

16.10 Separate evaluations also include audits and other evaluations that may involve the review of control design and direct testing of internal control. These audits and other evaluations may be mandated by law and are performed by internal auditors, external auditors, the Inspectors General, and other external reviewers. Separate evaluations provide greater objectivity when performed by reviewers who do not have responsibility for the activities being evaluated.

16.11 Management retains responsibility for monitoring the effectiveness of internal control over the assigned processes performed by service organizations. Management uses ongoing monitoring, separate evaluations, or a combination of the two to obtain reasonable assurance over the operating effectiveness of the service organization's internal controls over the assigned process.[39] These monitoring activities related to service organizations may either be performed by management or performed by external parties and reviewed by management.

Evaluate Results

16.12 Management should evaluate and document the results of ongoing monitoring and separate evaluations to identify internal control issues.

16.13 Management evaluates and documents the results of ongoing monitoring and separate evaluations to identify issues in the internal control system. Management utilizes this evaluation to determine the effectiveness of the internal control system. Differences between the results of monitoring activities and the previously established baseline may indicate internal control issues, including undocumented changes in the internal control system or potential internal control deficiencies.

16.14 Management may identify changes in the internal control system that either have occurred or are needed due to changes in the entity and its environment. External parties can also help management identify issues in the internal control system. For example, complaints from the general public and regulator comments may indicate areas in the internal control system that need improvement. Management considers whether current controls address the identified issues and modifies controls if necessary.

Principle 17 – Remediate Deficiencies

17.01 Management should ensure identified internal control deficiencies are remediated on a timely basis.

[39] See the Overview: Service Organizations for further discussion of service organizations.

Attributes

17.02 The following attributes contribute to the design, implementation, and operating effectiveness of this principle:

a. Report Issues - Personnel should report internal control issues to appropriate internal and external parties on a timely basis.

b. Evaluate Issues - Management should evaluate and document internal control issues and determine appropriate corrective actions for internal control deficiencies on a timely basis.

c. Complete Corrective Actions - Management should complete and document corrective actions to remediate internal control deficiencies on a timely basis.

Report Issues

17.03 Personnel should report internal control issues to appropriate internal and external parties on a timely basis.

17.04 Personnel report internal control issues through established reporting lines to the appropriate internal and external parties on a timely basis to enable the entity to timely evaluate those issues.[40]

17.05 Personnel may identify internal control issues while performing their assigned internal control responsibilities. Personnel communicate these issues internally to the person in the key role responsible for the internal control or associated process and to at least one level of management above that individual. Depending on the nature of the issues, personnel may consider reporting certain issues to the oversight body. Such issues may include:

- Issues that cut across the organizational structure or extend outside the organization to service organizations, contractors, or suppliers.
- Issues that may not be remediated due to the interests of management, such as sensitive information regarding fraud or other illegal acts.[41]

[40] See paras. 14.03 through 14.08 for further discussion of internal reporting lines and paras. 15.03 through 15.08 for further discussion of external reporting lines.

[41] See paras. 8.03 through 8.05 for further discussion of fraud.

17.06 Depending on the entity's regulatory or compliance requirements, the entity may also be required to report issues externally to appropriate external parties, such as the legislators, regulators and standard-setting bodies that establish laws, rules, regulations, and standards to which the entity is subject.

Evaluate Issues

17.07 Management should evaluate and document internal control issues and determine appropriate corrective actions for internal control deficiencies on a timely basis.

17.08 Management evaluates and documents internal control issues and determines appropriate corrective actions for internal control deficiencies on a timely basis to ensure an effective internal control system. Management evaluates issues identified through monitoring activities or reported by personnel to determine whether any of the issues rise to the level of an internal control deficiency. Internal control deficiencies require further evaluation and remediation by management. An internal control deficiency can be in the design, implementation, or operating effectiveness of the internal control and its related process.[42] Management determines from the type of internal control deficiency the appropriate corrective actions to remediate the internal control deficiency on a timely basis. Management assigns responsibility and delegates authority to remediate the internal control deficiency.

Complete Corrective Actions

17.09 Management should complete and document corrective actions to remediate internal control deficiencies on a timely basis.

17.10 Management completes and documents corrective actions to remediate internal control deficiencies on a timely basis. Depending on the nature of the deficiency, either the oversight body or management oversees the prompt remediation of deficiencies by communicating the corrective actions to the appropriate level of the organizational structure and delegating authority for completing corrective actions to appropriate

[42] See the Overview: Evaluation of an Internal Control System for further discussion of evaluation of internal control deficiency.

personnel. Management, with oversight from the oversight body, tracks the status of remediation efforts to ensure that they are completed on a timely basis.

Glossary

The following terms are provided to assist in clarifying the *Standards for Internal Control in the Federal Government*. The most relevant paragraph numbers are provided for reference.

Terms

Application control activities - Controls that are incorporated directly into computer applications to help ensure the validity, completeness, accuracy, and confidentiality of transactions and data during application processing; application controls include controls over input, processing, output, master file, interface, and data management system controls (paragraph 11.10)

Application material - Additional information that provides further explanation of the principle and attribute requirements of internal control (Overview: Components, Principles and Attributes)

Baseline - The difference between the criteria of the design of the internal control system and condition of the internal control system at a specific point in time (paragraph 16.04)

Competence - The qualification to carry out assigned responsibilities (paragraph 4.04)

Complementary user entity controls - Controls that management of the service organization assumes, in the design of its service, will be implemented by user entities, and which, if necessary to achieve the control objectives stated in management's description of the service organization's system, are identified as such in that description (Overview: Service Organizations).

Contingency plans - The processes defined to address an organization’s need to respond to sudden personnel changes impacting the organization (paragraph 4.10)

Control activities - The policies, procedures, techniques, and mechanisms that enforce management’s directives to achieve the entity’s objectives and address related risks (paragraph 10.04)

Deficiency - When the design, implementation, or operation of a control does not allow management or personnel, in the normal course of performing their assigned functions, to achieve control objectives and address related risks (Overview: Evaluation of Deficiencies in Internal Control)

Detective control - An activity that is designed to discover when an entity is not achieving an objective or addressing a risk before the entity's operation has concluded and corrects the actions so that the entity achieves the objective or addresses the risk (paragraph 10.07)

Entity-level control - Controls that have a pervasive effect on an organization's internal control system; entity-level controls may include controls related to the entity's risk assessment process, control environment, service organizations, management override, monitoring, and year-end financial reporting (paragraph 10.12)

Fraud - Involves obtaining something of value through willful misrepresentation (paragraph 8.04)

General control activities - The policies and procedures that apply to all or a large segment of an entity's information systems; general controls include security management, logical and physical access, configuration management, segregation of duties, and contingency planning (paragraph 11.09)

Green Book - The commonly used name for the *Standards for Internal Control in the Federal Government* (Overview: Foreword)

Information system - The people, processes, data, and technology management organizes to obtain, communicate, or dispose of information (paragraph 11.04)

Information technology - Technology-enabled information processes (paragraph 11.04)

Inherent risk - The risk to an entity in the absence of management's response to the risk (paragraph 7.05)

Internal control - The plans, methods, policies, and procedures used to fulfill the mission, strategic plan, goals, and objectives of the organization (Overview: Definition of Internal Control)

Internal control system - A continuous built-in component of operations, effected by people, that provides reasonable assurance, not absolute assurance, that an organization's objectives will be achieved (Overview: An Internal Control System)

Key role - A position in an organizational structure that is assigned an overall responsibility of an entity (paragraph 3.09)

Likelihood of occurrence - The possibility that a risk will occur (paragraph 7.09)

Magnitude of impact - Magnitude of deficiency that could result from the risk and is affected by factors such as the size, pace, and duration of the risk's impact (paragraph 7.09)

Management - Entity personnel who are directly responsible for all activities of an organization, including the design, implementation, and operating effectiveness of an entity's internal control system (Overview: Roles in an Internal Control System)

Organizational structure - The operating units, operational processes, and other structures management uses to achieve objectives (Overview: Internal Control and the Entity)

Oversight body - Those responsible for overseeing management's design, implementation, and operation of an internal control system (Overview: Roles in an Internal Control System)

Performance measure - A means of evaluating the entity's performance in achieving objectives (paragraph 6.09)

Policies - Statements of responsibility for an operational process's objectives and related risks, control activity design, implementation, and operating effectiveness (paragraph 12.04)

Preventive control - An activity that is designed to prevent an entity from failing to achieve an objective or addressing a risk (paragraph 10.07)

Qualitative objectives - Subjective objectives where management may need to design performance measures that indicate a level or degree of performance, such as milestones (paragraph 6.09)

Quality information - Information from relevant and reliable data that is appropriate, current, accurate, accessible, provided on a timely basis, and meets the need of identified information requirements (paragraph 13.09)

Quantitative objectives - Calculable objectives where performance measures may be a targeted percentage or numerical value (paragraph 6.09)

Reasonable assurance - A high degree of confidence, but not absolute confidence (Overview: An Internal Control System)

Reporting lines - Communication lines at all levels of the organization that provide methods of communication that can flow down, across, up, and around the organizational structure (paragraph 3.06)

Residual risk - The risk that remains after management's response to inherent risk (paragraph 7.05)

Risk - The possibility that an event will occur and adversely affect the achievement of objectives (paragraph 7.03)

Risk tolerance - The acceptable level of variation in performance relative to the achievement of objectives (paragraph 6.11)

Security management - The information processes and control activities related to access rights in an entity's information technology (paragraph 11.16)

Segregation of duties - The separation of the authority, custody and accounting of an operation (paragraph 10.17)

Service organization - An external party that performs operational process(es) for an entity (Overview: Service Organizations)

Succession plans - The processes that address an organization's need to replace competent personnel over the long term (paragraph 4.10)

Transaction control activities - Actions built directly into operational processes to support the organization in achieving its objectives and addressing related risks (paragraph 10.13)

A New Day for Federal Service

UNITED STATES OFFIC OF PERSONNEL MANAGEMENT
January 2014

A MESSAGE FROM THE DIRECTOR OF THE U.S. OFFICE OF PERSONNEL MANAGEMENT (OPM)

I am pleased to submit the annual Federal Equal Opportunity Recruitment Program (FEORP) Report for Fiscal Year (FY) 2012 to Congress. Prepared in accordance with the requirements of title 5, United States Code, section 7201, this report provides statistical data on employment in the Federal workforce (FW) and highlights human capital practices Federal agencies are using to recruit, develop, and retain talent.

Findings for FY 2012

The number of minorities in the FW increased by 1.2 percent from 662,991 in FY 2011 to 670,853 in FY 2012. The FW is 17.9 percent Black, 8.2 percent Hispanic, 5.8 percent Asian/Pacific Islander, 1.7 percent American Indian/Alaska Native, 1.0 percent Non-Hispanic/Multi-Racial, and 65.4 percent White. Minorities as a whole constituted 34.6 percent of the FW. Men comprised 56.5 percent of all Federal permanent employees and women 43.5 percent. Notably, the Federal government still faces challenges with regard to the full employment of Hispanics, as they constitute 8.2 percent of the FW.

The Senior Executive Service (SES) is now more diverse than ever. The SES is 10.5 percent Black, 4.1 percent Hispanic, 3.3 percent Asian/Pacific Islander, 1.4 percent American Indian/Alaska Native, and 0.6 percent Non-Hispanic/Multi-Racial. In addition, women now make up 33.5 percent of the SES.

OPM Initiatives

Since 2009 President Obama has signed various Executive Orders aimed at promoting a diverse and inclusive Federal workforce. On August 19, 2011, the President signed and issued Executive Order 13583, *Establishing a Coordinated Government-Wide Initiative to Promote Diversity and Inclusion in the Federal Workforce*, in order to promote the Federal workplace as a model of equality, diversity, and inclusion. On November 17, 2011, OPM issued the Government-Wide Diversity and Inclusion Strategic Plan, which identified three goals for implementation by agencies to include Workforce Diversity, Workplace Inclusion, and Sustainability. Fifty-seven agencies submitted agency-specific Diversity and Inclusion Strategic Plans, and they continue to actively implement those plans with guidance from OPM.

On November 9, 2009, President Obama signed Executive Order 13518, Employment of Veterans in the Federal Government, which established the Veterans Employment Initiative. In the first full year, the Executive Branch of the Government hired the highest percentage of veterans in more than 20 years.

In addition, OPM is committed to assisting agencies in implementing Executive Order 13548, Increasing Federal Employment of Individuals with Disabilities. The goal under Executive Order 13548 is to hire 100,000 people with disabilities in all job series and at all

grade levels by 2015 in order to enable the Federal Government to tap into this rich source of diverse talent. Initial FY 2012 data indicates an increase in the hiring of people with disabilities as compared to 2011, and in FY 2011, Americans with disabilities, including veterans who are 30 percent or more disabled, made up 14.7 percent of new hires, a 20-year high.

To address difficulties recruiting and hiring students, recent graduates and Veterans, President Obama signed Executive Order 13562, Recruiting and Hiring Students and Recent Graduates, on December 27, 2010. This executive order establishes the Pathways Program, consisting of three excepted-service programs tailored to recruit, hire, develop, and retain students and recent graduates to include veterans. Under this program, OPM is conducting outreach to, among others, Historically Black Colleges and Universities, Hispanic Serving Institutions, Tribal Colleges and Universities, and Asian American and American Indian/Alaska Native Pacific Islander Serving Institutions. Additionally, through the creation of the *Governmentwide Veterans Recruitment and Employment Strategic Plan for FY 2010–FY 2012*, OPM is helping agencies to meet the overarching goal to increase the percentage of veterans hired in the Federal Executive Branch.

Due to the challenge of underrepresentation of Hispanics in the Federal workforce, OPM renewed the Hispanic Council on Federal Employment (Council) through 2014. This Council, which brings together leaders from the Hispanic community, Human Resources (HR), Equal Employment Opportunity (EEO), and Diversity and Inclusion (D&I), is actively advising the Director of OPM on specific practices and recommendations related to the recruitment, hiring, retention, and advancement of Hispanics in the Federal workplace.

Finally, the OPM is working with the Chief Human Capital Officers (CHCO) Council and agencies to assess current and emerging skills gaps and develop strategies to close these gaps in mission-critical occupations and skills areas that have the greatest impact on government-wide, and agency-specific, performance. The desired outcomes of this effort are: (1) increased proficiency levels in targeted skills areas through training, and (2) institutionalized processes for identifying and addressing skills gaps (government-wide and agency-specific).

These efforts are designed to provide agencies with the foundation and support they need to advance the Federal government's goals - to recruit, hire, retain, and develop qualified candidates for Federal service. OPM will continue to work with agencies to ensure that they have the tools required to succeed in creating and developing a diverse and inclusive Federal workforce that is a model for the 21st Century.

Katherine L. Archuleta
Director

TABLE OF CONTENTS

EXECUTIVE SUMMARY

On August 18, 2011, President Obama signed Executive Order 13583, Establishing a Coordinated Government-Wide Initiative to Promote Diversity and Inclusion in the Federal Workforce. As a result, OPM in consultation with the Office of Management and Budget (OMB) and the Equal Employment Opportunity Commission (EEOC) developed a Government-Wide Diversity and Inclusion Strategic Plan (Plan) that provides guidance to agencies on implementing the President's Executive Order (the Executive Order). The Plan provides a shared direction, encourages commitment, and creates alignment so agencies can approach their workplace diversity and inclusion efforts in a coordinated, collaborative, and integrated manner. Three key goals provide a path for successful agency diversity and inclusion efforts: workforce diversity, workplace inclusion, and sustainability.

On March 16, 2012, 120 days after the issuance of the Government-Wide Diversity and Inclusion Strategic Plan, agencies were required to submit agency-specific Diversity and Inclusion Strategic Plans, consistent with the government-wide plan. Fifty-seven departments and agencies submitted plans, and OPM continues to conduct Feedback Assistance Roundtables (FAR), a three phased review process, with each agency's Chief Human Capital Officer (CHCO), Equal Employment Opportunity (EEO) Director, and Diversity and Inclusion (D&I) Director, where one exists. During Phase I of the FAR review, which was completed in July 2012, agencies met in clusters of three (3) in the OPM Innovation Lab to share successful practices and address challenges. OPM is now conducting Phase II of the FAR review, which entails meeting with each agency individually and discussing progress on the agency-specific Diversity and Inclusion Strategic Plans. Phase III will begin approximately 18 months after the submission of the plans and will include metric analysis for each agency, related to the three goals of diversity, inclusion, and sustainability.

In addition, the Executive Order directed agencies to identify and adopt best practices to promote diversity and inclusion and to identify and remove any barriers to equal employment opportunity, consistent with merit system principles and applicable law. To this end, agencies were asked to submit their successful or promising practices from the agency-specific Diversity and Inclusion Strategic Plans. This report provides information about those successful practices that agencies discussed during the FAR process or submitted in their FEORP reports.

Against this backdrop, we present the data for the FY 2012 FEORP Report.

FEORP Composition of Federal Workforce at a Glance

	Representation of the Federal Workforce		Representation in the Senior Executive Service	
	FY 2012	FY 2011	FY 2012	FY 2011
Men	56.5	56.4	66.5	67.7
Women	43.5	43.6	33.5	32.3
Hispanic or Latino	8.2	8.1	4.1	4.1
White	65.4	65.9	80.6	81.2
Black or African American	17.9	17.8	10.5	10.1
Asian/Pacific Islander	5.8	5.6	3.3	3.2
American Indian/Alaska Native	1.7	1.7	1.4	1.1
Non-Hispanic/Multi-Racial	1.0	0.8	0.6	0.5

Major findings in the FY 2012 FEORP Report are:

- The number of minorities in the FW increased by 1.2 percent from 662,991 in FY 2011 to 670,853 in FY 2012. The FW is 17.9 percent Black, 8.2 percent Hispanic, 5.8 percent Asian/Pacific Islander, 1.7 percent American Indian/Alaska Native, 1.0 percent Non-Hispanic/Multi-Racial, and 65.4 percent White. Minorities as a whole constituted 34.6 percent of the FW.
- Black employees represented 17.9 percent (346,824) of the permanent FW as of September 30, 2012, compared to 17.8 percent in FY 2011.
- Hispanic employees represented 8.2 percent (159,639) of the permanent FW as of September 30, 2012, compared to 8.1 percent in FY 2011.
- Asian/Pacific Islander employees represented 5.8 percent (112,261) of the permanent FW as of September 30, 2012, compared to 5.6 percent in FY 2011.
- American Indian/Alaska Native employees represented 1.7 percent (33,171) of the permanent FW as of September 30, 2012, compared to 1.7 percent in FY 2011.
- White employees represented 65.4 percent (1,270,362) of the permanent FW as of September 30, 2012, compared to 65.9 percent in FY 2011.
- Non-Hispanic Multi-Racial employees represented 1.0 percent (18,958) of the permanent FW as of September 30, 2012, compared to 0.8 percent in FY 2011.
- Women comprised 43.5 percent (844,223) of all Federal permanent employees as of September 30, 2012, compared to 43.6 percent in FY 2011.
- Men comprised 56.5 percent (1,096,992) of all Federal permanent employees as of September 30, 2012, compared to 56.4 percent in FY 2011.
- The percentage of minorities in the Senior Executive Service (SES) increased by 0.9 percent from 19 percent in FY 2011 to 19.9 percent in FY 2012. The SES is 10.5 percent Black, 4.1 percent Hispanic, 3.3 percent Asian/Pacific Islander, 1.4 percent American Indian/Alaska Native, and 0.6 percent Non-Hispanic/Multi-racial.
- The percentage of women in the Senior Executive Service (SES) increased by 1.2 percent from 32.3 percent in FY 2011 to 33.5 percent in FY 2012.

Federal Agencies' FEORP Report Submissions

In an effort to consolidate reporting requirements that necessitate similar information and provide meaningful guidance to the agencies, the OPM once again requested that Federal agencies jointly submit their FEORP Report and their Hispanic Employment Report, as required by Executive Order 13171 of October 12, 2000. Agencies were provided with the opportunity to include successful practices and planned activities that have been shown to improve the recruitment, career development, and retention of Hispanics, as well as women and other minorities. OPM also requested data regarding mentoring programs, leadership development programs, D&I Councils, and D&I training.

Agency successful practices can be found in the section titled *Agency FEORP Current Practices* on page 72 of this report.

DATA COVERAGE AND DEFINITIONS

On-board Federal employment statistics used in this report are as of September 30, 2011. All data are produced from OPM's Central Personnel Data File (CPDF). The FW referred to in this report is not the entire FW, but rather only permanent employees in those non-postal Federal Executive Branch agencies participating in the CPDF. This report covers workers in all pay plans including General Schedule and Related (GSR) pay plans, non-GSR pay plans, blue-collar pay plans, and employees at Senior Pay levels.

All references made to the General Schedule pay plan in this report are to General Schedule and Related (GSR) pay plans.

Only those agencies with 500 or more permanent employees are displayed in this report.

Non-Hispanic/Multi-Racial is defined as Non-Hispanic and of more than one race.

Senior Pay level employment includes employees in the Senior Executive Service (SES), Senior Foreign Service, and other employees earning salaries above grade 15, step 10 of the General Schedule, but excludes those employees under the Executive Schedule (pay plan EX).

The **Civilian Labor Force** (**CLF)** percentages for each minority group presented in this report are derived from the Bureau of Labor Statistics' (BLS) Current Population Survey (CPS). The CPS data, which is a monthly survey of households that is conducted by the Bureau of the Census for BLS, cover non-institutionalized individuals 16 years of age or older, employed or unemployed, U.S. citizens and non-U.S. citizens. Regarding multi-racial persons, the BLS designation "Two or More Races, Both Sexes" provides the data source for the multi-racial CLF percent.

The **Relevant Civilian Labor Force (RCLF)** is the CLF data that are directly comparable (or relevant) to the occupational population being considered in the FW. The RCLF is the benchmark used to measure individual Federal agencies' minority representation relative to their representation in that occupational category. In this Report, the RCLF is presented for each occupational category in the sections titled "Employment by Occupational Category." For further info on the RCLF, please see the U.S. Census Bureau Equal Employment Opportunity (EEO) Tabulation at http://www.census.gov/people/eeotabulation/about/page_c.html

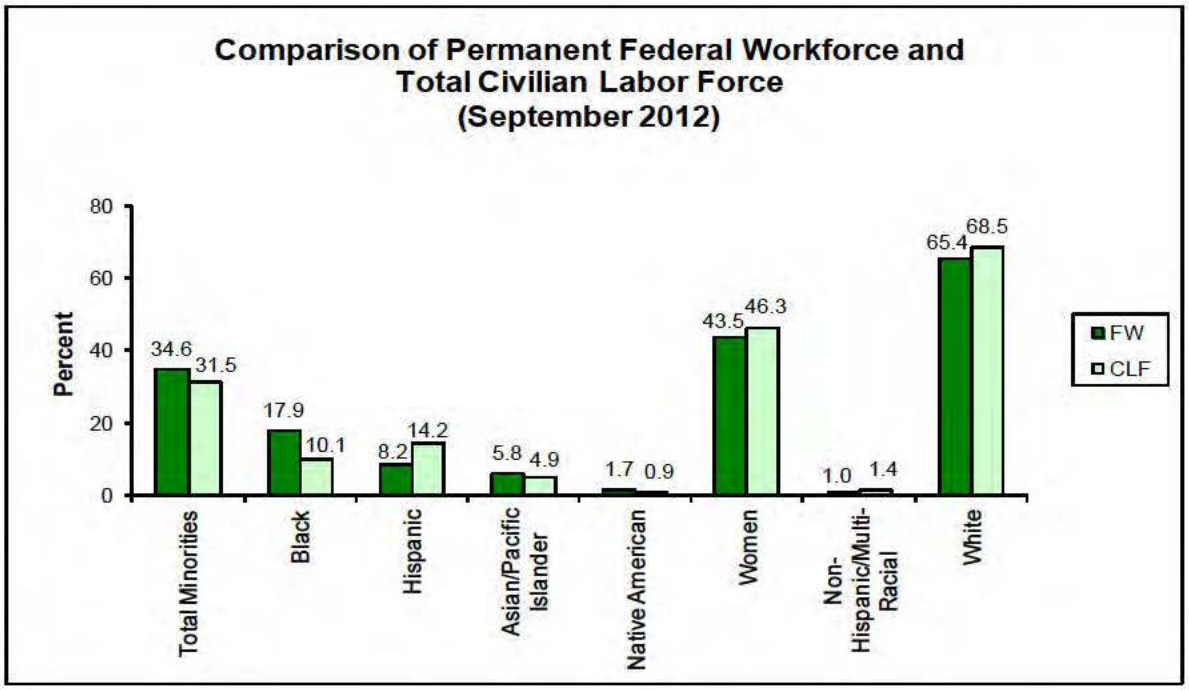
Underrepresentation, as defined in 5 CFR, section 720.202, means a situation in which the number of women or members of a minority group within a category of civil service employment constitutes a lower percentage of the total number of employees within the employment category than the percentage of women or the minority group constitutes within the CLF of the United States.

Occupational categories discussed in this report are white collar and blue collar. The white-collar category contains Professional, Administrative, Technical, Clerical or "Other" white-collar occupations. Professional occupations typically require a baccalaureate or professional degree and, along with Administrative occupations, are the usual sources for selections to senior management and executive positions. Positions in Technical, Clerical, Other, and blue-collar occupations usually are limited to lower grades, with limited opportunity for promotion to management levels. Advancement in these occupations often depends on individual attainment of further education or advanced skills. Employment data in this report are presented by occupational category and grade to provide a more informative profile.

NOTE: STATISTICS IN THIS REPORT MAY VARY FROM OTHER FEORP RELEASES BECAUSE OF DIFFERENCES IN COVERAGE (E.G., AGENCY, WORK SCHEDULE, TENURE, AND DATES). ALSO, PERCENTAGES SHOWN IN THIS REPORT MAY NOT ADD TO TOTALS OF 100 DUE TO INDEPENDENT ROUNDING.

FEDERAL WORKFORCE

TOTAL FEDERAL WORKFORCE EMPLOYMENT[1]



The number of minorities in the FW increased by 1.2percent from 662,991 to 670,853 in FY 2012.

- Blacks represented 17.9 percent (346,824) of the FW in 2012 and 17.8 percent (345,679) in FY 2011. The representation of Blacks in the CLF was 10.1 percent in 2012 and 2011.
- Hispanics represented 8.2 percent (159,639) of the FW in 2012, compared to 8.1 percent (157,648) in FY 2011. The representation of Hispanics in the CLF[2] was 14.2 percent in 2012, compared to 13.6 in 2011.
- Asian/Pacific Islanders represented 5.8 percent (112,261) of the FW in 2012, compared to 5.6 percent (109,871) in FY 2011. The representation of Asians/Pacific Islanders in the CLF[3] was 4.9 percent in 2012, compared to 4.4 in 2011.

---

[1] Detail percentages may not add to total due to rounding.

[2] Although Hispanics, taken as a whole, make up 14.2 percent of the Civilian Labor Force (CLF), that number drops to 10.8 percent of the CLF when only U.S. citizens (including those in Puerto Rico) are counted. (Citizenship is a requirement for most Federal positions.) Citizenship-based CLF calculations are based on the Equal Employment Opportunity (EEO) Tabulation of 5-year ACS data.

[3] Although Asian/Pacific Islanders make up 4.9 percent of the Civilian Labor Force (CLF), that number drops to 3.6 percent of the CLF, when only U.S. citizens are counted. As noted above, citizenship is a requirement for most Federal positions. Citizenship-based CLF calculations are based on the Equal Employment Opportunity (EEO) Tabulation of 5-year ACS data.

- American Indian/Alaska Natives represented 1.7 percent (33,171) of the FW in 2012 and 1.7 percent (33,761) in FY 2011. American Indian/Alaska Natives representation in the CLF was 0.9 percent in 2012, compared to 0.7 in 2011.
- Non-Hispanic Multi-Racial employees represented 1.0 percent (18,958) of the FW in 2012 compared to 0.8 (16,032) in FY 2011. The representation of Non-Hispanic Multi-Racial employees in the CLF was 1.7 percent in 2012, compared to 1.2 in 2011.
- White employees represented 65.4 percent (1,270,362) of the permanent FW as of September 30, 2012, compared to 65.9 (1,281,659). The representation of White employees in the CLF was 68.5 percent in 2012, compared to 70.0 percent in 2011.
- Women represented 43.5 percent (844,223) of the FW in 2012, compared to 43.6 percent (848,257) in FY 2011. The representation of women in the CLF was 46.3 percent in 2012, and the same in 2011.

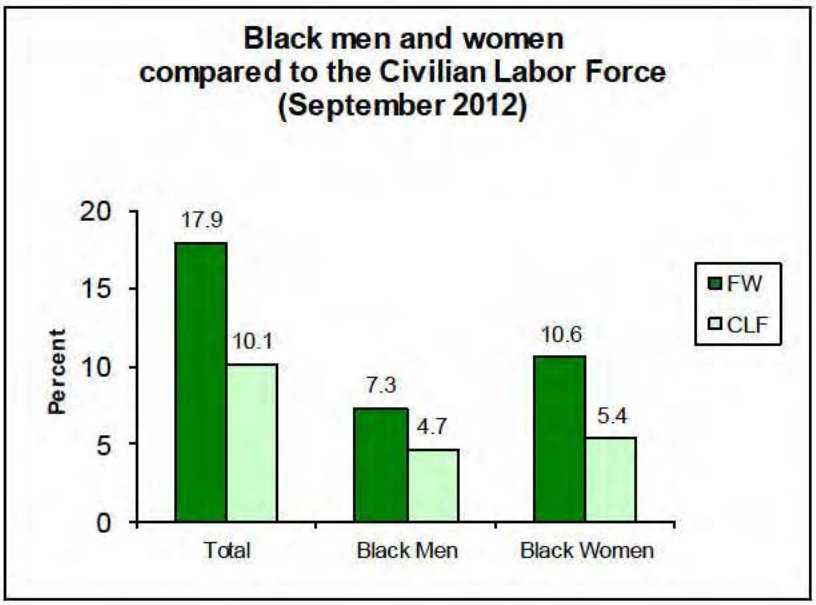
BLACKS IN THE FEDERAL WORKFORCE

BLACK EMPLOYMENT

Black employees represented 17.9 percent (346,824) of the permanent FW as of September 30, 2012 and 17.8 percent in FY 2011.

Black men represented 7.3 percent of the FW in FY 2012 and 7.2 percent in FY 2011.

Black women represented 10.6 percent of the FW in FY 2012 and 10.6 percent in FY 2011.



BLACK EMPLOYMENT BY OCCUPATIONAL CATEGORY

Black employment in professional occupations increased by 1,404, to 52,740 in FY 2012, from 51,336 in FY 2011. Blacks represented 10.7 percent of all Federal employees in this occupational category in FY 2012, compared to 10.6 percent in FY 2011.

Black employment in administrative occupations increased by 1,272 to 135,113 in FY 2012, from 133,841 in FY 2011. Blacks represented 18.4 percent of all Federal employees in this occupational category in FY 2012, compared to 18.3 percent in FY 2011.

2012	Black Employment	Percent of FW
Counts and Percentages of Blacks based on All Employees in Each Occupational Category (September 2012)		
Professional	52,740	10.7
Administrative	135,113	18.4
Technical	80,540	24.2
Clerical	33,242	27.4
Other	11,053	14.5
White-Collar (WC)	312,688	17.8
Blue-Collar (BC)	34,136	18.4
Total (WC + BC)	346,824	17.9

Black employment in technical occupations decreased by 389 to 80,540 in FY 2012, from 80,929 in FY 2011. Blacks represented 24.2 percent of all Federal employees in this occupational category in FY 2012, compared to 24 percent in FY 2011.

Black employment in clerical occupations decreased by 552 to 33,242 in FY 2012, from 33,794 in FY 2011. Blacks represented 27.4 percent of all Federal employees in this occupational category in FY 2012, compared to 27.3 percent in FY 2011.

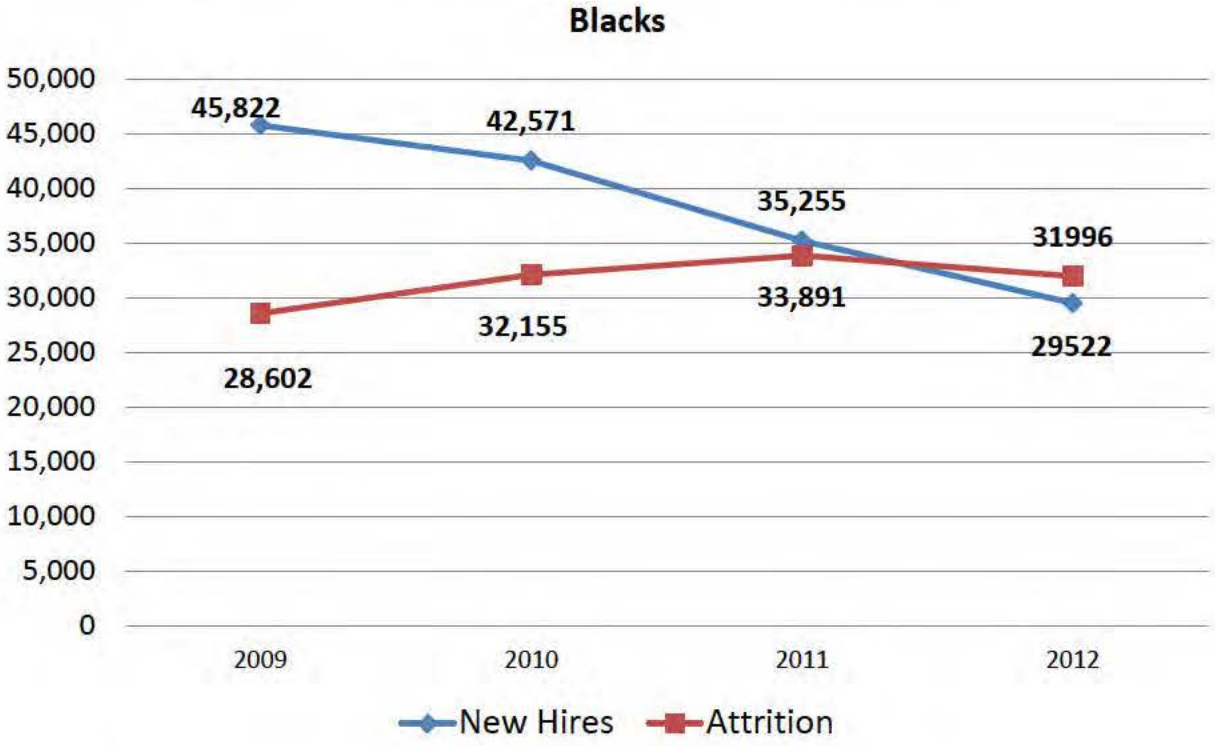
Black employment in "other" white-collar occupations decreased by 54 to 11,053 in FY 2012 from 11,107 in FY 2011. Blacks represented 14.5 percent of all Federal employees in this occupational category in FY 2012, compared to 14.4 in FY 2011.

Black employment in white-collar occupations increased by 1,681 to 312,688 in FY 2012 from 311,007 in FY 2011. Blacks represented 17.8 percent of all Federal employees in this occupational category in FY 2012, compared to 17.7 in FY 2011.

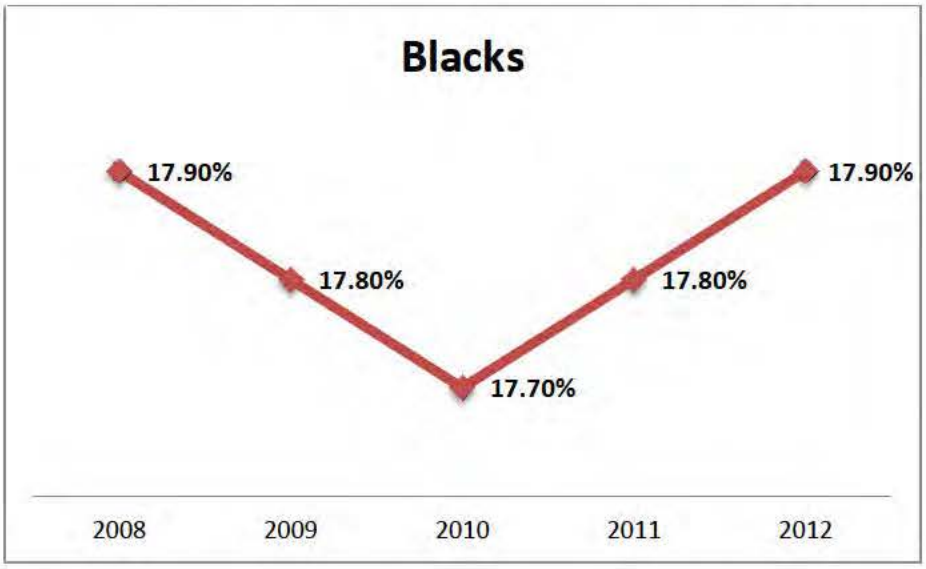
Black employment in blue-collar occupations decreased by 536, to 34,136 in FY 2012 from 34,672 in FY 2011. Blacks represented 18.4 percent of all Federal employees in this occupational category in FY 2012, as compared to 18.5 in FY 2011.

TRENDS

New Hires compared to Attrition Government-Wide[4]



Representation in the Federal Workforce over a 5-year period



[4] The New Hires compared to Attrition chart does not include Transfers In, nor does it include Transfers Out. Furthermore, the Judicial Branch is entirely excluded and some Executive Branch agencies are not included. Please see data notes for details.

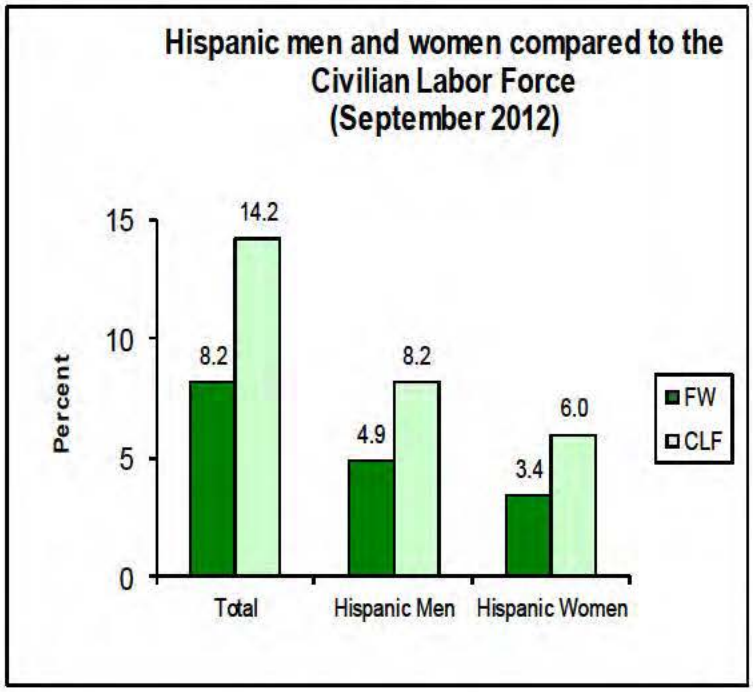
HISPANICS IN THE FEDERAL WORKFORCE

HISPANIC EMPLOYMENT

Hispanic employment represented 8.2 percent (159,639) of the permanent FW as of September 30, 2012 and 8.1 percent in FY 2011.

Hispanic men represented 4.9 percent of the permanent FW in FY 2012 and 4.8 percent in FY 2011.

Hispanic women represented 3.4 percent of the permanent FW in FY 2012 and 3.3 percent in FY 2011.



HISPANIC EMPLOYMENT BY OCCUPATIONAL CATEGORY

Hispanic employment in professional occupations increased by 839 to 25,746 in FY 2012 from 24,907 in FY 2011. Hispanics represented 5.2 percent of all Federal employees in this occupational category in FY 2012, compared to 5.1 in FY 2011.

Hispanic employment in administrative occupations increased by 1,080 to 59,736 in FY 2012 from 58,656 in FY 2011. Hispanics represented 8.1 percent of all Federal employees in this occupational category in FY 2012, compared to 8 percent in FY 2011.

Hispanic employment in technical occupations increased by 255 to 30,310 in FY 2012 from 30,055 in FY 2011. Hispanics represented 9.1 percent of all Federal employees in this occupational category in FY 2012, compared to 8.9 percent in FY 2011.

2012	Hispanic Employment	Percent of FW
Counts and Percentages of Hispanics based on All Employees in Each Occupational Category (September 2012		
Professional	25,746	5.2
Administrative	59,736	8.1
Technical	30,310	9.1
Clerical	13,608	11.2
Other	16,100	21.1
White-Collar (WC)	145,500	8.3
Blue-Collar (BC)	14,139	7.6
Total (WC + BC)	159,639	8.2

Hispanic employment in clerical occupations decreased by 29 to 13,608 in FY 2012 from 13,637 in FY 2011. Hispanics represented 11.2 percent of all Federal employees in this occupational category in FY 2012, compared to 11 percent in FY 2011.

Hispanic employment in "other" white-collar occupations decreased by 25 to 16,100 in FY 2012 from 16,125 in FY 2011. Hispanics represented 21.1 percent of all Federal employees in this occupational category in FY 2012, compared to 20.8 in FY 2011.

Hispanic employment in white-collar occupations increased by 2,120 to 145,500 in FY 2012 from 143,380 in FY 2011. Hispanics represented 8.3 percent of all Federal employees in this occupational category in FY 2012, compared to 8.2 percent in FY 2011.

Hispanic employment in blue-collar occupations decreased by 129 to 14,139 in FY 2012 from 14,268 in FY 2011. Hispanics represented 7.6 percent of all Federal employees in this occupational category in FY 2012, same as in FY 2011.

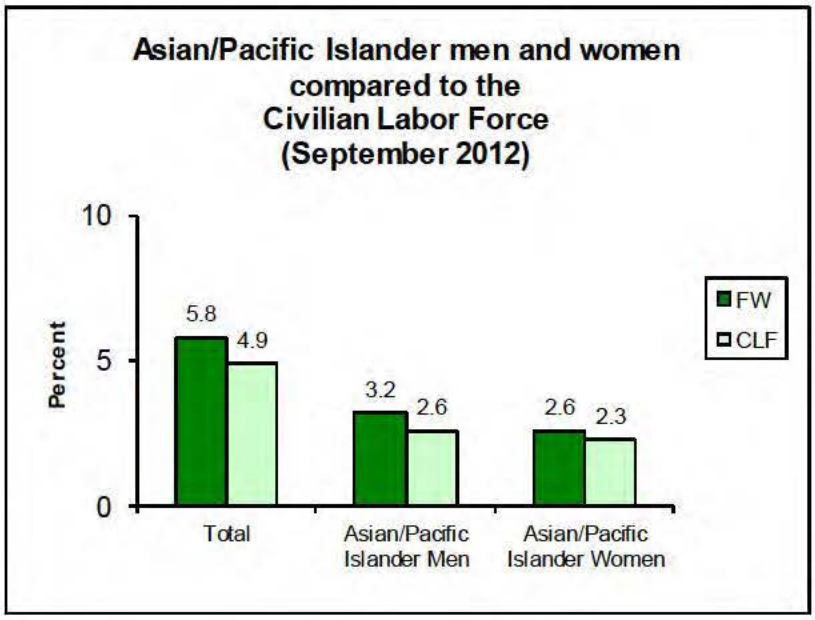
ASIAN/PACIFIC ISLANDERS IN THE FEDERAL WORKFORCE

ASIAN/PACIFIC ISLANDER EMPLOYMENT

Asian/Pacific Islander employees represented 5.8 percent (112,261) of the permanent FW as of September 30, 2012 and 5.6 percent in FY 2011.

Asian/Pacific Islander men represented 3.2 percent of the FW in FY 2012 and 3.1 percent in FY 2011.

Asian/Pacific Islander women represented 2.6 percent of the FW in FY 2012 and 2.6 percent in FY 2011.



ASIAN/PACIFIC ISLANDER EMPLOYMENT BY OCCUPATIONAL CATEGORY

Asian/Pacific Islander employment in professional occupations increased by

1,426 to 45,462 in FY 2012, from 44,036 in FY 2011. Asian/Pacific Islanders represented 9.2 percent of all Federal employees in this occupational category in FY 2012, compared to 9.1 percent in FY 2011.

2012	Asian/Pacific Islander Employment	Percent of FW
Counts and Percentages of Asian/Pacific Islanders based on All Employees in Each Occupational Category (September 2012)		
Professional	45,462	9.2
Administrative	33,541	4.6
Technical	14,867	4.5
Clerical	5,950	4.9
Other	2,118	2.8
White-Collar (WC)	101,938	5.8
Blue-Collar (BC)	10,323	5.6
Total (WC + BC)	112,261	5.8

Asian/Pacific Islander employment in administrative occupations increased by 935 to 33,541 in FY 2012 from 32,606 in FY 2011. Asian/Pacific Islanders represented 4.6 percent of Federal employees in this occupational category in FY 2012, compared to 4.5 percent in FY 2011.

Asian/Pacific Islander employment in technical occupations increased by 37 to 14,867 in FY 2012 from 14,830 in FY 2011. Asian/Pacific Islanders represented 4.5 percent of all Federal employees in this occupational category in FY 2012, compared to4.4 in FY 2011.

Asian/Pacific Islander employment in clerical occupations decreased by 64 to 5,950 in FY 2012 from 6,014 in FY 2011. Asian/Pacific Islanders represented 4.9 percent of all Federal employees in this occupational category in FY 2012, same as in FY 2011.

Asian/Pacific Islander employment in "other" white-collar occupations increased by 52 to 2,118 in 2012 from 2,066 in 2011. Asian/Pacific Islanders represented 2.8 percent of all Federal employees in this occupational category in FY 2012, compared to 2.7 in FY 2011.

Asian/Pacific Islander employment in white-collar occupations increased by 2.386 to 101,938 in FY 2012 from 99,552 in FY 2011. Asian/Pacific Islanders represented 5.8 percent of all Federal employees in this occupational category in FY 2012, compared to 5.7 in FY 2011.

Asian/Pacific Islander employment in blue-collar occupations increased by 4 to 10,323 in FY 2012 from 10,319 in FY 2011. Asian/Pacific Islanders represented 5.6 percent of all Federal employees in this occupational category in FY 2012, compared to 5.5 in FY 2011.

TRENDS

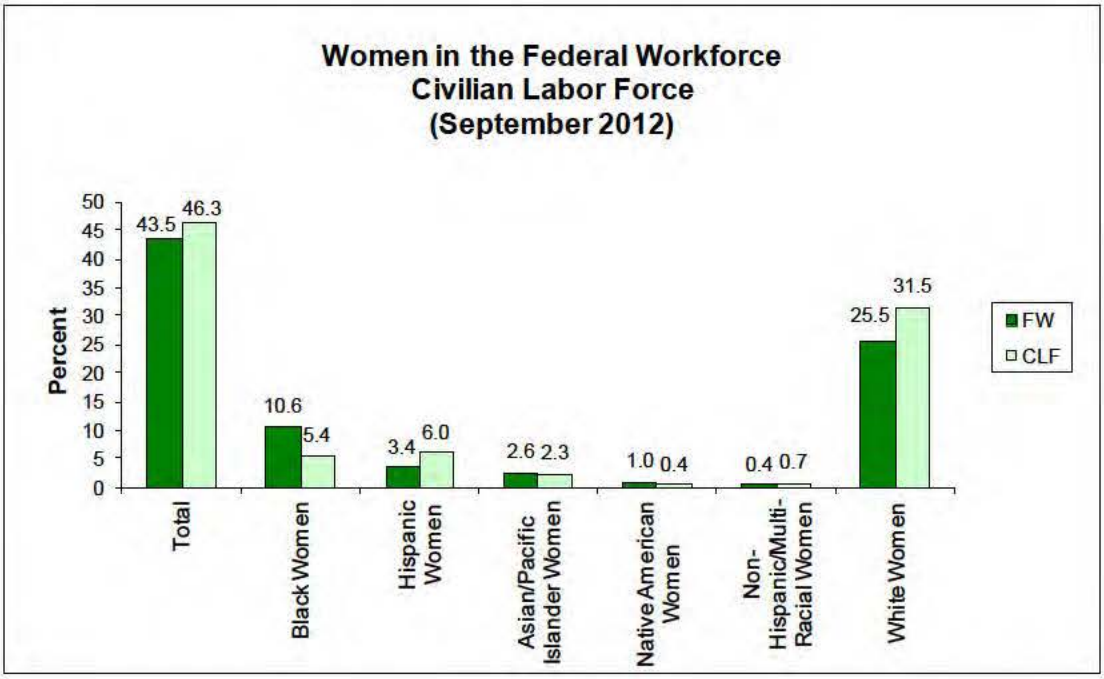
WOMEN IN THE FEDERAL WORKFORCE

EMPLOYMENT OF WOMEN



- Women represented 43.5 percent (844,223) of the permanent FW as of September 30, 2012.
- In FY 2011, Women made up 43.6 percent of the FW.
- Black women represented 10.6 percent of the FW in FY 2012 and FY 2011.
- Hispanic women represented 3.4 percent of the FW in FY 2012 and 3.3 percent in FY 2011.
- Asian/Pacific Islander women represented 2.6 percent of the FW in FY 2012 and FY 2011.
- American Indian/Alaska Native women represented 1.0 percent of the FW in FY 2012 and FY 2011.
- Non-Hispanic Multi-Racial women represented 0.4 percent of the FW in FY 2012 and FY 2011.
- White women represented 25.5 percent of the FW in FY 2012, compared to 25.8 percent in FY 2011.

WOMEN BY OCCUPATIONAL CATEGORY

The number of women in professional occupations increased by 4,572 to 226,589 in FY 2012 from 222,017 in FY 2011. Women represented 46.1 percent of all professional Federal employees in FY 2012, compared to 45.6 percent in FY 2011.

The number of women in administrative occupations decreased by 2,552 to 316,538 in FY 2012 from 319,090 in FY 2011. Women represented 43.1 percent of all Federal employees in this occupational category in FY 2012, compared to 43.6 percent in FY 2011.

2012	Employment of Women	Percent of FW
Counts and Percentages of Women based on All employees in Each Occupational Category September 2012)		
Professional	226,589	46.1
Administrative	316,538	43.1
Technical	192,524	57.8
Clerical	80,518	66.4
Other	10,006	13.1
White-Collar (WC)	826,175	47
Blue-Collar (BC)	18,048	9.8
Total (WC + BC)	844,223	43.5

The number of women in technical occupations decreased by 3,174 to 192,524 in FY 2012 from 195,698 in FY 2011. Women represented 57.8 percent of all Federal employees in this occupational category in FY 2012, compared to 58.1 percent in FY 2011.

The number of women in clerical occupations decreased by 2,352 to 80,518 in FY 2012 from 82,870 in FY 2011. Women represented 66.4 percent of all Federal employees in this occupational category in FY 2012, compared to 66.8 percent in FY 2011.

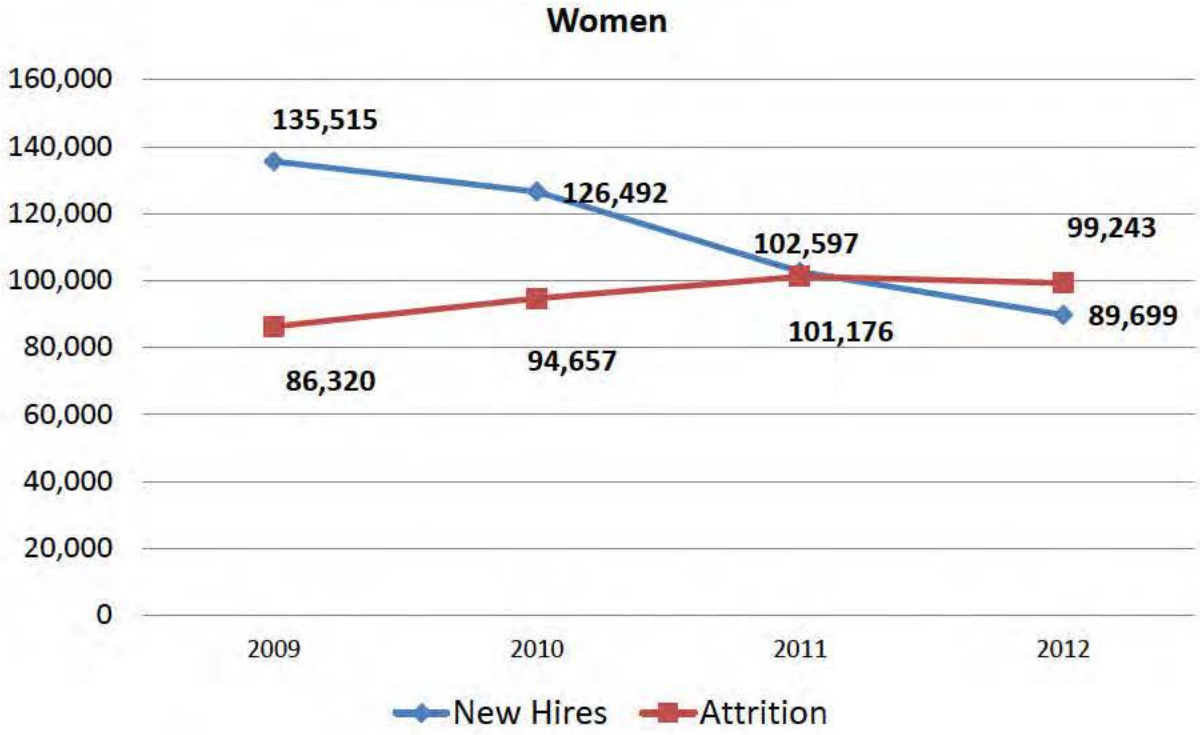
The number of women in "other" white-collar occupations decreased by 182 to 10,006 in FY 2012 from 10,188 in FY 2011. Women represented 13.1 percent of all Federal employees in this occupational category in FY 2012, compared to 13.2 percent in FY 2011.

The number of women in white-collar occupations decreased by 3,688 to 826,175 in FY 2012 from 829,863 in FY 2011. Women represented 47 percent of all Federal employees in this occupational category in FY 2012, compared to 47.2 percent in FY 2011.

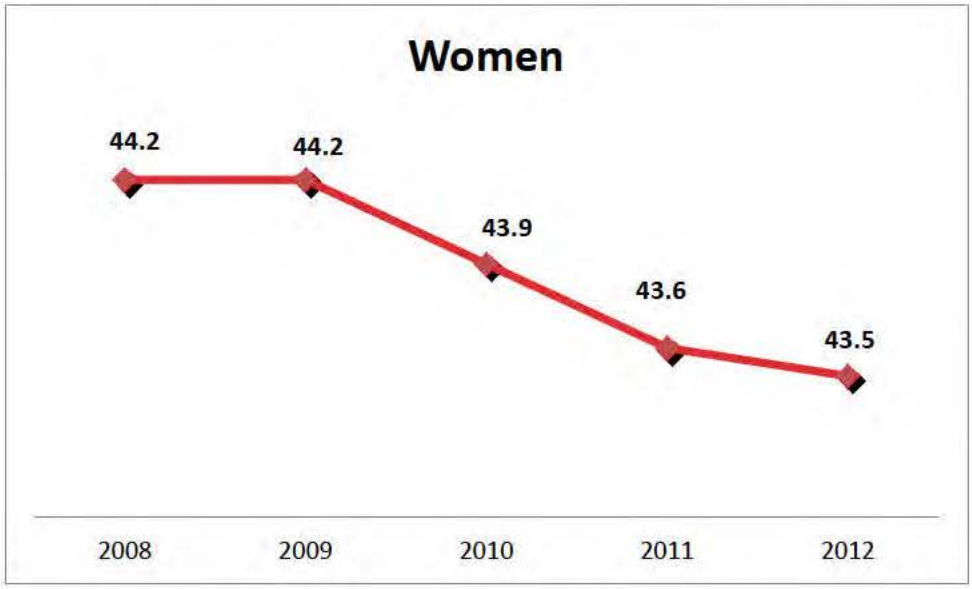
The number of women, in blue-collar occupations, decreased by 346 to 18,048 in FY 2012 from 18,394 in FY 2011. Women represented 9.8 percent of all Federal employees in this occupational category in FY 2012, the same as in FY 2011.

TRENDS

New Hires compared to Attrition[8]



Representation in the Federal Workforce over a 5-year period



[8] The New Hires compared to Attrition chart does not include Transfers In, nor does it include Transfers Out. Furthermore, the Judicial Branch is entirely excluded and some Executive Branch agencies are not included. Please see data notes for details.

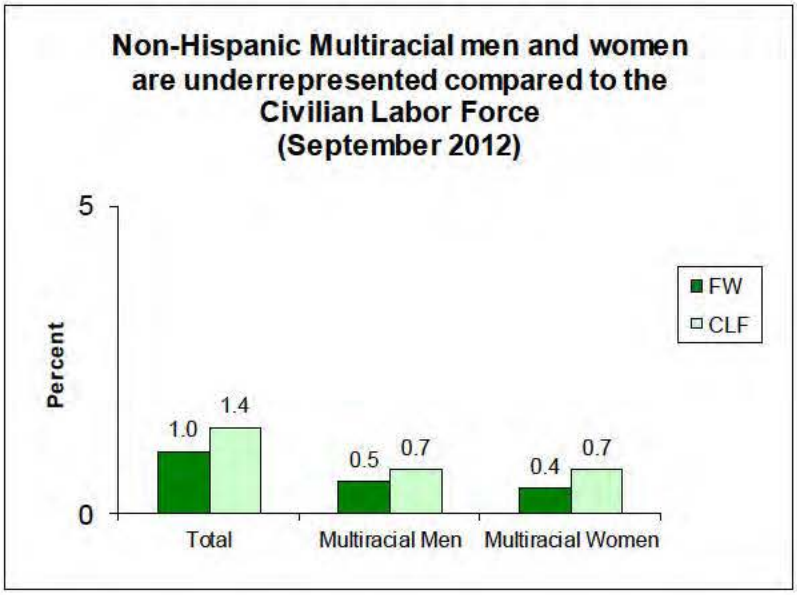
NON-HISPANIC/MULTI-RACIAL EMPLOYMENT IN THE FEDERAL WORKFORCE

NON-HISPANIC/MULTI-RACIAL EMPLOYMENT

Non-Hispanic Multi-Racial employees were 1.0 percent (18,958) of the permanent FW as of September 30, 2012 and 0.8 percent in FY 2011.

Non-Hispanic Multi-Racial men comprised 0.5 percent of the FW in FY 2012 and 0.4 percent in FY 2011.

Non-Hispanic Multi-Racial women comprised 0.4 percent of the FW in FY 2012 and 0.4 percent in FY 2011.



NON-HISPANIC/MULTI-RACIAL[9] BY OCCUPATIONAL CATEGORY

2012	Non-Hispanic Multi-racial Employment	Percent of FW
Counts and Percentages of Non-Hispanic/Multi-Racial based on All Employees in Each Occupational Category (September 2012)		
Professional	4,039	0.8
Administrative	7,849	1.1
Technical	3,014	0.9
Clerical	1,536	1.3
Other	893	1.2
White-Collar (WC)	17,331	1
Blue-Collar (BC)	1,627	0.9
Total (WC + BC)	18,958	1

Non-Hispanic/Multi-Racial employment in professional occupations increased by 631 to 4,039 in FY 2012, from 3,408 in FY 2011. Non-Hispanic/ Multi-Racial employees represented 0.8 percent of all Federal employees in this occupational category in FY 2012, compared to 0.7 percent in FY 2011.

Non-Hispanic/Multi-Racial employment in administrative occupations increased by 1,234 to 7,849 in FY 2012, from 6,615 in FY 2011. Non-Hispanic/ Multi-Racial employees represented 1.1 percent of all Federal employees in this occupational category in FY 2012, compared to 0.9 percent in FY 2011.

Non-Hispanic/Multi-Racial employment in technical occupations increased by 424 to 3,014 in FY 2012, from 2,590 in FY 2011. Non-Hispanic/Multi-Racial employees represented 0.9 percent of all Federal employees in this occupational category in FY 2012, compared to 0.8 percent in FY 2011.

Non-Hispanic/Multi-Racial employment in clerical occupations increased by 275 to 1,536 in FY 2012, from 1,261 in FY 2011. Non-Hispanic/Multi-Racial employees represented 1.3 percent of all Federal employees in this occupational category in FY 2012, compared to1 percent in FY 2011.

Non-Hispanic/Multi-Racial employment in "other" white-collar occupations increased by 76 to 893 in FY 2012, from to 817 in FY 2011. Non-Hispanic/Multi-Racial employees represented 1.2 percent of all Federal employees in this occupational category in FY 2012, compared to 1.1 percent in FY 2011.

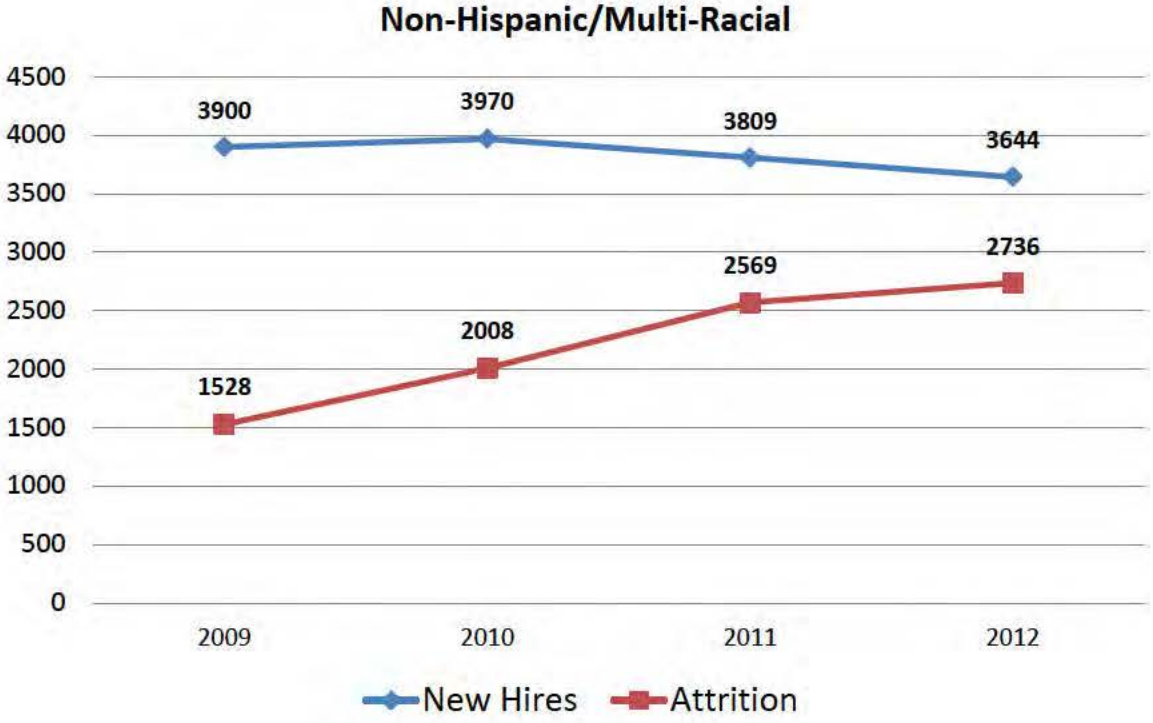
Non-Hispanic/Multi-Racial employment in white-collar occupations increased by 2,640 to 17,331 in FY 2012, from 14,691 in FY2011. Non-Hispanic/Multi-Racial employees represented 1 percent of all Federal employees in this occupational category in FY 2012, compared to 0.8 percent in FY 2011.

[9] Although this new category is not a minority group as determined under 5 U.S.C. § 7201, collection and representation of this data is consistent with the new Racial/National Origin structure required by the Office of Management and Budget. OPM guidance to agencies required use of the new codes for all accessions occurring on or after January 1, 2006. However, while agencies were not required to resurvey their workforce, they had the option to do so. As a result, the Federal civilian employees in this category do not reflect total numbers in the FW; they reflect only those who completed the new Standard Form 181, Ethnicity and Race Identification (dated July 2005).

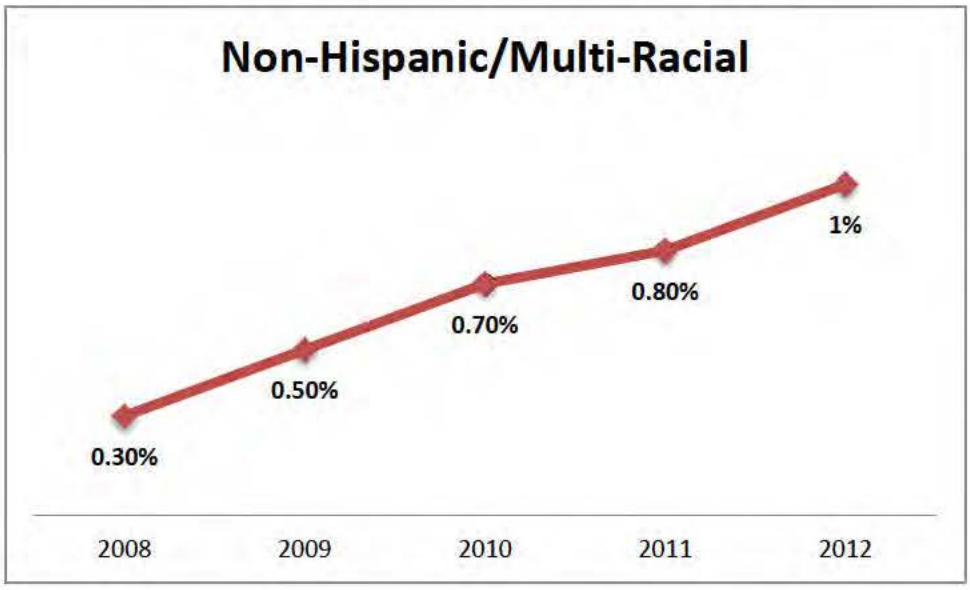
Non-Hispanic/Multi-Racial employment in blue-collar occupations increased by 286 to 1,627 in FY 2012, from 1,341 in FY 2011. Non-Hispanic/Multi-Racial employees represented 0.9 percent of all Federal employees in this occupational category in FY 2012, compared to 0.7 in FY 2011.

TRENDS

New Hires compared to Attrition[10]



Representation in the Federal Workforce over a 5-year period



[10] The above chart does not include Transfers In nor does it include Transfers Out. Furthermore, the Judicial Branch is entirely excluded and some Executive Branch agencies are not included. Please see data notes for details.

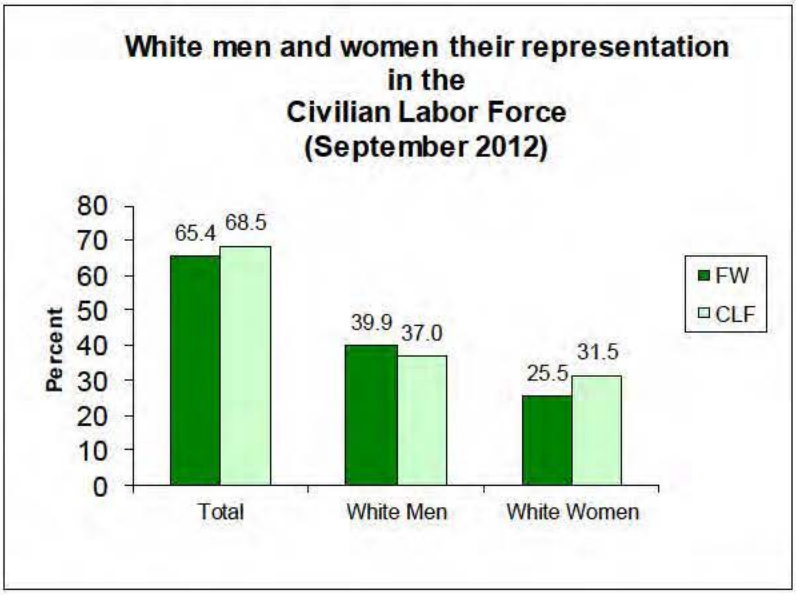
WHITES IN THE FEDERAL WORKFORCE

WHITE EMPLOYMENT

White employees comprised 65.4 percent (1,270,362) of the permanent FW as of September 30, 2012 and 65.9 percent in FY 2011.

White men comprised 39.9 percent of the FW in FY 2012 and 40.1 percent in FY 2011.

White women comprised 25.5 percent of the FW in FY 2012 and 25.8 percent in FY 2011.



WHITES[11] BY OCCUPATIONAL CATEGORY

White employment in professional occupations increased by 716 to

357,590 in FY 2012, from 356,874 in FY 2011. Whites represented 72.8 percent of all Federal employees in this occupational category in FY 2012, compared to 73.4 percent in FY 2011.

White employment in administrative occupations decreased by 2,529 to 488,615 in FY 2012, from 491,144 in FY 2011. Whites represented 66.6 percent of all Federal employees in this occupational category in FY 2012, compared to 67.1 percent in FY 2011.

White employment in technical occupations decreased by 4,009 to 194,924 in FY 2012, from 198,933 in FY 2011. Whites represented 58.5 percent of all Federal employees in this occupational category in FY 2012, compared to 59 percent in FY 2011.

2012	White Employment	Percent of FW
Counts and Percentages of White based on All Employees in Each Occupational Category (September 2012)		
Professional	357,590	72.8
Administrative	488,615	66.6
Technical	194,924	58.5
Clerical	63,612	52.5
Other	44,890	58.8
White-Collar (WC)	1,149,631	65.5
Blue-Collar (BC)	120,731	65.2
Total (WC + BC)	1,270,362	65.4

White employment in clerical occupations decreased by 2,192, to 63,612 in FY 2012, from 65,804 in FY 2011. Whites represented 52.5 percent of all Federal employees in this occupational category in FY 2012, compared to 53.1 percent in FY 2011.

White employment in "other" white-collar occupations decreased by 1,084, to 44,890 in FY 2012 from 45,974 in FY 2011. Whites represented 58.8 percent of all Federal employees in this occupational category in FY 2012, compared to 59.4 percent in FY 2011.

White employment in white-collar occupations decreased by 9,098 to 1,149,631 in FY 2012 from 1,158,729 in FY 2011. Whites represented 65.5 percent of all Federal employees in this occupational category in FY 2012, compared to 66 percent in FY 2011.

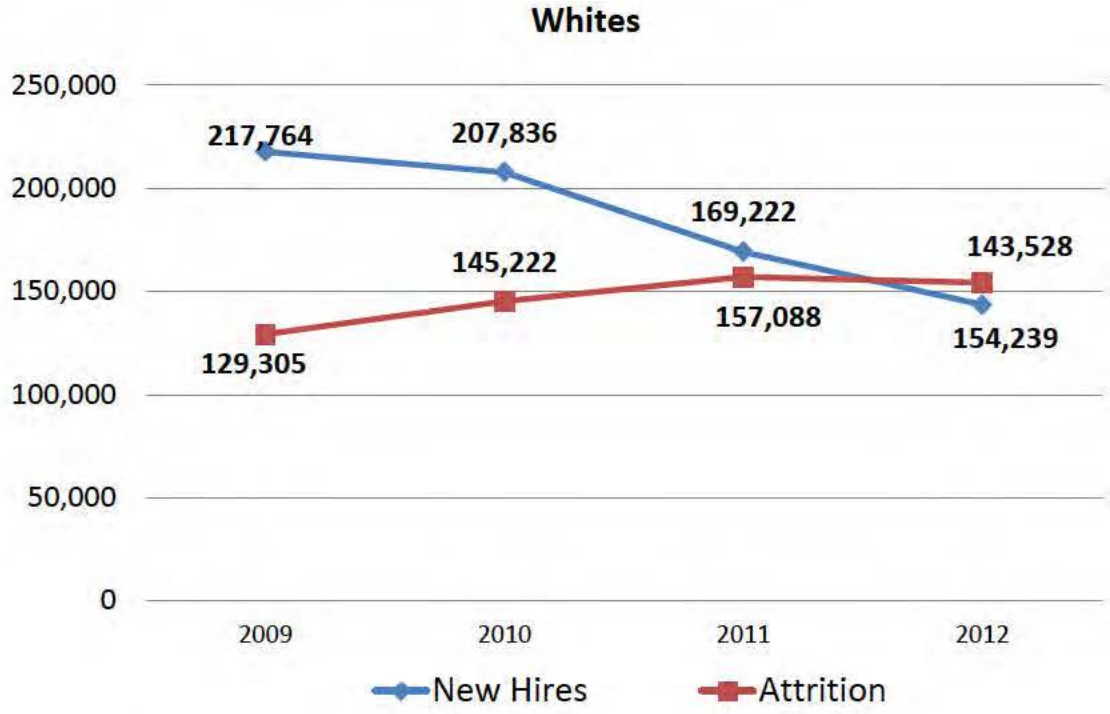
---

[11] Although this new category is not a minority group as determined under 5 U.S.C. § 7201, collection and representation of this data is consistent with the new Racial/National Origin structure required by the Office of Management and Budget. OPM guidance to agencies required use of the new codes for all accessions occurring on or after January 1, 2006. However, while agencies were not required to resurvey their workforce, they had the option to do so. As a result, the Federal civilian employees in this category do not reflect total numbers in the FW; they reflect only those who completed the new Standard Form 181, Ethnicity and Race Identification (dated July 2005).

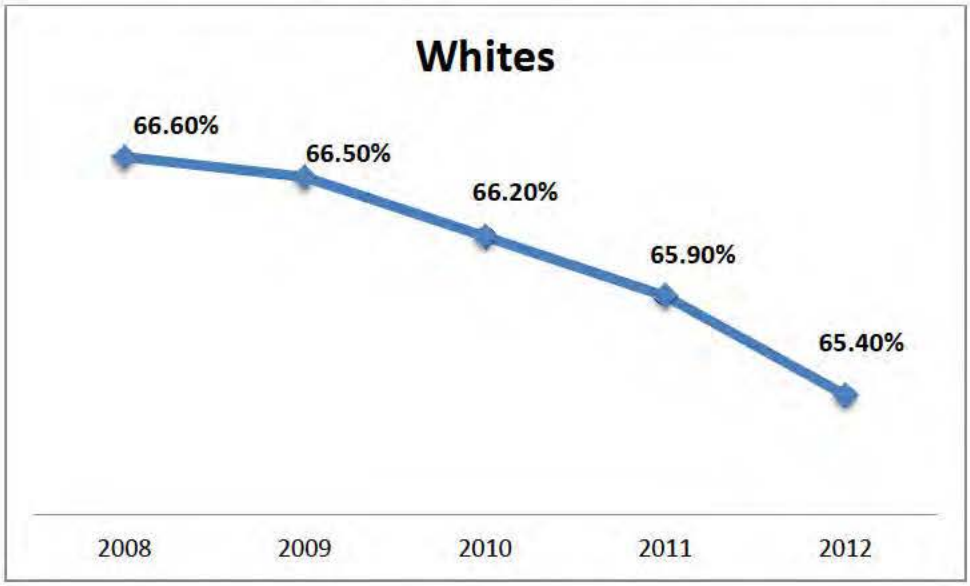
White employment in blue-collar occupations decreased by 2,199, to 120,731 in FY 2012 from 122,930 in FY 2011. Whites represented 65.2 percent of all Federal employees in this occupational category in FY 2012, as compared to 65.5 percent in FY 2011.

TRENDS

New Hires compared to Attrition[12]



Representation in the Federal Workforce over a 5-year period



[12] The New Hires compared to Attrition chart does not include Transfers In, nor does it include Transfers Out. Furthermore, the Judicial Branch is entirely excluded and some Executive Branch agencies are not included. Please see data notes for details.

AGENCY FEORP CURRENT PRACTICES

AGENCY FEORP INITIATIVES

In FY 2012, agencies reported that they continued their human resources initiatives in support of the Federal Equal Opportunity Recruitment Program (FEORP).

OPM requested agencies to provide diversity and inclusion training conducted for agency managers and supervisors; and the steps taken to assess the performance of managers and senior executives with respect to supporting diversity and inclusion. The following practices are highlighted in the area of learning.

National Aeronautics and Space Administration (NASA)

NASA's Offices of Human Capital Management (OHCM) and Diversity and Equal Opportunity (ODEO) have partnered closely to enhance the agency's recruitment strategies, allowing the agency to reach a broader and more diverse talent pool through implementation of the new Pathways Program.

NASA's Office of Education implemented a series of innovative projects designed to stimulate student interest in order to motivate higher levels of study in science, technology, engineering and mathematics (STEM), and expand the diversity of the nation's current and future STEM labor force pipeline.

The Science and Engineering Mathematics Aerospace Academy (SEMAA) is NASA's national project designed to increase the participation and retention of historically underserved and underrepresented K-12 youth in STEM. With respect to E.O. 13171 of October 12, 2000, NASA reports that a total of 6,631 Hispanic students participated, or 30 percent of the total students served.

Department of Interior (DOI)

Nearly 2,000 DOI managers and supervisors completed the Championing Diversity workshop in FY 2012. The Championing Diversity workshop was in part due to DOI's partnership with a private entity with a proven track record of achieving diversity and inclusion mind-set shifts and buy-in.

DOI's new approach is to educate managers and supervisors on diversity and inclusion so they understand that inclusivity is not just about whether whom they hire has paid off. They now embrace the various dimensions of diversity and recognize that the multiple frameworks and underpinning diversity and inclusion are important to achieving the mission and goals of the agency.

DOI is particularly proud of its Diversity Change Agent Program. DOI established the program to affect and mobilize stakeholders to embrace and enact its Inclusive Workplace Strategy.

DOI trained 265 new diversity change agents in FY2012, as well as established partnerships with other Federal agencies to conduct diversity agent training.

Department of Treasury

The Department of Treasury's Treasury Executive Institute (TEI) began a pilot-coaching program that has thus far served 202 clients. TEI also has plans to expand coaching training in FY 2013.

In March 2013, the Department of Treasury implemented a new Treasury-wide mentoring program aimed at employees with less than three years of Federal experience. The program initially targeted 75 mentees matched with 75 mentors. The mentoring program consists of orientation, training, mid-point evaluation and end-of-year evaluation.

Social Security Administration (SSA)

In FY 2012, SSA developed a cost-effective approach to training by creating a bi-lingual portal, which provides a region-wide training product that teaches more employees. Additionally, with respect to E.O. 13171 of October 12, 2000, SSA reports that 6.36 percent of our developmental program participants in FY 2012 were Hispanic.

National Transportation Safety Board (NTSB)

The Professional Development Program (PDP) is open to permanent staff in grades GS-9 through 13 and is based on enhancing core competencies focusing on career development and goal setting and providing assistance in overall career direction and progression.

The Leadership Development Program (LDP) is open to permanent staff in grades GS-13 through 15.

In FY 2012, the Office of EEO, Diversity and Inclusion completed the Diversity DARE branding campaign and video. The branding campaign and video demonstrate the importance of diversity and inclusion at the NTSB and also illustrate how employees from diverse backgrounds bring different perspectives to problem solving, creativity, innovation and management, making teams stronger and more effective. Because NTSB needs problem solvers, this approach is key to the accomplishment of the transportation safety mission.

Department of Veterans Affairs (VA)

The Department of Veterans Affairs, worked with OPM's Office of Diversity and Inclusion (ODI) to create a measurement tool that can help agencies measure their employees' perceptions of inclusion. This measurement tool is called the New IQ or the New Inclusion Quotient (IQ). The New IQ includes training developed based on research and questions from the Federal Employee Viewpoint Survey (EVS). The training helps supervisors hone inclusive habits that help create fair, open, cooperative, supportive, and empowering work environments. The VA hopes this tool will improve teamwork and better

utilization of talent, increase resiliency and retention, increase innovation and creativity, and improve team performance and productivity.

With respect to E.O. 13171, VA reports that the VA National Cemetery Administration (NCA) developed and is implementing the Hispanic Veterans Careers Coalition, an initiative that reviews VA Hispanic employment practices and develop improved processes to increase Hispanic Veteran employment. This initiative will also address reasons for high joblessness, the impact of current outreach strategies and the exploration of Veterans business enterprise as a source of employment for Hispanic Operation Enduring Freedom and Operation Iraqi Freedom heroes.

The NCA will continue its collaboration with the League of United Latin American Citizens on its strategy for integrating education, employment, outreach and entrepreneurship to increase educational and occupational opportunities for Hispanic and disabled Veterans.

Agency Successful/Promising Practices

Agencies were asked to submit their successful or promising practices from the agency-specific Diversity and Inclusion Strategic Plans. The following are some of those practices:

Corporation for National and Community Service (CNCS)

To broaden the scope and agency conversation regarding diversity and inclusion (D&I), CNCS developed CELEBRATE Diversity Month. This program engages staff in a series of activities beyond the normal "special emphasis" to heighten their awareness of the many facets of diversity and inclusion. Each year a new program theme is used as the lens to view different aspects of D&I, and how it relates to ALL of us. CNCS is infused with opportunities to celebrate through educational experiences in presentations, music, art, photography, dance and literature. Collaborative partnerships with other Federal entities, non-governmental agencies and CNCS's Affinity groups ensure the richness in their programming.

Department of Agriculture (USDA)

USDA Monthly Cultural Transformation Milestones and Metrics Reports contain key metrics that are reported to the Secretary to measure progress in the following areas: Diversity and Inclusion, Disability Hiring, Veterans Hiring, Diversity of Student Employment, Telework participation, Communication, Process Improvement, Labor Relations, Equal Employment Opportunity Accountability, Hiring Reform, Employee Development, and Employee Viewpoint Survey Results (Annually). In addition, the Milestone and Metrics Report is tied to performance management of all USDA Senior Executives. Monthly Report Cards/Mid-Year Report Card Ranking is also used to measure and rate progress as reaching or achieving set targets for all metrics, except Diversity and Inclusion/Student Diversity. Similarly, USDA assesses the performance of

supervisors, managers and senior executives with respect to supporting diversity and inclusion.

In addition, USDA hires over six thousand student interns annually. The Student Intern Program is the agency's pipeline for future USDA employees, and the agency has developed strong programs dedicated to attracting candidates from all segments of society, including, for example, African Americans, American Indians/Alaska Natives, Hispanics, Asians, and Students with Disabilities. Moreover, the USDA Student Portal is a one-stop application process where students can apply for internships across the United States within the 17 USDA agencies.

Department of Commerce (Commerce)

Commerce has a dedicated manager for hiring people with disabilities in addition to the program manager required for Veterans employment. The Department's Minority Business Development Agency voluntarily agreed that before advertising vacancies and filling them through the competitive process, it would check with the disability program manager to determine whether there were qualified candidates with disabilities who were eligible for non-competitive appointments under 5 C.F.R. 213.3102(u). The Department's National Technical Information Service is considering becoming the second bureau to voluntarily follow the same process.

Department of Defense (DoD)

DoD's Veterans Employment Initiative was established in January of 2010, in support of Presidential Executive Order 13518 - making promoting opportunities for Veterans in the Federal Government a top priority. The initiative encourages DoD component collaboration and support on Veterans' issues and includes providing career guidance and assistance to transitioning service members and Veterans through multiple modes of communication and outreach venues, such as personalized one-on-one interaction and assistance; interagency hiring fairs; and the Hiring Heroes Program. The Hiring Heroes Program provides career fairs to assist wounded warriors, transitioning service members, and Veterans and military spouses in their search for employment.

Department of Education (ED)

The Department of Education is the smallest of the cabinet level agencies and must effectively utilize internal resources as well as leverage external partnerships to achieve diversity and inclusion. To provide diversity and inclusion awareness and opportunities, ED has successfully developed and strengthened partnerships with:

- OPM's Office of Diversity and Inclusion (ODI); and
- The National Organizations (i.e. League of United Latin American Citizens (LULAC) and Federal Asian Pacific American Council (FAPAC)), and reinvigorated internship programs with diverse organizations such as: Conference on Asian Pacific American Leadership (CAPAL) and Hispanic Association of Colleges and Universities (HACU).

ED also has strengthened linkages to the mission side of the organization to leverage research and partnerships to inform strategic recruitment and outreach. These linkages include partnerships with:

- National Center for Education Statistics;
- White House Initiative Office on Education Excellence for Hispanics;
- White House Initiative Office on Asian American and Pacific Islanders;
- White House Initiative Office on American Indian and Alaska Native Education; and
- White House Initiative Office on Historically Black Colleges and Universities.

Department of Energy (DOE)

The Secretary of Energy established DOE's Diversity and Inclusion Council to help create a performance-based culture that better fosters diversity and inclusion. The Council is an extension of the Chief Operating Officer's Board (COOB), DOE's most senior career leaders. It ensures that the values underlying diversity and inclusion are institutionalized and integrated in all strategic management initiatives. The Council, meeting bi-weekly, uses a systematic approach to align DOE's strategies, processes, structures, and people and makes recommendations on how to overcome barriers impacting diversity and inclusion. The Council's goal is to improve mission execution through high performance, resulting from a mission-focused, accountable, and inclusive workforce.

Department of Health and Human Services (HHS)

HHS honors the diversity of its Veterans. HHS launched its own Veterans History Project with participating Veterans reflecting the full spectrum of diversity

including women, Hispanics, and persons with disabilities. This project reignited HHS's Veterans' passion by allowing them to share their military stories on video in the Secretary's Recording Studio. With over 20 stories filmed and an additional 30 scheduled, their powerful reflections will hold a permanent place in history at the Library of Congress. This effort gained praise from HHS Veterans and will have a positive impact on their attrition rates as HHS promotes and celebrates their Veterans.

Department of Homeland Security (DHS)

DHS adopted a diversity advocate performance standard for all SES and equivalent level employees two years ago and is enhancing performance management by ensuring consistent review and assessment. The Executive Director for Diversity and Inclusion, Office of the Chief Human Capital Officer and the Deputy Officer for the Office for Civil Rights and Civil Liberties review the Senior Executive Service (SES) diversity advocate performance standard.

Department of Housing and Urban Development (HUD)

The Department of Housing and Urban Development has established a Diversity Council that includes representatives from all of the major Program Offices, Affinity Groups, and Unions. Senior Executives at the highest levels of leadership are engaged to ensure the Department's commitment is upheld to celebrate the diversity of its employees. HUD has used state-of-the-art technology by offering webinars, with high quality content, to reach supervisors across the country to provide diversity awareness training. Representatives have participated in outreach recruitment efforts to market opportunities with the Department to a diverse pool of applicants.

Department of Interior (DOI)

The Department of the Interior established a *Diversity Change Agent* program to affect and mobilize a critical mass of stakeholders to embrace and enact its *Inclusive Workplace Strategy*. Participants in the program include influential leaders who have enormous credibility from a mission standpoint. The agents are trained to assist in efforts to educate the workforce on diversity and inclusion as mission critical imperatives. The agents are serving as catalysts for change and they are successfully drawing the workforce into the inclusivity debate. They are also effectively positioning diversity and inclusion as strategic opportunities as opposed to requirements or mandates.

Department of Justice (DOJ)

In 2011, DOJ's Office of Justice Programs (OJP) partnered with the Partnership for Public Service (PPS) on a collaborative pilot program to design and deploy a strategy to effectively recruit and hire interns with disabilities while assisting hiring managers in identifying and overcoming attitudinal barriers or concerns. Building off of existing diversity and inclusion processes, OJP's Disability Hiring

Initiative (FedRecruit) was designed to educate and engage hiring managers, work with campus service providers and disability awareness advocacy groups, and explore what attracts students to Federal service and what is necessary to make their experience a success.

Department of Labor (DOL)

The Department of Labor's Employee Benefits Security Administration (EBSA) Diversity Committee implemented a successful outreach strategy that is fostering greater workforce diversity. In FY 2010, EBSA established a relationship with Howard University Law School, a Historically Black University, through which EBSA senior employees taught a course on the Employee Retirement Income Security Act of 1974, which introduced students to employee benefits law as a potential career choice. A similar partnership with Southwestern Law School in Los Angeles, California, a law school recognized for its diverse student population, was established in 2012. These partnerships have enhanced the diversity of EBSA's candidate pools for both student and entry-level positions.

Department of State

At the Department of State, the Secretary and the Director General have mandated that the opportunity for mentoring be provided at all levels. They have four programs: Civil Service (CS) mentoring, Foreign Service (FS) mentoring, situational mentoring, and Locally Employed Staff situational mentoring. In its tenth year, the CS program has grown to over 400 participants per year while during this same period 6,701 entry-level generalists and specialists (85% of all new hires) have been paired in the Foreign Service mentoring program. The situational mentoring programs have over 600 volunteer mentors available every year to any employee in need.

Department of Treasury

Women in Finance Series: To support Treasury's human capital strategic goal to recruit and hire a highly skilled and diverse workforce, Treasury, under the auspices of the Treasurer, sponsored the first ever "*Women in Finance"* Symposium on March 29, 2010, during Women's History Month. The Symposium consisted of two panel discussions and presentations from senior administrative officials and women leaders in the financial sector, described by Time Magazine as *"The New Sheriffs of Wall Street, The Women Charged With Cleaning Up The Mess."* The article highlighted opening comments from Treasury's Secretary, Timothy Geithner, and the extraordinary careers of the Symposium panelists. Accordingly, the Department of the Treasury became the only agency whose Women's History Month event was featured on the cover of a national publication.

The goal of the Symposium was to recognize the contributions of women in all economic agencies and to discuss the best means to foster success among future generations of women in public and private finance. Additionally, as part of the

Symposium, senior staff from the Treasury and the White House moderated working lunches with Symposium participants discussing the future of women in finance, best practices in particular organizations, recommendations for young women entering finance, and development of concrete ideas about how the Federal Government can attract top women from the financial sector into public service.

While the event was by invitation only, business students at a number of universities across the country as well as employees throughout the Federal and private sector watched the event live on CSPAN or through the Treasury website and submitted questions to panelists through Twitter and email. The Departments of Energy and Education, among others, reported hosting watch parties.

On July 12, 2011, the Treasurer hosted a second "*Women in Leadership Symposium*." This symposium focused on the role that institutional investors play in the economic recovery to create local jobs, bring liquidity to markets and spur long-term growth and innovation. Specifically highlighted was the role that women are playing in the institutional investment space, with women in senior positions at domestic public pension funds, corporate pension funds, savings plans, foundations, and endowments. These women are managing well over $2 trillion worth of assets in the United States, and many of them were recent appointees who had not been widely publicized or recognized.

Development of an EEO and Diversity Competencies Model: An EEO Competencies Team has been charged with strategically developing a model for addressing gaps in EEO Human Capital competencies within the Department of the Treasury. The Team's analyses of numerous competencies within the various areas of Human Capital revealed that there are competency and skills gaps on both the macro level (Department-wide) and on the micro-level (bureau-specific), within each of these areas. As a result of these findings, Competencies Project Teams were developed to address these gaps and inconsistencies.

Department of Veterans Affairs (VA)

VA has developed two new indices to efficiently measure workforce diversity and workplace inclusion in the Federal sector. The Diversity Index measures aggregate workforce diversity by race, ethnicity, and gender (REG) as compared to the Civilian Labor Force (CLF). It is a percentage value that represents the mean ratio of each demographic group relative to its corresponding CLF group. The Inclusion Index measures organizational inclusion based on employee perceptions as reported in the Federal Employee Viewpoint Survey (EVS). This index represents the mean percentage of favorable responses to 20 empirically validated survey items relating to workplace inclusion as broadly defined (including but not limited to REG issues). Both metrics are based on valid, defensible benchmarks; are scalable to various organizational parameters; and

are applicable government-wide. These Indices have proven to be an efficient approach to track diversity and inclusion and drive organizational performance.

Environmental Protection Agency (EPA)

The U.S. Environmental Protection Agency launched a Diversity Dashboard as a robust performance measurement and reporting tool for promoting workplace diversity and inclusion. The quarterly Dashboard reports synthesize comprehensive Regional and Program Office diversity data on all EPA employees, including specific employee demographics. The multiple easy to read drill-down and high-level graphic view capabilities have proven invaluable in workforce and strategic planning, benchmarking and assessing the continuing effectiveness of diversity and inclusion efforts. The Dashboard also provides transparency for open dialogue and communications for pursuing efforts to foster a diverse and inclusive work environment.

Equal Employment Opportunity Commission (EEOC)

In response to the recent Federal Employee Viewpoint results, the EEOC launched its BEST Initiative (Building Employee Satisfaction Together) to focus on strategies for improving employee satisfaction. BEST has its own site on EEOC's intranet and its own e-mailbox for employees to send in suggestions or feedback to be evaluated and considered for implementation. The initial focus of BEST will be in the following areas: Reprisal, Workplace Health & Safety, and Skill Development & Workload Management. Improvement in the above areas will help to improve the work environment, and by extension, promote diversity and inclusion.

Export-Import Bank

The Export-Import Bank began implementation of a Rotational Program in FY 2011, which is designed to encourage job development by having participants engage in work activities of a different organizational division. The rotation cycle is for a period of 120 days, and affords program participants an opportunity to gain a new knowledge base/skillset while also gaining a broader understanding of the organization. As part of the program, individual development plans are developed as a means for targeting technical and developmental benchmarks.

Farm Credit Administration

The Farm Credit Administration adopted a final rule on operating and strategic business planning to require that Farm Credit System institutions develop human capital and marketing plans that promote diversity and inclusion. The human capital plan must contain an assessment of the strengths and weaknesses of the institution's workforce and management and a description of the institution's succession programs for its workforce and management. The marketing plan must contain strategies and action for marketing the institution's products and

services to all eligible and creditworthy persons, including outreach to foster diversity and inclusion within each market segment.

Federal Energy Regulatory Commission

Office of the Executive Director's FARM Team: In an effort to foster improved professional relationships within the Office of the Executive Director (OED) and to ensure staff is informed of OED priorities, the FARM (Fun, Activities, Recognition and Morale) team, a diverse cross section of volunteers, was formed to build a more unified (collaborative) informed organization with a common sense of identity and mission. The FARM Team coordinates and implements activities in support of these broad objectives. A few examples of activities are: Employee Feedback Forums; Social luncheons and after-hour events; Agency Mission-related Activities: Executive Director meet and greets, FERC field trips; Team Building coordination at OED's All-Hands meetings; and Employee Recognition Programs.

Council for Workforce Improvement: The Council for Workforce Improvement (CWI) is a staff-led initiative formed to advise Commission leadership at all levels on workplace diversity and professional development issues at all stages of the employee career cycle. The Council's mission is to foster a highly skilled inclusive workplace where diversity and individual strengths are developed, valued, and utilized by the Commission to advance the public interest. The Council serves as a source of input to Commission leadership regarding recruiting strategies to attract and select a qualified, diverse workforce and development opportunities for existing staff, including training, performance measurement, leadership development, and promotion policies.

Federal Mediation and Conciliation Service (FMCS)

As a best practice, the Federal Mediation & Conciliation Service ensures that all employees are involved in the planning and execution of special emphasis programs. If employees have specialties (talent, planning, procurement, public speaking), the agency utilizes those specialties to enhance the programs. In addition to having the Agency Director, Deputies, and the Chief Financial Officer (CFO) open and close the programs, the agency asks FMCS employees to participate in the development and presentation of the programs. The programs belong to *all* of the employees. When they are involved early in the process, and serve in key roles, they are more likely to continue to participate and encourage other employees to "get involved" as well. FMCS is a small, yet inclusive agency with a sense of belonging and great morale.

Federal Trade Commission (FTC)

The FTC's inaugural Diversity Summit, *Beyond the Numbers: Creating an Inclusive Environment*, included panel discussions from recognized experts and leaders in the area of diversity. It was followed by a Diversity Town Hall, which provided an opportunity for discussion among the Commissioners and employees about

diversity and inclusion. At the Town Hall, the agency's Diversity Council and EEO Director provided information on activities and our demographic data. These are examples of FTC's efforts to create and sustain an environment that values different points of view, recognizes individuals' contributions, and promotes inclusion.

National Aeronautics and Space Administration (NASA)

NASA has established a fully realized presence for diversity and inclusion (D&I), as well as equal employment opportunity (EEO), in the Agency's Strategic Plan and Performance and Accountability reporting structure. Through a strong partnership between the Agency Offices of Diversity and Equal Opportunity and Human Capital Management, NASA has specific and measurable outcomes and performance goals for D&I. NASA also established an agency D&I Strategic Partnership, inclusive of the full spectrum of senior leadership positions, to better ensure diverse inputs into D&I decision-making and fully shared accountability, as well as to create sustainability through an institutionalized D&I structure.

National Archives and Records Administration (NARA)

At the National Archives, the agency believes that a manager who values diversity and exhibits inclusive behaviors will more naturally select, collaborate with, and retain diverse talent. Therefore, NARA is building "inclusion competency" into the selection processes for managers and supervisors. Specifically, NARA is building diversity and inclusion-focused questions into the structured interviewing process for manager and supervisor positions. NARA is developing competency-based behavioral interview questions and evaluation standards that assess how candidates' past actions demonstrate experience and skill in managing diverse teams and fostering an inclusive work environment.

National Science Foundation (NSF)

NSF uses training opportunities on implicit bias as an excellent example of the link between mission focus and internal diversity and inclusion. The concept of implicit bias comes out of NSF-sponsored research in the social and behavioral sciences. The purpose of the training is to provide knowledge of how unconscious biases can affect the diversity of the NSF workforce and its grantees. While initially used for panelists evaluating grant proposals, recently the training has been broadened to address implicit bias in evaluation processes, inclusive of the selection process. As part of a pilot initiative, the training discusses ways in which implicit bias can impact one's decision-making process, particularly in making selections for higher-level positions, which is where it has the most significant underrepresentation. The pilot is part of a partnership between the Office of Diversity and Inclusion, Human Resource Management, and the Directorate for Engineering that also builds on continuing interactions between the directorate and its community through professional societies. The pilot will be expanded to other NSF directorates and offices.

Nuclear Regulatory Commission (NRC)

Annually and jointly, the Directors of the Office of the Chief Human Capital Officer and the Office of Small Business and Civil Rights provide a formal briefing to the Chairman and Commissioners of the NRC. These highly successful briefings provide an opportunity to update senior executives on progress made on topics relating to the agency's most valuable resource, the people. Topics include civil rights program updates, workforce data, organizational assessments, performance management, and diversity and inclusion. The meeting is open to all staff, and participation is encouraged. The meeting is broadcast out to the agency's regional offices as well.

Office of the Director of National Intelligence (ODNI)

The ODNI's workforce development approach focuses on highlighting opportunities for career development, ensuring structured and inclusive processes for selecting employees for these opportunities, increasing communication between management and the workforce, and fostering a professionally diverse, highly skilled workforce. A cornerstone of this approach is the development of Career Advisory Boards (CAB) comprised of senior leadership from ODNI components, under the governance of the Executive Review Board. CABs are responsible for managing their employees as a corporate asset; providing them with career path information, mentoring, and feedback to plan their professional growth; and helping employees navigate their careers. Taking a holistic look at each employee, CABs ensure each individual is fairly considered for training, assignments, professional development, promotion, pay and performance bonuses.

In addition, with the agency's focus on intelligence integration and the need to leverage the full range of the Community's diverse talent, ODNI created a Civilian Joint Manning Document to optimize staff composition, integrate Community expertise, and tailor core-contracting resources.

The Civilian Joint Manning Document (CJMD) process is the protocol for outlining the ODNI organizational structure that is aligned with the budget and Full Time Equivalent (FTE) allocations. It provides the mechanism for ongoing management of the civilian cadre structure. Further, it provides for the refreshing of ideas and talent from across the IC by identifying specific positions available for detailees through rotational assignments from the other IC elements.

Office of Navajo and Hopi Indian Relocation

To cultivate a supportive, welcoming, inclusive and fair work environment, the Office of Navajo and Hopi Indian Relocation utilizes workplace policies that encourage employee engagement and empowerment including, alternative work schedules, wellness programs, training needs, and support of employee needs to balance work and life issues.

Office of Personnel Management (OPM)

Knowledge Transfer: The OPM recognizes that knowledge constitutes a valuable intangible asset for sustaining high performance and organizational effectiveness. In order to address the potential loss of organizational knowledge when individuals retire or leave the agency, OPM is implementing a comprehensive knowledge transfer strategy that includes the development of a video based, knowledge capture system that allows individuals in strategic positions to outline key aspects of their jobs/careers and the way they performed their work, including tacit and explicit knowledge.

Railroad Retirement Board (RRB)

One of RRB's best practices is the utilization of technology to provide diversity and EEO compliance information to employees. Video training modules are produced via the RRB's in-house multimedia presentation system. The RRB's version of "YouTube" is a cost effective way to deliver a variety of diversity related programming, as well as training on anti-discrimination laws. The system is accessed through the agency's intranet, which allows employees to conveniently view a program at their workstations. Using the system also ensures that the delivery of the information is consistent.

Small Business Administration (SBA)

SBA's best practice for diversity and inclusion is the addition of a diversity statement in Human Capital (HC) policies. It demonstrates commitment to meritorious practices in talent acquisition and HC management, and reads:
It is SBA's policy to uphold merit systems principles and implement [the particular topic] fairly and equitably without discrimination for any non-merit reason such as race, color, religion, age, gender, national origin, political affiliation, sexual orientation, marital or family status, personal favoritism, membership or non-membership in an employee organization or holding office in an employee organization. SBA provides reasonable accommodation to applicants and employees with disabilities.

Social Security Administration (SSA)

SSA streamlined the process that its Human Resource professionals use to refer qualified veterans and individuals with disabilities to managers for non-competitive appointments. SSA further assists its managers and new hires with a centralized funding mechanism that is used solely to procure and train on assistive technology.

APPENDIX A: DATA NOTES

NEW HIRES AND ATTRITION NOTES

Notes about the data source

Data from...

- FY 2005 and later pulled from OPM's Enterprise Human Resources Integration Statistical Data Mart (EHRI-SDM).

Coverage is limited to Federal civilian employees with the following inclusions or exclusions:

Executive Branch exclusions:

- U.S. Postal Service
- Postal Rate Commission
- Central Intelligence Agency
- National Security Agency
- Defense Intelligence Agency
- National Geospatial-Intelligence Agency
- Office of the Director of National Intelligence
- White House Office
- Office of the Vice President
- Foreign Service Personnel at the State Department
- Tennessee Valley Authority
- Board of Governors of the Federal Reserve
- Public Health Service's Commissioned Officer Corps
- Non-appropriated fund employees
- Foreign Nationals Overseas

Legislative Branch inclusions:

- Government Printing Office
- U.S. Tax Court
- Dwight D. Eisenhower Memorial Commission
- Financial Crisis Inquiry Commission
- Ronald Reagan Centennial Commission
- Medicare Payment Advisory Commission
- U.S. - China Economic and Security Review Commission
- U.S. Commission on International Religious Freedom

Judicial Branch exclusions:

- Entirely excluded

The above represents current coverage and is subject to change over time.

Recent significant changes to coverage:

- The Bureau of Consumer Financial Protection, a component of the Federal Reserve, began reporting in March 2011.
- The Federal Bureau of Investigation did not report data on personnel actions until FY 2007.
- The State Department stopped providing data on Foreign Service Personnel in March 2006.

More information about data sources can be found at http://www.opm.gov/feddata/guidance.asp

Notes about your request

Counts include all employees in pay status, meaning work schedule, type of appointment, tenure, etc. are ignored.

FEDERAL INFORMATION SYSTEM CONTROLS AUDIT MANUAL (FISCAM)

GAO-09-232G

United States Government Accountability Office
Washington, DC 20548

February 2009

TO AUDIT OFFICIALS, CIOS, AND OTHERS INTERESTED IN FEDERAL AND OTHER GOVERNMENTAL INFORMATION SYSTEM CONTROLS AUDITING AND REPORTING

This letter transmits the revised Government Accountability Office (GAO) *Federal Information System Controls Audit Manual* (FISCAM). The FISCAM presents a methodology for performing information system (IS) control[1] audits of federal and other governmental entities in accordance with professional standards, and was originally issued in January 1999. We have updated the FISCAM for significant changes affecting IS audits.

This revised FISCAM reflects consideration of public comments received from professional accounting and auditing organizations, independent public accounting firms, state and local audit organizations, and interested individuals on the FISCAM Exposure Draft issued on July 31, 2008 (GAO-08-1029G).

GAO would like to thank the Council of the Inspectors General on Integrity and Efficiency and the state and local auditor community for their significant input into the development of this revised FISCAM.

Summary of Major Revisions to FISCAM

The revised FISCAM reflects changes in (1) technology used by government entities, (2) audit guidance and control criteria issued by the National Institute of Standards and Technology (NIST), and (3) generally accepted government auditing standards (GAGAS),

[1]Information system (IS) controls consist of those internal controls that are dependent on information systems processing and include general controls (entitywide, system, and business process application levels), business process application controls (input, processing, output, master file, interface, and data management system controls), and user controls (controls performed by people interacting with information systems).

as presented in *Government Auditing Standards* (also known as the "Yellow Book").[2] The FISCAM provides a methodology for performing information system (IS) control audits in accordance with GAGAS, where IS controls are significant to the audit objectives. However, at the discretion of the auditor, this manual may be applied on other than GAGAS audits. As defined in GAGAS, IS controls consist of those internal controls that are dependent on information systems processing and include general controls and application controls. This manual focuses on evaluating the effectiveness of such general and application controls. This manual is intended for both (1) auditors to assist them in understanding the work done by IS controls specialists, and (2) IS controls specialists to plan and perform the IS controls audit. The FISCAM is not intended to be used as a basis for audits where the audit objectives are to specifically evaluate broader information technology (IT) controls (e.g., enterprise architecture and capital planning) beyond the context of general and business process application controls.

The FISCAM is consistent with the GAO/PCIE *Financial Audit Manual* (FAM). Also, the FISCAM control activities are consistent with the NIST Special Publication (SP) 800-53 and other NIST and OMB IS control-related policies and guidance and all SP 800-53 controls have been mapped to FISCAM.[3]

The FISCAM is organized to facilitate effective and efficient IS control audits. Specifically, the methodology in the FISCAM incorporates:

- Top-down, risk based approach that considers materiality and significance in determining effective and efficient audit procedures and is tailored to achieve the audit objectives.

[2]GAO, *Government Auditing Standards*, GAO-07-162G (Washington, D.C.: July 2007).

[3]To assist the auditor in identifying criteria that may be used in the evaluation of IS controls, Chapters 3 and 4 include references, where appropriate, to NIST SP 800-53, other NIST standards and guidance, and OMB policy and guidance. Also, Appendix IV includes a summary of the mapping of the FISCAM controls to such criteria. In addition, audit procedures in FISCAM are designed to enable the auditor to determine if related control techniques are achieved.

- Evaluation of entitywide controls and their effect on audit risk.
- Evaluation of general controls and their pervasive impact on business process application controls.
- Evaluation of security management at all levels (entitywide, system, and business process application levels).
- A control hierarchy (control categories, critical elements, and control activities) to assist in evaluating the significance of identified IS control weaknesses.
- Groupings of control categories consistent with the nature of the risk.
- Experience gained in GAO's performance and review of IS control audits, including field testing the concepts in this revised FISCAM.

As discussed above, this manual is organized in a hierarchical structure to assist the auditor in performing the IS controls audit. Chapter 3 (general controls) and Chapter 4 (business process application level controls) contain several control categories, which are groupings of related controls pertaining to similar types of risk. For each control category, the manual identifies critical elements—tasks that are essential for establishing adequate controls within the category. For each critical element, there is a discussion of the associated control activities that are generally necessary to achieve the critical element, as well as related potential control techniques and suggested audit procedures. This hierarchical structure facilitates the auditor's audit planning and the auditor's analysis of identified control weaknesses.

Because control activities are generally necessary to achieve the critical elements, they are generally relevant to a GAGAS audit unless the related control category is not relevant, the audit scope is limited, or the auditor determines that, due to significant IS control weaknesses, it is not necessary to assess the effectiveness of all relevant IS controls. Within each relevant control activity, the auditor should identify control techniques implemented by the entity and determine whether the control techniques, as designed, are sufficient to achieve the control activity, considering IS risk and the audit objectives. The auditor may be able to determine whether control techniques are sufficient to achieve a particular control activity without evaluating and testing all of the control techniques.

Also, depending on IS risk and the audit objectives, the nature and extent of control techniques necessary to achieve a particular control objective will vary.

If control techniques are sufficient as designed, the auditor should determine whether the control techniques are implemented (placed in operation) and are operating effectively. Also, the auditor should evaluate the nature and extent of testing performed by the entity. Such information can assist in identifying key controls and in assessing risk, but the auditor should not rely on testing performed by the entity in lieu of appropriate auditor testing. If the control techniques implemented by the entity, as designed, are not sufficient to address the control activity, or the control techniques are not effectively implemented as designed, the auditor should determine the effect on IS controls and the audit objectives.

Throughout the updated FISCAM, revisions were made to reflect today's networked environment. The nature of IS risks continues to evolve. Protecting government computer systems has never been more important because of the complexity and interconnectivity of systems (including Internet and wireless), the ease of obtaining and using hacking tools, the steady advances in the sophistication and effectiveness of attack technology, and the emergence of new and more destructive attacks.

In addition, the FISCAM includes narrative that is designed to provide a basic understanding of the methodology (Chapter 2), general controls (Chapter 3) and business process application controls (Chapter 4) addressed by the FISCAM. The narrative may also be used as a reference source by the auditor and the IS control specialist. More experienced auditors and IS control specialists may find it unnecessary to routinely refer to such narrative in performing IS control audits. For example, a more experienced auditor may have sufficient knowledge, skills, and abilities to directly use the control tables in Chapters 2 and 3 (which are summarized in Appendices II and III).

A summary of significant changes to FISCAM from the prior version is presented on pages 6-10.

Future updates to the FISCAM, including any implementation tools and related materials, will be posted to the FISCAM website at http://www.gao.gov/special.pubs/fiscam.html.

The revised FISCAM is available only in electronic form at http://www.gao.gov/products/GAO-09-232G on GAO's Web page. This version supersedes previously issued versions of the FISCAM through January 2001. Should you need additional information, please contact us at FISCAM@gao.gov or call Robert Dacey at (202) 512-7439 or Greg Wilshusen at (202) 512-6244. GAO staff who made key contributions to the FISCAM are listed on page 15.

SUMMARY OF SIGNIFICANT CHANGES TO THE FISCAM[4]

Chapter 1

- Expanded purpose
  - provide guidance for performing effective and efficient Information System (IS) controls audits, either alone or as part of a performance audit, a financial audit, or an attestation engagement, including communication of any identified IS control weaknesses; and
  - inform financial, performance, and attestation auditors about IS controls and related audit issues, so that they can (1) plan their work in accordance with Generally Accepted Government Auditing Standards (GAGAS) and (2) integrate the work of IS controls specialists with other aspects of the financial or performance audit or attestation engagement.

- Conformity with July 2007 Revision to *Government Auditing Standards* – ("Yellow Book")(GAGAS), including information system control categories

- Conformity with AICPA auditing standards, including new risk standards

- An overall framework of IS control objectives (see summary on pages 11-13)

[4]This section summarizes significant changes to the FISCAM since the prior version.

- IS audit methodology consistent with GAGAS and FAM, including planning, testing, and reporting phases (see a summary of methodology steps on pages 14-15), which incorporates:
  - A top-down, risk-based evaluation that considers materiality and significance in determining effective and efficient audit procedures (the auditor determines which IS control techniques are relevant to the audit objectives and which are necessary to achieve the control activities; generally, all control activities are relevant unless the related control category is not relevant, the audit scope is limited, or the auditor determines that, due to significant IS control weaknesses, it is not necessary to test all relevant IS controls).
  - An evaluation of entitywide IS controls and their effect on audit risk, and therefore on the extent of audit testing (effective entitywide IS controls can reduce audit risk, while ineffective entitywide IS controls result in increased audit risk and generally are a contributory cause of IS control weaknesses at the system and business process application levels).
  - An evaluation of general controls and their pervasive impact on business process application controls (effective general controls support the effectiveness of business process application controls, while ineffective general controls generally render business process application controls ineffective).
  - An evaluation of security management at all levels of control —entitywide, system (includes networks, operating systems, and infrastructure applications), and business process application levels.
  - A control hierarchy (control categories, critical elements, and control activities) to assist in evaluating the significance of identified IS control weaknesses (if a critical element is not achieved, the respective control category is not likely to be achieved; if one of the nine control categories are not effectively achieved, IS controls are ineffective, unless other factors sufficiently reduce the risk).

- Groupings of control categories consistent with the nature of the risk.

- Change from "installation level" general controls to "system level" general controls to reflect the logically networked structure of today's systems

- IS controls audit documentation guidance for each audit phase

- Additional audit considerations that may affect an IS audit, including:
  - information security risk factors
  - automated audit tools
  - sampling techniques

Chapter 3

- Reorganized general control categories, consistent with GAGAS:
  - Security management - broadened to consider statutory requirements and best practices
  - Access controls - restructured to incorporate system software, eliminate redundancies, and facilitate IS auditing in a networked environment:
    - System boundaries
    - Identification and authentication
    - User authorization
    - Sensitive system resources
    - Audit and monitoring
    - Physical security
  - Configuration management - broadened to include network components and applications
  - Segregation of Duties - relatively unchanged
  - Contingency Planning - updated for new terminology

- Updated general control activities that (1) are consistent with current NIST and OMB information security guidance (including all NIST SP 800-53 controls) including references/mapping of each critical element to such guidance, and (2) consider new IS risks and audit experience

Chapter 4

- Audit methodology and IS controls for business process applications that (1) are consistent with GAGAS and current NIST and OMB information security guidance (including all NIST Special Publication 800-53 controls) including references/mapping to such guidance, and (2) consider new IS risks and audit experience:
  - Application security (formerly general controls at the application level)
  - Business process controls related to the validity, completeness, accuracy, and confidentiality of transactions and data during application processing
    - Transaction data input
    - Transaction data processing
    - Transaction data output
    - Master file data setup and maintenance
  - Interface controls
  - Data management systems controls

Appendices

- Expanded appendices to support IS audits
  - Updated information system controls audit planning checklist
  - Tables for summarizing the results of the IS audit
  - Mapping of FISCAM to NIST Special Publication 800-53 and other related NIST publications
  - Knowledge, skills, and abilities needed to perform IS audits
  - Scope of an IS audit in support of a financial audit
  - Entity's use of service organizations
  - Application of FISCAM to Single Audits
  - Application of FISCAM to FISMA
  - Information System Controls Audit Documentation
  - Updated Glossary

INFORMATION SYSTEM CONTROLS OBJECTIVES

GENERAL CONTROLS

Security Management

Controls provide reasonable assurance that security management is effective, including effective:

- security management program
- periodic assessments and validation of risk,
- security control policies and procedures,
- security awareness training and other security-related personnel issues,
- periodic testing and evaluation of the effectiveness of information security policies, procedures, and practices,
- remediation of information security weaknesses, and
- security over activities performed by external third parties.

Access Controls

Controls provide reasonable assurance that access to computer resources (data, equipment, and facilities) is reasonable and restricted to authorized individuals, including effective

- protection of information system boundaries,
- identification and authentication mechanisms,
- authorization controls,
- protection of sensitive system resources,
- audit and monitoring capability, including incident handling, and
- physical security controls.

Configuration Management

Controls provide reasonable assurance that changes to information system resources are authorized and systems are configured and operated securely and as intended, including effective

- configuration management policies, plans, and procedures,
- current configuration identification information,
- proper authorization, testing, approval, and tracking of all configuration changes,
- routine monitoring of the configuration,
- updating software on a timely basis to protect against known vulnerabilities, and
- documentation and approval of emergency changes to the configuration.

Segregation of Duties

Controls provide reasonable assurance that incompatible duties are effectively segregated, including effective

- segregation of incompatible duties and responsibilities and related policies, and
- control of personnel activities through formal operating procedures, supervision, and review.

Contingency Planning

Controls provide reasonable assurance that contingency planning (1) protects information resources and minimizes the risk of unplanned interruptions and (2) provides for recovery of critical operations should interruptions occur, including effective

- assessment of the criticality and sensitivity of computerized operations and identification of supporting resources,
- steps taken to prevent and minimize potential damage and interruption,
- comprehensive contingency plan, and
- periodic testing of the contingency plan, with appropriate adjustments to the plan based on the testing.

BUSINESS PROCESS APPLICATION CONTROLS

Completeness – controls provide reasonable assurance that all transactions that occurred are input into the system, accepted for processing, processed once and only once by the system, and properly included in output.

Accuracy – controls provide reasonable assurance that transactions are properly recorded, with correct amount/data, and on a timely basis (in the proper period); key data elements input for transactions are accurate; data elements are processed accurately by applications that produce reliable results; and output is accurate.

Validity – controls provide reasonable assurance (1) that all recorded transactions and actually occurred (are real), relate to the organization, are authentic, and were properly approved in accordance with management's authorization; and (2) that output contains only valid data.

Confidentiality – controls provide reasonable assurance that application data and reports and other output are protected against unauthorized access.

Availability – controls provide reasonable assurance that application data and reports and other relevant business information are readily available to users when needed.[5]

[5]Availability controls are principally addressed in application security controls (especially contingency planning) and therefore, are not included as specific controls in the business process controls (BP), interface controls (IN), and data management system controls (DA) categories in Chapter 4.

IS AUDIT METHODOLOGY STEPS

Plan the Information System Controls Audit

- Understand the Overall Audit Objectives and Related Scope of the Information System Controls Audit
- Understand the Entity's Operations and Key Business Processes.
- Obtain a General Understanding of the Structure of the Entity's Networks
- Identify Key Areas of Audit Interest
- Assess Information System Risk on a Preliminary Basis
- Identify Critical Control Points
- Obtain a Preliminary Understanding of Information System Controls
- Perform Other Audit Planning Procedures
  - Relevant Laws and Regulations
  - Consideration of the Risk of Fraud
  - Previous Audits and Attestation Engagements
  - Audit Resources
  - Multiyear Testing Plans
  - Communication with Entity Management and Those Charged with Governance
  - Service Organizations
  - Using the Work of Others
  - Audit Plan

Perform Information System Controls Audit Tests

- Understand Information Systems Relevant to the Audit Objectives
- Determine which IS Control Techniques are Relevant to the Audit Objectives
- For each Relevant IS Control Technique Determine Whether it is Suitably Designed to Achieve the Critical Activity and has been Implemented

- Perform Tests to Determine Whether such Control Techniques are Operating Effectively
- Identify Potential Weaknesses in IS Controls and Consider Compensating Controls

Report Audit Results

- Evaluate the Effects of Identified IS Control Weaknesses
  - Financial Audits, Attestation Engagements, and Performance Audits
- Consider Other Audit Reporting Requirements and Related Reporting Responsibilities

KEY GAO CONTRIBUTORS

GAO staff who made key contributions to the FISCAM include: Lon C. Chin, Debra M. Conner, David B. Hayes, Jeffrey L. Knott, David F. Plocher, John A. Spence, and Charles M. Vrabel.

Tables

Chapter 1. Introduction

1.0 Chapter 1 Overview

This manual provides a methodology for performing information system (IS) control audits in accordance with "generally accepted government auditing standards" (GAGAS), as presented in *Government Auditing Standards* (also known as the "Yellow Book").[6] However, at the discretion of the auditor, this manual may be applied on other than GAGAS audits. As defined in GAGAS, IS controls consist of those internal controls that are dependent on information systems processing and include general controls and application controls. This manual focuses on such general and application controls.

As computer technology has advanced, federal agencies and other government entities have become dependent on computerized information systems to carry out their operations and to process, maintain, and report essential information. Virtually all federal operations are supported by automated systems and electronic data, and agencies would find it difficult, if not impossible, to carry out their missions and account for their resources without these information assets. Hence, ineffective IS controls can result in significant risk to a broad array of government operations and assets. For example,

- resources, such as payments and collections, could be lost or stolen;
- computer resources could be used for unauthorized purposes, including the launching of attacks on others;
- sensitive information, such as taxpayer data, Social Security records, medical records, other personally identifiable information, and proprietary business information, could be inappropriately added, deleted, read, copied, disclosed, or

[6]GAO, *Government Auditing Standards*, GAO-07-162G (Washington, D.C.: July 2007).

modified for purposes such as espionage, identity theft, or other types of crime;

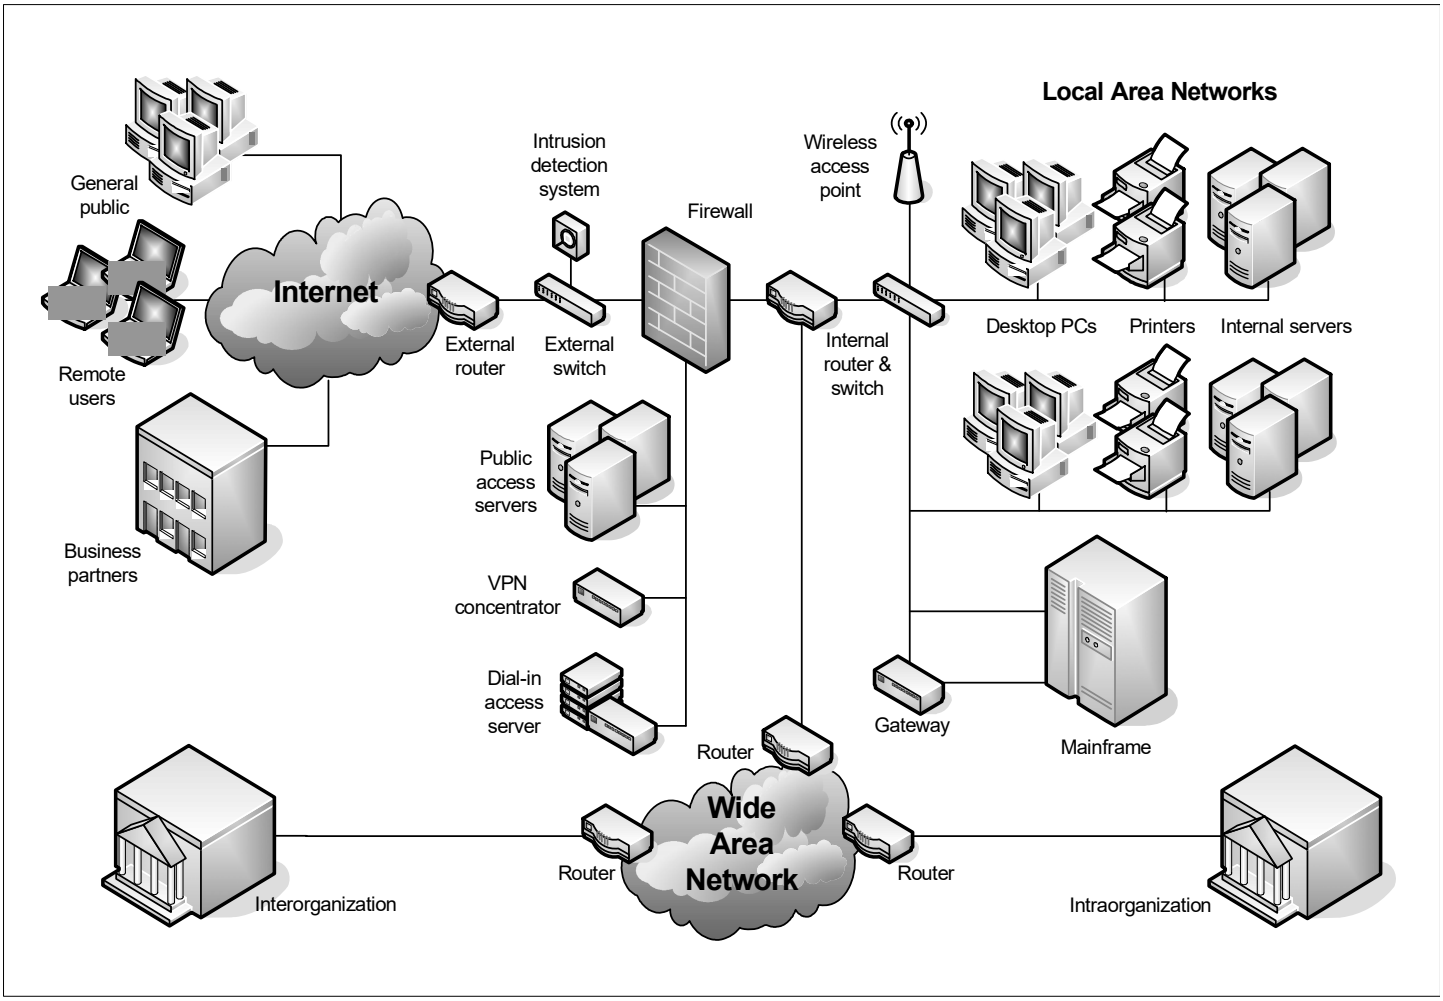
- critical operations, such as those supporting national defense and emergency services, could be disrupted;
- data could be modified or destroyed for purposes of fraud or disruption; and
- entity missions could be undermined by embarrassing incidents that result in diminished confidence in an entity's ability to conduct operations and fulfill its responsibilities.

The nature of IS risks continues to evolve. Protecting government computer systems has never been more important because of the complexity and interconnectivity of systems (including Internet and wireless), the ease of obtaining and using hacking tools, the steady advances in the sophistication and effectiveness of attack technology, and the emergence of new and more destructive attacks.

As a result, the reliability of computerized data and of the systems that process, maintain, and report these data is a major concern to managements of government entities and their auditors. Auditors may need to evaluate the effectiveness of information system controls over data supporting financial statements or data used to analyze specific program costs and outcomes. In addition, auditors may be called on to evaluate the effectiveness of IS controls to help reduce the risk due to errors, fraud, and other illegal acts and disasters or other incidents that cause the systems to be unavailable.

Figure 1 illustrates the potential complexity of a typical networked infrastructure. Such infrastructures are built upon multiple hosts, including desktop personal computers (PCs), servers, and mainframes. Data communications links and network devices such as routers, hubs, and switches enable the hosts to communicate with one another through local area networks (LANs) within entities. Wide area networks (WANs) connect LANs at different geographical locations. Moreover, entities are typically connected to the Internet.

Figure 1. An Example of Typical Networked Systems



Sources: GAO analysis and Visio.

1.1 Purpose and Anticipated Users of the Manual

This manual describes (1) an audit methodology for assessing the effectiveness of IS controls, and (2) the IS controls that auditors evaluate when assessing the confidentiality, integrity, and availability of information and information systems. The Federal Information System Controls Audit Manual (FISCAM) is designed to be used primarily on financial and performance audits and attestation engagements performed in accordance with "generally accepted government auditing standards" (GAGAS), as presented in *Government Auditing Standards* (also known as the "Yellow Book"). However, at the discretion of the auditor, this manual may be applied on other than GAGAS audits. This manual is intended for both (1) auditors performing financial and performance audits and attestation engagements to assist them in understanding the work done by IS controls specialists, and (2) IS controls specialists to plan and perform the IS controls audit. Federal and other government auditors may use this manual. It is not an auditing standard and it would be incorrect to refer to it as a standard. Its purposes are to

- provide guidance for performing effective and efficient IS controls audits, either alone or as part of a performance audit, a financial audit, or an attestation engagement, including communication of any identified IS control weaknesses; and
- inform financial, performance, and attestation auditors about IS controls and related audit issues, so that they can (1) plan their work in accordance with GAGAS and (2) integrate the work of IS controls specialists with other aspects of the financial or performance audit or attestation engagement.

The auditor should determine whether IS controls are relevant to the audit objectives. IS controls generally are relevant to a financial audit, as financial information is usually processed by information systems. For financial audits, the GAO/PCIE Financial Audit Manual

(FAM)[7] provides a framework for evaluating IS controls as part of a financial audit. The scope of an information system controls audit in support of a financial audit is summarized in Appendix VI. For performance audits, GAGAS 7.27 states that auditors should determine which audit procedures related to information system controls are needed to obtain sufficient, appropriate evidence to support the audit findings and conclusions.[8] This GAGAS paragraph provides factors that may assist auditors in making this determination.

This manual lists specific control activities and techniques and related suggested audit procedures. These are described at a high level and assume some level of expertise for an auditor to perform these audit procedures effectively. Accordingly, the auditor, applying judgment, should develop more detailed audit steps and tailor control activities based on the specific software and control techniques employed by the entity, the audit objectives, and significant areas of audit interest. Further, the auditor is responsible for identifying any necessary changes to IS control-related criteria, including changes to control activities and techniques, based on publications issued after December 2008. Future updates to the FISCAM, including any implementation tools and related materials, will be posted to the FISCAM website at http://www.gao.gov/special.pubs/fiscam.html.

As used in the FISCAM, "federal entities" refers to those entities that are subject to the specific law or regulation cited in the related discussion (e.g., Federal Information Security Management Act, Federal Financial Management Improvement Act, Federal Managers' Financial Integrity Act).

[7]The GAO/PCIE Financial Audit Manual (FAM) provides a framework for performing IS control audits performed as part of a financial audit. This framework is summarized in Appendix VI. The FAM is a joint effort between GAO and the President's Council on Integrity and Efficiency (PCIE) to provide a methodology for performing financial audits that meets professional standards. It can be viewed or downloaded at http://www.gao.gov/special.pubs/gaopcie/.

[8]In addition, GAO guidance, "Assessing the Reliability of Computer-Processed Data" (Washington, DC; October 2002) can be used to assist the auditor in determining the use of IS control audits in assessing data reliability in a performance audit.

In addition, the FISCAM includes narrative that is designed to provide a basic understanding of the methodology (Chapter 2), general controls (Chapter 3) and business process application controls (Chapter 4) addressed by the FISCAM. The narrative may also be used as a reference source by the auditor and the IS control specialist. More experienced auditors and IS control specialists may find it unnecessary to routinely refer to such narrative in performing IS control audits. For example, a more experienced auditor may have sufficient knowledge, skills, and abilities to directly use the control tables in Chapters 2 and 3 (which are summarized in Appendices II and III).

Further, many of the suggested audit procedures start with the word "review." The intent of such language is for the auditor to do more than simply look at the subject to be reviewed. Rather, a critical evaluation is envisioned, in which the auditor uses professional judgment and experience and undertakes the task with a certain level of skepticism, critical thinking, and creativity.

Although IS controls audit work, especially control testing, is generally performed by an IS controls specialist, financial or performance auditors with appropriate training, expertise, and supervision may undertake specific tasks in this area of the audit. Throughout this manual, the term "auditor" means either (1) an IS controls specialist or (2) a financial or performance auditor working in consultation with or under the supervision of an IS controls specialist. The FISCAM may be used by other staff that possess adequate IT competence. GAGAS requires that staff assigned to conduct an audit must collectively possess the technical knowledge, skills, and experience necessary to be competent for the type of work being performed. See Appendix V for additional information on the knowledge, skills, and abilities needed to perform information system control audits.

The following terms are used in the FISCAM to describe the degree of responsibility they impose on auditors and audit organizations:

- **must** - Auditors and audit organizations are required to comply with this unconditional requirement in all cases in which the circumstances exist to which the unconditional requirement applies. The term "must" is used only in FISCAM when the related requirement is specified as a "must" in GAGAS.

- **should** – Auditors and audit organizations are also required to comply with this presumptively mandatory requirement in all cases in which the circumstances exist to which the presumptively mandatory requirement applies; however, in rare circumstances, auditors and audit organizations may depart from a presumptively mandatory requirement provided they document their justification for the departure and how the alternative procedures performed in the circumstances were sufficient to achieve the objectives of the presumptively mandatory requirement. The term "should" is used when (1) the related requirement is specified as a "should" in GAGAS, or (2) performance is deemed necessary to meet GAGAS evidence requirements for an IS controls audit.

- **generally should** – Although optional, compliance with this policy is strongly encouraged

- **may** – Compliance with this procedure or action is optional. It is descriptive rather than required. It is explanatory material that provides further explanation and guidance on the professional requirements or identifies and describes other procedures or actions relating to auditors' or audit organizations' activities.

When these or similar terms are used to describe management or entity actions (rather than actions of the auditor or audit organization), the general meaning of the terms is intended. If the entity does not comply with a "must" or "should", the auditor should assess the impact of the noncompliance on the effectiveness of related IS controls.

1.2 Nature of Information System Controls

An evaluation of IS controls generally includes both general and business process application controls (also called application controls). The entity must have effective general and business process application controls to achieve the appropriate confidentiality, integrity, and availability of critical information and information systems.

Information system (IS) controls consist of those internal controls that are dependent on information systems processing and include general controls (entitywide, system, and business process application levels), business process application controls (input, processing, output, master file, interface, and data management system controls), and user controls[9] (controls performed by people interacting with information systems). General and business process application controls are always IS controls. A user control is an IS control if its effectiveness depends on information systems processing or the reliability (accuracy, completeness, and validity) of information processed by information systems. Conversely, a user control is not an IS control if its effectiveness does not depend on information systems processing or the reliability of information processed by information systems.

General controls are the policies and procedures that apply to all or a large segment of an entity's information systems and help ensure their proper operation. Examples of primary objectives for general controls are to safeguard data, protect business process application programs, and ensure continued computer operations in case of unexpected interruptions. General controls are applied at the entitywide, system, and business process application levels. The effectiveness of general controls is a significant factor in determining the effectiveness of business process application controls, which are applied at the business process application level.

[9]User controls are portions of controls that are performed by people interacting with IS controls. The effectiveness of user controls typically depend on information systems processing or the reliability of information processed by IS controls.

Without effective general controls, business process application controls can generally be rendered ineffective by circumvention or modification. For example, automated edits designed to preclude users from entering unreasonably large dollar amounts in a payment processing system can be an effective application control. However, this control is not effective (cannot be relied on) if the general controls permit unauthorized program modifications that might allow some payments to be exempted from the edits or unauthorized changes to be made to data files after the edit is performed. GAGAS paragraph 7.23 discusses the following types of general controls: security management, logical and physical access, configuration management, segregation of duties, and contingency planning. Chapter 3 discusses the general controls in an IS controls audit and provides more detail on the critical elements of each type of general control.

Business process application controls are directly related to individual computerized applications. They help ensure that transactions are complete, accurate, valid, confidential, and available[10]. Business process application controls include (1) programmed control techniques, such as automated edits, and (2) manual follow-up of computer-generated reports, such as reviews of reports identifying rejected or unusual items. GAGAS paragraph 7.23 defines application controls, or business controls, as those controls that help ensure the validity, completeness, accuracy, and confidentiality of transactions and data during application processing. Chapter 4 discusses the business process application level controls in an IS controls audit and provides more detail on the critical elements of each type of business process application control.

The overall framework of IS control objectives presented in the FISCAM can be viewed in different ways. One way to summarize the objectives is presented below.

[10]Availability controls are principally addressed in application security controls (especially contingency planning) and therefore, are not included as specific business process controls in Chapter 4.

GENERAL CONTROLS

Security Management

Controls provide reasonable assurance that security management is effective, including effective:

- security management program,
- periodic assessments and validation of risk,
- security control policies and procedures,
- security awareness training and other security-related personnel issues,
- periodic testing and evaluation of the effectiveness of information security policies, procedures, and practices,
- remediation of information security weaknesses, and
- security over activities performed by external third parties.

Access Controls

Controls provide reasonable assurance that access to computer resources (data, equipment, and facilities) is reasonable and restricted to authorized individuals, including effective:

- protection of information system boundaries,
- identification and authentication mechanisms,
- authorization controls,
- protection of sensitive system resources,
- audit and monitoring capability, including incident handling, and
- physical security controls.

Configuration Management

Controls provide reasonable assurance that changes to information system resources are authorized and systems are configured and operated securely and as intended, including effective:

- configuration management policies, plans, and procedures,
- current configuration identification information,

- proper authorization, testing, approval, and tracking of all configuration changes,
- routine monitoring of the configuration,
- updating software on a timely basis to protect against known vulnerabilities, and
- documentation and approval of emergency changes to the configuration.

Segregation of Duties

Controls provide reasonable assurance that incompatible duties are effectively segregated, including effective:

- segregation of incompatible duties and responsibilities and related policies, and
- control of personnel activities through formal operating procedures, supervision, and review.

Contingency Planning

Controls provide reasonable assurance that contingency planning (1) protects information resources and minimizes the risk of unplanned interruptions and (2) provides for recovery of critical operations should interruptions occur, including effective:

- assessment of the criticality and sensitivity of computerized operations and identification of supporting resources,
- steps taken to prevent and minimize potential damage and interruption,
- comprehensive contingency plan, and
- periodic testing of the contingency plan, with appropriate adjustments to the plan based on the testing.

BUSINESS PROCESS APPLICATION CONTROLS

Completeness – controls provide reasonable assurance that all transactions that occurred are input into the system, accepted for processing, processed once and only once by the system, and properly included in output.

Accuracy – controls provide reasonable assurance that transactions are properly recorded, with correct amount/data, and on a timely basis (in the proper period); key data elements input for transactions are accurate; data elements are processed accurately by applications that produce reliable results; and output is accurate.

Validity – controls provide reasonable assurance (1) that all recorded transactions and actually occurred (are real), relate to the organization, are authentic, and were properly approved in accordance with management's authorization; and (2) that output contains only valid data.

Confidentiality – controls provide reasonable assurance that application data and reports and other output are protected against unauthorized access.

Availability – controls provide reasonable assurance that application data and reports and other relevant business information are readily available to users when needed.[11]

[11]Availability controls are principally addressed in application security controls (especially contingency planning) and therefore, are not included as specific controls in the business process controls (BP), interface controls (IN), and data management system controls (DA) categories in Chapter 4.

1.3 Determining the Nature and Extent of Audit Procedures

The nature, timing, and extent of audit procedures performed to assess IS controls vary, depending on the audit objectives, the nature and extent of IS control risks and other factors. Factors that can affect the nature, timing, and extent of audit procedures include the nature and complexity of the entity's information systems, the entity's control environment, and particular data and applications that are significant to the financial statements or operations of the entity. As appropriate, the IS controls specialist, and the financial, performance, or attestation auditor generally should work cooperatively to determine the nature, timing, and extent of IS controls audit procedures.

Inadequate coordination can result in ineffective auditing, for example, incomplete IS controls audits or improper consideration of the work performed by the IS controls specialist. When performed as part of a financial statement audit, an assessment of IS controls is part of a comprehensive effort to evaluate both the controls over and reliability of financial reporting. In performance audits and attestation engagements, the nature and extent of IS controls audit procedures vary depending on the objectives of the audit.

1.4 Organization of This Manual

This manual is organized as follows:

- Chapter 2 describes the methodology for performing the IS controls audit.
- Chapter 3 provides information concerning the five general control categories, supporting critical elements, critical activities, potential control techniques, and suggested audit procedures.
- Chapter 4 provides information concerning the four business process application control level categories, supporting critical elements, critical activities, potential control techniques, and suggested audit procedures.

- Appendices provide supplemental information to assist the auditor in applying the FISCAM methodology.

This manual provides a risk-based approach for performing the information system controls audit that is consistent with government auditing standards and the GAO/PCIE *Financial Audit Manual* (FAM).[12] The FISCAM is consistent with GAGAS and, where appropriate, the FISCAM discusses the applicable GAGAS requirements. Each of the nine control categories (five general control categories and four business process level control categories) represents a grouping of related controls having similar types of risk. For each category, this manual discusses the key underlying concepts, associated risks if the controls in the category are ineffective, and the critical elements that should be achieved for IS controls to be effective.

This organization structure facilitates the following:

- Audit planning: Related audit steps can be grouped and broken down into three primary levels: the entitywide level, the system level, and the application level.
- Evaluation of findings: The effectiveness of IS controls can be evaluated by control technique, control activity, critical element, and control category.
- Audit report drafting: Findings can be summarized by control category and critical element.

To evaluate IS controls, the auditor should use appropriate criteria that are relevant to the audit objectives. For audits of federal entities, criteria are provided by the Federal Information Security Management Act (FISMA), OMB policies and guidance, and standards and guidance issued by the National Institute of Standards and Technology (NIST). NIST has developed a risk management framework of standards and guidelines for agencies to follow in

[12]The Financial Audit Manual is a joint effort between GAO and the President's Council on Integrity and Efficiency (PCIE) to provide a methodology for performing financial audits that meets professional standards. It can be viewed or downloaded at http://www.gao.gov/special.pubs/gaopcie/.

developing information security programs. This includes, for non-national security systems, Federal Information Processing Standards Publication (FIPS Pub) 199 *Standards for Security Categorization of Federal Information and Information Systems*, FIPS Pub 200, *Minimum Security Requirements for Federal Information and Information Systems*, and NIST Special Publication (SP) 800-53, *Recommended Security Controls for Federal Information Systems* and other NIST guidance[13]. The Office of Management and Budget (OMB) requires federal entities to apply NIST guidance to non-national security systems. Also, other sources, such as vendor recommended IS practices and other generally accepted IS resources, may provide criteria.[14] In addition, NIST is responsible for developing minimum security standards and guidelines that are complementary with standards and guidelines employed for the protection of national security systems and information contained in such systems. The auditor is responsible for identifying relevant IS control-related criteria issued after December 2008 and, where appropriate, criteria beyond that referred to in the FISCAM. Future updates to the FISCAM, including any implementation tools and related materials, will be posted to the FISCAM website at http://www.gao.gov/special.pubs/fiscam.html.

The critical elements and control activities are designed to be able to be applied to systems with varying level of risk. Consequently, critical elements and control activities are not differentiated by risk level. As discussed in Chapter 2, the auditor assesses IS risk based on a number of factors, including but not limited to consideration of the security categorizations assigned by management. In assessing whether the entity's control techniques are sufficient to achieve a particular control activity, the auditor considers several factors,

[13]NIST SP 800-100, *Information Security Handbook: A Guide for Managers*, provides guidance on establishing and implementing an information security program and includes certain entitywide program level controls.

[14]The Security Content Automation Program (SCAP) is a joint program of the National Security Agency (NSA), Defense Information Systems Agency (DISA), and NIST. SCAP is designed as a free, public repository of tools to be used for automating technical control compliance activities, vulnerability checking, and security measurement. Such tools can provide additional criteria. See http://nvd.nist.gov/scap/scap.cfm.

including but not limited to the level of IS risk, materiality or significance, and the audit objectives.

FISMA states that standards and guidelines for national security systems shall be developed, prescribed, enforced, and overseen as otherwise authorized by law and as directed by the President. Also, FISMA states that the head of each agency operating or exercising control of a national security system shall be responsible for ensuring that the agency:

- provides information security protections commensurate with the risk and magnitude of the harm resulting from the unauthorized access, use, disclosure, disruption, modification, or destruction of the information contained in such system;
- implements information security policies and practices as required by standards and guidelines for national security systems, issued in accordance with law and as directed by the President; and
- complies with the requirements of FISMA.

GAO has consulted with NIST, as provided for in FISMA, and all controls in NIST SP 800-53[15] are mapped to FISCAM[16]. Appendix IV provides a mapping of the FISCAM critical elements to NIST SP 800-53 and other related NIST publications. In addition, each critical element includes references to related NIST SP 800-53 controls. NIST SP 800-53 includes a table of the mapping. Also, to assist auditors, individual FISCAM control activities reference related NIST SP 800-53 controls. This manual provides additional narrative to assist the auditor in evaluating IS controls. In addition, FISCAM incorporates other NIST guidance, including, for example, NIST SP 800-100, *Information Security Handbook: A Guide for Managers*, which includes coverage of programmatic areas such as information security governance, capital planning and investment control, and system development life cycle.

[15]NIST has stated that it plans to update SP 800-53 annually.

[16]Audit procedures in FISCAM are designed to enable the auditor to determine if related control techniques are achieved.

FISCAM, which is consistent with NIST and other criteria, is organized to facilitate effective and efficient IS controls audits. Specifically, the methodology in the FISCAM incorporates:

- A top-down, risk-based evaluation that considers materiality and significance in determining effective and efficient audit procedures (the auditor determines which IS control techniques are relevant to the audit objectives and which are necessary to achieve the control activities; generally, all control activities are relevant unless the related control category is not relevant, the audit scope is limited, or the auditor determines that, due to significant IS control weaknesses, it is not necessary to test all relevant IS controls).
- An evaluation of entitywide IS controls and their effect on audit risk, and therefore on the extent of audit testing (effective entitywide IS controls can reduce audit risk, while ineffective entitywide IS controls result in increased audit risk and generally are a contributory cause of IS control weaknesses at the system and business process application levels)—NIST SP 800-53 principally relates to controls at the system and application level.
- An evaluation of general controls and their pervasive impact on business process application controls (effective general controls support the effectiveness of business process application controls, while ineffective general controls generally render business process application controls ineffective).
- An evaluation of security management at all levels of control (entitywide, system, and business process application levels).
- A control hierarchy (control categories, critical elements, and control activities) to assist in evaluating the significance of identified IS control weaknesses (if a critical element is not achieved, the respective control category is not likely to be achieved; if one of the nine control categories are not effectively achieved, IS controls are ineffective, unless other factors sufficiently reduce the risk).
- Groupings of control categories consistent with the nature of the risk.
- Experience gained in GAO's performance and review of IS control audits, including field testing the concepts in this revised FISCAM.

As discussed above, this manual is organized in a hierarchical structure to assist the auditor in performing the IS controls audit. Chapter 3 (general controls) and Chapter 4 (business process application level controls) contain several control categories, which are groupings of related controls pertaining to similar types of risk. For each control category, the manual identifies critical elements—tasks that are essential for establishing adequate controls within the category. For each critical element, there is a discussion of the associated objectives, risks, and control activities, as well as related potential control techniques and suggested audit procedures. This hierarchical structure facilitates the auditor's audit planning and analysis of identified control weaknesses.

Because control activities are generally necessary to achieve the critical elements, they are generally relevant to a GAGAS audit unless the related control category is not relevant, the audit scope is limited, or the auditor determines that, due to significant IS control weaknesses, it is not necessary to assess the effectiveness of all relevant IS controls. Within each relevant control activity, the auditor should identify control techniques implemented by the entity and determine whether the control techniques, as designed, are sufficient to achieve the control activity, considering IS risk and the audit objectives. The auditor may be able to determine whether control techniques are sufficient to achieve a particular control activity without evaluating and testing all of the control techniques. Also, depending on IS risk and the audit objectives, the nature and extent of control techniques necessary to achieve a particular control objective will vary.

If sufficient, the auditor should determine whether the control techniques are implemented (placed in operation) and are operating effectively. Also, the auditor should evaluate the nature and extent of testing performed by the entity. Such information can assist in identifying key controls and in assessing risk, but the auditor should not rely on testing performed by the entity in lieu of appropriate auditor testing. As discussed later in this section, if the control techniques implemented by the entity, as designed, are not sufficient to address the control activity, or the control techniques are not effectively implemented as designed, the auditor should determine the effect on IS controls and the audit objectives.

The entity's management is responsible for implementing an appropriate system of cost-effective IS controls, including an effective monitoring program to provide management with reasonable assurance that IS controls are properly designed and effectively operating. The auditor's responsibility is to perform tests of the IS controls and provide conclusions on the results of such tests to support the audit objectives.

Future updates to the FISCAM, including implementation tools and materials, will be posted to the FISCAM website at http://www.gao.gov/special.pubs/fiscam.html.

1.4.1 Appendices

The appendices to the FISCAM, summarized below, provide additional information to assist the auditor in performing the IS controls audit.

List of Appendices

Appendix	Description	Purpose
Appendix I	Information System Controls Audit Planning Checklist	To assist the auditor in requesting relevant background information.
Appendix II	Tables for Summarizing Work Performed in Evaluating and Testing General and Business Process Application Controls	To assist the auditor in summarizing work performed.
Appendix III	Tables for Assessing the Effectiveness of General and Business Process Application Controls	To assist the auditor in assessing and reporting on IS controls.
Appendix IV	Mapping of FISCAM to NIST SP 800-53 and Other Related NIST Publications	To show correlation of FISCAM critical elements to NIST SP 800-53 and related NIST publications.
Appendix V	Knowledge, Skills, and Abilities Needed to Perform Information System Controls Audits	Skill sets necessary to perform the IS controls audit.
Appendix VI	Scope of an Information System Controls Audit in Support of a Financial Audit	To show relation of FISCAM to relevant FAM sections.
Appendix VII	Entity's Use of Service Organizations	Audit issues related to an entity's use of a service organization and use of FISCAM as a basis for performing a SAS 70 audit.

Appendix	Description	Purpose
Appendix VIII	Application of FISCAM to Single Audits	Use of FISCAM to assess IS controls over compliance requirements and financial reporting in connection with a Single Audit.
Appendix IX	Application of FISCAM to FISMA	Use of FISCAM for the independent evaluation of a federal agency's information security program required by FISMA.
Appendix X	Information System Controls Audit Documentation	Summarizes IS controls audit documentation
Appendix XI	Glossary	Key terms used in the FISCAM.
Appendix XII	Bibliography	List of information sources.

Chapter 2. Performing the Information System Controls Audit

2.0 Introduction

The information system (IS) controls audit involves the following three phases:

- Planning: The auditor determines an effective and efficient way to obtain the evidential matter necessary to achieve the objectives of the IS controls audit and the audit report. For financial audits, the auditor develops an audit strategy and an audit plan. For performance audits, the auditor develops an audit plan.
- Testing: The auditor tests the effectiveness of IS controls that are relevant to the audit objectives.
- Reporting: The auditor concludes on the effect of any identified IS control weaknesses on the audit objectives and reports the results of the audit, including any material weaknesses and other significant deficiencies.

Appendix VI provides the scope of an IS controls audit in support of a financial statement audit.

For each of the three phases, the auditor prepares appropriate audit documentation.

In addition to the GAGAS field work and reporting standards (Chapters 4 through 8), which are generally addressed by the FISCAM, the auditor performing a GAGAS audit also should meet the requirements in Chapters 1, 2, and 3 of *Government Auditing Standards*.

2.1 Plan the Information System Controls Audit

2.1.1 Overview

In planning the IS controls audit, the auditor uses the equivalent concepts of materiality (in financial audits and attestation engagements) and significance[17] (in performance audits) to plan both effective and efficient audit procedures. Materiality and significance are concepts the auditor uses to determine the planned nature, timing, and extent of audit procedures. The underlying principle is that the auditor is not required to spend resources on items of little importance; that is, those that would not affect the judgment or conduct of a reasonable user of the audit report, in light of surrounding circumstances. On the basis of this principle, the auditor may determine that some areas of the IS controls audit (e.g., specific systems) are not material or significant, and therefore warrant little or no audit attention.

Materiality and significance include both quantitative and qualitative factors in relation to the subject matter of the audit. Even though a system may process transactions that are quantitatively immaterial or insignificant, the system may contain sensitive information or provide an access path to other systems that contain information that is sensitive or otherwise material or significant. For example, an application that provides public information via a website, if improperly configured, may expose internal network resources, including sensitive systems, to unauthorized access. Materiality is

[17] GAGAS paragraph 7.04 states that "the concept of significance assists auditors throughout a performance audit, including when deciding the type and extent of audit work to perform, when evaluating results of audit work, and when developing the report and related findings and conclusions. Significance is defined as the relative importance of a matter within the context in which it is being considered, including quantitative and qualitative factors. Such factors include the magnitude of the matter in relation to the subject matter of the audit, the nature and effect of the matter, the relevance of the matter, the needs and interests of an objective third party with knowledge of the relevant information, and the impact of the matter to the audited program or activity. Professional judgment assists auditors when evaluating the significance of matters within the context of the audit objectives."

more fully discussed in the FAM in section 230 (Determine Planning, Design, and Test Materiality), and both materiality and significance are discussed further in GAGAS.

Planning occurs throughout the audit as an iterative process. (For example, based on findings from the testing phase, the auditor may change the planned audit approach, including the design of specific tests.) However, planning activities are concentrated in the planning phase, during which the objectives are to obtain an understanding of the entity and its operations, including its internal control, identify significant issues, assess risk, and design the nature, extent, and timing of audit procedures. To accomplish this, the methodology presented in this chapter includes guidance to help the auditor do the following:

- Understand the overall audit objectives and related scope of the IS controls audit
- Obtain an understanding of an entity and its operations and key business processes
- Obtain a general understanding of the structure of the entity's networks
- Identify key areas of audit interest (files, applications, systems, locations)
- Assess IS risk on a preliminary basis
- Identify critical control points (for example, external access points to networks)
- Obtain a preliminary understanding of IS controls
- Perform other audit planning procedures

Although each of these areas is discussed separately in this chapter, they are not generally performed as discrete, sequential steps. For example, the IS controls specialist may gather information related to several steps concurrently, such as through interviews with key information technology (IT) staff or through data requests, or may perform steps in a different sequence. The auditor performs planning to determine an effective and efficient way to obtain the evidential matter necessary to support the objectives of the IS controls audit and the audit report. The nature and extent of audit

planning procedures varies for each audit depending on several factors, including the entity's size and complexity, the auditor's experience with the entity, and the auditor's knowledge of the entity's operations.

A key to a high-quality audit, the senior members of the audit team should be involved in planning. The auditor should coordinate with the entity being audited and, if the IS controls audit is part of another audit, with senior members of the overall audit team. In addition, auditors generally should determine the needs of other auditors who plan to use the work being performed and consult with them in a timely manner, especially when making decisions involving significant judgment.

If the IS controls audit is performed as part of a financial audit, GAGAS require the auditor to obtain an understanding of internal control over financial reporting sufficient to assess the risk of material misstatement of the financial statements whether due to error or fraud, and to design the nature, timing, and extent of further audit procedures based on that assessment. This includes performing risk assessment procedures to evaluate the design of controls relevant to an audit of financial statements and to determine whether they have been implemented. In obtaining this understanding, the auditor considers how an entity's use of information technology (IT) and manual procedures affect controls relevant to the audit. The auditor's responsibilities for considering internal control in a financial audit are described in more detail in the FAM.

If the IS controls audit is performed as part of an examination-level attestation engagement, the auditor should obtain a sufficient understanding of internal control that is material to the subject matter in order to plan the engagement and design procedures to achieve the objectives of the attestation engagement.

If the IS controls audit is performed as part of a performance audit, GAGAS[18] (para. 7.24) states that when information systems controls

[18]There is a section of GAGAS entitled "Information Systems Controls" (paras. 7.23-7.27)

are determined to be significant to the audit objectives, auditors should then evaluate the design and operating effectiveness of such controls. This evaluation would include other information systems controls that impact the effectiveness of the significant controls or the reliability of information used in performing the significant controls. Auditors should obtain a sufficient understanding of information systems controls necessary to assess audit risk and plan the audit within the context of the audit objectives.

Additionally, GAGAS (para. 7.27) states that auditors should determine which audit procedures related to information systems controls are needed to obtain sufficient, appropriate evidence to support the audit findings and conclusions. It also provides the following factors to assist the auditor in making this determination:

a. The extent to which internal controls that are significant to the audit depend on the reliability of information processed or generated by information systems.

b. The availability of evidence outside the information system to support the findings and conclusions: It may not be possible for auditors to obtain sufficient, appropriate evidence without assessing the effectiveness of relevant information systems controls. For example, if information supporting the findings and conclusions is generated by information systems or its reliability is dependent on information systems controls, there may not be sufficient supporting or corroborating information or documentary evidence that is available other than that produced by the information systems.

c. The relationship of information systems controls to data reliability: To obtain evidence about the reliability of computer-generated information, auditors may decide to assess the effectiveness of information systems controls as part of obtaining evidence about the reliability of the data. If the auditor concludes that information systems controls are effective, the auditor may reduce the extent of direct testing of data.

d. Assessing the effectiveness of information systems controls as an audit objective: When assessing the effectiveness of information systems controls that is directly a part of an audit objective, auditors

should test information systems controls necessary to address the audit objectives. For example, the audit may involve the effectiveness of information systems controls related to certain systems, facilities, or organizations.

2.1.2 Understand the Overall Audit Objectives and Related Scope of the Information System Controls Audit

The nature, timing, and extent of IS controls audit procedures vary depending upon the audit objectives. For example, the IS controls audit

- may be performed as part of a financial or performance audit, or may be performed as a separate engagement;
- may comprehensively address an entire entity, a component, or a network, or may narrowly target an application, specific technology (e.g., wireless, operating system, etc.), or location; and/or
- may include all control objectives or only a subset of control objectives (e.g., general controls, business process controls, or selected components of them, such as focusing on an entity's security management program).

If achieving the audit objectives does not require an overall conclusion on the effectiveness of the entity's IS controls or relates only to certain components of the entity or a subset of controls, the auditor's assessment would not necessarily identify all significant IS control weaknesses that may exist. For example, a limited review of controls over a type of operating system may not identify any significant weaknesses, although there may be very significant weaknesses in other areas that the auditor is unaware of because the scope of the audit is limited. Consequently, the auditor should evaluate the potential limitations of the auditor's work on the auditor's report and the needs and expectations of users. The auditor may determine that, because the limitations are so significant, the auditor will (1) communicate the limitations to the management of the audited entity, those charged with governance, and/or those requesting the audit, and (2) clearly report such limitations on the conclusions in the audit report. For example, in

reporting on an audit of an operating system, the auditor may determine that it is appropriate to clearly report that the scope of the assessment was limited to the operating system and that, consequently, additional IS control weaknesses may exist that could impact the effectiveness of IS controls related to the operating system and to the entity as a whole.

Based on the overall engagement objectives, the auditor should develop and document the objectives of the IS controls audit. Typical IS controls audit objectives include the following:

- To support financial statement audits by, for example, assessing the effectiveness of IS controls related to financial reporting. (Note: The assessment of IS controls generally occurs during the internal control phase of a financial statement audit.) This assessment affects the nature, timing, and extent of financial audit procedures to be performed, as well as provide timely recommendations for improvements in IS controls. In addition, it may cover the entire audit year or relate only to controls at a point in time, such as at the end of the fiscal year. The scope of an IS controls audit in support of a financial audit is described further in the FAM and in Appendix VI.
- To supplement IT performance audits by assessing the effectiveness of security within the context of a broader systems review.
- To support other performance audits, such as assessing data reliability or how well an information system protects the confidentiality, integrity, and availability of data and the effect of this level of protection on program performance.
- To determine the effectiveness of IS controls, not in support of another audit, so that any risks are identified. Such audits may be designed to provide a conclusion on the effectiveness of IS controls and describe any material weaknesses and other significant deficiencies, or merely describe any IS control weaknesses without an overall conclusion as to the effectiveness of IS controls.
- To support an evaluation of IS controls as required by FISMA.
- To support Single Audits.

The auditor should also determine and document (such as in an audit strategy and audit plan) the appropriate scope of the IS controls audit, including

- the organizational entities to be addressed (e.g., entitywide, selected component(s), etc.);
- the breadth of the audit (e.g., overall conclusion on IS control effectiveness, review of a specific application or technology area, such as wireless or UNIX, etc.);
- the types of IS controls to be tested:
- general and/or business process application level controls to be tested, or selected components; or
- all levels of the entity's information systems, or selected levels (e.g., entitywide, system level, or business process application level, or selected components of them—for definitions of each level, see the section below entitled "2.2 Perform Information System Controls Audit Tests.").

If the IS controls audit is performed as part of another audit, the auditor should understand the overall audit objectives and how the IS controls audit will integrate with the audit. The auditor should reach a common understanding of objectives with the audit team responsible for the overall audit.

2.1.3 Understand the Entity's Operations and Key Business Processes

The auditor should obtain and document an understanding of the entity sufficient to plan and perform the audit in accordance with applicable auditing standards and requirements. In planning the audit, the auditor obtains information that will provide an overall understanding of the entity, such as its mission, size and location, organization, business, strategies, risks, and internal control structure. Understanding the entity's operations in the planning process enables the auditor to identify, respond to, and resolve problems early in the audit.

The auditor's understanding of the entity includes:

- entity management and organization,
- external and internal factors affecting the entity's operations, and
- key business processes (defined below).

To plan the audit, the auditor obtains a general understanding of the entity's and the IT function's organizational structure, including key members of entity and IT management. The auditor's main objective is to understand how the entity is managed and how the organization is structured.

The auditor should identify significant external and internal factors that affect the entity's operations, particularly IT. External factors might include (1) IT budget, (2) external systems users, (3) current political climate, and (4) relevant legislation. Internal factors might include (1) size of the entity, (2) number of locations, (3) structure of the entity (centralized or decentralized), (4) complexity of operations, (5) IT management structure, (6) impact of information systems on business operations, (7) qualifications and competence of key IT personnel, and (8) turnover of key IT personnel. The auditor should document any significant factors that could affect the IS controls audit, including the auditor's risk assessment.

The auditor should also obtain a general understanding of the entity's business processes, particularly those processes most closely related to the audit objectives. Business processes are the primary functions that the entity performs in accomplishing its mission. Examples of typical business processes in government entities include

- mission-related processes, typically at the program or subprogram level, such as education, public health, law enforcement, or income security;
- financial management processes, such as collections, disbursements, or payroll; and
- other support processes, such as human resources, property management, or security.

Understanding the entity's operations and business processes includes understanding how business process applications are used to support key business processes, as it tends to vary from entity to entity. The auditor should obtain and review documentation, such as design documents, blueprints, business process procedures, user manuals, etc., and inquire of knowledgeable personnel to obtain a general understanding of each significant business process application that is relevant to the audit objectives. This includes a detailed understanding of

- business rules (e.g. removing all transactions that fail edits or only selected ones based on established criteria),
- transaction flows (detailed study of the entity's internal controls over a particular category of events that identifies all key procedures and controls relating to the processing of transactions), and
- application and software module interaction (transactions leave one system for processing by another, e.g. payroll time card interfaces with pay rate file to determine salary information).

Obtaining this understanding is essential to assessing information system risk, understanding business process application controls, and developing relevant audit procedures. For efficiency, the auditor may combine this step with the steps in FISCAM section 2.2.1 subsection entitled "Understand Information Systems Relevant to the Audit Objectives" to aid in the identification of relevant controls.

The auditor should identify and document the key business processes that are relevant to the audit objectives. For each key business process, the auditor should identify the significant general support systems and major applications that are used to support

each key business process.[19] Also, for each key business process, the auditor should identify the use of contractors and others to process information and/or operate systems for or on behalf of the entity. Throughout the remainder of this manual, references to entity systems and business processes include the use of contractors and others to process information and/or operate systems for or on behalf of the entity. If the IS controls audit is performed as part of a financial audit, as discussed in FAM 320 (Understand Information Systems) and other FAM sections, the auditor should obtain an understanding of the entity's information systems (including methods and records) for processing and reporting accounting (including supplemental information), compliance, and operations data (including performance measures reported in the Management's Discussion and Analysis).

The auditor should document an understanding of the entity's operations and key business processes, including the following items to the extent relevant to the audit objectives:

- the significance and nature of the programs and functions supported by information systems;
- a general understanding of the entity's and the IT function's organizational structure;
- key business processes relevant to the audit objectives, including business rules, transaction flows, and application and software module interaction;
- significant general support systems and major applications that support each key business process;
- background information checklist, if used;
- significant internal and external factors that could affect the IS controls audit objectives;

[19]OMB uses the terms "general support" and "application" systems to describe the two types of entity systems. As defined in OMB Circular A-130, a general support system is an interconnected set of information resources under the same direct management control that share common functionality. It normally includes hardware, software, information, data, applications, communications, and people. The term "application" means the use of information resources (information and information technology) to satisfy a specific set of user requirements.

- a detailed organization chart, particularly the IT and the IS components;
- significant changes in the IT environment or significant applications implemented within the recent past (e.g. 2 years) or planned within the near future (e.g., 2 years); and
- the entity's reliance on third parties to provide IT services (e.g., in-house, remote connectivity, remote processing).

Appendix I includes an Information System Controls Audit Planning Checklist that can be provided to the entity's management to facilitate gathering appropriate information for this audit step.

The auditor generally gathers planning information through different methods (observation, interviews, reading policy and procedure manuals, etc.) and from a variety of sources, including

- previous audits and management reviews (see section 2.1.9.C),
- top-level entity and IT management,
- entity management responsible for relevant significant programs,
- Office of Inspector General (IG) and internal audit management (including any internal control officer),
- other members of the audit organization, concerning relevant completed, planned or in-progress assignments,
- personnel in the Office of General Counsel, and
- personnel in the Special Investigator Unit.

Also, the auditor generally gathers information from relevant reports and articles issued by or about the entity, including

- GAO reports;
- IG, internal audit, or other audit reports (including those for performance audits and other reviews);
- congressional hearings and reports;
- consultant reports; and
- material published about the entity in newspapers, magazines, Internet sites, and other publications.

2.1.4 Obtain a General Understanding of the Structure of the Entity's Networks

The auditor should obtain and document a general understanding of the structure of the entity's networks as a basis for planning the IS controls audit. The auditor's understanding includes a high-level view of the network architecture that the entity uses to implement relevant key business processes. Such an understanding helps the auditor to assess risk, identify potential critical control points on a preliminary basis, understand technologies that may be subject to audit, and identify key locations. The auditor generally should request documentation of such information from the entity, including both high-level and detailed network schematics. The auditor should obtain the following information about the network architecture, generally documented in network schematics:

- Internet presence;
- firewalls, routers, and switches;
- intrusion detection or prevention systems;
- critical systems, such as Web and mail systems, file transfer systems, etc.;
- network management systems;
- connections to inter- and intra-agency sites;
- connections to other external organizations;
- remote access—virtual private network and dial-in; and
- wireless connections.

2.1.5 Identify Key Areas of Audit Interest

The auditor should identify key areas of audit interest, which are those that are critical to achieving the audit objectives (e.g., general support and business process application systems and files (or components thereof)). For a financial audit, this would include key financial applications and data and related feeder systems.[20] For a

[20] A feeder system is a system that provides information or data to support the main application. For example, in a payroll system the time and attendance system is the feeder system for the main application.

performance audit, this would include key systems that are likely to be significant to the audit objectives. For each key area of audit interest, the auditor should document relevant general support systems and major applications and files, including (1) the operational locations of each key system or file, (2) significant components of the associated hardware and software (e.g., firewalls, routers, hosts, operating systems), (3) other significant systems or system level resources that support the key areas of audit interest, and (4) prior audit problems reported. The auditor should also identify all access paths into and out of the key areas of audit interest. By identifying the key systems, files, or locations, the auditor can concentrate efforts on them, and do little or no work associated with other areas. The auditor generally should prioritize important systems, files, or locations in order of importance to the audit objectives. The auditor may characterize these items by the sensitivity or significance of the information processed, dollar value of the transactions processed, or presence or number of key edits or other controls performed by a business process application.

2.1.6 Assess Information System Risk on a Preliminary Basis

Overview

The auditor should assess and document, on a preliminary basis, the nature and extent of IS risk that relates to the key areas of audit interest. IS risk is the likelihood that a loss of confidentiality, integrity, or availability could occur that would materially/significantly affect the audit objectives (e.g., for a financial audit, a material misstatement). Assessing IS risk involves evaluation of both the likelihood that such a loss of confidentiality, integrity, or availability could occur and the materiality or significance of a loss of confidentiality, integrity, or availability to the audit objectives. The auditor should document factors that significantly increase or decrease the level of IS risk and their potential impact on the effectiveness of information system controls.

Assessing IS risk relating to the audit is different from management's risk assessment. In assessing IS risk, the auditor is

not required or expected to reperform management's risk assessment. Rather, the auditor assesses IS risk on a preliminary basis using data that would be collected in the planning of audit (this includes using the entity's risk assessments and performing other audit procedures as outlined below). The auditor's risk assessment should reflect the impact of the effectiveness of IS controls on the audit objectives.

The auditor's assessment of IS risk affects the nature, timing, and extent of IS controls audit procedures. As IS risk increases, the auditor should perform more extensive and/or more effective tests of IS controls. For example, a significant number of Internet access points that are not centrally controlled increases IS risk. In this case, the auditor would expand the auditor's testing, as there are more potential access paths to the key areas of audit interest. Risk assessments prepared by the entity may serve as a useful tool to assist in the identification of IS risk. However, the auditor should not rely on them without performing audit procedures to identify and assess risk.

To develop a framework for analyzing IS risk, the auditor should consider IS risk in the context of the following three security objectives for information and information systems:

- Confidentiality—preserving authorized restrictions on information access and disclosure, including means for protecting personal privacy and proprietary information. A loss of confidentiality is the unauthorized disclosure of information.
- Integrity—guarding against improper information modification or destruction, which includes ensuring information nonrepudiation[21] and authenticity[22]. A loss of integrity is the unauthorized modification or destruction of information.

[21]Nonrepudiation is assurance that the sender of information is provided with proof of delivery and the recipient is provided with proof of the sender's identity, so neither can later deny having processed the information. Nonrepudiation may not be necessary to evaluate integrity to meet an audit objective.

[22]Authenticity is the property of being genuine and being able to be verified and trusted; confidence in the validity of a transmission, a message, or message originator. Authenticity may not be necessary to evaluate integrity to meet an audit objective.

- Availability—ensuring timely and reliable access to and use of information. A loss of availability is the disruption of access to or use of information or an information system.

In some instances, one or more of the security objectives may have more significance to the audit objectives than the others.

The auditor should identify factors or conditions that significantly increase or decrease IS risk. These factors are general in nature; the auditor uses judgment in determining (1) the extent of procedures to identify the risks and (2) the impact of such risks on the entity's operations and the audit objectives. Because this risk assessment involves the exercise of significant audit judgment, the auditor should use experienced audit team personnel to perform the risk assessment. Factors considered would include those related to inherent risk[23] as well as those related to the control environment, risk assessment, communication, and monitoring components of internal control[24]. The auditor identifies such factors based on information obtained in the planning phase, primarily from understanding the entity's operations and key business processes, including significant IT processing performed outside the entity.

For each risk identified, the auditor should document the nature and extent of the risk; the conditions that gave rise to that risk; and the specific information or operations affected (if not pervasive). The auditor should also document compensating controls or other considerations that may mitigate the effects of identified risks.

[23]Inherent risk is the likelihood that a loss of confidentiality, integrity, or availability could occur that would materially/significantly affect the audit objectives (e.g., for a financial audit, a material misstatement), assuming that there are no related internal controls.

[24]Standards for Internal Control in the Federal Government (GAO/AIMD-00-21.3.1) describe the five standards of internal control as: control environment, risk assessment, control activities, information and communications, and monitoring. The specific IS controls assessed in an IS controls audit are part of the control activities component.

As noted above, the auditor should assess and document, on a preliminary basis, the nature and extent of IS risks for the information and information systems related to the key areas of audit interest, considering confidentiality, integrity, and availability. The auditor should document the basis for the assessed risk and its potential impact on the audit objectives. For example, in a financial audit, the auditor should evaluate the possibility of a material misstatement as a result of a loss of confidentiality, integrity, or availability. As discussed above, risk assessments prepared by the entity may serve as a useful tool to assist the auditor in the identification of IS risks.

Also, as noted above, IS risk includes the risk of loss of confidentiality, integrity, or availability. Such risk includes the potential impact of a loss to entity operations, assets, and individuals. However, depending on the audit objectives, the impact on the audit objectives could be greater or lesser. Federal agencies are required to use the following three levels to categorize their systems based on the potential impact of a breach of security on organizational operations, organizational assets, or individuals:[25]

- *Low*. The loss of confidentiality, integrity, or availability could be expected to have a **limited adverse effect** on organizational operations, organizational assets, or individuals.[26] A limited adverse effect means that, for example, the loss of confidentiality, integrity, or availability might (i) cause a degradation in mission capability to an extent and duration that the organization is able to perform its primary functions, but the effectiveness of the functions is noticeably reduced; (ii) result in minor damage to organizational assets; (iii) result in minor financial loss; or (iv) result in minor harm to individuals.
- *Moderate*. The loss of confidentiality, integrity, or availability could be expected to have a **serious adverse effect** on

[25]These risk levels are discussed further in National Institute of Standards and Technology, *Standards for Security Categorization of Federal Information and Information Systems*, Federal Information Processing Standards Publication (FIPS PUB) 199 (December 2003).

[26]Adverse effects on individuals may include, for example, loss of the privacy to which individuals are entitled under law.

organizational operations, organizational assets, or individuals. A serious adverse effect means that, for example, the loss of confidentiality, integrity, or availability might (i) cause a significant degradation in mission capability to an extent and duration that the organization is able to perform its primary functions, but the effectiveness of the functions is significantly reduced; (ii) result in significant damage to organizational assets; (iii) result in significant financial loss; or (iv) result in significant harm to individuals that does not involve loss of life or serious life-threatening injuries.

- *High*. The loss of confidentiality, integrity, or availability could be expected to have a **severe or catastrophic adverse effect** on organizational operations, organizational assets, or individuals. A severe or catastrophic adverse effect means that, for example, the loss of confidentiality, integrity, or availability might (i) cause a severe degradation in or loss of mission capability to an extent and duration that the organization is not able to perform one or more of its primary functions; (ii) result in major damage to organizational assets; (iii) result in major financial loss; or (iv) result in severe or catastrophic harm to individuals involving loss of life or serious life-threatening injuries.

The auditor's assessment of IS risk may change as audit evidence is obtained. To determine whether audit procedures continue to be appropriate, the auditor should periodically reassess the IS risk during the audit. For example, the auditor may reassess the IS risk level at the end of the planning and testing phases, as well as when evidence is obtained that significantly affects the auditor's risk assessment. If IS risk changes during the audit, the auditor should make any necessary changes to the nature, timing, and extent of planned audit procedures.

The risk factors that the auditor considers consist of the following two types, which are discussed further below:

- Inherent risk factors

- Risk factors related to the control environment, risk assessment, communication, and monitoring components of internal control

Inherent Risk Factors

Information systems can introduce additional risk factors not present in a manual system. To properly assess IS risk, the auditor should (1) evaluate each of the following factors and (2) assess the overall impact of information systems on IS risk. The impact of these factors typically will be pervasive in nature.

- The nature of the hardware and software may affect IS risk, as illustrated below.
- The type of processing (online, batch oriented, or distributed) presents different levels of IS risk. Distributed networks enable multiple computer processing units to communicate with each other, increasing the number of potential access points and the risk of unauthorized access to computer resources and possible data alteration. On the other hand, distributed networks may decrease the risk of data inconsistencies at multiple processing units if the units share a common database.
- Peripheral access devices or system interfaces can increase IS risk. For example, Internet or wireless access to a system increases the system's accessibility to additional persons and therefore increases the risk of unauthorized access to computer resources.
- Highly customized application software may have higher IS risk than vendor-supplied software that has been thoroughly tested and is in general commercial use. On the other hand, vendor-supplied software new to commercial use may not have been thoroughly tested or undergone client processing to a degree that would encounter existing flaws.
- Certain hardware and software may have more significant identified weaknesses than others.
- In certain systems (e.g., enterprise resource planning—ERP—systems[27]), the audit trails and supporting information produced

[27]ERP systems consist of functional modules that support business requirements such as human resources, financials, or inventory control. The modules can be used individually or in conjunction with other modules as needed. The individual modules contain the business process necessary to complete their intended function.

by the systems may be limited in their usefulness (1) as a basis for applying certain types of controls or (2) as audit evidence.

- Highly decentralized applications, particularly Web applications, increase IS risk by adding complexity to IS and increasing potential vulnerabilities.
- The application of new technologies generally increases the risk that secure configurations of such technologies may not be well developed or tested, or that IT personnel may not properly implement security over such new technologies.
- The manner in which the entity's networks are configured can affect the related IS risk. For example, factors increasing IS risks include a significant number of Internet access points that are not centrally controlled, networks that are not segmented to protect sensitive systems or information, use of technologies that are no longer supported, or lack of technologies that enhance security.
- The consistency of the entity's enterprise architecture and IT strategy with its business strategies can affect the proper planning and implementation of IT systems and related security.

Also, the following risk factors, discussed in FAM 260 (Identify Risk Factors) are relevant to both financial and performance audits:

- Uniform processing of transactions: Because information systems process groups of identical transactions consistently, any misstatements arising from erroneous computer programming will occur consistently in the same types of transactions. However, the risk of random processing errors is reduced substantially in information systems–based accounting systems.
- Automatic processing: The information system may automatically initiate transactions or perform processing functions. Evidence of these processing steps (and any related controls) may or may not be visible.
- Increased potential for undetected misstatements: Information systems use and store information in electronic form and require less human involvement in processing than manual systems. Without adequate controls, there is increased risk that individuals could gain unauthorized access to sensitive

information and alter data without leaving visible evidence. Because information is in electronic form, changes to computer programs and data are not readily detectible. Also, users may be less likely to challenge the reliability of information systems output than manual reports.

- Existence, completeness, and volume of the audit trail: The audit trail is the evidence that demonstrates how a specific transaction was initiated, processed, and summarized. For example, the audit trail for a purchase could include a purchase order; a receiving report; an invoice; an entry in an invoice register (purchases summarized by day, month, and/or account); and general ledger postings from the invoice register. Some computer systems are designed to maintain the audit trail for only a short period, only in an electronic format, or only in summary form. Also, the information generated may be too voluminous to be analyzed effectively without software. For example, one transaction may result from the automatic summarization of information from hundreds of locations. Without the use of audit or retrieval software, tracing transactions through the processing may be extremely difficult.
- Unusual or nonroutine transactions: As with manual systems, unusual or nonroutine transactions increase IS risk. Programs developed to process such transactions may not be subject to the same procedures as programs developed to process routine transactions. For example, the entity may use a utility program to extract specified information in support of a nonroutine management decision.

In addition, the auditor should evaluate the additional audit risk factors discussed in the "Additional IS Risk Factors" at the end of this chapter.

Risk Factors Related to the Control Environment, Risk Assessment, Communication, and Monitoring Components of Internal Control

Also, the auditor should evaluate the IT system factors discussed below, to the extent relevant to the audit objectives, in making an overall assessment of the control environment, risk assessment, communication, and monitoring components of internal control.

Additional information concerning these internal control components can be found at GAO's *Standards for Internal Control in the Federal Government*[28] ("Green Book") and *Internal Control Management and Evaluation Tool*[29], and at FAM 260, 295A, and 295B.

a. **Management's attitudes and awareness with respect to IT systems:** Management's interest in and awareness of IT system functions (including those performed for the entity by other organizations) is important in establishing an entitywide consciousness of control issues. Management may demonstrate its interest and awareness by

- considering the risks and benefits of computer applications;
- communicating policies regarding IT system functions and responsibilities;
- overseeing policies and procedures for developing, modifying, maintaining, and using computers, and for controlling access to programs and files;
- considering the risk of material misstatement, including fraud risk, related to IT systems;
- responding to previous recommendations or concerns;
- quickly and effectively planning for, and responding to, computerized processing crises; and
- using reliable computer-generated information for key operating decisions.

b. **Organization and structure of the IT system function:** The organizational structure affects the control environment. Centralized structures often have a single computer processing organization and use a single set of system and applications software, enabling tighter management control over IT systems. In decentralized structures, each computer center generally has its own computer processing organization, application programs, and system software, which may result in differences in policies and procedures and various levels of compliance at each location.

[28]GAO, *Standards for Internal Control in the Federal Government,* AIMD-00-21.3.1 (Washington, D.C.:November 1, 1999).

[29]GAO, *Internal Control Management and Evaluation Tool*, GAO-01-1008G (Washington, D.C.:August 2001).

c. **Clearly defined assignment of responsibilities and authority:** Appropriate assignment of responsibility according to typical IT system functional areas can affect the control environment. Factors to consider include

- how the position of the Chief Information Officer (CIO) fits into the organizational structure;
- whether duties are appropriately segregated within the IT systems function, such as operators and programmers, since lack of segregation typically affects all systems;
- the extent to which management external to the IT systems function is involved in major systems development decisions; and
- the extent to which IT system policies, standards, and procedures are documented, understood, followed, and enforced.

d. **Management's ability to identify and to respond to potential risk:** Computer processing, by its nature, introduces additional risk factors. The entity should be aware of these risks and should develop appropriate policies and procedures to respond to any IT system issues that might occur. The auditor may evaluate

- the methods for monitoring incompatible functions and for enforcing segregation of duties and
- management's mechanism for identifying and responding to unusual or exceptional conditions.

Examples of potential IT-related control environment, risk assessment, communication, and monitoring weaknesses include:

- Management and personnel in key areas (such as accounting, IT systems, IG, and internal auditing) have a high turnover.
- Management attitude toward IT systems and accounting functions is that these are necessary "bean counting" functions rather than a vehicle for exercising control over the entity's activities or making better decisions.
- The number of people, particularly in IT systems and accounting, with requisite skill levels relative to the size and complexity of the operations is inadequate.
- Management has not adequately identified risks arising from internal sources, such as human resources (ability to

retain key people) or IT (adequacy of backup systems in the event of systems failure).
- Accounting systems and/or information systems, including IT systems, are not modified in response to changing conditions.

2.1.7 Identify Critical Control Points

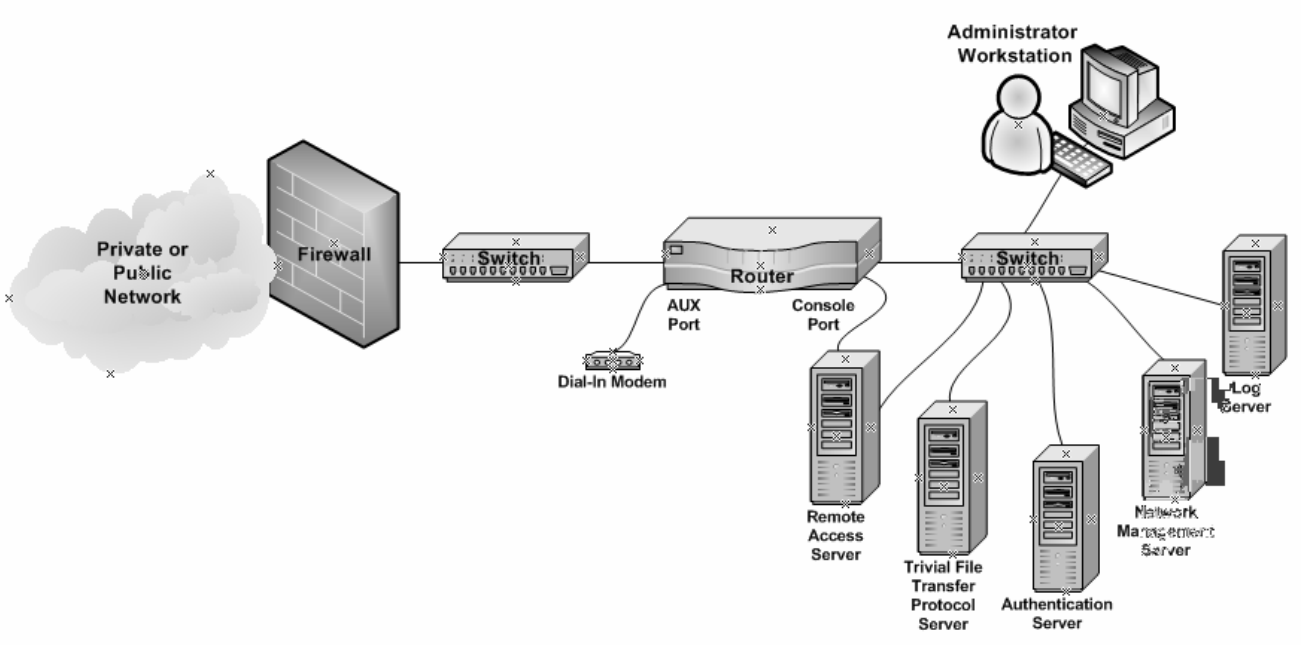
The auditor should identify and document critical control points in the design of the entity's information systems based on the auditor's understanding of such systems, key areas of audit interest, and IS risk. Critical control points are those system control points that, if compromised, could allow an individual to gain unauthorized access to or perform unauthorized or inappropriate activities on entity systems or data, which could lead directly or indirectly to unauthorized access or modifications to the key areas of audit interest. Control points typically include external access points to the entity's networks, interconnections with other external and internal systems, system components controlling the flow of information through the entity's networks or to the key areas of audit interest, critical storage and processing devices, and related operating systems, infrastructure applications, and relevant business process applications. Typical control points also include network components where business process application controls are applied. As the audit testing proceeds and the auditor gains a better understanding of the entity's information systems, of control weaknesses, and of the related risks, the auditor should periodically reassess the critical control points. Based on information obtained during audit planning, the auditor should identify those critical control points in the entity's IT systems that are significant to the effectiveness of security over the key areas of audit interest.

An analysis of critical control points includes consideration of alternate work sites. Since multiple FISCAM control categories are relevant to alternate work sites, it is not addressed as a specific control in this document. For further information on this subject refer to NIST guidance contained in SP 800-53 and SP 800-46.

In identifying critical control points and in planning and performing the assessment of IS controls, auditors apply the concept of control

dependencies. A control dependency exists when the effectiveness of an internal control is dependent on the effectiveness of other internal controls. An assessment of the effectiveness of information system controls over a critical control point includes testing the effectiveness of controls over other control points upon which the security of the critical control point is dependent. Figure 2 illustrates the concept of a control dependency in relation to a router for a typical network.

Figure 2: Example of Router Control Dependencies



Source: GAO and Visio.

The figure illustrates that the effectiveness of controls over the router in this example network are dependent on controls over other control points. In this example, because unauthorized or inappropriate access to the other control points could affect the security of the router, the auditor's tests of IS controls generally should include controls over

- the trivial file transfer protocol (tftp) servers used to maintain a central repository of sensitive configuration files (tftp servers do

not require authentication and are also used as remote boot devices for routers);
- the centralized authentication server that authenticates users to the router and other network devices;
- network switches that could share sensitive data with routers such as passwords and shared keys (also, network switches provide a trusted path to the routers);
- administrative workstations used to manage network devices, such as routers; and
- the log server, which maintains logs containing relevant information about significant network events, such as router access.

In addition, as part of a review of the system level controls over the router, the auditor generally should test controls over

- the network management servers used to manage configuration files that contain sensitive information about network devices such as routers;
- remote access to the router via the auxiliary and console ports that could be used to remotely manage the router;
- the firewalls that provide boundary protection (i.e., limits connectivity to the router);
- unencrypted network traffic that could be "sniffed" to obtain router or other privileged passwords; and
- the PC connected to the router that could facilitate direct connectivity to the router.

Further, the auditor generally should test other controls that may affect the security of the router, based on the auditor's judgment. Note that, in addition to controls over access to the router itself, IS controls include controls over the routing of traffic throughout the network (see AC-1 in Chapter 3).

As the auditor performs the IS controls audit, based on the auditor's assessment of risk and the results of audit tests, the auditor may determine that it is necessary to modify the scope of the audit, including revisions to the critical control points. For example, if

significant IS control weaknesses are identified during the audit, it may not be necessary to perform all planned tests of IS controls. If testing is reduced due to the identification of significant weaknesses, the auditor should document such a decision. Also, testing may result in the identification of additional risks, and critical control points, and /or control dependencies; the auditor should determine whether to adjust the scope for them.

2.1.8 Obtain a Preliminary Understanding of Information System Controls

The auditor should obtain and document a preliminary understanding of the design of the entity's IS controls, including the organization, staffing, responsibilities, authorities, and resources of the entity's security management function. The auditor should document a preliminary understanding of entitywide controls (or componentwide controls if only a component is being audited) related to security management, access controls, configuration management, segregation of duties and, contingency planning.

The auditor should understand the design of each of the three types of IS controls (general, business process application, and user controls) to the extent necessary to tentatively conclude whether these controls are likely to be effective. If they are likely to be effective, the auditor should consider specific IS controls in determining whether relevant IS control objectives are achieved. If IS controls are not likely to be effective, the auditor should obtain a sufficient understanding of control risks arising from IS controls to assess audit risk, design appropriate audit procedures, and develop appropriate findings.

In addition, the auditor should obtain a preliminary understanding of the business process application controls (business process, interface, and data management system controls) over key business process applications identified as or related to key areas of audit interest, determine where those controls are applied, and determine whether the controls are designed effectively and have been implemented (placed in operation). For example, authentication and authorization may be applied in network components that are different from those where key data files or applications reside; (e.g., Web applications that reside on one server may be used to

authenticate and authorize users of legacy systems that run on different servers or systems). The auditor should determine the potential impact of any identified design weaknesses on the completeness, accuracy, validity, and confidentiality of related application data. (See Chapter 4 for a description of completeness, accuracy, validity, and confidentiality.)

Based on this understanding, the auditor should make a preliminary assessment of whether IS controls are likely to be effective to assist in determining the nature, timing, and extent of testing. This assessment is based primarily on discussions with personnel throughout the entity, including program managers, system administrators, information resource managers, and systems security managers; on observations of IT operations and controls; on reviewing examples of evidence of control performance; on prior audits or the work of others; and on reading written policies and procedures. This preliminary assessment for financial audits is discussed further at FAM 270 (Determine Likelihood of Effective Information System Controls). Based on the preliminary assessment, the auditor should make any adjustments, as necessary, to the IS risk level, critical control points, and planned scope of the audit work.

Control activities for critical elements in each general control and business process control category are described in Chapters 3 and 4, respectively, and summarized in Appendix II. The auditor may use the summary tables in Appendix II, which are also available in electronic form from the FISCAM website at http://www.gao.gov/special.pubs/fiscam.html, to document preliminary findings and to assist in making the preliminary assessment of controls. As the audit progresses through testing of internal controls, the auditor may continue to use the electronic version of the tables to document controls evaluated and tested, test procedures performed, conclusions, and supporting documentation references.

The auditor should include the following information in the documentation of their preliminary understanding of the design of IS controls, to the extent relevant to the audit objectives:

- An identification of relevant entitywide, system, and business process application level controls designed to achieve the control activities for each critical element within each general control area and a determination of whether they are designed effectively and implemented (placed in operation), including identification of control activities for which there are no or ineffective controls at the entitywide level and the related risks
- Identification of business process controls for key applications identified as key areas of audit interest, determination of where those controls are implemented within the entity's systems, and the auditor's conclusion about whether the controls are designed effectively and implemented (placed in operation), including identification of control activities for which there are no or ineffective controls and the related risks and the potential impact of any identified design weaknesses on the completeness, accuracy, validity, and confidentiality of application data
- Any internal or third-party information systems reviews, audits, or specialized systems testing (e.g., penetration tests, disaster recovery tests, and application-specific tests) performed during the last year and the auditor's evaluation of the other auditor's objectivity, competence and conclusions (see section 2.1.9.C)
- Management's plans of action and milestones, or their equivalent, that identify corrective actions planned to address known IS control weaknesses (see section 2.1.9.C)
- Status of the prior years' audit findings (see section 2.1.9.C)
- Documentation for any significant computer security related incidents identified and reported for the last year
- Documented security plans
- Documented risk assessments for relevant systems (e.g., general support systems and major applications)
- System certification and accreditation documentation or equivalent for relevant systems
- Documented business continuity of operations plans and disaster recovery plans
- A description of the entity's use of third-party IT services

The auditor should obtain information from relevant reports and other documents concerning IS that are issued by or about the entity, including

- the entity's prior FISMA or equivalent reports on IS;
- the entity's annual performance and accountability report or equivalent reports on performance including reports filed to comply with the Federal Financial Management Improvement Act of 1996[30] (FFMIA) and Federal Managers' Financial Integrity Act of 1982[31] (FMFIA);
- other reports by management or the auditor about IS;
- other reports that contain information concerning IS that are relevant to the audit objectives;
- GAO reports;
- IG and internal audit reports (including those for performance audits and other reviews); and
- consultant reports.

2.1.9 Perform Other Audit Planning Procedures

The auditor should address the following areas during the planning phase, even though related audit procedures may be applied during the other phases. More specifically, the auditor should address any other issues, not identified in the previous steps, that could affect the objectives, scope, or methodology of the IS controls audit, including

- relevant laws and regulations;
- consideration of the risk of fraud;
- previous audits and attestation engagements;
- audit resources;
- multiyear testing plans;

[30]Federal Financial Management Improvement Act of 1996, 31 U.S.C. 3512 note.
[31]Federal Managers' Financial Integrity Act of 1982 (FMFIA), 31 U.S.C. 3512 (c), (d).

- communication with entity management and those charged with governance;
- service organizations;
- using the work of others; and
- audit plan (and an audit strategy for financial statement audits).

2.1.9.A Relevant Laws and Regulations

The auditor should identify applicable laws and regulations that are relevant to IS at the entity. Such laws and regulations may establish general or specific IS control requirements or criteria. Laws and regulations generally relevant to audits of federal agencies include FISMA, FMFIA, FFMIA, Appendix III of OMB Circular A-130[32], OMB Circulars A-123[33] and A-127[34], and FISMA implementing guidance. Federal laws and regulations that may affect the entity include, but are not limited to:

- Health Insurance Portability and Accountability Act of 1996 (HIPAA),[35]
- Gramm-Leach-Bliley Act,[36]
- Requirements for information security for Medicare Administrative Contractors,[37]
- Chief Privacy Officer statutory requirements,[38]

[32]OMB, *Management of Federal Information Resources*, Circular A-130 (Washington, D.C.: November 28, 2000).

[33]OMB, *Management's Responsibility for Internal Control*, Circular A-123 (Washington, D.C.: December 21, 2004).

[34]OMB, *Financial Management Systems*, Circular A-127, (Washington, D.C.: January 9, 2009).

[35]Health Insurance Portability and Accountability Act of 1996 (HIPAA), Pub. L. 104-191 (Aug. 21, 1996). For provisions relating to health information and systems, see 42 U.S.C. 1320d, et seq. For HHS HIPAA Security and Privacy Standards, see 45 C.F.R. Part 164.

[36]Gramm-Leach-Bliley Act, Pub. L. 106-102 (Nov. 12, 1999), see, e.g., Title V, Privacy.

[37]Requirements for information security for Medicare Administrative Contractors, Sec. 912, Medicare Prescription Drug, Improvement, and Modernization Act of 2003, Pub. L. 108-173 (Dec. 8, 2003), 117 Stat. 2387.

- OMB Memorandum M-05-08, *Designation of Senior Agency Officials for Privacy*, [39]
- OMB Memorandum M-06-19, *Reporting Incidents Involving Personally Identifiable Information*, and[40]
- OMB Memorandum M 07-16, *Safeguarding Against and Responding to the Breach of Personally Identifiable Information.*[41]

In IS controls audits of state and local governments, the auditor should identify applicable legal and reporting requirements and issues. Further information specifically related to audits of state and local government entities can be obtained from the National Association of State Auditors, Comptrollers and Treasurers (NASACT).[42]

Under GAGAS, the auditor should design and perform procedures to provide reasonable assurance of detecting instances of violations of legal and regulatory requirements that are significant within the context of the audit objectives. Consequently, if one of the objectives of the audit is to determine whether the entity violated specific laws or regulations, the auditor should plan the audit to detect significant violations of such laws or regulations. In financial audits, the auditor should test those laws and regulations that could have a direct and material effect on the financial statements.

[38]For example, sec. 522, Transportation, Treasury, Independent Agencies, and General Government Appropriations Act, 2005, Div. H, Consolidated Appropriations Act, 2005, Pub. L. 108-447 (Dec. 8, 2004).5 USC 552a note.

[39]OMB, *Designation of Senior Agency Officials for Privacy*, M-05-08 (Washington, D.C.: Feb. 11, 2005).

[40]OMB, *Reporting Incidents Involving Personally Identifiable Information and Incorporating the Cost for Security in Agency Information Technology Investments*, M-06-19 (Washington, DC: July 12, 2006).

[41]OMB, *Safeguarding Against and Responding to the Breach of Personally Identifiable Information*, M 07-16 (Washington, D.C.: May 22, 2007).

[42]Intergovernmental Information security Audit Forum, *Information Systems Security Auditing: Legal and Reporting Considerations* (Sept. 11, 2003) www.nasact.org/IISAF/legal.html

As part of an IS controls audit, the auditor's findings will typically be reported in terms of whether IS controls are effective. While laws and regulations such as FISMA, FMFIA, FFMIA, and OMB and NIST guidance provide requirements and criteria for assessing IS, IS controls audit objectives generally are not focused on detecting violations of such laws and regulations, but rather on assessing controls and identifying any control weaknesses. Consequently, such laws and regulations generally would not be considered significant to the audit objectives for the purposes of designing compliance tests to meet GAGAS. However, audit objectives may sometimes include specific objectives to determine compliance with such laws, in which case such laws and regulations would be significant. Also, other laws such as HIPAA, which provide for potential penalties, may be significant to the audit objectives.

2.1.9.B Consideration of the Risk of Fraud

In audits performed under GAGAS, the auditor should gather and assess the risks of fraud[43] occurring that is significant within the context of the audit objectives (for financial audits, a material misstatement) or that could affect the findings or conclusions. When auditors identify factors or risks related to fraud that has occurred or is likely to have occurred that they believe are significant within the context of the audit objectives, they should design procedures to provide reasonable assurance of detecting such fraud. In financial audits, GAGAS indicates that auditors should assess the risk of material misstatements of financial statement amounts or other financial data significant to the audit objectives due to fraud and to consider that assessment in designing the audit procedures to be performed.[44]

[43]Fraud is a type of illegal act involving the obtaining of something of value through willful misrepresentation.

[44]The terms "material" and "significant" are synonymous under generally accepted government auditing standards. In the AICPA standards, "material" is used in relation to audits of financial statements. "Significant" is used in relation to performance audits performed under GAGAS.

The auditor's responsibilities with respect to the risk of fraud in financial statement audits are discussed further in the GAGAS and in the AICPA's Auditing Standards Board Statement on Auditing Standards No. 99, titled *Consideration of Fraud in a Financial Statement Audit*, as amended (AU section 316). The risk of fraud is also a relevant consideration in performance audits. For example, an area of concern for fraud in a performance audit would be the adequate protection of personally identifiable information where individual social security numbers could be stolen and used for fraudulent activities.

If the IS controls audit is performed as part of a broader financial or performance audit, the auditor should coordinate with the audit team in the identification of and response to the risk of fraud. The auditor should be aware of fraud risks identified by the overall audit team and communicate any fraud risks or suspected fraud associated with IT to the overall audit team. Also, the overall audit team may identify audit procedures to be performed by the IS controls specialist to detect fraud significant to the audit.

The audit team should hold a brainstorming session at the start of the audit to discuss potential fraud risks, fraud factors such as individuals' incentives or pressures to commit fraud, the opportunity for fraud to occur, and rationalizations or attitudes that could allow individuals to commit fraud. For example, the following factors related to IS may indicate a risk of fraud:

- failure to provide an adequate security management program, including inadequate monitoring of control effectiveness;
- weaknesses in access and other IS controls that could allow overrides of internal controls or access to systems susceptible to fraud (e.g., payment systems);
- lack of adequate segregation of duties;[45] and
- pervasive or long-standing IS control weaknesses.

[45]Separation of duties so that no one individual controls all critical stages of a work process. Also see section 3.4 and the definition in the glossary.

The auditor should gather and assess information necessary to identify fraud risks that could be relevant to the audit objectives or affect the results of their audit. For example, the auditor may obtain information through discussion with officials of the audited entity or through other means to determine the susceptibility of the program to fraud, the status of internal controls the entity has established to detect and prevent fraud or the risk that officials of the audited entity could override internal controls. The auditor should exercise professional skepticism in assessing these risks to determine which factors or risks could significantly affect the results of their work if fraud has occurred or is likely to have occurred.

When the auditor identifies factors or risks related to fraud that they believe are significant within the context of the audit objectives or the results of the audit, they should design procedures to provide reasonable assurance of detecting such fraud. The auditor should prepare audit documentation related to their identification and assessment of and response to fraud risks.

Assessing the risk of fraud is an ongoing process throughout the audit and relates not only to planning the audit but also to evaluating evidence obtained during the audit. When testing general and business process application level controls, the auditor should be alert for information or other conditions that indicate fraud that is significant within the context of the audit objectives may have occurred.

A specific area of concern for fraud is override of controls, particularly in ERP applications. Because ERP applications are by their nature highly integrated, the potential risk of management override of controls is heightened. The audit generally should include procedures to identify system-based overrides. These procedures might include testing for instances of users performing inappropriate combinations of transactions (i.e., transactions that should have been segregated) and other similar procedures. Some examples of antifraud controls to consider include: workflow approvals, restricting access to sensitive files, segregation of duties, review of audit trails, and review of key management reports. Access controls, segregation of duties, and audit trails are discussed in Chapter 3.

The auditor should also evaluate situations or transactions that could be indicative of fraud. When information comes to the auditors' attention (through audit procedures, allegations received through fraud hotlines, or other means) indicating that fraud may have occurred, the auditor should evaluate whether the possible fraud could significantly affect the audit results. If the fraud could significantly affect the audit results, auditors should modify the audit steps and procedures, as necessary, to (1) determine if fraud likely has occurred and (2) if so, determine its effect on the audit results.

The auditor's training, experience, and understanding of the program being audited may provide a basis for recognizing that some acts coming to his or her attention may be indicative of fraud. Whether an act is, in fact, fraud is a determination to be made through the judicial or other adjudicative system and is beyond auditors' professional expertise and responsibility. However, the auditor is responsible for being aware of vulnerabilities to fraud associated with the area being audited to identify indications that fraud may have occurred.

2.1.9.C Previous Audits and Attestation Engagements

Under GAGAS, auditors should evaluate whether the audited entity has taken appropriate corrective action to address findings and recommendations from previous engagements that are significant within the context of the audit objectives (for financial audits, those that could have a material effect on the financial statements). When planning the audit, auditors should ask entity management to identify previous audits, attestation engagements, performance audits, or other studies that directly relate to the objectives of the audit, including whether related recommendations have been implemented. For IS control audits, this would include weaknesses identified by management through its monitoring controls (e.g., for federal entities, Plans of Action and Milestones) that are relevant to the audit objectives. Auditors should use this information in assessing risk and determining the nature, timing, and extent of current audit work, including determining the extent to which

testing the implementation of the corrective actions is applicable to the current audit objectives.

2.1.9.D Audit Resources

As with other types of audits, the staff assigned to perform the IS controls audit must collectively possess adequate professional competence. Therefore, it is important to carefully plan IS controls audits to ensure that adequate and appropriate resources are available to perform the audit. IS controls audits need a broad range of technical skills. In addition to skills necessary to assess each control category, IS controls audits generally use technical specialists with skills in such areas as networks, Windows/Novell, Unix, data management systems, and mainframe system and access control software. See Appendix V for a discussion of typical skill sets for IS controls specialists. Based on the knowledge obtained during audit planning, the auditor should identify resource requirements and determine whether internal resources are available or whether contractors will be necessary to complete the audit. The auditor should then schedule the resources for the appropriate periods of time.

Regardless of the size of the entity, the auditor must still perform the necessary planning to ensure that audit requirements are fully satisfied. This includes small/independent agencies which generally have a less complex, less risky IS control environment, which requires inherently fewer IS controls audit resources. The Committee of Sponsoring Organizations (COSO)[46] publication "Internal Controls over Financial Reporting – Guidance for Smaller Public Companies" includes guidance that could be used by smaller agencies to assist in planning their audits.

The auditor may determine that it is necessary to contract for audit services for all or a portion of the IS controls audit. For example, the auditor may determine that it is necessary to contract only for certain technical skills needed to perform the audit. Contracting for

[46]Is a voluntary private sector organization dedicated to improving the quality of financial reporting through business ethics, effective internal controls, and corporate governance.

audit services offers two significant benefits to an entity's audit organization—it allows audit coverage beyond that possible with the existing audit staff level, and it allows the audit activity to address technical and other issues in which the in-house staff is not skilled. Engagements that employ contractors in this way may help train in-house staff for future audits. However, when contracting for audit services, some in-house audit personnel generally should be actively involved. For example, the audit organization should be instrumental in determining the scope of the contracted services, and in developing the task order or request for proposal for the work. The FISCAM may be required to be used as a basis for the work to be performed.

Also, an auditor generally should be designated to monitor the contract for the entity. The contract monitor should have sufficient knowledge of IS controls to monitor and to assess the quality and adequacy of the work performed by the contractor, including the adequacy of the audit documentation. The contract monitor should discuss the contract with the contractor, including the product deliverables, the established time frames for deliverables, and documentation standards to adhere to. The auditor generally should hold this meeting before the contractor begins work. In addition, the contract monitor should attend critical meetings the contractor has with entity representatives, including the opening and close-out meetings.

The contract monitor should conduct a technical review of the work performed and may use this manual as guidance to determine whether the work addressed relevant issues and the audit procedures were adequate. For financial audits, the contract monitor or audit team may reperform some tests in accordance with FAM 650, "Using the Reports and Work of Others." Also, the contract monitor should review the audit report and supporting audit documentation to determine whether the audit report is adequately supported.

2.1.9.E Multiyear Testing Plans

In circumstances where the auditor regularly performs IS controls audits of the entity (as is done, for example, by an IG or for annual

financial audits), the auditor may determine that a multiyear plan for performing IS controls audits is appropriate. Such a plan will cover relevant key entity applications, systems, and processing centers. These strategic plans should cover no more than a 3-year period and include the schedule and scope of assessments to be performed during the period and the rationale for the planned approach. The auditor typically evaluates these plans annually and adjusts them for the results of prior and current audits and significant changes in the IT environment, such as implementation of new systems.

Multiyear testing plans can help to assure that all entity systems and locations are considered in the IS control evaluation process, to consider relative audit risk and prioritization of systems, and to provide sufficient evidence to support an assessment of IS control effectiveness, while helping to reduce annual audit resources under certain conditions. When appropriate, this concept allows the auditor to test computer-related general and business process application controls on a risk basis rather than testing every control every year. Under a multiyear testing plan, different controls are comprehensively tested each year, so that each significant general and business process control is selected for testing at least once during the multiyear period, which should not be more than 3 years. For example, a multiyear testing plan for an entity with five significant business process applications might include comprehensive tests of two or three applications annually, covering all applications in a 2 or 3 year period. For systems with high IS risk, the auditor generally should perform annual testing.

Such multiyear testing plans are not appropriate in all situations. For example, they are not appropriate for first-time audits, for audits where some significant business process applications or general controls have not been tested within a sufficiently recent period (no more than 3 years), or for audits of entities that do not have strong entitywide controls. Also, using this concept, the auditor should perform some limited tests and other activities annually for general and business process controls not selected for full testing; examples of such activities include updating the auditor's understanding of the control environment, inquiring about control changes, and conducting walk-throughs. For example, because of the importance of system level critical control points, the

auditor generally updates the understanding of these yearly through limited tests. Multiyear testing is discussed in greater detail in FAM section 395 G: "Multiyear Testing of Controls."

2.1.9.F Communication with Entity Management and Those Charged with Governance

The auditor should communicate information about the audit to appropriate entity management and those charged with governance. The auditor should document this communication, usually with an engagement letter. This step is particularly important in an IS controls audit because of the sensitivity of entity information systems and the nature of tests performed. Multiple meetings may be necessary with various levels of management so that they are adequately aware of the audit process. GAGAS requires that to help the various parties involved in the audit understand the audit objectives, time frames, and any data needs, the auditor should provide them with information about the specific nature of the audit, as well as general information concerning the planning and conduct of the audit and reporting. If the IS audit is performed as part of a broader financial or performance audit or attestation engagement, the auditor should coordinate this step with the audit team.

As part of this communication, it may be useful to provide general protocols for conducting the IS controls audit. Such protocols might include the following:

- Define the scope of the engagement. This might include an overview of the audit objectives, information about what is to be tested, when testing will occur, where and from what locations testing will be performed, who will be performing and monitoring the testing, and how the testing will be performed (for example, the methodology and tools that will be employed). However, it is important to not disclose detailed audit procedures so that the tests become ineffective.
- Communicate risks and steps taken by management to manage such risks. While risks cannot be eliminated entirely, they can be managed to an acceptable level to avoid, or at least minimize, service degradation or interruption. Auditors can communicate actions they have taken to minimize risks such as (a) not

performing denial-of-service testing, (b) coordinating testing with the audited site, (c) having knowledgeable personnel from the audited site monitoring all testing, (d) testing the tools that will be used and gaining expertise in their use, (e) logging test parameters, (f) logging testing and results, (g) using network analyzers to monitor loads placed on the network during testing, and (h) performing testing during nonpeak hours, if possible.

- Identify roles and responsibilities. Address the roles and responsibilities of each participant. Participants will likely include the test team, the auditors, the system owners, the systems security officer, the systems administrators, and contractors, if applicable.
- Address logistical requirements. Logistical requirements would include information about such items as the organization's range of Internet Protocol addresses and telephone numbers (particularly sensitive numbers that should be excluded from testing), analog telephone lines, wireless connections, Internet access paths, policies governing user accounts and passwords, etc. On-site workspace arrangements and entity points of contact might also be addressed.

GAGAS requires certain communications with management, those charged with governance, and others. For financial audits, see AU 380 and GAGAS 4.06. For attestation engagements, see GAGAS 6.06-6.08. For performance audits, see GAGAS 7.46-7.48. In situations in which those charged with governance are not clearly evident, auditors should document the process followed and conclusions reached for identifying those charged with governance.

2.1.9.G Service Organizations

When IS controls that are significant to a GAGAS audit are performed by a service organization external to the audited entity, the auditor should determine how to obtain sufficient, appropriate evidence about the operating effectiveness of such controls. The auditor should coordinate these procedures with the audit procedures performed in support of critical element SM-7 "Ensure That Activities Performed by External Third Parties are Adequately Secure". For example, the auditor should determine how

management of the audited entity monitors the effectiveness of IS controls at the service organization, such as through the receipt and analysis of a service auditor (SAS 70[47]) report. SAS 70 reports are discussed in more detail in Appendix VII. If the auditor uses a SAS 70 report, the auditor is responsible for determining whether SAS 70 report provides sufficient evidence about the operating effectiveness of IS controls performed by the service organization that are significant to the audit. Also, see section 2.1.9.H below. If IS controls are performed by service organizations, the auditor should document conclusions whether such controls are significant to the audit objectives and any audit procedures performed with respect to such controls (e.g., review of service auditor reports).

The auditor should integrate evidence obtained about the operating effectiveness of service auditor controls into the IS controls audit. For example, the auditor should evaluate the effectiveness of IS controls for the combination of IS controls at the audited entity and at the service organization collectively. The preparation and use of service auditor reports are discussed further in Appendix VII, including how to determine whether the service auditor report contains sufficient, appropriate evidence.

If the user auditor plans to use a service auditor's report as audit evidence about the design and implementation and/or operating effectiveness of controls at the service organization, the user auditor should:

- evaluate whether the description of the service organization's system and, for type 2 reports, the service auditor's description of tests of controls and results thereof, is as of a date or for a period that is appropriate for the user auditor's purposes;
- evaluate the sufficiency and appropriateness of the evidence provided for the understanding of internal control relevant to the audit;
- evaluate whether the specific tests of controls performed by the service auditor and the results thereof as described in the type 2

[47]The Auditing Standards Board of the American Institute of Certified Public Accountants is currently deliberating on possible changes to SAS 70 requirements. Users of the FISCAM should determine whether such changes have been made before applying this section.

report are relevant to assertions in the user entity's financial statements; and

- determine whether complementary user entity controls identified by the service organization are relevant to the user entity and, if so, obtain an understanding of whether the user entity has designed and implemented such controls and test such controls.

2.1.9.H Using the Work of Others

The auditor may be able to use the work of the other auditors to support findings or conclusions for the current audit. If auditors use the work of other auditors, they should perform procedures that provide a sufficient basis for using that work. For financial audits, further information on using the work of other auditors is discussed in FAM 650 and AU 336. For performance audits, as discussed in GAGAS 7.41-.43, auditors should obtain evidence concerning the other auditors' qualifications and independence and should determine whether the scope, quality, and timing of the audit work performed by the other auditors is adequate for reliance in the context of the current audit objectives. Procedures that auditors may perform in making this determination include reviewing the other auditors' report, audit plan, or audit documentation, and/or performing tests of the other auditors' work. The nature and extent of evidence needed will depend on the significance of the other auditors' work to the current audit objectives and the extent to which the auditors will use that work.

As discussed in GAGAS 7.43, some performance audits may necessitate the use of specialized techniques or methods that require the skills of a specialist. If auditors intend to use the work of specialists, they should obtain an understanding of the qualifications and independence of the specialists. (See GAGAS paragraph 3.05 for independence considerations when using the work of others.) Evaluating the professional qualifications of the specialist involves the following:

a. the professional certification, license, or other recognition of the competence of the specialist in his or her field, as appropriate;

b. the reputation and standing of the specialist in the views of peers and others familiar with the specialist's capability or performance;
c. the specialist's experience and previous work in the subject matter; and
d. the auditors' prior experience in using the specialist's work.

If the auditor plans to use the work of others, the auditor should document conclusions concerning the planned use of the work of others and any audit procedures performed with respect to using the work of others.

2.1.9.I Audit Plan

The auditor should prepare a written audit plan for each audit. The auditor should describe the objectives, scope, and methodology for the IS controls audit. The auditor should include planning information, discussed in the preceding sections of this chapter. If the IS controls audit is a component of a performance audit or attestation engagement, the auditor should integrate such information, as appropriate, into the overall audit plan. If the IS controls audit is a component of a financial audit, the auditor should integrate such information, as appropriate, with the overall audit strategy and audit plan for the financial audit. Additionally, the auditor generally should use the IS controls audit plan as a tool to communicate with the audit team. If the auditor believes that another auditor will use his or her work, the auditor may use the plan to coordinate with the other auditor.

In planning the audit, the auditor generally will first assess the effectiveness of entitywide and system level general controls prior to testing business process application level controls, unless the purpose of the audit is to identify control weaknesses in the application area. Without effective entitywide and system level general controls, business process application level controls may be rendered ineffective by circumvention or modification. Consequently, if general controls are not designed or operating effectively, the auditor may conclude that assessing business process application level controls is not efficient or necessary to achieve the audit objectives. In such cases, the auditor should

develop appropriate findings and consider the nature and extent of risks and their effect on the audit objectives and the nature, timing, and extent of audit procedures. However, if an audit objective is to identify control weaknesses within a business process application, an assessment of the business process application level controls would be appropriate. Also, testing of business process application level controls may be warranted when the auditor finds general control weaknesses mainly in areas with a relatively insignificant impact on business process controls and the key areas of audit interest, but not in more significant areas.

GAGAS require that a written audit plan be prepared for each performance audit. The form and content of the written audit plan may vary among audits and may include an audit strategy, audit program, project plan, audit planning paper, or other appropriate documentation of key decisions about the audit objectives, scope, and methodology and of the auditor's basis for these decisions. The auditor should update the plan, as necessary, to reflect any significant changes to the plan made during the audit. GAGAS include financial audit planning documentation standards.

2.1.10 Documentation of Planning Phase

The auditor should document the following information developed in the planning phase:

- Objectives of the IS controls audit and, if it is part of a broader audit, a description of how such objectives support the overall audit objectives.
- The scope of the IS controls audit.
- The auditor's understanding of the entity's operations and key business processes, including, to the extent relevant to the audit objectives, the following:
  - The significance and nature of the programs and functions supported by information systems;
  - Key business processes relevant to the audit objectives, including business rules, transaction flows, and application and software module interaction;

    - Significant general support systems and major applications that support each key process;
    - Background information request, if used;
    - Significant internal and external factors that could affect the IS controls audit objectives;
    - Detailed organization chart, particularly the IT and the IS components;
    - Significant changes in the IT environment/architecture or significant applications implemented within the past 2 years or planned within the next 2 years; and
    - The entity's reliance on third parties to provide IT services (e.g., in-house, remote connectivity, remote processing).
- A general understanding of the structure of the entity's or component's networks as a basis for planning the IS controls audit, including high-level and detailed network schematics relevant to the audit objectives.
- Key areas of audit interest, including relevant general support systems and major applications and files. This includes (1) the operational locations of each key system or file, (2) significant components of the associated hardware and software (e.g., firewalls, routers, hosts, operating systems), (3) other significant systems or system-level resources that support the key areas of audit interest, and (4) prior audit problems reported. Also, the auditor should document all access paths in and out of the key areas of audit interest.
- Factors that significantly increase or decrease IS risk and their potential impact on the effectiveness of information system controls. For each risk identified, the auditor should document the nature and extent of the risk; the conditions that gave rise to that risk; and the specific information or operations affected (if not pervasive).
- Preliminary assessment of IS risks related to the key areas of audit interest and the basis for the assessed risk. For each risk identified, the auditor should document the nature and extent of the risk; the conditions that gave rise to that risk; and the specific information or operations affected (if not pervasive). The auditor should also document other considerations that may mitigate the effects of identified risks.

- Critical control points.
- A preliminary understanding of the entity's IS controls, including the organization, staffing, responsibilities, authorities, and resources of the entity's security management function. The auditor should include the following information in the documentation of their preliminary understanding of the design of IS controls, to the extent relevant to the audit objectives:
  - Identification of entitywide level controls (and appropriate system level controls) designed to achieve the control activities for each critical element within each general control area and a determination of whether they are designed effectively and implemented (placed in operation), including identification of control activities for which there are no or ineffective controls at the entitywide level and the related risks;
  - Identification of business process level controls for key applications identified as key areas of audit interest, determination of where those controls are implemented (placed in operation) within the entity's systems, and the auditor's conclusion about whether the controls are designed effectively, including identification of control activities for which there are no or ineffective controls and the related risks and the potential impact of any identified design weaknesses on the completeness, accuracy, validity, and confidentiality of application data;
  - Any internal or third-party information systems reviews, audits, or specialized systems testing (e.g., penetration tests, disaster recovery tests, and application-specific tests) performed during the last year;
  - Management's plans of action and milestones, or their equivalent, that identify corrective actions planned to address known IS control weaknesses;
  - Status of the prior years' audit findings;
  - Documentation for any significant computer security related incidents identified and reported for the last year;
  - Documented security plans;
  - Documented risk assessments for relevant systems (e.g., general support systems and major applications);

- System certification and accreditation documentation or equivalent for relevant systems;
- Documented business continuity of operations plans and disaster recovery plans; and
- A description of the entity's use of third-party IT services

- Relevant laws and regulations and their relation to the audit objectives.
- Description of the auditor's procedures to consider the risk of fraud, any fraud risk factors that the auditor believes could affect the audit objectives, and planned audit procedures to detect any fraud significant to the audit objectives.
- Audit resources planned.
- Current multiyear testing plans.
- Documentation of communications with entity management.
- If IS controls are performed by service organizations, conclusions whether such controls are significant to the audit objectives and any audit procedures performed with respect to such controls (e.g., review of service auditor reports)
- If the auditor plans to use the work of others, conclusions concerning the planned use of the work of others and any audit procedures performed with respect to using the work of others.
- Audit plan (and for financial audits, audit strategy) that adequately describes the objectives, scope, and methodology of the audit.
- Any decision to reduce testing of IS controls due to the identification of significant IS control weaknesses.

2.2 Perform Information System Controls Audit Tests

2.2.1 Overview

In the testing phase of the IS controls audit, the auditor uses information obtained in the planning phase to test the effectiveness of IS controls that are relevant to the audit objectives. As audit evidence is obtained through performing control testing, the auditor should reassess the audit plan and consider whether changes are appropriate.

While determining whether IS controls are appropriately designed and implemented and while performing tests of IS controls, the auditor should periodically assess the cumulative audit evidence obtained to identify any revisions needed to the audit plan. For example, if significant weaknesses have been identified, the auditor may decide to perform less testing in remaining areas if audit objectives have been achieved. Conversely, the performance of tests may uncover additional areas to be tested.

For those IS controls that the auditor determines are properly/suitably designed and implemented, the auditor determines whether to perform tests of the operating effectiveness of such controls. In determining whether to test the operating effectiveness of IS controls, the auditor should determine whether it is possible and practicable to obtain sufficient, appropriate audit evidence without testing IS controls. For federal financial statement audits and for Single Audits (compliance requirements), the auditor is required to test controls that are suitably designed and implemented to achieve a low assessed level of control risk.

As discussed in Chapter 1, this manual is organized in a hierarchical structure to assist the auditor in performing the IS controls audit. Chapter 3 provides information concerning the general controls, and Chapter 4 provides information concerning four business process application level controls. Each of the chapters contains several control categories, which are groupings of related controls pertaining to similar types of risk. For each control category, this manual discusses the key underlying concepts and associated risks if the controls in the category are ineffective.

Chapter 3 is organized by five general control categories:

- security management,
- access controls,
- configuration management,
- segregation of duties, and
- contingency planning.

Chapter 4 is organized into four business process application level control categories:

- business process application level general controls[48] (also referred to as application security),
- business process controls,
- interface and conversion controls, and
- data management systems controls.

The last three business process application level control categories are collectively referred to herein as "business process application controls."

For each control category, the manual identifies critical elements—tasks that are essential for establishing adequate controls within the category. For each critical element, there is a discussion of the associated objectives, risks, and control activities, as well as related potential control techniques and suggested audit procedures. This hierarchical structure facilitates the auditor's analysis of identified control weaknesses.

Because control activities are generally necessary to achieve the critical elements, they are generally relevant to a GAGAS audit unless the related control category is not relevant, the audit scope is limited, or the auditor determines that, due to significant IS control weaknesses, it is not necessary to assess the effectiveness of all

[48]The first category of business process controls is defined as general controls operating at the business process application level.

relevant IS controls. Within each relevant control activity, the auditor should identify control techniques implemented by the entity and determine whether the control techniques, as designed, are sufficient to achieve the control activity, considering IS risk and the audit objectives. The auditor may be able to determine whether control techniques are sufficient to achieve a particular control activity without evaluating and testing all of the control techniques. Also, depending on IS risk and the audit objectives, the nature and extent of control techniques necessary to achieve a particular control objective will vary.

As discussed in Chapter 1, the FISCAM lists specific control activities and techniques and related suggested audit procedures. These are described at a high level and assume some level of expertise for an auditor to perform these audit procedures effectively. Accordingly, the auditor, applying judgment, should develop more detailed audit steps and tailor control activities based on the specific software and control techniques employed by the entity, the audit objectives, and significant areas of audit interest. Further, the auditor is responsible for identifying any necessary changes to IS control-related criteria, including changes to control activities and techniques, based on publications issued after December 2008. Future updates to the FISCAM, including any implementation tools and related materials, will be posted to the FISCAM website at http://www.gao.gov/special.pubs/fiscam.html.

Also, the auditor should evaluate the nature and extent of testing performed by the entity. Such information can assist in identifying key controls and in assessing risk, but the auditor should not rely on testing performed by the entity in lieu of appropriate auditor testing.

As discussed later in this section, if the control techniques implemented by the entity, as designed, are not sufficient to address the control activity, or the control techniques are not effectively implemented as designed, the auditor should determine the effect on IS controls and the audit objectives.

The auditor identifies control techniques and determines the effectiveness of controls at each of the following levels:

- Entitywide or component level (general controls) Controls at the entity or component level consist of the entitywide or componentwide processes designed to achieve the control activities. They are focused on how the entity or component manages IS related to each general control activity in Chapter 3. For example, the entity or component may have an entitywide process for configuration management, including establishment of accountability and responsibility for configuration management, broad policies and procedures, development and implementation of monitoring programs, and possibly centralized configuration management tools. The absence of entitywide processes may be a root cause of weak or inconsistent controls; for example, by increasing the risk that IS controls are not applied consistently across the organization.

- System level (general controls). Controls at the system level consist of processes for managing specific system resources related to either a general support system or major application. These controls are more specific than those at the entity or component level and generally relate to a single type of technology. Within the system level are three further levels that the auditor should assess: network, operating system, and infrastructure application. The three sublevels can be defined as follows:
  - *Network*. A network is an interconnected or intersecting configuration or system of components. For example, a computer network allows applications operating on various computers to communicate.
  - *Operating system*. An operating system is software that controls the execution of computer programs and may provide various services. For example, an operating system may provide services such as resource allocation, scheduling, input/output control, and data management.
  - *Infrastructure applications*. Infrastructure applications are software that is used to assist in performing systems operations, including management of network devices. These applications include databases, e-mail, browsers, plug-ins,

utilities, and applications not directly related to business processes. For example, infrastructure applications allow multiple processes running on one or more machines to interact across a network.

For an example of the identification of system level controls, take configuration management. The auditor who is evaluating configuration management at the system level should determine whether the entity has applied appropriate configuration management practices for each significant type of technology (e.g., firewalls, routers) in each of the three sublevels (e.g., specific infrastructure applications). Such configuration management practices typically include standard configuration guidelines for the technology and tools to effectively determine whether the configuration guidelines are effectively implemented.

- Business process application level. Controls at the business process application level consist of policies and procedures for controlling specific business processes. For example, the entity's configuration management should reasonably ensure that all changes to application systems are fully tested and authorized.

Chapter 3 includes general control activities that are applicable to the entitywide and system levels, and Chapter 4 includes the general controls applied at the business process application level (also referred to as application security) as well as the three categories of business process application controls. The control techniques for achieving the control activities and the related audit tests vary according to the level to which they are being applied. However, they are described at a high level in this manual, and these descriptions assume some expertise about the subject to be effectively performed. Thus, the auditor should develop more detailed audit steps based on the entity's specific software and control techniques, after consulting with the financial or performance auditor about audit objectives and significant areas of audit interest. This manual lists specific control activities and techniques and related suggested audit procedures. Table 1 shows the control categories applicable at each level.

Table 1: Control Categories Applicable at Different Levels of Audit

	Control Categories	Entitywide/ Component Level	System Level			Business Process Application Level
			Network	Operating Systems	Infrastructure Applications

Source: GAO.

The auditor should evaluate the effectiveness of IS controls including system and/or application level controls related to each critical control point. The auditor should evaluate all potential ways in which the critical control point could be accessed. Generally, for each critical control point, this would include assessing controls

related to the network, operating system, and infrastructure application components. For example, if a particular router was deemed to be a critical control point, the auditor generally should test controls related to the router itself (a network component), its operating system, and the infrastructure application that is used to manage the router. Access to any of these could lead to access to the control point. See the discussion of control dependencies in the above section entitled “Identify Critical Control Points”.

As discussed in audit planning (section 2.1.2), the auditor determines the appropriate scope of the IS controls audit, including

- the organizational entities to be addressed (e.g., entitywide, selected component(s), etc.);
- the breadth of the audit (e.g., overall conclusion on IS control effectiveness, review of a specific application or technology area, such as wireless or UNIX, etc.);
- the types of IS controls to be tested:
- general and/or business process application level controls to be tested, or selected components; or
- all levels of the entity’s information systems, or selected levels (e.g., entitywide, system level, or business process application level, or selected components of them.

The auditor should perform the following procedures as part of testing the effectiveness of information system controls:

- Understand information systems relevant to the audit objectives, building on identification of key areas of audit interest and critical control points.
- Determine which IS control techniques are relevant to the audit objectives. The control categories, critical elements, and control activities in Chapters 3 and 4 are generally relevant to all audits. However, if the auditor is not performing a comprehensive audit, for example, an application review, then there may be no need to assess controls in Chapter 3.
- For each relevant IS control technique, determine whether it is suitably designed to achieve the critical activity and has been implemented — placed in operation (if not done earlier).

- Perform tests to determine whether such control techniques are operating effectively.
- Identify potential weaknesses in IS controls. For each potential weakness, consider the impact of compensating controls or other factors that mitigate or reduce the risks related to potential weaknesses.

Understand Information Systems Relevant to the Audit Objectives

The auditor should obtain and document an understanding of the information processing steps performed in information systems that are significant to the audit objectives, including:

- The manner in which transactions are initiated;
- The nature and type of records and source documents;
- The processing involved from the initiation of transactions to their final processing, including the nature of computer files and the manner in which they are accessed, updated, and deleted; and
- For financial audits, the process used to prepare the entity's financial statements and budget information, including significant accounting estimates, disclosures, and computerized processing.

This understanding builds on information obtained in audit planning (e.g., identification of key areas of audit interest and critical control points). For efficiency, the auditor may combine this step with audit planning to aid in the identification of relevant controls. The auditor should perform and document walk-throughs for all business process applications that are significant to the audit objectives. Walk-throughs are important for understanding the information processing and for determining appropriate audit procedures.

Identify IS Control Techniques That Are Relevant to the Audit Objectives

Based on the results of audit planning and other procedures performed, the auditor should identify the control categories, critical elements, control activities, and control techniques that are relevant to the IS audit. In doing this, the auditor considers the audit

objectives and audit scope, the extent of IS risk and the preliminary understanding of IS controls. The process for identifying relevant control techniques is summarized below.

For IS audits that are stand alone GAGAS audits, generally all of the control categories, critical elements, and control activities are relevant to the audit objectives, unless specifically not part of the audit objectives. For example, in an evaluation of the effectiveness of business process controls in a specific application, the general controls in Chapter 3 may or may not be part of the audit objectives.

At the entitywide level and for each critical control point (including control dependencies) at the system and business process application levels, the auditor should identify and document the control techniques used by the entity to achieve each relevant control activity. For purposes of illustration, using the example of the router that is a critical control point (as discussed in section 2.1.7), the auditor would identify and document the control techniques used by the entity to achieve the control activities related to each relevant control category and critical element for the router and for the related control dependencies.

If the IS audit is part of a broader financial audit, performance audit, or attestation engagement, the auditor should obtain, from the overall audit team, audit documentation that identifies internal controls that are significant to the audit objectives. For financial audits performed under the FAM, such controls are identified in the SCE form. For each internal control technique that is identified as significant to the audit objectives (significant control technique) , the audit team should determine whether it is an IS control. An IS controls specialist generally should review and concur with the audit team's identification of IS controls, particularly with respect to whether all IS controls were properly identified as such.

The auditor should identify and document the other entitywide, system, and business process level IS controls upon which the effectiveness of each significant IS control technique depends. These other IS controls will principally relate to the entitywide level controls and to controls over each of the critical control points (including control dependencies) at the system and business process application levels. For example, if the IS control is the

review of an exception report, the auditor should identify and test the business process application controls directly related to the production of the exception report, as well as the general and other business process application controls upon which the reliability of the information in the exception report depends, including the proper functioning of the business process application that generated the exception report and the reliability of the data used to generate the exception report. In addition, the auditor should test the effectiveness of the user control (i.e., management review and followup on the items in the exception report).

For each relevant IS control technique, the auditor should determine whether it is (1) designed effectively to achieve the related control activity, considering IS risk and the audit objectives, and (2) implemented (placed in operation). The auditor may be able to determine whether control techniques are sufficient to achieve a particular control activity without evaluating and testing all of the control techniques. Also, depending on IS risk and the audit objectives, the nature and extent of control techniques necessary to achieve a particular control objective will vary.

The auditor generally should evaluate the design effectiveness and test only the control techniques necessary to achieve the relevant audit activities. For example, if there are two control techniques, each of which individually would achieve the control activity, the auditor generally would evaluate and test only one control technique. However, if the auditor determines that the control technique evaluated and tested was not effective, the auditor would consider the effectiveness of the other control technique.

Also, the auditor should evaluate the nature and extent of testing performed by the entity. Such information can assist in identifying key controls and in assessing risk, but the auditor should not rely on testing performed by the entity in lieu of appropriate auditor testing. If the control techniques implemented by the entity, as designed, are not sufficient to address the control activity, or the control techniques are not effectively implemented as designed, the auditor should determine the effect on IS controls and the audit objectives.

For efficiency, the auditor may implement a tiered approach to the identification and evaluation of the design effectiveness of relevant

IS control techniques, as discussed later in this session, beginning with entitywide level controls, followed by system level controls, then by business process application level controls.

Appendices II and III may be used to identify and summarize relevant IS controls at the entitywide, system, and business process application levels.

Test Information System Controls

The auditor should design and conduct tests of relevant control techniques that are effective in design to determine their effectiveness in operation.

It is generally more efficient for the auditor to test IS controls on a tiered basis, starting with the general controls at the entitywide and system levels, followed by the general controls at the business process application level, and concluding with tests of business process application, interface, and data management system controls at the business process application level. Such a testing strategy may be used because ineffective IS controls at each tier generally preclude effective controls at the subsequent tier.

If the auditor identifies IS controls for testing, the auditor should evaluate the effectiveness of

- general controls at the entitywide and system level;
- general controls at the business process application level; and
- specific business process application controls (business process controls, interface controls, data management system controls), and/or user controls, unless the IS controls that achieve the control objectives are general controls.

The auditor should determine whether entitywide and system level general controls are effectively designed, implemented, and operating effectively by

- identifying applicable general controls;
- determining how those controls function, and whether they have been placed in operation; and
- evaluating and testing the effectiveness of the identified controls.

The auditor should document the understanding of general controls and should conclude whether such controls are effectively designed, placed in operation, and, for those controls tested, operating as intended.

Based on the results of the IS controls audit tests, the auditor should determine whether the control techniques are operating effectively to achieve the control activities. Controls that are not properly designed to achieve the control activities or that are not operating effectively are potential IS control weaknesses. For each potential weakness, the auditor should determine whether there are specific compensating controls or other factors that could mitigate the potential weakness. If the auditor believes that the compensating controls or other factors could adequately mitigate the potential weakness and achieve the control activity, the auditor should obtain evidence that the compensating or other control is effectively operating and actually mitigates the potential weakness. If it effectively mitigates the potential weakness, the auditor can conclude that the control activity is achieved; however, the auditor may communicate such weaknesses to the entity. If the potential weakness is not effectively mitigated, the potential weakness is an actual weakness. The auditor evaluates its effects on IS controls in combination with other identified weaknesses in the reporting phase.

Tests of General Controls at the Entitywide and System Levels

The auditor may test general controls through a combination of procedures, including observation, inquiry, inspection (which includes a review of documentation on systems and procedures), and reperformance using appropriate test software. Although sampling is generally not used to test general controls, the auditor may use sampling to test certain controls, such as those involving approvals.

If general controls at the entitywide and system levels are not effectively designed and operating as intended, the auditor will generally be unable to obtain satisfaction that business process application-level controls are effective. In such instances, the

auditor should (1) determine and document the nature and extent of risks resulting from ineffective general controls and (2) identify and test any manual controls that achieve the control objectives that the IS controls were to achieve.

However, if manual controls do not achieve the control objectives, the auditor should determine whether any specific IS controls are designed to achieve the objectives. If not, the auditor should develop appropriate findings principally to provide recommendations to improve internal control. If specific IS controls are designed to achieve the objectives, but are in fact ineffective because of poor general controls, testing would typically not be necessary, except to support findings.

Tests of General Controls at the Business Process Application Level

If the auditor reaches a favorable conclusion on general controls at the entitywide and system levels, the auditor should evaluate and test the effectiveness of general controls for those applications within which business process application controls or user controls are to be tested. These business process application level general controls are referred to as Application Security (AS) controls in Chapter 4.

If general controls are not operating effectively within the business process application, business process application controls and user controls generally will be ineffective. If the IS controls audit is part of a financial or performance audit, the IS controls specialist should discuss the nature and extent of risks resulting from ineffective general controls with the audit team. The auditor should determine whether to proceed with the evaluation of business process application controls and user controls.

Tests of Business Process Application Controls and User Controls

The auditor generally should perform tests of those business process application controls (business process, interface, data management), and user controls necessary to achieve the control objectives where the entitywide, system, and application-level general controls were determined to be effective.

If IS controls are not likely to be effective, the auditor should obtain a sufficient understanding of control risks arising from information systems to

- identify the impact on the audit objectives,
- design audit procedures, and
- develop appropriate findings.

Also, in such circumstances, the auditor considers whether manual controls achieve the control objectives, including manual controls that may mitigate weaknesses in IS controls. If IS controls are not likely to be effective and if manual controls do not achieve the control objectives, the auditor should identify and evaluate any specific IS controls that are designed to achieve the control objectives to develop recommendations for improving internal controls.

IS controls that are not effective in design do not need to be tested. If the auditor determined in a prior year that controls in a particular accounting application were ineffective and if management indicates that controls have not significantly improved, the auditor need not test them.

2.2.2 Nature, Timing, and Extent of Control Tests

To assess the operating effectiveness of IS controls, auditors should perform an appropriate mix of audit procedures to obtain sufficient, appropriate evidence to support their conclusions. Such procedures could include the following:

- Inquiries of IT and management personnel can enable the auditor to gather a wide variety of information about the operating effectiveness of control techniques. The auditor should corroborate responses to inquiries with other techniques.
- Questionnaires can be used to obtain information on controls and how they are designed.
- Observation of the operation of controls can be a reliable source of evidence. For example, the auditor may observe the verification of edit checks and password controls. However, observation provides evidence about controls only when the

auditor was present. The auditor needs other evidence to be satisfied controls functioned the same way throughout the period.

- The auditor may review documentation of control polices and procedures. For example, the entity may have written policies regarding confidentiality or logical access. Review of documents will allow the auditors to understand and assess the design of controls.
- Inspection of approvals/reviews provides the auditor with evidence that management is performing appropriate control checks. The auditor may combine these tests with discussions and observations.
- Analysis of system information (e.g., configuration settings, access control lists, etc.) obtained through system or specialized software provides the auditor with evidence about actual system configuration.
- Data review and analysis of the output of the application processing may provide evidence about the accuracy of processing. For example, a detailed review of the data elements or analytical procedures of the data as a whole may reveal the existence of errors. Computer-assisted audit techniques (CAAT) may be used to test data files to determine whether invalid transactions were identified and corrected by programmed controls. However, the absence of invalid transactions alone is insufficient evidence that the controls effectively operated.
- Reperformance of the control could be used to test the effectiveness of some programmed controls by reapplying the control through the use of test data. For example, the auditor could prepare a file of transactions that contains known errors and determine if the application successfully captures and reports the known errors.

In assessing the operating effectiveness of IS controls, the auditor may determine that it is appropriate to attempt to gain access to identified key systems (e.g., vulnerability assessments or penetration tests). Consideration should be given to performing this type of tests when (1) a new system is developed or major system upgrade occurs, (2) major changes are made to the environment the system operates, and (3) serious weaknesses are identified that may

impact the system. See NIST SP 800-53A, Appendix G for further guidance on penetration testing. In performing this testing, it is important that the auditor and entity management have a common understanding of the type of tests to be performed, scope of the tests, and the risks involved in performing this testing. See SM-5 for further discussion of vulnerability assessments and section 2.1.9.F. concerning communication with entity management.

In determining the appropriate timing for tests of IS controls, the auditor should consider appropriate factors, including, among other things, whether the audit objectives relate to a specific point in time or to a period of time, the nature of the evidential matter that is available (evidence of the proper operation of many IS controls is available only at the time of the test), the extent of information system risk, the significance or criticality of the IS control to the audit objectives, and the effectiveness of entitywide and security management controls in reasonably assuring that IS controls operated consistently during the relevant period.

Audit procedures may include a selection of specific items (e.g., access forms). In addition, the auditor may need to determine, among multiple instances of a type of network component, which specific components to test. For example, the entity may have many internet access points or multiple instances of a data base. The auditor should exercise judgment in determining the number of items to select and the method used to select them. Generally, such judgment would include consideration of the related information system risk, the significance or criticality of the specific items in achieving the related control objectives, the location of the network component in relation to the key areas of audit interest, and the extent of consistency in the configuration of the components.

2.2.3 Documentation of Control Testing Phase

Information developed in the testing phase that the auditor should document includes the following:

- An understanding of the information systems that are relevant to the audit objectives
- IS Control activities relevant to the audit objectives
- By level (e.g., entitywide, system, business process application) and system sublevel (e.g., network, operating system, infrastructure applications), a description of control techniques used by the entity to achieve the relevant IS control objectives and activities
- By level and sublevel, specific tests performed, including
  - related documentation that describes the nature, timing, and extent of the tests;
  - evidence of the effective operation of the control techniques or lack thereof (e.g., memos describing procedures and results, output of tools and related analysis);
  - if a control is not achieved, any compensating controls or other factors and the basis for determining whether they are effective;
  - the auditor's conclusions about the effectiveness of the entity's IS controls in achieving the control objective; and
  - for each weakness, whether the weakness is a material weakness, significant deficiency or just a deficiency, as well as the criteria, condition, cause, and effect if necessary to achieve the audit objectives. The aggregate effect of all weaknesses is evaluated in the next section (2.3).

Appendices II and III may be used to summarize the results of testing.

2.3 Report Audit Results

After completing the testing phase, the auditor summarizes the results of the audit, draws conclusions on the individual and aggregate effect of all identified IS control weaknesses on audit risk and audit objectives and reports the results of the audit. Such evaluation includes consideration of (1) the effect of weaknesses identified by the auditor's current testing, (2) followup on weaknesses reported in previous audits or evaluations that are relevant to the audit objectives, and (3) other uncorrected weaknesses that have been identified and/or reported by management or others that are relevant to the audit objectives. The auditor evaluates the effect of any weaknesses on the entity's ability to achieve each of the critical elements in Chapters 3 and 4 and on the risk of unauthorized access to key systems or files. Also, the auditor evaluates potential control dependencies.

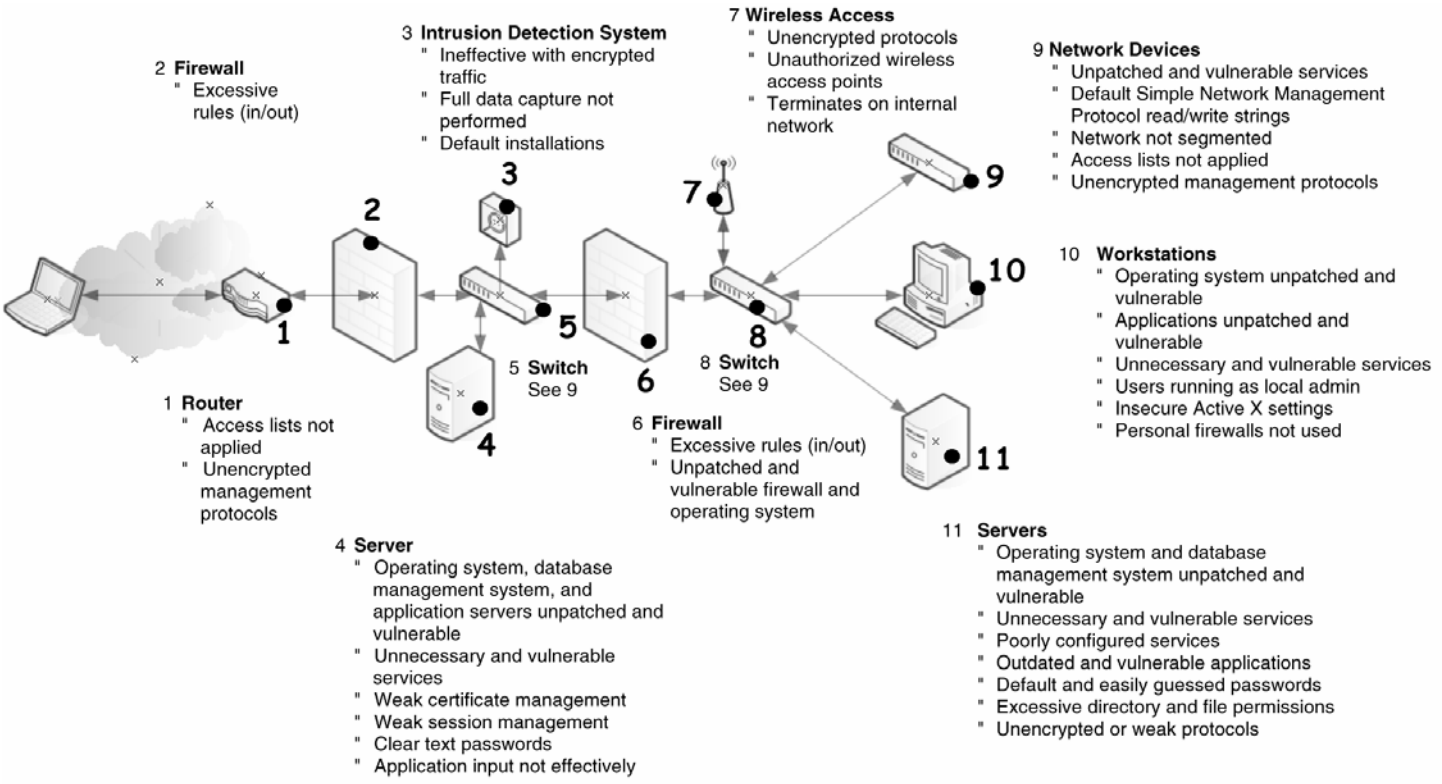
For each critical element, the auditor should make a summary determination as to whether the critical element is achieved, considering entitywide, system, and business process application levels collectively. The auditor should evaluate the effect of related underlying control activities that are not achieved. In addition, based on identified weaknesses, the auditor should determine the effectiveness of IS controls for each of the five categories of general controls or the four categories of application-level controls. If a critical element is not achieved, then (1) the respective control category is not likely to be achieved and (2) in the absence of strong compensating controls, overall IS controls are unlikely to be effective. If one or more of the nine control categories are not effectively achieved, IS controls are ineffective, unless other factors sufficiently reduce the risk. The auditor uses professional judgment in making such determinations. Also, the auditor should determine whether IS control weaknesses identified by the audit were identified in the entity's Plans of Action and Milestones (POA&Ms) or equivalent document. If not, the auditor generally should attempt to determine why they were not identified by the entity as appropriate and report weaknesses in the reporting process.

Also, the auditor should evaluate whether the aggregate combination of weaknesses could result in unauthorized access to

systems or files supporting key areas of audit interest, resulting in a significant internal control deficiency. Guidance for evaluating IS controls and determining the appropriate reporting are discussed separately for financial audits and attestation engagements and for performance audits in the following sections.

For example, a series of weaknesses might result in individuals having the ability to gain unauthorized external access to entity systems, escalate their privileges to obtain a significant level of access to critical control points, and consequently achieve access to key areas of audit interest. The auditor can use simplified network schematics annotated with weaknesses related to key system components to document the impact of a series of weaknesses. Such documentation may be developed as the audit progresses, allowing the auditor to demonstrate on the system that the weaknesses in fact exist and can be exploited to achieve the expected result. Also, such documentation can assist in communicating the related risks to entity management. Figure 3 is an example of a simplified network schematic annotated with weaknesses related to key system components.

Figure 3. Example of Network Schematic Describing System Weaknesses



Source: GAO and Visio.

Further, the auditor should evaluate the potential impact of any identified weaknesses on the completeness, accuracy, validity, and confidentiality of application data relevant to the audit objectives. (See Chapter 4 for a description of completeness, accuracy, validity, and confidentiality.)

When IS controls audits are performed as part of a broader financial or performance audit or attestation engagement, the auditor should coordinate with the audit team to determine whether significant controls are dependent on IT processing. In very rare circumstances, the auditor may determine that IS controls, in the aggregate, are ineffective, but that the entity has overall compensating controls not dependent on IT processing or that other factors mitigate or reduce the risks arising from IS control weaknesses. For example, manual reviews of support for all disbursements could mitigate certain IS risks related to a

disbursement system. If compensating controls or other factors are present, the auditor should document such controls or factors, test them appropriately to determine whether they effectively mitigate the identified IS control weaknesses, and draw conclusions about the nature and extent of the risks that remain after considering such controls or factors.

As noted earlier in the section entitled "Understand the Overall Audit Objectives and Related Scope of the Information System Controls Audit," if achieving the audit objectives does not require an overall conclusion on IS controls or only relates to certain components of the entity or a subset of controls, the auditor's assessment would not necessarily identify all significant IS control weaknesses. For example, a limited review of controls over a type of operating system may not identify any significant weaknesses, although there may be very significant weaknesses in other areas that the auditor may not be aware of because of the limited scope of the audit. Consequently, the auditor should evaluate the potential limitations of the auditor's work on the auditor's report and the needs and expectations of users. The auditor may determine that, because the limitations are so significant, the auditor (1) will communicate the limitations to the audited entity, those charged with governance, and those requesting the audit and (2) clearly report such limitations on the conclusions in the audit report. For example, in reporting on an audit of an operating system, the auditor may determine that it is appropriate to clearly report that the scope of the assessment was limited to the operating system and that, consequently, additional IS control weaknesses may exist that could impact the effectiveness of IS controls related to the operating system and to the entity as a whole.

The auditor should express the effect of identified IS control weaknesses in terms of the audit objectives. The following sections provide guidelines for assessing IS controls in financial and performance audits. For financial audits and attestation engagements, GAGAS states that auditors should report material weaknesses and other significant deficiencies.

2.3.1 Financial Audits and Attestation Engagements

The auditor should conclude whether IS control weaknesses, individually or in the aggregate, constitute a significant deficiency or material weakness in financial reporting. The auditor should coordinate these procedures with the overall audit team. For financial audits, GAGAS and OMB Circular A-123 state that a control deficiency exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect misstatements on a timely basis. A deficiency in design exists when (*a*) a control necessary to achieve the control activity is missing or (*b*) an existing control is not properly designed so that even if the control operates as designed, the control activity is not always achieved. A deficiency in operation exists when a properly designed control does not operate as designed or when the person performing the control does not possess the necessary authority or qualifications to perform the control effectively. In addition, in financial audits of federal entities, the auditor should evaluate the effect of IS control weaknesses on FFMIA and FMFIA reporting.

GAGAS uses the following definitions and guidelines for classifying internal control weaknesses for financial audits and attestation engagements:

A **significant deficiency** is a deficiency in internal control, or combination of deficiencies, that adversely affects the entity's ability to initiate, authorize, record, process, or report financial data reliably in accordance with generally accepted accounting principles (or in accordance with the applicable criteria or framework for attestation engagements) such that there is more than a remote likelihood[49] that a misstatement of the entity's financial statements (or misstatement of the subject matter for attestation engagements)

[49]The term "more than remote" used in the definitions for significant deficiency and material weakness means "at least reasonably possible." The following definitions apply: (1) Remote—The chance of the future events occurring is slight. (2) Reasonably possible—The chance of the future events or their occurrence is more than remote but less than likely. (3) Probable—The future events are likely to occur.

that is more than inconsequential[50] will not be prevented or detected.

A **material weakness** is a significant deficiency, or combination of significant deficiencies, that results in more than a remote likelihood that a material misstatement of the financial statements (or misstatement of the subject matter for attestation engagements) will not be prevented or detected.

OMB Circular A-123 uses the same definition for significant deficiency, but continues to refer to it as a reportable condition.

In determining whether IS control deficiencies, individually or in the aggregate, constitute a significant deficiency or material weakness, the auditor should evaluate several factors, including the following:

- The likelihood that an individual could obtain unauthorized access to or perform unauthorized or inappropriate activities on key entity systems or files that could affect information recorded in the financial statements. This might include (1) the ability to obtain root access to systems that house key financial systems (including feeder systems), thereby enabling unauthorized users to read, add, delete, modify, or exfiltrate financial data either directly or through the introduction of unauthorized software; (2) the ability to directly access and modify files containing financial information; or (3) the ability to assign unauthorized application user rights, thereby entering unauthorized transactions.
- The nature of unauthorized access that could be obtained (e.g., limited to system or application programmers or system administrators; all authorized system users; or anyone through

[50]The phrase "more than inconsequential" as used in the definition of significant deficiency describes the magnitude of potential misstatement that could occur as a result of a significant deficiency and serves as a threshold for evaluating whether a control deficiency or combination of control deficiencies is a significant deficiency. A misstatement is "inconsequential" if a reasonable person would conclude, after considering the possibility of further undetected misstatements, that the misstatement, either individually or when aggregated with other misstatements, would clearly be immaterial to the financial statements. If a reasonable person would not reach such a conclusion regarding a particular misstatement, that misstatement is more than inconsequential.

unauthorized external access through the Internet) or the nature of unauthorized or inappropriate activity that could be performed.

- The likelihood that financial statement amounts could be materially affected.
- The likelihood that other controls including business process application controls would prevent or detect such unauthorized access. Generally, if the effectiveness of such other controls depends on computer processed information, it is unlikely that they could effectively prevent or detect such access; unless the identified IS control weaknesses could not reasonably result in the ability to compromise such other controls.
- The risk that management could override controls (such as through excessive access rights).

Based upon these considerations, the auditor should determine whether IS control deficiencies, individually or in the aggregate, are a material weakness or significant deficiency. Also, the auditor should evaluate whether significant deficiencies, in combination, result in material weaknesses. If so, the auditor should determine them to be material weaknesses in drawing conclusions as to the effectiveness of internal control and reporting findings, as discussed in FAM paragraphs 580.42–.48 and 580.51–.58. If the control deficiencies constitute a material weakness, the auditor should conclude that internal controls are not effective.

Financial auditors may take one of two different approaches to reporting on internal control: (1) express an opinion on internal control (see FAM paragraphs 580.38-.48) or (2) report weaknesses found, categorized as material weaknesses or other significant deficiencies, but do not give an opinion (see FAM paragraphs 580.49-.50). GAO auditors generally express an opinion on internal control. In either case, the auditor considers whether internal control is sufficient to meet the following control objectives insofar as those objectives pertain to preventing or detecting misstatements, losses, or noncompliance that would be material in relation to the financial statements:

- Reliability of financial reporting—transactions are properly recorded, processed, and summarized to permit the preparation of the financial statements and supplemental information in accordance with Generally Accepted Accounting Principles (GAAP), and assets are safeguarded against loss from unauthorized acquisition, use, or disposition.
- Compliance with applicable laws and regulations—transactions are executed in accordance with laws governing the use of budget authority; other laws and regulations that could have a direct and material effect on the financial statements or required supplementary information (RSI); and any other laws, regulations, and governmentwide policies identified by OMB in its audit guidance.

The auditor may report weaknesses that do not meet the criteria for significant deficiencies in a letter to management or orally to an appropriate level of the entity. The auditor may include suggestions for corrective action for these less significant weaknesses if enough is understood about their cause. (More detailed information on how and where to report control weaknesses for financial statement audits is presented in sections 580.48 through 580.52 of the FAM.)

Note that SAS 115, issued in October 2008, which is incorporated into GAGAS, revised the definitions of material weakness and significant deficiency for financial audits. The SAS is effective for audits of financial statements for periods ending on or after December 15, 2009. The revised definitions are as follows:

- A material weakness is a deficiency, or combination of deficiencies, in internal control, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected on a timely basis.
- A significant deficiency is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

Check the FISCAM website for any updates at http://www.gao.gov/special.pubs/fiscam.html.

2.3.2 Performance Audits

The auditor should draw conclusions on the effectiveness of IS controls relevant to the audit objectives. Depending on the audit objectives, the auditor's report will vary. For example, the auditor's report may

- provide an overall conclusion (e.g., the entity's IS controls are or are not effective in achieving the IS control objectives relevant to the audit) and communicate identified weaknesses;
- limit reporting to identified weaknesses without providing an overall conclusion (e.g., "based on our work, we identified the following IS control weaknesses"); or
- if in support of a broader performance audit, report findings in the context of the audit objectives, such as how they relate to the assessment of the reliability of computer-processed data.

GAGAS state that auditors should include in their audit reports the scope of their work on internal control (which includes IS controls) and any deficiencies in internal control that are significant within the context of the audit objectives and based upon the audit work performed. Determining whether and how to communicate to officials of the audited entity internal control deficiencies that have an inconsequential effect on the financial statement or subject matter is a matter of professional judgment. Auditors should document such communications. The auditor may report such inconsequential weaknesses orally to officials of the entity or in a separate written communication.

In determining the significance of the IS control weaknesses, the auditor should evaluate several factors, including the following:

- The likelihood that an individual could obtain unauthorized access to or perform unauthorized or inappropriate activities on key entity systems or files that could affect key areas of audit interest. This might include (1) the ability to obtain root access to systems that house key areas of audit interest (including supporting systems), thereby enabling an intruder to read, add, delete, modify, or exfiltrate data either directly or through the introduction of unauthorized software; (2) the ability to directly

access and modify files related to key areas of audit interest; or (3) the ability to assign unauthorized application user rights, thereby enabling an intruder to enter unauthorized transactions or perform unauthorized activities.

- The nature of unauthorized access that could be obtained (e.g., limited to system or application programmers or system administrators; authorized system users; or anyone through unauthorized external access through the Internet)
- The likelihood that the achievement of the audit objectives would be significantly affected.
- The likelihood that other controls including business process application controls would prevent or detect such unauthorized access. Generally, if the effectiveness of such other controls depends on computer processed information, it is unlikely that they could effectively prevent or detect such access, unless the identified IS control weaknesses could not reasonably result in the ability to compromise such other controls.
- The risk that management could override controls (such as through excessive access rights).

Under GAGAS (Section 8.03), the auditor must issue audit reports communicating the results of each completed performance audit, including GAGAS audits performed to meet FISMA requirements. GAGAS also states that auditors should include in the audit report (1) the scope of their work on internal control and (2) any deficiencies in internal control that are significant within the context of the audit objectives and based upon the work performed. Such deficiencies would include any identified significant internal control deficiencies.

2.3.3 Other Audit Reporting Considerations

It is important to report IS control weaknesses in terms that are understandable to individuals who may have limited expertise regarding information systems issues. In this regard, the auditor generally should define technical terms and avoid jargon and undefined abbreviations and acronyms.

Auditors should develop the elements of the findings to the extent necessary to achieve the audit objectives. The extent to which the auditor should develop the elements for a finding (criteria, condition, cause, and effect) depends on the audit objectives. If auditors are able to sufficiently develop the findings, they should provide recommendations for corrective action if they are significant within the context of the audit objectives.

Criteria describe the required or desired state, or what is expected from the program or operation. Condition is the actual situation. Cause is the factor or factors responsible for the difference between condition and criteria. Effect is the impact of the difference between the condition and the criteria. This information helps senior management understand the significance of the weakness and develop appropriate corrective actions. For most types of IS control weaknesses, this manual includes a discussion of risks and potential negative effects that can be adapted for audit reports. GAO has issued numerous reports that can be used as models for reporting computer-related weaknesses. Current IS reports can be obtained from GAO's report database on GAO's Web site (http://www.gao.gov).

In many cases, auditors will have detailed information on control weaknesses that is too technical to be meaningful to most senior managers and other users of the audit report, but may be valuable to the entity's technical staff to aid in understanding the precise cause of the weaknesses and in developing corrective actions. The auditors generally should provide this information to the entity's technical staff in briefings. The auditor should provide information to technical staff that is in substance the same as that reported to senior management.

The auditor should effectively communicate the results of an IS controls audit to the appropriate persons through appropriate reports. This serves several purposes, including

- informing the audited entity and those charged with governance of control weaknesses; issues of noncompliance with laws, regulations, and provisions of contracts or grant agreements; and instances of fraud, illegal acts, or abuse;

- providing the audited entity with recommendations to correct such control weaknesses;
- providing the financial or performance auditor an understanding of the information systems control environment and the effects of IT on the processing of transactions;
- complying with legal reporting requirements; and
- complying with auditing standards, including generally accepted government auditing standards.

However, the auditor should avoid the disclosure of sensitive IS data. An individual could potentially compromise a system from any location in the world, as long as they have access to a computer and a telephone line or Internet connection. Technical information discussed in an audit report could potentially assist individuals by reducing the time and effort to obtain unauthorized access and compromise a system. Also, to avoid disclosure of sensitive information, the auditor should provide draft IS reports to the entity for a sensitivity review. The auditor should evaluate entity sensitivity concerns and make appropriate report revisions, considering legal or regulatory requirements, including the exercise of information classification authority.

Generally, in the federal environment, either one report with limited distribution or two reports, one of which has limited distribution, are issued. Information systems security audit reports may or may not be put on entity Web sites or released under FOIA, generally depending on the degree or extensiveness of sensitive data. Even though these reports may not be posted on entity Web sites, they are still typically issued to entity management. Also, state laws and regulations may affect the form of reporting. For further information, see *Information Systems Security Auditing: Legal and Reporting Considerations*.[51]

[51]Intergovernmental Information Security Audit Forum (Sept. 11, 2003); see www.nasact.org

2.3.4 Related Reporting Responsibilities

In addition to reporting the results of the audit, the auditor may have other related reporting responsibilities established by law, regulation, or policy. The auditor should identify any other reporting requirements and respond appropriately.

In financial audits of federal entities, the auditor should determine whether the IS control weaknesses, individually or in the aggregate, constitute a material weakness for FMFIA reporting or a lack of substantial compliance of the entity's systems with FFMIA. See FAM 260.53-57 for further information. Also, further information about reporting IS control weaknesses in relation to a financial audit are discussed in FAM 580 (Draft Reports).

OMB Circular A-123 provides requirements for complying with FMFIA. The Circular requires management to assess controls and provide an annual assurance statement on the overall adequacy and effectiveness of internal control within the agency. In addition, management is required to provide a separate assurance statement on the effectiveness of internal control over financial reporting, which includes safeguarding of assets and compliance with applicable laws and regulations. Also, OMB audit guidance requires management to include representations about internal control in its management representation letter to the auditor.

FMFIA requires agencies to evaluate and report on the adequacy of the systems of internal accounting and administrative control. For the *overall assessment* of internal control, OMB Circular A-123 defines a **material weakness** as a reportable condition which the agency head determines to be significant enough to report outside of the agency. It defines a **reportable condition** as a control deficiency, or combination of control deficiencies, that in management's judgment, should be communicated because they represent significant weaknesses in the design or operation of internal control that could adversely affect the organization's ability to meet its internal control objectives. For the *assessment of internal control over financial reporting*, Circular A-123 uses the same definitions for material weakness and significant deficiency described above for financial audits, except that OMB uses the term

reportable condition rather than the term significant deficiency. Also, FMFIA and OMB Circular A-123 require management to report nonconformances with system requirements. The Circular defines nonconformances as instances in which financial management systems do not substantially conform to financial systems requirements. Financial management systems include both financial and financially-related (or mixed) systems.

The auditor should evaluate the material weaknesses reported under FMFIA to determine whether they meet the definitions of material weakness and reportable condition for reporting as part of management's assertion about the effectiveness of internal control.

In addition, the auditor should consider if there are any issues that should be reported under OMB Circular A-127 "Financial Management Systems". This circular prescribes policies and standards for executive departments and agencies to follow in developing, operating, evaluating, and reporting on financial management systems.

FISMA requires federal agencies to report significant deficiencies in information security as material weaknesses under FMFIA and, if relating to financial management systems, as an instance of a lack of substantial compliance of systems with FFMIA. The term "significant deficiency" used in FISMA differs from the same term used in GAGAS. OMB defines a FISMA significant deficiency as "a weakness in an agency's overall information systems security program or management control structure, or within one or more information systems that significantly restricts the capability of the agency to carry out its mission or compromises the security of its information, information systems, personnel, or other resources, operations, or assets. In this context, the risk is great enough that the agency head and outside agencies must be notified and immediate or near-immediate corrective action must be taken."

FFMIA requires agencies to implement and maintain financial management systems that comply substantially with federal financial management systems requirements, applicable federal accounting standards, and the U.S. Government Standard General

Ledger[52] at the transaction level. FFMIA requires auditors to assess whether an agency's financial management systems substantially comply with system requirements. IS control weaknesses are a major concern for federal agencies and the general public and are one of the frequently cited reasons for noncompliance with FFMIA.

2.3.5 Documentation of Reporting Phase

The auditor should document appropriate IS information developed in the reporting phase, including:

- The auditor's conclusion about the effectiveness of IS controls (in relation to the IS controls audit objectives) in achieving the control categories, critical elements, and the relevant control activities and the basis for the conclusion, including the factors that the auditor considered in making the determination;
- If part of a broader audit, the impact of any identified IS control weaknesses on the overall audit objectives;
- Copies of any reports or written communications issued in connection with the audit, including the draft the entity commented on and entity management comments related to such reports and communications;
- For financial audits and attestation engagements, the auditor's determination of whether identified weaknesses represent material weaknesses or significant deficiencies, and the basis for the auditor's conclusions;
- Other documentation required by the audit organization's policies and procedures, including quality assurance processes;
- Results of procedures to detect any fraud significant to the audit objectives and the impact on the audit;
- Results of audit follow-up procedures to determine whether entity corrective actions have been implemented, to sufficiently remediate previously reported IS control weaknesses; and

[52]The *U.S. Government Standard General Ledger* (SGL) provides a uniform chart of accounts and pro forma transactions used to standardize federal agencies' financial information accumulation and processing throughout the year, enhance financial control, and support budget and external reporting, including financial statement preparation.

- As appropriate, the auditor's considerations and determinations concerning FMFIA, FFMIA, and other reporting responsibilities.

2.4 Documentation

The auditor should adequately document the IS controls audit. GAGAS has general documentation requirements for financial and performance audits and attestation engagements. In summary, they are as follows:

Financial Audits - Auditors must prepare audit documentation in connection with each engagement in sufficient detail to provide a clear understanding of the work performed (including the nature, timing, extent, and results of audit procedures performed), the audit evidence obtained and its source, and the conclusions reached. Auditors should prepare audit documentation that enables an experienced auditor, having no previous connection to the audit, to understand **a.** the nature, timing, and extent of auditing procedures performed to comply with GAGAS and other applicable standards and requirements; **b.** the results of the audit procedures performed and the audit evidence obtained; **c.** the conclusions reached on significant matters; and **d**. that the accounting records agree or reconcile with the audited financial statements or other audited information.

Attestation Engagements - Auditors must prepare attest documentation in connection with each engagement in sufficient detail to provide a clear understanding of the work performed (including the nature, timing, extent, and results of attest procedures performed); the evidence obtained and its source; and the conclusions reached. Auditors should prepare attest documentation in sufficient detail to enable an experienced auditor, having no previous connection to the attestation engagement, to understand from the documentation the nature, timing, extent, and results of procedures performed and the evidence obtained and its source and the conclusions reached, including evidence that supports the auditors' significant judgments and conclusions. Auditors should prepare documentation that contains support for

findings, conclusions, and recommendations before they issue their report.

Auditors also should document the following for attestation engagements performed under GAGAS: **a.** the objectives, scope, and methodology of the attestation engagement; **b.** the work performed to support significant judgments and conclusions, including descriptions of transactions and records examined; **c.** evidence of supervisory review, before the attest report is issued, of the work performed that supports findings, conclusions, and recommendations contained in the attest report; and **d.** the auditors' consideration that the planned procedures are designed to achieve objectives of the attestation engagement when (1) evidence obtained is dependent on computerized information systems, (2) such evidence is material to the objective of the engagement, and (3) the auditors are not relying on the effectiveness of internal control over those computerized systems that produced the evidence. Auditors should document (1) the rationale for determining the nature, timing, and extent of planned procedures; (2) the kinds and competence of available evidence produced outside a computerized information system, or plans for direct testing of data produced from a computerized information system; and (3) the effect on the attestation engagement report if evidence to be gathered does not afford a reasonable basis for achieving the objectives of the engagement.

Performance Audits – Auditors must prepare audit documentation related to planning, conducting, and reporting for each audit. Auditors should prepare audit documentation in sufficient detail to enable an experienced auditor, having no previous connection to the audit, to understand from the audit documentation the nature, timing, extent, and results of audit procedures performed, the audit evidence obtained and its source and the conclusions reached, including evidence that supports the auditors' significant judgments and conclusions. Auditors should prepare audit documentation that contains support for findings, conclusions, and recommendations before they issue their report. Auditors should document the following: **a.** the objectives, scope, and methodology of the audit; **b.** the work performed to support significant judgments and conclusions, including descriptions of transactions and records

examined; and **c.** evidence of supervisory review, before the audit report is issued, of the work performed that supports findings, conclusions, and recommendations contained in the audit report.

In addition to meeting these general requirements, the auditor should include, in IS controls audit documentation, the specific information discussed throughout this chapter, and summarized in Appendix X.

2.5 Other Information System Controls Audit Considerations

In addition to the above, the auditor should apply the following topics and techniques to the extent they are relevant to the entity, the audit objectives, and the audit procedures.

- Additional IS risk factors
- Automated audit tools
- Sampling techniques

Also, guidance is provided to the auditor in the evaluation of IS controls associated with service organizations, Single Audits, and FISMA independent evaluations in Appendix VII, VIII, and IX, respectively.

2.5.1 Additional IS Risk Factors

As part of the risk assessment, the auditor should also evaluate the following additional IS risk factors to the extent that they are relevant to the entity and the audit objectives. The auditor's risk assessment also includes other risk factors not listed here (e.g., Voice over Internet Protocol – VoIP)

2.5.1.A Defense-In-Depth Strategy

Defense-in-Depth is a commonly accepted "best practice" for implementing computer security controls in today's networked environments. In some agencies, the auditor may encounter this strategy as part of the agency's security management program.

Where an effective Defense-in-Depth strategy has been implemented by the entity, the auditor's assessment of IS risk would generally be lower. Conversely, where this strategy is not used, the auditor's assessment of IS risk would generally be higher. The auditor's IS control testing generally provides evidence about the effectiveness of a Defense-in-Depth strategy. See Chapter 3 (AC-1 and CM-5) for additional information on Defense-in-Depth strategy.

According to the National Security Agency, Defense-in-Depth integrates people, operations, and technology capabilities to protect information systems across multiple layers and dimensions. For example, successive layers of defense will cause an adversary who penetrates or breaks down one barrier to promptly encounter successive barriers until the attack ends. The strategy recommends a balance between protection capabilities and cost, performance, and operational considerations.

The people component of Defense-in-Depth begins with a senior-level management commitment (normally at the chief information officer level) that is based on a clear understanding of the perceived threat. This component must be implemented with effective information security policies and procedures, assignment of roles and responsibilities, commitment of resources, training and awareness programs (for both users and system administrators), and personnel accountability, which includes the establishment of physical and personnel security measures to control and monitor access to facilities and critical elements of the information technology environment.

The operations component focuses on all activities required to sustain an entity's security posture on a day-to-day basis. These activities include

- maintaining up-to-date system security policies,
- establishing certification and accreditation programs,
- managing information system security (for example, installing patches and virus updates, maintaining access control lists),
- performing system security assessments (for example, vulnerability assessments),

- auditing and monitoring system activity and responding to threats, and
- implementing recovery and reconstitution procedures in the event of a security breach.

The technology component includes defense in multiple places and layered defense mechanisms that provide intrusion prevention, detection, and response to security incidents. Since attackers may target multiple points in an information system, an entity needs to deploy protection mechanisms at multiple locations including the protection of local and wide area communication networks (for example, from denial of service attacks), protection for data transmitted over the networks (for example, use of encryption and traffic flow security measures), defense of enclave boundaries (for example, deploy firewalls and intrusion detection systems), and defense of the computing environment (for example, access control on hosts and servers). Even the best security products have inherent weaknesses, so it is only a matter of time before an attacker finds an exploitable vulnerability. Therefore, it is important to deploy layered defense mechanisms such as nested firewalls coupled with intrusion detection at outer and inner network boundaries, between the adversary and the target.

2.5.1.B Web Applications

Web applications, which use a web browser as part of the application, present significant additional IS risks because, if not properly controlled, they can expose the application and the entity's systems to unauthorized access. In some instances, the risk related to the application itself may be low because it is not critical or it does not contain sensitive information. However, if not properly controlled, it could be used to obtain unauthorized access to other entity system resources. Therefore, due to the heightened risk, even if a web application itself is not part of the scope of the audit, the auditor should assess the effectiveness of web application security and, as appropriate, general controls to determine whether the information system controls over the application could allow unauthorized access through the application to other system resources.

2.5.1.C ERP Systems

ERP systems present additional IS risks. While IS control objectives contained in the FISCAM, if properly achieved, should address such risks, it is important for the auditor to properly consider how the control objectives are achieved in ERP systems. This section provides some considerations in auditing ERP systems. The auditor should supplement the FISCAM with audit considerations and techniques that are specific to the particular ERP system(s) being audited. Although ERP systems share some similar functionality, the way they are implemented and the audit techniques (e.g., specific system queries, analysis of superuser capabilities) applied will vary with the particular vendor.

Factors affecting the overall risk related to ERP systems include the following:

- ERP systems are highly integrated (e.g., common databases, common security administration) and cover/include/address a broad range of entity activities, which leads to increased risks related to several control areas. For example, an ERP application generally includes a broader cross-section of users in the entity, increasing the need for access (particularly least privilege) and segregation of duties controls. Also, because loss of an ERP system/application can have devastating consequences to an entity, the entity needs effective controls over (1) system development/configuration management controls to provide reasonable assurance that the system will operate as intended, (2) service continuity/contingency planning to recover the more comprehensive ERP systems, and (3) access and other general controls to prevent unauthorized access to entity system resources that could lead to denial of service. Further, general controls over the ERP system and supporting databases and operating systems are important to adequately protect access to the underlying data and processing.
- Because ERP systems are on-line-real-time systems, data validation controls are critical to reasonably assure that only valid data is processed by the ERP systems. Controls in ERP systems tend to be preventive rather than detective, as subsequent detection and correction of errors may be costly or

impossible. Also, fewer controls may be in place as the data is generally entered and validated once.

- The network architectures for ERP systems are typically more distributed, resulting in increased access controls and other risks than for more centralized systems.
- Because security administration is generally centralized and powerful access is provided to system administrators, access controls over security administration and segregation of duties controls are important. In addition, ERP systems have powerful default user IDs that need to be adequately controlled.
- The broader number of users may also lead to an increase in external access (wireless or other remote access), from both a broader range of internal users as well as external users (e.g., vendors, customers), increasing the number of access points to the entity's systems.
- ERP systems typically have limited, if any, paper audit trails. Consequently, controls over audit logs and other general controls are important for the reliability of data in the ERP systems. Also, auditing access to ERP systems is typically performed online.
- In many instances, interfaces are developed between the ERP system and legacy applications. As a result, the adequacy of interface controls and configuration management controls are important to ensure that data from legacy systems is reliable, valid, complete, and properly converted from the legacy application into the ERP system.
- ERP systems may have a program change control module that allows for direct changes to production code. Therefore, controls related to segregation of development, test and production facilities and functions may not be present. Consequently, IS risks related to configuration management and monitoring are increased, and the entity should secure and monitor such modules.

ERP systems contain certain controls that are not changeable by the entity. It is important to understand these controls and how they may help to achieve the IS control objectives.

In addition, due to the increased risks discussed above, there are a number of other controls that are of increased significance in ERP systems, including controls relating to:

- user access to sensitive application capabilities (e.g., pages, screens, transactions, menus, queries), including related segregation of duties
- powerful user roles/profiles, including defaults
- default user IDs and default passwords
- default system configurations
- access to critical tables/databases
- access to log files
- the effectiveness of the settings of configurable controls
- sensitive reports/outputs

2.5.1.D Interface Controls

Interface controls are particularly important when applications rely on input from legacy systems. Such legacy systems are sometimes referred to as feeder systems. In certain instances, such legacy applications may not have been designed to fully achieve the objectives of the application they support. Consequently, the auditor evaluates the adequacy of interface controls and of application controls related to such legacy applications to provide reasonable assurance that data from legacy systems is reliable, valid, complete, and properly converted from the legacy applications into the applications they support. In addition, the auditor should assess the effectiveness of application controls over the legacy applications, if the reliability of input is relevant to the audit objectives. Interface controls are discussed further at section 4.3.

2.5.1.E Data Management Systems

Operational characteristics of various system architectures that include data management systems such as Database Management Systems (DBMS) software introduce several potential vulnerabilities to the data/application the DBMS directly supports and the general controls environment, itself. The degree to which these potential vulnerabilities increase risk is determined by the characteristics of the networks and host system(s) involved. One area of risk exists when the DBMS architecture involves multiple installations of the DBMS, which may be located on more than one host system.

System and/or application architectures that utilize multiple DBMS installations are commonly used to support functionally or geographically distributed operations, high performance requirements, high availability requirements or some combination of these factors. When multiple DBMSs exist, the mechanisms that allow them to communicate with each other need to be implemented and controlled to prevent unintended data and/or system access. Additionally, modern DBMS software contains powerful capabilities to access the host's operating system and other operating systems and other DBMSs across networks. The ability to use these capabilities needs to be carefully controlled for each DBMS installation. Finally, some administrator accounts in DBMS software provide privileged levels of access to the host's operating system. So, users with system administration privileges in DBMS software may also have significant privileges in host operating systems and those systems and network devices accessible from the DBMS's host. Data management systems are discussed further at section 4.4.

2.5.1.F Network-based Access Control Systems

Implementations of network-based access control systems (such as LDAPs, including the Microsoft Active Directory™) introduce the potential for specific vulnerabilities. Network-based access control systems are typically hosted on one or more server-class systems. The appropriate configuration of the operating systems and all factors that can effect the functioning of the operating systems for these hosts needs to be carefully controlled. A flaw in operating system-level controls on these hosts potentially jeopardizes the reliability of the control functions provided by the network-based access control system and/or the sensitive access control data contained in that system. Network-based access control systems are designed to support high performance and simplify network administration and maintenance. To facilitate these design considerations, the systems provide flexible methods to connect to and transfer information with other systems. Due to these characteristics, it is essential that effective controls be in place to prevent unintended system functions or data access that could compromise access controls. The nature of networks and

application architectures that employ network-based access control systems involves a shared or common reliance on them for critical controls. Therefore, a compromise of a network-based access control system has the potential of contributing to the compromise of other systems.

2.5.1.G Workstations

In modern systems best described as networks of networks, the effect of workstation controls can be much more significant than control over the functions nominally identified as associated with a specific workstation. Workstations can become critical components of a network's perimeter as a result of the manner in which they are configured in the network, the types of sessions they can create with other devices, the access privileges allowed to workstation users, software running on those workstations, and controls over both inbound and outbound network traffic to and from the workstation. An understanding of the configuration of controls on workstations and network-based controls over workstations in the context of network perimeter controls is necessary to assess risk for any network,

2.5.2 Automated Audit Tools

Various automated audit tools can be used to improve the effectiveness and efficiency of the IS controls audit. Sometimes referred to as CAATs, or computer-assisted audit techniques, such tools may be used by the auditor to gather, or assist in gathering, audit evidence. If the auditor plans to use automated audit tools, the auditor should understand

- when they could be used,
- how they can be used, and
- the associated risks.

In addition, the auditor should be adequately trained in the use/operation of these tools and in the interpretation of the results. Because some tools generate a significant volume of information, the auditor should understand how to analyze such information.

Also, the auditor should obtain reasonable assurance that the tools and their use/application produce reliable results and present a reasonably low risk of disrupting the entity's systems. Organizations should develop a process to select, evaluate, and revise software security tools. The following are some typical steps:

- Research available security tools, listing several in each category.
- Discuss with other members of your audit organization which tools could be most useful in-house and at sites to be audited. Discuss with other audit organizations as appropriate.
- Determine the degree of platform-specific security software needed.
- Determine a methodology to evaluate and select software.
- Develop a procedure to train personnel in its use.
- Develop a review process to determine whether the software tool has produced results commensurate with its cost.

There are many different types of automated audit tools:

- Commercial software, such as Microsoft Excel™, etc., may be used by the auditor for analyzing data imported from client files, writing audit programs, etc.
- Generalized audit software may be used by the auditor to query and extract information from the entity's information system. For example, data extraction tools and reporting facilities for access control software can identify users with excess privileges that circumvent segregation of duties. IDEA is the generalized software package available to GAO auditors.
- An embedded audit module is a CAAT in which code prepared by the auditor is embedded in the client's software to replicate a specific aspect of a control procedure, or to record details of certain transactions in a file accessible only to the auditor.
- An integrated test facility is testing software that is integrated into the client's software and enables the auditor's test data to be integrated and processed with the client's live input. Using an integrated test facility allows the auditor to be satisfied that test data are processed in the same way that live data are processed and to verify that the results are correct. Parallel simulation is a technique in which actual client data are processed by a copy of

the client's software that is under separate control of the auditor and has undergone program code analysis to ensure that the processing is identical to that of the client's operational software.

- Program code analysis is the analysis of the client's program code to ensure that the instructions given to the computer are the same instructions that the auditor has previously identified when reviewing the systems documentation. Control over program code, including review, testing and implementation into production is often supported by special purpose software. Auditors may evaluate the effectiveness of the controls implemented through the use of automated configuration management tools. Additionally, auditors may utilize a client's tools to independently verify that version control is effective.
- A test data CAAT is a technique in which test data prepared by the auditor are processed on the current production version of the client's software, but separately from the client's normal input data. Using the current production software provides evidence that the transactions were processed in the manner expected.
- Specialized audit software is software designed to perform specific tasks in specific circumstances, such as comparison of source and object code, the analysis of unexecuted code, and the generation of test data.
- Other specialized tools can be used to test IS controls. For example:
  - Password crackers can identify the use of vendor-default or easily guessed passwords.
  - Network "sniffers" (software that can intercept and log traffic passing over a network) can identify the transmission of passwords or sensitive information in clear text.
  - Network scanners, along with standard operating system commands, can help identify an organization's network security profile and determine whether dangerous services are active in components.
  - Modem locators ("war dialing" software) can help identify unsecured dial-in modems.
  - "War driving" software used to detect unauthorized wireless access points.

CAATs can also be used in testing the effectiveness of controls, as a companion to other controls testing. This would typically involve making a small selection of transactions and walking them through the system, or developing an integrated test facility and processing test transactions through the system. The advantage of using CAATs in controls testing is that it is possible to test every transaction (either in a master file or transaction file), to determine whether there were any control failures.

Any analysis performed using CAATS should be adequately documented. In addition, a technical review should be performed by audit staff independent of the preparer to determine that the implementation of CAATS and the analysis of results is complete and accurate and that any conclusions are supported by the analysis.

2.5.3 Use of Sampling Techniques

Suggested audit procedures may include a selection of specific items (e.g., access forms). In addition, the auditor may need to determine, among multiple instances of a type of network component, which specific components to test. For example, the entity may have many internet access points or multiple instances of a data base. The auditor should exercise judgment in determining the number of items to select and the method used to select them. Generally, such judgment would include consideration of the related IS risk, the significance or criticality of the specific items in achieving the related control objectives, the location of the network component in relation to the key areas of audit interest, and the extent of consistency in the configuration of the components.

Controls that leave documented evidence of their existence and application (such as logs) may be tested by inspecting such evidence. If sufficient evidence cannot be obtained through walkthroughs in combination with observation, inquiry, and other non-sampling tests, the auditor generally should obtain more evidence by using sampling procedures to select individual items for inspection. The auditor may use multipurpose testing to use the same sample to test controls, compliance, and/or substantive results

(such as balances in financial statements). Multipurpose testing is usually more efficient than separately designed samples. Alternatively, the auditor may design a sample to test controls alone. In this case, the auditor generally should use random attribute sampling. FAM section 450 (Sampling Control Tests) provides additional information on the use of this sampling technique, including those that can be applied to performance audits.

Chapter 3. Evaluating and Testing General Controls

3.0 Introduction

General controls are the policies and procedures that apply to all or a large segment of an entity's information systems and help ensure their proper operation. Examples of primary objectives for general controls are to safeguard data, protect application programs, and ensure continued computer operations in case of unexpected interruptions. General controls are applied at the entitywide, system, and business process application levels. The effectiveness of general controls at the entitywide and system levels is a significant factor in determining the effectiveness of business process controls at the application level. Without effective general controls at the entitywide and system levels, business process controls generally can be rendered ineffective by circumvention or modification. For example, edits[53] designed to preclude users from entering unreasonably large dollar amounts in a payment processing system can be an effective application control. However, this control cannot be relied on if the general controls permit unauthorized program modifications that might allow some payments to be exempt from the edit. Consequently, the auditor may decide that it is efficient to evaluate the effectiveness of general controls separately from and before evaluating business process controls.

In planning the evaluation of IS controls, the auditor identifies areas of audit interest and critical control points. In identifying these areas, the auditor considers business process applications that are relevant to the audit objectives. Also, the auditor considers the network components that are most significant to the effectiveness of IS controls over the areas of audit interest. In planning the

[53]Editing in this context is inspecting a data field or element to verify the accuracy of its content.

evaluation of general controls, the auditor considers the most effective and efficient manner to gather evidence to determine the effectiveness of general controls over these critical control points. For example, if a business process application for benefit payments is a key area of audit interest, the auditor's testing of general controls is designed, to the extent possible, to focus on those general controls that most directly affect the application.

The evaluation of general controls includes the following five general control categories:

- security management, which provides a framework and continuing cycle of activity for managing risk, developing security policies, assigning responsibilities, and monitoring the adequacy of the entity's computer-related controls;
- access controls, which limit or detect access to computer resources (data, programs, equipment, and facilities), thereby protecting them against unauthorized modification, loss, and disclosure;
- configuration management, which prevents unauthorized changes to information system resources (for example, software programs and hardware configurations) and provides reasonable assurance that systems are configured and operating securely and as intended;
- segregation of duties, which includes policies, procedures, and an organizational structure to manage who can control key aspects of computer-related operations; and
- contingency planning, so that when unexpected events occur, critical operations continue without disruption or are promptly resumed, and critical and sensitive data are protected.

For each of these five general control categories, this manual identifies several critical elements that are essential for establishing adequate controls over the related control category. For each critical element, the FISCAM provides a description of risks, control activities, and suggested audit procedures. The auditor can use this information to evaluate entity practices. For each critical element, the auditor should make a summary determination as to the effectiveness of the entity's related controls at the entitywide,

system, and application levels. If a critical element is not achieved, the respective control category is not likely to be achieved. The auditor should use professional judgment in making such determinations.

To evaluate the effectiveness of general controls, the auditor identifies control techniques implemented by the entity to achieve each of the control activities for general controls and determine whether these control techniques, as designed, are sufficient to achieve the control activities. If sufficient, the auditor determines whether they are implemented (placed in operation) and operating effectively. As discussed later in this section, if the control techniques are not sufficient or are not implemented as designed, the auditor should determine the effect on IS controls and the audit objectives.

As discussed in more detail in Chapter 2, general controls are applicable at the entitywide, system, and application levels, and so the auditor should consider general controls at each of these levels. The control techniques and the related audit tests vary according to the level to which they are being applied. However, in this manual they are described at a high level in order to be applicable to many computer environments; they may require some technical expertise about the subject to be effectively performed at an entity. More detailed audit steps generally should be developed by the auditor based on the specific software and control techniques employed by the entity. Table 2 shows the relationship between the general control areas and the levels.

Table 2. General Control Categories Applicable at Different Levels of Audit

	Control Categories	Entitywide/ Component Level	System Level			Business Process Application Level
			Network	Operating Systems	Infrastructure Applications	
General Controls	Security Management	→				
	Access Controls	→				
	Configuration Management	→				
	Segregation of Duties	→				
	Contingency Planning	→				

Source: GAO.

The auditor's evaluation of the effectiveness of IS controls should include system level controls related to each critical control point. Assessing the effectiveness of controls over critical control points should include consideration of all potential ways in which the critical control point could be accessed. Generally, for each critical control point, this would include assessing controls related to the network, operating system, and infrastructure application components. For example, if a particular router was deemed to be a critical control point, the auditor would test controls related to the router itself (a network component), as well as its operating system, and the infrastructure applications used to manage the router. Access to any of these could lead to access to the control point.

To facilitate the auditor's evaluation, tables identifying commonly used control techniques and related audit procedures are included after the discussion of each critical element and also in Appendix II.

These tables can be used for both the preliminary evaluation and the more detailed evaluation and testing of controls. For the preliminary evaluation, the auditor can use the tables to guide and document initial inquiries and observations; for the more detailed evaluation and testing, the auditor can use the suggested procedures in developing and carrying out a testing plan. Such a plan would include more extensive inquiries; inspections of facilities, systems, and written procedures; and tests of key control techniques, which may include using audit or system software and vulnerability analysis tools. To help document these evaluations and allow steps to be tailored to individual audits, electronic versions of the tables are available on our FISCAM website at http://www.gao.gov/special.pubs/fiscam.html.

When evaluating general controls, auditors may want to supplement the control techniques and audit procedures contained in this document with other guidance, including

- National Institute of Standards and Technology (NIST) information security standards and guidelines;
- Applicable OMB policy and guidance;
- international security standards published by the International Organization for Standardization and the International Electrotechnical Commission;
- Information Systems Audit and Control Association (ISACA) auditing standards, guidelines, and procedures; and
- requirements unique to the environment and entity being audited.

3.1. Security Management (SM)

An entitywide information security management program is the foundation of a security control structure and a reflection of senior management's commitment to addressing security risks. The security management program should establish a framework and continuous cycle of activity for assessing risk, developing and implementing effective security procedures, and monitoring the effectiveness of these procedures. Overall policies and plans are developed at the entitywide level. System and application-specific

procedures and controls implement the entitywide policy. Without a well-designed program, security controls may be inadequate; responsibilities may be unclear, misunderstood, or improperly implemented; and controls may be inconsistently applied. Such conditions may lead to insufficient protection of sensitive or critical resources and disproportionately high expenditures for controls over low-risk resources. Through FISMA, Congress requires each federal agency to establish an agencywide information security program to provide security to the information and information systems that support the operations and assets of the agency, including those managed by a contractor or other agency.

Security Program Guidance

General guidance on planning and managing an information security program is contained in (1) NIST SP 800-12,[54] which provides guidance on security-related management, operational, and technical controls and (2) our executive guide describing risk management principles found at leading organizations (discussed in the next section).[55] NIST has published a series of information security standards and guidelines for agencies to effectively manage risk to entity operations and entity assets. Key publications are:

- FIPS Publication 200, *Minimum Security Requirements for Federal Information and Information Systems*
- FIPS Publication 199, *Standards for Security Categorization of Federal Information and Information Systems*
- NIST SP 800-53, *Recommended Security Controls for Federal Information Systems*[56].

[54]NIST, *An Introduction to Computer Security: The NIST Handbook*, Special Publication (SP) 800-12, October 1995.

[55]GAO, *Executive Guide: Information security Management, Learning from Leading Organizations*, GAO/AIMD-98-68 (Washington, D.C.: May 1998).

[56]NIST has stated that it plans to update SP 800-53 annually.

FIPS Publication 200 provides

1. a specification for minimum security requirements for federal information and information systems;

2. a standardized approach to security control selection using the security categorization standard, FIPS Publication 199; and

3. links to NIST SP 800-53, containing the security controls needed for compliance with these minimum security requirements.

In applying the provisions of FIPS 200, agencies first categorize their systems as required by FIPS 199 (see Table 5), and then typically select an appropriate set of security controls from NIST SP 800-53 to satisfy their minimum security requirements. NIST reviews and updates the controls in NIST SP 800-53 annually to ensure that the controls represent the current state of practice in safeguards and countermeasures for information systems.

FIPS 200 and its supporting publication NIST SP 800-53 establish conditions to enable organizations to be flexible in tailoring their security control baselines. Agencies, may, for example, apply scoping guidance taking into consideration the issues related to such things as the technologies employed by the entity, size and complexity of the systems, unique circumstances, and risks involved. Agencies may use compensating controls in lieu of those controls prescribed by NIST SP 800-53. Agencies may also supplement the controls in NIST SP 800-53 with additional controls that may be needed.

In addition, NIST SP 800-100 provides a broad overview of information security program elements, including capital planning and investment control, performance measures, and security services, to assist managers in understanding how to establish and implement an information security program. This handbook summarizes and augments a number of existing NIST standards and guidance documents and provides additional information on related topics.

Other guidance supporting implementation of FIPS 199 and FIPS 200 include:

- NIST SP 800-18, *Guide for Developing Security Plans for Federal Information Systems*
- NIST SP 800-30, *Risk Management Guide for Information Technology Systems*
- NIST SP 800-37, *Guide for the Security Certification and Accreditation of Federal Information Systems*
- NIST SP 800-60, *Guide for Mapping Types of Information and Information Systems to Security Categories*

These and other publications, directives, and policies that support are available from NIST's website (http://csrc.nist.gov).

Security Management Critical Elements

Assessing an entitywide security management program involves evaluating the entity's efforts to perform each of the critical elements shown in table 3.

Table 3. Critical Elements for Security Management

Number	Description
SM-1	Establish a security management program
SM-2	Periodically assess and validate risks
SM-3	Document and implement security control policies and procedures
SM-4	Implement effective security awareness and other security-related personnel policies
SM-5	Monitor the effectiveness of the security program
SM-6	Effectively remediate information security weaknesses
SM-7	Ensure that activities performed by external third parties are adequately secure

Source: GAO.

The following sections discuss each of these critical elements and the control activities that support their achievement. At the end of each critical element, a summary table is presented that associates each control activity with techniques that agencies can use to perform the activity, as well as procedures for auditing the critical elements and control activities.

Critical Element SM-1: Establish a Security Management Program

Entities should have policies, plans, and procedures that clearly describe the entity's security management program. FISMA requires federal agencies to develop, document, and implement an agencywide information security program to provide security for the information and information systems that support the operations and assets of the agency, including those provided or managed by another agency, contractor, or other source. The security management program should cover all major systems and facilities and outline the duties of those who are responsible for overseeing security and those who own, use, or rely on the entity's computer resources. As part of this entitywide program, the entity should have a security management structure in place at the system and application levels. Thus, in managing a particular operating system or network device, the entity should have a clearly assigned structure and responsibilities for the security of the operating system and device. Similarly, the entity should have a clearly assigned structure and responsibilities related to particular business process applications. The security program policies, plans, and procedures should be kept up-to-date and revised to reflect system and organizational changes, problems identified during plan implementation, and security control assessments or audit reports.

SM-1.1. The security management program is adequately documented, approved, and up-to-date

The entity's security management program should be adequately documented. The nature and extent of the documentation of the program may vary. For federal entities, at a minimum, the program should adequately reflect the agency's consideration of the following eight elements of an agencywide information security program required by FISMA.

1. periodic risk assessments;

2. policies and procedures to ensure cost-effective risk reduction and compliance with applicable standards and guidance and with agency-determined system configuration requirements;

3. subordinate information security plans for networks, facilities, and systems;

4. security awareness training for agency employees and contractors;

5. periodic management testing and evaluation that includes testing of all major systems;

6. a remedial action process to address any deficiencies;

7. security-incident procedures for detecting, reporting, and responding to incidents; and

8. continuity of operations plans and procedures for information systems.

While most of these elements are covered in this section, security incident procedures are covered in section 3.2 on access controls, and continuity of operations is covered in section 3.5 on contingency planning.

The security management program may be documented in the form of a separate written security management program plan or may consist of several documents that collectively constitute the security management program. The documentation should be supported by subordinate (system and application level) plans and procedures; related policies should cover all major systems and facilities and outline the duties of those responsible for overseeing security (the security management function), as well as those who own, use, or rely on the entity's computer resources. An entitywide plan may describe such things as the overall security architecture, applicable procedures, and applicable system and application-level plans. The system-level plans identify the system-level architecture (for example, network configuration, control points, etc.), operational policies and procedures, and any business process (application-level) plans. Similarly, application-level plans should contain structures, procedures, and controls specific to the application.

The security management program should be approved by an appropriate level of management. In some instances, the entity may include the documentation in a policy document issued by management. In addition, for federal agencies, FISMA requires that

the Director of OMB review federal agency security management programs at least annually and approve or disapprove them.

Finally, to be effective, the security program documentation should be maintained to reflect current conditions. It should be periodically reviewed and, if appropriate, updated and reissued to reflect changes in risk due to factors such as changes in entity mission or the types and configuration of computer resources in use. Revisions to policies and plans should be reviewed, approved, and communicated to all employees. Outdated policies and plans not only reflect a lack of adequate top management concern, but also may be ineffective because they may not address current risks.

SM-1.2. A security management structure has been established

Senior management should establish a structure to implement the security management program throughout the entity. The structure generally consists of a core of personnel who are designated as security managers. These personnel play a key role in developing, communicating, and monitoring compliance with security polices and reporting on these activities to senior management. The security management function also serves as a focal point for other personnel who play a role in evaluating the appropriateness and effectiveness of computer-related controls on a day-to-day basis. These personnel include program managers who rely on the entity's computer systems, system administrators, and system users.

As an illustration of the different responsibilities of a security management structure, FISMA establishes responsibilities for certain agency officials as follows:

- The agency head is responsible for (1) providing risk-based information security, (2) complying with FISMA requirements and related NIST standards, (3) ensuring integration of information security management with agency strategic and operational planning, (4) ensuring adequacy of trained information security personnel, and (5) ensuring receipt of annual reporting from the CIO.
- The CIO is to have authority from the agency head to ensure compliance with FISMA, including responsibility for

(1) designating a senior agency information security official, (2) developing and maintaining the agency information security program and related policies and procedures, (3) training and overseeing information security personnel, and (4) assisting senior agency officials with their information security responsibilities.

- Senior agency officials are responsible for information security for operations and assets under their control, including (1) assessing risk, (2) determining levels of appropriate security, (3) implementing policies and procedures to cost-effectively reduce risks to an acceptable level, and (4) periodically testing and evaluating security controls.

Our survey of leading organizations[57] found that a central management focal point is key to ensuring that the various activities associated with managing risk are carried out. Such responsibility is assigned to a central security program office. A central security program office may be supplemented by individual security program managers, designated in units within the entity who assist in the implementation and management of the organization's security program. These individual unit security managers should report to or coordinate with the central security program office.

Responsibilities of the central security program office may include

- facilitating risk assessments,
- coordinating development and distribution of security policies and procedures,
- routinely monitoring compliance with these policies,
- promoting security awareness among system users,
- planning and coordinating security-related activities, including coordination of geographically dispersed security groups,
- ensuring that desktop security plans are integrated with infrastructure and database security plans,

[57] *Executive Guide: Information Security Management, Learning from Leading Organizations* (GAO/AIMD-98-68, May 1998).

- providing reports to senior management on policy and control evaluation results and advice to senior management on security policy issues, and
- representing the entity in the security community.

In assessing the effectiveness of the security management structure for an entitywide, system, or application level, the auditor considers the security function's scope of authority, placement, training and experience, and tools. For example, security management personnel should

- have sufficient authority to obtain data needed to monitor compliance with policies, report results to senior management, and elevate concerns regarding inappropriate risk management decisions or practices;
- have sufficient resources to carry out their responsibilities, including staff and tools (for example, computers, established audit trails, and specialized security software);
- report to a level of management that maximizes the independence and objectivity of the security function;
- not be assigned responsibilities that diminish their objectivity and independence; and
- have sufficient training and knowledge of control concepts, computer hardware, software, telecommunications concepts, physical and logical security, data architecture, database management and data access methods, pertinent legislation, and administration and organizational issues.

SM-1.3. Information security responsibilities are clearly assigned

Security-related responsibilities of offices and individuals throughout the entity that should be clearly defined include those of (1) information resource owners and users, (2) information resources management and data processing personnel, (3) senior management, and (4) security administrators. Further, responsibilities for individual employee accountability regarding the use and disclosure of information resources should be established. Appendix III of OMB Circular A-130 requires that the rules of the system and application "shall clearly delineate responsibilities and

expected behavior of all individuals with access … and shall be clear about the consequences of behavior not consistent with the rules."

Senior management and information resource management have ultimate responsibility for providing direction and ensuring that information security responsibilities are clearly assigned and carried out as intended. Security plans should clearly establish who "owns" the various computer resources, particularly data files, and what the responsibilities of ownership are. Ownership of computer resources should be assigned to persons responsible for their reliability and integrity. For example, owners of data files and application programs are generally the managers of the programs supported by these applications. These managers are primarily responsible for the proper operation of the program and for accurate reporting of related computer data. Similarly, owners of computer facilities and equipment are generally managers who are responsible for the physical protection of these resources. If a resource has multiple owners, policies should clearly describe whether and how ownership responsibilities are to be shared.

Assignment of ownership responsibilities is important because the managers who own the resources are in the best position to (1) determine the sensitivity of the resources, (2) analyze the duties and responsibilities of users, and (3) determine the specific access needs of these users. Once these factors are determined, the resource owner can identify persons authorized to access the resource and the extent of such access. The owners should communicate these authorizations to the security administrators, who are then responsible for implementing access controls in accordance with the owners' authorizations. Section 3.2, Access Controls, further discusses access authorization.

If management and ownership responsibilities are not clearly assigned, access authorizations may be left to personnel who are not in the best position to determine users' access needs. Such personnel are likely to authorize overly broad access in an attempt to ensure that all users can access the resources they need. This defeats the purpose of access controls and, depending on the

sensitivity of the resources involved, can unnecessarily provide opportunities for fraud, sabotage, and inappropriate disclosures.

SM-1.4. Subordinate security plans are documented, approved, and kept up-to-date

Entities should have written security plans at the system and application levels that cover networks, facilities, and systems or groups of systems, as appropriate. The plans and related policies should cover all major systems and facilities and outline the duties of those who are responsible for overseeing security and those who own, use, or rely on the entity's computer resources. In addition, these system-level plans should provide an overview of the security requirements for the system and a description of the security controls in place or planned for meeting those requirements. These plans should be kept up-to-date and revised to reflect system and organizational changes, problems identified during plan implementation, and security control assessments or audit reports. NIST SP 800-18 requires that all security plans should be reviewed and updated, if appropriate, at least annually. Further, NIST SP 800-18 and Appendix III of OMB Circular A-130 provide specific guidance on what should be included in federal entity system security plans.

FISMA states that "each agency shall develop, document, and implement…subordinate plans for providing adequate information security for networks, facilities, and systems or groups of information systems, as appropriate." System-level plans should identify the system-level architecture (for example, network configuration, control points, etc.), operational policies and procedures, and any application-level plans. Application plans should contain similar elements such as procedures and controls specific to the application.

System security plans should be clearly documented and, according to Appendix III of OMB Circular A-130, cover each general support system and each major application. The circular further specifies the topics to include in the plans. Topic names will differ depending on whether the plan is for a general support system or a major application, but the subject matter will be similar. The required topics are shown in table 4.

Table 4. Security Controls to Include in System Security Plans

General support system	Major application
rules of the system [a]	application rules [a]
training	specialized training
personnel controls	personnel security
incident-response capability	NA
continuity of support	contingency planning
technical security	technical controls
system interconnection	information sharing
NA	public access controls

Source: Appendix III of OMB Circular A-130.

[a] These include rules delineating responsibilities and expected behaviors of staff.
Note: In this manual, access controls are addressed in section 3.2 and contingency planning in section 3.5.

To help ensure that the system security plan is complete and supported by the entity as a whole, senior management should obtain agreement from all affected parties to establish policies for a security program. Such agreements will also help ensure that policies and procedures for security developed at lower levels within the agency are consistent with overall organizational policies and procedures. In accordance with Appendix III of OMB Circular A-130, final responsibility for authorization of a system to process information should be granted by a management official. Generally, the manager whose program operations and assets are at risk is the most appropriate management official. However, any disagreements between program managers and security specialists as to the adequacy of policies and controls should be resolved by senior management.

Like the overall security policies and plans, the subordinate security policies and plans should be maintained to reflect current conditions. As described in SM-1.1, they should be periodically reviewed and updated to reflect changes in risk and revisions should be reviewed, approved, and communicated to employees. Outdated policies and plans may be ineffective because they may not address current risks.

SM-1.5. An inventory of systems is developed, documented, and kept up-to-date

To implement an effective security program, entities need to maintain a complete, accurate, and up-to-date inventory of their

systems. Without one, the entity cannot effectively manage IS controls across the entity. For example, effective configuration management requires the entity to know what systems they have and whether the systems are configured as intended. Furthermore, the inventory is necessary for effective monitoring, testing, and evaluation of IS controls, and to support information technology planning, budgeting, acquisition, and management.

FISMA requires that each agency develop, maintain, and annually update an inventory of major information systems operated by the agency or under its control. OMB Circular A-130 defines a major information system as a system that requires special management attention because of its importance to an agency mission; its high development, operating, or maintenance costs; or its significant role in the administration of agency programs, finances, property, or other resources. The inventory must include identification of the interfaces between the agency systems and all other systems or networks, including interfaces not controlled by the agency. The inventory is needed to effectively track the agency systems for annual testing and evaluation and contingency planning.

Control Techniques and Suggested Audit Procedures for Critical Element SM-1

Table 5 presents control activities for critical element SM-1, techniques that entities may use to perform the activity and procedures for auditing the critical element and control activities.

Table 5. Control Techniques and Suggested Audit Procedures for Critical Element SM-1: Establish a security management program

Control activities	Control techniques	Audit procedures

SM-1.1. The security management program is adequately documented, approved, and up-to-date.	SM-1.1.1. An agency/entitywide security management program has been developed, documented, and implemented that
	• covers all major facilities and operations,
	• has been approved by senior management and key affected parties, and
	• covers the key elements of a security management program:
	  • periodic risk assessments,
	  • adequate policies and procedures,
	  • appropriate subordinate information security plans,
	  • security awareness training,
	  • management testing and evaluation,
	  • a remedial action process,
	  • security-incident procedures, and
	  • continuity of operations.
		Review documentation supporting the agency/entitywide security management program and discuss with key information security management and staff.
		
		Determine whether the program
		• adequately covers the key elements of a security management program
		• is adequately documented, and
		• is properly approved.
		
		Determine whether all key elements of the program are implemented. Consider audit evidence obtained during the course of the audit.

	SM-1.1.2. The agency/entitywide security management program is updated to reflect current conditions.	Based on a review of security management program documentation and interviews with key information security management and staff, determine whether the entity has adequate policies and procedures to identify significant changes in its IT environment that would necessitate an update to the program, and whether the program is periodically updated to reflect any changes.
SM-1.2. A security management structure has been established.	SM-1.2.1. Senior management establishes a security management structure for entitywide, system, and application levels that have adequate independence, authority, expertise, and resources.	Review security policies and plans, the entity's organization chart, and budget documentation. Interview security management staff. Evaluate the security structure: independence, authority, expertise, and allocation of resources required to adequately protect the information systems.
	SM-1.2.2. An information systems security manager has been appointed at an agency/entity level and at appropriate subordinate (i.e., system and application) levels and given appropriate authority.	Review pertinent organization charts and job descriptions. Interview the overall security manager and subordinate security managers responsible for specific systems and applications.
SM-1.3. Information security responsibilities are clearly assigned.	SM-1.3.1. The security program documentation clearly identifies owners of computer-related resources and those responsible for managing access to computer resources. Security responsibilities and expected behaviors are clearly defined at the entitywide, system, and application levels for (1) information resource owners and users, (2) information technology management and staff, (3) senior management, and (4) security administrators.	Review security program documentation detailing security responsibilities and rules of behavior for security officials, resource owners, and users at the entitywide, system, and application levels.

Control activities	Control techniques	Audit procedures
SM-1.4. Subordinate security plans are documented, approved, and kept up-to-date.	SM-1.4.1. System and application security plans have been documented and implemented that • cover all major facilities and operations, • have been approved by key affected parties, • cover appropriate topics (for federal agencies, those prescribed by OMB Circular A-130; see table 4).	Review agency/entity policies and procedures for preparing security plans. Review the system and application security plans encompassing key areas of audit interest and critical control points. Determine whether the plans adequately cover appropriate topics (for federal agencies, refer to NIST SP 800-18 for guidance on security plans) and are properly approved. When conducting the audit, determine whether the plans have been implemented and accurately reflect the conditions noted. Determine whether security plans collectively cover all major facilities and operations.
	SM-1.4.2. The subordinate security plans are updated annually or whenever there are significant changes to the agency/entity policies, organization, IT systems, facilities, applications, weaknesses identified, or other conditions that may affect security.	Review relevant security plans and any related documentation indicating whether they have been reviewed and updated and are current.
SM-1.5. An inventory of systems is developed, documented, and kept up-to-date.	SM-1.5.1. A complete, accurate, and up-to-date inventory exists for all major systems that includes the identification of all system interfaces.	Obtain the agency's/entity's systems inventory. Discuss with agency/entity management (1) the methodology and criteria for including or excluding systems from the inventory and (2) procedures and controls for ensuring the completeness, accuracy, and currency of the inventory. Determine whether systems tested during the audit are included in the inventory. Test the inventory for completeness, accuracy, and currency. The objective of this step in an IS controls audit being performed as part of a financial audit or data reliability assessment is generally limited to understanding management's process and controls for ensuring the accuracy of the inventory. Also, in the absence of effective controls over the inventory, the auditor would need to perform additional procedures to reasonably assure that all systems relevant to the audit have been identified.

Source: GAO.

Critical Element SM-2. Periodically assess and validate risks

A comprehensive risk assessment should be the starting point for developing or modifying an entity's security policies and security plans. Such assessments are important because they help make certain that all threats and vulnerabilities are identified and considered, that the greatest risks are addressed, and that appropriate decisions are made regarding which risks to accept and which to mitigate through security controls. Appropriate risk assessment policies and procedures should be documented and based on the security categorizations.

FISMA explicitly emphasizes a risk-based policy for cost-effective security. In support of and reinforcing this legislation, OMB Circular A-130, Appendix III, *Security of Federal Automated Information Resources*, requires executive agencies within the federal government to plan for security; ensure that appropriate officials are assigned security responsibility; review the security controls in their information systems; and authorize system processing prior to operations and periodically thereafter.

Risk assessments should consider threats and vulnerabilities at the entitywide level, system level, and application levels. For example, at the entitywide level, risk assessments should consider personnel policies and procedures, training, and security awareness activities. At the system level, risks related to connectivity issues (for example, Internet, dial-up, wireless) and access controls (for example, both logical and physical) need to be assessed. At the application level, risk assessments need to consider specific business processes and highly-integrated enterprise resource planning (ERP) applications (discussed in Chapter 4).

Risk assessments should consider risks to data confidentiality, integrity, and availability, and the range of risks that an entity's systems and data may be subject to, including those posed by authorized internal and external users, as well as unauthorized outsiders who may try to break into the systems. For example, risk assessments should take into account observed trends in the types and frequency of hacker activity and threats. Such analyses should also draw on reviews of system and network configurations, as well as observations and testing of existing security controls.

Our study of security programs at leading organizations found that the following were key success factors for risk assessments.

- Organizations had a defined process that allowed an entitywide understanding of what a risk assessment was and avoided individual units developing independent definitions.
- Organizations required that risk assessments be performed and designated a central security group to schedule and facilitate them.
- Risk assessments involved a mix of individuals who have knowledge of business operations and technical aspects of the organization's systems and security controls.
- The business managers were required to provide a final sign-off indicating agreement with risk-reduction decisions and acceptance of the residual risk.
- Organizations required that final documentation be forwarded to more senior officials and to internal auditors so that participants could be held accountable for their decisions.
- Leading organizations did not attempt to precisely quantify risk. Although they would have liked to place a dollar value on risks and precisely quantify the costs and benefits of controls, they felt that spending time on such an exercise was not worth the trouble. They believed that few reliable data were available on either the actual frequency of security incidents or on the full costs of controls and of damage due to a lack of controls.

Risk assessments are more likely to be effective when performed by personnel with enough independence to be objective and with enough expertise (training and experience) to be able to adequately identify and assess technical and security risks.

Risk assessment and risk management are ongoing efforts. Although a formal, comprehensive risk assessment is performed periodically, such as part of a system security plan, risk should be considered whenever there is a change in an entity's operations or its use of technology or in outside influences affecting its operations. Changes to systems, facilities, or other conditions and identified security vulnerabilities should be analyzed to determine their impact on risk, and the risk assessment should be performed or revised as

necessary. The risk assessment and validation and related management approvals should be documented and maintained on file. Such documentation should include risk assessments, security test and evaluation results, security plans, and appropriate management approvals. Further, according to NIST SP 800-37, systems should be certified and accredited before being placed in operation and when major system changes occur.

The NIST SP 800-30 risk management guide discusses the development of an effective risk management program and contains both the definitions and the practical steps necessary for assessing and mitigating risks within IT systems, including related testing. According to this guide, the principal goal of an entity's risk management process should be to protect the entity and its ability to perform its mission, not only its information technology assets.

According to FISMA, federal agencies must periodically assess the risk and magnitude of the harm that could result from the unauthorized access, use, disclosure, disruption, modification, or destruction of information and information systems that support their operations and assets. Policies and procedures are based on risk, and the rigor of management testing and evaluation of information security should also be based on risk. Also, OMB Circular A-123 states that management is responsible for developing and maintaining internal control activities that comply with certain standards, including risk assessment. The Circular further states that, under risk assessment, management should identify internal and external risks that may prevent the organization from meeting its objectives. Identified risks should then be analyzed for their potential effect or impact on the agency.

Further, Appendix III of OMB Circular A-130 requires that agencies consider risk when determining the need for and selecting computer-related control techniques. However, the Circular no longer requires formal periodic risk analyses that attempt to quantify in dollars an annual loss exposure resulting from unfavorable events.

Pursuant to FISMA, NIST developed standards for security categorization of federal information and information systems

according to a range of potential impacts (FIPS Pub 199). Table 6 summarizes these NIST standards using potential impact definitions for each security objective (confidentiality, integrity, and availability). Federal agencies should categorize/classify their non-national security systems according to these impact levels. The security categories are based on the potential impact on an entity should certain events occur that jeopardize the information and information systems needed by the entity to accomplish its assigned mission, protect its assets, fulfill its legal responsibilities, maintain its day-to-day functions, and protect individuals. NIST also issued a guide for mapping types of information and information systems to security categories (NIST SP 800-60). Security categories are to be used in conjunction with vulnerability and threat information in assessing the risk to an agency.

Table 6. NIST Impact Definitions for Security Objectives

	Potential impact		
Security objective	**Low**	**Moderate**	**High**
Confidentiality Preserving authorized restrictions on information access and disclosure, including means for protecting personal privacy and proprietary information. {44 U.S.C., Sec 3542}	The unauthorized disclosure of information could be expected to have a **limited** adverse effect on organizational operations, organizational assets, or individuals.	The unauthorized disclosure of information could be expected to have a **serious** adverse effect on organizational operations, organizational assets, or individuals.	The unauthorized disclosure of information could be expected to have a **severe or catastrophic** adverse effect on organizational operations, organizational assets, or individuals.

Security objective	Potential impact		
	Low	**Moderate**	**High**
Integrity Guarding against improper information modification or destruction, and includes ensuring information non-repudiation and authenticity. {44 U.S.C., Sec 3542}	The unauthorized modification or destruction of information could be expected to have a **limited** adverse effect on organizational operations, organizational assets, or individuals.	The unauthorized modification or destruction of information could be expected to have a **serious** adverse effect on organizational operations, organizational assets, or individuals.	The unauthorized modification or destruction of information could be expected to have a **severe or catastrophic** adverse effect on organizational operations, organizational assets, or individuals.
Availability Ensuring timely and reliable access to and use of information. {44 U.S.C. 3542}	The disruption of access to or use of information or an information system could be expected to have a **limited** adverse effect on organizational operations, organizational assets, or individuals.	The disruption of access to or use of information or an information system could be expected to have a **serious** adverse effect on organizational operations, organizational assets, or individuals.	The disruption of access or use of information or an information system could be expected to have a **severe or catastrophic** adverse effect on organizational operations, organizational assets, or individuals.

One area that merits additional emphasis is the appropriate consideration of risks associated with sensitive privacy information. In addition to an appropriate consideration of related risk, specific controls are discussed at SM-5 and AC-4.2.

In addition to FISMA, federal agencies are subject to privacy laws aimed at preventing the misuse of personally identifiable

information.[58] The Privacy Act of 1974 and the privacy provisions of the E-Government Act of 2002 contain the major requirements for the protection of personal privacy by federal agencies. The Privacy Act places limitations on agencies' collection, disclosure, and use of personal information maintained in systems of records[59] and requires that when agencies establish or make changes to a system of records; they must notify the public by a "system-of-records notice."[60] The E-Government Act of 2002 strives to enhance protection for personal information in government information systems or information collections by requiring that agencies conduct privacy impact assessments. These privacy impact assessments include an analysis of how personal information is collected, stored, shared, and managed in a federal system.

According to OMB guidance, these privacy impact assessments must analyze and describe how the information will be secured including administrative and technological controls and should be current.[61] OMB Memorandum M-03-22[62] directs agencies to conduct reviews of how information about individuals is handled within their agency when they use information technology to collect new

[58]Personally identifiable information refers to any information about an individual maintained by an agency, including any information that can be used to distinguish or trace an individual's identity, such as their name, social security number, date and place of birth, or biometric records, and any other information which is linked or linkable to an individual.

[59]The act describes a "record" as any item, collection, or grouping of information about an individual that is maintained by an agency and contains his or her name or another personal identifier. It also identifies "system of records" as a group of records under the control of any agency retrieved by the name of the individual or by an individual identifier.

[60]A system of records notice is a notice in the Federal Register identifying, among other things, the type of data collected, the types of individuals about whom information is collected, the intended "routine" uses of data, and procedures that individuals can use to review and correct personal information.

[61]See OMB Memorandum M-03-22, *OMB Guidance for Implementing the Privacy Provisions of the E-Government Act of 2002*. Also, according to FY 2006 Reporting Instructions for the Federal Information Security Management Act and Agency Privacy Management, OMB Memorandum M-06-20, July 17, 2006, a privacy impact assessment or a system of records notice is current if that document satisfies the applicable requirements and subsequent substantial changes have not been made to the system.

[62]OMB, *Guidance for implementing the Privacy Provisions of the E-Government Act of 2002*, M-03-22 (Washington, DC.: September 26, 2003).

information, or when agencies develop or buy new IT systems to handle collection of personally identifiable information.

As discussed in NIST SP 800-60[63], in establishing confidentiality impact levels for each information type, responsible parties must consider the consequences of unauthorized disclosure of privacy information (with respect to violations of Federal policy and/or law). The impact of privacy violations will depend in part on the penalties associated with violation of the relevant statutes and policies. Further, it says that, in most cases, the impact on confidentiality for privacy information will be in the ***moderate*** range.

Control Techniques and Suggested Audit Procedures for Critical Element SM-2

Table 7 Control Techniques and Suggested Audit Procedures for Critical Element SM-2: Periodically assess and validate risks

Control activities	Control techniques	Audit procedures
SM-2.1. Risk assessments and supporting activities are systematically conducted.	SM-2.1.1. Appropriate risk assessment policies and procedures are documented and based on security categorizations.	Review risk assessment policies, procedures, and guidance.
	SM-2.1.2. Information systems are categorized based on the potential impact that the loss of confidentiality, integrity, or availability would have on operations, assets, or individuals.	Determine if security risk categorizations are documented, reasonable, and, for federal entities, if they comply with NIST FIPS Pub 199 and SP 800-60.

[63]NIST Special Publication (SP) 800-60, *Volume I: Guide for Mapping Types of Information and Information Systems to Security Categories* – Revision 1 (August 2008).

Control activities	Control techniques	Audit procedures
	SM-2.1.3. Risks are reassessed for the entitywide, system, and application levels on a periodic basis or whenever systems, applications, facilities, or other conditions change.	Obtain the most recent risk assessments encompassing key areas of audit interest and critical control points. Determine if the risk assessments are up-to-date, appropriately documented, approved by management, and supported by sufficient testing (e.g., determine whether system vulnerabilities were identified using such techniques as automated scanning tools, security test evaluations or penetration tests). See NIST SP 800-30 for details. The objective of this step in an IS controls audit being performed as part of a financial audit or data reliability assessment is generally limited to understanding management's risk assessment process (including related controls), reading the risk assessments for the key systems relevant to the audit objectives, and determining whether risks identified by the IS controls audit are properly considered in the risk assessments.
	SM-2.1.4. Risk assessments and validations, and related management approvals are documented and maintained on file. Such documentation includes security plans, risk assessments, security test and evaluation results, and appropriate management approvals.	For a selection of risk assessments assess the completeness and adequacy of the required documentation.
	SM-2.1.5. Changes to systems, facilities, or other conditions and identified security vulnerabilities are analyzed to determine their impact on risk and the risk assessment is performed or revised as necessary based on OMB criteria.	Review criteria used for revising risk assessments. For recent changes that meet the criteria, determine if the risk assessment was redone or updated.
	SM-2.1.6. Federal systems are certified and accredited before being placed in operation and at least every 3 years, or more frequently if major system changes occur.	For federal systems that are significant to the audit objectives, review certification and accreditation documentation and determine compliance with NIST SP 800-37. The objective of this step in an IS controls audit being performed as part of a financial audit or data reliability assessment is generally limited to understanding the certification and accreditation process (including related controls), reading the certifications and accreditations for the key systems relevant to the audit objectives, and determining whether the certification and accreditation documentation for the systems tested is consistent with the testing results.

Critical Element SM-3. Document and implement security control policies and procedures

Security control policies and procedures should be documented and approved by management. They should also appropriately consider risk, address general and application controls, and ensure that users can be held accountable for their actions. Control policies and procedures may be written to be more general at the entitywide level and more specific at the systems (for example, specific configurations) and application levels (for example, user access rules for specific applications). For example, access control policies may be implemented at the entitywide level through communication of formal written guidance; at the system level through system-level security software, firewall rules, and access control lists; and at the application level through very specific controls built into the application. Also, a formal sanctions process should be established for personnel who fail to comply with established IS control policies and procedures.

According to FISMA, each federal agency information security program must include policies and procedures that are based on risk assessments that cost-effectively reduce information security risks to an acceptable level, and ensure that information security is addressed throughout the life cycle of each agency information system. NIST provides guidance pertaining to computer security policy and procedures, described here.

Security policy is senior management's directives to create a computer security program, establish its goals, and assign responsibilities. The term is also used to refer to the specific security rules for particular systems. Because policy is written at a broad level, agencies also develop standards, guidelines, and procedures that offer users, managers, and others a clear approach to implementing policy and meeting organizational goals. Standards and guidelines specify technologies and methodologies to be used to secure systems. Standards, guidelines, and procedures may be promulgated throughout an entity via handbooks, regulations, or manuals.

Procedures are detailed steps to be followed to accomplish particular security-related tasks (for example, preparing new user accounts and assigning the appropriate privileges). Procedures provide more detail in how to implement the security policies, standards, and guidelines. Manuals, regulations, handbooks, or similar documents may mix policy, guidelines, standards, and procedures, since they are closely linked. In order for manuals and regulations to serve as important tools, they should clearly distinguish between policy and its implementation. This can help in promoting flexibility and cost-effectiveness by offering alternative approaches to implementing policies.

Control Techniques and Suggested Audit Procedures for Critical Element SM-3

Table 8. Control Techniques and Suggested Audit Procedures for Critical Element SM-3: Document and implement security control policies and procedures

Control activities	Control techniques	Audit procedures
SM-3.1 Security control policies and procedures are documented, approved by management and implemented.	SM-3.1.1. Security control policies and procedures at all levels • are documented, • appropriately consider risk, • address purpose, scope, roles, responsibilities, and compliance, • ensure that users can be held accountable for their actions, • appropriately consider general and application controls, • are approved by management, and • are periodically reviewed and updated.	Review security policies and procedures and compare their content to NIST guidance (e.g., SP 800-30, SP 800-37, SP 800-100) and other applicable criteria (e.g., configuration standards).

Source: GAO.

Critical Element SM-4. Implement effective security awareness and other security-related personnel policies

Effective security-related personnel policies are critical to effective security. Ineffective personnel policies can result in employees or contractors inadvertently or intentionally compromising security.

For example, security may be compromised due to an inadequate awareness or understanding, inadequate security training, or inadequate screening of employees.

An ongoing security awareness program should be implemented that includes first-time training for all new employees, contractors, and users; periodic refresher training for all employees, contractors and users; and distribution of security policies detailing rules and expected behaviors to all affected personnel. Relevant security awareness requirements and guidance are contained in FISMA, OMB Circular A-130, and NIST SP 800-50, *Building an Information Technology Security Awareness and Training Program*. In addition, employees with significant security responsibilities should receive specialized training, as described in NIST SP 800-16, "*Information Technology Security Training Requirements: A Role- and Performance-Based Model*" (April 1998). Also, see 5 CFR 930.301.

According to FISMA, an agencywide information security program for a federal agency must include security awareness training for not only agency personnel but also contractors and other users of information systems that support the agency's operations and assets. This training must cover (1) information security risks associated with users' activities and (2) users' responsibilities in complying with agency policies and procedures designed to reduce these risks. FISMA also includes requirements for training of personnel with significant responsibilities for information security. Further, OMB requires personnel to be trained before they are granted access to systems or applications. The training is to make sure that personnel are aware of the system or application's rules, their responsibilities, and their expected behavior.

Other security-related personnel policies are also relevant to effective security. Policies related to personnel actions, such as hiring, termination, and employee expertise, are important considerations in securing information systems. If personnel policies are not adequate, an entity runs the risk of (1) hiring unqualified or untrustworthy individuals; (2) providing terminated employees opportunities to sabotage or otherwise impair entity operations or assets; (3) failing to detect continuing unauthorized

employee actions; (4) lowering employee morale, which may in turn diminish employee compliance with controls; and (5) allowing staff expertise to decline.

As mentioned, FISMA requires agencies to implement agencywide security programs that include effective policies and procedures to ensure cost-effective risk reduction and ensure compliance with FISMA and applicable OMB (e.g., OMB Circular A-130) and NIST (e.g., SP 800-30) guidance. This guidance specifically addresses security-related personnel policies and procedures. For example, NIST SP 800-53 addresses personnel security and controls related to personnel screening, termination and transfer, and third-party security.

SM-4.1 Ensure that resource owners, system administrators, and users are aware of security policies

For a security program to be effective, those expected to comply with it must be aware of it. Typical means for establishing and maintaining security awareness include

- informing users of the importance of the information they handle and the legal and business reasons for maintaining its integrity and confidentiality;
- distributing documentation describing security policies, procedures, and users' responsibilities, including their expected behavior;
- requiring users to periodically sign a statement acknowledging their awareness and acceptance of responsibility for security (including the consequences of security violations) and their responsibilities for following all organizational policies (including maintaining confidentiality of passwords and physical security over their assigned areas); and
- requiring comprehensive security orientation, training, and periodic refresher programs to communicate security guidelines to both new and existing employees and contractors.

Leading organizations studied considered promoting awareness to be one of the most important factors in the risk management process. Awareness was considered to be especially important in

reducing the risks of "social engineering," where users are talked into revealing passwords or other sensitive information to potential thieves. Educating users about such risks makes them think twice before revealing sensitive data and makes them more likely to notice and report suspicious activity.

Employee awareness is also critical in combating security threats posed by spam, spyware, and phishing. Spam (unsolicited commercial e-mail) consumes significant resources and is used as a delivery mechanism for other types of cyberattacks; spyware (software that monitors user activity without user knowledge or consent) can capture and release sensitive data, make unauthorized changes, and decrease system performance; and phishing (fraudulent messages to obtain personal or sensitive data) can lead to identity theft, loss of sensitive information, and reduced trust and use of electronic government services. The blending of these threats creates additional risks that cannot be easily mitigated with currently available tools.

SM-4.2. Hiring, transfer, termination, and performance policies address security

The security policies and procedures (including relevant personnel and human resources policies and procedures) that should generally be in place include the following:

- Hiring procedures include contacting references, performing background investigations, and ensuring that periodic investigations are performed as required by law and implementing regulations, consistent with the sensitivity of the position, per criteria from the Office of Personnel Management.
- Individuals are screened before they are authorized to have access to organizational information and information systems.
- For employees and contractors assigned to work with confidential information, confidentiality, nondisclosure, or security access agreements specify precautions required and unauthorized disclosure acts, contractual rights, and obligations during employment and after termination.
- Periodic job rotations and vacations are used, if appropriate, and work is temporarily reassigned during vacations.

- A formal sanctions process enforces (including performance ratings for individual employees) compliance with security policies and procedures.
- Compensation and recognition are appropriate to promote high morale.
- Where appropriate, termination and transfer procedures include
  - exit interview procedures;
  - return of property, such as keys, identification cards, badges, and passes;
  - notification to security management of terminations, and prompt termination of access to the entity's resources and facilities (including passwords);
  - the immediate escorting of terminated employees—especially those who have access to sensitive resources—out of the entity's facilities; and
  - identification of the period during which nondisclosure requirements remain in effect.

SM-4.3. Employees have adequate training and expertise

Management should ensure that employees—including data owners, system users, data processing personnel, and security management personnel—have the expertise to carry out their information security responsibilities. To accomplish this, a security training program should be developed that includes

- job descriptions that include the education, experience, and expertise required;
- periodically reassessing the adequacy of employees' skills;
- annual training requirements and professional development programs to help make certain that employees' skills, especially technical skills, are adequate and current; and
- monitoring employee training and professional development accomplishments.

Control Techniques and Suggested Audit Procedures for Critical Element SM-4

Table 9. Control Techniques and Suggested Audit Procedures for Critical Element SM-4: Implement effective security awareness and other security-related personnel policies

Control activities	Control techniques	Audit procedures
SM-4.1. Owners, system administrators, and users are aware of security policies.	SM-4.1.1. An ongoing security awareness program has been implemented that includes security briefings and training that is monitored for all employees with system access and security responsibilities. Coordinate with the assessment of the training program in SM-4.3.	Review documentation supporting or evaluating the awareness program. Observe a security briefing. Interview data owners, system administrators, and system users. Determine what training they have received and if they are aware of their security-related responsibilities. Determine whether adequate procedures are implemented to monitor that all employees and contractors are receiving security awareness training.

Control activities	Control techniques	Audit procedures
	SM-4.1.2. Security policies are distributed to all affected personnel, including system and application rules and expected user behaviors.	Review memos, electronic mail files, or other policy distribution mechanisms. Review personnel files to test whether security awareness statements are current. If appropriate, call selected users, identify yourself as security or network staff, and attempt to talk them into revealing their password. (See Section 2.2.2 “Appropriateness of Control Testing” for discussion of performance issues relating to this type of testing).
SM-4.2. Hiring, transfer, termination, and performance policies address security.	SM-4.2.1. For prospective employees, references are contacted and background checks performed. Individuals are screened before they are given authorization to access organizational information and information systems.	Review hiring policies. For a selection of recent hires, inspect personnel records and determine whether references have been contacted and background checks have been performed.
	SM-4.2.2. Periodic reinvestigations are performed as required by law, and implementing regulations [at least once every 5 years], consistent with the sensitivity of the position. For federal entities, criteria can be obtained from the Office of Personnel Management (OPM).	Review applicable laws, regulations and reinvestigation policies (e.g. 5 CFR 731.106(a); OPM/Agency policy, regulations and guidance; FIPS 201 & NIST SP 800-73, 800-76, 800-78; and, any criteria established for the risk designation of the assigned position.) For a selection of sensitive positions, inspect personnel records and determine whether background reinvestigations have been performed as required.
	SM-4.2.3. Nondisclosure or security access agreements are required for employees and contractors assigned to work with sensitive information.	Review policies on confidentiality or security agreements. For a selection of such users, determine whether confidentiality or security agreements are on file.
	SM-4.2.4. When appropriate, regularly scheduled vacations exceeding several days are required, and the individual’s work is temporarily reassigned.	Review vacation policies. Inspect personnel records to identify individuals who have not taken vacation or sick leave in the past year. Determine who performed employee’s work during vacations.
	SM-4.2.5. A formal sanctions process is employed for personnel failing to comply with security policy and procedures.	Review the sanctions process. Determine how compliance with security policies is monitored and how sanctions were administered.

Control activities	Control techniques	Audit procedures
	SM-4.2.6. Where appropriate, termination and transfer procedures include • exit interview procedures; • return of property, keys, identification cards, passes, etc.; • notification to security management of terminations and prompt revocation of IDs and passwords; • immediate escort of terminated employees out of the entity's facilities; and • identification of the period during which nondisclosure requirements remain in effect.	Review pertinent policies and procedures. For a selection of terminated or transferred employees, examine documentation showing compliance with policies. Compare a system-generated list of users to a list of active employees obtained from personnel to determine whether IDs and passwords for terminated employees still exist.
SM-4.3. Employees have adequate training and expertise.	SM-4.3.1. Skill needs are accurately identified and included in job descriptions, and employees meet these requirements.	Review job descriptions for security management personnel and for a selection of other system users. For a selection of employees, compare personnel records on education and experience with job descriptions.
	SM-4.3.2. Employee training and professional development are documented and monitored.	Review training records and related documentation showing whether such records are monitored and whether employees are receiving the appropriate training.

Source: GAO.

Critical Element SM-5. Monitor the effectiveness of the security program

An important element of risk management is ensuring that policies and controls intended to reduce risk are effective on an ongoing basis. Effective monitoring involves the entity performing tests of IS controls to evaluate or determine whether they are appropriately designed and operating effectively to achieve the entity's control objectives. Senior management's awareness, support, and involvement are essential in establishing the control environment needed to promote compliance with the agency's/entity's information security program. However, because security is not an end in itself, senior managers should balance the emphasis on security with the larger objective of achieving the agency's/entity's mission. To do this effectively, top management should understand the agency's/entity's security risks and actively support and monitor the effectiveness of its security policies. If senior management does not monitor the security program, it is unlikely that others in the

organization will be committed to properly implementing it. Monitoring is one of GAO's five internal control standards.[64]

Over time, policies and procedures may become inadequate because of changes in threats, changes in operations or deterioration in the degree of compliance. Periodic assessments are an important means of identifying areas of noncompliance, reminding employees of their responsibilities, and demonstrating management's commitment to the security plan. Such assessments can be performed by entity staff or by external reviewers engaged by management. Independent audits performed or arranged by GAO and by agency inspectors general, while an important check on management performance, should not be viewed as substitutes for management evaluations of the adequacy of the entity's security program.

FISMA requires federal agencies to perform periodic testing and evaluation of the effectiveness of information security policies, procedures, and practices. First, agencies must provide management testing of every system every year, but the level of rigor may vary depending on the risk. However, OMB in past FISMA reporting guidance (M-03-19) has noted that annual FISMA testing does not alter OMB's policy requiring system reauthorization (certification and accreditation) at least every 3 years or when significant changes are made.[65]

Second, FISMA requires annual independent evaluations of agency information security programs and practices to determine their effectiveness. Independent evaluations of non-national-security systems are to be performed by the agency's Inspector General, or by an independent external auditor chosen by the IG, if any, or by the head of the agency, if there is no agency IG. Evaluations related to national security systems are to be performed only by an entity designated by the agency head. These independent evaluations must test the effectiveness of control techniques for a representative

[64]Standards for Internal Control in the Federal Government (GAO/AIMD-00-21.3.1; November 1999).
[65]OMB's Circular A-130 requires that agencies review security controls and re-authorize system usage (i.e., certification and accreditation) at least every three years or more frequently if changes occur.

subset of systems. The head of each agency must report the evaluation results to OMB, which summarizes the results in a report to the Congress. GAO must also provide Congress with its independent assessment of agency information security policies and practices, including compliance with the annual evaluation and reporting requirements.

As part of its monitoring function, management should have policies and procedures for periodically assessing the appropriateness of security policies and the agency's compliance with them. At a minimum, such policies and procedures should address the following areas:

- Frequency of periodic testing. The frequency, nature, and extent of management's assessment should appropriately consider information security risks. Consequently, certain higher-risk systems may be tested more frequently or more extensively than lower-risk systems. FISMA requires periodic testing to be performed with a frequency depending on risk, but no less than annually.

- Depth and breadth of testing. The depth and breadth of testing should be based on a consideration of potential risk and magnitude of harm, the relative comprehensiveness of prior reviews, the nature and extent of tests performed as part of periodic risk and vulnerability assessments, and the adequacy and successful implementation of remediation plans.

- Common controls. To facilitate efficient periodic testing, entities should identify common IS controls that can be tested and the results used for multiple systems.

- Roles and responsibilities of personnel involved in testing. Personnel assigned to perform and supervise periodic testing should possess appropriate technical skills and have appropriate organizational placement to reasonably assure that tests are properly performed and results properly reported to entity management. In addition, personnel should not perform tests of controls for which they are responsible for implementation or operation.

- Documentation. Tests performed and the results and related analysis of such tests should be documented to the extent necessary to support effective supervisory review and independent evaluation.

An integrated testing plan or strategy helps to facilitate effective and efficient periodic testing. Without such an integrated plan or strategy, the nature and extent of periodic testing may be inadequate or testing may be inefficient.

Such tests may include tests performed as part of periodic risk and vulnerability assessments, continuous monitoring through scanning or agent-based software tools, or specifically designed tests. Management should periodically perform vulnerability assessments to help ensure that entity information resources are adequately protected. Vulnerability assessments involve analyzing a network to identify potential vulnerabilities that would allow unauthorized access to network resources, simulating what might be performed by someone trying to obtain unauthorized access. Vulnerability assessments typically consider both unauthorized access by outsiders as well as insiders. Vulnerability assessments typically include the use of various tools discussed in Table 10 below, such as scanning tools, password crackers, and war dialing and war driving tools. Also, vulnerability assessments may include penetration testing. Vulnerability assessments should be performed in addition to testing individual access controls and other control categories.

Since the methods used for unauthorized access vary greatly and are becoming more sophisticated, the vulnerability assessment techniques defined here are general in nature and should be supplemented with techniques and tools specific to the specific environment.

The effectiveness of management's security testing, including vulnerability assessments, may affect the auditor's judgments about IS risk and consequently, the nature, timing, and extent of audit testing. Factors to consider in assessing the effectiveness of management's testing include:

- the nature of management's testing (the types of testing management applied, the strength of the evidence obtained, the experience, capabilities, and objectivity of the persons performing the testing, and the quality of documentation of testing),
- the timing of management's testing (the recentness of testing), and
- extent of management's testing (the completeness of testing)

The auditor should review management vulnerability assessments and may independently perform their own vulnerability assessments to determine whether management vulnerability assessments are effective.

The type of vulnerability assessments that are conducted by the auditor affect the scope of the evaluation, methodology used, and the level of assurance achieved. It is important that the methods chosen by the auditor provide the least amount of disruption to the entity based on a cost/risk analysis. Auditors may need to conduct these types of audits without tools,[66] because some audited entities will not want to accept the risk of an auditor running tools in a "live" environment. There generally should be an agreement between the auditor and the audited entity on the type of testing to be conducted (intrusive or nonintrusive). Section 2.1.9.F "Communication with Entity Management and Those Charged with Governance" provides further guidance on communicating the nature and extent of planned testing with the entity.

Due to the highly technical nature of such testing by the auditor, it should be performed by persons possessing the necessary technical skills (e.g., an IT specialist). See Appendix V for additional information on the Knowledge, Skills, and Abilities needed to perform IS control audits. Also, section 2.5.2 "Automated Audit

[66] Assessments performed relying on reviews of system documentation such as hardware and software security settings and use of software features that are inherent to the application under review.

Tools" provides further guidance on the auditor's use of testing tools. Audit testing is discussed further in connection with AC-.1.1.

There are several different types of security testing. Some testing techniques are predominantly manual, requiring an individual to initiate and conduct the test. Other tests are highly automated and require less human involvement. Testing may also be conducted from external connections (for example, from the Internet, dial-up, wireless), from wide area network connections, or from internal connections. Regardless of the type of testing, staff that set up and conduct security testing should have significant security and networking knowledge, including significant expertise in the following areas: network security, firewalls, intrusion detection systems, operating systems, programming and networking protocols (such as Transmission Control Protocol/Internet Protocol (TCP/IP) – which is a low-level communication protocol that allows computers to send and receive data).

Table 10 summarizes types of security testing.

Table 10. Types of Security Testing

Test type	What it does
Network scanning	• Enumerates the network structure and determines the set of active hosts and associated software • Identifies unauthorized hosts connected to a network • Identifies open ports • Identifies unauthorized services
General vulnerability scanning	• Enumerates the network structure and determines the set of active hosts and associated software • Identifies a target set of computers to focus vulnerability analysis • Identifies potential vulnerabilities on the target set • Verifies that software (e.g., operating systems and major applications) is up-to-date with security patches and software versions
Penetration testing	• Determines how vulnerable an organization's network is to penetration and the level of damage that can be incurred • Tests IT staff's response to perceived security incidents and their knowledge of and implementation of the organization's security policy and system's security requirements • Verifies potential impact of multiple security weaknesses
Password cracking	• Verifies that the policy is effective in producing passwords that are more or less difficult to break • Verifies that users select passwords that are compliant with the organization's security policy

Test type	What it does
Log reviews	• Verifies that the system is operating according to policy
Integrity checkers	• Detects unauthorized file modifications
Virus detectors	• Detects and deletes viruses before successful installation on the system
War dialing	• Detects unauthorized modems and prevents unauthorized access to a protected network
War driving	• Detects unauthorized wireless access points and prevents unauthorized access to a protected network
Specialty scanning tools	• Detects security risks related to specific IS control areas (e.g., weaknesses in web pages, application code, and databases, network sniffers[67])

Source: Guideline on Network Security Testing (NIST SP 800-42, October 2003).

Often, several of these testing techniques are used together for a more comprehensive assessment of the overall network security posture. For example, penetration testing usually includes network scanning and vulnerability scanning to identify vulnerable hosts and services that may be targeted for later penetration. Some vulnerability scanners incorporate password cracking. None of these tests by themselves will provide a complete picture of the network or its security posture. NIST SP 800-42 describes these testing types in detail and summarizes the strengths and weaknesses of each test. In addition, NIST SP 800-115 provides guidance on the basic technical aspects of conducting information security assessments.

However, since penetration testing requires extensive planning and experienced staff to conduct, the auditor typically considers several factors before deciding to perform this testing. For example, penetration testing may be a desirable testing option when significant changes have been made to the entity's network (e.g., upgrades to server, routers, switches, network software), there are no recent penetration tests performed, or results of recent penetration testing identified significant security weaknesses that management represented were substantially corrected. Conversely, if recent independent penetration testing disclosed few security weaknesses and the scope and level of testing is determined by the

[67]Network "sniffers" (software that can intercept and log traffic passing over a network) can identify the transmission of passwords or sensitive information in clear text.

auditor to be sufficient, then the use of other types of testing may be more appropriate.

Other tools that may be used include specialty scanning tools (for example, application code, Web, database, SNMP[68]), host data extraction tools, packet analyzers or sniffers (for example, ethereal), and patch assessment tools. Separate patch assessment tools are more reliable than vulnerability scanners for this purpose. Also, the auditor is more likely to check for the presence of integrity checkers and virus detectors than to use them in an audit. After running any tests, certain procedures should be followed, including documenting the test results, informing system owners of the results, and ensuring that vulnerabilities are patched or mitigated.

When implementing system security plans for federal systems, as required by FISMA and OMB Circular A-130, management should monitor their implementation and adjust the plans in accordance with changing risk factors. Management should

- develop and document appropriate testing policies and procedures (all levels),
- test and document security controls related to each major system at least annually (system level),
- ensure that the frequency and scope of testing is commensurate with risk (all levels), and
- employ automated mechanisms to verify the correct operation of security functions when anomalies are discovered (system and application level).

In addition to the FISMA provisions in the E-Government Act of 2002, section 208 requires that agencies conduct privacy impact assessments. A privacy impact assessment is an analysis of how information is handled (1) to ensure handling conforms to applicable legal, regulatory, and policy requirements regarding privacy; (2) to determine the risks and effects of collecting,

[68]SNMP (Simple Network Management Protocol) provides remote administration of network devices.

maintaining, and disseminating information in identifiable form in an electronic information system; and (3) to examine and evaluate protections and alternative processes for handling information to mitigate potential privacy risks (OMB Memorandum M-03-22). OMB combined the FISMA and privacy annual reporting beginning in fiscal year 2005 (OMB Memorandum M-05-15).

Further, OMB has developed performance measures for federal agency reporting and requires that agencies provide quarterly performance metric updates. For example, one such measure requests the number of systems for which security controls have been tested and evaluated in the past year. NIST SP 800-55 provides additional guidance on performance measures and compliance metrics to monitor the security process and periodically report on the state of compliance.

In addition, NIST SP 800-100 provides information on how entities can develop information security metrics that measure the effectiveness of their security program, and provide data to be analyzed and used by program managers and system owners to isolate problems, justify investment requests, and target funds specifically to the areas in need of improvement. It describes metric types and discusses development and implementation approaches.

As mentioned, OMB Circular A-130 requires that federal agencies review and test the security of their general support systems and major applications at least once every 3 years—sooner if significant modifications have occurred or where the risk and magnitude of harm are high. Although not required, it would be appropriate for an agency to describe its evaluation program, including the expected type of testing and frequency of evaluations, in its security plan. (Security plans are discussed in critical element SM-1.)

OMB also requires that a management official authorize in writing the use of each general support system and major application. NIST SP 800-37 refers to this authorization as accreditation. OMB Circular A-130 allows self-reviews of controls for general support systems, but requires an independent review or audit of major applications. The authorizations or accreditations are to be provided by the program or functional managers whose missions are supported by

the automated systems; these represent the managers' explicit acceptance of risk based on the results of any security reviews, including those performed as part of financial statement audits and during related risk assessments. Additional guidance on accrediting federal automated systems can be found in NIST SP 800-37, *Guide for the Security Certification and Accreditation of Federal Information Systems*.

In addition, FMFIA and OMB Circular A-123[69] require agencies to annually assess their internal controls, including computer-related controls, and report any identified material weaknesses to the President and the Congress. The quality of the FMFIA process is a good indicator of management's (1) philosophy and operating style, (2) methods of assigning authority and responsibility, and (3) control methods for monitoring and follow-up. Weaknesses identified during security reviews conducted under OMB Circular A-130 are to be considered for reporting under FMFIA and OMB Circular A-123, particularly if the weakness involves no assignment of security responsibility, an inadequate security plan, or missing management authorization.

Control Techniques and Suggested Audit Procedures for Critical Element SM-5

Table 11. Control Techniques and Suggested Audit Procedures for Critical Element SM-5: Monitor the effectiveness of the security program

Control activities	Control techniques	Audit procedures
SM-5.1. The effectiveness of security controls are periodically assessed	SM-5.1.1. Appropriate monitoring and testing policies and procedures are documented.	Review testing policies and procedures. Determine if there is an overall testing strategy or plan.

[69]Office of Management and Budget, *Management's Responsibility for Internal Control*, OMB Circular No. A-123 (Washington, D.C.: December 2004).

Control activities	Control techniques	Audit procedures
	SM-5.1.2. Management routinely conducts vulnerability assessments and promptly corrects identified control weaknesses.	Interview officials who conducted the most recent agency/entity vulnerability assessment. Review the methodology and tools used, test plans and results obtained, and corrective action taken. Determine if testing is performed that complies with OMB and NIST certification and accreditation and other testing requirements. If appropriate, perform independent testing with the approval of management. Determine if identified control weaknesses are promptly corrected.
	SM-5.1.3. Management routinely conducts privacy impact assessments and promptly corrects identified control weaknesses.	Review privacy impact assessments, including the methodology, a selection of test plans, and related testing results.
	SM-5.1.4. The frequency and scope of security control testing is commensurate with risk.	Determine if the frequency and scope of security control testing is based on risk.
	SM-5.1.5. Performance measures and compliance metrics monitor the security processes and report on the state of compliance in a timely manner.	Review agency/entity performance measures and compare to NIST guidance (e.g., NIST SP 800-55).
	SM-5.1.6. An independent evaluation (periodic, e.g., annual) of the entity's information security program tests the effectiveness of the security policies, procedures, and practices.	Review the results of these evaluations and assess their adequacy and effectiveness.
	SM-5.1.7. Federal agencies report on the results of the annual independent evaluations to appropriate oversight bodies. Under OMB guidance, the head of each agency must submit security and privacy reports to OMB, which consolidates the information for a report to Congress. The Comptroller General must also periodically evaluate and report to Congress on the adequacy and effectiveness of agency information security policies and practices.	Evaluate the reporting/summarization process and identify any significant discrepancies between reports at each level and whether the reports agree with independent audit evaluations. Note that OMB has annual requirements for FISMA and privacy reporting.

Source: GAO.

Critical Element SM-6. Effectively Remediate Information Security Weaknesses

When weaknesses are identified, the related risks should be reassessed, appropriate corrective or remediation actions taken, and follow-up monitoring performed to make certain that corrective actions are effective. Procedures should be established to reasonably assure that all IS control weaknesses, regardless of how or by whom they are identified, are included in the entity's remediation processes. For each identified IS control weakness, the entity should develop and implement appropriate action plans and milestones. Action plans and

milestones should be developed based on findings from security control assessments, security impact analyses, continuous monitoring of activities, audit reports, and other sources. For federal agencies, such plans are referred to as Plans of Actions and Milestones (POAMs). When considering appropriate corrective actions to be taken, the entity should, to the extent possible, consider the potential implications throughout the entity and design appropriate corrective actions to systemically address the deficiency. Limiting corrective action only to identified deficiencies would not necessarily address similar weaknesses in other systems or applications or result in the most effective and efficient corrective action.

In addition to developing action plans and modifying written policies to correct identified problems, entities should test the implementation of the corrective actions to determine whether they are effective in addressing the related problems. Management should continue to periodically review and test such corrective actions to determine if they remain effective on a continuing basis. This is an important aspect of managers' risk management responsibilities.

FISMA specifically requires that agencywide information security programs include a "process for planning, implementing, evaluating, and documenting remedial action to address any deficiencies in the information security policies, procedures, and practices of the agency." Further, agencies must report on the adequacy and effectiveness of the information security program and practices in annual reports to OMB, Congress, and GAO and in annual budget and management plans and reports. The latter include reporting a FISMA "significant deficiency" in information security as a material weakness. Government Performance and Results Act performance plans must describe time periods and resources needed to effectuate a risk-based program.

Control Techniques and Suggested Audit Procedures for Critical Element SM-6

Table 12. Control Techniques and Suggested Audit Procedures for Critical Element SM-6: Effectively remediate information security weaknesses

Control activities	Control techniques	Audit procedures
SM-6.1. Information security weaknesses are effectively remediated.	SM-6.1.1. Management initiates prompt action to correct deficiencies. Action plans and milestones are documented.	Review recent POA&Ms, FMFIA reports and prior year audit reports and determine the status of corrective actions. The objective of this procedure in an IS controls audit being performed as part of a financial audit or data reliability assessment is generally limited to understanding management's POAM process and related controls to ensure the accuracy of the information in the POA&Ms, determining whether IS control weaknesses identified by the IS controls audit are included in the POA&Ms, and, if not, determining the cause. See OMB A-11 which recommends that audit remediation items be addressed within 6 months.
	SM-6.1.2. Deficiencies are analyzed in relation to the entire agency/entity, and appropriate corrective actions are applied entitywide.	Review corrective action plans to determine whether entitywide solutions were appropriately considered.
	SM-6.1.3. Corrective actions are tested and are monitored after they have been implemented and monitored on a continuing basis.	Review a selection of corrective action plans to determine whether testing was performed and monitoring was conducted after implementation of corrective actions.

Source: GAO.

Critical Element SM-7. Ensure that Activities Performed by External Third Parties are Adequately Secure

Appropriate policies and procedures should be developed, implemented, and monitored to ensure that the activities performed by external third parties (for example, service bureaus, contractors, other service providers such as system development, network management, and security management) are documented, agreed to, implemented, and monitored for compliance. These should include provisions for (1) security clearances (where appropriate and required), (2) background checks, (3) required expertise, (4) confidentiality/nondisclosure agreements, (5) security roles and responsibilities, (6) connectivity agreements, (7) individual accountability (for example, expectations, remedies), (8) audit access and reporting, (9) termination procedures, (10) security awareness training, (11)

requirements definition, (12) security responsibilities, and (13) performance metrics. In addition, checks should be performed to periodically ensure that the procedures are being correctly applied and consistently followed, including the security of relevant contractor systems. Appropriate controls also need to be applied to outsourced software development.

FISMA information security requirements apply not only to information systems used or operated by an agency but also to information systems used or operated by a contractor of an agency or other agency on behalf of an agency. In addition, the Federal Acquisition Regulation (FAR) requires that federal agencies prescribe procedures for ensuring that agency planners on information technology acquisitions comply with the information technology security requirements of FISMA, OMB's implementing policies including Appendix III of OMB Circular A-130, and guidance and standards from NIST.[70] For example, NIST SP 800-35 *Guide to Information Technology Security Services* provides guidance pertaining to the acquisition or outsourcing of dedicated information system security services such that (1) incident monitoring, analysis, and response; (2) operation of information system security devices (for example, firewalls); and (3) key management services are supported by a risk assessment and approved by the appropriate, designated entity official. Acquisition or outsourcing of information system services explicitly addresses government, service provider, and end-user security roles and responsibilities.

Governmental and private entities face a range of risks from contractors and other users with privileged access to their systems, applications and data. Contractors that provide systems and services or other users with privileged access to agency/entity systems, applications, and data can introduce risks to their information and systems; for example, contractors often provide unsupervised remote maintenance and monitoring of agency/entity

[70]The FAR was established to codify uniform policies for acquisition of supplies and services by executive agencies. The FAR appears in the Code of Federal Regulations at 48 CFR Chapter 1. See 48 CFR 7.103(u).

systems. Contractor risks to people, processes, and technology are summarized in table 13.

Table 13. Examples of Agency-Identified Risks to Federal Systems and Data Resulting from Reliance on Contractors

Category	Risk description
People	Unauthorized personnel having physical access to entity IT resources (including systems, applications, facilities, and data).
	Unauthorized personnel having electronic access to entity IT resources (including systems, applications, and data).
	Increased use of foreign nationals.
	Contractor or privileged users of federal data and systems who may not receive appropriate, periodic background investigations.
	Inadequate segregation of duties (for example, software developer is the same individual who puts the software into production).
Processes	Failure by contractor or privileged users of federal data and systems to follow entity IT security requirements.
	Possible disclosure of entity-sensitive information to unauthorized individuals or entities.
	Lack of effective compliance monitoring of contractors performing work off-site or privileged users of federal data and systems.
	Contractor or privileged users of federal data and systems may have ineffective patch management processes.
Technology	Incorporation of unauthorized features in customized application software. For example, a third-party software developer has the potential to incorporate “back doors,” spyware, or malicious code into customized application software that could expose entity IT resources to unauthorized loss, damage, modification, or disclosure of data.
	Encryption technology may not meet federal standards.
	Intentional or unintentional introduction of viruses and worms.

Source: Improving Oversight of Access to Federal Systems and Data by Contractors Can Reduce Risk (GAO-05-362, April 2005).

Note: The various risks identified could represent multiple risks (i.e., risks in one or more of the identified categories of people, processes, and technology).

In addition to the risks identified in the table, there are specific risks from contractor software development activities and off-site operations. These risks include a poor patch management process that could impact entity operations (for example, entity Web sites), a hosting infrastructure that may not separate customer and company data, and inadequate oversight at an off-site facility.

Control Techniques and Suggested Audit Procedures for Critical Element SM-7

Table 14. Control Techniques and Suggested Audit Procedures for Critical Element SM-7: Ensure that activities performed by external third parties are adequately secure

Control activities	Control techniques	Audit procedures
SM-7.1. External third party activities are secure, documented, and monitored.	SM-7.1.1. Appropriate policies and procedures concerning activities of external third parties (for example, service bureaus, contractors, other service providers such as system development, network management, security management) are documented, agreed to, implemented, and monitored for compliance and include provisions for • clearances, • background checks, • required expertise, • confidentiality agreements, • security roles and responsibilities, • connectivity agreements, • expectations, • remedies, • audit access/audit reporting, • monitoring • termination procedures, • security awareness training, • requirements definition, • security responsibilities, and • performance metrics.	Review policies and procedures pertaining to external third parties for the entitywide, system, and application levels. Identify use of external third parties and review activities including compliance with applicable policies and procedures. See NIST SP 800-35 for guidance on IT security services. Determine how security risks are assessed and managed for systems operated by a third party. Assess the adequacy of controls over monitoring external third party services. Coordinate assessment of security awareness training with SM-4. Review any available SAS 70 reports to determine the nature, timing, and extent of tests of operating effectiveness and assess whether results provide sufficient information to obtain an understanding of the service organization's controls that would affect the entity's controls being assessed.
	SM-7.1.2. Security requirements are included in the information system acquisition contracts based on an assessment of risk.	Review security provisions of selected contracts and determine that requirements are implemented. See FAR requirements for acquisition plans (48 CFR 7.1, 7.103 (u)).

Source: GAO.

3.2. Access Controls (AC)

Access controls limit or detect inappropriate access to computer resources (data, equipment, and facilities), thereby protecting them from unauthorized modification, loss, and disclosure. Such controls include both logical and physical controls. Logical access controls require users[71] to authenticate themselves (through the use of secret passwords or other identifiers) and limit the files and other resources that authenticated users can access and the actions that they can execute. Physical access controls involve restricting physical access to computer resources and protecting them from intentional or unintentional loss or impairment. Without adequate access controls, unauthorized individuals, including outside intruders and former employees, can surreptitiously read and copy sensitive data and make undetected changes or deletions for malicious purposes or personal gain. In addition, authorized users can intentionally or unintentionally read, add, delete, modify, or exfiltrate data or execute changes that are outside their span of authority.

Access control policies and procedures should be formally developed, documented, disseminated, and periodically updated. Policies should address purpose, scope, roles, responsibility, and compliance issues; procedures should facilitate the implementation of the policy and associated access controls. NIST SP 800-12 provides guidance on security policies and procedures. It is fundamental that control techniques for both logical and physical access controls be risk-based. Access control policies and procedures and risk assessments are covered in section 3.1 of the manual.

For access controls to be effective, they should be properly authorized, implemented, and maintained. First, an entity should analyze the responsibilities of individual computer users to determine what type of access (for example, read, modify, delete)

[71] As used herein, users include those given any level of authorized access to computer resources, including business process application users, system administrators, etc.

users need to fulfill their responsibilities. Then, specific control techniques, such as specialized access control software, should be implemented to restrict access to these authorized functions alone. Such software can be used to limit a user's activities associated with specific systems or files and keep records of individual users' actions on the computer. Finally, access authorizations and related controls should be monitored, maintained, and adjusted on an ongoing basis to accommodate new and departing employees and changes in users' responsibilities and related access needs.

Inadequate access controls diminish the reliability of computerized data and increase the risk of destruction or inappropriate disclosure of data. The following examples illustrate the potential consequences of such vulnerabilities.

- By obtaining direct logical access to data files, an individual could make unauthorized changes for personal gain or obtain sensitive information. For example, a person could (1) alter the address of a payee and thereby direct a disbursement to himself or herself, (2) alter inventory quantities to conceal a theft of assets, (3) alter critical data needed to make a strategic policy decision, or (4) obtain confidential personal, commercial, and governmental information.
- By obtaining logical access to business process applications[72] used to process transactions, an individual could grant unauthorized access to the application, make unauthorized changes to these programs, or introduce malicious programs, which, in turn, could be used to access data files, resulting in situations similar to those just described, or the processing of unauthorized transactions. For example, a person could alter a payroll or payables program to inappropriately generate a check for him/herself.
- By obtaining access to system-level resources, an individual could circumvent security controls to read, add, delete, modify,

[72]A computer program designed to help perform a business function such as payroll, inventory control, accounting, and mission support. Depending on the work for which it was designed, an application can manipulate text, numbers, graphics, or a combination of these elements.

or exfiltrate critical or sensitive business information or programs. Further, authorized users could gain unauthorized privileges to conduct unauthorized actions or to circumvent edits and other controls built into the application programs.

- By obtaining physical access to computer facilities and equipment, an individual could (1) obtain access to terminals or telecommunications equipment that provide input into the computer, (2) obtain access to confidential or sensitive information on magnetic or printed media, (3) substitute unauthorized data or programs, or (4) steal or inflict malicious damage on computer equipment and software.

The objectives of limiting access are to ensure that

- outsiders (for example, hackers) cannot gain unauthorized access to the entity's systems or data;
- authorized users have only the access needed to perform their duties;
- access to very sensitive resources, such as operating systems and security software programs, are limited to very few individuals;
- employees/contractors are restricted from performing incompatible functions or functions beyond their responsibility. (Segregation of duties is discussed in greater detail in section 3.4.)

If these objectives are met, the risk of inappropriate modification or disclosure of data can be reduced without interfering with users' practical needs. However, establishing the appropriate balance between user needs and security requires a careful analysis of the criticality and sensitivity of information resources available and the tasks performed by users. Access controls also apply to alternate work sites (for example, employee residence or contractor facility).

Implementing adequate access controls involves first determining what level and type of protection is appropriate for individual resources based on a risk assessment and on who needs access to these resources. These tasks should be performed by the resource owners. For example, program managers should determine how valuable their program data resources are and what access is

appropriate for personnel who must use an automated system to carry out, assess, and report on program operations. Similarly, managers in charge of systems development and modification should determine the sensitivity of hardware and software resources under their control and the access needs of systems analysts and programmers, and system administration officials should determine the access needs of their personnel. Levels of access granted to information resources should be consistent with FIPS 199 risk levels.

This section defines a set of critical elements that should be considered when conducting a comprehensive assessment of access controls. Today's networks and control environments are highly diverse, complex, and interconnected. Devices that are interconnected develop control dependencies (discussed in Chapter 2), directly and indirectly, on other devices such as routers, firewalls, switches, domain name servers, Web servers, network management stations, e-mail systems, and browser software. Audit objectives that are limited to targeted assessments such as a UNIX or Windows audit may not fully recognize the control dependencies on these systems.

Unfortunately, there are no simple solutions to controlling logical access. Each entity decides what combination of technologies to deploy and to what degree, based on business needs and priorities, risk management, and other factors. For instance, an entity may decide not to require users to periodically change passwords for e-mail because initial entry to the system relies on a two-factor token-based authentication system. Other entities may rely less on boundary protection but place more emphasis on audit and monitoring. Accordingly, the collection of controls used will vary from entity to entity.

The six critical elements for access controls are described here.

- *Boundary Protection.* Boundary protection pertains to the protection of a logical or physical boundary around a set of information resources and implementing measures to prevent unauthorized information exchange across the boundary in either

direction. Firewall devices represent the most common boundary protection technology at the network level

- *Identification and authentication*. If logical connectivity is allowed, then the users, processes acting on behalf of users, services, and specific devices are identified and authenticated by the information system. For example, users' identities may be authenticated through something they know (a traditional password), something they have (such as a smart card), or something about them that identifies them uniquely (such as a fingerprint).
- *Authorization*. If authentication is successful, authorization determines what users can do; i.e., it grants or restricts user, service, or device access to various network and computer resources based on the identity of the user, service, or device.
- *Sensitive system resources*. Controls over sensitive system resources are designed to ensure the confidentiality, integrity, and availability of system data such as passwords and keys during transmission and storage. Technologies used to control sensitive data include encryption, certificate management, hashing, checksums, and steganography.[73]
- *Audit and monitoring*. Audit and monitoring control involves the collection, review, and analysis of auditable events for indications of inappropriate or unusual activity. These controls should be used to routinely assess the effectiveness of information security controls, perform investigations during and after an attack, and recognize an ongoing attack.
- *Physical security*. Physical security controls restrict physical access or harm to computer resources and protect these resources from intentional or unintentional loss or impairment. Such controls include guards, gates, and locks, and also environmental controls such as smoke detectors, fire alarms and extinguishers, and uninterruptible power supplies.

[73]Steganography is a technique that hides the existence of a message (for example, by embedding it within another message) and may be used where encryption is not permitted or to hide information in an encrypted file in case the encrypted file is deciphered. Other uses include digital watermarking and fingerprinting of audio and video files.

Although the primary relevance of these concepts is to access controls, they are also relevant to other areas, such as security management and configuration management. For example, configuration management assurance controls help ensure that network devices are configured and are operating as intended. This would include verifying operational patch levels, disabling unnecessary and dangerous services, correcting poorly configured services, and protecting against viruses and worms. Also, these concepts are relevant to activities such as periodic self-assessment programs (covered in Section 3.1, Security Management).

Assessing access controls involves evaluating the entity's success in performing each of the critical elements listed in Table 15. When evaluating control techniques and performing audit procedures for access controls, the auditor considers access to networks, access to operating systems, and access to infrastructure applications.[74]

As discussed in section 2.2.2, the auditor may determine that it is appropriate to attempt to gain access to identified key systems (e.g., vulnerability assessments or penetration tests). In performing this testing, it is important that the auditor and entity management have a common understanding of the type of tests to be performed, scope of the tests, and the risks involved in performing this testing. See section 2.1.9.F concerning communication with entity management.

Table 15. Critical Elements for Access Control

Number	Description
AC-1.	Adequately protect information system boundaries
AC-2.	Implement effective identification and authentication mechanisms
AC-3.	Implement effective authorization controls
AC-4.	Adequately protect sensitive system resources
AC-5.	Implement an effective audit and monitoring capability
AC-6.	Establish adequate physical security controls

Source: GAO

[74]Infrastructure applications include databases, e-mail, browsers, plug-ins, utilities, and other applications.

Critical Element AC-1. Adequately protect information system boundaries

Boundary protection controls logical connectivity into and out of networks and controls connectivity to and from network connected devices. At the entitywide level, access control policy is developed and promulgated through procedures, manuals, and other guidance. At the system level, any connections to the Internet, or to other external and internal networks or information systems, should occur through controlled interfaces (for example, proxies, gateways, routers and switches, firewalls, and concentrators). At the host or device level, logical boundaries can be controlled through inbound and outbound filtering provided by access control lists and personal firewalls. At the application level, logical boundaries to business process applications may be controlled by access control lists in security software or within the applications.

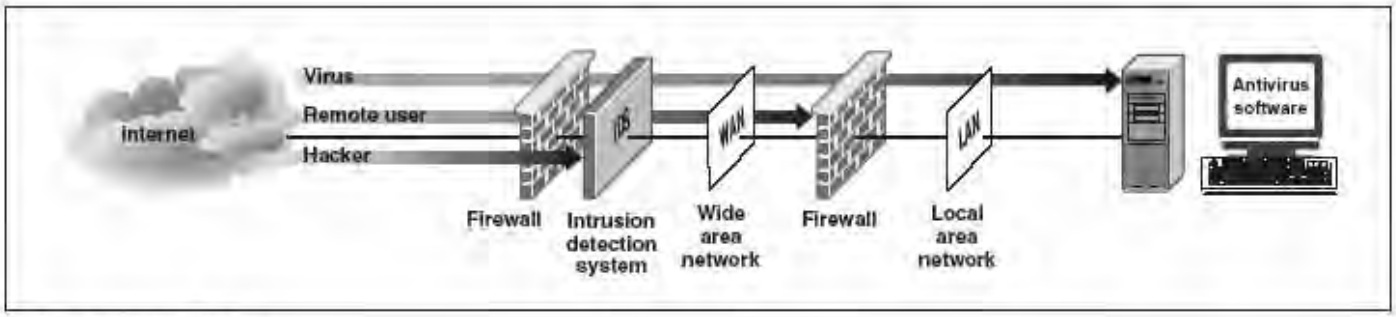
Implementing multiple layers of security to protect information system internal and external boundaries provides Defense-in-Depth(described earlier in Additional IS Risk Factors). According to security experts, a best practice for protecting systems against cyber attacks is for entities to build successive layers of defense mechanisms at strategic points in their information technology infrastructures. By using the strategy of Defense-in-Depth, entities can reduce the risk of a successful cyber attack. For example, multiple firewalls could be deployed to prevent both outsiders and trusted insiders from gaining unauthorized access to systems: one firewall could be deployed at the network's Internet connection to control access to and from the Internet, while another firewall could be deployed between wide area networks and local area networks to limit employees' access.

In addition to deploying a series of security technologies at multiple layers, deploying diverse technologies at different layers also mitigates the risk of successful cyber attacks. If several different technologies are deployed between the adversary and the targeted system, the adversary must overcome the unique obstacle presented by each of the technologies. For example, firewalls and intrusion detection technologies can be deployed to defend against attacks from the Internet, and antivirus software can be used to provide integrity protection for data transmitted over the network. Thus,

Defense-in-Depth can be effectively implemented through multiple security measures among hosts, local area networks and wide area networks, and the Internet.

Defense-in-Depth also entails implementing an appropriate network configuration, which can, in turn, affect the selection and implementation of cybersecurity technologies. For example, configuring the entity's network to channel Internet access through a limited number of connections improves security by reducing the number of points that can be attacked from the Internet. At the same time, the entity can focus technology solutions and attention on protecting and monitoring the limited number of connections for unauthorized access attempts. Figure 4 depicts how applying a layered approach to security through deploying both similar and diverse cybersecurity technologies at multiple layers can deflect different types of attacks.

Figure 4. Layered Approach to Network Security



Source: GAO analysis and Corel Draw.

Note: Excerpt from GAO, *Technologies to Secure Federal Systems,* GAO-04-467 (Washington, D.C.: March 2004).

AC-1.1. Appropriately control connectivity to system resources

Users obtain access to data files and software programs through one or more access paths through the networks and computer hardware and software. Accordingly, to implement an appropriate level of security, it is important that the entity, to the extent possible, identify, document, and control all access paths. Further, connectivity between systems should be approved only when

appropriate by entity management. Consideration should be given to the risk and corresponding safeguards needed to protect sensitive data. NIST SP 800-47 provides guidance on interconnecting information systems.

Networks should be appropriately configured to adequately protect access paths between systems and consider the existing technologies. For standalone computers, identifying access paths may be relatively simple. However, in a networked environment, careful analysis is needed to identify all of the system's entry points and paths to sensitive files. Networked systems typically consist of multiple personal computers that are connected to each other and to larger computers, such as file servers or mainframe processors. Many allow remote access (for example, dial-up, wireless, Internet) to the information systems from virtually any remote location. As a result, the entry points to the system can be numerous. Also, once the system has been entered, the programs available may provide multiple paths to various data resources and sensitive applications. Consequently, it is very important that all access paths be appropriately controlled and protected based on risk.

It is critical that access paths are identified as part of a risk analysis and documented in an access path diagram or similar network schematic. Such a diagram or schematic identifies the users of the system, the type of device from which they can access the system, the software used to access the system, the resources they may access, the system on which these resources reside, and the modes of operation and telecommunications paths. The goal in identifying access paths is to assist in identifying the points from which system resources could be accessed and the data stored—points that, therefore, must be controlled. Specific attention should be given to "backdoor" methods of accessing data by operators and programmers. As with other aspects of risk analysis, the access path diagram should be reviewed and updated whenever any changes are made to the system or to the nature of the program and program files maintained by the system.

If entry points and access paths are not identified, they may not be adequately controlled and may be exploited by unauthorized users to bypass existing controls to gain access to sensitive data,

programs, or password files. Should this happen, managers will have an incomplete understanding of the risks associated with their systems and, therefore, may make erroneous risk management decisions.

Connecting to the Internet presents a multitude of vulnerabilities for an entity due to the Internet's potential access to billions of people worldwide. Some Internet users are motivated to try to penetrate connected systems and have sophisticated software tools as aids, such as to repeatedly attempt access using different passwords. A variety of specialized software and hardware is available to limit access by outside systems or individuals through telecommunications networks. Examples of network components that can be used to limit access include secure gateways (firewalls) that restrict access between networks (an important tool to help reduce the risk associated with the Internet); teleprocessing monitors, which are programs incorporated into the computer's operating system that can be designed to limit access; and communications port protection devices, such as a security modem that requires a password from a dial-in terminal before establishing a network connection. Also available is the smart card, a device about the size of a credit card that contains a microprocessor, which can be used to control remote access to a computer with authenticating information generated by the microprocessor and communicated to the computer. Encryption is often used to protect the confidentiality of remote access sessions and is extremely important to protecting wireless access to information systems.

Information systems may identify and authenticate specific devices before establishing a connection. Device authentication typically uses either shared known information (for example, media access control or transmission control program/Internet protocol addresses) or an organizational authentication solution to identify and authenticate devices on local and wide area networks. Thus, it is important for the auditor to identify the controls over devices that provide this type of protection.

Emerging threats from the Internet (for example, spam and spyware) require new and updated protection mechanisms. The entity should employ spam and spyware protection mechanisms at

critical information system entry points (for example, firewalls, electronic mail servers, remote access servers) and at workstations, servers, or mobile computing devices on the network. Consideration should be given to using spam and software protection products from multiple vendors (for example, using one vendor for boundary devices and another vendor for workstations) to provide additional layers of defense. It is also important to centrally manage spam and software protection mechanisms and to have the system automatically update these mechanisms.

Depending on how access control techniques and devices are implemented, they can be used to

- verify terminal identifications to restrict access through specific terminals,
- verify IDs and passwords for access to specific applications,
- control access between telecommunications systems and terminals,
- restrict an application's use of network facilities,
- automatically disconnect at the end of a session,
- provide network activity logs that can be used to monitor network use and configuration,
- allow authorized users to shut down network components,
- monitor dial-in access to the system by monitoring the source of calls or by disconnecting and then dialing back users at preauthorized phone numbers,
- restrict in-house access to communications software,
- control changes to communications software, and
- restrict and monitor access to telecommunications hardware or facilities.

As with other access controls, to be effective remote access controls should be properly implemented in accordance with authorizations that have been granted. In addition, tables or lists used to define security limitations should be protected from unauthorized modification, and in-house access to communications security software should likewise be protected from unauthorized access

and modification. Dial-in phone numbers should not be published, and should be changed periodically.

An understanding of the system and network configurations and the control techniques that have been implemented is necessary to assess the risks associated with external access through telecommunications networks and the effectiveness of related controls. This is likely to require assistance from an auditor with special expertise in communications-related controls.

Connectivity should only be approved when appropriate to perform assigned official duties. Significant threats are posed by portable and mobile devices and personally owned information systems. Portable and mobile devices (for example, notebook computers, workstations, personal digital assistants) should not be allowed access to entity networks without first complying with security policies and procedures. Security policies and procedures might include activities such as scanning the devices for malicious code, updating virus protection software, scanning for critical software updates and patches, conducting primary operating system (and possibly other resident software) integrity checks, and disabling unnecessary hardware (for example, wireless). Security controls include

- usage restrictions and implementation guidance,
- authorization by appropriate organizational officials, and
- documentation and monitoring of device access to entity networks.

The entity should also establish strict terms and conditions for the use of personally-owned information systems. The terms and conditions should address, at a minimum: (1) the types of applications that can be accessed from personally-owned information systems; (2) the maximum FIPS 199 security category of information that can be processed, stored, and transmitted; (3) how other users of the personally-owned information system will be prevented from accessing federal information; (4) the use of virtual private networking and firewall technologies; (5) the use of and protection against the vulnerabilities of wireless technologies;

(6) the maintenance of adequate physical security controls; (7) the use of virus and spyware protection software; and (8) how often the security capabilities of installed software are to be updated (for example, operating system and other software security patches, virus definitions, firewall version updates, spyware definitions). For guidance on protection of remote information refer to OMB M-06-16[75].

AC-1.2. Appropriately control network sessions

It is desirable that information systems prevent further access to the system by initiating a session lock that remains in effect until the user reestablishes access using appropriate identification and authentication procedures. Users should be able to directly initiate session-lock mechanisms. The information system may also activate session-lock mechanisms automatically after a specified period of inactivity defined by the entity. A session lock is not, however, a substitute for logging out of the information system. When connectivity is not continual, network connections should automatically disconnect at the end of a session. OMB Memorandum M-06-16 requires that all federal agencies use a "time-out" function for remote access and mobile devices requiring user re-authentication after 30 minutes inactivity.

In addition to technical controls, the initial screen viewed by an individual accessing an entity's systems through a telecommunications network should provide a warning banner to discourage unauthorized users from attempting access, and make it clear that unauthorized browsing will not be tolerated. For example, an opening warning screen should state that the system is for authorized users only and that activity will be monitored. The information system should also display the entity's privacy policy before granting access. Also, the warning screen generally should refer to 18 U.S.C. 1030, which provides criminal penalties for intentional unauthorized access. Previous logon notification is another control that can identify unauthorized access. The

[75]OMB, *Protection of Sensitive Agency Information* (Washington, DC.: June 23, 2006).

information system notifies the user on successful logon, of the date and time of the last logon, the location of the last logon, and the number of unsuccessful logon attempts since the last successful logon.

Control Techniques and Suggested Audit Procedures for Critical Element AC-1

Table 16. Control Techniques and Suggested Audit Procedures for Critical Element AC-1: Adequately protect information system boundaries

Control activities	Control techniques	Audit procedures
AC-1.1. Appropriately control connectivity to system resources.	AC-1.1.1. Connectivity, including access paths and control technologies between systems and to internal system resources, is documented, approved by appropriate entity management, and consistent with risk.	Review access paths in network schematics, interface agreements, systems documentation, and in consultation with IT management and security personnel identify control points; determine whether the access paths and related system documentation is up-to-date, properly approved by management, and consistent with risk assessments.
	AC-1.1.2. Networks are appropriately configured to adequately protect access paths within and between systems, using appropriate technological controls (e.g. routers, firewalls, etc.)	Interview the network administrator; determine how the flow of information is controlled and how access paths are protected. Identify key devices, configuration settings, and how they work together. (This step is performed as a basis for the steps below).

Control activities	Control techniques	Audit procedures
		Perform security testing by attempting to access and browse computer resources including critical files, security software, and the operating system. These tests may be performed as (1) an “outsider” with no information about the entity’s computer systems, (2) an “outsider” with prior knowledge about the systems—for example, an ex-insider, and (3) an “insider” with and without specific information about the entity’s computer systems and with access to the entity’s facilities. Note: Due to the highly technical nature of such testing, it should be performed by persons possessing the necessary technical skills (e.g., an IT specialist). See Appendix V for additional information on the Knowledge, Skills, and Abilities needed to perform IS control audits. Also, see SM-5 for additional information on performing vulnerability assessments.
		When performing insider tests, use an ID with no special privileges to attempt to gain access to computer resources beyond those available to the account. Also, try to access the entity’s computer resources using default/generic IDs with easily guessed passwords. See NIST SP 800-42 for more details.
		When performing outsider tests, test the controls over external access to computer resources, including networks, dial-up, wireless, local area network, wide area network, and the Internet. See NIST SP 800-42 for more details.
	AC-1.1.3. The information system identifies and authenticates specific network devices before establishing a connection.	Determine whether authentication methods used are appropriate based on risk in accordance with FIPS Pub 200 and NIST SP 800-53.
	AC-1.1.4. Remote dial-up access is appropriately controlled and protected.	Interview network administrator and users; determine how remote dial-up access is controlled and protected (for example, monitor the source of calls and dial back mechanism); identify all dial-up lines through automatic dialer software routines and compare with known dial-up access; discuss discrepancies with management.

Control activities	Control techniques	Audit procedures
	AC-1.1.5. Remote Internet access is appropriately controlled and protected.	Interview network administrator and users; determine how connectivity is controlled and protected. Determine if federal agency policies, procedures, and practices comply with NIST SP 800-63 guidance on remote electronic authentication. Also, refer to OMB Memorandum 04-04 E-Authentication Guidance for Federal Agencies.
	AC-1.1.6. Remote wireless access is appropriately controlled and protected.	Interview network administrator and users; determine how connectivity is controlled and protected. Refer to NIST SP 800-97 *Establishing Wireless Robust Security Networks: A guide to IEEE.802.11i* for additional security assessment guidance. Test and validate entity controls: (1) use a wireless sniffer to capture data (for example, service set IDs (SSID), (2) if an SSID is obtained, associate the SSID to the access point, (3) identify what network resources are available, (4) determine if a security protocol[76] is implemented, and (5) if a security protocol is used, employ a program to test the strength of the encryption algorithm. Test and validate entity controls to identify rogue wireless access points. Test for rogue wireless access points. (See Section 2.2.2 “Appropriateness of Control Testing” for discussion of performance issues relating to this type of testing).
	AC-1.1.7. Connectivity is approved only when appropriate to perform assigned official duties. This includes portable and mobile devices, and personally-owned information systems. Appropriate safeguards are established to detect viruses, provide for timely patch management, and other security measures are in place to validate appropriate access for users working remotely (e.g., home)	Interview network administrator and users; review justifications for a selection of connections. Determine if these systems use appropriate safeguards such as automatic updates for virus protection and up-to-date patch protection, etc.
AC-1.2. Appropriately control network sessions.	AC-1.2.1. The information system prevents further access to the system by initiating a session lock, after a specified period of inactivity that remains in effect until the user reestablishes access using identification and authentication procedures.	Observe whether the system automatically initiates a session lock during a period of inactivity, and how the user can directly initiate a session lock, and then unlock the session (See OMB M-06-16)

[76] The optional cryptographic confidentiality algorithm specified by IEEE 802.11 used to provide data confidentiality that is subjectively equivalent to the confidentiality of a wired local area network (LAN) medium that does not employ cryptographic techniques to enhance confidentiality

Control activities	Control techniques	Audit procedures
	AC-1.2.2 Where connectivity is not continual, network connection automatically disconnects at the end of a session.	Interview network administrator and users; observe whether the control is implemented.
	AC-1.2.3. Appropriate warning banners are displayed before logging onto a system • system use notification (for example, U. S. Government system, consent to monitoring, penalties for unauthorized use, privacy notices) • previous logon notification (for example, date and time of last logon and unsuccessful logons).	Interview network administrator and users; observe whether the control is fully implemented and complies with NIST guidance.

Source: GAO.

Critical Element AC-2. Implement effective identification and authentication mechanisms

Users (or processes on behalf of users), and devices should be appropriately identified and authenticated through the implementation of adequate logical access controls. User authentication establishes the validity of a user's claimed identity, typically during access to a system or application (for example, login). Users can be authenticated using mechanisms such as requiring them to provide something they have (such as a smart card); something they alone know (such as a password or personal identification number); or something that physically identifies them uniquely (such as a biometric fingerprint or retina scan). Logical controls should be designed to restrict legitimate users to the specific systems, programs, and files that they need, and prevent others, such as hackers, from entering the system at all.

At the entitywide level, information systems accounts need to be managed to effectively control user accounts and identify and authenticate users. Account management includes the identification of account types (i.e., individual, group, system), establishment of conditions for group membership, and assignment of associated authorizations. Resource owners should identify authorized users of the information system and specify access rights. Access to the information system should be granted based on a valid need to know that is determined by assigned official duties and should also consider proper segregation of duties. The entity should require proper identification for requests to establish information system accounts and approve all such requests. The entity should also

specifically authorize and monitor the use of guest/anonymous accounts and remove, disable, or otherwise secure unnecessary accounts. Finally, the entity should ensure that account managers are notified when information system users are terminated or transferred and associated accounts are removed, disabled, or otherwise secured.

AC-2.1. Users are appropriately identified and authenticated

Identification and authentication is unique to each user (or processes acting on behalf of users). Account policies (for example, password policies, account lock out policies) should be formally established and enforced based on risk. Passwords, tokens, or other devices are used to identify and authenticate users. Identification is the process of distinguishing one user from all others, usually through user IDs. These are important because they are the means by which specific access privileges are assigned and recognized by the computer. However, the confidentiality of user IDs is typically not protected. For this reason, other means of authenticating users—that is, determining whether individuals are who they say they are—are typically implemented (for example, passwords, security tokens, etc.). In addition, the information system should limit the number of concurrent sessions for any user. NIST SP 800-63 provides additional guidance on authentication.[77]

An entity may allow limited user activity without identification and authentication for publicly available information systems and Web sites. However, for actions without identification and authentication, management should consider the risk and only allow such actions to the extent necessary to accomplish mission objectives.

The most widely used means of authentication is through the use of passwords. However, passwords are not conclusive identifiers of specific individuals since they may be guessed, copied, overheard,

[77]NIST, *Electronic Authentication Guidance* (Washington, DC: April 2006).

or recorded and played back. Typical controls for protecting the confidentiality of passwords include the following:

- Individual users are uniquely identified rather than having users within a group share the same ID or password; generic user IDs and passwords should not be used.
- Passwords are not the same as user IDs.
- Password selection is controlled by the assigned user and not subject to disclosure.
- Passwords are changed periodically, about every 30 to 90 days. The more sensitive the data or the function, the more frequently passwords should be changed.
- Passwords are not displayed when they are entered.
- Passwords contain alphanumeric and special characters and do not use names or words that can be easily guessed or identified using a password-cracking mechanism.
- A minimum character length, at least 8 characters, is set for passwords so that they cannot be easily guessed.
- Use of old passwords (for example, within six generations) is prohibited.
- Vendor-supplied passwords such as SYSTEM, DEFAULT, USER, DEMO, and TEST, are replaced immediately on implementation of a new system.

To help ensure that passwords cannot be guessed, attempts to logon to the system with invalid passwords should be limited. Typically, potential users are allowed 3 to 7 attempts to log on. This, in conjunction with the use of pass phrases or other complex passwords, reduces the risk that an unauthorized user could gain access to a system by using a computer to try thousands of words or names until they found a password that provided access. NIST SP 800-63 provides guidance on password selection and content.

Another technique for reducing the risk of password disclosure is encrypting the password file. Encryption may be used to transform passwords into a form readable only by using the appropriate key, held only by authorized parties. Access to this file should be restricted to only a few people; encryption further reduces the risk

that passwords could be accessed and read by unauthorized individuals. Passwords transmitted on the network may likewise be encrypted to prevent disclosure. Cryptographic controls and related audit procedures are covered in section AC-4.3.

In addition to passwords, identification devices such as ID cards, access cards, tokens, and keys may be used. Factors affecting the effectiveness of such devices include (1) the frequency that possession by authorized users is checked and (2) users' understanding that they should not allow others to use their identification devices and should report the loss of such devices immediately. Procedures should also be implemented to handle lost or compromised passwords, access cards, or tokens. OMB Memorandum M-06-16 requires that federal agencies allow remote access to personally identifiable information and other sensitive information only with two-factor authentication where one of the factors is provided by a device separate from the computer gaining access. Also see AC-4.2.

A less common means of authentication is based on biometrics, an automated method of verifying or recognizing the identity of a person based on physiological or behavioral characteristics. Biometrics devices include fingerprints, retina patterns, hand geometry, speech patterns, and keystroke dynamics. Tests of biometric techniques include reviewing the devices, observing the operations, and taking whatever other steps may be necessary to evaluate their effectiveness, including obtaining the assistance of a specialist.

To further increase security, identification and authentication may be accomplished using any combination of multiple mechanisms such as a token ID in conjunction with a number, or a biometric reader in conjunction with a password (also known as multifactor identification). Management should implement effective procedures to determine compliance with authentication policies. Whatever technique is used, the implementation cost versus the risk and potential loss to the entity's operations from a breach in security should be taken into consideration.

Electronic signatures such as digital signatures and public key infrastructure (PKI) are used to identify the sender of information and ensure the integrity of critical information received from the sender. Several technologies such as personal identification numbers, smart cards, biometrics, or digital signatures (an encrypted set of bits that identify the user) can be used to create electronic signatures. The most common electronic signature in use today is the digital signature, which is unique to each individual and to each message. Digital signatures are used in conjunction with certificate authorities and other PKI encryption hardware, software, policies, and people to verify that the individuals on each end of a communication are who they claim to be and to authenticate that nothing in the message has been changed. A digital certificate or shared secret may also be used to authenticate the identity of a device or devices involved in system communications, as opposed to the users. Also, see NIST SP 800-32[78], OMB Memorandum M-04-04[79], and the Federal Bridge Certification Authority for further information.

In addition, appropriate session-level identification and authentication controls should be implemented, such as those related to name/address resolution service and the authenticity of communication sessions.

In accordance with OMB policy, authentication of public users accessing federal information systems may also be required to protect nonpublic or privacy-related information. OMB Memorandum 04-04 requires agencies to conduct e-authentication risk assessments of e-government systems. These assessments will measure the relative severity of the potential harm and likelihood of occurrence of a wide range of impacts associated with the e-government system in the event of a compromise in identity authentication.

Control Techniques and Suggested Audit Procedures for Critical Element AC-2

Table 17. Control Techniques and Suggested Audit Procedures for Critical Element AC-2: Implement effective identification and authentication mechanisms

Control activities	Control techniques	Audit procedures
AC-2.1. Users are appropriately identified and authenticated.	AC-2.1.1. Identification and authentication is unique to each user (or processes acting on behalf of users), except in specially approved instances (for example, public Web sites or other publicly available information systems).	Review pertinent policies and procedures and NIST guidance pertaining to the authentication of user identities; interview users; review security software authentication parameters.
	AC-2.1.2. Account policies (including authentication policies and lockout policies) are appropriate given the risk, and enforced.	Review account policies and determine if they are based on risk and seem reasonable, based on interviews with system administrator and users. Determine how they are enforced, and test selected policies.
	AC-2.1.3. Effective procedures are implemented to determine compliance with identification and authentication policies.	Review adequacy of procedures for monitoring compliance with specific identification and authentication policies; selectively test compliance with key identification and authentication policies.

Control activities	Control techniques	Audit procedures
	AC-2.1.4. Selection of authentication methods (for example, passwords, tokens, biometrics, key cards, PKI certificates, or a combination therein) are appropriate, based on risk.	Determine whether authentication methods used are appropriate, based on system risk levels determined by the entity using NIST FIPS 199. See NIST SP 800-53 authentication controls as specified for entity designated system risk levels.
	AC-2.1.5. Authenticators: • are adequately controlled by the assigned user and not subject to disclosure; and • cannot be easily guessed or duplicated. Additional considerations for passwords are described below.	Review pertinent entity policies and procedures; assess procedures for generating and communicating authenticators to users; interview users; review related security software parameters. Observe users using authenticators; attempt to logon without a valid authenticator. Assess compliance with NIST guidance on authenticator selection, content, and usage.
	AC-2.1.6. Password-based authenticators: • are not displayed when entered; • are changed periodically (e.g., every 30 to 90 days); • contain alphanumeric and special characters; • are sufficiently long (e.g., at least 8 characters in length); • have an appropriate life (automatically expire); • are prohibited from reuse for a specified period of time (e.g., at least 6 generations); and • are not the same as the user ID.	Review pertinent entity policies and procedures; assess procedures for generating and communicating passwords to users; interview users; review security software password parameters. Observe users keying in passwords; attempt to logon without a valid password; make repeated attempts to guess passwords. (See Section 2.2.2 “Appropriateness of Control Testing” for discussion of performance issues relating to this type of testing). Assess entity compliance with NIST SP 800-63, which provides guidance on password selection and content.
	AC-2.1.7. Attempts to log on with invalid passwords are limited (e.g., 3–7 attempts).	Examine security parameters for failed log-on attempts; review security logs to determine whether attempts to gain access are logged and reviewed by entity security personnel; if appropriate, repeatedly attempt to logon using invalid passwords.
	AC-2.1.8. Use of easily guessed passwords (such as names or words) are prohibited.	As appropriate, review a system-generated list of current passwords; search password file using audit software to identify use of easily guessed passwords. Review management’s controls to prevent or detect easily guessed passwords.
	AC-2.1.9. Generic user IDs and passwords are not used.	Interview users and security managers; review a list of IDs and passwords to identify generic IDs and passwords in use.
	AC-2.1.10. Vendor-supplied default passwords are replaced during installation.	Attempt to log on using common vendor-supplied passwords; search password file using audit software. (See Section 2.2.2 “Appropriateness of Control Testing” for discussion of performance issues relating to this type of testing).

Control activities	Control techniques	Audit procedures
	AC-2.1.11. Passwords embedded in programs are prohibited. (Note: An embedded password is a password that is included into the source code of an application or utility. Applications often need to communication with other applications and systems and this requires an "authentication" process which is sometimes accomplished through the use of embedded passwords).	Discuss with entity security management how it obtains reasonable assurance that there are no embedded passwords used. If used, determine whether procedures have been established to monitor their use. Review selected programs for embedded passwords.
	AC-2.1.12. Use of and access to authenticators is controlled (e.g., their use is not shared with other users).	Review procedures to ensure that accounts are not shared. Select accounts to determine compliance with procedures.
	AC-2.1.13. Effective procedures are implemented to handle lost, compromised, or damaged authenticators (e.g., tokens, PKI certificates, biometrics, passwords, and key cards).	Identify procedures for handling lost or compromised authenticators; interview users and selectively test compliance with procedures.
	AC-2.1.14. Concurrent sessions are appropriately controlled.	Review procedures for controlling and auditing concurrent logons from different workstations. See NIST SP 800-53.
	AC-2.1.15. Where appropriate, digital signatures, PKI, and electronic signatures are effectively implemented.	Determine how nonrepudiation is assured and if PKI and electronic/digital signatures are effectively implemented.
	AC-2.1.16. PKI-based authentication • validates certificates by constructing a certification path to an accepted trust anchor; • establishes user control of the corresponding private key; and • maps the authenticated identity to the user account.	Review pertinent entity policies and procedures; assess procedures for generating and communicating certificates to users; interview users; review security software certificate parameters; obtain the help of experts if needed.
	AC-2.1.17. Authentication information is obscured (e.g., password is not displayed)	Review procedures for controlling the display of authentication information.
	AC-2.1.18. Appropriate session-level controls are implemented (e.g., name/address resolution service, session authenticity)	Assess the adequacy of session-level controls to include name/address resolution service, session authenticity, protection of session level information held in temporary storage, and controls to ensure that one session ends before the next session begins (prevent overlapping sessions).

Source: GAO.

Critical Element AC-3. Implement effective authorization controls

Once a user is authenticated, authorization[80] is used to allow or prevent actions by that user based on predefined rules. Authorization includes the principles of legitimate use, least privilege, and separation of duties (discussed in section 3.4).

[80] Access privileges granted to a user, program, or process.

Operating systems have some built-in authorization features such as user rights and privileges, groups of users, and permissions for files and folders. Network devices, such as routers, may have access control lists that can be used to authorize users who can access and perform certain actions on the device. Access rights and privileges are used to implement security policies that determine what a user can do after being allowed into the system.

Access rights, also known as permissions, allow the user to look, read, or write to a certain file or directory. Privileges are a set of access rights permitted by the access control system. In a Microsoft Windows™ system, rights are what give the user or members of a group the access needed to perform management tasks or simply to access a system. Information system access permissions are a Unix term that describe the kind of access to files a user is granted. A set of permissions is associated with every file and directory that determines who can read it, write to it, or execute it. Only the owner of the file (or the super user[81]) can change these permissions. Maintaining access rights, permissions, and privileges is one of the most important aspects of administering system security.

AC-3.1. User accounts are appropriately controlled

In order to adequately control user accounts, an entity should institute policies and procedures for authorizing logical access to information resources and document such authorizations. These policies and procedures should cover user access needed for routine operations, emergency access, and the sharing and disposition of data with individuals or groups outside the entity. Further, logical access controls should enforce segregation of duties.

The computer resource owner should identify the specific user or class of users authorized to obtain direct access to each resource for which they are responsible. Access should be limited to individuals with a valid business purpose (least privilege). Unnecessary accounts (default, guest accounts) should be removed, disabled, or

[81]The term “super user” denotes the highest level of user privilege and can allow unlimited access to a system's file and set up.

otherwise secured. This process can be simplified by developing standard profiles, which describe access needs for groups of users with similar duties, such as accounts payable clerks.

The owner should also identify the nature and extent of access to each resource that is available to each user. This is referred to as the user's profile. In general, users may be assigned one or more of the following types of access to specific computer resources:

- read access—the ability to look at and copy data or a software program
- update access—the ability to change data or a software program
- delete access—the ability to erase or remove data or programs
- merge access—the ability to combine data from two separate sources
- execute access—the ability to execute a software program

Access may be permitted at the file, record, or field level. Files are composed of records, typically one for each item or transaction. Individual records are composed of fields that contain specific data elements relating to each record.

Owners should periodically review access authorization listings and determine whether they remain appropriate. Access authorizations should be documented on standard forms and maintained on file. Listings of authorized users and their specific access needs and any modifications should be approved by an appropriate senior manager and directly communicated in writing by the resource owner to the security management function. A formal process for transmitting these authorizations, including the use of standardized access request forms, should be established to reduce the risk of mishandling, alterations, and misunderstandings.

Security managers should review access authorizations for new or modified access privileges and discuss any questionable authorizations with the resource owners (authorizing officials).

Approved authorizations should be maintained on file. Compliance with access authorizations should be monitored by periodically

comparing authorizations to actual access activity. Access control software typically provides a means of reporting user access authorizations and access activity. All changes to security access authorizations should be automatically logged and periodically reviewed by management independent of the security function. Unusual activity should then be investigated.

Broad or special access privileges, such as those associated with operating system software that allow normal controls to be overridden, are only appropriate for a small number of users who perform system maintenance or manage emergency situations. Such special privileges may be granted on a permanent or temporary basis. However, any such access should also be approved by a senior security manager, written justifications should be kept on file, and the use of highly sensitive files or access privileges should be routinely reviewed by management. Special access privileges, access to sensitive files, and related audit procedures are covered in section AC-4.1.

For systems that can be accessed through public telecommunications lines, some users may be granted dial-up access. This means that these individuals can use a modem to access and use the system from a remote location, such as their home or a field office. Because such access can significantly increase the risk of unauthorized access, it should be limited and the associated risks weighed against the benefits. To help manage the risk of dial-up access, justification for such access should be documented and approved by owners. (See section AC-1 for controls to help manage the risks of dial-up access, such as dial-back procedures to preauthorized phone numbers or the use of security modems, tokens, or smart cards to authenticate a valid user.)

Inactive accounts and accounts for terminated individuals should be disabled or removed in a timely manner. It is important to notify the security function immediately when an employee is terminated or, for some other reason, is no longer authorized access to information resources.

Notification may be provided by the human resources department or by others, but policies should exist that clearly assign responsibility for such notification. Terminated employees who continue to have access to critical or sensitive resources pose a major threat, as do individuals who may have left under acrimonious circumstances.

Owners should determine disposition and sharing of data. A mechanism should be established so that the owners of data files and programs determine whether and when these resources are to be maintained, archived, or deleted. Standard disposition forms can be used and maintained on file to document the users' approvals. In addition, resource owners should determine if, with whom, and by what means information resources can be shared. When files are shared with other entities, it is important that (1) data owners understand the related risks and approve such sharing and (2) receiving entities understand the sensitivity of the data involved and safeguard the data accordingly. This should require a written agreement before sensitive information is shared.

Required access to shared file systems should be restricted to the extent possible (for example, only to particular hosts, and only for the level of access required). Many scientific agencies, use file sharing networks. File sharing facilitates connections between persons who are looking for certain types of files. A type of file sharing known as peer-to-peer (P2P) refers to any software or system allowing individual users of the Internet to connect directly to each other and trade files. While there are many appropriate uses of this technology, several studies show that the vast majority of files traded on P2P networks are copyrighted music files and pornography. Data also suggest that P2P is a common avenue for the spread of computer viruses within IT systems. As required by FISMA, agencies are to use NIST standards and guidance to complete system risk and impact assessments in developing security plans and authorizing systems for operation. Operational controls detailing procedures for handling and distributing information and management controls outlining rules of behavior for users should

ensure that proper controls are in place to prevent and detect improper file sharing.[82]

Emergency and temporary access authorization needs to be controlled. Occasionally, there will be a need to grant temporary access privileges to an individual who is not usually authorized access. Such a need may arise during emergency situations, when an individual is temporarily assigned duties that require access to critical or sensitive resources, or for service or maintenance personnel. In addition, contractor personnel may require temporary access while involved in systems development or other work. As with normal access authorizations, temporary access should be approved and documented and the related documentation maintained on file. Temporary user identifications and authentication devices, such as passwords, should be designed to automatically expire after a designated date. Also, management should periodically review emergency and temporary access accounts to determine that they are still necessary.

AC-3.2. Processes and services are adequately controlled

Only authorized processes and services should be permitted in information systems and they should be limited to what is essential to effectively perform an entity's mission and business functions. In an information system, processes are systematic sequences of operations to produce a specified result. This includes all functions performed within a computer such as editing, calculating, summarizing, categorizing, and updating. Services refer to "customer or product-related business functions" such as file transfer protocol (FTP), hypertext transfer protocol (HTTP), and mainframe supervisor calls. Each system provides a set of services. For example, a computer network allows its users to send packets to specified destinations; a database system responds to queries; and a processor performs a number of different instructions. Controls related to processes and services include all of the technological and managerial safeguards established and applied to

[82]OMB Memorandum M-04-26, *Personal Use Policies and "File Sharing" Technology*, (Washington, D.C.: September 8, 2004).

an information system to protect hardware, software, and data from accidental or malicious modification, destruction, or disclosure.

When evaluating an entity's processes and services, it is important to consider the following:

- available processes and services should be minimized,
- the functions and purposes of processes and services should be documented and approved by management, and
- information available to unauthorized users should be restricted.

Proper control of information system processes and services is critical to ensuring the confidentiality, integrity, and availability of user data and, ultimately, the accomplishment of an entity's mission. Access control policies and enforcement mechanisms are employed by entities to control access between users (or processes acting on behalf of users) and objects (for example, segments, devices, files, records, fields, processes, programs) in the information system. Access control policies can be identity-based, role-based, or rule-based.[83] Associated enforcement mechanisms include access control lists, access control matrices, and cryptography. Where encryption of stored information is used as an access enforcement mechanism, the cryptography used should be in compliance with applicable standards.

Configuring systems only for necessary capabilities minimizes processes and services. First, only required services should be installed. Second, the number of individuals with access to such services should be restricted based on the concept of least privilege; this means that users should have the least amount of privileges (access to services) necessary to perform their duties. Third, the use of information services needs to be monitored. Fourth, it is important to maintain current service versions. According to NIST guidance, the information system should be periodically reviewed to identify and eliminate unnecessary services (for example, FTP,

[83]Identity-based access is based on the identities of users and information system resources. Role-based access is based on users' roles/responsibilities. Rule-based access is based on user or resource attributes and a predetermined rule set.

HTTP, mainframe supervisor calls) and protocols that would introduce an unacceptable level of risk should be disabled.[84] The information system that supports the server functionality should be, as much as possible, dedicated to that purpose. In addition, the function and purpose of processes and services should be documented and approved by appropriate entity officials.

According to NIST SP 800-53, additional process and service controls should be implemented to

- prohibit remote activation of collaborative computing mechanisms (e.g. video and audio devices),
- ensure that lower priority process do not interfere with higher priority processes, and
- ensure proprietary information and applications is protected from processes and systems available to the public.

[84]See NIST Special Publications (SP) 800-10 and 800-41 for information on configuring firewalls and filtering common protocols to minimize vulnerabilities from Internet services. SP 800-10, from 1994, contains basic information that is still applicable, but SP 800-41 updates the earlier document and covers Internet protocol packet filtering and more recent policy recommendations.

Control Techniques and Suggested Audit Procedures for Critical Element AC-3

Table 18. Control Techniques and Suggested Audit Procedures for Critical Element AC-3: Implement effective authorization controls

Control activities	Control techniques	Audit procedures
AC-3.1. User accounts are appropriately controlled.	AC-3.1.1. Resource owners have identified authorized users and the access they are authorized to have.	These audit procedures should be coordinated with section 3.4 (segregation of duties) to ensure that users do not have access to incompatible functions. Review written policies and procedures; for a selection of users (both application and information security personnel), review access authorization documentation and applicable rights and privileges in the information system.
	AC-3.1.2. Security administration personnel set parameters of security software to provide access as authorized and restrict access that has not been authorized. This includes access to data files, load and source code libraries (if applicable), security files, and operating system files. Standard naming conventions are established and used effectively as a basis for controlling access to data, and programs. (Standard naming conventions are essential to ensure effective configuration management identification and control of production files and programs vs. test files and programs)	Determine directory names for sensitive or critical files and obtain security reports of related access rules. Using these reports, determine who has access to sensitive files and whether the access matches the level and type of access authorized. Determine whether standard naming conventions are established and used effectively.
	AC-3.1.3. Security managers review access authorizations and discuss any questionable authorizations with resource owners.	Interview security managers and review documentation provided to them to determine whether they review access authorizations to include follow-ups with resource owners on questionable authorizations
	AC-3.1.4. All changes to security access authorizations are automatically logged and periodically reviewed by management independent of the security function; unusual activity is investigated.	Review a selection of recent changes to security access authorizations and related logs for evidence of management review and unusual activity; determine if unusual activity is being/has been investigated.
	AC-3.1.5. Resource owners periodically review access authorizations for continuing appropriateness.	Interview owners and review supporting documentation; determine whether they review access authorizations; determine whether inappropriate access rights are removed in a timely manner.
	AC-3.1.6. Access is limited to individuals with a valid business purpose (least privilege).	Identify who has access to user accounts and sensitive system resources and the business purpose for this access.
	AC-3.1.7. Unnecessary accounts (default, guest accounts) are removed, disabled, or otherwise secured.	Verify that unnecessary accounts are removed, disabled, or secured.

Control activities	Control techniques	Audit procedures
	AC-3.1.8. Inactive accounts and accounts for terminated individuals are disabled or removed in a timely manner.	Review security software parameters; review system-generated list of inactive logon IDs, and determine why access for these users has not been terminated. Obtain a list of recently terminated employees from Personnel and, for a selection, determine whether system access was promptly terminated.
	AC-3.1.9. Access to shared file systems are restricted to the extent possible (for example, only to particular hosts, and only for the level of access required).	Determine how access to shared file systems is restricted and verify that it works effectively.
	AC-3.1.10. Emergency or temporary access (e.g., firecall IDs) is appropriately controlled, including • documented and maintained, • approved by appropriate managers, • securely communicated to the security function, • automatically terminated after a predetermined period, and • all activity is logged.	Review pertinent policies and procedures for emergency/temporary access IDs, including firecall IDs; compare a selection of both expired and active temporary and emergency authorizations (obtained from authorizing parties) with a system-generated list of authorized users. Determine the appropriateness of access documentation and approvals and the timeliness of terminating access authorization when no longer needed. Review procedures for monitoring the use of emergency/temporary IDs (including firecall IDs) to ensure that access was used properly to correct a problem.
AC-3.2. Processes and services are adequately controlled.	AC-3.2.1. Available processes and services are minimized, such as through • installing only required processes and services based on least functionality, • restricting the number of individuals with access to such services based on least privilege, • monitoring the use of such services, and • maintaining current service versions. Note; Installed processes and services should be consistent with approved system baseline.	Review procedures for minimizing processes and services consistent with approved system baseline; interview system administrator; identify what services are installed and determine if they are required; determine who has access to these services and if they need them; determine how access to these services is monitored; and determine if the service versions are kept current. If appropriate, scan for poorly configured, unnecessary, and dangerous processes and services.
	AC-3.2.2. The function and purpose of processes and services are documented and approved by management.	Obtain documentation describing the function and purpose of processes and services, and evidence of management approval.
	AC-3.2.3. Information available to potential unauthorized users is appropriately restricted.	Determine if information about available processes and services is appropriately restricted.

Control activities	Control techniques	Audit procedures
	AC-3.2.4. The information system prohibits remote activation of collaborative computing mechanisms (for example, video and audio conferencing) and provides an explicit indication of use to the local users (for example, use of camera or microphone).	Determine if remote activation of collaborative computing services have been physically disconnected.
	AC-3.2.5. For publicly available systems, the information system controls protect the integrity and availability of the information and applications.	Identify controls used to protect the integrity and availability of the information and applications on such systems and test controls to ensure their effectiveness.

Source: GAO.

Critical Element AC-4. Adequately protect sensitive system resources

Certain system resources are more sensitive than others because, if compromised, serious security breaches could occur. Three areas related to sensitive system resources are: (1) restricting and monitoring access, (2) implementing adequate media controls over sensitive data, and (3) where appropriate, implementing effective cryptographic controls. Such sensitive system resources include system software, system utilities, configuration management systems, file maintenance systems, security software, data communications systems, and database management systems. Restricting access to sensitive system resources such as system software and related documentation is critical to controlling the overall integrity of information systems. For example, if system software is not adequately protected, an individual could gain access to capabilities that would allow him or her to bypass security features found in either operating system security software or access controls built into application software. The individual would then be able to read, modify, or destroy application programs, master data files, and transaction data, and subsequently erase any electronic audit trail of his or her activities. In addition, inadequate media controls can result in a loss of confidentiality of sensitive data. Further, cryptographic controls may be needed to protect sensitive information where it is not otherwise possible or practical to adequately restrict access through either physical or logical access controls.

AC-4.1. Access to sensitive system resources is restricted and monitored

Access to sensitive system resources, such as system software and powerful system utilities, should be appropriately restricted and monitored. System software is a set of programs designed to operate and control the processing activities of computer equipment. Generally, one set of system software is used to support and control a variety of applications that may run on the same computer hardware. System software helps control and coordinates the input, processing, output, and data storage associated with all of the applications that run on a system. Some system software can change data and program code on files without leaving an audit trail. The following are examples of system software:

- operating system software
- system utilities
- configuration management systems
- file maintenance software
- security software
- data communications systems
- database management systems

Access to sensitive system resources should be restricted to individuals or processes that have a legitimate need for this access for the purposes of accomplishing a valid business purpose. For example, access to system software should be restricted to a limited number of personnel who have job responsibilities associated with the use of that software. Responsibilities for using system utilities should be clearly defined and understood by systems programmers. Application programmers and computer operators should be specifically prohibited from accessing system software. Justification and approval by appropriate entity officials for access to system software should be documented and retained. Appropriate entity officials should periodically review the use of privileged system software and utilities to ensure that access permissions correspond with position descriptions and job duties. Further, the use of sensitive/privileged accounts should be adequately monitored. Responsibilities for monitoring use should be clearly defined and understood by entity officials.

Typically, access to operating system software is restricted to a few systems programmers whose job it is to modify the system, when needed, and intervene when the system will not operate properly. In addition, database administrators need access to the system's database management system and a designated senior-level security administrator needs access to security software. However, application programmers and computer operators should not have access to system software, as this would be incompatible with their assigned responsibilities and could allow unauthorized actions to occur. (See section 3.4 for details on segregation of duties.)

The number of personnel authorized to access the system will vary depending on the size and needs of the entity and, therefore, should be determined based on an analysis of the entity's operations. For example, a large entity that must maintain operations on a 24-hour basis will need more operating systems analysts and programmers than a smaller entity that operates on a less intensive schedule. There may be a tendency for entities to authorize access to many individuals so that emergency operating problems can be handled promptly. However, management should balance the need for efficiency with the need for security.

Because of the powerful capabilities at the disposal of those who have access to system software and related tools, use of the tools should be adequately controlled and monitored to identify any inappropriate or unusual behavior. Such behavior may indicate unauthorized access or an individual who is improperly exploiting access privileges. For example, greater than normal use of system software or use at odd hours may indicate that an individual is using the software to search for system weaknesses to exploit or to make unauthorized changes to system or application software or data. For monitoring to be effective in both detecting and deterring inappropriate use, personnel authorized to use system software should understand which uses are appropriate and which are not and also that their activities may be monitored. Such policies should be documented and distributed to all personnel.

Policies and techniques should be implemented for using and monitoring the use of system tools and utilities. Some system utilities are used to perform system maintenance routines that are

frequently required during normal processing operations. Other utilities aid the development and documentation of applications systems. These utilities can aid individuals who have fraudulent or malicious intentions in understanding how the programs or data in an application system operate and in how to make unauthorized modifications.

Following is a listing of some utilities with their intended functions that could be misused without proper monitoring and control:

- Flowcharters, transaction profile analyzers, execution path analyzers, and data dictionaries can be used to understand application systems.
- Data manipulation utilities, data comparison utilities, and query facilities can be used to access and view data, with manipulation utilities also allowing data modification.
- Online debugging facilities permit online changes to program object code leaving no audit trail and can activate programs at selected start points.
- Library copiers can copy source code from a library into a program, text and online editors permit modification of program source code, and online coding facilities permit programs to be coded and compiled in an interactive mode.

To prevent or detect the misuse of systems utilities, policies should be clearly documented regarding their use. In addition, the use of utilities should be monitored. Generally, system software contains a feature that provides for logging and reporting of its use. Such reports should identify when and by whom the software was used. It is important that this software operation work properly and that the reports are reviewed on a regular basis.

The availability of standard usage data may assist the systems manager in identifying unusual activity. Some systems can be designed to compare standard usage data with actual use and report significant variances, thus making it easier for the system manager to identify unusual activity. When questionable activity is identified, it should be investigated. If improper activity is determined to have occurred, in accordance with security violation policies, the

incident(s) should be documented, appropriate disciplinary action taken, and, when appropriate, higher-level management notified. Further, the possibility of damage or alteration to the system software, application software, and related data files should be investigated and corrective action taken if needed. Such action should include notifying the resource owner of the violation.

In addition to controlling access to sensitive system resources, it is also important to control a number of other activities. First, default permissions and rights to system software and network devices should be changed during installation. Second, system libraries should be appropriately controlled. For example, the migration of system software from the testing environment to the production environment may be performed, after approval, by an independent library control group. Outdated versions of system software should be removed from the production environment to preclude their use. Some changes may be made specifically to correct security or integrity vulnerabilities, and using outdated versions allows the entity's data and systems to remain exposed to these vulnerabilities. Third, access to authentication services and directories should also be appropriately controlled. Finally, access to mobile code[85] (see next paragraph) should be appropriately controlled due to its potential to cause damage to the information system if used maliciously.

Mobile code refers to programs (for example, script, macro, or other portable instruction) that can be shipped unchanged to a heterogeneous collection of platforms and executed with identical semantics. Being able to download files and electronic documents off the Internet is a useful function and a common practice today. Web pages serve as an electronic counterpart to paper documents; however, unlike paper documents, Web pages can entail active content that is capable of delivering digitally encoded multimedia information enlivened through embedded computer instructions.

[85]Mobile code is a software program or parts of programs obtained from remote information systems, transmitted across a network, and executed on a local information system without explicit installation or execution by the recipient. Examples of mobile code include scripts (JavaScript, VBScript), Java applets, Active X controls, and macros embedded within Office documents.

The popularity of the World Wide Web has spurred the trend toward active content. A dynamic weather map, a stock ticker, and live camera views or programmed broadcasts appearing on a Web page are common examples of the use of this technology. Like any technology, active content can provide a useful capability, but can also become a source of vulnerability for an attacker to exploit.

Mobile code controls should include registration, approval, and control procedures to prevent the development, acquisition, or introduction of unacceptable mobile code within the information system. All mobile code or executable content employed should be registered unless otherwise approved by the authorizing official. Uploading of mobile code or executable content from one organizational information system to another should also be similarly authorized.

Sensitive system resources may be further protected by partitioning applications, isolating security functions, and establishing a trusted communication path. First of all, through application partitioning, the information system physically or logically separates user interface services (for example, public Web pages) from information storage and management services (for example, database management). Separation may be accomplished through the use of different computers, different central processing units, different instances of the operating system, different network addresses, combinations of these methods, or other methods as appropriate. Secondly, it is desirable for the information system to isolate security functions from nonsecurity functions by means of partitions, domains, etc., including control of access to and integrity of the hardware, software, and firmware that perform those security functions. The information system maintains a separate execution domain (for example, address space) for each executing process. Thirdly, the information system should establish a trusted communication path between the user and the security functionality of the system. Technical experts may be needed to examine and test these controls. Finally, as appropriate, controls should be in place over information leakage through electromagnetic signals emanations.

AC-4.2. Adequate media controls have been implemented

Media controls should be implemented to control unauthorized physical access to digital and printed media removed from the information system and during pick up, transport, and delivery to authorized users. Media should also be properly labeled to identify its sensitivity and distribution limitations. Finally, all sensitive information should be removed from media before its disposal or transfer to another use.

As discussed in NIST SP 800-53, information system media includes both digital media (e.g., diskettes, magnetic tapes, external/removable hard drives, flash/thumb drives, compact disks, digital video disks) and non-digital media (e.g., paper, microfilm). Media controls also apply to portable and mobile computing and communications devices with information storage capability (e.g., notebook computers, personal digital assistants, cellular telephones).

NIST SP 800-53 also states that an organizational assessment of risk guides the selection of media and associated information contained on that media requiring restricted access. Organizations document in policy and procedures, the media requiring restricted access, individuals authorized to access the media, and the specific measures taken to restrict access. The rigor with which this control is applied is commensurate with the FIPS 199 security categorization of the information contained on the media. For example, fewer protection measures are needed for media containing information determined by the organization to be in the public domain, to be publicly releasable, or to have limited or no adverse impact on the organization or individuals if accessed by other than authorized personnel. In these situations, it is assumed that the physical access controls where the media resides provide adequate protection.

One sensitive area is the storage of personally identifiable information on portable media. The ability to store and transport substantial volumes of data on portable devices creates an additional exposure to information confidentiality. The entity should have adequate controls in place over such portable media. OMB Memorandum M-06-16 recommends federal agencies encrypt all data on mobile computers/devices which carry agency data unless

the data is determined to be non-sensitive, in writing, by the agency's Deputy Secretary or an individual they may designate in writing.

In addition, as part of the risk assessment process, entities should identify information that is sensitive, including personally identifiable information. Entities should implement controls to adequately protect the confidentiality of such information, including any copies of such data. OMB Memorandum M-06-16 recommends federal agencies to log all computer-readable data extracts from databases holding sensitive information and verify each extract including sensitive data has been erased within 90 days or its use is still required. This OMB Memorandum provides additional guidance on controls over personally identifiable and other sensitive information. Also see AC-1.2 and AC-2.1.

Automated marking and labeling of information helps to enforce information security access policy. Information system outputs should be marked using standard naming conventions to identify any special dissemination, handling, or distribution instructions. Similarly, information in storage, in process, and transmission should be appropriately labeled. Further, a means should be provided for the information system to ensure that the labels a user associates with information provided to the system are consistent with the information that the user is allowed to access. It is important that security parameters are exchanged between systems to authenticate services requested by another system. Security parameters include, for example, security labels and markings. Security parameters may be explicitly or implicitly associated with the information contained within the information system.

The entity should have policies and procedures in place to remove sensitive information[86] and software from computers, disks, and other equipment or media when they are disposed of or transferred to another use. Further, approved equipment and techniques should

[86]The process of removing sensitive information from computer media is often referred to as sanitization. It includes removing all labels, markings, and activity logs. NIST SP 800-36 provides guidance on appropriate sanitization equipment, techniques, and procedures.

be used and periodically tested to ensure correct performance. If sensitive information is not fully cleared, it may be recovered and inappropriately used or disclosed by individuals who have access to the discarded or transferred equipment and media. The responsibility for clearing information should be clearly assigned. Also, standard forms or a log should be used to document that all discarded or transferred items are examined for sensitive information and that this information is cleared before the items are released.

AC-4.3. Cryptographic controls are effectively used

Where appropriate, cryptographic tools help provide access control by rendering data unintelligible to unauthorized users and/or protecting the integrity of transmitted or stored data. In some cases—especially those involving telecommunications—it is not possible or practical to adequately restrict access through either physical or logical access controls. In these cases, cryptographic tools can be used to identify and authenticate users and help protect the integrity and confidentiality of data and computer programs, both while these data and programs are "in" the computer system and while they are being transmitted to another computer system or stored on removable media.

As discussed in FIPS Pub 140-2, cryptographic-based security systems may be utilized in various computer and telecommunication applications (e.g., data storage, access control and personal identification, network communications, radio, facsimile, and video) and in various environments (e.g., centralized computer facilities, office environments, and hostile environments). The cryptographic services (e.g., encryption, authentication, digital signature, and key management) provided by a cryptographic module are based on many factors that are specific to the application and environment. The security level to which a cryptographic module is validated should be chosen to provide a level of security appropriate for the security requirements of the application and environment in which the module will be utilized and the security services that the module will provide. The security requirements for a particular security level include both the security requirements specific to that level

and the security requirements that apply to all modules regardless of the level.

Cryptography involves the use of algorithms (mathematical formulae) and combinations of keys (strings of bits) to do any or all of the following:

- encrypt, or electronically scramble a message or file so that it is unintelligible to those who do not have the secret key needed to decrypt it, thus keeping the contents of the message or file confidential,
- provide an electronic signature that can be used to determine if any changes have been made to the related file, thus ensuring the file's integrity, and
- link a message or document to a specific individual's or group's key, thus ensuring that the "signer" of the file can be identified.

Cryptographic tools are especially valuable for any application that involves "paperless" transactions or for which the users want to avoid relying on paper documents to substantiate data integrity and validity. Examples include

- electronic commerce, where purchase orders, receiving reports, and invoices are created, approved, and transmitted electronically;
- travel administration, where travel orders and travel vouchers are created, approved, and transmitted electronically; and
- protection of documents or digital images, such as contracts, personnel records, or diagrams, which are stored on electronic media.

Cryptographic tools may be linked to an individual application or implemented so that they can be used to sign or encrypt data associated with multiple applications. For example, the personal computers connected to a local area network may each be fitted with hardware and/or software that identifies and authenticates users and allows them to encrypt, sign, and authenticate the messages and files that they send or receive, regardless of the application that they are using.

There are a number of technical issues to consider concerning cryptography. Some of the key considerations are listed here.

- Are the cryptographic tools implemented in software or through the use of a hardware module? (Hardware modules are generally more secure.)
- How is the data transmitted between the computer's memory and the cryptographic module, and is this path protected?
- How strong, or complex, is the algorithm used to encrypt and sign data?
- How are keys managed and distributed?
- Does the entity's use of cryptographic tools comply with related Federal Information Processing Standards issued by NIST?
- Has the entity chosen cryptographic techniques that are appropriate to cost-effectively meet its defined control objectives?

If the auditor encounters cryptographic tools and determines that their reliability is important to his or her understanding of the controls, they should obtain the most recent guidance available from OMB, NIST, and GAO, as well as technical assistance from an auditor experienced in assessing cryptographic tools.

Control Techniques and Suggested Audit Procedures for Critical Element AC-4

Table 19. Control Techniques and Suggested Audit Procedures for Critical Element AC-4: Adequately protect sensitive system resources

Control activities	Control techniques	Audit procedures
AC-4.1. Access to sensitive system resources is restricted and monitored.	AC-4.1.1. Access to sensitive/privileged accounts is restricted to individuals or processes having a legitimate need for the purposes of accomplishing a valid business purpose.	Review pertinent policies and procedures. Interview management and systems personnel regarding access restrictions. Identify and test who has access to sensitive/privileged accounts and determine the reason for that access.
	AC-4.1.2. Use of sensitive/privileged accounts is adequately monitored.	Determine if the use of sensitive and privileged accounts is monitored and evaluate the effectiveness of monitoring procedures.
	AC-4.1.3. Logical access to utilities and tools is adequately controlled (for example, remote maintenance).	Determine the last time the access capabilities of staff with special system access privileges (e.g., system programmers) were reviewed. Review security software settings to identify types of activity logged. Observe personnel accessing system software, such as sensitive utilities and note the controls encountered to gain access. Attempt to access the operating system and other system software. Select some application programmers and determine whether they are authorized access.
	AC-4.1.4. Files relied upon by operating systems are appropriately controlled.	Determine if access to files relied upon by operating systems are adequately controlled.
	AC-4.1.5. Passwords/authentication services and directories are appropriately controlled and encrypted when appropriate.	Determine if password files and authentication services are adequately protected from unauthorized access. Determine if password files are encrypted.
	AC-4.1.6. Mobile code is appropriately controlled.	Interview system administrator and perform appropriate procedures to determine if mobile code is adequately controlled.
	AC-4.1.7. Where appropriate, access is restricted based on time and/or location.	Determine if access is appropriately restricted based on time and/or location.

Control activities	Control techniques	Audit procedures
	AC-4.1.8. The information system partitions or separates user functionality (including user interface services) from information system management functionality.	Interview officials and review related system documentation. Coordinate with vulnerability analysis.
	AC-4.1.9. The information system isolates security functions from nonsecurity functions.	Interview officials and review related system documentation. Coordinate with vulnerability analysis.
	AC-4.1.10. The information system establishes a trusted communications path between the user and the security functionality of the system.	Interview officials with system and communication responsibilities and examine appropriate records such as developer design documents.
AC-4.2. Adequate media controls have been implemented.	AC-4.2.1. Only authorized users have access to printed and digital media removed from the information system.	Interview personnel and review procedures. Observe entity practices and review selected access logs.
	AC-4.2.2. The information system automatically identifies how information is to be used • output is marked using standard naming conventions, and • internal data in storage, process and transmission is labeled.	Interview appropriate personnel. For output, identify standard naming conventions and examine the system configuration. For internal data, examine the labeling mechanism and internal data for accurate labels. Test output and internal data for appropriate results.
	AC-4.2.3. The organization controls the pickup, transport, and delivery of information system media (paper and electronic) to authorized personnel.	Interview officials and review appropriate policy and procedures. Observe selected media transport practices and receipts.
	AC-4.2.4. Systems media is securely stored according to its sensitivity.	Determine if media storage practices are adequate and comply with applicable requirements (for federal agencies, FIPS 199 security categories).
	AC-4.2.5. Security parameters are clearly associated with information exchanged between information systems.	Determine if security parameters are clearly associated with information exchanged.
	AC-4.2.6. Approved equipment, techniques, and procedures are implemented to clear sensitive data from digital media before its disposal or release for reuse outside of the organization.	Review written procedures; interview personnel responsible for clearing data from digital media. For a selection of recently discarded or transferred items, examine documentation related to clearing of data and disposal of software. For selected items still in the entity's possession, test to determine whether they have been appropriately sanitized.
AC-4.3. Cryptographic controls are effectively used.	AC-4.3.1. Cryptographic tools have been implemented to protect the integrity and confidentiality of sensitive and critical data and software programs where appropriate.	Determine if cryptographic tools are properly implemented. (See NIST standards for federal agencies) To evaluate the use of cryptographic tools, the auditor should obtain the assistance of a specialist.
	AC-4.3.2. Encryption procedures are implemented in data communications where appropriate based on risk.	Capture passwords transmitted over the network and determine if they are encrypted; for federal system, determine if cryptographic authentication complies with FIPS 140-2. To evaluate cryptographic tools, the auditor should obtain the assistance of a specialist.

Control activities	Control techniques	Audit procedures
	AC-4.3.3. For authentication to a cryptographic module, the information system employs appropriate authentication methods.	Interview appropriate officials and review supporting documentation. For federal agencies, compare the authentication process to FIPS 140-2 requirements.
	AC-4.3.4. The information system employs automated mechanisms with supporting procedures or manual procedures for cryptographic key establishment and key management.	Compare policy and practices to appropriate guidance, such as NIST guidance in SP 800-56 and SP 800-57 for cryptographic key establishment and management, respectively.

Source: GAO.

Critical Element AC-5. Implement an effective audit and monitoring capability

Audit and monitoring involves the regular collection, review, and analysis of auditable events for indications of inappropriate or unusual activity, and the appropriate investigation and reporting of such activity. Automated mechanisms may be used to integrate audit monitoring, analysis, and reporting into an overall process for investigation and response to suspicious activities. Audit and monitoring controls can help security professionals routinely assess computer security, perform investigations during and after an attack, and even recognize an ongoing attack. Audit and monitoring technologies include network and host-based intrusion detection systems, audit logging, security event correlation tools, and computer forensics. Network-based intrusion detection systems (IDSs) capture or "sniff" and analyze network traffic in various parts of a network. On the other hand, host-based IDSs analyze activity on a particular computer or host. Both types of IDS have advantages and disadvantages.

FISMA requires that each federal agency implement an information security program that includes procedures for detecting, reporting, and responding to security incidents. Further, OMB is to ensure the operation of a central federal information security incident center to

- provide timely technical assistance to system operators,
- compile and analyze incident information,
- inform system operators about threats and vulnerabilities, and
- consult with NIST, national security agencies, and other designated agencies such as the Department of Homeland Security.

NIST issued two relevant special publications that provide additional information:

- SP 800-94, *Guide to Intrusion Detection and Prevention Systems (IDPS)*, and
- SP 800-61, Computer Security Incident Handling Guide

SP 800-61 discusses four steps in incident handling:

- preparation,
- detection and analysis,
- containment, eradication, and recovery, and
- post-incident activity.

An IDS detects inappropriate, incorrect, or anomalous activity aimed at disrupting the confidentiality, integrity, or availability of a protected network and its computer systems. An IDS collects information on a network, analyzes the information on the basis of a preconfigured rule set, and then responds to the analysis. A description of the technologies, their effectiveness, and how they work is described in *Technologies to Secure Federal Systems*, GAO-04-467 (Washington, D.C.: March 2004).

AC-5.1. An effective incident response program is documented and approved

An effective incident response program should be implemented. Control techniques include

- documented policies and procedures, including an incident response plan;
- documented testing of the incident response plan;
- a means of prompt centralized reporting;
- active monitoring of alerts and advisories;
- response team members with the necessary knowledge, skills, and abilities;
- training on roles and responsibilities and periodic refresher training;
- links to other relevant groups;
- protection against denial of service attacks; and

- appropriate incident response assistance and consideration of computer forensics.

OMB tasks NIST with coordinating activities governmentwide for agencies sharing information concerning common vulnerabilities and threats. Finally, Appendix III of OMB Circular A-130 directs the Department of Justice to provide appropriate guidance on pursuing legal remedies in the case of serious incidents.

According to NIST, the two main benefits of an incident-handling capability are (1) containing and repairing damage from incidents and (2) preventing future damage. Other, less obvious, benefits of an incident-handling capability include

- improved threat data for use in the risk assessment and control selection process,
- enhanced internal communication and organizational preparedness, and
- enhanced training and awareness programs by providing trainers with better information on users' knowledge and providing real-life illustrations for classes.

Also, according to NIST, the characteristics of a good incident-handling capability include

- an understanding of the constituency being served, including computer users and program managers;
- an educated constituency that trusts the incident-handling team;
- a means of prompt centralized reporting, such as through a hotline;
- a response team with the necessary knowledge, skills, and abilities, including technical expertise with the computer technology used by the entity, and the ability and willingness to respond when and where needed; and
- links to other groups—such as law enforcement agencies, response teams, or security groups external to the entity—and to the entity's public relations office (in case the incident receives media attention).

One aspect of incident response that can be especially problematic is gathering the evidence to pursue legal action. Incident response training and assistance is important for users of information systems to understand the proper handling and reporting of security incidents. Resources should be available to provide adequate computer forensics of security incidents. To gather evidence, an entity may need to allow an intruder or violator to continue his or her inappropriate activities—a situation that puts the system and data at continued risk. However, fear of detection and prosecution can serve as a deterrent to future violations.

The United States Computer Emergency Readiness Team (US–CERT) was established in September 2003 to provide a national incident response capability. US–CERT is a partnership of the Department of Homeland Security and the public and private sectors. Established to protect the nation's Internet infrastructure, US-CERT coordinates defense against and responses to cyber attacks across the nation. Specifically, it is responsible for analyzing and reducing cyber threats and vulnerabilities, disseminating cyber threat warning information, and coordinating incident response activities.

As the nation's focal point for preventing, protecting against, and responding to cyber security vulnerabilities, US–CERT interacts with all federal agencies, private industry, the research community, state and local governments, and others on a 24X7 basis to disseminate reasoned and actionable cyber security information. To provide security information to the public, US–CERT

- integrates content contributed by numerous organizations from both the public and private sectors,
- aggregates and analyzes the various types of data provided by contributing organizations,
- serves as the focal point for promoting common and comprehensive analysis of security trends and risks, and
- maintains quality control standards and works to ensure technical accuracy as well as timeliness.

Worldwide, there are more than 250 organizations that use the name CERT or a similar name and deal with cyber security response. US–CERT and the CERT Coordination Center at Carnegie Mellon University work jointly on cyber security activities. When a cyber security problem warrants, US-CERT coordinates a response by working with computer security experts from public and private state and local incident response teams. (See www.us-cert.gov/aboutus.html.)

In addition, the incident response program is affected by and should be responsive to the configuration of the entity's networks. For example, it can affect the placement of intrusion detection systems. Also, the network and related access controls can be designed to aid in containment of security breaches to limited areas of the network.

Also, the incident response program should appropriately consider treatment of privacy information. Specifically, federal entities should comply with applicable statutes and OMB guidance, including the following OMB Memoranda:

- M-06-15, *Safeguarding Personally Identifiable Information* (5/22/06)
- M-06-16, *Protection of Sensitive Agency Information* (6/23/06)
- M-06-19, *Reporting Incidents Involving Personally Identifiable Information and Incorporating the Cost for Security in Agency Information Technology Investments* (7/12/06)
- *OMB* Reporting Instructions for the Federal Information Security Management Act and Agency Privacy Management (generally annual OMB memorandums)
- *Recommendations for Identity Theft Related Data Breach Notifications* (9/20/06)
- M-07-04, *Use of Commercial Credit Monitoring Services Blanket Purchase Agreements* (12/22/06)

AC-5.2. Incidents are effectively identified and logged

Entity policies and procedures should establish criteria for the identification of significant system events that should be logged. Based on such criteria, the entity should identify significant system events. At a minimum, all such significant events,[87] including access to and modification of sensitive or critical system resources, should be logged. Also, logging should include appropriate information to facilitate monitoring of access to business process applications and related actions taken by application users. To be effective:

- identification and logging of auditable events should be based on considerations of costs, benefits, and risk;
- this feature should be activated to log critical activity, maintain critical audit trails, and report unauthorized or unusual activity;
- access to audit logs should be adequately controlled; and
- managers should review logs for unusual or suspicious activity and take appropriate action.

Access control software should be used to maintain an audit trail of security access containing appropriate information for effective review to determine how, when, and by whom specific actions were taken. For example, time stamps of audit records should be generated using internal information system clocks that are synchronized systemwide. Such information is critical to monitoring compliance with security policies and when investigating security incidents. The settings of the access control software control the nature and extent of audit trail information provided. Typically, audit trails may include user ID, resource accessed, date, time, terminal location, and specific data modified. The information system should have the capability to determine whether or not a given individual took a particular action (non-repudiation).

The completeness and value of the audit trails maintained will only be as good as the entity's ability to thoroughly identify the critical processes and the related information that may be needed. Procedures for maintaining such audit trails should be based on

[87] The checklists and configuration guides at http://csrc.nist.gov/pcig/cig.html provide recommended lists of auditable events.

- the value or sensitivity of data and other resources affected;
- the processing environment, for example, systems development, testing, or production;
- technical feasibility; and
- legal and regulatory requirements.

Audit trails, including automated logs, need to be retained for an appropriate period of time. Therefore, the entity needs to allocate sufficient audit record storage capacity and configure auditing to prevent the storage capacity from being exceeded. The information system should provide a warning when storage capacity reaches a certain level. If storage capacity is reached, the system should alert appropriate officials and take appropriate, predefined actions such as saving the oldest data offline, shutting down the system, overwriting the oldest audit records, or stop generating audit records.

An effective intrusion detection system (IDS) should be implemented, including appropriate placement of intrusion-detection sensors and setting of incident thresholds. IDS security software generally provides a means of determining the source of a transaction or an attempted transaction and of monitoring users' activities (audit trail).

AC-5.3. Incidents are properly analyzed and appropriate actions taken

Because all of the audit trail and log information maintained is likely to be too voluminous to review on a routine basis, the IDS security software should be implemented to selectively identify unauthorized, unusual, and sensitive access activity, such as

- attempted unauthorized logical and physical access;
- access trends and deviations from those trends;
- access to sensitive data and resources;
- highly-sensitive privileged access, such as the ability to override security controls;
- access modifications made by security personnel; and
- unsuccessful attempts to logon to a system.

Modern information systems may have an audit-reduction and report-generation capability to automatically process audit records for events of interest based on selectable event criteria. The security software should be designed to report such activity and, in some cases, respond by actions such as

- disabling passwords,
- terminating repeated failed attempts to access sensitive resources,
- terminating processing,
- shutting down terminals,
- issuing warning or error messages, and
- writing audit trail records that would not normally be maintained.

Once unauthorized, unusual, or sensitive access activity is identified, it should be reviewed and apparent or suspected violations investigated. If it is determined that a security violation has occurred, appropriate action should be taken to identify and remedy the control weaknesses that allowed the violation to occur, repair any damage that has been done, and determine and discipline the perpetrator. It is important that an entity have formal written procedures for reporting security violations or suspected violations to a central security management office so that multiple related incidents can be identified, other employees can be alerted to potential threats, and appropriate investigations can be performed. Such incidents might include multiple attacks by a common hacker or repeated infections with the same computer virus.

Without prompt and appropriate responses to security incidents, violations could continue to occur and cause damage to an entity's resources indefinitely. Further, violators will not be deterred from continuing inappropriate access activity, which could cause embarrassment to the entity and result in disclosure of confidential information and financial losses.

An entity should have documented procedures in place for responding to security violations. These should include procedures and criteria for

- incident containment, eradication, and recovery
- documenting offenses,
- determining the seriousness of violations,
- reporting violations to higher levels of management,
- investigating violations,
- imposing disciplinary action for specific types of violations,
- notifying the resource owner of the violation,
- sharing incident and threat information with owners of connected systems, and
- notifying and consulting with, as appropriate, law enforcement agencies, and for federal entities, relevant agency IGs and the US-CERT.

Further, access control policies and techniques should be modified when violations, incidents, and related risk assessments indicate that such changes are appropriate.

In addition, the frequency and magnitude of security violations and the corrective actions that have been taken should periodically be summarized and reported to senior management. Such a report can assist management in its overall management of risk by identifying the most attractive targets, trends in types of violations, cost of securing the entity's operations, and any need for additional controls.

Finally, since even the best incident response program may not catch increasingly sophisticated system intrusions, critical system resources should be periodically reviewed for integrity. For example, an organization may employ integrity verification applications on the information system to automatically look for evidence of information tampering, errors, and omissions.

Control Techniques and Suggested Audit Procedures for Critical Element AC-5

Table 20. Control Techniques and Suggested Audit Procedures for Critical Element AC-5: Implement an effective audit and monitoring capability

Control activities	Control techniques	Audit procedures
AC-5.1. An effective incident response program is documented and approved.	AC-5.1.1. An effective incident-response program has been implemented and include • documented policies, procedures, and plans; • documented testing of the incident response plan and follow-up on findings; • a means of prompt centralized reporting; • active monitoring of alerts/advisories; • response team members with the necessary knowledge, skills, and abilities; • training on roles and responsibilities and periodic refresher training; • links to other relevant groups; • protection against denial-of-service attacks (see http://icat.nist.gov); • appropriate incident-response assistance; and • consideration of computer forensics.	Interview security manager, response team members, and system users; review documentation supporting incident handling activities; compare practices to policies, procedures, and related guidance such as NIST SP 800-61 that provides guidance on incident-handling and reporting. Determine qualifications of response team members; review training records; identify training in incident response roles and responsibilities. Identify the extent to which computer forensics is used and compare to applicable guidelines and industry best practices.
AC-5.2. Incidents are effectively identified and logged.	AC-5.2.1. An effective intrusion detection system has been implemented, including appropriate placement of intrusion-detection sensors and incident thresholds.	Obtain the design and justification for the intrusion detection system; determine if the placement of sensors and incident thresholds is appropriate based on cost and risk.
	AC-5.2.2. An effective process has been established based on a risk assessment, to identify auditable events that will be logged.	Interview the security manager to determine the process for determining what actions are logged. Determine if security event correlation tools are used to identify anomalous network activity.
	AC-5.2.3. All auditable events, including access to and modifications of sensitive or critical system resources, are logged.	Review security software settings to identify types of activity logged; compare to NIST SP 800-92 guidance on auditable events.
	AC-5.2.4. Audit records contain appropriate information for effective review including sufficient information to establish what events occurred, when the events occurred (for example, time stamps), the source of the events, and the outcome of the events.	Determine if audit records/logs are reviewed and whether they contain appropriate information; see NIST SP 800-92 for guidance.
	AC-5.2.5. Audit record storage capacity is adequate and configured to prevent such capacity from being exceeded. In the event of an audit failure or audit storage capacity being reached, the information system alerts officials and appropriate action is taken.	Determine the retention period for audit records and logs and whether it complies with applicable guidance. Determine if audit capacity is sufficient and what happens should it be exceeded.
	AC-5.2.6. Audit records and tools are protected from unauthorized access, modification, and deletion. Audit records are effectively reviewed for unusual or suspicious activity or violations.	Determine how access to audit records/logs is controlled; review logs for suspicious activity and evidence of entity follow-up and appropriate corrective action.

Control activities	Control techniques	Audit procedures
	AC-5.2.7. Audit records are retained long enough to provide support for after-the-fact investigations of security incidents and to meet regulatory and organizational information retention requirements.	Determine if audit record retention (for example, logs etc.) meet legal requirements and entity policy for computer forensics. See General Records Schedule 20 and 24 for guidance on requirements for record retention.(http://archives.gov/records-mgmt/ardor/grs20.html and http://archives.gov/records-mgmt/ardor/grs24.html)
AC-5.3. Incidents are properly analyzed and appropriate actions taken.	AC-5.3.1. Security violations and activities, including failed logon attempts, other failed access attempts, and sensitive activity, are reported and investigated.	Review pertinent policies and procedures; review security violation reports; examine documentation showing reviews of questionable activities.
	AC-5.3.2. Security managers investigate security violations and suspicious activities and report results to appropriate supervisory and management personnel.	Test a selection of security violations to verify that follow-up investigations were performed and reported to appropriate supervisory and management personnel.
	AC-5.3.3. Appropriate disciplinary actions are taken.	For the selection reviewed in AC-5.3.2, determine what action was taken against the perpetrator.
	AC-5.3.4. Violations and incidents are analyzed, summarized, and reported to senior management and appropriate government authorities.	Interview senior management and personnel responsible for summarizing violations; review any supporting documentation. Determine if automated tools are used to analyze network activity and whether it complies with security policy.
	AC-5.3.5. Alerts and advisories are issued to personnel when appropriate.	Identify recent alerts and advisories and determine if they are up-to-date; interview entity personnel to determine what actions were taken.
	AC-5.3.6 Incident and threat information is shared with owners of connected systems.	Determine if incident and threat data are shared with owners of connected systems; follow up with owners of connected systems to see if they received this information in a timely manner.
	AC-5.3.7. Access control policies and techniques are modified when violations, incidents, and related risk assessments indicate that such changes are appropriate.	Review policies and procedures and interview appropriate personnel; review any supporting documentation.
	AC-5.3.8. Critical system resources are periodically reviewed for integrity.	Determine how frequently alterations to critical system files are monitored (for example, integrity checkers, etc.).
	AC-5.3.9. Appropriate processes are applied to gather forensic evidence in support of investigations.	Review entity processes to gather forensic information and determine whether they are adequate. Discuss with appropriate entity management.

Source: GAO.

Critical Element AC-6. Establish adequate physical security controls

Adequate physical security controls should be established that are commensurate with the risks of physical damage or access. In evaluating the effectiveness of physical security controls, the auditor should consider the effectiveness of the entity's policies and practices pertaining to both the overall facility and areas housing sensitive information technology components. Consequently, an entity should implement physical security controls in the following areas

- security planning and management (security management),
- securing the perimeter of the facility (perimeter security),
- controlling access into a facility (entry security),
- controlling access within a facility (interior security), and
- protection from emerging physical security threats (emerging threats).

Physical security controls restrict physical access to computer resources and protect them from intentional or unintentional loss or impairment. Computer resources to be protected include

- primary computer facilities,
- cooling system facilities,
- network devices such as routers and firewalls,
- terminals used to access a computer,
- microcomputers and mobile or portable systems,
- devices that display or output information,
- access to network connectivity, such as through "live" network jacks
- computer file storage areas, and
- telecommunications equipment and transmission lines.

In June 1995, the Department of Justice (DOJ) published minimum-security standards for the protection of federal facilities. It identified and evaluated the various types of security measures that could be used to counter potential vulnerabilities. The standards

cover perimeter security, entry security, interior security, and security planning. Because of the considerable differences among facilities and their security needs, physical holdings are divided into five security levels to determine which minimum standards are appropriate for which security levels.[88] For federal entity facilities, appropriate criteria for physical safeguards in place for the overall facility are Justice standards unless the facility has adopted different standards. To illustrate, information technology resources may be housed in a facility that has been designated a national critical asset in accordance with Homeland Security Presidential Directive 7[89] and therefore require physical security measures above those required by DOJ standards. For non-federal entities, appropriate criteria are equivalent guidance or the federal standards.

Physical controls also include environmental controls, such as smoke detectors, fire alarms, extinguishers, and uninterruptible power supplies (see section 3.5, service continuity).

In an IS controls audit being performed as part of a financial audit or data reliability assessment, the auditor should tailor the identification of control techniques and audit procedures related to the entity's physical security management program to the extent necessary to achieve the audit objectives, considering the IS controls identified by the auditor as significant to the audit objectives (e.g., internal control over financial reporting). Generally, this would include consideration of the overall design of the entity's physical security program at relevant facilities.

AC-6.1. Establish a physical security management program based on risk

Risk management is the foundation of an effective physical security program. The approach to good security is fundamentally similar, regardless of the assets being protected—information systems, buildings, or critical infrastructure. Risk management principles for

[88]Department of Justice, *Vulnerability Assessment of Federal Facilities*, (Washington, D.C.: June 28, 1995).

[89]*Critical Infrastructure Identification, Prioritization, and Protection* (Washington, D.C.: December 17, 2003).

an effective security program are discussed in section 3.1. In addition, the testimonies *Technologies to Secure Federal Buildings* (GAO-02-687T) and *Key Elements of a Risk Management Approach* (GAO-02-150T) elaborate on specific risk management steps that may be applied to the protection of any critical asset.

The effectiveness of physical security controls depends on the effectiveness of the entity's policies and practices pertaining to the overall facility and to areas housing sensitive information technology components, including

- granting and discontinuing access authorizations,
- controlling badges, ID cards, smartcards, passkeys, and other entry devices,
- controlling entry during and after normal business hours,
- controlling the entry and removal of computer resources (for example, equipment and storage media) from the facility,
- managing emergencies,
- controlling reentry after emergencies,
- establishing compensatory controls when restricting physical access is not feasible, as is often the case with telecommunications lines, and
- storing computer assets such as equipment and sensitive documents.

In some instances an entity may not be able to fully control their physical security posture. For example, leased space in a building managed by another organization. In this case, the entity should consider compensating controls and ensure that contingency planning adequately considers their lack of control over physical security.

As with any type of business activity, physical security should be monitored to ensure that controls are accomplishing their intended purpose. FISMA specifically requires that federal agencies periodically test and evaluate information security controls and techniques to ensure that they are effectively implemented.

Visitors should be controlled. On occasion, persons other than regularly authorized personnel may be granted access to sensitive areas or facilities, such as employees from another facility, maintenance personnel, contractors, and the infrequent or unexpected visitor. None of these visitors should be granted unrestricted access.[90] Controls should include

- preplanned appointments,
- identification checks,
- controlling the reception area,
- logging in visitors,
- escorting visitors while in sensitive areas, and
- periodically changing entry codes to prevent reentry by previous visitors who might have knowledge of the code.

AC-6.2. Establish adequate perimeter security based on risk

Perimeter security is the first line of defense against threats that can cause catastrophic damages to facilities and internal computer resources. Considerations for perimeter security include

- controlling vehicle and pedestrian traffic around the facility,
- controlling employee and visitor parking,
- monitoring the perimeter with closed circuit TV (CCTV),
- providing emergency backup power supply, and
- extending perimeter barriers to prevent unauthorized access and reduce exposure to explosions.

Perimeter security includes protective controls such as fencing around sensitive buildings, concrete and earthen and other barriers,

[90]Also see Homeland Security Presidential Directive 12, *Policy for a Common Identification Standard for Federal Employees and Contractors*, (Washington, D.C.: August 27, 2004); and NIST Federal Information Processing Standard Publication (FIPS PUB) 201-1, *Personal Identity Verification (PIV) of Federal Employees and Contractors*, (Washington, D.C.: March 2006).

appropriate gates and locks, exterior lighting, guard posts, security patrols, and detection and monitoring systems.

AC-6.3. Establish adequate security at entrances and exits based on risk

Access to facilities should be limited to personnel having a legitimate need for access to perform their duties. Management should regularly review the list of persons authorized to have physical access to sensitive facilities, including contractors and other third parties. In addition, procedures should be implemented to terminate access privileges for terminated or separated employees or contractors.

Physical security controls at entrances and exits vary, but may include

- manual door or cipher key locks,
- magnetic door locks that require the use of electronic keycards,
- biometrics authentication,
- security guards,
- photo IDs,
- entry logs, and
- electronic and visual surveillance systems.

Unissued keys or other entry devices should be secure. Issued keys or other entry devices should be regularly inventoried.

AC-6.4. Establish adequate interior security based on risk

The effectiveness of physical security controls over sensitive and critical IT resources within a facility include consideration of whether the entity has

- identified all sensitive areas—such as individual rooms or equipment, software and tape libraries, or telecommunication closets and lines—that are susceptible to physical access, loss, or impairment;
- identified all physical access points and threats to the sensitive areas; and

- developed cost-effective security controls over all physical access points and addressed all significant threats to sensitive areas.

In addition, the entity should have controls to prevent or detect surreptitious entry into sensitive areas. For example, could unauthorized persons gain entry by

- observing lock combinations entered by authorized personnel?
- obtaining unsecured keycards?
- going over the top of a partition that stops at the underside of a suspended ceiling when the partition serves as a wall for a sensitive facility?
- cutting a hole in a plasterboard wall in a location hidden by furniture?

Many of the control techniques for interior security are similar to those for perimeter and entry security (for example, locks, surveillance systems, as well as using and controlling badges, ID cards, smartcards, passkey, and other entry devices). Additional considerations include

- logs and authorization for removal and return of tapes and other storage media to the library,
- computer terminal locks,
- controlled access to powerful consoles in data centers, and
- segregation of duties (discussed in section 3.4).

AC-6.5. Adequately protect against emerging threats based on risk

In addition to traditional physical security considerations, it may be important to protect building environments from new threats such as airborne chemical, biological, and radiological (CBR) attacks. Such protective measures may include the installation of early warning sensors, the location and securing of air intakes, and plans and procedures to mitigate the effect of a CBR release. The decisions concerning which protective measures should be implemented for any building should be based on several factors,

including the perceived risk associated with the building and its tenants, engineering and architectural feasibility, and cost.

Appropriate audit procedures related to emerging threats include:

- Interview appropriate officials to identify the level of physical security controls needed for the facility.
- Review the facility risk and independent assessments (for example, internal audit, internal office of physical security, outside consultants) to identify their assessment of risk and the adequacy of controls in place.
- Observe and document the controls in place. Assess the organization's preparations based on what the organization has stated it needs based on risk, including an evacuation plan for a possible CBR attack.
- Identify any planned projects to enhance physical security controls in this area through discussions with physical security and building management/operations staff.

Table 21. Control Techniques and Suggested Audit Procedures for Critical Element AC-6: Establish adequate physical security controls

Control activities	Control techniques	Audit procedures
AC-6.1. Establish an effective physical security management program based on risk.		Coordinate AC-6 procedures with sections SM-2 (assess and validate risks), SM-3 (policies and procedures), SD-1 (segregation of duties), and CP-2 (environmental controls).
	AC-6.1.1. Use a risk management approach to identify the level of physical security needed for the facility and implement measures commensurate with the risks of physical damage or access.	Interview entity officials to discuss how their physical security program is organized and whether they use a risk management approach. Obtain and review any facility risk assessments performed by the entity or by independent entities.
	AC-6.1.2. Facilities and areas housing sensitive and critical resources have been identified. The following generally constitute sensitive areas: computer rooms, tape libraries, telecommunication closets, mechanical/ electrical rooms, cooling facilities and data transmission and power lines.	Review diagram of physical layout of the computer network, telecommunications, and cooling system facilities (for example, HVAC); Inspect these areas for physical access control weaknesses.
	AC-6.1.3. All significant threats to the physical well-being of these resources have been identified and related risks determined.	Interview entity officials. Review risk analysis to ensure that it includes physical threats to employees and assets. Review any recent audit reports or other evaluations of the facility's physical security.
	AC-6.1.4. Establish law enforcement security liaisons that facilitate the accurate flow of timely security information between appropriate government agencies, provide procedures for the timely receipt and dissemination of threat information, and implement a standardized security/threat classifications and descriptions (for example, alert levels).	Check if the organization has established law enforcement security liaisons that facilitate the accurate flow of timely security information between appropriate government agencies. Review how the organization receives and disseminates security alerts. Identify governmental agencies involved in the flow of security information and interview appropriate officials. Review procedures and nomenclature for threat information.
	AC-6.1.5. Conduct annual employee physical security awareness training. Coordinate this step with SM-4.	Review information (for example, individual training records, training program content) on security awareness training and its frequency.
	AC-6.1.6. Security control procedures (for example, trusted vendors/suppliers, background checks, etc.) are established for non-employees (contractors, custodial personnel).	Review security control procedures for scope and adequacy.

Control activities	Control techniques	Audit procedures
	AC-6.1.7. Periodic monitoring and independent evaluations of the physical security program are conducted. Physical security incidents are effectively monitored and appropriate countermeasures are implemented.	Check if the entity evaluates its physical security program and controls. Obtain and review the entity's most recent self assessments and compliance review report. Determine if security incidents are recorded, effectively analyzed, and result in appropriate countermeasures. Coordinate with SM-5: Monitor the effectiveness of the security program, and AC-5: Implement an effective audit and monitoring capability.
	AC-6.1.8. When possible, do not co-locate high risk operations with non-essential support organizations (for example, cafeteria, day care, banks, news media). If not possible, place appropriate security between such support organizations and critical facilities.	Identify co-located operations and their respective risk levels. Determine if the entity co-locates high risk operations with support operations and assess the security impact.
	AC-6.1.9. Visitors, contractors, and maintenance personnel are authenticated through the use of preplanned appointments and identification checks.	Review appointment and verification procedures for visitors, contractors, and maintenance personnel. Compare actual practices to procedures.
AC-6.2. Establish adequate perimeter security based on risk.	AC-6.2.1. Control/restrict vehicle and pedestrian traffic around the facility based on the facility's risk level. Specific measures include fences, gates, locks, guard posts, perimeter patrols and inspections.	Determine if vehicle and pedestrian traffic around the facility is adequately controlled for the risk level. Inspect the perimeter for physical security and access control weaknesses. Assess the effectiveness of perimeter guard procedures and practices for controlling access to facility grounds.
	AC-6.2.2. Control employee and visitor parking. For example, restrict access to facility parking and parking adjacent to the facility (including leases), use ID systems and procedures for authorized parking (for example, placard, decal, card key), have signs and arrangements for towing of unauthorized vehicles and adequate lighting for parking areas.	Observe parking area and related controls. Check if identification systems and procedures for authorized parking are in place. Determine what is done about unauthorized vehicles (e.g. towing).
	AC-6.2.3. Monitor the perimeter with closed circuit television (CCTV) including cameras with time lapse video recording and warning signs advising of 24 hour video surveillance.	Inspect the facility surveillance camera system to assess its capacity and ability to assist in protecting the facility's perimeter.
	AC-6.2.4. Lighting is adequate for effective surveillance and evacuation operations. Emergency power backup exists for lighting (as well as for alarm and monitoring systems).	Observe perimeter and exterior building lighting to determine its adequacy. Also, determine if emergency power is available for security systems. Request test results.
	AC-6.2.5. Extend perimeter barriers (for example, concrete, steel) and parking barriers, as needed, to prevent unauthorized access and reduce exposure to explosions.	Determine if perimeter barriers are used and extended if appropriate.
AC-6.3. Establish adequate security at entrances and exits based on risk.	AC-6.3.1. All employee access is authorized and credentials (for example, badges, identification cards, smart cards) are issued to allow access.	Observe and document all access control devices used to secure the facility.

Control activities	Control techniques	Audit procedures
	AC-6.3.2. Access is limited to those individuals who routinely need access through the use of guards, identification badges, or entry devices such as key cards.	Observe entries to and exits from facilities during and after normal business hours. Obtain a list of employees and contractors with badged access and check the justification for such access. Check whether terminated employees/contractors have turned in their badge.
	AC-6.3.3. Management conducts regular reviews of individuals with physical access to sensitive facilities to ensure such access is appropriate.	Review procedures used by management to ensure that individuals accessing sensitive facilities are adequately restricted. Evaluate support for physical access authorizations and determine appropriateness.
	AC-6.3.4. Intrusion detection systems with central monitoring capability are used to control access outside of normal working hours (for example, nights and weekends).	Determine if an intrusion detection system is used and test its use for appropriate exterior and interior apertures.
	AC-6.3.5. Visitor access logs are maintained and reviewed.	Compare entries in the log to a list of personnel authorized access.
	AC-6.3.6. X-ray and magnetometer equipment is used to screen people, possessions, and packages.	Observe how this equipment is used and test its effectiveness.
	AC-6.3.7. The entity controls information system-related items (i.e., hardware, firmware, software) entering and exiting the facility and maintains appropriate records of those items.	Review procedures and interview officials. Attempt to enter and exit the facility with information systems items at various entry points and times.
	AC-6.3.8. Entry and exit points are monitored by using CCTV capability. Also, high security locks and alarm systems are required for all doors that are not guarded.	Observe use of these devices and test as appropriate. Inspect the building(s) for physical access control weaknesses.
	AC-6.3.9. Emergency exit and re-entry procedures ensure that only authorized personnel are allowed to reenter the facility after fire drills, etc.	Review written emergency procedures. Examine documentation supporting prior fire drills. Observe a fire drill.
AC-6.4. Establish adequate interior security based on risk.	AC-6.4.1. An ID badge should generally be displayed at *all* times. [All individuals must display an ID at all times.]	Observe use of employee and visitor IDs. See what happens if you do not display your own ID.
	AC-6.4.2. Visitors such as vendors, contractors, and service personnel who need access to sensitive areas are prescreened, formally signed in, badged and escorted.	Review visitor entry logs. Observe entries to and exits from sensitive areas during and after normal business hours. Interview guards at facility entry.

Control activities	Control techniques	Audit procedures
	AC-6.4.3. Sensitive information technology and infrastructure resources are adequately secured (for example, using keys, alarm systems, security software and other access control devices), including • the badging system, • computer room, master consoles, and tape libraries, • display and output devices, • data transmission lines, • power equipment and power cabling, • mobile or portable systems, and • utility and mechanical areas (HVAC, elevator, water).	Interview officials. Walk through facilities and observe potential vulnerabilities and security controls [measures] used to protect sensitive information technology resources. Observe entries to and exits from sensitive areas during and after normal business hours. Review security software features and settings. Evaluate the badging system: who has access to the badging system and how it is protected; how is physical control maintained over unissued and visitor badges. Test the controls.
	AC-6.4.4. Management conducts regular reviews of individuals with physical access to sensitive areas to ensure such access is appropriate.	Review procedures used by management to ensure that individuals accessing sensitive areas are adequately restricted. Determine if there is a periodic (e.g. annual) auditing and reconciliation of ID cards. Evaluate support for physical access authorizations and determine appropriateness.
	AC-6.4.5. As appropriate, physical access logs to sensitive areas are maintained and routinely reviewed.	Compare entries in the logs to a list of personnel authorized access.
	AC-6.4.6. Unissued keys, badges, or other entry devices are secured. Issued keys or other entry devices are regularly inventoried.	Observe practices for safeguarding keys, badges, and other devices.
	AC-6.4.7. Entry codes are changed periodically.	Review documentation of entry code changes.
	AC-6.4.8. All deposits and withdrawals of storage media from the library are authorized and logged.	Review procedures for the removal and return of storage media to and from the library. Select from the log some returns and withdrawals, verify the physical existence of the tape or other media, and determine whether proper authorization was obtained for the movement.
	AC-6.4.9. Documents/equipment are appropriately stored and are subject to maintenance and accountability procedures.	Examine and verify maintenance and accountability procedures for storage of documents and equipment.
	AC-6.4.10. Critical systems have emergency power supplies (for example, all alarm systems, monitoring devices, entry control systems, exit lighting, communication systems).	Verify that critical systems, (e.g., alarm systems, monitoring devices, entry control systems, exit lighting, and communication systems) have emergency power supplies. Identify back up systems and procedures and determine the frequency of testing. Review testing results.

Control activities	Control techniques	Audit procedures
AC-6.5. Adequately protect against emerging threats, based on risk	AC-6.5.1. Appropriate plans have been developed and controls implemented based on a risk assessment such as a shelter in place plan and/or evacuation plan for a potential CBR attack. A plan is in place and tested to respond to emerging threats such as a CBR attack (e.g. an appropriate shelter in place and/or evacuation plan.)	Interview officials, review planning documents, and related test results. Observe and document the controls in place to mitigate emerging threats.
	AC-6.5.2. Outdoor areas such as air intakes, HVAC return air grilles, and roofs have been secured by restricting public access and relocating or protecting critical entry points (for example, air intake vents, protective grills, etc.)	Observe location of these devices and identify security measures that have been implemented.
	AC-6.5.3. All outdoor air intakes are monitored by CCTV, security lighting, and/or intrusion detection sensors.	Verify that all outdoor air intakes are monitored by CCTV or other similar security.
	AC-6.5.4. The ventilation and air filtration system has been evaluated for vulnerabilities to CBR agents and remedial action taken based on cost and risks.	Interview officials and review the results of any evaluations.

Source: GAO.

3.3. Configuration Management (CM)

Configuration management (CM) involves the identification and management of security features for all hardware, software, and firmware components of an information system at a given point and systematically controls changes to that configuration during the system's life cycle. At an entitywide level, management develops security policies that establish the entity's configuration management process and may establish the configuration settings for the organization. Policy enforcement applications can be used to help administrators define and perform centralized monitoring and enforcement of an entity's security policies. These tools examine desktop and server configurations that define authorized access to specified devices and they compare these settings against a baseline policy. At a system level, network management provides system administrators with the ability to control and monitor a computer network from a central location. Network management systems obtain status data from network components, enable network managers to make configuration changes, and alert them of problems. For each critical control point, at each system sublevel (for example, network, operating systems, and infrastructure applications), the entity should have configuration management controls to ensure that only authorized changes are made to such critical components. At a business process application level, all applications and changes to those applications should go through a formal, documented systems development process that identifies all changes to the baseline configuration. Also, procedures should ensure that no unauthorized software is installed.

In some instances, the entity may not have an effective entitywide configuration management process, but may nonetheless have configuration management controls at the systems and business process application level. Therefore, evaluation of configuration controls at all levels is important to determine whether they are effective.

FISMA requires each federal agency to determine minimally acceptable system configuration requirements and ensure compliance with them. Systems with secure configurations have less vulnerability and are better able to thwart network attacks. In

response to both FISMA and the Cyber Security Research and Development Act, NIST developed a central repository for information technology security configuration checklists: http://checklists.nist.gov. Typically, checklists are created by information technology vendors for their own products; however, checklists are also created by other entities such as consortia, academia, and government agencies. Security configuration checklists are a series of instructions for configuring a product to a particular operational environment. Some examples of the types of devices and software for which security checklists are intended are as follows:

- general purpose operating systems
- common desktop applications such as e-mail clients, Web browsers, word processing, personal firewalls, and antivirus software
- infrastructure devices such as routers, firewalls, virtual private network (VPN) gateways, intrusion detection systems (IDS), wireless access points (WAP), and telecom systems
- application servers such as domain name system (DNS) servers, dynamic host configuration protocol (DHCP) servers, Web servers, simple mail transfer protocol (SMTP) servers, file transfer protocol (FTP) servers, and database servers
- other network devices such as mobile devices, scanners, printers, copiers, and fax appliances

Industry best practices, NIST, and DOD guidance[91] all recognize the importance of configuration management when developing and maintaining a system or network. Through configuration management, the composition of a system is formally defined and tracked to ensure that an unauthorized change is not introduced. Changes to an information system can have a significant impact on the security of the system. Documenting information system changes and assessing the potential impact on the security of the system on an ongoing basis is an essential aspect of maintaining the

[91] See, for example, IEEE Standard 1200-1998, SEI CMMI (ver. 1.1), NIST SP 800-64, and Military Handbook 61A(SE).

security posture. An effective entity configuration management and control policy and associated procedures are essential to ensuring adequate consideration of the potential security impact of specific changes to an information system. Configuration management and control procedures are critical to establishing an initial baseline of hardware, software, and firmware components for the entity and subsequently controlling and maintaining an accurate inventory of any changes to the system.

An effective configuration management process consists of four primary concepts, each of which should be described in a configuration management plan and implemented according to the plan. The four are:

- *configuration identification:* procedures for identifying, documenting, and assigning unique identifiers (for example, serial number and name) to a system's hardware and software component parts and subparts, generally referred to as configuration items
- *configuration control:* procedures for evaluating and deciding whether to approve changes to a system's baseline configuration; decision makers such as a configuration control board evaluate proposed changes on the basis of costs, benefits, and risks, and decide whether to permit a change
- *configuration status accounting:* procedures for documenting and reporting on the status of configuration items as a system evolves. Documentation, such as historical change lists and original designs or drawings, are generated and kept in a library, thereby allowing entities to continuously know the state of a system's configuration and be in a position to make informed decisions about changing the configuration.
- *configuration auditing:* procedures for determining alignment between the actual system and the documentation describing it, thereby ensuring that the documentation used to support decision making is complete and correct. Configuration audits are performed when a significant system change is introduced and help to ensure that only authorized changes are being made and that systems are operating securely and as intended.

Establishing controls over the modification of information system components and related documentation helps to ensure that only authorized systems and related program modifications are implemented. This is accomplished by instituting policies, procedures, and techniques that help make sure all hardware, software, and firmware programs and program modifications are properly authorized, tested, and approved, and that access to and distribution of computer assets is carefully controlled. Without proper controls, there is a risk that security features could be inadvertently or deliberately omitted or turned off or that processing irregularities or malicious code could be introduced. For example,

- a knowledgeable programmer could modify program code to provide a means of bypassing controls to gain access to sensitive data;
- the wrong version of a program could be implemented, thereby perpetuating outdated or erroneous processing that is assumed to have been updated; or
- a virus could be introduced, inadvertently or on purpose, that disrupts processing.

Effective configuration management prevents unauthorized changes to information system resources (for example, software programs and hardware configurations) and provides reasonable assurance that systems are configured and operating securely and as intended.

The absence of effective system-level configuration management is a serious risk that jeopardizes an entity's ability to support current and potential requirements. Without effective configuration management, users do not have adequate assurance that the system and network will perform as intended and to the extent needed to support their missions.

Assessing controls over configuration management involves evaluating the entity's success in performing each of the critical elements listed in table 22. Also, NIST SP 800-100 provides guidance in related configuration management programmatic areas of capital planning and investment control, and security services and product acquisition. This publication discusses practices designed to help security managers identify funding needs to secure systems and

provide strategies for obtaining the necessary funding. In addition, it provides guidance to entities in applying risk management principles to assist in the identification and mitigation of risks associated with security services acquisitions.

Table 22. Critical Elements for Configuration Management

Number	Description
CM-1.	Develop and document CM policies, plans, and procedures
CM-2.	Maintain current configuration identification information
CM-3.	Properly authorize, test, approve, and track all configuration changes
CM-4.	Routinely monitor the configuration
CM-5.	Update software on a timely basis to protect against known vulnerabilities
CM-6.	Appropriately document and approve emergency changes to the configuration

Source: GAO

Critical Element CM-1. Develop and document CM policies, plans, and procedures

Configuration management policies, plans, and procedures should be developed, documented, and implemented at the entitywide, system, and application levels to ensure an effective configuration management process. Such procedures should cover employee roles and responsibilities, change control and system documentation requirements, establishment of a decision-making structure, and configuration management training. CM should be a key part of an entity's Systems Development Life Cycle (SDLC) methodology.[92]

An effective entitywide SDLC methodology details the procedures that are to be followed when systems and applications are being designed and developed, as well as when they are subsequently modified. The SDLC should provide a structured approach for identifying and documenting needed changes to computerized operations; assessing the costs and benefits of various options, including the feasibility of using off-the-shelf software; and designing, developing, testing, and approving new systems and system modifications. It is especially important that, for new

[92]A Systems Development Life Cycle (SDLC) methodology consists of the policies and procedures that govern software development and modification as a software product goes through each phase of its life cycle.

systems being developed or for major enhancements to existing systems, SDLC require approving design features at key points during the design and development process. For the methodology to be properly applied, it should be sufficiently documented to provide staff with clear and consistent guidance. Also, personnel involved in designing, developing, and implementing new systems and system modifications should be appropriately trained. This includes program staff who initiate requests for modifications and staff involved in designing, programming, testing, and approving changes.

Information system controls should be integrated into the SDLC to reasonably ensure appropriate protection for the information that the system is intended to support. Implementing information system controls early in the development of a system should reduce the risk of introducing vulnerabilities to the environment. This will also generally result in less expensive and more effective security than adding information system controls to an operational system. Information system controls should be considered in each phase of the SDLC. The SDLC typically will include the following phases: initiation, design/development, implementation, and operations/maintenance.

During the initiation phase, the entity establishes the need for a specific system and documents its purpose. In this phase the entity should define high-level information security policy requirements, including the development of the system security plan.

The design/development phase, includes efforts directed to designing, programming, developing, and testing the system. In this phase, the entity should define the system's security and functional requirements. These requirements should include technical features (e.g., access controls), assurances (e.g., background checks for system developers), or operational practices (e.g., security awareness training). This phase should also include testing the technical and system control features to ensure that they perform as intended.

In the implementation phase, the entity configures and enables information system control features, tests the functionality of these features, installs the system, and tests system prior to placing it into

operation to ensure that it meets all required security specifications. Tests should include user acceptance testing and related documentation of this test. Design reviews and system tests should be fully documented, updated, as new reviews or tests are performed, and maintained.

In the operation and maintenance phase, systems are in place and operating, enhancements and/or modifications to the system are developed and tested, and software is added or replaced. Documenting information system control changes and assessing the potential impact of these changes on the security of a system is an essential part of the continuous monitoring and key to avoiding a lapse in the system security.

Information system controls in the business process environment may be manual or automated. Automated controls are system-based, and may be used to control such things as the correctness or accuracy of data, such as edits and validations. Manual controls are procedures that require human intervention, such as the approval of a transaction, and are typically used to assure the reasonableness or propriety of transactions. Automated and manual controls can be preventive or detective. Automated controls can keep invalid data from being processed, and they can report transactions that fail to meet reasonableness criteria. Manual controls performed prior to input can identify problems before data is processed, while monitoring controls performed after processing can identify errors.

Information system controls should be considered throughout the SDLC process. In addition, in this process safeguarding provisions for personally identifiable information should be reviewed, including conducting privacy impact assessments when new IT systems are under development or significant modifications are made as required by OMB.

NIST SP 800-64, dated October 2003, identifies security considerations in the information system development life cycle. In addition, NIST SP 800-27 provides guidance on engineering principles for designing security into information systems.

Configuration management policies and procedures should describe the configuration management process and address purpose, scope, roles, responsibilities, compliance, and implementation of security controls. Security controls include the following.

- A baseline configuration of the information system and an inventory of the system's constituent components.
- A process to document and control changes to the system.
- Monitoring system changes and analysis of their impact to determine the effect of the changes.
- Access restrictions over changes to the system and auditing of the enforcement actions.
- Configuring the security settings of information technology products to the most restrictive mode consistent with operational requirements.
- Configuring the information system to provide only essential capabilities and specifically prohibiting or restricting the use of unnecessary or dangerous functions, ports, protocols, and services.

Good configuration management provides strict control over the implementation of system changes and thus minimizes corruption to information systems.

Also, CM policies should address the introduction of software developed outside of the entity's normal software development process, including the outsourced development of software and commercial or other software acquired by individual users. Specific configuration management policy considerations for systems that are internet accessible (inbound or outbound) should address software quality controls designed to prevent security flaws from being introduced.

Configuration management plans should address configuration management in terms of the following:[93]

[93]Based on IEEE Standard for Software Configuration Management Plans (IEEE Std. 828-1998), the Institute of Electrical and Electronic Engineers, June 25, 1998.

- responsibilities and authorities for accomplishing the planned activities (who)
- activities to be performed (what)
- required coordination of configuration management activities with other activities (when)
- tools and physical and human resources required for the execution of the plan as well as how the plan will be kept current (how)

The CM plan should describe the allocation of responsibilities and authorities for CM activities to entities and individuals within the project structure. Organizational units may consist of a vendor and customer, a prime contractor and subcontractors, or different groups within one entity. The name of the organizational unit or job title to perform this activity is provided for each activity listed within CM activities. A matrix that relates these entities to CM functions, activities, and tasks is useful for documenting CM activities. CM activities identify all functions and tasks required to mange the configuration as specified in the scope of the CM plan. CM activities are traditionally grouped into four functions: configuration identification, configuration control, configuration status accounting, and configuration audits and reviews.

Configuration management procedures should describe the configuration management system used to maintain and change controlled work products. A configuration management system includes the storage media, the procedures, and the tools for accessing the configuration system. The procedures should describe how configuration items are stored and retrieved; shared between control levels; recovered; protected by access controls; and stored, updated, and retrieved. Configuration management plans should be integrated at all levels.

CM-1 Related NIST SP 800-53 Controls CM-1 Configuration Management Policy and Procedures

Control Techniques and Suggested Audit Procedures for Critical Element CM-1

Table 23. Control Techniques and Suggested Audit Procedures for Critical Element CM-1: Develop and document CM policies, plans, and procedures

Control activities	Control techniques	Audit procedures
CM-1.1. CM policies, plans, and procedures have been developed, documented, and implemented.	CM-1.1.1. An effective configuration management process is documented and implemented, including: • a CM plan that identifies roles, responsibilities, procedures, and documentation requirements; • guidance that is appropriate for personnel with varying levels of skill and experience; • trained personnel who are familiar with the organization's configuration management process; • permitting only essential capabilities and restricting the use of dangerous functions, ports, protocols, and services; • regular review and approval of configuration changes by management (for example, Configuration Control Board (CCB)); • appropriate representation on CCB from across the entity; • a formal SDLC methodology that includes system-level security engineering principles to be considered in the design, development, and operation of an information system. • appropriate systems documentation.	Review CM policies, plans, and procedures to identify roles, responsibilities, procedures, and documentation requirements. Determine if a CCB exists and is operating effectively. Review organizational chart to ensure that the CCB has appropriate representation from across the entity. Interview hardware and software managers to identify the currency and completeness of CM policies, plans, procedures, and documentation. Review CM documentation and test whether recent changes are incorporated. Review the SDLC methodology and ensure that security is adequately considered throughout the life cycle. Review a selection of system documentation to verify that the SDLC methodology was followed and complies with appropriate guidance, such as NIST SP 800-64 and SP 800-27.

Source: GAO.

Critical Element CM-2. Maintain current configuration identification information

Configuration identification activities involve identifying, naming, and describing the physical and functional characteristics of a controlled item (for example, specifications, design, IP address, code, data element, architectural artifacts, and documents). The CM plan should describe how each configuration item and its versions are uniquely named. It should also describe the activities performed to define, track, store, manage, and retrieve configuration items. Configuration items should be associated with development and production baselines.

The entity should maintain current configuration information in a formal configuration baseline that contains the configuration information formally designated at a specific time during a product's or product component's life. Configuration baselines, plus approved changes from those baselines, constitute the current configuration information. There should be a current and comprehensive baseline inventory of hardware, software, and firmware, and it should be routinely validated for accuracy. Backup copies of the inventory should be maintained and adequately protected. There should also be information system diagrams and documentation on the set up of routers, switches, guards, firewalls, and any other devices facilitating connections to other systems[94] FISMA requires federal entity compliance with system configuration requirements, as determined by the entity. In addition, OMB Memorandum M-07-11 [95] requires agencies that upgrade to the Microsoft Vista™ operating system to adopt the security configurations developed by the National Institute of Standards and Technology (NIST), the Department of Defense (DoD) and the Department of Homeland Security (DHS).

Control Techniques and Suggested Audit Procedures for Critical Element CM-2

Table 24. Control Techniques and Suggested Audit Procedures for Critical Element CM-2: Maintain current configuration identification information

Control activities	Control techniques	Audit procedures
CM-2.1. Current configuration identification information is maintained.	CM-2.1.1. A current and comprehensive baseline inventory of hardware, software, and firmware is documented, backed up, and protected. Information system documentation describes security controls in sufficient detail to permit analysis and testing of controls. For Federal entities, baseline meets minimum configuration management standards as required by NIST standards and OMB.	Request an inventory of all computer assets and determine if the inventory is accurate, complete, and whether duplicate copies are adequately protected. Select items in the inventory and trace to the asset and verify that the configuration (model, settings, etc.) is accurate. Select assets at the entity and verify that they are accurately recorded in the inventory. (Note: Selections should be focused on areas that are most relevant to the audit.)
	CM-2.1.2. Hardware, software, and firmware are mapped to application it supports.	Determine whether management has mapped the hardware, software and firmware to the application it supports.
	CM-2.1.3. Configuration settings optimize the system's security features.	Determine if key component security settings conform with NIST SP 800-70 and vendor recommendations.

Source: GAO.

Critical Element CM-3. Properly authorize, test, approve, track, and control all configuration changes

An entity should properly control all configuration changes; not only changes made by internal developers but also changes made by external developers or contractors (see SM-7 for activities performed by external third parties). This includes a wide range of activities starting with the establishment of a formal change management process. Management should authorize and approve all configuration changes. Test plan standards should be developed for all levels of testing and test plans should be documented and approved by all responsible parties. Testing should be comprehensive and appropriately consider security and impacts on interfacing systems. An audit trail should be made to clearly document and track the configuration changes. Also, see Section AS-3 for additional business process application level considerations.

Authorizations for system and application software modifications should be documented and maintained. Policies and procedures should be in place that detail who can authorize a modification and how these authorizations are to be documented. Generally, the application users have the primary responsibility for authorizing system changes; however, users should be required to discuss their proposed changes with systems developers to confirm that the change is feasible and cost effective. For this reason, an entity may require a senior systems developer to co-authorize a change. The use of standardized change request forms helps ensure that requests are clearly communicated and approvals are documented. Authorization documentation should be maintained for at least as long as a system is in operation in case questions arise regarding why or when system modifications were made. Authorization documents may be maintained in either paper or electronic form as long as their integrity is protected.

Configuration control activities involve activities that request, evaluate, approve, disapprove, or implement changes to baseline configuration items. Changes encompass both error correction and enhancements. The configuration management plan should identify each level of decision making (for example, CCB[96]) and its level of authority for approving proposed system and application changes and its management of development and production baselines.

The configuration status accounting process records and reports the status of configuration items. The following are minimum data elements to be tracked for a configuration item: (1) its initial approved version, (2) the status of requested changes, and (3) the implementation status of approved changes. The level of detail and specific data required may vary according to the information needs of the project and the customer.

A disciplined process for testing and approving new and modified systems before their implementation is essential to make sure systems hardware and related programs operate as intended and

[96] A configuration control board evaluates and approves or disapproves proposed changes to configuration items and ensures implementation of approved changes.

that no unauthorized changes are introduced. Test plans should appropriately consider security. The extent of testing varies depending on the type of modification. For new systems being developed or major system enhancements, testing will be extensive, generally progressing through a series of test stages that include (1) testing individual program modules (unit testing), (2) testing groups of modules that must work together (integration testing), and (3) testing an entire system (system testing). Minor modifications may require less extensive testing; however, changes should still be carefully controlled and approved since relatively minor program code changes, if performed incorrectly, can have a significant impact on security and overall data reliability.

Once a change has been authorized, it should be implemented, written into the program code, and tested in a disciplined manner. Because testing is an iterative process that is generally performed at several levels, it is important that the entity adhere to a formal set of configuration management procedures or standards for prioritizing, scheduling, testing, and approving changes. These procedures should be described in the entity's configuration management plan and should include requirements for

- ranking and scheduling configuration changes so that authorized change requests are not lost and are implemented efficiently and in accordance with user needs;
- preparing detailed specifications for the configuration change, which are approved by an individual responsible for supervising programming activities to confirm that the specifications correspond to the user's authorized requirements;
- developing a detailed test plan for each modification that defines the levels and types of tests to be performed;
- defining responsibilities for each person involved in testing and approving software (for example, systems analysts, programmers, quality assurance staff, auditors, library control personnel, and users—who should participate in testing and approve test results before implementation), including determining that testing is performed by parties independent of development;

- developing related configuration changes to system documentation, including hardware documentation, operating procedures, and user procedures;
- supervisory review and documented approvals by appropriate personnel, including programming supervisors, database administrators, and other technical personnel before and after testing;
- maintaining controlled libraries of software in different stages of development to ensure that programs being developed or tested are not interchanged with each other or with production software;
- documenting configuration/software changes so that they can be traced from authorization to the final approved code and facilitating "trace-back" of code to design specifications and functional requirements by system testers; and
- obtaining final user acceptance only after testing is successfully completed and reviewed by the user.

To ensure that approved software programs are protected from unauthorized changes or impairment and that different versions are not misidentified, copies should be maintained in carefully controlled libraries. Further, adequately controlled software libraries help ensure that there is (1) a copy of the official approved version of a program available in case the integrity of an installed version is called into question and (2) a permanent historical record of old program versions.

Separate libraries should be established for programs being developed or modified, programs being tested by users, and programs approved for use (production programs). Access to these libraries should be limited and movement of programs and data among them should be controlled.

Inadequately controlled software libraries increase the risk that unauthorized changes could be made either inadvertently or deliberately for fraudulent or malicious purposes. In addition, inadequate controls over programs being developed or modified could make it difficult to determine which version of the program is the most recent. Such an environment can result in inefficiencies

and could lead to interruptions of service and monetary losses. For example,

- an unauthorized program could be substituted for the authorized version;
- test programs could be labeled as production programs;
- two programmers could inadvertently access and work on the same test program version simultaneously, making it difficult or impossible to merge their work; or
- unauthorized changes to either test or production programs could be made and remain undetected.

Copies of software programs should be maintained in libraries where they are labeled, dated, inventoried, and organized in a way that diminishes the risk that programs will be misidentified or lost. Library management software provides an automated means of inventorying software (ensuring that differing versions are not accidentally misidentified) and maintaining a record of software changes. Specifically, such software can be used to

- produce audit trails of program changes and maintain version number control,
- record and report program changes made,
- automatically number program versions,
- identify creation date information,
- maintain copies of previous versions, and
- control concurrent updates so that multiple programmers are prevented from making changes to the same program in an uncontrolled manner.

The movement of programs and data among libraries should be controlled by an entity group or person that is independent of both the user and the programming staff. This group should be responsible for

- moving programs from development/maintenance to user testing and from user testing to production;

- supplying data from the production library for testing and creating test data; and
- controlling different program versions, especially when more than one change is being performed on a program concurrently.

Before transferring a tested program from the user test library to the production library, the independent library control group should (1) generate a report that shows all changed source code (lines added, changed, and deleted) and (2) compare this report to the user request to ensure that only approved changes were made.

Many federal agencies have data processing operations that involve multiple locations and require a coordinated effort for effective and controlled distribution and implementation of new or revised software. For example, an entity may have a central software design, development, and maintenance activity, but have two or more regional data processing centers running the same software. Once a modified software program has been approved for use, the change should be communicated to all affected parties and distributed and implemented in a way that leaves no doubt about when it is to begin affecting processing. To accomplish these objectives, an entity should have and follow established procedures for announcing approved changes and their implementation dates and for making the revised software available to those who need to begin using it.

Source code programs (the code created by programmers) are compiled into object or production code programs that are machine-readable and become the versions that are actually used during data processing. Source code programs should be closely controlled at a central location and compiled into production programs before being distributed. Source code should not be distributed to other locations. This helps protect the source code from unauthorized changes and increases the integrity of the object or production code, which is much more difficult for programmers to change without access to the source code. Inadequately controlling software distribution and implementation increases the risk that data could be improperly processed due to

- implementation of unapproved and possibly malicious software,

- continued use of outdated versions of software, and
- inconsistent implementation dates resulting in inconsistent processing of similar data at different locations.

With independent processing sites, each site is responsible for implementing the correct version of the software at the predetermined date and time and maintaining the documentation authorizing such implementation. Conversely, implementing new software through one or more central computers or servers minimizes the risk that the software will be inconsistently implemented.

The use of public domain and personal software should be restricted. It is important that an entity have clear policies regarding the use of personal and public domain software by employees at work. Allowing employees to use their own software or even diskettes for data storage that have been used elsewhere increases the risk of introducing viruses. It also increases the risk of violating copyright laws and making bad decisions based on incorrect information produced by erroneous software. As mentioned in section CM-5, virus identification software can help contain damage from viruses that may be introduced from unauthorized use of public domain, from personal software, or from corrupted diskettes.

Control Techniques and Suggested Audit Procedures for Critical Element CM-3

Table 25. Control Techniques and Suggested Audit Procedures for Critical Element CM-3: Properly authorize, test, approve, and track all configuration changes

Control activities	Control techniques	Audit procedures
CM-3.1. All configuration changes are properly managed (authorized, tested, approved, and tracked).		Where appropriate, these audit procedures should be applied to both internal and external developers and coordinated with section SM-7. (Ensure that activities performed by external third parties are adequately secure.)
	CM-3.1.1. An appropriate formal change management process is documented.	Review the change management methodology for appropriateness. Review system documentation to verify that the change management methodology was followed.
	CM-3.1.2. Configuration changes are authorized by management. Configuration management actions are recorded in sufficient detail so that the content and status of each configuration item is known and previous versions can be recovered.	Review system logs for configuration changes. Determine whether these changes have been properly authorized. Examine a selection of CM and software change request forms for approvals and sufficiency of detail. Interview CM management and software development staff. Review a selection of configuration exceptions identified by the entity in its configuration audit (Refer to CM 4.1) or through other audit procedures to identify any weaknesses in the entity's configuration change process.
	CM-3.1.3. Relevant stakeholders have access to and knowledge of the configuration status of the configuration items.	Interview users and ensure that they have ready access to software change requests, test reports, and configuration items associated with the various baselines being managed.
	CM-3.1.4. Detailed specifications are prepared by the programmer and reviewed by a programming supervisor for system and application software changes.	For the software change requests selected for control activity CM-3.1.2: • review specifications and related documentation for evidence of supervisory review.
	CM-3.1.5. Test plan standards have been developed for all levels of testing that define responsibilities for each party (for example, users, system analysts, programmers, auditors, quality assurance, library control).	Review test plan standards.
	CM-3.1.6. Test plans are documented and approved that define responsibilities for each party involved (for example, users, systems analysts, programmers, auditors, quality assurance, library control).	Perform the following procedures to determine whether control techniques CM-3.1.6 through 3.1.12 are achieved.

Control activities	Control techniques	Audit procedures
	CM-3.1.7. Test plans include appropriate consideration of security.	For the software change requests selected for control activity CM-3.1.2: • review test plans; • compare test documentation with related test plans; • review test transactions and data; • review test results; • review documentation for appropriate supervisory or management reviews; • verify user acceptance; and • review updated documentation. Determine whether operational systems experience a high number of system failures (for example, bends) and, if so, whether they indicate inadequate testing before implementation. Examine a selection of program changes to determine whether they were approved by management prior to being moved to production.
	CM-3.1.8. Unit, integration, and system testing are performed and approved in accordance with the test plan and apply a sufficient range of valid and invalid conditions.	
	CM-3.1.9. A comprehensive set of test transactions and data is developed that represents the various activities and conditions that will be encountered in processing.	
	CM-3.1.10. Live data are not used in testing of program changes, except to build test data files.	
	CM-3.1.11. Test results are documented and appropriate responsive actions are taken based on the results.	
	CM-3.1.12. Program changes are moved into production only when approved by management and by persons independent of the programmer.	
	CM-3.1.13. Standardized procedures are used to distribute new software for implementation.	Examine procedures for distributing new software.
	CM-3.1.14. Appropriate tools (for example, library mgt. software and manual techniques) are used to: • produce audit trails of program changes, • maintain program version numbers, • record and report program changes, • maintain creation/date information for production modules, • maintain copies of previous versions, and • control concurrent updates.	Review pertinent policies and procedures. Interview personnel responsible for appropriate tools and library control. Examine a selection of programs maintained in the library and assess compliance with prescribed procedures. Determine whether documentation is maintained on program changes, program version numbers, creation/date information, and copies of prior versions. Review procedures for controlling concurrent updates. Assess the adequacy of access controls over CM tools (e.g., library management software) to ensure segregation of duties is adequately enforced. (Coordinate with audit procedures in AC 4.1).
	CM-3.1.15. Configuration/software changes are documented so that they can be traced from authorization to the final approved code and they facilitate “trace-back” of code to design specifications and functional requirements by system testers.	For the software change requests selected for control activity CM-3.1.2: • trace changes from authorization to the final approved code; and, • trace changes back from code to design specifications and functional requirements.

Control activities	Control techniques	Audit procedures
	CM-3.1.16. Program development and maintenance, testing, and production programs are maintained separately (for example, libraries) and movement between these areas is appropriately controlled, including appropriate consideration of segregation of duties (see the Segregation of Duties control category.	Review pertinent policies and procedures and interview library control personnel. Examine libraries in use. Test access to each program library (e.g., development, test, production) by examining security system parameters. Review program changes procedures for adherence to appropriate segregation of duties between application programming and movement of programs into production. For a selection of program changes, examine related documentation to verify that (1) procedures for authorizing movement among libraries were followed and (2) before and after images were compared to ensure that unauthorized changes were not made to the programs.
	CM-3.1.17. Access to all programs, including production code, source code, and extra program copies, are adequately protected.	For critical software production programs, determine whether access control software rules are clearly defined. Test access to program libraries by examining security system parameters.
	CM-3.1.18. Configuration changes to network devices (for example, routers and firewalls) are properly controlled and documented.	Review a selection of configuration settings to key devices and determine if configuration changes are adequately controlled and documented.
	CM-3.1.19. Clear policies restricting the use of personal and public domain software and prohibiting violations of software licensing agreements have been developed and are enforced.	Review pertinent policies and procedures. Interview users and data processing staff. Review and test management enforcement process.

Critical Element CM-4. Routinely monitor the configuration

Current configuration information should be routinely monitored for accuracy. Monitoring should address the current baseline and operational configuration of the hardware, software, and firmware that comprise the information system. Information technology products should comply with applicable standards and the vendors' good security practices. The entity should have the capability to monitor and test that it is functioning as intended. Also, networks should be appropriately configured and monitored to adequately protect access paths between information systems.

Monitoring, sometimes called configuration audits, should be periodically conducted to determine the extent to which the actual configuration item reflects the required physical and functional characteristics originally specified by requirements. The configuration plan should identify the frequency of configuration audits. A configuration audit should be performed on a configuration item before its release and it should be routinely tested thereafter. Configuration audits establish that the functional and performance requirements defined in the configuration documentation have been achieved by the design and that the design has been accurately documented in the configuration document. The purpose and benefits of the process include the following:

- Ensures that the product design provides the agreed-to performance capabilities
- Validates the integrity of the configuration documentation
- Verifies the consistency between a product and its configuration documentation
- Determines that an adequate process is in place to provide continuing control of the configuration
- Provides confidence in establishing a product baseline
- Ensures a known configuration as the basis for operation and maintenance instructions, and training.

Security settings for network devices, operating systems, and infrastructure applications need to be monitored periodically to ensure that they have not been altered and that they are set in the most restrictive mode consistent with the information system operational requirements. NIST SP 800-70 provides guidance on configuration settings (for example, checklists) for information technology products.

A process and related procedures needs to be established to document the results from monitoring configuration items and ensure that discrepancies are properly corrected. For example, network and host environments should be scanned on a regular basis to determine whether patches have been effectively applied. A formal process with central management helps to ensure patch

compliance with the network configuration. Audit results need to be recorded indicating

- each discrete requirement,
- method of verification,
- verification procedures,
- verification results, and
- corrective actions.

Control Techniques and Suggested Audit Procedures for Critical Element CM-4

Table 26. Control Techniques and Suggested Audit Procedures for Critical Element CM-4: Routinely monitor the configuration

Control activities	Control techniques	Audit procedures
CM-4.1. The configuration is routinely audited and verified.	CM-4.1.1. Routinely validate that the current configuration information is accurate, up-to-date, and working as intended for networks, operating systems, and infrastructure applications.	Identify the standards and procedures used to audit and verify the system configuration. Determine when and how often the configuration is verified and audited. Review a selection of the configuration verifications and audits for compliance with applicable standards. Verify that vendor-supplied system software is still supported by the vendor. Evaluate adequacy of the configuration audits based on the results of the IS control audit tests performed.
	CM-4.1.2. The verification and validation criteria for the configuration audit is appropriate and specifies how the configuration item will be evaluated in terms of correctness, consistency, necessity, completeness, and performance.	Review evaluation criteria for selected releases to determine whether verification and validation criteria for the configuration audit addresses the correctness, consistency, necessity, completeness, and performance of the configuration items. Identify all configuration items, deviations and waivers, and the status of tests. Determine if configuration items have gaps in the documentation or if there are defects in the change management process.

Control activities	Control techniques	Audit procedures
	CM-4.1.3. Confirm compliance with applicable configuration management policy, plans, standards, and procedures.	Compare configuration policy, plans, standards, and procedures with observations.
	CM-4.1.4. The information system periodically verifies the correct operation of security functions—on system start up and restart, on command by user with appropriate privilege—(providing system audit trail documentation) and takes appropriate action (for example, notifies system administrator, shuts the system down, restarts the system) when anomalies are discovered.	Interview officials and review related system documentation. Observe or test this system capability to determine that procedures are followed and related system documentation is generated and reviewed by entity security staff.

Source: GAO.

Critical Element CM-5. Update software on a timely basis to protect against known vulnerabilities

Software should be scanned and updated frequently to guard against known vulnerabilities. In addition to periodically looking for software vulnerabilities and fixing them, security software should be kept current by establishing effective programs for patch management, virus protection, and other emerging threats. Also, software releases should be adequately controlled to prevent the use of noncurrent software.

Vulnerability scanning

Using appropriate vulnerability scanning tools and techniques, entity management should scan for vulnerabilities in the information system or when significant new vulnerabilities affecting the system are identified and reported. Audit procedures include review of the scanning methodology and related results to ensure that significant vulnerabilities are remediated in a timely manner. (See section SM-5.1, table 9, for a description of vulnerability scanning.)

Patch management[97]

Patch management is a critical process used to help alleviate many of the challenges involved with securing computing systems from attack. A component of configuration management, it includes acquiring, testing, applying, and monitoring patches to a computer system. Flaws in software code that could cause a program to malfunction generally result from programming errors that occur during software development. The increasing complexity and size of software programs contribute to the growth in software flaws. While most flaws do not create security vulnerabilities, the potential for these errors reflects the difficulty and complexity involved in delivering trustworthy code.

The federal government has taken several steps to address security vulnerabilities that affect entity systems, including efforts to improve patch management. For example, OMB FISMA reporting instructions have indicated that maintaining up-to-date patches is part of FISMA's system configuration management requirements. Also, the US-CERT is intended to aggregate and disseminate cybersecurity information to improve warning and response to incidents, increase coordination of response information, reduce vulnerabilities, and enhance prevention and protection. Services include notification of software vulnerabilities and information on applicable patches.

Common patch management practices in security-related literature from several groups, including NIST, Microsoft, patch management software vendors, and other computer security experts include the following elements:

- centralized patch management support and clearly assigned responsibilities;
- senior executive support and assurance that appropriate patches are deployed;

[97]Patch management is the process of applying software patches to correct flaws. A patch is a piece of software code that is inserted into a program to temporarily fix a defect. Patches are developed and released by software vendors when vulnerabilities are discovered.

- standardized patch management policies, procedures, and tools;
- skills, knowledge, and training to perform patch management responsibilities;
- current technology inventory of all hardware, software, and services that are used;
- risk assessment based on the criticality of the vulnerability and importance of the system;
- thorough testing before the patch is applied in a production environment;
- monitoring through network and host vulnerability scanning; and
- timely notification of relevant vulnerabilities and distribution of critical patches.

Virus protection

Protecting information systems from malicious computer viruses and worms[98] is a serious challenge. Computer attack tools and techniques are becoming increasingly sophisticated; viruses are spreading faster as a result of the increasing connectivity of today's networks; commercial-off-the-shelf products can be easily exploited for attack by all their users; and there is no "silver bullet" solution such as firewalls or encryption to protect systems. To combat viruses and worms specifically, entities should take steps such as ensuring that security personnel are adequately trained to respond to early warnings of attacks and keeping antivirus programs up-to-date. Strengthening intrusion detection capabilities and effective patch management programs also help.

According to NIST, the information system (including servers, workstations, and mobile computing devices) should implement malicious code protection that includes a capability for automatic updates. Virus definitions should be kept up-to-date. Virus-scanning software should be provided at critical entry points, such as remote-access servers and at each desktop system on the network. Anti-

[98]Worms propagate through networks; viruses destroy files and replicate by manipulating files.

viral mechanisms should be used to detect and eradicate viruses in incoming and outgoing e-mail and attachments.

Emerging threats

Entities are facing a set of emerging cybersecurity threats that are the result of changing sources of attack, increasingly sophisticated social engineering techniques designed to trick the unsuspecting user into divulging sensitive information, new modes of covert compromise, and the blending of once distinct attacks into more complex and damaging exploits. Advances in antispam measures have caused spammers to increase the sophistication of their techniques to bypass detection; the frequency and sophistication of phishing[99] attacks have likewise increased, and spyware[100] has proven to be difficult to detect and remove.

The risks that entities face are significant. Spam consumes employee and technical resources and can be used as a delivery mechanism for malware[101] and other cyberthreats. Entities and their employees can be victims of phishing scams, and spyware puts the confidentiality, integrity, and availability of entity systems at serious risk. Other emerging threats include the increased sophistication of worms, viruses, and other malware, and the increased attack capabilities of blended threats and botnets.[102]

The transition to the new Internet protocol version 6 (IPv6) creates new security risks. The Internet protocol provides the addressing mechanism that defines how and where information moves across

[99]Phishing is tricking individuals into disclosing sensitive personal information through deceptive computer-based means.

[100]Spyware is software that is secretly or surreptitiously installed into an information system to gather information on individuals or organizations without their knowledge; a type of malicious code.

[101]Malware (malicious software) is defined as programs that are designed to carry out annoying or harmful actions. They often masquerade as useful programs or are embedded into useful programs so that users are induced into activating them. Malware can include viruses, worms, and spyware (GAO-05-231).

[102]Botnets are compromised computers that can be remotely controlled by attackers to automatically launch attacks. Bots (short for robots) have become a key automation tool to speed the infection of vulnerable systems (GAO-05-231).

interconnected networks. The key characteristics of IPv6 are designed to increase address space, promote flexibility and functionality, and enhance security. However, as IPv6-capable software and devices accumulate in entity networks, they could be abused by attackers if not managed properly. Specifically, some existing firewalls and intrusion detection systems do not provide IPv6 detection or filtering capability, and malicious users might be able to send IPv6 traffic through these security devices undetected. Configuration management can mitigate this threat by tightening firewalls to deny direct outbound connections and tuning intrusion detection systems to detect IPv6 traffic.

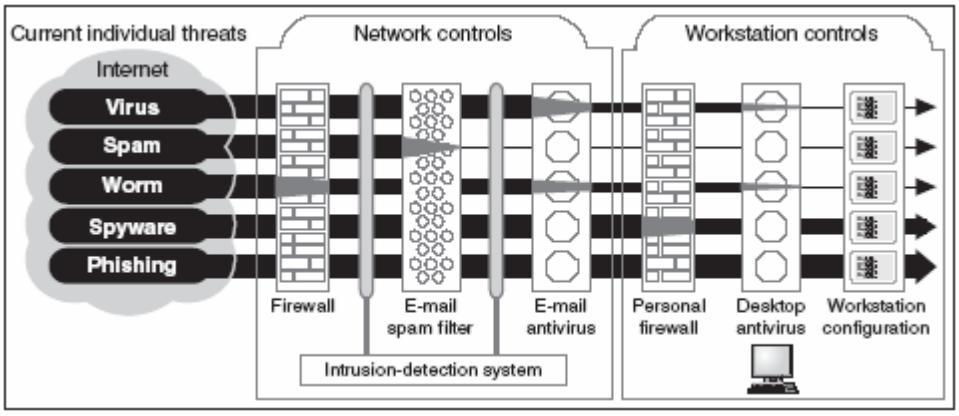
Voice over Internet Protocol (VoIP) technologies may also cause damage to the information system if used maliciously. Because of the integration of voice and data in a single network, establishing a secure VoIP and data network is a complex process that requires greater effort than that required for data-only networks. For example, typical firewall security configurations need to be reexamined when VoIP systems are implemented because of operational aspects required by this type of system that may in turn reduce the effectiveness of normally applied firewall security configurations. To mitigate this threat, the entity should establish usage restrictions and implementation guidance for VoIP, and document and control the use of VoIP. In addition, monitor and review procedures should be established to ensure security effectiveness. NIST SP 800-58 provides guidance on security considerations for VOIP technologies employed in information systems.

An effective security program can assist in entity efforts to mitigate and respond to these emerging cybersecurity threats. First of all, the risks of emerging cybersecurity threats should be addressed as part of required entitywide information security programs, which include performing periodic assessments of risk. Secondly, security controls commensurate with the identified risk should be implemented. Thirdly, ensuring security awareness training for entity personnel is critical. Comprehensive procedures for detecting, reporting, and responding to security incidents should be implemented. An effective security program, related control techniques, and proposed

audit procedures are discussed in the security management section of FISCAM.

As part of the entity security program, effective configuration of layered security (Defense-in-Depth) mitigates the risks from individual cybersecurity threats. Layered security implemented within an entity's security architecture includes the use of strong passwords, patch management, antivirus software, firewalls, software security settings, backup files, vulnerability assessments, and intrusion detection systems. Figure 5 depicts an example of how entities can use layered security controls to mitigate the risks of individual cybersecurity threats.

Figure 5. Layered Security Mitigates the Risk of Individual Cybersecurity Threats



Source: GAO.

Note: Excerpt from GAO, *Cybersecurity Issues Threaten Federal Information Systems*, GAO-05-231 (Washington, D.C.: May 2005).

Noncurrent software

Procedures should ensure that only current software releases are installed in information systems. Noncurrent software may be vulnerable to malicious code such as viruses and worms.

As mentioned previously under CM-3, many federal agencies have data processing operations that involve multiple locations and require a coordinated effort for effective and controlled distribution and implementation of new or revised software. This can include virus protection software and operating system patches. Once a modified software program has been approved for use, the change

should be communicated to all affected parties and distributed and implemented in a way that leaves no doubt about when it is to begin affecting processing. Inadequately controlling virus software distribution and system patches increases the risk that data could be improperly processed or lose its confidentiality due to computer viruses and hackers breaking into the database.

Software usage

Policies and procedures should be implemented to reasonably assure that the entity complies with software usage restrictions. In addition, the entity should have policies and procedures implemented that address the installation of software by users and procedures to determine that such policies and procedures are adhered to. In addition, policies and procedures should be implemented to address the use of collaborative web technologies and peer-to-peer file sharing[103]. This may include, for example, procedures for reviewing firewall rules to ensure compliance with the entity's policies for using these techniques.

[103]Peer-to-peer file sharing refers to providing and receiving files over a network, where files are stored on and served by workstations and involves both downloading and uploading of files.

Control Techniques and Suggested Audit Procedures for Critical Element CM-5

Table 27. Control Techniques and Suggested Audit Procedures for Critical Element CM-5: Update software on a timely basis to protect against known vulnerabilities

Control activities	Control techniques	Audit procedures
CM-5.1. Software is promptly updated to protect against known vulnerabilities.	CM-5.1.1. Information systems are scanned periodically to detect known vulnerabilities.	Interview entity officials. Identify the criteria and methodology used for scanning, tools used, frequency, recent scanning results, and related corrective actions. Coordinate this work with the AC section.
	CM-5.1.2. An effective patch management process is documented and implemented, including: • identification of systems affected by recently announced software vulnerabilities; • prioritization of patches based on system configuration and risk; • appropriate installation of patches on a timely basis, including testing for effectiveness and potential side effects on the entity's systems; and • verification that patches, service packs, and hotfixes were appropriately installed on affected systems.	Review pertinent policies and procedures. Interview users and data processing staff.
	CM-5.1.3. Software is up-to-date; the latest versions of software patches are installed.	Compare vendor recommended patches to those installed on the system. If patches are not up-to-date, determine why they have not been installed.
	CM-5.1.4. An effective virus, spam, and spyware protection process is documented and implemented, including: • appropriate policies and procedures; • effective protection software is installed that identifies and isolates suspected viruses, spam, and spyware; and • virus, spam, and spyware definitions are up-to-date.	Review pertinent policies and procedures. Interview users and data processing staff. Verify that actual software is installed and up-to-date.
	CM-5.1.5. The entity: (1) establishes usage restrictions and implementation guidance for IPv6 technology based on the potential to cause damage to the information system if used maliciously and (2) documents, monitors, and controls the use of IPv6 within the information system. Appropriate organizational officials authorize the use of IPv6.	Review policies and procedures for IPv6. Determine if known security vulnerabilities are mitigated by appropriate protective measures.
	CM-5.1.6. The entity: (1) establishes usage restrictions and implementation guidance for VoIP technologies based on the potential to cause damage to the information system if used maliciously and (2) documents, monitors, and controls the use of VoIP within the information system. Appropriate organizational officials authorize the use of VoIP.	Review policies and procedures for VoIP. Determine if security considerations in NIST SP 800-58 are used in the information system.
	CM-5.1.7. Noncurrent software releases are adequately secure, given the risk.	Review pertinent policies and procedures. Interview users and data processing staff.

Control activities	Control techniques	Audit procedures
	CM-5.1.8. Appropriate software usage controls (software restrictions, user-installed software) are implemented and exceptions are identified.	Assess the adequacy of software usage controls.

Source: GAO.

Critical Element CM-6. Appropriately document and approve emergency changes to the configuration

Emergency changes to the information system should be documented and approved by appropriate entity officials, either before the change or after the fact. In addition, appropriate personnel should be notified to provide analysis and follow-up.

It is not uncommon for program changes to be needed on an emergency basis to keep a system operating. Some applications, such as payroll processing, are performed in cycles that must be completed by a deadline. Other systems must be continuously available so that the operations they support are not interrupted. In these cases, the risk of missing a deadline or disrupting operations may pose a greater risk than that of temporarily suspending program change controls. However, because of the increased risk that errors or other unauthorized modifications could be implemented, emergency changes should be kept to a minimum.

It is important that an entity follow established procedures to perform emergency software changes and reduce the risk of suspending or abbreviating normal controls. Generally, emergency procedures should specify

- when emergency software changes are warranted,
- who may authorize emergency changes,
- how emergency changes are to be documented, and
- within what period after implementation the change must be tested and approved.

Making emergency changes often involves using sensitive system utilities or access methods that grant much broader access than would normally be needed. It is important that such access is strictly controlled and that their use be promptly reviewed.

Shortly after an emergency change is made, the usual configuration management controls should be applied retroactively. That is, the change should be subjected to the same review, testing, and approval process that apply to scheduled changes. In addition, logs of emergency changes and related documentation should be periodically reviewed by data center management or security administrators to determine whether all such changes have been tested and have received final approval.

Control activities	Control techniques	Audit procedures
CM-6.1. Adequate procedures for emergency changes are documented and implemented.	CM-6.1.1. Appropriately document and implement procedures for emergency changes.	Review procedures to determine whether they adequately address emergency change requirements.
CM-6.2. Emergency changes to the configuration are documented and approved.	CM-6.2.1. Appropriately document and approve emergency changes to the configuration and notify appropriate personnel for analysis and follow-up.	For a selection of emergency changes recorded in the emergency change log, review related documentation and approval.

Source: GAO.

3.4. Segregation of Duties (SD)

Effective segregation of duties starts with effective entitywide policies and procedures that are implemented at the system and application levels. Work responsibilities should be segregated so that one individual does not control all critical stages of a process. For example, while users may authorize program changes, programmers should not be allowed to do so because they are not the owners of the system and do not have the responsibility to see that the system meets user needs. Similarly, one computer programmer should not be allowed to independently write, test, and approve program changes. Often, segregation of duties is achieved by splitting responsibilities between two or more organizational groups. Dividing duties this way diminishes the likelihood that errors and wrongful acts will go undetected because the activities of one group or individual will serve as a check on the activities of the other.

Inadequately segregated duties, conversely, increase the risk that erroneous or fraudulent transactions could be processed, that improper program changes could be implemented, and that computer resources could be damaged or destroyed. For example:

- An individual who is independently responsible for authorizing, processing, and reviewing payroll transactions could inappropriately increase payments to selected individuals without detection.
- A computer programmer responsible for authorizing, writing, testing, and distributing program modifications could either inadvertently or deliberately implement computer programs that did not process transactions in accordance with management's policies or that included malicious code.

The extent to which duties are segregated depends on the size of the entity and the risk associated with its facilities and activities. A large entity will have more flexibility in separating key duties than will a small entity that must depend on only a few individuals to perform its operations. These smaller entities may rely more extensively on supervisory review to control activities. Similarly, activities that

involve extremely large dollar transactions or are otherwise inherently risky should be divided among several individuals and be subject to relatively extensive supervisory review.

Key areas of concern during a general controls review involve the segregation of duties among major operating and programming activities, including duties performed by users, application programmers, and data center staff. For example, where possible, the following types of activities should be separated: development versus production, security versus audit, accounts payable versus accounts receivable, and encryption key management versus the changing of keys. Entitywide policies outlining the responsibilities of groups and related individuals pertaining to incompatible activities should be documented, communicated, and enforced.

Because of the nature of computer operations, segregation of duties alone will not ensure that personnel perform only authorized activities, especially computer operators. Preventing or detecting unauthorized or erroneous personnel actions requires effective supervision and review by management and formal operating procedures.

Determining whether duties are adequately segregated and that the activities of personnel are adequately controlled involves assessing the entity's efforts in performing each of the critical elements listed in table 29.

Table 29. Critical Elements for Segregation of Duties

Number	Description
SD-1.	Segregate incompatible duties and establish related policies
SD-2.	Control personnel activities through formal operating procedures, supervision, and review

Source: GAO

Critical Element SD-1. Segregate incompatible duties and establish related policies

The first steps in determining if duties are appropriately segregated are to analyze the entity's operations, identify incompatible duties, and assign these duties to different organizational units or individuals. Federal internal control standards specify that key duties and responsibilities for authorizing, processing, recording, and reviewing transactions should be separated. This concept can also be applied to the authorization, testing, and review of computer program changes.

Segregating duties begins by establishing independent organizational groups with defined functions, such as a payroll unit responsible for preparing payroll transaction input and a data processing unit responsible for processing input prepared by other units. Functions and related tasks performed by each unit should be documented for the unit and written in job descriptions and should be clearly communicated to personnel assigned the responsibilities.

Both physical and logical access controls can be used to enforce many entity policies regarding segregation of duties and should be based on organizational and individual job responsibilities. (Access control is discussed in detail in section 3.2.) For example, logical access controls can preclude computer programmers from using applications software or accessing computerized data associated with applications. Similarly, physical access controls, such as key cards and a security guard, can be used to prevent unauthorized individuals from entering a data processing center.

SD-1.1. Incompatible duties have been identified and policies implemented to segregate these duties

Management should have analyzed operations and identified incompatible duties that are then segregated through policies and

organizational divisions. Although incompatible duties may vary from one entity to another, the following functions are generally performed by different individuals: information security management, systems design, applications programming, systems programming, quality assurance and testing, library management/ change management, computer operations, production control and scheduling, data security, data administration, network administration, and configuration management. A brief description of these functions follows.

Information security management includes the personnel who direct or manage the activities and staff of the information security department and its various organizational components.

Systems design is the function of identifying and understanding user information needs and translating them into a requirements document that is used to build a system.

Applications programming involves the development and maintenance of programs for specific applications, such as payroll, inventory control, accounting, and mission support systems.

Systems programming involves the development and maintenance of programs that form the system software, such as operating systems, utilities, compilers, and security software.

Quality assurance/testing involves the review and testing of newly-developed systems and modifications to determine whether they function as specified and perform in accordance with functional specifications. Testing may also determine whether appropriate procedures, controls, and documentation have been developed and implemented before approval is granted to place the system into operation.

Library management/change management is the control over program and data files that are either kept on-line or are on tapes and disks that are loaded onto the computer as needed. Software programs are generally used to assist in management of these files. This function also is often responsible for controlling

documentation related to system software, application programs, and computer operations.

Computer operations involves performing the various tasks to operate the computer and peripheral equipment, including providing the tape, disk, or paper resources as requested by the applications systems.

Production control and scheduling involves monitoring the information into, through, and as it leaves the computer operations area, and for determining the succession of programs to be run on the computer. Often, an automated scheduling package is used in this task. An entity may have a separate data control group that is responsible for seeing that all data necessary for processing are present and that all output is complete and distributed properly. This group is usually also responsible for reconciling record counts and control totals submitted by users with similar counts and totals generated during processing.

The data security function in an IT department involves the development and administration of an entity's information security program. This includes development of security policies, procedures, and guidelines and the establishment and maintenance of a security awareness and education program for employees. This function is also concerned with the adequacy of access controls and service continuity procedures.

Data administration involves planning for and administering the data used throughout the entity. This function is concerned with identifying, cataloging, controlling, and coordinating the information needs of the entity. Database administration is a narrower function concerned with the technical aspects of installing, maintaining, and using an entity's databases and database management systems.

Network administration involves maintaining a secure and reliable on-line communications network and serving as liaison with user departments to resolve network needs and problems.

Configuration management involves controlling and documenting changes made to a system's hardware, software, firmware, and

documentation throughout the development and operational life of the system.

The following include examples of restrictions that are generally addressed in policies about segregating duties and are achieved through organizational divisions and access controls:

- Application users should not have access to operating systems or applications software.
- Programmers should not be responsible for moving programs into production or have access to production libraries or data.
- Access to operating system documentation should be restricted to authorized systems programming personnel.
- Access to applications system documentation should be restricted to authorized applications programming personnel.
- Access to production software libraries should be restricted to library management personnel.
- Persons other than computer operators should not set up or operate the production computer.
- Only users—not computer staff—should be responsible for transaction origination or correction and for initiating changes to application files.
- Computer operators should not have access to program libraries or data files.

Some steps involved in processing a transaction also need to be separated among different individuals. For example, the following combinations of functions should not be performed by a single individual:

- Data entry and verification of data.
- Data entry and its reconciliation to output.
- Input of transactions for incompatible processing functions (for example, input of vendor invoices and purchasing and receiving information).
- Data entry and supervisory authorization functions (for example, authorizing a rejected transaction to continue processing that exceeds some limit requiring a supervisor's review and approval).

Organizations with limited resources to segregate duties should have compensating controls, such as supervisory review of transactions performed.

SD-1.2. Job descriptions have been documented

Documented job descriptions should exist that clearly describe employee duties and prohibited activities. These should include responsibilities that may be assumed during emergency situations. The documented job descriptions should match employees' assigned duties. Also, they should include definitions of the technical knowledge, skills, and abilities required for successful performance in the relevant position, and should be useful for hiring, promoting, and performance evaluation purposes. In addition, the organization should assign a risk designation to all positions and establish screening criteria for individuals filling those positions.

SD-1.3. Employees understand their duties and responsibilities

Employees and their supervisors should understand their responsibilities and the activities that are prohibited. Ultimate responsibility for this rests with senior managers. They should provide the resources and training so that employees understand their responsibilities and ensure that segregation-of-duties principles are established, enforced, and institutionalized within the organization.

Control Techniques and Suggested Audit Procedures for Critical Element SD-1

Table 30. Control Techniques and Suggested Audit Procedures for Critical Element SD-1: Segregate incompatible duties and establish related policies

Control activities	Control techniques	Audit procedures
SD-1.1. Incompatible duties have been identified and policies implemented to segregate these duties.	SD-1.1.1. Policies and procedures for segregating duties exist and are up-to-date.	Review pertinent policies and procedures. Interview selected management and information security personnel regarding segregation of duties.

Control activities	Control techniques	Audit procedures
	SD-1.1.2. Distinct system support functions where possible are performed by different individuals, including the following: • information security management • systems design • applications programming • systems programming • quality assurance/testing • library management/change management • computer operations • production control and scheduling • data control • data security • data administration • network administration • configuration management	Review an entity organization chart showing information security functions and assigned personnel. Interview selected personnel and determine whether functions are appropriately segregated. Determine whether the chart is current and each function is staffed by different individuals. Review relevant alternate or back up assignments and determine whether the proper segregation of duties is maintained. Observe activities of personnel to determine the nature and extent of the compliance with the intended segregation of duties.
	SD-1.1.3. No individual has complete control over incompatible transaction processing functions. Specifically, the following combination of functions are not performed by a single individual: • data entry and verification of data • data entry and its reconciliation to output • input of transactions for incompatible processing functions (for example, input of vendor invoices and purchasing and receiving information) • data entry and supervisory authorization functions (for example, authorizing a rejected transaction to continue processing that exceeds some limit requiring a supervisor's review and approval)	Review the organizational chart and interview personnel to determine that assignments do not result in a single person being responsible for the indicated combinations of functions. Observe activities of personnel to determine the nature and extent of the compliance with the intended segregation of duties.
	SD-1.1.4. Organizations with limited resources to segregate duties have compensating controls, such as supervisory review of transactions performed.	Interview management, observe activities, and test transactions. Note: Perform this in conjunction with SD-2.2.
	SD-1.1.5. Data processing personnel are not users of information systems. They and security managers do not initiate, input, or correct transactions.	Determine through interview and observation whether data processing personnel and security managers are prohibited from these activities.
	SD-1.1.6. Day-to-day operating procedures for the data center are adequately documented and prohibited actions are identified.	Review the adequacy of documented operating procedures for the data center.
	SD-1.1.7. Access controls enforce segregation of duties.	Audit procedures are found in section AC-3.1, but this item is listed here as a reminder. Logical and physical access controls should enforce segregation of duties.

Control activities	Control techniques	Audit procedures
SD-1.2. Job descriptions have been documented.	SD-1.2.1. Documented job descriptions accurately reflect assigned duties and responsibilities and segregation of duty principles.	Review job descriptions for several positions in organizational units and for user security administrators. Determine whether duties are clearly described and prohibited activities are addressed. Review the effective dates of the position descriptions and determine whether they are current. Compare these descriptions with the current responsibilities and duties of the incumbents in these positions to determine the accuracy of these statements.
	SD-1.2.2. Documented job descriptions include definitions of the technical knowledge, skills, and abilities required for successful performance in the relevant position and can be used for hiring, promoting, and performance evaluation purposes.	Review job descriptions and interview management personnel to determine if all job positions have documented technical knowledge, skills, and ability requirements that can be used for hiring, promoting, and performance evaluations.
SD-1.3. Employees understand their duties and responsibilities.	SD-1.3.1. All employees fully understand their duties and responsibilities and carry out those responsibilities in accordance to their job descriptions.	Interview personnel filling positions for the selected job descriptions (see SD-1.2). Determine if the descriptions match their understanding of their duties and responsibilities and whether additional duties are undertaken that are not listed in their job descriptions.
	SD-1.3.2. Senior management is responsible for providing adequate resources and training to ensure that segregation of duty principles are understood and established, enforced, and institutionalized within the organization.	Determine from interviewing personnel whether senior management has provided adequate resources and training to establish, enforce, and institutionalize the principles of segregation of duties.
	SD-1.3.3. Responsibilities for restricting access by job positions in key operating and programming activities are clearly defined, understood, and followed.	Interview management personnel in these activities.

Source: GAO.

Critical Element SD-2. Control personnel activities through formal operating procedures, supervision, and review

Control over personnel activities requires formal operating procedures and active supervision and review of these activities. This is especially relevant for computer operators and system administrators. Some information system officials have extensive access rights in order to keep the systems running efficiently so their activities need to be monitored closely. Inadequacies in this

area could allow mistakes to occur and go undetected and facilitate unauthorized use of the computer.

SD-2.1. Formal procedures guide personnel in performing their duties

Detailed, written instructions should be followed to guide personnel in performing their duties. These instructions are especially important for computer operators. For example, computer operator instruction manuals should provide guidance on system start up and shut down procedures, emergency procedures, system and job status reporting, and operator-prohibited activities. Application-specific manuals (commonly called run manuals) should provide additional instructions for operators specific to each application, such as instructions on job setup, console and error messages, job checkpoints, and restart and recovery steps after system failures. Operators should be prevented from overriding file label or equipment error messages.

SD-2.2. Active supervision and review are provided for all personnel

Supervision and review of personnel computer systems activities help make certain that these activities are performed in accordance with prescribed procedures, that mistakes are corrected, and that the computer is used only for authorized purposes. To aid in this oversight, all user activities on the computer system should be recorded on activity logs, which serve as an audit trail. Supervisors should routinely review these activity logs for incompatible actions and investigate any abnormalities.

Periodic management reviews of computer systems activities are essential to ensure that employees are performing their duties in accordance with established policies and to identify the need to update policies when operational processes change. In particular, management should periodically review activities that cannot be controlled by physical or logical access controls. Such activities are typically controlled instead by supervisory oversight and documentation showing approvals and authorizations.

Control Techniques and Suggested Audit Procedures for Critical Element SD-2

Table 31. Control Techniques and Suggested Audit Procedures for Critical Element SD-2: Control personnel activities through formal operating procedures, supervision, and review

Control activities	Control techniques	Audit procedures
SD-2.1. Formal procedures guide personnel in performing their duties.	SD-2.1.1. Detailed, written instructions exist and are followed for the performance of work.	Perform the following procedures for SD-2.1.1 to SD-2.1.3.
	SD-2.1.2. Instruction manuals provide guidance on system operation.	Review manuals to determine whether formal procedures exist to guide personnel in performing their work.
	SD-2.1.3. Application run manuals provide instruction on operating specific applications.	Interview supervisors and personnel. Observe processing activities.
SD-2.2. Active supervision and review are provided for all personnel.	SD-2.2.1. Personnel are provided adequate supervision and review, including each shift for computer operations.	Interview supervisors and personnel. Observe processing activities.
	SD-2.2.2. Access authorizations are periodically reviewed for incompatible functions.	Review a selection of access authorizations for incompatible functions and evidence of supervisory review.
	SD-2.2.3. Management reviews are performed to determine that control techniques for segregating incompatible duties are functioning as intended and that the control techniques in place are maintaining risks within acceptable levels (for example, periodic risk assessments).	Determine which reviews are conducted to assess the adequacy of duty segregation. Obtain and review results of such reviews. Note: This audit step should be performed in conjunction with audit steps in critical elements SM-2 (Periodically assess and validate risks) and SM-5 (Monitor the effectiveness of the security program).
	SD-2.2.4. Staff performance is monitored on a periodic basis and controlled to ensure that objectives laid out in job descriptions are carried out.	Interview management and subordinate personnel. Select documents or actions requiring supervisory review and approval for evidence of such performance (for example, approval of input of transactions, software changes).
	SD-2.2.5. Supervisors routinely review user activity logs for incompatible actions and investigate any abnormalities.	Interview supervisors and review user activity logs for incompatible actions. Check for evidence of supervisory review.

Source: GAO.

3.5. Contingency Planning (CP)

Losing the capability to process, retrieve, and protect electronically maintained information can significantly affect an entity's ability to accomplish its mission. If contingency planning controls are inadequate, even relatively minor interruptions can result in lost or incorrectly processed data, which can cause financial losses, expensive recovery efforts, and inaccurate or incomplete information. For some operations, such as those involving health care or safety, system interruptions could even result in injuries or loss of life.

Given these severe implications, it is critical that an entity have in place (1) procedures for protecting information resources and minimizing the risk of unplanned interruptions and (2) a plan to recover critical operations should interruptions occur. Such plans should consider the activities performed at general support facilities, such as data processing centers and telecommunications facilities, as well as those performed by users of specific applications. To determine whether recovery plans will work as intended, they should be tested periodically in disaster-simulation exercises. FISMA requires that each federal agency implement an information security program that includes "plans and procedures to ensure continuity of operations for information systems that support the operations and assets of the agency."

Although often referred to as disaster recovery or contingency plans, controls to ensure service continuity should address the entire range of potential disruptions. These may include relatively minor interruptions, such as temporary power failures, as well as major disasters, such as fires, natural disasters, and terrorism, that would require reestablishing operations at a remote location; it might also include errors, such as writing over a file. If controls are inadequate, even relatively minor interruptions can result in lost or incorrectly processed data.

To mitigate service interruptions, it is essential that the related controls be understood and supported by management and staff throughout the entity. Senior management commitment is especially important to ensuring that adequate resources are devoted to

emergency planning, training, and related testing. Also, the involvement of data and process owners is integral to contingency planning, as they have first-hand knowledge of their data and processes and of the impact of a loss of availability. In addition, all staff with contingency planning responsibilities, such as those responsible for backing up files, should be fully aware of the risks of not fulfilling those duties.

Assessing contingency planning controls involves evaluating the entity's performance in each of the critical elements listed in table 32.

Table 32. Critical Elements for Contingency Planning

Number	Description
CP-1.	Assess the criticality and sensitivity of computerized operations and identify supporting resources
CP-2.	Take steps to prevent and minimize potential damage and interruption
CP-3.	Develop and document a comprehensive contingency plan
CP-4.	Periodically test the contingency plan and adjust it as appropriate

Source: GAO

Critical Element CP-1. Assess the criticality and sensitivity of computerized operations and identify supporting resources

At most entities, the continuity of certain automated operations is more important than for other operations, and it is not cost effective to provide the same level of continuity for all operations. For this reason, it is important that management analyze data and operations to determine which are the most critical and what resources are needed to recover and support them. This is the first step in determining which resources merit the greatest protection and what contingency plans need to be made.

As explained in SM-2, FISMA required NIST to develop standards and guidelines for agencies to use in categorizing federal information and information systems so agencies can provide the appropriate level of information security according to a range of risks. This information is useful in assessing risks and the criticality and sensitivity of computerized operations, and in identifying

supporting resources. It is also very important to link this information to the entity's mission and critical business processes.

According to NIST, the definition of an organization's critical mission or business functions is often called a business plan, and it is used to support contingency planning.[104] Part of business planning involves the development of a business continuity plan that focuses on sustaining an organization's business functions during and after a disruption. A business continuity plan can be written for a specific business process or it may address all key business processes. Because there is an inherent relationship between an IT system and the business process it supports, there should be coordination between each plan, and ultimately an entity may use a suite of plans for its IT systems, business processes, and the facility.[105] In addition, a business impact analysis should be conducted to (1) identify critical information technology resources, (2) identify outage impact and allowable outage times, and (3) develop recovery priorities. The purpose of the business impact analysis is to correlate specific system components with the critical services that they provide and, based on that information, to characterize the consequences if system components were to be disrupted.

CP-1.1. Critical data and operations are identified and prioritized

The criticality and sensitivity of various data and operations should be determined and prioritized based on security categorizations and an overall risk assessment of the entity's operations. As discussed in section 3.1, Entitywide Security Management Program, such a risk assessment should serve as the foundation of an entity's security plan. Factors to be considered include the importance and sensitivity of the data and other organizational assets handled or protected by the individual operations, and the cost of not restoring data or operations promptly. For example, a 1-day interruption of major tax or fee-collection systems or a loss of related data could

[104]NIST, *An Introduction to Computer Security: The NIST Handbook*, Special Publication (SP) 800-12, October 1995.

[105]NIST, *Contingency Planning Guide for Information Technology Systems*, Special Publication (SP) 800-34, June 2002.

significantly slow or halt receipt of revenues, diminish controls over millions of dollars in receipts, and reduce public trust. Conversely, a system that monitors employee training could be out of service for perhaps as much as several months without serious consequences. Further, sensitive data, such as personal information on individuals or information related to contract negotiations, may require special protection during a suspension of normal service, even if such information is not needed on a daily basis to carry out critical operations.

Generally, critical data and operations should be identified and ranked by those personnel involved in the entity's business or program operations. For example, managers should predict the negative effects of lost data and interrupted operations and determine how long specific operations can be suspended or postponed. However, it is also important to obtain senior management's agreement with such determinations, as well as concurrence from affected groups.

The prioritized listing of critical information resources and operations should be periodically reviewed to determine whether current conditions are reflected in it. Such reviews should occur whenever there is a significant change in the entity's mission and operations or in the location or design of the systems that support these operations.

CP-1.2. Resources supporting critical operations are identified and analyzed

Once critical data and operations have been determined, the minimum resources needed to support them should be identified and their roles analyzed. The resources to be considered include computer resources, such as hardware, software, and data files; networks, including components such as routers and firewalls; supplies, including paper stock and preprinted forms; telecommunications services; and any other resources that are necessary to the operation, such as people, office facilities and supplies, and noncomputerized records. For example, an analysis should be performed to identify the maximum number of disk drives needed at one time and the specific requirements for telecommunications lines and devices.

Because essential resources are likely to be held or managed by a variety of groups within an entity, it is important that program and information security support staff work together to identify the resources needed for critical operations.

CP-1.3. Emergency processing priorities are established

In conjunction with identifying and ranking critical functions, the entity should develop a plan for restoring critical operations. The plan should clearly identify the order in which various aspects of processing should be restored, who is responsible, and what supporting equipment or other resources will be needed. A carefully developed processing restoration plan can help employees immediately begin the restoration process and make the most efficient use of limited computer resources during an emergency. Both system users and information security support staff should be involved in determining emergency processing priorities. (See critical element CP-3 for additional information on contingency planning.)

RA-2 Security Categorization

Control Techniques and Suggested Audit Procedures for Critical Element CP-1

Table 33. Control Techniques and Suggested Audit Procedures for Critical Element CP-1: Assess the criticality and sensitivity of computerized operations and identify supporting resources

Control activities	Control techniques	Audit procedures
CP-1.1. Critical data and operations are identified and prioritized.	CP-1.1.1. The entity categorizes information systems in accordance with appropriate guidance, such as FIPS 199, and documents the results in the system security plan.	Perform the following procedures for CP-1.1.1 to CP-1.1.2.
	CP-1.1.2 A list of critical operations and data has been documented that • identifies primary mission or business functions, • prioritizes data and operations, • is approved by senior program managers, and • reflects current conditions including system interdependencies and technologies.	Review the policies and methodology used to categorize systems and create the critical operations list. This list should identify each system and its criticality in supporting the entity's primary mission or business functions. Review how systems are categorized and the critical operations list. Determine if the justifications have been documented and that they (1) prioritize data and operations by primary mission or business functions; (2) are approved by senior management; and (3) reflect current operating conditions, including key system interdependencies. Determine if technology supporting critical operations is identified and appropriately considered in processing priorities. Interview program, information technology, and security administration officials. Determine their input and assessment of the reasonableness of priorities established.
CP-1.2. Resources supporting critical operations are identified and analyzed.	CP-1.2.1. Resources supporting critical operations and functions have been identified and documented. Types of resources identified should include • computer hardware, • computer software, • computer supplies, • network components, • system documentation, • telecommunications, • office facilities and supplies, and • human resources.	Interview program and security administration officials responsible for developing the critical operations listing. Review documentation supporting the critical operations listing to verify that the following resources have been identified for each critical operation: • computer hardware and software, • computer supplies, • network components, • system documentation, • telecommunications, • office facilities and supplies, and • human resources. Appropriate documentation may include contingency-related plans in NIST SP 800-34.

Control activities	Control techniques	Audit procedures
	CP-1.2.2. Critical information technology resources have been analyzed to determine their impact on operations if a given resource were disrupted or damaged. This analysis should evaluate the impact of the outages over time and across related resources and dependent systems.	Determine if a current business impact analysis has been conducted that identifies critical information technology resources, disruption impacts, allowed outage times, and recovery priorities.
CP-1.3. Emergency processing priorities are established.	CP-1.3.1. Emergency processing priorities have been documented and approved by appropriate program and data processing managers.	Review related policies, plans, and procedures for emergency processing and ensure: • recovery priorities have been developed, • management has approved priorities, and • priorities are documented. • Request a copy of the continuity of operations plan. Interview program and security administration officials to determine whether they are aware of all policies and procedures for emergency processing priorities and maintain copies of the continuity of operations plan.

Source: GAO.

Critical Element CP-2. Take steps to prevent and minimize potential damage and interruption

There are a number of steps that an entity should take to prevent or minimize the damage to automated operations that can occur from unexpected events. These can be categorized as

- routinely duplicating or backing up data files, computer programs, and critical documents with off-site storage;
- arranging for remote backup facilities that can be used if the entity's usual facilities are damaged beyond use;
- establishing an information system recovery and reconstitution capability so that the information system can be recovered and reconstituted to its original state after a disruption or failure;
- installing environmental controls, such as fire-suppression systems or backup power supplies; and
- ensuring that staff and other system users understand their responsibilities during emergencies.

Such steps, especially implementing thorough backup procedures and installing environmental controls, are generally inexpensive ways to prevent relatively minor problems from becoming costly disasters. In particular, an entity should maintain an ability to restore data files, which may be impossible to recreate if lost. In addition, effective maintenance, problem management, and change management for hardware equipment will help prevent unexpected interruptions.

In an IS controls audit being performed as part of a financial audit or data reliability assessment, the auditor should tailor the identification of control techniques and audit procedures related to environmental controls (CP-2.2) and hardware maintenance (CP-2.4) to achieve the audit objectives, considering the IS controls identified by the auditor as significant to the audit objectives (e.g., internal control over financial reporting).

CP-2.1. Data and program backup procedures have been implemented

Routinely copying data files and software and storing these files at a secure, remote location are usually the most cost-effective actions that an entity can take to mitigate service interruptions. Although equipment can often be readily replaced, the cost could be significant and reconstructing computerized data files and replacing software can be extremely costly and time consuming. And, data files cannot always be reconstructed. In addition to the direct costs of reconstructing files and obtaining software, the related service interruptions could lead to significant financial losses.

A program should be in place for regularly backing up computer files, including master files, transaction files, application programs, system software, and database software, and for storing these backup copies securely at an off-site location. Choosing a location depends on the particular needs of the entity, but in general, the location should be far enough away from the primary location that it will be protected from events such as fires, storms, electrical power outages, and terrorism that may occur to the primary location. In addition, it should be protected from unauthorized access and from environmental hazards.

The frequency with which files should be backed up depends on the volume and timing of transactions that modify the data files. Generally, backing up files on a daily basis is adequate. However, if a system accounts for thousands of transactions per day, it may be appropriate to back up files several times a day. Conversely, if only a few transactions are recorded every week, then weekly backing up of files may be adequate.

File back up procedures should be designed so that a recent copy is always available. For example, new data file versions should be received at the off-site storage location before the disks or tapes containing prior versions are returned to the data center for reuse.

Generally, data center personnel are responsible for routinely backing up files. However, if critical data are routinely maintained on computers that are not under the control of data center personnel, then responsibility for backing up this information should be clearly defined.

In addition to data files and software programs, copies of any other information and supplies that may be needed to maintain operations should be maintained at a remote location. Examples of such documents are system and application documentation, unique preprinted computer paper, and essential legal files. Although a review of computer-related controls focuses on electronically maintained data, it is important that critical paper documents also be copied and stored remotely so that they are available when needed to support automated operations.

CP-2.2. Adequate environmental controls have been implemented

Environmental controls prevent or mitigate potential damage to facilities and interruptions in service. Examples of environmental controls include

- fire extinguishers and fire-suppression systems;
- fire alarms;
- smoke detectors;
- water detectors;

- emergency lighting;
- redundancy in air cooling systems;
- backup power supplies;
- existence of shut-off valves and procedures for any building plumbing lines that may endanger processing facilities;
- processing facilities built with fire-resistant materials and designed to reduce the spread of fire; and
- policies prohibiting eating, drinking, and smoking within computer facilities.

Environmental controls can diminish the losses from some interruptions such as fires or prevent incidents by detecting potential problems early, such as water leaks or smoke, so that they can be remedied. Also, uninterruptible or backup power supplies can carry a facility through a short power outage or provide time to back up data and perform orderly shut-down procedures during extended power outages.

CP-2.3. Staff have been trained to respond to emergencies

Staff should be trained in and aware of their responsibilities in preventing, mitigating, and responding to emergency situations. For example, information security support staff should receive periodic training in emergency fire, water, and alarm incident procedures, as well as in their responsibilities in starting up and running an alternate data processing site. Also, if outside users are critical to the entity's operations, they should be informed of the steps they may have to take as a result of an emergency.

Generally, information on emergency procedures and responsibilities can be provided through training sessions and by distributing written policies and procedures. Training sessions should be held at least once a year and whenever changes to emergency plans are made. Further, if staff could be required to relocate or significantly alter their commuting routine in order to operate an alternate site in an emergency, it is advisable for an entity to incorporate into the contingency plan steps for arranging lodging and meals or any other facilities or services that may be needed to accommodate essential personnel.

CP-2.4. Effective hardware maintenance, problem management, and change management help prevent unexpected interruptions

Unexpected service interruptions can occur from hardware equipment failures or from changing equipment without adequate advance notification to system users. To prevent such occurrences requires an effective program for maintenance, problem management, and change management for hardware equipment.

Routine periodic hardware maintenance should be scheduled and performed to help reduce the possibility and impact of equipment failures. Vendor-supplied specifications normally prescribe the frequency and type of preventive maintenance to be performed. Such maintenance should be scheduled in a manner to minimize the impact on overall operations and on critical or sensitive applications. Specifically, peak workload periods should be avoided. All maintenance performed should be documented, especially any unscheduled maintenance that could be analyzed to identify problem areas warranting additional action for a more permanent solution. Flexibility should be designed into the data processing operations to accommodate the required preventive maintenance and reasonably expected unscheduled maintenance. For critical or sensitive applications that require a high level of system availability, the acquisition and use of spare or backup hardware may be appropriate.

Effective problem management requires tracking service performance and documenting problems encountered. Goals should be established by senior management on the availability of data processing and on-line service. Records should be maintained on the actual performance in meeting service schedules. Problems and delays encountered, the reasons for the problems or delays, and the elapsed time for resolution should be recorded and analyzed to identify any recurring pattern or trend. Senior management should periodically review and compare the service performance achieved with the goals and survey user departments to see if users' needs are being met.

Changes to hardware equipment and related software should be scheduled to minimize the impact on operations and users and allow for adequate testing to demonstrate that they will work as expected.

Advance notification should be given to users so that service is not unexpectedly interrupted.

Control Techniques and Suggested Audit Procedures for Critical Element CP-2

Table 34. Control Techniques and Suggested Audit Procedures for Critical Element CP-2: Take steps to prevent and minimize potential damage and interruption

Control activities	Control techniques	Audit procedures
CP-2.1. Information system back up and recovery procedures have been implemented.	CP-2.1.1. Backup files are created on a prescribed basis and rotated off-site often enough to avoid disruption if current files are lost or damaged.	Review written policies and procedures for backing up and transporting files. Determine how often files are backed up and rotated off site, retention periods, and security involved in transport. Compare inventory records with the files maintained off-site and determine the age of these files. For a selection of critical files, locate and examine the backup files. Verify that backup files can be used to recreate current reports. Determine whether backup files are created and rotated off-site as prescribed and are sent before prior versions are returned. Determine if the technology is implemented in such a manner as to provide appropriate availability, including consideration of backup procedures, system configuration, redundancy, environmental controls, staff training, and routine maintenance.
	CP-2.1.2. System and application documentation is maintained at the off-site storage location.	Locate and examine documentation.
	CP-2.1.3. The backup storage site is • geographically removed from the primary site (for example, not subject to the same hazards), and • protected by environmental controls and physical access controls.	Examine the backup storage site. Determine if there are accessibility problems between the storage and processing sites in the event of an area wide disaster.
	CP-2.1.4. The information system back up and recovery procedures adequately provide for recovery and reconstitution to the system's original state after a disruption or failure including • system parameters are reset; • patches are reinstalled; • configuration settings are reestablished; • system documentation and operating procedures are available; • application and system software is reinstalled; • information from the most recent backup is available; and • the system is fully tested.	Interview entity officials and determine whether comprehensive procedures and mechanisms exist to fully restore the information security to its original state. Determine if this recovery capability has been tested and, if so, review the test plan and test results.

Control activities	Control techniques	Audit procedures
CP-2.2. Adequate environmental controls have been implemented.		Audit procedures for CP-2.2 should be performed in conjunction with Section AC-6 regarding physical access controls. Perform the following procedures to determine whether control techniques CP-2.2.1 through 2.2.10 are achieved. - Examine the entity's facilities. - Interview site managers.
	CP-2.2.1. Fire detection and suppression devices have been installed and are working, for example, smoke detectors, fire extinguishers, and sprinkler systems.	Observe that operations staff are aware of the locations of fire alarms, fire extinguishers, regular and auxiliary electrical power switches, water shut-off valves, breathing apparatus, and other devices that they may be expected to use in an emergency. Observe fire detection and suppression devices. Determine whether the activation of heat and smoke detectors will notify the fire department.
	CP-2.2.2. Controls have been implemented to mitigate other disasters, such as floods, earthquakes, terrorism, etc.	Review the entity's assessment of environmental risks and related controls.
	CP-2.2.3. Redundancy exists in critical systems (for example, power and air cooling systems).	Observe the operation, location, maintenance, and access to critical systems.
	CP-2.2.4. Building plumbing lines do not endanger the computer facility or, at a minimum, shut-off valves and procedures exist and are known.	Observe whether water can enter through the computer room ceiling or whether pipes are running through the facility and that there are water detectors on the floor.
	CP-2.2.5. An uninterruptible power supply or backup generator has been provided so that power will be adequate for orderly shut down.	Observe power backup arrangements and results of testing.
	CP-2.2.6. Humidity, temperature, and voltage are controlled within acceptable levels.	Determine whether humidity, temperature, and voltage are appropriately controlled.
	CP-2.2.7. Emergency lighting activates in the event of a power outage and covers emergency exits and evacuation routes.	Observe that emergency lighting works and that power and other cabling is protected.
	CP-2.2.8. A master power switch or emergency shut-off switch is present and appropriately located.	Observe power shut-off arrangements.
	CP-2.2.9. Environmental controls are periodically tested at least annually for federal agencies	Review test policies. Review documentation supporting recent tests of environmental controls and followup actions.

Control activities	Control techniques	Audit procedures
	CP-2.2.10. Eating, drinking, and other behavior that may damage computer equipment is prohibited.	Review policies and procedures regarding employee behavior. Observe employee behavior.
CP-2.3. Staff have been trained to respond to emergencies.	CP-2.3.1. Operational and support personnel have received training and understand their emergency roles and responsibilities.	Interview security personnel and appropriate operational and support staff and ensure that they understand their roles and responsibilities.
	CP-2.3.2. Personnel receive periodic environmental controls training including emergency fire, water, and alarm incident procedures.	Review training records and training course documentation. Determine whether all personnel have received up-to-date training and that the scope of the training is adequate.
	CP-2.3.3. Emergency response procedures are documented.	Review emergency response procedures for completeness and determine whether roles and responsibilities are clearly defined.
	CP-2.3.4. Emergency procedures are periodically tested.	Review test policies. Review test documentation. Interview operational and data center staff.
CP-2.4. Effective hardware maintenance, problem management, and change management help prevent unexpected interruptions.	CP-2.4.1. Policies and procedures exist and are up-to-date.	Review policies and procedures.
	CP-2.4.2. Routine periodic hardware preventive maintenance is scheduled and performed in accordance with vendor specifications and in a manner that minimizes the impact on operations.	Perform the following procedures to determine whether control techniques CP-2.4.2 through 2.4.4 are achieved. Interview information security, data processing, and user management. Review maintenance documentation. Determine when maintenance is performed, if it is in accordance with vendor specifications, and if there is minimal impact on system availability.
	CP-2.4.3. Regular and unscheduled maintenance performed is documented.	
	CP-2.4.4. Flexibility exists in the data processing operations to accommodate regular and a reasonable amount of unscheduled maintenance.	
	CP-2.4.5. Spare or backup hardware is used to provide a high level of system availability for critical and sensitive applications.	Interview information security and data center management.
	CP-2.4.6. Goals are established by senior management on the availability of data processing and on-line services.	Perform the following procedures to determine whether control techniques CP-2.4.6 through 2.4.8 are achieved. Interview senior management, information security management, data processing management, and user management. Review supporting documentation, including system performance metrics.
	CP-2.4.7. Records are maintained on the actual performance in meeting service schedules.	
	CP-2.4.8. Problems and delays encountered, the reason, and the elapsed time for resolution are recorded and analyzed to identify recurring patterns or trends.	

Control activities	Control techniques	Audit procedures
	CP-2.4.9. Senior management periodically reviews and compares the service performance achieved with the goals and surveys of user departments to see if their needs are being met.	Interview senior management, information security management, data processing management, and user management. Review supporting documentation such as user surveys, service goals, metric measuring system availability, service schedules, and test plans.
	CP-2.4.10. Changes of hardware equipment and related software are scheduled to minimize the impact on operations and users, thus allowing for adequate testing.	For control techniques CP-2.4.10 and CP-2.4.11, review supporting documentation for scheduling of hardware changes, including staff notifications.
	CP-2.4.11. Advance notification of hardware changes and related software changes is given to users so that service is not unexpectedly interrupted.	

Source: GAO.

Critical Element CP-3. Develop and document a comprehensive contingency plan

A contingency plan or suite of related plans should be developed for restoring critical applications; this includes arrangements for alternative processing facilities in case the usual facilities are significantly damaged or cannot be accessed. Agency/entity-level policies and procedures define the contingency planning process and documentation requirements. Furthermore, an entitywide plan should identify critical systems, applications, and any subordinate or related plans. It is important that these plans be clearly documented, communicated to affected staff, and updated to reflect current operations. Testing the plan is addressed in critical element CP-4. In addition, the plan should address entity systems maintained by a contractor or other entity (e.g., through service level agreements).

According to NIST, contingency planning represents a broad scope of activities designed to sustain and recover critical IT services following an emergency. IT contingency planning fits into a much broader emergency preparedness environment that includes organizational and business process continuity and recovery planning. Ultimately, an organization may use a suite of plans to properly prepare response, recovery, and continuity activities for disruptions affecting the organization's IT systems, business processes, and the facility. Because there is an inherent relationship between an IT system and the business process it supports, there

should be coordination between each plan during development and updates to ensure that recovery strategies and supporting resources neither negate each other nor duplicate efforts.

The NIST SP 800-34, *Contingency Planning Guide for Information Technology Systems*, discusses the types of contingency plans that an organization might use and how they relate to each other. Since there is no standard definition for these plans, they may vary from organization to organization. To provide a common basis of understanding for IT contingency planning, NIST developed the descriptions shown in the table below.

Table 35: Types of Contingency-Related Plans

Plan	Purpose	Scope
Business Continuity Plan (BCP)	Provide procedures for sustaining essential business operations while recovering from a significant disruption	Addresses business processes; IT addressed based only on its support for business process
Business Recovery (or Resumption) Plan (BRP)	Provide procedures for recovering business operations immediately following a disaster	Addresses business processes; not IT-focused; IT addressed based only on its support for business process
Continuity of Operations Plan (COOP)	Provide procedures and capabilities to sustain an organization's essential, strategic functions at an alternate site for up to 30 days	Addresses the subset of an organization's missions that are deemed most critical; usually written at headquarters level; not IT-focused
Continuity of Support Plan/IT Contingency Plan	Provide procedures and capabilities for recovering a major application or general support system	Same as IT contingency plan; addresses IT system disruptions; not business process focused
Crisis Communications Plan	Provides procedures for disseminating status reports to personnel and the public	Addresses communications with personnel and the public; not IT focused

Plan	Purpose	Scope
Cyber Incident Response Plan	Provide strategies to detect, respond to, and limit consequences of malicious cyber incident	Focuses on information security responses to incidents affecting systems and/or networks
Disaster Recovery Plan (DRP)	Provide detailed procedures to facilitate recovery of capabilities at an alternate site	Often IT-focused; limited to major disruptions with long-term effects
Occupant Emergency Plan (OEP)	Provide coordinated procedures for minimizing loss of life or injury and protecting property damage in response to a physical threat	Focuses on personnel and property particular to the specific facility; not business process or IT system functionality based

Source: NIST Contingency Planning Guide for Information Technology Systems (SP 800-34).

In addition, NIST addresses technical contingency planning considerations and solutions for specific information technology platforms: (1) desktop computers and portable systems, (2) servers, (3) Web sites, (4) local area networks, (5) wide area networks, (6) distributed systems, and (7) mainframe systems.

Note that incident handling can be considered that portion of contingency planning that responds to malicious technical threats. An incident response capability is addressed in critical element AC-5.1.

CP-3.1. An up-to-date contingency plan is documented

Contingency plans should be documented, agreed on by both users and information security departments, and communicated to affected staff. As noted above, FISMA requires that each federal agency develop, document, and implement an agencywide information security program that includes plans to ensure continuity of operations for information systems.

The plan should reflect the risks and operational priorities that the entity has identified. It should be designed so that the costs of contingency planning do not exceed the costs associated with the risks that the plan is intended to reduce. The plan should also be detailed enough so that its success does not depend on the

knowledge or expertise of one or two individuals. It should identify and provide information on

- supporting resources that will be needed;
- roles and responsibilities of those who will be involved in recovery activities;
- arrangements for an off-site disaster recovery location and travel and lodging for necessary personnel, if needed;
- off-site storage location for backup files; and
- procedures for restoring critical applications and their order in the restoration process. (See section CP-1.3 for additional information on emergency processing priorities.)

Multiple copies of the contingency plan should be available, with some stored at off-site locations to make sure they are not destroyed by the same events that made the primary data processing facilities unavailable.

CP-3.2. Arrangements have been made for alternate data processing, storage, and telecommunications facilities

Depending on the degree of service continuity needed, choices for alternative facilities will range from an equipped site ready for immediate backup service, referred to as a "hot site," to an unequipped site that will take some time to prepare for operations, referred to as a "cold site." In addition, various types of services can be prearranged with vendors. These include making arrangements with suppliers of computer hardware and telecommunications services as well as with suppliers of business forms and other office supplies.

As with all emergency preparations, costs and risks should be considered in deciding what type of alternate site is needed. However, it should be geographically removed from the original site so that it is protected from the same events. In addition, the site should have ready access to the basic utilities needed to resume operations, such as electricity, water, and telecommunications services. In some cases, two or more entities may share the same

alternate site in order to reduce the cost. However, this may cause problems if two or more entities need the site at the same time.

Whatever options are determined to be the most appropriate, the entity should have a formal agreement or contract detailing the emergency arrangements. Further, the arrangements should be periodically reviewed to determine whether they remain adequate to meet the entity's needs.

Control Techniques and Suggested Audit Procedures for Critical Element CP-3

Table 36. Control Techniques and Suggested Audit Procedures for Critical Element CP-3: Develop and document a comprehensive contingency plan

Control activities	Control techniques	Audit procedures
CP-3.1. An up-to-date contingency plan is documented.	CP-3.1.1. A contingency plan has been documented that • is based on clearly defined contingency planning policy; • reflects current conditions, including system interdependencies; • has been approved by key affected groups, including senior management, information security and data center management, and program managers; • clearly assigns responsibilities for recovery; • includes detailed instructions for restoring operations (both operating system and critical applications); • identifies the alternate processing facility and the back up storage facility; • includes procedures to follow when the data/service center is unable to receive or transmit data; • identifies critical data files; • is detailed enough to be understood by all entity managers; • includes computer and telecommunications hardware compatible with the entity's needs; • includes necessary contact numbers; • includes appropriate system-recovery instructions; • has been distributed to all appropriate personnel; and • has been coordinated with related plans and activities.	Review contingency planning policy and determine if it documents the entity's overall contingency objectives and establishes the organizational framework and responsibilities for contingency planning. Obtain contingency plans (see NIST SP 800-34) and compare their provisions with the most recent risk assessment and with a current description of automated operations. Compare the contingency plans to security-related plans, facility-level plans, and agency/entity-level plans such as those in NIST contingency planning guidance. Determine if the contingency plans include • appropriate consideration of the technology, including alternative processing requirements, • recovery of the security infrastructure, and • interdependencies with other systems (i.e., other component, federal, state, or local agencies) that could affect the contingency operations.

Control activities	Control techniques	Audit procedures
	CP-3.1.2. Contingency plans are reevaluated before proposed changes to the information system are approved to determine if major modifications have security ramifications that require operational changes in order to maintain adequate risk mitigation.	Interview senior management, information security management, and program managers.
	CP-3.1.3. Procedures allow facility access in support of restoration of lost information under the contingency plans in the event of an emergency.	Determine whether emergency and temporary access authorizations are properly approved, documented, controlled, communicated, and automatically terminated after a predetermined period. These procedures should be performed in conjunction with Section AC-3.1.8 and AC-6.1.8 regarding access controls.
	CP-3.1.4. The plan provides for backup personnel so that it can be implemented independent of specific individuals.	Review the contingency plan.
	CP-3.1.5. User departments have developed adequate manual/peripheral processing procedures for use until operations are restored.	Interview senior management, information security management, and program managers.
	CP-3.1.6. Several copies of the current contingency plan are securely stored off-site at different locations.	Observe copies of the contingency and related plans held off-site.
	CP-3.1.7. The contingency plan is periodically reassessed and revised as appropriate. At a minimum, the plan is reassessed when there are significant changes in the entity mission, organization, business processes, and IT infrastructures (e.g. hardware, software, personnel).	Review the plan and any documentation supporting recent plan reassessments.
CP-3.2. Arrangements have been made for alternate data processing, storage, and telecommunications facilities.	CP-3.2.1. Contracts or interentity agreements have been established for backup processing facilities that • are in a state of readiness commensurate with the risks of interrupted operations, • have sufficient processing and storage capacity, and • are likely to be available for use.	Interview officials and review contracts and agreements including processing priorities for the backup site. Determine if the back up site is properly configured and ready to be used as an operational site.
	CP-3.2.2. Alternate network and telecommunication services have been arranged.	Interview officials and review contracts and agreements including the priority of service provisions for the backup service provider. Determine if the backup service provides separate failure points and is geographically removed from the primary provider.
	CP-3.2.3. Arrangements are planned for travel, lodging, and protection of necessary personnel, if needed.	Interview officials and review the plan.

Source: GAO.

Critical Element CP-4. Periodically test the contingency plan and adjust it as appropriate

Testing contingency plans is essential to determining whether they will function as intended in an emergency situation. According to OMB, federal managers have reported that testing revealed

important weaknesses in their plans, such as backup facilities that could not adequately replicate critical operations as anticipated. Through the testing process, these plans were substantially improved.[106]

The most useful scenarios involve simulating a disaster situation to test overall service continuity. Such an event would include testing whether the alternative data processing site will function as intended and whether critical computer data and programs recovered from off-site storage are accessible and current. In executing the plan, managers will be able to identify weaknesses and make changes accordingly. Moreover, tests will assess how well employees have been trained to carry out their roles and responsibilities in a disaster situation.

CP-4.1. The plan is periodically tested

The frequency of contingency plan testing will vary depending on the criticality of the entity's operations. Generally, contingency plans for very critical functions should be fully tested about once every year or two, whenever significant changes to the plan have been made, or when significant turnover of key people has occurred. It is important for top management to assess the risks of contingency plan problems and develop and document a policy on the frequency and extent of such testing.

CP-4.2. Test results are analyzed and the contingency plan is adjusted accordingly

Contingency test results provide an important measure of the feasibility of the contingency plan. As such, they should be reported to top management so that the need for modification and additional testing can be determined and so that top management is aware of

[106] *Observations of Agency Computer Security Practices and Implementation of OMB Bulletin No.90-08: Guidance for Preparation of Security Plans for Federal Computer Systems that Contain Sensitive Information*, February 1993. OMB Bulletin 90-08 was superseded by NIST Special Publication (SP) 800-18, dated December 1998, *Guide for Developing Security Plans for Information Technology Systems.* [OMB Circular A-130, Appendix III, directs NIST to update and expand security planning guidance.]

the risks of continuing operations with an inadequate contingency plan.

Any testing of contingency plans is likely to identify weaknesses in the plan, and it is important that the plan and related supporting activities, such as training, be revised to address these weaknesses. Otherwise, the benefits of the testing will be mostly lost.

Control Techniques and Suggested Audit Procedures for Critical Element CP-4

CP-4 Related NIST SP 800-53 Controls
CP-4 Contingency Plan Testing
CP-5 Contingency Plan Update

Table 37. Control Techniques and Suggested Audit Procedures for Critical Element CP-4: Periodically test the contingency plan and adjust it as appropriate

Control activities	Control techniques	Audit procedures
CP-4.1. The plan is periodically tested.	CP-4.1.1. The contingency plan is periodically tested under conditions that simulate a disaster. Disaster scenarios tested may be rotated periodically. Typically, contingency plans are tested annually or as soon as possible after a significant change to the environment that would alter the assessed risk.	Review testing policies and methodology used to select disaster scenarios. Determine when and how often contingency plans are tested. Determine if technology is appropriately considered in periodic tests of the contingency plan and resulting adjustments to the plan. Review test results. Observe a disaster recovery test.
CP-4.2. Test results are analyzed and the contingency plan is adjusted accordingly.	CP-4.2.1. Test results are documented and a report, such as a lessons learned report, is developed and provided to senior management.	Review final test report. Interview senior managers to determine if they are aware of the test results.
	CP-4.2.2. The contingency plan and related agreements and preparations are adjusted to correct any deficiencies identified during testing.	Review any documentation supporting contingency plan adjustments.

Source: GAO.

Chapter 4. Evaluating and Testing Business Process Application Controls

4.0 Overview

Business processes are the principal functions used by the entity to accomplish its mission. Examples of typical business processes in government entities include:

- Mission-related processes, typically at the program or sub-program level, such as education, public health, law enforcement, or income security;
- Financial management processes, such as collections, disbursements, or payroll; and
- Other support processes, such as human resources, or property management, and security.

A business process application is a combination of hardware and software that is used to process business information in support of a specific business process.

Business process application level controls, commonly referred to as “application level controls” or “application controls”, are those controls over the completeness, accuracy, validity, confidentiality, and availability of transactions and data during application processing. The effectiveness of application level controls is dependent on the effectiveness of entitywide and system level general controls. Weaknesses in entitywide and system level general controls can result in unauthorized changes to business process applications and data that can circumvent or impair the effectiveness of application level controls.

If entitywide and system level controls are relevant to the audit objectives, the auditor should coordinate the planning and testing of such controls with application level controls. For example, if a data management system is a critical control point, the auditor would

coordinate the planning of testing of the entitywide, system, and application level controls associated with the data management system.

In this chapter, application level controls are divided into the following four control categories, which are described in more detail below:

(1) Application level general controls;

(2) Business Process controls;

(3) Interface controls; and

(4) Data Management System controls.

The auditor should assess the effectiveness of controls in each of the four control categories to the extent they are significant to the audit objectives.

Application level general controls (referred to herein as "application security" or AS)consist of general controls operating at the business process application level, including those related to security management, access controls, configuration management, segregation of duties, and contingency planning. In this chapter, the general control activities discussed in Chapter 3, as well as related suggested control techniques and audit procedures, are tailored to the business process application level.

Business Process (BP) controls are the automated and/or manual controls applied to business transaction flows. They relate to the completeness, accuracy, validity and confidentiality of transactions and data during application processing. They typically cover the structure, policies, and procedures that operate at a detailed business process (cycle or transaction) level and operate over individual transactions or activities across business processes. Specific control areas of business process controls are:

- **Transaction Data Input** relates to controls over data that enter the application (e.g., data validation and edit checks).

- **Transaction Data Processing** relates to controls over data integrity within the application (e.g., review of transaction processing logs).

- **Transaction Data Output** relates to controls over data output and distribution (e.g., output reconciliation and review).

- **Master Data Setup and Maintenance** relates to controls over master data, the key information that is relatively constant and shared between multiple functions or applications (e.g., vendor file).

Interface controls (IN) consist of those controls over the a) timely, accurate, and complete processing of information between applications and other feeder and receiving systems on an on-going basis, and b) complete and accurate migration of clean data during conversion.

Data management system (DA) controls are relevant to most business process applications because applications frequently utilize the features of a data management system to enter, store, retrieve or process information, including detailed, sensitive information such as financial transactions, customer names, and social security numbers. Data management systems include database management systems, specialized data transport/communications software (often called middleware), data warehouse software, and data extraction/reporting software. Data management system controls enforce user authentication/authorization, availability of system privileges, data access privileges, application processing hosted within the data management systems, and segregation of duties. Chapter 3 addresses general controls over data management systems as part of system level controls. This chapter discusses their use within the application level.

For each of the four application control categories, this chapter identifies several critical elements—tasks that are essential for establishing adequate controls within the category. For each critical element, there is a discussion of the associated objectives, risks, and control activities, as well as potential control techniques and

suggested audit procedures. For each critical element, the auditor should make a summary determination as to the effectiveness of the entity's related controls in achieving the critical element. If the controls for one or more of each category's critical elements are ineffective, then the controls for the entire category are not likely to be effective. The auditor should use professional judgment in making such determinations.

To facilitate the auditors' evaluation, tables identifying commonly used control techniques and related suggested audit procedures are included after the discussion of each critical element. These tables can be used for both the preliminary evaluation and the more detailed evaluation and testing of controls. For the preliminary evaluation, the auditor can use the tables to guide and document preliminary inquiries and observations. For the more detailed evaluation and testing, the auditor can use the suggested audit procedures in developing and carrying out a testing plan. Such a testing plan would include more extensive inquiries; observation of control procedures; inspection of application configurations, design documents, policies and written procedures; and tests of key control techniques, which may include using audit or system software auditing tools.

The discussion of control elements and control techniques apply to all application environments, which include mainframe, client-server, integrated enterprise resource planning (ERP)[107] and web environments. The nature of evidence obtained by the auditor will be different based on the environment. Auditors' knowledge of the business processes and application level security in different environments is, therefore, critical to identifying and testing business process application level controls.

As noted earlier, the effectiveness of application level controls is dependent on the effectiveness of entitywide and system level

[107]An enterprise resource planning (ERP) system is a commercial software package that integrates all the information flowing through the entity. ERP systems contain functional modules (e.g., financial, accounting, human resources, and supply chain and customer information) that are integrated within the core system or interfaced to external systems.

general controls. Weaknesses in entitywide and system level general controls can result in unauthorized changes to business process applications and data (confidentiality, integrity, and availability) that can circumvent or impair the effectiveness of business process application controls. More specifically,

- Weaknesses in security management can result in inadequate assessment of and response to information security risks related to the business process applications and the systems on which they depend, as well as significantly increase the risk that application level and other controls are not consistently applied in accordance with management's policies.

- Weaknesses in access controls can result in unauthorized access to and modifications of

    - applications, including the operation of the related controls,

    - application data, including after the control(s) were applied, and/or

    - system components, which can lead to unauthorized changes to data and applications.

- Weaknesses in configuration management can result in unauthorized modifications or additions to the applications and to system components, leading to unauthorized access to data and applications.

- Weaknesses in segregation of duties can result in unauthorized access to applications, application data, and/or system components. In addition, such weaknesses can allow fraudulent transactions and control overrides to occur.

- Weaknesses in contingency planning can result in unavailability of applications and/or loss of application data.

The following table illustrates the relationship between business process application level controls and general controls at the entitywide and system level.

Table 38. General and Application Control Categories Applicable at Different Levels of Audit

4.0.1 The Auditor's Consideration of Business Process Control Objectives

The overall objectives of business process application level controls are to provide reasonable assurance about the completeness, accuracy, validity and confidentiality of transactions and data during application processing. Each specific business process control technique is designed to achieve one or more of these objectives. The effectiveness of business process controls depends on whether all of these overall objectives are achieved. Each objective is described in more detail below.

Completeness (C) controls should provide reasonable assurance that all transactions that occurred are input into the system, accepted for processing, processed once and only once by the system, and properly included in output. Completeness controls include the following key elements:

- transactions are completely input,
- valid transactions are accepted by the system,
- duplicate postings are rejected by the system,
- rejected transactions are identified, corrected and re-processed; and
- all transactions accepted by the system are processed completely.

The most common completeness controls in applications are batch totals, sequence checking, matching, duplicate checking, reconciliations, control totals and exception reporting.

Accuracy (A) controls should provide reasonable assurance that transactions are properly recorded, with the correct amount/data, and on a timely basis (in the proper period); key data elements input for transactions are accurate; and data elements are processed accurately by applications that produce reliable results; and output is accurate.

Accuracy control techniques include programmed edit checks (e.g., validations, reasonableness checks, dependency checks, existence checks, format checks, mathematical accuracy, range checks, etc.), batch totals and check digit verification.

Validity (V) controls should provide reasonable assurance (1) that all recorded transactions actually occurred (are real), relate to the organization, and were properly approved in accordance with management's authorization; and (2) that output contains only valid data. A transaction is valid when it has been authorized (for example, buying from a particular supplier) and when the master data relating to that transaction is reliable (for example, the name, bank account and other details on that supplier). Validity includes the concept of authenticity. Examples of validity controls are one-for-one checking and matching.

Confidentiality (CF) controls should provide reasonable assurance that application data and reports and other output are protected against unauthorized access. Examples of confidentiality controls include restricted physical and logical access to sensitive business process applications, data files, transactions, and output, and adequate segregation of duties. Confidentiality also includes restricted access to data reporting/extraction tools as well as copies or extractions of data files.

Availability controls should provide reasonable assurance that application data and reports and other relevant business information are readily available to users when needed. These controls are principally addressed in application security controls (especially contingency planning) and therefore, are not included as specific business process controls.

The completeness, accuracy, and validity controls relate to the overall integrity objective. The availability objective is addressed as part of application level general controls in AS-5.

4.0.2 Steps in Assessing Business Process Application Level Controls

The assessment of business process application level controls is incorporated into the audit approach discussed in Chapter 2. This

section provides supplemental implementation guidance with respect to planning the assessment of business process application level controls and should be applied in conjunction with Chapter 2. Consistent with Chapter 2, the assessment of business process application level controls includes the following steps:

- Plan the information system controls audit
- Perform information system controls audit tests
- Report audit results

4.0.3 Plan the Information System Controls Audit of Business Process Application Level Controls

Although planning continues throughout the audit, the objectives of the initial planning phase are to identify significant issues, assess risk, and design efficient and effective audit procedures. To accomplish this, the auditor performs the following steps, which are discussed in more detail in Chapter 2:

- Understand the overall audit objectives and related scope of the business process application control assessment
- Understand the entity's operations and key business processes
- Obtain a general understanding of the structure of the entity's networks
- Identify key areas of audit interest (files, applications, systems, locations)
- Assess information system risk on a preliminary basis
- Identify critical control points
- Obtain a preliminary understanding of business process application level controls
- Perform other audit planning procedures

The following discussion provides additional audit considerations as they apply to application level controls.

4.0.3.A Understand the overall audit objectives and related scope of the business process application control assessment

The auditor should obtain an understanding of the objectives of the application control assessment. The nature, timing and extent of the auditor's procedures to assess the effectiveness of application controls vary depending upon the audit objectives.

The audit objectives for an application control assessment could include:

- Assessment as part of a broad assessment of information system controls (including entitywide, system, and application level controls), either as part of a financial statement or performance audit, or as a standalone assessment;
- A comprehensive assessment of application level controls related to a specific application or applications, with or without an assessment of related entitywide and system level controls;
- An assessment of specific aspects of application level controls, such as:
    a. Evaluating the efficiency of business process applications;
    b. Assessing business process application level controls for applications under development;
    c. Assessing selected business application level control categories, such as business process controls or application level general controls;
    d. Assessing conversion of data to a new application; or
    e. Assessing access controls to assess whether access granted is appropriately identified, evaluated, and approved.

As noted in Chapter 2, if achieving the audit objectives does not require an overall conclusion on IS controls or relates only to certain components or a subset of controls, the auditor's assessment would not necessarily identify all significant IS control weaknesses that may exist. Consequently, if the audit objectives only relate to a subset of controls, such as only business process controls for a

specific application, the auditor should evaluate the potential limitations of the auditor's work on the auditor's report and the needs and expectations of users. The auditor may determine that, because the limitations are so significant, the auditor will (1) communicate the limitations to the management of the audited entity, those charged with governance, and/or those requesting the audit, and (2) clearly report such limitations on the conclusions in the audit report. For example, in reporting on an audit limited to business process controls within a business process application, the auditor may determine that it is appropriate to clearly report that the scope of the assessment was limited to those business process controls and that, consequently, additional information system control weaknesses may exist that could impact the effectiveness of IS controls related to the application and to the entity as a whole.

4.0.3.B Understand the entity's operations and key business processes

Understanding the entity's operations and business processes includes understanding how business process applications are used to support key business processes, as it tends to vary from entity to entity. The auditor should obtain and review documentation, such as design documents, blueprints, business process procedures, user manuals, etc., and inquire of knowledgeable personnel to obtain a general understanding of each significant business process application that is relevant to the audit objectives. This includes a detailed understanding of

- business rules (e.g. removing all transactions that fail edits or only selected ones based on established criteria),
- transaction flows (detailed study of the entity's internal controls over a particular category of events that identifies all key procedures and controls relating to the processing of transactions), and
- application and software module interaction (transactions leave one system for processing by another, e.g. payroll time card interfaces with pay rate file to determine salary information).

Obtaining this understanding is essential to assessing information system risk, understanding application controls, and developing relevant audit procedures.

The concept of materiality/significance, discussed in Chapter 2, can help the auditor determine which applications are significant, or key, to the audit objectives.

4.0.3.C Obtain a general understanding of the structure of the entity's networks

The auditor should obtain an understanding of the specific networks and systems that are used to support the key business process applications. Information obtained during this step is important to

(1) Assist in the identification of the critical control points (see Chapter 2) over which entitywide and system level controls need to be effective for the related application level controls to be effective. Based on the results of audit procedures, the auditor may modify the listing of critical control points, or identify additional critical control points. In the testing phase, the auditor assesses entitywide and system level controls (as outlined in Chapter 3) over each critical control point identified, unless not part of the objectives of the audit.

(2) Provide a foundation for understanding where application level general controls are applied. For example, application level general controls may be applied as part of the application itself, through access control software, data management systems, ERP systems, and/or in conjunction with operating system and network security. Obtaining such an understanding is important to identify those controls that are necessary to reasonably assure that unauthorized access to key applications and data files are prevented or detected.

4.0.3.D Identify key areas of audit interest (files, applications, systems, locations)

Based on the audit objectives and the auditor's understanding of the business processes and networks, the auditor should identify key areas of audit interest, including:

- key business process applications and where each key business process application is processed,
- key data files used by each key business application, and
- relevant general controls at the entitywide and system levels, upon which application level controls depend.

Chapter 2 provides additional information on identifying key areas of audit interest.

4.0.3.E Assess information system risk on a preliminary basis

Based on the auditor's understanding obtained in the previous steps, the auditor should assess, on a preliminary basis, the nature and extent of IS risk related to the key applications. The auditor may classify security risks according to the definitions explained in Chapter 2.

Chapter 2 provides a description of risk factors that are relevant to an assessment of IS risk, including nature of the hardware and software used, the configuration of the network, and the entity's IT strategy. The auditor should evaluate such risk factors in relation to the specific key business process applications. For example, Internet accessible applications, and applications that provide access to assets, such as payment or inventory systems, generally present a higher degree of risk.

4.0.3.F Identify critical control points

As discussed in Chapter 2, the auditor should identify and document critical control points in the entity's information systems and key applications, based on the auditor's understanding of such systems and applications, key areas of audit interest, and IS risk. Based on information obtained during audit planning, the auditor identifies critical control points related to the entity's key applications (applications that are significant to the audit objectives and key areas of audit interest). Critical control points at the application level (in addition to critical control points at the system levels) are those points, which if compromised, could significantly affect the integrity, confidentiality, or availability of key business process applications or related data. Critical control points at the business process application level typically include application level general

controls, and interface controls among several applications. Typical critical control points also include network components where business process application level controls are applied. As the audit testing proceeds and the auditor gains a better understanding of the applications, application functionality, controls within and outside each application, control weaknesses, and related risks, the auditor should reassess and reconsider the critical control points.

4.0.3.G Obtain a preliminary understanding of application controls

Within each key business process application, the auditor should obtain an understanding of the particular types of application level controls that are significant to the audit objectives. If the audit objectives relate to a comprehensive assessment of the effectiveness of application controls within one or more applications, the auditor should obtain an understanding of controls implemented by the entity to achieve each of the critical elements for each key application. If the assessment of application controls is performed in connection with a financial audit, the auditor should assess the effectiveness of those controls that are identified by the financial auditor (controls identified in the Specific Control Evaluation (SCE) Worksheet in federal financial audits) and other related controls upon which the effectiveness of these controls depend. The responsibility to identify financial reporting controls rests primarily with the financial auditor, but the information systems auditor should be consulted in this process. Financial reporting controls generally include both IS controls and non-IS controls. The SCE Worksheet is more fully discussed in section 395 H of the Financial Audit Manual (FAM).

The auditor should obtain a preliminary understanding of business process application controls in each of the following control categories to the extent they are significant to the audit objectives:

- Application level general controls;
- Business Process;
- Interface controls; and
- Data management systems.

Frequently each type of control occurs within a business process and such controls are interdependent. The auditor should consider the interaction between each of these types of controls. For example, interface and data management controls are inter linked since many of the feeder systems reside on some type of data management system whose controls must be effective to ensure the integrity of the data it maintains, including social security numbers, vendor names, and other sensitive information. Further, interface and business process controls are linked in that controls should be established that ensure the timely, accurate and complete processing of information between the feeder and receiving systems and the mainline business processes they support.

To document the auditor's understanding, the auditor may complete the control tables in Appendices II and III on a preliminary basis. The auditor generally should review available application documentation that explains processing of data within the application. The auditor generally should inspect any narratives, flowcharts, and documentation related to system and application, including error reporting.

As part of this step, the auditor should determine whether application level controls are effectively designed. In considering whether controls are effectively designed, the auditor considers the type of control. The effectiveness of business process application controls, and the nature, timing, and extent of assessment procedures, depend on the nature of the control.

As discussed in Chapter 1, information system (IS) controls consist of those internal controls that are dependent on information systems processing and include general controls (entitywide, system, and business process application levels), business process application controls (input, processing, output, master file, interface, and data management system controls), and user controls (controls performed by people interacting with information systems). General and business process application controls are always IS controls. A user control is an IS control if its effectiveness depends on information systems processing or the reliability (accuracy, completeness, and validity) of information processed by information systems. Conversely, a user control is not an IS control if its effectiveness does not depend on information systems

processing or the reliability of information processed by information systems.

Application controls can be automated or manual (sometimes referred to as user controls). The auditor will find that most business processes will have a combination of automated and manual controls that balance resource requirements and risk mitigation. Also, management may use manual controls as effective monitoring controls. It is important to understand how these types of controls inter-relate when assessing application controls. The auditor should evaluate the adequacy of controls, both automated and manual, to determine whether or not management has appropriately mitigated risks and achieved its control objectives.

Automated business process controls can provide a higher level of consistency in application, and can also be timelier in preventing an undesired outcome. Automated controls have greater consistency because once designed and implemented, they will continue to operate as designed, assuming the presence of effective general controls (at all levels). Automated controls can also be designed to block a transaction from proceeding through the process, making them timelier in preventing an undesired outcome. For example, a vendor invoice can be blocked for payment automatically if the goods or services are not received or if the payment exceeds a specific threshold and requires additional review and approval. Manual controls, such as the review of reports or payments over a certain amount, could effectively detect an invoice payment without goods receipt, or a high-dollar payment, but may not occur in time to stop the payment.

The operating effectiveness of an automated application control during the audit period also depends on the operating effectiveness of related general controls (at the entitywide, system and applications levels). For example, effective general controls are necessary to prevent or detect management overrides or other unauthorized changes to computer applications or data that could preclude or impair the operation of the automated control.

Automated controls can be further subdivided into

- **Inherent Controls** are those that have been hard coded and built into the application logic and cannot be changed by end users. The self-balancing capability provided by some applications is an example of an inherent control (e.g., in a financial application, the transaction will not post until debits = credits.

- **Configurable Controls** are those that have been designed into the system during application implementation and address the features most commonly associated with options available to guide end users through their assigned tasks. Workflow to approve purchase requisition and purchase orders, commitments not to exceed obligations, and dollar value threshold to process transactions are examples of configurable controls.

ERP systems by design are Extensible Business Reporting Language (XBRL) compliant, which means that they can be configured to prepare reports based upon standard rules or “taxonomies.” The auditor should understand the nature and extent of any XBRL use and evaluate the controls surrounding such reporting processes.

Automated controls cannot contemplate and reasonably forecast the outcome of every type of uncertainty, nor can it prevent or detect every possible error or intentional misuse of application functionality. For example, well-designed segregation of duty controls could be compromised by collusion. Manual controls, therefore, may be used either in situations where ideal controls, such as complete segregation of duties, can't be implemented to prevent something from occurring, or when manual controls offer an effective, cost-effective control option.

Manual controls require human involvement, usually by way of approval of a critical step in a business process (example: signed purchase requisition) or reviewing for exceptions and compliance by reviewing system output. Generally, the auditor considers and tests manual controls along with automated controls. Testing only one type of application control may lead to incorrect assessment of key controls management may be relying on.

When the effectiveness of a manual control that is significant to the audit objectives depends on the reliability of computer-processed information, it is considered an IS control and, the auditor should assess the effectiveness of relevant general (at the entitywide, system, and application levels) and business process application, controls over the reliability of the information used. Also, the effectiveness of manual controls is dependent on how consistently and effectively the control is applied. The auditor considers the following when reviewing manual controls:

- The competence of the individuals performing control activities (reviewing the reports or other documents). They should have an adequate level of business knowledge and technical expertise and be familiar with the entity's operations.
- The authority of the individuals performing the reviews to take corrective action. They should be adequately positioned within the entity to act effectively.
- The objectivity of the individuals performing the reviews. The individuals should be independent of those who perform the work, both functionally (that is, there should be adequate segregation of duties) and motivationally (for example, a review would be less effective if the reviewer's compensation is based on operating results being reviewed).
- The nature and quality of the information reviewed by management.
- The frequency and timeliness of performance of reviews.
- The extent of follow-up performed by management.
- The extent to which controls can be tested (i.e., the auditor's ability to corroborate management's responses to inquiries).

In addition to automated and manual controls performed prior to or during transaction processing, monitoring controls may be applied by management after the processing has taken place. Their objective is to identify any errors that have not been prevented or detected by other controls. Examples of monitoring controls include:

- Review of a report of revenue with overall knowledge of the volume of goods shipped.

- Monitoring of capital expenditures via a quarterly report that analyzes expenditures by department with comparisons to budgeted levels.
- Monitoring of budget versus actual program cost.

4.0.3.H Perform other audit planning procedures

As discussed in more detail in Chapter 2, the auditor should address the following issues during the planning phase that could affect the application control audit:

- relevant laws and regulations
- staffing and other resources needed to perform the audit
- multi-year planning
- communication to management officials concerning the planning and performance of the audit, and to others as applicable;
- use of service organizations;
- using the work of others; and
- preparation of an audit plan.

4.0.4 Perform Information System Controls Audit Tests of Business Process Application Level Controls

The auditor's assessment of application controls has two main aspects: testing the effectiveness of controls, and evaluating the results of testing. The process of testing and evaluation are planned and scoped during the planning phase, as discussed in Chapter 2. As the auditor obtains additional information during control testing, the auditor should periodically reassess the audit plan and consider whether changes are appropriate.

The auditor should perform the following procedures as part of testing and evaluating the effectiveness of application level controls:

- Understand information systems relevant to the audit objectives, building on identification of key areas of audit interest and critical control points.
- Determine which IS control techniques are relevant to the audit objectives. The control categories, critical elements, and control activities in Chapters 3 and 4 are generally relevant to all audits.

However, if the auditor is not performing a comprehensive audit, for example, an application review, then there may be no need to assess controls in Chapter 3.

- For each relevant IS control technique, determine whether it is suitably designed to achieve the critical activity and has been implemented — placed in operation (if not done earlier);
- Perform tests to determine whether such control techniques are operating effectively;
- Identify potential weaknesses in IS controls (weaknesses in design or operating effectiveness); and
- For each potential weakness, consider the impact of compensating controls or other factors that mitigate or reduce the risks related to the potential weakness.

The auditor considers the following in designing the tests of application level controls:

- The nature of the control;
- The significance of the control in achieving the control objective(s);
- The risk of the control not being properly applied. [also see FAM 340];
- All of the key controls that management is relying on to address the risks for a specific business process or a sub-process, which may include automated and manual controls;
- The key controls outside the application under audit, as the business process may involve other applications for a downstream or upstream sub-process; and
- The strength or weakness of the entitywide and system level controls. The depth of the testing is based on the level of risk of the entity under review and the audit objectives. In the absence of effective general controls, the auditor may conclude that business process application level controls are not likely to be effective.

4.0.5 Report Audit Results

As a final step of the audit of application level controls, the auditor should conclude on the individual aggregate effect of identified application control weaknesses on the audit objectives and report the results of the audit. Such conclusions generally should include the effect of any weaknesses on the entity's ability to achieve each of the critical elements in Chapters 3 and 4, and on the risk of unauthorized access to key systems or files. The auditor's conclusions should be based upon the potential interdependencies of application controls (i.e., controls which effectiveness depends on the effectiveness of other controls).

Prior to developing an audit report, it is generally appropriate to communicate identified weaknesses to management to obtain their concurrence with the facts and to understand whether there are additional factors that are relevant to the auditor's evaluation of the effect of the weaknesses. Communication of identified weaknesses to management typically includes the following information:

- Nature and extent of risks
- Control Objectives
- Control Activity
- Findings (including condition, criteria, and where possible, cause and effect), and
- Recommendations

Chapter 2 provides additional guidance on reporting audit results.

4.1. Application Level General Controls (AS)

Application level general controls consist of general controls operating at the business process application level, including those related to security management, access controls, configuration management, segregation of duties, and contingency planning. In this chapter, the general control activities discussed in Chapter 3, as well as related suggested control techniques and audit procedures, are tailored to the application level. Understanding business processes or events is necessary to determine the role of application level general controls in the assessment of business process application controls.

Chapter 3 addresses controls at the entitywide and system levels, such as those related to networks, servers, general support systems and databases that support one or more business and financial systems. Additional security considerations specific to applications are discussed in this section.

Application level general controls are dependent on general controls operating at the entitywide and system levels. The application is generally a subset of the infrastructure that includes one or more operating systems, networks, portals, LDAPs, and data management systems. For example, the system level access controls discussed in Chapter 3 apply to the users of the application. In addition, applications themselves require another level of access requirements that restrict users to application functionality that aligns with the user's role in the organization. The objective of application level general controls is to help entity management assure the confidentiality, integrity, and availability of information assets, and provide reasonable assurance that application resources and data are protected against unauthorized:

– Modification,
– Disclosure,
– Loss, and
– Impairment

Weaknesses in application level general controls can result in unauthorized access, use, disclosure, disruption, modification, or destruction of applications and application data. Consequently, weaknesses in application level general controls can affect the achievement of all of the control objectives (completeness, accuracy, validity, and confidentiality) related to applications data. Therefore, the control activities in the control tables for application level general controls do not contain reference to specific control objectives.

The evaluation of application level general controls is comprised of critical elements in the following areas: Security Management, Access Control, Configuration Management, Segregation of Duties and Contingency Planning. Application-specific technical knowledge is essential to assess the application level general controls.

The critical elements for application level general controls are:

- AS-1 - Implement effective application security management
- AS-2 - Implement effective application access controls
- AS-3 - Implement effective application configuration management
- AS-4 - Segregate application user access to conflicting transactions and activities and monitor segregation
- AS-5 - Implement effective application contingency planning

The related NIST SP 800-53 controls are identified in Chapter 3.

Critical Element AS-1. Implement effective application security management.

Effective application security management provides a foundation for entity management to obtain reasonable assurance that the application is effectively secure. Application security management provides a framework for managing risk, developing security policies, assigning responsibilities, and monitoring the adequacy of the entity's application-related controls. Without effective security management over the application, there is an increased risk that entity management, IT staff, and application owners and users will not properly assess risk and will, consequently, implement

inappropriate and/or inadequate information security over the application. Effective application security management controls, consistent with Section 3.1, Security Management (SM), include the following steps:

- Establish an application security plan
- Periodically assess and validate application security risks
- Document and implement application security policies and procedures
- Implement effective security awareness and other security-related personnel policies
- Monitor the effectiveness of the security program
- Effectively remediate information security weaknesses
- Ensure that activities performed by external third parties are adequately secure

Establish an application security plan

An application security plan serves as a roadmap during the entire security development and maintenance lifecycle of the application, and is therefore critical to the auditor in gaining a high-level understanding of the entity's application security. The lack of a comprehensive, documented security design increases the risk of inappropriate system access and compromised data confidentiality, integrity, and availability. Risks of not having a security program at the application level include the following:

- The process to gather design requirements may be compromised without clear guidelines on approval and sign off procedures for security roles.
- Ongoing requirements for business process owners to provide authorization specifications to the security design team (e.g., field-level security, role testing, etc.) may be compromised without a guideline to drive the joint-effort process.
- Security roles could be defined inappropriately resulting in users being granted excessive or unauthorized access.

For federal systems, NIST Special Publication 800-18, *Guide for Developing Security Plans for Federal Information Systems*, provides guidance on documenting information system security

controls. The general guidance in SP 800-18 is augmented by SP 800-53 with recommendations for information and rationale to be included in the system security plan.

Periodically assess and validate application security risks

Chapter 3 (SM-2) discusses comprehensive risk assessment, and provides guidance on risk assessment. The guidance includes requirements contained in various laws, such as FISMA and FMFIA, OMB Circular A-130, and standards developed by NIST[108]. Risk assessments should consider risks to data confidentiality, integrity, and availability, and the range of risks that an entity's systems and data may be subject to, including those posed by internal and external users. The Security Management section of Chapter 3 addresses the entitywide and system level security risk assessments. Risk assessments also should be conducted for applications, and documented in the security plan, as discussed in NIST SP 800-18. In assessing business processing controls, the auditor should consider management's own assessment of risks to know the risks identified by them and the extent to which each have been mitigated.

Document and implement application security policies and procedures

Based on the application security plan, the entity should document and implement specific policies and procedures that govern the operation of application controls. Policies and procedures should address all business process application level controls, be documented and reflect current application configurations.

In defining policies and procedures for application controls, the following should also be considered:

- High risk business processes – Procurement, Asset Management, Treasury, etc.
- Functionality that should not be widely distributed - For example, limiting vendor master data maintenance to a few

[108]In addition, agency-specific requirements should be addressed.

users is critical to ensure master data integrity and reliable transaction processing.

- Segregating master data and transactional data (Contrary to master data, transactional data result from a single event, and often use several field values of the master data.) – For example, combining vendor creation and payment authorization could result in payments to unauthorized vendors.
- Cross-business unit access - Should be limited to users who have a specific business need.

Implement effective security awareness and other security-related personnel policies

It is important that application owners and users are aware of and understand the application security policies and procedures so that they may be properly implemented. Improper implementation could result in ineffective controls and increased information security risks. Awareness programs should be coordinated with the entitywide training program to reasonably assure that the training is appropriate and consistent for all applications.

In addition, entitywide security-related personnel policies and procedures (see critical element SM-6) should be properly implemented with respect to the application. For example, controls should be in place to reasonably assure that (1) application users are appropriately trained, and (2) risks related to confidentiality, integrity, and availability are considered in approving user access (e.g., security clearances) and in applying personnel policies.

Monitor the effectiveness of the security program

Policies and procedures for monitoring application security should be integrated with monitoring performed as part of the entitywide information security program. Changes related to people, processes, and technology, often make policies and procedures inadequate. Periodic management evaluation not only identifies the need to change the policies and procedures, when appropriate, but also demonstrates management's commitment to an application security plan that is appropriate to the entity's mission. The basic components of an effective monitoring program are discussed in

Chapter 3 (Critical element SM-5), which provides guidelines for monitoring the policies and procedures relevant to application security. Management should have an adequate plan for monitoring policy effectiveness, and should test and document application security controls on a regular basis.

Management should consider ways to effectively coordinate monitoring efforts with work performed to comply with applicable laws and regulations and should consider them in developing an application security monitoring assessment plan. Examples of such requirements for federal entities include: FISMA, OMB Circular A-130 and OMB Circular A-123. FISMA requires that security of all major systems is tested by management annually, which would include applications. The depth and breadth of the testing may vary based on the following factors:

- The potential risk and magnitude of harm to the application or data;
- The criticality of the application to the entity's mission;
- The relative comprehensiveness of the prior year's review; and
- The adequacy and successful implementation of corrective actions for weaknesses identified in previous assessments.

OMB Circular A-130 requires that Federal agencies assess and test the security of major applications at least once every 3 years, as part of the certification and accreditation (C&A) process; sooner if significant modifications have occurred or where the risk and magnitude of harm are high.

OMB Circular A-123 requires agencies and individual Federal managers to take systematic and proactive measures to (i) develop and implement appropriate, cost-effective internal control for results-oriented management; (ii) assess the adequacy of internal control in Federal programs and operations; (iii) separately assess and document internal control over financial reporting consistent with the process defined in Appendix A; (iv) identify needed improvements; (v) take corresponding corrective action; and (vi) report annually on internal control through management assurance statements. The implementation guidance for OMB Circular A-123 includes requirements that are wholly consistent with this manual.

The entity should take into consideration the statutory and regulatory requirements in its assessment of the effectiveness of application security policies and procedures, and testing of application security controls.

Management should:

- develop and document the assessment plan of application security policies and procedures;
- test and document application security controls specific to each application; and
- ensure that the frequency and scope of testing are commensurate with the criticality of the application to the entity's mission and risk.

Effectively remediate information security weaknesses

Management's commitment to application security is also demonstrated in having an effective mechanism to address weaknesses and deficiencies identified. When weaknesses or deficiencies are identified in application security, management should assess the risk associated with the weakness or deficiency, and develop a corrective action plan (for federal agencies. OMB refers to these as Plans of Actions and Milestones (POAMs)). The action plan should include testing requirements of corrective actions, milestones, monitoring of activities related to the action plan, modification to policies and procedures (if required) and implementation of the corrective action. Such action plans should be coordinated with the entitywide corrective action plan process.

Ensure that activities performed by external third parties are adequately secure

An entity may allow external third parties access to their systems for various purposes. Chapter 3 discussed policies and procedures regarding the system access granted to third party providers (e.g. service bureaus, contractors, system development, security management), including the requirement to have appropriate controls over outsourced software development. Third party provider access to applications often extends beyond the software development. It is likely that entities have vendors, business

partners and contractors not only querying the applications, but also transacting with the entity, using entity applications, or connecting to the entity's applications via their own systems. In addition, public web sites are sometimes used to transact with the entity.

The impact of an external third party provider accessing the entity's applications is directly related to the magnitude of the system or direct access the provider is granted. This is determined by the entity's agreement with the provider. The entity should, however, require the providers to be subject to the same compliance requirements as the entity, and have the ability to monitor such compliance. Appropriate policies and procedures should exist for monitoring third party performance to determine whether activities performed by these external third parties are compliant with the entity's policies, procedures, privacy requirements, agreements or contracts.[109] In addition, subsection (m) of the Privacy Act of 1974 provides that when an entity contracts for the operation of a system of records on behalf of the entity to accomplish an entity function, the entity must apply the Act's requirements to the contractor and its employees working on the contract.

[109]See GAO, Information Security: Improving Oversight of Access to Federal Systems and Data by Contractors Can Reduce Risk, (Washington, D.C.: April 2005).

Control Techniques and Suggested Audit Procedures for Critical Element AS-1

Table 39. Control Techniques and Suggested Audit Procedures for Critical Element AS-1: Implement effective application security management

Control activities	Control techniques	Audit procedures
AS-1.1 A comprehensive application security plan is in place.	AS-1.1.1 A comprehensive application security plan has been developed and documented. Topics covered include: • Application identification and description • Application risk level • Application owner • Person responsible for the security of the application • Application interconnections/information sharing • A description of all of the controls in place or planned, including how the controls are implemented or planned to be implemented and special considerations • Approach and procedures regarding security design and upgrade process • Process for developing security roles • General security administration policies, including ongoing security role maintenance and development • Identification of sensitive transactions in each functional module • Identification of high risk segregation of duty cases • Roles and responsibilities of the security organization supporting the system with consideration to segregation of duties • Security testing procedures • Coordination with entitywide security policies • Procedures for emergency access to the production system, including access to update programs in production, direct updates to the database, and modification of the system change option • System parameter settings, compliant with entitywide agency policies • Access control procedures regarding the use of system delivered critical user IDs	Inspect the application security plan to determine whether it adequately addresses all of the relevant topics.

Control activities	Control techniques	Audit procedures
	AS-1.1.2 Sensitive accounts are identified for each business process or sub-process, and appropriate security access privileges are defined and assigned.	Review the entity's identification of sensitive transactions for the business process being audited for appropriateness and completeness. Observe and inspect procedures for identifying and assigning sensitive activities. Inspect authorizations for sensitive activities.
	AS-1.1.3 Access privileges are developed to prevent users from executing incompatible transactions within the application via menus or screens.	Through inquiry and inspection, determine whether the application security plan includes plans to identify segregation of duty conflicts in each of the business processes under assessment (master data and transaction data; data entry and reconciliation), and addresses controls to mitigate risks of allowing segregation of duty conflicts in a user's role.
AS-1.2 Application security risk assessments and supporting activities are periodically performed	AS-1.2.1 Security risks are assessed for the applications and supporting systems on a periodic basis or whenever applications or supporting systems significantly change. The risk assessments and validation, and related management approvals, are documented and maintained.	Obtain the most recent security risk assessment for each application under assessment. Inspect the risk assessments to determine if the risk assessments are up-to-date, appropriately documented, approved by management, and supported by testing. Consider compliance with OMB, NIST, and other requirements/ guidance and whether technology and business processes are appropriately considered in the risk assessment.
	The risk assessments are appropriately incorporated into the application security plan.	Obtain and inspect the relevant application security plan(s) to determine whether the risk assessments are appropriately incorporated into the application security plan.
AS-1.3 Policies and procedures are established to control and periodically assess the application.	AS-1.3.1 Business process owners accept risks and approve the policies and procedures.	Determine through interview with entity management whether policies and procedures have been established to review access to the application.
	AS-1.3.2 Policies and Procedures: • are documented, • appropriately consider business process security needs, and • appropriately consider segregation of application user activity from the system administrator activity.	Review policies and procedures to determine whether they have appropriately considered (1) business security needs and (2) segregation of application user activity from system administrator activity.

Control activities	Control techniques	Audit procedures
AS 1.4 Application owners and users are aware of application security policies	AS-1.4.1 The entity has an effective process to communicate application security policies to application owners and users and reasonably assure that they have an appropriate awareness of such policies.	Obtain an understanding of how application owners and users are made aware of application security policies and assess the adequacy of the process. Interview selected application owners and users concerning their awareness of application security policies.
	AS-1.4.2 Personnel policies related to the application appropriately address security and application owners and users have adequate training and experience.	Review personnel policies for appropriateness and consistency with entitywide policies. Assess the adequacy of training and expertise for application owners and users.
AS-1.5 Management monitors and periodically assesses the appropriateness of application security policies and procedures, and compliance with them.	AS-1.5.1 An application security policy and procedure test plan is developed and documented.	Inquire of management, and inspect testing policies and procedures.
	AS-1.5.2 Security controls related to each major application are tested at least annually.	Inspect the overall testing strategy, a selection of test plans and related testing results. Determine if the scope of testing complies with OMB Circular A-123 Revised (federal entities) and other appropriate guidance. Determine if C&A testing is performed that complies with OMB and NIST requirements.
	AS-1.5.3 The frequency and scope of testing is commensurate with the risk and criticality of the application to the entity's mission.	Based upon the application test plan, assess whether the frequency and scope of testing is appropriate, given the risk and critically of the application.
	AS-1.5.4 Compliance, and a report on the state of compliance, is part of the entity's security program.	Determine through inquiry and inspection if the application security plan is incorporated into the entity's security program.
AS-1.6 Management effectively remediates information security weaknesses.	AS-1.6.1 Management has a process in place to correct deficiencies.	Inquire of management and inspect security polices and procedures, including assessment and resolution plan.
	AS-1.6.2 Management initiates prompt action to correct deficiencies. Action plans and milestones are documented and complete.	Inspect recent FMFIA/A-123 and POA&M (or equivalent) reports for reasonableness of corrective actions (nature and timing). Determine whether application security control deficiencies (identified by the audit, by management testing, and by others) are included in the plans of action and milestones (or equivalent). and determine the status of corrective actions.

Control activities	Control techniques	Audit procedures
	AS-1.6.3 Deficiencies are analyzed by application (analysis may be extended to downstream, upstream, and other related applications), and appropriate corrective actions are applied.	Evaluate the scope and appropriateness of planned corrective actions through inquiry of management and inspection of evidence.
	AS-1.6.4 Corrective actions are tested after they have been implemented and monitored on a continuing basis.	Inspect documentation to determine if implemented corrective actions have been tested and monitored periodically.
AS-1.7 External third party provider activities are secure, documented, and monitored	AS-1.7.1 Policies and procedures concerning activities of third party providers are developed and include provisions for: • Application compliance with entity's security requirements, and • Monitoring of compliance with regulatory requirements	Inspect policies and procedures pertaining to external parties for the application under assessment. Inspect documentation to determine whether the external third party provider's need to access the application is appropriately defined and documented. Review contracts with third-party providers to determine compliance with the Privacy Act, where applicable.
	AS-1.7.2 A process is in place to monitor third party provider compliance to the entity's regulatory requirements	Inquire of management regarding procedures used to monitor third party providers. Inspect external reports (SAS 70) or other documentation supporting the results of compliance monitoring.

Source: GAO.

Critical Element AS-2. Implement effective application access controls

Effective application access controls should be implemented at the application level to provide reasonable assurance that only authorized personnel have access to the application and only for authorized purposes. Without effective application access controls, persons may obtain unauthorized or inappropriate access to applications and application data.

Effective application access controls, consistent with Section 3.2, Access Controls (AC), include the following steps:

- Adequately protect information system boundaries.
- Implement effective identification and authentication mechanisms.
- Implement effective authorization controls.

- Adequately protect sensitive system resources.
- Implement an effective audit and monitoring capability.
- Establish adequate physical security controls.

Adequately protect application boundaries

Application boundaries control logical connectivity to and from applications through controlled interfaces (e.g., gateways, routers, firewalls, encryption). In defining the application, the entity creates the boundaries for the application. Once defined, the entity should design appropriate controls over the flow of information across the application boundary. In complex applications, there may boundaries within the application. The security plan for the application should identify system boundaries and IS controls implemented to protect the security of such boundaries. Application boundaries are more sensitive where the connectivity is to lower risk systems or to systems or users external to the entity.

Implement effective identification and authentication mechanisms

The entity should have application security policies and procedures in place concerning user identification and authentication. Management should have created an environment where all users have their own unique IDs and passwords, or other mechanisms, such as tokens and biometrics to access any part of the information system and applications that allow them to execute functional responsibilities. Identification and authentication policy and management are discussed in Chapter 3, Critical Element AC-2. In addition, it is important to understand the mechanisms used to assign access privileges for applications under assessment. An evaluation of identification and authentication controls includes consideration of the following factors:

- How do the users access the application?

    a. Are users required to enter user name/ID and password?

    b. Do all users have an individual and unique ID that would allow the user's activities to be recorded and reviewed?

c. Are users required to enter/use other authenticating information, such as tokens or biometrics?

d. Are users required to enter a separate ID and password for each application?

e. Does the application require the user to enter a password?

f. What are the password parameters (i.e. length, character requirements, etc)?

g. How often does the application require the user to change the password?

h. Are there any instances of users having multiple IDs and passwords?

i. Are there any instances of users sharing IDs or passwords?

- What other IDs and passwords does the user have to enter before accessing the sign-in screen for the application?

    a. Does the user enter a network ID and password?

    b. Does the user enter a terminal emulation ID and password?

The knowledge of the application security design and function enables the auditor to assess the effectiveness of the security controls over the other levels of authentication, especially when weaknesses are identified at the application security layer, as those weaknesses may be mitigated by stronger controls at other levels.

Implement effective authorization controls

The following procedures discussed in Chapter 3 are equally applicable at the application level:

- The owner identifies the nature and extent of access that should be available for each user;
- The owner approves user access to the application and data;
- Access is permitted at the file, record, or field level; and
- Owners and security managers periodically monitor user access.

Security administration procedures should provide tactical guidance on the day-to-day operations of creating, assigning, monitoring, updating, and revoking end-user access to the application. End-users should be assigned authorizations sufficient, but not excessive, to perform their duties in the application: Access should be limited to individuals with a valid business purpose (least privilege). The users should be granted the level of access by virtue of the position they hold within the organization. This will generally require user to have both:

- Functional access (for example, accounts payable) based on the role from which their position derives; and
- Organizational access (for example, account payable supervisor) based on the specific needs of their position.

Sensitive transactions and segregation of duty conflicts defined by the process and data owners (discussed in AS-1) should be used as a baseline reference by security administration. In an integrated application environment, the importance of comprehensive identification of sensitive transactions and segregation of duty needs and conflicts is heightened, compared with entities having multiple applications for business processes. Entities lose the inherent segregation in integrated applications—since more of the process is performed in the same application, the opportunities for access throughout the process are greater. For example, in an entity with separate purchasing and accounts payable applications, adequate segregation of duties might be accomplished by only allowing access to one of the applications, whereas in an integrated application, these applications may be combined. Transaction-level restricted access, which is critical in integrated applications, may be less critical in non-integrated systems.

However, in an integrated environment, the entire business process cycle may be performed in the same application and a user may have the ability to perform more than one key activity in the cycle. Therefore, restricted access (access to a sensitive business transaction) and segregation of duty conflicts (access to two or more transactions that are sensitive in combination) should be considered carefully.

An integrated application environment also generally means that more business units of the entity are using the same application. Therefore, business unit access restrictions are also necessary. Management should have an adequate understanding of the business processes and determine whether users should have access to more than their individual business unit. For example, a property manager should not have access to change asset records or maintenance schedules for entities other than his/her own.

Sensitive transactions or activities in an application are determined by the nature and use of the data processed by the application. Factors that determine the sensitivity include the mission critical elements of the application, pervasive use of the data or activity, confidentiality and privacy of data, and activities performed or supported by the application.

The key element in assigning access to sensitive transactions or activities to an application user is the alignment of user access to job responsibility. This has a dual purpose: one, the proper alignment ensures that the user has accountability for proper execution of the transactions and accuracy of the related data, and two, the expertise and skills of the user match the business process underlying the transaction or activity. For example journal voucher entry is made by a General Accounting Account Analyst of Finance Department, and not by a Procurement manager.

Adequately protect sensitive application resources

Access to sensitive application resources should be restricted to individuals or processes that have a legitimate need for this access for the purposes of accomplishing a valid business purpose. Sensitive application resources include password files, access

authorizations to read or modify applications, and sensitive application functions such as application security administration. The entity should identify and adequately protect sensitive application resources. In some cases, sensitive data may need to be encrypted.

Implement an effective audit and monitoring capability

Audit and monitoring involves the regular collection, review, and analysis of indications of inappropriate or unauthorized access to the application. Automated controls may be used to identify and report such incidents. An understanding of manual control activities surrounding access to the application is important. The following questions can help the auditor gain insight into management's controls:

- Does management maintain and review a current list of authorized users?
- Does management periodically review the user list to ensure that only authorized individuals have access, and that the access provided to each user is appropriate?
- Does management monitor access within the application (i.e. unauthorized access attempts, unusual activity etc.)? Does the application generate reports to identify unauthorized access attempts? Are security logs created and reviewed?
- Is public access (non entity employees) permitted to the application? Is access permitted via the Internet? If so, how is this access controlled?
- Is the application configured to allow for segregation of duties? If so, does the application identify the users who performed activities that were in conflict? Are the transactions/logs reviewed by the business owners?
- Has a procedure been created and placed in operation that requires a complete user recertification on a periodic basis?

- Is the security administration monitored? When suspicious activities are identified, how does management investigate them?

Establish adequate physical security controls

Appropriate physical controls, integrated with related entitywide and system level physical security, should be in place to protect resources, where applicable, at the application level. Resources to be protected at the application level include controls over removable media (e.g., tape files), workstations containing sensitive application data, and physical inputs (e.g., check stock) and outputs (e.g., physical checks or other sensitive documents). The entity should identify application resources that are sensitive to physical access and implement adequate physical security over such resources.

Control Techniques and Suggested Audit Procedures for Critical Element AS-2

Table 40. Control Techniques and Suggested Audit Procedures for Critical Element AS-2: Implement effective application access controls

Control activities	Control techniques	Audit procedures
AS-2.1 Application boundaries are adequately protected.	AS-2.1.1 Application boundaries are identified in security plans. Application boundaries are adequately secure.	Review security plans for proper identification of application boundaries. Evaluate the effectiveness of controls over application boundaries.
AS-2.2 Application users are appropriately identified and authenticated.	AS-2.2 Identification and authentication is unique to each user. All approved users should enter their user ID (unique) and password (or other authentication) to gain access to the application.	Inspect pertinent policies and procedures, and NIST guidance for authenticating user IDs. Through inquiry, observation or inspection, determine the method of user authentication used (password, token, biometrics, etc.). If a password system is used, gain an understanding of the specific information and evaluate its appropriateness, including application security authentication parameters, via inspection of system reports or observation of the system, including appropriate testing. See AC-2 for more information on criteria for evaluating password policies.

Control activities	Control techniques	Audit procedures
AS-2.3 Security policies and procedures appropriately address ID and password management.	AS-2.3.1 The entity has formal procedures and processes for granting users access to the application. The entity's IT security policies and procedures contain guidance for: • Assigning passwords; • Changing and resetting passwords; and • Handling lost or compromised passwords	Through inquiry, observation, and inspection, understand and assess procedures used by the entity for application password management: • Procedures for initial password assignment, including the password parameters; • Procedures for password changes, including initial password change; • Procedures for handling lost passwords (password resetting); and • Procedures for handling password compromise.
	AS-2.3.2 The application locks the user's account after a pre-determined number of attempts to log-on with an invalid password. The application may automatically reset the user account after a specific time period (an hour or a day), or may require an administrator to reset the account. If the user is away from his/her workspace for a preset amount of time, or the user's session is inactive, the application automatically logs off the user's account.	After obtaining an understanding of the user authentication process, inspect and/or observe the following: • Whether access to the application is permitted only after the user enters their user ID and password. • Observe a user executing invalid logins and describe the actions taken. Either 1) inspect system security settings, or 2) observe an idle user workspace to determine whether the application logs the user off after an elapsed period of idle time.
	AS-2.3.3 Each application user has only one user ID.	Through observation and inspection, determine whether each user has one, and only one, user ID to access the application.
	AS-2.3.4 Multiple log-ons are controlled and monitored.	Through inquiry, observation or inspection, determine whether the application allows multiple log-ons by the same user. If so, understand and document monitoring procedures that reasonably assure that multiple log-ons are not used to allow application access to an unauthorized user, or to violate effective segregation of duties.
AS-2.4 Access to the application is restricted to authorized users.	AS-2.4.1 Before a user obtains a user account and password for the application, the user's level of access has been authorized by a manager and the application administrator.	Review policies and procedures. From a selection of user accounts determine whether the user level of access was authorized by appropriate entity management.

Control activities	Control techniques	Audit procedures
	AS-2.4.2 Owners periodically review access to ensure continued appropriateness.	Interview security administrators and inspect evidence of the effectiveness of periodic review of access by owners.
	AS-2.4.3 Access is limited to individuals with a valid business purpose (least privilege)	Interview owners and inspect documentation, to determine whether appropriate procedures are in place to remove or modify application access, as needed. Through inquiry, observation, and inspection, determine how an unauthorized user is identified, and whether access is removed promptly and how. Based on the selection of users in AS-2.4.1 above, determine whether the user access is appropriate to the business need. If the users did not execute the transaction or activity within the expected time frame, processes should be in place to evaluate the continued need for access, and modify access accordingly.
AS-2.5 Public access is controlled. (Based on an entity's business mission, the entity may allow the public to have access to the application.)	AS-2.5.1 The entity implements a security plan and process for 1) identification and authorization of users; 2) access controls for limited user privileges; 3) use of digital signatures; 4) prohibition of direct access by the public to production data; and 5) compliance with NIST guidance.	Obtain an understanding of the following controls through inquiry of the application owner, inspection of source documents, and/or observation of the following: • Identification and authentication; • Access controls for limiting user privileges(read, write, modify, delete); • Use of digital signatures; • Prohibition of direct access by the public to live databases and restricted/sensitive records; and Legal considerations (i.e., privacy laws, OMB, NIST, etc.).
AS-2.6 User access to sensitive transactions or activities is appropriately controlled.	AS-2.6.1 Owners have identified sensitive transactions or activities for the business process.	Inquire of responsible personnel and inspect pertinent policies and procedures covering segregation of application duties

Control activities	Control techniques	Audit procedures
	AS-2.6.2 Owners authorize users to have access to sensitive transactions or activities.	Determine whether the process owners have identified a list of sensitive transactions or activities for their area. Inspect the user administration procedures to determine whether they include a requirement for the process owner to approve access to transactions or activities in their area of responsibility. Through inquiry and inspection, determine whether user access is authorized by process owners.
	AS-2.6.3 Security Administrators review application user access authorizations for access to sensitive transactions and discuss any questionable authorizations with owners.	Select user access request forms or other authorization documents [can use selection from AS-2.4.1 and AS-2.4.3] and inspect them to determine whether the process owners have approved user access to appropriate transactions or activities. Interview security administrators and inspect user access authorization procedures to determine whether access to sensitive transactions require approval by the process owner.
	AS-2.6.4 Owners periodically review access to sensitive transactions and activities to ensure continued appropriateness.	Inspect evidence of periodic review by owners of access to sensitive transactions.
	AS-2.6.5 Inactive accounts and accounts for terminated individuals are disabled or removed in a timely manner.	Review security software parameters and review system-generated list of inactive logon IDs, and determine why access for these users has not been terminated. Obtain a list of recently terminated employees and, for a selection, determine whether system access was promptly terminated.

Control activities	Control techniques	Audit procedures
	AS-2.6.6 Access to sensitive transactions is limited to individuals with a valid business purpose (least privilege)	Interview owners and inspect documentation, to determine whether appropriate procedures are in place to remove or modify application access, as needed. Through inquiry, observations, and inspection, determine how an unauthorized user is identified, and whether access is removed promptly and how. Obtain a list of users with access to identified sensitive transactions for the business process under assessment. Inspect the list to determine whether the number of users having access to sensitive transactions/ activities is appropriate to the business need. If the users did not execute the transaction or activity within the expected time frame, processes should be in place to evaluate the continued need for access, and modify access accordingly.
AS-2.7 Sensitive application resources are adequately protected	AS-2.7.1 The entity identifies sensitive application resources. Access to sensitive application resources is restricted to appropriate users. Sensitive application data is encrypted, where appropriate.	Evaluate the completeness of sensitive application resources identified. Assess the adequacy of IS controls over sensitive application resources. Review implementation of encryption of sensitive application data, where appropriate.

Control activities	Control techniques	Audit procedures
AS-2.8 An effective access audit and monitoring program is in place, documented, and approved.	AS-2.8.1 Policies and procedures are established to reasonably assure that application security audit and monitoring is effective	Inspect documented policies and procedures for application security administration for each application in scope Determine whether the monitoring program has built-in procedures to identify inappropriate user assignments. Through inquiry and inspection, determine whether monitoring procedures are performed on a regular basis. Determine whether the exceptions are handled appropriately and in a timely manner.
AS- 2.9 Application security violations are identified in a timely manner.	AS-2.9.1 Logging and other parameters are appropriately set up to notify of security violations as they occur.	Observe and inspect application logging and other parameters that identify security violations and exceptions. (For example, parameter set up indicates whether or not users can logon to an application more than once)
AS-2.10 Exceptions and violations are properly analyzed and appropriate actions taken.	AS-2.10.1 Reportable exceptions and violations are identified and logged. Exception reports are generated and reviewed by security administration. If an exception occurs, specific action is taken based upon the nature of exception.	Observe and inspect management's monitoring of security violations, such as unauthorized user access. Inspect reports that identify security violations. Through inquiry and inspection, note management's action taken. Inspect reports of authorized segregation of duty conflicts sensitive process access; Assess business level authorization and monitoring, if applicable
AS-2.11 Physical security controls over application resources are adequate	AS-2.11.1 Physical controls are integrated with entitywide and system-level controls. Application resources sensitive to physical access are identified and appropriate physical security is placed over them.	Review the appropriateness of the entity's identification of application resources sensitive to physical access. Assess the adequacy of physical security over sensitive application resources.

Source: GAO.

Critical Element AS-3. Implement effective application configuration management

Entities need to proactively manage changes to system environments, application functionality and business processes to reasonably assure financial data and process integrity. To do this, entities should restrict and monitor access to program modifications and changes to configurable objects in the production environment. Configuration Management (CM) discusses changes to baseline configuration of applications, using the concepts of identification, control, status reporting and auditing of configuration. Most application configuration changes are managed using a staging process. The staging process allows the entity to develop and unit test changes to an application within the development environment, transport the changes into a Quality Assurance environment for further system and user acceptance testing and, when the tests have been completed and the changes are approved, transport the changes into the production environment. Also, see Section CM for general controls related to configuration management.

Control over business process applications modifications and configurable objects is an extension of Configuration Management controls in Chapter 3 that addresses an organization's change management process and should be coordinated with audit procedures applied to that general control category. This chapter includes changes to application functionality that do not go through the staging process, but take place directly in the production environment of the application as changes become necessary throughout the normal course of business.

Managing change for business process applications that are accessible from the internet needs to be performed in a manner consistent with risk. Specific policies and procedures for application change controls when inbound or outbound internet access is involved should be established.

Effective application configuration management, consistent with Section 3.3 Configuration Management (CM), includes the following steps:

1. Develop and document CM policies, plans, and procedures.

2. Maintain current configuration identification information.

3. Properly authorize, test, approve, and track all configuration changes, including

- Documented system development life cycle methodology (SDLC);
- Adequate authorization of change requests that are documented and maintained;
- Appropriate authorization for the user to change the configuration;
- Adequate control of program changes through testing to final approval;
- Adequate control of software libraries; and
- Appropriate segregation of duties over the user's access to reasonably assure that critical program function integrity is not affected;

4. Routinely monitor the configuration.

5. Update systems in a timely manner to protect against known vulnerabilities.

6. Appropriately document, test, and approve emergency changes to the configuration.

In addition, NIST SP 800-100 provides guidance in assessing related configuration management programmatic areas of capital planning and investment control, and security services and product acquisition. This publication discusses practices designed to help security management identify funding needs to secure systems and provide strategies for obtaining the necessary funding. Also, it provides guidance to entities in applying risk management principles to assist in the identification and mitigation of risks associated with security services acquisitions.

Control Techniques and suggested audit procedures for AS-3

Table 41. Control Techniques and suggested audit procedures for AS-3. Implement Effective Application Configuration Management

Control activities	Control techniques	Audit procedures
AS-3.1 Policies and procedures are designed to reasonably assure that changes to application functionality in production are authorized and appropriate, and unauthorized changes are detected and reported promptly.	AS-3.1.1 Appropriate policies and procedures are established for application configuration management.	Inspect documented policies and procedures related to application change control procedures. Through inquiry and inspection, identify key transactions that provide user access to change application functionality. Inspect transaction reports of changes made to the application. From a selection of changes, inspect documentation of the changes made, including the validity, reasons, authorization, and the user authority. Note the handling of exceptions.
AS-3.2 Current configuration information is maintained.	AS-3.2.1 The entity maintains information on the current configuration of the application.	Review the entity's configuration management information.
AS-3.3 A system development life cycle methodology has been implemented.	AS-3.3.1 A SDLC methodology has been developed that • provides a structured approach consistent with generally accepted concepts and practices, including active user involvement throughout the process, • is sufficiently documented to provide guidance to staff with varying levels of skill and experience, • provides a means of controlling changes in requirements that occur over the system life, and • includes documentation requirements.	Review SDLC methodology. Review system documentation to verify that SDLC methodology was followed.
AS-3.4 Authorizations for changes are documented and maintained.	AS-3.4.1 change request forms are used to document requests and related projects.	Identify recent software modification and determine whether change request forms were used.
	AS-3.4.2 Change requests must be approved by both system users and IT staff.	Examine a selection of software change request forms for approval.
AS-3.5 Changes are controlled as programs progress through testing to final approval.	AS-3.5.1 Test plan standards have been developed for all levels of testing that define responsibilities for each party (e.g., users, system analysis, programmers, auditors, quality assurance, library control).	Perform the following procedures to determine whether control techniques AS-3.5.1 through AS-3.5.9 are achieved. Review test plan standards. Examine a selection of recent software changes and • review specifications; • trace changes from code to design specifications;

Control activities	Control techniques	Audit procedures
	AS-3.5.2 Detailed system specifications are prepared by the programmer and reviewed by a programming supervisor.	• review test plans; • compare test documentation with related test plans; • analyze test failures to determine if they indicate ineffective software testing; • review test transactions and data; • review test results; • verify user acceptance; and • review updated documentation. Determine whether operational systems experience a high number of abends and if so, whether they indicate inadequate testing prior to implementation.
	AS-3.5.3 Software changes are documented so that hey can be traced from authorization to the final approved code.	
	AS-3.5.4 Test plans are documented and approved that define responsibilities for each party involved.	
	AS-3.5.5 Unit, integration, and system testing are performed and approved • in accordance with the test plan and • applying a sufficient range of valid and invalid conditions.	
	AS-3.5.6 A comprehensive set of test transactions and data is developed that represents the various activities and conditions that will be encountered in processing.	
	AS-3.5.7 Test results are reviewed and documented.	
	AS-3.5.8 Program changes are moved into production only upon documented approval from users and system development management.	
	AS-3.5.9 Documentation is updated when a new or modified system is implemented.	
AS-3.6 Access to program libraries is restricted.	AS-3.6.1 Separate libraries are maintained for program development and maintenance, testing, and production programs.	Examine libraries to determine whether separate libraries are used for development and maintenance, testing, and production.
	AS-3.6.2 Source code is maintained in a separate library.	Verify source code exists for a selection of production code modules by (1) comparing compile dates, (2) recompiling the source modules, and (3) comparing the resulting module size to production load module size.
	AS-3.6.3 Access to all programs, including production code, source code, and extra program copies are protected by access control software and operating system features.	For critical software production programs, determine whether access control software rules are clearly defined. Test access to program libraries by examining security system parameters.

Control activities	Control techniques	Audit procedures
AS-3.7 Movement of programs and data among libraries is controlled.	AS-3.7.1 A group independent of the user and programmers control movement of programs and data among libraries. Before and after images of program code are maintained and compared to ensure that only approved changes are made.	Review pertinent policies and procedures. For a selection of program changes, examine related documentation to verify that • procedures for authorizing movement among libraries were followed, and • before and after images were compared.
AS-3.8 Access to application activities/ transactions is controlled via user roles (access privileges).	AS-3.8.1 User accounts are assigned to a role in the application. Roles are designed and approved by management to provide appropriate access and prevent an unauthorized user from executing critical transactions in production that change application functionality.	Inspect system reports and identify users who have access to configuration transactions. For a selection of users identified above, inspect user authorization forms to determine whether the user's access was authorized.
AS-3.9 Access to all application programs/codes and tables are controlled.	AS-3.9.1 Changes to application programs, codes and tables are either restricted or denied in the production environment. All changes are made using the approved change control process. User access to the application programs, codes, and tables is provided only for emergency user IDs.	Through inquiry and inspection, identify key programs and tables for the application. Inspect system reports of users with access to the key programs, codes and tables. Select users that have access to the identified programs and tables. Inspect documentation supporting how the access was provided. Note exceptions.

Control activities	Control techniques	Audit procedures
AS-3.10 Access to administration (system) transactions that provide access to table maintenance and program execution is limited to key users.	AS-3.10.1 Security design includes consideration for sensitive administration (system) transactions and restricted user access to these transactions.	Inspect policies and procedures regarding restricted access to system administration transactions. Through inquiry and inspection, identify the system administration transactions. Inspect system reports of user access to these transactions. Select users with administration access and inspect documentation to determine whether access was authorized. Select system administration transactions executed by the system users and inspect resulting changes to the system elements, such as the program code or table. Inspect critical or privileged IDs (e.g., fire call ID) to determine if activity is logged.
AS-3.11 Access and changes to programs and data are monitored.	AS-3.11.1 Procedures are established to reasonably assure that key program and table changes are monitored by a responsible individual who does not have the change authority. The procedures provide the details of reports/logs to run, specific valuation criteria and frequency of the assessment.	Inspect documented procedures related to monitoring change control. Select reports or logs that are reviewed, and inspect to note evidence of monitoring compliance.
AS-3.12 Changes are assessed periodically.	AS-3.12.1 Periodic assessment of compliance with change management process, and changes to configurable objects and programs.	Inspect evidence of documented assessments performed. Determine who performed the assessment and note the exception handling procedures.
AS-3.13 Applications are updated on a timely manner to protect against known vulnerabilities.	AS-3.13.1 The entity follows an effective process to identify vulnerabilities in applications and update them.	Determine whether vendor supplied updates have been implemented. Assess management’s process for identifying vulnerabilities and updating applications.
AS-3.14 Emergency application changes are properly documented, tested, and approved.	AS-3.14.1 The entity follows an effective process to properly document, test, and approve emergency changes.	Inspect evidence of proper documentation, testing, and approval of emergency changes.

Source: GAO.

Critical Element AS-4. Segregate user access to conflicting transactions and activities and monitor segregation

Effective segregation of duties is designed to prevent the possibility that a single person could be responsible for diverse and critical functions in such a way that errors or misappropriations could occur and not be detected in a timely manner, in the normal course of business processes. Although segregation of duties alone will not adequately assure that only authorized activities occur, inadequate segregation of duties increases the risk that erroneous or fraudulent transactions could be processed, improper program changes implemented, and computer resources damaged or destroyed. As discussed in AS-1, the security plan should address the organization-wide policy on segregation of duties (segregation of duty) and management should organize the user departments to achieve adequate segregation of duties. As part of this process, most organizations adopt segregation of duties control matrices as a guideline of the job responsibilities that should not be combined. It is important for the auditor to assess the relationship among various job functions, responsibilities and authorities in assessing adequate segregation of duties. The auditor starts this assessment with the review of the control matrices defined by management. Several automated tools are available to dynamically manage segregation of duty conflicts within an application. Appropriate business rules are critical to the effective implementation of these tools.

Entity management should consider the organization structure and roles in determining the appropriate controls for the relevant environment. For example, an organization may not have all the positions described in the segregation of duties matrix, or one person may be responsible for more than one of the roles described. Based on the organizational resource limitation and risk management, certain levels of segregation of duty conflicts may be allowed by management for a select role or users. If so, management should have appropriate compensating controls in place to mitigate the risks of allowing the conflicts.

Appropriate segregation of duties often presents difficulties in smaller organizations. Even entities or locations that have only a few employees, however, can usually divide their responsibilities to

achieve the necessary checks and balances. More often than not, the auditor will encounter situations where a few to substantial number of users may have access to activities with segregation of duty conflicts. Management generally mitigates the risks of allowing the segregation of duty conflicts by adding compensatory controls, such as approval of transactions before they are entered in the application or review of the posted transactions or reports as direct oversight and close monitoring of the incompatible activities. Typically, a combination of access and monitoring controls is necessary for design and operational effectiveness.

Compensating controls are internal controls that are intended to reduce the risk of an existing or potential control weakness when duties cannot be appropriately segregated. Compensating controls for segregation of duties conflicts generally include additional monitoring and supervision of the activities performed by the individual possessing conflicting responsibilities, and may include an additional level of required approval. The segregation of duty conflicts are mitigated to reduce or eliminate business risks through the identification of compensating controls.

Effective segregation of duties, consistent with Section 3.4, Segregation of Duties (SD), includes the following steps:

- Segregate user access to conflicting transactions and activities
- Monitor user access to conflicting transactions and activities through formal operating procedures, supervision, and review

Control Techniques and Suggested Audit Procedures For Critical Element AS-4

Table 42. Control Techniques and Suggested Audit Procedures For Critical Element AS-4.- Segregate user access to conflicting transactions and activities and monitor segregation

Control activities	Control techniques	Audit procedures
AS-4.1 Incompatible activities and transactions are identified	AS-4.1.1 Owners have identified incompatible activities and transactions, and documented them on a segregation of duty matrix.	Through inquiry of management and inspection of policies and procedures, understand how management identifies incompatible activities and transactions.
	AS-4.1.2 Owners have appropriately considered risk acceptance when allowing segregation of duty conflicts in user roles.	Inspect list of segregation of duty conflicts to determine whether management has identified the segregation of duty conflicts appropriate for the business process and considered risk acceptance when allowing the conflicts.
AS-4.2 Application controls prevent users from performing incompatible duties.	AS-4.2.1 Users are prevented by the application from executing incompatible transactions, as authorized by the business owners.	Through inquiry, observations, and inspection, determine how the application segregates users from performing incompatible duties. Obtain and inspect a listing of users with access to the application. For a selection of users (can use same selection as in AS-2.4.1, AS-2.4.3 & AS-2.6.3), inspect documentation to determine whether access to menus/ screens corresponds with the user's defined duties. Evaluate whether their duties and access is appropriate to prevent employees from performing incompatible duties. Specifically, perform the following steps: • Obtain a system-generated user listing for the application (and other applications, if applicable); • For a selection of users, inspect their access profiles to determine whether access is appropriate (e.g., users have update access); and • For the selection of users, inspect their access profiles to determine if any of the users have access to menus with conflicting duties.

Control activities	Control techniques	Audit procedures
AS-4.3.3 There is effective segregation of duties between the security administration function of the application and the user functions.	AS-4.3.1 The profiles for security administrators do not have privileges to input and/or approve transactions.	Based on the inspection of user profiles, determine if: • individuals with security administration functions have access to input, process, or approve transactions; • security administrators have access to more than application security administration functions; and • security administrators are prevented from accessing production data.
AS-4.4 User access to transactions or activities that have segregation of duties conflicts is appropriately controlled.	AS-4.4.1 Owners authorize users to have access to transactions or activities that cause segregation of duty conflicts only when supported by a business need.	Inspect user administration policy to determine whether owner approval is required to access transactions or activities in their area of responsibility. Obtain and inspect a system report of users with conflicting responsibilities within the application. From a selection of user access request forms (electronic documents/workflow, if applicable) verify that the owners have approved user access to appropriate transactions or activities.
	AS-4.4.2 Security Administrators review application user access authorizations for segregation of duties conflicts and discuss any questionable authorizations with owners.	Interview security administrators and observe and inspect relevant procedures and documentation. If the security administrator's review is documented on the request form, inspect a selection of forms to note evidence of the security administrator's review.
	AS-4.4.3 Owners periodically review access to identify unauthorized segregation of duties conflicts and determine whether any authorized segregation of duties conflicts remain appropriate.	Interview owners and inspect documentation; determine whether appropriate procedures are in place to identify and remove or modify access, as needed.
AS-4.5 Effective monitoring controls are in place to mitigate segregation of duty risks	AS-4.5.1 Process Owner has identified the segregation of duty conflicts that can exist, and the roles and users with conflicts.	Inspect documentation of roles and users with conflicts.

Control activities	Control techniques	Audit procedures
	AS-4.5.2 Documented monitoring controls are in place that specifically address the conflict that the control mitigates.	Identify segregation of duty conflicts (including those that were intentionally established by the entity) and review documentation to determine whether: • monitoring controls adequately mitigate the risks created by the segregation of duty conflict; and • monitoring controls are effective. This can be achieved by inspecting the evidence collected by management.
	AS-4.5.3 Management has documented evidence of monitoring of control effectiveness.	Review evidence of monitoring of control effectiveness.

Critical Element AS-5. Implement effective application contingency planning

Chapter 3 addresses Contingency Planning at an entitywide and system level and is focused on the total information resources of an entity. Audit steps for the following section should be performed in conjunction with Chapter 3, which provides a more in-depth discussion of contingency planning issues. FISMA requires that each federal agency implement an information security program that includes "plans and procedures to ensure continuity of operations for information systems that support the operation and assets of the agency." Effective application contingency planning, consistent with Section 3.5, Contingency Planning (CP),

- Assess the criticality and sensitivity of computerized operations and identify supporting resources
- Take steps to prevent and minimize potential damage and interruption
- Develop and document a comprehensive contingency plan
- Periodically test the contingency plan and adjust it as appropriate

OMB Circular A-130, Appendix III, requires contingency plans for major applications, and NIST provides relevant guidance in Special Publication 800-34, *Contingency Planning Guide for Information Technology Systems*.[110]

Assess the criticality and sensitivity of the application

A key step in the contingency planning process is to conduct a Business Impact Analysis (BIA) for the application under focus.[111] The NIST contingency planning guide presents a three-step BIA process, which is discussed in Chapter 3 at the entitywide level. Following this process, staff conducting the BIA should, first, determine the critical functions performed by the application and then identify the specific IT resources required to perform the functions. Invariably, critical IT resources, in part, can include hardware and network components and telecommunication connections, as well as key application data and programs which should be backed up regularly. Second, staff should identify disruption impacts and allowable outage times for the application. And, third, staff should develop recovery priorities that will help determine recovery strategies. The NIST guide provides a range of recovery strategy considerations, including alternate sites of varying operational readiness, reciprocal agreements with other organizations, and service level agreements with equipment vendors.

Take steps to prevent and minimize potential damage and interruption.

The entity should implement policies and procedures to prevent or minimize potential damage and interruption to critical systems, including appropriate backup of application programs and data. Such policies and procedures should be incorporated into the entity's entitywide contingency planning efforts.

[110]In addition, this Circular requires and the NIST guide recommends a plan for general support systems.

[111]NIST defines **Business Impact Analysis (BIA)** as follows: An analysis of an information technology (IT) system's requirements, processes, and interdependencies used to characterize system contingency requirements and priorities in the event of a significant disruption.

Develop and document an application contingency plan.

A key step following the BIA is to develop the application contingency plan (which NIST refers to as an IT contingency plan) and incorporate it into related plans. The NIST guide provides a discussion of various related types of plans, but recognizes that universally accepted definitions are not available, and the scope and purpose of a plan at an organization may vary from the definition provided in the NIST guide. The application contingency plan is focused on one application and may address recovery procedures at an alternative site. However, it probably will not address the recovery of a major processing facility supporting multiple applications, nor the continuity or recovery of business functions relying on multiple applications. Therefore, an entity's Disaster Recovery Plan for a major processing facility may cover multiple applications and establish recovery priorities by application. Likewise, an entity's business functions involving multiple applications may have Business Continuity and Recovery Plans that incorporate multiple contingency plans for applications. It is important that an application contingency plan be incorporated into broader-scoped, related plans so that the application receives proper priority among multiple applications. The application contingency plan should also include time-based implementation procedures so that recovery activities are performed in a logical sequence and reflect the application's allowable outage times to avoid significant impacts. Contingency plans should include consideration of alternate work sites.

No application contingency plan could be activated without the availability of key data and programs. Therefore, application data should be backed up regularly and current programs should be copied and available for use. Both should be safeguarded, stored offsite, and be retrievable when recovery actions are implemented. The NIST guide provides a discussion of backup methods and considerations.

The entity should prevent and minimize potential damage and interruption. Chapter 3 includes a discussion of steps as the entitywide and system levels. In addition, for applications, the entity should maintain appropriate backup of applications and application data. Also, it is important that restarts process data completely and accurately.

Further, when an application contingency plan has been activated, responsible contingency personnel should reasonably assure that effective controls will restrict and monitor user access to application data and programs during the contingency operation. If adequate preparations have not been made or proper procedures are not followed, the contingency plan activation could result in an operational application with vulnerabilities that might allow unauthorized access to data and programs. As examples, access control software may not be started or allow default passwords, outdated software lacking up to date patches and containing known weaknesses may be activated, and logging of auditable events may not occur.

The control environment for the contingency operation should be similar to the normal operation. In particular, access controls as specified in the previous section AS-2 should be operating. That is, contingency operations should provide for effective user identification and authentication, proper authorization to perform sensitive transactions, and a continuing audit and monitoring capability.

Periodically test the contingency plan and adjust it as appropriate.

Testing the application contingency plan is essential to ensure it will function as intended when activated for an emergency. Testing can reveal important weaknesses. Testing the contingency plan and making adjustments as needed helps ensure the application will work when the contingency plan is implemented for an actual emergency. The NIST contingency planning guide recommends the following areas to be addressed in a contingency test:

- System recovery on an alternate platform from backup media
- Coordination among recovery teams
- Internal and external connectivity
- System performance using alternate equipment
- Restoration of normal operations
- Notification procedures

NIST's Handbook on Computer Security[112] discusses various degrees of contingency plan tests that could range from 1) a simple accuracy review to determine that key personnel contacts are still employed by the entity to 2) disaster simulations. On disaster simulations, this Handbook states the following: "These tests provide valuable information about flaws in the contingency plan and provide practice for a real emergency. While they can be expensive, these tests can also provide critical information that can be used to ensure the continuity of important functions. In general, the more critical the functions and the resources addressed in the contingency plan, the more cost-beneficial it is to perform a disaster simulation."

The NIST contingency planning guide states that test results and lessons learned should be documented and reviewed. The guide further states that, to be effective, the plan should be maintained in a ready state that accurately reflects the system, requirements, procedures, organizational structure, and policies and, therefore, the plan should be reviewed and updated regularly, at least annually or whenever significant changes occur.

[112] Special Publication 800-12, *An Introduction to Computer Security: The NIST Handbook*

Control Techniques And Suggested Audit Procedures For Critical Element AS-5

Table 43. Control Techniques And Suggested Audit Procedures For Critical Element AS-5. Implement effective application contingency planning

Control activities	Control techniques	Audit procedures
AS-5.1 Assess the criticality and sensitivity of the application through a Business Impact Analysis (BIA) or equivalent.	AS-5.1.1 Determine the critical functions performed by the application and identify the IT resources, including key data and programs, required to perform them.	Perform the following procedures for AS-5.1.1 to AS-5.1.3. Review the policies and methodology, and the BIA (if conducted) used to determine the application's critical functions and supporting IT resources, the outage impacts and allowable outage times, and the recovery priorities. Interview program, information technology, and security administration officials. Determine their input and assessment of the reasonableness of the results.
	AS-5.1.2 Identify the disruption impacts and allowable outage times for the application.	
	AS-5.1.3 Develop recovery priorities that will help determine recovery strategies.	
AS-5.2 Take steps to prevent and minimize potential damage and interruption.	AS-5.2.1 Backup files of key application data are created on a prescribed basis.	Review written policies and procedures for backing up and storing application data and programs.
	AS-5.2.2 Current application programs are copied and available for use	Examine the backup storage site.
	AS-5.2.3 Backup files of application data and programs are securely stored offsite and retrievable for contingency plan implementation	Interview program and information technology officials and determine their assessment of the adequacy of backup policy and procedures.
AS-5.3 Develop and document an application Contingency Plan	AS-5.3.1 Develop a time-based application Contingency Plan.	Review the application contingency plan and broader scoped related plans.
	AS-5.3.2 Incorporate the application Contingency Plan into related plans, such as the Disaster Recovery, Business Continuity, and Business Resumption Plans.	Determine whether the broader-scoped plans have incorporated the application contingency plan. Compare the plan with guidance provided in NIST SP 800-34. Interview program, information technology, and security administration officials and determine their input and assessment of the reasonableness of the plan.

Control activities	Control techniques	Audit procedures
	AS-5.3.3 Contingency operations provide for an effective control environment by restricting and monitoring user access to application data and programs, including. • Users are identified and authenticated. • Users are properly authorized before being able to perform sensitive transactions. • Audit and monitoring capabilities are operating.	Interview program, information technology, and security administration officials. Determine their assessment for providing an effective control environment during contingency operations. Review the contingency plan and any test results for control related issues.
AS-5.4 Periodically test the application contingency plan and adjust it as appropriate.	AS-5.4.1 The application contingency plan is periodically tested and test conditions include disaster simulations.	Review policies on testing. Determine when and how often contingency plans are tested.
	AS-5.4.2 The following areas are included in the contingency test: • System recovery on an alternate platform from backup media • Coordination among recovery teams • Internal and external connectivity • System performance using alternate equipment • Restoration of normal operations • Notification procedures	Determine if technology is appropriately considered in periodic tests of the contingency plan and resultant adjustments to the plan. Review test results. Observe a disaster recovery test.
	AS-5.4.3 Test results are documented and a report, such as a lessons-learned report, is developed and provided to senior management.	Review the final test report. Interview senior management to determine whether they are aware of the test results.
	AS-5.4.4 The contingency plan and related agreements and preparations are adjusted to correct any deficiencies identified during testing.	Review any documentation supporting contingency plan adjustments.

Source: GAO.

4.2. Business Process Controls (BP)

Business Process controls are the automated and/or manual controls applied to business transaction flows and relate to the completeness, accuracy, validity and confidentiality of transactions and data during application processing. They typically cover the structure, policies, and procedures that operate at a detailed business process (cycle or transaction) level and operate over individual transactions or activities across business processes. Specific types of business process controls are:

- **Transaction Data Input** relates to controls over data that enter the application (e.g., data validation and edit checks).
- **Transaction Data Processing** relates to controls over data integrity within the application (e.g., review of transaction processing logs).
- **Transaction Data Output** relates to controls over data output and distribution (e.g., output reconciliation and review).
- **Master Data Setup and Maintenance** relates to controls over master data, the key information that is relatively constant and shared between multiple functions or applications (e.g., vendor file).

The particular control techniques employed by an entity will depend on the context of the business process and its associated risks and objectives. Business process controls may be manual or automated. Automated controls are system-based, and may be used to control such things as the correctness or accuracy of data, such as edits and validations. Manual controls are procedures that require human intervention, such as the approval of a transaction, and are typically used to assure the reasonableness or propriety of transactions. Automated and manual controls can be preventive or detective. Automated controls can keep invalid data from being processed, and they can report transactions that fail to meet reasonableness criteria. Manual controls performed prior to input can identify problems before data is processed, while monitoring controls performed after processing can identify errors.

In many entities, the core business processes span across multiple applications. Some of the applications are themselves complex, integrated systems. Ideally, applications are interfaced seamlessly for the information to flow across these applications to complete a business process. Furthermore, functional areas may expand outside of the organization to include external “partners” as part of a larger vendor/contract management or personnel management, wherein partner applications are often interfaced with entity systems. This expansion of the environment to include external systems adds to the risks or challenges faced by the organization. If not properly controlled, these interfaces with external “partners” can affect the confidentiality, integrity, and availability of information and information systems. Business process controls are not limited to financial systems. For example, these controls are essential to ensuring the completeness, accuracy, validity and confidentiality of non-financial data such as patient health information.

At a high level, execution of a business process involves data input, processing and data output. However, the characteristics of data types (master or standing data and transaction data), and the complexity of the interfaced systems and the underlying data management systems, require the auditor to consider these in evaluating the completeness, accuracy, validity and confidentiality of data.

Master Data vs. Transaction Data

Every business process employs **master data**, or referential data that provides the basis for ongoing business activities, e.g., customers, vendors, and employees. The data that are generated as a result of these activities are called **transaction data**, and represent the result of the activity in the form of documents or postings, such as purchase orders and obligations.

Examples of master data are:

- Organizational structure
- G/L Account Structure

- Vendor Master
- Employee Master

Financially focused master data generally has the following characteristics:

- Relatively stable over time; even if the data records change, the overall volume of growth is limited. Example: chart of accounts, fixed assets, and vendors.

- Occur only once per object in the application. Example: assets are used by almost every organizational unit, but there is only one master record per asset.

- Everything else depends on them, e.g. inventory balances cannot be loaded without the organizational structure, G/L accounts, and material master being loaded. Therefore, master data should be loaded prior to processing business transactions.

Business Process Application Control Objectives

As discussed in the introduction to this chapter, the overall objectives of business process application level controls are to reasonably assure completeness, accuracy, validity, confidentiality, and availability[113] of transactions and data during application processing. The completeness, accuracy, and validity controls relate to the overall integrity objective. In particular, each specific business process control technique is designed to achieve one or more of these objectives. The effectiveness of business process controls depends on whether all of these overall objectives are

[113]Availability controls are principally addressed in application security controls (especially contingency planning) and therefore, are not included as specific business process application control objectives in the business process controls (BP), interface controls (IN), and data management system controls (DA) categories. The completeness, accuracy, and validity controls relate to the overall integrity objective. The availability objective is addressed as part of application level general controls in AS-5.

achieved by the application level controls. Each objective is described in more detail below.

Completeness (C) controls should provide reasonable assurance that all transactions that occurred are input into the system, accepted for processing, processed once and only once by the system, and properly included in output. Completeness controls include the following key elements:

- transactions are completely input,
- valid transactions are accepted by the system,
- duplicate postings are rejected by the system,
- rejected transactions are identified, corrected and re-processed; and
- all transactions accepted by the system are processed completely.

The most common completeness controls in applications are batch totals, sequence checking, matching, duplicate checking, reconciliations, control totals and exception reporting.

Accuracy (A) controls should provide reasonable assurance that transactions are properly recorded, with the correct amount/data, and on a timely basis (in the proper period); key data elements input for transactions are accurate; and data elements are processed accurately by applications that produce reliable results; and output is accurate.

Accuracy control techniques include programmed edit checks (e.g., validations, reasonableness checks, dependency checks, existence checks, format checks, mathematical accuracy, range checks, etc.), batch totals and check digit verification.

Validity (V) controls should provide reasonable assurance (1)that all recorded transactions actually occurred (are real), relate to the organization, and were properly approved in accordance with management's authorization; and (2) that output contains only valid

data. A transaction is valid when it has been authorized (for example, buying from a particular supplier) and when the master data relating to that transaction is reliable (for example, the name, bank account and other details on that supplier). Validity includes the concept of authenticity. Examples of validity controls are one-for-one checking and matching.

Confidentiality (CF) controls should provide reasonable assurance that application data and reports and other output are protected against unauthorized access. Examples of confidentiality controls include restricted physical and logical access to sensitive business process applications, data files, transactions, and output, and adequate segregation of duties. Confidentiality also includes restricted access to data reporting/extraction tools as well as copies or extractions of data files.

User Satisfaction Inquiry

Auditors may find it useful to query key system users on their satisfaction with business process information (transaction output). Users of business process information can help the auditor identify errors in processing or other major problem areas. The auditor should identify and interview enough principal users to develop a general idea of how they use the data and what their opinions are concerning its accuracy, timeliness, and completeness. Questions that may be used to collect information from the user include the following.

- For what purpose do you use the transaction output?
    - initiate transaction,
    - authorize changes to the system,
    - maintain information controls, or
    - other?
- Can the transaction output be used without correction?

- Is the information accurate and reliable, available when needed, current and up-to-date?
- Do you maintain manual records to supplement the transaction output?
- Do you check the information for quality (accuracy completeness, and validity) when you receive it?
- Is the transaction output ever rerun by the data center?
- Are you authorized to make changes to the information and if so, can you override validation and edit checks incorporated into the business process application?

When assessing user satisfaction, it is important to obtain evidence of incomplete or inaccurate data identified by a user. The auditor should determine

- the nature of the problem – amounts overstated or understated, incorrect totals, incomplete data fields, and negative balances which should be positive;
- how frequently errors are observed – isolated instances or recurring problems;
- whether the user can help explain why errors are made – since errors affect users the most, they may have conducted studies to show the cause and magnitude of errors; and
- whether users maintain manual records for use instead of computer reports or output – manually kept records may indicate problems with the integrity of the transaction output.

NIST Guidance

For federal systems, NIST SP 800-53 includes the following controls related to business process controls:

SI-9	Information Input Restrictions
SI-10	Information Accuracy, Completeness, Validity, and Authenticity
SI-11	Error Handling
SI-12	Information Output Handling and Retention

This section presents more detailed control objectives that should be achieved to reasonably assure that transaction data is complete, accurate, valid and confidential. Also, this section is organized to address the four principal types of business process controls: input, processing, output, and master files.

Business Process Control Critical Elements

Business Process Controls have the following four critical elements:

BP-1	Transaction Data Input is complete, accurate, valid, and confidential (Transaction data input controls).
BP-2	Transaction Data Processing is complete, accurate, valid, and confidential (Transaction data processing controls).
BP-3	Transaction Data Output is complete, accurate, valid, and confidential (Transaction data output controls).
BP-4	Master data setup and maintenance is adequately controlled.

Critical Element BP-1. Transaction Data Input is complete, accurate, valid, and confidential (Transaction Data Input Controls)

The entity should implement procedures to reasonably assure that (1) all data input is done in a controlled manner, (2) data input into the application is complete, accurate, and valid, (3) any incorrect information is identified, rejected, and corrected for subsequent processing, and (4) the confidentiality of data is adequately protected. Inadequate input controls can result in incomplete, inaccurate, and/or invalid records in the application data or unauthorized disclosure of application data.

Applications can accept input manually (application users enter data), or via automated input. In either case data input controls are relevant. The automated input may be interfaces that use batch processing or

are integrated real-time with internal and external systems. To the extent that data input is obtained from other applications, the auditor's assessment of input controls should be coordinated with data interface controls discussed in section 4.3 of this chapter.

For federal systems, NIST SP 800-53 [SI-10] establishes the following objectives for input controls:

- checks for accuracy, completeness, validity, and authenticity of information are accomplished as close to the point of origin as possible.
- rules for checking the valid syntax of information system inputs (e.g., character set, length, numerical range, acceptable values) are in place to verify that inputs match specified definitions for format and content.
- inputs passed to interpreters are prescreened to prevent the content from being unintentionally interpreted as commands.

Also, SI-10 states that the extent to which the information system is able to check the accuracy, completeness, validity, and authenticity of information is guided by organizational policy and operational requirements.

Data input for processing should have all key fields completed and be validated and edited. Error handling procedures should facilitate timely resubmission of corrected data, including real-time on-line edits and validations. These controls may be configured within the system settings, or added on as a customization. Where applicable, the auditor may also process a controlled group of live data and test for expected results. However, when using live data even in a controlled environment, the auditor should use additional safeguards to ensure that the data is not compromised (e.g., breaches that may impact the accuracy, completeness, and validity of the information or loss of confidentiality (privacy issue)). Preventive controls generally allow for higher reliance and the most efficient testing.

In addition, controls should be in place to reasonably assure that access to data input is adequately controlled. Procedures should be

implemented to control access to application input routines and physical input media (blank and completed). The assessment of such controls should be coordinated with Critical Element AS-2 *Implement effective application access controls.*

For federal systems, NIST SP 800-53 includes three controls relevant to transaction data input:

SI-9	Information Input Restrictions
SI-10	Information Accuracy, Completeness, Validity, and Authenticity
SI-11	Error Handling

Data input controls are comprised of the following control activities:

- Implement an effective transaction data strategy and design
- Establish input preparation (approval and review) policies and procedures
- Build data validations and edit checks into the application
- Implement effective auditing and monitoring capability

Implement an effective transaction data strategy and design

The entity should have an appropriate data strategy and design (how the data are organized into structures to facilitate retrieval while minimizing redundancy). The design of transaction data elements is a critical factor in helping to assure the quality of data as well as its interrelationship with other data elements. Data standards[114] should be defined and maintained, but may vary depending upon the specific requirements of the entity, including regulatory requirements, and database- or application-based standards.

[114]Data standards are designed to enable systems to easily interoperate and transfer information. Standard definitions for data elements are intended to ensure that users of all entity systems define the same data in the same way and have a common understanding of their meaning.

A clearly defined data strategy minimizes data redundancies fundamental to an efficient, effective transaction processing function. Poor data quality may lead to a failure of system controls, process inefficiencies, and inaccurate management reporting. Erroneous or missing elements of critical data in the transaction file can produce discrepancies within the process cycle.

Characteristics of erroneous transaction file data elements include, but are not limited to, duplicate transactions recorded or processed, and improper coding to departments, business units or accounts. They also include unpopulated data fields and data formatting inconsistencies, as described for the master file.

Establish Input Preparation (approval and review) Policies and Procedures

The entity should have policies and procedures in place to reasonably assure that all authorized source documents and input files are complete and accurate, properly accounted for, and transmitted in a timely manner for input to the computer system. Among these, management should establish procedures to reasonably assure that all inputs into the application have been processed and accounted for; and any missing or unaccounted for source documents or input transactions have been identified and investigated. Finally, procedures should be established to reasonably assure that all source documents (paper or electronic form) have been entered and accepted to create a valid transaction. Automatic input from other applications should be integrated either through an interface (external applications) or configuration (cross-modular within the same application). Interface controls are addressed in section 4.3, below.

For federal systems, NIST SP 800-53 [SI-9] establishes a control objective that the organization restricts the capability to input information to the information system to authorized personnel. Restrictions on personnel authorized to input information to the information system may extend beyond the typical access controls employed by the system and include limitations based on specific operational/project responsibilities.

Build Data Validation and Edits within the Application

Input data should be validated and edited to provide reasonable assurance that erroneous data are prevented or detected before processing. In many cases, application owners and programmers will build application input edits directly into the application to limit the number of errors that are input into the application. Edits are used to help assure that data are complete, accurate, valid, and recorded in the proper format. Edits can include programming to identify and correct invalid field lengths or characters, missing data, incorrect data, or erroneous dates.

The auditor should obtain an understanding of the application input edits to assess their adequacy and to determine the edits that will be tested. This understanding would include a determination on whether edits can be overridden or bypassed and if allowed, whether such capability is restricted to supervisory personnel only and limited in its use. In addition, entity procedures should provide for the automatic logging of all edit overrides/bypasses and include subsequent routine analysis of these logs to assess their appropriateness and correctness by entity management. The auditor should also determine whether table maintenance procedures have been established that include edit and validation controls to ensure that only valid changes are made to data tables that may be incorporated into business process applications

Implement Effective Auditing and Monitoring Capability

As part of the data input process, data entry errors may occur. These errors can occur during manual or automated entry of data. Management should have procedures to identify and correct any errors that occur during the data entry process. Error handling procedures during data entry should reasonably assure that errors and irregularities are detected, reported, and corrected. Management's audit and monitoring capability should include

- user error logs[115] to provide timely follow-up and correction of unresolved data errors and irregularities, and

- an established monitoring process to assure the effectiveness of error handling procedures. This should include procedures to periodically review user error logs to determine the extent to which data errors are being made and the status of uncorrected data errors.

For federal systems, NIST SP 800-53 [SI-11] states that the information system identifies and handles error conditions in an expeditious manner without providing information that could be exploited by adversaries. The structure and content of error messages are carefully considered by the organization. Error messages are revealed only to authorized personnel. Error messages generated by the information system provide timely and useful information without revealing potentially harmful information that could be used by adversaries. Sensitive information (e.g., account numbers, social security numbers, and credit card numbers) are not listed in error logs or associated administrative messages. The extent to which the information system is able to identify and handle error conditions is guided by organizational policy and operational requirements.

Control Techniques and Suggested Audit Procedures for Critical Element BP-1

Table 44. Control Techniques and Suggested Audit Procedures for Critical Element BP-1. Transaction Data Input is complete, accurate, valid, and confidential.

Control activities	Control Object.	Control techniques	Audit procedures
BP-1.1 A transaction data strategy is properly defined, documented, and appropriate.	C,A,V, CF	BP-1.1.1 Data management procedures exist that include transaction data strategy, data design, data definitions, data quality standards, ownership and monitoring procedures. Data strategy should be unique to each data type.	Inquire of management and inspect documented policies and procedures related to data strategy. Inspect transaction data strategy.

[115]Error logs may be automated or manual. Automated logs generally provide more reporting consistency.

Control activities	Control Object.	Control techniques	Audit procedures
BP-1.2 Source documentation and input file data collection and input preparation and entry is effectively controlled.	C,V,CF	BP-1.2.1 Procedures are established to provide reasonable assurance that all inputs into the application have been authorized, accepted for processing, and accounted for; and any missing or unaccounted for source documents or input files have been identified and investigated. Such procedures may include one or more of the following: • batch totals • sequence checking • reconciliations • control totals	Through inquiry, observations, and inspection, obtain an understanding of policies and procedures related to source document and input file collection and preparation, and determine whether the procedures are documented and properly designed. Observe and inspect input preparation policies and procedures and relevant controls, noting procedures taken when exceptions are identified. Inspect a selection of reports used by management to determine whether the necessary inputs are accepted for processing, and inquire of review procedures used. Inquire as to how source documents and input files are tracked and maintained and inspect relevant documentation.
BP-1.3 Access to data input is adequately controlled	C,A,V, CF	BP-1.3.1 Procedures are implemented to control access to application input routines and physical input media (blank and completed)	Review procedures over control of data input to determine whether they are adequate. Coordinate this step with AS-2.
BP-1.4 Input data are approved	A, V	BP-1.4.1 Documented approval procedures exist to validate input data before entering the system. Approval procedures are followed for data input.	Inspect documented procedures for approval of input data. Inspect a selection of source documents and input files and determine whether the source data were approved for input.

Control activities	Control Object.	Control techniques	Audit procedures
BP-1.5 Input data are validated and edited to provide reasonable assurance that erroneous data are detected before processing.	A,V	BP-1.5.1 Appropriate edits are used to reasonably assure that data are valid and recorded in the proper format, including: • authorization or approval codes; • field format controls; • required field controls; • limit and reasonableness controls; • valid combination of related data field values; • range checks • mathematical accuracy • master file matching • duplicate processing controls; and • balancing controls.	Through inquiry, observations, and inspection, understand edits used to reasonably assure that input data is accurate, valid, and in the proper format prior to being accepted by the application. The edits and procedures should address both manual and automated input processes. Identify the key data input screens. Consider such factors as known errors and the frequency of use. If available, use analytical reports to support reasoning for screen selection. For the key manual input layouts identified, perform the following steps as applicable: • Observe an authorized data entry clerk inputting transactions, noting edits and validations for the various transaction entries. • Observe key transaction fields to determine whether they have adequate edit/validation controls over data input. • Obtain screen prints of appropriate scenarios and document the result. For key automated inputs, observe and inspect data validation processes, completion controls, and exception reports in place. Inquire of management regarding procedures used to reject and resubmit data for processing, and procedures to provide reasonable assurance that data is not processed multiple times. Note: audit procedures apply only to the current environment at the time of test. Supplemental audit procedures would need to be applied at other points during the year to obtain evidence that the control was operating effectively.)

Control activities	Control Object.	Control techniques	Audit procedures
		BP-1.5.2 Edit and validation overrides are restricted to authorized personnel. Procedures exist to monitor, in a timely manner, overrides applied to transactions, including maintenance of override logs.	Observe and inspect existing procedures for reviewer overrides or bypassing data validation and error routines. If an override log exists, observe and inspect to determining whether adequate review and follow up of overrides is performed. Inspect a selection of overrides for evidence of proper approval. (Note: use of overrides is not by itself indicative of inadequate controls. However, the auditor needs to examine why the overrides are being used and controls in place to minimize risks from these actions).
		BP-1.5.3 Table maintenance procedures include edit and validation controls to help assure that only valid changes are made to data tables.	Through inquiry, observations, and inspection, obtain an understanding of table maintenance procedures relative to data edits and validation. Observe an authorized person attempting to make invalid changes to tables, and confirm edits and validations are performed on changes.
BP-1.6 Input values to data fields that do not fall within the tolerances or parameters determined by the management result in an automated input warning or error.	A,V	BP-1.6.1 Parameters and tolerances are configured and error conditions and messages are defined. (These restrictions can be configured based on limits on transaction amounts or based on the nature of transactions) If a workflow is used so that documents can be released only by personnel with appropriate approval authority, then these requirements should be appropriately designed in the system. Management regularly reviews the restrictions placed on data input and validates that they are accurate and appropriate.	Inspect configuration of parameters and tolerance levels defined by the entity to identify whether the application accepts the data with warning or rejects the data, if the conditions are not met. Determine whether management review and follow-up of warnings are adequate. Inspect the workflow rules and validate that the releasing authority is at an appropriate level. Inspect evidence of management's regular review of relevant tolerances and parameters, and any correctional activities taken.

Control activities	Control Object.	Control techniques	Audit procedures
BP-1.7 Error handling procedures during data origination and entry reasonably assure that errors and irregularities are detected, reported, and corrected.	C,A,V	BP-1.7.1 Procedures are established to reasonably assure that all inputs into the application have been accepted for processing and accounted for; and any missing or unaccounted for source documents or input files have been identified and investigated. The procedures specifically require the exceptions to be resolved within a specific time period.	Inspect documented procedures related to data entry error handling procedures. Inquire of management to determine which key management reports are used to monitor input errors. Select input error reports and inspect to note evidence of management review. As applicable, inspect subsequent data input reports to note where data was corrected and resubmitted for processing.
BP-1.8 Errors are investigated and resubmitted for processing promptly and accurately.	C,A,V	BP-1.8.1 Data input errors are identified in suspense or error reports and resolved or resubmitted in a timely manner (within the period specified in the procedures).	Inspect a selection of recent suspense or error reports (can use selection used in BP-1.7.1 provided information included will satisfy audit objectives for both audit procedures) and note whether suspense items are being corrected in a timely manner. Inspect the open items and note management's reasons for not correcting them in a timely manner.

Source: GAO.

Critical Element BP-2. Transaction Data Processing is complete, accurate, valid, and confidential (Transaction Data Processing Controls)

Transaction data processing controls address the completeness, accuracy, validity, and confidentiality of data as the data get processed within the application. Data processing controls are employed following input, or during batch processing or on-line user processing within the application.

Once the initial data are entered in the system and accepted for processing, the processing of the data should be controlled by a series of activities within the system. These activities are designed by management and are either programmed or configured into the application. The processing steps are different for each process (purchasing versus invoice processing) and control requirements differ to mitigate the risks inherent to the applicable process. An effective assessment of data processing controls includes an understanding of the process steps and dataflow in a process cycle,

the controls imbedded in the application, and the manual controls that are common across processes or specific to each process.

Some applications may allow user-defined processing, whereby the user may establish or modify processing. This frequently occurs in applications based on spreadsheets and report writer/data extraction tools. Entities should establish clear policies and procedures concerning user-defined processing. In addition, the entity should have adequate controls over the accuracy, completeness and validity of information processed in applications with user-defined processing.

Audit trails and security reports should be monitored on a regular basis to help assure that transactions are processing as intended. The effectiveness of such procedures depends on the level of security reporting and problem analysis tools available in the application. Controls over the processing of data should preclude or detect the erroneous or unauthorized addition, removal, or alteration of data during processing.

Interface controls relate to the integrity of data as they move from one system to another. Interface controls are addressed separately in Section 4.3 below.

For federal systems, as noted in BP-1 above, NIST SP 800-53 includes three controls relevant to data processing:

SI-9	Information Input Restrictions
SI-10	Information Accuracy, Completeness, Validity, and Authenticity
SI-11	Error Handling

Formal Transaction Processing Procedures.

Formal procedures should be established for data processing to help assure that data are processed completely and accurately, that data retains its validity, and that appropriate data confidentiality is maintained during processing. Related controls include the following:

- Transaction or table logs provide an audit trail and the ability to compare transactions to source documents. Audit trails or processing logs are often used within applications to track the pertinent information related to application transactions, both manual and automated. The processing logs should also be used to identify those transactions that did not process completely or correctly within the application. The log should document the errors identified during application processing, and should contain enough information for the systems personnel to identify the exact transactions that failed, and the application users that will need to be contacted to correct the posting (if the error can not be corrected by the systems personnel). Processing logs typically contain such information as date and time of error, responsible user (if applicable), codes describing the type of error encountered, and the corrective action that has occurred to assure correct processing of the transaction.

- An automated process exists that allows one or more of the following: capturing transaction data in correct accounts; unique documentation; tolerances in processing data; periodic review and reconciliation of subsidiary or clearing accounts (e.g., clearing Goods Received accounts against Invoice Received accounts through two- and three-way matching process); prevention of direct posting to reconciliation accounts; and workflow to initiate the approval process.

- Efficient transaction entry that eliminates unnecessary duplication of data entry. Where appropriate, data needed by the systems are entered only once and other parts of the system are automatically updated consistent with the timing requirements of each process cycle.

- Managers should provide review and authorization for transactions that are rejected and should be rerun.

Effective auditing and monitoring capability.

During data processing, transactions may not be processed completely or accurately as a result of errors or inconsistencies in data, system interruptions, communication failures, or other events. In addition, valid data may be corrupted or data may lose its confidentiality. To identify these instances, a monitoring capability should be implemented. The monitoring function should reasonably assure that data are accurately processed through the application and that processing procedures determine data to be added, or altered during processing. No data should be lost during the process. Controls may include:

- If the application is "run" on a regular schedule to process data, either manually or automatically, there are documented procedures explaining how this is performed, including controls in place to reasonably assure that all processing was completed.
- A processing log is maintained and is reviewed on a regular basis for unusual or unauthorized activity.
- The processing log, or another log or report, is used to document any errors or problems encountered during processing. Types of information that should be considered for retention are descriptions of any errors encountered, dates identified, any codes associated with errors, any corrective action taken, date and times corrected.
- controls to reasonably assure that the correct generation/cycle of files is used for processing. This may include the generation of backup files from processing to be used for disaster recovery.
- Adequate audit trails are generated during processing. These audit trails should be logs or reports that contain information about each transaction. Data that should be included are who initiated each of the transactions, the date and time of the transactions, and the location of the transaction origination (terminal or IP address as an example).

Control Techniques and Suggested Audit Procedures for Critical Element BP-2

Table 45. Control Techniques and Suggested Audit Procedures for Critical Element BP-2. Transaction Data Processing is complete, accurate, valid, and confidential.

Control activities	Control Object.	Control techniques	Audit procedures
BP-2.1 Application functionality is designed to process input data, with minimal manual intervention.	C,A,V, CF	BP-2.1.1 Application processing of input data is automated and standardized. Design documentation supporting the processing design exists for validation and change control purposes. The version of application, data and files to be processed are appropriate and current.	Inspect configuration and/or design documentation noting automatic and manual processing of transaction and information flow. Verify that proper versions of application, data and file are used.
BP-2.2 Processing errors are identified, logged and resolved.	C, A, V	BP-2.2.1 System entries use transaction logs to reasonably assure that all transactions are properly processed and identify the transactions that were not completely processed.	Inspect a selection of application, transaction and error logs, noting whether all transactions were properly processed and missing or duplicate transactions were identified, including reruns and restarts.
		BP-2.2.2 Procedures are in place to identify and review the incomplete execution of transactions, analyze and take appropriate action.	Inspect selected incomplete transactions and validate that management has adequately investigated and corrected the errors or omissions. Conduct a test with controlled group of live data and analyze the results with the expected values. Follow up with any exceptions.
		BP-2.2.3 Procedures exist to monitor, in a timely manner, overrides applied to transaction processing.	Observe and inspect existing procedures for reviewer overrides or bypassing data processing routines. If an override log exists, observe and inspect to determining whether adequate review and follow up of overrides is performed. Inspect a selection of overrides for evidence of proper approval. (Note: use of overrides is not by itself indicative of inadequate controls. However, the auditor needs to examine why the overrides are being used and controls in place to minimize risks from these actions).

Control activities	Control Object.	Control techniques	Audit procedures
BP-2.3 Transactions are executed in accordance with the pre-determined parameters and tolerances, specific to entity's risk management.	A,V	BP-2.3.1 Document processing and posting conditions (parameters and tolerances) are configured, including system errors and actions, if the are conditions are not met.	Inspect configuration of parameters and tolerances levels defined by the entity to identify whether the application processes the data with warning or rejects the data, if the conditions are not met.
		BP-2.3.2 Management regularly reviews the restrictions to validate the accuracy and appropriateness.	Inspect management review procedures, noting management action when the application processes data or rejects it. In both cases, management should clearly analyze the impact on the downstream transactions.
BP-2.4 Transactions are valid and are unique (not duplicated).	A, V	BP-2.4.1 The application performs on-line edit and validation checks against data being processed.	Perform the following procedures for BP-2.4.1 to BP-2.4.4.
		BP-2.4.2 The system produces warning or error messages.	Inspect design document to identify key data validation and edit checks.
		BP-2.4.3 Transactions with errors are rejected or suspended from processing until the error is corrected.	Inspect configuration to verify that the identified edit and validations checks are appropriately set, and transactions are rejected/suspended when data/processing errors occur. Also verify that warning and error messages are designed when the processing is incomplete.
		BP-2.4.4 The application communicates the processing error to the users either on-line (if on-line entry) or via an exception report.	Inspect the error communication methodology and assess whether all processing errors are communicated to the users.
BP-2.5 The transactions appropriately authorized.	A,V	BP-2.5.1 Transactions are matched with management's general or specific authorizations.	Review the adequacy of controls over authorization of transactions.
BP-2.6 Data from subsidiary ledgers are in balance with the general ledger (step applicable to financial-related audits only).	C,A,V	BP-2.6.1 Periodic reconciliation is performed and exceptions are appropriately handled.	Inspect periodic procedures to determine whether reconciliations are performed and documented with evidence. For a selection of reconciliations, examine supporting evidence for adequacy. Through inquiry, observations, and inspection, determine if the system is configured to auto balance, where possible.
BP-2.7 User-defined processing is adequately controlled.	C, A, V, CF	BP-2.7.1 Appropriate policies and procedures over user-defined processing are implemented.	Review policies and procedures over user-defined processing.

Control activities	Control Object.	Control techniques	Audit procedures
		BP-2.7.2 Controls over user-defined processing are adequate.	Assess the operating effectiveness of user-defined processing.
BP-2.8 As appropriate, the confidentiality of transaction data during processing is adequately controlled	CF	BP-2.8.1 Management implements adequate controls to protect the confidentiality of data during processing, as appropriate.	Assess the adequacy of management controls over confidentiality during processing. Coordinate this step with Critical Element AS-2 *Implement effective application access controls.*
BP-2.9 An adequate audit and monitoring capability is implemented.	C,A	BP-2.9.1 Management has procedures in place to reconcile the data input with the data processed by the application.	Inspect procedures regarding reconciliation of transactions.
		BP-2.9.2 Monitoring procedures should provide details of data to be added/modified during the processing, and expected result. System audit logs should be reviewed for exception.	Inspect operations activity at selected times and check for evidence that reconciliations are being performed.
		BP-2.9.3 Management maintains a process log and the log is reviewed for unusual or unauthorized activity.	Inspect the processing log and note whether the unusual or unauthorized activity was followed up properly and promptly.
		BP-2.9.4 Procedures exist to monitor, in a timely manner, overrides applied to transactions, including maintenance of override logs.	Observe and inspect existing procedures for reviewer overrides or bypassing data validation and error routines. If an override log exists, observe and inspect to determine whether adequate review and follow-up of overrides is performed.

Source: GAO.

Critical Element BP-3. Transaction data output is complete, accurate, valid, and confidential (Transaction Data Output Controls)

Like input and processing controls, transaction data output controls are used to reasonably assure that transaction data is complete, accurate, valid, and confidential. In addition, output controls are aimed at the correct and timely distribution of any output produced. Output can be in hardcopy form, in the form of files used as input to other systems, or information available for online viewing.

Formal procedures should be established for data processing to help assure that data are processed completely and accurately, that data retains its validity, and that appropriate data confidentiality is maintained during processing, output control totals are accurate and

are being verified, and the resulting information is distributed in a timely and consistent manner to the appropriate end users. Controls include:

- An overall reporting process that identifies specific output that will be generated, the form and content of the reporting, sensitivity of information and selectivity of user.
    - Output is delivered to the appropriate end user.
    - Output is restricted from unauthorized access.
    - Record retention and backup schedules for output data should be established.
- Data integrity through reconciliation of the output to the input and processing data.
    - Documented procedures explain the methods for the proper balancing/reconciliation and error correcting of output should exist. There should be adequate separation of duties for the balancing/reconciliation process.
    - Output is reviewed for general acceptability and completeness, including any control totals. There should be either error reports or a log kept of output errors. These should contain information such as a description of problems/errors and the date identified, as well as any corrective action taken.

In addition, controls should be in place to reasonably assure that access to data output is adequately controlled. Procedures should be implemented to control access to output data and physical output media (blank and completed). The assessment of such controls should be coordinated with Critical Element AS-2 *Implement effective application access controls.*

For federal systems, NIST SP 800-53 includes three controls relevant to data output controls:

SI-10	Information Accuracy, Completeness, Validity, and Authenticity
SI-11	Error Handling
SI-12	Information Output Handling and Retention

In addition, NIST SP 800-53 [SI-12] states that the organization handles and retains output from the information system in accordance with applicable laws, Executive Orders, directives, policies, regulations, standards, and operational requirements.

Implementing a reporting strategy

One of the key elements of output controls is having an overall reporting strategy. The strategy helps to reasonably assure that content and availability of reports is consistent with end users' needs, that end users are aware of the sensitivity and confidentiality of data, and that an "owner" has been defined for all report output. The strategy also provides a basis for policies and procedures that govern preferred report methods (hardcopy vs. soft, standard vs. custom), report generation and distribution, and any review and or approvals.

The strategy should specifically consider:

- Compliance with laws and regulations;
- Sensitivity of data;
- Levels of reporting segregation of duties;
- Consolidation/ processing of reporting from a 3rd party;
- Reporting tools utilized;
- Business needs/functionality of reports; and
- Non-standard output items.

The strategy should adequately consider the confidentiality of all types of output. For example, the entity should have adequate security over output queues, particularly for sensitive information. Inadequately secured output queues can lead to unauthorized disclosure of information. Similarly, access to output screens should be adequately controlled.

Another significant area for output controls relates to data that is routinely or episodically transferred to other systems, such as data supporting a management reporting system. If controls over such other systems are not adequate and consistent with the risk level of the data, such data may be subject to unauthorized access. For example, personnel data transferred to a management reporting system should have adequate controls to achieve the confidentiality and integrity objectives.

Establishing security and controls over report generation and distribution.

Controls over report generation and distribution should include the following:

- Reports should be reviewed for reasonableness and accuracy prior to distribution.
- Output distribution should be controlled so that output is provided to authorized recipients only and on a timely basis.
- Report retention should be adequate based on internal needs and regulatory requirements. For example, application output may be stored to back-up tapes (or kept as hard copy documentation) and rotated to an offsite storage facility.
- Output reports comply with applicable laws and regulations, including the type of clearance required to view the output reports.
- User access to reports is controlled based on the user's business need to view the report and the sensitivity of information contained in the report.

- Data output to management reporting or other copies of output files are adequately controlled.

Control Techniques and Suggested Audit Procedures for Critical Element BP-3

Table 46. Control Techniques and Suggested Audit Procedures for Critical Element BP-3. Transaction data output is complete, accurate, valid, and confidential.

Control activities	Control Object.	Control techniques	Audit procedures
BP-3.1 Outputs are appropriately defined by the management (form, sensitivity of data, user selectivity, confidentiality, etc)	C,A,V,CF	BP-3.1.1 Management has developed a reporting strategy that includes the following: • content and availability that are consistent with end users' needs, • sensitivity and confidentiality of data • appropriate user access to output data.	Inquire of management about a reporting strategy or policy. Obtain a copy of any formal reporting strategy or policy. Assess the adequacy of the strategy and related policies.
BP-3.2 Output generation and distribution are aligned with the reporting strategy.	C,A,V,CF	BP-3.2.1 Management has procedures in place to reasonably assure that content and availability of output and data are consistent with end users' needs, sensitivity, laws and regulations, and confidentiality of data and valid user access.	Inspect management procedures for defining and assigning output/reports. Select key output/reports in the area of audit scope and verify the user access to the output/reports.
		BP-3.2.2 Management has procedures in place to monitor replication of output data used in management reports or other communications within or outside the entity.	Inquire of management on the use of data output. Inspect selected management reports or other communication to verify the accurate replication of data. Verify that the user received appropriate authorization to use the data.
		BP-3.2.3 User access to output data is aligned with the user's role and confidentiality/sensitivity of information.	Review user access to selected output data and assess the appropriateness of access.
BP-3.3 System generated outputs/reports are reviewed to reasonably assure the integrity of production data and transaction processing.	C,A,V	BP-3.3.1 Management has identified key reports to track processing results.	Perform the following procedures for BP-3.3.1 to BP-3.3.3. Inquire of user management and personnel to determine the key reports used to track processing results. Obtain and inspect reports identified by management in the above test to determine whether the reports exist and are reviewed on a timely basis.
		BP-3.3.2 Management has documented procedures to (1) review processed results, where applicable and (2) monitor, in a timely manner, overrides applied to transactions, including maintenance of override logs.	

Control activities	Control Object.	Control techniques	Audit procedures
		BP-3.3.3 Procedures are in place to review critical output data or control reports on a timely basis.	Observe and inspect existing procedures for reviewer overrides or bypassing data validation and error routines. If an override log exists, observe and inspect to determine whether adequate review and follow-up of overrides is performed.
BP-3.4 Output/ reports are in compliance with applicable laws and regulations.	C,A,V,CF	BP-3.4.1 Output reports for compliance with applicable laws and regulations are accurate, complete	Inspect a selection of output/reports for compliance with applicable laws and regulations. Identify laws and regulations that are to be complied with and verify that the reports are in compliance.
BP-3.5 Access to output/reports and output files is based on business need and is limited to authorized users.	CF	BP-3.5.1 Access to reports is restricted to those users with a legitimate business need for the information.	Perform the following procedures for BP-3.5.1 to BP-3.5.2. Select output/reports and output files from the audit area and inspect application access (if the output can be accessed on-line or other electronic form) or inspect distribution to determine whether the user has appropriate level of security clearance and is authorized to access.
		BP-3.5.2 Users should have appropriate authorization for accessing reports, including the appropriate level of security clearance, where applicable.	

Source: GAO.

Critical Element BP-4. Master Data Setup and Maintenance is Adequately Controlled

Master data are the key information that is constant and shared with multiple functions, such as a customer master record, which contains the customer number, shipping address, billing address, key contact and payment terms. Most applications use the following two types of master data:

Configurable master data or business rules are defined in an application module and used by end users, but cannot be changed directly in production. Purchase order release procedures (requiring approval) and payment terms are examples of business rules.

Business master data are master data created in production based upon the criteria designed to capture essential standing data, for example, customer and vendor master data.

Master data are, usually, entered once and are shared among various application modules. Also, common data fields may be used by the application several times over a period of time until the master data is no longer valid because of termination of a contractual agreement or data owner decision.

Three key control areas specific to master data controls are the controls related to design and configuration of master data (preventive), the procedures external to the system (detective and preventive), and the monitoring of master data design compliance (detective). Master data is also subject to access controls (activities to create and maintain master data are controlled by access privileges) discussed in AS-2.

The three key steps in master file setup and maintenance are:

- Implementing an effective design of master data elements
- Establishing master data maintenance procedures, including approval, review, and adequate support for changes to master data
- Implementing an effective auditing and monitoring capability

Implementing an effective design of master data elements

Master data elements should be designed to minimize the risk of erroneous master data. The effectiveness of master data design can be affected by the following:

- Centralized versus decentralized maintenance – centralized master data maintenance provides a greater control over creation and change of master data. It could, however, delay the process. Since most applications provide field or functional level access, it is possible for key data to be centrally maintained and functional specific data maintained by a unit. For example, vendor master data can be segmented into purchasing data and finance data, separately maintained by purchasing and finance departments, respectively.

- Partial edit – Master data maintenance may be controlled by rules that can be configured to prevent changes to certain areas of data, or key fields within a record.

- Numbering – System-assigned internal numbering is generally considered to be lower risk than external numbering, however, management can choose to use external numbering (to match numbers from an external system) and can choose naming conventions appropriate to its use. Adequate procedures should be in place to reasonably assure compliance with management's policy on numbering/naming conventions.

- Ownership – Ownership should be clearly identified.

Establishing master data maintenance procedures, including approval, review, and adequate support for changes to master data

As discussed earlier, master data are much more static than transaction data, which may be created and updated on a daily basis by a wide range of users. Master data maintenance, therefore, should be the domain of fewer users than those responsible for updating transaction data.

Because Master Data serves as the basis for transaction processing, it is critical that controls exist over the integrity and quality of the data. An erroneous Master Data record will compromise the integrity of whatever transactions use the field values stored in the master data. Characteristics of erroneous master data elements include, but are not limited to, duplicate names, invalid records, duplicate addresses, improper address formats, incomplete or inaccurate address information, unpopulated data fields and other data formatting inconsistencies between the business rules and the data sets.

Because it is foundational in nature and may have a broad impact on transactional data, master data should be carefully controlled through reviews and approval by designated data owners. To reasonably assure an appropriate level of control, a combination of automated, preventive controls and manual, detective controls is recommended.

Controls over master data include controls related to:

- changes to the configuration of the master file,
- validity of all master file records,
- completeness and validity of master file data,
- consistency of master data among modules, and
- approval of changes to master file data.

Implementing an effective auditing and monitoring capability

As part of the control of master data, the organization should have an effective auditing and monitoring capability which allows changes to master data records to be recorded and reviewed where necessary. This monitoring may be done either as part of ongoing activities or through separate “master data audits”. In either case, the most important factor supporting the capability is that activity is properly captured and maintained by an automated logging mechanism.

Depending on the level of risk associated with the data, the type and frequency of monitoring may vary. Ideally, monitoring should be built into the normal, recurring responsibilities of the data owner. Because audits take place after the fact, problems often will be identified more quickly by ongoing monitoring routines.

Ongoing monitoring may include obtaining approval prior to changes, or verifying the accuracy of changes on a real-time basis.

For federal systems, NIST SP 800-53 includes the following controls related to master data setup and maintenance:

SI-9	Information Input Restrictions
SI-10	Information Accuracy, Completeness, Validity, and Authenticity
SI-11	Error Handling

Control Techniques and Suggested Audit Procedures for Critical Element BP-4

Table 47. Control Techniques and Suggested Audit Procedures for Critical Element BP-4. Master Data Setup and Maintenance is Adequately Controlled

Control activities	Control techniques	Audit procedures
BP-4.1 Master data are appropriately designed.	BP-4.1.1 An entry is required in all key fields, such as address and account number.	Inspect master data configuration for required field values.
	BP-4.1.2 Null values or invalid values are not accepted in the required fields.	Observe user input of invalid values, or blank values, and note any exceptions.
	BP-4.1.3 For financial applications, account assignments (asset, liability, income and expense) are accurately defined.	Inspect master data configuration for account groups and assignments.
BP-4.2 Changes to master data configuration are appropriately controlled.	BP-4.2.1 Policies and procedures are established for master data configuration management, which include change rules that identify data fields that are excluded from changes (for example, master data number).	Review the master data polices and procedures for change management.
	BP-4.2.2 Changes to the master data design are approved by appropriate personnel	Inspect a selection of change requests and verify that appropriate approvals are obtained. Inspect master data configuration for change rules, if the rules are configured. If the change rules are automatic, then the user should be prevented from making unauthorized configuration changes.
	BP-4.2.3 Changes to the master data records should be limited to non-key fields.	Inspect a selection of master data change reports and verify that changes are limited to management-defined non-key fields.
BP-4.3 Only valid master records exist.	BP-4.3.1 Master data is reviewed on a regular basis, duplicates are identified and removed or blocked, and unused data is identified and blocked.	Inquire of management regarding their master data review procedures. Inspect policies and procedures on master data review, including duplicate master data entry and resolution, and unused master records. Inspect evidence of the most recent management review and action. Inspect list of accounts/records blocked for posting or use. Inspect duplicate master record report and management's use of it.
	BP-4.3.2 Automatic application controls (duplicate checks, system warnings) are configured to prevent and/or identify potential duplicate master records.	Inspect application configuration for automatic controls and determine whether the controls prevent erroneous processing or simply warn of potential errors.

Control activities	Control techniques	Audit procedures
BP-4.4 Master data are complete and valid.	BP-4.4.1 Policies and procedures for master data maintenance are documented and include: • approval requirements; • data quality criteria; • data owner; • supporting documents; • backup procedures in the event of a disaster or data corruption error; • Archival policies.	Inspect master data maintenance policies and procedures for appropriateness. Inquire of responsible personnel.
	BP-4.4.2 The master data maintenance process includes a formal create/change request from the requestor and approval from the data owner.	Select master data created or changed, and inspect relevant documentation, noting appropriate approvals and compliance with policies and procedures. Obtain system report of users with master data maintenance access. For a selection of users with conflicting responsibilities, inspect user profiles noting evidence of segregation of duty consideration and review when conflicts are noted.
	BP-4.4.3 Segregation of duties conflicts are considered and resolved before providing access to master data transactions.	Inspect procedures for identifying, segregation of duty exceptions, and review compliance.
	BP-4.4.4 Edit reports are reviewed by appropriate data owners on a periodic basis to review new master data and changes made to existing master data.	Inspect evidence of proper review of edit reports by owners
BP-4.5 Master data are consistent among modules.	BP-4.5.1 Periodic review and reconciliation procedures are in place to ensure that master data are consistent between different application modules.	Inspect evidence of management reconciliation and review for effectiveness. Through inquiry and inspection, determine whether the frequency of management reconciliation of master data is appropriate.
BP-4.6 Master data additions, deletions, and changes are properly managed and monitored by data owners.	BP-4.6.1 Master data policies and procedures require data owners to be responsible for the creation, deletion, and change of master data and also changes to data characteristics.	Review policies and procedures and inquire of data owner concerning application of specific monitoring procedures.
	BP-4.6.2 Data owners monitor master data design changes, and approve and monitor creation, deletion and changes to master data on a regular basis.	Obtain and inspect evidence of monitoring by data owners, including related reports. Inquire of management regarding ongoing monitoring of master data changes. Obtain and inspect evidence of management review of master data design changes, and determine whether changes are approved and reviewed.
BP-4.7 As appropriate, the confidentiality of master data is adequately controlled	BP-4.7.1 Management implements adequate controls to protect the confidentiality of master data, as appropriate.	Assess the adequacy of management controls over confidentiality of master data. Coordinate this step with Critical Element AS-2 *Implement effective application access controls.*

Source: GAO.

4.3. Interface Controls (IN)

Interface controls consist of those controls over the a) timely, accurate, and complete processing of information between applications and other feeder and receiving systems on an on-going basis, and b) complete and accurate migration of clean data during conversion.

Interfaces[116] result in the structured exchange of data between two computer applications, referred to in this section as the source and target systems or applications. These applications may reside on the same or different computer systems that may or may not reside in the same physical environment. Interfaces are periodic and recurring in nature. Interface controls may be performed manually or automated, scheduled or event-driven, electronically or on paper. One interface transfers one business data object and is one-directional; e.g. vendor master outbound, sales order inbound, etc. Interfaces are never bi-directional, even if technically there may be handshaking, back-and-forth reconciliation, etc.

This section focuses on the scope of and controls for interfaces, governing specifically the extraction, transformation, and loading of data between two applications. The data input, validation, and output controls within an application are addressed in the preceding business process control sections. To the extent that data input is obtained from other applications, auditor's assessment of this data should be coordinated with data input controls discussed in section 4.2 of this chapter.

The interface process, including conversions, can be broken down into the following seven separate components:

1. Interface strategy – A documented strategy is developed to keep data synchronized between source and target application. The strategy should include an explanation of each interface, the interface method chosen (manual or batch, etc.), the data fields

[116]In contrast, system interconnections refer to the direct connection of two or more IT systems for the purpose of sharing data and other information resources.

being interfaced, the controls to reasonably assure that the data is interfaced completely and accurately, timing requirements, definition of responsibilities, on-going system balancing requirements, and security requirements.

2. Data Export / Extraction –The information needs of the target application (key information fields, ID fields and cross-reference fields) should be fully understood and documented. If the information needs are not fully understood, all relevant data may not be extracted. In addition, appropriate procedures/should be in place concerning the format, quality, cut-off, and audit trails related to source data.

    a. The format of the source data should be checked to reasonably assure that the information is available, accurate and at the appropriate level of detail. If the source data quality is poor, the data may not be able to be interfaced.

    b. Data processing should be cut-off as of a specific time to reasonably assure that the data is extracted for the proper period.

    c. Sufficient audit trails should exist for the source application, such that once the data is extracted, the original audit trail remains. For instance, invoices can be traced back to the applicable purchase order in the source system.

3. Data Mapping / Translation – Data mapping and translation is the process of converting source data from the source application format to the target application format. If the data is not entered in the target application in exactly the same way as it is expected, target application edit and validation checks may be rendered ineffective.

4. Data Import – Data import is the process of loading source data into the target application. Appropriate controls, such as database indicies that enforce uniqueness, should be in place to prevent duplicate processing.

5. Error Handling and Reconciliation procedures – The procedures developed to reasonably assure that all transactions are accounted for and that all errors are identified, isolated, analyzed, and corrected in a timely manner.

6. Job definition, Scheduling and Event Triggering – Due to business requirements, it may be necessary to initiate an interface daily, weekly, monthly, or after a triggering event. "Triggering events" are used to start interface processing based on specific criteria, such as date/time or completion of another event. Interfaces may run across multiple platforms. Therefore, interface jobs may need to be scheduled across platforms. Visibility of these jobs may be necessary in a single location by the system operators. Restart and recovery procedures should exist.

7. Data Handling – Original interfaced data should be preserved for re-execution of the interface, if needed. Controls should be established to support the confidentiality and proper handling of sensitive data. Access to interface data and processes should be properly restricted.

The objectives of interface controls are to:

- Implement an effective interface strategy and design
- Implement effective interface processing procedures, including
    - interfaces are processed completely, accurately and only once in the proper period.
    - interface errors are rejected, isolated and corrected in a timely manner.
    - access to interface data and processes are properly restricted. Data is reliable and obtained only from authorized sources

For federal systems, NIST SP 800-53 includes the following controls related to interface:

SI-9	Information Input Restrictions
SI-10	Information Accuracy, Completeness, Validity, and Authenticity
SI-11	Error Handling

Critical Elements

The critical elements for interface controls are:

IN-1 Implement an effective interface strategy and design
IN-2 Implement effective interface processing procedures

Because weaknesses in interface controls can affect the achievement of all of the control objectives (completeness, accuracy, validity, and confidentiality) related to applications data, the control activities in the control tables for interface controls do not contain reference to specific control objectives.

Critical Element IN-1. Implement an effective interface strategy and design.

The purpose of an interface strategy is to describe, at a high level, how the interfaces are implemented between two applications. The interface strategy is the basis for the interface design and scope. The interface strategy includes an explanation of each interface, the interface method chosen (manual or batch, etc.), the data fields being interfaced, the controls to reasonably assure that the data is interfaced completely and accurately, timing requirements, assignment of responsibilities, on-going system balancing requirements, and security requirements. Interface design uses guidelines set by the strategy and provides specific information for each of the characteristics defined in the strategy.

Control Techniques and Suggested Audit Procedures for Critical Element IN-1

Table 48. Control Techniques and Suggested Audit Procedures for Critical Element IN-1. Implement an effective interface strategy and design.

Control activities	Control techniques	Audit procedures
IN-1.1 An interface strategy is developed for each interface used in the application.	IN-1.1.1 An interface strategy exists for each interface that includes the interface method, data fields being interfaced, controls to reasonably ensure a complete and accurate interface, schedule, assignment of responsibilities, system balancing requirements and security requirements.	Obtain a list of all interfaces to and from the application audited. Inspect the interface strategy document noting the details of each interface and determine whether it contains appropriate information.
IN-1.2 An interface design is developed for each interface used in the application that includes appropriate detailed specifications.	IN-1.2.1 An interface design exists for each interface and includes appropriate specifications based on the business requirements, including: • validations and edits • ownership of the interface process • error correction and communication methods	Inspect interface design documents of each interface and determine whether it contains appropriate information.
	IN-1.2.2 Mapping tables are used to convert data from the source system to the target system. Controls are in place to reasonably assure that mapping tables are only changed when authorized and that historical data on mappings is retained with the previous mapping table.	Determine whether the interfaces use mapping tables. Verify that controls over mapping tables will be established.
	IN-1.2.3 If mapping tables are not used, appropriate edits and validations are present in the source system.	Review the edits and validations in the source system to determine whether they are appropriate and perform tests to assess their effectiveness.

Source: GAO.

Critical Element IN-2. Implement effective interface processing procedures

Because there may be several methods that are used to transfer data from one system to another, the auditor should understand the procedures that are used for each interface, including:

- Who is the owner of the interface? Who initiates the process?
- How is the data transferred from the source application?
- How often are the interface programs run?
- How does the target system get the notification of an interface?
- Where are the errors corrected - in the source or target system?

Controls surrounding interface processing should reasonably assure that data is transferred from the source system to target system completely, accurately, and timely. The processing routines should

include balancing by ensuring the opening balance control totals plus processed transactions equal the closing balance of control totals. Both the applications (source and target) are typically designed with controls so that data are controlled by the use of control totals, record counts, batching run totals, or other data logging techniques. These types of controls are commonly referred to as balancing controls. Records or data produced by one application may be used in another application and may have dependencies that are based upon the sequential processing of data. The entity should have effective procedures to reconcile control information between the source and target applications.

During interface processing, all data may not be processed completely or accurately as a result of errors or inconsistencies in data, system interruptions, communication failures, or other events. To identify these instances, a monitoring capability should be implemented. The objective of the monitoring function is to reasonably assure that data are accurately processed through the interface and that no data are added, lost, or altered during processing. Control techniques include:

- If the interface is "run" on a regular schedule to process data, either manually or automatically, documented procedures explain how this is performed, including controls in place to reasonably assure that all processing was completed.

- An interface processing log is maintained and reviewed for unusual or unauthorized activity.

- The interface processing log, or another log or report, is used to document any errors or problems encountered during processing. Types of information that should be considered for logging are descriptions of any errors encountered, dates identified, any codes associated with errors, any corrective action taken, date and times corrected.

- Procedures are in place to use the correct generation/cycle of files for processing. This may include the generation of backup files from processing to be used for disaster recovery.

- Audit trails are generated during processing. These audit trails should be logs or reports that contain information about each interface. Data that should be included are who initiated each of the interfaces, the data and time of the run, the source system, and the results.

- Procedures are implemented to identify and correct any errors that occur during the interface run. Error handling procedures during data entry should reasonably assure that errors and irregularities are detected, reported, and corrected. Errors should be corrected in the source system and reprocessed through the next run. Management should have procedures in place to reasonably assure that error logs are used to timely follow-up on and correct unresolved data errors and irregularities.

In addition, to the above, change control procedures should be implemented over the interfaced applications to prevent unauthorized and potentially inaccurate changes to fields and values. The change control procedures should include

- establishing formal change requests, authorization, and approval processes,

- testing all changes both scheduled and emergency ones, and

- logging all changes and routinely reviewing them to ensure compliance with established procedures.

Control Techniques And Suggested Audit Procedures For Critical Element IN-2

Table 49. Control Techniques And Suggested Audit Procedures For Critical Element Critical Element Critical Element IN-2. Implement effective interface processing procedures.

Control activities	Control techniques	Audit procedures
IN-2.1 Procedures are in place to reasonably assure that the interfaces are processed accurately, completely and timely	IN-2.1.1 Procedures include a complete list of interfaces to be run, the timing of the interface processing, how it is processed and how it is reconciled. If system interconnections are used, procedures should address requirements for an Interconnection Security Agreement and Memorandum of Understanding.	Inspect documentation of interface processing procedures and, if applicable, Interconnection Service Agreements and Memorandums of Understanding. Observe interface processing into the application.
	Timing for processing of the interface has been determined and is followed.	Determine whether data and files from interface activities are processed according to the stated policies and in the proper accounting period.
	A positive acknowledgement scheme is used to ensure that files sent from a source system are received by the target system (i.e., a "handshake" between the systems so that files are not skipped or lost).	Determine whether all files sent from the source system are received and acknowledged by the target system.
IN-2.2 Ownership for interface processing is appropriately assigned.	IN-2.2.1 Responsibility for processing the interface and correcting any errors has been assigned to a user from the source and to a user of the target system. Actual processing may involve a technical person, if the interface is processed via an electronic media, such as a tape.	Identify which users are assigned responsibility for the interfaces. Evaluate whether an appropriate level of resources has been assigned to maintain interfaces.
	IN-2.2.2 The files generated by an application interface (both source and target) are properly secured from unauthorized access and/or modifications.	Assess whether appropriate security is in place for all access points to the interface data are secure from unauthorized use. Identify individuals that will be responsible for providing security surrounding the interfaces.
	IN-2.2.3 Users who are processing interfaces are able to monitor the status of interfaces.	Assess whether proper access is assigned to the appropriate individuals for the monitoring of the interface status and that such individuals have access to appropriate information to monitor the status of the interface.
IN-2.3 The interfaced data is reconciled between the source and target application to ensure that the data transfer is complete and accurate.	IN-2.3.1 Reconciliations are performed between source and target applications to ensure that the interface is complete and accurate. Control totals agree between the source and target systems. Reports reconcile data interfaced between the two systems and provide adequate information to reconcile each transaction processed.	Inspect reports or other documents used to reconcile interface processing between source and target applications and review their content and frequency for appropriateness.

Control activities	Control techniques	Audit procedures
IN-2.4 Errors during interface processing are identified by balancing processes and promptly investigated, corrected and resubmitted for processing.	IN-2.4.1 Management maintains a log for interface processing. The log accounts for errors and exceptions, as well. Exception/error reports are produced, reviewed, and resolved by management on a regular basis, including correction and resubmission, as appropriate.	Through inquiry of management and review of logs, determine whether errors are properly handled. Assess the appropriateness of the frequency that exception reports are reviewed (daily, weekly, etc). Inspect evidence of such reviews having been performed.
IN-2.5 Rejected interface data is isolated, analyzed and corrected in a timely manner.	IN-2.5.1 Error and correction facilities are utilized to track and correct errors in interface data.	Assess the adequacy of procedures in place to properly correct any rejected transactions. Inquire about procedures applied with individuals responsible for identifying and correcting errors and inspect evidence that rejected data is properly processed timely basis.
	IN-2.5.2 A mechanism is used to notify users when data is rejected (for example, an e-mail message may be sent to the user). These messages should repeat daily until they are corrected.	Determine whether error messages are generated and promptly reviewed for all rejected data and are maintained until corrected.
	IN-2.5.3 Audit trails are used to identify and follow-up on interface errors. The corrections to interface errors are included in the audit trail.	Determine whether appropriate audit trails are generated, reviewed and maintained.
IN-2.6 Data files are not processed more than once.	IN-2.6.1 Interfaces files are automatically archived or deleted from the production environment after processing.	Inspect a selection of archived interface documents and verify the date and time of processing. Observe the interfaces that are in process and inspect evidence that interface files were not processed before.

Source: GAO.

4.4 Data Management System Controls (DA)

Applications that support business processes typically generate, accumulate, process, store, communicate and display data. Applications which handle significant volumes of data often employ data management systems to perform certain data processing functions within an application. Data management systems use specialized software which may operate on specialized hardware. Data management systems include database management systems, specialized data transport/communications software (often called middleware), cryptography used in conjunction with data integrity controls, data warehouse software and data reporting/data extraction software. Many of the data input and processing controls,

such as edit checks, existence checks and thresholds described in previous sections are implemented in functions of data management systems. These types of controls implemented in data management systems are often referred to as business rules.

Critical Element DA-1. Implement an Effective Data Management System Strategy and Design

When assessing the effectiveness of application controls, the auditor should evaluate functions of data management systems specific to the business processes under review, in addition to the general controls described in Chapter 3. When auditors are evaluating application security plans and independently assessing risk, consideration of the risk inherent to the data management system "layer" in the application architecture is important. Necessarily, multiple access paths must exist into the data and the business rules that reside in the data management system layer to facilitate the operation and administration of the application. In most large scale and/or high performance applications, various components of data management systems reside on different servers which often employ various operating systems and hardware technologies. The auditor should obtain an understanding of the interconnected combination of data management technologies and appropriately consider related risks.

Understanding the logical design and physical architecture of the data management components of the application is necessary for the auditor to adequately assess risk. In addition to supporting the data storage and retrieval functions, it is typical for applications to employ data management systems to support operational aspects of the application, such as the management of transient user session state data, session specific security information, transactional audit logs and other "behind the scenes" functions that are essential to the application's operation. Controls associated with these types of functions can be critical to the security of the application.

The following highlights certain key concepts the auditor considers when assessing controls over a data management systems, including database management systems, middleware, cryptography, data warehouse, and data reporting/data extraction software.

Key Concepts - Database Management Systems

Authentication/Authorization

Controls in a data management system should include consideration of the access paths to the data management system. The access paths should be clearly documented and updated as changes are made. Generally access to a data management system can be obtained in three ways, via:

- Directly, via the database management system;
- Through access paths facilitated by the application; or
- Through the operating system(s) underlying the database management system.

Data management systems have built in privileged accounts that are used to administer and maintain the data management system. The auditor's objective is to determine whether appropriate controls are in place for securing these privileged accounts. Such controls include, but are not limited to:

- Strong password usage or other authentication controls;
- Highly restrictive assignment of personnel to these accounts;
- Enforcement of unique accounts for each administrator; and
- Effective monitoring of privileged account use.

In addition to privileged accounts, the auditor should obtain an understanding of the role the data management system plays in authentication and authorization for the application. The data management system will also contain user accounts related to the application.

Generally, there are two methods of authentication using a data management system. In the first scenario, the application uses a generic ID to authenticate to the database on behalf of end-users. These generic IDs should have their access privileges carefully scoped to only provide access to what the highest level of end-user

is permitted to access. There should be a limited number of generic IDs within the database supported by well-documented and carefully monitored control procedures. In the second scenario, the application passes the user ID to the database and uses accounts assigned to each end-user to authenticate to the database. Depending upon the size of the application, there could be a large number of user accounts stored within the database management system. In either case, the auditor should review the account and password policies relevant to the database management system.

There may be situations where authentication to the data management system is done through the operating system. The auditor should, in such instances, coordinate testing of general controls related to the operating system.

There are two major types of database management systems in use, hierarchical and relational databases. Hierarchical databases, such as IBM's IMS, have a heritage near the beginning of computer systems; however they are still used in some modern applications. Each different hierarchical database product is proprietary in design and implementation. If achieving audit objectives involving hierarchical databases is a requirement, staff with knowledge of the specific database product will be necessary. Relational databases (such as Oracle, DB2, and SQL-Server) share a common design based on relational algebra and a common data access method, called the Structured Query Language (SQL). While there are differences in the implementation of the different relational database products, they are similar enough that staff should be able to perform audit work in most relational database systems with a common skill set. The discussion in this chapter will focus on relational database systems.

SQL Commands

There are two categories of commands available through SQL, data definition language statements (DDL) and data manipulation language statements (DML). DDL statements are used to define and alter the structures or objects that contain and support access to data. DDL statements are used to create, alter and delete objects such as tables and indices. DML statements are used to retrieve, add, change and delete data in existing database objects.

Application end-users would not typically need to use DDL statements.

System, Role, Object Privileges

A user *privilege* is a right to execute a particular type of Structured Query Language (SQL) server statement, or a right to access another user's object. As discussed below, there are two types of data management system privileges: system and object. *Roles* are created by users (usually administrators), and are used to group together privileges or other roles. They are a means of facilitating the granting of multiple privileges or roles to users.

System privileges relate to the ability of the user within the database to interact with the database itself using DDL statements and the ability to execute special functions. They include: CREATE, ALTER, DROP, CONNECT, and AUDIT, among many others. The auditor should examine the privileges granted to the users within the database. Typically administrator level accounts have extended system privileges while general user accounts should have limited access to system privileges.

Object privileges (through DML statements) allow the user to have access to the data within an object or allow the user to execute a stored program. These include SELECT, INSERT, DELETE, etc. Each type of object has different privileges associated with it. Examples of database objects include the following:

- **Tables** - A data structure containing a collection of rows (or records) that have associated columns (or fields). It is the logical equivalent of a database file.
- **Index** - A database object that provides access to data in the rows of a table, based on key values. Indexes provide quick access to data and can enforce uniqueness on the rows in a table.
- **Triggers** - A special form of a stored procedure that is carried out automatically when data in a specified table is modified. Triggers are often created to enforce referential integrity or consistency among logically related data in different tables.

- **Stored procedure** - A precompiled collection of SQL or other statements and optional control-of-flow statements stored under a name and processed as a unit. Stored procedures are stored within a database, can be executed with one call from an application, and enable user-declared variables, conditional execution, and other powerful programming features.

- **Views** - A virtual table generated by a query whose definition is stored in the database. For example, a view might be defined as containing three out of five available columns in a table, created to limit access to certain information. Views can be treated as tables for most database operations, including Select queries, and under some circumstances, Update, Insert, and Delete queries. Any operations performed on views actually affect the data in the table or tables on which the view is based.

The auditor should identify the objects within the data management system. The privileges that a user account has for each object should be reviewed. These privileges should be granted based on the functionality of the account.

A *role* groups several privileges and roles, so that they can be granted to and revoked from users simultaneously. A role should be enabled for a user before it can be used by the user. Predefined roles exist that can be leveraged, such as the data base administrator (e.g., DBA) role. The auditor should review the privileges granted to each role, and then analyze the role(s) granted to each user. Roles that grant high level access, or permit direct manipulation of data in the database are very sensitive. The auditor should evaluate controls over the use of such roles.

Stored Procedures

Stored procedures are programs that are compiled and stored in the data management system. These programs can be executed directly by a user or they can be called by other programs. Most data management systems are prepackaged with stored procedures that provide a structured and controlled method of administering the database. For example, when the administrator creates a user, the database management system uses a stored procedure to perform

the steps necessary to create that account. In addition custom stored procedures can be created to support additional functionality. The auditor should review stored procedures that interact with sensitive data within the database management system or provide access to the operating system.

Key Concepts – Middleware

Modern business applications frequently have user interface, data processing and data storage components hosted on different computer systems, often using different operating systems. Tying the components together is often accomplished through the use of specialized data transport/communications software commonly known as middleware. A popular example of this type of software is IBM's MQSeries. Middleware is used to connect applications together in varying architectures including interconnected systems and interfaced systems (as described in 4.3).

Middleware provides robust and potentially secure communications between application components through layers of functions across a series of host computer and network technologies. In modern application architectures, the "behind the scenes" processing and storage of information may be designed to *trust* upstream application components, such as user interfaces, due to the data security and data integrity services provided by the middleware. Middleware can be used to communicate both data and commands between systems using different operating systems. The communication links are often facilitated by *channels* created by the middleware. The channels can be configured so that they provide data security for the information flowing across the network, typically using cryptography, and data integrity through error detection and correction facilities. Middleware can also be an important aspect of an application's continuity of operations, by being configured to support multiple data paths to eliminate single points of failure across networks.

Middleware Controls

Middleware components can be found on many components in a network of computers used to support business applications. The location and function of these components should be well documented. Middleware carries not only data and system commands; it also typically facilitates the establishment of sessions between application components, often some level of application component logging onto a "back-end" host and database management system. An application's controls often rely on the encrypted transmission of information between components. This protection may be a function of the implementation of middleware, sometimes in conjunction with how the channels are configured across the network. As with other data management systems, auditors should identify the staff with administrative access privileges to middleware and verify that appropriate controls are in place.

Key Concepts – Cryptography

Modern business applications commonly employ one or more controls that rely on cryptographic services. Auditors should identify where these controls are deployed and verify that the technical implementations are appropriate and effective operational procedures are in place and being followed. The mere existence of cryptography provides no assurance that data controls are actually in place and effective. Due to the exacting nature of verifying the effectiveness of cryptographic controls, a detailed discussion is beyond the scope of this audit guidance. When it is necessary to evaluate the effectiveness of cryptographic controls to achieve audit objectives, the auditor should obtain the services of adequately qualified specialists.

Key Concepts – Data Warehouse, Data Reporting and Data Extraction Software

Increasingly, modern business applications are parts of larger business management information architectures. This is certainly

the case with ERP environments, but also is the result of interconnected and interfaced systems that supply information used for purposes beyond the application's primary business function. A common element in these combined business management information architectures is the data warehouse, which may be populated with both financial and non-financial business information. The data warehouse is often a separate data store, not operationally part of the entity's transactional systems. The reasons behind having this separate copy of business information can be multifold: separating the information eliminates potential performance issues associated with trying to use live transactional data for reporting; also the structure of the information in diverse business applications may be technically or logically incompatible with efficient information retrieval. When the auditor encounters a data warehouse, important questions related to audit objectives and system boundaries need to be addressed. Unless the data warehouse itself is the subject of the audit, the relevance to the audit objectives and potential risks created by the data warehouse need to be identified and evaluated. Since a data warehouse may represent a copy of information from other systems that are part of the audit, any data confidentiality concerns will likely need consideration. Additionally, the auditor may need to functionally understand how the entity uses the data warehouse. In a financial audit, the auditor may find that financial statements may be prepared, in part, from the data warehouse instead of directly from the general ledger.

A data warehouse typically exists to facilitate analysis and reporting from a large quantity of data. Supporting the efficient use of a data warehouse will often be specialized data reporting and data extraction software tools. The existence of these tools and data warehouses creates the potential for many different access paths to data. Depending on the control requirements of the data warehouse and the information it stores, the auditor may need to identify controls over how the data is populated, maintained, and accessed by both users and administrators. The software systems involved are often specialized and effective reviews may require the services of qualified specialists.

Segregation of Duties

Since data management systems are supported by one or more operating systems, the auditor should obtain an understanding of the role of the data management system administrators. There should be a distinct segregation between the data management system administrator and the operating system administrator. The operating system administrator may need access to the data management system, but should have limited access. Likewise, the data management system administrator may need access to the underlying operating system, but should have only the access necessary to manage the data management system functionality.

The auditor should also evaluate the segregation between the data management system administrator and personnel in charge of reviewing audit and transaction logs. The data management system administrator should not have access to the audit logs within the data management system. These logs should be reviewed by a security administrator.

There should also be a separation between the functional aspects of the data management system environments. Data management system access should be consistent with the functional separation of duties within the application environment. Users that are developers should have access to the development environment only, and consequently only the development data management system. Users that require access to production should only have access to the production data management system.

Control Techniques and Suggested Audit Procedures for Critical Element DA-1

Because weaknesses in data management controls can affect the achievement of all of the control objectives (completeness, accuracy, validity, and confidentiality) related to applications data, the control activities in the control tables for interface controls do not contain reference to specific control objectives.

Table 50. Control Techniques and Suggested Audit Procedures for Critical Element DA-1. Implement an effective data management system strategy and design

Control activities	Control techniques	Audit procedures
DA-1.1 Implement an effective data management system strategy and design, consistent with the control requirements of the application and data. The strategy addresses key concepts including: • database management, • middleware, • cryptography, • data warehouse, and • data reporting/data extraction.	DA-1.1.1 The physical and logical (in terms of connectivity) location of the data storage and retrieval functions are appropriate.	Inspect documentation of the design of the data management system(s) associated with the application.
	DA-1.1.2 The production data management system is effectively separated from non-production systems (such as testing and development) and other production systems with lesser control requirements.	Assess whether the production and non-production data management systems are effectively separated.
	DA-1.1.3 The database schema is consistent with access control requirements such that the organization of data and database-hosted functions correspond to the access limitations that need to be imposed on different groups of users.	Verify that all access paths to data and sensitive data management system administrative functions have been identified and are adequately controlled.
DA-1.2 Detective controls are implemented in a manner that effectively supports requirements to identify and react to specific system or user activity within the data management system and its related components.	DA-1.2.1 Logging and monitoring controls are in place at the data management system level which effectively satisfy requirements to accurately identify historical system activity and data access.	Identify the security events that are logged and determine whether logging is adequate. Assess the adequacy of controls to monitor the audit logs.
	DA-1.2.2 Real-time or near real-time controls are in place to detect abnormal activity and security events.	Assess the adequacy of controls to detect abnormal activity.
DA-1.3 Control of specialized data management processes used to facilitate interoperability between applications and/or functions not integrated into the applications (such as ad-hoc reporting) are consistent with control requirements for the application, data and other systems that may be affected.	DA-1.3.1 Data accuracy and completeness controls are in place and effective to correct and/or detect data anomalies.	Perform the following procedures for DA-1.3.1 to DA-1.3.2. Identify and obtain an understanding of specialized data management processes used to facilitate interoperability. Understand how system

Control activities	Control techniques	Audit procedures
	DA-1.3.2 The configuration of system connectivity that facilitates application to application and application to non-integrated functions is controlled to limit access appropriately.	interconnectivity is controlled with respect to data management systems. Assess the adequacy of controls over specialized management processes. Note: These procedures should be closely coordinated with tests of general controls related to the data management systems. Determine whether a periodic reconciliation process is implemented to ensure the data in a data warehouse matches the data from the source system.

Source: GAO.

Appendix I - Information System Controls Audit Planning Checklist

The auditor should obtain and document a preliminary understanding of the design of the entity's information system (IS) controls, including

- Understanding the entity's operations and key business processes,
- Obtaining a general understanding of the structure of the entity's networks
- Obtaining a preliminary understanding of IS controls.

In addition to this checklist, the auditor should obtain information from relevant reports and other documents concerning IS that are issued by or about the entity.

To facilitate this process, the following checklist has been developed as a guide for the auditor to collect preliminary information from the entity at the start of the audit. This checklist is intended as a starting point for collecting relevant IS control information. The information request can be tailored to the type of audit being performed. For example, an audit of application controls could be limited to the information needs listed in Sections I, II, and IV. The extent of the information requested from the entity will vary depending on whether this is a first year or follow-up review of IS controls. Also, as a result of the auditor's initial review and analysis of the information collected in this process, additional detailed information may need to be subsequently requested from the entity. The checklist is organized to request information on the entity's:

- organization and key systems/applications,
- prior audit reports/documents,
- IS general controls, and
- IS business process application level controls.

This appendix is downloadable as a Microsoft Word ® document on GAO's FISCAM web site at http://www.gao.gov/special.pubs/fiscam.html.

I. Organization and Key Systems/Applications

Understanding the entity's organization is a key to planning and performing the audit in accordance with applicable audit standards and requirements. Further, it helps to identify, respond to, and resolve problems early in the audit. Relevant information includes organizational structure, locations, use of contractors, key applications and IS platforms used to support them.

Document	Workpaper Reference
1. Entity's overall organizational chart with functional description of key components.	
2. Organizational charts that include functional description for security and IT components. Note: It is critical that the organizational relationships between management, information security, physical security, and computer operations are discernable.	
3. Name and functional description of relevant major applications, including functional owner, operating platform (including locations), operating system and version, and database management system and version. Note: FISMA requires agencies to maintain an inventory of all major systems.	
4. Name and functional description of relevant operating environments (e.g., general support systems (GSS)), including locations.	

Document	Workpaper Reference
5. List of contractors/third parties or other governmental entities that process information and/or operate systems for or on behalf of the entity. 6. Significant changes in the IT environment or significant applications implemented within the recent past (e.g., within 2 years) or planned within the near future (e.g., 2 years)	

II. Prior Audit Reports/Documents

The auditor generally gathers planning information through different methods, including previous audits, management reviews, and other documents. These reports often provide invaluable information on the effectiveness of IS controls and provides clues to areas of particular risk. Of specific interest are those reports/documents dealing with the IS control environment, including GSS and major applications. Relevant information in this area includes the following.

Document	Workpaper Reference
1. Internal or third party information system reviews, audits, or specialized testing (e.g., penetration tests, disaster recovery testing) performed during the last 2 years (e.g., IG, GAO, SAS 70 reports). 2. The entity's prior FISMA or equivalent entity reports on IS.	

Document	Workpaper Reference
3. The entity's annual performance and accountability report or equivalent reports (e.g., reports prepared under the Federal Financial Management Improvement Act of 1996 (FFMIA), Federal Managers' Financial Integrity Act of 1982 (FMFIA), Government Management and Reform Act (GMRA) and/or Accountability of Tax Dollars Act of 2002 (ATDA), as applicable). 4. Other reports by management, including privacy impact assessments and vulnerability assessments. 5. Consultant reports on IS controls.	

III. IS General Controls

General controls are the policies and procedures that apply to all or a large segment of an entity's information systems and help ensure their proper operation. General controls are applied at the entitywide, system, and business process application levels. The effectiveness of general controls at the entitywide and system levels is a significant factor in determining the effectiveness of business process application controls at the application level. General controls include security management, access controls, configuration management, segregation of duties, and contingency planning.

III.1 IS General Controls – Security Management

Security management provides a framework and continuing cycle of activity for managing risk, developing security policies, assigning responsibilities, and monitoring the adequacy of the entity's computer-related controls. The program should reflect the entity's consideration of the following critical elements for security

management – established security management program, periodic risk assessments, documented security policies and procedures, established security awareness training, and periodic management testing and evaluation of major systems. Other elements include implementing effective security-related personnel policies and ensuring that activities performed by external third parties are adequately secure. Relevant information for this control category includes the following.

Document	Workpaper Reference
1. Documentation of entity's security management program approved by OMB.	
2. Documented risk assessments for relevant systems (e.g., GSS and major applications).	
3. Certification and accreditation documentation or equivalent for relevant systems (e.g., GSS and major applications being reviewed).	
4. Documented security plans for relevant systems (e.g., GSS and major applications being reviewed).	
5. Entity performance measures and compliance metrics for monitoring the security processes.	
6. Management's plans of actions and milestones or their equivalent that identify corrective actions planned to address known IS weaknesses and status of prior year security findings.	

Document	Workpaper Reference
7. Entitywide policies and procedures governing • security management program, structure, and responsibilities, including system inventories • risk assessment • security awareness training for employees, contractors, third parties (including those in sensitive security and data processing position) and security-related personnel policies (including personnel hiring, reference and background checks, and job transfers and terminations), • performance of periodic tests and evaluations of IS controls and monitoring to ensure compliance with established policies and procedures (including copies of tests and evaluations performed (if not included under Section II "Prior Audit Reports/ Documents"), • security weakness remediation, and • security requirements and monitoring activities of third-party providers supporting specific application(s).	

III.2 IS General Controls – Access Controls

A basic management objective for any organization is to protect the resources that support its critical operations from unauthorized access. Organizations accomplish this objective by designing and implementing controls that are intended to prevent, limit, and detect unauthorized access to computing resources, programs, information, and facilities. Inadequate access controls diminish the

reliability of computerized information and increase the risk of unauthorized disclosure, modification, and destruction of sensitive information and disruption of service. Access controls include those related to protecting system boundaries, user identification and authentication, authorization, protecting sensitive system resources, audit and monitoring, and physical security. Relevant information for this control category includes the following.

Document	Workpaper Reference
1. High-level network schematic which identifies external network connections, inter- and intra-entity connections, contractor sites, and other external organizations. 2. Network schematic of all GSS (by site) that includes components such as: • internet presence, • firewalls, routers, and switches, • domain name servers, • intrusion detection systems, • critical systems, such as web and email servers, file transfer systems, etc. • network management systems • connectivity with other entity sites and other external organizations • remote access – virtual private networks and dial-in, and • wireless connections.	

Document	Workpaper Reference
3. Inventory of mid-level systems (Unix, Windows-based, etc.) supporting applications relevant to the audit. • operating systems/versions, • security software/versions, • list of systems/applications supported, and • data set naming conventions for the operating system, system configuration, utility software, applications, and security software. • documentation of basic security configuration settings, i.e. Windows-based, Unix, etc. 4. Inventory of mainframe systems including • operating systems/versions, • security software/versions, • IP addresses, • description and use of each LPAR configuration(production & non production),including list of user applications and software installed on each LPAR and description of any test or development activity in each LPAR. • data set naming conventions for the operating system, system configuration, utility software, applications, and security software, • identity of Exits and SVCs, including load library and module name, and • documentation of basic security configuration settings, i.e. RACF, Top Secret, or ACF2.	

Document	Workpaper Reference
5. Entitywide policies and procedures for • system boundaries • controlling remote access to entity information, including use of remote devices, • governing user and system identification and authentication, • requesting, approving, and periodically reviewing user access authorization, • restricting access to sensitive system resources (including system utilities, system software, and privileged accounts), • protecting digital and sensitive media, including portable media, • applying cryptography methods, if used, • monitoring mainframe, mid-level servers, and network systems for incidents, including management response and reporting on unusual activities, intrusion attempts, and actual intrusions, and • controlling physical security, including those concerning the granting and controlling of physical access to the data center and other IT sensitive areas. 6. Physical diagram of computer network and data center and other sensitive IT areas.	

III.3 IS General Controls – Configuration Management

Configuration management involves the identification and management of security features for all hardware and software components of an information system at a given point and systematically controls changes to that configuration during the system's life cycle. By implementing configuration management, organizations can ensure that only authorized applications and software programs are placed into production through establishing and maintaining baseline configurations and monitoring changes to these configurations. Configuration management includes

- overall policies and procedures,
- maintaining current configurations,
- authorizing, testing, and approving configuration changes,
- monitoring the configuration, updating software on a timely basis, and
- documenting and controlling emergency changes.

Relevant information for this control category includes the following.

Document	Workpaper Reference
1. Entitywide policies and procedures for: • configuration management, including the approval and testing of scheduled and emergency changes, and monitoring procedures to ensure compliance, • maintaining current configuration information, • authorizing, testing, approving, and tracking all configuration changes, • monitoring/auditing the configuration,	

Document	Workpaper Reference
• patch management, vulnerability scanning, virus protection, emerging threats, and user installed software, and • emergency changes. 2. Copy of System Development Life Cycle Methodology (SDLC). 3. Technical configuration standards for workstations, servers, related network components, mobile devices, mainframes, operating systems, and security software. 4. Description of configuration management software.	

III.4 IS General Controls- Segregation of Duties

Segregation of duties refers to the policies, procedures, and organizational structures that help ensure that no single individual can independently control all key aspects of a process or computer-related operation and thereby gain unauthorized access to assets or records. Often, organizations achieve segregation of duties by dividing responsibilities among two or more individuals or organizational groups. This diminishes the likelihood that errors and wrongful acts will go undetected, because the activities of one individual or group will serve as a check on the activities of the other. Effective segregation of duties includes segregating incompatible duties, maintaining formal operating procedures, supervision, and review. Relevant information for this control category includes the following.

Document	Workpaper Reference
1. Entitywide policies and procedures for • segregating duties. • periodically reviewing access authorizations. 2. Management reviews conducted to determine that control techniques for segregating incompatible duties are functioning as intended.	

III.5 IS General Controls – Contingency Planning

Contingency planning is critical to ensuring that when unexpected events occur, key operations continue without interruption or are promptly resumed and that critical and sensitive data are protected. Critical elements for contingency planning include: assessing the critical and sensitive computer activities and identifying supporting resources, taking steps to minimize damage and interruption, developing and documenting a comprehensive contingency plan, and periodically testing the contingency plan and adjusting it as needed. Relevant information for this control category includes the following.

Document	Workpaper Reference
1. Entitywide policies and procedures for: • assessing the availability needs of entity systems, • backing-up data, programs, and software, and	

Document	Workpaper Reference
• environmental controls, including emergency power, fire/smoke detection and response, hardware maintenance and problem management, alternate work sites, etc. 2. Documented contingency plan(s) and recent test results.	

IV. IS Business Process Application Level Controls

Business process application level controls are those controls over the completeness, accuracy, validity and confidentiality of transactions and data during application processing. The effectiveness of application level controls is dependent on the effectiveness of entitywide and system level general controls. Weaknesses in entitywide and system level general controls can result in unauthorized changes to business process applications and data that can circumvent or impair the effectiveness of application level controls. Application level controls are divided into the following four areas: application level general controls, business process controls, interface controls, and data management system controls. Relevant application specific information for this control category includes the following.

Document	Workpaper Reference
1. Certification and accreditation, or equivalent, documentation for relevant systems. 2. Documented security plans for relevant applications.	

Document	Workpaper Reference
3. Documented risk assessments for relevant applications. 4. High-level schematic of application boundaries that identifies controlled interfaces (e.g., gateways, routers, firewalls, encryption), to include: • internet presence, • firewalls, routers, and switches, • domain name servers, • intrusion detection systems, • critical systems, such as web and email servers, file transfer systems, etc. • network management systems • connectivity with other entity sites and other external organizations • remote access – virtual private networks and dial-in, and 5. Inventory of mid-level systems (Unix, Windows, etc.) supporting applications being reviewed. • operating systems/versions, • security software/versions, • list of systems/applications supported, • data set naming conventions for the operating system, system configuration, utility software, applications, and security software, and • documentation of basic security configuration settings, i.e. Windows-based, Unix.	

Document	Workpaper Reference
6. Inventory of mainframe systems supporting applications being reviewed, including • operating system/versions, • security software/versions, • IP addresses, • description of each LPAR configuration, including list of user applications and software installed on each LPAR, • data set naming conventions for the operating system, system configuration, utility software, applications, and security software, • identity of Exits and SVCs, including load library and module name. • documentation of basic security configuration settings, i.e. RACF, Top Secret, or ACF2. 7. Documented test and evaluation covering relevant applications. 8. Corrective action plan for identified IS application control weaknesses, including listing of weaknesses corrected. 9. Segregation of duties control matrices for job functions/responsibilities. 10. Application contingency plan and related disaster recovery, business continuity, and business resumption plans, including test results. 11. Documentation on data validation and edit checks, including auditing and monitoring processes.	

Document	Workpaper Reference
12. Documentation describing interface strategy between applications, including both manual and automated methods. 13. Documentation describing data management system used, including access paths to this system, privileged accounts, and authentication and authorization processes. 14. Policies and procedures for relevant application(s) being reviewed that govern • operation of application controls, • security and awareness training for employees and contractors, • granting user application access, • hiring, including reference and background checks, and job transfers and terminations, • security requirements and monitoring activities of third-party providers supporting relevant applications. • application user identification and authentication at the application level, • requesting and granting user access authorization to relevant applications, • collection, review, and analysis of access activities for unauthorized or inappropriate access to relevant applications,	

Document	Workpaper Reference
• configuration management process at the application level, including the approval and testing of scheduled and emergency application program changes and procedures to ensure compliance, • backing-up relevant application data and programs, • approval and review of data input, and • master file data configuration management and maintenance.	
15. Documentation describing system output, format of the output, and controls over the output.	

Appendix II - Tables for Summarizing Work Performed in Evaluating and Testing General and Business Process Application Controls

These tables are provided for the auditor's use in performing the audit. They are a consolidation of the tables of critical elements, control activities, control techniques, and related suggested audit procedures that are included after the discussion of each critical element. To reduce documentation and allow the tables to be tailored to individual audits, the tables are downloadable as Microsoft Word® documents from GAO's FISCAM web site at http://www.gao.gov/special.pubs/fiscam.html

These tables can be used as a guide during initial interviews and to document the preliminary assessment of controls. As the audit progresses, the auditor can continue to use the electronic version of the tables to document controls evaluated and tested, test procedures performed, conclusions, and supporting work paper references.

Note: The first page of the table is provided below for illustration purposes.

General Controls

Table 3. Security Management

Critical element and control activity	Control technique	Audit procedure	Entitywide level conclusion/ reference	System level conclusion/ reference	Application level conclusion/ reference	Overall conclusion/ reference
SM-1. A security management program has been established						
SM-1.1. A security management program is developed, documented, approved, and implemented.	SM-1.1.1. An entitywide security management program has been developed, documented, and implemented. It covers all major facilities and operations, has been approved by senior management and key affected parties, covers the key elements of a security management program: • periodic risk assessments • adequate policies and procedures • appropriate subordinate information security plans • security awareness training • management testing and evaluation • remedial action process	Review documentation supporting the entitywide security management program and discuss with key information security management and staff. Determine whether the program: • adequately covers the key elements of a security management program • is adequately documented, and • has been properly approved. Determine whether all key elements of the program are implemented. Consider audit evidence obtained during the course of the audit.				

Appendix III - Tables for Assessing the Effectiveness of General and Business Process Application Controls

The tables in this appendix are provided for the auditor's use in recording the control effectiveness for each critical element in each control category, as well as formulating an overall assessment of each control category. Judging control effectiveness should be based on the results of audit work performed and assessments of control effectiveness for specific control techniques, as summarized in Appendix II. After completing Appendix III, the auditor should prepare a narrative summarizing the control effectiveness for general and business process controls. The general control narrative should also state whether or not audit work should be conducted to determine the reliability of business process controls at the application level. These tables are downloadable as Microsoft Word® documents from GAO's FISCAM web site at http://www.gao.gov/special.pubs/fiscam.html

General Controls

Security Management

Critical elements	Are controls effective?			Comments on control effectiveness	Work paper references
	Yes	No	Partially		
SM-1. Establish a security management program					
SM-2. Periodically assess and validate risks					
SM-3. Document security control policies and procedures					
SM-4. Implement effective security awareness and other security-related personnel policies					
SM-5. Monitor the effectiveness of the security program					

Critical elements	Are controls effective?			Comments on control effectiveness	Work paper references
	Yes	No	Partially		
SM-6. Effectively remediate information security weaknesses					
SM-7. Ensure that activities performed by external third parties are adequately secure					
Overall assessment of security management					

Access Control

Critical elements	Are controls effective?			Comments on control effectiveness	Work paper references
	Yes	No	Partially		
AC-1. Adequately protect information system boundaries					
AC-2. Implement effective identification and authentication mechanisms					
AC-3. Implement effective authorization controls					
AC-4. Adequately protect sensitive system resources					
AC-5. Implement an effective audit and monitoring capability					
AC-6. Establish adequate physical security controls					
Overall assessment of access controls					

Configuration Management

Critical elements	Are controls effective?			Comments on control effectiveness	Work paper references
	Yes	No	Partially		
CM-1. Develop and document CM policies, plans, and procedures					
CM-2. Maintain current configuration identification information					
CM-3. Properly authorize, test, approve, and track all configuration changes					
CM-4. Routinely monitor the configuration					
CM-5. Update software on a timely basis to protect against known vulnerabilities					
CM-6. Appropriately document and approve emergency changes to the configuration					
Overall assessment of configuration management					

Segregation of Duties

Critical elements	Are controls effective?			Comments on control effectiveness	Work paper references
	Yes	No	Partially		
SD-1. Segregate incompatible duties and establish related policies					
SD-2. Control personnel activities through formal operating procedures, supervision, and review					
Overall assessment of segregation of duties					

Contingency Planning

Critical elements	Are controls effective?			Comments on control effectiveness	Work paper references
	Yes	No	Partially		
CP-1. Assess the criticality and sensitivity of computerized operations and identify supporting resources					
CP-2. Take steps to prevent and minimize potential damage and interruption					
CP-3. Develop and document a comprehensive contingency plan					
CP-4. Periodically test the contingency plan and adjust it as appropriate					
Overall assessment of contingency planning					

Business Process Application Level Controls

Application Security

Critical elements	Are controls effective?			Comments on control effectiveness	Work paper references
	Yes	No	Partially		
AS-1. Implement effective application security management					
AS-2. Implement effective application access controls					
AS-3. Implement effective configuration management					
AS-4. Segregate user access to conflicting transactions and activities and monitor segregation					
AS -5. Implement effective application contingency planning					
Overall assessment of application security					

Business Process Controls

Critical elements	Are controls effective?			Comments on control effectiveness	Work paper references
	Yes	No	Partially		
BP-1 Transaction data input is complete, accurate, valid, and confidential					
BP-2. Transaction data processing is complete, accurate, valid, and confidential					
BP-3. Transaction data output is complete, accurate, valid, and confidential					
BP-4. Master data setup and maintenance is adequately controlled					
Overall assessment of business process controls					

Interface Controls

Critical elements	Are controls effective?			Comments on control effectiveness	Work paper references
	Yes	No	Partially		
IN-1. Implement an effective interface strategy and design					
IN-2. Implement effective interface processing procedures					
Overall assessment of interface controls					

Data Management System Controls

Critical elements	Are controls effective?			Comments on control effectiveness	Work paper references
	Yes	No	Partially		
DA-1. Implement an effective data management system strategy and design					

Assessment(s) on control effectiveness involving cross-cutting controls issues:

NOTE: In assessing the effectiveness of general and business process application controls, the auditor may find situations where weaknesses identified solely in a specific control category (e.g., contingency planning) may not reach the level that would justify concluding controls to be ineffective for that particular category. However, when the auditor considers control weaknesses identified in separate control categories collectively, it may justify concluding controls to be ineffective (cross-cutting). For example, the auditor may have identified weaknesses indicating that the entity did not have a complete inventory of all major systems (security management), the system configuration baseline was incomplete (configuration management), and all critical systems/activities for contingency planning may not have been identified. In assessing these weaknesses solely in the context of their respective control categories, the auditor may have concluded that they did not reach the threshold to assess each of these respective control categories as ineffective. However, when the auditor assessed the weaknesses collectively, the auditor may conclude controls to be ineffective since an incomplete inventory of systems could significantly hamper the entity's ability to ensure that current and complete security settings are installed on all systems and that contingency plans address each system in the event of operational disruptions.

The space above is provided to document those assessments that are not control category specific but are made from a collectively assessment of weaknesses identified in separate control categories.

Appendix IV - Mapping of FISCAM to NIST SP 800-53 And Other Related NIST Publications

In table below, FISCAM is mapped to NIST Special Publication (SP) 800-53. To assist auditors, the individual FISCAM general and business process control activities are referenced to related NIST 800-53 controls.

FISCAM Controls	**Related NIST SP 800-53 Controls**
General Controls	
Security Management:

Appendix V - Knowledge, Skills, and Abilities Needed to Perform Information System Controls Audits

Information system (IS) controls audits require a broad range of technical skills. A key component of planning is determining the knowledge, skills, and abilities needed to perform the IS audit. Such needs are then compared with the audit team's current knowledge, skills, and abilities to identify any expertise that must be acquired. Any expertise gap can be filled through hiring, training, contracting, or staff sharing. The knowledge, skills, and abilities described in this appendix are not intended to be prescriptive, but to provide a framework to assist the auditor in determining the audit resources needed to effectively perform audit procedures in an IS audit. In addition, when contracting for IS audit services, this framework may be used as resource to identify the specific knowledge, skills, and abilities that will be needed to perform the contracting services requested.

Generally accepted government auditing standards (GAGAS) state that the "staff assigned to conduct an audit or attestation engagement under GAGAS must collectively possess the technical knowledge, skills, and experience necessary to be competent for the type of work being performed before beginning work on that assignment." The standards further require that if the work involves a review of information systems, the staff assigned to the GAGAS audit engagement should collectively possess knowledge of information technology.[117]These skills are often described in terms of knowledge, skills, and abilities (KSAs). KSAs are typically used in job position descriptions and job announcements to describe the attributes required for those in particular jobs. These terms are defined as follows:

[117]*Government Auditing Standards: July 2007 Revision* (GAO-07-731G), paragraph 3.43.

Knowledge—the foundation upon which skills and abilities are built. Knowledge is an organized body of information, facts, principles, or procedures that, if applied, make adequate performance of a job possible. An example is knowledge of tools and techniques used to establish logical access control over an information system.

Skill—the proficient manual, verbal, or mental manipulation of people, ideas, or things. A skill is demonstrable and implies a degree of proficiency. For example, a person may be skilled in operating a personal computer to prepare electronic spreadsheets or in using a software product to conduct an automated review of the integrity of an operating system.

Ability—the power to perform a job function while applying or using the essential knowledge. Abilities are evidenced through activities or behaviors required to do a job. An example is the ability to apply knowledge about logical access controls to evaluate the adequacy of an organization's implementation of such controls.

A staff member's knowledge, skills, and abilities can be categorized in accordance with FISCAM audit areas. Table 1 includes an overview of the knowledge, skills, and abilities that a team typically needs to effectively perform an IS audit. It assumes a level of proficiency in performing basic auditing tasks, such as interviewing, gathering and documenting evidence, communicating both orally and in writing, and managing projects. It focuses on attributes associated specifically with IS auditing. Although each staff member assigned to such an audit need not have all these attributes, the audit team must collectively possess the KSAs necessary to perform the audit, including adequately planning the audit, assessing the effectiveness of IS controls, testing IS controls, determining the effect of the results of testing on the audit objectives, developing findings and recommendations, and reporting the results. Audit resources may be supplemented from outside the organization through partnering or engaging consultants.

Table 1. Knowledge, Skills, and Abilities for IS Security Audit Areas by FISCAM Objective

FISCAM objective	Associated knowledge, skills, and abilities

Security Management	• Knowledge of the legislative requirements for an entity's information security management program
	• Knowledge of the sensitivity of data and the risk management process through risk assessment and risk mitigation
	• Knowledge of the risks associated with a deficient information security management program
	• Knowledge of the key elements of a good information security management program
	• Ability to analyze and evaluate an entity's security policies and procedures and identify their strengths and weaknesses
	• **Ability to analyze and evaluate the entity's security management program and identify the strengthens and weaknesses, including:**
	  • security management program, structure, and responsibilities, including system inventories
	  • risk assessment
	  • security awareness training for employees, contractors, third parties (including those in sensitive security and data processing position) and security-related personnel policies (including personnel hiring, including reference and background checks, and job transfers and terminations),
	  • performance of periodic tests and evaluations of IS controls and monitoring to ensure compliance with established policies and procedures (including copies of tests and evaluations performed), and
	  • security requirements and monitoring activities of third-party providers supporting specific application(s).

FISCAM objective	Associated knowledge, skills, and abilities

Access Control	• Knowledge across platforms of the access paths into computer systems and of the functions of associated hardware and software that provides an access path
	• Knowledge of access level privileges granted to users and the technology used to provide and control them
	• Knowledge of the procedures, tools, and techniques that provide for good physical, technical, and administrative controls over access
	• Knowledge of the risks associated with inadequate access controls
	• Skills to perform vulnerability assessments of the entity's applications and supporting computer systems
	• **Ability to analyze and evaluate the entity's access controls and identify the strengthens and weaknesses, including:**
	  • system boundaries
	  • controlling remote access to entity information, including use of remote devices,
	  • user and system identification and authentication,
	  • requesting, approving, and periodically reviewing user access authorization,
	  • restricting access to sensitive system resources (including system utilities, system software, and privileged accounts),
	  • protecting digital and sensitive media, including portable media,
	  • applying cryptography methods, if used,
	  • monitoring mainframe, mid-level servers, and network systems for incidents, including management response and reporting on unusual activities, intrusion attempts, and actual intrusions, and
	  • controlling physical security, including granting and controlling of physical access to the data center and other IT sensitive areas.

FISCAM objective	Associated knowledge, skills, and abilities

Configuration Management	• Knowledge of the concept of configuration management and the System Development Life Cycle (SDLC) process
	• Knowledge of baseline configuration management procedures, tools, and techniques that provide control over application and system software, and computer security settings
	• Knowledge of the risks associated with the modification, including emergency changes, of application and system software, and computer security settings
	• Knowledge of the risks associated with inadequate procedures for updating software to protect against known vulnerabilities
	• Ability to analyze and evaluate the entity's configuration management and identify the strengths and weaknesses, including:
	  • configuration management policies, including the approval and testing of scheduled and emergency changes, and monitoring procedures to ensure compliance,
	  • maintaining current configuration information,
	  • authorizing, testing, approving, and tracking all configuration changes,
	  • monitoring/auditing the configuration,
	  • patch management, vulnerability scanning, virus protection, emerging threats, and user installed software, and
	  • emergency changes.

Segregation of Duties	• Knowledge of the different functions involved with information systems and data processing and incompatible duties associated with these functions • Knowledge of the risks associated with inadequate segregation of duties • Ability to analyze and evaluate the entity's organizational structure and segregation of duties (including periodic review of access authorizations) and identify the strengths and weaknesses

Contingency Planning	• Knowledge of the procedures, tools, and techniques that provide for contingency planning and business continuity
	• Knowledge of the risks that exist when measures are not taken to provide for contingency planning and business continuity
	• Ability to analyze and evaluate an entity's contingency planning program and contingency plans for business continuity and identify the strengths and weaknesses, including:
	  • assessing the availability needs of entity systems
	  • backing-up data, programs, and software, and
	  • environmental controls, including emergency power, fire/smoke detection and response, hardware maintenance and problem management, alternate work sites, etc.

FISCAM objective	Associated knowledge, skills, and abilities
Business Process Controls	• Knowledge about the practices, procedures, and techniques that provide for the completeness, accuracy, validity, and confidentiality of application data • Knowledge of typical applications in each business process transaction cycle • Skills to use a generalized audit software package to conduct data analyses and tests of application data, and to plan, extract, and evaluate data samples • Ability to analyze and evaluate the entity's application controls and identify the strengths and weaknesses

Source: GAO.

Auditors performing tasks in two of the above FISCAM areas—**Access Controls and Configuration Management**—require additional specialized technical skills. Such technical specialists should have skills in one or more of the categories listed in table 2.

Table 2. KSAs for Information Security Technical Specialists

Specialist	Skills
Network analyst	• Advanced knowledge of network hardware and software • Understanding of data communication protocols • Ability to evaluate the configuration of routers , firewalls, and intrusion detection systems • Ability to perform external and internal vulnerability tests with manual and automated tools • Knowledge of the operating systems used by servers
Windows/Novell analyst	• Detailed understanding of microcomputer and network architectures • Ability to evaluate the configuration of servers and the major applications hosted on servers • Ability to perform internal vulnerability tests with manual and automated tools
Unix analyst	• Detailed understanding of the primary variants of the Unix architectures • Ability to evaluate the configuration of servers and the major applications hosted on servers • Ability to perform internal vulnerability tests with manual and automated tools
Database analyst	• Understanding of the control functions of the major database management systems • Understanding of the control considerations of the typical application designs that use database systems • Ability to evaluate the configuration of major database software products

Specialist	Skills
Mainframe system software analyst	• Detailed understanding of the design and function of the major components of the operating system • Ability to develop or modify tools necessary to extract and analyze control information from mainframe computers • Ability to use audit software tools • Ability to analyze modifications to system software components
Mainframe access control analyst	• Detailed understanding of auditing access control security software such as ACF2, Top Secret, and RACF • Ability to analyze mainframe audit log data • Ability to develop or modify tools to extract and analyze access control information

Source: GAO.

As table 2 shows, some activities require a high degree of IT knowledge, skills, and abilities, while others involve more basic auditing tasks (interviewing, gathering background information, and documenting the IT security environment). Audit management may therefore want to organize staff that have highly specialized technical skills into a separate group that has access to special-purpose computer hardware and software. A group of this kind can focus on more technical issues, while other groups within the organization can perform the less technical work.

Appendix VI - Scope of an Information System Controls Audit in Support of a Financial Audit

This appendix provides a framework for assessing the effectiveness of information system controls audits in support of financial statement audits. Given the prevalence of the use of information systems to process financial information, performing a financial audit generally includes an assessment of the effectiveness of information system controls. The information system controls audit should be performed as an integral part of the financial audit.

This appendix is intended to assist (1) financial auditors in communicating audit requirements to IS control specialists, and (2) financial auditors and IS control specialists in understanding how an assessment of the effectiveness of IS controls integrates with financial audit requirements.

The Government Accountability Office (GAO) and the President's Council on Integrity and Efficiency (PCIE) *Financial Audit Manual* (FAM) presents a methodology for performing financial statement audits of federal entities in accordance with professional standards. Chapter 2 (and related steps in Chapter 4) of the FISCAM describe a methodology for performing the IS controls audit in the context of an audit performed in accordance with generally accepted government auditing standards (GAGAS). This appendix discusses how the audit steps described in Chapter 2 of the FISCAM (and related steps in Chapter 4) provide more specific guidance concerning the evaluation of the effectiveness of information systems controls in support of the audit steps in the FAM. For financial audits performed in accordance with the FAM, the steps in the FISCAM should be performed in coordination with the related steps in the FAM. The flowchart of steps in assessing IS controls in a financial statement audit, appearing in FAM 295 J, is presented at the end of this appendix.

The following table presents a summary of the relationship between selected FAM steps and related FISCAM steps.

FAM Step(s)	Related FISCAM Step(s)
AUDIT PLANNING	
220 Understand the Entity's Operations 235 Identify Significant Line Items, Accounts, Assertions, and RSSI 240 Identify Significant Cycles, Accounting Applications, And Financial Management Systems	2.1.1 Planning the Information System Controls Audit—Overview 2.1.2 Understand the Overall Audit Objectives and Related Scope of the Information System Controls Audit 2.1.3 Understand the Entity's Operations and Key Business Processes 2.1.4 Obtain a General Understanding of the Structure of the Entity's Networks 2.1.5 Identify Key Areas of Audit Interest (files, applications, systems, locations)
260 Identify Risk Factors	2.1.6 Assess Information system Risk on a Preliminary Basis
270 Determine Likelihood of Effective IT System Controls	2.1.7 Identify Critical Control Points (for example, external access points to networks) 2.1.8 Obtain a Preliminary Understanding of Information System Controls
Miscellaneous FAM planning sections	2.1.9 Perform Other Audit Planning Procedures

INTERNAL CONTROL TESTING	
310 Overview of the Internal Control Phase 320 Understand Information Systems 330 Identify Control Objectives 340 Identify and Understand Relevant Control Activities 350 Determine the Nature, Timing, and Extent of Control Tests And Of Tests For Systems' Compliance With FFMIA Requirements 360 Perform Nonsampling Control Tests And Tests For Systems' Compliance With FFMIA Requirements, including 360.03-.09—Test IT System Controls	2.2 Perform Information System Controls Audit Tests • Understand Information Systems Relevant to the Audit Objectives • Identify IS Control Techniques Relevant to the Audit Objectives • Test IT System Controls
REPORTING THE RESULTS OF THE IS CONTROLS AUDIT	
370 Assess Controls On A Preliminary Basis 580 Draft Reports – Internal Control	2.3 Report Audit Results

AUDIT PLANNING

IS Audit Resources

As discussed in FAM Section 110.27, the audit team should possess sufficient knowledge of IS controls to determine the effect of IT on the audit, to understand IS controls, and to consult with an IS

controls specialist[118] to design and test IS controls. Specialized IS audit skills generally are needed in situations where

- the entity's systems, automated controls, or the manner in which they are used in conducting the entity's business are complex;
- significant changes have been made to existing systems or new systems have been implemented;
- data are extensively shared among systems;
- the entity participates in electronic commerce;
- the entity uses emerging technologies; or
- significant audit evidence is available only in electronic form.

In some cases, the financial auditor may consult with IS controls specialists within the audit organization or use outside contractors to provide these skills. However, per AU 311.22, the financial auditor should have sufficient knowledge to communicate the objectives of the specialists' work, to evaluate whether the specified procedures will meet the audit objectives, and to evaluate the results of the procedures as they relate to the nature, extent, and timing of further planned audit procedures.

Appendix V of the FISCAM provides a framework to assist the auditor in determining the audit resources needed to effectively perform an IS controls audit. In addition, when contracting for IS systems audit services, this framework may be used as a resource to identify the specific knowledge, skills, and abilities that will be needed to perform the contracting services requested. Section 2.1.9.D "Audit Resources" in Chapter 2 provides additional information on the use of IS controls specialists in a GAGAS audit.

[118] The IS control specialist is a person with technical expertise in information technology systems, general controls, business process applications and controls, and information security.

The following sections discuss IT-related FAM steps and the related FISCAM steps.

Understand the Entity's Operations, Identify Significant Line Items, Accounts, Assertions, and RSSI, and Identify Significant Cycles, Accounting Applications, and Financial Management Systems

FAM 220.01 states that the auditor must obtain an understanding of the entity and its environment, including internal control to assess the risk of material misstatement of the financial statements, whether due to error or fraud, and to design the nature, extent, and timing of further audit procedures. The following IT-related FAM sections discuss obtaining an understanding of the entity's operations and information systems:

- 220.04—the auditor should identify significant external and internal factors that affect the entity's operations as part of understanding the entity and its environment for purposes of planning the audit, including the IT structure and the extent to which IT processing is performed externally such as through cross-servicing agreements.

- 220.07—the auditor should develop and document a high-level understanding of the entity's use of IS controls and how IT affects the generation of financial statement information and supplementary information. An IS controls specialist may assist the auditor in understanding the entity's use of IS controls. Appendix I of the FISCAM may be used to document this understanding.

- 235.01—the auditor should identify significant line items and accounts in the financial statements and significant related financial statement assertions.

- 240.08—once the auditor identifies significant accounting applications, the auditor should determine which information systems are involved in those applications.

- 240.09—the auditor should obtain sufficient knowledge of the information systems relevant to financial reporting to

understand the accounting processing from initiation of a transaction to its inclusion in the financial statements, including electronic means used to transmit, process, maintain, and access information (see AU 319.49, SAS No. 94).

The following FISCAM sections (Chapter 2) provide more specific guidance on how the auditor obtains an understanding of the entity's IT operations and information systems:

- Planning the information system controls audit—overview – 2.1.1
- Understand the entity's operations and key business processes - 2.1.3
- Obtain a general understanding of the structure of the entity's networks – 2.1.4
- Identify key areas of audit interest (files, applications, systems, locations) – 2.1.5

More specifically, based on the audit objectives and the auditor's understanding of the business processes and networks, the auditor's identification of key areas of audit interest includes:

- key business process applications and where each key business process application is processed,
- key data files used by each key business application, and
- relevant general controls at the entitywide and system levels, upon which application level controls depend.

These FISCAM sections include information related to the IS controls audit that should be included in audit documentation. Such information should be summarized, as appropriate, in the entity profile or an equivalent document, as discussed in FAM Section 290.04. However, the auditor generally should document internal control separately as discussed below and in FAM 390.

Identify Risk Factors

FAM Section 260.09 states that the auditor should (1) identify conditions that significantly increase inherent, fraud, and control risk (based on identified control environment, risk assessment, communication, or monitoring weaknesses) and (2) conclude

whether any identified control risks preclude the effectiveness of specific control activities in significant applications. The auditor should identify specific inherent risks, fraud risks, and control environment, risk assessment, communication, and monitoring weaknesses based on information obtained in the planning phase, primarily from understanding the entity's operations, including significant IT processing performed outside the entity and preliminary analytical procedures. SAS No. 70 reports, which are discussed further in FAM 310 and in Appendix VII, may be prepared by service auditors for organizations performing significant IT processing for the entity. The auditor may find these reports useful for performing risk assessments and planning other audit procedures. The auditor should update the risk assessment throughout the audit.

FAM Section 260.22 states that IS controls do not affect the audit objectives for an account or a cycle. However, IS controls can introduce inherent risk factors not present in a manual accounting system. The FAM section states that the auditor should assess the overall impact of IS processing on inherent risk. The impact of these factors typically will be pervasive in nature. An IS controls specialist may assist the auditor in considering these factors and making this assessment.

FAM Section 260.56 states that IS controls affect the effectiveness of control activities, the control environment, risk assessment, communication, and monitoring. For example, controls that normally would be performed by separate individuals in manual systems may be concentrated in one computer application and pose a potential segregation-of-duties issue. See SAS No. 109.57-63 for further discussion of the effect of IT on internal control.

FAM Section 260.57 provides several IS factors, discussed in Chapter 2 of the FISCAM, that the auditor should evaluate in making an overall assessment of the control environment, risk assessment, communication, and monitoring.

The FISCAM section 2.1.6 entitled "Assess Information System Risk on a Preliminary Basis" provides more specific guidance on how the auditor identifies IS risk (inherent and the control environment, risk assessment, communication, and monitoring components of internal

control). Also, the FISCAM section 2.1.9.B entitled "Consideration of the Risk of Fraud" provides more specific guidance concerning identification of the risk of fraud arising from IT, including coordination between the financial auditor and the IS controls specialist. In addition, the FISCAM section 2.5.1 "Additional IS Risk Factors" provides more risk factors for the auditor to consider. Further, FISCAM Appendix VII provides more information on the use of SAS 70 reports.

These FISCAM sections include information that should be included in audit documentation. In addition, such information should be summarized, as appropriate, in the GRA or equivalent document as discussed in FAM Section 290, including:

- the assessments of overall inherent risk and the risk factors considered in the assessment, and
- the assessments of the overall effectiveness of the control environment, risk assessment, communication, and monitoring, including whether an ineffective control environment precludes the effectiveness of specific control activities.

Determine Likelihood of Effective IS Controls

As discussed in FAM 270, information system (IS) controls consist of those internal controls that are dependent on information systems processing and include general, business process application, and user controls. IS controls consist of those internal controls that are dependent on information systems processing and include general controls (entitywide, system, and business process application levels), business process application controls (input, processing, output, master file, interface, and data management system controls), and user controls (controls performed by people interacting with information systems). General and business process application controls are always IS controls. A user control is an IS control if its effectiveness depends on information systems processing or the reliability (accuracy, completeness, and validity) of information processed by information systems. Conversely, a user control is not an IS control if its effectiveness does not depend on information systems processing or the reliability of information processed by information systems.

In the financial audit planning phase, the auditor, with the assistance of an IS control specialist should determine whether IS controls are likely to be effective and should therefore be considered in the internal control phase. The auditor may coordinate work done to meet the provisions of FISMA with work done as part of the financial statement audit.

The procedures performed to determine the likelihood of effective IS controls build on those procedures performed while understanding the entity's operations and assessing the effects of IS controls on inherent risk and the control environment, risk assessment, communication, and monitoring. Under SAS No. 109, the auditor should sufficiently understand each of the five components of internal control—control environment, risk assessment, information and communication, monitoring, and control activities—to assess the risk of material misstatement. This understanding should include relevant IS aspects.

As discussed in FAM 260.06, the auditor evaluates and tests the following types of controls in a financial statement audit:

- financial reporting controls,
- compliance controls, and
- certain operations controls (to the extent described in FAM 275).

For each of the specific controls to be evaluated and tested, as documented in the SCE Form or equivalent, the auditor should distinguish which are IS controls. In addition, based on such IS controls and the audit planning procedures (particularly the identification of critical control points), the auditor should identify those other IS controls (general and business process application controls) upon which the effectiveness of the controls in the SCE depend. These other IS controls also need to be effective for the specific controls in the SCE to be effective. FISCAM Appendices II and III can be used to document such controls.

IS controls can be classified into three types:

- general controls – GAGAS defines information systems general controls as the policies and procedures that apply to all or a large segment of an entity's information systems. General controls help ensure the proper operation of information

systems by creating the environment for proper operation of application controls. General controls include security management, logical and physical access, configuration management, segregation of duties, and contingency planning.

- business process application controls –GAGAS defines application controls, sometimes referred to as business process controls, as those controls that are incorporated directly into computer applications to help ensure the validity, completeness, accuracy, and confidentiality of transactions and data during application processing. Application controls include controls over input, processing, output, master data, application interfaces, and data management system interfaces.
- user controls – portions of controls that are performed by people interacting with IS controls. The effectiveness of user controls typically depend on information systems processing or the reliability of information processed by IS controls.

An IS controls specialist generally should review and concur with the auditor's identification of IS controls.

Testing of technical IS controls should be performed by an IS controls specialist as described in FAM 360. The audit team may work with the IS controls specialist by testing user controls and application controls involving manual follow-up.

FAM Section 270.05 states that early in the audit's planning phase, the auditor and the IS controls specialist should understand the design of each of the three types of IS controls (general, business process application level, and user controls) to the extent necessary to tentatively conclude whether these controls are likely to be effective.

If they are likely to be effective, the auditor should consider specific IS controls in determining whether control objectives are achieved in the internal control phase. As discussed in SAS No. 109.54, evaluating the design of a control involves considering whether the control, individually or in combination with other controls, is capable of effectively preventing, detecting, and correcting material misstatements.

If IS controls are not likely to be effective, the auditor, with the assistance of the IS controls specialist, should obtain a sufficient understanding of control risks arising from IS controls to

- identify types of potential misstatements,
- consider factors that affect the risks of material misstatement,
- design tests of controls and substantive procedures, and
- develop appropriate findings.

Also, in the internal control phase, the auditor generally should focus on the effectiveness of manual controls in achieving control objectives, including manual controls that may mitigate weaknesses in IS controls. If IS controls are not likely to be effective due to poor general controls and if manual controls do not achieve the control objectives, the auditor should identify and evaluate any specific IS controls that are designed to achieve the control objectives to develop recommendations for improving internal controls.

As discussed in SAS No. 109.117-.120, in some circumstances, such as where a significant amount of information is electronically initiated, recorded, processed, and reported, it may not be practical or possible to restrict detection risk to an acceptable level by performing only substantive tests for one or more financial statement assertions. In such circumstances, the auditor should test IS controls to obtain evidential matter about the effectiveness of both the design and operation of controls to reduce the assessed level of the risk of material misstatement.

The following FISCAM sections provide more specific guidance on how the auditor determines the likelihood of effective IS controls:

- Identify critical control points (for example, external access points to networks) – 2.1.7
- Obtain a preliminary understanding of information system controls – 2.1.8

These FISCAM sections include information that should be included in audit documentation. In addition to this audit documentation, as discussed in FAM Section 290, the auditor should document tentative conclusions on the likelihood that IT controls and any compensating controls such as manual controls, reviews, or reconciliations are operating effectively.

Other Audit Planning Procedures

The FISCAM section 2.1.9 provides additional information concerning the following planning steps in the IS controls audit that should be coordinated with the financial audit.

- Relevant laws and regulations—this section provides more specific guidance on how the auditor identifies significant IT related provisions of laws and regulations and should be performed in coordination with FAM Section 245
- Consideration of the risk of fraud—as discussed above, this section provides more specific guidance on how the auditor identifies the risk of fraud arising from IT, including coordination between the financial auditor and the IS controls specialist, and should be performed in coordination with FAM Section 260.
- Audit Resources—as discussed above, this section provides more specific guidance on how the auditor identifies the knowledge, skills, and abilities needed to perform an IS controls audit and the auditor's responsibilities and procedures for using the work of an IS controls specialist, and should be performed in coordination with FAM Section 110.
- Multiyear testing plans—this section provides more specific guidance on how the auditor establishes a multiyear testing plan for IS controls, and should be performed in coordination with FAM Section 395G.
- Communication with entity management and those charged with governance—this section provides more specific guidance on communicating relevant IT-related information with entity management and those charged with governance, and should be performed in coordination with FAM Section 215.
- Service organizations—this section provides more specific guidance on the auditor's consideration of IS controls, significant to the IS audit, that are performed by a service organization. This issue is discussed further in Appendix VII "Entity's Use of Service Organizations". This section should be performed in coordination with FAM 310.
- Using the work of others—this section provides more specific guidance on how the auditor prepares uses the work of others in performing the IS controls audit, and should be performed in coordination with FAM section 650.

- Audit plan—this section provides more specific guidance on how the auditor prepares an audit plan and strategy for performing the IS controls audit, and should be performed in coordination with FAM section 290.

Also the FISCAM provides more specific guidance on how the auditor documents the planning of the IS controls audit, and should be performed in coordination with FAM Section 290.

INTERNAL CONTROL TESTING

Overview

In general, FAM Section 300 describes the methodology for assessing the effectiveness of internal control in a financial audit. FAM Section 310 summarizes the methodology. Specifically, Section 310 states that, in the internal control phase, the auditor should gain an understanding of internal control and obtain evidence about the effectiveness of internal control to (1) assess control risk, (2) determine the nature, timing, and extent of control, compliance, and substantive testing, and (3) form an opinion or report on internal control over financial reporting and compliance. Control risk should be assessed separately for each significant financial statement assertion in each significant cycle/accounting application (including RSSI).

The auditor of federal financial statements must evaluate and test certain controls. AU 319 permits the auditor to assess control risk at a high (maximum) level and forgo evaluation and testing of financial reporting controls if the auditor believes evaluating their effectiveness would be inefficient. However, because OMB audit guidance requires the auditor to perform sufficient tests of internal controls that have been properly designed and placed in operation to support a low assessed level of control risk, the auditor in a federal financial audit may not elect to forgo control tests solely because it is more efficient to extend compliance and substantive audit procedures.

The following are the types of controls tested in a financial audit:

- financial reporting controls (including certain safeguarding and budget controls) for each significant assertion in each significant cycle/accounting application (identified in section 240),
- compliance controls for each significant provision of laws and regulations (identified in section 245), including budget controls for each relevant budget restriction (identified in section 250), and
- operations controls for each operations control (1) relied on in performing financial audit procedures or (2) selected for testing by the audit team. (see section 275).

The auditor is not required to test controls that have not been properly designed and implemented (placed in operation). Thus, internal controls that are not effective in design do not need to be tested. If the auditor determined in a prior year that controls in a particular accounting application were ineffective and if management indicates that controls have not improved, the auditor need not test them.

On the other hand, if controls have been determined to be effective in design and implemented (placed in operation), the auditor of federal financial statements must perform sufficient tests of their effectiveness to support a low assessed level of control risk. In such cases, the auditor may consider using a rotation approach to testing controls over the various accounting applications, as described in FAM Section 395 G (and in the FISCAM section 2.1.9.E “Multiyear Testing Plans”). If the auditor expects to disclaim an opinion because of scope limitations or inadequate controls, the auditor may limit internal control work to updating the understanding of controls and whether they have been placed in operation. The auditor may do this by inquiring as to whether previously identified control weaknesses have been corrected. In the year the auditor expects to issue an opinion on the financial statements, the auditor needs a basis of sufficient work on internal control.

In the internal control phase of a financial audit, the auditor should perform and document the following procedures:

- Understand the entity's information systems for financial reporting, compliance with laws and regulations, and relevant operations (see FAM Section 320).
- Identify control objectives (see FAM Section 330).
- Identify and understand relevant control activities that effectively achieve the control objectives (see FAM Section 340).
- Determine the nature, timing, and extent of control testing (see FAM Section 350).
- Perform control tests that do not involve sampling (nonsampling control tests - see section 360).1 (Sampling control tests, if necessary, are performed in the testing phase, as discussed in FAM Section 450.)
- On a preliminary basis, based on the evidence obtained, assess (1) the effectiveness of financial reporting, compliance, and relevant operations controls and (2) control and combined risk (see FAM Section 370). (Combined risk, which includes inherent and control risk, is discussed in FAM paragraph 370.09).

As discussed in FAM Section 310.10, in gaining an understanding of an entity's internal control, including internal control related to IT and other business processing performed outside the entity, the auditor should obtain evidence about the design of relevant controls and whether they have been placed in operation. In obtaining evidence about whether controls have been placed in operation, the auditor should determine whether the entity is using them, rather than merely having them written in a manual, for example. This differs from determining a control's operating effectiveness, which is concerned with how the control was applied, the consistency with which it was applied, and by whom. Gaining an understanding of the design of internal control does not require that the auditor obtain evidence about operating effectiveness.

As discussed in FAM Section 310.11, the auditor should obtain an understanding of internal control for IT and other business processing performed outside the entity under a service agreement or other contract arrangements for assessing risk and planning other audit procedures. The auditor may obtain this understanding by performing work directly at the service organization or by using SAS

No. 70 reports that include these internal controls as discussed in AU 324.06-.21.

For each potential weakness, consider the impact of compensating controls or other factors that mitigate or reduce the risks related to potential weaknesses.

The following sections summarize FAM audit steps related to the testing of information system controls. The auditor should coordinate these steps with the related FISCAM steps.

Understand Information Systems

FAM Section 320 states that the auditor may use an IS controls specialist to assist in understanding and documenting the IT aspects of these systems. The auditor should document the understanding of these systems in cycle memorandums, or other equivalent narratives, and generally should prepare or obtain related flow charts. FAM 340 and 350 discuss identifying and documenting controls that are designed to mitigate the risk of material misstatement.

Walk-throughs are important for understanding the transaction process and for determining appropriate audit procedures. The auditor should perform walk-throughs for all significant accounting applications. Walk-throughs of budget, accounting, compliance, and operations systems provide evidence about the functioning of such systems. The auditor should document these walk-throughs. The auditor should incorporate the IT aspects of each system into the audit documentation and may include additional flow charts, narratives, and checklists.

FAM Section 320 continues that the auditor should obtain an understanding of and should document the following for each significant cycle and accounting application (including those dealing with RSSI):

- The manner in which transactions are initiated;
- The nature and type of records, journals, ledgers, and source documents, and the accounts involved;

- The processing involved from the initiation of transactions to their inclusion in the financial statements, including the nature of computer files and the manner in which they are accessed, updated, and deleted; and
- The process used to prepare the entity's financial statements and budget information, including significant accounting estimates, disclosures, and computerized processing.

FAM Section 320.03 states that for each significant cycle and accounting application identified for significant line items and assertions in FAM 240 (including those dealing with RSSI) the auditor should obtain an understanding of and should document, among other things, processes used to prepare the entity's financial statements and budget information, including significant accounting estimates, disclosures, and IT processing. These processes include

- Procedures used to enter transaction totals into the general ledger;
- procedures used to initiate, authorize, record, and process journal entries in the general ledger;
- procedures used to record recurring and nonrecurring adjustments to the financial statements;
- procedures used to combine and consolidate general ledger data; and
- closing process, including manual and automated procedures, for preparing the financial statements and related disclosures.

The FISCAM section entitled "Understand Information Systems Relevant to the Audit Objectives" included in section 2.2 provides more specific guidance on how the auditor obtains an understanding of information systems. This FISCAM section includes information that should be included in audit documentation. As discussed in FAM Section 320, the auditor must document the understanding gained of each component of internal control, including the information system. The auditor should prepare sufficient documentation to clearly describe the accounting system. For each significant cycle, the auditor should prepare a cycle memorandum or equivalent. Also, the auditor generally should prepare an illustrative flowchart of the cycle and component accounting application(s). Flowcharts provide a good mechanism to document the process and the flow of transactions through the system.

However, the auditor should avoid extreme detail, which makes the charts confusing and hard to follow. Complex systems, particularly those involving IT, may be difficult to understand without a flowchart. To the extent required as described above, the auditor should use the following documents or equivalents to document.

Identify Relevant Control Objectives

FAM Section 330 discusses the identification of control objectives. In a financial audit, the auditor should identify control objectives for each type of control that if achieved, would provide the entity with reasonable assurance that individual and aggregate misstatements (whether caused by error or fraud), losses, or noncompliance material to the financial statements would be prevented or detected. For Required Supplementary Stewardship Information (RSSI), the Statement of Social Insurance, and nonmonetary information in the financial statements, such as physical units of heritage assets, the objectives would relate to controls that would provide reasonable assurance that misstatements, losses, or noncompliance that would be considered material by users of the information would be prevented or detected. As noted above, control objectives in a financial audit involve:

- financial reporting controls, including safeguarding controls and segregation-of-duties controls,
- compliance controls,
- budget controls, and
- relevant operations controls.

As discussed in FAM Section 495A.21, if the reliability of internally-generated data used in the substantive analytical procedures is dependent on the effectiveness of IS controls, the auditor should perform additional procedures before relying on the data. The auditor should test, as appropriate, (1) the relevant general controls and the specific business process application level controls over the data and/or (2) the data in the report.

The FISCAM section "Identify IS Control Techniques That are Relevant to the Audit Objectives" included in section 2.2 provides more specific guidance on how the auditor identifies relevant IS control activities. This FISCAM section includes information that

should be included in audit documentation. In addition to such documentation, as discussed in FAM Sections 390 and 395H, the auditor documents relevant control objectives in the SCE form or equivalent documentation. Based on such controls and the audit planning procedures (particularly the identification of critical control points), the auditor should identify those other IS controls (general, business process application, interface, and data management system controls) upon which the controls in the SCE depend. FISCAM Appendices II and III can be used to document such controls.

Identify Relevant Control Activities

As discussed in FAM Section 340, the auditor identifies and understands relevant control activities. For each control objective, based on discussions with entity personnel and the results of other procedures performed, the auditor should identify the control activities designed to achieve the specific control objective. The auditor may indicate these controls in the auditor's informal notes and/or interview write-ups for use in the following procedures, but the auditor need not formally document them on the SCE worksheet at this time. The auditor should first screen the activities to identify those that are effective and efficient to test. An IS controls specialist may assist the auditor in identifying and understanding IT controls. As discussed in FAM 350, the auditor should use walk-throughs to confirm that the entity has implemented these controls identified for further audit procedures. These walk-throughs are in addition to those performed earlier to understand the transaction processing. As discussed in FAM 270, in determining whether control objectives are achieved, the auditor should consider both manual and IS controls, if likely to be effective.

FAM Section 340.05 states that the auditor also should evaluate the appropriateness of the specified criteria used to identify items in a management or exception report. For example, IT input controls (such as the matching of vendor invoices with receiving reports and purchase orders) that require exact matches of data from different sources before a transaction is accepted for processing may be more effective than controls that accept transactions that fall within a broader range of values. On the other hand, controls based on exception reports that are limited to selected information or use

more selective criteria may be more effective than lengthy reports that contain excessive information.

The FISCAM section "Identify IS Control Techniques That are Relevant to the Audit Objectives" provides more specific guidance on how the auditor identifies relevant IS controls.

The FISCAM is organized in a hierarchical structure to assist the auditor in performing the IS controls audit. Chapter 3 (general controls) and Chapter 4 (business process application level controls) contain several control categories, which are groupings of related controls pertaining to similar types of risk. For each control category, the manual identifies critical elements—tasks that are essential for establishing adequate controls within the category. For each critical element, there is a discussion of the associated objectives, risks, and control activities, as well as related potential control techniques and suggested audit procedures. This hierarchical structure facilitates the auditor's audit planning and the auditor's analysis of identified control weaknesses.

Because control activities are generally necessary to achieve the critical elements, they are generally relevant to a GAGAS audit unless the related control category is not relevant, the audit scope is limited, or the auditor determines that, due to significant IS control weaknesses, it is not necessary to assess the effectiveness of all relevant IS controls. Within each relevant control activity, the auditor should identify control techniques implemented by the entity and determine whether the control techniques, as designed, are sufficient to achieve the control activity, considering IS risk and the audit objectives. The auditor may be able to determine whether control techniques are sufficient to achieve a particular control activity without evaluating and testing all of the control techniques. Also, depending on IS risk and the audit objectives, the nature and extent of control techniques necessary to achieve a particular control objective will vary.

If sufficient, the auditor should determine whether the control techniques are implemented (placed in operation) and are operating effectively. Also, the auditor should evaluate the nature and extent of testing performed by the entity. Such information can assist in

identifying key controls and in assessing risk, but the auditor should not rely on testing performed by the entity in lieu of appropriate auditor testing. If the control techniques implemented by the entity, as designed, are not sufficient to address the control activity, or the control techniques are not effectively implemented as designed, the auditor should determine the effect on IS controls and the audit objectives.

This FISCAM section includes information that should be included in audit documentation. In addition to this documentation, as discussed in FAM Sections 390 and 395H, the auditor documents relevant controls in the SCE form or equivalent documentation. Based on such controls and the audit planning procedures (particularly the identification of critical control points), the auditor should identify those other IS controls (general, business process application, interface, and data management system controls) upon which the controls in the SCE depend. FISCAM Appendices II and III can be used to document such controls.

Determine the Nature, Timing, and Extent of Control Tests

FAM Section 350 discusses determining the nature, extent, and timing of control tests and compliance with FFMIA. FAM Section 350.01 states that for each control objective, the auditor should

- identify specific relevant control activities to test (FAM 350.06-.08),
- perform walk-throughs to determine whether those controls have been placed in operation (FAM 350.09),
- document these control activities in the SCE worksheet or equivalent (FAM 350.10),
- determine the nature of control tests (FAM 350.11-.18),
- determine the extent of control tests (FAM 350.19-.20), and
- determine the timing of control tests (FAM 350.21).

As discussed in FAM Section 350, for each control objective identified in FAM 330, the auditor should identify the control activity, or combination of control activities, that is likely to (1) achieve the control objective and (2) improve the efficiency of control tests. In doing this, the auditor should consider (1) the extent of any inherent risk and control environment, risk

assessment, communication, or monitoring weaknesses, including those related to IS controls (as documented in the ARA and/or audit strategy document, or equivalent (see FAM 260)), and (2) the tentative determination of the likelihood that IS controls will be effective, as determined in the planning phase (see FAM 270). The auditor generally should test only the control activities necessary to achieve the objective.

If, in any phase of the audit, the auditor determines that control activities selected for testing are, in fact, ineffective in design or operation, the auditor should discontinue the specific control evaluation of the related control objectives and should report the identified weaknesses in internal control as discussed in FAM 580. This would include situations where the control activities are not effective in design or operation due to ineffective IS controls. If the entity's management does not agree with the auditor's conclusion that effective control activities do not exist or are unlikely to exist, the auditor may need to perform procedures sufficient to support that conclusion.

As discussed in FAM Section 350.10, the auditor should document the control activities to be tested on the SCE worksheet or equivalent (see an illustration in FAM 395 H). The auditor generally should test other components of internal control by observation and inquiry in the planning phase (see FAM 260.09). The auditor may list (and evaluate) controls that satisfy more than one control objective only once and refer to these controls, when applicable, on subsequent occasions. For each control to be tested, the auditor should determine whether the control is an IS control. An IS controls specialist generally should review and concur with the auditor's identification of IS controls.

For every IS control identified above and included in the SCE form or equivalent document, based upon IS controls audit planning, the IS controls specialist should identify the general controls (entitywide, and system levels) and business process application level controls upon which the IS controls depend. Such systems and business process application level controls would principally relate to the critical control points. For example, if the IS control is the review of an exception report, the auditor should identify and test the business process application controls directly related to the

production of the exception report, as well as the general and other business process application controls upon which the reliability of the information in the exception report depends, including the proper functioning of the business process application that generated the exception report and the reliability of the data used to generate the exception report. In addition, the auditor should test the effectiveness of the user control (i.e., management review and followup on the items in the exception report).

Test Information System Controls

FAM Section 360 discusses tests of application controls and user controls. As discussed in FAM Section 360.10, the auditor, with IS controls specialist assistance, generally should perform tests of those application controls and user controls necessary to achieve the control objectives where the entitywide, system, and application-level general controls were determined to be effective.

FAM 360.01 states that the auditor should design and conduct tests of control activities that are effective in design to determine their effectiveness in operation. (See FAM 380.02 if control activities are not effective in design during the entire audit period.) The auditor generally should

- request IS controls specialist assistance and test IS controls (FAM 360.03-.10),
- perform nonsampling control tests (the auditor generally should perform sampling control tests in the testing phase, as discussed in FAM 450), (FAM 360.11-.13), and
- evaluate the results of nonsampling control tests (FAM 360.14-15).

If the auditor identifies IS controls for testing, the auditor, with IS controls specialist assistance, should evaluate the effectiveness of relevant

- general controls at the entitywide and system level;
- general controls at the business process application level; and
- specific business process controls, interface controls, data management system controls and/or user controls, unless the IS controls that achieve the control objectives are general controls.

If controls are not effective, see FAM 360.07 and FAM 360.09.
It is generally more efficient for the auditor to test IS controls on a tiered basis, starting with the general controls at the entitywide and system levels, followed by the general controls at the business process application level, and concluding with tests of business process application, interface, and data management system controls at the business process application level. Such a testing strategy may be used because ineffective IS controls at each tier generally preclude effective controls at the subsequent tier.

The auditor, with IS controls specialist assistance, should determine whether relevant entitywide and system level general controls are effectively designed, implemented, and operating effectively by

- identifying applicable general controls;
- determining how those controls function, and whether they have been placed in operation; and
- evaluating and testing the effectiveness of the identified controls.

The auditor and the IS controls specialist generally should use knowledge obtained in the planning phase. The auditor, with assistance from the IS controls specialist, should document the understanding of general controls and should conclude whether such controls are effectively designed, placed in operation, and, for those controls tested, operating as intended.

Tests of General Controls at the Entitywide and System Levels

The auditor may test general controls through a combination of procedures, including observation, inquiry, inspection (which includes a review of documentation on systems and procedures), and reperformance using appropriate test software. Although sampling is generally not used to test general controls, the auditor may use sampling to test certain controls, such as those involving approvals.

If general controls are not effectively designed and operating as intended, the auditor will generally be unable to obtain satisfaction that application controls are effective. In such instances, the auditor should (1) determine and document the nature and extent of risks

resulting from ineffective general controls and (2) identify and test any manual controls that achieve the control objectives that the IS controls in the SCE or equivalent document were to achieve.

However, if manual controls do not achieve the control objectives, the auditor, with IS controls specialist assistance, should determine whether any specific IS controls are designed to achieve the objectives. If not, the auditor should develop appropriate findings principally to provide recommendations to improve internal control. If specific IS controls are designed to achieve the objectives, but are in fact ineffective because of poor general controls, testing would typically not be necessary, except to support findings.

Tests of General Controls at the Business Process Application Level

If the auditor reaches a favorable conclusion on general controls at the entitywide and system levels, the IS controls specialist should evaluate and test the effectiveness of general controls for those business process applications within which business process application controls or user controls are to be tested.

If general controls are not operating effectively within the application, application controls and user controls generally will be ineffective. In such instances, the IS controls specialist should discuss the nature and extent of risks resulting from ineffective general controls with the audit team. The auditor should determine whether to proceed with the evaluation of application controls and user controls.

Tests of Business Process Application Controls and User Controls

The auditor, with IS controls specialist assistance, generally should perform tests of those business process application controls (business process controls, interface controls, and data management system controls), and user controls necessary to achieve the control objectives where the entitywide, system, and application-level general controls were determined to be effective.

As discussed in FAM Section 360.13, the auditor should test segregation of duties in the situations described in FAM 330.08. The auditor may use the following procedures to test segregation-of-duties controls:

a. Identify the assets to be controlled through the segregation of duties.
b. Identify the individuals who have authorized access (direct or indirect) to the assets. Direct access exists when the individual is authorized to handle the assets directly (such as during the processing of cash receipts). Indirect access exists when the individual is authorized to prepare documents that cause the release or transfer of assets (such as preparing the necessary forms to request a cash disbursement or transfer of inventory).
c. For each individual with authorized access to assets, determine whether there are sufficient asset access controls. Asset access controls are those controls that are designed to provide assurance that actions taken by individuals with authorized access to assets are reviewed and approved by other individuals. For example, an approval of an invoice for payment generally provides asset access controls (relating to cash) over those individuals authorized to prepare supporting documentation for the transaction. If IS controls provide access to assets, the auditor should design tests of IS controls to identify (1) individuals (including IT personnel) who may use the computer to obtain access and (2) asset access controls over such individuals.
d. For individuals with authorized access to assets over which asset access controls are insufficient, determine whether such individuals can affect any recording of transactions in the accounting records. If so, segregation of duties is insufficient, unless such access to accounting records is controlled. For example, the person who processes cash receipts may also be able to record entries in the accounting records.

Such a person may be in a position to manipulate the accounting records to conceal a shortage in the cash account, unless another individual reviews all accounting entries made (and those that should have been made) by that person. In an IT accounting system, access to assets frequently provides access to records. For example,

generation of a check may automatically record a related accounting entry. In such circumstances, a lack of asset access controls would result in inadequate segregation of duties, and the auditor should determine whether other controls would mitigate the effects of this lack of asset access control.

The FISCAM section "Test Information System Controls" included in section 2.2 provides more specific guidance on how the auditor tests relevant IS control techniques. This FISCAM section includes information that should be included in audit documentation. In addition, FISCAM Chapters 3 and 4 provide general controls and business process application level controls consistent with GAGAS categories. In addition, Appendices II and III may be used to document the results of the IS controls audit tests.

As discussed in FAM Section 390, the auditor should document the evaluation of specific control activities in the SCE worksheet or equivalent. The auditor should document control tests in the control test audit plan (formerly referred to as the audit program) and in accompanying documents. The auditor should also document any IT system control tests as discussed in FAM 370.05. FAM 395 H presents an example of a completed SCE worksheet documents. FISCAM Appendices II and III can be used to document such controls.

REPORTING THE RESULTS OF THE IS CONTROLS AUDIT

FAM Sections 370 and 580 discuss the auditor's assessment of the effectiveness of IS controls based on internal control tests performed.

As discussed in FAM Section 370.03, based on the procedures performed, the auditor and IS controls specialist should discuss conclusions on the effectiveness of IS controls and reach agreement. The auditor should (1) incorporate the conclusions into the audit documentation for each IS control tested and (2) perform tests of application controls (principally manual follow-up of exceptions) or user controls identified by the IS controls specialist for the audit team to test.

If the auditor and the IS controls specialist determine that IS controls are effective, the auditor may also ask the IS controls specialist to identify any IS controls within the applications tested that were not previously identified by the auditor using the above procedures. For example, such IS controls might achieve control objectives not otherwise achieved through manual controls or might be more efficient or effective to test than manual controls. The IS controls specialist may assist the auditor in determining the efficiency and effectiveness of searching for and testing additional IS controls. The auditor should document these decisions, including a description of the expected scope of the IS controls specialist's work.

The auditor and the IS controls specialist should work together to document the procedures for evaluating and testing the effectiveness of IS controls and the results of this work.

The FISCAM section 2.3 "Report Audit Results" provides more specific guidance on how the auditor evaluates the results of tests of IS controls within the context of a financial audit. More specifically, the section discusses the auditor's considerations for determining whether IS control weaknesses are material weaknesses, significant deficiencies, and significant deficiencies for purposes of FFMIA reporting.

Steps in Assessing Information System Controls

As discussed in FAM 270, the following flowcharts illustrate steps the auditor and the IS controls specialist generally follow in assessing IS controls in a financial statement audit. However, the audit team may decide to test the effectiveness of the general controls even if they are not likely to be effective (see fig. 6) or review business process application controls even though general controls are not effective (see fig. 7), in order to make recommendations on how to fix weak controls.

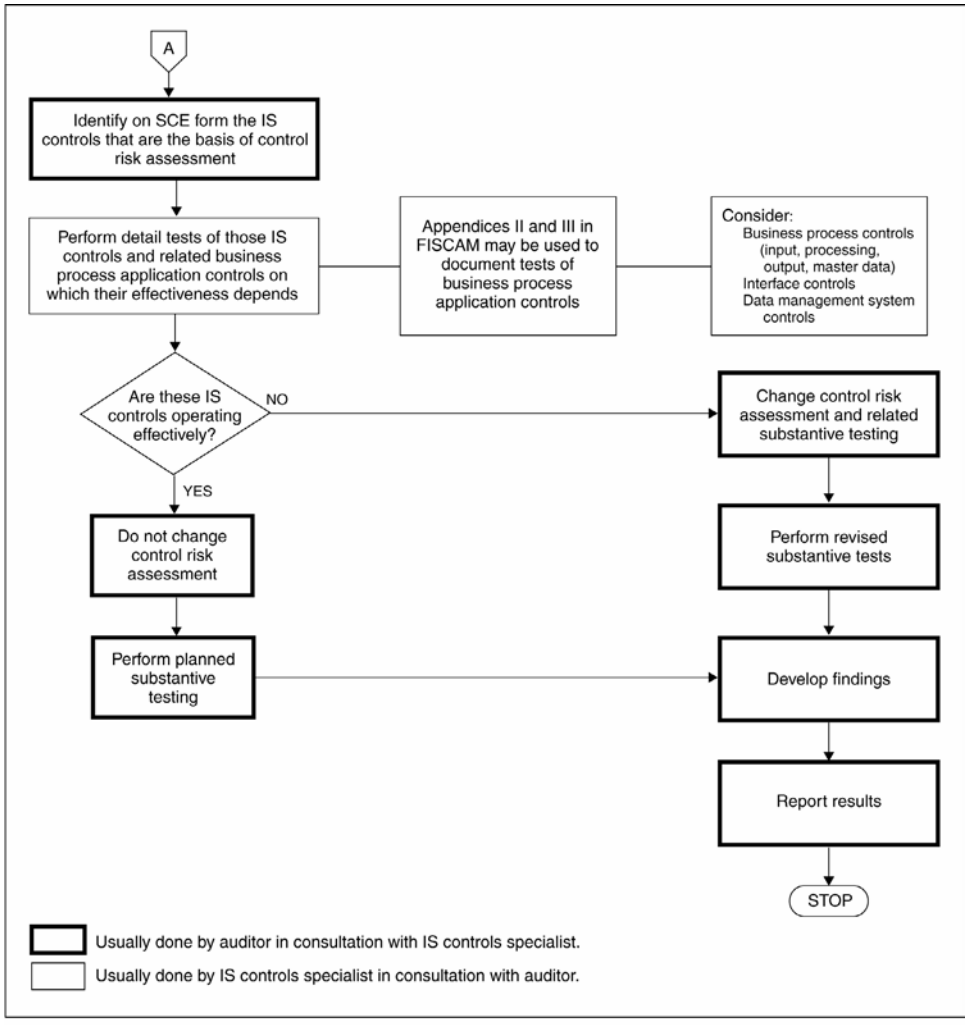
Figure 7: Steps for Each Significant Application in Assessing Information System Controls in a Financial Statement Audit



Source: GAO.

Appendix VII - Entity's Use of Service Organizations

Many entities use outside service organizations to support business processes. Service organizations provide services ranging from performing a specific task (e.g., payroll processing) to replacing entire business units or functions of an entity. To determine the significance of the functions performed by service organizations to the audit objectives, auditors should obtain information about (1) services performed by the service organizations, (2) the related service organization controls, and (3) their effects on the audit objectives.

If an organization uses a service organization, information and information processing are subjected to controls that may be physically and operationally removed from the user organization. Consequently, an entity's internal control may include controls that are not directly administered by the user organization, but rather by the service organization. For this reason, to obtain an understanding of IS controls, the auditor of the user organization (the user auditor) should gain an understanding of controls at the service organization that may affect the user organization's business processes. This understanding may be gained in several ways, including discussions with management and/or obtaining a service auditor's report. In addition, FISMA requirements specifically apply to information systems used or operated by an agency or by a contractor of an agency or other organization on behalf of the entity.

During the planning stage of the audit, the user auditor should determine the significance of the service organization's controls to the user organization's internal control and to the audit objectives. Factors that may affect the significance to the audit of a service organization's controls include the following:

- The nature and materiality/significance of the transactions or information affected by the service organization

- The degree of interaction between internal control at the user organization and the service organization's controls. The degree of interaction refers to the extent to which a user organization is able to and elects to implement effective controls over the processing performed by the service organization.

With respect to financial audits, a service organization's services are part of an entity's information system, and therefore significant to the user organization's internal control, if they affect any of the following:

- The classes of transactions in the entity's operations that are significant to the financial statements
- The procedures, both automated and manual, by which the entity's transactions are initiated, recorded, processed, and reported, from their occurrence to their inclusion in the financial statements
- The related accounting records (whether electronic or manual), supporting information, and specific accounts in the financial statements involved in initiating, recording, processing, and reporting the entity's transactions
- How the entity's information system captures other events and conditions that are significant to the financial statements
- The financial reporting process used to prepare the entity's financial statements, including significant accounting estimates and disclosures

If the user auditor determines that the service organization's controls are significant to the user organization's internal control, and within the context of the audit objectives, the user auditor should gain a sufficient understanding of those controls to assess risk and plan the audit. Such controls include (1) user controls and (2) other controls implemented by the user entity to monitor the effectiveness of the design and operation of controls related to the information processed by the service organization. Such monitoring controls could include:

- contractual security requirements,
- service level agreements,

- receipt and analysis of service organization reports,
- additional testing requested of the service auditor or performed by the user entity, and
- other user entity controls

If the service organization's controls are significant to the user organization's internal control and within the context of the audit objectives, inadequate monitoring controls prevent entity management from having reasonable assurance that controls over the information processed and/or maintained by the service organization are designed and operating effectively.

Sources of information include analysis of user controls implemented by the user entity and interviews of appropriate entity personnel. Also, the auditor may review any service auditor reports. The service organization may hire an independent auditor (referred to as the service auditor) to provide a report (referred to as the SAS 70 report[119]) on the internal controls at the service provider. Each user organization and its auditor may use this report to assess the internal control policies and procedures at the service organization as part of the overall evaluation of the internal control at the user organization. If additional information about service bureau controls is still needed, the auditor may contact the service organization, through the user entity, for additional information.

The user auditor should obtain a sufficient understanding of internal control to evaluate the effectiveness of the design of controls relevant to the audit objectives and determine whether they have been implemented. In some instances, the user entity may have effective controls over the service organization. In such cases, evidence about the operating effectiveness of internal control can be obtained from the user entity. However, in other cases, the controls are applied only at the service organization.

[119]The Auditing Standards Board of the American Institute of Certified Public Accountants is currently deliberating on possible changes to SAS 70 requirements. Users of the FISCAM should determine whether such changes have been made before applying this Appendix.

For internal control that is significant within the context of the audit objectives, auditors should assess whether internal control has been properly designed and implemented. Based on the user auditor's understanding of the design effectiveness and implementation of internal control, the auditor should assess risks relevant to the audit objectives. In a financial statement audit, the auditor should identify and assess the risk of material misstatement at the financial statement level and at the relevant assertion level related to classes of transactions, account balances, and disclosures.

In a performance audit, for those internal controls that are deemed significant within the context of the audit objectives, auditors should plan to obtain sufficient, appropriate evidence to support their assessment about the operating effectiveness of those controls, including tests of such controls. In a financial audit, the auditor should perform tests of the operating effectiveness of controls when the auditor's risk assessment includes an expectation of the operating effectiveness of controls or when substantive procedures alone do not provide sufficient appropriate audit evidence at the relevant assertion level. For federal financial audits, OMB requires auditors of federal financial statements to test those controls that are effectively designed.

To obtain sufficient, appropriate evidence about the operating effectiveness of service organization controls, the auditor may determine that it is appropriate to use a service auditor's report. In such instances, the auditor should determine whether the service auditor's report is sufficient to meet the audit objectives. For financial audits, the auditor's considerations are discussed at AU 543 (Part of Audit Performed by Other Independent Auditors). In some instances, the user auditor may determine that it is necessary and appropriate to supplement the service auditor report by discussing it with the service auditor, by requesting the service auditor to perform agreed-upon procedures, or by performing procedures at the service organization. In addition, in some instances, the user auditor may request the service auditor to perform tests of data maintained by the service organizations. Any such requests of the service auditor should be coordinated through the user and service organizations.

A service auditor may provide a service organization with one of two types of SAS 70 reports:

- Type 1 is a report on the design and implementation of controls (placed in operation) at a service organization, but does not include testing of the operating effectiveness of controls. This information, in conjunction with other information about a user organization's internal control, may assist the user auditor in obtaining an understanding of the user organization's internal control. A type 1 report is not intended to provide a basis for the auditor to reduce the assessment of risk, because it does not include control testing to determine whether the controls are operating effectively.

- Type 2 is a report on the design and implementation of controls (placed in operation) *and* on their operating effectiveness. In a type 2 engagement, the service auditor performs the procedures required for a type 1 engagement and also performs tests of specific controls to evaluate their operating effectiveness in achieving the specified control objectives. The service auditor issues a report that includes the type 1 report opinions and refers the reader to a description of tests of operative effectiveness performed by a service auditor. The report states whether, in the opinion of the service auditor, the controls tested were operating with sufficient effectiveness to provide reasonable, but not absolute, assurance that the related control objectives were achieved during the period specified. If a service organization's controls that affect a user organization's financial statements are operating with sufficient effectiveness to achieve the related control objectives, a user auditor may be able to use the type 2 report as evidence of control effectiveness, reduce their assessment of risk for certain financial statement assertions affected by the service organization's service, and reduce the extent of substantive procedures performed for those assertions.

The nature, timing, and extent of the tests of operating effectiveness are also affected by the period covered by the report. Tests of operating effectiveness may provide evidence that will enable the service auditor to report on the entire period covered by the report. To be useful to user auditors, the report ordinarily should cover the

reporting period of the user organization. However, for the SAS 70 report to be received in time for the completion of the user entity audit, SAS 70 reports may need to be requested for periods prior to the end of the federal fiscal year. If it does not cover the entire reporting period, the user auditor should evaluate the related effect on the user auditor's risk assessment and, for the period not covered by the service auditor report(s), should evaluate the adequacy of evidence about the operating effectiveness of controls.

The service organization is responsible for identifying the internal controls that may be relevant to a user organization's internal control (description of controls). The service auditor is responsible for determining whether the description provides sufficient information for user auditors to obtain an understanding of those aspects of the service organization's controls that would have an effect on the user organization's internal control. Also, the service auditor may identify certain controls that the service organization assumes would be implemented by the user organization.

In OMB Circular A-123, Appendix A, OMB stated that an agency can leverage SAS 70 reports during the assessment. Management should determine if a Type II SAS 70 report exists and consider whether it is sufficient in scope. Entity management should look at the scope of the SAS 70 report in the context of the overall internal control assessment when considering the nature and type of other assessment activities needed outside of the SAS 70 process. OMB Bulletin 07-04, as revised, *Audit Requirements for Federal Financial Statements*, para. 6-16-18 states that service organizations *must* either provide its user organizations with an audit report on whether (1) internal controls were designed properly to achieve specified objectives and placed into operation as of a specified date and (2) the controls that were tested were operating effectively to provide reasonable assurance that the related control objectives were met during the period specified or allow user auditors to perform appropriate tests of controls at the service organization. If the service organization uses another service organization (subservicer), the service organization is responsible for requesting or obtaining appropriate audit coverage. Such audit reports should be submitted to user organizations within a reasonable time *but no later than September 30* to allow the auditor of the user

organization to use the audit report during the audit of the user organization's financial statements.[120]

In addition, the "Implementation Guide for OMB Circular A-123, Management's Responsibility for Internal Control Appendix A, Internal Control over Financial Reporting," issued by the Chief Financial Officer's Council (July 2005) provides guidance for considering service organization controls as part of the annual A-123 assessment.

FISMA applies to both (1) information collected or maintained by or on behalf of an agency and (2) information systems used or operated by an agency or by a contractor of an agency or other organization on behalf of an agency. As discussed in OMB Memoranda, as part of FISMA, agency management is responsible for ensuring that contractors (and others covered by FISMA) meet FISMA requirements, including annual testing. SAS 70 reports may provide sufficient evidence of contractor compliance. However, it may not address all of the FISMA control objectives and it may not ensure the specific systems that support the government or contract activity are actually reviewed.

Therefore, in determining whether SAS 70 reports provide sufficient evidence of contractor system FISMA compliance, it is the entity's responsibility to ensure:

- The scope of the SAS 70 audit was sufficient, and fully addressed the specific contractor system requiring FISMA review.
- The audit encompassed all controls and requirements of law, OMB policy and NIST guidance.

In addition, NIST SP 800-47 discusses additional steps entity management should implement with respect to contractors, such as an Interconnection Security Agreement (ISA) and a Memorandum of Understanding (MOU). The ISA specifies the technical and security

[120]Supersedes requirements in OMB Memorandum M-04-11, *Service Organization Audits*.

requirements of the interconnection, and the MOU defines the responsibilities of the participating organizations.

SAS 70 reports do not include contingency planning controls, as auditing standards (AU 324) do not apply to internal control deficiencies that affect processing in future periods. However, service auditors can be requested to perform procedures to test the effectiveness of contingency planning controls and report the results of such testing to service organization management, who may in turn disclose the information and plans to correct deficiencies in the section of the SAS 70 report titled "Other Information Provided by the Service Organization."

The FISCAM can be used as a basis for performing a SAS 70 audit, using the control objectives discussed in Chapter 1.

Appendix VIII - Application of FISCAM to Single Audits[121]

The FISCAM can be used to assess information system controls over compliance requirements and financial reporting in connection with a Single Audit. The following provides a brief introduction to Single Audit requirements and how the FISCAM relates to such requirements. See the Single Audit Act, as amended, OMB Circular A-133, the Compliance Supplement, and the AICPA Audit Guide: Government Auditing Standards and Circular A-133 Audits for additional information.

Single Audits include opinions on the entity's financial statements, the schedule of expenditures of federal awards, and the entity's compliance with laws, regulations, and the provisions of contracts or grant agreements pertaining to federal awards that may have a direct and material effect on each of its major programs (referred to as compliance requirements). Government Auditing Standards ("yellow book") require certain audit procedures relating to internal controls over financial reporting in relation to the audit of the financial statements and the schedule of expenditures. In addition, auditors performing a Single Audit should obtain evidence about the effectiveness of internal control over the compliance requirements of major Federal programs.

In assessing internal control over compliance requirements and financial reporting, the auditor should evaluate whether the each of the specific control techniques that are significant to compliance

[121]The Single Audit is intended to provide a cost-effective audit for nonfederal entities in that one audit is conducted in lieu of multiple audits of individual programs. Such audits are performed in accordance with the Single Audit Act Amendments of 1996 and OMB Circular A-133 (*Audits of States, Local Governments, and Non-Profit Organizations*) to determine whether federal funds to nonfederal entities are expended properly.

and financial reporting is an information systems (IS) control. An IS controls specialist generally should review and concur with the audit team's identification of IS controls, particularly with respect to whether all IS controls were properly identified as such.

As discussed in Chapter 1, IS controls consist of those internal controls that are dependent on information systems processing and include general controls (entitywide, system, and business process application levels), business process application controls (input, processing, output, master file, interface, and data management system controls), and user controls[122] (controls performed by people interacting with information systems). General and business process application controls are always IS controls. A user control is an IS control if its effectiveness depends on information systems processing or the reliability (accuracy, completeness, and validity) of information processed by information systems. Conversely, a user control is not an IS control if its effectiveness does not depend on information systems processing or the reliability of information processed by information systems.

The FISCAM can be used to determine whether IS controls are (1) appropriately designed and implemented (placed in operation), and (2) operating effectively.

As discussed in Chapter 2, the auditor should identify and document the other entitywide, system, and business process level IS controls upon which the effectiveness of each significant IS control technique depends. These other IS controls will principally relate to the entitywide level controls and to each of the critical control points (including control dependencies) at the system and business process application levels. For example, if the IS control is the review of an exception report, the auditor should identify and test the business process application controls directly related to the production of the exception report, as well as the general and other business process application controls upon which the reliability of the information in the exception report depends, including the

[122]User controls are portions of controls that are performed by people interacting with IS controls. The effectiveness of user controls typically depend on information systems processing or the reliability of information processed.

proper functioning of the business process application that generated the exception report and the reliability of the data used to generate the exception report. In addition, the auditor should test the effectiveness of the user control (i.e., management review and followup on the items in the exception report).

The following sections address the audit procedures that should be applied in a Single Audit with respect to controls over (1) compliance requirements and (2) financial reporting.

Internal Control over Compliance Requirements

To evaluate internal control over compliance requirements for major programs, the auditor should:

- plan the audit and testing of internal control to support a low assessed level of control risk for the assertions relevant to the compliance requirements for each major program, and
- unless internal controls are ineffective in design, perform testing of the operating effectiveness of internal controls as planned to support a low assessed level of control risk for the assertions relevant to the compliance requirements for each major program.

When internal control over compliance requirements for a major program is ineffective in preventing or detecting noncompliance (either in design or operation), the auditor should report a significant deficiency (including whether any such condition is a material weakness), assess the related control risk at the maximum, and determine whether to apply further audit procedures to test compliance based on ineffective internal control.

In planning and performing a Single Audit, the auditor should:

- Identify the major programs subject to the Single Audit.
- Identify systems that process data for major programs.
- Determine the types of compliance requirements that are relevant to the audit (see A-133 and the *Compliance Supplement*).

- For each relevant type of compliance requirement, determine/identify the relevant control objectives (see the Compliance Supplement).
- For each relevant control objective, identify the internal control technique(s) designed/implemented by the entity to achieve the objective.
- Determine whether such control techniques are effectively designed to achieve the related control objective(s) and if so, whether they are placed in operation (implemented), including related IS controls upon which the effectiveness of the control technique depends. The auditor can use the FISCAM to assess the effectiveness of the design of IS control techniques and whether they have been implemented (placed in operation).
- For each control that is effectively designed and implemented (placed in operation), the auditor should determine whether it is effectively operating. The auditor can use the FISCAM to determine whether IS controls are effectively operating. As discussed in Chapter 2, for each IS control technique, the auditor should test the effectiveness of:
  - the specific IS control technique, and
  - the business process application and general controls upon which the effectiveness of specific IS control depends.

When the auditor assesses control risk below the maximum level, the auditor should obtain sufficient evidential matter to support that assessed level of control risk. The type of evidential matter, its source, its timeliness, and the existence of other evidential matter related to the conclusions to which it leads all bear on the degree of assurance the evidential matter provides.

Based on the tests of controls, the auditor should draw conclusions on the assessed level of control risk. The auditor should also consider the impact on the assessment of internal controls of any exceptions noted as part of the audit procedures applied to test conformance with compliance requirements. The assessment of the effectiveness of internal control over compliance in preventing or detecting noncompliance is determined in relation to each individual type of compliance requirement for each major program

or to an audit objective identified in the Compliance Supplement (e.g., controls over requirements for eligibility).

The auditor should determine whether any deficiencies in IS controls represent material weaknesses or significant deficiencies. The following definitions are provided in the draft reports on A-133 provided by the AICPA[123]:

- A *control deficiency* in an entity's internal control over compliance exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect noncompliance with a type of compliance requirement of a federal program on a timely basis.
- A *significant deficiency* is a control deficiency, or combination of control deficiencies, that adversely affects the entity's ability to administer a federal program such that there is more than a remote likelihood that noncompliance with a type of compliance requirement of a federal program that is more than inconsequential will not be prevented or detected by the entity's internal control.
- A *material weakness* is a significant deficiency, or combination of significant deficiencies, that results in more than a remote likelihood that material noncompliance with a type of compliance requirement of a federal program will not be prevented or detected by the entity's internal control.

[123]The definitions currently in Circular A-133, based on superseded GAGAS, are as follows: Reportable conditions involve matters coming to the auditor's attention relating to significant deficiencies in the design or operation of the internal control over compliance that, in the auditor's judgment, could adversely affect the entity's ability to administer a major federal program in accordance with the applicable requirements of laws, regulations, contracts, and grants. A material weakness is a reportable condition in which the design or operation of one or more of the internal control components does not reduce to a relatively low level the risk that noncompliance with the applicable requirements of laws, regulations, contracts, and grants caused by error or fraud that would be material in relation to a major federal program being audited may occur and not be detected within a timely period by employees in the normal course of performing their assigned functions.

The objectives of internal control pertaining to the compliance requirements for Federal programs are as follows:

(1) Transactions are properly recorded and accounted for to:

(i) Permit the preparation of reliable financial statements and Federal reports;
(ii) Maintain accountability over assets; and
(iii) Demonstrate compliance with laws, regulations, and other compliance requirements;

(2) Transactions are executed in compliance with:

(i) Laws, regulations, and the provisions of contracts or grant agreements that could have a direct and material effect on a Federal program; and
(ii) Any other laws and regulations that are identified in the compliance supplements; and

(3) Funds, property, and other assets are safeguarded against loss from unauthorized use or disposition.

Part 6 of the *Compliance Supplement* is designed to assist non-Federal entities and their auditors in complying with these requirements by describing, for each type of compliance requirement, the objectives of internal control, and certain characteristics of internal control that, when present and operating effectively, may ensure compliance with program requirements. Part 6 cautions that the categorizations used in the Supplement may not necessarily reflect how an entity considers and implements internal control. Also, Part 6 was not designed as a checklist of required internal control characteristics. Non-Federal entities could have adequate internal control even though some or all of the characteristics included in Part 6 are not present. Further, non-Federal entities could have other appropriate internal controls operating effectively that have not been included in Part 6. Non-Federal entities and their auditors should exercise judgment in determining the most appropriate and cost effective internal control in a given environment or circumstance to provide reasonable assurance for compliance with Federal program requirements.

The characteristics of internal control in Part 6 of the *Compliance Supplement* are presented in the context of the components of

internal control discussed in *Internal Control-Integrated Framework* (COSO Report), published by the Committee of Sponsoring Organizations of the Treadway Commission. These components are consistent with the *Standards for Internal Control in the Federal Government* (Green Book).[124] Part 6 describes characteristics of internal control relating to each of the five components of internal control that should reasonably assure compliance with the requirements of Federal laws, regulations, and program compliance requirements.

Internal Control over Financial Reporting

In addition, the auditor should gather evidence about internal controls over financial reporting, including information system controls, as part of the financial audits of the financial statements and schedule of expenditures of federal awards. The auditor may use evidence gathered in connection with the testing of controls over compliance discussed above.

GAGAS financial audit standards require the auditor to obtain an understanding of internal control over financial reporting sufficient to assess the risk of material misstatement of the financial statements whether due to error or fraud, and to design the nature, timing, and extent of further audit procedures. This includes performing risk assessment procedures to evaluate the design of controls relevant to an audit of financial statements and to determine whether they have been implemented. In obtaining this understanding, the auditor considers how an entity's use of information technology (IT) and manual procedures affect controls relevant to the audit. The FISCAM can be used to assist the auditor in obtaining an understanding of internal controls relevant to the financial statements and schedule of expenditures of federal awards.

In addition, when the auditor has determined that it is not possible or practicable to reduce the detection risk at the relevant assertion

[124]Standards for Internal Control in the Federal Government (GAO/AIMD-00-21.3.1, November 1999)

level to an acceptably low level with audit evidence obtained only from substantive procedures, the auditor should perform tests of controls to obtain audit evidence about their operating effectiveness. For example, the auditor may find it impossible to design effective substantive procedures that by themselves provide sufficient appropriate audit evidence at the relevant assertion level when an entity conducts its business using information technology (IT) and no documentation of transactions is produced or maintained, other than through the IT system.

Specifically, as discussed in Chapter 2, for those internal controls over financial reporting that the auditor (1) has determined are suitably designed and implemented (2) plans to test whether they are operating effectively, and (3) has determined to be IS controls (as defined above), the auditor should test the effectiveness of

- the specific IS control, and
- the business process application and general controls upon which the effectiveness of specific IS control depends.

The FISCAM can be used to assess the effectiveness of the design and operation of information system controls as part of the financial audits of the financial statements and schedule of expenditures of federal awards.

Appendix IX - Application of FISCAM to FISMA

The FISCAM may be used as a basis for the independent evaluation of a federal agency's information security program required by the Federal Information Security Management Act (FISMA). FISMA requires that each year each agency shall have performed an independent evaluation of the information security program and practices of that agency to determine the effectiveness of such program and practices. Independent evaluations of non-national-security systems are to be performed by the agency's Inspector General, or by an independent external auditor chosen by the IG, if any, or by the head of the agency, if there is no agency IG. Evaluations related to national security systems are to be performed only by an entity designated by the agency head.

Each evaluation shall include:

- testing of the effectiveness of information security policies, procedures, and practices of a representative subset of the agency's information systems;
- an assessment (made on the basis of the results of the testing) of compliance with the requirements of FISMA and related information security policies, procedures, standards, and guidelines; and
- separate presentations, as appropriate, regarding information security relating to national security systems.

Although FISMA does not require that these evaluations be performed in accordance with GAGAS, or use the FISCAM, agency Inspectors General and independent external auditors may use FISCAM as the basis for FISMA evaluations performed under GAGAS. Also, this guidance may be used to perform FISMA evaluations that are not performed as GAGAS audits.

The FISCAM was designed as a risk-based methodology to assess the effectiveness of an entity's information system controls. It can also be used to provide a reasonable basis for determining whether information security is effective, and identifying information

security strengths and weaknesses as a basis for that determination. The FISCAM control activities are consistent with NIST guidance in NIST SP 800-53 (see Appendix IV). All controls in NIST SP 800-53 have been mapped to FISCAM.

The following selected topics, which supplement the methodology (including the planning, testing, and reporting phases) and controls discussed in Chapters 1-4, may provide useful supplemental guidance to assist the auditor in applying the FISCAM to meet the evaluation (testing and assessment) requirements of FISMA:

- selecting a representative subset of systems;
- independence requirements; and
- reporting.

Selecting a representative subset of systems

The concept of a representative subset of systems was intended to provide the evaluator (the party performing the independent evaluation) with a reasonable basis for their evaluation. The evaluator uses professional judgment to identify a sufficient scope of systems testing to constitute a representative subset of the entity's systems with the expectation that it would be representative of all of the entity's systems covered by FISMA, in all significant respects. The evaluator may supplement systems tested for other purposes (e.g., financial audits) with additional systems necessary to obtain a representative subset. Alternatively, the evaluator also may select a representative subset of systems for purposes of the FISMA evaluation and supplement it with additional systems necessary to perform the financial audit or other audits.

Factors that the evaluator may consider in determining a representative subset of agency systems include:

- systems at different risk levels (high, moderate, and low)
- both general support systems and major application systems
- different types of applications (e.g., financial management, operations) operated by the agency
- major processing locations

- general and business process controls
- coverage of the FISCAM control areas
- contractor and other non-entity systems that are covered by FISMA requirements.

In determining the specific systems to be tested in the current evaluation period, the evaluator may consider implementing a multi-year testing strategy (as discussed FISCAM Section 2.1.9.E) or may consider recent testing performed as part of a multi-year testing strategy. Also, evidence of continuing material weaknesses or significant deficiencies may reduce the extent of testing necessary to reasonably conclude that information security is ineffective; however, the evaluator may consider the benefits of testing to identify additional weaknesses that the agency can begin to address.

Independence requirements

FISMA requires that an independent evaluation be performed. This means that the auditor should be independent of the entity in fact and in appearance. In addition, if the auditor would like to use the work of other parties as a basis for the auditor's evaluation, the auditor should consider the independence and objectivity of the persons performing the testing on behalf of the agency. If such other parties are considered independent, the auditor may determine that the work of the other parties can be used as support for the evaluation without retesting. The less independent or objective the other parties' work is, the less the auditor can use the work of the other party without retesting the other parties' work. If the other parties are not independent, the auditor should not use such work as a substitute for their own testing. Although GAGAS is not required to be applied in the FISMA evaluation, such standards provide guidance on considering independence that is consistent with other discussions of independence in professional literature. Also, the auditor may elect to perform the FISMA evaluation using GAGAS. GAGAS independence requirements are discussed in GAGAS 3.20-3.30.

Reporting

The Reporting phase discussed in Chapter 2 describes how to evaluate the results of the tests of controls and conclude as to their effectiveness. As part of evaluating the results of the testing for audits used to as a basis for the FISMA evaluations, the evaluator should determine whether any weaknesses identified, individually or collectively, represent FISMA significant deficiencies as that term is used in FISMA (see "Related Reporting Responsibilities" in Chapter 2 for further information.) FISMA requires agencies to report any significant deficiencies (FISMA significant deficiencies) (1) as material weaknesses under FMFIA, and 2) as instances of a lack of substantial compliance under FFMIA, if related to financial management systems.

OMB defines a FISMA significant deficiency as "a weakness in an agency's overall information systems security program or management control structure, or within one or more information systems which significantly restricts the capability of the agency to carry out its mission or compromises the security of its information, information systems, personnel, or other resources, operations, or assets. In this context, the risk is great enough that the agency head and outside agencies must be notified and immediate or near-immediate corrective action must be taken."

As part of evaluating the effectiveness of information security controls, the evaluator may perform audit procedures to determine whether information used in management reports or used to support FISMA reporting to OMB is consistent with the results of the testing they performed. More specifically, for each system tested, the evaluator may compare the results of testing with related information included in management and FISMA reports. For example, the evaluator may compare evidence obtained about the effectiveness of a system's certification and accreditation with information included in management and FISMA reports to determine whether such reporting was accurate (e.g., whether a certification and accreditation was effectively completed). If, in this circumstance, a certification and accreditation was completed and was reported as such in management and FISMA reports, but the evaluator's testing revealed that it was not properly performed, the

evaluator should consider this deficiency in management's controls over monitoring in their evaluation of the results of testing and determine whether there are systemic reasons for the deficiency.

For additional guidance on performing FISMA evaluations, refer to the PCIE FISMA Framework.

Appendix X - Information System Controls Audit Documentation

This appendix summarizes the audit documentation that should be prepared by the auditor in connection with the IS controls audit, as discussed in Chapter 2.

Planning Phase

The auditor should document the following information developed in the planning phase:

- Objectives of the IS controls audit and, if it is part of a broader audit, a description of how such objectives support the overall audit objectives.
- The scope of the IS controls audit.
- The auditor's understanding of the entity's operations and key business processes, including, to the extent relevant to the audit objectives, the following:
  - The significance and nature of the programs and functions supported by information systems;
  - Key business processes relevant to the audit objectives, including business rules, transaction flows, and application and software module interaction;
  - Significant general support systems and major applications that support each key process;
  - Background information request, if used;
  - Significant internal and external factors that could affect the IS controls audit objectives;
  - Detailed organization chart, particularly the IT and the IS components;
  - Significant changes in the IT environment/architecture or significant applications implemented within the past 2 years or planned within the next 2 years; and

- The entity's reliance on third parties to provide IT services (e.g., in-house, remote connectivity, remote processing).

- A general understanding of the structure of the entity's or component's networks as a basis for planning the IS controls audit, including high-level and detailed network schematics relevant to the audit objectives.
- Key areas of audit interest, including relevant general support systems and major applications and files. This includes (1) the operational locations of each key system or file, (2) significant components of the associated hardware and software (e.g., firewalls, routers, hosts, operating systems), (3) other significant systems or system-level resources that support the key areas of audit interest, and (4) prior audit problems reported. Also, the auditor should document all access paths in and out of the key areas of audit interest.
- Factors that significantly increase or decrease IS risk and their potential impact on the effectiveness of information system controls. For each risk identified, the auditor should document the nature and extent of the risk; the conditions that gave rise to that risk; and the specific information or operations affected (if not pervasive).
- Preliminary assessment of IS risks related to the key areas of audit interest and the basis for the assessed risk. For each risk identified, the auditor should document the nature and extent of the risk; the conditions that gave rise to that risk; and the specific information or operations affected (if not pervasive). The auditor should also document other considerations that may mitigate the effects of identified risks.
- Critical control points.
- A preliminary understanding of the entity's IS controls, including the organization, staffing, responsibilities, authorities, and resources of the entity's security management function. The auditor should include the following information in the documentation of their preliminary understanding of the design of IS controls, to the extent relevant to the audit objectives:
  - Identification of entitywide level controls (and appropriate system level controls) designed to achieve the control activities for each critical element within each general control area and a determination of whether they are designed effectively and

implemented (placed in operation), including identification of control activities for which there are no or ineffective controls at the entitywide level and the related risks;

- Identification of business process level controls for key applications identified as key areas of audit interest, determination of where those controls are implemented (placed in operation) within the entity's systems, and the auditor's conclusion about whether the controls are designed effectively, including identification of control activities for which there are no or ineffective controls and the related risks and the potential impact of any identified design weaknesses on the completeness, accuracy, validity, and confidentiality of application data;
- Any internal or third-party information systems reviews, audits, or specialized systems testing (e.g., penetration tests, disaster recovery tests, and application-specific tests) performed during the last year;
- Management's plans of action and milestones, or their equivalent, that identify corrective actions planned to address known IS control weaknesses;
- Status of the prior years' audit findings;
- Documentation for any significant computer security related incidents identified and reported for the last year;
- Documented security plans;
- Documented risk assessments for relevant systems (e.g., general support systems and major applications);
- System certification and accreditation documentation or equivalent for relevant systems;
- Documented business continuity of operations plans and disaster recovery plans; and
- A description of the entity's use of third-party IT services

- Relevant laws and regulations and their relation to the audit objectives, including documentation of any consultation with legal counsel.
- Description of the auditor's procedures to consider the risk of fraud, any fraud risk factors that the auditor believes could affect the audit objectives, and planned audit procedures to detect any fraud significant to the audit objectives.
- Audit resources planned.

- Current multiyear testing plans.
- Documentation of communications with entity management.
- If IS controls are performed by service organizations, conclusions whether such controls are significant to the audit objectives and any audit procedures performed with respect to such controls (e.g., review of service auditor reports)
- If the auditor plans to use the work of others, conclusions concerning the planned use of the work of others and any audit procedures performed with respect to using the work of others.
- Audit plan that adequately describes the objectives, scope, and methodology of the audit.
- Any decision to reduce testing of IS controls due to the identification of significant IS control weaknesses.

Testing Phase

The auditor should document the following information developed in the testing phase:

- An understanding of the information systems that are relevant to the audit objectives
- IS control objectives and activities relevant to the audit objectives.
- By level (e.g., entitywide, system, business process application) and system sublevel (e.g., network, operating system, infrastructure applications), a description of control techniques used by the entity to achieve the relevant control activities.
- By level and sublevel, specific tests performed, including:
  - related documentation that describes the nature, timing, and extent of the tests;
  - evidence of the effective operation of the control techniques or lack thereof (e.g., memos describing procedures and results, output of tools and related analysis);
  - if a control activity is not achieved, any compensating controls or other factors and the basis for determining whether they are effective;

- the auditor's conclusions about the effectiveness of the entity's IS controls in achieving the control activity; and
- for each weakness, whether the weakness is a material weakness, significant deficiency, or just a deficiency, as well as the criteria, condition, cause, and effect if necessary to achieve the audit objectives.

Reporting Phase

The auditor should document the following information developed in the reporting phase:

- The auditor's conclusion about the effectiveness of IS controls (in relation to the IS controls audit objectives) in achieving the control categories, critical elements, and the relevant control activities and the basis for the conclusion, including the factors that the auditor considered in making the determination.
- If part of a broader audit, the impact of any identified IS control weaknesses on the overall audit objectives.
- Copies of any reports or written communications issued in connection with the audit, including entity management comments related to such reports and communications.
- For financial audits and attestation engagements, the auditor's determination of whether identified weaknesses represent material weaknesses or significant deficiencies, and the basis for the auditor's conclusions.
- Other documentation required by the audit organization's policies and procedures, including quality assurance processes.
- Results of procedures to detect any fraud significant to the audit objectives and the impact on the audit.
- Results of audit follow-up procedures to determine whether agency corrective actions have been implemented, based on risk and a cost benefit analysis, to sufficiently remediate previously reported IS control weaknesses.
- As appropriate, the auditor's considerations and determinations concerning FMFIA, FFMIA, and other reporting responsibilities.

Appendix XI - Glossary

The definitions in this glossary are drawn from various sources, including this manual and the materials in the bibliography. In addition, certain definitions were developed by project staff and contractors.

Acceptance testing	Final testing by users to decide whether to accept a new system.
Access control	The process of granting or denying specific requests: 1) for obtaining and using information and related information processing services; and 2) to enter specific physical facilities (e.g., Federal buildings, military establishments, and border crossing entrances).
Access control list (ACL)	A register of: 1) users (including groups, machines, and processes) who have been given permission to use a particular system resource, and 2) the types of access they have been permitted.
Access control software	(CA-ACF2, RACF, CA-TOP SECRET) This type of software, which is external to the operating system, provides a means of specifying who has access to a system, which has access to specific resources, and what capabilities authorized users are granted. Access control software can generally be implemented in different modes that provide varying degrees of protection such as denying access for which the user is not expressly authorized, allowing access which is not expressly authorized but providing a warning, or allowing access to all resources without warning regardless of authority.
Access method	The technique used for selecting records in a file for processing, retrieval, or storage.
Access path	Sequence of hardware and software components significant to access control. Any component capable of enforcing access restrictions or any component that could be used to bypass an access restriction should be considered part of the access path. The access path can also be defined as the path through which a user request travels, including the telecommunications software, transaction processing software, application program, etc.
Access path diagram	Network schematic that identifies the users of the system, the type of device from which they can access the system, the software used to access the system, the resource they may access, the system on which these resources reside, and the modes of operation and telecommunication paths.

Access privileges	Precise statements that define the extent to which an individual can access computer systems and use or modify the programs and data on a system, and under what circumstances this access will be allowed.
Access rights	Also called permissions or privileges, these are the rights granted to users by the administrator or supervisor. Access rights determine the actions users can perform (e.g., read, write, execute, create and delete) on files in shared volumes or file shares on the server.
Accountability	The security goal that generates the requirement for actions of an entity to be traced uniquely to that entity. This supports non-repudiation, deterrence, fault isolation, intrusion detection and prevention, and after-action recovery and legal action.
Account Management	Involves (1) the process of requesting, establishing, issuing, and closing user accounts; (2) tracking users and their respective access authorizations; and (3) managing these functions.
Accreditation	The official management decision given by a senior agency/entity official to authorize operation of an information system and to explicitly accept the risk to agency/entity operations (including mission, functions, image, or reputation), agency/entity assets, or individuals, based on the implementation of an agreed-upon set of security controls.
Accreditation boundary	All components of an information system to be accredited by an authorizing official and excludes separately accredited systems, to which the information system is connected.
Accuracy	See Accuracy Control.
Accuracy control	Controls that are designed to provide reasonable assurance that transactions are properly recorded, with correct amount/data, and on a timely basis (in the proper period); key data elements input for transactions are accurate; data elements are processed accurately by applications that produce reliable results; and output is accurate.
Adequate security	Security commensurate with the risk and the magnitude of harm resulting from the loss, misuse, or unauthorized access to or modification of information.
Advanced Encryption Standard (AES)	The Advanced Encryption Standard specifies a U.S. Government-approved cryptographic algorithm that can be used to protect electronic data. The AES algorithm is a symmetric block cipher that can encrypt (encipher) and decrypt (decipher) information.
Alternate work site	Entity authorized work at home or at geographically convenient satellite offices (e.g., telecommuting).

Application controls	Application controls, sometimes referred to as business controls, are incorporated directly into computer applications to help ensure the validity, completeness, accuracy, and confidentiality of data during application processing and reporting.
Application level general controls	Controls consist of general controls operating at the business process application level, including those related to security management, access controls, configuration management, segregation of duties, and contingency planning.
Application System	The use of information resources to satisfy a specific set of user requirements. Performs a certain type of work, including specific functions such as payroll, inventory control, accounting, and mission support. Depending on the work for which it was designed, an application system can manipulate text, numbers, graphics, or a combination of these elements.
Application programmer	A person who develops and maintains application programs, as opposed to system programmers who develop and maintain the operating system and system utilities.
Application programs	See application system.
Assertion	Financial statement assertions are management representations that are embodied in financial statement components. The assertions can be either explicit or implicit and can be classified into the following broad categories: existence or occurrence (an entity's assets or liabilities exist at a given date and recorded transactions have occurred during a given period; completeness (all transactions and accounts that should be presented in the financial statements are included; rights and obligations (assets are the rights of the entity and liabilities are the obligations of the entity at a given date; valuation or allocation (asset, liability, revenue, and expense components have been included in the financial statements at appropriate amounts; and presentation and disclosure (the particular components of the financial statements are properly classified, described, and disclosed).
Attack	Attempt to gain unauthorized access to an information system's services, resources, or information, or the attempt to compromise an information system's integrity, availability, or confidentiality.
Audit logging	Recording of user activity in a system or application initiated by the user (e.g., access to a file, record, or field, use of modem). Further, it may record any attempts to log on (successful or unsuccessful) to a system and record log on ID, date and time of each log on.

Audit plan	A high level description of the audit work to be performed in a certain period of time (ordinarily a year). It includes the areas to be audited, the type of work planned, the high level objectives and scope of the work, and topics such as budget, resource allocation, schedule dates, type of report and its intended audience and other general aspects of the work.
Auditable event	A system activity identified by the entity's audit monitoring system that may be indicative of a violation of security policy. The activity may range from simple browsing to attempts to plant a Trojan horse or gain unauthorized access privilege.
Audit risk	For financial statement audits, the risk that the auditor may unknowingly fail to appropriately modify the audit opinion on financial statements that are materially misstated. In a performance audit, the risk that the auditor's findings, conclusions, recommendations, or assurance may be improper or incomplete.
Audit strategy	Plan for assessing organizational activities based on an understanding of the entity's business processes and related risk assessments.
Audit trail	A record showing who has accessed an Information Technology (IT) system and what operations the user has performed during a given period.
Authentication	Verifying the identity of a user, process, or device, often as a prerequisite to allowing access to resources in an information system.
Authenticity	The property of being genuine and being able to be verifies and trusted; confidence in the validity of a transmission, a message, or message originator. See authentication.
Authorization	The official management decision given by a senior agency/entity official to authorize operation of an information system and to explicitly accept the risk to agency/entity operations (including mission, functions, image, or reputation), agency/entity assets, or individuals, based on the implementation of an agreed-upon set of security controls.
Authorizing official	Official with the authority to formally assume responsibility for operating an information system at an acceptable level of risk to agency/entity operations (including mission, functions, image, or reputation), agency/entity assets, or individuals.
Availability	Ensuring timely and reliable access to and use of information.
Backdoor	An undocumented way to gain access to a program, data, or an entire computer system, often known only to the programmer who created it. Backdoors can be handy when the standard way of getting information is unavailable, but they usually constitute a security risk.

Backup	Any duplicate of a primary resource function, such as a copy of a computer program or data file. This standby is used in case of loss or failure of the primary resource.
Backup procedures	A regular maintenance procedure that copies all new or altered files to a backup storage medium, such as a tape drive.
Baseline configuration	Current inventory of all entity hardware, software, and firmware plus approved changes from the baseline.
Biometric	A physical or behavioral characteristic of a human being.
Boundary	Software, hardware, or physical barrier that limits access to a system or part of a system.
Boundary Protection	Monitoring and control of communications at the external boundary between information systems completely under the management and control of the organization, and at key internal boundaries between information systems completely under the management and control of the organization, to prevent and detect malicious and other unauthorized communication, employing controlled interfaces (e.g., proxies, gateways, routers, firewalls, encrypted tunnels).
Browsing	The act of electronically perusing files and records without authorization.
Business Impact Analysis (BIA)	An analysis of an information technology (IT) system's requirements, processes, and interdependencies used to characterize system contingency requirements and priorities in the event of a significant disruption.
Business process	Processes that are the primary functions that the entity performs in accomplishing its mission. Examples include, financial management processes, such as collections, disbursements, or payroll; and mission-related processes, typically at the program or subprogram level, such as education, public health, law enforcement, or income security.
Business process application	A computer program designed to help perform a business function such as payroll, inventory control, accounting, and mission support. Depending on the work for which it was designed, an application can manipulate text, numbers, graphics, or a combination of these elements.
Business process application controls	Controls directly related to individual computerized applications. They help ensure that transactions are complete, accurate, valid, confidential, and available. These controls include programmed control techniques, such as automated edits, and manual follow-up of computer generated reports, such as reviews of reports identifying rejected or unusual items.
Business process application level	Controls at the business process application level consist of policies, procedures for controlling specific processes. For example, the entity's configuration management should reasonably ensure that all changes to application systems are fully tested and authorized.

Business process controls (FISCAM)	These controls are the automated and /or manual controls applied to business transaction flows. They relate to the completeness, accuracy, validity and confidentiality of transactions and data during application processing.
Bypass label processing (BLP)	The technique of reading a computer file while bypassing the internal file/data set label. This process could result in bypassing security access controls.
CAAT	See computer-assisted audit technique.
CD-ROM	See compact disk-read only memory.
Central processing unit (CPU)	The computational and control unit of a computer; the device that interprets and executes instructions.
Certificate	A digital representation of information which at least 1) identifies the certification authority issuing it, 2) names or identifies its subscriber, 3) contains the subscriber's public key, 4) identifies its operational period, and 5) is digitally signed by the certification authority issuing it.
Certificate Authority (CA)	A trusted third party that serves authentication infrastructures or organizations and registers entities and issues them certificates.
Certificate Management	Process whereby certificates (as defined above) are generated, stored, protected, transferred, loaded, used, and destroyed.
Certification	A comprehensive assessment of the management, operational, and technical security controls in an information system, made in support of security accreditation, to determine the extent to which the controls are implemented correctly, operating as intended, and producing the desired outcome with respect to meeting the security requirements for the system.
Certification and Accreditation	A comprehensive assessment of the management, operational and technical security controls in an information system, made in support of security accreditation, to determine the extent to which the controls are implemented correctly, operating as intended, and producing the desired outcome with respect to meeting the security requirements for the system. Accreditation is the official management decision given by a senior agency/entity official to authorize operation of an information system and to explicitly accept the risk to agency/entity operations (including mission, functions, image, or reputation), agency/entity assets, or individuals, based on the implementation of an agreed-upon set of security controls.
Certification Authority	A trusted entity that issues and revokes public key certificates.

Checkpoint	The process of saving the current state of a program and its data, including intermediate results, to disk or other nonvolatile storage, so that, if interrupted, the program could be restarted at the point at which the last checkpoint occurred.
Chief Information Officer	Under the Paperwork Reduction Act, the agency official responsible for ensuring agency compliance with, and prompt, efficient, and effective implementation of, information policies and information resources management responsibilities, including information security and the management of information technology.
Cipher key lock	A lock with a key pad-like device that requires the manual entry of a predetermined code for entry.
Cipher text	Data output from the Cipher or input to the Inverse Cipher. Data in its encrypted form.
Code	Instructions written in a computer programming language. (See object code and source code.)
Cold site	An IS backup facility that has the necessary electrical and physical components of a computer facility, but does not have the computer equipment in place. The site is ready to receive the necessary replacement computer equipment in the event that the user has to move from their main computing location to an alternative site.
Collaborative computing	Applications and technology (e.g., white boarding, group conferencing) that allow two or more individuals to share information real time in an inter- or intra-enterprise environment.
Command	A job control statement or a message, sent to the computer system, that initiates a processing task.
Compact disc-read only memory (CD-ROM)	Compact Disc (CD)-Read Only Memory (ROM) is a form of optical, rather than magnetic, storage. CD-ROM devices are generally read only.
Compensating control	An internal control that reduces the risk of an existing or potential control weakness that could result in errors or omissions.
Compiler	A program that reads the statements in a human-readable programming language and translates them into a machine-readable executable program.
Completeness control	Controls that ensure entity management that all transactions that occurred are entered into the system, accepted for processing, and processed once and only once by the system and are properly included in output.
Component	A single resource with defined characteristics, such as a terminal or printer. These components are also defined by their relationship to other components.
Computer-assisted audit technique (CAAT)	Any automated audit technique, such as generalized audit software, test data generators, computerized audit programs, and special audit utilities.
Computer facility	A site or location with computer hardware where information processing is performed or where data from such sites are stored.

Computer operations	The function responsible for operating the computer and peripheral equipment, including providing the tape, disk, or paper resources as requested by the application systems.
Computer processing location	See computer facility.
Computer resource	See resource.
Computer room	Room within a facility that houses computers and/or telecommunication devices.
Computer security	Computer security, as defined by Appendix III to OMB Circular A-130, involves the use of management, personnel, operational, and technical controls to ensure that systems and applications operate effectively and provide confidentiality, integrity, and availability.
Computer system	A complete computer installation, including peripherals, in which all the components are designed to work with each other.
Computer-related controls	Computer-related controls help ensure the reliability, confidentiality, and availability of automated information. They include both general controls, which apply to all or a large segment of an entity's information systems, and application controls, which apply to individual applications.
Computing environment	Workstation or server (host) and its operating system, peripherals, and applications. .
Confidentiality	Preserving authorized restrictions on access and disclosure, including means for protecting personal privacy and proprietary information.
Confidentiality control	Controls that are designed to provide reasonable assurance that application data and reports and other output are protected against unauthorized access.
Configuration auditing	Procedures for determining alignment between the actual system and the documentation describing it, thereby ensuring that the documentation used to support decision making is complete and correct.
Configuration control	Process for controlling modifications to hardware, firmware, software, and documentation to ensure the information system is protected against improper modifications prior to, during, and after system implementation.
Configuration control board	Evaluates and approves or disapproves proposed changes to configuration items and ensures implementation of approved changes
Configuration identification	Procedures for identifying, documenting, and assigning unique identifiers (for example, serial numbers and name) to a system's hardware and software component parts and subparts generally referred to as configuration items.
Configuration settings	Information system parameters that provide only essential capabilities and specifically prohibit or restrict the use of unnecessary functions, ports, protocols, and services.

Configuration status accounting	A procedure for documenting and reporting on the status of configuration items as a system evolves. Documentation, such as historical change lists and original designs or drawings, are generated and kept in a library, thereby allowing entities to continuously know the state of a system's configuration and be in a position to make informed decisions about changing the configuration.
Configuration management	The control and documentation of changes made to a system's hardware, software, and documentation throughout the development and operational life of the system.
Console	Traditionally, a control unit such as a terminal through which a user communicates with a computer. In the mainframe environment, a console is the operator's station.
Contingency plan	Management policy and procedures designed to maintain or restore business operations, including computer operations, possibly at an alternate location, in the event of emergencies, system failure, or disaster.
Contingency planning	See contingency plan.
Continuity of Operations Plan (COOP)	A predetermined set of instructions or procedures that describe how an organization's essential functions will be sustained for up to 30 days as a result of a disaster event before returning to normal operations.
Control activities	Descriptions of individual control requirements for each critical control element (e.g., implement effective authorization controls, adequately protect sensitive system resources).
Control categories	Groupings of related controls pertaining to similar types of risk. Control categories include security management, access controls, configuration management, segregation of duties, and contingency planning.
Control deficiency - financial audit	In financial audits, a control deficiency in an entity's internal control over financial reporting exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect misstatements on a timely basis.
Control deficiency - Single Audit	In Single Audits, a control deficiency in an entity's internal control over compliance exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect noncompliance with a type of compliance requirement of a federal program on a timely manner.
Control dependency	Exists when the effectiveness of an internal control is dependent on the effectiveness of other internal controls.

Control environment	The control environment is an important component of an entity's internal control structure. It sets the "tone at the top" and can influence the effectiveness of specific control techniques. Factors that influence the control environment include management's philosophy and operating style, the entity's organizational structure, methods of assigning authority and responsibility, management's control methods for monitoring and following up on performance, the effectiveness of the Inspector General's and internal audits, personnel policies and practices, and influences external to the entity.
Control objectives	The intent of the specific control to effectively secure specific general support or business activities.
Control risk	In a financial statement audit, the risk that a material misstatement that could occur in an assertion will not be prevented, or detected and corrected on a timely basis by the entity's internal control structure.
Control techniques	The specific control implemented by the entity to secure a specific general support system or business process activity.
Controlled Interface	Mechanism that facilitates the adjudication of different interconnected system security policies (e.g., controlling the flow of information into or out of an interconnected system).
Countermeasures	Actions, devices, procedures, techniques, or other measures that reduce the vulnerability of an information system. Synonymous with security controls and safeguards.
CPU	See central processing unit.
Critical control point	System control points that, if compromised, could allow an individual to gain unauthorized access to or perform unauthorized or inappropriate activities on entity systems or data, which could lead directly or indirectly to unauthorized access or modifications to the key areas of audit interest.
Cryptography	The science of coding messages so they cannot be read by any person other than the intended recipient. Ordinary text—or plain text—and other data are transformed into coded form by encryption and translated back to plain text or data by decryption.
Data	Facts and information that can be communicated and manipulated.
Data access method	See access method.
Data administration	The function that plans for and administers the data used throughout the entity. This function is concerned with identifying, cataloging, controlling, and coordinating the information needs of the entity.

Database	A collection of related information about a subject organized in a useful manner that provides a base or foundation for procedures, such as retrieving information, drawing conclusions, or making decisions. Any collection of information that serves these purposes qualifies as a database, even if the information is not stored on a computer.
Database administrator (DBA)	The individual responsible for both the design of the database, including the structure and contents, and the access capabilities of application programs and users to the database. Additional responsibilities include operation, performance, integrity, and security of the database.
Database management	Tasks related to creating, maintaining, organizing, and retrieving information from a database.
Database management system (DBMS)	(DB2, IMS, IDMS) A software product that aids in controlling and using the data needed by application programs. DBMSs organize data in a database, manage all requests for database actions—such as queries or updates from users—and permit centralized control of security and data integrity.
Data center	See computer facility.
Data communications	The transfer of information from one computer to another through a communications medium, such as telephone lines, microwave relay, satellite link, or physical cable.
Data communications systems	See data communications.
Data design	Organization of data into structures to facilitate retrieval while minimizing redundancy. The design of transaction data elements is a critical factor in helping assure the quality of data as well as its interrelationship with other data elements.
Data definition	Identification of all fields in the database, how they are formatted, how they are combined into different types of records, and how the record types are interrelated.
Data file	See file.
Data management systems	Applications which handle significant volumes of data often employ data management system to perform certain data processing functions within an application. Data management systems include database management systems, specialized data transport/communications software (often called middleware, cryptography used in conjunction with data integrity controls, data warehouse software and data reporting/data extraction software.
Data owner	See owner.
Data processing	The computerized preparation of documents and the flow of data contained in these documents through the major steps of recording, classifying, and summarizing.
Data processing center	See computer facility.

Data quality standard	Requirements to ensure the state of completeness, validity, consistency, timeliness and accuracy that make data appropriate for a specific use.
Data security	See security management function.
Data strategy	Plan used to identify data needed to support business processes. A clearly defined data strategy minimizes data redundancies fundamental to an efficient, effective transaction processing function.
Data validation	Checking transaction data for any errors or omissions that can be detected by examining the data.
Data warehouse	A generic term for a system used to store, retrieve, and manage large amounts of data. A database, often remote, that contains recent snapshots of corporate data that can be used for analysis without slowing down day-to-day operations of the production database.
DBA	See database administrator.
DBMS	See database management system.
Debug	With software, to detect, locate, and correct logical or syntactical errors in a computer program.
Decryption	The process of changing ciphertext using a cryptographic algorithm and key.
Defense-in-depth	A commonly accepted “best practice” for implementing computer security controls in today’s networked environments. Integrates people, operations, and technology capabilities to protect information systems across multiple layers.
Delete access	This level of access provides the ability to erase or remove data or programs.
Denial of Service (DOS)	The prevention of authorized access to resources or the delaying of time-critical operations. (Time-critical may be milliseconds or it may be hours, depending upon the service provided.)
Denial of Service (DOS) Attack	An assault on a service from a single source that floods it with so many requests that it becomes overwhelmed and is either stopped completely or operates at a significantly reduced rate
Detection risk	The risk that the auditor will not detect a material misstatement that exists in an assertion.
Dial-up access	A means of connecting to another computer, or a network similar to the Internet, over a telecommunications line using a modem-equipped computer.
Dial-back	Used as a control over dial-up telecommunications lines. The telecommunications link established through dial-up into the computer from a remote location is interrupted so the computer can dial back to the caller. The link is permitted only if the caller is from a valid phone number or telecommunications channel.

Digital Certificate	A certificate identifying a public key to its subscriber, corresponding to a private key held by that subscriber. It is a unique code that typically is used to allow the authenticity and integrity of communicated data to be verified.
Digital signature	Cryptographic process used to assure message originator authenticity, integrity, and nonrepudiation.
Direct access	An access method for finding an individual item on a storage device and accessing it directly, without having to access all preceding records.
Disaster recovery plan	A written plan for processing critical applications in the event of a major hardware or software failure or destruction of facilities.
Diskette	A removable and widely-used data storage medium that uses a magnetically coated flexible disk of Mylar enclosed in a plastic case.
DNS (domain name system)	A hierarchical database that is distributed across the Internet that allows names to be resolved into IP addresses (and vice versa) to locate services such as web and e-mail servers
Download	Process of transferring data from a central computer to a personal computer or workstation.
Edit controls	Detects errors in the input portion of information that is sent to the computer for processing. The controls may be manual or automated and allow the user to edit data errors before processing.
Electronic signature	A symbol generated through electronic means that can be used to (1) identify the sender of information and (2) ensure the integrity of the critical information received from the sender. An electronic signature may represent either an individual or an entity. Adequate electronic signatures are (1) unique to the signer, (2) under the signer's sole control, (3) capable of being verified, and (4) linked to the data in such a manner that, if data are changed, the signature is invalidated upon verification. Traditional user identification code/password techniques do not meet these criteria.
Embedded Audit Module	Integral part of an application system that is designed to identify and report specific transactions or other information based on pre-determined criteria. Identification of reportable items occurs as part of real-time processing. Reporting may be real-time online, or may use store and forward methods. Also known as integrated test facility or continuous auditing module.
Encryption	Encryption is the conversion of data into a form, called a cipher text, which cannot be easily understood by unauthorized people.

Enterprise Resource Planning (ERP)	Commercial software that integrates all the information flowing through the entity. ERP systems contain functional modules (e.g., financial, accounting, human resources, supply chain, and customer information) that are integrated within the core system or interfaced to external systems.
Entity or component level	Controls at the entity or component level consist of the entitywide or componentwide processes designed to achieve the control activities. They are focused on how the entity or component manages IS related to each general control activity.
Entitywide information security program	An entity program that establishes a framework and continuous cycle of activity for assessing risk, developing and implementing effective security procedures, and monitoring the effectiveness of these procedures. An entitywide information security program is the foundation of a security control structure and a reflection of senior management's commitment to addressing security risks. FISMA requires federal agencies to establish an agency-wide information security program.
Entry points	Access points to the entity's information systems. This may include remote access through dial-up, wireless devices, or the Internet
Environmental controls	This subset of physical access controls prevents or mitigates damage to facilities and interruptions in service. Smoke detectors, fire alarms and extinguishers, and uninterruptible power supplies are some examples of environmental controls.
Execute access	This level of access provides the ability to execute a program.
Exit	A predefined or in-house written routine that receives controls at a predefined point in processing. These routines provide an entity with the flexibility to customize processing, but also create the opportunity to bypass security controls.
Field	A location in a record in which a particular type of data are stored. In a database, the smallest unit of data that can be named. A string of fields is a concatenated field or record.
File	A collection of records stored in computerized form.
Financial management system	Under FFMIA, a financial management system includes financial information systems and the financial portions of mixed systems (systems that support both financial and nonfinancial functions) that are necessary to support financial management.
Firewall	Hardware and software components that protect one set of system resources (e.g., computers, networks) from attack by outside network users (e.g., Internet users) by blocking and checking all incoming network traffic. Firewalls permit authorized users to access and transmit privileged information and deny access to unauthorized users.

Firmware	Program recorded in permanent or semi permanent computer memory.
FFMIA	Enacted into law in Public Law 104-208, Title VIII (31 U.S.C. 3512 note), was intended to advance Federal financial management by ensuring that Federal financial management systems can and do provide reliable, consistent disclosure of financial data, and that they do so on a basis that is uniform across the Federal government from year to year consistently using professionally accepted accounting standards.
FISMA	Enacted into law as Title III of the E-Government Act of 2002 (PL 107-347; December 17, 2002), FISMA provides a comprehensive framework for ensuring the effectiveness of information security controls over information resources that support federal operations and assets.
FMFIA	The objective of the Federal Managers' Financial Integrity Act of 1982 (31 U.S.C. 3512 (c)and (d)) is to provide reasonable assurance that (1) obligations and costs are in compliance with applicable law, (2) funds, property, and other assets are safeguarded against waste, loss, unauthorized use, or misappropriation, and (3) revenues and expenditures applicable to agency operations are properly recorded and accounted for to permit the preparation of accounts and reliable financial and statistical reports and to maintain accountability over the assets.
Flowchart	A diagram of the movement of transactions, computer functions, media, and/or operations within a system. The processing flow is represented by arrows between symbolic shapes for operation, device, data file, etc. to depict the system or program.
Fraud	Fraud is a type of illegal act involving the obtaining of something of value through willful misrepresentation.
FTP (file transfer protocol)	A protocol used to transfer files over a TCP/IP network (Internet, UNIX, etc.)
GAGAS	Also referred to as the Yellow Book. IT provides standards and guidance for use by government auditors to ensure that they maintain competence, integrity, objectivity, and independence in planning, conducting, and reporting their work, and are to be followed by auditors and audit organizations when required by law regulation, contract, agreement, or policy.
Gateway	In networks, a computer that connects two dissimilar local area networks, or connects a local area network to a wide area network, minicomputer, or mainframe. A gateway may perform network protocol conversion and bandwidth conversion.

General controls	General controls are the structure, policies, and procedures that apply to an entity's overall computer operations. They include an entitywide security program, access controls, application development and change controls, segregation of duties, system software controls, and service continuity controls.
General support system	An interconnected set of information resources under the same direct management control that shares common functionality. Normally, the purpose of a general support system is to provide processing or communications support.
Hacker	A person who attempts to enter a system without authorization from a remote location.
Hardware	The physical components of IT, including the computers, peripheral devices such as printers, disks, and scanners, and cables, switches, and other elements of the telecommunications infrastructure.
Hashing	Value computed on data to detect error or manipulation.
Hot site	A fully operational off-site data processing facility equipped with both hardware and system software to be used in the event of a disaster.
HTTP (hyper text transfer protocol)	A communication protocol used to connect to servers on the World Wide Web. Its primary function is to establish a connection with a web server and transmit HTML pages to the client browser.
HTTPS (hyper text transfer protocol secure)	A protocol for accessing a secure web server, whereby all data transferred is encrypted
Hub	A common connection point for devices in a network, hubs commonly is used to connect segments of a LAN. A hub contains multiple ports. When a packet arrives at one port, it is copied to the other ports so that all segments of the LAN can see all packets.
Identification	The process of verifying the identity of a user, process, or device, usually as a prerequisite for granting access to resources in an IT system.
IDS	See intrusion detection system.
IEEE	Institute of Electrical and Electronics Engineers)—Pronounced I-triple-E, IEEE is an organization composed of engineers, scientists and students. The IEEE is best known for developing standards for the computer and electronics industry.
Implementation	The process of making a system operational in the organization.
Incident	Assessed occurrence having actual or potentially adverse effects on an IS.
Incident response program	A process that involves detecting a problem, determining its cause, minimizing the damage it causes, resolving the problem, and documenting each step of the response for future reference.

Incompatible duties	When work responsibilities are not segregated so that one individual controls critical stages of a process incompatible duties exist. For example, while users may authorize program changes, programmers should not be allowed to do so because they are not the owners of the system and do not have the responsibility to see that the system meets user needs. Similarly, one computer programmer should not be allowed to independently write, test, and approve program changes.
Information	The meaning of data. Data are facts; they become information when they are seen in context and convey meaning.
Information resource owner	See owner.
Information Security	The protection of information and information systems from unauthorized access, use, disclosure, disruption, modification, or destruction in order to provide confidentiality, integrity, and availability.
Information System	A discrete set of information resources organized for the collection, processing, maintenance, use, sharing, dissemination, or disposition of information.
Information system boundaries	Logical or physical boundaries around information resources and implementing measures to prevent unauthorized information exchange across the boundary in either direction. Firewall devices represent the most common boundary protection technology at the network level.
Information System (IS) Control	As defined in GAGAS, information system (IS) controls consist of those internal controls that are dependent on information systems processing and include general controls and application controls.
Information System Owner (or Program Manager)	Official responsible for the overall procurement, development, integration, modification, or operation and maintenance of an information system.
Information systems management	The function that directs or manages the activities and staff of the IS department and its various organizational components.
Information Type	A specific category of information (e.g., privacy, medical, proprietary, financial, investigative, contractor sensitive, security management) defined by an organization or in some instances, by a specific law, executive order, directive, policy, or regulation.
Infrastructure application	Include software that is used to assist in performing systems operations, including management of network devices. These applications include database, e-mail, browsers, plug-ins, utilities, and applications not directly related to business processes.
Input	Any information entered into a computer, or the process of entering data into the computer.
Integration testing	Testing to determine if related information system components perform to specifications.

Integrity	Guarding against improper information modification or destruction, and includes ensuring information nonrepudiation and authenticity. This involves ensuring that transmitted or stored data are not altered by unauthorized persons in a way that is not detectable by authorized users.
Interface	A connection between two devices, applications, or networks or a boundary across which two systems communicate. Interface may also refer to the portion of a program that interacts with the user.
Interface controls	Controls used to provide reasonable assurance that data used by applications that is input from legacy systems is reliable, valid, complete, and properly converted from the legacy application into the applications they support.
Interface design	Uses guidelines set by the strategy and provides specific information for each of the characteristics defined in the strategy. See Interface Strategy
Interface strategy	Describes at the highest level how the interfaces are implemented between two applications, The interface strategy includes an explanation of each interface, the interface method chosen (manual or batch, etc.), the data fields being interfaced, the controls to reasonably assure that the data is interfaced completely and accurately, timing requirements, assignment of responsibilities, on-going system balancing requirements, and security requirements.
Internal control	(also referred to as internal control structure) A process, affected by entity management and other personnel, designed to provide reasonable assurance that (1) operations, including the use of entity resources, are effective and efficient; (2) financial reporting, including reports on budget execution, financial statements, and other reports for internal and external use, are reliable; and (3) applicable laws and regulations are followed. Internal control also includes the safeguarding of entity assets against unauthorized acquisition, use, or disposition. Internal control consists of 5 interrelated components that form an integrated process that can react to changing circumstances and conditions within the entity. These components include the control environment, risk assessment, control activities, information and communication, and monitoring.
Internet	When capitalized, the term “Internet” refers to the collection of networks and gateways that use the transmission control protocol/Internet protocol suite of protocols.
Internet protocol	Standard protocol for transmission of data from source to destinations in packet-switched communications networks and interconnected systems of such networks.
Intrusion	Any intentional violation of the security policy of a system.

Intrusion Detection System (IDS)	An intrusion detection system (IDS) inspects network activity to identify suspicious patterns that may indicate a network or system attack from someone attempting to break into or compromise a system
Intranet	A private network that uses the infrastructure and standards of the Internet and World Wide Web, but is isolated from the public Internet by firewall barriers.
Inventory	FISMA requires that each agency develop, maintain, and annually update an inventory of major information systems operated by the agency or under its control. The inventory must include identification of the interfaces between agency systems and all other systems or networks, including interfaces not controlled by the agency.
Job	A set of data that completely defines a unit of work for a computer. A job usually includes programs, linkages, files, and instructions to the operating system.
Key	A long stream of seemingly random bits used with cryptographic algorithms. The keys must be known or guessed to forge a digital signature or decrypt an encrypted message.
Key area of audit interest	Those areas which are critical to achieving the audit objectives (e.g., general support and business process application systems and files or components thereof).
LAN	See local area network.
Label	See security label.
Least Privilege	Principle requiring that each subject be granted the most restrictive set of privileges needed for the performance of authorized tasks. Application of this principle limits the damage that can result from accident, error, or unauthorized use of an IS.
Legacy system	A computer system consisting of older applications and hardware that was developed to solve a specific business problem. Many legacy systems do not conform to current standards, but are still in use because they solve the problem and replacing them would be too expensive.
Library	In computer terms, a library is a collection of similar files, such as data sets contained on tape and/or disks, stored together in a common area. Typical uses are to store a group of source programs or a group of load modules. In a library, each program is called a member. Libraries are also called partitioned data sets (PDS). Library can also be used to refer to the physical site where magnetic media, such as a magnetic tape, is stored. These sites are usually referred to as tape libraries.
Library control/management	The function responsible for controlling program and data files that are either kept on-line or on tapes and disks that are loaded onto the computer as needed.
Library copier	Software that can copy source code from a library into a program.

Library management software	Software that provides an automated means of inventorying software, ensuring that differing versions are not accidentally misidentified, and maintaining a record of software changes.
Local area network (LAN)	A group of computers and other devices dispersed over a relatively limited area and connected by a communications link that enables a device to interact with any other on the network. Local area networks (LAN) commonly include microcomputers and shared (often expensive) resources such as laser printers and large hard disks. Most modern LANs can support a wide variety of computers and other devices. Separate LANs can be connected to form larger networks.
Log	With respect to computer systems, to record an event or transaction.
Log on	The process of establishing a connection with, or gaining access to, a computer system or peripheral device.
Logging file	See log.
Logical access control	The use of computer hardware and software to prevent or detect unauthorized access. For example, users may be required to input user identification numbers (ID), passwords, or other identifiers that are linked to predetermined access privileges.
Logical security	See logical access control.
Mainframe computer	A multi-user computer designed to meet the computing needs of a large organization. The term came to be used to refer generally to the large central computers developed in the late 1950s and 1960s to meet the accounting and information management needs of large organizations.
Maintenance	Altering programs after they have been in use for a while. Maintenance programming may be performed to add features, correct errors that were not discovered during testing, or update key variables (such as the inflation rate) that change over time.
Major application	OMB Circular A-130 defines a major application as an application that requires special attention due to the risk and magnitude of the harm resulting from the loss, misuse, or unauthorized access to, or modification o, information in the application.
Malicious code	Software or firmware intended to perform an unauthorized process that will have adverse impact on the confidentiality, integrity, or availability of an information system. A virus, worm, Trojan horse, or other code-based entity that infects a host.

Management controls	The organization, policies, and procedures used to provide reasonable assurance that (1) programs achieve their intended result, (2) resources are used that are consistent with the organization's mission, (3) programs and resources are protected from waste, fraud, and mismanagement, (4) laws and regulations are followed, and (5) reliable and timely information is obtained, maintained, reported, and used for decision making.
Master console	In MVS environments, the master console provides the principal means of communicating with the system. Other multiple console support (MCS) consoles often serve specialized functions, but can have master authority to enter all MVS commands.
Master data	Referential data that provides the basis for ongoing business activities, e.g., customers, vendors, and employees.
Master data controls	Controls over master data, the key information that is relatively constant and shared between multiple functions or applications (e.g., vendors, customers, employee's data, and vendor files).
Master data design	Layout of key data requirements to ensure integrity and utility of data information. Data integrity requirements include, for example, requiring an entry in all key fields, such as address and account number and not accepting invalid values in the required fields.
Master file	In a computer, the most currently accurate and authoritative permanent or semi-permanent computerized record of information maintained over an extended period.
Material weakness – A-123 – Financial Reporting Controls	A material weakness is a reportable condition in which the design or operation of the internal controls does not reduce to a relatively low level the risk that losses, noncompliance, or misstatements in amounts that would be material in relation to the principal statements or to a performance measure or aggregation of related performance measures may occur and not be detected within a timely period by employees in the normal course of their assigned duties.
Material weakness – A-123 – Other Controls	Control deficiency or combination of control deficiencies that in management's judgment should be communicated because they represent significant weaknesses in the design or operation of internal control that could adversely affect the organization's ability to meet its internal control objectives.
Material weakness – GAGAS – financial reporting	A significant deficiency or combination of significant deficiencies that results in more than a remote likelihood that a material misstatement of the financial statements will not be prevented or detected.
Material weakness – Single Audit compliance	A significant deficiency or combination of significant deficiencies, that result in more than a remote likelihood that material noncompliance with a type of compliance requirement of a federal program will not be prevented or detected by the entity's internal control.

Materiality	An auditing concept regarding the relative importance of an amount or item. An item is considered not to be material when it is not significant enough to influence decisions or have an effect on the financial statements.
Media controls	Controls implemented to prevent unauthorized physical access to digital (e.g., diskettes, flash/thumb drives, compact disks) and printed media (e.g., paper, microfilm) removed from information system and during pick-up, transport, and delivery to authorized users.
Merge access	This level of access provides the ability to combine data from two separate sources.
Microcomputer	Any computer with its arithmetic logic unit and control unit contained in one integrated circuit, called a microprocessor.
Microprocessor	An integrated circuit device that contains the miniaturized circuitry to perform arithmetic, logic, and control operations (i.e. contains the entire CPU on a single chip).
Middleware	Another term for an application programmer interface (API). It refers to the interfaces that allow programmers to access lower- or higher-level services by providing an intermediary layer that includes function calls to the services.
Migration	A change from an older hardware platform, operating system, or software version to a newer one.
Mobile code	Software programs or parts of programs obtained from remote information systems, transmitted across a network, and executed on a local information system without explicit installation or execution by the recipient.
Mobile computing	Ability to use technology that is not physically connected, or in remote or mobile (non static) environments. Requires that the mobile computing activity be connected wirelessly to and through the internet or to and through a private network. This connection ties the mobile device to centrally located information and/or application software through the use of battery powered, portable, and wireless computing and communication devices. This includes devices like laptops with wireless LAN or wireless WAN technology, smart mobile phones, wearable computers and Personal Digital Assistants (PDAs).
Modem	Short for modulator-demodulator. A device that allows digital signals to be transmitted and received over analog telephone lines. This type of device makes it possible to link a digital computer to the analog telephone system. It also determines the speed at which information can be transmitted and received.

Multiyear testing plan	Where IS audits are performed on a regular basis the auditor may develop a multiyear audit plan. Such a plan will cover relevant key entity applications, systems, and processing centers. These strategic plans should cover no more than 3-year period and include the schedule and scope of assessments to be performed during the period and the rationale for planned approach.
Naming conventions	Standards for naming computer resources, such as data files, program libraries, individual programs, and applications.
Network	A group of computers and associated devices that are connected by communications facilities. A network can involve permanent connections, such as cables, or temporary connections made through telephone or other communications links. A network can be as small as a local area network consisting of a few computers, printers, and other devices, or it can consist of many small and large computers distributed over a vast geographic area.
Network administration	The function responsible for maintaining secure and reliable network operations. This function serves as a liaison with user departments to resolve network needs and problems.
Network architecture	The underlying structure of a computer network, including hardware, functional layers, interfaces, and protocols (rules) used to establish communications and ensure the reliable transfer of information. Because a computer network is a mixture of hardware and software, network architectures are designed to provide both philosophical and physical standards for enabling computers and other devices to manage the complexities of establishing communications links and transferring information without conflict. Various network architectures exist, among them the internationally accepted seven-layer open systems interconnection model and International Business Machine (IBM) Systems Network Architecture. Both the open systems interconnection model and the Systems Network Architecture organize network functions in layers, each layer dedicated to a particular aspect of communication or transmission and each requiring protocols that define how functions are carried out. The ultimate objective of these and other network architectures is the creation of communications standards that will enable computers of many kinds to exchange information freely.
Network component	Devices that support a network including, workstations, servers, switches, and routers.

Network scanning	Procedure for identifying active hosts on a network, either for the purpose of attacking them or for network security assessment. Scanning procedures, such as ping sweeps and port scans, return information about which IP addresses map to live hosts that are active on the Internet and what services they offer. Another scanning method, inverse mapping, returns information about what IP addresses do not map to live hosts; this enables an attacker to make assumptions about viable addresses.
Network session	A connection between two network component peers. This provides the capability of bundling of resources needed for an instance of a service.
Node	In a local area network, a connection point that can create, receive, or repeat a message. Nodes include repeaters, file servers, and shared peripherals. In common usage, however, the term node is synonymous with workstation.
Nonrepudiation	The ability to prevent senders from denying that they have sent messages and receivers from denying that they have received messages.
Object code	The machine code generated by a source code language processor such as an assembler or compiler. A file of object code may be immediately executable or it may require linking with other object code files, e.g., libraries, to produce a complete executable program.
Object privilege	Allows the user to have access to the data within an object or allow the user to execute a stored program. These include: SELECT, INSERT, DELETE, etc. Each type of object has different privileges associated with it.
Off-the-shelf software	Software that is marketed as a commercial product, unlike custom programs that are privately developed for a specific client.
Online	A processing term that categorizes operations that are activated and ready for use. If a resource is online, it is capable of communicating with or being controlled by a computer. For example, a printer is online when it can be used for printing. An application is classified as online when users interact with the system as their information is being processed, as opposed to batch processing.
Online editors	See online program development software.
Online program development software	(TSO, ROSCOE, VOLLIE, ICCF, ISPF) Software that permits programs to be coded and compiled in an interactive mode.
Operating system	The software that controls the execution of other computer programs, schedules tasks, allocates storage, manages the interface to peripheral hardware, and presents a default interface to the user when no application program is running.

Operational controls	Relate to managing the entity's business and include policies and procedures to carry out organizational objectives, such as planning, productivity, programmatic, quality, economy, efficiency, and effectiveness objectives. Management uses these controls to provide reasonable assurance that the entity (1) meets its goals, (2) maintains quality standards, and (3) does what management directs it to do.
Output	Data/information produced by computer processing, such as graphic display on a terminal or hard copy.
Output devices	Peripheral equipment, such as a printer or tape drive, that provides the results of processing in a form that can be used outside the system.
Override	Decision made by entity management or operation staff to bypass established control(s) to allow a transaction or transactions that would otherwise be rejected by the system controls to be processed.
Owner	Manager or director who has responsibility for a computer resource, such as a data file or application program.
Packet	Data unit that is routed from source to destination in a packet-switched network. A packet contains both routing information and data. Transmission control protocol/Internet protocol (TCP/IP) is such a packet-switched network.
Packet Filtering	Controlling access to a network by analyzing the attributes of the incoming and outgoing packets and either letting them pass, or denying them, based on a list of rules
Parameter	A value that is given to a variable. Parameters provide a means of customizing programs.
Partitioning	Process of physically or logically separating different functions such as applications, security and communication activities. Separation may be accomplished by using different computers, different central processing units, different instances of the operating systems, different network addresses, or combinations of these methods.
Password	A confidential character string used to authenticate an identity or prevent unauthorized access.
Password Cracker	Specialized security checker that tests user's passwords, searching for passwords that are easy to guess by repeatedly trying words from specially crafted dictionaries. Failing that, many password crackers can brute force all possible combinations in a relatively short period of time with current desktop computer hardware.
Patch	Patches are additional pieces of code that have been developed to address specific problems or flaws in existing software. Vulnerabilities are flaws that can be exploited, enabling unauthorized access to IT systems or enabling users to have access to greater privileges than authorized.

Penetration testing	Security testing in which evaluators attempt to circumvent the security features of a system based on their understanding of the system design and implementation.
Peripheral	A hardware unit that is connected to and controlled by a computer, but that is external to the CPU. These devices provide input, output, or storage capabilities when used in conjunction with a computer.
Personally identifiable information	Refers to any information about an individual maintained by an entity, including any information that can be used to distinguish or trace an individual's identity, such as their name, social security number, date of birth, or biometric records, and any other information which is linked or linkable to an individual.
Personnel controls	This type of control involves screening individuals prior to their authorization to access computer resources. Such screening should be commensurate with the risk and magnitude of the harm the individual could cause.
Personnel security	See personnel controls.
Physical access control	This type of control involves restricting physical access to computer resources and protecting these resources from intentional or unintentional loss or impairment.
Physical security	See physical access control.
Plain text	Data input to the Cipher or output from the Inverse Cipher.
Plans of Action and Milestones	A document that identifies tasks needing to be accomplished. It details resources required to accomplish the elements of the plan, any milestones in meeting the tasks, and scheduled completion dates for the milestones.
Platform	The foundation technology of a computer system. Typically, a specific combination of hardware and operating system.
Privacy Impact Assessment	An analysis of how information is handled: (1) to ensure handling conforms to applicable legal, regulatory, and policy requirements regarding privacy; (2) to determine the risks and effects of collecting, maintaining, and disseminating information in identifiable form in an electronic information system; and (3) to examine and evaluate protections and alternative processes for handling information to mitigate potential privacy risks.
Privileged account	Individuals who have access to set "access rights" for users on a given system. Sometimes referred to as system or network administrative accounts.
Privileged User	Individual who has access to system control, monitoring, or administration functions (e.g., system administrator, system security officer, maintainers, system programmers, etc.)
Process	Systematic sequences of operations to produce a specified result. This includes all functions performed within a computer such as editing, calculating, summarizing, categorizing, and updating.

Processing	The execution of program instructions by the computer's CPU.
Production control and scheduling	The function responsible for monitoring the information into, through, and as it leaves the computer operations area and for determining the succession of programs to be run on the computer. Often, an automated scheduling package is used in this task.
Production environment	The system environment where the entity performs its operational information processing activities.
Production programs	Programs that are being used and executed to support authorized organizational operations. Such programs are distinguished from "test" programs that are being developed or modified, but have not yet been authorized for use by management.
Profile	A set of rules that describe the nature and extent of access to available resources for a user or a group of users with similar duties, such as accounts payable clerks. (See standard profile and user profile.)
Program	A set of related instructions that, when followed and executed by a computer, perform operations or tasks. Application programs, user programs, system programs, source programs, and object programs are all software programs.
Program library	See library.
Programmer	A person who designs, codes, tests, debugs, and documents computer programs.
Proprietary	Privately owned, based on trade secrets, privately developed technology, or specifications that the owner refuses to divulge, which prevents others from duplicating a product or program unless an explicit license is purchased.
Protocol	In data communications and networking, a standard that specifies the format of data as well as the rules to be followed when performing specific functions, such as establishing a connection and exchanging data.
Public access controls	A subset of access controls that apply when an entity application promotes or permits public access. These controls protect the integrity of the application and public confidence in the application and include segregating the information made directly available to the public from official entity records.
Public domain software	Software that has been distributed with an explicit notification from the program's author that the work has been released for unconditional use, including for-profit distribution or modification by any party under any circumstances.
Public Key Infrastructure (PKI)	A set of policies, processes, server platforms, software and workstations used for the purpose of administering certificates and public-private key pairs, including the ability to issue, maintain, and revoke public key certificates.

Quality assurance	The function that reviews software project activities and tests software products throughout the software life cycle to determine if (1) the software project is adhering to its established plans, standards, and procedures and (2) the software meets the functional specifications defined by the user.
Query	The process of extracting data from a database and presenting it for use.
Read access	This level of access provides the ability to look at and copy data or a software program.
Real-time system	A computer and/or a software system that reacts to events before they become obsolete. This type of system is generally interactive and updates files as transactions are processed.
Record	A unit of related data fields. The group of data fields that can be accessed by a program and contains the complete set of information on a particular item.
Reliability	The capability of hardware or software to perform as the user expects and to do so consistently, without failures or erratic behavior.
Remote access	The process of communicating with a computer located in another place over a communications link.
Remote job entry (RJE)	With respect to computer systems with locations geographically separate from the main computer center, submitting batch processing jobs via a data communications link.
Remote Maintenance	Maintenance activities conducted by individuals communicating external to an information system security perimeter.
Reportable condition – A 123	Reportable conditions include matters coming to the auditor's attention that, in the auditor's judgment, should be communicated because they represent significant deficiencies in the design or operation of internal controls, which could adversely affect the entity's ability to meet its internal control objectives.
Repudiation	The denial by one of the parties to a transaction or participation in all or part of that transaction or of the content of communications related to that transaction.
Residual risk	Portion of risk remaining after security measures have been applied.
Resource	Something that is needed to support computer operations, including hardware, software, data, telecommunications services, computer supplies such as paper stock and preprinted forms, and other resources such as people, office facilities, and noncomputerized records.
Risk	The level of impact on entity operations (including mission, functions, image, or reputation), entity assets, or individuals resulting from the operation of an information system given the potential impact of a threat and the likelihood of that threat occurring.

Risk analysis	The process of identifying the risks to system security and determining the likelihood of occurrence, the resulting impact, and the additional safeguards that mitigate this impact. Part of risk management and synonymous with risk assessment.
Risk assessment	The identification and analysis of possible risks in meeting the entity's objectives that forms a basis for managing the risks identified and implementing deterrents.
Risk management	A management approach designed to reduce risks inherent in systems development and operations.
Router	An intermediary device on a communications network that expedites message delivery. As part of a LAN, a router receives transmitted messages and forwards them to their destination over the most efficient available route.
Run	A popular, idiomatic expression for program execution.
Run manual	A manual that provides application-specific operating instructions, such as instructions on job setup, console and error messages, job checkpoints, and restart and recovery steps after system failures.
Safeguards	Protective measures prescribed to meet the security requirements (i.e., confidentiality, integrity, and availability) specified for an information system. Safeguards may include security features, management constraints, personnel security, and security of physical structures, areas, and devices. Synonymous with security controls and countermeasures.
Sanitization	Process to remove information from media such that information recovery is not possible. It includes removing all labels, markings, and activity logs.
SAS 70	Statement on Auditing Standards No. 70: Service Organizations, commonly abbreviated as SAS 70, is an auditing statement issued by the Auditing Standards Board of the American Institute of Certified Public Accountants (AICPA), officially titled "Reports on the Processing of Transactions by Service Organizations". SAS 70 defines the professional standards used by a service auditor to assess the internal controls of a service organization and issue a service auditor's report. Service organizations are typically entities that provide outsourcing services that impact the control environment of their customers.
SDLC methodology	See system development life cycle methodology.
Security administrator	Person who is responsible for managing the security program for computer facilities, computer systems, and/or data that are stored on computer systems or transmitted via computer networks.

Security Category	The characterization of information or an information system based on an assessment of the potential impact that a loss of confidentiality, integrity, or availability of such information or information system would have on organizational operations, organizational assets, or individuals.
Security Controls	The management, operational, and technical controls (i.e., safeguards or countermeasures) prescribed for an information system to protect the confidentiality, integrity, and availability of the system and its information.
Security Label	Explicit or implicit marking of a data structure or output media associated with an information system representing the FIPS 199 security category, or distribution limitations or handling caveats of the information contained therein.
Security management function	The function responsible for the development and administration of an entity's information security program. This includes assessing risks, implementing appropriate security policies and related controls, establishing a security awareness and education program for employees, and monitoring and evaluating policy and control effectiveness.
Security Objective	Confidentiality, integrity, or availability.
Security plan	A written plan that clearly describes the entity's security program and policies and procedures that support it. The plan and related policies should cover all major systems and facilities and should outline the duties of those who are responsible for overseeing security (the security management function) as well as those who own, use, or rely on the entity's computer resources.
Security policy	The set of management statements that documents an organization's philosophy of protecting its computing and information assets. The set of security rules enforced by the system's security features
Security profile	See profile.
Security requirements	Requirements levied on an information system that are derived from laws, executive orders, directives, policies, instructions, regulations, or organizational (mission) needs to ensure the confidentiality, integrity, and availability of the information being processed, stored, or transmitted.
Security software	See access control software.
Segregation/separation of duties	A basic control that prevents or detects errors and irregularities by assigning responsibility for initiating transactions, recording transactions and custody of assets to separate individuals. Commonly used in large IT organizations so that no single person is in a position to introduce fraudulent or malicious code without detection.

Sensitive information	Any information that an entity has determined requires heightened protection from unauthorized access, use, disclosure, disruption, modification, or destruction [e.g., by using specific access controls] because of the nature of the information (e.g., personal information required to be protected by the Privacy Act, proprietary commercial information, information critical to law enforcement activities, and information that has or may be determined to be exempt from public release under the Freedom of Information Act).
Sensitivity accounts	See privileged account
Server	A computer running administrative software that controls access to all or part of the network and its resources, such as disk drives or printers. A computer acting as a server makes resources available to computers acting as workstations on the network.
Service	Refers to customer or product-related business functions such as file transfer protocol (FTP), hypertext transfer protocol (HTTP), and mainframe supervisor calls. Each system provides a set of services. For example, a computer network alls its users to send packets to specified destinations and a database system responds to queries.
Service auditor	An independent auditor hired by the service organization to provide a report on internal controls at the service provider. See Service Organization.
Service Bureau	A computer facility that provides data processing services to clients on a continual basis
Service organization	Outside organizations used to support business processes. Service organizations provide services ranging from performing a specific task (e.g., payroll processing) to replacing entire business units or functions of an entity.
Significant deficiency – FISMA	A weakness in an agency's overall information systems security program or management control structure, or within one or more information systems, that significantly restricts the capability of the agency to carry out its mission or compromises the security of its information, information systems, personnel, or other resources, operations, or assets.
Significant deficiency – A-123	OMB Circular A-123 uses the same definition for significant deficiency as financial reporting (See Significant Deficiency – Financial Reporting), but continues to refer to it as a reportable condition.
Significant Deficiency – financial reporting	A deficiency in internal control, or combination of deficiencies, that adversely affects the entity's ability to initiate, authorize, record, process, or report financial data reliably in accordance with generally accepted accounting principles such that there is more than a remote likelihood that a misstatement of the entity's financial statements that is more than inconsequential will not be prevented or detected.

Significant deficiency – Single Audit compliance	A control deficiency, or combination of control deficiencies, that adversely affects the entity's ability to administer a federal program such that there is more than a remote likelihood that noncompliance with a type of compliance requirement of a federal program that is more than inconsequential will not be prevented or detected by the entity's internal control.
Simultaneous peripheral operations online (SPOOL)	In the mainframe environment, a component of system software that controls the transfer of data between computer storage areas with different speed capabilities. Usually, an intermediate device, such as a buffer, exists between the transfer source and the destination (e.g., a printer).
Single Audit	The Single Audit is intended to provide a cost-effective audit for nonfederal entities in that one audit is conducted in lieu of multiple audits of individual programs. Such audits are performed in accordance with the Single Audit Act (31USC ch75) of 1984 (with amendment in 1996) and OMB Circular A-133 (*Audits of States, Local Governments, and Non-Profit Organizations*) to ensure that federal funds to nonfederal entities are expended properly.
Smart card	A credit card-sized token that contains a microprocessor and memory circuits for authenticating a user of computer, banking, or transportation services.
SMTP (Simple Mail Transport Protocol)	The standard e-mail protocol on the Internet
Sniffer	Synonymous with packet sniffer. A program that intercepts routed data and examines each packet in search of specified information, such as passwords transmitted in clear text.
Social engineering	A method used by hackers to obtain passwords for unauthorized access. For example, a hacker may call an authorized user of a computer system and pose as a network administrator to gain access.
Software	A computer program or programs, in contrast to the physical environment on which programs run (hardware).
Source code	Human-readable program statements written in a high-level or assembly language, as opposed to object code, which is derived from source code and designed to be machine-readable.
Spyware	Software that is secretly or surreptitiously installed into an information system to gather information on individuals or organizations without their knowledge.
Standard	In computing, a set of detailed technical guidelines used as a means of establishing uniformity in an area of hardware or software development.
Standard profile	A set of rules that describe the nature and extent of access to each resource that is available to a group of users with similar duties, such as accounts payable clerks.

Supervisor call (SVC)	A supervisor call instruction interrupts a program being executed and passes control to the supervisor so that it can perform a specific service indicated by the instruction.
Switch	A device that forwards packets between LAN devices or segments. LANs that use switches are called switched LANs.
System	See information system.
System administrator	The person responsible for administering use of a multi-user computer system, communications system, or both.
System analyst	A person who designs systems.
System designer	See system analyst.
System developer	See programmer.
System development life cycle (SDLC) methodology	The policies and procedures that govern software development and modification as a software product goes through each phase of its life cycle.
System level	Controls consist of processes for managing specific system resources related to either a general support system or business process application systems. Three sublevels include network, operating system, and infrastructure.
System management facility	An IBM control program that provides the means for gathering and recording information that can be used to evaluate the extent of computer system usage.
System privilege	Ability of the user within the database to interact with the database itself. They include: CREATE, ALTER, DROP, CONNECT, and AUDIT, among many others.
System programmer	A person who develops and maintains system software.
System security plan	Formal document that provides an overview of the security requirements for the information system and describes the security controls in place or planned for meeting those requirements.
System software	The set of computer programs and related routines designed to operate and control the processing activities of computer equipment. It includes the operating system and utility programs and is distinguished from application software.
System testing	Testing to determine that the results generated by the enterprise's information systems and their components are accurate and the systems perform to specifications.
System utilities	Software used to perform system maintenance routines that are frequently required during normal processing operations. Some of the utilities have powerful features that will allow a user to access and view or modify data or program code.
TCP (transmission control protocol)	A connection-based Internet protocol that supports reliable data transfer connections. Packet data is verified using checksums and retransmitted if it is missing or corrupted. The application plays no part in validating the transfer.

TCP/IP protocol	Transmission Control Protocol/Internet Protocol) A set of communications protocols that encompasses media access, packet transport, session communications, file transfer, electronic mail, terminal emulation, remote file access and network management. TCP/IP provides the basis for the Internet.
Technical controls	See logical access control.
Telecommunications	A general term for the electronic transmission of information of any type, such as data, television pictures, sound, or facsimiles, over any medium, such as telephone lines, microwave relay, satellite link, or physical cable.
Teleprocessing monitor	In the mainframe environment, a component of the operating system that provides support for online terminal access to application programs. This type of software can be used to restrict access to online applications and may provide an interface to security software to restrict access to certain functions within the application.
Terminal	A device consisting of a video adapter, a monitor, and a keyboard.
Test facility	A processing environment that is isolated from the production environment and dedicated to testing and validating systems and/or their components.
Those charged with governance	Are those responsible for overseeing the strategic direction of the entity and the entity's fulfillment of its obligations related to accountability. This includes overseeing the financial reporting process, subject matter, or program under audit including related internal controls.
Threat	Any circumstance or event with the potential to adversely impact entity operations (including mission, functions, image, or reputation), entity assets, or individuals through an information system via unauthorized access, destruction, disclosure, modification of information, and/or denial of service.
Token	In authentication systems, some type of physical device (such as a card with a magnetic strip or a smart card) that must be in the individual's possession in order to gain access. The token itself is not sufficient; the user must also be able to supply something memorized, such as a personal identification number (PIN).
Transaction	A discrete activity captured by a computer system, such as the entry of a customer order or an update of an inventory item. In financial systems, a transaction generally represents a business event that can be measured in money and entered in accounting records.
Transaction data	The finite data pertaining to a given event occurring in a business process. The result of this process is in the form of documents or postings, such as purchase orders and obligations.

Transaction data input	Relates to controls over data that enter the application (e.g., data validation and edit checks).
Transaction data output	Relates to controls over data output and distribution (e.g., output reconciliation and review).
Transaction data processing	Relates to controls over data integrity within the application (e.g., review of transaction processing logs).
Transaction file	A group of one or more computerized records containing current business activity and processed with an associated master file. Transaction files are sometimes accumulated during the day and processed in batch production overnight or during off-peak processing periods.
Trusted communication Path	A mechanism by which a user (through an input device) can communicate directly with the security functions of the information system with the necessary confidence to support the system security policy. This mechanism can only be activated by the user or the security functions of the information system and cannot be imitated by untrusted software.
Uninterruptible power supply (UPS)	Provides short-term backup power from batteries for a computer system when the electrical power fails or drops to an unacceptable voltage level
Unit testing	Testing individual program modules to determine if they perform to specifications.
UNIX	A multitasking operating system originally designed for scientific purposes that have subsequently become a standard for midrange computer systems with the traditional terminal/host architecture. UNIX is also a major server operating system in the client/server environment.
Update access	This access level includes the ability to change data or a software program.
Upload	The process of transferring a copy of a file from a local computer to a remote computer by means of a modem or network.
User	The person who uses a computer system and its application programs to perform tasks.
User auditor	The auditor of the user organization.
User control	Portions of controls that are performed by people interacting with IS controls. The effectiveness of information systems processing or the reliability of information processed by IS controls.
User-defined processing	The user is allowed to establish or modify processing steps. This frequently occurs in application based spreadsheets and report writer/data extraction tools.
User identification (ID)	A unique identifier assigned to each authorized computer user.
User privilege	Right to execute a particular type of Microsoft SQL server statement, or a right to access another user's object

User profile	A set of rules that describes the nature and extent of access to each resource that is available to each user.
Utility program	Generally considered to be system software designed to perform a particular function (e.g., an editor or debugger) or system maintenance (e.g., file backup and recovery).
Validation	The process of evaluating a system or component during or at the end of the development process to determine whether it satisfies specified requirements.
Validity	See Validity Control.
Validity Control	Controls designed to provide reasonable assurance (1) that all recorded transactions actually occurred (are real), relate to the entity, and were properly approved in accordance with management's authorization, and (2) that output contains only valid data.
Virtual Private Network (VPN)	Protected IS link utilizing tunneling, security controls (see information assurance), and end-point address translation giving the impression of a dedicated line.
Virus	A program that "infects" computer files, usually executable programs, by inserting a copy of itself into the file. These copies are usually executed when the "infected" file is loaded into memory, allowing the virus to infect other files. Unlike the computer worm, a virus requires human involvement (usually unwitting) to propagate.
Vulnerability	Weakness in an information system, system security procedures, internal controls, or implementation that could be exploited or triggered by a threat source.
Vulnerability Assessment	Formal description and evaluation of the vulnerabilities in an information system.
Vulnerability scanning	Type of network security testing that among others enumerates the network structure and determines the set of active hosts and associated software and verifies that software (e.g., operating system and major applications) is up-to-date with security patches and software version.
Wide area network (WAN)	A group of computers and other devices dispersed over a wide geographical area that is connected by communications links.
WAN	See wide area network.
War Dialer	Software packages that sequentially dial telephone numbers, recording any numbers that answer.
Web application	Is an application that is accessed via web over a network such as the Internet or an intranet. The ability to update and maintain Web applications without distributing and installing software on potentially thousands of client computers is a key reason for their popularity.

Wired Equivalent Privacy (WEP)	The Wired Equivalent Privacy (WEP) security protocol for wireless local area networks (LANs) uses encryption to provide similar security to that of a wired LAN. WEP is defined in the IEEE 802.11b standard.
Wi-Fi Protected Access (WPA)	The Wi-Fi Protected Access (WPA) security protocol was designed to improve upon the security features of WEP for wireless communications. It is defined in IEEE's 802.11i standard.
Workstation	A microcomputer or terminal connected to a network. Workstation can also refer to a powerful, stand-alone computer that has considerable calculating or graphics capability.
World Wide Web (WWW)	A sub-network of the Internet through which information is exchanged by text, graphics, audio and video.
Worm	An independent computer program that reproduces by copying itself from one system to another across a network. Unlike computer viruses, worms do not require human involvement to propagate.

Standards for Internal Control in the Federal Government

(b) (5)

(b) (5)

GAO/AIMD-00-21.3.1

Foreword

Federal policymakers and program managers are continually seeking ways to better achieve agencies' missions and program results, in other words, they are seeking ways to improve accountability. A key factor in helping achieve such outcomes and minimize operational problems is to implement appropriate internal control. Effective internal control also helps in managing change to cope with shifting environments and evolving demands and priorities. As programs change and as agencies strive to improve operational processes and implement new technological developments, management must continually assess and evaluate its internal control to assure that the control activities being used are effective and updated when necessary.

The Federal Managers' Financial Integrity Act of 1982 (FMFIA) requires the General Accounting Office (GAO) to issue standards for internal control in government. The standards provide the overall framework for establishing and maintaining internal control and for identifying and addressing major performance and management challenges and areas at greatest risk of fraud, waste, abuse, and mismanagement. Office of Management and Budget (OMB) Circular A-123, Management Accountability and Control, revised June 21, 1995, provides the specific requirements for assessing and reporting on controls. The term internal control in this document is synonymous with the term management control (as used in OMB Circular A-123) that covers all aspects of an agency's operations (programmatic, financial, and compliance).

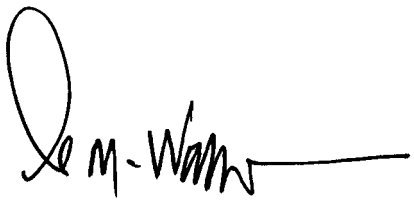
Recently, other laws have prompted renewed focus on internal control. The Government Performance and Results Act of 1993 requires agencies to clarify their missions, set strategic and annual performance goals, and measure and report on performance

toward those goals. Internal control plays a significant role in helping managers achieve those goals. Also, the Chief Financial Officers Act of 1990 calls for financial management systems to comply with internal control standards, and the Federal Financial Management Improvement Act of 1996 identifies internal control as an integral part of improving financial management systems.

Rapid advances in information technology have highlighted the need for updated internal control guidance related to modern computer systems. The management of human capital has gained recognition as a significant part of internal control. Furthermore, the private sector has updated its internal control guidance with the issuance of Internal Control — Integrated Framework, published by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Consequently, we have developed this standards update which supersedes our previously issued "Standards for Internal Controls in the Federal Government."

This update gives greater recognition to the increasing use of information technology to carry out critical government operations, recognizes the importance of human capital, and incorporates, as appropriate, the relevant updated internal control guidance developed in the private sector. The standards are effective beginning with fiscal year 2000 and the Federal Managers Financial Integrity Act reports covering that year.

We appreciate the efforts of government officials, public accounting professionals, and other members of the financial community and academia who provided valuable assistance in developing these standards.



David M. Walker
Comptroller General
of the United States

Introduction

The following definition, objectives, and fundamental concepts provide the foundation for the internal control standards.

Definition and Objectives

Internal Control

An integral component of an organization's management that provides reasonable assurance that the following objectives are being achieved:

- effectiveness and efficiency of operations,
- reliability of financial reporting, and
- compliance with applicable laws and regulations.

Internal control is a major part of managing an organization. It comprises the plans, methods, and procedures used to meet missions, goals, and objectives and, in doing so, supports performance-based management. Internal control also serves as the first line of defense in safeguarding assets and preventing and detecting errors and fraud. In short, internal control, which is synonymous with management control, helps government program managers achieve desired results through effective stewardship of public resources.

Internal control should provide reasonable assurance that the objectives of the agency are being achieved in the following categories:

- Effectiveness and efficiency of operations including the use of the entity's resources.
- Reliability of financial reporting, including reports on budget execution, financial statements, and other reports for internal and external use.
- Compliance with applicable laws and regulations.

A subset of these objectives is the safeguarding of assets. Internal control should be designed to provide reasonable assurance regarding prevention of or prompt detection of unauthorized acquisition, use, or disposition of an agency's assets.

Fundamental Concepts

Internal Control

- A continuous built-in component of operations.
- Effected by people.
- Provides reasonable assurance, not absolute assurance.

The fundamental concepts provide the underlying framework for designing and applying the standards.

Internal Control Is a Continuous Built-in Component of Operations

Internal control is not one event, but a series of actions and activities that occur throughout an entity's operations and on an ongoing basis. Internal control should be recognized as an integral part of each system that management uses to regulate and guide its operations rather than as a separate system within an agency. In this sense, internal control is management control that is built into the entity as a

part of its infrastructure to help managers run the entity and achieve their aims on an ongoing basis.

Internal Control Is Effected by People

People are what make internal control work. The responsibility for good internal control rests with all managers. Management sets the objectives, puts the control mechanisms and activities in place, and monitors and evaluates the control. However, all personnel in the organization play important roles in making it happen.

Internal Control Provides Reasonable Assurance, Not Absolute Assurance

Management should design and implement internal control based on the related cost and benefits. No matter how well designed and operated, internal control cannot provide absolute assurance that all agency objectives will be met. Factors outside the control or influence of management can affect the entity's ability to achieve all of its goals. For example, human mistakes, judgment errors, and acts of collusion to circumvent control can affect meeting agency objectives. Therefore, once in place, internal control provides reasonable, not absolute, assurance of meeting agency objectives.

Internal Control Standards

Presentation of the Standards

The Five Standards for Internal Control

- Control Environment
- Risk Assessment
- Control Activities
- Information and Communications
- Monitoring

These standards define the minimum level of quality acceptable for internal control in government and provide the basis against which internal control is to be evaluated. These standards apply to all aspects of an agency's operations: programmatic, financial, and compliance. However, they are not intended to limit or interfere with duly granted authority related to developing legislation, rule-making, or other discretionary policy-making in an agency. These standards provide a general framework. In implementing these standards, management is responsible for developing the detailed policies, procedures, and practices to fit their agency's operations and to ensure that they are built into and an integral part of operations.

In the following material, each of these standards is presented in a short, concise statement. Additional information is provided to help managers incorporate the standards into their daily operations.

Control Environment

Management and employees should establish and maintain an environment throughout the organization that sets a positive and supportive attitude toward internal control and conscientious management.

A positive control environment is the foundation for all other standards. It provides discipline and structure as well as the climate which influences the quality of internal control. Several key factors affect the control environment.

One factor is the integrity and ethical values maintained and demonstrated by management and staff. Agency management plays a key role in providing leadership in this area, especially in setting and maintaining the organization's ethical tone, providing guidance for proper behavior, removing temptations for unethical behavior, and providing discipline when appropriate.

Another factor is management's commitment to competence. All personnel need to possess and maintain a level of competence that allows them to accomplish their assigned duties, as well as understand the importance of developing and implementing good internal control. Management needs to identify appropriate knowledge and skills needed for various jobs and provide needed training, as well as candid and constructive counseling, and performance appraisals.

Management's philosophy and operating style also affect the environment. This factor determines the degree of risk the agency is willing to take and management's philosophy towards performance-based management. Further, the attitude and philosophy of management toward information systems, accounting, personnel functions, monitoring, and audits and evaluations can have a profound effect on internal control.

Another factor affecting the environment is the agency's organizational structure. It provides management's framework for planning, directing, and controlling operations to achieve agency objectives. A good internal control environment requires that the agency's organizational structure clearly define key areas of authority and responsibility and establish appropriate lines of reporting.

The environment is also affected by the manner in which the agency delegates authority and responsibility throughout the organization. This delegation covers authority and responsibility for operating activities, reporting relationships, and authorization protocols.

Good human capital policies and practices are another critical environmental factor. This includes establishing appropriate practices for hiring, orienting, training, evaluating, counseling, promoting, compensating, and disciplining personnel. It also includes providing a proper amount of supervision.

A final factor affecting the environment is the agency's relationship with the Congress and central oversight agencies such as OMB. Congress mandates the programs that agencies undertake and monitors their progress and central agencies provide policy and guidance on many different matters. In addition,

Inspectors General and internal senior management councils can contribute to a good overall control environment.

Risk Assessment

> Internal control should provide for an assessment of the risks the agency faces from both external and internal sources.

A precondition to risk assessment is the establishment of clear, consistent agency objectives. Risk assessment is the identification and analysis of relevant risks associated with achieving the objectives, such as those defined in strategic and annual performance plans developed under the Government Performance and Results Act, and forming a basis for determining how risks should be managed.

Management needs to comprehensively identify risks and should consider all significant interactions between the entity and other parties as well as internal factors at both the entitywide and activity level. Risk identification methods may include qualitative and quantitative ranking activities, management conferences, forecasting and strategic planning, and consideration of findings from audits and other assessments.

Once risks have been identified, they should be analyzed for their possible effect. Risk analysis generally includes estimating the risk's significance, assessing the likelihood of its occurrence, and

deciding how to manage the risk and what actions should be taken. The specific risk analysis methodology used can vary by agency because of differences in agencies' missions and the difficulty in qualitatively and quantitatively assigning risk levels.

Because governmental, economic, industry, regulatory, and operating conditions continually change, mechanisms should be provided to identify and deal with any special risks prompted by such changes.

Control Activities

> Internal control activities help ensure that management's directives are carried out. The control activities should be effective and efficient in accomplishing the agency's control objectives.

Control activities are the policies, procedures, techniques, and mechanisms that enforce management's directives, such as the process of adhering to requirements for budget development and execution. They help ensure that actions are taken to address risks. Control activities are an integral part of an entity's planning, implementing, reviewing, and accountability for stewardship of government resources and achieving effective results.

Control activities occur at all levels and functions of the entity. They include a wide range of diverse activities such as approvals, authorizations, verifications, reconciliations, performance reviews,

maintenance of security, and the creation and maintenance of related records which provide evidence of execution of these activities as well as appropriate documentation. Control activities may be applied in a computerized information system environment or through manual processes.

Activities may be classified by specific control objectives, such as ensuring completeness and accuracy of information processing.

Examples of Control Activities

- Top level reviews of actual performance,
- Reviews by management at the functional or activity level,
- Management of human capital,
- Controls over information processing,
- Physical control over vulnerable assets,
- Establishment and review of performance measures and indicators,
- Segregation of duties,
- Proper execution of transactions and events,
- Accurate and timely recording of transactions and events,
- Access restrictions to and accountability for resources and records, and
- Appropriate documentation of transactions and internal control.

There are certain categories of control activities that are common to all agencies. Examples include the following:

Top Level Reviews of Actual Performance	Management should track major agency achievements and compare these to the plans, goals, and objectives established under the Government Performance and Results Act.
Reviews by Management at the Functional or Activity Level	Managers also need to compare actual performance to planned or expected results throughout the organization and analyze significant differences.
Management of Human Capital	Effective management of an organization's workforce—its human capital—is essential to achieving results and an important part of internal control. Management should view human capital as an asset rather than a cost. Only when the right personnel for the job are on board and are provided the right training, tools, structure, incentives, and responsibilities is operational success possible. Management should ensure that skill needs are continually assessed and that the organization is able to obtain a workforce that has the required skills that match those necessary to achieve organizational goals. Training should be aimed at developing and retaining employee skill levels to meet changing organizational needs. Qualified and continuous supervision should be provided to ensure that internal control objectives are achieved. Performance evaluation and feedback, supplemented by an effective reward system, should be designed to help employees understand the connection between their performance and the organization's success. As a part of its human capital planning, management should also consider how best to retain valuable employees, plan for their eventual succession, and ensure continuity of needed skills and abilities.
Controls Over Information Processing	A variety of control activities are used in information processing. Examples include edit checks of data entered, accounting for transactions in numerical sequences, comparing file totals with control

	accounts, and controlling access to data, files, and programs. Further guidance on control activities for information processing is provided below under "Control Activities Specific for Information Systems."
Physical Control Over Vulnerable Assets	An agency must establish physical control to secure and safeguard vulnerable assets. Examples include security for and limited access to assets such as cash, securities, inventories, and equipment which might be vulnerable to risk of loss or unauthorized use. Such assets should be periodically counted and compared to control records.
Establishment and Review of Performance Measures and Indicators	Activities need to be established to monitor performance measures and indicators. These controls could call for comparisons and assessments relating different sets of data to one another so that analyses of the relationships can be made and appropriate actions taken. Controls should also be aimed at validating the propriety and integrity of both organizational and individual performance measures and indicators.
Segregation of Duties	Key duties and responsibilities need to be divided or segregated among different people to reduce the risk of error or fraud. This should include separating the responsibilities for authorizing transactions, processing and recording them, reviewing the transactions, and handling any related assets. No one individual should control all key aspects of a transaction or event.
Proper Execution of Transactions and Events	Transactions and other significant events should be authorized and executed only by persons acting within the scope of their authority. This is the principal means of assuring that only valid transactions to exchange, transfer, use, or commit resources and other events are initiated or entered

	into. Authorizations should be clearly communicated to managers and employees.
Accurate and Timely Recording of Transactions and Events	Transactions should be promptly recorded to maintain their relevance and value to management in controlling operations and making decisions. This applies to the entire process or life cycle of a transaction or event from the initiation and authorization through its final classification in summary records. In addition, control activities help to ensure that all transactions are completely and accurately recorded.
Access Restrictions to and Accountability for Resources and Records	Access to resources and records should be limited to authorized individuals, and accountability for their custody and use should be assigned and maintained. Periodic comparison of resources with the recorded accountability should be made to help reduce the risk of errors, fraud, misuse, or unauthorized alteration.
Appropriate Documentation of Transactions and Internal Control	Internal control and all transactions and other significant events need to be clearly documented, and the documentation should be readily available for examination. The documentation should appear in management directives, administrative policies, or operating manuals and may be in paper or electronic form. All documentation and records should be properly managed and maintained.

These examples are meant only to illustrate the range and variety of control activities that may be useful to agency managers. They are not all-inclusive and may not include particular control activities that an agency may need.

Furthermore, an agency's internal control should be flexible to allow agencies to tailor control activities to fit their special needs. The specific control activities used by a given agency may be different from those

used by others due to a number of factors. These could include specific threats they face and risks they incur; differences in objectives; managerial judgment; size and complexity of the organization; operational environment; sensitivity and value of data; and requirements for system reliability, availability, and performance.

Control Activities Specific for Information Systems

- General Control
- Application Control

There are two broad groupings of information systems control - general control and application control. General control applies to all information systems—mainframe, minicomputer, network, and end-user environments. Application control is designed to cover the processing of data within the application software.

General Control

This category includes entitywide security program planning, management, control over data center operations, system software acquisition and maintenance, access security, and application system development and maintenance. More specifically:

- Data center and client-server operations controls include backup and recovery procedures, and contingency and disaster planning. In addition, data center operations controls also include job set-up and scheduling procedures and controls over operator activities.

- System software control includes control over the acquisition, implementation, and maintenance of all system software including the operating system, data-based management systems, telecommunications, security software, and utility programs.
- Access security control protects the systems and network from inappropriate access and unauthorized use by hackers and other trespassers or inappropriate use by agency personnel. Specific control activities include frequent changes of dial-up numbers; use of dial-back access; restrictions on users to allow access only to system functions that they need; software and hardware "firewalls" to restrict access to assets, computers, and networks by external persons; and frequent changes of passwords and deactivation of former employees' passwords.
- Application system development and maintenance control provides the structure for safely developing new systems and modifying existing systems. Included are documentation requirements; authorizations for undertaking projects; and reviews, testing, and approvals of development and modification activities before placing systems into operation. An alternative to in-house development is the procurement of commercial software, but control is necessary to ensure that selected software meets the user's needs, and that it is properly placed into operation.

Application Control

This category of control is designed to help ensure completeness, accuracy, authorization, and validity of all transactions during application processing. Control should be installed at an application's interfaces with other systems to ensure that all inputs are received and are valid and outputs are correct and properly distributed. An example is computerized edit checks built into the system to review the format, existence, and reasonableness of data.

General and application control over computer systems are interrelated. General control supports the functioning of application control, and both are needed to ensure complete and accurate information processing. If the general control is inadequate, the application control is unlikely to function properly and could be overridden.

Because information technology changes rapidly, controls must evolve to remain effective. Changes in technology and its application to electronic commerce and expanding Internet applications will change the specific control activities that may be employed and how they are implemented, but the basic requirements of control will not have changed. As more powerful computers place more responsibility for data processing in the hands of the end users, the needed controls should be identified and implemented.

Information and Communications

Information should be recorded and communicated to management and others within the entity who need it and in a form and within a time frame that enables them to carry out their internal control and other responsibilities.

For an entity to run and control its operations, it must have relevant, reliable, and timely communications relating to internal as well as external events. Information is needed throughout the agency to achieve all of its objectives.

Program managers need both operational and financial data to determine whether they are meeting their agencies' strategic and annual performance plans and meeting their goals for accountability for effective and efficient use of resources. For example, operating information is required for development of financial reports. This covers a broad range of data from purchases, subsidies, and other transactions to data on fixed assets, inventories, and receivables. Operating information is also needed to determine whether the agency is achieving its compliance requirements under various laws and regulations. Financial information is needed for both external and internal uses. It is required to develop financial statements for periodic external reporting, and, on a day-to-day basis, to make operating decisions, montinor performance, and allocate resources. Pertinent information should be identified, captured, and distributed in a form and time frame that permits people to perform their duties efficiently.

Effective communications should occur in a broad sense with information flowing down, across, and up the organization. In additional to internal communications, management should ensure there are adequate means of communicating with, and obtaining information from, external stakeholders that may have a significant impact on the agency achieving its goals. Moreover, effective information technology management is critical to achieving useful, reliable, and continuous recording and communication of information.

Monitoring

Internal control monitoring should assess the quality of performance over time and ensure that the findings of audits and other reviews are promptly resolved.

Internal control should generally be designed to assure that ongoing monitoring occurs in the course of normal operations. It is performed continually and is ingrained in the agency's operations. It includes regular management and supervisory activities, comparisons, reconciliations, and other actions people take in performing their duties.

Separate evaluations of control can also be useful by focusing directly on the controls' effectiveness at a specific time. The scope and frequency of separate evaluations should depend primarily on the assessment of risks and the effectiveness of ongoing monitoring procedures. Separate evaluations may take the form of self-assessments as well as review of control design and direct testing of internal control. Separate evaluations also may be performed by the agency Inspector General or an external auditor. Deficiencies found during ongoing monitoring or through separate evaluations should be communicated to the individual responsible for the function and also to at least one level of management above that individual. Serious matters should be reported to top management.

Monitoring of internal control should include policies and procedures for ensuring that the findings of audits and other reviews are promptly resolved. Managers are to (1) promptly evaluate findings from

audits and other reviews, including those showing deficiencies and recommendations reported by auditors and others who evaluate agencies' operations, (2) determine proper actions in response to findings and recommendations from audits and reviews, and (3) complete, within established time frames, all actions that correct or otherwise resolve the matters brought to management's attention. The resolution process begins when audit or other review results are reported to management, and is completed only after action has been taken that (1) corrects identified deficiencies, (2) produces improvements, or (3) demonstrates the findings and recommendations do not warrant management action.

Ordering Information

The first copy of each GAO report and testimony is free. Additional copies are $2 each. Orders should be sent to the following address, accompanied by a check or money order made out to the Superintendent of Documents, when necessary. VISA and MasterCard credit cards are accepted, also. Orders for 100 or more copies to be mailed to a single address are discounted 25 percent.

Orders by mail:

U.S. General Accounting Office
P.O. Box 37050
Washington, DC 20013

or visit:

Room 1100
700 4th St. NW (corner of 4th & G Sts. NW)
U.S. General Accounting Office
Washington, DC

Orders may also be placed by calling (202) 512-6000 or by using fax number (202) 512-6061, or TDD (202) 512-2537.

Each day, GAO issues a list of newly available reports and testimony. To receive facsimile copies of the daily list or any list from the past 30 days, please call (202) 512-6000 using a touchtone phone. A recorded menu will provide information on how to obtain these lists.

For information on how to access GAO reports on the INTERNET, send an e-mail message with "info" in the body to: info@www.gao.gov

or visit GAO's World Wide Web Home Page at: http://www.gao.gov

Government Auditing Standards

2011 Revision

The 2011 revision of Government Auditing Standards supersedes the 2007 revision. The 2011 revision should be used by government auditors until further updates and revisions are made. An electronic version of this document can be accessed on GAO's Yellow Book Web page at http://www.gao.gov/yellowbook.

The 2011 revision of Government Auditing Standards is effective for financial audits and attestation engagements for periods ending on or after December 15, 2012, and for performance audits beginning on or after December 15, 2011. Early implementation is not permitted.

Revised on January 20, 2012, to correct a typo in paragraph 7.19.

Audits provide essential accountability and transparency over government programs. Given the current challenges facing governments and their programs, the oversight provided through auditing is more critical than ever. Government auditing provides objective analysis and information needed to make the decisions necessary to help create a better future. The professional standards presented in this 2011 revision of Government Auditing Standards provide a framework for performing high-quality audit work with competence, integrity, objectivity, and independence to provide accountability and to help improve government operations and services. These standards provide the foundation for government auditors to lead by example in the areas of independence, transparency, accountability, and quality through the audit process.

The 2011 revision of Government Auditing Standards represents a modernized version of the standards, taking into account recent changes in other auditing standards, including international standards. This revision supersedes the 2007 revision. It contains the following major changes from the 2007 revision that reinforce the principles of transparency and accountability and provide the framework for high-quality government audits that add value.

- A conceptual framework for independence was added to provide a means for auditors to assess their independence for activities that are not expressly prohibited in the standards. This more principles-based approach to analyzing independence provides the framework for auditors to assess the unique facts and circumstances that arise during their work.

- This revision drops discussion surrounding certain AICPA Statements on Auditing Standards (SAS) and

Statements on Standards for Attestation Engagements (SSAE) requirements that were incorporated by reference and included in the 2007 revision, as the standards have converged in those areas.

- The definition of validity as an aspect of the quality of evidence has been clarified for performance audits.

Effective with the implementation dates for the 2011 revision of Government Auditing Standards, GAO is also retiring Government Auditing Standards: Answers to Independence Standard Questions (GAO-02-870G, July 2002).

This revision of the standards has gone through an extensive deliberative process, including public comments and input from the Comptroller General's Advisory Council on Government Auditing Standards. The Advisory Council generally consists of about 25 experts in financial and performance auditing and reporting drawn from federal, state, and local government; the private sector; and academia. The views of all parties were thoroughly considered in finalizing the standards.

The 2011 revision of Government Auditing Standards will be effective for financial audits and attestation engagements for periods ending on or after December 15, 2012, and for performance audits beginning on or after December 15, 2011. Early implementation is not permitted.

An electronic version of this document and any interpretive publications can be accessed at http://www.gao.gov/yellowbook.

I extend special thanks to the members of the Advisory Council for their extensive input and feedback through the entire process of developing and finalizing the standards.

Government Auditing: Foundation and Ethical Principles

Introduction

1.01 The concept of accountability for use of public resources and government authority is key to our nation's governing processes. Management and officials entrusted with public resources are responsible for carrying out public functions and providing service to the public effectively, efficiently, economically, ethically, and equitably within the context of the statutory boundaries of the specific government program.

1.02 As reflected in applicable laws, regulations, agreements, and standards, management and officials of government programs are responsible for providing reliable, useful, and timely information for transparency and accountability of these programs and their operations.[1] Legislators, oversight bodies, those charged with governance,[2] and the public need to know whether (1) management and officials manage government resources and use their authority properly and in compliance with laws and regulations; (2) government programs are achieving their objectives and desired outcomes; and (3) government services are provided effectively, efficiently, economically, ethically, and equitably.

1.03 Government auditing is essential in providing accountability to legislators, oversight bodies, those charged with governance, and the public. Audits[3] provide an independent, objective, nonpartisan assessment of the stewardship, performance, or cost of government policies, programs, or operations, depending upon the type and scope of the audit.

[1]See paragraph A1.08 for additional information on management's responsibilities.

[2]See paragraphs A1.05 through A1.07 for additional discussion on the role of those charged with governance.

[3]See paragraph 1.07c for discussion of the term "audit" as it is used in chapters 1 through 3 and corresponding sections of the Appendix.

Purpose and Applicability of GAGAS

1.04 The professional standards and guidance contained in this document, commonly referred to as generally accepted government auditing standards (GAGAS), provide a framework for conducting high quality audits with competence, integrity, objectivity, and independence. These standards are for use by auditors of government entities and entities that receive government awards and audit organizations performing GAGAS audits. Overall, GAGAS contains standards for audits, which are comprised of individual requirements that are identified by terminology as discussed in paragraphs 2.14 through 2.18. GAGAS contains requirements and guidance dealing with ethics, independence, auditors' professional judgment and competence, quality control, performance of the audit, and reporting.

1.05 Audits performed in accordance with GAGAS provide information used for oversight, accountability, transparency, and improvements of government programs and operations. GAGAS contains requirements and guidance to assist auditors in objectively acquiring and evaluating sufficient, appropriate evidence and reporting the results. When auditors perform their work in this manner and comply with GAGAS in reporting the results, their work can lead to improved government management, better decision making and oversight, effective and efficient operations, and accountability and transparency for resources and results.

1.06 Provisions of laws, regulations, contracts, grant agreements, or policies frequently require audits be conducted in accordance with GAGAS. In addition, many auditors and audit organizations voluntarily choose to perform their work in accordance with GAGAS. The requirements and guidance in GAGAS apply to audits of government entities, programs, activities, and functions, and of government assistance administered by contractors, nonprofit entities, and other nongovernmental entities when the use of GAGAS is required or is voluntarily followed.[4]

1.07 This paragraph describes the use of the following terms in GAGAS.

a. The term "auditor" as it is used throughout GAGAS describes individuals performing work in accordance with GAGAS (including audits and attestation engagements) regardless of job title. Therefore, individuals who may have the titles auditor, analyst, practitioner, evaluator, inspector, or other similar titles are considered auditors in GAGAS.

b. The term "audit organization" as it is used throughout GAGAS refers to government audit organizations as well as public accounting or other firms that perform audits and attestation engagements using GAGAS.

c. The term "audit" as it is used in chapters 1 through 3 and corresponding sections of the Appendix refers to financial audits, attestation engagements, and performance audits conducted in accordance with GAGAS.

[4]See paragraphs A1.02 through A1.04 for discussion of laws, regulations, and guidelines that require use of GAGAS.

1.08 A government audit organization can be structurally located within or outside the audited entity.[5] Audit organizations that are external to the audited entity and report to third parties are considered to be external audit organizations. Audit organizations that are accountable to senior management and those charged with governance of the audited entity, and do not generally issue their reports to third parties external to the audited entity, are considered internal audit organizations.

1.09 Some government audit organizations represent a unique hybrid of external auditing and internal auditing in their oversight role for the entities they audit. These audit organizations have external reporting requirements consistent with the reporting requirements for external auditors while at the same time being part of their respective agencies. These audit organizations often have a dual reporting responsibility to their legislative body as well as to the agency head and management.

Ethical Principles

1.10 The ethical principles presented in this section provide the foundation, discipline, and structure, as well as the climate that influence the application of GAGAS. This section sets forth fundamental principles rather than establishing specific standards or requirements.

1.11 Because auditing is essential to government accountability to the public, the public expects audit organizations and auditors who conduct their work in accordance with GAGAS to follow ethical principles. Management of the audit organization sets the tone for

[5]See paragraph 1.19 for a discussion of objectivity and paragraphs 3.27 through 3.32 for requirements related to independence considerations for government auditors and audit organization structure.

ethical behavior throughout the organization by maintaining an ethical culture, clearly communicating acceptable behavior and expectations to each employee, and creating an environment that reinforces and encourages ethical behavior throughout all levels of the organization. The ethical tone maintained and demonstrated by management and staff is an essential element of a positive ethical environment for the audit organization.

1.12 Conducting audit work in accordance with ethical principles is a matter of personal and organizational responsibility. Ethical principles apply in preserving auditor independence,[6] taking on only work that the audit organization is competent[7] to perform, performing high-quality work, and following the applicable standards cited in the auditors' report. Integrity and objectivity are maintained when auditors perform their work and make decisions that are consistent with the broader interest of those relying on the auditors' report, including the public.

1.13 Other ethical requirements or codes of professional conduct may also be applicable to auditors who conduct audits in accordance with GAGAS. For example, individual auditors who are members of professional organizations or are licensed or certified professionals may also be subject to ethical requirements of those professional organizations or licensing bodies. Auditors employed by government entities may also be subject to government ethics laws and regulations.

[6]See paragraphs 3.02 through 3.59 for requirements related to independence.

[7]See paragraphs 3.69 through 3.81 for additional information on competence.

1.14 The ethical principles that guide the work of auditors who conduct audits in accordance with GAGAS are

a. the public interest;

b. integrity;

c. objectivity;

d. proper use of government information, resources, and positions; and

e. professional behavior.

The Public Interest

1.15 The public interest is defined as the collective well-being of the community of people and entities the auditors serve. Observing integrity, objectivity, and independence in discharging their professional responsibilities assists auditors in meeting the principle of serving the public interest and honoring the public trust. The principle of the public interest is fundamental to the responsibilities of auditors and critical in the government environment.

1.16 A distinguishing mark of an auditor is acceptance of responsibility to serve the public interest. This responsibility is critical when auditing in the government environment. GAGAS embodies the concept of accountability for public resources, which is fundamental to serving the public interest.

Integrity

1.17 Public confidence in government is maintained and strengthened by auditors performing their professional responsibilities with integrity. Integrity includes auditors conducting their work with an attitude that is objective, fact-based, nonpartisan, and nonideological with regard

to audited entities and users of the auditors' reports. Within the constraints of applicable confidentiality laws, rules, or policies, communications with the audited entity, those charged with governance, and the individuals contracting for or requesting the audit are expected to be honest, candid, and constructive.

1.18 Making decisions consistent with the public interest of the program or activity under audit is an important part of the principle of integrity. In discharging their professional responsibilities, auditors may encounter conflicting pressures from management of the audited entity, various levels of government, and other likely users. Auditors may also encounter pressures to inappropriately achieve personal or organizational gain. In resolving those conflicts and pressures, acting with integrity means that auditors place priority on their responsibilities to the public interest.

Objectivity

1.19 The credibility of auditing in the government sector is based on auditors' objectivity in discharging their professional responsibilities. Objectivity includes independence of mind and appearance when providing audits, maintaining an attitude of impartiality, having intellectual honesty, and being free of conflicts of interest. Maintaining objectivity includes a continuing assessment of relationships with audited entities and other stakeholders in the context of the auditors' responsibility to the public. The concepts of objectivity and independence are closely related. Independence impairments impact objectivity.[8]

[8]See independence standards at paragraphs 3.02 through 3.59.

Proper Use of Government Information, Resources, and Positions

1.20 Government information, resources, and positions are to be used for official purposes and not inappropriately for the auditor's personal gain or in a manner contrary to law or detrimental to the legitimate interests of the audited entity or the audit organization. This concept includes the proper handling of sensitive or classified information or resources.

1.21 In the government environment, the public's right to the transparency of government information has to be balanced with the proper use of that information. In addition, many government programs are subject to laws and regulations dealing with the disclosure of information. To accomplish this balance, exercising discretion in the use of information acquired in the course of auditors' duties is an important part in achieving this goal. Improperly disclosing any such information to third parties is not an acceptable practice.

1.22 Accountability to the public for the proper use and prudent management of government resources is an essential part of auditors' responsibilities. Protecting and conserving government resources and using them appropriately for authorized activities is an important element in the public's expectations for auditors.

1.23 Misusing the position of an auditor for financial gain or other benefits violates an auditor's fundamental responsibilities. An auditor's credibility can be damaged by actions that could be perceived by an objective third party with knowledge of the relevant information as improperly benefiting an auditor's personal financial interests or those of an immediate or close family member; a general partner; an organization for which the auditor serves as an officer, director, trustee, or employee; or an organization with which the auditor is negotiating concerning future employment.

Professional Behavior

1.24 High expectations for the auditing profession include compliance with all relevant legal, regulatory, and professional obligations and avoidance of any conduct that might bring discredit to auditors' work, including actions that would cause an objective third party with knowledge of the relevant information to conclude that the auditors' work was professionally deficient. Professional behavior includes auditors putting forth an honest effort in performance of their duties and professional services in accordance with the relevant technical and professional standards.

Standards for Use and Application of GAGAS

Introduction

2.01 This chapter establishes requirements and provides guidance for audits[9] performed in accordance with generally accepted government auditing standards (GAGAS). This chapter also identifies the types of audits that may be performed in accordance with GAGAS, explains the terminology that GAGAS uses to identify requirements, explains the relationship between GAGAS and other professional standards, and provides requirements for stating compliance with GAGAS in the auditors' report.

Types of GAGAS Audits and Attestation Engagements

2.02 This section describes the types of audits that audit organizations may perform in accordance with GAGAS. This description is not intended to limit or require the types of audits that may be performed in accordance with GAGAS.

2.03 All audits begin with objectives, and those objectives determine the type of audit to be performed and the applicable standards to be followed. The types of audits that are covered by GAGAS, as defined by their objectives, are classified in this document as financial audits, attestation engagements, and performance audits.

2.04 In some audits, the standards applicable to the specific objective will be apparent. For example, if the objective is to express an opinion on financial statements, the standards for financial audits apply. However, some audits may have multiple or overlapping objectives. For example, if the objectives are to determine the reliability of performance measures, this work can be done in accordance with either the standards for attestation engagements or performance

[9]See paragraph 1.07c for discussion of the term "audit" as it is used in chapters 1 through 3 and corresponding sections of the Appendix.

audits. In cases in which there is a choice between applicable standards, auditors should evaluate users' needs and the auditors' knowledge, skills, and experience in deciding which standards to follow.

2.05 GAGAS requirements apply to the types of audits that may be performed in accordance with GAGAS as follows:

a. Financial audits: the requirements and guidance in chapters 1 through 4 apply.

b. Attestation engagements: the requirements and guidance in chapters 1 through 3, and 5 apply.

c. Performance audits: the requirements and guidance in chapters 1 through 3, 6, and 7 apply.

2.06 Appendix I includes supplemental guidance for auditors and audited entities to assist in the implementation of GAGAS. Appendix I does not establish auditor requirements but instead is intended to facilitate implementation of the standards contained in chapters 2 through 7. Appendix II includes a flowchart which may assist in the application of the conceptual framework for independence.[10]

Financial Audits

2.07 Financial audits provide an independent assessment of whether an entity's reported financial information (e.g., financial condition, results, and use of resources) are presented fairly in accordance with recognized criteria. Financial audits performed in accordance with GAGAS include financial statement audits and other related financial audits:

[10]See paragraphs 3.07 through 3.32 for discussion of the conceptual framework.

a. Financial statement audits: The primary purpose of a financial statement audit is to provide an opinion about whether an entity's financial statements are presented fairly in all material respects in conformity with an applicable financial reporting framework. Reporting on financial statement audits performed in accordance with GAGAS also includes reports on internal control over financial reporting and on compliance with provisions of laws, regulations, contracts, and grant agreements that have a material effect on the financial statements.

b. Other types of financial audits: Other types of financial audits conducted in accordance with GAGAS entail various scopes of work, including: (1) obtaining sufficient, appropriate evidence to form an opinion on single financial statements, specified elements, accounts, or items of a financial statement;[11] (2) issuing letters for underwriters and certain other requesting parties;[12] and (3) auditing compliance with applicable compliance requirements relating to one or more government programs.[13]

2.08 GAGAS incorporates by reference the American Institute of Certified Public Accountants (AICPA)

[11]See American Institute of Certified Public Accountants (AICPA) *Codification of Statements on Auditing Standards* for Auditing (AU-C) Section 805, *Special Considerations – Audits of Single Financial Statements and Specific Elements, Accounts, or Items of a Financial Statement*.

[12]See AICPA AU-C Section 920, *Letters for Underwriters and Certain Other Requesting Parties.*

[13]See AICPA AU-C Section 935, *Compliance Audits.*

Statements on Auditing Standards (SAS).[14] Additional requirements for performing financial audits in accordance with GAGAS are contained in chapter 4. For financial audits performed in accordance with GAGAS, auditors should also comply with chapters 1 through 3.

Attestation Engagements

2.09 Attestation engagements can cover a broad range of financial or nonfinancial objectives about the subject matter or assertion depending on the users' needs.[15] GAGAS incorporates by reference the AICPA's Statements on Standards for Attestation Engagements (SSAE).[16] Additional requirements for performing attestation engagements in accordance with GAGAS are contained in chapter 5. The AICPA's standards recognize attestation engagements that result in an examination, a review, or an agreed-upon procedures report on a subject matter or on an assertion about a subject matter that is the responsibility of another party.[17] The three types of attestation engagements are:

a. Examination: Consists of obtaining sufficient, appropriate evidence to express an opinion on whether the subject matter is based on (or in conformity with) the

[14]See AICPA *Codification of Statements on Auditing Standards* and paragraph 2.20 for additional discussion on the relationship between GAGAS and other professional standards. References to the AICPA *Codification of Statements on Auditing Standards* use an "AU-C" identifier to refer to the clarified SASs instead of an "AU" identifier. "AU-C" is a temporary identifier to avoid confusion with references to existing "AU" sections, which remain effective through 2013. The "AU-C" identifier will revert to "AU" in 2014 AICPA *Codification of Statements on Auditing Standards*, by which time the clarified SASs become fully effective for all engagements.

[15]See A2.01 for examples of objectives for attestation engagements.

[16]See the AICPA *Codification of Statements on Standards for Attestation Engagements* (AT) Sections.

[17]See AICPA AT Section 101, *Attest Engagements* and AT Section 201, *Agreed-Upon Procedures Engagements*.

criteria in all material respects or the assertion is presented (or fairly stated), in all material respects, based on the criteria.

b. Review: Consists of sufficient testing to express a conclusion about whether any information came to the auditors' attention on the basis of the work performed that indicates the subject matter is not based on (or not in conformity with) the criteria or the assertion is not presented (or not fairly stated) in all material respects based on the criteria. Auditors should not perform review-level work for reporting on internal control or compliance with provisions of laws and regulations.[18]

c. Agreed-Upon Procedures: Consists of auditors performing specific procedures on the subject matter and issuing a report of findings based on the agreed-upon procedures. In an agreed-upon procedures engagement, the auditor does not express an opinion or conclusion, but only reports on agreed-upon procedures in the form of procedures and findings related to the specific procedures applied.

Performance Audits

2.10 Performance audits are defined as audits that provide findings or conclusions based on an evaluation of sufficient, appropriate evidence against criteria.[19] Performance audits provide objective analysis to assist management and those charged with governance and oversight in using the information to improve program performance and operations, reduce costs, facilitate decision making by parties with responsibility to oversee or initiate corrective action, and contribute to public accountability. The term "program" is used in

[18]See AICPA AT Sections 501, *Reporting on an Entity's Internal Control Over Financial Reporting* and 601, *Compliance Attestation.*

[19]See paragraphs 6.37 and A6.02 for discussion of criteria.

GAGAS to include government entities, organizations, programs, activities, and functions.

2.11 Performance audit objectives vary widely and include assessments of program effectiveness, economy, and efficiency; internal control; compliance; and prospective analyses. These overall objectives are not mutually exclusive. Thus, a performance audit may have more than one overall objective. For example, a performance audit with an objective of determining or evaluating program effectiveness may also involve an additional objective of evaluating internal controls to determine the reasons for a program's lack of effectiveness or how effectiveness can be improved. Examples of the various types of the performance audit objectives discussed below are included in Appendix I.[20]

a. Program effectiveness and results audit objectives are frequently interrelated with economy and efficiency objectives. Audit objectives that focus on program effectiveness and results typically measure the extent to which a program is achieving its goals and objectives. Audit objectives that focus on economy and efficiency address the costs and resources used to achieve program results.

b. Internal control audit objectives relate to an assessment of one or more components of an organization's system of internal control that is designed to provide reasonable assurance of achieving effective and efficient operations, reliable financial and performance reporting, or compliance with applicable laws and regulations. Internal control objectives also may be relevant when determining the cause of unsatisfactory program performance. Internal control

[20]See paragraphs A2.02 through A2.05 for discussion of performance audit objectives.

comprises the plans, policies, methods, and procedures used to meet the organization's mission, goals, and objectives. Internal control includes the processes and procedures for planning, organizing, directing, and controlling program operations, and management's system for measuring, reporting, and monitoring program performance.[21]

c. Compliance audit objectives relate to an assessment of compliance with criteria established by provisions of laws, regulations, contracts, or grant agreements, or other requirements that could affect the acquisition, protection, use, and disposition of the entity's resources and the quantity, quality, timeliness, and cost of services the entity produces and delivers. Compliance requirements can be either financial or nonfinancial.

d. Prospective analysis audit objectives provide analysis or conclusions about information that is based on assumptions about events that may occur in the future, along with possible actions that the entity may take in response to the future events.

Nonaudit Services Provided by Audit Organizations

2.12 GAGAS does not cover nonaudit services, which are defined as professional services other than audits or attestation engagements. Therefore, auditors do not report that the nonaudit services were conducted in accordance with GAGAS. When performing nonaudit services for an entity for which the audit organization performs a GAGAS audit, audit organizations should communicate with requestors and those charged with governance to clarify that the work performed does not constitute an audit conducted in accordance with GAGAS.

[21]See paragraphs A.03 through A.04 for additional discussion of internal control.

2.13 When audit organizations provide nonaudit services to entities for which they also provide GAGAS audits, they should assess the impact that providing those nonaudit services may have on auditor and audit organization independence and respond to any identified threats to independence in accordance with the GAGAS independence standard.[22]

Use of Terminology to Define GAGAS Requirements

2.14 GAGAS contains requirements together with related guidance in the form of application and other explanatory material. The terminology is consistent with the terminology defined in the AICPA's *Codification of Statements on Auditing Standards*.[23] Auditors have a responsibility to consider the entire text of GAGAS in carrying out their work and in understanding and applying the requirements in GAGAS. Not every paragraph of GAGAS carries a requirement that auditors and audit organizations are expected to fulfill. Rather, the requirements are identified through use of specific language.

2.15 GAGAS uses two categories of requirements, identified by specific terms, to describe the degree of responsibility they impose on auditors and audit organizations, as follows:

a. Unconditional requirements: Auditors and audit organizations must comply with an unconditional requirement in all cases where such requirement is relevant. GAGAS uses the word *must* to indicate an unconditional requirement.

[22]See paragraphs 3.02 through 3.59 for the GAGAS independence standard.

[23]See AICPA AU-C Section 200, *Overall Objectives of the Independent Auditor and the Conduct of an Audit in Accordance With Generally Accepted Auditing Standards*.

b. Presumptively mandatory requirements: Auditors and audit organizations must comply with a presumptively mandatory requirement in all cases where such a requirement is relevant except in rare circumstances discussed in paragraph 2.16. GAGAS uses the word *should* to indicate a presumptively mandatory requirement.[24]

2.16 In rare circumstances, auditors and audit organizations may determine it necessary to depart from a relevant presumptively mandatory requirement. In such rare circumstances, auditors should perform alternative procedures to achieve the intent of that requirement. The need for the auditors to depart from a relevant presumptively mandatory requirement is expected to arise only when the requirement is for a specific procedure to be performed and, in the specific circumstances of the audit, that procedure would be ineffective in achieving the intent of the requirement. If, in rare circumstances, auditors judge it necessary to depart from a relevant presumptively mandatory requirement, they must document their justification for the departure and how the alternative procedures performed in the circumstances were sufficient to achieve the intent of that requirement.

2.17 In addition to requirements as identified in paragraph 2.15, GAGAS contains related guidance in the form of application and other explanatory material. The application and other explanatory material provides further explanation of the requirements and guidance for carrying them out. In particular, it may explain more precisely what a requirement means or is intended to cover or include examples of procedures that may be appropriate in the circumstances. Although such guidance does not in itself impose a requirement, it is

[24]See paragraph 2.25 for additional documentation requirements for departures from GAGAS requirements.

relevant to the proper application of the requirements. Auditors should have an understanding of the application and other explanatory material; how auditors apply the guidance in the audit depends on the exercise of professional judgment in the circumstances consistent with the objective of the requirement. The words "may," "might," and "could" are used to describe these actions and procedures. The application and other explanatory material may also provide background information on matters addressed in GAGAS.

2.18 Auditors also use "interpretive publications" in planning and performing GAGAS audits. Interpretive publications are recommendations on the application of GAGAS in specific circumstances, including audits for entities in specialized industries. Interpretive publications, such as related GAGAS guidance documents and interpretations, are issued under the authority of the Government Accountability Office (GAO) to provide additional guidance on the application of GAGAS.[25] Interpretive publications are not auditing standards, but have the same level of authority as application and other explanatory material in GAGAS.

Relationship between GAGAS and Other Professional Standards

2.19 Auditors may use GAGAS in conjunction with professional standards issued by other authoritative bodies.

2.20 The relationship between GAGAS and other professional standards for financial audits and attestation engagements is as follows:

[25]See http://www.gao.gov/yellowbook for a listing of related GAGAS interpretive publications.

a. The AICPA has established professional standards that apply to financial audits and attestation engagements for nonissuers (entities other than issuers[26] under the Sarbanes-Oxley Act of 2002, such as privately held companies, nonprofit entities, and government entities) performed by certified public accountants (CPA). For financial audits and attestation engagements, GAGAS incorporates by reference AICPA standards, as discussed in paragraph 2.08.

b. The International Auditing and Assurance Standards Board (IAASB) has established professional standards that apply to financial audits and assurance engagements. Auditors may elect to use the IAASB standards and the related International Standards on Auditing (ISA) and International Standards on Assurance Engagements (ISAE) in conjunction with GAGAS.

c. The Public Company Accounting Oversight Board (PCAOB) has established professional standards that apply to financial audits and attestation engagements for issuers (generally, publicly traded companies with a reporting obligation under the Securities Exchange Act of 1934). Auditors may elect to use the PCAOB standards in conjunction with GAGAS.

2.21 For performance audits, GAGAS does not incorporate other standards by reference, but recognizes that auditors may use or may be required to use other professional standards in conjunction with GAGAS, such as the following:

[26]See the Sarbanes-Oxley Act of 2002 (Public Law 107-204) for discussion of issuers.

a. *International Standards for the Professional Practice of Internal Auditing*, The Institute of Internal Auditors, Inc.;

b. *Guiding Principles for Evaluators*, American Evaluation Association;

c. *The Program Evaluation Standards*, Joint Committee on Standards for Education Evaluation;

d. *Standards for Educational and Psychological Testing*, American Psychological Association; and

e. *IT Standards, Guidelines, and Tools and Techniques for Audit and Assurance and Control Professionals*, ISACA.

2.22 When auditors cite compliance with both GAGAS and another set of standards, such as those listed in paragraphs 2.20 and 2.21, auditors should refer to paragraph 2.24 for the requirements for citing compliance with GAGAS. In addition to citing GAGAS, auditors may also cite the use of other standards in their reports when they have also met the requirements for citing compliance with the other standards.[27] Auditors should refer to the other set of standards for the basis for citing compliance with those standards.

Stating Compliance with GAGAS in the Auditors' Report

2.23 When auditors are required to perform an audit in accordance with GAGAS or are representing to others that they did so, they should cite compliance with GAGAS in the auditors' report as set forth in paragraphs 2.24 through 2.25.

[27]See paragraphs 4.18, 5.19, 5.51, and 5.61 for additional requirements for citing compliance with standards of the AICPA.

2.24 Auditors should include one of the following types of GAGAS compliance statements in reports on GAGAS audits, as appropriate.[28]

a. Unmodified GAGAS compliance statement: Stating that the auditor performed the audit in accordance with GAGAS. Auditors should include an unmodified GAGAS compliance statement in the auditors' report when they have (1) followed unconditional and applicable presumptively mandatory GAGAS requirements, or (2) have followed unconditional requirements, and documented justification for any departures from applicable presumptively mandatory requirements and have achieved the objectives of those requirements through other means.

b. Modified GAGAS compliance statement: Stating either that (1) the auditor performed the audit in accordance with GAGAS, except for specific applicable requirements that were not followed, or (2) because of the significance of the departure(s) from the requirements, the auditor was unable to and did not perform the audit in accordance with GAGAS. Situations when auditors use modified compliance statements also include scope limitations, such as restrictions on access to records, government officials, or other individuals needed to conduct the audit. When auditors use a modified GAGAS statement, they should disclose in the report the applicable requirement(s) not followed, the reasons for not following the requirement(s), and how not following the requirement(s) affected, or could have affected, the audit and the assurance provided.

[28]See paragraph A2.06 for additional discussion of GAGAS compliance statements.

2.25 When auditors do not comply with applicable requirement(s), they should (1) assess the significance of the noncompliance to the audit objectives, (2) document the assessment, along with their reasons for not following the requirement(s), and (3) determine the type of GAGAS compliance statement. The auditors' determination is a matter of professional judgment, which is affected by the significance of the requirement(s) not followed in relation to the audit objectives.

General Standards

Introduction

3.01 This chapter establishes general standards and provides guidance for performing financial audits, attestation engagements, and performance audits under generally accepted government auditing standards (GAGAS). These general standards, along with the overarching ethical principles presented in chapter 1, establish a foundation for the credibility of auditors' work. These general standards emphasize the importance of the independence of the audit organization and its individual auditors; the exercise of professional judgment in the performance of work and the preparation of related reports; the competence of staff; and quality control and assurance.

Independence

3.02 In all matters relating to the audit work, the audit organization and the individual auditor, whether government or public, must be independent.

3.03 Independence comprises:

a. Independence of Mind
The state of mind that permits the performance of an audit without being affected by influences that compromise professional judgment, thereby allowing an individual to act with integrity and exercise objectivity and professional skepticism.

b. Independence in Appearance
The absence of circumstances that would cause a reasonable and informed third party, having knowledge of the relevant information, to reasonably conclude that the integrity, objectivity, or professional skepticism of an audit organization or member of the audit team had been compromised.

3.04 Auditors and audit organizations maintain independence so that their opinions, findings,

conclusions, judgments, and recommendations will be impartial and viewed as impartial by reasonable and informed third parties. Auditors should avoid situations that could lead reasonable and informed third parties to conclude that the auditors are not independent and thus are not capable of exercising objective and impartial judgment on all issues associated with conducting the audit and reporting on the work.

3.05 Except under the limited circumstances discussed in paragraphs 3.47 and 3.48, auditors should be independent from an audited entity during:

a. any period of time that falls within the period covered by the financial statements or subject matter of the audit, and

b. the period of the professional engagement, which begins when the auditors either sign an initial engagement letter or other agreement to perform an audit or begin to perform an audit, whichever is earlier. The period lasts for the entire duration of the professional relationship (which, for recurring audits, could cover many periods) and ends with the formal or informal notification, either by the auditors or the audited entity, of the termination of the professional relationship or by the issuance of a report, whichever is later. Accordingly, the period of professional engagement does not necessarily end with the issuance of a report and recommence with the beginning of the following year's audit or a subsequent audit with a similar objective.

3.06 GAGAS's practical consideration of independence consists of four interrelated sections, providing:

a. a conceptual framework for making independence determinations based on facts and circumstances that are often unique to specific environments;

b. requirements for and guidance on independence for audit organizations that are structurally located within the entities they audit;

c. requirements for and guidance on independence for auditors performing nonaudit services, including indication of specific nonaudit services that always impair independence and others that would not normally impair independence; and

d. requirements for and guidance on documentation necessary to support adequate consideration of auditor independence.

GAGAS Conceptual Framework Approach to Independence

3.07 Many different circumstances, or combinations of circumstances, are relevant in evaluating threats to independence. Therefore, GAGAS establishes a conceptual framework that auditors use to identify, evaluate, and apply safeguards to address threats to independence.[29] The conceptual framework assists auditors in maintaining both independence of mind and independence in appearance. It can be applied to many variations in circumstances that create threats to independence and allows auditors to address threats to independence that result from activities that are not specifically prohibited by GAGAS.

3.08 Auditors should apply the conceptual framework at the audit organization, audit, and individual auditor levels to:

a. identify threats to independence;

[29]See Appendix II for a flowchart to assist in the application of the conceptual framework for independence.

b. evaluate the significance of the threats identified, both individually and in the aggregate; and

c. apply safeguards as necessary to eliminate the threats or reduce them to an acceptable level.

3.09 If no safeguards are available to eliminate an unacceptable threat or reduce it to an acceptable level, independence would be considered impaired.

3.10 The use of the term “audit organization” in GAGAS is described in paragraph 1.07. For consideration of auditor independence, offices or units of an audit organization, or related or affiliated entities under common control, are not differentiated from one another. Consequently, for the purposes of independence evaluation using the conceptual framework, an audit organization that includes multiple offices or units, or includes multiple entities related or affiliated through common control, is considered to be one audit organization. Common ownership may also affect independence in appearance regardless of the level of control.

3.11 The GAGAS section on nonaudit services in paragraphs 3.33 through 3.58 provides requirements and guidance on evaluating threats to independence related to nonaudit services provided by auditors to audited entities. That section also enumerates specific nonaudit services that always impair auditor independence with respect to audited entities and that auditors are prohibited from providing to audited entities.

3.12 The following sections discuss threats to independence, safeguards or controls to eliminate or reduce threats, and application of the conceptual framework for independence.

Threats

3.13 Threats to independence are circumstances that could impair independence. Whether independence is impaired depends on the nature of the threat, whether the threat is of such significance that it would compromise an auditor's professional judgment or create the appearance that the auditor's professional judgment may be compromised, and on the specific safeguards applied to eliminate the threat or reduce it to an acceptable level. Threats are conditions to be evaluated using the conceptual framework. Threats do not necessarily impair independence.

3.14 Threats to independence may be created by a wide range of relationships and circumstances. Auditors should evaluate the following broad categories of threats to independence when threats are being identified and evaluated:[30]

a. Self-interest threat - the threat that a financial or other interest will inappropriately influence an auditor's judgment or behavior;

b. Self-review threat - the threat that an auditor or audit organization that has provided nonaudit services will not appropriately evaluate the results of previous judgments made or services performed as part of the nonaudit services when forming a judgment significant to an audit;

c. Bias threat - the threat that an auditor will, as a result of political, ideological, social, or other convictions, take a position that is not objective;

d. Familiarity threat - the threat that aspects of a relationship with management or personnel of an

[30]See A3.02 through A3.09 for further discussion and examples of threats.

audited entity, such as a close or long relationship, or that of an immediate or close family member, will lead an auditor to take a position that is not objective;

e. Undue influence threat - the threat that external influences or pressures will impact an auditor's ability to make independent and objective judgments;

f. Management participation threat - the threat that results from an auditor's taking on the role of management or otherwise performing management functions on behalf of the entity undergoing an audit; and

g. Structural threat - the threat that an audit organization's placement within a government entity, in combination with the structure of the government entity being audited, will impact the audit organization's ability to perform work and report results objectively.

3.15 Circumstances that result in a threat to independence in one of the above categories may result in other threats as well. For example, a circumstance resulting in a structural threat to independence may also expose auditors to undue influence and management participation threats.

Safeguards

3.16 Safeguards are controls designed to eliminate or reduce to an acceptable level threats to independence. Under the conceptual framework, the auditor applies safeguards that address the specific facts and circumstances under which threats to independence exist. In some cases, multiple safeguards may be necessary to address a threat. The list of safeguards in this section provides examples that may be effective under certain circumstances. The list cannot provide safeguards for all circumstances. It may, however, provide a starting point for auditors who have identified threats to independence and are considering what

safeguards could eliminate those threats or reduce them to an acceptable level.

3.17 Examples of safeguards include:

a. consulting an independent third party, such as a professional organization, a professional regulatory body, or another auditor;

b. involving another audit organization to perform or reperform part of the audit;

c. having a professional staff member who was not a member of the audit team review the work performed; and

d. removing an individual from an audit team when that individual's financial or other interests or relationships pose a threat to independence.

3.18 Depending on the nature of the audit, an auditor may also be able to place limited reliance on safeguards that the entity has implemented. It is not possible to rely solely on such safeguards to eliminate threats or reduce them to an acceptable level.

3.19 Examples of safeguards within the entity's systems and procedures include:

a. an entity requirement that persons other than management ratify or approve the appointment of an audit organization to perform an audit;

b. internal procedures at the entity that ensure objective choices in commissioning nonaudit services; and

c. a governance structure at the entity that provides appropriate oversight and communications regarding the audit organization's services.

Application of the Conceptual Framework

3.20 Auditors should evaluate threats to independence using the conceptual framework when the facts and circumstances under which the auditors perform their work may create or augment threats to independence. Auditors should evaluate threats both individually and in the aggregate because threats can have a cumulative effect on an auditor's independence.

3.21 Facts and circumstances that create threats to independence can result from events such as the start of a new audit; assignment of new staff to an ongoing audit; and acceptance of a nonaudit service at an audited entity. Many other events can result in threats to independence. Auditors use professional judgment to determine whether the facts and circumstances created by an event warrant use of the conceptual framework. Whenever relevant new information about a threat to independence comes to the attention of the auditor during the audit, the auditor should evaluate the significance of the threat in accordance with the conceptual framework.

3.22 Auditors should determine whether identified threats to independence are at an acceptable level or have been eliminated or reduced to an acceptable level. A threat to independence is not acceptable if it either (a) could impact the auditor's ability to perform an audit without being affected by influences that compromise professional judgment or (b) could expose the auditor or audit organization to circumstances that would cause a reasonable and informed third party to conclude that the integrity, objectivity, or professional skepticism of the audit organization, or a member of the audit team, had been compromised.

3.23 When an auditor identifies threats to independence and, based on an evaluation of those threats, determines that they are not at an acceptable level, the auditor should determine whether appropriate

safeguards are available and can be applied to eliminate the threats or reduce them to an acceptable level. The auditor should exercise professional judgment in making that determination, and should take into account whether both independence of mind and independence in appearance are maintained. The auditor should evaluate both qualitative and quantitative factors when determining the significance of a threat.

3.24 In cases where threats to independence are not at an acceptable level, thereby requiring the application of safeguards, the auditors should document the threats identified and the safeguards applied to eliminate the threats or reduce them to an acceptable level.

3.25 Certain conditions may lead to threats that are so significant that they cannot be eliminated or reduced to an acceptable level through the application of safeguards, resulting in impaired independence. Under such conditions, auditors should decline to perform a prospective audit or terminate an audit in progress.[31]

3.26 If a threat to independence is initially identified after the auditors' report is issued, the auditor should evaluate the threat's impact on the audit and on GAGAS compliance. If the auditors determine that the newly identified threat had an impact on the audit that would have resulted in the auditors' report being different from the report issued had the auditors been aware of it, they should communicate in the same manner as that used to originally distribute the report to those charged with governance, the appropriate officials of the audited entity, the appropriate officials of the

[31]See paragraph 3.44 for a discussion of conditions under which an auditor may be required by law or regulation to perform both an audit and a nonaudit service and cannot decline to perform or terminate the service. See the discussion of nonaudit services beginning in paragraph 3.45 for consideration of threats related to nonaudit services that cannot be eliminated or reduced to an appropriate level.

organizations requiring or arranging for the audits, and other known users, so that they do not continue to rely on findings or conclusions that were impacted by the threat to independence. If the report was previously posted to the auditors' publicly accessible website, the auditors should remove the report and post a public notification that the report was removed. The auditors should then determine whether to conduct additional audit work necessary to reissue the report, including any revised findings or conclusions or repost the original report if the additional audit work does not result in a change in findings or conclusions.

Government Auditors and Audit Organization Structure

3.27 The ability of audit organizations in government entities to perform work and report the results objectively can be affected by placement within government and the structure of the government entity being audited. The independence standard applies to auditors in government entities whether they report to third parties externally (external auditors), to senior management within the audited entity (internal auditors), or to both.

External Auditor Independence

3.28 Audit organizations that are structurally located within government entities are often subject to constitutional or statutory safeguards that mitigate the effects of structural threats to independence. For external audit organizations, such safeguards may include governmental structures under which a government audit organization is:

a. at a level of government other than the one of which the audited entity is part (federal, state, or local); for example, federal auditors auditing a state government program; or

b. placed within a different branch of government from that of the audited entity; for example, legislative auditors auditing an executive branch program.

3.29 Safeguards other than those described above may mitigate threats resulting from governmental structures. For external auditors or auditors who report both externally and internally, structural threats may be mitigated if the head of an audit organization meets any of the following criteria in accordance with constitutional or statutory requirements:

a. directly elected by voters of the jurisdiction being audited;

b. elected or appointed by a legislative body, subject to removal by a legislative body, and reports the results of audits to and is accountable to a legislative body;

c. appointed by someone other than a legislative body, so long as the appointment is confirmed by a legislative body and removal from the position is subject to oversight or approval by a legislative body, and reports the results of audits to and is accountable to a legislative body; or

d. appointed by, accountable to, reports to, and can only be removed by a statutorily created governing body, the majority of whose members are independently elected or appointed and are outside the organization being audited.

3.30 In addition to the criteria in paragraphs 3.28 and 3.29, GAGAS recognizes that there may be other organizational structures under which external audit organizations in government entities could be considered to be independent. If appropriately designed and implemented, these structures provide safeguards that prevent the audited entity from interfering with the

audit organization's ability to perform the work and report the results impartially. For an external audit organization or one that reports both externally and internally to be considered independent under a structure different from the ones listed in paragraphs 3.28 and 3.29, the audit organization should have all of the following safeguards. In such situations, the audit organization should document how each of the following safeguards was satisfied and provide the documentation to those performing quality control monitoring and to the external peer reviewers to determine whether all the necessary safeguards are in place. The following safeguards may also be used to augment those listed in paragraphs 3.28 and 3.29:

a. statutory protections that prevent the audited entity from abolishing the audit organization;

b. statutory protections that require that if the head of the audit organization is removed from office, the head of the agency reports this fact and the reasons for the removal to the legislative body;

c. statutory protections that prevent the audited entity from interfering with the initiation, scope, timing, and completion of any audit;

d. statutory protections that prevent the audited entity from interfering with audit reporting, including the findings and conclusions or the manner, means, or timing of the audit organization's reports;

e. statutory protections that require the audit organization to report to a legislative body or other independent governing body on a recurring basis;

f. statutory protections that give the audit organization sole authority over the selection, retention, advancement, and dismissal of its staff; and

g. statutory access to records and documents related to the agency, program, or function being audited and access to government officials or other individuals as needed to conduct the audit.

Internal Auditor Independence

3.31 Certain entities employ auditors to work for entity management. These auditors may be subject to administrative direction from persons involved in the entity management process. Such audit organizations are internal audit functions and are encouraged to use the Institute of Internal Auditors (IIA) *International Standards for the Professional Practice of Internal Auditing* in conjunction with GAGAS. In accordance with GAGAS, internal auditors who work under the direction of the audited entity's management are considered independent for the purposes of reporting internally if the head of the audit organization meets all of the following criteria:

a. is accountable to the head or deputy head of the government entity or to those charged with governance;

b. reports the audit results both to the head or deputy head of the government entity and to those charged with governance;

c. is located organizationally outside the staff or line-management function of the unit under audit;

d. has access to those charged with governance; and

e. is sufficiently removed from political pressures to conduct audits and report findings, opinions, and conclusions objectively without fear of political reprisal.

3.32 When internal audit organizations perform audits of external parties such as auditing contractors or outside party agreements, and no impairments to independence exist, the audit organization can be

considered independent as an external audit organization of those external parties.

Provision of Nonaudit Services to Audited Entities

3.33 Auditors have traditionally provided a range of nonaudit services that are consistent with their skills and expertise to entities at which they perform audits. Providing such nonaudit services may create threats to an auditor's independence.

Requirements for Performing Nonaudit Services

3.34 Before an auditor agrees to provide a nonaudit service to an audited entity, the auditor should determine whether providing such a service would create a threat to independence, either by itself or in aggregate with other nonaudit services provided, with respect to any GAGAS audit it performs. A critical component of this determination is consideration of management's ability to effectively oversee the nonaudit service to be performed. The auditor should determine that the audited entity has designated an individual who possesses suitable skill, knowledge, or experience, and that the individual understands the services to be performed sufficiently to oversee them. The individual is not required to possess the expertise to perform or reperform the services. The auditor should document consideration of management's ability to effectively oversee nonaudit services to be performed.

3.35 If an auditor were to assume management responsibilities for an audited entity, the management participation threats created would be so significant that no safeguards could reduce them to an acceptable level. Management responsibilities involve leading and directing an entity, including making decisions regarding the acquisition, deployment and control of human, financial, physical, and intangible resources.

3.36 Whether an activity is a management responsibility depends on the facts and circumstances and auditors

exercise professional judgment in identifying these activities. Examples of activities that are considered management responsibilities and would therefore impair independence if performed for an audited entity include:

a. setting policies and strategic direction for the audited entity;

b. directing and accepting responsibility for the actions of the audited entity's employees in the performance of their routine, recurring activities;

c. having custody of an audited entity's assets;

d. reporting to those charged with governance on behalf of management;

e. deciding which of the auditor's or outside third party's recommendations to implement;

f. accepting responsibility for the management of an audited entity's project;

g. accepting responsibility for designing, implementing, or maintaining internal control;

h. providing services that are intended to be used as management's primary basis for making decisions that are significant to the subject matter of the audit;

i. developing an audited entity's performance measurement system when that system is material or significant to the subject matter of the audit; and

j. serving as a voting member of an audited entity's management committee or board of directors.

3.37 Auditors performing nonaudit services for entities for which they perform audits should obtain assurance that audited entity management performs the following functions in connection with the nonaudit services:

a. assumes all management responsibilities;

b. oversees the services, by designating an individual, preferably within senior management, who possess suitable skill, knowledge, or experience;[32]

c. evaluates the adequacy and results of the services performed; and

d. accepts responsibility for the results of the services.

3.38 In cases where the audited entity is unable or unwilling to assume these responsibilities (for example, the audited entity does not have an individual with suitable skill, knowledge, or experience to oversee the nonaudit services provided, or is unwilling to perform such functions due to lack of time or desire), the auditor's provision of these services would impair independence.

3.39 In connection with nonaudit services, auditors should establish and document their understanding with the audited entity's management or those charged with governance, as appropriate, regarding the following:

a. objectives of the nonaudit service;

b. services to be performed;

c. audited entity's acceptance of its responsibilities;

[32]See paragraph 3.34 for additional discussion of management's ability to effectively oversee the nonaudit service.

d. the auditor's responsibilities; and

e. any limitations of the nonaudit service.

3.40 Routine activities performed by auditors that relate directly to the performance of an audit, such as providing advice and responding to questions as part of an audit, are not considered nonaudit services under GAGAS. Such routine activities generally involve providing advice or assistance to the entity on an informal basis as part of an audit. Routine activities typically are insignificant in terms of time incurred or resources expended and generally do not result in a specific project or engagement or in the auditors producing a formal report or other formal work product. However, activities such as financial statement preparation, cash to accrual conversions, and reconciliations are considered nonaudit services under GAGAS, not routine activities related to the performance of an audit, and are evaluated using the conceptual framework as discussed in paragraph 3.46.

3.41 Routine activities directly related to an audit include the following:

a. providing advice to the audited entity on an accounting matter as an ancillary part of the overall financial audit;

b. researching and responding to the audited entity's technical questions on relevant tax laws as an ancillary part of providing tax services;

c. providing advice to the audited entity on routine business matters;

d. educating the audited entity on matters within the technical expertise of the auditors; and

e. providing information to the audited entity that is readily available to the auditors, such as best practices and benchmarking studies.

3.42 An auditor who previously performed nonaudit services for an entity that is a prospective subject of an audit should evaluate the impact of those nonaudit services on independence before accepting an audit. If the nonaudit services were performed in the period to be covered by the audit, the auditor should (1) determine if the nonaudit service is expressly prohibited by GAGAS and, if not, (2) determine whether a threat to independence exists and address any threats noted in accordance with the conceptual framework.

3.43 Nonaudit services provided by auditors can impact independence of mind and in appearance in periods subsequent to the period in which the nonaudit service was provided. For example, if auditors have designed and implemented an accounting and financial reporting system that is expected to be in place for many years, a threat to independence in appearance for future financial audits or attestation engagements performed by those auditors may exist in subsequent periods. For recurring audits, having another independent audit organization perform an audit of the areas affected by the nonaudit service may provide a safeguard that allows the audit organization that provided the nonaudit service to mitigate the threat to its independence. Auditors use professional judgment to determine whether the safeguards adequately mitigate the threats.

3.44 An auditor in a government entity may be required to perform a nonaudit service that could impair the auditor's independence with respect to a required audit. If the auditor cannot, as a consequence of constitutional or statutory requirements over which the auditor has no control, implement safeguards to reduce the resulting

threat to an acceptable level, or decline to perform or terminate a nonaudit service that is incompatible with audit responsibilities, the auditor should disclose the nature of the threat that could not be eliminated or reduced to an acceptable level and modify the GAGAS compliance statement accordingly.[33]

Consideration of Specific Nonaudit Services

3.45 By their nature, certain nonaudit services directly support the entity's operations and impair auditors' ability to maintain independence in mind and appearance. The nonaudit services discussed below are among those frequently requested of auditors working in a government environment. Some aspects of these services will impair an auditor's ability to perform audits for the entities for which the services are provided. The specific services indicated are not the only nonaudit services that would impair an auditor's independence.

3.46 Auditors may be able to provide nonaudit services in the broad areas indicated in paragraphs 3.49 through 3.58 without impairing independence if (1) the nonaudit services are not expressly prohibited, (2) the auditor has determined that the requirements for performing nonaudit services in paragraphs 3.34 through 3.44 have been met, and (3) any significant threats to independence have been eliminated or reduced to an acceptable level through the application of safeguards. Auditors should use the conceptual framework to evaluate independence given the facts and circumstances of individual services not specifically prohibited in this section.

3.47 For performance audits and agreed-upon procedures engagements, nonaudit services that are

[33]See paragraphs 2.24 and 2.25 for the discussion of modifications to the GAGAS compliance statement.

otherwise prohibited by GAGAS may be provided when such services do not relate to the specific subject matter of the engagement.

3.48 For financial statement audits and examination or review engagements, a nonaudit service performed during the period covered by the financial statements may not impair an auditor's independence with respect to those financial statements provided that the following conditions exist:

a. the nonaudit service was provided prior to the period of professional engagement;

b. the nonaudit service related only to periods prior to the period covered by the financial statements; and

c. the financial statements for the period to which the nonaudit service did relate were audited by another auditor (or in the case of an examination or review engagement, examined, reviewed, or audited by another auditor as appropriate).

Management Responsibilities

3.49 If performed on behalf of an audited entity by the entity's auditor, management responsibilities such as those listed in paragraph 3.36 would create management participation threats so significant that no safeguards could reduce them to an acceptable level. Consequently the auditor's independence would be impaired with respect to that entity.

Preparing Accounting Records and Financial Statements

3.50 Some services involving preparation of accounting records always impair an auditor's independence with respect to an audited entity. These services include:

a. determining or changing journal entries, account codes or classifications for transactions, or other accounting records for the entity without obtaining management's approval;

b. authorizing or approving the entity's transactions; and

c. preparing or making changes to source documents without management approval. Source documents include those providing evidence that transactions have occurred (for example, purchase orders, payroll time records, customer orders, and contracts). Such records also include an audited entity's general ledger and subsidiary records or equivalent.

3.51 Management is responsible for the preparation and fair presentation of the financial statements in accordance with the applicable financial reporting framework, even if the auditor assisted in drafting those financial statements. Consequently, an auditor's acceptance of responsibility for the preparation and fair presentation of financial statements that the auditor will subsequently audit would impair the auditor's independence.

3.52 Services related to preparing accounting records and financial statements that an auditor may be able to provide to an audited entity if the conditions in paragraph 3.46 are met include:

a. recording transactions for which management has determined or approved the appropriate account classification, or posting coded transactions to an audited entity's general ledger;

b. preparing financial statements based on information in the trial balance;

c. posting entries that have been approved by an audited entity's management to the entity's trial balance;

d. preparing account reconciliations that identify reconciling items for the audited entity management's evaluation; and

e. proposing standard, adjusting, or correcting journal entries or other changes affecting the financial statements to an audited entity's management provided management reviews and accepts the entries and the auditor is satisfied that management understands the nature of the proposed entries and the impact the entries have on the financial statements.

Internal Audit Assistance Services Provided by External Auditors

3.53 Internal audit assistance services involve assisting an entity in the performance of its internal audit activities. Certain internal audit assistance activities always impair an external auditor's independence with respect to an audited entity. These activities include:

a. setting internal audit policies or the strategic direction of internal audit activities;

b. performing procedures that form part of the internal control, such as reviewing and approving changes to employee data access privileges; and

c. determining the scope of the internal audit function and resulting work.

Internal Control Monitoring as a Nonaudit Service

3.54 Accepting responsibility for designing, implementing or maintaining internal control includes accepting responsibility for designing, implementing, or maintaining monitoring procedures.[34] Monitoring involves the use of either ongoing monitoring procedures or separate evaluations to gather and analyze persuasive information supporting conclusions about the effectiveness of the internal control system.

[34]See A.03 and A.04 for a discussion of internal control.

Ongoing monitoring procedures performed on behalf of management are built into the routine, recurring operating activities of an organization. Therefore, the management participation threat created if an auditor performs or supervises ongoing monitoring procedures is so significant that no safeguards could reduce the threat to an acceptable level.

3.55 Separate evaluations are sometimes performed as nonaudit services by individuals who are not directly involved in the operation of the controls being monitored. As such, it is possible for an auditor to provide an objective analysis of control effectiveness by performing separate evaluations without creating a management participation threat that would impair independence. However, in all such cases, the significance of the threat created by performing separate evaluations should be evaluated and safeguards applied when necessary to eliminate the threat or reduce it to an acceptable level. Auditors should assess the frequency of the separate evaluations as well as the scope or extent of the controls (in relation to the scope of the audit performed) being tested when evaluating the significance of the threat. An evaluation prepared as a nonaudit service is not a substitute for audit procedures in a GAGAS audit.

Information Technology Systems Services

3.56 Services related to information technology (IT) systems include the design or implementation of hardware or software systems. The systems may aggregate source data, form part of the internal control over the subject matter of the audit, or generate information that affects the subject matter of the audit. IT services that would impair independence if provided by an audit organization to an audited entity include:

a. designing or developing a financial or other IT system that will play a significant role in the management of an

area of operations that is or will be the subject matter of an audit;

b. providing services that entail making other than insignificant modifications to the source code underlying such a system; and

c. operating or supervising the operation of such a system.

Valuation Services

3.57 A valuation comprises the making of assumptions with regard to future developments, the application of appropriate methodologies and techniques, and the combination of both to compute a certain value, or range of values, for an asset, a liability, or an entity as a whole. If an audit organization provides valuation services to an audited entity and the valuations would have a material effect, separately or in the aggregate, on the financial statements or other information on which it is reporting, and the valuation involves a significant degree of subjectivity, the audit organization's independence would be impaired.

Other Nonaudit Services

3.58 Provision of certain other nonaudit services always impairs an external auditor's independence with respect to an audited entity. These activities include:

a. Non tax disbursement – prohibited nonaudit services

(1) Accepting responsibility to authorize payment of audited entity funds, electronically or otherwise.

(2) Accepting responsibility for signing or cosigning audited entity checks, even if only in emergency situations.

(3) Maintaining an audited entity's bank account or otherwise having custody of an audited entity's funds or

making credit or banking decisions for the audited entity.

(4) Approving vendor invoices for payment.

b. Benefit plan administration – prohibited nonaudit services

(1) Making policy decisions on behalf of audited entity management.

(2) When dealing with plan participants, interpreting the plan document on behalf of management without first obtaining management's concurrence.

(3) Making disbursements on behalf of the plan.

(4) Having custody of a plan's assets.

(5) Serving a plan as a fiduciary as defined by the Employee Retirement Income Security Act (ERISA).

c. Investment—advisory or management—prohibited nonaudit services

(1) Making investment decisions on behalf of audited entity management or otherwise having discretionary authority over an audited entity's investments.

(2) Executing a transaction to buy or sell an audited entity's investment.

(3) Having custody of an audited entity's assets, such as taking temporary possession of securities purchased by an audited entity.

d. Corporate finance—consulting or advisory – prohibited nonaudit services

(1) Committing the audited entity to the terms of a transaction or consummating a transaction on behalf of the audited entity.

(2) Acting as a promoter, underwriter, broker-dealer, or guarantor of audited entity securities, or distributor of private placement memoranda or offering documents.

(3) Maintaining custody of an audited entity's securities.

e. Executive or employee personnel matters – prohibited nonaudit services

(1) Committing the audited entity to employee compensation or benefit arrangements.

(2) Hiring or terminating audited entity employees.

f. Business risk consulting – prohibited nonaudit services

(1) Making or approving business risk decisions.

(2) Presenting business risk considerations to those charged with governance or others on behalf of management.

Documentation

3.59 Documentation of independence considerations provides evidence of the auditor's judgments in forming conclusions regarding compliance with independence requirements. GAGAS contains specific requirements for documentation related to independence which may be in addition to the documentation that auditors have previously maintained. While insufficient documentation of an auditor's compliance with the independence standard does not impair independence, appropriate documentation is required under the GAGAS quality

control and assurance requirements.[35] The independence standard includes the following documentation requirements:

a. document threats to independence that require the application of safeguards, along with safeguards applied, in accordance with the conceptual framework for independence as required by paragraph 3.24;

b. document the safeguards required by paragraph 3.30 if an audit organization is structurally located within a government entity and is considered independent based on those safeguards;

c. document consideration of audited entity management's ability to effectively oversee a nonaudit service to be provided by the auditor as indicated in paragraph 3.34; and

d. document the auditor's understanding with an audited entity for which the auditor will perform a nonaudit service as indicated in paragraph 3.39.

Professional Judgment

3.60 Auditors must use professional judgment in planning and performing audits and in reporting the results.

3.61 Professional judgment includes exercising reasonable care and professional skepticism. Reasonable care includes acting diligently in accordance with applicable professional standards and ethical principles. Professional skepticism is an attitude that includes a questioning mind and a critical

[35]See paragraph 3.84 for additional discussion of documenting compliance with quality control policies and procedures and paragraph 3.88 for additional discussion of policies and procedures on independence, legal, and ethical requirements.

assessment of evidence. Professional skepticism includes a mindset in which auditors assume neither that management is dishonest nor of unquestioned honesty.

3.62 Using the auditors' professional knowledge, skills, and experience to diligently perform, in good faith and with integrity, the gathering of information and the objective evaluation of the sufficiency and appropriateness of evidence is a critical component of audits. Professional judgment and competence are interrelated because judgments made are dependent upon the auditors' competence.

3.63 Professional judgment represents the application of the collective knowledge, skills, and experiences of all the personnel involved with an audit, as well as the professional judgment of individual auditors. In addition to personnel directly involved in the audit, professional judgment may involve collaboration with other stakeholders, external specialists, and management in the audit organization.

3.64 Using professional judgment is important to auditors in carrying out all aspects of their professional responsibilities, including following the independence standards and related conceptual framework; maintaining objectivity and credibility; assigning competent staff to the audit; defining the scope of work; evaluating, documenting, and reporting the results of the work; and maintaining appropriate quality control over the audit process.

3.65 Using professional judgment is important to auditors in applying the conceptual framework to determine independence in a given situation. This includes the consideration of any threats to the auditor's independence and related safeguards which may mitigate the identified threats. Auditors use professional

judgment in identifying and evaluating any threats to independence, including threats to the appearance of independence.[36]

3.66 Using professional judgment is important to auditors in determining the required level of understanding of the audit subject matter and related circumstances. This includes consideration about whether the audit team's collective experience, training, knowledge, skills, abilities, and overall understanding are sufficient to assess the risks that the subject matter of the audit may contain a significant inaccuracy or could be misinterpreted.

3.67 An auditor's consideration of the risk level of each audit, including the risk of arriving at improper conclusions, is also important. Within the context of audit risk, exercising professional judgment in determining the sufficiency and appropriateness of evidence to be used to support the findings and conclusions based on the audit objectives and any recommendations reported is an integral part of the audit process.

3.68 While this standard places responsibility on each auditor and audit organization to exercise professional judgment in planning and performing an audit, it does not imply unlimited responsibility, nor does it imply infallibility on the part of either the individual auditor or the audit organization. Absolute assurance is not attainable due to factors such as the nature of evidence and characteristics of fraud. Professional judgment does not mean eliminating all possible limitations or weaknesses associated with a specific audit, but rather identifying, assessing, mitigating, and explaining them.

[36]See paragraph 3.03 for a description of independence in appearance.

Competence

3.69 The staff assigned to perform the audit must collectively possess adequate professional competence needed to address the audit objectives and perform the work in accordance with GAGAS.

3.70 The audit organization's management should assess skill needs to consider whether its workforce has the essential skills that match those necessary to perform the particular audit. Accordingly, audit organizations should have a process for recruitment, hiring, continuous development, assignment, and evaluation of staff to maintain a competent workforce. The nature, extent, and formality of the process will depend on various factors such as the size of the audit organization, its structure, and its work.

3.71 Competence is derived from a blending of education and experience. Competencies are not necessarily measured by years of auditing experience because such a quantitative measurement may not accurately reflect the kinds of experiences gained by an auditor in any given time period. Maintaining competence through a commitment to learning and development throughout an auditor's professional life is an important element for auditors. Competence enables an auditor to make sound professional judgments.

Technical Knowledge

3.72 The staff assigned to conduct an audit in accordance with GAGAS should collectively possess the technical knowledge, skills, and experience necessary to be competent for the type of work being performed before beginning work on that audit. The staff assigned to a GAGAS audit should collectively possess

a. knowledge of GAGAS applicable to the type of work they are assigned and the education, skills, and

experience to apply this knowledge to the work being performed;

b. general knowledge of the environment in which the audited entity operates and the subject matter;

c. skills to communicate clearly and effectively, both orally and in writing; and

d. skills appropriate for the work being performed; for example, skills in

(1) statistical or nonstatistical sampling if the work involves use of sampling;

(2) information technology if the work involves review of information systems;

(3) engineering if the work involves review of complex engineering data;

(4) specialized audit methodologies or analytical techniques, such as the use of complex survey instruments, actuarial-based estimates, or statistical analysis tests, as applicable; or

(5) specialized knowledge in subject matters, such as scientific, medical, environmental, educational, or any other specialized subject matter, if the work calls for such expertise.

Additional Qualifications for Financial Audits and Attestation Engagements

3.73 Auditors performing financial audits should be knowledgeable in U.S. generally accepted accounting principles (GAAP), or with the applicable financial reporting framework being used, and the American Institute of Certified Public Accountants' (AICPA)

Statements on Auditing Standards (SAS)[37] and they should be competent in applying these SASs to the audit work.

3.74 Similarly, auditors performing attestation engagements should be knowledgeable in the AICPA general attestation standard related to criteria, the AICPA attestation standards for field work and reporting, and the related Statements on Standards for Attestation Engagements (SSAE),[38] and they should be competent in applying these standards and SSAE to the attestation work.[39]

3.75 Auditors engaged to perform financial audits or attestation engagements should be licensed certified public accountants, persons working for a licensed certified public accounting firm or for a government auditing organization, or licensed accountants in states that have multi-class licensing systems that recognize licensed accountants other than certified public accountants.

Continuing Professional Education

3.76 Auditors performing work in accordance with GAGAS, including planning, directing, performing audit procedures, or reporting on an audit conducted in accordance with GAGAS, should maintain their professional competence through continuing professional education (CPE). Therefore, each auditor performing work in accordance with GAGAS should complete, every 2 years, at least 24 hours of CPE that

[37]See paragraph 2.08 and 4.01 for discussion of the AICPA standards incorporated into GAGAS for financial audits.

[38]See paragraphs 2.09 and 5.01 for discussion of the AICPA standards incorporated into GAGAS for attestation engagements.

[39]See paragraphs 2.19 through 2.22 for additional information on the relationship between GAGAS and other professional standards for financial audits and attestation engagements.

directly relates to government auditing, the government environment, or the specific or unique environment in which the audited entity operates. Auditors who are involved in any amount of planning, directing, or reporting on GAGAS audits and auditors who are not involved in those activities but charge 20 percent or more of their time annually to GAGAS audits should also obtain at least an additional 56 hours of CPE (for a total of 80 hours of CPE in every 2-year period) that enhances the auditor's professional proficiency to perform audits. Auditors required to take the total 80 hours of CPE should complete at least 20 hours of CPE in each year of the 2-year periods. Auditors hired or initially assigned to GAGAS audits after the beginning of an audit organization's 2-year CPE period should complete a prorated number of CPE hours.

3.77 CPE programs are structured educational activities with learning objectives designed to maintain or enhance participants' knowledge, skills, and abilities in areas applicable to performing audits. Determining what subjects are appropriate for individual auditors to satisfy both the 80-hour and the 24-hour requirements is a matter of professional judgment to be exercised by auditors in consultation with appropriate officials in their audit organizations. Among the considerations in exercising that judgment are the auditors' experience, the responsibilities they assume in performing GAGAS audits, and the operating environment of the audited entity.

3.78 Meeting CPE requirements is primarily the responsibility of individual auditors. The audit organization should have quality control procedures to help ensure that auditors meet the continuing education requirements, including documentation of the CPE completed. The Government Accountability Office (GAO) has developed guidance pertaining to CPE requirements to assist auditors and audit organizations

in exercising professional judgment in complying with the CPE requirements.[40]

CPE Requirements for Specialists

3.79 The audit team should determine that external specialists assisting in performing a GAGAS audit are qualified and competent in their areas of specialization; however, external specialists are not required to meet the GAGAS CPE requirements.

3.80 The audit team should determine that internal specialists consulting on a GAGAS audit who are not involved in directing, performing audit procedures, or reporting on a GAGAS audit, are qualified and competent in their areas of specialization; however, these internal specialists are not required to meet the GAGAS CPE requirements.

3.81 The audit team should determine that internal specialists, who are performing work in accordance with GAGAS as part of the audit team, including directing, performing audit procedures, or reporting on a GAGAS audit, comply with GAGAS, including the CPE requirements.[41] The GAGAS CPE requirements become effective for internal specialists when an audit organization first assigns an internal specialist to an audit. Because internal specialists apply specialized knowledge in government audits, training in their areas of specialization qualify under the requirement for 24 hours of CPE that directly relates to government auditing, the government environment, or the specific or unique environment in which the audited entity operates.

[40]*Government Auditing Standards: Guidance on GAGAS Requirements for Continuing Professional Education*, GAO-05-568G (Washington, D.C.: April 2005), http://www.gao.gov/yellowbook.

[41]See paragraphs 3.76 through 3.81 for discussion of the CPE requirements.

Quality Control and Assurance

3.82 Each audit organization performing audits in accordance with GAGAS must:

a. establish and maintain a system of quality control that is designed to provide the audit organization with reasonable assurance that the organization and its personnel comply with professional standards and applicable legal and regulatory requirements,[42] and

b. have an external peer review performed by reviewers independent of the audit organization being reviewed at least once every 3 years.

System of Quality Control

3.83 An audit organization's system of quality control encompasses the audit organization's leadership, emphasis on performing high quality work, and the organization's policies and procedures designed to provide reasonable assurance of complying with professional standards and applicable legal and regulatory requirements. The nature, extent, and formality of an audit organization's quality control system will vary based on the audit organization's circumstances, such as the audit organization's size, number of offices and geographic dispersion, knowledge and experience of its personnel, nature and complexity of its audit work, and cost-benefit considerations.

3.84 Each audit organization should document its quality control policies and procedures and communicate those policies and procedures to its personnel. The audit organization should document compliance with its quality control policies and procedures and maintain such documentation for a

[42]See paragraph A3.10 for additional discussion of the system of quality control.

period of time sufficient to enable those performing monitoring procedures and peer reviews to evaluate the extent of the audit organization's compliance with its quality control policies and procedures. The form and content of such documentation are a matter of professional judgment and will vary based on the audit organization's circumstances.

3.85 An audit organization should establish policies and procedures in its system of quality control that collectively address

a. leadership responsibilities for quality within the audit organization,

b. independence, legal, and ethical requirements,

c. initiation, acceptance, and continuance of audits,

d. human resources,

e. audit performance, documentation, and reporting, and

f. monitoring of quality.

Leadership Responsibilities for Quality within the Audit Organization

3.86 Audit organizations should establish policies and procedures on leadership responsibilities for quality within the audit organization that include the designation of responsibility for quality of audits performed in accordance with GAGAS and communication of policies and procedures relating to quality. Appropriate policies and communications encourage a culture that recognizes that quality is essential in performing GAGAS audits and that leadership of the audit organization is ultimately responsible for the system of quality control.

3.87 The audit organization should establish policies and procedures designed to provide it with reasonable assurance that those assigned operational responsibility for the audit organization's system of quality control have sufficient and appropriate experience and ability, and the necessary authority, to assume that responsibility.

Independence, Legal, and Ethical Requirements

3.88 Audit organizations should establish policies and procedures on independence, legal, and ethical requirements that are designed to provide reasonable assurance that the audit organization and its personnel maintain independence and comply with applicable legal and ethical requirements.[43] Such policies and procedures assist the audit organization to

a. communicate its independence requirements to its staff, and

b. identify and evaluate circumstances and relationships that create threats to independence, and take appropriate action to eliminate those threats or reduce them to an acceptable level by applying safeguards, or, if considered appropriate, withdraw from the audit where withdrawal is not prohibited by law or regulation.

Initiation, Acceptance, and Continuance of Audits

3.89 Audit organizations should establish policies and procedures for the initiation, acceptance, and continuance of audits that are designed to provide reasonable assurance that the audit organization will undertake audits only if it can comply with professional standards, legal requirements, and ethical principles

[43]See paragraphs 3.02 through 3.59 for GAGAS independence requirements. See chapter 1 for GAGAS ethical principles.

and is acting within the legal mandate or authority of the audit organization.[44]

Human Resources

3.90 Audit organizations should establish policies and procedures for human resources that are designed to provide the audit organization with reasonable assurance that it has personnel with the capabilities and competence to perform its audits in accordance with professional standards and legal and regulatory requirements.[45]

Audit Performance, Documentation, and Reporting

3.91 Audit organizations should establish policies and procedures for audit performance, documentation, and reporting that are designed to provide the audit organization with reasonable assurance that audits are performed and reports are issued in accordance with professional standards and legal and regulatory requirements.[46]

3.92 When performing GAGAS audits, audit organizations should have policies and procedures for the safe custody and retention of audit documentation for a time sufficient to satisfy legal, regulatory, and administrative requirements for records retention. Whether audit documentation is in paper, electronic, or other media, the integrity, accessibility, and retrievability of the underlying information could be compromised if the documentation is altered, added to, or deleted without the auditors' knowledge, or if the documentation is lost or damaged. For audit documentation that is retained electronically, the audit organization should

[44]See paragraph A3.10a for discussion of initiation of audits by government audit organizations.

[45]See paragraphs 3.69 through 3.81 for requirements related to professional competence.

[46]For financial audits, chapters 2 through 4 apply; for attestation engagements, chapters 2, 3 and 5 apply; for performance audits, chapters 2, 3, 6, and 7 apply.

establish effective information systems controls concerning accessing and updating the audit documentation.

Monitoring of Quality

3.93 Audit organizations should establish policies and procedures for monitoring of quality in the audit organization.[47] Monitoring of quality is an ongoing, periodic assessment of work completed on audits designed to provide management of the audit organization with reasonable assurance that the policies and procedures related to the system of quality control are suitably designed and operating effectively in practice. The purpose of monitoring compliance with quality control policies and procedures is to provide an evaluation of whether the:

a. professional standards and legal and regulatory requirements have been followed,

b. quality control system has been appropriately designed, and

c. quality control policies and procedures are operating effectively and complied with in practice.

3.94 Monitoring procedures will vary based on the audit organization's facts and circumstances. The audit organization should perform monitoring procedures that enable it to assess compliance with applicable professional standards and quality control policies and procedures for GAGAS audits. Individuals performing monitoring should collectively have sufficient expertise and authority for this role.

3.95 The audit organization should analyze and summarize the results of its monitoring process at least

[47]See paragraph A3.10c for additional discussion of monitoring.

annually, with identification of any systemic or repetitive issues needing improvement, along with recommendations for corrective action. The audit organization should communicate to appropriate personnel any deficiencies noted during the monitoring process and make recommendations for appropriate remedial action.

External Peer Review

3.96 The audit organization should obtain an external peer review at least once every 3 years that is sufficient in scope to provide a reasonable basis for determining whether, for the period under review, the reviewed audit organization's system of quality control was suitably designed and whether the audit organization is complying with its quality control system in order to provide the audit organization with reasonable assurance of conforming with applicable professional standards.

3.97 The first peer review for an audit organization not already subject to a peer review requirement covers a review period ending no later than 3 years from the date an audit organization begins its first audit in accordance with GAGAS. The period under review generally covers 1 year, although peer review programs may choose a longer review period. Generally, the deadlines for peer review reports are established by the entity that administers the peer review program. Extensions of the deadlines for submitting the peer review report exceeding 3 months beyond the due date are granted by the entity that administers the peer review program and GAO.

3.98 The peer review team should include the following elements in the scope of the peer review:

a. review of the audit organization's quality control policies and procedures;

b. consideration of the adequacy and results of the audit organization's internal monitoring procedures;

c. review of selected auditors' reports and related documentation;

d. review of other documents necessary for assessing compliance with standards, for example, independence documentation, CPE records, and relevant human resource management files; and

e. interviews with a selection of the reviewed audit organization's professional staff at various levels to assess their understanding of and compliance with relevant quality control policies and procedures.

3.99 The peer review team should perform an assessment of peer review risk to help determine the number and types of audits to select for review.[48] Based on the risk assessment, the team should use one or a combination of the following approaches to select individual audits for review with greater emphasis on those audits with higher assessed levels of peer review risk: (1) select GAGAS audits that provide a reasonable cross-section of the GAGAS audits performed by the reviewed audit organization; or (2) select audits that provide a reasonable cross-section from all types of work subject to the reviewed audit organization's quality control system, including one or more audits performed in accordance with GAGAS. The second approach is generally applicable to audit organizations that perform only a small number of GAGAS audits in relation to other types of audits. In these cases, one or more GAGAS audits may represent more than what would be

[48]See paragraph A3.11 for examples of factors to consider in assessing peer review risk.

selected when looking at a cross-section of the audit organization's work as a whole.

3.100 The peer review team should prepare one or more written reports communicating the results of the peer review, including the following:

a. a description of the scope of the peer review, including any limitations;

b. an opinion on whether the system of quality control of the reviewed audit organization's audit practices was adequately designed and complied with during the period reviewed to provide the audit organization with reasonable assurance of conforming with applicable professional standards;

c. specification of the professional standards to which the reviewed audit organization is being held; and

d. reference to a separate written communication, if issued under the peer review program.

3.101 The peer review team uses professional judgment in deciding the type of peer review report. The following are the types of peer review reports.

a. Peer Review Rating of Pass: A conclusion that the audit organization's system of quality control has been suitably designed and complied with to provide the audit organization with reasonable assurance of performing and reporting in conformity with applicable professional standards in all material respects.

b. Peer Review Rating of Pass with Deficiencies: A conclusion that the audit organization's system of quality control has been suitably designed and complied with to provide the audit organization with reasonable assurance of performing and reporting in conformity

with applicable professional standards in all material respects with the exception of a certain deficiency or deficiencies that are described in the report.

c. Peer Review Rating of Fail: A conclusion, based on the significant deficiencies that are described in the report, that the audit organization's system of quality control is not suitably designed to provide the audit organization with reasonable assurance of performing and reporting in conformity with applicable professional standards in all material respects, or the audit organization has not complied with its system of quality control to provide the audit organization with reasonable assurance of performing and reporting in conformity with applicable professional standards in all material respects.

3.102 When the scope of the review is limited by conditions that preclude the application of one or more peer review procedures considered necessary in the circumstances and the peer reviewer cannot accomplish the objectives of those procedures through alternative procedures, the types of reports described in paragraphs 3.101 a-c are modified by including statements in the report's scope paragraph, body and opinion paragraph. These statements describe the relationship of the excluded audit(s) or functional area(s) to the reviewed organization's full scope of practice and system of quality control and the effects of the exclusion on the scope and results of the review.

3.103 For any deficiencies or significant deficiencies included in the peer review report or other written communication, the peer review team should include, either in the peer review report or in a separate written communication, a detailed description of the findings, conclusions, and recommendations related to the deficiencies or significant deficiencies.

3.104 The peer review team should meet the following criteria:

a. The review team collectively has current knowledge of GAGAS and government auditing.

b. The organization conducting the peer review and individual review team members are independent (as defined in GAGAS)[49] of the audit organization being reviewed, its staff, and the audits selected for the peer review.

c. The review team collectively has sufficient knowledge of how to perform a peer review. Such knowledge may be obtained from on-the-job training, training courses, or a combination of both. Having personnel on the peer review team with prior experience on a peer review or internal inspection team is desirable.

3.105 An external audit organization[50] should make its most recent peer review report publicly available.[51] For example, an audit organization may satisfy this requirement by posting the peer review report on a publicly available web site or to a publicly available file designed for public transparency of peer review results. Alternatively, if neither of these options is available to the audit organization, then it should use the same transparency mechanism it uses to make other information public. The audit organization should provide the peer review report to others upon request. If a separate communication detailing findings, conclusions, and recommendations is issued, public

[49]See paragraphs 3.02 through 3.32 for discussion of independence.

[50]See paragraph 1.07b for the definition of "audit organizations" and paragraph 1.08 for discussion of external audit organizations.

[51]See paragraph A3.12 for additional discussion of peer review report transparency.

availability of that communication is not required. Internal audit organizations that report internally to management and those charged with governance should provide a copy of the peer review report to those charged with governance.

3.106 Information in peer review reports may be relevant to decisions on procuring audits. Therefore, audit organizations seeking to enter into a contract to perform an audit in accordance with GAGAS should provide the following to the party contracting for such services when requested:

a. the audit organization's most recent peer review report, and

b. any subsequent peer review reports received during the period of the contract.

3.107 Auditors who are using another audit organization's work should request a copy of the audit organization's latest peer review report and any other written communication issued, and the audit organization should provide these documents when requested.[52]

[52]See paragraphs 6.40 through 6.44 for additional discussion on using the work of other auditors.

Standards for Financial Audits

Introduction

4.01 This chapter contains requirements, guidance, and considerations for performing and reporting on financial audits conducted in accordance with generally accepted government auditing standards (GAGAS). GAGAS incorporates by reference the American Institute of Certified Public Accountants (AICPA) Statements on Auditing Standards (SAS), as discussed in paragraph 2.08.[53] All sections of the SASs are incorporated, including the introduction, objectives, definitions, requirements, and application and other explanatory material. Auditors performing financial audits in accordance with GAGAS should comply with the incorporated SASs and the additional requirements in this chapter. The requirements and guidance contained in chapters 1 through 3 also apply to financial audits performed in accordance with GAGAS.

Additional GAGAS Requirements for Performing Financial Audits

4.02 GAGAS establishes requirements for performing financial audits in addition to the requirements contained in the AICPA standards. Auditors should comply with these additional requirements, along with the incorporated SASs, when citing GAGAS in their reports. The additional requirements for performing financial audits relate to:

a. auditor communication;

b. previous audits and attestation engagements;

[53]See the AICPA *Codification of Statements on Auditing Standards* and paragraph 2.20 for additional discussion on the relationship between GAGAS and other professional standards. References to the AICPA *Codification of Statements on Auditing Standards* use an "AU-C" identifier to refer to the clarified SASs instead of an "AU" identifier. "AU-C" is a temporary identifier to avoid confusion with references to existing "AU" sections, which remain effective through 2013. The "AU-C" identifier will revert to "AU" in 2014 AICPA *Codification of Statements on Auditing Standards*, by which time the clarified SASs become fully effective for all engagements.

c. fraud, noncompliance with provisions of laws, regulations, contracts, and grant agreements, and abuse;

d. developing elements of a finding; and

e. audit documentation.[54]

Auditor Communication

4.03 In addition to the AICPA requirements for auditor communication,[55] when performing a GAGAS financial audit, auditors should communicate pertinent information that in the auditors' professional judgment needs to be communicated to individuals contracting for or requesting the audit, and to cognizant legislative committees when auditors perform the audit pursuant to a law or regulation, or they conduct the work for the legislative committee that has oversight of the audited entity. This requirement does not apply if the law or regulation requiring an audit of the financial statements does not specifically identify the entities to be audited, such as audits required by the Single Audit Act Amendments of 1996.

4.04 In those situations where there is not a single individual or group that both oversees the strategic direction of the audited entity and the fulfillment of its accountability obligations or in other situations where the identity of those charged with governance is not clearly evident, auditors should document the process followed and conclusions reached for identifying the appropriate individuals to receive the required auditor communications.

[54]See paragraphs 4.03 through 4.16 for additional discussion of paragraph 4.02 a-e.

[55]See AICPA AU-C Section 260, *The Auditor's Communication With Those Charged With Governance.*

Previous Audits and Attestation Engagements

4.05 When performing a GAGAS audit, auditors should evaluate whether the audited entity has taken appropriate corrective action to address findings and recommendations from previous engagements that could have a material effect on the financial statements or other financial data significant to the audit objectives. When planning the audit, auditors should ask management of the audited entity to identify previous audits, attestation engagements, and other studies that directly relate to the objectives of the audit, including whether related recommendations have been implemented. Auditors should use this information in assessing risk and determining the nature, timing, and extent of current audit work, including determining the extent to which testing the implementation of the corrective actions is applicable to the current audit objectives.

Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

4.06 In addition to the AICPA requirements concerning fraud[56] and noncompliance with provisions of laws and regulations,[57] when performing a GAGAS financial audit, auditors should extend the AICPA requirements pertaining to the auditors' responsibilities for laws and regulations to also apply to consideration of compliance with provisions of contracts or grant agreements.

4.07 Abuse involves behavior that is deficient or improper when compared with behavior that a prudent person would consider reasonable and necessary business practice given the facts and circumstances. Abuse also includes misuse of authority or position for personal financial interests or those of an immediate or

[56]See AICPA AU-C Section 240, *Consideration of Fraud in a Financial Statement Audit*.

[57]See AICPA AU-C Section 250, *Consideration of Laws and Regulations in an Audit of Financial Statements.*

close family member or business associate.[58] Abuse does not necessarily involve fraud, or noncompliance with provisions of laws, regulations, contracts, or grant agreements.

4.08 Because the determination of abuse is subjective, auditors are not required to detect abuse in financial audits. However, as part of a GAGAS audit, if auditors become aware of abuse that could be quantitatively or qualitatively material to the financial statements or other financial data significant to the audit objectives, auditors should apply audit procedures specifically directed to ascertain the potential effect on the financial statements or other financial data significant to the audit objectives. After performing additional work, auditors may discover that the abuse represents potential fraud or noncompliance with provisions of laws, regulations, contracts, or grant agreements.

4.09 Avoiding interference with investigations or legal proceedings is important in pursuing indications of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse. Laws, regulations, or policies may require auditors to report indications of certain types of fraud, noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse to law enforcement or investigatory authorities before performing additional audit procedures. When investigations or legal proceedings are initiated or in process, auditors should evaluate the impact on the current audit. In some cases, it may be appropriate for the auditors to work with investigators or legal authorities, or withdraw from or defer further work on the audit engagement or a portion of the engagement to

[58]See paragraph A.08 for additional examples of abuse.

avoid interfering with an ongoing investigation or legal proceeding.

Developing Elements of a Finding

4.10 In a financial audit, findings may involve deficiencies in internal control; noncompliance with provisions of laws, regulations, contracts, or grant agreements; fraud; or abuse. As part of a GAGAS audit, when auditors identify findings, auditors should plan and perform procedures to develop the elements of the findings that are relevant and necessary to achieve the audit objectives. The elements of a finding are discussed in paragraphs 4.11 through 4.14 below.

4.11 Criteria: The laws, regulations, contracts, grant agreements, standards, measures, expected performance, defined business practices, and benchmarks against which performance is compared or evaluated. Criteria identify the required or desired state or expectation with respect to the program or operation. Criteria provide a context for evaluating evidence and understanding the findings.

4.12 Condition: Condition is a situation that exists. The condition is determined and documented during the audit.

4.13 Cause: The cause identifies the reason or explanation for the condition or the factor or factors responsible for the difference between the situation that exists (condition) and the required or desired state (criteria), which may also serve as a basis for recommendations for corrective actions. Common factors include poorly designed policies, procedures, or criteria; inconsistent, incomplete, or incorrect implementation; or factors beyond the control of program management. Auditors may assess whether the evidence provides a reasonable and convincing argument for why the stated cause is the key factor or

factors contributing to the difference between the condition and the criteria.

4.14 Effect or potential effect: The effect is a clear, logical link to establish the impact or potential impact of the difference between the situation that exists (condition) and the required or desired state (criteria). The effect or potential effect identifies the outcomes or consequences of the condition. When the audit objectives include identifying the actual or potential consequences of a condition that varies (either positively or negatively) from the criteria identified in the audit, "effect" is a measure of those consequences. Effect or potential effect may be used to demonstrate the need for corrective action in response to identified problems or relevant risks.

Audit Documentation

4.15 In addition to the AICPA requirements for audit documentation,[59] auditors should comply with the following additional requirements when performing a GAGAS financial audit.[60]

a. Document supervisory review, before the report release date, of the evidence that supports the findings, conclusions, and recommendations contained in the auditors' report.

b. Document any departures from the GAGAS requirements and the impact on the audit and on the auditors' conclusions when the audit is not in compliance with applicable GAGAS requirements due to law, regulation, scope limitations, restrictions on access to records, or other issues impacting the audit.

[59]See AICPA AU-C Section 230, *Audit Documentation.*

[60]See paragraphs 4.04, 4.06, 4.26, and 4.45 for additional documentation requirements regarding financial audits.

This applies to departures from unconditional requirements and presumptively mandatory requirements when alternative procedures performed in the circumstances were not sufficient to achieve the objectives of the requirements.[61]

4.16 When performing GAGAS financial audits and subject to applicable provisions of laws and regulations, auditors should make appropriate individuals, as well as audit documentation, available upon request and in a timely manner to other auditors or reviewers. Underlying GAGAS audits is the premise that audit organizations in federal, state, and local governments and public accounting firms engaged to perform a financial audit in accordance with GAGAS cooperate in auditing programs of common interest so that auditors may use others' work and avoid duplication of efforts. The use of auditors' work by other auditors may be facilitated by contractual arrangements for GAGAS audits that provide for full and timely access to appropriate individuals, as well as audit documentation.

Additional GAGAS Requirements for Reporting on Financial Audits

4.17 In addition to the AICPA requirements for reporting,[62] auditors should comply with the following additional requirements when citing GAGAS in their reports. The additional requirements relate to

a. reporting auditors' compliance with GAGAS;

[61]See paragraphs 2.24 and 2.25 for additional requirements on citing compliance with GAGAS.

[62]See AICPA AU-C Sections 700 *Forming an Opinion and Reporting on Financial Statements;* 705 *Modifications to the Opinion in the Independent Auditor's Report,* and 706 *Emphasis-of-Matter Paragraphs and Other-Matter Paragraphs in the Independent Auditor's Report.*

b. reporting on internal control and compliance with provisions of laws, regulations, contracts, and grant agreements;

c. communicating deficiencies in internal control, fraud, noncompliance with provisions of laws, regulations, contracts, and grant agreements, and abuse;

d. reporting views of responsible officials;

e. reporting confidential or sensitive information; and

f. distributing reports.[63]

Reporting Auditors' Compliance with GAGAS

4.18 When auditors comply with all applicable GAGAS requirements for financial audits, they should include a statement in the auditors' report that they performed the audit in accordance with GAGAS.[64] Because GAGAS incorporates by reference the AICPA SASs,[65] GAGAS does not require auditors to cite compliance with the AICPA standards when citing compliance with GAGAS. Additionally, an entity receiving a GAGAS auditors' report may also request auditors to issue a financial audit report for purposes other than complying with requirements for a GAGAS audit. GAGAS does not prohibit auditors from issuing a separate report conforming only to AICPA or other standards.[66]

[63]See paragraphs 4.18 through 4.45 for additional discussion paragraph of 4.17 a-f.

[64]See paragraphs 2.24 and 2.25 for additional requirements on citing compliance with GAGAS.

[65]See paragraph 2.08 for a discussion of the AICPA SASs incorporated into GAGAS.

[66]See AICPA AU-C Section 700, *Forming an Opinion and Reporting on Financial Statements.*

Reporting on Internal Control and Compliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements

4.19 When providing an opinion or a disclaimer on financial statements, auditors should also report on internal control over financial reporting[67] and on compliance with provisions of laws, regulations, contracts, or grant agreements that have a material effect on the financial statements.[68] Auditors report on internal control and compliance, regardless of whether or not they identify internal control deficiencies or instances of noncompliance.

4.20 Auditors should include either in the same or in separate report(s) a description of the scope of the auditors' testing of internal control over financial reporting and of compliance with provisions of laws, regulations, contracts, or grant agreements. Auditors should also state in the reports whether the tests they performed provided sufficient, appropriate evidence to support opinions on the effectiveness of internal control and on compliance with provisions of laws, regulations, contracts, or grant agreements.

4.21 The objective of the GAGAS requirement for reporting on internal control over financial reporting differs from the objective of an examination of internal control in accordance with the AICPA Statement on Standards for Attestation Engagements (SSAE), which is to express an opinion on the design or the design and operating effectiveness of an entity's internal control, as applicable. To form a basis for expressing such an opinion, the auditor would need to plan and perform the examination to provide a high level of assurance about whether the entity maintained, in all material respects, effective internal control over financial reporting as of a

[67]See paragraph A.05 for examples of deficiencies in internal control.

[68]See paragraph A.11 for additional discussion of laws, regulations, and provisions of contract and grant agreements.

point in time or for a specified period of time.[69] If auditors issue an opinion on internal control, the opinion would satisfy the GAGAS requirement for reporting on internal control.

4.22 If auditors report separately (including separate reports bound in the same document) on internal control over financial reporting and on compliance with provisions of laws, regulations, contracts, and grant agreements, they should state in the auditors' report on the financial statements that they are issuing those additional reports. They should include a reference to the separate reports and also state that the reports on internal control over financial reporting and on compliance with provisions of laws, regulations, contracts, and grant agreements are an integral part of a GAGAS audit in considering the audited entity's internal control over financial reporting and compliance.

Communicating Deficiencies in Internal Control, Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

4.23 When performing GAGAS financial audits, auditors should communicate in the report on internal control over financial reporting and compliance, based upon the work performed, (1) significant deficiencies and material weaknesses in internal control; (2) instances of fraud and noncompliance with provisions of laws or regulations that have a material effect on the audit and any other instances that warrant the attention of those charged with governance; (3) noncompliance with provisions of contracts or grant agreements that has a material effect on the audit; and (4) abuse that has a material effect on the audit.

Deficiencies in Internal Control

4.24 The AICPA requirements to communicate in writing significant deficiencies and material weaknesses

[69]See AICPA AT Section 501, *An Examination of an Entity's Internal Control Over Financial Reporting That Is Integrated With an Audit of Its Financial Statements.*

identified during an audit[70] form the basis for reporting significant deficiencies and material weaknesses in the GAGAS report on internal control over financial reporting when deficiencies are identified during the audit.

Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

4.25 When performing a GAGAS financial audit, and auditors conclude, based on sufficient, appropriate evidence, that any of the following either has occurred or is likely to have occurred, they should include in their report on internal control and compliance the relevant information about

a. fraud[71] and noncompliance with provisions of laws or regulations that have a material effect on the financial statements or other financial data significant to the audit objectives and any other instances that warrant the attention of those charged with governance;

b. noncompliance with provisions of contracts or grant agreements that has a material effect on the determination of financial statement amounts or other financial data significant to the audit objectives; or

c. abuse[72] that is material, either quantitatively or qualitatively.[73]

4.26 When auditors detect instances of noncompliance with provisions of contracts or grant agreements or abuse that have an effect on the financial statements or other financial data significant to the audit objectives

[70]See AICPA AU-C Section 265, *Communicating Internal Control Related Matters Identified in an Audit.*

[71]See paragraph A.10 for examples of indicators of fraud risk.

[72]See paragraph A.08 for examples of abuse.

[73]See paragraphs 4.07 and 4.08 for a discussion of abuse.

that are less than material but warrant the attention of those charged with governance, they should communicate those findings in writing to audited entity officials. When auditors detect any instances of fraud, noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse that do not warrant the attention of those charged with governance, the auditors' determination of whether and how to communicate such instances to audited entity officials is a matter of professional judgment.

4.27 When fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse either have occurred or are likely to have occurred, auditors may consult with authorities or legal counsel about whether publicly reporting such information would compromise investigative or legal proceedings. Auditors may limit their public reporting to matters that would not compromise those proceedings, and for example, report only on information that is already a part of the public record.

Presenting Findings in the Auditors' Report

4.28 When performing a GAGAS financial audit and presenting findings such as deficiencies in internal control, fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse, auditors should develop the elements of the findings to the extent necessary, including findings related to deficiencies from the previous year that have not been remediated. Clearly developed findings, as discussed in paragraphs 4.10 through 4.14, assist management or oversight officials of the audited entity in understanding the need for taking corrective action, and assist auditors in making recommendations for corrective action. If auditors sufficiently develop the elements of a finding, they may provide recommendations for corrective action.

4.29 Auditors should place their findings in perspective by describing the nature and extent of the issues being reported and the extent of the work performed that resulted in the finding. To give the reader a basis for judging the prevalence and consequences of these findings, auditors should, as appropriate, relate the instances identified to the population or the number of cases examined and quantify the results in terms of dollar value or other measures. If the results cannot be projected, auditors should limit their conclusions appropriately.

Reporting Findings Directly to Parties Outside the Audited Entity

4.30 Auditors should report known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse directly to parties outside the audited entity in the following two circumstances.

a. When entity management fails to satisfy legal or regulatory requirements to report such information to external parties specified in law or regulation, auditors should first communicate the failure to report such information to those charged with governance. If the audited entity still does not report this information to the specified external parties as soon as practicable after the auditors' communication with those charged with governance, then the auditors should report the information directly to the specified external parties.

b. When entity management fails to take timely and appropriate steps to respond to known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that (1) is likely to have a material effect on the financial statements and (2) involves funding received directly or indirectly from a government agency, auditors should first report management's failure to take timely and appropriate steps to those charged with governance. If the audited entity still does not take timely and

appropriate steps as soon as practicable after the auditors' communication with those charged with governance, then the auditors should report the entity's failure to take timely and appropriate steps directly to the funding agency.

4.31 The reporting in paragraph 4.30 is in addition to any legal requirements to report such information directly to parties outside the audited entity. Auditors should comply with these requirements even if they have resigned or been dismissed from the audit prior to its completion.

4.32 Auditors should obtain sufficient, appropriate evidence, such as confirmation from outside parties, to corroborate assertions by management of the audited entity that it has reported such findings in accordance with laws, regulations, or funding agreements. When auditors are unable to do so, they should report such information directly as discussed in paragraphs 4.30 and 4.31.

Reporting Views of Responsible Officials

4.33 When performing a GAGAS financial audit, if the auditors' report discloses deficiencies in internal control, fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse, auditors should obtain and report the views of responsible officials of the audited entity concerning the findings, conclusions, and recommendations, as well as any planned corrective actions.

4.34 Providing a draft report with findings for review and comment by responsible officials of the audited entity and others helps the auditors develop a report that is fair, complete, and objective. Including the views of responsible officials results in a report that presents not only the auditors' findings, conclusions, and recommendations, but also the perspectives of the

responsible officials of the audited entity and the corrective actions they plan to take. Obtaining the comments in writing is preferred, but oral comments are acceptable.

4.35 When auditors receive written comments from the responsible officials, they should include in their report a copy of the officials' written comments, or a summary of the comments received. When the responsible officials provide oral comments only, auditors should prepare a summary of the oral comments and provide a copy of the summary to the responsible officials to verify that the comments are accurately stated.

4.36 Auditors should also include in the report an evaluation of the comments, as appropriate. In cases in which the audited entity provides technical comments in addition to its written or oral comments on the report, auditors may disclose in the report that such comments were received.

4.37 Obtaining oral comments may be appropriate when, for example, there is a reporting date critical to meeting a user's needs; auditors have worked closely with the responsible officials throughout the work and the parties are familiar with the findings and issues addressed in the draft report; or the auditors do not expect major disagreements with findings, conclusions, or recommendations in the draft report, or major controversies with regard to the issues discussed in the draft report.

4.38 When the audited entity's comments are inconsistent or in conflict with the findings, conclusions, or recommendations in the draft report, or when planned corrective actions do not adequately address the auditors' recommendations, the auditors should evaluate the validity of the audited entity's comments. If the auditors disagree with the comments, they should

explain in the report their reasons for disagreement. Conversely, the auditors should modify their report as necessary if they find the comments valid and supported with sufficient, appropriate evidence.

4.39 If the audited entity refuses to provide comments or is unable to provide comments within a reasonable period of time, the auditors may issue the report without receiving comments from the audited entity. In such cases, the auditors should indicate in the report that the audited entity did not provide comments.

Reporting Confidential and Sensitive Information

4.40 When performing a GAGAS financial audit, if certain pertinent information is prohibited from public disclosure or is excluded from a report due to the confidential or sensitive nature of the information, auditors should disclose in the report that certain information has been omitted and the reason or other circumstances that make the omission necessary.

4.41 Certain information may be classified or may otherwise be prohibited from general disclosure by federal, state, or local laws or regulations. In such circumstances, auditors may issue a separate, classified, or limited use report containing such information and distribute the report only to persons authorized by law or regulation to receive it.

4.42 Additional circumstances associated with public safety, privacy, or security concerns could also justify the exclusion of certain information from a publicly available or widely distributed report. For example, detailed information related to computer security for a particular program may be excluded from publicly available reports because of the potential damage that could be caused by the misuse of this information. In such circumstances, auditors may issue a limited use report containing such information and distribute the

report only to those parties responsible for acting on the auditors' recommendations. In some instances, it may be appropriate to issue both a publicly available report with the sensitive information excluded and a limited use report. The auditors may consult with legal counsel regarding any requirements or other circumstances that may necessitate the omission of certain information.

4.43 Considering the broad public interest in the program or activity under audit assists auditors when deciding whether to exclude certain information from publicly available reports. When circumstances call for omission of certain information, auditors should evaluate whether this omission could distort the audit results or conceal improper or illegal practices.

4.44 When audit organizations are subject to public records laws, auditors should determine whether public records laws could impact the availability of classified or limited use reports and determine whether other means of communicating with management and those charged with governance would be more appropriate. For example, the auditors may communicate general information in a written report and communicate detailed information orally. The auditors may consult with legal counsel regarding applicable public records laws.

Distributing Reports

4.45 Distribution of reports completed in accordance with GAGAS depends on the relationship of the auditors to the audited organization and the nature of the information contained in the report. Auditors should document any limitation on report distribution.[74] The following discussion outlines distribution for reports completed in accordance with GAGAS:

[74]See paragraphs 4.41 and 4.42 for discussion of limited use reports containing confidential or sensitive information.

a. Audit organizations in government entities should distribute auditors' reports to those charged with governance, to the appropriate audited entity officials, and to the appropriate oversight bodies or organizations requiring or arranging for the audits. As appropriate, auditors should also distribute copies of the reports to other officials who have legal oversight authority or who may be responsible for acting on audit findings and recommendations, and to others authorized to receive such reports.

b. Internal audit organizations in government entities may also follow the Institute of Internal Auditors (IIA) *International Standards for the Professional Practice of Internal Auditing*.[75] In accordance with GAGAS and IIA standards, the head of the internal audit organization should communicate results to the parties who can ensure that the results are given due consideration. If not otherwise mandated by statutory or regulatory requirements, prior to releasing results to parties outside the organization, the head of the internal audit organization should: (1) assess the potential risk to the organization, (2) consult with senior management or legal counsel as appropriate, and (3) control dissemination by indicating the intended users in the report.

c. Public accounting firms contracted to perform an audit in accordance with GAGAS should clarify report distribution responsibilities with the engaging organization. If the contracting firm is responsible for the distribution, it should reach agreement with the party contracting for the audit about which officials or

[75]See paragraph 2.21 for additional discussion about using the IIA standards in conjunction with GAGAS and paragraph 2.22 for additional discussion about citing compliance with another set of standards.

organizations will receive the report and the steps being taken to make the report available to the public.

Additional GAGAS Considerations for Financial Audits

4.46 Due to the objectives and public accountability of GAGAS audits, additional considerations for financial audits completed in accordance with GAGAS may apply. These considerations relate to

a. materiality in GAGAS financial audits; and

b. early communication of deficiencies.[76]

Materiality in GAGAS Financial Audits

4.47 The AICPA standards require the auditor to apply the concept of materiality appropriately in planning and performing the audit.[77] Additional considerations may apply to GAGAS financial audits of government entities or entities that receive government awards. For example, in audits performed in accordance with GAGAS, auditors may find it appropriate to use lower materiality levels as compared with the materiality levels used in non-GAGAS audits because of the public accountability of government entities and entities receiving government funding, various legal and regulatory requirements, and the visibility and sensitivity of government programs.

[76]See paragraphs 4.47 through 4.48 for additional discussion of paragraph 4.46 a-b.

[77]See AICPA AU-C Section 320, *Materiality in Planning and Performing an Audit.*

Early Communication of Deficiencies

4.48 For some matters, early communication to those charged with governance or management may be important because of the relative significance and the urgency for corrective follow-up action.[78] Further, when a control deficiency results in noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse, early communication is important to allow management to take prompt corrective action to prevent further noncompliance. When a deficiency is communicated early, the reporting requirements in paragraphs 4.19 through 4.23 still apply.

[78]See AICPA AU-C Section 265, *Communicating Internal Control Related Matters Identified in an Audit.*

Standards for Attestation Engagements

Introduction

5.01 This chapter contains requirements, guidance, and considerations for performing and reporting on attestation engagements conducted in accordance with generally accepted government auditing standards (GAGAS). Auditors performing attestation engagements in accordance with GAGAS should comply with the American Institute of Certified Public Accountants (AICPA) general attestation standard on criteria, the field work and reporting attestation standards, and the corresponding statements on standards for attestation engagements (SSAEs), which are incorporated in this chapter by reference.[79] Auditors performing attestation engagements in accordance with GAGAS should also comply with the additional requirements in this chapter. The requirements and guidance contained in chapters 1 through 3 also apply to attestation engagements performed in accordance with GAGAS.

5.02 An attestation engagement can provide one of three levels of service as defined by the AICPA, namely an examination engagement, a review engagement, or an agreed-upon procedures engagement.[80] Auditors performing an attestation engagement should determine which of the three levels of service apply to that engagement and refer to the appropriate AICPA standards and GAGAS section below for applicable requirements and considerations.

[79]See AICPA AT Section 50, *SSAE Hierarchy.*

[80]See paragraph 2.09 and AICPA AT Section 101, *Attest Engagements*.

Examination Engagements

Additional Field Work Requirements for Examination Engagements

5.03 GAGAS establishes field work requirements for performing examination engagements in addition to the requirements contained in the AICPA standards. Auditors should comply with these additional requirements, along with the relevant AICPA standards for examination attestation engagements, when citing GAGAS in their examination reports. The additional field work requirements relate to:

a. auditor communication;

b. previous audits and attestation engagements;

c. fraud, noncompliance with provisions of laws, regulations, contracts, and grant agreements, and abuse;

d. developing elements of a finding; and

e. examination engagement documentation.[81]

Auditor Communication

5.04 In addition to the AICPA requirements for auditor communication,[82] when performing a GAGAS examination engagement, auditors should communicate pertinent information that in the auditors' professional judgment needs to be communicated to individuals contracting for or requesting the examination engagement, and to cognizant legislative committees

[81]See paragraphs 5.04 through 5.17 for additional discussion of 5.03 a-e.

[82]See AICPA AT Section 101.14 and 101.46, *Attest Engagements.*

when auditors perform the examination engagement pursuant to a law or regulation, or they conduct the work for the legislative committee that has oversight of the audited entity.

5.05 In those situations where there is not a single individual or group that both oversees the strategic direction of the audited entity and the fulfillment of its accountability obligations or in other situations where the identity of those charged with governance is not clearly evident, auditors should document the process followed and conclusions reached for identifying the appropriate individuals to receive the required auditor communications.

Previous Audits and Attestation Engagements

5.06 When performing a GAGAS examination engagement, auditors should evaluate whether the audited entity has taken appropriate corrective action to address findings and recommendations from previous engagements that could have a material effect on the subject matter, or an assertion about the subject matter, of the examination engagement. When planning the engagement, auditors should ask audited entity management to identify previous audits, attestation engagements, and other studies that directly relate to the subject matter or an assertion about the subject matter of the examination engagement being undertaken, including whether related recommendations have been implemented. Auditors should use this information in assessing risk and determining the nature, timing, and extent of current work, including determining the extent to which testing the implementation of the corrective actions is applicable to the current examination engagement objectives.

Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

5.07 In addition to the AICPA requirements concerning fraud,[83] when performing a GAGAS examination engagement, auditors should design the engagement to detect instances of fraud and noncompliance with provisions of laws, regulations, contracts, and grant agreements that may have a material effect on the subject matter or the assertion thereon of the examination engagement. Auditors should assess the risk and possible effects of fraud and noncompliance with provisions of laws, regulations, contracts, and grant agreements that could have a material effect on the subject matter or an assertion about the subject matter of the examination engagement. When risk factors are identified, auditors should document the risk factors identified, the auditors' response to those risk factors individually or in combination, and the auditors' conclusions.[84]

5.08 Abuse involves behavior that is deficient or improper when compared with behavior that a prudent person would consider a reasonable and necessary business practice given the facts and circumstances. Abuse also includes misuse of authority or position for personal financial interests or those of an immediate or close family member or business associate.[85] Abuse does not necessarily involve fraud, or noncompliance with provisions of laws, regulations, contracts, or grant agreements.

[83]See AICPA AT Sections 501.27, *An Examination of an Entity's Internal Control Over Financial Reporting That Is Integrated With an Audit of Its Financial Statements*, 601.33, *Compliance Attestation*, and 701.42, *Management's Discussion and Analysis*.

[84]See paragraphs A.09 through A.13 for additional discussion of indicators of fraud risk and significance of provisions of laws, regulations, and contracts and grant agreements.

[85]See A.08 for additional examples of abuse.

5.09 Because the determination of abuse is subjective, auditors are not required to detect abuse in examination engagements. However, as part of a GAGAS examination engagement, if auditors become aware of abuse that could be quantitatively or qualitatively material, auditors should apply procedures specifically directed to ascertain the potential effect on the subject matter, or the assertion thereon, or other data significant to the objective of the examination engagement. After performing additional work, auditors may discover that the abuse represents potential fraud or noncompliance with provisions of laws, regulations, contracts, or grant agreements.

5.10 Avoiding interference with investigations or legal proceedings is important in pursuing indications of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse. Laws, regulations, or policies may require auditors to report indications of certain types of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse to law enforcement or investigatory authorities before performing additional audit procedures. When investigations or legal proceedings are initiated or in process, auditors should evaluate the impact on the current examination engagement. In some cases, it may be appropriate for the auditors to work with investigators or legal authorities, or withdraw from or defer further work on the examination engagement or a portion of the examination engagement to avoid interfering with an ongoing investigation or legal proceeding.

Developing Elements of a Finding

5.11 In an examination engagement, findings may involve deficiencies in internal control; noncompliance with provisions of laws, regulations, contracts, or grant agreements; fraud; or abuse. As part of a GAGAS examination engagement, when auditors identify

findings, auditors should plan and perform procedures to develop the elements of the findings that are relevant and necessary to achieve the examination engagement objectives. The elements of a finding are discussed in paragraphs 5.12 through 5.15 below.

5.12 Criteria: The laws, regulations, contracts, grant agreements, standards, measures, expected performance, defined business practices, and benchmarks against which performance is compared or evaluated. Criteria identify the required or desired state or expectation with respect to the program or operation. Criteria provide a context for evaluating evidence and understanding the findings.

5.13 Condition: Condition is a situation that exists. The condition is determined and documented during the engagement.

5.14 Cause: The cause identifies the reason or explanation for the condition or the factor or factors responsible for the difference between the situation that exists (condition) and the required or desired state (criteria), which may also serve as a basis for recommendations for corrective actions. Common factors include poorly designed policies, procedures, or criteria; inconsistent, incomplete, or incorrect implementation; or factors beyond the control of program management. Auditors may assess whether the evidence provides a reasonable and convincing argument for why the stated cause is the key factor or factors contributing to the difference between the condition and the criteria.

5.15 Effect or potential effect: The effect is a clear, logical link to establish the impact or potential impact of the difference between the situation that exists (condition) and the required or desired state (criteria). The effect or potential effect identifies the outcomes or

consequences of the condition. When the engagement objectives include identifying the actual or potential consequences of a condition that varies (either positively or negatively) from the criteria identified in the engagement, "effect" is a measure of those consequences. Effect or potential effect may be used to demonstrate the need for corrective action in response to identified problems or relevant risks.

Examination Engagement Documentation

5.16 In addition to AICPA requirements for audit documentation,[86] auditors should comply with the following additional requirements when performing a GAGAS examination engagement.[87]

a. Prepare attest documentation in sufficient detail to enable an experienced auditor, having no previous connection to the examination engagement, to understand from the documentation the nature, timing, extent, and results of procedures performed and the evidence obtained and its source and the conclusions reached, including evidence that supports the auditors' significant judgments and conclusions. An experienced auditor means an individual (whether internal or external to the audit organization) who possesses the competencies and skills to be able to perform the examination engagement. These competencies and skills include an understanding of (1) examination engagement processes and related SSAEs,[88] (2) GAGAS and applicable legal and regulatory requirements, (3) the subject matter that the auditors are engaged to report on, (4) the suitability and

[86]See AICPA AT Section 101.100–101.107, *Attest Engagements.*

[87]See paragraphs 5.05, 5.07, 5.25, and 5.44 for additional documentation requirements regarding attestation engagements.

[88]See paragraphs 3.74 and 3.75 for additional discussion of qualifications for attestation engagements.

availability of criteria, and (5) issues related to the audited entity's environment.

b. Document supervisory review, before the date of the examination report, of the evidence that supports findings, conclusions, and recommendations contained in the examination report.

c. Document any departures from the GAGAS requirements and the impact on the engagement and on the auditors' conclusions when the examination engagement is not in compliance with applicable GAGAS requirements due to law, regulation, scope limitations, restrictions on access to records, or other issues impacting the audit. This applies to departures from unconditional requirements and from presumptively mandatory requirements when alternative procedures performed in the circumstances were not sufficient to achieve the objectives of the requirement.[89]

5.17 When performing GAGAS examination engagements and subject to applicable laws and regulations, auditors should make appropriate individuals, as well as attest documentation, available upon request and in a timely manner to other auditors or reviewers. Underlying GAGAS engagements is the premise that audit organizations in federal, state, and local governments and public accounting firms engaged to perform an engagement in accordance with GAGAS cooperate in performing examination engagements of programs of common interest so that auditors may use others' work and avoid duplication of efforts. The use of auditors' work by other auditors may be facilitated by contractual arrangements for GAGAS engagements

[89]See paragraph 2.15 for a definition of GAGAS requirements.

that provide for full and timely access to appropriate individuals, as well as attest documentation.

Additional GAGAS Reporting Requirements for Examination Engagements

5.18 In addition to the AICPA requirements for reporting on examination engagements,[90] auditors should comply with the following additional requirements when citing GAGAS in their examination reports. The additional reporting requirements relate to

a. reporting auditors' compliance with GAGAS;

b. reporting deficiencies in internal control, fraud, noncompliance with provisions of laws, regulations, contracts, and grant agreements, and abuse;

c. reporting views of responsible officials;

d. reporting confidential or sensitive information; and

e. distributing reports.[91]

Reporting Auditors' Compliance with GAGAS

5.19 When auditors comply with all applicable GAGAS requirements for examination engagements, they should include a statement in the examination report that they performed the examination engagement in accordance with GAGAS.[92] Because GAGAS incorporates by reference the AICPA's general attestation standard on criteria, the field work and reporting attestation standards, and the corresponding SSAEs, GAGAS does not require auditors to cite

[90]See AICPA AT Section 101.63-101.87, *Attest Engagements*.

[91]See paragraphs 5.19 through 5.44 for additional discussion of paragraph 5.18 a-e.

[92]See paragraphs 2.24 and 2.25 for additional requirements on citing compliance with GAGAS.

compliance with the AICPA standards when citing compliance with GAGAS. GAGAS does not prohibit auditors from issuing a separate report conforming only to the requirements of AICPA or other standards.[93]

Reporting Deficiencies in Internal Control, Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

5.20 When performing GAGAS examination engagements, auditors should report, based upon the work performed, (1) significant deficiencies and material weaknesses in internal control;[94] (2) instances of fraud[95] and noncompliance with provisions of laws or regulations that have a material effect on the subject matter or an assertion about the subject matter and any other instances that warrant the attention of those charged with governance; (3) noncompliance with provisions of contracts or grant agreements that has a material effect on the subject matter or an assertion about the subject matter of the examination engagement; and (4) abuse that has a material effect on the subject matter or an assertion about the subject matter of the examination engagement. Auditors should include this information either in the same or in separate report(s).

5.21 If auditors report separately (including separate reports bound in the same document) on the items discussed in paragraph 5.20, they should state in the examination report that they are issuing those additional reports. They should include a reference to the separate reports and also state that the reports are an integral part of a GAGAS examination engagement.

[93]See AICPA AT Sections 101.85e, *Attest Engagements.*

[94]See paragraph A.06 for examples of deficiencies in internal control.

[95]See paragraph A.10 for examples of indicators of fraud risk.

Deficiencies in Internal Control

5.22 In addition to the AICPA requirements concerning internal control, [96] when performing GAGAS examination engagements, including attestation engagements related to internal control,[97] auditors should include in the examination report all deficiencies, even those communicated early,[98] that are considered to be significant deficiencies or material weaknesses.

5.23 Determining whether and how to communicate to officials of the audited entity internal control deficiencies that warrant the attention of those charged with governance, but are not considered significant deficiencies or material weaknesses, is a matter of professional judgment.

Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

5.24 When performing a GAGAS examination engagement, and auditors conclude, based on sufficient, appropriate evidence, that any of the following either has occurred or is likely to have occurred, they should include in their examination report the relevant information about

a. fraud[99] and noncompliance with provisions of laws or regulations that have a material effect on the subject matter or an assertion about the subject matter and any other instances that warrant the attention of those charged with governance,

[96]See AICPA AT Section 101.52 through 101.53, *Attest Engagements*.

[97]See AICPA AT Section 501.07, *An Examination of an Entity's Internal Control Over Financial Reporting That Is Integrated With an Audit of Its Financial Statements*.

[98]See paragraph 5.47 for a discussion of early communication of deficiencies.

[99]See paragraph A.10 for examples of indicators of fraud risk.

b. noncompliance with provisions of contracts or grant agreements that has a material effect on the subject matter or an assertion about the subject matter, or

c. abuse[100] that is material to the subject matter or an assertion about the subject matter, either quantitatively or qualitatively.[101]

5.25 When auditors detect instances of noncompliance with provisions of contracts or grant agreements, or abuse that have an effect on the subject matter or an assertion about the subject matter that are less than material but warrant the attention of those charged with governance, they should communicate those findings in writing to audited entity officials. When auditors detect any instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that do not warrant the attention of those charged with governance, the auditors' determination of whether and how to communicate such instances to audited entity officials is a matter of professional judgment.

5.26 When fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse either have occurred or are likely to have occurred, auditors may consult with authorities or legal counsel about whether publicly reporting such information would compromise investigative or legal proceedings. Auditors may limit their public reporting to matters that would not compromise those proceedings and, for example, report only on information that is already a part of the public record.

[100]See paragraph A.08 for examples of abuse.

[101]See paragraphs 5.08 and 5.09 for a discussion of abuse.

Presenting Findings in the Examination Report

5.27 When performing a GAGAS examination engagement and presenting findings such as deficiencies in internal control, fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse, auditors should develop the elements of the findings to the extent necessary. Clearly developed findings, as discussed in paragraphs 5.11 through 5.15, assist management or oversight officials of the audited entity in understanding the need for taking corrective action, and assist auditors in making recommendations for corrective action. If auditors sufficiently develop the elements of a finding, they may provide recommendations for corrective action.

5.28 Auditors should place their findings in perspective by describing the nature and extent of the issues being reported and the extent of the work performed that resulted in the finding. To give the reader a basis for judging the prevalence and consequences of these findings, auditors should, as appropriate, relate the instances identified to the population or the number of cases examined and quantify the results in terms of dollar value or other measures. If the results cannot be projected, auditors should limit their conclusions appropriately.

Reporting Findings Directly to Parties Outside the Audited Entity

5.29 Auditors should report known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse directly to parties outside the audited entity in the following two circumstances.

a. When entity management fails to satisfy legal or regulatory requirements to report such information to external parties specified in law or regulation, auditors should first communicate the failure to report such information to those charged with governance. If the audited entity still does not report this information to the specified external parties as soon as practicable after

the auditors' communication with those charged with governance, then the auditors should report the information directly to the specified external parties.

b. When entity management fails to take timely and appropriate steps to respond to known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that (1) is likely to have a material effect on the subject matter or an assertion about the subject matter and (2) involves funding received directly or indirectly from a government agency, auditors should first report management's failure to take timely and appropriate steps to those charged with governance. If the audited entity still does not take timely and appropriate steps as soon as practicable after the auditors' communication with those charged with governance, then the auditors should report the entity's failure to take timely and appropriate steps directly to the funding agency.

5.30 The reporting in paragraph 5.29 is in addition to any legal requirements to report such information directly to parties outside the audited entity. Auditors should comply with these requirements even if they have resigned or been dismissed from the engagement prior to its completion.

5.31 Auditors should obtain sufficient, appropriate evidence, such as confirmation from outside parties, to corroborate assertions by management of the audited entity that it has reported such findings in accordance with laws, regulations, or funding agreements. When auditors are unable to do so, they should report such information directly as discussed in paragraph 5.29.

Reporting Views of Responsible Officials

5.32 When performing a GAGAS examination engagement, if the examination report discloses deficiencies in internal control, fraud, noncompliance

with provisions of laws, regulations, contracts, or grant agreements, or abuse, auditors should obtain and report the views of responsible officials of the audited entity concerning the findings, conclusions, and recommendations, as well as any planned corrective actions.

5.33 Providing a draft report with findings for review and comment by responsible officials of the audited entity and others helps the auditors develop a report that is fair, complete, and objective. Including the views of responsible officials results in a report that presents not only the auditors' findings, conclusions, and recommendations, but also the perspectives of the responsible officials of the audited entity and the corrective actions they plan to take. Obtaining the comments in writing is preferred, but oral comments are acceptable.

5.34 When auditors receive written comments from the responsible officials, they should include in their report a copy of the officials' written comments, or a summary of the comments received. When the responsible officials provide oral comments only, auditors should prepare a summary of the oral comments and provide a copy of the summary to the responsible officials to verify that the comments are accurately stated.

5.35 Auditors should also include in the report an evaluation of the comments, as appropriate. In cases in which the audited entity provides technical comments in addition to its written or oral comments on the report, auditors may disclose in the report that such comments were received.

5.36 Obtaining oral comments may be appropriate when, for example, there is a reporting date critical to meeting a user's needs; auditors have worked closely with the responsible officials throughout the work and

the parties are familiar with the findings and issues addressed in the draft report; or the auditors do not expect major disagreements with findings, conclusions, or recommendations in the draft report, or major controversies with regard to the issues discussed in the draft report.

5.37 When the audited entity's comments are inconsistent or in conflict with the findings, conclusions, or recommendations in the draft report, or when planned corrective actions do not adequately address the auditors' recommendations, the auditors should evaluate the validity of the audited entity's comments. If the auditors disagree with the comments, they should explain in the report their reasons for disagreement. Conversely, the auditors should modify their report as necessary if they find the comments valid and supported with sufficient, appropriate evidence.

5.38 If the audited entity refuses to provide comments or is unable to provide comments within a reasonable period of time, the auditors may issue the report without receiving comments from the audited entity. In such cases, the auditors should indicate in the report that the audited entity did not provide comments.

Reporting Confidential and Sensitive Information

5.39 When performing a GAGAS examination engagement, if certain pertinent information is prohibited from public disclosure or is excluded from a report due to the confidential or sensitive nature of the information, auditors should disclose in the report that certain information has been omitted and the reason or other circumstances that make the omission necessary.

5.40 Certain information may be classified or may be otherwise prohibited from general disclosure by federal, state, or local laws or regulations. In such circumstances, auditors may issue a separate classified

or limited use report containing such information and distribute the report only to persons authorized by law or regulation to receive it.

5.41 Additional circumstances associated with public safety, privacy, or security concerns could also justify the exclusion of certain information from a publicly available or widely distributed report. For example, detailed information related to computer security for a particular program may be excluded from publicly available reports because of the potential damage that could be caused by the misuse of this information. In such circumstances, auditors may issue a limited use report containing such information and distribute the report only to those parties responsible for acting on the auditors' recommendations. In some instances, it may be appropriate to issue both a publicly available report with the sensitive information excluded and a limited use report. The auditors may consult with legal counsel regarding any requirements or other circumstances that may necessitate the omission of certain information.

5.42 Considering the broad public interest in the program or activity under review assists auditors when deciding whether to exclude certain information from publicly available reports. When circumstances call for omission of certain information, auditors should evaluate whether this omission could distort the examination engagement results or conceal improper or illegal practices.

5.43 When audit organizations are subject to public records laws, auditors should determine whether public records laws could impact the availability of classified or limited use reports and determine whether other means of communicating with management and those charged with governance would be more appropriate. For example, the auditors may communicate general information in a written report and communicate

detailed information orally. The auditors may consult with legal counsel regarding applicable public records laws.

Distributing Reports

5.44 Distribution of reports completed in accordance with GAGAS depends on the relationship of the auditors to the audited organization and the nature of the information contained in the report. Auditors should document any limitation on report distribution.[102] The following discussion outlines distribution for reports completed in accordance with GAGAS:

a. Audit organizations in government entities should distribute reports to those charged with governance, to the appropriate audited entity officials, and to the appropriate oversight bodies or organizations requiring or arranging for the engagements. As appropriate, auditors should also distribute copies of the reports to other officials who have legal oversight authority or who may be responsible for acting on engagement findings and recommendations, and to others authorized to receive such reports.

b. Internal audit organizations in government entities may also follow the Institute of Internal Auditors (IIA) *International Standards for the Professional Practice of Internal Auditing*.[103] In accordance with GAGAS and IIA standards, the head of the internal audit organization should communicate results to the parties who can ensure that the results are given due consideration. If not otherwise mandated by statutory or regulatory

[102]See paragraphs 5.40 and 5.41 for discussion of limited use reports containing confidential or sensitive information.

[103]See paragraph 2.21 for additional discussion about using the IIA standards in conjunction with GAGAS and paragraph 2.22 for additional discussion about citing compliance with another set of standards.

requirements, prior to releasing results to parties outside the organization, the head of the internal audit organization should: (1) assess the potential risk to the organization, (2) consult with senior management or legal counsel as appropriate, and (3) control dissemination by indicating the intended users in the report.

c. Public accounting firms contracted to perform an examination engagement in accordance with GAGAS should clarify report distribution responsibilities with the engaging organization. If the contracting firm is responsible for the distribution, it should reach agreement with the party contracting for the engagement about which officials or organizations will receive the report and the steps being taken to make the report available to the public.

Additional GAGAS Considerations for Examination Engagements

5.45 Due to the objectives and public accountability of GAGAS examination engagements, additional considerations for examination engagements completed in accordance with GAGAS may apply. These considerations relate to

a. Materiality in GAGAS examination engagements, and

b. Early communication of deficiencies.[104]

Materiality in GAGAS Examination Engagements

5.46 The AICPA standards require that one of the factors to be considered when planning an attest engagement includes preliminary judgments about attestation risk and materiality for attest purposes.[105]

[104]See paragraphs 5.46 and 5.47 for additional discussion of paragraph 5.45 a-b.

[105]See AICPA AT Section 101.45b and 101.67, *Attest Engagements.*

Additional considerations may apply to GAGAS examination engagements of government entities or entities that receive government awards. For example, in engagements performed in accordance with GAGAS, auditors may find it appropriate to use lower materiality levels as compared with the materiality levels used in non-GAGAS engagements because of the public accountability of government entities and entities receiving government funding, various legal and regulatory requirements, and the visibility and sensitivity of government programs.

Early Communication of Deficiencies

5.47 For some matters, early communication to those charged with governance or management may be important because of the relative significance and the urgency for corrective follow-up action.[106] Further, when a control deficiency results in noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse, early communication is important to allow management to take prompt corrective action to prevent further noncompliance. When a deficiency is communicated early, the reporting requirements in paragraph 5.20 still apply.

[106]See AICPA AT Section 501.103, *An Examination of an Entity's Internal Control Over Financial Reporting That Is Integrated With an Audit of Its Financial Statements*.

Review Engagements

Additional GAGAS Field Work Requirements for Review Engagements

5.48 GAGAS establishes a field work requirement for review engagements in addition to the requirements contained in the AICPA standards. Auditors should comply with this additional requirement, along with the relevant AICPA standards for review engagements, when citing GAGAS in their review engagement reports. The additional requirement relates to communicating significant deficiencies, material weaknesses, instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that come to the auditors' attention during a review engagement.

Communicating Significant Deficiencies, Material Weaknesses, Instances of Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

5.49 If, on the basis of conducting the procedures necessary to perform a review, significant deficiencies; material weaknesses; instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements; or abuse come to the auditors' attention that warrant the attention of those charged with governance, GAGAS requires that auditors should communicate such matters to audited entity officials. When auditors detect any instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that do not warrant the attention of those charged with governance, the auditors' determination of whether and how to communicate such instances to audited entity officials is a matter of professional judgment. Additionally, auditors should determine whether the existence of such matters affects the auditors' ability to conduct or report on the review.

Additional GAGAS Reporting Requirements for Review Engagements

5.50 GAGAS establishes reporting requirements for review engagements in addition to the requirements contained in the AICPA standards.[107] Auditors should comply with these additional requirements when citing GAGAS in their review engagement reports. The additional requirements relate to

a. reporting auditors' compliance with GAGAS; and

b. distributing reports.[108]

Reporting Auditors' Compliance with GAGAS

5.51 When auditors comply with all applicable requirements for a review engagement conducted in accordance with GAGAS, they should include a statement in the review report that they performed the engagement in accordance with GAGAS.[109] Because GAGAS incorporates by reference the general standard on criteria, and the field work and reporting standards of the AICPA SSAEs, GAGAS does not require auditors to cite compliance with the AICPA standards when citing compliance with GAGAS. GAGAS does not prohibit auditors from issuing a separate report conforming only to the requirements of AICPA or other standards.[110]

Distributing Reports

5.52 Distribution of reports completed in accordance with GAGAS depends on the relationship of the auditors to the audited organization and the nature of the

[107]See AICPA AT Section 101.63-101.83 and 101.88-101.90, *Attest Engagements*.

[108]See paragraphs 5.51 and 5.52 for additional discussion of paragraph 5.50 a-b.

[109]See paragraphs 2.24 and 2.25 for additional requirements on citing compliance with GAGAS.

[110]See AICPA AT Section 101.89d, *Attest Engagements.*

information contained in the report. For GAGAS review engagements, if the subject matter or the assertion involves material that is classified for security purposes or contains confidential or sensitive information, auditors should limit the report distribution. Auditors should document any limitation on report distribution. The following discussion outlines distribution for reports completed in accordance with GAGAS:

a. Audit organizations in government entities should distribute reports to those charged with governance, to the appropriate audited entity officials, and to the appropriate oversight bodies or organizations requiring or arranging for the engagements. As appropriate, auditors should also distribute copies of the reports to other officials who have legal oversight authority, and to others authorized to receive such reports.

b. Internal audit organizations in government entities may also follow the Institute of Internal Auditors (IIA) *International Standards for the Professional Practice of Internal Auditing*.[111] In accordance with GAGAS and IIA standards, the head of the internal audit organization should communicate results to the parties who can ensure that the results are given due consideration. If not otherwise mandated by statutory or regulatory requirements, prior to releasing results to parties outside the organization, the head of the internal audit organization should: (1) assess the potential risk to the organization, (2) consult with senior management or legal counsel as appropriate, and (3) control dissemination by indicating the intended users in the report.

[111]See paragraph 2.21 for additional discussion about using the IIA standards in conjunction with GAGAS and paragraph 2.22 for additional discussion about citing compliance with another set of standards.

c. Public accounting firms contracted to perform a review engagement in accordance with GAGAS should clarify report distribution responsibilities with the engaging organization. If the contracting firm is responsible for the distribution, it should reach agreement with the party contracting for the engagement about which officials or organizations will receive the report and the steps being taken to make the report available to the public.

Additional GAGAS Considerations for Review Engagements

5.53 Due to the objectives and public accountability of GAGAS review engagements, additional considerations for review engagements performed in accordance with GAGAS may apply. These considerations relate to

a. establishing an understanding regarding services to be performed; and

b. reporting on review engagements.[112]

Establishing an Understanding Regarding Services to be Performed

5.54 The AICPA standards require auditors to establish an understanding with the audited entity (client) regarding the services to be performed for each attestation engagement. Such an understanding reduces the risk that either the auditors (practitioner) or the audited entity may misinterpret the needs or expectations of the other party. The understanding includes the objectives of the engagement, responsibilities of entity management, responsibilities of auditors, and limitations of the engagement.[113]

[112]See paragraphs 5.54 through 5.57 for additional discussion of 5.53 a-b.

[113]See AICPA AT Section 101.46, *Attest Engagements*.

5.55 Auditors often perform GAGAS engagements under a contract with a party other than the officials of the audited entity or pursuant to a third-party request. In such cases, auditors may also find it appropriate to communicate information regarding the services to be performed to the individuals contracting for or requesting the engagement. Such an understanding can help auditors avoid any misunderstandings regarding the nature of the review engagement. For example, review engagements only provide a moderate level of assurance expressed as a conclusion in the form of negative assurance, and, as a result, auditors do not perform sufficient work to be able to develop elements of a finding or provide recommendations that are common in other types of GAGAS engagements. Under such circumstances, for example, requesting parties may find that a different type of attestation engagement or a performance audit may provide the appropriate level of assurance to meet their needs.

Reporting on Review Engagements

5.56 The AICPA standards require that the auditors' review report be in the form of a conclusion expressed in the form of negative assurance.[114]

5.57 Because reviews are substantially less in scope than audits and examination engagements, it is important to include all required reporting elements contained in the SSAEs.[115] For example, a required element of the review report is a statement that a review engagement is substantially less in scope than an examination, the objective of which is an expression of opinion on the subject matter, and accordingly, review reports express no such opinion. Including only those elements that the AICPA reporting standards for review

[114]See AICPA AT Section 101.68, *Attest Engagements*.

[115]See AICPA AT Section 101.89, *Attest Engagements.*

engagements require or permit ensures that auditors comply with the AICPA standards and that users of GAGAS reports have an understanding of the nature of the work performed and the results of the review engagement.

Agreed-Upon Procedures Engagements

Additional GAGAS Field Work Requirements for Agreed-Upon Procedures Engagements

5.58 GAGAS establishes a field work requirement for agreed-upon procedures engagements in addition to the requirements contained in the AICPA standards. Auditors should comply with this additional requirement, along with the relevant AICPA standards for agreed-upon procedures engagements, when citing GAGAS in their agreed-upon procedures engagement reports. The additional requirement relates to communicating significant deficiencies, material weaknesses, instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that comes to the auditors' attention during an agreed-upon procedures engagement.

Communicating Significant Deficiencies, Material Weaknesses, Instances of Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

5.59 If, on the basis of conducting the procedures necessary to perform an agreed-upon procedures engagement,[116] significant deficiencies, material weaknesses, instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse come to the auditors' attention that warrant the attention of those charged with governance, GAGAS requires that auditors should communicate such matters to audited entity officials. When auditors detect any instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that do not warrant the attention of those charged with governance, the auditors' determination of whether and how to communicate such instances to audited entity officials is a matter of professional judgment. Additionally, auditors should determine whether the existence of such matters affects the auditors' ability to conduct or report on the agreed-upon procedures engagement.

Additional GAGAS Reporting Requirements for Agreed-Upon Procedures Engagements

5.60 GAGAS establishes reporting requirements for agreed-upon procedures engagements in addition to the requirements contained in the AICPA standards.[117] Auditors should comply with these additional requirements when citing GAGAS in their agreed-upon procedures engagement reports. The additional requirements relate to

a. reporting auditors' compliance with GAGAS; and

[116]See AICPA AT Section 201.03, *Agreed-Upon Procedures Engagements*.

[117]See AICPA AT Section 201.31-201.36, *Agreed-Upon Procedures Engagements*.

b. distributing reports.[118]

Reporting Auditors' Compliance with GAGAS

5.61 When auditors comply with all applicable GAGAS requirements for agreed-upon procedures engagements, they should include a statement in the agreed-upon procedures engagement report that they performed the engagement in accordance with GAGAS.[119] Because GAGAS incorporates by reference the AICPA's general attestation standard on criteria, the field work and reporting attestation standards, and the corresponding SSAEs, GAGAS does not require auditors to cite compliance with the AICPA standards when citing compliance with GAGAS. GAGAS does not prohibit auditors from issuing a separate report conforming only to the requirements of AICPA or other standards.[120]

Distributing Reports

5.62 Distribution of reports completed in accordance with GAGAS depends on the relationship of the auditors to the audited organization and the nature of the information contained in the report. For GAGAS agreed-upon procedures engagements, if the subject matter or the assertion involves material that is classified for security purposes or contains confidential or sensitive information, auditors should limit the report distribution. Auditors should document any limitation on report distribution. The following discussion outlines distribution for reports completed in accordance with GAGAS:

[118]See paragraphs 5.61 and 5.62 for additional discussion of paragraph 5.60 a-b.

[119]See paragraphs 2.24 and 2.25 for additional requirements on citing compliance with GAGAS.

[120]See AICPA AT Section 201.31 g, *Agreed-Upon Procedures Engagements.*

a. Audit organizations in government entities should distribute reports to those charged with governance, to the appropriate audited entity officials, and to the appropriate oversight bodies or organizations requiring or arranging for the engagements. As appropriate, auditors should also distribute copies of the reports to other officials who have legal oversight authority, and to others authorized to receive such reports.

b. Internal audit organizations in government entities may also follow the Institute of Internal Auditors (IIA) *International Standards for the Professional Practice of Internal Auditing*.[121] In accordance with GAGAS and IIA standards, the head of the internal audit organization should communicate results to the parties who can ensure that the results are given due consideration. If not otherwise mandated by statutory or regulatory requirements, prior to releasing results to parties outside the organization, the head of the internal audit organization should: (1) assess the potential risk to the organization, (2) consult with senior management or legal counsel as appropriate, and (3) control dissemination by indicating the intended users in the report.

c. Public accounting firms contracted to perform an agreed-upon procedures engagement in accordance with GAGAS should clarify report distribution responsibilities with the engaging organization. If the contracting firm is responsible for the distribution, it should reach agreement with the party contracting for the engagement about which officials or organizations will receive the report and the steps being taken to make the report available to the public.

[121]See paragraph 2.21 for additional discussion about using the IIA standards in conjunction with GAGAS and paragraph 2.22 for additional discussion about citing compliance with another set of standards.

Additional GAGAS Considerations for Agreed-Upon Procedures Engagements

5.63 Due to the objectives and public accountability of GAGAS agreed-upon procedures engagements, additional considerations for agreed-upon procedures engagements performed in accordance with GAGAS may apply. These considerations relate to

a. establishing an understanding regarding services to be performed; and

b. reporting on agreed-upon procedures engagements.[122]

Establishing an Understanding Regarding Services to be Performed

5.64 The AICPA standards require auditors to establish an understanding with the audited entity (client) regarding the services to be performed for each attestation engagement. Such an understanding reduces the risk that either the auditors (practitioner) or the audited entity may misinterpret the needs or expectations of the other party. The understanding includes the objectives of the engagement, responsibilities of entity management, responsibilities of auditors, and limitations of the engagement.[123]

5.65 Auditors often perform GAGAS engagements under a contract with a party other than the officials of the audited entity or pursuant to a third-party request. In such cases, auditors may also find it appropriate to communicate information regarding the services to be performed to the individuals contracting for or requesting the engagement. Such an understanding can help auditors avoid any misunderstandings regarding the nature of the agreed-upon procedures

[122]See paragraphs 5.64 through 5.67 for additional discussion of paragraph 5.63 a-b.

[123]See AICPA AT Sections 101.46, *Attest Engagements,* and 201.10, *Agreed-Upon Procedures Engagements*.

engagement. For example, agreed-upon procedures engagements provide neither a high nor moderate level of assurance, and, as a result, auditors do not perform sufficient work to be able to develop elements of a finding or provide recommendations that are common in other types of GAGAS engagements. Under such circumstances, for example, requesting parties may find that a different type of attestation engagement or a performance audit may provide the appropriate level of assurance to meet their needs.

Reporting on Agreed-Upon Procedures Engagements

5.66 The AICPA standards require that the auditors' report on agreed-upon procedures engagements be in the form of procedures and findings and specifies the required elements to be contained in the report.[124]

5.67 Because GAGAS agreed-upon procedures engagements are substantially less in scope than audits and examination engagements, it is important not to deviate from the required reporting elements contained in the SSAEs. For example, a required element of the report on agreed-upon procedures is a statement that the auditors were not engaged to and did not conduct an examination or a review of the subject matter, the objectives of which would be the expression of an opinion or limited assurance and that if the auditors had performed additional procedures, other matters might have come to their attention that would have been reported.[125] Another required element is a statement that the sufficiency of the procedures is solely the responsibility of the specified parties and a disclaimer of

[124]See AICPA AT Section 201.31, *Agreed-Upon Procedures Engagements*.

[125]See AICPA AT Section 201.31k, *Agreed-Upon Procedures Engagements*.

responsibility for the sufficiency of those procedures.[126] Including only those elements that the AICPA reporting standards for agreed-upon procedure engagements require or permit ensures that auditors comply with the AICPA standards and that users of GAGAS reports have an understanding of the nature of the work performed and the results of the agreed-upon procedures engagement.

[126]See AICPA AT Section 201.31h and 201.11-201.14, *Agreed-Upon Procedures Engagements*.

Field Work Standards for Performance Audits

Introduction

6.01 This chapter contains field work requirements and guidance for performance audits conducted in accordance with generally accepted government auditing standards (GAGAS). The purpose of field work requirements is to establish an overall approach for auditors to apply in obtaining reasonable assurance that the evidence is sufficient and appropriate to support the auditors' findings and conclusions. The field work requirements for performance audits relate to planning the audit; supervising staff; obtaining sufficient, appropriate evidence; and preparing audit documentation. The concepts of reasonable assurance, significance, and audit risk form a framework for applying these requirements and are included throughout the discussion of performance audits.

6.02 For performance audits conducted in accordance with GAGAS, the requirements and guidance in chapters 1 through 3, 6, and 7 apply.

Reasonable Assurance

6.03 In performance audits that comply with GAGAS, auditors obtain reasonable assurance that evidence is sufficient and appropriate to support the auditors' findings and conclusions in relation to the audit objectives.[127] Thus, the sufficiency and appropriateness of evidence needed and tests of evidence will vary based on the audit objectives, findings, and conclusions. Objectives for performance audits range from narrow to broad and involve varying types and quality of evidence. In some engagements, sufficient, appropriate evidence is available, but in others, information may have limitations. Professional judgment assists auditors in determining the audit scope and methodology needed to address the audit objectives,

[127]See paragraphs 2.11 and A2.02 for additional discussion of performance audit objectives.

and in evaluating whether sufficient, appropriate evidence has been obtained to address the audit objectives.

Significance in a Performance Audit

6.04 The concept of significance assists auditors throughout a performance audit, including when deciding the type and extent of audit work to perform, when evaluating results of audit work, and when developing the report and related findings and conclusions. Significance is defined as the relative importance of a matter within the context in which it is being considered, including quantitative and qualitative factors. Such factors include the magnitude of the matter in relation to the subject matter of the audit, the nature and effect of the matter, the relevance of the matter, the needs and interests of an objective third party with knowledge of the relevant information, and the impact of the matter to the audited program or activity. Professional judgment assists auditors when evaluating the significance of matters within the context of the audit objectives. In the performance audit requirements, the term “significant” is comparable to the term “material” as used in the context of financial statement engagements.

Audit Risk

6.05 Audit risk is the possibility that the auditors’ findings, conclusions, recommendations, or assurance may be improper or incomplete, as a result of factors such as evidence that is not sufficient and/or appropriate, an inadequate audit process, or intentional omissions or misleading information due to misrepresentation or fraud. The assessment of audit risk involves both qualitative and quantitative considerations. Factors impacting audit risk include the time frames, complexity, or sensitivity of the work; size of the program in terms of dollar amounts and number of citizens served; adequacy of the audited entity’s

systems and processes to detect inconsistencies, significant errors, or fraud; and auditors' access to records. Audit risk includes the risk that auditors will not detect a mistake, inconsistency, significant error, or fraud in the evidence supporting the audit. Audit risk can be reduced by taking actions such as increasing the scope of work; adding specialists, additional reviewers, and other resources to perform the audit; changing the methodology to obtain additional evidence, higher quality evidence, or alternative forms of corroborating evidence; or aligning the findings and conclusions to reflect the evidence obtained.

Planning

6.06 Auditors must adequately plan and document the planning of the work necessary to address the audit objectives.

6.07 Auditors must plan the audit to reduce audit risk to an appropriate level for the auditors to obtain reasonable assurance that the evidence is sufficient and appropriate[128] to support the auditors' findings and conclusions. This determination is a matter of professional judgment. In planning the audit, auditors should assess significance and audit risk and apply these assessments in defining the audit objectives and the scope and methodology to address those objectives. Planning is a continuous process throughout the audit. Therefore, auditors may need to adjust the audit objectives, scope, and methodology as work is being completed. In situations where the audit objectives are established by statute or legislative oversight, auditors may not have latitude to define or adjust the audit objectives or scope.

[128]See paragraphs 6.56 through 6.72 for a discussion about assessing the sufficiency and appropriateness of evidence.

6.08 The objectives are what the audit is intended to accomplish. They identify the audit subject matter and performance aspects to be included, and may also include the potential findings and reporting elements that the auditors expect to develop. Audit objectives can be thought of as questions about the program that the auditors seek to answer based on evidence obtained and assessed against criteria. The term “program” is used in GAGAS to include government entities, organizations, programs, activities, and functions.

6.09 Scope is the boundary of the audit and is directly tied to the audit objectives. The scope defines the subject matter that the auditors will assess and report on, such as a particular program or aspect of a program, the necessary documents or records, the period of time reviewed, and the locations that will be included.

6.10 The methodology describes the nature and extent of audit procedures for gathering and analyzing evidence to address the audit objectives. Audit procedures are the specific steps and tests auditors perform to address the audit objectives. Auditors should design the methodology to obtain reasonable assurance that the evidence is sufficient and appropriate to support the auditors’ findings and conclusions in relation to the audit objectives and to reduce audit risk to an acceptable level.

6.11 Auditors should assess audit risk and significance within the context of the audit objectives by gaining an understanding of the following:

a. the nature and profile of the programs and the needs of potential users of the audit report;

b. internal control as it relates to the specific objectives and scope of the audit;

c. information systems controls for purposes of assessing audit risk and planning the audit within the context of the audit objectives;

d. provisions of laws, regulations, contracts, and grant agreements, and potential fraud, and abuse that are significant within the context of the audit objectives;

e. ongoing investigations or legal proceedings within the context of the audit objectives; and

f. the results of previous audits and attestation engagements that directly relate to the current audit objectives.[129]

6.12 During planning, auditors should also

a. identify the potential criteria needed to evaluate matters subject to audit;

b. identify sources of audit evidence and determine the amount and type of evidence needed given audit risk and significance;

c. evaluate whether to use the work of other auditors and specialists to address some of the audit objectives;

d. assign sufficient staff and specialists with adequate collective professional competence and identify other resources needed to perform the audit;

e. communicate about planning and performance of the audit to management officials, those charged with governance, and others as applicable; and

[129]See paragraphs 6.13 through 6.36 for additional discussion of 6.11 a-f.

f. prepare a written audit plan.[130]

Nature and Profile of the Program and User Needs

6.13 Auditors should obtain an understanding of the nature of the program or program component under audit and the potential use that will be made of the audit results or report as they plan a performance audit. The nature and profile of a program include

a. visibility, sensitivity, and relevant risks associated with the program under audit;

b. age of the program or changes in its conditions;

c. the size of the program in terms of total dollars, number of citizens affected, or other measures;

d. level and extent of review or other forms of independent oversight;

e. program's strategic plan and objectives; and

f. external factors or conditions that could directly affect the program.

6.14 One group of users of the auditors' report is government officials who may have authorized or requested the audit. Other important users of the auditors' report are the audited entity, those responsible for acting on the auditors' recommendations, oversight organizations, and legislative bodies. Other potential users of the auditors' report include government legislators or officials (other than those who may have authorized or requested the audit), the media, interest groups, and individual citizens. In addition to an interest

[130]See paragraphs 6.37 through 6.52 for additional discussion of 6.12 a-f.

in the program, potential users may have an ability to influence the conduct of the program. An awareness of these potential users' interests and influence can help auditors judge whether possible findings could be significant to relevant users.

6.15 Obtaining an understanding of the program under audit helps auditors to assess the relevant risks associated with the program and the impact of the risks on the audit objectives, scope, and methodology. The auditors' understanding may come from knowledge they already have about the program or knowledge they gain from inquiries, observations, and reviewing documents while planning the audit. The extent and breadth of those inquiries and observations will vary among audits based on the audit objectives, as will the need to understand individual aspects of the program, such as the following:

a. Provisions of laws, regulations, contracts and grant agreements: Government programs are usually created by law and are subject to specific laws and regulations. Laws and regulations usually set forth what is to be done, who is to do it, the purpose to be achieved, the population to be served, and related funding guidelines or restrictions. Government programs may also be subject to contracts or grant agreements. Thus, understanding the laws and legislative history establishing a program and the provisions of any contracts or grant agreements is essential to understanding the program itself. Obtaining that understanding is also a necessary step in identifying the provisions of laws, regulations, contracts, or grant agreements that are significant within the context of the audit objectives.

b. Purpose and goals: Purpose is the result or effect that is intended or desired from a program's operation. Legislatures usually establish the program's purpose

when they provide authority for the program. Entity officials may provide more detailed information on the program's purpose to supplement the authorizing legislation. Entity officials are sometimes asked to set goals for program performance and operations, including both output and outcome goals. Auditors may use the stated program purpose and goals as criteria for assessing program performance or may develop additional criteria to use when assessing performance.

c. Internal control: Internal control, sometimes referred to as management control, in the broadest sense includes the plan, policies, methods, and procedures adopted by management to meet its missions, goals, and objectives. Internal control includes the processes for planning, organizing, directing, and controlling program operations. It includes the systems for measuring, reporting, and monitoring program performance. Internal control serves as a defense in safeguarding assets and in preventing and detecting errors; fraud; noncompliance with provisions of laws, regulations, contracts or grant agreements; or abuse.[131]

d. Inputs: Inputs are the amount of resources (in terms of money, material, personnel, etc.) that are put into a program. These resources may come from within or outside the entity operating the program. Measures of inputs can have a number of dimensions, such as cost, timing, and quality. Examples of measures of inputs are dollars spent, employee-hours expended, and square feet of building space.

e. Program operations: Program operations are the strategies, processes, and activities management uses

[131]See paragraphs 6.16 through 6.27 for guidance pertaining to internal control.

to convert inputs into outputs. Program operations may be subject to internal control.

f. Outputs: Outputs represent the quantity of goods or services produced by a program. For example, an output measure for a job training program could be the number of persons completing training, and an output measure for an aviation safety inspection program could be the number of safety inspections completed.

g. Outcomes: Outcomes are accomplishments or results of a program. For example, an outcome measure for a job training program could be the percentage of trained persons obtaining a job and still in the work place after a specified period of time. An example of an outcome measure for an aviation safety inspection program could be the percentage reduction in safety problems found in subsequent inspections or the percentage of problems deemed corrected in follow-up inspections. Such outcome measures show the progress made in achieving the stated program purpose of helping unemployable citizens obtain and retain jobs, and improving the safety of aviation operations. Outcomes may be influenced by cultural, economic, physical, or technological factors outside the program. Auditors may use approaches drawn from other disciplines, such as program evaluation, to isolate the effects of the program from these other influences. Outcomes also include unexpected and/or unintentional effects of a program, both positive and negative.

Internal Control

6.16 Auditors should obtain an understanding of internal control[132] that is significant within the context of the audit objectives. For internal control that is significant within the context of the audit objectives, auditors should assess whether internal control has been properly designed and implemented and should perform procedures designed to obtain sufficient, appropriate evidence to support their assessment about the effectiveness of those controls. Information systems controls are often an integral part of an entity's internal control. The effectiveness of significant internal controls is frequently dependent on the effectiveness of information systems controls. Thus, when obtaining an understanding of internal control significant to the audit objectives, auditors should also determine whether it is necessary to evaluate information systems controls.[133]

6.17 The effectiveness of internal control that is significant within the context of the audit objectives can affect audit risk. Consequently, auditors may determine that it is necessary to modify the nature, timing, or extent of the audit procedures based on the auditors' assessment of internal control and the results of internal control testing. For example, poorly controlled aspects of a program have a higher risk of failure, so auditors may choose to focus more efforts in these areas. Conversely, effective controls at the audited entity may enable the auditors to limit the extent and type of audit testing needed.

6.18 Auditors may obtain an understanding of internal control through inquiries, observations, inspection of documents and records, review of other auditors'

[132]See paragraphs A.03 and A.04 for additional discussion on internal control.

[133]See paragraphs 6.23 through 6.27 for additional discussion on evaluating the effectiveness of information systems controls.

reports, or direct tests. The nature and extent of procedures auditors perform to obtain an understanding of internal control may vary among audits based on audit objectives, audit risk, known or potential internal control deficiencies, and the auditors' knowledge about internal control gained in prior audits.

6.19 The following discussion of the principal types of internal control objectives is intended to help auditors better understand internal controls and determine whether or to what extent they are significant to the audit objectives.

a. Effectiveness and efficiency of program operations: Controls over program operations include policies and procedures that the audited entity has implemented to provide reasonable assurance that a program meets its objectives, while considering cost-effectiveness and efficiency. Understanding these controls can help auditors understand the program operations that convert inputs to outputs and outcomes.

b. Relevance and reliability of information: Controls over the relevance and reliability of information include policies and procedures that officials of the audited entity have implemented to provide themselves reasonable assurance that operational and financial information they use for decision making and reporting externally is relevant and reliable and fairly disclosed in reports. Understanding these controls can help auditors (1) assess the risk that the information gathered by the entity may not be relevant or reliable and (2) design appropriate tests of the information considering the audit objectives.

c. Compliance with applicable laws, regulations, contracts, and grant agreements: Controls over compliance include policies and procedures that the audited entity has implemented to provide reasonable

assurance that program implementation is in accordance with provisions of laws, regulations, contracts, and grant agreements. Understanding the relevant controls concerning compliance with those laws, regulations, contracts or grant agreements that the auditors have determined are significant within the context of the audit objectives can help them assess the risk of noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse.

6.20 A subset of these categories of internal control objectives is the safeguarding of assets and resources. Controls over the safeguarding of assets and resources include policies and procedures that the audited entity has implemented to reasonably prevent or promptly detect unauthorized acquisition, use, or disposition of assets and resources.

6.21 In performance audits, a deficiency in internal control[134] exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct (1) impairments of effectiveness or efficiency of operations, (2) misstatements in financial or performance information, or (3) noncompliance with provisions of laws, regulations, contracts, or grant agreements on a timely basis. A deficiency in design exists when (a) a control necessary to meet the control objective is missing or (b) an existing control is not properly designed so that, even if the control operates as designed, the control objective is not met. A deficiency in operation exists when a properly designed control does not operate as designed, or when the person performing the control does not possess the

[134]See paragraph A.05 for additional discussion of internal control deficiencies.

necessary authority or qualifications to perform the control effectively.

6.22 Internal auditing is an important part of overall governance, accountability, and internal control. A key role of many internal audit organizations is to provide assurance that internal controls are in place to adequately mitigate risks and achieve program goals and objectives. The auditor may determine that it is appropriate to use the work of the internal auditors in the auditor's assessment of the effectiveness of design or operation of internal controls that are significant within the context of the audit objectives.[135]

Information Systems Controls

6.23 Understanding information systems controls is important when information systems are used extensively throughout the program under audit and the fundamental business processes related to the audit objectives rely on information systems. Information systems controls consist of those internal controls that are dependent on information systems processing and include general controls, application controls, and user controls.

a. Information systems general controls (entitywide, system, and application levels) are the policies and procedures that apply to all or a large segment of an entity's information systems. General controls help ensure the proper operation of information systems by creating the environment for proper operation of application controls. General controls include security management, logical and physical access, configuration management, segregation of duties, and contingency planning.

[135]See paragraphs 6.40 through 6.44 for standards and guidance for using the work of other auditors.

b. Application controls, sometimes referred to as business process controls, are those controls that are incorporated directly into computer applications to help ensure the validity, completeness, accuracy, and confidentiality of transactions and data during application processing. Application controls include controls over input, processing, output, master file, interface, and data management system controls.

c. User controls are portions of controls that are performed by people interacting with information system controls. A user control is an information system control if its effectiveness depends on information systems processing or the reliability (accuracy, completeness, and validity) of information processed by information systems.

6.24 An organization's use of information systems controls may be extensive; however, auditors are primarily interested in those information systems controls that are significant to the audit objectives. Information systems controls are significant to the audit objectives if auditors determine that it is necessary to evaluate the effectiveness of information systems controls in order to obtain sufficient, appropriate evidence. When information systems controls are determined to be significant to the audit objectives or when the effectiveness of significant controls is dependent on the effectiveness of information systems controls, auditors should then evaluate the design and operating effectiveness of such controls. This evaluation would include other information systems controls that impact the effectiveness of the significant controls or the reliability of information used in performing the significant controls. Auditors should obtain a sufficient understanding of information systems

controls necessary to assess audit risk and plan the audit within the context of the audit objectives.[136]

6.25 Audit procedures to evaluate the effectiveness of significant information systems controls include (1) gaining an understanding of the system as it relates to the information and (2) identifying and evaluating the general, application, and user controls that are critical to providing assurance over the reliability of the information required for the audit.

6.26 The evaluation of information systems controls may be done in conjunction with the auditors' consideration of internal control within the context of the audit objectives[137] or as a separate audit objective or audit procedure, depending on the objectives of the audit. Depending on the significance of information systems controls to the audit objectives, the extent of audit procedures to obtain such an understanding may be limited or extensive. In addition, the nature and extent of audit risk related to information systems controls are affected by the nature of the hardware and software used, the configuration of the entity's systems and networks, and the entity's information systems strategy.

6.27 Auditors should determine which audit procedures related to information systems controls are needed to obtain sufficient, appropriate evidence to support the audit findings and conclusions. The following factors may assist auditors in making this determination:

[136]Refer to additional criteria and guidance in *Federal Information System Controls Audit Manual* (FISCAM), GAO-09-232G (Washington, D.C.: February 2009) and *IT Standards, Guidelines, and Tools and Techniques for Audit and Assurance and Control Professionals*, published by ISACA.

[137]See paragraphs 6.16 through 6.22 for additional discussion on internal control.

a. The extent to which internal controls that are significant to the audit depend on the reliability of information processed or generated by information systems.

b. The availability of evidence outside the information system to support the findings and conclusions: It may not be possible for auditors to obtain sufficient, appropriate evidence without evaluating the effectiveness of relevant information systems controls. For example, if information supporting the findings and conclusions is generated by information systems or its reliability is dependent on information systems controls, there may not be sufficient supporting or corroborating information or documentary evidence that is available other than that produced by the information systems.

c. The relationship of information systems controls to data reliability: To obtain evidence about the reliability of computer-generated information, auditors may decide to evaluate the effectiveness of information systems controls as part of obtaining evidence about the reliability of the data. If the auditor concludes that information systems controls are effective, the auditor may reduce the extent of direct testing of data.

d. Evaluating the effectiveness of information systems controls as an audit objective: When evaluating the effectiveness of information systems controls is directly a part of an audit objective, auditors should test information systems controls necessary to address the audit objectives. For example, the audit may involve the effectiveness of information systems controls related to certain systems, facilities, or organizations.

Provisions of Laws, Regulations, Contracts, and Grant Agreements, Fraud, and Abuse

Provisions of Laws, Regulations, Contracts, and Grant Agreements

6.28 Auditors should identify any provisions of laws, regulations, contracts or grant agreements that are significant within the context of the audit objectives and assess the risk that noncompliance with provisions of laws, regulations, contracts or grant agreements could occur.[138] Based on that risk assessment, the auditors should design and perform procedures to obtain reasonable assurance of detecting instances of noncompliance with provisions of laws, regulations, contracts, or grant agreements that are significant within the context of the audit objectives.

6.29 The auditors' assessment of audit risk may be affected by such factors as the complexity or newness of the laws, regulations, contracts or grant agreements. The auditors' assessment of audit risk also may be affected by whether the entity has controls that are effective in preventing or detecting noncompliance with provisions of laws, regulations, contracts, or grant agreements. If auditors obtain sufficient, appropriate evidence of the effectiveness of these controls, they can reduce the extent of their tests of compliance.

Fraud

6.30 In planning the audit, auditors should assess risks of fraud occurring that is significant within the context of the audit objectives.[139] Fraud involves obtaining something of value through willful misrepresentation.

[138]See paragraphs A.11 through A.13 for additional discussion on the significance of provisions of laws, regulations, contracts, or grant agreements.

[139]See paragraph A.10 for examples of indicators of fraud risk.

Whether an act is, in fact, fraud is a determination to be made through the judicial or other adjudicative system and is beyond auditors' professional responsibility. Audit team members should discuss among the team fraud risks, including factors such as individuals' incentives or pressures to commit fraud, the opportunity for fraud to occur, and rationalizations or attitudes that could allow individuals to commit fraud. Auditors should gather and assess information to identify risks of fraud that are significant within the scope of the audit objectives or that could affect the findings and conclusions. For example, auditors may obtain information through discussion with officials of the audited entity or through other means to determine the susceptibility of the program to fraud, the status of internal controls the audited entity has established to prevent and detect fraud, or the risk that officials of the audited entity could override internal control. An attitude of professional skepticism in assessing these risks assists auditors in assessing which factors or risks could significantly affect the audit objectives.

6.31 When auditors identify factors or risks related to fraud that has occurred or is likely to have occurred that they believe are significant within the context of the audit objectives, they should design procedures to obtain reasonable assurance of detecting any such fraud. Assessing the risk of fraud is an ongoing process throughout the audit and relates not only to planning the audit but also to evaluating evidence obtained during the audit.

6.32 When information comes to the auditors' attention indicating that fraud, significant within the context of the audit objectives, may have occurred, auditors should extend the audit steps and procedures, as necessary, to (1) determine whether fraud has likely occurred and (2) if so, determine its effect on the audit findings. If the fraud that may have occurred is not significant within the context of the audit objectives, the auditors may

conduct additional audit work as a separate engagement, or refer the matter to other parties with oversight responsibility or jurisdiction.

Abuse

6.33 Abuse involves behavior that is deficient or improper when compared with behavior that a prudent person would consider reasonable and necessary business practice given the facts and circumstances. Abuse also includes misuse of authority or position for personal financial interests or those of an immediate or close family member or business associate.[140] Abuse does not necessarily involve fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements.

6.34 Because the determination of abuse is subjective, auditors are not required to detect abuse in performance audits. However, as part of a GAGAS audit, if auditors become aware of abuse that could be quantitatively or qualitatively significant to the program under audit, auditors should apply audit procedures specifically directed to ascertain the potential effect on the program under audit within the context of the audit objectives. After performing additional work, auditors may discover that the abuse represents potential fraud or noncompliance with provisions of laws, regulations, contracts, or grant agreements.

Ongoing Investigations and Legal Proceedings

6.35 Avoiding interference with investigations or legal proceedings is important in pursuing indications of fraud, noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse. Laws, regulations, and policies may require auditors to report indications of certain types of fraud, noncompliance with provisions of laws, regulations,

[140]See A.08 for additional examples of abuse.

contracts, or grant agreements, or abuse to law enforcement or investigatory authorities before performing additional audit procedures. When investigations or legal proceedings are initiated or in process, auditors should evaluate the impact on the current audit. In some cases, it may be appropriate for the auditors to work with investigators or legal authorities, or withdraw from or defer further work on the audit or a portion of the audit to avoid interfering with an ongoing investigation or legal proceeding.

Previous Audits and Attestation Engagements

6.36 Auditors should evaluate whether the audited entity has taken appropriate corrective action to address findings and recommendations from previous engagements that are significant within the context of the audit objectives. When planning the audit, auditors should ask management of the audited entity to identify previous audits, attestation engagements, performance audits, or other studies that directly relate to the objectives of the audit, including whether related recommendations have been implemented. Auditors should use this information in assessing risk and determining the nature, timing, and extent of current audit work, including determining the extent to which testing the implementation of the corrective actions is applicable to the current audit objectives.

Identifying Audit Criteria

6.37 Auditors should identify criteria. Criteria represent the laws, regulations, contracts, grant agreements, standards, specific requirements, measures, expected performance, defined business practices, and benchmarks against which performance is compared or evaluated. Criteria identify the required or desired state or expectation with respect to the program or operation. Criteria provide a context for evaluating evidence and understanding the findings, conclusions, and recommendations included in the report. Auditors should use criteria that are relevant to the audit

objectives and permit consistent assessment of the subject matter.[141]

Identifying Sources of Evidence and the Amount and Type of Evidence Required

6.38 Auditors should identify potential sources of information that could be used as evidence. Auditors should determine the amount and type of evidence needed to obtain sufficient, appropriate evidence to address the audit objectives and adequately plan audit work.

6.39 If auditors believe that it is likely that sufficient, appropriate evidence will not be available, they may revise the audit objectives or modify the scope and methodology and determine alternative procedures to obtain additional evidence or other forms of evidence to address the current audit objectives. Auditors should also evaluate whether the lack of sufficient, appropriate evidence is due to internal control deficiencies or other program weaknesses, and whether the lack of sufficient, appropriate evidence could be the basis for audit findings.[142]

Using the Work of Others

6.40 Auditors should determine whether other auditors have conducted, or are conducting, audits of the program that could be relevant to the current audit objectives. The results of other auditors' work may be useful sources of information for planning and performing the audit. If other auditors have identified areas that warrant further audit work or follow-up, their work may influence the auditors' selection of objectives, scope, and methodology.

[141]See paragraph A6.02 for examples of criteria.

[142]See paragraphs 6.56 through 6.72 for standards concerning evidence.

6.41 If other auditors have completed audit work related to the objectives of the current audit, the current auditors may be able to use the work of the other auditors to support findings or conclusions for the current audit and, thereby, avoid duplication of efforts. If auditors use the work of other auditors, they should perform procedures that provide a sufficient basis for using that work. Auditors should obtain evidence concerning the other auditors' qualifications and independence and should determine whether the scope, quality, and timing of the audit work performed by the other auditors is adequate for reliance in the context of the current audit objectives. Procedures that auditors may perform in making this determination include reviewing the other auditors' report, audit plan, or audit documentation, and/or performing tests of the other auditors' work. The nature and extent of evidence needed will depend on the significance of the other auditors' work to the current audit objectives and the extent to which the auditors will use that work.[143]

6.42 Some audits may necessitate the use of specialized techniques or methods that require the skills of a specialist. Specialists to whom this section applies include, but are not limited to, actuaries, appraisers, attorneys, engineers, environmental consultants, medical professionals, statisticians, geologists, and information technology experts. If auditors intend to use the work of specialists, they should assess the professional qualifications and independence of the specialists.

6.43 Auditors' assessment of professional qualifications of the specialist involves the following:

[143]See paragraph 3.107 for additional discussion on using the work of other auditors and peer review reports.

a. the professional certification, license, or other recognition of the competence of the specialist in his or her field, as appropriate;

b. the reputation and standing of the specialist in the views of peers and others familiar with the specialist's capability or performance;

c. the specialist's experience and previous work in the subject matter; and

d. the auditors' prior experience in using the specialist's work.

6.44 Auditors' assessment of the independence of specialists who perform audit work includes identifying threats and applying any necessary safeguards in the same manner as they would for auditors performing work on those audits.[144]

Assigning Staff and Other Resources

6.45 Audit management should assign sufficient staff and specialists with adequate collective professional competence to perform the audit.[145] Staffing an audit includes, among other things:

a. assigning staff and specialists with the collective knowledge, skills, and experience appropriate for the job,

b. assigning a sufficient number of staff and supervisors to the audit,

[144]See paragraphs 3.02 through 3.26 for additional discussion related to independence and applying the conceptual framework approach to independence.

[145]See paragraphs 3.72 and 3.79 through 3.81 for additional discussion of using specialists in a GAGAS audit.

c. providing for on-the-job training of staff, and

d. engaging specialists when necessary.

6.46 If planning to use the work of a specialist, auditors should document the nature and scope of the work to be performed by the specialist, including

a. the objectives and scope of the specialist's work,

b. the intended use of the specialist's work to support the audit objectives,

c. the specialist's procedures and findings so they can be evaluated and related to other planned audit procedures, and

d. the assumptions and methods used by the specialist.

Communicating with Management, Those Charged with Governance, and Others

6.47 Auditors should communicate an overview of the objectives, scope, and methodology and the timing of the performance audit and planned reporting (including any potential restrictions on the report), unless doing so could significantly impair the auditors' ability to obtain sufficient, appropriate evidence to address the audit objectives, such as when the auditors plan to conduct unannounced cash counts or perform procedures related to indications of fraud. Auditors should communicate with the following parties, as applicable:

a. management of the audited entity, including those with sufficient authority and responsibility to implement corrective action in the program or activity being audited;

b. those charged with governance;[146]

c. the individuals contracting for or requesting audit services, such as contracting officials or grantees; and

d. the cognizant legislative committee, when auditors perform the audit pursuant to a law or regulation or they conduct the work for the legislative committee that has oversight of the audited entity.

6.48 In those situations where there is not a single individual or group that both oversees the strategic direction of the audited entity and the fulfillment of its accountability obligations or in other situations where the identity of those charged with governance is not clearly evident, auditors should document the process followed and conclusions reached for identifying the appropriate individuals to receive the required auditor communications.

6.49 Determining the form, content, and frequency of the communication is a matter of professional judgment, although written communication is preferred. Auditors may use an engagement letter to communicate the information. Auditors should document this communication.

6.50 If an audit is terminated before it is completed and an audit report is not issued, auditors should document the results of the work to the date of termination and why the audit was terminated. Determining whether and how to communicate the reason for terminating the audit to those charged with governance, appropriate officials of the audited entity, the entity contracting for or requesting the audit, and other appropriate officials will

[146]See paragraphs A1.05 through A1.07 for a discussion of the role of those charged with governance.

depend on the facts and circumstances and, therefore, is a matter of professional judgment.

Preparing a Written Audit Plan

6.51 Auditors must prepare a written audit plan for each audit. The form and content of the written audit plan may vary among audits and may include an audit strategy, audit program, project plan, audit planning paper, or other appropriate documentation of key decisions about the audit objectives, scope, and methodology and the auditors' basis for those decisions. Auditors should update the plan, as necessary, to reflect any significant changes to the plan made during the audit.

6.52 A written audit plan provides an opportunity for audit organization management to supervise audit planning and to determine whether

a. the proposed audit objectives are likely to result in a useful report;

b. the audit plan adequately addresses relevant risks;

c. the proposed audit scope and methodology are adequate to address the audit objectives;

d. available evidence is likely to be sufficient and appropriate for purposes of the audit; and

e. sufficient staff, supervisors, and specialists with adequate collective professional competence and other resources are available to perform the audit and to meet expected time frames for completing the work.

Supervision

6.53 Audit supervisors or those designated to supervise auditors must properly supervise audit staff.

6.54 Audit supervision involves providing sufficient guidance and direction to staff assigned to the audit to address the audit objectives and follow applicable requirements, while staying informed about significant problems encountered, reviewing the work performed, and providing effective on-the-job training.[147]

6.55 The nature and extent of the supervision of staff and the review of audit work may vary depending on a number of factors, such as the size of the audit organization, the significance of the work, and the experience of the staff.

Obtaining Sufficient, Appropriate Evidence

6.56 Auditors must obtain sufficient, appropriate evidence to provide a reasonable basis for their findings and conclusions.

6.57 The concept of sufficient, appropriate evidence is integral to an audit. Appropriateness is the measure of the quality of evidence that encompasses its relevance, validity, and reliability in providing support for findings and conclusions related to the audit objectives.[148] In assessing the overall appropriateness of evidence, auditors should assess whether the evidence is relevant, valid, and reliable. Sufficiency is a measure of the quantity of evidence used to support the findings and conclusions related to the audit objectives. In assessing the sufficiency of evidence, auditors should determine whether enough evidence has been obtained to persuade a knowledgeable person that the findings are reasonable.

[147]See paragraph 6.83c for the documentation requirement related to supervision.

[148]See paragraph A6.05 for additional discussion of the appropriateness of evidence.

6.58 In assessing evidence, auditors should evaluate whether the evidence taken as a whole is sufficient and appropriate for addressing the audit objectives and supporting findings and conclusions. Audit objectives may vary widely, as may the level of work necessary to assess the sufficiency and appropriateness of evidence to address the objectives. For example, in establishing the appropriateness of evidence, auditors may test its reliability by obtaining supporting evidence, using statistical testing, or obtaining corroborating evidence. The concepts of audit risk and significance assist auditors with evaluating the audit evidence.[149]

6.59 Professional judgment assists auditors in determining the sufficiency and appropriateness of evidence taken as a whole. Interpreting, summarizing, or analyzing evidence is typically used in the process of determining the sufficiency and appropriateness of evidence and in reporting the results of the audit work. When appropriate, auditors may use statistical methods to analyze and interpret evidence to assess its sufficiency.

Appropriateness

6.60 Appropriateness is the measure of the quality of evidence that encompasses the relevance, validity, and reliability of evidence used for addressing the audit objectives and supporting findings and conclusions.[150]

a. Relevance refers to the extent to which evidence has a logical relationship with, and importance to, the issue being addressed.

[149]See paragraphs 6.04 and 6.05 for a discussion of significance and audit risk.

[150]See paragraph A6.05 for additional guidance regarding assessing the appropriateness of evidence in relation to the audit objectives.

b. Validity refers to the extent to which evidence is a meaningful or reasonable basis for measuring what is being evaluated. In other words, validity refers to the extent to which evidence represents what it is purported to represent.

c. Reliability refers to the consistency of results when information is measured or tested and includes the concepts of being verifiable or supported.[151]

6.61 There are different types and sources of evidence that auditors may use, depending on the audit objectives. Evidence may be obtained by observation, inquiry, or inspection. Each type of evidence has its own strengths and weaknesses.[152] The following contrasts are useful in judging the appropriateness of evidence. However, these contrasts are not adequate in themselves to determine appropriateness. The nature and types of evidence to support auditors' findings and conclusions are matters of the auditors' professional judgment based on the audit objectives and audit risk.

a. Evidence obtained when internal control is effective is generally more reliable than evidence obtained when internal control is weak or nonexistent.

b. Evidence obtained through the auditors' direct physical examination, observation, computation, and inspection is generally more reliable than evidence obtained indirectly.

c. Examination of original documents is generally more reliable than examination of copies.

[151]See paragraph 6.66 for a discussion of computer-processed information and guidance on data reliability.

[152]See paragraph A6.04 for additional guidance regarding the types of evidence.

d. Testimonial evidence obtained under conditions in which persons may speak freely is generally more reliable than evidence obtained under circumstances in which the persons may be intimidated.

e. Testimonial evidence obtained from an individual who is not biased and has direct knowledge about the area is generally more reliable than testimonial evidence obtained from an individual who is biased or has indirect or partial knowledge about the area.

f. Evidence obtained from a knowledgeable, credible, and unbiased third party is generally more reliable than evidence obtained from management of the audited entity or others who have a direct interest in the audited entity.

6.62 Testimonial evidence may be useful in interpreting or corroborating documentary or physical information. Auditors should evaluate the objectivity, credibility, and reliability of the testimonial evidence. Documentary evidence may be used to help verify, support, or challenge testimonial evidence.

6.63 Surveys generally provide self-reported information about existing conditions or programs. Evaluation of the survey design and administration assists auditors in evaluating the objectivity, credibility, and reliability of the self-reported information.

6.64 When sampling is used, the method of selection that is appropriate will depend on the audit objectives. When a representative sample is needed, the use of statistical sampling approaches generally results in stronger evidence than that obtained from nonstatistical techniques. When a representative sample is not needed, a targeted selection may be effective if the auditors have isolated risk factors or other criteria to target the selection.

6.65 When auditors use information provided by officials of the audited entity as part of their evidence, they should determine what the officials of the audited entity or other auditors did to obtain assurance over the reliability of the information. The auditor may find it necessary to perform testing of management's procedures to obtain assurance or perform direct testing of the information. The nature and extent of the auditors' procedures will depend on the significance of the information to the audit objectives and the nature of the information being used.

6.66 Auditors should assess the sufficiency and appropriateness of computer-processed information regardless of whether this information is provided to auditors or auditors independently extract it. The nature, timing, and extent of audit procedures to assess sufficiency and appropriateness is affected by the effectiveness of the audited entity's internal controls over the information, including information systems controls, and the significance of the information and the level of detail presented in the auditors' findings and conclusions in light of the audit objectives.[153] The assessment of the sufficiency and appropriateness of computer-processed information includes considerations regarding the completeness and accuracy of the data for the intended purposes.[154]

Sufficiency

6.67 Sufficiency is a measure of the quantity of evidence used for addressing the audit objectives and supporting findings and conclusions. Sufficiency also depends on the appropriateness of the evidence. In

[153]See paragraphs 6.23 through 6.27 for additional discussion on assessing the effectiveness of information systems controls.

[154]Refer to additional guidance in *Assessing the Reliability of Computer-Processed Data*, GAO-09-680G (Washington, D.C.: July 2009).

determining the sufficiency of evidence, auditors should determine whether enough appropriate evidence exists to address the audit objectives and support the findings and conclusions.

6.68 The following presumptions are useful in judging the sufficiency of evidence. The sufficiency of evidence required to support the auditors' findings and conclusions is a matter of the auditors' professional judgment.

a. The greater the audit risk, the greater the quantity and quality of evidence required.

b. Stronger evidence may allow less evidence to be used.

c. Having a large volume of audit evidence does not compensate for a lack of relevance, validity, or reliability.

Overall Assessment of Evidence

6.69 Auditors should determine the overall sufficiency and appropriateness of evidence to provide a reasonable basis for the findings and conclusions, within the context of the audit objectives. Professional judgments about the sufficiency and appropriateness of evidence are closely interrelated, as auditors interpret the results of audit testing and evaluate whether the nature and extent of the evidence obtained is sufficient and appropriate. Auditors should perform and document an overall assessment of the collective evidence used to support findings and conclusions, including the results of any specific assessments conducted to conclude on the validity and reliability of specific evidence.

6.70 Sufficiency and appropriateness of evidence are relative concepts, which may be thought of in terms of a

continuum rather than as absolutes. Sufficiency and appropriateness are evaluated in the context of the related findings and conclusions. For example, even though the auditors may have some limitations or uncertainties about the sufficiency or appropriateness of some of the evidence, they may nonetheless determine that in total there is sufficient, appropriate evidence to support the findings and conclusions.

6.71 When assessing the sufficiency and appropriateness of evidence, auditors should evaluate the expected significance of evidence to the audit objectives, findings, and conclusions, available corroborating evidence, and the level of audit risk. The steps to assess evidence may depend on the nature of the evidence, how the evidence is used in the audit or report, and the audit objectives.

a. Evidence is sufficient and appropriate when it provides a reasonable basis for supporting the findings or conclusions within the context of the audit objectives.

b. Evidence is not sufficient or not appropriate when (1) using the evidence carries an unacceptably high risk that it could lead the auditor to reach an incorrect or improper conclusion, (2) the evidence has significant limitations, given the audit objectives and intended use of the evidence, or (3) the evidence does not provide an adequate basis for addressing the audit objectives or supporting the findings and conclusions. Auditors should not use such evidence as support for findings and conclusions.

6.72 Evidence has limitations or uncertainties when the validity or reliability of the evidence has not been assessed or cannot be assessed, given the audit objectives and the intended use of the evidence. Limitations also include errors identified by the auditors in their testing. When the auditors identify limitations or

uncertainties in evidence that is significant to the audit findings and conclusions, they should apply additional procedures, as appropriate. Such procedures include

a. seeking independent, corroborating evidence from other sources;

b. redefining the audit objectives or limiting the audit scope to eliminate the need to use the evidence;

c. presenting the findings and conclusions so that the supporting evidence is sufficient and appropriate and describing in the report the limitations or uncertainties with the validity or reliability of the evidence, if such disclosure is necessary to avoid misleading the report users about the findings or conclusions;[155] and

d. determining whether to report the limitations or uncertainties as a finding, including any related, significant internal control deficiencies.

Developing Elements of a Finding

6.73 Auditors should plan and perform procedures to develop the elements of a finding necessary to address the audit objectives.[156] In addition, if auditors are able to sufficiently develop the elements of a finding, they should develop recommendations for corrective action if they are significant within the context of the audit objectives. The elements needed for a finding are related to the objectives of the audit. Thus, a finding or set of findings is complete to the extent that the audit objectives are addressed and the report clearly relates those objectives to the elements of a finding. For

[155]See paragraph 7.15 for additional reporting requirements when there are limitations or uncertainties with the validity or reliability of evidence.

[156]See paragraph A6.06 for additional discussion on findings.

example, an audit objective may be to determine the current status or condition of program operations or progress in implementing legislative requirements, and not the related cause or effect. In this situation, developing the condition would address the audit objective and development of the other elements of a finding would not be necessary.

6.74 The element of criteria is discussed in paragraph 6.37, and the other elements of a finding—condition, effect, and cause—are discussed in paragraphs 6.75 through 6.77.

6.75 Condition: Condition is a situation that exists. The condition is determined and documented during the audit.

6.76 Cause: The cause identifies the reason or explanation for the condition or the factor or factors responsible for the difference between the situation that exists (condition) and the required or desired state (criteria), which may also serve as a basis for recommendations for corrective actions. Common factors include poorly designed policies, procedures, or criteria; inconsistent, incomplete, or incorrect implementation; or factors beyond the control of program management. Auditors may assess whether the evidence provides a reasonable and convincing argument for why the stated cause is the key factor or factors contributing to the difference between the condition and the criteria.[157]

6.77 Effect or potential effect: The effect is a clear, logical link to establish the impact or potential impact of the difference between the situation that exists (condition) and the required or desired state (criteria).

[157]See paragraph A6.06 for additional discussion on cause.

The effect or potential effect identifies the outcomes or consequences of the condition. When the audit objectives include identifying the actual or potential consequences of a condition that varies (either positively or negatively) from the criteria identified in the audit, "effect" is a measure of those consequences. Effect or potential effect may be used to demonstrate the need for corrective action in response to identified problems or relevant risks.[158]

Early Communication of Deficiencies

6.78 Auditors report deficiencies in internal control, fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse. For some matters, early communication to those charged with governance or management may be important because of their relative significance and the urgency for corrective follow-up action. Further, when a control deficiency results in noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse, early communication is important to allow management to take prompt corrective action to prevent further noncompliance. When a deficiency is communicated early, the reporting requirements in paragraphs 7.18 through 7.23 still apply.

Audit Documentation

6.79 Auditors must prepare audit documentation related to planning, conducting, and reporting for each audit. Auditors should prepare audit documentation in sufficient detail to enable an experienced auditor, having no previous connection to the audit, to understand from the audit documentation the nature, timing, extent, and results of audit procedures performed, the audit evidence obtained and its source

[158]See paragraph A6.07 for additional discussion on effect.

and the conclusions reached, including evidence that supports the auditors' significant judgments and conclusions. An experienced auditor means an individual (whether internal or external to the audit organization) who possesses the competencies and skills that would have enabled him or her to conduct the performance audit. These competencies and skills include an understanding of (1) the performance audit processes, (2) GAGAS and applicable legal and regulatory requirements, (3) the subject matter associated with achieving the audit objectives, and (4) issues related to the audited entity's environment.

6.80 Auditors should prepare audit documentation that contains evidence that supports the findings, conclusions, and recommendations before they issue their report.

6.81 Auditors should design the form and content of audit documentation to meet the circumstances of the particular audit. The audit documentation constitutes the principal record of the work that the auditors have performed in accordance with standards and the conclusions that the auditors have reached. The quantity, type, and content of audit documentation are a matter of the auditors' professional judgment.

6.82 Audit documentation is an essential element of audit quality. The process of preparing and reviewing audit documentation contributes to the quality of an audit. Audit documentation serves to (1) provide the principal support for the auditors' report, (2) aid auditors in conducting and supervising the audit, and (3) allow for the review of audit quality.

6.83 Auditors should document[159] the following:

a. the objectives, scope, and methodology of the audit;

b. the work performed and evidence obtained to support significant judgments and conclusions, including descriptions of transactions and records examined (for example, by listing file numbers, case numbers, or other means of identifying specific documents examined, but copies of documents examined or detailed listings of information from those documents are not required); and

c. supervisory review, before the audit report is issued, of the evidence that supports the findings, conclusions, and recommendations contained in the audit report.

6.84 When auditors do not comply with applicable GAGAS requirements due to law, regulation, scope limitations, restrictions on access to records, or other issues impacting the audit, the auditors should document the departure from the GAGAS requirements and the impact on the audit and on the auditors' conclusions. This applies to departures from unconditional requirements and from presumptively mandatory requirements when alternative procedures performed in the circumstances were not sufficient to achieve the objectives of the standard.[160]

6.85 Underlying GAGAS audits is the premise that audit organizations in federal, state, and local governments and public accounting firms engaged to perform audits in accordance with GAGAS cooperate in auditing

[159]See paragraphs 6.06, 6.46, 6.48, 6.49, 6.50, 6.69, 6.84, 7.19, 7.22, and 7.44 for additional documentation requirements regarding performance audits.

[160]See paragraphs 2.24 and 2.25 for additional requirements on citing compliance with GAGAS.

programs of common interest so that auditors may use others' work and avoid duplication of efforts. Subject to applicable laws and regulations, auditors should make appropriate individuals, as well as audit documentation, available upon request and in a timely manner to other auditors or reviewers to satisfy these objectives. The use of auditors' work by other auditors may be facilitated by contractual arrangements for GAGAS audits that provide for full and timely access to appropriate individuals, as well as audit documentation.

Reporting Standards for Performance Audits

Introduction

7.01 This chapter contains reporting requirements and guidance for performance audits conducted in accordance with generally accepted government auditing standards (GAGAS). The purpose of reporting requirements is to establish the overall approach for auditors to apply in communicating the results of the performance audit. The reporting requirements for performance audits relate to the form of the report, the report contents, and report issuance and distribution.[161]

7.02 For performance audits conducted in accordance with GAGAS, the requirements and guidance in chapters 1 through 3, 6, and 7 apply.

Reporting

7.03 Auditors must issue audit reports communicating the results of each completed performance audit.

7.04 Auditors should use a form of the audit report that is appropriate for its intended use and is in writing or in some other retrievable form.[162] For example, auditors may present audit reports using electronic media that are retrievable by report users and the audit organization. The users' needs will influence the form of the audit report. Different forms of audit reports include written reports, letters, briefing slides, or other presentation materials.

[161]See paragraph A7.02 for a description of report quality elements.

[162]See paragraph 7.43 for situations when audit organizations are subject to public records laws.

7.05 The purposes of audit reports are to (1) communicate the results of audits to those charged with governance, the appropriate officials of the audited entity, and the appropriate oversight officials; (2) make the results less susceptible to misunderstanding; (3) make the results available to the public, unless specifically limited;[163] and (4) facilitate follow-up to determine whether appropriate corrective actions have been taken.

7.06 If an audit is terminated before it is completed and an audit report is not issued, auditors should follow the guidance in paragraph 6.50.

7.07 If, after the report is issued, the auditors discover that they did not have sufficient, appropriate evidence to support the reported findings or conclusions, they should communicate in the same manner as that used to originally distribute the report to those charged with governance, the appropriate officials of the audited entity, the appropriate officials of the organizations requiring or arranging for the audits, and other known users, so that they do not continue to rely on the findings or conclusions that were not supported. If the report was previously posted to the auditors' publicly accessible website, the auditors should remove the report and post a public notification that the report was removed. The auditors should then determine whether to conduct additional audit work necessary to reissue the report, including any revised findings or conclusions or repost the original report if the additional audit work does not result in a change in findings or conclusions.

[163]See paragraph 7.40 for additional guidance on classified or limited use reports and paragraph 7.44b for distribution of reports for internal auditors.

Report Contents

7.08 Auditors should prepare audit reports that contain (1) the objectives, scope, and methodology of the audit; (2) the audit results, including findings, conclusions, and recommendations, as appropriate; (3) a statement about the auditors' compliance with GAGAS; (4) a summary of the views of responsible officials; and (5) if applicable, the nature of any confidential or sensitive information omitted.

Objectives, Scope, and Methodology

7.09 Auditors should include in the report a description of the audit objectives and the scope and methodology used for addressing the audit objectives. Report users need this information to understand the purpose of the audit, the nature and extent of the audit work performed, the context and perspective regarding what is reported, and any significant limitations in audit objectives, scope, or methodology.

7.10 Audit objectives for performance audits may vary widely. Auditors should communicate audit objectives in the audit report in a clear, specific, neutral, and unbiased manner that includes relevant assumptions. When audit objectives are limited but broader objectives could be inferred by users, auditors should state in the audit report that certain issues were outside the scope of the audit in order to avoid potential misunderstanding.

7.11 Auditors should describe the scope of the work performed and any limitations, including issues that would be relevant to likely users, so that they could reasonably interpret the findings, conclusions, and recommendations in the report without being misled. Auditors should also report any significant constraints imposed on the audit approach by information limitations or scope impairments, including denials or excessive delays of access to certain records or individuals.

7.12 In describing the work conducted to address the audit objectives and support the reported findings and conclusions, auditors should, as applicable, explain the relationship between the population and the items tested; identify organizations, geographic locations, and the period covered; report the kinds and sources of evidence; and explain any significant limitations or uncertainties based on the auditors' overall assessment of the sufficiency and appropriateness of the evidence in the aggregate.

7.13 In reporting audit methodology, auditors should explain how the completed audit work supports the audit objectives, including the evidence gathering and analysis techniques, in sufficient detail to allow knowledgeable users of their reports to understand how the auditors addressed the audit objectives. Auditors may include a description of the procedures performed as part of their assessment of the sufficiency and appropriateness of information used as audit evidence. Auditors should identify significant assumptions made in conducting the audit; describe comparative techniques applied; describe the criteria used; and, when sampling significantly supports the auditors' findings, conclusions, or recommendations, describe the sample design and state why the design was chosen, including whether the results can be projected to the intended population.

Reporting Findings

7.14 In the audit report, auditors should present sufficient, appropriate evidence to support the findings and conclusions in relation to the audit objectives. Clearly developed findings[164] assist management and oversight officials of the audited entity in understanding the need for taking corrective action. If auditors are able

[164]See paragraphs 6.73 through 6.77 for additional discussion on developing the elements of a finding.

to sufficiently develop the elements of a finding, they should provide recommendations for corrective action if they are significant within the context of the audit objectives. However, the extent to which the elements for a finding are developed depends on the audit objectives. Thus, a finding or set of findings is complete to the extent that the auditors address the audit objectives.

7.15 Auditors should describe in their report limitations or uncertainties with the reliability or validity of evidence if (1) the evidence is significant to the findings and conclusions within the context of the audit objectives and (2) such disclosure is necessary to avoid misleading the report users about the findings and conclusions. As discussed in paragraphs 6.69 through 6.72, even though the auditors may have some uncertainty about the sufficiency or appropriateness of some of the evidence, they may nonetheless determine that in total there is sufficient, appropriate evidence given the findings and conclusions. Auditors should describe the limitations or uncertainties regarding evidence in conjunction with the findings and conclusions, in addition to describing those limitations or uncertainties as part of the objectives, scope, and methodology. Additionally, this description provides report users with a clear understanding regarding how much responsibility the auditors are taking for the information.

7.16 Auditors should place their findings in perspective by describing the nature and extent of the issues being reported and the extent of the work performed that resulted in the finding. To give the reader a basis for judging the prevalence and consequences of these findings, auditors should, as appropriate, relate the instances identified to the population or the number of cases examined and quantify the results in terms of dollar value, or other measures. If the results cannot be

projected, auditors should limit their conclusions appropriately.

7.17 Auditors may provide background information to establish the context for the overall message and to help the reader understand the findings and significance of the issues discussed. Appropriate background information may include information on how programs and operations work; the significance of programs and operations (e.g., dollars, impact, purposes, and past audit work, if relevant); a description of the audited entity's responsibilities; and explanation of terms, organizational structure, and the statutory basis for the program and operations. When reporting on the results of their work, auditors should disclose significant facts relevant to the objectives of their work and known to them which, if not disclosed, could mislead knowledgeable users, misrepresent the results, or conceal significant improper or illegal practices.

7.18 Auditors should also report deficiencies in internal control, instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that have occurred or are likely to have occurred and are significant within the context of the audit objectives.

Deficiencies in Internal Control

7.19 Auditors should include in the audit report (1) the scope of their work on internal control and (2) any deficiencies in internal control that are significant within the context of the audit objectives and based upon the audit work performed.[165] When auditors detect deficiencies in internal control that are not significant to the objectives of the audit but warrant the attention of those charged with governance, they should include

[165]See paragraph 6.21 for a discussion of internal control deficiencies in performance audits and paragraph A.06 for examples of deficiencies in internal control.

those deficiencies either in the report or communicate those deficiencies in writing to audited entity officials. Auditors should refer to that written communication in the audit report if the written communication is separate from the audit report. When auditors detect deficiencies that do not warrant the attention of those charged with governance, the determination of whether and how to communicate such deficiencies to audited entity officials is a matter of professional judgment.

7.20 In a performance audit, auditors may conclude that identified deficiencies in internal control that are significant within the context of the audit objectives are the cause of deficient performance of the program or operations being audited. In reporting this type of finding, the internal control deficiency would be described as the cause.

Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse

7.21 When auditors conclude, based on sufficient, appropriate evidence, that fraud,[166] noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse[167] either has occurred or is likely to have occurred which is significant within the context of the audit objectives, they should report the matter as a finding. Whether a particular act is, in fact, fraud or noncompliance with provisions of laws, regulations, contracts or grant agreements may have to await final determination by a court of law or other adjudicative body.

7.22 When auditors detect instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that are not significant within the context of the audit objectives but warrant the attention of those charged with governance,

[166]See paragraph A.10 for examples of indicators of fraud risk.

[167]See paragraph A.08 for examples of abuse.

they should communicate those findings in writing to audited entity officials. When auditors detect any instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that do not warrant the attention of those charged with governance, the auditors' determination of whether and how to communicate such instances to audited entity officials is a matter of professional judgment.

7.23 When fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse either have occurred or are likely to have occurred, auditors may consult with authorities or legal counsel about whether publicly reporting such information would compromise investigative or legal proceedings. Auditors may limit their public reporting to matters that would not compromise those proceedings and, for example, report only on information that is already a part of the public record.

Reporting Findings Directly to Parties Outside the Audited Entity

7.24 Auditors should report known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse directly to parties outside the audited entity in the following two circumstances.

a. When entity management fails to satisfy legal or regulatory requirements to report such information to external parties specified in law or regulation, auditors should first communicate the failure to report such information to those charged with governance. If the audited entity still does not report this information to the specified external parties as soon as practicable after the auditors' communication with those charged with governance, then the auditors should report the information directly to the specified external parties.

b. When entity management fails to take timely and appropriate steps to respond to known or likely fraud,

noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that (1) is significant to the findings and conclusions and (2) involves funding received directly or indirectly from a government agency, auditors should first report management's failure to take timely and appropriate steps to those charged with governance. If the audited entity still does not take timely and appropriate steps as soon as practicable after the auditors' communication with those charged with governance, then the auditors should report the entity's failure to take timely and appropriate steps directly to the funding agency.

7.25 The reporting in paragraph 7.24 is in addition to any legal requirements for the auditor to report such information directly to parties outside the audited entity. Auditors should comply with these requirements even if they have resigned or been dismissed from the audit prior to its completion. Internal audit organizations do not have a duty to report outside the audited entity unless required by law, rule, regulation, or policy.[168]

7.26 Auditors should obtain sufficient, appropriate evidence, such as confirmation from outside parties, to corroborate assertions by management of the audited entity that it has reported such findings in accordance with laws, regulations, or funding agreements. When auditors are unable to do so, they should report such information directly as discussed in paragraphs 7.24 and 7.25.

Conclusions

7.27 Auditors should report conclusions based on the audit objectives and the audit findings. Report conclusions are logical inferences about the program based on the auditors' findings, not merely a summary

[168]See paragraph 7.44b for reporting standards for internal audit organizations when reporting externally.

of the findings. The strength of the auditors' conclusions depends on the sufficiency and appropriateness of the evidence supporting the findings and the soundness of the logic used to formulate the conclusions. Conclusions are more compelling if they lead to the auditors' recommendations and convince the knowledgeable user of the report that action is necessary.

Recommendations

7.28 Auditors should recommend actions to correct deficiencies and other findings identified during the audit and to improve programs and operations when the potential for improvement in programs, operations, and performance is substantiated by the reported findings and conclusions. Auditors should make recommendations that flow logically from the findings and conclusions, are directed at resolving the cause of identified deficiencies and findings, and clearly state the actions recommended.

7.29 Effective recommendations encourage improvements in the conduct of government programs and operations. Recommendations are effective when they are addressed to parties that have the authority to act and when the recommended actions are specific, practical, cost effective, and measurable.

Reporting Auditors' Compliance with GAGAS

7.30 When auditors comply with all applicable GAGAS requirements, they should use the following language, which represents an unmodified GAGAS compliance statement, in the audit report to indicate that they performed the audit in accordance with GAGAS.[169]

[169]See paragraphs 2.24 and 2.25 for additional standards on citing compliance with GAGAS.

We conducted this performance audit in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

7.31 When auditors do not comply with all applicable GAGAS requirements, they should include a modified GAGAS compliance statement in the audit report. For performance audits, auditors should use a statement that includes either (1) the language in 7.30, modified to indicate the requirements that were not followed or (2) language that the auditor did not follow GAGAS.[170]

Reporting Views of Responsible Officials

7.32 Auditors should obtain and report the views of responsible officials of the audited entity concerning the findings, conclusions, and recommendations included in the audit report, as well as any planned corrective actions.

7.33 Providing a draft report with findings for review and comment by responsible officials of the audited entity and others helps the auditors develop a report that is fair, complete, and objective. Including the views of responsible officials results in a report that presents not only the auditors' findings, conclusions, and recommendations, but also the perspectives of the responsible officials of the audited entity and the corrective actions they plan to take. Obtaining the comments in writing is preferred, but oral comments are acceptable.

[170]See paragraphs 2.24 and 2.25 for additional standards on citing compliance with GAGAS.

7.34 When auditors receive written comments from the responsible officials, they should include in their report a copy of the officials' written comments, or a summary of the comments received. When the responsible officials provide oral comments only, auditors should prepare a summary of the oral comments and provide a copy of the summary to the responsible officials to verify that the comments are accurately stated.

7.35 Auditors should also include in the report an evaluation of the comments, as appropriate. In cases in which the audited entity provides technical comments in addition to its written or oral comments on the report, auditors may disclose in the report that such comments were received.

7.36 Obtaining oral comments may be appropriate when, for example, there is a reporting date critical to meeting a user's needs; auditors have worked closely with the responsible officials throughout the work and the parties are familiar with the findings and issues addressed in the draft report; or the auditors do not expect major disagreements with the findings, conclusions, and recommendations in the draft, or major controversies with regard to the issues discussed in the draft report.

7.37 When the audited entity's comments are inconsistent or in conflict with the findings, conclusions, or recommendations in the draft report, or when planned corrective actions do not adequately address the auditors' recommendations, the auditors should evaluate the validity of the audited entity's comments. If the auditors disagree with the comments, they should explain in the report their reasons for disagreement. Conversely, the auditors should modify their report as necessary if they find the comments valid and supported with sufficient, appropriate evidence.

7.38 If the audited entity refuses to provide comments or is unable to provide comments within a reasonable period of time, the auditors may issue the report without receiving comments from the audited entity. In such cases, the auditors should indicate in the report that the audited entity did not provide comments.

Reporting Confidential and Sensitive Information

7.39 If certain pertinent information is prohibited from public disclosure or is excluded from a report due to the confidential or sensitive nature of the information, auditors should disclose in the report that certain information has been omitted and the reason or other circumstances that make the omission necessary.

7.40 Certain information may be classified or may be otherwise prohibited from general disclosure by federal, state, or local laws or regulations. In such circumstances, auditors may issue a separate, classified or limited use report containing such information and distribute the report only to persons authorized by law or regulation to receive it.

7.41 Additional circumstances associated with public safety, privacy, or security concerns could also justify the exclusion of certain information from a publicly available or widely distributed report. For example, detailed information related to computer security for a particular program may be excluded from publicly available reports because of the potential damage that could be caused by the misuse of this information. In such circumstances, auditors may issue a limited use report containing such information and distribute the report only to those parties responsible for acting on the auditors' recommendations. In some instances, it may be appropriate to issue both a publicly available report with the sensitive information excluded and a limited use report. The auditors may consult with legal counsel regarding any requirements or other circumstances that may necessitate the omission of certain information.

7.42 Considering the broad public interest in the program or activity under audit assists auditors when deciding whether to exclude certain information from publicly available reports. When circumstances call for omission of certain information, auditors should evaluate whether this omission could distort the audit results or conceal improper or illegal practices.

7.43 When audit organizations are subject to public records laws, auditors should determine whether public records laws could impact the availability of classified or limited use reports and determine whether other means of communicating with management and those charged with governance would be more appropriate. For example, the auditors may communicate general information in a written report and communicate detailed information orally. The auditor may consult with legal counsel regarding applicable public records laws.

Distributing Reports

7.44 Distribution of reports completed in accordance with GAGAS depends on the relationship of the auditors to the audited organization and the nature of the information contained in the report. Auditors should document any limitation on report distribution.[171] The following discussion outlines distribution for reports completed in accordance with GAGAS:

a. Audit organizations in government entities should distribute audit reports to those charged with governance, to the appropriate audited entity officials, and to the appropriate oversight bodies or organizations requiring or arranging for the audits. As appropriate, auditors should also distribute copies of the reports to other officials who have legal oversight authority or who

[171]See paragraphs 7.40 and 7.41 for discussion of limited use reports containing confidential or sensitive information.

may be responsible for acting on audit findings and recommendations, and to others authorized to receive such reports.

b. Internal audit organizations in government entities may also follow the Institute of Internal Auditors' (IIA) *International Standards for the Professional Practice of Internal Auditing*.[172] In accordance with GAGAS and IIA standards, the head of the internal audit organization should communicate results to parties who can ensure that the results are given due consideration. If not otherwise mandated by statutory or regulatory requirements, prior to releasing results to parties outside the organization, the head of the internal audit organization should: (1) assess the potential risk to the organization, (2) consult with senior management or legal counsel as appropriate, and (3) control dissemination by indicating the intended users of the report.

c. Public accounting firms contracted to perform an audit in accordance with GAGAS should clarify report distribution responsibilities with the engaging organization. If the contracting firm is responsible for the distribution, it should reach agreement with the party contracting for the audit about which officials or organizations will receive the report and the steps being taken to make the report available to the public.

[172]See paragraph 2.21 for additional discussion about using the IIA standards in conjunction with GAGAS and paragraph 2.22 for additional discussion about citing compliance with another set of standards.

Supplemental Guidance

Introduction

A.01 The following sections provide supplemental guidance for auditors and the audited entities to assist in the implementation of generally accepted government auditing standards (GAGAS). The guidance does not establish additional requirements but instead is intended to facilitate auditor implementation of GAGAS requirements in chapters 2 through 7. The supplemental guidance in the first section may be of assistance for all types of audits covered by GAGAS. Subsequent sections provide supplemental guidance for specific chapters of GAGAS, as indicated.

Overall Supplemental Guidance

A.02 Chapters 4 through 7 discuss the standards for financial audits, attestation engagements, and performance audits. The identification and communication of significant deficiencies and material weaknesses in internal control, fraud, noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse are important aspects of government auditing. The following discussion is provided to assist auditors in identifying significant deficiencies in internal control, abuse, and indicators of fraud risk and to assist auditors in determining whether noncompliance with provisions of laws, regulations, contracts or grant agreements are significant within the context of the audit objectives.

Internal Control

A.03 The *Internal Control—Integrated Framework*[173] published by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) provides guidance on internal control. As discussed in the COSO framework, internal control consists of five interrelated components, which are (1) control

[173]*Internal Control—Integrated Framework,* Committee of Sponsoring Organizations of the Treadway Commission, 1992.

environment, (2) risk assessment, (3) control activities, (4) information and communication, and (5) monitoring. The objectives of internal control relate to (1) financial reporting, (2) operations, and (3) compliance. Safeguarding of assets is a subset of these objectives. Management designs internal control to provide reasonable assurance that unauthorized acquisition, use, or disposition of assets will be prevented or timely detected and corrected.

A.04 In addition to the COSO framework, the publication, *Standards for Internal Control in the Federal Government*,[174] which incorporates the concepts developed by COSO, provides definitions and fundamental concepts pertaining to internal control at the federal level and may also be useful to auditors at other levels of government. The related *Internal Control Management and Evaluation Tool*,[175] based on the federal internal control standards, provides a systematic, organized, and structured approach to assessing the internal control structure.

Examples of Deficiencies in Internal Control

A.05 GAGAS contains requirements for reporting identified deficiencies in internal control.

a. For financial audits, see paragraphs 4.19 through 4.24.

b. For attestation engagements, see paragraphs 5.20 through 5.23.

[174] *Standards for Internal Control in the Federal Government*, GAO/AIMD-00-21.3.1 (Washington, D.C.: November 1999).

[175] *Internal Control Management and Evaluation Tool*, GAO-01-1008G (Washington, D.C.: August 2001).

c. For performance audits, see paragraphs 7.19 through 7.20.

A.06 The following are examples of control deficiencies:

a. Insufficient control consciousness within the organization. For example, the tone at the top and the control environment. Control deficiencies in other components of internal control could lead the auditor to conclude that weaknesses exist in the control environment.

b. Ineffective oversight by those charged with governance of the entity's financial reporting, performance reporting, or internal control, or an ineffective overall governance structure.

c. Control systems that did not prevent, or detect and correct material misstatements so that it was necessary to restate previously issued financial statements or operational results. Control systems that did not prevent or detect material misstatements in performance or operational results so that it was later necessary to make significant corrections to those results.

d. Control systems that did not prevent, or detect and correct material misstatements identified by the auditor. This includes misstatements involving estimation and judgment for which the auditor identifies potential material adjustments and corrections of the recorded amounts.

e. An ineffective internal audit function or risk assessment function at an entity for which such functions are important to the monitoring or risk assessment component of internal control, such as for a large or complex entity.

f. Identification of fraud of any magnitude on the part of senior management.

g. Failure by management or those charged with governance to assess the effect of a significant deficiency previously communicated to them and either to correct it or to conclude that it does not need to be corrected.

h. Inadequate controls for the safeguarding of assets.

i. Evidence of intentional override of internal control by those in authority to the detriment of the overall objectives of the system.

j. Deficiencies in the design or operation of internal control that could fail to prevent, or detect and correct, fraud, noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse having a material effect on the financial statements or the audit objective.

k. Inadequate design of information systems general, application, and user controls that prevent the information system from providing complete and accurate information consistent with financial, compliance, or performance reporting objectives or other current needs.

l. Failure of an application control caused by a deficiency in the design or operation of an information systems general control.

m. Employees or management who lack the qualifications and training to fulfill their assigned functions.

Examples of Abuse

A.07 GAGAS contains requirements for responding to indications of material abuse and reporting abuse that is material to the audit objectives.

a. For financial audits, see paragraphs 4.07 and 4.08 and 4.25 through 4.27.

b. For attestation engagements, see paragraphs 5.08 through 5.09 and 5.24 through 5.26.

c. For performance audits, see paragraphs 6.33 and 6.34 and 7.21 through 7.23.

A.08 The following are examples of abuse, depending on the facts and circumstances:

a. Creating unneeded overtime.

b. Requesting staff to perform personal errands or work tasks for a supervisor or manager.

c. Misusing the official's position for personal gain (including actions that could be perceived by an objective third party with knowledge of the relevant information as improperly benefiting an official's personal financial interests or those of an immediate or close family member; a general partner; an organization for which the official serves as an officer, director, trustee, or employee; or an organization with which the official is negotiating concerning future employment).

d. Making travel choices that are contrary to existing travel policies or are unnecessarily extravagant or expensive.

e. Making procurement or vendor selections that are contrary to existing policies or are unnecessarily extravagant or expensive.

Examples of Indicators of Fraud Risk

A.09 GAGAS contains requirements relating to evaluating fraud risk.

a. For financial audits, see paragraphs 4.06 and 4.25 through 4.27.

b. For attestation engagements, see paragraphs 5.07, 5.20, and 5.24 through 5.26.

c. For performance audits, see paragraphs 6.30 through 6.32 and 7.21 through 7.23.

A.10 In some circumstances, conditions such as the following might indicate a heightened risk of fraud:

a. economic, programmatic, or entity operating conditions threaten the entity's financial stability, viability, or budget;

b. the nature of the entity's operations provide opportunities to engage in fraud;

c. management's monitoring of compliance with policies, laws, and regulations is inadequate;

d. the organizational structure is unstable or unnecessarily complex;

e. communication and/or support for ethical standards by management is lacking;

f. management is willing to accept unusually high levels of risk in making significant decisions;

g. the entity has a history of impropriety, such as previous issues with fraud, waste, abuse, or questionable practices, or past audits or investigations with findings of questionable or criminal activity;

h. operating policies and procedures have not been developed or are outdated;

i. key documentation is lacking or does not exist;

j. asset accountability or safeguarding procedures is lacking;

k. improper payments;

l. false or misleading information;

m. a pattern of large procurements in any budget line with remaining funds at year end, in order to "use up all of the funds available;" and

n. unusual patterns and trends in contracting, procurement, acquisition, and other activities of the entity or program.

Determining Whether Provisions of Laws, Regulations, Contracts and Grant Agreements Are Significant within the Context of the Audit Objectives

A.11 GAGAS contains requirements for determining whether provisions of laws, regulations, contracts or grant agreements are significant within the context of the audit objectives.

a. For financial audits, see paragraphs 4.19 through 4.22.

b. For attestation engagements, see paragraphs 5.07 and 5.08.

c. For performance audits, see paragraphs 6.28 and 6.29.

A.12 Government programs are subject to many provisions of laws, regulations, contracts or grant agreements. At the same time, their significance within the context of the audit objectives varies widely,

depending on the objectives of the audit. Auditors may find the following approach helpful in assessing whether provisions of laws, regulations, contracts or grant agreements are significant within the context of the audit objectives:

a. Express each audit objective in terms of questions about specific aspects of the program being audited (that is, purpose and goals, internal control, inputs, program operations, outputs, and outcomes).

b. Identify provisions of laws, regulations, contracts or grant agreements that directly relate to specific aspects of the program within the context of the audit objectives.

c. Determine if the audit objectives or the auditors' conclusions could be significantly affected if noncompliance with those provisions of laws, regulations, contracts or grant agreements occurred. If the audit objectives or audit conclusions could be significantly affected, then those provisions of laws, regulations, contracts or grant agreements are likely to be significant to the audit objectives.

A.13 Auditors may consult with their own legal counsel to (1) determine those laws and regulations that are significant to the audit objectives, (2) design tests of compliance with laws and regulations, or (3) evaluate the results of those tests. Auditors also may consult with their own legal counsel when audit objectives require testing compliance with provisions of contracts or grant agreements. Depending on the circumstances of the audit, auditors may consult with others, such as investigative staff, other audit organizations or government entities that provided professional services to the audited entity, or applicable law enforcement authorities, to obtain information on compliance matters.

Information to Accompany Chapter 1

A1.01 Chapter 1 discusses the use and application of GAGAS and the role of auditing in government accountability. Those charged with governance and management of audited organizations also have roles in government accountability. The discussion that follows is provided to assist auditors in understanding the roles of others in accountability. The following section also contains background information on the laws, regulations, or other authoritative sources that require the use of GAGAS. This information is provided to place GAGAS within the context of overall government accountability.

Laws, Regulations, and Other Authoritative Sources That Require Use of GAGAS

A1.02 Laws, regulations, contracts, grant agreements, or policies frequently require the use of GAGAS.[176] The following are some of the laws, regulations, and or other authoritative sources that require the use of GAGAS:

a. The Inspector General Act of 1978, as amended, 5 U.S.C. App. requires that the statutorily appointed federal inspectors general comply with GAGAS for audits of federal establishments, organizations, programs, activities, and functions. The act further states that the inspectors general shall take appropriate steps to assure that any work performed by nonfederal auditors complies with GAGAS.

b. The Chief Financial Officers Act of 1990 (Public Law 101-576), as expanded by the Government Management Reform Act of 1994 (Public Law 103-356), requires that GAGAS be followed in audits of executive branch departments' and agencies' financial statements. The Accountability of Tax Dollars Act of 2002 (Public Law 107-289) generally extends this

[176]See paragraph 1.06 for additional discussion on the use of GAGAS.

requirement to most executive agencies not subject to the Chief Financial Officers Act unless they are exempted for a given year by the Office of Management and Budget (OMB).

c. The Single Audit Act Amendments of 1996 (Public Law 104-156) require that GAGAS be followed in audits of state and local governments and nonprofit entities that receive federal awards. OMB Circular No. A-133, *Audits of States, Local Governments, and Non-Profit Organizations*, which provides the governmentwide guidelines and policies on performing audits to comply with the Single Audit Act, also requires the use of GAGAS.

A1.03 Other laws, regulations, or authoritative sources may require the use of GAGAS. For example, auditors at the state and local levels of government may be required by state and local laws and regulations to follow GAGAS. Also, auditors may be required by the terms of an agreement or contract to follow GAGAS. Auditors may also be required to follow GAGAS by federal audit guidelines pertaining to program requirements, such as those issued for Housing and Urban Development programs and Student Financial Aid programs. Being alert to such other laws, regulations, or authoritative sources may assist auditors in performing their work in accordance with the required standards.

A1.04 Even if not required to do so, auditors may find it useful to follow GAGAS in performing audits of federal, state, and local government programs as well as audits of government awards administered by contractors, nonprofit entities, and other nongovernmental entities. Many audit organizations not formally required to do so, both in the United States of America and in other countries, voluntarily follow GAGAS.

The Role of Those Charged with Governance

A1.05 During the course of GAGAS audits, auditors communicate with those charged with governance.[177]

a. For financial audits, see paragraphs 4.03 and 4.04.

b. For attestation engagements, see paragraphs 5.04 and 5.05.

c. For performance audits, see paragraphs 6.47 through 6.50.

A1.06 Those charged with governance are responsible for overseeing the strategic direction of the entity and obligations related to the accountability of the entity. This includes overseeing the financial reporting process, subject matter, or program under audit including related internal controls. In certain entities covered by GAGAS, those charged with governance may also be part of the entity's management. In some audit entities, multiple parties may be charged with governance, including oversight bodies, members or staff of legislative committees, boards of directors, audit committees, or parties contracting for the audit.

A1.07 Because the governance structures of government entities and organizations can vary widely, it may not always be clearly evident who is charged with key governance functions. In these situations, auditors evaluate the organizational structure for directing and controlling operations to achieve the audited entity's objectives. This evaluation also includes how the audited entity delegates authority and establishes accountability for its management personnel.

[177]See paragraph 1.02 for additional discussion of those charged with governance.

Management's Role

A1.08 Managers have fundamental responsibilities for carrying out government functions.[178] Management of the audited entity is responsible for

a. using its financial, physical, and informational resources legally, effectively, efficiently, economically, ethically, and equitably to achieve the purposes for which the resources were furnished or the program was established;

b. complying with applicable laws and regulations (including identifying the requirements with which the entity and the official are responsible for compliance);

c. implementing systems designed to achieve compliance with applicable laws and regulations;

d. establishing and maintaining effective internal control to help ensure that appropriate goals and objectives are met; following laws and regulations; and ensuring that management and financial information is reliable and properly reported;

e. providing appropriate reports to those who oversee their actions and to the public in order to demonstrate accountability for the resources and authority used to carry out government programs and the results of these programs;

f. addressing the findings and recommendations of auditors, and for establishing and maintaining a process to track the status of such findings and recommendations;

[178]See paragraphs 1.01 and 1.02 for additional discussion of management and officials of government programs.

g. following sound procurement practices when contracting for audits, including ensuring procedures are in place for monitoring contract performance; and

h. taking timely and appropriate steps to remedy fraud, noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse that auditors report.

Information to Accompany Chapter 2

Attestation Engagements

A2.01 Examples of attestation engagements objectives[179] include

a. prospective financial or performance information;

b. management's discussion and analysis (MD&A) presentation;

c. an entity's internal control over financial reporting;

d. the effectiveness of an entity's internal control over compliance with specified requirements, such as those governing the bidding for, accounting for, and reporting on grants and contracts;

e. an entity's compliance with requirements of specified laws, regulations, policies, contracts, or grants;

f. the accuracy and reliability of reported performance measures;

[179]See paragraph 2.09 for additional discussion of attestation engagements.

g. whether incurred final contract costs are supported with required evidence and in compliance with the contract terms;

h. the allowability and reasonableness of proposed contract amounts that are based on detailed costs; and

i. the quantity, condition, or valuation of inventory or assets.

Performance Audit Objectives

A2.02 Examples of program effectiveness and results audit objectives[180] include:

a. assessing the extent to which legislative, regulatory, or organizational goals and objectives are being achieved;

b. assessing the relative ability of alternative approaches to yield better program performance or eliminate factors that inhibit program effectiveness;

c. analyzing the relative cost-effectiveness of a program or activity, focusing on combining cost information or other inputs with information about outputs or the benefit provided or with outcomes or the results achieved;

d. determining whether a program produced intended results or produced results that were not consistent with the program's objectives;

e. determining the current status or condition of program operations or progress in implementing legislative requirements;

[180]See paragraph 2.11a for additional discussion of program effectiveness and results audit objectives.

f. determining whether a program provides equitable access to or distribution of public resources within the context of statutory parameters;

g. assessing the extent to which programs duplicate, overlap, or conflict with other related programs;

h. evaluating whether the entity is following sound procurement practices;

i. assessing the reliability, validity, or relevance of performance measures concerning program effectiveness and results, or economy and efficiency;

j. assessing the reliability, validity, or relevance of financial information related to the performance of a program;

k. determining whether government resources (inputs) are obtained at reasonable costs while meeting timeliness and quality considerations;

l. determining whether appropriate value was obtained based on the cost or amount paid or based on the amount of revenue received;

m. determining whether government services and benefits are accessible to those individuals who have a right to access those services and benefits;

n. determining whether fees assessed cover costs;

o. determining whether and how the program's unit costs can be decreased or its productivity increased; and

p. assessing the reliability, validity, or relevance of budget proposals or budget requests to assist legislatures in the budget process.

A2.03 Examples of audit objectives related to internal control[181] include an assessment of the extent to which internal control provides reasonable assurance about whether

a. organizational missions, goals, and objectives are achieved effectively and efficiently;

b. resources are used in compliance with laws, regulations, or other requirements;

c. resources, including sensitive information accessed or stored outside the organization's physical perimeter, are safeguarded against unauthorized acquisition, use, or disposition;

d. management information, such as performance measures, and public reports are complete, accurate, and consistent to support performance and decision making;

e. the integrity of information from computerized systems is achieved; and

f. contingency planning for information systems provides essential back-up to prevent unwarranted disruption of the activities and functions that the systems support.

A2.04 Compliance objectives[182] include determining whether

[181]See paragraph 2.11b for additional discussion of internal control audit objectives.

[182]See paragraph 2.11c for additional discussion of compliance audit objectives.

a. the purpose of the program, the manner in which it is to be conducted, the services delivered, the outcomes, or the population it serves is in compliance with provisions of laws, regulations, contracts or grant agreements, or other requirements;

b. government services and benefits are distributed or delivered to citizens based on the individual's eligibility to obtain those services and benefits;

c. incurred or proposed costs are in compliance with applicable laws, regulations, contracts, or grant agreements; and

d. revenues received are in compliance with applicable laws, regulations, contracts or grant agreements.

A2.05 Examples of objectives pertaining to prospective analysis[183] include providing conclusions based on

a. current and projected trends and future potential impact on government programs and services;

b. program or policy alternatives, including forecasting program outcomes under various assumptions;

c. policy or legislative proposals, including advantages, disadvantages, and analysis of stakeholder views;

d. prospective information prepared by management;

e. budgets and forecasts that are based on (1) assumptions about expected future events and (2) management's expected reaction to those future events; and

[183]See paragraph 2.11d for additional discussion of prospective analysis audit objectives.

f. management's assumptions on which prospective information is based.

GAGAS Compliance Statements

A2.06 The determination of whether an unmodified or modified GAGAS compliance statement is appropriate is based on the consideration of the individual and aggregate effect of exceptions to GAGAS requirements.[184] Quantitative and qualitative factors that the auditor may consider include:

a. the likelihood that the exception(s) will affect the perceptions of report users about the audit findings, conclusions, and recommendations;

b. the magnitude of the effect of the exception(s) on the perceptions of report users about the audit findings, conclusions, and recommendations;

c. the pervasiveness of the exception(s);

d. the potential effect of the exception(s) on the sufficiency and appropriateness of evidence supporting the audit findings, conclusions, and recommendations; and

e. whether report users could be misled if the GAGAS compliance statement were not modified.

Information to Accompany Chapter 3

A3.01 Chapter 3 discusses the general standards applicable to financial audits, attestation engagements, and performance audits in accordance with GAGAS. The following supplemental guidance is provided to assist auditors and audited entities in avoiding

[184]See paragraphs 2.24 and 2.25 for additional discussion on citing compliance with GAGAS.

impairments to independence, establishing a system of quality control, and identifying peer review risk factors.

Threats to Independence

A3.02 This list is intended to illustrate by example the types of circumstances that create threats to independence that an auditor might identify when applying the conceptual framework.[185] It does not include all circumstances that create threats to independence; these circumstances will be unique to the conditions under which each evaluation takes place.

A3.03 Examples of circumstances that create self-interest threats for an auditor include:

a. A member of the audit team having a direct financial interest in the audited entity. This would not preclude auditors from auditing pension plans that they participate in if (1) the auditor has no control over the investment strategy, benefits, or other management issues associated with the pension plan and (2) the auditor belongs to such pension plan as part of his/her employment with the audit organization, provided that the plan is normally offered to all employees in equivalent employment positions.

b. An audit organization having undue dependence on income from a particular audited entity.

c. A member of the audit team entering into employment negotiations with an audited entity.

d. An auditor discovering a significant error when evaluating the results of a previous professional service performed by a member of the auditor's audit organization.

[185]See paragraphs 3.07 through 3.26.

A3.04 Examples of circumstances that create self-review threats for an auditor include:

a. An audit organization issuing a report on the effectiveness of the operation of financial or performance management systems after designing or implementing the systems.

b. An audit organization having prepared the original data used to generate records that are the subject matter of the audit.

c. An audit organization performing a service for an audited entity that directly affects the subject matter information of the audit.

d. A member of the audit team being, or having recently been, employed by the audited entity in a position to exert significant influence over the subject matter of the audit.

A3.05 Examples of circumstances that create bias threats for an auditor include:

a. An auditor's having preconceptions about the objectives of a program under audit that are sufficiently strong to impact the auditor's objectivity.

b. An auditor's having biases associated with political, ideological, or social convictions that result from membership or employment in, or loyalty to, a particular type of policy, group, organization, or level of government that could impact the auditor's objectivity.

A3.06 Examples of circumstances that create familiarity threats for an auditor include:

a. A member of the audit team having a close or immediate family member who is a principal or senior manager of the audited entity.

b. A member of the audit team having a close or immediate family member who is an employee of the audited entity and is in a position to exert significant influence over the subject matter of the audit.

c. A principal or employee of the audited entity in a position to exert significant influence over the subject matter of the audit having recently served on the audit team.

d. An auditor accepting gifts or preferential treatment from an audited entity, unless the value is trivial or inconsequential.

e. Senior audit personnel having a long association with the audited entity.

A3.07 Examples of circumstances that create undue influence threats for an auditor or audit organization include existence of:

a. External interference or influence that could improperly limit or modify the scope of an audit or threaten to do so, including exerting pressure to inappropriately reduce the extent of work performed in order to reduce costs or fees.

b. External interference with the selection or application of audit procedures or in the selection of transactions to be examined.

c. Unreasonable restrictions on the time allowed to complete an audit or issue the report.

d. External interference over the assignment, appointment, compensation, and promotion of audit personnel.

e. Restrictions on funds or other resources provided to the audit organization that adversely affect the audit organization's ability to carry out its responsibilities.

f. Authority to overrule or to inappropriately influence the auditors' judgment as to the appropriate content of the report.

g. Threat of replacing the auditors over a disagreement with the contents of an auditors' report, the auditors' conclusions, or the application of an accounting principle or other criteria.

h. Influences that jeopardize the auditors' continued employment for reasons other than incompetence, misconduct, or the need for audits or attestation engagements.

A3.08 Examples of circumstances that create management participation threats for an auditor include:

a. A member of the audit team being, or having recently been, a principal or senior manager of the audited entity.

b. An audit organization principal or employee serving as a voting member of an entity's management committee or board of directors, making policy decisions that affect future direction and operation of an entity's programs, supervising entity employees, developing or approving programmatic policy, authorizing an entity's transactions, or maintaining custody of an entity's assets.

c. An audit organization principal or employee recommending a single individual for a specific position that is key to the entity or program under audit, or otherwise ranking or influencing management's selection of the candidate.

d. An auditor preparing management's corrective action plan to deal with deficiencies detected in the audit.

A3.09 Examples of circumstances that create structural threats for an auditor include:

a. For both external and internal audit organizations, structural placement of the audit function within the reporting line of the areas under audit.

b. For internal audit organizations, administrative direction from the audited entity's management.

System of Quality Control

A3.10 Chapter 3 discusses the elements of an audit organization's system of quality control.[186] The following supplemental guidance is provided to assist auditors and audit organizations in establishing policies and procedures in its system of quality control to address the following elements: initiation, acceptance, and continuance of audits; audit performance, documentation, and reporting; and monitoring.

a. Government audit organizations initiate audits as a result of (1) legal mandates, (2) requests from legislative bodies or oversight bodies, and (3) the audit organization's discretion. In the case of legal mandates and requests, a government audit organization may be required to perform the audit and may not be permitted

[186]See paragraphs 3.82 through 3.95 for additional discussion of the system of quality control.

to make decisions about acceptance or continuance and may not be permitted to resign or withdraw from the audit.

b. GAGAS standards for audit performance, documentation, and reporting are in chapter 4 for financial audits, chapter 5 for attestation engagements, and chapters 6 and 7 for performance audits. Chapter 3 specifies that an audit organization's quality control system include policies and procedures designed to provide the audit organization with reasonable assurance that audits are performed and reports are issued in accordance with professional standards and legal and regulatory requirements.[187] Examples of such policies and procedures include the following:

(1) communication provided to team members so that they sufficiently understand the objectives of their work and the applicable professional standards;

(2) audit planning and supervision;

(3) appropriate documentation of the work performed;

(4) review of the work performed, the significant judgments made, and the resulting audit documentation and report;

(5) review of the independence and qualifications of any external specialists or contractors used, as well as a review of the scope and quality of their work;

(6) procedures for resolving difficult or contentious issues or disagreements among team members, including specialists;

[187]See paragraphs 3.82 through 3.95 for additional discussion of quality control policies and procedures.

(7) obtaining and addressing comments from the audited entity on draft reports; and

(8) reporting supported by the evidence obtained, and in accordance with applicable professional standards and legal or regulatory requirements.

c. Monitoring is an ongoing, periodic assessment of audits designed to provide management of the audit organization with reasonable assurance that the policies and procedures related to the system of quality control are suitably designed and operating effectively in practice.[188] The following guidance is provided to assist audit organizations with implementing and continuing its monitoring of quality:

(1) Who: Monitoring is most effective when performed by persons who do not have responsibility for the specific activity being monitored (e.g., for specific audits or specific centralized processes). The staff member or team of staff members assigned with responsibility for the monitoring process collectively need sufficient and appropriate competence and authority in the audit organization to assume that responsibility. Generally the staff member or the team of staff members performing the monitoring are apart from the normal audit supervision associated with individual audits.

(2) How much: The extent of monitoring procedures varies based on the audit organization's circumstances to enable the audit organization to assess compliance with applicable professional standards and the audit organization's quality control policies and procedures. Examples of specific monitoring procedures include

[188]See paragraphs 3.93 through 3.95 for additional discussion of monitoring.

(a) examination of selected administrative and personnel records pertaining to quality control;

(b) review of selected audit documentation and reports;

(c) discussions with the audit organization's personnel (as applicable and appropriate);

(d) periodic summarization of the findings from the monitoring procedures in writing (at least annually), and consideration of the systematic causes of findings that indicate improvements are needed;

(e) determination of any corrective actions to be taken or improvements to be made with respect to the specific audits reviewed or the audit organization's quality control policies and procedures;

(f) communication of the identified findings to appropriate audit organization management with subsequent follow-up; and

(g) consideration of findings by appropriate audit organization management personnel who also determine whether actions necessary, including necessary modifications to the quality control system, are performed on a timely basis.

(3) Review of selected administrative and personnel records: The review of selected administrative and personnel records pertaining to quality control may include tests of

(a) compliance with policies and procedures on independence;

(b) compliance with continuing professional development policies, including training;

(c) procedures related to recruitment and hiring of qualified personnel, including hiring of specialists or consultants when needed;

(d) procedures related to performance evaluation and advancement of personnel;

(e) procedures related to initiation, acceptance, and continuance of audits;

(f) audit organization personnel's understanding of the quality control policies and procedures, and implementation of these policies and procedures; and

(g) audit organization's process for updating its policies and procedures.

(4) Follow-up on previous findings: Monitoring procedures include an evaluation of whether the audit organization has taken appropriate corrective action to address findings and recommendations from previous monitoring and peer reviews. Personnel involved in monitoring use this information as part of the assessment of risk associated with the design and implementation of the audit organization's quality control system and in determining the nature, timing, and extent of monitoring procedures.

(5) Communication: The audit organization communicates internally the results of the monitoring of its quality control systems that allows the audit organization to take prompt and appropriate action where necessary. Information included in this communication includes:

(a) a description of the monitoring procedures performed;

(b) the conclusions drawn from the monitoring procedures; and

(c) where relevant, a description of the systemic, repetitive, or other significant deficiencies and of the actions taken to resolve those deficiencies.

Peer Review

A3.11 Examples of the factors to consider when performing an assessment of peer review risk for selecting audits for peer review[189] include:

a. scope of the audits including size of the audited entity or audits covering multiple locations;

b. functional area or type of government program;

c. types of audits provided, including the extent of nonaudit services provided to audited entities;

d. personnel (including use of new personnel or personnel not routinely assigned the types of audits provided);

e. initial audits;

f. familiarity resulting from a longstanding relationship with the audited entity;

g. political sensitivity of the audits;

h. budget constraints for the audit organization;

i. results of the peer review team's review of the design of system of quality control;

[189]See paragraph 3.99 for additional discussion of the assessment of peer review risk.

j. results of the audit organization's monitoring process; and

k. risk sensitivity of the audit organization.

A3.12 As discussed in paragraph 3.105, an external audit organization should make its most recent peer review report publicly available. Examples of how to achieve this transparency requirement include posting the peer review report on an external Web site or to a publicly available file. To help the public understand the peer review reports, an audit organization may also include a description of the peer review process and how it applies to its organization. The following provides examples of additional information that audit organizations may include to help users understand the meaning of the peer review report.

a. Explanation of the peer review process.

b. Description of the audit organization's system of quality control.

c. Explanation of the relationship of the peer review results to the audited organization's work.

d. If the peer review report that includes deficiencies or significant deficiencies is modified, explanation of the reviewed audit organization's plan for improving quality controls and the status of the improvements.

Information to Accompany Chapter 6

A6.01 Chapter 6 discusses the field work standards for performance audits. An integral concept for performance auditing is the use of sufficient, appropriate evidence based on the audit objectives to support a sound basis for audit findings, conclusions, and recommendations. The following discussion is provided to assist auditors in identifying criteria and the

various types of evidence, including assessing the appropriateness of evidence in relation to the audit objectives.

Types of Criteria

A6.02 The following are some examples of criteria:[190]

a. purpose or goals prescribed by law or regulation or set by officials of the audited entity,

b. policies and procedures established by officials of the audited entity,

c. technically developed standards or norms,

d. expert opinions,

e. prior periods' performance,

f. defined business practices,

g. contract or grant terms, and

h. performance of other entities or sectors used as defined benchmarks.

A6.03 Audit objectives may pertain to describing the current status or condition of a program or process. For this type of audit objective, criteria may also be represented by the assurance added by the auditor's (1) description of the status or condition, (2) evaluation of whether the status or condition meets certain characteristics, or (3) evaluation of whether management's description is verifiable, accurate, or supported.

[190]See paragraph 6.37 for additional discussion on identifying audit criteria.

Types of Evidence

A6.04 In terms of its form and how it is collected, evidence may be categorized as physical, documentary, or testimonial. Physical evidence is obtained by auditors' direct inspection or observation of people, property, or events. Such evidence may be documented in summary memos, photographs, videos, drawings, charts, maps, or physical samples. Documentary evidence is obtained in the form of already existing information such as letters, contracts, accounting records, invoices, spreadsheets, database extracts, electronically stored information, and management information on performance. Testimonial evidence is obtained through inquiries, interviews, focus groups, public forums, or questionnaires. Auditors frequently use analytical processes including computations, comparisons, separation of information into components, and rational arguments to analyze any evidence gathered to determine whether it is sufficient and appropriate.[191] The strength and weakness of each form of evidence depends on the facts and circumstances associated with the evidence and professional judgment in the context of the audit objectives.

Appropriateness of Evidence in Relation to the Audit Objectives

A6.05 One of the primary factors influencing the assurance associated with a performance audit is the appropriateness of the evidence in relation to the audit objectives.[192] For example:

a. The audit objectives might focus on verifying specific quantitative results presented by the audited entity. In these situations, the audit procedures would likely focus

[191]See paragraphs 6.67 and 6.60 for definitions of sufficient and appropriate.

[192]See paragraphs 6.60 through 6.66 for additional discussion on the appropriateness of evidence.

on obtaining evidence about the accuracy of the specific amounts in question. This work may include the use of statistical sampling.

b. The audit objectives might focus on the performance of a specific program or activity in the agency being audited. In these situations, the auditor may be provided with information compiled by the agency being audited in order to answer the audit objectives. The auditor may find it necessary to test the quality of the information, which includes both its validity and reliability.

c. The audit objectives might focus on information that is used for widely accepted purposes and obtained from sources generally recognized as appropriate. For example, economic statistics issued by government agencies for purposes such as adjusting for inflation, or other such information issued by authoritative organizations, may be the best information available. In such cases, it may not be practical or necessary for auditors to conduct procedures to verify the information. These decisions call for professional judgment based on the nature of the information, its common usage or acceptance, and how it is being used in the audit.

d. The audit objectives might focus on comparisons or benchmarking between various government functions or agencies. These types of audits are especially useful for analyzing the outcomes of various public policy decisions. In these cases, auditors may perform analyses, such as comparative statistics of different jurisdictions or changes in performance over time, where it would be impractical to verify the detailed data underlying the statistics. Clear disclosure as to what extent the comparative information or statistics were evaluated or corroborated will likely be necessary to place the evidence in context for report users.

e. The audit objectives might focus on trend information based on data provided by the audited entity. In this situation, auditors may assess the evidence by using overall analytical tests of underlying data, combined with a knowledge and understanding of the systems or processes used for compiling information.

f. The audit objectives might focus on the auditor identifying emerging and cross-cutting issues using information compiled or self-reported by agencies. In such cases, it may be helpful for the auditor to consider the overall appropriateness of the compiled information along with other information available about the program. Other sources of information, such as inspector general reports or other external audits, may provide the auditors with information regarding whether any unverified or self-reported information is consistent with or can be corroborated by these other external sources of information.

Findings

A6.06 When the audit objectives include explaining why a particular type of positive or negative program performance, output, or outcome identified in the audit occurred, they are referred to as "cause."[193] Identifying the cause of problems may assist auditors in making constructive recommendations for correction. Because deficiencies can result from a number of plausible factors or multiple causes, the recommendation can be more persuasive if auditors can clearly demonstrate and explain with evidence and reasoning the link between the deficiencies and the factor or factors they have identified as the cause or causes. Auditors may also identify deficiencies in program design or structure as the cause of deficient performance. Auditors may also identify deficiencies in internal control that are

[193]See paragraph 6.76 for additional discussion of "cause."

significant to the subject matter of the performance audit as the cause of deficient performance. In developing these types of findings, the deficiencies in program design or internal control would be described as the "cause." Often the causes of deficient program performance are complex and involve multiple factors, including fundamental, systemic root causes. Alternatively, when the audit objectives include estimating the program's effect on changes in physical, social, or economic conditions, auditors seek evidence of the extent to which the program itself is the "cause" of those changes.

A6.07 When the audit objectives include estimating the extent to which a program has caused changes in physical, social, or economic conditions, "effect" is a measure of the impact achieved by the program. In this case, "effect" is the extent to which positive or negative changes in actual physical, social, or economic conditions can be identified and attributed to the program.

Information to Accompany Chapter 7

A7.01 Chapter 7 discusses the reporting standards for performance audits. The following discussion is provided to assist auditors in developing and writing their audit report for performance audits.

Report Quality Elements

A7.02 The auditor may use the report quality elements of timely, complete, accurate, objective, convincing, clear, and concise when developing and writing the audit report as the subject permits.[194]

a. Accurate: An accurate report is supported by sufficient, appropriate evidence with key facts, figures,

[194]See paragraph 7.08 for additional discussion of report contents.

and findings being traceable to the audit evidence. Reports that are fact-based, with a clear statement of sources, methods, and assumptions so that report users can judge how much weight to give the evidence reported, assist in achieving accuracy. Disclosing data limitations and other disclosures also contribute to producing more accurate audit reports. Reports also are more accurate when the findings are presented in the broader context of the issue. One way to help audit organizations prepare accurate audit reports is to use a quality control process such as referencing. Referencing is a process in which an experienced auditor who is independent of the audit checks that statements of facts, figures, and dates are correctly reported, that the findings are adequately supported by the evidence in the audit documentation, and that the conclusions and recommendations flow logically from the evidence.

b. Objective: Objective means that the presentation of the report is balanced in content and tone. A report's credibility is significantly enhanced when it presents evidence in an unbiased manner and in the proper context. This means presenting the audit results impartially and fairly. The tone of reports may encourage decision makers to act on the auditors' findings and recommendations. This balanced tone can be achieved when reports present sufficient, appropriate evidence to support conclusions while refraining from using adjectives or adverbs that characterize evidence in a way that implies criticism or unsupported conclusions. The objectivity of audit reports is enhanced when the report explicitly states the source of the evidence and the assumptions used in the analysis. The report may recognize the positive aspects of the program reviewed if applicable to the audit objectives. Inclusion of positive program aspects may lead to improved performance by other government organizations that read the report. Audit reports are more objective when they demonstrate that the work

has been performed by professional, unbiased, independent, and knowledgeable staff.

c. Complete: Being complete means that the report contains sufficient, appropriate evidence needed to satisfy the audit objectives and promote an understanding of the matters reported. It also means the report states evidence and findings without omission of significant relevant information related to the audit objectives. Providing report users with an understanding means providing perspective on the extent and significance of reported findings, such as the frequency of occurrence relative to the number of cases or transactions tested and the relationship of the findings to the entity's operations. Being complete also means clearly stating what was and was not done and explicitly describing data limitations, constraints imposed by restrictions on access to records, or other issues.

d. Convincing: Being convincing means that the audit results are responsive to the audit objectives, that the findings are presented persuasively, and that the conclusions and recommendations flow logically from the facts presented. The validity of the findings, the reasonableness of the conclusions, and the benefit of implementing the recommendations are more convincing when supported by sufficient, appropriate evidence. Reports designed in this way can help focus the attention of responsible officials on the matters that warrant attention and can provide an incentive for taking corrective action.

e. Clear: Clarity means the report is easy for the intended user to read and understand. Preparing the report in language as clear and simple as the subject permits assists auditors in achieving this goal. Use of straightforward, nontechnical language is helpful to simplify presentation. Defining technical terms,

abbreviations, and acronyms that are used in the report is also helpful. Auditors may use a highlights page or summary within the report to capture the report user's attention and highlight the overall message. If a summary is used, it is helpful if it focuses on the specific answers to the questions in the audit objectives, summarizes the audit's most significant findings and the report's principal conclusions, and prepares users to anticipate the major recommendations. Logical organization of material, and accuracy and precision in stating facts and in drawing conclusions assist in the report's clarity and understanding. Effective use of titles and captions and topic sentences makes the report easier to read and understand. Visual aids (such as pictures, charts, graphs, and maps) may clarify and summarize complex material.

f. Concise: Being concise means that the report is not longer than necessary to convey and support the message. Extraneous detail detracts from a report, may even conceal the real message, and may confuse or distract the users. Although room exists for considerable judgment in determining the content of reports, those that are fact-based but concise are likely to achieve results.

g. Timely: To be of maximum use, providing relevant evidence in time to respond to officials of the audited entity, legislative officials, and other users' legitimate needs is the auditors' goal. Likewise, the evidence provided in the report is more helpful if it is current. Therefore, the timely issuance of the report is an important reporting goal for auditors. During the audit, the auditors may provide interim reports of significant matters to appropriate entity officials. Such communication alerts officials to matters needing immediate attention and allows them to take corrective action before the final report is completed.

GAO's Mission

The Government Accountability Office, the audit, evaluation, and investigative arm of Congress, exists to support Congress in meeting its constitutional responsibilities and to help improve the performance and accountability of the federal government for the American people. GAO examines the use of public funds; evaluates federal programs and policies; and provides analyses, recommendations, and other assistance to help Congress make informed oversight, policy, and funding decisions. GAO's commitment to good government is reflected in its core values of accountability, integrity, and reliability.

Obtaining Copies of GAO Reports and Testimony

The fastest and easiest way to obtain copies of GAO documents at no cost is through GAO's Web site (www.gao.gov). Each weekday afternoon, GAO posts on its Web site newly released reports, testimony, and correspondence. To have GAO e mail you a list of newly posted products, go to www.gao.gov and select "E-mail Updates."

Order Printed Copies

The printed version of the December 2011 revision of *Government Auditing Standards* can be ordered through the Government Printing Office (GPO) online or by calling 202-512-1800 or 1-866-512-1800 toll free.

Connect with GAO

Connect with GAO on Facebook, Flickr, Twitter, and YouTube. Subscribe to our RSS Feeds or E-mail Updates. Listen to our Podcasts. Visit GAO on the web at www.gao.gov.

June 2005

HUMAN CAPITAL

Selected Agencies Have Opportunities to Enhance Existing Succession Planning and Management Efforts

GAO Accountability • Integrity • Reliability

Highlights

Highlights of GAO-05-585, a report to congressional requesters

Why GAO Did This Study

As the federal government confronts an array of challenges in the 21st century, it must employ strategic human capital management, including succession planning, to help meet those challenges. Leading organizations go beyond a succession planning approach that focuses on replacing individuals and engage in broad, integrated succession planning and management efforts that focus on strengthening current and future organizational capacity.

GAO reviewed how the Census Bureau, Department of Labor (DOL), the Environmental Protection Agency (EPA) and the Veterans Health Administration (VHA) are implementing succession planning and management efforts.

What GAO Recommends

GAO made specific recommendations to enhance agencies' succession efforts. The Department of Veterans Affairs agreed with our recommendations. The Census Bureau agreed with two recommendations and in response to a third, stated that its existing monitoring approach is effective. However, without strengthened monitoring, the Bureau is at increased risk that it will not have the skills it needs for the 2010 Census. DOL did not take issue with our findings and will consider our recommendations. EPA did not comment on our recommendations. DOL and EPA provided technical comments.

What GAO Found

The Census Bureau, DOL, EPA, and VHA have all implemented succession planning and management efforts that collectively are intended to strengthen organizational capacity. However, in light of governmentwide fiscal challenges, the agencies have opportunities to enhance some of their succession efforts.

- While all of the agencies have assigned responsibility for their succession planning and management efforts to councils or boards, VHA has established a subcommittee and high-level positions that are directly responsible for its succession efforts. Also, VHA and the Census Bureau specifically mention succession planning and management as performance expectations in their executives' performance plans.

- The four agencies have begun to link succession efforts to strategic planning. For example, DOL plans to shift from a historical enforcement role to a compliance assistance and consulting role, requiring stronger skills in communication and analysis. To attract and retain employees with such skills, DOL launched the Masters in Business Administration Fellows program in 2002, which it considers one of its major succession training and development programs.

- Monitoring mission-critical workforce needs helps make informed planning decisions. DOL, EPA, and VHA have identified gaps in occupations or competencies, have undertaken strategies to address these gaps, and are planning or are taking steps to monitor their progress in closing these gaps. The Census Bureau could strengthen the monitoring of its mission-critical occupations more closely and at a higher level to ensure it is prepared for the 2010 Decennial Census.

- Effective training and development programs can enhance the federal government's ability to achieve results. All of the agencies' succession efforts include training and development programs at all organizational levels. However, in the current budget environment, there are opportunities to coordinate and share these programs and create synergies through benchmarking with others, achieving economies of scale, limiting duplication of efforts, and enhancing the effectiveness of programs, among other things. Performance measures for these programs can also help agencies evaluate these programs' effects on organizational capacity and justify their value.

- Finally, agencies have recognized the importance of diversity to a successful workforce and use succession planning and management to enhance their workforce diversity.

Contents

Abbreviations

CHCO	Chief Human Capital Officers (Council)
DOC	Department of Commerce
DOL	Department of Labor
EEOC	Equal Employment Opportunity Commission
EPA	Environmental Protection Agency
Fed CDP	Federal Candidate Development Program
MBA	Masters in Business Administration

The Honorable Jon Porter
Chairman
Subcommittee on the Federal Workforce and Agency Organization
Committee on Government Reform
House of Representatives

The Honorable Jo Ann Davis
House of Representatives

Large, escalating, and persistent deficits that are unsustainable over the long term are among an array of challenges that the federal government confronts in the 21st century.[1] To help meet government's challenges, we have reported that agencies must employ strategic human capital management. We also continue to designate strategic human capital management as a high-risk area, one that threatens the federal government's ability to serve Americans effectively, because federal human capital strategies are still not appropriately constituted to meet current and emerging challenges or drive the transformations necessary for agencies to meet these challenges.[2] More specifically, agencies need to identify, develop, and select the appropriate leaders, managers, and workforce to meet 21st century challenges, and one critical step is through effective succession planning and management. Leading organizations go beyond a succession planning approach that focuses on simply replacing individuals and engage in broad, integrated succession planning and management efforts that focus on strengthening both current and future organizational capacity. Particularly in an environment of likely continued budget constraints, federal agencies must implement human capital strategies,

[1] GAO, *21st Century Challenges: Reexamining the Base of the Federal Government*, GAO-05-325SP (Washington, D.C.: February 2005).

[2] GAO, *High-Risk Series: An Update*, GAO-05-207 (Washington, D.C.: January 2005).

including succession planning and management, to transform their cultures to achieve their long-term goals.

Congress has recognized the important role of succession planning and management in preparing federal workers for the future. The Federal Workforce Flexibility Act of 2004 requires the head of each agency to establish, in consultation with the Office of Personnel Management (OPM), a comprehensive management succession program to provide training for employees and develop future managers for the agency.[3] In addition, the Chief Human Capital Officers Act led to the creation of a governmentwide Chief Human Capital Officers (CHCO) Council, which subsequently established a leadership and succession planning subcommittee.[4] This subcommittee' s intended focus is on reviewing leadership development, moving leaders from technicians to strategic thinkers, and meeting future workforce needs in a planned manner. The act also calls for OPM to design measures to assess, among other issues, the continuity of effective leadership through the implementation of succession plans.

We previously identified how agencies in Australia, Canada, New Zealand, and the United Kingdom are adopting a more strategic approach to managing the succession of senior executives and other employees with critical skills.[5] We found that these agencies' succession planning and management efforts (1) receive active support of top leadership; (2) link to the agencies' strategic planning; (3) identify talent from multiple organizational levels, early in their careers, or with critical skills; (4) emphasize developmental assignments for high-potential employees in addition to formal training; (5) address specific human capital challenges, such as diversity; and (6) facilitate broader transformation efforts.[6] We observed that these experiences may prove valuable to agencies in the United States.

[5] GAO, *Human Capital: Insights for U.S. Agencies from Other Countries' Succession Planning and Management Initiatives*, GAO-03-914 (Washington, D.C.: Sept. 15, 2003).

[6] For more information on transformation, see GAO, *Forum: High-Performing Organizations: Metrics, Means, and Mechanisms for Achieving High Performance in the 21st Century Public Management Environment*, GAO-04-343SP (Washington, D.C.: Feb. 13, 2004).

As a follow up to that report, we reviewed how selected U.S. agencies are implementing succession planning and management efforts. For purposes of this report, we specifically address the first five practices given the selected agencies' immediate succession challenges. We selected agencies based on the nature of these succession challenges as well as their diverse organizational structures and missions.

Specifically, we reviewed the

- Census Bureau, which has a unique, event-driven requirement, namely the 2010 Decennial Census, and projected that 45 percent of its workforce will be eligible to retire by 2010;

- Department of Labor (DOL), which has reported a Senior Executive Service (SES) retirement eligibility rate of more than 60 percent by the beginning of fiscal year (FY) 2010;

- Environmental Protection Agency (EPA), which has reported that almost 60 percent of its SES will be eligible to retire by 2008 and projected a loss of at least 20 percent of its supervisors in 10 of 18 priority occupations; and

- Veterans Health Administration (VHA), which reported a 38 percent SES retirement eligibility rate through 2008 and projects that 24 percent of its Nurse Executives will be eligible for regular retirement in 2005.

To meet this objective, we analyzed strategic, human capital, workforce, succession, and training and development plans; guidance for managers' performance agreements; human capital team charters; and diversity information from the selected agencies. In addition, we reviewed policies and guidance on succession-related issues from OPM, as well as the Equal Employment Opportunity Commission (EEOC) and the Merit Systems Protection Board (MSPB) because of their responsibilities for ensuring the fair application of personnel decisions, such as selection for training and development programs. We also interviewed agency, OPM, EEOC, and MSPB officials involved with strategic, human capital, and succession planning and management. To get the varied perspectives of agencies' staff located in headquarters and regional offices, we interviewed agency officials in Washington, D.C.; Charlotte, North Carolina; and Los Angeles and San Francisco, California. Appendix I provides additional information on our scope and methodology. We conducted our study from June 2004

through April 2005 in accordance with generally accepted government auditing standards.

Results in Brief

The Census Bureau, DOL, EPA, and VHA have all implemented selected succession planning and management efforts that collectively are intended to strengthen both current and future organizational capacity. Generally, these efforts receive top leadership support and commitment, link with strategic planning, identify critical gaps in occupations or competencies, offer training and development programs, and enhance diversity. However, each of the agencies should enhance some succession efforts to better position themselves for the future.

All four agencies have the support and commitment of their organizations' top leadership. For example, they have established councils or boards with responsibility for human capital that involve top agency leadership. Specifically, VHA has a dedicated subcommittee as well as high-level positions that are directly accountable for succession planning and management, while the other three agencies have councils or boards that are responsible for human capital more broadly, including succession. Furthermore, all four agencies include a performance expectation that in general holds executives accountable for human capital management in their performance plans. However, VHA and the Census Bureau include an expectation that specifically holds executives accountable for succession planning and management.

All four agencies have also begun to link their succession efforts to their strategic goals. DOL states that to meet its strategic goal of ensuring a competitive 21st century workforce, it plans to identify skill gaps, assess training needs, and recruit new employees. For example, DOL plans to shift from a historical enforcement role to compliance assistance and consultation, requiring stronger skills in communication and analysis. DOL seeks to develop more skills in technology and project management as well as in strategic planning, quantitative analysis, and analytical thinking for a more "business-like" management approach. To attract and retain employees with such skills, DOL launched the Masters in Business Administration (MBA) Fellows program in 2002, which it considers one of its major succession development programs.

These agencies have identified the talent, and specifically the mission-critical occupations or competencies required to achieve their goals. For example, VHA projects the number of employees needed to fill the gaps in

mission-critical occupations and monitors changes in its mission-critical workforce. EPA has projected gaps by mission-critical occupations, identified technical and cross-occupational competencies, and plans to monitor its progress in closing these gaps. DOL assesses its mission-critical requirements through skills inventories and monitors the turnover of its workforce. The Census Bureau, on the other hand, has also identified its mission-critical occupations, but does not monitor its progress in closing gaps because decisions to fill vacancies are delegated to line managers. However, without monitoring the readiness of its mission-critical workers more closely and at a higher level than line managers, the Bureau may not know overall if it is acquiring the skills it needs to be prepared to conduct the 2010 Decennial Census.

Effective training and development programs can enhance the federal government's ability to prepare its workforce and thereby achieve results. Further, effective succession planning and management efforts identify talent from multiple organizational levels and early in their careers as well as provide both formal and developmental training to strengthen high-potential employees' skills and to broaden their experience. All four agencies have core succession training and development programs for entry-level employees, middle-level management, and senior executives. However, in the current budget environment, there are opportunities for agencies to coordinate and share these programs and create synergies through benchmarking with others, achieving economies of scale, limiting duplication of efforts, and enhancing the effectiveness of programs, among other things. Examples of such coordinated and shared training include a partnership across three agencies to share best practices among their acquisition workforces and OPM's program to help agencies meet their senior executive succession goals and create a leadership corps. The selected agencies generally had not sought out such opportunities for their core succession programs.

Given this environment, agencies also need credible information to evaluate how training and development programs affect organizational capacity. All four agencies are able to report on measures such as participant number and program cost. However, the Census Bureau, VHA, and EPA could better demonstrate their programs' value in providing future talent by identifying outcome-oriented measures and evaluating the extent to which these programs enhance their organizations' capacity. For example, DOL has identified measures that are intended to provide the department with an understanding of the programs' impact on organizational capacity, such as its SES "bench strength," a ratio of senior

executives who are in training or have completed training to those projected to leave.

Finally, all four agencies report using their succession planning and management efforts to enhance diversity. For example, VHA has integrated diversity planning into its succession and workforce planning process. Initially, each regional office that has primary responsibility for health care—or Veterans Integrated Service Network (VISN)—submits a regional succession plan that includes diversity information. VHA then analyzes these data, highlights underrepresentation of certain demographic groups in specific mission-critical occupations, and provides guidance to focus recruiting efforts to enhance diversity.

To improve and refine their succession planning and management efforts, we are recommending that all four agencies actively seek opportunities to coordinate and share their core succession training and development programs with other outside agencies. By doing so, agencies can enhance efficiency and increase the effectiveness of their programs, among other things. We are also making other recommendations to individual agencies to enhance their succession planning and management efforts.

We provided a draft of this report to the Acting Director of OPM and the CHCO Council's Leadership and Succession Planning Subcommittee for their information. We also provided a draft of this report to the Secretaries of Commerce, Labor, and Veterans Affairs (VA) and the Administrator of EPA for their review and comment. VA agreed with our findings and recommendations, and we present their written comments in appendix II. The Department of Commerce (DOC) and the Census Bureau agreed with our findings and our recommendations to seek opportunities to coordinate core succession training and development programs and to evaluate the extent to which these programs enhance organizational capacity. In response to our recommendation to strengthen the monitoring of its mission-critical workforce, the Census Bureau stated that its existing approach is effective. However, without strengthened monitoring of its mission-critical workforce, the Census Bureau is at increased risk that it will not have the skills it needs to be prepared to conduct the 2010 Census as efficiently or effectively as possible. For example, a lesson from the 2000 Census was that while contracts for various projects supported decennial census operations, they did so in many instances at a higher cost than necessary because the Census Bureau did not have sufficient contracting and program staff with the training and experience to manage them. We present DOC's and the Census Bureau's written comments in appendix III.

DOL did not take issue with our findings, stated that it will consider our recommendations, and provided technical comments, which we incorporated as appropriate. EPA did not comment on our recommendations, but provided a technical comment, which we incorporated.

Background

We have found that other countries are experiencing challenges in managing their human capital, and their experiences may prove valuable to federal agencies in the United States. For example, they are using their performance management systems to connect employee performance with organizational success to help foster a results-oriented culture.[7] They are also implementing succession planning and management initiatives that are designed to protect and enhance organizational capacity.[8] Collectively, these agencies' initiatives demonstrated the following practices.

- *Receive active support of top leadership*. Top leadership actively participates in, regularly uses, and ensures the needed financial and staff resources for key succession planning and management initiatives. New Zealand's State Services Commissioner, whose wide-ranging duties include the appointment and review of public service chief executives, formulated a new governmentwide senior leadership and management development strategy.

- *Link to strategic planning*. To focus on both current and future needs and to provide leaders with a broader perspective, the Royal Canadian Mounted Police's succession planning and management initiative figures prominently in the agency's multiyear human capital plan and provides top leaders with an agencywide perspective when making decisions.

- *Identify talent from multiple organizational levels, early in their careers, or with critical skills*. For example, the United Kingdom's Fast Stream program targets high-potential individuals as well as recent college graduates, and aims to provide individuals with experiences and training linked to strengthening specific competencies required for admission to the Senior Civil Service.

[7] GAO, *Results-Oriented Cultures: Insights for U.S. Agencies from Other Countries' Performance Management Initiatives*, GAO-02-862 (Washington, D.C.: Aug. 2, 2002).

[8] GAO-03-914.

- *Emphasize developmental assignments in addition to formal training*. Initiatives emphasize developmental assignments in addition to formal training to strengthen high-potential employees' skills and broaden their experiences. For example, Canada's Accelerated Executive Development Program temporarily assigns executives to work in unfamiliar roles or subject areas, and in different agencies.

- *Address specific human capital challenges, such as diversity, leadership capacity, and retention*. For example, the United Kingdom created a centralized development program that targets minorities with the potential to join the Senior Civil Service.

- *Facilitating broader transformation efforts*. The United Kingdom launched a wide-ranging reform program know as Modernising Government, which focused on improving the quality, coordination, and accessibility of the services government offered to its citizens and restructured the content of its leadership and management development programs to reflect this new emphasis on service delivery. In Australia, to find individuals to champion recent changes in how it delivers services and interacts with stakeholders, the Family Court of Australia identifies and prepares future leaders who will have the skills and experiences to help the organization successfully adapt to agency transformation.

We at GAO have also undertaken a variety of succession planning and management initiatives consistent with these leading practices to strengthen our own internal efforts. For example, we have constructed a detailed workforce planning model and analyzed it to ensure that it hired, retained, and contracted for the appropriate number of staff with the needed competencies. In addition, we have developed certain "people measures" to assess its performance in human capital management, including measures for the attraction and retention of staff, staff utilization and development, and organizational leadership.

Agencies Reinforce Top Leadership Support by Assigning Responsibility for Succession Efforts

Effective succession planning and management programs have the support and commitment of their organizations' top leadership. Our past work has shown that demonstrated commitment of top leaders is perhaps the single most important element of successful management reform.[9] We have reported that to demonstrate its support of succession planning and management efforts, top leadership actively participates in and regularly uses these initiatives to develop and promote individuals, and ensures that these programs receive sufficient resources.[10] As a next step, federal agencies are to hold their senior executives accountable to address human capital issues, such as succession.[11] We found that VHA has assigned responsibility for succession planning and management initiatives to a dedicated subcommittee, while DOL, the Census Bureau, and EPA have councils or boards that are responsible for human capital more broadly, including succession efforts.

VHA has established a subcommittee and high-level positions that are directly responsible for succession planning and management. The Succession and Workforce Development Management Subcommittee reports to the Human Resources Committee of the National Leadership Board, as illustrated in figure 1. VHA's Chief Executive Officer—the Department of Veterans Affairs' Undersecretary for Health—chairs the board, which consists of VISN directors, chief officers, and heads of offices.

[9] GAO, *Management Reform: Elements of Successful Improvement Initiatives*, GAO/T-GGD-00-26 (Washington, D.C.: Oct. 15, 1999).

[10] GAO-03-914.

[11] GAO, *Results-Oriented Cultures: Using Balanced Expectations to Manage Senior Executive Performance*, GAO-02-966 (Washington, D.C.: Sept. 27, 2002).

Figure 1: VHA's Assigned Responsibility for Succession

Source: GAO.

In addition, VHA has established (1) a workforce planner position to help coordinate and manage VHA workforce planning activities, and (2) a nurse workforce planner position to help respond to its nursing shortage and consult with the workforce planner on certain issues, such as regional-specific recruiting challenges and training. Also, this year, VHA seeks to establish a director of succession management, a senior executive-level position. According to a VHA human capital official, the new director's duties will include overseeing national coordination of VHA's succession activities.

At DOL, the Management Review Board, chaired by the Assistant Secretary for Administration and Management, is responsible for a variety of business issues, including human capital. The board is composed of top senior leaders from each of the agencies within DOL. According to DOL, the board's senior leaders helped garner support for departmentwide succession planning and management efforts. For example, the board recommended funding the development of departmentwide competencies required for mission-critical occupations.

The Census Bureau's Human Capital Management Council, consisting of representatives from each of the Census Bureau's directorates, reports to the Deputy Director of Census. According to Census Bureau human resource officials, the Council plays a key role in involving and advising top leadership on human capital issues. For example, the Council developed

and presented a succession management plan that recommended, among other things, piloting job rotations and assignments to address mission-critical priorities and resources. In addition, according to a Census Bureau human resource official, the Council assesses various succession-related issues, such as recruiting and competency development for the Bureau's senior management. In turn, senior management recently tasked a Council representative to provide monthly updates on succession-related issues.

EPA's Human Resources Council, composed of senior leaders who are to advise the EPA Administrator on human capital issues, released EPA's "Strategy for Human Capital," a planning document outlining EPA's long-term human capital goals. The strategy names the offices responsible for leading each of its goals. For example, the Office of Human Resources, the Executive Resources Board, and human resources officers are to implement a strategy to "Ensure the Continuity of Leadership, Critical Expertise, and Agency Values through Succession Planning and Management/Executive Development." According to agency human capital officials, EPA's assistant and regional administrators and their senior managers are responsible for executing succession planning initiatives.

As a next step, federal agencies are to hold their senior executives accountable for human capital issues, thus explicitly aligning individual performance expectations with organizational goals. VHA and the Census Bureau specifically mention succession planning and management in their executives' performance plans. DOL and EPA senior executive performance expectations also include aspects of succession planning and management as part of more general human capital management responsibilities.

- At VHA, in their FY 2005 performance plans, chief officers and program officials are to assure that the regional strategic plans address workforce development, including a succession plan that projects workforce needs. A VHA official also stated that VHA is considering including specific succession-related performance measures, such as turnover rates for selected priority occupations, in applicable executive performance plans.

- The Census Bureau's FY 2005 executive performance plans state that each senior executive "effectively develops and executes plans to accomplish strategic goals and organizational objectives, setting clear priorities and acquiring, organizing, and leveraging available resources (human, financial, budget, etc.,) and succession planning to ensure

timely delivery of high quality services and products in compliance with applicable laws, regulations and policies." Senior executives are also to demonstrate a planned approach to workforce development for managers and staff.

- At DOL, executives are to ensure that "staff are appropriately selected, utilized, appraised, and developed…" Executives are also to develop the talents of the staff and qualified candidates for positions in the organization, according to DOL's latest senior executive performance management plan, revised in 2004.

- EPA' s FY 2004 performance plan for senior executives states that executives should identify current and projected skill gaps and develop strategies for addressing these gaps. According to an EPA executive resource policy official, the FY 2005 senior executive performance plan is under revision, but the expectations concerning skill gaps will not change.

We have also reported that to demonstrate its support of succession planning and management, top leadership ensures that these programs receive sufficient financial and staff resources and are maintained over time.[12] DOL uses a centrally managed "crosscut fund" to supplement its succession planning and management initiatives. Component agencies within DOL submit project proposals, which DOL evaluates against established criteria, such as supporting initiatives in the department's Human Capital Strategic Plan. According to DOL, from FY 2003-2004, the agency allocated about $6.1 million for 18 human capital projects, such as competency assessments for mission-critical occupations, and the Management Development Program, one of DOL's major succession development programs. The Census Bureau, EPA, and VHA allocate money to various programs, including succession efforts, intended to contribute to human capital goals, but detailed funding information was not readily available from the agencies.

[12] GAO-03-914.

Agencies Have Begun to Link Succession Efforts to Their Strategic Goals

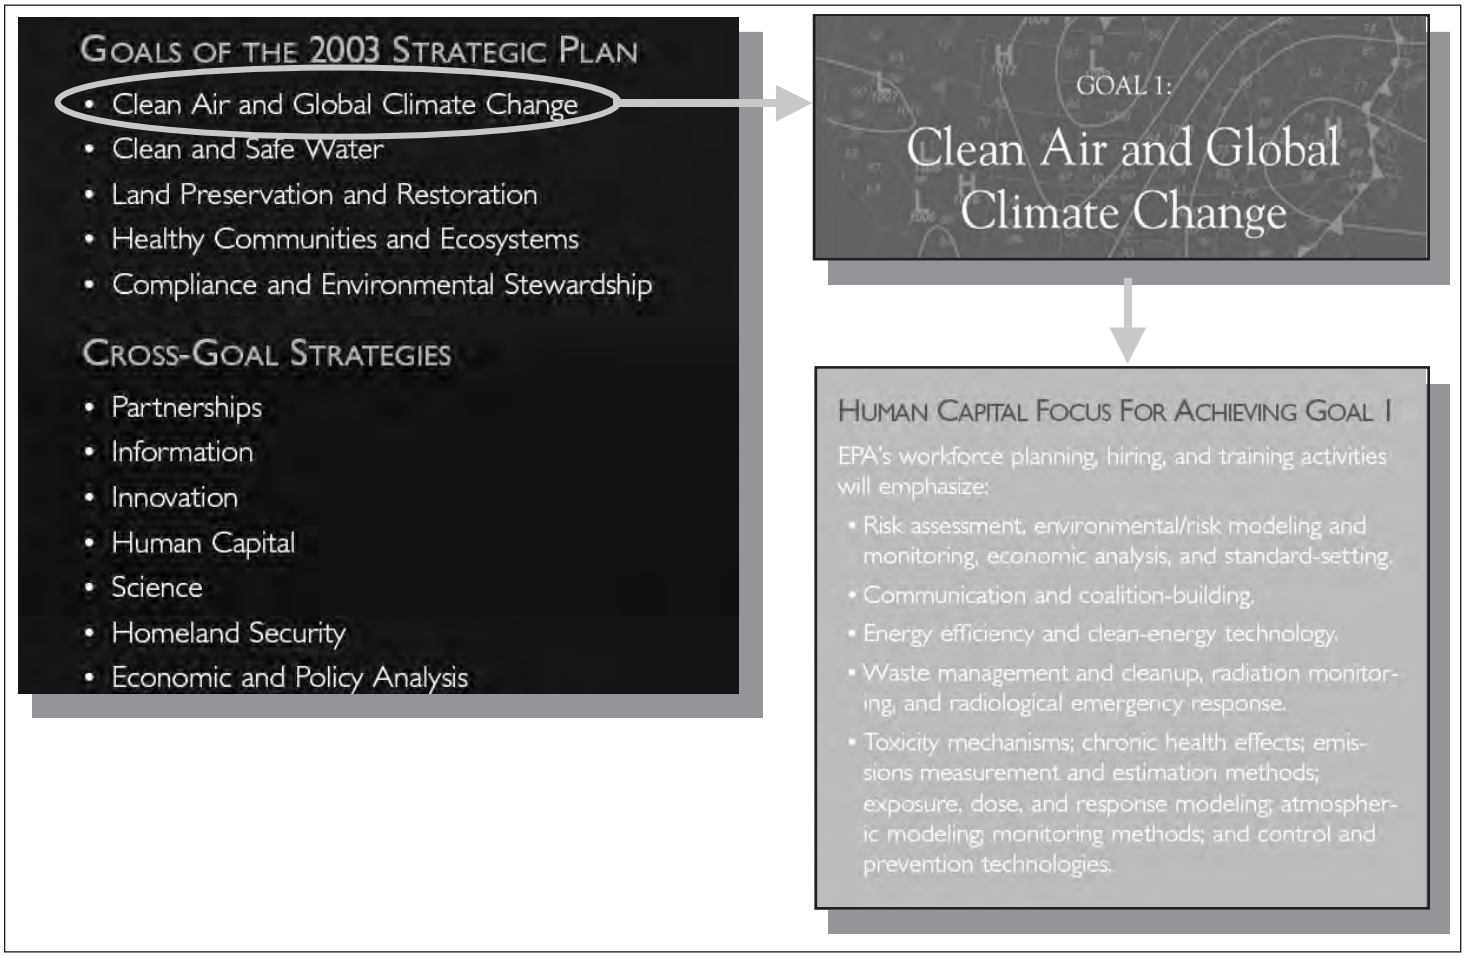
Leading organizations use succession planning and management as a strategic planning tool that focuses on current and future needs and develops pools of high-potential staff in order to meet the organization's mission over the long term. That is, succession planning and management is used to help the organization become what it needs to be, rather than simply to recreate the existing organization. We have previously reported on the importance of linking succession planning and management with the forward-looking process of strategic planning.[13] Specifically, discussing how workforce knowledge, skills, and abilities will contribute to the achievement of strategic and annual performance goals, how significant gaps are identified, and what mitigating strategies are proposed (such as hiring and training) can show the connection between succession planning and strategic planning. All four agencies have begun to link their succession planning to their strategic goals.

We previously reported that EPA's human capital strategy lacked some key elements, including the linking of human capital objectives to strategic goals.[14] Since then, EPA's current strategic plan recognizes that human capital management spans its 5 strategic goals and identifies specific workforce knowledge, skills, and abilities to achieve each goal. For example, as illustrated in figure 2, to achieve its goal for "Clean Air and Global Climate Change," EPA states that its workforce planning, hiring, and training activities will emphasize risk assessment, including environmental-risk modeling and monitoring, economic analysis, and standard setting, among other factors.

[13] GAO, *Human Capital: A Self-Assessment Checklist for Agency Leaders*, GAO/OCG-00-14G (Washington, D.C.: September 2000).

[14] GAO, *Human Capital: Implementing an Effective Workforce Strategy Would Help EPA to Achieve Its Strategic Goals*, GAO-01-812 (Washington, D.C.: July 31, 2001).

Figure 2: EPA's Strategic Goals and Associated Human Capital Focus



Source: EPA.

Separately, the succession plan states that the agency faces a number of future challenges, such as global pollution, and identifies key drivers shaping the agency's future work, such as science and technology advancements, budget constraints, administration priorities, agricultural practices, public expectations, and the media's influences. To respond to these drivers, EPA states that its employees must have the capacity to build stronger working partnerships, increase on-site problem solving, and enhance internal and external communication practices.

As a component of VA, VHA recognizes VA's strategic objective to "recruit, develop and retain a competent, committed and diverse workforce that provides high quality service to veterans and their families" in its *Workforce Succession Strategic Planning Guide*. To achieve this objective, VHA identifies a number of strategic assumptions about the future of veterans' health care. For example, it states that health care delivery will become more patient centered, that patients will be seen based on need instead of a predetermined schedule, and the use of in-home and interactive technology will increase, along with noninstitutional long-term care. Although VHA states that technological advances will improve access and quality of care for veterans, it does not anticipate significant impacts on the need for health care professionals over the next 5 years, and expects to continue to compete for scarce health care professionals in certain occupations.

DOL states that to meet its strategic goal of ensuring a competitive 21st century workforce, it plans to identify skill gaps, assess training needs, and recruit new employees. For example, DOL plans to shift from a historical enforcement role to compliance assistance and consultation, requiring stronger skills in communication and analysis. DOL seeks to develop more skills in technology and project management as well as in strategic planning, quantitative analysis, and analytical thinking for a more "business-like" management approach. To attract and retain employees with such skills, DOL launched the MBA Fellows program in 2002, which it considers one of its major succession development programs. The 2-year developmental program includes rotational assignments, mentoring, and promotional opportunities for successful graduates. In FY 2004, DOL reported retaining 89 percent of its MBA Fellows after 2 years.

Among the Census Bureau's strategic goals is its unique requirement to conduct the Decennial Census. According to the agency strategic plan, the Bureau plans to reengineer the 2010 Census so that it "is cost-effective, provides more timely data, improves coverage accuracy, and reduces operational risk." The agency will accomplish this by collecting

information on a yearly basis, enhancing address databases, using local geographic information, and undertaking operational tests of these new sources and methods. In its human capital plan, the Bureau acknowledges that reengineering the 2010 Census requires new skills in project, contract, and financial management; advanced programming and technology; and statistics, mathematics, economics, quantitative analysis, marketing, demography, and geography. To help obtain these skills, the Bureau has established training programs and developed competency guides. For example, it has instituted a Project Management Master's Certificate Program and an Information Technology Master's Certificate Program. All program managers now are to receive project management training.

Monitoring Mission-Critical Workforce Needs Helps Make Informed Succession Planning Decisions

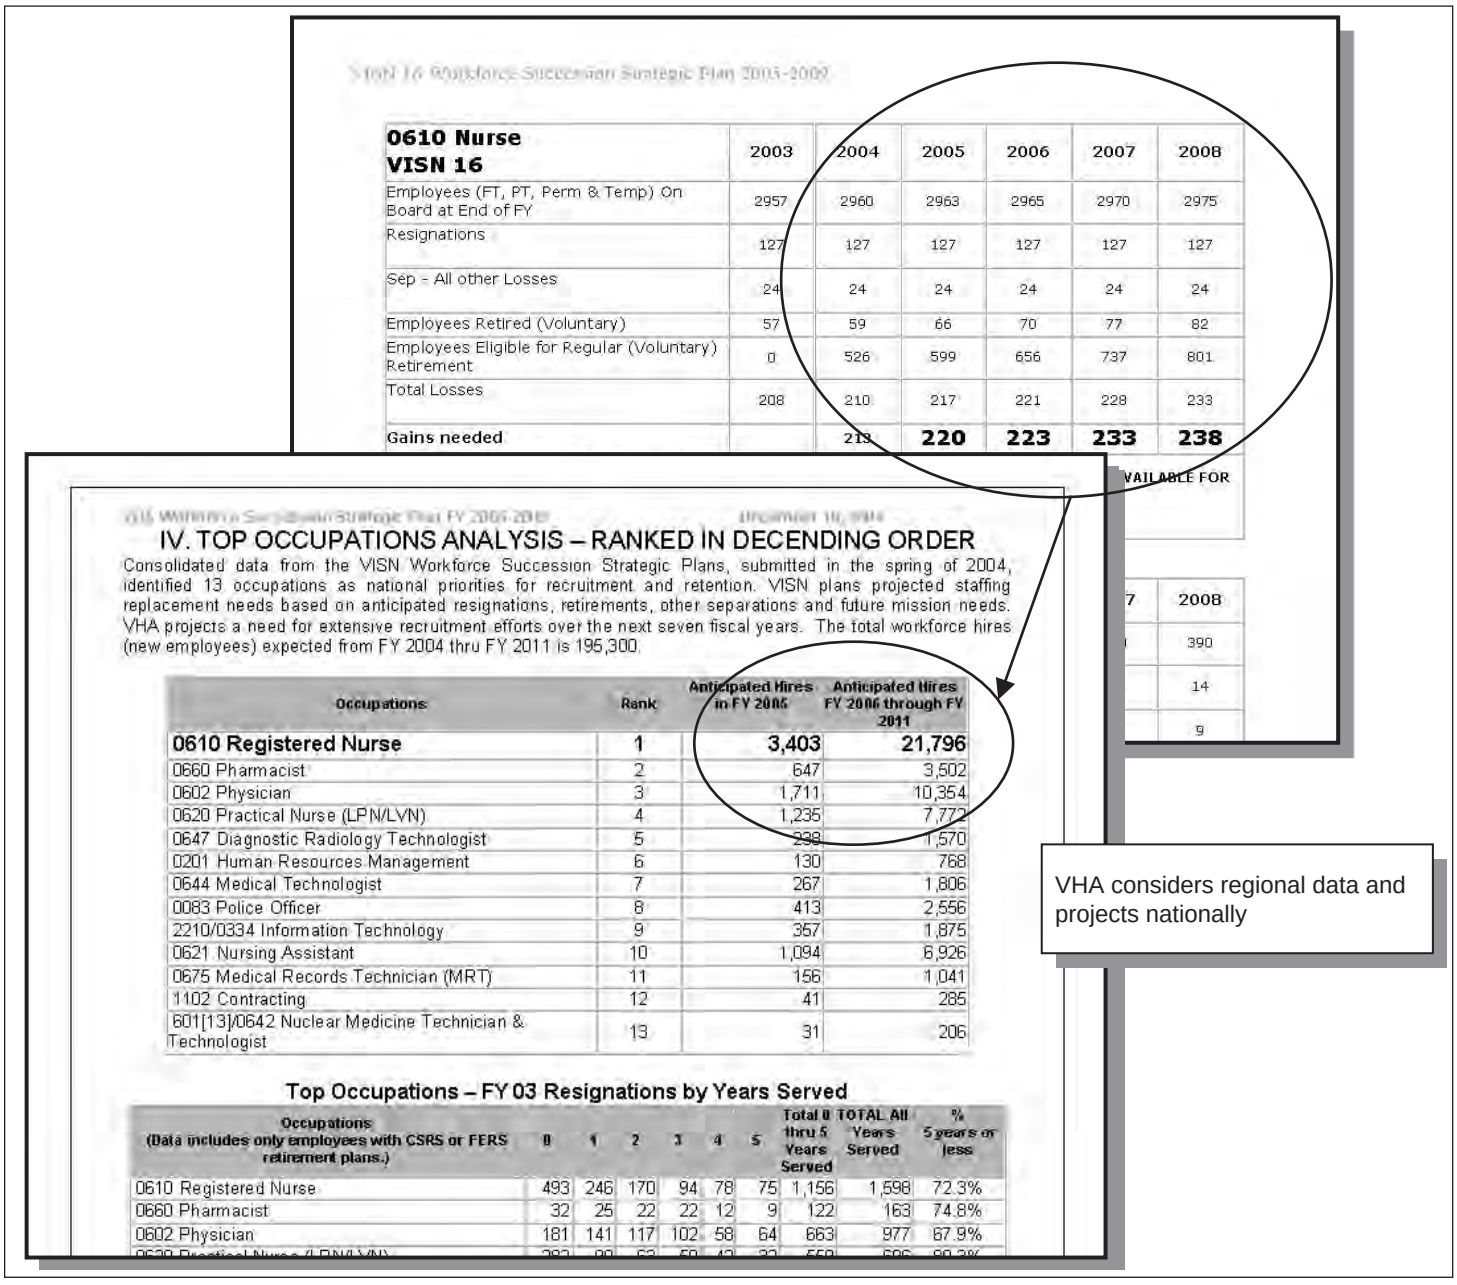
Leading organizations use succession planning and management to identify the talent required to achieve their goals. We have also identified key principles for effective workforce planning including determining the critical skills and competencies that will be needed to achieve current and future programmatic results; developing strategies that are tailored to address gaps in number, deployment, and alignment of human capital approaches for enabling and sustaining the contributions of all critical skills and competencies; and monitoring and evaluating the agency's progress toward its human capital goals and the contribution that human capital results have made toward achieving programmatic results.[15]

VHA, EPA, and DOL have identified gaps in occupations or competencies in their mission-critical workforce to achieve their goals, have undertaken strategies to address these gaps, and plan to or are taking steps to monitor their progress. By doing so, they can make more informed planning decisions and help appropriately focus succession efforts. While the Census Bureau has identified and is recruiting for its mission-critical occupations, it could achieve similar benefits if it more closely monitors its mission-critical workforce as it plans for the 2010 Decennial Census.

[15] GAO, *Human Capital: Key Principles for Effective Strategic Workforce Planning*, GAO-04-39 (Washington, D.C.: Dec. 11, 2003).

VHA has identified 13 occupations it deems as national priorities for recruitment and retention, including registered nurses, physicians, and nuclear medicine technicians, among others. VHA uses a Web-based tool with a workforce strategic planning template to help project its needs in these mission-critical occupations. Each VISN completes a comprehensive and detailed regional workforce assessment that projects staffing needs for priority occupations for at least the next 5 years. These projections are based on anticipated resignations, retirements, other separations, and future mission needs. VHA's workforce planner considers these data when projecting national staffing needs. For example, as illustrated in figure 2, VHA anticipates hiring 3,403 nurses in FY 2005 and 21,796 nurses from FY 2006 through FY 2011. This national projection includes, for example, the VISN 16 assessment that it will need from 220 to 238 nurses from FY 2005 to FY 2008.

Figure 3: VISN 16 Workforce Assessment and VHA's National Succession Plan



Source: VHA.

VHA also monitors and reports changes in its mission-critical workforce based on these data. For example, VHA reports that it increased the total nurses it had on-board by 6.2 percent or 2,184 from FY 1999 to FY 2004. VHA states that the succession programs implemented since 1999 have helped it to meet these mission-critical needs and, therefore, it does not plan to implement additional programs.

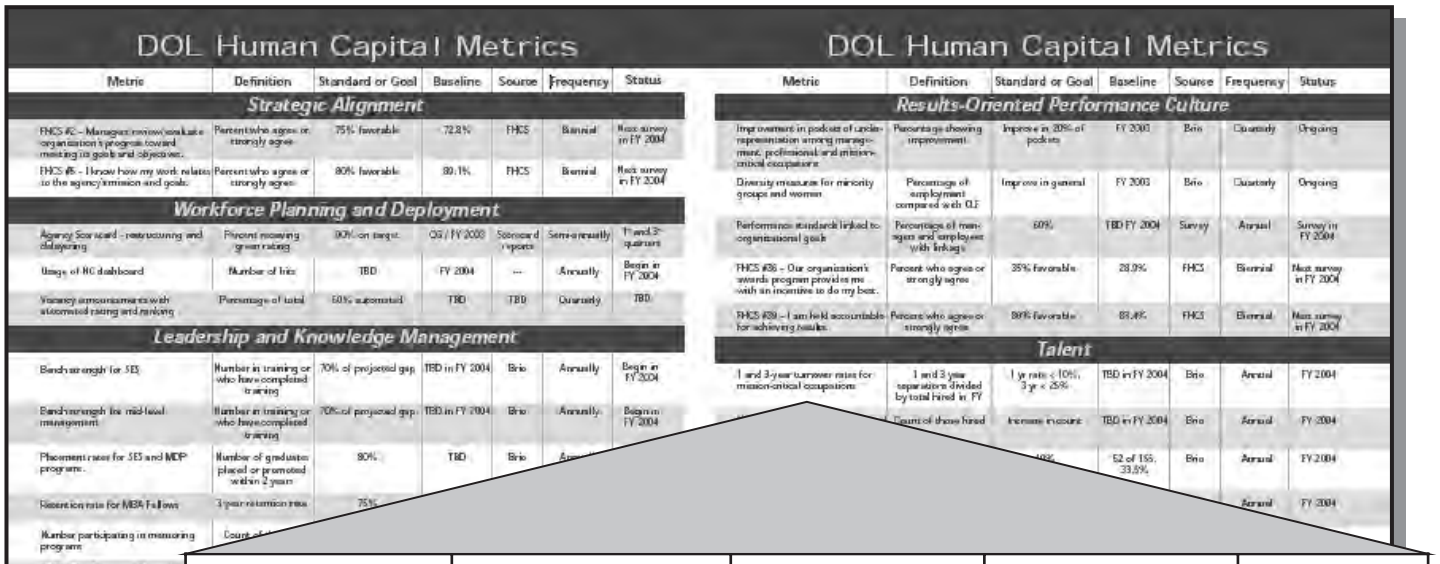
We previously recommended that EPA comprehensively assess its workforce needs.[16] Subsequently, EPA identified 18 priority occupations, including physical scientists, biologists, chemists, and attorneys. EPA projects each occupation's retirement, attrition, and accession rates based on historical averages. For example, EPA estimates that approximately 20 percent of the managers and supervisors in 10 of the 18 priority occupations will leave by 2008, mostly due to retirements. In addition, human capital officials stated that the agency's strategy has been on strengthening mission-critical competencies among their priority occupations. For example, EPA has identified 12 technical competencies, such as information management and sciences and biological sciences, and 12 cross-occupational competencies, such as teamwork and oral communication, that are essential for the agency to acquire, retain, or develop to accomplish its future mission. EPA plans to address emerging mission-critical competencies and gaps in priority occupations through recruitment and development. EPA also plans to update its 2004 strategic workforce planning effort on a cyclical basis to monitor progress in closing any gaps, but the agency did not indicate specific time frames for these updates.

DOL has identified 27 mission-critical occupations, such as investigators, workforce development specialists, and mining engineers as well as the skills needed for each occupation, which it specifies in competency models. For example, for criminal investigators, DOL identified skills such as external awareness and interpersonal communication in addition to the knowledge and conduct of investigations. DOL has also inventoried the skills of its on-board mission-critical workers through the department's mission-critical Skills Assessment Initiative. DOL reports that its component agencies are developing action plans to reduce or close skill gaps which DOL is incorporating into its human capital planning and reporting process.

[16] GAO-01-812.

In addition, DOL has developed performance measures that are designed to help it gauge its organizational capacity, as illustrated in figure 4. For example, for FY 2004 DOL reported a 5 percent turnover rate of its mission-critical employees during their first year, meeting its goal of less than 10 percent. Likewise, DOL reported a 19.5 percent turnover rate during their first 3 years, meeting its goal of less than 25 percent. In addition, DOL reported a 95.4 percent FTE utilization rate, the percentage of filled and authorized, full-time equivalent positions, for FY 2004, compared with a 98 percent goal.

Figure 4: Selected DOL Performance Measures Designed to Gauge Organizational Capacity



Metric	Definition	Standard/ Goal	FY 2004 (actual)	Frequency Measured
1 and 3-Year Turnover for Mission-Critical Occupations	1 and 3-Year separations divided by total hired in FY	1-year rate<10% 3-year rate<25%	1-year rate = 5% 3-year = 19.5%	Annually
FTE Utilization	FTE Utilized/FTE authorized	98%	95.4%	Annually

Source: DOL.

The Census Bureau has identified its mission-critical occupations and is recruiting for statisticians, mathematical statisticians, information technology specialists, cartographers, and geographers on its employment Web site. According to an agency human capital official, the Census Bureau does not monitor or assess gaps in numbers by mission-critical occupation, but focuses on "building infrastructure" by recruiting and developing competencies. The same official stated that the Bureau delegates decisions to line managers to fill vacancies, and thus there is no need to assess workers by mission-critical categories. To assist these managers, the Bureau reports that an electronic hiring system allows them to identify competencies for each vacancy, and that line managers engage in a continuing dialogue with senior managers, the Hiring Coordinators Group, and the Human Capital Management Council to address hiring needs. Nevertheless, while line managers are appropriately concerned with filling vacancies, as noted earlier, the Bureau has also acknowledged that reengineering the 2010 Decennial Census requires new competencies. By not monitoring its mission-critical occupations more closely and at a higher level, Census may not know overall if it is acquiring the skills it needs to be prepared to conduct the 2010 Decennial Census as efficiently or effectively as possible.

Enhanced Coordination and Evaluation of Training and Development Programs Could Help Leverage Scarce Resources

Effective training and development programs can enhance the federal government's ability to achieve results. Further, effective succession planning and management efforts identify talent from multiple organizational levels, early in their careers, or with critical skills as well as provide both formal training and opportunities for rotational, developmental, or "stretch" assignments, to strengthen high-potential employees' skills and to broaden their experience and perspective.[17] While all four agencies offer core succession training and development programs, they each can seek opportunities to achieve efficiencies through more coordination and sharing of these programs. In addition, establishing valid measures to better evaluate how these programs affect organizational capacity can give agency decision makers credible information to justify training and development programs' value.

[17] GAO-03-914.

Agency Succession Efforts Include Training and Development for Employees across Organizational Levels

All four agencies offer programs to train and develop their entry-, middle-, and senior-level employees. These programs provide opportunities for formal training, and all but one program offers rotational or developmental assignments.[18] Table 1 provides a summary of core succession training and development programs by agency.

Table 1: Agencies' Core Succession Training and Development Programs

	Level of training		
Program	**Entry**	**Middle**	**Senior**
Census Bureau (DOC Programs)			
Aspiring Leaders Development Program	x	x	
Executive Leadership Development Program	x	x	
SES Candidate Development Program			x

VHA			
Facility LEAD Program	x		
VISN LEAD Program		x	
Executive Career Field Candidate Development Program			x

Source: Census Bureau, DOC, DOL, EPA, and VHA.

Note: Agency human capital officials identified these as their core succession training and development programs.

[18] EPA's Mid-level Development Programs do not offer formal rotational assignments but rotations are available to all employees.

At the senior level, all four agencies have succession training and development programs intended to enhance leadership skills, primarily through SES candidate development programs. For example, EPA's SES Candidate Development Program—designed to prepare a cadre of leaders to fill future vacant executive positions in the agency and to maintain valuable institutional knowledge—requires candidates to complete an executive development plan and work with an SES mentor and executive coach to help define career goals and provide guidance. The program also requires participants to complete at least 80 hours of formal leadership development training, as well as complete a 4-month developmental assignment. DOL and VHA have similar programs in place. The Census Bureau, as a component of DOC, participates in DOC's SES Candidate Development Program.

The four agencies also have programs intended to develop the leadership and supervisory skills for middle-level managers. For example, VHA's program named "VISN LEAD" provides an opportunity for high-potential employees in field locations to receive coaching and mentoring, create a personal development plan, and join with special VISN-wide project task teams, while retaining their current responsibilities. EPA's Mid-level Development Programs, DOL's Management Development Program, and DOC's Executive Leadership Development Program—in which the Census Bureau participates—all offer similar opportunities.

At the entry level, all agencies have programs intended to develop employees and provide them with the foundation for future leadership. For example, DOL's MBA Fellows program requires participants to take a minimum of four rotational assignments and core training classes, complete a personal development plan, and work with a senior-level mentor, among other activities. Targeting recent MBA graduates, DOL established its program not only to address increased departmentwide needs for business and project-management skills, but also to create a cadre of future department leaders. EPA's Intern Program and Rotational Program, VHA's Facility LEAD Program, and DOC's Aspiring Leaders Development Program, in which the Census Bureau participates, are similar in nature.

According to agency human capital officials, other programs also contribute to their succession efforts. For example, the Census Bureau has established certificate programs in project management and leadership for all employees to develop and enhance these specific skills. The Bureau also has a mathematical statisticians program, which, according to the Deputy

Director, provides career enhancement opportunities designed to help develop and retain employees in this critical occupation. Similarly, DOL has a Career Assistance Program that provides employees at all levels with career planning advice and other development assistance. In addition, the agencies use formal mentoring or coaching programs to help guide employees throughout their career.

Coordination and Sharing of Training and Development Programs Can Achieve Efficiencies

As agencies implement their core succession training and development programs, they must plan and prepare for the possibility of significant and recurring constraints on their resources, in light of fiscal and budgetary constraints. Recognizing this, leading agencies look for opportunities to coordinate and share their efforts and create synergies through benchmarking with others, achieving economies of scale, limiting duplication of efforts, and enhancing the effectiveness of programs, among other things.[19] An example of such a coordinated and shared training effort is the recent announcement of a new partnership by the Office of Federal Procurement Policy, Department of Defense, and the General Services Administration. The initiative is geared toward the civilian and defense acquisition workforces, and is intended to provide similar training and development opportunities for acquisition personnel across all three agencies with the goal of sharing best practices, among other things.

OPM has begun to serve as a bridge for agencies to seek opportunities to coordinate their succession training and development programs as it shifts its role from less of a rule maker and enforcer to more of a strategic partner in leading and supporting agencies' human capital management. For example, OPM established a governmentwide Federal Candidate Development Program (Fed CDP). OPM expects the 14-month program to help agencies meet their SES succession planning goals and contribute to the government's efforts to create a high-quality SES leadership corps. Participating agencies may select, without further competition, people who have successfully completed the Fed CDP training program. In addition, we have testified that approaches to interagency collaboration, such as the CHCO Council, have emerged as an important central leadership strategy

[19] GAO, *Human Capital: A Guide for Assessing Strategic Training and Development Efforts in the Federal Government*, GAO-04-546G (Washington, D.C.: March 2004).

and that agency collaboration can serve to institutionalize many management policies governmentwide.[20] The Leadership and Succession Planning Subcommittee of the CHCO Council is charged with reviewing leadership development, among other things, and is a possible mechanism to help agencies coordinate succession training and development programs.

While some agencies' human capital officials acknowledged the potential benefits of coordinating succession training and development programs with other agencies or departments, they all could do more to seek coordination and sharing opportunities. Cognizant human capital and training officials stated that they had not actively sought opportunities to coordinate core succession training and development programs. Although EPA plans to select one senior executive through the Fed CDP, human capital officials stated they had not extensively explored the idea of coordinating with other agencies for their core succession training and development. VHA human capital officials said they did not coordinate further because they have specialized skill needs. DOL and Census Bureau human capital managers also stated that they had not partnered with other outside agencies to coordinate their core succession training and development programs. By not actively seeking to coordinate and share core succession training and development programs, agencies may miss a potentially valuable opportunity to gain efficiency, which may be especially important in the current budget environment.

Performance Measures Can Help Agencies Assess Programs' Effects on Organizational Capacity

Decision makers need credible information to justify training and development programs' value. We have also reported that agencies need credible information to assess how their training and development programs affect organizational performance and enhance organizational capacity.[21] We have observed in our guide for assessing strategic training and development that while not all training and development programs require, or are suitable for, higher levels of evaluation, establishing valid performance measures can ensure that agencies adequately address their development objectives. Moreover, our guide states that such measures

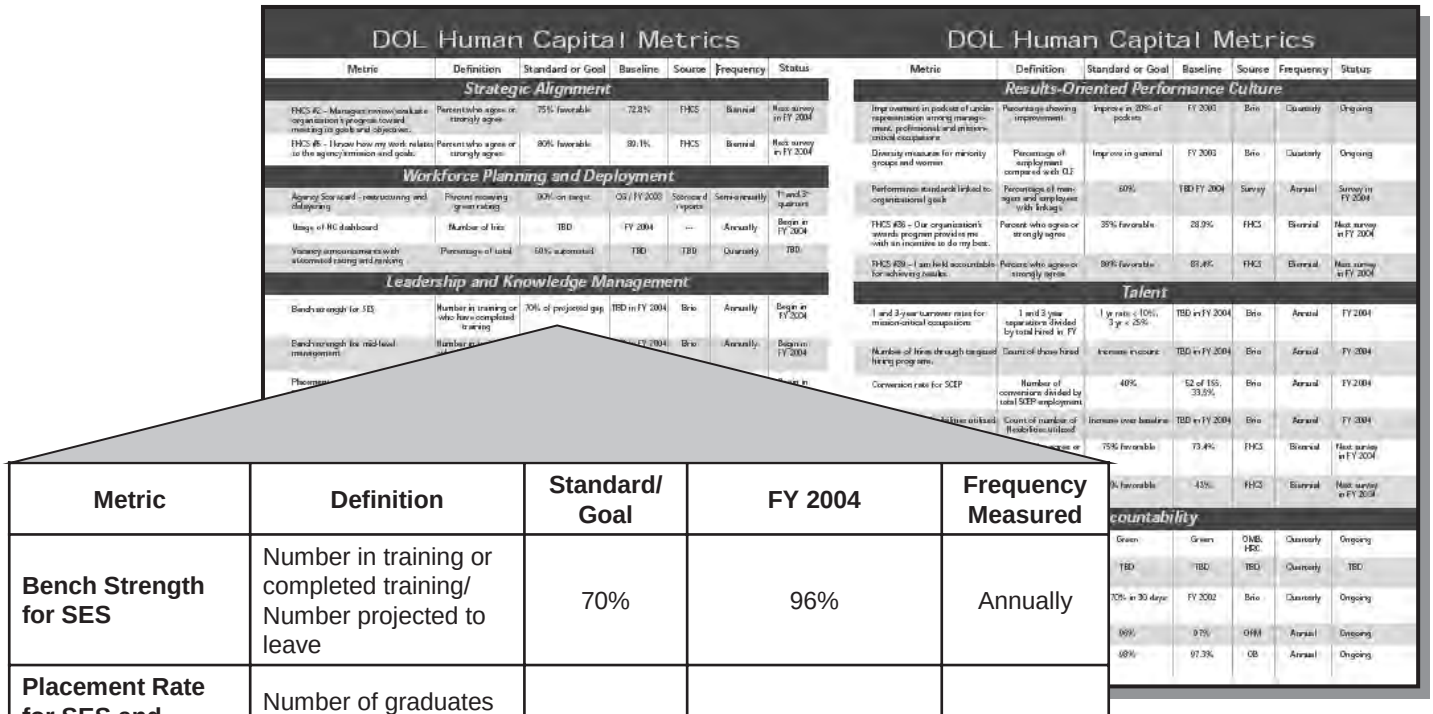
[20] GAO, *Human Capital: Observations on Agencies' Implementation of the Chief Human Capital Officers Act*, GAO-04-800T (Washington, D.C.: May 18, 2004) and *Posthearing Questions Related to Agencies' Implementation of the Chief Human Capital Officers (CHCO) Act*, GAO-04-897R (Washington, D.C.: June 18, 2004).

[21] GAO-04-546G.

should go beyond input and output data, and can include data on quality, costs, and time. We also recognize, however, that agencies need to scale their efforts depending on the program. Factors to consider when deciding on the appropriate level of evaluation include the estimated costs of training efforts, size of training audience, and program visibility, among other things.

All four agencies are able to report on participation and cost related to their succession training and development programs. For example, 12 Census Bureau employees participated in DOC's Aspiring Leaders Development Program in FY 2004, with an average cost of $6,267 per participant, according to the Bureau. In addition, the Census Bureau and DOL have also identified outcome measures related to the performance of some of their succession-related training and development programs. For example, the Census Bureau evaluates, among other things, the extent to which certified project managers are using the skills they have learned in the Project Management Masters Certificate Program. Only DOL has identified measures intended to provide an understanding of core succession training and development programs' effects on organizational capacity. Figure 5 illustrates a selection of these measures.

Figure 5: Selected DOL Human Capital Measures Related to Succession Planning and Management



Metric	Definition	Standard/ Goal	FY 2004	Frequency Measured
Bench Strength for SES	Number in training or completed training/ Number projected to leave	70%	96%	Annually
Placement Rate for SES and Management Development (MDP) Programs	Number of graduates placed or promoted within 2 years/ Number of graduates	80%	SES – 68% placed MDP - 51%[a]	Annually
Retention Rate for MBA Fellows	3-year retention rate	75%	89%[b]	Annually
Number Participating in Mentoring Program	Number in mentoring program	100	119	Annually

Source: DOL.

[a]Promoted to date. Candidates are eligible for promotion through February 2006.
[b]Currently retained after 2 years.

For example, by considering the retention rate for MBA Fellows, DOL can make informed planning decisions about the potential availability of certain skill sets in the department as well as when to initiate a new program and how many students to include in it. DOL reported that in FY 2004, it retained 89 percent of its MBA fellows after 2 years and has a

goal of 75 percent after 3 years. DOL also tracks SES "bench strength," a ratio of senior executives who are in training or have completed training to those projected to leave. DOL reported a 96 percent "bench strength" for its senior executives in FY 2004, exceeding its goal of 70 percent. The Census Bureau, VHA, and EPA could better demonstrate their programs' value in providing future talent by identifying outcome-oriented measures and evaluating the extent to which these programs enhance their organizations' capacity.

Agencies Use Succession Efforts to Enhance Workforce Diversity

Leading organizations recognize that diversity, ways in which people in a workforce are similar and different from one another, is an organizational strength and that succession planning is a leading diversity management practice.[22] Given the retirement projections for the federal government that could create vacancies, agencies can use succession planning and management as a critical tool in their efforts to enhance diversity in their leadership positions. All of the selected agencies have recognized the importance of diversity to a successful workforce and use succession planning and management efforts to enhance their workforce diversity.

VA requires all of its administrative staff offices to produce workforce and succession plans aligned with overall VA strategic planning. VHA states that although its overall workforce is fairly diverse, women and minorities are not well represented in leadership positions nor are they well represented in the pipeline to such positions. We have reported that VHA has integrated diversity planning into its succession efforts.[23] As part of their regional succession plans, VISNs submit diversity information to VHA for national planning. VHA then analyzes the diversity of its top-priority occupations, highlights underrepresentation of certain demographic groups in specific mission-critical occupations, and provides guidance to focus recruiting efforts to enhance diversity. For example, VHA states that White females and American Indian/Alaskan Native females are underrepresented in the nurse occupation and advises that recruitment efforts should focus on them. In addition, VHA tracks applicant diversity for the Executive Career Field Candidate Development Program, one of

[22] GAO, *Diversity Management: Expert-Identified Leading Practices and Agency Examples*, GAO-05-90 (Washington, D.C.: Jan. 14, 2005).

[23] GAO-05-90.

VHA's core succession training and development programs, and reports that applicants to this program are drawn from a diverse pool.

EPA has stated in its human capital plan that a diverse workforce makes the agency a more effective and healthy organization that is better able to relate to the American people and develop more creative and workable solutions. EPA credits its Intern Program, one of its core succession training and development programs, with attracting and retaining a diverse group of employees based on a 2003 assessment of the program. For example, the assessment found that EPA interns were more ethnically diverse than other comparable groups of hires. As part of its diversity action plan, EPA reports that it is expanding targeted recruitment initiatives to identify well-qualified candidates for mission-critical occupations. In addition, regional offices report succession-related efforts intended to enhance diversity initiatives, such as mentoring, leadership, and career development programs, and workforce demographic analyses, among other activities.

DOL identifies a strategic initiative to enhance diversity in management and mission-critical occupations in its human capital plan. To help it achieve this initiative, DOL monitors and evaluates diversity information for its mission-critical occupations annually, and has identified "pockets of low participation" for certain minority groups, such as Hispanics. In addition, DOL has reported a higher percentage of women and Hispanics in its three core succession training and development programs than in its general workforce.

The Census Bureau has established a diversity program office to manage the Bureau's diversity efforts. Bureau officials stated that because of the highly specialized nature of the Bureau's work, such as the use of statistics and mathematics, and the relatively small pool of people trained in these areas, it is difficult to enhance diversity in several critical occupation categories. As part of its combined diversity and recruiting initiative, the Bureau has established a specific recruiting team for mathematical statisticians, one of its highlighted mission-critical occupations. The Bureau also has various targeted recruiting efforts at academic institutions and community organizations with high Hispanic and other minority enrollment, and various Hispanic or Latino Chambers of Commerce.

Conclusions

The Census Bureau, DOL, EPA, and VHA have all implemented succession planning and management efforts that collectively are intended to strengthen organizational capacity. Generally, these efforts receive top leadership support, link with strategic planning, identify critical skills gaps and strategies to fill them, offer training and development programs for high-potential employees, and enhance diversity. Nevertheless, given the nation's large current budget deficit and long-range fiscal imbalance, Congress is likely to place increasing emphasis on agencies to exercise fiscal restraint.

Given this environment, these agencies can look for opportunities to coordinate and share their succession training and development programs to achieve economies of scale, limit duplication of efforts, increase efficiency, and enhance the effectiveness of their programs. For example, all four agencies emphasize rotational or developmental assignments and formal training, and they may have opportunities to coordinate and share these assignments and training with each other or other federal agencies or departments. Agencies can also work with OPM and the CHCO Council to determine how they can better leverage other agencies' succession training and development programs.

Furthermore, it is increasingly important for agencies to evaluate their training and development programs to be able to demonstrate how these efforts enhance organizational capacity. While the Census Bureau, EPA, and VHA have some information on their succession training and development programs, such as participation and cost, they can take additional steps, such as enhanced evaluations, to justify these programs' value. DOL has identified measures intended to provide an understanding of these programs' effects on organizational capacity.

Finally, although the Census Bureau has identified and is recruiting for its mission-critical occupations, it can better monitor its mission-critical workforce. By not monitoring more closely and at a higher level than line managers, the Bureau may not know how to best focus its succession planning efforts, and ultimately how well it is prepared for major tasks, such as the 2010 Decennial Census.

Recommendations for Executive Action

To help agencies reinforce their succession planning and management efforts, and make well informed planning decisions, we recommend a number of actions.

The Secretary of Commerce should ensure that the Director of Census takes the following three actions:

- Strengthen the monitoring of its mission-critical workforce by identifying mission-critical workforce gaps, developing strategies to address gaps, evaluating progress toward closing gaps, and adjusting strategies accordingly.

- Seek appropriate opportunities to coordinate and share core succession training and development programs with other outside agencies to achieve economies of scale, limit duplication of efforts, benchmark with high-performing agencies, keep abreast of current practices, enhance efficiency, and increase the effectiveness of its programs.

- Evaluate core succession training and development programs to assess the extent to which programs contribute to enhancing organizational capacity. When deciding the appropriate analytical approach and level of evaluation, the Bureau should consider factors such as estimated costs of training efforts, size of training audience, and program visibility, among other things.

The Administrator of EPA should take the following two actions:

- Seek appropriate opportunities to coordinate and share core succession training and development programs with other outside agencies to achieve economies of scale, limit duplication of efforts, benchmark with high-performing agencies, keep abreast of current practices, enhance efficiency, and increase the effectiveness of its programs.

- Evaluate core succession training and development programs to assess the extent to which programs contribute to enhancing organizational capacity. When deciding the appropriate analytical approach and level of evaluation, EPA should consider factors such as estimated costs of training efforts, size of training audience, and program visibility, among other things.

The Secretary of Labor should take the following action:

- Seek appropriate opportunities to coordinate and share core succession training and development programs with other outside agencies to achieve economies of scale, limit duplication of efforts, benchmark with high-performing agencies, keep abreast of current practices, enhance efficiency, and increase the effectiveness of its programs.

The Secretary of VA should take the following two actions:

- Seek appropriate opportunities to coordinate and share core succession training and development programs with other outside agencies to achieve economies of scale, limit duplication of efforts, benchmark with high-performing agencies, keep abreast of current practices, enhance efficiency, and increase the effectiveness of its programs.

- Evaluate core succession training and development programs to assess the extent to which programs contribute to enhancing organizational capacity. When deciding the appropriate analytical approach and level of evaluation, VHA should consider factors such as estimated costs of training efforts, size of training audience, and program visibility, among other things.

Agency Comments and Our Evaluation

We provided a draft of this report to the Secretaries of Commerce, Labor, and VA and the Administrator of EPA for their review and comment. In addition, we provided a draft of this report to the Acting Director of OPM and the CHCO Council's Leadership and Succession Planning Subcommittee for their information.

VA agreed with our findings and recommendations. In response to our recommendation to seek opportunities to coordinate and share core succession training and development programs, VA suggested that OPM could act as a "clearinghouse" by gathering and publishing curricula and other relevant training information from agencies, thus enabling agencies to identify existing training programs across the government. We present VA's written comments in appendix II. DOC and the Census Bureau agreed with our findings and our recommendations to seek opportunities to coordinate core succession training and development programs and to evaluate the extent to which these programs enhance organizational capacity. In response to our recommendation to strengthen the monitoring

of its mission-critical workforce, the Census Bureau stated that its existing approach is effective in meeting its needs. However, as we discussed earlier, the Census Bureau acknowledges that reengineering the 2010 Decennial Census requires new competencies. By not strengthening the monitoring of its mission-critical workforce, the Census is at increased risk that it will not have the skills it needs to be prepared to conduct the 2010 Census as efficiently or effectively as possible. For example, a lesson from the 2000 Census was that while contracts for various projects supported decennial census operations, they did so in many instances at a higher cost than necessary because the Census Bureau did not have sufficient contracting and program staff with the training and experience to manage them.[24] We present DOC's and the Census Bureau's written comments in appendix III. DOL did not take issue with our findings, stated that it will consider our recommendations, and provided technical comments, which we incorporated as appropriate. EPA did not comment on our recommendations, but provided a technical comment, which we incorporated.

As agreed with your offices, unless you publicly announce its contents earlier, we plan no further distribution of this report until 30 days after its date. At that time, we will provide copies of this report to other interested congressional parties; the Secretaries of Commerce, Labor, and VA; the Administrator of EPA; the Director of Census; the Acting Director of OPM; and the CHCO Council's Leadership and Succession Planning Subcommittee. We will also make this report available at no charge on the GAO Web site at http://www.gao.gov.

If you or your staff have any questions about this report, please contact me on (202) 512-6806 or at larencee@gao.gov. Contact points for our Offices of Congressional Relations and Public Affairs may be found on the last page of this report. GAO staff who made major contributions to this report are listed in appendix IV.

Eileen Larence
Director, Strategic Issues

Objectives, Scope, and Methodology

To review how federal agencies are implementing succession planning and management efforts, we selected the Department of Labor (DOL), the Veterans Health Administration (VHA), the Environmental Protection Agency (EPA), and the Census Bureau for our review. We considered the nature of their succession challenges, agency missions, and prior GAO human capital work conducted at these agencies. These agencies represent an array of organizational structures, missions, and succession challenges.

We analyzed strategic, human capital, workforce, succession, and training and development plans, performance contracts, human capital team charters, and diversity information from the selected agencies. In addition, we reviewed policies and guidance on succession-related issues from the Office of Personnel Management (OPM), the Equal Employment Opportunity Commission (EEOC), and the Merit Systems Protection Board (MSPB) because of their responsibilities for ensuring the fair application of personnel decisions, such as selection for training and development programs. We also interviewed agency, OPM, EEOC, and MSPB officials involved with strategic, human capital, and succession planning and management.

The scope of our work did not include independent evaluation or verification of the effectiveness of the succession planning and management initiatives used in the four agencies, including any performance results that agencies attributed to specific practices or aspects of their programs. We assessed the reliability of staffing and projection data provided to us by the Census Bureau, DOL, EPA, VHA, and OPM to ensure the data we used in this report were complete and accurate by (1) interviewing agency officials knowledgeable about the data and (2) performing manual and electronic testing, when applicable. We determined that these data were sufficiently reliable for the purposes of this engagement.

To get the varied perspectives of agencies' staff located in headquarters and regional offices, we interviewed agency officials in Washington, D.C.; Charlotte, North Carolina; and Los Angeles and San Francisco, California. We conducted our study from June 2004 through April 2005.

Comments from the Department of Veterans Affairs

THE DEPUTY SECRETARY OF VETERANS AFFAIRS
WASHINGTON

June 13, 2005

Ms. Eileen Larence
Director
Strategic Issues
U. S. Government Accountability Office
441 G Street, NW
Washington, DC 20548

Dear Ms. Larence:

The Department of Veterans Affairs (VA) has reviewed the Government Accountability Office's (GAO) draft report, ***HUMAN CAPITAL: Selected Agencies Have Opportunities to Enhance Existing Succession Planning and Management Efforts,*** (GAO-05-585). The Department agrees with GAO's overall conclusions and concurs with the recommendations. The enclosures provide additional discussion on the recommendations.

VA appreciates the opportunity to comment on your draft report.

Sincerely yours,

Gordon H. Mansfield

Enclosures

Enclosure

THE DEPARTMENT OF VETERANS AFFAIRS (VA) COMMENTS
TO GOVERNMENT ACCOUNTABILITY OFFICE (GAO)
DRAFT REPORT
HUMAN CAPITAL: Selected Agencies Have Opportunities to Enhance Existing Succession Planning and Management Efforts
(GAO-05-585)

- **To help agencies reinforce their succession planning and management efforts, and make well informed planning decisions, we recommend a number of actions. Specifically, the Secretary of VA should take the following actions:**

  Seek appropriate opportunities to coordinate and share core succession training and development programs with other outside agencies to achieve economies of scale, limit duplication of efforts, benchmark with high-performing agencies, keep abreast of current practices, enhance efficiency, and increase the effectiveness of its programs.

Concur – The Department of Veterans Affairs (VA) agrees with GAO's underlying rationale that improved coordination among and between federal agencies would strengthen training programs across the federal sector. As an alternative means of implementation, the Department suggests that the Office of Personnel Management (OPM) serve as a clearinghouse for information sharing. For example, VA could provide information to OPM on the target audience, a description of its training programs, and the curricula. OPM, in turn, would publicize such information, allowing other agencies to pick and choose best practices for adoption into their own organizations. This would maximize each agency's ability to identify existing training programs throughout the government that might provide targeted training content for occupational, professional, technical or supervisory skills, and would achieve the objectives contemplated in the recommendation efficiently and effectively.

Evaluate core succession training and development programs to assess the extent to which programs contribute to enhancing organizational capacity. When deciding the appropriate analytical approach and level of evaluation, VHA should consider factors such as estimated costs of training efforts, size of training audience, and program visibility, among other things.

Concur - In January 2005, the Veterans Health Administration (VHA) established a method for evaluating its succession planning and leadership development programs. A detailed action plan describing this evaluation process, as well as

1

THE DEPARTMENT OF VETERANS AFFAIRS (VA) COMMENTS
TO GOVERNMENT ACCOUNTABILITY OFFICE (GAO)
DRAFT REPORT
HUMAN CAPITAL: Selected Agencies Have Opportunities to Enhance Existing Succession Planning and Management Efforts
(GAO-05-585)

other actions being taken to implement the recommendation, is included as an enclosure to this response.

2

VETERANS HEALTH ADMINISTRATION (VHA)
Action Plan
GAO Draft Report: *HUMAN CAPITAL: Selected Agencies Have Opportunities to Enhance Existing Succession Planning and Management Efforts,*
(GAO-05-585)

Recommended Improvement Action(s): The Secretary of VA should take the following action to evaluate core succession training and development programs to assess the extent to which programs contribute to enhancing organizational capacity. When deciding the appropriate analytical approach and level of evaluation, VHA should consider factors such as estimated costs of training, size of training audience, and program visibility, among other things.

Concur

Goal: To ensure VHA's succession training and development plans enhance the organization's ability to face current and future organization challenges.

Strategy:

Detailed information concerning VHA's workforce planning efforts, including the VHA succession strategic planning guidance and Veterans Integrated Service Network (VISN) plans for 2006-2010, and the VHA 2005-2009 workforce succession strategic plans is available to the Department of Veterans Affairs (VA) entities on the VHA Succession Planning Web Site. Enhancements to this website are continually being made and information is updated on an ongoing basis. VHA's three major succession training and development programs are: the Executive Career Field (ECF) Development program, the VISN Leadership Effectiveness Accountability and Development (LEAD) program, and the facility LEAD program.

In May 2005, VHA's National Leadership Board (NLB) began reviewing the fiscal year (FY) cost proposals and mid-year status of the national programs on a bi-annual basis. These are reported to NLB by the VHA Succession and Workforce Development Management Subcommittee through the VHA Human Resource Committee (HRC). Also in May 2005, VHA initiated bi-annual reviews of the participant size and scope, based on retirement and other losses. The findings are also reported to NLB by the VHA Succession and Workforce Development Management Subcommittee through VHA HRC.

The ECF Candidate Development program uses the eight VHA core High Performance Development Model (HPDM) competencies as a framework for VHA to develop a highly skilled, customer-centered workforce. Research was implemented in January 2005 by the Management Support Office in collaboration with the VHA Center for Organization Leadership and Management Research (COLMR) to establish criteria to evaluate the mentoring and precepting process of

1

the candidate's development program (CDP). The research will be completed in the summer of 2005 and presented to the VHA Succession and Workforce Development Management Subcommittee and forwarded on to HRC and NLB for feedback and approval.

The Management Support Office and COLMR are also researching the ECF CDP rating and selection process (to validate the selection process), the ECF CDP's acceptance to the program with the HPDM 360 degree assessment of their critical core competencies/critical skills set, and the effects of ECF CDP on their manager's evaluation, their career advancement and turnover rates. Results of this research will be completed in summer 2006, although elements of it will be completed sooner. The results will be forwarded to the NLB for feedback and approval prior to implementation. When possible, research findings associated with the VHA leadership Development and Succession Planning program will be published.

The VISN LEAD program is based on six key elements designed to establish criteria for a successful leadership development program that will develop leaders and meet VHA's organizational goals for succession and diversity. The criteria were defined by the VHA LEAD steering committee that consists of all the VISN education coordinators. Annual assessment against these criteria served as a national performance measure for each VISN in FY 2004 and FY 2005 and will continue. Status and progress of the program is reported to the VHA Succession & Workforce Development Subcommittee by the VHA LEAD steering committee and Management Support Office. Attached are the criteria VISNs are measured on for the performance measure (Attachment A). A report summarizing findings of the LEAD assessment goes to the VHA Succession & Workforce Development Subcommittee. The VHA LEAD Steering Committee holds quarterly meetings to coordinate and share training information and programs. Since the establishment of this committee in 2004, VISNs across the system have partnered in the management of leadership development and this is ongoing. Participants in VISN LEAD programs are entered into the VHA Leadership and Workforce Development database for succession planning purposes.

The VHA LEAD Steering Committee also oversees the guidance and monitoring of the facility level LEAD programs. Status and progress is reported by the VHA LEAD Steering committee and Management Support Office to the VHA Succession & Workforce Development Subcommittee. An annual national performance measure for the facility level LEAD will be established for the FY 2006 performance cycle. Similar criteria as those used in the VISN LEAD program are being developed and are expected to be ready for use in the FY 2006 performance cycle. Sharing of information across the system concerning this program is already ongoing. Participants in facility LEAD programs will be entered into the VHA Leadership and Workforce Development Database for succession planning purposes.

ATTACHMENT A
LEAD
PROGRAM CERTIFICATION

CRITERIA	MINIMUM ELEMENTS	YES*	NO*
Needs Assessment	1) Outcomes from Workforce Strategic Planning (WF SP) process were driven by and linked to strategic planning. (i.e., curriculum and selection process linked to strategic plan).		
Program Design	2) Course curriculums will include training in all eight (8) HPDM core competencies.		
Program Design	3) Program design includes a variety of learning and instructional methodologies.		
Program Design	4) Formal mentoring and/or coaching is included in the program.		
Program Design	5) Program participants complete a Personal Development Plan (PDP) with the collaboration of both their supervisor and mentor and/or coach		
Program Design	6) At least one individual assessment tool is used.		
Selection Process	7) Programs are widely announced thru a variety of mechanisms.		
Selection Process	8) A formal application process allows employees to self-nominate to the program with the endorsement of their supervisor.		
Evaluation	9) Program has a formal evaluation process in place that assesses the reactions of the participants to the program.		
Evaluation	10) Participants are asked to make recommendations for changes in the program		
Leadership Support	11) Evidence of resources to support program		
Leadership Support	12) Supervisors endorse participant application to the program		
Leadership Support	13) Senior Leaders (ELC members, Triad) are involved in the program		
Reward and Recognition	14) Participants are acknowledged by executive leadership that they were part of the program		

* A statement of "yes" certifies that the minimal criteria of LEAD are in place and relates to a score of one (1) or greater on the self-assessment tool. A statement of "no" equals a score of zero on the self-assessment tool.

BEST PRACTICE PROGRAM ASSESSMENT GUIDE

CRITERIA CATEGORY	ELEMENTS	EVALUATION	SCORE	SELF ASSESSMENT
NEEDS ASSESSMENT	1) Outcomes from WF SP process were driven by and linked to strategic planning	None	O	
		Present	3	
PROGRAM DESIGN	1) Curriculum shows evidence of training in all eight (8) HPDM core competencies.	None	0 Points	
		Present	3 Point	
	2) Program design includes a variety of learning and instructional methodologies. (stretch assignments – projects)	No specific design identified	0 POINTS	
		The program design follows adult learning principles for classroom or didactic instruction.	1 POINT	
		The program design includes the use of a variety of learning methodologies (i.e., distance learning, independent learning experiences, case studies)	2 POINTS	
		The program design includes opportunities for participants to apply skills outside the classroom. (i.e., assignments, projects, action learning projects)	3 POINTS	

2

CRITERIA CATEGORY	ELEMENTS	EVALUATION	SCORE	SELF ASSESSMENT
		SCORE:		
	3) Formal mentoring and/or coaching is included in the program	No mentoring or coaching component	0 POINTS	
		-An application process is in place to select mentors and coaches. -A matching process is utilized to pair mentors and coaches based on skill, interests and expertise. -Coaches and mentors are trained and/or demonstrate basic skill requirements are met.	1 POINT	
		There is ongoing training offered in the facility and/or VISN for the purposes of continuing to improve and increase the skills of coaches and mentors.	2 POINTS	
		The coaching and mentoring program is evaluated and feedback is utilized to improve the program.	3 POINTS	
		SCORE:		
	4) Program participants complete a Personal Development Plan (PDP) with the collaboration of both their supervisor and mentor and/or coach.	None	0	

3

CRITERIA CATEGORY	ELEMENTS	EVALUATION	SCORE	SELF ASSESSMENT
		Program participants complete a Personal Development Plan (PDP) with the collaboration of both their supervisor and mentor and/or coach	1	
		The PDP incorporates/includes assessment and/or feedback	2	
		Evidence of ongoing collaboration and implementation (review, updates)	3	
		SCORE:		
	5) At least one individual assessment tool is used.	None	0	
		At least one assessment tool.	3	
		SCORE:		
SELECTION PROCESS				
	1) Advertising strategy - How the organization publicizes and attracts candidates to the program	One method of communication (i.e., postmaster) is used to announce the program.	0 POINTS	
		Programs are widely announced thru a variety of mechanisms (i.e., postmaster, intranet, brochures, staff meetings)	1 POINT	

4

CRITERIA CATEGORY	ELEMENTS	EVALUATION	SCORE	SELF ASSESSMENT
		In addition to the announcement to solicit participants, information is available all year to establish continuous awareness of the program.	2 POINTS	
		In addition to multiple posting and announcements, leaders routinely encourage and develop employees to be successful candidates. There is also evidence of efforts to assure a diverse applicant pool (i.e., the special emphasis coordinators are actively involved in the recruitment for the program, career counseling centers are established that serve as feeders for the talent pool, career fairs are regularly held)	3 POINTS	
		SCORE:		
	2) Selection - The process by which applicants are selected	No Formal process	0 POINTS	
		Formal application process allows employees to self-nominate to the program with the endorsement of their supervisor. (see footnote)	1 POINT	
		The formal selection process includes a performance/ competence-based approach for screening applicants. The pool of selected participants represents the diversity and the succession needs of the organization.	2 POINTS	

5

CRITERIA CATEGORY	ELEMENTS	EVALUATION	SCORE	SELF ASSESSMENT
		The formal application and selection process includes the items above and provides individualized feedback to all non-selected protégée. The effectiveness of the selection process is continually assessed to assure that it produces successful program graduates. Uses all elements of the ECF process (vaww.med.gov/succession)	3 POINTS	
		SCORE:		
EVALUATION	1) Program has a formal evaluation process in place.	No evaluation process in place	0 POINTS	
		Level 1 – Reaction How well did the participants like the program? Examples of ways to assess: Evaluation sheets, interviews, or focus groups that measure participant's reactions to content relevancy and use, speaker quality, format, location, etc.	1 POINT	
		Level 2 – Learning What principles, facts and techniques were learned? What attitudes were changed? Examples of ways to assess: End-of-course mastery test, attitudinal assessments, projects, presentations, participant self-report. Level 3 – Behavior What changes in job behavior resulted from the program?	2 POINTS	

6

CRITERIA CATEGORY	ELEMENTS	EVALUATION	SCORE	SELF ASSESSMENT
		Examples of ways to assess: Observation of on-the-job performance, completion of action plans, work samples, interviews.		
		Level 4 – Results/Business Impact What were the tangible results of the program in terms of reduced cost, improved quality, improved quantity, timesaving, etc.? Examples of ways to assess: Control groups, pre-and-post training comparison of data, e.g., number of errors, waiting times, time to fill leadership vacancies. Level 5* - Return on Investment Did the program produce return-on-investment? Examples of ways to assess: Calculate the dollar value of benefits and compare with total cost of training. *Not in original model by Kirkpatrick	3 POINTS	
		SCORE:		
	2) Program has built in feedback loop (i.e., evaluation results fed into continuous - improvement)	No evidence of feedback	0 POINTS	
		Participants are asked to make recommendations for changes in the program	1 POINT	

7

CRITERIA CATEGORY	ELEMENTS	EVALUATION	SCORE	SELF ASSESSMENT
		Developers and faculty review and analyze evaluations data to make program improvements based on that data	2 POINTS	
		There is a comprehensive collaborative analysis of the LEAD program compared with best practices (VHA/Community) resulting in subsequent improvements	3 POINTS	
		SCORE:		
LEADERSHIP SUPPORT	1) Evidence of dedicated resources – staff time and dollars	No dedicated resources – (i.e., no assigned responsibilities, no staff assigned)	0 POINTS	
		Collateral staff provide casual support with no dedicated funding	1 POINT	
		Collateral staff support with dedicated funding	2 POINTS	
		Consistent/dedicated core staff responsible for the LEAD program. Dedicated funding for the program – the dollars spent as they were intended to be at the end of the year.	3 POINTS	
		SCORE:		
	2) Supervisors involved and supportive	No Support –	0 POINTS	
		Supervisors endorse participant application to the program	1 POINT	
		Evidence of supervisory support for their subordinates' participation in the program. (i.e., recommend people consistently and are in	2 POINTS

Comments from the Department of Commerce

THE DEPUTY SECRETARY OF COMMERCE
Washington, D.C. 20230

June 7, 2005

Ms. Eileen Larence
Director
Strategic Issues
U.S. Government Accountability Office
Washington, DC 20548

Dear Ms. Larence:

The U.S. Department of Commerce appreciates the opportunity to comment on the Government Accountability Office draft report entitled *Human Capital: Selected Agencies Have Opportunities to Enhance Existing Succession Planning and Management Efforts (GAO-05-585).*

I enclose the Department of Commerce's comments on this report.

Sincerely,

David A. Sampson
(Acting)

Enclosure

U.S. Department of Commerce
Comments on
Government Accountability Office Draft Report,
Human Capital: Selected Agencies Have Opportunities to Enhance Existing Succession Planning and Management Efforts (GAO-05-585)

The U.S. Department of Commerce thanks the Government Accountability Office for the opportunity to review the draft report, *Human Capital: Selected Agencies Have Opportunities to Enhance Existing Succession Planning and Management Efforts* (GAO-05-585). This report discusses an important issue of concern to the Census Bureau -- human capital management and in particular succession management.

GENERAL COMMENTS

Since 2000, the U.S. Census Bureau has carefully studied and improved its approaches to succession management. The report highlights some of the critical succession management practices the Census Bureau is employing. These, as well as other key practices, need to be seen within the broader context of the Census Bureau's succession management framework. Understanding this framework is important because it is the diversity and adaptability of approaches as a whole, rather than individual techniques, that have been the key to the Census Bureau's success in planning and meeting succession challenges.

The Census Bureau has created a matrix of broad succession planning practices that is used to structure succession management efforts, disseminate best practices across the organization, and provide a point of reference for gauging progress in succession management practices. The matrix consists of 13 categories: (1) setting strategic goals; (2) collecting and analyzing work force data; (3) assessing employees for management and leadership; (4) orienting new employees at junior, mid- and senior levels; (5) mentoring; (6) continuous career-long learning based on individual development plans; (7) rotational assignments; (8) stretch assignments; (9) formal and informal training (particularly in terms of technical and core competencies); (10) formal management and leadership development programs integrated with on-the-job training; (11) individual development plans and critical performance elements; (12) use of management flexibilities; and (13) knowledge management, including the use of transition positions to allow for overlapping periods of transition for critical retirements.

The Census Bureau refined its recruitment, development, training, and human capital management programs to support a strategic approach to succession management. These refinements included different approaches to meet the varied succession challenges relating to senior management, mathematical statisticians, information technology specialists, and other mission-critical job categories.

Succession management programs are critical for senior executives and other key staff who, as the federal civil service continues to age, are projected to retire in large numbers. The Census Bureau's strategy for succession, particularly for key staff, focuses on building a solid pool of candidates from which to select. This strategy also focuses on building external relationships and outreach to attract diverse and well-qualified

applicants. The Census Bureau recognizes the constraints placed on agencies and bureaus by not knowing when people will actually retire and the inability to preselect successors. The individuals themselves cannot commit to a certain retirement date very far in advance of actual retirement. Personal circumstances change and with them, retirement decisions. Unlike private sector positions, the merit system limits the designation of an "heir apparent" as a tool for making smoother leadership transitions.

For mathematical statisticians, the pool of highly qualified applicants in the marketplace is diminishing. The report mentions one tool used by the Census Bureau to address this issue, which is the mathematical statisticians recruiting team. The recruiting team is part of the Methodology and Standards Council which, in addition to recruiting, leads the management and development of critical technical and leadership talent for mathematical statisticians across the entire organization. The efforts of the Council in building recruiting relationships; attracting candidates; and then selecting, developing, and retaining leading professionals, are critical and could serve as a useful model for other bureaus or agencies facing similar challenges for highly technical professionals.

The field of information technology changes rapidly and affects the competencies and work methods that are needed. To meet this challenge, the Census Bureau uses a strategy of hiring and developing professionals and complementing the capabilities of that work force by acquiring specialized skills and expertise through contracts. Contracting is used in areas where it has been determined, after an assessment of internal resources and capabilities, to be more effective than developing in-house talent. On a much broader scale, the Census Bureau is making the most extensive use of contracting in its history for the 2010 Census. The Census Bureau is contracting for data capture and processing services, geographic systems and support, as well as support for field automation systems. Collectively, these are very large contracts that represent strategic decisions to 'buy' rather than 'build.'

SPECIFIC COMMENTS ON THE REPORT'S TEXT AND RECOMMENDATIONS

P. 15, para. 2 "According to an agency human capital official, …."

The Census Bureau's strategy for ensuring its mission-critical capabilities is an anticipatory one. As the report correctly states, it focuses on building infrastructure by recruiting and developing competencies.

The "delegation of line managers to fill vacancies" refers to the ability of managers to use a proven electronic hiring system that allows them to identify and request a unique blend of competencies for each vacancy. This approach allows the organization to continuously update the competencies it seeks and select staff for competencies that match emerging, as well as established, needs. Front-line managers are engaged in a continuing dialogue with senior managers and interdirectorate councils (e.g., Hiring Coordinators Group and Human Capital Management Council) to identify, plan for, and address skill and competency needs at all organizational levels. The line managers use the flexibility and precision of the hiring system (and the robust pool of applicants who

have been recruited) to address both their specific hiring needs, as well as select for competencies that are of increasing importance to the Census Bureau as a whole.

The report recommends that the Secretary of Commerce should ensure that the Director of the Census take three actions. The Census Bureau's comments on each of these recommendations follow.

Recommendation 1—"Strengthen the monitoring of its mission critical workforce by identifying mission critical workforce gaps, developing strategies to address gaps, evaluating progress toward closing gaps, and adjusting strategies accordingly."

The Census Bureau agrees that monitoring and assuring the necessary competencies of its mission-critical work force is essential and requires close and continuing attention. The Census Bureau has found that its existing approach to succession management is effective in meeting mission-critical requirements. The practices described in the general comments section above are designed to anticipate skill needs and ensure that those needs are met through diverse and flexible approaches. Contracting is also used strategically to meet mission-critical objectives. The Census Bureau has found that its present methods of assessing and ensuring appropriate levels of critical work force capabilities are more efficient and effective than attempting to categorize and quantify 'gaps' within mission-critical occupations.

Recommendation 2—"Seek appropriate opportunities to coordinate and share core succession training and development programs with other outside agencies to achieve economies of scale, limit duplication of efforts, benchmark with high-performing agencies, keep abreast of current practices, enhance efficiency, and increase the effectiveness of its programs."

The Census Bureau agrees with this recommendation. As described in the report, the Census Bureau takes advantage of opportunities to partner and participate in succession development programs with its parent organization, the Department of Commerce. The Census Bureau will continue to explore opportunities to join with other bureaus and agencies in designing and conducting cost-effective training and development programs.

Recommendation 3—"Evaluate core succession training and development programs to assess the extent to which programs contribute to enhancing organizational capacity. When deciding the appropriate analytical approach and level of evaluation, the Bureau should consider factors such as estimated costs of training efforts, size of training audience, and program visibility, among other things."

The Census Bureau agrees with this recommendation. While, as the report notes, the Census Bureau tracks training and development program participation rates, costs, and outcome measures, a more comprehensive approach to evaluations is being planned. The Census Bureau has aligned its Planning and Evaluation Branch, along with its Work Force Development Branch, under the direction of a single Assistant Division Chief in its Human Resources Division. The report's recommendation reinforces the importance of these organizations working closely together to increase the efficiency and effectiveness of the Census Bureau's training and development programs.

GAO Contact and Staff Acknowledgments

GAO Contact

Eileen Larence (202) 512-6806

Acknowledgments

In addition to the contact named above, Lisa Shames, Naved Qureshi, Peter Rumble, Jennifer Cooke, Erin Murello, and Elena Lipson made key contributions to this report.

GAO's Mission

The Government Accountability Office, the audit, evaluation and investigative arm of Congress, exists to support Congress in meeting its constitutional responsibilities and to help improve the performance and accountability of the federal government for the American people. GAO examines the use of public funds; evaluates federal programs and policies; and provides analyses, recommendations, and other assistance to help Congress make informed oversight, policy, and funding decisions. GAO's commitment to good government is reflected in its core values of accountability, integrity, and reliability.

Obtaining Copies of GAO Reports and Testimony

The fastest and easiest way to obtain copies of GAO documents at no cost is through GAO's Web site (www.gao.gov). Each weekday, GAO posts newly released reports, testimony, and correspondence on its Web site. To have GAO e-mail you a list of newly posted products every afternoon, go to www.gao.gov and select "Subscribe to Updates."

Order by Mail or Phone

The first copy of each printed report is free. Additional copies are $2 each. A check or money order should be made out to the Superintendent of Documents. GAO also accepts VISA and Mastercard. Orders for 100 or more copies mailed to a single address are discounted 25 percent. Orders should be sent to:

U.S. Government Accountability Office
441 G Street NW, Room LM
Washington, D.C. 20548

To order by Phone: Voice: (202) 512-6000

Evaluating Performance Appraisal Programs: An Overview

TABLE OF CONTENTS

CONCEPT

Assessing the value and effectiveness of an appraisal program is necessary for determining how to improve it. This guide suggests procedures and criteria for evaluating the implementation and effect of performance appraisal programs. It provides a brief summary of program evaluation and is a starting point for program evaluators.

Designing Evaluation Into the Program

Agencies are required to evaluate their performance appraisal system and program(s). Ideally, as appraisal program designers plan for the implementation of their program, they should also plan for its ongoing evaluation. The methods and questions used should be similar to the ones used in the design process when an initial assessment of the organization and its current appraisal program was done. (For example, if a survey of employees and managers was used to determine satisfaction levels with the current process, the same survey could be used for the new appraisal process to compare changes in satisfaction levels between the old and the new.) As program designers develop new appraisal programs, they should also develop the criteria they will use to determine whether the program is successful. They should plan to evaluate the program after the first appraisal period is completed. Ongoing program evaluation should be part of the program design and should be planned for, not only because it is required by regulation but to improve program effectiveness.

STRATEGY

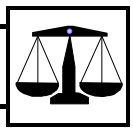
Appraisal programs can be evaluated from two broad perspectives:

- **Are we doing things right?** (i.e., are the process and the rules being followed?) and
- **Are we doing the right things?** (i.e., what effect does the program have?)

Compliance

By asking the first question, evaluators are attempting to determine if the organization is in compliance with regulatory, system, and program requirements. Examples of these types of questions include:

- Were appraisals done on time?
- Did everyone who was supposed to receive an appraisal get one?
- Were employee performance plans issued timely?
- Were progress reviews conducted?
- Does management devote appropriate resources and give priority to the effective maintenance and operation of the performance appraisal program?



As an initial step, compliance information is important to collect. If a program is not being run as it was designed to be run, it will have little chance of accomplishing the reasons for its implementation. But compliance information should not be the only program issue evaluated.

Effect

By asking the second question—Are we doing the right things?—evaluators attempt to determine the effect or the results of the appraisal program. The questions below represent possible criteria for determining the results of an appraisal program:

- **Are the stated objectives of the appraisal program being met?** If there are no stated objectives, do users have unwritten expectations and are those expectations being met? By focusing on program goals and objectives, evaluators can gather information specific to the goals and report results in terms of goal achievement. (Examples of stated program goals could include such things as improving organizational performance, encouraging teamwork, or improving communication about expectations between supervisors and employees.) If there are no stated goals in the program, determine the expectations of the designers, decision makers, and users of the program through surveys, interviews, and focus groups. Then base evaluation questions on those expectations. If there are no stated or unwritten goals for the program, at least the regulatory requirements of performance management (listed below) can be the basis for developing evaluation questions (see 5 CFR 430.102(b)):

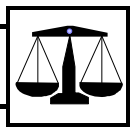
  (1) Communicate and clarify organizational goals to employees.
  Does the program provide for including or addressing organizational goals in employee performance plans?

  (2) Identify individual and, where applicable, team accountability for accomplishing organizational goals.
  Are employees held accountable through elements and standards that relate to organizational goals? Is team accountability addressed, where appropriate?

  (3) Identify and address developmental needs for individuals and, where applicable, teams.
  Are training needs and/or career development discussed?

  (4) Assess and improve individual, team, and organizational performance.
  Is appraisal used for improving individual and group performance — as it's supposed to be — or is it used to threaten and punish employees? Or is it used for some other reason?

  (5) Use appropriate measures of performance as the basis for recognizing and rewarding accomplishments.
  Are measures credible? Are awards based on valid and accepted criteria?



(6) Use the results of performance appraisal as a basis for appropriate personnel actions.

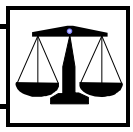
Are appraisal results used appropriately as a factor that is considered when making other personnel decisions (such as within-grade increase determinations, promotion decisions, etc.)?

- **Are employees and managers satisfied with the equity, utility, accuracy, etc., of the program?** The perceptions of managers and employees are important to the success and effectiveness of a program. Employees need to feel they get enough feedback on their performance and that their elements and standards are current and fair. Measures should be perceived as accurate and objective. On paper, the design of an appraisal program may appear to have all the right components. However, the perceptions of the users will be key to whether the program operates successfully.

- **Do the benefits of the program outweigh the costs?** Costs could include the cost of developing the program as well as the cost of using it. Examples of measurable costs are the costs of developing and using an automated appraisal process; the amount of time taken to develop employee performance plans; or the amount of time taken by raters, ratees, reviewers, and other users to appraise performance. But costs must be compared against the benefits. A method that costs little may also produce little, while a method that costs much in terms of development and usage time may provide significant benefits, such as improved performance, clarified expectations, or higher satisfaction rates.

- **Has there been an improvement in employee, unit, or organizational performance?** One of the purposes of performance management is to improve organizational effectiveness in the accomplishment of agency mission and goals. Because of the requirements of the Government Performance and Results Act of 1993, agencies are establishing strategic plans and measuring their performance against the goals they set for themselves in their plans. It may be difficult, however, if not impossible, to attribute the results of organizational performance to an employee appraisal program since an appraisal program is only one of many systems and processes that affect organizational outcomes. It is much easier to relate appraisal program effectiveness to improvements in employee and unit performance, but organizational performance should be considered.

- **Has the attitude or the behavior of employees and/or managers changed as desired?** Appraisal programs can be used as tools to support agency initiatives, such as focusing on results, improving customer service, and developing teamwork. These initiatives often require a change in organizational culture and employee attitudes to be successful. Determining that there have been desired attitude and behavior changes may be an indication that the appraisal program has had some effect. But again, it would be difficult to attribute attitude changes solely to the appraisal program.



- **Are there signs of different treatment in the results of performance appraisal processes?** Statistics on the distribution of performance ratings should be gathered and analyzed. Uneven ratings distributions might raise questions of fairness when compared by race, national origin, sex, and by occupational groups and grade. Performance-based adverse actions taken against certain groups of employees more often than others also should be analyzed. If different treatment is found, designers should attempt to determine if appraisal design features are causing the lack of balance in the ratings or if there is a larger problem in the organization that is surfacing through the appraisal process.

- **Has there been an improvement in the efficiency or the effectiveness of related human resources programs?** The law requires that the results of Federal performance appraisal, i.e., the appraisal of elements and rating of record, be used as a basis for training, rewarding, reassigning, promoting, reducing in grade, retaining, and removing employees. Evaluators may look at the relationships between performance appraisal and other human resource programs. For example, evaluators might want to determine:
  - if summary levels are used as a reference point in promotions or if ratings are so inflated that they are meaningless to the process;
  - if training needs are determined through the appraisal process or if supervisors and employees fail to talk about ways of improving performance during appraisal interviews; and/or
  - if supervisors receive support from the organization when a performance-based action is necessary, or if poor performance is tolerated.

CHECKLIST

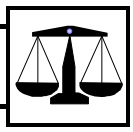
Once a list of possible topics and questions has been developed for evaluating the program, the following checklist can be used to help ensure that the right questions are being asked in the right way:

❑ Is it possible to gather information about the question? Don't bother including it if information can't be gathered.

❑ Is there only one possible answer to the question? The answer should not be predetermined or loaded by the phrasing of the question.

❑ Do decision makers feel they need the information? If no one will use the information, there is no reason to gather it.

❑ Do decision makers want the answer to the question for themselves? The results of evaluations are much more useful when people want the information.



- ❑ Can decision makers indicate how they would use the answer to the question? Knowing ahead of time how evaluation information will be used increases the chances that the evaluation results will not be filed away and never used.

A periodic, well-designed evaluation of the results of performance appraisal programs will provide the information managers and employees need to continually improve their appraisal processes. As program designers or evaluators design the evaluation tool, the underlying questions should be, What difference would it make to have this information? How would the information be used and how would it be useful?

A Handbook for Measuring Employee Performance

A Handbook for Measuring Employee Performance

ALIGNING EMPLOYEE

PERFORMANCE PLANS WITH

ORGANIZATIONAL GOALS

WORKFORCE COMPENSATION
AND PERFORMANCE SERVICE

Executive Resources and Employee Development ■ Performance Management Implementation ■ September 2011

contents

foreword

This handbook is designed for Federal supervisors and employees and presents an eight-step process for developing employee performance plans that are aligned with and support organizational goals. It also provides guidelines for writing performance elements and standards that not only meet regulatory requirements, but also maximize the capability that performance plans have for focusing employee efforts on achieving organizational and group goals.

The methods presented here are designed to develop elements and standards that measure employee and work unit accomplishments rather than to develop other measures that are often used in appraising performance, such as measuring behaviors or competencies. Although this handbook includes a discussion of the importance of balancing measures, the main focus presented here is to measure accomplishments. Consequently, much of the information presented in the first five steps of this eight-step process applies when supervisors and employees want to measure results. However, the material presented in Steps 6 through 8 about developing standards, monitoring performance, and checking the performance plan apply to all measurement approaches.

foreword

The handbook has four chapters and three appendices:

- **CHAPTER 1** gives the background and context of performance management that you will need to understand before beginning the eight-step process.
- **CHAPTER 2** defines **accomplishments,** which is key to using this handbook successfully.
- **CHAPTER 3** includes a detailed description of the **eight-step process** for developing employee performance plans that are aligned with and support organizational goals.
- **CHAPTER 4** provides **study tools**, including a followup **quiz** and a **quick reference** for the eight-step process.
- **THE APPENDICES** contain **example standards** that were written specifically for **appraisal programs** that appraise performance on elements at five, three, and two levels.

After reading the instructional material, studying the examples, and completing the exercises in this book, you should be able to:

- **DEVELOP** a performance plan that aligns individual performance with organizational goals
- **USE** a variety of methods to determine work unit and individual accomplishments
- **DETERMINE** the difference between activities and accomplishments
- **EXPLAIN** regulatory requirements for employee performance plans

chapter 1

chapter 1

PERFORMANCE MANAGEMENT: BACKGROUND AND CONTEXT

Remember the story about the naive student in his first English literature course who was worried because he didn't know what prose was? When he found out that prose was ordinary speech, he exclaimed, "Wow! I've been speaking prose all my life!"

Managing performance well is like speaking prose. Many managers have been "speaking" and practicing effective performance management naturally all their supervisory lives, but don't know it!

Some people mistakenly assume that performance management is concerned only with following regulatory requirements to appraise and rate performance. Actually, assigning ratings of record is only **one part** of the overall process (and perhaps the least important part).

Performance management is the systematic process of:

- **planning** work and setting expectations
- continually **monitoring** performance
- **developing** the capacity to perform
- periodically **rating** performance in a summary fashion
- **rewarding** good performance

The revisions made in 1995 to the governmentwide performance appraisal and awards regulations support "natural" performance management. Great care was taken to ensure that the requirements those regulations establish would complement and not conflict with the kinds of activities and actions effective managers are practicing as a matter of course.

PLANNING In an effective organization, work is planned out in advance. Planning means setting performance expectations and goals for groups and individuals to channel their efforts toward achieving organizational objectives. Getting employees involved in the planning process will help them understand the goals of the organization, what needs to be done, why it needs to be done, and how well it should be done.

The regulatory requirements for planning employees' performance include establishing the elements and standards of their performance appraisal plans. Performance elements and standards should be measurable, understandable, verifiable, equitable, and achievable. Through critical elements, employees are held accountable as individuals for work assignments or responsibilities. Employee performance plans should be flexible so that they can be adjusted for changing program objectives and work requirements. When used effectively, these plans can be beneficial working documents that are discussed often, and not merely paper work that is filed in a drawer and seen only when ratings of record are required.

MONITORING In an effective organization, assignments and projects are monitored continually. Monitoring well means consistently measuring performance and providing ongoing feedback to employees and work groups on their progress toward reaching their goals.

The regulatory requirements for monitoring performance include conducting progress reviews with employees where their performance is compared against their elements and standards. Ongoing monitoring provides the supervisor the opportunity to check how well employees are meeting predetermined standards and to make changes to unrealistic or problematic standards. By monitoring continually, supervisors can identify unacceptable performance at any time during the appraisal period and provide assistance to address such performance rather than wait until the end of the period when summary rating levels are assigned.

PERFORMANCE MANAGEMENT'S FIVE KEY COMPONENTS

DEVELOPING In an effective organization, employee developmental needs are evaluated and addressed. Developing in this instance means increasing the capacity to perform through training, giving assignments that introduce new skills or higher levels of responsibility, improving work processes, or other methods. Providing employees with training and developmental opportunities encourages good performance, strengthens job-related skills and competencies, and helps employees keep up with changes in the workplace, such as the introduction of new technology .

Carrying out the processes of performance management provides an excellent opportunity for supervisors and employees to identify developmental needs. While planning and monitoring work, deficiencies in performance become evident and should be addressed. Areas for improving good performance also stand out, and action can be taken to help successful employees improve even further.

RATING From time to time, organizations find it useful to summarize employee performance. This helps with comparing performance over time or across a set of employees. Organizations need to know who their best performers are.

Within the context of formal performance appraisal requirements, rating means evaluating employee or group performance against the elements and standards in an employee's performance plan and assigning a summary rating of record. The rating of record is assigned according to procedures included in the organization's appraisal program. It is based on work performed during an entire appraisal period. The rating of record has a bearing on various other personnel actions, such as granting within-grade pay increases and determining additional retention service credit in a reduction in force.

REWARDING In an effective organization, rewards are used often and well. Rewarding means recognizing employees, individually and as members of groups, for their performance and acknowledging their contributions to the agency's mission. A basic principle of effective management is that all behavior is controlled by its consequences. Those consequences can and should be both formal and informal and both positive and negative.

Good managers don't wait for their organization to solicit nominations for formal awards before recognizing good performance. Recognition is an ongoing, natural part of day-to-day experience. A lot of the actions that reward good performance, like saying "thank you," don't require a specific regulatory authority. Nonetheless, awards regulations provide a broad range of forms that more formal rewards can take, such as cash, time off, and many recognition items. The regulations also cover a variety of contributions that can be rewarded, from suggestions to group accomplishments.

PERFORMANCE MANAGEMENT AS PROSE

Good managers have been speaking and practicing effective performance management all their lives, executing each key component process well. They not only set goals and plan work routinely, but they also measure progress toward those goals and give feedback to employees. They set high standards, but they also take care to develop the skills needed to reach them. They also use formal and informal rewards to recognize the behavior and results that accomplish their mission. All five components working together and supporting each other achieve natural, effective performance management.

Employee Performance Plans

Employees must know what they need to do to perform their jobs successfully. Expectations for employee performance are established in employee performance plans. Employee performance plans are all of the written, or otherwise recorded, performance elements that set forth expected performance. A plan must include all critical and non-critical elements and their performance standards.

Performance elements tell employees **what** they have to do and standards tell them **how well** they have to do it. Developing elements and standards that are understandable, measurable, attainable, fair, and challenging is vital to the effectiveness of the performance appraisal process and is what this handbook is all about.

Federal regulations define three types of elements: critical elements, non-critical elements, and additional performance elements. Agency appraisal programs are required to use critical elements (although the agency may choose to call them something else), but the other two types can be used at the agency's option. Before continuing further with this handbook, you should contact your human resources office to determine the types of elements your appraisal program allows.

A NOTE ABOUT PERFORMANCE PLANS

This handbook is about developing employee performance plans. However, there is another type of performance plan that you need to be aware of. The Government Performance and Results Act of 1993 requires each agency to prepare an annual performance plan covering each program activity set forth in its budget. These organizational performance plans:

- ***establish program-level performance goals that are objective, quantifiable, and measurable***
- ***describe the operational resources needed to meet those goals***
- ***establish performance indicators to be used in measuring the outcomes of each program***

We will be using organizational performance plans during Step 1 of the eight-step process presented in this handbook. Organizational performance plans are key in the process of aligning employee performance with organizational goals.

A NOTE ABOUT GROUP OR TEAM PERFORMANCE

The term "group or team performance" can be confusing sometimes. When we say that critical elements cannot describe group performance, we are saying that the group's performance as a whole cannot be used as a critical element. This does not preclude describing an individual's contribution to the group as a critical element. The key to distinguishing between group performance and an individual's contribution to the group is that group performance is measured at an aggregate level, not for a single employee. An individual's contribution to the group is measured at the individual employee level.

CRITICAL ELEMENTS A critical element is an assignment or responsibility of such importance that unacceptable performance in that element would result in a determination that the employee's overall performance is unacceptable. Regulations require that each employee have at least one critical element in his or her performance plan. Even though no maximum number is placed on the number of critical elements possible, most experts in the field of performance management agree that between three and seven critical elements are appropriate for most work situations.

Critical elements are the cornerstone of individual accountability in employee performance management. Unacceptable performance is defined in Section 4301(3) of title 5, United States Code, as failure on one or more critical elements, which can result in the employee's reassignment, removal, or reduction in grade. Consequently, critical elements must describe work assignments and responsibilities that are within the employee's control. For most employees this means that critical elements **cannot** describe a group's performance. However, a supervisor or manager can and should be held accountable for seeing that results measured at the group or team level are achieved. Critical elements assessing group performance may be appropriate to include in the performance plan of a supervisor, manager, or team leader who can reasonably be expected to command the production and resources necessary to achieve the results (i.e., be held individually accountable).

NON-CRITICAL ELEMENTS A non-critical element is a dimension or aspect of individual, team, or organizational performance, exclusive of a critical element, that is used in assigning a summary level. Important aspects of non-critical elements include:

- **NO PERFORMANCE-BASED ACTIONS** Failure on a non-critical element **cannot** be used as the basis for a performance-based adverse action, such as a demotion or removal. Only critical elements may be used that way. Moreover, if an employee fails on a non-critical element, the employee's performance cannot be summarized as *Unacceptable* overall based on that failure.

- **GROUP PERFORMANCE** Non-critical elements are the only way an agency can include the group's or the team's performance as an element in the performance plan so that it counts in the summary level. For example, team structured organizations might use a non-critical element to plan, track, and appraise the team on achieving its goals. To do this, each team member's performance plan would include the "team" element (i.e., a non-critical element) and the rating for the team on that element would be counted in the summary level of each team member.

- **WHEN THEY CAN'T BE USED** Non-critical elements cannot be used in appraisal programs that use only two levels to summarize performance in the rating of record. This is because they would have no effect on the summary rating level and, by definition, they must affect the summary level. (That is, in a two-level program, failure on non-critical elements cannot bring the summary level down to *Unacceptable,* and assessments of non-critical elements cannot raise the summary level to *Fully Successful* if a critical element is failed.)

- **CAN GREATLY AFFECT THE SUMMARY LEVEL** Sometimes the word "non-critical" is interpreted to mean "not as important." Prior to 1995, this interpretation was prescribed by regulation. Now, however, depending on how an appraisal program is designed, this need not be the case. Even though consideration of non-critical elements cannot result in assigning an *Unacceptable* summary level, appraisal programs can be designed so that non-critical elements have as much weight or more weight than critical elements in determining summary levels above *Unacceptable*.

BEFORE YOU CAN USE NON-CRITICAL ELEMENTS IN EMPLOYEE PERFORMANCE PLANS, YOU MUST DETERMINE IF YOUR APPRAISAL PROGRAM ALLOWS THEM.

ADDITIONAL PERFORMANCE ELEMENTS

An additional performance element is a dimension or aspect of individual, team, or organizational performance that is not a critical element and is not used in assigning a summary rating level. The essential difference between a non-critical element and an additional performance element is that non-critical elements **do** affect the summary level. Otherwise, the features and limitations of non-critical elements discussed above also apply to additional performance elements. Opportunities for using additional performance elements include:

CHECK THE RULES OF YOUR PROGRAM BEFORE INCLUDING ADDITIONAL PERFORMANCE ELEMENTS IN YOUR PLANS.

- **NEW WORK ASSIGNMENT** Managers and employees may want to establish goals, track and measure performance, and develop skills for an aspect of work that they do not believe should count in the summary level. For example, if an employee volunteered to work on a new project that requires new skills, an additional performance element describing the new assignment provides a non-threatening vehicle for planning, measuring, and giving feedback on the employee's performance without counting it in the summary level.
- **GROUP PERFORMANCE** In a two-level appraisal program, additional performance elements are the only way to include a discussion of group performance in the appraisal process. Even though the element assessment does not count when determining the summary level, managers and employees could use it to manage the group's performance.
- **AWARDS** Additional performance elements can be used to establish criteria for determining awards eligibility, especially in a two-level program that no longer bases awards solely on a summary level.

ELEMENT CHARACTERISTICS

	REQUIRED IN EMPLOYEE PERFORMANCE PLANS	CREDITED IN THE SUMMARY LEVEL	CAN DESCRIBE A GROUP'S PERFORMANCE
CRITICAL ELEMENTS	YES	YES	NO*
NON-CRITICAL ELEMENTS	NO	YES	YES
ADDITIONAL PERFORMANCE ELEMENTS	NO	NO	YES

*Except when written for a supervisor or manager who has individual management control over a group's production and resources.

Additional performance elements were introduced in the September 1995 performance appraisal regulations and have not been used widely yet. We foresee their popularity rising as agencies discover the possibilities they present for managing performance.

KNOW YOUR PROGRAM FEATURES

Again, it is important to stress that before you continue with this handbook, you need to find out the rules established by your appraisal program; specifically , you will need to know:

- which kinds of elements your program allows you to use
- at how many levels your program appraises employee performance on elements
- how many summary levels your program uses
- if your program allows weighting of elements (see Step 4)
- whether the program requires specific elements and/or uses generic standards

example program features

This handbook uses an example agency called the "Federal Benefits Bureau," (FBB) which is an agency that specializes in benefits and retirement services. To be able to understand and work through the examples, you need to know the features of FBB's appraisal program (i.e., the same features listed above).
FBB's appraisal program:

- uses critical, non-critical, and additional performance elements
- appraises employee performance on elements at five levels:

  Unacceptable
  Minimally Successful
  Fully Successful
  Exceeds Fully Successful
  Outstanding
- uses five summary levels, which are the same as the elements' five levels listed above
- allows elements to be weighted according to importance to the organization
- requires **no** specific or generic elements

chapter 2

DISTINGUISHING ACTIVITIES FROM ACCOMPLISHMENTS

CHAPTER 2 DISCUSSES WHAT MAY BE THE MOST IMPORTANT CONCEPT IN THIS HANDBOOK: THE DIFFERENCE BETWEEN MEASURING ACTIVITIES AND MEASURING ACCOMPLISHMENTS. THE FOLLOWING STORY ILLUSTRATES THIS CONCEPT.

The Beekeepers and Their Bees

Once upon a time, there were two beekeepers who each had a beehive. The beekeepers worked for a company called Bees, Inc. The company's customers loved its honey and wanted the business to produce more honey than it had the previous year. As a result, each beekeeper was told to produce more honey at the same quality. With different ideas about how to do this, the beekeepers designed different approaches to improve the performance of their hives.

The first beekeeper established a bee performance management approach that measured how many flowers each bee visited. At considerable cost to the beekeeper, an extensive measurement system was created to count the flowers each bee visited. The beekeeper provided feedback to each bee at midseason on his individual performance, but the bees were never told about the hive's goal to produce more honey so that Bees, Inc., could increase honey sales. The beekeeper created special awards for the bees who visited the most flowers.

The second beekeeper also established a bee performance management approach, but this approach communicated to each bee the goal of the hive—to produce more honey. This beekeeper and his bees measured two aspects of their performance: the amount of nectar each bee brought back to the hive and the amount of honey the hive produced. The performance of each bee and the hive's overall performance were charted and posted on the hive's bulletin board for all bees to see. The beekeeper created a few awards for the bees that gathered the most nectar, but he also established a hive incentive program that rewarded each bee in the hive based on the hive's production of honey—the more honey produced the more recognition each bee would receive.

chapter 2

At the end of the season, the beekeepers evaluated their approaches. The first beekeeper found that his hive had indeed increased the number of flowers visited, but the amount of honey produced by the hive had dropped. The Queen Bee reported that because the bees were so busy trying to visit as many flowers as possible, they limited the amount of nectar they would carry so they could fly faster. Also, because the bees felt they were competing against each other for awards (because only the top performers were recognized), they would not share valuable information with each other (like the location of the flower-filled fields they'd spotted on the way back to the hive) that could have helped improve the performance of all the bees. (After all was said and done, one of the high-performing bees told the beekeeper that if he'd been told that the real goal was to make more honey rather than to visit more flowers, he would have done his work completely differently.) As the beekeeper handed out the awards to individual bees, unhappy buzzing was heard in the background.

The second beekeeper, however, had very different results. Because each bee in his hive was focused on the hive's goal of producing more honey, the bees had concentrated their efforts on gathering more nectar to produce more honey than ever before. The bees worked together to determine the highest nectar-yielding flowers and to create quicker processes for depositing the nectar they'd gathered. They also worked together to help increase the amount of nectar gathered by the poor performers. The Queen Bee of this hive reported that the poor performers either improved their performance or transferred to another hive. Because the hive had reached its goal, the beekeeper awarded each bee his portion of the hive incentive payment. The beekeeper was also surprised to hear a loud, happy buzz and a jubilant flapping of wings as he rewarded the individual high-performing bees with special recognition.

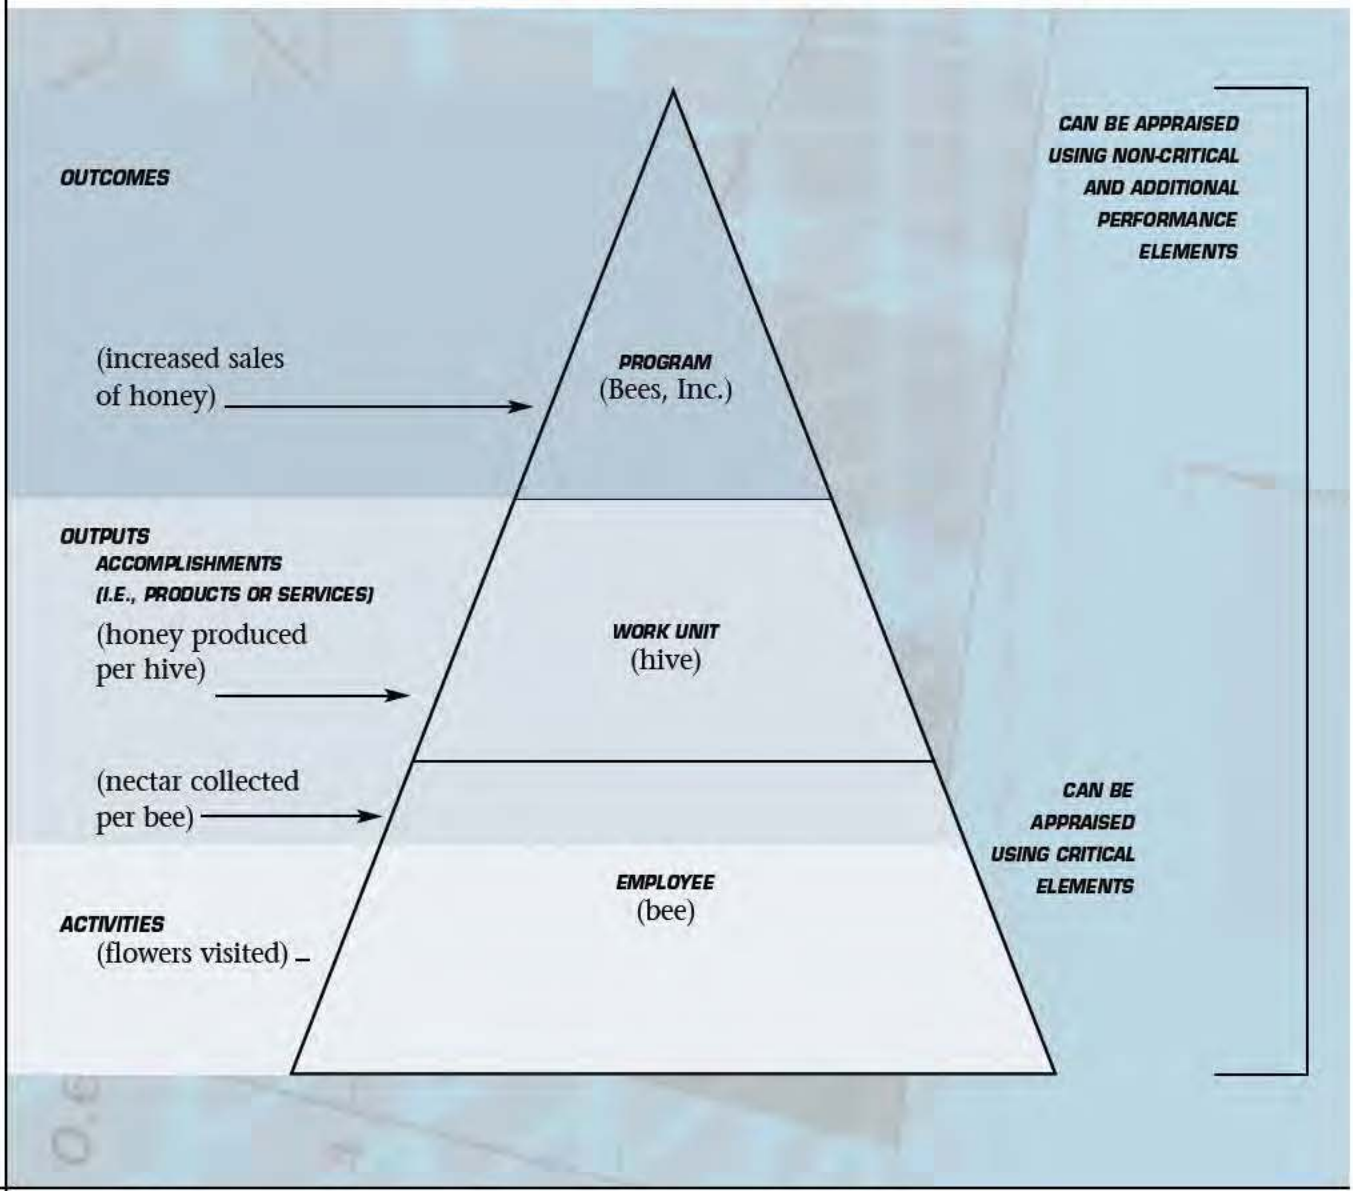
THE MORAL OF THIS STORY IS: MEASURING AND RECOGNIZING ACCOMPLISHMENTS RATHER THAN ACTIVITIES—AND GIVING FEEDBACK TO THE WORKER BEES—OFTEN IMPROVES THE RESULTS OF THE HIVE.

Although it somewhat oversimplifies performance management, the beekeepers' story illustrates the importance of measuring and recognizing accomplishments (the amount of honey production per hive) rather than activities (visiting flowers). This handbook is designed to help you develop elements and standards that center around accomplishments, not activities.

The chart below depicts the type of measurement that should occur at each organizational level of Bees, Inc., and includes measurements used by the beekeepers.

PERFORMANCE PYRAMID

Note that outputs occur at two levels—the work unit and the employee level.



Activities are the actions taken to produce results and are generally described using verbs. In the beekeeper story, the *activity* being measured was *visiting* flowers. Other examples of activities include:

- *filing* documents
- *developing* software programs
- *answering* customer questions
- *writing* reports

Accomplishments (or outputs) are the products or services (the results) of employee and work unit activities and are generally described using nouns. The examples of *outputs* used in the story include the amount of *nectar* each bee collected and the *honey* production for the hive. Other examples include:

- *files* that are orderly and complete
- a software *program* that works
- accurate *guidance* to customers
- a *report* that is complete and accurate

Outcomes are the final results of an agency's products and services (and other outside factors that may affect performance). The example of an outcome used in the beekeeper story was increased sales of honey for Bees, Inc. Other examples of outcomes could include:

- reduced number of transportation-related deaths
- improved fish hatcheries
- a decrease in the rate of teenage alcoholism
- clean air

A NOTE ABOUT FEDERAL EFFORTS TO MEASURE OUTCOMES AND OUTPUTS

Because of the requirements set by the Government Performance and Results Act of 1993 (i.e., the Results Act), Federal agencies are measuring their organizational outcomes and outputs. The Results Act requires agencies to have strategic plans, which include outcome-related goals and objectives for the major functions and operations of the agency. Those outcome goals must be objective, quantifiable, and measurable. The Results Act also requires agencies to develop annual performance plans that cover each one of their programs. Performance plans must include performance goals, which define the annual, often incremental, progress in achieving the outcome goals in the strategic plan. Performance goals are often output-oriented because they address single-year performance. We will talk more about strategic plans with their outcome goals, and performance plans with their output goals, in Chapter 3.

On the performance pyramid illustrated on page 14, notice that accomplishments can be measured at two levels in the organization—the employee level and the work unit level. Employee accomplishments can be included in employee performance plans using all three types of performance elements. Work unit accomplishments also can be included in the appraisal process—through non-critical elements if the agency desires to have work unit performance affect ratings (and only if the appraisal program uses more than two summary levels) or through additional performance elements if work unit performance is not to affect ratings. However they are used in performance appraisal, work unit as well as employee accomplishments can always be recognized through an awards program.

If supervisors, team leaders, and employees want to develop performance plans that support the achievement of organizational outcomes, they might try the second beekeeper's approach of sharing organizational goals with the hive, measuring and rewarding accomplishments rather than activities, and providing feedback on performance.

Using Balanced Measures

THIS HANDBOOK FOCUSES ON MEASURING ACCOMPLISHMENTS AT THE WORK UNIT AND EMPLOYEE LEVELS. THERE MAY BE SITUATIONS, HOWEVER, WHEN ACTIVITIES, BEHAVIORS, OR PROCESSES MAY BE IMPORTANT TO INCLUDE IN AN EMPLOYEE'S PERFORMANCE PLAN. THIS HANDBOOK DOES NOT FOCUS ON HOW TO DEVELOP THOSE KINDS OF MEASURES. HOWEVER, WE WOULD BE REMISS NOT TO INCLUDE A DISCUSSION ABOUT THE IMPORTANCE OF BALANCING MEASURES IN YOUR MEASUREMENT SYSTEM. THEREFORE, A SHORT DESCRIPTION OF BALANCED MEASURES FOLLOWS.

Traditionally, many agencies have measured their organizational performance by focusing on internal or process performance, looking at factors such as the number of full-time equivalents (FTEs) allotted, the number of programs controlled by the agency, or the size of the budget for the fiscal year. In contrast, private sector businesses usually focus on the financial measures of their bottom line: return-on-investment, market share, and earnings-per-share. Alone, neither of these approaches provides the full perspective on an organization's performance that a manager needs to manage effectively. But by balancing customer and employee satisfaction measures with results and financial measures, managers will have a more complete picture and will know where to make improvements.

BALANCING MEASURES Robert S. Kaplan and David P. Norton have developed a set of measures that they refer to as "a balanced scorecard." These measures give top managers a fast but comprehensive view of the organization's performance and include both process and results measures. Kaplan and Norton compare the balanced scorecard to the dials and indicators in an airplane cockpit. For the complex task of flying an airplane, pilots need detailed information about fuel, air speed, altitude, bearing, and other indicators that summarize the current and predicted environment. Reliance on one instrument can be fatal. Similarly, the complexity of managing an organization requires that managers be able to view performance in several areas simultaneously. A balanced scorecard—or a balanced set of measures—provides that valuable information.

MANAGING PERFORMANCE FROM THREE PERSPECTIVES A variety of studies have shown that both the public and private sectors have used balanced measures to help create high-performing organizations. Because balancing the perspectives of business, customers, and employees plays a key role in organizational success, OPM regulations (effective November 13, 2000) now require agencies to evaluate senior executive performance using balanced measures, which should take into account the following factors:

- **The business perspective,** which has a different interpretation in the Government than in the private sector. For many organizations, there are actually two separate sets of measures: the outcomes, or social/political impacts, which define the role of the agency/department within the Government and American society; and the business processes needed for organizational efficiency and effectiveness. Many of the outcome-oriented goals agencies establish in their strategic plans under the Government Performance and Results Act include the business perspective. To gain the business perspective, Federal managers must answer the question: *How do we look to Congress, the President, and other stakeholders?*

- **The customer perspective,** which considers the organization's performance through the eyes of its customers, i.e., American citizens, so that the organization retains a careful focus on customer needs and satisfaction. To achieve the best in business performance, agencies must incorporate customer needs and wants and must respond to them as part of their performance planning. Federal managers must answer the question: *How do customers see us?*
- **The employee perspective,** which focuses attention on the performance of the key internal processes that drive the organization, including employee development and retention. This perspective directs attention to the basis of all future success—the organization's people and infrastructure. Adequate investment in these areas is critical to all long-term success. Federal managers must answer the question: *Do employees view the organization as a good place to work and develop their skills?*

TIE-IN TO EMPLOYEE PERFORMANCE The balanced measures philosophy need not apply only at the organizational or senior executive level. A balanced approach to employee performance appraisal is an effective way of getting a complete look at an employee's work performance. Too often, employee performance plans with their elements and standards measure behaviors, actions, or processes without also measuring the results of employees' work. By measuring only behaviors or actions in employee performance plans, an organization might find that most of its employees are appraised as *Outstanding* when the organization as a whole has failed to meet its objectives.

By using balanced measures at the organizational level, and by sharing the results with supervisors, teams, and employees, managers are providing the information needed to align employee performance plans with organizational goals. By balancing the measures used in employee performance plans, the performance picture becomes complete.

Categories of Work

Sometimes performance plans describe elements using categories of work. Categories are classifications of work types often used to organize performance elements and standards. If, for example, the first beekeeper in our fable had used categories of work for his elements, he might have used the broad category of "making honey" as the element and then included a grouping that described all the activities the bees did to make the honey , such as gather nectar, report to the drones, etc. Other examples of categories of work and the types of activities that are often described under these categories include:

- customer service (greets customers with a smile, answers the phone promptly)
- teamwork (cooperates with others, shares information)
- communication (writes well, gives presentations)
- office duties (files papers, prepares reports)

THIS HANDBOOK DOES NOT EXPLAIN HOW TO DESCRIBE AND MEASURE CATEGORIES OF WORK. HERE YOU ARE ASKED TO CONCENTRATE ON MEASURING ACCOMPLISHMENTS.

EXERCISE ON DISTINGUISHING ACTIVITIES FROM ACCOMPLISHMENTS:

It is time to check your understanding of the differences among activities, accomplishments, and categories. Please check the column that best describes each item.

chapter 3

DEVELOPING EMPLOYEE PERFORMANCE PLANS

You are now going to begin an eight-step process for developing employee performance plans that support organizational goals. Before you begin, however, we want to briefly review a process for developing performance plans that you may have followed in the past but will **NOT** be learning here.

Traditionally in some organizations, performance plans have been developed by copying the activities described in an employee's job description onto the appraisal form. This handbook asks that you **NOT** begin with the position description. Even though a performance plan must reflect the type of work described in the employee's position description, the performance plan does not have to mirror it.

The next two pages illustrate what happens when you develop a performance plan solely from a position description. Page 22 is a simplified position description for a Retirement Benefits Specialist within the Claims Division branch of our example agency — the Federal Benefits Bureau (FBB). Notice how the duties and responsibilities in the position description all begin with a verb. They describe **activities**, not **accomplishments**.

chapter 3

A performance plan for a Retirement Benefits Specialist follows on page 23. It was written by copying the simplified position description from page 22 onto the appraisal form. Note that by copying the activities from the position description onto the appraisal form, FBB has developed a performance plan that only measures **activities,** not accomplishments. Also, by developing a performance plan without using a process that links **accomplishments** to organizational goals, the organization has lost the opportunity to use the appraisal process to communicate its goals to its employees and to align employee efforts with its goals.

REMEMBER THAT FBB'S APPRAISAL PROGRAM APPRAISES EMPLOYEE PERFORMANCE ON ELEMENTS AT FIVE LEVELS. THE FORM ON PAGE 23 SHOWS FIVE POSSIBLE LEVELS OF PERFORMANCE: UNSATISFACTORY (U), MINIMALLY SUCCESSFUL (MS), FULLY SUCCESSFUL (FS), EXCEEDS FULLY SUCCESSFUL (EFS), AND OUTSTANDING (O).

POSITION DESCRIPTION

THE DUTIES AND RESPONSIBILITIES IN THE POSITION DESCRIPTION ALL BEGIN WITH A VERB. THEY DESCRIBE ACTIVITIES.

POSITION DESCRIPTION: #123456
ORGANIZATIONAL TITLE: RETIREMENT BENEFITS SPECIALIST

INTRODUCTION

The incumbent of this position serves in a highly responsible capacity as a Retirement Benefits Specialist in an office responsible for the adjudication of claims for retirement and insurance benefits.
The work requires the services of an experienced, fully-trained Retirement Benefits Specialist. This position is responsible for considering and acting on all aspects of claims and applications for retirement and insurance benefits in an assigned area.

MAJOR DUTIES AND RESPONSIBILITIES

- Determine entitlement to and the amount of retirement annuities and survivor benefits, as well as payments to adult students and the entitlements and payments to certain other parties such as former spouses.
- Develop the record in individual cases, determining what is necessary and the sources of needed information.
- Adjudicate cases.
- Review and approve recommendations and decisions made by other Specialists, and provide training, advice, and assistance.
- Respond to inquiries from various customer sources and provide clear, responsive explanations of actions taken and the bases for them.

HAVING REVIEWED HOW TO DEVELOP A PERFORMANCE PLAN THAT FOCUSES ONLY ON ACTIVITIES, WE WILL NOW DEVELOP A PERFORMANCE PLAN THAT ESTABLISHES ELEMENTS AND STANDARDS, ADDRESSING ACCOMPLISHMENTS THAT LEAD TO ORGANIZATIONAL GOAL ACHIEVEMENT. ***AN EIGHT-STEP PROCESS HAS BEEN DEVELOPED TO PRODUCE SUCH PLANS.*** *EACH STEP IN THE EIGHT-STEP PROCESS WE PRESENT IN THIS HANDBOOK BUILDS ON THE PREVIOUS STEP; YOU CANNOT SKIP A STEP AND END UP WITH GOOD RESULTS.*

step 1: look at the overall picture

DEVELOPING EMPLOYEE PERFORMANCE PLANS

Instead of beginning at the bottom of the organization with the position description to develop employee performance plans, begin the process by looking at your agency' s goals and objectives. Gather the following information:

WHAT ARE YOUR AGENCY'S GENERAL OUTCOME GOALS AS OUTLINED IN ITS STRATEGIC PLAN?

The Government Performance and Results Act of 1993 (i.e., GPRA) requires all agencies to develop a strategic plan that includes objective, quantifiable, and measurable performance goals. Agencies submitted their first strategic plans to Congress in September 1997. You will be referring to your agency's strategic plan while creating employee performance plans.

WHAT ARE THE SPECIFIC PERFORMANCE GOALS ESTABLISHED FOR YOUR PROGRAM AREA AS OUTLINED IN YOUR AGENCY'S ANNUAL PERFORMANCE PLAN?

GPRA also requires each agency to have an annual performance plan that sets out measurable goals that define what will be accomplished during a fiscal year. The goals in the annual performance plan describe the incremental progress toward achieving the general goals and objectives in the strategic plan. Performance plan goals are usually more specific and may be more output-oriented than the general outcome goals found in the strategic plan. Since performance plan goals should be used by managers as they direct and oversee how a program is carried out, these are the goals to which employee performance plans should be linked.

WHAT PERFORMANCE MEASURES ARE ALREADY IN PLACE?

You should be aware of the measurement systems that you can access for information on performance, including measures used for determining progress toward achieving Results Act goals and customer satisfaction surveys.

EXAMPLE OF ORGANIZATIONAL GOALS

Again, this handbook will continually refer to the Retirement Benefits Specialist position located within the Retirement Claims Division (a division of the Office of Retirement Services) of our example agency - the Federal Benefits Bureau (FBB). One of the primary functions of this position is to process retirement claims. FBB's strategic, outcome-oriented goals and two of the Office of Retirement Service's performance goals established in FBB's annual performance plan serve as examples of organizational goals. You will use this information in the next step of our eight-step process.

example organizational goals

)%% V STRATEGIC GOALS

Provide. Offer a wide range of benefits and retirement services that will enhance recipients' quality of life.

Diversity. Create and maintain an inclusive work environment that values diversity and allows every employee the opportunity to reach their highest potential.

Serve. FBB's customer service, benefits, and retirement services meet the evolving needs of Federal employees and their families.

Integrity. Act as model agency within the Federal Government through fiscally responsible business practices and a commitment to excellence.

example organizational goals

FBB'S ANNUAL PERFORMANCE PLAN GOALS FOR THE OFFICE OF RETIREMENT SERVICES (ORS)

ORS GOAL #2

Retirement claims processing times are reduced and more customer services are delivered through self-servicing technology, while customer satisfaction is maintained at last fiscal year's level.

DIRECTLY LINKED TO FBB'S THIRD GOAL: SERVE

MEANS: *(ONLY TWO MEANS ARE PRESENTED HERE.)*

- We will use the ORS Calculator implemented through the automation improvement project to reduce the time needed to process claims.
- We will continue the availability of both Interactive Voice Response and Internet technology to make annuity payment account changes.

CUSTOMER SATISFACTION INDICATORS

- Customers who received their first payment either before or when they expected. (The goal is to reach 80 per cent.)
- Annuitants who indicate overall satisfaction with the handling of their retirement claims. (The goal is to reach 95 per cent.)

BUSINESS PROCESS INDICATORS

- Interim payment processing time. (The goal is 4.5 days.)
- Annuity processing time. (The goal is 90 days.)
- Annuity claims accuracy. (The goal is 92 per cent.)

FINANCIAL INDICATOR

Claims processing unit cost. (The goal is $190 per claim.)

step 2: determine work unit accomplishments

The next step in this eight-step method is to determine the accomplishments (i.e., the products or services) of the work unit. Identifying work unit accomplishments lets you identify appropriate measures in the following steps of this process.

A work unit is a small group of employees that, in a traditional work structure, is supervised by the same first-line supervisor. Work units are generally the smallest organizational group on the organizational chart and usually include between 5 and 20 people. A work unit can also be a team—permanent or temporary—where the team members work interdependently toward a common goal.

Because not all types of work situations and structures are the same, this handbook offers three different ways to determine what to measure at the work unit level:

A. A GOAL CASCADING METHOD

B. A CUSTOMER-FOCUSED METHOD

C. A WORK FLOW CHARTING METHOD

You can use one or all three methods, depending on what fits your situation. Whichever you use, remember to describe accomplishments (using nouns) rather than activities (using verbs).

method A: cascade the agency's goals down to the work unit level

The **goal cascading method** works best for agencies with clear organizational goals and objectives, such as those established in the strategic plans and annual performance plans that agencies have prepared under the Government Performance and Results Act. This method requires answers to each of the following questions:

WHAT ARE THE AGENCY'S SPECIFIC GOALS AND OBJECTIVES?

These can be found in the agency's annual performance plan and customer service standards. (Note that this question repeats Step 1 of the eight-step process.)

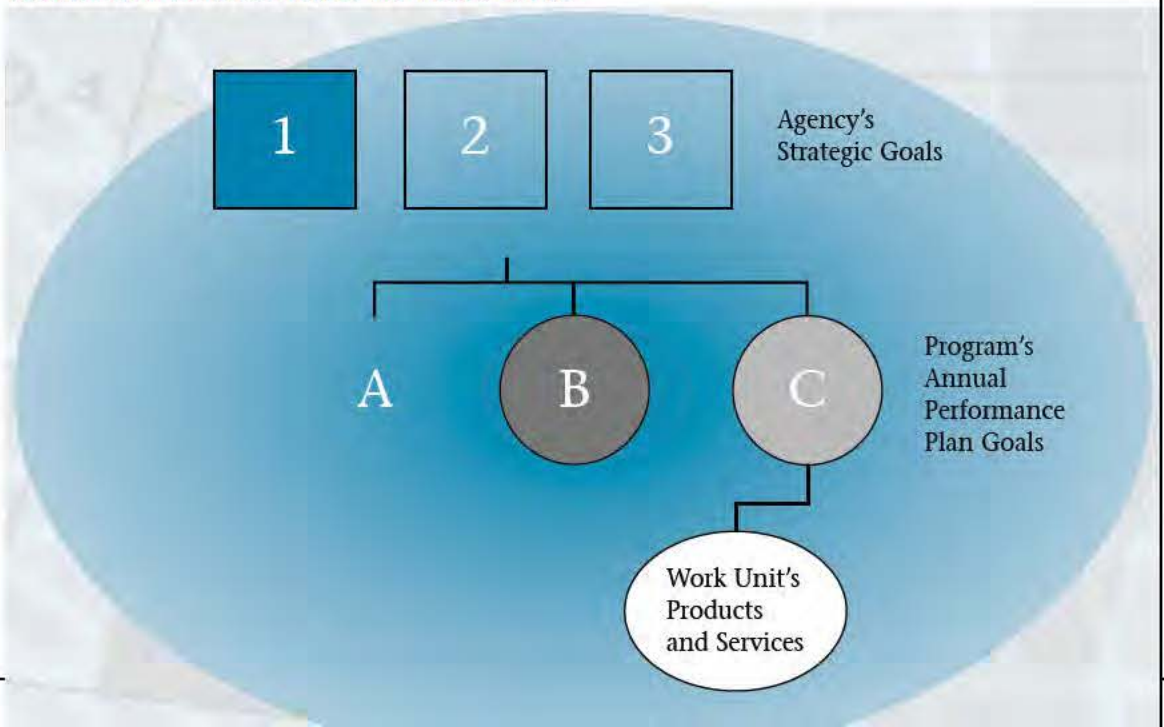
WHICH AGENCY GOAL(S) CAN THE WORK UNIT AFFECT?

Often, work units may affect only one agency goal, but in some situations, agency goals are written so broadly that work units may affect more than one.

WHAT PRODUCT OR SERVICE DOES THE WORK UNIT PRODUCE OR PROVIDE TO HELP THE AGENCY REACH ITS GOALS?

Clearly tying work unit products and services to organizational goals is key to this process. If a work unit finds it generates a product or service that does not affect organizational goals, the work unit needs to analyze the situation. It may decide to eliminate the product or service.

CASCADING AGENCY GOALS TO WORK UNITS



example method A

EXAMPLE OF CASCADING AGENCY GOALS TO A WORK UNIT

FBBStrategic Goal

FBB's THIRD GOAL: SERVE

FBB's customer service, benefits, and retirement services meet the evolving needs of Federal employees and their families.

An Office of Retirement Services (ORS) annual performance plan goal that cascades from FBB's THIRD GOAL: SERVE

ORS GOAL #2

Retirement claims processing times are reduced and more customer services are delivered through self-servicing technology, while customer satisfaction is maintained at last fiscal year's levels.

Some of Office of Retirement Services(ORS) GOALS

A. Reduce overall processing times for annuity claims by processing fully developed annuity claims in an average of 90 days (re ORS Goal #2).

B. Reduce claims processing error rates by providing increased training in workplace competencies (re ORS Goal #2).

Retirement Claims Division GOALS FBB

- Claims processed in less time and with lower error rates.
- Increased number of individuals who can process insurance claims.

EXERCISE ON CASCADING GOALS

In the spaces below, begin mapping your agency's strategic and performance goals and how those goals cascade or "trickle down" through your organization. Try to show how your work unit's products or services link to your agency's goals. Remember to describe work unit accomplishments in terms of products or services (i.e., the end result of all the unit's activities).

YOUR AGENCY'S GOALS

YOUR ORGANIZATION'S GOALS

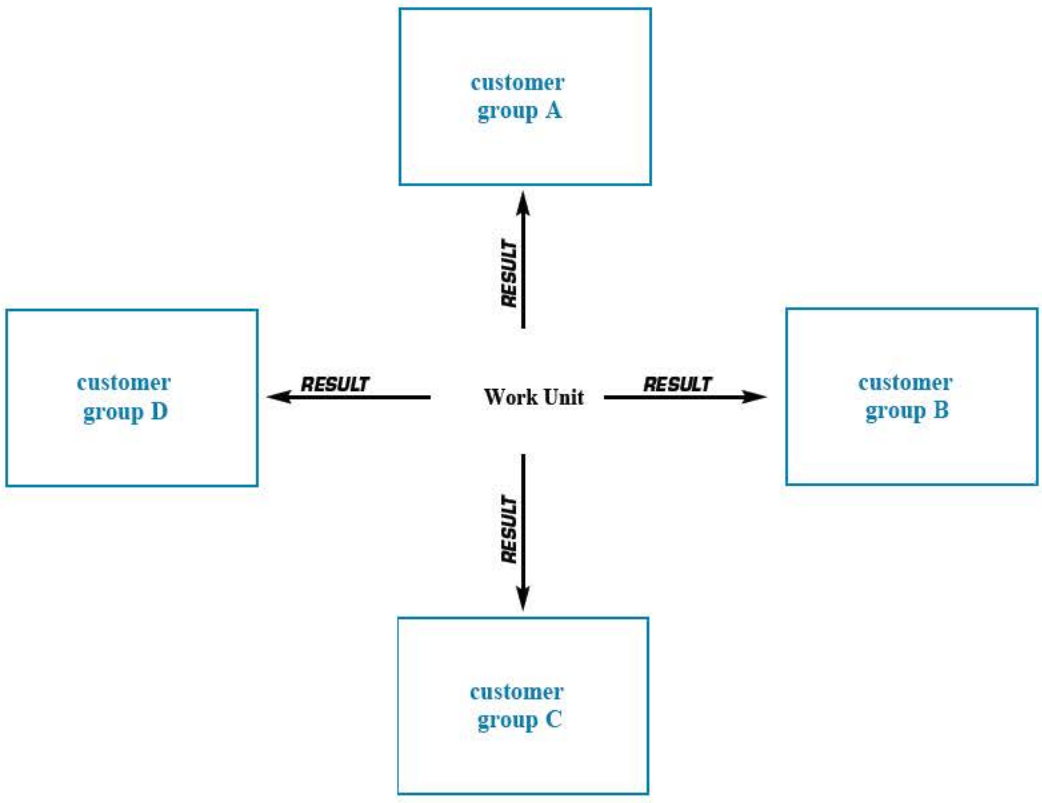
YOUR WORK UNIT'S PRODUCTS OR SERVICES

method B: determine the products and services the work unit provides for its customers

The **customer-focused method** works well when there are no clear agency goals and when the work unit knows who its customers are and what they expect. Often this method is easier to apply to administrative work units that provide support functions, such as a human resources unit, an acquisitions unit, or a facilities maintenance unit. This method focuses on achieving customer satisfaction and requires answers to each of the following questions:

- Who are the customers of the work unit? If the work unit provides a support function, most of its customers may be internal to the agency.
- What products and/or services do the customers expect? Remember to describe accomplishments, not activities.

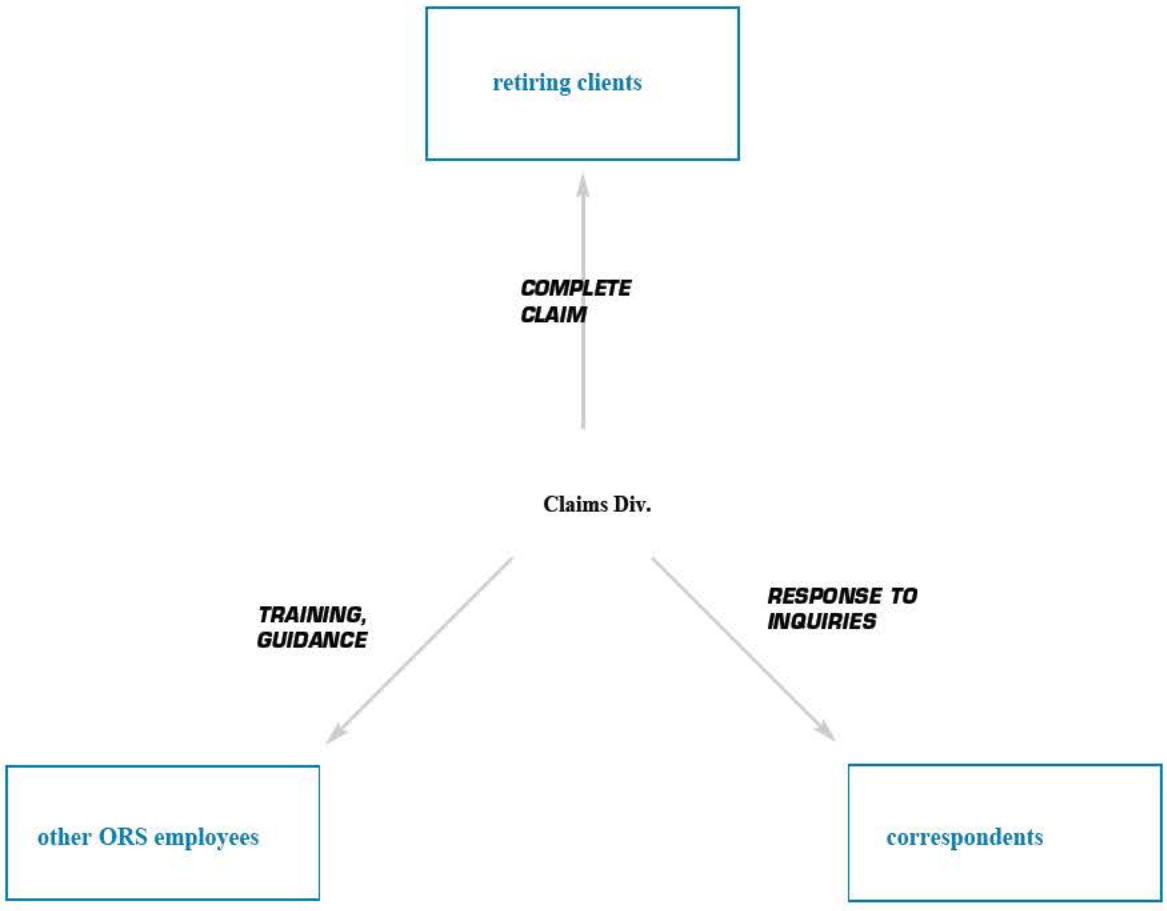
One way to approach this method is to build a map, as shown below. Place an oval representing the work unit in the center of a blank piece of paper. List the customer groups around the oval and describe the products or services the customers expect in the box under the customer groups.



EXAMPLE OF IDENTIFYING CUSTOMERS AND THEIR EXPECTATIONS

The example below diagrams the accomplishments of the Office of Retirement Service's Claims Division from a customer-focused approach. Note that the accomplishments listed are the **results** of the team's work.

example method B



EXERCISE FOR IDENTIFYING CUSTOMERS AND THEIR EXPECTATIONS

Use method B—the customer-focused method—to develop the product(s) or service(s) that your work unit provides.

1) Identify your work unit's customers

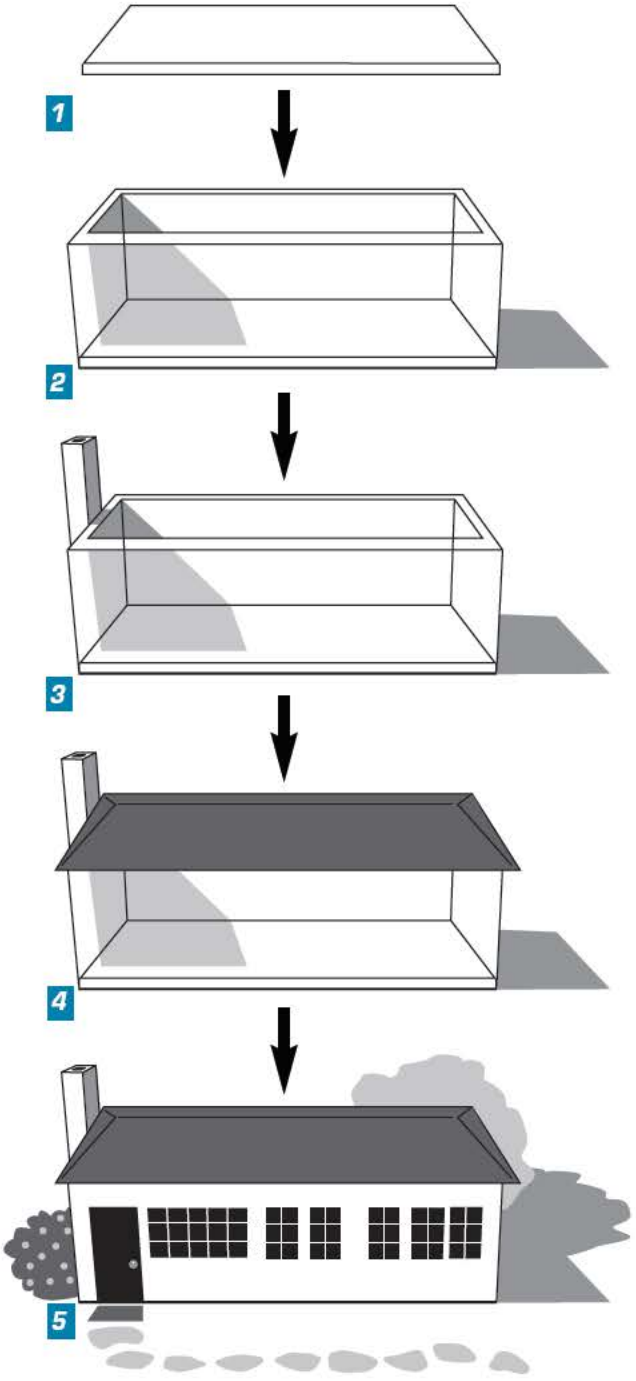
2) Determine what product(s) or service(s) your work unit supplies or provides to its customers

YOUR WORK UNIT

method C: develop a work flow chart for the work unit, establishing key steps in the work process

The **work flow charting method** works well for work units that are responsible for a complete work process, such as the processing of a case, the writing of a report, or the production of a customer information package. This method asks work units to develop work flow charts. A work flow chart is a picture of the major steps in a work process or project. It begins with the first step of the work process, maps out each successive step, and ends with the final product or service. To illustrate, the work flow chart to the right depicts a work process for building a house.

1. Foundation
2. Walls
3. Chimney
4. Roof
5. A complete house



TO HELP YOU BUILD YOUR WORK FLOW CHART, ANSWER THESE QUESTIONS:

- How does the work unit produce its products or services? List the most basic steps in the process. For this purpose, you do not need to list all the activities required. (If you were analyzing the work to find ways of improving the process, you would need to list every activity.)
- Which are the most important steps in the process? By determining these steps, you highlight areas for performance measurement.

As you map out the process, you may find yourself describing activities. Try to group the activities into key steps by describing the results of those activities as one step in the process. As an example, the activities described in the following columns are all the activities that a publication team described when it was trying to create a work flow chart for the process of developing a newsletter. By grouping the related activities into the same columns, it was easier for the team to determine the results of those activities. Those results are written at the top of the column and became the key steps in the work flow chart.

example method C

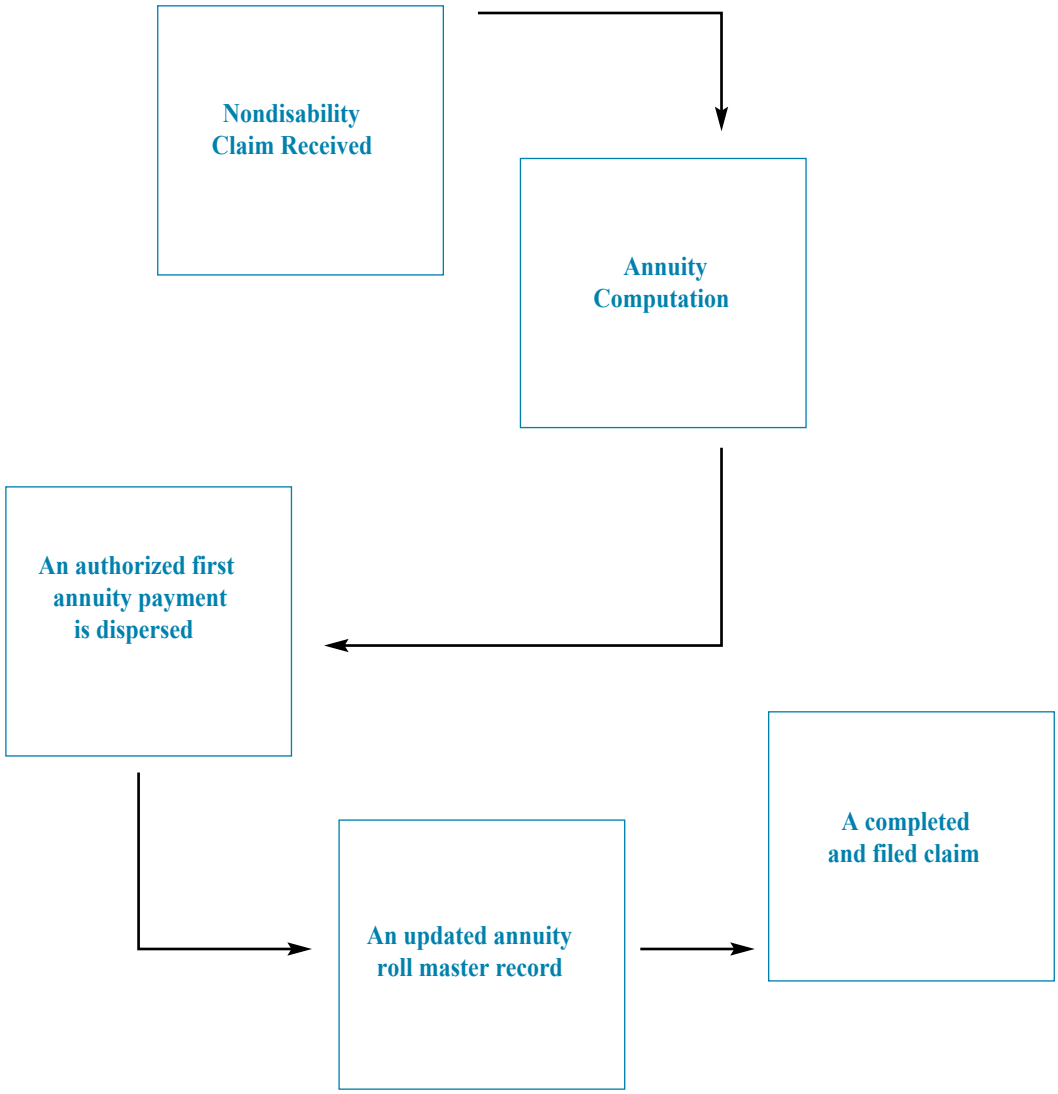
RESULTS	PLAN FOR NEXT ISSUE	THE DRAFT VERSION OF THE ARTICLES	THE EDITED VERSION OF THE ARTICLE	THE CAMERA-READY COPY
ACTIVITIES	brainstorm ideas	interview contacts	review articles for errors	crop pictures
	meet to discuss ideas	get contact review and edits of article	make suggestions for improvements	develop the original graphics
	research various resources for ideas	get pictures or graphics, if used	make necessary changes	create layout boards
	get management approval of proposed plan	write article	consider the overall effect of the entire issue	format issue

WORK FLOW CHART

ANOTHER EXAMPLE OF WORK FLOW CHARTING

This example of the results of method C—which focuses on the work flow and the key steps in the work process—uses a work flow chart that maps the key steps in processing retirement claims. Notice that the steps are described as products. In other words, all the activities to complete the steps are not listed individually but have been grouped and described as products.

example method C



EXERCISE ON WORK FLOW CHARTING

1) Select a product or services that your work unit provides.
2) As best you can, map out the work process your unit uses. Focus on the major categories or steps of the work. You may need to first list the smaller steps of the work and then group them into subproducts. (Remember to describe products and services when you can, not activities.)

step 3:
determine individual accomplishments that support work unit goals

The performance elements that will be measured in the overall employee performance plan can include both individual and group assignments and responsibilities. The most important, results-oriented aspects of a unit's performance (which are its products or services) were identified in Step 2. (Other types of processes that work units may want to measure and include as elements in their plans—but which are not products or services and would not be identified through Step 2—include internal group dynamics processes, such as decision-making or problem-solving processes, or group/team development.)

Elements that address individual accomplishments can be identified using a role-results matrix. A role-results matrix is simply a table that identifies the results each work unit member must produce to support the unit's accomplishments. To build the matrix, list the work unit's products or services across the top row of a table. List each member of the work unit or each job position down the left column of the matrix. For each cell of the table, ask this question: What must this unit member produce or perform (i.e., accomplish) to support this particular work unit product or service? List those employee products or services (i.e., accomplishments) in the appropriate cell. The products or services you list for each unit member are possible performance elements that might be included in the employee's performance plan. All performance elements should be either quantifiable or verifiable and should be described as accomplishments (nouns), not activities (verbs).

A ROLE-RESULTS MATRIX

UNIT EMPLOYEES	UNIT PRODUCT OR SERVICE	UNIT PRODUCT OR SERVICE	UNIT PRODUCT OR SERVICE	UNIT PRODUCT OR SERVICE
EMPLOYEE 1	ACCOMPLISHMENT	ACCOMPLISHMENT	ACCOMPLISHMENT	ACCOMPLISHMENT
EMPLOYEE 2	ACCOMPLISHMENT	ACCOMPLISHMENT	ACCOMPLISHMENT	*N/A
EMPLOYEE 3	ACCOMPLISHMENT	*N/A	ACCOMPLISHMENT	ACCOMPLISHMENT
EMPLOYEE 4	*N/A	ACCOMPLISHMENT	ACCOMPLISHMENT	ACCOMPLISHMENT

*The employee had no part in this work unit product or service.

EXAMPLE OF A ROLE-RESULTS MATRIX

An example of a role-results matrix is shown below. It was built for a work team that produces a bimonthly policy newsletter. The team has five members: the editor, three writers, and a graphic artist. The final product or output is the newsletter. (The expected outcome is better educated employees.) The team created a work flow chart (see page 36), which identified four key steps in the work process. The team then used these key steps to build the matrix and will use it to develop performance elements.

Note that the main steps of the work process are laid out along the top of the matrix. The team members are listed down the left-hand column. Accomplishments are listed for each team member. Also, note that not all members have assignments or responsibilities for every team accomplishment. (This often will occur in cross-functional work units that include a variety of different job series.)

When building a role-results matrix, you may identify certain aspects of performance at either the work unit level or the individual level that you may not be able to measure (e.g., the effect a human resources program has on organizational performance) or over which the unit or the employee has no control (i.e., a portion of the product must be completed by someone outside the work unit). Also, certain aspects of performance may cost too much to measure or the agency may not have the resources to measure them. You should not include these aspects of performance as elements in the performance plan, but they are still legitimate parts of the role-results matrix.

A role-results matrix is a valuable management tool. When supervisors involve employees in the process of completing the matrix, everyone's role in the work unit is very clear, which is important to the successful performance of the group. The whole process of determining work unit products and services, and then completing a role-results matrix, is a beneficial team-building exercise.

example role-results matrix

A ROLE-RESULTS MATRIX FOR A NEWSLETTER TEAM:

TEAM ACCOMPLISHMENTS →

TEAM MEMBERS	THE PLAN FOR THE NEXT ISSUE	THE DRAFT VERSION OF THE ARTICLES	THE EDITED VERSION OF THE ARTICLES	THE CAMERA-READY COPY
EDITOR	*TOPICS TO BE COVERED*		*ARTICLES THAT HAVE BEEN EDITED*	
WRITER A	*RECOMMENDATIONS FOR ARTICLES*	*DRAFT ARTICLE(S)*		
WRITER B	*RECOMMENDATIONS FOR ARTICLES*	*DRAFT ARTICLE(S)*		
WRITER C	*RECOMMENDATIONS FOR ARTICLES*	*DRAFT ARTICLE(S)*		
GRAPHIC ARTIST	*RECOMMENDATIONS FOR LAYOUT*			*A CAMERA-READY COPY*

ANOTHER EXAMPLE OF A ROLE-RESULTS MATRIX

The table below displays example data gathered for FBB's Office of Retirement Service's Claims Division using the cascading method as described on pages 29-30 and the customer-focused method on pages 33-34. Note that the products or services (i.e., the work unit accomplishments) identified through the process of Step 2 are shown along the top of the matrix. Employees are listed down the left side of the matrix. Employee work accomplishments are included in each cell. Notice that the employee work responsibilities are described as accomplishments (i.e., products or services) rather than activities or behaviors.

example role-results matrix

EMPLOYEES	WORK UNIT PRODUCTS OR SERVICES		
DIVISION MGR*	***CLAIMS PROCESSED IN LESS TIME AND WITH LOWER ERROR RATES***	***RESPONSES TO INQUIRIES***	***INCREASED NUMBER OF EMPLOYEES WHO CAN PROCESS CLAIMS***
RETIREMENT BENEFITS SPECIALIST	*A COMPLETED* ***CLAIM*** ***SUGGESTION(S)*** *FOR IMPROVING THE PROCESS*	*N/A*	***GUIDANCE,*** *TRAINING, AND* ***TECHNICAL ASSISTANCE*** *TO OTHER SPECIALISTS*
CUSTOMER SERVICE SPECIALISTS	*CLAIM CONTROL* ***LOG***	***CORRESPONDENCE*** *THAT IS FORMATTED, MAILED, AND FILED* ***ANSWERS*** *TO CUSTOMER TELEPHONE QUESTIONS*	*N/A*

Note that the Division Manager is on the same row as work unit accomplishments. This shows that the Branch Manager is responsible for work unit results.

EXERCISE FOR BUILDING A ROLE-RESULTS MATRIX

Fill in the role-results matrix for your work unit. Place the work unit products or services that you developed in Step 2 (using method A, page 31, method B, page 34, and/or method C, page 38) along the top of the matrix. Fill in the names or the job titles of the work unit's employees in the left-hand column. Then fill in the employees' accomplishments that contribute to each work unit accomplishment.

EMPLOYEES	WORK UNIT PRODUCTS OR SERVICES			
ORGANIZATIONAL CHIEF				

step 4: convert expected accomplishments into performance elements, indicating type and priority

In Steps 2 and 3 of the process presented in this handbook, you developed the expected accomplishments for the work unit and the unit's employees. Now, in Step 4, you will:

- identify which accomplishment(s) should be included as elements in the performance plan
- select which type of element to use
- assign weights or priorities

All employees must have at least one critical element in their performance plan. Critical elements must address individual performance only, except in the case of supervisors who may be held responsible for a work unit's products or services. Work unit performance can be addressed through non-critical or additional performance elements. In appraisal programs with only two summary levels, work unit performance can be addressed only through additional performance elements.

Once you have classified elements as either critical, non-critical, or additional, and if your appraisal program allows, prioritize them so that work units and employees know which elements are most important. One way to do this is to distribute 100 percentage points across the elements based on each one's importance to the organization. (Programs usually allocate weights in five-percent increments.)

HOW CAN YOU DETERMINE WHICH ELEMENTS ARE CRITICAL?

Remember that critical elements are work assignments or responsibilities of such importance that unacceptable performance on the element would result in a determination that an employee's overall performance is unacceptable. Defining critical elements must be done thoughtfully because an employee's unacceptable performance on any critical element could be the basis for an adverse action. To help decide whether an element should be classified as critical or not, answer the following questions:

- Is the element a major component of the work? If you answered "yes," the element might be critical.
- Does the element address individual performance only? Elements measuring group performance cannot be critical elements, except as explained for supervisors and only under certain circumstances.
- If the employee performed unacceptably on the element, would there be serious consequences to completing the work of the organization? If employee error on the element affects the work unit's accomplishments, the element may be critical.
- Does the element require a significant amount of the employee's time? If you answered "yes," the element might be critical.

Unless prescribed by your appraisal program, there is no fixed or uniform number of critical elements to be included in the performance plan; the number varies with the work assignments and may vary from year to year in response to changing program emphases. However, every employee must have at least one critical element.

EXAMPLE OF IDENTIFYING ELEMENTS

The Claims Division within the Office of Retirement Services (ORS) has been used on the following page as an example for identifying elements. The expected accomplishments of the Retirement Benefits Specialist (as outlined in the role-results matrix on page 41) are listed down the left side of the matrix on the next page. The work unit accomplishments for the Division are also listed. The next column shows how the Division Manager and employees designated elements as critical, non-critical, or additional. Finally, priority points are assigned to each element to give them relative weights. (Remember that ORS's appraisal program uses five levels to appraise employee performance on elements and summarizes performance overall at five levels and that non-critical and additional performance elements are allowed.)

example identifying elements

Note the following in the matrix on page 45:

1. The Division decided that "Suggestions for Improving the Process" should not affect the summary level, but the Division wanted to track and measure the value of the suggestions in order to recognize individuals who help improve the process. Therefore, it was included as an additional element and given a weight of 0. The Division plans to use the results of performance on this element as a criterion for awards recognizing innovation by individuals within ORS.

2. The Division decided that claims completed by individuals should be a critical element for Benefits Specialists, but the Division also felt it was important to count in employee performance plans the group's performance as a whole on claims completed. The Division felt that counting group performance on claims processed would encourage specialists to work together as a group and promote collaboration. Since this Division is under a five-level appraisal program and it wants to count this group element in the appraisal process, it will be a non-critical element. (If it were in a two-level appraisal program, the group element would have to be an additional performance element.)

3. For the group goal of increased number of employees who can process insurance claims, the Division decided not to count group performance in the appraisal process. Because of the importance of this group goal, however, management decided to make it an additional element and use it as a basis for recognizing the group if it meets specific goals. (Note that the Division is measuring individual performance to support this group goal and is counting individual performance as a critical element.)

4. The Division determined the priority of each element by distributing 100 points across the critical and non-critical elements. The priority points let employees know which elements are more important to the organization. Priority points also are used in this example to affect how the summary level will be determined. Using this method allows non-critical elements to count significantly in the summary level determination. (Failure on the non-critical element would not cause performance to be *Unacceptable*; it would merely count as 0 priority points and could lower the summary level—but not to *Unacceptable*.)

example identifying elements

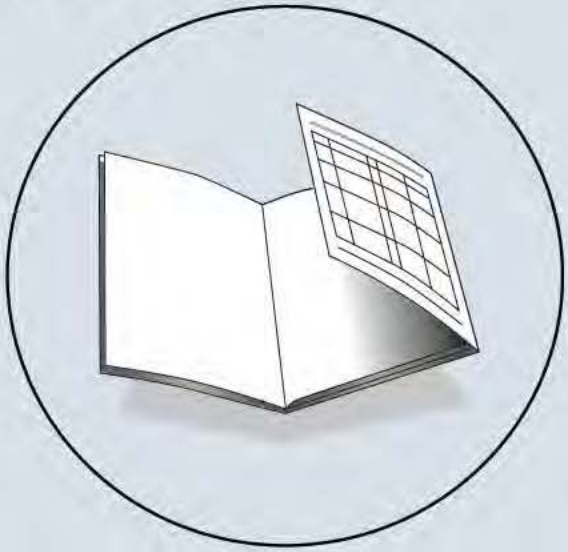
ORS RETIREMENT CLAIMS DIVISION
RETIREMENT BENEFITS SPECIALIST

ELEMENT	*ELEMENT TYPE*	*WEIGHT or POINTS*
Completed claims	Critical (CE)	50
Suggestion(s) for improving the process	Additional (AE)	0
Guidance and technical assistance to other specialists	Critical (CE)	35
WORK PRODUCTS OR SERVICES		
Claims processed in less time and with lower error rates	Non-critical (NC)	15
Increased number of employees who can process claims	Additional (AE)	0

EXERCISE ON IDENTIFYING ELEMENTS

Based on the accomplishments that you identified for your job in the role-results matrix that you made on page 42 and working within the rules established by your appraisal program, identify appropriate elements and categorize them as critical, non-critical, and, if appropriate, additional performance elements. Write those elements and their type under the columns marked "Element" and "Type" on the foldout form on the back cover. (If you have a two-level appraisal program—that is, a pass/fail program—you cannot use non-critical elements.) If applicable, prioritize the elements by distributing 100 points among the elements, giving more points to elements that are more important. Write the priority points you assign under the column labeled "priority" on the foldout form on the back cover .

FOLD OVER INSIDE BACK COVER FLAP AS SHOWN TO FILL OUT CHART



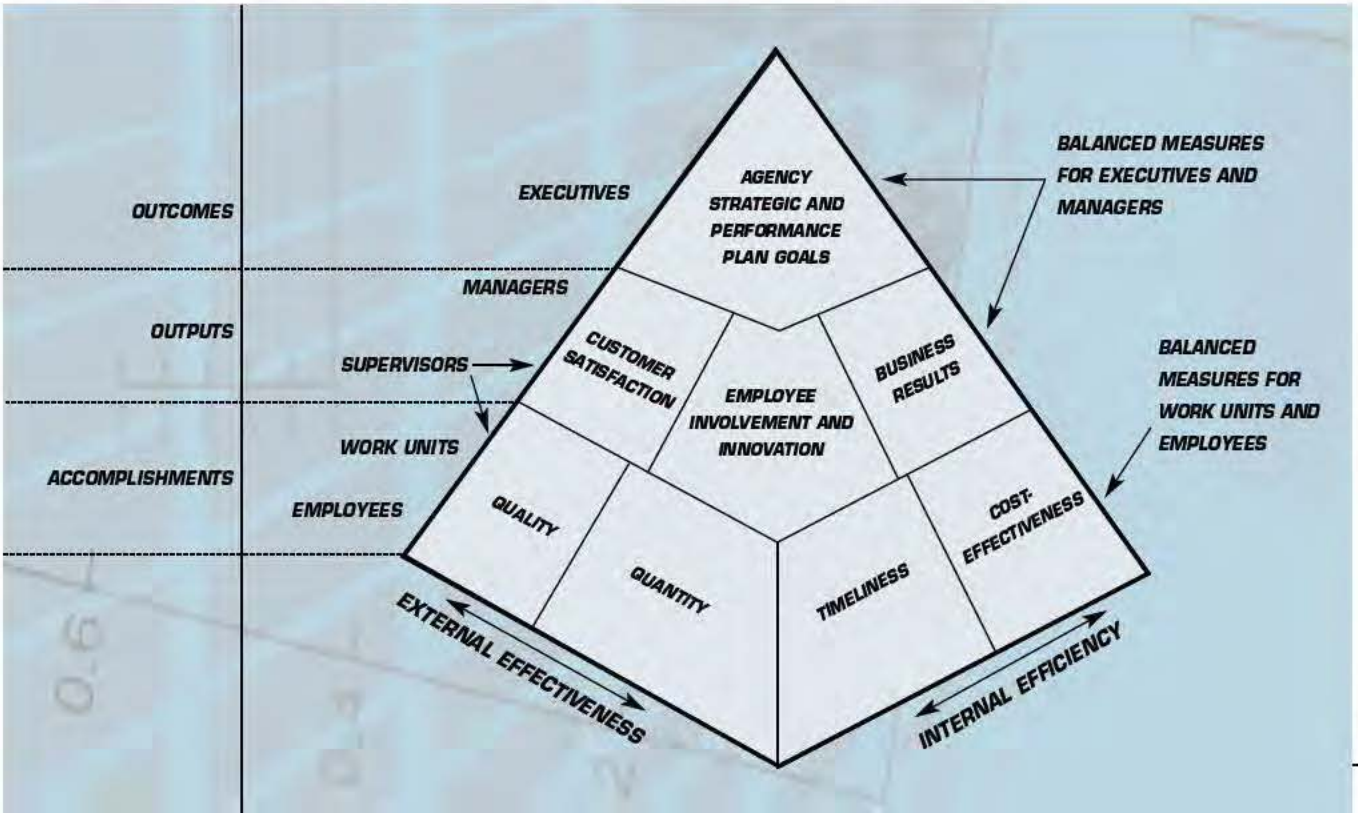
step 5: determine work unit and individual measures

In Step 4 of this process, you designated the critical, non-critical, and additional performance elements you will include in your performance plan. In Step 5, you will determine how to measure performance on those elements.

Measures are the yardsticks used to determine how well work units and employees produced or provided products or services. To develop specific measures of performance for each element in your performance plan, you first must determine the general measures that apply to each. Once you determine the general and specific measures, you will be able to develop the standards for your elements, which you will do in Step 6 of this process. Your standards will be worded in terms of the specific measures developed in this step.

The performance pyramid below shows the types of general measures that are used at different levels in the organization. Note that the balanced measures incorporating the business, customer, and employee perspectives are appropriate for measuring managerial performance and are sometimes appropriate for supervisory or even work unit performance. At the bottom of the pyramid, the four general measures normally used for measuring work unit and employee performance are quality, quantity, timeliness, and cost-effectiveness.

PERFORMANCE PYRAMID FOR IDENTIFYING PERFORMANCE MEASURES



GENERAL MEASURES

QUALITY addresses how well the employee or work unit performed the work and/or the accuracy or effectiveness of the final product. Quality refers to accuracy, appearance, usefulness, or effectiveness. Quality measures can include error rates (such as the number or percentage of errors allowable per unit of work) and customer satisfaction rates (determined through a customer survey).

QUANTITY addresses how much work the employee or work unit produced. Quantity measures are expressed as a number of products produced or services provided, or as a general result to achieve.

TIMELINESS addresses how quickly, when, or by what date the employee or work unit produced the work.

COST-EFFECTIVENESS addresses dollar savings or cost control for the Government. You should develop measures that address cost-effectiveness on specific resource levels (money, personnel, or time) that you can generally document and measure in agency annual fiscal year budgets. Cost-effectiveness measures may include such aspects of performance as maintaining or reducing unit costs, reducing the time it takes to produce or provide a product or service, or reducing waste.

DEVELOPING SPECIFIC MEASURES

To develop specific measures, you first must determine the general measure(s) that are important for each element (i.e., quantity, quality, timeliness, or cost-effectiveness). Then, determine how to measure the quantity, quality, timeliness, and/or cost-effectiveness for the element. If you can measure an accomplishment with numbers, record the form of measurement. If you can only describe performance (i.e., observe and verify), clarify who will appraise the performance and the factors they will appraise.

The kinds of questions you should ask in this process include the following.

FIRST: For each element, decide which general measures apply:

- Is quality important? Does the stakeholder or customer care how well the work is done?
- Is quantity important? Does the stakeholder or customer care how many are produced?
- Is it important to accomplish the element by a certain time or date?
- Is it important to accomplish the element within certain cost limits?
- What measures are already available?

SECOND: For each general measure, ask:

- How could [quality, quantity, timeliness, and/or cost-effectiveness] be measured?
- Is there some number or percent that could be tracked?

If the element does not lend itself to being measured with numbers and can only be described, ask:

- Who could judge that the element was done well?
- What factors would they look for?

FINALLY: Write down or otherwise record the specific measures. If the measure is numeric, list the units that you will track. If the measure is descriptive, identify the judge and list the factors that the judge will look for to observe and verify performance.

example general & specific measures

CLAIMS DIVISION

Note that general and specific measures have been added to the elements for a Retirement Benefits Specialist (see page 45). Also note that only the measures have been identified, not the standard that describes how well the element should be done. (Standards are addressed in the next step in the process.)

RETIREMENT BENEFITS SPECIALIST

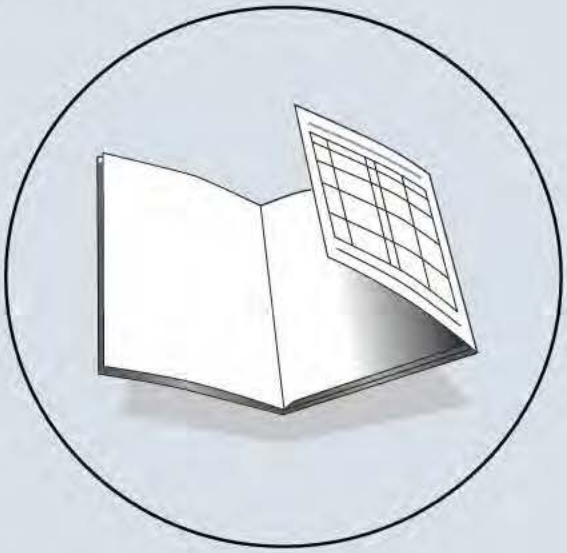
PRIORITY POINTS	ELEMENT	TYPE	GENERAL MEASURES	SPECIFIC MEASURES
50	Completed *claim*	CE	Quality Quantity Timeliness	The accuracy of annuity amounts. The completeness of the paperwork The number of claims processed per week The average number of days it takes to process a claim*
35	*Guidance* and *technical assistance* to other specialists	CE	Quality Timeliness	The accuracy of the information, as determined by supervisor The perceptions of other specialists that the incumbent is willing to assist and that feedback is helpful The number of hours it takes for the incumbent to respond to other specialists' requests for assistance
15	**Division Element:** Division *claims* processed in less time and with lower error rates	NC	Quality Quantity Timeliness	The accuracy rate for annuity amounts from the whole Division The number of claims the Division processes per week The average number of days it takes to process a claim*
0	Suggestion(s) for improving the process (for special individual recognition)	AE	Quality Quantity Cost-Effectiveness	The supervisor's and reviewers' judgment that the suggestion(s) improve(s) efficiency, productivity, and flexibility The number of suggestions made The amount of money saved by adopting the suggestion
0	**Division Element:** Increased number of employees who can process claims	AE	Quantity Quality	The number of employees who can do claims The accuracy rate of annuities processed

**Note: Using the average adjusts for the varying levels of difficulty in claims and ensures that specialists will not focus only on easy claims and ignore the difficult ones. Also, all specialists are assigned equal numbers of easy and difficult claims to ensure fairness of the standard. Finally, the average can be prorated when necessary.*

EXERCISE FOR DETERMINING GENERAL AND SPECIFIC MEASURES

Determine the general measures for your job based on the elements that you created in the previous exercise on page 46. Next, identify some specific measures. Write down those general and specific measures under the columns labeled "General Measure" and "Specific Measure" on the foldout form on the back cover.

FOLD OVER INSIDE BACK COVER FLAP AS SHOWN TO FILL OUT CHART



step 6: develop work unit and individual standards

The next step in the process of developing a performance plan is to establish standards for the elements. To work through this section successfully, you will need to know the number of levels your appraisal program uses to appraise elements. You also will need to know which performance level your program uses as the retention standard. (A definition of retention standard is included in this section.) The discussions below address performance standards and what to avoid when writing standards.

WHAT IS A PERFORMANCE STANDARD?

Performance standards are management-approved expressions of the performance threshold(s), requirement(s), or expectation(s) that employees must meet to be appraised at particular levels of performance.

Each critical element must have a *Fully Successful* or equivalent standard established. Technically, neither non-critical elements nor additional performance elements require a *Fully Successful* or equivalent standard. However, to help employees and work units understand the expectations for performance on these elements, we recommend that they have a clear idea of what is considered fully successful performance.

(NOTE: NON-CRITICAL ELEMENTS MUST BE APPRAISABLE AT LEAST ON TWO LEVELS, BUT THOSE LEVELS CAN BE ESTABLISHED HIGHER THAN THE FULLY SUCCESSFUL LEVEL.)

WHAT SHOULD PERFORMANCE STANDARDS INCLUDE?

Once you have established the specific measures that apply to the elements, you can begin to write the standards. Before writing the *Fully Successful* standard, you must know the number of levels that your appraisal program uses to appraise elements. For example, if you are under an appraisal program that uses two levels to appraise elements, the *Fully Successful* standard would describe a single point of performance. Any performance at or above that point is *Fully Successful,* and anything below it is *Unacceptable.* If, however, your appraisal program uses five levels to appraise performance, you would describe the *Fully Successful* standard as a range. Performance that exceeds the top of that range would be appraised at the level(s) above *Fully Successful,* and performance below the bottom of that range would be *Minimally Successful* (or equivalent) or *Unacceptable.* How you write the *Fully Successful* standard depends on the number of levels your program uses to appraise performance on elements.

If a specific measure for an element is numeric, for example, you would list the units to be tracked and determine the range of numbers (or the single number in a program that appraises elements at two levels) that represents *Fully Successful* performance. If the specific measure is descriptive, you would identify the appraiser(s) who would judge performance, list the factors that the appraiser(s) would look for , and determine what he or she would see or report that verifies that *Fully Successful* performance for that element had been met. (Remember to express performance standards in terms of the specific measure[s] determined in Step 5 of this process.)

Several examples of elements and standards are included below. The specific measures are in italics; the performance (or range of performance) that actually establishes the level of the standard is in boldface type.

ELEMENT: CASES COMPLETED

Fully Successful Standard in an appraisal program that appraises elements at five levels (to meet this standard, all of the bullets listed must be present or occur):

- no more than **3-4** *valid customer complaints per year,* as determined by the supervisor
- no more than **2-3** *errors per quarter,* as spotted by the supervisor
- no more than **4-5** *late cases per year* (processed later than 10 working days from receipt)

(If this standard had been written for an appraisal program that appraised elements at only two levels, the standard would have been "no more than **4** *valid customer complaints per year,*" "no more than **3** *errors per quarter,*" and "no more than **5** *late cases per year.*")

ELEMENT: MEETINGS SCHEDULED

Fully Successful Standard in an appraisal program that appraises elements at five levels (to meet this standard, all of the bullets listed must be present or occur):

The **meeting leader and attendees generally are satisfied** that

- *the room size matched the group size*
- *attendees were notified of the meeting*
- *attendees knew whom to call for information*
- *the meeting was set up by the deadline*

ELEMENT: LEGAL ADVICE

Fully Successful Standard in an appraisal program that appraises elements at five levels (to meet this standard, all of the bullets listed must be present or occur):

- Consistent with attorney's grade, attorney **usually** *carries an adequate workload of projects,* **frequently** *takes on new projects* to meet the needs of the office, and **generally** *shows personal initiative* in handling projects (generally, projects are of average difficulty)
- Consistent with attorney's grade, legal advice rendered is **infrequently** *modified by practice group leaders and supervisors* in a **significant** way
- Advice given to clients is **usually** *timely and thorough* and of **average** *quality,* and **usually** *shows sensitivity* to program and agency needs

ADDITIONAL EXAMPLES OF ELEMENTS AND STANDARDS SPECIFICALLY WRITTEN FOR APPRAISAL PROGRAMS THAT APPRAISE ELEMENTS AT FIVE, THREE, AND TWO LEVELS ARE INCLUDED IN THE APPENDICES.

WHAT SHOULD YOU AVOID WHEN WRITING RETENTION STANDARDS?

By "retention" standard, we mean the standard that describes the level of performance necessary to be retained in a job (i.e., the standard written for performance one level above the *Unacceptable* level). In appraisal programs that do not have a *Minimally Successful* or equivalent level available for appraising elements, the retention-level standard is the *Fully Successful* standard. Otherwise, the retention standard is the *Minimally Successful* or equivalent standard.

The Merit Systems Protection Board (MSPB) and the courts have issued many decisions on the topic of valid performance standards. This section highlights what the Board deems to be two major errors to avoid when writing standards. In order to avoid reversal by the MSPB, agencies must ensure that "retention" standards:

- are not impermissibly absolute (i.e., allow for some error)
- inform the employee of the level of performance needed to retain his or her job

AVOID ABSOLUTE RETENTION STANDARDS

An "absolute" retention standard—one that allows for no errors—is acceptable only in very limited circumstances. When a single failure to perform under a critical element would result in loss of life, injury, breach of national security, or great monetary loss, an agency can legitimately defend its decision to require perfection from its employees. In other circumstances, the MSPB and the courts usually will find that the agency abused its discretion by establishing retention standards that allow for no margin of error.

When writing standards, you should avoid the appearance of requiring perfection at the retention level. In appraisal programs that do not appraise elements at the *Minimally Successful* or equivalent level, you must carefully word the *Fully Successful* or equivalent standards so that they are not absolute. For example here are *Fully Successful* standards used by agencies that the MSPB would consider absolute retention standards if they were used in a two-level appraisal program:

- Work is timely, efficient, and of acceptable quality
- Communicates effectively within and outside of the organization

MSPB considers these standards absolute because they appear to require that work is *always* timely, efficient, and of acceptable quality and that the employee *always* communicates effectively. When writing standards—especially retention standards—avoid simply listing tasks without describing the regularity of the occurrence of the task—but also avoid the requirement to do it *always*.

Also, in appraisal programs that appraise elements at levels above *Fully Successful*, the *Fully Successful* standard itself—as well as the *Exceeds Fully Successful* standard when an *Outstanding* or equivalent level is possible—should not be absolute. If it is supposed to be possible to exceed, make sure it is written that way.

To help determine whether you are writing an absolute standard, ask yourself:

- How many times may the employee fail this requirement and still be acceptable?
- Does the retention standard use words such as "all," "never," and "each"? (These words do not automatically create an absolute standard, but they often alert you to problems.)
- If the retention standard allows for no errors, would it be valid according to the criteria listed above (risk of death, injury, etc.)?

The examples of elements and standards included in the appendices were carefully written to avoid absolute requirements.

AVOID "BACKWARD" STANDARDS

Case law requires that an employee understand the level of performance needed for retention in the position. When using a *Minimally Successful* level of performance, a common tendency is to describe it in terms of work that does not get done instead of what must be done to meet that retention standard. Describing negative performance actually describes *Unacceptable* performance. Standards such as "fails to meet deadlines" or "performs work inaccurately" allow an employee to do virtually no work or to do it poorly and still meet that retention standard. MSPB considers these "backward" retention standards invalid. To help you determine whether you are writing a backward retention standard, ask:

- Does the standard express the level of work the supervisor wants to see or does it describe negative performance? (Example of describing negative performance: Requires assistance more than 50 percent of the time.)
- If the employee did nothing, would he or she meet the standard, as written? (Example: Completes fewer than four products per year.)

MORE EXAMPLE STANDARDS

Example standards for a Retirement Benefits Specialist are shown on the next two pages. These standards were written for elements that are appraised at five levels. The appraisal regulations only require that a *Fully Successful* standard be established for each element. However, to clarify at the outset what employees need to do to exceed the *Fully Successful* level (as well as what they must do to be retained in the position) the Claims Division includes standards for the *Minimally Successful*, *Fully Successful*, and *Exceeds Fully Successful* levels of performance. (Performance below the minimum of the *Minimally Successful* range of performance is considered *Unacceptable*, and performance above the maximum of the *Exceeds Fully Successful* range of performance is *Outstanding*.)

Most of the example standards on the next two pages are quantifiable. The numbers used are based on work flow data. Examples of descriptive standards written at a variety of levels are found in the appendices. In all these examples, distinguishing between *Fully Successful* and levels above or below *Fully Successful* requires careful planning and forethought.

NOTE THAT THE STANDARDS TYPICALLY DESCRIBE A RANGE OF PERFORMANCE. ALSO NOTE THAT THE ELEMENTS HAVE BEEN REARRANGED TO ORDER THE ELEMENTS BY WEIGHT.

RETIREMENT BENEFITS SPECIALIST

ELEMENT	GENERAL MEASURES	SPECIFIC MEASURES	STANDARDS *		
			MINIMALLY SUCCESSFUL	FULLY SUCCESSFUL	EXCEEDS FULLY SUCCESSFUL
Completed *claims* Critical Element 50 priority points	Quality	The accuracy of annuity amounts The completeness of the paperwork	82-87% of annuity amounts are accurate and of claims are complete	88-93% of annuity amounts are accurate and of claims are complete	94-97% of annuity amounts are accurate and of claims are complete
	Quantity	The number of claims processed per week	10-12 claims processed per week	13-16 claims processed per week	17-20 claims processed per week
	Timeliness	The average number of days it takes to process a claim	An average of 101-110 days to complete claim	An average of 90-100 days to complete claim	An average of 75-90 days to complete claim
Guidance and *technical assistance* to other specialists Critical Element 35 priority points	Quality	The accuracy of the information, as determined by supervisor	Usually accurate	Usually accurate	Almost always accurate
		The perceptions of other specialists that the incumbent is willing to assist and that feedback is helpful	50-59% of specialists agree that incumbent is routinely willing to assist and that feedback is helpful	60-80% of specialists agree that incumbent is routinely willing to assist and that feedback is helpful	81-89% of specialists agree that incumbent is routinely willing to assist and that feedback is helpful
	Timeliness	The number of hours it takes for the incumbent to respond to other specialists' requests for assistance	Usually responds within 9-12 working hours from receipt of request	Usually responds within 4-8 working hours from receipt of request	Usually responds within 2-3 working hours from receipt of request
Claims Division: *claims* processed in less time and with lower error rates Non-critical Element 15 priority points	Quality	The accuracy rate for annuity amounts from the whole Division	N/A**	88-93% annuity amounts are accurate	94-97 % annuity amounts are accurate
	Quantity	The number of claims the Division processes per week		220-230 claims processed by the Division per week	231-244 claims processed by the Division per week
	Timeliness	The average number of days it takes to process a claim		An average of 90-100 days to complete claim	An average of 75-90 days to complete claim

example develop standards

RETIREMENT BENEFITS SPECIALIST, CONTINUED

ELEMENT	GENERAL MEASURES	SPECIFIC MEASURES	STANDARDS*		
			MINIMALLY SUCCESSFUL	FULLY SUCCESSFUL	EXCEEDS FULLY SUCCESSFUL
Suggestion(s) for improving the process (for special individual recognition) ▎Additional Performance Element ▎0 priority points	Quality	The supervisor's and reviewers' judgment that the suggestion(s) improve(s) efficiency, productivity, and flexibility	N/A**	Management and Division members determine that the suggestion(s) is/are worth adopting	Management and Division members determine that the suggestion(s) is/are worth adopting
	Quantity	The number of suggestions made		Incumbent provides 1-2 adopted suggestions per year	Incumbent provides 3-5 adopted suggestions per year
	Cost Effectiveness	The amount of money saved by adopting the suggestion		The incumbent's suggestion saved up to 10% of costs	The incumbent's suggestion saved 10-25% of costs
Claims Division: Increased number of employees who can process claims ▎Additional Performance Element ▎0 priority points	Quantity	The number of employees who can do claims	N/A**	35- 50% of Division employees can process claims	51-75% of Division employees can process claims
	Quality	The accuracy rate of annuities processed		88-93% of annuity amounts are accurate	94-97% of annuity amounts are accurate

*To meet the performance level of the standards described for each element, each listed part of the standard must be present or occur.

**The Division decided that there was no benefit to establishing a *Minimally Successful* standard for a non-critical or an additional performance element.

If these standards had been written for an appraisal program that appraises elements at only two levels, only the *Fully Successful* standard would have been included and it would describe a single point, not a range. So, for example, on the first element (i.e., completed case files) instead of establishing an 88-93 percent accuracy rate, etc., as the *Fully Successful* standard, the standard would be:

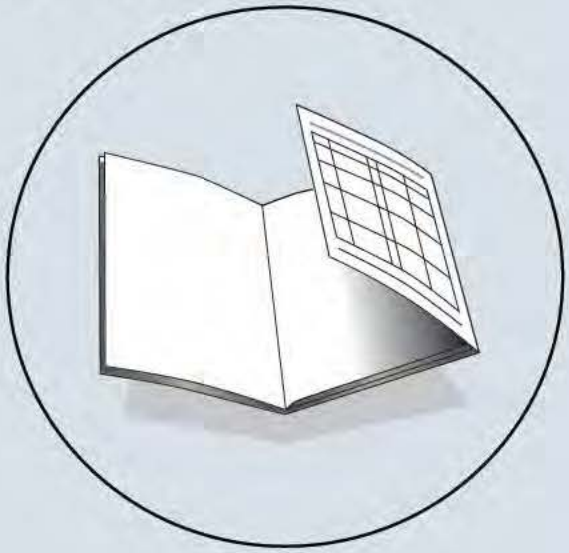
- 88% accuracy or better
- at least 13 cases processed per week;
- takes an average of 100 days to complete case

Another point of interest in the example is that the elements and standards written for the Division were included in each Division employee's performance plan as group elements and standards.

EXERCISE FOR WRITING STANDARDS

Based on the elements and measures you established in the previous exercise on page 51, develop *Fully Successful* standards for your elements. Write those standards under the column labeled "Standards" on the foldout form on the back cover. Remember to write standards that specifically match the measurement levels of your appraisal program (i.e., two-level or more than two-level). This exercise is asking you to develop only the *Fully Successful* standard. However, if your appraisal program appraises elements at more than two levels, you may also want to define the other levels of performance that are possible.

FOLD OVER INSIDE BACK COVER FLAP AS SHOWN TO FILL OUT CHART



step 7: determine how to monitor performance

Monitoring performance means measuring performance and providing feedback to employees. Agency appraisal programs are required to provide ongoing appraisal, which includes, but is not limited to, conducting one or more progress reviews during each appraisal period. In addition to a once– or twice–a–year progress review, which is sometimes a formal part of the appraisal process, supervisors and employees should discuss performance informally and often.

Determining how to monitor performance is an important step in developing performance plans. You may have worked through the previous six steps of the process presented in this handbook, developed what you thought were great elements and standards, and then found that monitoring performance on an element is impossible, or too costly, or too time-consuming. If this happens, think through other specific measures that indicate performance—measures that are as specific as possible.

To complete this step in the process:

- Determine what data to collect for each performance element, the source of the data, and whether to collect all the data or just a sample
- Determine when to collect the data, who will collect it, and who will receive it
- Review existing reports for possible use as feedback reports
- Create feedback tables or graphs where necessary or applicable
- Try to design feedback processes that give feedback automatically

FEEDBACK

Effective and timely feedback addressing employee performance on elements and standards is an essential component of a successful performance management program. People need to know in a timely manner how they are doing, what is working, and what is not working.

Feedback can come from many different sources: managers and supervisors, measurement systems, peers, and customers, just to name a few. Using multiple sources of feedback, which is sometimes called 360-degree assessment or multirater appraisal, is done in a variety of ways, but most methods are computerized and the raters are anonymous. Whether you need or want to use multirater appraisal depends on what you want to measure. For example, if you want to measure customer satisfaction, the best way to get the information is to ask the customer directly. (If customer survey tools are not available, or they are too expensive to develop, you may have to rely on other feedback sources, such as the number of complaints received.)

However feedback occurs, certain factors ensure its effectiveness:

SPECIFICITY Feedback works best when it relates to a specific goal, such as those established in elements and standards. Basing feedback on the employee's performance against his or her elements and standards is key to providing tangible, objective, and powerful feedback. Telling employees that they are doing well because they exceeded their goal by 10 percent is more effective than simply saying "you're doing a good job."

TIMELINESS Employees should receive information about how they are doing in as timely a fashion as possible. If they need to improve their performance, the sooner they find out about it, the sooner they can correct the problem. If employees have reached or exceeded a goal, the sooner they receive positive feedback, the more rewarding it is to them.

MANNER Give feedback in a manner that will best help improve performance. Since people respond better to information presented in a positive way, express feedback in a positive manner. This is not to say that information should be sugar-coated. Present accurate, factual, and complete feedback; it is more effective when it reinforces what the employee did right and then identifies what the employee needs to do in the future. Constant criticism eventually falls on deaf ears.

NATURALLY OCCURRING FEEDBACK Some kinds of feedback occur naturally while other kinds require careful planning and management. Naturally occurring feedback can be classified into two categories. The first type is self-evident feedback—information that employees can see for themselves as they do their work. For instance, a team of materials handlers who are given the assignment of moving ten stacks of supplies from one side of the warehouse to the other by the end of the day will know that if only one of ten stacks is moved by noon, it is not likely to complete the assignment on time. This information is self-evident and is obtained by the employees making their own comparisons against a specific goal.

Another kind of self-evident feedback can be gained by having a broader scope of work. The broader the employee's scope of work, the better the employee can determine the quality of the finished product. For example, a writer/editor assigned to write a portion of an article may feel satisfied with the section he wrote. But the same writer/editor , if assigned responsibility for the entire article, would see that his independently written section had no relation to the rest of the article and needed revision.

The second category of naturally occurring feedback is carefully planned feedback characterized by automatic, frequent delivery through a measurement system. It is possible to design feedback into a work process or a measurement system so that employees receive it automatically. For example, feedback loops designed into many work processes provide performance measures daily, such as a production or printing process (i.e., number of copies printed per day as determined by machine count). Also, total quality and reengineering programs use extensive work process measurement methods. Employees measure for themselves how they and their team are doing.

Designing effective feedback into a performance management program will improve individual and team performance and will make your organization more effective. With effective feedback processes, employees can see their progress and that motivates them to reach their performance goals successfully.

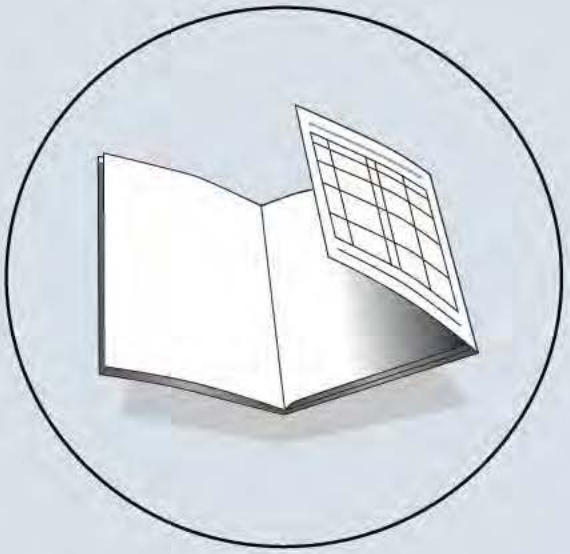
*To meet the performance level of the standards described for each element, each listed part of the standard must be present or occur.
**The Division decided that there was no benefit to establishing a *Minimally Successful* standard for a non-critical or an additional performance element.

EXERCISE ON DEFINING FEEDBACK SOURCES

Now that you have developed elements, measures, and standards in previous exercises, what are the best sources of feedback for those elements? How often is it feasible to receive feedback? Who needs to see the feedback? Write down those sources of feedback under the column labeled "Feedback Source" on the foldout form on the back cover.

FOLD OVER INSIDE BACK COVER FLAP AS SHOWN TO FILL OUT CHART



step 8: check the performance plan

Once you have developed a performance plan using the previous seven steps, checking your work is always a good idea. Use the checklist below to ensure that the elements and standards you developed to include in the performance plan are effective and meet regulatory requirements:

- Are the critical elements truly critical? Does failure on the critical element mean that the employee's overall performance is unacceptable?
- Is the range of acceptable performance clear? Are the performance expectations quantifiable, observable, and/or verifiable?
- Are the standards attainable? Are expectations reasonable?
- Are the standards challenging? Does the work unit or employee need to exert a reasonable amount of effort to reach the fully successful performance level?
- Are the standards fair? Are they comparable to expectations for other employees in similar positions? Do they allow for some margin of error?
- Are the standards applicable? Can the appraiser(s) use the standards to appraise performance? Can the appraiser(s) manage the data collected through the measurement process?
- Will work units and employees understand what is required?
- Are the elements and standards flexible? Can they be adapted readily to changes in resources or objectives?
- If your program permits appraising elements at levels above the *Fully Successful* or equivalent level, is the *Fully Successful* or equivalent standard surpassable? Is it possible for a work unit's or an employee's performance to exceed it?

Guiding Principles for Performance Measurement

The principles listed below contain some valuable lessons learned about measuring performance.

VIEW PERFORMANCE MEASUREMENT AS A VALUABLE TOOL, NOT AS AN EVIL
People view measurement systems from at least two different perspectives. When used constructively, they see a measurement system as a helpful feedback tool that provides information to managers and employees about how well they are doing in reaching their goals and where they might have room for improvement. It also provides information on which to base awards and recognition. When used poorly, however, people see a measurement system as a punishing club with which to hit people over the head if the numbers or results are bad. Managers and employees must trust that the measurement system is beneficial to them and the organization; otherwise, the temptation to game the numbers to avoid discipline will overwhelm them.

ACCEPTANCE OF THE PERFORMANCE MEASUREMENT PROCESS IS ESSENTIAL TO ITS SUCCESS Involving employees in the development of the elements and standards included in the performance plan is an excellent way to clarify expectations and measurement terminology. Active employee participation in creating valid measures that accurately reflect performance decreases the possibility that employees may feel manipulated through the measurement system.

MEASURE WHAT IS IMPORTANT—NOT WHAT IS EASY TO MEASURE It is easy to count the number of days since a project began, but if that is all that you measure, is that enough information to assess performance? No, probably not. Or if, for example, a customer service team only measures the number of calls that come into the team (the easy measure) and does not attempt to measure customer satisfaction with its service (the more difficult measure), the team does not have complete information about its performance and has no idea how well it is serving its customers. In addition, because what gets measured gets done, the team will probably focus on how it can increase the number of calls it receives and ignore the quality of service it provides.

As a result, organizations need to anticipate the behavioral and unintended consequences of measuring performance. As an example, recently a medical laboratory came under fire because of the errors it made in certain of its cancer tests. A high number of cancer tests that the laboratory had approved as negative turned out to be wrong—cancer had actually been

evident. An investigation found that the laboratory had been measuring and rewarding its employees on the number of slides they reviewed daily, not on the accuracy of the reviews. Knowing that the more slides they reviewed, the more recognition they received, employees were quickly moving from slide to slide to slide without accurately reading them. As a result, the lab's errors in measuring what was important allowed cancer to go untreated and people who could have been saved through early detection and treatment lost their lives.

DEVELOP EMPLOYEE PERFORMANCE PLANS THAT ARE FLEXIBLE ENOUGH TO ALLOW FOR CHANGES IN PROGRAM GOALS TO KEEP THE PROCESS CREDIBLE Do not design performance plans that are set in concrete; build in flexibility so you can adjust them as program goals and work assignments change. Even though employees must work at least a minimum period of time on elements and standards before they receive performance ratings, the agency minimum appraisal period usually provides enough time during the appraisal period for changes in elements and standards. (Minimum appraisal periods usually range from 30-120 days, depending on the agency. Check with your agency to find out the minimum appraisal period that applies to you.)

RELY ON MULTIPLE MEASURES Don't rely on a single measure. Remember the story of the three blind men who went for a walk and came across an elephant? One felt the animal's trunk and claimed that the elephant was like a large snake. Another explored the elephant's leg and claimed that the elephant was like a big tree trunk. The third blind man touched the elephant's side and said that the elephant was like a tall, wide wall. All three of them were right, but all of them were wrong. Each one was relying on only one measure from one perspective. If the measures had been used together, the three men would have had a more accurate picture of the elephant.

EMPLOYEES SHOULD PERCEIVE THAT PERFORMANCE MEASUREMENT IS IMPORTANT In many organizations, employees have been exposed to a variety of management fads that seem to appear and then fade away as the next fad takes its place. Employees need to know that management is serious and committed to measuring and improving performance.

MANAGEMENT SHOULD DEMONSTRATE THAT PERFORMANCE IS CRITICAL TO ORGANIZATIONAL AND INDIVIDUAL SUCCESS Closely related to the previous principle, this principle observes that not only should employees perceive that performance measurement is important, but also management must demonstrate that performance matters. When management tolerated poor performance in the past and employees see that the new measurement system has not changed the situation (in other words, Joe or Mary still comes to work and reads the paper for most of the day), employees know that performance is not important, despite the new system.

LEARNING AIDS

Performance Measurement Quiz

Circle the correct answer(s).

1. Circle the accomplishments listed below:
   a. A completed, accurate report
   b. Types reports and correspondence
   c. Teamwork
   d. Guidance and technical assistance
   e. Satisfied customers
   f. Answers phones

2. Non-critical elements have to be weighted less than critical elements.
   a. True
   b. False

3. Standards should be written in terms of specific measures.
   a. True
   b. False

4. Which of the following is/are NOT regulatory requirements for critical elements?
   a. Each employee must have a minimum of one critical element
   b. Critical elements must measure individual performance
   c. Critical elements generally can be used to measure team-level performance
   d. Critical elements must have an established standard at least at a *Fully Successful* level
   e. Critical elements must be given greater weight than non-critical elements in deriving a summary level rating

5. Which of the following statement(s) is/are true about feedback?
   a. Peers can be included as sources of input for appraisals
   b. Feedback should be specific
   c. Whether to use 360-degree feedback depends on what you're measuring
   d. Feedback should be timely
   e. Feedback should be given in a manner that will best help improve performance
   f. All of the above are true

chapter 4

6. Performance plans must be built from the employee's position description.
   a. True
   b. False

7. You can't measure results at the individual level.
   a. True
   b. False

8. The four general measures for measuring employee and work unit performance are cost-effectiveness, quantity, timeliness, and:
   a. Flexibility
   b. Quality
   c. Agency strategy
   d. Teamwork

9. Absolute standards can never be used.
   a. True
   b. False

10. A *Fully Successful* standard is a retention standard when (circle one or more):
   a. The standard is used in a Pass/Fail program with critical elements appraised at only two levels
   b. When there is no *Minimally Successful* level available in the appraisal program
   c. None of the above.

11. Measurement should be used for performance improvement.
   a. True
   b. False

ANSWERS ON PAGE 88

Quick Reference: The Eight-Step Process

STEP 1 ***LOOK AT THE OVERALL PICTURE***

Review organizational goals and objectives and performance measures already available. Determine which goals and measures the employee's work unit can affect.

STEP 2 ***DETERMINE WORK UNIT ACCOMPLISHMENTS USING ANY OR ALL OF THE FOLLOWING METHODS:***

METHOD A ***A GOAL CASCADING METHOD***

Cascade the agency's goals to the work unit level. Determine the work unit' s accomplishment(s) that directly affect the organization's goals.

METHOD B ***A CUSTOMER-FOCUSED METHOD***

Determine the product(s) or service(s) that the work unit provides to its customers.

METHOD C ***A WORK FLOW CHARTING METHOD***

Develop a work flow chart for the work unit, establishing key steps(s) in the work process.

STEP 3 ***DETERMINE INDIVIDUAL ACCOMPLISHMENTS THAT SUPPORT WORK UNIT GOALS***

Elements that address individual performance can be identified using a role-results matrix. List the work unit accomplishments across the top of the matrix. List each member of the work unit or each job position down the left side of the matrix. In each cell, list the accomplishment (i.e., performance element) that the member must produce or perform to support the work unit accomplishment. All performance elements should be either quantifiable or verifiable.

STEP 4 ***CONVERT EXPECTED ACCOMPLISHMENTS INTO PERFORMANCE ELEMENTS, INDICATING TYPE AND PRIORITY***

All employees must have at least one critical element. Critical elements must address individual performance only. Work unit performance can be addressed through non-critical or additional elements. In appraisal programs with only two summary levels, work unit performance can be addressed only through additional performance elements.

STEP 5 **DETERMINE WORK UNIT AND INDIVIDUAL MEASURES**

For each element, determine which general measure(s) (i.e., quantity, quality, timeliness, or cost-effectiveness) are important. Determine how to measure the quantity, quality, timeliness, and/or cost-effectiveness for the element. If an accomplishment can be measured with numbers, determine the unit of measurement to be used. If performance can only be described (i.e., observed and verified), clarify who would appraise the work and what factors they would look for.

STEP 6 **DEVELOP WORK UNIT AND INDIVIDUAL STANDARDS**

A *Fully Successful* or equivalent standard must be established for each critical element. If the measure for the element is numeric, determine the range of numbers that would represent *Fully Successful* performance. For critical elements appraised at two levels, the *Fully Successful* standard identifies the level of performance below which performance is *Unacceptable*. For critical elements appraised at more than two levels, establish a range of performance above which special recognition may be warranted and below which a performance problem exists.

If the measure for the element is descriptive, determine what the appraiser would see or report that would verify that performance is *Fully Successful*. For critical elements appraised at two levels, describe performance for that element below which is *Unacceptable* performance. For elements appraised at more than two levels, and for elements for which stretch goals are desired, determine what exceeding expectations would look like. Describe what the appraiser would see happening when expectations are exceeded.

STEP 7 **DETERMINE HOW TO MONITOR PERFORMANCE**

Determine what data to collect for each performance element, which source the data should come from, and whether to collect all the data or just a sample. Determine when to collect the data, who should collect it, and who should receive it. Review existing reports for possible use as feedback reports. Create feedback tables or graphs where appropriate or necessary. Try to design feedback processes that give employees feedback automatically.

STEP 8 ***CHECK THE PERFORMANCE PLAN USING THE FOLLOWING GUIDELINES:***

- Are the critical elements truly critical? Does failure on the critical element mean that the employee's overall performance is unacceptable?
- Is the range of acceptable performance clear? Are the performance expectations quantifiable, observable, and/or verifiable?
- Are the standards attainable? Are expectations reasonable?
- Are the standards challenging? Does the work unit or employee need to exert a reasonable amount of effort to reach a fully successful performance level?
- Are the standards fair? Are they comparable to expectations for other employees in similar positions? Do they allow for some margin of error?
- Are the standards applicable? Can the appraiser(s) use the standards to appraise performance? Can the appraiser(s) manage the data collected through the measurement process?
- Will work units and employees understand what is required?
- Are the elements and standards flexible? Can they be adapted readily to changes in resources or objectives?
- If your program permits appraising elements at levels above the *Fully Successful* or equivalent level, is the *Fully Successful* or equivalent standard surpassable? Is it possible for a work unit's or an employee's performance to exceed it?

Five-Level Appraisal–Examples

THE FOLLOWING EXAMPLES OF ELEMENTS AND STANDARDS WERE WRITTEN SPECIFICALLY FOR APPRAISAL PROGRAMS THAT APPRAISE PERFORMANCE ON ELEMENTS AT FIVE LEVELS.

HUMAN RESOURCES ASSISTANT

ELEMENT	STANDARDS*
CUSTOMER SATISFACTION	**FULLY SUCCESSFUL STANDARD** (To meet this standard, the employee must meet all of the following requirements). As determined by the supervisor through direct observation and/or discussions with several customers and/or peers: • Usually communicates clearly, courteously, and effectively with customers • Routinely responds to each customer request with the most accurate and complete information available. If the information to a telephone call can not be provided immediately upon request, usually provides an answer within 3 working days of receipt of call. Email responses are usually answered within 5 working days. Formal written correspondence is produced within agencywide standards (usually 10 working days) • Generally mails requested information within 3 working days of receipt of request • Whenever possible, elicits customer feedback to improve service • If the employee cannot answer a customer's question completely, he/she generally provides name and phone number for the proper contact. If the question requires additional research, keeps the customer apprised of progress • If requested material is temporarily unavailable to mail to customers, usually notifies the customers when they may expect to receive it **OUTSTANDING STANDARD** Exceeds the *Fully Successful* standard plus two of the following occur: • Receives praise and/or written commendations from customers • On own initiative, assumes and accomplishes a significant amount of work beyond the normal load of assigned duties to achieve customer satisfaction • Proactively communicates with customers to establish good working relationship and assess customer needs • Consistently demonstrates in-depth knowledge of customer programs **MINIMALLY SUCCESSFUL STANDARD** The employee meets the first two requirements listed for *Fully Successful* and of the four remaining requirements, meets all but number(s) 4 & 6 .

Note: We have purposely listed the Minimally Successful standard last to emphasize performance that is Fully Successful and higher more than performance that is less than Fully Successful.

*The standards include measures that can be tracked without using a customer survey. *Exceeds Fully Successful* falls between the performance described for *Fully Successful* and that described for *Outstanding*. *Unacceptable* performance falls below the minimum of *Minimally Successful*.

HUMAN RESOURCES SPECIALIST

ELEMENT	STANDARDS*
HR POLICY PRODUCTS (e.g., written guidance, reports, overviews, workshops, formal presentations)	***FULLY SUCCESSFUL* STANDARD** (To meet this standard, the employee must meet all of the following requirements.) ***QUALITY*** ▌ Written products generally follow plain English principles, including logical organization, descriptive section headings, simple terms, and good use of tables, lists, graphics, and white space ▌ Assigned presentations and workshops are generally well-organized with a logical flow, a use of simple terms, and graphics that illustrate concepts to help audience understanding. The overall audience rating of any presentation given is at least acceptable ▌ Products usually reflect sound analytical thinking and present recommendations consistent with sound HR principles and supportive of Administration initiatives ***QUANTITY*** ▌ Produces (or does significant work for) a) at least one major product (e.g., a workshop; a complex paper or report, often over 10 pages long) b) at least three intermediate-in-scope products (e.g., topic papers 3-10 pages long) c) at least five minor products (e.g., articles or 1-2 page papers) d) a combination of these (To meet the definition of "produces," the report or paper at least must be cleared by the Division Chief.) ***TIMELINESS*** ▌ Draft written products are usually completed and submitted for review by the date agreed to at initial assignment. Revisions are usually done and returned within the agreed-upon time frame ***OUTSTANDING* STANDARD** ▌ Produces more than two major products, more than five intermediate-in-scope products, more than eight minor products, OR a combination of these ▌ Exceeds the quality and timeliness criteria ▌ Plus meets at least three of the following: a) On own initiative, proposes the subject of the product b) Completes extensive research to complete the product c) Develops applicable, understandable models and examples d) Synthesizes complex issues and condenses and explains them so that they are understandable to a general audience e) Product content provides leadership in the program, fits the HR policy into the big picture of management, links HR policy to organizational goals, and/or highlights the links of HR policy with other management functions f) Develops original understandable graphics that illustrate the concept being presented ***MINIMALLY SUCCESSFUL* STANDARD** The employee accomplishes the work described at the *Fully Successful* level except that intermediate and minor products of a routine nature are produced with moderate but not excessive rework.

Note: We have purposely listed the Minimally Successful standard last to emphasize performance that is Fully Successful and higher more than performance that is less than Fully Successful.

**Exceeds Fully Successful* falls between the performance described for *Fully Successful* and that described for *Outstanding*. *Unacceptable* falls below *Minimally Successful*.

MEDICAL RECORDS TECHNICIAN

ELEMENT	STANDARDS*
MEDICAL RECORDS that include accurately filed documentation	***FULLY SUCCESSFUL* STANDARD** (To meet this standard, the employee must meet all of the following requirements.) As determined by the supervisor and from doctor/clinic feedback: ***QUALITY*** ▌ Paperwork is usually filed according to hospital documentation regulations, with only a few errors or complaints ▌ With few exceptions, paperwork is date stamped the same day it arrives in the Medical Records Section ▌ The employee can usually locate records, whether they are in their filing shelves or checked out to doctors/clinics ▌ With few exceptions, medical records requested by a doctor/clinic/emergency room contain the paperwork received by the Medical Records Section within the last 3 working days, with contents usually filed accurately ***QUANTITY*** ▌ The backlog of paperwork to be filed usually does not exceed the amount received within the last 3 working days ***TIMELINESS*** ▌ Medical records are usually supplied to requestors by the time requested. In emergency situations, medical records are supplied consistently within an hour of request ***OUTSTANDING* STANDARD** The employee exceeds the *Fully Successful* standard plus meets all of the following: ▌ On own initiative, systematically reviews assigned files to ensure accuracy of paperwork placement in the file ▌ Very few records are more than three inches thick (i.e., overly thick files have been split into additional volumes) ▌ Voluntarily conducts systematic searches for missing paperwork or records, including verifying checkout cards ▌ At least one of the employee's suggestions for improvements in the filing process or to records management is adopted ▌ Most medical record jackets are in good condition (i.e., torn or worn jackets have been replaced, as supplies allow) ***MINIMALLY SUCCESSFUL* STANDARD** To meet this standard, the employee completes the requirements of the *Fully Successful* standard except that the backlog often exceeds 3 days but usually does not exceed 4 days and the _third_ quality requirement is not met.

Note: We have purposely listed the Minimally Successful standard last to emphasize performance that is Fully Successful and higher more than performance that is less than Fully Successful.

**Exceeds Fully Successful* falls between the performance described for *Fully Successful* and that described for *Outstanding*. *Unacceptable* falls below *Minimally Successful*.

HUMAN RESOURCES SPECIALIST (EMPLOYEE RELATIONS)

ELEMENT	STANDARDS*
TECHNICAL INFORMATION, ADVICE, AND ASSISTANCE	*FULLY SUCCESSFUL* STANDARD ▌ Provides timely and reliable technical advice and assistance to agency and other officials on employee relations and appellate matters. Advice is based on good knowledge and proper application of regulation, precedent cases, and relationships among human resources programs. Discusses advantages, disadvantages, and feasible options in connection with issues and problems presented. Coordinates with other agency offices, as appropriate. Brings unique or potentially difficult issues and problems to the attention of the supervisor with options and recommendations for further action ▌ Gains useful feedback from agencies and other organizations within the agency on the impact of policies and processes under the employee relations program. Provides suggestions on how best to use information and insights to improve employee relations programs and procedures ▌ Thoroughly reviews and provides timely comments on materials presented for review by other offices. Comments take into account applicable regulations, case law, and policy objectives in the areas of employee relations and appellate policies. Training and briefings provided to employees are well conceived, effectively presented, and well received ***OUTSTANDING STANDARD:*** ▌ Is uncommonly effective in dealing with officials who present difficult issues and problems for resolution. Options and recommended solutions are creative, pertinent, and demonstrate an in-depth understanding of the issues. Where appropriate, recites successful practices and programs in other agencies. Displays deep knowledge of HRM policies, precedent cases, agency needs, and the likely impact on management and employees of solution proposed ▌ Based on knowledge and insights, is able to propose significant changes to policies and procedures which hold the potential for improvement ▌ In reviewing the products of other organizations, is able to point out major issues or problems not otherwise foreseen or to make suggestions for significant improvement as warranted ▌ Is able to cause major changes in policies to be considered, where appropriate, through the persuasiveness and thoroughness of written comments and/or informal meetings ▌ Review and commentary is timely, even in the event of competing priorities and large workload ***MINIMALLY SUCCESSFUL STANDARD:*** ▌ Answers to questions about employee relations policies are usually accurate and provided in a timely manner ▌ Regularly gains useful feedback from organizations on agency policies and programs in employee relations. Occasionally surfaces feedback in a manner that is useful to management ▌ As requested, furnishes comments to other offices on proposed policy materials, training courses, and legislation. Comments point out technical inaccuracies or inconsistency with established policy

Note: We have purposely listed the Minimally Successful standard last to emphasize performance that is Fully Successful and higher more than performance that is less than Fully Successful.

**Exceeds Fully Successful* falls between the performance described for *Fully Successful* and that described for *Outstanding*. *Unacceptable* falls below *Minimally Successful*. This example does not include a *Minimally Successful* standard.

ATTORNEY ADVISOR

ELEMENT	STANDARDS*
WRITTEN MATERIALS (e.g., legal memoranda, briefs, and pleadings)	***FULLY SUCCESSFUL* STANDARD** (must meet all of the following) **QUALITY** As determined by the supervisor, written materials • Are generally considered to be of average professional quality • Are infrequently returned for substantial revision • Usually fully analyze relevant legal and policy issues • Usually reflect thorough investigation of factual and legal resources • Usually do not contain significant extraneous or inappropriate material **QUANTITY** • In most instances, written materials are developed as needed **TIMELINESS** • Written materials are generally completed and presented in accordance with established deadlines or time frames ***OUTSTANDING* STANDARD** (must meet all of the following) Written materials: • Are routinely considered to be of highest professional quality • Are rarely returned for substantial revision • Consistently fully analyze relevant legal and policy issues • Reflect thorough investigation of factual and legal resources • Do not contain significant extraneous or inappropriate material • Are completed before established deadlines or time frames • Are always completed as needed

**Exceeds Fully Successful* falls between the performance described for *Fully Successful* and that described for *Outstanding*. *Unacceptable* falls below *Minimally Successful*. This example does not include a *Minimally Successful* standard.

NOTE: We have purposely left out a Minimally Successful standard in this example to emphasize performance that is Fully Successful and higher. In the event that an employee's performance fell below the Fully Successful level, a Minimally Successful standard would be established and communicated.

Three-Level Appraisal–Examples

THE FOLLOWING EXAMPLES OF ELEMENTS AND STANDARDS WERE WRITTEN SPECIFICALLY FOR APPRAISAL PROGRAMS THAT APPRAISE PERFORMANCE ON ELEMENTS AT THREE LEVELS.

TEAM LEADER, PACKAGING PRODUCTION TEAM

ELEMENT	FULLY SUCCESSFUL STANDARD* (To meet the *Fully Successful* standard for an element, all of the bullets listed for the element must be met.)
Quality products	▎Usually 90% to 95% of pallets have no defects ▎With few exceptions, no more than 1.5 to 2 hours of down time per week ▎Normally, the packaging production schedule is met 5 out of 7 days ▎Normally, the shipment schedule is met 5 out of 7 days
Safe work environment	▎Safety problems are corrected or improvements usually are made by agreed-on date ▎Routinely holds one safety audit per week ▎Very rarely has any lost time hours
Effective leadership	▎Team goals are met 60-80% of the time ▎Manager judges that the team leader periodically initiates ways to reduce costs ▎Manager judges that decisions are well thought out and support organizational goals.
Productive subordinates	Manager is generally satisfied that: ▎Training requirements of the team are met ▎Discipline is provided fairly and consistently ▎Most team members understand the department's goals and how their performance affects these goals ▎Team members understand how they're performing against their goals ▎Team members receive rewards for good performance

*To achieve the *Outstanding* level, the employee must consistently exceed a majority of the bullets listed for the *Fully Successful* standard. *Unacceptable* performance occurs when the employee fails to meet one or more of the bullets listed for *Fully Successful* performance.

PROGRAM ANALYST

ELEMENT: ORAL PRESENTATIONS

STANDARDS* (To meet a standard, all of the statements listed for the standard must be met.)

OUTSTANDING STANDARD

When attendee evaluations are available:

- Sixty to eighty-four percent of attendees rated the employee's presentation good or very good.

When attendee evaluations are not available, the supervisor determines that the employee:

- Presents information in a clear, concise, and well-organized manner
- Responds well to questions, including unanticipated ones
- Creates a favorable impression for effective communication by seeking the views of others and respecting different points of view
- Asks probing questions to ensure that everyone understands the matters discussed
- Clearly distinguishes between fact and opinion and avoids disclosing sensitive or tentative information prematurely
- Listens well, responds appropriately and articulately, and remains calm in adverse situations
- Knows when and how to use visual aids, speaks authoritatively on subject matter , and displays ability to respond directly to questions raised
- Encourages active participation by others
- Senses audience's receptivity to presentation and adjusts accordingly
- Shows thorough knowledge of issues and their relationship to broader issues
- Presents technical information clearly and persuasively, demonstrating the importance and relevancy of planning.

FULLY SUCCESSFUL STANDARD

When attendee evaluations are available:

- More than 60-84% of attendees rated the employee's presentation good or very good

When attendee evaluations are not available, the supervisor determines that the employee:

- Usually presents information clearly, concisely, and in a well-organized manner
- Routinely shows respect for comments of participants
- Generally keeps discussion on track
- Usually elicits comments of others
- Generally weighs consequences of statements before speaking, clearly distinguishing between fact and opinion, and avoids disclosing sensitive or tentative information prematurely
- Usually listens well, responds to issues at hand, and minimizes extraneous information
- Usually answers most questions and invites additional questions to ensure understanding

**Unacceptable* performance occurs when the employee fails to meet one or more of the bullets listed for *Fully Successful* performance.

GRAPHICS DESIGNER

ELEMENT: GRAPHIC DESIGNS

STANDARD

OUTSTANDING STANDARD

In addition to meeting all criteria of the *Fully Successful* standard, the supervisor determines that the employee meets at least four of the following:

- Designs are often of such high quality that they generate spontaneous praise from clients
- The elegance of designs often enhances their purpose in unexpected ways
- Designs consistently reflect the highest professional standards and raise the standards for other agency designers
- The most complex design tasks are handled with little or no difficulty
- Suggestions are made that improve the agency's design processes
- Potential problems are anticipated, brought to the supervisor's attention as appropriate, and usually solved independently

FULLY SUCCESSFUL STANDARD

To meet this standard, all of the following must be met:

The supervisor determines that:

- The quality of information-material design is usually acceptable to the client and sufficient to achieve the purposes intended
- In most cases, designs are in accordance with the agency's graphic standards system and meet commonly accepted criteria for professional work
- Logical planning, due consideration of priorities, and efficient application of technical graphics skills usually result in creation of graphic designs in time to meet reasonable deadlines
- Generally nonwasteful work habits reflect a consideration of costs to the Government
- Instructions from supervisors are most often followed as given, major revisions are rarely necessary, and routine problems are usually resolved with a minimum of supervision

TRAINING COORDINATOR

ELEMENT	FULLY SUCCESSFUL STANDARD* (To meet the *Fully Successful* standard for an element, **all** of the bullets listed for the element must be met.)
CERTIFIED PROGRAMMERS	Most of the supervisors of certified programmers say that the trained programmer(s): • Could handle their assignments right away • Didn't bother coworkers and supervisor for covered objectives • Demonstrated certified skill/knowledge assessment was accurate Recommended trainees generally complete the training within the following time frames: • Average of 18 to 25 working days to complete Phase I training • Average of 18 to 23 working days to complete Phase II training • Average of 10 to 15 working days to complete Phase III training Most of the supervisors of the trained programmers say that the topics covered match what is needed on the job
TRAINING PLANS	• Most internal customers agree that the training plan will meet their needs and commit dollars and trainee time • Supervisor is generally satisfied that the training plan contains standard components, has realistic time lines and objectives, is based on input from representative sample, and is consistent with agency long-range goals, objectives, and philosophy • The incumbent meets agreed-upon deadline for first approved draft
CROSS-TRAINED ANALYSTS	• 60%-80% trainees meet learning objectives • Trainees' supervisors are generally satisfied with analysts' improvement in their ability to communicate with programmers and solve minor problems without a programmer
TRAINING FACILITY READY FOR TRAINING	The supervisor is generally satisfied that: • The training room is ready for training when needed • Materials are available • Speaker's needs have been determined and addressed
CUSTOMER SERVICE MANUAL	The supervisor is generally satisfied that the manual: • Covers most if not all job dimensions • Has most if not all standard components • The customer service supervisor says the document is useful

*To achieve the *Outstanding* level, the employee must consistently exceed a majority of the bullets listed for the *Fully Successful* standard. *Unacceptable* performance occurs when the employee fails to meet one or more of the bullets listed for *Fully Successful* performance.

Two-Level Appraisal–Examples

THE FOLLOWING EXAMPLES OF ELEMENTS AND STANDARDS WERE WRITTEN SPECIFICALLY FOR APPRAISAL PROGRAMS THAT APPRAISE PERFORMANCE OF ELEMENTS AT ONLY TWO LEVELS.

POLICY PROCESSING CLERK

ELEMENT	***FULLY SUCCESSFUL STANDARD*** (To meet the *Fully Successful* standard for each element, **all** of the bullets listed for the element must be present or occur.)
COMPLETED AUDITS	▌No more than 5 errors per month are found on audits ▌For at least 10 weeks per year, no audits are more than 30 days old
QUOTES AND PROPOSALS	▌No more than 5 quotes and proposals per month are found to be inaccurate at issuing ▌No more than 5 quotes per month are processed in more than 5 days ▌No more than 5 proposals per month are processed in more than 24 hours
SOLUTIONS	▌No more than 2 times per quarter are incorrect results or procedures spotted by the supervisor or other team members ▌No more than 2 times per quarter are problems corrected in more than 3 business days
FINISHED POLICIES	▌No more than 5 errors per month are spotted by team members ▌No more than 5 times per month when someone can't do the next step on a policy due to illegibility, incompleteness, or vagueness in the file ▌No more than 3 times per month someone on the team gets a second call for the same issue/problem ▌For at least 10 weeks per year, there are no changes more than 30 days old ▌For at least 5 weeks per year, there is no new business more than 10 days old
ANSWERS TO QUESTIONS	▌60% of surveyed team members and a sample of people outside the team say: — The technician stops what (s)he's doing and immediately tries to answer the question — They don't find out later that the answer is wrong — If the technician doesn't know the answer, (s)he either researches the solution or directs the person to the correct source

RESEARCH CHEMIST

ELEMENT	***FULLY SUCCESSFUL STANDARD*** (To meet the *Fully Successful* standard for each element, **all** of the bullets listed for the element must be present or occur .)
ANALYTICAL RESULTS AND SPECIFICATIONS	The Research Manager is routinely satisfied that: ▌The method measures the appropriate variable ▌The results are relevant ▌The method is scientifically sound ▌There is a well-written protocol ▌The method is accurate, precise, reproducible, fast, and cost-effective The customer is generally satisfied that: ▌They can understand and observe the results ▌The cost is within the budget ▌The information gives understandable answers to their questions
SOLUTIONS TO CUSTOMER PROBLEMS	The Research Manager is routinely satisfied that: ▌Reports and solutions address the question that was asked ▌The assumptions or hypotheses are based on scientific principles ▌The proposed solutions, suggestions, and/or recommendations are understandable ▌The recommendations were provided within the agreed-on time frame. The customer is generally satisfied that: ▌The report and any answers to questions address the question that was asked ▌The proposed solutions, suggestions, and/or recommendations are understandable ▌The proposed recommendations were provided within the agreed-on time frame ▌The solutions work ▌The information gives understandable answers to their questions ▌They are able to implement the recommendations

ENGINEER

ELEMENT	FULLY SUCCESSFUL STANDARD (To meet the *Fully Successful* standard for each element, **all** of the bullets listed for the element must be present or occur .)
DESIGNS FOR CAPITAL IMPROVEMENTS AND OPERATIONS CHANGES	The supervisor is routinely satisfied that: ▎The cost estimate is sufficiently itemized ▎There is backup documentation for all cost estimates ▎There is consistency across design documents ▎The design looks like it will solve the problem or meet the need ▎The design doesn't cause new problems while solving the original problem In addition: ▎There is no significant cost overrun due to inaccurate quantities ▎The design is routinely completed by the agreed-on deadline
BUDGET REPORT	▎The budget report is generally submitted by the fifteenth day of the month ▎The engineer is routinely able to answer questions about project financial status at any time
COMPLETED PROJECTS	The supervisor is routinely satisfied that: ▎The project is constructed according to the design ▎Unexpected conditions are successfully worked around ▎Recommendations are made by agreed-on deadline ▎The contract cost is within 5% of the estimate

PROGRAM ANALYST (BUDGET)

ELEMENT	***FULLY SUCCESSFUL STANDARD*** (To meet the *Fully Successful* standard for each element, **all** of the bullets listed for the element must be present or occur .)
BUSINESS DECISION RECOMMENDATIONS, INCLUDING BUDGET ANALYSIS AND COST INFORMATION/ANALYSIS	The supervisor is routinely satisfied that: ▎Cost impacts surrounding the decision have been identified and evaluated ▎The numbers are accurate and do not require second-guessing or rework ▎Reports/analysis logically state the issues and reach conclusions that are supported by the data and analysis ▎The analysis is useful and answers the question asked ▎The analysis/information was provided by the agreed-on deadline
FINANCIAL SYSTEMS IMPROVED	The supervisor as well as the users of the system are generally satisfied that: ▎The system change is within the scope of control ▎The change provides information in a more efficient, accurate, and useful manner than previously ▎The time required to implement the change meets the customer's needs and deadlines ▎The value of the improvements exceeds the cost of the implementation
BUDGET PROCESS EVALUATION AND ANALYSIS	The supervisor is routinely satisfied that: ▎The reports/analysis logically state the issues and reach conclusions that are supported by the data and analysis ▎The evaluations address all issues and cost impacts

UNITED STATES OFFICE OF PERSONNEL MANAGEMENT

Guidance for Agency-Specific Diversity and Inclusion Strategic Plans

November 2011

a New Day for Federal Service

Table of Contents

Introduction

This Guidance on implementation of the Government-Wide Diversity and Inclusion Strategic Plan (the Guidance) provides agencies with direction to enable them to fulfill the goals identified in Executive Order 13583 and coordinate their diversity and inclusion efforts within the agency in a collaborative and integrated manner. Currently, in many agencies, human resource (HR) programs collect workforce data, advise management in making personnel decisions, and submit reports to the Office of Personnel Management (OPM). Equal employment opportunity (EEO) programs manage the discrimination complaint process, track data, identify potential barriers, and submit reports to the Equal Employment Opportunity Commission (EEOC). To deliver excellent service to the public through a skilled, engaged, and diverse workforce, HR, EEO, and diversity and inclusion (D&I) must work collaboratively and share data and information. Further, agencies that draw on the unique knowledge and expertise possessed by all three programs are better able to achieve the goal of becoming a model workplace. This guidance provides a path forward, drawing from leading practices identified by Federal, state, and private sector models of collaboration.

The Guidance is separated into two sections. Section 1 provides operational guidance and sets forth the roles, responsibilities, and requirements applicable to Federal agencies that will facilitate their successful execution of actions outlined in Executive Order 13583. Section 2 provides specific guidance to Federal agencies that will enable them to bring themselves into alignment with the priorities and actions outlined in the Government-Wide Diversity and Inclusion Strategic Plan (the Plan). In this section, each goal is listed along with its associated priorities and action items. Section 2 also provides guidance on possible measurements for the actions. The Office of Personnel Management, in coordination with the Office of Management and Budget (OMB) and the Equal Employment Opportunity Commission (EEOC), will continue to refine these measurements and provide additional guidance for agencies in subsequent issuances. Finally, in the conclusion of this Guidance, Federal departments and agencies are provided a pathway to connecting diversity and inclusion with innovation.

Below are the definitions, vision and mission statements, and goals from the Government-Wide Diversity and Inclusion Strategic Plan (the Plan).

Definitions of “Diversity” and “Inclusion”

Throughout this document, we define workforce diversity as a collection of individual attributes that together help agencies pursue organizational objectives efficiently and effectively. These include, but are not limited to, characteristics such as national origin, language, race, color, disability, ethnicity, gender, age, religion, sexual orientation, gender identity, socioeconomic status, veteran status, and family structures. The concept also encompasses differences among

people concerning where they are from and where they have lived and their differences of thought and life experiences.[1]

We define inclusion as a culture that connects each employee to the organization; encourages collaboration, flexibility, and fairness; and leverages diversity throughout the organization so that all individuals are able to participate and contribute to their full potential.

Federal Government-Wide Diversity and Inclusion Vision Statement

Be the Nation's model employer by leveraging diversity and fostering inclusion to deliver the best public service.

Federal Government-Wide Diversity and Inclusion Mission Statement

Recruit, retain, and develop a diverse, high-performing Federal workforce that draws from all segments of society and values fairness, diversity and inclusion.

Goals:

1. Workforce Diversity. Recruit from a diverse, qualified group of potential applicants to secure a high-performing workforce drawn from all segments of American society.

2. Workplace Inclusion. Cultivate a culture that encourages collaboration, flexibility, and fairness to enable individuals to contribute to their full potential and further retention.

3. Sustainability. Develop structures and strategies to equip leaders with the ability to manage diversity, be accountable, measure results, refine approaches on the basis of such data, and institutionalize a culture of inclusion.

The three goals listed above are absolutely necessary for the successful growth of diversity and inclusion. Other characteristics of diversity and inclusion best practice plans, such as leadership, accountability, measurement, and training are components of, and integrated in, the three goals.

[1] Data on all the characteristics listed in this definition of diversity is not collected. However, OPM, in coordination with OMB, EEOC, and DOJ, will continue to refine existing measurements and provide additional guidance for agencies in subsequent issuances.

Section 1

Operational Guidance

This operational guidance sets forth the roles, responsibilities, and requirements applicable to Federal agencies in successfully executing actions outlined in Executive Order 13583. Successful implementation of the Government-Wide Diversity and Inclusion Strategic Plan (the Plan) will help each agency achieve its diversity and inclusion objectives for the American people. Notably, the priorities outlined in the Plan will succeed only with the strong support of leaders, managers, and supervisors, as well as a coordinated and collaborative approach within HR, EEO and D&I functions. Further, because of the complexity of the relevant legal landscape, agencies should consult with their General Counsels when crafting and implementing their individual strategic plans, to ensure compliance with law.

Agency Guidance:

A) Pursuant to Executive Order 13583, section 3(a), each Agency will designate the Chief Human Capital Officer (CHCO) as the responsible official for enhancing employment and promotion (employee life cycle processes) goals of the Government-Wide Diversity and Inclusion Strategic Plan, in collaboration with the agency's Director of Equal Employment Opportunity and Director of Diversity (also known as the Chief Diversity Officer (CDO)), if any, including the development and implementation of the agency-specific Diversity and Inclusion Strategic Plan.

1. The agency will ensure that the EEO Director reports to the Head of the Agency, or his or her designee, and is not a direct report to the CHCO.

2. The role of CDO may be a separate or distinct role, or it may be held by the EEO Director or the CHCO. [2]

[2] Executive Order 13583 does not require agencies to designate a separate Director of Diversity or a Chief Diversity Officer. Our research has shown, however, that having three separate functions – Human Resources (HR), EEO and Diversity and Inclusion - has worked very well in the private sector and in those Federal agencies that have followed this tri-partite model. Where HR, EEO and Diversity and Inclusion work together as teams rather than competitors, organizations experience the best outcomes, and this is the model we recommend.

3. The agency will assign Human Resources to lead workforce planning.

4. The agency will assign EEO to lead barrier analysis.[3]

5. The agency's General Counsel or other chief legal officer shall ensure that agency specific plans are in compliance with laws, rules and regulations that make it unlawful for agencies to discriminate for or against an applicant or employee based on race, color, religion, sex (including pregnancy or gender identity), national origin, age, disability, sexual orientation or any other prohibited basis.

B) The CHCO, EEO, and CDO (if any) roles and responsibilities are dependent upon the unique needs, reporting structures, current laws, policies, regulations, and strategies utilized by the respective agency. (*See* Appendix A for a roles and responsibility matrix that identifies functional responsibilities of the CHCO, EEO, and Diversity and Inclusion functions).

C) 120 days after the issuance of Government-Wide Diversity and Inclusion Strategic Plan, each agency will submit to OPM and OMB an agency-specific Diversity and Inclusion Strategic Plan, which it shall then implement. The plan shall:

1. Outline the actions that will be taken to achieve the specific priorities identified in the Government-Wide Diversity and Inclusion Strategic Plan.

2. Identify a responsible management official for each action.

3. Be consistent with applicable law, the agency's Strategic Human Capital Plan, merit system principles, EEOC Management Directive 715 (MD-715) and other applicable workforce planning strategies, including but not limited to those prescribed in 5 CFR Part 250, Subpart B.

[3] As used in this guidance, "barrier analysis" refers to the process described in EEOC Management Directive 715. That Directive provides that "[w]here an agency's self-assessment indicates that a racial, national origin, gender, [or disability] group may have been denied equal access to employment opportunities, the agency must take steps to identify the potential barrier. Workplace barriers can take various forms and sometimes involve a policy or practice that is neutral on its face. Identifying and evaluating potential barriers requires an agency to examine all relevant policies, practices, procedures and conditions in the workplace." EEOC's Management Directive 715 (MD-715). For more information, see http://www.eeoc.gov/federal/directives/md715.cfm.

a. Agencies utilizing existing plans should modify plans to ensure alignment with the Government-Wide Diversity and Inclusion Strategic Plan goals and priorities.

b. Agencies that do not have Diversity and Inclusion Strategic Plans will develop plans that are in alignment with the Government-Wide Diversity and Inclusion Strategic Plan.

c. At a minimum:

1. The agency plan should incorporate the three Goals and seven Priorities established by the Government-Wide Diversity and Inclusion Strategic Plan.

2. Agencies are encouraged to employ the actions identified within the Government-wide Diversity and Inclusion Strategic Plan, as these actions will be utilized as part of the Measurement Indices currently under development.

D) OPM will review agency-specific Diversity and Inclusion Strategic Plans for alignment with the Government-Wide Diversity and Inclusion Strategic Plan and provide recommended modifications for agency consideration.

E) Agencies will use the Diversity and Inclusion Dashboard which OPM develops as the reporting mechanism to submit progress reports to OPM. [4]

[4] OPM, in coordination with OMB, EEOC and the President's Management Council, is currently in the process of developing a diversity and inclusion dashboard that will provide appropriate measures of agencies' progress in implementing their agency-specific strategic plans. OPM will provide reporting requirements under separate cover.

Section 2

Goal 1: Workforce Diversity…Draw from All Segments of American Society

Federal agencies shall recruit from a diverse, qualified group of potential applicants to secure a high performing workforce drawn from all segments of American society.

Workforce diversity is the first goal in the Government-Wide Diversity and Inclusion Strategic Plan and is grounded in the merit principle that: "Recruitment should be from qualified individuals from appropriate sources in an endeavor to achieve a workforce from all segments of society" while avoiding discrimination for or against any employee or applicant on the basis of race, color, religion, sex (including pregnancy or gender identity), national origin, age, disability, sexual orientation or any other prohibited basis. (5 U.S.C. 2301(b)(1), 2302(b)).

Analysis of Future Workforce Needs

Effective and efficient human capital management enables agencies to have a greater alignment of policies and programs with mission objectives. Workforce planning is a systematic approach to understanding the environment and the challenges in the people issues of an agency which impact mission achievement. To develop strategies to attract and retain high performers to accomplish organizational mission, agencies must: 1) understand their current Federal workforce, 2) project the number and competencies required for the future, and 3) understand the current and future composition of the civilian labor force and/or relevant civilian labor force.[5]

[5] As used in this guidance, the term "Civilian Labor Force" means the subset of Americans who are currently employed or are seeking employment and are eligible to work. The "Relevant Civilian Labor Force" (RCLF) is the CLF data that is directly comparable (or relevant) to the workforce population being studied. For example, if we were analyzing the representation of women as engineers in the Federal workforce, we might compare that representation with the percentage of women who are engineers in the CLF. In this example, the women engineers in the CLF represent the RCLF. For more information, see http://www.opm.gov/feorp01/DCAD.asp and http://www.census.gov/hhes/www/eeoindex/page_c.html.

Meeting and projecting future Federal workforce needs in a difficult budget environment presents challenges. However, demands for ever increasing innovation and greater efficiency provide agencies with an opportunity to make a strong case for building a diverse workforce.

For example, from 2008 to 2010, a study of hiring trends across Federal agencies showed that IT and cybersecurity professionals, nurses, contract and acquisition specialists, border patrol agents, and program analysts were among the top 15 most hired positions within government. In each of these fields, research shows that hiring with an emphasis on cultural, experiential, and cognitive diversity will ensure agencies have a workforce that is capable of addressing increasingly complex challenges more efficiently. Beyond traditional measures of diversity, seeking individuals with varying degree types and professional experience will also benefit agencies and offices across government.

Workforce planning data and analysis—including knowledge about the demographics of the current workforce, projections of attrition for the next 3-5 years, skills and competencies needed to perform the job, effectiveness of succession plans, projected demographics and anticipated changes in served populations—enable leaders to make informed decisions to attract, build and retain inclusive teams to serve customers and stakeholders.

Steps for Integration of Diversity and Inclusion into Workforce Planning

1. **Establish the Strategic Direction.** Align the workforce planning process with the agency's strategic plan, annual performance and business plans and work activities.

2. **Analyze the workforce.** Conduct an analysis of the current and future workforce for the mission critical occupations in coordination with HR, EEO and Diversity and Inclusion to then conduct a barrier analysis. For more information on barrier analyses, see EEOC's EEO Management Directive 715, at http://www.eeoc.gov/Federal/directives/md715.cfm.

    a. Project attrition rates for the next 3-5 years.
    b. Project promotion opportunities to fill gaps for positions requiring experience.

3. **Develop the Competency Action Plan.** Analyze the future skills and competencies needed for mission critical occupations.

4. **Implement Workforce Plan.**

    a. Conduct a comparative analysis between the current supply and demand (projected need) to determine projected requirements.
    b. Use analysis to develop actions in outreach, recruiting, hiring, retaining, developing and promotion activities.

c. Establish internal controls or checks for fairness and advancing inclusion in workforce policies and practices.

5. **Evaluate and Measure.** Assure linkage of workforce planning to accountability system and processes.

For more information about workforce planning, see OPM's End-to-End Hiring Initiative at http://www.opm.gov/publications/EndToEnd-HiringInitiative.pdf, p.p. 11-17.

Priorities, Actions, and Sample Practices for Goal 1

Priority 1.1: Design and implement strategic recruitment and outreach to reach all segments of society.

Actions:

1. Collect and analyze applicant flow data.[6]

2. Coordinate outreach and recruitment strategies to maximize ability to recruit from a diverse, broad spectrum of potential applicants, including a variety of geographic regions, academic sources, and professional disciplines.

3. Ensure that outreach and recruitment strategies designed to draw from all segments of society, including but not limited to those who are underrepresented,[7] are employed when using staffing flexibilities and alternative hiring authorities.

4. Develop strategic partnerships with a diverse range of colleges and universities, trade schools, apprentice programs, and affinity organizations from across the country.

[6] Rigorous collection of applicant flow data is a key to crafting effective recruitment strategies. On March 3, 2010, OPM and EEOC issued a joint memorandum (Available at: http://www.chcoc.gov/Transmittals/TransmittalDetails.aspx?TransmittalID=2920) supporting the collection of demographic data, "including applicant flow data, because such collection is an integral part of the barrier identification process described in [EEOC's Management Directive] 715." OPM also strongly supports the collection of this data because it is a necessary component for effective workforce planning. A form for collecting applicant data has been approved by the Office of Management and Budget (OMB) and is available at: http://www.eeoc.gov/federal/upload/OMB-3046-0046.pdf.

[7] Underrepresentation, as defined in 5 CFR 720.202, "means a situation in which the number of women or members of a minority group within a category of civil service employment constitutes a lower percentage of the total number of employees within the employment category than the percentage that women or the minority group constitutes within the civilian labor force of the United States. . ."

5. Involve managers and supervisors in recruitment activities and take appropriate action to ensure that outreach efforts are effective in addressing barriers.

6. Review and ensure that student internship and fellowship programs have diverse pipelines to draw candidates from all segments of society.

Measurements:

- Review applicant flow data to determine whether outreach and recruitment efforts are effectively reaching all segments of society.
- Measure percentage of qualified applicants from various hiring authorities used by the agency within the past 12 months by demographic group.
- Enter into strategic partnerships and memorialize relationships with the following: colleges and universities, trade schools, apprentice programs, and affinity organizations from all parts of the country.
- Measure applicant flow data to determine whether applicant pools are reflective of the relevant civilian labor force (RCLF).
- Measure percentage of managers and supervisors involved in recruitment activities and outcomes of outreach efforts to all segments of society.
- Review applicant flow data of agency internship program to determine whether applicant pools are reflective of the relevant civilian labor force (RCLF).
- Review applicant flow data of agency Presidential Management Fellows to determine whether applicant pools are reflective of the relevant civilian labor force (RCLF).
- Measure percentage of interns converted and/or hired for permanent employment.

Sample practices for Priority 1.1:

CHCOs, in collaboration with appropriate offices and senior managers, should design and perform strategic outreach to, and recruitment of, communities identified as underrepresented, as well as other communities as appropriate. Below are sample practices for conducting strategic outreach and recruitment:

- Use recruiters who possess the cultural competency necessary to communicate effectively with underrepresented groups.

- Create a diverse integrated recruitment team under which the recruiting function is centralized to plan and coordinate its campaigns. This central group works with agency contacts nationwide to take full advantage of local assets, including staff and managers who can serve as recruiters at local events.

- Generate and disseminate quarterly Workforce Diversity and Inclusion Reports to agency leadership conveying progress/status of organizational workforce diversity, in

order to ensure that outreach and recruitment strategies are effective. Furthermore, interact regularly with hiring managers and supervisors and make them aware of the agency's strategic human capital plan.

- Connect with university disability support service offices to find qualified individuals with disabilities; and conduct campus visits and one-on-one interviews with the university disability support center.

- Utilize Federal Student Service Ambassadors as a peer-to-peer marketing strategy. Use ambassador programs to tap college students who have successfully completed internships to send these former interns back to their campuses as public service emissaries, who host educational visits from agency representatives, promote job and internship opportunities to classmates, share their intern experience and meet with key staff and faculty to bolster the government's effort in recruiting young people.

- Post advertisements and job announcements in locations, and through multiple technologies, that are likely to reach underrepresented groups.

- Hold Outreach Forums and job fairs in conjunction with human resources staff where the agency recruiters interface with organizations and the community.

- Foster early talent detection through the adoption of schools where there is a broad diverse student population.

- Partner with diverse professional organizations and diverse institutions of postsecondary education to identify networking opportunities, student/staff exchange programs and rotational assignments to expand the pipeline to agency employment; Designate Executive Sponsors to build strong, active relationships with these organizations.

- Utilize diversity focused student internship and fellowship programs where underrepresentation exists as identified by barrier analysis conducted in the agency's MD-715 Report.

- Utilize employee resource groups (ERGs) and affinity groups to assist in outreach to diverse organizations.

Priority 1.2: Use strategic hiring initiatives for people with disabilities and for veterans, conduct barrier analyses, and support Special Emphasis Programs, to promote diversity within the workforce.

Actions:

1. Review results of barrier analysis required by MD 715 (if any), develop action plans to eliminate any identified barrier(s), and coordinate implementation of action plans.

2. Use Schedule A hiring authority for people with disabilities and Veteran Hiring Authorities as part of strategy to recruit and retain a diverse workforce.

3. Support Special Emphasis Programs (SEPs) and appoint SEP Managers as advisors on hiring, retaining and promoting a diverse workforce.

Measurements:

- Measure percentage of hires under the Schedule A hiring authority for people with disabilities.
- Measure percentage of hires under Veteran Hiring Authorities within the past 12 months.
- Evaluate outcomes of SEPs and the quality of engagement of SEP Managers in the recruitment outreach, retention, and promotion process in collaboration with human resources staff.

Sample practices for Priority 1.2:

The CHCO, EEO Director, and CDO (if any) should partner in reviewing and modifying the agency's existing HR policies, specifically by performing, at a minimum, the following actions—

- Modifying the agency's outreach and recruitment methods, to ensure that job advertisements are reaching a diverse audience.

- Eliminating job or promotion criteria that are not job related and consistent with business necessity.

- Ensuring to the greatest extent possible that a diverse group of individuals are involved in individual selection, promotion and award decisions.

Below are sample practices for implementing Priority 1.2:

- Utilize automated programs that prepare the agency's MD-715 Report in its totality and provide specific data on diversity in narrative, as well as graphic formats. Such data can be utilized to identify where variances exist between the agency's workforce and the Civilian Labor Force (CLF) or the Relevant Civilian Labor Force (RCLF), and share that information with managers.

- Conduct barrier analyses consistent with MD-715 with respect to various terms and conditions of employment (*e.g.*, hire, promotion, training, leadership development, separation, discipline, awards, *etc.*).

- Use OPM's Shared Register of Candidates with Disabilities. OPM, in collaboration with the Chief Human Capital Officer (CHCO) Council, has established a shared register of individuals with disabilities who have an interest in working for Federal agencies and who satisfy the requirements of positions Federal agencies are frequently required to fill. Agencies that wish to access the register or that have questions should contact their human capital office.

- For more information about hiring under Schedule A for people with disabilities, see Model Strategies for Recruitment and Hiring of People with Disabilities as Required under Executive Order 13548 at: http://www.chcoc.gov/Transmittals/TransmittalDetails.aspx?TransmittalID=3228#Attachment1.

- Use the updated SF 256, Self-Identification of Disability, as a tool to measure progress toward hiring people with disabilities by resurveying the workforce at least every other year to request that people with disabilities self-identify. The form is available at: http://www.opm.gov/forms/pdf_fill/sf256.pdf.

- For information about hiring Veterans, and Executive Order 13518, which established the Veterans Employment Initiative, see the Feds Hire Vets website at: http://www.fedshirevets.gov/hire/hrp/regs/index.aspx.

- Pursuant to 29 C.F.R. 1614.102(b)(4), appoint full-time Special Emphasis Program Managers (SEPMs) (e.g., People with Disabilities Program, Federal Women's Program and Hispanic Employment Program) to address employment initiatives and programs, grade these positions commensurate with the work performed, adequately fund the programs, and ensure access to leadership. *See* appendix C for a model SEPM position description.

- Create SEP committees for various diverse groups as needed to address underrepresentation, utilizing agency-wide staff in field components to expand the reach of SEPs; and gather information from employee affinity and resource groups.

Goal 2: Workplace Inclusion…Include All Federal Employees

Federal agencies shall cultivate a culture that encourages collaboration, flexibility, and fairness to enable individuals to contribute to their full potential.

The merit system principles directly advocate that "the Federal workforce should be used efficiently and effectively." [5 USC 2301(b)(5)]. The workplace inclusion goal focuses on the reality that a diverse workforce alone is no guarantee to organizational productivity or to employees reaching their full potential. Inclusion strategies are the necessary link to harness and leverage the potential inherent in all diverse workforces. Studies have shown that, absent the facilitating conditions in the workplace (*i.e.*, inclusion strategies), workforce diversity will not yield the promised performance benefits.[8] The inclusion emphasis is also an important component of the employee lifecycle stages of retaining, developing, and promoting.

Analysis of Workforce Environment

Employee satisfaction and commitment are two necessary ingredients in developing high-performing organizations and attracting and retaining top talent. Creating an organizational culture that respects and values diversity and inclusion is a business imperative that is critical to the continued success of the Federal government.[9]

Ensuring that diversity and inclusion permeates an organization helps drive performance, productivity and mission success.[10]

- Performance – D&I drives innovation and creativity. In studies and research, diverse teams are better at problem solving, better at critical analysis, and more innovative as they introduce new perspectives and ideas and learn how to be flexible and adaptable in working with one another.

- Productivity – D&I fosters a culture that respects and values each employee and his or her contributions; provides opportunity; and increases individual commitment, team

[8] Diversity Research Network, October 2002.

[9] The Partnership for Public Service, The Best Places to Work in the Federal Government 2010 Rankings, 2010, available at http://www.bestplacestowork.org/BPTW/assets/BPTW10.pdf.

[10] Scott E. Page, The Difference: How the Power of Diversity Creates Better Groups, Firms, Schools, and Societies, 2007.

motivation and trust. High level of employee engagement translates into increased productivity and retention of top talent in highly competitive markets.

- Mission Success - D&I adds value as a critical element tied to mission success. "The how" we can accomplish our mission is D&I – by capitalizing on the strengths of our diverse workforce to better perform our mission through teamwork and innovation.

When employees feel included, perceive they have a voice, and are given the opportunity to develop and maximize their potential, the employer creates an organization of choice and becomes a model employer. To accomplish this transformation, agencies should review and analyze programs, policies, and procedures to ensure that they are inclusive, transparent, and fair to all employees, and that employees perceive them as so. Data can also be gathered from exit interviews, new employee follow-up, and focus group meetings with affinity groups and employee resource groups.

An example of how to gather relevant employee engagement data is outlined below.

Steps for environment analysis

1. Conduct employee surveys (Employee Viewpoint Survey and/or agency survey) to assess: (a) leadership and management practices that contribute to an agency's performance; and (b) employee satisfaction with workplace policies and practices, work environment, rewards and recognition, access to resources, and opportunity for development and growth.[11]

2. Review and analyze survey results, including trend data by demographic category to include, for example, age, length of service, *etc*.

3. Assess workplace programs, policies, and procedures to ensure they are fair and transparent.

4. Analyze exit interview results and other available data.

5. Identify barriers and other issues and develop improvement strategies.

6. Incorporate strategies into human capital planning efforts and in retention, development and promotion activities.

[11] 5 C.F.R. Pt. 250, Subpart C..

Priorities, Actions, and Sample Practices for Goal 2

Priority 2.1: Promote diversity, inclusion, and equity in leadership development programs.

Actions:

1. Review leadership development programs, determine whether they draw from all segments of the workforce, and develop strategies to eliminate barrier(s) where they exist.[12]

2. Enhance mentoring programs within agencies for employees at all levels with an emphasis on aspiring Executive level employees.

3. Develop and implement a succession planning system for mission-critical occupations that includes broad outreach to a wide variety of potential leaders.

Measurements:

- Measure the total percentage of GS-11 through GS-15 level employees (or equivalent) by demographic group and compare with the percent of each group that participated in leadership development programs in the past 12 months.
- Analyze applicant pool data for all leadership development programs by demographic groups.
- Measure percentage of agency employees engaged in mentoring relationships by all demographic categories.
- Measure number of GS-11 through GS-15 level employees engaged in mentoring relationships by demographic categories.
- Measure percentage of all demographic groups incorporated into agency succession planning system.

Sample practices for Priority 2.1:

CHCOs, in collaboration with appropriate offices and senior managers, should review existing leadership development, training, and mentoring programs and conduct succession planning that ensures all employees have the opportunity to develop to their full potential. Below are sample practices for Priority 2.1:

[12] When conducting analysis of leadership development programs and succession planning, agencies should consider the entire workforce and determine whether programs and plans draw from the talent present throughout the agency with consideration of all dimensions of diversity to the greatest extent practicable.

- Where underrepresentation exists, conduct analyses of leadership development selection processes to identify barriers to equal opportunity in the process.

- Ensure programs are competency-based; provide potential for career path change; and consist of a variety of developmental activities including: training, rotational assignments, executive interviews, and shadow assignments.

- Ensure Program participants receive guidance through a Mentoring Program, made up of volunteer managers and supervisors; support mentoring programs that are sponsored by employee affinity or resource groups; conduct reverse mentoring programs and coaching programs. For more information on mentoring, go to OPM's Best Practices: Mentoring, available at: http://www.opm.gov/hrd/lead/BestPractices-Mentoring.pdf (See page 15 for definition of reverse mentoring).

- Routinely offer temporary detail assignments, special assignments, leadership shadowing programs, and opportunities to transfer to other regions for advancement to help upgrade employees' skills and improve their visibility. Widely advertise such assignments.

- Use a career executive service, which provides extensive training, executive simulations, targeted Individual Development Plans, and places candidates on succession planning lists.

- Measure employee perceptions on the availability and utility of agency development programs to access effectiveness and identify areas for improvement through the Employee Viewpoint Survey.

Priority 2.2: Cultivate a supportive, welcoming, inclusive and equitable work environment.

Actions:

1. Use flexible workplace policies that encourage employee engagement and empowerment, including, but not limited to, telework, flexiplace, wellness programs, and other work-life flexibilities and benefits.

2. Support participation in employee affinity and resource groups and provide such groups with access to agency senior leadership.

3. Administer a robust orientation process for new Federal employees and new members of the SES to introduce them to the agency culture and to provide networking opportunities.

Measurements:

- Measure percentage of workforce participating in 1) telework, 2) flexiplace and 3) Wellness programs.
- Review Employee Viewpoint Survey (EVS) results each year.
- Measure number of new initiatives implemented by employee affinity and/or resource groups.
- Measure percentage of agency executives involved in employee affinity and/or resource groups.
- Measure percentage of positive replies received on agency on-boarding (newcomers) process through survey feedback.

Sample practices for Priority 2.2:

The CHCO, EEO Director, and CDO (if any) should partner in reviewing and modifying the agency's existing policies and practices related to workforce flexibilities, employee affinity and/or resource groups, and new employee and SES onboarding. Below are sample practices for Priority 2.2:

- Review workplace policies and revise those that unnecessarily limit employee flexibility. Specifically, ensure employees are able to request flexible work arrangements that allow them to balance work and personal responsibilities. General Flexible Options include:

    - Flextime Programs. Flextime policies generally permit employees to vary their work day start and stop times within a specified range, such as allowing an employee to arrive at work at any time between 8:00 and 10:00 a.m. and then work for 8 hours.
    - Flexible Week Opportunities. Flexible week opportunities may include compressed work weeks, such as a work week consisting of four ten-hour work days.
    - Telecommuting, Work-at-Home, or Flexiplace Programs. These options enable employees to work from home or alternate office locations.
    - Reduced-time options. These options permit employees to work part-time while juggling other responsibilities, such as caregiving.

- Consistent with OPM regulations, provide reasonable personal or sick leave to allow employees to engage in caregiving even if not required to do so by the Family and Medical Leave Act of 1993 (FMLA).[13]

- Set forth guidelines for employees to use when establishing employee affinity or resource groups with a senior organizational advisor and a charter that sets forth roles, responsibilities, activities, funding parameters, recognition, community outreach, talent management and outreach roles.

- Conduct regular meetings, at least semi-annually, between employee affinity and resource groups and agency leadership.

- Conduct multi-day orientation program in which a high level official and functional areas (or their designees) share their roles and responsibilities, and which includes tours of different work locations.

- Assign new employees "mentors" or "ambassadors" (one from work area and one outside work area) to help new employees navigate the workplace for the first 6 months.

[13] Definitions Related to Family Member and Immediate Relative for Purposes of Sick Leave, Funeral Leave, Voluntary Leave Transfer, Voluntary Leave Bank, and Emergency Leave Transfer, available at http://www.opm.gov/oca/leave/HTML/FamilyDefs.asp.

Goal 3: Sustainability…Institutionalize Diversity and Inclusion

Federal Agencies shall develop structures and strategies to equip leaders with the ability to manage diversity, be accountable, measure results refine approaches on the basis of such data, and engender a culture of inclusion.

Coping with labor force changes and navigating the altered environment of the evolving workplace requires acquisition of new knowledge and development of new skills for all employees. For a diversity and inclusion program to be successful, not only must new roles and responsibilities be defined, but employees must be held accountable for delivering on expectations and meeting program requirements. Moreover, management accountability and innovation must be emphasized in order for progress to be made in employing, retaining, and developing all employees in the Federal government.

First, diversity and inclusion must be strategically integrated and aligned with the organization's mission, goals, objectives, staffing and budgets. Then, managers and supervisors at all levels of an organization must be required to make measurable and sustainable progress toward established priorities. This requires making diversity management a part of both performance evaluation and training, as well as incentivizing the development of programs that succeed and meet the organization's goals. Finally, development of such evaluation criteria underscores diversity and inclusion as an important and strategic organizational initiative. When these actions are performed, all employees, from entry level to SES, share in such accountability. This encourages teamwork and compliance at all levels of the Federal workforce.

Analysis of Diversity & Inclusion Institutionalization

Institutionalization is a key imperative of sustainable diversity and inclusion efforts. However, even when institutionalization efforts have been utilized, organizational progress has been frustratingly slow, sporadic, and dependent on enlightened leadership rather than sound sustainability practices.

Effective sustainability efforts are dependent upon identifying and weaving key diversity principles into organizational systems, processes, and policies. Following is a list of possible areas and questions agencies can utilize in sustaining diversity and inclusion progress by using sound institutionalizing strategies (Jarvis, 2009).

1. **Include diversity and inclusion in GPRA Required Strategic Planning.** Agencies should affirm the value of workforce diversity and inclusion in GPRA Required Strategic Planning, and where barriers have been identified, the agency Strategic Plan and/or Annual Performance Plan should incorporate strategies to address those areas and describe how it will monitor progress.

2. **Discover Ways to Integrate Diversity within Your Organizational Culture.** In what ways can diversity become a part of the organization's structure, mission and vision? What quick successes exist for the organization to leverage diversity engagement in consistent ways? What are the key indicators from the employees' perspectives that would define their agency as both valuing and rewarding diversity and inclusion in the workplace?

3. **Create an Organizational Core Value Focused on Diversity.** How could a core value of diversity demonstrate the organization's commitment? Who would be responsible for developing the diversity value? What would the diversity statement be and why?

4. **Blend Diversity into All Learning and Development Initiatives.** Which aspects of diversity make the most sense to integrate with training goals? How will the agency know when diversity goals have been successful? What will motivate employees to go to diversity training?

5. **Incorporate Diversity into Your Performance Management System.** In what ways can the Performance Management System have meaningful aspects of diversity within it? What performance metrics focused on diversity would be relevant at varying employee levels?

6. **Proactively Seek New Hires from All Segments of Society.** Where can organizations go to recruit individuals who can advance the organization's mission and business? What areas of talent have not been located and how might the organization deploy resources to achieve this goal?

7. **Generate a New Idea Factory to Engage Diverse Thinking.** How might a new idea generating system contribute to diversity of thought? What would the system look like? Who would manage it and how would it ensure the great ideas become a reality with significant impact on the business enterprise?

Priorities, Actions, and Sample Practices for Goal 3

Priority 3.1: Demonstrate leadership accountability, commitment, and involvement regarding diversity and inclusion in the workplace.

Actions:

1. Affirm the value of workforce diversity and inclusion in each agency's strategic plan and include them in workforce planning activities.

2. Develop an agency-specific diversity and inclusion strategic plan, and implement that plan, through the collaboration and coordination of the Chief Human Capital Officer, the EEO Director, and the Director of Diversity (if any).

3. Ensure that all SES members, managers, supervisors and employees throughout the agency have performance measures in place to ensure the proper execution of the agency's strategic plan, which includes diversity and inclusion.

4. Develop and widely distribute a set of diversity and inclusion measures to track agency efforts and provide a mechanism for refining plans.

Measurements:

- Provide documentation verifying diversity and inclusion language has been inserted into agency planning documentation.
- Issue annual diversity and inclusion policy statements by the agency head.
- Develop and submit agency-specific Diversity and Inclusion Strategic Plan outlining agency strategy to ensure a diverse, inclusive, high performance workplace.
- Submit percentage of SES members, managers, and supervisors, who have diversity and inclusion performance measures as a part of their performance evaluation.
- Provide diversity and inclusion metrics to OPM with short narrative on how metrics are embedded in the agency culture.

Sample practices for Priority 3.1:

Agencies should affirm the value of workforce diversity and inclusion in GPRA Required Strategic Planning, and where barriers have been identified, the agency Strategic Plan and/or Annual Performance Plans should incorporate strategies to address those areas and describe how it will monitor progress. Below are sample practices for achieving Priority 3.1:

- Tie vision, role and commitment of diversity and inclusion to strategic organizational goals and leadership plans and behavior that demonstrates diversity and inclusion principles and practices and that integrate these practices into the culture of the organization.

- Include a non-numerical, qualitative goal on diversity and inclusion in the Agency's Strategic Plan. For example:

    - "Identify, cultivate, and sustain a diverse workforce and inclusive work environment…."
    - "Improve retention of [diverse] students in STEM disciplines by providing opportunities and activities along the full length of the education pipeline."
    - "[E]nsure that beneficiaries of our Agency-funded educational programs are afforded equal opportunities, regardless of race, ethnicity, gender, age, or disability…."[14]

- List diversity and inclusion efforts as one of the agency's major initiatives for "Executing the Plan" under human capital management.[15]

- Coordinate efforts to ensure that MD-715 barrier analysis regarding D&I is not redundant with workforce planning, but rather complements and supports the agency's overall goals with each reflecting their own distinctive features and cross-referencing where there is overlap.

- Include a D&I and EEO element in SES and supervisors/managers Performance Plans specifically focused on making measurable progress in advancing the goals of the Diversity and Inclusion Strategic Plan. Language for a member of the Senior Executive Service may include, for example:

    > Designs and implements strategies that maximize employee potential, connects the organization vertically and horizontally, and fosters high ethical standards in meeting the organization's vision, mission, and goals. Provides an inclusive workplace that fosters the development of others to their full

[14] For example, see the NASA Strategic Plan, available at: http://www.nasa.gov/pdf/516579main_NASA2011StrategicPlan.pdf.

[15] For example, see the Department of Veterans Affairs (VA) Strategic Plan, page 59 at http://www.va.gov/VA_2011-2015_Strategic_Plan_Refresh_wv.pdf.

potential; allows for full participation by all employees; facilitates collaboration, cooperation and teamwork; and supports constructive resolution of conflicts. Ensures employee performance plans are aligned with the organization's mission and goals, that employees receive constructive feedback, and that employees are realistically appraised against clearly defined and communicated performance standards. Seeks and considers employee input. Recruits, retains, and develops the talent needed to achieve a high quality, diverse workforce that reflects the nation, with the skills needed to accomplish organizational performance objectives while supporting workforce diversity, workplace inclusion and equal employment policies and programs.

- Establish diversity and inclusion metrics including statistics on employee hiring, retention, promotions, EEO compliance, grievances and diversity of talent pipeline/outreach efforts and employee affinity and resource group accomplishments; disseminate quarterly workforce diversity reports to leadership; and issue Agency Annual Performance Report conveying accomplishments, progress, status on attainment of goals and priorities contained in agency Diversity and Inclusion Strategic Plan.

Priority 3.2: Fully and timely comply with all related Federal laws, regulations, Executive orders, management directives, and policies related to promoting diversity and inclusion in the federal workforce.

Actions:

1. Employ a diversity and inclusion dashboard with metrics as a tool for agency workforce planning and reporting.

2. Timely submit to the U.S. Office of Personnel Management (OPM) reports required by Federal laws, regulations, Executive orders, management directives, and policies. Where an agency fails to do so, OPM will issue a Diversity and Inclusion Improvement Notice and notify the President's Management Council (PMC) of the deficiency.

Measurements:

- Provide agency metric diversity and inclusion information for posting on designated reporting system by due date to avoid Diversity and Inclusion Performance Notice.

Priority 3.3: Involve employees as participants and responsible agents of diversity, mutual respect and inclusion.

Actions:

1. Create a formal diversity and inclusion council at each agency with visible leadership involvement.

2. Participate in, and contribute to, OPM's Diversity and Inclusion Best Practice Program, pursuant to Executive Order 13583.

3. Ensure all employees have access to diversity and inclusion training and education to include the proper implementation of the Agency-Specific Diversity and Inclusion Strategic Plan, as well as relevant legal requirements.

Measurements:

- Provide quarterly updates on progress of council/taskforce in achieving items listed in the Agency Specific Diversity and Inclusion Strategic Plan.
- Provide two Best Practices to the OPM Best Practice Initiative annually.
- Measure percentage of workforce (counting managers/supervisors separately) completing diversity and inclusion related training (both mandatory and elective).

Sample practices for Priority 3.3:

The CHCO, EEO Director, and CDO (if any) should partner in developing the diversity and inclusion council, as well as training and education. Below are sample practices for Priority 3.3:

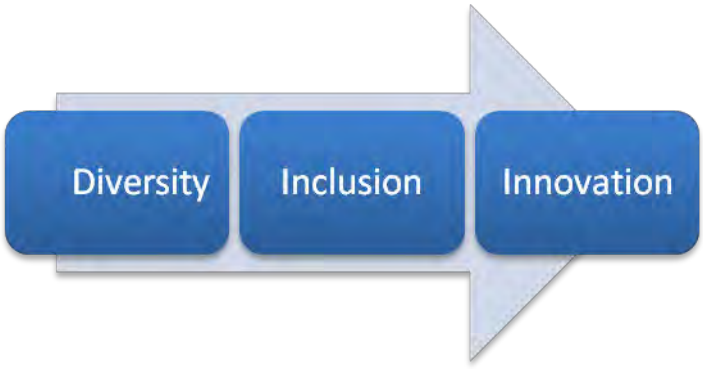
- Establish a Diversity and Inclusion Council which is chaired by an organizational head (or direct report designee) and include senior level officials and the heads of employee affinity and/or resource groups.

- Promote cultural competency at your agency by educating and training Senior Executives, supervisors and HR professionals on the importance of D&I, as well as on how to conduct effective outreach, recruitment, interviewing and decision-making that is consistent with all legal requirements.

- Ensure that appropriate agency personnel are trained in strategic planning, workforce planning, strategic recruitment, as well as cross-cultural and cross-generational training.

Conclusion

The Path Forward: Diversity, Inclusion, and the Innovation Connection



Connecting Different Minds in Different Ways to Achieve Common Goals…

One of the significant benefits of the Government-Wide Diversity and Inclusion Strategic Plan is innovation. Innovation is the mechanism that provides creative and unique solutions to the complex and seemingly intractable problems many agencies face today. However, to ensure sustainability of diversity and inclusion progress in this era of budget constraints, demographic shifts, and emerging technologies, there is a core requirement for agencies to focus on nurturing and harnessing the rich and critical benefits of innovation. The ultimate benefit of a diverse and inclusive workplace is the resulting innovation that is produced when different minds are connected in different ways to achieve common goals.

The primary key to innovation is diversity of thought. Diversity of thought in the social sciences is referred to as cognitive diversity. Cognitive diversity is comprised of primarily two components - "seeing" and "thinking."[16] In other words, people have different perspectives

[16] Page, S. E. (2007). *The difference: How the power of diversity creates better groups, firms, schools, and societies*. Princeton: Princeton University Press.

and different heuristics or “rules of thumb” which are a product of their unique upbringing, culture, and unique experiences. Perspectives are responsible for innovative breakthroughs. They are the game-changers. Once a breakthrough has been established then subsequent innovations and improvements are made through the “thinking” part of the innovation equation. This type of constant innovation can only take place through an environment where people feel included, connected, and engaged. Connecting different minds is the key to moving innovation forward for Federal agencies.

The primary goal of Federal agencies is to serve the American people. Because the world is becoming more complex, social, and interconnected, agencies must be poised to harness diversity of thought and leverage it to generate innovative ideas to solve the tough problems they face.

To build a culture that fosters innovation, agencies must hire for innovation talent; build teams that are diverse in talent, perspective and discipline; and place individuals in the right role to drive success. Once employees have been identified and placed, management can then provide them with the right training and onboarding relative to innovation and train managers for skills needed to drive talent.

In addition, Federal agencies must have useful metrics that are embedded in the culture of the organization. These metrics include benchmarking tools that allow organizations to compare themselves to the best in industry.

An agency that emphasizes connecting different minds, in different ways to achieve common goals is an agency that understands the functional importance of diversity. It is diversity of thought that is the engine that drives innovation. And it is innovation that ultimately determines the long term success of Federal agencies.

APPENDIX A

ORGANIZATIONAL STRUCTURES AND DIVISION OF RESPONSIBILITIES

Agencies have requested guidance on the division of responsibilities between HR, EEO, and D&I. The following table is adapted from *Becoming More Competitive: How Diversity and Inclusion Can Transform Your Organization, American Council for Technology*, and provides the typical allocation of key duties and responsibilities from six Federal agencies included in the Human Capital Shared Interest Group's benchmark study:

Key Duties and Responsibilities	**Chief Human Capital Officer**	**Office of Civil Rights / Civil Liberties & EEO**	**Office of Diversity and Inclusion**
Strategic Human Capital Planning and Organizational Assessments/Climate Surveys	Leads process	Has input	Builds D&I Strategy aligned with overall plan and/or co-leads SHC planning efforts
Workforce Planning-Workforce Analysis	Leads process	Has input	Has input
Writes Vacancy Announcement	Leads - coordinates with line	Has input	Has input
Outreach and Assistance	Has input	Works with D&I to identify pipelines & organizations that are disadvantaged including people with disabilities	Leads process - handles outreach and works with Affinity or Employee Resource Groups
Hiring Process	Leads process	Provides data/metrics	Provides data/metrics
Reasonable Accommodation	Has input	Lead process	Has input

Key Duties and Responsibilities	Chief Human Capital Officer	Office of Civil Rights / Civil Liberties & EEO	Office of Diversity and Inclusion
Training – Supervisor/ On-boarding – Orientation *etc*.	Manages overall training program/ Grievances	Focus on EEO, Alternative Dispute Resolution (ADR) and Complaint process	Focus on D&I and Conflict Management
Writing Policy	Lead on all HR policies	Focus on EEO, ADR and Complaint process – reviews other HR policies	Focus on D&I -– reviews other HR policies
Communications Plan and Metrics	Communicates all HR policies and collects data	Focus on EEO, ADR and Complaint process	Focus on D&I – works with Diversity Councils
Talent Management	Leads process	Ensures opportunities are fair, transparent and open to all	Ensures opportunities are fair, transparent and open to all
Awards/Recognitions/ Accountability Framework – bonuses and compensation	Leads process	Ensures opportunities are fair, transparent and open to all	Ensures opportunities are fair, transparent and open to all
Exit Interviews etc.	May manage	Reviews data	May manage

As noted in *Becoming More Competitive*:

> From this benchmark study, we noted that no "one size fits all" solution exists and that agencies assign and perform the various [] functions differently, depending on the size and geographic locations of the offices…. One key organizational finding was that regardless of who was assigned responsibility for a particular function, it must be clear that input and feedback are required from [all three organizations] for the process to work efficiently and effectively. A second key finding was that flexibility and collaboration were key to ensuring that all [] functions are effectively managed across any [F]ederal agency to ensure that D&I strategies are developed, implemented, and acted upon.

Government-Wide Diversity and Inclusion Strategic Plan 2011

Our Nation derives strength from the diversity of its population and from its commitment to equal opportunity for all. We are at our best when we draw on the talents of all parts of our society, and our greatest accomplishments are achieved when diverse perspectives are brought to bear to overcome our greatest challenges.

— President Obama,
Executive Order 13583

Table of Contents

Overview

This Government-Wide Diversity and Inclusion Strategic Plan (Plan) outlines the implementation of the President's Executive Order 13583 on Establishing a Coordinated Government-Wide Initiative to Promote Diversity and Inclusion in the Federal Workforce (the Executive order). This document incorporates recommendations from stakeholders with expertise in the areas of diversity and inclusion, equal employment opportunity, and organizational change.

The Plan provides a shared direction, encourages commitment, and creates alignment so agencies can approach their workplace diversity and inclusion efforts in a coordinated, collaborative, and integrated manner. Three key goals provide a path for successful agency diversity and inclusion efforts: workforce diversity, workplace inclusion, and sustainability.

Background

The Executive order directs executive departments and agencies (agencies) to develop and implement a more comprehensive, integrated, and strategic focus on diversity and inclusion as a key component of their human resources strategies. This approach should include a continuing effort to identify and adopt best practices to promote diversity and inclusion and to identify and remove any barriers to equal employment opportunity, consistent with merit system principles and applicable law.

A commitment to equal opportunity, diversity, and inclusion is critical to accomplishing the Federal government's missions. By law, the Federal government's recruitment policies should "endeavor to achieve a work force from all segments of society," while avoiding discrimination for or against any employee or applicant on the basis of race, color, religion, sex (including pregnancy or gender identity), national origin, age, disability, sexual orientation or any other prohibited basis. (5 U.S.C. 2301(b)(1), 2302(b)). As the Nation's largest employer, the Federal government has an obligation to lead by example. Seeking to attain a diverse, qualified workforce is a cornerstone of the merit-based civil service.

In order to cultivate high performing organizations for the 21st century, the Federal government must tap into the rich resources of our global community and ensure fairness and justice in the workplace. To accomplish this, we define diversity broadly, including, but not limited to, the legally protected categories. Diversity encompasses all that makes us unique, including the diversity of thought and perspective that accompanies our identity. Only then can we realize the full performance potential and harness the innovation that diversity offers. This is more than a legal or moral imperative, it is a business imperative for public service.

The difficult budget environment and the increased demand for innovation and efficiency present challenges to projecting and meeting future Federal human resources needs. Agencies can address these challenges with a diverse and inclusive workforce built by casting a broad net in the search for top talent, wherever it may be found. Agencies that

employ a workforce that draws from all corners of America – in filling positions from the Senior Executive Service (SES) to the entry level - will create a culture that fosters creativity and benefits from a greater return on investments in the workforce.

Moreover, research has demonstrated that, while organizations may have diversity in their midst, employees may not perceive that their social identities are appreciated and included in the workplace. For this reason, building inclusive workplaces ensures that all employees feel included, connected, and engaged.

A comprehensive strategic human capital plan is critical to the ability of all Federal agencies to carry out assigned missions and properly manage their diverse workforces. An important dimension of each agency's human capital plan is the ability to identify and close current and emerging skill gaps thereby enabling the agency to carry out its mission more cost-effectively. The U.S. Office of Personnel Management is working with the Chief Human Capital Officers (CHCO) Council and agencies to assess current and emerging skill gaps and develop strategies to close skill gaps in mission-critical occupations and skills areas that have the greatest impact on Government-Wide, and agency-specific, performance. The desired outcomes of this effort are: (1) increased proficiency levels in targeted skills areas through training, and (2) institutionalized processes for identifying and addressing skills gaps (Government-wide and agency-specific).

From 2008 to 2010, a study of hiring trends across Federal agencies revealed that information technology (IT) and cyber security professionals, nurses, contract and acquisition specialists, border patrol agents, and program analysts were among the top 15 most-hired positions within government. In each of these fields, research shows that recruiting with an emphasis on cultural, experiential, and cognitive diversity will improve agencies' prospects of having a workforce that is capable of addressing increasingly complex challenges more efficiently. Beyond traditional measures of diversity, seeking individuals with varying degree types; Science, Technology, Engineering and Mathematics (STEM) backgrounds; and professional experience will also benefit agencies and offices Government-Wide.

Creating a diverse Federal workforce that draws from all segments of society requires sustained commitment to ensuring a level playing field upon which applicants and employees may compete for opportunities within government. Sustaining the highest levels of integrity and professionalism through new outreach and recruiting efforts is paramount to achieving the strategic vision set out in this Plan.

Definitions of "Diversity" and "Inclusion"

We define workforce diversity as a collection of individual attributes that together help agencies pursue organizational objectives efficiently and effectively. These include, but are not limited to, characteristics such as national origin, language, race, color, disability, ethnicity, gender, age, religion, sexual orientation, gender identity, socioeconomic status, veteran status, and family structures. The concept also encompasses differences among people concerning where they are from and where they have lived and their differences of thought and life experiences.

We define inclusion as a culture that connects each employee to the organization; encourages collaboration, flexibility, and fairness; and leverages diversity throughout the organization so that all individuals are able to participate and contribute to their full potential.

Federal Government-Wide Diversity and Inclusion Vision Statement

Be the Nation's model employer by leveraging diversity and fostering inclusion to deliver the best public service.

Federal Government-Wide Diversity and Inclusion Mission Statement

Recruit, retain, and develop a diverse, high-performing Federal workforce that draws from all segments of society and values fairness, diversity and inclusion.

Goals:

1. Workforce Diversity. Recruit from a diverse, qualified group of potential applicants to secure a high-performing workforce drawn from all segments of American society.

2. Workplace Inclusion. Cultivate a culture that encourages collaboration, flexibility, and fairness to enable individuals to contribute to their full potential and further retention.

3. Sustainability. Develop structures and strategies to equip leaders with the ability to manage diversity, be accountable, measure results, refine approaches on the basis of such data, and institutionalize a culture of inclusion.

The three goals listed above are absolutely necessary for the successful growth of diversity and inclusion. Other characteristics of diversity and inclusion best practice plans, such as leadership, accountability, measurement, and training are components of, and integrated in, the three goals.

Goal 1: Workforce Diversity

Federal agencies shall recruit from a diverse, qualified group of potential applicants to secure a high-performing workforce drawn from all segments of American society.

Priority 1.1: Design and perform strategic outreach and recruitment to reach all segments of society.

Actions:

1. Collect and analyze applicant flow data.

2. Coordinate outreach and recruitment strategies to maximize ability to recruit from a diverse, broad spectrum of potential applicants, including a variety of geographic regions, academic sources, and professional disciplines.

3. Ensure that outreach and recruitment strategies designed to draw from all segments of society, including those who are underrepresented, are employed when using staffing flexibilities and alternative hiring authorities.

4. Develop strategic partnerships with a diverse range of colleges and universities, trade schools, apprentice programs, and affinity organizations from across the country.

5. Involve managers and supervisors in recruitment activities and take appropriate action to ensure that outreach efforts are effective in addressing barriers.

6. Review and ensure that student internship and fellowship programs have diverse pipelines to draw candidates from all segments of society.

Priority 1.2: Use strategic hiring initiatives for people with disabilities and for veterans, conduct barrier analysis, and support Special Emphasis Programs (SEPs), to promote diversity within the workforce.

Actions:

1. Review results of barrier analyses required under MD 715, develop action plans to eliminate any identified barrier(s), and coordinate implementation of action plans.

2. Use Schedule A hiring authority for people with disabilities and Veteran Hiring Authorities as part of strategy to recruit and retain a diverse workforce.

3. Support SEPs and appoint SEP Managers as advisors on hiring, retaining and promoting a diverse workforce.

Goal 2: Workplace Inclusion

Federal agencies shall cultivate a culture that encourages collaboration, flexibility, and fairness to enable individuals to contribute to their full potential and further retention.

Priority 2.1: Promote diversity and inclusion in leadership development programs.

Actions:

1. Review leadership development programs, determine whether they draw from all segments of the workforce, and develop strategies to eliminate barrier(s) where they exist.

2. Enhance mentoring programs within agencies for employees at all levels with an emphasis on aspiring Executive level employees.

3. Develop and implement a succession planning system for mission-critical occupations that includes broad outreach to a wide variety of potential leaders.

Priority 2.2: Cultivate a supportive, welcoming, inclusive and fair work environment.

Actions:

1. Use flexible workplace policies that encourage employee engagement and empowerment, including, but not limited to, telework, flexiplace, wellness programs, and other work-life flexibilities and benefits.

2. Support participation in employee affinity and resource groups and provide such groups with access to agency senior leadership.

3. Administer a robust orientation process for new Federal employees and new members of the SES to introduce them to the agency culture and to provide networking opportunities.

Goal 3: Sustainability

Federal agencies shall develop structures and strategies to equip leaders with the ability to manage diversity, be accountable, measure results, refine approaches on the basis of such data, and engender a culture of inclusion.

Priority 3.1: Demonstrate leadership accountability, commitment, and involvement regarding diversity and inclusion in the workplace.

Actions:

1. Affirm the value of workforce diversity and inclusion in each agency's strategic plan and include them in workforce planning activities.

2. Develop an agency-specific diversity and inclusion strategic plan, and implement that plan, through the collaboration and coordination of the Chief Human Capital Officer, the EEO Director, and the Director of Diversity (if any).

3. Ensure that all SES members, managers, supervisors and employees throughout the agency have performance measures in place to ensure the proper execution of the agency's strategic plan, which includes diversity and inclusion, and that all are trained regarding relevant legal requirements.

4. Develop and widely distribute a set of diversity and inclusion measures to track agency efforts and provide a mechanism for refining plans.

Priority 3.2: Fully and timely comply with all Federal laws, regulations, Executive orders, management directives, and policies related to promoting diversity and inclusion in the Federal workforce.

Actions:

1. Employ a diversity and inclusion dashboard with metrics as a tool for agency workforce planning and reporting.

2. Timely submit to the U.S. Office of Personnel Management (OPM) reports required by Federal laws, regulations, Executive orders, management directives, and policies. Where an agency fails to do so, OPM will issue a Diversity and Inclusion Improvement Notice and notify the President's Management Council (PMC) of the deficiency.

Priority 3.3: Involve employees as participants and responsible agents of diversity, mutual respect and inclusion.

Actions:

1. Create a formal diversity and inclusion council at each agency with visible leadership involvement.

2. Participate in, and contribute to, OPM's Diversity and Inclusion Best Practice Program, pursuant to Executive Order 13583.

3. Ensure all employees have access to diversity and inclusion training and education, including the proper implementation of the Agency-Specific Diversity and Inclusion Strategic Plan as well as relevant legal requirements.

Performance Management Overview & History

- Overview
- Setting the Stage
- Historical Chronology

Overview

Performance management is the systematic process by which an agency involves its employees, as individuals and members of a group, in improving organizational effectiveness in the accomplishment of agency mission and goals.

Employee performance management includes:

- planning work and setting expectations,
- continually monitoring performance,
- developing the capacity to perform,
- periodically rating performance in a summary fashion, and
- rewarding good performance.

The revisions made in 1995 to the Governmentwide performance appraisal and awards regulations support sound management principles. Great care was taken to ensure that the requirements those regulations establish would complement and not conflict with the kinds of activities and actions practiced in effective organizations as a matter of

course.

Additional background information on performance management can be found in the following articles:

- Chronology of Employee Performance Management in the Federal Government
- Setting the Stage for Performance Management Today

Planning

In an effective organization, work is planned out in advance. Planning means setting performance expectations and goals for groups and individuals to channel their efforts toward achieving organizational objectives. Getting employees involved in the planning process will help them understand the goals of the organization, what needs to be done, why it needs to be done, and how well it should be done.

The regulatory requirements for planning employees' performance include establishing the elements and standards of their performance appraisal plans. Performance elements and standards should be measurable, understandable, verifiable, equitable, and achievable. Through critical elements, employees are held accountable as individuals for work assignments or responsibilities. Employee performance plans should be flexible so that they can be adjusted for changing program objectives and work requirements. When used effectively, these plans can be beneficial working documents that are discussed often, and not merely paperwork that is filed in a drawer and seen only when ratings of record are required.

Monitoring

In an effective organization, assignments and projects are monitored continually. Monitoring well means consistently measuring performance and providing ongoing feedback to employees and work groups on their progress toward reaching their goals.

Regulatory requirements for monitoring performance include conducting progress reviews with employees where their performance is compared against their elements and standards. Ongoing monitoring provides the opportunity to check how well employees are meeting predetermined standards and to make changes to unrealistic or problematic standards. And by monitoring continually, unacceptable performance can be identified at any time during the appraisal period and assistance provided to address such performance rather than wait until the end of the period when summary rating levels are assigned.

Back to Top

Developing

In an effective organization, employee developmental needs are evaluated and addressed. Developing in this instance means increasing the capacity to perform through training, giving assignments that introduce new skills or higher levels of responsibility, improving work processes, or other methods. Providing employees with training and developmental opportunities encourages good performance, strengthens job-related skills and competencies, and helps employees keep up with changes in the workplace, such as the introduction of new technology.

Carrying out the processes of performance management provides an excellent opportunity to identify developmental needs. During planning and monitoring of work, deficiencies in performance become evident and can be addressed. Areas for improving good performance also stand out, and action can be taken to help successful employees improve even further.

Rating

From time to time, organizations find it useful to summarize employee performance. This can be helpful for looking at and comparing performance over time or among various employees. Organizations need to know who their best performers are.

Within the context of formal performance appraisal requirements, rating means evaluating employee or group performance against the elements and standards in an employee's performance plan and assigning a summary rating of record. The rating of record is assigned according to procedures included in the organization's appraisal program. It is based on work performed during an entire appraisal period. The rating of record has a bearing on various other personnel actions, such as granting within-grade pay increases and determining additional retention service credit in a reduction in force.

Note:

Although group performance may have an impact on an employee's summary rating, a rating of record is assigned only to an individual, not to a group.

Back to Top

Rewarding

In an effective organization, rewards are used well. Rewarding means recognizing employees, individually and as members of groups, for their performance and acknowledging their contributions to the agency's mission. A basic principle of effective management is that all behavior is controlled by its consequences. Those consequences can and should be both formal and informal and both positive and negative.

Good performance is recognized without waiting for nominations for formal awards to be solicited. Recognition is an ongoing, natural part of day-to-day experience. A lot of the actions that reward good performance like saying "Thank you" don't require a specific regulatory authority. Nonetheless, awards regulations provide a broad range of forms that more formal rewards can take, such as cash, time off, and many nonmonetary items. The regulations also cover a variety of contributions that can be rewarded, from suggestions to group accomplishments.

Managing Performance Effectively

In effective organizations, managers and employees have been practicing good performance management naturally all their lives, executing each key component process well. Goals are set and work is planned routinely. Progress toward those goals is measured and employees get feedback. High standards are set, but care is also taken to develop the skills needed to reach them. Formal and informal rewards are used to recognize the behavior and results that accomplish the mission. All five component processes working together and supporting each other achieve natural, effective performance management.

Public Law 88-352

AN ACT

July 2, 1964
[H. R. 7152]

To enforce the constitutional right to vote, to confer jurisdiction upon the district courts of the United States to provide injunctive relief against discrimination in public accommodations, to authorize the Attorney General to institute suits to protect constitutional rights in public facilities and public education, to extend the Commission on Civil Rights, to prevent discrimination in federally assisted programs, to establish a Commission on Equal Employment Opportunity, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Civil Rights Act of 1964".

Civil Rights Act of 1964.

TITLE I—VOTING RIGHTS

SEC. 101. Section 2004 of the Revised Statutes (42 U.S.C. 1971), as amended by section 131 of the Civil Rights Act of 1957 (71 Stat. 637), and as further amended by section 601 of the Civil Rights Act of 1960 (74 Stat. 90), is further amended as follows:

Operation and enforcement.

(a) Insert "1" after "(a)" in subsection (a) and add at the end of subsection (a) the following new paragraphs:

"(2) No person acting under color of law shall—

"(A) in determining whether any individual is qualified under State law or laws to vote in any Federal election, apply any standard, practice, or procedure different from the standards, practices, or procedures applied under such law or laws to other individuals within the same county, parish, or similar political subdivision who have been found by State officials to be qualified to vote;

Voting qualifications.

"(B) deny the right of any individual to vote in any Federal election because of an error or omission on any record or paper relating to any application, registration, or other act requisite to voting, if such error or omission is not material in determining whether such individual is qualified under State law to vote in such election; or

Registration, etc.

"(C) employ any literacy test as a qualification for voting in any Federal election unless (i) such test is administered to each individual and is conducted wholly in writing, and (ii) a certified copy of the test and of the answers given by the individual is furnished to him within twenty-five days of the submission of his request made within the period of time during which records and papers are required to be retained and preserved pursuant to title III of the Civil Rights Act of 1960 (42 U.S.C. 1974–74e; 74 Stat. 88): *Provided, however*, That the Attorney General may enter into agreements with appropriate State or local authorities that preparation, conduct, and maintenance of such tests in accordance with the provisions of applicable State or local law, including such special provisions as are necessary in the preparation, conduct, and maintenance of such tests for persons who are blind or otherwise physically handicapped, meet the purposes of this subparagraph and constitute compliance therewith.

Literacy tests. Records.

Attorney General. Agreements with State and local authorities.

"(3) For purposes of this subsection—

"(A) the term 'vote' shall have the same meaning as in subsection (e) of this section;

"Vote."

"(B) the phrase 'literacy test' includes any test of the ability to read, write, understand, or interpret any matter."

"Literacy test."

(b) Insert immediately following the period at the end of the first sentence of subsection (c) the following new sentence: "If in any such proceeding literacy is a relevant fact there shall be a rebuttable

presumption that any person who has not been adjudged an incompetent and who has completed the sixth grade in a public school in, or a private school accredited by, any State or territory, the District of Columbia, or the Commonwealth of Puerto Rico where instruction is carried on predominantly in the English language, possesses sufficient literacy, comprehension, and intelligence to vote in any Federal election."

(c) Add the following subsection "(f)" and designate the present subsection "(f)" as subsection "(g)":

"Federal election."

"(f) When used in subsection (a) or (c) of this section, the words 'Federal election' shall mean any general, special, or primary election held solely or in part for the purpose of electing or selecting any candidate for the office of President, Vice President, presidential elector, Member of the Senate, or Member of the House of Representatives."

(d) Add the following subsection "(h)":

Suits by Attorney General.

"(h) In any proceeding instituted by the United States in any district court of the United States under this section in which the Attorney General requests a finding of a pattern or practice of discrimination pursuant to subsection (e) of this section the Attorney General, at the time he files the complaint, or any defendant in the proceeding, within twenty days after service upon him of the complaint, may file with the clerk of such court a request that a court of three judges be convened to hear and determine the entire case. A copy of the request for a three-judge court shall be immediately furnished by such clerk to the chief judge of the circuit (or in his absence, the presiding circuit judge of the circuit) in which the case is pending. Upon receipt of the copy of such request it shall be the duty of the chief judge of the circuit or the presiding circuit judge, as the case may be, to designate immediately three judges in such circuit, of whom at least one shall be a circuit judge and another of whom shall be a district judge of the court in which the proceeding was instituted, to hear and determine such case, and it shall be the duty of the judges so designated to assign the case for hearing at the earliest practicable date, to participate in the hearing and determination thereof, and to cause the case to be in every way expedited. An appeal from the final judgment of such court will lie to the Supreme Court.

Appeals.

Designation of judges.

"In any proceeding brought under subsection (c) of this section to enforce subsection (b) of this section, or in the event neither the Attorney General nor any defendant files a request for a three-judge court in any proceeding authorized by this subsection, it shall be the duty of the chief judge of the district (or in his absence, the acting chief judge) in which the case is pending immediately to designate a judge in such district to hear and determine the case. In the event that no judge in the district is available to hear and determine the case, the chief judge of the district, or the acting chief judge, as the case may be, shall certify this fact to the chief judge of the circuit (or, in his absence, the acting chief judge) who shall then designate a district or circuit judge of the circuit to hear and determine the case.

"It shall be the duty of the judge designated pursuant to this section to assign the case for hearing at the earliest practicable date and to cause the case to be in every way expedited."

TITLE II—INJUNCTIVE RELIEF AGAINST DISCRIMINATION IN PLACES OF PUBLIC ACCOMMODATION

Equal access.

SEC. 201. (a) All persons shall be entitled to the full and equal enjoyment of the goods, services, facilities, privileges, advantages, and accommodations of any place of public accommodation, as defined in this section, without discrimination or segregation on the ground of race, color, religion, or national origin.

Establishments affecting interstate commerce.

(b) Each of the following establishments which serves the public is a place of public accommodation within the meaning of this title if its operations affect commerce, or if discrimination or segregation by it is supported by State action:

Lodgings.

(1) any inn, hotel, motel, or other establishment which provides lodging to transient guests, other than an establishment located within a building which contains not more than five rooms for rent or hire and which is actually occupied by the proprietor of such establishment as his residence;

Restaurants, etc.

(2) any restaurant, cafeteria, lunchroom, lunch counter, soda fountain, or other facility principally engaged in selling food for consumption on the premises, including, but not limited to, any such facility located on the premises of any retail establishment; or any gasoline station;

Theaters, stadiums, etc.

(3) any motion picture house, theater, concert hall, sports arena, stadium or other place of exhibition or entertainment; and

Other covered establishments.

(4) any establishment (A) (i) which is physically located within the premises of any establishment otherwise covered by this subsection, or (ii) within the premises of which is physically located any such covered establishment, and (B) which holds itself out as serving patrons of such covered establishment.

Operations affecting commerce criteria.

(c) The operations of an establishment affect commerce within the meaning of this title if (1) it is one of the establishments described in paragraph (1) of subsection (b); (2) in the case of an establishment described in paragraph (2) of subsection (b), it serves or offers to serve interstate travelers or a substantial portion of the food which it serves, or gasoline or other products which it sells, has moved in commerce; (3) in the case of an establishment described in paragraph (3) of subsection (b), it customarily presents films, performances, athletic teams, exhibitions, or other sources of entertainment which move in commerce; and (4) in the case of an establishment described in paragraph (4) of subsection (b), it is physically located within the premises of, or there is physically located within its premises, an establishment the operations of which affect commerce within the meaning of this subsection. For purposes of this section, "commerce" means travel, trade, traffic, commerce, transportation, or communication among the several States, or between the District of Columbia and any State, or between any foreign country or any territory or possession and any State or the District of Columbia, or between points in the same State but through any other State or the District of Columbia or a foreign country.

"Commerce."

Support by State action.

(d) Discrimination or segregation by an establishment is supported by State action within the meaning of this title if such discrimination or segregation (1) is carried on under color of any law, statute, ordinance, or regulation; or (2) is carried on under color of any custom or usage required or enforced by officials of the State or political subdivision thereof; or (3) is required by action of the State or political subdivision thereof.

Private establishments.

(e) The provisions of this title shall not apply to a private club or other establishment not in fact open to the public, except to the extent that the facilities of such establishment are made available

to the customers or patrons of an establishment within the scope of subsection (b).

Entitlement.

SEC. 202. All persons shall be entitled to be free, at any establishment or place, from discrimination or segregation of any kind on the ground of race, color, religion, or national origin, if such discrimination or segregation is or purports to be required by any law, statute, ordinance, regulation, rule, or order of a State or any agency or political subdivision thereof.

Interference.

SEC. 203. No person shall (a) withhold, deny, or attempt to withhold or deny, or deprive or attempt to deprive, any person of any right or privilege secured by section 201 or 202, or (b) intimidate, threaten, or coerce, or attempt to intimidate, threaten, or coerce any person with the purpose of interfering with any right or privilege secured by section 201 or 202, or (c) punish or attempt to punish any person for exercising or attempting to exercise any right or privilege secured by section 201 or 202.

Restraining orders, etc.

SEC. 204. (a) Whenever any person has engaged or there are reasonable grounds to believe that any person is about to engage in any act or practice prohibited by section 203, a civil action for preventive relief, including an application for a permanent or temporary injunction, restraining order, or other order, may be instituted by the person aggrieved and, upon timely application, the court may, in its discretion, permit the Attorney General to intervene in such civil action if he certifies that the case is of general public importance. Upon application by the complainant and in such circumstances as the court may deem just, the court may appoint an attorney for such complainant and may authorize the commencement of the civil action without the payment of fees, costs, or security.

Attorneys' fees.

(b) In any action commenced pursuant to this title, the court, in its discretion, may allow the prevailing party, other than the United States, a reasonable attorney's fee as part of the costs, and the United States shall be liable for costs the same as a private person.

Notification of State.

(c) In the case of an alleged act or practice prohibited by this title which occurs in a State, or political subdivision of a State, which has a State or local law prohibiting such act or practice and establishing or authorizing a State or local authority to grant or seek relief from such practice or to institute criminal proceedings with respect thereto upon receiving notice thereof, no civil action may be brought under subsection (a) before the expiration of thirty days after written notice of such alleged act or practice has been given to the appropriate State or local authority by registered mail or in person, provided that the court may stay proceedings in such civil action pending the termination of State or local enforcement proceedings.

Community Relations Service.

(d) In the case of an alleged act or practice prohibited by this title which occurs in a State, or political subdivision of a State, which has no State or local law prohibiting such act or practice, a civil action may be brought under subsection (a): *Provided*, That the court may refer the matter to the Community Relations Service established by title X of this Act for as long as the court believes there is a reasonable possibility of obtaining voluntary compliance, but for not more than sixty days: *Provided further*, That upon expiration of such sixty-day period, the court may extend such period for an additional period, not to exceed a cumulative total of one hundred and twenty days, if it believes there then exists a reasonable possibility of securing voluntary compliance.

Hearings and investigations.

SEC. 205. The Service is authorized to make a full investigation of any complaint referred to it by the court under section 204(d) and may hold such hearings with respect thereto as may be necessary.

The Service shall conduct any hearings with respect to any such complaint in executive session, and shall not release any testimony given therein except by agreement of all parties involved in the complaint with the permission of the court, and the Service shall endeavor to bring about a voluntary settlement between the parties.

Suits by Attorney General.

SEC. 206. (a) Whenever the Attorney General has reasonable cause to believe that any person or group of persons is engaged in a pattern or practice of resistance to the full enjoyment of any of the rights secured by this title, and that the pattern or practice is of such a nature and is intended to deny the full exercise of the rights herein described, the Attorney General may bring a civil action in the appropriate district court of the United States by filing with it a complaint (1) signed by him (or in his absence the Acting Attorney General), (2) setting forth facts pertaining to such pattern or practice, and (3) requesting such preventive relief, including an application for a permanent or temporary injunction, restraining order or other order against the person or persons responsible for such pattern or practice, as he deems necessary to insure the full enjoyment of the rights herein described.

(b) In any such proceeding the Attorney General may file with the clerk of such court a request that a court of three judges be convened to hear and determine the case. Such request by the Attorney General shall be accompanied by a certificate that, in his opinion, the case is of general public importance. A copy of the certificate and request for a three-judge court shall be immediately furnished by such clerk to the chief judge of the circuit (or in his absence, the presiding circuit judge of the circuit) in which the case is pending.

Designation of judges.

Upon receipt of the copy of such request it shall be the duty of the chief judge of the circuit or the presiding circuit judge, as the case may be, to designate immediately three judges in such circuit, of whom at least one shall be a circuit judge and another of whom shall be a district judge of the court in which the proceeding was instituted, to hear and determine such case, and it shall be the duty of the judges so designated to assign the case for hearing at the earliest practicable date, to participate in the hearing and determination thereof, and to cause the case to be in every way expedited.

Appeals.

An appeal from the final judgment of such court will lie to the Supreme Court.

In the event the Attorney General fails to file such a request in any such proceeding, it shall be the duty of the chief judge of the district (or in his absence, the acting chief judge) in which the case is pending immediately to designate a judge in such district to hear and determine the case. In the event that no judge in the district is available to hear and determine the case, the chief judge of the district, or the acting chief judge, as the case may be, shall certify this fact to the chief judge of the circuit (or in his absence, the acting chief judge) who shall then designate a district or circuit judge of the circuit to hear and determine the case.

It shall be the duty of the judge designated pursuant to this section to assign the case for hearing at the earliest practicable date and to cause the case to be in every way expedited.

District courts, jurisdiction.

SEC. 207. (a) The district courts of the United States shall have jurisdiction of proceedings instituted pursuant to this title and shall exercise the same without regard to whether the aggrieved party shall have exhausted any administrative or other remedies that may be provided by law.

Enforcement.

(b) The remedies provided in this title shall be the exclusive means of enforcing the rights based on this title, but nothing in this title shall preclude any individual or any State or local agency from asserting any right based on any other Federal or State law not inconsistent with this title, including any statute or ordinance requiring nondiscrimination in public establishments or accommodations, or from pursuing any remedy, civil or criminal, which may be available for the vindication or enforcement of such right.

TITLE III—DESEGREGATION OF PUBLIC FACILITIES

Suits by Attorney General.

SEC. 301. (a) Whenever the Attorney General receives a complaint in writing signed by an individual to the effect that he is being deprived of or threatened with the loss of his right to the equal protection of the laws, on account of his race, color, religion, or national origin, by being denied equal utilization of any public facility which is owned, operated, or managed by or on behalf of any State or subdivision thereof, other than a public school or public college as defined in section 401 of title IV hereof, and the Attorney General believes the complaint is meritorious and certifies that the signer or signers of such complaint are unable, in his judgment, to initiate and maintain appropriate legal proceedings for relief and that the institution of an action will materially further the orderly progress of desegregation in public facilities, the Attorney General is authorized to institute for or in the name of the United States a civil action in any appropriate district court of the United States against such parties and for such relief as may be appropriate, and such court shall have and shall exercise jurisdiction of proceedings instituted pursuant to this section. The Attorney General may implead as defendants such additional parties as are or become necessary to the grant of effective relief hereunder.

(b) The Attorney General may deem a person or persons unable to initiate and maintain appropriate legal proceedings within the meaning of subsection (a) of this section when such person or persons are unable, either directly or through other interested persons or organizations, to bear the expense of the litigation or to obtain effective legal representation; or whenever he is satisfied that the institution of such litigation would jeopardize the personal safety, employment, or economic standing of such person or persons, their families, or their property.

Costs, fees.

SEC. 302. In any action or proceeding under this title the United States shall be liable for costs, including a reasonable attorney's fee, the same as a private person.

SEC. 303. Nothing in this title shall affect adversely the right of any person to sue for or obtain relief in any court against discrimination in any facility covered by this title.

62 Stat. 749.

SEC. 304. A complaint as used in this title is a writing or document within the meaning of section 1001, title 18, United States Code.

TITLE IV—DESEGREGATION OF PUBLIC EDUCATION

DEFINITIONS

SEC. 401. As used in this title—

"Commissioner."

(a) "Commissioner" means the Commissioner of Education.

"Desegregation."

(b) "Desegregation" means the assignment of students to public schools and within such schools without regard to their race, color, religion, or national origin, but "desegregation" shall not mean the assignment of students to public schools in order to overcome racial imbalance.

(c) "Public school" means any elementary or secondary educational institution, and "public college" means any institution of higher education or any technical or vocational school above the secondary school level, provided that such public school or public college is operated by a State, subdivision of a State, or governmental agency within a State, or operated wholly or predominantly from or through the use of governmental funds or property, or funds or property derived from a governmental source. "Public school."

(d) "School board" means any agency or agencies which administer a system of one or more public schools and any other agency which is responsible for the assignment of students to or within such system. "School board."

SURVEY AND REPORT OF EDUCATIONAL OPPORTUNITIES

SEC. 402. The Commissioner shall conduct a survey and make a report to the President and the Congress, within two years of the enactment of this title, concerning the lack of availability of equal educational opportunities for individuals by reason of race, color, religion, or national origin in public educational institutions at all levels in the United States, its territories and possessions, and the District of Columbia. Report to the President and Congress.

TECHNICAL ASSISTANCE

SEC. 403. The Commissioner is authorized, upon the application of any school board, State, municipality, school district, or other governmental unit legally responsible for operating a public school or schools, to render technical assistance to such applicant in the preparation, adoption, and implementation of plans for the desegregation of public schools. Such technical assistance may, among other activities, include making available to such agencies information regarding effective methods of coping with special educational problems occasioned by desegregation, and making available to such agencies personnel of the Office of Education or other persons specially equipped to advise and assist them in coping with such problems.

TRAINING INSTITUTES

SEC. 404. The Commissioner is authorized to arrange, through grants or contracts, with institutions of higher education for the operation of short-term or regular session institutes for special training designed to improve the ability of teachers, supervisors, counselors, and other elementary or secondary school personnel to deal effectively with special educational problems occasioned by desegregation. Individuals who attend such an institute on a full-time basis may be paid stipends for the period of their attendance at such institute in amounts specified by the Commissioner in regulations, including allowances for travel to attend such institute. Stipends, etc.

GRANTS

SEC. 405. (a) The Commissioner is authorized, upon application of a school board, to make grants to such board to pay, in whole or in part, the cost of—

(1) giving to teachers and other school personnel inservice training in dealing with problems incident to desegregation, and

(2) employing specialists to advise in problems incident to desegregation.

(b) In determining whether to make a grant, and in fixing the amount thereof and the terms and conditions on which it will be made, the Commissioner shall take into consideration the amount available Conditions.

for grants under this section and the other applications which are pending before him; the financial condition of the applicant and the other resources available to it; the nature, extent, and gravity of its problems incident to desegregation; and such other factors as he finds relevant.

PAYMENTS

SEC. 406. Payments pursuant to a grant or contract under this title may be made (after necessary adjustments on account of previously made overpayments or underpayments) in advance or by way of reimbursement, and in such installments, as the Commissioner may determine.

SUITS BY THE ATTORNEY GENERAL

SEC. 407. (a) Whenever the Attorney General receives a complaint in writing—

(1) signed by a parent or group of parents to the effect that his or their minor children, as members of a class of persons similarly situated, are being deprived by a school board of the equal protection of the laws, or

(2) signed by an individual, or his parent, to the effect that he has been denied admission to or not permitted to continue in attendance at a public college by reason of race, color, religion, or national origin,

and the Attorney General believes the complaint is meritorious and certifies that the signer or signers of such complaint are unable, in his judgment, to initiate and maintain appropriate legal proceedings for relief and that the institution of an action will materially further the orderly achievement of desegregation in public education, the Attorney General is authorized, after giving notice of such complaint to the appropriate school board or college authority and after certifying that he is satisfied that such board or authority has had a reasonable time to adjust the conditions alleged in such complaint, to institute for or in the name of the United States a civil action in any appropriate district court of the United States against such parties and for such relief as may be appropriate, and such court shall have and shall exercise jurisdiction of proceedings instituted pursuant to this section, provided that nothing herein shall empower any official or court of the United States to issue any order seeking to achieve a racial balance in any school by requiring the transportation of pupils or students from one school to another or one school district to another in order to achieve such racial balance, or otherwise enlarge the existing power of the court to insure compliance with constitutional standards. The Attorney General may implead as defendants such additional parties as are or become necessary to the grant of effective relief hereunder.

Persons unable to initiate suits.

(b) The Attorney General may deem a person or persons unable to initiate and maintain appropriate legal proceedings within the meaning of subsection (a) of this section when such person or persons are unable, either directly or through other interested persons or organizations, to bear the expense of the litigation or to obtain effective legal representation; or whenever he is satisfied that the institution of such litigation would jeopardize the personal safety, employment, or economic standing of such person or persons, their families, or their property.

"Parent."

"Complaint."

62 Stat. 749.

(c) The term "parent" as used in this section includes any person standing in loco parentis. A "complaint" as used in this section is a writing or document within the meaning of section 1001, title 18, United States Code.

SEC. 408. In any action or proceeding under this title the United States shall be liable for costs the same as a private person.

SEC. 409. Nothing in this title shall affect adversely the right of any person to sue for or obtain relief in any court against discrimination in public education.

SEC. 410. Nothing in this title shall prohibit classification and assignment for reasons other than race, color, religion, or national origin.

TITLE V—COMMISSION ON CIVIL RIGHTS

SEC. 501. Section 102 of the Civil Rights Act of 1957 (42 U.S.C. 1975a; 71 Stat. 634) is amended to read as follows:

"RULES OF PROCEDURE OF THE COMMISSION HEARINGS

"SEC. 102. (a) At least thirty days prior to the commencement of any hearing, the Commission shall cause to be published in the Federal Register notice of the date on which such hearing is to commence, the place at which it is to be held and the subject of the hearing. The Chairman, or one designated by him to act as Chairman at a hearing of the Commission, shall announce in an opening statement the subject of the hearing. Publication in Federal Register.

"(b) A copy of the Commission's rules shall be made available to any witness before the Commission, and a witness compelled to appear before the Commission or required to produce written or other matter shall be served with a copy of the Commission's rules at the time of service of the subpena.

"(c) Any person compelled to appear in person before the Commission shall be accorded the right to be accompanied and advised by counsel, who shall have the right to subject his client to reasonable examination, and to make objections on the record and to argue briefly the basis for such objections. The Commission shall proceed with reasonable dispatch to conclude any hearing in which it is engaged. Due regard shall be had for the convenience and necessity of witnesses. Right of counsel.

"(d) The Chairman or Acting Chairman may punish breaches of order and decorum by censure and exclusion from the hearings.

"(e) If the Commission determines that evidence or testimony at any hearing may tend to defame, degrade, or incriminate any person, it shall receive such evidence or testimony or summary of such evidence or testimony in executive session. The Commission shall afford any person defamed, degraded, or incriminated by such evidence or testimony an opportunity to appear and be heard in executive session, with a reasonable number of additional witnesses requested by him, before deciding to use such evidence or testimony. In the event the Commission determines to release or use such evidence or testimony in such manner as to reveal publicly the identity of the person defamed, degraded, or incriminated, such evidence or testimony, prior to such public release or use, shall be given at a public session, and the Commission shall afford such person an opportunity to appear as a voluntary witness or to file a sworn statement in his behalf and to submit brief and pertinent sworn statements of others. The Commission shall receive and dispose of requests from such person to subpena additional witnesses. Executive sessions.

"(f) Except as provided in sections 102 and 105(f) of this Act, the Chairman shall receive and the Commission shall dispose of requests to subpena additional witnesses.

"(g) No evidence or testimony or summary of evidence or testimony taken in executive session may be released or used in public Testimony, release restrictions.

sessions without the consent of the Commission. Whoever releases or uses in public without the consent of the Commission such evidence or testimony taken in executive session shall be fined not more than $1,000, or imprisoned for not more than one year.

"(h) In the discretion of the Commission, witnesses may submit brief and pertinent sworn statements in writing for inclusion in the record. The Commission shall determine the pertinency of testimony and evidence adduced at its hearings.

Transcript copies.

"(i) Every person who submits data or evidence shall be entitled to retain or, on payment of lawfully prescribed costs, procure a copy or transcript thereof, except that a witness in a hearing held in executive session may for good cause be limited to inspection of the official transcript of his testimony. Transcript copies of public sessions may be obtained by the public upon the payment of the cost thereof. An accurate transcript shall be made of the testimony of all witnesses at all hearings, either public or executive sessions, of the Commission or of any subcommittee thereof.

Witness fees.

"(j) A witness attending any session of the Commission shall receive $6 for each day's attendance and for the time necessarily occupied in going to and returning from the same, and 10 cents per mile for going from and returning to his place of residence. Witnesses who attend at points so far removed from their respective residences as to prohibit return thereto from day to day shall be entitled to an additional allowance of $10 per day for expenses of subsistence, including the time necessarily occupied in going to and returning from the place of attendance. Mileage payments shall be tendered to the witness upon service of a subpena issued on behalf of the Commission or any subcommittee thereof.

Subpena of witnesses.

"(k) The Commission shall not issue any subpena for the attendance and testimony of witnesses or for the production of written or other matter which would require the presence of the party subpenaed at a hearing to be held outside of the State wherein the witness is found or resides or is domiciled or transacts business, or has appointed an agent for receipt of service of process except that, in any event, the Commission may issue subpenas for the attendance and testimony of witnesses and the production of written or other matter at a hearing held within fifty miles of the place where the witness is found or resides or is domiciled or transacts business or has appointed an agent for receipt of service of process.

Organization statement, etc. Publication in Federal Register.

"(l) The Commission shall separately state and currently publish in the Federal Register (1) descriptions of its central and field organization including the established places at which, and methods whereby, the public may secure information or make requests; (2) statements of the general course and method by which its functions are channeled and determined, and (3) rules adopted as authorized by law. No person shall in any manner be subject to or required to resort to rules, organization, or procedure not so published."

SEC. 502. Section 103(a) of the Civil Rights Act of 1957 (42 U.S.C. 1975b(a); 71 Stat. 634) is amended to read as follows:

Payments to members.

"SEC. 103. (a) Each member of the Commission who is not otherwise in the service of the Government of the United States shall receive the sum of $75 per day for each day spent in the work of the Commission, shall be paid actual travel expenses, and per diem in lieu of subsistence expenses when away from his usual place of residence, in accordance with section 5 of the Administrative Expenses Act of 1946, as amended (5 U.S.C. 73b-2; 60 Stat. 808)."

75 Stat. 339, 340.

SEC. 503. Section 103(b) of the Civil Rights Act of 1957 (42 U.S.C. 1975b(b); 71 Stat. 634) is amended to read as follows:

"(b) Each member of the Commission who is otherwise in the service of the Government of the United States shall serve without compensation in addition to that received for such other service, but while engaged in the work of the Commission shall be paid actual travel expenses, and per diem in lieu of subsistence expenses when away from his usual place of residence, in accordance with the provisions of the Travel Expenses Act of 1949, as amended (5 U.S.C. 835–42; 63 Stat. 166)." 75 Stat. 339, 340.

SEC. 504. (a) Section 104(a) of the Civil Rights Act of 1957 (42 U.S.C. 1975c(a); 71 Stat. 635), as amended, is further amended to read as follows:

"DUTIES OF THE COMMISSION

"SEC. 104. (a) The Commission shall—

"(1) investigate allegations in writing under oath or affirmation that certain citizens of the United States are being deprived of their right to vote and have that vote counted by reason of their color, race, religion, or national origin; which writing, under oath or affirmation, shall set forth the facts upon which such belief or beliefs are based;

"(2) study and collect information concerning legal developments constituting a denial of equal protection of the laws under the Constitution because of race, color, religion or national origin or in the administration of justice;

"(3) appraise the laws and policies of the Federal Government with respect to denials of equal protection of the laws under the Constitution because of race, color, religion or national origin or in the administration of justice;

"(4) serve as a national clearinghouse for information in respect to denials of equal protection of the laws because of race, color, religion or national origin, including but not limited to the fields of voting, education, housing, employment, the use of public facilities, and transportation, or in the administration of justice;

"(5) investigate allegations, made in writing and under oath or affirmation, that citizens of the United States are unlawfully being accorded or denied the right to vote, or to have their votes properly counted, in any election of presidential electors, Members of the United States Senate, or of the House of Representatives, as a result of any patterns or practice of fraud or discrimination in the conduct of such election; and

"(6) Nothing in this or any other Act shall be construed as authorizing the Commission, its Advisory Committees, or any person under its supervision or control to inquire into or investigate any membership practices or internal operations of any fraternal organization, any college or university fraternity or sorority, any private club or any religious organization."

(b) Section 104(b) of the Civil Rights Act of 1957 (42 U.S.C. 1975c(b); 71 Stat. 635), as amended, is further amended by striking out the present subsection "(b)" and by substituting therefor: 77 Stat. 271.

"(b) The Commission shall submit interim reports to the President and to the Congress at such times as the Commission, the Congress or the President shall deem desirable, and shall submit to the President and to the Congress a final report of its activities, findings, and recommendations not later than January 31, 1968." Reports to the President and Congress.

SEC. 505. Section 105(a) of the Civil Rights Act of 1957 (42 U.S.C. 1975d(a); 71 Stat. 636) is amended by striking out in the last sentence thereof "$50 per diem" and inserting in lieu thereof "$75 per diem."

Powers.

SEC. 506. Section 105(f) and section 105(g) of the Civil Rights Act of 1957 (42 U.S.C. 1975d (f) and (g); 71 Stat. 636) are amended to read as follows:

"(f) The Commission, or on the authorization of the Commission any subcommittee of two or more members, at least one of whom shall be of each major political party, may, for the purpose of carrying out the provisions of this Act, hold such hearings and act at such times and places as the Commission or such authorized subcommittee may deem advisable. Subpenas for the attendance and testimony of witnesses or the production of written or other matter may be issued in accordance with the rules of the Commission as contained in section 102 (j) and (k) of this Act, over the signature of the Chairman of the Commission or of such subcommittee, and may be served by any person designated by such Chairman. The holding of hearings by the Commission, or the appointment of a subcommittee to hold hearings pursuant to this subparagraph, must be approved by a majority of the Commission, or by a majority of the members present at a meeting at which at least a quorum of four members is present.

Ante, p. 250.

"(g) In case of contumacy or refusal to obey a subpena, any district court of the United States or the United States court of any territory or possession, or the District Court of the United States for the District of Columbia, within the jurisdiction of which the inquiry is carried on or within the jurisdiction of which said person guilty of contumacy or refusal to obey is found or resides or is domiciled or transacts business, or has appointed an agent for receipt of service of process, upon application by the Attorney General of the United States shall have jurisdiction to issue to such person an order requiring such person to appear before the Commission or a subcommittee thereof, there to produce pertinent, relevant and nonprivileged evidence if so ordered, or there to give testimony touching the matter under investigation; and any failure to obey such order of the court may be punished by said court as a contempt thereof."

SEC. 507. Section 105 of the Civil Rights Act of 1957 (42 U.S.C. 1975d; 71 Stat. 636), as amended by section 401 of the Civil Rights Act of 1960 (42 U.S.C. 1975d(h); 74 Stat. 89), is further amended by adding a new subsection at the end to read as follows:

"(i) The Commission shall have the power to make such rules and regulations as are necessary to carry out the purposes of this Act."

TITLE VI—NONDISCRIMINATION IN FEDERALLY ASSISTED PROGRAMS

SEC. 601. No person in the United States shall, on the ground of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance.

Rules governing grants, loans, and contracts.

SEC. 602. Each Federal department and agency which is empowered to extend Federal financial assistance to any program or activity, by way of grant, loan, or contract other than a contract of insurance or guaranty, is authorized and directed to effectuate the provisions of section 601 with respect to such program or activity by issuing rules, regulations, or orders of general applicability which shall be consistent with achievement of the objectives of the statute authorizing the financial assistance in connection with which the action is taken.

Approval by President.

No such rule, regulation, or order shall become effective unless and until approved by the President. Compliance with any requirement adopted pursuant to this section may be effected (1) by the termination of or refusal to grant or to continue assistance under such program or activity to any recipient as to whom there has been an express find-

ing on the record, after opportunity for hearing, of a failure to comply with such requirement, but such termination or refusal shall be limited to the particular political entity, or part thereof, or other recipient as to whom such a finding has been made and, shall be limited in its effect to the particular program, or part thereof, in which such noncompliance has been so found, or (2) by any other means authorized by law: *Provided, however*, That no such action shall be taken until the department or agency concerned has advised the appropriate person or persons of the failure to comply with the requirement and has determined that compliance cannot be secured by voluntary means. In the case of any action terminating, or refusing to grant or continue, assistance because of failure to comply with a requirement imposed pursuant to this section, the head of the Federal department or agency shall file with the committees of the House and Senate having legislative jurisdiction over the program or activity involved a full written report of the circumstances and the grounds for such action. No such action shall become effective until thirty days have elapsed after the filing of such report.

Termination.

SEC. 603. Any department or agency action taken pursuant to section 602 shall be subject to such judicial review as may otherwise be provided by law for similar action taken by such department or agency on other grounds. In the case of action, not otherwise subject to judicial review, terminating or refusing to grant or to continue financial assistance upon a finding of failure to comply with any requirement imposed pursuant to section 602, any person aggrieved (including any State or political subdivision thereof and any agency of either) may obtain judicial review of such action in accordance with section 10 of the Administrative Procedure Act, and such action shall not be deemed committed to unreviewable agency discretion within the meaning of that section.

Judicial review.

60 Stat. 243.
5 USC 1009.

SEC. 604. Nothing contained in this title shall be construed to authorize action under this title by any department or agency with respect to any employment practice of any employer, employment agency, or labor organization except where a primary objective of the Federal financial assistance is to provide employment.

SEC. 605. Nothing in this title shall add to or detract from any existing authority with respect to any program or activity under which Federal financial assistance is extended by way of a contract of insurance or guaranty.

TITLE VII—EQUAL EMPLOYMENT OPPORTUNITY

DEFINITIONS

SEC. 701. For the purposes of this title—

(a) The term "person" includes one or more individuals, labor unions, partnerships, associations, corporations, legal representatives, mutual companies, joint-stock companies, trusts, unincorporated organizations, trustees, trustees in bankruptcy, or receivers.

"Person."

(b) The term "employer" means a person engaged in an industry affecting commerce who has twenty-five or more employees for each working day in each of twenty or more calendar weeks in the current or preceding calendar year, and any agent of such a person, but such term does not include (1) the United States, a corporation wholly owned by the Government of the United States, an Indian tribe, or a State or political subdivision thereof, (2) a bona fide private membership club (other than a labor organization) which is exempt from taxation under section 501(c) of the Internal Revenue Code of 1954: *Provided*, That during the first year after the effective date prescribed in subsection (a) of section 716, persons having fewer than one hun-

"Employer."

68A Stat. 163; 74 Stat. 534.
26 USC 501.

dred employees (and their agents) shall not be considered employers, and, during the second year after such date, persons having fewer than seventy-five employees (and their agents) shall not be considered employers, and, during the third year after such date, persons having fewer than fifty employees (and their agents) shall not be considered employers: *Provided further*, That it shall be the policy of the United States to insure equal employment opportunities for Federal employees without discrimination because of race, color, religion, sex or national origin and the President shall utilize his existing authority to effectuate this policy.

"Employment agency."

(c) The term "employment agency" means any person regularly undertaking with or without compensation to procure employees for an employer or to procure for employees opportunities to work for an employer and includes an agent of such a person; but shall not include an agency of the United States, or an agency of a State or political subdivision of a State, except that such term shall include the United States Employment Service and the system of State and local employment services receiving Federal assistance.

"Labor organization."

(d) The term "labor organization" means a labor organization engaged in an industry affecting commerce, and any agent of such an organization, and includes any organization of any kind, any agency, or employee representation committee, group, association, or plan so engaged in which employees participate and which exists for the purpose, in whole or in part, of dealing with employers concerning grievances, labor disputes, wages, rates of pay, hours, or other terms or conditions of employment, and any conference, general committee, joint or system board, or joint council so engaged which is subordinate to a national or international labor organization.

(e) A labor organization shall be deemed to be engaged in an industry affecting commerce if (1) it maintains or operates a hiring hall or hiring office which procures employees for an employer or procures for employees opportunities to work for an employer, or (2) the number of its members (or, where it is a labor organization composed of other labor organizations or their representatives, if the aggregate number of the members of such other labor organization) is (A) one hundred or more during the first year after the effective date prescribed in subsection (a) of section 716, (B) seventy-five or more during the second year after such date or fifty or more during the third year, or (C) twenty-five or more thereafter, and such labor organization—

61 Stat. 136.
29 USC 167.
44 Stat. 577;
49 Stat. 1189.
45 USC 151.

(1) is the certified representative of employees under the provisions of the National Labor Relations Act, as amended, or the Railway Labor Act, as amended;

(2) although not certified, is a national or international labor organization or a local labor organization recognized or acting as the representative of employees of an employer or employers engaged in an industry affecting commerce; or

(3) has chartered a local labor organization or subsidiary body which is representing or actively seeking to represent employees of employers within the meaning of paragraph (1) or (2); or

(4) has been chartered by a labor organization representing or actively seeking to represent employees within the meaning of paragraph (1) or (2) as the local or subordinate body through which such employees may enjoy membership or become affiliated with such labor organization; or

(5) is a conference, general committee, joint or system board, or joint council subordinate to a national or international labor organization, which includes a labor organization engaged in an

industry affecting commerce within the meaning of any of the preceding paragraphs of this subsection.

"Employee." (f) The term "employee" means an individual employed by an employer.

"Commerce." (g) The term "commerce" means trade, traffic, commerce, transportation, transmission, or communication among the several States; or between a State and any place outside thereof; or within the District of Columbia, or a possession of the United States; or between points in the same State but through a point outside thereof.

"Industry affecting commerce." (h) The term "industry affecting commerce" means any activity, business, or industry in commerce or in which a labor dispute would hinder or obstruct commerce or the free flow of commerce and includes any activity or industry "affecting commerce" within the meaning of the Labor-Management Reporting and Disclosure Act of 1959.

73 Stat. 519. 29 USC 401 note.

"State." (i) The term "State" includes a State of the United States, the District of Columbia, Puerto Rico, the Virgin Islands, American Samoa, Guam, Wake Island, the Canal Zone, and Outer Continental Shelf lands defined in the Outer Continental Shelf Lands Act.

67 Stat. 462. 43 USC 1331 note.

EXEMPTION

Religious organizations, etc. SEC. 702. This title shall not apply to an employer with respect to the employment of aliens outside any State, or to a religious corporation, association, or society with respect to the employment of individuals of a particular religion to perform work connected with the carrying on by such corporation, association, or society of its religious activities or to an educational institution with respect to the employment of individuals to perform work connected with the educational activities of such institution.

DISCRIMINATION BECAUSE OF RACE, COLOR, RELIGION, SEX, OR NATIONAL ORIGIN

Unlawful practices. SEC. 703. (a) It shall be an unlawful employment practice for an employer—

Employers. (1) to fail or refuse to hire or to discharge any individual, or otherwise to discriminate against any individual with respect to his compensation, terms, conditions, or privileges of employment, because of such individual's race, color, religion, sex, or national origin; or

(2) to limit, segregate, or classify his employees in any way which would deprive or tend to deprive any individual of employment opportunities or otherwise adversely affect his status as an employee, because of such individual's race, color, religion, sex, or national origin.

Employment agency. (b) It shall be an unlawful employment practice for an employment agency to fail or refuse to refer for employment, or otherwise to discriminate against, any individual because of his race, color, religion, sex, or national origin, or to classify or refer for employment any individual on the basis of his race, color, religion, sex, or national origin.

Labor organization. (c) It shall be an unlawful employment practice for a labor organization—

(1) to exclude or to expel from its membership, or otherwise to discriminate against, any individual because of his race, color, religion, sex, or national origin;

(2) to limit, segregate, or classify its membership, or to classify or fail or refuse to refer for employment any individual, in any

way which would deprive or tend to deprive any individual of employment opportunities, or would limit such employment opportunities or otherwise adversely affect his status as an employee or as an applicant for employment, because of such individual's race, color, religion, sex, or national origin; or

(3) to cause or attempt to cause an employer to discriminate against an individual in violation of this section.

Training programs.

(d) It shall be an unlawful employment practice for any employer, labor organization, or joint labor-management committee controlling apprenticeship or other training or retraining, including on-the-job training programs to discriminate against any individual because of his race, color, religion, sex, or national origin in admission to, or employment in, any program established to provide apprenticeship or other training.

Exceptions.

(e) Notwithstanding any other provision of this title, (1) it shall not be an unlawful employment practice for an employer to hire and employ employees, for an employment agency to classify, or refer for employment any individual, for a labor organization to classify its membership or to classify or refer for employment any individual, or for an employer, labor organization, or joint labor-management committee controlling apprenticeship or other training or retraining programs to admit or employ any individual in any such program, on the basis of his religion, sex, or national origin in those certain instances where religion, sex, or national origin is a bona fide occupational qualification reasonably necessary to the normal operation of that particular business or enterprise, and (2) it shall not be an unlawful employment practice for a school, college, university, or other educational institution or institution of learning to hire and employ employees of a particular religion if such school, college, university, or other educational institution or institution of learning is, in whole or in substantial part, owned, supported, controlled, or managed by a particular religion or by a particular religious corporation, association, or society, or if the curriculum of such school, college, university, or other educational institution or institution of learning is directed toward the propagation of a particular religion.

(f) As used in this title, the phrase "unlawful employment practice" shall not be deemed to include any action or measure taken by an employer, labor organization, joint labor-management committee, or employment agency with respect to an individual who is a member of the Communist Party of the United States or of any other organization required to register as a Communist-action or Communist-front organization by final order of the Subversive Activities Control Board pursuant to the Subversive Activities Control Act of 1950.

64 Stat. 987. 50 USC 781 note.

(g) Notwithstanding any other provision of this title, it shall not be an unlawful employment practice for an employer to fail or refuse to hire and employ any individual for any position, for an employer to discharge any individual from any position, or for an employment agency to fail or refuse to refer any individual for employment in any position, or for a labor organization to fail or refuse to refer any individual for employment in any position, if—

(1) the occupancy of such position, or access to the premises in or upon which any part of the duties of such position is performed or is to be performed, is subject to any requirement imposed in the interest of the national security of the United States under any security program in effect pursuant to or administered under any statute of the United States or any Executive order of the President; and

(2) such individual has not fulfilled or has ceased to fulfill that requirement.

(h) Notwithstanding any other provision of this title, it shall not be an unlawful employment practice for an employer to apply different standards of compensation, or different terms, conditions, or privileges of employment pursuant to a bona fide seniority or merit system, or a system which measures earnings by quantity or quality of production or to employees who work in different locations, provided that such differences are not the result of an intention to discriminate because of race, color, religion, sex, or national origin, nor shall it be an unlawful employment practice for an employer to give and to act upon the results of any professionally developed ability test provided that such test, its administration or action upon the results is not designed, intended or used to discriminate because of race, color, religion, sex or national origin. It shall not be an unlawful employment practice under this title for any employer to differentiate upon the basis of sex in determining the amount of the wages or compensation paid or to be paid to employees of such employer if such differentiation is authorized by the provisions of section 6(d) of the Fair Labor Standards Act of 1938, as amended (29 U.S.C. 206(d)).

77 Stat. 56.
29 USC 206.

(i) Nothing contained in this title shall apply to any business or enterprise on or near an Indian reservation with respect to any publicly announced employment practice of such business or enterprise under which a preferential treatment is given to any individual because he is an Indian living on or near a reservation.

Indians.

(j) Nothing contained in this title shall be interpreted to require any employer, employment agency, labor organization, or joint labor-management committee subject to this title to grant preferential treatment to any individual or to any group because of the race, color, religion, sex, or national origin of such individual or group on account of an imbalance which may exist with respect to the total number or percentage of persons of any race, color, religion, sex, or national origin employed by any employer, referred or classified for employment by any employment agency or labor organization, admitted to membership or classified by any labor organization, or admitted to, or employed in, any apprenticeship or other training program, in comparison with the total number or percentage of persons of such race, color, religion, sex, or national origin in any community, State, section, or other area, or in the available work force in any community, State, section, or other area.

Preferential treatment.

OTHER UNLAWFUL EMPLOYMENT PRACTICES

SEC. 704. (a) It shall be an unlawful employment practice for an employer to discriminate against any of his employees or applicants for employment, for an employment agency to discriminate against any individual, or for a labor organization to discriminate against any member thereof or applicant for membership, because he has opposed any practice made an unlawful employment practice by this title, or because he has made a charge, testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under this title.

(b) It shall be an unlawful employment practice for an employer, labor organization, or employment agency to print or publish or cause to be printed or published any notice or advertisement relating to employment by such an employer or membership in or any classification or referral for employment by such a labor organization, or relating to any classification or referral for employment by such an employment agency, indicating any preference, limitation, specification, or discrimination, based on race, color, religion, sex, or national origin, except that such a notice or advertisement may indicate a preference, limitation, specification, or discrimination based on reli-

gion, sex, or national origin when religion, sex, or national origin is a bona fide occupational qualification for employment.

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

Establishment.

SEC. 705. (a) There is hereby created a Commission to be known as the Equal Employment Opportunity Commission, which shall be composed of five members, not more than three of whom shall be members of the same political party, who shall be appointed by the President by and with the advice and consent of the Senate. One of the original members shall be appointed for a term of one year, one for a term of two years, one for a term of three years, one for a term of four years, and one for a term of five years, beginning from the date of enactment of this title, but their successors shall be appointed for terms of five years each, except that any individual chosen to fill a vacancy shall be appointed only for the unexpired term of the member whom he shall succeed. The President shall designate one member to serve as Chairman of the Commission, and one member to serve as Vice Chairman. The Chairman shall be responsible on behalf of the Commission for the administrative operations of the Commission, and shall appoint, in accordance with the civil service laws, such officers, agents, attorneys, and employees as it deems necessary to assist it in the performance of its functions and to fix their compensation in accordance with the Classification Act of 1949, as amended. The Vice Chairman shall act as Chairman in the absence or disability of the Chairman or in the event of a vacancy in that office.

Term of office.

Post, p. 400.
5 USC 1071 note.

(b) A vacancy in the Commission shall not impair the right of the remaining members to exercise all the powers of the Commission and three members thereof shall constitute a quorum.

(c) The Commission shall have an official seal which shall be judicially noticed.

Reports to the President and Congress.

(d) The Commission shall at the close of each fiscal year report to the Congress and to the President concerning the action it has taken; the names, salaries, and duties of all individuals in its employ and the moneys it has disbursed; and shall make such further reports on the cause of and means of eliminating discrimination and such recommendations for further legislation as may appear desirable.

70 Stat. 736.
5 USC 2201 note.

(e) The Federal Executive Pay Act of 1956, as amended (5 U.S.C. 2201–2209), is further amended—

(1) by adding to section 105 thereof (5 U.S.C. 2204) the following clause:

"(32) Chairman, Equal Employment Opportunity Commission"; and

70 Stat. 737.
5 USC 2205.

(2) by adding to clause (45) of section 106(a) thereof (5 U.S.C. 2205(a)) the following: "Equal Employment Opportunity Commission (4)."

(f) The principal office of the Commission shall be in or near the District of Columbia, but it may meet or exercise any or all its powers at any other place. The Commission may establish such regional or State offices as it deems necessary to accomplish the purpose of this title.

Powers.

(g) The Commission shall have power—

(1) to cooperate with and, with their consent, utilize regional, State, local, and other agencies, both public and private, and individuals;

(2) to pay to witnesses whose depositions are taken or who are summoned before the Commission or any of its agents the same witness and mileage fees as are paid to witnesses in the courts of the United States;

(3) to furnish to persons subject to this title such technical assistance as they may request to further their compliance with this title or an order issued thereunder;

(4) upon the request of (i) any employer, whose employees or some of them, or (ii) any labor organization, whose members or some of them, refuse or threaten to refuse to cooperate in effectuating the provisions of this title, to assist in such effectuation by conciliation or such other remedial action as is provided by this title;

(5) to make such technical studies as are appropriate to effectuate the purposes and policies of this title and to make the results of such studies available to the public;

(6) to refer matters to the Attorney General with recommendations for intervention in a civil action brought by an aggrieved party under section 706, or for the institution of a civil action by the Attorney General under section 707, and to advise, consult, and assist the Attorney General on such matters.

(h) Attorneys appointed under this section may, at the direction of the Commission, appear for and represent the Commission in any case in court.

(i) The Commission shall, in any of its educational or promotional activities, cooperate with other departments and agencies in the performance of such educational and promotional activities.

(j) All officers, agents, attorneys, and employees of the Commission shall be subject to the provisions of section 9 of the Act of August 2, 1939, as amended (the Hatch Act), notwithstanding any exemption contained in such section.

53 Stat. 1148; 64 Stat. 475. 5 USC 118i.

PREVENTION OF UNLAWFUL EMPLOYMENT PRACTICES

SEC. 706. (a) Whenever it is charged in writing under oath by a person claiming to be aggrieved, or a written charge has been filed by a member of the Commission where he has reasonable cause to believe a violation of this title has occurred (and such charge sets forth the facts upon which it is based) that an employer, employment agency, or labor organization has engaged in an unlawful employment practice, the Commission shall furnish such employer, employment agency, or labor organization (hereinafter referred to as the "respondent") with a copy of such charge and shall make an investigation of such charge, provided that such charge shall not be made public by the Commission. If the Commission shall determine, after such investigation, that there is reasonable cause to believe that the charge is true, the Commission shall endeavor to eliminate any such alleged unlawful employment practice by informal methods of conference, conciliation, and persuasion. Nothing said or done during and as a part of such endeavors may be made public by the Commission without the written consent of the parties, or used as evidence in a subsequent proceeding. Any officer or employee of the Commission, who shall make public in any manner whatever any information in violation of this subsection shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined not more than $1,000 or imprisoned not more than one year.

Legal proceedings.

(b) In the case of an alleged unlawful employment practice occurring in a State, or political subdivision of a State, which has a State or local law prohibiting the unlawful employment practice alleged and establishing or authorizing a State or local authority to grant or seek relief from such practice or to institute criminal proceedings with respect thereto upon receiving notice thereof, no charge may be filed under subsection (a) by the person aggrieved before the expira-

tion of sixty days after proceedings have been commenced under the State or local law, unless such proceedings have been earlier terminated, provided that such sixty-day period shall be extended to one hundred and twenty days during the first year after the effective date of such State or local law. If any requirement for the commencement of such proceedings is imposed by a State or local authority other than a requirement of the filing of a written and signed statement of the facts upon which the proceeding is based, the proceeding shall be deemed to have been commenced for the purposes of this subsection at the time such statement is sent by registered mail to the appropriate State or local authority.

Time requirements.

(c) In the case of any charge filed by a member of the Commission alleging an unlawful employment practice occurring in a State or political subdivision of a State, which has a State or local law prohibiting the practice alleged and establishing or authorizing a State or local authority to grant or seek relief from such practice or to institute criminal proceedings with respect thereto upon receiving notice thereof, the Commission shall, before taking any action with respect to such charge, notify the appropriate State or local officials and, upon request, afford them a reasonable time, but not less than sixty days (provided that such sixty-day period shall be extended to one hundred and twenty days during the first year after the effective day of such State or local law), unless a shorter period is requested, to act under such State or local law to remedy the practice alleged.

(d) A charge under subsection (a) shall be filed within ninety days after the alleged unlawful employment practice occurred, except that in the case of an unlawful employment practice with respect to which the person aggrieved has followed the procedure set out in subsection (b), such charge shall be filed by the person aggrieved within two hundred and ten days after the alleged unlawful employment practice occurred, or within thirty days after receiving notice that the State or local agency has terminated the proceedings under the State or local law, whichever is earlier, and a copy of such charge shall be filed by the Commission with the State or local agency.

(e) If within thirty days after a charge is filed with the Commission or within thirty days after expiration of any period of reference under subsection (c) (except that in either case such period may be extended to not more than sixty days upon a determination by the Commission that further efforts to secure voluntary compliance are warranted), the Commission has been unable to obtain voluntary compliance with this title, the Commission shall so notify the person aggrieved and a civil action may, within thirty days thereafter, be brought against the respondent named in the charge (1) by the person claiming to be aggrieved, or (2) if such charge was filed by a member of the Commission, by any person whom the charge alleges was aggrieved by the alleged unlawful employment practice. Upon application by the complainant and in such circumstances as the court may deem just, the court may appoint an attorney for such complainant and may authorize the commencement of the action without the payment of fees, costs, or security. Upon timely application, the court may, in its discretion, permit the Attorney General to intervene in such civil action if he certifies that the case is of general public importance. Upon request, the court may, in its discretion, stay further proceedings for not more than sixty days pending the termination of State or local proceedings described in subsection (b) or the efforts of the Commission to obtain voluntary compliance.

Courts. Jurisdiction.

(f) Each United States district court and each United States court of a place subject to the jurisdiction of the United States shall

have jurisdiction of actions brought under this title. Such an action may be brought in any judicial district in the State in which the unlawful employment practice is alleged to have been committed, in the judicial district in which the employment records relevant to such practice are maintained and administered, or in the judicial district in which the plaintiff would have worked but for the alleged unlawful employment practice, but if the respondent is not found within any such district, such an action may be brought within the judicial district in which the respondent has his principal office. For purposes of sections 1404 and 1406 of title 28 of the United States Code, the judicial district in which the respondent has his principal office shall in all cases be considered a district in which the action might have been brought.

62 Stat. 937; 74 Stat. 912; 76A Stat. 699.

(g) If the court finds that the respondent has intentionally engaged in or is intentionally engaging in an unlawful employment practice charged in the complaint, the court may enjoin the respondent from engaging in such unlawful employment practice, and order such affirmative action as may be appropriate, which may include reinstatement or hiring of employees, with or without back pay (payable by the employer, employment agency, or labor organization, as the case may be, responsible for the unlawful employment practice). Interim earnings or amounts earnable with reasonable diligence by the person or persons discriminated against shall operate to reduce the back pay otherwise allowable. No order of the court shall require the admission or reinstatement of an individual as a member of a union or the hiring, reinstatement, or promotion of an individual as an employee, or the payment to him of any back pay, if such individual was refused admission, suspended, or expelled or was refused employment or advancement or was suspended or discharged for any reason other than discrimination on account of race, color, religion, sex or national origin or in violation of section 704(a).

(h) The provisions of the Act entitled "An Act to amend the Judicial Code and to define and limit the jurisdiction of courts sitting in equity, and for other purposes," approved March 23, 1932 (29 U.S.C. 101–115), shall not apply with respect to civil actions brought under this section.

47 Stat. 70.

(i) In any case in which an employer, employment agency, or labor organization fails to comply with an order of a court issued in a civil action brought under subsection (e), the Commission may commence proceedings to compel compliance with such order.

(j) Any civil action brought under subsection (e) and any proceedings brought under subsection (i) shall be subject to appeal as provided in sections 1291 and 1292, title 28, United States Code.

62 Stat. 929; 65 Stat. 726; 72 Stat. 348, 1770.

(k) In any action or proceeding under this title the court, in its discretion, may allow the prevailing party, other than the Commission or the United States, a reasonable attorney's fee as part of the costs, and the Commission and the United States shall be liable for costs the same as a private person.

Costs, fees.

SEC. 707. (a) Whenever the Attorney General has reasonable cause to believe that any person or group of persons is engaged in a pattern or practice of resistance to the full enjoyment of any of the rights secured by this title, and that the pattern or practice is of such a nature and is intended to deny the full exercise of the rights herein described, the Attorney General may bring a civil action in the appropriate district court of the United States by filing with it a complaint (1) signed by him (or in his absence the Acting Attorney General), (2) setting forth facts pertaining to such pattern or practice, and (3) requesting such relief, including an application for a permanent or temporary injunction, restraining order or other order against the

Suits by Attorney General.

person or persons responsible for such pattern or practice, as he deems necessary to insure the full enjoyment of the rights herein described.

(b) The district courts of the United States shall have and shall exercise jurisdiction of proceedings instituted pursuant to this section, and in any such proceeding the Attorney General may file with the clerk of such court a request that a court of three judges be convened to hear and determine the case. Such request by the Attorney General shall be accompanied by a certificate that, in his opinion, the case is of general public importance. A copy of the certificate and request for a three-judge court shall be immediately furnished by such clerk to the chief judge of the circuit (or in his absence, the presiding circuit judge of the circuit) in which the case is pending. Upon receipt of such request it shall be the duty of the chief judge of the circuit or the presiding circuit judge, as the case may be, to designate immediately three judges in such circuit, of whom at least one shall be a circuit judge and another of whom shall be a district judge of the court in which the proceeding was instituted, to hear and determine such case, and it shall be the duty of the judges so designated to assign the case for hearing at the earliest practicable date, to participate in the hearing and determination thereof, and to cause the case to be in every way expedited. An appeal from the final judgment of such court will lie to the Supreme Court.

In the event the Attorney General fails to file such a request in any such proceeding, it shall be the duty of the chief judge of the district (or in his absence, the acting chief judge) in which the case is pending immediately to designate a judge in such district to hear and determine the case. In the event that no judge in the district is available to hear and determine the case, the chief judge of the district, or the acting chief judge, as the case may be, shall certify this fact to the chief judge of the circuit (or in his absence, the acting chief judge) who shall then designate a district or circuit judge of the circuit to hear and determine the case.

It shall be the duty of the judge designated pursuant to this section to assign the case for hearing at the earliest practicable date and to cause the case to be in every way expedited.

EFFECT ON STATE LAWS

SEC. 708. Nothing in this title shall be deemed to exempt or relieve any person from any liability, duty, penalty, or punishment provided by any present or future law of any State or political subdivision of a State, other than any such law which purports to require or permit the doing of any act which would be an unlawful employment practice under this title.

INVESTIGATIONS, INSPECTIONS, RECORDS, STATE AGENCIES

SEC. 709. (a) In connection with any investigation of a charge filed under section 706, the Commission or its designated representative shall at all reasonable times have access to, for the purposes of examination, and the right to copy any evidence of any person being investigated or proceeded against that relates to unlawful employment practices covered by this title and is relevant to the charge under investigation.

Agreements, State and local agencies.

(b) The Commission may cooperate with State and local agencies charged with the administration of State fair employment practices laws and, with the consent of such agencies, may for the purpose of carrying out its functions and duties under this title and within the limitation of funds appropriated specifically for such purpose, utilize the services of such agencies and their employees and, notwithstand-

ing any other provision of law, may reimburse such agencies and their employees for services rendered to assist the Commission in carrying out this title. In furtherance of such cooperative efforts, the Commission may enter into written agreements with such State or local agencies and such agreements may include provisions under which the Commission shall refrain from processing a charge in any cases or class of cases specified in such agreements and under which no person may bring a civil action under section 706 in any cases or class of cases so specified, or under which the Commission shall relieve any person or class of persons in such State or locality from requirements imposed under this section. The Commission shall rescind any such agreement whenever it determines that the agreement no longer serves the interest of effective enforcement of this title.

Records.

(c) Except as provided in subsection (d), every employer, employment agency, and labor organization subject to this title shall (1) make and keep such records relevant to the determinations of whether unlawful employment practices have been or are being committed, (2) preserve such records for such periods, and (3) make such reports therefrom, as the Commission shall prescribe by regulation or order, after public hearing, as reasonable, necessary, or appropriate for the enforcement of this title or the regulations or orders thereunder. The Commission shall, by regulation, require each employer, labor organization, and joint labor-management committee subject to this title which controls an apprenticeship or other training program to maintain such records as are reasonably necessary to carry out the purpose of this title, including, but not limited to, a list of applicants who wish to participate in such program, including the chronological order in which such applications were received, and shall furnish to the Commission, upon request, a detailed description of the manner in which persons are selected to participate in the apprenticeship or other training program. Any employer, employment agency, labor organization, or joint labor-management committee which believes that the application to it of any regulation or order issued under this section would result in undue hardship may (1) apply to the Commission for an exemption from the application of such regulation or order, or (2) bring a civil action in the United States district court for the district where such records are kept. If the Commission or the court, as the case may be, finds that the application of the regulation or order to the employer, employment agency, or labor organization in question would impose an undue hardship, the Commission or the court, as the case may be, may grant appropriate relief.

Exceptions.

(d) The provisions of subsection (c) shall not apply to any employer, employment agency, labor organization, or joint labor-management committee with respect to matters occurring in any State or political subdivision thereof which has a fair employment practice law during any period in which such employer, employment agency, labor organization, or joint labor-management committee is subject to such law, except that the Commission may require such notations on records which such employer, employment agency, labor organization, or joint labor-management committee keeps or is required to keep as are necessary because of differences in coverage or methods of enforcement between the State or local law and the provisions of this title. Where an employer is required by Executive Order 10925, issued March 6, 1961, or by any other Executive order prescribing fair employment practices for Government contractors and subcontractors, or by rules or regulations issued thereunder, to file reports relating to his employment practices with any Federal agency or committee, and he is substantially in compliance with such requirements, the Commission shall not require him to file additional reports pursuant to subsection (c) of this section.

3 CFR, 1961 Supp., p. 86.
5 USC 631 note.

Prohibited disclosures.

(e) It shall be unlawful for any officer or employee of the Commission to make public in any manner whatever any information obtained by the Commission pursuant to its authority under this section prior to the institution of any proceeding under this title involving such information. Any officer or employee of the Commission who shall make public in any manner whatever any information in violation of this subsection shall be guilty of a misdemeanor and upon conviction thereof, shall be fined not more than $1,000, or imprisoned not more than one year.

INVESTIGATORY POWERS

SEC. 710. (a) For the purposes of any investigation of a charge filed under the authority contained in section 706, the Commission shall have authority to examine witnesses under oath and to require the production of documentary evidence relevant or material to the charge under investigation.

(b) If the respondent named in a charge filed under section 706 fails or refuses to comply with a demand of the Commission for permission to examine or to copy evidence in conformity with the provisions of section 709(a), or if any person required to comply with the provisions of section 709 (c) or (d) fails or refuses to do so, or if any person fails or refuses to comply with a demand by the Commission to give testimony under oath, the United States district court for the district in which such person is found, resides, or transacts business, shall, upon application of the Commission, have jurisdiction to issue to such person an order requiring him to comply with the provisions of section 709 (c) or (d) or to comply with the demand of the Commission, but the attendance of a witness may not be required outside the State where he is found, resides, or transacts business and the production of evidence may not be required outside the State where such evidence is kept.

Petitions.

(c) Within twenty days after the service upon any person charged under section 706 of a demand by the Commission for the production of documentary evidence or for permission to examine or to copy evidence in conformity with the provisions of section 709(a), such person may file in the district court of the United States for the judicial district in which he resides, is found, or transacts business, and serve upon the Commission a petition for an order of such court modifying or setting aside such demand. The time allowed for compliance with the demand in whole or in part as deemed proper and ordered by the court shall not run during the pendency of such petition in the court. Such petition shall specify each ground upon which the petitioner relies in seeking such relief, and may be based upon any failure of such demand to comply with the provisions of this title or with the limitations generally applicable to compulsory process or upon any constitutional or other legal right or privilege of such person. No objection which is not raised by such a petition may be urged in the defense to a proceeding initiated by the Commission under subsection (b) for enforcement of such a demand unless such proceeding is commenced by the Commission prior to the expiration of the twenty-day period, or unless the court determines that the defendant could not reasonably have been aware of the availability of such ground of objection.

(d) In any proceeding brought by the Commission under subsection (b), except as provided in subsection (c) of this section, the defendant may petition the court for an order modifying or setting aside the demand of the Commission.

NOTICES TO BE POSTED

SEC. 711. (a) Every employer, employment agency, and labor organization, as the case may be, shall post and keep posted in conspicuous places upon its premises where notices to employees, applicants for employment, and members are customarily posted a notice to be prepared or approved by the Commission setting forth excerpts from or, summaries of, the pertinent provisions of this title and information pertinent to the filing of a complaint.

(b) A willful violation of this section shall be punishable by a fine of not more than $100 for each separate offense.

VETERANS' PREFERENCE

SEC. 712. Nothing contained in this title shall be construed to repeal or modify any Federal, State, territorial, or local law creating special rights or preference for veterans.

RULES AND REGULATIONS

SEC. 713. (a) The Commission shall have authority from time to time to issue, amend, or rescind suitable procedural regulations to carry out the provisions of this title. Regulations issued under this section shall be in conformity with the standards and limitations of the Administrative Procedure Act. 60 Stat. 237. 5 USC 1001 note.

(b) In any action or proceeding based on any alleged unlawful employment practice, no person shall be subject to any liability or punishment for or on account of (1) the commission by such person of an unlawful employment practice if he pleads and proves that the act or omission complained of was in good faith, in conformity with, and in reliance on any written interpretation or opinion of the Commission, or (2) the failure of such person to publish and file any information required by any provision of this title if he pleads and proves that he failed to publish and file such information in good faith, in conformity with the instructions of the Commission issued under this title regarding the filing of such information. Such a defense, if established, shall be a bar to the action or proceeding, notwithstanding that (A) after such act or omission, such interpretation or opinion is modified or rescinded or is determined by judicial authority to be invalid or of no legal effect, or (B) after publishing or filing the description and annual reports, such publication or filing is determined by judicial authority not to be in conformity with the requirements of this title.

FORCIBLY RESISTING THE COMMISSION OR ITS REPRESENTATIVES

SEC. 714. The provisions of section 111, title 18, United States Code, shall apply to officers, agents, and employees of the Commission in the performance of their official duties. 62 Stat. 688.

SPECIAL STUDY BY SECRETARY OF LABOR

SEC. 715. The Secretary of Labor shall make a full and complete study of the factors which might tend to result in discrimination in employment because of age and of the consequences of such discrimination on the economy and individuals affected. The Secretary of Labor shall make a report to the Congress not later than June 30, 1965, containing the results of such study and shall include in such report such recommendations for legislation to prevent arbitrary discrimination in employment because of age as he determines advisable. Report to Congress.

EFFECTIVE DATE

SEC. 716. (a) This title shall become effective one year after the date of its enactment.

(b) Notwithstanding subsection (a), sections of this title other than sections 703, 704, 706, and 707 shall become effective immediately.

Presidential conferences.

(c) The President shall, as soon as feasible after the enactment of this title, convene one or more conferences for the purpose of enabling the leaders of groups whose members will be affected by this title to become familiar with the rights afforded and obligations imposed by its provisions, and for the purpose of making plans which will result in the fair and effective administration of this title when all of its provisions become effective. The President shall invite the participation in such conference or conferences of (1) the members of the President's Committee on Equal Employment Opportunity, (2) the members of the Commission on Civil Rights, (3) representatives of State and local agencies engaged in furthering equal employment opportunity, (4) representatives of private agencies engaged in furthering equal employment opportunity, and (5) representatives of employers, labor organizations, and employment agencies who will be subject to this title.

Membership.

TITLE VIII—REGISTRATION AND VOTING STATISTICS

Survey.

SEC. 801. The Secretary of Commerce shall promptly conduct a survey to compile registration and voting statistics in such geographic areas as may be recommended by the Commission on Civil Rights. Such a survey and compilation shall, to the extent recommended by the Commission on Civil Rights, only include a count of persons of voting age by race, color, and national origin, and determination of the extent to which such persons are registered to vote, and have voted in any statewide primary or general election in which the Members of the United States House of Representatives are nominated or elected, since January 1, 1960. Such information shall also be collected and compiled in connection with the Nineteenth Decennial Census, and at such other times as the Congress may prescribe. The provisions of section 9 and chapter 7 of title 13, United States Code, shall apply to any survey, collection, or compilation of registration and voting statistics carried out under this title: *Provided, however*, That no person shall be compelled to disclose his race, color, national origin, or questioned about his political party affiliation, how he voted, or the reasons therefore, nor shall any penalty be imposed for his failure or refusal to make such disclosure. Every person interrogated orally, by written survey or questionnaire or by any other means with respect to such information shall be fully advised with respect to his right to fail or refuse to furnish such information.

68 Stat. 1013, 1022; 76 Stat. 922. 13 USC 9, 211-241.

TITLE IX—INTERVENTION AND PROCEDURE AFTER REMOVAL IN CIVIL RIGHTS CASES

63 Stat. 102.

SEC. 901. Title 28 of the United States Code, section 1447(d), is amended to read as follows:

"An order remanding a case to the State court from which it was removed is not reviewable on appeal or otherwise, except that an order remanding a case to the State court from which it was removed pursuant to section 1443 of this title shall be reviewable by appeal or otherwise."

62 Stat. 938.

SEC. 902. Whenever an action has been commenced in any court of the United States seeking relief from the denial of equal protection of the laws under the fourteenth amendment to the Constitution on ac-

count of race, color, religion, or national origin, the Attorney General for or in the name of the United States may intervene in such action upon timely application if the Attorney General certifies that the case is of general public importance. In such action the United States shall be entitled to the same relief as if it had instituted the action.

TITLE X—ESTABLISHMENT OF COMMUNITY RELATIONS SERVICE

SEC. 1001. (a) There is hereby established in and as a part of the Department of Commerce a Community Relations Service (hereinafter referred to as the "Service"), which shall be headed by a Director who shall be appointed by the President with the advice and consent of the Senate for a term of four years. The Director is authorized to appoint, subject to the civil service laws and regulations, such other personnel as may be necessary to enable the Service to carry out its functions and duties, and to fix their compensation in accordance with the Classification Act of 1949, as amended. The Director is further authorized to procure services as authorized by section 15 of the Act of August 2, 1946 (60 Stat. 810; 5 U.S.C. 55(a)), but at rates for individuals not in excess of $75 per diem.

Post, p. 400.
5 USC 1071 note.

(b) Section 106(a) of the Federal Executive Pay Act of 1956, as amended (5 U.S.C. 2205(a)), is further amended by adding the following clause thereto:

70 Stat. 737.

"(52) Director, Community Relations Service."

Functions.

SEC. 1002. It shall be the function of the Service to provide assistance to communities and persons therein in resolving disputes, disagreements, or difficulties relating to discriminatory practices based on race, color, or national origin which impair the rights of persons in such communities under the Constitution or laws of the United States or which affect or may affect interstate commerce. The Service may offer its services in cases of such disputes, disagreements, or difficulties whenever, in its judgment, peaceful relations among the citizens of the community involved are threatened thereby, and it may offer its services either upon its own motion or upon the request of an appropriate State or local official or other interested person.

SEC. 1003. (a) The Service shall, whenever possible, in performing its functions, seek and utilize the cooperation of appropriate State or local, public, or private agencies.

(b) The activities of all officers and employees of the Service in providing conciliation assistance shall be conducted in confidence and without publicity, and the Service shall hold confidential any information acquired in the regular performance of its duties upon the understanding that it would be so held. No officer or employee of the Service shall engage in the performance of investigative or prosecuting functions of any department or agency in any litigation arising out of a dispute in which he acted on behalf of the Service. Any officer or other employee of the Service, who shall make public in any manner whatever any information in violation of this subsection, shall be deemed guilty of a misdemeanor and, upon conviction thereof, shall be fined not more than $1,000 or imprisoned not more than one year.

Report to Congress.

SEC. 1004. Subject to the provisions of sections 205 and 1003(b), the Director shall, on or before January 31 of each year, submit to the Congress a report of the activities of the Service during the preceding fiscal year.

TITLE XI—MISCELLANEOUS

Trial by jury.

SEC. 1101. In any proceeding for criminal contempt arising under title II, III, IV, V, VI, or VII of this Act, the accused, upon demand therefor, shall be entitled to a trial by jury, which shall conform as near as may be to the practice in criminal cases. Upon conviction, the accused shall not be fined more than $1,000 or imprisoned for more than six months.

Exceptions.

This section shall not apply to contempts committed in the presence of the court, or so near thereto as to obstruct the administration of justice, nor to the misbehavior, misconduct, or disobedience of any officer of the court in respect to writs, orders, or process of the court. No person shall be convicted of criminal contempt hereunder unless the act or omission constituting such contempt shall have been intentional, as required in other cases of criminal contempt.

Nor shall anything herein be construed to deprive courts of their power, by civil contempt proceedings, without a jury, to secure compliance with or to prevent obstruction of, as distinguished from punishment for violations of, any lawful writ, process, order, rule, decree, or command of the court in accordance with the prevailing usages of law and equity, including the power of detention.

Double jeopardy.

SEC. 1102. No person should be put twice in jeopardy under the laws of the United States for the same act or omission. For this reason, an acquittal or conviction in a prosecution for a specific crime under the laws of the United States shall bar a proceeding for criminal contempt, which is based upon the same act or omission and which arises under the provisions of this Act; and an acquittal or conviction in a proceeding for criminal contempt, which arises under the provisions of this Act, shall bar a prosecution for a specific crime under the laws of the United States based upon the same act or omission.

Attorney General, etc., authority.

SEC. 1103. Nothing in this Act shall be construed to deny, impair, or otherwise affect any right or authority of the Attorney General or of the United States or any agency or officer thereof under existing law to institute or intervene in any action or proceeding.

States' authority.

SEC. 1104. Nothing contained in any title of this Act shall be construed as indicating an intent on the part of Congress to occupy the field in which any such title operates to the exclusion of State laws on the same subject matter, nor shall any provision of this Act be construed as invalidating any provision of State law unless such provision is inconsistent with any of the purposes of this Act, or any provision thereof.

Appropriation.

SEC. 1105. There are hereby authorized to be appropriated such sums as are necessary to carry out the provisions of this Act.

Separability clause.

SEC. 1106. If any provision of this Act or the application thereof to any person or circumstances is held invalid, the remainder of the Act and the application of the provision to other persons not similarly situated or to other circumstances shall not be affected thereby.

Approved July 2, 1964.

59 to 61, 64a, 71a, 78, 84, 85, 170, 181, 192, 221a, 228, 241, 242, 244, 247a, 248, 263, 287, 288, 321, 324, 336, 341, 343, 347b, 352a, 355, 357, 371, 371b, 371c, 375a, 377, 378, 461, 462a–1, 462b, 465, 481, 482, 486, 619, 1702, 1703, 1709, and 1713 of this title; section 101 of Title 11, Bankruptcy; section 19 of Title 15, Commerce and Trade. See, also, sections 217, 218, 334, 655, 656, 709, 1005, 1906, 1909, and 2113 of Title 18, Crimes and Criminal Procedure. For complete classification of this Act to the Code see Tables.

SEPARABILITY

Section 346 of act Aug. 23, 1935, provided: ''If any provision of this Act, or the application thereof to any person or circumstances, is held invalid, the remainder of the Act, and the application of such provision to other persons and circumstances, shall not be affected thereby.''

SUBCHAPTER II—BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

§ 241. Creation; membership; compensation and expenses

The Board of Governors of the Federal Reserve System (hereinafter referred to as the ''Board'') shall be composed of seven members, to be appointed by the President, by and with the advice and consent of the Senate, after August 23, 1935, for terms of fourteen years except as hereinafter provided, but each appointive member of the Federal Reserve Board in office on such date shall continue to serve as a member of the Board until February 1, 1936, and the Secretary of the Treasury and the Comptroller of the Currency shall continue to serve as members of the Board until February 1, 1936. In selecting the members of the Board, not more than one of whom shall be selected from any one Federal Reserve district, the President shall have due regard to a fair representation of the financial, agricultural, industrial, and commercial interests, and geographical divisions of the country. The members of the Board shall devote their entire time to the business of the Board and shall each receive basic compensation at the rate of $15,000 per annum, payable monthly, together with actual necessary traveling expenses.

(Dec. 23, 1913, ch. 6, § 10 (par.), 38 Stat. 260; June 3, 1922, ch. 205, 42 Stat. 620; Aug. 23, 1935, ch. 614, title II, § 203(b), 49 Stat. 704.)

CODIFICATION

Section is comprised of first par. of section 10 of act Dec. 23, 1913. Pars. 2–7 and 8 of section 10; par. 9 of section 10, as added June 3, 1922, ch. 205, 42 Stat. 621; par. 10 of section 10, as added Aug. 23, 1935, ch. 614, § 203(d), 49 Stat. 705; and par. (12) of section 10, as added Pub. L. 111–203, title XI, § 1108(b), July 21, 2010, 124 Stat. 2126, are classified to sections 242 to 247, 1, 522, 247a, and 247b, respectively, of this title. No par. between pars. (10) and (12) has been enacted.

AMENDMENTS

1935—Act Aug. 23, 1935, § 203(b), increased the appointive membership from six to seven, terminated the membership of the Secretary of the Treasury and the Comptroller of the Currency, raised the tenure from twelve to fourteen years and increased the annual salary from $12,000 to $15,000.

CHANGE OF NAME

Section 203(a) of act Aug. 23, 1935, provided that: ''Hereafter the Federal Reserve Board shall be known as the 'Board of Governors of the Federal Reserve System,' and the governor and the vice governor of the Federal Reserve Board shall be known as the 'chairman' and the 'vice chairman,' respectively, of the Board of Governors of the Federal Reserve System.''

REPEALS

Act Oct. 15, 1949, ch. 695, § 4, 63 Stat. 880, formerly cited as a credit to this section, which was used as authority to substitute ''$16,000'' for ''$15,000'' in the last sentence, was repealed by Pub. L. 89–554, § 8(a), Sept. 6, 1966, 80 Stat. 655.

GENERAL ACCOUNTING OFFICE STUDY OF CONFLICTS OF INTEREST

Pub. L. 106–102, title VII, § 728, Nov. 12, 1999, 113 Stat. 1475, provided that the Comptroller General of the United States was to conduct a study analyzing the conflict of interest faced by the Board of Governors of the Federal Reserve System between its role as a primary regulator of the banking industry and its role as a vendor of services to the banking and financial services industry and, before the end of the 1-year period beginning on Nov. 12, 1999, submit a report to the Congress, together with recommendations for such legislative or administrative actions as the Comptroller General determined to be appropriate.

COMPENSATION OF BOARD OF GOVERNORS

Annual basic compensation of Chairman and Members of Board of Governors, see sections 5313 and 5314 of Title 5, Government Organization and Employees.

§ 242. Ineligibility to hold office in member banks; qualifications and terms of office of members; chairman and vice chairman; oath of office

The members of the Board shall be ineligible during the time they are in office and for two years thereafter to hold any office, position, or employment in any member bank, except that this restriction shall not apply to a member who has served the full term for which he was appointed. Upon the expiration of the term of any appointive member of the Federal Reserve Board in office on August 23, 1935, the President shall fix the term of the successor to such member at not to exceed fourteen years, as designated by the President at the time of nomination, but in such manner as to provide for the expiration of the term of not more than one member in any two-year period, and thereafter each member shall hold office for a term of fourteen years from the expiration of the term of his predecessor, unless sooner removed for cause by the President. Of the persons thus appointed, 1 shall be designated by the President, by and with the advice and consent of the Senate, to serve as Chairman of the Board for a term of 4 years, and 2 shall be designated by the President, by and with the advice and consent of the Senate, to serve as Vice Chairmen of the Board, each for a term of 4 years, 1 of whom shall serve in the absence of the Chairman, as provided in section 244 of this title, and 1 of whom shall be designated Vice Chairman for Supervision. The Vice Chairman for Supervision shall develop policy recommendations for the Board regarding supervision and regulation of depository institution holding companies and other financial firms supervised by the Board, and shall oversee the supervision and regulation of such firms. The Chairman of the Board, subject to its supervision, shall be its active executive officer. Each member of the

Board Policies

Adjusting Work-Related Problems

Approved by H. Fay Peters, effective June 30, 2010

Jump to section: Policy Statement

Policy Statement

All employees are to be treated fairly and equitably. Managers and their staffs are encouraged to create and maintain an atmosphere of mutual trust, respect, and open and objective communication. Most work-related problems, complaints, disputes, and differences of opinion can be resolved once they are discussed with the employee's supervisor. If the problem cannot be resolved through discussion, employees are encouraged to follow the procedure described below.

Return to top

Covered Problems

A work-related problem covered under this policy can be any issue that arises in the context of a work situation *and* that is not within the scope of the following management policies: Adverse Action Policy and Procedures, Disciplinary Actions, Sexual Harassment, Reasonable Accommodation, Performance Management Program, Equal Employment Opportunity, Provisional Employment Period, and Provisional Period for Newly Selected Managers and Supervisors. Accordingly, the procedure set forth in this policy may not be used in lieu of appeal procedures provided in other policies that establish an exclusive remedy and may not be used to avoid conditions or limitations set out in such other policies. When a work-related problem is addressed under another management policy, any complaint or appeal under this policy regarding the same work-related problem will be dismissed, and the matter will be addressed under the other applicable policy.

Work-related problems include, but are not limited to, employee complaints or questions regarding unfair treatment on the basis of conduct or reasons that do not adversely affect the employee's performance and that are not covered under existing laws regarding discrimination. Such matters may include allegations of discrimination in employment on the basis of sexual orientation.

Return to top

Definitions

Employee means an individual who works full-time or part-time and is appointed into Board service for a period of more than 90 calendar days.[1] The term *employee* does not include members of the Board or nonregular employees, that is, student aides, worker-trainees, student interns, co-op employees, or individuals who are serving in a temporary term-limited position.

The term *employee* also does not include an *at-will* employee, that is, an individual serving at the pleasure of the Board and who may be discharged from Board service for any reason that is not illegal.

Return to top

Procedure for Addressing a Work-Related Problem

Employee relations specialists in the Employee Relations section (ER) of the Management Division are available to help employees and managers address work-related problems. They ensure that employees are aware of their rights and guide them through the steps outlined in the following procedure. An employee relations specialist may also help resolve cases by gathering facts, consulting with the employee regarding his or her concerns, and recommending a course of action. An employee relations specialist may be consulted at any time before or during the

process.

Step 1. An employee should first discuss any work-related problem (or problems) under this policy with his or her immediate supervisor as soon as possible. Unless unusual circumstances exist, an employee should bring the matter to the attention of the supervisor within 15 working days from the date the employee first became aware of the matter or from the effective date of the action giving rise to the work-related problem. Experience has shown that most problems can be settled once they are brought to the attention of the supervisor and discussed fairly and openly.

Step 2. If the problem is not resolved within 15 working days after it has been brought to the attention of the immediate supervisor, the employee may submit a written description of the problem within five working days to the manager or officer responsible for the functional area. This person may, depending on the organizational structure, be the same person as the immediate supervisor. The manager or officer responsible for the functional area will review the problem and issue a written decision within 15 working days of receipt of the employee's written description of the problem.

Step 3. If the employee is not satisfied with the decision of the manager or officer responsible for the functional area, the employee may appeal to the division director. Any such appeal must be filed within five working days of the employee's receipt of the manager's or officer's decision. The appeal must be submitted in writing to the division director. If the division director is the same person as the manager or officer responsible for the functional area (as described in step 2), the employee may ignore step 3 and proceed to step 4. The division director will issue a written decision within 15 working days of receipt of the employee's appeal.

Step 4. If the employee is not satisfied with the decision of the division director (or of the manager or officer responsible for the functional area if that person is the same person as the division director), the employee may select one of the following two options:

- *Officer responsible for ER (ER Officer).* The employee may appeal the decision of the division director to the ER Officer or to his or her designee. Any such appeal must be filed within five working days of the employee's receipt of the division director's decision and must be submitted in writing. The ER Officer, or his or her designee, will issue a written decision within 15 working days of receipt of the employee's appeal. The decision of the ER Officer is final and binding.

  For employees in the Management Division, this appeal shall be made to a Board officer outside the Management Division, who shall be designated by the chairman, Committee on Board Affairs, rather than to the ER Officer. The decision of the officer appointed by chairman, Committee on Board Affairs, shall be final and binding.

  The decision of the ER Officer or, as appropriate, a Board officer designated by the chairman, Committee on Board Affairs, may be implemented under delegated authority.

- *Mediation.* Within five working days of the employee's receipt of the division director's decision, the employee may request that a mediator be engaged to help bring about a mutually acceptable resolution to the problem. The mediation between the employee and division management will be governed by the procedures described in the Employee Relations Mediation Guidelines.

  If mediation does not resolve the problem, the employee may choose to appeal the decision of the division director to the ER Officer in accordance with the provisions of step 4.1 above. Any such appeal must be made within five working days of the conclusion of the mediation.

Review of Documentation at Each Level

In reviewing an appeal, the reviewing authority at each level has the discretion to conduct whatever investigation he or she deems appropriate, including requesting supplementary information from the employee or from management. The reviewing authority, however, may choose to issue a decision based on a review of the appeal and any documentation that may have been initially presented.

Submission of Documentation

At any stage of the process, the employee may submit additional material. Such material must be submitted, as applicable, by the date the written description of the problem or the date the appeal is due.

Any material submitted to the ER Officer in connection with an appeal will be shared with the employee's management unless the ER Officer does not rely on the information in reaching a decision or if the ER Officer determines that disclosing the

information would create or exacerbate an employee relations issue. Any documentation submitted by the division in connection with an appeal will be shared with the employee except to the extent that doing so infringes on the privacy rights of other employees.

Time Limits

The ER Officer can extend the time limits contained in this policy. No procedural rights or requirements that are not specifically stated in the procedure may be implied.

Return to top

Responsibility

The Management Division has the discretionary authority to administer and interpret this policy. The Board may review, update, and amend this policy at any time.

Return to top

Footnotes

1. Applicants for employment with the Board may invoke the procedures in this policy for claims of unfair treatment on the basis of sexual orientation. Return to text.

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM
MANAGEMENT POLICY STATEMENT

Equal Employment Opportunity

Approved by Don Hammond, effective May 13, 2013

Policy Statement

The Board's policy is to provide equal opportunity in employment for all persons. Thus, consistent with applicable law, the Board prohibits discrimination in employment on the basis of race, color, religion, sex, national origin, age, disability, or genetic information, and promotes the full realization of equal employment opportunity (EEO) through a continuing affirmative program. The Board also prohibits discrimination on the basis of any application, membership, or service in the uniformed services. In addition, as a matter of policy and although it is not required by law, the Board prohibits discrimination in employment on the basis of sexual orientation.

The Board strives to comply with the following statutes and any amendments thereof: the Civil Rights Act of 1964 (title VII), section 501 of the Rehabilitation Act of 1973, the Age Discrimination in Employment Act of 1967 (ADEA), the Equal Pay Act of 1963, the Genetic Information Nondiscrimination Act of 2008, and the Uniformed Services Employment and Reemployment Rights Act of 1994 (USERRA). The Board's Rules Regarding Equal Employment Opportunity (the Board's EEO rules), 12 CFR part 268, set forth the policies and procedures relating to the Board's policy to promote equal opportunity. In addition, plans, program objectives, and goals dealing with equal employment opportunity and affirmative action are set forth in the Board's EEO rules as well as in the Affirmative Employment Program Plan adopted by the Board (which is available through the Board's Office of Diversity and Inclusion (ODI)).

Complaint Processing

An employee or applicant for employment who believes that he or she has been discriminated against on the basis of race, color, religion, sex, national origin, disability, age, or genetic information, or subject to retaliation for engaging in protected activity, may raise any such complaint with the Board's ODI (formerly the EEO Office) as provided by the Board's EEO rules. The aggrieved person must initiate contact with an EEO counselor within 45 days of the matter alleged to be discriminatory or, in the case of a personnel action, within 45 days of the effective date of the action.

An employee or applicant for employment who believes that he or she has been discriminated against on the basis of any application, membership, or service in the uniformed services, or

subject to retaliation for engaging in protected activity, may raise any such complaint with the Department of Labor. Because the process for USERRA-related complaints differs from the process for complaints of other forms of discrimination, ODI does not counsel or provide any complaint processing for USERRA-related complaints. These complaints are addressed by the Department of Labor. Additional information on USERRA and filing USERRA complaints is available at the Department of Labor's VETS website.

Complaints by employees and applicants for employment regarding discrimination on the basis of sexual orientation may be raised under the Adjusting Work–Related Problems policy. Because discrimination on the basis of sexual orientation is not covered by federal laws prohibiting discrimination, the Board's EEO rules do not address discrimination on the basis of sexual orientation. In this regard, this policy does not create any right to file a lawsuit or other legal action on the basis of sexual orientation. This policy also does not provide any right to benefits, as those are determined by the terms of the particular benefit plan.

Interaction with Other Policies

Allegations of discrimination on the grounds of race, color, sex, national origin, age, disability, or genetic information, or of retaliation for engaging in protected activity, cannot be simultaneously raised under the Board's EEO rules and the Board's Adjusting Work–Related Problems policy. When an employee presents an allegation of discrimination on the grounds of race, color, sex, religion, national origin, age, disability, or genetic information, the allegation shall be processed under the Board's EEO rules, and any grievance regarding the same matter being processed through the Adjusting Work–Related Problems policy shall terminate.

Responsibility

The Board has assigned direct responsibility for implementation of its EEO policy to supervisors and managers. The ODI director is responsible for coordinating Boardwide implementation of EEO procedures and practices; advising on the Board's policies and practices in connection with federal EEO laws; implementing this and other Board policies related to EEO; coordinating the resolution of EEO complaints; and, if applicable, recommending corrective measures to management. The Human Resources (HR) Function of the Management Division is responsible for addressing complaints filed under the Adjusting Work–Related Problems policy that allege discrimination on the basis of sexual orientation and for addressing any USERRA-related concerns.

This policy will be reviewed and updated as necessary.

Management Policies Home

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM
MANAGEMENT POLICY STATEMENT

Performance Management Program

Approved by Michell C. Clark, effective February 7, 2014

Policy Statement

The Board's policy is to review the performance of all employees periodically and make employment decisions based on an employee's performance. To this end, the Board has established a Performance Management Program (PMP) that requires a written annual review (annual PMP).[1]

Purpose

The purpose of the PMP process is to (1) continuously improve individual and organizational performance, (2) develop and motivate employees to become top performers and help the Board achieve its mission and purpose, and (3) inform various employment decisions, such as compensation and retention decisions.

Objectives

The PMP process helps the Board achieve its mission and purpose by establishing a set of planned activities for each employee. These activities support the organization’s work needs and emphasize the importance of open lines of communication between employees and their supervisors regarding work performance. The Board encourages employees to develop their skills and grow in their professions; therefore, annual PMPs should outline goals and objectives and discuss performance areas that can be improved. To meet the goals of the PMP process, supervisors are responsible for creating performance standards, monitoring performance, and providing an employee with feedback on his or her performance. Employees share responsibility for initiating communication at any time regarding performance issues and concerns, preparing for each step of the performance-appraisal

process, and implementing the suggestions provided as feedback.

Definitions

For purposes of this policy, the following definitions apply unless otherwise specified.

Employee is an individual who works full-time or part-time and is appointed into Board service for a period of more than 90 calendar days. The term "employee" includes officers but not Board members, student aides, student interns, or co-op employees.

Performance Ratings

An employee's performance is evaluated against five possible levels of performance: Extraordinary, Outstanding, Commendable, Marginal, and Unsatisfactory. An employee receives an evaluation and overall rating each year. The evaluation takes into account an employee's performance on both the technical requirements and the behavioral components of the job and may take into consideration the performance of his or her similarly situated peers. The five rating levels are defined below.

Extraordinary. Performance that substantially and consistently exceeds the Board's high standards and expectations. This rating is reserved for a limited number of employees.

Outstanding. Performance that consistently meets and often exceeds the Board's high standards of the job and the expectations of the position. This rating is reserved for a limited number of employees.

Commendable. Performance that consistently meets the Board's high standards and expectations.

Marginal. Performance that is marginally below the level of acceptability because it does not either fully or consistently satisfy the requirements and expectations of the position.

Unsatisfactory. Performance that is below the level of acceptability because it substantially fails to satisfy the requirements and expectations of the position.

Annual PMP Requirements

1. *Timing.* Supervisors must conduct an annual PMP for each employee they supervise.[2] Annual PMPs of all employees will be completed on the same annual cycle on PMP forms that have been approved by the Human Resources (HR) Function of the Management Division.[3] HR will notify all divisions of the dates the annual PMPs are due.

2. *PMP session.* Supervisors should let each employee know when they will be conducting the annual PMP session. During the PMP session, supervisors are expected to discuss the employee's performance and how well the employee met his or her performance objectives or expectations during the performance period. Supervisors may also review an employee's job responsibilities, performance expectations and/or objectives, behavior, strengths, areas for further improvement, and development needs and activities. The objective of feedback is to recognize effective and ineffective performance and motivate the employee to higher levels of performance. Employeesare

encouraged to provide their views about their performance.

3. *Reviewing managers' responsibilities*. Reviewing managers should review the PMPs completed by their subordinate supervisors (before an employee is given his or her PMP) and ensure that the PMPs adequately reflect employee performance. Reviewing managers should attempt to resolve PMP disagreements between an employee and his or her immediate supervisor.

4. *Change of supervisor or job*. If a supervisor is reassigned from a work unit or leaves the Board, responsibility for the PMPs for employees in the unit will be given to the new supervisor. Similarly, responsibility for the PMP for an employee transferring to a work unit with a different supervisor will be with the new supervisor. In both cases, the prior supervisor should provide the new supervisor and the employee who is transferring or being reassigned with feedback on the employee's performance before the employee's reassignment or transfer.

5. *Signing and finalizing the PMP*. The supervisor and reviewing manager must sign the annual PMP and the employee should acknowledge receipt of the PMP by signing it as well. If the employee declines to sign the PMP, this should be noted on the PMP. A copy of the PMP must be provided to the employee shortly after it is signed by the reviewing manager.

   A PMP is final and effective when both the supervisor and the reviewing manager sign it. Until the PMP is signed by the reviewing manager, an employee may raise a disagreement about the PMP with the supervisor or reviewing manager. (If the employee continues to disagree with the PMP, after it is signed by the reviewing manager the employee may appeal the PMP as explained under the appeal section, below.) If the reviewing manager or supervisor makes any changes to the PMP in connection with a PMP disagreement, these changes should be reflected on the PMP. Any written statements an employee submits in response to the PMP must be attached to the completed PMP.

6. *Submitting the PMP to HR*. Each division must send the original, completed annual PMP to the designated HR staff responsible for the Performance Management Program for HR staff to file in the appropriate system of records consistent with applicable law. Divisions are expected to provide signed PMPs to HR no later than November 30. HR will keep documents related to PMP appeals. Each division must maintain all of the supporting documentation to support the PMP rating consistent with the applicable records-retention schedule.

7. *Consultation with HR*. A division may issue an annual PMP that rates an employee's performance as Marginal or Unsatisfactory only after consulting with the Employee Relations Section, HR.

Other PMP-Related Activities

1. *Objective setting for new employees and employees in new positions.* Supervisors should hold objective-setting sessions with all new employees and employees who are assuming new positions within 90 calendar days of an employee's appointment or assumption of a new position. The objective-setting session is a meeting in which the supervisor, with the employee's input, clarifies the employee's job responsibilities and performance expectations, identifies specific objectives and measurement criteria for the employee's job, and plans how the employee will accomplish the objectives. The supervisor should retain a written record documenting the session.

2. *PMP training for newly appointed employees and newly appointed supervisors.* New employees and newly appointed supervisors must complete PMP training within 90 calendar days of their appointments. If possible, this training should occur before the supervisor issues any PMPs and before the supervisor's initial PMP-objective-setting session with a subordinate employee.

3. *Interim PMPs.* Supervisors may provide their employees with interim PMPs in order to give employees performance feedback between annual PMPs.

4. *Performance feedback*. In addition to interim and annual PMPs, supervisors should routinely provide performance feedback to their employees. As described below, thatperformance feedback may include a performance warning, if warranted.

Use of Annual PMP Ratings

1. *Generally.* The annual PMP rating is used to determine the amount of any merit increase the employee will receive for the year and, when applicable, is considered when determining variable pay or eligibility for other incentive programs. PMP ratings may also be relied on for promotion decisions and employment actions within the Board. In addition, as explained more fully below, a rating of Marginal or Unsatisfactory at any time (including on an interim PMP or performance warning) may lead to an employee's separation from Board employment.

2. *Merit pay and Marginal or Unsatisfactory ratings.* An employee who receives a rating of Marginal or Unsatisfactory on his or her annual PMP is not eligible for a merit increase, salary-structure increase, or any other type of performance-based pay, such as cash awards and variable pay, unless and until the employee receives a rating of higher than Marginal or Unsatisfactory on a subsequent annual PMP. If the employee's salary falls below the minimum of the salary range for his or her grade because he or she receives a Marginal or Unsatisfactory rating, the employee's salary will not be raised to the minimum of the salary range.

3. *Workforce reductions.* An employee's performance on the three most recent annual PMPs is a factor used in determining the retention standing of the employee when the employee is affected by a workforce reduction.

Marginal or Unsatisfactory Performance

1. *Timing.* At any time during the year, if an employee's performance is Marginal or Unsatisfactory, the employee's supervisor can issue the employee notice that his or her performance is Marginal or Unsatisfactory. This could happen through either a formal annual or interim PMP or a less formal performance warning, such as an e-mail or memorandum. Whatever the form, the performance warning must tell the employee why his or her performance has been Marginal or Unsatisfactory and the consequences of failure to improve performance to at least the Commendable level after a period to improve performance.

2. *Consequences of Marginal or Unsatisfactory performance.* The Board may separate an employee who fails to meet the Board's performance standards after the employee is given Marginal or Unsatisfactory performance feedback and a period of time to improve his or her performance.[4] An employee who is subject to the Board's Adverse Action policy and receives feedback that his or her performance is Marginal will generally be given six months to improve. An employee who is subject to the Board's Adverse Action policy and receives feedback that his or her performance is Unsatisfactory will generally be given three months to improve. An employee who is subject to the Board's Provisional Employment policy and receives feedback that his or her performance is Marginal or Unsatisfactory will generally be given a period of three months to improve. If an employee engages in any misconduct during the improvement period, the employee may be separated immediately. If at the end of the improvement period, the employee's performance is still at a Marginal or Unsatisfactory level, the employee may be separated from Board employment.

   In addition, if an employee improves performance to a Commendable level or above, the employee must sustain his or her performance at that level after the improvement period ends. If an employee who is subject to the Board's Provisional Employment Policy does not, during the provisional period, sustain performance at a Commendable level or above, the employee may be separated from service. If an employee who is subject to the Board's Adverse Action policy does not sustain performance, in the areas previously identified for improvement, at a Commendable level or above, for six months after the end of the improvement period, the employee may be separated from service.[5] The Board's Provisional Employment policy and Adverse Action policy describe the procedures applicable to separating most Board employees for poor performance.

3. *Consultation with HR.* A division may issue an employee notice that his or her performance is Marginal or Unsatisfactory only after consulting with the Employee Relations Section, HR.

Appeals

1. *What may be appealed.* An employee (other than a division or office director or the chief operating officer) may appeal (1) his or her most recent annual PMP, which may include an appeal of the overall rating, the rating on an individual element, or adverse comments in the PMP; or (2) any notice that his or her performance is Marginal or

Unsatisfactory. An employee may not appeal interim PMPs or other informal performance feedback (unless the PMP or feedback rates the employee's performance as Marginal or Unsatisfactory) or annual PMPs for prior performance periods. Any appeal must be in writing.

2. *Time period.* An employee wishing to appeal an annual PMP or notice that his or her performance is Marginal or Unsatisfactory must file any such appeal, along with all documentation the employee wishes to provide in support of the appeal, within 15 calendar days after the date on which the reviewing manager signed the PMP or the date on which the supervisor notified the employee that his or her performance was Marginal or Unsatisfactory. The appeal must be filed with the director of the division or office in which the employee works unless the director was the supervisor or reviewing manager for the PMP or other performance warning, in which case the chief human capital officer shall hear the appeal ("appeal officer"). If the chief operating officer was the supervisor or reviewing manager for the PMP or other performance warning, the general counsel shall appoint an appeal officer.

3. *Content of the appeal.* The appeal must specifically set forth those areas with which the employee disagrees. If the employee does not provide sufficient information in the appeal, the employee may be asked to submit additional information.

4. *Appeal determination.*The appeal officer will notify the appropriate supervisor of the appeal promptly after receipt.

   In reviewing the appeal, the appeal officer (or his or her designee) may act based upon the material provided by the employee and may also conduct whatever further investigation he or she deems appropriate, including requesting supplementary information from the employee and his or her supervisor(s).

   Unless an extension of time (explained below) is granted, within 30 calendar days after receipt of the appeal, the appeal officer (or his or her designee) will issue a written decision on the appeal. The decision should be given to the employee in a manner that identifies the date it was delivered to the employee. The appeal officer (or his or her designee) will determine whether the overall performance rating is appropriate and whether any changes should be made to the written documentation. As a result of an appeal, an appeal officer (or his or her designee) may uphold the PMP or notification that the employee's performance is Marginal or Unsatisfactory, raise the overall performance rating, raise the rating in an individual element on an annual PMP, or change language in the documentation. The PMP or the notification that the employee's performance is Marginal or Unsatisfactory may not be modified in a way that is adverse to the employee as a result of an appeal. The appeal officer's decision on an appeal is final and not subject to further review.

   Even if an appeal is pending, the Board may proceed with action under any other

policy, including the Provisional Employment and Adverse Action policies.

5. *Interplay with other appeal processes.*A PMP or notice that the employee's performance is Marginal or Unsatisfactory may not be simultaneously challenged under this policy and through other procedures provided by various Board policies. This means that while PMP or rating-related issues may be raised under employee relations policies, such as the Adverse Action policy, Provisional Employment policy, and the Equal Employment Opportunity (EEO) policy, an appeal under this policy cannot be pursued at the same time as an action or appeal under these other policies. Accordingly, whenever an employee is pursuing other avenues under any other policy, any appeal under this policy will be dismissed, and the PMP issue will be addressed under the other policy.

   If an employee files an appeal under this procedure and the employee wishes to file an EEO complaint regarding the PMP or notice that the employee's performance is Marginal or Unsatisfactory, the employee must contact an EEO counselor and initiate the EEO process within 45 calendar days of the date his or her PMP was signed by the reviewing manager or the date that he or she received notice that his or her performance was Marginal or Unsatisfactory.

   An employee may not pursue a PMP-related disagreement under the Board's Adjusting Work-Related Problems policy. The supervisor or manager involved must refer the employee to the PMP policy.

   An employee's appeal under this procedure does not stay or prevent any action that may be taken under another Board procedure. In this regard, an adverse action or a disciplinary action that is based on the PMP or notice of Marginal or Unsatisfactory performance can be taken even if an appeal is pending. The PMP matter will be addressed under the Board procedure pursuant to which the action is taken against the employee.

6. *Consultation.* At any stage in the appeals process, an employee or manager may contact an Employee Relations specialist for assistance in resolving appeal-related problems.

7. *Extensions of time.* The ER Officer, after consulting with both the affected employee and the employee's division, may extend any of the time frames under this appeal procedure.

Responsibility

The Management Division has the authority to administer and interpret this policy. The Management Division shares the responsibility for implementation of the PMP program with each division (or office). This policy may be reviewed, updated, or amended at any time.

---

1. Whether an employee who has been at the Board for less than 12 months receives a PMP depends on the division's practice. Return to text

2. Some new employees may be an exception (see footnote 1). Return to text

3. If a division demonstrates a sufficient need, HR may permit that division to use specifically tailored PMP forms. Any such form must include objectives and/or expectations; measurement criteria; performance results; strengths; areas for further improvement; and an overall evaluation. Furthermore, all tailored PMP forms must include a description of the performance–rating levels as stated in this policy. Return to text

4. In general, the improvement period will not be extended for time an employee is out on leave unless the employee is out for more than half of the improvement period and the employee showed improvement prior to going out on leave. Return to text

5.If an employee is out of work for any reason this six month period may be extended by the number of days the employee is out of work. Return to text

Management Policies Home

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM
MANAGEMENT POLICY STATEMENT

Adverse Action

Approved by Michell C. Clark, effective February 7, 2014

Purpose

This policy outlines the general circumstances under which the Board may take an adverse action against an employee and describes the procedures that will be followed when such an action is proposed and taken. Unless an action falls within the definition of an adverse action, the action is not covered by this policy. Actions not covered by this policy may be covered by other Board policies—for example, the Disciplinary Actions policy or the Provisional Employment policy.

Definitions

Adverse action means a discharge, removal, suspension without pay for a period of more than 14 calendar days, or a reduction in grade or base pay against an employee. All other actions do not constitute adverse actions. In addition, adverse actions do not include

- actions the employee voluntarily agrees to or takes on his or her own behalf;
- actions that reduce an employee's variable pay, bonuses, cash awards, or any other type of pay that does not constitute base pay;
- any action taken under the Board's Workforce Reduction policy (including separation or reduction in grade or pay); or
- actions taken to carry out a transfer of function(s) required by law or other actions required by applicable law.

Base pay means the employee's annual rate of basic pay. Base pay does not include variable pay, cash awards, lump-sum merit increases, sign-on bonuses, retention bonuses, shift differential, overtime pay, holiday pay, availability pay, unscheduled-duty pay, premium pay, or any other type of pay that the Board does not treat as base pay.

Days refers to calendar, not working, days unless otherwise noted.

Employee means an individual who works full-time or part-time and is appointed into Board service for a period of more than 90 calendar days. The term *employee* does not include members of the Board or those serving a provisional employment period, student aides, office assistants, student interns, co-op employees, or those serving in a term-limited position.[1] The term employee also does not include an at-will employee, that is, an individual serving at the pleasure of the Board who may be discharged from Board service for any reason that is not unlawful. An individual who provides services to the Board but who is not an employee as defined herein has no rights under this policy.

Officer means an employee who has been appointed by the Board to serve as a member of its official staff.

Grounds for Adverse Actions

Adverse actions are taken to promote the integrity and efficiency of the Board. The circumstances under which an employee's performance may result in an adverse action are described in the Board's Performance Management Program policy. For example, an adverse action may be initiated against an employee on the basis of his or her less-than-commendable performance. An adverse action may also be initiated against an employee on the basis of national security or employment-suitability considerations. When taking an adverse action on the basis of performance, national security, or employment suitability, the Board does not take aggravating and mitigating factors (as explained below) into account.

In addition, the Board may take an adverse action against an employee as a result of his or her misconduct. Whether the Board takes an adverse action against an employee for misconduct depends on the facts of the particular case, including the nature and severity of the misconduct, whether and how the misconduct affects the employee's ability to carry out his or her job responsibilities, and the Board's confidence in the employee's ability to carry out those responsibilities. In deciding whether to pursue an adverse action for misconduct, the Board may consider, as appropriate, aggravating and mitigating factors. Such factors may include whether an offense was intentional, technical, or inadvertent; was committed maliciously or for gain; was frequently repeated; or was notorious (such that it could negatively affect the Board's reputation). The employee's job level, type of employment, supervisory status, previous disciplinary record, performance, and potential for rehabilitation may also be considered. Depending on the seriousness of the offense, one instance of misconduct may be sufficient to separate an employee from Board service.

In certain cases the Board may initiate an adverse action due to an employee's failure to meet certain employment requirements, such as not being legally authorized to work in the United States; not meeting an essential job requirement, such as a law enforcement officer who is not authorized to carry a weapon; not being fit for duty; not passing a background investigation; or not meeting other suitability requirements as explained in the Board's Suitability policy. In cases where the employee fails to meet an employment requirement, the employee will be notified of the problem and be provided with the procedural protections outlined in this policy. However, the employee may not be given any time period to improve performance or remedy the problem, but instead will immediately be separated from Board employment under the procedures outlined herein. In addition, aggravating and mitigating

factors will not be considered in such cases.

Adverse Action Procedures

Proposing an Adverse Action

An officer in the employee's division (the proposing official) must consult with the Employee Relations (ER) Section of the Management Division prior to proposing an action. A division may not inform an employee of a proposed adverse action before consulting ER. After ER has reviewed and commented on the proposal, the proposing official will deliver the proposal to the employee (and such notice will be considered delivered on the date that it was delivered to the employee either in person, by certified mail or Federal Express, or similar method). At the same time, the proposing official will deliver the proposal to the head of the employing division or office (the deciding official). The appendix outlines the individuals who serve as the proposing and deciding officials if an officer is the subject of the adverse action. The employee shall be given an opportunity to respond to the proposal, as further described below.

Content of the proposal and notice to employee. The proposal must state the proposed action, state the specific reasons for the proposed action, and describe the evidence or information on which the proposing official is basing the proposal.[2] In addition, if the proposed action is a result of employee misconduct, the proposal should discuss why the proposed penalty is appropriate in light of any mitigating or aggravating factors. The proposal must (1) attach a copy of this policy; (2) include any material that was relied upon to support the proposed actions, including documents, investigative reports, or extracts and, if such material was derived from witness statements, the statements themselves or information regarding how the employee can access them; and (3) inform the employee

- of the time period to respond to the proposal and that the response may either be in writing, in person (if requested by the employee), or both;
- that an employee relations specialist is available to assist him or her; and
- that he or she is entitled to consult with, and be represented by, a personal representative of the employee's choice and at the employee's expense, at any stage in the adverse action process.

Procedures governing the employee's response to the proposal. An employee will be given 15 calendar days from the date of the proposal to respond to the proposal unless there is reasonable cause to believe that the employee may be guilty of a crime for which a prison sentence can be imposed. In that case, the officer responsible for Employee Relations (ER Officer), or his or her designee, may reduce the response period, but in no event may it be reduced to less than seven calendar days.

At any time, the proposing official may amend a proposed action that has been issued to an employee to include additional information in support of the proposed action, to reference subsequently occurring or discovered supporting evidence, or to add additional bases for the proposed action. The information upon which such amendments are based will be provided to

the employee as stated above. The employee shall be given no less than 15 calendar days to respond to the proposed action, as amended. When there is reasonable cause to believe that an employee may be guilty of a crime for which a prison sentence can be imposed, the ER Officer, or his or her designee, may reduce this time period, but in no event may it be reduced to less than seven calendar days.

An employee's response to the deciding official must be made in writing. The employee's response must specifically state the reasons he or she believes the proposed action is incorrect and may include affidavits or any other relevant documentation. All documentation must be submitted with the employee's response.

An employee may request to meet in person with the deciding official. (An in-person meeting could also include a telephone call or a video conference.) Such requests must be made within seven calendar days of the date of the proposed action and must explain why the employee believes an in-person meeting is necessary. In addition, the employee's meeting request must include the dates and times he or she is available to meet within the 15 calendar-day response period. After receiving the request, the deciding official will inform the employee whether the request for an in person meeting will be granted and, if so, the date and time of the meeting, if applicable. This policy does not provide a right to an in-person meeting with the deciding official.

Employee's status pending a decision. The proposing official, in consultation with the ER Officer, or his or her designee, may place the employee on administrative leave (with pay) from the date the employee is provided with the proposal, or at any time after that date, until the deciding official issues a decision on the proposal. An employee on administrative leave may have his or her access to things such as the Board's buildings and electronic systems restricted, but the employee will continue to receive the regular health and retirement benefits and pay (excluding overtime) he or she would have been paid if the employee had worked during the administrative-leave period.

An employee who is absent from work without pay at the time the adverse action is proposed will not be placed in a pay status while the deciding official's decision is pending, unless the employee requests and qualifies for paid leave or returns to duty. If the employee requests and qualifies for paid leave or returns to duty, the employee will be placed in a pay status from the date the leave request was made or the date the employee returned to duty. In addition, if an employee is absent from work and has applied for, or is receiving, short-term disability (STD) benefits at the time the adverse action is proposed, the employee will be paid in accordance with the Board's normal rules for administering STD claims/benefits while the deciding official's decision is pending. However, if the employee states that he or she is able to return to work and, if required, provides medical documentation to support this statement, the employee will be placed on administrative leave with pay or returned to work while the deciding official's decision is pending. An employee's access to the building may be restricted while the decision is pending.

Deciding Official's Decision on the Proposal

Within 30 calendar days after the employee responds to the proposed action, or not more than 30 calendar days after the time period for the employee's response expires, the deciding

official shall notify the employee, the employee's representative (if any), and the proposing official in writing of his or her decision. The deciding official may, in reaching a decision, conduct whatever investigation he or she deems appropriate, including requesting supplementary information from the employee or the proposing official (or both).

The decision may (1) sustain the proposing official's recommendation either in whole or in part; (2) modify the proposing official's recommendation by substituting a less severe action; or (3) reverse the proposing official's recommendation either in whole or in part. If the deciding official uncovers new and material information to support the proposal, and he or she intends to rely on that information in reaching a decision, the deciding official must provide the employee with that information and allow the employee an opportunity to respond. The employee must have a minimum of 15 calendar days to respond to the new and material information, unless there is reasonable cause to believe that the employee may be guilty of a crime for which a prison sentence can be imposed. In that case, the ER Officer, or his or her designee, may reduce this time period, but in no event may it be reduced to less than seven calendar days.

If the decision is adverse to the employee, the deciding official shall notify the employee of the decision at or before the time the action will be made effective. The deciding official's decision shall be dated and shall inform the employee of the reason (or reasons) for the decision, the effective date of the decision, and his or her right to appeal the decision. Any appeal will not delay the effective date of the adverse action.

Appeal

An employee may appeal the deciding official's decision to the chief operating officer (COO),[3] or if the COO made the initial determination to separate the employee or otherwise must abstain from making the decision, to a neutral and impartial third party designated by the chairman, Committee on Board Affairs (appeal official).[4] The appendix outlines who serves as the appeal official in the case of an officer. As part of an employee's appeal, he or she may request a hearing. The employee must file an appeal with the appeal official no later than 15 calendar days after the date of the deciding official's decision.

Content of the appeal. The appeal must (1) be in writing, (2) state the specific reasons the adverse action is incorrect, and (3) state whether the employee is requesting a hearing.

Hearing. If the employee requests a hearing, the appeal official, will determine the type of hearing and the scope of the hearing that will be provided.[5]

Decision on appeal. The appeal official shall review and consider the entire record. Within 30 calendar days after the date of a timely appeal, the appeal official shall notify the employee, the employee's representative (if any), the proposing official, and the deciding official of his or her decision in writing. The decision may (1) sustain the deciding official's decision either in whole or in part, (2) modify the deciding official's decision by substituting a less severe action, or (3) reverse the deciding official's decision either in whole or in part. In reaching a decision on appeal, the appeal official may only consider the written record before him or her as well as the information presented at the hearing, if any. The decision must explain the basis for the decision. The decision on appeal shall be final and binding upon the employee and the Board.

Time Limits

At any stage of the process, the deciding official or appeal official, as appropriate, may extend the time limits indicated in the adverse action procedures. In situations that require an extension of time, the employee will be informed of such an extension.

Disclosure of Information

Any information the employee submits in response to an adverse action will be shared with the proposing official at each stage in the process unless the information will not be relied on in reaching a decision. Any information the proposing official or the deciding official submits to support the adverse action will be supplied to the employee unless the information will not be relied on in reaching a decision. In appropriate cases, the deciding official or appeal official may require the employee to agree to maintain the confidentiality of information submitted by the proposing official or the deciding official as a pre-condition to receiving such information if disclosure of such information would impinge on the privacy rights of other employees or would otherwise be impermissible under law or Board policy.

Interplay with Other Policies

An employee may not simultaneously challenge an action under this policy and under other applicable Board policies, except for the Board's Equal Employment Opportunity (EEO) policy. Accordingly, subject to that exception, if an adverse action is proposed, all actions under other Board policies that are based on the same set of facts as the proposed adverse action will be terminated. An employee may continue to pursue both an appeal under this Adverse Action policy and an action under the Board's EEO policy. If an employee wishes to challenge an adverse action under the Board's EEO policy, he or she must initiate contact with an EEO counselor within 45 calendar days of the date of the deciding official's decision on the adverse action. The filing of an EEO complaint does not delay the effective date of the adverse action.

Actions Taken Pursuant to National Security

Notwithstanding any other provisions of this policy, to the extent a proposed adverse action is based on information that is classified for national security reasons, the Board will provide an employee with as comprehensive and detailed a written explanation of the basis for the adverse action as the national security interests of the United States and other applicable law permit. In addition, the Board will provide an employee with the information an adverse action is based on only as permitted by national security interests and other applicable law.

Responsibility

The Management Division has the authority to administer and interpret this policy. Divisions are responsible for notifying ER when the division first believes that an employee's behavior or performance could result in an adverse action. This policy may be reviewed, updated, or amended at any time.

Appendix —Proposing and Deciding Officials for Adverse Actions Involving Officers

Adverse Action Against:

1. **Against the chief operating officer (COO) and division/office directors, except those listed under 2, below, and except the inspector general**[6]
   Proposing Official: Chair of the relevant standing committee (or administrator if there is no standing committee)
   Deciding Official: Administrative governor (or if the administrative governor was the proposing official, the Vice Chair)[7]
   Appeal Official: Full Board (excluding the proposing and deciding officials)

2. **Against the director of the Management Division, director of the Division of Financial Management, program director of the Office of Diversity and Inclusion, director of the Division of Information Technology, chief data officer, and any other division or office director that the Board states, in writing, reports to the COO**
   Proposing Official: Chief operating officer
   Deciding Official: Administrative governor
   Appeal Official: Full Board (excluding the deciding official)

3. **Against all other officers (other than the inspector general)**
   Proposing Official: Division/office director
   Deciding Official: Chair of the standing committee/administrator
   Appeal Official: Administrative governor (or if the administrative governor was the deciding official, the Board's Vice Chair)[8]

The COO, division directors, and governors who are required to act as the proposing official, deciding official, or appeal official may consult with the chief human capital officer and the assistant general counsel, as needed.

---

1. Those serving a provisional employment period can be separated from employment at the will of the Board for any reason that is not unlawful, in accordance with the Board's Provisional Employment policy. In addition, student aides, office assistants, student interns, co-op employees, and persons in term limited positions, serve at the will of the Board and may be disciplined or separated for any reason that is not unlawful. Furthermore, a person serving in a term-limited position may automatically be separated at the end of his or her term, unless a decision is made to extend the employee's term.
Return to text

2. If an adverse action is based on the employee's performance under the Board's Performance Management Program, the proposing official need only attach the employee's PMP forms to describe or explain the action.
Return to text

3. The COO may designate the chief human capital officer (CHCO) to decide the appeal instead of the COO. However, if the COO made the initial determination to separate the employee or otherwise must abstain from deciding the appeal, the CHCO also may not hear the appeal.
Return to text

4. The COO must consult with the Legal Division regarding when a neutral and impartial third party must be assigned. A neutral and impartial third party may be any Board officer who was not involved in the initial decision.
Return to text

5. The hearing will provide sufficient process to satisfy due process requirements as determined by the COO or the third party designated by the chairman, Committee on Board Affairs, in consultation with the Legal Division.
Return to text

6. The inspector general may only be removed under the terms and conditions specified under the Inspector General Act.
Return to text

7. If the position of Vice Chair is vacant the administrative governor shall appoint a governor to act in place of the Vice Chair.
Return to text
8. As noted above, if the position of Vice Chair is vacant the administrative governor shall appoint a governor to act in place of the Vice Chair.

Board Policies

Delegations of Administrative Authority

Effective December 20, 2013

Jump to section:
Overview

Overview

A 1966 amendment to the Federal Reserve Act authorizes the Board to delegate any of its functions, other than those pertaining to rulemaking or monetary and credit policies, to hearing examiners, members or employees of the Board, or the Federal Reserve Banks. Since 1966, the Board has delegated a large number of functions, mostly in the areas of the Board's management, administration, and bank and financial holding company supervision, including the processing of applications. Only the Chairman may assign responsibility for the performance of functions delegated by the Board.

Section 10(2) of the Federal Reserve Act designates the Chairman as the Board's "active executive officer." In this capacity, the Chairman is responsible for the overall management of the Board in the execution of its objectives, policies, and programs. The Board has delegated to the Chairman the administrative responsibilities delineated in section 1 of this document. This document only deals with the delegations of the Board's internal administrative authority. The Board has delegated non-internal functions as stated in 12 CFR 265. The Board shall review any action taken under these delegations of internal administrative authority upon the vote of one member of the Board in accordance with the procedures set out in 12 CFR 265.3.

The Chairman, who has authority under section 11(k) of the Federal Reserve Act to assign responsibility for performance of delegated functions, has selected one of the Board members to serve as the Board's administrative governor, with authority to oversee day-to-day operations of the organization as outlined in section 2 below. As outlined in other sections of this document, the administrative governor has delegated authority and responsibility for a number of these operations to the chief operating officer (COO) and to the directors of the offices and divisions, and some of these functions have been further delegated. However, the Board has not delegated the authority to approve the Board's budget, strategic plan, or salary structure.

As outlined in section 3 below, the Chairman delegates to the chair of each standing committee (or administrator for the relevant division or office) the authority to supervise all officers (including actions such as approving promotions of officers, adjusting officer salaries and bonuses, and approving any significant changes to duties of existing officers). In exercising delegated authority for setting and adjusting officer salaries and bonuses, the chair of each standing committee (or the administrator for the relevant division or office) must obtain the concurrence of the administrative governor, unless the administrative governor is responsible for taking the action. The Board retains the authority and responsibility for the creation of new officer positions, the initial appointment of officers, and all matters relating to division and office directors (except adverse actions against division or office directors).[1]

The governor or officer to whom any function shown below is delegated may redelegate that function to any other staff in writing, while also retaining the delegated authority, unless expressly stated otherwise. Moreover, individuals who delegate authority have a duty to monitor the work of the individuals who exercise their delegated authority. To assist with this monitoring, those who are delegated functions must report to the Board, or to the appropriate committee, governor, or officer, as needed. No individual authorized to act under these delegation rules, or any further subdelegation, may take action that contravenes (1) prior decisions, findings, or determinations lawfully made by the Board, except for budget actions permitted by the below delegations; (2) an applicable management policy, unless the individual has the authority to modify the applicable policy and has done so in writing (or has consented

to an exception in writing); or (3) a decision made by a higher-level individual without first obtaining the consent of that individual.

The Board also delegates certain administrative authorities to the inspector general. This delegation is made in conjunction with the Director of the Consumer Financial Protection Bureau (CFPB). The Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) (Pub. L. 111-203) modified the Inspector General Act by creating one inspector general for both the Board and the CFPB. As a result of this statutory modification, matters (other than appointment of the inspector general) related to management of the Office of Inspector General are handled by both the Board and the CFPB. For this reason, the delegation of administrative authority to the inspector general is from both the Board and the Director of the CFPB.

1. Delegation of Administrative Responsibilities from the Board to the Chairman

1.1 ***Delegation of responsibilities.*** Except as provided under section 16, the Board delegates to the Chairman the responsibility and authority for—

(a) the overall internal management and organization of the Board's resources, including the formulation and implementation of plans, budgets, and funding to ensure effective performance of the Board's functions under law and the formulation, approval, and implementation of management policies such as those governing physical premises; personnel management; financial planning; management and control; information technology; security of personnel, premises, and information; and space accommodations;

(b) the review and presentation to the Board of the operating and capital budgets for the Board;[2]

(c) the disbursement of funds;

(d) the appointment and supervision of non-officer personnel (including the approval of personnel actions, such as pay actions and adverse actions) and taking adverse actions against officers (including division and office directors), the authority to supervise all officers (including actions such as approving promotions of officers, adjusting officer salaries and bonuses, and approving any significant changes to duties of existing officers), except that the Board retains the authority and responsibility for the creation of additional officer positions that increase the total number of Board officer positions, the initial appointment of an individual as an officer, and all matters relating to division and office directors (except adverse actions against them);

(e) the distribution of business activities among staff and organizational units;

(f) the approval of reorganizations within the dollar limitations noted below for substantive changes; and

(g) the abolishment of vacant positions and reduction of the Board's workforce if doing so is consistent with the Board's strategic plan and work requirements.

1.2 ***Limitations on delegation.*** In carrying out these delegated responsibilities, the Chairman shall be governed by the operating budget and the single-year and multiyear capital budgets adopted by the Board, except that the Chairman shall have authority to amend any of the operating and single-year capital budgets or multiyear capital budgets by—

(a) approving, with regard to the operating budget, reallocations among cost centers and budget accounts (as set forth in the budget authorized by the Board) or overexpenditures of budgeted funds, except that no individual reallocation or overexpenditure may exceed $2.0 million and the total of all such changes combined may not exceed 2 percent of the operating budget approved by the Board for the budget period, [3]

(b) approving, with regard to the single-year capital budget, reallocations among cost centers and budget accounts (as set forth in the budget authorized by the Board) or overexpenditures of budgeted funds, except that no individual reallocation or overexpenditure may exceed $2.0 million and the total of all such changes combined may not exceed 10 percent of the single-year capital budget approved by the Board for the budget period;

(c) approving, with regard to the multiyear capital budget, reallocations among cost centers and budget accounts (as set forth in the budget authorized by the Board) or overexpenditures of budgeted funds, except that no individual reallocation or overexpenditure may exceed $2.0 million and the total of all such changes combined may not exceed 10 percent of the multiyear capital budget approved by the Board for the budget period; and

(d) approving permanent new positions that would increase the Board's total position authorization for that budget period by no more than 2 percent of the number

originally authorized by the Board for that budget period, and approving dual-occupancy and temporary positions as long the overall budget limits are not exceeded.

2. Chairman to the Administrative Governor (Chair, Committee on Board Affairs)

2.1 ***Delegation.*** The Chairman redelegates to the administrative governor all administrative responsibilities delegated to the Chairman pursuant to section 1 above (and as limited by section 1 above) with the further limitations noted below. The administrative governor shall have the authority to carry out the day-to-day operations of the Board directly or through appropriate redelegation. All actions taken by the administrative governor and any other person delegated to act under these delegations of authority count against the Chairman's limits with regard to reallocations, overexpenditures, and number of positions, except actions that result in current-year budget savings and/or transfers of functions to achieve operating efficiencies that do not result in increases to the Board's budget.

2.2 ***Limitations on delegation.*** In carrying out these delegated responsibilities, the administrative governor shall not—

(a) make significant budgetary decisions without input from the appropriate standing committee chair or administrator or abolish vacant positions or reduce the Board's workforce without the consent of the appropriate standing committee chair or administrator; or

(b) approve, with regard to the operating budget, single-year capital budget, or multiyear capital budget, any reallocations among cost centers and budget accounts (as set forth in the budget authorized by the Board) or overexpenditures of budgeted funds unless the administrative governor has reason to believe that savings in one or more other budget categories will have the result that the overall operating budget, single-year capital budget, or multiyear capital budget, as the case may be, will not be exceeded; or

(c) take any actions delegated to the chair of each standing committee (or administrator for the relevant division or office) under section 3 unless the administrative governor serves as the chair of the relevant standing committee or administrator for the relevant division or office. In addition, any Board policy pertaining to the separation of officers must give the chairs of the standing committees (or administrators) the sole authority to propose separations of division/office directors in the divisions/offices they oversee (except the COO may propose separations of directors who report directly to the COO) and to make final decisions to separate all other officers in the divisions/offices they oversee.

3. Chairman to the Chair of Each Standing Committee (or Administrator for the Relevant Division or Office)

3.1 ***Delegation.*** The Chairman redelegates to the chair of each standing committee (or administrator for the relevant division or office) the authority to supervise all officers within the relevant division or office (including actions such as approving promotions of officers, adjusting officer salaries and bonuses, and approving any significant changes to duties of existing officers, but not including adverse actions against officers, unless the adverse action was delegated to the governor by the Chairman, administrative governor, or under Board policy).

3.2 ***Limitations on delegation.*** In exercising delegated authority for setting and adjusting officer salaries and bonuses, the chair of each standing committee (or the administrator for the relevant division or office) must obtain the concurrence of the administrative governor unless the administrative governor is responsible for taking the action. The Board retains the authority and responsibility for the creation of new officer positions, the appointment of officers, and all matters relating to division directors (except adverse actions against them).

4. Administrative Governor to the Chief Operating Officer

4.1 ***Delegation.*** The administrative governor redelegates to the COO (as limited above) the responsibility and authority for—

(a) administrative oversight of the Board's operations and resources;

(b) approval, with regard to the operating budget, of reallocations among cost centers and budget accounts (as set forth in the budget authorized by the Board) or overexpenditures of budgeted funds if (1) each reallocation or overexpenditure does not exceed $1.5 million, (2) the total of all such changes combined does not exceed 2 percent of the operating budget approved by the Board for the budget period, and (3) the COO has reason to believe that savings in one or more other budget categories will have the result that the overall operating budget will not be exceeded;

(c) approval, with regard to the single-year or multiyear capital budget, of reallocations among cost centers and budget accounts (as set forth in the budget authorized by the Board) or overexpenditures of budgeted funds if (1) each reallocation or overexpenditure does not exceed $1.5 million, (2) the total of all such changes combined does not exceed 10 percent of the single-year or multiyear capital budget approved by the Board, and (3) the COO has reason to believe that savings in one or more other budget categories will have the result that the overall single-year or multiyear capital budget will not be exceeded;

(d) approval of dual-occupancy and temporary positions as long the overall budget limits are not exceeded;

(e) approval of the reallocation of functions from one cost center to another to promote efficient staff operations, without regard to the dollar or position limitations noted above, if the reallocation does not result in increases to the Board's budget or total authorized position count (funds transferred as a result of such actions do not count against the delegation limits);

(f) approval of the specific financial and position changes proposed to implement more general actions approved previously by the Board or the administrative governor pursuant to these delegations;

(g) approval of actual expenses (as opposed to per diem expenses) in connection with travel of all staff;

(h) approval of all agreements and understandings that obligate the Board to make payments or entitle the Board to receive payments (except assessing civil money penalties) and, in consultation with the Legal Division, settling any actual or potential claims against the Board (and such claim-settlement authority may only be further redelegated to the director of the Management Division);

(i) procurement of goods, services, and real property for use in conducting the operations of the Board as approved in the budget or by an authorized program change request;

(j) formulation, approval, and implementation of Board policies pertaining to administrative oversight of the Board's operations and resources, including policies governing matters such as planning, management, and financial control; personnel management (including policies for adverse actions against officers) within the limits noted below; physical and personnel security (except for policies related to the Chairman's physical protection); access to and handling of classified information; information technology and security; data management and governance; privacy; procurement; allocation, management control, and maintenance of building space required by the Board; and the Board's continuity of operations and business-resumption activities;

(k) approval of all personnel actions of non-officer employees (except that the COO shall have no authority to decide whether to reduce the Board's workforce or abolish positions, except as provided under section 14, or change personnel actions made by a division or office director under his or her delegated authority under section 14.1(e) of these delegations);

(l) performing actions and duties required under the Paperwork Reduction Act; and

(m) approval of changes to benefit-plan documents (other than changes to plans administered by the Office of Employee Benefits), so long as the plan documents relate to benefits available only to Board staff and do not create a new benefit or reduce or eliminate an existing benefit.

4.2 ***Limitations on delegation.*** In exercising delegated authority, the COO must obtain the prior consent of the administrative governor for all changes to Board policies that pertain to personnel issues, such as policies that govern adverse actions, including actions such as separating and disciplining employees (whether at the staff or officer level); performance systems; pay; and benefits (such as leave accrual rates, severance pay, disability benefits, flexible work schedules, and similar benefits). For clarity, the COO is not required to obtain the consent of the administrative governor when taking actions with regard to a specific employee unless Board policy requires such consent. In addition, any Board policy pertaining to the separation of officers must give the chairs of the standing committees (or administrators) the sole authority to propose separations of division/office directors in the divisions/offices they oversee (except the COO may propose separations of directors who report directly to the COO) and to make final decisions to separate all other officers in the divisions/offices they oversee.

5. Chief Operating Officer to Director of the Management Division

5.1 ***Delegation.*** The COO redelegates to the director of the Management Division (as limited above) the responsibility and authority for—

(a) formulation, approval, and implementation of the management policies for personnel management; physical and personnel security (except for the Chairman's physical protection); access to and handling of classified information; allocation, management control, and maintenance of building space required by the Board; and the Board's continuity of operations and business-resumption activities (but such formulation and approval authority may not be further redelegated);

(b) approval of changes to benefit-plan documents (other than changes to plans administered by the Office of Employee Benefits) so long as the plan documents relate to benefits available only to Board staff and do not create a new benefit or reduce or eliminate an existing benefit; and

(c) approval of all personnel actions of non-officer employees.

6. Chief Operating Officer to the Program Director, Office of Diversity and Inclusion

6.1 ***Delegation***. The COO redelegates to the program director, Office of Diversity and Inclusion (as limited above), the responsibility and authority for—

(a) formulation and approval, in consultation with the director of the Management Division or the director of the Division of Financial Management (as appropriate) and the Legal Division, of management policies relating to diversity and inclusion in the Board's workforce and procurement (but such formulation and approval authority may not be further redelegated); and

(b) overseeing the Board's equal employment opportunity function, including processing complaints of discrimination in hiring or employment under federal law.

6.2 ***Reporting responsibilities.*** The program director, Office of Diversity and Inclusion, shall report to the Board on the progress of the Office of Diversity and Inclusion as needed.

7. Chief Operating Officer to the Chief Financial Officer

7.1 ***Delegation.*** The COO redelegates to the chief financial officer (CFO) (as limited above) the responsibility and authority for—

(a) formulation, approval, and implementation of the Board's policies, operations, and resources related to travel, procurement, financial management, financial control, and risk management (but such formulation and approval authority may not be further redelegated);

(b) setting budget targets consistent with the Board's strategic plan and chairing the Board's annual budget and review process, including discussions of enterprise-wide initiatives that are not included in the strategic plan and making recommendations regarding the same to the Board;

(c) approval, with regard to the operating budget, of reallocations among cost centers and budget accounts (as set forth in the budget authorized by the Board) or overexpenditures of budgeted funds if (1) each reallocation or overexpenditure does not exceed $1.5 million, (2) the total of all such changes combined does not exceed 2 percent of the operating budget approved by the Board for the budget period, and (3) the CFO has reason to believe that savings in one or more other budget categories will have the result that the overall operating budget will not be exceeded;

(d) approval, with regard to the single-year or multiyear capital budget, of reallocations among cost centers and budget accounts (as set forth in the budget authorized by the Board) or overexpenditures of budgeted funds if (1) each reallocation or overexpenditure does not exceed $1.5 million, (2) the total of all such changes combined does not exceed 10 percent of the single-year or multiyear capital budget approved by the Board, and (3) the CFO has reason to believe that savings in one or more other budget categories will have the result that the overall single-year or multiyear capital budget will not be exceeded;

(e) approval of the reallocation of functions from one cost center to another to promote efficient staff operations, without regard to the dollar or position limitations noted above, if the reallocation does not result in increases to the Board's budget or total authorized position count (funds transferred as a result of such actions do not count against the delegation limits);

(f) approval of dual-occupancy and temporary positions as long as the overall budget limits are not exceeded;

(g) approval of the specific financial and position changes proposed to implement more general actions approved previously by the Board or the administrative governor pursuant to these delegations;

(h) approval of actual expenses (as opposed to per diem expenses) in connection with

travel of all staff;

(i) approval of all agreements and memorandums that obligate the Board to make payments or entitle the Board to receive payments (except assessing civil money penalties or settling any actual or potential claims against the Board); and

(j) procurement of goods, services, and real property for use in conducting the operations of the Board as approved in the budget or by an authorized program change request.

7.2 ***Limitation on delegation.*** Notwithstanding the authority delegated to the CFO herein, the CFO may not approve dual-occupancy or temporary positions within the Division of Financial Management, and with respect to budget reallocations within the Division of Financial Management, the CFO shall be limited to the same authority granted to division directors under section 14 of these delegations.

7.3 ***Reporting responsibilities.*** The CFO shall report to the Committee on Board Affairs quarterly, in conjunction with budget reports, on all material actions under delegated authority that result in budget or position adjustments.

8. Chief Operating Officer to the Chief Information Officer and Chief Privacy Officer

8.1 ***Delegation.***The COO redelegates to the chief information officer and chief privacy officer (as limited above) the responsibility and authority for—

(a) automation, telecommunications, and other information technology matters;

(b) information security (but not as it relates to handling and access to classified information);

(c) formulation, approval, and implementation of the management policies for information technology and security (but such formulation and approval authority may not be further redelegated); and

(d) formulation, approval, and implementation of all privacy policies, including responsibility for (1) ensuring the Board's implementation of information-privacy protections, which includes the Board's compliance with applicable federal laws, regulations, and policies relating to information privacy, such as the Privacy Act of 1974 (but such formulation and approval authority may not be further redelegated), and (2) providing input into the Board's development and evaluation of legislative, regulatory, and other policy proposals regarding information privacy issues, except that approving and reviewing privacy impact assessments must be coordinated with the chief information officer.

8.2 ***Reporting responsibilities.*** The chief information officer and chief privacy officer shall report to the Committee on Board Affairs as needed.

9. Director of the Management Division to the Deputy Director of the Management Division Responsible for Facility Services

9.1 ***Delegation.*** The director of the Management Division redelegates to the deputy director of the Management Division responsible for facility services, the responsibility and authority—

(a) to allocate, manage, and maintain all Board buildings, grounds, and storage spaces;

(b) for the Board's continuity of operations and business resumption activities; and

(c) for physical and personnel security (except for the Chairman's physical protection) and for implementation of policies related to the access to and handling of classified information.

10. Director of the Management Division to the Deputy Director of the Management Division Responsible for Human Resources

10.1 ***Delegation.*** The director of the Management Division redelegates to the deputy director of the Management Division responsible for human resources (as limited above), except as otherwise provided in written management policies, the responsibility and authority for—

(a) administrative oversight of the Board's operations and resources related to personnel management; and

(b) approval of all personnel actions involving non-officer employees in accordance with Board policies.

10.2 ***Reporting responsibilities.*** The deputy director of the Management Division

responsible for human resources shall inform the director of the Management Division of the pending involuntary removal of any employee Boardwide. The chief human capital officer shall also report to the Committee on Board Affairs quarterly on all material actions related to personnel management.

11. Deputy Director of the Management Division Responsible for Facility Services to the Chief Personnel Security Officer

11.1 ***Delegation.*** The deputy director of the Management Division responsible for facility services redelegates to the chief personnel security officer the responsibility and authority for physical and personnel security (except for the Chairman's physical protection and except for matters pertaining to handling of classified national security information) and for implementation of policies related to access to classified national security information.

12. Chief Financial Officer to the Chief Acquisition Officer

12.1 ***Delegation.*** The CFO redelegates to the chief acquisition officer the responsibility and authority for procurement of goods, services, and real property for use in conducting the operations of the Board as approved in the budget or by an authorized program change request and for approval of all agreements and memorandums that obligate the Board to make payments or entitle the Board to receive payments (except assessing civil money penalties or settling any actual or potential claims against the Board). The chief acquisition officer shall act as the Board's contracting officer with authority to procure goods and services.

13. Deputy Director of the Management Division Responsible for Human Resources to the Chief Human Capital Officer

13.1 ***Delegation.*** The deputy director of the Management Division responsible for human resources redelegates to the chief human capital officer (as limited above), except as otherwise provided in written management policies, the responsibility and authority for—

(a) administrative oversight of the Board's operations and resources related to personnel management; and

(b) approval of all personnel actions involving non-officer employees in accordance with Board policies.

13.2 ***Reporting responsibilities.*** The chief human capital officer shall inform the deputy director of the Management Division responsible for human resources and the director of the Management Division of the pending involuntary removal of any employee Boardwide. The chief human capital officer shall also report as necessary to the Committee on Board Affairs on all material actions related to personnel management.

14. Administrative Governor to the Directors of Offices and Divisions

14.1 ***Delegation***. The administrative governor redelegates to the directors of offices and divisions the responsibility and authority to—

(a) approve, with regard to the division's or office's operating budget, reallocations among cost centers and budget accounts (as set forth in the budget authorized by the Board) or overexpenditures of budgeted funds in a particular cost center or budget account if (1) each reallocation or overexpenditure does not exceed $200,000, (2) the total of all such changes combined does not exceed a cumulative limit of the higher of 1 percent of the division's or office's operating budget approved by the Board for the budget period or $500,000 per budget period, (3) the reallocation does not move funds between personnel services and goods and services accounts, and (4) the director has reason to believe that savings in one or more other budget categories will have the result that the division's or office's overall operating budget will not be exceeded;

(b) approve the reallocation of functions from one cost center to another to promote efficient staff operations (such as a division or office reorganization) if the reallocation does not increase the division's or office's operating budget or total authorized positions (in which case, the funds or positions transferred do not count against the delegation limits);

(c) approve, with regard to the division's or office's single-year capital budget, reallocations among cost centers and budget accounts (as set forth in the budget authorized by the Board) if the total of all such changes combined does not exceed the lesser of 5 percent of the division's or office's single-year capital budget approved by the Board for the budget period or $100,000 for each budget period (if 5 percent of the division's or office's single-year capital budget is less than $10,000, the limit is $10,000);

(d) abolish vacant positions within their office or division if doing so is consistent with the Board's strategic plan and work requirements and if the standing committee chair or administrator for the division or office consents to the abolishment;

(e) approve all personnel actions, in accordance with Board policies, for non-officers within the division/office relating to promotions, salary increases, and performance awards such as cash awards and variable pay;

(f) approve domestic and foreign travel of division staff, including the division director's own travel expenses, and approve the division director's own leave use; and

(g) maintain information security associated with the data and computer facilities under their control in accordance with policies established by the chief information officer.

15. Administrative Governor to the Director of the Office of Board Members

15.1 ***Delegation***. The administrative governor redelegates to the director of the Office of Board Members the responsibility and authority for the Chairman's physical protection and Board policies related thereto (which responsibilities and authorities may not be further redelegated).

16. Board and Director of the Consumer Financial Protection Bureau to the Inspector General

16.1 ***Delegation***.The principles embodied in the Inspector General Act of 1978 and subsequent amendments preclude the Board and the Director of the CFPB from redelegating the responsibility for providing general supervision for the inspector general. To facilitate the operations of the Office of Inspector General (OIG), however, the Board and the Director of the CFPB delegate to the inspector general the responsibility and authority to—

(a) approve, with regard to the office's operating budget, reallocations among cost centers and budget accounts (as set forth in the OIG's authorized budget) or overexpenditures of budgeted funds in a particular cost center or budget account if (1) each reallocation or overexpenditure does not exceed $200,000, (2) the total of all such changes combined does not exceed a cumulative limit of the higher of 1 percent of the office's operating budget approved by the Board and the CFPB for the budget period or $500,000 per budget period, (3) the reallocation does not move funds between personnel services and goods and services accounts, and (4) the inspector general has reason to believe that savings in one or more other budget categories will have the result that the office's overall operating budget will not be exceeded;

(b) approve the reallocation of functions from one cost center to another to promote efficient staff operations (such as an office reorganization) if the reallocation does not increase the office's operating budget or total authorized positions (in which case, the funds or positions transferred do not count against the delegation limits);

(c) approve, with regard to the office's single-year capital budget, reallocations among cost centers and budget accounts (as set forth in the OIG's authorized budget) if the total of all such changes combined does not exceed the lesser of 5 percent of the office's single-year capital budget approved by the Board and the CFPB for the budget period or $100,000 for each budget period (if 5 percent of the office's single-year capital budget is less than $10,000, the limit is $10,000);

(d) abolish positions and create new positions so long as the office's total position authorization for that budget period does not change and so long as no additional funding is required in the current budget period;

(e) approve all personnel actions, in accordance with Board policies, for non-officer Board employees within the office, which relate to promotions, salary increases, and performance awards such as cash awards and variable pay;

(f) approve domestic and foreign travel of Board employees within the office, including the inspector general's own travel expenses, in accordance with Board policies, and approve the inspector general's own leave use;

(g) maintain information security associated with the data and computer facilities under the office's control, in accordance with policies established by the Board; and

(h) procure goods and services directly, within the approved operating and capital budgets, for use in conducting the operations of the office when, in the opinion of the inspector general, operational necessity warrants. In all other cases, normal Board procurement procedures will be used if the office uses the Board to procure the items or services.

Board Policies

Discriminatory Workplace Harassment

Approved by Don Hammond, effective June 24, 2013

Jump to section:
Policy Statement

Policy Statement

The Board's policy is to (1) provide all employees with a work environment that is free from discriminatory harassment, (2) thoroughly and promptly investigate all complaints of discriminatory harassment, and (3) effect appropriate discipline if discriminatory harassment is found to have occurred. Sexual harassment is one form of discriminatory harassment and is addressed more specifically later in this policy.

Return to top

Zero-Tolerance Policy

Discriminatory harassment will not be tolerated. The Board's policy is to prevent any discriminatory harassment even if the behavior does not violate the law—that is, it is not objectively severe or pervasive. Because the Board wishes to prevent all discriminatory harassment and to encourage reporting of discriminatory harassment before it becomes severe or pervasive, the Board has established this policy both to encourage the reporting of discriminatory harassment and to clarify that any employee who engages in discriminatory harassment may face disciplinary action. The Board is committed to investigating any possible discriminatory harassment of which it learns, even if the harassed individual does not file an equal employment opportunity (EEO) complaint.

Return to top

Background

Discriminatory harassment is verbal or physical conduct that demeans or shows hostility or aversion toward an individual because of his or her race, color, religion, sex, gender, national origin, age (40 or older), disability, genetic information, or because of retaliation for engaging in protected activity. Discriminatory harassment is against the law (that is, it violates Title VII of the Civil Rights Act of 1964, Section 501 of the Rehabilitation Act of 1973, the Age Discrimination in Employment Act of 1967, or the Genetic Information Nondiscrimination Act of 2008) when it has the purpose or effect of unreasonably interfering with an individual's work performance or of creating an intimidating, hostile, or offensive working environment. The conduct must be sufficiently severe or pervasive that it alters the conditions of employment and creates an environment that a reasonable person would find to be hostile or abusive. In addition, to constitute illegal harassment, there must be a basis for imputing liability to the Board. Although harassment based on sexual orientation is not a violation of federal law, it constitutes discriminatory harassment for purposes of this policy.

Below are some examples of conduct that might constitute discriminatory harassment. The list is not all-inclusive; in addition, each situation must be considered in light of the specific facts and circumstances to determine if discriminatory harassment occurred. For example, an occasional remark that could be considered offensive by a particularly sensitive individual is unlikely to be considered discriminatory harassment under this policy; a pattern of such remarks, particularly after the individual has objected to them, would more likely be considered to be discriminatory harassment. By contrast, even a single use of an epithet or slur that would be widely considered to be offensive would be likely to be considered discriminatory harassment under this policy. A finding that discriminatory harassment occurred that violates this policy does not mean that illegal discriminatory harassment necessarily occurred.

Examples of Discriminatory Harassment

- Oral or written use of offensive epithets, slurs, or comments aimed at an individual or group that relate to their race, color, religion, sex, gender,

national origin, age (40 or older), disability, genetic information, or sexual orientation.

- Use of offensive gestures or display of graphic pictures or drawings which demean or show hostility or aversion toward an individual or group because of race, color, religion, sex, gender, national origin, age (40 or older), disability, genetic information, or sexual orientation.
- Taunting on the basis of an individual's association with people of a particular race, color, religion, sex, gender, national origin, age (40 or older), disability, genetic information, or sexual orientation.
- Intimidation through violence or threats of force or violence against an individual because of his or her race, color, religion, sex, gender, national origin, age (40 or older), disability, genetic information, or sexual orientation.
- Unfavorable treatment of an individual or group because of their race, color, religion, sex, gender, national origin, age (40 or older), disability, genetic information, or sexual orientation.
- Ridiculing or mocking a person because of his or her race, color, religion, sex, gender, national origin, age (40 or older), disability, genetic information, or sexual orientation.
- Making comments to an individual, or in an individual's hearing, that reflect stereotypes about that individual's race, color, religion, sex, gender, national origin, age (40 or older), disability, genetic information, or sexual orientation.
- Sending unwelcome mail, voicemail or email containing derogatory jokes or comments about an individual or group because of race, color, religion, sex, gender, national origin, age (40 or older), disability, genetic information, or sexual orientation.[1]
- Treating people differently based on their protected characteristics can also be discriminatory harassment. For example, a supervisor who complains about his or her older employees' tardiness but allows workers under age 40 to come to work late without comment may be engaging in discriminatory harassment based on age.

Return to top

Sexual Harassment

Sexual harassment is a specific type of discriminatory harassment. Sexual harassment is defined as unsolicited and unwelcome sexual advances, requests for sexual favors, or other verbal or physical conduct of a sexual nature directed to any person of the same or opposite sex when (1) submission to such conduct is made either explicitly or implicitly a term or condition of an individual's employment, (2) submission to or rejection of such conduct by an individual is used as the basis for employment decisions affecting such individual, or (3) such conduct has the purpose or effect of unreasonably interfering with an individual's work performance or creating an intimidating, hostile, or offensive work environment. The courts and the Equal Employment Opportunity Commission (EEOC) have defined two types of illegal sexual harassment: (1) quid pro quo (a Latin phrase meaning giving or providing something in return for something else); and (2) hostile work environment.

Quid Pro Quo Sexual Harassment

Quid pro quo sexual harassment is the easiest to recognize. It occurs when one person seeks sexual favors from another person in return for something of value. The "something of value" offered in return might consist of almost any form of favorable treatment, such as receiving a good performance evaluation or being selected for promotion.

Quid pro quo sexual harassment does ***not*** require that the harasser clearly state what specific favors are expected for what specific return. Rather, as both the courts and the EEOC have recognized, quid pro quo sexual harassment can be ***implied*** from the overall pattern of a person's actions—particularly if he or she occupies a position of authority or power over the other person.

Below are some examples of conduct that might constitute quid pro quo sexual harassment. The list is not all-inclusive; in addition, each situation must be considered in light of the specific facts and circumstances to determine whether sexual harassment occurred. A finding that sexual harassment occurred that violates this policy does not mean that illegal sexual harassment necessarily occurred.

Examples of Quid Pro Quo Sexual Harassment

- When an employee tells her supervisor that some people really don't like to have their necks and shoulders rubbed, he responds by saying, "Those who want to get ahead do."

- A manager pressures a subordinate employee to join her for dinner and dancing. When he declines, she tells him that he can't expect her to mentor him on the job if he's unwilling to spend time together after hours.
- After an employee resists her team leader's repeated suggestion that she travel with him so that they "can get to know each other better," he turns in a project evaluation rating her work "substandard."

Hostile Work Environment Sexual Harassment

Hostile work environment sexual harassment is often harder for employees and managers to recognize. It is usually found where a general pattern of workplace behavior exists that is ***sexually oriented, pervasive,*** and ***severe.*** Those descriptive terms have been defined in actual workplace situations as follows:

Sexually oriented behavior has been found to include

- letters, telephone calls, magazines, pictures, and objects of a sexual nature or content;
- the deliberate touching, brushing, cornering, or pinching of or leaning over a person;
- suggestive looks, comments, gestures, or whistles; or
- sexual jokes, teasing, remarks, and questions.

Pervasive behavior is behavior that is widespread, common, or repeated.

Behavior of a sexual nature is considered *severe* when it would be objectionable to a "reasonable person" within the circumstances.

Below are some examples of conduct that might constitute hostile work environment sexual harassment. The list is not all-inclusive; in addition, each situation must be considered in light of the specific facts and circumstances to determine whether sexual harassment occurred. A finding that sexual harassment occurred that violates this policy does not mean that illegal sexual harassment necessarily occurred.

Examples of Hostile Work Environment Sexual Harassment

- When an employee complains about the vulgar language and jokes that routinely fill the break room, her supervisor tells her to "lighten up and get used to it because that's how boys behave."
- After learning that an employee has separated from her husband and may be getting a divorce soon, a coworker has begun asking her out. After being repeatedly turned down, he has begun calling her at home to ask if she'd like him to "come over and help cure her loneliness."
- A manager calls and sends instant messages to an employee in another division repeatedly asking him to go out with her, even after he tells her he's not interested.

Return to top

Applicability of Policy

This discriminatory harassment policy applies equally to any conduct that constitutes discriminatory harassment, whether sexual harassment or some other form of discriminatory harassment.

Return to top

Responsibility of All Employees with Regard to Discriminatory Harassment, Including Sexual Harassment

It is the responsibility of all employees to refrain from engaging in, condoning, or tolerating discriminatory harassment. It is also employees' responsibility to cooperate with any investigation or inquiry into allegations of discriminatory harassment.

Return to top

Responsibility of All Supervisors and Managers with Regard to Discriminatory Harassment, Including Sexual Harassment

A supervisor or manager who witnesses or receives a report of actions that he or she believes may constitute discriminatory harassment under this policy must report the incident to the officer responsible for Employee Relations, or his or her designee. This is true whether or not the manager or supervisor is in the direct reporting chain of the victim of the alleged discriminatory harassment. After receiving a report, the officer responsible for Employee Relations, or his or her designee, must follow the investigation procedures outlined below, including immediately informing the

program director of the Office of Diversity and Inclusion (formerly called the EEO Office) of the complaint.

Return to top

Procedures for Reporting and Responding to Discriminatory Harassment, Including Sexual Harassment

Any employee who believes he or she has been subjected to discriminatory harassment, or witnessed discriminatory harassment, is encouraged to promptly report the conduct and not remain silent. Employees are encouraged (but not required) to inform the offending person orally or in writing that such conduct is unwelcome and offensive and must stop. If employees do not wish to communicate directly with the offending person, or if such communication has been ineffective, employees are encouraged to report the discriminatory harassment to their supervisor or any of the individuals designated below. When reporting a concern, employees should describe in detail the actions that are perceived to be discriminatorily harassing.

Employees who allege discriminatory harassment or who cooperate in an investigation shall not be subjected to reprisal, recrimination, retaliation, or the threat of such action. Prompt reporting and employees' continued assistance is critical to allow rapid response by management and resolution of the objectionable behavior.

An employee who believes he or she has been subjected to discriminatory harassment always has the option to initiate the EEO complaint process by contacting an EEO counselor within 45 days of the action perceived to be harassing. More detail regarding this process can be found in the "EEO Administrative Complaint Process" section of this policy; in addition, employees may wish to consult the Board's Rules Regarding Equal Opportunity at 12 CFR 268).[4]

Alternatively, an employee who believes he or she has been subjected to discriminatory harassment may report the conduct to any of the following individuals: (1) the offending individual's supervisor or the harassed employee's supervisor; (2) the offending individual's division director or the harassed employee's division director; (3) an
Employee Relations staff member in the Human Resources Function of the Management Division; (4) the officer responsible for Employee Relations, or his or her designee; and (5) for employees in Human Resources, the assistant general counsel for Human Resources in the Legal Division. The names and telephone numbers of the individuals occupying the positions identified in (3), (4), and (5), above are available by calling the Human Resources hotline at extension 3737. An employee who reports discriminatory harassment to any of these individuals will be advised of this policy and that an investigation/inquiry will be opened by Employee Relations as set forth in this policy.

Return to top

Employee Relations Investigation/Inquiry Procedure

Any individual, including an employee of the Office of Diversity and Inclusion, who receives an allegation that he or she believes may constitute discriminatory harassment under this policy must report the allegation to the officer responsible for Employee Relations, or his or her designee. Upon receipt, the officer responsible for Employee Relations or his or her designee must

1. document the allegation received;

2. inform the individual who believes that he or she was subjected to discriminatory harassment that he or she may initiate the EEO complaint process by contacting an EEO counselor in the Office of Diversity and Inclusion within 45 days of the action perceived to be harassing; and

3. inform the program director of the Office of Diversity and Inclusion of the complaint, and ascertain from the program director whether the Office of Diversity and Inclusion will investigate the complaint or whether Employee Relations will.

Depending upon the determination in 3, above, either Employee Relations or the Office of Diversity and Inclusion will

1. investigate the allegation, including documenting the investigation;

2. evaluate the results of the investigation and determine whether discriminatory harassment may have occurred;

3. if discriminatory harassment occurred, determine the appropriate management response, including the proposed action to be taken against the employee who engaged in discriminatory harassment;

4. ensure implementation of (including documenting of) management's response and, if problems are encountered with implementation, immediately report

such problems to the program director of the Office of Diversity and Inclusion;

5. follow up with the victim to ensure management's response effectively addressed (ended) the discriminatory harassment (including documenting the employee's response); and

6. in the unusual event the employee indicates that discriminatory harassment has continued, immediately report the problem to the program director of the Office of Diversity and Inclusion, and consider additional management responses that may more effectively stop the harassing activity (e.g., taking more stringent action against the employee who engaged in discriminatory harassment).

In no case shall the individual being accused of harassment have supervisory authority over the individual who investigates the harassment or over the investigation more generally. Other immediate measures to stop any harassing conduct and prevent further harassment may include granting interim relief to the victim of the harassing conduct before completing an investigation. Examples of such interim relief include making scheduling changes so as to avoid contact between the parties, transferring the alleged harasser, or placing the alleged harasser on administrative leave with pay pending the conclusion of the investigation.

Where an investigation has established that an employee engaged in discriminatory harassment, he or she may be subject to discipline or other appropriate management action, ranging from a letter of reprimand to suspension without pay, to separation for cause, in accordance with the Board's Adverse Action policy or its Disciplinary Actions policy. Oral or written performance feedback may also be considered. Furthermore, the offending employee may also be required to attend training designed to address his or her harassing conduct. Where an investigation has established that a manager condoned harassing conduct, ignored complaints of such conduct or otherwise failed to properly carry out the responsibilities provided under this policy, he or she may be subject to disciplinary action and/or be required to attend training to assist the manager in identifying and preventing discriminatory harassment in the future.

Management will protect the confidentiality of all harassment allegations to the fullest extent possible. However, such information may have to be disclosed to management and employees with a need to know in order to carry out the purpose and intent of this policy. For example, management will need to disclose sufficient facts to the alleged harasser to enable the Board to investigate the allegation of harassment. In addition, information relating to the alleged harassment may have to be disclosed in any litigation involving the Board to which the information may be relevant or necessary.

Return to top

EEO Administrative Complaint Process

An employee subjected to discriminatory harassment may choose to initiate the administrative EEO process with the Board's Office of Diversity and Inclusion by contacting an EEO counselor within 45 days of the action perceived to be harassing. If an employee has reported an incident to Employee Relations in a timely manner and Employee Relations' investigation has not been completed before the 45-day period for filing an EEO complaint, the employee may request in writing that the program director of the Office of Diversity and Inclusion stay, for a specific period of time, the time for filing a complaint. The program director of the Office of Diversity and Inclusion will consider requests that stay the filing deadline for the time it takes to resolve any internal investigation or inquiry and will inform the employee in writing whether the stay has been granted and, if so, for how long.

An employee's right to initiate the EEO process does not diminish in any way management's responsibility to ensure that discriminatory harassment does not occur. Even if an employee chooses not to use the procedures in this policy to report harassing conduct and instead initiates the EEO process with the Office of Diversity and Inclusion, the Human Resources Function of the Management Division may choose to initiate an investigation/inquiry using the procedures in this policy.

The Board forbids retaliation against any employee who reports harassment to an EEO counselor or management official, files an EEO complaint, or otherwise participates in a discriminatory harassment investigation/inquiry.

Return to top

Appeals Process

An employee subject to disciplinary action for conduct that violates this policy may appeal such disciplinary action under procedures set out in the Board's Disciplinary Actions policy or the Adverse Action policy, as appropriate.

Return to top

Responsibility for Policy

The Human Resources Function of the Management Division and the Office of Diversity and Inclusion are responsible for the administration and interpretation of

this policy. Division directors will consult with the Board's Office of Diversity and Inclusion, as necessary, in carrying out their responsibilities under this policy. This policy will be reviewed and updated as necessary.

Return to top

Footnotes

1. Note that the Board's Information Technology Permissible-Use and Privacy policy forbids employees from disseminating material that is offensive or harassing in nature, including material that disparages others on the basis of race, color, religion, sex, gender, national origin, age (40 or older), disability, genetic information, or sexual orientation, even if such dissemination is not "unwelcome." Return to text.

2. While a victim of harassment is free to initiate the EEO process in lieu of using the reporting process described in this policy, a victim of harassment who unreasonably fails to use available, effective complaint mechanisms designed to stop the harassment is less likely to prevail on a claim of discriminatory harassment, including hostile work environment sexual harassment. Return to text.

Board Policies

Adjusting Work-Related Problems

Approved by H. Fay Peters, effective June 30, 2010

Jump to section: Policy Statement

Policy Statement

All employees are to be treated fairly and equitably. Managers and their staffs are encouraged to create and maintain an atmosphere of mutual trust, respect, and open and objective communication. Most work-related problems, complaints, disputes, and differences of opinion can be resolved once they are discussed with the employee's supervisor. If the problem cannot be resolved through discussion, employees are encouraged to follow the procedure described below.

Return to top

Covered Problems

A work-related problem covered under this policy can be any issue that arises in the context of a work situation *and* that is not within the scope of the following management policies: Adverse Action Policy and Procedures, Disciplinary Actions, Sexual Harassment, Reasonable Accommodation, Performance Management Program, Equal Employment Opportunity, Provisional Employment Period, and Provisional Period for Newly Selected Managers and Supervisors. Accordingly, the procedure set forth in this policy may not be used in lieu of appeal procedures provided in other policies that establish an exclusive remedy and may not be used to avoid conditions or limitations set out in such other policies. When a work-related problem is addressed under another management policy, any complaint or appeal under this policy regarding the same work-related problem will be dismissed, and the matter will be addressed under the other applicable policy.

Work-related problems include, but are not limited to, employee complaints or questions regarding unfair treatment on the basis of conduct or reasons that do not adversely affect the employee's performance and that are not covered under existing laws regarding discrimination. Such matters may include allegations of discrimination in employment on the basis of sexual orientation.

Return to top

Definitions

Employee means an individual who works full-time or part-time and is appointed into Board service for a period of more than 90 calendar days.[1] The term *employee* does not include members of the Board or nonregular employees, that is, student aides, worker-trainees, student interns, co-op employees, or individuals who are serving in a temporary term-limited position.

The term *employee* also does not include an *at-will* employee, that is, an individual serving at the pleasure of the Board and who may be discharged from Board service for any reason that is not illegal.

Return to top

Procedure for Addressing a Work-Related Problem

Employee relations specialists in the Employee Relations section (ER) of the Management Division are available to help employees and managers address work-related problems. They ensure that employees are aware of their rights and guide them through the steps outlined in the following procedure. An employee relations specialist may also help resolve cases by gathering facts, consulting with the employee regarding his or her concerns, and recommending a course of action. An employee relations specialist may be consulted at any time before or during the

process.

Step 1. An employee should first discuss any work-related problem (or problems) under this policy with his or her immediate supervisor as soon as possible. Unless unusual circumstances exist, an employee should bring the matter to the attention of the supervisor within 15 working days from the date the employee first became aware of the matter or from the effective date of the action giving rise to the work-related problem. Experience has shown that most problems can be settled once they are brought to the attention of the supervisor and discussed fairly and openly.

Step 2. If the problem is not resolved within 15 working days after it has been brought to the attention of the immediate supervisor, the employee may submit a written description of the problem within five working days to the manager or officer responsible for the functional area. This person may, depending on the organizational structure, be the same person as the immediate supervisor. The manager or officer responsible for the functional area will review the problem and issue a written decision within 15 working days of receipt of the employee's written description of the problem.

Step 3. If the employee is not satisfied with the decision of the manager or officer responsible for the functional area, the employee may appeal to the division director. Any such appeal must be filed within five working days of the employee's receipt of the manager's or officer's decision. The appeal must be submitted in writing to the division director. If the division director is the same person as the manager or officer responsible for the functional area (as described in step 2), the employee may ignore step 3 and proceed to step 4. The division director will issue a written decision within 15 working days of receipt of the employee's appeal.

Step 4. If the employee is not satisfied with the decision of the division director (or of the manager or officer responsible for the functional area if that person is the same person as the division director), the employee may select one of the following two options:

- *Officer responsible for ER (ER Officer).* The employee may appeal the decision of the division director to the ER Officer or to his or her designee. Any such appeal must be filed within five working days of the employee's receipt of the division director's decision and must be submitted in writing. The ER Officer, or his or her designee, will issue a written decision within 15 working days of receipt of the employee's appeal. The decision of the ER Officer is final and binding.

  For employees in the Management Division, this appeal shall be made to a Board officer outside the Management Division, who shall be designated by the chairman, Committee on Board Affairs, rather than to the ER Officer. The decision of the officer appointed by chairman, Committee on Board Affairs, shall be final and binding.

  The decision of the ER Officer or, as appropriate, a Board officer designated by the chairman, Committee on Board Affairs, may be implemented under delegated authority.

- *Mediation.* Within five working days of the employee's receipt of the division director's decision, the employee may request that a mediator be engaged to help bring about a mutually acceptable resolution to the problem. The mediation between the employee and division management will be governed by the procedures described in the Employee Relations Mediation Guidelines.

  If mediation does not resolve the problem, the employee may choose to appeal the decision of the division director to the ER Officer in accordance with the provisions of step 4.1 above. Any such appeal must be made within five working days of the conclusion of the mediation.

Review of Documentation at Each Level

In reviewing an appeal, the reviewing authority at each level has the discretion to conduct whatever investigation he or she deems appropriate, including requesting supplementary information from the employee or from management. The reviewing authority, however, may choose to issue a decision based on a review of the appeal and any documentation that may have been initially presented.

Submission of Documentation

At any stage of the process, the employee may submit additional material. Such material must be submitted, as applicable, by the date the written description of the problem or the date the appeal is due.

Any material submitted to the ER Officer in connection with an appeal will be shared with the employee's management unless the ER Officer does not rely on the information in reaching a decision or if the ER Officer determines that disclosing the

information would create or exacerbate an employee relations issue. Any documentation submitted by the division in connection with an appeal will be shared with the employee except to the extent that doing so infringes on the privacy rights of other employees.

Time Limits

The ER Officer can extend the time limits contained in this policy. No procedural rights or requirements that are not specifically stated in the procedure may be implied.

Return to top

Responsibility

The Management Division has the discretionary authority to administer and interpret this policy. The Board may review, update, and amend this policy at any time.

Board Policies

Cash Compensation Program

Approved by H. Fay Peters, effective June 30, 2010

Jump to section: Policy Statement

Policy Statement

The Board's Total Rewards Program consists of cash compensation, benefits, work environment, career development opportunities, and intrinsic rewards. As part of *Total Rewards*, the Board's various cash compensation programs are designed to (1) attract, motivate, and retain highly skilled employees; (2) balance external competitiveness and internal fairness; (3) reward employees according to their individual performance and contribution to organizational goals; (4) provide reasonable flexibility in the management of employee pay so as to respond to employment pressures and changing market conditions; and (5) comply with applicable laws and regulations.

Return to top

Definitions

Cash compensation programs: These programs include (1) base salaries and the guidelines used to set and adjust salaries, and (2) additional pay programs, such as cash awards, variable pay plans, sign-on and retention bonuses, project incentives or pay as described in the Overtime and Other Forms of Premium Pay Policy.

Employee: An employee is defined as an individual who works full- or part-time and is appointed into Board service for a period of more than 90 days. The term does not include members of the Board, student aides, worker-trainees, student interns, co-op employees, or those serving in a temporary term-limited position.[1]

Base salary: Base salary means the employee's annual rate of basic pay. Base salary does not include variable pay, cash awards, lump-sum merit increases, sign-on bonuses, retention bonuses, project incentives, shift differential, overtime pay, holiday pay, availability pay, unscheduled duty pay, premium pay, or any other type of pay that the Board does not treat as base salary.

Return to top

Guidelines: Base Salary Programs

New Employee Starting Salaries

The Human Resources (HR) Staffing function, with guidance from the HR Compensation function and in conjunction with input from the Board hiring division, determines starting salaries. Starting salaries are based on one or more of the following factors: (1) the experience and qualifications of the new employee; (2) salary alignment with other staff in the hiring division or job family, as appropriate; (3) market comparisons relevant to the specific position; (4) current salary of the prospective employee; and (5) the business needs of the hiring division. Generally, a new employee's salary may be set anywhere within the salary range, depending upon the employee's qualifications and market conditions. Starting salaries more than 10 percent above the midpoint of the range will be reviewed by HR Compensation.

Return to top

Salary Increases

Annual Merit Increase

Annual merit increases in base salary are based on performance during the past year, as reflected in employee performance evaluations and as outlined in the Board's

Performance Management Program (PMP). Generally, employees hired on or before June 30 of the performance year are eligible to receive annual merit increases based on the formal PMP review.[2] An employee rated marginal or unsatisfactory during his or her most recent annual PMP review (annual PMP) is not eligible for a merit increase. An employee hired after June 30 of the performance year is generally not eligible for a merit increase, but may receive a salary increase up to an amount published annually by the HR Compensation staff. Each division director decides whether or not to grant salary increases in such cases, subject to final sign off by HR after Compensation staff validate that the actions are consistent with policy.

Periodic salary-range adjustments: The Board may adjust salary ranges periodically based on the results of available salary information from custom and/or published surveys. When salary ranges are adjusted, an employee's salary may fall below the minimum of the new salary range. In this case, an employee whose most recent annual PMP was commendable or better is eligible to receive a merit and/or special salary increase to bring his or her salary to at least the minimum of the new salary range. An employee rated marginal or unsatisfactory will not have his or her salary brought to the minimum of the salary range until his or her performance, as reflected on an annual PMP review, reaches the commendable or better level.

Merit increases and the maximum of the salary range: If a merit increase will take an employee's salary above the maximum of the range for his or her grade, the employee will receive a merit increase sufficient to bring his or her salary to the maximum of the range, and will receive the remainder of the increase in the form of a lump-sum merit payment, provided that his or her PMP rating is commendable or better. If an employee's salary is at the maximum of the range, the employee will receive the full amount of the increase in the form of a lump-sum merit payment.[3]

Merit increases and job/supervisor changes: When an employee transfers or changes direct supervisors during the performance period (October 1 through September 30), and is eligible for a merit increase for that year, the increase will be based on his or her annual PMP. An interim (close-out) PMP should be given at the time of the transfer. However, if this does not occur, input from previous supervisor(s) will be sought for the annual PMP.

Promotional Increase

When an employee is promoted to a higher grade level, the employee's salary level should be increased to at least the minimum of the salary range of the new grade. In making a promotion salary increase recommendation, managers should consider the following:

- the employee's education and experience in relation to the minimum qualifications of the position
- the salaries of other employees in similar positions within the division, section or office
- the placement of the recommended salary relative to the new salary range

A division director can approve a recommended salary increase up to 12 percent (15 percent if an employee is promoted multiple grades) for any staff level, subject to final sign off by HR after Compensation staff validate the action is consistent with policy.

Special Salary Adjustment

Special salary adjustments may be necessary when external or internal considerations affect the salary of an individual, the salaries of those employees in a particular job family, or the salaries of a group of employees in general. For example, special adjustments may be needed to retain employees who possess skills for which HR has determined market demand exceeds supply or other significant market factors exist. An employee with a rating of marginal or unsatisfactory on his or her most recent PMP review (annual or interim) is not eligible for a special salary adjustment. Requests by managers for adjustments up to 5 percent (on an annual basis) can be approved by division directors (with subsequent notification to, and automatic sign off by, HR of the adjustments made using a form noted below); requests over 5 percent will be reviewed and approved by HR after Compensation staff review them on a case-by-case basis. In addition, a special salary adjustment for an employee who has already received an adjustment within the past 12 months must be reviewed by HR Compensation staff for approval.

In making special salary adjustments, divisions should consider one or more of the following factors:

- internal equity with other staff salaries
- consistency with the Board's pay-for-performance philosophy
- retention of incumbents with critical knowledge and competencies

- comparative employee performance over time
- job enlargement, such as taking on duties that have a greater scope than originally envisioned
- market averages for the job
- special market pressures that may affect the job, such as skill shortages
- completion of a PhD (by economists)

To process a special salary adjustment, the requesting division director (or the director's designee) must submit a completed *Special Salary Adjustment Request* form and forward it to HR Compensation staff for review or approval, as appropriate. The form must be submitted for inclusion in the employee's records, even in cases where the division director has the authority to approve the adjustment.

Lateral Transfer Equity Adjustment

Generally, salary increases are not granted for cross-divisional lateral transfers (i.e., a transfer to a position at the same grade) at the Board. However, special circumstances, such as ensuring internal equity, may support salary increases in the range of 3 percent to 5 percent. These increases are considered exceptions, and are reviewed and approved by HR Compensation staff on a case-by-case basis.

Return to top

Salary Grade Reductions

A reduction in grade and salary can occur: (1) voluntarily at an employee's request; (2) involuntarily without cause through job abolishment or reclassification; or (3) involuntarily in accordance with the Board's Adverse Action Policy.

Voluntary Reduction

A voluntary reduction in grade level occurs when an employee is reduced in grade as a result of a (1) change in career focus, (2) request to reduce an employee's workload, (3) need to address personal issues, or (4) need to address performance problems (accepting a lower grade level voluntarily in lieu of a formal adverse action).[4]

The employee's grade will be reduced and his or her new salary will be set within a new salary range, if possible. If the current salary is within the range of the new grade level, no decrease in salary will occur. Thereafter, normal salary-administration procedures will apply. If the employee's salary is above the maximum of the range for the lower grade, the employee's salary will be frozen, and no salary increases will occur until the maximum of the range for the new lower grade exceeds the frozen salary level. If, after two years at the new grade, the employee's salary remains above the maximum of the range for the lower grade, the salary will be reduced to the maximum of that grade. If an employee is promoted to a higher grade level within the two-year timeframe, the employee will not normally receive an increase in base salary.

Involuntary Reduction without Cause

An involuntary reduction in grade can occur as a result of (1) the reclassification of a job to a lower grade level, or (2) the abolishment of a position.

An employee will retain his or her current grade and pay for two years from the date of the reclassification decision or from the effective date of the abolishment decision. After two years, the grade will be reduced. If the employee's salary is above the maximum of the new range after the two years, the employee's salary will be frozen, and no salary increases will be granted until the maximum of the range for the reduced grade exceeds the employee's frozen salary. Thereafter, normal salary-administration procedures will apply.

Involuntary Reduction with Cause

An employee's salary and/or grade may be reduced in accordance with the procedures set out in the Board's Adverse Action Policy. The employee's salary and/or grade will be reduced upon the effective date of the action.

Return to top

Guidelines: Additional Pay Programs

In addition to base salary, the Board provides a number of other pay programs, such as sign-on and retention bonuses, cash awards, project incentives, and variable pay.

Sign-on Bonuses

Sign-on bonuses are designed to assist in recruiting new employees for positions that

are under market pressure and, in the absence of such bonuses, would be difficult to fill.

Source of funds. Divisions fund these payments from their individual operating budgets and not through their cash award allocations.

Eligibility and amount.[5,6] In determining the appropriateness of paying sign-on bonuses and the amount, the following factors should be considered:

- the results of recent efforts to recruit candidates for the same or similar positions
- recent turnover rates for the same or similar positions
- current labor market factors that may affect the ability of the Board to recruit candidates for the same or similar positions
- special qualifications required for the position as well as the demand at the Board and in the marketplace for those qualifications
- assessments of internal-equity, base-salary considerations when making hiring offers

Sign-on bonuses may be paid in lump-sum form or paid out in installments. For lump-sum sign-on bonuses, if an employee's employment with the Board is terminated voluntarily or involuntarily within the first year of employment, the pro-rated balance of the bonus must be returned based on the number of months remaining. In cases where sign-on bonuses are awarded, upon voluntary or involuntary termination, the employee forfeits unpaid installments. The terms and conditions of sign-on bonuses are specified in the *Sign-On Bonus Program* receipt form, which must be signed by employees as part of offer packages.

To obtain authorization for payment of sign-on bonuses, a division director (or the director's designee) must complete the *Sign-On Bonus Program* request and receipt form(s), and submit them to the HR Staffing supervisor for approval before an offer is extended.

Retention Bonuses

Retention bonuses are designed to increase the flexibility of cash compensation packages and ensure the availability and continuity of critical skills and knowledge needed to meet business objectives.

Source of funds: Divisions fund these bonuses from their individual operating budgets and not through their cash award allocations.

Eligibility and amount:[7] Division requests for retention bonuses and specific amounts should consider one or more of the following factors:

- criticality of the knowledge, skills, and abilities needed
- current market conditions and practices
- availability of replacements
- critical project completions/requirements
- knowledge transfer
- length of time for which the knowledge, skills, and abilities are needed
- employee performance

Retention bonus amounts may vary. The bonus shall be paid for a specific project or a retention period and, except for the final payment, shall normally not exceed a maximum of one-third of the annual base salary each year (except in the final year of a multi-year retention agreement).

Payment options and conditions. An employee who has received a sign-on bonus may not receive a retention bonus until 12 months have elapsed since either the date of hire or the last installment of the sign-on bonus has been paid to him or her.

Retention bonus agreements. Guidelines for administering retention bonuses are as follows:

- *Length of agreements:* A retention arrangement should not normally extend for more than three years, and may be distributed monthly, quarterly, multi-year, or in one lump sum payment.
- *Maximum annual payout:* No more than 40 percent of the bonus awarded shall be paid before the conclusion of the specified project or retention period.

- *Employee acknowledgment:* The employee must acknowledge and sign an understanding of both the bonus percentages and the project benchmarks or retention period.
- *Future retention agreement:* If it is necessary to retain the employee beyond the designated retention period, new retention arrangements may be established.
- *Employment termination:* Any employee who terminates employment before the conclusion of the retention period shall forfeit any unpaid bonus amounts.
- *Performance expectation:* The commitment to pay a retention bonus is based upon the *continued satisfactory performance* of the intended recipient, meaning the employee must continue to meet established standards of the job, maintain productivity requirements, and perform all assigned responsibilities. The employee must also receive a performance rating of commendable or higher, and must not have been subject to disciplinary action. The Board will withhold all unpaid retention bonus payments if the recipient's performance does not meet expectations.
- *Change in circumstances:* A retention agreement should include provisions that cover payment of the unpaid retention bonus if the Board finds that circumstances occur affecting the criticality of the criteria listed above before the end of the agreed upon project or retention period or if an employee transfers to another position within the Board.

Except for the economist retention program (in which the division director or division director's designee approves the retention bonus), the director of the Management Division must approve all requests for retention bonuses. To obtain authorization for payment of a retention bonus, the requesting division director (or the director's designee) must submit the *Retention Bonus Plan* request and receipt forms to the HR Compensation staff to validate that the terms of the retention bonus have been met and to sign off on the payment. Terms and conditions for a retention bonus are specified on the *Retention Bonus Plan* receipt form and signed by the employee.

Cash Awards

There are two types of cash awards: (1) project-based, and (2) performance-based. Cash awards may be provided to individual employees or to groups of employees (for example, a project team).

Source of funds. The Board provides the funding for cash awards in each division's budget, and divisions may not exceed the allocation of funds for cash awards.

Eligibility. Any employee, except one who receives--or is eligible to receive--a variable pay award at any time during the relevant performance period, may be nominated for a cash award. To be eligible to receive a cash award, the employee must *not* have been subject to any type of written disciplinary action during the performance period or received (if eligible) a PMP rating below commendable.[8]

The division director (or the director's designee) can approve an employee's cash award, based on whether the employee:

- initiated, recommended, or accomplished actions that achieved important Board goals, improved productivity, realized significant cost reductions, or improved the productivity or quality of Board services;
- responded to unforeseen circumstances or events in an exemplary fashion;
- resolved, or made significant progress toward resolving, significant operational problems;
- made a unique and significant contribution that resulted in a section or group meeting its objectives when factors such as new laws or regulations, severe staff turnover, or a dramatic increase in work volume presented additional challenges;
- made outstanding contributions, on behalf of the Board, to a profession or organization, and those contributions enhanced the Board's image and or strengthened its external relations; or
- performed at a high level for a sustained period.

To process a project-based cash award at any time during the year or performance-based cash award at any time other than at year-end, the division director (or the director's designee) must complete the *Cash Award Nomination* form and submit it to HR Compensation staff, who will then validate and sign off on awards that satisfy one or more of the above criteria.

For end-of-year cash awards for sustained high performance, divisions need only state

the employee's name, determine the proposed amount of the award, and indicate the appropriate award criteria. HR Compensation will provide divisions annually with instructions required for end-of-year processing and will sign off on awards after validating they meet eligibility criteria.

Amount. Cash awards may be made in any amount up to an annual maximum of 30 percent of an employee's base salary. If an employee receives more than one award within the same calendar year, then the total of all cash awards received (including targeted cash awards and/or project incentives) for that year must not exceed 30 percent of the employee's base salary.

Targeted Cash Awards

Targeted cash awards allow divisions to reward employees outside the normal cash award program subject to one or more of the eligibility criteria below.

Source of funds. The Board provides the funding for targeted cash awards, and funding is separate and apart from the normal cash award allocation.

Eligibility. Any employee, except one who receives--or is eligible to receive--a variable pay award at any time during the relevant performance period, is eligible to be nominated for a targeted cash award. The employee must *not* have been subject to any type of written disciplinary action during the performance period for which the targeted cash award is issued or received (if eligible) a PMP rating below commendable.

The division director (or the director's designee) approves an employee's recommended targeted cash award, based on the award satisfying at least one or more of the following criteria:

- It addresses external compensation market pressures.
- It recognizes significant specific project-based achievements by the employee.
- It recognizes and helps to retain specific critical skills of the employee.

To obtain authorization for targeted cash awards, the division director (or the director's designee) must complete the *Targeted Cash Award Nomination* form and submit it to HR Compensation for sign off after validating the awards meet eligibility criteria.

Amount. The total of all cash awards may be made in any amount up to an annual maximum of 30 percent of an employee's base salary. If an employee receives cash awards, targeted cash awards, and/or project incentives within the same calendar year, then the total of all awards for that year must not exceed 30 percent of the employee's base salary.

Project Incentives

The establishment of project incentive plans provides means to recognize Boardwide or System initiatives (e.g., Y2K, Basel II) to motivate, reward and encourage individual employees or project teams to achieve project milestones and goals necessary to meet business objectives. Divisions should work with HR to design project incentives that complement merit increases and cash awards, taking into account *total reward* objectives for employees.

Source of funds. The division should fund project incentive plans through requests for additional funds from the Board using the normal budget adjustment process and with the review of the director of Management Division and approval of the chair of the Committee on Board Affairs.

Eligibility. Divisions may pay project incentives to individual employees or project teams that serve as contributors to the successful completion of a project plan. Staff receiving variable pay are eligible to receive project incentives.

Amount. Project incentive amounts may vary. In determining whether an incentive payout and payout amount is appropriate, the division director (or the director's designee) should consider one or more of the following factors:

- the impact of project completion on the Board's mission, objectives, and operations
- the complexity and scope of the project
- the extent to which the performance is above and beyond expectations
- the special skills and qualifications required for the project

Project incentive agreements. Guidelines for administering project incentive plans are

as follows:

- *Maximum annual payout.* Project incentives shall be paid for a specific project and shall not exceed a maximum of 30 percent of an employee's annual base salary each year. If an employee receives cash awards, targeted cash awards, and/or project incentives within the same calendar year, then the total of all awards for that year must not exceed 30 percent of the employee's base salary in that year.
- *Additional payout condition.* No more than 40 percent of the project incentive awarded shall be paid before the conclusion of the specified project.
- *Employee acknowledgment.* The employee must acknowledge and sign an understanding of both the potential bonus amount and the expectations, with the latter including project benchmarks and deliverables.
- *Employment termination.* Any employee who terminates employment before the conclusion of the incentive period shall forfeit any unpaid incentive money.
- *Performance expectations.* Payment of a project incentive is contingent upon *continued satisfactory performance* by the intended recipient. In other words, the employee must continue to meet specific project milestones and established job standards; maintain productivity requirements; perform all assigned responsibilities; possess a current performance rating of commendable or higher; and not have been subject to any type of written disciplinary action during the performance period. The Board will withhold all unpaid incentive payments if the recipient's performance does not meet expectations.
- *Changes in circumstances.* The incentive agreement should include provisions that cover payment of the unpaid project incentive if the Board finds that circumstances change regarding (1) the project's relative importance and/or priority, or (2) the employee's involvement in the project.

To obtain authorization for payment of a project incentive, the requesting division's director (or the director's designee) must submit the *Project Incentive Plan* request and receipt forms to the HR Compensation staff to validate the terms of the plan have been met and to sign off on the payment. Terms and conditions for a Project Incentive Plan are specified on the *Project Incentive Plan* receipt form and signed by the employee.

Variable Pay

Variable pay is generally targeted toward employees appointed as Official Staff of the Board (officers) and employees in designated job families that: (1) are critical to the execution of the Board's core mission; (2) require skills that are in high demand in the marketplace; (3) offer salaries well below prevailing market levels; and (4) experience recruiting difficulties and high rates of turnover. HR Compensation staff reviews new variable pay requests for additional job families, and makes a recommendation to the chair of the Committee on Board Affairs, who makes the final determination. Employees who receive variable pay are not eligible to participate in the Board's cash award and targeted cash award programs; however, they may participate in the merit pay program.[9] Participation in other programs (i.e., a retention bonus plan) is restricted to situations where a compelling business case exists, and requires approval from the director of the Management Division unless otherwise provided for in this policy.

Source of funds. Each year, the Board determines whether to allocate funds to the variable pay program for the following year. Whether variable pay is funded, and the level at which it is funded, is based on (1) market conditions and (2) the Board's experience in retaining and recruiting staff into officer positions and specific job families. If variable pay is funded, the funding level is expressed as a percentage of the total annual salaries of eligible employees (broken out by salary liability for officers and non-officers) in each division. Divisions may not exceed the allocation of funds for variable pay.

Officers

Officer eligibility.[10] To be eligible to participate in the officer variable pay program, an employee must occupy an officer position (and not be in the Personnel Placement Program),[11] have a current performance rating of commendable or higher, and *not* have been subject to any type of written disciplinary action during the performance period.[12] The amount of a division director's variable pay award will be determined by the division's respective oversight governor, in consultation with the chief human capital officer (CHCO), and with the concurrence of the chair of the Committee on Board Affairs. The Board of Governors approves the amount of a division director's

variable pay award. For all other officers, the respective division director recommends variable pay amounts with the concurrence of the division's respective oversight governor and, when needed to ensure consistency and/or fairness in recommendations, in consultation with the CHCO. The chair of the Committee on Board Affairs reviews and approves officer variable pay awards (other than those for directors).

Maximum payout amount. The total of variable pay awards for the performance period must not exceed 30 percent of an officer's base salary. In addition, the total of variable pay awards and base salary cannot exceed the total cash compensation cap.[13] To receive payment, an eligible officer must be an active employee as of the date variable pay is distributed.

Officer variable pay awards are based on one or more of the following:

- the officer's performance rating under the Board's Performance Management Program
- an assessment of whether the officer has knowledge or skills uniquely valuable in carrying out the Board's work
- an assessment of whether the officer has skills that command a substantial salary premium in the external job market
- an evaluation of the awards necessary to relieve salary compression (and in some cases inversion) between officers and senior professional staff in each division

Non-Officers

Non-officer eligibility. To be eligible for variable pay, an employee must not be in the Personnel Placement Program,[14] have a current performance rating of commendable or higher, and *not* have been subject to adverse or disciplinary action during the performance period. In addition, the employee must occupy a position in the grade FR-27 to FR-29 range and be in a job family approved for variable pay.

Amount of variable pay awards for non-officers. The amount of a non-officer's variable pay award is based on performance and division director approval.

Maximum payout amount. The total of a variable pay award and project incentive plan award for the performance period must not exceed 30 percent of the non-officer's base salary. In addition, the total of variable pay awards, qualified project incentive plan awards, and base salary may not exceed the Board's total cash compensation cap. Variable pay will only be paid out to non-officers who occupy positions eligible for variable pay at the time variable pay is distributed.[15]

Non-Monetary Awards

At the discretion of each division director, a portion of a division's cash award budget may be used to fund de minimis, non-monetary awards to employees. A de minimis award is any property or service that has so little value that accounting for it would be unreasonable or administratively impracticable. Examples of such awards include movie tickets, meals, and keepsakes (such as mugs, plaques, key chains, and t-shirts). These awards may not be issued as cash or cash equivalents, such as gift certificates. The fair market value of de minimis awards must not exceed $75 per employee per year. Divisions that wish to offer de minimis, non-monetary awards to employees should consult their HR Compensation Specialist to designate an appropriate funding level, and discuss administrative procedures that will apply to granting the awards. A non-monetary award is not included in an employee's salary for any purpose.

Return to top

Exceptions for Employees in the Management Division

When the Management Division is requesting an exception to any portion of this policy for one of its employees, it shall make a request to the chairman, Committee on Board Affairs or his or her designee. The decision of the officer appointed by the chairman, Committee on Board Affairs, shall be final.

Return to top

Responsibility

The Human Resources function administers this policy. Unless otherwise noted in this policy, exceptions to this policy must be approved by the Board's CHCO in consultation with the deputy director for the Management Division.[16] The Board reserves the right to amend this policy at any time.

Return to top

Footnotes

1. A term-limited appointment is limited to a set period after which time the appointment expires and Board employment ends. Return to text.

2. Economists and research assistants generally become eligible to participate in the annual merit process in the December following their completion of one year of employment. An economist or research assistant may be eligible earlier, depending upon the hire date; eligibility is specified at the time of the job offer. Worker-trainees, student interns, co-op employees, and student aides are not eligible for merit increases, but may receive a salary increase up to an amount published annually by HR Compensation staff. Return to text.

3. Employees who have taken a voluntary or involuntary reduction in grade and are at or above the maximum of their salary range are not eligible to receive lump sum merit payments. Return to text.

4. Exceptions to these provisions may be granted on a case-by-case basis for employees who initiate a voluntary grade reduction as part of a change in career focus. Return to text.

5. The chairman of the Committee on Board Affairs approves, when needed, any changes to the maximum sign-on bonus amount permitted. Return to text.

6. Sign-on bonuses and retention bonuses for economists are administered in accordance with the program approved by the Board in February 2001. Return to text.

7. Sign-on bonuses and retention bonuses for economists are administered in accordance with the program approved by the Board in February 2001. Return to text.

8. New hires that have not received PMP rating and are not subject to disciplinary action are eligible to receive cash awards. Return to text.

9. Officers and staff who are eligible and/or receive variable pay may participate in project incentive plans only when the funding is from outside the division's normal cash award allocation. Return to text.

10. Taking an approved leave of absence, whether paid or unpaid, may affect eligibility for an award. If an employee takes such leave, its length and nature may be considered in determining the amount of a variable pay award. Return to text.

11. Refer to the Personnel Placement Program Policy. Return to text.

12. Variable pay awards for economists are administered in accordance with the program approved by the Board in February 2001. Return to text.

13. On an annual basis, the Board reviews the total cash compensation cap. Return to text.

14. Refer to the Personnel Placement Program Policy. Return to text.

15. Taking an approved leave of absence, whether paid or unpaid, may affect eligibility for an award. If an employee takes such leave, its length and nature may be considered in determining the amount of the variable pay award. Return to text.

16. Exceptions to the policy requested by the Management Division must be approved with the concurrence of the chairman, Committee on Board Affairs. Return to text.

Board Policies

Vacant-Position Posting

Approved by Don Hammond, effective December 20, 2012

Jump to section: Policy Statement

Policy Statement

The Board's policy is (1) to hire the best qualified candidates from the pool of internal and external applicants for vacant positions[1] and (2) to promote, through its posting procedures, employee awareness of available career opportunities. The Board generally provides employees the first opportunity to apply for open positions; if employees meet the minimum qualifications and apply during the initial posting period, they will be interviewed by the hiring division. This policy is also intended to promote an open process by providing feedback to employees when they are not selected for a position.

Postings

Human Resources (HR) will post notices about vacant positions in the FR and Wage Employee grade levels, with the following exceptions: (1) the positions are filled through the Personnel Placement Program; (2) an employee is reassigned to a vacancy at the same grade and with the same career-ladder potential (for example, a dual-occupancy position or positions that result from a division reorganization); (3) the positions are temporary (365 calendar days or less); (4) the positions are reserved for cooperative education programs and internships; (5) the positions are used to rotate candidates for a specific developmental program; (6) the positions are filled by employees returning from leave, regular military service, long-term disability leave, special assignments, or officially approved leaves of absence; and (7) the positions are filled through the required transfer of disabled employees, pursuant to the requirements of the Rehabilitation Act. In response to organizational needs, the HR officer responsible for Talent Acquisition may make other exceptions on the basis of a division director's written recommendation.

Return to top

Eligibility

To be eligible to apply for a posted vacant position, employees must (1) be rated Commendable or above on their most recent annual or interim Performance Management Program evaluation (if they have had one), (2) have served at least six months in their current position (except for worker-trainees, co-op employees, and interns), and (3) not have been subject to disciplinary action (suspension and above) within the immediately preceding six months. With the concurrence of the current supervisor and hiring manager and with HR approval, employees who do not satisfy the above eligibility requirements may, under certain circumstances, be allowed to apply for a vacancy.

Return to top

Posting Requirements

1. The Board will post vacant-position notices internally until the position is filled.

2. Divisions may post positions at the same grade (or a different grade in the career ladder) as that held by the previous incumbent, depending on the specific job family and the needs of the hiring division.

3. The Board will ensure that internal candidates who meet the minimum qualifications *and* who apply during the first 5 business days of the posting

process have an opportunity to interview. Divisions may, at their discretion, extend this internal posting period to 10 days. The hiring manager, or his or her designee, will interview all internal applicants who meet the minimum qualifications for the position and who apply during the initial 5- or 10-day internal posting period. (These interviews may precede, coincide, or follow external interviews.)

4. HR will forward to the hiring manager the applications of all internal candidates who meet the minimum qualifications and who apply for the position *after* the initial 5- or 10-day posting period, as well as the applications of qualified external candidates. The hiring manager will decide which candidates to interview from among the internal candidates who applied after the posting period and the external candidates and schedule interviews accordingly.

5. Posting a position externally does not prevent an internal candidate from being selected for the position.

6. Hiring managers will complete a candidate evaluation form for all internal applicants who are interviewed but not selected for a position.

Return to top

Responsibility

The Management Division is responsible for the administration of this policy and will review and update the policy as necessary. Exceptions to this policy can be approved by the HR officer for Talent Acquisition. The Board reserves the right to amend this policy at any time.

Board Policies

Reasonable Accommodation

Approved by Don Hammond, effective October 21, 2013

Jump to section: Policy Statement

Policy Statement

The Board complies with the reasonable-accommodation requirements of the Rehabilitation Act of 1973, the federal government's equivalent of the Americans with Disabilities Act, as well as the Board's Rules Regarding Equal Opportunity (12 CFR § 268). Accordingly, this policy establishes the procedures for providing (1) qualified individuals with disabilities reasonable accommodations to enable them to perform the essential functions of their jobs, (2) employees with disabilities reasonable accommodations to ensure they enjoy the equal benefits and privileges of employment, and (3) job applicants with disabilities reasonable accommodations to assist them in applying for jobs at the Board.

Return to top

Definitions

Disability. With respect to an individual, a disability is a physical or mental impairment that substantially limits one or more of such individual's "major life activities." Major life activities include activities such as walking, seeing, hearing, speaking, performing manual tasks, eating, sleeping, standing, lifting, bending, breathing, learning, reading, concentrating, thinking, communicating, and working, as well as the operation of major bodily functions such as functions of the immune system, normal cell growth, and digestive, bowel, bladder, neurological, brain, respiratory, circulatory, endocrine, and reproductive functions. An impairment that is episodic or in remission may constitute a disability if it would substantially limit a major life activity when active.

Equal benefits and privileges of employment. Those benefits, such as cafeteria service, fitness center access, or employee benefit plans, that are available (under the conditions and limitations established by the Board) to the Board's similarly situated employees without disabilities.

Essential functions. Those job duties that are so fundamental to the position that the individual holds or desires that he or she cannot do the job without performing them. A function can be *essential* if, among other things, the position exists specifically to perform that function, there are a limited number of other employees who could perform the function, or the function is specialized and the individual is hired based on his or her ability to perform it. Determination of the essential functions of a position must be evaluated on a case-by-case basis so that it reflects the job as actually performed and not simply the components of a generic position description.

Genetic information. This means genetic information as defined by the Genetic Information Nondiscrimination Act of 2008 (GINA) and includes such information as an employee's or family member's genetic tests; an employee's family medical history (or manifestation of a disease or disorder in a family member); an employee's or family member's request for genetic services (as defined by GINA); an employee's or family member's participation in clinical research that includes genetic services; or genetic information of a fetus carried by an employee or an employee's family member or an embryo lawfully held by an employee or family member receiving assistive reproductive services. Genetic information does not include information about the sex, age, race, or ethnicity of an employee or family member.

Qualified. An individual with a disability, as defined in 12 CFR 268, is qualified for a position if (1) he or she satisfies the requisite skill, experience, education, and other job-related requirements of the position and (2) he or she can perform the essential functions of the position, with or without reasonable accommodation.

Reasonable accommodation. Any change in the work environment or in the way things are customarily done that would not create an undue hardship for the Board and would enable (1) a qualified individual with a disability to perform the essential functions of his or her job, (2) an employee with a disability to enjoy the equal benefits

and privileges of employment, and/or (3) an individual with a disability to apply for a job at the Board.

Undue hardship. If a specific type of accommodation causes significant difficulty or expense, then the Board does not have to provide that particular accommodation. Determination of undue hardship is always made on a case-by-case basis, considering factors that include the nature and cost of the accommodation needed and the impact of the accommodation on the operations of the Board.

Return to top

Requesting Accommodations Generally

An employee can request either an informal accommodation or a formal reasonable accommodation, but only a request for a formal reasonable accommodation gives rise to the rights and obligations under the Rehabilitation Act. An informal accommodation is an accommodation the Board may make in the ordinary course of its business, such as an ergonomic equipment adjustment, whether or not the employee is disabled under the Rehabilitation Act. A formal reasonable accommodation is an accommodation the Board would make as a result of its legal obligation to provide reasonable accommodations to qualified individuals with disabilities under the Rehabilitation Act.

An employee does not need to use special words, such as "reasonable accommodation," "disability," or "Rehabilitation Act," when requesting an informal accommodation or formal reasonable accommodation. However, in order for the Board to know whether an employee is making an informal request versus a formal request for a reasonable accommodation under the Rehabilitation Act, the employee must state in the request whether the accommodation is due to a medical condition. If the employee does not state that the accommodation is due to a medical condition, the Board will assume the employee is making an informal accommodation request. Informal accommodation requests do not receive the same procedural protections as formal reasonable accommodation requests under the Rehabilitation Act.

Return to top

Informal Accommodation Requests

The Board has an informal policy of making minor changes in office furniture and equipment (such as computers) and other similar adjustments to increase the comfort of employees who may not necessarily suffer from a disability or other medical condition.[1]

As noted above, informal accommodation requests will not receive the same procedural protections and considerations as formal reasonable accommodation requests under the Rehabilitation Act. Informal accommodation requests, which, in most cases, require no showing of medical necessity but do require a reason for the request, should be submitted to the employee's division administrator. The division administrator, in consultation with the division director, will decide whether to approve an informal accommodation request.[2]

Return to top

Formal Reasonable-Accommodation Requests

Timing and Content of the Request

Timing. Individuals may request formal reasonable accommodations, orally or in writing, whenever they choose, even if they have not previously disclosed the existence of a disability.

Content. As noted above, a request for a reasonable accommodation need not use special words, such as "reasonable accommodation," "disability," or "Rehabilitation Act." However, the employee must state in his or her request that the request is due to a medical condition if the employee would like for the request to receive the procedural and other protections afforded under the Rehabilitation Act and this policy.

Information Reporting Form for Reasonable-Accommodation Requests

The Board employee who receives the request for accommodation under the Rehabilitation Act must fill out the applicable portions of the Reasonable-Accommodation Information Reporting Form (the reporting form) and forward it to Employee Life, Human Resources (HR) Function, Management Division. The employee filling out the form may obtain assistance from the requester, but should in any event submit the form to Employee Life no more than five business days after the request was made. If additional information is needed to complete the form, the Employee Life staff member who receives the request will contact the requester to obtain the information and/or note why the missing information could not be obtained.

How to Submit a Request for a Reasonable Accommodation

Employees. Employees seeking a reasonable accommodation must request an accommodation from one of the following: (1) their immediate supervisor, (2) their second-level manager, (3) their division director, (4) the Office of Diversity and Inclusion, or (5) Employee Life.

Job applicants. A job applicant seeking a reasonable accommodation to apply for a job must request an accommodation from one of the following: (1) a recruiting specialist; (2) the Talent Acquisition Office, HR; (3) the Office of Diversity and Inclusion; (4) the manager in charge of the particular vacancy; or (5) a Board representative with whom the applicant has had substantial contact during the job-application process--for example, an interviewer.

Representatives of employees or applicants. An individual representing an employee or applicant, such as a family member, attorney, or health professional, may request a reasonable accommodation on the employee's or applicant's behalf. The request must follow the processes outlined above depending upon for whom (employee or applicant) the accommodation is requested. Board staff, where possible, should confirm with the employee or applicant that he or she, in fact, desires the requested accommodation.

Return to top

Processing Requests

Medical Information

Unless a disability and/or need for accommodation is obvious or already known, appropriate medical information will be needed, after a request is made, to make a determination on the employee's request for an accommodation. A disability is considered *obvious* if it is apparent to all observers that it substantially limits one or more of the requester's major life activities and there is no need for detailed medical documentation explaining the condition. For example, an employee's total blindness should be obvious and there would be no need to submit medical documentation to establish that a disability exists and that it substantially limits a major life activity. In addition, assuming the accommodation requested is designed to assist with blindness generally, there would be no need for the employee to submit medical documentation to support the need for the accommodation.

In all other cases, the extent and type of information required will vary depending on the nature of the disability and the accommodation requested. However, the Board will need to know the following information to make a determination under this policy: (1) the nature of the medical problem at issue; (2) the major life activity or activities that are substantially limited and how they are substantially limited; (3) the actual or expected duration of the medical problem; and (4) how the requested accommodation will address the individual's limitations and assist the individual in performing the essential functions of his or her job, enjoying equal benefits and privileges of employment, or applying for a job.

The Board has the right to request relevant supplemental medical information if the information submitted does not clearly explain and address all issues outlined above. The individual will be given a reasonable period to submit any necessary documentation. The Board has the right to have a medical expert of its choosing (and at its expense) review any medical documentation submitted. Failure to provide requested medical information may result in a denial of the request for an accommodation.

Under limited circumstances, the Board may require an individual requesting an accommodation to undergo a medical examination. If the individual has provided insufficient documentation from his or her health-care professional to substantiate the disability and/or need for the accommodation, the Board will explain why the documentation is insufficient and allow the individual an opportunity to provide the missing information in a timely manner. If, after an opportunity to submit additional information, the medical documentation is still insufficient, the Board may require the individual to be examined by a health-care professional of the Board's choice to substantiate the disability and/or need for the accommodation in order to continue to process the request for a reasonable accommodation.

Documentation is insufficient if, for example, (1) it does not establish the existence of a disability and explain the need for the reasonable accommodation requested, (2) it is from a health-care professional who does not have the expertise to give an opinion about the medical condition and the limitations imposed by it, (3) the information does not specify the functional limitations due to the disability, or (4) other factors indicate that the information provided is not credible or may be fraudulent. If the individual fails to provide sufficient documentation and refuses to be examined by a health-care professional of the Board's choice and at the Board's expense, the Board does not have to provide a reasonable accommodation until sufficient documentation is provided.

The scope of any medical examination must be limited to determining the existence of a disability and the functional limitations that require a reasonable accommodation.

Genetic Information Nondiscrimination Act of 2008

GINA prohibits employers from requesting or requiring genetic information of an individual, except as specifically allowed by this law. In accordance with GINA, when the Board requests medical information or conducts medical examinations, the Board will not seek to collect genetic information, and it will inform employees and health care providers responding to Board inquiries or working on the Board's behalf not to share genetic information with the Board.

Time Frame for Responding to a Request

The time limit for responding to a request for accommodation begins when the oral or written request is received by the appropriate Board representative as outlined above. Unless extenuating circumstances are involved, the chief human capital officer (CHCO) will respond to the request no later than 30 days after the request for accommodation was received. However, if the Board requests medical or other information, the period for responding will be extended by the number of days that the Board waited for a response to its request. If extenuating circumstances exist and the 30-day period must be extended, the CHCO will notify the individual of the delay, state the reason (or reasons) for the delay, and inform the individual of the date on which a decision is expected to be made. The Board will make reasonable accommodations prior to the expiration of the 30-day period if circumstances permit such expedited action. In addition, the period for processing a request may be expedited if, for example, the accommodation is needed to enable an individual to apply for a job or attend a Board activity that is scheduled to occur prior to the end of the 30-day processing period.

Interactive Process

Where the existence of a disability, the need for accommodation, or the specific requested accommodation is not clear, or when the Board believes the requested accommodation is not reasonable or that another reasonable accommodation exists, Employee Life must, with the assistance of any other relevant parties, discuss the requested accommodation with the requester to determine whether a mutually acceptable, effective reasonable accommodation exists. A requester should cooperate with these efforts to the extent possible, as failing to do so may result in the denial of the request for reasonable accommodation.

Return to top

Decisionmaking Process

Requests Involving Job Performance

The Board representative (or representatives) who receives an accommodation request involving job performance should advise Employee Life of the request by forwarding part I of the reporting form to Employee Life no later than five days after receipt of the request. Employee Life will promptly work with the employing division, as appropriate, to respond to the request. Absent extenuating circumstances, the CHCO will make a final determination as to how to respond to the request within 30 days of the date on which the Board received the request.

Requests by Job Applicants

The Board representative (or representatives) who receives a request for accommodation by a job applicant should advise Employee Life of the request by forwarding part I of the reporting form to Employee Life no later than five days after receipt of the request. Employee Life will promptly work with the manager in charge of the vacancy and other divisions, as appropriate, to resolve the request. Absent extenuating circumstances, the CHCO will make a final determination as to how to respond to the request within 30 days of the date on which the Board received the request.

Requests Involving Equal Benefits and Privileges of Employment

The Board representative (or representatives) who receives an accommodation request involving equal benefits and privileges of employment should advise Employee Life of the request by forwarding part I of the reporting form to Employee Life no later than five days after receipt of the request. Employee Life will promptly work with the other divisions, as appropriate, to resolve the request. Absent extenuating circumstances, the CHCO will make a final determination as to how to respond to the request within 30 days of the date on which the Board received the request.

Return to top

Types of Accommodations

The Board will consider a range of possible reasonable accommodations. The Board retains discretion to choose among any reasonable accommodation options that address the employee's disability, and is not required to provide the reasonable accommodation favored by the requester. Reassignment will be considered as a reasonable accommodation if the Board determines that no other reasonable

accommodation will permit the employee with a disability to perform the essential functions of his or her current position or if the only effective accommodation would cause undue hardship. In considering whether there are positions available for reassignment, Employee Life will work with the individual requesting the accommodation to identify (1) all vacant positions within the agency for which the employee may be qualified, with or without reasonable accommodation, and (2) all positions that HR knows will become vacant within a reasonable amount of time and for which the employee may be qualified. For example, if HR knows that a position for which the individual is qualified will become vacant in a week, that position should be considered for reassignment. Employee Life will first focus on positions that are equivalent to the employee's current job in terms of pay, status, and other relevant factors. If there is no vacant equivalent position, Employee Life will consider vacant lower-level positions for which the employee is qualified. If the Board is considering reassignment as an accommodation, the Board may consult with the affected employee as necessary to determine whether there are limitations on the search the employee would like the Board to conduct.

Return to top

Granted Requests

If the request for accommodation is granted, the accommodation will be provided at the same time as the response on the request for accommodation is given to the employee. If the accommodation will take longer to provide, the employee will be informed and told when the accommodation will be provided. Management's decision to provide a requested accommodation does not constitute an admission by the Board that the individual is disabled under the Rehabilitation Act.

Return to top

Denied Requests

A denial of a request for accommodation shall be in writing and shall identify the requester, the individual who made the decision, the specific accommodation requested, and the specific reasons for denying the request. Where the decision maker has denied a specific requested accommodation but offered a different one in its place (which was not agreed to during the interactive process), the denial notice should explain both the reasons for the denial of the requested accommodation and the reasons why the decision maker believes the offered accommodation will be effective. (If a requester agrees to an alternative accommodation during the interactive process, the request for accommodation will be deemed granted.) The written notice of denial must inform the individual of the right to initiate the EEO process under the Board's rules, by contacting an EEO counselor within 45 days of the denial of the request. The denial notice must also identify procedures that are available for informal dispute resolution.

Return to top

Appeal and Informal Dispute Resolution

If an individual wishes to appeal HR's decision, the individual must appeal to the director of the Management Division within 10 days of the date of HR's decision. Individuals may present additional information to support their request. The director will issue a decision on the appeal within 10 days unless extenuating circumstances exist. In addition, an individual who wishes to request informal dispute resolution should contact employee relations, which will arrange such dispute resolution.[3] The individual must request informal dispute resolution within 10 days of HR's decision or, if that decision is appealed, within 10 days of the director's decision on appeal. An appeal or a request for informal dispute resolution stays the time for an employee to initiate the EEO process by contacting an EEO counselor. Once a decision on the appeal is issued, or informal dispute resolution is closed by the Board or the employee, or a decision is made and communicated to the employee that informal dispute resolution is not appropriate, the period to request EEO counseling begins for the employee who chooses to use that process.

Return to top

Confidentiality

Under the Rehabilitation Act and GINA, medical information and genetic information obtained in connection with the reasonable-accommodation process must be kept confidential. This means that all medical information, including information about functional limitations and reasonable-accommodation needs, that the Board obtains in connection with a request for reasonable accommodation must be kept in files separate from the individual's personnel file. It also means that any Board employee who obtains or receives such information is bound by these confidentiality requirements. In addition, all records will be maintained in accordance with the Privacy Act. In certain circumstances, medical information may have to be disclosed to those individuals with a need for the information. For example, information may be disclosed to

- a supervisor and manager who needs to be told about necessary restrictions on the work or duties of the employee and/or necessary accommodations;
- first aid and safety personnel if the disability might require emergency medical treatment or assistance in vacating the employee's office in the event of an emergency;
- government officials, if necessary, to investigate the Board's compliance with applicable laws;
- individuals who need the information in connection with processing a reasonable-accommodation request, a workers' compensation claim, or other insurance benefit;
- the Board's attorneys, if necessary, to advise the Board on legal issues arising under this policy; and
- individuals named in a court order or other legal process, if such disclosure is required by a court order or legal process.

Return to top

Responsibility

The Management Division is responsible for administering this policy. The Management Division is solely responsible for maintaining all reporting forms, including information on the disposition of requests, and for reviewing information as necessary to ensure compliance with the Rehabilitation Act. This policy will be posted in all Board facilities and on the Board's internal website. Copies of this policy are available from HR. This policy is subject to change and will be reviewed and updated as necessary.

Return to top

Appendix A--Reasonable-Accommodation Information Reporting Form

Appendix B--Denial of Reasonable-Accommodation Request

Appendix C--Selected Reasonable-Accommodation Resources

1. U.S. Equal Employment Opportunity Commission (EEOC), 800-669-4000 (voice), 800-669-6820 (TTY), http://www.eeoc.gov

   The EEOC has many free documents on the title I employment provisions of the Americans with Disabilities Act (ADA), including both the statute, 42 USC 12101 et seq., and the regulations, 29 CFR 1630. In addition, the EEOC has published a great deal of basic information about reasonable accommodation and undue hardship. The three main sources of interpretive information are (1) the interpretive guidance accompanying the title I regulations (also known as the appendix to the regulations) (29 CFR 1630, appendix, and sections 1630.2(o) and (p) and 1630.9); (2) the *Enforcement Guidance on Reasonable Accommodation and Undue Hardship Under the Americans with Disabilities Act* (8 FEP Manual 405:7601 (1999)); and (3) *A Technical Assistance Manual on the Employment Provisions (Title I) of the Americans with Disabilities Act* (8 FEP Manual (BNA) 405:6981, 6998-7018 (1992) (the technical assistance manual)). The technical assistance manual includes a 200-page resource directory, including federal and state agencies, and disability organizations that can provide assistance in identifying and locating reasonable accommodations.

   The EEOC also has discussed issues involving reasonable accommodation in the following guidances and documents:

   - *Enforcement Guidance: Pre-Employment Disability-Related Questions and Medical Examinations* (5, 6-8, 20, 21-22, 8 FEP Manual (BNA) 405:7191, 7192-94, 7201 (1995))
   - *Enforcement Guidance: Workers' Compensation and the ADA* (15-20, 8 FEP Manual (BNA) 405:7391, 7398-7401 (1996))
   - *Enforcement Guidance: The Americans with Disabilities Act and Psychiatric Disabilities* (19-28, 8 FEP Manual (BNA) 405:7461, 7470-76 (1997))
   - Fact Sheet on the Family and Medical Leave Act, the Americans with Disabilities Act,Act, the Americans with Disabilities Act, and Title VII of the Civil Rights Act of 1964 (6-9, 8 FEP Manual (BNA) 405:7371, 7374-76 (1996))
   - *Enforcement Guidance: Disability-Related Inquiries and Medical Examinations of Employees Under the Americans with Disabilities Act* (20, 22, 23, 24-5, 8 FEP Manual (BNA) 405:7701, 7711, 7712-14, 7715-16 (2000))

   Finally, the EEOC has a poster that employers and labor unions may use to fulfill the ADA's posting requirement.

All of the above-listed documents, with the exception of the technical assistance manual and the poster, are also available through the Internet at www.eeoc.gov. All of these documents provide guidance that applies to federal agencies through the Rehabilitation Act of 1973 (29 USC 791).

2. Job Accommodation Network (JAN), 800-526-7234 (voice), 877-781-9403 (TTY), http://askjan.org

   A service of the President's Committee on Employment of People with Disabilities, JAN can provide information, free of charge, about many types of reasonable accommodations.

3. ADA Disability and Business Technical Assistance Centers (DBTACs), 800-949-4232 (voice/TTY), http://adata.org

   The DBTACs consist of 10 federally funded regional centers that provide information, training, and technical assistance on the ADA. Each center works with local business, disability, governmental, rehabilitation, and other professional networks to provide current ADA information and assistance, and places special emphasis on meeting the needs of small businesses. The DBTACs can make referrals to local sources of expertise in reasonable accommodations.

4. Registry of Interpreters for the Deaf, (703) 938-0030 (voice), (703) 939-0459 (TTY), http://www.rid.org

   The registry offers information on locating and using interpreters and transliteration services.

5. RESNA Technical Assistance Project, (703) 524-6686, http://www.resna.org

   RESNA, the Rehabilitation Engineering and Assistive Technology Society of North America, can refer individuals to projects in all 50 states and the six territories offering technical assistance on technology-related services for individuals with disabilities. Services may include --
   - information and referral centers to help determine what devices may assist a person with a disability (including access to large databases containing information on thousands of commercially available assistive technology products);
   - centers where individuals can try out devices and equipment;
   - assistance in obtaining funding for and repairing devices; and
   - equipment exchange and recycling programs.

Return to top

Footnotes

1. For example, an employee may be able to type more comfortably if he or she uses a certain type of keyboard tray. If practicable, the Board may provide the employee with the requested tray. Return to text.

2. Management's decision to provide an informal adjustment does not constitute a determination that the employee is disabled, as defined by the Rehabilitation Act, or that an adjustment or other type of accommodation is legally required. Return to text.

3. Informal dispute resolution can include mediation, team building, climate assessments, job coaching, etc. Return to text.

Board Policies

Time Off in Connection with Administrative EEO Complaints

Approved by Stephen Malphrus, effective November 27, 2002

Jump to section:
Policy Statement

Policy Statement

Section 268.605 of the Board's Rules Regarding Equal Opportunity (12 CFR 268) provides that an individual bringing an equal employment opportunity (EEO) complaint (the complainant) against the Board is entitled to a representative of his or her choice during precomplaint counseling and at all stages of the complaint process. Both the complainant and the representative, if they are Board employees who are otherwise on duty and if the complaint is against the Board, are entitled to a reasonable amount of administrative leave (also called *official time*) to present the complaint and respond to Board requests for information (section 268.605(b)). Former employees of the Board who initiate the EEO process concerning claims relating to their prior employment are employees within the meaning of section 268.605, and their representatives, if they are current Board employees, are entitled to administrative leave.

Return to top

Guidelines

Generally, administrative leave is granted for the following purposes:

- *Meetings or hearings.* Complainants and their representatives are entitled to administrative leave for the duration of meetings or hearings with Board or Equal Employment Opportunity Commission (EEOC) officials.
- *Preparation for meetings or hearings.* Complainants and their representatives are to be given a *reasonable* amount of administrative leave to prepare for the meetings or hearings described in item 1.
- *Preparation of responses and documents.* Complainants and their representatives are to be given a reasonable amount of administrative leave to respond to Board and EEOC requests for information, to prepare the formal EEO complaint, and to prepare any appeals to the EEOC.

Reasonable Amount of Administrative Leave

As used in this policy, *reasonable amount of administrative leave* is defined as whatever is appropriate, under the particular circumstances of the complaint, to allow the complainant and the representative to make a complete presentation of relevant information associated with the complaint and to respond to Board requests for information. The actual number of hours to which a complainant and representative are entitled will vary, depending on the nature and complexity of the complaint and considering the mission of the Board and the Board's need to have its employees available to perform their normal duties on a regular basis. The complainant and the Board should mutually agree on the amount of administrative leave to be used before the complainant uses such time. Time spent commuting to and from home is not included in administrative-leave computations because all employees are required to commute to and from their Board employment on their own time.

Meeting and hearing time. For meetings or hearings (see item 1 above), *reasonable* is defined as the duration of the meeting or hearing. During the processing of a typical complaint, complainants and their representatives spend most of the time in meetings and hearings with Board officials or with EEOC administrative judges. Whatever time is spent in such meetings and hearings is automatically deemed reasonable. Both the complainant and the representative are to be granted official time for the duration of these meetings or hearings. If a complainant or representative has already worked a full week and must attend a meeting or hearing on a day when he or she would normally be off, that complainant or representative is entitled to administrative leave, which may require that the Board pay overtime in accordance with the applicable Board policy.

Preparation time. With respect to items 2 and 3 above, since presentation of a complaint involves preparation for meetings and hearings, as well as attendance at such meetings, conferences, and hearings, complainants and their representatives are also afforded a reasonable amount of administrative leave, as defined above, to prepare for meetings and hearings. In addition, the complainant and the representative are to be afforded a reasonable amount of administrative leave to prepare the formal complaint and any appeals that may be filed with the EEOC, even though no meetings or hearings are involved. However, because matters raised in a complaint will be investigated by investigators appointed by the Board or EEOC personnel, the regulation does not envision that the complainant and representative will need large amounts of administrative leave for preparation. Consequently, *reasonable*, with respect to preparation time (as opposed to time actually spent in meetings and hearings), is generally defined in terms of hours, not days, weeks, or months. Again, however, what is reasonable will depend on the individual circumstances of each complaint.

Aggregate Time Spent on EEO Matters by EEO Representatives

As a federal employer, the Board is entitled to expect its employees to spend most of their time doing the work for which they are employed. Therefore, the Board may restrict the overall hours of administrative leave afforded to a representative, for both preparation purposes and for attendance at meetings and hearings, to a certain percentage of that representative's duty hours in any given month, quarter, or year. These overall restrictions would depend on the nature of the representative's position, the relationship of that position to the Board's mission, and the degree of hardship imposed on the Board's mission by the representative's absence from his or her normal duties. The amount of time to be afforded to an employee for representational activities will vary with the circumstances.

Scheduling of Meetings

It is expected that the Board will, to the extent practical, schedule meetings during the complainant's normal working hours and that Board officials shall provide administrative leave for the complainant and the representatives to attend such meetings and hearings.

If meetings, conferences, and hearings must be scheduled outside of the complainant's or representative's normal work hours, the Board should adjust or rearrange the complainant's or representative's work schedule to coincide with the meetings or hearings, or grant administrative leave to allow an approximately equivalent time off during normal hours of work. In any individual circumstance, the Board has the discretion to select the appropriate method for making the complainant or representative available.

When a Board employee is called as a witness in connection with an EEO complaint, he or she must be in a paid-work status if his or her presence is authorized or required by EEOCor Board officials in connection with the complaint.

Return to top

Procedures for Requesting Administrative Leave

An employee seeking administrative leave in connection with an EEO complaint in the administrative process, whether he or she is an EEO complainant or a representative, must request such leave from the supervisor who is authorized to approve his or her other leave requests. Requests need to be made before the use of any administrative leave. The employee must provide sufficiently detailed information to permit the supervisor to determine what constitutes a *reasonable* amount of administrative leave. For example, if an employee is requesting administrative leave to attend a meeting or hearing, the employee must identify the entity who called the meeting (that is, the Board, an investigator, or an EEOC administrative judge) and provide an estimate of the duration of the meeting. The employee would then be entitled to administrative leave for the duration of the meeting or hearing. After the leave is granted, the supervisor should confirm the actual duration of the meeting or hearing and adjust the amount of administrative leave granted to reflect the actual duration of the meeting or hearing.

Similarly, if an employee is requesting administrative leave for preparation time, the employee must identify the reason the time is needed (for example, to prepare for a meeting or hearing with Board or EEOC officials, to respond to a Board or an EEOC information request, to prepare a formal complaint, or to prepare an appeal to the EEOC) and provide an estimate of the amount of preparation time required.

Supervisors who have questions about how much administrative leave should be granted in a specific instance should contact the Legal Division attorney (or attorneys) assigned to provide assistance with respect to questions on administrative leave for EEO purposes. The Legal Division attorney will consult with the EEO programs director and will work with the supervisor to advise him or her on what constitutes an appropriate amount of administrative leave in that specific instance.

Any reasons for the denial of official time should be fully documented and made part of the complaint file. If a supervisor denies a request for administrative leave, either

in whole or in part, he or she must prepare a written statement noting the reasons for the denial. The supervisor must immediately send the written statement to the EEO Programs Office for inclusion in the employee's EEO complaint file. If administrative leave is denied before a formal complaint is filed, the Board shall provide the complainant with a written explanation for the denial, which it will include in the complaint file if the complainant subsequently files a complaint.

Return to top

Annual Leave or Leave Without Pay in Connection with an EEO Complaint

If the employee believes that additional leave is required beyond any administrative leave that has been determined to be *reasonable* for the purposes set out above, the employee may use annual leave or leave without pay in accordance with the Board's policies.

Return to top

Leave for a Civil Action

Following the administrative process, an employee may file an EEO complaint in federal court as a lawsuit under title VII of the Civil Rights Act of 1964 (and related statutes). Once a complaint is no longer in the administrative EEO process, such as when the employee is preparing to file or has filed his or her EEO complaint as a lawsuit in federal court, this policy on administrative leave in connection with administrative EEO complaints no longer applies. There is no entitlement to administrative leave in connection with title VII litigation in a U.S. district court, a U.S. court of appeals, or before the U.S. Supreme Court. In those cases, Board policies governing annual leave or leave without pay are applicable. However, when an employee-litigant appears as a witness in a court case in which the government is a party, he or she is eligible for court leave for the time involved in giving testimony, as further described in the Board's Leave Policy.

Return to top

Applicability

This policy is issued pursuant to the Board's Rules RegardingEqual Opportunity and is consistent with guidance that is provided to federal agencies by the EEOC. In the case of a conflict between this policy and the Board's rules, the Board's rules shall apply.

EEO training begins October 27

Sheila Clark, Off ce of Divers ty and Inclusion

Published: October 27, 2014

In compliance with the training requirements of the Notification and Federal Employee Antidiscrimination and Retaliation Act of 2002 (NO FEAR Act), the Board is implementing web-based training beginning October 27. The training is designed to increase awareness and knowledge of equal opportunity federal laws and their application within the workplace.

The training consists of the following modules: discrimination-free workplace, workplace harassment, lawful hiring (managers), and disability discrimination and accommodation. Please allow ample time to complete the training; it takes about 1 to 1.5 hours to complete.

If you begin the training and then are unable to complete it in one sitting, you may exit at any time and resume from where you left off. At the end of each module, you must record your completion by clicking "**I Agree**" on the certificate screen. After doing so, print the certificate for your records.

Please note the following:

- Employees should complete the training in Firefox. If your default browser is Internet Explorer, you should cut and paste the link https://federalres.elt-inc.com into Firefox. If you attempt to access the training in IE, you will receive a certificate error message.
- The username for the training is **FR** combined with you **employee ID** (e.g., **FR000001**), and the password is **welcome** (lowercase).
- A notification will be sent to employees hired after September 30 to take the training at a later date.

All Board employees must complete the training by Friday, December 12.

If you have any questions regarding the training, please contact LaWanda Musgrove at 452-2083.

Employee Relations

Jump to section: How To Find Us

Video: Allison Dichoso

The Board's Employee Relations (ER) function exists to maintain effective working relationships between employees and management. The ER staff takes a proactive approach, anticipating the impact of policy changes at the Board that will affect staff. The ER staff reinforces the employee/management relationship by providing assistance in three major areas

- counseling dispute resolution,
- policy assistance, and
- the facilitation of formal employee relations cases.

How to Find Us

Employee Relations is located at 1850 K Street in suite 3301

FRB Shuttle schedule

What We Do

- Who We Are & What We Do (PDF)
- We identify emerging employee relations issues and trends that may affect employee morale; bring them to the attention of management in advance of any impact.
- We systematically gauge employee morale and assess the quality of Human Resources programs and services through various outreach mechanisms.
- We resolve workplace issues by providing consultation and counseling for management and employees.
- We develop and implement employee relations policies that are responsive to Board needs.
- We administer the grievance and disciplinary actions policies.

Development and Learning

Assessments

Assessment tools are designed to increase employees' awareness of their behavioral tendencies in relation to how they interact with others. The tools can be used to help target training needs as well as help employees make good decisions.

Employee and Managerial Assessment Tools

- **Myers-Briggs (MBTI)** – Scores obtained from the Myers-Briggs Type Indicator (MBTI) indicate a person's individual mind patterns and learning process implications on each of eight polarities and four personality dimensions. This is helpful in the workplace, as the scores can provide insight into a person's working style.
- **NMap (New Manager Assimilation Process)** –The purpose of the New Manager Assimilation Process is to ramp up the integration of a newly appointed manager/leader with his or her direct reports. This process is a valuable step to ensure that a team quickly becomes productive after a management change.
- **DISC Profile** – This four-quadrant behavioral personality profile test is designed to help people gain insight into their behavioral style based on their personality and the situation they find themselves in. The DISC Profile can help build productive teams and develop effective management and leadership.
- **360-Degree Feedback** – A 360, or multi-rater, assessment gathers information from several different groups of people about an employee's effectiveness. A 360 assessment for managers might seek feedback from (1) the people that manager reports to, (2) peers, and (3) people who report to that manager.

Development and Learning

Career Planning

We can help you understand the career planning process and help identify appropriate short- and long-term career options.

We start by identifying your interests along with any skill gaps. If there are any gaps, we can help you develop a plan and direct you to the tools necessary to be successful. Then we can help match your talents and skills with your interests. Ultimately, your increased knowledge and skills will add more value to the Board.

We provide the following:

- Skill and value assessments
- Individual career path development
- Job search guidance
- Résumé writing guidance
- Personal brand/marketing guidance
- Networking guidance
- Interview guidance
- Development plan guidance

inside the board

Development and Learning

Consulting

From organization-wide interventions to coaching work teams, our seasoned Organizational Development team can accurately diagnose and recommend the appropriate course of action.

Following is a sample of the types of interventions available:

- **Leadership development**: Expertise is shared in leadership assessment, training, coaching, and other development activities.
- **Process management**: We help create heightened awareness of work processes, which enables individuals and teams to think more systematically about how to improve them. It also helps teams learn the important skill of mapping work processes so that their improvement will increase the departments' effectiveness.
- **Learning solutions**: We provide creative solutions to your training needs, including traditional classroom instruction, facilitation, blended learning, and e-learning.
- **Strategic planning**: We help individuals and teams understand various strategic planning models and assist in implementing them. We assist with identifying the current state of the organization, envisioning the desired future, defining goals, developing action plans to meet goals, and monitoring progress.
- **Change management**: We help plan how change can occur, build a shared commitment to change, and implement needed changes.
- **Team development**: Team development can improve the diagnosis and problem-solving abilities of individuals and other work groups whose difficulties are teamwork-related.
- **Needs assessment design: surveys, evaluations, and focus groups**: The needs assessment process can provide vital information about your teams' services, employees, growth opportunities, and customer attitudes.

Training & Classes

We offer classroom, e-learning, blended learning, and virtual instruction within the Federal Reserve System—all a search away using FedLearn. Each division requires that you get approval from your manager before enrolling in training. This is to ensure that there are adequate resources in the office and that course fees (if applicable) have been approved.

Currently offered professional development courses

We can assist you with the following:

- Information about internal offerings and how they align with development and performance goals
- Referrals to external educational offerings or vendors for department, team, or individual-specific training or coaching needs
- Requests/suggestions you may have for new offerings
- Teambuilding
- Customized training/targeted training
- Writing classes
- e-learning options

What is FedLearn?

FedLearn is our enterprise learning management system. It is a web-based product that provides an infrastructure to manage and deliver training for Fed employees.

Review courses on FedLearn.

Office of Diversity and Inclusion

Equal Employment Opportunity

Back to Equal Employment Opportunity

EEO Complaint Process and How It Works

Chairman's Letter

The Board's policy is to provide equal opportunity in employment for all persons. Thus, consistent with applicable law, the Board prohibits discrimination in employment on the basis of race, color, religion, sex, national origin, age, disability, or genetic information and promotes the full realization of equal employment opportunity (EEO) through a continuing affirmative program. In addition, as a matter of policy and although it is not required by law, the Board prohibits discrimination in employment on the basis of sexual orientation.

The Board is committed to complying with the following statutes and any amendments thereof: Civil Rights Act of 1964 (Title VII), section 501 of the Rehabilitation Act of 1973, the Age Discrimination in Employment Act of 1967, the Equal Pay Act of 1963, the Genetic Information Nondiscrimination Act of 2008, and the Uniformed Services Employment and Reemployment Rights Act of 1994. The Board's plan, program objectives, and goals dealing with equal employment opportunity are set forth in the Board's Rules Regarding Equal Opportunity, 12 CFR 268, and in the Annual EEO Program Status Report adopted by the Board. Both of these documents are available from the Board's Office of Diversity and Inclusion.

As an essential part of the Board's policy, no one will be subject to retaliation or reprisal for participating in any stage of the administrative or judicial proceedings provided for in the Board's Rules Regarding Equal Opportunity.
The Board has a zero-tolerance policy for discriminatory harassment, which includes sexual harassment. The Board is committed to preventing any discriminatory harassment.

The Board calls on senior management to comply fully with its policy of a work environment that is free from discrimination, hostility, intimidation, reprisal, and harassment. Each manager, at every level, must ensure that the Board's commitment to equality of opportunity is honored.

The following is an overview of the Board's EEO complaint process. For a comprehensive review of the Board's EEO program, employees and applicants for employment are encouraged to review the Board's Rules Regarding Equal Opportunity.

Sincerely,
Janet L. Yellen, Chair

Equal Employment Opportunity (EEO) Designations

The Board designates members of its staff to help carry out the functions described in the Board's Rules Regarding Equal Opportunity.

EEO Counselors

Johanna C. Bruce, M-3304, ext. ext. 2787
Penny Thompson, M-3310, ext. 2077
Daniel Aranda, M-3303, ext. 3367

EEO counselors are available to counsel any Board employee or applicant who feels

that he or she has been discriminated against because of race, religion, color, national origin, sex, age, disability, genetic information, or sexual orientation, or has been subjected to retaliation for engaging in protected activity.

Return to top

Receipt of Complaints

The following individual is designated to receive formal complaints of discrimination:

Sheila Clark, Program Director

Office of Diversity and Inclusion
Board of Governors of the Federal Reserve System
Stop 156, Room M-3408
20th Street & Constitution Avenue, NW
Washington, DC 20551
Voice: (202) 452-2883

Return to top

Approaches to Solving Complaints

If you believe that you have been discriminated against because of your race, religion, color, national origin, sex, age, disability, genetic information, or sexual orientation, or have been subjected to retaliation for engaging in protected activity, you should contact an EEO counselor.

If you believe that you are a victim of discriminatory harassment, which includes sexual harassment, you may contact an EEO counselor. You may also seek relief by reporting such conduct through the established channels designated in the Board's Discriminatory Workplace Harassment Policy. In this regard, an employee may report discriminatory harassment to (1) the offending individual's supervisor or the harassed employee's supervisor; (2) the offending individual's division director or the harassed employee's division director; (3) the Office of Diversity and Inclusion program director, (4) an employee relations specialist in the Human Resources Function of the Management Division; (5) the officer responsible for Employee Relations, or his or her designee; (6) for employees in Human Resources, the assistant general for Human Resources in the Legal Division.

Return to top

The EEO Complaint Process

The following steps summarize the Board's EEO complaint process for employees and applicants who feel they have been discriminated against because of their race, religion, color, national origin, sex, age, disability, genetic information, or sexual orientation, or have been subjected to retaliation for engaging in protected activity. There are time limits for the filing and resolution of an EEO complaint. Failure of the employee or applicant to meet the time requirements stated for any stage of the complaint process may result in the dismissal of the complaint or the loss of administrative and judicial rights. These steps also apply to complaints of retaliation and equal pay (sex-based wage discrimination).

- You must contact an EEO counselor within 45 calendar days of the date of the matter alleged to be discriminatory or, in the case of a personnel action, within 45 calendar days of the effective date of the action.
- Unless you agree to an extension of time, the EEO counselor has 30 calendar days to inquire into your informal complaint, to attempt a resolution of the matter, and to advise you how to file a formal complaint if the matter is not resolved.
- In the event the Board's alternative dispute resolution process is offered to you and you agree to participate in mediation, the informal complaint processing period will be 90 days. Mediation will be offered on a case-by-case basis, when the program director deems a complaint appropriate for mediation.
- If the EEO counselor cannot resolve your complaint or if your complaint is in mediation and it is not resolved by the 90th day, the EEO counselor will issue you in writing a notice of your right to file a formal complaint with the Board. Should you choose to file a formal complaint, you must do so within 15 calendar days after your receipt of this notice.
- If you file a formal complaint, the Office of Diversity and Inclusion will review that complaint and determine the issues accepted for investigation. The Office of Diversity and Inclusion will then assign an EEO investigator to

investigate the issues accepted in your complaint.

- At the conclusion of the investigation, the program director will provide you with the investigative report.
- You will have 30 calendar days from receipt of the investigative report to request a hearing and a decision from an Equal Employment Opportunity Commission (EEOC) administrative judge or to request a final Board decision without a hearing.
- You may request a hearing before an EEOC administrative judge any time after 180 days have elapsed since the filing of your formal complaint.
- All requests for a hearing before an EEOC administrative judge must be made by submitting a written request to:

EEOC

131 M Street, NE – Fourth Floor, Suite 4NW02F
Washington, DC 20507

You are required to send a copy of your request for a hearing to:

Sheila Clark, Program Director

Office of Diversity and Inclusion
Stop 156, Room M-3408
20th Street & Constitution Avenue,
NW Washington, DC 20551

- If you request a final Board decision without a hearing, the Board will have 60 calendar days to render its final decision.
- If you request a hearing before an EEOC administrative judge, the EEOC will appoint an EEOC administrative judge to hold the hearing. The administrative judge will make findings of fact and conclusions of law and will issue a decision. The Board will have 40 calendar days from the date of its receipt of the administrative judge's decision to issue a final order informing you whether it will implement the decision. If the Board does not implement the administrative judge's decision, the Board can file an appeal with the EEOC simultaneously with the issuance of the Board's final order.
- As a complainant, you may appeal the Board's dismissal, or its final decision on your formal complaint, to the EEOC within 30 calendar days of your receipt of the Board's dismissal or final decision.
- As a complainant, you may file a civil action in U.S. district court within 90 calendar days of the Board's final decision or the EEOC's decision on appeal. In addition, you may file a civil action in U.S. district court after 180 calendar days have passed since the filing of your formal complaint or since the filing of your appeal with the EEOC.

Return to top

Important Points to Remember

- *You have the right to be represented at any stage in the presentation of your complaint by a person of your own choosing. This representative may be a Board employee and need not be an attorney. The Board does not, however, provide attorneys. The Board may determine to award attorney fees to a complainant—but only for the services of an attorney—when a finding of discrimination has been entered or when such an award is deemed appropriate under the applicable regulations. Attorney fees are not available for services performed at the administrative level for Age Discrimination in Employment Act (ADEA) or Equal Pay Act (EPA) complaints.*
- *Any person considering filing an EEO complaint must first meet with an EEO counselor within 45 days of the alleged discriminatory act.*
- *Copies of the Board's EEO rules and the Board's internal policy statements on EEO as well as further details on the EEO complaint process, including the Mediation Program for EEO Complaints, are available from the Office of Diversity and Inclusion.*
- *For a work-related problem in which you do not believe discrimination is a*

factor, you should first seek a resolution through your supervisor and other division management. If that effort fails, you may wish to contact an employee relations specialist in Human Resources.

- *If a complaint is determined to be appropriate for mediation, mediation can be offered (prior to the hearing) at both the informal and formal complaint processing stages.*

Talent Acquisition

Jump to section: Getting Started

Video: Debra York

The Management Division's Talent Acquisition section assists divisions in attracting, selecting, and hiring a well-qualified and diverse workforce. Section staff recruits for full-time, temporary, worker trainee, intern, youth aids, and cooperative education positions.

Getting started

When you contact the Talent Acquisition section with a position need, the recruiter will arrange for a strategy session with you to discuss the qualifications you are looking for. Please consider the following when you have a position vacancy:

- Obtain a copy of an existing job description for the position from your division's administrative office and review it for accuracy. Your recruiter can help you develop language that can be used in the description and when posting the job internally and externally.
- All positions are posted internally for five business days. All internal job applicants who meet the minimum qualifications for a position must be interviewed by the hiring manager.

Return to top

Are You Hiring?

Peoplefluent is an applicant tracking system designed to manage the recruiting and hiring process through an external website. It assists with evaluating candidate qualifi cations, tracking new hires, and maintaining metrics. Click on the image to access PeopleClick job aid.

Return to top

Services

Sourcing. Talent Acquisition uses many sources to provide a diverse applicant pool. Our recruiters will help you find highly qualified applicants by posting on various job boards, such as Monster, DICE, LinkedIn, USAJOBS, and more. The staff also search for passive candidates by using these websites. (Passive candidates are those individuals who post profiles or resumes on websites, but who are not actively searching for new positions.)

Prescreening. Ensuring that job candidates have the right skills before coming in for a formal interview saves time. Talent Acquisition will work with hiring managers to develop a list of specific questions to identify or narrow a candidate's work experience and will contact candidates for writing samples or other materials.

Candidate coordination. Talent Acquisition will work with hiring managers to develop interview schedules and to arrange for travel assistance for candidates. The staff will also discuss benefits and salary with candidates and will mail information packets to all candidates who are offered positions.

Process management. Recruiters in the Talent Acquisition section understand Board policies. No matter what type of employee you wish to hire, the staff will guide you through the process.

QuickStart

01: Exploring Your Role as Manager

Six Roles of a Manager

QuickStart
for managers
at the Board of Governors

Results Master: Focuses on **delivery of outcomes**. The delivery of the "task," "product," or "services" through your team's efforts.

Connector: Aligns, connects, and translates to ensure a shared vision. Builds a robust network of peers and stakeholders, both internally and externally. Maintains productive relationships up, down, and across the organization.

Team Leader: Focuses on **team development** to achieve high performance; this role looks at how the team works together and sets an effective climate for team success.

Change Agent: Initiates and leads change in alignment with organization goals, objectives and initiatives.

Strategist: Takes in the broader view of the organization and external changes impacting the team; **orchestrates strategies** to ensure team's outcomes remain relevant and valuable. Sets the agenda to take actions required to be successful.

Coach: Supports **employees to grow and develop**. Enables employees to increase skills, capabilities and knowledge through developmental opportunities, experiences, and stretch projects.

Enablers and De-Railers

Approaches That *Enable* Success	Approaches That *De-Rail* Success
Engagement and enablement of staff in your section	Micromanagement through controlling and directive behaviors
Openness to and awareness of changing conditions and ability to respond adaptably	Resistance to change
Decision-making informed by timeliness and data required of the situation	Desire for and demand of perfection
Relationships that span across divisions and functions	Over-focus on section or individual results
Perspective that is balanced between strategic thinking and short-term reactive thinking	Focus on short-term priorities

QuickStart for managers at the Board of Governors

Connection – Connecting the work employees do to larger organization outcomes and success. Here is how:

1. Share the big picture.
2. Help employees find meaning and purpose in their work.
3. Support and celebrate progress.

Growth – Encouraging employees to develop their full potential and abilities. Here is how:

1. Know your employees.
2. Provide diverse development opportunities.
3. Use questions to develop employee insight.

Ownership – Fostering employee commitment and accountability for work outcomes and results. Here is how:

1. Empower employees through delegation.
2. Hold employees accountable.
3. Create opportunities for input and suggestions.

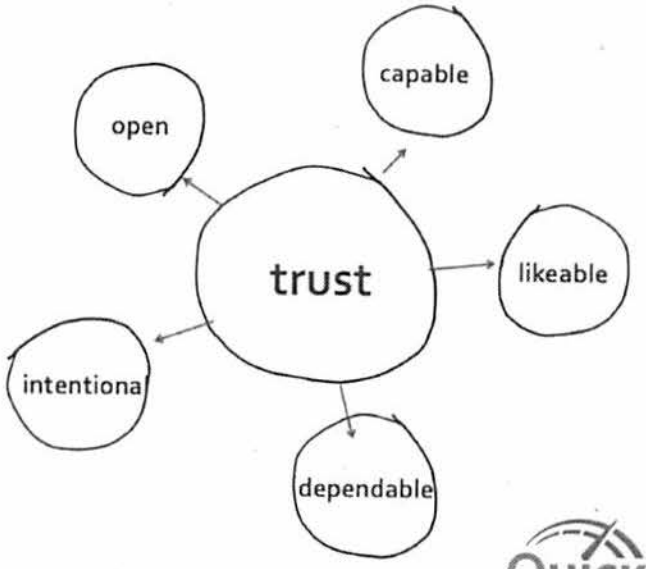
Trust – Increasing trust and openness so employees feel safe talking honestly about difficult issues. Here is how:

1. Develop supportive relationships with your employees.
2. Demonstrate openness to ideas of all team members.
3. Create fairness through consistency and dependability.

QuickStart for managers at the Board of Governors

02: Motivating and Engaging Others

Trust Model



QuickStart for managers at the Board of Governors

Trust, (n). One in which confidence is placed.

It is the underpinning of every effective relationship and is foundational to organization success. Yet, it is a hidden and an over looked element. Trust is built on one's personal character and competence.

Cultivate Trust

1. **Listen first:** Seek to understand.
2. **Give credit to team members:** Provide them opportunities to be recognized in wider arenas.
3. **Create transparency:** Be open and authentic.
4. **Confront reality:** Take issues head-on, even the 'un-discussable'.

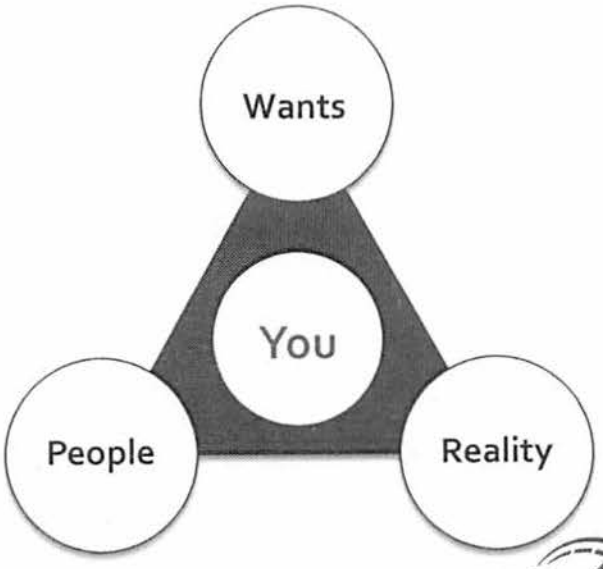
Triangle of Influence



Reference: Bellman (1992)

QuickStart for managers at the Board of Governors

WHAT: An influence approach to get things done within organizations by leveraging collective power, building shared understanding, and creating alignment on desired outcomes that are shared.

Three focus areas:

People – Who are the people involved in or that care about the situation?

Reality – What is the current situation? How do you and others see the situation as it currently exists?

Wants – What is the preferred state? What do you and others want in the situation?

DiSC Model

03: Influencing and Managing Up
Managing Up
Ensure No Surprises
Adapt Your Style
Provide Solutions
Earn Respect
Leverage Strengths and Support Weaknesses
Understand Priorities and Pressures
Power
Perspective
QuickStart for managers
at the Board of Governors

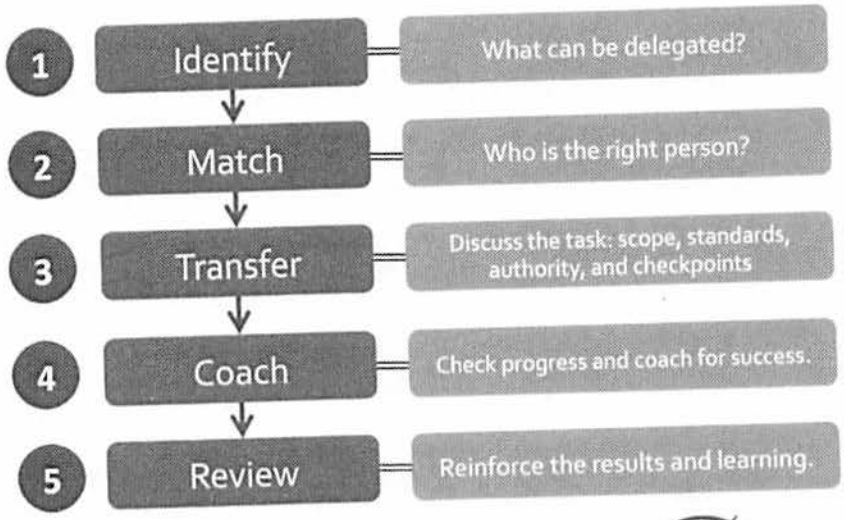
10 Principles to Managing Up

1. A productive relationship with your boss is a core determinant to your success.
2. Know your boss' DiSC Style. Adapt your style as necessary.
3. Do not compete with your boss. You will lose. Negotiate.
4. Always make your boss look good. Keep them well-informed to ensure a "no surprise" policy.
5. Trust is a two way street.
6. Know if your work is progressing your boss' priorities.
7. Under-promise and over-deliver.

QuickStart for managers at the Board of Governors

04: Managing for Results

The Five-Step Delegation Process



QuickStart for managers at the Board of Governors

1. Identify

- Can someone else do the task?
- Can doing the task develop an employee?
- How frequent is the task?
- Is there time to delegate?
- How critical is the task?

2. Match

- Who is interested?
- Who is capable and reliable?
- Who has the required skills?
- Who has the time?
- Who will grow from the task?
- Who are you overusing/overlooking?

3. Transfer

- What is expected?
- How will success be measured?
- What resources will be available?
- Clarify decision making authority.
- What checkpoints are expected?

4. Coach

- High Competence/High Commitment – **Empower**
- High Competence/Variable Commitment – **Support**
- Some Competence/Some Commitment – **Coach**
- Low Competence/High Commitment – **Direct**

5. Review Results

- Review results
- Celebrate successes
- Integrate learning

QuickStart for managers at the Board of Governors

Accountability Initiative Framework

Level 1:	Employee waits until told what to do
Level 2:	Employee asks you what to do
	Low to No Initiative
	Productive Initiative
Level 3:	Employee suggests what to do, and then moves with your approval
Level 4:	Employee decides what to do, and informs you right away
Level 5:	Employee does it and keeps you updated regularly

Reference: Oncken & Wass (1999)

QuickStart for managers at the Board of Governors

Avoid the Tendency to "Take Back Work"

Ensure employees know to:

1. Come with solutions
2. Have an agreed level of accountability to progress work

Authority	Control	Initiative
• Delegate enough authority to: • Keep work going • Allow employee initiative • Allow oversight/guidance to ensure success • Fuel of delegation	• Employee responsible for outcome • Employee responsible for the results of their actions • Consistent feedback mechanisms are necessary	• Allow: • Freedom for employees to do things their way • Managers focus on results not the process

QuickStart for managers at the Board of Governors

Defensive Triggers

Reference: Rock (2008)

QuickStart for managers at the Board of Governors

Principles for Dealing with Emotional Reactions

Remember:

1. The reaction is not about you.
2. Emotions can block the conversation.
3. Emotions can amplify if dismissed or avoided.
4. Enabling expression of emotions can diminish intensity.

Avoiding Defensive Triggers

Status - relative importance as compared to others. Provide growth opportunities; pay attention to employee improvement.

Certainty - the brain craves certainty so that prediction is possible. Provide clear expectations or ensure consistent decision making.

Autonomy - the perception of exerting control over one's environment. Provide options and opportunity for input.

Relatedness - one's inclusion in groups and relationships. Create opportunity to connection with or mentor other employees.

Fairness - perceived equity. Increase transparency and communication.

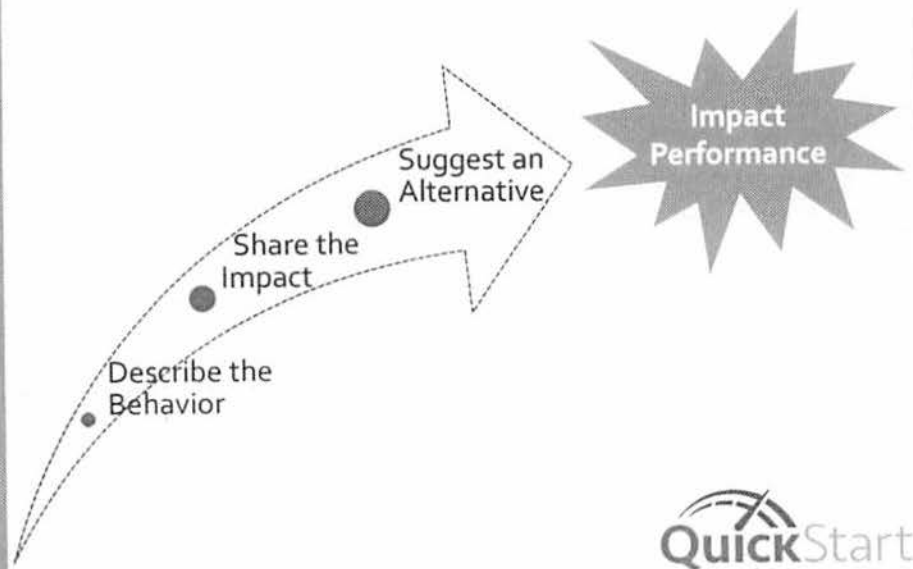
05: Providing High-Impact Feedback

Three-Step Feedback Approach



QuickStart for managers at the Board of Governors

What	Why	How
Describe the Behavior	Ensures the feedback is fact-based and non-judging De-personalizes the feedback	"When you..." Describe the behavior Be specific
Share the Impact	Increases their awareness of their impact Provides the reason why change is important	"I felt... confused, frustrated, disappointed" Impact for organization, team, or yourself
Suggest an Alternative	Allows choice of how they handle it in the future Demonstrates respect and provides autonomy	"Next time I suggest..." "Next time I'd prefer..." "How could you handle this differently in the future?"

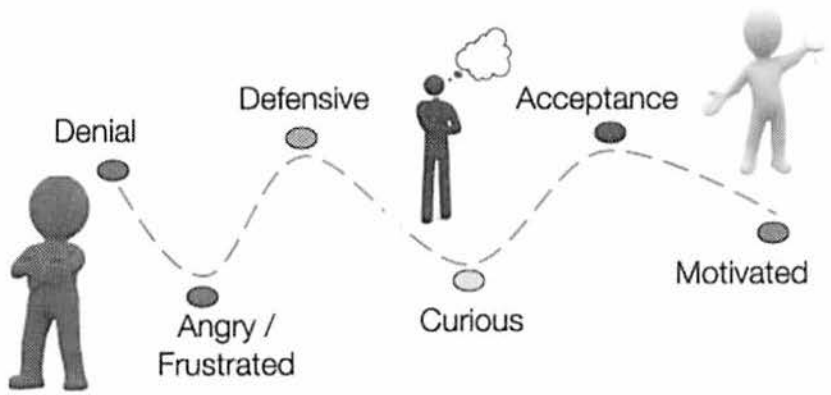
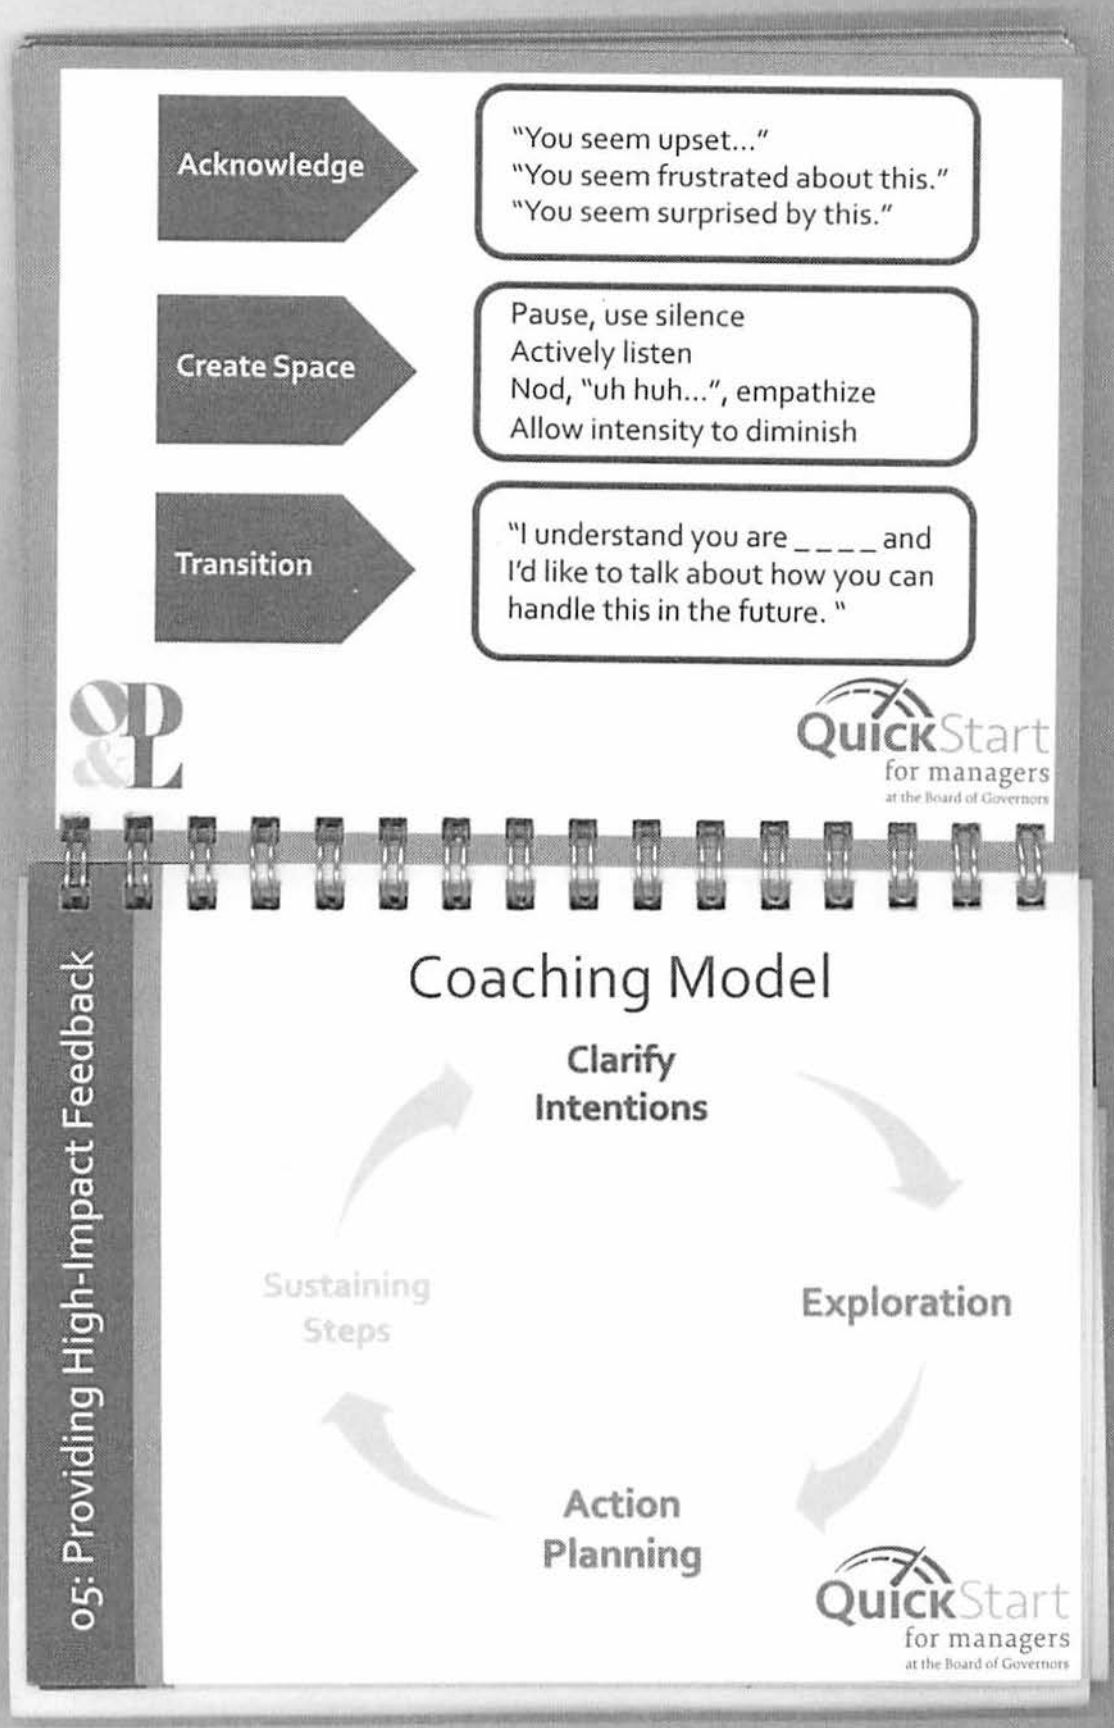
05: Providing High-Impact Feedback

ACT Model



Acknowledge Create Space Transition

QuickStart for managers at the Board of Governors



Acknowledge
"You seem upset..."
"You seem frustrated about this."
"You seem surprised by this."
Create Space
Pause, use silence
Actively listen
Nod, "uh huh...", empathize
Allow intensity to diminish
Transition
"I understand you are _ _ _ _ and I'd like to talk about how you can handle this in the future. "

Coaching Model
Clarify Intentions
Exploration
Action Planning
Sustaining Steps
QuickStart for managers at the Board of Governors

Clarify Intentions

- Build shared understanding
- Desired outcomes
- Why is this important

Exploration

- Identify what is working well
- Envision success
- Explore opportunities and options

Sustaining Steps

- Specific next steps or actions
- Success measures
- Support and follow-up

Action Planning

- What will you do differently
- How will you do it differently
- Support required

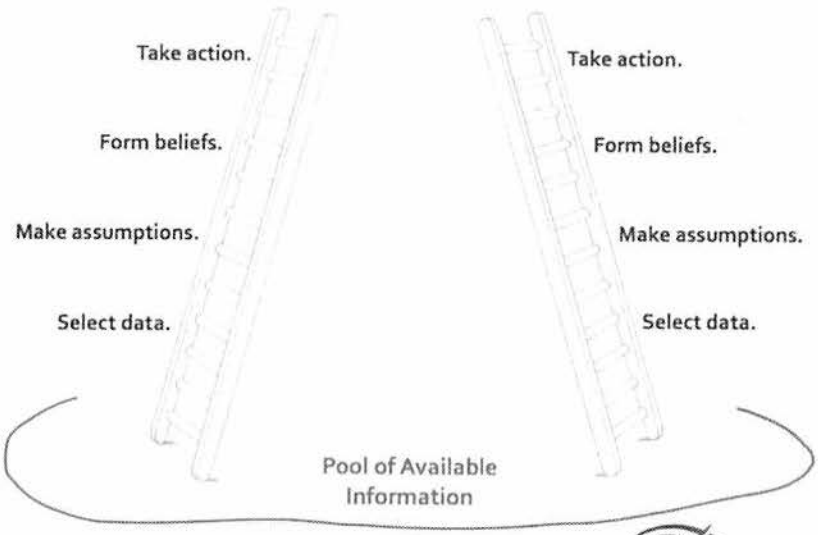
06: Navigating Conflict

Ladder of Inference



Reference: Argyris (1990)

QuickStart for managers at the Board of Governors

Climbing Down the Ladder (Reframing Beliefs)

1. **Stop.** Practice waiting before acting, especially when the urge to act arises.
2. **Reflect.** What beliefs have you formed about the person or situation? What information/data are using to support your beliefs?
3. **Investigate.** Inquire about others' beliefs and the data they used to form their beliefs.
4. **Advocate.** Express your beliefs and how you came to them.
5. **Reframe.** Use relevant data to reframe your beliefs, if necessary.
6. **Act.** Consider the consequences of your actions and proceed.

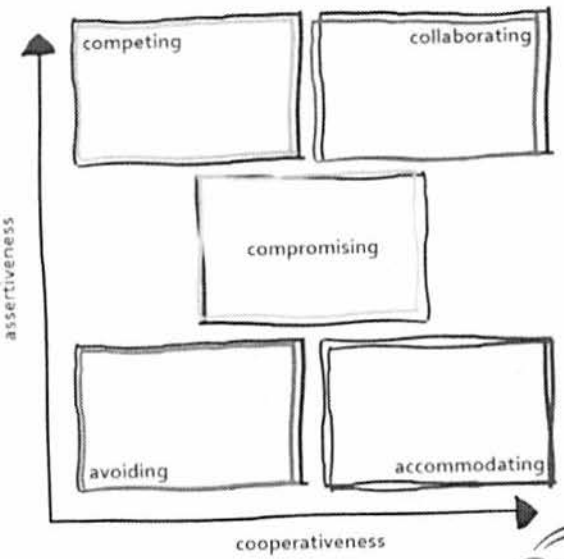
06: Navigating Conflict

Five Conflict-Handling Modes



Reference: Thomas & Kilmann (1974)

QuickStart for managers at the Board of Governors

Mode	Involves	Useful When
Competing	Asserting your opinions Standing your ground Stating your opinion clearly	Standing up for vital issues Taking quick action Protecting yourself
Accommodating	Forgoing your desires Selflessness Yielding	Goodwill & building relationships Keeping peace Providing customer service
Avoiding	Side-stepping Withdrawing Leaving	Reducing tensions Freeing time Allowing others ownership
Collaborating	Listening and empathizing Balanced advocacy and inquiry Identifying concerns & interests	Gaining commitment Integrating solutions Improving relationships
Compromising	Making concessions Negotiating Finding a middle ground	Resolving small issues Creating temporary solutions Dealing with time constraints

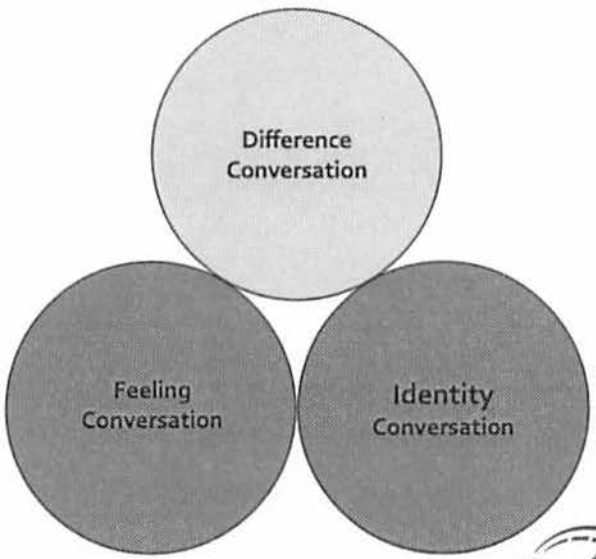
06: Navigating Conflict

Difficult Conversations Model



QuickStart for managers at the Board of Governors

Keys to the Difference Conversation

1. Clearly state the assessment of performance
2. Give specific examples of behavior/performance
3. Understand the employee's view of their performance
4. Identify and clarify where the differences lie
5. Establish a plan for moving forward

Keys to the Feelings Conversation

1. Recognize that you can not control their reaction – do not try to
2. Listen to, empathize, and acknowledge their feelings
3. Summarize feelings and the desired outcome to minimize venting
4. Shift the conversation towards the future

Keys to the Identity Conversation

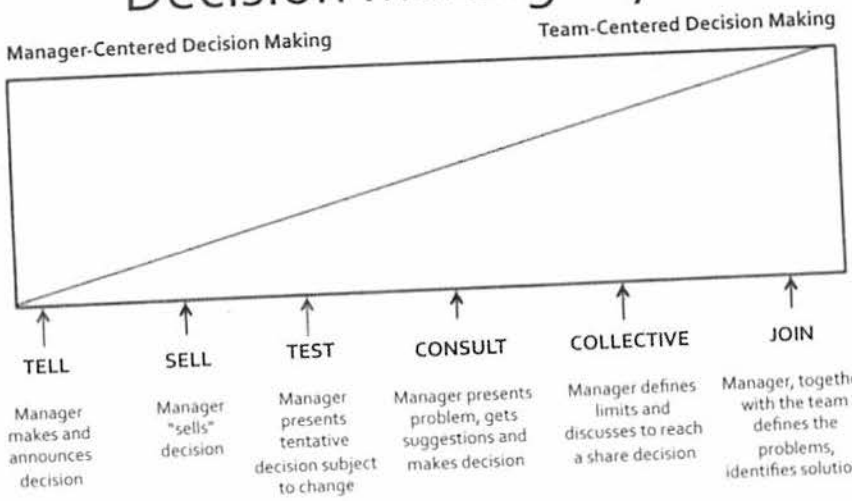
1. Measure success by how clearly and with how much care you speak
2. Separate your self-image from the employee's reaction
3. Help the employee understand the different perceptions
4. Share that you care and want to be helpful in moving forward

High-Performance Team Conditions

QuickStart for managers at the Board of Governors

Compelling Goals • Is there a common understanding of team purpose? • Is there high-level of commitment to this purpose?	**Effective Leadership** • Does the leader provide a vision of what needs to be accomplished and why it is important? • Does the leader obtain appropriate input on key decisions?
Clear Roles • Do individuals have a clear understanding of what is expected from them? • Do individuals understand how their role contributes to the team's success?	**Cooperative Relationships** • Do individuals feel supported in their roles? • Are individuals sensitive to both individual needs and the best interest of teams?
Enabling Principles • Does the team have a clear set of priorities? • Are action plans aligned in an effective manner?	**Mutual Accountability** • Are members committed to doing their best? • Do all members share in the responsibility to deliver?

Decision Making Styles



QuickStart for managers at the Board of Governors

Reference: Tannenbaum & Schmidt (1973)

Approach	Use when...
Tell	Time is limited and urgency is high You have already made the decision
Sell	You have largely made the decision but need to persuade others of your point of view
Test	You want to give the team an opportunity to check the logic of the decision and test it for flaws or gaps You have an idea of what to do, but only a small amount of time to get feedback from a few people (rather than the whole team)
Consult	You have ample time You want to solicit significant participation from team members
Collect	You are open the decision that the team reaches You want to ensure that everyone is involved in the decision process and has an equal say
Join	Manager defines the limits and allows the group to make a decision

3Cs Conversations
Contributions. Competencies. Capabilities

About the 3Cs Process

The 3Cs Conversations, our performance management process, is designed to align staff to the work of the Board, provide greater accountability, support the growth of our staff, improve the value of time everyone spends, and increase fairness of the process.

This process is not solely about new forms or steps in the process:

- It is about the partnership between manager and employee (manager is defined as anyone who supervises someone else - (e.g. officer, manager, chief, supervisor))
- It is about the conversations managers and employees have
- And, most importantly, it is about the approach to the conversations; an approach that increases focused action, encourages learning, and reduces defensive reactions for both managers and employees

The 3Cs Conversations Framework aligns and connects the Board's work. At the heart of this process are collaborative, forward-focused, ongoing, and two-way conversations between managers and employees about the work (**what** needs to be accomplished—the tasks and results—also known as contribution) and behaviors (**how** the work is approached and how one builds relationships along the way—also known as competencies).

The framework incorporates both formal conversations and informal, ongoing conversations. Taken together, all of these conversations are designed to support and direct employees' performance to achieve the Board's mission.

Characteristics of the conversation approach:

- **Collaborative** conversations are those conversations in which employees and managers jointly and cooperatively determine work, define performance, and create conditions for employee success.
- **Forward-focused** conversations use questions to focus on developing solutions for the future.
- **Ongoing** means there will be both formal, scheduled conversations and spontaneous, ad-hoc conversations. The ongoing nature of the conversations will ensure continual adjustment and support and adaptation of expectations as work expectations change.
- **Two-way** conversations means that both the manager and the employee are active, engaged participants in the conversation.)

What are the core changes to performance management for year 2014-2015?

There are changes to the overall standardized process, the objective setting approach, Board- wide competencies, and the definition of performance.

Below, these core changes are explained in greater detail.

1. Overall standardized process: We will operationalize a Board standard conversation approach to performance management. Specifically, this means we will:

- Introduce a set of foundational conversations, the 3Cs Conversations.
- Adopt a conversation approach that is collaborative, ongoing, two-way, forward-focused, and generative.
- Clarify role expectations of managers at the Board. This dual role combines technical expertise and managerial expertise, the ability to engage employees in contributing their best ability.
- Provide a toolkit for managers on how to improve performance via short ongoing conversations.
- Implement a new semi-automated form.

2. Objective setting approach (what): The 3Cs Conversations will increase clarity of what is expected from employees by establishing performance objectives (what) to align and guide work for the year and against which performance is assessed. Specifically, this will include three steps.

- Set organizational priorities. Division and/or section outcomes set annually by leadership.
- Align staff. Run Align & Connect Conversations to communicate division and/or section outcomes.
- Ensure individual accountability. Run Start-Up Agreement Conversations to finalize objectives that were drafted by employees; objectives will be specific, measurable, actionable, and realistic.

3. Boardwide competencies or expected behaviors (how): Introduce Boardwide expected behaviors/competencies. Everyone will have "how" behaviors/competencies incorporated into their work discussions.

- Divisions will be able to add specific critical competencies relative to their unique goals and objectives.
- Competencies will be graduated across three levels: Employee (Individual Contributor), Manager, and Officer.
- The six Boardwide competencies are:
    - Decision quality
    - Learning agility
    - Perspective and strategic agility
    - Relationships
    - Communication
    - Drive for excellence

4. Successful performance will be defined by both the "what" (objectives) and the "how" (competency demonstration).
The rating will be based on a both "what" the employee has accomplished and "how" the employee accomplished the work. See Diagram 1: Learning Review Matrix

Diagram 1: Learning Review Matrix
