Supplemental Guidance: This control applies to organizational employees and visitors. Individuals (e.g., employees, contractors, and others) with permanent physical access authorization credentials are not considered visitors. Organizations determine the types of facility guards needed including, for example, professional physical security staff or other personnel such as administrative staff or information system users. Physical access devices include, for example, keys, locks, combinations, and card readers. Safeguards for publicly accessible areas within organizational facilities include, for example, cameras, monitoring by guards, and isolating selected information systems and/or system components in secured areas. Physical access control systems comply with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance. The Federal Identity, Credential, and Access Management Program provides implementation guidance for identity, credential, and access management capabilities for physical access control systems. Organizations have flexibility in the types of audit logs employed. Audit logs can be procedural (e.g., a written log of individuals accessing the facility and when such access occurred), automated (e.g., capturing ID provided by a PIV card), or some combination thereof. Physical access points can include facility access points, interior access points to information systems and/or components requiring supplemental access controls, or both. Components of organizational information systems (e.g., workstations, terminals) may be located in areas designated as publicly accessible with organizations safeguarding access to such devices. Related controls: AU-2, AU-6, MP-2, MP-4, PE-2, PE-4, PE-5, PS-3, RA-3.

Control Enhancements:

(1) *PHYSICAL ACCESS CONTROL | INFORMATION SYSTEM ACCESS*

The organization enforces physical access authorizations to the information system in addition to the physical access controls for the facility at [*Assignment: organization-defined physical spaces containing one or more components of the information system*].

Supplemental Guidance: This control enhancement provides additional physical security for those areas within facilities where there is a concentration of information system components (e.g., server rooms, media storage areas, data and communications centers). Related control: PS-2.

(2) *PHYSICAL ACCESS CONTROL | FACILITY / INFORMATION SYSTEM BOUNDARIES*

The organization performs security checks [*Assignment: organization-defined frequency*] at the physical boundary of the facility or information system for unauthorized exfiltration of information or removal of information system components.

Supplemental Guidance: Organizations determine the extent, frequency, and/or randomness of security checks to adequately mitigate risk associated with exfiltration. Related controls: AC-4, SC-7.

(3) *PHYSICAL ACCESS CONTROL | CONTINUOUS GUARDS / ALARMS / MONITORING*

The organization employs guards and/or alarms to monitor every physical access point to the facility where the information system resides 24 hours per day, 7 days per week.

Supplemental Guidance: Related controls: CP-6, CP-7.

(4) *PHYSICAL ACCESS CONTROL | LOCKABLE CASINGS*

The organization uses lockable physical casings to protect [*Assignment: organization-defined information system components*] from unauthorized physical access.

(5) *PHYSICAL ACCESS CONTROL | TAMPER PROTECTION*

The organization employs [*Assignment: organization-defined security safeguards*] to [*Selection (one or more): detect; prevent*] physical tampering or alteration of [*Assignment: organization-defined hardware components*] within the information system.

Supplemental Guidance: Organizations may implement tamper detection/prevention at selected hardware components or tamper detection at some components and tamper prevention at other components. Tamper detection/prevention activities can employ many types of anti-tamper technologies including, for example, tamper-detection seals and anti-tamper coatings. Anti-tamper programs help to detect hardware alterations through counterfeiting and other supply chain-related risks. Related control: SA-12.

(6) *PHYSICAL ACCESS CONTROL | FACILITY PENETRATION TESTING*

The organization employs a penetration testing process that includes [*Assignment: organization-defined frequency*], unannounced attempts to bypass or circumvent security controls associated with physical access points to the facility.

Supplemental Guidance: Related controls: CA-2, CA-7.

References: FIPS Publication 201; NIST Special Publications 800-73, 800-76, 800-78, 800-116; ICD 704, 705; DoD Instruction 5200.39; Personal Identity Verification (PIV) in Enterprise Physical Access Control System (E-PACS); Web: http://idmanagement.gov, http://fips201ep.cio.gov.

Priority and Baseline Allocation:

P1	**LOW** PE-3	**MOD** PE-3	**HIGH** PE-3 (1)

PE-4 ACCESS CONTROL FOR TRANSMISSION MEDIUM

Control: The organization controls physical access to [*Assignment: organization-defined information system distribution and transmission lines*] within organizational facilities using [*Assignment: organization-defined security safeguards*].

Supplemental Guidance: Physical security safeguards applied to information system distribution and transmission lines help to prevent accidental damage, disruption, and physical tampering. In addition, physical safeguards may be necessary to help prevent eavesdropping or in transit modification of unencrypted transmissions. Security safeguards to control physical access to system distribution and transmission lines include, for example: (i) locked wiring closets; (ii) disconnected or locked spare jacks; and/or (iii) protection of cabling by conduit or cable trays. Related controls: MP-2, MP-4, PE-2, PE-3, PE-5, SC-7, SC-8.

Control Enhancements: None.

References: NSTISSI No. 7003.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** PE-4	**HIGH** PE-4

PE-5 ACCESS CONTROL FOR OUTPUT DEVICES

Control: The organization controls physical access to information system output devices to prevent unauthorized individuals from obtaining the output.

Supplemental Guidance: Controlling physical access to output devices includes, for example, placing output devices in locked rooms or other secured areas and allowing access to authorized individuals only, and placing output devices in locations that can be monitored by organizational personnel. Monitors, printers, copiers, scanners, facsimile machines, and audio devices are examples of information system output devices. Related controls: PE-2, PE-3, PE-4, PE-18.

Control Enhancements:

(1) *ACCESS CONTROL FOR OUTPUT DEVICES | ACCESS TO OUTPUT BY AUTHORIZED INDIVIDUALS*

The organization:

(a) Controls physical access to output from [*Assignment: organization-defined output devices*]; and

(b) Ensures that only authorized individuals receive output from the device.

Supplemental Guidance: Controlling physical access to selected output devices includes, for example, placing printers, copiers, and facsimile machines in controlled areas with keypad access controls or limiting access to individuals with certain types of badges.

(2) *ACCESS CONTROL FOR OUTPUT DEVICES | ACCESS TO OUTPUT BY INDIVIDUAL IDENTITY*

The information system:

(a) Controls physical access to output from [*Assignment: organization-defined output devices*]; and

(b) Links individual identity to receipt of the output from the device.

Supplemental Guidance: Controlling physical access to selected output devices includes, for example, installing security functionality on printers, copiers, and facsimile machines that allows organizations to implement authentication (e.g., using a PIN or hardware token) on output devices prior to the release of output to individuals.

(3) *ACCESS CONTROL FOR OUTPUT DEVICES | MARKING OUTPUT DEVICES*

The organization marks [*Assignment: organization-defined information system output devices*] indicating the appropriate security marking of the information permitted to be output from the device.

Supplemental Guidance: Outputs devices include, for example, printers, monitors, facsimile machines, scanners, copiers, and audio devices. This control enhancement is generally applicable to information system output devices other than mobiles devices.

References: None.

Priority and Baseline Allocation:

P2	**LOW** Not Selected	**MOD** PE-5	**HIGH** PE-5

PE-6 MONITORING PHYSICAL ACCESS

Control: The organization:

a. Monitors physical access to the facility where the information system resides to detect and respond to physical security incidents;

b. Reviews physical access logs [*Assignment: organization-defined frequency*] and upon occurrence of [*Assignment: organization-defined events or potential indications of events*]; and

c. Coordinates results of reviews and investigations with the organizational incident response capability.

Supplemental Guidance: Organizational incident response capabilities include investigations of and responses to detected physical security incidents. Security incidents include, for example, apparent security violations or suspicious physical access activities. Suspicious physical access activities include, for example: (i) accesses outside of normal work hours; (ii) repeated accesses to areas not normally accessed; (iii) accesses for unusual lengths of time; and (iv) out-of-sequence accesses. Related controls: CA-7, IR-4, IR-8.

Control Enhancements:

(1) *MONITORING PHYSICAL ACCESS | INTRUSION ALARMS / SURVEILLANCE EQUIPMENT*

The organization monitors physical intrusion alarms and surveillance equipment.

(2) *MONITORING PHYSICAL ACCESS | AUTOMATED INTRUSION RECOGNITION / RESPONSES*

The organization employs automated mechanisms to recognize [*Assignment: organization-defined classes/types of intrusions*] and initiate [*Assignment: organization-defined response actions*].

Supplemental Guidance: Related control: SI-4.

(3) *MONITORING PHYSICAL ACCESS | VIDEO SURVEILLANCE*

The organization employs video surveillance of [*Assignment: organization-defined operational areas*] and retains video recordings for [*Assignment: organization-defined time period*].

Supplemental Guidance: This control enhancement focuses on recording surveillance video for purposes of subsequent review, if circumstances so warrant (e.g., a break-in detected by other means). It does not require monitoring surveillance video although organizations may choose to do so. Note that there may be legal considerations when performing and retaining video surveillance, especially if such surveillance is in a public location.

(4) *MONITORING PHYSICAL ACCESS | MONITORING PHYSICAL ACCESS TO INFORMATION SYSTEMS*

The organization monitors physical access to the information system in addition to the physical access monitoring of the facility as [*Assignment: organization-defined physical spaces containing one or more components of the information system*].

Supplemental Guidance: This control enhancement provides additional monitoring for those areas within facilities where there is a concentration of information system components (e.g., server rooms, media storage areas, communications centers). Related controls: PS-2, PS-3.

References: None.

Priority and Baseline Allocation:

P1	**LOW** PE-6	**MOD** PE-6 (1)	**HIGH** PE-6 (1) (4)

PE-7 VISITOR CONTROL

[Withdrawn: Incorporated into PE-2 and PE-3].

PE-8 VISITOR ACCESS RECORDS

Control: The organization:

a. Maintains visitor access records to the facility where the information system resides for [*Assignment: organization-defined time period*]; and

b. Reviews visitor access records [*Assignment: organization-defined frequency*].

Supplemental Guidance: Visitor access records include, for example, names and organizations of persons visiting, visitor signatures, forms of identification, dates of access, entry and departure times, purposes of visits, and names and organizations of persons visited. Visitor access records are not required for publicly accessible areas.

Control Enhancements:

(1) *VISITOR ACCESS RECORDS | AUTOMATED RECORDS MAINTENANCE / REVIEW*

The organization employs automated mechanisms to facilitate the maintenance and review of visitor access records.

(2) *VISITOR ACCESS RECORDS | PHYSICAL ACCESS RECORDS*

[Withdrawn: Incorporated into PE-2].

References: None.

Priority and Baseline Allocation:

P3	**LOW** PE-8	**MOD** PE-8	**HIGH** PE-8 (1)

PE-9 POWER EQUIPMENT AND CABLING

Control: The organization protects power equipment and power cabling for the information system from damage and destruction.

Supplemental Guidance: Organizations determine the types of protection necessary for power equipment and cabling employed at different locations both internal and external to organizational facilities and environments of operation. This includes, for example, generators and power cabling outside of buildings, internal cabling and uninterruptable power sources within an office or data center, and power sources for self-contained entities such as vehicles and satellites. Related control: PE-4.

Control Enhancements:

(1) *POWER EQUIPMENT AND CABLING | REDUNDANT CABLING*

The organization employs redundant power cabling paths that are physically separated by [*Assignment: organization-defined distance*].

Supplemental Guidance: Physically separate, redundant power cables help to ensure that power continues to flow in the event one of the cables is cut or otherwise damaged.

(2) *POWER EQUIPMENT AND CABLING | AUTOMATIC VOLTAGE CONTROLS*

The organization employs automatic voltage controls for [*Assignment: organization-defined critical information system components*].

References: None.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** PE-9	**HIGH** PE-9

PE-10 EMERGENCY SHUTOFF

Control: The organization:

a. Provides the capability of shutting off power to the information system or individual system components in emergency situations;

b. Places emergency shutoff switches or devices in [*Assignment: organization-defined location by information system or system component*] to facilitate safe and easy access for personnel; and

c. Protects emergency power shutoff capability from unauthorized activation.

Supplemental Guidance: This control applies primarily to facilities containing concentrations of information system resources including, for example, data centers, server rooms, and mainframe computer rooms. Related control: PE-15.

Control Enhancements:

(1) *EMERGENCY SHUTOFF | ACCIDENTAL / UNAUTHORIZED ACTIVATION*

[Withdrawn: Incorporated into PE-10].

References: None.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** PE-10	**HIGH** PE-10

PE-11 EMERGENCY POWER

Control: The organization provides a short-term uninterruptible power supply to facilitate [*Selection (one or more): an orderly shutdown of the information system; transition of the information system to long-term alternate power*] in the event of a primary power source loss.

Supplemental Guidance: Related controls: AT-3, CP-2, CP-7.

Control Enhancements:

(1) *EMERGENCY POWER | LONG-TERM ALTERNATE POWER SUPPLY - MINIMAL OPERATIONAL CAPABILITY*

The organization provides a long-term alternate power supply for the information system that is capable of maintaining minimally required operational capability in the event of an extended loss of the primary power source.

Supplemental Guidance: This control enhancement can be satisfied, for example, by the use of a secondary commercial power supply or other external power supply. Long-term alternate power supplies for the information system can be either manually or automatically activated.

(2) *EMERGENCY POWER | LONG-TERM ALTERNATE POWER SUPPLY - SELF-CONTAINED*

The organization provides a long-term alternate power supply for the information system that is:

(a) Self-contained;

(b) Not reliant on external power generation; and

(c) Capable of maintaining [*Selection: minimally required operational capability; full operational capability*] in the event of an extended loss of the primary power source.

Supplemental Guidance: This control enhancement can be satisfied, for example, by the use of one or more generators with sufficient capacity to meet the needs of the organization. Long-term alternate power supplies for organizational information systems are either manually or automatically activated.

References: None.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** PE-11	**HIGH** PE-11 (1)

PE-12 EMERGENCY LIGHTING

Control: The organization employs and maintains automatic emergency lighting for the information system that activates in the event of a power outage or disruption and that covers emergency exits and evacuation routes within the facility.

Supplemental Guidance: This control applies primarily to facilities containing concentrations of information system resources including, for example, data centers, server rooms, and mainframe computer rooms. Related controls: CP-2, CP-7.

Control Enhancements:

(1) *EMERGENCY LIGHTING | ESSENTIAL MISSIONS / BUSINESS FUNCTIONS*

The organization provides emergency lighting for all areas within the facility supporting essential missions and business functions.

References: None.

Priority and Baseline Allocation:

P1	**LOW** PE-12	**MOD** PE-12	**HIGH** PE-12

PE-13 FIRE PROTECTION

Control: The organization employs and maintains fire suppression and detection devices/systems for the information system that are supported by an independent energy source.

Supplemental Guidance: This control applies primarily to facilities containing concentrations of information system resources including, for example, data centers, server rooms, and mainframe computer rooms. Fire suppression and detection devices/systems include, for example, sprinkler systems, handheld fire extinguishers, fixed fire hoses, and smoke detectors.

Control Enhancements:

(1) *FIRE PROTECTION | DETECTION DEVICES / SYSTEMS*

The organization employs fire detection devices/systems for the information system that activate automatically and notify [*Assignment: organization-defined personnel or roles*] and [*Assignment: organization-defined emergency responders*] in the event of a fire.

Supplemental Guidance: Organizations can identify specific personnel, roles, and emergency responders in the event that individuals on the notification list must have appropriate access authorizations and/or clearances, for example, to obtain access to facilities where classified operations are taking place or where there are information systems containing classified information.

(2) *FIRE PROTECTION | SUPPRESSION DEVICES / SYSTEMS*

The organization employs fire suppression devices/systems for the information system that provide automatic notification of any activation to *Assignment: organization-defined personnel or roles*] and [*Assignment: organization-defined* emergency responders].

Supplemental Guidance: Organizations can identify specific personnel, roles, and emergency responders in the event that individuals on the notification list must have appropriate access authorizations and/or clearances, for example, to obtain access to facilities where classified operations are taking place or where there are information systems containing classified information.

(3) *FIRE PROTECTION | AUTOMATIC FIRE SUPPRESSION*

The organization employs an automatic fire suppression capability for the information system when the facility is not staffed on a continuous basis.

(4) *FIRE PROTECTION | INSPECTIONS*

The organization ensures that the facility undergoes [*Assignment: organization-defined frequency*] inspections by authorized and qualified inspectors and resolves identified deficiencies within [*Assignment: organization-defined time period*].

References: None.

Priority and Baseline Allocation:

P1	**LOW** PE-13	**MOD** PE-13 (3)	**HIGH** PE-13 (1) (2) (3)

PE-14 TEMPERATURE AND HUMIDITY CONTROLS

Control: The organization:

a. Maintains temperature and humidity levels within the facility where the information system resides at [*Assignment: organization-defined acceptable levels*]; and

b. Monitors temperature and humidity levels [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control applies primarily to facilities containing concentrations of information system resources, for example, data centers, server rooms, and mainframe computer rooms. Related control: AT-3.

Control Enhancements:

(1) *TEMPERATURE AND HUMIDITY CONTROLS | AUTOMATIC CONTROLS*

The organization employs automatic temperature and humidity controls in the facility to prevent fluctuations potentially harmful to the information system.

(2) *TEMPERATURE AND HUMIDITY CONTROLS | MONITORING WITH ALARMS / NOTIFICATIONS*

The organization employs temperature and humidity monitoring that provides an alarm or notification of changes potentially harmful to personnel or equipment.

References: None.

Priority and Baseline Allocation:

P1	**LOW** PE-14	**MOD** PE-14	**HIGH** PE-14

PE-15 WATER DAMAGE PROTECTION

Control: The organization protects the information system from damage resulting from water leakage by providing master shutoff or isolation valves that are accessible, working properly, and known to key personnel.

Supplemental Guidance: This control applies primarily to facilities containing concentrations of information system resources including, for example, data centers, server rooms, and mainframe computer rooms. Isolation valves can be employed in addition to or in lieu of master shutoff valves to shut off water supplies in specific areas of concern, without affecting entire organizations. Related control: AT-3.

Control Enhancements:

(1) *WATER DAMAGE PROTECTION | AUTOMATION SUPPORT*

The organization employs automated mechanisms to detect the presence of water in the vicinity of the information system and alerts [*Assignment: organization-defined personnel or roles*].

Supplemental Guidance: Automated mechanisms can include, for example, water detection sensors, alarms, and notification systems.

References: None.

Priority and Baseline Allocation:

P1	**LOW** PE-15	**MOD** PE-15	**HIGH** PE-15 (1)

PE-16 DELIVERY AND REMOVAL

Control: The organization authorizes, monitors, and controls [*Assignment: organization-defined types of information system components*] entering and exiting the facility and maintains records of those items.

Supplemental Guidance: Effectively enforcing authorizations for entry and exit of information system components may require restricting access to delivery areas and possibly isolating the areas from the information system and media libraries. Related controls: CM-3, MA-2, MA-3, MP-5, SA-12.

Control Enhancements: None.

Priority and Baseline Allocation:

P2	**LOW** PE-16	**MOD** PE-16	**HIGH** PE-16

PE-17 ALTERNATE WORK SITE

Control: The organization:

a. Employs [*Assignment: organization-defined security controls*] at alternate work sites;

b. Assesses as feasible, the effectiveness of security controls at alternate work sites; and

c. Provides a means for employees to communicate with information security personnel in case of security incidents or problems.

Supplemental Guidance: Alternate work sites may include, for example, government facilities or private residences of employees. While commonly distinct from alternative processing sites, alternate work sites may provide readily available alternate locations as part of contingency operations. Organizations may define different sets of security controls for specific alternate work sites or types of sites depending on the work-related activities conducted at those sites. This control supports the contingency planning activities of organizations and the federal telework initiative. Related controls: AC-17, CP-7.

Control Enhancements: None.

References: NIST Special Publication 800-46.

Priority and Baseline Allocation:

P2	**LOW** Not Selected	**MOD** PE-17	**HIGH** PE-17

PE-18 LOCATION OF INFORMATION SYSTEM COMPONENTS

Control: The organization positions information system components within the facility to minimize potential damage from [*Assignment: organization-defined physical and environmental hazards*] and to minimize the opportunity for unauthorized access.

Supplemental Guidance: Physical and environmental hazards include, for example, flooding, fire, tornados, earthquakes, hurricanes, acts of terrorism, vandalism, electromagnetic pulse, electrical interference, and other forms of incoming electromagnetic radiation. In addition, organizations consider the location of physical entry points where unauthorized individuals, while not being granted access, might nonetheless be in close proximity to information systems and therefore increase the potential for unauthorized access to organizational communications (e.g., through the use of wireless sniffers or microphones). Related controls: CP-2, PE-19, RA-3.

Control Enhancements:

(1) *LOCATION OF INFORMATION SYSTEM COMPONENTS | FACILITY SITE*

The organization plans the location or site of the facility where the information system resides with regard to physical and environmental hazards and for existing facilities, considers the physical and environmental hazards in its risk mitigation strategy.

Supplemental Guidance: Related control: PM-8.

References: None.

Priority and Baseline Allocation:

P3	**LOW** Not Selected	**MOD** Not Selected	**HIGH** PE-18

PE-19 INFORMATION LEAKAGE

Control: The organization protects the information system from information leakage due to electromagnetic signals emanations.

Supplemental Guidance: Information leakage is the intentional or unintentional release of information to an untrusted environment from electromagnetic signals emanations. Security categories or classifications of information systems (with respect to confidentiality) and organizational security policies guide the selection of security controls employed to protect systems against information leakage due to electromagnetic signals emanations.

Control Enhancements:

(1) *INFORMATION LEAKAGE | NATIONAL EMISSIONS / TEMPEST POLICIES AND PROCEDURES*

The organization ensures that information system components, associated data communications, and networks are protected in accordance with national emissions and TEMPEST policies and procedures based on the security category or classification of the information.

FAMILY: PLANNING

PL-1 SECURITY PLANNING POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. A security planning policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the security planning policy and associated security planning controls; and

b. Reviews and updates the current:

   1. Security planning policy [*Assignment: organization-defined frequency*]; and

   2. Security planning procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the PL family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

References: NIST Special Publications 800-12, 800-18, 800-100.

Priority and Baseline Allocation:

P1	**LOW** PL-1	**MOD** PL-1	**HIGH** PL-1

PL-2 SYSTEM SECURITY PLAN

Control: The organization:

a. Develops a security plan for the information system that:

   1. Is consistent with the organization's enterprise architecture;

   2. Explicitly defines the authorization boundary for the system;

   3. Describes the operational context of the information system in terms of missions and business processes;

   4. Provides the security categorization of the information system including supporting rationale;

   5. Describes the operational environment for the information system and relationships with or connections to other information systems;

   6. Provides an overview of the security requirements for the system;

   7. Identifies any relevant overlays, if applicable;

8. Describes the security controls in place or planned for meeting those requirements including a rationale for the tailoring decisions; and
9. Is reviewed and approved by the authorizing official or designated representative prior to plan implementation;

b. Distributes copies of the security plan and communicates subsequent changes to the plan to [*Assignment: organization-defined personnel or roles*];

c. Reviews the security plan for the information system [*Assignment: organization-defined frequency*];

d. Updates the plan to address changes to the information system/environment of operation or problems identified during plan implementation or security control assessments; and

e. Protects the security plan from unauthorized disclosure and modification.

Supplemental Guidance: Security plans relate security requirements to a set of security controls and control enhancements. Security plans also describe, at a high level, how the security controls and control enhancements meet those security requirements, but do not provide detailed, technical descriptions of the specific design or implementation of the controls/enhancements. Security plans contain sufficient information (including the specification of parameter values for assignment and selection statements either explicitly or by reference) to enable a design and implementation that is unambiguously compliant with the intent of the plans and subsequent determinations of risk to organizational operations and assets, individuals, other organizations, and the Nation if the plan is implemented as intended. Organizations can also apply tailoring guidance to the security control baselines in Appendix D and CNSS Instruction 1253 to develop *overlays* for community-wide use or to address specialized requirements, technologies, or missions/environments of operation (e.g., DoD-tactical, Federal Public Key Infrastructure, or Federal Identity, Credential, and Access Management, space operations). Appendix I provides guidance on developing overlays.

Security plans need not be single documents; the plans can be a collection of various documents including documents that already exist. Effective security plans make extensive use of references to policies, procedures, and additional documents (e.g., design and implementation specifications) where more detailed information can be obtained. This reduces the documentation requirements associated with security programs and maintains security-related information in other established management/operational areas related to enterprise architecture, system development life cycle, systems engineering, and acquisition. For example, security plans do not contain detailed contingency plan or incident response plan information but instead provide explicitly or by reference, sufficient information to define what needs to be accomplished by those plans. Related controls: AC-2, AC-6, AC-14, AC-17, AC-20, CA-2, CA-3, CA-7, CM-9, CP-2, IR-8, MA-4, MA-5, MP-2, MP-4, MP-5, PL-7, PM-1, PM-7, PM-8, PM-9, PM-11, SA-5, SA-17.

Control Enhancements:

(1) *SYSTEM SECURITY PLAN | CONCEPT OF OPERATIONS*

[Withdrawn: Incorporated into PL-7].

(2) *SYSTEM SECURITY PLAN | FUNCTIONAL ARCHITECTURE*

[Withdrawn: Incorporated into PL-8].

(3) *SYSTEM SECURITY PLAN | PLAN / COORDINATE WITH OTHER ORGANIZATIONAL ENTITIES*

The organization plans and coordinates security-related activities affecting the information system with [*Assignment: organization-defined individuals or groups*] before conducting such activities in order to reduce the impact on other organizational entities.

Supplemental Guidance: Security-related activities include, for example, security assessments, audits, hardware and software maintenance, patch management, and contingency plan testing. Advance planning and coordination includes emergency and nonemergency (i.e., planned or nonurgent unplanned) situations. The process defined by organizations to plan and coordinate security-related activities can be included in security plans for information systems or other documents, as appropriate. Related controls: CP-4, IR-4.

PL-3 SYSTEM SECURITY PLAN UPDATE

[Withdrawn: Incorporated into PL-2].

PL-4 RULES OF BEHAVIOR

Control: The organization:

a. Establishes and makes readily available to individuals requiring access to the information system, the rules that describe their responsibilities and expected behavior with regard to information and information system usage;

b. Receives a signed acknowledgment from such individuals, indicating that they have read, understand, and agree to abide by the rules of behavior, before authorizing access to information and the information system;

c. Reviews and updates the rules of behavior [*Assignment: organization-defined frequency*]; and

d. Requires individuals who have signed a previous version of the rules of behavior to read and resign when the rules of behavior are revised/updated.

Supplemental Guidance: This control enhancement applies to organizational users. Organizations consider rules of behavior based on individual user roles and responsibilities, differentiating, for example, between rules that apply to privileged users and rules that apply to general users. Establishing rules of behavior for some types of non-organizational users including, for example, individuals who simply receive data/information from federal information systems, is often not feasible given the large number of such users and the limited nature of their interactions with the systems. Rules of behavior for both organizational and non-organizational users can also be established in AC-8, System Use Notification. PL-4 b. (the signed acknowledgment portion of this control) may be satisfied by the security awareness training and role-based security training programs conducted by organizations if such training includes rules of behavior. Organizations can use electronic signatures for acknowledging rules of behavior. Related controls: AC-2, AC-6, AC-8, AC-9, AC-17, AC-18, AC-19, AC-20, AT-2, AT-3, CM-11, IA-2, IA-4, IA-5, MP-7, PS-6, PS-8, SA-5.

Control Enhancements:

(1) *RULES OF BEHAVIOR | SOCIAL MEDIA AND NETWORKING RESTRICTIONS*

The organization includes in the rules of behavior, explicit restrictions on the use of social media/networking sites and posting organizational information on public websites.

Supplemental Guidance: This control enhancement addresses rules of behavior related to the use of social media/networking sites: (i) when organizational personnel are using such sites for official duties or in the conduct of official business; (ii) when organizational information is involved in social media/networking transactions; and (iii) when personnel are accessing social media/networking sites from organizational information systems. Organizations also address specific rules that prevent unauthorized entities from obtaining and/or inferring non-public organizational information (e.g., system account information, personally identifiable information) from social media/networking sites.

PL-6 SECURITY-RELATED ACTIVITY PLANNING

[Withdrawn: Incorporated into PL-2].

PL-7 SECURITY CONCEPT OF OPERATIONS

Control: The organization:

a. Develops a security Concept of Operations (CONOPS) for the information system containing at a minimum, how the organization intends to operate the system from the perspective of information security; and

b. Reviews and updates the CONOPS [*Assignment: organization-defined frequency*].

Supplemental Guidance: The security CONOPS may be included in the security plan for the information system or in other system development life cycle-related documents, as appropriate. Changes to the CONOPS are reflected in ongoing updates to the security plan, the information security architecture, and other appropriate organizational documents (e.g., security specifications for procurements/acquisitions, system development life cycle documents, and systems/security engineering documents). Related control: PL-2.

Control Enhancements: None.

PL-8 INFORMATION SECURITY ARCHITECTURE

Control: The organization:

a. Develops an information security architecture for the information system that:

   1. Describes the overall philosophy, requirements, and approach to be taken with regard to protecting the confidentiality, integrity, and availability of organizational information;

   2. Describes how the information security architecture is integrated into and supports the enterprise architecture; and

   3. Describes any information security assumptions about, and dependencies on, external services;

b. Reviews and updates the information security architecture [*Assignment: organization-defined frequency*] to reflect updates in the enterprise architecture; and

c. Ensures that planned information security architecture changes are reflected in the security plan, the security Concept of Operations (CONOPS), and organizational procurements/acquisitions.

Supplemental Guidance: This control addresses actions taken by organizations in the design and development of information systems. The information security architecture at the individual information system level is consistent with and complements the more global, organization-wide information security architecture described in PM-7 that is integral to and developed as part of the enterprise architecture. The information security architecture includes an architectural description, the placement/allocation of security functionality (including security controls), security-related information for external interfaces, information being exchanged across the interfaces, and the protection mechanisms associated with each interface. In addition, the security architecture can include other important security-related information, for example, user roles and access privileges assigned to each role, unique security requirements, the types of information processed, stored, and transmitted by the information system, restoration priorities of information and information system services, and any other specific protection needs.

In today's modern architecture, it is becoming less common for organizations to control all information resources. There are going to be key dependencies on external information services and service providers. Describing such dependencies in the information security architecture is important to developing a comprehensive mission/business protection strategy. Establishing, developing, documenting, and maintaining under configuration control, a baseline configuration for organizational information systems is critical to implementing and maintaining an effective information security architecture. The development of the information security architecture is coordinated with the Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO) to ensure that security controls needed to support privacy requirements are identified and effectively implemented. PL-8 is primarily directed at organizations (i.e., internally focused) to help ensure that organizations develop an information security architecture for the information system, and that the security architecture is integrated with or tightly coupled to the enterprise architecture through the organization-wide information security architecture. In contrast, SA-17 is primarily directed at external information technology product/system developers and integrators (although SA-17 could be used internally within organizations for in-house system development). SA-17, which is complementary to PL-8, is selected when organizations outsource the development of information systems or information system components to external entities, and there is a need to demonstrate/show consistency with the organization's enterprise architecture and information security architecture. Related controls: CM-2, CM-6, PL-2, PM-7, SA-5, SA-17, Appendix J.

Control Enhancements:

(1) *INFORMATION SECURITY ARCHITECTURE | DEFENSE-IN-DEPTH*

The organization designs its security architecture using a defense-in-depth approach that:

(a) Allocates [*Assignment: organization-defined security safeguards*] to [*Assignment: organization-defined locations and architectural layers*]; and

(b) Ensures that the allocated security safeguards operate in a coordinated and mutually reinforcing manner.

Supplemental Guidance: Organizations strategically allocate security safeguards (procedural, technical, or both) in the security architecture so that adversaries have to overcome multiple safeguards to achieve their objective. Requiring adversaries to defeat multiple mechanisms makes it more difficult to successfully attack critical information resources (i.e., increases adversary work factor) and also increases the likelihood of detection. The coordination of allocated safeguards is essential to ensure that an attack that involves one safeguard does not create adverse unintended consequences (e.g., lockout, cascading alarms) by interfering with another safeguard. Placement of security safeguards is a key activity. Greater asset criticality or information value merits additional layering. Thus, an organization may choose to place anti-virus software at organizational boundary layers, email/web servers, notebook computers, and workstations to maximize the number of related safeguards adversaries must penetrate before compromising the information and information systems. Related controls: SC-29, SC-36.

(2) *INFORMATION SECURITY ARCHITECTURE | SUPPLIER DIVERSITY*

The organization requires that [*Assignment: organization-defined security safeguards*] allocated to [*Assignment: organization-defined locations and architectural layers*] are obtained from different suppliers.

Supplemental Guidance: Different information technology products have different strengths and weaknesses. Providing a broad spectrum of products complements the individual offerings. For example, vendors offering malicious code protection typically update their products at different times, often developing solutions for known viruses, Trojans, or worms according to their priorities and development schedules. By having different products at different locations (e.g., server, boundary, desktop) there is an increased likelihood that at least one will detect the malicious code. Related control: SA-12.

References: None.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** PL-8	**HIGH** PL-8

PL-9 CENTRAL MANAGEMENT

Control: The organization centrally manages [*Assignment: organization-defined security controls and related processes*].

Supplemental Guidance: Central management refers to the organization-wide management and implementation of selected security controls and related processes. Central management includes planning, implementing, assessing, authorizing, and monitoring the organization-defined, centrally managed security controls and processes. As central management of security controls is generally associated with common controls, such management promotes and facilitates standardization of security control implementations and management and judicious use of organizational resources. Centrally-managed security controls and processes may also meet independence requirements for assessments in support of initial and ongoing authorizations to operate as part of organizational continuous monitoring. As part of the security control selection process, organizations determine which controls may be suitable for central management based on organizational resources and capabilities. Organizations consider that it may not always be possible to centrally manage every aspect of a security control. In such cases, the security control is treated as a hybrid control with the control managed and implemented either centrally or at the information system level. Controls and control enhancements that are candidates for full or partial central management include, but are not limited to: AC-2 (1) (2) (3) (4); AC-17 (1) (2) (3) (9); AC-18 (1) (3) (4) (5); AC-19 (4); AC-22; AC-23; AT-2 (1) (2); AT-3 (1) (2) (3); AT-4; AU-6 (1) (3) (5) (6) (9); AU-7 (1) (2); AU-11, AU-13, AU-16, CA-2 (1) (2) (3); CA-3 (1) (2) (3); CA-7 (1); CA-9; CM-2 (1) (2); CM-3 (1) (4); CM-4; CM-6 (1); CM-7 (4) (5); CM-8 (all); CM-9 (1); CM-10; CM-11; CP-7 (all); CP-8 (all); SC-43; SI-2; SI-3; SI-7; and SI-8.

Control Enhancements: None.

FAMILY: PERSONNEL SECURITY

PS-1 PERSONNEL SECURITY POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. A personnel security policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the personnel security policy and associated personnel security controls; and

b. Reviews and updates the current:

   1. Personnel security policy [*Assignment: organization-defined frequency*]; and

   2. Personnel security procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the PS family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

References: NIST Special Publications 800-12, 800-100.

Priority and Baseline Allocation:

P1	**LOW** PS-1	**MOD** PS-1	**HIGH** PS-1

PS-2 POSITION RISK DESIGNATION

Control: The organization:

a. Assigns a risk designation to all organizational positions;

b. Establishes screening criteria for individuals filling those positions; and

c. Reviews and updates position risk designations [*Assignment: organization-defined frequency*].

Supplemental Guidance: Position risk designations reflect Office of Personnel Management policy and guidance. Risk designations can guide and inform the types of authorizations individuals receive when accessing organizational information and information systems. Position screening criteria include explicit information security role appointment requirements (e.g., training, security clearances). Related controls: AT-3, PL-2, PS-3.

Control Enhancements: None.

References: 5 C.F.R. 731.106.

Priority and Baseline Allocation:

P1	**LOW** PS-2	**MOD** PS-2	**HIGH** PS-2

PS-3 PERSONNEL SCREENING

Control: The organization:

a. Screens individuals prior to authorizing access to the information system; and

b. Rescreens individuals according to [*Assignment: organization-defined conditions requiring rescreening and, where rescreening is so indicated, the frequency of such rescreening*].

Supplemental Guidance: Personnel screening and rescreening activities reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, guidance, and specific criteria established for the risk designations of assigned positions. Organizations may define different rescreening conditions and frequencies for personnel accessing information systems based on types of information processed, stored, or transmitted by the systems. Related controls: AC-2, IA-4, PE-2, PS-2.

Control Enhancements:

(1) *PERSONNEL SCREENING | CLASSIFIED INFORMATION*

The organization ensures that individuals accessing an information system processing, storing, or transmitting classified information are cleared and indoctrinated to the highest classification level of the information to which they have access on the system.

Supplemental Guidance: Related controls: AC-3, AC-4.

(2) *PERSONNEL SCREENING | FORMAL INDOCTRINATION*

The organization ensures that individuals accessing an information system processing, storing, or transmitting types of classified information which require formal indoctrination, are formally indoctrinated for all of the relevant types of information to which they have access on the system.

Supplemental Guidance: Types of classified information requiring formal indoctrination include, for example, Special Access Program (SAP), Restricted Data (RD), and Sensitive Compartment Information (SCI). Related controls: AC-3, AC-4.

(3) *PERSONNEL SCREENING | INFORMATION WITH SPECIAL PROTECTION MEASURES*

The organization ensures that individuals accessing an information system processing, storing, or transmitting information requiring special protection:

(a) Have valid access authorizations that are demonstrated by assigned official government duties; and

(b) Satisfy [*Assignment: organization-defined additional personnel screening criteria*].

Supplemental Guidance: Organizational information requiring special protection includes, for example, Controlled Unclassified Information (CUI) and Sources and Methods Information (SAMI). Personnel security criteria include, for example, position sensitivity background screening requirements.

References: 5 C.F.R. 731.106; FIPS Publications 199, 201; NIST Special Publications 800-60, 800-73, 800-76, 800-78; ICD 704.

Priority and Baseline Allocation:

P1	**LOW** PS-3	**MOD** PS-3	**HIGH** PS-3

PS-4 PERSONNEL TERMINATION

Control: The organization, upon termination of individual employment:

a. Disables information system access within [*Assignment: organization-defined time period*];

b. Terminates/revokes any authenticators/credentials associated with the individual;

c. Conducts exit interviews that include a discussion of [*Assignment: organization-defined information security topics*];

d. Retrieves all security-related organizational information system-related property;

e. Retains access to organizational information and information systems formerly controlled by terminated individual; and

f. Notifies [*Assignment: organization-defined personnel or roles*] within [*Assignment: organization-defined time period*].

Supplemental Guidance: Information system-related property includes, for example, hardware authentication tokens, system administration technical manuals, keys, identification cards, and building passes. Exit interviews ensure that terminated individuals understand the security constraints imposed by being former employees and that proper accountability is achieved for information system-related property. Security topics of interest at exit interviews can include, for example, reminding terminated individuals of nondisclosure agreements and potential limitations on future employment. Exit interviews may not be possible for some terminated individuals, for example, in cases related to job abandonment, illnesses, and nonavailability of supervisors. Exit interviews are important for individuals with security clearances. Timely execution of termination actions is essential for individuals terminated for cause. In certain situations, organizations consider disabling the information system accounts of individuals that are being terminated prior to the individuals being notified. Related controls: AC-2, IA-4, PE-2, PS-5, PS-6.

Control Enhancements:

(1) *PERSONNEL TERMINATION | POST-EMPLOYMENT REQUIREMENTS*

The organization:

(a) Notifies terminated individuals of applicable, legally binding post-employment requirements for the protection of organizational information; and

(b) Requires terminated individuals to sign an acknowledgment of post-employment requirements as part of the organizational termination process.

Supplemental Guidance: Organizations consult with the Office of the General Counsel regarding matters of post-employment requirements on terminated individuals.

(2) *PERSONNEL TERMINATION | AUTOMATED NOTIFICATION*

The organization employs automated mechanisms to notify [*Assignment: organization-defined personnel or roles*] upon termination of an individual.

Supplemental Guidance: In organizations with a large number of employees, not all personnel who need to know about termination actions receive the appropriate notifications—or, if such notifications are received, they may not occur in a timely manner. Automated mechanisms can be used to send automatic alerts or notifications to specific organizational personnel or roles (e.g., management personnel, supervisors, personnel security officers, information security officers, systems administrators, or information technology administrators) when individuals are terminated. Such automatic alerts or notifications can be conveyed in a variety of ways, including, for example, telephonically, via electronic mail, via text message, or via websites.

References: None.

Priority and Baseline Allocation:

P1	**LOW** PS-4	**MOD** PS-4	**HIGH** PS-4 (2)

PS-5 PERSONNEL TRANSFER

Control: The organization:

a. Reviews and confirms ongoing operational need for current logical and physical access authorizations to information systems/facilities when individuals are reassigned or transferred to other positions within the organization;

b. Initiates [*Assignment: organization-defined transfer or reassignment actions*] within [*Assignment: organization-defined time period following the formal transfer action*];

c. Modifies access authorization as needed to correspond with any changes in operational need due to reassignment or transfer; and

d. Notifies [*Assignment: organization-defined personnel or roles*] within [*Assignment: organization-defined time period*].

Supplemental Guidance: This control applies when reassignments or transfers of individuals are permanent or of such extended durations as to make the actions warranted. Organizations define actions appropriate for the types of reassignments or transfers, whether permanent or extended. Actions that may be required for personnel transfers or reassignments to other positions within organizations include, for example: (i) returning old and issuing new keys, identification cards, and building passes; (ii) closing information system accounts and establishing new accounts; (iii) changing information system access authorizations (i.e., privileges); and (iv) providing for access to official records to which individuals had access at previous work locations and in previous information system accounts. Related controls: AC-2, IA-4, PE-2, PS-4.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P2	**LOW** PS-5	**MOD** PS-5	**HIGH** PS-5

PS-6 ACCESS AGREEMENTS

Control: The organization:

a. Develops and documents access agreements for organizational information systems;

b. Reviews and updates the access agreements [*Assignment: organization-defined frequency*]; and

c. Ensures that individuals requiring access to organizational information and information systems:

   1. Sign appropriate access agreements prior to being granted access; and

   2. Re-sign access agreements to maintain access to organizational information systems when access agreements have been updated or [*Assignment: organization-defined frequency*].

Supplemental Guidance: Access agreements include, for example, nondisclosure agreements, acceptable use agreements, rules of behavior, and conflict-of-interest agreements. Signed access agreements include an acknowledgement that individuals have read, understand, and agree to

abide by the constraints associated with organizational information systems to which access is authorized. Organizations can use electronic signatures to acknowledge access agreements unless specifically prohibited by organizational policy. Related control: PL-4, PS-2, PS-3, PS-4, PS-8.

Control Enhancements:

(1) *ACCESS AGREEMENTS | INFORMATION REQUIRING SPECIAL PROTECTION*

[Withdrawn: Incorporated into PS-3].

(2) *ACCESS AGREEMENTS | CLASSIFIED INFORMATION REQUIRING SPECIAL PROTECTION*

The organization ensures that access to classified information requiring special protection is granted only to individuals who:

(a) Have a valid access authorization that is demonstrated by assigned official government duties;

(b) Satisfy associated personnel security criteria; and

(c) Have read, understood, and signed a nondisclosure agreement.

Supplemental Guidance: Classified information requiring special protection includes, for example, collateral information, Special Access Program (SAP) information, and Sensitive Compartmented Information (SCI). Personnel security criteria reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance.

(3) *ACCESS AGREEMENTS | POST-EMPLOYMENT REQUIREMENTS*

The organization:

(a) Notifies individuals of applicable, legally binding post-employment requirements for protection of organizational information; and

(b) Requires individuals to sign an acknowledgment of these requirements, if applicable, as part of granting initial access to covered information.

Supplemental Guidance: Organizations consult with the Office of the General Counsel regarding matters of post-employment requirements on terminated individuals.

References: None.

P3	**LOW** PS-6	**MOD** PS-6	**HIGH** PS-6

PS-7 THIRD-PARTY PERSONNEL SECURITY

Control: The organization:

a. Establishes personnel security requirements including security roles and responsibilities for third-party providers;

b. Requires third-party providers to comply with personnel security policies and procedures established by the organization;

c. Documents personnel security requirements;

d. Requires third-party providers to notify [*Assignment: organization-defined personnel or roles*] of any personnel transfers or terminations of third-party personnel who possess organizational credentials and/or badges, or who have information system privileges within [*Assignment: organization-defined time period*]; and

e. Monitors provider compliance.

Supplemental Guidance: Third-party providers include, for example, service bureaus, contractors, and other organizations providing information system development, information technology services, outsourced applications, and network and security management. Organizations explicitly include personnel security requirements in acquisition-related documents. Third-party providers

may have personnel working at organizational facilities with credentials, badges, or information system privileges issued by organizations. Notifications of third-party personnel changes ensure appropriate termination of privileges and credentials. Organizations define the transfers and terminations deemed reportable by security-related characteristics that include, for example, functions, roles, and nature of credentials/privileges associated with individuals transferred or terminated. Related controls: PS-2, PS-3, PS-4, PS-5, PS-6, SA-9, SA-21.

Control Enhancements: None.

References: NIST Special Publication 800-35.

P1	**LOW** PS-7	**MOD** PS-7	**HIGH** PS-7

PS-8 PERSONNEL SANCTIONS

Control: The organization:

a. Employs a formal sanctions process for individuals failing to comply with established information security policies and procedures; and

b. Notifies [*Assignment: organization-defined personnel or roles*] within [*Assignment: organization-defined time period*] when a formal employee sanctions process is initiated, identifying the individual sanctioned and the reason for the sanction.

Supplemental Guidance: Organizational sanctions processes reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Sanctions processes are described in access agreements and can be included as part of general personnel policies and procedures for organizations. Organizations consult with the Office of the General Counsel regarding matters of employee sanctions. Related controls: PL-4, PS-6.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P3	**LOW** PS-8	**MOD** PS-8	**HIGH** PS-8

FAMILY: RISK ASSESSMENT

RA-1 RISK ASSESSMENT POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. A risk assessment policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the risk assessment policy and associated risk assessment controls; and

b. Reviews and updates the current:

   1. Risk assessment policy [*Assignment: organization-defined frequency*]; and

   2. Risk assessment procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the RA family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

References: NIST Special Publications 800-12, 800-30, 800-100.

Priority and Baseline Allocation:

P1	**LOW** RA-1	**MOD** RA-1	**HIGH** RA-1

RA-2 SECURITY CATEGORIZATION

Control: The organization:

a. Categorizes information and the information system in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance;

b. Documents the security categorization results (including supporting rationale) in the security plan for the information system; and

c. Ensures that the security categorization decision is reviewed and approved by the authorizing official or authorizing official designated representative.

Supplemental Guidance: Clearly defined authorization boundaries are a prerequisite for effective security categorization decisions. Security categories describe the potential adverse impacts to organizational operations, organizational assets, and individuals if organizational information and information systems are comprised through a loss of confidentiality, integrity, or availability. Organizations conduct the security categorization process as an organization-wide activity with the involvement of chief information officers, senior information security officers, information system owners, mission/business owners, and information owners/stewards. Organizations also

consider the potential adverse impacts to other organizations and, in accordance with the USA PATRIOT Act of 2001 and Homeland Security Presidential Directives, potential national-level adverse impacts. Security categorization processes carried out by organizations facilitate the development of inventories of information assets, and along with CM-8, mappings to specific information system components where information is processed, stored, or transmitted. Related controls: CM-8, MP-4, RA-3, SC-7.

Control Enhancements: None.

References: FIPS Publication 199; NIST Special Publications 800-30, 800-39, 800-60.

Priority and Baseline Allocation:

P1	**LOW** RA-2	**MOD** RA-2	**HIGH** RA-2

RA-3 RISK ASSESSMENT

Control: The organization:

a. Conducts an assessment of risk, including the likelihood and magnitude of harm, from the unauthorized access, use, disclosure, disruption, modification, or destruction of the information system and the information it processes, stores, or transmits;

b. Documents risk assessment results in [*Selection: security plan; risk assessment report;* [*Assignment: organization-defined document*]];

c. Reviews risk assessment results [*Assignment: organization-defined frequency*];

d. Disseminates risk assessment results to [*Assignment: organization-defined personnel or roles*]; and

e. Updates the risk assessment [*Assignment: organization-defined frequency*] or whenever there are significant changes to the information system or environment of operation (including the identification of new threats and vulnerabilities), or other conditions that may impact the security state of the system.

Supplemental Guidance: Clearly defined authorization boundaries are a prerequisite for effective risk assessments. Risk assessments take into account threats, vulnerabilities, likelihood, and impact to organizational operations and assets, individuals, other organizations, and the Nation based on the operation and use of information systems. Risk assessments also take into account risk from external parties (e.g., service providers, contractors operating information systems on behalf of the organization, individuals accessing organizational information systems, outsourcing entities). In accordance with OMB policy and related E-authentication initiatives, authentication of public users accessing federal information systems may also be required to protect nonpublic or privacy-related information. As such, organizational assessments of risk also address public access to federal information systems.

Risk assessments (either formal or informal) can be conducted at all three tiers in the risk management hierarchy (i.e., organization level, mission/business process level, or information system level) and at any phase in the system development life cycle. Risk assessments can also be conducted at various steps in the Risk Management Framework, including categorization, security control selection, security control implementation, security control assessment, information system authorization, and security control monitoring. RA-3 is noteworthy in that the control must be partially implemented prior to the implementation of other controls in order to complete the first two steps in the Risk Management Framework. Risk assessments can play an important role in security control selection processes, particularly during the application of tailoring guidance, which includes security control supplementation. Related controls: RA-2, PM-9.

Control Enhancements: None.

Priority and Baseline Allocation:

P1	**LOW** RA-3	**MOD** RA-3	**HIGH** RA-3

RA-4 RISK ASSESSMENT UPDATE

[Withdrawn: Incorporated into RA-3].

RA-5 VULNERABILITY SCANNING

Control: The organization:

a. Scans for vulnerabilities in the information system and hosted applications [*Assignment: organization-defined frequency and/or randomly in accordance with organization-defined process*] and when new vulnerabilities potentially affecting the system/applications are identified and reported;

b. Employs vulnerability scanning tools and techniques that facilitate interoperability among tools and automate parts of the vulnerability management process by using standards for:

   1. Enumerating platforms, software flaws, and improper configurations;

   2. Formatting checklists and test procedures; and

   3. Measuring vulnerability impact;

c. Analyzes vulnerability scan reports and results from security control assessments;

d. Remediates legitimate vulnerabilities [*Assignment: organization-defined response times*] in accordance with an organizational assessment of risk; and

e. Shares information obtained from the vulnerability scanning process and security control assessments with [*Assignment: organization-defined personnel or roles*] to help eliminate similar vulnerabilities in other information systems (i.e., systemic weaknesses or deficiencies).

Supplemental Guidance: Security categorization of information systems guides the frequency and comprehensiveness of vulnerability scans. Organizations determine the required vulnerability scanning for all information system components, ensuring that potential sources of vulnerabilities such as networked printers, scanners, and copiers are not overlooked. Vulnerability analyses for custom software applications may require additional approaches such as static analysis, dynamic analysis, binary analysis, or a hybrid of the three approaches. Organizations can employ these analysis approaches in a variety of tools (e.g., web-based application scanners, static analysis tools, binary analyzers) and in source code reviews. Vulnerability scanning includes, for example: (i) scanning for patch levels; (ii) scanning for functions, ports, protocols, and services that should not be accessible to users or devices; and (iii) scanning for improperly configured or incorrectly operating information flow control mechanisms. Organizations consider using tools that express vulnerabilities in the Common Vulnerabilities and Exposures (CVE) naming convention and that use the Open Vulnerability Assessment Language (OVAL) to determine/test for the presence of vulnerabilities. Suggested sources for vulnerability information include the Common Weakness Enumeration (CWE) listing and the National Vulnerability Database (NVD). In addition, security control assessments such as red team exercises provide other sources of potential vulnerabilities for which to scan. Organizations also consider using tools that express vulnerability impact by the Common Vulnerability Scoring System (CVSS). Related controls: CA-2, CA-7, CM-4, CM-6, RA-2, RA-3, SA-11, SI-2.

Control Enhancements:

(1) *VULNERABILITY SCANNING | UPDATE TOOL CAPABILITY*

The organization employs vulnerability scanning tools that include the capability to readily update the information system vulnerabilities to be scanned.

Supplemental Guidance: The vulnerabilities to be scanned need to be readily updated as new vulnerabilities are discovered, announced, and scanning methods developed. This updating process helps to ensure that potential vulnerabilities in the information system are identified and addressed as quickly as possible. Related controls: SI-3, SI-7.

(2) *VULNERABILITY SCANNING | UPDATE BY FREQUENCY / PRIOR TO NEW SCAN / WHEN IDENTIFIED*

The organization updates the information system vulnerabilities scanned [*Selection (one or more):* [*Assignment: organization-defined frequency*]*; prior to a new scan; when new vulnerabilities are identified and reported*].

Supplemental Guidance: Related controls: SI-3, SI-5.

(3) *VULNERABILITY SCANNING | BREADTH / DEPTH OF COVERAGE*

The organization employs vulnerability scanning procedures that can identify the breadth and depth of coverage (i.e., information system components scanned and vulnerabilities checked).

(4) *VULNERABILITY SCANNING | DISCOVERABLE INFORMATION*

The organization determines what information about the information system is discoverable by adversaries and subsequently takes [*Assignment: organization-defined corrective actions*].

Supplemental Guidance: Discoverable information includes information that adversaries could obtain without directly compromising or breaching the information system, for example, by collecting information the system is exposing or by conducting extensive searches of the web. Corrective actions can include, for example, notifying appropriate organizational personnel, removing designated information, or changing the information system to make designated information less relevant or attractive to adversaries. Related control: AU-13.

(5) *VULNERABILITY SCANNING | PRIVILEGED ACCESS*

The information system implements privileged access authorization to [*Assignment: organization-identified information system components*] for selected [*Assignment: organization-defined vulnerability scanning activities*].

Supplemental Guidance: In certain situations, the nature of the vulnerability scanning may be more intrusive or the information system component that is the subject of the scanning may contain highly sensitive information. Privileged access authorization to selected system components facilitates more thorough vulnerability scanning and also protects the sensitive nature of such scanning.

(6) *VULNERABILITY SCANNING | AUTOMATED TREND ANALYSES*

The organization employs automated mechanisms to compare the results of vulnerability scans over time to determine trends in information system vulnerabilities.

Supplemental Guidance: Related controls: IR-4, IR-5, SI-4.

(7) *VULNERABILITY SCANNING | AUTOMATED DETECTION AND NOTIFICATION OF UNAUTHORIZED COMPONENTS*

[Withdrawn: Incorporated into CM-8].

(8) *VULNERABILITY SCANNING | REVIEW HISTORIC AUDIT LOGS*

The organization reviews historic audit logs to determine if a vulnerability identified in the information system has been previously exploited.

Supplemental Guidance: Related control: AU-6.

(9) *VULNERABILITY SCANNING | PENETRATION TESTING AND ANALYSES*

[Withdrawn: Incorporated into CA-8].

(10) *VULNERABILITY SCANNING | CORRELATE SCANNING INFORMATION*

The organization correlates the output from vulnerability scanning tools to determine the presence of multi-vulnerability/multi-hop attack vectors.

RA-6 TECHNICAL SURVEILLANCE COUNTERMEASURES SURVEY

Control: The organization employs a technical surveillance countermeasures survey at [*Assignment: organization-defined locations*] [*Selection (one or more):* [*Assignment: organization-defined frequency*]; [*Assignment: organization-defined events or indicators occur*]].

Supplemental Guidance: Technical surveillance countermeasures surveys are performed by qualified personnel to detect the presence of technical surveillance devices/hazards and to identify technical security weaknesses that could aid in the conduct of technical penetrations of surveyed facilities. Such surveys provide evaluations of the technical security postures of organizations and facilities and typically include thorough visual, electronic, and physical examinations in and about surveyed facilities. The surveys also provide useful input into risk assessments and organizational exposure to potential adversaries.

Control Enhancements: None.

FAMILY: SYSTEM AND SERVICES ACQUISITION

SA-1 SYSTEM AND SERVICES ACQUISITION POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. A system and services acquisition policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the system and services acquisition policy and associated system and services acquisition controls; and

b. Reviews and updates the current:

   1. System and services acquisition policy [*Assignment: organization-defined frequency*]; and

   2. System and services acquisition procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the SA family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

References: NIST Special Publications 800-12, 800-100.

Priority and Baseline Allocation:

P1	**LOW** SA-1	**MOD** SA-1	**HIGH** SA-1

SA-2 ALLOCATION OF RESOURCES

Control: The organization:

a. Determines information security requirements for the information system or information system service in mission/business process planning;

b. Determines, documents, and allocates the resources required to protect the information system or information system service as part of its capital planning and investment control process; and

c. Establishes a discrete line item for information security in organizational programming and budgeting documentation.

Supplemental Guidance: Resource allocation for information security includes funding for the initial information system or information system service acquisition and funding for the sustainment of the system/service. Related controls: PM-3, PM-11.

Control Enhancements: None.

References: NIST Special Publication 800-65.

Priority and Baseline Allocation:

P1	**LOW** SA-2	**MOD** SA-2	**HIGH** SA-2

SA-3 SYSTEM DEVELOPMENT LIFE CYCLE

Control: The organization:

a. Manages the information system using [*Assignment: organization-defined system development life cycle*] that incorporates information security considerations;

b. Defines and documents information security roles and responsibilities throughout the system development life cycle;

c. Identifies individuals having information security roles and responsibilities; and

d. Integrates the organizational information security risk management process into system development life cycle activities.

Supplemental Guidance: A well-defined system development life cycle provides the foundation for the successful development, implementation, and operation of organizational information systems. To apply the required security controls within the system development life cycle requires a basic understanding of information security, threats, vulnerabilities, adverse impacts, and risk to critical missions/business functions. The security engineering principles in SA-8 cannot be properly applied if individuals that design, code, and test information systems and system components (including information technology products) do not understand security. Therefore, organizations include qualified personnel, for example, chief information security officers, security architects, security engineers, and information system security officers in system development life cycle activities to ensure that security requirements are incorporated into organizational information systems. It is equally important that developers include individuals on the development team that possess the requisite security expertise and skills to ensure that needed security capabilities are effectively integrated into the information system. Security awareness and training programs can help ensure that individuals having key security roles and responsibilities have the appropriate experience, skills, and expertise to conduct assigned system development life cycle activities. The effective integration of security requirements into enterprise architecture also helps to ensure that important security considerations are addressed early in the system development life cycle and that those considerations are directly related to the organizational mission/business processes. This process also facilitates the integration of the information security architecture into the enterprise architecture, consistent with organizational risk management and information security strategies. Related controls: AT-3, PM-7, SA-8.

Control Enhancements: None.

References: NIST Special Publications 800-37, 800-64.

Priority and Baseline Allocation:

P1	**LOW** SA-3	**MOD** SA-3	**HIGH** SA-3

SA-4 ACQUISITION PROCESS

Control: The organization includes the following requirements, descriptions, and criteria, explicitly or by reference, in the acquisition contract for the information system, system component, or information system service in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, guidelines, and organizational mission/business needs:

a. Security functional requirements;

b. Security strength requirements;

c. Security assurance requirements;

d. Security-related documentation requirements;

e. Requirements for protecting security-related documentation;

f. Description of the information system development environment and environment in which the system is intended to operate; and

g. Acceptance criteria.

Supplemental Guidance: Information system components are discrete, identifiable information technology assets (e.g., hardware, software, or firmware) that represent the building blocks of an information system. Information system components include commercial information technology products. Security functional requirements include security capabilities, security functions, and security mechanisms. Security strength requirements associated with such capabilities, functions, and mechanisms include degree of correctness, completeness, resistance to direct attack, and resistance to tampering or bypass. Security assurance requirements include: (i) development processes, procedures, practices, and methodologies; and (ii) evidence from development and assessment activities providing grounds for confidence that the required security functionality has been implemented and the required security strength has been achieved. Security documentation requirements address all phases of the system development life cycle.

Security functionality, assurance, and documentation requirements are expressed in terms of security controls and control enhancements that have been selected through the tailoring process. The security control tailoring process includes, for example, the specification of parameter values through the use of assignment and selection statements and the specification of platform dependencies and implementation information. Security documentation provides user and administrator guidance regarding the implementation and operation of security controls. The level of detail required in security documentation is based on the security category or classification level of the information system and the degree to which organizations depend on the stated security capability, functions, or mechanisms to meet overall risk response expectations (as defined in the organizational risk management strategy). Security requirements can also include organizationally mandated configuration settings specifying allowed functions, ports, protocols, and services. Acceptance criteria for information systems, information system components, and information system services are defined in the same manner as such criteria for any organizational acquisition or procurement. The Federal Acquisition Regulation (FAR) Section 7.103 contains information security requirements from FISMA. Related controls: CM-6, PL-2, PS-7, SA-3, SA-5, SA-8, SA-11, SA-12.

Control Enhancements:

(1) *ACQUISITION PROCESS | FUNCTIONAL PROPERTIES OF SECURITY CONTROLS*

The organization requires the developer of the information system, system component, or information system service to provide a description of the functional properties of the security controls to be employed.

Supplemental Guidance: Functional properties of security controls describe the functionality (i.e., security capability, functions, or mechanisms) visible at the interfaces of the controls and specifically exclude functionality and data structures internal to the operation of the controls. Related control: SA-5.

(2) *ACQUISITION PROCESS | DESIGN / IMPLEMENTATION INFORMATION FOR SECURITY CONTROLS*

The organization requires the developer of the information system, system component, or information system service to provide design and implementation information for the security controls to be employed that includes: [*Selection (one or more): security-relevant external system interfaces; high-level design; low-level design; source code or hardware schematics;* [*Assignment: organization-defined design/implementation information*]] at [*Assignment: organization-defined level of detail*].

Supplemental Guidance: Organizations may require different levels of detail in design and implementation documentation for security controls employed in organizational information systems, system components, or information system services based on mission/business requirements, requirements for trustworthiness/resiliency, and requirements for analysis and testing. Information systems can be partitioned into multiple subsystems. Each subsystem within the system can contain one or more modules. The high-level design for the system is expressed in terms of multiple subsystems and the interfaces between subsystems providing security-relevant functionality. The low-level design for the system is expressed in terms of modules with particular emphasis on software and firmware (but not excluding hardware) and the interfaces between modules providing security-relevant functionality. Source code and hardware schematics are typically referred to as the implementation representation of the information system. Related control: SA-5.

(3) *ACQUISITION PROCESS | DEVELOPMENT METHODS / TECHNIQUES / PRACTICES*

The organization requires the developer of the information system, system component, or information system service to demonstrate the use of a system development life cycle that includes [*Assignment: organization-defined state-of-the-practice system/security engineering methods, software development methods, testing/evaluation/validation techniques, and quality control processes*].

Supplemental Guidance: Following a well-defined system development life cycle that includes state-of-the-practice software development methods, systems/security engineering methods, quality control processes, and testing, evaluation, and validation techniques helps to reduce the number and severity of latent errors within information systems, system components, and information system services. Reducing the number/severity of such errors reduces the number of vulnerabilities in those systems, components, and services. Related control: SA-12.

(4) *ACQUISITION PROCESS | ASSIGNMENT OF COMPONENTS TO SYSTEMS*

[Withdrawn: Incorporated into CM-8 (9)].

(5) *ACQUISITION PROCESS | SYSTEM / COMPONENT / SERVICE CONFIGURATIONS*

The organization requires the developer of the information system, system component, or information system service to:

(a) Deliver the system, component, or service with [*Assignment: organization-defined security configurations*] implemented; and

(b) Use the configurations as the default for any subsequent system, component, or service reinstallation or upgrade.

Supplemental Guidance: Security configurations include, for example, the U.S. Government Configuration Baseline (USGCB) and any limitations on functions, ports, protocols, and services. Security characteristics include, for example, requiring that all default passwords have been changed. Related control: CM-8.

(6) *ACQUISITION PROCESS | USE OF INFORMATION ASSURANCE PRODUCTS*

The organization:

(a) Employs only government off-the-shelf (GOTS) or commercial off-the-shelf (COTS) information assurance (IA) and IA-enabled information technology products that compose an NSA-approved solution to protect classified information when the networks used to transmit the information are at a lower classification level than the information being transmitted; and

(b) Ensures that these products have been evaluated and/or validated by NSA or in accordance with NSA-approved procedures.

Supplemental Guidance: COTS IA or IA-enabled information technology products used to protect classified information by cryptographic means may be required to use NSA-approved key management. Related controls: SC-8, SC-12, SC-13.

(7) *ACQUISITION PROCESS | NIAP-APPROVED PROTECTION PROFILES*

The organization:

(a) Limits the use of commercially provided information assurance (IA) and IA-enabled information technology products to those products that have been successfully evaluated against a National Information Assurance partnership (NIAP)-approved Protection Profile for a specific technology type, if such a profile exists; and

(b) Requires, if no NIAP-approved Protection Profile exists for a specific technology type but a commercially provided information technology product relies on cryptographic functionality to enforce its security policy, that the cryptographic module is FIPS-validated.

Supplemental Guidance: Related controls: SC-12, SC-13.

(8) *ACQUISITION PROCESS | CONTINUOUS MONITORING PLAN*

The organization requires the developer of the information system, system component, or information system service to produce a plan for the continuous monitoring of security control effectiveness that contains [*Assignment: organization-defined level of detail*].

Supplemental Guidance: The objective of continuous monitoring plans is to determine if the complete set of planned, required, and deployed security controls within the information system, system component, or information system service continue to be effective over time based on the inevitable changes that occur. Developer continuous monitoring plans include a sufficient level of detail such that the information can be incorporated into the continuous monitoring strategies and programs implemented by organizations. Related control: CA-7.

(9) *ACQUISITION PROCESS | FUNCTIONS / PORTS / PROTOCOLS / SERVICES IN USE*

The organization requires the developer of the information system, system component, or information system service to identify early in the system development life cycle, the functions, ports, protocols, and services intended for organizational use.

Supplemental Guidance: The identification of functions, ports, protocols, and services early in the system development life cycle (e.g., during the initial requirements definition and design phases) allows organizations to influence the design of the information system, information system component, or information system service. This early involvement in the life cycle helps organizations to avoid or minimize the use of functions, ports, protocols, or services that pose unnecessarily high risks and understand the trade-offs involved in blocking specific ports, protocols, or services (or when requiring information system service providers to do so). Early identification of functions, ports, protocols, and services avoids costly retrofitting of security controls after the information system, system component, or information system service has been implemented. SA-9 describes requirements for external information system services with organizations identifying which functions, ports, protocols, and services are provided from external sources. Related controls: CM-7, SA-9.

(10) *ACQUISITION PROCESS | USE OF APPROVED PIV PRODUCTS*

The organization employs only information technology products on the FIPS 201-approved products list for Personal Identity Verification (PIV) capability implemented within organizational information systems.

Supplemental Guidance: Related controls: IA-2; IA-8.

References: HSPD-12; ISO/IEC 15408; FIPS Publications 140-2, 201; NIST Special Publications 800-23, 800-35, 800-36, 800-37, 800-64, 800-70, 800-137; Federal Acquisition Regulation; Web: http://www.niap-ccevs.org, http://fips201ep.cio.gov, http://www.acquisition.gov/far.

Priority and Baseline Allocation:

P1	**LOW** SA-4 (10)	**MOD** SA-4 (1) (2) (9) (10)	**HIGH** SA-4 (1) (2) (9) (10)

SA-5 INFORMATION SYSTEM DOCUMENTATION

Control: The organization:

a. Obtains administrator documentation for the information system, system component, or information system service that describes:

   1. Secure configuration, installation, and operation of the system, component, or service;

   2. Effective use and maintenance of security functions/mechanisms; and

   3. Known vulnerabilities regarding configuration and use of administrative (i.e., privileged) functions;

b. Obtains user documentation for the information system, system component, or information system service that describes:

1. User-accessible security functions/mechanisms and how to effectively use those security functions/mechanisms;

2. Methods for user interaction, which enables individuals to use the system, component, or service in a more secure manner; and

3. User responsibilities in maintaining the security of the system, component, or service;

c. Documents attempts to obtain information system, system component, or information system service documentation when such documentation is either unavailable or nonexistent and [*Assignment: organization-defined actions*] in response;

d. Protects documentation as required, in accordance with the risk management strategy; and

e. Distributes documentation to [*Assignment: organization-defined personnel or roles*].

Supplemental Guidance: This control helps organizational personnel understand the implementation and operation of security controls associated with information systems, system components, and information system services. Organizations consider establishing specific measures to determine the quality/completeness of the content provided. The inability to obtain needed documentation may occur, for example, due to the age of the information system/component or lack of support from developers and contractors. In those situations, organizations may need to recreate selected documentation if such documentation is essential to the effective implementation or operation of security controls. The level of protection provided for selected information system, component, or service documentation is commensurate with the security category or classification of the system. For example, documentation associated with a key DoD weapons system or command and control system would typically require a higher level of protection than a routine administrative system. Documentation that addresses information system vulnerabilities may also require an increased level of protection. Secure operation of the information system, includes, for example, initially starting the system and resuming secure system operation after any lapse in system operation. Related controls: CM-6, CM-8, PL-2, PL-4, PS-2, SA-3, SA-4.

Control Enhancements:

(1) *INFORMATION SYSTEM DOCUMENTATION | FUNCTIONAL PROPERTIES OF SECURITY CONTROLS*
[Withdrawn: Incorporated into SA-4 (1)].

(2) *INFORMATION SYSTEM DOCUMENTATION | SECURITY-RELEVANT EXTERNAL SYSTEM INTERFACES*
[Withdrawn: Incorporated into SA-4 (2)].

(3) *INFORMATION SYSTEM DOCUMENTATION | HIGH-LEVEL DESIGN*
[Withdrawn: Incorporated into SA-4 (2)].

(4) *INFORMATION SYSTEM DOCUMENTATION | LOW-LEVEL DESIGN*
[Withdrawn: Incorporated into SA-4 (2)].

(5) *INFORMATION SYSTEM DOCUMENTATION | SOURCE CODE*
[Withdrawn: Incorporated into SA-4 (2)].

SA-6 SOFTWARE USAGE RESTRICTIONS

[Withdrawn: Incorporated into CM-10 and SI-7].

SA-7 USER-INSTALLED SOFTWARE

[Withdrawn: Incorporated into CM-11 and SI-7].

SA-8 SECURITY ENGINEERING PRINCIPLES

Control: The organization applies information system security engineering principles in the specification, design, development, implementation, and modification of the information system.

Supplemental Guidance: Organizations apply security engineering principles primarily to new development information systems or systems undergoing major upgrades. For legacy systems, organizations apply security engineering principles to system upgrades and modifications to the extent feasible, given the current state of hardware, software, and firmware within those systems. Security engineering principles include, for example: (i) developing layered protections; (ii) establishing sound security policy, architecture, and controls as the foundation for design; (iii) incorporating security requirements into the system development life cycle; (iv) delineating physical and logical security boundaries; (v) ensuring that system developers are trained on how to build secure software; (vi) tailoring security controls to meet organizational and operational needs; (vii) performing threat modeling to identify use cases, threat agents, attack vectors, and attack patterns as well as compensating controls and design patterns needed to mitigate risk; and (viii) reducing risk to acceptable levels, thus enabling informed risk management decisions. Related controls: PM-7, SA-3, SA-4, SA-17, SC-2, SC-3.

Control Enhancements: None.

References: NIST Special Publication 800-27.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** SA-8	**HIGH** SA-8

SA-9 EXTERNAL INFORMATION SYSTEM SERVICES

Control: The organization:

a. Requires that providers of external information system services comply with organizational information security requirements and employ [*Assignment: organization-defined security controls*] in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance;

b. Defines and documents government oversight and user roles and responsibilities with regard to external information system services; and

c. Employs [*Assignment: organization-defined processes, methods, and techniques*] to monitor security control compliance by external service providers on an ongoing basis.

Supplemental Guidance: External information system services are services that are implemented outside of the authorization boundaries of organizational information systems. This includes services that are used by, but not a part of, organizational information systems. FISMA and OMB policy require that organizations using external service providers that are processing, storing, or transmitting federal information or operating information systems on behalf of the federal government ensure that such providers meet the same security requirements that federal agencies are required to meet. Organizations establish relationships with external service providers in a variety of ways including, for example, through joint ventures, business partnerships, contracts, interagency agreements, lines of business arrangements, licensing agreements, and supply chain exchanges. The responsibility for managing risks from the use of external information system services remains with authorizing officials. For services external to organizations, a chain of trust requires that organizations establish and retain a level of confidence that each participating

provider in the potentially complex consumer-provider relationship provides adequate protection for the services rendered. The extent and nature of this chain of trust varies based on the relationships between organizations and the external providers. Organizations document the basis for trust relationships so the relationships can be monitored over time. External information system services documentation includes government, service providers, end user security roles and responsibilities, and service-level agreements. Service-level agreements define expectations of performance for security controls, describe measurable outcomes, and identify remedies and response requirements for identified instances of noncompliance. Related controls: CA-3, IR-7, PS-7.

Control Enhancements:

(1) *EXTERNAL INFORMATION SYSTEMS | RISK ASSESSMENTS / ORGANIZATIONAL APPROVALS*

The organization:

(a) Conducts an organizational assessment of risk prior to the acquisition or outsourcing of dedicated information security services; and

(b) Ensures that the acquisition or outsourcing of dedicated information security services is approved by [*Assignment: organization-defined personnel or roles*].

Supplemental Guidance: Dedicated information security services include, for example, incident monitoring, analysis and response, operation of information security-related devices such as firewalls, or key management services. Related controls: CA-6, RA-3.

(2) *EXTERNAL INFORMATION SYSTEMS | IDENTIFICATION OF FUNCTIONS / PORTS / PROTOCOLS / SERVICES*

The organization requires providers of [*Assignment: organization-defined external information system services*] to identify the functions, ports, protocols, and other services required for the use of such services.

Supplemental Guidance: Information from external service providers regarding the specific functions, ports, protocols, and services used in the provision of such services can be particularly useful when the need arises to understand the trade-offs involved in restricting certain functions/services or blocking certain ports/protocols. Related control: CM-7.

(3) *EXTERNAL INFORMATION SYSTEMS | ESTABLISH / MAINTAIN TRUST RELATIONSHIP WITH PROVIDERS*

The organization establishes, documents, and maintains trust relationships with external service providers based on [*Assignment: organization-defined security requirements, properties, factors, or conditions defining acceptable trust relationships*].

Supplemental Guidance: The degree of confidence that the risk from using external services is at an acceptable level depends on the trust that organizations place in the external providers, individually or in combination. Trust relationships can help organization to gain increased levels of confidence that participating service providers are providing adequate protection for the services rendered. Such relationships can be complicated due to the number of potential entities participating in the consumer-provider interactions, subordinate relationships and levels of trust, and the types of interactions between the parties. In some cases, the degree of trust is based on the amount of direct control organizations are able to exert on external service providers with regard to employment of security controls necessary for the protection of the service/information and the evidence brought forth as to the effectiveness of those controls. The level of control is typically established by the terms and conditions of the contracts or service-level agreements and can range from extensive control (e.g., negotiating contracts or agreements that specify security requirements for the providers) to very limited control (e.g., using contracts or service-level agreements to obtain commodity services such as commercial telecommunications services). In other cases, levels of trust are based on factors that convince organizations that required security controls have been employed and that determinations of control effectiveness exist. For example, separately authorized external information system services provided to organizations through well-established business relationships may provide degrees of trust in such services within the tolerable risk range of the organizations using the services. External service providers may also outsource selected services to other external entities, making the trust relationship more difficult and complicated to manage. Depending on the nature of the services, organizations may find it very difficult to

place significant trust in external providers. This is not due to any inherent untrustworthiness on the part of providers, but to the intrinsic level of risk in the services.

(4) *EXTERNAL INFORMATION SYSTEMS | CONSISTENT INTERESTS OF CONSUMERS AND PROVIDERS*

The organization employs [*Assignment: organization-defined security safeguards*] to ensure that the interests of [*Assignment: organization-defined external service providers*] are consistent with and reflect organizational interests.

Supplemental Guidance: As organizations increasingly use external service providers, the possibility exists that the interests of the service providers may diverge from organizational interests. In such situations, simply having the correct technical, procedural, or operational safeguards in place may not be sufficient if the service providers that implement and control those safeguards are not operating in a manner consistent with the interests of the consuming organizations. Possible actions that organizations might take to address such concerns include, for example, requiring background checks for selected service provider personnel, examining ownership records, employing only trustworthy service providers (i.e., providers with which organizations have had positive experiences), and conducting periodic/unscheduled visits to service provider facilities.

(5) *EXTERNAL INFORMATION SYSTEMS | PROCESSING, STORAGE, AND SERVICE LOCATION*

The organization restricts the location of [*Selection (one or more): information processing; information/data; information system services*] to [*Assignment: organization-defined locations*] based on [*Assignment: organization-defined requirements or conditions*].

Supplemental Guidance: The location of information processing, information/data storage, or information system services that are critical to organizations can have a direct impact on the ability of those organizations to successfully execute their missions/business functions. This situation exists when external providers control the location of processing, storage or services. The criteria external providers use for the selection of processing, storage, or service locations may be different from organizational criteria. For example, organizations may want to ensure that data/information storage locations are restricted to certain locations to facilitate incident response activities (e.g., forensic analyses, after-the-fact investigations) in case of information security breaches/compromises. Such incident response activities may be adversely affected by the governing laws or protocols in the locations where processing and storage occur and/or the locations from which information system services emanate.

References: NIST Special Publication 800-35.

Priority and Baseline Allocation:

P1	**LOW** SA-9	**MOD** SA-9 (2)	**HIGH** SA-9 (2)

SA-10 DEVELOPER CONFIGURATION MANAGEMENT

Control: The organization requires the developer of the information system, system component, or information system service to:

a. Perform configuration management during system, component, or service [*Selection (one or more): design; development; implementation; operation*];

b. Document, manage, and control the integrity of changes to [*Assignment: organization-defined configuration items under configuration management*];

c. Implement only organization-approved changes to the system, component, or service;

d. Document approved changes to the system, component, or service and the potential security impacts of such changes; and

e. Track security flaws and flaw resolution within the system, component, or service and report findings to [*Assignment: organization-defined personnel*].

Supplemental Guidance: This control also applies to organizations conducting internal information systems development and integration. Organizations consider the quality and completeness of the configuration management activities conducted by developers as evidence of applying effective security safeguards. Safeguards include, for example, protecting from unauthorized modification or destruction, the master copies of all material used to generate security-relevant portions of the system hardware, software, and firmware. Maintaining the integrity of changes to the information system, information system component, or information system service requires configuration control throughout the system development life cycle to track authorized changes and prevent unauthorized changes. Configuration items that are placed under configuration management (if existence/use is required by other security controls) include: the formal model; the functional, high-level, and low-level design specifications; other design data; implementation documentation; source code and hardware schematics; the running version of the object code; tools for comparing new versions of security-relevant hardware descriptions and software/firmware source code with previous versions; and test fixtures and documentation. Depending on the mission/business needs of organizations and the nature of the contractual relationships in place, developers may provide configuration management support during the operations and maintenance phases of the life cycle. Related controls: CM-3, CM-4, CM-9, SA-12, SI-2.

Control Enhancements:

(1) *DEVELOPER CONFIGURATION MANAGEMENT | SOFTWARE / FIRMWARE INTEGRITY VERIFICATION*

The organization requires the developer of the information system, system component, or information system service to enable integrity verification of software and firmware components.

Supplemental Guidance: This control enhancement allows organizations to detect unauthorized changes to software and firmware components through the use of tools, techniques, and/or mechanisms provided by developers. Integrity checking mechanisms can also address counterfeiting of software and firmware components. Organizations verify the integrity of software and firmware components, for example, through secure one-way hashes provided by developers. Delivered software and firmware components also include any updates to such components. Related control: SI-7.

(2) *DEVELOPER CONFIGURATION MANAGEMENT | ALTERNATIVE CONFIGURATION MANAGEMENT PROCESSES*

The organization provides an alternate configuration management process using organizational personnel in the absence of a dedicated developer configuration management team.

Supplemental Guidance: Alternate configuration management processes may be required, for example, when organizations use commercial off-the-shelf (COTS) information technology products. Alternate configuration management processes include organizational personnel that: (i) are responsible for reviewing/approving proposed changes to information systems, system components, and information system services; and (ii) conduct security impact analyses prior to the implementation of any changes to systems, components, or services (e.g., a configuration control board that considers security impacts of changes during development and includes representatives of both the organization and the developer, when applicable).

(3) *DEVELOPER CONFIGURATION MANAGEMENT | HARDWARE INTEGRITY VERIFICATION*

The organization requires the developer of the information system, system component, or information system service to enable integrity verification of hardware components.

Supplemental Guidance: This control enhancement allows organizations to detect unauthorized changes to hardware components through the use of tools, techniques, and/or mechanisms provided by developers. Organizations verify the integrity of hardware components, for example, with hard-to-copy labels and verifiable serial numbers provided by developers, and by requiring the implementation of anti-tamper technologies. Delivered hardware components also include updates to such components. Related control: SI-7.

(4) *DEVELOPER CONFIGURATION MANAGEMENT | TRUSTED GENERATION*

The organization requires the developer of the information system, system component, or information system service to employ tools for comparing newly generated versions of security-relevant hardware descriptions and software/firmware source and object code with previous versions.

Supplemental Guidance: This control enhancement addresses changes to hardware, software, and firmware components between versions during development. In contrast, SA-10 (1) and SA-10 (3) allow organizations to detect unauthorized changes to hardware, software, and firmware components through the use of tools, techniques, and/or mechanisms provided by developers.

(5) *DEVELOPER CONFIGURATION MANAGEMENT | MAPPING INTEGRITY FOR VERSION CONTROL*

The organization requires the developer of the information system, system component, or information system service to maintain the integrity of the mapping between the master build data (hardware drawings and software/firmware code) describing the current version of security-relevant hardware, software, and firmware and the on-site master copy of the data for the current version.

Supplemental Guidance: This control enhancement addresses changes to hardware, software, and firmware components during initial development and during system life cycle updates. Maintaining the integrity between the master copies of security-relevant hardware, software, and firmware (including designs and source code) and the equivalent data in master copies on-site in operational environments is essential to ensure the availability of organizational information systems supporting critical missions and/or business functions.

(6) *DEVELOPER CONFIGURATION MANAGEMENT | TRUSTED DISTRIBUTION*

The organization requires the developer of the information system, system component, or information system service to execute procedures for ensuring that security-relevant hardware, software, and firmware updates distributed to the organization are exactly as specified by the master copies.

Supplemental Guidance: The trusted distribution of security-relevant hardware, software, and firmware updates helps to ensure that such updates are faithful representations of the master copies maintained by the developer and have not been tampered with during distribution.

References: NIST Special Publication 800-128.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** SA-10	**HIGH** SA-10

SA-11 DEVELOPER SECURITY TESTING AND EVALUATION

Control: The organization requires the developer of the information system, system component, or information system service to:

a. Create and implement a security assessment plan;

b. Perform [*Selection (one or more): unit; integration; system; regression*] testing/evaluation at [*Assignment: organization-defined depth and coverage*];

c. Produce evidence of the execution of the security assessment plan and the results of the security testing/evaluation;

d. Implement a verifiable flaw remediation process; and

e. Correct flaws identified during security testing/evaluation.

Supplemental Guidance: Developmental security testing/evaluation occurs at all post-design phases of the system development life cycle. Such testing/evaluation confirms that the required security controls are implemented correctly, operating as intended, enforcing the desired security policy, and meeting established security requirements. Security properties of information systems may be affected by the interconnection of system components or changes to those components. These interconnections or changes (e.g., upgrading or replacing applications and operating systems) may adversely affect previously implemented security controls. This control provides additional types of security testing/evaluation that developers can conduct to reduce or eliminate potential flaws. Testing custom software applications may require approaches such as static analysis, dynamic

analysis, binary analysis, or a hybrid of the three approaches. Developers can employ these analysis approaches in a variety of tools (e.g., web-based application scanners, static analysis tools, binary analyzers) and in source code reviews. Security assessment plans provide the specific activities that developers plan to carry out including the types of analyses, testing, evaluation, and reviews of software and firmware components, the degree of rigor to be applied, and the types of artifacts produced during those processes. The *depth* of security testing/evaluation refers to the rigor and level of detail associated with the assessment process (e.g., black box, gray box, or white box testing). The *coverage* of security testing/evaluation refers to the scope (i.e., number and type) of the artifacts included in the assessment process. Contracts specify the acceptance criteria for security assessment plans, flaw remediation processes, and the evidence that the plans/processes have been diligently applied. Methods for reviewing and protecting assessment plans, evidence, and documentation are commensurate with the security category or classification level of the information system. Contracts may specify documentation protection requirements. Related controls: CA-2, CM-4, SA-3, SA-4, SA-5, SI-2.

Control Enhancements:

(1) *DEVELOPER SECURITY TESTING AND EVALUATION | STATIC CODE ANALYSIS*

The organization requires the developer of the information system, system component, or information system service to employ static code analysis tools to identify common flaws and document the results of the analysis.

Supplemental Guidance: Static code analysis provides a technology and methodology for security reviews. Such analysis can be used to identify security vulnerabilities and enforce security coding practices. Static code analysis is most effective when used early in the development process, when each code change can be automatically scanned for potential weaknesses. Static analysis can provide clear remediation guidance along with defects to enable developers to fix such defects. Evidence of correct implementation of static analysis can include, for example, aggregate defect density for critical defect types, evidence that defects were inspected by developers or security professionals, and evidence that defects were fixed. An excessively high density of ignored findings (commonly referred to as ignored or false positives) indicates a potential problem with the analysis process or tool. In such cases, organizations weigh the validity of the evidence against evidence from other sources.

(2) *DEVELOPER SECURITY TESTING AND EVALUATION | THREAT AND VULNERABILITY ANALYSES*

The organization requires the developer of the information system, system component, or information system service to perform threat and vulnerability analyses and subsequent testing/evaluation of the as-built system, component, or service.

Supplemental Guidance: Applications may deviate significantly from the functional and design specifications created during the requirements and design phases of the system development life cycle. Therefore, threat and vulnerability analyses of information systems, system components, and information system services prior to delivery are critical to the effective operation of those systems, components, and services. Threat and vulnerability analyses at this phase of the life cycle help to ensure that design or implementation changes have been accounted for, and that any new vulnerabilities created as a result of those changes have been reviewed and mitigated. Related controls: PM-15, RA-5.

(3) *DEVELOPER SECURITY TESTING AND EVALUATION | INDEPENDENT VERIFICATION OF ASSESSMENT PLANS / EVIDENCE*

The organization:

(a) Requires an independent agent satisfying [*Assignment: organization-defined independence criteria*] to verify the correct implementation of the developer security assessment plan and the evidence produced during security testing/evaluation; and

(b) Ensures that the independent agent either is provided with sufficient information to complete the verification process or has been granted the authority to obtain such information.

Supplemental Guidance: Independent agents have the necessary qualifications (i.e., expertise, skills, training, and experience) to verify the correct implementation of developer security assessment plans. Related controls: AT-3, CA-7, RA-5, SA-12.

(4) *DEVELOPER SECURITY TESTING AND EVALUATION | MANUAL CODE REVIEWS*

The organization requires the developer of the information system, system component, or information system service to perform a manual code review of [Assignment*: organization-defined specific code*] using [*Assignment: organization-defined processes, procedures, and/or techniques*].

Supplemental Guidance: Manual code reviews are usually reserved for the critical software and firmware components of information systems. Such code reviews are uniquely effective at identifying weaknesses that require knowledge of the application's requirements or context which are generally unavailable to more automated analytic tools and techniques such as static or dynamic analysis. Components benefiting from manual review include for example, verifying access control matrices against application controls and reviewing more detailed aspects of cryptographic implementations and controls.

(5) *DEVELOPER SECURITY TESTING AND EVALUATION | PENETRATION TESTING / ANALYSIS*

The organization requires the developer of the information system, system component, or information system service to perform penetration testing at [*Assignment: organization-defined breadth/depth*] and with [*Assignment: organization-defined constraints*].

Supplemental Guidance: Penetration testing is an assessment methodology in which assessors, using all available information technology product and/or information system documentation (e.g., product/system design specifications, source code, and administrator/operator manuals) and working under specific constraints, attempt to circumvent implemented security features of information technology products and information systems. Penetration testing can include, for example, white, gray, or black box testing with analyses performed by skilled security professionals simulating adversary actions. The objective of penetration testing is to uncover potential vulnerabilities in information technology products and information systems resulting from implementation errors, configuration faults, or other operational deployment weaknesses or deficiencies. Penetration tests can be performed in conjunction with automated and manual code reviews to provide greater levels of analysis than would ordinarily be possible.

(6) *DEVELOPER SECURITY TESTING AND EVALUATION | ATTACK SURFACE REVIEWS*

The organization requires the developer of the information system, system component, or information system service to perform attack surface reviews.

Supplemental Guidance: Attack surfaces of information systems are exposed areas that make those systems more vulnerable to cyber attacks. This includes any accessible areas where weaknesses or deficiencies in information systems (including the hardware, software, and firmware components) provide opportunities for adversaries to exploit vulnerabilities. Attack surface reviews ensure that developers: (i) analyze both design and implementation changes to information systems; and (ii) mitigate attack vectors generated as a result of the changes. Correction of identified flaws includes, for example, deprecation of unsafe functions.

(7) *DEVELOPER SECURITY TESTING AND EVALUATION | VERIFY SCOPE OF TESTING / EVALUATION*

The organization requires the developer of the information system, system component, or information system service to verify that the scope of security testing/evaluation provides complete coverage of required security controls at [*Assignment: organization-defined depth of testing/evaluation*].

Supplemental Guidance: Verifying that security testing/evaluation provides complete coverage of required security controls can be accomplished by a variety of analytic techniques ranging from informal to formal. Each of these techniques provides an increasing level of assurance corresponding to the degree of formality of the analysis. Rigorously demonstrating security control coverage at the highest levels of assurance can be provided by the use of formal modeling and analysis techniques including correlation between control implementation and corresponding test cases.

(8) *DEVELOPER SECURITY TESTING AND EVALUATION | DYNAMIC CODE ANALYSIS*

The organization requires the developer of the information system, system component, or information system service to employ dynamic code analysis tools to identify common flaws and document the results of the analysis.

Supplemental Guidance: Dynamic code analysis provides run-time verification of software programs, using tools capable of monitoring programs for memory corruption, user privilege

issues, and other potential security problems. Dynamic code analysis employs run-time tools to help to ensure that security functionality performs in the manner in which it was designed. A specialized type of dynamic analysis, known as fuzz testing, induces program failures by deliberately introducing malformed or random data into software programs. Fuzz testing strategies derive from the intended use of applications and the functional and design specifications for the applications. To understand the scope of dynamic code analysis and hence the assurance provided, organizations may also consider conducting code coverage analysis (checking the degree to which the code has been tested using metrics such as percent of subroutines tested or percent of program statements called during execution of the test suite) and/or concordance analysis (checking for words that are out of place in software code such as non-English language words or derogatory terms).

References: ISO/IEC 15408; NIST Special Publication 800-53A; Web: http://nvd.nist.gov, http://cwe.mitre.org, http://cve.mitre.org, http://capec.mitre.org.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** SA-11	**HIGH** SA-11

SA-12 SUPPLY CHAIN PROTECTION

Control: The organization protects against supply chain threats to the information system, system component, or information system service by employing [*Assignment: organization-defined security safeguards*] as part of a comprehensive, defense-in-breadth information security strategy.

Supplemental Guidance: Information systems (including system components that compose those systems) need to be protected throughout the system development life cycle (i.e., during design, development, manufacturing, packaging, assembly, distribution, system integration, operations, maintenance, and retirement). Protection of organizational information systems is accomplished through threat awareness, by the identification, management, and reduction of vulnerabilities at each phase of the life cycle and the use of complementary, mutually reinforcing strategies to respond to risk. Organizations consider implementing a standardized process to address supply chain risk with respect to information systems and system components, and to educate the acquisition workforce on threats, risk, and required security controls. Organizations use the acquisition/procurement processes to require supply chain entities to implement necessary security safeguards to: (i) reduce the likelihood of unauthorized modifications at each stage in the supply chain; and (ii) protect information systems and information system components, prior to taking delivery of such systems/components. This control enhancement also applies to information system services. Security safeguards include, for example: (i) security controls for development systems, development facilities, and external connections to development systems; (ii) vetting development personnel; and (iii) use of tamper-evident packaging during shipping/warehousing. Methods for reviewing and protecting development plans, evidence, and documentation are commensurate with the security category or classification level of the information system. Contracts may specify documentation protection requirements. Related controls: AT-3, CM-8, IR-4, PE-16, PL-8, SA-3, SA-4, SA-8, SA-10, SA-14, SA-15, SA-18, SA-19, SC-29, SC-30, SC-38, SI-7.

Control Enhancements:

(1) *SUPPLY CHAIN PROTECTION | ACQUISITION STRATEGIES / TOOLS / METHODS*

The organization employs [*Assignment: organization-defined tailored acquisition strategies, contract tools, and procurement methods*] for the purchase of the information system, system component, or information system service from suppliers.

Supplemental Guidance: The use of acquisition and procurement processes by organizations early in the system development life cycle provides an important vehicle to protect the supply chain. Organizations use available all-source intelligence analysis to inform the tailoring of acquisition strategies, tools, and methods. There are a number of different tools and

techniques available (e.g., obscuring the end use of an information system or system component, using blind or filtered buys). Organizations also consider creating incentives for suppliers who: (i) implement required security safeguards; (ii) promote transparency into their organizational processes and security practices; (iii) provide additional vetting of the processes and security practices of subordinate suppliers, critical information system components, and services; (iv) restrict purchases from specific suppliers or countries; and (v) provide contract language regarding the prohibition of tainted or counterfeit components. In addition, organizations consider minimizing the time between purchase decisions and required delivery to limit opportunities for adversaries to corrupt information system components or products. Finally, organizations can use trusted/controlled distribution, delivery, and warehousing options to reduce supply chain risk (e.g., requiring tamper-evident packaging of information system components during shipping and warehousing). Related control: SA-19.

(2) *SUPPLY CHAIN PROTECTION | SUPPLIER REVIEWS*

The organization conducts a supplier review prior to entering into a contractual agreement to acquire the information system, system component, or information system service.

Supplemental Guidance: Supplier reviews include, for example: (i) analysis of supplier processes used to design, develop, test, implement, verify, deliver, and support information systems, system components, and information system services; and (ii) assessment of supplier training and experience in developing systems, components, or services with the required security capability. These reviews provide organizations with increased levels of visibility into supplier activities during the system development life cycle to promote more effective supply chain risk management. Supplier reviews can also help to determine whether primary suppliers have security safeguards in place and a practice for vetting subordinate suppliers, for example, second- and third-tier suppliers, and any subcontractors.

(3) *SUPPLY CHAIN PROTECTION | TRUSTED SHIPPING AND WAREHOUSING*

[Withdrawn: Incorporated into SA-12 (1)].

(4) *SUPPLY CHAIN PROTECTION | DIVERSITY OF SUPPLIERS*

[Withdrawn: Incorporated into SA-12 (13)].

(5) *SUPPLY CHAIN PROTECTION | LIMITATION OF HARM*

The organization employs [*Assignment: organization-defined security safeguards*] to limit harm from potential adversaries identifying and targeting the organizational supply chain.

Supplemental Guidance: Supply chain risk is part of the advanced persistent threat (APT). Security safeguards and countermeasures to reduce the probability of adversaries successfully identifying and targeting the supply chain include, for example: (i) avoiding the purchase of custom configurations to reduce the risk of acquiring information systems, components, or products that have been corrupted via supply chain actions targeted at specific organizations; (ii) employing a diverse set of suppliers to limit the potential harm from any given supplier in the supply chain; (iii) employing approved vendor lists with standing reputations in industry, and (iv) using procurement carve outs (i.e., exclusions to commitments or obligations).

(6) *SUPPLY CHAIN PROTECTION | MINIMIZING PROCUREMENT TIME*

[Withdrawn: Incorporated into SA-12 (1)].

(7) *SUPPLY CHAIN PROTECTION | ASSESSMENTS PRIOR TO SELECTION / ACCEPTANCE / UPDATE*

The organization conducts an assessment of the information system, system component, or information system service prior to selection, acceptance, or update.

Supplemental Guidance: Assessments include, for example, testing, evaluations, reviews, and analyses. Independent, third-party entities or organizational personnel conduct assessments of systems, components, products, tools, and services. Organizations conduct assessments to uncover unintentional vulnerabilities and intentional vulnerabilities including, for example, malicious code, malicious processes, defective software, and counterfeits. Assessments can include, for example, static analyses, dynamic analyses, simulations, white, gray, and black box testing, fuzz testing, penetration testing, and ensuring that components or services are genuine (e.g., using tags, cryptographic hash verifications, or digital signatures). Evidence

generated during security assessments is documented for follow-on actions carried out by organizations. Related controls: CA-2, SA-11.

(8) *SUPPLY CHAIN PROTECTION | USE OF ALL-SOURCE INTELLIGENCE*

The organization uses all-source intelligence analysis of suppliers and potential suppliers of the information system, system component, or information system service.

Supplemental Guidance: All-source intelligence analysis is employed by organizations to inform engineering, acquisition, and risk management decisions. All-source intelligence consists of intelligence products and/or organizations and activities that incorporate all sources of information, most frequently including human intelligence, imagery intelligence, measurement and signature intelligence, signals intelligence, and open source data in the production of finished intelligence. Where available, such information is used to analyze the risk of both intentional and unintentional vulnerabilities from development, manufacturing, and delivery processes, people, and the environment. This review is performed on suppliers at multiple tiers in the supply chain sufficient to manage risks. Related control: SA-15.

(9) *SUPPLY CHAIN PROTECTION | OPERATIONS SECURITY*

The organization employs [*Assignment: organization-defined Operations Security (OPSEC) safeguards*] in accordance with classification guides to protect supply chain-related information for the information system, system component, or information system service.

Supplemental Guidance: Supply chain information includes, for example: user identities; uses for information systems, information system components, and information system services; supplier identities; supplier processes; security requirements; design specifications; testing and evaluation results; and system/component configurations. This control enhancement expands the scope of OPSEC to include suppliers and potential suppliers. OPSEC is a process of identifying critical information and subsequently analyzing friendly actions attendant to operations and other activities to: (i) identify those actions that can be observed by potential adversaries; (ii) determine indicators that adversaries might obtain that could be interpreted or pieced together to derive critical information in sufficient time to cause harm to organizations; (iii) implement safeguards or countermeasures to eliminate or reduce to an acceptable level, exploitable vulnerabilities; and (iv) consider how aggregated information may compromise the confidentiality of users or uses of the supply chain. OPSEC may require organizations to withhold critical mission/business information from suppliers and may include the use of intermediaries to hide the end use, or users, of information systems, system components, or information system services. Related control: PE-21.

(10) *SUPPLY CHAIN PROTECTION | VALIDATE AS GENUINE AND NOT ALTERED*

The organization employs [*Assignment: organization-defined security safeguards*] to validate that the information system or system component received is genuine and has not been altered.

Supplemental Guidance: For some information system components, especially hardware, there are technical means to help determine if the components are genuine or have been altered. Security safeguards used to validate the authenticity of information systems and information system components include, for example, optical/nanotechnology tagging and side-channel analysis. For hardware, detailed bill of material information can highlight the elements with embedded logic complete with component and production location.

(11) *SUPPLY CHAIN PROTECTION | PENETRATION TESTING / ANALYSIS OF ELEMENTS, PROCESSES, AND ACTORS*

The organization employs [*Selection (one or more): organizational analysis, independent third-party analysis, organizational penetration testing, independent third-party penetration testing*] of [*Assignment: organization-defined supply chain elements, processes, and actors*] associated with the *information system, system component, or information system service*.

Supplemental Guidance: This control enhancement addresses analysis and/or testing of the supply chain, not just delivered items. Supply chain elements are information technology products or product components that contain programmable logic and that are critically important to information system functions. Supply chain processes include, for example: (i) hardware, software, and firmware development processes; (ii) shipping/handling procedures; (iii) personnel and physical security programs; (iv) configuration management tools/measures to maintain provenance; or (v) any other programs, processes, or procedures associated with the production/distribution of supply chain elements. Supply chain actors are individuals with

specific roles and responsibilities in the supply chain. The evidence generated during analyses and testing of supply chain elements, processes, and actors is documented and used to inform organizational risk management activities and decisions. Related control: RA-5.

(12) *SUPPLY CHAIN PROTECTION | INTER-ORGANIZATIONAL AGREEMENTS*

The organization establishes inter-organizational agreements and procedures with entities involved in the supply chain for the information system, system component, or information system service.

Supplemental Guidance: The establishment of inter-organizational agreements and procedures provides for notification of supply chain compromises. Early notification of supply chain compromises that can potentially adversely affect or have adversely affected organizational information systems, including critical system components, is essential for organizations to provide appropriate responses to such incidents.

(13) *SUPPLY CHAIN PROTECTION | CRITICAL INFORMATION SYSTEM COMPONENTS*

The organization employs [*Assignment: organization-defined security safeguards*] to ensure an adequate supply of [*Assignment: organization-defined critical information system components*].

Supplemental Guidance: Adversaries can attempt to impede organizational operations by disrupting the supply of critical information system components or corrupting supplier operations. Safeguards to ensure adequate supplies of critical information system components include, for example: (i) the use of multiple suppliers throughout the supply chain for the identified critical components; and (ii) stockpiling of spare components to ensure operation during mission-critical times.

(14) *SUPPLY CHAIN PROTECTION | IDENTITY AND TRACEABILITY*

The organization establishes and retains unique identification of [*Assignment: organization-defined supply chain elements, processes, and actors*] for the information system, system component, or information system service.

Supplemental Guidance: Knowing who and what is in the supply chains of organizations is critical to gaining visibility into what is happening within such supply chains, as well as monitoring and identifying high-risk events and activities. Without reasonable visibility and traceability into supply chains (i.e., elements, processes, and actors), it is very difficult for organizations to understand and therefore manage risk, and to reduce the likelihood of adverse events. Uniquely identifying acquirer and integrator roles, organizations, personnel, mission and element processes, testing and evaluation procedures, delivery mechanisms, support mechanisms, communications/delivery paths, and disposal/final disposition activities as well as the components and tools used, establishes a foundational identity structure for assessment of supply chain activities. For example, labeling (using serial numbers) and tagging (using radio-frequency identification [RFID] tags) individual supply chain elements including software packages, modules, and hardware devices, and processes associated with those elements can be used for this purpose. Identification methods are sufficient to support the provenance in the event of a supply chain issue or adverse supply chain event.

(15) *SUPPLY CHAIN PROTECTION | PROCESSES TO ADDRESS WEAKNESSES OR DEFICIENCIES*

The organization establishes a process to address weaknesses or deficiencies in supply chain elements identified during independent or organizational assessments of such elements.

Supplemental Guidance: Evidence generated during independent or organizational assessments of supply chain elements (e.g., penetration testing, audits, verification/validation activities) is documented and used in follow-on processes implemented by organizations to respond to the risks related to the identified weaknesses and deficiencies. Supply chain elements include, for example, supplier development processes and supplier distribution systems.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** Not Selected	**HIGH** SA-12

SA-13 TRUSTWORTHINESS

Control: The organization:

a. Describes the trustworthiness required in the [*Assignment: organization-defined information system, information system component, or information system service*] supporting its critical missions/business functions; and

b. Implements [*Assignment: organization-defined assurance overlay*] to achieve such trustworthiness.

Supplemental Guidance: This control helps organizations to make explicit trustworthiness decisions when designing, developing, and implementing information systems that are needed to conduct critical organizational missions/business functions. Trustworthiness is a characteristic/property of an information system that expresses the degree to which the system can be expected to preserve the confidentiality, integrity, and availability of the information it processes, stores, or transmits. Trustworthy information systems are systems that are capable of being trusted to operate within defined levels of *risk* despite the environmental disruptions, human errors, and purposeful attacks that are expected to occur in the specified environments of operation. Trustworthy systems are important to mission/business success. Two factors affecting the trustworthiness of information systems include: (i) security functionality (i.e., the security features, functions, and/or mechanisms employed within the system and its environment of operation); and (ii) security assurance (i.e., the grounds for confidence that the security functionality is effective in its application). Developers, implementers, operators, and maintainers of organizational information systems can increase the level of assurance (and trustworthiness), for example, by employing well-defined security policy models, structured and rigorous hardware, software, and firmware development techniques, sound system/security engineering principles, and secure configuration settings (defined by a set of assurance-related security controls in Appendix E).

Assurance is also based on the assessment of evidence produced during the system development life cycle. Critical missions/business functions are supported by high-impact systems and the associated assurance requirements for such systems. The additional assurance controls in Table E-4 in Appendix E (designated as optional) can be used to develop and implement high-assurance solutions for specific information systems and system components using the concept of overlays described in Appendix I. Organizations select assurance overlays that have been developed, validated, and approved for community adoption (e.g., cross-organization, governmentwide), limiting the development of such overlays on an organization-by-organization basis. Organizations can conduct criticality analyses as described in SA-14, to determine the information systems, system components, or information system services that require high-assurance solutions. Trustworthiness requirements and assurance overlays can be described in the security plans for organizational information systems. Related controls: RA-2, SA-4, SA-8, SA-14, SC-3.

Control Enhancements: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SA-14 CRITICALITY ANALYSIS

Control: The organization identifies critical information system components and functions by performing a criticality analysis for [*Assignment: organization-defined information systems, information system components, or information system services*] at [*Assignment: organization-defined decision points in the system development life cycle*].

Supplemental Guidance: Criticality analysis is a key tenet of supply chain risk management and informs the prioritization of supply chain protection activities such as attack surface reduction, use of all-source intelligence, and tailored acquisition strategies. Information system engineers can conduct an end-to-end functional decomposition of an information system to identify mission-critical functions and components. The functional decomposition includes the identification of core organizational missions supported by the system, decomposition into the specific functions to perform those missions, and traceability to the hardware, software, and firmware components that implement those functions, including when the functions are shared by many components within and beyond the information system boundary. Information system components that allow for unmediated access to critical components or functions are considered critical due to the inherent vulnerabilities such components create. Criticality is assessed in terms of the impact of the function or component failure on the ability of the component to complete the organizational missions supported by the information system. A criticality analysis is performed whenever an architecture or design is being developed or modified, including upgrades. Related controls: CP-2, PL-2, PL-8, PM-1, SA-8, SA-12, SA-13, SA-15, SA-20.

Control Enhancements: None.

(1) *CRITICALITY ANALYSIS | CRITICAL COMPONENTS WITH NO VIABLE ALTERNATIVE SOURCING*
[Withdrawn: Incorporated into SA-20].

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SA-15 DEVELOPMENT PROCESS, STANDARDS, AND TOOLS

Control: The organization:

a. Requires the developer of the information system, system component, or information system service to follow a documented development process that:

   1. Explicitly addresses security requirements;

   2. Identifies the standards and tools used in the development process;

   3. Documents the specific tool options and tool configurations used in the development process; and

   4. Documents, manages, and ensures the integrity of changes to the process and/or tools used in development; and

b. Reviews the development process, standards, tools, and tool options/configurations [*Assignment: organization-defined frequency*] to determine if the process, standards, tools, and tool options/configurations selected and employed can satisfy [*Assignment: organization-defined security requirements*].

Supplemental Guidance: Development tools include, for example, programming languages and computer-aided design (CAD) systems. Reviews of development processes can include, for example, the use of maturity models to determine the potential effectiveness of such processes. Maintaining the integrity of changes to tools and processes enables accurate supply chain risk assessment and mitigation, and requires robust configuration control throughout the life cycle (including design, development, transport, delivery, integration, and maintenance) to track authorized changes and prevent unauthorized changes. Related controls: SA-3, SA-8.

Control Enhancements:

(1) *DEVELOPMENT PROCESS, STANDARDS, AND TOOLS | QUALITY METRICS*

The organization requires the developer of the information system, system component, or information system service to:

(a) Define quality metrics at the beginning of the development process; and

(b) Provide evidence of meeting the quality metrics [*Selection (one or more):* [*Assignment: organization-defined frequency*]; [*Assignment: organization-defined program review milestones*]; *upon delivery*].

Supplemental Guidance: Organizations use quality metrics to establish minimum acceptable levels of information system quality. Metrics may include quality gates which are collections of completion criteria or sufficiency standards representing the satisfactory execution of particular phases of the system development project. A quality gate, for example, may require the elimination of all compiler warnings or an explicit determination that the warnings have no impact on the effectiveness of required security capabilities. During the execution phases of development projects, quality gates provide clear, unambiguous indications of progress. Other metrics apply to the entire development project. These metrics can include defining the severity thresholds of vulnerabilities, for example, requiring no known vulnerabilities in the delivered information system with a Common Vulnerability Scoring System (CVSS) severity of Medium or High.

(2) *DEVELOPMENT PROCESS, STANDARDS, AND TOOLS | SECURITY TRACKING TOOLS*

The organization requires the developer of the information system, system component, or information system service to select and employ a security tracking tool for use during the development process.

Supplemental Guidance: Information system development teams select and deploy security tracking tools, including, for example, vulnerability/work item tracking systems that facilitate assignment, sorting, filtering, and tracking of completed work items or tasks associated with system development processes.

(3) *DEVELOPMENT PROCESS, STANDARDS, AND TOOLS | CRITICALITY ANALYSIS*

The organization requires the developer of the information system, system component, or information system service to perform a criticality analysis at [*Assignment: organization-defined breadth/depth*] and at [*Assignment: organization-defined decision points in the system development life cycle*].

Supplemental Guidance: This control enhancement provides developer input to the criticality analysis performed by organizations in SA-14. Developer input is essential to such analysis because organizations may not have access to detailed design documentation for information system components that are developed as commercial off-the-shelf (COTS) information technology products (e.g., functional specifications, high-level designs, low-level designs, and source code/hardware schematics). Related controls: SA-4, SA-14.

(4) *DEVELOPMENT PROCESS, STANDARDS, AND TOOLS | THREAT MODELING / VULNERABILITY ANALYSIS*

The organization requires that developers perform threat modeling and a vulnerability analysis for the information system at [*Assignment: organization-defined breadth/depth*] that:

(a) Uses [*Assignment: organization-defined information concerning impact, environment of operations, known or assumed threats, and acceptable risk levels*];

(b) Employs [*Assignment: organization-defined tools and methods*]; and

(c) Produces evidence that meets [*Assignment: organization-defined acceptance criteria*].

Supplemental Guidance: Related control: SA-4.

(5) *DEVELOPMENT PROCESS, STANDARDS, AND TOOLS | ATTACK SURFACE REDUCTION*

The organization requires the developer of the information system, system component, or information system service to reduce attack surfaces to [*Assignment: organization-defined thresholds*].

Supplemental Guidance: Attack surface reduction is closely aligned with developer threat and vulnerability analyses and information system architecture and design. Attack surface reduction is a means of reducing risk to organizations by giving attackers less opportunity to exploit weaknesses or deficiencies (i.e., potential vulnerabilities) within information systems,

information system components, and information system services. Attack surface reduction includes, for example, applying the principle of least privilege, employing layered defenses, applying the principle of least functionality (i.e., restricting ports, protocols, functions, and services), deprecating unsafe functions, and eliminating application programming interfaces (APIs) that are vulnerable to cyber attacks. Related control: CM-7.

(6) *DEVELOPMENT PROCESS, STANDARDS, AND TOOLS | CONTINUOUS IMPROVEMENT*

The organization requires the developer of the information system, system component, or information system service to implement an explicit process to continuously improve the development process.

Supplemental Guidance: Developers of information systems, information system components, and information system services consider the effectiveness/efficiency of current development processes for meeting quality objectives and addressing security capabilities in current threat environments.

(7) *DEVELOPMENT PROCESS, STANDARDS, AND TOOLS | AUTOMATED VULNERABILITY ANALYSIS*

The organization requires the developer of the information system, system component, or information system service to:

(a) Perform an automated vulnerability analysis using [*Assignment: organization-defined tools*];

(b) Determine the exploitation potential for discovered vulnerabilities;

(c) Determine potential risk mitigations for delivered vulnerabilities; and

(d) Deliver the outputs of the tools and results of the analysis to [*Assignment: organization-defined personnel or roles*].

Supplemental Guidance: Related control: RA-5.

(8) *DEVELOPMENT PROCESS, STANDARDS, AND TOOLS | REUSE OF THREAT / VULNERABILITY INFORMATION*

The organization requires the developer of the information system, system component, or information system service to use threat modeling and vulnerability analyses from similar systems, components, or services to inform the current development process.

Supplemental Guidance: Analysis of vulnerabilities found in similar software applications can inform potential design or implementation issues for information systems under development. Similar information systems or system components may exist within developer organizations. Authoritative vulnerability information is available from a variety of public and private sector sources including, for example, the National Vulnerability Database.

(9) *DEVELOPMENT PROCESS, STANDARDS, AND TOOLS | USE OF LIVE DATA*

The organization approves, documents, and controls the use of live data in development and test environments for the information system, system component, or information system service.

Supplemental Guidance: The use of live data in preproduction environments can result in significant risk to organizations. Organizations can minimize such risk by using test or dummy data during the development and testing of information systems, information system components, and information system services.

(10) *DEVELOPMENT PROCESS, STANDARDS, AND TOOLS | INCIDENT RESPONSE PLAN*

The organization requires the developer of the information system, system component, or information system service to provide an incident response plan.

Supplemental Guidance: The incident response plan for developers of information systems, system components, and information system services is incorporated into organizational incident response plans to provide the type of incident response information not readily available to organizations. Such information may be extremely helpful, for example, when organizations respond to vulnerabilities in commercial off-the-shelf (COTS) information technology products. Related control: IR-8.

(11) *DEVELOPMENT PROCESS, STANDARDS, AND TOOLS | ARCHIVE INFORMATION SYSTEM / COMPONENT*

The organization requires the developer of the information system or system component to archive the system or component to be released or delivered together with the corresponding evidence supporting the final security review.

Supplemental Guidance: Archiving relevant documentation from the development process can provide a readily available baseline of information that can be helpful during information system/component upgrades or modifications.

References: None.

Priority and Baseline Allocation:

P2	**LOW** Not Selected	**MOD** Not Selected	**HIGH** SA-15

SA-16 DEVELOPER-PROVIDED TRAINING

Control: The organization requires the developer of the information system, system component, or information system service to provide [*Assignment: organization-defined training*] on the correct use and operation of the implemented security functions, controls, and/or mechanisms.

Supplemental Guidance: This control applies to external and internal (in-house) developers. Training of personnel is an essential element to ensure the effectiveness of security controls implemented within organizational information systems. Training options include, for example, classroom-style training, web-based/computer-based training, and hands-on training. Organizations can also request sufficient training materials from developers to conduct in-house training or offer self-training to organizational personnel. Organizations determine the type of training necessary and may require different types of training for different security functions, controls, or mechanisms. Related controls: AT-2, AT-3, SA-5.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P2	**LOW** Not Selected	**MOD** Not Selected	**HIGH** SA-16

SA-17 DEVELOPER SECURITY ARCHITECTURE AND DESIGN

Control: The organization requires the developer of the information system, system component, or information system service to produce a design specification and security architecture that:

a. Is consistent with and supportive of the organization's security architecture which is established within and is an integrated part of the organization's enterprise architecture;

b. Accurately and completely describes the required security functionality, and the allocation of security controls among physical and logical components; and

c. Expresses how individual security functions, mechanisms, and services work together to provide required security capabilities and a unified approach to protection.

Supplemental Guidance: This control is primarily directed at external developers, although it could also be used for internal (in-house) development. In contrast, PL-8 is primarily directed at internal developers to help ensure that organizations develop an information security architecture and such security architecture is integrated or tightly coupled to the enterprise architecture. This distinction is important if/when organizations outsource the development of information systems, information system components, or information system services to external entities, and there is a requirement to demonstrate consistency with the organization's enterprise architecture and information security architecture. Related controls: PL-8, PM-7, SA-3, SA-8.

Control Enhancements:

(1) *DEVELOPER SECURITY ARCHITECTURE AND DESIGN | FORMAL POLICY MODEL*

The organization requires the developer of the information system, system component, or information system service to:

(a) Produce, as an integral part of the development process, a formal policy model describing the [*Assignment: organization-defined elements of organizational security policy*] to be enforced; and

(b) Prove that the formal policy model is internally consistent and sufficient to enforce the defined elements of the organizational security policy when implemented.

Supplemental Guidance: Formal models describe specific behaviors or security policies using formal languages, thus enabling the correctness of those behaviors/policies to be formally proven. Not all components of information systems can be modeled, and generally, formal specifications are scoped to specific behaviors or policies of interest (e.g., nondiscretionary access control policies). Organizations choose the particular formal modeling language and approach based on the nature of the behaviors/policies to be described and the available tools. Formal modeling tools include, for example, Gypsy and Zed.

(2) *DEVELOPER SECURITY ARCHITECTURE AND DESIGN | SECURITY-RELEVANT COMPONENTS*

The organization requires the developer of the information system, system component, or information system service to:

(a) Define security-relevant hardware, software, and firmware; and

(b) Provide a rationale that the definition for security-relevant hardware, software, and firmware is complete.

Supplemental Guidance: Security-relevant hardware, software, and firmware represent the portion of the information system, component, or service that must be trusted to perform correctly in order to maintain required security properties. Related control: SA-5.

(3) *DEVELOPER SECURITY ARCHITECTURE AND DESIGN | FORMAL CORRESPONDENCE*

The organization requires the developer of the information system, system component, or information system service to:

(a) Produce, as an integral part of the development process, a formal top-level specification that specifies the interfaces to security-relevant hardware, software, and firmware in terms of exceptions, error messages, and effects;

(b) Show via proof to the extent feasible with additional informal demonstration as necessary, that the formal top-level specification is consistent with the formal policy model;

(c) Show via informal demonstration, that the formal top-level specification completely covers the interfaces to security-relevant hardware, software, and firmware;

(d) Show that the formal top-level specification is an accurate description of the implemented security-relevant hardware, software, and firmware; and

(e) Describe the security-relevant hardware, software, and firmware mechanisms not addressed in the formal top-level specification but strictly internal to the security-relevant hardware, software, and firmware.

Supplemental Guidance: Correspondence is an important part of the assurance gained through modeling. It demonstrates that the implementation is an accurate transformation of the model, and that any additional code or implementation details present have no impact on the behaviors or policies being modeled. Formal methods can be used to show that the high-level security properties are satisfied by the formal information system description, and that the formal system description is correctly implemented by a description of some lower level, for example a hardware description. Consistency between the formal top-level specification and the formal policy models is generally not amenable to being fully proven. Therefore, a combination of formal/informal methods may be needed to show such consistency. Consistency between the formal top-level specification and the implementation may require the use of an informal demonstration due to limitations in the applicability of formal methods to prove that the specification accurately reflects the implementation. Hardware, software, and firmware mechanisms strictly internal to security-relevant hardware, software, and firmware

include, for example, mapping registers and direct memory input/output. Related control: SA-5.

(4) *DEVELOPER SECURITY ARCHITECTURE AND DESIGN | INFORMAL CORRESPONDENCE*

The organization requires the developer of the information system, system component, or information system service to:

(a) Produce, as an integral part of the development process, an informal descriptive top-level specification that specifies the interfaces to security-relevant hardware, software, and firmware in terms of exceptions, error messages, and effects;

(b) Show via [*Selection: informal demonstration, convincing argument with formal methods as feasible*] that the descriptive top-level specification is consistent with the formal policy model;

(c) Show via informal demonstration, that the descriptive top-level specification completely covers the interfaces to security-relevant hardware, software, and firmware;

(d) Show that the descriptive top-level specification is an accurate description of the interfaces to security-relevant hardware, software, and firmware; and

(e) Describe the security-relevant hardware, software, and firmware mechanisms not addressed in the descriptive top-level specification but strictly internal to the security-relevant hardware, software, and firmware.

Supplemental Guidance: Correspondence is an important part of the assurance gained through modeling. It demonstrates that the implementation is an accurate transformation of the model, and that any additional code or implementation details present has no impact on the behaviors or policies being modeled. Consistency between the descriptive top-level specification (i.e., high-level/low-level design) and the formal policy model is generally not amenable to being fully proven. Therefore, a combination of formal/informal methods may be needed to show such consistency. Hardware, software, and firmware mechanisms strictly internal to security-relevant hardware, software, and firmware include, for example, mapping registers and direct memory input/output. Related control: SA-5.

(5) *DEVELOPER SECURITY ARCHITECTURE AND DESIGN | CONCEPTUALLY SIMPLE DESIGN*

The organization requires the developer of the information system, system component, or information system service to:

(a) Design and structure the security-relevant hardware, software, and firmware to use a complete, conceptually simple protection mechanism with precisely defined semantics; and

(b) Internally structure the security-relevant hardware, software, and firmware with specific regard for this mechanism.

Supplemental Guidance: Related control: SC-3.

(6) *DEVELOPER SECURITY ARCHITECTURE AND DESIGN | STRUCTURE FOR TESTING*

The organization requires the developer of the information system, system component, or information system service to structure security-relevant hardware, software, and firmware to facilitate testing.

Supplemental Guidance: Related control: SA-11.

(7) *DEVELOPER SECURITY ARCHITECTURE AND DESIGN | STRUCTURE FOR LEAST PRIVILEGE*

The organization requires the developer of the information system, system component, or information system service to structure security-relevant hardware, software, and firmware to facilitate controlling access with least privilege.

Supplemental Guidance: Related controls: AC-5, AC-6.

References: None.

P1	**LOW** Not Selected	**MOD** Not Selected	**HIGH** SA-17

SA-18 TAMPER RESISTANCE AND DETECTION

Control: The organization implements a tamper protection program for the information system, system component, or information system service.

Supplemental Guidance: Anti-tamper technologies and techniques provide a level of protection for critical information systems, system components, and information technology products against a number of related threats including modification, reverse engineering, and substitution. Strong identification combined with tamper resistance and/or tamper detection is essential to protecting information systems, components, and products during distribution and when in use. Related controls: PE-3, SA-12, SI-7.

Control Enhancements:

(1) *TAMPER RESISTANCE AND DETECTION | MULTIPLE PHASES OF SDLC*

The organization employs anti-tamper technologies and techniques during multiple phases in the system development life cycle including design, development, integration, operations, and maintenance.

Supplemental Guidance: Organizations use a combination of hardware and software techniques for tamper resistance and detection. Organizations employ obfuscation and self-checking, for example, to make reverse engineering and modifications more difficult, time-consuming, and expensive for adversaries. Customization of information systems and system components can make substitutions easier to detect and therefore limit damage. Related control: SA-3.

(2) *TAMPER RESISTANCE AND DETECTION | INSPECTION OF INFORMATION SYSTEMS, COMPONENTS, OR DEVICES*

The organization inspects [*Assignment: organization-defined information systems, system components, or devices*] [*Selection (one or more): at random;* at [*Assignment: organization-defined frequency*], *upon* [*Assignment: organization-defined indications of need for inspection*]] to detect tampering.

Supplemental Guidance: This control enhancement addresses both physical and logical tampering and is typically applied to mobile devices, notebook computers, or other system components taken out of organization-controlled areas. Indications of need for inspection include, for example, when individuals return from travel to high-risk locations. Related control: SI-4.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SA-19 COMPONENT AUTHENTICITY

Control: The organization:

a. Develops and implements anti-counterfeit policy and procedures that include the means to detect and prevent counterfeit components from entering the information system; and

b. Reports counterfeit information system components to [*Selection (one or more): source of counterfeit component;* [*Assignment: organization-defined external reporting organizations*]*;* [*Assignment: organization-defined personnel or roles*]].

Supplemental Guidance: Sources of counterfeit components include, for example, manufacturers, developers, vendors, and contractors. Anti-counterfeiting policy and procedures support tamper resistance and provide a level of protection against the introduction of malicious code. External reporting organizations include, for example, US-CERT. Related controls: PE-3, SA-12, SI-7.

Control Enhancements:

(1) *COMPONENT AUTHENTICITY | ANTI-COUNTERFEIT TRAINING*

The organization trains [*Assignment: organization-defined personnel or roles*] to detect counterfeit information system components (including hardware, software, and firmware).

(2) *COMPONENT AUTHENTICITY | CONFIGURATION CONTROL FOR COMPONENT SERVICE / REPAIR*

The organization maintains configuration control over [*Assignment: organization-defined information system components*] awaiting service/repair and serviced/repaired components awaiting return to service.

(3) *COMPONENT AUTHENTICITY | COMPONENT DISPOSAL*

The organization disposes of information system components using [*Assignment: organization-defined techniques and methods*].

Supplemental Guidance: Proper disposal of information system components helps to prevent such components from entering the gray market.

(4) *COMPONENT AUTHENTICITY | ANTI-COUNTERFEIT SCANNING*

The organization scans for counterfeit information system components [*Assignment: organization-defined frequency*].

References: None.

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SA-20 CUSTOMIZED DEVELOPMENT OF CRITICAL COMPONENTS

Control: The organization re-implements or custom develops [*Assignment: organization-defined critical information system components*].

Supplemental Guidance: Organizations determine that certain information system components likely cannot be trusted due to specific threats to and vulnerabilities in those components, and for which there are no viable security controls to adequately mitigate the resulting risk. Re-implementation or custom development of such components helps to satisfy requirements for higher assurance. This is accomplished by initiating changes to system components (including hardware, software, and firmware) such that the standard attacks by adversaries are less likely to succeed. In situations where no alternative sourcing is available and organizations choose not to re-implement or custom develop critical information system components, additional safeguards can be employed (e.g., enhanced auditing, restrictions on source code and system utility access, and protection from deletion of system and application files. Related controls: CP-2, SA-8, SA-14.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SA-21 DEVELOPER SCREENING

Control: The organization requires that the developer of [*Assignment: organization-defined information system, system component, or information system service*]:

a. Have appropriate access authorizations as determined by assigned [*Assignment: organization-defined official government duties*]; and

b. Satisfy [*Assignment: organization-defined additional personnel screening criteria*].

Supplemental Guidance: Because the information system, system component, or information system service may be employed in critical activities essential to the national and/or economic security interests of the United States, organizations have a strong interest in ensuring that the developer is trustworthy. The degree of trust required of the developer may need to be consistent with that of

the individuals accessing the information system/component/service once deployed. Examples of authorization and personnel screening criteria include clearance, satisfactory background checks, citizenship, and nationality. Trustworthiness of developers may also include a review and analysis of company ownership and any relationships the company has with entities potentially affecting the quality/reliability of the systems, components, or services being developed. Related controls: PS-3, PS-7.

Control Enhancements:

(1) *DEVELOPER SCREENING | VALIDATION OF SCREENING*

The organization requires the developer of the information system, system component, or information system service take [*Assignment: organization-defined actions*] to ensure that the required access authorizations and screening criteria are satisfied.

Supplemental Guidance: Satisfying required access authorizations and personnel screening criteria includes, for example, providing a listing of all the individuals authorized to perform development activities on the selected information system, system component, or information system service so that organizations can validate that the developer has satisfied the necessary authorization and screening requirements.

References: None.

SA-22 UNSUPPORTED SYSTEM COMPONENTS

Control: The organization:

a. Replaces information system components when support for the components is no longer available from the developer, vendor, or manufacturer; and

b. Provides justification and documents approval for the continued use of unsupported system components required to satisfy mission/business needs.

Supplemental Guidance: Support for information system components includes, for example, software patches, firmware updates, replacement parts, and maintenance contracts. Unsupported components (e.g., when vendors are no longer providing critical software patches), provide a substantial opportunity for adversaries to exploit new weaknesses discovered in the currently installed components. Exceptions to replacing unsupported system components may include, for example, systems that provide critical mission/business capability where newer technologies are not available or where the systems are so isolated that installing replacement components is not an option. Related controls: PL-2, SA-3.

Control Enhancements:

(1) *UNSUPPORTED SYSTEM COMPONENTS | ALTERNATIVE SOURCES FOR CONTINUED SUPPORT*

The organization provides [*Selection (one or more): in-house support;* [*Assignment: organization-defined support from external providers*]] for unsupported information system components.

Supplemental Guidance: This control enhancement addresses the need to provide continued support for selected information system components that are no longer supported by the original developers, vendors, or manufacturers when such components remain essential to mission/business operations. Organizations can establish in-house support, for example, by developing customized patches for critical software components or secure the services of external providers who through contractual relationships, provide ongoing support for the designated unsupported components. Such contractual relationships can include, for example, Open Source Software value-added vendors.

References: None.

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SYSTEM AND SERVICES ACQUISITION CONTROLS

DEVELOPMENT OF SYSTEMS, COMPONENTS, AND SERVICES

With the renewed emphasis on trustworthy information systems and supply chain security, it is essential that organizations have the capability to express their information security requirements with clarity and specificity in order to engage the information technology industry and obtain the systems, components, and services necessary for mission and business success. To ensure that organizations have such capability, this publication provides a set of security controls in the System and Services Acquisition family (i.e., SA family) addressing requirements for the development of information systems, information technology products, and information system services. Therefore, many of the controls in the SA family are directed at developers of those systems, components, and services. It is important for organizations to recognize that the scope of the security controls in the SA family includes all system/component/service development and the developers associated with such development whether the development is conducted by internal organizational personnel or by external developers through the contracting/acquisition process. Affected controls include SA-8, SA-10, SA-11, SA-15, SA-16, SA-17, SA-20, and SA-21.

FAMILY: SYSTEM AND COMMUNICATIONS PROTECTION

SC-1 SYSTEM AND COMMUNICATIONS PROTECTION POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. A system and communications protection policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the system and communications protection policy and associated system and communications protection controls; and

b. Reviews and updates the current:

   1. System and communications protection policy [*Assignment: organization-defined frequency*]; and

   2. System and communications protection procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the SC family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

References: NIST Special Publications 800-12, 800-100.

Priority and Baseline Allocation:

P1	**LOW** SC-1	**MOD** SC-1	**HIGH** SC-1

SC-2 APPLICATION PARTITIONING

Control: The information system separates user functionality (including user interface services) from information system management functionality.

Supplemental Guidance: Information system management functionality includes, for example, functions necessary to administer databases, network components, workstations, or servers, and typically requires privileged user access. The separation of user functionality from information system management functionality is either physical or logical. Organizations implement separation of system management-related functionality from user functionality by using different computers, different central processing units, different instances of operating systems, different network addresses, virtualization techniques, or combinations of these or other methods, as appropriate. This type of separation includes, for example, web administrative interfaces that use separate authentication methods for users of any other information system resources. Separation of system and user functionality may include isolating administrative interfaces on different domains and with additional access controls. Related controls: SA-4, SA-8, SC-3.

Control Enhancements:

(1) *APPLICATION PARTITIONING | INTERFACES FOR NON-PRIVILEGED USERS*

The information system prevents the presentation of information system management-related functionality at an interface for non-privileged users.

Supplemental Guidance: This control enhancement ensures that administration options (e.g., administrator privileges) are not available to general users (including prohibiting the use of the grey-out option commonly used to eliminate accessibility to such information). Such restrictions include, for example, not presenting administration options until users establish sessions with administrator privileges. Related control: AC-3.

References: None.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** SC-2	**HIGH** SC-2

SC-3 SECURITY FUNCTION ISOLATION

Control: The information system isolates security functions from nonsecurity functions.

Supplemental Guidance: The information system isolates security functions from nonsecurity functions by means of an isolation boundary (implemented via partitions and domains). Such isolation controls access to and protects the integrity of the hardware, software, and firmware that perform those security functions. Information systems implement code separation (i.e., separation of security functions from nonsecurity functions) in a number of ways, including, for example, through the provision of security kernels via processor rings or processor modes. For non-kernel code, security function isolation is often achieved through file system protections that serve to protect the code on disk, and address space protections that protect executing code. Information systems restrict access to security functions through the use of access control mechanisms and by implementing least privilege capabilities. While the ideal is for all of the code within the security function isolation boundary to only contain security-relevant code, it is sometimes necessary to include nonsecurity functions within the isolation boundary as an exception. Related controls: AC-3, AC-6, SA-4, SA-5, SA-8, SA-13, SC-2, SC-7, SC-39.

Control Enhancements:

(1) *SECURITY FUNCTION ISOLATION | HARDWARE SEPARATION*

The information system utilizes underlying hardware separation mechanisms to implement security function isolation.

Supplemental Guidance: Underlying hardware separation mechanisms include, for example, hardware ring architectures, commonly implemented within microprocessors, and hardware-enforced address segmentation used to support logically distinct storage objects with separate attributes (i.e., readable, writeable).

(2) *SECURITY FUNCTION ISOLATION | ACCESS / FLOW CONTROL FUNCTIONS*

The information system isolates security functions enforcing access and information flow control from nonsecurity functions and from other security functions.

Supplemental Guidance: Security function isolation occurs as a result of implementation; the functions can still be scanned and monitored. Security functions that are potentially isolated from access and flow control enforcement functions include, for example, auditing, intrusion detection, and anti-virus functions.

(3) *SECURITY FUNCTION ISOLATION | MINIMIZE NONSECURITY FUNCTIONALITY*

The organization minimizes the number of nonsecurity functions included within the isolation boundary containing security functions.

Supplemental Guidance: In those instances where it is not feasible to achieve strict isolation of nonsecurity functions from security functions, it is necessary to take actions to minimize the nonsecurity-relevant functions within the security function boundary. Nonsecurity functions

contained within the isolation boundary are considered security-relevant because errors or maliciousness in such software, by virtue of being within the boundary, can impact the security functions of organizational information systems. The design objective is that the specific portions of information systems providing information security are of minimal size/complexity. Minimizing the number of nonsecurity functions in the security-relevant components of information systems allows designers and implementers to focus only on those functions which are necessary to provide the desired security capability (typically access enforcement). By minimizing nonsecurity functions within the isolation boundaries, the amount of code that must be trusted to enforce security policies is reduced, thus contributing to understandability.

(4) *SECURITY FUNCTION ISOLATION | MODULE COUPLING AND COHESIVENESS*

The organization implements security functions as largely independent modules that maximize internal cohesiveness within modules and minimize coupling between modules.

Supplemental Guidance: The reduction in inter-module interactions helps to constrain security functions and to manage complexity. The concepts of coupling and cohesion are important with respect to modularity in software design. Coupling refers to the dependencies that one module has on other modules. Cohesion refers to the relationship between the different functions within a particular module. Good software engineering practices rely on modular decomposition, layering, and minimization to reduce and manage complexity, thus producing software modules that are highly cohesive and loosely coupled.

(5) *SECURITY FUNCTION ISOLATION | LAYERED STRUCTURES*

The organization implements security functions as a layered structure minimizing interactions between layers of the design and avoiding any dependence by lower layers on the functionality or correctness of higher layers.

Supplemental Guidance: The implementation of layered structures with minimized interactions among security functions and non-looping layers (i.e., lower-layer functions do not depend on higher-layer functions) further enables the isolation of security functions and management of complexity.

References: None.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** Not Selected	**HIGH** SC-3

SC-4 INFORMATION IN SHARED RESOURCES

Control: The information system prevents unauthorized and unintended information transfer via shared system resources.

Supplemental Guidance: This control prevents information, including encrypted representations of information, produced by the actions of prior users/roles (or the actions of processes acting on behalf of prior users/roles) from being available to any current users/roles (or current processes) that obtain access to shared system resources (e.g., registers, main memory, hard disks) after those resources have been released back to information systems. The control of information in shared resources is also commonly referred to as object reuse and residual information protection. This control does not address: (i) information remanence which refers to residual representation of data that has been nominally erased or removed; (ii) covert channels (including storage and/or timing channels) where shared resources are manipulated to violate information flow restrictions; or (iii) components within information systems for which there are only single users/roles. Related controls: AC-3, AC-4, MP-6.

Control Enhancements:

(1) *INFORMATION IN SHARED RESOURCES | SECURITY LEVELS*

[Withdrawn: Incorporated into SC-4].

(2) *INFORMATION IN SHARED RESOURCES | PERIODS PROCESSING*

The information system prevents unauthorized information transfer via shared resources in accordance with [*Assignment: organization-defined procedures*] when system processing explicitly switches between different information classification levels or security categories.

Supplemental Guidance: This control enhancement applies when there are explicit changes in information processing levels during information system operations, for example, during multilevel processing and periods processing with information at different classification levels or security categories. Organization-defined procedures may include, for example, approved sanitization processes for electronically stored information.

References: None.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** SC-4	**HIGH** SC-4

SC-5 DENIAL OF SERVICE PROTECTION

Control: The information system protects against or limits the effects of the following types of denial of service attacks: [*Assignment: organization-defined types of denial of service attacks or reference to source for such information*] by employing [*Assignment: organization-defined security safeguards*].

Supplemental Guidance: A variety of technologies exist to limit, or in some cases, eliminate the effects of denial of service attacks. For example, boundary protection devices can filter certain types of packets to protect information system components on internal organizational networks from being directly affected by denial of service attacks. Employing increased capacity and bandwidth combined with service redundancy may also reduce the susceptibility to denial of service attacks. Related controls: SC-6, SC-7.

Control Enhancements:

(1) *DENIAL OF SERVICE PROTECTION | RESTRICT INTERNAL USERS*

The information system restricts the ability of individuals to launch [*Assignment: organization-defined denial of service attacks*] against other information systems.

Supplemental Guidance: Restricting the ability of individuals to launch denial of service attacks requires that the mechanisms used for such attacks are unavailable. Individuals of concern can include, for example, hostile insiders or external adversaries that have successfully breached the information system and are using the system as a platform to launch cyber attacks on third parties. Organizations can restrict the ability of individuals to connect and transmit arbitrary information on the transport medium (i.e., network, wireless spectrum). Organizations can also limit the ability of individuals to use excessive information system resources. Protection against individuals having the ability to launch denial of service attacks may be implemented on specific information systems or on boundary devices prohibiting egress to potential target systems.

(2) *DENIAL OF SERVICE PROTECTION | EXCESS CAPACITY / BANDWIDTH / REDUNDANCY*

The information system manages excess capacity, bandwidth, or other redundancy to limit the effects of information flooding denial of service attacks.

Supplemental Guidance: Managing excess capacity ensures that sufficient capacity is available to counter flooding attacks. Managing excess capacity may include, for example, establishing selected usage priorities, quotas, or partitioning.

(3) *DENIAL OF SERVICE PROTECTION | DETECTION / MONITORING*

The organization:

(a) Employs [*Assignment: organization-defined monitoring tools*] to detect indicators of denial of service attacks against the information system; and

(b) Monitors [*Assignment: organization-defined information system resources*] to determine if sufficient resources exist to prevent effective denial of service attacks.

Supplemental Guidance: Organizations consider utilization and capacity of information system resources when managing risk from denial of service due to malicious attacks. Denial of service attacks can originate from external or internal sources. Information system resources sensitive to denial of service include, for example, physical disk storage, memory, and CPU cycles. Common safeguards to prevent denial of service attacks related to storage utilization and capacity include, for example, instituting disk quotas, configuring information systems to automatically alert administrators when specific storage capacity thresholds are reached, using file compression technologies to maximize available storage space, and imposing separate partitions for system and user data. Related controls: CA-7, SI-4.

References: None.

Priority and Baseline Allocation:

P1	**LOW** SC-5	**MOD** SC-5	**HIGH** SC-5

SC-6 RESOURCE AVAILABILITY

Control: The information system protects the availability of resources by allocating [*Assignment: organization-defined resources*] by [*Selection (one or more); priority; quota;* [*Assignment: organization-defined security safeguards*]].

Supplemental Guidance: Priority protection helps prevent lower-priority processes from delaying or interfering with the information system servicing any higher-priority processes. Quotas prevent users or processes from obtaining more than predetermined amounts of resources. This control does not apply to information system components for which there are only single users/roles.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SC-7 BOUNDARY PROTECTION

Control: The information system:

a. Monitors and controls communications at the external boundary of the system and at key internal boundaries within the system;

b. Implements subnetworks for publicly accessible system components that are [*Selection: physically; logically*] separated from internal organizational networks; and

c. Connects to external networks or information systems only through managed interfaces consisting of boundary protection devices arranged in accordance with an organizational security architecture.

Supplemental Guidance: Managed interfaces include, for example, gateways, routers, firewalls, guards, network-based malicious code analysis and virtualization systems, or encrypted tunnels implemented within a security architecture (e.g., routers protecting firewalls or application gateways residing on protected subnetworks). Subnetworks that are physically or logically separated from internal networks are referred to as demilitarized zones or DMZs. Restricting or prohibiting interfaces within organizational information systems includes, for example, restricting external web traffic to designated web servers within managed interfaces and prohibiting external

traffic that appears to be spoofing internal addresses. Organizations consider the shared nature of commercial telecommunications services in the implementation of security controls associated with the use of such services. Commercial telecommunications services are commonly based on network components and consolidated management systems shared by all attached commercial customers, and may also include third party-provided access lines and other service elements. Such transmission services may represent sources of increased risk despite contract security provisions. Related controls: AC-4, AC-17, CA-3, CM-7, CP-8, IR-4, RA-3, SC-5, SC-13.

Control Enhancements:

(1) *BOUNDARY PROTECTION | PHYSICALLY SEPARATED SUBNETWORKS*

[Withdrawn: Incorporated into SC-7].

(2) *BOUNDARY PROTECTION | PUBLIC ACCESS*

[Withdrawn: Incorporated into SC-7].

(3) *BOUNDARY PROTECTION | ACCESS POINTS*

The organization limits the number of external network connections to the information system.

Supplemental Guidance: Limiting the number of external network connections facilitates more comprehensive monitoring of inbound and outbound communications traffic. The Trusted Internet Connection (TIC) initiative is an example of limiting the number of external network connections.

(4) *BOUNDARY PROTECTION | EXTERNAL TELECOMMUNICATIONS SERVICES*

The organization:

(a) Implements a managed interface for each external telecommunication service;

(b) Establishes a traffic flow policy for each managed interface;

(c) Protects the confidentiality and integrity of the information being transmitted across each interface;

(d) Documents each exception to the traffic flow policy with a supporting mission/business need and duration of that need; and

(e) Reviews exceptions to the traffic flow policy [*Assignment: organization-defined frequency*] and removes exceptions that are no longer supported by an explicit mission/business need.

Supplemental Guidance: Related control: SC-8.

(5) *BOUNDARY PROTECTION | DENY BY DEFAULT / ALLOW BY EXCEPTION*

The information system at managed interfaces denies network communications traffic by default and allows network communications traffic by exception (i.e., deny all, permit by exception).

Supplemental Guidance: This control enhancement applies to both inbound and outbound network communications traffic. A deny-all, permit-by-exception network communications traffic policy ensures that only those connections which are essential and approved are allowed.

(6) *BOUNDARY PROTECTION | RESPONSE TO RECOGNIZED FAILURES*

[Withdrawn: Incorporated into SC-7 (18)].

(7) *BOUNDARY PROTECTION | PREVENT SPLIT TUNNELING FOR REMOTE DEVICES*

The information system, in conjunction with a remote device, prevents the device from simultaneously establishing non-remote connections with the system and communicating via some other connection to resources in external networks.

Supplemental Guidance: This control enhancement is implemented within remote devices (e.g., notebook computers) through configuration settings to disable split tunneling in those devices, and by preventing those configuration settings from being readily configurable by users. This control enhancement is implemented within the information system by the detection of split tunneling (or of configuration settings that allow split tunneling) in the remote device, and by prohibiting the connection if the remote device is using split tunneling. Split tunneling might be desirable by remote users to communicate with local information system resources such as printers/file servers. However, split tunneling would in effect allow unauthorized external connections, making the system more vulnerable to attack and to exfiltration of organizational

information. The use of VPNs for remote connections, when adequately provisioned with appropriate security controls, may provide the organization with sufficient assurance that it can effectively treat such connections as non-remote connections from the confidentiality and integrity perspective. VPNs thus provide a means for allowing non-remote communications paths from remote devices. The use of an adequately provisioned VPN does not eliminate the need for preventing split tunneling.

(8) *BOUNDARY PROTECTION | ROUTE TRAFFIC TO AUTHENTICATED PROXY SERVERS*

The information system routes [*Assignment: organization-defined internal communications traffic*] to [*Assignment: organization-defined external networks*] through authenticated proxy servers at managed interfaces.

Supplemental Guidance: External networks are networks outside of organizational control. A proxy server is a server (i.e., information system or application) that acts as an intermediary for clients requesting information system resources (e.g., files, connections, web pages, or services) from other organizational servers. Client requests established through an initial connection to the proxy server are evaluated to manage complexity and to provide additional protection by limiting direct connectivity. Web content filtering devices are one of the most common proxy servers providing access to the Internet. Proxy servers support logging individual Transmission Control Protocol (TCP) sessions and blocking specific Uniform Resource Locators (URLs), domain names, and Internet Protocol (IP) addresses. Web proxies can be configured with organization-defined lists of authorized and unauthorized websites. Related controls: AC-3, AU-2.

(9) *BOUNDARY PROTECTION | RESTRICT THREATENING OUTGOING COMMUNICATIONS TRAFFIC*

The information system:

(a) Detects and denies outgoing communications traffic posing a threat to external information systems; and

(b) Audits the identity of internal users associated with denied communications.

Supplemental Guidance: Detecting outgoing communications traffic from internal actions that may pose threats to external information systems is sometimes termed extrusion detection. Extrusion detection at information system boundaries as part of managed interfaces includes the analysis of incoming and outgoing communications traffic searching for indications of internal threats to the security of external systems. Such threats include, for example, traffic indicative of denial of service attacks and traffic containing malicious code. Related controls: AU-2, AU-6, SC-38, SC-44, SI-3, SI-4.

(10) *BOUNDARY PROTECTION | PREVENT UNAUTHORIZED EXFILTRATION*

The organization prevents the unauthorized exfiltration of information across managed interfaces.

Supplemental Guidance: Safeguards implemented by organizations to prevent unauthorized exfiltration of information from information systems include, for example: (i) strict adherence to protocol formats; (ii) monitoring for beaconing from information systems; (iii) monitoring for steganography; (iv) disconnecting external network interfaces except when explicitly needed; (v) disassembling and reassembling packet headers; and (vi) employing traffic profile analysis to detect deviations from the volume/types of traffic expected within organizations or call backs to command and control centers. Devices enforcing strict adherence to protocol formats include, for example, deep packet inspection firewalls and XML gateways. These devices verify adherence to protocol formats and specification at the application layer and serve to identify vulnerabilities that cannot be detected by devices operating at the network or transport layers. This control enhancement is closely associated with cross-domain solutions and system guards enforcing information flow requirements. Related control: SI-3.

(11) *BOUNDARY PROTECTION | RESTRICT INCOMING COMMUNICATIONS TRAFFIC*

The information system only allows incoming communications from [*Assignment: organization-defined authorized sources*] routed to [*Assignment: organization-defined authorized destinations*].

Supplemental Guidance: This control enhancement provides determinations that source and destination address pairs represent authorized/allowed communications. Such determinations can be based on several factors including, for example, the presence of source/destination

address pairs in lists of authorized/allowed communications, the absence of address pairs in lists of unauthorized/disallowed pairs, or meeting more general rules for authorized/allowed source/destination pairs. Related control: AC-3.

(12) *BOUNDARY PROTECTION | HOST-BASED PROTECTION*

The organization implements [*Assignment: organization-defined host-based boundary protection mechanisms*] at [*Assignment: organization-defined information system components*].

Supplemental Guidance: Host-based boundary protection mechanisms include, for example, host-based firewalls. Information system components employing host-based boundary protection mechanisms include, for example, servers, workstations, and mobile devices.

(13) *BOUNDARY PROTECTION | ISOLATION OF SECURITY TOOLS / MECHANISMS / SUPPORT COMPONENTS*

The organization isolates [*Assignment: organization-defined information security tools, mechanisms, and support components*] from other internal information system components by implementing physically separate subnetworks with managed interfaces to other components of the system.

Supplemental Guidance: Physically separate subnetworks with managed interfaces are useful, for example, in isolating computer network defenses from critical operational processing networks to prevent adversaries from discovering the analysis and forensics techniques of organizations. Related controls: SA-8, SC-2, SC-3.

(14) *BOUNDARY PROTECTION | PROTECTS AGAINST UNAUTHORIZED PHYSICAL CONNECTIONS*

The organization protects against unauthorized physical connections at [*Assignment: organization-defined managed interfaces*].

Supplemental Guidance: Information systems operating at different security categories or classification levels may share common physical and environmental controls, since the systems may share space within organizational facilities. In practice, it is possible that these separate information systems may share common equipment rooms, wiring closets, and cable distribution paths. Protection against unauthorized physical connections can be achieved, for example, by employing clearly identified and physically separated cable trays, connection frames, and patch panels for each side of managed interfaces with physical access controls enforcing limited authorized access to these items. Related controls: PE-4, PE-19.

(15) *BOUNDARY PROTECTION | ROUTE PRIVILEGED NETWORK ACCESSES*

The information system routes all networked, privileged accesses through a dedicated, managed interface for purposes of access control and auditing.

Supplemental Guidance: Related controls: AC-2, AC-3, AU-2, SI-4.

(16) *BOUNDARY PROTECTION | PREVENT DISCOVERY OF COMPONENTS / DEVICES*

The information system prevents discovery of specific system components composing a managed interface.

Supplemental Guidance: This control enhancement protects network addresses of information system components that are part of managed interfaces from discovery through common tools and techniques used to identify devices on networks. Network addresses are not available for discovery (e.g., network address not published or entered in domain name systems), requiring prior knowledge for access. Another obfuscation technique is to periodically change network addresses.

(17) *BOUNDARY PROTECTION | AUTOMATED ENFORCEMENT OF PROTOCOL FORMATS*

The information system enforces adherence to protocol formats.

Supplemental Guidance: Information system components that enforce protocol formats include, for example, deep packet inspection firewalls and XML gateways. Such system components verify adherence to protocol formats/specifications (e.g., IEEE) at the application layer and identify significant vulnerabilities that cannot be detected by devices operating at the network or transport layers. Related control: SC-4.

(18) *BOUNDARY PROTECTION | FAIL SECURE*

The information system fails securely in the event of an operational failure of a boundary protection device.

Supplemental Guidance: Fail secure is a condition achieved by employing information system mechanisms to ensure that in the event of operational failures of boundary protection devices at managed interfaces (e.g., routers, firewalls, guards, and application gateways residing on protected subnetworks commonly referred to as demilitarized zones), information systems do not enter into unsecure states where intended security properties no longer hold. Failures of boundary protection devices cannot lead to, or cause information external to the devices to enter the devices, nor can failures permit unauthorized information releases. Related controls: CP-2, SC-24.

(19) *BOUNDARY PROTECTION | BLOCKS COMMUNICATION FROM NON-ORGANIZATIONALLY CONFIGURED HOSTS*

The information system blocks both inbound and outbound communications traffic between [*Assignment: organization-defined communication clients*] that are independently configured by end users and external service providers.

Supplemental Guidance: Communication clients independently configured by end users and external service providers include, for example, instant messaging clients. Traffic blocking does not apply to communication clients that are configured by organizations to perform authorized functions.

(20) *BOUNDARY PROTECTION | DYNAMIC ISOLATION / SEGREGATION*

The information system provides the capability to dynamically isolate/segregate [*Assignment: organization-defined information system components*] from other components of the system.

Supplemental Guidance: The capability to dynamically isolate or segregate certain internal components of organizational information systems is useful when it is necessary to partition or separate certain components of dubious origin from those components possessing greater trustworthiness. Component isolation reduces the attack surface of organizational information systems. Isolation of selected information system components is also a means of limiting the damage from successful cyber attacks when those attacks occur.

(21) *BOUNDARY PROTECTION | ISOLATION OF INFORMATION SYSTEM COMPONENTS*

The organization employs boundary protection mechanisms to separate [*Assignment: organization-defined information system components*] supporting [*Assignment: organization-defined missions and/or business functions*].

Supplemental Guidance: Organizations can isolate information system components performing different missions and/or business functions. Such isolation limits unauthorized information flows among system components and also provides the opportunity to deploy greater levels of protection for selected components. Separating system components with boundary protection mechanisms provides the capability for increased protection of individual components and to more effectively control information flows between those components. This type of enhanced protection limits the potential harm from cyber attacks and errors. The degree of separation provided varies depending upon the mechanisms chosen. Boundary protection mechanisms include, for example, routers, gateways, and firewalls separating system components into physically separate networks or subnetworks, cross-domain devices separating subnetworks, virtualization techniques, and encrypting information flows among system components using distinct encryption keys. Related controls: CA-9, SC-3.

(22) *BOUNDARY PROTECTION | SEPARATE SUBNETS FOR CONNECTING TO DIFFERENT SECURITY DOMAINS*

The information system implements separate network addresses (i.e., different subnets) to connect to systems in different security domains.

Supplemental Guidance: Decomposition of information systems into subnets helps to provide the appropriate level of protection for network connections to different security domains containing information with different security categories or classification levels.

(23) *BOUNDARY PROTECTION | DISABLE SENDER FEEDBACK ON PROTOCOL VALIDATION FAILURE*

The information system disables feedback to senders on protocol format validation failure.

Supplemental Guidance: Disabling feedback to senders when there is a failure in protocol validation format prevents adversaries from obtaining information which would otherwise be unavailable.

References: FIPS Publication 199; NIST Special Publications 800-41, 800-77.

Priority and Baseline Allocation:

P1	**LOW** SC-7	**MOD** SC-7 (3) (4) (5) (7)	**HIGH** SC-7 (3) (4) (5) (7) (8) (18) (21)

SC-8 TRANSMISSION CONFIDENTIALITY AND INTEGRITY

Control: The information system protects the [*Selection (one or more): confidentiality; integrity*] of transmitted information.

Supplemental Guidance: This control applies to both internal and external networks and all types of information system components from which information can be transmitted (e.g., servers, mobile devices, notebook computers, printers, copiers, scanners, facsimile machines). Communication paths outside the physical protection of a controlled boundary are exposed to the possibility of interception and modification. Protecting the confidentiality and/or integrity of organizational information can be accomplished by physical means (e.g., by employing protected distribution systems) or by logical means (e.g., employing encryption techniques). Organizations relying on commercial providers offering transmission services as commodity services rather than as fully dedicated services (i.e., services which can be highly specialized to individual customer needs), may find it difficult to obtain the necessary assurances regarding the implementation of needed security controls for transmission confidentiality/integrity. In such situations, organizations determine what types of confidentiality/integrity services are available in standard, commercial telecommunication service packages. If it is infeasible or impractical to obtain the necessary security controls and assurances of control effectiveness through appropriate contracting vehicles, organizations implement appropriate compensating security controls or explicitly accept the additional risk. Related controls: AC-17, PE-4.

Control Enhancements:

(1) *TRANSMISSION CONFIDENTIALITY AND INTEGRITY | CRYPTOGRAPHIC OR ALTERNATE PHYSICAL PROTECTION*

The information system implements cryptographic mechanisms to [*Selection (one or more): prevent unauthorized disclosure of information; detect changes to information*] during transmission unless otherwise protected by [*Assignment: organization-defined alternative physical safeguards*].

Supplemental Guidance: Encrypting information for transmission protects information from unauthorized disclosure and modification. Cryptographic mechanisms implemented to protect information integrity include, for example, cryptographic hash functions which have common application in digital signatures, checksums, and message authentication codes. Alternative physical security safeguards include, for example, protected distribution systems. Related control: SC-13.

(2) *TRANSMISSION CONFIDENTIALITY AND INTEGRITY | PRE / POST TRANSMISSION HANDLING*

The information system maintains the [*Selection (one or more): confidentiality; integrity*] of information during preparation for transmission and during reception.

Supplemental Guidance: Information can be either unintentionally or maliciously disclosed or modified during preparation for transmission or during reception including, for example, during aggregation, at protocol transformation points, and during packing/unpacking. These unauthorized disclosures or modifications compromise the confidentiality or integrity of the information. Related control: AU-10.

(3) *TRANSMISSION CONFIDENTIALITY AND INTEGRITY | CRYPTOGRAPHIC PROTECTION FOR MESSAGE EXTERNALS*

The information system implements cryptographic mechanisms to protect message externals unless otherwise protected by [*Assignment: organization-defined alternative physical safeguards*].

Supplemental Guidance: This control enhancement addresses protection against unauthorized disclosure of information. Message externals include, for example, message headers/routing information. This control enhancement prevents the exploitation of message externals and applies to both internal and external networks or links that may be visible to individuals who are not authorized users. Header/routing information is sometimes transmitted unencrypted because the information is not properly identified by organizations as having significant value

or because encrypting the information can result in lower network performance and/or higher costs. Alternative physical safeguards include, for example, protected distribution systems. Related controls: SC-12, SC-13.

(4) *TRANSMISSION CONFIDENTIALITY AND INTEGRITY | CONCEAL / RANDOMIZE COMMUNICATIONS*

The information system implements cryptographic mechanisms to conceal or randomize communication patterns unless otherwise protected by [*Assignment: organization-defined alternative physical safeguards*].

Supplemental Guidance: This control enhancement addresses protection against unauthorized disclosure of information. Communication patterns include, for example, frequency, periods, amount, and predictability. Changes to communications patterns can reveal information having intelligence value especially when combined with other available information related to missions/business functions supported by organizational information systems. This control enhancement prevents the derivation of intelligence based on communications patterns and applies to both internal and external networks or links that may be visible to individuals who are not authorized users. Encrypting the links and transmitting in continuous, fixed/random patterns prevents the derivation of intelligence from the system communications patterns. Alternative physical safeguards include, for example, protected distribution systems. Related controls: SC-12, SC-13.

SC-9 TRANSMISSION CONFIDENTIALITY

[Withdrawn: Incorporated into SC-8].

SC-10 NETWORK DISCONNECT

Control: The information system terminates the network connection associated with a communications session at the end of the session or after [*Assignment: organization-defined time period*] of inactivity.

Supplemental Guidance: This control applies to both internal and external networks. Terminating network connections associated with communications sessions include, for example, de-allocating associated TCP/IP address/port pairs at the operating system level, or de-allocating networking assignments at the application level if multiple application sessions are using a single, operating system-level network connection. Time periods of inactivity may be established by organizations and include, for example, time periods by type of network access or for specific network accesses.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P2	**LOW** Not Selected	**MOD** SC-10	**HIGH** SC-10

SC-11 TRUSTED PATH

Control: The information system establishes a trusted communications path between the user and the following security functions of the system: [*Assignment: organization-defined security functions to include at a minimum, information system authentication and re-authentication*].

Supplemental Guidance: Trusted paths are mechanisms by which users (through input devices) can communicate directly with security functions of information systems with the requisite assurance to support information security policies. The mechanisms can be activated only by users or the security functions of organizational information systems. User responses via trusted paths are protected from modifications by or disclosure to untrusted applications. Organizations employ trusted paths for high-assurance connections between security functions of information systems and users (e.g., during system logons). Enforcement of trusted communications paths is typically provided via an implementation that meets the reference monitor concept. Related controls: AC-16, AC-25.

Control Enhancements:

(1) *TRUSTED PATH | LOGICAL ISOLATION*

The information system provides a trusted communications path that is logically isolated and distinguishable from other paths.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SC-12 CRYPTOGRAPHIC KEY ESTABLISHMENT AND MANAGEMENT

Control: The organization establishes and manages cryptographic keys for required cryptography employed within the information system in accordance with [*Assignment: organization-defined requirements for key generation, distribution, storage, access, and destruction*].

Supplemental Guidance: Cryptographic key management and establishment can be performed using manual procedures or automated mechanisms with supporting manual procedures. Organizations define key management requirements in accordance with applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance, specifying appropriate options, levels, and parameters. Organizations manage trust stores to ensure that only approved trust anchors are in such trust stores. This includes certificates with visibility external to organizational information systems and certificates related to the internal operations of systems. Related controls: SC-13, SC-17.

Control Enhancements:

(1) *CRYPTOGRAPHIC KEY ESTABLISHMENT AND MANAGEMENT | AVAILABILITY*

The organization maintains availability of information in the event of the loss of cryptographic keys by users.

Supplemental Guidance: Escrowing of encryption keys is a common practice for ensuring availability in the event of loss of keys (e.g., due to forgotten passphrase).

(2) *CRYPTOGRAPHIC KEY ESTABLISHMENT AND MANAGEMENT | SYMMETRIC KEYS*

The organization produces, controls, and distributes symmetric cryptographic keys using [*Selection: NIST FIPS-compliant; NSA-approved*] key management technology and processes.

(3) *CRYPTOGRAPHIC KEY ESTABLISHMENT AND MANAGEMENT | ASYMMETRIC KEYS*

The organization produces, controls, and distributes asymmetric cryptographic keys using [*Selection: NSA-approved key management technology and processes; approved PKI Class 3 certificates or prepositioned keying material; approved PKI Class 3 or Class 4 certificates and hardware security tokens that protect the user's private key*].

(4) *CRYPTOGRAPHIC KEY ESTABLISHMENT AND MANAGEMENT | PKI CERTIFICATES*
[Withdrawn: Incorporated into SC-12].

(5) *CRYPTOGRAPHIC KEY ESTABLISHMENT AND MANAGEMENT | PKI CERTIFICATES / HARDWARE TOKENS*
[Withdrawn: Incorporated into SC-12].

P1	**LOW** SC-12	**MOD** SC-12	**HIGH** SC-12 (1)

SC-13 CRYPTOGRAPHIC PROTECTION

Control: The information system implements [*Assignment: organization-defined cryptographic uses and type of cryptography required for each use*] in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, and standards.

Supplemental Guidance: Cryptography can be employed to support a variety of security solutions including, for example, the protection of classified and Controlled Unclassified Information, the provision of digital signatures, and the enforcement of information separation when authorized individuals have the necessary clearances for such information but lack the necessary formal access approvals. Cryptography can also be used to support random number generation and hash generation. Generally applicable cryptographic standards include FIPS-validated cryptography and NSA-approved cryptography. This control does not impose any requirements on organizations to use cryptography. However, if cryptography is required based on the selection of other security controls, organizations define each type of cryptographic use and the type of cryptography required (e.g., protection of classified information: NSA-approved cryptography; provision of digital signatures: FIPS-validated cryptography). Related controls: AC-2, AC-3, AC-7, AC-17, AC-18, AU-9, AU-10, CM-11, CP-9, IA-3, IA-7, MA-4, MP-2, MP-4, MP-5, SA-4, SC-8, SC-12, SC-28, SI-7.

Control Enhancements: None.

(1) *CRYPTOGRAPHIC PROTECTION | FIPS-VALIDATED CRYPTOGRAPHY*
[Withdrawn: Incorporated into SC-13].

(2) *CRYPTOGRAPHIC PROTECTION | NSA-APPROVED CRYPTOGRAPHY*
[Withdrawn: Incorporated into SC-13].

(3) *CRYPTOGRAPHIC PROTECTION | INDIVIDUALS WITHOUT FORMAL ACCESS APPROVALS*
[Withdrawn: Incorporated into SC-13].

SC-14 PUBLIC ACCESS PROTECTIONS

[Withdrawn: Capability provided by AC-2, AC-3, AC-5, AC-6, SI-3, SI-4, SI-5, SI-7, SI-10].

SC-15 COLLABORATIVE COMPUTING DEVICES

Control: The information system:

a. Prohibits remote activation of collaborative computing devices with the following exceptions: [*Assignment: organization-defined exceptions where remote activation is to be allowed*]; and

b. Provides an explicit indication of use to users physically present at the devices.

Supplemental Guidance: Collaborative computing devices include, for example, networked white boards, cameras, and microphones. Explicit indication of use includes, for example, signals to users when collaborative computing devices are activated. Related control: AC-21.

Control Enhancements:

(1) *COLLABORATIVE COMPUTING DEVICES | PHYSICAL DISCONNECT*

The information system provides physical disconnect of collaborative computing devices in a manner that supports ease of use.

Supplemental Guidance: Failing to physically disconnect from collaborative computing devices can result in subsequent compromises of organizational information. Providing easy methods to physically disconnect from such devices after a collaborative computing session helps to ensure that participants actually carry out the disconnect activity without having to go through complex and tedious procedures.

(2) *COLLABORATIVE COMPUTING DEVICES | BLOCKING INBOUND / OUTBOUND COMMUNICATIONS TRAFFIC*

[Withdrawn: Incorporated into SC-7].

(3) *COLLABORATIVE COMPUTING DEVICES | DISABLING / REMOVAL IN SECURE WORK AREAS*

The organization disables or removes collaborative computing devices from [*Assignment: organization-defined information systems or information system components*] in [*Assignment: organization-defined secure work areas*].

Supplemental Guidance: Failing to disable or remove collaborative computing devices from information systems or information system components can result in subsequent compromises of organizational information including, for example, eavesdropping on conversations.

(4) *COLLABORATIVE COMPUTING DEVICES | EXPLICITLY INDICATE CURRENT PARTICIPANTS*

The information system provides an explicit indication of current participants in [*Assignment: organization-defined online meetings and teleconferences*].

Supplemental Guidance: This control enhancement helps to prevent unauthorized individuals from participating in collaborative computing sessions without the explicit knowledge of other participants.

SC-18 MOBILE CODE

Control: The organization:

a. Defines acceptable and unacceptable mobile code and mobile code technologies;

b. Establishes usage restrictions and implementation guidance for acceptable mobile code and mobile code technologies; and

c. Authorizes, monitors, and controls the use of mobile code within the information system.

Supplemental Guidance: Decisions regarding the employment of mobile code within organizational information systems are based on the potential for the code to cause damage to the systems if used maliciously. Mobile code technologies include, for example, Java, JavaScript, ActiveX, Postscript, PDF, Shockwave movies, Flash animations, and VBScript. Usage restrictions and implementation guidance apply to both the selection and use of mobile code installed on servers and mobile code downloaded and executed on individual workstations and devices (e.g., smart phones). Mobile code policy and procedures address preventing the development, acquisition, or introduction of unacceptable mobile code within organizational information systems. Related controls: AU-2, AU-12, CM-2, CM-6, SI-3.

Control Enhancements:

(1) *MOBILE CODE | IDENTIFY UNACCEPTABLE CODE / TAKE CORRECTIVE ACTIONS*

The information system identifies [*Assignment: organization-defined unacceptable mobile code*] and takes [*Assignment: organization-defined corrective actions*].

Supplemental Guidance: Corrective actions when unacceptable mobile code is detected include, for example, blocking, quarantine, or alerting administrators. Blocking includes, for example, preventing transmission of word processing files with embedded macros when such macros have been defined to be unacceptable mobile code.

(2) *MOBILE CODE | ACQUISITION / DEVELOPMENT / USE*

The organization ensures that the acquisition, development, and use of mobile code to be deployed in the information system meets [*Assignment: organization-defined mobile code requirements*].

(3) *MOBILE CODE | PREVENT DOWNLOADING / EXECUTION*

The information system prevents the download and execution of [*Assignment: organization-defined unacceptable mobile code*].

(4) *MOBILE CODE | PREVENT AUTOMATIC EXECUTION*

The information system prevents the automatic execution of mobile code in [*Assignment: organization-defined software applications*] and enforces [*Assignment: organization-defined actions*] prior to executing the code.

Supplemental Guidance: Actions enforced before executing mobile code, include, for example, prompting users prior to opening electronic mail attachments. Preventing automatic execution of mobile code includes, for example, disabling auto execute features on information system components employing portable storage devices such as Compact Disks (CDs), Digital Video Disks (DVDs), and Universal Serial Bus (USB) devices.

(5) *MOBILE CODE | ALLOW EXECUTION ONLY IN CONFINED ENVIRONMENTS*

The organization allows execution of permitted mobile code only in confined virtual machine environments.

SC-20 SECURE NAME / ADDRESS RESOLUTION SERVICE (AUTHORITATIVE SOURCE)

Control: The information system:

a. Provides additional data origin authentication and integrity verification artifacts along with the authoritative name resolution data the system returns in response to external name/address resolution queries; and

b. Provides the means to indicate the security status of child zones and (if the child supports secure resolution services) to enable verification of a chain of trust among parent and child domains, when operating as part of a distributed, hierarchical namespace.

Supplemental Guidance: This control enables external clients including, for example, remote Internet clients, to obtain origin authentication and integrity verification assurances for the host/service name to network address resolution information obtained through the service. Information systems that provide name and address resolution services include, for example, domain name system (DNS) servers. Additional artifacts include, for example, DNS Security (DNSSEC) digital signatures and cryptographic keys. DNS resource records are examples of authoritative data. The means to indicate the security status of child zones includes, for example, the use of delegation signer resource records in the DNS. The DNS security controls reflect (and are referenced from) OMB Memorandum 08-23. Information systems that use technologies other than the DNS to map between host/service names and network addresses provide other means to assure the authenticity and integrity of response data. Related controls: AU-10, SC-8, SC-12, SC-13, SC-21, SC-22.

Control Enhancements:

(1) *SECURE NAME / ADDRESS RESOLUTION SERVICE (AUTHORITATIVE SOURCE) | CHILD SUBSPACES*
[Withdrawn: Incorporated into SC-20].

(2) *SECURE NAME / ADDRESS RESOLUTION SERVICE (AUTHORITATIVE SOURCE) | DATA ORIGIN / INTEGRITY*
The information system provides data origin and integrity protection artifacts for internal name/address resolution queries.

P1	**LOW** SC-20	**MOD** SC-20	**HIGH** SC-20

SC-21 SECURE NAME / ADDRESS RESOLUTION SERVICE (RECURSIVE OR CACHING RESOLVER)

Control: The information system requests and performs data origin authentication and data integrity verification on the name/address resolution responses the system receives from authoritative sources.

Supplemental Guidance: Each client of name resolution services either performs this validation on its own, or has authenticated channels to trusted validation providers. Information systems that provide name and address resolution services for local clients include, for example, recursive resolving or caching domain name system (DNS) servers. DNS client resolvers either perform validation of DNSSEC signatures, or clients use authenticated channels to recursive resolvers that perform such validations. Information systems that use technologies other than the DNS to map between host/service names and network addresses provide other means to enable clients to verify the authenticity and integrity of response data. Related controls: SC-20, SC-22.

Control Enhancements: None.

P1	**LOW** SC-21	**MOD** SC-21	**HIGH** SC-21

SC-22 ARCHITECTURE AND PROVISIONING FOR NAME / ADDRESS RESOLUTION SERVICE

Control: The information systems that collectively provide name/address resolution service for an organization are fault-tolerant and implement internal/external role separation.

Supplemental Guidance: Information systems that provide name and address resolution services include, for example, domain name system (DNS) servers. To eliminate single points of failure and to enhance redundancy, organizations employ at least two authoritative domain name system servers, one configured as the primary server and the other configured as the secondary server. Additionally, organizations typically deploy the servers in two geographically separated network subnetworks (i.e., not located in the same physical facility). For role separation, DNS servers with internal roles only process name and address resolution requests from within organizations (i.e., from internal clients). DNS servers with external roles only process name and address resolution information requests from clients external to organizations (i.e., on external networks including the Internet). Organizations specify clients that can access authoritative DNS servers in particular roles (e.g., by address ranges, explicit lists). Related controls: SC-2, SC-20, SC-21, SC-24.

Control Enhancements: None.

References: NIST Special Publication 800-81.

P1	**LOW** SC-22	**MOD** SC-22	**HIGH** SC-22

SC-23 SESSION AUTHENTICITY

Control: The information system protects the authenticity of communications sessions.

Supplemental Guidance: This control addresses communications protection at the session, versus packet level (e.g., sessions in service-oriented architectures providing web-based services) and establishes grounds for confidence at both ends of communications sessions in ongoing identities of other parties and in the validity of information transmitted. Authenticity protection includes, for example, protecting against man-in-the-middle attacks/session hijacking and the insertion of false information into sessions. Related controls: SC-8, SC-10, SC-11.

Control Enhancements:

(1) *SESSION AUTHENTICITY | INVALIDATE SESSION IDENTIFIERS AT LOGOUT*

The information system invalidates session identifiers upon user logout or other session termination.

Supplemental Guidance: This control enhancement curtails the ability of adversaries from capturing and continuing to employ previously valid session IDs.

(2) *SESSION AUTHENTICITY | USER-INITIATED LOGOUTS / MESSAGE DISPLAYS*

[Withdrawn: Incorporated into AC-12 (1)].

(3) *SESSION AUTHENTICITY | UNIQUE SESSION IDENTIFIERS WITH RANDOMIZATION*

The information system generates a unique session identifier for each session with [*Assignment: organization-defined randomness requirements*] and recognizes only session identifiers that are system-generated.

Supplemental Guidance: This control enhancement curtails the ability of adversaries from reusing previously valid session IDs. Employing the concept of randomness in the generation of unique session identifiers helps to protect against brute-force attacks to determine future session identifiers. Related control: SC-13.

(4) *SESSION AUTHENTICITY | UNIQUE SESSION IDENTIFIERS WITH RANDOMIZATION*

[Withdrawn: Incorporated into SC-23 (3)].

(5) *SESSION AUTHENTICITY | ALLOWED CERTIFICATE AUTHORITIES*

The information system only allows the use of [*Assignment: organization-defined certificate authorities*] for verification of the establishment of protected sessions.

Supplemental Guidance: Reliance on certificate authorities (CAs) for the establishment of secure sessions includes, for example, the use of Secure Socket Layer (SSL) and/or Transport Layer Security (TLS) certificates. These certificates, after verification by the respective

certificate authorities, facilitate the establishment of protected sessions between web clients and web servers. Related control: SC-13.

SC-27 PLATFORM-INDEPENDENT APPLICATIONS

Control: The information system includes: [*Assignment: organization-defined platform-independent applications*].

Supplemental Guidance: Platforms are combinations of hardware and software used to run software applications. Platforms include: (i) operating systems; (ii) the underlying computer architectures, or (iii) both. Platform-independent applications are applications that run on multiple platforms. Such applications promote portability and reconstitution on different platforms, increasing the availability of critical functions within organizations while information systems with specific operating systems are under attack. Related control: SC-29.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SC-28 PROTECTION OF INFORMATION AT REST

Control: The information system protects the [*Selection (one or more): confidentiality; integrity*] of [*Assignment: organization-defined information at rest*].

Supplemental Guidance: This control addresses the confidentiality and integrity of information at rest and covers user information and system information. Information at rest refers to the state of information when it is located on storage devices as specific components of information systems. System-related information requiring protection includes, for example, configurations or rule sets for firewalls, gateways, intrusion detection/prevention systems, filtering routers, and authenticator content. Organizations may employ different mechanisms to achieve confidentiality and integrity protections, including the use of cryptographic mechanisms and file share scanning. Integrity protection can be achieved, for example, by implementing Write-Once-Read-Many (WORM) technologies. Organizations may also employ other security controls including, for example, secure off-line storage in lieu of online storage when adequate protection of information at rest cannot otherwise be achieved and/or continuous monitoring to identify malicious code at rest. Related controls: AC-3, AC-6, CA-7, CM-3, CM-5, CM-6, PE-3, SC-8, SC-13, SI-3, SI-7.

Control Enhancements:

(1) *PROTECTION OF INFORMATION AT REST | CRYPTOGRAPHIC PROTECTION*

The information system implements cryptographic mechanisms to prevent unauthorized disclosure and modification of [*Assignment: organization-defined information*] on [*Assignment: organization-defined information system components*].

Supplemental Guidance: Selection of cryptographic mechanisms is based on the need to protect the confidentiality and integrity of organizational information. The strength of mechanism is commensurate with the security category and/or classification of the information. This control enhancement applies to significant concentrations of digital media in organizational areas designated for media storage and also to limited quantities of media generally associated with information system components in operational environments (e.g., portable storage devices, mobile devices). Organizations have the flexibility to either encrypt all information on storage devices (i.e., full disk encryption) or encrypt specific data structures (e.g., files, records, or fields). Organizations employing cryptographic mechanisms to protect information at rest also consider cryptographic key management solutions. Related controls: AC-19, SC-12.

(2) *PROTECTION OF INFORMATION AT REST | OFF-LINE STORAGE*

The organization removes from online storage and stores off-line in a secure location [*Assignment: organization-defined information*].

Supplemental Guidance: Removing organizational information from online information system storage to off-line storage eliminates the possibility of individuals gaining unauthorized access to the information through a network. Therefore, organizations may choose to move information to off-line storage in lieu of protecting such information in online storage.

References: NIST Special Publications 800-56, 800-57, 800-111.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** SC-28	**HIGH** SC-28

SC-29 HETEROGENEITY

Control: The organization employs a diverse set of information technologies for [*Assignment: organization-defined information system components*] in the implementation of the information system.

Supplemental Guidance: Increasing the diversity of information technologies within organizational information systems reduces the impact of potential exploitations of specific technologies and also defends against common mode failures, including those failures induced by supply chain attacks. Diversity in information technologies also reduces the likelihood that the means adversaries use to compromise one information system component will be equally effective against other system components, thus further increasing the adversary work factor to successfully complete planned cyber attacks. An increase in diversity may add complexity and management overhead which could ultimately lead to mistakes and unauthorized configurations. Related controls: SA-12, SA-14, SC-27.

Control Enhancements:

(1) *HETEROGENEITY | VIRTUALIZATION TECHNIQUES*

The organization employs virtualization techniques to support the deployment of a diversity of operating systems and applications that are changed [*Assignment: organization-defined frequency*].

Supplemental Guidance: While frequent changes to operating systems and applications pose configuration management challenges, the changes can result in an increased work factor for adversaries in order to carry out successful cyber attacks. Changing virtual operating systems or applications, as opposed to changing actual operating systems/applications, provide virtual changes that impede attacker success while reducing configuration management efforts. In addition, virtualization techniques can assist organizations in isolating untrustworthy software and/or software of dubious provenance into confined execution environments.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SC-30 CONCEALMENT AND MISDIRECTION

Control: The organization employs [*Assignment: organization-defined concealment and misdirection techniques*] for [*Assignment: organization-defined information systems*] at [*Assignment: organization-defined time periods*] to confuse and mislead adversaries.

Supplemental Guidance: Concealment and misdirection techniques can significantly reduce the targeting capability of adversaries (i.e., window of opportunity and available attack surface) to initiate and complete cyber attacks. For example, virtualization techniques provide organizations with the ability to disguise information systems, potentially reducing the likelihood of successful attacks without the cost of having multiple platforms. Increased use of concealment/misdirection techniques including, for example, randomness, uncertainty, and virtualization, may sufficiently confuse and mislead adversaries and subsequently increase the risk of discovery and/or exposing tradecraft. Concealment/misdirection techniques may also provide organizations additional time to successfully perform core missions and business functions. Because of the time and effort required to support concealment/misdirection techniques, it is anticipated that such techniques would be used by organizations on a very limited basis. Related controls: SC-26, SC-29, SI-14.

Control Enhancements:

(1) *CONCEALMENT AND MISDIRECTION | VIRTUALIZATION TECHNIQUES*

[Withdrawn: Incorporated into SC-29 (1)].

(2) *CONCEALMENT AND MISDIRECTION | RANDOMNESS*

The organization employs [*Assignment: organization-defined techniques*] to introduce randomness into organizational operations and assets.

Supplemental Guidance: Randomness introduces increased levels of uncertainty for adversaries regarding the actions organizations take in defending against cyber attacks. Such actions may impede the ability of adversaries to correctly target information resources of organizations supporting critical missions/business functions. Uncertainty may also cause adversaries to hesitate before initiating or continuing attacks. Misdirection techniques involving randomness include, for example, performing certain routine actions at different times of day, employing different information technologies (e.g., browsers, search engines), using different suppliers, and rotating roles and responsibilities of organizational personnel.

(3) *CONCEALMENT AND MISDIRECTION | CHANGE PROCESSING / STORAGE LOCATIONS*

The organization changes the location of [*Assignment: organization-defined processing and/or storage*] [*Selection:* [*Assignment: organization-defined time frequency*]*; at random time intervals*]].

Supplemental Guidance: Adversaries target critical organizational missions/business functions and the information resources supporting those missions and functions while at the same time, trying to minimize exposure of their existence and tradecraft. The static, homogeneous, and deterministic nature of organizational information systems targeted by adversaries, make such systems more susceptible to cyber attacks with less adversary cost and effort to be successful. Changing organizational processing and storage locations (sometimes referred to as moving target defense) addresses the advanced persistent threat (APT) using techniques such as virtualization, distributed processing, and replication. This enables organizations to relocate the information resources (i.e., processing and/or storage) supporting critical missions and business functions. Changing locations of processing activities and/or storage sites introduces uncertainty into the targeting activities by adversaries. This uncertainty increases the work factor of adversaries making compromises or breaches to organizational information systems much more difficult and time-consuming, and increases the chances that adversaries may inadvertently disclose aspects of tradecraft while attempting to locate critical organizational resources.

(4) *CONCEALMENT AND MISDIRECTION | MISLEADING INFORMATION*

The organization employs realistic, but misleading information in [*Assignment: organization-defined information system components*] with regard to its security state or posture.

Supplemental Guidance: This control enhancement misleads potential adversaries regarding the nature and extent of security safeguards deployed by organizations. As a result, adversaries may employ incorrect (and as a result ineffective) attack techniques. One way of misleading adversaries is for organizations to place misleading information regarding the specific security controls deployed in external information systems that are known to be accessed or targeted by adversaries. Another technique is the use of deception nets (e.g., honeynets, virtualized environments) that mimic actual aspects of organizational information systems but use, for example, out-of-date software configurations.

(5) *CONCEALMENT AND MISDIRECTION | CONCEALMENT OF SYSTEM COMPONENTS*

The organization employs [*Assignment: organization-defined techniques*] to hide or conceal [*Assignment: organization-defined information system components*].

Supplemental Guidance: By hiding, disguising, or otherwise concealing critical information system components, organizations may be able to decrease the probability that adversaries target and successfully compromise those assets. Potential means for organizations to hide and/or conceal information system components include, for example, configuration of routers or the use of honeynets or virtualization techniques.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SC-31 COVERT CHANNEL ANALYSIS

Control: The organization:

a. Performs a covert channel analysis to identify those aspects of communications within the information system that are potential avenues for covert [*Selection (one or more): storage; timing*] channels; and

b. Estimates the maximum bandwidth of those channels.

Supplemental Guidance: Developers are in the best position to identify potential areas within systems that might lead to covert channels. Covert channel analysis is a meaningful activity when there is the potential for unauthorized information flows across security domains, for example, in the case of information systems containing export-controlled information and having connections to external networks (i.e., networks not controlled by organizations). Covert channel analysis is also meaningful for multilevel secure (MLS) information systems, multiple security level (MSL) systems, and cross-domain systems. Related controls: AC-3, AC-4, PL-2.

Control Enhancements:

(1) *COVERT CHANNEL ANALYSIS | TEST COVERT CHANNELS FOR EXPLOITABILITY*

The organization tests a subset of the identified covert channels to determine which channels are exploitable.

(2) *COVERT CHANNEL ANALYSIS | MAXIMUM BANDWIDTH*

The organization reduces the maximum bandwidth for identified covert [*Selection (one or more); storage; timing*] channels to [*Assignment: organization-defined values*].

Supplemental Guidance: Information system developers are in the best position to reduce the maximum bandwidth for identified covert storage and timing channels.

(3) *COVERT CHANNEL ANALYSIS | MEASURE BANDWIDTH IN OPERATIONAL ENVIRONMENTS*

The organization measures the bandwidth of [*Assignment: organization-defined subset of identified covert channels*] in the operational environment of the information system.

Supplemental Guidance: This control enhancement addresses covert channel bandwidth in operational environments versus developmental environments. Measuring covert channel bandwidth in operational environments helps organizations to determine how much information can be covertly leaked before such leakage adversely affects organizational missions/business functions. Covert channel bandwidth may be significantly different when measured in those settings that are independent of the particular environments of operation (e.g., laboratories or development environments).

SC-32 INFORMATION SYSTEM PARTITIONING

Control: The organization partitions the information system into [*Assignment: organization-defined information system components*] residing in separate physical domains or environments based on [*Assignment: organization-defined circumstances for physical separation of components*].

Supplemental Guidance: Information system partitioning is a part of a defense-in-depth protection strategy. Organizations determine the degree of physical separation of system components from physically distinct components in separate racks in the same room, to components in separate rooms for the more critical components, to more significant geographical separation of the most critical components. Security categorization can guide the selection of appropriate candidates for domain partitioning. Managed interfaces restrict or prohibit network access and information flow among partitioned information system components. Related controls: AC-4, SA-8, SC-2, SC-3, SC-7.

Control Enhancements: None.

References: FIPS Publication 199.

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SC-33 TRANSMISSION PREPARATION INTEGRITY

[Withdrawn: Incorporated into SC-8].

SC-34 NON-MODIFIABLE EXECUTABLE PROGRAMS

Control: The information system at [*Assignment: organization-defined information system components*]:

a. Loads and executes the operating environment from hardware-enforced, read-only media; and

b. Loads and executes [*Assignment: organization-defined applications*] from hardware-enforced, read-only media.

Supplemental Guidance: The term *operating environment* is defined as the specific code that hosts applications, for example, operating systems, executives, or monitors including virtual machine monitors (i.e., hypervisors). It can also include certain applications running directly on hardware platforms. Hardware-enforced, read-only media include, for example, Compact Disk-Recordable

(CD-R)/Digital Video Disk-Recordable (DVD-R) disk drives and one-time programmable read-only memory. The use of non-modifiable storage ensures the integrity of software from the point of creation of the read-only image. The use of reprogrammable read-only memory can be accepted as read-only media provided: (i) integrity can be adequately protected from the point of initial writing to the insertion of the memory into the information system; and (ii) there are reliable hardware protections against reprogramming the memory while installed in organizational information systems. Related controls: AC-3, SI-7.

Control Enhancements:

(1) *NON-MODIFIABLE EXECUTABLE PROGRAMS | NO WRITABLE STORAGE*

The organization employs [*Assignment: organization-defined information system components*] with no writeable storage that is persistent across component restart or power on/off.

Supplemental Guidance: This control enhancement: (i) eliminates the possibility of malicious code insertion via persistent, writeable storage within the designated information system components; and (ii) applies to both fixed and removable storage, with the latter being addressed directly or as specific restrictions imposed through access controls for mobile devices. Related controls: AC-19, MP-7.

(2) *NON-MODIFIABLE EXECUTABLE PROGRAMS | INTEGRITY PROTECTION / READ-ONLY MEDIA*

The organization protects the integrity of information prior to storage on read-only media and controls the media after such information has been recorded onto the media.

Supplemental Guidance: Security safeguards prevent the substitution of media into information systems or the reprogramming of programmable read-only media prior to installation into the systems. Security safeguards include, for example, a combination of prevention, detection, and response. Related controls: AC-5, CM-3, CM-5, CM-9, MP-2, MP-4, MP-5, SA-12, SC-28, SI-3.

(3) *NON-MODIFIABLE EXECUTABLE PROGRAMS | HARDWARE-BASED PROTECTION*

The organization:

(a) Employs hardware-based, write-protect for [*Assignment: organization-defined information system firmware components*]; and

(b) Implements specific procedures for [*Assignment: organization-defined authorized individuals*] to manually disable hardware write-protect for firmware modifications and re-enable the write-protect prior to returning to operational mode.

References: None.

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SC-35 HONEYCLIENTS

Control: The information system includes components that proactively seek to identify malicious websites and/or web-based malicious code.

Supplemental Guidance: Honeyclients differ from honeypots in that the components actively probe the Internet in search of malicious code (e.g., worms) contained on external websites. As with honeypots, honeyclients require some supporting isolation measures (e.g., virtualization) to ensure that any malicious code discovered during the search and subsequently executed does not infect organizational information systems. Related controls: SC-26, SC-44, SI-3, SI-4.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SC-36 DISTRIBUTED PROCESSING AND STORAGE

Control: The organization distributes [*Assignment: organization-defined processing and storage*] across multiple physical locations.

Supplemental Guidance: Distributing processing and storage across multiple physical locations provides some degree of redundancy or overlap for organizations, and therefore increases the work factor of adversaries to adversely impact organizational operations, assets, and individuals. This control does not assume a single primary processing or storage location, and thus allows for parallel processing and storage. Related controls: CP-6, CP-7.

Control Enhancements:

(1) *DISTRIBUTED PROCESSING AND STORAGE | POLLING TECHNIQUES*

The organization employs polling techniques to identify potential faults, errors, or compromises to [*Assignment: organization-defined distributed processing and storage components*].

Supplemental Guidance: Distributed processing and/or storage may be employed to reduce opportunities for adversaries to successfully compromise the confidentiality, integrity, or availability of information and information systems. However, distribution of processing and/or storage components does not prevent adversaries from compromising one (or more) of the distributed components. Polling compares the processing results and/or storage content from the various distributed components and subsequently voting on the outcomes. Polling identifies potential faults, errors, or compromises in distributed processing and/or storage components. Related control: SI-4.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SC-37 OUT-OF-BAND CHANNELS

Control: The organization employs [*Assignment: organization-defined out-of-band channels*] for the physical delivery or electronic transmission of [*Assignment: organization-defined information, information system components, or devices*] to [*Assignment: organization-defined individuals or information systems*].

Supplemental Guidance: Out-of-band channels include, for example, local (nonnetwork) accesses to information systems, network paths physically separate from network paths used for operational traffic, or nonelectronic paths such as the US Postal Service. This is in contrast with using the same channels (i.e., in-band channels) that carry routine operational traffic. Out-of-band channels do not have the same vulnerability/exposure as in-band channels, and hence the confidentiality, integrity, or availability compromises of in-band channels will not compromise the out-of-band channels. Organizations may employ out-of-band channels in the delivery or transmission of many organizational items including, for example, identifiers/authenticators, configuration management changes for hardware, firmware, or software, cryptographic key management information, security updates, system/data backups, maintenance information, and malicious code protection updates. Related controls: AC-2, CM-3, CM-5, CM-7, IA-4, IA-5, MA-4, SC-12, SI-3, SI-4, SI-7.

Control Enhancements:

(1) *OUT-OF-BAND CHANNELS | ENSURE DELIVERY / TRANSMISSION*

The organization employs [*Assignment: organization-defined security safeguards*] to ensure that only [*Assignment: organization-defined individuals or information systems*] receive the [*Assignment: organization-defined information, information system components, or devices*].

Supplemental Guidance: Techniques and/or methods employed by organizations to ensure that only designated information systems or individuals receive particular information, system components, or devices include, for example, sending authenticators via courier service but requiring recipients to show some form of government-issued photographic identification as a condition of receipt.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SC-38 OPERATIONS SECURITY

Control: The organization employs [*Assignment: organization-defined operations security safeguards*] to protect key organizational information throughout the system development life cycle.

Supplemental Guidance: Operations security (OPSEC) is a systematic process by which potential adversaries can be denied information about the capabilities and intentions of organizations by identifying, controlling, and protecting generally unclassified information that specifically relates to the planning and execution of sensitive organizational activities. The OPSEC process involves five steps: (i) identification of critical information (e.g., the security categorization process); (ii) analysis of threats; (iii) analysis of vulnerabilities; (iv) assessment of risks; and (v) the application of appropriate countermeasures. OPSEC safeguards are applied to both organizational information systems and the environments in which those systems operate. OPSEC safeguards help to protect the confidentiality of key information including, for example, limiting the sharing of information with suppliers and potential suppliers of information system components, information technology products and services, and with other non-organizational elements and individuals. Information critical to mission/business success includes, for example, user identities, element uses, suppliers, supply chain processes, functional and security requirements, system design specifications, testing protocols, and security control implementation details. Related controls: RA-2, RA-5, SA-12.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SC-39 PROCESS ISOLATION

Control: The information system maintains a separate execution domain for each executing process.

Supplemental Guidance: Information systems can maintain separate execution domains for each executing process by assigning each process a separate address space. Each information system process has a distinct address space so that communication between processes is performed in a manner controlled through the security functions, and one process cannot modify the executing code of another process. Maintaining separate execution domains for executing processes can be

achieved, for example, by implementing separate address spaces. This capability is available in most commercial operating systems that employ multi-state processor technologies. Related controls: AC-3, AC-4, AC-6, SA-4, SA-5, SA-8, SC-2, SC-3.

Control Enhancements:

(1) *PROCESS ISOLATION | HARDWARE SEPARATION*

The information system implements underlying hardware separation mechanisms to facilitate process separation.

Supplemental Guidance: Hardware-based separation of information system processes is generally less susceptible to compromise than software-based separation, thus providing greater assurance that the separation will be enforced. Underlying hardware separation mechanisms include, for example, hardware memory management.

(2) *PROCESS ISOLATION | THREAD ISOLATION*

The information system maintains a separate execution domain for each thread in [*Assignment: organization-defined multi-threaded processing*].

References: None.

Priority and Baseline Allocation:

P1	**LOW** SC-39	**MOD** SC-39	**HIGH** SC-39

SC-40 WIRELESS LINK PROTECTION

Control: The information system protects external and internal [*Assignment: organization-defined wireless links*] from [*Assignment: organization-defined types of signal parameter attacks or references to sources for such attacks*].

Supplemental Guidance: This control applies to internal and external wireless communication links that may be visible to individuals who are not authorized information system users. Adversaries can exploit the signal parameters of wireless links if such links are not adequately protected. There are many ways to exploit the signal parameters of wireless links to gain intelligence, deny service, or to spoof users of organizational information systems. This control reduces the impact of attacks that are unique to wireless systems. If organizations rely on commercial service providers for transmission services as commodity items rather than as fully dedicated services, it may not be possible to implement this control. Related controls: AC-18, SC-5.

Control Enhancements:

(1) *WIRELESS LINK PROTECTION | ELECTROMAGNETIC INTERFERENCE*

The information system implements cryptographic mechanisms that achieve [*Assignment: organization-defined level of protection*] against the effects of intentional electromagnetic interference.

Supplemental Guidance: This control enhancement protects against intentional jamming that might deny or impair communications by ensuring that wireless spread spectrum waveforms used to provide anti-jam protection are not predictable by unauthorized individuals. The control enhancement may also coincidentally help to mitigate the effects of unintentional jamming due to interference from legitimate transmitters sharing the same spectrum. Mission requirements, projected threats, concept of operations, and applicable legislation, directives, regulations, policies, standards, and guidelines determine levels of wireless link availability and performance/cryptography needed. Related controls: SC-12, SC-13.

(2) *WIRELESS LINK PROTECTION | REDUCE DETECTION POTENTIAL*

The information system implements cryptographic mechanisms to reduce the detection potential of wireless links to [*Assignment: organization-defined level of reduction*].

Supplemental Guidance: This control enhancement is needed for covert communications and protecting wireless transmitters from being geo-located by their transmissions. The control enhancement ensures that spread spectrum waveforms used to achieve low probability of

detection are not predictable by unauthorized individuals. Mission requirements, projected threats, concept of operations, and applicable legislation, directives, regulations, policies, standards, and guidelines determine the levels to which wireless links should be undetectable. Related controls: SC-12, SC-13.

(3) *WIRELESS LINK PROTECTION | IMITATIVE OR MANIPULATIVE COMMUNICATIONS DECEPTION*

The information system implements cryptographic mechanisms to identify and reject wireless transmissions that are deliberate attempts to achieve imitative or manipulative communications deception based on signal parameters.

Supplemental Guidance: This control enhancement ensures that the signal parameters of wireless transmissions are not predictable by unauthorized individuals. Such unpredictability reduces the probability of imitative or manipulative communications deception based upon signal parameters alone. Related controls: SC-12, SC-13.

(4) *WIRELESS LINK PROTECTION | SIGNAL PARAMETER IDENTIFICATION*

The information system implements cryptographic mechanisms to prevent the identification of [*Assignment: organization-defined wireless transmitters*] by using the transmitter signal parameters.

Supplemental Guidance: Radio fingerprinting techniques identify the unique signal parameters of transmitters to fingerprint such transmitters for purposes of tracking and mission/user identification. This control enhancement protects against the unique identification of wireless transmitters for purposes of intelligence exploitation by ensuring that anti-fingerprinting alterations to signal parameters are not predictable by unauthorized individuals. This control enhancement helps assure mission success when anonymity is required. Related controls: SC-12, SC-13.

SC-41 PORT AND I/O DEVICE ACCESS

Control: The organization physically disables or removes [*Assignment: organization-defined connection ports or input/output devices*] on [*Assignment: organization-defined information systems or information system components*].

Supplemental Guidance: Connection ports include, for example, Universal Serial Bus (USB) and Firewire (IEEE 1394). Input/output (I/O) devices include, for example, Compact Disk (CD) and Digital Video Disk (DVD) drives. Physically disabling or removing such connection ports and I/O devices helps prevent exfiltration of information from information systems and the introduction of malicious code into systems from those ports/devices.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SC-42 SENSOR CAPABILITY AND DATA

Control: The information system:

a. Prohibits the remote activation of environmental sensing capabilities with the following exceptions: [*Assignment: organization-defined exceptions where remote activation of sensors is allowed*]; and

b. Provides an explicit indication of sensor use to [*Assignment: organization-defined class of users*].

Supplemental Guidance: This control often applies to types of information systems or system components characterized as mobile devices, for example, smart phones, tablets, and E-readers. These systems often include sensors that can collect and record data regarding the environment where the system is in use. Sensors that are embedded within mobile devices include, for example, cameras, microphones, Global Positioning System (GPS) mechanisms, and accelerometers. While the sensors on mobiles devices provide an important function, if activated covertly, such devices can potentially provide a means for adversaries to learn valuable information about individuals and organizations. For example, remotely activating the GPS function on a mobile device could provide an adversary with the ability to track the specific movements of an individual.

Control Enhancements:

(1) *SENSOR CAPABILITY AND DATA | REPORTING TO AUTHORIZED INDIVIDUALS OR ROLES*

The organization ensures that the information system is configured so that data or information collected by the [*Assignment: organization-defined sensors*] is only reported to authorized individuals or roles.

Supplemental Guidance: In situations where sensors are activated by authorized individuals (e.g., end users), it is still possible that the data/information collected by the sensors will be sent to unauthorized entities.

(2) *SENSOR CAPABILITY AND DATA | AUTHORIZED USE*

The organization employs the following measures: [*Assignment: organization-defined measures*], so that data or information collected by [*Assignment: organization-defined sensors*] is only used for authorized purposes.

Supplemental Guidance: Information collected by sensors for a specific authorized purpose potentially could be misused for some unauthorized purpose. For example, GPS sensors that are used to support traffic navigation could be misused to track movements of individuals. Measures to mitigate such activities include, for example, additional training to ensure that authorized parties do not abuse their authority, or (in the case where sensor data/information is maintained by external parties) contractual restrictions on the use of the data/information.

(3) *SENSOR CAPABILITY AND DATA | PROHIBIT USE OF DEVICES*

The organization prohibits the use of devices possessing [*Assignment: organization-defined environmental sensing capabilities*] in [*Assignment: organization-defined facilities, areas, or systems*].

Supplemental Guidance: For example, organizations may prohibit individuals from bringing cell phones or digital cameras into certain facilities or specific controlled areas within facilities where classified information is stored or sensitive conversations are taking place.

SC-44 DETONATION CHAMBERS

Control: The organization employs a detonation chamber capability within [*Assignment: organization-defined information system, system component, or location*].

Supplemental Guidance: Detonation chambers, also known as dynamic execution environments, allow organizations to open email attachments, execute untrusted or suspicious applications, and execute Universal Resource Locator (URL) requests in the safety of an isolated environment or virtualized sandbox. These protected and isolated execution environments provide a means of determining whether the associated attachments/applications contain malicious code. While related to the concept of deception nets, the control is not intended to maintain a long-term environment in which adversaries can operate and their actions can be observed. Rather, it is intended to quickly identify malicious code and reduce the likelihood that the code is propagated to user environments of operation (or prevent such propagation completely). Related controls: SC-7, SC-25, SC-26, SC-30.

Control Enhancements: None.

References: None.

FAMILY: SYSTEM AND INFORMATION INTEGRITY

SI-1 SYSTEM AND INFORMATION INTEGRITY POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. A system and information integrity policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the system and information integrity policy and associated system and information integrity controls; and

b. Reviews and updates the current:

   1. System and information integrity policy [*Assignment: organization-defined frequency*]; and

   2. System and information integrity procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the SI family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

Priority and Baseline Allocation:

P1	**LOW** SI-1	**MOD** SI-1	**HIGH** SI-1

SI-2 FLAW REMEDIATION

Control: The organization:

a. Identifies, reports, and corrects information system flaws;

b. Tests software and firmware updates related to flaw remediation for effectiveness and potential side effects before installation;

c. Installs security-relevant software and firmware updates within [*Assignment: organization-defined time period*] of the release of the updates; and

d. Incorporates flaw remediation into the organizational configuration management process.

Supplemental Guidance: Organizations identify information systems affected by announced software flaws including potential vulnerabilities resulting from those flaws, and report this information to designated organizational personnel with information security responsibilities. Security-relevant software updates include, for example, patches, service packs, hot fixes, and anti-virus signatures. Organizations also address flaws discovered during security assessments,

continuous monitoring, incident response activities, and system error handling. Organizations take advantage of available resources such as the Common Weakness Enumeration (CWE) or Common Vulnerabilities and Exposures (CVE) databases in remediating flaws discovered in organizational information systems. By incorporating flaw remediation into ongoing configuration management processes, required/anticipated remediation actions can be tracked and verified. Flaw remediation actions that can be tracked and verified include, for example, determining whether organizations follow US-CERT guidance and Information Assurance Vulnerability Alerts. Organization-defined time periods for updating security-relevant software and firmware may vary based on a variety of factors including, for example, the security category of the information system or the criticality of the update (i.e., severity of the vulnerability related to the discovered flaw). Some types of flaw remediation may require more testing than other types. Organizations determine the degree and type of testing needed for the specific type of flaw remediation activity under consideration and also the types of changes that are to be configuration-managed. In some situations, organizations may determine that the testing of software and/or firmware updates is not necessary or practical, for example, when implementing simple anti-virus signature updates. Organizations may also consider in testing decisions, whether security-relevant software or firmware updates are obtained from authorized sources with appropriate digital signatures. Related controls: CA-2, CA-7, CM-3, CM-5, CM-8, MA-2, IR-4, RA-5, SA-10, SA-11, SI-11.

Control Enhancements:

(1) *FLAW REMEDIATION | CENTRAL MANAGEMENT*

The organization centrally manages the flaw remediation process.

Supplemental Guidance: Central management is the organization-wide management and implementation of flaw remediation processes. Central management includes planning, implementing, assessing, authorizing, and monitoring the organization-defined, centrally managed flaw remediation security controls.

(2) *FLAW REMEDIATION | AUTOMATED FLAW REMEDIATION STATUS*

The organization employs automated mechanisms [*Assignment: organization-defined frequency*] to determine the state of information system components with regard to flaw remediation.

Supplemental Guidance: Related controls: CM-6, SI-4.

(3) *FLAW REMEDIATION | TIME TO REMEDIATE FLAWS / BENCHMARKS FOR CORRECTIVE ACTIONS*

The organization:

(a) Measures the time between flaw identification and flaw remediation; and

(b) Establishes [*Assignment: organization-defined benchmarks*] for taking corrective actions.

Supplemental Guidance: This control enhancement requires organizations to determine the current time it takes on the average to correct information system flaws after such flaws have been identified, and subsequently establish organizational benchmarks (i.e., time frames) for taking corrective actions. Benchmarks can be established by type of flaw and/or severity of the potential vulnerability if the flaw can be exploited.

(4) *FLAW REMEDIATION | AUTOMATED PATCH MANAGEMENT TOOLS*

[Withdrawn: Incorporated into SI-2].

(5) *FLAW REMEDIATION | AUTOMATIC SOFTWARE / FIRMWARE UPDATES*

The organization installs [*Assignment: organization-defined security-relevant software and firmware updates*] automatically to [*Assignment: organization-defined information system components*].

Supplemental Guidance: Due to information system integrity and availability concerns, organizations give careful consideration to the methodology used to carry out automatic updates. Organizations must balance the need to ensure that the updates are installed as soon as possible with the need to maintain configuration management and with any mission or operational impacts that automatic updates might impose.

(6) *FLAW REMEDIATION | REMOVAL OF PREVIOUS VERSIONS OF SOFTWARE / FIRMWARE*

The organization removes [*Assignment: organization-defined software and firmware components*] after updated versions have been installed.

Supplemental Guidance: Previous versions of software and/or firmware components that are not removed from the information system after updates have been installed may be exploited by adversaries. Some information technology products may remove older versions of software and/or firmware automatically from the information system.

References: NIST Special Publications 800-40, 800-128.

Priority and Baseline Allocation:

SI-3 MALICIOUS CODE PROTECTION

Control: The organization:

a. Employs malicious code protection mechanisms at information system entry and exit points to detect and eradicate malicious code;

b. Updates malicious code protection mechanisms whenever new releases are available in accordance with organizational configuration management policy and procedures;

c. Configures malicious code protection mechanisms to:

1. Perform periodic scans of the information system [*Assignment: organization-defined frequency*] and real-time scans of files from external sources at [*Selection (one or more); endpoint; network entry/exit points*] as the files are downloaded, opened, or executed in accordance with organizational security policy; and

2. [*Selection (one or more): block malicious code; quarantine malicious code; send alert to administrator;* [*Assignment: organization-defined action*]] in response to malicious code detection; and

d. Addresses the receipt of false positives during malicious code detection and eradication and the resulting potential impact on the availability of the information system.

Supplemental Guidance: Information system entry and exit points include, for example, firewalls, electronic mail servers, web servers, proxy servers, remote-access servers, workstations, notebook computers, and mobile devices. Malicious code includes, for example, viruses, worms, Trojan horses, and spyware. Malicious code can also be encoded in various formats (e.g., UUENCODE, Unicode), contained within compressed or hidden files, or hidden in files using steganography. Malicious code can be transported by different means including, for example, web accesses, electronic mail, electronic mail attachments, and portable storage devices. Malicious code insertions occur through the exploitation of information system vulnerabilities. Malicious code protection mechanisms include, for example, anti-virus signature definitions and reputation-based technologies. A variety of technologies and methods exist to limit or eliminate the effects of malicious code. Pervasive configuration management and comprehensive software integrity controls may be effective in preventing execution of unauthorized code. In addition to commercial off-the-shelf software, malicious code may also be present in custom-built software. This could include, for example, logic bombs, back doors, and other types of cyber attacks that could affect organizational missions/business functions. Traditional malicious code protection mechanisms cannot always detect such code. In these situations, organizations rely instead on other safeguards including, for example, secure coding practices, configuration management and control, trusted procurement processes, and monitoring practices to help ensure that software does not perform functions other than the functions intended. Organizations may determine that in response to the detection of malicious code, different actions may be warranted. For example, organizations can define actions in response to malicious code detection during periodic scans, actions in response to detection of malicious downloads, and/or actions in response to detection of maliciousness when attempting to open or execute files. Related controls: CM-3, MP-2, SA-4, SA-8, SA-12, SA-13, SC-7, SC-26, SC-44, SI-2, SI-4, SI-7.

Control Enhancements:

(1) *MALICIOUS CODE PROTECTION | CENTRAL MANAGEMENT*

The organization centrally manages malicious code protection mechanisms.

Supplemental Guidance: Central management is the organization-wide management and implementation of malicious code protection mechanisms. Central management includes planning, implementing, assessing, authorizing, and monitoring the organization-defined, centrally managed flaw malicious code protection security controls. Related controls: AU-2, SI-8.

(2) *MALICIOUS CODE PROTECTION | AUTOMATIC UPDATES*

The information system automatically updates malicious code protection mechanisms.

Supplemental Guidance: Malicious code protection mechanisms include, for example, signature definitions. Due to information system integrity and availability concerns, organizations give careful consideration to the methodology used to carry out automatic updates. Related control: SI-8.

(3) *MALICIOUS CODE PROTECTION | NON-PRIVILEGED USERS*

[Withdrawn: Incorporated into AC-6 (10)].

(4) *MALICIOUS CODE PROTECTION | UPDATES ONLY BY PRIVILEGED USERS*

The information system updates malicious code protection mechanisms only when directed by a privileged user.

Supplemental Guidance: This control enhancement may be appropriate for situations where for reasons of security or operational continuity, updates are only applied when selected/approved by designated organizational personnel. Related controls: AC-6, CM-5.

(5) *MALICIOUS CODE PROTECTION | PORTABLE STORAGE DEVICES*

[Withdrawn: Incorporated into MP-7].

(6) *MALICIOUS CODE PROTECTION | TESTING / VERIFICATION*

The organization:

(a) Tests malicious code protection mechanisms [*Assignment: organization-defined frequency*] by introducing a known benign, non-spreading test case into the information system; and

(b) Verifies that both detection of the test case and associated incident reporting occur.

Supplemental Guidance: Related controls: CA-2, CA-7, RA-5.

(7) *MALICIOUS CODE PROTECTION | NONSIGNATURE-BASED DETECTION*

The information system implements nonsignature-based malicious code detection mechanisms.

Supplemental Guidance: Nonsignature-based detection mechanisms include, for example, the use of heuristics to detect, analyze, and describe the characteristics or behavior of malicious code and to provide safeguards against malicious code for which signatures do not yet exist or for which existing signatures may not be effective. This includes polymorphic malicious code (i.e., code that changes signatures when it replicates). This control enhancement does not preclude the use of signature-based detection mechanisms.

(8) *MALICIOUS CODE PROTECTION | DETECT UNAUTHORIZED COMMANDS*

The information system detects [*Assignment: organization-defined unauthorized operating system commands*] through the kernel application programming interface at [*Assignment: organization-defined information system hardware components*] and [*Selection (one or more): issues a warning; audits the command execution; prevents the execution of the command*].

Supplemental Guidance: This control enhancement can also be applied to critical interfaces other than kernel-based interfaces, including for example, interfaces with virtual machines and privileged applications. Unauthorized operating system commands include, for example, commands for kernel functions from information system processes that are not trusted to initiate such commands, or commands for kernel functions that are suspicious even though commands of that type are reasonable for processes to initiate. Organizations can define the malicious commands to be detected by a combination of command types, command classes, or specific instances of commands. Organizations can define hardware components by specific component, component type, location in the network, or combination therein.

Organizations may select different actions for different types/classes/specific instances of potentially malicious commands. Related control: AU-6.

(9) *MALICIOUS CODE PROTECTION | AUTHENTICATE REMOTE COMMANDS*

The information system implements [*Assignment: organization-defined security safeguards*] to authenticate [*Assignment: organization-defined remote commands*].

Supplemental Guidance: This control enhancement protects against unauthorized commands and replay of authorized commands. This capability is important for those remote information systems whose loss, malfunction, misdirection, or exploitation would have immediate and/or serious consequences (e.g., injury or death, property damage, loss of high-valued assets or sensitive information, or failure of important missions/business functions). Authentication safeguards for remote commands help to ensure that information systems accept and execute in the order intended, only authorized commands, and that unauthorized commands are rejected. Cryptographic mechanisms can be employed, for example, to authenticate remote commands. Related controls: SC-12, SC-13, SC-23.

(10) *MALICIOUS CODE PROTECTION | MALICIOUS CODE ANALYSIS*

The organization:

(a) Employs [*Assignment: organization-defined tools and techniques*] to analyze the characteristics and behavior of malicious code; and

(b) Incorporates the results from malicious code analysis into organizational incident response and flaw remediation processes.

Supplemental Guidance: The application of selected malicious code analysis tools and techniques provides organizations with a more in-depth understanding of adversary tradecraft (i.e., tactics, techniques, and procedures) and the functionality and purpose of specific instances of malicious code. Understanding the characteristics of malicious code facilitates more effective organizational responses to current and future threats. Organizations can conduct malicious code analyses by using reverse engineering techniques or by monitoring the behavior of executing code.

References: NIST Special Publication 800-83.

Priority and Baseline Allocation:

P1	**LOW** SI-3	**MOD** SI-3 (1) (2)	**HIGH** SI-3 (1) (2)

SI-4 INFORMATION SYSTEM MONITORING

Control: The organization:

a. Monitors the information system to detect:

1. Attacks and indicators of potential attacks in accordance with [*Assignment: organization-defined monitoring objectives*]; and

2. Unauthorized local, network, and remote connections;

b. Identifies unauthorized use of the information system through [*Assignment: organization-defined techniques and methods*];

c. Deploys monitoring devices: (i) strategically within the information system to collect organization-determined essential information; and (ii) at ad hoc locations within the system to track specific types of transactions of interest to the organization;

d. Protects information obtained from intrusion-monitoring tools from unauthorized access, modification, and deletion;

e. Heightens the level of information system monitoring activity whenever there is an indication of increased risk to organizational operations and assets, individuals, other organizations, or

the Nation based on law enforcement information, intelligence information, or other credible sources of information;

f. Obtains legal opinion with regard to information system monitoring activities in accordance with applicable federal laws, Executive Orders, directives, policies, or regulations; and

g. Provides [*Assignment: organization-defined information system monitoring information*] to [*Assignment: organization-defined personnel or roles*] [*Selection (one or more): as needed;* [*Assignment: organization-defined frequency*]].

Supplemental Guidance: Information system monitoring includes external and internal monitoring. External monitoring includes the observation of events occurring at the information system boundary (i.e., part of perimeter defense and boundary protection). Internal monitoring includes the observation of events occurring within the information system. Organizations can monitor information systems, for example, by observing audit activities in real time or by observing other system aspects such as access patterns, characteristics of access, and other actions. The monitoring objectives may guide determination of the events. Information system monitoring capability is achieved through a variety of tools and techniques (e.g., intrusion detection systems, intrusion prevention systems, malicious code protection software, scanning tools, audit record monitoring software, network monitoring software). Strategic locations for monitoring devices include, for example, selected perimeter locations and near server farms supporting critical applications, with such devices typically being employed at the managed interfaces associated with controls SC-7 and AC-17. Einstein network monitoring devices from the Department of Homeland Security can also be included as monitoring devices. The granularity of monitoring information collected is based on organizational monitoring objectives and the capability of information systems to support such objectives. Specific types of transactions of interest include, for example, Hyper Text Transfer Protocol (HTTP) traffic that bypasses HTTP proxies. Information system monitoring is an integral part of organizational continuous monitoring and incident response programs. Output from system monitoring serves as input to continuous monitoring and incident response programs. A network connection is any connection with a device that communicates through a network (e.g., local area network, Internet). A remote connection is any connection with a device communicating through an external network (e.g., the Internet). Local, network, and remote connections can be either wired or wireless. Related controls: AC-3, AC-4, AC-8, AC-17, AU-2, AU-6, AU-7, AU-9, AU-12, CA-7, IR-4, PE-3, RA-5, SC-7, SC-26, SC-35, SI-3, SI-7.

Control Enhancements:

(1) *INFORMATION SYSTEM MONITORING | SYSTEM-WIDE INTRUSION DETECTION SYSTEM*

The organization connects and configures individual intrusion detection tools into an information system-wide intrusion detection system.

(2) *INFORMATION SYSTEM MONITORING | AUTOMATED TOOLS FOR REAL-TIME ANALYSIS*

The organization employs automated tools to support near real-time analysis of events.

Supplemental Guidance: Automated tools include, for example, host-based, network-based, transport-based, or storage-based event monitoring tools or Security Information and Event Management (SIEM) technologies that provide real time analysis of alerts and/or notifications generated by organizational information systems.

(3) *INFORMATION SYSTEM MONITORING | AUTOMATED TOOL INTEGRATION*

The organization employs automated tools to integrate intrusion detection tools into access control and flow control mechanisms for rapid response to attacks by enabling reconfiguration of these mechanisms in support of attack isolation and elimination.

(4) *INFORMATION SYSTEM MONITORING | INBOUND AND OUTBOUND COMMUNICATIONS TRAFFIC*

The information system monitors inbound and outbound communications traffic [*Assignment: organization-defined frequency*] for unusual or unauthorized activities or conditions.

Supplemental Guidance: Unusual/unauthorized activities or conditions related to information system inbound and outbound communications traffic include, for example, internal traffic that indicates the presence of malicious code within organizational information systems or propagating among system components, the unauthorized exporting of information, or

signaling to external information systems. Evidence of malicious code is used to identify potentially compromised information systems or information system components.

(5) *INFORMATION SYSTEM MONITORING | SYSTEM-GENERATED ALERTS*

The information system alerts [*Assignment: organization-defined personnel or roles*] when the following indications of compromise or potential compromise occur: [*Assignment: organization-defined compromise indicators*].

Supplemental Guidance: Alerts may be generated from a variety of sources, including, for example, audit records or inputs from malicious code protection mechanisms, intrusion detection or prevention mechanisms, or boundary protection devices such as firewalls, gateways, and routers. Alerts can be transmitted, for example, telephonically, by electronic mail messages, or by text messaging. Organizational personnel on the notification list can include, for example, system administrators, mission/business owners, system owners, or information system security officers. Related controls: AU-5, PE-6.

(6) *INFORMATION SYSTEM MONITORING | RESTRICT NON-PRIVILEGED USERS*

[Withdrawn: Incorporated into AC-6 (10)].

(7) *INFORMATION SYSTEM MONITORING | AUTOMATED RESPONSE TO SUSPICIOUS EVENTS*

The information system notifies [*Assignment: organization-defined incident response personnel (identified by name and/or by role)*] of detected suspicious events and takes [*Assignment: organization-defined least-disruptive actions to terminate suspicious events*].

Supplemental Guidance: Least-disruptive actions may include, for example, initiating requests for human responses.

(8) *INFORMATION SYSTEM MONITORING | PROTECTION OF MONITORING INFORMATION*

[Withdrawn: Incorporated into SI-4].

(9) *INFORMATION SYSTEM MONITORING | TESTING OF MONITORING TOOLS*

The organization tests intrusion-monitoring tools [*Assignment: organization-defined frequency*].

Supplemental Guidance: Testing intrusion-monitoring tools is necessary to ensure that the tools are operating correctly and continue to meet the monitoring objectives of organizations. The frequency of testing depends on the types of tools used by organizations and methods of deployment. Related control: CP-9.

(10) *INFORMATION SYSTEM MONITORING | VISIBILITY OF ENCRYPTED COMMUNICATIONS*

The organization makes provisions so that [*Assignment: organization-defined encrypted communications traffic*] is visible to [*Assignment: organization-defined information system monitoring tools*].

Supplemental Guidance: Organizations balance the potentially conflicting needs for encrypting communications traffic and for having insight into such traffic from a monitoring perspective. For some organizations, the need to ensure the confidentiality of communications traffic is paramount; for others, mission-assurance is of greater concern. Organizations determine whether the visibility requirement applies to internal encrypted traffic, encrypted traffic intended for external destinations, or a subset of the traffic types.

(11) *INFORMATION SYSTEM MONITORING | ANALYZE COMMUNICATIONS TRAFFIC ANOMALIES*

The organization analyzes outbound communications traffic at the external boundary of the information system and selected [*Assignment: organization-defined interior points within the system (e.g., subnetworks, subsystems)*] to discover anomalies.

Supplemental Guidance: Anomalies within organizational information systems include, for example, large file transfers, long-time persistent connections, unusual protocols and ports in use, and attempted communications with suspected malicious external addresses.

(12) *INFORMATION SYSTEM MONITORING | AUTOMATED ALERTS*

The organization employs automated mechanisms to alert security personnel of the following inappropriate or unusual activities with security implications: [*Assignment: organization-defined activities that trigger alerts*].

Supplemental Guidance: This control enhancement focuses on the security alerts generated by organizations and transmitted using automated means. In contrast to the alerts generated by information systems in SI-4 (5), which tend to focus on information sources internal to the

systems (e.g., audit records), the sources of information for this enhancement can include other entities as well (e.g., suspicious activity reports, reports on potential insider threats). Related controls: AC-18, IA-3.

(13) *INFORMATION SYSTEM MONITORING | ANALYZE TRAFFIC / EVENT PATTERNS*

The organization:

(a) Analyzes communications traffic/event patterns for the information system;

(b) Develops profiles representing common traffic patterns and/or events; and

(c) Uses the traffic/event profiles in tuning system-monitoring devices to reduce the number of false positives and the number of false negatives.

(14) *INFORMATION SYSTEM MONITORING | WIRELESS INTRUSION DETECTION*

The organization employs a wireless intrusion detection system to identify rogue wireless devices and to detect attack attempts and potential compromises/breaches to the information system.

Supplemental Guidance: Wireless signals may radiate beyond the confines of organization-controlled facilities. Organizations proactively search for unauthorized wireless connections including the conduct of thorough scans for unauthorized wireless access points. Scans are not limited to those areas within facilities containing information systems, but also include areas outside of facilities as needed, to verify that unauthorized wireless access points are not connected to the systems. Related controls: AC-18, IA-3.

(15) *INFORMATION SYSTEM MONITORING | WIRELESS TO WIRELINE COMMUNICATIONS*

The organization employs an intrusion detection system to monitor wireless communications traffic as the traffic passes from wireless to wireline networks.

Supplemental Guidance: Related control: AC-18.

(16) *INFORMATION SYSTEM MONITORING | CORRELATE MONITORING INFORMATION*

The organization correlates information from monitoring tools employed throughout the information system.

Supplemental Guidance: Correlating information from different monitoring tools can provide a more comprehensive view of information system activity. The correlation of monitoring tools that usually work in isolation (e.g., host monitoring, network monitoring, anti-virus software) can provide an organization-wide view and in so doing, may reveal otherwise unseen attack patterns. Understanding the capabilities/limitations of diverse monitoring tools and how to maximize the utility of information generated by those tools can help organizations to build, operate, and maintain effective monitoring programs. Related control: AU-6.

(17) *INFORMATION SYSTEM MONITORING | INTEGRATED SITUATIONAL AWARENESS*

The organization correlates information from monitoring physical, cyber, and supply chain activities to achieve integrated, organization-wide situational awareness.

Supplemental Guidance: This control enhancement correlates monitoring information from a more diverse set of information sources to achieve integrated situational awareness. Integrated situational awareness from a combination of physical, cyber, and supply chain monitoring activities enhances the capability of organizations to more quickly detect sophisticated cyber attacks and investigate the methods and techniques employed to carry out such attacks. In contrast to SI-4 (16) which correlates the various cyber monitoring information, this control enhancement correlates monitoring beyond just the cyber domain. Such monitoring may help reveal attacks on organizations that are operating across multiple attack vectors. Related control: SA-12.

(18) *INFORMATION SYSTEM MONITORING | ANALYZE TRAFFIC / COVERT EXFILTRATION*

The organization analyzes outbound communications traffic at the external boundary of the information system (i.e., system perimeter) and at [*Assignment: organization-defined interior points within the system (e.g., subsystems, subnetworks)*] to detect covert exfiltration of information.

Supplemental Guidance: Covert means that can be used for the unauthorized exfiltration of organizational information include, for example, steganography.

(19) *INFORMATION SYSTEM MONITORING | INDIVIDUALS POSING GREATER RISK*

The organization implements [*Assignment: organization-defined additional monitoring*] of individuals who have been identified by [*Assignment: organization-defined sources*] as posing an increased level of risk.

Supplemental Guidance: Indications of increased risk from individuals can be obtained from a variety of sources including, for example, human resource records, intelligence agencies, law enforcement organizations, and/or other credible sources. The monitoring of individuals is closely coordinated with management, legal, security, and human resources officials within organizations conducting such monitoring and complies with federal legislation, Executive Orders, policies, directives, regulations, and standards.

(20) *INFORMATION SYSTEM MONITORING | PRIVILEGED USER*

The organization implements [*Assignment: organization-defined additional monitoring*] of privileged users.

(21) *INFORMATION SYSTEM MONITORING | PROBATIONARY PERIODS*

The organization implements [*Assignment: organization-defined additional monitoring*] of individuals during [*Assignment: organization-defined probationary period*].

(22) *INFORMATION SYSTEM MONITORING | UNAUTHORIZED NETWORK SERVICES*

The information system detects network services that have not been authorized or approved by [*Assignment: organization-defined authorization or approval processes*] and [*Selection (one or more): audits; alerts* [*Assignment: organization-defined personnel or roles*]].

Supplemental Guidance: Unauthorized or unapproved network services include, for example, services in service-oriented architectures that lack organizational verification or validation and therefore may be unreliable or serve as malicious rogues for valid services. Related controls: AC-6, CM-7, SA-5, SA-9.

(23) *INFORMATION SYSTEM MONITORING | HOST-BASED DEVICES*

The organization implements [*Assignment: organization-defined host-based monitoring mechanisms*] at [*Assignment: organization-defined information system components*].

Supplemental Guidance: Information system components where host-based monitoring can be implemented include, for example, servers, workstations, and mobile devices. Organizations consider employing host-based monitoring mechanisms from multiple information technology product developers.

(24) *INFORMATION SYSTEM MONITORING | INDICATORS OF COMPROMISE*

The information system discovers, collects, distributes, and uses indicators of compromise.

Supplemental Guidance: Indicators of compromise (IOC) are forensic artifacts from intrusions that are identified on organizational information systems (at the host or network level). IOCs provide organizations with valuable information on objects or information systems that have been compromised. IOCs for the discovery of compromised hosts can include for example, the creation of registry key values. IOCs for network traffic include, for example, Universal Resource Locator (URL) or protocol elements that indicate malware command and control servers. The rapid distribution and adoption of IOCs can improve information security by reducing the time that information systems and organizations are vulnerable to the same exploit or attack.

Priority and Baseline Allocation:

P1	**LOW** SI-4	**MOD** SI-4 (2) (4) (5)	**HIGH** SI-4 (2) (4) (5)

SI-5 SECURITY ALERTS, ADVISORIES, AND DIRECTIVES

Control: The organization:

a. Receives information system security alerts, advisories, and directives from [*Assignment: organization-defined external organizations*] on an ongoing basis;

b. Generates internal security alerts, advisories, and directives as deemed necessary;

c. Disseminates security alerts, advisories, and directives to: [*Selection (one or more):* [*Assignment: organization-defined personnel or roles*]; [*Assignment: organization-defined elements within the organization*]; [*Assignment: organization-defined external organizations*]]; and

d. Implements security directives in accordance with established time frames, or notifies the issuing organization of the degree of noncompliance.

Supplemental Guidance: The United States Computer Emergency Readiness Team (US-CERT) generates security alerts and advisories to maintain situational awareness across the federal government. Security directives are issued by OMB or other designated organizations with the responsibility and authority to issue such directives. Compliance to security directives is essential due to the critical nature of many of these directives and the potential immediate adverse effects on organizational operations and assets, individuals, other organizations, and the Nation should the directives not be implemented in a timely manner. External organizations include, for example, external mission/business partners, supply chain partners, external service providers, and other peer/supporting organizations. Related control: SI-2.

Control Enhancements:

(1) *SECURITY ALERTS, ADVISORIES, AND DIRECTIVES | AUTOMATED ALERTS AND ADVISORIES*

The organization employs automated mechanisms to make security alert and advisory information available throughout the organization.

Supplemental Guidance: The significant number of changes to organizational information systems and the environments in which those systems operate requires the dissemination of security-related information to a variety of organizational entities that have a direct interest in the success of organizational missions and business functions. Based on the information provided by the security alerts and advisories, changes may be required at one or more of the three tiers related to the management of information security risk including the governance level, mission/business process/enterprise architecture level, and the information system level.

Priority and Baseline Allocation:

P1	**LOW** SI-5	**MOD** SI-5	**HIGH** SI-5 (1)

SI-6 SECURITY FUNCTION VERIFICATION

Control: The information system:

a. Verifies the correct operation of [*Assignment: organization-defined security functions*];

b. Performs this verification [*Selection (one or more):* [*Assignment: organization-defined system transitional states*]*; upon command by user with appropriate privilege;* [*Assignment: organization-defined frequency*]];

c. Notifies [*Assignment: organization-defined personnel or roles*] of failed security verification tests; and

d. [*Selection (one or more): shuts the information system down; restarts the information system;* [*Assignment: organization-defined alternative action(s)*]] when anomalies are discovered.

Supplemental Guidance: Transitional states for information systems include, for example, system startup, restart, shutdown, and abort. Notifications provided by information systems include, for example, electronic alerts to system administrators, messages to local computer consoles, and/or hardware indications such as lights. Related controls: CA-7, CM-6.

Control Enhancements:

(1) *SECURITY FUNCTION VERIFICATION | NOTIFICATION OF FAILED SECURITY TESTS*

[Withdrawn: Incorporated into SI-6].

(2) *SECURITY FUNCTION VERIFICATION | AUTOMATION SUPPORT FOR DISTRIBUTED TESTING*

The information system implements automated mechanisms to support for the management of distributed security testing.

Supplemental Guidance: Related control: SI-2.

(3) *SECURITY FUNCTION VERIFICATION | REPORT VERIFICATION RESULTS*

The organization reports the results of security function verification to [*Assignment: organization-defined personnel or roles*].

Supplemental Guidance: Organizational personnel with potential interest in security function verification results include, for example, senior information security officers, information system security managers, and information systems security officers. Related controls: SA-12, SI-4, SI-5.

References: None.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** Not Selected	**HIGH** SI-6

SI-7 SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY

Control: The organization employs integrity verification tools to detect unauthorized changes to [*Assignment: organization-defined software, firmware, and information*].

Supplemental Guidance: Unauthorized changes to software, firmware, and information can occur due to errors or malicious activity (e.g., tampering). Software includes, for example, operating systems (with key internal components such as kernels, drivers), middleware, and applications. Firmware includes, for example, the Basic Input Output System (BIOS). Information includes metadata such as security attributes associated with information. State-of-the-practice integrity-checking mechanisms (e.g., parity checks, cyclical redundancy checks, cryptographic hashes) and associated tools can automatically monitor the integrity of information systems and hosted applications. Related controls: SA-12, SC-8, SC-13, SI-3.

Control Enhancements:

(1) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | INTEGRITY CHECKS*

The information system performs an integrity check of [*Assignment: organization-defined software, firmware, and information*] [*Selection (one or more):* **at startup; at [*Assignment: organization-defined transitional states or security-relevant events*]; [*Assignment: organization-defined frequency*]].

Supplemental Guidance: Security-relevant events include, for example, the identification of a new threat to which organizational information systems are susceptible, and the installation of new hardware, software, or firmware. Transitional states include, for example, system startup, restart, shutdown, and abort.

(2) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | AUTOMATED NOTIFICATIONS OF INTEGRITY VIOLATIONS*

The organization employs automated tools that provide notification to [*Assignment: organization-defined personnel or roles*] upon discovering discrepancies during integrity verification.

Supplemental Guidance: The use of automated tools to report integrity violations and to notify organizational personnel in a timely matter is an essential precursor to effective risk response.

Personnel having an interest in integrity violations include, for example, mission/business owners, information system owners, systems administrators, software developers, systems integrators, and information security officers.

(3) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | CENTRALLY-MANAGED INTEGRITY TOOLS*

The organization employs centrally managed integrity verification tools.

Supplemental Guidance: Related controls: AU-3, SI-2, SI-8.

(4) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | TAMPER-EVIDENT PACKAGING*

[Withdrawn: Incorporated into SA-12].

(5) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | AUTOMATED RESPONSE TO INTEGRITY VIOLATIONS*

The information system automatically [*Selection (one or more): shuts the information system down; restarts the information system; implements* [*Assignment: organization-defined security safeguards*]] when integrity violations are discovered.

Supplemental Guidance: Organizations may define different integrity checking and anomaly responses: (i) by type of information (e.g., firmware, software, user data); (ii) by specific information (e.g., boot firmware, boot firmware for a specific types of machines); or (iii) a combination of both. Automatic implementation of specific safeguards within organizational information systems includes, for example, reversing the changes, halting the information system, or triggering audit alerts when unauthorized modifications to critical security files occur.

(6) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | CRYPTOGRAPHIC PROTECTION*

The information system implements cryptographic mechanisms to detect unauthorized changes to software, firmware, and information.

Supplemental Guidance: Cryptographic mechanisms used for the protection of integrity include, for example, digital signatures and the computation and application of signed hashes using asymmetric cryptography, protecting the confidentiality of the key used to generate the hash, and using the public key to verify the hash information. Related control: SC-13.

(7) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | INTEGRATION OF DETECTION AND RESPONSE*

The organization incorporates the detection of unauthorized [*Assignment: organization-defined security-relevant changes to the information system*] into the organizational incident response capability.

Supplemental Guidance: This control enhancement helps to ensure that detected events are tracked, monitored, corrected, and available for historical purposes. Maintaining historical records is important both for being able to identify and discern adversary actions over an extended period of time and for possible legal actions. Security-relevant changes include, for example, unauthorized changes to established configuration settings or unauthorized elevation of information system privileges. Related controls: IR-4, IR-5, SI-4.

(8) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | AUDITING CAPABILITY FOR SIGNIFICANT EVENTS*

The information system, upon detection of a potential integrity violation, provides the capability to audit the event and initiates the following actions: [*Selection (one or more): generates an audit record; alerts current user; alerts* [*Assignment: organization-defined personnel or roles*]; [*Assignment: organization-defined other actions*]].

Supplemental Guidance: Organizations select response actions based on types of software, specific software, or information for which there are potential integrity violations. Related controls: AU-2, AU-6, AU-12.

(9) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | VERIFY BOOT PROCESS*

The information system verifies the integrity of the boot process of [*Assignment: organization-defined devices*].

Supplemental Guidance: Ensuring the integrity of boot processes is critical to starting devices in known/trustworthy states. Integrity verification mechanisms provide organizational personnel with assurance that only trusted code is executed during boot processes.

(10) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | PROTECTION OF BOOT FIRMWARE*

The information system implements [*Assignment: organization-defined security safeguards*] to protect the integrity of boot firmware in [*Assignment: organization-defined devices*].

Supplemental Guidance: Unauthorized modifications to boot firmware may be indicative of a sophisticated, targeted cyber attack. These types of cyber attacks can result in a permanent denial of service (e.g., if the firmware is corrupted) or a persistent malicious code presence (e.g., if code is embedded within the firmware). Devices can protect the integrity of the boot firmware in organizational information systems by: (i) verifying the integrity and authenticity of all updates to the boot firmware prior to applying changes to the boot devices; and (ii) preventing unauthorized processes from modifying the boot firmware.

(11) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | CONFINED ENVIRONMENTS WITH LIMITED PRIVILEGES*

The organization requires that [*Assignment: organization-defined user-installed software*] execute in a confined physical or virtual machine environment with limited privileges.

Supplemental Guidance: Organizations identify software that may be of greater concern with regard to origin or potential for containing malicious code. For this type of software, user installations occur in confined environments of operation to limit or contain damage from malicious code that may be executed.

(12) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | INTEGRITY VERIFICATION*

The organization requires that the integrity of [*Assignment: organization-defined user-installed software*] be verified prior to execution.

Supplemental Guidance: Organizations verify the integrity of user-installed software prior to execution to reduce the likelihood of executing malicious code or code that contains errors from unauthorized modifications. Organizations consider the practicality of approaches to verifying software integrity including, for example, availability of checksums of adequate trustworthiness from software developers or vendors.

(13) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | CODE EXECUTION IN PROTECTED ENVIRONMENTS*

The organization allows execution of binary or machine-executable code obtained from sources with limited or no warranty and without the provision of source code only in confined physical or virtual machine environments and with the explicit approval of [*Assignment: organization-defined personnel or roles*].

Supplemental Guidance: This control enhancement applies to all sources of binary or machine-executable code including, for example, commercial software/firmware and open source software.

(14) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | BINARY OR MACHINE EXECUTABLE CODE*

The organization:

(a) Prohibits the use of binary or machine-executable code from sources with limited or no warranty and without the provision of source code; and

(b) Provides exceptions to the source code requirement only for compelling mission/operational requirements and with the approval of the authorizing official.

Supplemental Guidance: This control enhancement applies to all sources of binary or machine-executable code including, for example, commercial software/firmware and open source software. Organizations assess software products without accompanying source code from sources with limited or no warranty for potential security impacts. The assessments address the fact that these types of software products may be very difficult to review, repair, or extend, given that organizations, in most cases, do not have access to the original source code, and there may be no owners who could make such repairs on behalf of organizations. Related control: SA-5.

(15) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | CODE AUTHENTICATION*

The information system implements cryptographic mechanisms to authenticate [*Assignment: organization-defined software or firmware components*] prior to installation.

Supplemental Guidance: Cryptographic authentication includes, for example, verifying that software or firmware components have been digitally signed using certificates recognized and approved by organizations. Code signing is an effective method to protect against malicious code.

(16) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | TIME LIMIT ON PROCESS EXECUTION W/O SUPERVISION*

The organization does not allow processes to execute without supervision for more than [*Assignment: organization-defined time period*].

Supplemental Guidance: This control enhancement addresses processes for which normal execution periods can be determined and situations in which organizations exceed such periods. Supervision includes, for example, operating system timers, automated responses, or manual oversight and response when information system process anomalies occur.

References: NIST Special Publications 800-147, 800-155.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** SI-7 (1) (7)	**HIGH** SI-7 (1) (2) (5) (7) (14)

SI-8 SPAM PROTECTION

Control: The organization:

a. Employs spam protection mechanisms at information system entry and exit points to detect and take action on unsolicited messages; and

b. Updates spam protection mechanisms when new releases are available in accordance with organizational configuration management policy and procedures.

Supplemental Guidance: Information system entry and exit points include, for example, firewalls, electronic mail servers, web servers, proxy servers, remote-access servers, workstations, mobile devices, and notebook/laptop computers. Spam can be transported by different means including, for example, electronic mail, electronic mail attachments, and web accesses. Spam protection mechanisms include, for example, signature definitions. Related controls: AT-2, AT-3, SC-5, SC-7, SI-3.

Control Enhancements:

(1) *SPAM PROTECTION | CENTRAL MANAGEMENT*

The organization centrally manages spam protection mechanisms.

Supplemental Guidance: Central management is the organization-wide management and implementation of spam protection mechanisms. Central management includes planning, implementing, assessing, authorizing, and monitoring the organization-defined, centrally managed spam protection security controls. Related controls: AU-3, SI-2, SI-7.

(2) *SPAM PROTECTION | AUTOMATIC UPDATES*

The information system automatically updates spam protection mechanisms.

(3) *SPAM PROTECTION | CONTINUOUS LEARNING CAPABILITY*

The information system implements spam protection mechanisms with a learning capability to more effectively identify legitimate communications traffic.

Supplemental Guidance: Learning mechanisms include, for example, Bayesian filters that respond to user inputs identifying specific traffic as spam or legitimate by updating algorithm parameters and thereby more accurately separating types of traffic.

References: NIST Special Publication 800-45.

Priority and Baseline Allocation:

P2	**LOW** Not Selected	**MOD** SI-8 (1) (2)	**HIGH** SI-8 (1) (2)

SI-9 INFORMATION INPUT RESTRICTIONS

[Withdrawn: Incorporated into AC-2, AC-3, AC-5, AC-6].

SI-10 INFORMATION INPUT VALIDATION

Control: The information system checks the validity of [*Assignment: organization-defined information inputs*].

Supplemental Guidance: Checking the valid syntax and semantics of information system inputs (e.g., character set, length, numerical range, and acceptable values) verifies that inputs match specified definitions for format and content. Software applications typically follow well-defined protocols that use structured messages (i.e., commands or queries) to communicate between software modules or system components. Structured messages can contain raw or unstructured data interspersed with metadata or control information. If software applications use attacker-supplied inputs to construct structured messages without properly encoding such messages, then the attacker could insert malicious commands or special characters that can cause the data to be interpreted as control information or metadata. Consequently, the module or component that receives the tainted output will perform the wrong operations or otherwise interpret the data incorrectly. Prescreening inputs prior to passing to interpreters prevents the content from being unintentionally interpreted as commands. Input validation helps to ensure accurate and correct inputs and prevent attacks such as cross-site scripting and a variety of injection attacks.

Control Enhancements:

(1) *INFORMATION INPUT VALIDATION | MANUAL OVERRIDE CAPABILITY*

The information system:

(a) Provides a manual override capability for input validation of [*Assignment: organization-defined inputs*];

(b) Restricts the use of the manual override capability to only [*Assignment: organization-defined authorized individuals*]; and

(c) Audits the use of the manual override capability.

Supplemental Guidance: Related controls: CM-3, CM-5.

(2) *INFORMATION INPUT VALIDATION | REVIEW / RESOLUTION OF ERRORS*

The organization ensures that input validation errors are reviewed and resolved within [*Assignment: organization-defined time period*].

Supplemental Guidance: Resolution of input validation errors includes, for example, correcting systemic causes of errors and resubmitting transactions with corrected input.

(3) *INFORMATION INPUT VALIDATION | PREDICTABLE BEHAVIOR*

The information system behaves in a predictable and documented manner that reflects organizational and system objectives when invalid inputs are received.

Supplemental Guidance: A common vulnerability in organizational information systems is unpredictable behavior when invalid inputs are received. This control enhancement ensures that there is predictable behavior in the face of invalid inputs by specifying information system responses that facilitate transitioning the system to known states without adverse, unintended side effects.

(4) *INFORMATION INPUT VALIDATION | REVIEW / TIMING INTERACTIONS*

The organization accounts for timing interactions among information system components in determining appropriate responses for invalid inputs.

Supplemental Guidance: In addressing invalid information system inputs received across protocol interfaces, timing interfaces become relevant, where one protocol needs to consider the impact of the error response on other protocols within the protocol stack. For example, 802.11 standard wireless network protocols do not interact well with Transmission Control Protocols (TCP) when packets are dropped (which could be due to invalid packet input). TCP assumes packet losses are due to congestion, while packets lost over 802.11 links are typically dropped due to collisions or noise on the link. If TCP makes a congestion response, it takes

precisely the wrong action in response to a collision event. Adversaries may be able to use apparently acceptable individual behaviors of the protocols in concert to achieve adverse effects through suitable construction of invalid input.

(5) *INFORMATION INPUT VALIDATION | RESTRICT INPUTS TO TRUSTED SOURCES AND APPROVED FORMATS*

The organization restricts the use of information inputs to [*Assignment: organization-defined trusted sources*] and/or [*Assignment: organization-defined formats*].

Supplemental Guidance: This control enhancement applies the concept of whitelisting to information inputs. Specifying known trusted sources for information inputs and acceptable formats for such inputs can reduce the probability of malicious activity.

References: None.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** SI-10	**HIGH** SI-10

SI-11 ERROR HANDLING

Control: The information system:

a. Generates error messages that provide information necessary for corrective actions without revealing information that could be exploited by adversaries; and

b. Reveals error messages only to [*Assignment: organization-defined personnel or roles*].

Supplemental Guidance: Organizations carefully consider the structure/content of error messages. The extent to which information systems are able to identify and handle error conditions is guided by organizational policy and operational requirements. Information that could be exploited by adversaries includes, for example, erroneous logon attempts with passwords entered by mistake as the username, mission/business information that can be derived from (if not stated explicitly by) information recorded, and personal information such as account numbers, social security numbers, and credit card numbers. In addition, error messages may provide a covert channel for transmitting information. Related controls: AU-2, AU-3, SC-31.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P2	**LOW** Not Selected	**MOD** SI-11	**HIGH** SI-11

SI-12 INFORMATION HANDLING AND RETENTION

Control: The organization handles and retains information within the information system and information output from the system in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and operational requirements.

Supplemental Guidance: Information handling and retention requirements cover the full life cycle of information, in some cases extending beyond the disposal of information systems. The National Archives and Records Administration provides guidance on records retention. Related controls: AC-16, AU-5, AU-11, MP-2, MP-4.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P2	**LOW** SI-12	**MOD** SI-12	**HIGH** SI-12

SI-13 PREDICTABLE FAILURE PREVENTION

Control: The organization:

a. Determines mean time to failure (MTTF) for [*Assignment: organization-defined information system components*] in specific environments of operation; and

b. Provides substitute information system components and a means to exchange active and standby components at [*Assignment: organization-defined MTTF substitution criteria*].

Supplemental Guidance: While MTTF is primarily a reliability issue, this control addresses potential failures of specific information system components that provide security capability. Failure rates reflect installation-specific consideration, not industry-average. Organizations define criteria for substitution of information system components based on MTTF value with consideration for resulting potential harm from component failures. Transfer of responsibilities between active and standby components does not compromise safety, operational readiness, or security capability (e.g., preservation of state variables). Standby components remain available at all times except for maintenance issues or recovery failures in progress. Related controls: CP-2, CP-10, MA-6.

Control Enhancements:

(1) *PREDICTABLE FAILURE PREVENTION | TRANSFERRING COMPONENT RESPONSIBILITIES*

The organization takes information system components out of service by transferring component responsibilities to substitute components no later than [*Assignment: organization-defined fraction or percentage*] of mean time to failure.

(2) *PREDICTABLE FAILURE PREVENTION | TIME LIMIT ON PROCESS EXECUTION WITHOUT SUPERVISION*

[Withdrawn: Incorporated into SI-7 (16)].

(3) *PREDICTABLE FAILURE PREVENTION | MANUAL TRANSFER BETWEEN COMPONENTS*

The organization manually initiates transfers between active and standby information system components [*Assignment: organization-defined frequency*] if the mean time to failure exceeds [*Assignment: organization-defined time period*].

(4) *PREDICTABLE FAILURE PREVENTION | STANDBY COMPONENT INSTALLATION / NOTIFICATION*

The organization, if information system component failures are detected:

(a) Ensures that the standby components are successfully and transparently installed within [*Assignment: organization-defined time period*]; and

(b) [*Selection (one or more): activates [Assignment: organization-defined alarm]; automatically shuts down the information system*].

Supplemental Guidance: Automatic or manual transfer of components from standby to active mode can occur, for example, upon detection of component failures.

(5) *PREDICTABLE FAILURE PREVENTION | FAILOVER CAPABILITY*

The organization provides [*Selection: real-time; near real-time*] [*Assignment: organization-defined failover capability*] for the information system.

Supplemental Guidance: Failover refers to the automatic switchover to an alternate information system upon the failure of the primary information system. Failover capability includes, for example, incorporating mirrored information system operations at alternate processing sites or periodic data mirroring at regular intervals defined by recovery time periods of organizations.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SI-14 NON-PERSISTENCE

Control: The organization implements non-persistent [*Assignment: organization-defined information system components and services*] that are initiated in a known state and terminated [*Selection (one or more): upon end of session of use; periodically at* [*Assignment: organization-defined frequency*]].

Supplemental Guidance: This control mitigates risk from advanced persistent threats (APTs) by significantly reducing the targeting capability of adversaries (i.e., window of opportunity and available attack surface) to initiate and complete cyber attacks. By implementing the concept of non-persistence for selected information system components, organizations can provide a known state computing resource for a specific period of time that does not give adversaries sufficient time on target to exploit vulnerabilities in organizational information systems and the environments in which those systems operate. Since the advanced persistent threat is a high-end threat with regard to capability, intent, and targeting, organizations assume that over an extended period of time, a percentage of cyber attacks will be successful. Non-persistent information system components and services are activated as required using protected information and terminated periodically or upon the end of sessions. Non-persistence increases the work factor of adversaries in attempting to compromise or breach organizational information systems.

Non-persistent system components can be implemented, for example, by periodically re-imaging components or by using a variety of common virtualization techniques. Non-persistent services can be implemented using virtualization techniques as part of virtual machines or as new instances of processes on physical machines (either persistent or non-persistent).The benefit of periodic refreshes of information system components/services is that it does not require organizations to first determine whether compromises of components or services have occurred (something that may often be difficult for organizations to determine). The refresh of selected information system components and services occurs with sufficient frequency to prevent the spread or intended impact of attacks, but not with such frequency that it makes the information system unstable. In some instances, refreshes of critical components and services may be done periodically in order to hinder the ability of adversaries to exploit optimum windows of vulnerabilities. Related controls: SC-30, SC-34.

Control Enhancements:

(1) *NON-PERSISTENCE | REFRESH FROM TRUSTED SOURCES*

The organization ensures that software and data employed during information system component and service refreshes are obtained from [*Assignment: organization-defined trusted sources*].

Supplemental Guidance: Trusted sources include, for example, software/data from write-once, read-only media or from selected off-line secure storage facilities.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SI-15 INFORMATION OUTPUT FILTERING

Control: The information system validates information output from [*Assignment: organization-defined software programs and/or applications*] to ensure that the information is consistent with the expected content.

Supplemental Guidance: Certain types of cyber attacks (e.g., SQL injections) produce output results that are unexpected or inconsistent with the output results that would normally be expected from software programs or applications. This control enhancement focuses on detecting extraneous content, preventing such extraneous content from being displayed, and alerting monitoring tools that anomalous behavior has been discovered. Related controls: SI-3, SI-4.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

SI-16 MEMORY PROTECTION

Control: The information system implements [*Assignment: organization-defined security safeguards*] to protect its memory from unauthorized code execution.

Supplemental Guidance: Some adversaries launch attacks with the intent of executing code in non-executable regions of memory or in memory locations that are prohibited. Security safeguards employed to protect memory include, for example, data execution prevention and address space layout randomization. Data execution prevention safeguards can either be hardware-enforced or software-enforced with hardware providing the greater strength of mechanism. Related controls: AC-25, SC-3.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** SI-16	**HIGH** SI-16

SI-17 FAIL-SAFE PROCEDURES

Control: The information system implements [*Assignment: organization-defined fail-safe procedures*] when [*Assignment: organization-defined failure conditions occur*].

Supplemental Guidance: Failure conditions include, for example, loss of communications among critical system components or between system components and operational facilities. Fail-safe procedures include, for example, alerting operator personnel and providing specific instructions on subsequent steps to take (e.g., do nothing, reestablish system settings, shut down processes, restart the system, or contact designated organizational personnel). Related controls: CP-12, CP-13, SC-24, SI-13.

Control Enhancements: None.

References: None.

APPENDIX G

INFORMATION SECURITY PROGRAMS

ORGANIZATION-WIDE INFORMATION SECURITY PROGRAM MANAGEMENT CONTROLS

The Federal Information Security Management Act (FISMA) requires organizations to develop and implement an organization-wide information security program to address information security for the information and information systems that support the operations and assets of the organization, including those provided or managed by another organization, contractor, or other source. The information security program management (PM) controls described in this appendix are typically implemented at the organization level and not directed at individual organizational information systems. The program management controls have been designed to facilitate compliance with applicable federal laws, Executive Orders, directives, policies, regulations, and standards. The controls are independent of any FIPS Publication 200 impact levels and therefore, are not directly associated with any of the security control baselines described in Appendix D. The program management controls do, however, complement the security controls in Appendix F and focus on the programmatic, organization-wide information security requirements that are independent of any particular information system and are essential for managing information security programs. Tailoring guidance can be applied to the program management controls in a manner similar to how the guidance is applied to security controls in Appendix F. Organizations specify the individual or individuals responsible and accountable for the development, implementation, assessment, authorization, and monitoring of the program management controls. Organizations document program management controls in the *information security program plan*. The organization-wide information security program plan supplements the individual security plans developed for each organizational information system. Together, the security plans for the individual information systems and the information security program cover the totality of security controls employed by the organization.

In addition to documenting the information security program management controls, the security program plan provides a vehicle for the organization, in a central repository, to document all security controls from Appendix F that have been designated as *common controls* (i.e., security controls inheritable by organizational information systems).[111] The information security program management controls and common controls contained in the information security program plan are implemented, assessed for effectiveness,[112] and authorized by a senior organizational official, with the same or similar authority and responsibility for managing risk as the authorization officials for information systems. Plans of action and milestones are developed and maintained for the program management and common controls that are deemed through assessment to be less than effective. Information security program management and common controls are also subject to the same continuous monitoring requirements as security controls employed in individual organizational information systems.

Table G-1 provides a summary of the security controls in the program management family from Appendix G. Organizations can use the recommended *priority code* designation associated with each program management control to assist in making sequencing decisions for implementation

[111] Common controls are those security controls that are inheritable by one or more organizational information systems, and thus are separate and distinct from information security program management controls.

[112] Assessment procedures for program management controls and common controls can be found in NIST Special Publication 800-53A.

(i.e., a Priority Code 1 [P1] control has a higher priority for implementation than a Priority Code 2 [P2] control; and a Priority Code 2 [P2] control has a higher priority for implementation than a Priority Code 3 [P3] control.

TABLE G-1: PROGRAM MANAGEMENT CONTROLS

CNTL NO.	CONTROL NAME	PRIORITY	INITIAL CONTROL BASELINES		
			LOW	MOD	HIGH
PM-1	Information Security Program Plan	P1	**Deployed organization-wide. Supporting information security program. Not associated with security control baselines. Independent of any system impact level.**		
PM-2	Senior Information Security Officer	P1

PM-5	Information System Inventory	P1			
PM-6	Information Security Measures of Performance	P1			
PM-7	Enterprise Architecture	P1			
PM-8	Critical Infrastructure Plan	P1			
PM-9	Risk Management Strategy	P1			
PM-10	Security Authorization Process	P1			
PM-11	Mission/Business Process Definition	P1			
PM-12	Insider Threat Program	P1			
PM-13	Information Security Workforce	P1			
PM-14	Testing, Training, and Monitoring	P1			
PM-15	Contacts with Security Groups and Associations	P3			
PM-16	Threat Awareness Program	P1			

Cautionary Note

Organizations are required to implement security program management controls to provide a foundation for the organizational information security program. The successful implementation of security controls for organizational information systems depends on the successful implementation of organization-wide program management controls. However, the manner in which organizations implement the program management controls depends on specific organizational characteristics including, for example, the size, complexity, and mission/business requirements of the respective organizations.

PM-1 INFORMATION SECURITY PROGRAM PLAN

Control: The organization:

a. Develops and disseminates an organization-wide information security program plan that:

   1. Provides an overview of the requirements for the security program and a description of the security program management controls and common controls in place or planned for meeting those requirements;

   2. Includes the identification and assignment of roles, responsibilities, management commitment, coordination among organizational entities, and compliance;

   3. Reflects coordination among organizational entities responsible for the different aspects of information security (i.e., technical, physical, personnel, cyber-physical); and

   4. Is approved by a senior official with responsibility and accountability for the risk being incurred to organizational operations (including mission, functions, image, and reputation), organizational assets, individuals, other organizations, and the Nation;

b. Reviews the organization-wide information security program plan [*Assignment: organization-defined frequency*];

c. Updates the plan to address organizational changes and problems identified during plan implementation or security control assessments; and

d. Protects the information security program plan from unauthorized disclosure and modification.

Supplemental Guidance: Information security program plans can be represented in single documents or compilations of documents at the discretion of organizations. The plans document the program management controls and organization-defined common controls. Information security program plans provide sufficient information about the program management controls/common controls (including specification of parameters for any *assignment* and *selection* statements either explicitly or by reference) to enable implementations that are unambiguously compliant with the intent of the plans and a determination of the risk to be incurred if the plans are implemented as intended.

The security plans for individual information systems and the organization-wide information security program plan together, provide complete coverage for all security controls employed within the organization. Common controls are documented in an appendix to the organization's information security program plan unless the controls are included in a separate security plan for an information system (e.g., security controls employed as part of an intrusion detection system providing organization-wide boundary protection inherited by one or more organizational information systems). The organization-wide information security program plan will indicate which separate security plans contain descriptions of common controls.

Organizations have the flexibility to describe common controls in a single document or in multiple documents. In the case of multiple documents, the documents describing common controls are included as attachments to the information security program plan. If the information security program plan contains multiple documents, the organization specifies in each document the organizational official or officials responsible for the development, implementation, assessment, authorization, and monitoring of the respective common controls. For example, the organization may require that the Facilities Management Office develop, implement, assess, authorize, and continuously monitor common physical and environmental protection controls from the PE family when such controls are not associated with a particular information system but instead, support multiple information systems. Related control: PM-8.

Control Enhancements: None.

References: None.

PM-2 SENIOR INFORMATION SECURITY OFFICER

Control: The organization appoints a senior information security officer with the mission and resources to coordinate, develop, implement, and maintain an organization-wide information security program.

Supplemental Guidance: The security officer described in this control is an organizational official. For a federal agency (as defined in applicable federal laws, Executive Orders, directives, policies, or regulations) this official is the Senior Agency Information Security Officer. Organizations may also refer to this official as the Senior Information Security Officer or Chief Information Security Officer.

Control Enhancements: None.

References: None.

PM-3 INFORMATION SECURITY RESOURCES

Control: The organization:

a. Ensures that all capital planning and investment requests include the resources needed to implement the information security program and documents all exceptions to this requirement;

b. Employs a business case/Exhibit 300/Exhibit 53 to record the resources required; and

c. Ensures that information security resources are available for expenditure as planned.

Supplemental Guidance: Organizations consider establishing champions for information security efforts and as part of including the necessary resources, assign specialized expertise and resources as needed. Organizations may designate and empower an Investment Review Board (or similar group) to manage and provide oversight for the information security-related aspects of the capital planning and investment control process. Related controls: PM-4, SA-2.

Control Enhancements: None.

References: NIST Special Publication 800-65.

PM-4 PLAN OF ACTION AND MILESTONES PROCESS

Control: The organization:

a. Implements a process for ensuring that plans of action and milestones for the security program and associated organizational information systems:

   1. Are developed and maintained;

   2. Document the remedial information security actions to adequately respond to risk to organizational operations and assets, individuals, other organizations, and the Nation; and

   3. Are reported in accordance with OMB FISMA reporting requirements.

b. Reviews plans of action and milestones for consistency with the organizational risk management strategy and organization-wide priorities for risk response actions.

Supplemental Guidance: The plan of action and milestones is a key document in the information security program and is subject to federal reporting requirements established by OMB. With the increasing emphasis on organization-wide risk management across all three tiers in the risk management hierarchy (i.e., organization, mission/business process, and information system), organizations view plans of action and milestones from an organizational perspective, prioritizing risk response actions and ensuring consistency with the goals and objectives of the organization. Plan of action and milestones updates are based on findings from security control assessments and

continuous monitoring activities. OMB FISMA reporting guidance contains instructions regarding organizational plans of action and milestones. Related control: CA-5.

Control Enhancements: None.

References: OMB Memorandum 02-01; NIST Special Publication 800-37.

PM-5 INFORMATION SYSTEM INVENTORY

Control: The organization develops and maintains an inventory of its information systems.

Supplemental Guidance: This control addresses the inventory requirements in FISMA. OMB provides guidance on developing information systems inventories and associated reporting requirements. For specific information system inventory reporting requirements, organizations consult OMB annual FISMA reporting guidance.

Control Enhancements: None.

References: Web: http://www.omb.gov.

PM-6 INFORMATION SECURITY MEASURES OF PERFORMANCE

Control: The organization develops, monitors, and reports on the results of information security measures of performance.

Supplemental Guidance: Measures of performance are outcome-based metrics used by an organization to measure the effectiveness or efficiency of the information security program and the security controls employed in support of the program.

Control Enhancements: None.

References: NIST Special Publication 800-55.

PM-7 ENTERPRISE ARCHITECTURE

Control: The organization develops an enterprise architecture with consideration for information security and the resulting risk to organizational operations, organizational assets, individuals, other organizations, and the Nation.

Supplemental Guidance: The enterprise architecture developed by the organization is aligned with the Federal Enterprise Architecture. The integration of information security requirements and associated security controls into the organization's enterprise architecture helps to ensure that security considerations are addressed by organizations early in the system development life cycle and are directly and explicitly related to the organization's mission/business processes. This process of security requirements integration also embeds into the enterprise architecture, an integral *information security architecture* consistent with organizational risk management and information security strategies. For PM-7, the information security architecture is developed at a system-of-systems level (organization-wide), representing all of the organizational information systems. For PL-8, the information security architecture is developed at a level representing an individual information system but at the same time, is consistent with the information security architecture defined for the organization. Security requirements and security control integration are most effectively accomplished through the application of the Risk Management Framework and supporting security standards and guidelines. The Federal Segment Architecture Methodology provides guidance on integrating information security requirements and security controls into enterprise architectures. Related controls: PL-2, PL-8, PM-11, RA-2, SA-3.

Control Enhancements: None.

References: NIST Special Publication 800-39.

PM-8 CRITICAL INFRASTRUCTURE PLAN

Control: The organization addresses information security issues in the development, documentation, and updating of a critical infrastructure and key resources protection plan.

Supplemental Guidance: Protection strategies are based on the prioritization of critical assets and resources. The requirement and guidance for defining critical infrastructure and key resources and for preparing an associated critical infrastructure protection plan are found in applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance. Related controls: PM-1, PM-9, PM-11, RA-3.

Control Enhancements: None.

References: HSPD 7; National Infrastructure Protection Plan.

PM-9 RISK MANAGEMENT STRATEGY

Control: The organization:

a. Develops a comprehensive strategy to manage risk to organizational operations and assets, individuals, other organizations, and the Nation associated with the operation and use of information systems;

b. Implements the risk management strategy consistently across the organization; and

c. Reviews and updates the risk management strategy [*Assignment: organization-defined frequency*] or as required, to address organizational changes.

Supplemental Guidance: An organization-wide risk management strategy includes, for example, an unambiguous expression of the risk tolerance for the organization, acceptable risk assessment methodologies, risk mitigation strategies, a process for consistently evaluating risk across the organization with respect to the organization's risk tolerance, and approaches for monitoring risk over time. The use of a risk executive function can facilitate consistent, organization-wide application of the risk management strategy. The organization-wide risk management strategy can be informed by risk-related inputs from other sources both internal and external to the organization to ensure the strategy is both broad-based and comprehensive. Related control: RA-3.

Control Enhancements: None.

References: NIST Special Publications 800-30, 800-39.

PM-10 SECURITY AUTHORIZATION PROCESS

Control: The organization:

a. Manages (i.e., documents, tracks, and reports) the security state of organizational information systems and the environments in which those systems operate through security authorization processes;

b. Designates individuals to fulfill specific roles and responsibilities within the organizational risk management process; and

c. Fully integrates the security authorization processes into an organization-wide risk management program.

Supplemental Guidance: Security authorization processes for information systems and environments of operation require the implementation of an organization-wide risk management process, a Risk Management Framework, and associated security standards and guidelines. Specific roles within the risk management process include an organizational risk executive (function) and designated authorizing officials for each organizational information system and common control provider. Security authorization processes are integrated with organizational continuous monitoring

processes to facilitate ongoing understanding and acceptance of risk to organizational operations and assets, individuals, other organizations, and the Nation. Related control: CA-6.

Control Enhancements: None.

References: NIST Special Publications 800-37, 800-39.

PM-11 MISSION/BUSINESS PROCESS DEFINITION

Control: The organization:

a. Defines mission/business processes with consideration for information security and the resulting risk to organizational operations, organizational assets, individuals, other organizations, and the Nation; and

b. Determines information protection needs arising from the defined mission/business processes and revises the processes as necessary, until achievable protection needs are obtained.

Supplemental Guidance: Information protection needs are technology-independent, required capabilities to counter threats to organizations, individuals, or the Nation through the compromise of information (i.e., loss of confidentiality, integrity, or availability). Information protection needs are derived from the mission/business needs defined by the organization, the mission/business processes selected to meet the stated needs, and the organizational risk management strategy. Information protection needs determine the required security controls for the organization and the associated information systems supporting the mission/business processes. Inherent in defining an organization's information protection needs is an understanding of the level of adverse impact that could result if a compromise of information occurs. The security categorization process is used to make such potential impact determinations. Mission/business process definitions and associated information protection requirements are documented by the organization in accordance with organizational policy and procedure. Related controls: PM-7, PM-8, RA-2.

Control Enhancements: None.

References: FIPS Publication 199; NIST Special Publication 800-60.

PM-12 INSIDER THREAT PROGRAM

Control: The organization implements an insider threat program that includes a cross-discipline insider threat incident handling team.

Supplemental Guidance: Organizations handling classified information are required, under Executive Order 13587 and the National Policy on Insider Threat, to establish insider threat programs. The standards and guidelines that apply to insider threat programs in classified environments can also be employed effectively to improve the security of Controlled Unclassified Information in non-national security systems. Insider threat programs include security controls to detect and prevent malicious insider activity through the centralized integration and analysis of both technical and non-technical information to identify potential insider threat concerns. A senior organizational official is designated by the department/agency head as the responsible individual to implement and provide oversight for the program. In addition to the centralized integration and analysis capability, insider threat programs as a minimum, prepare department/agency insider threat policies and implementation plans, conduct host-based user monitoring of individual employee activities on government-owned classified computers, provide insider threat awareness training to employees, receive access to information from all offices within the department/agency (e.g., human resources, legal, physical security, personnel security, information technology, information system security, and law enforcement) for insider threat analysis, and conduct self-assessments of department/agency insider threat posture.

Insider threat programs can leverage the existence of incident handling teams organizations may already have in place, such as computer security incident response teams. Human resources

records are especially important in this effort, as there is compelling evidence to show that some types of insider crimes are often preceded by nontechnical behaviors in the workplace (e.g., ongoing patterns of disgruntled behavior and conflicts with coworkers and other colleagues). These precursors can better inform and guide organizational officials in more focused, targeted monitoring efforts. The participation of a legal team is important to ensure that all monitoring activities are performed in accordance with appropriate legislation, directives, regulations, policies, standards, and guidelines. Related controls: AC-6, AT-2, AU-6, AU-7- AU-10, AU-12, AU-13, CA-7, IA-4, IR-4, MP-7, PE-2, PS-3, PS-4, PS-5, PS-8, SC-7, SC-38, SI-4, PM-1, PM-14.

Control Enhancements: None.

References: Executive Order 13587.

PM-13 INFORMATION SECURITY WORKFORCE

Control: The organization establishes an information security workforce development and improvement program.

Supplemental Guidance: Information security workforce development and improvement programs include, for example: (i) defining the knowledge and skill levels needed to perform information security duties and tasks; (ii) developing role-based training programs for individuals assigned information security roles and responsibilities; and (iii) providing standards for measuring and building individual qualifications for incumbents and applicants for information security-related positions. Such workforce programs can also include associated information security career paths to encourage: (i) information security professionals to advance in the field and fill positions with greater responsibility; and (ii) organizations to fill information security-related positions with qualified personnel. Information security workforce development and improvement programs are complementary to organizational security awareness and training programs. Information security workforce development and improvement programs focus on developing and institutionalizing core information security capabilities of selected personnel needed to protect organizational operations, assets, and individuals. Related controls: AT-2, AT-3.

Control Enhancements: None.

References: None.

PM-14 TESTING, TRAINING, AND MONITORING

Control: The organization:

a. Implements a process for ensuring that organizational plans for conducting security testing, training, and monitoring activities associated with organizational information systems:

   1. Are developed and maintained; and

   2. Continue to be executed in a timely manner;

b. Reviews testing, training, and monitoring plans for consistency with the organizational risk management strategy and organization-wide priorities for risk response actions.

Supplemental Guidance: This control ensures that organizations provide oversight for the security testing, training, and monitoring activities conducted organization-wide and that those activities are coordinated. With the importance of continuous monitoring programs, the implementation of information security across the three tiers of the risk management hierarchy, and the widespread use of common controls, organizations coordinate and consolidate the testing and monitoring activities that are routinely conducted as part of ongoing organizational assessments supporting a variety of security controls. Security training activities, while typically focused on individual information systems and specific roles, also necessitate coordination across all organizational elements. Testing, training, and monitoring plans and activities are informed by current threat and vulnerability assessments. Related controls: AT-3, CA-7, CP-4, IR-3, SI-4.

Control Enhancements: None.

References: NIST Special Publications 800-16, 800-37, 800-53A, 800-137.

PM-15 CONTACTS WITH SECURITY GROUPS AND ASSOCIATIONS

Control: The organization establishes and institutionalizes contact with selected groups and associations within the security community:

a. To facilitate ongoing security education and training for organizational personnel;

b. To maintain currency with recommended security practices, techniques, and technologies; and

c. To share current security-related information including threats, vulnerabilities, and incidents.

Supplemental Guidance: Ongoing contact with security groups and associations is of paramount importance in an environment of rapidly changing technologies and threats. Security groups and associations include, for example, special interest groups, forums, professional associations, news groups, and/or peer groups of security professionals in similar organizations. Organizations select groups and associations based on organizational missions/business functions. Organizations share threat, vulnerability, and incident information consistent with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance. Related control: SI-5.

Control Enhancements: None.

References: None.

PM-16 THREAT AWARENESS PROGRAM

Control: The organization implements a threat awareness program that includes a cross-organization information-sharing capability.

Supplemental Guidance: Because of the constantly changing and increasing sophistication of adversaries, especially the advanced persistent threat (APT), it is becoming more likely that adversaries may successfully breach or compromise organizational information systems. One of the best techniques to address this concern is for organizations to share threat information. This can include, for example, sharing threat events (i.e., tactics, techniques, and procedures) that organizations have experienced, mitigations that organizations have found are effective against certain types of threats, threat intelligence (i.e., indications and warnings about threats that are likely to occur). Threat information sharing may be bilateral (e.g., government-commercial cooperatives, government-government cooperatives), or multilateral (e.g., organizations taking part in threat-sharing consortia). Threat information may be highly sensitive requiring special agreements and protection, or less sensitive and freely shared. Related controls: PM-12, PM-16.

Control Enhancements: None.

References: None.

APPENDIX H

INTERNATIONAL INFORMATION SECURITY STANDARDS

SECURITY CONTROL MAPPINGS FOR ISO/IEC 27001 AND 15408

The mapping tables in this appendix provide organizations with a *general* indication of security control coverage with respect to ISO/IEC 27001, *Information technology–Security techniques–Information security management systems–Requirements*[113] and ISO/IEC 15408, *Information technology -- Security techniques -- Evaluation criteria for IT security*.[114] ISO/IEC 27001 applies to all types of organizations and specifies requirements for establishing, implementing, operating, monitoring, reviewing, maintaining, and improving a documented information security management system (ISMS) within the context of business risks. NIST Special Publication 800-39 includes guidance on managing risk at the organizational level, mission/business process level, and information system level, is consistent with ISO/IEC 27001, and provides additional implementation detail for the federal government and its contractors. ISO/IEC 15408 (also known as the Common Criteria) provides functionality and assurance requirements for developers of information systems and information system components (i.e., information technology products). Since many of the technical security controls defined in Appendix F are implemented in hardware, software, and firmware components of information systems, organizations can obtain significant benefit from the acquisition and employment of information technology products evaluated against the requirements of ISO/IEC 15408. The use of such products can provide evidence that certain security controls are implemented correctly, operating as intended, and producing the desired effect in satisfying stated security requirements.

[113] ISO/IEC 27001 was published in October 2005 by the International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC).

[114] ISO/IEC 15408 was published in September 2012 by the International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC).

Table H-1 provides a mapping from the security controls in NIST Special Publication 800-53 to the security controls in ISO/IEC 27001. The mappings are created by using the primary security topic identified in each of the Special Publication 800-53 and searching for a similar security topic in ISO/IEC 27001. Security controls with similar functional meaning are included in the mapping table. For example, Special Publication 800-53 contingency planning and ISO/IEC 27001 business continuity were deemed to have similar, but not the same, functionality. In some cases, similar topics are addressed in the security control sets but provide a different context, perspective, or scope. For example, Special Publication 800-53 addresses information flow control broadly in terms of approved authorizations for controlling access between source and destination objects, whereas ISO/IEC 27001 addresses the information flow more narrowly as it applies to interconnected network domains. Table H-2 provides a reverse mapping from the security controls in ISO/IEC 27001 to the security controls in Special Publication 800-53.[115]

TABLE H-1: MAPPING NIST SP 800-53 TO ISO/IEC 27001

NIST SP 800-53 CONTROLS		ISO/IEC 27001 CONTROLS
AC-1	Access Control Policy and Procedures	A.5.1.1, A.5.1.2, A.6.1.1, A.6.1.2, A.6.1.3, A.8.1.1, A.10.1.1, A.10.8.1, A.11.1.1, A.11.3.3, A.11.4.1, A.11.6.1, A.11.7.1, A.11.7.2, A.12.3.2, A.15.1.1, A.15.2.1
AC-2	Account Management	A.8.3.3, A.11.2.1, A.11.2.2, A.11.2.4, A.11.5.2, A.11.5.5, A.11.5.6
AC-3	Access Enforcement	A.7.2.2, A.10.6.1, A.10.7.3, A.10.7.4, A.10.8.1 A.10.9.1, A.10.9.2, A.10.9.3, A.11.2.2, A.11.5.4, A.11.6.1, A.12.4.3, A.15.1.3
AC-4	Information Flow Enforcement	A.7.2.2, A.10.7.3, A.10.8.1, A.11.4.5, A.11.4.7, A.12.5.4
AC-5	Separation of Duties	A.10.1.3
AC-6	Least Privilege	A.11.2.2, A.11.4.1, A.11.4.4, A.11.5.4, A.11.6.1, A.12.4.3
AC-7	Unsuccessful Logon Attempts	A.11.5.1
AC-8	System Use Notification	A.6.2.2, A.11.5.1, A.15.1.5
AC-9	Previous Logon (Access) Notification	A.11.5.1
AC-10	Concurrent Session Control	None
AC-11	Session Lock	A.11.3.2, A.11.3.3, A.11.5.5
AC-12	Session Termination	A.11.5.5
AC-13	**Withdrawn**	---
AC-14	Permitted Actions without Identification or Authentication	None
AC-15	**Withdrawn**	---
AC-16	Security Attributes	A.7.2.2, A.10.7.3
AC-17	Remote Access	A.10.6.1, A.10.8.1, A.10.8.5, A.11.4.1, A.11.4.2, A.11.4.6, A.11.7.1, A.11.7.2
AC-18	Wireless Access	A.10.6.1, A.10.8.1, A.11.4.1, A.11.4.2, A.11.4.6, A.11.7.1
AC-19	Access Control for Mobile Devices	A.9.2.5, A.10.4.1, A.10.7.3, A.11.4.3, A.11.4.6, A.11.7.1
AC-20	Use of External Information Systems	A.6.2.1, A.7.1.3, A.9.2.5, A.10.6.1, A.10.8.1, A.11.4.1, A.11.4.2, A.11.4.6
AC-21	Information Sharing	None
AC-22	Publicly Accessible Content	A.10.9.3, A.11.6.1
AC-23	Data Mining Protection	None
AC-24	Access Control Decisions	A.11.6.1
AC-25	Reference Monitor	None
AT-1	Security Awareness and Training Policy and Procedures	A.5.1.1, A.5.1.2, A.6.1.1, A.6.1.2, A.6.1.3, A.8.1.1, A.10.1.1, A.15.1.1, A.15.2.1
AT-2	Security Awareness Training	A.6.2.2, A.8.2.2, A.10.4.1
AT-3	Role-Based Security Training	A.6.2.2, A.8.2.2, A.10.4.1

[115] The use of the term *XX-1 controls* in mapping Table H-2 refers to the set of security controls represented by the first control in each family in Appendix F, where *XX* is a placeholder for the two-letter family identifier.

A.15.3.1 Information systems audit controls	AU-1, AU-2, SI-4
A.15.3.2 Protection of information systems audit tools	AU-9

Table H-3 provides a generalized mapping from the functional and assurance requirements in ISO/IEC 15408 (Common Criteria) to the security controls in Special Publication 800-53. The table represents an *informal* correspondence between security requirements and security controls (i.e., the table is not intended to determine whether the ISO/IEC 15408 security requirements are fully, partially, or not satisfied by the associated security controls). However, the table can serve as a beneficial starting point for further correspondence analysis. Organizations are cautioned that satisfying ISO/IEC 15408 security requirements for an particular evaluated and validated information technology product as represented by the presence of certain security controls from Appendix F, does not imply that such requirements have been satisfied throughout the entire information system (which may consist of multiple, integrated individual component products). Additional information explaining the specific mappings that appear in Table H-3 is available at the National Information Assurance Partnership (NIAP) website at: http://www.niap-ccevs.org.

TABLE H-3: MAPPING ISO/IEC 15408 TO NIST SP 800-53

ISO/IEC 15408 REQUIREMENTS		NIST SP 800-53 CONTROLS	
Functional Requirements			
FAU_ARP.1	**Security Audit Automatic Response** Security Alarms	AU-5	**Response to Audit Processing Failures**
		AU-5 (1)	**Response to Audit Processing Failures** *Audit Storage Capacity*
		AU-5 (2)	**Response to Audit Processing Failures** *Real-Time Alerts*
		AU-5 (3)	**Response to Audit Processing Failures** *Configurable Traffic Volume Thresholds*
		AU-5 (4)	**Response to Audit Processing Failures** *Shutdown on Failure*
		PE-6 (2)	**Monitoring Physical Access** *Automated Intrusion Recognition / Responses*
		SI-3	**Malicious Code Protection**
		SI-3 (8)	**Malicious Code Protection** *Detect Unauthorized Commands*
		SI-4 (5)	**Information System Monitoring** *System-Generated Alerts*
		SI-4 (7)	**Information Systems Monitoring** *Automated Response to Suspicious Events*
		SI-4 (22)	**Information Systems Monitoring** *Unauthorized Network Services*
		SI-7 (2)	**Software, Firmware, and Information Integrity** *Automated Notifications of Integrity Violations*
		SI-7 (5)	**Software, Firmware, and Information Integrity** *Automated Response to Integrity Violations*
		SI-7 (8)	**Software, Firmware, and Information Integrity** *Auditing Capability for Significant Events*
FAU_GEN.1	**Security Audit Data Generation** Audit Data Generation	AU-2	**Audit Events**
		AU-3	**Content of Audit Records**
		AU-3 (1)	**Content of Audit Records** *Additional Audit Information*
		AU-12	**Audit Generation**

ISO/IEC 15408 REQUIREMENTS		NIST SP 800-53 CONTROLS	
FAU_GEN.2	**Security Audit Data Generation** User Identity Association	AU-3	**Content of Audit Records**
FAU_SAA.1	**Security Audit Analysis** Potential Violation Analysis	SI-4	**Information System Monitoring**
FAU_SAA.2	**Security Audit Analysis** Profile-Based Anomaly Detection	AC-2 (12)	**Account Management** *Account Monitoring / Atypical Usage*
		SI-4	**Information System Monitoring**
FAU_SAA.3	**Security Audit Analysis** Simple Attack Heuristics	SI-3 (7)	**Malicious Code Protection** *Non Signature-Based Protection*
		SI-4	**Information System Monitoring**
FAU_SAA.4	**Security Audit Analysis** Complex Attack Heuristics	SI-3 (7)	**Malicious Code Protection** *Non Signature-Based Protection*
		SI-4	**Information System Monitoring**
FAU_SAR.1	**Security Audit Review** Audit Review	AU-7	**Audit Reduction and Report Generation**
FAU_SAR.2	**Security Audit Review** Restricted Audit Review	AU-9 (6)	**Protection of Audit Information** *Read Only Access*
FAU_SAR.3	**Security Audit Review** Selectable Audit Review	AU-7	**Audit Reduction and Report Generation**
		AU-7 (1)	**Audit Reduction and Report Generation** *Automatic Processing*
		AU-7 (2)	**Audit Reduction and Report Generation** *Automatic Sort and Search*
FAU_SEL.1	**Security Audit Event Selection** Selective Audit	AU-12	**Audit Generation**
FAU_STG.1	**Security Audit Event Storage** Protected Audit Trail Storage	AU-9	**Protection of Audit Information**
FAU_STG.2	**Security Audit Event Storage** Guarantees of Audit Data Availability	AU-9	**Protection of Audit Information** *Alternate audit capability*
FAU_STG.3	**Security Audit Event Storage** Action In Case of Possible Audit Data Loss	AU-5	**Response to Audit Processing Failures**
		AU-5 (1)	**Response to Audit Processing Failures** *Audit Storage Capacity*
		AU-5 (2)	**Response To Audit Processing Failures** *Real-Time Alerts*
		AU-5 (4)	**Response To Audit Processing Failures** *Shutdown on Failure*
FAU_STG.4	**Security Audit Event Storage** Prevention of Audit Data Loss	AU-4	**Audit Storage Capacity**
		AU-5	**Response to Audit Processing Failures**
		AU-5 (2)	**Response To Audit Processing Failures** *Real-Time Alerts*
		AU-5 (4)	**Response To Audit Processing Failures** *Shutdown on Failure*
FCO_NRO.1	**Non-Repudiation of Origin** Selective Proof of Origin	AU-10	**Non-Repudiation**
		AU-10 (1)	**Non-Repudiation** *Association Of Identities*
		AU-10 (2)	**Non-Repudiation** *Validate Binding of Information Producer Identity*

ISO/IEC 15408 REQUIREMENTS		NIST SP 800-53 CONTROLS	
FCO_NRO.2	**Non-Repudiation of Origin** Enforced Proof of Origin	AU-10	**Non-Repudiation**
		AU-10 (1)	**Non-Repudiation** *Association Of Identities*
		AU-10 (2)	**Non-Repudiation** *Validate Binding of Information Producer Identity*
FCO_NRR.1	**Non-Repudiation of Receipt** Selective Proof of Receipt	AU-10	**Non-Repudiation**
		AU-10 (1)	**Non-Repudiation** *Association Of Identities*
		AU-10 (2)	**Non-Repudiation** *Validate Binding of Information Producer Identity*
FCO_NRR.2	**Non-Repudiation of Receipt** Enforced Proof of Receipt	AU-10	**Non-Repudiation**
		AU-10 (1)	**Non-Repudiation** *Association Of Identities*
		AU-10 (2)	**Non-Repudiation** *Validate Binding of Information Producer Identity*
FCS_CKM.1	**Cryptographic Key Management** Cryptographic Key Generation	SC-12	**Cryptographic Key Establishment and Management**
FCS_CKM.2	**Cryptographic Key Management** Cryptographic Key Distribution	SC-12	**Cryptographic Key Establishment and Management**
FCS_CKM.3	**Cryptographic Key Management** Cryptographic Key Access	SC-12	**Cryptographic Key Establishment and Management**
FCS_CKM.4	**Cryptographic Key Management** Cryptographic Key Destruction	SC-12	**Cryptographic Key Establishment and Management**
FCS_COP.1	**Cryptographic Operation** Cryptographic Operation	SC-13	**Cryptographic Protection**
FDP_ACC.1	**Access Control Policy** Subset Access Control	AC-3	**Access Enforcement**
		AC-3 (3)	**Access Enforcement** *Mandatory Access Control*
		AC-3 (4)	**Access Enforcement** *Discretionary Access Control*
		AC-3 (7)	**Access Enforcement** *Role-Based Access Control*
FDP_ACC.2	**Access Control Policy** Complete Access Control	AC-3	**Access Enforcement**
		AC-3 (3)	**Access Enforcement** *Mandatory Access Control*
		AC-3 (4)	**Access Enforcement** *Discretionary Access Control*
		AC-3 (7)	**Access Enforcement** *Role-Based Access Control*
FDP_ACF.1	**Access Control Functions** Security Attribute Based Access Control	AC-3	**Access Enforcement**
		AC-3 (3)	**Access Enforcement** *Mandatory Access Control*
		AC-3 (4)	**Access Enforcement** *Discretionary Access Control*
		AC-3 (7)	**Access Enforcement** *Role-Based Access Control*
		AC-16	**Security Attributes**

ISO/IEC 15408 REQUIREMENTS		NIST SP 800-53 CONTROLS	
		SC-16	**Transmission of Security Attributes**
FDP_DAU.1	**Data Authentication** Basic Data Authentication	SI-7	**Software, Firmware, and Information Integrity**
		SI-7 (1)	**Software, Firmware, and Information Integrity** *Integrity Checks*
		SI-7 (6)	**Software, Firmware, And Information Integrity** *Cryptographic Protection*
		SI-10	**Information Input Validation**
FDP_DAU.2	**Data Authentication** Data Authentication With Identity of Guarantor	SI-7	**Software, Firmware, and Information Integrity**
		SI-7 (1)	**Software, Firmware, and Information Integrity** *Integrity Checks*
		SI-7 (6)	**Software, Firmware, And Information Integrity** *Cryptographic Protection*
		SI-10	**Information Input Validation**
FDP_ETC.1	**Export from the TOE** Export of User Data without Security Attributes	No Mapping.	
FDP_ETC.2	**Export from the TOE** Export of User Data with Security Attributes	AC-4 (18)	**Information Flow Enforcement** *Security Attribute Binding*
		AC-16	**Security Attributes**
		AC-16 (5)	**Security Attributes** *Attribute Displays for Output Devices*
		SC-16	**Transmission of Security Attributes**
FDP_IFC.1	**Information Flow Control Policy** Subset Information Flow Control	AC-3	**Access Enforcement**
		AC-3 (3)	**Access Enforcement** *Mandatory Access Control*
		AC-4	**Information Flow Enforcement**
		AC-4 (1)	**Information Flow Enforcement** *Object Security Attributes*
FDP_IFC.2	**Information Flow Control Policy** Complete Information Flow Control	AC-3	**Access Enforcement**
		AC-3 (3)	**Access Enforcement** *Mandatory Access Control*
		AC-4	**Information Flow Enforcement**
FDP_IFF.1	**Information Flow Control Functions** Simple Security Attributes	AC-3	**Access Enforcement**
		AC-3 (3)	**Access Enforcement** *Mandatory Access Control*
		AC-4	**Information Flow Enforcement**
		AC-4 (1)	**Information Flow Enforcement** *Object Security Attributes*
		AC-4 (2)	**Information Flow Enforcement** *Processing Domains*
		AC-4 (7)	**Information Flow Enforcement** *One-Way Flow Mechanisms*
		AC-16	**Security Attributes**
		SC-7	**Boundary Protection**

ISO/IEC 15408 REQUIREMENTS		NIST SP 800-53 CONTROLS	
FDP_IFF.2	**Information Flow Control Functions** Hierarchical Security Attributes	AC-3	**Access Enforcement**
		AC-3 (3)	**Access Enforcement** *Mandatory Access Control*
		AC-4 (1)	**Information Flow Enforcement** *Object Security Attributes*
		AC-16	**Security Attributes**
FDP_IFF.3	**Information Flow Control Functions** Limited Illicit Information Flows	SC-31	**Covert Channel Analysis**
		SC-31 (2)	**Covert Channel Analysis** *Maximum Bandwidth*
FDP_IFF.4	**Information Flow Control Functions** Partial Elimination of Illicit Information Flows	SC-31	**Covert Channel Analysis**
		SC-31 (2)	**Covert Channel Analysis** *Maximum Bandwidth*
FDP_IFF.5	**Information Flow Control Functions** No Illicit Information Flows	SC-31	**Covert Channel Analysis**
		SC-31 (2)	**Covert Channel Analysis** *Maximum Bandwidth*
FDP_IFF.6	**Information Flow Control Functions** Illicit Information Flow Monitoring	SC-31	**Covert Channel Analysis**
		SI-4 (18)	**Information System Monitoring** *Analyze Traffic / Covert Exfiltration*
FDP_ITC.1	**Import from Outside of the TOE** Import of User Data without Security Attributes	AC-4 (9)	**Information Flow Enforcement** *Human Reviews*
		AC-4 (12)	**Information Flow Enforcement** *Data Type Identifiers*
FDP_ITC.2	**Import from Outside of the TOE** Import of User Data with Security Attributes	AC-4 (18)	**Information Flow Enforcement** *Security Attribute Binding*
		AC-16	**Security Attributes**
		SC-16	**Transmission of Security Attributes**
FDP_ITT.1	**Internal TOE Transfer** Basic Internal Transfer Protection	SC-8	**Transmission Confidentiality and Integrity**
		SC-8 (1)	**Transmission Confidentiality and Integrity** *Cryptographic or Alternate Physical Protection*
		SC-5	**Denial of Service Protection**
FDP_ITT.2	**Internal TOE Transfer** Transmission Separation by Attribute	SC-8	**Transmission Confidentiality and Integrity**
		SC-8 (1)	**Transmission Confidentiality and Integrity** *Cryptographic or Alternate Physical Protection*
		SC-5	**Denial of Service Protection**
		AC-4 (21)	**Information Flow Enforcement** *Physical / Logical Separation of Information Flows*
FDP_ITT.3	**Internal TOE Transfer** Integrity Monitoring	SI-7	**Software, Firmware, and Information Integrity**
		SI-7 (1)	**Software, Firmware, and Information Integrity** *Integrity Checks*
		SC-8 (1)	**Transmission Integrity** *Cryptographic or Alternate Physical Protection*
		SI-7 (5)	**Software, Firmware, and Information Integrity** *Automated Response to Integrity Violations*

ISO/IEC 15408 REQUIREMENTS		NIST SP 800-53 CONTROLS	
FDP_ITT.4	**Internal TOE Transfer** Attribute-Based Integrity Monitoring	SI-7	**Software, Firmware, and Information Integrity**
		SI-7 (1)	**Software, Firmware, and Information Integrity** *Integrity Checks*
		SC-8 (1)	**Transmission Integrity** *Cryptographic or Alternate Physical Protection*
		AC-4 (21)	**Information Flow Enforcement** *Physical / Logical Separation of Information Flows*
		SI-7 (5)	**Software, Firmware, and Information Integrity** *Automated Response to Integrity Violations*
FDP_RIP.1	**Residual Information Protection** Subset Residual Information Protection	SC-4	**Information in Shared Resources**
FDP_RIP.2	**Residual Information Protection** Full Residual Information Protection	SC-4	**Information in Shared Resources**
FDP_ROL.1	**Rollback** Basic Rollback	CP-10 (2)	**Information System Recovery and Reconstitution** *Transaction Recovery*
FDP_ROL.2	**Rollback** Advanced Rollback	CP-10 (2)	**Information System Recovery and Reconstitution** *Transaction Recovery*
FDP_SDI.1	**Stored Data Integrity** Stored Data Integrity Monitoring	SI-7	**Software, Firmware, and Information Integrity**
		SI-7 (1)	**Software, Firmware, and Information Integrity** *Integrity Scans*
FDP_SDI.2	**Stored Data Integrity** Stored Data Integrity Monitoring and Action	SI-7	**Software, Firmware, and Information Integrity**
		SI-7 (1)	**Software, Firmware, and Information Integrity** *Integrity Scans*
		SI-7 (5)	**Software, Firmware, and Information Integrity** *Automated Response to Integrity Violations*
FDP_UCT.1	**Inter-TSF User Data Confidentiality Transfer Protection** Basic Data Exchange Confidentiality	SC-8	**Transmission Confidentiality and Integrity**
		SC-8 (1)	**Transmission Confidentiality and Integrity** *Cryptographic or Alternate Physical Protection*
FDP_UIT.1	**Inter-TSF User Data Integrity Transfer Protection** Data Exchange Integrity	SC-8	**Transmission Confidentiality and Integrity**
		SC-8 (1)	**Transmission Confidentiality and Integrity** *Cryptographic or Alternate Physical Protection*
		SI-7	**Software, Firmware, and Information Integrity**
		SI-7 (6)	**Software, Firmware, and Information Integrity** *Cryptographic Protection*
FDP_UIT.2	**Inter-TSF User Data Integrity Transfer Protection** Source Data Exchange Recovery	No Mapping.	

ISO/IEC 15408 REQUIREMENTS		NIST SP 800-53 CONTROLS	
FDP_UIT.3	**Inter-TSF User Data Integrity Transfer Protection** Destination Data Exchange Recovery	No Mapping.	
FIA_AFL.1	**Authentication Failure** Authentication Failure Handling	AC-7	**Unsuccessful Logon Attempts**
FIA_ATD.1	**User Attribute Definition** User Attribute Definition	AC-2	**Account Management**
		IA-2	**Identification and Authentication (Organizational Users)**
FIA_SOS.1	**Specification of Secrets** Verification of Secrets	IA-5	**Authenticator Management**
		IA-5 (1)	**Authenticator Management** Password-Based Authentication
		IA-5 (12)	**Authenticator Management** Biometric Authentication
FIA_SOS.2	**Specification of Secrets** TSF Generation of Secrets	IA-5	**Authenticator Management**
		IA-5 (1)	**Authenticator Management** Password-Based Authentication
		IA-5 (12)	**Authenticator Management** Biometric Authentication
FIA_UAU.1	**User Authentication** Timing of Authentication	AC-14	**Permitted Actions without Identification or Authentication**
		IA-2	**Identification and Authentication (Organizational Users)**
		IA-8	**Identification and Authentication (Non-Organizational Users)**
FIA_UAU.2	**User Authentication** User Authentication Before Any Action	AC-14	**Permitted Actions without Identification or Authentication**
		IA-2	**Identification and Authentication (Organizational Users)**
		IA-8	**Identification and Authentication (Non-Organizational Users)**
FIA_UAU.3	**User Authentication** Unforgeable Authentication	IA-2 (8)	**Identification and Authentication (Organizational Users)** *Network Access To Privileged Accounts - Replay Resistant*
		IA-2 (9)	**Identification and Authentication (Organizational Users)** *Network Access To Non-Privileged Accounts - Replay Resistant*
FIA_UAU.4	**User Authentication** Single-Use Authentication Mechanisms	IA-2 (8)	**Identification and Authentication (Organizational Users)** *Network Access To Privileged Accounts - Replay Resistant*
		IA-2 (9)	**Identification and Authentication (Organizational Users)** *Network Access To Non-Privileged Accounts - Replay Resistant*
FIA_UAU.5	**User Authentication** Multiple Authentication Mechanisms	IA-2 (1)	**Identification and Authentication (Organizational Users)** Network Access To Privileged Accounts
		IA-2 (2)	**Identification and Authentication (Organizational Users)** Network Access To Non-Privileged Accounts

ISO/IEC 15408 REQUIREMENTS		NIST SP 800-53 CONTROLS	
		IA-2 (3)	**Identification and Authentication (Organizational Users)** Local Access To Privileged Accounts
		IA-2 (4)	**Identification and Authentication (Organizational Users)** Local Access To Non-Privileged Accounts
		IA-2 (6)	**Identification and Authentication (Organizational Users)** Network Access To Privileged Accounts - Separate Device
		IA-2 (7)	**Identification and Authentication (Organizational Users)** Network Access To Non-Privileged Accounts - Separate Device
		IA-2 (11)	**Identification and Authentication (Organizational Users)** Remote Access - Separate Device
FIA_UAU.6	**User Authentication** Re-Authenticating	IA-11	**Re-authentication**
FIA_UAU.7	**User Authentication** Protected Authentication Feedback	IA-6	**Authenticator Feedback**
FIA_UID.1	**User Identification** Timing of Identification	AC-14	**Permitted Actions without Identification or Authentication**
		IA-2	**Identification and Authentication (Organizational Users)**
		IA-8	**Identification and Authentication (Non-Organizational Users)**
FIA_UID.2	**User Identification** User Identification Before Any Action	AC-14	**Permitted Actions without Identification or Authentication**
		IA-2	**Identification and Authentication (Organizational Users)**
		IA-8	**Identification and Authentication (Non-Organizational Users)**
FIA_USB.1	**User-Subject Binding** User-Subject Binding	AC-16 (3)	**Security Attributes** Maintenance Of Attribute Associations By Information System
FMT_MOF.1	**Management of Functions in TSF** Management of Security Functions Behavior	AC-3 (7)	**Access Enforcement** Role-Based Access Control
		AC-6	**Least Privilege**
		AC-6 (1)	**Least Privilege** Authorize Access To Security Functions
FMT_MSA.1	**Management of Security Attributes** Management of Security Attributes	AC-6	**Least Privilege**
		AC-6 (1)	**Least Privilege** Authorize Access To Security Functions
		AC-16 (2)	**Security Attributes** Attribute Value Changes By Authorized Individuals
		AC-16 (4)	**Security Attributes** Association of Attributes By Authorized Individuals
		AC-16 (10)	**Security Attributes** Attribute Configuration By Authorized Individuals

ISO/IEC 15408 REQUIREMENTS		NIST SP 800-53 CONTROLS	
FMT_MSA.2	**Management of Security Attributes** Secure Security Attributes	AC-16	**Security Attributes**
		CM-6	**Configuration Settings**
		SI-10	**Information Input Validation**
FMT_MSA.3	**Management of Security Attributes** Static Attribute Initialization	No Mapping.	
FMT_MSA.4	**Management of Security Attributes** Security Attribute Value Inheritance	No Mapping.	
FMT_MTD.1	**Management of TSF Data** Management of TSF Data	AC-3 (7)	**Access Enforcement** Role-Based Access Control
		AC-6	**Least Privilege**
		AC-6 (1)	**Least Privilege** Authorize Access To Security Functions
		AU-6 (7)	**Audit Review, Analysis, and Reporting** Permitted Actions
		AU-9 (4)	**Protection of Audit Information** Access By Subset of Privileged Users
FMT_MTD.2	**Management of TSF Data** Management of Limits on TSF Data	AC-3 (7)	**Access Enforcement** Role-based Access Control
		AC-6	**Least Privilege**
		AC-6 (1)	**Least Privilege** Authorize Access To Security Functions
FMT_MTD.3	**Management of TSF Data** Secure TSF Data	SI-10	**Information Input Validation**
FMT_REV.1	**Revocation** Revocation	AC-3 (7)	**Access Enforcement** Rose-based Access Control
		AC-3 (8)	**Access Enforcement** Revocation Of Access Authorizations
		AC-6	**Least Privilege**
		AC-6 (1)	**Least Privilege** Authorize Access To Security Functions
FMT_SAE.1	**Security Attribute Expiration** Time-Limited Authorization	AC-3 (7)	**Access Enforcement** Role-based Access Control
		AC-6	**Least Privilege**
		AC-6 (1)	**Least Privilege** Authorize Access To Security Functions
FMT_SMF.1	**Specification of Management Functions** Specification of Management Functions	No Mapping.	
FMT_SMR.1	**Security Management Roles** Security Roles	AC-2 (7)	**Account Management** Role-based schemes
		AC-3 (7)	**Access Enforcement** Role-Based Access Control
		AC-5	**Separation of Duties**
		AC-6	**Least Privilege**
FMT_SMR.2	**Security Management Roles** Restrictions on Security Roles	AC-2 (7)	**Account Management** Role-based schemes
		AC-3 (7)	**Access Enforcement** Role-Based Access Control
		AC-5	**Separation of Duties**

ISO/IEC 15408 REQUIREMENTS		NIST SP 800-53 CONTROLS	
		AC-6	**Least Privilege**
FMT_SMR.3	**Security Management Roles** Assuming Roles	AC-6 (1)	**Least Privilege** Authorized Access to Security Functions
		AC-6 (2)	**Least Privilege** Non-Privileged Access For Nonsecurity Functions
FPR_ANO.1	**Anonymity** Anonymity	No Mapping.	
FPR_ANO.2	**Anonymity** Anonymity Without Soliciting Information	No Mapping.	
FPR_PSE.1	**Pseudonymity** Pseudonymity	No Mapping.	
FPR_PSE.2	**Pseudonymity** Reversible Pseudonymity	No Mapping.	
FPR_PSE.3	**Pseudonymity** Alias Pseudonymity	No Mapping.	
FPR_UNL.1	**Unlinkability** Unlinkability	No Mapping.	
FPR_UNO.1	**Unobservability** Unobservability	No Mapping.	
FPR_UNO.2	**Unobservability** Allocation of Information Impacting Unobservability	No Mapping.	
FPR_UNO.3	**Unobservability** Unobservability Without Soliciting Information	No Mapping.	
FPR_UNO.4	**Unobservability** Authorized User Observability	No Mapping.	
FPT_FLS.1	**Fail Secure** Failure with Preservation of Secure State	SC-7 (18)	**Boundary Protection** Fail Secure
		SC-24	**Fail in Known State**
FPT_ITA.1	**Availability of Exported TSF Data** Inter-TSF Availability within a Defined Availability Metric	CP-10	**Information System Recovery And Reconstitution** Restore Within Time Period
		SC-5	**Denial of Service Protection**
		SC-5 (2)	**Denial of Service Protection** Excess Capacity/Bandwidth/Redundancy
		SC-5 (3)	**Denial of Service Protection** Detection/Monitoring
FPT_ITC.1	**Confidentiality of Exported TSF Data** Inter-TSF Confidentiality During Transmission	SC-8	**Transmission Confidentiality and Integrity**
		SC-8 (1)	**Transmission Confidentiality and Integrity** Cryptographic Or Alternate Physical Protection
FPT_ITI.1	**Integrity of Exported TSF Data** Inter-TSF Detection of Modification	SC-8	**Transmission Confidentiality and Integrity**
		SC-8 (1)	**Transmission Confidentiality and Integrity** Cryptographic Or Alternate Physical Protection
		SI-7	**Software, Firmware, and Information Integrity**
		SI-7 (1)	**Software, Firmware, and Information Integrity** Integrity Scans

ISO/IEC 15408 REQUIREMENTS		NIST SP 800-53 CONTROLS	
		SI-7 (5)	**Software, Firmware, and Information Integrity** Automated Response to Integrity Violations
		SI-7 (6)	**Software, Firmware, and Information Integrity** Cryptographic Protection
FPT_ITI.2	**Integrity of Exported TSF Data** Inter-TSF Detection and Correction of Modification	SC-8	**Transmission Confidentiality and Integrity**
		SC-8 (1)	**Transmission Confidentiality and Integrity** Cryptographic Or Alternate Physical Protection
		SI-7	**Software, Firmware, and Information Integrity**
		SI-7 (1)	**Software, Firmware, and Information Integrity** Integrity Scans

APPENDIX I

OVERLAY TEMPLATE

APPLYING TAILORING GUIDANCE FOR SPECIAL CONDITIONS OR COMMUNITY-WIDE USE[116]

Organizations may use the following template when developing tailored baselines using the concept of overlays.[117] The template is provided as an example only—organizations may choose to use other formats or modify the format in this appendix based on organizational needs and the type of overlay being developed. The level of detail included in the overlay is at the discretion of the organization initiating the overlay but should be of sufficient breadth and depth to provide an appropriate rationale and justification for the resulting tailored baseline developed, including any risk-based decisions made during the overlay development process. Security control baseline tailoring using the concept of overlays results in security plans that are subject to approval by authorizing officials. The example template consists of eight sections:

- Identification;
- Overlay Characteristics;
- Applicability;
- Overlay Summary;
- Detailed Overlay Control Specifications;
- Tailoring Considerations;
- Definitions; and
- Additional Information or Instructions.

How Overlays Can Be Used

Within the Risk Management Framework (RMF), overlays are implemented as part of the tailoring process after the completion of an initial security categorization process described in Section 3.1 and any organization-specific guidance. The security categorization process results in the determination of an *impact level* of the information system, and is subsequently used to select an initial set of security controls from one of the security control baselines in Appendix D.[118] After the initial set of security controls is identified, organizations initiate the tailoring process to modify and align the controls more closely with the specific conditions within the organizations. Overlays provide tailoring guidance from a community-wide perspective to address specialized requirements, missions/business functions, technologies, or environments of operation. Overlays provide uniformity and efficiency of security control selection by presenting tailoring options

[116] Tailored baselines produced using the concept of *overlays* can be published independently in a variety of venues and publications including, for example, OMB policies, CNSS Instructions, NIST Special Publications, industry standards, and sector-specific guidance. As part of the overlay initiative, the previous guidance in Appendix I regarding industrial and process control system security will be transferred to NIST Special Publication 800-82.

[117] While organizations are encouraged to use the overlay concept to tailor security control baselines, generating widely divergent overlays on the same topic may prove to be counterproductive. The overlay concept is most effective when communities of interest work together to create consensus-based overlays that are not duplicative.

[118] CNSS Instruction 1253 provides security categorization guidance and security control baselines for national security systems.

developed by security experts and other subject matter experts to information system owners responsible for implementing and maintaining such systems.

There is a considerable range of options that can be used to construct overlays, depending on the specificity desired by the overlay developers. Some overlays may be very specific with respect to the hardware, firmware, and software that form the key components the information system and the environment in which the system operates. Other overlays may be more abstract in order to be applicable to a large class of information systems that may be deployed in different environments. The example template described below can be used for any level of specificity on this continuum of potential options for overlays.

Overlays that provide *greater specificity* are typically developed by organizations with authority over the information system owners and environments of operation. Organizations decide on the appropriate tailoring actions for the selected baseline security controls as described in Section 3.2. Many of the variables and conditions that qualify the overlay for use on a specific information system are made explicit to ensure consistency when applying the overlay. Overlays that provide *less specificity* can also be developed by security and subject matter experts for application to large classes of information systems or in situations where there is less than full knowledge about the specific implementation details related to the system. Less specific overlays may require additional tailoring to customize the set of security controls for the specific information system. These overlays leave many of the assignment and selection statements in the security controls (i.e., the variable portion of the controls) to be completed by the organization that owns and operates the information system. The eight sections comprising the overlay are described below.

Identification

Organizations identify the overlay by providing: (i) a unique name for the overlay; (ii) a version number and date; (iii) the version of NIST Special Publication 800-53 used to create the overlay; (iv) other documentation used to create the overlay; (v) author or authoring group and point of contact; and (vi) type of organizational approval received. Organizations define how long the overlay is to be in effect and any events that may trigger an update to the overlay other than changes to NIST Special Publication 800-53 or organization-specific security guidance. If there are no unique events that can trigger an update for the overlay, this section provides that notation.

Overlay Characteristics

Organizations describe the characteristics that define the intended use of the overlay in order to help potential users select the most appropriate overlay for their missions/business functions. This may include, for example, a description of: (i) the environment in which the information system will be used (e.g., inside a guarded building within the continental United States, in an unmanned space vehicle, while traveling for business to a foreign country that is known for attempting to gain access to sensitive or classified information, or in a mobile vehicle that is in close proximity to hostile entities); (ii) the type of information that will be processed, stored, or transmitted (e.g., personal identity and authentication information, financial management information, facilities, fleet, and equipment management information, defense and national security information, system development information); (iii) the functionality within the information system or the type of system (e.g., standalone system, industrial/process control system, or cross-domain system); and (iv) other characteristics related to the overlay that help protect organizational missions/business functions, information systems, information, or individuals from a specific set of threats that may not be addressed by the assumptions described in Chapter Three.

Applicability

Organizations provide criteria to assist potential users of the overlay in determining whether or not the overlay applies to a particular information system or environment of operation. Typical formats include, for example, a list of questions or a decision tree based on the description of the characteristics of the information system (including associated applications) and its environment of operation at the level of specificity appropriate to the overlay.

Overlay Summary

Organizations provide a brief summary of the salient characteristics of the overlay. This summary may include, for example: (i) the security controls and control enhancements that are affected by the overlay; (ii) an indication of which controls/enhancements are selected or not selected based on the characteristics and assumptions in the overlay, the tailoring guidance provided in Section 3.2, or any organization-specific guidance; (iii) the selected controls/enhancements including an overview of new supplemental guidance and parameter values; and (iv) references to applicable laws, Executive Orders, directives, instructions, regulations, policies, or standards.

Detailed Overlay Control Specifications

Organizations provide a comprehensive expression of the security controls/control enhancements in the overlay as part of the tailoring process. This may include, for example: (i) justification for selecting or not selecting a specific security control/control enhancement; (ii) modifications to the supplemental guidance or the addition of new supplemental guidance for the security controls and control enhancements to address the characteristics of the overlay and the environments in which the overlay is intended to operate; (iii) unique parameter values for security control selection or assignment statements; (iv) specific statutory and/or regulatory requirements (above and beyond FISMA) that are met by a security control or control enhancement; (v) recommendations for compensating controls, as appropriate; and (vi) guidance that extends the basic capability of the control/enhancement by specifying additional functionality, altering the strength of mechanism, or adding or limiting implementation options.

Tailoring Considerations

Organizations provide information to information system owners and authorizing officials to consider during the tailoring process when determining the set of security controls applicable to their specific information systems. This is especially important for overlays that are used in an environment of operation different from the one assumed by the security control baselines (as defined in Section 3.1). In addition, organizations can provide guidance on the use of multiple overlays applied to a security control baseline and address any potential conflicts that may arise between overlay specifications and baseline controls.

Definitions

Organizations provide any terms and associated definitions that are unique and relevant to the overlay. The terms and definitions are listed in alphabetical order. If there are no unique terms or definitions for the overlay, this is stated in this section.

Additional Information or Instructions

Organizations provide any additional information or instructions relevant to the overlay not covered in the previous sections.

APPENDIX J

PRIVACY CONTROL CATALOG

PRIVACY CONTROLS, ENHANCEMENTS, AND SUPPLEMENTAL GUIDANCE

The need to protect an individual's privacy is as important today as it was in 1974 when the Privacy Act first sought to balance the government's need to collect information from an individual with a citizen's right to be notified as to how that information was being used, collected, maintained, and disposed of after the requisite period of use. These concerns are also shared in the private sector, where healthcare, financial, and other services continue to be delivered via the web with increasingly higher levels of personalization. The proliferation of social media, Smart Grid, mobile, and cloud computing, as well as the transition from structured to unstructured data and metadata environments, have added significant complexities and challenges for federal organizations in safeguarding privacy. These challenges extend well beyond the traditional information technology security view of protecting privacy which focused primarily on ensuring confidentiality. Now there are greater implications with respect to controlling the integrity of an individual's information, and with ensuring that an individual's information is available on demand. The challenging landscape requires federal organizations to expand their view of privacy, in order to meet citizen expectations of privacy that go beyond information security.

Privacy, with respect to personally identifiable information (PII),[119] is a core value that can be obtained only with appropriate legislation, policies, procedures, and associated controls to ensure compliance with requirements. Protecting the privacy of individuals and their PII that is collected, used, maintained, shared, and disposed of by programs and information systems, is a fundamental responsibility of federal organizations. Privacy also involves each individual's right to decide when and whether to share personal information, how much information to share, and the particular circumstances under which that information can be shared. In today's digital world, effective privacy for individuals depends on the safeguards employed within the information systems that are processing, storing, and transmitting PII and the environments in which those systems operate. Organizations cannot have effective privacy without a basic foundation of information security. Privacy is more than security, however, and includes, for example, the principles of transparency, notice, and choice.

This appendix provides a structured set of controls for protecting privacy and serves as a roadmap for organizations to use in identifying and implementing privacy controls concerning the entire life cycle of PII, whether in paper or electronic form. The controls focus on information privacy as a value distinct from, but highly interrelated with, information security. Privacy controls are

[119] OMB Memorandum 07-16 defines PII as information which can be used to distinguish or trace an individual's identity such as their name, social security number, biometric records, etc., alone, or when combined with other personal or identifying information which is linked or linkable to a specific individual, such as date and place of birth, mother's maiden name, etc. OMB Memorandum 10-22 further states that "the definition of PII is not anchored to any single category of information or technology. Rather, it requires a case-by-case assessment of the specific risk that an individual can be identified by examining the context of use and combination of data elements. In performing this assessment, it is important for agencies to recognize that non-PII can become PII, whenever additional information is made publicly available, in any medium and from any source that, when combined with other available information, could be used to identify an individual." NIST Special Publication 800-122 also includes a definition of PII that differs from this appendix because it was focused on the security objective of confidentiality and not privacy in the broad sense. Organizational definitions of PII may vary based on the consideration of additional regulatory requirements. The privacy controls in this appendix apply regardless of the definition of PII by organizations.

the administrative, technical, and physical safeguards employed within organizations to protect and ensure the proper handling of PII.[120] Organizations may also engage in activities that do not involve the collection and use of PII, but may nevertheless raise privacy concerns and associated risk. The privacy controls are equally applicable to those activities and can be used to analyze the privacy risk and mitigate such risk when necessary.

The privacy controls in this appendix are based on the Fair Information Practice Principles (FIPPs)[121] embodied in the Privacy Act of 1974, Section 208 of the E-Government Act of 2002, and Office of Management and Budget (OMB) policies. The FIPPs are designed to build public trust in the privacy practices of organizations and to help organizations avoid tangible costs and intangible damages from privacy incidents. There are eight privacy control families, each aligning with one of the FIPPs. The privacy families can be implemented at the organization, department, agency, component, office, program, or information system level, under the leadership and oversight of the Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO)[122] and in coordination with the Chief Information Security Officer, Chief Information Officer, program officials, legal counsel, and others as appropriate. Table J-1 provides a summary of the privacy controls by family in the privacy control catalog.

TABLE J-1: SUMMARY OF PRIVACY CONTROLS BY FAMILY

ID	PRIVACY CONTROLS
AP	**Authority and Purpose**
AP-1	Authority to Collect
AP-2	Purpose Specification
AR	**Accountability, Audit, and Risk Management**
AR-1	Governance and Privacy Program
AR-2	Privacy Impact and Risk Assessment
AR-3	Privacy Requirements for Contractors and Service Providers
AR-4	Privacy Monitoring and Auditing
AR-5	Privacy Awareness and Training
AR-6	Privacy Reporting
AR-7	Privacy-Enhanced System Design and Development
AR-8	Accounting of Disclosures
DI	**Data Quality and Integrity**
DI-1	Data Quality
DI-2	Data Integrity and Data Integrity Board
DM	**Data Minimization and Retention**
DM-1	Minimization of Personally Identifiable Information
DM-2	Data Retention and Disposal

[120] In 2010, the Federal CIO Council Privacy Committee issued a framework for designing and implementing a privacy program entitled *Best Practices: Elements of a Federal Privacy Program (Elements White Paper)*. The privacy controls in this appendix mirror a number of the elements included in the paper. Organizations can use the privacy controls and the guidance in the paper to develop an organization-wide privacy program or enhance an already existing program.

[121] The FIPPs are widely accepted in the United States and internationally as a general framework for privacy and are reflected in other federal and international laws and policies. In a number of organizations, FIPPs serve as the basis for analyzing privacy risks and determining appropriate mitigation strategies. The Federal Enterprise Architecture Security and Privacy Profile (FEA-SPP) also provided information and materials in development of the privacy controls.

[122] All federal agencies and departments designate an SAOP/CPO as the senior organizational official with the overall organization-wide responsibility for information privacy issues. OMB Memorandum 05-08 provides guidance for the designation of SAOPs/CPOs. The term SAOP/CPO as used in this appendix means an organization's senior privacy leader, whose job title may vary from organization to organization.

ID	PRIVACY CONTROLS
DM-3	Minimization of PII Used in Testing, Training, and Research
IP	**Individual Participation and Redress**
IP-1	Consent
IP-2	Individual Access
IP-3	Redress
IP-4	Complaint Management
SE	**Security**
SE-1	Inventory of Personally Identifiable Information
SE-2	Privacy Incident Response
TR	**Transparency**
TR-1	Privacy Notice
TR-2	System of Records Notices and Privacy Act Statements
TR-3	Dissemination of Privacy Program Information
UL	**Use Limitation**
UL-1	Internal Use
UL-2	Information Sharing with Third Parties

There is a strong similarity between the structure of the privacy controls in this appendix and the structure of the security controls in Appendices F and G. For example, the control AR-1 (Governance and Privacy Program) requires organizations to develop privacy plans that can be implemented at the organizational or program level. These plans can also be used in conjunction with security plans to provide an opportunity for organizations to select the appropriate set of security and privacy controls in accordance with organizational mission/business requirements and the environments in which the organizations operate. Incorporating the fundamental concepts associated with managing information security risk helps to ensure that the employment of privacy controls is carried out in a cost-effective and risk-based manner while simultaneously meeting compliance requirements. Standardized privacy controls and assessment procedures (developed to evaluate the effectiveness of the controls) will provide a more disciplined and structured approach for satisfying federal privacy requirements and demonstrating compliance with those requirements.

In summary, the Privacy Appendix achieves several important objectives. The appendix:

- Provides a structured set of privacy controls, based on best practices, that helps organizations comply with applicable federal laws, Executive Orders, directives, instructions, regulations, policies, standards, guidance, and organization-specific issuances;
- Establishes a linkage and relationship between privacy and security controls for purposes of enforcing respective privacy and security requirements that may overlap in concept and in implementation within federal information systems, programs, and organizations;
- Demonstrates the applicability of the NIST Risk Management Framework in the selection, implementation, assessment, and ongoing monitoring of privacy controls deployed in federal information systems, programs, and organizations; and
- Promotes closer cooperation between privacy and security officials within the federal government to help achieve the objectives of senior leaders/executives in enforcing the requirements in federal privacy legislation, policies, regulations, directives, standards, and guidance.

HOW TO USE THIS APPENDIX

The privacy controls outlined in this publication are primarily for use by an organization's Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO) when working with program managers, mission/business owners, information owners/stewards, Chief Information Officers, Chief Information Security Officers, information system developers/integrators, and risk executives to determine how best to incorporate effective privacy protections and practices (i.e., privacy controls) within organizational programs and information systems and the environments in which they operate. The privacy controls facilitate the organization's efforts to comply with privacy requirements affecting those organizational programs and/or systems that collect, use, maintain, share, or dispose of personally identifiable information (PII) or other activities that raise privacy risks. While the security controls in Appendix F are allocated to the low, moderate, and high baselines in Appendix D, the privacy controls are selected and implemented based on the privacy requirements of organizations and the need to protect the PII of individuals collected and maintained by organizational information systems and programs, in accordance with federal privacy legislation, policies, directives, regulations, guidelines, and best practices.

Organizations analyze and apply each privacy control with respect to their distinct mission/business and operational needs based on their legal authorities and obligations. Implementation of the privacy controls may vary based upon this analysis (e.g., organizations that are defined as *covered entities* pursuant to the Health Insurance Portability and Accountability Act [HIPAA] may have additional requirements that are not specifically enumerated in this publication). This enables organizations to determine the information practices that are compliant with law and policy and those that may need review. It also enables organizations to tailor the privacy controls to meet their defined and specific needs at the organization level, mission/business process level, and information system level. Organizations with national security or law enforcement authorities take those authorities as well as privacy interests into account in determining how to apply the privacy controls in their operational environments. Similarly, organizations subject to the Confidential Information Protection and Statistical Efficiency Act (CIPSEA), implement the privacy controls consistent with that Act. All organizations implement the privacy controls consistent with the Privacy Act of 1974, 5 U.S.C. § 552a, subject to any exceptions and/or exemptions.

Privacy control enhancements described in Appendix J reflect best practices which organizations should strive to achieve, but are not mandatory. Organizations should decide when to apply control enhancements to support their particular missions/business functions. Specific *overlays* for privacy, developed in accordance with the guidance in Section 3.2 and Appendix I, can also be considered to facilitate the tailoring of the security control baselines in Appendix D with the requisite privacy controls to ensure that both security and privacy requirements can be satisfied by organizations. Many of the security controls in Appendix F provide the fundamental information protection for confidentiality, integrity, and availability within organizational information systems and the environments in which those systems operate—protection that is essential for strong and effective privacy.

Organizations document the agreed upon privacy controls to be implemented in organizational programs and information systems and the environments in which they operate. At the discretion of the implementing organization, privacy controls may be documented in a distinct privacy plan or incorporated into other risk management documents (e.g., system security plans). Organizations also establish appropriate assessment methodologies to determine the extent to which the privacy controls are implemented correctly, operating as intended, and producing the desired outcome with respect to meeting designated privacy requirements. Organizational assessments of privacy controls can be conducted either by the SAOP/CPO alone or jointly with the other organizational risk management offices including the information security office.

Implementation Tip

- Select and implement privacy controls based on the privacy requirements of organizations and the need to protect the personally identifiable information (PII) of individuals collected and maintained by systems and programs.
- Coordinate privacy control selection and implementation with the organizational Risk Executive Function, mission/business owners, enterprise architects, Chief Information Officer, SAOP/CPO, and Chief Information Security Officer.
- View the privacy controls in Appendix J from the same perspective as the Program Management controls in Appendix G—that is, the controls are implemented for each organizational information system irrespective of the FIPS 199 categorization for that system.
- Select and implement the optional privacy control enhancements when there is a demonstrated need for additional privacy protection for individuals and PII.
- Apply the privacy controls consistent with any specific exceptions and exemptions included in legislation, Executive Orders, directives, policies, and regulations (e.g., law enforcement or national security considerations).

FAMILY: AUTHORITY AND PURPOSE

This family ensures that organizations: (i) identify the legal bases that authorize a particular personally identifiable information (PII) collection or activity that impacts privacy; and (ii) specify in their notices the purpose(s) for which PII is collected.

AP-1 AUTHORITY TO COLLECT

Control: The organization determines and documents the legal authority that permits the collection, use, maintenance, and sharing of personally identifiable information (PII), either generally or in support of a specific program or information system need.

Supplemental Guidance: Before collecting PII, the organization determines whether the contemplated collection of PII is legally authorized. Program officials consult with the Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO) and legal counsel regarding the authority of any program or activity to collect PII. The authority to collect PII is documented in the System of Records Notice (SORN) and/or Privacy Impact Assessment (PIA) or other applicable documentation such as Privacy Act Statements or Computer Matching Agreements. Related controls: AR-2, DM-1, TR-1, TR-2.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. § 552a (e); Section 208(c), E-Government Act of 2002 (P.L. 107-347); OMB Circular A-130, Appendix I.

AP-2 PURPOSE SPECIFICATION

Control: The organization describes the purpose(s) for which personally identifiable information (PII) is collected, used, maintained, and shared in its privacy notices.

Supplemental Guidance: Often, statutory language expressly authorizes specific collections and uses of PII. When statutory language is written broadly and thus subject to interpretation, organizations ensure, in consultation with the Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO) and legal counsel, that there is a close nexus between the general authorization and any specific collection of PII. Once the specific purposes have been identified, the purposes are clearly described in the related privacy compliance documentation, including but not limited to Privacy Impact Assessments (PIAs), System of Records Notices (SORNs), and Privacy Act Statements provided at the time of collection (e.g., on forms organizations use to collect PII). Further, in order to avoid unauthorized collections or uses of PII, personnel who handle PII receive training on the organizational authorities for collecting PII, authorized uses of PII, and on the contents of the notice. Related controls: AR-2, AR-4, AR-5, DM-1, DM-2, TR-1, TR-2, UL-1, UL-2.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. § 552a (e)(3)(A)-(B); Sections 208(b), (c), E-Government Act of 2002 (P.L. 107-347).

FAMILY: ACCOUNTABILITY, AUDIT, AND RISK MANAGEMENT

This family enhances public confidence through effective controls for governance, monitoring, risk management, and assessment to demonstrate that organizations are complying with applicable privacy protection requirements and minimizing overall privacy risk.

AR-1 GOVERNANCE AND PRIVACY PROGRAM

Control: The organization:

a. Appoints a Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO) accountable for developing, implementing, and maintaining an organization-wide governance and privacy program to ensure compliance with all applicable laws and regulations regarding the collection, use, maintenance, sharing, and disposal of personally identifiable information (PII) by programs and information systems;

b. Monitors federal privacy laws and policy for changes that affect the privacy program;

c. Allocates [*Assignment: organization-defined allocation of budget and staffing*] sufficient resources to implement and operate the organization-wide privacy program;

d. Develops a strategic organizational privacy plan for implementing applicable privacy controls, policies, and procedures;

e. Develops, disseminates, and implements operational privacy policies and procedures that govern the appropriate privacy and security controls for programs, information systems, or technologies involving PII; and

f. Updates privacy plan, policies, and procedures [*Assignment: organization-defined frequency, at least biennially*].

Supplemental Guidance: The development and implementation of a comprehensive governance and privacy program demonstrates organizational accountability for and commitment to the protection of individual privacy. Accountability begins with the appointment of an SAOP/CPO with the authority, mission, resources, and responsibility to develop and implement a multifaceted privacy program. The SAOP/CPO, in consultation with legal counsel, information security officials, and others as appropriate: (i) ensures the development, implementation, and enforcement of privacy policies and procedures; (ii) defines roles and responsibilities for protecting PII; (iii) determines the level of information sensitivity with regard to PII holdings; (iv) identifies the laws, regulations, and internal policies that apply to the PII; (v) monitors privacy best practices; and (vi) monitors/audits compliance with identified privacy controls.

To further accountability, the SAOP/CPO develops privacy plans to document the privacy requirements of organizations and the privacy and security controls in place or planned for meeting those requirements. The plan serves as evidence of organizational privacy operations and supports resource requests by the SAOP/CPO. A single plan or multiple plans may be necessary depending upon the organizational structures, requirements, and resources, and the plan(s) may vary in comprehensiveness. For example, a one-page privacy plan may cover privacy policies, documentation, and controls already in place, such as Privacy Impact Assessments (PIA) and System of Records Notices (SORN). A comprehensive plan may include a baseline of privacy controls selected from this appendix and include: (i) processes for conducting privacy risk assessments; (ii) templates and guidance for completing PIAs and SORNs; (iii) privacy training and awareness requirements; (iv) requirements for contractors processing PII; (v) plans for eliminating unnecessary PII holdings; and (vi) a framework for measuring annual performance goals and objectives for implementing identified privacy controls.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. § 552a; E-Government Act of 2002 (P.L. 107-347); Federal Information Security Management Act (FISMA) of 2002, 44 U.S.C. § 3541; OMB Memoranda 03-22, 05-08, 07-16; OMB Circular A-130; Federal Enterprise Architecture Security and Privacy Profile.

AR-2 PRIVACY IMPACT AND RISK ASSESSMENT

Control: The organization:

a. Documents and implements a privacy risk management process that assesses privacy risk to individuals resulting from the collection, sharing, storing, transmitting, use, and disposal of personally identifiable information (PII); and

b. Conducts Privacy Impact Assessments (PIAs) for information systems, programs, or other activities that pose a privacy risk in accordance with applicable law, OMB policy, or any existing organizational policies and procedures.

Supplemental Guidance: Organizational privacy risk management processes operate across the life cycles of all mission/business processes that collect, use, maintain, share, or dispose of PII. The tools and processes for managing risk are specific to organizational missions and resources. They include, but are not limited to, the conduct of PIAs. The PIA is both a process and the document that is the outcome of that process. OMB Memorandum 03-22 provides guidance to organizations for implementing the privacy provisions of the E-Government Act of 2002, including guidance on when PIAs are required for information systems. Some organizations may be required by law or policy to extend the PIA requirement to other activities involving PII or otherwise impacting privacy (e.g., programs, projects, or regulations). PIAs are conducted to identify privacy risks and identify methods to mitigate those risks. PIAs are also conducted to ensure that programs or information systems comply with legal, regulatory, and policy requirements. PIAs also serve as notice to the public of privacy practices. PIAs are performed before developing or procuring information systems, or initiating programs or projects, that collect, use, maintain, or share PII and are updated when changes create new privacy risks.

Control Enhancements: None.

References: Section 208, E-Government Act of 2002 (P.L. 107-347); Federal Information Security Management Act (FISMA) of 2002, 44 U.S.C. § 3541; OMB Memoranda 03-22, 05-08, 10-23.

AR-3 PRIVACY REQUIREMENTS FOR CONTRACTORS AND SERVICE PROVIDERS

Control: The organization:

a. Establishes privacy roles, responsibilities, and access requirements for contractors and service providers; and

b. Includes privacy requirements in contracts and other acquisition-related documents.

Supplemental Guidance: Contractors and service providers include, but are not limited to, information providers, information processors, and other organizations providing information system development, information technology services, and other outsourced applications. Organizations consult with legal counsel, the Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO), and contracting officers about applicable laws, directives, policies, or regulations that may impact implementation of this control. Related control: AR-1, AR-5, SA-4.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. § 552a(m); Federal Acquisition Regulation, 48 C.F.R. Part 24; OMB Circular A-130.

AR-4 PRIVACY MONITORING AND AUDITING

Control: The organization monitors and audits privacy controls and internal privacy policy [*Assignment: organization-defined frequency*] to ensure effective implementation.

Supplemental Guidance: To promote accountability, organizations identify and address gaps in privacy compliance, management, operational, and technical controls by conducting regular assessments (e.g., internal risk assessments). These assessments can be self-assessments or third-party audits that result in reports on compliance gaps identified in programs, projects, and information systems. In addition to auditing for effective implementation of all privacy controls identified in this appendix, organizations assess whether they: (i) implement a process to embed privacy considerations into the life cycle of personally identifiable information (PII), programs, information systems, mission/business processes, and technology; (ii) monitor for changes to applicable privacy laws, regulations, and policies; (iii) track programs, information systems, and applications that collect and maintain PII to ensure compliance; (iv) ensure that access to PII is only on a *need-to-know* basis; and (v) ensure that PII is being maintained and used only for the legally authorized purposes identified in the public notice(s).

Organizations also: (i) implement technology to audit for the security, appropriate use, and loss of PII; (ii) perform reviews to ensure physical security of documents containing PII; (iii) assess contractor compliance with privacy requirements; and (iv) ensure that corrective actions identified as part of the assessment process are tracked and monitored until audit findings are corrected. The organization Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO) coordinates monitoring and auditing efforts with information security officials and ensures that the results are provided to senior managers and oversight officials. Related controls: AR-6, AR-7, AU-1, AU-2, AU-3, AU-6, AU-12, CA-7, TR-1, UL-2.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. § 552a; Federal Information Security Management Act (FISMA) of 2002, 44 U.S.C. § 3541; Section 208, E-Government Act of 2002 (P.L. 107-347); OMB Memoranda 03-22, 05-08, 06-16, 07-16; OMB Circular A-130.

AR-5 PRIVACY AWARENESS AND TRAINING

Control: The organization:

a. Develops, implements, and updates a comprehensive training and awareness strategy aimed at ensuring that personnel understand privacy responsibilities and procedures;

b. Administers basic privacy training [*Assignment: organization-defined frequency, at least annually*] and targeted, role-based privacy training for personnel having responsibility for personally identifiable information (PII) or for activities that involve PII [*Assignment: organization-defined frequency, at least annually*]; and

c. Ensures that personnel certify (manually or electronically) acceptance of responsibilities for privacy requirements [*Assignment: organization-defined frequency, at least annually*].

Supplemental Guidance: Through implementation of a privacy training and awareness strategy, the organization promotes a culture of privacy. Privacy training and awareness programs typically focus on broad topics, such as responsibilities under the Privacy Act of 1974 and E-Government Act of 2002 and the consequences of failing to carry out those responsibilities, how to identify new privacy risks, how to mitigate privacy risks, and how and when to report privacy incidents. Privacy training may also target data collection and use requirements identified in public notices, such as Privacy Impact Assessments (PIAs) or System of Records Notices (SORNs) for a program or information system. Specific training methods may include: (i) mandatory annual privacy awareness training; (ii) targeted, role-based training; (iii) internal privacy program websites; (iv) manuals, guides, and handbooks; (v) slide presentations; (vi) events (e.g., privacy awareness week, privacy clean-up day); (vii) posters and brochures; and (viii) email messages to all employees and contractors. Organizations update training based on changing statutory, regulatory, mission,

program, business process, and information system requirements, or on the results of compliance monitoring and auditing. Where appropriate, organizations may provide privacy training as part of existing information security training. Related controls: AR-3, AT-2, AT-3, TR-1.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. § 552a(e); Section 208, E-Government Act of 2002 (P.L. 107-347); OMB Memoranda 03-22, 07-16.

AR-6 PRIVACY REPORTING

Control: The organization develops, disseminates, and updates reports to the Office of Management and Budget (OMB), Congress, and other oversight bodies, as appropriate, to demonstrate accountability with specific statutory and regulatory privacy program mandates, and to senior management and other personnel with responsibility for monitoring privacy program progress and compliance.

Supplemental Guidance: Through internal and external privacy reporting, organizations promote accountability and transparency in organizational privacy operations. Reporting also helps organizations to determine progress in meeting privacy compliance requirements and privacy controls, compare performance across the federal government, identify vulnerabilities and gaps in policy and implementation, and identify success models. Types of privacy reports include: (i) annual Senior Agency Official for Privacy (SAOP) reports to OMB; (ii) reports to Congress required by the *Implementing Regulations of the 9/11 Commission Act*; and (iii) other public reports required by specific statutory mandates or internal policies of organizations. The organization Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO) consults with legal counsel, where appropriate, to ensure that organizations meet all applicable privacy reporting requirements.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. § 552a; Section 208, E-Government Act of 2002 (P.L. 107-347); Federal Information Security Management Act (FISMA) of 2002, 44 U.S.C. § 3541; Section 803, 9/11 Commission Act, 42 U.S.C. § 2000ee-1; Section 804, 9/11 Commission Act, 42 U.S.C. § 2000ee-3; Section 522, Consolidated Appropriations Act of 2005 (P.L. 108-447); OMB Memoranda 03-22; OMB Circular A-130.

AR-7 PRIVACY-ENHANCED SYSTEM DESIGN AND DEVELOPMENT

Control: The organization designs information systems to support privacy by automating privacy controls.

Supplemental Guidance: To the extent feasible, when designing organizational information systems, organizations employ technologies and system capabilities that automate privacy controls on the collection, use, retention, and disclosure of personally identifiable information (PII). By building privacy controls into system design and development, organizations mitigate privacy risks to PII, thereby reducing the likelihood of information system breaches and other privacy-related incidents. Organizations also conduct periodic reviews of systems to determine the need for updates to maintain compliance with the Privacy Act and the organization's privacy policy. Regardless of whether automated privacy controls are employed, organizations regularly monitor information system use and sharing of PII to ensure that the use/sharing is consistent with the authorized purposes identified in the Privacy Act and/or in the public notice of organizations, or in a manner compatible with those purposes. Related controls: AC-6, AR-4, AR-5, DM-2, TR-1.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. § 552a(e)(10); Sections 208(b) and(c), E-Government Act of 2002 (P.L. 107-347); OMB Memorandum 03-22.

AR-8 ACCOUNTING OF DISCLOSURES

Control: The organization:

a. Keeps an accurate accounting of disclosures of information held in each system of records under its control, including:

   (1) Date, nature, and purpose of each disclosure of a record; and

   (2) Name and address of the person or agency to which the disclosure was made;

b. Retains the accounting of disclosures for the life of the record or five years after the disclosure is made, whichever is longer; and

c. Makes the accounting of disclosures available to the person named in the record upon request.

Supplemental Guidance: The Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO) periodically consults with managers of organization systems of record to ensure that the required accountings of disclosures of records are being properly maintained and provided to persons named in those records consistent with the dictates of the Privacy Act. Organizations are not required to keep an accounting of disclosures when the disclosures are made to individuals with a need to know, are made pursuant to the Freedom of Information Act, or are made to a law enforcement agency pursuant to 5 U.S.C. § 552a(c)(3). Heads of agencies can promulgate rules to exempt certain systems of records from the requirement to provide the accounting of disclosures to individuals. Related control: IP-2.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. § 552a (c)(1), (c)(3), (j), (k).

FAMILY: DATA QUALITY AND INTEGRITY

This family enhances public confidence that any personally identifiable information (PII) collected and maintained by organizations is accurate, relevant, timely, and complete for the purpose for which it is to be used, as specified in public notices.

DI-1 DATA QUALITY

Control: The organization:

a. Confirms to the greatest extent practicable upon collection or creation of personally identifiable information (PII), the accuracy, relevance, timeliness, and completeness of that information;

b. Collects PII directly from the individual to the greatest extent practicable;

c. Checks for, and corrects as necessary, any inaccurate or outdated PII used by its programs or systems [*Assignment: organization-defined frequency*]; and

d. Issues guidelines ensuring and maximizing the quality, utility, objectivity, and integrity of disseminated information.

Supplemental Guidance: Organizations take reasonable steps to confirm the accuracy and relevance of PII. Such steps may include, for example, editing and validating addresses as they are collected or entered into information systems using automated address verification look-up application programming interfaces (API). The types of measures taken to protect data quality are based on the nature and context of the PII, how it is to be used, and how it was obtained. Measures taken to validate the accuracy of PII that is used to make determinations about the rights, benefits, or privileges of individuals under federal programs may be more comprehensive than those used to validate less sensitive PII. Additional steps may be necessary to validate PII that is obtained from sources other than individuals or the authorized representatives of individuals.

When PII is of a sufficiently sensitive nature (e.g., when it is used for annual reconfirmation of a taxpayer's income for a recurring benefit), organizations incorporate mechanisms into information systems and develop corresponding procedures for how frequently, and by what method, the information is to be updated. Related controls: AP-2, DI-2, DM-1, IP-3, SI-10.

Control Enhancements:

(1) *DATA QUALITY | VALIDATE PII*

The organization requests that the individual or individual's authorized representative validate PII during the collection process.

(2) *DATA QUALITY | RE-VALIDATE PII*

The organization requests that the individual or individual's authorized representative revalidate that PII collected is still accurate [*Assignment: organization-defined frequency*].

DI-2 DATA INTEGRITY AND DATA INTEGRITY BOARD

Control: The organization:

a. Documents processes to ensure the integrity of personally identifiable information (PII) through existing security controls; and

b. Establishes a Data Integrity Board when appropriate to oversee organizational Computer Matching Agreements[123] and to ensure that those agreements comply with the computer matching provisions of the Privacy Act.

Supplemental Guidance: Organizations conducting or participating in Computer Matching Agreements with other organizations regarding applicants for and recipients of financial assistance or payments under federal benefit programs or regarding certain computerized comparisons involving federal personnel or payroll records establish a Data Integrity Board to oversee and coordinate their implementation of such matching agreements. In many organizations, the Data Integrity Board is led by the Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO). The Data Integrity Board ensures that controls are in place to maintain both the quality and the integrity of data shared under Computer Matching Agreements. Related controls: AC-1, AC-3, AC-4, AC-6, AC-17, AC-22, AU-2, AU-3, AU-6, AU-10, AU-11, DI-1, SC-8, SC-28, UL-2.

Control Enhancements:

(1) *DATA INTEGRITY AND DATA INTEGRITY BOARD | PUBLISH AGREEMENTS ON WEBSITE*

The organization publishes Computer Matching Agreements on its public website.

References: The Privacy Act of 1974, 5 U.S.C. §§ 552a (a)(8)(A), (o), (p), (u); OMB Circular A-130, Appendix I.

[123] Organizations enter into Computer Matching Agreements in connection with computer matching programs to which they are a party. With certain exceptions, a computer matching program is any computerized comparison of two or more automated systems of records or a system of records with nonfederal records for the purpose of establishing or verifying the eligibility of, or continuing compliance with, statutory and regulatory requirements by, applicants for, recipients or beneficiaries of, participants in, or providers of services with respect to cash or in-kind assistance or payments under federal benefit programs or computerized comparisons of two or more automated federal personnel or payroll systems of records or a system of federal personnel or payroll records with nonfederal records. See Computer Matching and Privacy Protection Act of 1988, 5 U.S.C. § 552a (a)(8)(A).

FAMILY: DATA MINIMIZATION AND RETENTION

This family helps organizations implement the data minimization and retention requirements to collect, use, and retain only personally identifiable information (PII) that is relevant and necessary for the purpose for which it was originally collected. Organizations retain PII for only as long as necessary to fulfill the purpose(s) specified in public notices and in accordance with a National Archives and Records Administration (NARA)-approved record retention schedule.

DM-1 MINIMIZATION OF PERSONALLY IDENTIFIABLE INFORMATION

Control: The organization:

a. Identifies the minimum personally identifiable information (PII) elements that are relevant and necessary to accomplish the legally authorized purpose of collection;

b. Limits the collection and retention of PII to the minimum elements identified for the purposes described in the notice and for which the individual has provided consent; and

c. Conducts an initial evaluation of PII holdings and establishes and follows a schedule for regularly reviewing those holdings [*Assignment: organization-defined frequency, at least annually*] to ensure that only PII identified in the notice is collected and retained, and that the PII continues to be necessary to accomplish the legally authorized purpose.

Supplemental Guidance: Organizations take appropriate steps to ensure that the collection of PII is consistent with a purpose authorized by law or regulation. The minimum set of PII elements required to support a specific organization business process may be a subset of the PII the organization is authorized to collect. Program officials consult with the Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO) and legal counsel to identify the minimum PII elements required by the information system or activity to accomplish the legally authorized purpose.

Organizations can further reduce their privacy and security risks by also reducing their inventory of PII, where appropriate. OMB Memorandum 07-16 requires organizations to conduct both an initial review and subsequent reviews of their holdings of all PII and ensure, to the maximum extent practicable, that such holdings are accurate, relevant, timely, and complete. Organizations are also directed by OMB to reduce their holdings to the minimum necessary for the proper performance of a documented organizational business purpose. OMB Memorandum 07-16 requires organizations to develop and publicize, either through a notice in the Federal Register or on their websites, a schedule for periodic reviews of their holdings to supplement the initial review. Organizations coordinate with their federal records officers to ensure that reductions in organizational holdings of PII are consistent with NARA retention schedules.

By performing periodic evaluations, organizations reduce risk, ensure that they are collecting only the data specified in the notice, and ensure that the data collected is still relevant and necessary for the purpose(s) specified in the notice. Related controls: AP-1, AP-2, AR-4, IP-1, SE-1, SI-12, TR-1.

Control Enhancements:

(1) *MINIMIZATION OF PERSONALLY IDENTIFIABLE INFORMATION | LOCATE / REMOVE / REDACT / ANONYMIZE PII*

The organization, where feasible and within the limits of technology, locates and removes/redacts specified PII and/or uses anonymization and de-identification techniques to permit use of the retained information while reducing its sensitivity and reducing the risk resulting from disclosure.

Supplemental Guidance: NIST Special Publication 800-122 provides guidance on anonymization.

References: The Privacy Act of 1974, 5 U.S.C. §552a (e); Section 208(b), E-Government Act of 2002 (P.L. 107-347); OMB Memoranda 03-22, 07-16.

DM-2 DATA RETENTION AND DISPOSAL

Control: The organization:

a. Retains each collection of personally identifiable information (PII) for [*Assignment: organization-defined time period*] to fulfill the purpose(s) identified in the notice or as required by law;

b. Disposes of, destroys, erases, and/or anonymizes the PII, regardless of the method of storage, in accordance with a NARA-approved record retention schedule and in a manner that prevents loss, theft, misuse, or unauthorized access; and

c. Uses [*Assignment: organization-defined techniques or methods*] to ensure secure deletion or destruction of PII (including originals, copies, and archived records).

Supplemental Guidance: NARA provides retention schedules that govern the disposition of federal records. Program officials coordinate with records officers and with NARA to identify appropriate retention periods and disposal methods. NARA may require organizations to retain PII longer than is operationally needed. In those situations, organizations describe such requirements in the notice. Methods of storage include, for example, electronic, optical media, or paper.

Examples of ways organizations may reduce holdings include reducing the types of PII held (e.g., delete Social Security numbers if their use is no longer needed) or shortening the retention period for PII that is maintained if it is no longer necessary to keep PII for long periods of time (this effort is undertaken in consultation with an organization's records officer to receive NARA approval). In both examples, organizations provide notice (e.g., an updated System of Records Notice) to inform the public of any changes in holdings of PII.

Certain read-only archiving techniques, such as DVDs, CDs, microfilm, or microfiche, may not permit the removal of individual records without the destruction of the entire database contained on such media. Related controls: AR-4, AU-11, DM-1, MP-1, MP-2, MP-3, MP-4, MP-5, MP-6, MP-7, MP-8, SI-12, TR-1.

Control Enhancements:

(1) *DATA RETENTION AND DISPOSAL | SYSTEM CONFIGURATION*

The organization, where feasible, configures its information systems to record the date PII is collected, created, or updated and when PII is to be deleted or archived under an approved record retention schedule.

References: The Privacy Act of 1974, 5 U.S.C. § 552a (e)(1), (c)(2); Section 208 (e), E-Government Act of 2002 (P.L. 107-347); 44 U.S.C. Chapters 29, 31, 33; OMB Memorandum 07-16; OMB Circular A-130; NIST Special Publication 800-88.

DM-3 MINIMIZATION OF PII USED IN TESTING, TRAINING, AND RESEARCH

Control: The organization:

a. Develops policies and procedures that minimize the use of personally identifiable information (PII) for testing, training, and research; and

b. Implements controls to protect PII used for testing, training, and research.

Supplemental Guidance: Organizations often use PII for testing new applications or information systems prior to deployment. Organizations also use PII for research purposes and for training. The use of PII in testing, research, and training increases risk of unauthorized disclosure or misuse of the information. If PII must be used, organizations take measures to minimize any associated risks and to authorize the use of and limit the amount of PII for these purposes. Organizations consult with the SAOP/CPO and legal counsel to ensure that the use of PII in testing, training, and research is compatible with the original purpose for which it was collected.

Control Enhancements:

(1) *MINIMIZATION OF PII USED IN TESTING, TRAINING, AND RESEARCH | RISK MINIMIZATION TECHNIQUES*

The organization, where feasible, uses techniques to minimize the risk to privacy of using PII for research, testing, or training.

Supplemental Guidance: Organizations can minimize risk to privacy of PII by using techniques such as de-identification.

References: NIST Special Publication 800-122.

FAMILY: INDIVIDUAL PARTICIPATION AND REDRESS

This family addresses the need to make individuals active participants in the decision-making process regarding the collection and use of their personally identifiable information (PII). By providing individuals with access to PII and the ability to have their PII corrected or amended, as appropriate, the controls in this family enhance public confidence in organizational decisions made based on the PII.

IP-1 CONSENT

Control: The organization:

a. Provides means, where feasible and appropriate, for individuals to authorize the collection, use, maintaining, and sharing of personally identifiable information (PII) prior to its collection;

b. Provides appropriate means for individuals to understand the consequences of decisions to approve or decline the authorization of the collection, use, dissemination, and retention of PII;

c. Obtains consent, where feasible and appropriate, from individuals prior to any new uses or disclosure of previously collected PII; and

d. Ensures that individuals are aware of and, where feasible, consent to all uses of PII not initially described in the public notice that was in effect at the time the organization collected the PII.

Supplemental Guidance: Consent is fundamental to the participation of individuals in the decision-making process regarding the collection and use of their PII and the use of technologies that may increase risk to personal privacy. To obtain consent, organizations provide individuals appropriate notice of the purposes of the PII collection or technology use and a means for individuals to consent to the activity. Organizations tailor the public notice and consent mechanisms to meet operational needs. Organizations achieve awareness and consent, for example, through updated public notices.

Organizations may obtain consent through opt-in, opt-out, or implied consent. Opt-in consent is the preferred method, but it is not always feasible. Opt-in requires that individuals take affirmative action to *allow* organizations to collect or use PII. For example, opt-in consent may require an individual to click a radio button on a website, or sign a document providing consent. In contrast, opt-out requires individuals to take action to *prevent* the new or continued collection or use of such PII. For example, the Federal Trade Commission's Do-Not-Call Registry allows individuals to opt-out of receiving unsolicited telemarketing calls by requesting to be added to a list. Implied consent is the least preferred method and should be used in limited circumstances. Implied consent occurs where individuals' behavior or failure to object indicates agreement with the collection or use of PII (e.g., by entering and remaining in a building where notice has been posted that security cameras are in use, the individual implies consent to the video recording). Depending upon the nature of the program or information system, it may be appropriate to allow individuals to limit the types of PII they provide and subsequent uses of that PII. Organizational consent mechanisms include a discussion of the consequences to individuals of failure to provide PII. Consequences can vary from organization to organization. Related controls: AC-2, AP-1, TR-1, TR-2.

Control Enhancements:

(1) *CONSENT | MECHANISMS SUPPORTING ITEMIZED OR TIERED CONSENT*

The organization implements mechanisms to support itemized or tiered consent for specific uses of data.

Supplemental Guidance: Organizations can provide, for example, individuals' itemized choices as to whether they wish to be contacted for any of a variety of purposes. In this situation, organizations construct consent mechanisms to ensure that organizational operations comply with individual choices.

References: The Privacy Act of 1974, 5 U.S.C. § 552a (b), (e)(3); Section 208(c), E-Government Act of 2002 (P.L. 107-347); OMB Memoranda 03-22, 10-22.

IP-2 INDIVIDUAL ACCESS

Control: The organization:

a. Provides individuals the ability to have access to their personally identifiable information (PII) maintained in its system(s) of records;

b. Publishes rules and regulations governing how individuals may request access to records maintained in a Privacy Act system of records;

c. Publishes access procedures in System of Records Notices (SORNs); and

d. Adheres to Privacy Act requirements and OMB policies and guidance for the proper processing of Privacy Act requests.

Supplemental Guidance: Access affords individuals the ability to review PII about them held within organizational systems of records. Access includes timely, simplified, and inexpensive access to data. Organizational processes for allowing access to records may differ based on resources, legal requirements, or other factors. The organization Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO) is responsible for the content of Privacy Act regulations and record request processing, in consultation with legal counsel. Access to certain types of records may not be appropriate, however, and heads of agencies may promulgate rules exempting particular systems from the access provision of the Privacy Act. In addition, individuals are not entitled to access to information compiled in reasonable anticipation of a civil action or proceeding. Related controls: AR-8, IP-3, TR-1, TR-2.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. §§ 552a (c)(3), (d)(5), (e) (4); (j), (k), (t); OMB Circular A-130.

IP-3 REDRESS

Control: The organization:

a. Provides a process for individuals to have inaccurate personally identifiable information (PII) maintained by the organization corrected or amended, as appropriate; and

b. Establishes a process for disseminating corrections or amendments of the PII to other authorized users of the PII, such as external information-sharing partners and, where feasible and appropriate, notifies affected individuals that their information has been corrected or amended.

Supplemental Guidance: Redress supports the ability of individuals to ensure the accuracy of PII held by organizations. Effective redress processes demonstrate organizational commitment to data quality especially in those business functions where inaccurate data may result in inappropriate decisions or denial of benefits and services to individuals. Organizations use discretion in determining if records are to be corrected or amended, based on the scope of redress requests, the changes sought, and the impact of the changes. Individuals may appeal an adverse decision and have incorrect information amended, where appropriate.

To provide effective redress, organizations: (i) provide effective notice of the existence of a PII collection; (ii) provide plain language explanations of the processes and mechanisms for requesting access to records; (iii) establish criteria for submitting requests for correction or amendment; (iv) implement resources to analyze and adjudicate requests; (v) implement means of correcting or amending data collections; and (vi) review any decisions that may have been the result of inaccurate information.

Organizational redress processes provide responses to individuals of decisions to deny requests for correction or amendment, including the reasons for those decisions, a means to record individual objections to the organizational decisions, and a means of requesting organizational reviews of the initial determinations. Where PII is corrected or amended, organizations take steps to ensure that all authorized recipients of that PII are informed of the corrected or amended information. In instances where redress involves information obtained from other organizations, redress processes include coordination with organizations that originally collected the information. Related controls: IP-2, TR-1, TR-2, UL-2.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. § 552a (d), (c)(4); OMB Circular A-130.

IP-4 COMPLAINT MANAGEMENT

Control: The organization implements a process for receiving and responding to complaints, concerns, or questions from individuals about the organizational privacy practices.

Supplemental Guidance: Complaints, concerns, and questions from individuals can serve as a valuable source of external input that ultimately improves operational models, uses of technology, data collection practices, and privacy and security safeguards. Organizations provide complaint mechanisms that are readily accessible by the public, include all information necessary for successfully filing complaints (including contact information for the Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO) or other official designated to receive complaints), and are easy to use. Organizational complaint management processes include tracking mechanisms to ensure that all complaints received are reviewed and appropriately addressed in a timely manner. Related controls: AR-6, IP-3.

Control Enhancements:

(1) *COMPLAINT MANAGEMENT | RESPONSE TIMES*

The organization responds to complaints, concerns, or questions from individuals within [*Assignment: organization-defined time period*].

References: OMB Circular A-130; OMB Memoranda 07-16, 08-09.

FAMILY: SECURITY

This family supplements the security controls in Appendix F to ensure that technical, physical, and administrative safeguards are in place to protect personally identifiable information (PII) collected or maintained by organizations against loss, unauthorized access, or disclosure, and to ensure that planning and responses to privacy incidents comply with OMB policies and guidance. The controls in this family are implemented in coordination with information security personnel and in accordance with the existing NIST Risk Management Framework.

SE-1 INVENTORY OF PERSONALLY IDENTIFIABLE INFORMATION

Control: The organization:

a. Establishes, maintains, and updates [*Assignment: organization-defined frequency*] an inventory that contains a listing of all programs and information systems identified as collecting, using, maintaining, or sharing personally identifiable information (PII); and

b. Provides each update of the PII inventory to the CIO or information security official [*Assignment: organization-defined frequency*] to support the establishment of information security requirements for all new or modified information systems containing PII.

Supplemental Guidance: The PII inventory enables organizations to implement effective administrative, technical, and physical security policies and procedures to protect PII consistent with Appendix F, and to mitigate risks of PII exposure. As one method of gathering information for their PII inventories, organizations may extract the following information elements from Privacy Impact Assessments (PIA) for information systems containing PII: (i) the name and acronym for each system identified; (ii) the types of PII contained in that system; (iii) classification of level of sensitivity of all types of PII, as combined in that information system; and (iv) classification of level of potential risk of substantial harm, embarrassment, inconvenience, or unfairness to affected individuals, as well as the financial or reputational risks to organizations, if PII is exposed. Organizations take due care in updating the inventories by identifying linkable data that could create PII. Related controls: AR-1, AR-4, AR-5, AT-1, DM-1, PM-5, UL-3.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. § 552a (e) (10); Section 208(b)(2), E-Government Act of 2002 (P.L. 107-347); OMB Memorandum 03-22; OMB Circular A-130, Appendix I; FIPS Publication 199; NIST Special Publications 800-37, 800-122.

SE-2 PRIVACY INCIDENT RESPONSE

Control: The organization:

a. Develops and implements a Privacy Incident Response Plan; and

b. Provides an organized and effective response to privacy incidents in accordance with the organizational Privacy Incident Response Plan.

Supplemental Guidance: In contrast to the Incident Response (IR) family in Appendix F, which concerns a broader range of incidents affecting information security, this control uses the term Privacy Incident to describe only those incidents that relate to personally identifiable information (PII). The organization Privacy Incident Response Plan is developed under the leadership of the SAOP/CPO. The plan includes: (i) the establishment of a cross-functional Privacy Incident Response Team that reviews, approves, and participates in the execution of the Privacy Incident Response Plan; (ii) a process to determine whether notice to oversight organizations or affected individuals is appropriate and to provide that notice accordingly; (iii) a privacy risk assessment process to determine the extent of harm, embarrassment, inconvenience, or unfairness to affected individuals and, where appropriate, to take steps to mitigate any such risks; (iv) internal

procedures to ensure prompt reporting by employees and contractors of any privacy incident to information security officials and the Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO), consistent with organizational incident management structures; and (v) internal procedures for reporting noncompliance with organizational privacy policy by employees or contractors to appropriate management or oversight officials. Some organizations may be required by law or policy to provide notice to oversight organizations in the event of a breach. Organizations may also choose to integrate Privacy Incident Response Plans with Security Incident Response Plans, or keep the plans separate. Related controls: AR-1, AR-4, AR-5, AR-6, AU-1 through 14, IR-1 through IR-8, RA-1.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. § 552a (e), (i)(1), and (m); Federal Information Security Management Act (FISMA) of 2002, 44 U.S.C. § 3541; OMB Memoranda 06-19, 07-16; NIST Special Publication 800-37.

FAMILY: TRANSPARENCY

This family ensures that organizations provide public notice of their information practices and the privacy impact of their programs and activities.

TR-1 PRIVACY NOTICE

Control: The organization:

a. Provides effective notice to the public and to individuals regarding: (i) its activities that impact privacy, including its collection, use, sharing, safeguarding, maintenance, and disposal of personally identifiable information (PII); (ii) authority for collecting PII; (iii) the choices, if any, individuals may have regarding how the organization uses PII and the consequences of exercising or not exercising those choices; and (iv) the ability to access and have PII amended or corrected if necessary;

b. Describes: (i) the PII the organization collects and the purpose(s) for which it collects that information; (ii) how the organization uses PII internally; (iii) whether the organization shares PII with external entities, the categories of those entities, and the purposes for such sharing; (iv) whether individuals have the ability to consent to specific uses or sharing of PII and how to exercise any such consent; (v) how individuals may obtain access to PII; and (vi) how the PII will be protected; and

c. Revises its public notices to reflect changes in practice or policy that affect PII or changes in its activities that impact privacy, before or as soon as practicable after the change.

Supplemental Guidance: Effective notice, by virtue of its clarity, readability, and comprehensiveness, enables individuals to understand how an organization uses PII generally and, where appropriate, to make an informed decision prior to providing PII to an organization. Effective notice also demonstrates the privacy considerations that the organization has addressed in implementing its information practices. The organization may provide general public notice through a variety of means, as required by law or policy, including System of Records Notices (SORNs), Privacy Impact Assessments (PIAs), or in a website privacy policy. As required by the Privacy Act, the organization also provides direct notice to individuals via Privacy Act Statements on the paper and electronic forms it uses to collect PII, or on separate forms that can be retained by the individuals.

The organization Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO) is responsible for the content of the organization's public notices, in consultation with legal counsel and relevant program managers. The public notice requirement in this control is satisfied by an organization's compliance with the public notice provisions of the Privacy Act, the E-Government Act's PIA requirement, with OMB guidance related to federal agency privacy notices, and, where applicable, with policy pertaining to participation in the Information Sharing Environment (ISE).[124] Changing PII practice or policy without prior notice is disfavored and should only be undertaken in consultation with the SAOP/CPO and counsel. Related controls: AP-1, AP-2, AR-1, AR-2, IP-1, IP-2, IP-3, UL-1, UL-2.

Control Enhancements:

(1) *PRIVACY NOTICE | REAL-TIME OR LAYERED NOTICE*

The organization provides real-time and/or layered notice when it collects PII.

Supplemental Guidance: Real-time notice is defined as notice at the point of collection. A layered notice approach involves providing individuals with a summary of key points in the organization's privacy policy. A second notice provides more detailed/specific information.

[124] The Information Sharing Environment is an approach that facilitates the sharing of terrorism and homeland security information. The ISE was established by the Intelligence Reform and Terrorism Prevention Act of 2004, Public Law 108-458, 118 Stat. 3638. See the ISE website at: http://www.ise.gov.

References: The Privacy Act of 1974, 5 U.S.C. § 552a (e)(3), (e)(4); Section 208(b), E-Government Act of 2002 (P.L. 107-347); OMB Memoranda 03-22, 07-16, 10-22, 10-23; ISE Privacy Guidelines.

TR-2 SYSTEM OF RECORDS NOTICES AND PRIVACY ACT STATEMENTS

Control: The organization:

a. Publishes System of Records Notices (SORNs) in the Federal Register, subject to required oversight processes, for systems containing personally identifiable information (PII);

b. Keeps SORNs current; and

c. Includes Privacy Act Statements on its forms that collect PII, or on separate forms that can be retained by individuals, to provide additional formal notice to individuals from whom the information is being collected.

Supplemental Guidance: Organizations issue SORNs to provide the public notice regarding PII collected in a system of records, which the Privacy Act defines as "a group of any records under the control of any agency from which information is retrieved by the name of an individual or by some identifying number, symbol, or other identifier." SORNs explain how the information is used, retained, and may be corrected, and whether certain portions of the system are subject to Privacy Act exemptions for law enforcement or national security reasons. Privacy Act Statements provide notice of: (i) the authority of organizations to collect PII; (ii) whether providing PII is mandatory or optional; (iii) the principal purpose(s) for which the PII is to be used; (iv) the intended disclosures (routine uses) of the information; and (v) the consequences of not providing all or some portion of the information requested. When information is collected verbally, organizations read a Privacy Act Statement prior to initiating the collection of PII (for example, when conducting telephone interviews or surveys). Related control: DI-2.

Control Enhancements:

(1) *SYSTEM OF RECORDS NOTICES AND PRIVACY ACT STATEMENTS | PUBLIC WEBSITE PUBLICATION*
The organization publishes SORNs on its public website.

References: The Privacy Act of 1974, 5 U.S.C. § 552a (e)(3); OMB Circular A-130.

TR-3 DISSEMINATION OF PRIVACY PROGRAM INFORMATION

Control: The organization:

a. Ensures that the public has access to information about its privacy activities and is able to communicate with its Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO); and

b. Ensures that its privacy practices are publicly available through organizational websites or otherwise.

Supplemental Guidance: Organizations employ different mechanisms for informing the public about their privacy practices including, but not limited to, Privacy Impact Assessments (PIAs), System of Records Notices (SORNs), privacy reports, publicly available web pages, email distributions, blogs, and periodic publications (e.g., quarterly newsletters). Organizations also employ publicly facing email addresses and/or phone lines that enable the public to provide feedback and/or direct questions to privacy offices regarding privacy practices. Related control: AR-6.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. § 552a; Section 208, E-Government Act of 2002 (P.L. 107-347); OMB Memoranda 03-22, 10-23.

FAMILY: USE LIMITATION

This family ensures that organizations only use personally identifiable information (PII) either as specified in their public notices, in a manner compatible with those specified purposes, or as otherwise permitted by law. Implementation of the controls in this family will ensure that the scope of PII use is limited accordingly.

UL-1 INTERNAL USE

Control: The organization uses personally identifiable information (PII) internally only for the authorized purpose(s) identified in the Privacy Act and/or in public notices.

Supplemental Guidance: Organizations take steps to ensure that they use PII only for legally authorized purposes and in a manner compatible with uses identified in the Privacy Act and/or in public notices. These steps include monitoring and auditing organizational use of PII and training organizational personnel on the authorized uses of PII. With guidance from the Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO) and where appropriate, legal counsel, organizations document processes and procedures for evaluating any proposed new uses of PII to assess whether they fall within the scope of the organizational authorities. Where appropriate, organizations obtain consent from individuals for the new use(s) of PII. Related controls: AP-2, AR-2, AR-3, AR-4, AR-5, IP-1, TR-1, TR-2.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. § 552a (b)(1).

UL-2 INFORMATION SHARING WITH THIRD PARTIES

Control: The organization:

a. Shares personally identifiable information (PII) externally, only for the authorized purposes identified in the Privacy Act and/or described in its notice(s) or for a purpose that is compatible with those purposes;

b. Where appropriate, enters into Memoranda of Understanding, Memoranda of Agreement, Letters of Intent, Computer Matching Agreements, or similar agreements, with third parties that specifically describe the PII covered and specifically enumerate the purposes for which the PII may be used;

c. Monitors, audits, and trains its staff on the authorized sharing of PII with third parties and on the consequences of unauthorized use or sharing of PII; and

d. Evaluates any proposed new instances of sharing PII with third parties to assess whether the sharing is authorized and whether additional or new public notice is required.

Supplemental Guidance: The organization Senior Agency Official for Privacy (SAOP)/Chief Privacy Officer (CPO) and, where appropriate, legal counsel review and approve any proposed external sharing of PII, including with other public, international, or private sector entities, for consistency with uses described in the existing organizational public notice(s). When a proposed new instance of external sharing of PII is not currently authorized by the Privacy Act and/or specified in a notice, organizations evaluate whether the proposed external sharing is compatible with the purpose(s) specified in the notice. If the proposed sharing is compatible, organizations review, update, and republish their Privacy Impact Assessments (PIAs), System of Records Notices (SORNs), website privacy policies, and other public notices, if any, to include specific descriptions of the new uses(s) and obtain consent where appropriate and feasible. Information-sharing agreements also include security protections consistent with the sensitivity of the information being shared. Related controls: AR-3, AR-4, AR-5, AR-8, AP-2, DI-1, DI-2, IP-1, TR-1.

Control Enhancements: None.

References: The Privacy Act of 1974, 5 U.S.C. § 552a (a)(7), (b), (c), (e)(3)(C), (o); ISE Privacy Guidelines.

Acknowledgements

This appendix was developed by the National Institute of Standards and Technology and the Privacy Committee of the Federal Chief Information Officer (CIO) Council. In particular, we wish to thank the members of the Privacy Committee's Best Practices Subcommittee and its Privacy Controls Appendix Working Group—Claire Barrett, Chris Brannigan, Pamela Carcirieri, Debra Diener, Deborah Kendall, Martha Landesberg, Steven Lott, Lewis Oleinick, and Roanne Shaddox—for their valuable insights, subject matter expertise, and overall contributions in helping to develop the content for this appendix to Special Publication 800-53. We also wish to recognize and thank Erika McCallister, Toby Levin, James McKenzie, Julie McEwen, and Richard Graubart for their significant contributions to this project. A special note of thanks goes to Peggy Himes and Elizabeth Lennon for their superb administrative support. The authors also gratefully acknowledge and appreciate the significant contributions from individuals, groups, and organizations in the public and private sectors, whose thoughtful and constructive comments improved the overall quality, thoroughness, and usefulness of this publication.

Federal Equal Opportunity Recruitment Program Plan Fiscal Year 2012

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

Table of Contents

Executive Summary

Moreover, we recognize diversity as a catalyst for new ideas and innovation, helping us to solve not only the problems of today but also the challenges of tomorrow. R1

This Federal Equal Opportunity Recruitment Program (FEORP) Plan is our roadmap for how to recruit and retain a highly qualified diverse workforce. It outlines the basic policy, legal authority, and responsibility for NARA's FEORP Plan; provides data on our workforce and how it compares to both the Federal Civilian Workforce (FCW) and the Relevant Civilian Labor Force (RCLF); and identifies specific actions that NARA will undertake in the coming years to address areas where underrepresentation of women and minorities exist in our workforce.

As shown in Figure 1 below, representation for some groups – specifically, women and Blacks - compare favorably to both the FCW and the RCLF. However, with the exception of these two groups, all others are underrepresented at NARA when compared to the FCW. In particular, Hispanics are significantly underrepresented in NARA, comprising just 1.6 percent of the workforce as compared to the 7.7 percent of the FCW and 10.7 percent of the RCLF. Representation rates for Asian/Pacific Islanders and Native Americans are also below those in both the RCLF and the FCW.

Figure 1
NARA vs. Federal and Relevant Civilian Labor Workforce[1]

	Black	Hispanic	Asian/P.I.	Native American	Women
NARA	25.6%	1.6%	2.9%	0.7%	52.3%
FCW	17.9%	7.7%	5.5%	1.8%	43.7%
RCLF	10.5%	10.7%	3.7%	1.4%	46.8%

[1] NARA data provided by NARA's Performance Measurement and Reporting System (PMRS); covers full-time permanent employees as of October 27, 2011

Relevant Civilian Labor Workforce (RCLF); covers full and part-time permanent employees, data sourced from Census EEO Tool, Nationwide

supervisory workforce, they comprise only 45 percent of supervisory positions and 23 percent of executive positions.

To address these challenges, NARA has identified three multi-year strategic goals that together form the foundation of our FEORP. These goals are:

- Ensure that FEORP goals are aligned with NARA's Strategic Plan and Strategic Human Capital Plan and integrated with workforce planning efforts;
- Expand the pipeline of women and minorities available for employment with NARA; and
- Enhance staff development opportunities that prepare staff for upper level positions.

In support of these goals, we have identified 14 specific strategies that NARA will undertake in Fiscal Year 2012 to enhance the representation of women and minorities at all levels. Our strategies focus on expanding partnerships with minority-serving universities, education associations, and professional organizations; attending and networking at minority conferences and job fairs; encouraging the use of developmental assignments that provide on-the-job training opportunities for women and minorities; and ensuring that our FEORP goals and strategies are fully aligned with NARA's Strategic Human Capital Plan and, by extension, NARA's Strategic Plan.

Progress against these goals and strategies will be assessed each year as part of our human capital accountability efforts and the U.S. Office of Personnel Management's (OPM) annual FEORP and Federal Hispanic Employment Plan (HEP) reporting requirements. In addition, this plan will be revised each year to reflect NARA's latest workforce demographics and updated strategies for addressing underrepresentation at NARA.

Introduction

I agency created by statute in 1934, NARA safeguards the records of all three branches of the Federal Government.

Our job is to ensure continuing access to essential documentation and, in doing so, we serve a broad spectrum of American society. Genealogists and family historians; veterans and their authorized representatives; academics, scholars, historians, business and occupational researchers; publication and broadcast journalists; Congress, the Courts, the White House, and other public officials; Federal Government agencies and the individuals they serve; state and local government personnel; professional organizations and their members; students and teachers; and the general public – all seek answers from the records we preserve.

Mission

The National Archives and Records Administration serves American democracy by safeguarding and preserving the records of our Government, ensuring that the people can discover, use, and learn from this documentary heritage. We ensure continuing access to the essential documentation of the rights of American citizens and the actions of their government. We support democracy, promote civic education, and facilitate historical understanding of our national experience.

Vision

As the nation's record keeper, it is our vision that all Americans will understand the vital role records play in a democracy, and their own personal stake in the National Archives. Our holdings and diverse programs will be available to more people than ever before through modern technology and dynamic partnerships. The stories of our nation and our people are told in the records and artifacts cared for in NARA facilities around the country. We want all Americans to be inspired to explore the records of their country.

We carry out our mission through a national network of archives and records services facilities stretching

response to hundreds of thousands of requests, the records on which the entitlements of citizens, the credibility of Government, and the accuracy of history depend.

In order to accomplish our mission and effectively represent the many customers we serve, NARA recognizes the need to recruit, retain, reward, and promote a highly qualified diverse workforce. Demographic research suggests that the future workforce talent pool will be much more diverse, including individuals of different genders, ages, races, ethnicities, and lifestyles. By effectively leveraging this human capital, we can increase the variety of available skills and knowledge in our workforce, thereby achieving greater mission success. Specifically, diversity recruitment initiatives can help NARA reduce turnover, improve retention and employee morale, and increase innovation.

NARA's commitment to diversity is reflected in our 2006 – 2016 Strategic Plan ("*Preserving the Past to Protect the Future"*). The Strategic Plan incorporates two goals, specifically 6.1 and 6.2, aimed at enhancing the competencies and diversity of our workforce:

Strategic Goal 6

We will equip NARA to meet the changing needs of our customers.

- **6.1 By 2016, 95 percent of employees possess the core competencies that were identified for their jobs.**
- **6.2 By 2016, the percentage of NARA employees in underrepresented groups match their respective availability levels in the Civilian Labor Force (CLF).**

This Federal Equal Opportunity Recruitment Program Plan further emphasizes our commitment to diversity. It identifies specific objectives and strategies for eliminating underrepresentation of women and minorities in NARA, and it provides a framework for aligning our strategic diversity recruitment and human capital goals with the vision and mission articulated in our Strategic Plan.

women exist.

The U.S. Office of Personnel Management (OPM) sets policy and provides guidance to Federal agencies on the development and administration of FEORP. OPM requires that agency FEORP plans cover the following underrepresented groups: White females, Black males and females, Hispanic males and females[2], Asian/Pacific Islander males and females, and Native American males and females.

The FEORP applies to all positions in all pay plans, unless specifically exempt by statute.

This plan is reviewed and updated on an annual basis.

LEGAL AUTHORITY

As outlined in 5 U.S.C. 7201(b), "It is the policy of the United States to insure equal employment opportunities for employees without discrimination because of race, color, religion, sex, or national origin."

Further, as outlined in Executive Order 13171, "The head of each executive department and agency (agency) shall establish and maintain a program for the recruitment and career development of Hispanics/Latinos in Federal government."

OPM's implementing regulations for these provisions are contained at 5 CFR 720, Subpart B – Federal Equal Opportunity Recruitment Program. Specifically, 5 CFR 720.205 requires each agency to "have an up-to-date equal opportunity recruitment program plan covering recruitment of positions at various organizational levels and geographic locations within the agency."

Pursuant to this policy, 5 U.S.C. 7201(c) requires: "That each Executive agency conduct a continuing program for the recruitment of members of minorities for positions in the agency to carry out the [anti-discrimination] policy set forth in subsection (b) in a manner designed to eliminate underrepresentation of minorities in the various categories of civil service employment within the Federal service, with special efforts directed at recruiting in minority communities, in educational institutions, and from other sources from which minorities can be recruited…."

[2] Until 2010, agencies were also required to submit a separate Hispanic Employment Plan to OPM. However, in September 2010, OPM released a memo, "Subject: Tenth Annual Report to the President on Hispanic Employment" which requests that Hispanic Employment information be submitted with the FEORP report in an effort to consolidate like reports. Complying with this request, NARA has integrated the analysis, goals and strategies Hispanic employment into our FEORP plan.

DEFINITIONS

It is the policy of the National Archives and Records Administration to prohibit discrimination and to ensure equal employment opportunity for all applicants and employees without regard to race, color, religion, sex, sexual orientation and genetics, national origin, age or disability.

DESIGNATION OF RESPONSIBILITY

A. The Chief Human Capital Officer (CHCO), is responsible for:
    1. Overseeing the planning and implementation of this plan;
    2. Communicating the FEORP plan to NARA's managers and employees;
    3. Certifying that the FEORP plan exists and is current; and
    4. Submitting the annual FEORP report to OPM.

B. The Talent Management Division (HT) within the Office of Human Capital is responsible for:
    1. Annually developing and updating the FEORP plan;
    2. Implementing the recruitment strategies and programs identified within the plan; and
    3. Preparing FEORP reports and responding to inquiries about program activities.

C. The Staffing and Recruitment Branch (HTS) within The Office of Human Capital is responsible for:
    1. Conducting recruitment and hiring practices that align with the FEORP plan and promote the advancement of women and minorities; and
    2. Providing advice and assistance to selecting officials when vacancies occur in underrepresented occupations.

D. The Office of Diversity and Inclusion (HD) recommends changes to programs and procedures to eliminate practices that act as barriers to the hiring and advancement of women and minorities.

E. The Learning and Development Division (HL) is responsible for providing developmental opportunities that will support the advancement of women and minorities.

F. Hiring officials are responsible for conducting recruitment and hiring practices that align with this plan and promote the advancement of women and minorities.

Underrepresentation Analysis

national origin (RNO) and gender of our workforce as of October 7, 2011.

When evaluating the composition of our workforce to determine if underrepresentation exists, NARA measures itself against two groups: the Federal Civilian Workforce and the Relevant Civilian Labor Force. The Federal Civilian Workforce is defined by the OPM as full and part-time permanent non-military employees working in non-Postal Executive Branch agencies of the U.S. Government. Measuring ourselves against the FCW enables us to see how our workforce compares to other Federal agencies.

Relevant Civilian Labor Force is defined as those occupations in the Civilian Labor Force (non-institutionalized individuals 16 years of age or older, employed or unemployed, U.S. citizens and non-U.S. citizens) that are directly comparable or relevant to occupations at NARA. Appendix B contains a list of the 54 occupational groups that comprise NARA's RCLF, cross-walked to their corresponding OPM occupational series. Measuring ourselves against the RCLF enables us to compare ourselves against like occupations in the national labor market.

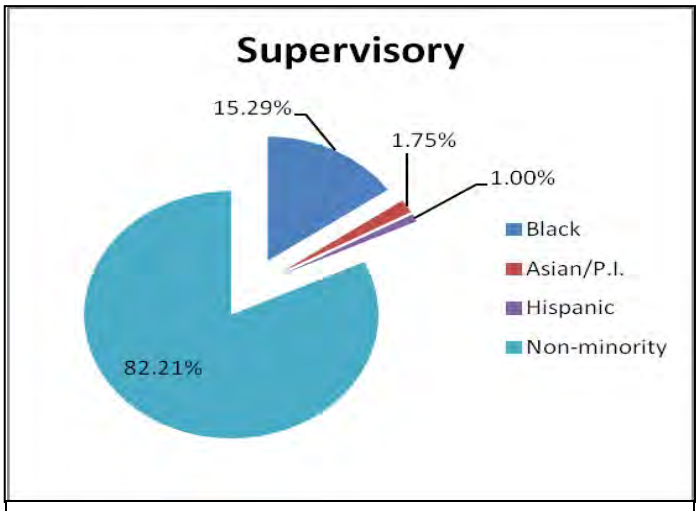
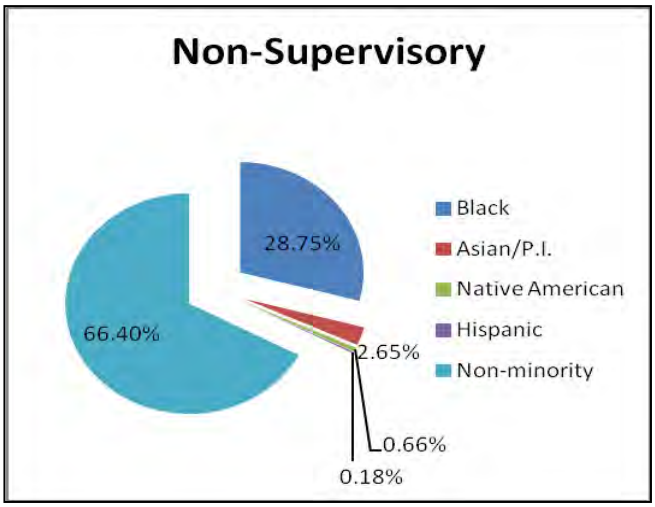
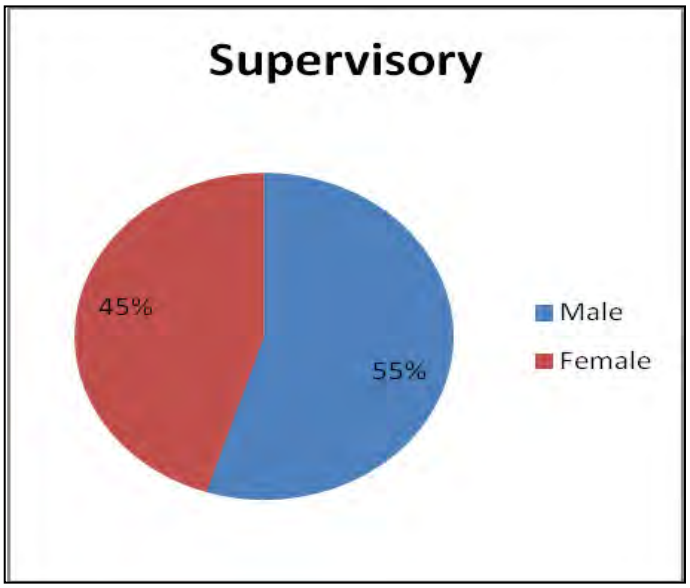
Figure 9
Supervisory vs. Non-supervisory Workforce



*Note Native American not shown (0% representation)





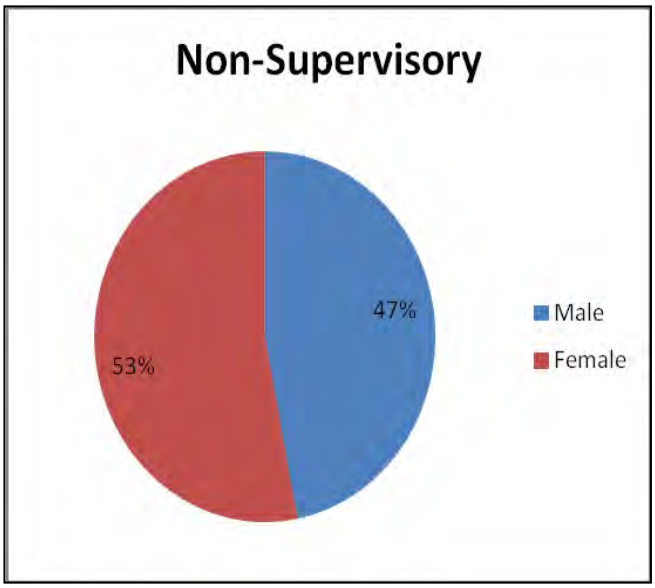


Figure 10
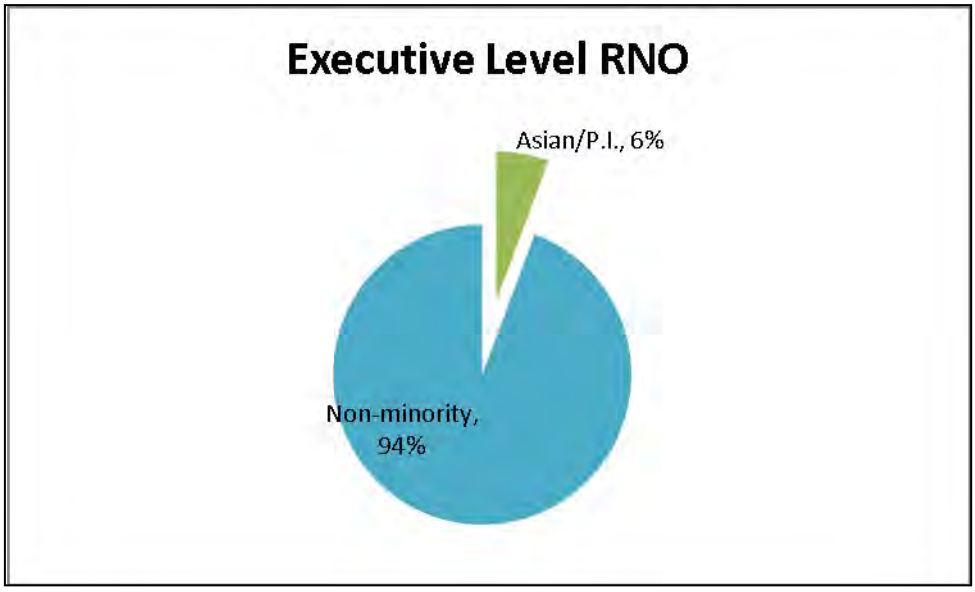
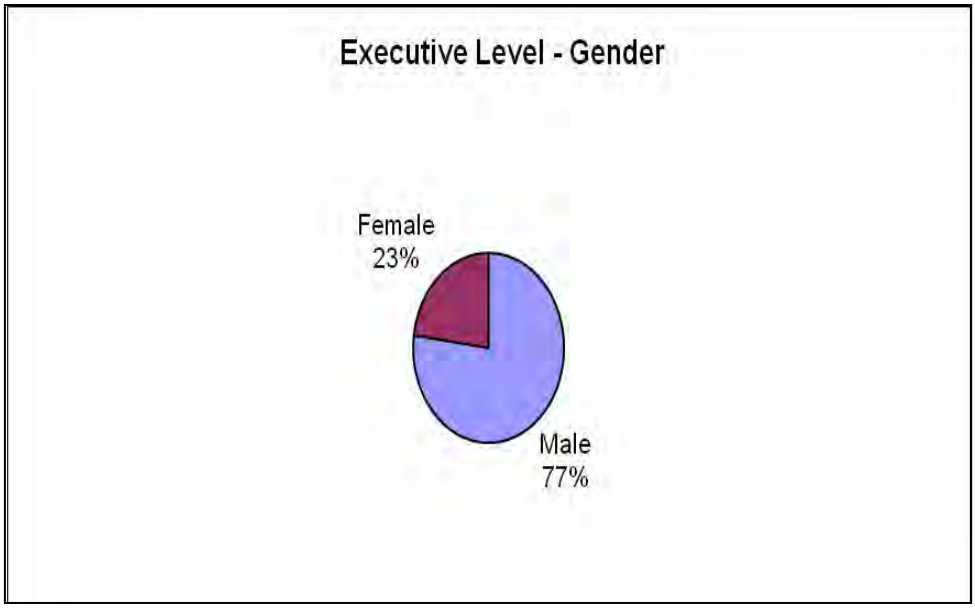
Executive Level RNO and Gender





Findings

Hispanics, who comprise only 1.6 percent of NARA's workforce. Native Americans are likewise underrepresented at all grade levels and across four of NARA's five largest occupational series. Representation rates for Asian/Pacific Islanders vary. For example, Asian/Pacific Islanders comprise six percent of NARA's executive level positions; however, they are consistently underrepresented at all other grade levels.

Our analysis also shows that minorities and women are better represented in the non-supervisory workforce than in the supervisory workforce. Minorities comprise 32 percent of our non-supervisory workforce, and only 18 percent of our supervisory ranks; likewise, women comprise 53 percent of our non-supervisory workforce and 45 percent of supervisory positions.

Progress is needed in increasing the representation of women and minorities at the most senior levels of NARA. As illustrated in Figure 10, minorities comprise just 6 percent of NARA's executive level positions, and women comprise 23 percent of NARA's executive level positions.

Specific findings for each group are outlined below:

BLACKS

Blacks comprise 25.6 percent of NARA's total workforce, exceeding their representation in the FCW and RCLF by 7.7 percent and 15.1 percent respectively. Representation rates for Blacks exceed the FCW across all grade levels, except at the GS 13-15 levels where representation rates are somewhat lower than the FCW. Representation rates for Blacks declined in FY11 in three of NARA's five largest occupational series; GS-1421 (Archives Technician), GS-1001 (General Arts and Information) and the GS-2210 (Information Technology Management) series.

NARA's greatest challenges regarding the representation of Blacks are at the supervisory and executive levels. Blacks comprise 28.7 percent of NARA's non-supervisory workforce, but only 15.2 percent of supervisory positions. Moreover, Blacks are not represented at all among NARA's executive level positions. It is encouraging to note, however, that there was a 1.2 percent increase in representation (14 to 15.2 percent) of Blacks at the supervisory level from last year.

HISPANICS

underrepresentation occurring at the GS 9-12 levels with a difference of 4.8 percent when compared to the FCW.

Hispanics are underrepresented across NARA's five largest occupational series when compared to the RCLF. However, when compared to FCW, Hispanics fare slightly better in the GS-1421 occupational series – exceeding the FCW by .1 percent.

Hispanics comprise .18 percent of NARA's non-supervisory workforce and are represented at a rate of 1 percent within NARA's supervisory positions. Hispanics are not represented at all among NARA's executive level positions.

NARA's greatest challenge in recruiting Hispanics continues to be the exceedingly small number of Hispanics studying in the fields of archives, history, library and information science, and social science – the areas of study from which the majority (58.9 percent) of NARA's workforce is based. Of the approximate 200,000 undergraduate and graduate degrees conferred in the areas of library and information science, social science or history in 2008 - 2009, only 0.86 percent was conferred to Hispanics[4].

ASIAN/PACIFIC ISLANDERS

Asian/Pacific Islanders represent 2.5 percent of NARA's workforce, as compared to 5.5 percent of the Federal workforce and 3.7 percent of the RCLF. In comparison to FY10, representation of this group has increased by .4 percent. Representation rates vary across NARA's five largest occupational series. Within the GS-1421 occupational series, Asian/Pacific Islanders slightly exceed both the FCW and RECLF. Within the GS-1001 series, Asian/Pacific Islanders are only slightly underrepresented when compared to the RCLF, but significantly more underrepresented when compared to the FCW. Within the GS-0343 series, Asian/Pacific Islanders exceed the FCW representation by .77 percent but are underrepresented by .47 percent when compared to the RCLF. This however, is an improvement over FY10 when Asian/Pacific Islanders were not represented all within this occupational series. Asian/Pacific Islanders also continue to exceed both the FCW and the RCLF within the GS-2210 series.

Although Asian/Pacific Islanders represent only 1.7 percent of supervisory positions at NARA, they are the only minority group represented within NARA's executive ranks – representing 6 percent of that workforce.

[4] National Center for Education Statistics, 2008-2009, Tables 297 and 300. 2008 – 2009 is the most recent year for which data is available.

NATIVE AMERICANS

where Native Americans comprise 4.8 percent of the workforce (an increase of 0.3 percent over FY10), exceeding the FCW by the same amount. Native Americans do not hold any supervisory or executive level positions at NARA.

As with Hispanics, one of the challenges NARA faces in recruiting Native Americans is the small number of Native Americans majoring in fields of study that are applicable to NARA's Mission Critical Occupations. Only .80 percent of all undergraduate and graduate degrees conferred in 2008 - 2009 were conferred to Native Americans majoring in library and information science, social science or history.[5]

WOMEN

Women represent 52.3 percent of NARA's workforce, exceeding their representation in the FCW and RCLF by 8.6 and 5.5 percent respectively.

Women comprise 50.9 percent of NARA's MCOs, an increase of 2.9 percent over FY10. However, women exceed the RCLF for NARA's three other largest occupational series – the GS-1001 series, GS-0343 series, and GS-2210 series, and the FCW in two of those series (GS-1001 and GS-2210).

NARA leads the FCW in female representation at the GS 9-12 and GS 13-15 levels. However, women are underrepresented at the GS 1-4 and GS 5-8 levels. This is an improvement over FY10 when the FCW led NARA in female representation at all but the GS 5-8 level. Women comprise 53 percent of the non-supervisory workforce and 45 percent of supervisory positions. Women comprise 23 percent of NARA's executive positions, a decrease of 3 percent when compared to FY10.

[5] National Center for Education Statistics, 2008-2009, Tables 297 and 300. 2008 – 2009 is the most recent year for which data is available.

Trend Analysis

and gender of our Mission Critical Occupations (MCOs), RNO and gender of NARA's next three largest occupational series (GS-1001 General Arts and Information series, GS-0343 Management and Program Analysts series, and GS-2210 Information Technology Management series), grade-cluster data, and the composition of our supervisory/non-supervisory workforce as well as our executive level positions.

These areas are discussed in detail below.

NARA's Workforce Composition

Overall minority representation has remained relatively stable over the three-year period, as shown in Figure 11 below.

Representation of Blacks within NARA's workforce has declined slightly each year - down 1.7 compared to FY2009 and 1.0 percent compared to FY2010. Despite this decrease, Blacks continue to exceed both the FCW and RCLF over the three-year analysis period.

Hispanic representation had remained consistent at 1.4 percent for FY2009 and FY2010. In FY11 there was slight increase (up .2 percent) to 1.6 percent in FY11. Representation of Asian/Pacific Islanders has shown the greatest improvement, with slight increases each year over the three-year period.

Native American representation has increased slightly each year, for a net increase of .2 percent over the three-year analysis period.

Figure 11

	Black	Hispanic	Asian/P.I.	Native American	Women
NARA 2009	27.3%	1.4%	2.2%	0.5%	52.0%
NARA 2010	26.6%	1.4%	2.5%	0.6%	51.9%
NARA 2011	25.6%	1.6%	2.9%	0.7%	52.3%

As shown in Figure 12 below, representation of Blacks declined from 30.9% in 2009 to 30.1% in 2010 and 28.6% in 2011, while all other races and women either stayed the same or slightly increased at the end of the analysis period. While we are cognizant of the decline in Black representation levels, we also recognize that we continue to considerably exceed the representation of Blacks in these occupations when compared to the RCLF – by an average of 24.5 percent over the three year period.

Figure 12

	Black	Hispanic	Asian/P.I.	Native American	Women
NARA 2009	30.9%	1.3%	1.8%	0.5%	49.0%
NARA 2010	30.1%	1.3%	2.0%	0.6%	49.5%
NARA 2011	28.6%	1.5%	2.4%	0.7%	50.9%

GS-1001, General Arts and Information Series – Representation of women, Hispanics, and Native Americans has not changed. Representation of Blacks and Asian /Pacific Islanders has declined slightly.

Figure 13

NARA 2011	17.2%	2.8%	4.8%	0.0%	55.2%

GS-2210, Information Technology Management Series - Over the course of the three-year analysis period, Hispanics have had no representation in this occupational series. There has been a slight decrease in representation amongst Blacks and Women. Representation of Asian/Pacific Islanders, on the other hand, maintained representation from FY09 to FY10 at 15.2% and increased by 1.1 percent in FY11.

Figure 15

2010	12.1%	1.2%	3.9%	0.2%	46.0%
2011	12.1%	1.2%	3.8%	0.3%	44.8%

the executive level over the three-year analysis period. The representation of Asian/Pacific Islanders has remained stable. Representation of women has fluctuated from 24.2 percent in 2009 to 26 percent in 2010 and 23 percent in 2011. While these increases are hopeful, there is still room for improvement. As we move forward it will important to communicate these trends and findings and develop strategies to increase representation of minorities across the board at executive levels.

Figures 20 - 22
Supervisory/Non-supervisory and Executive Level Workforce

Figure 20

	Black	Hispanic	Asian/P.I.	Native American	Women
2009	15.0%	1.0%	1.3%	0.0%	44.9%

2010	0.0%	0.0%	6.0%	0.0%	26.0%
2011	0.0%	0.0%	6.0%	0.0%	23.0%

that we have had minimal variation in minority representation throughout the analysis period.

While our strategies appear to be effective in maintaining the representation of minorities and women, the data suggests that new and/or additional strategies, including an in-depth analysis of barriers, may be needed in order to yield significant changes going forward. In addition, the lack of minority candidates majoring in the fields of study applicable to the majority of NARA's workforce continues to be a challenge.

Goals & Strategies

that together form the foundation for improving our recruitment strategy for women and minorities:

- **Ensure that FEORP goals are aligned with NARA's Strategic Plan and Strategic Human Capital Plan and integrated with workforce planning efforts;**
- **Expand the pipeline of women and minorities available for employment with NARA; and**
- **Enhance staff development opportunities that prepare staff for upper level positions.**

In support of these goals, we have identified 14 specific strategies that NARA will undertake in Fiscal Year 2012 to enhance the representation of women and minorities at all levels. These strategies are discussed in detail on the following pages.

Several of these strategies are a continuation from previous years. However, as mentioned previously in this report, NARA recognizes the need to identify additional new strategies and further analyze barriers if we are to make significant improvements versus simply maintaining our current rates of minority representation.

Progress against our goals and strategies will be assessed each year as part of our human capital accountability efforts and OPM's annual FEORP reporting requirement. In addition, this plan will be revised each year to reflect our latest workforce demographics and the strategies will be updated as necessary to address any underrepresentation at NARA.

GOAL 1

Ensure that FEORP goals are aligned with NARA's Strategic Plan and Strategic Human Capital Plan and integrated with workforce planning efforts.

In FY2011 NARA began work on a workforce planning infrastructure that will enable managers to better understand the composition of their workforce, anticipate retirements and other attrition, and plan for projected vacancies.

The purpose of this goal is to ensure that the recruitment goals outlined in NARA's FEORP plan are fully aligned with the goals of NARA's Strategic Human Capital Plan and, by extension, NARA's Strategic Plan. This alignment is critical to ensuring that diversity recruitment goals are met. Appendix C documents the linkage between NARA's FEORP, Strategic Human Capital Plan, and Strategic Plan. The following strategies support NARA's overall strategic plan and will ensure that we have the infrastructure in place to plan for and prioritize human capital needs in Fiscal Year 2012.

Through our strategic diversity planning efforts, we intend to remain focused on creating solutions that support an inclusive work environment, develop continual improvement in workforce representation, strengthen employee talent through diversity recruiting, hiring and retention, ensuring a diverse leadership pipeline through employee development and promoting and holding management accountability for diversity at all levels.

STRATEGIES

1.1 Analyze and incorporate EEO data (e.g., workforce demographics, hiring statistics, and turnover statistics) as a formal component of NARA's workforce planning process.

1.2 Continue to work with program offices to identify the human capital required to meet organizational goals, analyze competency gaps in mission-critical occupations, develop strategies to address human capital needs and include the agency's diversity recruitment goals.

1.3 Develop and implement an agency-wide diversity strategic plan to provide a formulated approach to increasing minority, female and Veteran representation throughout NARA and in upper management positions and hold hiring managers, supervisors and upper management accountable for implementing strategies and reaching identified goals.

1.4 Continue to work with NARA's EEO office as they pursue assistance from the Equal Employment Opportunity Commission and USAStaffing to create a government-wide applicant flow data tool.

GOAL 2

Maintain a diverse high-performing workforce by effectively recruiting, hiring and retaining top talent.

NARA places a particular emphasis on recruiting for our Mission Critical Occupations – Archivists, Archives Specialists, and Archives Technicians – since these occupations comprise the largest percentage (58.9 percent) of our permanent workforce and thus, the most opportunities to enhance diversity.

NARA targets its recruitment outreach efforts to organizations that represent highly qualified diverse applicants in the fields of archives, library and information science, and history. We utilize a variety of outreach methods and tools in an attempt to reach the broadest cross-section of applicants. These include: attending career fairs and professional networking events; posting recruitment advertisements on diversity websites; and attending resume workshops and related career events in partnership with universities and minority-serving organizations and hosting interns through our Summer Diversity Internship program.

Through our Summer Diversity Internship Program, NARA reaches out to minority-serving organizations to fund internship opportunities for talented minorities. In FY 2011, we sponsored 12 highly qualified diverse candidates through the Hispanic Association of Colleges and Universities (HACU) National Internship Program and ten students through The Washington Center (TWC) internship program.

Beyond the recruitment efforts in place, NARA recognizes the need to hire and retain a diverse workforce. Therefore, strategies will be implemented in FY12 that will provide the necessary training to supervisors and managers in understanding the benefit of hiring and retaining a diverse workforce. Having a diverse applicant pool alone will not increase minority representation at NARA; we must actually hire some of these diverse candidates and work to retain new and current minorities.

STRATEGIES

2.1 Continue to utilize minority serving intern organizations in order to build a diverse talent pool.

2.2 Expand NARA's network of recruiters (referred to as Diversity Champions), including issuing guidance that emphasizes diversity as a recruitment factor.

2.3 Attend and network at the following minority conferences and career fairs in Fiscal Year 2012:

- American Legion Veterans Career Fair.

2.4 Strengthen relationships with Hispanic-Serving Institutions (HSIs), Historically Black Colleges and Universities (HBCUs), and Tribal Colleges and Universities (TCUs) through education of NARA's mission and promotion of internship and employment opportunities at NARA.

2.5 Continue to maximize the visibility of vacancy announcements by posting them on USAJobs.gov, NARA's career website and with universities/organizations with a high concentration of minorities and/or female students, alumni and/or members.

2.6 Conduct benchmarking efforts in order to better understand and implement strategies that have yielded other Federal agencies successes in the areas of minority recruitment, hiring and retention.

GOAL 3

Enhance staff development opportunities that prepare staff for upper level positions.

NARA depends on leaders who possess the knowledge, skills, and abilities to effectively lead our workforce in support of NARA's mission. We are committed to developing our leadership capacity and to ensuring continuity in leadership even as key players retire or move to new responsibilities. To do this, we recognize that we must have systems and processes in place to bring forth new, highly competent, diverse leaders.

As NARA moves forward with the development of our workforce planning infrastructure, we will be systematically identifying our current and future leadership needs and the leadership competencies and talent sources available to meet those needs. We will also be using the results of that analysis to design and implement development opportunities that prepare staff for upper level positions, paying close attention to the need for diversity among our supervisory and executive ranks.

STRATEGIES

3.1 Encourage supervisors/managers to consider the use of developmental assignments and/or detail opportunities as tools for resourcing special projects that, in turn, provide minority and/or female employees the opportunity to gain experience in higher graded occupations.

3.2 Increase awareness of the benefits of a diverse workforce at NARA's manager/supervisor training and encourage upward mobility of minorities and women.

3.3 Develop mentoring programs that will enable employees to broaden skill sets; exposing them to a wider scope of activities performed by NARA thereby expanding their visibility and personal networks throughout the agency.

3.4 Educate and promote awareness among employees about available opportunities to participate in a mentoring program, either as a mentor or mentee.

Appendix A – Definitions

Accountability: A data-driven results-oriented planning system.

performance and to organizational success.

Diversity or Workplace diversity: Covers gender, age, disability, language, ethnicity, cultural background, sexual preference, religious belief and family responsibilities. Diversity also refers to the other ways in which people are different, such as educational level, life experience, work experience, socio-economic background, personality, marital status and abilities/disabilities. Workplace diversity involves recognizing the value of individual differences and managing them in the workplace.

Federal Civilian Workforce (FCW): Covers full and part-time permanent employees in non-Postal Executive Branch Agencies participating in Central Personnel Data File (CPDF). CPDF coverage is limited to Federal civilian employees.

Federal Equal Opportunity Recruitment Program (FEORP): A recruiting initiative designed to eliminate underrepresentation of minorities and women in the Federal service.

Gaps: Amount by which workforce needs (future state) exceed current resources. These resources should be essential for NARA to carry out its mission and accomplish its strategic goals.

Minorities: All categories of current and potential employees identified as non-white.

Mission Critical Occupation: An occupation that is so critical to NARA's mission, that if it ceased to exist NARA could not accomplish its statutory mission and related statutes, the vision articulated in NARA's Strategic Plan, and the mission articulated in NARA's Strategic Plan.

Relevant Civilian Labor Force (RCLF): Occupational groups that are directly comparable or relevant to occupational groups at NARA.

Underrepresentation: A situation in which the number of women or members of a minority group within a category of civil service employment constitutes a lower percentage of the total number of employees within the employment category than the percentage that women or the minority group constitutes within the civilian labor force of the United States.

Hard Evidence on Soft Skills
James J. Heckman and Tim D. Kautz
NBER Working Paper No. 18121
June 2012
JEL No. D01,I20

ABSTRACT

This paper summarizes recent evidence on what achievement tests measure; how achievement tests relate to other measures of "cognitive ability" like IQ and grades; the important skills that achievement tests miss or mismeasure, and how much these skills matter in life.

Achievement tests miss, or perhaps more accurately, do not adequately capture, soft skills—personality traits, goals, motivations, and preferences—that are valued in the labor market, in school, and in many other domains. The larger message of this paper is that soft skills predict success in life, that they causally produce that success, and that programs that enhance soft skills have an important place in an effective portfolio of public policies.

1 Introduction

Contemporary society places great value on standardized achievement tests to sift and sort people, to evaluate schools, and to assess the performance of nations. Admissions committees use tests like the SAT, the ACT, and the GRE (Graduate Record Examinations) to screen applicants. In the United States, the No Child Left Behind (NCLB) Act stipulates that government-run schools must administer standardized achievement tests in order to be eligible for federal funding.[1] The Programme for International Student Assessment (PISA) evaluates student performance in math, science, and reading across countries. The results attract media attention and influence policy. The year 2000 PISA test results caused Germany to re-evaluate its educational system and introduce a variety of educational reforms (Grek, 2009).

Despite the widespread use of standardized achievement tests, the traits that they measure are not well-understood. This paper summarizes recent evidence on what achievement tests capture; how achievement tests relate to other measures of "cognitive ability" like IQ and grades; the important skills that achievement tests miss or mismeasure, and how much these other skills matter in life.

Achievement tests miss, or more accurately, do not adequately capture, *soft skills*—personality traits, goals, motivations, and preferences that are valued in the labor market, in school, and in many other domains. The larger message of this paper is that soft skills predict success in life, that they produce that success, and that programs that enhance soft skills have an important place in an effective portfolio of public policies.[2]

Measurement of cognition and educational attainment has been refined during the past century. Psychometricians have shown that cognitive ability has multiple facets.[3] This

[1] Sales of achievement tests have increased by nearly 400% between 1959 and 2005 (Digest of Education Statistics, various years; The Bowker Annual: Library and Book Trade Almanac, various years).

[2] This paper draws on and supplements Borghans et al. (2008a), Almlund et al. (2011), and Heckman et al. (2012a).

[3] See Carroll (1994) and Ackerman and Heggestad (1997) for a discussion.

progress is not widely appreciated. Many social scientists—even many psychologists—continue to use IQ tests, standardized achievement tests, and grades interchangeably to proxy "cognitive ability."[4] Even though scores on IQ tests, standardized achievement tests, and grades are positively correlated with each other, the recent literature shows that they measure different skills and depend on different facets of cognitive ability. Recent research also shows that all three measures are associated with personality, but to different degrees across various cognitive measures.

Standardized achievement tests were designed to capture "general knowledge" produced in schools and through life experiences. Such knowledge is thought to be relevant to success inside and outside of the classroom. However, achievement tests are often validated using other standardized achievement tests or other measures of cognitive ability—surely a circular practice.

A more relevant validity criterion is how well these tests predict meaningful outcomes, such as educational attainment, labor market success, crime, and health. No single measure of cognitive ability predicts much of the variance in these outcomes, and measurement error does not account for most of the remaining variance, leaving much room for other determinants of success.[5]

Success in life depends on personality traits that are not well captured by measures of cognition. Conscientiousness, perseverance, sociability, and curiosity matter. While economists have largely ignored these traits, personality psychologists have studied them over the last century.[6] They have constructed measures of them and provide evidence that these traits predict meaningful life outcomes.

Many scholars—inside and outside of psychology—have questioned the existence of stable personality traits, arguing that constraints and incentives in situations almost entirely

[4]Many call this "IQ", e.g., Flynn (2007), Nisbett (2009), and Nisbett et al. (2012).

[5]On the magnitudes of measurement error on a variety of economic measures, see Bound et al. (2001). These authors report that at most 15–30% of earnings variance is due to measurement error.

[6]Some early studies in economics are Bowles and Gintis (1976), and Bowles et al. (2001). An important study in sociology is Jencks (1979). Work in psychology going back to Terman et al. (1925) shows that personality traits matter (see Murray, 1938; Terman et al., 1947; and the discussion in Gensowski, 2012).

determine behavior. These scholars claim that people are like chameleons—they adapt to any situation.[7] A substantial body of evidence shows that stable traits exist. People tend to behave in the same fashion across a wide range of situations.[8] Evidence from genetics and neuroscience provides a biological basis for the existence of such traits, suggesting that something tied to the person, not the just the situation, affects behavior.[9]

Throughout this paper we use the term "personality traits" to describe the personal attributes not thought to be captured by measures of abstract reasoning power. These attributes go by many names in the literature, including soft skills, personality traits, noncognitive skills, noncognitive abilities, character, and socioemotional skills. These different names connote different properties. The term "traits" suggests a sense of permanence and possibly also of heritability. The terms "skills" and "character" suggest that they can be learned. In reality, the extent to which these personal attributes can change lies on a spectrum. Both cognitive and personality traits can change and be changed over the life cycle but through different mechanisms and to different degrees at different ages. To avoid confusion, throughout this paper we use the term "trait" to capture the set of personal attributes we study.[10]

Psychological traits are not directly observed. There is no ruler for perseverance, no caliper for intelligence. All cognitive and personality traits are measured using performance on "tasks," broadly defined. Different tasks require different traits in different combinations. Some distinguish between measurements of traits and measurements of outcomes, but this distinction is misleading. Both traits and outcomes are measured using performance on some task or set of tasks.

Psychologists sometimes claim to circumvent this measurement issue by creating taxonomies of traits and by applying intuitive names to responses on questionnaires. These

[7] See Mischel (1968). Some behavioral economists share this view. See, e.g., Thaler (2008).

[8] See Epstein (1979) for an early paper showing that personality traits are stable across multiple situations. See the special issue of Journal of Research in Personality (43),"*Personality and Assessment at Age 40*," for a more recent discussion.

[9] See Bouchard and Loehlin (2001) for estimates of the heritability of traits. See Canli (2006) and DeYoung et al. (2010) for evidence that regions of the brain are associated with different traits.

[10] Drawing on the literature in psychology, Borghans et al. (2008a) present one definition of cognitive traits.

questionnaires are not windows to the soul. They are still rooted in task performance or behavior. Responding to a questionnaire is itself a task. Additionally, many of the questionnaires inquire directly about behavior, e.g., a measure of Agreeableness used in the German Socioeconomic Panel asks the extent to which a respondent "is sometimes somewhat rude to others."[11] How else can one answer that question but reflect on one's behavior? IQ tests and standardized achievement tests also measure performance on different "cognitively loaded" tasks.

Performance on most tasks depends on effort, personality traits, cognitive ability, and incentives, although the importance of each differs by task. This dependence creates a fundamental problem in measuring traits. Most studies in psychology devise a set of measures to capture a trait but do not standardize for incentives in the situation in which the trait is being measured or for other traits. Measured cognitive ability and measured personality depend on a constellation of factors. The identification problem arising from the multiple determinants of performance on tasks is empirically important, even for measures of cognitive ability. Incentives can affect performance on IQ tests. Multiple traits affect performance on cognitive tasks. For example, personality traits affect achievement test scores and grades.[12] Caution is required in taking the measures developed by psychologists too literally.

Nonetheless, measures of personality traits predict meaningful life outcomes. Conscientiousness – the tendency to be organized, responsible, and hardworking—is the most widely predictive of the commonly used personality measures. It predicts educational attainment, health, and labor market outcomes as strongly as measures of cognitive ability.[13]

Most studies in psychology only report correlations between measured traits and outcomes without addressing whether the traits *cause* the outcomes and without controlling for the other traits and incentives that determine performance on the tasks used to measure the traits. While traits are relatively stable across situations, they are not set in stone. They

[11]Throughout this paper, we adopt the convention of capitalizing traits from the "Big Five" personality taxonomy. See Table 3 for a description of the Big Five.

[12]See Borghans et al. (2011a).

[13]See the evidence collected in Almlund et al. (2011), Borghans et al. (2008a), and Roberts et al. (2007).

change over the life cycle. On average, Agreeableness and Conscientiousness tend to grow with age. Different facets of cognitive ability peak at different ages. Interventions, education, and parenting can affect traits in lasting ways.

This paper summarizes recent evidence that personality causally affects life outcomes. We review some of the literature from psychology and economics and then focus on two particularly compelling examples.[14]

First, we show how an achievement test, the General Educational Development (GED) test, fails to capture important traits that affect success in life. High school dropouts can take the GED to certify to employers and post-secondary institutions that their skills are equivalent to those of high school graduates who do not attend college. After accounting for differences in pre-existing cognitive ability, GED recipients perform much worse in the labor market than high school graduates and much more like other high school dropouts. GED recipients lack important personality traits. (See Heckman et al., 2011a and Heckman et al., 2012a.)

Second, we show how an early childhood intervention, the Perry Preschool Program, improved the lives of disadvantaged children, even though the program did not permanently change the IQ of its participants. The program changed their personality traits in a lasting way (see Heckman et al., 2012b). Other interventions and observational studies provide supporting evidence that early-childhood investments improve outcomes through their effects on personality.[15]

[14]Borghans et al. (2008a) and Almlund et al. (2011) present extensive surveys of this literature.

[15]The "*Tools of the Mind*" intervention is designed to promote "executive functioning," which has both cognitive and personality components. Barnett et al. (2008, 2006); Bierman et al. (2010); Bodrova and Leong (2001, 2007); Dee and West (2011); Diamond et al. (2007); Durlak et al. (2011); Lillard and Else-Quest (2006) report success of this intervention. For a contrary view, see the study by Farran et al. (2011).

2 Defining and Measuring Personality Traits

2.1 History and Measurement of Cognitive Ability

Modern intelligence tests have been used for just over a century, beginning when a French minister of public instruction wished to identify retarded pupils in need of specialized education programs. In response, Alfred Binet created the first IQ test.[16] IQ scores were interpreted as measuring a stable trait. The standardized achievement test was created in the wake of the perceived success of IQ tests as an objective and cost-effective measure of acquired skills. In contrast to IQ tests, standardized achievement tests were designed to measure "general knowledge" that could be acquired in schools and through life experiences and was widely applicable beyond the classroom to workplace and social functioning.[17]

Achievement tests are typically validated on other achievement tests, IQ tests, and grades, rather than on tasks or outcomes in the labor market and in social functioning. Table 1 shows correlations among scores on standardized achievement tests, IQ tests, and grades. Standardized achievement tests are correlated with IQ tests, but the correlation depends on the subject area of the standardized achievement test. Hartlage and Steele (1977) find that the arithmetic portions of standardized achievement tests are the most highly correlated with IQ. Grades and scores on IQ tests and standardized achievement tests are far from perfectly correlated, suggesting that they measure different aspects of "cognitive functioning."[18]

Psychologists distinguish between fluid intelligence (the rate at which people learn) and crystalized intelligence (acquired knowledge).[19] Achievement tests are heavily weighted to-

[16] In 1904, *La Société Libre pour l'Etude Psychologique de l'Enfant* appointed a commission to create a mechanism for identifying these pupils in need of alternative education led by Binet. See Herrnstein and Murray (1994) for an overview of Binet's life and work.

[17] See Lindquist (1951).

[18] It is an irony of the testing literature that high school grades are more predictive of first year college performance than SAT scores (Bowen et al., 2009). The SAT and related tests are thought to be more objective measures of student quality than high school grades (Lemann, 1999).

[19] See, e.g., Nisbett et al. (2012).

Table 1: Cognitive Ability Validities

Test	**Validation Domain**	**Estimate(s)**	**Source(s)**
SAT (Achievement)	1st Year College GPA	0.35 - 0.53	Kobrin et al. (2008)
ACT (Achievement)	Early College GPA	0.42	ACT, Inc. (2007)

WAIS (IQ)	HS GPA	0.62	Feingold (1982)
Various IQ**	9th Grade GPA	0.42	Borghans et al. (2011a)
WISC (IQ)	WRAT (Achievement)	0.44 - 0.75‡	Hartlage and Steele (1977)
WISC-R (IQ)	WRAT (Achievement)	0.35 - 0.76‡	Hartlage and Steele (1977)
Various IQ**	AFQT (Achievement)	0.65	Borghans et al. (2011a)
Stanford Binet (IQ)	WISC-R (IQ)	0.77 - 0.87	Rothlisberg (1987), Greene et al. (1990)
Raven's (IQ)	WAIS-R (IQ)	0.74 - 0.84	O'Leary et al. (1991)
WIAT (Achievement)	CAT/2 (Achievement)	0.69 - 0.83*	Michalko and Saklofske (1996)

Definitions: WISC – Wechsler Intelligence Scale for Children, WISC-R – Wechsler Intelligence Scale for Children - Revised, WAIS - Wechsler Adult Intelligence Scale, Raven's IQ – Raven's Standard Progressive Matrices, GED – General Educational Development, DAT – Differential Aptitude Tests, WIAT – Wechsler Individual Achievement Test, CAT – California Achievement Test, WRAT – Wide Range Achievement Test, AFQT – Armed Forces Qualification Test
† Large range is due to varying validity of eight subtests of DAT
‡ Ranges are given because correlations vary by academic subject
∗ Ranges are given because correlations vary by grade level
∗∗ IQ test scores in the NLSY79 are pooled across several IQ tests using IQ percentiles

wards crystallized intelligence,[20] whereas IQ tests like Raven's progressive matrices (1962) are heavily weighted toward fluid intelligence.[21,22] Many psychologists do not recognize the differences among these measures and interchangeably use IQ, achievement tests, and grades to measure "cognitive ability" or "intelligence," and this practice is also widespread in economics.[23]

2.2 Defining and Measuring Psychological Traits

Validating one measure of cognitive ability using other measures of cognitive ability is circular. More relevant is how well these measures predict important life outcomes. Table 2 shows the extent to which IQ, standardized achievement tests, and grades explain the variance of outcomes at age 35 in the National Longitudinal Survey of Youth, 1979 (NLSY79) data. The three groups of columns under each category show results for different sub-samples based on the availability of the different cognitive measures. For each category, the first column shows the explained variance using only the designated measure of cognitive ability. Achievement tests and grades are more predictive than IQ. But none of these measures explains much of the variation of any outcome, leaving considerable room for other determinants. As noted in the introduction, it is unlikely that measurement error accounts for all of the remaining variance.

Personality is one missing ingredient. The second columns in each category preview our later discussion of the explanatory power of personality. They show the variance explained by measures of personality.[24] In many cases, the variance explained by personality measures rivals that explained by measures of cognitive ability. The relative importance of person-

[20] See Roberts et al. (2000).

[21] See Raven et al. (1988). The high correlation between intelligence and achievement tests is in part due to the fact that both require cognitive ability and knowledge. Common developmental factors may affect both of these traits. Fluid intelligence promotes the acquisition of crystallized intelligence.

[22] Carroll (1994) and Ackerman and Heggestad (1997) discuss more disaggregated facets of cognitive ability.

[23] See Flynn (2007) and Nisbett et al. (2012). For examples in economics, see Benjamin et al. (2006).

[24] They include measures of adolescent risky behavior, self-esteem and locus of control (the extent to which people feel they have control over their lives). For precise definitions of the measures used, see the notes to Table 2.

ality depends on the outcome. The third column for each sub-sample shows the variance explained when both the cognitive and personality measures are used as predictors. In many cases, including the measures of personality in a regression with cognitive measures explains additional variance. The correlations between the set of measures of personality and the measures of cognition are positive, but not especially strong (see the bottom row of each table). Each set of traits has an independent influence on the outcomes in the table.

Even though economists have largely ignored personality traits, the pioneers of the original IQ tests recognized their importance.[25] Alfred Binet the creator of the first IQ test (the Stanford-Binet test), noted that:

> *"[Success in school] ...admits of other things than intelligence; to succeed in his studies, one must have qualities which depend on attention, will, and character; for example a certain docility, a regularity of habits, and especially continuity of effort. A child, even if intelligent, will learn little in class if he never listens, if he spends his time in playing tricks, in giggling, in playing truant."*
>
> -(Binet and Simon, 1916, p. 254)

Since the middle of the 19th century, personality psychologists have studied these traits. One leading personality psychologist defines personality traits in the following way:

> *"Personality traits are the relatively enduring patterns of thoughts, feelings, and behaviors that reflect the tendency to respond in certain ways under certain circumstances."*
>
> -(Roberts, 2009, p. 140)

Personality traits are manifested through thoughts, feelings, and behaviors, and therefore, must be inferred from measures of performance on "*tasks*," broadly defined. Under this

[25]Lewis Terman, who created the Stanford-Binet test, even collected data on personality traits of a high-ability sample. In this sample, Conscientiousness is highly predictive of health and earnings (Savelyev, 2011; Gensowski, 2012).

Table 2: Predictive Validities in Outcomes that Matter (Adjusted R-Squared)

Source: National Longitudinal Survey of Youth 1979. Table Description: The table shows the adjusted R-squared from regressions of later-life outcomes on measures of personality and cognition. For each cognitive measure, the first column shows the explained variance using only the measures of cognitive ability, the second column shows the explained variance from using only the measure of personality (Personality), and the third column shows the explained variance from using both the measures of personality and cognition (Both). The last row shows the adjusted R-squared from a regression of each cognitive measure on the personality measures. Measures of Personality and Cognition: The measures of personality include minor illegal activity in 1979 (vandalism, shoplifting, petty theft, fraud and fencing), major illegal activity in 1979 (auto theft, breaking/entering private property, grand theft), participation in violent crime in 1979 (fighting, assault and aggravated assault), tried marijuana before age 15, daily smoking before age 15, regular drinking before age 15, and any intercourse before age 15. It also includes measures of self-esteem and locus of control. Self-esteem is measured using the ten-item Rosenberg scale administered in 1980. Locus of control is a measure of how much control an individual believes they have over their life and is measured using the 4-item Rotter scale. IQ and grades are from high school transcripts. IQ is pooled across several IQ tests using IQ percentiles. GPA is the individual's core-subject GPA from 9th grade. The Armed Forces Qualification Test (AFQT) was adjusted for schooling at the time of the test conditional on final schooling as described in Hansen et al. (2004). Outcomes: Due to the biennial nature of the survey after 1994, some respondents are not interviewed at age 35, for these individuals age 36 is used. Earnings includes zero-earners and excludes observations over $200,000 (2005 dollars). Hourly wage excludes observations less than $3 or over $200 (2005 dollars). Hours worked excludes observations less than 80 or more than 4000. Jail by age 35 indicates whether the respondent had listed residing in a jail or prison at some point before age 35. Welfare at age 35 indicates whether the respondent received any positive amount of welfare at age 35. Married at age 35 indicates whether the responded was currently married. B.A. degree by age 35 indicates whether the respondent received a B.A. degree (or higher) by age 35. Depression in 1992 is based on the 7-item Center for Epidemiologic Studies Depression Scale (CES-D). Sample: The sample excludes the military over sample. The samples differ across the IQ, AFQT, and GPA due to missing measures across the samples.

definition, performance on IQ tests is a personality trait because it is an enduring pattern of behavior (how one "behaves" or "performs" on an IQ test).[26]

Personality psychologists primarily measure personality traits using self-reported surveys. They have arrived at a relatively well-accepted taxonomy of traits called the "Big Five," which includes Openness to Experience, Conscientiousness, Extraversion, Agreeableness, and Neuroticism. Table 3 defines these traits and their multiple facets.[27] Some argue that the Big Five are the longitude and latitude of personality, by which all more narrowly defined traits may be categorized (see Costa and McCrae, 1992a). While the Big Five measures are now the most widely used, there are several other taxonomies, including the Big Three, the MPQ, and the Big Nine. They are conceptually and empirically related to the Big Five.[28] Other taxonomies, including psychopathology as measured by the DSM IV and measures of temperament, have also been related to the Big Five.[29] Almlund et al. (2011) show that economic preference parameters are not all that closely related to psychological traits and apparently represent different traits that, along with the psychological traits, govern behavior.

A deeper issue, as yet not systematically investigated in the literature in economics or psychology, is whether the traits captured by the alternative measurement systems are the manifestation of a deeper set of preferences or goals. Achieving certain goals requires certain traits, e.g., a surgeon has to be careful and intelligent; a salesman has to be outgoing and engaging and so forth, etc. Under this view, traits are developed through practice, investment, and habituation. The deeper traits may be the preference parameters that generate the manifest traits. The apparent stability of expressed traits across situations may be a consequence of the stability of the goals and incentives to achieve these goals.[30]

[26]Studies of test-retest reliability of IQ tests show that scores are highly correlated across repeated testing occasions (see, e.g., Niolon, 2005).

[27]See, e.g., Borghans et al. (2008a).

[28]See Borghans et al. (2008a) and Almlund et al. (2011) for a comparison of these taxonomies.

[29]See, e.g., Cloninger et al. (1999).

[30]McAdams and Pals (2006) adds goals to the list of possible traits. Almlund et al. (2011) develop a model in which preferences and traits determine the effort applied to tasks.

Table 3: The Big Five Domains and Their Facets

Big Five Personality Factor	American Psychology Association Dictionary description	Facets (and correlated trait adjective)	Related Traits	Analogous Childhood Temperament Traits
Conscientiousness	"the tendency to be organized, responsible, and hardworking"	Competence (efficient), Order (organized), Dutifulness (not careless), Achievement striving (ambitious), Self-discipline (not lazy), and Deliberation (not impulsive)	Grit, Perseverance, Delay of gratification, Impulse control, Achievement striving, Ambition, and Work ethic	Attention/(lack of) distractibility, Effortful control, Impulse control/delay of gratification, Persistence, Activity*
Openness to Experience	"the tendency to be open to new aesthetic, cultural, or intellectual experiences"	Fantasy (imaginative), Aesthetic (artistic), Feelings (excitable), Actions (wide interests), Ideas (curious), and Values (unconventional)		Sensory sensitivity, Pleasure in low-intensity activities, Curiosity
Extraversion	"an orientation of one's interests and energies toward the outer world of people and things rather than the inner world of subjective experience; characterized by positive affect and sociability"	Warmth (friendly), Gregariousness (sociable), Assertiveness (self-confident), Activity (energetic), Excitement seeking (adventurous), and Positive emotions (enthusiastic)		Surgency, Social dominance, Social vitality, Sensation seeking, Shyness*, Activity*, Positive emotionality, and Sociability/affiliation
Agreeableness	"the tendency to act in a cooperative, unselfish manner"	Trust (forgiving), Straightforwardness (not demanding), Altruism (warm), Compliance (not stubborn), Modesty (not show-off), and Tender-mindedness (sympathetic)	Empathy, Perspective taking, Cooperation, and Competitiveness	Irritability*, Aggressiveness, and Willfulness
Neuroticism/ Emotional Stability	Emotional Stability is "predictability and consistency in emotional reactions, with absence of rapid mood changes." Neuroticism is "a chronic level of emotional instability and proneness to psychological distress."	Anxiety (worrying), Hostility (irritable), Depression (not contented), Self-consciousness (shy), Impulsiveness (moody), Vulnerability to stress (not self-confident)	Internal vs. External, Locus of control, Core self-evaluation, Self-esteem, Self-efficacy, Optimism, and Axis I psychopathologies (mental disorders) including depression and anxiety disorders	Fearfulness/behavioral inhibition, Shyness*, Irritability*, Frustration (Lack of) soothability, Sadness

Notes: Facets specified by the NEO PI-R personality inventory (Costa and McCrae, 1992b). Trait adjectives in parentheses from the Adjective Check List (Gough and Heilbrun, 1983). *These temperament traits may be related to two Big Five factors.
Source: Table adapted from John and Srivastava (1999).

2.3 Identification Problems in Measuring Traits

Measuring traits is difficult, because, as suggested by Roberts' definition of personality, all psychological measurements are calibrated on measured behavior, and the behaviors used to measure one trait can be influenced by incentives and other traits. To infer traits from behaviors requires standardizing for all of the other contributing factors that produce the observed behavior. The inability to parse and localize behaviors that depend on a single trait or ability gives rise to a fundamental identification problem that is typically ignored in empirical research investigating how psychological traits affect outcomes.[31]

There are two primary issues. First, behavior depends on incentives created in situations. Different incentives elicit different amounts of effort on the tasks used to measure traits. Accurately measuring personality traits requires standardizing for the effort applied in any task. Second, behavior in one task can depend on multiple traits. Not standardizing for incentives and other traits can produce misleading estimates of any trait.

These identification problems are empirically important when measuring any given trait. For example, incentives partly determine scores on IQ tests, even though some have argued that performance on IQ tests reflects maximal effort.[32] A series of studies conducted over the past 40 years shows that incentives, like money or candy, can increase IQ scores, particularly among low-IQ individuals. The Black-White gap in IQ can be completely eliminated by incentivizing students with M&M candies.[33] The incentives in one test do not affect performance on future tests.

The recent literature shows that personality traits are associated with standardized achievement test scores, which many analysts use interchangeably with IQ scores.[34] Figures 1 and 2 show how the variance in the scores on two achievement tests, the Armed Forces

[31] See Borghans et al. (2011a) and Almlund et al. (2011).

[32] A leading psychometrician, Carroll (1993), does not accept the notion that IQ captures maximal effort.

[33] See Ayllon and Kelly (1972); Borghans et al. (2008b); Breuning and Zella (1978); Clingman and Fowler (1976); Edlund (1972); Holt and Hobbs (1979); Larson et al. (1994); Segal (2008). This evidence is summarized in Borghans et al. (2008a) and Almlund et al. (2011).

[34] See, e.g., Nisbett (2009).

Qualification Test (AFQT) and the closely related Differential Aptitudes Tests (DAT),[35] are decomposed into IQ and personality measures. Personality traits explain a substantial portion of the variances in both AFQT scores and DAT scores.[36] The personality traits are incrementally valid in that they explain the variance above and beyond the variance that IQ explains in a regression. These findings caution the interpretation that standardized achievement tests only measure cognitive ability. They are bundled with personality traits. In data from the Stella Maris secondary school in Maastricht, Holland, Openness to Experience is strongly correlated with IQ.[37]

Further complicating identification, not everyone responds to incentives in the same way. Borghans et al. (2008b) show that adults spend substantially more time answering questions on IQ tests when rewards are higher. Subjects high in Emotional Stability and Conscientiousness are less affected by rewards. Similarly, Segal (2008) shows that introducing cash incentives for performance on the coding speed test of the Armed Services Vocational Battery (ASVAB) increases performance substantially, particularly for men with lower levels of Conscientiousness.

2.4 Are There Stable Personality Traits?

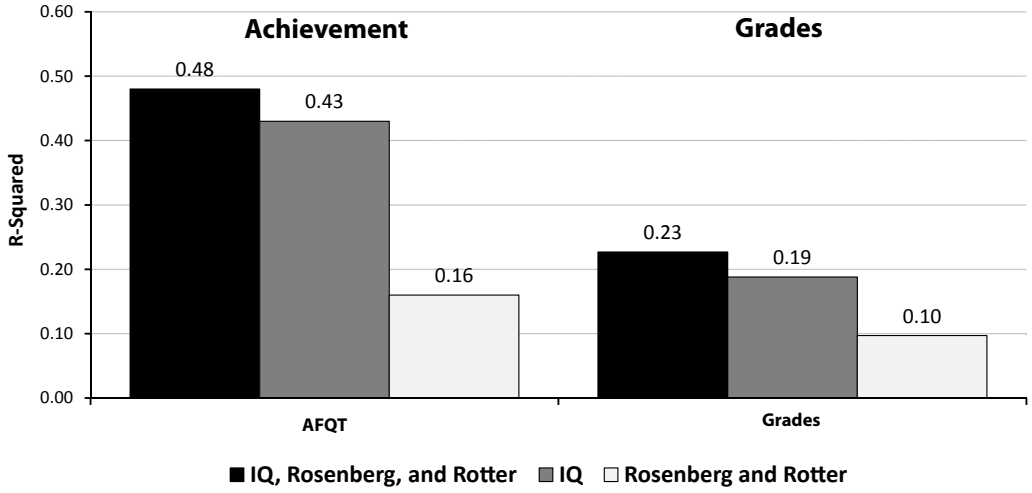
Many have questioned whether personality traits exist. The publication of Walter Mischel's 1968 book, *Personality and Assessment*, gave rise to a heated "personality-situation" debate within psychology, which pitted the social psychologists who favored situational factors as explaining behavior against those who considered stable personality traits as more consequential. Mischel argued that aspects of situations overshadow any effect of personality on

[35]The correlation between DAT and AFQT scores in the National Longitudinal Study of Youth 1979 (NLSY79) is 0.76 to 0.80 (Borghans et al., 2011b). Friedman and Streicher (1985) estimate correlations between 0.65 and 0.82 for in a sample of high school sophomores and juniors. Kettner (1976) estimates correlations between DAT and the AFQT subtests of 0.76 to 0.89 in a sample of juniors and seniors.

[36]The lower explained variance in the sample with DAT is likely a consequence of restriction on range. The DAT data come from a single school, whereas the AFQT data come from a national sample.

[37]See Borghans et al. (2011b) for information on the Stella Marris secondary school and the analysis described in the text.

Figure 1: Decomposing Achievement Tests and Grades into IQ and Personality [NLSY79]



Source: Borghans et al. (2011a), National Longitudinal Survey of Youth 1979 (NLSY79). Notes: Rotter is a measure of locus of control designed to measure the extent to which individuals believe that they have control over their lives through self-motivation or self-determination as opposed to the extent to which individuals believe that the environment controls their lives (Rotter, 1966). Rosenberg is a measure of self-esteem designed to measure the degree of approval or disapproval toward oneself (Rosenberg, 1965). The Armed Forces Qualification Test (AFQT) score is constructed from the Arithmetic Reasoning, Word Knowledge, Mathematical Knowledge, and Paragraph Comprehension Armed Services Vocational Aptitude Battery (ASVAB) subtests. Rotter was administered in 1979. The ASVAB and Rosenberg were administered in 1980. IQ and GPA are from high school transcript data. AFQT, Rosenberg, and Rotter have been adjusted for schooling at the time of the test conditional on final schooling, as described in Hansen et al. (2004). IQ is pooled across several IQ tests using IQ percentiles. GPA is the individual's core subject GPA from 9th grade. Sample excludes the military over-sample.

behavior.[38]

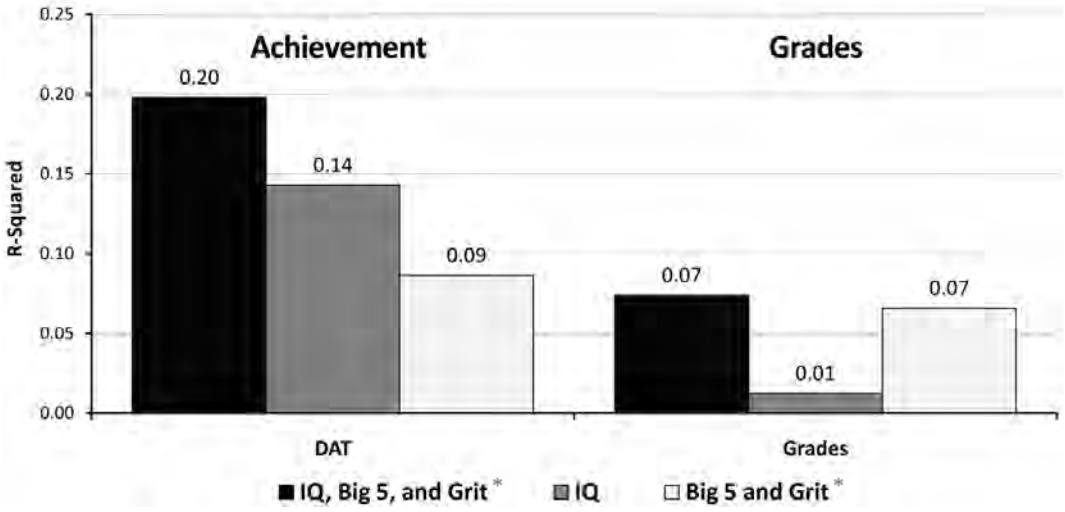
A large body of evidence reviewed in Almlund et al. (2011) shows that stable personality traits exist and are predictive of many behaviors.[39] An important paper by Epstein (1979) presents compelling evidence that, averaging over tasks and situations at a point in time, people act in a predictable fashion with a high level of reliability (R^2 of 0.6-0.8) of average behavior ("measured personality") across situations. The incentives in any situation also matter. Heritability studies show that measures of personality traits tend to be about 40%-60% heritable, suggesting that something tied to the person, rather than the situation, influences behavior (Bouchard and Loehlin, 2001).[40] Evidence in neuroscience suggests that

[38]This theme has been picked up in behavioral economics. See Thaler (2008).

[39]See the special issue of *Journal of Research in Personality* (43), entitled "*Personality and Assessment at Age 40*" for a recent discussion.

[40]Devlin et al. (1997) suggest that traditional estimates of the heritability of IQ may be inflated because

Figure 2: Decomposing Achievement Tests and Grades into IQ and Personality [Stella Maris]



*Grit is a measure of persistence on tasks (Duckworth et al., 2007).

Source: Borghans et al. (2011a).

expression of traits is related to regions of the brain (see Canli, 2006, and DeYoung et al., 2010).

2.5 The Evolution of Personality Traits Over the Life Cycle

Even though personality traits are relatively stable across situations, they are not set in stone. They change over the life cycle. Figure 3 shows that Conscientiousness tends to increase monotonically over the life cycle. Other traits change in different ways over the life cycle.[41] Crystallized intelligence tends to increase monotonically for most of the life cycle, whereas fluid intelligence tends to peak in early adulthood and then decline.[42]

This evidence does not address whether these changes occur naturally ("ontogenic change") or whether they are due to changes in the environments commonly experienced over the life

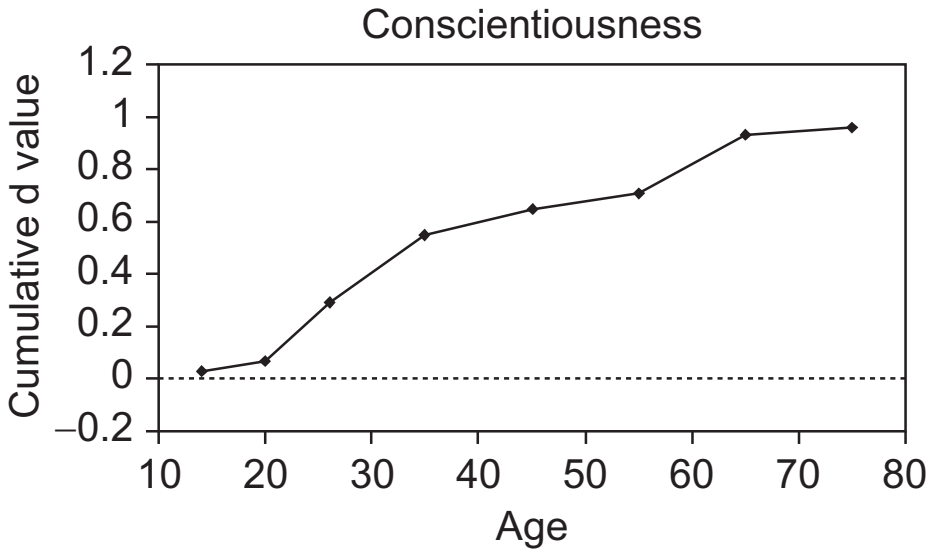
they fail to take into account the effect of the environment on conditions in the maternal womb. See also Rutter (2006) and an emerging literature on epigenetics.

[41]See the evidence collected in Borghans et al. (2008a) and Almlund et al. (2011) for a variety of other traits.

[42]See McArdle et al. (2000).

cycle ("sociogenic change"). No evidence is available in the published literature on the distributions of these profiles over the life cycle. Almlund et al. (2011) review the evidence on how parental investment and interventions promote changes in personality.

Figure 3: Cumulative Mean-Level Changes in Personality Across the Life Cycle



Note: Cumulative d values represent total lifetime change in units of standard deviations ("effect sizes").
Source: Figure taken from Roberts et al. (2006) and Roberts and Mroczek (2008). Reprinted with permission of the authors.

2.6 The Predictive Power of Personality

Table 2 shows that personality traits predict many later-life outcomes as strongly as measures of cognitive ability. Conscientiousness – the tendency to be perseverant and hardworking – stands out as the most predictive of the Big Five traits across many outcomes. Figure 4 presents for males correlations between the Big Five and educational attainment, adjusting and not adjusting for fluid and crystalized intelligence. Conscientiousness predicts educational attainment more than either of the facets of intelligence.[43] Similar patterns appear for many other outcomes, including labor market performance, grades, and health.[44]

A recurrent finding in the literature is that measured IQ is highly predictive of perfor-

[43]Results are similar for women (see Almlund et al., 2011).

[44]See Almlund et al. (2011), Borghans et al. (2008a), and Roberts et al. (2007) for comprehensive reviews of the evidence.

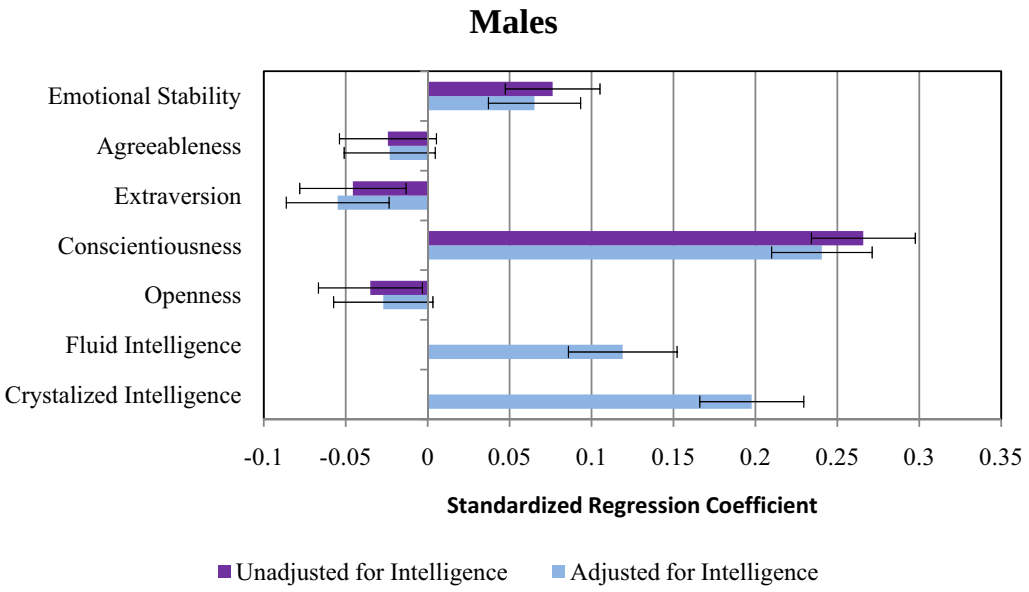
mance on complex tasks and jobs (Gottfredson, 1997). The importance of IQ increases with job complexity, defined as the information processing requirements of the job: cognitive skills are more important for professors, scientists, and senior managers than for semi-skilled or unskilled laborers (Schmidt and Hunter, 2004). In contrast, the importance of Conscientiousness does not vary much with job complexity (Barrick and Mount, 1991), suggesting that it pertains to a wider spectrum of jobs.

The literature in economics establishes that the same bundle of traits has different productivity in different tasks. People also differ in their endowments of traits. These two features lead to sorting in the tasks people pursue in life and are a manifestation of the general principle of comparative advantage in the labor market and in life. (See Almlund et al., 2011; Borghans et al., 2008a; Cattan, 2012; Heckman et al., 2006a, 2011b.)

Achievement test scores are crude, low-dimensional summaries of high-dimensional vectors of traits that operate in conjunction with effort. It is unlikely that these summaries capture the precise combinations of traits required for success in specific life tasks. The thrust of recent research in personality and economics is to isolate the traits that determine life outcomes and to understand how those diverse traits determine choices of tasks.

Most of the evidence in personality psychology is correlational. The reported correlations do not prove that personality traits *cause* higher educational attainment although it is consistent with it. For example, the reported pattern in Figure 4 could arise if educational attainment increased Conscientiousness. We next present causal evidence.

Figure 4: Association of the Big Five and intelligence with years of completed schooling



Notes: The figure displays standardized regression coefficients from a multivariate regression of years of school attended on the Big Five and intelligence, controlling for age and age squared. The bars represent standard errors. The Big Five coefficients are corrected for attenuation bias. The Big Five were measured in 2005. Years of schooling were measured in 2008. Intelligence was measured in 2006. The measures of intelligence were based on components of the Wechsler Adult Intelligence Scale (WAIS). The data is a representative sample of German adults between the ages 21 and 94.

3 Causal Evidence

3.1 Problems with Establishing Causality

Most studies in personality psychology do not address the question of causality, i.e., whether measured traits *cause* (rather than just predict) outcomes. Empirical associations are not a reliable basis for policy analysis. In this section, we discuss difficulties in establishing causality. We also summarize several studies that provide evidence that personality traits *cause* outcomes.

We introduce a simple framework to analyze the effect of traits on outcomes and how traits evolve over time.[45] Equation (1) shows how an outcome at age a, T_a, which is the

[45]This framework draws on Almlund et al. (2011).

performance on a task, depends on cognition C_a, personality P_a, other acquired skills such as education and job training K_a, and the effort allocated to the task e_{T_a}:

$$\underbrace{T_a}_{\substack{\text{Outcome on a}\\ \text{task at age } a}} = \phi_a(\underbrace{C_a}_{\text{Cognition}} , \underbrace{P_a}_{\text{Personality}} , \underbrace{K_a}_{\substack{\text{Other}\\ \text{acquired}\\ \text{skills}}} , \underbrace{e_{T_a}}_{\substack{\text{Effort}\\ \text{devoted to}\\ \text{task}}}) \quad a = 1, \ldots, A. \tag{1}$$

Equation (2) shows how the effort allocated to task T_a depends on cognition C_a, personality P_a, other acquired skills K_a, incentives R_{T_a}, and preferences Υ_a:

$$e_{T_a} = \psi_{T_a}(C_a, P_a, K_a, \underbrace{R_{T_a}}_{\substack{\text{Incentives}\\ \text{to perform}\\ \text{on task}}} , \underbrace{\Upsilon_a}_{\text{Preferences}}). \tag{2}$$

The effort applied to a task is the outcome of a choice problem that depends on traits, preferences, and incentives, much like a supply equation in the standard theory of consumer choice. Preferences can be thought of as additional traits.[46] Some psychological theories posit that people have limited effort that they can divide among different tasks (See, e.g., Baumeister and Tierney, 2011).

Equations (1) and (2) formalize the difficulty in establishing a causal relationship between outcomes and traits. Multiple traits, effort, and acquired skills generate performance in a given task. Many studies in psychology and economics do not control for these inputs and equate measurement of a set of outcomes with the trait the analyst is trying to measure.[47] This practice can lead to a substantial bias in inference about any particular trait.

An additional point is that most studies assume a linear relationship between outcomes and traits. This practice is particularly problematic for measuring personality traits, where the effect of a trait on an outcome is not always linear or even monotonic. Too much of a

[46]The empirical relationship between measured preference parameters and Big Five measures is weak (see Almlund et al., 2011).

[47]Selecting measures and verifying them is part of the sometimes mysterious and inherently subjective process of "construct validity" in psychology. For a discussion, see Borghans et al. (2008a).

good thing can be bad $\left(\frac{\partial \phi_a}{\partial P_a} < 0 \text{ for } P_a > \bar{P} \text{ for threshold } \bar{P}\right)$. For example, extreme levels of traits are associated with psychopathologies. High levels of Conscientiousness are associated with Obsessive Compulsive Disorder, which hinders task performance (Samuel and Widiger, 2008). Nonlinearities can also arise when traits and incentives interact, as in the analyses of Borghans et al. (2008b) and Segal (2008) who show that people with different personality traits respond differently to incentives on tests.[48]

The traits and other acquired skills evolve over time through investment and habituation. Equation (3) shows that traits at age $a+1$ are age-dependent functions of cognitive ability, personality traits, other acquired skills, and investment I_a at age a. In this way, previous levels of traits and acquired skill affect current levels of traits and acquired skill. Equation (3) formalizes the notion that the traits and skills governing performance at a point in time are themselves the outcome of investment and habituation:

$$(C_{a+1}, P_{a+1}, K_{a+1}) = \eta_a(C_a \ , \ P_a \ , \ K_a \ , \ \underbrace{I_a}_{\substack{\text{Investment} \\ \text{and} \\ \text{experience}}}), \qquad a = 1, \ldots, A. \tag{3}$$

In conjunction with resource constraints, a "deeper" set of preference parameters at age a may govern investment decisions and effort allocated to tasks.

3.2 Extreme Examples of Personality Change

Laboratory experiments and brain lesion studies provide some of the most compelling evidence that personality traits can change and that the change affects behaviors. The most famous example is that of Phineas Gage, a railway construction foreman whose head was impaled by a metal spike. Miraculously he retained his problem solving abilities, but he changed from being polite and dependable to being rude and unreliable. His personality change caused him to lose his job and alienate family members (Damasio et al., 2005). Lab-

[48] Formally, this occurs when $\frac{\partial^2 \psi_{T_a}}{\partial P_a \partial R_{T_a}} \neq 0$.

oratory experiments show that expressed traits can be manipulated temporarily. Magnetic disruption of the left lateral prefrontal cortex can increase experimentally elicited discount rates (Figner et al., 2010) and nasal sprays of oxytocin increase trust (Kosfeld et al., 2005).

3.3 Evidence from the GED Testing Program

The GED is a standardized achievement test that serves as an alternative to a high school diploma. High school dropouts can take the seven-and-a-half hour GED exam to certify that they have the "general knowledge" of a high school graduate. The test is widely used. The GED testing program currently produces 12% of high school certificates each year in the United States. We draw on the analysis of Heckman et al. (2012a) and first present results for males. The GED program provides insight into the effects of personality traits on outcomes. GED recipients have the same cognitive ability as high school graduates, but differ in their personality traits.

Table 4 shows the correlations between GED test scores and other achievement test scores. GED test scores are strongly correlated with scores on other standardized achievement tests. The correlations range from 0.61 with the General Aptitude Test Battery (GATB) to 0.88 with the Iowa Test of Educational Development, the progenitor of the GED.

Table 4: Validities of GED Test

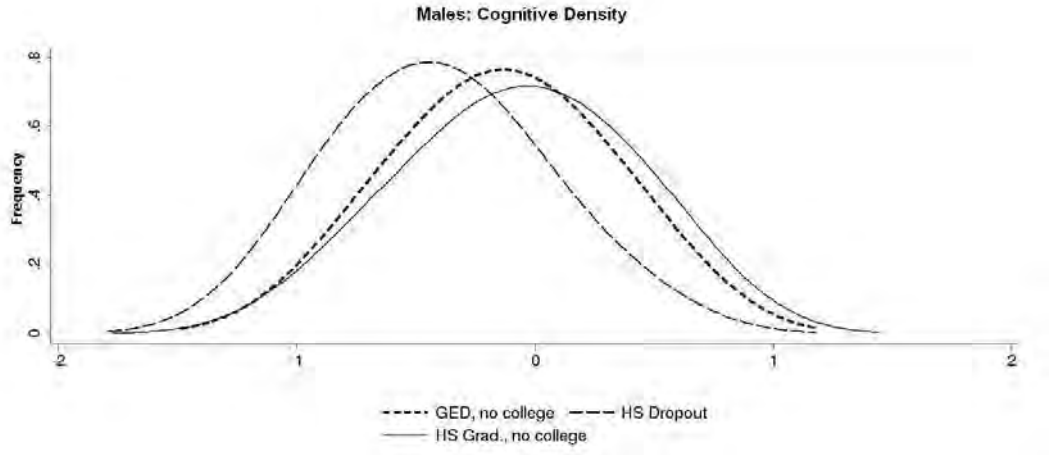
Test	**Correlation**	**Source(s)**
Armed Forces Qualification Test (AFQT)	0.75 - 0.79 †	Means and Laurence (1984)
Iowa Test of Educational Development	0.88 †	Means and Laurence (1984)
ACT	0.80 †	Means and Laurence (1984)
Adult Performance Level (APL) Survey	0.81 †	Means and Laurence (1984)
New York's Degrees of Reading Power (DRP) Test	0.77 †	Means and Laurence (1984)
Test of Adult Basic Education (TABE)	0.66-0.68†	Means and Laurence (1984)
General Aptitude Test Battery (GATB)	0.61-0.67†	Means and Laurence (1984)
National Adult Literacy Survey (NALS) factor	0.78 ‡	Baldwin (1995)

† Uses mean GED subtest scores
‡ Uses a general GED factor

GED recipients are smarter than other dropouts. Figure 5 shows the distributions of a factor extracted from the components of the ASVAB for male high school dropouts, GED recipients, and high school graduates.[49] The sample excludes people who attend post-secondary education. The distribution of the scores of GED recipients is much more like that of high school graduates than that of high school dropouts.

[49]Similar results are found for females.

Figure 5: Cognitive ability by educational status



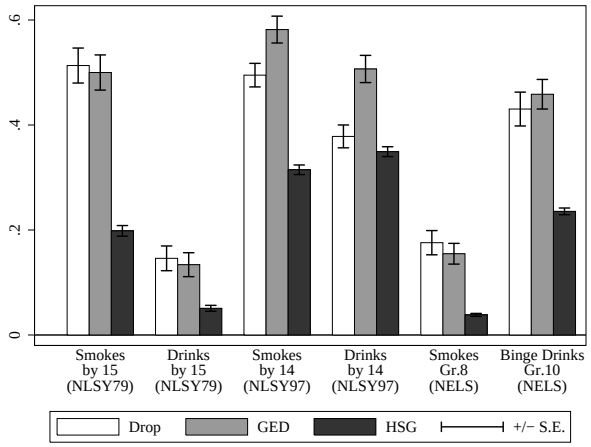
Source: Reproduced from Heckman et al. (2011b), which uses data from the National Longitudinal Study of Youth 1979 (NLSY79). Notes: The distributions above represent cognitive ability factors estimated using a subset of the Armed Services Vocational Aptitude Battery (ASVAB) and educational attainment as laid out in Hansen et al. (2004). The sample is restricted to the cross-sectional subsample for both males and females. Distributions show only those with no post-secondary educational attainment. The cognitive ability factors are normalized by gender to be mean zero standard deviation one.

If they have the same cognitive ability as high school graduates, then why do they drop out of high school? Success in school requires other traits. On a variety of other dimensions, GED recipients behave much more like other dropouts. Figure 6 shows measures of early adolescent drug use, crime, sex, and violence extracted from three data sources.[50] Male high school graduates perform better on all measures than high school dropouts or GED recipients. GED recipients are much more similar to dropouts, but in several cases are statistically significantly *more likely* to engage in risky behaviors than other dropouts. On no outcome measure in that figure are dropouts statistically significantly more likely to engage in risky behaviors compared to GED recipients. Figure 7 summarizes these adolescent behaviors using a single factor and shows that unlike the cognitive summary measures, the distribution of the noncognitive (personality) summary measure of GED recipients is much closer to that of dropouts than to that of high school graduates.

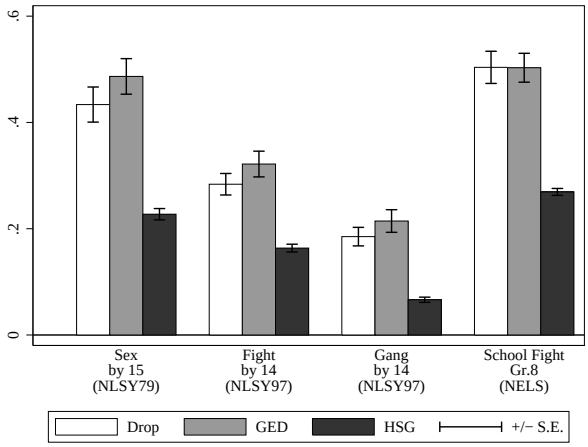
[50]The data sets are the National Longitudinal Survey of Youth 1979 (NLSY79), National Longitudinal Survey of Youth 1997 (NLSY97), and National Educational Longitudinal Survey (NELS). For discussion of these data sets, see Heckman et al. (2012a).

Figure 6: Measures of Adolescent Behaviors for Male Dropouts, GED Recipients, and High School Graduates

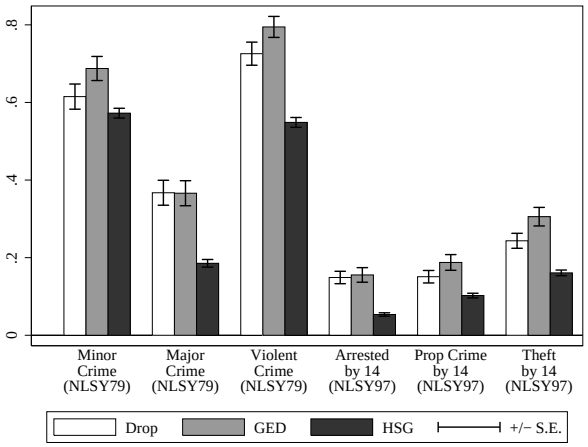
(a) Smoking and Drinking



(b) Sex and Violent Behavior

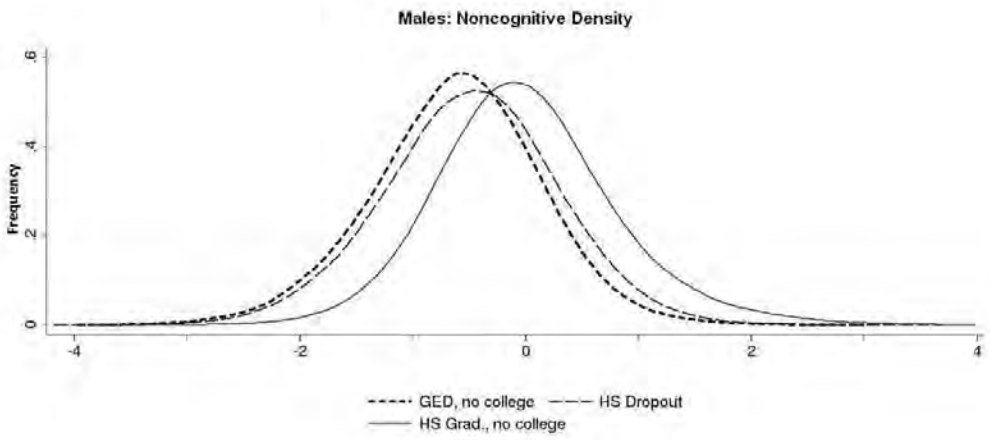


(c) Criminal Behavior



Sources: Heckman et al. (2012a, Chapter 3). National Longitudinal Survey of Youth 1979 (NLSY79), National Longitudinal Survey of Youth 1997 (NLSY97), National Educational Longitudinal Survey (NELS). Notes: Minor crime includes vandalism, shoplifting, petty theft, fraud, holding or selling stolen goods. Major crime includes auto theft, breaking/entering private property, grand theft. Violent crime includes fighting, assault, aggravated assault. Tests of Significance: The estimates for GED recipients and high school graduates are statistically significantly different at the 5% level for all variables. The estimates for dropouts and high school graduates are statistically significantly different at the 5% level for all variables, except for "Minor Crime (NLSY79)" and "Drinks by 14 (NLSY97)." The estimates of "Smokes by 14 (NLSY97)," "Drinks by 14 (NLSY97)," and "Theft by 14 (NLSY97)" between GED recipients and dropouts are statistically significantly different at the 5% level.

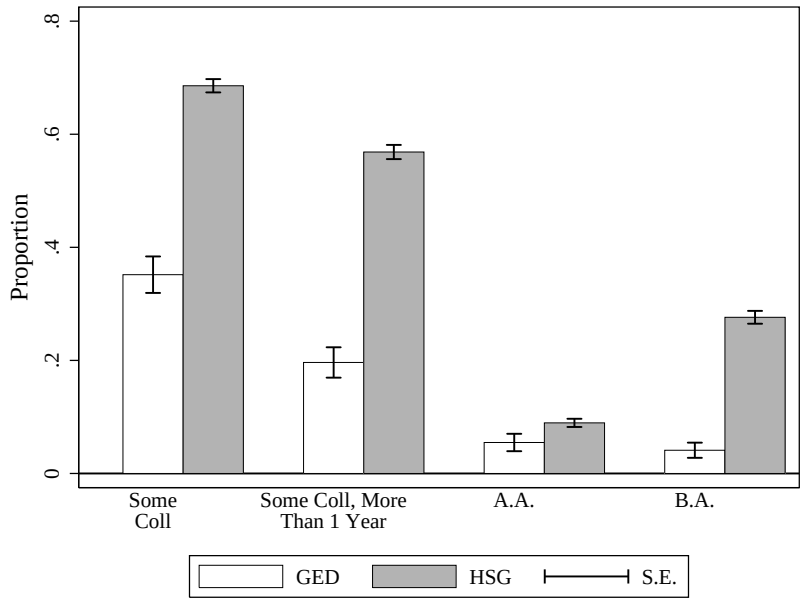
Figure 7: Distribution of a Summary Measure of Noncognitive Ability by Education Group



Source: Reproduced from Heckman et al. (2011b), which uses data from the National Longitudinal Study of Youth 1979 (NLSY79). Notes: The distributions above represent noncognitive ability factors estimated using measures of early violent crime, minor crime, marijuana use, regular smoking, drinking, early sexual intercourse, and educational attainment as in Hansen et al. (2004). Sample restricted to the cross-sectional subsample for both males and females. Distributions show only those with no post-secondary educational attainment. The noncognitive ability factors normalized to be mean zero standard deviation one.

The traits that cause GED recipients to drop out of high school manifest themselves in many other life outcomes. One potential benefit of the GED certificate is that it opens doors to post-secondary education. Figure 8 shows post-secondary educational attainment for GED recipients and high school graduates. About 40% of GED recipients enroll in a 2- or 4- year college. Nearly half drop out within the first year. Fewer than 5% earn a B.A. degree and fewer than 10% earn an A.A. degree.

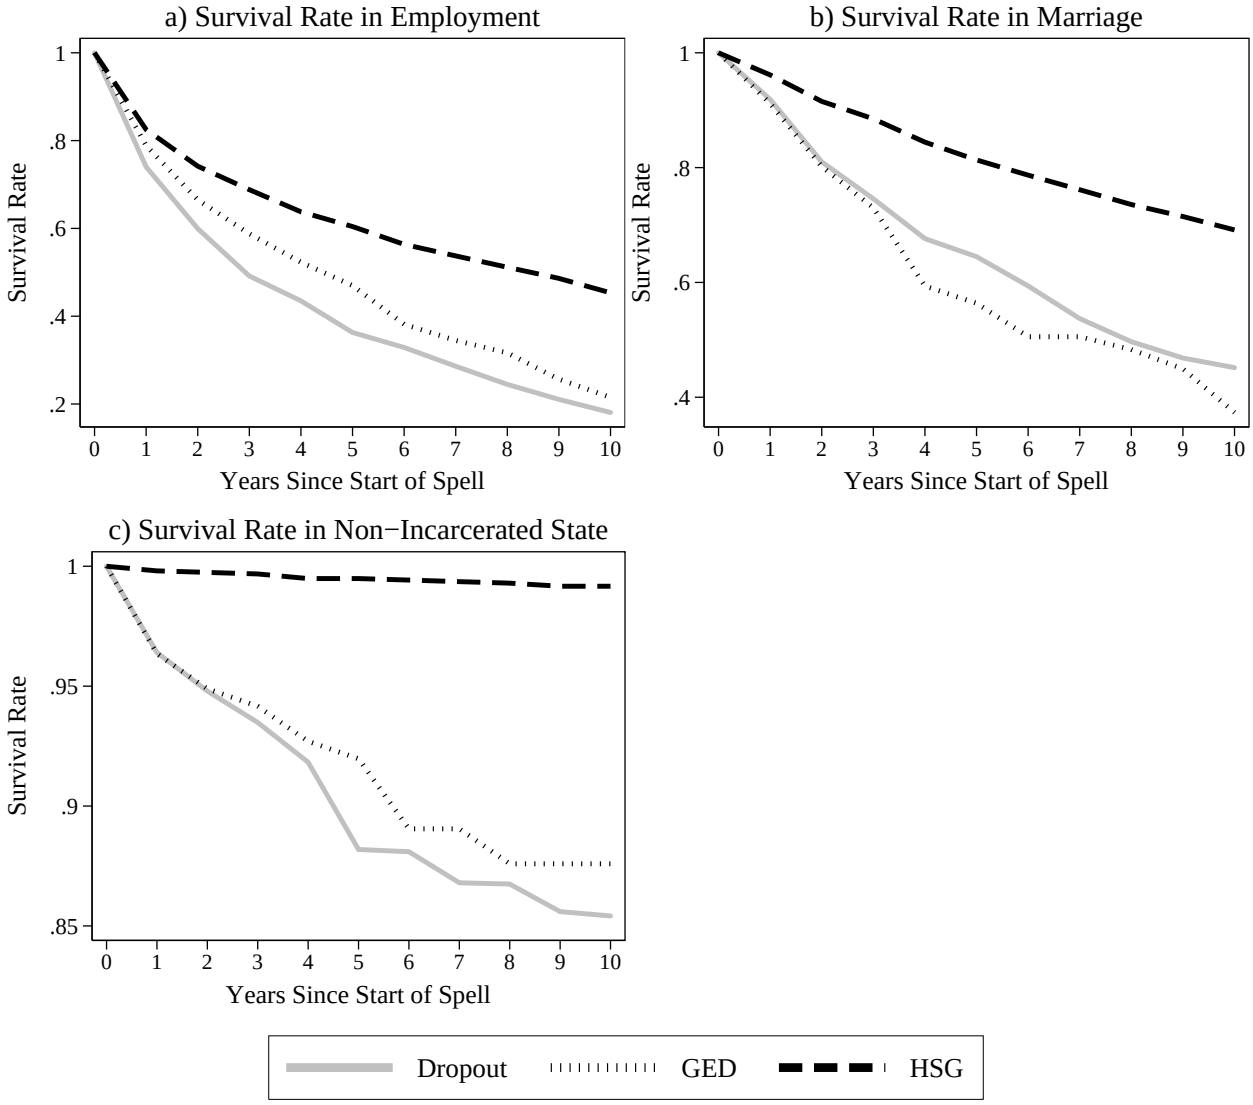
Figure 8: Post-Secondary Educational Attainment Across Education Groups Through Age 40 - Males



Sources: Heckman et al. (2012a, Chapter 4). National Longitudinal Survey of Youth 1979 (NLSY79). Notes: The graph shows post-secondary educational attainment of GED recipients and high school graduates. Variable Definitions: "Some College" represents people who entered any post-secondary institution ever. "Some College, More Than a Year" represents people who completed at least a year of some post-secondary education ever. "A.A." represents people who obtained associate's degrees ever. "B.A." represents people who obtained bachelor's degrees ever. "B.A." also includes people with higher education: M.A. Ph.D and professional degrees. Tests of Significance: The estimates for GED recipients and high school graduates are statistically significantly different at the 5% level for all but attainment of the A.A. degree.

GED recipients lack persistence in a variety of tasks in life. Figure 9 shows the survival rates in employment, marriage, and in the condition of not having been incarcerated. GED recipients tend to exit employment, become divorced, and enter jail at rates similar to those of high school dropouts, while high school graduates are much more persistent.

Figure 9: Survival Rates in Various States for Male Dropouts, GED Recipients, and High School Dropouts

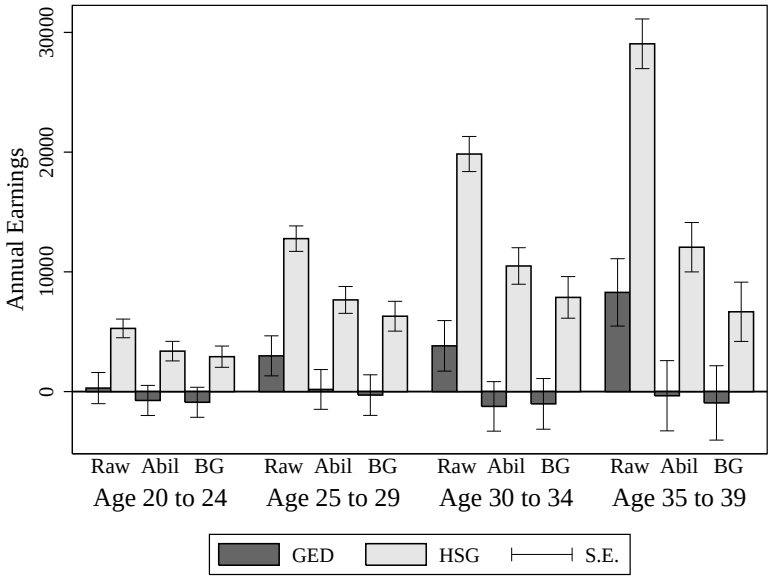


Source: Heckman et al. (2012a, Chapter 4). National Longitudinal Survey of Youth 1979 (NLSY79), nationally representative cross sectional sample. Notes: The "Survival Rate in Marriage" is based on the first marriage spell that began after 1979. People who were already married or divorced in 1979 were excluded from the sample, because the length of their spell is unknown. The "Survival Rate in Employment" is based on all employment spells that began after 1979 and after the respondent was 16. People are excluded from the employment estimates if they have been to jail. The "Survival Rate in Non-Incarcerated State" is based on the time until first incarceration starting at age 22 (the youngest age for which the jail status is available for all respondents). Respondents who were already in jail at age 22 were excluded from the sample. Tests of Significance: The estimates for GED recipients and high school graduates are statistically significantly different at the 5% level in all cases except for the first year of the "Survival Rate in Employment" and the first year of the "Survival Rate in Marriage." The estimates for dropouts and high school graduates are statistically significantly different at the 5% level in all cases. The estimates for dropouts and GED recipients are significantly different at the 5% level for years three through five of the "Survival Rate in Employment."

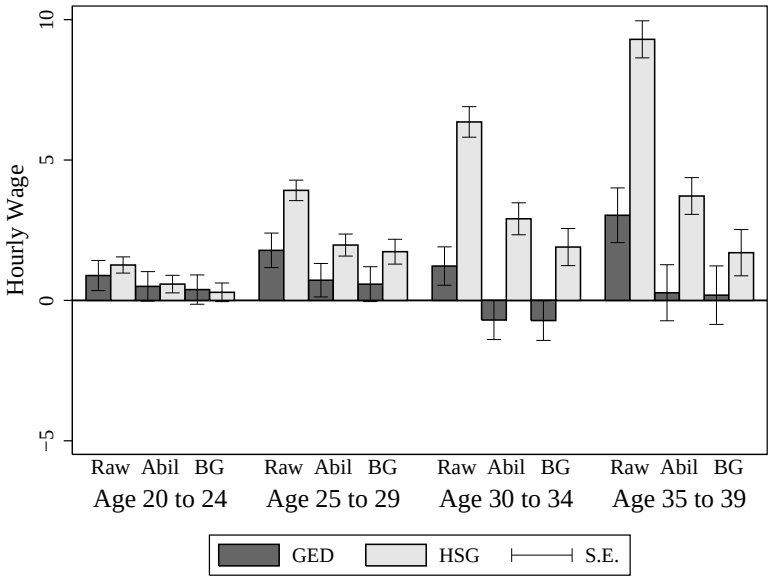
Adjusting for their differences in cognitive ability, male GED recipients perform virtually the same as high school dropouts in the labor market. Figure 10 shows the hourly wages and annual earnings of male GED recipients and high school graduates compared to high school dropouts for different age groups. The first set of bars shows the outcomes after adjusting for age, race, year, and region of residence. The second set of bars shows the effects after additionally adjusting for AFQT scores. The third set of bars shows the effects after additionally adjusting for standard measures of family background. GED recipients and high school graduates outperform dropouts in regressions that only adjust for age, race, year, and region of residence. After adjusting for cognitive ability, GED recipients are indistinguishable from dropouts, whereas high school graduates earn more and have higher hourly wages. Controlling for family background characteristics does not change the story.

Figure 10: Labor Market Outcomes Differences - By Age - NLSY79 - Males

(a) Annual Earnings



(b) Hourly Wage



Source: Heckman et al. (2012a, Chapter 3). National Longitudinal Survey of Youth 1979 (NLSY79). Controls: *"Raw"* – age, race, and region of residence; *"Abil"* –age, race, year, region of residence, and Armed Forces Qualification Test (AFQT) adjusted for schooling at time of test; *"BG"* – age, race, year, region of residence, mother's highest grade completed, urban status at age 14, family income in 1978, broken home status at age 14, south at age 14, AFQT, and factors based on adolescent behavioral measures, crime and school performance. Regressions exclude those reporting earning more than $300,000 or working more than 4,000 hours. Notes: All regressions allow for heteroskedastic errors and when appropriate clustering at the individual level.

Most of the patterns found for women parallel those found for men. However, there are some important differences.[51] While female GED recipients share similar cognitive and personality traits as male GED recipients, their outcomes differ. After accounting for differences in cognitive ability, female GED recipients do not earn higher hourly wages than other dropouts, but unlike men they have higher annual earnings because they are more likely to participate in the labor force.[52]

3.4 Evidence from The Perry Preschool Program and Other Interventions

Evidence from the Perry Preschool Program shows how personality traits can be changed in ways that produce beneficial lifetime outcomes. The Perry preschool Program enriched the lives of three- and four-year-old low-income, Black children with initial IQs below 85 at age 3.[53]

Participants were taught social skills in a "plan-do-review" sequence where students planned a task, executed it, and then reviewed it with teachers and fellow students. They learned to work with others when problems arose.[54] In addition, home visits promoted parent-child interactions. The program ended after two years of enrollment and both treatments and controls entered the same school. The program was evaluated by the method of random assignment.

The program did not improve IQ scores in a lasting way. Figure 11 shows that, by age ten, treatment and control groups had the same average IQ scores. Many critics of early childhood programs seize on this finding and related evidence to dismiss the value of early

[51] See Heckman et al. (2012a).

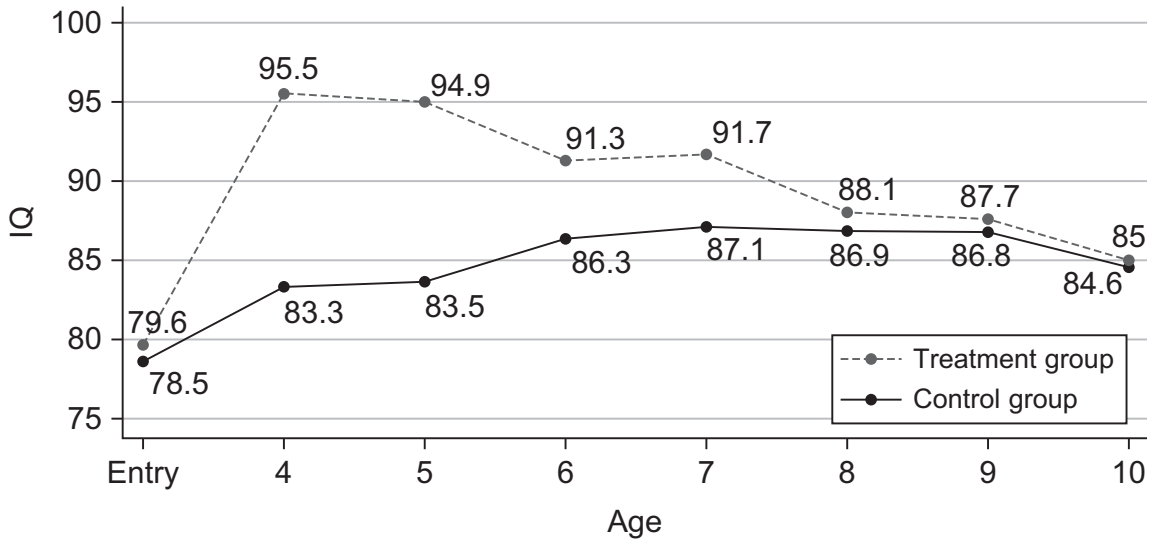
[52] The increased labor supply response is largely due to female GED recipients who attain some post-secondary education or who have dropped out of high school due to pregnancy. See Heckman et al. (2012a) for a full discussion of the evidence on the performance of GED recipients.

[53] We draw on the analysis of Heckman et al. (2012b).

[54] Sylva (1997) describes the Perry program as a Vygotskian program fostering personality traits. Vygotsky developed a psychology of child development in structured social settings that emphasized development of social and personality skills. The Vygotskian approach strongly influences the Tools of the Mind program (see Bodrova and Leong, 2001, 2007).

intervention studies.

Figure 11: Perry Preschool Program: IQ, by Age and Treatment Group



Notes: IQ measured on the Stanford-Binet Intelligence Scale (Terman and Merrill, 1960). The test was administered at program entry and at each of the ages indicated. Source: Cunha et al. (2006) and Heckman and Masterov (2007) based on data provided by the High Scope Foundation.

Nevertheless, the program improved outcomes for both boys and girls, resulting in a statistically significant rate of return of around 6-10% per annum for both boys and girls (see Heckman et al., 2010a,b). These returns are above the post-World War II, pre-2008 meltdown in stock market returns to equity estimated to be 5.8% per annum.[55]

The Perry Preschool Program worked primarily through improving personality traits. Participants had better direct measures of personal behavior (a weighted average of "absences and truancies," "lying and cheating," "stealing," and "swears or uses obscene words" measured by teachers in the elementary school years). Participants of both genders improved their "externalizing behavior," a psychological construct related to Agreeableness and Conscientiousness. For girls, the program improved Openness to Experience (proxied by academic motivation). The program also improved scores on the California Achievement

[55]See DeLong and Magin (2009).

Test (CAT). This evidence is consistent with the evidence presented in the previous section that shows that performance on achievement tests depends on personality traits.

Other studies are broadly consistent with the evidence from the Perry Preschool study. Analyses of data from Project STAR, a program that randomly assigned kindergartners and teachers to classes of different sizes, yields results similar to the Perry Program. Using data from Project STAR, Dee and West (2011) find that assignment to a small class is associated with positive changes in personality. In a follow-up analysis, Chetty et al. (2011) examine the Project STAR program and find that students placed in higher quality kindergarten classes–as measured by their peer's average performance on a Stanford Achievement Test–had significantly higher earnings in early adulthood.

The curriculum of Promoting Alternative Thinking Strategies (PATHS) teaches self-control, emotional awareness, and social problem-solving skills and is aimed at elementary school children (see Bierman et al., 2010). A recent random-assignment, longitudinal study demonstrates that the PATHS curriculum reduces teacher and peer ratings of aggression, improves teacher and peer ratings of prosocial behavior, and improves teacher ratings of academic engagement.[56] PATHS is an exemplar of school-based social and emotional learning (SEL) programs. A recent meta-analysis shows that the program improved grades by 0.33 standard deviations and achievement test scores by 0.27 standard deviations (Durlak et al., 2011).[57]

Likewise, several random assignment evaluations of *Tools of the Mind*, a preschool and early primary school curriculum targeting development of self-control, show that it improves classroom behavior as well as executive function, defined as higher-level cognitive skills including inhibitory control, working memory, and cognitive flexibility (Barnett et al., 2008, 2006; Bodrova and Leong, 2001, 2007; Diamond et al., 2007; Lillard and Else-Quest, 2006).[58]

[56]See Bierman et al. (2010).

[57]Note, however, that the largest federal study to date on character education programs, including PATHS, failed to find evidence for improvements in behavior or academic performance (see Social and Character Development Research Consortium, 2010).

[58]However, a more recent large-scale study (Farran et al., 2011) does not find any effect of the program on self-regulation or literacy, language, and mathematics achievement.

Positive findings are reported for the Montessori preschool curriculum (Lillard and Else-Quest, 2006). Unlike the Perry study, these studies do not have long-term followups.

There is evidence that targeted intervention efforts can improve aspects of Conscientiousness. In contrast to the multi-faceted curricula described above, studies targeting improvement in this trait are designed to isolate a particular mechanism producing behavioral change. For instance, Rueda et al. (2005) designed a set of computer exercises to train attention in children between four and six years of age. Children in the intervention group improved in performance on computer tasks of attention relative to children who instead watched interactive videos for a comparable amount of time. Similarly, Stevens et al. (2008) designed a 6-week computerized intervention and showed that it can improve selective auditory attention (i.e., the ability to attend to a target auditory signal in the face of an irrelevant, distracting auditory signal). As is typical of much of the literature, all of these programs have only short-term follow-ups.

Several studies suggest that personality can be remediated in adolescence. Martins (2010) analyzes data from EPSIS, a program developed to improve student achievement of 13-15 year-olds in Portugal by increasing motivation, self-esteem, and study skills. The program consists of one-on-one meetings with a trained staff member or meetings in small groups. The intervention was tailored to each participant's individual skill deficit. Overall, the program was successful and cost-effective, decreasing grade retention by 10 percentage points.

Other life experiences, like employment, can improve personality. Gottschalk (2005) analyzes evidence from a randomized control trial that working at a job can improve locus of control, a trait related to Neuroticism that measures the extent to which individuals believe that they have control over their lives through self-motivation or self-determination as opposed to the extent that the environment controls their lives (Rotter, 1966).[59] He uses data from the Self-Sufficiency Project (SSP) in which some welfare recipients were randomly offered substantial subsidies to work. The subsidy more than doubled the earnings of a

[59]The relationship between locus of control and the Big Five trait of Neuroticism is discussed in Almlund et al. (2011).

minimum wage worker. People in the experimental group worked about 30% more hours than those in the control group. After 36 months, those who received the subsidy were more likely to have an improved locus of control.

3.5 Additional Evidence

Studies that account for the endogeneity of investment and education provide further evidence of the causal effect of education and cognitive and personality traits on outcomes. Heckman et al. (2011b) estimate a sequential model of education to study the effects of education on a variety of outcomes. Correcting for selection into education, they find that early cognitive and personality traits affect schooling choices, labor market outcomes, adult health, and social outcomes and that increasing education promotes beneficial labor market, health, and social outcomes.

Heckman et al. (2006b) estimate a version of Equation (3) to analyze the effects of increases in education on measured cognition and personality measures.[60] Controlling for the problem of reverse causality that schooling may be caused by traits, they find that schooling improves both personality and cognitive traits and that these traits, in turn, boost outcomes.[61]

Cunha et al. (2010) estimate a model of the technology of skill formation using longitudinal data on the development of children with rich measures of parental investment and child traits. They control for the endogeneity of investment using shocks to family income along with other instruments. Their model is a version of Equation (3). Traits are self-productive and exhibit dynamic complementarity – current values of traits affect the evolution of future traits through direct and cross effects. A leading example of a cross effect is that more motivated children are more likely to learn. They estimate parameters that summarize how

[60] They estimate the effect of schooling on self-esteem and locus of control, personality traits related to Neuroticism. The Rosenberg Self-Esteem Scale attempts to assess the degree of approval or disapproval of oneself (Rosenberg, 1965). The relationship between these measures and the Big Five traits of Neuroticism is discussed in Almlund et al. (2011).

[61] Both Heckman et al. (2011b) and Heckman et al. (2006b) use an identification strategy based on matching on proxies for unobserved traits that corrects for measurement error and the endogeneity of schooling.

past personality traits affect future cognitive traits.

They find that self-productivity becomes stronger as children become older, for both cognitive and personality traits. The elasticity of substitution for cognitive inputs is *smaller* later in life. This means that it is more difficult to compensate for the effects of adverse environments on cognitive endowments at later ages than it is at earlier ages. This finding is consistent with the high rank stability of cognition over ages past 10-12 reported in the literature. It also helps to explain the evidence on the ineffectiveness of cognitive remediation strategies for disadvantaged adolescents documented in Cunha et al. (2006); Knudsen et al. (2006) and Cunha and Heckman (2007).

Personality traits foster the development of cognition but not vice versa. It is equally easy at all stages of the child's life cycle to compensate for early disadvantage in endowments using personality traits. (Elasticities of substitution for these traits are essentially the same at different stages of the life cycle.) The most effective adolescent interventions target personality traits.[62]

4 Summary

This paper reviews recent evidence on the importance of personality in economic and social life. It shows that success in life depends on many traits, not just those measured by IQ, grades, and standardized achievements tests. Personality traits predict and *cause* outcomes.

All psychological traits are measured by performance on tasks. Psychological traits have different productivities in different tasks. Performance on tasks depends on incentives and multiple traits, giving rise to a fundamental identification problem when measuring any single trait. This identification problem is empirically important even for measures of cognitive traits.

The importance of cognitive ability increases with the complexity of the task. Given their

[62] Cunha et al. (2006) report that 16% of the variation in educational attainment is explained by adolescent cognitive traits, 12% is due to adolescent personality (socioemotional traits), and 15% is due to measured parental investments.

endowments of traits and the incentives they face, people sort into tasks in life in pursuit of their comparative advantage.

Traits are stable across situations, but their manifestation depends on incentives to apply effort in the situations where they are measured and also depends on other traits and skills. However, traits are not set in stone. They change over the life cycle and can be enhanced by education, parenting, and environment to different degrees at different ages.

Scores on achievement tests capture both cognitive and personality traits. Children who are more academically motivated and more curious learn more and have higher test scores. More motivated children also try harder on achievement tests.

The evidence in this paper should give pause to analysts and policy makers who rely solely on achievement tests to monitor school performance and school systems. Standardized achievement tests do not adequately capture many skills that matter in life. GED recipients perform about as well as high school graduates on achievement tests but perform much worse in many aspects of life because they lack important personality traits. Categorizing GED recipients as high school graduates misrepresents national statistics on educational attainment.[63] The Perry Preschool Program improved the lives of its participants without increasing their IQ scores, demonstrating why it is problematic to focus curricula exclusively on improving cognitive test scores.

Monitoring school progress and creating programs to enhance skills requires a broader framework of measurement. Interventions that promote beneficial changes in personality have an important place in a portfolio of public policies to foster human development.

No FEAR Act Data

No FEAR Act Notice

PDF

The Notification and Federal Employee Anti-discrimination and Retaliation Act (No FEAR Act) of 2002 increases federal agency accountability for acts of discrimination or reprisal against employees.

The No FEAR Act requires agencies to post on their public websites statistical data relating to equal employment opportunity complaints filed against the respective agencies.

The Federal Reserve Board's public website contains statistical data in accordance with the No FEAR Act.

Information updated as of June 30, 2014

Press Release

Release Date: November 4, 2010

For immediate release

The Federal Reserve Board on Thursday established the Office of Financial Stability Policy and Research and appointed Board economist J. Nellie Liang as its director.

The office will bring together economists, banking supervisors, markets experts, and others in the Federal Reserve who will be dedicated to supporting the Board's financial stability responsibilities. The office will develop and coordinate staff efforts to identify and analyze potential risks to the financial system and the broader economy, including through the monitoring of asset prices, leverage, financial flows, and other market risk indicators; follow developments at key institutions; and analyze policies to promote financial stability. It will also support the supervision of large financial institutions and the Board's participation on the Financial Stability Oversight Council.

"The Office of Financial Stability Policy and Research brings together a skilled group of people with a wide range of expertise to focus solely on financial stability," Federal Reserve Chairman Ben S. Bernanke said. "The financial stability team will play an important role in implementing the Dodd-Frank Wall Street Reform and Consumer Protection Act, in our oversight of systemically important financial institutions, and in our overall surveillance of the financial markets and the economy. I am pleased that such a strong economist and leader as Nellie is leading this group."

Liang joined the Board in 1986, acting most recently as a senior associate director in the Division of Research and Statistics. In that role, she has led a group of economists focused on the intersection of economics and finance, including oversight of capital markets, financial institutions, consumer finance, and financial flows. Liang was a key participant in crafting the Federal Reserve's response to the financial crisis and helped lead the Supervisory Capital Assessment Program, or bank stress tests, which helped increase public confidence in the banking system in 2009. Liang has a Ph.D. in economics from the University of Maryland and an undergraduate degree in economics from the University of Notre Dame.

Executive Summary:

The Board Can Enhance Its Diversity and Inclusion Efforts

2015-MO-B-006 March 31, 2015

Purpose

The Office of Inspector General conducted this audit in response to a congressional request for information on the Board of Governors of the Federal Reserve System's (Board) activities related to diversity and inclusion. Our objective was to assess the Board's human resources–related operations and other efforts to provide for equal employment opportunities, including equal opportunity for minorities and women to obtain senior management positions, and increase racial, ethnic, and gender diversity in the workforce.

Background

Section 10 of the Federal Reserve Act (12 U.S.C. § 244) grants the Board broad authority and independence over matters of employment. As such, the Board is generally not subject to the personnel provisions of title 5 of the *United States Code*, including those relating to recruiting and hiring, performance management, promotions, and employee satisfaction surveys. However, as part of its employment rules, the Board has adopted equal employment opportunity (EEO) provisions that prohibit employment discrimination, including provisions of the No FEAR Act.

The Dodd-Frank Wall Street Reform and Consumer Protection Act required the Board to establish an Office of Minority and Women Inclusion that is responsible for all agency matters relating to diversity in management.

Findings

The Board has established diversity and inclusion practices that are embedded in its longstanding EEO programs. Recent activities include adopting a more standardized process for recruiting officers, developing a formal agency-wide succession planning program to help identify a diverse pool of candidates for senior management positions, and conducting an agency-wide employee survey.

We identified areas of the Board's diversity and inclusion efforts that can be enhanced. First, the Board can enhance its efforts to track and analyze certain types of workforce data that can be used to identify diversity and inclusion trends. Second, the Office of Diversity and Inclusion can increase its interaction with all Board divisions and provide diversity and inclusion and EEO training on a regular basis. Third, the Board should formalize standards for equal employment opportunity and the racial, ethnic, and gender diversity of the workforce to fully comply with section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. Fourth, the Board can further enhance its diversity and inclusion goals and objectives by finalizing and implementing its diversity strategic plan.

We acknowledge that initiatives and activities that are beyond the scope of our review also contribute to enhancing diversity and inclusion. Therefore, the Board's ability to attract, develop, and retain a diverse and inclusive workforce is affected by other factors not specifically identified in our report.

Recommendations

Our report contains recommendations designed to enhance and promote diversity and inclusion at the Board. In its response to our draft report, the Board concurs with our recommendations and outlines planned, ongoing, and completed activities. The Board has taken steps to improve the collection of applicant demographic data, provide non-EEO statistics, and finalize the diversity and inclusion strategic plan. In addition, the Board plans to enhance certain functions within the Office of Diversity and Inclusion.

Summary of Recommendations, OIG Report No. 2015-MO-B-006

Rec. no.	Report page no.	Recommendation	Responsible office
1	23	Develop and implement an alternative method for collecting the demographic data of economist and research assistant applicants to improve the response rate.	Divisions that recruit economists and research assistants
2	24	Ensure that the demographic data for all internal and external officer applicants are maintained in the Board's centralized applicant database.	Management Division
3	30	Consider conducting annual analyses of the distribution of employee performance ratings to identify whether patterns exist that may indicate unfair or unequal treatment. If the analyses reveal patterns that may indicate unfair or unequal treatment, determine whether any actions are necessary.	Management Division
4	41	Ensure that aggregate non–equal employment opportunity case statistics are provided to all Division Directors and that division-specific statistics are provided to the respective Division Director.	Management Division
5	51	Finalize and implement the Board's diversity and inclusion strategic plan and ensure that a. the plan incorporates the agency's overall diversity and inclusion objectives. b. key elements of the plan are included in the Board's 2016–2019 agency strategic plan.	Office of Diversity and Inclusion
6	52	Formalize the standards the Office of Diversity and Inclusion relies on for equal employment opportunity and the racial, ethnic, and gender diversity of the workforce and the senior management of the agency.	Office of Diversity and Inclusion
7	54	Ensure that No FEAR Act training a. is offered on a regular basis. b. is tailored to the Board and includes equal employment opportunity and diversity and inclusion topics in accordance with the Board's *No FEAR Act Written Training Plan*. c. is evaluated for effectiveness and that any improvements identified are incorporated into the training as needed. d. attendance records are retained.	Office of Diversity and Inclusion
8	56	Document the roles and responsibilities of the Office of Diversity and Inclusion and distribute them to all Board divisions.	Office of Diversity and Inclusion
9	56	Partner with divisions to cooperatively develop strategies and initiatives that will help advance diversity and inclusion throughout the Board.	Office of Diversity and Inclusion
10	56	Work with divisions to finalize and implement the quarterly reporting tool and establish a schedule to communicate the results for each division to the respective Division Director. The quarterly reporting tool should include diversity and inclusion activities for each division with clear objectives and corresponding measures.	Office of Diversity and Inclusion

Rec. no.	Report page no.	Recommendation	Responsible office
11	57	Strengthen internal controls for reporting *Management Directive 715* data, to include a. documenting the methodology for extracting and filtering the appropriate data. b. verifying the accuracy and completeness of the data in the *Management Directive 715* report prior to submission.	Office of Diversity and Inclusion and Management Division

MEMORANDUM

TO: Distribution List

FROM: Melissa Heist
Associate Inspector General for Audits and Evaluations

SUBJECT: OIG Report No. 2015-MO-B-006: *The Board Can Enhance Its Diversity and Inclusion Efforts*

The Office of Inspector General has completed its final report on the subject audit. We conducted this audit in response to a congressional request for information on the Board of Governors of the Federal Reserve System's (Board) activities related to diversity and inclusion. Our objective was to assess the Board's human resources–related operations and other efforts to provide for equal employment opportunities, including equal opportunity for minorities and women to obtain senior management positions, and increase racial, ethnic, and gender diversity in the workforce.

Our report contains recommendations designed to improve the monitoring and promotion of diversity and inclusion at the Board, as well as strengthen related controls. In the Board's response to our draft report, the Board concurs with our recommendations and indicated progress in addressing the recommendations. We have included the Board's response as appendix I in our report.

We appreciate the cooperation that we received from your offices. In its final form, this report will be added to our public website and will be summarized in our next *Semiannual Report to Congress.* Please contact me if you would like to discuss this report or any related issues.

Introduction

Objective

The Office of Inspector General (OIG) conducted an audit in response to a March 24, 2014, congressional request for information on the Board of Governors of the Federal Reserve System's (Board) activities related to diversity and inclusion.[1] We received a similar congressional request for information on activities related to diversity and inclusion at the Consumer Financial Protection Bureau, as did the OIGs of five other federal financial regulatory agencies.[2] We coordinated with the other OIGs to develop a comparable objective and scope to address the congressional requests.

Our resultant objective was to assess the Board's human resources–related functions and other efforts to provide for equal employment opportunities, including equal opportunity for minorities and women to obtain senior management positions, and increase racial, ethnic, and gender diversity in the workforce. To answer our objective, we

- reviewed relevant agency personnel operations, policies, and procedures, (e.g., policies related to performance management and hiring), to determine whether adequate controls are established to prevent and detect bias or discrimination
- analyzed information related to demographic statistics for minority and women employees (e.g., performance management, promotions, and representation at all levels of the agency); informal and formal equal employment opportunity (EEO) complaint statistics; and employee satisfaction survey results to determine whether this information suggests disparities in gender, race/ethnicity, or age
- assessed the Board's efforts to respond to complaints, employee satisfaction survey results, or other potential indications of bias or discrimination and to increase diversity throughout the agency
- evaluated the Office of Minority and Women Inclusion's (OMWI) role and involvement in monitoring the impact of the Board's personnel policies on minorities and women, as well as monitoring the Board's efforts to increase diversity in senior management positions
- identified factors that may impact the Board's ability to increase diversity in senior management positions

1. The congressional request letter is in appendix A.

2. The OIGs that received similar requests are those for the U.S. Department of the Treasury's Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Federal Housing Finance Agency, the National Credit Union Administration, and the U.S. Securities and Exchange Commission.

The scope of our audit included the Board's human resources–related functions affecting diversity and inclusion from 2011 through 2013.[3] We also report on relevant management actions that were undertaken in 2014.

We acknowledge that diversity and inclusion are much broader than the areas covered in our report, and that initiatives and activities that are beyond the scope of our review also contribute to enhancing diversity and inclusion. The U.S. Office of Personnel Management (OPM) defines workforce diversity and inclusion, respectively, as follows:

> [Workforce diversity is] a collection of individual attributes that together help agencies pursue organizational objectives efficiently and effectively. These include, but are not limited to, characteristics such as national origin, language, race, color, disability, ethnicity, gender, age, religion, sexual orientation, gender identity, socioeconomic status, veteran status, and family structures. The concept also encompasses differences among people concerning where they are from and where they have lived and their differences of thought and life experiences.[4]
>
> [Inclusion is] a culture that connects each employee to the organization; encourages collaboration, flexibility, and fairness; and leverages diversity throughout the organization so that all individuals are able to participate and contribute to their full potential.[5]

For the purposes of our review, we focused on aspects of diversity and inclusion as they specifically relate to gender, race/ethnicity, and age. These three aspects of diversity were emphasized as being of particular interest in our discussions with congressional staff. The race/ethnicity categories discussed in this report follow those prescribed by the U.S. Equal Employment Opportunity Commission (EEOC) as defined in its *Equal Employment Opportunity Standard Form 100, Rev. January 2006, Employer Information Report EEO-1 Instruction Booklet*. These categories include White (Not Hispanic or Latino), Black or African American (Not Hispanic or Latino), Hispanic or Latino, and Asian (Not Hispanic or Latino), among others.[6] Details on our scope and methodology are in appendix B.

The U.S. Government Accountability Office (GAO), in its *Diversity Management: Expert-Identified Leading Practices and Agency Examples* report, emphasized that a high-performance organization relies on a dynamic workforce with the requisite talents, multidisciplinary knowledge, and up-to-date skills to ensure that it is equipped to accomplish its mission and

3. The Board generally operates on a calendar-year basis; however its performance management process is on a fiscal-year basis.

4. U.S. Office of Personnel Management, *Government-Wide Diversity and Inclusion Strategic Plan 2011*.

5. U.S. Office of Personnel Management, *Government-Wide Diversity and Inclusion Strategic Plan 2011*.

6. For the purposes of this report, we grouped the following race/ethnicity categories as *Other* due to the small number of individuals typically represented in each of these categories: (1) Native Hawaiian or Other Pacific Islander (Not Hispanic or Latino), (2) American Indian or Alaska Native (Not Hispanic or Latino), (3) Two or More Races/Ethnicities (Not Hispanic or Latino), and (4) Not Specified (i.e., individuals who chose not to disclose demographic data).

achieve its goals.[7] Further, the GAO report states that the approach a high-performance organization takes toward its workforce is inclusive and draws on the strengths of employees at all levels and of all backgrounds. Diversity management creates and maintains a positive work environment where the similarities and differences of individuals are valued, so that all can reach their potential and maximize their contributions to an organization's strategic goals and objectives.

Background

The Federal Reserve Act established the Board of Governors of the Federal Reserve System.[8] The Board is composed of seven Governors appointed by the President of the United States, with the advice and consent of the United States Senate.[9] The Board's mission is to foster the stability, integrity, and efficiency of the nation's monetary, financial, and payment systems. The Board has 14 divisions and an OIG.

Section 10 of the Federal Reserve Act[10] grants the Board broad authority over matters of employment. Specifically, section 10 states that Board employment will be governed "solely" by the provisions of the Federal Reserve Act and rules and regulations of the Board that are not inconsistent with the act. As such, the Board is generally not subject to the personnel provisions of title 5 of the *United States Code*, including those relating to recruiting and hiring, performance management, promotions, and employee satisfaction surveys. However, as part of its employment rules, the Board has adopted EEO laws that prohibit discrimination against an individual on the basis of race, color, religion, sex, national origin, age, disability, or genetic information, and the Board promotes the full realization of equal employment opportunity through a continuing affirmative program. The Board also prohibits discrimination on the basis of any application, membership, or service in the uniformed services. In addition, as a matter of policy and although it is not required by law, the Board prohibits discrimination in employment on the basis of sexual orientation. The Board's employment rules include the provisions of the Notification and Federal Employee Antidiscrimination and Retaliation Act of 2002 (No FEAR Act) that require agencies to report EEO complaint information and to provide training at least every two years to their employees, including managers, regarding the rights and remedies available under the employment discrimination protection laws.

Guidance and Best Practices Related to Diversity and Inclusion

This section highlights guidance and best practices related to diversity and inclusion, including EEOC management directives, GAO's *Standards for Internal Control in the Federal Government*, and diversity management leading practices.

7. U.S. Government Accountability Office, *Diversity Management: Expert-Identified Leading Practices and Agency Examples*, GAO-05-90, January 14, 2005.

8. The Federal Reserve System comprises the Board, the 12 regional Federal Reserve Banks, and the Federal Open Market Committee.

9. 12 U.S.C. § 241.

10. 12 U.S.C. § 244.

The EEOC is responsible for enforcing federal laws that prohibit discrimination against a job applicant or an employee because of the person's race/ethnicity, color, religion, sex, national origin, age (40 or older), disability, or genetic information. Federal law also prohibits discrimination against a person because the person complained about discrimination, filed a charge of discrimination, or participated in an employment discrimination investigation or lawsuit. The EEOC provides leadership and guidance to federal agencies on all aspects of the federal government's EEO program. The EEOC ensures federal agency and department compliance with EEOC regulations, provides technical assistance to federal agencies concerning EEO complaint adjudication, monitors and evaluates federal agencies' affirmative employment programs, develops and distributes federal-sector educational materials and conducts training for stakeholders, and adjudicates appeals from administrative decisions made by federal agencies on EEO complaints.

The EEOC's *Management Directive 715* (MD-715) provides federal agencies policy guidance and standards for establishing and maintaining effective EEO programs. The Board follows the requirements of the MD-715 and annually attests to its commitment to equal opportunity in aspects of employment and fostering diversity and inclusion in the workplace.[11] The MD-715 provides instructions that require agencies, among other things, to report demographic data on their workforce on an annual basis. The MD-715 also provides guidance on establishing and maintaining effective programs of equal employment. The MD-715 defines the following six essential elements of a model EEO program:

- demonstrated commitment from agency leadership
- integration of equal employment opportunity into the agency's strategic mission
- management and program accountability
- proactive prevention of unlawful discrimination
- efficiency (e.g., efficient, fair, and impartial complaint resolution process)
- responsiveness and legal compliance[12]

Establishing appropriate internal controls helps agencies improve organizational effectiveness and accountability. In the context of diversity and inclusion at the Board, internal controls may assist the agency in preventing and detecting bias or discrimination in its human resources–related functions and in ensuring the accurate reporting of diversity information. GAO's *Standards for Internal Control in the Federal Government* contains internal control standards for federal agencies to follow; these standards incorporate elements of the Committee of Sponsoring Organizations of the Treadway Commission's (COSO) internal control framework. COSO's internal control framework is widely used and recognized as a leading framework for designing, implementing, and evaluating the effectiveness of internal control. Similar controls are also prescribed for the accurate reporting of information. The National Institute of Standards and Technology's Special Publication 800-53, Revision 4, *Security and Privacy Controls for Federal Information Systems and Organizations*, outlines mandatory information security controls for federal information systems, including data output reconciliation and error correction.

GAO has reported leading practices to guide organizations in diversity management. These practices are intended to help agencies create and maintain a positive work environment where

11. In May 2014, the Board published *The EEO Complaint System and How It Works*, which contains Chair Janet Yellen's attestation to the Board's commitment to providing equal employment to all persons.

12. Equal Employment Opportunity Commission, *Management Directive 715*, October 1, 2003.

the similarities and differences of individuals are valued so that all can reach their potential and maximize their contributions to an organization's strategic goals and objectives. GAO issued *Diversity Management: Expert-Identified Leading Practices and Agency Examples* in response to a congressional request to report on the federal government's performance in managing its diverse workforce. In its report, GAO identifies the following nine leading diversity management practices:

Top leadership commitment—A vision of diversity demonstrated and communicated throughout an organization by top-level management.

Diversity as part of an organization's strategic plan—A diversity strategy and plan that are developed and aligned with the organization's strategic plan.

Diversity linked to performance—The understanding that a more diverse and inclusive work environment can yield greater productivity and help improve individual and organizational performance.

Measurement—A set of quantitative and qualitative measures of the impact of various aspects of an overall diversity program.

Accountability—The means to ensure that leaders are responsible for diversity by linking their performance assessment and compensation to the progress of diversity initiatives.

Succession planning—An ongoing, strategic process for identifying and developing a diverse pool of talent for an organization's potential future leaders.

Recruitment—The process of attracting a supply of qualified, diverse applicants for employment.

Employee involvement—The contribution of employees in driving diversity throughout an organization.

Diversity training—Organizational efforts to inform and educate management and staff about diversity.[13]

The GAO report states that the diversity management experts it spoke with or whose publications it reviewed generally agreed that organizations should consider a combination of these nine leading practices when developing and implementing diversity management.

The Board's Workforce

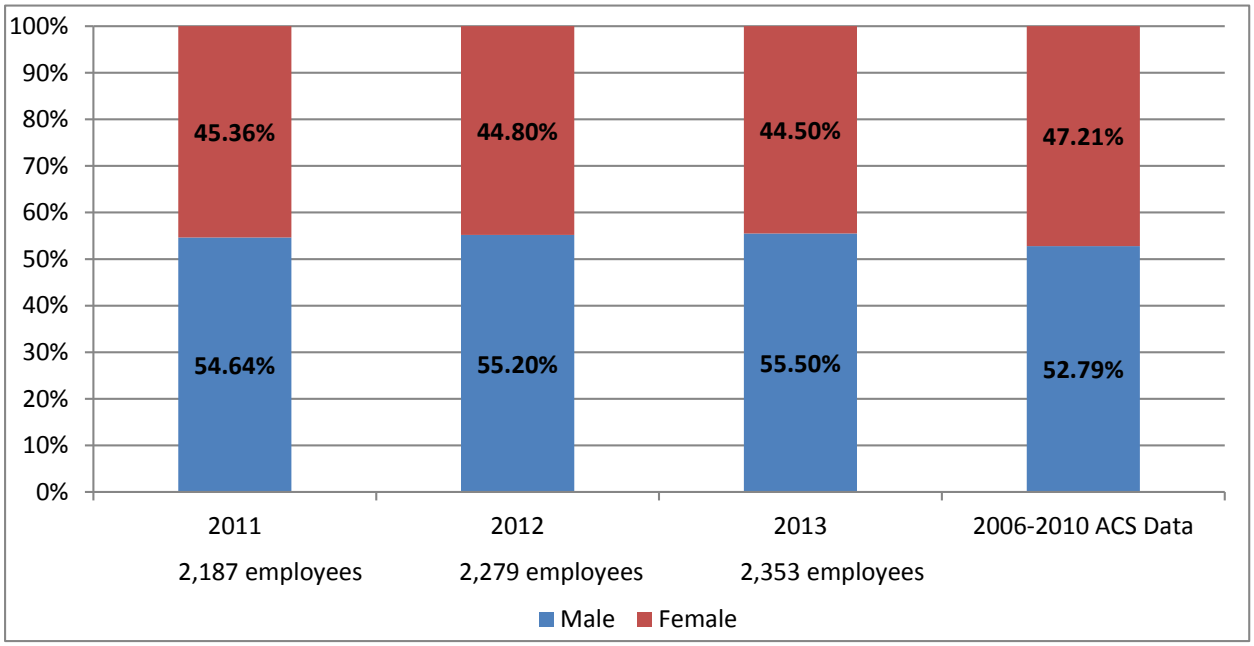
In this section, we provide information about the Board's workforce composition by sex, race/ethnicity, and age. This information provides context for the remainder of the report.

13. U.S. Government Accountability Office, *Diversity Management: Expert-Identified Leading Practices and Agency Examples*, GAO-05-90, January 14, 2005.

Composition of the Workforce

The Board's total workforce was 2,187 in 2011, 2,279 in 2012, and 2,353 in 2013.[14] During this period, as shown in figure 1, female employees accounted for approximately 45 percent of the Board's workforce. According to the U.S. Census Bureau, females accounted for approximately 47 percent of the general workforce, as represented by the most recent five-year American Community Survey (ACS) data.[15]

Figure 1: Permanent Board Employees, 2011–2013, and ACS Data,[a] by Sex



Source: OIG analysis of Board-provided data and the U.S. Census Bureau's ACS data.

[a]These data are compiled through the survey, which randomly samples around 3.5 million addresses and produces statistics for five-year time periods.

14. The OIG was excluded from this audit to maintain its independence. In addition, the total workforce numbers do not include temporary employees or interns.

15. The U.S. Census Bureau entered into a reimbursable agreement with a consortium of four federal agencies—the EEOC, the U.S. Department of Justice, the Office of Federal Contract Compliance Programs at the U.S. Department of Labor, and OPM—to create a custom tabulation identified as the EEO Tabulation 2006–2010 and referred to as the five-year ACS data. The five-year ACS data serve as the primary benchmark for comparing the race, ethnicity, and sex composition of an organization's workforce with that of the analogous external labor market within a specified geography and job category.

The non-White workforce population averaged 44 percent for all three years under review (figure 2). The Board's workforce is more racially diverse than the workforce represented in the ACS data, which reported a 33 percent non-White workforce for 2006–2010.[16]

Figure 2: Permanent Board Employees, 2011–2013, and ACS Data,[a] by Race/Ethnicity[b]

	2011	2012	2013	2006-2010 ACS Data
Other	1.74%	1.71%	1.83%	2.21%
Hispanic/Latino	3.93%	4.17%	4.08%	14.58%
Asian	11.93%	12.59%	13.56%	4.82%
Black/African American	25.93%	25.14%	24.35%	11.34%
White	56.47%	56.38%	56.18%	67.05%
Number of employees	2,187	2,279	2,353	

Source: OIG analysis of Board-provided data and the Census Bureau's ACS data.

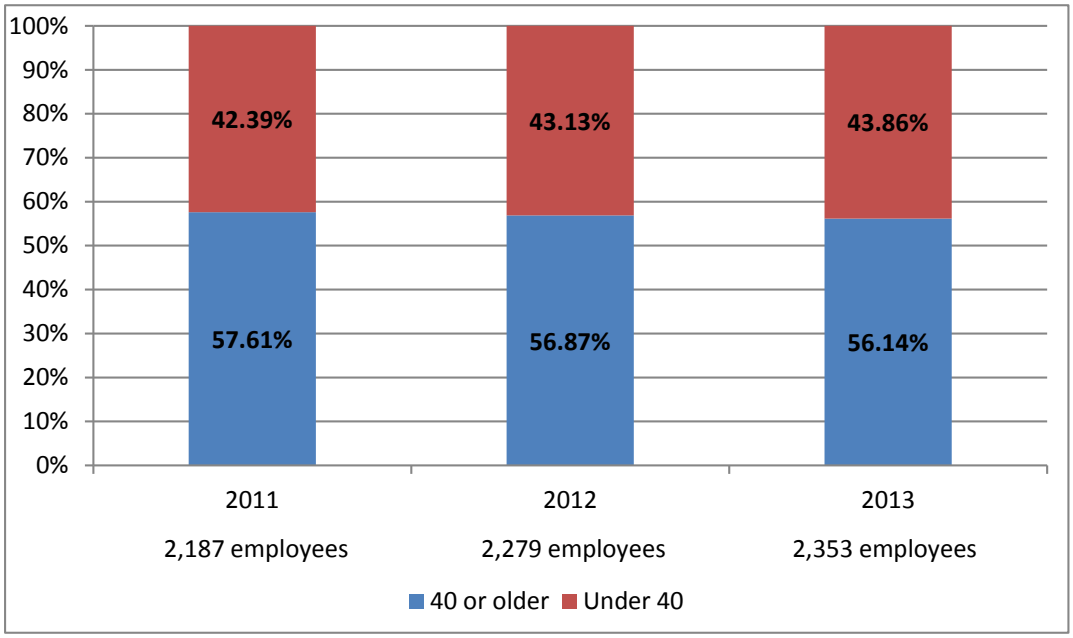
[a]These data are compiled through the survey, which randomly samples around 3.5 million addresses and produces statistics for five-year time periods.

[b]*Other* includes (1) Native Hawaiian or Other Pacific Islander (Not Hispanic or Latino), (2) American Indian or Alaska Native (Not Hispanic or Latino), (3) Two or More Races/Ethnicities (Not Hispanic or Latino), and (4) Not Specified (i.e., individuals who chose not to disclose demographic data).

16. The race/ethnicity categories discussed in this report are the same as those prescribed by the EEOC in its *Equal Employment Opportunity Standard Form 100, Rev. January 2006, Employer Information Report EEO-1 Instruction Booklet*.

To assess age diversity, we looked at two age groups: those under 40 years of age and those 40 years of age or older. We noted that employees 40 years of age or older accounted for approximately 56 to 58 percent of the Board's workforce in 2011, 2012, and 2013 (figure 3). There are no comparable ACS data on age demographics.

Figure 3: Permanent Board Employees, 2011–2013, by Age



Source: OIG analysis of Board-provided data.

Demographics by Pay Grade Category

The Board's pay structure has 22 pay grades.[17] For wage employees, there are seven pay grades, or WE levels, ranging from 41 (lowest) to 47 (highest). The Board also has 14 professional pay grades, or FR levels, ranging from 16 (lowest) to 29 (highest).[18] For executive-level Board staff (known as official staff or officers), the Board has one pay grade, 00, regardless of position title. For the purpose of our analysis, we grouped the wage, professional, and officer grades into the following three categories:

- senior managers and officers (FR-29 and 00)
- mid-level professionals (FR-26 to FR-28)[19]
- all other professional employees and all wage employees (FR-16 to FR-25 and WE-41 to WE-47)

17. The Board's salary structure does not map to the federal government's General Schedule pay structure.

18. In January 2014, the Board added the FR-30 pay grade. This pay grade was not included in our analysis. As of March 2015, there were no incumbents at this pay grade.

19. *Mid-level professionals* may include supervisors and managers.

Men held more positions than women in each pay grade category. The number of women in the *mid-level professionals* and *senior managers and officers* pay grade categories increased in all three years (appendix C, table C-3).

As illustrated in figure 4, the overall race/ethnicity concentrations within pay grade categories were relatively unchanged from 2011 through 2013. From 2011 through 2013, the Board's workforce was the most diverse in the a*ll other professional employees and all wage employees* category. During that same period, the workforce was the least diverse in the *senior managers and officers* category.

In each year under review, White employees as a percentage of total employees increased in each successively higher grade category. For example, in 2013, White employees accounted for approximately 42 percent of the *all other professional employees and all wage employees* category, 62 percent of the *mid-level professionals* pay grade category, and 80 percent of the *senior managers and officers* pay grade category. Within the *mid-level professionals* and *senior managers and officers* pay grade categories, the percentage of White employees declined while the percentage of non-White employees increased each year.

Figure 4: Workforce Distribution by Race/Ethnicity[a] and Pay Grade Category, 2011–2013

	2011	2012	2013	2011	2012	2013	2011	2012	2013
	All others (FR-16 to FR-25 and WE-41 to WE-47)			Mid-level professionals (FR-26 to FR-28)			Senior managers and officers (FR-29 to 00)		
Other	1.89%	1.78%	2.18%	1.78%	1.99%	1.80%	1.05%	0.65%	0.88%
Hispanic/Latino	3.68%	4.15%	3.86%	5.02%	4.91%	4.89%	1.40%	1.94%	2.35%
Asian	10.85%	11.46%	12.17%	15.38%	16.09%	17.47%	4.91%	5.48%	6.18%
Black/African American	43.18%	41.30%	39.56%	11.82%	13.06%	13.57%	9.47%	9.68%	10.88%
White	40.40%	41.30%	42.24%	66.00%	63.95%	62.28%	83.16%	82.26%	79.71%

Source: OIG analysis of Board-provided data.

Note: Percentages may not total 100 due to rounding.

[a]*Other* includes (1) Native Hawaiian or Other Pacific Islander (Not Hispanic or Latino), (2) American Indian or Alaska Native (Not Hispanic or Latino), (3) Two or More Races/Ethnicities (Not Hispanic or Latino), and (4) Not Specified (i.e., individuals who chose not to disclose demographic data).

Additional workforce distribution data for permanent employees by pay grade category, race/ethnicity, sex, and age are in appendix C.

Human Resource–Related Offices at the Board

Generally, the Board's human resources–related functions are performed by certain sections under the Chief Human Capital Officer within the Management Division as well as the Office of Diversity and Inclusion (OD&I), which is within the Office of the Chief Operating Officer.

Human Resources' Sections in the Management Division

Human Resources' (HR) mission is "to develop human capital strategies and services that align and support the strategic direction of the Board while creating an environment recognized as a 'great place to work' with a high-performing, diverse workforce." The office includes several sections that provide human resources services: Talent Acquisition, Compensation, Employee Relations (ER), and Organizational Development and Learning (OD&L).

Talent Acquisition

Talent Acquisition is responsible for recruiting and hiring. Although Talent Acquisition is involved with the hiring process for all 14 divisions and the OIG, the section does not recruit for certain specialized positions. These specialized positions are legal assistants, attorneys, senior attorneys, counsels, research assistants, and economists. Board divisions that hire research assistants and economists, as well as some specialized legal positions, conduct their own recruiting and applicant screening for those positions, while Talent Acquisition conducts final processing and onboarding for the selected specialized candidates.

Compensation

Compensation conducts analysis and provides recommendations on salary offers and increases for employees based on their qualifications and market conditions. For the performance management process, Compensation ensures that employees' performance ratings are accurately recorded and reconciled before annual merit increases are finalized, as these increases are based on the employees' performance ratings.

Employee Relations

ER provides employee counseling, dispute resolution, and policy assistance, and it also facilitates formal employee relations cases. ER's responsibilities include, but are not limited to, the following:

- identifying and bringing to management's attention emerging employee relations issues and trends that may affect employee morale
- gauging employee morale and assessing the quality of human resources programs and services through outreach

- resolving workplace issues by providing consultation and counseling for management and employees
- administering the Board's grievance and disciplinary actions policies
- collecting employee performance appraisals and managing appeals of employee performance appraisals
- developing and implementing employee relations policies

Organizational Development and Learning

OD&L is responsible for improving the Board's organizational performance and employees' productivity through training and development. The section provides the following services to Board employees:

- Assessments—employee and managerial assessments to identify opportunities for growth and expansion
- Career planning—assessments and development of employee skills that add value to the Board
- Consulting—guidance on organizational transitions, strategy creation, skill-gap analysis, team-need analysis, and creative training options
- Training and classes—guidance on training classes as well as the organization of in-house training for Board employees
- Succession planning—guidance to divisions in identifying and developing staff for career advancement
- Employee engagement surveys—management of the newly adopted, agency-wide process aimed at gaining employees' feedback on the Board's work environment.[20]

Office of Diversity and Inclusion

The Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) requires federal financial agencies to establish an OMWI to be responsible for all agency matters related to diversity in management, employment, and business activities. The Board established the OD&I in January 2011 to house in one organization its existing EEO function; its diversity and inclusion programs for minorities, women, and other Board employees; and the Dodd-Frank Act OMWI activities related to financial education, supplier diversity, and regulated entities.

The Board's EEO function follows the regulations set forth in title 12, part 268, of the *Code of Federal Regulations*. These provisions are included in the Board's policy, program, and procedures for providing equal opportunity to Board employees and applicants for employment. In addition, the Board's EEO function manages the Board's EEO complaint process; regulatory reporting, such as that set forth in the MD-715; and EEO training.

20. The Board refers to the employee satisfaction survey as an engagement survey.

In accordance with the Dodd-Frank Act, the Board's OD&I is responsible for the following:

- developing and implementing standards and procedures to ensure, to the maximum extent possible, the fair inclusion and utilization of minorities and women in all activities of the Board

- developing standards for assessing the diversity policies and practices of entities regulated by the Board

- submitting to Congress an annual report regarding actions taken by the Board since the previous report, to include successes achieved and challenges faced by the Board in operating minority and women outreach programs; challenges the Board may face in hiring qualified minority and women employees and contracting with qualified minority-owned and women-owned businesses; and any other information, findings, conclusions, and recommendations for legislative or agency action, as appropriate

The OD&I is also responsible for diversity and inclusion programs that support recruiting and hiring.

Human Resources–Related Functions at the Board

The five human resources–related functions pertaining to diversity and inclusion that are covered in this report and the respective offices with primary or secondary responsibilities for these functions are shown in table 1.

Table 1: Board Offices Responsible for Select Human Resources–Related Functions

Office	Human resources–related functions at the Board				
	Recruiting and hiring	Performance management	Promotions and succession planning	Employee complaints	Employee surveys
Human Resources					
Employee Relations		primary for collecting		primary for non-EEO	primary for exit surveys
Organizational Development and Learning			primary for succession planning		primary for engagement surveys
Talent Acquisition	primary for general professional and wage secondary for officers		secondary for promotions		
Office of Diversity and Inclusion					
Diversity and Inclusion	secondary				
Equal Employment Opportunity				primary for EEO	
All Board divisions					
Divisions	primary for specialized positions and officers	primary for conducting	primary for promotions		

Source: OIG analysis of Board-provided documents and interviews.

The congressional request that initiated our work asked us to examine certain components of the Board's personnel-related functions with respect to diversity and inclusion. We identified these functions to include recruiting and hiring; performance management; promotions and succession planning; complaints; employee satisfaction surveys; and, more generally, the OD&I's overall efforts to enhance diversity and inclusion at the Board. Our findings and recommendations related to each of these activities are discussed in the remaining sections of this report.

Recruiting and Hiring

The Board recognizes that a work environment that attracts top talent is essential. We considered the Board's diversity efforts in its recruiting and hiring as part of our work to address the congressional request to examine the Board's overall human resources–related practices.

This section presents information on the Board's recruiting and hiring processes, including the competitive promotion process. Further, we present demographic statistics on recruiting and hiring. Our findings relate to the Board's processes for gathering and analyzing demographic data on applicants for certain specialized positions and officers.

The Board's Processes

The Board has four distinct processes for recruiting and hiring, depending on position type:

1. professional employees (other than professionals with specialized skills) and wage employees
2. specialized professional employees—legal assistants, attorneys, senior attorneys, and counsels
3. specialized professional employees—economists and research assistants
4. officers

The Board's recruiting and hiring processes for each position type are described below. For each recruitment process, Talent Acquisition assists with the final processing and onboarding of candidates selected for employment.

Recruiting and Hiring for Professional Positions (Other Than Professionals With Specialized Skills) and Wage Positions

The Board has established recruitment practices and uses a variety of methods to attract a broad range of candidates, including job boards, social media, and career fairs. In addition, the Board recruits from colleges and universities. The Board's *Vacant-Position Policy* provides guidance on posting vacancies, selecting the most qualified candidates from a pool of internal and external applicants, and promoting employee awareness of available career opportunities.

Talent Acquisition leads the Board's recruitment efforts and participates in recruiting events with entities such as the National Society of Hispanic MBAs, the National Society of Asian MBAs, and the Thurgood Marshall College Fund. Further, the Board recruits interns through (1) colleges and universities, including historically Black colleges and universities; (2) diversity-focused organizations, such as the Hispanic Association of Colleges and Universities, Washington

Internships for Native Students, the Workforce Recruitment Program,[21] and INROADS;[22] and (3) special-interest publications. OD&I staff members accompany Talent Acquisition representatives at certain recruiting events.

The Board generally provides current employees the first opportunity to apply for open positions;[23] however, the Board may simultaneously advertise open positions to external and internal candidates. Applicants are asked to voluntarily provide their sex and race/ethnicity at the time of application. Talent Acquisition reviews the applications of internal and external candidates to determine whether they meet the position's minimum requirements. Talent Acquisition forwards the applications of qualified internal and external candidates to the hiring manager. The hiring manager identifies candidates to be interviewed. Upon selection of a candidate, the hiring manager informs Talent Acquisition, which then conducts reference and education checks and offers a salary. Applicant information for these professional and wage positions is stored in a centralized applicant database.[24]

Recruiting and Hiring for Specialized Professional Positions—Attorneys

The Legal Division recruits for attorney positions in two ways. For mid-career attorney positions, the division can partner with Talent Acquisition to advertise a vacancy on the Board's public website. In August 2013, Talent Acquisition became involved in recruiting and screening attorney applicants. These applicants are asked to voluntarily provide demographic data at the time of application, and their information is stored in the same centralized applicant database that contains information on other professional and wage position applicants.

For entry-level attorney positions, a Legal Division recruiter recruits second- and third-year students from select law schools, which include schools that have banking law programs. Legal Division applicant information obtained through this process is also stored in the Board's centralized applicant database.

Recruiting and Hiring for Specialized Professional Positions—Economists and Research Assistants

Board divisions that recruit for and hire economists and research assistants have a standard practice for each type of position.[25] According to an economics division official, the Board's

21. The Workforce Recruitment Program is a nationwide recruitment and referral program that connects federal and private-sector employers with highly motivated college students and recent graduates with disabilities.

22. INROADS is the nation's largest nonprofit source of paid internships for undergraduate students of diverse backgrounds.

23. Employees may apply after the internal-only posting period ends, but they are then considered as external applicants and are not guaranteed an interview.

24. Talent Acquisition uses a human resources software application that manages the recruiting and hiring process. Information stored in the software database assists with evaluating candidate qualifications, tracking new hires, and maintaining metrics.

25. Six Board divisions hire economists and research assistants: Research and Statistics, International Finance, Monetary Affairs, Office of Financial Stability Policy and Research, Banking Supervision and Regulation, and Reserve Bank Operations and Payment Systems.

practice derives from universities' practice of posting relevant materials of those pursuing a PhD in economics on their public website. The Board develops its economist candidate pool in four ways:[26]

- A representative for the Board's economics divisions downloads the job market materials of those pursuing a PhD in economics (e.g., curriculum vitae and publications) from select university websites, irrespective of whether the individuals have expressed an interest in working for the Board.

- A committee of Board economists contacts faculty members in economics and finance departments at universities in the United States and abroad to request referrals of individuals expected to be in the job market.

- Candidates can send job market materials to an e-mail address specified on the section of the Board's public website that describes economist positions at the Board.

- Candidates can apply through the American Economic Association's Job Openings for Economists listings.

Board divisions that hire economists contact individuals from this resultant candidate pool to offer them an interview at the American Economic Association's annual meeting in January. A subset of those interviewed are invited for additional interviews at the Board. An individual may be extended multiple interviews and offers, and the economics divisions ultimately choose the candidates to whom they will extend an offer of employment. All economist candidate information is stored in the economics divisions' proprietary database,[27] which is separate from the Board's centralized applicant database.

Research assistants are recruited twice a year through job fairs and outreach to economics and mathematics departments at a number of universities. Applicants for these positions are directed to the Board's website and must submit the required materials (college transcripts and a survey of interest form) to the Board. The materials are reviewed by staff members in several divisions, and qualified candidates are ranked based on credentials. Multiple divisions can interview and extend offers to research assistant candidates. Research assistants at the Board are typically employed for two years; however, their positions can be extended for a year.[28] Research assistant applicant materials are downloaded to a database that is separate from both the database used for economists' applications as well as the Board's centralized applicant database.

Divisions that recruit for economists request demographic data from applicants in the Board's economist database in a mass e-mail that is sent to all the e-mail addresses obtained from curriculum vitae accumulated during the development of the applicant pool, irrespective of whether the individuals have expressed an interest in working for the Board. Divisions that recruit for research assistants request demographic data from applicants after the applicants submit their

26. For the purposes of our review, an economist or research assistant applicant is a candidate whose information is stored in the economics divisions' proprietary database. These individuals may or may not have expressed an interest in working for the Board. An applicant's job market materials are considered by multiple Board divisions.

27. Multiple divisions may consider any candidate in the database for an economist or research assistant position. As a result, individuals were counted multiple times.

28. Research assistants are considered as part of the Board's permanent workforce.

job market materials. The e-mail contains a form that requests research assistant applicants to voluntarily provide their sex and race/ethnicity. Applicants choosing to disclose this information must return the form via e-mail. Data for all individuals being considered for these positions is manually compiled and submitted to HR. HR combines the economist and research assistant demographic data with all other applicant data contained in the Board's centralized applicant database to complete federal reporting requirements.

Hiring officials in the divisions that recruit economists and research assistants acknowledge that diversity within the economics profession is low and that the Board faces challenges in recruiting minorities for these positions. Divisions that hire for these specialized positions recruit at select schools with economist programs. Hiring officials state that they have taken measures to broaden their outreach for economists to underrepresented groups. For example, Board economists serve as program faculty at the American Economic Association Summer Program, which is designed for minority college-level students studying economics.

In addition, outreach is conducted at the high-school level to enhance students' interest in economics prior to college. For example, the FedEd program promotes outreach to underserved high schools in the Washington, DC, metro area and Math x Econ program brings students who are underrepresented in the field of economics, including minorities and women, from underserved high schools to the Board for a one-day program that highlights careers in economics in general and at the Board in particular.

Subsequent to our review, the Board, in partnership with the American Economic Association, hosted the National Summit on Diversity in the Economics Profession. The conference brought together Presidents and Research Directors of the Federal Reserve Banks and Chairs of economics departments from universities around the country to discuss, among other things, the state of diversity in the economics profession.

Recruiting and Hiring for Officers

Board divisions can recruit officers by using the assistance of an external search firm or using the assistance of Talent Acquisition. Divisions can also promote from within. However, officer hirings are managed by, and must be processed through, HR. Each division is charged with developing a detailed justification memorandum to support its officer selection. According to a Board official, Talent Acquisition and the OD&I review the candidate selection justification before it is submitted for approval by either the Oversight Governor for the division or the full Board of Governors.[29]

As of June 2014, both Talent Acquisition and the Director of the OD&I are involved in the early activities of the officer hiring process. These activities include, but are not limited to, discussing the recruitment strategy, identifying the selection panel, and reviewing résumés. Information about the officer applicant pool varied from division to division and was not always captured in the Board's centralized database during the years under review.

29. Internal officer promotions are approved by the division's Oversight Governor and the Administrative Governor. For a newly created officer position, officer vacancies filled with external candidates, or a Board employee who is being considered for an officer position, the members of the Board of Governors must approve the position and the new officer appointment.

Demographic Statistics

Professional Positions (Other Than Economists and Research Assistants) and Wage Positions

During the application process, applicants for professional positions—including legal assistants, attorneys, senior attorneys, and counsels—and wage positions are prompted to voluntarily provide demographic data, to include sex and race/ethnicity. We analyzed demographic data from the Board's centralized applicant database pertaining to all applicants, to those applicants found to be qualified and referred to the hiring manager, and to those who were ultimately hired. The Board filled 232 professional and wage positions in 2011, 199 positions in 2012, and 154 positions in 2013.

Figure 5 illustrates the number of male and female applicants who applied and the number who were referred to the hiring manager during the period under our review. We found that similar percentages of male and female applicants were referred to the hiring manager. Applicants who did not voluntarily disclose their sex are included in the *Unknown* category.

Figure 5: Professional Position (Other Than Economist and Research Assistant) and Wage Position Applicants, by Sex, 2011–2013

	2011		2012		2013	
	Number of applicants	Number/percent of applicants referred	Number of applicants	Number/percent of applicants referred	Number of applicants	Number/percent of applicants referred
Unknown	1,020	707 / 69.31%	857	603 / 70.36%	936	539 / 57.59%
Female	3,588	1,835 / 51.14%	3,076	1,397 / 45.42%	3,427	1,302 / 37.99%
Male	5,451	2,709 / 49.70%	3,600	1,720 / 47.78%	3,824	1,763 / 46.10%

Source: OIG analysis of Board-provided data.

The total distribution of hires by sex for professional positions (other than economists and research assistants) and wage positions during the three-year period was 339 males, or 57.95 percent of the total hired, and 246 females, or 42.05 percent of the total hired.

Figure 6 illustrates the race/ethnicity composition of applicants who applied and were referred to the hiring manager during the three years we reviewed. Applicants who did not voluntarily disclose their race/ethnicity are included in the *Unknown* category.[30]

Figure 6: Professional Position (Other Than Economist and Research Assistant) and Wage Position Applicants, by Race/Ethnicity,[a] 2011–2013

	2011		2012		2013	
	Number of applicants	Number/percent of applicants referred	Number of applicants	Number/percent of applicants referred	Number of applicants	Number/percent of applicants referred
Other	368	173 / 47.01%	284	120 / 42.25%	329	138 / 41.95%
Hispanic/Latino	542	264 / 48.71%	360	170 / 47.22%	393	173 / 44.02%
Asian	1,200	515 / 42.92%	838	353 / 42.12%	928	354 / 38.15%
Unknown	1,498	935 / 62.42%	1,270	787 / 61.97%	1,325	707 / 53.36%
Black/African American	3,112	1,508 / 48.46%	2,387	1,037 / 43.44%	2,681	1,141 / 42.56%
White	3,339	1,856 / 55.59%	2,394	1,253 / 52.34%	2,531	1,091 / 43.11%

Source: OIG analysis of Board-provided data.

[a]*Other* includes (1) Native Hawaiian or Other Pacific Islander (Not Hispanic or Latino), (2) American Indian or Alaska Native (Not Hispanic or Latino), and (3) Two or More Races/Ethnicities (Not Hispanic or Latino). *Unknown* includes individuals who chose not to disclose their demographic data.

Table 2 illustrates, for the period of our review, the race/ethnicity composition of applicants hired for professional positions (other than economists and research assistants) and wage positions. In the three-year period, approximately 43 percent of all such hires were non-White individuals.

30. Because applicants are not asked to provide a birthdate during the application process, we did not conduct an analysis of the age of applicants and referred applicants.

Table 2: Professional Position (Other Than Economist and Research Assistant) and Wage Position Hires, by Race/Ethnicity, 2011–2013

Race/Ethnicity	Number hired	% of hired
Asian	82	14.02
Black/African American	128	21.88
White	333	56.92
Hispanic/Latino	31	5.30
Other[a]	11	1.88
Total hired	**585**	**100.00**

Source: OIG analysis of Board-provided data.

Note: All hires fully disclosed their race/ethnicity. We were unable to compare the composition of hires to the composition of the applicant pool due to the number of *Unknown* responses in the applicant pool.

[a]*Other* includes (1) Native Hawaiian or Other Pacific Islander (Not Hispanic or Latino), (2) American Indian or Alaska Native (Not Hispanic or Latino), and (3) Two or More Races/Ethnicities (Not Hispanic or Latino).

For more detailed information on the demographics of applicants for professional positions (other than economists and research assistants) and wage positions, see appendix D.

Specialized Positions for Economists and Research Assistants

We attempted to analyze the demographic trends of economist and research assistant applicants as they moved through the recruiting and hiring process; however, we were unable to perform a meaningful analysis due to the large number of applicants who had not voluntarily disclosed their sex or race/ethnicity.[31] The economist database for storing applicant information differs from the database used to store information on research assistant applicants, and both are separate from the Board's centralized applicant database, which is used for other professional and wage position vacancies. As noted above, divisions that recruit for economists and research assistants request demographic data from applicants by sending a form in a separate mass e-mail, and in the case of economist candidates, demographic data is requested irrespective of whether the candidates have expressed an interest in working for the Board. Applicants choosing to disclose this information must return the form via e-mail.

The Board filled 116 economist and research assistant positions in 2011, 85 positions in 2012, and 112 positions in 2013. Upon gaining employment at the Board, all economists and research assistants disclosed their sex for the years under review. The total distribution of economist and research assistant hires by sex during the three-year period was 206 males, or 65.81 percent of the total hired, and 107 females, or 34.19 percent of the total hired.

Table 3 illustrates the total distribution of economist and research assistant hires by race/ethnicity during the period of our review. Approximately 25 percent of economist and research assistant hires during this period were non-White.

31. For the purposes of our review, an economist or research assistant applicant is a candidate whose information is stored in the economics divisions' proprietary database. These individuals may or may not have expressed an interest in working for the Board. An applicant's job market materials are considered by multiple Board divisions.

Table 3: Economist and Research Assistant Hires, by Race/Ethnicity, 2011–2013

Race/Ethnicity	Number hired	% of hired
Asian	61	19.49
Black/African American	2	0.64
White	234	74.76
Hispanic/Latino	10	3.19
Other[a]	6	1.92
Total hired	**313**	**100.00**

Source: OIG analysis of Board-provided data.

Note: All hires fully disclosed their race/ethnicity. We were unable to compare the composition of hires to the composition of the applicant pool due to the number of *Unknown* responses in the applicant pool.

[a]*Other* includes (1) Native Hawaiian or Other Pacific Islander (Not Hispanic or Latino), (2) American Indian or Alaska Native (Not Hispanic or Latino), and (3) Two or More Races/Ethnicities (Not Hispanic or Latino).

For more detailed information on the demographics of applicants for economist and research assistant positions, see appendix D.

The OIG's Analysis of Nondisclosure of Demographic Information

We found that in 2011, approximately 67 percent of individuals considered for economist and research assistant positions did not voluntarily disclose their sex or race/ethnicity, which was considerably higher than the 10 to 15 percent nondisclosure rate of applicants for professional positions (other than economists and research assistants) and wage positions (table 4). In 2012, the nondisclosure rate of economist and research assistant applicants approximated 59 percent, and in 2013, this rate rose to approximately 92 percent. The low response rate may be attributable to the fact that a mass e-mail is sent to the applicant pool for economist positions, irrespective of whether the individuals have expressed an interest in working for the Board. Also, in 2013, according to a Board official, the e-mail was not sent. See appendix D for a distribution of the applicants who voluntarily disclosed their demographic data.

Table 4: Percentage of Applicants Who Did Not Voluntarily Disclose Demographic Information, by Type of Position, 2011–2013

Applicant type	2011	2012	2013
Unknown sex			
Economist and research assistant	67.01	58.96	92.13
Other professional position and wage position	10.14	11.38	11.43
Unknown race/ethnicity			
Economist and research assistant	67.19	59.31	92.26
Other professional position and wage position	14.89	16.86	16.18

Source: OIG analysis based on Board-provided data.

Officers

We attempted to analyze the applicant demographic data for officer positions; however, these data were not consistently tracked by Talent Acquisition and Board divisions. As such, we conducted an analysis of the sex and race/ethnicity of the number of officers selected during the years under our review. The Board filled 30 officer positions in 2011, 26 in 2012, and 18 in 2013 (table 5). Of these 74 officer positions filled through internal promotions and external hires, 41.89 percent were female. The race/ethnicity composition of officers selected over the three-year period was as follows: 8.11 percent were Asian, 8.11 percent were Black/African American, 81.08 percent were White, 1.35 percent were Hispanic/Latino, and 1.35 percent were Other.

Table 5: Officer Selections, by Sex and by Race/Ethnicity, 2011–2013

Demographic group	2011		2012		2013	
	Number selected	% of selected	Number selected	% of selected	Number selected	% of selected
Sex						
Male	13	43.33	19	73.08	11	61.11
Female	17	56.67	7	26.92	7	38.89
Total	**30**	**100.00**	**26**	**100.00**	**18**	**100.00**
Race/Ethnicity						
Asian	1	3.33	5	19.23	0	0.00
Black/African American	3	10.00	3	11.54	0	0.00
White	25	83.33	17	65.38	18	100.00

Other[a]	0	0.00	1	3.85	0	0.00
Total	**30**	**100.00**	**26**	**100.00**	**18**	**100.00**

Source: OIG analysis based on Board-provided data.

Note: Officer selections include both internal promotions and external hires.

[a]*Other* includes (1) Native Hawaiian or Other Pacific Islander (Not Hispanic or Latino), (2) American Indian or Alaska Native (Not Hispanic or Latino), and (3) Two or More Races/Ethnicities (Not Hispanic or Latino).

Finding: The Board Cannot Fully Assess the Level of Diversity in the Economist and Research Assistant Applicant Pool

We found that in 2011 and 2012, over half the individuals in the economist and research assistant database did not voluntarily disclose their sex and race/ethnicity; this percentage rose to over 90 percent in 2013. We were informed that in 2013, no economist applicants disclosed demographic information. These rates of nondisclosure did not facilitate demographic trend analysis in the economist and research assistant applicant pools.

The EEOC's guidance to federal agencies for MD-715 reporting instructs agencies to report applicant demographic data for prescribed occupational categories. Pursuant to this guidance, the Board reports applicant pool data for occupational categories that include economists and

research assistants. Further, the guidance states that if a particular group has a low participation rate in a particular occupation, the agency should determine whether recruitment efforts are resulting in a diverse pool of applicants. The Board cannot assess the degree to which the economist and research assistant applicant pool is diverse because the Board's process to collect demographic data for these applicants has resulted in high nondisclosure rates.

Divisions request demographic data from individuals considered for economist and research assistant positions in an additional step in the recruitment process by sending a mass e-mail that contains a form requesting the individual to voluntarily provide his or her sex and race/ethnicity. In the case of economist applicants, this e-mail is sent irrespective of whether the individuals have expressed an interest in working for the Board. Research assistant applicants are asked after their expression of interest in employment. If the individual chooses to disclose this information, he or she must return the form via e-mail. In contrast, professional and wage applicants are asked to voluntarily disclose their demographic data at the time they apply for a position on the Board's website, and the information is stored in the Board's centralized applicant database. In 2013, according to an official, the mass e-mail to request economists' demographic data was never released due to an administrative error.

We found that the method used to obtain demographic data from economist and research assistant applicants did not result in a response rate that enabled the agency to identify diversity trends in its economist and research assistant applicant pool. This method is less effective than the method used for professional positions (other than economists and research assistants) and wage positions, which yields a higher percentage of applicants disclosing demographic data.

Management Actions

According to an official, the Board implemented a new process for economist candidates in 2014 in which the Board automatically requests self-disclosure of demographic information within 24 hours of the Board obtaining an economist applicant's e-mail address. This process eliminates the administrator's role of releasing the mass e-mail.

Recommendation

We recommend that the Directors of the divisions that recruit economists and research assistants

1. Develop and implement an alternative method for collecting the demographic data of economist and research assistant applicants to improve the response rate.

Management's Response

The Board concurs with our recommendation. In its response, the Board notes that management began implementing a new process to automatically request self-disclosure of demographic information within 24 hours of obtaining an economist applicant's e-mail address. The Board will assess whether this change provides a significant improvement in response rates for economist and research assistant applicants and, if not, will consider other changes in order to obtain demographic data for economist and research assistant applicants.

OIG Comment

The actions described by the Board are generally responsive to our recommendation. We plan to follow up on the Board's actions to ensure that the recommendation is fully addressed.

Finding: The Board Did Not Consistently Track Officer Applicant Demographic Data

We found that the Board's method for recruiting and hiring officers did not produce information that shows the diversity of the applicant pool. Demographic information for the officer applicant pool was not consistently tracked by Talent Acquisition, the hiring division, or the executive search firms used by divisions. We also noted that during 2011–2013, two officer positions were tracked in the Board's centralized applicant database.

The MD-715 guidance requires agencies to report applicant demographic data for occupational categories, including senior-level positions. Further, the guidance states that if a particular group has a low participation rate in the applicant pool, the agency should determine whether recruitment efforts are resulting in a diverse pool of applicants.

Historically, the Board's divisions have operated autonomously in establishing their management processes, including those for recruiting and hiring officers. A division may fill an officer vacancy by promoting from within the division, using an executive search firm, or posting a vacancy announcement through the Board's centralized applicant database. Because the Board has several methods to recruit and hire officers and does not consistently collect voluntary demographic data for officer applicants, the Board cannot assess the diversity of the applicant pool for officer-level positions. By establishing a standardized formal process to ensure that officer applicant demographic data are captured, the Board can better assess whether its officer recruitment efforts are resulting in a diverse pool of applicants.

Management Actions

In June 2013, the Board began a more standardized process to recruit for officer positions. Further, all officer positions will be tracked through the centralized applicant database. This standardized process may allow Talent Acquisition to accumulate demographic data and measure trends in diversity at the officer-applicant level. While these efforts will provide the Board with better information to assess the diversity of its officer applicant pool, we note that there may be gaps in the demographic data when divisions use an executive search firm to recruit officer candidates.

Recommendation

We recommend that the Chief Human Capital Officer

2. Ensure that the demographic data for all internal and external officer applicants are maintained in the Board's centralized applicant database.

Management's Response

The Board concurs with our recommendation. In its response, the Board notes that management began to implement processes to track officer positions, which it believes will allow it to accumulate demographic data and measure trends in diversity at the officer-applicant level.

OIG Comment

The actions described by the Board are generally responsive to our recommendation. We plan to follow up on the Board's actions to ensure that the recommendation is fully addressed.

Performance Management

The purpose of the Board's Performance Management Program is (1) to continuously improve individual and organizational performance, (2) to develop and motivate employees to become top performers and help the Board achieve its mission and purpose, and (3) to inform various employment decisions.

This section presents information on performance management for the period of our review, including a summary of the Board's process and trend statistics based on the independent analysis performed by an external consulting firm. The consulting firm's analysis indicated statistically significant differences in performance ratings among certain demographic groups on an agency-wide basis. When these demographic groups' performance ratings were evaluated by pay grade category, however, in most cases there was no trend of statistically significant differences.[32] The agency-wide differences do not necessarily indicate discrimination and could be due to actual differences in employee performance or other factors. Further analysis of performance ratings may help the Board identify any patterns that may indicate potential unfair or unequal treatment. The Board piloted a new performance management system in 2014; performance management data associated with the new rating system are not reflected in our analysis.

The Board's Process

The Board's *Performance Management Program* policy describes the Board's Performance Management Program, which provides the framework for an employee's annual performance assessment and rating during the period of our review. The Board's performance periods follow a fiscal year (October 1 through September 30) schedule. Supervisors are responsible for creating performance standards, monitoring performance, and providing employees with feedback on their performance. Supervisors are required to conduct an annual, written review of an employee's performance, which should be reviewed by the supervisors' manager before issuance to the employee. In the fiscal year (FY) 2011, FY 2012, and FY 2013 rating periods, employees were assigned one of five possible ratings: *extraordinary*, *outstanding*, *commendable*, *marginal*, and *unsatisfactory*.[33]

According to the Board's policy, the reviewing manager should attempt to resolve any disagreement between an employee and his or her supervisor with respect to the employee's performance rating. Further, Board employees other than a Division Director, an Office Director, or the Chief Operating Officer can, within a certain time frame, appeal their performance rating

32. The external consulting firm we used refers to this as *job level* rather than pay grade category.

33. Economists were on a seven-tier system: *extraordinary*, *outstanding plus*, *outstanding*, *commendable plus*, *commendable*, *marginal*, and *unsatisfactory*.

with the Director of the division or office.[34] ER will assist in facilitating this process. However, if the appeal is based on sex, race/ethnicity, or age, the employee must file a separate complaint with the OD&I.[35]

Annual performance ratings are the basis for determining merit salary increases, which are administered by Compensation, and the ratings may also be considered when determining variable pay, eligibility for additional incentive programs, and promotions.[36] Employees with a rating of *marginal* or *unsatisfactory* are not eligible for merit increases or other types of performance-based pay.

Demographic Statistics

Results From an External Consulting Firm's Analysis Performed for the OIG

We used an external consulting firm to conduct an independent analysis of the Board's FY 2011, FY 2012, and FY 2013 employee performance ratings. The consulting firm conducted tests of statistical significance and practical significance to evaluate group differences.[37] For analysis purposes, the consulting firm analyzed gender and age differences, as well as race/ethnicity differences among the White, Black/African American, Hispanic/Latino, Asian, and Other groups.[38] The consulting firm evaluated performance data for three pay grade categories: *senior managers and officers* (FR-29 and 00), *mid-level professionals* (FR-26 to FR-28), and *all others*[39] (FR-16 to FR-25 and WE-41 to WE-47).

The external consulting firm's analysis revealed that overall during the three-year period, approximately 99 percent of Board employees received ratings of *commendable* or above (table 6).[40]

34. The Chief Human Capital Officer will review appeals if the Division Director is the supervisor or the reviewing manager. If the Chief Human Capital Officer is the supervisor or the reviewing manager, the Board's General Counsel will appoint an appeals officer.

35. The OD&I and ER ensure that the appropriate office handles an employee's complaint, depending on the basis. Gender, race/ethnicity, age, or disability discrimination claims are handled by the OD&I; other workplace complaints are handled by ER.

36. During the review period, variable pay was generally targeted toward officers and employees in designated job families that (1) are critical to the execution of the Board's core mission, (2) require skills that are in high demand in the marketplace, (3) have salaries well below prevailing market levels, and (4) experience recruiting difficulties and high rates of turnover. Compensation reviews new variable pay requests for additional job families and makes a recommendation to the Chair of the Committee on Board Affairs, who makes the final determination.

37. A test for statistical significance indicates the probability that the group difference could have been due to chance. In contrast, measures of practical significance provide an indication of the size of the difference.

38. *Other* includes American Indian/Alaskan Native, Native Hawaiian/Pacific Islander, individuals identifying themselves as belonging to two or more races, and individuals who chose not to disclose demographic data.

39. In this section of the report, the external consulting firm's use of the term *all others* equates to our use of the term *all other professional employees and all wage employees* elsewhere in the report.

40. Economists who were rated *outstanding plus* are shown as *outstanding* and those rated as *commendable plus* are shown as *commendable*.

Table 6: Distribution of Performance Ratings for All Employees, FY 2011–FY 2013

Performance ratings	FY 2011		FY 2012		FY 2013	
	Number of rated employees	% of total rated employees	Number of rated employees	% of total rated employees	Number of rated employees	% of total rated employees
1—*extraordinary*	378	19.13	429	20.27	480	22.39
2—*outstanding*	712	36.03	848	40.08	956	44.59
3—*commendable*	882	44.64	829	39.18	696	32.46
4—*marginal*	4	0.20	10	0.47	12	0.56
5—*unsatisfactory*	0	N/A	0	N/A	0	N/A
Total	**1,976**	**100.00**	**2,116**	**100.00**	**2,144**	**100.00**

Source: External consulting firm analysis based on Board-provided data.

The results of the consulting firm's analysis of the Board's FY 2011, FY 2012, and FY 2013 performance ratings indicated statistically significant differences among Board employees across certain demographic groups on an agency-wide basis. However, when these demographic groups' performance ratings were evaluated by pay grade category, in most cases, there was no trend of statistically significant differences. These statistically significant differences do not necessarily indicate discrimination and could be due to a variety of factors either individually or in combination, such as actual differences in employee performance. A statistically significant result does not imply that a difference is good or bad or that it is large or small; it indicates that the observed difference is probably not due to chance.

The external consulting firm did not find statistically significant differences in the gender category. However, the consulting firm found statistically significant differences in the following race/ethnicity and age categories:

- In all three years, on an agency-wide basis, White employees received higher performance ratings compared with Asian employees; however, there were no significant differences in performance ratings when analyzed at the job levels.

- In all three years, on an agency-wide basis, White employees received higher performance ratings compared with Black/African American employees. In 2012 and 2013, there were no statistically significant differences in performance ratings when analyzed at the job levels. In 2011, there was a statistically significant difference between the average ratings of White employees and Black/African American employees for the *all others* employee job level.

- In 2013, in the *senior managers and officers* category, Hispanic/Latino employees received higher performance ratings as compared with White employees. The comparison included 247 White employees and only 7 Hispanic/Latino employees; therefore, these results should be interpreted with caution.[41]

41. According to the external consulting firm, small sample results are often nonrepresentative and unstable and can change substantially with small changes in the data.

- In 2012, on an agency-wide basis, White employees received higher performance ratings compared with Hispanic/Latino employees; however, there were no significant differences in performance ratings when analyzed at the job levels.

- In 2012, on an agency-wide basis, employees 40 years of age or older received higher performance ratings than employees under 40 years of age; however, there were no significant differences in ratings for employees under 40 years of age and employees 40 years of age or older within the *senior managers and officers* job level and within the *all others* employee job level.

- In all three years, in the *mid-level professionals* category, employees under 40 years of age received higher performance ratings than employees 40 years of age or older.

The consulting firm's full report on the Board's employee performance ratings is included as appendix E.

The OIG's Analysis

In addition to the external consulting firm's statistical analysis of performance ratings for the entire Board, we analyzed performance ratings by division to determine average performance ratings for FY 2011, FY 2012, and FY 2013 by race/ethnicity. We did not evaluate these averages for statistical significance, and we did not conduct analyses by pay grade category.

The results of our analysis by division were similar to the external consulting firm's agency-wide findings discussed above.[42] These observations do not necessarily indicate discrimination and could be due to a variety of factors. Appendix F contains our analysis of performance management data by divisions.

Finding: The Board Has Not Conducted Analyses of Employee Performance Reviews on an Annual Basis

According to a Board official, the Board does not consistently conduct a review of the distribution of performance ratings to ascertain how the ratings are distributed across sex, race, or people 40 years of age or older. The Board has periodically analyzed aggregate performance ratings distributions by divisions. Further, in 2012, the Board surveyed employees on the Performance Management Program. The final results report indicates survey participant concerns with effectiveness, fairness, and rater bias.

One government best practice suggests that organizations should gather and analyze statistics on the distribution of performance ratings.[43] Uneven ratings distributions across gender and race/ethnicity might raise questions about fairness. If differing treatment is found within the performance appraisal process, efforts should be made to determine whether appraisal design

42. The external consulting firm reversed the order of the Board's performance management rating system so that higher ratings reflected better performance. However, our analysis reflects the Board's ordering of performance ratings, in which a lower rating number reflected higher performance (e.g., *extraordinary* is represented by a rating of 1).

43. U.S. Office of Personnel Management, *Evaluating Performance Appraisal Programs: An Overview*, PMD-09, January 1999.

features are causing the lack of balance in the ratings or whether other issues at the organization may be responsible.

As previously noted, the external consulting firm found statistically significant differences in performance ratings among certain demographic groups on an agency-wide basis. When these demographic groups' performance ratings were evaluated by pay grade category, however, in most cases there was no trend of statistically significant differences. Additional analyses of employee performance ratings will allow the Board to better determine whether its performance management system supports the development and retention of a diverse workforce.

Management Actions

The Board acknowledged challenges with the performance management system in place during the review period. In discussions about the performance management framework, employees were in favor of a framework that (1) focused on growth, (2) included ongoing conversations between managers and employees, (3) created a partnership between managers and employees, and (4) potentially had a more effective method to rate performance. The Board decided to adopt a new performance rating system.

The new performance management process was piloted in five divisions and the OIG for performance year 2013–2014, with full implementation in all Board divisions in the 2014–2015 performance year. The purpose of the new process is to align staff to the work of the Board, provide greater accountability, support the growth of staff, improve the value of time spent, and increase the fairness of the process. In addition, the new process involves frequent conversations between employees and their managers that are designed to develop and grow employees' capabilities. The Board contracted for the necessary expertise to assist with the program's implementation, which includes information sessions, tools and guides, training, and other support.

Recommendation

We recommend that the Chief Human Capital Officer

3. Consider conducting annual analyses of the distribution of employee performance ratings to identify whether patterns exist that may indicate unfair or unequal treatment. If the analyses reveal patterns that may indicate unfair or unequal treatment, determine whether any actions are necessary.

Management's Response

The Board concurs with our recommendation. In its response, the Board notes that a periodic analysis focused on areas in which management has potential concerns may be useful. Management will consider the feasibility of conducting additional analyses on a periodic basis.

OIG Comment

The actions described by the Board are generally responsive to our recommendation. We plan to follow up with the Board to determine its final decision in considering our recommendation.

Promotions and Succession Planning

In the OIG's September 2014 *Major Management Challenges for the Board of Governors of the Federal Reserve System*, we reported on the Board's risk associated with staff retirement and turnover, as well as challenges the Board faces in replacing employees with specialized knowledge and skill sets. One way to address such challenges is through succession planning. GAO states that succession planning is a comprehensive ongoing process that provides for forecasting senior leadership needs, identifying and developing candidates with the potential to fill future leadership position openings, and selecting individuals from a diverse pool of qualified candidates to meet executive resource needs. Similarly, promotions can also be a vehicle for increasing agency diversity.

This section presents information on the Board's career-ladder promotions process as well as demographic statistics on promotions. We found that the Board started a formal succession planning process in late 2012, but it has not yet been fully implemented across all Board divisions.

The Board's Processes

Promotions

Promotions at the Board may be made in a competitive manner or through career-ladder progression. A competitive promotion is a grade increase that results when an employee applies for a vacant position in a higher grade level than the current employee's grade level, competes from a pool of applicants, and is hired for the position. Competitive promotions are addressed in the Board's *Vacant-Position Posting* policy. Information on competitive promotions is included in the Recruiting and Hiring section of this report.

A career-ladder promotion is available to both wage and professional employees in positions that allow for the employee to be promoted to one or more sequentially higher pay grades within the career ladder for his or her position. Employees in such positions may become eligible for a career-ladder promotion once they complete any required time within the grade and have proven their ability to perform satisfactorily at the next-higher pay grade. An employee's manager or supervisor recommends an employee for a career-ladder promotion by preparing a written justification. Once the recommendation is approved within the respective division, Talent Acquisition processes the personnel action.

Succession Planning

According to GAO, agencies with effective succession planning and management efforts determine the critical skills and competencies that will be needed to achieve current and future program results; develop strategies tailored to address gaps in human capital approaches for enabling and sustaining the contributions of all critical skills and competencies; and address

specific human capital challenges, such as diversity.[44] In addition, succession planning is one of GAO's nine leading diversity management practices. In that context, GAO describes strategic planning as an ongoing, strategic process for identifying and developing a diverse pool of talent for an organization's potential future leaders.

The Board developed a two-phase, formal agency-wide succession planning program in late 2012 to help identify a diverse pool of candidates for senior management positions throughout the Board. The Board's program will identify development opportunities for employees to prepare them for potential advancement. Both phases entail planning discussions with Board senior management focusing on three elements: (1) employee performance, (2) learning agility, and (3) readiness.

Phase 1 discussions are held with Division Directors and Deputy Directors regarding their direct reports at the officer level. Phase 2 of the Board's succession planning program will involve discussions with officers regarding their managers. The Board currently does not have a formal plan for Board employees in nonsupervisory roles; however, divisions have engaged in informal succession planning practices that are separate from the Board's formal succession planning program.

Demographic Statistics

We conducted an analysis of career-ladder promotions for all three pay grade categories at the Board. For the purpose of this report, our analysis focuses on career-ladder promotions by race/ethnicity in 2011, 2012, and 2013 (figure 7). We did not conduct an analysis of the eligibility requirements based on time in grade for career-ladder promotions because these requirements vary by division and position type. In addition, an employee's performance rating may also factor into his or her eligibility. Therefore, the results of our trend analysis do not necessarily indicate discrimination or bias and could be due to a variety of factors.

In 2011 through 2013, the Board awarded a total of 610 career-ladder promotions. Of these 610 promotions,

- 460 occurred in the *all other professional employees and all wage employees* category (FR-16 to FR-25 and WE-41 to WE-47)
- 144 occurred in the *mid-level professionals* category (FR-26–FR-28)
- 6 occurred in the *senior managers and officers* category (FR-29–00)[45]

As a percentage of the overall workforce during 2011–2013, female employees accounted for 44.89 percent of the workforce and received 42.13 percent of the career-ladder promotions. Male employees accounted for 55.11 percent of the workforce and received 57.87 percent of the career-ladder promotions.

44. U.S. Government Accountability Office, *Human Capital: Selected Agencies Have Opportunities to Enhance Existing Succession Planning and Management Efforts*, GAO-05-585, June 2005.

45. All six promotions were from FR-28 to FR-29.

Figure 7: Career-Ladder Promotions Awarded, by Race/Ethnicity, 2011–2013[a]

	2011	2012	2013
Other	3.75%	3.64%	0.87%
Hispanic/Latino	3.13%	3.64%	6.52%
Asian	15.63%	17.73%	12.61%
Black/African American	15.63%	12.27%	14.35%
White	61.88%	62.73%	65.65%

Source: OIG analysis of Board-provided data.

[a]*Other* includes (1) Native Hawaiian or Other Pacific Islander (Not Hispanic or Latino), (2) American Indian or Alaska Native (Not Hispanic or Latino), (3) Two or More Races/Ethnicities (Not Hispanic or Latino), and (4) Not Specified (i.e., individuals who chose not to disclose demographic data).

For additional information on the 2011–2013 career-ladder promotions by sex, race/ethnicity, and age within each pay grade category, refer to appendix G.

The Board Is in the Process of Implementing Its Formal Succession Planning Process

The Board developed a two-phase, formal agency-wide succession planning program in late 2012 to help identify a diverse pool of candidates for senior management positions throughout the Board. Phase 1 of the Board's process has been implemented in 8 of the 14 divisions and the OIG. The Board anticipates implementing phase 1 in the remaining 6 divisions by 2016. Phase 2 will begin by the end of 2015. Both phases are scheduled for full implementation by 2017.

GAO's *Diversity Management: Expert-Identified Leading Practices and Agency Examples* defines succession planning as

> a comprehensive, ongoing strategic process that provides for forecasting an organization's senior leadership needs; identifying and developing candidates who have the potential to be future leaders; and selecting individuals from among a diverse pool of qualified candidates to meet executive resource needs. . . . Succession planning and management can help an organization become what it needs to be, rather than simply recreate the existing organization.[46]

In addition, GAO reports that succession planning is also tied to the federal government's "opportunity to change" the diversity of its executives through new appointments.

Board officials informed the OIG that most divisions have performed some form of succession planning. For example, one Board division is developing a process to meet with every officer, manager, and supervisor to determine the developmental requirements for preparing a qualified replacement. Further, the division is developing key competencies for each pay grade and plans to identify training to complement these competencies. These steps are designed to guide staff members as they progress through the division's career ladder. Another division offers a robust staff development program that focuses on technical training and soft skills.[47] Aside from the Board's formal succession planning program, Board divisions have taken actions to develop staff members.

Succession planning is associated with opportunities to change diversity at the executive level.[48] Therefore, the establishment within the Board of a formal succession program may help the Board in its efforts to reach diversity and inclusion goals.

46. U.S. Government Accountability Office, *Diversity Management: Expert-Identified Leading Practices and Agency Examples*, GAO-05-90, January 14, 2005.

47. Soft skills include, but are not limited to, communication, self-awareness, motivation, social skills, and empathy.

48. U.S. Government Accountability Office, *Diversity Management: Expert-Identified Leading Practices and Agency Examples*, GAO-05-90, January 14, 2005.

Employee Complaints

Employees can raise grievances through the EEO and non-EEO processes. The Board has a defined EEO complaint process for applicants and Board employees who believe that they have been a victim of discrimination. The non-EEO process includes providing opportunities for employees to file and resolve grievances related to unfavorable performance ratings, unfair treatment, harassment, relationships with coworkers, and disciplinary actions.

This section provides a summary of the Board's processes and statistics related to EEO and non-EEO case data. We noted an opportunity for the Board to better communicate non-EEO case statistics to all divisions.

Related Laws and Regulations

Although not required by law, the Board follows several laws and regulations related to the EEOC and the processing of EEO complaints. In particular, the Board follows the requirements of the MD-715, which provides guidance and standards for establishing and maintaining effective EEO programs that ensure that all employees have equal opportunity without regard to race/ethnicity, color, religion, national origin, age, sex, or disability.[49]

The Board has also adopted, as part of its employment rules, EEO laws that prohibit discrimination, including the provisions of the No FEAR Act that require the Board to report and provide training on compliance with EEO laws and to post on its public website on a quarterly basis certain summary statistical data relating to EEO complaints.

The Board's Process for EEO Complaints

The Board's *Equal Employment Opportunity Policy*, revised May 13, 2013, provides for equal opportunity in employment for all persons and applies to, among other human resources–related functions, the EEO complaint process. The Board prohibits discrimination in employment on the basis of race/ethnicity, color, religion, sex, national origin, age, disability, or genetic information, and promotes the full realization of EEO through a continuing affirmative program. The Board also prohibits discrimination on the basis of any application, membership, or service in the uniformed services. In addition, as a matter of policy and although it is not required by law, the Board prohibits discrimination in employment on the basis of sexual orientation. An applicant or Board employee who believes that he or she has been discriminated against should consult with the OD&I within 45 days of becoming aware of the alleged discriminatory act or personnel action.

49. These programs are under of title VII, section 717, of the Civil Rights Act of 1964 and section 501 of the Rehabilitation Act of 1973.

Informal EEO Complaints

The informal process begins when an EEO counselor is assigned to conduct an initial counseling session with the complainant to obtain information about the alleged complaint. The EEO counselor then has 30 calendar days to make inquiries, attempt to resolve the matter, and advise the employee on the process to file a formal complaint. On a case-by-case basis, the EEO counselor may offer the complainant the right to engage in the alternative dispute resolution process. If counseling sessions or the alternative dispute resolution process cannot resolve the matter, or if a complaint in mediation is not resolved by the 90th day, the EEO counselor will issue a written notice to the complainant stating that it is the complainant's right to file a formal complaint within 15 days of receipt of the notice.

Formal EEO Complaints

If a formal complaint is filed, an EEO counselor will review the complaint and determine the issues that will be accepted for investigation. During the investigation stage, an independent investigator will be contracted to investigate the issues accepted in the complaint. At the close of the investigation, the OD&I will provide the complainant with an investigative report. On receipt of the investigative report, the complainant has 30 days to take one of the following courses of action:

- Request from the OD&I a final Board decision without a hearing; the Board has 60 calendar days to render a decision.

- Request a hearing and decision from an EEOC Administrative Judge, followed by a final decision by the Board.[50]

If a complainant does not agree with the final decision that has been rendered by the Board, the complainant may take the following courses of action:

- Appeal to the EEOC upon the Board's dismissal of, or its final decision on, a formal complaint within 30 calendar days of receipt of the Board's dismissal or final decision.

- File a civil action in U.S. district court within 90 calendar days of the Board's final decision or the EEOC's decision on appeal.

- If 180 days have elapsed since the filing of the formal complaint, request a hearing from an EEOC Administrative Judge.

- If 180 days have elapsed since the filing of the formal complaint or since the filing of an appeal with the EEOC, file a civil action in U.S. district court.

50. Employees who request a hearing before an EEOC Administrative Judge must notify the OD&I. The EEOC will appoint an EEOC Administrative Judge to hold the hearing. The Administrative Judge will make findings of fact and conclusions of law and will issue a decision. The Board will have 40 calendar days from the date it receives the Administrative Judge's decision to issue a final order informing the complainant of whether it will implement the decision. If the Board does not implement the Administrative Judge's decision, the complainant can file an appeal with the EEOC simultaneously with the issuance of the Board's final order.

Statistics

Informal EEO Complaints

From FY 2011 through FY 2013, the OD&I conducted 166 counseling sessions.[51] A counseling session is a conversation between an EEO staff member and a complainant. The number of counseling sessions for FY 2011–FY 2013 remained relatively steady. Specifically, there were 58 counseling sessions in FY 2011 and 54 counseling sessions each year in FY 2012 and FY 2013.[52]

Formal EEO Complaints

Overall, the total number of new formal EEO complaints was 8 in FY 2011, 11 in FY 2012, and 2 in FY 2013.[53] Of the 21 new complaints filed during FY 2011–FY 2013, the most common EEO issues were as follows:

- **Retaliation.** Federal law prohibits the removal, demotion, harassment, or otherwise retaliatory activity against employees because they filed a charge of discrimination or because they complained to their employer about discrimination on the job.

- **Hostile work environment/harassment.** Hostile work environment or harassment is created by unwelcome conduct that is based on race, color, religion, sex, national origin, age, disability, or genetic information.[54]

- **Disparate treatment.** This prohibited treatment is apparent when an individual of a protected group is shown to have been singled out and treated less favorably than others who are similarly situated based on race, color, religion, sex, national origin, age, disability, or genetic information.

A complainant may file multiple issues in a single complaint.

51. The Board operates on a calendar-year basis; however, EEOC reporting requirements are based on a fiscal-year basis. Therefore, the OD&I reports counseling session data and EEO cases filed on a fiscal-year basis. Counseling sessions are counted, but to preserve anonymity, complainant identification data are not collected. As a result, the counseling session counts may include OIG personnel who are otherwise excluded from the data in this report.

52. Complainants may receive multiple counseling sessions; therefore, the number of counseling sessions per fiscal year may be greater than the number of complainants who sought counseling.

53. The OIG was excluded from this audit; therefore, we excluded OIG complaints. During this period, we noted that for the 21 complaints filed, there were 21 complainants.

54. Harassment becomes unlawful when (1) enduring the offensive conduct becomes a condition of continued employment or (2) the conduct is severe or pervasive enough to create a work environment that a reasonable person would consider intimidating, hostile, or abusive.

EEO Processing Time

The Board reports EEO complaint processing times as part of its No FEAR Act reporting. Investigations must be completed within 270 days, including extension, of the filing date of an individual complaint.[55] We noted that during FY 2011–FY 2013, the average number of days complaints were in the investigation stage rose sharply in FY 2013; however, the Board's average remained below the 270-day requirement. In addition, the average number of days that complaints were in the final action stage rose in FY 2012 and then declined in FY 2013 (table 7).[56]

Table 7: EEO Complaint Processing Times, FY 2011–FY 2013[a]

Complaint phase	Average number of days, FY 2011	Average number of days, FY 2012	Average number of days, FY 2013
Investigation	151	133	228
Final action	36	53	26

Source: The Board's *No FEAR Act Report*, September 18, 2014.

[a]Complaint processing times include data from all EEO complaints filed during FY 2011–FY 2013, including EEO complaints filed by the OIG.

The Board's Process for Non-EEO Matters

The Board's non-EEO process is initiated when a Board employee or an employee's supervisor contacts ER for advice or guidance. ER categorizes non-EEO matters into 21 categories that include performance, leave, attendance, or other workplace issues (such as perceived unfair or unprofessional treatment, concerns about promotions, or relationships with coworkers), and disciplinary actions.[57]

ER will provide one or more counseling sessions to help resolve a non-EEO issue. At any time during this counseling process, a Board employee or supervisor can choose to file a non-EEO case, which requires ER to take action aside from counseling, such as mediation. When this occurs, ER documents the action as a non-EEO case. Cases include employee complaints and adverse actions taken by the Board against an employee.

ER recorded 711 active non-EEO cases during 2011–2013, excluding the OIG. The majority of the cases were concentrated in four categories related to performance, work, leave, and disciplinary actions, which are defined as follows:

55. This requirement derives from *Management Directive 110*, which provides federal agencies with EEOC policies, procedures, and guidance relating to the processing of employment discrimination complaints governed by the EEOC's regulations in title 29, part 1614, of the *Code of Federal Regulations*.

56. When an Administrative Law Judge renders a decision, final action is required within 40 days of receipt of the hearing file and the Administrative Law Judge's decision. The Board's *Rules Regarding Equal Opportunity* delineates time frames for other circumstances and particular complaints.

57. For purposes of this report, performance issues include performance, performance management, and performance improvement. Categories that garnered fewer complaints include adverse action, disability, fit for duty, garnishment, harassment, Americans with Disabilities Act, selection, suitability, and other/miscellaneous.

- Performance issues include matters related to an employee's performance under the Board's performance management system.

- Work issues include employee complaints or questions regarding unfair treatment on the basis of conduct or reasons that do not adversely affect the employee's performance and that are not covered under existing laws regarding discrimination.

- Leave issues include an employee's failing to follow leave procedures, being tardy, and making false statements related to a leave request. Other leave complaints may include leave administration matters such as Family and Medical Leave Act requests.

- Disciplinary actions document oral counseling, a written warning, or a suspension of 14 calendar days or less. Disciplinary actions only address conduct-related problems and provide for disciplinary measures that are less severe than those outlined in the Board's *Adverse Action Policy* and associated procedures.

In general, ER works to resolve all non-EEO matters informally through counseling sessions or formally as a case between the employee and management within four to six weeks. Resolution time frames vary, however, based on the type of case.

The Board maintains non-EEO case data on a calendar-year basis. Overall, we noted that the number of active non-EEO cases as of year-end 2011, 2012, and 2013 were 232, 229, and 250, respectively.[58] We found that in 2011, the average processing time was 147 days; in 2012, 153 days; and in 2013, 155 days. In general, resolution time frames vary based on the type of case.

Finding: Non-EEO Case Statistics Were Not Provided to Divisions on a Regular Basis

We found that during 2011–2013, ER provided non-EEO case statistics to Board divisions only on request. According to ER, if it detected a pattern of non-EEO cases (i.e., three or more) in a specific division, it would typically address the issue by offering counseling or training to division officials to prevent future occurrences. We also noted that the HR division compiled aggregate statistics in an internal report each year; however, only the report containing 2013 data was distributed to the divisions in May 2014.[59]

One of ER's objectives is to identify emerging employee relations issues and trends that may affect employee morale and notify management of such issues in advance of any impact. ER's practice is to collect non-EEO case data, conduct trend analysis, and submit this information to Management Division officials and to divisions that specifically request this information. While we acknowledge that ER collected this information, this information was not disseminated to all Board divisions. Further, according to a Board official, there was no systematic process in place to distribute the annual HR report that contained aggregate non-EEO statistics to all divisions in the Board in 2011 and 2012.

58. Formal non-EEO cases are tracked in a centralized database by ER; one employee may have more than one formal case.

59. The Management Division publishes an annual internal HR operations report. This report includes the number of new hires, employee benefits, separations, and employee exit interview data, among other types of information.

Disclosure of non-EEO case statistics to all Board divisions will help the divisions to identify barriers and other issues related to harassment, unfair treatment, relationships with coworkers, disciplinary action, and unfavorable performance ratings that may relate to diversity and inclusion. In addition, sharing information with division officials may assist them in identifying any patterns. Communicating non-EEO case data to all divisions can help to mitigate similar occurrences and assist in developing improvement strategies.

Management Actions

ER provided Division Directors with a more detailed non-EEO trend statistics report in October 2014 with the intent of obtaining their feedback and suggestions for an ongoing information exchange. This was the first detailed report to be distributed to all Division Directors. ER intends to distribute non-EEO trend statistics on at least a quarterly basis.

Recommendation

We recommend that the Chief Human Capital Officer

4. Ensure that aggregate non-EEO case statistics are provided to all Division Directors and that division-specific statistics are provided to the respective Division Director.

Management's Response

The Board concurs with our recommendation. In its response, the Board notes that management began providing Division Directors with non-EEO trend statistics and plans to continue this practice on a quarterly basis.

OIG Comment

The actions described by the Board are responsive to our recommendation. We plan to follow up on the Board's actions to ensure that the recommendation is fully addressed.

Employee Surveys

According to GAO, involving employees in diversity management efforts helps drive diversity throughout an organization. Employee surveys provide an opportunity for employees to share with management their perceptions of the agency's diversity and inclusion, culture, and work environment.[60]

This section presents information on the Board's efforts to obtain employee feedback. Specifically, we provide the Board's practices on satisfaction and exit surveys as well as demographic information regarding separations from the Board during the 2011–2013 period.

The Board's Process

The Board did not conduct agency-wide employee satisfaction surveys during the 2011–2013 period. On September 4, 2014, an external consulting firm administered the Board's first agency-wide engagement survey. Eighty-seven percent, or 2,147 employees, responded to the survey in its entirety. The survey included the three questions below, which were designed to gather data specifically related to employee perceptions of diversity and inclusion. Employees were asked to rate their responses as *strongly agree*, *agree*, *neutral*, *disagree*, or *strongly disagree*. As detailed below, 64 percent to 75 percent of respondents answered either or *strongly agree* or *agree* to the three questions.

Diversity and inclusion question	% responding *strongly agree* or *agree*
My organization's policies promote fair treatment of employees regardless of their different diversity characteristics.	75
My organization values employees with varied backgrounds and experiences.	67
My organization is committed to promoting diversity and inclusion.	64

The Board is continuing to assess the results of the 2014 survey and will determine what, if any, action plans are needed. These action plans will help to determine the timing of the next survey. We were also informed that the Board may consider conducting a diversity and inclusion survey once the agency-wide survey results have been thoroughly analyzed. These efforts will allow for trend analyses on the success of diversity initiatives as well as workplace inclusion.

60. U.S. Government Accountability Office, *Diversity Management: Expert-Identified Leading Practices and Agency Examples*, GAO-05-90, January 14, 2005.

We also noted that in 2013, two divisions independently conducted employee satisfaction surveys to obtain their employees' perspective on the particular division's work environment. Each survey contained one question specifically related to diversity and inclusion.

Although the Board did not conduct an agency-wide employee satisfaction survey in 2011, 2012, or 2013, ER offered separating employees the opportunity to voluntarily complete an electronic exit survey and participate in a face-to-face exit interview. ER collected the data and interview responses and prepared aggregate separation information for reporting in the HR section's internal annual report.

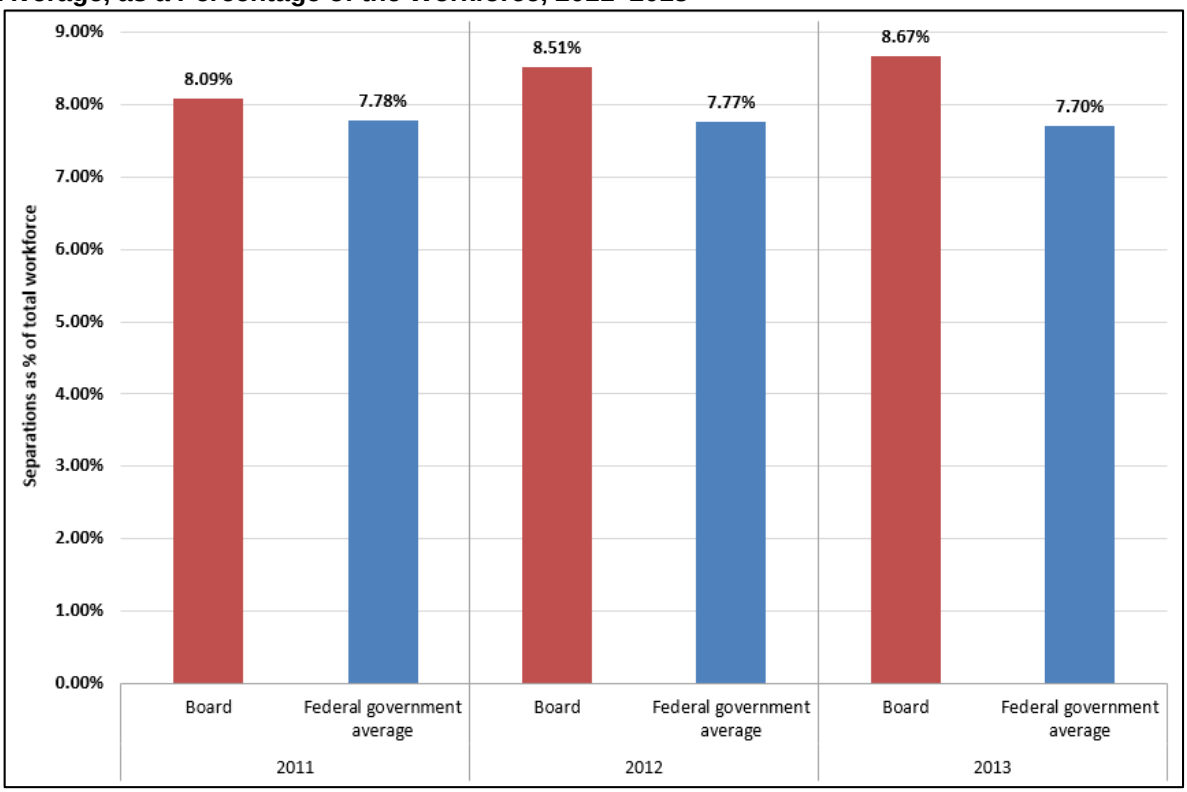
Demographic Statistics

Separations

We reviewed data for employees leaving the Board. Generally, the rate at which employees left Board employment was consistent with federal executive agencies during 2011–2013 (figure 8).[61]

61. The federal government average for separations was obtained from OPM's FedScope, which is a database that includes information on permanent employees who left the federal executive service (excluding the U.S. Postal Service). FedScope data are recorded on a fiscal-year basis; however, Board separation data are captured on a calendar-year basis. Therefore, an exact comparison could not be made. FedScope can be found at http://www.fedscope.opm.gov.

Figure 8: Separations (Including Retirements) From the Board and the Federal Government Average, as a Percentage of the Workforce, 2011–2013[a]



Source: OIG analysis of Board-provided data and OPM's FedScope data.

[a]OPM's FedScope data, which we used as a benchmark, are recorded on a fiscal-year basis; however, Board separation data are captured on a calendar-year basis rather than a fiscal-year basis. Both FedScope and Board separation data include retirements.

We analyzed the demographics of employees leaving Board service for reasons other than retirement. In 2011, 117 Board employees, or approximately 5 percent of the workforce, separated for reasons other than retirement. In 2012 and 2013, there were 139 and 138 nonretirement separations, respectively, accounting for approximately 6 percent of the workforce in both years.

Research assistants are considered permanent employees during their two-year tenure at the Board. Excluding research assistant separations, the Board's annual separation rate decreases by an average of 1.71 percent over the three years.

From 2011 through 2013, the number and percentage of female employees leaving Board service for reasons other than retirement remained relatively steady. Fifty-three female employees left the Board in 2011 and again in 2012, and 49 female employees left the Board in 2013. These separations represented 4.68 percent to 5.34 percent of the total female workforce.

With respect to race/ethnicity:

- In 2011, 12 Black/African American employees separated; in 2012, 20 Black/African American employees separated; and in 2013, 12 Black/African American employees separated. These separations represented 2.09 percent to 3.49 percent of the Black/African American workforce.

- In 2011, 16 Asian employees separated; in 2012, 13 Asian employees separated; and in 2013, 14 Asian employees separated. These separations represented 4.39 percent to 6.13 percent of the Asian workforce.

- In 2011, 4 Hispanic/Latino employees separated; in 2012, 5 Hispanic/Latino employees separated; and in 2013, 9 Hispanic/Latino employees separated. These separations represented 4.65 percent to 9.38 percent of the Hispanic/Latino workforce.

- In 2011, 83 White employees separated; in 2012, 98 White employees separated; and in 2013, 99 White employees separated. These separations represented 6.72 percent to 7.63 percent of the total White workforce.

Additional information on nonretirement separations by sex, race/ethnicity, and age can be found in appendix H.

The Board Has Begun Providing Employee Exit Survey Statistics to Divisions

Employees who separated from the Board are given the opportunity to voluntarily complete an exit survey and, separately, to participate in an exit interview. HR reported aggregate employee exit data for employees who separated in 2011 and 2012 in its 2013 annual report for its internal use; the aggregate data were provided to divisions only on request. For employees who separated in 2013, the aggregate employee exit data in HR's annual report were distributed to Board divisions in May 2014. The 2015 publication that will reflect 2014 aggregate employee exit data was being compiled at the time of our audit.

GAO's *Diversity Management: Expert-Identified Leading Practices and Agency Examples* suggests that one leading practice is to use quantitative and qualitative data derived from interviews, focus groups, and surveys to identify employee perceptions of the work environment and culture. Over time, trends in responses can help an organization assess progress in achieving organizational goals and objectives.

We noted that specific diversity and inclusion issues did not emerge in HR's annual reports; however, exit interview narratives documented that the most favorable aspects of working at the Board were colleagues, employee benefits, and work schedules. Interviewees indicated that the least favorable aspects included workload pressures, dissatisfaction with management, and frustration with having several layers of review of work and not being able to make decisions at lower levels of the organization. Board divisions can benefit from having access to agency-wide employee exit statistics and exit interview responses regardless of whether the division had

employees who separated, as that information may help inform the Board's continued efforts related to diversity and inclusion.

The Office of Diversity and Inclusion

The OD&I's mission is to ensure equal opportunity for all persons and to promote diversity relating to the Board's initiatives to employ, manage, and retain its human capital. This section discusses the OD&I's compliance with applicable provisions of the Dodd-Frank Act, the Board's application of the EEOC's MD-715 requirements, and the Board's compliance with provisions of the No FEAR Act as set forth in the Board's employment rules. It also presents the OD&I's organizational structure.

We found that the Board could benefit from finalizing its diversity strategic plan. We also found that the Board should formalize standards for equal employment opportunity and racial, ethnic, and gender diversity of the workforce and the senior management of the agency and ensure that No FEAR Act training is offered on a regular basis. In addition, we noted that the OD&I could enhance its communication to divisions on EEO matters and diversity initiatives. Finally, the OD&I should strengthen its internal controls for data collection and processing for MD-715 reporting.

Related Laws and Regulations

The Dodd-Frank Act required the Board to establish an OMWI. To satisfy this requirement, the Board established the OD&I in January 2011. The OD&I houses the preexisting EEO function; the Diversity and Inclusion section, which is responsible for programs for minorities, women, and other employees at the Board; and OMWI, which is responsible for implementing the applicable provisions of the Dodd-Frank Act related to financial education, supplier diversity, and regulated entities. The Director of the OD&I reports to the Board's Administrative Governor and to the Chief Operating Officer.[62]

The Board follows the EEOC's MD-715, which includes general reporting requirements that help an agency identify and eliminate any barriers that impede free and open competition in the workplace and prevent individuals of any racial or national origin group or either sex from realizing their full potential. As part of its annual MD-715 reporting, the Board reports its identification of barriers to equal employment opportunity and its plans to eliminate such barriers.

In addition, the Board has adopted provisions of the No FEAR Act and its implementing regulations[63] that require agencies to (1) post quarterly, on their public website, certain summary statistical data relating to EEO complaints filed under title 29, part 1614, of the *Code of Federal Regulations* and (2) notify current and former employees and applicants for federal employment of their rights and protections against discrimination. The No FEAR Act also requires each agency to develop a written plan for training all its employees, including supervisors and

62. The Federal Reserve Act authorizes the Board to delegate any of its functions, other than those pertaining to rulemaking or pertaining principally to monetary and credit policies, to members or employees of the Board, among others. As such, the Chairman delegated the responsibility for the OD&I to the Chief Operating Officer, who in turn delegated it to the Director of the OD&I.

63. 5 C.F.R. part 724.

managers. In response to the No FEAR Act's requirements, the Board developed the *No FEAR Act Written Training Plan*, which outlines how the Board will satisfy the No FEAR Act requirements. The plan includes, but is not limited to, providing training to all new Board employees within 90 days of employment and refresher training to Board employees.

The EEOC produces an *Annual Report on the Federal Workforce* that includes, among other data, information on federal EEO complaints and alternative dispute resolution activities. Similar to other federal agencies, the Board reports this information on the EEOC's Annual Federal Equal Employment Opportunity Statistical Report of Discrimination Complaints. Federal agency administrators upload data into the EEOC's Federal Sector EEO Portal, which is only accessible to authorized federal agency administrators.

Structure of the OD&I

An OD&I official explained that the OD&I's structure is based on its three functions:

- **Diversity and Inclusion—**OD&I staff members are responsible for the diversity and inclusion aspects of certain programs, such as recruiting, and for generating workforce trend data and providing this information to 13 of the 15 Board divisions.[64] In addition, a Diversity and Inclusion staff member is assigned as an official liaison to 12 Board divisions.[65] This section of the OD&I fulfills the Dodd-Frank Act requirements concerning minorities and women.

- **Equal Employment Opportunity—**OD&I staff members are responsible for handling the Board's EEO complaints and relevant reporting requirements, such as the annual MD-715 and No FEAR Act reports and the EEOC's Annual Federal Equal Employment Opportunity Statistical Report of Discrimination Complaints. In addition to EEO responsibilities, EEO staff members assist the Diversity and Inclusion section with generating workforce trend data and providing the data to the remaining two Board divisions, as well as assisting with diversity and inclusion programs. In addition, an EEO staff member is assigned as an official liaison to these two Board divisions.

- **OMWI—**OD&I staff members are responsible for activities related to the financial education of the community, such as minority and youth groups; the diversity of the Board's suppliers; and the standards for assessing the policies and practices of the entities supervised by the Federal Reserve Banks under delegated authority from the Board. These specific practices do not directly relate to diversity within the Board and are not addressed in this report.

Compliance With Dodd-Frank Act Requirements

We assessed the OD&I's activities for compliance with 10 requirements of section 342 of the Dodd-Frank Act that pertain to our audit objective. We found that the OD&I complies with 9 of the 10 requirements and partially complies with 1 requirement, as shown in table 8.

64. The OIG is included in the 15 divisions.

65. The OD&I does not provide a liaison to the Office of the Chief Operating Officer because the OD&I is part of that division.

Table 8: The Board's Compliance With Relevant OMWI Requirements of Section 342 of the Dodd-Frank Act[a]

Relevant[a] OMWI requirements applicable to the Board	Fully satisfies	Partially satisfies
The Director of each Office shall be appointed by, and shall report to, the agency administrator.	✓	
Each Director shall develop standards for equal employment opportunity and the racial, ethnic, and gender diversity of the workforce and senior management of the agency:		✓
Each Office shall submit to Congress an annual report regarding the actions taken by the agency and the Office pursuant to this section, which shall include		
the successes achieved and challenges faced by the agency in operating minority and women outreach programs	✓	
the challenges the agency may face in hiring qualified minority and women employees and contracting with qualified minority-owned and women-owned businesses; and	✓	
any other information, findings, conclusions, and recommendations for legislative or agency action, as the Director determines appropriate.	✓	
Each agency shall take affirmative steps to seek diversity in the workforce of the agency at all levels of the agency in a manner consistent with applicable law. Such steps shall include		
recruiting at historically black colleges and universities, Hispanic-serving institutions, women's colleges, and colleges that typically serve majority minority populations;	✓	
sponsoring and recruiting at job fairs in urban communities;	✓	
placing employment advertisements in newspapers and magazines oriented toward minorities and women;	✓	
partnering with organizations that are focused on developing opportunities for minorities and women to place talented young minorities and women in industry internships, summer employment, and full-time positions;	✓	
any other mass media communications that the Office determines necessary.	✓	

Source: OIG analysis of the Board's *Annual Report to Congress on OMWI*, OIG interviews with OMWI officials, Board policies and procedures, and section 342 of the Dodd-Frank Act (12 U.S.C. § 5452).

[a]We only analyzed the Dodd-Frank Act requirements that pertained to the scope of our audit.

The OD&I submitted annual reports to Congress for 2011, 2012, and 2013, which outlined its activities, successes, and challenges. The OD&I focused on agency diversity issues by partnering

with the six Board employee advisory committees that deal with gender, race/ethnicity, and diversity.[66]

In addition, Board officials indicated that the OD&I participates in divisions' recruiting efforts and in national diversity recruiting events by sharing the costs associated with career fairs and attending affinity group[67] engagements hosted by professional minority organizations. We also noted that the OD&I is involved with the hiring of Board officers, as detailed in the Recruiting and Hiring section of this report. However, the Director of the OD&I has not formalized standards for equal employment opportunity and the racial, ethnic, and gender diversity of the workforce and the senior management of the agency.

Finding: The Board Needs to Finalize Its Diversity and Inclusion Strategic Plan

We found that the Board has not finalized its diversity and inclusion strategic plan. Board officials, including those within the OD&I, were in the process of developing this plan during our audit. The Board's *Strategic Framework 2012–15* states,

> OD&I is working with Human Resources and Procurement staff at the Board to (1) ensure a commitment to recruit and retain a staff that is diverse and inclusive and (2) develop standards and procedures to ensure, to the extent possible, the fair inclusion and utilization of minority and women-owned businesses in the Board's procurements.

The Board is developing its 2016–2019 strategic plan, which will include a component on diversity.

GAO's *Diversity Management: Expert-Identified Leading Practices and Agencies Examples* states that an agency's diversity strategy and plan should be developed and aligned with the organization's overall strategic plan. Further, GAO reports that one expert suggests that organizations link diversity to their overall strategic plan to ensure that diversity initiatives are not viewed as extras that could be vulnerable to cuts, for example, when funds are tight. An agency that incorporates diversity as part of its strategic plan can translate its diversity aspirations into a tangible practice and can foster a culture change that supports and values differences.

Implementation of a diversity and inclusion strategic plan tied to the Board's strategic plan would promote a culture of diversity and inclusion in achieving the Board's goals. The plan can also provide a base from which progress can be measured on the Board's diversity and inclusion objectives.

66. The six employee advisory groups are (1) Advisory Committee for People with Disabilities; (2) African American Employees Advisory Committee; (3) Asian Employees Advisory Committee; (4) FRB Woman's Program Advisory Committee; (5) Hispanic Employees Advisory Committee; and (6) Lesbian, Gay, Bisexual, Transgender, and Allies Employees Advisory Committee.

67. An *affinity group* is a group formed around a shared interest or common goal, to which individuals formally or informally belong.

Recommendation

We recommend the Director of the OD&I

5. Finalize and implement the Board's diversity and inclusion strategic plan and ensure that

    a. the plan incorporates the agency's overall diversity and inclusion objectives.

    b. key elements of the plan are included in the Board's 2016–2019 agency strategic plan.

Management's Response

The Board concurs with our recommendation. In its response, the Board states that it will finalize the diversity and inclusion strategic plan. In addition, the Director of OMWI is a member of the Board's 2016–2019 strategic plan workgroup and is ensuring that the key elements of the diversity and inclusion plan are included.

OIG Comment

The actions described by the Board appear to be responsive to our recommendation. We plan to follow up on the Board's actions to ensure that the recommendation is fully addressed.

Finding: The Board's Standards for Equal Employment Opportunity and Racial, Ethnic, and Gender Diversity Have Not Been Formalized

We found that the Director of the OD&I has not formalized the OD&I's standards for equal employment opportunity and racial, ethnic, and gender diversity of the workforce and the senior management of the agency, as required by section 342(b)(2)(A) of the Dodd-Frank Act. Although the OD&I's diversity efforts are guided by federal government EEO requirements, it has not formalized a set of standards as required by the Dodd-Frank Act.

As a benchmarking exercise, we reviewed the standards of another financial regulatory agency's OMWI that were documented in the agency's overall diversity and inclusion strategic plan. In developing standards, the OMWI used the agency's strategic plan, annual performance budget information, the *Federal Equal Employment Opportunity Recruitment Plan*,[68] and the MD-715. Following best practices, the financial regulatory agency's diversity and inclusion strategic plan contains standards that include the agency's attestation of, commitment to, and definition of diversity and inclusion, as well as the agency's goals, implementation measures, priorities, and actions to satisfy Dodd-Frank Act requirements and to enhance diversity and inclusion within the agency.

68. The *Federal Equal Employment Opportunity Recruitment Plan* provides statistical data on employment in the federal workforce and highlights human capital practices that federal agencies are using to recruit, develop, and retain talent.

Since 1995 and prior to the creation of the OD&I, the Board sponsored EEO and affirmative action programs that included promoting diversity in its employment practices. The OD&I considers elements of these legacy programs, as well as the EEOC guidance used for MD-715 reporting, as its Dodd-Frank Act–required standards.

Formalizing standards can increase the transparency of the OD&I's diversity processes and practices and the way in which it plans to meet its internal objectives, monitor its progress, and meet its long-term goals. Without formalized standards, the Board is only partially compliant with the Dodd-Frank Act and may be limited in its ability to evaluate its effectiveness in promoting equal employment opportunity and diversity within its workforce and senior management.

Recommendation

We recommend that the Director of the OD&I

6. Formalize the standards the OD&I relies on for equal employment opportunity and the racial, ethnic, and gender diversity of the workforce and the senior management of the agency.

Management's Response

The Board concurs with our recommendation. In its response, the Board states that it plans to formalize the standards the OD&I relies on for equal employment opportunity and the racial, ethnic, and gender diversity of the workforce and the senior management of the agency, which will be included in the diversity and inclusion strategic plan.

OIG Comment

The actions described by the Board appear to be responsive to our recommendation. We plan to follow up on the Board's actions to ensure that the recommendation is fully addressed.

Finding: The Board's EEO and Diversity Training Is Not Provided on a Regular Basis

We found that the OD&I does not provide training related to EEO and diversity to all employees on a regular basis. No FEAR Act training is required every two years. The Board provided No FEAR Act training in 2011; however, the OD&I did not retain any records pertaining to this training. No FEAR Act training, as described in the Board's *No FEAR Act Written Training Plan*, was not provided in 2013.

The OD&I is responsible for providing EEO, No FEAR Act, and diversity training. Internal and external guidance related to administering these trainings includes the following:

- The EEOC's MD-715 instructions identify the basic elements necessary to create and maintain a model EEO program. One element in the guidance advocates that all employees receive information about the EEO program through training on the EEO process and the protections afforded to employees, related policy statements, and reasonable accommodation procedures.

- GAO's *Diversity Management: Expert-Identified Leading Practices and Agencies Examples* states that diversity training can help an organization's employees increase their awareness and understanding of diversity as well as help employees develop skills to promote communication and increase productivity. Such training can provide employees with an awareness of individual differences—including cultural, work style, and personal presentation—and an understanding of how diverse perspectives can improve organizational performance. The GAO report also states that the effectiveness of diversity training efforts should be evaluated to help decisionmakers manage resources and help agencies improve results.

- The Board's *No FEAR Act Written Training Plan*, developed in response to OPM's July 2006 final rule implementing the No FEAR Act training requirements, outlines how the Board will satisfy the No FEAR Act requirements. The act requires federal agencies to train all new employees within 90 days of hire and provide training to all employees every two years. Training must inform employees of their rights and remedies under the federal antidiscrimination laws.

An OD&I official informed us that both EEO and diversity training were included in the No FEAR Act training that was required for all Board employees in 2014. In addition, the OD&I official indicated that the office provided customized EEO and diversity training based on trends or issues observed in particular divisions. Division officials we spoke with expressed an interest in having more guidance on the EEO complaint handling process.

In 2011, a Board contractor provided No FEAR Act training. According to an OD&I official, the vendor retained records of attendance using its own identification system and OD&I officials verified employees' completion of the training by matching Board employee identification numbers to those in the vendor's identification system. However, the OD&I did not retain records of this verification or of the training modules that were taught. The contract ended in 2011, and similar training was not offered Boardwide in 2013.

Providing No FEAR Act training—which includes both EEO and diversity and inclusion elements—on a regular basis can benefit the Board. For example, training on equal employment opportunity can inform employees who may wish to file EEO complaints and managers who handle such complaints, and it can assist the Board in establishing a model EEO program. Further, training on diversity and inclusion can help employees to understand how diverse perspectives can improve organizational performance. To ensure that the training accomplishes these goals, the Board will need to evaluate the effectiveness of the training offered and take steps to make improvements, as needed.

Management Actions

On October 27, 2014, the OD&I offered a web-based No FEAR Act training that was mandatory for all employees. Additional training modules were provided for supervisors, managers, and officers.

Recommendation

We recommend that the Director of the OD&I

7. Ensure that No FEAR Act training

    a. is offered on a regular basis.

    b. is tailored to the Board and includes EEO and diversity and inclusion topics in accordance with the Board's *No FEAR Act Written Training Plan.*

    c. is evaluated for effectiveness and that any improvements identified are incorporated into the training as needed.

    d. attendance records are retained.

Management's Response

The Board concurs with our recommendation. In its response, the Board states that it will continue to provide No FEAR Act training on a regular basis. In addition, it will explore methods to evaluate the training for effectiveness and to incorporate improvements as needed. Further, the Board will consider including provisions in its contract for the training that would require the vendor to provide the Board with evidence of employees' completion of the training.

OIG Comment

The actions described by the Board are generally responsive to our recommendation. While the Board will explore methods to evaluate the No FEAR Act training for effectiveness, we encourage the Board to tailor the program to the Board's workplace needs, as necessary. We also encourage the Board to retain evidence of employees' completion of the No FEAR Act training. We plan to follow up on the Board's actions to ensure that the recommendation is fully addressed.

Finding: The OD&I Can Improve Its Communication to Divisions on EEO Matters and Diversity Initiatives

Board division officials reported that they experienced varying levels of interaction with and guidance from the OD&I. Specifically, four divisions reported positive experiences with the

OD&I in regard to its EEO function and its diversity and inclusion activities. However, the remaining divisions communicated a variety of concerns that indicate perceived limits to the OD&I's value and impact, including not understanding the function of components within OD&I, the limited assistance available to managers and officers with respect to the EEO complaint process, and the OD&I's minimal involvement during the recruiting and hiring of specialized positions.

Further, one division expressed that it would like the OD&I to address developmental issues for women and minorities. Additionally, another division stated that it would like the OD&I to hold annual or biannual meetings with division management to, among other things,

- discuss Boardwide expectations and any planned diversity initiatives
- educate managers and officers on the Board's EEO program and expectations
- discuss how EEO counselors can assist managers and officers

The OD&I's objectives are to provide guidance to Division Directors, managers, and supervisors to help them resolve EEO matters as they arise and to participate in planning and implementing the divisions' EEO and diversity programs, including talent management, employee coaching, career development, recruitment, outreach, intern programs, and leadership development. However, these objectives do not fully address OD&I's roles and responsibilities, which will assist divisions in understanding the function of components within the OD&I.

According to an OD&I official, prior to the Dodd-Frank Act enactment, the EEO section and the Diversity and Inclusion section conducted outreach to the divisions. Although the Board established the OD&I to include an OMWI function in response to the Dodd-Frank Act requirements, according to the OD&I official, the OD&I has not significantly modified its approach because these activities were already being covered prior to the enactment of the Dodd-Frank Act.

We believe that the OD&I can further its objectives by enhancing communications with all Board divisions on EEO and diversity and inclusion efforts. This approach can also assist the OD&I in aligning its efforts to its objectives and better enable the office to ensure equal opportunity for all persons and to promote diversity relating to the Board's initiatives to employ, manage, and retain its human capital.

Management Actions

We were informed that the OD&I is developing a quarterly reporting tool for each division. The tool's purpose is to support the Board's strategic objectives and commitment to attract, hire, develop, promote, and retain a highly diverse workforce and to show each division's progress. The OD&I plans to implement this tool during the second quarter of 2015. The sharing and discussion of the quarterly reporting tool results with the divisions will provide the OD&I with an opportunity to clarify its roles and responsibilities and provide guidance and assistance to divisions.

Recommendations

We recommend that the Director of the OD&I

8. Document the roles and responsibilities of the OD&I and distribute them to all Board divisions.

9. Partner with divisions to cooperatively develop strategies and initiatives that will help advance diversity and inclusion throughout the Board.

10. Work with divisions to finalize and implement the quarterly reporting tool and establish a schedule to communicate the results for each division to the respective Division Director. The quarterly reporting tool should include diversity and inclusion activities for each division with clear objectives and corresponding measures.

Management's Response

The Board concurs with our recommendations. In its response, the Board states that it will take steps to increase the divisions' awareness of the OD&I's roles and responsibilities. In addition, the Board plans to implement a new quarterly reporting tool for divisions that will establish specific diversity and inclusion strategies and initiatives.

OIG Comment

The actions described by the Board are generally responsive to our recommendations. While we acknowledge that the OD&I's objectives are updated annually as part of the Board's budget process, the stated objectives do not fully address the OD&I's roles and responsibilities. A more comprehensive document may assist divisions in understanding the functions of the components within the OD&I. We plan to follow up on the Board's actions to ensure that the recommendations are fully addressed.

Finding: The OD&I's Controls for MD-715 Data Collection Should Be Strengthened

We analyzed the workforce data in the Board's human resources database and had difficulty reconciling the annual aggregated data to the information reported on the MD-715. We determined that the OD&I's process to filter the data used for the MD-715 report resulted in a limited overstatement of the number of promotions, separations, and new hires. Specifically, we found 20 duplicate entries, representing less than 1 percent of the 2,600 total entries in the promotions, separations, and new hires data in the Board's MD-715 report for 2011, 2012, and 2013. Although we identified a small number of errors in the MD-715 reporting, additional controls would help reduce the risk of significant errors occurring in the future.

Establishing appropriate internal controls helps agencies improve organizational effectiveness and accountability. GAO's *Standards for Internal Controls in the Federal Government* states that effective communications within the organization are needed to carry out internal controls and

other responsibilities. In addition to internal communications, agencies should ensure that there are adequate means of communicating with, and obtaining information from, stakeholders. Moreover, effective information management is critical to achieving useful and reliable communication of information.

Further, National Institute of Standards and Technology Special Publication 800-53, Revision 4, *Security and Privacy Controls for Federal Information Systems and Organizations*, outlines mandatory information security controls for federal information systems, including in the areas of data output reconciliation and error correction.

The OD&I's process for reporting certain data in the MD-715 report consists of querying, downloading, and filtering data provided by HR. During the 2011–2013 period, we found that the data collected were not validated against the employee electronic records stored in HR. We believe that the duplicate entries resulted from the lack of mutual understanding between the OD&I and HR of the underlying data needed to complete a line item in the MD-715 report and the lack of internal controls in the OD&I to validate the data. We noted fewer duplicate entries in 2013 due to better collaboration between the OD&I and HR.

While we understand that the error rate was less than 1 percent, a documented data gathering methodology can facilitate consistent reporting and reduce the risk of reporting errors, such as the duplicate entries noted in our analysis. During our audit, we were informed that the OD&I will hire a data specialist to assist with the MD-715 reporting process.

Recommendation

We recommend that the Director of the OD&I and the Director of the Management Division

11. Strengthen internal controls for reporting MD-715 data, to include

    a. documenting the methodology for extracting and filtering the appropriate data.

    b. verifying the accuracy and completeness of the data in the MD-715 report prior to submission.

Management's Response

The Board concurs with our recommendation. In its response, the Board states that it agrees that it is always useful to take steps to ensure that data are reported as completely and accurately as possible, and the Board states that it will take the recommended steps to enhance the data reporting process.

OIG Comment

The actions described by the Board are generally responsive to our recommendation. We plan to follow up on the Board's actions to ensure that the recommendation is fully addressed.

According to GAO, an agency with a diverse workforce that includes minorities and women in key positions benefits from multidisciplinary knowledge and skills that can help the organization better accomplish its mission and goals and increase innovation.[69] An agency that effectively manages its employees provides for equal opportunities, which is essential to attracting, developing, and retaining the most qualified workforce. GAO further states that when an organization's top leaders demonstrate the importance of diversity and inclusion initiatives, a clear message is sent about the organization's commitment to diversity management.

Prior to the enactment of the Dodd-Frank Act, which required the Board to establish an OMWI, the Board had established diversity and inclusion practices, followed the requirements of the EEOC's MD-715, and adopted provisions of the No FEAR Act. After the period under review, we noted that the Board took actions to change certain practices, including, but not limited to, adopting a more standardized process for recruiting officer positions; sharing a non-EEO trend statistics report with all divisions; providing mandatory, web-based No FEAR Act training; and developing a quarterly reporting tool to show each division's progress in supporting the Board's strategic objectives and commitment to attract, hire, develop, promote, and retain a highly diverse workforce.

Our audit results identified several opportunities for the Board to enhance its diversity and inclusion efforts. Such improvements may enable the Board to further realize the benefits of a diverse workforce and reaffirm its commitment to diversity and inclusion in the workplace. Our recommendations address issues in the following four areas:

Data Analysis and Reporting—The Board can enhance its efforts to monitor and analyze certain types of workforce data that can be used to identify diversity and inclusion trends. For example, the Board could more effectively collect demographic data on applicants for economist, research assistant, and officer positions to gain a better understanding of the diversity within applicant pools for these professions. Additionally, there is an opportunity for the Board to conduct additional analysis of its employees' performance ratings to identify any patterns that may relate to diversity and inclusion or to identify any differences that may indicate bias. We also noted that in areas with available statistics, such as non-EEO matters, the Board can provide this information on a regular basis to all divisions. Further, the Board can strengthen its controls for MD-715 data collection.

Communication and Training—The Board can benefit from communicating the roles and responsibilities for carrying out EEO and diversity and inclusion activities. The Board is developing a quarterly reporting tool to evaluate each division's progress toward achieving the Board's diversity and inclusion goals. This tool could be used to enhance communication between the divisions and the OD&I as well as the divisions' understanding of the OD&I's

69. U.S. Government Accountability Office, *Diversity Management: Trends and Practices in the Financial Services Industry and Agencies after the Recent Financial Crisis*, GAO-13-238, April 2013.

functions. The Board can also benefit from requiring No FEAR Act training on a regular basis, include both EEO and diversity components in the training, and maintain internal records of employee's completion of training. No FEAR Act training should be tailored to the agency and evaluated to determine its effectiveness. Moreover, regular, mandatory training can be used to increase organizational efforts to inform and educate management and staff and provide employees with an understanding of how diverse perspectives can improve organizational performance. Further, regular No FEAR Act training can facilitate the appropriate handling of EEO matters by management and staff.

Full Compliance With Relevant Dodd-Frank Act Requirements—The Board believes that elements of its legacy EEO program satisfy section 342(b)(2)(A) of the Dodd-Frank Act—which requires agencies to develop standards for equal employment opportunity and racial, ethnic, and gender diversity of the workforce and the senior management of the agency—and therefore has not formalized these standards. Formalizing standards can increase the transparency of the Board's diversity processes and practices and the way in which it plans to meet its internal objectives, monitor its progress, and meet its long-term goals. Additionally, with formalized standards, the Board can be in full compliance with the Dodd-Frank Act requirements.

Diversity Strategic Planning—The Board should finalize its diversity strategic plan and ensure that the Board's diversity and inclusion objectives are incorporated into the agency's broader strategic plan. As indicated by best practices, incorporating diversity and inclusion objectives into the agency-wide strategic plan will assist in ensuring that diversity and inclusion are viewed as essential to meeting the Board's strategic goals. Implementation of a diversity and inclusion strategic plan tied to the Board's strategic plan would promote a culture of diversity and inclusion in achieving the Board's goals. The plan can also provide a base from which progress can be measured on the Board's diversity and inclusion objectives.

It is important to note that while our report focuses on the Board's specific diversity and inclusion initiatives and human resources–related activities, initiatives and activities that are beyond the scope of our review also contribute to enhancing diversity and inclusion principles.

Appendix A
Congressional Request Letter

JEB HENSARLING, TX, CHAIRMAN

United States House of Representatives
Committee on Financial Services
Washington, D.C. 20515

MAXINE WATERS, CA, RANKING MEMBER

March 24, 2014

Inspector General Mark Bialek
Board of Governors of the Federal Reserve System
Office of Inspector General
20th and C Streets N.W.
Mail Stop 300
Washington, DC 20551

Dear Inspector General Bialek:

We write to request that the Office of the Inspector General (OIG) for the Board of Governors of the Federal Reserve System (FRS) review the agency's internal operations to determine whether any personnel practices have created a discriminatory workplace or otherwise systematically disadvantaged minorities from obtaining senior management positions.

Section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act established an Office of Minority and Women Inclusion (OMWI) at most of the federal financial regulatory agencies, responsible for matters relating to diversity in management, employment, and business activities. Despite this statutory mandate, the Government Accountability Office (GAO) concluded in a report released last year that management-level representation of minorities and women among federal financial agencies and Federal Reserve Banks has not changed substantially from 2007 through 2011. In fact, across all federal financial regulators, agency representation of minorities was as low as 6 percent and dropped as low as zero percent at one of the Reserve Banks. In light of these findings and the concerns raised by employee performance evaluations at the Consumer Financial Protection Bureau (CFPB), we believe the OIG should work in cooperation with Federal Reserve System's OMWI Director to assess current personnel practices and make recommendations necessary to ensure full compliance with the law.

The 2013 GAO report, entitled "Trends and Practices in the Financial Industry and Agencies after the Recent Financial Crisis," documented the extremely poor representation of women and minorities in leadership positions within the financial services industry and among federal financial regulators. According to GAO, industry representation of minorities in 2011 was higher in lower-level management positions – approximately 20 percent – as compared to about 11 percent of senior-level manager positions.

While public attention is currently and justifiably focused on the CFPB, the most recent OMWI reports suggest the disparities impeding internal upward mobility for minorities may be endemic throughout all the agencies regulating the financial services industry. According to the Treasury Department's 2013 OMWI report, among its senior executive management, 86 percent are white men, compared to 7 percent Black men, 4 percent Hispanic men, and 3 percent Asian men. Among the agency's GS-15 employees, which serves as a pipeline to senior level management, white men are once again overrepresented at 86 percent, compared to 6 percent Black men, 2 percent Hispanic men, and 6 percent Asian men.

At the Federal Reserve, white men represent 50 percent of executive senior level managers, compared to just 28.7 percent represented by white women. Along ethnic categories, black and Hispanic men represent, respectively, roughly 5 percent and 1 percent of executive senior level managers. Black women represent roughly 6 percent and Hispanic women represent nearly 2 percent of senior managers.

According to the most recent information from the GAO, at the National Credit Union Administration (NCUA), whites represent 88 percent of senior level management positions, compared to 4 percent represented by blacks and 4 percent by Hispanics. At the Office of the Comptroller of the Currency (OCC), whites represent 82 percent of senior level managers, compared to 9 percent black and 5 percent Hispanic. Whites represent 89 percent of senior level management positions at the Securities and Exchange Commission, compared to 2 percent black and 5 percent Hispanic. Minorities appear to fair best at the Federal Housing Finance Agency, where whites represent 76 percent of senior level management positions, compared to 16 percent black and 8 percent Hispanic. However, more comprehensive analysis is still needed from the agency to fully assess the racial and gender employment of minorities in senior positions beyond the GAO's limited information.

Accordingly, we request that the OIG examine any employee complaints, formal or informal, related to personnel practices, workplace policies and the findings from any employee satisfaction surveys, whether conducted by the Federal Reserve System or an outside entity. If the OIG identifies any individuals or groups of individuals who have exhibited discriminatory behaviors or patterns of unfair or unequal treatment, we ask that the OIG provide recommendations about appropriate actions, including remedial training or removal from employment with the agency. Furthermore, we request that the OIG assess the agency's OMWI operations, and ensure corrective actions are taken within the agency with regard to employee compensation, rating systems, retention, and promotion of women and minorities.

Sincerely,

Appendix B
Scope and Methodology

The overall objective for this audit was to assess the Board's human resources–related functions and other efforts to provide for equal employment opportunities, including equal opportunity for minorities and women to obtain senior management positions, and for racial, ethnic, and gender diversity in the workforce. The scope of our audit included the Board's human resources–related operations affecting diversity and inclusion from January 2011 through December 2013. We also considered any changes that occurred during 2014.

We gained an understanding of the Board's human resources–related functions within our scope, which include recruiting and hiring, performance management, promotions and succession planning, complaints, and employee satisfaction surveys, by reviewing relevant Board policies and procedures and interviewing Board divisions responsible for performing these functions. Specifically, we met with officials from the OD&I and HR, as well as representatives from the economics-related divisions and the Legal Division, to discuss topics such as key personnel, roles and responsibilities, systems and applications, and policies and procedures.

We identified Board policies and procedures related to recruiting and hiring, employee complaints, and performance management, as well as guidance and best practices related to diversity and inclusion. We reviewed relevant Board policies and procedures to identify internal controls that may prevent or detect bias or discrimination. The Board has a limited number of policies related to its human resources–related functions. As a result, we selected two internal controls related to preventing or detecting discrimination or bias in the performance management process to conduct compliance testing with policies and procedures.

We collected and analyzed data from HR to identify trend statistics related to the Board's workforce, recruiting and hiring, performance management, promotions, and separations. In addition, we analyzed data related to informal and formal EEO complaints and non-EEO complaints. We assessed the reliability of all the data we obtained to ensure that they were sufficiently reliable for the purposes of our analysis. As part of our data reliability evaluation, we observed the Board extract the data it provided us from the Board's centralized database of record for all of the human resources–related activities except for EEO complaints. We also obtained screenshots of the queries it used to extract the data. In the case of EEO complaints, we did not verify this information, as the Board informed us of the potential for privacy issues associated with the OIG's extracting or observing the extraction of these data; however, officials provided us with the summary data, and we attempted to use publicly available sources to verify the cases the Board provided us. After we determined that the data were reliable for the purposes of our audit, we analyzed the data based on sex, race/ethnicity, and age, where possible.

We examined workforce demographics agency-wide and by pay grade category. We also compared the workforce demographics data to the data from the ACS published by the U.S. Census Bureau, which serves as the primary external benchmark for comparing the sex and race/ethnicity composition of an organization's workforce. We examined the demographics of the applicants processed during each phase of the Board's hiring process.

For performance management, we coordinated with the four other federal financial regulatory agency OIGs that had received a similar congressional request to use the services of an external consulting firm. The external consulting firm analyzed, on an agency-wide basis, the Board's FY 2011, FY 2012, and FY 2013 performance ratings by gender, race/ethnicity, and age. The external consulting firm's analysis is provided in its entirety in appendix E of this report. In addition, we conducted an internal analysis of the performance ratings by division.

We analyzed data for career-ladder promotions, exit survey results, EEO complaints, non-EEO complaints, and Board separations. We assessed the Board's efforts (1) to respond to complaints or other potential indications of bias and (2) to increase diversity in management.

We evaluated the OD&I's role and involvement in monitoring (1) the impact of the Board's human resources–related policies on minorities and women and (2) the agency's efforts to increase diversity in senior management positions and within the agency. We reviewed documents and conducted interviews with OD&I officials to assess its efforts to respond to EEO complaints. We also reviewed documents, conducted interviews, and applied best practices to evaluate the OD&I's efforts as they relate to diversity and inclusion and the provision of training to management and staff. In addition, we reviewed Board documents and conducted interviews with OD&I officials to evaluate compliance with applicable sections of the Dodd-Frank Act.

Finally, we interviewed Board division officials to gain an understanding of the Board's challenges in achieving diversity throughout the agency and within senior management. Through these interviews, we sought to gain management's perspective on

- diversity challenges and strategies to enhance diversity and succession planning efforts for critical management positions
- division interactions with the OD&I
- the OD&I's role and involvement in monitoring the effect of the Board's human resources–related policies on minorities and women

We conducted our audit fieldwork from May 2014 to November 2014. We conducted this performance audit in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objective. We believe that the evidence obtained provides a reasonable basis for our finding and conclusions based on our audit objective.

Appendix C
Workforce Data

The tables below provide a breakdown of permanent employees based on sex, race/ethnicity, and age for 2011, 2012, and 2013.

Table C-1: Permanent Employees, by Sex, Race/Ethnicity, and Age, 2011–2013, and Demographic Breakdown of ACS Data, 2006–2010

Permanent workforce demographics	2011		2012		2013		ACS data
	Number	% of total workforce	Number	% of total workforce	Number	% of total workforce	% of total

Executive Summary

On March 24, 2014, members of the United States House of Representatives Committee on Financial Services sent letters requesting that the Offices of Inspector Generals (OIGs) for seven financial regulatory agencies perform work to determine whether agency internal operations and personnel practices are systematically disadvantaging minorities and women from obtaining senior management positions. The Federal Reserve Board (FRB) was one of these agencies.

The OIGs initiated individual assignments with a general overall objective to assess agency personnel operations and other efforts to provide for equal employment opportunities, including equal opportunity for minorities and women to obtain senior management positions, and increase racial, ethnic and gender diversity in the workforce. One element of the work was for each OIG to assemble agency wide performance appraisal data to identify performance ratings distributions by gender, race/ethnicity, age and bargaining unit status (where applicable). This report presents the methodology and results of the analyses conducted for the OIG for the Board of Governors of the Federal Reserve System (FRB).

Separate analyses were conducted on overall performance ratings administered in 2011, 2012, and 2013. These analyses were conducted to detect potential performance rating differences based on gender, race/ethnicity and age. Analyses were conducted at a number of different job levels. Both statistical significance tests (e.g., t-tests) and effect sizes (e.g., d-scores) were evaluated to determine whether differences were meaningful. Standard social science criteria (e.g., alpha = .05) were used to interpret statistical significance, and effect sizes were compared to typical results found in the personnel selection research literature.

For gender data, males and females did not differ significantly in performance ratings at any level of analysis in any of the three years.

For the agency wide race/ethnicity data, Whites were rated significantly higher than African Americans and Asians in all three years, and were rated significantly higher than Hispanics in 2012 but not 2011 and 2013.

Lastly, for age data, younger workers were rated significantly higher than older workers at the mid-level jobs for all three years.

Statistically significant group differences do not necessarily indicate discrimination by themselves. Differences in performance ratings could be due to a wide variety of explanations. This report concludes with a number of measures that an agency can take to assess performance rating system content and process.

Introduction

Project Background

On March 24, 2014, members of the United States House of Representatives Committee on Financial Services sent letters requesting that the Offices of Inspector Generals (OIGs) for seven financial regulatory agencies perform work to determine whether agency internal operations and personnel practices are systematically disadvantaging minorities and women from obtaining senior management positions.[1] The agencies include the following:

- Federal Deposit Insurance Corporation (FDIC)
- Board of Governors of the Federal Reserve System (FRB)
- Consumer Financial Protection Bureau (CFPB)
- Office of the Comptroller of the Currency (OCC)
- Federal Housing Finance Agency (FHFA)
- National Credit Union Administration (NCUA)
- Securities and Exchange Commission (SEC)

The OIGs initiated individual assignments with a general overall objective to assess agency personnel operations and other efforts to provide for equal employment opportunities, including equal opportunity for minorities and women to obtain senior management positions, and increase racial, ethnic and gender diversity in the workplace. One element of the work was for each OIG to assemble agency wide performance appraisal data to identify performance ratings distributions by gender, race/ethnicity, age and bargaining unit status (applicable to all agencies except the FRB and FHFA). The FDIC Office of Inspector General (FDIC OIG) offered to engage and fund an independent contractor to perform statistical analyses of the performance appraisal results for each agency to determine whether there are statistically significant differences between groups of interest. DCI Consulting Group was selected to conduct these analyses for each of the agencies except for the Securities and Exchange Commission (SEC).

This report presents the methodology and results of the analyses conducted for the OIG for the Board of Governors of the Federal Reserve System (FRB).[2]

The FRB Performance Rating System

The performance management program at FRB serves as the basis for determining "pay-for-performance" amounts provided to employees. These increases take the form of *merit increases*, which affect employees' base salary and growth over time. Performance ratings may also be considered when determining variable pay or eligibility for additional incentive programs. Employees who receive lower ratings (i.e., unsatisfactory or marginal) may not be eligible for such increases.

---

[1] See the Appendix for a copy of this letter.
[2] DCI staff conducted all analyses and authored this report. Nothing in the report should be construed as representing the views of FRB OIG.

The distribution of performance ratings for 2011, 2012, and 2013 are depicted in Table 1. As presented, the lower the rating the better the performance. For purposes of exposition and consistency across agencies, these codes were reverse ordered so that higher ratings reflected better performance in the results section below. For example, a rating of 5 represents extraordinary performance in the results summarized in this report.

Table 1. Distribution of Performance Ratings

	Count			Percent		
Rating	2011	2012	2013	2011	2012	2013
1 – Extraordinary	378	429	480	19.13	20.27	22.39
2 – Outstanding	712	848	956	36.03	40.08	44.59

5 – Unsatisfactory	0	0	0	0.00	0.00	0.00

Method

Initial Dataset

FRB OIG provided DCI with data for 2011, 2012 and 2013. The performance time period covered for each year was from October 1st through September 30th. Relevant information for each year included:

- Performance Year
- EEO1 Category
- Job Function
- Job Level
- Salary Plan
- Overall Rating
- Rating Description
- Age
- Race/National origin
- Gender
- Whether the employee was 40 years of age or Older

The dataset for each year included all employees who were eligible for performance ratings. Although OIG employees are rated using the FRB system, they were not included in the dataset. Neither employee name nor employee number was included in the dataset.

Data Cleaning

The first step in the data cleaning process was to remove employees in the dataset who had not been with the agency long enough (90 days) to receive a performance rating. As it turned out, no employees were removed in any of the three years.

Race/Ethnicity Grouping

FRB OIG provided race/ethnicity grouping for analysis. Their coding scheme is presented in Table 2. If employees listed only one race/ethnicity (e.g., White, Asian), they were placed into that race/ethnicity category. If employees listed more than one race/ethnicity (e.g., Asian and White) were placed into the category of "Two or more".[3] Employees who did not identify their

[3] As shown in Table 2, the exception to this was that any employees identifying themselves as Hispanic, regardless of whether they listed any other races, were counted as Hispanic rather than "Two or More." There were no employees categorized as "Two or more" races. Note that employees self-identifying as "two or more" races or "other" are typically not included in any analysis, because those classifications could mean many different things, particularly due to the number of possible race combinations.

race/ethnicity were included in the gender and age analyses but were omitted from the race/ethnicity analyses.

Table 2. Race/Ethnicity From Dataset and Race/Ethnicity Analysis Groups

Analysis Grouping	Race/Ethnicity Categories in Dataset
White, Non-Hispanic (White)	• White • White, not of Hispanic origin • Not Hispanic in Puerto Rico
Asian (Asian)	• Asian
Black or African American (African American)	• Black or African American • Black, not of Hispanic Origin
Hispanic or Latino (Hispanic)	• Hispanic • Hispanic or Latino • Hispanic or Latino, American Indian or Alaska Native • Hispanic or Latino, Black or African American • Hispanic or Latino, Black or African American, White • Hispanic or Latino, White
Native Hawaiian or Other Pacific Islander (Native Hawaiian)	• Native Hawaiian • Other Pacific Islander
American Indian or Alaska Native (American Indian)	• American Indian • Alaska Native • American Indian/Alaska Native
Other	• Unknown

Age Grouping

FRB OIG also provided age groupings for analysis. Employees were placed into one of two categories: under 40 or 40+. These categories were chosen to be consistent with the Age Discrimination in Employment Act (ADEA). The category placement was based on the employee's age on the first day of the performance period for each of the three years. Table 3 depicts the race/ethnicity, gender, and age breakdown for each of the three years.

Table 3. Number of Employees by Gender, Race/Ethnicity, and Age

	Year		
Demographic Group	2011	2012	2013
TOTAL	1,976	2,116	2,144
Gender			
Female	917	960	973
Male	1,059	1,156	1,171
Race/Ethnicity			
White	1,087	1,184	1,185
Black or African American	546	550	554
Asian	229	259	280
Not Specified	3	2	2
Hispanic/Latino	79	87	88
American Indian/Alaskan Native	2	2	2
Native Hawaiian/Pacific Islander	1	2	0
Other (Unknown)	29	30	33
Age			
Under 40	778	881	893
40+	1,198	1,235	1,251

Data Integrity

To ensure the integrity of the data, two consultants reviewed the initial dataset. To ensure the accuracy of the statistical analyses, the analyses were conducted twice by separate consultants using different analysis programs (i.e., SAS, SPSS, Excel, HR Equator). These separate analyses yielded identical results.

Data Analysis Methodology

The OIGs for each agency agreed that the analyses would be conducted at two levels for all agencies: Overall and by bargaining unit status (where applicable). However, bargaining status was not a factor in the FRB data. Each agency then determined other levels of analysis that made sense for the agency. FRB OIG asked that analyses also be conducted by job level (senior managers, mid-level employees, and all other employees).

To compare the differences in the mean performance ratings across gender, race/ethnicity and age groups, tests of both statistical significance and practical significance were used.[4] Tests of

[4] Statistical analyses were only conducted when comparisons included 5 or more employees in each group. This decision was based on professional judgment. Small sample results are often non-representative, unstable and can change substantially with small changes in the data. Samples too small for analyses are labeled n/a in results tables.

statistical significance indicate the probability that the group difference could have been due to chance. A statistically significant result does not imply that a difference is good or bad or that it is large or small. Instead it simply indicates that the observed difference is probably not due to chance. In contrast, measures of practical significance provide an indication of the size of the difference.

To determine if the group differences were statistically significant, t-tests were used.[5] To assess statistical significance, DCI used two-tailed tests, which assess rating differences in both directions (e.g., differences that favor males as well as differences that favor females) and an alpha level of .05. Both standards are common in social science research. An alpha level of .05 indicates that the probability of a false positive (i.e., a statistically significant result that is incorrect) is 5 percent. This threshold for identifying a statistically significant difference generally corresponds to a t-value of 1.96 (although this value may vary slightly depending on sample size). Any t-value highlighted in the results tables was statistically significant at an alpha level of .05.

To determine practical significance, two measures were used: the percent differences between the two groups and d-scores. A d-score indicates the size of the difference in terms of standard deviations. That is, a d of 1.0 indicates that the two groups differed by a full standard deviation (a large effect) whereas a d of 0.10 indicates that the two groups differed by a tenth of a standard deviation (a small effect).

Table 4 will be helpful in interpreting the d-scores observed for FRB. The table summarizes a combination of d-scores obtained in a meta-analysis[6] by Roth, Huffcutt, and Bobko (2003)[7] on racial differences, a meta-analysis by McKay and McDaniel (2006)[8] on Black-White differences, a meta-analysis by Roth, Purvis, and Bobko (2012)[9] on gender differences, as well as internal research conducted by DCI. Thus, Table 4 represents the gender and race/ethnicity differences that are "typically found" in studies of performance appraisal differences. There have been no meta-analyses comparing performance ratings of employees over and under 40.

---

[5] For each comparison, we tested the assumption of equal variances between the two groups. If this test indicated unequal variances, a *t*-test for unequal variances was used (Welch's *t*-test). If the Welch's *t*-test changed the significance interpretation from that of the initial Student's *t*-test, the Welch's *t*-test value was listed in the table.

[6] A meta-analysis is a study that statistically combines the results of all previous studies conducted on a topic. These studies combine data over time (e.g., some source studies date back to the 1960s) and from a variety of jobs (e.g., blue collar and white collar) in different settings (e.g., private, public and military) to identify "typical" findings. In this context, the results of a meta-analysis are a series of effect sizes (d-scores) that provide a single source summary of previous research. Interested readers should refer to the references below for more information related to specific studies.

[8] McKay, P. F., & McDaniel, M. A. (2006). A reexamination of Black-White mean differences in work performance: More data, more moderators. *Journal of Applied Psychology, 91*(3), 538-554.

[9] Roth, P. L., Purvis, K. L., & Bobko, P. (2012). A meta-analysis of gender group differences for measures of job performance in field studies. *Journal of Management, 38*(2), 719-739.

Table 4. "Typical" D-Scores Found in Performance Rating Studies

Comparison	Level of Analysis	
	Company Wide	By Title
Male – Female	-0.07	-0.08
White – Black	0.34	0.22
White – Hispanic	0.14	0.07
White – Asian	0.08	0.00

Note: Negative d-scores indicate females have higher ratings than men. D-scores computed by title reflect average performance differences between protected class subgroups within specific titles, rather than company-wide. Thus, analyses conducted by title are conducted at a finer level of analysis than are analyses conducted company wide, such that employees are more similar to one another in each cross-section of employees that are analyzed.

Analysis Results

Gender

Table 5 presents the results of gender analyses. There were no statistically significant gender differences in average performance ratings either agency wide or within the three job levels. This pattern was observed for all three years.

Race/Ethnicity

White to African-American Comparison

As depicted in Table 6, for 2013 the average performance ratings for Whites were higher than the average performance ratings for African Americans, at a statistically significant level, when evaluating ratings agency wide. However, when the data were analyzed by job level, there were no statistically significant White-African American differences in ratings. The effect size for the agency wide difference in 2013 (d= 0.23) was smaller than the value normally found for company-wide White-African American comparisons (which is d= 0.34).

In terms of statistically significant findings at the agency wide level, the pattern for 2012 and 2011 was identical to that of 2013: the average performance ratings for Whites were higher than the average performance ratings for African Americans, at a statistically significant level. The effect size for 2012 was d= 0.32 and for 2011 was d= 0.27, which is similar to the magnitude of differences reported in the research literature. The results for 2012 were also similar to those for 2013 in that there were no statistically significant differences once the data were analyzed by job level. In 2011, however, there was a statistically significant difference between average ratings of Whites and African Americans for the all other employee job level (d= 0.15).[10]

White to Hispanic Comparison

As depicted in Table 7, there were two statistically significant differences in the average performance ratings of Whites and Hispanics across all years and comparisons. In 2013, there was a statistically significant difference in favor of Hispanics at the senior manager level. This effect was in the opposite direction of what is typically found in the literature and was large (d=-0.77). However, it should be noted that this latter comparison included 247 Whites and only 7 Hispanics, and results should be interpreted with caution.

[10] One pattern that we were not asked to formally evaluate using statistics, but which is clear simply by evaluating the average ratings across the different job levels, is that employees at higher levels tend to receive higher performance ratings.

Other	331	36	3.66	3.67	-0.06	-0.2	-0.01

Note: Negative t-values indicate Hispanics received higher ratings than Whites

t-values highlighted in orange indicate that the t-value is statistically significant favoring Hispanics

t-values highlighted in gray indicate that the t-value is statistically significant favoring Whites

At the agency wide level in 2012, Whites received significantly higher performance ratings than Hispanics and the effect size exceeded what would be expected based on the research literature (d=0.24). However, there were no significant differences in performance ratings within any of the three job levels.

For 2011, there were no significant differences in performance ratings for Whites versus Hispanics at an agency wide level, and for either mid-level employees or all other employees. There were too few Hispanic senior managers (N=4) to make a comparison between White and Hispanic at the senior manager level.

White to Asian Comparison

As depicted in Table 8, Whites received significantly higher performance ratings than Asians at the agency wide level in 2013, and the effect size (d=0.22) was larger than the value normally found for company-wide White-Asian differences (d= 0.08). However, there were no significant differences in performance ratings within any of the three job levels.

This pattern was repeated for both 2012 and 2011, where Whites received significantly higher performance ratings than Asians (d= 0.22). However, as in 2013, there were no significant differences in performance ratings within any of the three job levels in either 2012 or 2011.

Age

As depicted in Table 9, there were no statistically significant differences in performance ratings between older and younger employees in 2013 at an agency wide level, for senior managers, or for all other employees. However, there was a significant difference in favor of younger employees for mid-level employees (d= 0.21).

In 2012, there was a statistically significant overall difference in performance ratings favoring older employees (d= -0.11). However, there were no significant differences in ratings for younger and older employees when looking at the senior manager or all other employee job level. Younger employees received significantly higher ratings than older employees for mid-level employees (d =0.13). This flip in the direction of the difference across unit of analysis is likely what statisticians refer to as a Simpson's paradox. This phenomenon occurs when aggregating data across levels while ignoring the distributions at particular levels produce misleading results (i.e., that older workers are significantly favored in the aggregate). In this case, a larger percentage of older workers were in senior executive roles compared to younger workers, where ratings were much higher than other job levels. As such the larger percentage of older workers at this level may be driving aggregate results.

For 2011, there were no significant differences in performance ratings between older and younger employees at an agency wide level, and the same was true for senior managers and all

other employees. However, there was a significant difference in favor of the younger employees for mid-level employees (d= 0.20).

t-values highlighted in gray indicate that the t-value is statistically significant favoring those younger than 40 years of age

Conclusions and Discussion

This report summarized the methodology and results of analyses related to subgroup differences on overall performance ratings administered in 2011, 2012, and 2013 at FRB. These analyses were conducted to detect potential performance rating differences based on gender, race/ethnicity and age. Analyses were conducted at a variety of levels of analysis. Both statistical significance tests (e.g., t-tests) and effect sizes (e.g., d-scores) were evaluated to determine whether differences were meaningful. Standard social science criteria (e.g., alpha = .05) were used to interpret statistical significance, and effect sizes were compared to typical results found in the personnel selection research literature.

The agency wide results across years indicate no pattern of statistically significant differences in average performance ratings between (a) women and men, (b) Hispanics and Whites, or (c) those age 40 or older and those younger than 40. In fact, there were no statistically significant gender differences, regardless of the level of analysis (i.e., overall or by organizational level). There were two statistically significant differences in average performance ratings between Hispanics and Whites, but they were not (a) at the same level of analysis (one was at the agency wide level and the other at the senior management level) or (b) in the same direction (one indicated higher average ratings for Hispanics and the other for Whites). Thus, in general, the overall results indicated no systematic differences in performance ratings for gender or White-Hispanic comparisons. With respect to age, a consistent pattern across years emerged at the mid-level jobs. The average performance ratings for employees younger than 40 were higher than those for employees age 40 or older, at a statistically significant level, but the effect sizes were not large.

With respect to agency wide performance differences between White employees and both Asian and African American employees, there is a trend of statistically significant differences in average ratings. In all three years, the average performance ratings for Whites were higher than those for Asians, at a statistically significant level. Similarly, in all three years, the average performance ratings for Whites were higher than those for African Americans, at a statistically significant level. The White-Asian differences were higher than that which is typically reported in the research literature, whereas the White-African American differences were lower than that which is typically reported in the research literature. It is notable that in the case of both White-Asian comparisons and White-African American comparisons, there is not a trend of statistically significant differences in performance ratings once the data are evaluated by job level.

Interpreting Statistically Significant Findings

It is important to understand that a statistically significant difference in ratings based on gender, race/ethnicity, or age does not necessarily indicate that discrimination is occurring. Such group differences could be due to actual differences in performance, regional differences in ratings, job family differences in ratings (i.e., supervisors in certain fields are more strict or lenient than supervisors in other fields) or some combination of all these factors.

To investigate whether any group differences are due to actual differences in performance or other factors rather than to discrimination, a number of measures could be taken to assess an agency's performance rating system process and content. These include verification that:

- The performance appraisal dimensions are job related;
- The performance appraisal system is adequately structured;
- Supervisors making the performance evaluations receive training;
- There is a system in place for management to review supervisor's performance ratings to determine if there are any patterns (e.g., racial or gender differences) that need to be reviewed;
- There is an appeal process for employees who believe their performance ratings are not accurate;
- There is a standardized, objective system for making employment decisions (e.g., merit increases, promotions) on the basis of the performance ratings;
- There is a well-developed feedback system through which employees can receive information about their performance that will promote their future development and enable them to improve job performance.

Potential Future Analyses

As described above, in cases where statistically significant differences exist, we generally recommend that the performance appraisal system be evaluated along the dimensions described above. In addition, a number of follow up analyses may be useful for interpreting results and gaining a clearer understanding of what factors may be driving those findings.

First, the analyses for this report were conducted at three job levels: senior managers, mid-level employees, and all other employees. It might be useful to conduct further analyses by such strata as salary band, region or location, and job title. In some instances, job level results may be further explained by more nuanced analyses and more granular levels.

Second, examining the interaction between the race/ethnicity and gender of the employee and the race/ethnicity and gender of the supervisor might also provide some insight into the statistically significant group differences. In some instances rater-ratee interactions may further explain results.

Third, because the analyses in this report focused on the overall rating, it might be informative to look at group differences in the initial element ratings, to determine whether a particular element could be driving results.

Fourth, it may be useful to analyze tangible employment outcomes that are directly or indirectly linked to performance ratings. For example, merit raises, bonuses and promotion decisions could

all be analyzed across the protected groups discussed in this report. This set of analyses could provide a broader perspective on equal employment opportunity outcomes across groups.

Note: We did not include appendix I of the external consultant's report, which is a copy of the congressional request letter. We include that letter as appendix A of this report.

Appendix F
Performance Management Data

In addition to the consultant's analysis on performance management data, we conducted our own analysis to determine the average performance ratings for each division by race/ethnicity (tables F-1 and F-2).

Table F-1: Average Performance Ratings, Race/Ethnicity Distribution by Division, 2011–2013

Average performance ratings by race/ethnicity	Division						
	Office of the Chief Operating Officer	Division of Financial Management	Division of Information Technology	Legal Division	Management Division	Office of the Staff Director	Office of the Secretary
2011

Appendix I
Management's Response

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM
WASHINGTON, DC 20551

OFFICE OF THE
CHIEF OPERATING OFFICER

DATE: March 30, 2015

TO: Mark Bialek, Inspector General

FROM: Don Hammond, Chief Operating Officer

SUBJECT: Response to March 19, 2015 Draft – "The Board Can Enhance Its Diversity and Inclusion Efforts"

Board staff has reviewed the above referenced draft report prepared by the Office of Inspector General ("OIG"). We appreciate the amount of work that went into the report and the opportunity to respond to its recommendations.

At the outset we would like to take the opportunity to emphasize that the Board is committed to increasing diversity and enhancing inclusion, and we believe that the evidence in the report shows some successes in that effort. For example, as noted in Figure 4 of the draft report, the representation of minorities in the Board's mid-level and senior level positions increased in each year under review. We believe this is a clear indication of this commitment.

Upon reviewing the draft report we consider it significant that the independent consultant who analyzed the Board's performance ratings concluded that there is "not a trend of statistically significant differences" in ratings based on race, gender, or age when the data are evaluated by job level.[1] Because performance ratings at the Board are not awarded on an agency-wide basis, agency-wide results do not provide useful information about whether employment discrimination may have occurred,[2] although the Board's agency-wide results are generally positive. The independent consultant concluded that the agency-wide results across years "indicate no pattern of statistically significant differences in average performance ratings between: (a) women and men, (b) Hispanics and Whites, or (c) those age 40 or older and those younger than 40," and that agency-wide White-African American differences were lower than those typically found in

[1] OIG draft report, dated March 19, 2015, entitled, "The Board Can Enhance Its Diversity and Inclusion Efforts," p.98 (Appendix E, "An Analysis of Gender, Race, and Age Differences in Performance Ratings of FRB Employees: 2011-2013").

[2] *See Wal-Mart Stores v. Dukes*, 131 S. Ct. 2541, 2555 (2011).

www.federalreserve.gov

studies of performance appraisal differences.[3] With respect to the more relevant job-level analyses, the independent consultant concluded that there is no trend of statistically significant differences between White and African American performance ratings when the data are analyzed at the job level.[4] Similarly, all White-Asian differences disappeared when the data were analyzed at the job level.[5] It is also important to keep in mind that, as stated in the independent consultant's analysis, differences in performance ratings could be due to a wide variety of explanations. The independent consultant also suggested a number of measures that could be taken to assess an agency's performance rating system process and content. Management will keep these in mind as we evaluate our performance appraisal system.

Although the Board's results are positive, management is fully committed to making further improvements in its diversity and inclusion efforts given the utmost importance of providing a work environment that is free of employment discrimination and that supports the engagement of all employees. In this regard we note that the OIG has recommended several additional improvements to the Board's diversity and inclusion efforts. Management generally agrees with the OIG's recommendations and, in a number of instances, has already implemented, or has begun to implement, changes to address them. Each OIG recommendation, and management's response, is discussed in more detail below.

OIG Recommendations and Management's Response

Recommendation 1: Develop and implement an alternative method for collecting the demographic data of economic and research assistant applicants to improve the response rate.

Management's Response: Management agrees with this recommendation and, as the OIG notes, in 2013, management began implementing a new process to automatically request self-disclosure of demographic information within 24 hours of obtaining an economist applicant's email address. Management will assess whether this change provides a significant improvement in response rates, and if not will consider other changes in order to obtain demographic data for economist and research assistant applicants.

Recommendation 2: Ensure that the demographic data for all internal and external officer applicants are maintained in the Board's centralized applicant database.

Management's Response: Management agrees with this recommendation and, as the OIG notes, in 2014, management implemented a process to track all officer positions through a centralized applicant database. This process will allow management to accumulate demographic data and measure trends in diversity at the officer-applicant

[3] *Id.*

[4] *Id.*

[5] *Id.* at 94.

level. Although this process does not currently fully capture applicant data when an executive search firm is used to recruit officer candidates, management plans to implement a process in the near future to capture this data.

Recommendation 3: Consider conducting annual analyses of the distribution of employee performance ratings to identify whether patterns exist that may indicate unfair or unequal treatment. If the analyses reveal patterns that may indicate unfair or unequal treatment, determine whether any actions are necessary.

Management's Response: Management agrees that a periodic analysis focused on areas where management has potential concerns may be useful. Management will consider establishing a process for identifying such areas and determining what type of statistical review would be warranted, and if statistically significant discrepancies are found from such analyses, will explore steps that may be appropriate to address those discrepancies. It is unclear whether the costs of paying for an annual statistical analyses on a Board-wide basis or even on the basis of job level provide corresponding value.

Recommendation 4: Ensure that aggregate non-EEO case statistics are provided to all Division Directors and that division-specific statistics are provided to the respective Division Director.

Management's Response: Management agrees with this recommendation and, as the OIG notes, in 2014 management began providing Division Directors with a non-EEO trend statistics report and we will continue to do so on a quarterly basis.

Recommendation 5: Finalize and implement the Board's diversity and inclusion strategic plan, and ensure that: (a) the plan incorporates the agency's overall diversity and inclusion objectives; and (b) key elements of the plan are included in the Board's 2016–2019 agency strategic plan.

Management's Response: Management agrees with this recommendation to finalize the diversity and inclusion strategic plan currently being developed, as noted in the OIG report. The OMWI Director is a member of the Board's 2016-19 strategic plan workgroup, ensuring that the key elements of the diversity and inclusion plan are included.

Recommendation 6: Formalize the standards the OD&I relies on for equal employment opportunity and the racial, ethnic, and gender diversity of the workforce and the senior management of the agency.

Management's Response: The standards will be formalized and incorporated in the diversity and inclusion strategic plan which is currently under development and scheduled for issuance in 2015.

Recommendation 7: Ensure that No FEAR Act training: (a) is offered on a regular basis; (b) is tailored to the Board and includes EEO and diversity and inclusion topics in accordance with the Board's *No FEAR Act Written Training Plan;* (c) is evaluated for effectiveness and that any improvements identified are incorporated into the training as needed; and (d) attendance records are retained.

Management's Response: Management agrees with this recommendation and notes that the Board has historically offered No FEAR Act training on a regular basis. Management recognizes that there was one instance in which No FEAR training was not offered during the planned year because of a procurement issue; the Board resolved this discrepancy by providing No FEAR Act training in October of 2014. Going forward, management agrees that it continues to be important to provide No FEAR Act training on a regular basis and to evaluate the training for effectiveness. Management also will explore methods of evaluating the effectiveness of training and incorporating improvements. Finally, while management has historically monitored employees to ensure they complete the training, management has not typically retained evidence of completion at the Board. Rather, such records have been held by the vendor that provides the training materials. The Board will consider providing in its contract for these services that the vendor provide the Board with evidence of employees' completion of training.

Recommendations 8-10: Document the roles and responsibilities of the OD&I and distribute to all Board divisions; Partner with divisions to cooperatively develop strategies and initiatives that will help advance diversity and inclusion throughout the Board; and work with divisions to finalize and implement the quarterly reporting tool and establish a schedule to communicate the results for each division to the respective Division Director. The quarterly reporting tool should include diversity and inclusion activities for each division with clear goals, objectives, and corresponding measures.

Management's Response: Management agrees with these recommendations; however, it should be noted that the mission and objectives of OD&I are updated annually as part of the Board's budget process. Management will take steps to increase the divisions' awareness of OD&I's role and responsibilities. Also, each division, has a designated EEO Officer as Liaison to OD&I. A new quarterly reporting tool for divisions aimed at establishing specific diversity and inclusion strategies and initiatives will be implemented in the second quarter. The new tool slated for the second quarter will strengthen the strategic direction of diversity and inclusion and provide transparency and accountability for achievement of objectives.

Recommendation 11: Strengthen internal controls for reporting MD-715 data, to include: (a) documenting the methodology for extracting and filtering the appropriate data; and (b) verifying the accuracy and completeness of the data in the MD-715 report prior to submission.

Management's Response: Although the very low error rate in reporting these data (less than 0.8 percent) suggests that data reporting errors were not a significant problem, management agrees that it is always useful to take steps to ensure that data are reported as completely and accurately as possible. Thus, management agrees to take the steps noted by the OIG to provide an enhanced data reporting process.

Federal Reserve Act

Print

Section 10. Board of Governors of the Federal Reserve System

1. Appointment and qualification of members

The Board of Governors of the Federal Reserve System (hereinafter referred to as the "Board") shall be composed of seven members, to be appointed by the President, by and with the advice and consent of the Senate, after the date of enactment of the Banking Act of 1935, for terms of fourteen years except as hereinafter provided, but each appointive member of the Federal Reserve Board in office on such date shall continue to serve as a member of the Board until February 1, 1936, and the Secretary of the Treasury and the Comptroller of the Currency shall continue to serve as members of the Board until February 1, 1936. In selecting the members of the Board, not more than one of whom shall be selected from any one Federal Reserve district, the President shall have due regard to a fair representation of the financial, agricultural, industrial, and commercial interests, and geographical divisions of the country. The members of the Board shall devote their entire time to the business of the Board and shall each receive an annual salary of $15,000, payable monthly, together with actual necessary traveling expenses.

[12 USC 241. As amended by acts of June 3, 1922 (42 Stat. 620); Aug. 23, 1935 (49 Stat. 704). Prior to the enactment of the Banking Act of 1935, approved Aug. 23, 1935, the Board of Governors of the Federal Reserve System was known as the Federal Reserve Board. See note to the third paragraph of section 1. The portion of this paragraph dealing with salaries of Board members has in effect been amended numerous times, most recently by Executive Order. Prior to the act of December 27, 2000, section 1002 of which revised the executive schedule, the salary of the chairman of the Board was set at executive schedule level 2 and the salary of other members at level 3. The salary of the chairman of the Board is now set at executive schedule level I, and the salary of other members at level II (see 2 USC 358 and 5 USC 5313 and 5314).]

Back to Top

2. Members ineligible to serve member banks; term of office; chairman and vice chairman

The members of the Board shall be ineligible during the time they are in office and for two years thereafter to hold any office, position, or employment in any member bank, except that this restriction shall not apply to a member who has served the full term for which he was appointed. Upon the expiration of the term of any appointive member of the Federal Reserve Board in office on the date of enactment of the Banking Act of 1935, the President shall fix the term of the successor to such member at not to exceed fourteen years, as designated by the President at the time of nomination, but in such manner as to provide for the expiration of the term of not more than one member in any two-year period, and thereafter each member shall hold office for a term of fourteen years from the expiration of the term of his predecessor, unless sooner removed for cause by the President. Of the persons thus appointed, 1 shall be designated by the President, by and with the advice and consent of the Senate, to serve as Chairman of the Board for a term of 4 years, and 2 shall be designated by the President, by and with the advice and consent of the Senate, to serve as Vice Chairmen of the Board, each for a term of 4 years, 1 of whom shall serve in the absence of the Chairman, as provided in the fourth undesignated paragraph of this section, and 1 of whom shall be designated Vice Chairman for Supervision. The Vice Chairman for Supervision shall develop policy recommendations for the Board regarding supervision and regulation of depository institution holding companies and other financial firms supervised by the Board, and shall oversee the supervision and regulation of such firms. The chairman of the Board, subject to its supervision, shall be its active executive officer. Each member of the Board shall within fifteen days after notice of appointment make and subscribe to the oath of office. Upon the expiration of their terms of office, members of the Board shall continue to serve until their successors are appointed and have qualified. Any person appointed as a member of the Board after the date of enactment of the Banking Act of 1935 shall not be eligible for reappointment as such member after he shall have served a full term of fourteen years.

[12 USC 242. As amended by acts of March 3, 1919 (40 Stat. 1315); June 3, 1922 (42 Stat. 620); June 16, 1933 (48 Stat. 166); Aug. 23, 1935 (49 Stat. 704); November 16, 1977 (91 Stat. 1388); and act of July 21, 2010 (124 Stat. 2126). The Banking Act of 1935, referred to in this paragraph, became effective Aug. 23, 1935. Prior to the enactment of that act, the chairman and vice chairman of the Board of Governors of the Federal Reserve System were known as the governor and vice governor of the Federal Reserve Board, respectively. See note to the third paragraph of section 1. The act of November 16, 1977, amended the second sentence of this paragraph. The amendment takes effect on Jan. 1, 1979, and applies to individuals who are designated by the President on or after such date to serve as chairman or vice chairman. The act of July 21, 2010, designated a new Vice Chairman for Supervision.]

Back to Top

3. Assessments on Federal reserve banks

The Board of Governors of the Federal Reserve System shall have power to levy semiannually upon the Federal reserve banks, in proportion to their capital stock and surplus, an assessment sufficient to pay its estimated expenses and the salaries of its members and employees for the half year succeeding the levying of such assessments, together with any deficit carried forward from the preceding half year, and such assessments may include amounts sufficient to provide for the acquisition by the Board in its own name of such site or building in the District of Columbia as in its judgment alone shall be necessary for the purpose of providing suitable and adequate quarters for the performance of its functions. After September 1, 2000, the Board may also use such assessments to acquire, in its own name, a site or building (in addition to the facilities existing on such date) to provide for the performance of the functions of the Board. After approving such plans, estimates, and specifications as it shall have caused to be prepared, the Board may, notwithstanding any other provision of law, cause to be constructed on any site so acquired by it a building or buildings suitable and adequate in its judgment for

its purposes and proceed to take all such steps as it may deem necessary or appropriate in connection with the construction, equipment, and furnishing of such building or buildings. The Board may maintain, enlarge, or remodel any building or buildings so acquired or constructed and shall have sole control of such building or buildings and space therein.

[12 USC 243. As reenacted without change by act of June 3, 1922 (42 Stat. 621); and amended by acts of June 19, 1934 (48 Stat. 1108) and Dec. 27, 2000 (114 Stat. 3027). By act approved June 27, 1935 (49 Stat. 425), provision was made for the furnishing of steam from the central heating plant to the Federal Reserve Board, now the Board of Governors of the Federal Reserve System.]

4. Principal offices; expenses; deposit of funds; members not to be officers or stockholders of banks

The principal offices of the Board shall be in the District of Columbia. At meetings of the Board the chairman shall preside, and, in his absence, the vice chairman shall preside. In the absence of the chairman and the vice chairman, the board shall elect a member to act as chairman pro tempore. The Board shall determine and prescribe the manner in which its obligations shall be incurred and its disbursements and expenses allowed and paid, and may leave on deposit in the Federal Reserve banks the proceeds of assessments levied upon them to defray its estimated expenses and the salaries of its members and employees, whose employment, compensation, leave, and expenses shall be governed solely by the provisions of this Act, specific amendments thereof, and rules and regulations of the Board not inconsistent therewith; and funds derived from such assessments shall not be construed to be Government funds or appropriated moneys. No member of the Board of Governors of the Federal Reserve System shall be an officer or director of any bank, banking institution, trust company, or Federal Reserve bank or hold stock in any bank, banking institution, or trust company; and before entering upon his duties as a member of the Board of Governors of the Federal Reserve System he shall certify under oath that he has complied with this requirement, and such certification shall be filed with the secretary of the Board. Whenever a vacancy shall occur, other than by expiration of term, among the six members of the Board of Governors of the Federal Reserve System appointed by the President as above provided, a successor shall be appointed by the President, by and with the advice and consent of the Senate, to fill such vacancy, and when appointed he shall hold office for the unexpired term of his predecessor.

[12 USC 244. As amended by acts of June 3, 1922 (42 Stat. 621); June 16, 1933 (48 Stat. 167); Aug. 23, 1935 (49 Stat. 705). The reference to "the six members" of the Board of Governors is an apparent error in the law and should read "the seven members." See section 10, first paragraph, this act.]

Back to Top

5. Vacancies during recess of Senate

The President shall have power to fill all vacancies that may happen on the Board of Governors of the Federal Reserve System during the recess of the Senate by granting commissions which shall expire with the next session of the Senate.

[12 USC 245. As amended by act of June 3, 1922 (42 Stat. 621).]

Back to Top

6. Reservation of powers of Secretary of Treasury

Nothing in this Act contained shall be construed as taking away any powers heretofore vested by law in the Secretary of the Treasury which relate to the supervision, management, and control of the Treasury Department and bureaus under such department, and wherever any power vested by this Act in the Board of Governors of the Federal Reserve System or the Federal reserve agent appears to conflict with the powers of the Secretary of the Treasury, such powers shall be exercised subject to the supervision and control of the Secretary.

[12 USC 246. As reenacted without change by act of June 3, 1922 (42 Stat. 621).]

Back to Top

7. Annual report

The Board of Governors of the Federal Reserve System shall annually make a full report of its operations to the Speaker of the House of Representatives, who shall cause the same to be printed for the information of the Congress. The report required under this paragraph shall include the reports required under section 707 of the Equal Credit Opportunity Act, section 18(f)(7) of the Federal Trade Commission Act, section 114 of the Truth in Lending Act, and the tenth undesignated paragraph of this section.

[12 USC 247. As reenacted without change by act of June 3, 1922 (42 Stat. 621) and amended by acts of June 3, 1922, and Dec. 27, 2000 (114 Stat. 3030).]

8. Office of the Comptroller of the Currency

Section three hundred and twenty-four of the Revised Statutes of the United States shall be amended so as to read as follows:

(a) Office Of The Comptroller Of The Currency Established. There is established in the Department of the Treasury a bureau to be known as the “Office of the Comptroller of the Currency” which is charged with assuring the safety and soundness of, and compliance with laws and regulations, fair access to financial services, and fair treatment of customers by, the institutions and other persons subject to its jurisdiction.

(b) Comptroller Of The Currency.

1. **In General.** The chief officer of the Office of the Comptroller of the Currency shall be known as the Comptroller of the Currency. The Comptroller of the Currency shall perform the duties of the Comptroller of the Currency under the general direction of the Secretary of the Treasury. The Secretary of the Treasury may not delay or prevent the issuance of any rule or the promulgation of any regulation by the Comptroller of the Currency, and may not intervene in any matter or proceeding before the Comptroller of the Currency (including agency enforcement actions), unless otherwise specifically provided by law.
2. **Additional Authority.** The Comptroller of the Currency shall have the same authority with respect to functions

transferred to the Comptroller of the Currency under the Enhancing Financial Institution Safety and Soundness Act of 2010 as was vested in the Director of the Office of Thrift Supervision on the transfer date, as defined in section 311 of that Act.

[12 USC 1. As reenacted without change by act of June 3, 1922 (42 Stat. 621); and amended by acts of May 20, 1966 (80 Stat. 161), Sept. 23, 1994 (108 Stat. 2232), and July 21, 2010 (124 Stat. 1523).]

Back to Top

9. Branch Federal Reserve bank buildings

No Federal Reserve bank may authorize the acquisition or construction of any branch building, or enter into any contract or other obligation for the acquisition or construction of any branch building, without the approval of the Board.

[12 USC 522. As added by act of June 3, 1922 (42 Stat. 622); and amended by acts of Feb. 6, 1923 (42 Stat. 1223); July 30, 1947 (61 Stat. 520); May 29, 1953 (67 Stat. 41); Aug. 31, 1962 (76 Stat. 418); Oct. 28, 1974 (88 Stat. 1505); and Oct. 24, 1992 (106 Stat. 3144).]

Back to Top

10. Record of open market and other policies

The Board of Governors of the Federal Reserve System shall keep a complete record of the action taken by the Board and by the Federal Open Market Committee upon all questions of policy relating to open-market operations and shall record therein the votes taken in connection with the determination of open-market policies and the reasons underlying the action of the Board and the Committee in each instance. The Board shall keep a similar record with respect to all questions of policy determined by the Board, and shall include in its annual report to the Congress a full account of the action so taken during the preceding year with respect to open-market policies and operations and with respect to the policies determined by it and shall include in such report a copy of the records required to be kept under the provisions of this paragraph.

[12 USC 247a. As added by act of Aug. 23, 1935 (49 Stat. 705).]

Back to Top

12. Appearances before Congress*

The Vice Chairman for Supervision shall appear before the Committee on Banking, Housing, and Urban Affairs of the Senate and the Committee on Financial Services of the House of Representatives and at semi-annual hearings regarding the efforts, activities, objectives, and plans of the Board with respect to the conduct of supervision and regulation of depository institution holding companies and other financial firms supervised by the Board.

[12 USC 247b. As added by act of July 21, 2010 (124 Stat. 2126).]

* The act of July 21, 2010, added paragraph 12 without adding paragraph 11.

Government Performance and Results Act Annual Performance Report 2011

Print

Mission, Values, and Goals of the Board of Governors

Mission

The mission of the Board is to foster the stability, integrity, and efficiency of the nation's monetary, financial, and payment systems so as to promote optimal macroeconomic performance.

Back to section top

Values

The following values of the Board guide its organizational decisions and its employees' actions.

- **Public interest.** In its actions and policies, the Board seeks to promote the public interest. It is accountable and responsive to the general public, the U.S. government, and the financial community.
- **Integrity.** The Board adheres to the highest standards of integrity in its dealings with the public, the financial community, and its employees.
- **Excellence.** The conduct of monetary policy, responsibility for bank supervision, and maintenance of the payment system demand high-quality analysis; high performance standards; and a secure, robust infrastructure. The pursuit of excellence drives the Board's policies concerning recruitment, selection, and retention of Board employees.
- **Efficiency and effectiveness.** In carrying out its functions, the Board is continually aware that its operations are supported primarily by public funds, and it recognizes its obligation to manage resources efficiently and effectively.
- **Independence of views.** The Board values the diversity of its employees, input from a variety of sources, and the independent professional judgment that is fostered by the System's highly valued regional structure. It relies on strong teamwork to mold independent viewpoints into coherent, effective policies.

Back to section top

Strategic Goals

The Board has six primary strategic goals with interrelated and mutually reinforcing elements:

conduct monetary policy that promotes the achievement of the Federal Reserve's statutory objectives of maximum employment and stable prices

promote a safe, sound, competitive, and accessible banking system and stable financial markets

administer federal consumer financial protection laws that fall within the Board's statutory authority, including those designed to encourage regulated financial institutions to help meet the credit needs of their local communities

foster the integrity, efficiency, and accessibility of U.S. payment and settlement systems

provide oversight of the Reserve Banks

foster the integrity, efficiency, and effectiveness of Board programs and operations

Back to section top

Role of Strategic Planning

Unlike most other government agencies, the Board's budget is not subject to the congressional appropriations process or to review by the Administration through the Office of Management and Budget. Rather, the Board establishes its own budget formulation procedures, conducts strategic planning to identify changes to its critical activities and the proper amount and allocation of resources to support its mission, and provides various reports to the Congress.

The Board, like the framers of the Federal Reserve Act, considers its budgetary independence directly relevant to independence in managing monetary policy. The Board believes that to maintain budgetary independence, it must demonstrate effective and efficient use of its financial resources. Resource management begins with a clear mission statement, identification of goals, a review of factors that might affect the long-term attainment of these goals, and consideration of possible responses to those factors. By establishing objectives to attain its goals and by identifying the resources needed to accomplish them, the Board develops a budget necessary to implement its strategic plan.

Strategic planning is a critical factor in ensuring the long-term effectiveness of Board operations and in minimizing its costs. Effectiveness is improved through timely identification of threats and through efforts to improve operational efficiency. Efficiency is increased by early identification of issues and timely responses.

As technological and other changes evolve and accelerate, planning is essential to the effective and efficient conduct of Board operations. A continuing challenge to government agencies in this regard is identifying the appropriate measures of performance. The Board's strategic planning effort recognizes the key distinctions between government and private-sector strategic planning efforts and measurement of those efforts.

Private-sector planning often relies on measures of cost and revenue derived from prices determined in competitive markets; the results of that planning are reflected in the ability of the private entity to prosper over time. The government does not have direct competition in certain areas and has a monopoly in others (conducting monetary policy, for example); establishing a comparable metric to costs and prices is therefore extraordinarily difficult. Moreover, the results are judged relative to public policy objectives embodied in law, which often are not readily measurable. The Board seeks to accomplish its mission effectively while creating the efficiencies that come from strategic planning, recognizing that analogies to the private sector are just that. The Board's central planning objective is oriented toward achieving efficiency and effectiveness specific to the functions it serves.

Back to section top

Interagency Coordination

The Federal Reserve works closely with other regulators, the Congress, and the Administration to ensure that its responsibilities are carried out in a manner that best protects the stability of the nation's financial system and strengthens the U.S. economy. Following are some highlights of the Board's interagency coordination efforts.

In this Section:

Federal Financial Institutions Examination Council (FFIEC)

Other Interagency Efforts

To promote uniformity in the supervision of financial institutions by the federal regulatory agencies, the Board participates in the FFIEC, a formal interagency body empowered to prescribe uniform principles, standards, and report forms for the federal examination of financial institutions and to make recommendations to the federal supervisory agencies. The FFIEC is composed of a Board governor, the Comptroller of the Currency, the director of the CFPB, the chairman of the Federal Deposit Insurance Corporation (FDIC), the chairman of the National Credit Union Administration (NCUA), and the chairman of the State Liaison Committee, representing state banking supervisors.

Financial Stability Oversight Council (FSOC)

The FSOC, which was established by the Dodd-Frank Act, is charged with a number of important duties, including monitoring and identifying emerging risks to financial stability across the entire financial system, identifying potential regulatory gaps, and coordinating financial regulatory agencies' responses to potential systemic risks. The FSOC is composed of the Secretary of the U.S. Department of the Treasury (Treasury) (serves as chairperson of the FSOC); the Chairman of the Federal Reserve Board; the heads of the Commodity Futures Trading Commission, CFPB, FDIC, Federal Housing Finance Agency, NCUA, Office of the Comptroller of the Currency (OCC), Securities and Exchange Commission (SEC); and an independent member with insurance expertise, appointed by the President and confirmed by the Senate.

Other Interagency Efforts

In addition to participating in the FFIEC and FSOC, the Board also works bilaterally with federal agencies to coordinate key initiatives, such as the Board's implementation efforts under the Dodd-Frank Act. For example, shortly after the Dodd-Frank Act was enacted in July 2010, the Board developed a transition team, headed by a Board governor, to provide technical assistance to Treasury in setting up the functions of the CFPB.[4] The Board also worked with the Office of Thrift Supervision (OTS) to develop comprehensive plans relating to the transfer of the supervisory authority of the OTS for savings associations and their parent holding companies.[5] The Board will continue to work closely and cooperatively with other federal agencies to develop several joint rules required under the Dodd-Frank Act.

Purposes and Functions is published under the direction of the staff Publications Committee. It is assisted by the Publications Department, under the direction of Lucretia M. Boyer.

Preface

This is the ninth edition of The Federal Reserve System: Purposes and Functions. *It has been revised by staff members of the Federal Reserve Board to reflect the changes that have taken place in the monetary, regulatory, and other policy areas since publication of the eighth edition in 1994. It incorporates major changes in the law and in the structure of the financial system that have occurred over the past decade.*

The Board's Publications Committee had overall responsibility for the preparation of this edition. Major contributions were made by the following:

Division of Research and Statistics
Thomas D. Simpson

Division of Monetary Affairs
Cheryl L. Edwards, William R. Nelson, Seth B. Carpenter, and Selva Demiralp

Division of International Finance
Joseph E. Gagnon

Division of Banking Supervision and Regulation
Richard Spillenkothen, Virginia M. Gibbs, and Greg Feldberg

Division of Consumer and Community Affairs
Jeanne Hogarth, Adrienne Hurt, Terri Johnsen, Elizabeth Eurgubian, Yvonne Cooper, and Tracy Anderson

Division of Reserve Bank Operations and Payment Systems
Jeffrey C. Marquardt and Theresa A. Trimble

Legal Division
Kieran Fallon, Joshua H. Kaplan, Amanda Allexon, and Heatherun Allison

Office of Board Members
Rose Pianalto, Diana Lahm, Anita Bennett, and Britt Leckman

Contents

1 Overview of the Federal Reserve System

The Federal Reserve System is the central bank of the United States. It was founded by Congress in 1913 to provide the nation with a safer, more flexible, and more stable monetary and financial system. Over the years, its role in banking and the economy has expanded.

Today, the Federal Reserve's duties fall into four general areas:

- conducting the nation's monetary policy by influencing the monetary and credit conditions in the economy in pursuit of maximum employment, stable prices, and moderate long-term interest rates
- supervising and regulating banking institutions to ensure the safety and soundness of the nation's banking and financial system and to protect the credit rights of consumers
- maintaining the stability of the financial system and containing systemic risk that may arise in financial markets
- providing financial services to depository institutions, the U.S. government, and foreign official institutions, including playing a major role in operating the nation's payments system

Most developed countries have a central bank whose functions are broadly similar to those of the Federal Reserve. The oldest, Sweden's Riksbank, has existed since 1668 and the Bank of England since 1694. Napoleon I established the Banque de France in 1800, and the Bank of Canada began operations in 1935. The German Bundesbank was reestablished after World War II and is loosely modeled on the Federal Reserve. More recently, some functions of the Banque de France and the Bundesbank have been assumed by the European Central Bank, formed in 1998.

Background

During the nineteenth century and the beginning of the twentieth century, financial panics plagued the nation, leading to bank failures and business bankruptcies that severely disrupted the economy. The failure of the nation's banking system to effectively provide funding to troubled depository institutions contributed significantly to the economy's vulnerability to financial panics. Short-term credit is an important source of liquidity when a bank experiences unexpected and widespread withdrawals during a financial panic. A particularly severe crisis in 1907 prompted

Congress to establish the National Monetary Commission, which put forth proposals to create an institution that would help prevent and contain financial disruptions of this kind. After considerable debate, Congress passed the Federal Reserve Act "to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes." President Woodrow Wilson signed the act into law on December 23, 1913.

HOME VIEWS OF CURRENCY ACT

FOUR PENS USED BY PRESIDENT

President Wilson signed the Federal Reserve Act on December 23, 1913.

Soon after the creation of the Federal Reserve, it became clear that the act had broader implications for national economic and financial policy. As time has passed, further legislation has clarified and supplemented the original purposes. Key laws affecting the Federal Reserve have been the Banking Act of 1935; the Employment Act of 1946; the Bank Holding Company Act of 1956 and the amendments of 1970; the International Banking Act of 1978; the Full Employment and Balanced Growth Act of 1978; the Depository Institutions Deregulation and Monetary Control Act of 1980; the Financial Institutions Reform, Recovery, and Enforcement Act of 1989; the Federal Deposit Insurance Corporation Improvement Act of 1991; and the Gramm-Leach-Bliley Act of 1999. Congress has also adopted legislation defining the primary objectives of national economic policy, including the Employment Act of 1946; the Federal Reserve Reform Act of 1977; and the Full Employment and Balanced Growth Act of 1978, which is sometimes called the Humphrey-Hawkins Act, after its original sponsors. These objectives include economic growth in line with the economy's potential to expand; a high level of employment; stable prices (that is, stability in the purchasing power of the dollar); and moderate long-term interest rates.

The Federal Reserve System is considered to be an independent central bank because its decisions do not have to be ratified by the President or

anyone else in the executive branch of government. The System is, however, subject to oversight by the U.S. Congress. The Federal Reserve must work within the framework of the overall objectives of economic and financial policy established by the government; therefore, the description of the System as "independent within the government" is more accurate.

Structure of the System

Congress designed the structure of the Federal Reserve System to give it a broad perspective on the economy and on economic activity in all parts of the nation. It is a federal system, composed of a central, governmental agency—the Board of Governors—in Washington, D.C., and twelve regional Federal Reserve Banks. The Board and the Reserve Banks share responsibility for supervising and regulating certain financial institutions and activities, for providing banking services to depository institutions and the federal government, and for ensuring that consumers receive adequate information and fair treatment in their business with the banking system.

The Federal Reserve must work within the framework of the overall objectives of economic and financial policy established by the government.

A major component of the System is the Federal Open Market Committee (FOMC), which is made up of the members of the Board of Governors, the president of the Federal Reserve Bank of New York, and presidents of four other Federal Reserve Banks, who serve on a rotating basis. The FOMC oversees open market operations, which is the main tool used by the Federal Reserve to influence overall monetary and credit conditions. These operations are described in greater detail in chapter 3.

The Federal Reserve implements monetary policy through its control over the federal funds rate—the rate at which depository institutions trade balances at the Federal Reserve. It exercises this control by influencing the demand for and supply of these balances through the following means:

- Open market operations—the purchase or sale of securities, primarily U.S. Treasury securities, in the open market to influence the level of balances that depository institutions hold at the Federal Reserve Banks
- Reserve requirements—requirements regarding the percentage of certain deposits that depository institutions must hold in reserve in the form of cash or in an account at a Federal Reserve Bank
- Contractual clearing balances—an amount that a depository institution agrees to hold at its Federal Reserve Bank in addition to any required reserve balance
- Discount window lending—extensions of credit to depository institutions made through the primary, secondary, or seasonal lending programs

Two other groups play roles in the functioning of the Federal Reserve Sys-

tem: depository institutions, through which monetary policy operates, and advisory committees, which make recommendations to the Board of Governors and to the Reserve Banks regarding the System's responsibilities.

Board of Governors

The Board of Governors of the Federal Reserve System is a federal government agency. The Board is composed of seven members, who are appointed by the President of the United States and confirmed by the U.S. Senate. The full term of a Board member is fourteen years, and the appointments are staggered so that one term expires on January 31 of each even-numbered year. After serving a full term, a Board member may not be reappointed. If a member leaves the Board before his or her term expires, however, the person appointed and confirmed to serve the remainder of the term may later be reappointed to a full term.

The first Federal Reserve Board, 1914

The Chairman and the Vice Chairman of the Board are also appointed by the President and confirmed by the Senate. The nominees to these posts must already be members of the Board or must be simultaneously appointed to the Board. The terms for these positions are four years.

The Board of Governors is supported by a staff in Washington, D.C., numbering about 1,800 as of 2004. The Board's responsibilities require thorough analysis of domestic and international financial and economic developments. The Board carries out those responsibilities in conjunction with other components of the Federal Reserve System. The Board of Governors also supervises and regulates the operations of the Federal Reserve Banks, exercises broad responsibility in the nation's payments system, and administers most of the nation's laws regarding consumer credit protection.

Policy regarding open market operations is established by the FOMC. However, the Board of Governors has sole authority over changes in reserve requirements, and it must approve any change in the discount rate initiated by a Federal Reserve Bank.

The Board also plays a major role in the supervision and regulation of the U.S. banking system. It has supervisory responsibilities for state-chartered banks that are members of the Federal Reserve System, bank holding companies (companies that control banks), the foreign activities of member banks, the U.S. activities of foreign banks, and Edge Act and agreement corporations (limited-purpose institutions that engage in a foreign banking business). The Board and, under delegated authority, the Federal

Reserve Banks, supervise approximately 900 state member banks and 5,000 bank holding companies. Other federal agencies also serve as the primary federal supervisors of commercial banks; the Office of the Comptroller of the Currency supervises national banks, and the Federal Deposit Insurance Corporation supervises state banks that are not members of the Federal Reserve System.

Some regulations issued by the Board apply to the entire banking industry, whereas others apply only to member banks, that is, state banks that have chosen to join the Federal Reserve System and national banks, which by law must be members of the System. The Board also issues regulations to carry out major federal laws governing consumer credit protection, such as the Truth in Lending, Equal Credit Opportunity, and Home Mortgage Disclosure Acts. Many of these consumer protection regulations apply to various lenders outside the banking industry as well as to banks.

Members of the Board of Governors are in continual contact with other policy makers in government. They frequently testify before congressional committees on the economy, monetary policy, banking supervision and regulation, consumer credit protection, financial markets, and other matters. For instance, as required by the Federal Reserve Act, the Chairman of the Board of Governors testifies before the Senate Committee on Banking, Housing, and Urban Affairs and the House Committee on Financial Services on or about February 20 and July 20 of each year. The Chairman's testimony addresses the efforts, activities, objectives, and plans of the Board of Governors and the Federal Open Market Committee with respect to the conduct of monetary policy, as well as economic developments in the United States and the prospects for the future. Concurrently, the Board of Governors must submit a report on these same issues to the House and Senate committees before which the Chairman testifies.

The Board has regular contact with members of the President's Council of Economic Advisers and other key economic officials. The Chairman also meets from time to time with the President of the United States and has regular meetings with the Secretary of the Treasury.

The Chairman has formal responsibilities in the international arena as well. For example, he is the alternate U.S. member of the board of governors of the International Monetary Fund, a member of the board of the Bank for International Settlements (BIS), and a member, along with the heads of other relevant U.S. agencies and departments, of the National Advisory Council on International Monetary and Financial Policies. He is also a member of U.S. delegations to key international meetings, such as those of the finance ministers and central bank governors of the seven largest industrial countries—referred to as the Group of Seven, or G-7. He, other Board members, and Board staff members share many inter-

national responsibilities, including representing the Federal Reserve at meetings at the BIS in Basel, Switzerland, and at the Organisation for Economic Co-operation and Development in Paris, France.

One member of the Board of Governors serves as the System's representative to the Federal Financial Institutions Examination Council (FFIEC), which is responsible for coordinating, at the federal level, examinations of depository institutions and related policies. The FFIEC has representatives from the Federal Deposit Insurance Corporation, the National Credit Union Administration, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision, as well.

The Board publishes detailed statistics and other information about the System's activities and the economy in publications such as the quarterly *Federal Reserve Bulletin*, the monthly *Statistical Supplement*, and separate statistical releases. Through the *Federal Reserve Regulatory Service*, it provides materials relating to its regulatory and supervisory functions. Extensive information about the Board of Governors is available on the Board's web site (www.federalreserve.gov), including the testimony and speeches of Board members; actions on banking and consumer regulations and other matters; and statistics and research papers concerning economic, banking, and financial matters.

The Reserve Banks are the operating arms of the central banking system.

The Board is audited annually by a major public accounting firm. In addition, the Government Accountability Office (GAO) generally exercises its authority to conduct a number of reviews each year to look at specific aspects of the Federal Reserve's activities. The audit report of the public accounting firm and a complete list of GAO reviews under way are available in the Board's *Annual Report*, which is sent to Congress during the second quarter of each calendar year. Monetary policy is exempt from audit by the GAO because it is monitored directly by Congress through written reports, including the semiannual *Monetary Policy Report to the Congress*, prepared by the Board of Governors.

Federal Reserve Banks

A network of twelve Federal Reserve Banks and their Branches (twenty-five as of 2004) carries out a variety of System functions, including operating a nationwide payments system, distributing the nation's currency and coin, supervising and regulating member banks and bank holding companies, and serving as banker for the U.S. Treasury. The twelve Reserve Banks are each responsible for a particular geographic area or district of the United States. Each Reserve District is identified by a number and a letter (see the list of District offices on page 7). Besides carrying out functions for the System as a whole, such as administering nationwide banking and credit policies, each Reserve Bank acts as a depository for the banks in its own District and fulfills other District responsibilities. Notes

The Federal Reserve officially identifies Districts by number and by Reserve Bank city (shown on both pages) as well as by letter (shown on the facing page).

In the 12th District, the Seattle Branch serves Alaska and the San Francisco Bank serves Hawaii.

The New York Bank serves the Commonwealth of Puerto Rico and the U.S. Virgin Islands; the San Francisco Bank serves American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands.

The Board of Governors revised the Branch boundaries of the System most recently in February 1996.

offices and boundaries of the Federal Reserve Districts are shown on the maps on pages 8 and 9.

The Board of Governors has broad oversight responsibility for the operations and activities of the Federal Reserve Banks and their Branches. This authority includes oversight of the Reserve Banks' services to banks and other depository institutions and of their examination and supervision of various banking institutions. Each Federal Reserve Bank must submit its annual budget to the Board of Governors for approval. Particular types of expenditures—such as those for construction or major alterations of Reserve Bank buildings and for the salaries of Reserve Bank presidents and first vice presidents—also are subject to specific Board approval.

Congress chartered the Federal Reserve Banks for a public purpose. The Reserve Banks are the operating arms of the central banking system, and they combine both public and private elements in their makeup and organization. As part of the Federal Reserve System, the Banks are subject to oversight by Congress.

Each Reserve Bank has its own board of nine directors chosen from outside the Bank as provided by law. The boards of the Reserve Banks are intended to represent a cross-section of banking, commercial, agricultural, industrial, and public interests within the Federal Reserve District. Three directors, designated Class A directors, represent commercial banks that are members of the Federal Reserve System. Three Class B and three Class C directors represent the public. The member commercial banks in each District elect the Class A and Class B directors. The Board of Governors appoints the Class C directors to their posts. From the Class C directors, the Board of Governors selects one person as chairman and another as deputy chairman. No Class B or Class C director may be an officer, director, or employee of a bank or a bank holding company. No Class C director may own stock in a bank or a bank holding company. The directors in turn nominate a president and first vice president of the Reserve Bank, whose selection is subject to approval by the Board of Governors. Each Branch of a Reserve Bank has its own board of directors composed of at least three and no more than seven members. A majority of these directors are appointed by the Branch's Reserve Bank; the others are appointed by the Board of Governors.

Boards of directors of the Reserve Banks provide the Federal Reserve System with a wealth of information on economic conditions in virtually every corner of the nation. This information is used by the FOMC and the Board of Governors in reaching major decisions about monetary policy. Information from directors and other sources gathered by the Reserve Banks is also shared with the public in a special report—informally called the Beige Book—which is issued about two weeks

before each meeting of the FOMC. In addition, every two weeks, the board of each Bank must recommend interest rates for its Bank's discount window lending, subject to review and determination by the Board of Governors.

The income of the Federal Reserve System is derived primarily from the interest on U.S. government securities that it has acquired through open market operations. Other major sources of income are the interest on foreign currency investments held by the System; interest on loans to depository institutions; and fees received for services provided to depository institutions, such as check clearing, funds transfers, and automated clearinghouse operations.

After it pays its expenses, the Federal Reserve turns the rest of its earnings over to the U.S. Treasury. About 95 percent of the Reserve Banks' net earnings have been paid into the Treasury since the Federal Reserve System began operations in 1914. (Income and expenses of the Federal Reserve Banks from 1914 to the present are included in the *Annual Report* of the Board of Governors.) In 2003, the Federal Reserve paid approximately $22 billion to the Treasury.

After it pays its expenses, the Federal Reserve turns the rest of its earnings over to the U.S. Treasury.

The Board of Governors contracts with an accounting firm to conduct an audit of the Reserve Banks every year, and Board staff periodically reviews the operations of the Reserve Banks in key functional areas. The audited combined financial statements of the Reserve Banks are published in the Board's *Annual Report.* The Reserve Banks, like the Board, are subject to audit by the GAO, but certain functions, such as transactions with foreign central banks and open market operations, are excluded from the GAO's audit. Each Reserve Bank has an internal auditor who is responsible to the Bank's board of directors.

Federal Open Market Committee

The FOMC is charged under law with overseeing open market operations, the principal tool of national monetary policy. These operations affect the amount of Federal Reserve balances available to depository institutions (see chapter 3), thereby influencing overall monetary and credit conditions. The FOMC also directs operations undertaken by the Federal Reserve in foreign exchange markets.

The FOMC is composed of the seven members of the Board of Governors and five of the twelve Reserve Bank presidents. The president of the Federal Reserve Bank of New York is a permanent member; the other

presidents serve one-year terms on a rotating basis.[1] All the presidents participate in FOMC discussions, contributing to the committee's assessment of the economy and of policy options, but only the five presidents who are committee members vote on policy decisions. The FOMC, under law, determines its own internal organization and by tradition elects the Chairman of the Board of Governors as its chairman and the president of the Federal Reserve Bank of New York as its vice chairman. Formal meetings typically are held eight times each year in Washington, D.C. Telephone consultations and other meetings are held when needed.

The FOMC is composed of the seven members of the Board of Governors and five of the twelve Reserve Bank presidents.

Member Banks

The nation's commercial banks can be divided into three types according to which governmental body charters them and whether or not they are members of the Federal Reserve System. Those chartered by the federal government (through the Office of the Comptroller of the Currency in the Department of the Treasury) are national banks; by law, they are members of the Federal Reserve System. Banks chartered by the states are divided into those that are members of the Federal Reserve System (state member banks) and those that are not (state nonmember banks). State banks are not required to join the Federal Reserve System, but they may elect to become members if they meet the standards set by the Board of Governors. As of March 2004, of the nation's approximately 7,700 commercial banks approximately 2,900 were members of the Federal Reserve System—approximately 2,000 national banks and 900 state banks.

Member banks must subscribe to stock in their regional Federal Reserve Bank in an amount equal to 6 percent of their capital and surplus, half of which must be paid in while the other half is subject to call by the Board of Governors. The holding of this stock, however, does not carry with it the control and financial interest conveyed to holders of common stock in for-profit organizations. It is merely a legal obligation of Federal Reserve membership, and the stock may not be sold or pledged as collateral for loans. Member banks receive a 6 percent dividend annually on their stock, as specified by law, and vote for the Class A and Class B directors of the Reserve Bank. Stock in Federal Reserve Banks is not available for purchase by individuals or entities other than member banks.

1. The rotating seats are filled from the following four groups of Banks, one Bank president from each group: Boston, Philadelphia, and Richmond; Cleveland and Chicago; Atlanta, St. Louis, and Dallas; and Minneapolis, Kansas City, and San Francisco. An alternate for each Reserve Bank president also is elected. This alternate, who must be a president or first vice president of a Reserve Bank, may serve on the FOMC in the absence of the relevant Reserve Bank president.

Advisory Committees

The Federal Reserve System uses advisory committees in carrying out its varied responsibilities. Three of these committees advise the Board of Governors directly:

- ***Federal Advisory Council.*** This council, which is composed of twelve representatives of the banking industry, consults with and advises the Board on all matters within the Board's jurisdiction. It ordinarily meets four times a year, as required by the Federal Reserve Act. These meetings are held in Washington, D.C., customarily on the first Friday of February, May, September, and December, although occasionally the meetings are set for different times to suit the convenience of either the council or the Board. Annually, each Reserve Bank chooses one person to represent its District on the Federal Advisory Committee, and members customarily serve three one-year terms and elect their own officers.
- ***Consumer Advisory Council.*** This council, established in 1976, advises the Board on the exercise of its responsibilities under the Consumer Credit Protection Act and on other matters in the area of consumer financial services. The council's membership represents the interests of consumers, communities, and the financial services industry. Members are appointed by the Board of Governors and serve staggered three-year terms. The council meets three times a year in Washington, D.C., and the meetings are open to the public.
- ***Thrift Institutions Advisory Council.*** After the passage of the Depository Institutions Deregulation and Monetary Control Act of 1980, which extended to thrift institutions the Federal Reserve's reserve requirements and access to the discount window, the Board of Governors established this council to obtain information and views on the special needs and problems of thrift institutions. Unlike the Federal Advisory Council and the Consumer Advisory Council, the Thrift Institutions Advisory Council is not a statutorily mandated body, but it performs a comparable function in providing firsthand advice from representatives of institutions that have an important relationship with the Federal Reserve. The council meets with the Board in Washington, D.C., three times a year. The members are representatives from savings and loan institutions, mutual savings banks, and credit unions. Members are appointed by the Board of Governors and generally serve for two years.

The Federal Reserve Banks also use advisory committees. Of these advisory committees, perhaps the most important are the committees (one for each Reserve Bank) that advise the Banks on matters of agriculture, small business, and labor. Biannually, the Board solicits the views of each of these committees by mail.

2 Monetary Policy and the Economy

The Federal Reserve sets the nation's monetary policy to promote the objectives of maximum employment, stable prices, and moderate long-term interest rates. The challenge for policy makers is that tensions among the goals can arise in the short run and that information about the economy becomes available only with a lag and may be imperfect.

Goals of Monetary Policy

The goals of monetary policy are spelled out in the Federal Reserve Act, which specifies that the Board of Governors and the Federal Open Market Committee should seek "to promote effectively the goals of maximum employment, stable prices, and moderate long-term interest rates." Stable prices in the long run are a precondition for maximum sustainable output growth and employment as well as moderate long-term interest rates. When prices are stable and believed likely to remain so, the prices of goods, services, materials, and labor are undistorted by inflation and serve as clearer signals and guides to the efficient allocation of resources and thus contribute to higher standards of living. Moreover, stable prices foster saving and capital formation, because when the risk of erosion of asset values resulting from inflation—and the need to guard against such losses—are minimized, households are encouraged to save more and businesses are encouraged to invest more.

Although price stability can help achieve maximum sustainable output growth and employment over the longer run, in the short run some tension can exist between the two goals. Often, a slowing of employment is accompanied by lessened pressures on prices, and moving to counter the weakening of the labor market by easing policy does not have adverse inflationary effects. Sometimes, however, upward pressures on prices are developing as output and employment are softening—especially when an adverse supply shock, such as a spike in energy prices, has occurred. Then, an attempt to restrain inflation pressures would compound the weakness in the economy, or an attempt to reverse employment losses would aggravate inflation. In such circumstances, those responsible for monetary policy face a dilemma and must decide whether to focus on defusing price pressures or on cushioning the loss of employment and output. Adding to the difficulty is the possibility that an expectation of

increasing inflation might get built into decisions about prices and wages, thereby adding to inflation inertia and making it more difficult to achieve price stability.

Beyond influencing the level of prices and the level of output in the near term, the Federal Reserve can contribute to financial stability and better economic performance by acting to contain financial disruptions and preventing their spread outside the financial sector. Modern financial systems are highly complex and interdependent and may be vulnerable to widescale systemic disruptions, such as those that can occur during a plunge in stock prices. The Federal Reserve can enhance the financial system's resilience to such shocks through its regulatory policies toward banking institutions and payment systems. If a threatening disturbance develops, the Federal Reserve can also cushion the impact on financial markets and the economy by aggressively and visibly providing liquidity through open market operations or discount window lending.

Depository institutions have accounts at their Reserve Banks, and they actively trade balances held in these accounts in the federal funds market at an interest rate known as the federal funds rate.

How Monetary Policy Affects the Economy

The initial link in the chain between monetary policy and the economy is the market for balances held at the Federal Reserve Banks. Depository institutions have accounts at their Reserve Banks, and they actively trade balances held in these accounts in the federal funds market at an interest rate known as the federal funds rate. The Federal Reserve exercises considerable control over the federal funds rate through its influence over the supply of and demand for balances at the Reserve Banks.

The FOMC sets the federal funds rate at a level it believes will foster financial and monetary conditions consistent with achieving its monetary policy objectives, and it adjusts that target in line with evolving economic developments. A change in the federal funds rate, or even a change in expectations about the future level of the federal funds rate, can set off a chain of events that will affect other short-term interest rates, longer-term interest rates, the foreign exchange value of the dollar, and stock prices. In turn, changes in these variables will affect households' and businesses' spending decisions, thereby affecting growth in aggregate demand and the economy.

Short-term interest rates, such as those on Treasury bills and commercial paper, are affected not only by the current level of the federal funds rate but also by expectations about the overnight federal funds rate over the duration of the short-term contract. As a result, short-term interest rates could decline if the Federal Reserve surprised market participants with a reduction in the federal funds rate, or if unfolding events convinced participants that the Federal Reserve was going to be holding the federal funds rate lower than had been anticipated. Similarly, short-term inter-

est rates would increase if the Federal Reserve surprised market participants by announcing an increase in the federal funds rate, or if some event prompted market participants to believe that the Federal Reserve was going to be holding the federal funds rate at higher levels than had been anticipated.

It is for these reasons that market participants closely follow data releases and statements by Federal Reserve officials, watching for clues that the economy and prices are on a different trajectory than had been thought, which would have implications for the stance of monetary policy.

Changes in short-term interest rates will influence long-term interest rates, such as those on Treasury notes, corporate bonds, fixed-rate mortgages, and auto and other consumer loans. Long-term rates are affected not only by changes in current short-term rates but also by expectations about short-term rates over the rest of the life of the long-term contract. Generally, economic news or statements by officials will have a greater impact on short-term interest rates than on longer rates because they typically have a bearing on the course of the economy and monetary policy over a shorter period; however, the impact on long rates can also be considerable because the news has clear implications for the expected course of short-term rates over a long period.

Lower interest rates in the United States will lead to a decline in the exchange value of the dollar, prompting an increase in the price of imports and a decline in the price of exports.

Changes in long-term interest rates also affect stock prices, which can have a pronounced effect on household wealth. Investors try to keep their investment returns on stocks in line with the return on bonds, after allowing for the greater riskiness of stocks. For example, if long-term interest rates decline, then, all else being equal, returns on stocks will exceed returns on bonds and encourage investors to purchase stocks and bid up stock prices to the point at which expected risk-adjusted returns on stocks are once again aligned with returns on bonds. Moreover, lower interest rates may convince investors that the economy will be stronger and profits higher in the near future, which should further lift equity prices.

Furthermore, changes in monetary policy affect the exchange value of the dollar on currency markets. For example, if interest rates rise in the United States, yields on dollar assets will look more favorable, which will lead to bidding up of the dollar on foreign exchange markets. The higher dollar will lower the cost of imports to U.S. residents and raise the price of U.S. exports to those living outside the United States. Conversely, lower interest rates in the United States will lead to a decline in the exchange value of the dollar, prompting an increase in the price of imports and a decline in the price of exports.

Changes in the value of financial assets, whether the result of an actual or expected change in monetary policy, will affect a wide range of spending decisions. For example, a drop in interest rates, a lower exchange value of

the dollar, and higher stock prices will stimulate various types of spending. Investment projects that businesses believed would be only marginally profitable will become more attractive with lower financing costs. Lower consumer loan rates will elicit greater demand for consumer goods, especially bigger-ticket items such as motor vehicles. Lower mortgage rates will make housing more affordable and lead to more home purchases. They will also encourage mortgage refinancing, which will reduce ongoing housing costs and enable households to purchase other goods. When refinancing, some homeowners may withdraw a portion of their home equity to pay for other things, such as a motor vehicle, other consumer goods, or a long-desired vacation trip. Higher stock prices can also add to household wealth and to the ability to make purchases that had previously seemed beyond reach. The reduction in the value of the dollar associated with a drop in interest rates will tend to boost U.S. exports by lowering the cost of U.S. goods and services in foreign markets. It will also make imported goods more expensive, which will encourage businesses and households to purchase domestically produced goods instead. All of these responses will strengthen growth in aggregate demand. A tightening of monetary policy will have the opposite effect on spending and will moderate growth of aggregate demand.

If the economy slows and employment softens, policy makers will be inclined to ease monetary policy to stimulate aggregate demand.

If the economy slows and employment softens, policy makers will be inclined to ease monetary policy to stimulate aggregate demand. When growth in aggregate demand is boosted above growth in the economy's potential to produce, slack in the economy will be absorbed and employment will return to a more sustainable path. In contrast, if the economy is showing signs of overheating and inflation pressures are building, the Federal Reserve will be inclined to counter these pressures by tightening monetary policy—to bring growth in aggregate demand below that of the economy's potential to produce—for as long as necessary to defuse the inflationary pressures and put the economy on a path to sustainable expansion.

While these policy choices seem reasonably straightforward, monetary policy makers routinely face certain notable uncertainties. First, the actual position of the economy and growth in aggregate demand at any point in time are only partially known, as key information on spending, production, and prices becomes available only with a lag. Therefore, policy makers must rely on estimates of these economic variables when assessing the appropriate course of policy, aware that they could act on the basis of misleading information. Second, exactly how a given adjustment in the federal funds rate will affect growth in aggregate demand—in terms of both the overall magnitude and the timing of its impact—is never certain. Economic models can provide rules of thumb for how the economy will respond, but these rules of thumb are subject to statistical error. Third, the growth in aggregate supply, often called the growth in potential

output, cannot be measured with certainty. Key here is the growth of the labor force and associated labor input, as well as underlying growth in labor productivity. Growth in labor input typically can be measured with more accuracy than underlying productivity; for some time, growth in labor input has tended to be around the growth in the overall population of 1 percentage point per year. However, underlying productivity growth has varied considerably over recent decades, from approximately 1 percent or so per year to somewhere in the neighborhood of 3 percent or even higher, getting a major boost during the mid- and late 1990s from applications of information technology and advanced management systems. If, for example, productivity growth is 2 percent per year, then growth in aggregate supply would be the sum of this amount and labor input growth of 1 percent—that is, 3 percent per year. In which case, growth in aggregate demand in excess of 3 percent per year would result in a pickup in growth in employment in excess of that of the labor force and a reduction in unemployment. In contrast, growth in aggregate demand below 3 percent would result in a softening of the labor market and, in time, a reduction in inflationary pressures.

If the economy is showing signs of overheating and inflation pressures are building, the Federal Reserve will be inclined to counter these pressures by tightening monetary policy.

Limitations of Monetary Policy

Monetary policy is not the only force acting on output, employment, and prices. Many other factors affect aggregate demand and aggregate supply and, consequently, the economic position of households and businesses. Some of these factors can be anticipated and built into spending and other economic decisions, and some come as a surprise. On the demand side, the government influences the economy through changes in taxes and spending programs, which typically receive a lot of public attention and are therefore anticipated. For example, the effect of a tax cut may precede its actual implementation as businesses and households alter their spending in anticipation of the lower taxes. Also, forward-looking financial markets may build such fiscal events into the level and structure of interest rates, so that a stimulative measure, such as a tax cut, would tend to raise the level of interest rates even before the tax cut becomes effective, which will have a restraining effect on demand and the economy before the fiscal stimulus is actually applied.

Other changes in aggregate demand and supply can be totally unpredictable and influence the economy in unforeseen ways. Examples of such shocks on the demand side are shifts in consumer and business confidence, and changes in the lending posture of commercial banks and other creditors. Lessened confidence regarding the outlook for the economy and labor market or more restrictive lending conditions tend to curb business and household spending. On the supply side, natural disasters, disruptions in the oil market that reduce supply, agricultural losses, and slowdowns in

productivity growth are examples of adverse supply shocks. Such shocks tend to raise prices and reduce output. Monetary policy can attempt to counter the loss of output or the higher prices but cannot fully offset both.

In practice, as previously noted, monetary policy makers do not have up-to-the-minute information on the state of the economy and prices. Useful information is limited not only by lags in the construction and availability of key data but also by later revisions, which can alter the picture considerably. Therefore, although monetary policy makers will eventually be able to offset the effects that adverse demand shocks have on the economy, it will be some time before the shock is fully recognized and—given the lag between a policy action and the effect of the action on aggregate demand—an even longer time before it is countered. Add to this the uncertainty about how the economy will respond to an easing or tightening of policy of a given magnitude, and it is not hard to see how the economy and prices can depart from a desired path for a period of time.

The statutory goals of maximum employment and stable prices are easier to achieve if the public understands those goals and believes that the Federal Reserve will take effective measures to achieve them.

The statutory goals of maximum employment and stable prices are easier to achieve if the public understands those goals and believes that the Federal Reserve will take effective measures to achieve them. For example, if the Federal Reserve responds to a negative demand shock to the economy with an aggressive and transparent easing of policy, businesses and consumers may believe that these actions will restore the economy to full employment; consequently, they may be less inclined to pull back on spending because of concern that demand may not be strong enough to warrant new business investment or that their job prospects may not warrant the purchase of big-ticket household goods. Similarly, a credible anti-inflation policy will lead businesses and households to expect less wage and price inflation; workers then will not feel the same need to protect themselves by demanding large wage increases, and businesses will be less aggressive in raising their prices, for fear of losing sales and profits. As a result, inflation will come down more rapidly, in keeping with the policy-related slowing in growth of aggregate demand, and will give rise to less slack in product and resource markets than if workers and businesses continued to act as if inflation were not going to slow.

Guides to Monetary Policy

Although the goals of monetary policy are clearly spelled out in law, the means to achieve those goals are not. Changes in the FOMC's target federal funds rate take some time to affect the economy and prices, and it is often far from obvious whether a selected level of the federal funds rate will achieve those goals. For this reason, some have suggested that the Federal Reserve pay close attention to guides that are intermediate between its operational target—the federal funds rate—and the economy.

Among those frequently mentioned are monetary aggregates, the level and structure of interest rates, the so-called Taylor rule (discussed on page 23), and foreign exchange rates. Some suggest that one of these guides be selected as an intermediate target—that is, that a specific formal objective be set for the intermediate target and pursued aggressively with the policy instruments. Others suggest that these guides be used more as indictors, to be monitored regularly; in other words, the Federal Reserve could establish a reference path for the intermediate variable that it thought to be consistent with achieving the final goals of monetary policy, and actual outcomes departing appreciably from that path would be seen as suggesting that the economy might be drifting off course and that a policy adjustment might be necessary.

Monetary Aggregates

Monetary aggregates have at times been advocated as guides to monetary policy on the grounds that they may have a fairly stable relationship with the economy and can be controlled to a reasonable extent by the central bank, either through control over the supply of balances at the Federal Reserve or the federal funds rate. An increase in the federal funds rate (and other short-term interest rates), for example, will reduce the attractiveness of holding money balances relative to now higher-yielding money market instruments and thereby reduce the amount of money demanded and slow growth of the money stock. There are a few measures of the money stock—ranging from the transactions-dominated M1 to the broader M2 and M3 measures, which include other liquid balances—and these aggregates have different behaviors. (See page 22 for a description of the composition of the monetary aggregates.)

Ordinarily, the rate of money growth sought over time would be equal to the rate of nominal GDP growth implied by the objective for inflation and the objective for growth in real GDP. For example, if the objective for inflation is 1 percent in a given year and the rate of growth in real GDP associated with achieving maximum employment is 3 percent, then the guideline for growth in the money stock would be 4 percent. However, the relation between the growth in money and the growth in nominal GDP, known as "velocity," can vary, often unpredictably, and this uncertainty can add to difficulties in using monetary aggregates as a guide to policy. Indeed, in the United States and many other countries with advanced financial systems over recent decades, considerable slippage and greater complexity in the relationship between money and GDP have made it more difficult to use monetary aggregates as guides to policy. In addition, the narrow and broader aggregates often give very different signals about the need to adjust policy. Accordingly, monetary aggregates have taken on less importance in policy making over time.

The Components of the Monetary Aggregates

The Federal Reserve publishes data on three monetary aggregates. The first, M1, is made up of types of money commonly used for payment, basically currency and checking deposits. The second, M2, includes M1 plus balances that generally are similar to transaction accounts and that, for the most part, can be converted fairly readily to M1 with little or no loss of principal. The M2 measure is thought to be held primarily by households. The third aggregate, M3, includes M2 plus certain accounts that are held by entities other than individuals and are issued by banks and thrift institutions to augment M2-type balances in meeting credit demands; it also includes balances in money market mutual funds held by institutional investors.

The aggregates have had different roles in monetary policy as their reliability as guides has changed. The following details their principal components:

M1 Currency (and traveler's checks)
Demand deposits
NOW and similar interest-earning checking accounts

M2 M1
Savings deposits and money market deposit accounts
Small time deposits[1]
Retail money market mutual fund balances[2]

M3 M2
Large time deposits
Institutional money market mutual fund balances
Repurchase agreements
Eurodollars

1. Time deposits in amounts of less than $100,000, excluding balances in IRA and Keogh accounts at depository institutions.
2. Excludes balances held in IRA and Keogh accounts with money market mutual funds.

Interest Rates

Interest rates have frequently been proposed as a guide to policy, not only because of the role they play in a wide variety of spending decisions but also because information on interest rates is available on a real-time basis. Arguing against giving interest rates the primary role in guiding monetary policy is uncertainty about exactly what level or path of interest rates is consistent with the basic goals of monetary policy. The appropriate level of interest rates will vary with the stance of fiscal policy, changes in the pattern of household and business spending, productivity growth, and economic developments abroad. It can be difficult not only to gauge the strength of these forces but also to translate them into a path for interest rates.

The slope of the yield curve (that is, the difference between the interest rate on longer-term and shorter-term instruments) has also been suggested as a guide to monetary policy. Whereas short-term interest rates are strongly influenced by the current setting of the policy instrument, longer-term interest rates are influenced by expectations of future short-term interest rates and thus by the longer-term effects of monetary policy on inflation and output. For example, a yield curve with a steeply positive slope (that is, longer-term interest rates far above short-term rates) may be a signal that participants in the bond market believe that monetary policy has become too expansive and thus, without a monetary policy correction, more inflationary. Conversely, a yield curve with a downward slope (short-term rates above longer rates) may be an indication that policy is too restrictive, perhaps risking an unwanted loss of output and employment. However, the yield curve is also influenced by other factors, including prospective fiscal policy, developments in foreign exchange markets, and expectations about the future path of monetary policy. Thus, signals from the yield curve must be interpreted carefully.

The Taylor Rule

The "Taylor rule," named after the prominent economist John Taylor, is another guide to assessing the proper stance of monetary policy. It relates the setting of the federal funds rate to the primary objectives of monetary policy—that is, the extent to which inflation may be departing from something approximating price stability and the extent to which output and employment may be departing from their maximum sustainable levels. For example, one version of the rule calls for the federal funds rate to be set equal to the rate thought to be consistent in the long run with the achievement of full employment and price stability plus a component based on the gap between current inflation and the inflation objective less a component based on the shortfall of actual output from the full-employment level. If inflation is picking up, the Taylor rule prescribes

the amount by which the federal funds rate would need to be raised or, if output and employment are weakening, the amount by which it would need to be lowered. The specific parameters of the formula are set to describe actual monetary policy behavior over a period when policy is thought to have been fairly successful in achieving its basic goals.

Although this guide has appeal, it too has shortcomings. The level of short-term interest rates associated with achieving longer-term goals, a key element in the formula, can vary over time in unpredictable ways. Moreover, the current rate of inflation and position of the economy in relation to full employment are not known because of data lags and difficulties in estimating the full-employment level of output, adding another layer of uncertainty about the appropriate setting of policy.

Foreign Exchange Rates

Exchange rate movements are an important channel through which monetary policy affects the economy, and exchange rates tend to respond promptly to a change in the federal funds rate. Moreover, information on exchange rates, like information on interest rates, is available continuously throughout the day.

Interpreting the meaning of movements in exchange rates, however, can be difficult. A decline in the foreign exchange value of the dollar, for example, could indicate that monetary policy has become, or is expected to become, more accommodative, resulting in inflation risks. But exchange rates respond to other influences as well, notably developments abroad; so a weaker dollar on foreign exchange markets could instead reflect higher interest rates abroad, which make other currencies more attractive and have fewer implications for the stance of U.S. monetary policy and the performance of the U.S. economy. Conversely, a strengthening of the dollar on foreign exchange markets could reflect a move to a more restrictive monetary policy in the United States—or expectations of such a move. But it also could reflect expectations of a lower path for interest rates elsewhere or a heightened perception of risk in foreign financial assets relative to U.S. assets.

Some have advocated taking the exchange rate guide a step further and using monetary policy to stabilize the dollar's value in terms of a particular currency or in terms of a basket of currencies. However, there is a great deal of uncertainty about which level of the exchange rate is most consistent with the basic goals of monetary policy, and selecting the wrong rate could lead to a protracted period of deflation and economic slack or to an overheated economy. Also, attempting to stabilize the exchange rate in the face of a disturbance from abroad would short-circuit the cushioning effect that the associated movement in the exchange rate would have on the U.S. economy.

Conclusion

All of the guides to monetary policy discussed here have something to do with the transmission of monetary policy to the economy. All have certain advantages; however, none has shown so consistently close a relationship with the ultimate goals of monetary policy that it can be relied on alone. Consequently, monetary policy makers have tended to use a broad range of indicators—those mentioned above along with many others, including the actual behavior of output and prices—to judge trends in the economy and to assess the stance of monetary policy.

Such an eclectic approach enables the Federal Reserve and other central banks to use all the available information in conducting monetary policy. This tack may be especially important as market structures and economic processes change in ways that reduce the utility of any single indictor. However, a downside to such an approach is the difficulty it poses in communicating the central bank's intentions to the public; the lack of a relatively simple set of procedures may make it difficult for the public to understand the actions of the Federal Reserve and to judge whether those actions are consistent with achieving its statutory goals. This downside risk can be mitigated if the central bank develops a track record of achieving favorable policy outcomes when no single guide to policy has proven reliable.

3 The Implementation of Monetary Policy

The Federal Reserve exercises considerable control over the demand for and supply of balances that depository institutions hold at the Reserve Banks. In so doing, it influences the federal funds rate and, ultimately, employment, output, and prices.

The Federal Reserve implements U.S. monetary policy by affecting conditions in the market for balances that depository institutions hold at the Federal Reserve Banks. The operating objectives or targets that it has used to effect desired conditions in this market have varied over the years. At one time, the FOMC sought to achieve a specific quantity of balances, but now it sets a target for the interest rate at which those balances are traded between depository institutions—the federal funds rate. (See "Operational Approaches over the Years" on page 28.) By conducting open market operations, imposing reserve requirements, permitting depository institutions to hold contractual clearing balances, and extending credit through its discount window facility, the Federal Reserve exercises considerable control over the demand for and supply of Federal Reserve balances and the federal funds rate. Through its control of the federal funds rate, the Federal Reserve is able to foster financial and monetary conditions consistent with its monetary policy objectives.

The Market for Federal Reserve Balances

The Federal Reserve influences the economy through the market for balances that depository institutions maintain in their accounts at Federal Reserve Banks. Depository institutions make and receive payments on behalf of their customers or themselves in these accounts. The end-of-day balances in these accounts are used to meet reserve and other balance requirements. If a depository institution anticipates that it will end the day with a larger balance than it needs, it can reduce that balance in several ways, depending on how long it expects the surplus to persist. For example, if it expects the surplus to be temporary, the institution can lend excess balances in financing markets, such as the market for repurchase agreements or the market for federal funds.

Operational Approaches over the Years

The Federal Reserve can try to achieve a desired quantity of balances at the Federal Reserve Banks or a desired price of those balances (the federal funds rate), but it may not be able to achieve both at once. The greater the emphasis on a quantity objective, the more short-run changes in the demand for balances will influence the federal funds rate. Conversely, the greater the emphasis on a funds-rate objective, the more shifts in demand will influence the quantity of balances at the Federal Reserve. Over the years, the Federal Reserve has used variations of both of these operational approaches.

During most of the 1970s, the Federal Reserve targeted the price of Federal Reserve balances. The FOMC would choose a target federal funds rate that it thought would be consistent with its objective for M1 growth over short intervals of time. The funds-rate target would be raised or lowered if M1 growth significantly exceeded or fell short of the desired rate. At times, large rate movements were needed to bring money growth back in line with the target, but the extent of the necessary policy adjustment was not always gauged accurately. Moreover, there appears to have been some reluctance to permit substantial variation in the funds rate. As a result, the FOMC did not have great success in combating the increase in inflationary pressures that resulted from oil-price shocks and excessive money growth over the decade.

By late 1979, the FOMC recognized that a change in tactics was necessary. In October, the Federal Reserve began to target the quantity of reserves—the sum of balances at the Federal Reserve and cash in the vaults of depository institutions that is used to meet reserve requirements—to achieve greater control over M1 and bring down inflation. In particular, the operational objective for open market operations was a specific level of nonborrowed reserves, or total reserves less the quantity of discount window borrowing. A predetermined target path for nonborrowed reserves was based on the FOMC's objectives for M1. If M1 grew faster than the objective, required reserves, which were linked to M1 through the required reserve ratios, would expand more quickly than nonborrowed reserves. With the fixed supply of nonborrowed reserves falling short of demand, banks would bid up the

federal funds rate, sometimes sharply. The rise in short-term interest rates would eventually damp M1 growth, and M1 would be brought back toward its targeted path.

By late 1982, it had become clear that the combination of interest rate deregulation and financial innovation had weakened the historical link between M1 and the economic objectives of monetary policy. The FOMC began to make more discretionary decisions about money market conditions, using a wider array of economic and financial variables to judge the need for adjustments in short-term interest rates. In the day-to-day implementation of open market operations, this change was manifested in a shift of focus from a nonborrowed-reserve target to a borrowed-reserve target. The Federal Reserve routinely supplied fewer nonborrowed reserves than the estimated demand for total reserves, thus forcing depository institutions to meet their remaining need for reserves by borrowing at the discount window. The total amount borrowed was limited, however, even though the discount rate was generally below the federal funds rate, because access to discount window credit was restricted. In particular, depository institutions were required to pursue all other reasonably available sources of funds, including those available in the federal funds market, before credit was granted. During the time it was targeting borrowed reserves, the Federal Reserve influenced the level of the federal funds rate by controlling the extent to which depository institutions had to turn to the discount window. When it wanted to ease monetary policy, it would reduce the borrowed-reserve target and supply more nonborrowed reserves to meet estimated demand. With less pressure to borrow from the discount window, depository institutions would bid less aggressively for balances at the Federal Reserve and the federal funds rate would fall.

Beginning in the mid-1980s, spreading doubts about the financial health of some depository institutions led to an increasing reluctance on the part of many institutions to borrow at the discount window, thus weakening the link between borrowing and the federal funds rate. Consequently, the Federal Reserve increasingly sought to attain a specific level of the federal funds rate rather than a targeted amount of borrowed reserves. In July 1995, the FOMC began to announce its target for the federal funds rate.

In the federal funds market, depository institutions actively trade balances held at the Federal Reserve with each other, usually overnight, on an uncollateralized basis. Institutions with surplus balances in their accounts lend those balances to institutions in need of larger balances. The federal funds rate—the interest rate at which these transactions occur—is an important benchmark in financial markets. Daily fluctuations in the federal funds rate reflect demand and supply conditions in the market for Federal Reserve balances.

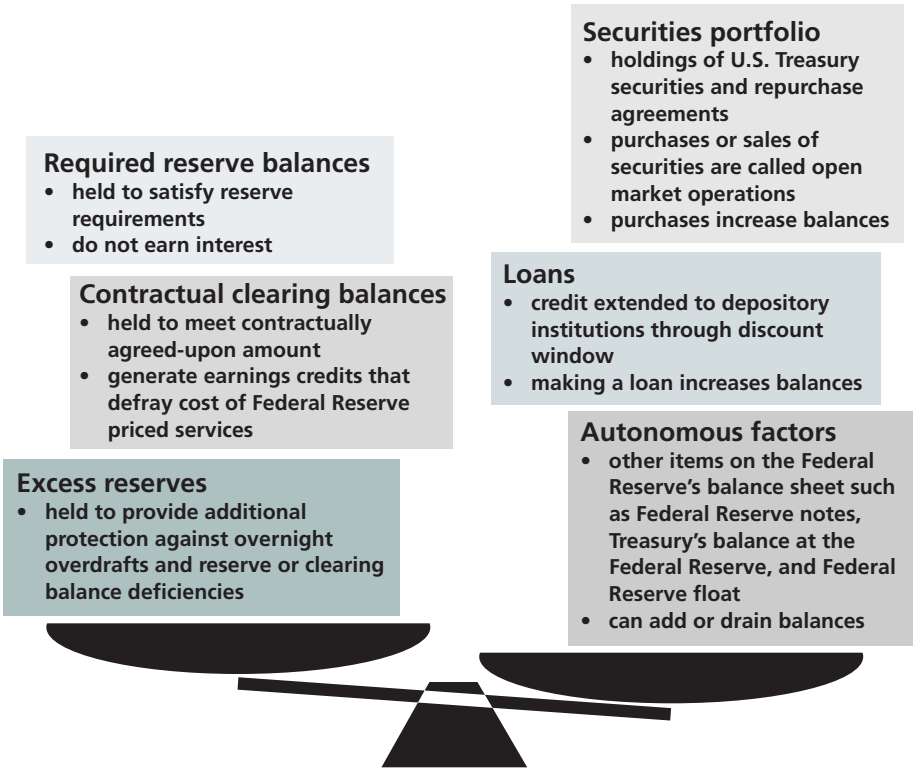
Demand for Federal Reserve Balances

The demand for Federal Reserve balances has three components: required reserve balances, contractual clearing balances, and excess reserve balances.

Required Reserve Balances

Required reserve balances are balances that a depository institution must hold with the Federal Reserve to satisfy its reserve requirement. Reserve requirements are imposed on all depository institutions—which include commercial banks, savings banks, savings and loan associations, and credit unions—as well as U.S. branches and agencies of foreign banks and other

The Market for Balances at the Federal Reserve



domestic banking entities that engage in international transactions. Since the early 1990s, reserve requirements have been applied only to transaction deposits, which include demand deposits and interest-bearing accounts that offer unlimited checking privileges. An institution's reserve requirement is a fraction of such deposits; the fraction—the required reserve ratio—is set by the Board of Governors within limits prescribed in the Federal Reserve Act. A depository institution's reserve requirement expands or contracts with the level of its transaction deposits and with the required reserve ratio set by the Board. In practice, the changes in required reserves reflect movements in transaction deposits because the Federal Reserve adjusts the required reserve ratio only infrequently.

A depository institution satisfies its reserve requirement by its holdings of vault cash (currency in its vault) and, if vault cash is insufficient to meet the requirement, by the balance maintained directly with a Federal Reserve Bank or indirectly with a pass-through correspondent bank (which in turn holds the balances in its account at the Federal Reserve). The difference between an institution's reserve requirement and the vault cash used to meet that requirement is called the required reserve balance. If the balance maintained by the depository institution does not satisfy its reserve balance requirement, the deficiency may be subject to a charge.

Contractual Clearing Balances

Depository institutions use their accounts at Federal Reserve Banks not only to satisfy their reserve balance requirements but also to clear many financial transactions. Given the volume and unpredictability of transactions that clear through their accounts every day, depository institutions seek to hold an end-of-day balance that is high enough to protect against unexpected debits that could leave their accounts overdrawn at the end of the day and against any resulting charges, which could be quite large. If a depository institution finds that targeting an end-of-day balance equal to its required reserve balance provides insufficient protection against overdrafts, it may establish a contractual clearing balance (sometimes referred to as a required clearing balance).

A contractual clearing balance is an amount that a depository institution agrees to hold at its Reserve Bank in addition to any required reserve balance. In return, the depository institution earns implicit interest, in the form of earnings credits, on the balance held to satisfy its contractual clearing balance. It uses these credits to defray the cost of the Federal Reserve services it uses, such as check clearing and wire transfers of funds and securities. If the depository institution fails to satisfy its contractual requirement, the deficiency is subject to a charge.

Excess Reserve Balances

A depository institution may hold balances at its Federal Reserve Bank in addition to those it must hold to meet its reserve balance requirement and its contractual clearing balance; these balances are called excess reserve balances (or excess reserves). In general, a depository institution attempts to keep excess reserve balances at low levels because balances at the Federal Reserve do not earn interest. However, a depository institution may aim to hold some positive excess reserve balances at the end of the day as additional protection against an overnight overdraft in its account or the risk of failing to hold enough balances to satisfy its reserve or clearing balance requirement. This desired cushion of balances can vary considerably from day to day, depending in part on the volume and uncertainty about payments flowing through the institution's account. The daily demand for excess reserve balances is the least-predictable component of the demand for balances. (See table 3.1 for data on required reserve balances, contractual clearing balances, and excess reserve balances.)

Purchases or sales of securities by the Federal Reserve, whether outright or temporary, are called open market operations.

Table 3.1

Measures of aggregate balances, 2001–2004

Billions of dollars; annual averages of daily data

Year	Required reserve balances	Contractual clearing balances	Excess reserve balances
2001	7.2	7.0	2.8
2002	8.0	9.7	1.5
2003	10.0	11.0	1.8
2004	11.0	10.4	1.6

Supply of Federal Reserve Balances

The supply of Federal Reserve balances to depository institutions comes from three sources: the Federal Reserve's portfolio of securities and repurchase agreements; loans from the Federal Reserve through its discount window facility; and certain other items on the Federal Reserve's balance sheet known as autonomous factors.

Securities Portfolio

The most important source of balances to depository institutions is the Federal Reserve's portfolio of securities. The Federal Reserve buys and sells securities either on an outright (also called permanent) basis or temporarily in the form of repurchase agreements and reverse repurchase

agreements. Purchases or sales of securities by the Federal Reserve, whether outright or temporary, are called open market operations, and they are the Federal Reserve's principal tool for influencing the supply of balances at the Federal Reserve Banks. Open market operations are conducted to align the supply of balances at the Federal Reserve with the demand for those balances at the target rate set by the FOMC.

Purchasing securities or arranging a repurchase agreement increases the quantity of balances because the Federal Reserve creates balances when it credits the account of the seller's depository institution at the Federal Reserve for the amount of the transaction; there is no corresponding offset in another institution's account. Conversely, selling securities or conducting a reverse repurchase agreement decreases the quantity of Federal Reserve balances because the Federal Reserve extinguishes balances when it debits the account of the purchaser's depository institution at the Federal Reserve; there is no corresponding increase in another institution's account. In contrast, when financial institutions, business firms, or individuals buy or sell securities among themselves, the credit to the account of the seller's depository institution is offset by the debit to the account of the purchaser's depository institution; so existing balances held at the Federal Reserve are redistributed from one depository institution to another without changing the total available.

The supply of Federal Reserve balances increases when depository institutions borrow from the Federal Reserve's discount window.

Discount Window Lending

The supply of Federal Reserve balances increases when depository institutions borrow from the Federal Reserve's discount window. Access to discount window credit is established by rules set by the Board of Governors, and loans are made at interest rates set by the Reserve Banks and approved by the Board. Depository institutions decide to borrow based on the level of the lending rate and their liquidity needs. Beginning in early 2003, rates for discount window loans have been set above prevailing market rates (see "Major Revision to Discount Window Programs" on page 47). As a result, depository institutions typically will borrow from the discount window in significant volume only when overall market conditions have tightened enough to push the federal funds rate up close to the discount rate. Overall market conditions tend to tighten to such an extent only infrequently, so the volume of balances supplied through the discount window is usually only a small portion of the total supply of Federal Reserve balances. However, at times of market disruptions, such as after the terrorist attacks in 2001, loans extended through the discount window can supply a considerable volume of Federal Reserve balances.

Autonomous Factors

The supply of balances can vary substantially from day to day because of movements in other items on the Federal Reserve's balance sheet (table

3.2). These so-called autonomous factors are generally outside the Federal Reserve's direct day-to-day control. The most important of these factors are Federal Reserve notes, the Treasury's balance at the Federal Reserve, and Federal Reserve float.

The largest autonomous factor is Federal Reserve notes. When a depository institution needs currency, it places an order with a Federal Reserve Bank. When the Federal Reserve fills the order, it debits the account of the depository institution at the Federal Reserve, and total Federal Reserve balances decline. The amount of currency demanded tends to grow over time, in part reflecting increases in nominal spending as the economy grows. Consequently, an increasing volume of balances would be extinguished, and the federal funds rate would rise, if the Federal Reserve did not offset the contraction in balances by purchasing securities. Indeed, the expansion of Federal Reserve notes is the primary reason that the Federal Reserve's holdings of securities grow over time.

Table 3.2

Consolidated balance sheet of the Federal Reserve Banks, December 31, 2004

Millions of dollars

Assets		Liabilities	
Securities	717,819	Federal Reserve notes	719,436
Repurchase agreements	33,000	Reverse repurchase agreements	30,783
Loans	43	Balance, U.S. Treasury account	5,912
Float	927	Other liabilities and capital	27,745
All other assets	56,130	Balances, all depository institutions	24,043

Another important factor is the balance in the U.S. Treasury's account at the Federal Reserve. The Treasury draws on this account to make payments by check or direct deposit for all types of federal spending. When these payments clear, the Treasury's account is reduced and the account of the depository institution for the person or entity that receives the funds is increased. The Treasury is not a depository institution, so a payment by the Treasury to the public (for example, a Social Security payment) raises the volume of Federal Reserve balances available to depository institutions. Movements in the Treasury's balance at the Federal Reserve tend to be less predictable following corporate and individual tax dates, especially in the weeks following the April 15 deadline for federal income tax payments.

Federal Reserve float is created when the account of the depository institution presenting a check for payment is credited on a different day than

the account of the depository institution on which the check is drawn is debited. This situation can arise because credit is granted to the presenting depository institution on a preset schedule, whereas the paying institution's account is not debited until the check is presented to it. Float temporarily adds Federal Reserve balances when there is a delay in debiting the paying institution's account because the two depository institutions essentially are credited with the same balances. Float temporarily drains balances when the paying institution's account is debited before the presenting institution receives credit under the schedule. Float tends to be quite high and variable following inclement weather that disrupts the normal check-delivery process.

Controlling the Federal Funds Rate

Open market operations are the most powerful and often-used tool for controlling the federal funds rate.

The Federal Reserve's conduct of open market operations, its policies related to required reserves and contractual clearing balances, and its lending through the discount window all play important roles in keeping the federal funds rate close to the FOMC's target rate. Open market operations are the most powerful and often-used tool for controlling the funds rate. These operations, which are arranged nearly every business day, are designed to bring the supply of Federal Reserve balances in line with the demand for those balances at the FOMC's target rate. Required reserve balances and contractual clearing balances facilitate the conduct of open market operations by creating a predictable demand for Federal Reserve balances. If, even after an open market operation is arranged, the supply of balances falls short of demand, then discount window lending provides a mechanism for expanding the supply of balances to contain pressures on the funds rate.

Reserve balance requirements and contractual clearing balances need to be met only on average over a so-called reserve maintenance period, not each day. This structure gives depository institutions considerable flexibility in managing their end-of-day balances at the Federal Reserve from one day to the next. This flexibility helps smooth fluctuations in the federal funds rate. If a depository institution finds that its balance at the Federal Reserve is unexpectedly high on one day (for instance, because a customer made an unexpected deposit or an expected payment was not made), it does not have to offer to lend the extra balance at very low rates; it can absorb the surplus by choosing to hold lower balances in the remaining days of the maintenance period and still meet its balance requirements. Holding a lower balance on a subsequent day of the period does not necessarily increase the likelihood that the depository institution will incur an overnight overdraft if the sum of its required reserve balance and contractual clearing balance is high relative to its payment needs. This flexibility in managing account balances protects against variations in the

demand for and supply of Federal Reserve balances that would otherwise put pressure on the federal funds rate.

Reserve balance requirements and contractual clearing balances also help create a predictable demand for balances at the Federal Reserve. Without reserve balance requirements or contractual clearing balances, many depository institutions would still hold positive balances at the Federal Reserve to facilitate payments on behalf of themselves or their customers and to avoid having a negative balance in their account at the end of the day. The exact amount of balances that depository institutions want to hold at the Federal Reserve at the end of the day for clearing purposes can vary considerably from day to day, often depending on the volume and uncertainty of the payment flows through their accounts. These demands are very difficult for the Federal Reserve to forecast. When the level of reserve balance requirements, contractual clearing balances, or the sum of the two make it necessary for depository institutions to hold balances above the shifting and unpredictable level needed for clearing purposes, the Federal Reserve can more accurately determine the demand for Federal Reserve balances and, by manipulating the supply of Federal Reserve balances through open market operations, more readily attain the target funds rate.

The remainder of this chapter takes a more detailed look at open market operations, reserve requirements, contractual clearing balances, and the discount window.

Open Market Operations

In theory, the Federal Reserve could conduct open market operations by purchasing or selling any type of asset. In practice, however, most assets cannot be traded readily enough to accommodate open market operations. For open market operations to work effectively, the Federal Reserve must be able to buy and sell quickly, at its own convenience, in whatever volume may be needed to keep the federal funds rate at the target level. These conditions require that the instrument it buys or sells be traded in a broad, highly active market that can accommodate the transactions without distortions or disruptions to the market itself.

The market for U.S. Treasury securities satisfies these conditions. The U.S. Treasury securities market is the broadest and most active of U.S. financial markets. Transactions are handled over the counter, not on an organized exchange. Although most of the trading occurs in New York City, telephone and computer connections link dealers, brokers, and customers—regardless of their location—to form a global market.

Composition of the Federal Reserve's Portfolio

The overall size of the Federal Reserve's holdings of Treasury securities depends principally on the growth of Federal Reserve notes; however, the amounts and maturities of the individual securities held depends on the FOMC's preferences for liquidity. The Federal Reserve has guidelines that limit its holdings of individual Treasury securities to a percentage of the total amount outstanding. These guidelines are designed to help the Federal Reserve manage the liquidity and average maturity of the System portfolio. The percentage limits under these guidelines are larger for shorter-dated issues than longer-dated ones. Consequently, a sizable share of the Federal Reserve's holdings is held in Treasury securities with remaining maturities of one year or less. This structure provides the Federal Reserve with the ability to alter the composition of its assets quickly when developments warrant. At the end of 2004, the Federal Reserve's holdings of Treasury securities were about evenly weighted between those with maturities of one year or less and those with maturities greater than one year (table 3.3).

Table 3.3

U.S. Treasury securities held in the Federal Reserve's open market account, December 31, 2004

Billions of dollars

Remaining maturity	U.S. Treasury securities
1 year or less	379.4
More than 1 year to 5 years	208.3
More than 5 years to 10 years	54.4
More than 10 years	75.8
Total	717.8

The Conduct of Open Market Operations

The Federal Reserve Bank of New York conducts open market operations for the Federal Reserve, under an authorization from the Federal Open Market Committee. The group that carries out the operations is commonly referred to as "the Open Market Trading Desk" or "the Desk." The Desk is permitted by the FOMC's authorization to conduct business with U.S. securities dealers and with foreign official and international institutions that maintain accounts at the Federal Reserve Bank of New York. The dealers with which the Desk transacts business are called primary dealers. The Federal Reserve requires primary dealers to meet the

capital standards of their primary regulators and satisfy other criteria consistent with being a meaningful and creditworthy counterparty. All open market operations transacted with primary dealers are conducted through an auction process.

Each day, the Desk must decide whether to conduct open market operations, and, if so, the types of operations to conduct. It examines forecasts of the daily supply of Federal Reserve balances from autonomous factors and discount window lending. The forecasts, which extend several weeks into the future, assume that the Federal Reserve abstains from open market operations. These forecasts are compared with projections of the demand for balances to determine the need for open market operations. The decision about the types of operations to conduct depends on how long a deficiency or surplus of Federal Reserve balances is expected to last. If staff projections indicate that the demand for balances is likely to exceed the supply of balances by a large amount for a number of weeks or months, the Federal Reserve may make outright purchases of securities or arrange longer-term repurchase agreements to increase supply. Conversely, if the projections suggest that demand is likely to fall short of supply, then the Federal Reserve may sell securities outright or redeem maturing securities to shrink the supply of balances.

Even after accounting for planned outright operations or long-term repurchase agreements, there may still be a short-term need to alter Federal Reserve balances. In these circumstances, the Desk assesses whether the federal funds rate is likely to remain near the FOMC's target rate in light of the estimated imbalance between supply and demand. If the funds rate is likely to move away from the target rate, then the Desk will arrange short-term repurchase agreements, which add balances, or reverse repurchase agreements, which drain balances, to better align the supply of and demand for balances. If the funds rate is likely to remain close to the target, then the Desk will not arrange a short-term operation. Short-term temporary operations are much more common than outright transactions because daily fluctuations in autonomous factors or the demand for excess reserve balances can create a sizable imbalance between the supply of and demand for balances that might cause the federal funds rate to move significantly away from the FOMC's target.

Outright Purchases and Sales

The Federal Reserve tends to conduct far more outright purchases than outright sales or redemptions of securities primarily because it must offset the drain of balances resulting from the public's increasing demand for Federal Reserve notes (table 3.4). When the Desk decides to buy securities in an outright operation, it first determines how much it wants to buy to address the mismatch between supply and demand. It then divides that

amount into smaller portions and makes a series of purchases in different segments of the maturity spectrum, rather than buying securities across all maturities at once, in order to minimize the impact on market prices.

When the projections indicate a need to drain Federal Reserve balances, the Desk may choose to sell securities or to redeem maturing securities. Sales of securities are extremely rare. By redeeming some maturing securities, rather than exchanging all of them for new issues, the Federal Reserve can reduce the size of its holdings gradually without having to enter the market. Redemptions drain Federal Reserve balances when the Treasury takes funds out of its accounts at depository institutions, transfers those funds to its account at the Federal Reserve, and then pays the Federal Reserve for the maturing issues.

Table 3.4

Federal Reserve System outright transactions, 2001–2004

Billions of dollars

Transaction	2001	2002	2003	2004
Purchases	68.5	54.2	36.8	50.5
Redemptions	26.9	—	—	—
Total	95.4	54.2	36.8	50.5

Purchases from and sales to foreign official and international customers enable the Federal Reserve to make small adjustments to its portfolio without formally entering the market. These transactions occur at market prices. The size of the buy or sell orders of these customers and the projected need for open market operations determine whether the Desk chooses to arrange these customer transactions directly with the Federal Reserve, in which case they affect Federal Reserve balances, or to act as agent by conducting the transactions in the market, with no effect on balances.

Repurchase Agreements

The Federal Reserve frequently arranges repurchase agreements to add Federal Reserve balances temporarily (table 3.5). In these transactions, it acquires a security from a primary dealer under an agreement to return the security on a specified date. Most repurchase agreements have an overnight term, although short-term repurchase agreements with maturities of two to thirteen days are also arranged to address shortages in Federal Reserve balances that are expected to extend over several days. Longer-term repurchase agreements are used to address more-persistent needs. The Federal Reserve accepts Treasury, federal agency, and mort-

gage-backed securities guaranteed by federal agencies as collateral for its repurchase agreements.

Table 3.5

Federal Reserve System temporary transactions, 2001–2004

Volume in billions of dollars

	2001		2002		2003		2004	
	Num.	Vol.	Num.	Vol.	Num.	Vol.	Num.	Vol.
Repurchase agreements[1]	305	1,497.7	262	1,143.1	288	1,522.9	299	1,876.9
Matched sale–purchase transactions/ Reverse repurchase agreements[2]	10	25.0	7	11.3	10	22.8	2	4.8

1. Includes all types of repurchase agreements.
2. Reverse repurchase agreements after 2003.

Reverse Repurchase Agreements

When the Federal Reserve needs to absorb Federal Reserve balances temporarily, it enters into reverse repurchase agreements with primary dealers. These transactions involve selling a Treasury security to a primary dealer under an agreement to receive the security back on a specified date. As in repurchase agreement transactions, these operations are arranged on an auction basis. When the Federal Reserve transfers the collateral (usually a Treasury bill) to the dealer, the account of the dealer's clearing bank at the Federal Reserve is debited, and total Federal Reserve balances decline. When the transaction unwinds, the account of the dealer's clearing bank is credited and total balances increase.

Every business day, the Federal Reserve also arranges reverse repurchase agreements with foreign official and international accounts. These institutions have accounts at the Federal Reserve Bank of New York to help manage their U.S. dollar payments and receipts. The Federal Reserve permits these institutions to invest cash balances overnight through these agreements.

A Typical Day in the Conduct of Open Market Operations

Each weekday, beginning at around 7:30 a.m., two groups of Federal Reserve staff members, one at the Federal Reserve Bank of New York and one at the Board of Governors in Washington, prepare independent projections of the supply of and demand for Federal Reserve balances.

The manager of the System Open Market Account and the group in New York are linked in a telephone conference call with members of the staff at the Board of Governors and with a Federal Reserve Bank president who is currently a member of the FOMC. Participants in the call discuss staff forecasts for Federal Reserve balances and recent developments in financial markets. They pay special attention to trading conditions in the federal funds market, particularly the level of the federal funds rate in relation to the FOMC's target. In light of this information, they determine a plan for open market operations. The decision is announced to the markets at around 9:30 a.m., at the same time that the Desk solicits offers from dealers. (Typically, longer-term repurchase agreements are arranged earlier in the morning, usually on a specific day of the week.) If an outright operation is also needed, it would typically be executed later in the morning, after the daily operation is complete.

Securities Lending

The Federal Reserve has a securities lending program designed to provide a secondary and temporary source of securities to the market in order to promote the smooth clearing of Treasury securities. Under this program, securities from the portfolio are offered for loan to primary dealers through an auction process each day at noon. The total amount available for an individual security is a fraction of the Federal Reserve's total holdings, and there are limits on the amount of securities that can be lent to a single dealer. As collateral, the dealer gives the Federal Reserve other securities, not cash; therefore, the Federal Reserve's lending operations do not affect the supply of Federal Reserve balances and are not considered open market operations.

Reserve requirements play a useful role in the conduct of open market operations by helping to ensure a predictable demand for Federal Reserve balances.

Reserve Requirements

Reserve requirements have long been a part of our nation's banking history. Depository institutions maintain a fraction of certain liabilities in reserve in specified assets. The Federal Reserve can adjust reserve requirements by changing required reserve ratios, the liabilities to which the ratios apply, or both. Changes in reserve requirements can have profound effects on the money stock and on the cost to banks of extending credit and are also costly to administer; therefore, reserve requirements are not adjusted frequently. Nonetheless, reserve requirements play a useful role in the conduct of open market operations by helping to ensure a predictable demand for Federal Reserve balances and thus enhancing the Federal Reserve's control over the federal funds rate.

Requiring depository institutions to hold a certain fraction of their deposits in reserve, either as cash in their vaults or as non-interest-bearing

balances at the Federal Reserve, does impose a cost on the private sector. The cost is equal to the amount of forgone interest on these funds—or at least on the portion of these funds that depository institutions hold only because of legal requirements and not to meet their customers' needs.

The burden of reserve requirements is structured to bear generally less heavily on smaller institutions. At every depository institution, a certain amount of reservable liabilities is exempt from reserve requirements, and a relatively low required reserve ratio is applied to reservable liabilities up to a specific level. The amounts of reservable liabilities exempt from reserve requirements and subject to the low required reserve ratio are adjusted annually to reflect growth in the banking system. Table 3.6 shows the reserve requirement ratios in effect in 2004.

The burden of reserve requirements is structured to bear generally less heavily on smaller institutions.

Table 3.6

Reserve requirement ratios, 2004

Category	Reserve requirement
Net transaction accounts	
$0 to $6.6 million	0 percent of amount
Over $6.6 million and up to $45.4 million	3 percent of amount
Over $45.4 million	$1,164,000 plus 10 percent of amount over $45.4 million
Nonpersonal time deposits	0 percent
Eurocurrency liabilities	0 percent

Changes in reserve requirements can affect the money stock, by altering the volume of deposits that can be supported by a given level of reserves, and bank funding costs. Unless it is accompanied by an increase in the supply of Federal Reserve balances, an increase in reserve requirements (through an increase in the required reserve ratio, for example) reduces excess reserves, induces a contraction in bank credit and deposit levels, and raises interest rates. It also pushes up bank funding costs by increasing the amount of non-interest-bearing assets that must be held in reserve. Conversely, a decrease in reserve requirements, unless accompanied by a reduction in Federal Reserve balances, initially leaves depository institutions with excess reserves, which can encourage an expansion of bank credit and deposit levels and reduce interest rates.

Recent History of Reserve Requirements

In the 1960s and 1970s, the Federal Reserve actively used reserve requirements as a tool of monetary policy in order to influence the expansion of

money and credit partly by manipulating bank funding costs. As financial innovation spawned new sources of bank funding, the Federal Reserve adapted reserve requirements to these new financial products. It changed required reserve ratios on specific bank liabilities that were most frequently used to fund new lending. Reserve requirements were also imposed on other, newly emerging liabilities that were the functional equivalents of deposits, such as Eurodollar borrowings. At times, it supplemented these actions by placing a marginal reserve requirement on large time deposits —that is, an additional requirement applied only to each new increment of these deposits.

As the 1970s unfolded, it became increasingly apparent that the structure of reserve requirements was becoming outdated. At this time, only banks that were members of the Federal Reserve System were subject to reserve requirements established by the Federal Reserve. The regulatory structure and competitive pressures during a period of high interest rates were putting an increasing burden on member banks. This situation fostered the growth of deposits, especially the newly introduced interest-bearing transaction deposits, at institutions other than member banks and led many banks to leave the Federal Reserve System. Given this situation, policy makers felt that reserve requirements needed to be applied to a broad group of institutions for more effective monetary control—that is, to strengthen the relationship between the amount of reserves supplied by the Federal Reserve and the overall quantity of money in the economy.

Changes in reserve requirements can affect the money stock and bank funding costs.

The Monetary Control Act of 1980 (MCA) ended the problem of membership attrition and facilitated monetary control by reforming reserve requirements. Under the act, all depository institutions are subject to reserve requirements set by the Federal Reserve, whether or not they are members of the Federal Reserve System. The Board of Governors may impose reserve requirements solely for the purpose of implementing monetary policy. The required reserve ratio may range from 8 percent to 14 percent on transaction deposits and from 0 percent to 9 percent on nonpersonal time deposits. The Board may also set reserve requirements on the net liabilities owed by depository institutions in the United States to their foreign affiliates or to other foreign banks. The MCA permits the Board, under certain circumstances, to establish supplemental and emergency reserve requirements, but these powers have never been exercised.

Following the passage of the MCA in 1980, reserve requirements were not adjusted for policy purposes for a decade. In December 1990, the required reserve ratio on nonpersonal time deposits was pared from 3 percent to 0 percent, and in April 1992 the 12 percent ratio on transaction deposits was trimmed to 10 percent. These actions were partly motivated by evidence suggesting that some lenders had adopted a more cautious approach to extending credit, which was increasing the cost and restricting the availability of credit to some types of borrowers. By reducing funding costs and thus

providing depository institutions with easier access to capital markets, the cuts in required reserve ratios put depository institutions in a better position to extend credit.

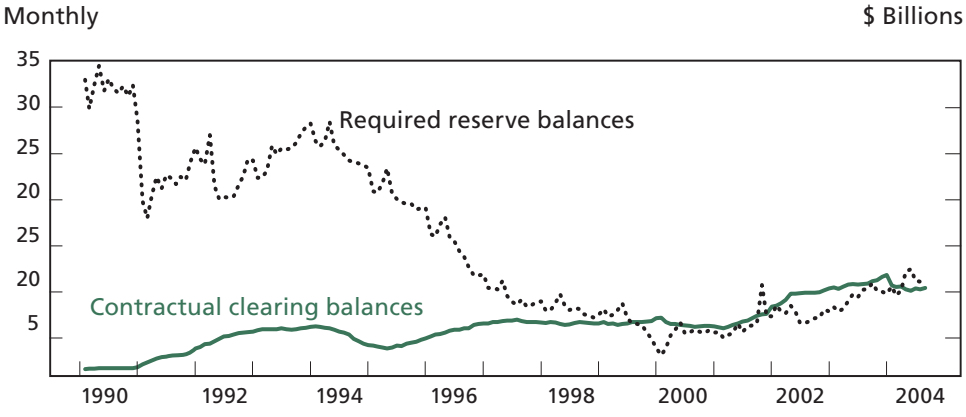
Although reserve requirement ratios have not been changed since the early 1990s, the level of reserve requirements and required reserve balances has fallen considerably since then because of the widespread implementation of retail sweep programs by depository institutions. Under such a program, a depository institution sweeps amounts above a predetermined level from a depositor's checking account into a special-purpose money market deposit account created for the depositor. In this way, the depository institution shifts funds from an account that is subject to reserve requirements to one that is not and therefore reduces its reserve requirement. With no change in its vault cash holdings, the depository institution can lower its required reserve balance, on which it earns no interest, and invest the funds formerly held at the Federal Reserve in interest-earning assets.

Contractual Clearing Balances

Contractual clearing balances, like required reserve balances, help to create a stable, predictable demand for Federal Reserve balances, which assists in the conduct of open market operations. In early 1981, the Federal Reserve Board established a policy that permitted all depository institutions to hold contractual clearing balances at the Federal Reserve Banks. Such balances, which were referred to as required clearing balances at the time, were established following the passage of the MCA to facilitate access to Federal Reserve priced services by depository institutions with zero or low required reserve balances. Use of these arrangements was minimal in the early 1980s because required reserve balances were sufficiently high to facilitate clearing and meet reserve requirements.

Chart 3.1

Balances at Federal Reserve Banks, 1990–2004

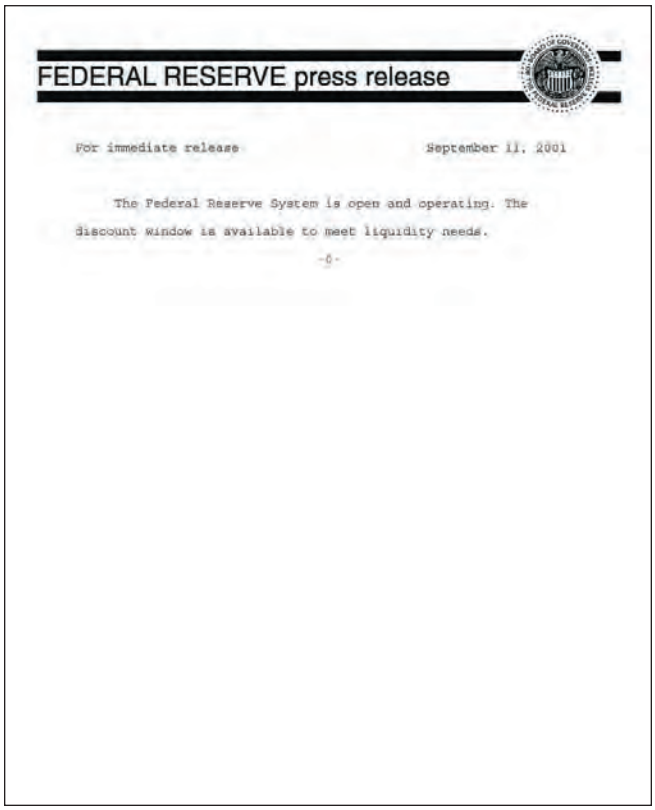


The use of contractual clearing balances rose considerably in the 1990s as required reserve balances dropped in the wake of the cuts in required reserve ratios early in the decade and the widespread implementation of retail sweep programs by depository institutions. The resulting reduction in required reserve balances left some depository institutions with insufficient protection against overnight overdrafts, so they established or expanded their contractual clearing balances. The rise in contractual clearing balances during the 1990s did not match the decline in required reserve balances, however, in part because depository institutions apparently did not need as large a cushion to protect against overnight overdrafts as was once provided by their required reserve balance. In addition, the ability of some depository institutions to expand their contractual clearing balances was limited by the extent to which they use Federal Reserve priced services.

The Discount Window

The Federal Reserve's lending at the discount window serves two primary functions. It complements open market operations in achieving the target federal funds rate by making Federal Reserve balances available to depository institutions when the supply of balances falls short of demand. It also serves as a backup source of liquidity for individual depository institutions.

At times when the normal functioning of financial markets is disrupted, the discount window can become the principal channel for supplying balances to depository institutions.



FEDERAL RESERVE press release

For immediate release September 11, 2001

The Federal Reserve System is open and operating. The discount window is available to meet liquidity needs.

-0-

Although the volume of discount window borrowing is relatively small, it plays an important role in containing upward pressures on the federal funds rate. If a depository institution faces an unexpectedly low balance in its account at the Federal Reserve, either because the total supply of balances has fallen short of demand or because it failed to receive an expected transfer of funds from a counterparty, it can borrow at the discount window. This extension of credit increases the supply of Federal

Reserve balances and helps to limit any upward pressure on the federal funds rate. At times when the normal functioning of financial markets is disrupted—for example after operational problems, a natural disaster, or a terrorist attack—the discount window can become the principal channel for supplying balances to depository institutions.

The discount window can also, at times, serve as a useful tool for promoting financial stability by providing temporary funding to depository institutions that are having significant financial difficulties. If the institution's sudden collapse were likely to have severe adverse effects on the financial system, an extension of central bank credit could be desirable because it would address the liquidity strains and permit the institution to make a transition to sounder footing. Discount window credit can also be used to facilitate an orderly resolution of a failing institution. An institution obtaining credit in either situation must be monitored appropriately to ensure that it does not take excessive risks in an attempt to return to profitability and that the use of central bank credit would not increase costs to the deposit insurance fund and ultimately the taxpayer.

Types of Credit

In ordinary circumstances, the Federal Reserve extends discount window credit to depository institutions under the primary, secondary, and seasonal credit programs. The rates charged on loans under each of these programs are established by each Reserve Bank's board of directors every two weeks, subject to review and determination by the Board of Governors. The rates for each of the three lending programs are the same at all Reserve Banks, except occasionally for very brief periods following the Board's action to adopt a requested rate change. The Federal Reserve also has the authority under the Federal Reserve Act to extend credit to entities that are not depository institutions in "unusual and exigent circumstances"; however, such lending has not occurred since the 1930s.

Primary Credit

Primary credit is available to generally sound depository institutions on a very short-term basis, typically overnight. To assess whether a depository institution is in sound financial condition, its Reserve Bank regularly reviews the institution's condition, using supervisory ratings and data on adequacy of the institution's capital. Depository institutions are not required to seek alternative sources of funds before requesting occasional advances of primary credit, but primary credit is expected to be used as a backup, rather than a regular, source of funding.

The rate on primary credit has typically been set 1 percentage point above the FOMC's target federal funds rate, but the spread can vary depending on circumstances. Because primary credit is the Federal Reserve's main dis-

Major Revision to Discount Window Programs

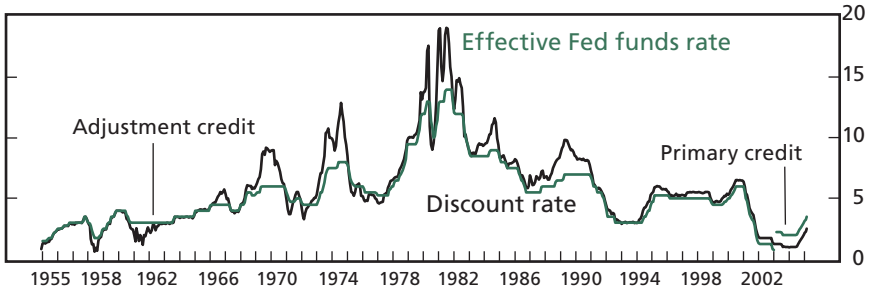
On January 9, 2003, the Federal Reserve significantly revised its discount window lending programs, replacing the previous adjustment and extended credit programs with primary and secondary credit facilities. Adjustment credit had been made available to help depository institutions make short-term balance-sheet adjustments and to provide an alternate source of funds in the event of a shortfall in the supply of Federal Reserve balances. Extended credit, which was intended to accommodate depository institutions' somewhat longer-term liquidity needs resulting from exceptional circumstances, had not been used since 1995.

Adjustment credit was extended at the basic discount rate, which over the previous decade had been 25 to 50 basis points below the usual level of overnight market interest rates. The below-market interest rate on adjustment credit had caused several significant problems. The incentive for depository institutions to exploit the below-market rate meant that borrowing requests necessarily were subject to considerable administration by Reserve Banks. In particular, borrowers were required to seek funds elsewhere before coming to the window. Partly as a result of those requirements, many depository institutions were reluctant to borrow from the discount window, reducing the effectiveness of the discount window in buffering shocks to the money market.

Under the revised lending programs, the above-market rate and the fact that primary credit is restricted to financially sound institutions mean that primary credit can be extended largely without administration, making depository institutions more willing to borrow and so making the discount window a more effective monetary policy tool. The central banks of nearly all industrialized countries have similar lending facilities that extend collateralized credit at an above-market rate with little or no administration.

Chart 3.3

Effective federal funds rate and discount rate, 1955–2004*



* On January 9, 2003, the main discount rate switched from being the rate on adjustment credit to the rate on primary credit.

count window program, the Federal Reserve at times uses the term *discount rate* specifically to mean the primary credit rate.

Reserve Banks ordinarily do not require depository institutions to provide reasons for requesting very short-term primary credit. Borrowers are asked to provide only the minimum information necessary to process a loan, usually the requested amount and term of the loan. If a pattern of borrowing or the nature of a particular borrowing request strongly indicates that a depository institution is not generally sound or is using primary credit as a regular rather than a backup source of funding, a Reserve Bank may seek additional information before deciding whether to extend the loan.

Primary credit may be extended for longer periods of up to a few weeks if a depository institution is in generally sound financial condition and cannot obtain temporary funds in the market at reasonable terms. Large and medium-sized institutions are unlikely to meet this test.

Depository institutions that have reservable transaction accounts or nonpersonal time deposits may borrow from the discount window.

Secondary Credit

Secondary credit is available to depository institutions that are not eligible for primary credit. It is extended on a very short-term basis, typically overnight. Reflecting the less-sound financial condition of borrowers of secondary credit, the rate on secondary credit has typically been 50 basis points above the primary credit rate, although the spread can vary as circumstances warrant. Secondary credit is available to help a depository institution meet backup liquidity needs when its use is consistent with the borrowing institution's timely return to a reliance on market sources of funding or with the orderly resolution of a troubled institution's difficulties. Secondary credit may not be used to fund an expansion of the borrower's assets.

Loans extended under the secondary credit program entail a higher level of Reserve Bank administration and oversight than loans under the primary credit program. A Reserve Bank must have sufficient information about a borrower's financial condition and reasons for borrowing to ensure that an extension of secondary credit would be consistent with the purpose of the facility. Moreover, under the Federal Deposit Insurance Corporation Improvement Act of 1991, extensions of Federal Reserve credit to an FDIC-insured depository institution that has fallen below minimum capital standards are generally limited to 60 days in any 120-day period or, for the most severely undercapitalized, to only five days.

Seasonal Credit

The Federal Reserve's seasonal credit program is designed to help small depository institutions manage significant seasonal swings in their loans and deposits. Seasonal credit is available to depository institutions that can

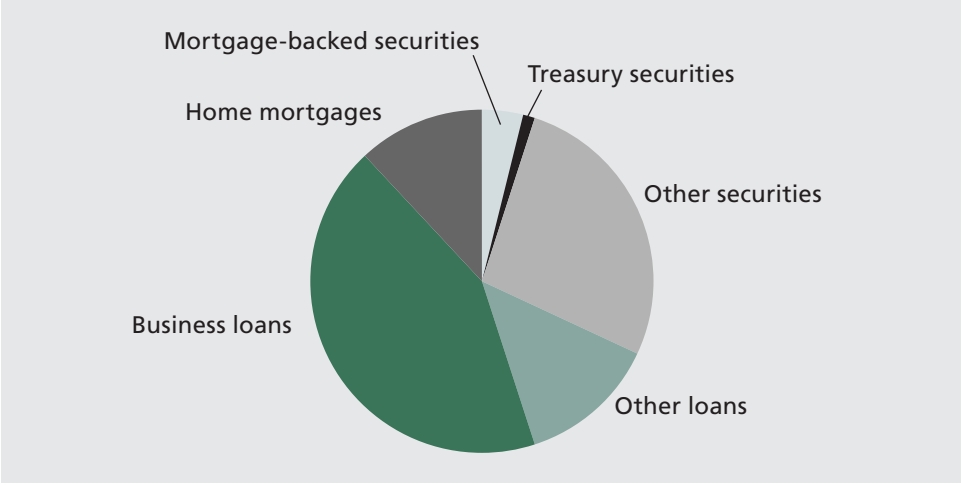
demonstrate a clear pattern of recurring swings in funding needs throughout the year—usually institutions in agricultural or tourist areas. Borrowing longer-term funds from the discount window during periods of seasonal need allows institutions to carry fewer liquid assets during the rest of the year and make more funds available for local lending.

The seasonal credit rate is based on market interest rates. It is set on the first business day of each two-week reserve maintenance period as the average of the effective federal funds rate and the interest rate on three-month certificates of deposit over the previous reserve maintenance period.

Eligibility to Borrow

By law, depository institutions that have reservable transaction accounts or nonpersonal time deposits may borrow from the discount window. U.S. branches and agencies of foreign banks that are subject to reserve requirements are eligible to borrow under the same general terms and conditions that apply to domestic depository institutions. Banker's banks, corporate credit unions, and certain other banking institutions that are not subject to reserve requirements generally do not have access to the discount window. However, the Board of Governors has determined that those institutions may obtain access to the discount window if they voluntarily maintain required reserve balances.

Chart 3.2
Collateral value by asset type, December 31, 2004



Discount Window Collateral

By law, all discount window loans must be secured by collateral to the satisfaction of the lending Reserve Bank. Most loans that are not past due and most investment-grade securities held by depository institutions are acceptable as collateral. Reserve Banks must be able to establish a legal right in the event of default to be first in line to take possession of and, if necessary, sell all collateral that secures discount window loans.

Reserve Banks assign a lendable value to assets accepted as collateral. The lendable value is the maximum loan amount that can be backed by that asset. It is based on market values, if available, or par values—in both cases reduced by a margin. The margin depends on how accurately the asset can be valued, how much its value tends to vary over time, the liquidity of the asset, and the financial condition of the pledging institution.

4 The Federal Reserve in the International Sphere

The U.S. economy and the world economy are linked in many ways. Economic developments in this country have a major influence on production, employment, and prices beyond our borders; at the same time, developments abroad significantly affect our economy. The U.S. dollar, which is the currency most used in international transactions, constitutes more than half of other countries' official foreign exchange reserves. U.S. banks abroad and foreign banks in the United States are important actors in international financial markets.

The activities of the Federal Reserve and the international economy influence each other. Therefore, when deciding on the appropriate monetary policy for achieving basic economic goals, the Board of Governors and the FOMC consider the record of U.S. international transactions, movements in foreign exchange rates, and other international economic developments. And in the area of bank supervision and regulation, innovations in international banking require continual assessments of, and occasional modifications in, the Federal Reserve's procedures and regulations.

The Federal Reserve formulates policies that shape, and are shaped by, international developments. It also participates directly in international affairs. For example, the Federal Reserve occasionally undertakes foreign exchange transactions aimed at influencing the value of the dollar in relation to foreign currencies, primarily with the goal of stabilizing disorderly market conditions. These transactions are undertaken in close and continuous consultation and cooperation with the U.S. Treasury. The Federal Reserve also works with the Treasury and other government agencies on various aspects of international financial policy. It participates in a number of international organizations and forums and is in almost continuous contact with other central banks on subjects of mutual concern.

International Linkages

The Federal Reserve's actions to adjust U.S. monetary policy are designed to attain basic objectives for the U.S. economy. But any policy move also influences, and is influenced by, international developments. For example,

U.S. monetary policy actions influence exchange rates. The dollar's exchange value in terms of other currencies is therefore one of the channels through which U.S. monetary policy affects the U.S. economy. If Federal Reserve actions raised U.S. interest rates, for instance, the foreign exchange value of the dollar generally would rise. An increase in the foreign exchange value of the dollar, in turn, would raise the price in foreign currency of U.S. goods traded on world markets and lower the dollar price of goods imported into the United States. By restraining exports and boosting imports, these developments could lower output and price levels in the U.S. economy. In contrast, an increase in interest rates in a foreign country could raise worldwide demand for assets denominated in that country's currency and thereby reduce the dollar's value in terms of that currency. Other things being equal, U.S. output and price levels would tend to increase—just the opposite of what happens when U.S. interest rates rise.

Economic developments in the United States, including U.S. monetary policy actions, have significant effects on growth and inflation in foreign economies.

Therefore, when formulating monetary policy, the Board of Governors and the FOMC draw upon information about and analysis of international as well as U.S. domestic influences. Changes in public policies or in economic conditions abroad and movements in international variables that affect the U.S. economy, such as exchange rates, must be factored into the determination of U.S. monetary policy.

Conversely, economic developments in the United States, including U.S. monetary policy actions, have significant effects on growth and inflation in foreign economies. Although the Federal Reserve's policy objectives are limited to economic outcomes in the United States, it is mutually beneficial for macroeconomic and financial policy makers in the United States and other countries to maintain a continuous dialogue. This dialogue enables the Federal Reserve to better understand and anticipate influences on the U.S. economy that emanate from abroad.

The increasing complexity of global financial markets—combined with ever-increasing linkages between national markets through trade, finance, and direct investment—have led to a proliferation of forums in which policy makers from different countries can meet and discuss topics of mutual interest. One important forum is provided by the Bank for International Settlements (BIS) in Basel, Switzerland. Through the BIS, the Federal Reserve works with representatives of the central banks of other countries on mutual concerns regarding monetary policy, international financial markets, banking supervision and regulation, and payments systems. (The Chairman of the Board of Governors and the president of the Federal Reserve Board of New York represent the U.S. central bank on the board of directors of the BIS.) Representatives of the Federal Reserve also participate in the activities of the International Monetary Fund (IMF) and discuss macroeconomic, financial market, and structural issues with representatives of other industrial countries at the Organisation for Economic

Co-operation and Development (OECD). Following the Asian Financial Crises of 1997 and 1998, the Financial Stability Forum (FSF) was established to enable central banks, finance ministries, and financial regulatory authorities in systemically important economies to work together to address issues related to financial stability. The Federal Reserve also sends delegates to international meetings such as those of the Asia Pacific Economic Cooperation (APEC) Finance Ministers' Process, the G-7 Finance Ministers and Central Bank Governors, the G-20, and the Governors of Central Banks of the American Continent.

Foreign Currency Operations

The Federal Reserve conducts foreign currency operations—the buying and selling of dollars in exchange for foreign currency—under the direction of the FOMC, acting in close and continuous consultation and cooperation with the U.S. Treasury, which has overall responsibility for U.S. international financial policy. The manager of the System Open Market Account at the Federal Reserve Bank of New York acts as the agent for both the FOMC and the Treasury in carrying out foreign currency operations. Since the late 1970s, the U.S. Treasury and the Federal Reserve have conducted almost all foreign currency operations jointly and equally.

The purpose of Federal Reserve foreign currency operations has evolved in response to changes in the international monetary system. The most important of these changes was the transition in the 1970s from a system of fixed exchange rates—established in 1944 at an international monetary conference held in Bretton Woods, New Hampshire—to a system of flexible (or floating) exchange rates for the dollar in terms of other countries' currencies. Under the Bretton Woods Agreements, which created the IMF and the International Bank for Reconstruction and Development (known informally as the World Bank), foreign authorities were responsible for intervening in exchange markets to maintain their countries' exchange rates within 1 percent of their currencies' parities with the U.S. dollar; direct exchange market intervention by U.S. authorities was extremely limited. Instead, U.S. authorities were obliged to buy and sell dollars against gold to maintain the dollar price of gold near $35 per ounce. After the United States suspended the gold convertibility of the dollar in 1971, a regime of flexible exchange rates emerged; in 1973, under that regime, the United States began to intervene in exchange markets on a more significant scale. In 1978, the regime of flexible exchange rates was codified in an amendment to the IMF's Articles of Agreement.

Under flexible exchange rates, the main aim of Federal Reserve foreign currency operations has been to counter disorderly conditions in exchange markets through the purchase or sale of foreign currencies (called foreign

exchange intervention operations), primarily in the New York market. During some episodes of downward pressure on the foreign exchange value of the dollar, the Federal Reserve has purchased dollars (sold foreign currency) and has thereby absorbed some of the selling pressure on the dollar. Similarly, the Federal Reserve may sell dollars (purchase foreign currency) to counter upward pressure on the dollar's foreign exchange value. The Federal Reserve Bank of New York also executes transactions in the U.S. foreign exchange market for foreign monetary authorities, using their funds.

Under flexible exchange rates, the main aim of Federal Reserve foreign currency operations has been to counter disorderly conditions in exchange markets.

In the early 1980s, the United States curtailed its official exchange market operations, although it remained ready to enter the market when necessary to counter disorderly conditions. In 1985, particularly after September, when representatives of the five major industrial countries reached the so-called Plaza Agreement on exchange rates, the United States began to use exchange market intervention as a policy instrument more frequently. Between 1985 and 1995, the Federal Reserve—sometimes in coordination with other central banks—intervened to counter dollar movements that were perceived as excessive. Based on an assessment of past experience with official intervention and a reluctance to let exchange rate issues be seen as a major focus of monetary policy, U.S. authorities have intervened only rarely since 1995.

Sterilization

Intervention operations involving dollars affect the supply of Federal Reserve balances to U.S. depository institutions, unless the Federal Reserve offsets the effect. A purchase of foreign currency by the Federal Reserve increases the supply of balances when the Federal Reserve credits the account of the seller's depository institution at the Federal Reserve. Conversely, a sale of foreign currency by the Federal Reserve decreases the supply of balances. The Federal Reserve offsets, or "sterilizes," the effects of intervention on Federal Reserve balances through open market operations; otherwise, the intervention could cause the federal funds rate to move away from the target set by the FOMC.

For example, assume that the Federal Reserve, perhaps in conjunction with Japanese authorities, wants to counter downward pressure on the dollar's foreign exchange value in relation to the Japanese yen. The Federal Reserve would sell some of its yen-denominated securities for yen on the open market and then trade the yen for dollars in the foreign exchange market, thus reducing the supply of dollar balances at the Federal Reserve. In order to sterilize the effect of intervention on the supply of Federal Reserve balances, the Open Market Desk would then purchase an equal amount of U.S. Treasury securities in the open market (or arrange a repurchase agreement), thereby raising the supply of balances back to

its former level. The net effect of such an intervention is a reduction in dollar-denominated securities in the hands of the public and an increase in yen-denominated securities. The operations have no net effect on the level of yen balances at the Bank of Japan or on the level of dollar balances at the Federal Reserve.

A dollar intervention initiated by a foreign central bank also leaves the supply of balances at the Federal Reserve unaffected, unless the central bank changes the amount it has on deposit at the Federal Reserve. If, for example, the foreign central bank purchases dollars in the foreign exchange market and places them in its account at the Federal Reserve Bank of New York, then the supply of Federal Reserve balances available to U.S. depository institutions decreases because the dollars are transferred from the bank of the seller of dollars to the foreign central bank's account with the Federal Reserve. However, the Open Market Desk would offset this drain by buying a Treasury security or arranging a repurchase agreement to increase the supply of Federal Reserve balances to U.S. depository institutions. Most dollar purchases by foreign central banks are used to purchase dollar securities directly, and thus they do not need to be countered by U.S. open market operations to leave the supply of dollar balances at the Federal Reserve unchanged.

U.S. Foreign Currency Resources

The main source of foreign currencies used in U.S. intervention operations currently is U.S. holdings of foreign exchange reserves. At the end of June 2004, the United States held foreign currency reserves valued at $40 billion. Of this amount, the Federal Reserve held foreign currency assets of $20 billion, and the Exchange Stabilization Fund of the Treasury held the rest.

The U.S. monetary authorities have also arranged swap facilities with foreign monetary authorities to support foreign currency operations. These facilities, which are also known as reciprocal currency arrangements, provide short-term access to foreign currencies. A swap transaction involves both a spot (immediate delivery) transaction, in which the Federal Reserve transfers dollars to another central bank in exchange for foreign currency, and a simultaneous forward (future delivery) transaction, in which the two central banks agree to reverse the spot transaction, typically no later than three months in the future. The repurchase price incorporates a market rate of return in each currency of the transaction. The original purpose of swap arrangements was to facilitate a central bank's support of its own currency in case of undesired downward pressure in foreign exchange markets. Drawings on swap arrangements were common in the 1960s but over time declined in frequency as policy authorities came to rely more on foreign exchange reserve balances to finance currency operations.

In years past, the Federal Reserve had standing commitments to swap currencies with the central banks of more than a dozen countries. In the middle of the 1990s, these arrangements totaled more than $30 billion, but they were almost never drawn upon. At the end of 1998, these facilities were allowed to lapse by mutual agreement among the central banks involved, with the exception of arrangements with the central banks of Canada and Mexico (see table 4.1).

Reciprocal currency arrangements can be an important policy tool in times of unusual market disruptions. For example, immediately after the terrorist attacks of September 11, 2001, the Federal Reserve established temporary swap arrangements with the European Central Bank and the Bank of England, as well as a temporary augmentation of the existing arrangement with the Bank of Canada (see table 4.1). The purpose of these arrangements was to enable the foreign central banks to lend dollars to local financial institutions to facilitate the settlement of their dollar obligations and to guard against possible disruptions to the global payments system. The European Central Bank drew $23.5 billion of its swap line; the balance was repaid after three days. The other central banks did not draw on their lines. The temporary arrangements lapsed after thirty days.

Table 4.1

Federal Reserve standing reciprocal currency arrangements, June 30, 2004

Millions of U.S. dollars

Institution	Amount of facility	Amount drawn
Bank of Canada	2,000	0
Bank of Mexico	3,000	0
Temporary reciprocal currency arrangements of September 2001		
European Central Bank	50,000	23,500*
Bank of England	30,000	0
Bank of Canada	10,000†	0

* Total drawings on September 12, 13, and 14, 2001. Balance repaid as of September 15, 2001.

† Includes 2,000 from existing arrangement (see upper panel).

International Banking

The Federal Reserve is interested in the international activities of banks, not only because it functions as a bank supervisor but also because such activities are often close substitutes for domestic banking activities and need to be monitored carefully to help interpret U.S. monetary and credit conditions. Moreover, international banking institutions are important vehicles for capital flows into and out of the United States.

Where international banking activities are conducted depends on such factors as the business needs of customers, the scope of operations permitted by a country's legal and regulatory framework, and tax considerations. The international activities of U.S.-chartered banks include lending to and accepting deposits from foreign customers at the banks' U.S. offices and engaging in other financial transactions with foreign counterparts. However, the bulk of the international business of U.S.-chartered banks takes place at their branch offices located abroad and at their foreign-incorporated subsidiaries, usually wholly owned. Much of the activity of foreign branches and subsidiaries of U.S. banks has been Eurocurrency[1] business—that is, taking deposits and lending in currencies other than that of the country in which the banking office is located. Increasingly, U.S. banks are also offering a range of sophisticated financial products to residents of other countries and to U.S. firms abroad.

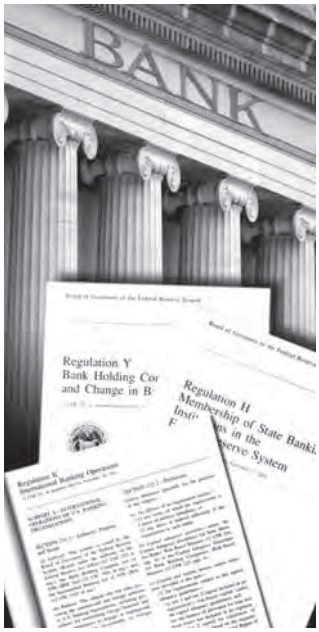
The international role of U.S. banks has a counterpart in foreign bank operations in the United States. U.S. offices of foreign banks actively participate as both borrowers and investors in U.S. domestic money markets and are active in the market for loans to U.S. businesses. (See chapter 5 for a discussion of the Federal Reserve's supervision and regulation of the international activities of U.S. banks and the U.S. activities of foreign banks.)

International banking by both U.S.-based and foreign banks facilitates the holding of Eurodollar deposits—dollar deposits in banking offices outside the United States—by nonbank U.S. entities. Similarly, Eurodollar loans—dollar loans from banking offices outside the United States—can be an important source of credit for U.S. companies (banks and nonbanks). Because they are close substitutes for deposits at domestic banks, Eurodollar deposits of nonbank U.S. entities at foreign branches of U.S. banks are included in the U.S. monetary aggregate M3; Eurodollar deposits of nonbank U.S. entities at all other banking offices in the United Kingdom and Canada are also included in M3. (See page 21 for a discussion of U.S. monetary aggregates.)

1. The term *Eurocurrency* should not be confused with *euro,* the common currency of several European Union countries.

5 Supervision and Regulation

The Federal Reserve has supervisory and regulatory authority over a wide range of financial institutions and activities. It works with other federal and state supervisory authorities to ensure the safety and soundness of financial institutions, stability in the financial markets, and fair and equitable treatment of consumers in their financial transactions. As the U.S. central bank, the Federal Reserve also has extensive and well-established relationships with the central banks and financial supervisors of other countries, which enables it to coordinate its actions with those of other countries when managing international financial crises and supervising institutions with a substantial international presence.



The Federal Reserve has responsibility for supervising and regulating the following segments of the banking industry to ensure safe and sound banking practices and compliance with banking laws:

- bank holding companies, including diversified financial holding companies formed under the Gramm-Leach-Bliley Act of 1999 and foreign banks with U.S. operations
- state-chartered banks that are members of the Federal Reserve System (state member banks)
- foreign branches of member banks
- Edge and agreement corporations, through which U.S. banking organizations may conduct international banking activities
- U.S. state-licensed branches, agencies, and representative offices of foreign banks
- nonbanking activities of foreign banks

Although the terms *bank supervision* and *bank regulation* are often used interchangeably, they actually refer to distinct, but complementary, activities. Bank supervision involves the monitoring, inspecting, and examining of banking organizations to assess their condition and their compliance with relevant laws and regulations. When a banking organization within the Federal Reserve's supervisory jurisdiction is found to be noncompliant or to have other problems, the Federal Reserve may use its supervisory authority to take formal or informal action to have the organization correct the problems.

Bank regulation entails issuing specific regulations and guidelines governing the operations, activities, and acquisitions of banking organizations.

Responsibilities of the Federal Banking Agencies

The primary supervisor of a domestic banking institution is generally determined by the type of institution that it is and the governmental authority that granted it permission to commence business.

The Federal Reserve shares supervisory and regulatory responsibilities for domestic banking institutions with the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), and the Office of Thrift Supervision (OTS) at the federal level, and with the banking departments of the various states. The primary supervisor of a domestic banking institution is generally determined by the type of institution that it is and the governmental authority that granted it permission to commence business (commonly referred to as a charter). Banks that are chartered by a state government are referred to as state banks; banks that are chartered by the OCC, which is a bureau of the Department of the Treasury, are referred to as national banks.

The Federal Reserve has primary supervisory authority for state banks that elect to become members of the Federal Reserve System (state member banks). State banks that are not members of the Federal Reserve System (state nonmember banks) are supervised by the FDIC. In addition to being supervised by the Federal Reserve or FDIC, all state banks are supervised by their chartering state. The OCC supervises national banks. All national banks must become members of the Federal Reserve System. This dual federal–state banking system has evolved partly out of the complexity of the U.S. financial system, with its many kinds of depository institutions and numerous chartering authorities. It has also resulted from a wide variety of federal and state laws and regulations designed to remedy problems that the U.S. commercial banking system has faced over its history.

Banks are often owned or controlled by another company. These companies are referred to as bank holding companies. The Federal Reserve has supervisory authority for all bank holding companies, regardless of whether the subsidiary bank of the holding company is a national bank, state member bank, or state nonmember bank.

Savings associations, another type of depository institution, have historically focused on residential mortgage lending. The OTS, which is a bureau of the Department of the Treasury, charters and supervises federal savings associations and also supervises companies that own or control a savings association. These companies are referred to as thrift holding companies.

The FDIC insures the deposits of banks and savings associations up to certain limits established by law. As the insurer, the FDIC has special exami-

nation authority to determine the condition of an insured bank or savings association for insurance purposes.

Table 5.1 summarizes the supervisory responsibilities of the Federal Reserve and other federal banking agencies.

Table 5.1
Federal supervisor and regulator of corporate components of banking organizations in the United States

Component	Supervisor and regulator
Bank holding companies (including financial holding companies)	FR
Nonbank subsidiaries of bank holding companies	FR/Functional regulator[1]
National banks	OCC
State banks	
Members	FR
Nonmembers	FDIC
Thrift holding companies	OTS
Savings banks	OTS/FDIC/FR
Savings and loan associations	OTS
Edge and agreement corporations	FR
Foreign banks[2]	
Branches and agencies[3]	
State-licensed	FR/FDIC
Federally licensed	OCC/FR/FDIC
Representative offices	FR

NOTE: FR = Federal Reserve; OCC = Office of the Comptroller of the Currency; FDIC = Federal Deposit Insurance Corporation; OTS = Office of Thrift Supervision

1. Nonbank subsidiaries engaged in securities, commodities, or insurance activities are supervised and regulated by their appropriate functional regulators. Such functionally regulated subsidiaries include a broker, dealer, investment adviser, and investment company registered with and regulated by the Securities and Exchange Commission (or, in the case of an investment adviser, registered with any state); an insurance company or insurance agent subject to supervision by a state insurance regulator; and a subsidiary engaged in commodity activities regulated by the Commodity Futures Trading Commission.

2. Applies to direct operations in the United States. Foreign banks may also have indirect operations in the United States through their ownership of U.S. banking organizations.

3. The FDIC has responsibility for branches that are insured.

Federal Financial Institutions Examination Council

To promote consistency in the examination and supervision of banking organizations, in 1978 Congress created the Federal Financial Institutions Examination Council (FFIEC). The FFIEC is composed of the chairpersons of the FDIC and the National Credit Union Administration, the comptroller of the currency, the director of the OTS, and a governor of the Federal Reserve Board appointed by the Board Chairman. The FFIEC's purposes are to prescribe uniform federal principles and standards for the examination of depository institutions, to promote coordination of bank supervision among the federal agencies that regulate financial institutions, and to encourage better coordination of federal and state regulatory activities. Through the FFIEC, state and federal regulatory agencies may exchange views on important regulatory issues. Among other things, the FFIEC has developed uniform financial reports for federally supervised banks to file with their federal regulator.

The main objective of the supervisory process is to evaluate the overall safety and soundness of the banking organization.

Supervisory Process

The main objective of the supervisory process is to evaluate the overall safety and soundness of the banking organization. This evaluation includes an assessment of the organization's risk-management systems, financial condition, and compliance with applicable banking laws and regulations.

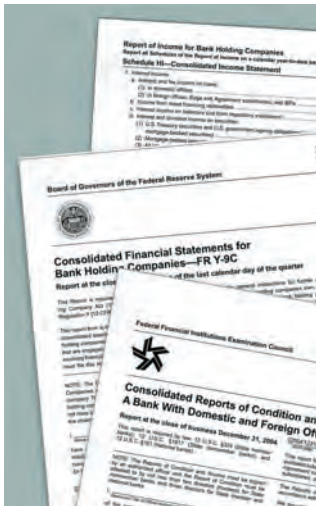
The supervisory process entails both on-site examinations and inspections and off-site surveillance and monitoring. Typically, state member banks must have an on-site examination at least once every twelve months. Banks that have assets of less than $250 million and that meet certain management, capital, and other criteria may be examined once every eighteen months. The Federal Reserve coordinates its examinations with those of the bank's chartering state and may alternate exam cycles with the bank's state supervisor.

The Federal Reserve generally conducts an annual inspection of large bank holding companies (companies with consolidated assets of $1 billion or greater) and smaller bank holding companies that have significant nonbank assets. Small, noncomplex bank holding companies are subject to a special supervisory program that permits a more flexible approach that relies on off-site monitoring and the supervisory ratings of the lead subsidiary depository institution. When evaluating the consolidated condition of the holding company, Federal Reserve examiners rely heavily on the results of the examination of the company's subsidiary banks by the primary federal or state banking authority, to minimize duplication of efforts and reduce burden on the banking organization.

Risk-Focused Supervision

With the largest banking organizations growing in both size and complexity, the Federal Reserve has moved towards a risk-focused approach to supervision that is more a continuous process than a point-in-time examination. The goal of the risk-focused supervision process is to identify the greatest risks to a banking organization and assess the ability of the organization's management to identify, measure, monitor, and control these risks. Under the risk-focused approach, Federal Reserve examiners focus on those business activities that may pose the greatest risk to the organization.

Supervisory Rating System



The results of an on-site examination or inspection are reported to the board of directors and management of the bank or holding company in a report of examination or inspection, which includes a confidential supervisory rating of the financial condition of the bank or holding company. The supervisory rating system is a supervisory tool that all of the federal and state banking agencies use to communicate to banking organizations the agency's assessment of the organization and to identify institutions that raise concern or require special attention. This rating system for banks is commonly referred to as CAMELS, which is an acronym for the six components of the rating system: capital adequacy, asset quality, management and administration, earnings, liquidity, and sensitivity to market risk. The Federal Reserve also uses a supervisory rating system for bank holding companies, referred to as RFI/C(D), that takes into account risk management, financial condition, potential impact of the parent company and nondepository subsidiaries on the affiliated depository institutions, and the CAMELS rating of the affiliated depository institutions.[1]

Financial Regulatory Reports

In carrying out their supervisory activities, Federal Reserve examiners and supervisory staff rely on many sources of financial and other information about banking organizations, including reports of recent examinations and inspections, information published in the financial press and elsewhere, and the standard financial regulatory reports filed by institutions.

1. The risk-management component has four subcomponents that reflect the effectiveness of the banking organization's risk management and controls: board and senior management oversight; policies, procedures, and limits; risk monitoring and management information systems; and internal controls. The financial-condition component has four subcomponents reflecting an assessment of the quality of the banking organization's capital, assets, earnings, and liquidity.

The financial report for banks is the Consolidated Reports of Condition and Income, often referred to as the Call Report. It is used to prepare the Uniform Bank Performance Report, which employs ratio analysis to detect unusual or significant changes in a bank's financial condition that may warrant supervisory attention. The financial report for bank holding companies is the Consolidated Financial Statements for Bank Holding Companies (the FR Y-9 series).

The number and type of report forms that must be filed by a banking organization depend on the size of the organization, the scope of its operations, and the types of activities that it conducts either directly or through a subsidiary. The report forms filed by larger institutions that engage in a wider range of activities are generally more numerous and more detailed than those filed by smaller organizations.

The Federal Reserve plays a significant role in promoting sound accounting policies and meaningful public disclosure by financial institutions.

Off-Site Monitoring

In its ongoing off-site supervision of banks and bank holding companies, the Federal Reserve uses automated screening systems to identify organizations with poor or deteriorating financial profiles and to help detect adverse trends developing in the banking industry. The System to Estimate Examinations Ratings (SEER) statistically estimates an institution's supervisory rating based on prior examination data and information that banks provide in their quarterly Call Report filings. This information enables the Federal Reserve to better direct examiner resources to those institutions needing supervisory attention.

Accounting Policy and Disclosure

Enhanced market discipline is an important component of bank supervision. Accordingly, the Federal Reserve plays a significant role in promoting sound accounting policies and meaningful public disclosure by financial institutions. In 1991, Congress passed the Federal Deposit Insurance Corporation Improvement Act, emphasizing the importance of financial institution accounting, auditing, and control standards. In addition, the Sarbanes-Oxley Act of 2002 seeks to improve the accuracy and reliability of corporate disclosures and to detect and address corporate and accounting fraud. Through its supervision and regulation function, the Federal Reserve seeks to strengthen the accounting, audit, and control standards related to financial institutions. The Federal Reserve is involved in the development of international and domestic capital, accounting, financial disclosure, and other supervisory standards. Federal Reserve examiners also review the quality of financial institutions' disclosure practices. Public disclosure allows market participants to assess the strength of individual institutions and is a critical element in market discipline.

Umbrella Supervision and Coordination with Other Functional Regulators

In addition to owning banks, bank holding companies also may own broker-dealers engaged in securities activities or insurance companies. Indeed, one of the primary purposes of the Gramm-Leach-Bliley Act (GLB Act), enacted in 1999, was to allow banks, securities broker-dealers, and insurance companies to affiliate with each other through the bank holding company structure. To take advantage of the expanded affiliations permitted by the GLB Act, a bank holding company must meet certain capital, managerial, and other requirements and must elect to become a "financial holding company." When a bank holding company or financial holding company owns a subsidiary broker-dealer or insurance company, the Federal Reserve seeks to coordinate its supervisory responsibilities with those of the subsidiary's functional regulator—the Securities and Exchange Commission (SEC) in the case of a broker-dealer and the state insurance authorities in the case of an insurance company.

The Federal Reserve's role as the supervisor of a bank holding company or financial holding company is to review and assess the consolidated organization's operations, risk-management systems, and capital adequacy to ensure that the holding company and its nonbank subsidiaries do not threaten the viability of the company's depository institutions. In this role, the Federal Reserve serves as the "umbrella supervisor" of the consolidated organization. In fulfilling this role, the Federal Reserve relies to the fullest extent possible on information and analysis provided by the appropriate supervisory authority of the company's bank, securities, or insurance subsidiaries.

Anti-Money-Laundering Program

To enhance domestic security following the terrorist attacks of September 11, 2001, Congress passed the USA Patriot Act, which contained provisions for fighting international money laundering and for blocking terrorists' access to the U.S. financial system. The provisions of the act that affect banking organizations were generally set forth as amendments to the Bank Secrecy Act (BSA), which was enacted in 1970.

The BSA requires financial institutions doing business in the United States to report large currency transactions and to retain certain records, including information about persons involved in large currency transactions and about suspicious activity related to possible violations of federal law, such as money laundering, terrorist financing, and other financial crimes. The BSA also prohibits the use of foreign bank accounts to launder illicit funds or to avoid U.S. taxes and statutory restrictions.

The Department of the Treasury maintains primary responsibility for issuing and enforcing regulations to implement this statute. However, Treasury has delegated to the federal financial regulatory agencies responsibility for monitoring banks' compliance with the BSA. The Federal Reserve Board's Regulation H requires banking organizations to develop a written program for BSA compliance. During examinations of state member banks and U.S. branches and agencies of foreign banks, Federal Reserve examiners verify an institution's compliance with the recordkeeping and reporting requirements of the BSA and with related regulations, including those related to economic sanctions imposed by Congress against certain countries, as implemented by the Office of Foreign Assets Control.

Business Continuity

After September 11, 2001, the Federal Reserve implemented a number of measures to promote the continuous operation of financial markets and to ensure the continuity of Federal Reserve operations in the event of a future crisis. The process of strengthening the resilience of the private-sector financial system—focusing on organizations with systemic elements—is largely accomplished through the existing regulatory framework. In 2003, responding to the need for further guidance for financial institutions in this area, the Federal Reserve Board, the OCC, and the SEC issued the "Interagency Paper on Sound Practices to Strengthen the Resilience of the U.S. Financial System." The paper sets forth sound practices for the financial industry to ensure a rapid recovery of the U.S. financial system in the event of a wide-scale disruption that may include loss or inaccessibility of staff. Many of the concepts in the paper amplify long-standing and well-recognized principles relating to safeguarding information and the ability to recover and resume essential financial services.

Other Supervisory Activities

The Federal Reserve conducts on-site examinations of banks to ensure compliance with consumer protection laws (discussed in chapter 6) as well as compliance in other areas, such as fiduciary activities, transfer agency, securities clearing agency, government and municipal securities dealing, securities credit lending, and information technology. Further, in light of the importance of information technology to the safety and soundness of banking organizations, the Federal Reserve has the authority to examine the operations of certain independent organizations that provide information technology services to supervised banking organizations.

Enforcement

If the Federal Reserve determines that a state member bank or bank holding company has problems that affect the institution's safety and soundness

or is not in compliance with laws and regulations, it may take a supervisory action to ensure that the institution undertakes corrective measures. Typically, such findings are communicated to the management and directors of a banking organization in a written report. The management and directors are then asked to address all identified problems voluntarily and to take measures to ensure that the problems are corrected and will not recur. Most problems are resolved promptly after they are brought to the attention of an institution's management and directors. In some situations, however, the Federal Reserve may need to take an informal supervisory action, requesting that an institution adopt a board resolution or agree to the provisions of a memorandum of understanding to address the problem.

If necessary, the Federal Reserve may take formal enforcement actions to compel the management and directors of a troubled banking organization, or persons associated with it, to address the organization's problems. For example, if an institution has significant deficiencies or fails to comply with an informal action, the Federal Reserve may enter into a written agreement with the troubled institution or may issue a cease-and-desist order against the institution or against an individual associated with the institution, such as an officer or director. The Federal Reserve may also assess a fine, remove an officer or director from office and permanently bar him or her from the banking industry, or both. All final enforcement orders issued by the Board and all written agreements executed by Reserve Banks are available to the public on the Board's web site.

Under federal law, U.S. banking organizations generally may conduct a wider range of activities abroad than they may conduct in this country.

Supervision of International Operations of U.S. Banking Organizations

The Federal Reserve also has supervisory and regulatory responsibility for the international operations of member banks (that is, national and state member banks) and bank holding companies. These responsibilities include

- authorizing the establishment of foreign branches of national banks and state member banks and regulating the scope of their activities;
- chartering and regulating the activities of Edge and agreement corporations, which are specialized institutions used for international and foreign business;
- authorizing foreign investments of member banks, Edge and agreement corporations, and bank holding companies and regulating the activities of foreign firms acquired by such investors; and
- establishing supervisory policy and practices regarding foreign lending by state member banks.

Under federal law, U.S. banking organizations generally may conduct a wider range of activities abroad than they may conduct in this country.

The Board has broad discretionary powers to regulate the foreign activities of member banks and bank holding companies so that, in financing U.S. trade and investments abroad, U.S. banking organizations can be fully competitive with institutions of the host country. U.S. banks also may conduct deposit and loan business in U.S. markets outside their home states through Edge and agreement corporations if the operations of the corporations are related to international transactions.

The Federal Reserve examines the international operations of state member banks, Edge and agreement corporations, and bank holding companies principally at the U.S. head offices of these organizations. When appropriate, the Federal Reserve will conduct an examination at the foreign operations of a U.S. banking organization in order to review the accuracy of financial and operational information maintained at the head office as well as to test the organization's adherence to safe and sound banking practices and to evaluate its efforts to implement corrective measures. Examinations abroad are conducted in cooperation with the responsible foreign-country supervisor.

Supervision of U.S. Activities of Foreign Banking Organizations

Although foreign banks have been operating in the United States for more than a century, before 1978 the U.S. branches and agencies of these banks were not subject to supervision or regulation by any federal banking agency. When Congress enacted the International Banking Act of 1978 (IBA), it created a federal regulatory structure for the activities of foreign banks with U.S. branches and agencies. The IBA established a policy of "national treatment" for foreign banks operating in the United States to promote competitive equality between them and domestic institutions. This policy generally gives foreign banking organizations operating in the United States the same powers as U.S. banking organizations and subjects them to the same restrictions and obligations that apply to the domestic operations of U.S. banking organizations.

The Foreign Bank Supervision Enhancement Act of 1991 (FBSEA) increased the Federal Reserve's supervisory responsibility and authority over the U.S. operations of foreign banking organizations and eliminated gaps in the supervision and regulation of foreign banking organizations. The FBSEA amended the IBA to require foreign banks to obtain Federal Reserve approval before establishing branches, agencies, or commercial lending company subsidiaries in the United States. An application by a foreign bank to establish such offices or subsidiaries generally may be approved only if the Board determines that the foreign bank and any foreign-bank parents engage in banking business outside the United States and are subject to comprehensive supervision or regulation on a consolidated basis by their home-country supervisors. The Board may also take into account other factors, such as whether the home-country supervisor has consented

to the proposed new office or subsidiary, the financial and managerial resources of the foreign bank, the condition of any existing U.S. offices, the bank's compliance with U.S. law, the extent of access by the Federal Reserve to information on the foreign bank from the bank and its home-country supervisor, and whether both the foreign bank and its home-country supervisor have taken actions to combat money laundering. The Board's prior approval is also required before a foreign bank may establish a representative office and, in approving the establishment of such an office, the Board takes the above-mentioned standards into account to the extent deemed appropriate.

The FBSEA also increased the responsibility and the authority of the Federal Reserve to regularly examine the U.S. operations of foreign banks. Under the FBSEA, all branches and agencies of foreign banks must be examined on-site at least once every twelve months, although this period may be extended to eighteen months if the branch or agency meets certain criteria. Supervisory actions resulting from examinations may be taken by the Federal Reserve alone or with other agencies. Representative offices are also subject to examination by the Federal Reserve.

The Federal Reserve evaluates transactions between a bank and its affiliates to determine the effect of the transactions on the bank's condition.

The Federal Reserve coordinates the supervisory program for the U.S. operations of foreign banking organizations with the other federal and state banking agencies. Since a foreign banking organization may have both federally and state-chartered offices in the United States, the Federal Reserve plays a key role in assessing the condition of the organization's entire U.S. operations and the foreign banking organization's ability to support its U.S. operations. In carrying out their supervisory responsibilities, the Federal Reserve and other U.S. supervisors rely on two supervisory tools: SOSA rankings and ROCA ratings. SOSA (the Strength of Support Assessment) is the examiners' assessment of a foreign bank's ability to provide support for its U.S. operations. The ROCA rating is an assessment of the organization's U.S. activities in terms of its risk management, operational controls, compliance, and asset quality.

Under the Bank Holding Company Act and the IBA, the Federal Reserve is also responsible for approving, reviewing, and monitoring the U.S. nonbanking activities of foreign banking organizations that have a branch, agency, commercial lending company, or subsidiary bank in the United States. In addition, such foreign banks must obtain Federal Reserve approval to acquire more than 5 percent of the shares of a U.S. bank or bank holding company.

Supervision of Transactions with Affiliates

As part of the supervisory process, the Federal Reserve also evaluates transactions between a bank and its affiliates to determine the effect of the transactions on the bank's condition and to ascertain whether the transac-

tions are consistent with sections 23A and 23B of the Federal Reserve Act, as implemented by the Federal Reserve Board's Regulation W. Since the GLB Act increased the range of affiliations permitted to banking organizations, sections 23A and 23B play an increasingly important role in limiting the risk to depository institutions from these broader affiliations. Among other things, section 23A prohibits a bank from purchasing an affiliate's low-quality assets. In addition, it limits a bank's loans and other extensions of credit to any single affiliate to 10 percent of the bank's capital and surplus, and it limits loans and other extensions of credit to all affiliates in the aggregate to 20 percent of the bank's capital and surplus. Section 23B requires that all transactions between a bank and its affiliates be on terms that are substantially the same, or at least as favorable, as those prevailing at the time for comparable transactions with nonaffiliated companies. The Federal Reserve Board is the only banking agency that has the authority to exempt any bank from these requirements. During the course of an examination, examiners review a banking organization's intercompany transactions for compliance with these statutes and Regulation W.

The Federal Reserve establishes standards designed to ensure that banking organizations operate in a safe and sound manner and in accordance with applicable law.

Regulatory Functions

As a bank regulator, the Federal Reserve establishes standards designed to ensure that banking organizations operate in a safe and sound manner and in accordance with applicable law. These standards may take the form of regulations, rules, policy guidelines, or supervisory interpretations and may be established under specific provisions of a law or under more general legal authority. Regulatory standards may be either restrictive (limiting the scope of a banking organization's activities) or permissive (authorizing banking organizations to engage in certain activities). (For a complete list of Federal Reserve regulations, see appendix A.)

In many cases, the Federal Reserve Board's regulations are adopted to implement specific legislative initiatives or requirements passed by Congress. These statutory provisions may have been adopted by Congress to respond to past crises or problems or to update the nation's banking laws to respond to changes in the marketplace. For example, in response to the savings and loan crisis and financial difficulties in the banking industry in the late 1980s and early 1990s, Congress enacted several laws to improve the condition of individual institutions and of the overall banking industry, including the Competitive Equality Banking Act of 1987; the Financial Institutions Reform, Recovery, and Enforcement Act of 1989; and the Federal Deposit Insurance Corporation Improvement Act of 1991. These legislative initiatives restricted banking practices, limited supervisors' discretion in dealing with weak banks, imposed new regulatory requirements—including prompt corrective action—and strengthened supervisory oversight overall.

More recently, Congress has adopted other laws to respond to the growing integration of banking markets, both geographically and functionally, and the increasing convergence of banking, securities, and insurance activities. The Riegle-Neal Interstate Banking and Branching Efficiency Act of 1994 significantly reduced the legal barriers that had restricted the ability of banks and bank holding companies to expand their activities across state lines. In 1999, Congress passed the GLB Act, which repealed certain Depression-era banking laws and permitted banks to affiliate with securities and insurance firms within financial holding companies.

Acquisitions and Mergers

Under the authority assigned to the Federal Reserve by the Bank Holding Company Act of 1956 as amended, the Bank Merger Act of 1960, and the Change in Bank Control Act of 1978, the Federal Reserve Board maintains broad authority over the structure of the banking system in the United States.

The Bank Holding Company Act assigned to the Federal Reserve primary responsibility for supervising and regulating the activities of bank holding companies. Through this act, Congress sought to achieve two basic objectives: (1) to avoid the creation of a monopoly or the restraint of trade in the banking industry through the acquisition of additional banks by bank holding companies and (2) to keep banking and commerce separate by restricting the nonbanking activities of bank holding companies. Historically, bank holding companies could engage only in banking activities and other activities that the Federal Reserve determined to be closely related to banking. But since the passage of the GLB Act, a bank holding company that qualifies to become a financial holding company may engage in a broader range of financially related activities, including full-scope securities underwriting and dealing, insurance underwriting and sales, and merchant banking. A bank holding company seeking financial holding company status must file a written declaration with the Federal Reserve System, certifying that the company meets the capital, managerial, and other requirements to be a financial holding company.

Bank Acquisitions

Under the Bank Holding Company Act, a firm that seeks to become a bank holding company must first obtain approval from the Federal Reserve. The act defines a *bank holding company* as any company that directly or indirectly owns, controls, or has the power to vote 25 percent or more of any class of the voting shares of a bank; controls in any manner the election of a majority of the directors or trustees of a bank; or is found to exercise a controlling influence over the management or policies of a bank. A bank holding company must obtain the approval of the Federal

Reserve before acquiring more than 5 percent of the shares of an additional bank or bank holding company. All bank holding companies must file certain reports with the Federal Reserve System.

When considering applications to acquire a bank or a bank holding company, the Federal Reserve is required to take into account the likely effects of the acquisition on competition, the convenience and needs of the communities to be served, the financial and managerial resources and future prospects of the companies and banks involved, and the effectiveness of the company's policies to combat money laundering. In the case of an interstate bank acquisition, the Federal Reserve also must consider certain other factors and may not approve the acquisition if the resulting organization would control more than 10 percent of all deposits held by insured depository institutions. When a foreign bank seeks to acquire a U.S. bank, the Federal Reserve also must consider whether the foreign banking organization is subject to comprehensive supervision or regulation on a consolidated basis by its home-country supervisor.

The Federal Reserve is responsible for changes in the control of bank holding companies and state member banks.

Bank Mergers

Another responsibility of the Federal Reserve is to act on proposed bank mergers when the resulting institution would be a state member bank. The Bank Merger Act of 1960 sets forth the factors to be considered in evaluating merger applications. These factors are similar to those that must be considered in reviewing bank acquisition proposals by bank holding companies. To ensure that all merger applications are evaluated in a uniform manner, the act requires that the responsible agency request reports from the Department of Justice and from the other approving banking agencies addressing the competitive impact of the transaction.

Other Changes in Bank Control

The Change in Bank Control Act of 1978 authorizes the federal bank regulatory agencies to deny proposals by a single "person" (which includes an individual or an entity), or several persons acting in concert, to acquire control of an insured bank or a bank holding company. The Federal Reserve is responsible for approving changes in the control of bank holding companies and state member banks, and the FDIC and the OCC are responsible for approving changes in the control of insured state nonmember and national banks, respectively. In considering a proposal under the act, the Federal Reserve must review several factors, including the financial condition, competence, experience, and integrity of the acquiring person or group of persons; the effect of the transaction on competition; and the adequacy of the information provided by the acquiring party.

Formation and Activities of Financial Holding Companies

As authorized by the GLB Act, the Federal Reserve Board's regulations allow a bank holding company or a foreign banking organization to become a financial holding company and engage in an expanded array of financial activities if the company meets certain capital, managerial, and other criteria. Permissible activities for financial holding companies include conducting securities underwriting and dealing, serving as an insurance agent and underwriter, and engaging in merchant banking. Other permissible activities include those that the Federal Reserve Board, after consulting with the Secretary of the Treasury, determines to be financial in nature or incidental to financial activities. Financial holding companies also may engage to a limited extent in a nonfinancial activity if the Board determines that the activity is complementary to one or more of the company's financial activities and would not pose a substantial risk to the safety or soundness of depository institutions or the financial system.

Capital Adequacy Standards

A key goal of banking regulation is to ensure that banks maintain sufficient capital to absorb reasonably likely losses.

A key goal of banking regulation is to ensure that banks maintain sufficient capital to absorb reasonably likely losses. In 1989, the federal banking regulators adopted a common standard for measuring capital adequacy that is broadly based on the risks of an institution's investments. This common standard, in turn, was based on the 1988 agreement "International Convergence of Capital Measurement and Capital Standards" (commonly known as the Basel Accord) developed by the Basel Committee on Banking Supervision. This committee, which is associated with the Bank for International Settlements headquartered in Switzerland, is composed of representatives of the central banks or bank supervisory authorities from Belgium, Canada, France, Germany, Italy, Japan, Luxembourg, the Netherlands, Spain, Sweden, Switzerland, the United Kingdom, and the United States.

The risk-based capital standards require institutions that assume greater risk to hold higher levels of capital. Moreover, these standards take into account risks associated with activities that are not included on a bank's balance sheet, such as the risks arising from commitments to make loans. Because they have been accepted by the bank supervisory authorities of most of the countries with major international banking centers, these standards promote safety and soundness and reduce competitive inequities among banking organizations operating within an increasingly global market.

Recognizing that the existing risk-based capital standards were in need of significant enhancements to address the activities of complex bank-

ing organizations, the Basel Committee began work to revise the Basel Accord in 1999 and, in June 2004, endorsed a revised framework, which is referred to as Basel II. Basel II has three "pillars" that make up the framework for assessing capital adequacy. Pillar I, minimum regulatory capital requirements, more closely aligns banking organizations' capital levels with their underlying risks. Pillar II, supervisory oversight, requires supervisors to evaluate banking organizations' capital adequacy and to encourage better risk-management techniques. Pillar III, market discipline, calls for enhanced public disclosure of banking organizations' risk exposures.

Financial Disclosures by State Member Banks

State member banks that issue securities registered under the Securities Exchange Act of 1934 must disclose certain information of interest to investors, including annual and quarterly financial reports and proxy statements. By statute, the Federal Reserve administers these requirements and has adopted financial disclosure regulations for state member banks that are substantially similar to the SEC's regulations for other public companies.

Securities Credit

The Securities Exchange Act of 1934 requires the Federal Reserve to regulate the extension of credit used in connection with the purchase of securities. Through its regulations, the Board establishes the minimum amount the buyer must put up when purchasing a security. This minimum amount is known as the margin requirement. In fulfilling its responsibility under the act, the Federal Reserve limits the amount of credit that may be provided by securities brokers and dealers (Regulation T) and the amount of securities credit extended by banks and other lenders (Regulation U). These regulations generally apply to credit-financed purchases of securities traded on securities exchanges and certain securities traded over the counter when the credit is collateralized by such securities. In addition, Regulation X prohibits borrowers who are subject to U.S. laws from obtaining such credit overseas on terms more favorable than could be obtained from a domestic lender.

In general, compliance with the Federal Reserve's margin regulations is enforced by several federal regulatory agencies. The federal agencies that regulate financial institutions check for Regulation U compliance during examinations. The Federal Reserve checks for Regulation U compliance on the part of securities credit lenders not otherwise regulated by federal agencies. Compliance with Regulation T is verified during examinations of broker-dealers by the securities industry's self-regulatory organizations under the general oversight of the SEC.

6 Consumer and Community Affairs

The number of federal laws intended to protect consumers in credit and other financial transactions has been growing since the late 1960s. Congress has assigned to the Federal Reserve the duty of implementing many of these laws to ensure that consumers receive comprehensive information and fair treatment.

Among the Federal Reserve's responsibilities in this area are

- writing and interpreting regulations to carry out many of the major consumer protection laws,
- reviewing bank compliance with the regulations,
- investigating complaints from the public about state member banks' compliance with consumer protection laws,
- addressing issues of state and federal jurisdiction,
- testifying before Congress on consumer protection issues, and
- conducting community development activities.

In carrying out these responsibilities, the Federal Reserve is advised by its Consumer Advisory Council, whose members represent the interests of consumers, community groups, and creditors nationwide. Meetings of the council, which take place three times a year at the Federal Reserve Board in Washington, D.C., are open to the public.

Consumer Protection

Most financial transactions involving consumers are covered by consumer protection laws. These include transactions involving credit, charge, and debit cards issued by financial institutions and credit cards issued by retail establishments; automated teller machine transactions and other electronic fund transfers; deposit account transactions; automobile leases; mortgages and home equity loans; and lines of credit and other unsecured credit.

Writing and Interpreting Regulations

The Federal Reserve Board writes regulations to implement many of the major consumer protection laws. These regulations may cover not only banks but also certain businesses, including finance companies, mortgage brokers, retailers, and automobile dealers. For example, Congress passed

the Truth in Lending Act to ensure that consumers have adequate information about credit. The Board implemented that law by writing Regulation Z, which requires banks and other creditors to provide detailed information to consumers about the terms and cost of consumer credit for mortgages, car loans, credit and charge cards, and other credit products. The Board also revises and updates its regulations to address new products or changes in technology, to implement changes to existing legislation, or to address problems encountered by consumers.

Educating Consumers about Consumer Protection Laws

Well-educated consumers are the best consumer protection in the market.

Well-educated consumers are the best consumer protection in the market. They know their rights and responsibilities, and they use the information provided in disclosures to shop and compare. The Federal Reserve Board maintains a consumer information web site with educational materials related to the consumer protection regulations developed by the Board (www.federalreserve.gov/consumers.htm). In addition, the Federal Reserve staff uses consumer surveys and focus groups to learn more about what issues are important to consumers and to develop and test additional educational resources.

Enforcing Consumer Protection Laws

The Federal Reserve has a comprehensive program to examine financial institutions and other entities that it supervises to ensure compliance with consumer protection laws and regulations. Its enforcement responsibilities generally extend only to state-chartered banks that are members of the Federal Reserve System and to certain foreign banking organizations. Other federal regulators are responsible for examining banks, thrift institutions, and credit unions under their jurisdictions and for taking enforcement action.

Each Reserve Bank has specially trained examiners who regularly evaluate banks' compliance with consumer protection laws and their Community Reinvestment Act (CRA) performance. Most banks are evaluated every forty-eight months, although large banks are examined every twenty-four months and poorly rated banks are examined more frequently.

To make the most effective and efficient use of resources while ensuring compliance with consumer protection laws and regulations, the Federal Reserve uses a risk-focused approach to supervision, focusing most intensely on those areas involving the greatest compliance risk. Examinations always include a comprehensive assessment of an institution's CRA performance in order to present to the public a full and fair portrait of the institution's efforts. Examiners also assess the broad range of large complex banking organizations' activities to determine the level and trend of compliance risk in the area of consumer protection.

In accordance with the Community Reinvestment Act of 1977, the Federal Reserve reviews a bank's efforts to meet the credit and community development needs of its entire community, including low- and moderate-income neighborhoods; for example, it looks at the extent to which a bank has programs that contribute to the building of affordable housing and to other aspects of community development. When deciding whether to approve an application for a bank acquisition or merger or for the formation of a bank holding company, the Federal Reserve takes into account an institution's performance under the CRA. An important aspect of the process is that it gives the public the opportunity to submit written comments on the proposal. These comments, which often provide insight into a financial institution's CRA performance, are reviewed by Federal Reserve staff and considered by the Board when it evaluates an application.

The Federal Reserve reviews a bank's efforts to meet the credit and community development needs of its entire community.

At the end of this chapter is a list of the consumer protection laws for which the Federal Reserve has rule-writing or enforcement responsibility, the dates the laws were enacted, and the highlights of the laws' provisions.

Consumer Complaint Program

The Federal Reserve responds to inquiries and complaints from the public about the policies and practices of financial institutions involving consumer protection issues. Each Reserve Bank has staff whose primary responsibility is to investigate consumer complaints about state member banks and refer complaints about other institutions to the appropriate regulatory agencies. The Federal Reserve's responses not only address the concerns raised but also educate consumers about financial matters.

The Federal Reserve Board maintains information on consumer inquiries and complaints in a database, which it regularly reviews to identify potential problems at individual financial institutions and, as required by the Federal Trade Commission Improvement Act, to uncover potentially unfair or deceptive practices within the banking industry. Complaint data are a critical component of the risk-focused supervisory program and are used as a risk factor to assess a bank's compliance with consumer regulations. Data about consumer complaints are also used to determine the need for future regulations or educational efforts.

Community Affairs

Community affairs programs at the Board and the twelve Federal Reserve Banks promote community development and fair and impartial access to credit. Community affairs offices at the Board and Reserve Banks engage in a wide variety of activities to help financial institutions, community-based organizations, government entities, and the public understand and

address financial services issues that affect low- and moderate-income people and geographic regions. Each office responds to local needs in its District and establishes its own programs to

- foster depository institutions' active engagement in providing credit and other banking services to their entire communities, particularly traditionally underserved markets;
- encourage mutually beneficial cooperation among community organizations, government agencies, financial institutions, and other community development practitioners;
- develop greater public awareness of the benefits and risks of financial products and of the rights and responsibilities that derive from community investment and fair lending regulations; and
- promote among policy makers, community leaders, and private-sector decision makers a better understanding of the practices, processes, and resources that result in successful community development programs.

Each Federal Reserve Bank develops specific products and services to meet the informational needs of its region. The community affairs offices issue a wide array of publications, sponsor a variety of public forums, and provide technical information on community and economic development and on fair and equal access to credit and other banking services.

The Fair Housing Act prohibits discrimination in the extension of housing credit.

Consumer Protection Laws

- ***Fair Housing Act (1968)***
  Prohibits discrimination in the extension of housing credit on the basis of race, color, religion, national origin, sex, handicap, or family status.
- ***Truth in Lending Act (1968)***
  Requires uniform methods for computing the cost of credit and for disclosing credit terms. Gives borrowers the right to cancel, within three days, certain loans secured by their residences. Prohibits the unsolicited issuance of credit cards and limits cardholder liability for unauthorized use. Also imposes limitations on home equity loans with rates or fees above a specified threshold.
- ***Fair Credit Reporting Act (1970)***
  Protects consumers against inaccurate or misleading information in credit files maintained by credit-reporting agencies; requires credit-reporting agencies to allow credit applicants to correct erroneous reports.
- ***Flood Disaster Protection Act of 1973***
  Requires flood insurance on property in a flood hazard area that comes under the National Flood Insurance Program.
- ***Fair Credit Billing Act (1974)***
  Specifies how creditors must respond to billing-error complaints from consumers; imposes requirements to ensure that creditors handle ac-

counts fairly and promptly. Applies primarily to credit and charge card accounts (for example, store card and bank card accounts). Amended the Truth in Lending Act.

- ***Equal Credit Opportunity Act (1974)***
  Prohibits discrimination in credit transactions on several bases, including sex, marital status, age, race, religion, color, national origin, the receipt of public assistance funds, or the exercise of any right under the Consumer Credit Protection Act. Requires creditors to grant credit to qualified individuals without requiring cosignature by spouses, to inform unsuccessful applicants in writing of the reasons credit was denied, and to allow married individuals to have credit histories on jointly held accounts maintained in the names of both spouses. Also entitles a borrower to a copy of a real estate appraisal report.
- ***Real Estate Settlement Procedures Act of 1974***
  Requires that the nature and costs of real estate settlements be disclosed to borrowers. Also protects borrowers against abusive practices, such as kickbacks, and limits the use of escrow accounts.
- ***Home Mortgage Disclosure Act of 1975***
  Requires mortgage lenders to annually disclose to the public data about the geographic distribution of their applications, originations, and purchases of home-purchase and home-improvement loans and refinancings. Requires lenders to report data on the ethnicity, race, sex, income of applicants and borrowers, and other data. Also directs the Federal Financial Institutions Examination Council, of which the Federal Reserve is a member, to make summaries of the data available to the public.
- ***Consumer Leasing Act of 1976***
  Requires that institutions disclose the cost and terms of consumer leases, such as automobile leases.
- ***Fair Debt Collection Practices Act (1977)***
  Prohibits abusive debt collection practices. Applies to banks that function as debt collectors for other entities.
- ***Community Reinvestment Act of 1977***
  Encourages financial institutions to help meet the credit needs of their entire communities, particularly low- and moderate-income neighborhoods.
- ***Right to Financial Privacy Act of 1978***
  Protects bank customers from the unlawful scrutiny of their financial records by federal agencies and specifies procedures that government authorities must follow when they seek information about a customer's financial records from a financial institution.
- ***Electronic Fund Transfer Act (1978)***
  Establishes the basic rights, liabilities, and responsibilities of consumers who use electronic fund transfer services and of financial institutions that offer these services. Covers transactions conducted at automated teller machines, at point-of-sale terminals in stores, and through tele-

The Community Reinvestment Act encourages financial institutions to help meet the credit needs of their entire communities.

phone bill-payment plans and preauthorized transfers to and from a customer's account, such as direct deposit of salary or Social Security payments.

- ***Federal Trade Commission Improvement Act (1980)***
  Authorizes the Federal Reserve to identify unfair or deceptive acts or practices by banks and to issue regulations to prohibit them. Using this authority, the Federal Reserve has adopted rules substantially similar to those adopted by the FTC that restrict certain practices in the collection of delinquent consumer debt, for example, practices related to late charges, responsibilities of cosigners, and wage assignments.
- ***Expedited Funds Availability Act (1987)***
  Specifies when depository institutions must make funds deposited by check available to depositors for withdrawal. Requires institutions to disclose to customers their policies on funds availability.
- ***Women's Business Ownership Act of 1988***
  Extends to applicants for business credit certain protections afforded consumer credit applicants, such as the right to an explanation for credit denial. Amended the Equal Credit Opportunity Act.
- ***Fair Credit and Charge Card Disclosure Act of 1988***
  Requires that applications for credit cards that are sent through the mail, solicited by telephone, or made available to the public (for example, at counters in retail stores or through catalogs) contain information about key terms of the account. Amended the Truth in Lending Act.
- ***Home Equity Loan Consumer Protection Act of 1988***
  Requires creditors to provide consumers with detailed information about open-end credit plans secured by the consumer's dwelling. Also regulates advertising of home equity loans and restricts the terms of home equity loan plans.
- ***Truth in Savings Act (1991)***
  Requires that depository institutions disclose to depositors certain information about their accounts—including the annual percentage yield, which must be calculated in a uniform manner—and prohibits certain methods of calculating interest. Regulates advertising of savings accounts.
- ***Home Ownership and Equity Protection Act of 1994***
  Provides additional disclosure requirements and substantive limitations on home-equity loans with rates or fees above a certain percentage or amount. Amended the Truth in Lending Act.
- ***Gramm-Leach-Bliley Act, title V, subpart A, Disclosure of Nonpublic Personal Information (1999)***
  Describes the conditions under which a financial institution may disclose nonpublic personal information about consumers to nonaffiliated third parties, provides a method for consumers to opt out of information sharing with nonaffiliated third parties, and requires a financial institution to notify consumers about its privacy policies and practices.

The Fair Credit and Charge Card Disclosure Act requires that applications for credit cards contain information about key terms of the account.

- ***Fair and Accurate Credit Transaction Act of 2003***
  Enhances consumers' ability to combat identity theft, increases the accuracy of consumer reports, allows consumers to exercise greater control over the type and amount of marketing solicitations they receive, restricts the use and disclosure of sensitive medical information, and establishes uniform national standards in the regulation of consumer reporting. Amended the Fair Credit Reporting Act.

7 The Federal Reserve in the U.S. Payments System

The Federal Reserve plays an important role in the U.S. payments system. The twelve Federal Reserve Banks provide banking services to depository institutions and to the federal government. For depository institutions, they maintain accounts and provide various payment services, including collecting checks, electronically transferring funds, and distributing and receiving currency and coin. For the federal government, the Reserve Banks act as fiscal agents, paying Treasury checks; processing electronic payments; and issuing, transferring, and redeeming U.S. government securities.

By creating the Federal Reserve System, Congress intended to eliminate the severe financial crises that had periodically swept the nation, especially the sort of financial panic that occurred in 1907. During that episode, payments were disrupted throughout the country because many banks and clearinghouses refused to clear checks drawn on certain other banks, a practice that contributed to the failure of otherwise solvent banks. To address these problems, Congress gave the Federal Reserve System the authority to establish a nationwide check-clearing system. The System, then, was to provide not only an elastic currency—that is, a currency that would expand or shrink in amount as economic conditions warranted—but also an efficient and equitable check-collection system.

Bank panic of 1907

Congress was also concerned about some banks' paying less than the full amount of checks deposited by their customers because some paying banks charged fees to presenting banks to pay checks. To avoid paying presentment fees, many collecting banks routed checks through banks that were not charged presentment fees by paying banks. This practice, called circuitous routing, resulted in extensive delays and inefficiencies in the check-collection system. In 1917, Congress amended the Federal Reserve Act to prohibit banks from charging the Reserve Banks presentment fees and to authorize nonmember banks as well as member banks to collect checks through the Federal Reserve System.

In passing the Monetary Control Act of 1980, Congress reaffirmed its intention that the Federal Reserve should promote an efficient nationwide payments system. The act subjects all depository institutions, not just member commercial banks, to reserve requirements and grants them equal access to Reserve Bank payment services. It also encourages competition between the Reserve Banks and private-sector providers of payment services by requiring the Reserve Banks to charge fees for certain payments services listed in the act and to recover the costs of providing these services over the long run.

The Federal Reserve performs an important role as an intermediary in clearing and settling interbank payments.

More recent congressional action has focused increasingly on improving the efficiency of the payments system by encouraging increased use of technology. In 1987, Congress enacted the Expedited Funds Availability Act (EFAA), which gave the Board, for the first time, the authority to regulate the payments system in general, not just those payments made through the Reserve Banks. The Board used its authority under the EFAA to revamp the check-return system, improve the presentment rights of private-sector banks, and establish rules governing the time that banks can hold funds from checks deposited into customer accounts before making the funds available for withdrawal. In 2003, Congress enacted the Check Clearing for the 21st Century Act, which further enhanced the efficiency of the payments system by reducing legal and practical impediments to check truncation and the electronic collection of checks, services that speed up check collection and reduce associated costs.

Financial Services

The U.S. payments system is the largest in the world. Each day, millions of transactions, valued in the trillions of dollars, are conducted between sellers and purchasers of goods, services, or financial assets. Most of the payments underlying those transactions flow between depository institutions, a large number of which maintain accounts with the Reserve Banks. The Federal Reserve therefore performs an important role as an intermediary in clearing and settling interbank payments. The Reserve

Banks settle payment transactions efficiently by debiting the accounts of the depository institutions making payments and by crediting the accounts of depository institutions receiving payments. Moreover, as the U.S. central bank, the Federal Reserve is immune from liquidity problems—not having sufficient funds to complete payment transactions—and credit problems that could disrupt its clearing and settlement activities.

The Federal Reserve plays a vital role in both the nation's retail and wholesale payments systems, providing a variety of financial services to depository institutions. Retail payments are generally for relatively small-dollar amounts and often involve a depository institution's retail clients—individuals and smaller businesses. The Reserve Banks' retail services include distributing currency and coin, collecting checks, and electronically transferring funds through the automated clearinghouse system. By contrast, wholesale payments are generally for large-dollar amounts and often involve a depository institution's large corporate customers or counterparties, including other financial institutions. The Reserve Banks' wholesale services include electronically transferring funds through the Fedwire Funds Service and transferring securities issued by the U.S. government, its agencies, and certain other entities through the Fedwire Securities Service. Because of the large amounts of funds that move through the Reserve Banks every day, the System has policies and procedures to limit the risk to the Reserve Banks from a depository institution's failure to make or settle its payments.

An important function of the Federal Reserve is ensuring that enough cash is in circulation to meet the public's demand.

Retail Services

Currency and Coin

An important function of the Federal Reserve is ensuring that enough cash—that is, currency and coin—is in circulation to meet the public's demand. When Congress established the Federal Reserve, it recognized that the public's demand for cash is variable. This demand increases or decreases seasonally and as the level of economic activity changes. For example, in the weeks leading up to a holiday season, depository institutions increase their orders of currency and coin from Reserve Banks to meet their customers' demand. Following the holiday season, depository institutions ship excess currency and coin back to the Reserve Banks, where it is credited to their accounts.

Each of the twelve Reserve Banks is authorized by the Federal Reserve Act to issue currency, and the Department of Treasury is authorized to issue coin. The Secretary of the Treasury approves currency designs, and the Treasury's Bureau of Engraving and Printing prints the notes. The Federal Reserve Board places an annual printing order with the bureau

and pays the bureau for the cost of printing. The Federal Reserve Board coordinates shipments of currency to the Reserve Banks around the country. The Reserve Banks, in turn, issue the notes to the public through depository institutions. Federal Reserve notes are obligations of the Reserve Banks. The Reserve Banks secure the currency they issue with legally authorized collateral, most of which is in the form of U.S. Treasury securities held by the Reserve Banks. Coin, unlike currency, is issued by the Treasury, not the Reserve Banks. The Reserve Banks order coin from the Treasury's Bureau of the Mint and pay the Mint the full face value of coin, rather than the cost to produce it. The Reserve Banks then distribute coin to the public through depository institutions.

Demand Treasury note, 1861

Silver certificate, 1880

Although the issuance of paper money in this country dates back to 1690, the U.S. government did not issue paper currency with the intent that it circulate as money until 1861, when Congress approved the issuance of demand Treasury notes. All currency issued by the U.S. government since then remains legal tender, including silver certificates, which have a blue seal for the Department of the Treasury; United States notes, which have a red seal; and national bank notes, which have a brown seal. Today, nearly all currency in circulation is in the form of Federal Reserve notes, which

were first issued in 1914 and have a green Treasury seal. Currency is redesigned periodically to incorporate new anti-counterfeiting features. When currency is redesigned, all previous Federal Reserve notes remain valid.

National bank note, Winters National Bank of Dayton, Ohio, 1901

When currency flows back to the Reserve Banks, each deposit is counted, verified, and authenticated. Notes that are too worn for recirculation (unfit notes) and those that are suspected of being counterfeit are culled out. Suspect notes are forwarded to the United States Secret Service, and unfit notes are destroyed at the Reserve Banks on behalf of the Treasury. Notes that can be recirculated to the public are held in Reserve Bank vaults, along with new notes, until they are needed to meet demand. Coin that is received by Reserve Banks is verified by weight rather than piece-counted, as currency is.

Today, currency and coin are used primarily for small-dollar transactions and thus account for only a small proportion of the total dollar value of all monetary transactions. During 2003, Reserve Banks delivered to depository institutions about 36.6 billion notes having a value of $633.4 billion and received from depository institutions about 35.7 billion notes having a value of $596.9 billion. Of the total received by Reserve Banks, 7.4 billion notes, with a face value of $101.3 billion, were deemed to be unfit to continue to circulate and were destroyed. The difference between the amount of currency paid to depository institutions and the amount of currency received from circulation equals the change in demand for currency resulting from economic activity. In 2003, the increase in demand was $36.5 billion.

Over the past five decades, the value of currency and coin in circulation has risen dramatically—from $31.2 billion in 1955 to $724.2 billion in 2003 (table 7.1).[1] The total number of notes in circulation (24.8 billion at

1. Current data on currency and coin can be found on the Board's web site (www.federalreserve.gov), under "Payment Systems."

the end of 2003) and the demand for larger denominations ($20, $50, and $100 notes) has also increased (table 7.2). In 1960, these larger denominations accounted for 64 percent of the total value of currency in circulation; by the end of 2003, they accounted for 95 percent. Because the U.S. dollar is highly regarded throughout the world as a stable and readily negotiable currency, much of the increased demand for larger-denomination notes has arisen outside of the United States. Although the exact value of U.S. currency held outside the country is unknown, Federal Reserve economists estimate that from one-half to two-thirds of all U.S. currency circulates abroad.

Table 7.1

Value of currency and coin in circulation, selected years, 1955–2003

Millions of dollars

Year	Currency*	Coin	Total
1955	29,242	1,916	31,158
1960	30,442	2,426	32,868
1965	38,029	4,027	42,056
1970	45,915	5,986	51,901
1975	68,059	8,285	76,344
1980	109,515	11,641	121,156
1985	182,003	15,456	197,459
1990	268,206	18,765	286,971
1995	401,517	22,727	424,244
2000	563,970	29,724	593,694
2001	612,273	31,028	643,301
2002	654,785	32,733	687,518
2003	690,267	33,927	724,194

* Currency in circulation includes Federal Reserve notes, silver certificates, United States notes, and national bank notes.

Table 7.2

Estimated value of currency in circulation by denomination, selected years, 1960–2003

Billions of dollars

Year	Denomination								Total
	1	2	5	10	20	50	100	Other*	
1960	1.5	.1	2.2	6.7	10.5	2.8	6.0	.6	30.4
1970	2.1	.1	2.9	8.4	16.6	4.4	10.9	.5	45.9
1980	3.1	.7	4.1	11.0	36.4	12.2	41.6	.4	109.5
1990	5.1	.8	6.3	12.6	69.0	33.9	140.2	.3	268.2
2000	7.7	1.2	8.9	14.5	98.6	55.1	377.7	.3	564.0
2003	8.2	1.4	9.7	15.2	107.8	59.9	487.8	.3	690.3

* Other denominations include the $500, $1,000, $5,000, and $10,000 notes. No denominations larger than $100 have been printed since 1946 or issued since 1969. The majority of these notes are held by private collectors, currency dealers, and financial institutions for display.

Check Processing

While cash is convenient for small-dollar transactions, for larger-value transactions individuals, businesses, and governments generally use checks or electronic funds transfers. Measured by the number used, checks continue to be the preferred noncash payment method; however, their use has begun to decline in favor of electronic methods. In 2001, the Federal Reserve conducted an extensive survey on the use of checks and other noncash payment instruments in the United States and compared the results with a 1979 study of noncash payments and similar data collected in 1995. The survey results indicated that check usage peaked sometime during the mid-1990s and has declined since then. For example, the survey found that checks represented 59.5 percent of retail noncash payments in 2000, compared with 77.1 percent just five years earlier and 85.7 percent in 1979. The total value of checks paid declined from an estimated $50.7 trillion in 1979 to $39.3 trillion in 2000 (both in 2000 dollars).[2]

In 2004, the Federal Reserve conducted another study to determine the changes in noncash payments from 2000 to 2003. That study found that the number of noncash payments had grown since 2000 and that checks were the only payment instrument being used less frequently than in 2000

2. See Gerdes, Geoffrey R., and Jack K. Walton II, "The Use of Checks and Other Noncash Payment Instruments in the United States," *Federal Reserve Bulletin,* vol. 88 (August 2002), pp. 360–74.

(table 7.3). Chart 7.1 illustrates the changes in the distribution of noncash payments from 2000 to 2003.

Table 7.3
Number of noncash payments, 2000 and 2003

	2000 estimate (billions)	2003 estimate (billions)	CAGR*
Noncash payments	72.5	81.2	38%
Check	41.9	36.7	–4.3%

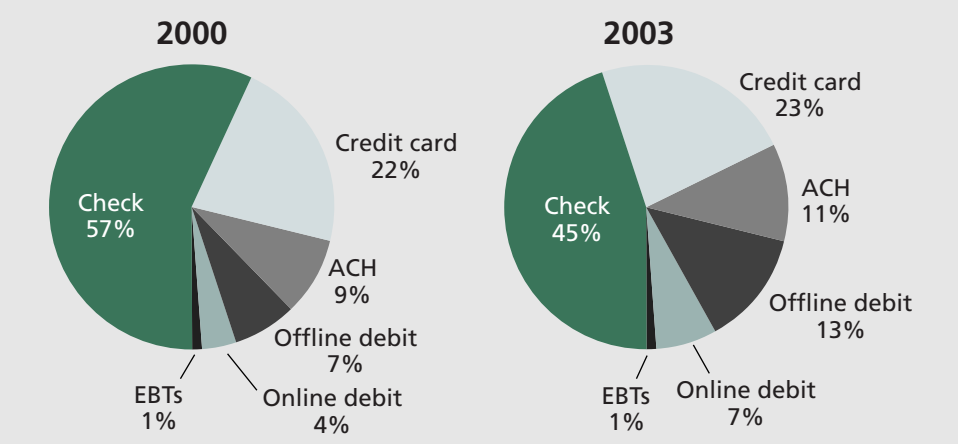
Online debit	3.0	5.3	21.0%
Electronic benefits transfers (EBTs)	0.5	0.8	15.4%

* Compound annual growth rate.

Chart 7.1
Distribution of number of noncash payments, 2000 and 2003



Of the estimated 36.7 billion checks paid in 2003, approximately 8.7 billion were "on-us checks," that is, checks deposited in the same institution on which they were drawn. In 2003, the Reserve Banks processed more than 58 percent of interbank checks, checks not drawn on the institution at which they were deposited. Depository institutions cleared the remaining checks through private arrangements among themselves. These private arrangements include sending checks directly to the depository institution on which they are drawn, depositing the checks for collection with a correspondent bank, or delivering the checks to a clearinghouse for exchange. Processing interbank checks requires a mechanism for

exchanging the checks as well as for the related movement of funds, or settlement, among the depository institutions involved.

For checks collected through the Reserve Banks, the account of the collecting institution is credited for the value of the deposited checks in accordance with the availability schedules maintained by the Reserve Banks. These schedules reflect the time normally needed for the Reserve Banks to receive payments from the institutions on which the checks are drawn. Credit is usually given on the day of deposit or the next business day. In 2003, the Reserve Banks collected 16 billion checks with a value of $15.8 trillion (table 7.4).

Table 7.4

Number and value of checks collected by the Reserve Banks, selected years, 1920–2003

Number in millions; value in millions of dollars

Year	Number	Value
1920	424	149,784
1930	905	324,883
1940	1,184	280,436
1950	1,955	856,953
1960	3,419	1,154,121
1970	7,158	3,331,733
1980	15,716	8,038,026
1990	18,598	12,519,171
2000	16,994	13,849,084
2003	16,271	15,768,877

NOTE: In 2003, the Reserve Banks, acting as fiscal agents for the United States, also paid 267 million Treasury checks and 198 million postal money orders.

Since it was established, the Federal Reserve has worked with the private sector to improve the efficiency and cost-effectiveness of the check-collection system. Toward that end, the Federal Reserve and the banking industry developed bank routing numbers in the 1940s. These numbers are still printed on checks to identify the institution on which a check is drawn and to which the check must be presented for payment. In the 1950s, the magnetic ink character recognition (MICR) system for encoding pertinent data on checks was developed so that the data could be read electronically. The MICR system contributed significantly to the automation of check processing.

In the 1970s, the Federal Reserve introduced a regional check-processing program to further improve the efficiency of check clearing, which resulted in an increase in the number of check-processing facilities throughout the country. In response to the recent decline in overall check usage, the

Reserve Banks began an initiative to better align Reserve Bank check-processing operations with the changing demand for those services. As part of the initiative, the Reserve Banks standardized check processing, consolidated some operations, and reduced the overall number of their check-processing sites.

Other improvements in check collection have focused on when a customer has access to funds deposited in a bank. Until the late 1980s, depository institutions were not required to make funds from check deposits available for withdrawal within specific time frames. In 1988, the Federal Reserve Board adopted Regulation CC, Availability of Funds and Collection of Checks, which implemented the Expedited Funds Availability Act. Regulation CC established maximum permissible hold periods for checks and other deposits, after which banks must make funds available for withdrawal. It also established rules to speed the return of unpaid checks. In late 1992, the Federal Reserve Board amended Regulation CC to permit all depository institutions to demand settlement in same-day funds from paying banks without paying presentment fees, provided presenting banks meet certain conditions.

Substitute check

In addition to processing paper checks more efficiently, the Federal Reserve has also encouraged check truncation, which improves efficiency by eliminating the need to transfer paper checks physically between institutions. To that end, the Federal Reserve worked with Congress on the Check Clearing for the 21st Century Act, commonly known as Check 21, which be-

came effective October 28, 2004. Check 21 facilitates check truncation by creating a new negotiable instrument called a substitute check, which is the legal equivalent of an original check. A substitute check is a paper reproduction of an original check that contains an image of the front and back of the original check and is suitable for automated processing, just as the original check is. Check 21 allows depository institutions to truncate original checks, process check information electronically, and deliver substitute checks to depository institutions if they require paper checks. In 2004, the Board amended Regulation CC to implement Check 21.

The Automated Clearinghouse

The automated clearinghouse (ACH) is an electronic payment system, developed jointly by the private sector and the Federal Reserve in the early 1970s as a more-efficient alternative to checks. Since then, the ACH has evolved into a nationwide mechanism that processes credit and debit transfers electronically. ACH credit transfers are used to make direct deposit payroll payments and corporate payments to vendors. ACH debit transfers are used by consumers to authorize the payment of insurance premiums, mortgages, loans, and other bills from their account. The ACH is also used by businesses to concentrate funds at a primary bank and to make payments to other businesses. In 2003, the Reserve Banks processed 6.5 billion ACH payments with a value of $16.8 trillion (table 7.5).

Table 7.5

Number and value of ACH transactions processed by the Reserve Banks, selected years, 1975–2003

Number in millions; value in millions of dollars

Year	Number	Value
1975	6	92,868
1980	227	286,600
1990	1,435	4,660,476
2000	4,651	14,024,445
2003	6,502	16,761,883

The use of the ACH has evolved over time. The ACH is now used to make certain payments initiated by telephone or over the Internet. In addition, merchants that receive checks at the point of sale and banks that receive bill-payment checks in the mail are increasingly converting those checks into ACH payments.

In 2001, the Reserve Banks began a cross-border ACH service. Legal and operational differences between countries have presented challenges to the rapid growth of the cross-border service; however, the Reserve Banks

are continuing to work with financial institutions and ACH operators in other nations to address these challenges.

Depository institutions transmit ACH payments to the Reserve Banks in batches, rather than individually. ACH funds transfers are generally processed within one to two days, according to designated schedules, and are delivered to receiving institutions several times a day, as they are processed. The Reserve Banks offer ACH operator services to all depository institutions. A private-sector processor also provides ACH operator services in competition with the Reserve Banks. The Reserve Banks and the private-sector operator deliver ACH payments to participants in each other's system in order to maintain a national ACH payment system.

Both the government and the commercial sectors use ACH payments. Compared with checks, ACH transfers are less costly to process and provide greater certainty of payment to the receiver. Initially, the federal government was the dominant user of the ACH and promoted its use for Social Security and payroll payments. Since the early 1980s, commercial ACH volume has grown rapidly, and in 2003 it accounted for 86 percent of total ACH volume (table 7.6).

Table 7.6

ACH volume by type, selected years 1975–2003

Number in millions

Year	Number of commercial payments	Number of government payments	Commercial payments as a percentage of total (percent)
1975	5.8	.2	97
1980	64.5	162.5	28
1990	915.3	519.5	64
2000	3,812.0	839.0	82
2003	5,588.0	914.0	86

Wholesale Services

Fedwire Funds Service

The Fedwire Funds Service provides a real-time gross settlement system in which more than 9,500 participants are able to initiate electronic funds transfers that are immediate, final, and irrevocable. Depository institutions that maintain an account with a Reserve Bank are eligible to use the service to send payments directly to, or receive payments from, other participants. Depository institutions can also use a correspondent relationship with a Fedwire participant to make or receive transfers indirectly through

the system. Participants generally use Fedwire to handle large-value, time-critical payments, such as payments to settle interbank purchases and sales of federal funds; to purchase, sell, or finance securities transactions; to disburse or repay large loans; and to settle real estate transactions. The Department of the Treasury, other federal agencies, and government-sponsored enterprises also use the Fedwire Funds Service to disburse and collect funds. In 2003, the Reserve Banks processed 123 million Fedwire payments having a total value of $436.7 trillion (table 7.7).

Table 7.7

Number and value of Fedwire funds transactions processed by the Federal Reserve, selected years, 1920–2003

Number in millions; value in millions of dollars

Year	Number	Value
1920	.5	30,857
1930	1.9	198,881

1970	7.0	12,332,001
1980	43.0	78,594,862
1990	62.6	199,067,200
2000	108.3	379,756,389
2003	123.0	436,706,269

Fedwire funds transfers are processed individually, rather than in batches as ACH transfers are. The Federal Reserve uses secure, sophisticated data-communications and data-processing systems to ensure that each transfer is authorized by the sender and that it is not altered while it is under the control of a Reserve Bank. Although a few depository institutions use the telephone to initiate Fedwire payments, more than 99 percent of all Fedwire funds transfers are initiated electronically. The Federal Reserve processes Fedwire funds transfers in seconds, electronically debiting the account of the sending institution and crediting the account of the receiving institution. The Federal Reserve guarantees the payment, assuming any risk that the institution sending the payment has insufficient funds in its Federal Reserve account to complete the transfer.

Fedwire Securities Service

The Fedwire Securities Service provides safekeeping, transfer, and settlement services for securities issued by the Treasury, federal agencies, gov-

ernment-sponsored enterprises, and certain international organizations. The Reserve Banks perform these services as fiscal agents for these entities. Securities are safekept in the form of electronic records of securities held in custody accounts. Securities are transferred according to instructions provided by parties with access to the system. Access to the Fedwire Securities Service is limited to depository institutions that maintain accounts with a Reserve Bank, and a few other organizations, such as federal agencies, government-sponsored enterprises, and state government treasurer's offices (which are designated by the U.S. Treasury to hold securities accounts). Other parties, specifically brokers and dealers, typically hold and transfer securities through depository institutions that are Fedwire participants and that provide specialized government securities clearing services. In 2003, the Fedwire Securities Service processed 20.4 million securities transfers with a value of $267.6 trillion (table 7.8).

Table 7.8

Number and value of book-entry securities transfers processed by the Federal Reserve, selected years, 1970–2003

Number in millions; value in millions of dollars

Year	Number	Value
1970	.3	258,200
1980	4.1	13,354,100
1990	10.9	99,861,205
2000	13.6	188,133,178
2003	20.4	267,644,194

Fedwire securities are processed individually, in much the same way that Fedwire funds transfers are processed, and participants initiate securities transfers in the same manner, using either a computer connection or the telephone. When the Federal Reserve receives a request to transfer a security, for example as a result of the sale of securities, it determines that the security is held in safekeeping for the institution requesting the transfer and withdraws the security from the institution's safekeeping account. It then electronically credits the proceeds of the sale to the account of the depository institution, deposits the book-entry security into the safekeeping account of the receiving institution, and electronically debits that institution's account for the purchase price. Most securities transfers involve the delivery of securities and the simultaneous exchange of payment, which is referred to as delivery versus payment. The transfer of securities ownership and related funds is final at the time of transfer, and the Federal Reserve guarantees payment to institutions that initiate such securities transfers.

National Settlement Service

The National Settlement Service allows participants in private-sector clearing arrangements to do multilateral funds settlements on a net basis using balances in their Federal Reserve accounts. The service provides an automated mechanism for submitting settlement information to the Reserve Banks. It improves operational efficiency and controls for this process and reduces settlement risk to participants by granting settlement finality for movements of funds on settlement day. The service also enables the Federal Reserve to manage and limit the financial risk posed by these arrangements because it incorporates risk controls that are as stringent as those used in the Fedwire Funds Service. Approximately seventy arrangements use the National Settlement Service—primarily check clearinghouse associations, but also other types of arrangements.

Fiscal Agency Services

As fiscal agents of the United States, the Reserve Banks function as the U.S. government's bank.

As fiscal agents of the United States, the Reserve Banks function as the U.S. government's bank and perform a variety of services for the Treasury, other government agencies, government-sponsored enterprises, and some international organizations. Often the fiscal agent services performed by the Reserve Banks are the same, or similar to, services that the Reserve Banks provide to the banking system. Services performed for the Treasury include maintaining the Treasury's bank account; processing payments; and issuing, safekeeping, and transferring securities. Fiscal services performed for other entities are generally securities-related. The Treasury and other entities reimburse the Reserve Banks for the expenses incurred in providing these services.

One of the unique fiscal agency functions that the Reserve Banks provide to the Treasury is a program through which the Reserve Banks invest Treasury monies until needed to fund the government's operations. The Treasury receives funds from two principal sources: tax receipts and borrowings. The funds that flow into and out of the government's account vary in amount throughout the year; for example, the account balance tends to be relatively high during the April tax season. The Treasury directs the Reserve Banks to invest funds in excess of a previously agreed-upon minimum amount in special collateralized accounts at depository institutions nationwide. The Federal Reserve monitors these balances for compliance with collateral requirements and returns the funds to the Treasury when they are needed.

This investment facility, in which excess funds are invested in accounts at depository institutions, also facilitates the implementation of monetary policy. When funds flow from depository institutions into the Treasury's

account at the Federal Reserve, the supply of Federal Reserve balances to depository institutions decreases. The reverse occurs when funds flow from the Treasury's Federal Reserve account to the Treasury's accounts at depository institutions. A stable balance in the Treasury's account at the Federal Reserve mitigates the effect of Treasury's receipts and disbursements on the supply of Federal Reserve balances to depository institutions.

The Reserve Banks make disbursements from the government's account through Fedwire funds transfers or ACH payments, or to a limited extent, by check. Fedwire disbursements are typically associated with, but not limited to, the redemption of Treasury securities. Certain recurring transactions, such as Social Security benefit payments and government employee salary payments, are processed mainly by the ACH and electronically deposited directly to the recipients' accounts at their depository institutions. Other government payments may be made using Treasury checks drawn on the government's account at the Reserve Banks. The Treasury continues to work to move the remaining government payments away from Treasury checks toward electronic payments, primarily the ACH, in an effort to improve efficiency and reduce the costs associated with government payments.

The Federal Reserve plays an important role when the Treasury needs to raise money to finance the government or to refinance maturing Treasury securities. The Reserve Banks handle weekly, monthly, and quarterly auctions of Treasury securities, accepting bids, communicating them to the Treasury, issuing the securities in book-entry form to the winning bidders, and collecting payment for the securities. Over the past several years, the auction process has become increasingly automated, which further ensures a smooth borrowing process. For example, automation has reduced to only minutes the time between the close of bidding and the announcement of the results of a Treasury securities auction.

Treasury securities are maintained in book-entry form in either the Reserve Banks' Fedwire Securities Service or the Treasury's TreasuryDirect system, which is also operated by the Reserve Banks. Even though TreasuryDirect holds less than 2 percent of all outstanding Treasury securities, it provides a convenient way for individuals to hold their securities directly, rather than with a third party such as a depository institution. Individuals purchase Treasury securities either directly from the Treasury when they are issued or on the secondary market, and they instruct their broker that the securities be delivered to their TreasuryDirect account. Once the securities are deposited there, the ACH directly deposits any interest or principal payments owed to the account holder to the account holder's account at a depository institution. A Reserve Bank, if requested, will sell securities held in TreasuryDirect for a fee on the secondary market, even though this is a service intended for individuals who hold Treasury securities to maturity.

The Federal Reserve also provides support for the Treasury's savings bonds program. Although savings bonds represent less than 5 percent of the federal debt, they are a means for individuals to invest in government securities with a small initial investment, currently $25. The Reserve Banks issue, service, and redeem tens of millions of U.S. savings bonds each year on behalf of the Treasury. As authorized by the Treasury, the Reserve Banks also qualify depository institutions and corporations to serve as issuing agents and paying agents for savings bonds.[3]

International Services

As the central bank of the United States, the Federal Reserve performs services for foreign central banks and for international organizations such as the International Monetary Fund and the International Bank for Reconstruction and Development. The Reserve Banks provide several types of services to these organizations, including maintaining non-interest-bearing deposit accounts (in U.S. dollars), securities safekeeping accounts, and accounts for safekeeping gold. Some foreign official institutions direct a portion of their daily receipts and payments in U.S. dollars through their funds accounts at the Federal Reserve. If an account contains excess funds, the foreign official institution may request that these funds be invested overnight in repurchase agreements with the Reserve Banks. If investments are needed for longer periods, the foreign official institution may provide instructions to buy securities to be held in safekeeping. Conversely, the foreign institution may provide instructions to sell securities held in safekeeping, with the proceeds deposited in its account. The Reserve Banks charge foreign official institutions for these services.

Gold vault, Federal Reserve Bank of New York

Federal Reserve Intraday Credit Policy

Each day, the Reserve Banks process a large number of payment transactions resulting from the Banks' role in providing payment services to depository institutions. Because depository institutions in the aggregate generally hold a relatively small amount of funds overnight in their Reserve Bank accounts, the Reserve Banks extend intraday credit, commonly referred to as daylight credit or daylight-overdraft credit, to facilitate the settlement of payment transactions and to ensure the smooth functioning of the U.S. payments system. To address the risk of providing this credit, the Federal Reserve has developed a policy that balances the goals of ensuring smooth functioning of the payments system and managing the Federal Reserve's direct credit risk from institutions' use of Federal Reserve intraday credit.

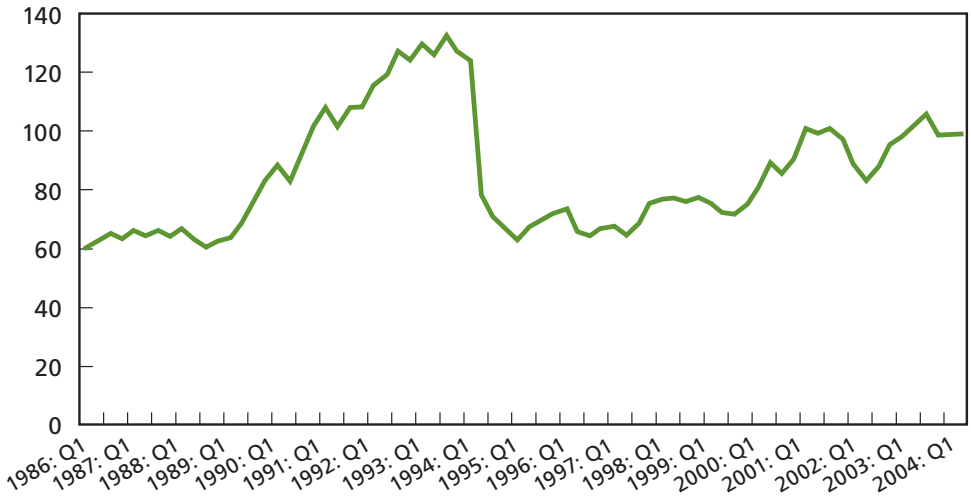
3. Savings bonds are now available in book-entry form from the Treasury, through www.TreasuryDirect.gov.

Institutions incur daylight overdrafts in their Reserve Bank accounts because of the mismatch in timing between the settlement of payments owed and the settlement of payments due. The Federal Reserve uses a schedule of rules, referred to as daylight-overdraft posting rules, to determine whether a daylight overdraft has occurred in an institution's account. The daylight-overdraft posting rules define the time of day that debits and credits for transactions processed by the Reserve Banks will be posted to an institution's account. The Federal Reserve relies on an automated system to measure an institution's intraday account activity, to monitor its compliance with the Federal Reserve's policy, and to calculate the institution's daylight-overdraft charges. The Reserve Banks' daylight-overdraft exposure can be significant. For example, in 2003 daylight overdrafts across depository institutions peaked at levels over $100 billion per day (chart 7.2).

Chart 7.2

Average peak daylight overdrafts of depository institutions, 1986:Q1–2004:Q2

Billions of dollars



NOTE: The Federal Reserve measures each depository institution's account balance at the end of each minute during the business day. An institution's peak daylight overdraft for a given day is its largest negative end-of-minute balance. The System peak daylight overdraft for a given day is determined by adding the negative account balances of all depository institutions at the end of each minute and then selecting the largest negative end-of-minute balance. The quarterly average peak is the sum of daily System peaks for a quarter divided by the number of days in that quarter.

The Federal Reserve's policy establishes various measures to control the risks associated with daylight overdrafts. Beginning in 1985, the policy set a maximum limit, or net debit cap, on depository institutions' daylight-overdraft positions. In order to adopt a net debit cap greater than zero, an institution must be in sound financial condition. Certain institutions may

be eligible to obtain additional daylight-overdraft capacity above their net debit caps by pledging collateral, subject to Reserve Bank approval. Institutions must have regular access to the Federal Reserve's discount window so that they can borrow overnight from their Reserve Bank to cover any daylight overdrafts that are not eliminated before the end of the day. Those that lack regular access to the discount window are prohibited from incurring daylight overdrafts in their Reserve Bank accounts and are subject to additional risk controls. Beginning in 1994, the Reserve Banks also began charging fees to depository institutions for their use of daylight overdrafts as an economic incentive to reduce the overdrafts, thereby reducing direct Federal Reserve credit risk and contributing to economic efficiency.

Federal Reserve policy allows Reserve Banks to apply additional risk controls to an account holder's payment activity, if necessary to limit risk. These risk controls include unilaterally reducing an account holder's net debit cap, placing real-time controls on the account holder's payment activity so that requested payments are rejected, or requiring the account holder to pledge collateral to cover its daylight overdrafts.

A Appendix: Federal Reserve Regulations

A **Extensions of Credit by Federal Reserve Banks**
Governs borrowing by depository institutions and others at the Federal Reserve discount window

B **Equal Credit Opportunity**
Prohibits lenders from discriminating against credit applicants, establishes guidelines for gathering and evaluating credit information, and requires written notification when credit is denied

C **Home Mortgage Disclosure**
Requires certain mortgage lenders to disclose data regarding their lending patterns

D **Reserve Requirements of Depository Institutions**
Sets uniform requirements for all depository institutions to maintain reserves either with their Federal Reserve Bank or as cash in their vaults

E **Electronic Funds Transfers**
Establishes the rights, liabilities, and responsibilities of parties in electronic funds transfers and protects consumers when they use such systems

F **Limitations on Interbank Liabilities**
Prescribes standards to limit the risks that the failure of a depository institution would pose to an insured depository institution

G **Disclosure and Reporting of CRA-Related Agreements**
Implements provisions of the Gramm-Leach-Bliley Act that require reporting and public disclosure of written agreements between (1) insured depository institutions or their affiliates and (2) nongovernmental entities or persons, made in connection with fulfillment of Community Reinvestment Act requirements

H **Membership of State Banking Institutions in the Federal Reserve System**
Defines the requirements for membership of state-chartered banks in the Federal Reserve System; sets limitations on certain investments and requirements for certain types of loans; describes rules pertaining to securities-related activities; establishes the minimum ratios of capital to assets that banks must maintain and procedures

for prompt corrective action when banks are not adequately capitalized; prescribes real estate lending and appraisal standards; sets out requirements concerning bank security procedures, suspicious-activity reports, and compliance with the Bank Secrecy Act; and establishes rules governing banks' ownership or control of financial subsidiaries

I Issue and Cancellation of Capital Stock of Federal Reserve Banks
Sets out stock-subscription requirements for all banks joining the Federal Reserve System

J Collection of Checks and Other Items by Federal Reserve Banks and Funds Transfers through Fedwire
Establishes procedures, duties, and responsibilities among (1) Federal Reserve Banks, (2) the senders and payors of checks and other items, and (3) the senders and recipients of Fedwire funds transfers

K International Banking Operations
Governs the international banking operations of U.S. banking organizations and the operations of foreign banks in the United States

L Management Official Interlocks
Generally prohibits a management official from serving two nonaffiliated depository institutions, depository institution holding companies, or any combination thereof, in situations where the management interlock would likely have an anticompetitive effect

M Consumer Leasing
Implements the consumer leasing provisions of the Truth in Lending Act by requiring meaningful disclosure of leasing terms

N Relations with Foreign Banks and Bankers
Governs relationships and transactions between Federal Reserve Banks and foreign banks, bankers, or governments

O Loans to Executive Officers, Directors, and Principal Shareholders of Member Banks
Restricts credit that a member bank may extend to its executive officers, directors, and principal shareholders and their related interests

P Privacy of Consumer Financial Information
Governs how financial institutions use nonpublic personal information about consumers

Q **Prohibition against Payment of Interest on Demand Deposits**
Prohibits member banks from paying interest on demand deposits

S **Reimbursement to Financial Institutions for Assembling or Providing Financial Records; Recordkeeping Requirements for Certain Financial Records**
Establishes rates and conditions for reimbursement to financial institutions for providing customer records to a government authority and prescribes recordkeeping and reporting requirements for insured depository institutions making domestic wire transfers and for insured depository institutions and nonbank financial institutions making international wire transfers

T **Credit by Brokers and Dealers**
Governs extension of credit by securities brokers and dealers, including all members of national securities exchanges (See also Regulations U and X.)

U **Credit by Banks and Persons Other Than Brokers and Dealers for the Purpose of Purchasing or Carrying Margin Stock**
Governs extension of credit by banks or persons other than brokers or dealers to finance the purchase or the carrying of margin securities (See also Regulations T and X.)

V **Fair Credit Reporting**
Implements the provisions of the Fair Credit Reporting Act applicable to financial institutions regarding obtaining and using consumer reports and other information about consumers, sharing such information among affiliates, furnishing information to consumer reporting agencies, and preventing identity theft

W **Transactions Between Member Banks and Their Affiliates**
Implements sections 23A and 23B of the Federal Reserve Act, which establish certain restrictions on and requirements for transactions between a member bank and its affiliates

X **Borrowers of Securities Credit**
Applies the provisions of Regulations T and U to borrowers who are subject to U.S. laws and who obtain credit within or outside the United States for the purpose of purchasing securities

Y **Bank Holding Companies and Change in Bank Control**
Regulates the acquisition of control of banks and bank holding companies by companies and individuals, defines and regulates the nonbanking activities in which bank holding companies (includ-

ing financial holding companies) and foreign banking organizations with United States operations may engage, and establishes the minimum ratios of capital to assets that bank holding companies must maintain

Z **Truth in Lending**
Prescribes uniform methods for computing the cost of credit, for disclosing credit terms, and for resolving errors on certain types of credit accounts

AA **Unfair or Deceptive Acts or Practices**
Establishes consumer complaint procedures and defines unfair or deceptive practices in extending credit to consumers

BB **Community Reinvestment**
Implements the Community Reinvestment Act and encourages banks to help meet the credit needs of their entire communities

CC **Availability of Funds and Collection of Checks**
Governs the availability of funds deposited in checking accounts and the collection and return of checks

DD **Truth in Savings**
Requires depository institutions to provide disclosures to enable consumers to make meaningful comparisons of deposit accounts

EE **Netting Eligibility for Financial Institutions**
Defines financial institutions to be covered by statutory provisions that validate netting contracts, thereby permitting one institution to pay or receive the net, rather than the gross, amount due, even if the other institution is insolvent

B Appendix: Glossary of Terms

This glossary gives basic definitions of terms used in the text. Readers looking for more comprehensive explanations may want to consult textbooks in economics, banking, and finance.

A

agreement corporation
Corporation chartered by a state to engage in international banking; so named because the corporation enters into an "agreement" with the Board of Governors to limit its activities to those permitted an Edge Act corporation. Typically organized as a subsidiary of a bank, an agreement corporation may conduct activities abroad that are permissible to foreign banks abroad but that may not otherwise be permissible for U.S. banks.

automated clearinghouse (ACH)
Electronic clearing and settlement system for exchanging electronic credit and debit transactions among participating depository institutions. The Federal Reserve Banks operate an automated clearinghouse, as do private organizations.

B

balances
See **Federal Reserve balances**.

Bank for International Settlements (BIS)
International organization established in 1930 and based in Basel, Switzerland, that serves as a forum for central banks for collecting information, developing analyses, and cooperating on a wide range of policy-related matters; also provides certain financial services to central banks.

bank holding company
Company that owns, or has controlling interest in, one or more banks. The Board of Governors is responsible for regulating and supervising bank holding companies, even if the bank owned by the holding company is under the primary supervision of a different federal agency (the Comptroller of the Currency or the Federal Deposit Insurance Corporation).

Bank Holding Company Act of 1956
Federal legislation that establishes the legal framework under which bank

holding companies operate and places the formation of bank holding companies and their acquisition of banking and nonbanking interests under the supervision of the Federal Reserve.

banking organization
A bank holding company (consolidated to include all of its subsidiary banks and nonbank subsidiaries) or an independent bank (a bank that is not owned or controlled by a bank holding company).

bank regulation
Actions to make and issue rules and regulations and enforce those rules and other laws governing the structure and conduct of banking.

bank supervision
Oversight of individual banks to ensure that they are operated prudently and in accordance with applicable statutes and regulations.

Basel Committee on Banking Supervision
An international committee of bank supervisors, associated with the BIS, that is headquartered in Basel, Switzerland, and is composed of bank supervisors from Belgium, Canada, France, Germany, Italy, Japan, Luxembourg, the Netherlands, Spain, Sweden, Switzerland, the United Kingdom, and the United States.

Basel I
Informal name for the 1988 agreement—the International Convergence of Capital Measurement and Capital Standards—under which national bank supervisors for the first time agreed on an international framework for capital adequacy guidelines. Also known as the Basel Accord.

Basel II
Informal name for the 2004 agreement updating the Basel Accord. Also known as the New Basel Accord, Basel II has three pillars: minimum capital requirements, supervisory oversight, and market discipline.

Board of Governors
Central, governmental agency of the Federal Reserve System, located in Washington, D.C., and composed of seven members, who are appointed by the President and confirmed by the Senate. The Board, with other components of the System, has responsibilities associated with the conduct of monetary policy, the supervision and regulation of certain banking organizations, the operation of much of the nation's payments system, and the administration of many federal laws that protect consumers in credit transactions. The Board also supervises the Federal Reserve Banks.

book-entry securities
Securities that are recorded in electronic records, called book entries, rather than as paper certificates. (*Compare* **definitive securities**.)

C

Call Report
Informal name for quarterly Reports of Condition and Income.

capital
In banking, the funds invested in a bank that are available to absorb loan losses or other problems and therefore protect depositors. Capital includes all equity and some types of debt. Bank regulators have developed two definitions of capital for supervisory purposes: tier 1 capital, which can absorb losses while a bank continues operating, and tier 2 capital, which may be of limited life and may carry an interest obligation or other characteristics of a debt obligation, and therefore provides less protection to depositors than tier 1 capital.

capital market
The market in which corporate equity and longer-term debt securities (those maturing in more than one year) are issued and traded. (*Compare* **money market**.)

cash
U.S. paper currency plus coin.

central bank
Principal monetary authority of a nation, which performs several key functions, including conducting monetary policy to stabilize the economy and level of prices. The Federal Reserve is the central bank of the United States.

check clearing
The movement of a check from the depository institution at which it was deposited back to the institution on which it was written, the movement of funds in the opposite direction, and the corresponding credit and debit to the accounts involved. Check clearing also encompasses the return of a check (for insufficient funds, for example) from the bank on which it was written to the bank at which it was deposited, and the corresponding movement of funds. The Federal Reserve Banks operate a nationwide check-clearing system.

check truncation
The practice of removing an original paper check from the check-clearing process and sending in its place an alternative paper or electronic version of the essential information on the check.

clearing
General term that may refer to check clearing or to the process of matching trades between the sellers and buyers of securities and other financial instruments and contracts.

commercial bank
Bank that offers a variety of deposit accounts, including checking, savings, and time deposits, and extends loans to individuals and businesses. Commercial banks can be contrasted with investment banking firms, which generally are involved in arranging for the sale of corporate or municipal securities, and broker-dealer firms, which buy and sell securities for themselves and others. (*Compare* **savings bank**.)

commercial paper
Short-term, unsecured promissory note issued by an industrial or commercial firm, a financial company, or a foreign government.

Consumer Advisory Council
Group, created under the Federal Reserve Act, composed of thirty members who represent the interests of a broad range of consumers and creditors. The council meets with the Board of Governors three times a year on matters concerning consumers and the consumer protection laws administered by the Board.

corporate bond
Interest-bearing or discounted debt obligation issued by a private corporation.

contractual clearing balance
An amount a depository institution may contract to maintain in its account at a Federal Reserve Bank in addition to any reserve balance requirement. This amount helps ensure that the institution can meet its daily transaction obligations without overdrawing its account. Balances maintained to satisfy the contractual clearing balance earn credits that can be used to pay for services provided by the Federal Reserve Banks.

correspondent bank
Bank that accepts the deposits of, and performs services for, another bank (called a respondent bank).

credit risk
The risk that economic loss will result from the failure of an obligor to repay financial institutions according to the terms and conditions of a contract or agreement.

credit union
Financial cooperative organization whose membership consists of individuals who have a common bond, such as place of employment or residence or membership in a labor union. Credit unions accept deposits from members, pay interest (in the form of dividends) on the deposits out of earnings, and use their funds mainly to provide consumer installment loans to members.

currency
Paper money that consists mainly of Federal Reserve notes. Other types of currency that were once issued by the United States include silver certificates, United States notes, and national bank notes.

D

daylight overdraft
A negative balance in an institution's Federal Reserve Bank account at any time during the operating hours of the Fedwire Funds Service.

daylight-overdraft posting rules
A schedule used to determine the timing of debits and credits to an institution's Federal Reserve Bank account for various transactions processed by the Reserve Banks.

definitive securities
Securities that are recorded on engraved paper certificates and payable to the bearers or to specific, registered owners. (*Compare* **book-entry securities**.)

demand deposit
A deposit that the depositor has a right to withdraw at any time without prior notice to the depository institution. By law, no interest can be paid on such deposits. Demand deposits are commonly offered in the form of checking accounts.

depository institution
Financial institution that makes loans and obtains its funds mainly through accepting deposits from the public; includes commercial banks, savings and loan associations, savings banks, and credit unions.

derivative
A financial instrument whose value depends upon the characteristics and value of an underlying commodity, currency, or security.

discounting
Practice of extending credit in which the borrower endorses a negotiable instrument or other commercial paper in the borrower's portfolio over to the lender in exchange for funds from the lender in the amount of the instrument's face value less the interest due over the term of the loan, that is, the "discounted" value.

discount rate
Officially the primary credit rate, it is the interest rate at which an eligible depository institution may borrow funds, typically for a short period, directly from a Federal Reserve Bank. The law requires that the board of directors of each Reserve Bank establish the discount rate every fourteen days, subject to review and determination by the Board of Governors.

discount window (the window)
Figurative expression for the Federal Reserve facility that extends credit directly to eligible depository institutions (those subject to reserve requirements); so named because, in the early days of the Federal Reserve System, bankers would come to a Reserve Bank teller window to obtain credit.

discount window credit
Credit extended by a Federal Reserve Bank to an eligible depository institution. All discount window borrowing must be secured by collateral. Three types of discount window credit are available to eligible depository institutions:

- **primary credit**
  Credit extended to generally sound depository institutions at a rate above the target federal funds rate on a very short-term basis as a backup source of funding.
- **seasonal credit**
  Credit extended by a Federal Reserve Bank to depository institutions that have difficulty raising funds in national money markets to help meet temporary needs for funds resulting from regular, seasonal fluctuations in loans and deposits. The interest rate charged is based on market rates.
- **secondary credit**
  Credit extended to depository institutions ineligible for primary credit, at a rate above the primary credit rate, either on a very short-term basis (when consistent with a timely return to market sources of funds) or for a longer term (to facilitate the orderly resolution of serious financial difficulties).

E

easing
Federal Reserve action to lower the federal funds rate. The action is undertaken when economic activity needs to be stimulated. (*Compare* **tightening**.)

Edge Act corporation (or Edge corporation)
Corporation chartered by the Federal Reserve to engage in international banking. The Board of Governors acts on applications to establish Edge Act corporations and also examines the corporations and their subsidiaries. Typically organized as a subsidiary of a bank, an Edge Act corporation may conduct activities abroad that are permissible to foreign banks abroad but that may not otherwise be permissible to U.S. banks. Named after Senator Walter Edge of New Jersey, who sponsored the original legislation to permit formation of such organizations. (*Compare* **agreement corporation**.)

elastic currency
Currency that can, by the actions of the central monetary authority, expand or contract in amount warranted by economic conditions.

electronic funds transfer (EFT)
Transfer of funds electronically rather than by check or cash. The Federal Reserve's Fedwire Funds Service and automated clearinghouse services are EFT systems. (EFTs subject to the Electronic Funds Transfer Act are more narrowly defined.)

Eurocurrency liabilities
A generic term referring to liabilities in a bank located in a country other than the one that issues the currency in which the liability is denominated. Despite its name, Eurocurrency need not be a liability of a European banking office nor denominated in European currency. Not to be confused with the euro, the name of the common currency of twelve (as of 2004) European Union countries.

Eurodollar deposits
Dollar-denominated deposits in banks and other financial institutions outside the United States; includes deposits at banks not only in Europe, but in all parts of the world.

excess reserves
Amount of funds held by an institution in its account at a Federal Reserve Bank in excess of its required reserve balance and its contractual clearing balance.

F

Federal Advisory Council
Advisory group made up of one representative (in most cases a banker) from each of the twelve Federal Reserve Districts. Established by the Federal Reserve Act, the council meets periodically with the Board of Governors to discuss business and financial conditions and to make recommendations.

federal agency securities
Interest-bearing obligations issued by federal agencies and government-sponsored entities, such as the Federal Home Loan Banks, the Federal Farm Credit Banks, the Federal National Mortgage Association (Fannie Mae), the Federal Home Loan Mortgage Corporation (Freddie Mac), and the Tennessee Valley Authority. Some federal agency securities are backed by the U.S. government while others are not.

Federal Financial Institutions Examination Council (FFIEC)
Group of representatives of the federal banking regulatory agencies—the Board of Governors, the Office of Thrift Supervision, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the National Credit Union Administration—established to help maintain uniform standards for examining and supervising federally insured depository institutions.

federal funds transactions
Short-term transactions in immediately available funds—between depository institutions and certain other institutions that maintain accounts with the Federal Reserve—that involve lending balances at the Federal Reserve; usually not collateralized.

federal funds rate
Rate charged by a depository institution on an overnight loan of federal funds to another depository institution; rate may vary from day to day and from bank to bank.

Federal Open Market Committee (FOMC, or the Committee)
Twelve-voting-member committee made up of the seven members of the Board of Governors; the president of the Federal Reserve Bank of New York; and, on a rotating basis, the presidents of four other Reserve Banks. Nonvoting Reserve Bank presidents also participate in Committee deliberations and discussion. The FOMC generally meets eight times a year in Washington, D.C., to set the nation's monetary policy. It also establishes policy relating to System operations in the foreign exchange markets.

Federal Reserve Act
Federal legislation, enacted in 1913, that established the Federal Reserve System.

Federal Reserve balances
The amount of funds held by a depository institution in its account at its Federal Reserve Bank.

Federal Reserve Bank
One of the twelve operating arms of the Federal Reserve System, located throughout the nation, that together with their Branches carry out various System functions, including providing payment services to depository institutions, distributing the nation's currency and coin, supervising and regulating member banks and bank holding companies, and serving as fiscal agent for the U.S. government.

Federal Reserve District (Reserve District, or District)
One of the twelve geographic regions served by a Federal Reserve Bank.

Federal Reserve float
Float is credit that appears on the books of the depository institution of both the check writer (the payor) and the check receiver (the payee) while a check is being processed. Federal Reserve float is float present during the Federal Reserve Banks' check-clearing process. To promote efficiency in the payments system and provide certainty about the date that deposited funds will become available to the receiving depository institution (and the payee), the Federal Reserve Banks credit the accounts of banks that deposit checks according to a fixed schedule. However, processing certain checks and collecting funds from the banks on which these checks are written may take more time than the schedule allows. Therefore, the accounts of some banks may be credited before the Federal Reserve Banks are able to collect payment from other banks, resulting in Federal Reserve float.

Federal Reserve note
Paper currency issued by the Federal Reserve Banks. Nearly all the nation's circulating currency is in the form of Federal Reserve notes, which are printed by the Bureau of Engraving and Printing, a bureau of the U.S. Department of the Treasury. Federal Reserve notes are obligations of the Federal Reserve Banks and legal tender for all debts.

Federal Reserve Regulatory Service
Monthly subscription service that includes all statutes and regulations for which the Federal Reserve has responsibility, Board of Governors interpretations and rulings, official staff commentaries, significant staff opinions, and procedural rules under which the Board operates.

Federal Reserve System
The central bank of the United States, created by the Federal Reserve Act and made up of a seven-member Board of Governors in Washington, D.C., twelve regional Federal Reserve Banks, and Branches of the Federal Reserve Banks.

Fedwire Funds Service
Electronic funds transfer network operated by the Federal Reserve Banks. It is usually used to transfer large amounts of funds from one institution's account at the Federal Reserve to another institution's account. It is also used by the U.S. Department of the Treasury, other federal agencies, and government-sponsored enterprises to collect and disburse funds.

Fedwire Securities Service
Electronic vault that stores records of book-entry securities holdings and a transfer and settlement mechanism used by depository institutions to transfer custody of book-entry securities from one depository institution to another. The securities on the Fedwire Securities Service include U.S. Treasury securities, U.S. agency securities, mortgage-backed securities issued by government-sponsored enterprises, and securities of certain international organizations.

financial holding company
A bank holding company that has met the capital, managerial, and other requirements to take advantage of the expanded affiliations allowed under the Gramm-Leach-Bliley Act.

financial institution
Institution that uses its funds chiefly to purchase financial assets, such as loans or securities (as opposed to tangible assets, such as real estate). Financial institutions can be separated into two major groups according to the nature of the principal claims they issue: (1) depository institutions (also called depository intermediaries), such as commercial banks, savings and loan associations, savings banks, and credit unions, which obtain funds largely by accepting deposits from the public and (2) nondepositories (sometimes called nondepository intermediaries), such as life insurance and property–casualty insurance companies and pension funds, whose claims are the policies they sell or their promise to provide income after retirement.

fiscal agency services
Services performed by the Federal Reserve Banks for the U.S. government and other organizations, including maintaining accounts for the U.S. Department of the Treasury, paying checks and making electronic payments on behalf of the Treasury, and selling and redeeming marketable Treasury securities and savings bonds.

fiscal policy
Federal government policy regarding taxation and spending, set by Congress and the President.

flexible exchange rates
Arrangements in which the rate of exchange between countries' currencies (the foreign exchange rate) is allowed to fluctuate in response to market forces of supply and demand.

foreign currency operations
Transactions in the foreign exchange markets involving the purchase of the currency of one nation with that of another. Also called foreign exchange transactions.

foreign exchange intervention
A foreign currency operation (*see* above) designed to influence the value of the dollar against foreign currencies, typically with the aim of stabilizing disorderly markets.

foreign exchange markets
Markets in which foreign currencies are purchased and sold.

foreign exchange rate
Price of the currency of one nation in terms of the currency of another nation.

G

government securities
Securities issued by the U.S. Treasury or federal agencies.

Gramm-Leach-Bliley Act
Federal legislation that allowed affiliations among banks, securities firms, and insurance companies under a financial holding company structure. The act reaffirmed the Federal Reserve's role as "umbrella supervisor" over organizations that control banks, while also requiring that bank regulators and functional regulators supervise subsidiaries within a financial holding company.

gross domestic product (GDP)
Total value of goods and services produced by labor and property located in the United States during a specific period.

Group of Seven (G-7)
International group made up of seven leading industrial nations—Canada, France, Germany, Italy, Japan, the United Kingdom, and the United States—whose finance ministers and central bank governors meet occasionally to discuss economic policy.

I

interest-rate risk
Risk of gain or loss in the value of a portfolio as a result of changes in market interest rates.

international banking facility
Specially designated activities of a bank located in the United States that are treated as those of an offshore bank by U.S. regulatory authorities. Dollar deposits in such a facility are considered to be Eurodollars.

International Monetary Fund (IMF)
International organization established for lending funds to member nations to promote international monetary cooperation among nations, to facilitate the expansion and balanced growth of international trade, and to finance temporary balance-of-payments deficits, usually in conjunction with macroeconomic adjustment programs.

L

liquidity
Quality that makes an asset easily convertible into cash with relatively little loss of value in the conversion process. Sometimes used more broadly to encompass cash and credit in hand and promises of credit to meet needs for cash.

liquidity risk
In banking, the risk that a depository institution will not have sufficient cash or liquid assets to meet the claims of depositors and other creditors.

M

M1
Measure of the U.S. money stock that consists of currency held by the public, traveler's checks, demand deposits, and other checkable deposits.

M2
Measure of the U.S. money stock that consists of M1, savings deposits (including money market deposit accounts), time deposits in amounts of less than $100,000, and balances in retail money market mutual funds. Excludes individual retirement account (IRA) and Keough balances at depository institutions and retail money funds.

M3
Measure of the U.S. money stock that consists of M2, time deposits of $100,000 or more at all depository institutions, repurchase agreements in amounts of $100,000 or more, Eurodollars, and balances held in institutional money market mutual funds.

margin requirement
Buying on margin refers to buying stocks or securities with borrowed money (usually borrowed from a brokerage firm or bank). The margin requirement is the minimum amount (expressed as a percentage) the buyer must put up (rather than borrow). The Federal Reserve Board sets margin requirements.

market interest rates
Rates of interest determined by the interaction of the supply of and demand for funds in freely functioning markets.

market risk
The risk that a banking organization may incur losses due to the change in market value of an asset or liability on its balance sheet.

member bank
Depository institution that is a member of the Federal Reserve System. All national banks are automatically members of the System; state-chartered banks may choose to apply to join the System.

monetary aggregates
Aggregate measures through which the Federal Reserve monitors the nation's monetary assets: M1, M2, and M3.

monetary policy
A central bank's actions to influence the availability and cost of money and credit, as a means of helping to promote national economic goals. Tools of monetary policy include open market operations, direct lending to depository institutions, and reserve requirements.

monetize
Action in which a central bank purchases an object that is not money (for example, gold) and pays for it by creating balances at the central bank. The action permits an increase in the money stock.

money
Anything that serves as a generally accepted medium of exchange, a standard of value, and a means of saving or storing purchasing power. In the United States, currency (the bulk of which is Federal Reserve notes) and coin as well as funds in deposit accounts at depository institutions are examples of money.

money market
Figurative expression for the informal network of dealers and investors over which short-term debt securities are purchased and sold. Money market securities generally are highly liquid securities that mature in less than one year, often less than ninety days. (*Compare* **capital market**.)

money stock
Total quantity of money available for transactions and investment; measures of the U.S. money stock include M1, M2, and M3. (Also referred to as the money supply or, simply, money.)

mutual savings bank
Savings bank owned by its depositors (contrasted with a stock savings bank, which issues common stock to the public).

N

national bank
A commercial bank that is chartered by the Office of the Comptroller of the Currency, which is a bureau of the U.S. Department of the Treasury; by law, national banks are members of the Federal Reserve System.

net debit cap
The maximum uncollateralized daylight-overdraft position that a depository institution is permitted to incur in its Federal Reserve Bank account at any point in the day, or on average over a two-week period.

nominal interest rates
Current stated rates of interest paid or earned. (*Compare* **real interest rates**.)

nonmember bank
State-chartered commercial bank that is not a member of the Federal Reserve System.

nonpersonal time deposit
Time deposit held by a depositor other than an individual (for example, a corporation).

O

official foreign exchange reserves
Assets denominated in foreign currencies held by a country's monetary authorities (in the United States, held by the Federal Reserve System and the Treasury Department).

open market
Freely competitive market.

open market operations
Purchases and sales of securities, typically U.S. Treasury securities, in the open market, by the Open Market Trading Desk at the Federal Reserve Bank of New York as directed by the Federal Open Market Committee, to influence interest rates. Purchases increase the supply of Federal Reserve balances to depository institutions; sales do the opposite.

outright transaction
"Permanent" purchase or sale of securities in the open market, or the redemption of securities, by the Federal Reserve to adjust the supply of balances at the Federal Reserve Banks over the long term. (Contrasts with transactions intended to adjust the supply of balances only temporarily. *See* **repurchase agreement** *and* **reverse repurchase agreement**.)

over the counter
Figurative term for the means of trading securities that are not listed on an organized stock exchange such as the New York Stock Exchange. Over-the-counter trading is done by broker-dealers who communicate by telephone and computer networks.

P

paper
General term for short-term debt instruments such as commercial paper.

payments system
Collective term for mechanisms (both paper-based and electronic) for moving funds, payments, and money among financial institutions throughout the nation. The Federal Reserve plays a major role in the nation's payments system through distribution of currency and coin, pro-

cessing of checks, and electronic transfer of funds; various private organizations also perform payments system functions.

portfolio
Collection of loans or assets, classified by type of borrower or asset. For example, a bank's portfolio might include loans, investment securities, and assets managed in trust; the loan portfolio might include commercial, mortgage, and consumer installment loans.

presentment fee
Fee that a bank receiving a check imposes on the bank collecting payment.

prompt corrective action
Supervisory framework, created under the Federal Deposit Insurance Corporation Improvement Act of 1991, that links enforcement actions closely to the level of capital held by banks.

R

real interest rates
Interest rates adjusted for the expected erosion of purchasing power resulting from inflation. Technically defined as nominal interest rates minus the expected rate of inflation. (*Compare* **nominal interest rates**.)

reciprocal currency (swap) arrangements
Short-term reciprocal arrangements between a Federal Reserve Bank and individual foreign central banks. By drawing on a swap the foreign central bank obtains dollars that can be used to conduct foreign exchange intervention in support of its currency or to lend to its domestic banking system to satisfy temporary liquidity demands. For the duration of the swap, the Federal Reserve Bank obtains an equivalent amount of foreign currency along with a commitment from the foreign central bank to repurchase the foreign currency at a preset exchange rate.

Reports of Condition and Income
Quarterly financial report that all banks, savings and loan associations, Edge and agreement corporations, and certain other types of organizations must file with a federal regulatory agency. Informally called a Call Report.

repurchase agreement (RP or repo)
A transaction in which the Federal Reserve enters into an agreement with a primary dealer to acquire securities from the dealer for a specified

principal amount at an agreed-upon interest rate and to return the securities on a specified future date. The maturity date may be the next day or many days later, with the maximum length set by the FOMC. These transactions permit the Federal Reserve to increase the supply of Federal Reserve balances for the length of the agreement.

required reserve balance

That portion of its required reserves that a depository institution must hold in an account at a Federal Reserve Bank. This portion is the difference between the institution's reserve requirement and its vault cash.

required reserve ratio

The percentage of reservable liabilities that depository institutions must set aside in the form of reserves.

required reserves

Funds that a depository institution is required to maintain in the form of vault cash or, if vault cash is insufficient to meet the requirement, in the form of a balance maintained directly with a Reserve Bank or indirectly with a pass-through correspondent bank. The required amount varies according to the required reserve ratios set by the Board and the amount of reservable liabilities held by the institution.

reservable liabilities

Those obligations on a depository institution's balance sheet that are subject to reserve requirements. Transaction deposits, nonpersonal time deposits, and Eurocurrency liabilities are all subject to reserve requirements; however, the required reserve ratios for nonpersonal time deposits and Eurocurrency liabilities are zero.

reserve requirements

Requirements set by the Board of Governors for the amounts of certain liabilities that depository institutions must set aside in the form of reserves.

reverse repurchase agreement

A transaction—the opposite of a repurchase agreement—in which the Federal Reserve enters into an agreement with a primary dealer to sell securities from the System portfolio for a specified principal amount at an agreed-upon interest rate and to receive the securities back from the dealer on a specified future date. The maturity date may be the next day or many days later, with the maximum length set by the FOMC. These transactions permit the Federal Reserve to decrease the supply of Federal Reserve balances for the length of the agreement.

S

savings and loan association (S&L)
Historically, depository institution that accepted deposits mainly from individuals and invested heavily in residential mortgage loans; although still primarily residential lenders, S&Ls now have many of the powers of commercial banks.

savings bank
Depository institution historically engaged primarily in accepting consumer savings deposits and in originating and investing in residential mortgage loans; now may offer checking-type deposits and make a wider range of loans. (*Compare* **commercial bank**.)

savings bond
A nonmarketable debt obligation of the U.S. government. Savings bonds are available in both paper and book-entry form and can be purchased with an initial investment of as little as $25. Investors can purchase paper savings bonds in person from many depository institutions, by mail from a Reserve Bank or the Treasury, or online. Book-entry bonds are available from the Treasury online.

securities
Paper certificates (definitive securities) or electronic records (book-entry securities) evidencing ownership of equity (stocks) or debt obligations (bonds).

securitization
The process of packaging and selling similar financial instruments, such as loans and other receivables, in the form of "asset-backed" securities that can be traded on secondary markets. Securitization allows financial institutions to transfer some of the risks of ownership to parties more willing or able to manage them.

self-regulatory organizations
Associations of broker-dealers or others that have responsibility, under the oversight of the Securities and Exchange Commission, to regulate their own members through the adoption and enforcement of rules of conduct for fair, ethical, and efficient practices. Examples include the National Association of Securities Dealers and the New York Stock Exchange.

settlement
In banking, the process of recording the debit and credit positions of two parties in a transfer of funds. Also, the delivery of securities by a seller and the payment by the buyer.

shock
Unanticipated or unusual event that has a noticeable impact on the economy or a financial system.

special drawing rights (SDRs)
Type of international reserve asset created by the International Monetary Fund and allocated, on occasion, to the nations that are members of the IMF.

state bank
Bank that is chartered by a state; may or may not be a member of the Federal Reserve System.

subsidiary
Company that is controlled by another corporation (called the parent corporation), typically through stock ownership or voting control.

substitute check
A paper reproduction of an original check that contains an image of the front and back of the original check and is suitable for automated processing, just as the original check is. The Check Clearing for the 21st Century Act, commonly known as Check 21, allows depository institutions to truncate original checks, process check information electronically, and deliver substitute checks to depository institutions if they require paper checks.

swap
An agreement between two parties to exchange cash flows of underlying securities. For example, in an interest rate swap, the most common type of swap, one party agrees to pay a fixed interest rate in return for receiving a variable rate from the other party.

swap arrangement
See **reciprocal currency arrangement**.

System Open Market Account
The Federal Reserve's portfolio of U.S. Treasury securities. Purchases and sales in this account—open market operations—are under the overall supervision of the manager of the System Open Market Account, subject to the policies and rules of the Federal Open Market Committee.

systemic risk
Risk that a disruption at a firm, in a market segment, to a settlement system, or in a similar setting will cause widespread difficulties at other firms, in other market segments, or in the financial system as a whole.

T

thrift institution
A general term encompassing savings banks, savings and loan associations, and credit unions.

Thrift Institutions Advisory Council
Group established by the Board of Governors to obtain information and opinions on the needs and problems of thrift institutions. Made up of representatives of savings and loan associations, savings banks, and credit unions.

tightening
Federal Reserve action to raise interest rates. Undertaken when inflation is a concern. (*Compare* **easing**.)

time deposit
Funds deposited in an account that has a fixed term to maturity and technically cannot be withdrawn before maturity without advance notice (for example, a certificate of deposit). Time deposits may earn interest.

Trading Desk (the Desk)
The group at the Federal Reserve Bank of New York that conducts open market operations for the Federal Reserve System and intervenes in foreign currency markets for the Federal Reserve and Treasury.

transaction account
A checking account or similar deposit account from which transfers of funds can be made. Demand deposit accounts, NOW (negotiable order of withdrawal) accounts, and credit union share draft accounts are examples of transaction accounts.

U

U.S. Treasury securities
Obligations of the U.S. government issued by the U.S. Department of the Treasury as a means of borrowing money to meet government expenditures not covered by tax revenues. All marketable Treasury securities have a minimum purchase amount of $1,000 and are issued in $1,000 increments. There are three types of marketable Treasury securities: bills, notes, and bonds.

- **Treasury bill (T-bill)**
  Short-term U.S. Treasury security having a maturity of up to one year. T-bills are sold at a discount. Investors purchase a bill at a price lower than the face value (for example, the investor might buy a

$10,000 bill for $9,700); the return is the difference between the price paid and the amount received when the bill is sold or it matures (if held to maturity, the return on the T-bill in the example would be $300).

- **Treasury note**
  Intermediate-term security having a maturity of one to ten years. Notes pay interest semiannually, and the principal is payable at maturity.
- **Treasury bond**
  Long-term security having a maturity of longer than ten years. Bonds pay interest semiannually, and the principal is payable at maturity.

The Treasury Department also issues several types of nonmarketable securities, including savings bonds.

V

vault cash
Cash on hand at a depository institution to meet day-to-day business needs, such as cashing checks for customers. Can be used to satisfy the institution's reserve requirement.

W

wire transfer
Electronic transfer of funds; usually involves large-dollar payments.

Daniel K. Tarullo
Jerome H. Powell
Lael Brainard

Members since 1913

The seven members of the Board of Governors of the Federal Reserve System are nominated by the President and confirmed by the Senate. A full term is fourteen years. One term begins every two years, on February 1 of even-numbered years. A member who serves a full term may not be reappointed. A member who completes an unexpired portion of a term may be reappointed. All terms end on their statutory date regardless of the date on which the member is sworn into office.

The Chairman and the Vice Chairman of the Board are named by the President from among the members and are confirmed by the Senate. They serve a term of four years. A member's term on the Board is not affected by his or her status as Chairman or Vice Chairman.

Federal Reserve Act

Print

Section 10. Board of Governors of the Federal Reserve System

1. Appointment and qualification of members

The Board of Governors of the Federal Reserve System (hereinafter referred to as the "Board") shall be composed of seven members, to be appointed by the President, by and with the advice and consent of the Senate, after the date of enactment of the Banking Act of 1935, for terms of fourteen years except as hereinafter provided, but each appointive member of the Federal Reserve Board in office on such date shall continue to serve as a member of the Board until February 1, 1936, and the Secretary of the Treasury and the Comptroller of the Currency shall continue to serve as members of the Board until February 1, 1936. In selecting the members of the Board, not more than one of whom shall be selected from any one Federal Reserve district, the President shall have due regard to a fair representation of the financial, agricultural, industrial, and commercial interests, and geographical divisions of the country. The members of the Board shall devote their entire time to the business of the Board and shall each receive an annual salary of $15,000, payable monthly, together with actual necessary traveling expenses.

[12 USC 241. As amended by acts of June 3, 1922 (42 Stat. 620); Aug. 23, 1935 (49 Stat. 704). Prior to the enactment of the Banking Act of 1935, approved Aug. 23, 1935, the Board of Governors of the Federal Reserve System was known as the Federal Reserve Board. See note to the third paragraph of section 1. The portion of this paragraph dealing with salaries of Board members has in effect been amended numerous times, most recently by Executive Order. Prior to the act of December 27, 2000, section 1002 of which revised the executive schedule, the salary of the chairman of the Board was set at executive schedule level 2 and the salary of other members at level 3. The salary of the chairman of the Board is now set at executive schedule level I, and the salary of other members at level II (see 2 USC 358 and 5 USC 5313 and 5314).]

Back to Top

2. Members ineligible to serve member banks; term of office; chairman and vice chairman

The members of the Board shall be ineligible during the time they are in office and for two years thereafter to hold any office, position, or employment in any member bank, except that this restriction shall not apply to a member who has served the full term for which he was appointed. Upon the expiration of the term of any appointive member of the Federal Reserve Board in office on the date of enactment of the Banking Act of 1935, the President shall fix the term of the successor to such member at not to exceed fourteen years, as designated by the President at the time of nomination, but in such manner as to provide for the expiration of the term of not more than one member in any two-year period, and thereafter each member shall hold office for a term of fourteen years from the expiration of the term of his predecessor, unless sooner removed for cause by the President. Of the persons thus appointed, 1 shall be designated by the President, by and with the advice and consent of the Senate, to serve as Chairman of the Board for a term of 4 years, and 2 shall be designated by the President, by and with the advice and consent of the Senate, to serve as Vice Chairmen of the Board, each for a term of 4 years, 1 of whom shall serve in the absence of the Chairman, as provided in the fourth undesignated paragraph of this section, and 1 of whom shall be designated Vice Chairman for Supervision. The Vice Chairman for Supervision shall develop policy recommendations for the Board regarding supervision and regulation of depository institution holding companies and other financial firms supervised by the Board, and shall oversee the supervision and regulation of such firms. The chairman of the Board, subject to its supervision, shall be its active executive officer. Each member of the Board shall within fifteen days after notice of appointment make and subscribe to the oath of office. Upon the expiration of their terms of office, members of the Board shall continue to serve until their successors are appointed and have qualified. Any person appointed as a member of the Board after the date of enactment of the Banking Act of 1935 shall not be eligible for reappointment as such member after he shall have served a full term of fourteen years.

[12 USC 242. As amended by acts of March 3, 1919 (40 Stat. 1315); June 3, 1922 (42 Stat. 620); June 16, 1933 (48 Stat. 166); Aug. 23, 1935 (49 Stat. 704); November 16, 1977 (91 Stat. 1388); and act of July 21, 2010 (124 Stat. 2126). The Banking Act of 1935, referred to in this paragraph, became effective Aug. 23, 1935. Prior to the enactment of that act, the chairman and vice chairman of the Board of Governors of the Federal Reserve System were known as the governor and vice governor of the Federal Reserve Board, respectively. See note to the third paragraph of section 1. The act of November 16, 1977, amended the second sentence of this paragraph. The amendment takes effect on Jan. 1, 1979, and applies to individuals who are designated by the President on or after such date to serve as chairman or vice chairman. The act of July 21, 2010, designated a new Vice Chairman for Supervision.]

3. Assessments on Federal reserve banks

The Board of Governors of the Federal Reserve System shall have power to levy semiannually upon the Federal reserve banks, in proportion to their capital stock and surplus, an assessment sufficient to pay its estimated expenses and the salaries of its members and employees for the half year succeeding the levying of such assessments, together with any deficit carried forward from the preceding half year, and such assessments may include amounts sufficient to provide for the acquisition by the Board in its own name of such site or building in the District of Columbia as in its judgment alone shall be necessary for the purpose of providing suitable and adequate quarters for the performance of its functions. After September 1, 2000, the Board may also use such assessments to acquire, in its own name, a site or building (in addition to the facilities existing on such date) to provide for the performance of the functions of the Board. After approving such plans, estimates, and specifications as it shall have caused to be prepared, the Board may, notwithstanding any other provision of law, cause to be constructed on any site so acquired by it a building or buildings suitable and adequate in its judgment for

its purposes and proceed to take all such steps as it may deem necessary or appropriate in connection with the construction, equipment, and furnishing of such building or buildings. The Board may maintain, enlarge, or remodel any building or buildings so acquired or constructed and shall have sole control of such building or buildings and space therein.

[12 USC 243. As reenacted without change by act of June 3, 1922 (42 Stat. 621); and amended by acts of June 19, 1934 (48 Stat. 1108) and Dec. 27, 2000 (114 Stat. 3027). By act approved June 27, 1935 (49 Stat. 425), provision was made for the furnishing of steam from the central heating plant to the Federal Reserve Board, now the Board of Governors of the Federal Reserve System.]

4. Principal offices; expenses; deposit of funds; members not to be officers or stockholders of banks

The principal offices of the Board shall be in the District of Columbia. At meetings of the Board the chairman shall preside, and, in his absence, the vice chairman shall preside. In the absence of the chairman and the vice chairman, the board shall elect a member to act as chairman pro tempore. The Board shall determine and prescribe the manner in which its obligations shall be incurred and its disbursements and expenses allowed and paid, and may leave on deposit in the Federal Reserve banks the proceeds of assessments levied upon them to defray its estimated expenses and the salaries of its members and employees, whose employment, compensation, leave, and expenses shall be governed solely by the provisions of this Act, specific amendments thereof, and rules and regulations of the Board not inconsistent therewith; and funds derived from such assessments shall not be construed to be Government funds or appropriated moneys. No member of the Board of Governors of the Federal Reserve System shall be an officer or director of any bank, banking institution, trust company, or Federal Reserve bank or hold stock in any bank, banking institution, or trust company; and before entering upon his duties as a member of the Board of Governors of the Federal Reserve System he shall certify under oath that he has complied with this requirement, and such certification shall be filed with the secretary of the Board. Whenever a vacancy shall occur, other than by expiration of term, among the six members of the Board of Governors of the Federal Reserve System appointed by the President as above provided, a successor shall be appointed by the President, by and with the advice and consent of the Senate, to fill such vacancy, and when appointed he shall hold office for the unexpired term of his predecessor.

[12 USC 244. As amended by acts of June 3, 1922 (42 Stat. 621); June 16, 1933 (48 Stat. 167); Aug. 23, 1935 (49 Stat. 705). The reference to "the six members" of the Board of Governors is an apparent error in the law and should read "the seven members." See section 10, first paragraph, this act.]

Back to Top

5. Vacancies during recess of Senate

The President shall have power to fill all vacancies that may happen on the Board of Governors of the Federal Reserve System during the recess of the Senate by granting commissions which shall expire with the next session of the Senate.

[12 USC 245. As amended by act of June 3, 1922 (42 Stat. 621).]

Back to Top

6. Reservation of powers of Secretary of Treasury

Nothing in this Act contained shall be construed as taking away any powers heretofore vested by law in the Secretary of the Treasury which relate to the supervision, management, and control of the Treasury Department and bureaus under such department, and wherever any power vested by this Act in the Board of Governors of the Federal Reserve System or the Federal reserve agent appears to conflict with the powers of the Secretary of the Treasury, such powers shall be exercised subject to the supervision and control of the Secretary.

[12 USC 246. As reenacted without change by act of June 3, 1922 (42 Stat. 621).]

Back to Top

7. Annual report

The Board of Governors of the Federal Reserve System shall annually make a full report of its operations to the Speaker of the House of Representatives, who shall cause the same to be printed for the information of the Congress. The report required under this paragraph shall include the reports required under section 707 of the Equal Credit Opportunity Act, section 18(f)(7) of the Federal Trade Commission Act, section 114 of the Truth in Lending Act, and the tenth undesignated paragraph of this section.

[12 USC 247. As reenacted without change by act of June 3, 1922 (42 Stat. 621) and amended by acts of June 3, 1922, and Dec. 27, 2000 (114 Stat. 3030).]

Back to Top

8. Office of the Comptroller of the Currency

Section three hundred and twenty-four of the Revised Statutes of the United States shall be amended so as to read as follows:

(a) Office Of The Comptroller Of The Currency Established. There is established in the Department of the Treasury a bureau to be known as the “Office of the Comptroller of the Currency” which is charged with assuring the safety and soundness of, and compliance with laws and regulations, fair access to financial services, and fair treatment of customers by, the institutions and other persons subject to its jurisdiction.

(b) Comptroller Of The Currency.

1. **In General.** The chief officer of the Office of the Comptroller of the Currency shall be known as the Comptroller of the Currency. The Comptroller of the Currency shall perform the duties of the Comptroller of the Currency under the general direction of the Secretary of the Treasury. The Secretary of the Treasury may not delay or prevent the issuance of any rule or the promulgation of any regulation by the Comptroller of the Currency, and may not intervene in any matter or proceeding before the Comptroller of the Currency (including agency enforcement actions), unless otherwise specifically provided by law.
2. **Additional Authority.** The Comptroller of the Currency shall have the same authority with respect to functions

transferred to the Comptroller of the Currency under the Enhancing Financial Institution Safety and Soundness Act of 2010 as was vested in the Director of the Office of Thrift Supervision on the transfer date, as defined in section 311 of that Act.

[12 USC 1. As reenacted without change by act of June 3, 1922 (42 Stat. 621); and amended by acts of May 20, 1966 (80 Stat. 161), Sept. 23, 1994 (108 Stat. 2232), and July 21, 2010 (124 Stat. 1523).]

Back to Top

9. Branch Federal Reserve bank buildings

No Federal Reserve bank may authorize the acquisition or construction of any branch building, or enter into any contract or other obligation for the acquisition or construction of any branch building, without the approval of the Board.

[12 USC 522. As added by act of June 3, 1922 (42 Stat. 622); and amended by acts of Feb. 6, 1923 (42 Stat. 1223); July 30, 1947 (61 Stat. 520); May 29, 1953 (67 Stat. 41); Aug. 31, 1962 (76 Stat. 418); Oct. 28, 1974 (88 Stat. 1505); and Oct. 24, 1992 (106 Stat. 3144).]

Back to Top

10. Record of open market and other policies

The Board of Governors of the Federal Reserve System shall keep a complete record of the action taken by the Board and by the Federal Open Market Committee upon all questions of policy relating to open-market operations and shall record therein the votes taken in connection with the determination of open-market policies and the reasons underlying the action of the Board and the Committee in each instance. The Board shall keep a similar record with respect to all questions of policy determined by the Board, and shall include in its annual report to the Congress a full account of the action so taken during the preceding year with respect to open-market policies and operations and with respect to the policies determined by it and shall include in such report a copy of the records required to be kept under the provisions of this paragraph.

[12 USC 247a. As added by act of Aug. 23, 1935 (49 Stat. 705).]

Back to Top

12. Appearances before Congress*

The Vice Chairman for Supervision shall appear before the Committee on Banking, Housing, and Urban Affairs of the Senate and the Committee on Financial Services of the House of Representatives and at semi-annual hearings regarding the efforts, activities, objectives, and plans of the Board with respect to the conduct of supervision and regulation of depository institution holding companies and other financial firms supervised by the Board.

[12 USC 247b. As added by act of July 21, 2010 (124 Stat. 2126).]

* The act of July 21, 2010, added paragraph 12 without adding paragraph 11.

Financial Literacy Activities

During 2013, the Board continued to participate in community and Federal Reserve System outreach events and programs, examples of which are listed below.

- *Congressional Black Caucus Annual Legislative Conference*: In September 2013, the Board, in conjunction with the Federal Reserve System, sponsored a booth at the 43rd Annual Legislative Conference. Financial education materials and information were distributed to conference attendees. The Board also provided support for the Financial Education Youth Summit convened by the Congressional Black Caucus held at the U.S. Capitol Visitor Center and Trinity Washington University.
- *FedEd Program*: During 2013, research assistants from divisions within the Board continued to implement a program developed to work with local high school students to improve their understanding of personal finances and the role of the Federal Reserve System in the economy. Subjects covered include the importance of saving, budgeting, using credit, establishing financial goals, and the impact of Federal Reserve policy on those subjects. More than 40 presentations were made to middle and high school students in the Washington metropolitan area. Presentations were made at ten schools in the District of Columbia: Roosevelt High School; Wilson High School; Coolidge High School; Dunbar High School; Anacostia High School; Ballou High School; Washington Latin Public Charter School; Edmund Burke School; KIPP DC Charter School; and St. Albans School. Presentations were made at two schools in Virginia--Annandale High School and Marshall High School--and one school in Maryland--Stone Ridge School of the Sacred Heart. Presentations were also made at the District of Columbia Public Schools Central Office to preview the FedEd Program for the New Heights Providers Meeting, the Sumner School for the DC Future Business Leaders of America, and the Heights School.
- *Federal Reserve Financial Literacy Day*: On October 23, 2013, the Board and the Federal Reserve System held training programs and seminars around the country on such topics as saving, budgeting, credit use, and the establishment of financial goals. Board research assistants presented the program to classes at two schools in the District of Columbia: Cardozo High School and the Columbia Heights Education Campus.
- *Math x Economics*: On May 23, 2013, the Board hosted the Math x Economics program for a second year in a row. The goal of the program was to introduce students to economics as a potential course of study in college and as a future career option. The Board's recruitment efforts targeted groups who are underrepresented in the field of economics, including minorities and females, especially from underserved schools. A total of 29 students from Washington metropolitan area schools attended. The students completed a survey at the end of the program; all 29 participants said they would recommend the program to other students. The descriptive statistics of the respondents are listed below.

Distribution of participants	Percent
Female	56
Male	44
Juniors	78
Seniors	22
African American	25.9
Hispanic	18.5
Asian	18.5
White	18.5
More than one ethnicity	14.8
Did not specify ethnicity	3.7

- *Education and Training Materials Distribution*: During 2013, the Board continued to provide financial literacy materials to consumer education and financial literacy groups, including the University of Maryland Extension Family and Consumer Sciences Center, the YMCA of Metropolitan Washington, Operation HOPE, and It Takes a Community to Raise a Child (located in New York City).

- *Professional Outreach*: On April 3, 2013, Chairman Bernanke delivered remarks to the 13th Annual Redefining Investment Strategy Education (RISE) Forum. His remarks highlighted the importance of promoting economic and financial knowledge among people of all ages and walks of life. He stated that the Board and the 12 Federal Reserve Banks are all deeply involved in economic education and in supporting the work of teachers, schools, and national organizations.

  On November 13, 2013, Chairman Bernanke hosted the annual Teacher Town Hall Meeting at the Federal Reserve Board. Federal Reserve Banks also held gatherings around the country to provide educators the opportunity to listen to the Chairman and ask questions. His remarks covered the origins, history, and role of the Federal Reserve, and how it has helped shape the nation's economy and financial system.

National Summit on Diversity in the Economics Profession

Print

About | Conference Program

About

The National Summit on Diversity in the Economics Profession, hosted by the Board of Governors of the Federal Reserve System in partnership with the American Economic Association, will be held at the Federal Reserve Board on October 30, 2014 in Washington, D.C. This conference brings together presidents and research directors of the Federal Reserve Banks and chairs of economics departments from around the country to open a profession-wide dialogue about diversity. Speakers and panelists will discuss the state of diversity in the economics profession and examples of successful diversity initiatives in academia. A hallmark of the conference will be the opportunity for collegial learning, discussion, and sharing among faculty peers to develop practical ideas about what can be accomplished in our profession.

Please note that attendance at the conference is by invitation only. Conference attendees and media representatives must register in advance.

No FEAR Act Data

No FEAR Act Notice

PDF

The Notification and Federal Employee Anti-discrimination and Retaliation Act (No FEAR Act) of 2002 increases federal agency accountability for acts of discrimination or reprisal against employees.

The No FEAR Act requires agencies to post on their public websites statistical data relating to equal employment opportunity complaints filed against the respective agencies.

The Federal Reserve Board's public website contains statistical data in accordance with the No FEAR Act.

Information updated as 1st Quarter 2015 for period ending December 31, 2014

Executive Summary:

The Board Can Benefit from Implementing an Agency-Wide Process for Maintaining and Monitoring Administrative Internal Control

2013-AE-B-013 **September 5, 2013**

Purpose

Our objective for this audit was to determine the processes for establishing, maintaining, and monitoring internal control within the Board of Governors of the Federal Reserve System (Board). We focused on internal control over the effectiveness and efficiency of operations and compliance with laws and regulations, i.e., administrative internal control. Our scope does not include internal control over financial reporting or information systems because the Board issues a management assertion on internal control over financial reporting and complies with the Federal Information Security Management Act of 2002, which requires agencies to establish and maintain an information security program to protect information and information systems.

Background

Internal control is an integral part of managing an organization and is critical to improving organizational effectiveness and accountability. It comprises the plans, methods, and procedures used to meet the organization's mission, goals, and objectives. Internal control is the first line of defense in safeguarding assets and preventing and detecting errors and fraud and, thus, helps organizations achieve desired results through effective stewardship of public resources.

The Federal Managers' Financial Integrity Act of 1982 (FMFIA) requires that each executive agency establish internal accounting and administrative controls in compliance with standards established by the Government Accountability Office and prepare an annual statement on internal control based on an evaluation performed using Office of Management and Budget guidelines. Although the Board is not subject to FMFIA, the Board decided to voluntarily comply with the spirit and intent of FMFIA shortly after its enactment. The Board's approach to FMFIA remains unchanged.

Findings

We found that the Board's divisions have processes for establishing administrative internal control that are tailored to their specific responsibilities. These controls generally utilize best practices and are designed to increase efficiency and react to changing environments. The Board's processes for maintaining and monitoring these controls can be enhanced. Specifically, we found that the Board does not have an agency-wide process for maintaining and monitoring its administrative internal control.

Although the Board is not subject to FMFIA, the Board decided to voluntarily comply with the spirit and intent of FMFIA. The Board's approach to addressing the provisions of FMFIA does not require management to assess and monitor administrative internal control. We believe that an agency-wide process that maintains, monitors, and reports on administrative internal control can assist the Board in effectively and efficiently achieving its mission, goals, and objectives, as well as address the organizational challenges outlined in the Board's 2012–2015 strategic framework.

Recommendation

We recommend that the Chief Operating Officer (COO) designate responsible officials or an office to develop and implement an agency-wide policy and process to more closely follow the spirit and intent of FMFIA and develop a training program to increase staff awareness about maintaining and monitoring administrative internal control.

In its response to a draft of our report, the COO stated that the Board concurred with the recommendation's intent. The COO also stated that the Board has already implemented, or is in the process of implementing, several enhanced administrative processes. He added that, given the priorities and budgetary constraints underlying the Board's new strategic framework, Board management will evaluate whether, and in what form, an agency-wide framework makes sense and will coordinate with the Executive Committee of the Board to implement any additional requirements.

MEMORANDUM

TO: Donald Hammond
Chief Operating Officer
Board of Governors of the Federal Reserve System

FROM: Melissa Heist
Associate Inspector General for Audits and Evaluations

SUBJECT: OIG Report No. 2013-AE-B-013: *The Board Can Benefit from Implementing an Agency-Wide Process for Maintaining and Monitoring Administrative Internal Control*

Attached is the Office of Inspector General's (OIG's) final report on the subject audit. We conducted this audit to determine the processes for establishing, maintaining, and monitoring internal control within the Board of Governors of the Federal Reserve System (Board). We focused on internal control over the effectiveness and efficiency of operations and compliance with laws and regulations, i.e., administrative internal control.

We provided you with a copy of our draft report for review and comment. In your response, you stated that you concurred with the intent of our recommendation, and that you planned to evaluate whether, and in what form, an agency-wide framework makes sense and that you will coordinate with the Executive Committee of the Board to implement any additional requirements. The Inspector General Act, as amended, requires that we report in our Semiannual Report to Congress on recommendations for which no management decision has been made. The act defines a management decision as the issuance of a final decision by management concerning its response to audit findings and recommendations, including actions concluded to be necessary. Since your response indicates that you have not yet determined the final actions you will take to address our report's findings we request that you provide to us within 90 calendar days a final management decision describing the actions you have taken or that you plan to take to address our recommendation. We have included your response as appendix B to our report.

We appreciate the cooperation that we received from the Board's Office of the Chief Operating Officer and the divisions with which we met. Please contact Cynthia Gray, Senior OIG Manager, or me if you would like to discuss this report or any related issues.

Introduction

Objective

Our objective for this audit was to determine the processes for establishing, maintaining, and monitoring internal control within the Board of Governors of the Federal Reserve System (Board). Our audit focused on the internal control over the effectiveness and efficiency of operations and compliance with laws and regulations, i.e., administrative internal control. Administrative controls address programmatic, operational, and administrative areas. Our scope does not include internal control over financial reporting or information systems because the Board issues a management assertion on internal control over financial reporting and complies with the Federal Information Security Management Act of 2002, which requires agencies to establish and maintain an information security program to protect information and information systems. Additional detail on our scope and methodology is in appendix A.

Background

Internal control is an integral part of managing an organization and is critical to improving organizational effectiveness and accountability. It comprises the plans, methods, and procedures used to meet the organization's mission, goals, and objectives. Internal control is the first line of defense in safeguarding assets and preventing and detecting errors and fraud and, thus, helps organizations achieve desired results through effective stewardship of public resources. Internal control should provide reasonable assurance that the objectives of the organization are being achieved in the following categories: (1) effectiveness and efficiency of operations, (2) reliability of financial reporting, and (3) compliance with applicable laws and regulations.

The Board's long-standing mission is to foster stability, integrity, and efficiency in the nation's monetary, financial, and payment systems in pursuit of optimal macroeconomic performance. In carrying out its mission, the Board has stated that it is continually aware that its operations are supported primarily by public funds, it is accountable and responsive to the public, and it recognizes its obligation to manage resources efficiently and effectively while providing transparency and accountability.[1]

1. The Board is an independent federal government agency that does not receive funding appropriated by Congress. The Federal Reserve System's income is derived primarily from the interest on U.S. government securities that it has acquired through open market operations. After paying its expenses, the Federal Reserve System turns the rest of its earnings over to the U.S. Treasury.

Federal Managers' Financial Integrity Act of 1982

Congress has long recognized the importance that internal control plays in achieving organizational effectiveness and accountability. In 1982, when faced with several highly publicized internal control breakdowns, including disclosures of waste, loss, unauthorized use, and misappropriation of funds across a wide spectrum of government operations, Congress passed the Federal Managers' Financial Integrity Act of 1982 (FMFIA) to help reduce fraud, waste, and abuse, as well as to enhance the management of federal government operations through improved internal control.

FMFIA requires the Government Accountability Office (GAO) to establish internal control standards (*Standards for Internal Control in the Federal Government*) and the Office of Management and Budget (OMB) to issue guidelines (*Circular A-123—Management's Responsibility for Internal Control*) for agencies to follow in assessing and reporting on their internal control. In addition, FMFIA requires that each executive agency establish internal accounting and administrative controls in compliance with GAO's standards and evaluate and report annually on internal control using OMB guidelines.

Under its long-standing legal interpretation, the Board is not required to comply with FMFIA because it is a financially related statute that is made inapplicable to the Board by section 10 of the Federal Reserve Act.[2] However, in 1983, shortly after the enactment of FMFIA, the Board's Controller issued a memorandum to the Board's Staff Director for Management stating that it would be in the Board's best interest to comply with the spirit and intent of FMFIA.[3] The Board's approach to addressing FMFIA was described in this memorandum as well as in later correspondence in 1984 and 1988. The Board's approach to addressing FMFIA remains unchanged since the correspondence from the 1980s.

Standards for Internal Control

In accordance with FMFIA, GAO issued *Standards for Internal Control in the Federal Government* in 1983. To address changes in information technology and financial systems, GAO revised and reissued its standards in November 1999. The revised standards include five standards for internal control and provide the overall framework for establishing and maintaining internal control and for identifying and addressing major performance challenges and areas at greater risk for fraud, waste, abuse, and mismanagement (figure 1).

The revised GAO standards also incorporate the private sector's *Internal Control—Integrated Framework* published by the Committee of Sponsoring Organizations of the Treadway

2. Section 10 of the Federal Reserve Act empowers the Board to "determine and prescribe the manner in which its obligations shall be incurred and its disbursements and expenses allowed and paid." 12 U.S.C. § 244.

3. The positions of Controller and Staff Director for Management no longer exist within the current Board organizational structure.

Commission (COSO).[4] The COSO framework was recently updated to include enhancements and clarifications that are intended to increase ease of use and broaden application. The new COSO framework provides clarity for understanding requirements for effective internal control and expands reporting to include nonfinancial and internal reporting. It also reflects changes in the business and operating environments, including governance oversight, demands and complexities in laws and regulations, and expectations for competencies and accountabilities.

Figure 1: GAO's *Standards for Internal Control in the Federal Government*

Control Environment: Sets a positive and supportive attitude toward internal control and conscientious management.

Risk Assessment: Provides for an assessment of the risks the agency faces from both external and internal sources.

Control Activities: Help ensure that management's directives are carried out.

Information & Communication: Ensure that information is recorded and communicated to management and others within the entity to enable them to carry out their internal control and other responsibilities.

Monitoring: Assesses the quality of internal control performance over time and ensures that the findings of audits and other reviews are promptly resolved.

4. COSO's internal control framework is widely used and recognized as a leading framework for designing, implementing, and evaluating the effectiveness of internal control. It integrates various internal control concepts into a framework in which a common definition is established and control components are identified. COSO's internal control framework was updated in May 2013 with a transition period ending December 15, 2014.

Responsibility for Internal Control

In anticipation of FMFIA's enactment, OMB issued Circular A-123, then titled *Internal Control Systems*, in 1981. In 1982, following FMFIA's enactment, OMB issued the assessment guidelines required by FMFIA. Circular A-123 has been periodically updated over the years and is now titled *Management's Responsibility for Internal Control*. The updated circular emphasizes the need for agencies to integrate and coordinate internal control assessments with other internal control–related activities. The circular provides information on improving the accountability and effectiveness of programs and operations by establishing, assessing, correcting, and reporting on internal control. Internal control guidance can be found in GAO's *Standards for Internal Control in the Federal Government,* OMB's Circular A-123, as well as COSO's *Internal Control—Integrated Framework.* Below are excerpts from those documents.

Establishing Internal Control

Management is responsible for developing and maintaining effective internal control. Management sets the objectives, defines organizational programs and operations, performs risk assessments to identify the most significant areas within those programs and operations, communicates the objectives of internal control to the organization, and implements the control activities to minimize risks. Some examples of internal control activities are

- policies and procedures
- segregation of duties
- reviews by management at the functional or activity level
- appropriate documentation of transactions and internal control
- access restrictions to and accountability for resources and records

As part of this process, management should take systematic and proactive measures to develop and implement appropriate, cost-effective internal control.

While management is responsible for developing and maintaining effective internal control, internal control is accomplished by all personnel in an organization. Internal control recognizes that personnel do not always understand, communicate, or perform consistently. Accordingly, a clear and close linkage must exist between personnel's duties and the way in which they are carried out, as well as between personnel's duties and the organization's objectives. Personnel should know their responsibilities and the limits of their authority. Further, internal control should be clearly documented, and the documentation should be readily available for examination. All documentation and records should be properly managed and maintained.

Maintaining and Monitoring Internal Control

Managers should continually assess and evaluate internal control. Once-effective procedures can become less effective over time, or the application of controls may change. Such changes can result from the arrival of new personnel, the variability of training and supervision, time and resource constraints, or other factors. Monitoring ensures that internal control continues to operate effectively and is accomplished by (1) appropriate personnel assessing the design and

operation of controls on a suitably timely basis and (2) management taking necessary actions to address any issues.

Monitoring can be done through ongoing activities or separate evaluations. Ongoing monitoring occurs during the course of normal operations; separate evaluations of specific processes take place after the processes have been performed. Ongoing monitoring is effective because it is performed on a real-time basis, it reacts dynamically to changing conditions, and it is ingrained in the organization. However, separate evaluations provide an opportunity to consider the continued effectiveness of ongoing monitoring. Therefore, a combination of ongoing monitoring and separate evaluations will usually ensure that the internal control maintains its effectiveness over time.

The final stage of monitoring involves reporting findings and deficiencies on a timely basis to appropriate personnel. Reporting enables the results of monitoring to either confirm previously established expectations about the effectiveness of internal control or highlight identified deficiencies for possible corrective action. The basis for reporting on internal control can include a variety of information sources including Office of Inspector General (OIG) and GAO reports, management reviews, and annual evaluations pursuant to statutory requirements; however, management should use its own judgment to assess and report on internal control and use other sources of information as supplements.

Finding: The Board Does Not Have an Agency-Wide Process for Maintaining and Monitoring Administrative Internal Control

We found that the Board's divisions have processes for establishing administrative internal control that are tailored to their specific responsibilities. These controls generally utilize best practices and are designed to increase efficiency and react to changing environments. A few of the divisions' functional areas formally maintain and monitor their controls. However, the Board's processes for maintaining and monitoring these internal controls can be enhanced. Specifically, we found that the Board does not have an agency-wide process for maintaining, monitoring, and reporting on its administrative internal control. Although the Board is not subject to FMFIA, the Board decided to voluntarily comply with the spirit and intent of FMFIA. The Board's approach to addressing the provisions of FMFIA does not require management to assess and monitor administrative internal control. GAO has emphasized the benefits of internal control, and during our audit we performed benchmarking against other independent agencies that voluntarily follow FMFIA as a best practice. We believe that an agency-wide process that maintains, monitors, and reports on administrative internal control can assist the Board in effectively and efficiently achieving its mission, goals, and objectives, as well as address organizational challenges outlined in the Board's 2012–2015 strategic framework.

The Board Has Not Implemented an Agency-Wide Process for Maintaining and Monitoring Administrative Internal Control

During our audit, we found that the Board's functional areas have processes for establishing internal control. The types of internal controls implemented differ by functional area because they are tailored to their specific responsibilities. For example, we found that some functional areas have implemented automated processes to increase efficiency while others have documented their procedures to ensure consistency as environments may change. In general, we found that functional areas developed their internal controls as they recognized the need to mitigate risks.

Although the Board's divisions have processes for establishing internal controls, we found that the Board does not have an agency-wide process for maintaining, monitoring, and reporting on administrative internal control. A few of the divisions' functional areas do formally maintain and monitor their controls through regular updates to policies and procedures, continuous evaluation of a process, or internal business reviews. For example, functional areas in multiple divisions that are responsible for providing economic analyses to support monetary policy decisionmaking have created a committee to periodically review their process and ensure that it is up-to-date. Other functional areas have set schedules for reviewing their procedures to ensure they are up-to-date. Some of these functional areas maintain and monitor their controls because they are reviewed periodically by outside agencies. Two of these functional areas perform and submit self-assessments to those outside agencies. However, we found that the majority of the functional areas do not formally maintain and monitor their administrative internal controls. The functional areas that do not maintain and monitor their administrative internal controls update them on an

as-needed basis, such as when a process changes or new guidance is issued, rather than as a result of monitoring.

The Board's Approach to Complying with FMFIA in Spirit and Intent Does Not Require Management to Assess and Monitor Administrative Internal Control

In a series of correspondence from 1983 to 1988, the Board stated its intent to comply with the spirit and intent of FMFIA. Since that time, the Board's approach to addressing the provisions of FMFIA has relied on work already being conducted, such as the examination of the Board's financial statements by independent auditors as well as independent reviews by the OIG and GAO. In addition, the Board stated that its approach to meeting the reporting provisions of FMFIA is through reports the Board provides to Congress, such as the Board's annual report and the OIG's semiannual reports. However, this approach does not require any action by the Board's divisions and does not include maintaining, monitoring, and reporting on administrative internal control.

FMFIA guidance states that management has primary responsibility for assessing and monitoring controls associated within their programs and should use other sources as a supplement to, not a replacement for, its own judgment when assessing and reporting on internal control. The guidance also states that continuous monitoring and other periodic assessments should provide the basis for the agency's assessment of its internal control. Therefore, although the OIG and GAO perform independent reviews of the Board's programs and operations, their reports should not replace Board management's own judgment for assessing and reporting on administrative internal control.

Complying with FMFIA Is a Best Practice

GAO has emphasized the benefits of internal control. GAO monitored and reported on initial FMFIA implementation efforts across the government in a series of reports as well as in numerous reports targeting specific agencies and programs. Specifically, GAO reported that agencies noted moderate or better senior management support for a strong internal control review process and for reporting weaknesses identified and making the needed improvements as a result of implementing FMFIA. GAO also reported that federal managers generally perceived that positive impacts, such as improved internal control and program efficiency and effectiveness, have resulted from FMFIA. In February 2005, GAO testified before Congress that controls at agencies had improved and that agencies had implemented logical, cohesive, and coordinated agency-wide approaches to identifying and correcting internal control problems.

During our benchmarking, we met with management at one executive agency that is required to comply with FMFIA (Agency 1) and two independent agencies that voluntarily follow FMFIA as

a best practice (Agency 2 and Agency 3).[5] Management from Agencies 2 and 3 stated to us that they recognize the importance of internal control and therefore decided to follow FMFIA. Both of the agencies stated that accountability was recognized as one of the benefits of following FMFIA. Agency 2 also stated that its FMFIA process allows business units to proactively focus on their areas of highest risk.

We found only minor differences in the approach of the agency required to comply with FMFIA as compared with the agencies that voluntarily follow FMFIA. Specifically, we found that all three agencies have developed an agency-wide process for evaluating and reporting on internal control. For example, all three agencies have designated officials responsible for FMFIA compliance at the agency level. Within these agencies, each business unit performs internal control reviews and provides an assurance statement to the head of the agency concerning the adequacy of their internal control, including deficiencies identified during their assessments. In addition, using the assurance statements provided by the business units, the heads of each of the three agencies publicly issue a consolidated assurance statement on the adequacy of the agency's internal control. One of the agencies that voluntarily follows FMFIA has also implemented a policy for FMFIA compliance and has established a senior oversight council. The other agency stated that it is planning to implement a policy for FMFIA compliance and establish a senior oversight council in the near future. Both agencies placed great emphasis on the importance of educating their staffs regarding internal control.

A comparison of the FMFIA implementation approaches of the benchmarked agencies is in table 1.

Table 1: Benchmarking Summary, FMFIA Section 2[a]

FMFIA Implementation	Agency 1	Agency 2	Agency 3
Required to comply with FMFIA	Yes	No	No
Designated officials responsible for FMFIA compliance	Yes	Yes	Yes
Developed an agency-wide policy regarding FMFIA compliance	Yes	Yes	No[b]
Established an oversight council	Yes	Yes	No[c]
Conduct internal control reviews and program evaluations of the business lines	Yes	Yes	Yes
Provide an assurance statement concerning the adequacy of business units' internal control to the agency head	Yes	Yes	Yes
Include all the deficiencies identified throughout the unit in the assurance letter, which is forwarded to the agency head	Yes	Yes	Yes
Publicly issues an annual assurance statement	Yes	Yes	Yes

Source: OIG compilation of benchmarking results.

[a]Section 2 of FMFIA deals with accounting and administrative internal controls.
[b]During our interview, agency officials stated that they were planning to develop an agency policy for FMFIA compliance.
[c]During our interview, agency officials stated that they were planning to create an oversight council in the future.

5. Agency 1 is required to comply with FMFIA and was included in our benchmarking to gain an understanding of how an executive agency implemented FMFIA. This agency was used as the basis of comparison to the agencies that voluntarily comply with FMFIA.

Maintaining and Monitoring Administrative Internal Control Can Help the Board Achieve Its Mission, Goals, and Objectives

Maintaining and monitoring administrative internal control can help the Board respond to shifting environments and evolving demands and priorities by ensuring that the control activities being used are effective and updated when necessary. While the Board's broad mission of fostering stability, integrity, and efficiency in the nation's monetary, financial, and payment system remains essentially unchanged, the 2007–2009 financial crisis fundamentally changed how the Board operates within its functional disciplines. To address these changes, the Board developed a strategic framework for 2012–2015 that addresses the most critical organizational challenges, such as retaining the right mix of skills and expertise, data governance, and facilities upgrades. As the Board's programs change to meet the strategic framework goals, established control activities can become less effective due to changing conditions. Maintaining and monitoring established control activities to address organizational challenges can help the Board ensure that the internal controls implemented are adequately designed and continue to work over time and that control failures and risks are identified, corrected, and mitigated on a timely basis.

We believe that an agency-wide process for maintaining, monitoring, and reporting on internal control can assist the Board in achieving its mission, goals, and objectives; lead to organizational efficiencies; and help avoid and address potential and actual problems that might prevent the Board from carrying out its mission effectively and efficiently or complying with laws and regulations. Prior OIG work products have identified internal control weaknesses at the Board, including noncompliance with policies and procedures, inadequate access control, and the premature release of confidential information. Although these internal control weaknesses did not prevent the Board from carrying out its mission or achieving its strategic objectives, they introduced operational and reputational risks. An agency-wide process for maintaining and monitoring administrative internal control can allow the Board to (1) identify and prevent or correct internal control weaknesses in a timely manner; (2) reduce costs because problems are identified and addressed in a proactive, rather than reactive, manner; (3) produce more accurate and reliable information for use in decisionmaking; and (4) provide periodic assertions on the effectiveness of internal control.

Conclusion

Recognizing the importance of FMFIA, the Board decided to voluntarily comply with the spirit and intent of the legislation. However, the Board's approach to FMFIA compliance does not include an agency-wide process for evaluating and reporting on administrative internal control. During our benchmarking, we found that other agencies that are not required to follow FMFIA have developed an agency-wide process for evaluating and reporting on administrative internal control. Maintaining and monitoring administrative internal control can provide management with reasonable assurance that the Board is effectively and efficiently achieving its mission, goals, and objectives and complying with laws and regulations. We believe an agency-wide approach that more closely follows and addresses the spirit and intent of FMFIA would allow the Board to maximize the benefit from its internal control and could contribute to the Board's ongoing commitment to accountability and effective and efficient operations.

Recommendation

We recommend that the Chief Operating Officer

1. Designate responsible officials or an office to

   a. develop and implement an agency-wide policy and process to more closely follow the spirit and intent of FMFIA.

   b. develop a training program to increase staff awareness about maintaining and monitoring administrative internal control.

Management's Response

Regarding our recommendation, the Board's Chief Operating Officer (COO) stated the following:

> Concur with the recommendation's intent. We agree that effectively establishing, maintaining, and monitoring administrative internal controls can assist the Board in achieving its goals and objectives and in complying with laws and regulations. We also agree that there are opportunities to enhance our current practices related to administrative internal controls. To that end, we have already implemented, or are in the process of implementing, several enhanced administrative processes. For example, we are establishing within the Division of Financial Management a central tracking point for all audit, inspection, evaluation, or other similar reports pertaining to any Board functional area. This will allow us to better monitor findings across the organization and identify trends and opportunities to more broadly strengthen administrative internal controls. We have also established a comprehensive process for regularly reviewing and updating all of our management policies to ensure that the policies and the underlying practices and associated controls remain up-to-date; I receive regular reports on the status of this activity.
>
> The audit report notes that shortly after FMFIA was enacted, as well as in later correspondence in 1984 and 1988, staff recommended that the Board comply with the spirit and intent of FMFIA. It is unclear, however, from this correspondence whether the Board officially adopted this recommendation or exactly what staff intended in establishing a FMFIA-compliant program. Given the priorities and budgetary constraints underlying the Board's new strategic framework, we believe that creating additional infrastructure to develop and implement policies and processes, to include developing a training program, must be carefully balanced with other competing resource priorities. We will evaluate whether, and in what form, an agency-wide framework makes sense and coordinate with the Executive Committee of the Board to implement any additional requirements.

OIG Comment

The COO acknowledged that there are opportunities to enhance the Board's current practices related to administrative internal controls and provided two examples of enhancements that have been implemented or are in the process of being implemented. The COO stated that the Board has established a comprehensive process for regularly reviewing and updating all management policies. We agree that this is a method of maintaining and monitoring internal control over those management policies; however, this process addresses only one of the Board's functions. We believe that this is a good example of a method by which other functional areas in other divisions can keep their policies and procedures up to date. In addition, the COO stated that the Division of Financial Management is establishing a central tracking point for all audit, inspection, evaluation, and other similar reports. While a tracking system will assist the Board in monitoring the areas that have been reviewed by others, FMFIA and COSO guidance state that management should continually assess and evaluate internal control and should use other sources as a supplement to, not as a replacement for, its own judgment when assessing and reporting on internal control.

The COO also stated in his response that it is unclear whether the Board officially adopted a staff recommendation included in the correspondence from the 1980s to comply with the spirit and intent of FMFIA. Further, the COO stated in his response that it is unclear what the staff recommendation intended regarding the establishment of a FMFIA-compliant program. While we did not find evidence that the Board officially adopted a staff recommendation to comply with the spirit and intent of FMFIA, correspondence from the 1980s from the Vice Chairman of the Board and others indicate support for complying with the spirit and intent of FMFIA.

Concerning our audit recommendation, the COO stated that implementing policies and processes, to include developing a training program, must be balanced with other competing resource priorities as detailed in the Board's new strategic framework. He plans to evaluate whether, and in what form, an agency-wide framework makes sense and coordinate with the Executive Committee of the Board to implement any additional requirements. We recognize that the Board has priorities and resource constraints, but we believe that an agency-wide process for maintaining and monitoring administrative internal control can help the Board manage changes that may result from implementing the strategic framework and further the Board's goal of increasing the efficiencies of its operations. As we stated in our report, change can decrease the effectiveness of the Board's control activities. Therefore, maintaining and monitoring established control activities to address organizational challenges can help the Board ensure that the internal controls implemented are adequately designed and continue to work over time and that control failures and risks are identified, corrected, and mitigated in a timely manner. Based on our benchmarking and the emphasis on the benefits of internal control throughout the federal government, we strongly believe it is in the Board's best interest to more closely follow the spirit and intent of FMFIA.

The Inspector General Act, as amended, requires that we report in our Semiannual Report to Congress on recommendations for which no management decision has been made. The act defines a management decision as the issuance of a final decision by management concerning its response to audit findings and recommendations, including actions concluded to be necessary. Since the COO's response indicated that he had not yet determined the final actions he would take to address our report's findings, we are requesting that he provide us within 90 calendar days a final management decision describing the actions taken or planned to address our recommendation.

Appendix A
Scope and Methodology

To accomplish our objective, we reviewed FMFIA and applicable guidance, including GAO's *Standards for Internal Control in the Federal Government*, GAO's Internal Control and Management Evaluation Tool, OMB Circular A-123, and COSO publications. We also reviewed previous audit reports issued by our office as well as by GAO.

We met with personnel in 12 of the 14 Board divisions to provide background information on internal control and the process for maintaining and monitoring internal control, and to gain a high-level understanding of administrative internal control processes in place in the divisions.[6] Following the initial meetings, the divisions provided the audit team with points of contact in a variety of functional areas in each of the divisions. The audit team held over 70 meetings across the 12 divisions, including follow-up meetings with points of contact in functional areas for each division, to determine their administrative internal control processes. We then reviewed documentation of those administrative internal controls. Although we reviewed the internal control documentation, we did not test any of the controls in place nor did we make a determination on the adequacy of the controls.

We discussed the process for establishing internal control with selected functional areas. We also benchmarked with three federal agencies to gain an understanding of their processes for maintaining and monitoring their internal controls. One of these agencies is required to comply with FMFIA, while the other two follow it voluntarily.

Our audit addressed section 2 of FMFIA (internal accounting and administrative control) and not section 4 (financial accounting systems). We focused on internal control over the effectiveness and efficiency of operations and compliance with laws and regulations, i.e., administrative controls, because the Board voluntarily complies with Sarbanes-Oxley section 404, which requires management to assert that it is responsible for creating, maintaining, and assessing the effectiveness of internal control over financial reporting. Further, we did not assess internal control over information systems because the Board complies with the Federal Information Security Management Act of 2002, which requires agencies to establish and maintain an information security program and implement controls to protect information and information systems that support the operations and assets of the agency.

We conducted our audit fieldwork from March 2012 to May 2013. We conducted this performance audit in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objective. We

6. We did not include the OIG in the scope of this audit because we are not independent with regard to the OIG's internal control activities. We did not meet with the Division of Financial Management because it was created during our fieldwork phase.

believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objective.

Appendix B
Management's Response

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM
WASHINGTON, DC 20551

OFFICE OF THE
CHIEF OPERATING OFFICER

DATE: July 15, 2013

TO: Melissa Heist

FROM: Don Hammond

SUBJECT: Response to the OIG's OIG Draft Report: *The Board Can Benefit from Implementing an Agency-wide Process for Maintaining and Monitoring Administrative Internal Control*

We appreciate the opportunity to comment on the draft report of the OIG's audit work related to the processes for establishing, maintaining, and monitoring internal control within the Board of Governors of the Federal Reserve System (Board). As the report notes, the Board's divisions have developed processes for establishing administrative internal controls that are tailored to their specific responsibilities. We are pleased that the report found that these controls generally utilize best practices and are designed to increase efficiency and react to changing environments. The following comments provide additional perspective on the report's recommendation and management's planned actions to further enhance our processes.

Recommendation 1: We recommend that the Chief Operating Officer designate responsible officials or an office to:

a. develop and implement an agency-wide policy and process to more closely follow the spirit and intent of the Federal Managers' Financial Integrity Act (FMFIA), and
b. develop a training program to increase staff awareness about maintaining and monitoring administrative internal control.

COO Response:

Concur with the recommendation's intent. We agree that effectively establishing, maintaining, and monitoring administrative internal controls can assist the Board in achieving its goals and objectives and in complying with laws and regulations. We also agree that there are opportunities to enhance our current practices related to administrative internal controls. To that end, we have already implemented, or are in the process of implementing, several enhanced administrative processes. For example, we are establishing within the Division of Financial Management a central tracking point for all audit, inspection, evaluation, or other similar reports pertaining to any Board functional area. This will allow us to better monitor findings across the organization and identify trends and opportunities to more broadly strengthen administrative internal

controls. We have also established a comprehensive process for regularly reviewing and updating all of our management policies to ensure that the policies and the underlying practices and associated controls remain up-to-date; I receive regular reports on the status of this activity.

The audit report notes that shortly after FMFIA was enacted, as well as in later correspondence in 1984 and 1988, staff recommended that the Board comply with the spirit and intent of FMFIA. It is unclear, however, from this correspondence whether the Board officially adopted this recommendation or exactly what staff intended in establishing a FMFIA-compliant program. Given the priorities and budgetary constraints underlying the Board's new strategic framework, we believe that creating additional infrastructure to develop and implement policies and processes, to include developing a training program, must be carefully balanced with other competing resource priorities. We will evaluate whether, and in what form, an agency-wide framework makes sense and coordinate with the Executive Committee of the Board to implement any additional requirements.

No FEAR Act Data

No FEAR Act Notice

PDF (24 KB)

The Notification and Federal Employee Anti-discrimination and Retaliation Act (No FEAR Act) of 2002 increases federal agency accountability for acts of discrimination or reprisal against employees.

The No FEAR Act requires agencies to post on their public websites statistical data relating to equal employment opportunity complaints filed against the respective agencies.

The Federal Reserve Board's public website contains statistical data in accordance with the No FEAR Act.

Preface: Implementing the Dodd-Frank Act

The Board of Governors of the Federal Reserve System (the Board) is responsible for implementing numerous provisions of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Dodd-Frank Act). The Dodd-Frank Act requires, among other things, that the Board produce reports to the Congress on a number of potential reform topics.

Pursuant to section 342(e) of the Dodd-Frank Act, Sheila Clark, director of the Board's Office of Diversity and Inclusion, submits this first annual report to the Congress outlining the activities, successes, and challenges of the office.

See the Board's website for an overview of the Dodd-Frank Act regulatory reform effort (www.federalreserve.gov/newsevents/reform_about.htm) and a list of the implementation initiatives recently completed by the Board as well as several of the most significant initiatives that the Board expects to address in the future (www.federalreserve.gov/newsevents/reform_milestones.htm).

Contents

Introduction

In January 2011, pursuant to section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act), the Board of Governors of the Federal Reserve System (the Board) established its Office of Diversity and Inclusion (ODI). The ODI builds on the Board's long-standing efforts to promote equal employment opportunity and diversity and to foster diversity in procurement. The Board has welcomed the new requirements under section 342 as a complement to its existing efforts as well as an opportunity to strengthen those efforts.

The ODI's mission and scope include the responsibilities identified in section 342 for the Office of Minority and Women Inclusion, as well as Equal Employment Opportunity (EEO) compliance and programs and initiatives addressing diversity and inclusion more generally (for example, inclusion of persons with disabilities).

Employment of Minorities and Women

The Board is committed to fostering an inclusive work environment where diversity is respected and leveraged to better serve the agency's mission. The Board has a long-standing equal employment policy and makes significant efforts to recruit and retain a staff that is diverse and inclusive. The best ideas, decisionmaking, and ultimately, service to the public are born from diverse perspectives.

Equal Employment Opportunity Policies

The Board's Equal Employment Program, which is housed within the ODI, strives to meet the "Essential Elements of a Model EEO Program" as prescribed in the Equal Employment Opportunity Commission's (EEOC) Management Directive 715 (MD-715). The Board has formal policies regarding equal employment opportunity, reasonable accommodation, and sexual harassment; and the EEO Program undertakes training and analysis to ensure that the Board complies with all applicable laws and regulations. The Board uses MD-715 (which includes an annual barrier analysis) as the primary metric to assess the effectiveness of its diversity policies. In addition, the Board conducts an impact analysis on employment transaction data (i.e., hires and promotions) and a complaint trend analysis. Each operational division has an EEO liaison who works with the ODI to address recruitment and retention issues specific to the liaison's division. The ODI, in conjunction with each EEO liaison, monitors progress on increasing workforce diversity.

The Board submits an EEO Program Status Report based on the requirements of MD-715 annually to the EEOC, as required by law. As part of that report, the Board provides the EEOC with an EEO-1 Report on workforce demographics. The EEO-1 Report is available on the Board's public website: www.federalreserve.gov/aboutthefed/diversityinclusion.htm. The Board's EEO-1 Report for calendar year 2011 is also appended to this report as appendix A. In general, the Board compares favorably to the federal government in workforce diversity, with an overall workforce that is approximately 46 percent female, 27 percent African American, 12 percent Asian, and 4 percent Hispanic. Within the ranks of Board officials and managers, approximately 44 percent are female, 15 percent are African American, 6 percent are Asian, and 2 percent are Hispanic. Recruitment and retention of Hispanics has been a strategic objective for the Board. We have made some progress in recent years; the Hispanic workforce has increased from 3.70 percent in 2010 to 4.02 percent in 2011.

The Board reviews the diversity profile of its workforce and applicant pool periodically, comparing against census availability data for major occupations. The following have been implemented based on the reviews and comparisons of our workforce against census availability data for major occupations:

- identification of effective recruitment resources to increase diversity in the applicant pool;
- development of recruitment outreach action plans;
- increased participation by divisions in summer internships and recruitment at minority and female professional career fairs; and
- mentoring and career development activities to increase the pipeline to senior professional, managerial, and official staff (i.e., its officers) positions.

To further strengthen its diversity, EEO, and inclusion policies and practices, the Board is a member of organizations that provide research, benchmarking, exchange of diversity best practices, and networking opportunities. The Board has participated in benchmarking surveys conducted by the Conference Board, the Society for Human Resource Management, the Organization Resource Network Council, the Equal Employment Advisory Council, and the Federal Inter-Agency Diversity Partnership. Board

staff have also served on committees and workgroups focusing on diversity and EEO topics.

Recruitment and Retention

The Board uses a variety of recruitment methods depending on the role, level, and grade of the position. Different divisions also may use different recruitment methods based on specialty skill sets needed. Methods of recruitment include, but are not limited to, posting positions on job boards, placing advertisements in targeted minority and female publications (such as *IMDiversity, Hispanic Business,* and *Careers & the Disabled*), and announcing job opportunities with industry, trade, and minority and female professional organizations. The Board also works with career placement offices at colleges and universities. Organizations such as the American Economic Association and the Urban Financial Services Association provide access to applicants for positions critical to meet the Board's mission. The Board has found that including hiring managers at recruitment events enhances recruiting effectiveness, and it has increased its use of this technique in recent years. Also, in order to increase diversity in candidate pools for executive positions, the Board at times uses external minority and female recruiting search firms. In addition, the Board has a summer intern program that provides an opportunity for students to work in a variety of Board positions, including financial analyst, information technology (IT), economic research, and business management. Summer intern applicants are sourced from colleges, universities, and diversity organizations, including INROADS and the Hispanic Association of Colleges and Universities.

To assess the effectiveness of the different recruitment channels and strategies in achieving a diverse applicant pool, the Board performs applicant tracking reviews to determine the diversity of applicant pools, interviewees, and hire results based on interviews. Information derived from program assessments is used to improve diversity outreach and recruitment efforts at colleges, universities, and professional career fairs. The ODI similarly monitors the retention of minorities and women by role, level, and grade. Where issues are identified in hiring or retention, meetings are held with management in the specific division. This enables the ODI to address issues and/or trends that adversely impact the Board's policies and practices pertaining to EEO.

Training and Mentoring

The Federal Reserve System and the Board sponsor the Federal Reserve System Leadership Exchange Program. This program, in conjunction with customized division mentoring programs, enables participants to develop depth and breadth of skills and experiences in their careers. Exchange assignments come in many forms, ranging from a short-term job shadow to a long-term critical project or a specialized experience tailored to support an individual's development goals. The exchange and mentoring programs provide hands-on learning; promote exposure to different functions, experiences, and cross-System opportunities; and expand cross-System and cross-function networks and visibility.

Further, the Board has implemented an apprenticeship program to provide employees in job families with limited potential for advancement the opportunity to receive classroom and on-the-job training in order to develop careers in skilled trades.

In addition, the Board has provided training in classroom and web-based formats. The following are examples of diversity training and education activities that have been offered to official staff and employees: Leading in an Environment of Diversity, Working in an Environment of Diversity, Workplace Harassment, Conflict Resolution, and Leadership Competencies. The ODI plans to increase its training activities in 2012 and going forward.

Successes

An ongoing focus of the Board is to increase diversity in the official staff. In 2011, the Board increased its official staff by 14 positions, of which 3, or more than 21 percent, were minorities. In addition, 17 Hispanics were hired in job categories with low Hispanic participation. Further, the Board's increased outreach efforts resulted in more diverse applicant pools for a number of positions.

Challenges

Despite some progress, the Board continues to have low minority representation in the economist job family. The Board hires a large number of Ph.D. economists, and the availability of minority candi-

dates for these positions is low. To address this challenge, the Board participates in educational forums and is a member of the American Economic Association's Committee on the Status of Minority Groups in the Economics Profession.

The Board also identified the need to enhance diversity in the pool of applicants for key functions such as financial analysis, IT, middle management, and senior professional positions. In response, the Board enhanced its recruitment outreach efforts for these positions by targeting recruitment venues with a more diversified applicant pool. The Board also included hiring managers at recruitment fairs with high participation by black and Hispanic MBAs, attorneys, and IT professionals. In addition, the Board has enhanced its advertisement of career opportunities in minority and female conference publications. These activities resulted in a more diverse applicant pool.

Inclusion of Minority-Owned and Women-Owned Businesses

The Procurement Section of the Board's Management Division, working with the ODI, is responsible for implementing section 342 of the Dodd-Frank Act in connection with developing standards and procedures to ensure, to the extent possible, the fair inclusion and utilization of minority- and women-owned businesses in the Board's procurement process. The ODI and the Procurement Section meet on a regular basis to assess the results of the supplier diversity objectives and activities and to determine whether additional efforts would be helpful in assisting minority- and women-owned businesses to compete successfully in the Board's acquisition process.

Currently, the Board continues to operate under its small disadvantaged business acquisition policy, which existed prior to the enactment of the Dodd-Frank Act. That policy helps to ensure that small and socially and economically disadvantaged businesses have an equitable opportunity to compete in the Board's procurement activities. To further enhance the Board's Small and Disadvantaged Business Development Program and to support the ODI's goals and objectives, the Procurement Section is in the process of implementing a supplier diversity program. Under the program, as required by section 342, the Board's general contract provisions will include standard language that requires contractors to confirm their commitment to ensuring the fair inclusion of women and minorities in employment and contracting. In addition, during the solicitation phase, the program will allow prospective vendors to submit a subcontracting plan with their proposal. With the adoption of the supplier diversity policy, the Board is confident that its vendor selection processes will encourage and support the participation of minority- and women-owned businesses.

Access Initiatives

In 2011, a supplier diversity specialist was hired to develop a comprehensive program strategy, including meetings with prospective suppliers to pre-qualify them and offer technical assistance as needed. By dedicating a full-time staff person to this effort, the Board expects to increase the participation and identification of diverse suppliers in the Board's acquisition process. Procurement staff and the supplier diversity specialist plan to host workshops and other technical assistance activities to assist vendors with the fundamentals of doing business with the Board.

The Board is also working to develop a website that will enable companies to register, identify their business type, and include information regarding their products and services.

Outreach Activities

The Board continues its outreach activities to attract a diverse pool of vendors by holding events to provide vendors an opportunity to meet with procurement staff and the technical end users. These vendor fairs have been well received by the vendors that attend as well as the internal-Board customers that meet one-on-one with potential suppliers. Giving the internal-Board customer an opportunity to meet with potential suppliers prior to starting the solicitation process provides the customer an opportunity to speak with the vendors about their qualifications. The Board plans to hold additional events, including workshops and forums for vendors on how to do business with the Board and how to access small business opportunities.

The Board's external strategies to increase contracting opportunities for minority- and women-owned firms focus on developing partnerships with advocacy groups representing minority- and women-owned businesses and organizational memberships. The Board is a member of the Maryland/District of Columbia Minority Supplier Development Council. As a member, the Board uses the Council's vendor database to find qualified suppliers to invite to out-

reach activities and to include in the bidding process for contracts with the Board. The Board is also applying for membership in the Women's Business Enterprise National Council, which hosts networking events focused on supplier diversity. In addition, the Board has met with advocacy groups, such as the Greenlining Institute, to discuss the inclusion of minority businesses in products and services contracts.

The Board also attends external vendor outreach events, such as the annual procurement conference sponsored by the Office of Small Disadvantaged Business Utilization in Washington, D.C., local and national conferences of the Minority Supplier Development Council, and the national conference of the Women's Business Enterprise National Council. In 2012, the Board plans to participate in a number of trade shows, such as the Minority Enterprise Development Week, D.C. Small Business Expo, the National Association of Women Business Owners, the U.S. Chamber of Commerce Business Summit, the U.S. Pan American Expo, the New York Small Business Expo, and the trade show held in conjunction with the Congressional Black Caucus annual conference.

Successes

As mentioned earlier in the report, the Procurement Section hired a supplier diversity specialist to enhance outreach activities and to focus the Board's efforts toward increasing the number of minority- and women-owned businesses involved in the Board's procurement process.

A separate budget was approved for the supplier diversity program to ensure that the program is adequately funded. As a result, the Board has tripled the number of outreach activities planned for 2012. During 2011, the Board participated in several local and national events designed to identify and educate minority- and women-owned businesses about contracting opportunities at the Board. In addition, the Board hosted its annual vendor fair, which provided the opportunity for minority- and women-owned businesses to meet with procurement staff and end users. These activities resulted in a more diverse pool of qualified minority- and women-owned businesses in the bid process.

Over the past five years, the Board has increased the amount of contracting dollars spent with minority- and women-owned businesses from $8,376,750 in 2007 to $15,414,147 in 2011, representing an increase of 84 percent.

In order to improve the accuracy of information on vendors in our procurement database, we contacted vendors to revalidate their classification and status. More than 90 percent of the vendors responded. This effort will enhance our ability to track and produce accurate reports.

Challenges

As an initial hurdle, the Board's total procurement expenditure is small relative to other federal agencies, and the specific mission of our agency dictates the type of products and services purchased. In particular, the Board spends a significant amount of its overall contracting dollars on purchases of economic data, which are generally not available from minority- or women-owned firms.

A further barrier to competition by minority- and women-owned businesses is the fact that many of these companies have never conducted business with the federal government and have expressed concern that the documentation requirements are an undue burden. The outreach and technical assistance programs described earlier are designed to assist minority- and women-owned businesses in addressing this concern.

In addition, to ensure further participation of minority- and women-owned businesses, it is important to identify ways to foster networking opportunities between prime contractors and minority- and women-owned firms interested in subcontracting opportunities.

Contracts with Minority-Owned and Women-Owned Businesses

The Board tracks the diversity of a company by its business size (small or large) and by its ownership classification (such as minority-owned or women-owned). The Board is more likely to receive a more diverse pool of vendor applications in some areas than others. For example, the Board has encountered a number of diverse vendors in the areas of temporary staffing, IT staffing, IT consulting, and office supplies and furnishings. Conversely, the Board does

not receive a diverse pool of vendor applications from firms that provide economic and statistical data.

During 2011, the Board's procurement contracts for goods and services totaled $125,070,569. Of this total, $15,414,147, or 12.3 percent, was awarded to minority-owned or women-owned businesses. Specific awards by contractor classification are as follows

- minority-owned businesses (excludes women-owned businesses) = $9,028,526 (7.2 percent of total);
- women-owned businesses (excludes minority women) = $4,237,038 (3.4 percent of total); and
- minority women-owned businesses = $2,148,583 (1.7 percent of total).

Financial Literacy Activities

The Board is dedicated to enhancing economic and financial literacy. The financial literacy program provides educational programs and resources for educators and students through workshops, classroom curricula, and other resources related to concepts of economics and personal finance.

In April 2011, Chairman Ben Bernanke provided a statement for the record, for a hearing held by the U.S. Senate Homeland Security and Governmental Affairs Subcommittee on Oversight of Government Management, in which he highlighted the importance of financial literacy to a stable and healthy economy. He also described some of the Federal Reserve System's efforts to help Americans make informed financial decisions. Specifically, the Chairman noted that exposing young people to financial concepts is particularly important and that the Federal Reserve is committed to helping teachers and schools work more effectively with students to develop financial literacy. For example, the Federal Reserve provides a financial and economic education website (federalreserveeducation.org) that features a variety of resources for teachers and students of various ages and knowledge levels.

The Board also participates in community outreach events and programs, examples of which are listed below.

- *Financial Literacy Day on the Hill:* The Board participated in the ninth annual "Financial Literacy Day on the Hill" on April 15, 2011, in the Cannon House Office Building in Washington, D.C. and provided financial publications and education program information to participants.
- *Congressional Black Caucus Annual Legislative Conference:* In September 2011, the Board sponsored a booth at the 41st Annual Legislative Conference. Financial education materials and information on how to access the System's public website for additional information regarding financial literacy were distributed to exhibit fair attendees.
- *FedEd Program:* During the summer of 2010, research assistants from divisions within the Board developed and implemented a program to work with local high-school students to improve understanding of personal financial subjects and the role of the Federal Reserve System in the economy. Subjects covered include budgeting, credit and the time value of money, and the importance of saving. Since the inception of the program, more than a dozen presentations have been made to middle- and high-school students in the Washington metropolitan area. The program is continuing in 2012 with an expanded focus on high schools with high minority and female student populations within the urban communities of Maryland, Virginia, and Washington, D.C.
- *Education and Training Materials Distribution:* During 2011, the Board provided financial literacy materials to the Ready to Achieve Mentoring Program (RAMP), a project of the Institute for Educational Leadership. RAMP is a high-tech, career-focused mentoring program being implemented by organizations across the country to promote employment and continued learning opportunities for underserved, at-risk youth. The Board provided training materials to PEN OR PENCIL: Writing a New History, a program developed by the National Alliance of Faith and Justice and the National CARES Mentoring Movement. The program's goal is to provide mentoring that will assist underserved youth in developing a keen and improved understanding of all aspects of financial literacy.
- *The Jump$tart Coalition for Personal Financial Literacy:* The Board continues to partner with and serve on the Jump$tart Coalition Board of Directors. In its 15-year history, Jump$tart has brought visibility and—through its biennial survey of high-school seniors—research-based data to the financial literacy movement. Jump$tart is a Washington, D.C.-based not-for-profit organization that seeks to improve the personal financial literacy of students in kindergarten through college. The Board

plans to continue its partnership with the Washington, D.C. Jump$tart chapter.

- In the spring of 2012, Chairman Bernanke delivered a four-part lecture series at the George Washington University about the history of the Federal Reserve and its response to the 2007–2009 financial crisis. The series was live-streamed to the public and was available on the Board's public website: www.federalreserve.gov/newsevents/lectures/about.htm.

Going forward, the Board is developing a strategic plan for continued implementation of the goals of section 342. The plan includes a proposal to convene a meeting of senior-level educators from the school systems in the Washington metropolitan area. The purpose of the meeting is to ascertain the goals of the respective school systems as related to expansion of financial education opportunities for the student population and to explore ways that the Board could add value and assist in achieving those goals. The Board will also pursue partnerships with financial education entities such as the Institute for Financial Literacy and the Council for Economic Education. Such partnerships will serve to enhance the Board's ability to develop and deliver the most meaningful financial education products to our partners and our community.

The Board will continue its outreach efforts and will continue to participate in conventions and seminars given by national groups such as the National School Boards Association.

Diversity Policies and Practices of Regulated Entities

Section 342 requires the Board and the other agencies with Offices of Minority and Women Inclusion to develop standards to assess the diversity policies and practices of the entities the agencies regulate. Board staff have met regularly with the staff of other financial regulatory agencies to establish a common framework for compliance with this provision of section 342. The regulatory community believes that a uniform approach is important to ensure that all entities are subject to similar standards regardless of regulator. This is particularly important because some entities are regulated by more than one agency, and conflicting or overlapping expectations could create significant confusion for the industry. The agencies are discussing a variety of approaches to implementing this provision of section 342 in a way that will have maximum impact while limiting regulatory burden and remaining within the constraints of the statutory authorization.

In order to develop a framework for standards that promote good faith efforts for diversity and EEO, the financial regulators hosted a roundtable of financial industry trade groups on February 20, 2012. Approximately 10 industry groups attended. The roundtable discussion focused on how to engage members on leading practices for diversity and EEO. Based on the feedback received, the financial regulators will establish a schedule of roundtable discussions with financial institutions and other regulated entities to further develop standards for the diversity policies and practices of regulated entities.

Preface: Implementing the Dodd-Frank Act

Pursuant to section 342(e) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act), the Office of Diversity and Inclusion of the Board of Governors of the Federal Reserve System must submit an annual report to the Congress outlining the activities, successes, and challenges of the Office. This is the Office's report for 2012.

See the Board's website for an overview of the Dodd-Frank Act regulatory reform effort (www.federalreserve.gov/newsevents/reform_about.htm) and a list of the implementation initiatives recently completed by the Board as well as several of the most significant initiatives that the Board expects to address in the future (www.federalreserve.gov/newsevents/reform_milestones.htm).

Contents

Introduction

In January 2011, pursuant to section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act), the Board of Governors of the Federal Reserve System (the Board) established its Office of Diversity and Inclusion (ODI) to promote diversity and inclusion. ODI builds on the Board's long-standing efforts to promote equal employment opportunity and diversity and to foster diversity in procurement. The Board has welcomed the new requirements under section 342 as a complement to its existing efforts as well as an opportunity to strengthen those efforts.

ODI's mission and scope include the responsibilities identified in section 342 for the Office of Minority and Women Inclusion (OMWI), as well as Equal Employment Opportunity (EEO) compliance and programs, and initiatives addressing diversity and inclusion. Sheila Clark serves as the director of ODI.

Equal Employment of Minorities and Women

The Board is committed to equal employment opportunity in all aspects of employment, and to fostering diversity and inclusion in the workplace. The Board believes that it can assemble the workforce needed to complete its important mission only by attracting and hiring talented individuals without regard to race, gender, color, creed, nationality, or sexual preference, and by providing an inclusive and respectful work environment that allows its employees to fully use their individual talents to advance the mission of the Board most effectively.

In support of its commitment, the Board has in place strategic objectives to attract, hire, develop, promote, and retain a highly skilled and diverse workforce. The Board also allocates significant resources to ensure the success of its equal employment opportunity (EEO) and diversity and inclusion initiatives, which assist in enabling the Board to compete with other federal agencies and the private sector for talented individuals.

Equal Employment Opportunity

The Office of Diversity and Inclusion (ODI) has oversight for equal employment opportunity and diversity and inclusion initiatives for the Board.

The Board's Equal Employment Program, which is housed within ODI, strives to meet the "Essential Elements of a Model EEO Program" as prescribed in the Equal Employment Opportunity Commission's (EEOC) Management Directive 715 (MD-715) and the Government-Wide Diversity and Inclusion Strategic Plan 2011 issued by the Office of Personnel Management and mandated by the President's Executive Order 13583. The Board has formal policies regarding equal employment opportunity, reasonable accommodation, and sexual harassment, and the EEO Program undertakes training and analysis to ensure that the Board complies with all applicable laws and regulations. The Board uses MD-715 (which includes an annual barrier analysis) as the primary metric to assess the effectiveness of its diversity policies. In addition, the Board conducts an impact analysis on employment transaction data (i.e., hires and promotions) and a complaint trend analysis. Each of the Board's 15 operational divisions has an EEO liaison who works with ODI to address recruitment and retention issues specific to the liaison's division. ODI, in conjunction with each EEO liaison, monitors progress on increasing workforce diversity.

Table 1. Federal Reserve Board reported total workforce demographics, selected data, 2011 and 2012

	2012	2011	Change (number)
Male	1,315	1,238	+77
Female	1,072	1,036	+36
Non-minority	1,339	1,276	+63
Minority	1,048	998	+50
Total employees	2,387	2,274	+113

The Board annually submits to the EEOC an EEO Program Status Report as well as its EEO-1 Report, which is published at www.federalreserve.gov/aboutthefed/diversityinclusionrpt.htm. The Board's 2012 EEO-1 report is included in this document as appendix A.

Highlights of the Board's 2011 and 2012 EEO-1 reported total workforce demographics are shown in tables 1, 2, and 3. The Board's total workforce is 45 percent female and 44 percent minority. The Board reported an increase of 113 (5 percent) employees in the total workforce for 2012. The percentage of minorities in the Executive Senior Level category increased from 19 percent in 2011 to 21 percent in 2012. The percentage of minorities decreased from 46 percent in 2011 to 42 percent in 2012 in the 1st/Mid. Level Manager category compared to increases in previous years as noted in the MD-715 for 2007–10. The representation of women increased from 53 percent in 2011 to 65 percent in 2012 in the

1st/Mid. Level Manager category and decreased slightly in the Executive Senior Level category from 41 percent in 2011 to 40 percent in 2012. Hispanic representation in the Board's workforce continued to increase from a total of 94 employees in 2011 to 106 employees in 2012.

Non-minority	277	79	45	58	914	59	21	14	57	30
Minority	74	21	33	42	648	41	124	86	135	70
Total employees	**351**	**–**	**78**	**–**	**1,562**	**–**	**145**	**–**	**192**	**–**

The Board recognizes that a strategic approach to diversity and inclusion requires multiple, integrated, ongoing efforts. The Board continuously reviews and assesses our employment policies, procedures, and practices to ensure EEO compliance and the full utilization of our diverse and talented workforce. As examples, the Board closely monitors: the pipeline in place to advance and promote young workers, efforts relating to skill development, succession planning, compensation equity, and analysis of applicant pool data. Results of the Board's assessment(s) are considered when deciding how to address issues and trends.

In addition to monitoring hiring and promotion, the Board also monitors the retention of women and minorities by job category, level, and grade. In the event there are concerns about retention, ODI works with management to address issues.

Further, the Board utilizes the complaint investigation process to address employees' concerns. This process is also utilized as a means of identifying trends in the workplace that may adversely affect the Board's employees.

ODI and the Office of Employee Relations collaborate to ensure that the Board properly administers its EEO policies, including those relating to reasonable accommodations for employees with disabilities, and its workplace-related policies, such as adverse actions and disciplinary actions.

Recruitment and Retention

The Board recognizes that a work environment that attracts and retains top talent is essential. ODI, Human Resources, Employee Relations, and Organizational Development and Learning collaborate continuously to promote an excellent quality of work life at the Board for all employees.

Short-term and long-term strategies are developed to help ensure women and minorities are represented in

the Board's applicant and candidate pools and are considered for hires and/or promotions for key positions. In 2012, the Board filled 427 positions, including 116 summer interns. The positions were filled in the following major job families: financial analysis, information technology, economics, human resources, and legal.

The Board utilized a variety of sources to fill the positions. Thirty-five percent of the positions were filled through internal promotions. In filling the remaining 65 percent of positions, the Board used a variety of methods to reach out to a broad range of qualified candidates, including job boards, social media (e.g., LinkedIn Talent Advantage, Federal Reserve System's Diversity Twitter account), professional associations (e.g., National Black MBA Association, National Society of Hispanic MBAs, HBCU Connect), career fairs, and publications that aid in providing diverse pools of candidates with the skill sets—or the potential to develop such skill sets—necessary to fill positions.

Additionally, as part of its strategy to attract pools of talented applicants, the Board recruits from a number of colleges and universities for full-time positions, including those listed in table 4.

The Board also continues to partner with the Reserve Banks to participate in national diversity recruiting events by sharing the cost of career fairs, engagements hosted by professional organizations (National Black MBA Association, National Society of Hispanic MBAs, and the Association of Latino Professionals in Finance and Accounting), and networking opportunities with special interest organizations.

In addition, the Board identifies students for paid summer internships. The internship program helps enable the Board to identify candidates for future employment opportunities and provides students hands-on opportunities and insight into the mission and work of the Board and the Federal Reserve System. Many of the students are recruited through colleges and universities (including Historically Black Colleges and Universities), special interest publications, and diversity focused organizations (e.g., the Hispanic Association of Colleges and Universities, Washington Internship for Native American Students, Workforce Recruitment Programs - College Students with Disabilities, and INROADS).

Internally, to help ensure equal opportunity and diversity in their divisions, the Board appoints Division Liaisons to work directly with ODI. Divisions also develop their own equal employment opportunity and diversity strategies, such as management development, succession planning, and accountability, and include these strategies in management performance objectives.

To ensure Division Liaisons are aware of innovative developments and best practices, ODI consults with leading national professional organizations such as the Equal Employment Advisory Council, the Society of Human Resources Management, the Federal Interagency Diversity Partnership, Workforce Opportunity Network, and the Conference Board. These organizations conduct valuable research and benchmarking, and highlight relevant best practices, which ODI shares with Division Liaisons to meet the Board's needs.

Training and Mentoring

In 2012, the Board continued to provide Workplace Harassment Prevention training and counseling services to divisions to address EEO and/or diversity issues and trends. Other diversity-related training included "Leading in a Diverse Environment and Working in a Diverse Environment," "Conflict Resolution," and "Diversity Management Awareness." In compliance with the mandates of the No FEAR Act, the Board is enhancing the No FEAR web-based training to be implemented in the spring of 2013. This training is required for all employees.

The Federal Reserve System Leadership Exchange Program, in conjunction with division-specific mentoring programs, enables participants to develop skills relating to their careers. The exchange and mentoring programs provide hands-on learning, promote exposure to different experiences, and broaden cross-system opportunities and visibility.

The Board also has a Quick Start for Managers program, which provides several interactive learning sessions for managers to design a plan of action to help enable them to be successful managers. The sessions are: "Exploring Your Role as a Manager," "Motivating and Engaging Others," "Influencing and Managing Up," "Managing Results," "Providing High-Impact Feedback," "Navigating Conflict," "Building High Performance Teams," and "Realizing Your Impact."

Successes

At the officer level, the Board increased its staff by seven positions in 2012, of which six, or 86 percent, were minorities. Female representation in 1st/Mid. Level Manager category increased from 53 percent in 2011 to 65 percent in 2012. Further, the Board's outreach initiatives resulted in more diverse applicant pools for major job families, such as financial analyst and IT professional, as well as 26 minority hires (out of a total 66 hires). The minority hires included seven Hispanics in job categories with low Hispanic representation. Overall, there was an increase of Hispanic representation from a total of 94 employees in 2011 (4.1 percent of the workforce) to 106 employees in 2012 (4.4 percent of the workforce).

Challenges

Although there was some improvement, there continue to be challenges in hiring minorities in the economist job family and Hispanics in the overall employee workforce.

To help improve the current state of low Hispanic representation, the Board has strengthened its recruiting for major job occupations through its relationships with professional associations, such as the Association of Latino Professionals in Finance and Accounting, and by sourcing applicants for internships through organizations such as the Hispanic Association of Colleges and Universities.

The Board also continues to address these challenges through participation in educational forums, mentoring programs, and summer internships sponsored by the American Economic Association's Committee on Status of Minority Groups in Economics Profession (CSMGEP), of which the Board is a member.

In recent years, a senior staff member or an economist has represented the Board on CSMGEP. CSMGEP was established by the American Economic Association (AEA) to increase the representation of minorities in the economics profession, primarily by broadening opportunities for the training of underrepresented minorities. CSMGEP, which comprises economists from all areas of the profession, also works to ensure that issues related to the representation of minorities are considered in the work of the AEA, and engages in other efforts to promote the advancement of minorities in the economics profession. The Board representative helps to organize and oversee the three programs under the purview of CSMGEP: (1) the Summer Economics Fellows Program, which matches advanced graduate students or junior faculty with research-oriented sponsoring institutions (including the Board) for a short residency, during which fellows are expected to work in one of their own research projects while participating in the research community of the sponsoring institutions; (2) the Summer Training Program, which is designed to provide undergraduate students with a program of study and research opportunities that prepare them with a better understanding of what the study of economics entails at the doctoral level and career options for doctoral graduates; and (3) the Mentoring Program in which students are matched with a mentor who sees them through the critical junctures of their graduate program (including the transition from course work to research) or the early stages of their post-graduate career.

Board economics staff have been actively involved in all three CSMGEP programs serving as mentors in the Mentoring Program, instructors in the Summer Training Program, and sponsors for the Summer Fellows program.

Inclusion of Minority-Owned and Women-Owned Businesses

The Procurement Section in the Board's Division of Financial Management continues to demonstrate a strong and positive commitment to the inclusion of minority-owned and women-owned businesses in the Board's acquisition process. A comprehensive program strategy has been implemented by setting forth specific actions to assist the Board in fostering relationships with these types of businesses. This strategy contains objectives and activities with detailed steps that are aligned with the provisions of section 342 of the Dodd-Frank Act to help position the Board to cultivate minority-owned and women-owned businesses. Through networking with minority-owned and women-owned firms, the Procurement Section has made significant progress in fostering success for minority-owned and women-owned businesses looking to do business with the Board.

Outreach Activities

The Board is committed to executing a dynamic and effective outreach program to minority-owned and women-owned businesses. As a part of Procurement's Supplier Diversity Plan, the Procurement staff participated in numerous external outreach programs and activities. The Board designed and implemented an outreach plan primarily focused on three strategies: (1) forging partnerships with the local, regional, and national minority-owned and women-owned business communities; (2) creating or having access to a database of minority-owned and women-owned firms that can offer the Board quality goods and services; and (3) reviewing minority-owned and women-owned firms offering goods and services aligned with the Board's expected needs. As will be discussed, the Board has made significant progress in implementing each of the three strategies outlined above.

Providing Technical Assistance

In April 2012, ODI and the Federal Reserve Bank of Richmond's Office of Minority and Women Inclusion sponsored an Empower Forum. The goal of the forum was to provide capacity-building resources for minority-owned and women-owned businesses. Featured sessions included "How to do business with the Federal Reserve System and other Government agencies," "Sustaining minority-owned and women-owned businesses during challenging economic times," "Building successful and beneficial relationships to grow business," "Challenges of accessing capital," and "Top characteristics of emerging businesses."

Federal Reserve Board Chairman Ben Bernanke provided opening remarks, and presentations were given by the following partnering organizations: U.S. Department of the Treasury, Minority Business Development Agency, Small Business Investor Alliance, Interise, Women's Business Enterprise National Council, United States Hispanic Chamber of Commerce, and the U.S. Pan Asian American Chamber of Commerce. Representatives from the Board and the Federal Reserve Bank of Richmond participated in and led various panel discussions and workshops.

Fifty percent of the total participants at the forum were minority-owned businesses of which 50 percent were African American, 36 percent were Asian American, and eight percent were Hispanic American; 35 percent of the total participants were women-owned businesses. The largest number of participants represented companies that focus on business services and information technology. Other sectors represented were: law firms, management, consulting, and the service industry.

Further, the Supplier Diversity Specialist, hired by the Board in 2011, has continued to work with suppliers to provide technical assistance in order to increase the participation and identification of diverse suppliers in the Board's acquisition process. A major initiative in 2012 was the implementation of an external vendor management system. This web-based application allows vendors to register their

companies' information with the Board to become potential suppliers.

The Board is very proud that its Procurement Section was named 2012 Minority Business Advocate of the Year by the Minority Business Development Agency (MBDA) Business Center of Washington, D.C. Through the Board's Supplier Diversity Program, the Procurement Section worked closely with the MBDA to raise awareness among minority-owned firms of contracting opportunities at the Board, and to provide technical assistance regarding the Board's acquisition process.

Program Enhancements

The Board has made a number of internal program enhancements. The Procurement Section now requires that for all procurements greater than or equal to $50,000, staff members are to make concerted efforts to include minority-owned and women-owned companies in the solicitation process by reviewing the solicitations and adding to the list of potential vendors qualified companies identified through the Procurement vendor management system or through other means. The Board is also making efforts to review U.S. General Services Administration and Federal Supply Schedule purchases to ensure that, where possible, minority-owned and women-owned companies are included in contracting opportunities. In 2013, the Board also plans to solicit information from its telephone and utility company contractors regarding their second-tier sourcing with minority-owned and women-owned companies in an effort to better track such subcontracts.

Successes

In 2012, the Procurement Section made substantial progress in its supplier diversity initiatives, which are designed to foster the fair inclusion and utilization of minority-owned and women-owned businesses in the Board's acquisition process.

The Board incorporated supplier diversity language in contracts, including a statement requiring contractors to confirm their commitment to equal opportunity in employment and contracting, and to the fair inclusion of minorities and women in their workforce.

As mentioned earlier, the Board implemented a web-based application allowing vendors to register their companies' information with the Board to become potential suppliers. Approximately 900 companies have registered with the Board using the web-based application. This information is available to internal purchasers of goods and services (such as the Procurement Section) to use as a tool to identify registered minority-owned and women-owned companies for solicitations. The site also allows internal users to export stored data in a way that allows Procurement and other Board users to measure and track the progress made to include minority-owned and women-owned companies in the solicitation process. Ultimately, this system will also be used to communicate information to potential suppliers regarding goods and services projected in the Board's forecast of contract opportunities and networking/outreach opportunities.

The Board held its annual Vendor Outreach Fair in May 2012. Vendors were able to conduct one-on-one meetings to share their capabilities with representatives from several Board functional areas, including Human Resources, Benefits, Employee Relations, Staffing, Information Technology, Facilities, Communications, Staff Development, Organizational Development and Learning, Space Planning, and Automation Programs Applications. Representatives from the Small Business Administration and from the Federal Reserve Bank of Richmond were also in attendance to meet with vendors. Approximately 116 of the roughly 200 firms that attended the event were minority-owned and/or women-owned firms.

Further, the Board designed capacity-development workshops on "How to do Business with the Federal Reserve Board," and conducted these workshops at the 2012 Vendor Outreach Fair and at other outreach events. These capacity workshops are designed to assist minority-owned and women-owned firms with overcoming obstacles that inhibit them from successfully competing in the Board's acquisition process.

The Board also obtained memberships in national and local organizations which serve as a method to connect directly with qualified minority-owned and women-owned companies. Memberships in these types of organizations will provide direct access to diverse suppliers that demonstrate the ability to provide high-quality goods and services.

The Board significantly strengthened its relationships in the business community by forging key external relationships through collaboration. Relationships with the following key external organizations were either established or enhanced, through organization memberships and/or participation in conferences and outreach events: the Greater Washington Hispanic Chamber of Commerce, the U.S. Hispanic Chamber of Commerce, the Office of Small and Disadvantaged Business Utilization (OSDBU), the U.S. Black Chamber of Commerce, Women Impacting Public Policy, the U.S. Women's Chamber of Commerce, the U.S. Pan Asian American Chamber of Commerce, the Minority Business Development Agency, the National Minority Supplier Development Council, the MD/DC Minority Supplier Development Council, the Chicago Minority Supplier Development Council, the Women Business Enterprise National Council, the National Association of Small Disadvantaged Businesses, the Small Business Administration, the National 8(a) Association, and the National Center for American Indian Enterprise Development. The Board continues to work to identify additional opportunities for outreach and networking events with minority-owned and women-owned companies, locally and nationally.

Contracts with Minority-Owned and Women-Owned Businesses

In reviewing the 2012 contract awards, the Board identified a critical need to implement a systematic process to track, monitor, and forecast the progress of contracts from inception to completion, including the contract option years. To address this need, Procurement staff is working with technical support staff to discuss requirements for an automated system that will track contracts.

The Board continues to maintain indefinite-delivery/indefinite-quantity (IDIQ) contracts for information technology consulting services with several minority-owned and women-owned firms, through which the Board can order consulting services. Out of 15 total IDIQ contracts for IT consulting services, eight are with minority-owned or women-owned companies, and the Board will continue to place task orders with these firms on an ongoing basis. In an effort to further the Board's contracting activity with minority-owned and women-owned construction firms, the Board conducted a competitive solicitation, offer, and award process that resulted in the award of several Basic Ordering Agreement construction contracts to minority-owned firms. The Board plans to issue task orders for construction projects to these firms during 2013 and beyond.

During 2012, the Board's contracts for goods and services totaled $141,168,580. Of that amount, a total of $13,556,629, or 9.6 percent, was awarded to minority-owned or women-owned businesses. Contracting with minority-owned businesses decreased in 2012 compared to 2011, due in part to a number of construction contracts that concluded in 2011. At the same time, however, contracts issued to women-owned businesses increased significantly, from 3.4 percent of contract expenditures in 2011 to 8.4 percent in 2012, and contracts with minority women-owned businesses also expanded.

Table 5. Contract awards for minority-owned and women-owned businesses, 2011 and 2012

	2012[1]		2011[2]	
	Dollars	Percent	Dollars	Percent
Minority-owned businesses[3]	$3,726,415	2.6	$9,028,526	7.2
Women-owned businesses[3]	$8,145,183	8.4	$4,237,038	3.4
Minority women-owned businesses	$1,685,031	1.2	$2,148,583	1.7

1 Total contracts awarded in 2012 were $141,168,580.
2 Total contracts awarded in 2011 were $125,070,569.
3 Does not include contracts with minority women-owned businesses.

Challenges

Much of the Board's procurement activity involves acquisition of economic data, generally purchased from large companies. ODI and Procurement offices have met with minority-owned and women-owned businesses that have indicated that they can provide these services, and expect to host a meeting between the Board's research divisions and these prospective vendors. The meeting agenda will focus on the Board's requirements for economic data, and will provide an opportunity for vendors to discuss their capabilities.

The Procurement section continues to actively solicit and review minority-owned and women-owned vendors to participate in the Board's contracting activities. Procurement collaborates with advocacy groups representing minority-owned and women-owned firms to better understand the challenges of these

businesses and provide assistance to help them navigate the Board's acquisition process.

Looking Ahead

The Board will continue to improve its acquisition process to enhance the ability of minority-owned and women-owned firms to successfully compete. Among its strategies are comprehensive training programs for all Board employees, supplier diversity performance plans for procurement staff, targeted outreach programs, revised procurement policies, and the adoption of online tools and resources. The Board is currently finalizing a draft Supplier Diversity Policy which will assist the Board in implementing policies that will increase the number of contracts awarded to minority-owned and women-owned businesses.

To maximize the impact on minority-owned and women-owned firms, the Board will focus on increasing the participation of small business enterprises in its acquisition process. To that end, the Board will post on Procurement's external webpage a forecast of upcoming solicitations to inform firms of contracting opportunities. The Board will continue to collaborate with other Federal banking agencies, the OSDBU, and the Federal Reserve System Supplier Diversity Work Group to share successful "best practices" and to integrate those practices into the Board's business processes and systems to capture relevant data and monitor improvements in the inclusion of minority-owned and women-owned firms. The Board will provide resources to its end users who participate in the Board purchase card program to allow them to purchase from minority-owned and women-owned companies to the maximum extent practicable.

In addition, the Board plans to host networking meetings for vendors in specific markets such as economic research/data and legal services in order to expand opportunities for the Board to contract with minority-owned and women-owned firms in these industries. In preparation for a major construction project anticipated to take place in the next few years, the Board plans to host networking meetings where large general construction firms that might be included as prime contractors for the construction project could meet with minority-owned and women-owned construction firms that could serve as subcontractors on the project. The Board also plans to solicit information from its primary contractors regarding their second-tier sourcing with minority-owned and women-owned companies in an effort to better track such subcontracts.

Finally, the Board will continue to nurture and foster relationships with small minority-owned and women-owned firms to broaden its access to quality products and services.

Financial Literacy Activities

During 2012, the Board continued to participate in community outreach events and programs, examples of which are listed below.

- *Conversation with the Chairman: A Teacher Town Hall Meeting*: In August 2012, Chairman Bernanke held a town hall meeting with teachers and educators across the 12 Reserve Bank Districts to discuss the need for personal financial education in the wake of the recent financial crisis. Chairman Bernanke took questions in person and via videoconference from K–12 and post-secondary educators of economics, personal finance, and related disciplines, who were gathered at Federal Reserve Bank offices across the country.
- *Congressional Black Caucus Annual Legislative Conference*: In September 2012, the Board, in conjunction with the Federal Reserve Banks, sponsored a booth at the 42nd Annual Legislative Conference. Financial education materials and information on how to access the System's public website for additional information regarding financial literacy were distributed to exhibit fair attendees. The Board also provided support for the Financial Education Youth Summit convened by the Black Caucus held at the U.S. Capitol Visitor's Center and Trinity Washington University.
- *FedEd Program*: During 2012, research assistants from divisions within the Board continued to expand upon and implement a program developed to work with local high school students to improve their understanding of personal finances and the role of the Federal Reserve System in the economy. Subjects covered included the importance of saving, budgeting, use of credit, and the establishment of financial goals. In 2012, more than a dozen presentations were made to middle and high school students in the Washington metropolitan area. Presentations were made at six schools: Friendly High School and Sherwood High School in Maryland; Cardozo High School and The Duke Ellington School of the Arts in Washington, D.C.; and the Academy of Finance at T.C. Williams High School in Virginia.
- *Math x Economics*: In May 2012, the Board hosted a one-day program for high school juniors and seniors who are exceptionally talented in mathematics. The goal of the program was to introduce students to economics as a potential course of study in college, and as a future career option.
- *D.C. Public Schools Partner Fair*: In June 2012, Board research assistants participated in the "Connecting School Leaders and Community Partners" event held at Eastern High School in Washington, D.C. The research assistants distributed information on the Federal Reserve Board's FedEd program as well as other financial literacy materials from the Federal Reserve System. As a result of this activity, several school administrators requested presentations for their students. Presentations have been scheduled for the 2013 school year.
- *Education and Training Materials Distribution*: During 2012, the Board continued to provide financial literacy materials to consumer education and financial literacy groups including the University of Maryland Extension Family and Consumer Sciences Center, the YMCA of Metropolitan Washington, and Operation HOPE.
- *Financial Literacy Day on the Hill*: The Board participated in the 10th annual "Financial Literacy Day on the Hill" on April 17, 2012, in the Hart Senate Building in Washington, D.C., and provided financial publications and education program information to participants.

Diversity Policies and Practices of Regulated Entities

In 2012, an interagency working group comprising the financial agency OMWI Directors (the Board, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the National Credit Union Administration, the Consumer Financial Protection Bureau, and the Securities Exchange Commission) continued to coordinate closely in the development of standards for assessing the diversity policies and practices of entities regulated by each agency. The priority of the interagency working group is to meet the provisions of section 342(b)(3) of the Dodd-Frank Act pertaining to the development of standards to assess the diversity policies and practices of entities regulated by the agencies, and ensure that all entities are subject to similar standards regardless of regulator.

The interagency working group completed the following activities in 2012:

- held meetings with the EEOC, the Department of Labor, Office of Federal Contract Compliance Programs, and the Department of Justice to determine available resources;
- held industry, trade, and public roundtables throughout the United States, and telephone conferences with industry, trade, and state banking representatives;
- held meetings with community interest group representatives to broadly discuss implementation of section 342 of the Dodd-Frank Act; and
- held meetings with banking and industry trade representatives to gather information and discuss leading practices in recognition of the wide-ranging sizes, markets, and complexities of the regulated entities.

The roundtables referenced above, held with the OMWI Directors, regulated entities, industry trade organizations, and consumer organizations in Washington, D.C.; Chicago; Dallas; New York City; Charlotte; and Denver, were attended by more than 100 representatives. In addition, two roundtable conference calls were held to enable community bankers from across the country to provide input. The information and suggestions gathered from these meetings have assisted the interagency group's efforts in developing a direction for standards that would promote diversity best practices while not disrupting existing, successful programs or imposing undue burdens on the financial services and banking industry. Attendees responded to questions and shared suggestions and concerns regarding standards and implementation methods. Using this input, as well as diversity best practices research information, the OMWI Directors have drafted proposed interagency standards.

The interagency OMWI Directors plan to publish for comment a Proposed Policy Statement proposing joint standards to assess the diversity policies and practices of regulated entities during spring 2013. The standards describe leading diversity practices for the financial services industry in four key areas: organizational commitment, workforce profile and employment practices, supplier diversity in procurement and business practices, and transparency of organizational diversity and inclusion policies.

Preface: Implementing the Dodd-Frank Act

Pursuant to section 342(e) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act), the Office of Diversity and Inclusion (ODI) of the Board of Governors of the Federal Reserve System must submit an annual report to the Congress outlining the activities, successes, and challenges of the Office. This is the Office's report for calendar year 2013. Sheila Clark serves as the director of ODI.

See the Board's website for an overview of the Dodd-Frank Act regulatory reform effort (www.federalreserve.gov/newsevents/reform_about.htm) and a list of the implementation initiatives recently completed by the Board as well as several of the most significant initiatives that the Board expects to address in the future (www.federalreserve.gov/newsevents/reform_milestones.htm).

Contents

Introduction

In January 2011, pursuant to section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act), the Board of Governors of the Federal Reserve System (the Board) established its Office of Diversity and Inclusion (ODI) to promote diversity and inclusion. ODI builds on the Board's long-standing efforts to promote equal employment opportunity and diversity and to foster diversity in procurement.

ODI's mission and scope include the responsibilities identified in section 342 for the Office of Minority and Women Inclusion (OMWI), as well as Equal Employment Opportunity (EEO) compliance and programs, and initiatives addressing diversity and inclusion. ODI works to assess the Board's diversity policies, programs, and performance to determine progress and increase transparency. ODI's ongoing effort to foster an informed dialogue on diversity best practices includes participation in Equal Employment Opportunity Commission (EEOC) technical workshops, attendance at conferences and events held by professional organizations, and participation in financial industry groups.

Equal Employment of Minorities and Women

The Board is committed to equal employment opportunity in all aspects of employment, and to fostering diversity and inclusion in the workplace. In support of its commitment, the Board has in place strategic objectives to attract, hire, develop, promote, and retain a highly skilled and diverse workforce. The Board also allocates significant resources to ensure the success of its equal employment opportunity (EEO) and diversity and inclusion initiatives, which assist in enabling the Board to compete with other federal agencies and the private sector for talented individuals.

Table 1. Federal Reserve Board reported total workforce demographics, selected data, 2012 and 2013

	2012	2013	Change (number)
Male	1,315	1,364	+49
Female	1,072	1,092	+20
Non-minority	1,339	1,376	+37
Minority	1,048	1,080	+32
Total employees	2,387	2,456	+69

Equal Employment Opportunity

The Board's Equal Employment Program, which is housed within the Office of Diversity and Inclusion (ODI), strives to meet the "Essential Elements of a Model EEO Program" as prescribed in the Equal Employment Opportunity Commission's (EEOC) Management Directive 715 (MD-715) and the Government-Wide Diversity and Inclusion Strategic Plan 2011 issued by the Office of Personnel Management and mandated by the President's Executive Order 13583. The Board has formal policies regarding equal employment opportunity, reasonable accommodation, and discriminatory workplace harassment, and the EEO Program undertakes training and analysis to ensure that the Board complies with all applicable laws and regulations. The Board uses elements of MD-715 (which includes an annual barrier analysis) as the primary metric to assess the effectiveness of its diversity policies and initiatives. Further, the Board reviews quarterly employment transaction data (i.e., hires and promotions) to determine any adverse impact based on race or gender as well as a complaint trend analysis.

In addition, the Board utilizes EEO management systems to identify strengths and areas for improvement in the talent acquisition process. By identifying potential issues, the Board can develop action plans that incorporate short- and long-term objectives. ODI works in conjunction with EEO liaisons from each of the Board's 15 operational divisions and Board leadership to ensure that inclusion and diversity exist at all levels of employment throughout the Board and that divisions identify and approach diversity challenges with transparency. Divisions also develop their own additional EEO and diversity strategies, such as management development, succession planning, and accountability, and include these strategies in management performance objectives.

To ensure the Board is aware of innovative developments and best practices, ODI consults with leading national professional organizations such as the Equal Employment Advisory Council, the Society of Human Resources Management, the Federal Interagency Diversity Partnership, Workforce Opportunity Network, the Conference Board, and the Federal Dispute Resolution Conference. These organizations conduct valuable research and benchmarking, and highlight relevant best practices, which ODI shares with division EEO liaisons to meet the Board's needs.

The Board annually submits to the EEOC an EEO Program Status Report as well as its EEO-1 Report, which is published at www.federalreserve.gov/aboutthefed/diversityinclusionrpt.htm. The Board's 2013 EEO-1 Report is included in this document as appendix A.

Highlights of the Board's 2012 and 2013 EEO-1 reported total workforce demographics are shown in tables 1, 2, and 3. The Board's total workforce is 44 percent female and 44 percent minority. The Board reported an increase of 69 (3 percent) employ-

ees in the total workforce for 2013, of which 32 were minorities and 20 were women. The percentage of minorities in the Executive Senior Level category increased from 21 percent in 2012 to 23 percent in 2013. In the 1st/Mid. Level Manager category, the percentage of minorities increased from 42 percent in 2012 to 53 percent in 2013 and the representation of women decreased from 65 percent in 2012 to 55 percent in 2013. The representation of women remained at 40 percent in the Executive Senior Level category. Hispanic representation in the Board's workforce continued to increase from a total of 106 employees in 2012 to 109 employees in 2013.

Total employees	**384**	**–**	**85**	**–**	**1,641**	**–**	**136**	**–**	**152**	**–**

The Board recognizes that a strategic approach to diversity and inclusion requires multiple, integrated, ongoing efforts. The Board continuously reviews and assesses its employment policies, procedures, and practices to ensure EEO compliance and the full utilization of our diverse and talented workforce. As examples, the Board closely monitors applicant pool data; the programs in place to advance and promote employees, as well as those related to skill development, succession planning, and compensation equity; and the pipeline of personnel available for promotions. Results of the Board's assessment(s) are considered when deciding how to address issues and trends.

In addition to monitoring hiring and promotion, the Board also monitors the retention of women and minorities by job category, level, and grade. In the event there are concerns about retention, ODI works with management to address any issues.

Further, the Board utilizes the complaint investigation process to address employees' concerns and to identify trends in the workplace that may adversely affect the Board's employees.

ODI and the Office of Employee Relations collaborate to ensure that the Board properly administers its EEO policies, including those relating to reasonable accommodations for employees with disabilities, and its workplace-related policies, such as adverse actions and disciplinary actions.

Recruitment and Retention

The Board recognizes that a work environment that attracts and retains top talent is essential. ODI, Human Resources, Employee Relations, and Organizational Development and Learning collaborate continuously to promote an excellent quality of work life at the Board for all employees.

Short-term and long-term strategies are developed to help ensure women and minorities are represented in the Board's applicant and candidate pools and are considered for hires and/or promotions for key positions. In 2013, the Board filled 409 positions, of which 113 were summer interns. Fifty-seven percent of the positions filled were in the following major job families: attorney, computer professional, financial analyst, economist, and research assistant.

The Board utilized a variety of sources to fill the positions. Thirty-nine percent of the positions were filled internally. In filling the remaining 61 percent of positions, the Board used a variety of methods to attract a broad range of candidates, including job boards, social media (e.g., LinkedIn Talent Advantage, Federal Reserve System's Diversity Twitter account), career fairs, and publications that aid in providing diverse pools of candidates with the skill sets necessary to fill positions.

Additionally, as part of its strategy to attract diverse pools of talented applicants, the Board recruits from a number of colleges and universities for full-time positions, including those listed in table 4.

The Board also continues to partner with the Reserve Banks to participate in national diversity recruiting events by sharing the cost of career fairs, engagements hosted by professional organizations (National Society of Hispanic MBAs, Asian MBA (AMBA), and the Thurgood Marshall College Fund), and networking opportunities with special interest organizations. The Board is collaborating with the National Capital Region chapter of Year Up and will have a formal internship program during the summer of 2014. Year Up empowers urban young adults with the skills, experience, and support to achieve their potential through professional career opportunities and higher education. It offers a one-year, intensive training program that equips students with a combination of hands-on skill development, college credits, and corporate internships.

In addition, the Board identifies students for paid summer internships. The internship program helps enable the Board to identify candidates for future employment opportunities and provides students hands-on opportunities and insight into the mission and work of the Board and the Federal Reserve System. Many of the students are recruited through colleges and universities (including Historically Black Colleges and Universities), special interest publications, and diversity focused organizations (e.g., the Hispanic Association of Colleges and Universities, Washington Internship for Native American Students, Workforce Recruitment Programs – College Students with Disabilities, and INROADS).

Training and Mentoring

In 2013, the Board continued to provide Workplace Harassment Prevention training and counseling services to divisions to address EEO and/or diversity issues and trends. Other diversity-related training included "Conflict Resolution," "Diversity Management Awareness," "Fierce Conversations," and "Micro-Triggers."

In compliance with the training requirements of the Notification and Federal Employee Antidiscrimination and Retaliation Act (No FEAR Act), the Board has contracted with Navex Global to provide No FEAR web-based training in 2014. This training is required for all employees. The segments will cover EEO compliance, disability and accommodations, and discriminatory workplace harassment.

The Federal Reserve System Leadership Exchange Program, in conjunction with division-specific mentoring programs, enables participants to develop skills relating to their careers. The exchange and mentoring programs provide hands-on learning, promote exposure to different employment experiences, and broaden cross-system opportunities and visibility.

The Board's talent development processes also correlate to six performance competencies:

- decision quality
- learning agility
- drive for excellence
- perspective and strategic
- collaborative relationships
- effective communications

The competencies are grouped by employee role (e.g., manager or officer) and include desired behaviors in shaping, guiding, and leveraging diversity and inclusion.

Talent is developed through participation in the Executive Coaching Program, the System Senior Leadership Initiative, and the Quick Start for Managers Program. The Quick Start for Managers Program provides several interactive learning sessions for new managers to design a plan of action to help enable them to be successful. The sessions are: "Exploring Your Role as a Manager," "Motivating and Engaging Others," "Influencing and Managing Up," "Managing Results," "Providing High-Impact Feedback," "Navigating Conflict," "Building High Performance Teams," and "Realizing Your Impact." A Quick Start program for officers will be developed in 2014.

Employees are encouraged to take part in development opportunities through self-assessment, coaching, mentoring, service on task forces, participating in significant high priority projects, and taking on special assignments.

In 2013, a total of 149 officers and managers participated in leadership programs, of which 46 percent were female and 31 percent were minorities.

Successes

Minorities in the pipeline (grades FR-27 through 29) to official staff increased by 13 percent, from 256 in 2012 to 289 in 2013.[1] The Board's outreach initiatives resulted in more diverse applicant pools for major job families, such as financial analyst and information technology (IT) professional. Out of a total of 409 hires, 167 were minorities. The minority hires included 15 Hispanics in the major job families.

Challenges and Next Steps

Although there was some improvement, there continue to be challenges in the hiring of Hispanics in the overall workforce, and in the hiring of minorities in the job families of economist, program analyst, and regulatory and business analyst.

To help improve the current state of low Hispanic representation, the Board has strengthened its recruiting for major job occupations through its relationships with professional associations and academic institutions, such as the Association of Latino Professionals in Finance and Accounting, the National Society of Hispanic MBAs, and universities with significant Hispanic representation (e.g., Florida International University, the University of Maryland, and the New Jersey Institute of Technology), and by sourcing applicants for internships through organizations such as the Hispanic Association of Colleges and Universities.

Further, the Board also anticipates exploring new sources for recruitment of Hispanics such as partnering with community colleges that have joint programs with four-year universities and colleges to identify juniors for summer internship positions. This will enable students to gain experience in critical job occupations and encourage future applicants and candidates for job opportunities after degree completion.

The Board continues to address low representation of minorities in the official staff as well as in the pipeline to become official staff. During calendar year 2013, the official staff had 20 new appointments, of

[1] Official staff is equivalent to Senior Executive Service.

which 14 were internal promotions. While 8 women were appointed, no minorities were appointed. This can be attributed to insufficient availability of minorities in the senior professional levels from grades FR-28 through 29 from which official staff is drawn. Although minorities were not appointed to the official staff of the Board in 2013, there was an increase of 36 percent in minority managers (grades FR-25 through 27). The potential for these managers to reach senior professional levels in the long-term should increase the number of minorities in the pipeline from which official staff is selected. Under a broad management mandate, succession planning and workforce planning strategy objectives are being established to ensure leadership and accountability in addressing this issue. In addition, during the initial stages of appointing official staff, the director of ODI is now consulted and is a member of the reviewing team (which also includes representatives from the Human Resources Department and the Division of Financial Management) that evaluates proposed actions. This allows the ODI director to better support inclusion and diversity at the official staff level and to ensure that the Board's leadership nomination criteria and process are inclusive.

The Board has also completed an availability analysis utilizing the 2010 Census civilian labor force data to determine minority representation in the major occupations of the Board. The census data continue to show significant low availability of minorities, particularly in the economist job occupation for all minority groups and women. To address this, the Board continues to organize, oversee, and participate in the three programs under the purview of the American Economic Association's Committee on the Status of Minority Groups in the Economics Profession (CSMGEP): (1) the Summer Economics Fellow Program; (2) the Summer Training Program; and (3) the Mentoring Program. The Board also plans to expand its participation at a number of recruitment and outreach events that target minority and women students and experienced professionals in the occupations of financial analyst, IT, quality assurance, system analyst, and attorney.

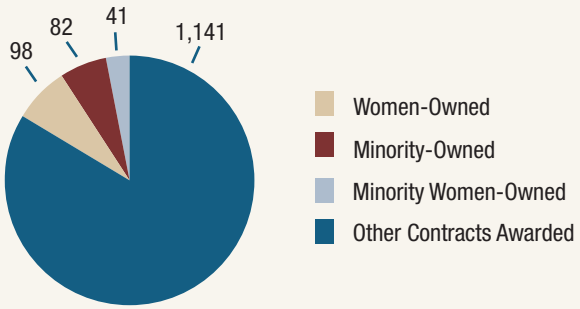
Inclusion of Minority-Owned and Women-Owned Businesses

The Procurement Function in the Board's Division of Financial Management continued to demonstrate a strong and positive commitment to the inclusion of minority-owned and women-owned businesses in the Board's acquisition process. As outlined below, a comprehensive program strategy was implemented by setting forth specific actions to assist the Board in fostering relationships with these types of businesses. This strategy contains objectives and activities that are aligned with the provisions of section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) and will help position the Board to continue to cultivate positive relationships with minority-owned and women-owned businesses. Key elements of the program strategy include

- establishing a supplier diversity policy that reaffirms the Board's commitment to equal opportunity in the acquisition process;
- developing an internal and external communication plan, including the design and dissemination of informational brochures and the creation of an external website where vendors can register their companies with the Board and obtain information on upcoming procurement opportunities;
- creating a vendor management system that allows Procurement to track the status of minority-owned and women-owned businesses throughout the acquisition process;
- conducting capacity-building workshops;
- reviewing subcontractor plans from prime contractors; and
- preparing quarterly reports for senior management that describe the status and results of the Supplier Diversity Program.

Through implementation of the program strategy and through networking with minority-owned and women-owned firms, Procurement has made significant progress in fostering success for those firms seeking to do business with the Board.

Figure 1. Distribution of contracts awarded by the Board, 2013



Successes

The accomplishments of the Supplier Diversity Program complement the Board's long-standing commitment to support the inclusion of minority-owned and women-owned businesses in the procurement process. During 2013, the Board increased the number of contracts awarded to minority-owned and women-owned businesses. This was due in part to an increased focus on providing technical training, enhancing outreach activities, and holding meetings with senior leaders and division representatives to discuss their role and responsibility in implementing Dodd-Frank Act requirements related to supplier diversity. The Board awarded 1,362 contracts in 2013; figure 1 shows the distribution of those contracts among minority-owned businesses, women-owned businesses, minority women-owned businesses, and other businesses. The Board awarded contracts for goods and services in the amount of $158,196,516.[2] Of this total, $20,997,715, or 13.3 percent, was awarded to minority-owned or women-owned businesses. This represents a 54.9 percent increase in the dollar value of contracts awarded to minorities and

[2] This report describes the contracts awarded by the Board for the period January 1, 2013 through December 31, 2013. The dollar amount shown represents the estimated value of the contracts rather than the actual amount spent.

Table 5. Contract awards for minority-owned and women-owned businesses, 2011 through 2013

	2013[1]		2012[2]		2011[3]	
	Dollars	Percent	Dollars	Percent	Dollars	Percent
Minority-owned businesses[4]	$ 6,806,841	4.3	$ 3,726,415	2.6	$ 9,028,526	7.2
Women-owned businesses[4]	$11,520,842	7.3	$ 8,145,183	5.8	$ 4,237,038	3.4
Minority women-owned businesses	$ 2,670,032	1.7	$ 1,685,031	1.2	$ 2,148,583	1.7
Total	$20,997,715	13.3	$13,556,629	9.6	$15,414,147	12.3

[1] Total contracts awarded in 2013 were $158,196,516.
[2] Total contracts awarded in 2012 were $141,168,580.
[3] Total contracts awarded in 2011 were $125,070,569.
[4] Does not include contracts with minority women-owned businesses.

women in 2012. Table 5 summarizes the Board's contract awards for the period 2011–2013.

Outreach Activities

The Procurement Function implemented an effective outreach program to minority-owned and women-owned businesses. As part of these efforts, Procurement participated in events hosted by a wide array of organizations that promote the growth and development of minority-owned and women-owned businesses. A listing of these outreach events is shown in table 6.

The Board hosted its annual vendor outreach fair in May. The fair, which allows vendors to interact with the procurement staff and Board technical representatives, was an overwhelming success. More than 400 companies, along with the U.S. Small Business Administration, other federal financial regulatory agencies, the Federal Reserve Bank of Richmond, and 87 Board staff members participated in the event. Vendors were given the opportunity to learn about the Board's purchasing needs, to attend a seminar on "How to Do Business with the Board," and to discuss their business capabilities with Board representatives and staff from other agencies. Figure 2 shows a breakdown of companies participating in the fair.

Providing Technical Assistance

A significant amount of time and effort was devoted to supplier development. Procurement provided guidance to interested vendors to help them be more competitive in the procurement process. Technical assistance included discussing how to do business with the Board, providing information on upcoming contracting opportunities, monitoring the period of performance during the life of the contract, and preparing post-contract award debriefs. Debriefs include the following information:

- an evaluation of significant weaknesses or deficiencies in the offeror's proposal;

- the overall cost or price and technical rating, if applicable, of the successful offeror and the debriefed offeror;
- past performance information on the debriefed offeror;
- the overall ranking of all offerors; and
- a summary of the rationale for the award to assist the offeror in preparing more comprehensive proposals for future acquisitions.

Internal Training and Automation Support

During 2013, Procurement enhanced the Contracting Officer Technical Representative (COTR) training to include discussions of Dodd-Frank Act requirements, the COTR's responsibility in supporting supplier diversity initiatives, and the competitive advantages of the inclusion of minority-owned and women-owned businesses.

Procurement also implemented a system to track the status of vendors throughout the acquisition process. This system allows the Board's staff to identify where barriers may exist within the acquisition process, and helps staff develop targeted technical training for vendors. Other automation initiatives included

- implementing a business intelligence reporting tool that provides trend analyses and dashboards to assist Procurement and Board divisions in evaluating their procurement activity;
- developing a web-based tutorial video, "How to Do Business with the Board," which will be located on the Board's public website when completed; and
- creating a link to expiring contracts on the Board's public website.

Challenges

Among the challenges faced by the Procurement Function in 2013 is the issue of vendors' self-designation of their status as a minority-owned or women-owned business. The Board currently accepts vendors' self-designation, which may result in inaccurate data classification. To address this issue, the Board plans to meet with the Women's Business Enterprise National Council (WBENC) and National Minority Supplier Development Council (NMSDC) to validate their certification procedures so that their certifications can be used during the Board's vetting process. This will help validate vendors' status more efficiently during the acquisition process.

In addition, Procurement continues to recognize the need to increase Board staff awareness and understanding of Dodd-Frank Act requirements as they relate to supplier diversity. Procurement and ODI have implemented a strategy to raise awareness within the agency that includes educating and training staff on the importance of supplier diversity, holding regular meetings with senior leadership to discuss the Supplier Diversity Program and garner their support, and engaging division leadership to work as champions by supporting the inclusion of minority-owned and women-owned businesses in their contracting opportunities.

Finally, Procurement is working to revise existing acquisition policies and procedures that have become outdated and do not reflect the objectives of the Supplier Diversity Policy approved in 2013. Acquisition policies and procedures are being revised to reflect the commitment and objectives of the Supplier Diversity Program.

Financial Literacy Activities

During 2013, the Board continued to participate in community and Federal Reserve System outreach events and programs, examples of which are listed below.

- *Congressional Black Caucus Annual Legislative Conference*: In September 2013, the Board, in conjunction with the Federal Reserve System, sponsored a booth at the 43rd Annual Legislative Conference. Financial education materials and information were distributed to conference attendees. The Board also provided support for the Financial Education Youth Summit convened by the Congressional Black Caucus held at the U.S. Capitol Visitor Center and Trinity Washington University.
- *FedEd Program*: During 2013, research assistants from divisions within the Board continued to implement a program developed to work with local high school students to improve their understanding of personal finances and the role of the Federal Reserve System in the economy. Subjects covered include the importance of saving, budgeting, using credit, establishing financial goals, and the impact of Federal Reserve policy on those subjects. More than 40 presentations were made to middle and high school students in the Washington metropolitan area. Presentations were made at ten schools in the District of Columbia: Roosevelt High School; Wilson High School; Coolidge High School; Dunbar High School; Anacostia High School; Ballou High School; Washington Latin Public Charter School; Edmund Burke School; KIPP DC Charter School; and St. Albans School. Presentations were made at two schools in Virginia—Annandale High School and Marshall High School—and one school in Maryland—Stone Ridge School of the Sacred Heart. Presentations were also made at the District of Columbia Public Schools Central Office to preview the FedEd Program for the New Heights Providers Meeting, the Sumner School for the DC Future Business Leaders of America, and the Heights School.
- *Federal Reserve Financial Literacy Day*: On October 23, 2013, the Board and the Federal Reserve System held training programs and seminars around the country on such topics as saving, budgeting, credit use, and the establishment of financial goals. Board research assistants presented the program to classes at two schools in the District of Columbia: Cardozo High School and the Columbia Heights Education Campus.
- *Math x Economics*: On May 23, 2013, the Board hosted the Math x Economics program for a second year in a row. The goal of the program was to introduce students to economics as a potential course of study in college and as a future career option. The Board's recruitment efforts targeted groups who are underrepresented in the field of economics, including minorities and females, especially from underserved schools. A total of 29 students from Washington metropolitan area schools attended. The students completed a survey at the end of the program; all 29 participants said they would recommend the program to other students. The descriptive statistics of the respondents are listed below.

Distribution of participants	Percent
Female	56
Male	44
Juniors	78
Seniors	22
African American	25.9
Hispanic	18.5
Asian	18.5
White	18.5
More than one ethnicity	14.8
Did not specify ethnicity	3.7

- *Education and Training Materials Distribution*: During 2013, the Board continued to provide financial literacy materials to consumer education and financial literacy groups, including the University of Maryland Extension Family and Consumer Sciences Center, the YMCA of Metropolitan Washington, Operation HOPE, and It Takes a Community to Raise a Child (located in New York City).
- *Professional Outreach*: On April 3, 2013, Chairman Bernanke delivered remarks to the 13th Annual Redefining Investment Strategy Education (RISE) Forum. His remarks highlighted the importance of promoting economic and financial knowledge among people of all ages and walks of life. He stated that the Board and the 12 Federal Reserve Banks are all deeply involved in economic education and in supporting the work of teachers, schools, and national organizations.

On November 13, 2013, Chairman Bernanke hosted the annual Teacher Town Hall Meeting at the Federal Reserve Board. Federal Reserve Banks also held gatherings around the country to provide educators the opportunity to listen to the Chairman and ask questions. His remarks covered the origins, history, and role of the Federal Reserve, and how it has helped shape the nation's economy and financial system.

Diversity Policies and Practices of Regulated Entities

In 2013, an interagency working group comprising the financial agency OMWI directors (the Board, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, the National Credit Union Administration, the Consumer Financial Protection Bureau, and the Securities and Exchange Commission) published proposed standards for assessing the diversity policies and practices of entities regulated by each agency. The proposed standards were published in the *Federal Register* on October 25, 2013, for public comment; the comment period was later extended to February 7, 2014.[3]

The interagency working group is meeting to review all comments received and expects to adopt final standards in 2014.

OFFICE OF INSPECTOR GENERAL

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

CONSUMER FINANCIAL PROTECTION BUREAU

September 30, 2014

MEMORANDUM

TO: Board of Governors

FROM: Mark Bialek
Inspector General

SUBJECT: The OIG's List of Major Management Challenges for the Board

We are pleased to provide you with the Office of Inspector General's (OIG) first listing of major management challenges facing the Board of Governors of the Federal Reserve System (Board). These challenges represent what we believe to be the areas that, if not addressed, are most likely to hamper the Board's accomplishment of its strategic objectives.

We used audit and evaluation work performed by the OIG, audits performed by the U.S. Government Accountability Office, and the Board's strategic planning documentation to identify the Board's major management challenges, which are listed in the table below.

Management challenge no.	Description	Attachment 1 page no.
1	Continuing to implement a financial stability regulatory and supervisory framework	1
2	Human capital	3
3	Board governance	5
4	Capital improvement projects	8
5	Information security	11

Details on each challenge are in attachment 1 of this memorandum. Attachment 2 maps our ongoing and planned work related to the major management challenges we have identified for the Board.

We appreciate the cooperation that we received from the Board as we developed this listing of challenges. Feel free to contact me if you would like to discuss any of the challenges.

Attachment 1

Major Management Challenges for the Board of Governors of the Federal Reserve System, September 2014

Management Challenge 1: Continuing to Implement a Financial Stability Regulatory and Supervisory Framework

As outlined in the Board of Governors of the Federal Reserve System's (Board) *Strategic Framework 2012–15*, continuing to build a robust infrastructure for regulating, supervising, and monitoring risks to financial stability remains a strategic priority for the agency. The Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) provided the Board with the authority to oversee nonbank financial companies designated by the Financial Stability Oversight Council (FSOC) as systemically important. In Supervision and Regulation Letter 12-17, the Board outlined its updated framework for consolidated supervision of large financial institutions as a result of lessons learned during the financial crisis. While Supervision and Regulation Letter 12-17 provides a high-level description of the framework and priorities for consolidated supervision for large institutions, including nonbank systemically important financial companies, we understand that the supporting guidance necessary to fully implement the framework is forthcoming. Finalizing the supporting guidance and effectively implementing it through examiner training programs will be a challenge for management in the coming years. The following sections describe specific challenges associated with implementing the financial stability regulatory and supervisory framework.

Cultivating Effective Relationships With Other Regulators

Effective consolidated supervision is predicated on the Board, as the consolidated supervisor for bank, financial, and savings and loan holding companies, cultivating strong cooperative relationships with the primary supervisors of holding company subsidiaries. Our evaluation work has revealed instances in which this cooperation could be improved.

Agency Actions

Since 2013, senior Board officials have made significant efforts to coordinate with their counterparts at the Office of the Comptroller of the Currency and the Federal Deposit Insurance Corporation to align strategic objectives and minimize duplication of efforts with respect to the supervisory planning process. We also understand that similar efforts routinely occur at the examination-team level.

Finalizing and Ensuring Compliance With New Regulations

While the Board has finalized many of the regulations mandated by the Dodd-Frank Act and other significant rulemakings supporting the financial stability framework, such as the Basel III capital rules, some rulemakings remain in the comment phase or have yet to be finalized. For example, the comment period for the Board's proposal to amend its emergency lending regulations to conform to the requirements of the Dodd-Frank Act has closed, but the rules have yet to be finalized.[1]

Further, the Board will face challenges as its focus shifts from rulemaking to interpreting the rules and ensuring compliance with recently issued regulations. As an example of challenges related to interpreting rules, we understand that following the issuance of the Basel III capital rules, responding to industry questions for interpretive guidance became a priority for the Board. With regard to ensuring compliance, the Volcker Rule took effect in April 2014, and the Board has indicated its intent to hold banks accountable for complying with the requirements of the final rule starting in July 2015. Under delegated authority from the Board, Federal Reserve Bank examiners will be expected to monitor and enforce compliance with prohibitions and restrictions related to proprietary trading and certain relationships with hedge funds or private equity funds. Supervisory guidance on this topic needs to be issued, and examiners will need to be trained on how to assess compliance with the rule's provisions. Similar training and implementation challenges also exist for other significant rulemakings.

Agency Actions

The Board has made considerable progress in fulfilling the regulatory mandates outlined in the Dodd-Frank Act and in finalizing other significant rulemakings supporting the financial stability framework. Our office will assess the Board's progress toward implementing its supervisory approach for these new, complex regulations.

Developing Technology Infrastructure and Addressing Human Capital Challenges Associated With Monitoring Risks to Financial Stability

The Board faces operational and human capital challenges associated with its efforts to supervise and monitor risks to financial stability. Within the large bank portfolio, our evaluation work has revealed that supervisory teams have encountered challenges searching through the significant amounts of supervisory information that result from the Board's continuous monitoring activities. Within the regional and community bank portfolios, we understand that the Board is in the process of transitioning to a technology platform that will standardize the processes for conducting examinations across the Federal Reserve Banks. This project requires a multiyear implementation effort. The Board also faces challenges in attracting and retaining employees

1. The status of Dodd-Frank Act rulemakings is available on the Federal Reserve Bank of St. Louis's website at http://www.stlouisfed.org/regreformrules/index.aspx.

with the specialized subject-matter expertise necessary to execute its supervisory activities, as further discussed in the human capital management challenge.

Agency Actions

The Board recently improved supervisory teams' search capabilities for informal supervisory information related to specific institutions. Information previously stored in specific Lotus Notes databases has been transitioned to internal websites to facilitate these enhanced search capabilities. We also understand that the INSite platform will be implemented for the regional and community bank portfolios using a phased approach over multiple years.

Management Challenge 2: Human Capital

The Board's success in achieving its mission depends on having the right number of people with the necessary technical, managerial, and leadership skills. Accordingly, human capital is one of the key themes in the Board's *Strategic Framework 2012–15*. As the Board's framework notes, maximizing the value of the Board's human capital will depend on enhancing processes for effective recruitment, development, and retention of qualified staff. A key first step in ensuring that the Board has a workforce that can effectively carry out the Board's mission both now and in the future is identifying the critical technical, managerial, and leadership skills through workforce and succession planning. The Board faces challenges in maintaining the necessary skill sets due to competition for highly qualified staff and the difficulties associated with replacing employees who have the specialized knowledge and skill needed to fulfill the Board's mission. In addition, the Board will face challenges as it implements a new performance management process and continues its efforts to recruit and retain a more diverse workforce.

Identifying Mission-Critical Technical, Managerial, and Leadership Skills Through Workforce and Succession Planning

The Board will need to determine the skill sets and number of staff members needed to enable each division to efficiently and effectively accomplish its goals. The U.S. Government Accountability Office (GAO) congressional testimony highlighted the need for federal agencies to identify and address current and emerging critical skills gaps to reduce the risk of staffing shortfalls that could jeopardize agencies' efforts to accomplish their missions. In its 2003 report *Human Capital: Key Principles for Effective Strategic Workforce Planning*, GAO highlights effective principles for workforce planning that include determining the critical skills and competencies needed to achieve an agency's mission, along with strategies to address skill and competency gaps.

An important consideration in workforce planning is the need to develop a succession plan to ensure continuity of knowledge and leadership in key positions. The Board has noted the operational risks associated with staff retirement and turnover and the difficulties associated with replacing employees with specialized knowledge and skill sets. Failure to plan for and anticipate

turnover and departures could have a negative effect on the Board's ability to achieve its goals and fulfill its mission. In addition, the Board has experienced turnover in the leadership of various divisions, highlighting the need for clear succession plans. In a 2005 report on succession planning, GAO encourages federal agencies to "go beyond a succession planning approach that focuses on replacing individuals and engage in broad, integrated succession planning and management efforts that focus on strengthening current and future organizational capacity." To ensure that the Board successfully achieves its mission, each division will need to identify its current and emerging skill needs, develop and implement a plan to address any identified skill gaps, and ensure that leadership development is a component of its succession planning.

Agency Actions

In its strategic framework, the Board acknowledged the need to establish a Boardwide succession planning process, which will require considerable support across all divisions. The *2012–2015 Human Resources Strategic Plan* also identifies leadership development as a key focus area. In support of these objectives, the Board formed a Leading and Managing People workgroup, composed of senior managers and officers across divisions. The purpose of this workgroup is to develop leadership capacity, including but not limited to introducing leadership coaching, creating case studies to define successful and unsuccessful leadership skills, and developing a list of core competencies expected of leaders. The Board has also successfully implemented a new manager development program, which it is expanding to include senior Board officials, and has begun using a succession planning tool.

Implementing a New Performance Management Process

In early 2013, the Board elected to change how employees approach and use individual performance feedback. The Board is currently developing and implementing a new performance management program intended to align staff members to the work of the Board, provide greater accountability, and support employee development. The new program seeks to be a more forward-looking, development-centric process in which staff members and managers work together for the greater effectiveness of the Board. The new performance management program is a significant change for the Board. The Board will need to ensure that the new process is effective, fair, and not overly burdensome, while simultaneously maintaining distinctions between high and low performers. Ensuring a successful paradigm shift from a rating-centric process to a development-centric process for assessing employee performance, as well as ensuring that a consistent approach is followed across the Board, will be a challenge for the Board.

Agency Actions

The Board introduced the new performance management process as a pilot in six divisions for performance year 2013–2014. Full implementation in all divisions is planned for performance year 2014–2015. The Board contracted for the necessary

expertise to assist with the program's implementation, which includes information sessions, tools and guides, training, and other support.

Recruiting and Retaining a Diverse Workforce

The Board's policy is to provide equal opportunity in employment for all persons. In support of this commitment, the Board has established strategic objectives to attract, hire, develop, promote, and retain a highly diverse workforce. A diverse workforce is one that not only includes employees with a wide variety of attributes but also is rich in diversity of thought and perspective. According to the Office of Personnel Management's *Government-Wide Diversity and Inclusion Strategic Plan*, harnessing the innovation that can come from a diverse workforce will help agencies to realize full performance potential and to cultivate a high-performing organization. Although the Board has undertaken a number of activities to increase diversity, it noted continuing challenges in hiring minorities in its April 2014 *Report to the Congress on the Office of Minority and Women Inclusion.* In April 2013, GAO reported that federal agency officials said the main challenge to improving diversity was identifying candidates, noting that minorities and women are often underrepresented in both internal and external candidate pools.

Agency Actions

To successfully achieve its diversity goals and objectives, the Office of Human Resources plans to partner with divisions to design, develop, and implement an integrated Boardwide talent management strategy. This strategy will facilitate the management of a diverse workforce throughout all phases of the employee life cycle, which includes recruiting, engaging, retaining, and developing employees. Building on each phase of the life cycle will enable the Board to create an integrated approach to managing talent. An enterprise-wide talent management strategy that identifies the basic competencies every employee should possess will allow the Board to assess performance and to develop and retain talent. In addition, the Board continues to address challenges to improving diversity by participating in educational forums and offering mentoring programs and summer internships.

Management Challenge 3: Board Governance

Historically, the Board's divisions have operated largely autonomously in performing their specified mission functions, developing organizational structures, formulating budgets, and establishing management processes. As the Board's mandate expanded in the wake of the financial crisis and the enactment of the Dodd-Frank Act, so has the Board's need for strategic planning, management processes, and coordination across divisions. In its *Strategic Framework 2012–15*, the Board lists three strategic themes that address various aspects of its governance challenges:

- strengthening management processes to enable effective implementation of strategic themes, increasing operating efficiencies, and reducing administrative burden

- establishing a cost-reduction approach and a budgetary growth target that maintains an effective and efficient use of financial resources
- redesigning data governance and management processes to enhance the Board's data environment

The Board's strategic framework states that achieving its strategic objectives will require more active collaboration across divisions. Collaboration will be required to fulfill the Board's supervisory expectations under the Dodd-Frank Act as well as its traditional monetary policy functions. Collaboration will also be required to carry out the Board's agenda of management process changes to keep major investments on track, identify additional opportunities for cost savings, and improve overall operations. Enhancements to the Board's management processes will allow for increased ownership of and accountability for leadership decisions, an enhanced ability to prioritize strategic needs, and a potentially reduced administrative burden. We believe that aspects of Board governance, including internal control, information technology (IT), and data, will continue to pose management challenges to the Board's efficient accomplishment of its mission.

Internal Control Governance

Internal control is an integral part of managing an organization and is critical to improving organizational effectiveness and accountability. Internal control comprises the plans, methods, and procedures used to meet the organization's mission, goals, and objectives. The Federal Managers' Financial Integrity Act of 1982 (FMFIA) requires that each executive agency establish internal accounting and administrative controls in compliance with standards established by GAO and prepare an annual statement on internal control based on an evaluation performed using Office of Management and Budget guidelines. The Board is not subject to FMFIA.

Although the Board has stated that it voluntarily complies with the spirit and intent of FMFIA, it does not currently have a Boardwide process for maintaining and monitoring its administrative internal controls. Office of Inspector General (OIG) work has identified internal control weaknesses at the Board. While these control weaknesses have not prevented the Board from carrying out its mission or achieving its strategic objectives, some of them have introduced operational and reputational risks. Establishing a process for maintaining and monitoring internal controls will help ensure that the Board's controls, as designed and implemented, are effective and continue to work over time. Establishing a Boardwide process to monitor internal controls will also provide a means for the Board to identify and timely mitigate any control weaknesses that exist.

Agency Actions

Board management identified actions that it plans to take in 2014 to implement a process for maintaining and monitoring administrative internal controls. Management plans to (1) develop a Board policy describing the requirements for appropriate administrative internal controls based on the guidance provided by the Committee of Sponsoring

Organizations of the Treadway Commission[2] and GAO, (2) implement the new policy using a phased approach, (3) require each Division Director to provide a reliance letter acknowledging that the division is responsible for implementing and maintaining internal controls, and (4) develop training on administrative internal controls and the Board's policy. Management noted that given the priorities and budget constraints underlying the Board's new strategic framework, creating additional infrastructure to develop and implement policies and processes must be carefully balanced with other competing resource priorities.

IT Governance

The Board also faces governance challenges in both the centralized and decentralized management of IT services. A primary mission of the Division of Information Technology (Division of IT) is to provide services to meet the automation and data analysis needs of its customers; however, divisions also provide IT services to their employees. Our recent audit work found that over half of Board divisions perform their own application development and help desk activities, often using differing processes, procedures, and tools. We also found that Board divisions do not track costs for IT services in a consistent manner.

Agency Actions

The Board recently approved new delegations of authority that grant the Director of the Division of IT the authority for automation, telecommunications, and other IT matters; information security; and the formulation, approval, and implementation of the management policies for IT and information security.

The Director of the Division of IT chairs the Board's Business Technology Strategic Committee, which comprises senior IT representatives from each division. The purpose of the committee is to promote an enterprise view of the implementation and administration of IT services in a consistent, cost-sensitive, and secure manner that is informed by business needs. The Director of the Division of IT recently updated and finalized the committee's charter to increase coordination among the divisions; she also continues to hold discussions on strategic collaboration.

In 2013, the Director of the Division of IT administered a survey of IT costs across the divisions to help the Board better understand the scope and diversity of the technology services provisioned across the enterprise. Also, the Business Technology Strategic Committee designed a survey to collect information from each Board division and office to identify opportunities to improve operational efficiency.

---

2. The Committee of Sponsoring Organizations of the Treadway Commission's internal control framework is widely used and recognized as a leading framework for designing, implementing, and evaluating the effectiveness of internal control. It integrates various internal control concepts into a framework in which a common definition is established and control components are identified. The commission's internal control framework was updated in May 2013 with a transition period ending December 15, 2014.

Data Governance

As a result of expanded responsibilities under the Dodd-Frank Act, the Board is engaging in new data collection and analysis. New data collection and data management processes are required to perform these new responsibilities. The need for data across the divisions to support the Board's analytical challenges has also increased in terms of the quantity, sharing, awareness, access, controls, and quality. Traditionally, data were used within divisions to accomplish specific mission functions; however, to fulfill the Board's expanded responsibilities, divisions now need to increase coordination with each other and with the Board's new Office of Financial Stability Policy and Research, and they need to support the Board's participation in FSOC. A Boardwide data management view is needed to enhance the ability of staff members to obtain, interpret, and analyze these data. The Board will be challenged to expand its technology infrastructure and processes to support the increased requests for and analysis of data, as well as to enable comprehensive, enterprise-level data governance and information management practices.

Agency Actions

In the *Strategic Framework 2012–15*, the Board outlined the role of a new Chief Data Officer (CDO) position. The first CDO was hired in April 2013. The CDO is working with the Board Data Council and Board divisions to establish data governance policies and to facilitate coordination across data communities at the Board and among the Board; the Federal Reserve Banks; and other regulatory agencies, such as FSOC and the U.S. Department of the Treasury's Office of Financial Research.

A new Boardwide data governance and management structure is planned to support the growing need to share large amounts of data across divisions. The CDO is reviewing the current data collections, engaging divisions, and developing a cohesive enterprise data governance framework.

Management Challenge 4: Capital Improvement Projects

The Board is currently managing two major capital improvement projects that are included as key themes in the Board's *Strategic Framework 2012–15*: the Martin Building renovation and construction and the relocation of the Board's data center. Both are multiyear projects that involve significant resources and pose challenges due to their size, complexity, and effect on the Board's staff members and mission. In addition, managing large-scale construction projects is not a core function of the Board.

The Martin Building facility has not been significantly renovated since its construction in 1974. In addition to ensuring a safe and adequate environment in which individuals and groups can work and meet, efforts associated with the renovation will focus on security, energy efficiency, meeting and conference space, and physical plant capacity. Relocating the data center is critical because the Board needs increased storage capacity for the data essential to its mission. As currently planned, the relocation of the Board's data center will overlap with the Martin Building project, creating an additional challenge as the Board attempts to oversee and manage both

projects. In addition to managing these projects, the Board will have to adapt its space-planning and leasing activities due to the Martin Building project. The Board will need to manage the swing space acquired to accommodate its significant workforce growth as well as staff members displaced from the Martin Building during the construction period.

Martin Building Renovation and Construction

The Martin Building renovation and construction project is one of the Board's largest contracting efforts, and it will require an estimated $280 million expenditure. The concept for the project began shortly after the events of September 11, 2001. Since the original concept was developed, the Martin Building project has gone through a lengthy design phase, primarily due to significant scope changes. In addition, project management has been complicated by changes in the Board's organizational structure and leadership.

The Martin Building renovation and construction project is a complex undertaking with significant implementation risks and challenges that the Board must manage. These risks include scope changes, cost management, and disruption to staff members during the renovation. Delays during construction could lead to contractor claims and increased costs for the Board due to the size of the construction contract and the nature of construction work. Many parties are involved in the construction life cycle process, and interdependencies exist. As a result, delays could cascade and affect the timing and sequencing of others' work.

In September 2012, the Martin Building project team presented an overall conceptual construction cost estimate of $179.9 million to the Committee on Board Affairs. The project was approved as a strategic plan project, and the capital portions of the project are currently included as a multiyear capital project in the Board's *2013 Budget as Approved by the Board of Governors.* Our audit of this conceptual construction cost estimate identified opportunities for the Board to improve its recordkeeping, cost estimation, and cost management processes for the Martin Building project.

Agency Actions

Since 2011, the Board has hired personnel with construction experience. In addition to the project team, an executive team and the Executive Oversight Group were established to be strategic advisors to the Martin Building renovation and construction project. The project team purchased software that provides collaboration, project management, and information management applications specifically for the architectural, engineering, design, and construction business sector. In addition, the project team is currently maintaining files initiated by the former project manager to fulfill contracting officer technical representative and project recordkeeping responsibilities. After receiving independent cost reviews, a stated cost limitation was established with the architectural and engineering firm, and the firm submitted cost-saving items to aid in cost management.

Relocation of the Board's Data Center

A key consideration of the Martin Building renovation and construction project is the future of the data center. The Board has undertaken a multiyear project to move its data center from the Martin Building to the Baltimore Branch of the Federal Reserve Bank of Richmond. The Board is relocating the data center because the growing number of file servers, network racks, and network switches has dramatically increased the footprint of data center operations. Critical subsystems for cooling and power have exceeded their capacity. The data center relocation is a major element of the third theme in the Board's *Strategic Framework 2012–15*, and the multiyear data center project is composed of four overlapping phases, with completion scheduled for December 2015.

Relocating the Board's data center within the approved budget and schedule will pose challenges to the Board. The start of the Martin Building renovation and construction project is contingent on completion of the data center relocation. The construction phase of the data center relocation project has an aggressive schedule with several identified risk areas. The initial planning schedules for the Martin Building project and the completion of the data center project have a six-month overlap; therefore, delays in the data center schedule could affect the Martin Building project. The Board's data center operates 24 hours a day, 365 days a year, to monitor the operation of the Board's mainframe and the status of the file servers and other critical components of the Board's distributed network. The data center provides the infrastructure that makes data and IT available to the Board and to the Federal Reserve System for monetary policy, financial supervision, consumer protection, and economic research purposes.

The Board has approved $201.5 million as the overall budget for the project. The budget was based on a 10-year total cost of ownership estimate based on a rough order of magnitude. As the actual build-out work begins, additional changes and cost increases are possible, which could potentially affect the budget.

Agency Actions

The Federal Reserve Bank of Richmond is responsible for the build-out of the data center, and it designated a project manager to oversee the project. The Board designated a program manager and a project manager, both within the Division of IT, to oversee the project in coordination with a team composed of members with experience in IT, procurement, and financial management, among other areas. There is also an Executive Oversight Group that oversees and provides guidance on the project and ensures that the Board's strategic objectives are being met.

Space Planning and Leasing

The Board currently occupies space in several buildings in Washington, DC. The Board's overall staffing level has grown significantly over the last several years, and continued growth is expected in some of its divisions. The Board is challenged with accommodating both the expected growth of its workforce and the placement of staff members in swing space due to the

Martin Building renovation and construction project, while also effectively managing its existing real property assets.

The Board acknowledges the need to focus on its long-term space requirements while also considering, in the context of its strategic framework, factors such as the current space environment, building location limitations, the projected growth of the organization, technological requirements, the implications of telework, and the operational effects and life cycle costs of all options. Considering these factors will help the Board to develop a meaningful approach for the most efficient and effective use of space.

Agency Actions

The Board signed a 10-year lease for swing space to relocate staff members displaced by the Martin Building renovation. To accommodate anticipated growth in some divisions, the Board plans to retain that space after the renovation is complete. Recognizing that it needs to take a more consistent approach to space planning, the Board is developing a standard process for allocating and managing its space. The Board is also developing a strategic master plan for space planning, and it contracted for real estate advisory services to assist with this effort. This plan is intended to inform the decisions of the Board's senior leadership regarding the Board's space needs.

Management Challenge 5: Information Security

GAO continues to include as a priority for federal agencies the protection of information systems and the nation's cybercritical infrastructures. The OIG has also identified information security as a major management challenge for the Board. Management should place a high priority on implementing new federal requirements for developing a Boardwide continuous monitoring program and a Boardwide risk management program. In addition, the Board is challenged to ensure that information systems and services provided by third-party providers, including the Federal Reserve Banks, meet the requirements of the Federal Information Security Management Act of 2002 (FISMA) and the Board's information security program.

Continuous Monitoring of Information Security

Implementing Boardwide continuous monitoring of information security that complies with National Institute for Standards and Technology (NIST) requirements will pose challenges for the Board. NIST requires that agencies establish a continuous monitoring strategy and implement a continuous monitoring program that includes a configuration management process for the information system and its constituent components, a determination of the security impact of changes to the information system and the environment of operation, ongoing security control assessments in accordance with the organizational continuous monitoring strategy, and a reporting of the security state of the information system to appropriate organizational officials.

NIST Special Publication 800-137, *Information Security Continuous Monitoring (ISCM) for Federal Information Systems and Organizations* (SP 800-137), states that at the mission/business processes tier, the organization needs to establish the minimum frequency with which each security control or metric is to be assessed or monitored. Frequencies need to be established across all organizational systems and common controls. SP 800-137 states that the organization-wide information security continuous monitoring strategy and associated policy should be developed at the organizational tier, with general procedures for implementation at the mission or business tier. OIG reports have identified that the Board's Chief Information Officer has continued to make progress in implementing a continuous monitoring program; however, the Chief Information Officer should finalize policies and procedures, establish metrics, and define the frequency of monitoring.

Agency Actions

The Board's Information Security Officer (ISO) outlined a strategic plan for the Board and has made progress in implementing NIST guidance. The initial plan for continuous monitoring was developed in 2011 and was updated in August 2012 to include additional continuous monitoring automation tools and to provide more detailed implementation status information. In August 2013, the ISO evolved the continuous monitoring strategy into an *Information Security Continuous Monitoring Program* document, which discusses three primary activities: continuous monitoring automation, manual processes, and key metrics. Lastly, the ISO developed a draft version of the continuous monitoring standard.

Risk Management

Implementing Boardwide risk management will pose challenges to the Board. Although the majority of the Board's computing environment is managed by the Division of IT, NIST requires that the risk management program be expanded to address and cover all aspects of the Board's computing environments within all divisions' missions and business processes.

FISMA requires organizations to develop and implement an organization-wide information security program for the information and the information systems that support the operations and assets of the organization, including those provided or managed by another organization, a contractor, or another source. NIST Special Publication 800-37, Revision 1, *Guide for Applying the Risk Management Framework to Federal Information Systems*, expands the concept of risk management and covers a strategic-to-tactical organizational approach to risk management. NIST Special Publication 800-39, *Managing Information Security Risk*, states that it is imperative that leaders and managers at all levels understand their responsibilities and are held accountable for managing information security risk—that is, the risk associated with the operation and use of information systems that support the mission and business functions of their organizations. OIG reports have identified that the Board's Chief Information Officer has continued to make progress in implementing a risk management program; however, the program still needs to be implemented Boardwide.

Agency Actions

The ISO developed the *Risk Management Program and Risk Assessment Guide* to enhance the original risk assessment framework initiative.

Reliance on the Federal Reserve Banks and Third-Party Providers

The Board will be challenged to ensure that information systems and services provided by third-party providers, including systems supported by the Federal Reserve Banks while they transition to a NIST-based information security program, meet FISMA requirements. FISMA requires agencies to provide information security for the information and information systems that support the operations and assets of the agency, including those provided or managed by another agency, a contractor, or another source. The Board's information security program requires third parties, including Federal Reserve Banks, other agencies, and commercial providers, to use appropriate security controls to protect Board-provided information and services. The level of controls provided by third parties must be comparable to the controls provided for in NIST requirements.

The Board is part of the Federal Reserve System and relies on some services provided through the Federal Reserve Banks; however, the Federal Reserve Banks are not bound by the requirements of FISMA. We have issued information security control review reports to the Board that identified services provided by third-party providers, including Federal Reserve Banks, that did not meet the Board's information security requirements.

Agency Actions

The Federal Reserve System is currently implementing NIST guidance as the strategic direction for the Federal Reserve Bank information security program. The information security program defines the rules, such as the security objectives and control requirements, and the risk management process that help the Federal Reserve System manage information security risk.

The ISO performs onsite security reviews of Federal Reserve Bank systems that store or process Board data to ensure that the systems are meeting the requirements of the Board's information security program. The ISO has developed a security policy that applies to all third parties that collect or maintain Board information or those that operate or use information systems on behalf of the Board. The ISO also published an inventory guide that outlines how the Board accounts for all information assets and tracks the security compliance of all systems, including systems used or operated by third parties on behalf of the Board.

Attachment 2

Board Management Challenges: Crosswalk to Ongoing and Planned OIG Work

Management Challenge 1: Continuing to Implement a Financial Stability Regulatory and Supervisory Framework

Ongoing work

- Evaluation of the Federal Reserve's Supervisory Activities Related to the Loss at JPMorgan Chase & Co.'s Chief Investment Office
- Evaluation of the Division of Banking Supervision and Regulation's Model Risk Management Practices for Models Used in Support of the Annual Comprehensive Capital Analysis and Review

Planned work for 2014

- Audit of the Board's Process for Supervisory Assessments of Large Bank Holding Companies and Savings and Loan Holding Companies
- Evaluation of the Board's Continuous Monitoring Supervisory Tool
- Evaluation of Systemically Important Financial Institutions Supervision Teams: Preserving and Transferring Institutional Knowledge Within and Between Supervisory Teams
- Audit of the Board's C-SCAPE Project

Management Challenge 2: Human Capital

Ongoing work

- Audit of the Board's Diversity and Inclusion Processes

Planned work for 2014

- Evaluation of Systemically Important Financial Institutions Supervision Teams: Preserving and Transferring Institutional Knowledge Within and Between Supervisory Teams

Management Challenge 3: Board Governance

Ongoing work

None

Planned work for 2014

- Audit of the Board's Data Governance
- Audit of the Board's Strategic Plan Implementation and Governance

Management Challenge 4: Capital Improvement Projects

Ongoing work

- Audit of the Board's Data Center Relocation—Phase 2

Planned work for 2014

- Follow-Up on Martin Building Audit

Management Challenge 5: Information Security

Ongoing work

- 2014 Audit of the Board's Information Security Program
- Audit of the Board's STAR Modernization Project
- Audit of the Board's Information Technology Contingency Planning and Continuity of Operations Program
- Security Control Review of the C-SCAPE System

  Audit of the Information System Security Life Cycle Process

Planned work for 2014

- Board Security Control Reviews
- Vulnerability Scanning

462 Data Collection Resources

The Office of Federal Operations (OFO) produces an Annual Report on the Federal Workforce that includes, among other data, information on federal equal employment opportunity complaints and ADR activities. This data is collected from each agency in the Annual Federal Equal Employment Opportunity Statistical Report of Discrimination Complaints (EEOC Form 462). Federal agency administrators upload data into the EEOC Federal Sector EEO Portal (FedSEP) provided by EEOC and which is not accessible to the general public but only to authorized federal agency administrators. OFO also produces an Instruction Manual which provides detailed information pertaining to the form which aids in understanding the data that must be submitted (rather than entered). Questions concerning the EEOC Form 462 report or Instruction Manual may be sent to the email address form462.form462@eeoc.gov.
