MR. BELGER: Well, yeah, I mean, let me answer that generically, even going back before Irish. I mean, the FAA, as you know, is not an intelligence gathering organization. We're, I keep saying we, but the FAA is, you know, dependent upon the FBI, CIA, State, DOD, whoever is gathering intelligence.

So, there was always a, oh, I don't want to say concern, but there's always this feeling on the FAA's part, you know, are we getting everything we need?

MR. RAIDT: Mm-hmm.

MR. BELGER: Are we getting all the intelligence we need--are we--and I don't really

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

mean that to be critical, it's just a reality that we're relying on somebody else to give you the stuff and to tell you what you can release to the carriers in a nonclassified way. You always have wonder, you know, is there something else there I don't know that I should know.

So, in that generic sense, I think it would be fair to say the FAA folks, you know, kind of had that generic feeling, are we getting everything we need? And are we privileged to everything thing that we should be privileged to.

MR. RAIDT: Do you remember any efforts by Irish to exchange analysts that FAA would pay for a position in exchange for greater levels of access to intelligence?

MR. BELGER: I don't remember that specifically, but I know, even over the years, the FAA had made efforts with the CIA to get folks over there. We were able to get an FBI liaison, as you mentioned. I don't remember specifically, you know Irish doing anything, but I would expect he would have been, and so that wouldn't surprise me at all.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : And on those lines, did you have a concern about domestic versus foreign? Some of the Intel folks that we've talked to from FAA said that they thought they knew more about what was going on, let's say, in Beirut than in Detroit?

MR. BELGER: Oh, there's no doubt about that. I think just the volume of data, raw intelligence, internationally versus domestically would tell you that. We knew--we got more intelligence information about international activities than about domestic.

MR. RAIDT: And that's really honing in on what we are just trying to understand, is that, you know, from everybody, from ACI and from testimony on the Hill, everybody said the threat is overseas. And our question and it keeps coming back is, was our projection of the threat overseas because that's where we had the intelligence as opposed to we don't have a threat.

It wasn't that we didn't have a threat domestically, we didn't have the intelligence? It

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

was that level of concern and on that particular level that we don't have eyes domestically, something that was a concern in the building prior to 9/11 or is that something that, in retrospect, as we look at it is a problem?

MR. BELGER: I think it was probably more retrospective. I mean, I couldn't tell you what capability the FBI had, at the time domestically.

MR. : Let me ask you about some specific intel information. And this will be a good point to do some more housekeeping [unintell.] up front. We are all, every one in this room has cleared to receive information, up from the top secret level, however, this facility is just set up to secret level. At any point in your--when we're going through this today. If you feel that the information rises above the SSI level, if you would let us know so we can note it in our notes.

MR. BELGER: Okay.

MR. : And if it goes above the secret level, we'll need to make arrangements to get that information in some other place and time.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

But what I'm going to be using for this purpose is information that all was at the SSI level.

MR. BELGER: Okay.

MR. : Including, provided by the FBI or by the FAA to the Joint Intelligence inquiry. So, I want to start by just asking you if you have any recollection of the following documents? A March 1998, FAA assessment, as produced by FAA intelligence, entitled "Osama bin Laden/World Islamic Front Threat to U.S. Civil Aviation?" it went through a brief description of bin Laden and associated parties. And it talked about a number of possible scenarios; foreign and domestic involving bin Laden. Does that ring a bell?

MR. BELGER: I don't remember, I probably looked at that after the fact.

MR. : Okay.

MR. BELGER: I don't recall ever having seen that before September 11.

MR. : How about a 1999 FAA

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

Assessment of the same title, it's just an updated version?

MR. BELGER: I don't remember, I mean, I was aware that the security folks did those types of assessments and did those types of analyses. It's possible I saw it, I don't recall.

MR. : But you don't recall?

MR. BELGER: Yeah.

MR. : And a 2000 document produced by the intelligence community, an intelligence community threat assessment which was authored by FAA's Office of Intelligence, entitled "Prospects for Aircraft Hijackings to Free Incarcerated Terrorists?"

MR. BELGER: I don't recall that one.

MR. : Now, after all that information--

MR. BELGER: Let me just say that, if I could--

MR. : Please.

MR. BELGER: I think this is at least important from my standpoint.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : Yeah.

MR. BELGER: I would have been comfortable in the '98, '99, 2000 time frame, that when the FAA security folks did those types of analyses--

MR. : Yeah.

MR. BELGER: --if there was anything that should have been given to the carriers, if there was anything that should have been given to the airports, if there was any action that should have been taken, you know, in the form of, you know, advisories or even directives, that they would have taken them.

MR. : Okay, and--

MR. BELGER: So, I would have felt comfortable back in that time frame that they were--

MR. : --well, let me ask you this about the implementation of that: If they wanted to issue an information circular or security directive or initiate rule making, in each of those cases, would that information that they were trying to undertake that effort, come to your attention?

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. BELGER: Yes.

MR. : In all those cases, even
the ICS?

MR. BELGER: Well, now, the ICS, let me
say it this way--

MR. : Yeah.

MR. BELGER: At least after the fact they
would have. And with respect [unintell.] and rule
making before?

MR. BELGER: Again, according to the
criticality, you know, if it was something that
needed to be done at 3:00 o'clock in the morning
that was basically a phone call and--

MR. : Okay, well--

MR. BELGER: --I would look at it the next
morning.

MR. : --let me, the last
document that I want to show you and I'll show you
this one, is it's, many of these were classified,
but the existence of them was not. FAA Sent this
to the Joint Inquiry.

This is a, I'm going to let you look at it

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

and I'm going to ask you about Slide 24. This is something that Pat McDonald [ph] prepared, starting in the years 2000 and it's an assessment of the terrorist threat to civil aviation. It goes--it was prepared to be given to folks in the industry, largely and, therefore, there's a more classified version that was given to those that had proper clearance in the industry. And this also was made available to FAA field personnel.

And it was, evidently, a traveling show prepared on a CD-ROM. The summation. You can turn now to Slide 24 and thereafter. And Slide 24 is another scenario that went through several more typical scenarios. But this, actually appears, this possible domestic suicide hijacking or aircraft-as-weapon scenario appears back, at least as early as the '98 assessment.

Now, Mr. McDonald, you'll see in there that after they posit the threat, they say, fortunately, we have no information that anybody's actually thinking about this.

MR. BELGER: Yeah, I mean, there's a lot

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

of evidence--

MR. : Yes, sir.

MR. BELGER: --that U.S. airliners were more likely to occur--that a hijacking was more likely to occur overseas than domestic hijacking, don't rule it out, but things aren't in the hijackers--

MR. : Right, but--

MR. BELGER: Covering all bases as the intel folks do, you know, they also said, well, yeah, it's likely that there could be a suicide bombing of a U.S. airliner, a low probability.

MR. : Right.

MR. BELGER: But a major concern.

MR. : Do you recall this document or this subject matter, was this brought to your attention?

MR. : I don't recall this document. I mean, I think that was weird that we were doing this type of information sharing. Not only internally, but, also, with the airlines and the airports. I don't recall seeing this

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

particular document, but I think I was aware, I mean, I was aware that we were doing this type of data sharing to the extent we could with the airlines, yeah.

MR. : Okay, just one more on that. We also realize there's a great volume of [unintell.] access [unintell.] Were you aware that Osama bin Laden and Al Qaeda prior to 9/11?

MR. BELGER: You know, that's a really interesting question. I think the honest answer is no, I mean, if you had come up to me on September 11 and asked me to, you know, give you a definition of who he was, what his organization was, I would have probably told you it was a terrorist organization, you know, probably knew they were in Afghanistan or that area, but I wouldn't have known. They weren't on my radar screen.

MR. : And not knowing about UBL, you know, then the next level that they had an active ongoing interest in civil aviation or is it something at least the intelligence community knew. And the thing that, and again, with all the

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

hindsight, retrospect, the rule making that went out that summer talking about that terrorist cells are active in the United States with an interest in civil aviation, and there has been a debate in a lot of our interviews whether that was intended to trump up the threat in order to get past the cost-benefit for rule making or whether that was actually the threat that we have a very significant--

MR. BELGER: 107, 108, the revised suicide--

MR. : --yeah, I'm sorry. That we have a very significant threat and a pretty 9/11-like scenario as far as consequences were concerned. Do you remember that rule making--

MR. BELGER: Oh, I remember the rule making, that was a huge rule making, it had been underway for years to completely revise the airport and the airline security rules. So, yeah, I remember that rule making.

MR. : Do you remember the threat analysis that accompanied the--

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. BELGER: I read it, I would have read it--I would have read the preamble and I would have read the analysis that went with it.

MR. : And what's your sense as far as whether that was an actual threat that we perceived or a means--

MR. : Sort of remind him that the threat that was posited in there was essentially a domestic no [unintell.] that took care of up to 12 aircraft blown up over the United States.

MR. BELGER: Yeah, I put that, though, in that category of that other one, that, you know, it's a low-probability but a high-concern.

MR. : Yeah.

MR. BELGER: So, you know there might have been some--I would not have thought about it at the time I would not have thought that they were playing with the threat analysis nor to justify the rule. But, in retrospect, I guess, it's possible.

MR. : So, the attitude at the time would have been, well, this is what they

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

believe the threat to be?

MR. BELGER: Yeah, yeah.

MR. : Well, let's maybe go to the other vectors and talk about prescreening and let's talk about check points. And, I don't think we can go through cargo and mail and all that--

MR. BELGER: Okay.

MR. : --but on prescreening with CAPS you had mentioned the fact that people who check baggage it was intended to address the bombing threat.

MR. BELGER: Right.

MR. : Here's the issue that we have the most concern about, is that prior to 1998, the effort to prescreen people and identify the group of people where a terrorist might be, that, and I think the rule said, that those who impose more than a minimal risk to the aircraft--was built on a hijacker profile and if you were a selectee, then you would have secondary screening of your person and carry-on bags as well as a look at your checked bag.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

Then the automated system comes in, you had the Gore Commission Report. You had the effort to try to ration a limited number of CTX machines. And the idea was to let's use the automated prescreening system, but tie only to checked baggage and [unintell.]--

MR. BELGER: Correct.

MR. : And here's I guess, how the family members looked. They have at least in the intelligence world in 1995, i.e., had a baseline working group. You have everybody saying the threat is increasing, increasing, increasing, including domestically. And then you have a rule that lapses, in the case of manual prescreening subsumed by automated and it actually looks like we relaxed the security rules, particularly with respect to the person and their carry-on belongings.

So, do you remember that rule making? do you remember the decision to let that manual system lapse? What's your overall impression?

MR. BELGER: Yeah, when did it lapse?

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : It would have been '98,
late '97 or early '98.

MR. BELGER: Well, I remember the CAPS 2,
I mean being implemented--

MR. : Or CAPS 1.

MR. BELGER: Or CAPS 1, oh, yeah, yeah,
yeah. I remember that being implement. And,
again, my view of that was it was, you know, maybe
fewer people would have had their baggage
physically inspected, but that was the intent of
CAPS, was to zero-in in a more precise way on those
folks who, based on the information analysis would
have been the higher threat.

MR. : The threats just for
bombing or for hijacking or whatever the threat
was.

MR. BELGER: Well, I think, in fact, my
recollection is CAPS 2 profile--

MR. : CAPS 1.

MR. BELGER: --CAPS 1, I'm sorry, the CAPS
1, CAPS, at that time, it wasn't the CAPS 1 and 2.

MR. : Yeah, right.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. BELGER: The CAPS profile was geared to those people who were checking baggage, only it wasn't applied to people who weren't checking baggage.

MR. : Right, and that's exactly the question.

MR. BELGER: So, it was geared to explosives--

MR. : Well, can we determine, because I think there are two aspects here: One is the profile that goes into making a selection of who needs to be looked at; but a separate subject is what do you do with the consequences of selection?

MR. BELGER: Right.

MR. : Is it your recollection that the profile, itself, you know, the information, and we've been over and looked at the weights and factors, which we won't discuss in any detail.

MR. BELGER: Did you talk to the FAA folks that developed it?

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : Yes, sir, but--

MR. BELGER: But there's one guy, in particular, James--

MR. : Padgett [ph]

MR. BELGER: Yeah, he's--

MR. : But your recollection, I just want to isolate this--

MR. BELGER: Sure.

MR. : --to see if it's your recollection that the factors and weights used in determining who was going to get extra scrutiny that it's your recollection that that, too, was geared to bombers?

MR. BELGER: Yes.

MR. : Okay.

MR. BELGER: Yeah, yeah.

MR. : And was there any discussion at the time, I mean, the record shows what happened. But was there any discussion at the time that you had an increased threat, an increased threat domestically, according to our own rules and, yet, in a way, we're reducing that before

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

someone who is prescreened and selected received secondary screening of their person and their carry-on; and now, you know, we're reducing that to say don't worry about that, we're just going to look at their checked baggage? Was that a discussion that that might not be the best thing for security or--

MR. BELGER: I'm trying to recollect. First of all, I don't remember any discussions like that, but I'm trying to recollect is this actually was--what you're saying is it was a lessening of the number of the number of people who were actually secondarily screened?

MR. : Right.

MR. : No, I think you're talking about the consequences of what would happen to them. I don't think it's a reduction of the number of--but just whether they get hand wanded--whether they get physically searched--

MR. BELGER: Oh, okay.

MR. : --the person boarding the plane or just their baggage.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. BELGER: My recollection was that if you met the profile, your bags either had to be physically inspected, through an explosive detection machine or x-rayed or they had to be cleared in, I think it was one of those three ways. If I remember right. I'm talking about explosive detection. So, everybody who met the profile, their bags should have been cleared through one of those three methods.

MR. : And I guess--here's what we're trying to get at is that family members who were looking at the system, say that, well, prior to the automation of the system, if you were selected from the manual system, as a selectee--the consequences of a selectee was that you had secondary screening of your person and your checked items, more than the norm.

Then that got changed to say if you're a selectee, don't worry about additional screening of your person and carry-on belongings, we're just going to check you for explosives in your checked bags.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. BELGER: Well, I think that was a reflection, if that is actually what happened, and I'll assert, then I'll give you that, then that was a reflection of the fact that people were thinking that the threat was explosives but the screening system--the initial screening system was probably good enough and that the secondary focus ought to be on the checked bags.

MR. : And that was consistent with the War Commission--

MR. BELGER: Because the explosives were the threat.

MR. : Well, let's go out and talk a little bit about prescreening or I'm sorry about screening, the checkpoint screening. And, obviously, there had been 15 or 20 years of IGJ or, you know, it's FAA, the Red Team and everybody looked and said, well, it's not a perfect system, and there's no way it could be. You're never going to get it consolidated. They said there's no zero in the aviation business.

But, obviously, it was a long-time

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

enduring concern that: one, even detectable items weren't going to get detected all the time and in some cases, only 40 to 50 to 60 percent of the time.

MR. BELGER: Right.

MR. : And if there were a whole range of items that were dangerous and, you know, that were prohibited that were not detectable. And so, talk a little bit about in your discussions with Irish or with the Administrator, your feelings about those problems and what to do about it and whatever, is it just inevitable and just keep plugging away. What was your attitude about it?

MR. BELGER: Well, my attitude about that, goes back to the days when I was a security inspector and working at the airports. It's a constant, it was and is still today, even the they're TSA employees, it is a constant effort to keep the folks alert and give them the best tools so they can see into those bags. I mean, have you looked at those screens? Have you looked to see? It's tough, man, it is hard. It's--to get to 100

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

percent detection, you'd bring the airline schedule system to a halt.

So, it's always been trying to find the right balance between the detection capability, with the best equipment and the best people, you know in a system that's fundamentally built around schedules. I mean the most important thing to an air carrier is their schedule and it's always, from the very first day I ever went to a screening point as an FAA inspector, it's always been about finding that right balance.

Knowing that, I mean, heck, I knew from 1972 that it would never be perfect.

MR. : And with the idea that 100 percent is probably unachievable, what was your view of--and presumably zero-percent would be completely unacceptable.

MR. BELGER: Yes.

MR. : So, there's something in-between there, where did you think you were in 2000/2001? I mean was it what you'd thought the system was capable of being? Was it as good as it

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

could be? Was it short in some way and what were you doing about it?

MR. BELGER: Well, I think in that time frame, the data that the FAA had from protection rates was, my recollection was, it was slightly improving. But it was still, I don't think.

MR. : That being the regular testing?

MR. BELGER: Yeah, the regular testing. But I don't think those rates were acceptable to any of us. I don't remember exactly what they were, but I don't think they were acceptable to any of us. And, you know, what were we doing about it? I think the emphasis for 20 years has been on better screening equipment, better people. I mean better trained people, not better people. But more highly trained people who know what to look for.

MR. : Can we talk about--I want to ask about a rule making on screener certification, which is one of the efforts that was underway for a long time.

MR. BELGER: Right.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : And when you testified after 9/11 to the Government Affairs Committee in the Senate, I think it was just two weeks afterward. And the question came up about well, what can be done on improving screening. And you were talking about the process and the screener certification, which, indeed had been mandated by Congress, at various times and recommended by the Gore Commission. And you said, you know, quote, "One of the problems we had in getting this" the screener certification rule "out sooner was the fact that there was no real objective way to test screeners other than to test objects that our inspectors use." Which really is not a good real-world way to test.

MR. BELGER: Mm-hmm.

MR. : So, if you could talk to us a little bit about that trainer certification rule, which was years in the making and was on the brink of being issued when September 11 happened. And the use of test objects versus other tests by your own special assessments division, like EAO and

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

the DOT IG to find it.

MR. BELGER: Okay. I think that rule was actually on the verge of being finalized even before September 11 and Irish pulled it back. Admiral Flynn pulled it back, fundamentally, for this reason that we're talking about. That there was no good capability to quantifiably test the screeners. And he was waiting on and we were waiting on, not just being him, we were waiting on that capability. And what's it called, TIP.

MR. : TIPS.

MR. BELGER: TIPS, yeah, the Threat Image Projection System. So that there would be a measurable, quantifiable way to test the screeners. If you're actually going to have them certified, then you've got to have some objective measurable way to test them, just like you do a pilot or somebody who has to be recertified.

MR. : Mm-hmm.

MR. BELGER: So, we were waiting to get that capability in place to go with the certification.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : Let me ask you, we had, one of the carriers, I need to put it in an interesting way, so that it would, as the carrier recognizing that there was no way that it could be perfect in the limitations on both humans and equipment; that there were three levels: there are crazies, criminals, and terrorists. And we knew we could stop the crazies or we thought we could and the criminals. But a dedicated terrorist can do what they were doing that the system just wasn't designed to stop and couldn't stop. Is that a fair?

MR. BELGER: Well, I mean, I think that's a true statement about any security system. I mean, the more dedicated, skilled, trained, preparation one takes, the more likely you are to defeat it. You know, if somebody spends five years planning to hijack four airplanes on the same day and, yeah, that, U.S. domestic system probably wasn't designed to prevent that.

With weapons that probably weren't even--I don't know what they had to be honest with you.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

But with weapons that probably weren't even on the, don't carry list.

MR. : We should probably ask that question about the [unintell.]--

MR. : Yeah, I want to, can we do that one when I do the [unintell.] tying this together?

You talk about the threat information that you got from the intelligence side. And we've just been talking about vulnerability data that you received from testing and evaluation. And we've talked with other people about how the FAA reacted to both sets of information.

Let me ask you, in your position as Deputy Administrator, what in the way of consequence assessment and risk management, did you undertake in allocating your security resources?

MR. BELGER: I'm sorry, help me some more.

MR. : Well, all right, on consequence management, let's use as the example, what you talked to us earlier about, which was, okay, the suicide hijacking in the United States.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

Low-probability, but high-concern.

MR. BELGER: right.

MR. : So, an example of a consequence management concern would be, okay, this is a remote possibility, but if it did happen, you know, it would make TWA-800 look like another day at the office. So, that's what I'm talking about on consequence management. And on risk management, simply, how did you put the things together. National Academy of Sciences and others have questioned in the security area the capability, not only of FAA, but other U.S. government entities of bringing together threat assessment, vulnerability assessment, and consequence assessment into a unified risk-assessment kind of matrix. So, that's what I'm getting at.

MR. BELGER: Well, I think the decision on the resources within the security organization would have been basically made by the security--by the Associated Administrator Irish, for the most part in the years preceding.

I mean, I know that the FAA's intel shop

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

was significantly improved in the '90s, after PanAm-103, significant improvement starting in late '92, '93, somewhere in there. Their analytical capability was significantly improved.

MR. : And those folks are dealing mostly with threat assessment?

MR. BELGER: Right and vulnerability, I would say, also, I mean, I think they were making some vulnerability assessments, also, along with the folks in the field. But I think, perhaps they were looking at vulnerability along with threat.

MR. : But they weren't heavily involved in looking at your compliance testing, that level of vulnerability?

MR. BELGER: No, I don't think so, that would have been more in the operations side.

MR. : So, the question is, really is: How were those brought together? You know, you have the Ops folks doing these tests on vulnerability and system; you have your intel division, mainly focused on threats and maybe vulnerabilities in the larger sense; based on the

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

targets that the bad guys might follow?

MR. BELGER: Right.

MR. : But, presumably at the top of the organization would be where you kind of bring these things together.

MR. BELGER: That would have been at Irish's level, yeah.

MR. : And are you aware of that being done and how it was done, how he did--

MR. BELGER: I really don't.

MR. : One quick more thing on that. I checked my screening of fines that were assessed for the carriers when they failed. There's been a concern that a lot of fines were reduced, that they ended up paying 10-cents on the dollar.

How did that system work? And one of the quotes that we'd received was that the carriers treated the fines as the cost of doing business, you know, it was just factored in, they knew they were going to get them. It wasn't something that they took terribly seriously. The scenario is,

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

okay, we've been fined, we've got a problem let's see what we can do to fix it. They just kind of negotiated, paid the fine and move on. Can you talk about both of those items?

MR. BELGER: Yeah, from very first-hand experience, from a variety of different positions, from the inspector position, to the staff position to the manager position, I've been in all three levels.

I mean, it's called a compliance and enforcement program, fundamental objective is compliance. There are times when you have to go the enforcement route, I mean, the civil thing, revocation or something like that. There are times in FAA's history where the emphasis on civil penalties has gone up or gone down, depending on the emphasis to put on certain programs.

You know, there was a time in the FAA's history when every single pilot deviation resulted in a civil penalty. Because they were going out of control and that was seen as a way to bring the pilots to get their attention. So the enforcement

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

tool was used for that reason--to get their attention.

You know, when I was an inspector and I wrote up an enforcement report and the recommendation was to fine the carrier. I mean, I followed that case. I talked to the lawyer who was working it. I talked to whoever was ultimately making the decision whether to settle or what--so--

MR. : Is that standard process even today?

MR. BELGER: Well, it ought to be. There's nothing that says the inspectors can't pick up the phone and call the attorney and find out what's going on, make sure that their input is considered. It's harder--it's easier to bitch about it than it is to do that.

MR. : Are you aware--

MR. BELGER: [unintell.]

MR. : Are you aware of how many--whether the current--or let's say before you left of whether the current--or the then current generation of inspectors were following your

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

example?

MR. BELGER: I don't know. I got the sense that they weren't because if they were, they probably wouldn't have had some of the complaints they had about the cases being settled.

And, frankly, I don't have a, I mean, without looking at the specifics, I'm just going to make a general statement. I don't have concerns about the way the cases were settled in the end. You know every legal proceeding gives the accused, you know, the opportunity to go in and make your case, make your extenuating circumstances. I was a part of several what's the word I'm looking for? Compromises, I guess. And one of the compromises I remember was the carrier, rather than paying a fine to the FAA, put x-thousands of dollars into putting new screening. So, again it was all about compliance in my mind, rather than--

MR. : [unintell.]

MR. BELGER: --the civil penalties were there for emphasis, you know, if you do something, you've got to pay the consequences.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : The 10-cents on a dollar figure? Does that seem accurate or inaccurate to you?

MR. BELGER: I don't know. It seems low to me, but, again, I think you have to look at the specifics.

MR. : But it was at the end, it was an ALJ process, quasijudicial, unless you want to go to the federal court, you know, and we give them time and money.

MR. BELGER: Right, when you get into the civil penalty arena, it is a legal proceeding.

MR. : And a lot of people have said, really, if you wanted to get compliance, always that publicity was a lot more fashionable.

MR. BELGER: I think that's exactly right.

MR. : And keep that in mind, because when we get to the recommendation phase, I want to talk to you about how to do that.

MR. BELGER: That's right, publicity was a much more feared consequence than paying the fine.

MR. : Yeah.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : Do you recall any instances where you mentioned decertification. We have seen examples of decertification being real good in the safety arena--

MR. BELGER: Right.

MR. : --especially in earlier years. Are you aware of any instances where security violations prompted threatened decertification action by the FAA?

MR. BELGER: No, I don't recall any.

MR. : Was that procedure a tool that was at your disposal or something that was--

MR. BELGER: No, it was always at the inspectors or the security organization's disposal. Now, I can probably think of situations where screening points were shut down or a period of time. If they weren't manned properly or if the machine wasn't working right, you'd shut the screening point down. Which, in essence, is shutting down the operation.

But I don't recall ever--I don't recall a situation where there was actually talk about

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

revoking a carrier's certificate or [unintell.]

MR. : In retrospect, do you think that might have been, gotten their attention better--

MR. BELGER: I don't know that any of those--I guess I'd have to say, no, because I don't think that screening point violations rose to that level.

MR. : Monte, let's talk a little bit about kind of on-board strategies, common strategies in FAMS. And talk a little bit about the public input the FAA was receiving. That's something you talked about how Congress and the public and FAA's and whether you all have any documents that show the number of calls you are getting about, hey, my bags were on their time, I was delayed, as opposed to we were worried about security.

That's a part of the--a piece of the story that needs to be told, that you know the public's expectations had a role there, with democratic institutions, it's the way it works.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. BELGER: Yeah.

MR. : And then, let's get in a 9/11 piece and contrary to what Sam said, Miles, I think probably that's the right time for us to mix in because we're going to be going through the day.

MR. : Yeah, right.

MR. : Rather than us do our stuff--

MR. : --agreed

MR. : --and then do yours? What do you--

MR. : With one caveat, Team A still will need to come back to you at some point, because we haven't reviewed all the relevant documents and talked to all the necessary people.

MR. BELGER: Okay.

MR. : So this would be a tentative first

MR. BELGER: I'll be available.

MR. : But we will, we'll try to finish up with pre-9/11 shortly. Let's start with--

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : And please tell us if you want a break at some point.

MR. BELGER: I'm okay, right now.

MR. : Okay.

MR. : There are two pieces that we're most interested in: one is the FAM program, an in common strategy.

MR. BELGER: Okay.

MR. : And kind of look at it, again, with an overview, you know, that intelligence was the first layer of security. Is it credible, is it specific, is it actionable. Absent that, then, you know, the pre-screening, hopefully will capture that population of people who mean ill--screening, you know, stop them from bringing on the tools to do what they intend.

MR. BELGER: Right.

MR. : And then, failing all that, what happens on-board the aircraft?

MR. BELGER: Right.

MR. : I meant there was three pieces that we're interested in: FAMS; the cockpit

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

doors; and the common strategy.

MR. BELGER: Okay.

MR. : So, recognizing that each of those layers has pretty significant deficiencies, the odds weren't terribly small that someone wouldn't actually get to that point in the aircraft.

On the common strategy, can you talk to us a little bit about your impressions of it. Efforts to up-date it; the means by which FAA assured that it remain relevant, and address the prevailing threat?

MR. BELGER: Well, the common strategy was developed and it was--I mean, my recollection was that it was improved several times over the years. I mean, it certainly was not designed to counter what happened on September 11. There's no ifs ands or buts about that. I don't ever recall a scenario or even a plan for thinking about what happened on September 11. So, I don't think you can say a common strategy was designed to combat that type of incident.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

So, obviously, it had to be rethought and replaced. But the common strategy was an effort to make sure that the FAA, the FBI and carriers knew what the strategy was when there was an incident.

And that's going to be one of my recommendations to you guys in the future. Because there is not a common strategy today.

MR. : Let's delve into that in detail when we get to recommendations.

MR. BELGER: Okay.

MR. : Are you aware of, and I've heard that Mike Morris [ph], among others was leading, in 2000/2001 to update the common strategy, did you have any role in that?

MR. BELGER: I didn't have any specific role, but, I mean, I--it was updated over the years, several times, so, I mean, I would assume that they would be updating it.

MR. : And the two pieces that were supposed to go along with common strategy, the FAM program.

MR. BELGER: Right.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : We all know that that actually faded over the years.

MR. BELGER: Right.

MR. : How would you answer the question that was posed to us that, again, when you have an increased threat and a concern domestically, and, yet the FAM program had, you know, it had said that we have confidence that the checkpoints were working. Well, as we've all discussed in all these interviews, that wasn't the case. So, why did the FAM wither on the vine?

MR. BELGER: I don't think, this is, I think the irony of my answer is going to be that I think at the time, people really didn't think there was an increased domestic threat.

I mean, the threat, every, you can see these things in these documents, obviously, you know, to me those were throw-ins. Domestic, suicide, very low probability, but--

MR. : A sense that you got from Admiral Flynn or from General [unintell.]

MR. BELGER: Absolutely.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : [unintell.] not domestic terrorism?

MR. BELGER: I never--I had no feeling, at the time that the domestic was higher than it was in the previous year.

MR. : And was the--so the FAM program for that reason wasn't seen as an essential tool or was doing okay, with--

MR. BELGER: Well, the FAM program died over the years, it was, basically, a resource question.

MR. : Mainly FAA resource or were the air carriers complaining that they were giving up high-priced seats or--

MR. BELGER: FAA resources, FAA resources, people.

MR. : Just, there were higher priorities in both in security and the [unintell.]

MR. BELGER: Right. Well, you know, and it's hindsight's 100 percent better in retrospect, but what eight, ten years not a single domestic hijacking?

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : Ninety-one was--o

MR. BELGER: Yeah, right so ten years now. It's like--it's like, you know, I used to use this analogy, you have car thefts in the parking lot. So you put a guard in the parking lot and you go two years and you don't have a car theft.

MR. : Right.

MR. BELGER: And the budget cutter comes by and says what the hell you need that guard for, you haven't had a car theft in two years.

MR. : And it's a tough question, it's like the baseball thing. If someone's 0-for-10 does that mean they're going to go for 11 or are they due for a hit?

MR. BELGER: Right.

MR. : And then the cockpit doors.

MR. BELGER: Yeah.

MR. : Can you, I know part of this is a flight standards piece, part of it's an aviation security, can you walk us through how we should be looking at this from both sides and what

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

may be happening, because there were real serious looks of putting Keplar [ph] [unintell.] ditched? What's your knowledge of that?

MR. BELGER: I don't know that they were real serious looks. I know that over the years there were discussions about things that could be done to further secure the cockpit doors. The doors were supposed to be locked in flight, you know, on September 11. But, obviously somebody could, or three or four people could knock those doors down if that was st they wanted to do.

The issues that we got into, which were flight standards, certification issues about how to re-enforce those doors and the potential safety consequences that would be caused by re-enforcing those doors in the case of a decompression, were just, they were startlingly complex, as you saw.

So, you know, well, just make the door stronger, but that really affects the structural integrity of the cockpit when you have a decompression type of event.

I think the FAA certification folks just

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

did a marvelous job figuring out how to get those doors hardened in a way that wouldn't significantly impact the safety.

MR. : You're talking post-9/11?

MR. BELGER: Post-9/11, yeah. It did have a negative impact on safety. I mean, we sacrificed safety in order to harden those doors.

MR. : Tell us a little bit about that.

MR. BELGER: Well, there was a certain extent of--you increase--by hardening the doors, you increase the risk of a catastrophic failure in the cockpit in some type of decompression.

Now, that was mitigated a lot by the work they did, but there was still some higher risk. But the FAA said, it's worth that risk in order to get the doors to harden quickly. And then we'll go back and kind of refigure the more complex certification to further mitigate that risk.

MR. : And that's the work that's ongoing now?

MR. BELGER: It's ongoing now, right,

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

right. All future aircraft are going to have the built-in risk mitigation, whatever it turns out to be.

MR. : As person who's been in this business a long time, do you think was a right trade-off?

MR. BELGER: Oh, absolutely, yeah.

MR. : Post-September 11?

MR. BELGER: Yeah. Prior to September 11, I don't think you would have gotten any safety person to have made that trade-off.

MR. : Can I ask one last thing? This will be my last--

MR. BELGER: But you see, this is really interesting, because the FAA is about safety, security, and efficiency trade-offs. There are trade-offs, you know, you can have 100 percent security, but you'll keep all the airplanes on the ground, you know, that's a ridiculous figure. You can have 100 percent safety, but you'll keep them on the ground.

So, there's--with every decision, there's

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

a risk involved.

MR. : Let me turn in to the last pre-9/11 question I have. Which is safety versus security. I don't know whether you've had a chance to look at a 2002 report that the National Academy of Sciences or the National Research Council did for the National Academy of Sciences. Which has a section on transportation security and has a treatment of aviation security within it.

One of their findings was, they said it was striking to them that within the FAA, there was a tremendous dichotomy between how safety, which they classified as being handled by a unified system, clearly directed by one agency, the FAA, with an outstanding track record, as they classed it.

They contrasted that with security, which was handled in a shared way with a lot of entities involved and with kind of blurred lines of responsibility and, which, in their time, had a less outstanding performance.

We've had some people tell us that while

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

safety was engineered into the FAA's work from the very start and was one of the main reasons it was created or even it's predecessors were created--

MR. BELGER: Right.

MR. : --that security was kind of late to arrive and was kind of grafted on.

Can you, as someone who was in that system for a long time, could you talk to us about safety versus security in the FAA?

MR. BELGER: Sure, absolutely. So, you're right, I don't. I would not completely agree with their assessment if that's what they said, and here's why. First of all security did come later to the FAA, 1971/72 is actually when the FAA--'71 probably, is when the FAA actually took over responsibility for security.

MR. : Since the wave of hijackings?

MR. BELGER: Right. Cuban hijackings almost every weekend in '70, '71, '72. Actually in 1972, I think it was '72, the first airport and airline security regulations promulgated by the

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

FAA.

But during that time period, '72-'75, when there were a lot of domestic hijackings, mostly to Cuba, Congress made a decision, the government made a decision that the FAA should be the lead agency for the management of hijacking incidents. For the reason that the hijacked aircraft was an aircraft in distress. And it was a safety issue.

So, the FAA, because of their safety responsibilities, FAA Administrator, ought to be in control of managing that incident. So there was a direct link between safety and security, even back in those days.

Hijacked aircraft, aircraft in distress, safety problem, FAA has the jurisdiction for safety issues, therefore FAA managed the incident.

MR. : As opposed, for example, the FBI?

MR. BELGER: Right, and there were memorandums of agreement between the FAA and the FBI, going back to the '70s that laid that out very clearly and it was well understood, and it worked

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

really well, which, I'm going to go back. I don't think it would work too well today.

But let me--the other point I wanted to make is even in the security world--let me say it a different way. The analogy that the reports--that you say the reports said about the difference between safety and security, I don't think is accurate. Because even on the safety side, FAA's a regulatory agency, but the FAA doesn't build airplanes; the FAA doesn't fly the airplanes; the FAA doesn't train the pilots or the flight attendants. You know, the FAA is a regulatory agency; no different than in the security world.

The FAA set the standards, but the FAA didn't screen the people, the FAA didn't, you know, put up the fences around the airports; the FAA didn't put in the perimeter security or train the screeners. So, I don't think there's fundamentally any difference in the way that safety and security programs were managed or manifested themselves with the industry.

MR. : And I think that one point

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

that they were making was that in the safety arena, there is a set mathematical goal, like 10 to the minus-9.

MR. BELGER: It's more precise, yes.

MR. : Somewhat more precise and can you give us your impression of whether it's that type of goal is applicable to security?

MR. BELGER: I don't think it is, somebody smarter than me would have to figure out what the formula was, but we used to sometimes think that the safety inspector's job was easier for that very reason. And it was clear fact and in the security it was more subjective. And in the safety world, you weren't trying to defeat an enemy that was trying to defeat you.

In the safety world you were trying to prevent accidents from mistakenly doing--

MR. : And you were saying physics as opposed to human.

MR. BELGER: Yeah, and in the security world, you're trying to work against somebody who's trying to defeat you.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : How about industry receptivity to safety versus security regulation. Do you see differences there?

MR. BELGER: Oh, I think as a general statement the industry paid more attention to safety regulations than they did security regulations.

I mean, it's almost kind of human nature you go ten years, you don't have an incident. But you're still having safety incidents, --I don't really mean that in a negative way, it's just--

MR. : No.

MR. BELGER: --kind of human nature. But, yeah, I mean, we used to make analogies all the time about the safety guys trying to prevent accidents and the security guys trying to prevent, you know, people from willfully trying to do something bad.

MR. : And one last question and we can go to 9/11, if you're ready. Miles did you have any pre-9/11?

MR. KARA: Is the issue of cockpit keys,

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

again, I know that was a flight standards/safety issue. Do you recall a conversation regarding security and what the standards were? We don't want people knowing that our flight attendants have keys and you know one key fits all cockpits. Was there any discussion that those weren't good ideas?

MR. BELGER: Well, yeah, I mean, it's probably not a good idea to have one key fit all doors. But I don't know that anybody who really thought it was a significant enough risk to do anything about it. It's certainly not the best safety or security practice to have a common key for every door. It's not a good practice. I don't think anybody would tell you it is.

MR. : And was that something that most people agreed, you were aware of that--

MR. BELGER: I was aware of it, yeah.

MR. : Do you think Irish and [unintell.] knew that?

[Simultaneous inaudible conversation.]

MR. : But in the end, you just didn't see that as a priority?

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : Monte, then, let's go to 9/11, really what we're most interested in, if you can just give us your narrative of, you know, where you were that day and what happened. And take us through your day and tell us about the significant events and decisions and to the extent you ou can remember, you know, times.

MR. : Do you want to take a break before we start?

MR. BELGER: No, I'm okay, fine. I'll let you know, if I need to.

I was at work that day, just seemed like a typical morning. I was in a meeting I think down in the Air Traffic Organization, if I remember right. And I was walking back to my office. And my assistant was standing in the doorway, Shirley Miller, was standing in the doorway as I was walking up to the office and she said, we had to go to the Ops Center, a plane's just hit the World Trade Center.

So, I immediately went into the Operations Center, which is right across the hall from my

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

office.

MR. : This was definitely after the first plane had gone in?

MR. BELGER: Yeah, this was, I walked in and the first thing I saw on the TV screen was the hole in the building.

MR. : Before, in place and time, before or after the second crash?

MR. BELGER: Before, before the second crash. So we were in the Operations Center for a few minutes. I was talking to the folks in the Operations Center trying to figure out who knew what. You know nobody really knew what had happened at that time. The speculation was--the most general speculation was that it was a general aviation aircraft, the pilot had had a stroke or fainted or whatever, or lost direction, or lost control, or whatever. I don't think anybody at that time thought that somebody had deliberately flown in a commercial aircraft into the World Trade Center.

MR. : Did Shirley say anything

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

to you that ATC had picked up on strange threatening transmissions from aircraft or did remember anything before you went to the--

MR. BELGER: Not before we went in there, no.

MR. : And when you got there was that something that was immediately told to you?

MR. BELGER: After a few minutes, yeah, after a few minutes of talking to the air traffic folks. Yeah, we learned that they had had some concerns about that was American 11, was that--

MR. : The first, yes.

MR. BELGER: --that they--air traffic had had some concerns about that flight. But that was several minutes after I had been in the Operations Center.

MR. : But before the second?

MR. BELGER: I don't know. I honestly don't know, the second one was not too far behind the first. I was in-between the Operations Center and my office which was right across the hall. I was on the phone a couple of times with--called

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

over to the Department to get Jane and she was actually, I think, already on her way.

Might have had a couple of discussion with people over in the Secretary's Office. I was actually in my office on the phone with John Flaherty from the Secretary's Office when the second plane hit the World Trade Center.

MR. : And do you remember your conversation with John, what you all were saying?

MR. BELGER: Well, we were talking and John actually, he must have been looking at a TV screen, because he said, a second plane just hit the World Trade Center.

MR. : You didn't see it on the second--I didn't see anything, really, until the next morning. I had no visual conception at all of what happened until the next morning.

MR. : So he told you, but prior to that, do you remember what you all were just trying to figure out what was going on or did you have any information you were sharing/

MR. BELGER: We were trying to figure out,

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

you know, what that--who that airplane was.

MR. : Did he have any
information?

MR. BELGER: No.

MR. : So he was really trying to
get it from you?

MR. BELGER: He was trying to get it from
us, yeah.

MR. : For the Secretary or--

MR. BELGER: Yeah, yeah.

MR. : So then he told you that
second plane had hit?

MR. BELGER: Right.

MR. : And then what happened?

MR. BELGER: I think I went back into the
Operations Center. So, the second plane hit at
what time, 9:00

MR. : 9:02/9:03.

MR. BELGER: As you might expect, it was
somewhat chaotic, but organized chaos, I think, at
least in our Operations Center.

MR. : Who was running the show

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

there?

MR. BELGER: I think probably I was. Yeah, we have people in there 24 hours a day and the security and air traffic people were available there to work in the Operations Center.

You know, the Boston Center, the New York Center, started to make decisions about that time to impose ground stops. Ground stops meaning nobody takes off within their airspace. All terrifically good decisions, I mean, I can't--I wouldn't second-guess a single decision that anybody at our field facilities made that day. They were all kind of instinctive, smart reactive decisions and I think they made in a scenario that had never been practiced before. Never even been thought of probably by most people, but it was certainly never practiced.

MR. : Miles knows this stuff cold, so forgive us--

MR. BELGER: Oh, no--

MR. : But as far as their authority to do that, was that something that they

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

knew they had the authority to do, they knew they didn't, but they knew it needed to be done or what?

MR. BELGER: That's an interesting question, I am, frankly, I'm glad they didn't follow some of the guidelines and rules that were in place. I think it's great that some of those supervisors picked up the phone and called NORAD directly. I think it's terrific. Now, they do have the authority to issue ground stops, they always, the individual controller even has that authority. If there's a safety issue in his or her area. So the Center Manager or the Tower Manager, they have the authority to issue ground stops and they did it wisely, I think, in those situations. Or the Command Center has the authority to issue ground stops, obviously.

I think, actually, some supervisors picked up the phone and called NORAD around that time frame directly, which is, you know, their own initiative, their own smart, quick thinking and thank God they did.

MR. : And one of the things

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

we're very interested in is the establishment of phone nets and how that happened, and, really, the opening up of centers. As we go along. So, take us down from Flaherty.

MR. BELGER: Even before the Flaherty call, when I was in the Ops Center, when I first went into the Operations Center, they were in the process of setting up a net. Which would have included all the air traffic folks in the Eastern region; air traffic folks in the headquarters; actually, they would have been setting up, probably an easier way to say it, they would have been setting up the normal security net.

Which would have included all the people that would generally be in on a security incident.

MR. : And our understanding is that there was a primary net and a tactical net--

MR. BELGER: That's true.

MR. : --and I'm still not sure what the difference is and who was supposed to be on which.

MR. : Good question, if you can

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

lay that out for us.

MR. BELGER: Okay, well, let me get to that in just a second.

MR. : Okay.

MR. BELGER: I don't know if I can tell you who exactly was on the tactical net, but there's the strategy has always been, there's a primary net on which you have all the principal players. FAA, DOD, FBI, the FAA facilities, and that's kind of an open net to talk strategically about what's going on.

And then, there's a lower level tactical net where you don't have the lead persons on, but it's a more, you know, Joe, I need you to go do this or Jane I need you to go get this information from the screen pointer or, you know, John go check LaGuardia Tower and see--

MR. : Would it be cross-agencies, too, the tactical net or is that primarily FAA only?

MR. BELGER: That's a good question, I don't know.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : Okay.

MR. BELGER: It could have been either.

MR. : Could you check that out with, we've had some--on those who should have been on and anything to find out who actually was on, that would be helpful to us.

MR. : And Miles in the FAA deliverables, did we ever get anything in writing, you know, the checklist for here's who you put on the primary net, here's who you put on the tactical net?

MR. : I think we have a checklist, but I'm not sure we know the date of that and I don't have the details in front of me right now.

MR. BELGER: The Operations Center should have a checklist of who, you know, who they called, what time they were called and whether or not they were on the net.

MR. : Well, for example, we had one high-level FAA person who was in the Ops Center, said that it was his expectation that the

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

National Military Command--

MR. BELGER: NMCC--

MR. : --NMCC--

MR. BELGER: --well, they should have been on it.

MR. : --should have been on the net and he later--

MR. : On the primary net.

MR. : On the primary net, and he later discovered they weren't on and he was not aware of when that discovery was made--

MR. BELGER: I didn't know that, I mean, they should have been on, they're on the checklist, I 'm sure.

MR. : You're not a ware of a discovery that they were not on--

MR. BELGER: No.

MR. : --or an attempt to bring that up.

MR. BELGER: No, that's the first I'd heard that.

MR. : [unintell.] tell us as

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

much as you can about the phone conversations and coordinations. You got off the phone with Flaherty?

MR. BELGER: That was after the United flight had hit the World Trade Center, which was what, 9:02, 03, something like that. So, I was on the phone with him. So, that's--then the focus, then was on, you know what are we doing in the system, what decisions are being made by the regions and everything that was told to me, I absolutely agreed with and endorsed. Around 9:20 or so, if my recollection is right. We were talking in the Command Center about a national ground stop. Ground stop meaning nobody takes off and we made the decision, got it collaboratively that there should be a national ground stop.

I think, in retrospect the folks in the operation of the Command Center out in Herndon were making that same decision. Stop at the same time, which I think was great. I don't remember the exact time, but it was around 9:20 or so, is that right? National ground stop decision?

MR. : And who had the authority

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

to make that decision, both or one or the other?

MR. BELGER: It could have been--the authority, in my opinion, the Command Center in Herndon had the authority to do that. Obviously, the Administrator or I had that authority.

MR. : Would the Secretary have had that authority?

MR. BELGER: Oh, sure, sure, sure.

MR. : But Herndon was not acting beyond it's authority by ordering that ground stoppage?

MR. BELGER: No, not in my opinion, absolutely not. And even if they weren't, so what.

MR. : In anybody's opinion that you've heard was [unintell.] they had no authority to do that.

MR. BELGER: Yeah, I had heard that some folks in air traffic were questioning the Command Center's authority to do that.

MR. : Air traffic that were in the--

MR. BELGER: Yeah, but in my opinion they

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

had the authority. They do it on a routine, never a national ground stop, but they do it on a routine basis for localized ground stops in weather situations or back during the summer of 2000 we had all those congestion problems. So, they do that.

MR. : So, 9:20, talking about the ground stop.

MR. BELGER: Right. I think during that time period, it was, you know, trying to figure out which aircraft had hit the World Trade Center. We were starting to get a lot of reports about other aircraft that were not accounted for.

MR. : At this point had you had any conversations with the carriers?

MR. BELGER: I don't think I had at this point. I think the Administrator might have.

MR. : And they're not part of the primary net or the tactical net?

MR. BELGER: Not at that time because we didn't know who the carriers were. Now, eventually, American and United were brought in and I'm not sure just at what time they were brought

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

in.

MR. : Into the primary net?

MR. BELGER: Yeah.

MR. : Well, this took place, was it just before 77 hit the Pentagon that the carriers came in?

MR. BELGER: I don't know, I honestly don't know. It would have been whenever we were certain it was the United and/or American flights.

MR. : And are you pretty sure that the Administrator had been in touch with the air carriers in this relatively early time frame?

MR. BELGER: I think so. I think she was probably talking with American and United.

MR. : Miles do we know whether the primary and tactical nets were recorded or not.

MR. : We ought to pose the question, we have heard that they were not, but I would simply pose the question to you?

MR. BELGER: I don't know. I don't know.

MR. : No one has told us they weren't.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : One thought on that,
Miles, forgive me.

MR. BELGER: Sure.

MR. : If there were all these
other agencies, maybe the FAA didn't, but maybe
some of these other agencies like the FBI, they
have a recording?

MR. : We have one side of some
of the conversations from the positions at the
Command Center, but that's on the tactical net.

MR. : Yeah, that deliverable, I
think that's essential we get who the understanding
was who's on that checklist so we can query each of
those agencies to see whether they have.

MR. BELGER: Well, you ought to be able to
get that directly from the FAA Operations Center.

MR. : Yeah, I've got a crisis
management notification list, but I'm not sure if
that contains.

MR. : I tell you what the best
person to get that information from is Dave
Canoles. Dave Canoles is the head of the FAA's

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

Operations Center.

MR. : We met with him.

MR. BELGER: Yeah, Canoles. He would be the best one to get that information from. There were--during this time period, there were very confusing reports about--

MR. : This is still around 9:45?

MR. BELGER: This is before 9:45, yeah, between 9:20 and 9:45, in that time frame. There were a lot of confusing reports coming in about aircraft that were unaccounted for. At one time, we actually got a report--and to this day I don't know where it came from--that an aircraft had crashed on the--I think it was the Ohio/Indiana border or--

MR. : Ashland--could it be Ashland, Kentucky?

MR. BELGER: Yeah, Indiana/Kentucky border, I forget. And there was speculation that that was American 77 that had crashed.

MR. : So, by this

MR. BELGER: After air traffic having lost

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

contact with that aircraft.

MR. : So you became aware at this point of 77 being a problem flight or before perhaps?

MR. BELGER: I think it was in that time frame, yes, if I remember right, yeah. And at that time, we actually, you know, air traffic had lost contact. Excuse me--lost contact with the aircraft. We got this report of the crash, speculation that that was American 77. At this time frame, I'm quite sure that both the Administrator and I were talking to American and United during this time frame.

And, quite frankly, they weren't sure.

MR. : Do you remember who you talked to?

MR. BELGER: I talked to Bob Baker a couple of times. I think I talked to Russ Chew a couple of times.

MR. : Was he at American or was he out in the field do you remember?

MR. BELGER: Russ?

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : Yeah, was he at the American Office?

MR. BELGER: I don't know where he was. Bob Baker, I think, was in Dallas.

MR. : Was Russ giving you any information or was he?

MR. BELGER: I don't remember, exactly, I remember getting more specific information from Bob Baker. And I think Jane talked to Don Cardy [ph] who's the American President. And she talked to United.

MR. : Did you talk to anyone at United?

MR. BELGER: I think I did, I'm pretty sure I did, I don't remember exactly who it was.

MR. : Okay. And in the same time frame.

MR. : Monte, so when you are getting all these reports coming in of other flights that we don't know and, obviously the whole ground stop was being discussed--

MR. BELGER: Right.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : Was there any discussion in the Operations Center that, hey, there's a lot going on out there, we can't keep everything safe, we're shutting down the system because of it.

MR. BELGER: Yeah.

MR. : We ought to get communications to the cockpits saying, telling people what's going on, telling them to secure their cockpits, was that discussion had at all?

MR. BELGER: Was there a discussion about security in the cockpit?

MR. : Yeah, of notifying aircraft?

MR. BELGER: I mean, not that I was aware of.

MR. : What were you, I mean, you seem to be nodding that there was some discussion of some kind of communication?

MR. BELGER: Well, we were talking actually, the ground stop, the national ground stop, obviously, I think that was in the 9:20-something time frame. We started talked

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

about, jeeze, you know, do we need to shut the whole system down? We were having those discussions.

MR. : While they were still landing planes that were in the air?

MR. : Yeah, definitely, it was not something that we weren't thinking about.

MR. : Can just ask this?

MR. : What were the range of people in agencies that you were personally talking to?

MR. BELGER: This would have been just within the FAA.

MR. : Just within, you were not talking with external agencies?

MR. BELGER: No, I was not, no not--

MR. : Jane was talking to the two airlines and you may have talked to--

MR. BELGER: I was talking to the airlines, too, I was running back and forth between the Ops Center and my office, I was answering the phone every couple of minutes from somebody over in

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

the Department of Transportation trying to figure out what was going on.

MR. : You, personally, weren't talking to the NMCC or to--

MR. BELGER: No, I didn't--I didn't participate on the Net at all--

MR. : On the primary net.

MR. BELGER: On the primary net, on either net.

MR. : And who is the first among equals on the primary net within the FAA?

MR. BELGER: I guess, was it Ross Hamory, was he, it would have been whoever was the senior security person. I think it was Ross Hamory if my recollection is right.

MR. : Not Lee Longmire?

MR. BELGER: It could have been Lee, it could have been early on, Lee and then Ross replaced him.

MR. : It--

MR. BELGER: It would have been because Ross was--

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : On the primary.

MR. BELGER: It probably would have been Lee Longmire. Because Ross wasn't even in security then.

MR. : So it was your expectation that if Lee or Ross, whoever from security was to be on that that they would be coordinating any military response?

MR. BELGER: Yeah, they did that routinely.

MR. : And Lee never said anything to you, do you remember at the day that NMCC was supposed to be on but wasn't?

MR. BELGER: No.

MR. : That was never mentioned to you?

MR. BELGER: No.

MR. : Is that information you would like to have had?

MR. BELGER: Yeah, probably. Would like to have known that. But I have the distinct impression that the military folks were on the net.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : At some point?

MR. BELGER: Yeah.

MR. : You don't know--do you know when they were on ?

MR. : No.

MR. BELGER: No. And there are military liaisons out at the Command Center.

MR. : We were told that thought the NMCC was on the check list and everyone presumed that they were on that they weren't and we haven't been able to identify what time they actually came on. When was it your understanding that the military was responding to the crisis in one manner or another and who was coordinating that?

MR. BELGER: I don't think I knew that, you know that NORAD had actually responded, meaning put aircraft in the air. I don't think I knew that until after the Pentagon crash.

MR. : And do you recall any conversations going on with Jane or anybody else about where is the military on this or we need to

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

activate the military? Was there the understanding--well, who was the hijack coordinator that day?

MR. BELGER: Well, it would have been the senior security person, if Lee, if he was the one. What section was it that NORAD and DOD were on the Net that they were aware of what was going on. And, you know, after the fact, I learned that NORAD had been notified directly by folks in Boston and New York, you know, in the 9:20-something time frame, I thought.

MR. : And can you describe your thoughts at the time that knowing that they had been called was that NORAD would be coordinating their response with air traffic control system?

MR. BELGER: Right.

MR. : So this was not something that the Washington Operation Center really had to worry about, the military had been called--

MR. BELGER: I would assume that they would be doing their thing.

MR. : Which was, really, an

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

ATC--

MR. BELGER: Right.

MR. : And at no time in your awareness was the formal established procedure by the books to go through the hijack coordinator and call NORAD or call in NMCC and call NORAD and then ascertain that there were fighters available? None of that happened on that day?

MR. BELGER: Well, now, I'm sure it did, I mean, I can't be sure because I didn't hear it. But I assumed it should have been done on the net, also. But I mean this was so spontaneous, that I think NORAD was notified by our field facilities before they were notified by our Washington--

MR. : But you didn't know, you weren't aware that NORAD had been contacted by a field facilities until after the fact?

MR. BELGER: Till after the fact.

MR. : Did Jane, we'll save that till the end.

MR. : Do you want to, we've gotten to the point where we're up to about the

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

crash of [unintell.] at the Pentagon. You want to take us through that period up till the crash of 93?

MR. BELGER: Yeah, okay. So, I don't remember exactly how I knew that--I don't remember exactly who told me that a plane had crashed in the Pentagon, but I was told obviously that.

A few minutes later, both Jane and I were on the phone with the Secretary. Shortly after the American 77 crash. And it was during that conversation that the Secretary said, that we should bring everything down. That was around approximately 9:40 or 9:45. And, of course, we immediately implemented that.

And I think we put the order out around 9:45, 9:46, to bring all the aircraft down, and then our attention turned to monitoring the system, monitoring what was happening in the system until about 12:15 or so, if I remember right, when we actually got the word that all the commercial and private aircraft were out of the system.

MR. : I think everything had

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

been grounded by 12:15.

MR. BELGER: Yeah, I think it was 12:15 or so, that we actually got that word.

MR. : Now at some point in there did you learn of the crash of the fourth aircraft?

MR. BELGER: I was told of the crash, the United Flight shortly after it crashed. I don't actually recall doing anything to monitor that particular flight. I'm sure other people were.

MR. : At that point you recall knowing that it was 77 into the Pentagon--

MR. BELGER: Absolutely not, that was the most confusing part for me. I remember talking to both American and United shortly after the discussion with the Secretary. They didn't know which aircraft; they weren't sure which aircraft had hit the World Trade Center nor the Pentagon. United actually thought that both of their aircraft had hit the World Trade Center.

MR. : American or United?

MR. BELGER: My recollection, it was United, but--but the point is neither one of them

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

knew which of the four aircraft had crashed where.

MR. : Do you recall who you were talking to at the airlines?

MR. BELGER: My conversations, at that time would have been with Bob Baker at American and I don't remember who the guy--

MR. : But someone at United.

MR. BELGER: Yeah, it would have been someone in their office organization.

MR. : Would you know the name if we said it?

MR. BELGER: It could--well, I mean, I know the ops folks, there was Pete McDonald [ph], there was a Andy Studdard--Stoddard--I just don't remember which one, I probably talked to both of them that day.

MR. : In your conversations with the air carriers, were they giving you helpful information or were they seeking information from you?

MR. BELGER: They were looking for information, they--

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : Can you remember any piece of information that the air carriers gave you that was useful, interesting, accurate, reports from flight attendants on-board the aircraft, did Mr. Baker convey that to you at some point?

MR. BELGER: It seems like he did, recounts what was told to him, you know, about one of the flight attendant calls. One of the most frustrating things about was getting this time frame and we could not get confirmation. Or it seems like it took too long for us to get confirmation, that it was an American aircraft that had hit the Pentagon.

And I remember saying why can't somebody just go look at the goddam [unintell.] you know. It just seemed like it took too long to actually be sure that it was an American aircraft.

OFF MICROPHONE: [unintell.]

MR. : Okay, next item--the next thing we'd like to ask you is your awareness of the hijackers weapons and tactics.

First on that day, what did you learn on

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

September 11?

MR. BELGER: The only think that I think that I was told on September 11, which I think was the result of the telephone--cellphone calls was that they had box cutters and that they stormed the cockpit.

MR. : And that was the result of information that you got from Mr. Baker, do you think?

MR. BELGER: And news reports, I mean it was all over the news. I think primarily the source of the news stories were the cellphone calls.

MR. : And nothing about knives mainly box-cutters?

MR. BELGER: I don't remember anything about knives, it was box-cutters four or five hijackers storming the cockpit.

MR. : Are you aware of [unintell.] but of an Executive Summary that was prepared, these two, this one comes first but this is essentially the same and this one's much easier

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

to read. Did you see these Executive Summaries that day. Even though the second one is dated September 12, if you look at the bottom there's a time line.

MR. BELGER: Yeah. No, I didn't know anything about this.

MR. : So you did not see that Executive Summary?

MR. BELGER: No, I was up to my eyeballs--

MR. : On 9/11?

MR. BELGER: --on 9/11. I don't think I read or looked at anything for several days after 9/11.

MR. : And did you ever hear during the day about guns or any other weapons?

MR. BELGER: No.

MR. : Never heard a word?

MR. BELGER: No, not till several days later when I heard about this report that there might have been that American might have said that there was a gun. But I had no knowledge of that till a couple days later.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : Do you recall any discussions?

MR. BELGER: There was some discussion that the United 93 hijackers had said over the air traffic net that they had a bomb, I think.

MR. : Monte, this is, really, a very important point.

MR. BELGER: Okay.

MR. : I hope you can search your memory, the box-cutter issue, I mean, are you certain that came from media reports or do you remember hearing that from Baker or the United people?

MR. BELGER: I don't--I don't remember where I heard that. I mean it just seemed like it was all over the news. What I remember is it being all over the news. I don't remember if somebody told me that before. I just remember it being--that's what everybody was talking about. And I still don't know--I don't know what kind of weapons they had.

MR. : Did you ever have--did FAA

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

ever have you write a statement about everything that happened that day from your perspective?

MR. BELGER: No.

MR. : If you'll turn to the point about the ground stop. And I want to quote again, if I can find it, from your testimony just after the event. This is, again, when we did our 9/25, so two week after when you were testifying in the Senate Government Affairs Committee. quote, "It is very possible that these items, meaning the hijacker weapons, did not go through the screening checkpoint. I think there was a newspaper report that after they did a thorough overhaul of one of the canceled flights, I found one of these box-cutters or paper-cutters in one of the seat cushions of the planes and there is no telling whether a passenger brought it on-board or it was planted, at this point."

Can you talk for a minute on your, on this particular subject?

MR. BELGER: Yeah. There was a lot of speculation, early on, that their weapons, whatever

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

they might have been were planted on the aircraft.

MR. : And this speculation would have been taking place when, before the four crash or after?

MR. BELGER: No, this would have been later in the day on the 11th or 12th or 13th.

MR. : Now, let me ask you on that point, either at the time or do you think that was based on information or more wishful thinking?

MR. BELGER: No, it wasn't based on information.

MR. : Do you think it was wishful thinking?

MR. BELGER: Yeah, it was based on, I think, our security folks, maybe wishful thinking. The security folks probably thinking that there's no way in hell that they could get, you know, that many weapons through four screening points simultaneously. An then there were these types of reports where things were found after the fact, you know, under seat cushions. So, I would say it was speculation.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : Okay, this was two weeks later.

MR. BELGER: Yeah.

MR. : So, that's still going on. All right, with that--

MR. BELGER: But I don't think there was ever any--to close the loop on that.

MR. : Yeah, please.

MR. BELGER: I don't think there was ever any evidence--none that I was aware of, that said that the weapons, whatever they had were planted, whether there was some inside, if that helps.

MR. : Okay, we go back to when the decision to bring all the planes down was made. Can you talk to us about the discussions that you were involved in about what to do once the planes landed? With respect to coordination with the FBI or local law enforcement?

MR. BELGER: Well, so, once the decision was made to bring everybody down, which was unprecedented, never had been done before, so there was not standard operating procedure--

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : Right.

MR. BELGER: --we were making it up as we went along. We then turned our attention to trying to coordinate with the airlines where their aircraft were. There were hundreds of aircraft diverted to Canada. I had numerous conversations, starting around noon or so that day with the NAFCANADA people and with the Canadian government people, you know, what in the world are we going to do with these hundreds of aircraft that had been diverted to Canada? They had no idea what to do with the people.

MR. : Mm-hmm.

MR. BELGER: They didn't know how to handle it from the Customs standpoint. They didn't know whether to leave them on the airplanes or take them off the airplanes or what to do with them. I don't know if--did you ever see a picture of, I think, it was Halifax airport?

MR. : There were several of them.

MR. BELGER: Yeah.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. BELGER: So that was a big part of what I was doing that afternoon. And trying to--that, and trying to figure out what decisions did we have to make in order to restart the operation. What needed to be done at the airports? What did the carriers need to do? What process did we need to go through to start operations back up?

MR. : On that day, on the 11th, was there any discussion about, and given this uncertainty in the reports of other possible plots; any discussion that you're aware of that maybe we should try to screen the passengers coming off these planes to see if we got any other bad guys?

MR. : Or check the manifests to see if there were some more five-member, middle-eastern teams?

MR. BELGER: I don't think there was, at the time. It would have been--let me put it this way, I don't think that I was a part of any discussions about that.

MR. : Are you aware of any such discussions later?

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. BELGER: No, well, later, I mean,
sure--

MR. : Or did you become aware
later of any discussions on that day on this point?

MR. BELGER: No, no.

MR. : FAA had said--a couple
people we talked to had said with regard to
notifying aircraft in the air that there were
problems and to do X, Y, or Z and, you know, once on
the ground, to do certain things that there was a
concern that--the worry about panic overrode the
need to do that? Was that--

MR. BELGER: I think that's a--I'm sure
that was a concern. Yeah, I mean, in the position
of the pilots or the flight attendants, what did
they tell the passengers, you know, so that you
don't have panic?

My focus was just on making sure we got
all those aircraft on the ground safely.

MR. : Were you worried about
panicking pilots, at all. In other words this
absence of saying here's what's happening do

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

anything to protect your cockpit because we don't know who else is out there that that's not really done in any coordinated fashion, either by the FAA, it was kind of ad hoc with the air carriers. Was there a concern that pilots would be panicking?

MR. BELGER: Yea, I wasn't personally concerned about pilot or controller panic. I just didn't think about that. I just, I mean they were--I never thought that they wouldn't perform superbly.

MR. : And, again, please receive this in thinking of the retrospect--

MR. BELGER: Yeah, I am.

MR. : If you look back, are you curious, does it seem like a gap that an order didn't go out to notify all aircraft of what was happening? Did some people look back and say, why the heck didn't that--wasn't that done?

MR. BELGER: Yeah, probably, I mean, in retrospect, it could have been done maybe more precisely. I mean I gotta think that the airlines put the word out through their communication. I'm

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

not--I don't know exactly what messages the controllers told the pilots; I don't know exactly what the company dispatchers told the pilots. But, yeah, probably in retrospect, I mean, it certainly wouldn't have been a bad thing to do.

MR. : Because one of the--Command Center, they said, well, they had told the ATA representative and the expectation was that the air carriers would do that.

MR. BELGER: Yeah, again, you know, there was no SOP for what to do.

MR. : Miles, what else do you have?

MR. KARA: I've got a little bit of a potpourri of questions.

MR. : Were you ever interviewed by the FBI?

MR. BELGER: No.

MR. : Do you know anybody from the Operations Center that was interviewed by the FBI?

MR. BELGER: No.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : And the FAA never had you sit down and/or everybody in the Operations Center and say, you know, give us your best narrative of what happened with you that day?

MR. BELGER: We did that informally. And in retrospect, that's probably something that we could have done more formally. But, no, the answer's, no.

MR. KARA: Sketch out for me for a moment the hubs of activity, if you will, on FAA and DOT? How many hubs of activity were there and where were they located?

MR. : On 9/11.

MR. KARA: On 9/11, after the Ops Center. You go to the Ops Center and that's where you worked out of? Were there other hubs of activity?

MR. BELGER: Yeah, yeah, I would say there were probably, just let me think a minute. I'd say there were probably, maybe four in the headquarters in the building.

MR. KARA: Okay.

MR. BELGER: I'd say my office and the

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

Administrator's offices are joined, so there's one hub of activity.

MR. KARA: Admin--

MR. BELGER: Yeah, the Ops Center, obviously.

MR. KARA: Ops Center, okay.

MR. BELGER: Air Traffic had their own communication hub set up down in their facilities where they were talking to the facilities, talking to the field people constantly--

MR. KARA: Localewise in the building, where was the--

MR. BELGER: On the tenth floor. Oh, the Ops Center?

MR. KARA: The Ops Center was on the--

MR. BELGER: On the tenth floor.

MR. : All of these are on the tenth floor, right?

MR. BELGER: The Air Traffic would be on the tenth floor.

MR. KARA: As well?

MR. BELGER: Down in the Associate

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

Administrator's complex. And then the security folks would have a--they have kind of a core operation going down in their offices, which, I think is on the third floor.

MR. KARA: Third floor?

MR. BELGER: Yeah.

MR. KARA: How about over in DOT, was there a similar?

MR. BELGER: Yeah, I don't know what they were doing in DOT to be honest with you. They were, I don't know.

MR. KARA: And then Herndon, was up, outside the Command Center.

MR. BELGER: Yeah, outside the headquarters building, Herndon would have been the next.

MR. KARA: And the primary contact with Herndon would have been the ATC or the Ops Center or both?

MR. BELGER: It would have been through Air Traffic.

MR. KARA: Air traffic out to

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. BELGER: It would have been both, but primarily Air Traffic.

MR. : Miles backtrack on that one. There was actually five that I want to make sure--

MR. KARA: Okay.

MR. : --and see if you agree, then we put our arms around them. The Operations Center; the Administrator's Office; ATC office on the tenth floor; the ACS working room on the third floor--

MR. BELGER: Yes.

MR. : --and then the ACI Watch. Would you agree the ACI Watch a lot was happening there?

MR. BELGER: Yeah, okay, but I put them in the Operations Center because that's where it physically was, it was in a room, yeah, it was a separate hub, yeah, which would be focused on intel stuff, yeah.

MR. : So, five.

MR. BELGER: They were physically in the

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

Operations Centers

MR. : On the tenth floor?

MR. BELGER: Yeah, I'll agree with that.

MR. : And if anyone was in contact with NORAD or the military, it would have been through?

MR. BELGER: Air Traffic.

MR. : Air Traffic.

MR. BELGER: Or the Ops Center--

MR. : Or the Ops Center.

MR. BELGER: --or the Command Center, out in Herndon.

MR. : And the primary net and the technical net were both in the Ops Center.

MR. BELGER: Right.

MR. : Now, was there a separate [unintell.] net and a separate security net that worked on that day?

MR. BELGER: My, I think the answer is yes. I think Air Traffic had their communication lines open and as did security.

MR. : Within the Ops Center was

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

there a method used to record information [unintell.] simply putting butcher paper on the wall?

MR. BELGER: You mean on the particular flights?

MR. : Well, let's say, just trying to figure out what flights or which flight and the details of each flight was that kind of--

MR. BELGER: There is all the, well, I'll say it's been remodeled now.

MR. : On 9/11?

MR. BELGER: Yeah there was a board, a chalkboard to write on.

MR. : But in terms of an easel with butcher paper--

MR. BELGER: I think it was a chalkboard, if I remember correctly.

MR. : Who would have been the primary person recording information--

MR. BELGER: Whoever was there and the leader told them to write it down.

MR. : And I'm jumping around a

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

little--on 9/11, prior to 9/11, FAA's ability to have complete radar coverage in the central United States, particularly over, let's say, over the mountains to our immediate West.

MR. BELGER: Right.

MR. : Can you speak to that issue at all?

MR. BELGER: Well, there are certain areas in the West and certain low-altitude areas [unintell.] but we didn't have primary radar coverage. That's why transponders were used for aircraft position locations.

MR. : Because of the altitude and because you didn't have a primary.

MR. BELGER: Didn't have primary returns in.

MR. : Did that vector, were you aware would that affect a plane at all with in particular with American Air 77 that day?

MR. BELGER: After the fact, yeah.

MR. : After the fact.

MR. BELGER: When we went back and

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

reconstructed what happened, yeah. But the transponder was turned off. And the aircraft turned back East.

MR. : And it was lost.

MR. BELGER: And it was lost, there was no primary return for however long it was, and then a primary return was actually picked up, I think, by the Dalles [Dulles?] folks. They weren't sure what it was.

MR. : Was that sort of [unintell.], if you will, on radar coverage known prior--

MR. BELGER: Oh, yeah, yeah, sure, I mean nobody envisioned that, you know, somebody would deliberately turn off your transponder and change course like that.

MR. : And, if you could, speak briefly to other threats. 93 goes down, down that end the treats or are there other issues at play?

MR. BELGER: Well, 93 went down about what time? I'll say it this time, I didn't feel comfortable that we had everything under control

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

until we got a call--Jane and I got a call from the Command Center, that said every aircraft was within 40 miles of landing. Which was basically, they're all under TRACON control.

MR. : They were all under
[unintell.]

MR. BELGER: Yeah, they were all under the TRACON control. So, I didn't feel comfortable until that time that we weren't going to have any other instances.

MR. : Let's go back to 93.

MR. BELGER: Okay.

MR. : Ninety-three crashed at about 10:03 in Pennsylvania.

MR. BELGER: Okay, so until about 12:00 o'clock or so--

MR. : But how about the immediate aftermath, were there other threats to the Washington area in specific that you were managing or that you were aware of ?

MR. BELGER: No, I don't believe so. I think by that time we were pretty comfortable that

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

we had--that we knew where all the aircraft were.

MR. : We're two hours, in, would you like to take a break?

MR. BELGER: Yeah, just take five minutes?

MR. : Sure.

[Technical interruption--break on CD--file renews at BELGER-2, same CD.]

MR. : One last question before we take our break is: Obviously for us it would be [unintell.] definitive narrative evidence is the most important and the best important and the best evidence are tapes. And just to make sure that we have everything. In each of these five hubs, who would be the person that you think--not necessarily responsible for determining who would know whether the phones were recorded?

MR. BELGER: All right.

MR. : In first in Washington Operations Center?

MR. BELGER: Dave Canoles.

MR. : Dave Canoles.

MR. BELGER: It's C-a-n-o-l-e-s.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : And how about the Administrator's offices?

MR. BELGER: Well, I think I would know that they weren't recorded, they weren't, as far as I know the phones were not recorded.

MR. : The ATC?

MR. BELGER: Either Bill Peacock or Jeff Griffith. Bill Peacock was the head of Air Traffic and Jeff was his deputy.

MR. : And the working room in the ACS?

MR. BELGER: Lee Longmire or--he'd probably be the best.

MR. : And then Claudio Fabraci [ph]?

MR. BELGER: Fabraci, intel, yeah.

MR. : So, if we asked each of those individuals, whether the phones that day were recorded, we would get a definitive accurate answer as far as you know.

MR. BELGER: They should know.

MR. : You knew that the Admin

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

was not recorded?

MR. BELGER: Yeah, my phones and Jane's phones, unless somebody was doing it without out knowledge, were not recorded.

MR. : Well, we'll take a break, right.

[BREAK.]

MR. : Okay, we're going to resume the interview, it's 11:00 o'clock. We'll just have a few more questions and then maybe get into the recommendation stage.

We're trying to figure out, as far as telling the story of what happened, the narrative of it, was the roles of leadership and what they were doing that day. And we're having a hard time kind of figuring out Jane's activities on 9/11. You know, we might be venturing into a sensitive area here. I'm just curious, could you share with us your impressions.

I mean, from what we've heard just lay it on the table, that you were running the show. That you were the person, at least that's how people

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

inside and outside the building perceived that you were the go-to person. And I guess if you could just describe how that arrived? Was that something that was expected or just evolved and kind of what was your responsibility vis-a-vis what Jane was doing?

MR. BELGER: Well, I think it just evolved that way, would be my answer. I mean, Jane, when this--when it first occurred, she was over in the Secretary's Office. She immediately came back. I think she and I were together all day. the only time we were probably not together would be when she was in her office, you know, on the phone. And at one point she went downstairs to the lobby to try to, you know, just console folks who were leaving the building.

MR. : Let me ask you--

MR. BELGER: Just to offer some moral encouragement.

MR. : Did that concern you all in that you've got this active emergency that's trying to be managed that, you know, that was,

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

obviously a very compassionate thing to do, but was that the proper thing to do?

MR. BELGER: Well, I didn't second-guess that at all. I mean this was later in the afternoon. This was after everything was on the ground. And, you know, we were in that mode of trying to figure out what do we do tomorrow. And I mean people were very, very concerned about their relatives; their neighbors.

I mean, Shirley, who's my assistant, her husband worked at the Pentagon. And you know, she was terrified, until she learned that he was safe. So, he didn't know if our building was going to be targeted or what. So, I think it was a very appropriate thing to do.

Yeah, I don't know, I think she--she was there. She was making decisions along with me. I--

MR. : So, you didn't feel kind of abandoned or--

MR. BELGER: Oh, Lord, no. I mean, it's kind of my nature just to take charge.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : So, you worked as a team?

MR. BELGER: Yeah, I have no second-thoughts or reservations about, you know, what she did that day. No. We were there together.

MR. : Did you ever hear anybody in the building issue second thoughts, or, you know?

MR. BELGER: No.

MR. : There was a general good feeling about the way the leadership handled the situation?

MR. BELGER: Well, let me just say, I never heard anything negative. But I, you know, I had been through some of those things before. And I think we did a pretty good job of keeping the Ops Center and the headquarters under control and, you know, we called all of the senior managers together in my office, sometime late in the morning. And activated our remote relocation site.

Got the people knowledgeable about what they were supposed to do. And you know, just got

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

sensitized to what--this was going to be a three-or-four-day exercise and don't plan to go home for a while and, Jane spent a lot of time; not a lot of time, she spent more time than I did talking to United and American and the airlines, but that was appropriate, I think.

MR. : Were you all in touch with members of Congress, do you recall that?

MR. BELGER: I wasn't. That was the last thing on my list. That's a joke, that's a joke, it's a joke.

MR. : That's all right, we understand.

MR. BELGER: We both worked on the hill we understand that and his laughing was--our congressional liaison folks, I'm sure were on the phone with them all day.

MR. : Can I ask you about after-action reports?

MR. BELGER: Yeah.

MR. : We talked to a bunch of folks at FAA who talked about that. What

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

are--first of all, are you aware of an after-action report, as such, being undertaken in FAA?

MR. BELGER: Not a formal consolidated after-action report. That's one of the things, in retrospect, that we probably could have done better. But I tell you, my, at least my thought process--

MR. : Yeah, please.

MR. BELGER: --during that time. In retrospect that's maybe something we could have done better. Now, having said that, though, there were hourly discussions with Air Traffic, particularly about what processes did we need to put in place, you know, to improve the communications between us and DOD. What did we need to do to get DOD people in our facilities actually, which we did. What did we need to do to improve and streamline the communication from the field to NORAD.

And we changed some of those procedures, I think within days.

MR. : Mm-hmm.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. BELGER: And made it a lot more flexible and appropriate for the field facilities to directly call the NORAD folks without going through the region with headquarters.

So, we implemented those kinds of things kind of quickly, I think.

MR. : Mm-hmm.

MR. BELGER: So, we were going through a self-assessment and self-critique daily and changing things. What i can't show you is a consolidated, you know, after-action report. But we knew. Here's how my thought processes--

MR. : Yeah.

MR. BELGER: We knew that the FBI was investigating everything, starting from that day. And our instructions were to our people, you know, give the FBI everything. So, there was some thought that we didn't want to be in doing our own review at the same time the FBI was in our facilities doing their review and gathering all their information.

Then, sometime after 9/11, I don't

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

remember when, the other Commission started doing their review. So, we figured everything in connection--

MR. : The Joint Intelligence?

MR. BELGER: Yeah, right the Congressional--so we figured, you know, everything's going to come out.

MR. : Are you aware was time, at least a start was attempted at doing an after-action report? Do you recall any attempts to do that?

MR. BELGER: No. Not in any agencywide, not agencywide-type of report. Now, Air Traffic might have started to do their own, I don't know.

MR. : Did the action on Capitol Hill and with the Administration in terms of reorganization, did that have an impact on your decision on an after-action hearing?

MR. BELGER: I don't follow you, no.

MR. : The establishment of TSA, did that after--

MR. BELGER: Well, no, I don't think so.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

No, I don't think so, no.

MR. : One pre-9/11 question: Do you--were there exercises that the Administrator's Office took part in on emergency response, table-to-type stuff that you recall?

MR. BELGER: Yeah, over the years, not a lot, but there were some over the years. Mostly table-top, mostly, you know, telephonic communication exercises.

MR. : And how often would you say, one a year?

MR. BELGER: Maybe once a year at the most.

MR. : And was that coordinated with ATC and other agencies or was it an internal. How does the FAA headquarters respond?

MR. BELGER: It could have been either of those. Some might have been a security-oriented incident. The Command Center, just, every now and then just did a communication check. Or the Operation Center, not the Command Center. A communications check was to make sure that they

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

could communicate with everybody.

MR. : Uh-huh, but do you recall any exercises of a security nature where that was practiced with Herndon or was the exercise mainly inside the building?

MR. BELGER: There were some that were even broader than the FAA. Some security exercises--

MR. : Uh-huh.

MR. BELGER: --that were broader than the FAA in which the Herndon folks might have participated.

MR. : And Mike Weikert would have been the best person, do you think to talk about that, do you know?

MR. BELGER: I don't even know that name, Mike Weikert?

MR. : Yeah, wasn't that the name, they told me that was kind of the exercise person--

MR. BELGER: At the Command Center?

[Simultaneous inaudible conversation.]

MR. : But did you ever recall any exercises that practices domestic hijacking or--

MR. BELGER: Yeah, yeah.

MR. : Do you remember when--

MR. BELGER: I don't remember exactly. You know, and during the years, also, I mean over the course of time, there were false hijack alerts, in which the system would get tested. The Ops would get activated, the net would get activated. So, it was exercised over the years.

MR. : This was something that John had mentioned earlier and we didn't get around to it, but in helping us, you know, I mean, so much is we're doing this obviously all with the benefit of hindsight. And we did want to give you a chance to kind of give us a time text. And it was like for your insights on, you know, what was the mind set? What were the priorities that you were perceiving from the public? Did you have access to polling data? What was the pressure from Capitol Hill? In the summer and early in--or throughout

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

the summer of 2001, what was the context under which you were operating?

MR. BELGER: That's a good question. From the spring of 2000 through the summer of 2001, the focus, the pressure was on capacity, congestion, and delays. I mean, just look at the news stories; the congressional hearings, during the summer of 2000. There were dozens of hearings it seems like. All focused on congestion, delays. Interest from the White House; initiatives that we took for what we called the Spring 2000 Program, I mean it was briefed all the way up to the White House.

MR. : What was that that Spring 2000 Program?

MR. BELGER: It was an initiative we took with the airlines to be more collaborative with the airlines in decisionmaking; to implement some new weather prediction tools. We actually opened up the Command Center for airline employees to come work there. An initiative that would be more collaborative, share more information, hopefully make smarter decisions.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : In the Command Center, you mean Herndon?

MR. BELGER: Herndon, yeah. So the focus was clearly on capacity.

MR. : And did you guys have any database, because, you know, we've looked at the hearings, we've looked at the headlines and, I mean, that is an important part of the story, you know. Everybody was, this is what people were focusing on.

But from a purely public perspective not Congress's representing with their constituents worry about, did you all have a database or a call where you logged what people called about and what could we get information as far as the percentage of calls that were on these different subjects?

MR. BELGER: the FAA didn't but DOT does. The Consumer--the Consumer Hotline. The DOT tracks delays by carrier and they tack all types of consumer calls, whether it be lost baggage, delayed flights, inappropriate attention by the carriers. There's a database in DOT that would show during

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

that time period, there was a significant increase in complaints about delays.

MR. : And did the subject about a Passenger Bill of Rights--

MR. BELGER: Yeah--

MR. : --play into this?

MR. BELGER: --that came up, yeah, yeah. That was the result of all the delays and the way that passengers felt they were being treated by the carriers.

MR. : And, in addition, if someone you know, as people had concerns about security, you know, what do you guys do--that would also, would that presumably be in this database?

MR. BELGER: There would be--if there were complaints about security, they would be in that database, yeah.

MR. : Who would we call about that database?

MR. BELGER: It's the DOT Counsel's Office, I don't know who the person would be. But they actually publish a report every month.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : Oh, really?

MR. BELGER: Yeah, it's on their Website, actually. They publish a monthly report of airline delays; percentage of flights on time; and then they categorize passenger complaints in a bunch of different categories.

MR. : Is there anything else that you'd like to talk about on the context setting of things that were--any non-security matters the other priorities in FAA--

MR. BELGER: Well, I mean the context would be, Jane and I were focused on delays and congestion. Not a day went by during the summer of 2000 and 2001 that that wasn't our priority fundamentally, unless there was some other crisis.

You know, the domestic security situation seemed to be well in hand. We have a very good security organization with a well-respected, well-known, well-respected in the intelligence community, leader. We had a--

MR. : This was when Admiral Flynn was--

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. BELGER: Irish, yeah.

MR. : What about when he was
replace by General Canavan [ph].

MR. BELGER: That didn't work out too
well.

MR. : And not only post-9/11,
but are you saying that with respect to pre-9/11?

MR. BELGER: Well, I don't know, pre-9/11,
he came with a great reputation, also. He wasn't
there too long before 9/11, I forget exactly when
he came?

MR. : March, I think.

MR. : Did you see him as active
in--you didn't see him as active and knowledgeable
as Irish Flynn or how would you compare the two?

MR. BELGER: Well, I don't want to be
critical, but he was as knowledgeable as Admiral
Flynn was, in my opinion. He didn't have the grasp
of the FAA's procedures and policies and
relationships as did Flynn, but he hadn't been
there that long either.

MR. : Do you recall of him, when

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

he took over and I think anybody who takes over a job kinds of assesses where things are.

MR. BELGER: Sure.

MR. : Do you recall him coming forward in 2001, saying, hey, you know, I'm the new guy here and I've looked, and I've got real concerns with this, that, or the other thing?

MR. BELGER: No. I don't recall that at all.

MR. : So, in your impression was he comfortable or uncomfortable with--

MR. BELGER: I had to assume that he was comfortable, given the fact that I don't recall that he ever said he wasn't.

MR. : Did you ever get a sense from him what his top priorities were with security, what his agenda was?

MR. BELGER: Well, I think it was the same as all of ours, I mean, I think it would be the same as all of ours, which was, you know, the focus was on international terrorism, bombings, trying to improve the screening system. Clean those 107 and

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

108 rules out.

MR. : Do you recall any specific major initiatives that he had in mind?

MR. BELGER: I don't recall, no.

MR. : Before we go to recommendations and keeping with those elements. Is there anything, I mean, you know our mandate, understanding the evolution of the aviation security system, you know seeing what happened on 9/11 and formulating recommendations. Before getting recommendations, is there anything that we should have asked you that we didn't that we need to know to do our job right or that you came prepared to talk about that we didn't cover?

MR. BELGER: Well, that's a good question. No, but I'll certainly call you. But I will tell you your question to me about Jane surprised me. I hadn't anticipated that. That was the only question, you know, that I hadn't quite anticipated.

I might have been the guy that was doing the talking and--but we were a team.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. : And let me just say for you that it's not we have any indications to the contrary. It was more just to capture your response.

MR. BELGER: Okay. We were a team for five years, though.

MR. : Well, with that, I think we'll turn now to the last part, which is to get your recommendations--

MR. BELGER: Yeah, I thought about a couple.

MR. : In many ways, we see that as at least as important as telling the story, if not more important. So, please.

MR. BELGER: Well, I got maybe three recommendations. I could do a lot, but there are three that I think are really kind of critical.

The first I mentioned: My biggest fear today is that there's no-- Let me back up. Prior to 9/11, the FAA and the FBI knew--and the military--knew how to manage hijackings. You know, they'd been doing it since the '70s. There

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

was a protocol between the FAA and FBI and the military and it worked.

MR. : And you're talking here about the common strategy?

MR. BELGER: Yeah, the common strategy was a part of that protocol and there were memorandums of agreement between the FAA and the FBI as to who did what when, who was responsible when the aircraft was considered to be in flight; the FBI was responsible when the aircraft was not in flight. And that was very clear and there was no confusion when it came to making the decision as to who had the authority to make that decision.

MR. : Mm-hmm.

MR. BELGER: I don't think that's the case today. I'm worried that, particularly with DOD's new, more active role that when it gets down to a crisis, it's not going to be clear who really has the wherewithal to make which decisions, at which time.

And my biggest recommendation would be that TSA, FAA, and DOD really put together and

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

practice some protocols and scenarios and work through these issues of who's going to do what to whom, when?

MR. : Do you have any guidelines as someone experienced in the system of how if you were doing it in FAA, if you were made king, and could write the protocol, how would you do it?l

MR. BELGER: Well, there ought to be, first of all the fundamental premise going back to the '70s that the FAA was in charge of a hijacked aircraft while it was in flight; and that was actually in legislation, that transferred to TSA. But I gotta think today that DOD would question that.

MR. : You think it would be a good thing, though, to retain the primacy of TSA in that position or do you think that's something that just needs to be analyzed?

MR. BELGER: Well, I personally think they should retain it, but I think it needs to be made clear to everybody that that is their role. And even before--after I left the FAA, I helped the

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

current Administrator on a couple of things before I went to work with Lockheed. One of the things I recommended to her, which to her credit, she did follow up on, was that there needed to be an exercise between the FAA and TSA. They actually did that over, I think over a day and a half.

MR. : Do you remember when?

MR. BELGER: It would have been November or December

MR. : Of last year, 2003?

MR. BELGER: Yeah, and I actually sat in on one afternoon of the exercise, it was a great exercise.

MR. : And this was specifically on hijacking coordination?

MR. BELGER: Yeah, it was a table-top type exercise. And really kind of exposed the TSA folks to what happens.

But I'm just concerned with orders out there now to shoot down aircraft, the DOD, by their nature are going to be very aggressive. I just don't think that roles are real clear or broad

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

that's what I think.

MR. : Kind of gets back to be about shooting down [unintell.] prospective drug smuggling. Are you worried in your mind that, you know, the law of unintended consequences could come up here and we end up shooting down something that didn't need to be shot down?

MR. BELGER: Yeah.

MR. : How about other aspects of that, because we were out at Air Traffic Control at Dulles and they were showing us what they do and how certain things they have to be watching for this. Do you ever worry that, again, you mentioned very well, about safety, security, and efficiency, there always has to be a balance that safety in any way could be compromised and a new security paradigm and, if so, specifically where?

MR. BELGER: No, I don't think I'm worried about that. I mean, give me an example of--I don't think I'd be worried about the security procedures--

MR. : Compromising--

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

MR. BELGER: --compromising safety. Other than things, like, you know, the cockpit door, which was minima.

MR. : You want to go on, I think you said you had three.

MR. BELGER: Well the other one relates to CAPS. I think some type of capability like CAPS to really further identify who the bad guys are is absolutely needed. Given the fact, I don't think we're ever going to get to 100 percent detection capability. Seems to me you're better off knowing who the people are rather than knowing what they might be carrying. I mean, the most honest, let me put it this way. The good guy carrying a knife is not a threat. The bad guy with his bare hands is a threat.

So, I think, I know there are bit privacy concerns and I'm sensitive to those but some type of capability like that has got to get implemented. So you can have better knowledge of who the pl are, not what they might be carrying.

MR. : From what you know of the

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

development of CAPS, do you think they're headed in the right direction?

MR. BELGER: Yeah, I think so, I mean, I don't have any first-hand knowledge, but I think they are, yeah.

MR. : Was there another recommendation?

MR. BELGER: Yeah, and this goes to the intelligence sharing, which starts with having the better capability of knowing who everyone is who enters this country. I mean the fact that these guys were, you know, 19, 20 of them in the country for four or five years planning this is just astounding to me. So I think, you know, I know there are some efforts underway to put some processes in place to better identify people coming into the U.S. particularly from visa states. But that's got to be done and that information's got to get shared with all the intelligence agencies.

And I'm still not sure, today if there's a common database. I don't think there is.

MR. : Maybe you can help us on

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

one issue that's come up--

MR. BELGER: Okay.

MR. : --because I know you testified before Congress and then had to respond to a lot of public inquiries on the different aspects of the system. We talked a great deal about this issue of the veil of mystery over security, don't tell the bad guy your weaknesses, over what's important in the democracy of public oversight and things don't get fixed until you call attention and everywhere we turn, whether it's border patrol or FAA, you know, people get in trouble for talking about weaknesses, but then they don't get fixed until they're talked about.

What recommendations do you have for us of balancing the veil of mystery versus the need to know?

MR. BELGER: Well, that's a good question. Maybe it takes somebody, I'm thinking out loud now, maybe it takes somebody other than the owner of that information to make a decision that it's worth the risk to talk about it. In other words, maybe

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

it takes somebody outside the FAA to say--

MR. : Or TSA?

MR. BELGER: --or TSA, now, yeah, thanks. Maybe it takes somebody outside of TSA to say, you know, it's okay to talk about the weaknesses in the screening system. Or maybe it takes somebody outside of Customs to tell them, you know, it's okay to talk about some of the border security issues.

I don't know it's going to be hard to get the owners of that data to come forward and talk about it. It's going to be hard.

MR. : And the idea of talking about it in public forum where the IG issues report or GAO. Did ou ever see that as a huge problem, like when the latest IG thing, not only, oh, my God, our system has a problem, let's go to work or was it telling these guys what to do?

MR. BELGER: 99.999 percent of the time the IG never told us anything we didn't already know.

MR. : Yeah. But how about that

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

aspect of did you when you saw those reports go public because you had that--

MR. : Do you see that as a vulnerability--

MR. BELGER: Oh, sure, sure.

MR. : That's a tough question.

MR. BELGER: Sure, you would like for people to think and I know this is naive, but you would like for people to think that if they try to carry something through the screening point, it's going to get caught. You don't want people thinking that, well, I've got a 60 percent chance that I can get through. Even if it's true, you want them thinking that they're going to get caught.

MR. : Anything else.

MR. BELGER: I hope that was helpful.

MR. : Oh, very helpful and thank you very much for all of your time.

MR. BELGER: I'm glad to and I'll be glad to follow up with them. And who should, if I have any other thoughts or--

MR. : Either of us, yeah.

MR. BELGER: I apologize again for my
voice.

[END OF INTERVIEW.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

INTERVIEW OF (b)(6), (b)(7)c **AND** (b)(6), (b)(7)c

On December 29, 2004 (b)(6), (b)(7)c and (b)(6), (b)(7)c Boston Air Route Traffic Control Center (Center), New England Region (NER), Federal Aviation Administration (FAA), 35 Fieldstone Drive, Nashua, New Hampshire were interviewed at their place of employment by USDOT/OIG Special Agent (b)(6), (b)(7)c (b)(6), (b)(7)c The interview had been arranged through Center management. (b)(6), (b)(7)c and (b)(6), (b)(7)c were advised of the identity of the interviewing agent and the purpose of the interview and provided the following information:

(b)(6), (b)(7)c has been employed by the FAA for approximately 22 years. He worked initially as an Air Traffic Controller (ATC) and has worked in various Air Traffic staff positions during his career. His current title is (b)(6), (b)(7)c (b)(6), (b)(7)c at the Center. In September 2001, he was assigned as a (b)(6), (b)(7)c (b)(6), (b)(7)c in Air Traffic management.

(b)(6), (b)(7)c has been employed by the FAA for approximately 16 years. Prior to the FAA, she worked as a (b)(6), (b)(7)c She has worked in administrative/support positions with the FAA. In (b)(6), (b)(7)c she was employed in her current position.

According to (b)(6), (b)(7)c the Center has a Military Operations Specialist (MOS) position assigned to the Traffic Management Unit (TMU). The MOS position is usually staffed only when the military has notified the FAA in advance of military activity that might impact airspace under the control of the Center. This does not happen with enough frequency such that the MOS position is staffed that often and even when the position is staffed on a certain day, it is usually as a collateral duty.

Both (b)(6), (b)(7)c and (b)(6), (b)(7)c were working at the Center on September 11, 2001 (9/11). (b)(6), (b)(7)c advised that after the events of that day began to unfold, their primary point of contact was (b)(6), (b)(7)c at the NER Quality Assurance

Prepared by: Special Agent (b)(6), (b)(7)c Date Prepared: 1/3/05

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

1/5

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF

(b)(6), (b)(7)c

AND

(b)(6), (b)(7)c

Division. It was (b)(6), (b)(7)c understanding that most of the requests relayed through (b)(6), (b)(7)c came from Dave CANOLES and Tony FERRANTE at AAT-20 in FAA Headquarters. There was some direct contact between the Center and AAT-20, but (b)(6), (b)(7)c recalled that this was via telephone and no record of telephone calls was kept. (b)(6), (b)(7)c and (b)(6), (b)(7)c indicated that most of the tasks they were assigned came via telephone calls as opposed to e-mails.

(b)(6), (b)(7)c advised that he prepared a "partial" transcript of Center radio communications with the military that he believed was sent to AAT-20. The cover memorandum that he prepared was dated 9/15/01 and the "partial" refers to the fact that the transcript contains only transmissions that were pertinent to the event, in this case the circumstances surrounding American Airlines Flight 11 (AA 11). The memo lists all of the parties involved in the transmissions.

(b)(6), (b)(7)c noted and (b)(6), (b)(7)c agreed that the MOS position at the Center was not staffed on 9/11. (b)(6), (b)(7)c noted that the transmissions in the partial transcript are transmissions with the military at Cape Cod, Massachusetts from the "severe weather position" in the TMU. The severe weather position requested that the military (Air National Guard) at Cape Cod scramble fighters. This request was made after conversations between the Center and Cape Approach.

(b)(6), (b)(7)c advised that his cover memorandum and the partial transcript were faxed to the NER and he assumed from NER to AAT-20.

(b)(6), (b)(7)c advised that he prepared an earlier transcript on the day of the actual occurrence of AA 11 and United Airlines Flight 175 (UAL 175). It was his impression that FAA Headquarters was trying to get an idea of what was said and was coordinating with all of the air traffic control facilities involved. There were no questions about communications with the military for the first few days after 9/11.

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

2/5

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

REDACTED FOR DISCLOSURE

INTERVIEW OF (b)(6), (b)(7)c **AND** (b)(6), (b)(7)c

The Center had responsibility for preparing the “aircraft accident package” on AA 11 because the initial sector that handled the flight was in the Center’s airspace. All of that material was sent from the Center to (b)(6), (b)(7)c as all of the 9/11 documents have been centralized at the FAA in Washington for FOIA purposes. This package has the transcripts, personnel logs, facility record of operations and weather information, but no radar data. New York Center had responsibility for UAL 175; Washington Center had responsibility for AA 77; and Cleveland Center had UN 93.

(b)(6), (b)(7)c and (b)(6), (b)(7)c advised that they did all of the radar inputs for 9/11 for AA 11 and UAL 175. They used “radar viewpoint” to produce the radar document and this was provided to AAT-20. This radar information did not track military aircraft. (b)(6), (b)(7)c did the terminal “RAPTOR” work that enabled the playback of radar data.

(b)(6), (b)(7)c indicated that the question about the military probably came up around the date of his memo, 9/15/01. Neither (b)(6), (b)(7)c nor (b)(6), (b)(7)c were really thinking about the issue when it came up nor did they know who initiated the request or why.

(b)(6), (b)(7)c advised that he built “WAV” (wave) files of the transmissions covered by the 9/15/01 memo and e-mailed the files to (b)(6), (b)(7)c. Based on his review of the file, (b)(6), (b)(7)c believed that (b)(6), (b)(7)c of the FAA in Washington received the memo by fax.

(b)(6), (b)(7)c advised that he was aware of the issue where an individual from the FAA indicated that AA 11 was still airborne at 9:24 a.m. on 9/11. The FAA person was (b)(6), (b)(7)c, who was a staff person that talked to (b)(6), (b)(7)c and this would be in the accident package.

(b)(6), (b)(7)c advised that he probably did a partial transcript of the MOS position. (b)(6), (b)(7)c was shown Attachment 6 to the JRI-2 action lead request that indicates three wave files for the Center (ZBW) MOS position. (b)(6), (b)(7)c reviewed the

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

3/5

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF (b)(6), (b)(7)c **AND** (b)(6), (b)(7)c

document and indicated that no additional wave files exist. (b)(6), (b)(7)c and (b)(6), (b)(7)c indicated that based on the last page of the attachment, someone must have asked for the "Huntress" conversations which are the MOS wave files. (b)(6), (b)(7)c advised that he probably did a partial transcript for the MOS position. All of this should be in the official accident package and was most likely provided to NER and AAT-20.

(b)(6), (b)(7)c advised that the Center uses a high capacity voice recorder, which records 24 hours per reel of 1" tape. Portions of this tape are copied to a regular sized cassette and then through the computer, the recording is converted to a digital format and a wave file. Conversions were done only when asked for and the wave files are not part of the accident package.

(b)(6), (b)(7)c and (b)(6), (b)(7)c advised that the Center still has the master reel for 9/11. They have prepared "certified re-recordings" from the master reel.

(b)(6), (b)(7)c was asked when the Center first notified the military. (b)(6), (b)(7)c reviewed the partial transcript and advised that the transcript contains a reference to the Center telling Cape Cod TRACON that they wanted to talk to Otis Tower (Air National Guard) at 12:34 UTC or 8:34 a.m. EDT. There is no indication as to when the ANG got aircraft into the air, but they probably needed (b)(6), (b)(7)c authorization.

(b)(6), (b)(7)c advised that he recalled there were some direct conversations with AAT-20 personnel in which he was asked about conversations between the Center and (b)(6), (b)(7)c and the Center and Cape Cod. He knew the issue was the military notification, although no one from AAT-20 ever said exactly why they were asking. He did not recall who at AAT-20 he spoke to on this particular question. He did not recall receiving any written inquiries on the issue from AAT-20.

Neither (b)(6), (b)(7)c nor (b)(6), (b)(7)c were ever asked to alter any documents or transcripts by anyone for any reason.

Attached for your review is the FAA/NORAD Statements to the 9-11 Commission report.

I spoke with (b)(6), (b)(7)c this morning and he advised that plans are still in place to issue a joint transmittal letter covering our respective reports. The acting IG at DOD is (b)(6), (b)(7)c
(b)(6), (b)(7)c

He affirmed my understand from our last meeting that he would write the first draft of the transmittal letter upon receipt of our near final report. If you don't have any concerns I will provide him with a copy of this most recent draft report.

Thanks

(b)(6), (b)(7)c

On Friday, 2/11 (b)(6), (b)(7)c was interviewed. Though he admitted to talking to Jeff GRIFFITH on a near daily basis following 9/11 he did not have any recollection of having been asked for or providing a copy of the NEADS log to GRIFFITH. Further, he did not recall having agreed to use the military's logs as the source for FAA notification to the military.

DOD has pretty much completed their field work with the interview of (b)(6), (b)(7)c We have some additional field work concerning FAA communication of suspicious aircraft (up their chain-of-command and to the military) pre and post 9/11. I don't anticipate that the remaining field work will take more than two days. However, prior to conducting further interviews on that aspect we still need to complete a review of the FAA orders that were provided to us and obtain some that were not provided. We also are waiting on a copy of FAA's report concerning the KY Gov incident in June 2004. Today, I am supposed to talk to (b)(6), (b)(7)c about both of these items.

Following the interview on Friday, (b)(6), (b)(7)c and I met with (b)(6), (b)(7)c and (b)(6), (b)(7)c (b)(6), (b)(7)c to discuss our joint report. As can be seen in the message below I have provided them with a copy of the draft report outline and a copy of our results in brief as follow-up to our discussion on Friday. They in turn have provided a copy of their results in brief (see attached PDF file). Their brief also contains their proposed timeline (see page 13). They are shooting for Mid March to complete the draft report.

(b)(6), (b)(7)c has indicated that they will most likely issue two reports. The first will be unclassified, joint with us and will report the results of our joint review of the Commission's allegations. The second will be classified and contain their recommendations.

Investigation Quarterly Synopsis

Case No: 042R0122001

Report Date: 12/12/2006

Title: FAA- NORAD Statements to 9-11 Commission

Summary of Predication

Case opened at the direction of DAIGI, DOT-OIG based on a referral a July 24, 2004 from the National Commission on Terrorist Attacks Upon the United States (the Commission). During the Commission's investigation they discovered evidence that public statements made by North American Aerospace Defense Command (NORAD) and Federal Aviation Administration (FAA) officials at a the Commission hearing on May 23, 2003, and elsewhere, regarding the actions of NORAD and FAA officials in responding to the 9-11 attacks were not accurate. The Commission did not investigate whether these statements were knowingly false. The Commission specifically noted four statements made by retired General Larry ARNOLD in his testimony on the 23rd of May as being inaccurate.

- 1) The FAA notified the military at 9:16 a.m. that United Flight 93 (UN93) was hijacked.
- 2) The FAA notified the military of the hijacking of American Flight 77 (AA77) at 9:24 a.m.
- 3) When the Langley fighters were scrambled, their objective was to respond to the reports at 9:16 that UN93 was hijacked and at 9:24 a.m. that AA77 was hijacked.
- 4) [Military] Officials were tracking UN93 and intended to intercept the aircraft if it approached Washington, D.C.

The Commission believes that NORAD and FAA made significant efforts to get accurate information as to what had transpired, within days of September 11th. The Commission further believes that once accurate reconstruction information was developed by NORAD and FAA they both had the burden of correcting the public record and insuring that information, including testimony provided to the Commission in May 2003, was accurate.

Investigation will be conducted in cooperation with Department of Defense, OIG. DOT-OIG's portion of the investigation will seek to determine whether FAA officials knowingly made false or inaccurate statements at a Commission hearing on May 23, 2003 and/or elsewhere regarding the action of FAA officials in responding to the September 11th attacks.

Updates

12/03/2004 Investigation to date has revealed that the FAA's Evaluations and Investigations Staff (formerly AAT-20) prepared the FAA's initial 9-11 chronologies. This effort began on or about September 11th and continued through the end of the month. All subsequent timelines, which we have identified, that were produced by the FAA and that referenced military notification were based upon the work products generated during this period.

Witnesses indicate that AAT-20 had access to some information from the military that they likely received sometime between the 13th and 17th of September 2001. Though preliminary at this stage, some evidence and witness testimony suggests that AAT-20 had information, from FAA and military sources, concerning the correct time that it notified the military about United Flight 93 (10:07 EDT) but removed it from its final military notification chronology. We are currently working on determining the exact information AAT-20 obtained from the military. Further, we are identifying the extent of the internal information, which pertained to military notifications, AAT-20 had obtained when it completed its chronologies.

Witnesses have advised that sometime after Former FAA Administrator Garvey testimony before the Commission in May 2003 the Department's Chief of Staff may have made requested that FAA validate their timeline data. Though we are currently working on pinning down the precise request from the COS; we have learned that the work product apparently generated as response to the COS's request was based on existing timelines. Further, no source materials were review and no further validation was conducted in preparation of the work product. We have some additional interviews and re-

OFFICE OF INSPECTOR GENERAL

Investigation Quarterly Synopsis

Case No: 042R0122001

Report Date: 12/12/2006

Title: FAA- NORAD Statements to 9- 11 Commission

interviews to conduct in connection with this finding to further pin it down.

During our investigation we discovered that the FAA had two public websites containing incorrect references regarding when the FAA notified the military about American Airlines flight 77. We brought this to the FAA's attention and they changed both sites to read: "9:20. The FAA establishes an open phone line with other government agencies and the military to share information about missing or suspicious aircraft. (revised entry 10/21/04)." The new statement is consistent with the Commission's conclusions. However, the Commission does point out that this teleconference played no role in coordinating a response to the attacks of 9/11.

02/15/2005 On 2/15/05, the DOT-OIG, along with DOJ-OIG received a request from Congressmen Conyers, Oberstar and Waxman By letter dated February 15, 2005, requesting that we investigate the DOT's role in the classification and declassification of a 9/11 Commission report (the 3rd monograph) of the FAA's pre-9/11 knowledge of aviation threats and to determine whether the classification review of the report followed applicable legal requirements governing prompt declassification of information (Control #2005-018). We investigated DOT's role in the classification and declassification review of the 9/11 Commission's third monograph, focusing primarily on the FAA's review of the monograph and the timeliness of the FAA's response to DOJ. We found that FAA did appear to promptly process the DOJ request for review of Part II of the 3rd monograph. Records shows that on 9/1/04 FAA received Part II of the monograph from DOJ and provided a reply on 9/16/04, one day before DOJ's imposed deadline. Furthermore, DOT's role in the classification review was greatly limited by the fact that all of the classified information contained within the monograph came from agencies other than the FAA and thus, the FAA had no authority to recommend the declassification of any of the information contained therein. DOT-OIG's response to the congressional has been drafted and is pending review.

04/15/2005 On March 10, 2005, Congressman Shays sent a request to Christopher McMahon, RADM, MARAD, who is assigned to the DOT-OST Office of Intelligence, Security and Emergency Response, as follow-up to his testimony at a March 2, 2005, hearing before the Subcommittee on National Security, Emerging Threats, and International Relations. The purpose of the hearing was to examine the proliferation of categories of information that are not classified but are withheld from public disclosure. Congressman Shays asked for McMahon's response to ten questions. In light of the pre-existing work conducted as part of this investigation, OIG-HQ requested a review of the first six questions in Shays' letter. The first six questions primarily concern the FAA's and DOT's response to their classification review of the 9/11 Commission's 3rd monograph. (b)(5), (b)(6), (b)(7)c

(b)(5), (b)(6), (b)(7)c

(b)(5)

04/26/2005 Investigative work is essentially complete with regard to the Commission's referral. (b)(5)

(b)(5)

(b)(5) DOT's report is essentially complete, pending further review and revision.

06/23/2005 On June 1, 2005, a meeting was held with DOD-OIG to clarify how we are going to jointly report the results of our response to the 9-11 Commission's August 2004. referral. (b)(5)

(b)(5)

DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Investigation Quarterly Synopsis

Case No: 042R0122001

Report Date: 12/12/2006

Title: FAA- NORAD Statements to 9- 11 Commission

The joint letter is being prepared to cover our respective reports.

CONGRESSIONAL

During the conduct of our review of the Commission's referral, in February 2005, Congressmen Conyers, Oberstar and Waxman asked DOJ-OIG and us to review the declassification of a 9/11 Commission staff report (monograph) on the Federal Aviation Administration's (FAA) pre-9/11 knowledge of aviation threats. Our review found that FAA completed its review of the monograph in a timely fashion, that none of the classified material in the monograph was originally so classified by FAA, and that the TSA's review of the monograph consumed more than three months of the approximate five-month period that passed between delivery of the monograph to DOJ and its delivery to NARA. On June 14, 2005, JI briefed the Congressmen's staff and transmitted to them our final report. No further action on this Congressional is anticipated.

10/13/2005 The draft report/letter documenting DOT-OIG's response to the 9-11 Commission's referral is being reviewed and edited. The joint letter is being prepared by DOD-OIG to cover our respective reports.

01/10/2006 In November 2005, the revised report was forwarded to JI-2 for review. (b)(5)
(b)(5) On Dec. 20th a power point presentation and hand-out were prepared, to be used during an OST briefing, and forwarded to HQ for review.

04/01/2006 Following late December 2005, inquiry from DOD-OIG on the status of the OIG's report, case agent had discussions with (b)(6), (b)(7)c and (b)(6), (b)(7)c about reporting out on this matter. Revisions were made to the report. An OST briefing was revised and submitted to (b)(6), (b)(7) on 1/17/06 and then again on 2/1/06, following further revision. Following a subsequent conference call with (b)(6), (b)(7) and (b)(6), (b)(7)c case agent prepared an executive summary document and on 2/16/06 submitted it to (b)(5), (b)(6), (b)(7)c
(b)(5)

(b)(5) Following the last conference call, the executive summary was prepared as a potential alternative to an OST briefing. (b)(5)

08/09/2006 In May 2006, additional work on a final report commenced and again in July/August 2006. A draft report was submitted to the Acting IG on 8/2/2006. A copy of the draft report was also to be given to the "10th floor" for comment.

During this period it was decided that a joint DOD report will not be issued.

There were numerous media inquiries about the status of the report and subsequent news articles in Vanity Fair, Washington Post and NY Daily News, to name a few, about the status of our report.

Final report is pending.

10/01/2006 On August 31, 2006, the final report was issued documenting the results of our review from a referral made by the 9/11 Commission staff regarding certain inaccurate statements made by FAA officials regarding their notifications to DOD during the September 11 hijackings. Our investigation included examining whether FAA officials knowingly made any false statements. The report contained the review results, which indicated that, we did not find evidence to conclude that FAA officials knowingly made false statements, purposely omitted accurate information from any statement, or intentionally failed to correct an inaccurate statement after becoming aware of it. However, the review did discover that three FAA executives did not act to correct an erroneous FAA response to a Commission Question for the Record (QFR) after learning it was inaccurate. The report contained recommendations to the FAA Administrator that FAA correct its QFR response and consider appropriate administrative action for two current executives. The other recommendations to the Administrator include enhancing FAA's capability to respond to and report on hijacked or suspicious

Office of the Secretary
of Transportation

Office of Inspector General

Subject: INFORMATION: Meeting DOT Chief of Staff

Date: Mar. 30, 2005

From:

(b)(6), (b)(7)c

Asst. Special Agent-in-Charge, (b)(6), (b)(7)c

Reply to

Attn of: JRI-2

(b)(6), (b)(7)c

To:

File 042R0122001

On March (b)(6), (b)(7)c 2005, Special Agent (b)(6), (b)(7)c and I met with DOT Chief of Staff John Flaherty, special assistant (b)(6), (b)(7)c and (b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c The purpose of the meeting was to obtain information from Mr. Flaherty concerning the proposed DOT Emergency Response Organization (ERO) with the stated intent of incorporating the information into the OIG's response to a referral from the 9-11 Commission concerning allegedly inaccurate public statements made by DOD and FAA officials regarding the actions of DOD and FAA in responding to the 9-11 attacks.

Mr. Flaherty expressed essentially three concerns in discussing the Department's ongoing work on the ERO in connection with the 9/11 Commission's referral:

- 1) He did not see a connection to the proposed ERO and the allegations in the 9/11 Commission's referral.
- 2) He opined that the philosophy behind the Department's ERO is broader in scope than the very narrow issue in the 9/11 Commission's referral.
- 3) He expressed concern about associating the Department's ERO work as an outgrowth of September 11th or the 9/11 Commission.

Mr. Flaherty advised that he is more than happy to talk to the OIG about the ERO and welcomes an OIG review of the ERO.

AGENT'S NOTES

CASE # 042R0122001

AGENT (b)(6), (b)(7)c

(b)(6), (b)(7)c

5/13/05

5/24/05

5/13/05

Dan Noel

① In the joint exercises developed by FAA and did w/ TSA. info injected into A/T and WSC used between the WSC staff, TSA Ops (Watch) based on decisions they would effect the outcome. Security Aviation Ops (Watch)

|| no after action ~~report~~ reports.

wanted to get people communicating no fault, verbal debrief afterward enhance team environment and do verbal debrief.

* Jun 02 - Jan 03, did the exercises.

once perceived better communication would stop doing them.

② Since TSA moved over to TSOc have no further exercises is about trying (b)(6), (b)(7)c had to activate the Civil Reserve Air fleet and would not do both that and exercises.

③ TSOc came about in roughly

They developed various scenarios.

just HQ is involved
* A/T is involved @ DEN

- alt injected into scenario w/ inserts or people on staff would call and play role of AT facility.

TSO = Transportation Security Operations Specialist.

④ 7610 YK is an alt order.

@ regional level there are exercises that EOs might not be involved in.

④ AIT does do some exercise that also don't involve the EOs.

- TOPOFF III still drafting aft action. is in draft now.

(b)(6), (b)(7)c

④ The FAA has had a series of executive level exercises between FAA and TSA administrators.

both when they were part of DOT and since going to DHS.

- they are table top.

none had any field component. all activities outside the room are simulated.

5 completed

6 is being prepared for. 5/25

Principals brought need all operational direct reports
Chief Operating Officer

- cause of flux @ TSA it is very difficult to get these organized.

* w/ one major difference, MANPADs -
 They are all focused on the basics.
 Cause of turnover have to teach the TSA folks involved.
 Because, though, these exercises are very important.

* 9/11 caught g off guard.

- old style hijack scenarios were not effective for 9/11 type hijack

* The executive exercises are not documented in afteraction reports. In the majority.
 But I there was some good afteraction ~~reports~~.

Though there are no reports, there are lessons learned and actions taken to make corrections.
 They might need to just do it.

* There are instances where after fact the action officers and make changes. But can't always direct correct changes to exercises.

* Exercises are geared toward problem and try to work out the problems so see if changes can be made.

* (b)(6), (b)(7)(c)

- after each of exercises 1-4 took notes and had official notetaker, Michelle Salinas

- after notes typed and approved note sent to audience
MANPADS

* (b)(6), (b)(7) 4 did notes and opinion of those involved were typed up and the playbook was provided to Under Sec of Policy @ DOT.

* need to balance risk of economics v security.

* need to rely on indirect evidence that the exercises resulted in changes.

② after exercise 4, process for running changed.
FSA + TSA jointly sponsored and FSA did most of work setup.

- * By exercise 4,
 - 5th would alternate agencies to take lead.
 - 1 agency will take playbook prep. role.
 - 5th TSA provided notes taken etc hosted etc.
 - 6th TSA will host and created playbook.

7th has been agreed to FSA will host AMTI contract facility.

* FAA has made exercises part of agreements w/ other agencies.
for example, an agreement is pending w/ FARMU, (i)
says each agrees to participate in joint and multi-agency
exercises. do currently in DRAFT.

* Current agreement w/ TSA (MOU) blue tabs are examples
of lessons learned from exercises. - all blue highlights
in document come out of exercises

* Common Strategy # 1/3/05 is jointly prepared by
TSA-FAA.

[h. FSD - A/T communication]

- In exercise 5 (on CD) there were disagreements as to who call
to order a/c to land for security reasons.
o They arrived @ TSA doesn't want to direct movement of a/c
was agreed TSA suggest, FAA consent.

* Draft replacement for TSA-FAA MOU.
still not signed but is cleared @ DOT, FAA, OIG
but still pending TSA. [will enact it.]

- In 5 you can see development of authority of
FSD and AT merger, attached ID. to new
MOU. a/t would have a 1 page agreement w/
authority of a/t merger and FSD w/in a week of
exercise.

(b)(6), (b)(7)c

* what lines are not recorded.

* why not.

* What type of equipment

- how long are they retained?

in when would they be pulled?

(b)(6), (b)(7)c

5/24/05

* Can't put a recording on a S&E STU

⊕ also have a couple of other lines that are not recorded.

* Conference bridge 10 records on bridge.

don't record some of conference call.

can, optionally record a conference call.

* The DEW is always recorded.

(b)(6), (b)(7)c

- main #, anytime answered is auto recorded

6 his board off that main #.

⊕ The ~~the~~ lines for the CCP phone for administrator to

call in on are not recorded. This allows them to

call in when all are busy. Can record if xfr call

to conference bridge. ~~initially~~ not recordable, not

the switch. cause wanted them to have priority.

* 380 hrs for conference bridge.

can place a recorder on a conf call.

default is not to record.

* DEN is part of this conf bridge and always has

- 1 recorder on it. 100 hrs for DEN. will fluctuate.

* Bridge was purchased for emergency.

will allow X # of admin calls per hour so as not
over tax system.

* CCP hrs 4 and can't be recorded unless XCR into

conference bridge not recordable, unless XCR to

bridge. would have to XCR to conf w/other.

* STE Secure Tele Equip Approx 8 [uses 8 hrs not part of conf bridge]
STE will not allow one to record. [person to person.]

There are secure conf bridge that can record but
FAA does not own one. (= like Red Switch).

* Secure Video System: not recorded, are not the cover.

FAA is nearby user and does not record. Managed by WHCA.

* Satophone Fixed & Portable 1 Fixed + 1 port.

* own equip and lease service. a b/c form of comm.
can't record on those hrs.

* Red Switch is a system on network, FAA is user

* DEN is a huge conference call hosted to on the bridge.

* Main phone line w/ 6 hrs that can be recorded
default is to record.

⊕ 3 faxes that use up regular phone line off switch

⊕ all office phones associated w/ work core off switch

⊕ DEN hold for 30 days

look @ capability and that is how long they keep it
recording onto DVD in a computerized format

⊕ after gets full, will hold for 30 days.

⊕ thales recorder

[thales recorder] rewritable

6/1/05

procedure is ^{not} documented to keep for 30 days.

3/21/05

3/21/05

(b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c

+ incident and emergency

* typically FAA means of notice, electronic via email. alt return for lost engine. 1-2 days per day.

* FAA incidents include CMC and some DOT officials. In those regards interdependent. [COO]
DEN CMC is on the DEN.

hired in Oct 2003, came to June 04.
no detailed elsewhere 1st.

+ CMC was already a 24 hr op when he started.

(b)(6), (b)(7)c

was prior dir.

(b)(6), (b)(7)c

no time or right transfer.

* Don't know the next 24 hr operation.

* This FAA was already including CMC and DOT senior officials in notices.

* CMC has been on the DEN for the last 3 months. could always call into and now is always on his. Watch standards don't always participate but if Sr. DOT official want they can.

email already in place. (1) When he got the
was digital papers
skyped. Still going out
to Sr. executive.

(2)

(+) There was an event that did cause CMC to be
on all the time. But doesn't recall
what caused the problem.

(+) He does feel he gets notices and alerts w/in
minutes of the situation taking place
seems truly and efficient.

(+) Blackberry

- no specific initiatives on the do list.
no plan in place for additional change.

- get email

- * a/c turn around
- * a/c emergency pressurization
- * intoxicated abuse
- * security related info that affects
system. bomb threat; suspicious; etc
- will say that radar is down,
weather problems

* CMC staff is a mix of details. Have 1 FAA detail.
* Some folks are Kon.
* Have USCG officers that staff.

* Qual based → CMC
not one of background

* was aware of KY gov. but not involved

not aware of changes could have but not aware of what they are.

- WOC would interact w/ Sr. watch officer -
Claudio Manno is SES

- DEM he would deal w/ the watch on Claudio

(b)(6), (b)(7)c

handles more operations
doesn't think he is tied to WOC

cmd is one of several.
cmd coordinator

- Coop
- COG Cont. of Gov't.

coordinates all exercises like TOPOFF 3
coordinates w/ NATO

* Regional Trans. Coordinators.
Emergency

Surge emergency coordinators for incident
or threat, w/ people from
O/A areas into. It is a component of
emergency response team

- FAS is only one.

- MARAD will surge into cmd. when activate
a lot of ships. They're a room in the
cmd.

(b)(6), (b)(7)c

⊕ on 9/11 position: OEA A/T
was in NY on 9/11.

(b)(6), (b)(7)c

currently (b)(6), (b)(7)c

10/18/01 is the gist of what he gave me.

* came to DC in early (b)(6), (b)(7)c was in charge of (b)(6), (b)(7)c for A/T brief for A/T.

* Created new org in A/T to take over ops security. Roughly in March (b)(6), (b)(7)c

⊕ went to IRAQ to help rebuild aviation system 3 months in (b)(6), (b)(7)c and then again in the summer of 04.

⊕ Started in FAA in (b)(6), (b)(7)c from Navy was @ FAA as liaison since (b)(6), (b)(7)c 1st position (b)(6), (b)(7)c (b)(6), (b)(7)c

then went to Military operations w/ in FAA became mng. (b)(6), (b)(7)c or so in (b)(6), (b)(7)c became

* (b)(6), (b)(7)c

had problems in East Coast so took over Eastern region (b)(6), (b)(7)c

WOC Review

* on 9/11 he was in NIC. he dealt w/ the day and worked non-stop.

or Scott

(b)(6), (b)(7)c

(b)(6), (b)(7)c

called and said things could have done better and see how could improve WOC. Drove and was in DC Monday for about a month and walked thru every aspect of WOC ops.

Balanced against criticism FAA

* Only people accountable to interface w/ (b)(6), (b)(7)c Garvey.

(b)(6), (b)(7)c

Danny ~~K~~ Noel.

(b)(6), (b)(7)c

But was 1 person team. needed to be ramped from equipment standpoint and operational.

* We did not write a report of finding just doc his suggestions for changes.

there was no written doc for equipment visit had an early discussion w/ (b)(6), (b)(7)c

Phone bridge display crowded dingy

Oct/Nov 2002 went back to NY

(3)

(b)(6), (b)(7)c

committed \$

- screens for display of info
- physical layout was bad. just desks in a room.

He did little things, lights in stairs did not work.

* Comm capability needed redundancy, separate power systems.

* overall layout of room was to be implemented by person put in charge.

Dave Knowles recommended to take over.

they did all the configurations he recommended.

(b)(6), (b)(7)c

wanted him to discover

- structure

- function

- capabilities

w/ eye on engineering,
he didn't tell him the issues.

lines of business - AIT would use ops center for communications for different issues evolved like near miss.

Deputy Admin.

- Security used center for different
 - A/F used differently.
 - external too such as DOT ops center.
- looked @ who how different lines used the WOC

Emergency Ops Staff worked for Dep Admin.

EOS: prior to 9/11 people who planned exercises
 ↓
 (Dep. Admin.) runs the coop facility
 military reserve fleet "Civil Reserve aircraft fleet"
 weather emergency for crisis management center.
 to manage the facility on 10th floor in response to emergency

• in event of hurricane would set up an emergency ops center. Danny Noel ran it w/ approval of Dep. Admin. People from pre assigned list would get into center until crisis was over. Jr. level people staffed the EOC. Was separate from WOC.

1) WOC: Command and control for communications.
Common Center.
on 9/11 all info flowed into it and passed along. set up tel com, receive info and connect people w/ people.

2) ACC was activated only in select situations was only major incident.
~~was~~ is the security operations; was separate location. Not run by ops, 24/7 operations.

3) EOC ad hoc for crisis.

ACC is basically the same room as EOC.
it would be run by security - v - EOC
multipurpose room.

his sense was ops center was only communication center.
there was no operational skill set in the room.
there was only people w/ telcom skills.

FN this need in a true ops center needs to receive info, interpret, manipulate info and connect the dots and turn into actionable items. This did not exist on 9/11.

⊕ in 2000 (b)(6), (b)(7)c would not feel something out for a day later. And he would get mad @ staff, cause they didn't pass along but was cause they were not checked in to what Belag was looking @.

⊕ Need operations people w/ a/t background.

~~sectors~~ need people in charge who deal w/ on tactical.

⊕ A/t. / flight stds, shift merge w/ skill set. who will carry out

* there was lots of info coming in on 9/11 but no one was connecting the dots and no one put bigger picture together.

* EOS should be one function w/ w/c and merge them into on 9/11 had only GS-14.

⊕ Personnel Executive Assist. turn into a small room - items.

* Equip

* Room

* Comm Equip

COST - DOT

(b)(6), (b)(7)c

is provided
cause there are events @ FGA and
no one called him or the CMC (OOT)
to tell it is going on.

⊕ Major snow storm w/ lots of a/c delays
in Chicago and OOT didn't find
out and no one let OOT know.
People w/ operational sensitivity should.

FH after 9/11 2 elements

Not function
of WOC
but in WOC.

didn't fully implement, ext. DEN
is not part of WOC. DEN
works for FH. He is DEN
mng. DEN is operational here.
every aft facility is able to report
on this line of suspicious. Also on
DEN is other govt agencies. Only
let people on if they can add to it.

NORAD, FBI Watch Ctr.

TSOC. all defense sectors, 1st A/F

WASH Cap. Police.

⊕ The CMC is not on the list of. CMC is
comm center for DOT also.

Ops Center will get info from DEN folks to
pass out.

RESULTS OF INVESTIGATION OF 9/11 COMMISSION STAFF REFERRAL

Report Number: CC-2006-085

Date Issued: August 31, 2006

Commission hearings, written statements presented to the Commission, and memoranda and transcripts of numerous interviews conducted by the Commission. Additionally, we reviewed documents chronicling the events of September 11, as well as over 1,000 other documents, including air traffic control transcripts and FAA and DOD event logs, emails, faxes, memoranda, and correspondence. We also assigned an investigator to assist DOD/OIG in its review.

Results in Brief

1. We did not find evidence to conclude that FAA officials knowingly made false statements, purposely omitted accurate information from any statement, or intentionally failed to correct any inaccurate statement after becoming aware of it, regarding FAA notifications to DOD about the September 11 hijackings.
2. Our investigation disclosed that FAA inaccurately reported on its public website in 2002 that FAA notified DOD of the suspected hijacking of American Flight 77 at 9:24 a.m. on September 11. (In fact, no such notification was made.) FAA officials promptly corrected this error—which we attribute to FAA’s reliance on an erroneous timeline entry—after we brought it to their attention in Fall 2004.
3. We found that in its response to a May 22, 2003, Commission Question for the Record (QFR), FAA again inaccurately reported that it had notified DOD about American Flight 77. This, too, we attribute to FAA’s reliance on an erroneous timeline entry.
4. While investigating FAA’s QFR response, we found that it also inaccurately reported that the Air Force Liaison to FAA had joined an FAA headquarters phone-bridge and established contact with NORAD “immediately” following the crash of the first aircraft (American Flight 11) into the World Trade Center at 8:46 a.m. In fact, the Liaison did not join the phone-bridge until after the third hijacked aircraft (American Flight 77) struck the Pentagon at 9:37 a.m.

We further found that three FAA executives (two current and one now-retired) learned of this inaccuracy from the Liaison shortly following FAA’s submission of the QFR response. The two current FAA executives told us they thought the Liaison, when interviewed by Commission staff, would correct the inaccuracy. However, the Liaison told us that no one at FAA spoke to her about making a correction and she did not address this issue when interviewed by Commission staff. As a result, this inaccuracy was not corrected with the Commission.

5. During our investigation, we also reviewed FAA's post-September 11 capability to notify federal agencies about a hijacked or suspicious aircraft, as well as FAA's capability to investigate its handling of a hijacked or suspicious aircraft. We found that FAA acted to improve these capabilities, including:
- Establishing the Domestic Events Network (DEN), a nationwide, continuously open telephone line managed by FAA, designed to allow federal agencies with jurisdiction over the security of U.S. airspace to communicate information in real-time.
 - Instituting new procedures for air traffic controllers on communicating information about a hijacked or suspicious aircraft over the DEN.
 - Installing equipment to record most FAA Washington Operations Center Complex (WOCC) telephone lines. (Prior to September 11, FAA did not record any WOCC telephone lines.)

Based on our findings detailed below, we are making recommendations to the FAA Administrator for enhancing FAA's capability to respond to and report on hijacked or suspicious aircraft. We are also recommending that FAA correct its response to the Commission's QFR and consider appropriate administrative action for the two current executives who did not act to correct the record with the Commission. As a mitigating factor, and to provide some context, we note that at the time, the FAA, including these executives, produced over 6,000 documents and materials to the Commission.

Details

Background on Commission Staff Referral

As part of its statutory mandate to investigate the "facts and circumstances relating to the terrorist attacks of September 11, 2001," the Commission examined the interaction between FAA and DOD. The Commission's findings included the specific hours and minutes when FAA notified DOD about the four hijacked aircraft. The summary chronology for each of the hijacked flights from the Commission's Final Report is attached as Appendix 1.¹

¹ The Commission's summary chronology did not list a notification time for United Flight 175; however, included in the body of the Commission's Final Report is the statement that at 9:03 a.m., at approximately the same time United Flight 175 struck the World Trade Center, FAA advised DOD that the aircraft might have been hijacked.

Subject: **ACTION:** Results of OIG Investigation
of 9/11 Commission Staff Referral

Date: August 31, 2006

From: 
Todd J. Zinser
Acting Inspector General

Reply to
Attn of:

To: The Acting Secretary
Federal Aviation Administrator

Introduction

By letter dated July 29, 2004, the General Counsel for the *National Commission on Terrorist Attacks Upon the United States*, on behalf of the Commission staff, referred to the Department of Defense (DOD) and Department of Transportation (DOT) Inspectors General information concerning several inaccurate statements made by DOD and Federal Aviation Administration (FAA) officials regarding FAA notifications to DOD about the airplane hijackings on September 11, 2001. The letter noted that the Commission, which would “sunset” on August 26, 2004, did not investigate whether the inaccurate statements were knowingly false; thus, the Commission staff’s referral noted that this information was being provided to the Inspectors General for appropriate action.

Based on the Commission staff’s referral, our office investigated whether FAA officials knowingly made any false statements. We also investigated whether FAA officials intentionally omitted accurate information from any statement or failed to correct an inaccurate statement after becoming aware of it. Separately, but in coordination with our office, the DOD Office of Inspector General (OIG) undertook a similar review with regard to the actions of DOD officials, namely North American Aerospace Defense Command (NORAD) officials.

In addition to conferring with Commission staff, our investigation included interviews of 34 current and former FAA and other DOT officials, government contractors, and other private citizens, and we examined voluminous records. Specifically, we reviewed the Commission’s Final Report, Commission Staff Statements, transcripts of

The Commission staff's July 29, 2004, correspondence identified the following inaccurate statements made by FAA and NORAD officials regarding the times at which FAA notified NORAD that United Flight 93 and American Flight 77 had been hijacked:

1. During the Commission's May 23, 2003, hearing, a retired NORAD Colonel inaccurately testified that FAA notified DOD at 9:24 a.m. that American Flight 77 had been hijacked. The Commission found that FAA never notified DOD that American Flight 77 had been hijacked. Instead, it found that, at 9:34 a.m., three minutes before American Flight 77 crashed into the Pentagon, FAA advised NEADS that American 77 was "missing."²
2. FAA officials, despite having documents containing an accurate time within their possession, omitted from FAA's September 17, 2001, "Summary of Air Traffic Hijack Events," the time at which FAA notified the NORAD's Northeast Air Defense Sector (NEADS) that United Flight 93 had been hijacked. The Commission found that FAA notified NEADS at 10:07 a.m. that United Flight 93 had been hijacked.
3. NORAD's September 18, 2001, press release inaccurately stated that the time of FAA's notification to DOD that United Flight 93 had been hijacked was "N/A," i.e., "not applicable." The Commission found the accurate time was 10:07 a.m. (NORAD's press release, captioned "NORAD's Response Times" is attached as Appendix 2.)
4. During the Commission's May 23, 2003, hearing, the same retired NORAD Colonel inaccurately testified that FAA notified DOD at 9:16 a.m. that United Flight 93 had been hijacked. The Commission found the accurate time was 10:07 a.m.

The Commission staff concluded that FAA officials had accurate information concerning the above four statements. Thus, the Commission staff referred to us the questions of whether FAA officials knew the above four statements were inaccurate and, if so, why they failed to correct them. We investigated these questions and also whether FAA officials intentionally omitted accurate information from any statement or failed to correct an inaccurate statement after becoming aware of it.

² The Commission staff also identified two other inaccurate statements made by the NORAD Colonel at the May 23, 2003, hearing. Because those statements involved actions by DOD officials, not FAA officials, they were investigated by DOD/OIG.

Investigative Findings

1. **We did not find evidence to conclude that FAA officials knowingly made false statements, purposely omitted accurate information from any statement, or intentionally failed to correct any inaccurate statement after becoming aware of it, regarding FAA notifications to DOD about the September 11 hijackings.**

- a. FAA's September 17 and 18 documents chronicling the events of September 11

We found that shortly following September 11, 2001, an FAA executive (now retired), his subordinate manager (now an executive), and their staff created two documents chronicling the events of September 11. The first document, dated September 17, 2001, was entitled "Summary of Air Traffic Hijack Events." FAA officials told us this document was prepared for, and circulated to, FAA, DOT, and other government agencies. The second document, untitled and dated September 18, 2001, was prepared for FAA internal use. These two documents (attached at Appendices 3 and 4) served as the principal sources for other FAA documents chronicling the events of September 11.

In preparing the September 17 and 18 documents, the FAA executive cited the Air Force's NEADS log and also had available a transcript from FAA's Cleveland Air Route Traffic Control Center. Both of these documents correctly recorded FAA's notification to DOD about the hijacking of United Flight 93 as having occurred at 10:07 a.m. Despite the availability of this accurate information, FAA's September 17 "Summary of Air Traffic Hijack Events" is silent as to the time of FAA's notification to DOD for United Flight 93.

Similarly, FAA's September 17 "Summary" is silent as to FAA's notification to DOD about American Flight 77. The Commission found that FAA never notified DOD that American Flight 77 had been hijacked. Instead, the Commission found that at 9:34 a.m., three minutes before American Flight 77 crashed into the Pentagon, FAA advised NEADS that American Flight 77 was "missing."

FAA's September 18 chronology document erroneously listed FAA's notification time to DOD about American Flight 77 as 9:24 a.m. The FAA executive, who was responsible for preparing the document, told us that he cited the NEADS log as the source for the 9:24 a.m. entry. We found, however, that he failed to cross-check the tail number listed for the American Airlines aircraft in the 9:24 a.m. entry. Had he done so, he would have discovered that the aircraft identified was American Flight 11,

not Flight 77.³ Therefore, we concluded that, because of the executive's lack of attention to the details in the NEADS log, he mistakenly believed that FAA had notified DOD of the hijacking of American Flight 77 at 9:24 a.m.

Further, the September 18 document inaccurately reported that the notification time for United Flight 93 was "N/A," i.e., "not applicable," when, in fact, the NEADS log and the Cleveland Center transcript both accurately show that FAA notified DOD of the hijacking of United Flight 93 at 10:07 a.m., four minutes after the aircraft crashed in Pennsylvania.⁴

We interviewed the FAA executive and manager separately and each told us that at the time they prepared the September 17 and 18 chronology documents, they did not believe they had an accurate notification time for United Flight 93, and for that reason they listed "N/A," meaning "not applicable." (We note that they took no further action to establish an accurate notification time.) We also interviewed other members of their staff, who did not contradict the rationale of the executive and manager for the lack of a notification time. We do not find this explanation to be reasonable because the NEADS log—which the executive and manager cited was the source of the notification times for the three other hijacked aircraft—and the transcript from FAA's Cleveland Center (which was also available to them) show the correct notification time for United Flight 93. However, while we could not determine whether these officials omitted the correct notification time for United Flight 93 for any reason other than what they told us, we considered two alternative possibilities:

First, we considered whether the FAA executive and manager may have adopted the "N/A" entry from NORAD's September 18, 2001, press release, a September 17 draft of which FAA's Office of Public Affairs had obtained. It is possible, for example, that the "N/A" entry in NORAD's press release created uncertainty on the part of the FAA executive and manager about the United Flight 93 notification time as they were preparing FAA's September 18 chronology document. Thus, they may have deferred to the NORAD release. However, despite the coincidence of the "N/A" entry in both NORAD's press release and FAA's September 18 document, when we addressed this possibility during our interviews, the FAA executive did not recall, and the manager denied, having seen any draft of NORAD's press release. We investigated the extent to which FAA and DOD collaborated on their chronologies of events of September 11. However, neither DOD/OIG's investigation nor our investigation

³ This entry in the NEADS log was based on an erroneous report that American Flight 11 was headed toward Washington, DC.

⁴ These two documents, along with multiple other drafts and versions of FAA's September 11 chronology, were obtained by the Commission pursuant to its mandate. Nonetheless, the Commission was able to produce an accurate chronology that is the definitive record of the events of September 11.

established any direct coordination between DOD and FAA officials regarding the chronologies.

Second, we considered whether the FAA executive and manager may have purposely omitted the notification time to avoid disclosing that FAA did not notify DOD until approximately four minutes after United Flight 93 had crashed. We asked them about this and they denied it. Further, we discounted this possibility because both the September 17 and 18 documents they produced reported that FAA had not notified DOD of the hijacking of United Flight 175 until approximately two minutes after it crashed into the World Trade Center. We found no evidence to explain why the executive and manager would have purposely omitted one after-the-fact notification and not the other.

Based on our investigation and factoring in the potential for human error under the circumstances that existed during the week following September 11, and the limitations of their recollections, we did not find evidence to conclude that the FAA executive and manager omitted the correct notification times for American Flight 77 and United Flight 93 for any reason other than what they told us.

b. NORAD press release dated September 18, 2001

The Commission staff questioned why FAA officials did not correct NORAD's September 18, 2001, press release, which inaccurately stated that the time NORAD was notified by FAA that United Flight 93 had been hijacked was "N/A," i.e., "not applicable." As addressed above, the FAA executive and manager maintained that they did not believe they had an accurate notification time for United Flight 93.

c. Retired NORAD Colonel's testimony of May 23, 2003

The Commission staff also questioned why FAA officials did not correct the retired NORAD Colonel's May 23, 2003, testimony in which he stated, erroneously, that FAA notified DOD at 9:16 a.m. on September 11 that United Flight 93 had been hijacked. During our interviews, only an FAA executive who attended the hearing acknowledged being aware of the Colonel's testimony. This FAA executive initially recalled having been "upset" about the timeline in the Colonel's testimony, and, immediately following the hearing, unsuccessfully attempted to speak with a NORAD official about inaccurate notification times in that timeline. However, following our interview and after reviewing the Colonel's testimony at our request, the FAA executive advised us that her recollection was it was not the timeline about which she attempted to talk to the NORAD official. Rather, she advised, she tried to tell the NORAD official that the Colonel did not include in his testimony information about

the phone-bridge that was established between FAA headquarters and DOD on September 11.

Finally, the Commission staff questioned why FAA officials did not correct the NORAD Colonel's May 23, 2003, testimony, in which he inaccurately stated that FAA notified DOD at 9:24 a.m. that American Flight 77 had been hijacked. As addressed above, we found that because of the executive's lack of attention to the details on the NEADS log, he mistakenly believed that FAA had notified DOD of the hijacking of American Flight 77 at 9:24 a.m. Thus, we concluded that it would have been reasonable for any FAA official aware of the Colonel's testimony about FAA's notification time for American Flight 77 to have believed it was accurate because his testimony was consistent with FAA's erroneous chronology.

- 2. Our investigation disclosed that FAA inaccurately reported on its public website that FAA notified DOD of the suspected hijacking of American Flight 77 at 9:24 a.m. (In fact, no such notification was made.) FAA officials promptly corrected this error, which we attribute to an erroneous timeline entry, after we brought it to their attention in Fall 2004.**

We found that FAA posted its September 11 chronology in two documents on its public website. The first document, undated, was entitled *FAA Responds*.⁵ The second document, dated August 12, 2002, was an FAA "fact-sheet" entitled *Chronology of Events on September 11, 2001*.⁶ Both erroneously stated:

0924. The FAA notifies NORAD's Northeast Air Defense Sector about the suspected hijacking of American Flight 77.

In fact, as previously addressed in this report, FAA never made such a notification. After we brought this inaccuracy to FAA's attention (in September 2004 on the first document and October 2004 on the second), the agency deleted it from each document. We found no evidence to indicate that anyone at FAA posted these documents knowing they were inaccurate. Instead, we found that FAA's Office of Public Affairs, which was responsible for preparing the documents posted on the website, relied upon inaccurate documents chronicling the events of September 11.

⁵ See www.faa.gov/Sept11portraits/chronology.cfm

⁶ See www.faa.gov/newsroom/factsheets/2002/factsheets_020812.htm

- 3. We found that in its response to a May 22, 2003, Commission Question for the Record (QFR), FAA again inaccurately reported that it had notified DOD about American Flight 77. This, too, we attribute to FAA's reliance on an erroneous timeline entry.**

On May 22, 2003, former FAA Administrator Jane Garvey testified before the Commission. During the hearing, she was asked the time at which FAA notified DOD about American Flight 77. Because Administrator Garvey did not have this information at hand, she told the Commission she would provide a response for the record that evening. FAA's response to the Commission's QFR, captioned "FAA Communications with NORAD on September 11, 2001," which was submitted on the night of May 22, 2003, and read into the Commission hearing record on May 23, 2003, inaccurately reported that FAA notified DOD about American Flight 77 at 9:24 a.m. (FAA's response to the Commission's QFR is attached as Appendix 5.)

We determined that FAA's QFR response was prepared by a now-retired FAA executive and two current executives. We found that because these three executives had relied upon inaccurate FAA documents chronicling the events of September 11, they believed FAA notified DOD of the hijacking of American Flight 77 at 9:24 a.m. We did not find evidence that these three executives knew that FAA never notified DOD that American Flight 77 had been hijacked.

- 4. We also found the QFR response to be inaccurate regarding the time at which the Air Force Liaison to the FAA joined an FAA headquarters phone-bridge about the hijackings. We determined that three FAA executives learned of this inaccuracy shortly following FAA's submission of the QFR response, but did not act to correct the record with the Commission; consequently, it was never corrected.**

We found that the QFR response incorrectly related that the Air Force Liaison to FAA joined the FAA phone-bridge on the hijackings and established contact with NORAD "immediately" following the crash of the first aircraft (American Flight 11) into the World Trade Center at 8:46 a.m. In fact, the Liaison did not join the phone-bridge until after the third hijacked aircraft (American Flight 77) struck the Pentagon at 9:37 a.m. The Air Force Liaison told us:

I was enroute to the [FAA headquarters] building when the first plane hit the World Trade Center. ... [S]o probably five, ten minutes after that, I got to the building. ... I went to my office. Everybody was there around the TV. We watched the events unfold. At first, we were kind of hanging back and saying, you know, there's something awful going on with the air traffic system[.] ... But at a certain point, not too long after that, it became

obvious that, you know, something really strange is going on and so ... I relocated. I went upstairs to the 10th floor. ... It was right after the airplane hit the Pentagon.

The now-retired FAA executive told us she learned during a conversation with the Air Force Liaison, which she told us may have occurred on the same day that FAA's QFR response was read into the record, that the response was inaccurate regarding when the Liaison joined the phone-bridge. The other two FAA executives also told us that they learned from speaking with the Liaison that the QFR response was inaccurate. One executive told us that she spoke with the Liaison within a few weeks of the submission of the QFR response, the other executive told us she spoke to the Liaison by the end of the summer. None of these executives, however, informed the Commission of the inaccuracy.

The now-retired executive told us she knew the other two executives were aware of the inaccuracy and assumed they would correct it. The two current executives told us they thought that the Air Force Liaison, when interviewed by Commission staff, would tell the staff that she did not immediately join the phone-bridge on September 11. The Air Force Liaison told us that no one at the FAA spoke to her about correcting FAA's QFR response during her Commission staff interview and she did not address the response when interviewed. Therefore, no one corrected this inaccuracy.

In our view, these FAA executives had an affirmative obligation to correct FAA's May 2003 response to the Commission's QFR directly with the Commission, as opposed to relying on the Air Force Liaison to do so. Part of the Commission's mandate was to examine, and accurately report on, the interaction between FAA and DOD on September 11. The time at which the Air Force Liaison joined the FAA headquarters phone-bridge and established contact with NORAD was relevant to the Commission's mandate.

5. After September 11, FAA improved its capability to notify federal agencies about, and investigate its handling of, hijacked or suspicious aircraft.

While investigating statements about FAA's notifications to DOD about the hijackings on September 11, we also reviewed FAA's post-September 11 capability to notify federal agencies about a hijacked or suspicious aircraft, as well as FAA's capability to investigate its handling of a hijacked or suspicious aircraft. We found that FAA acted to improve these capabilities.

a. FAA established the Domestic Events Network (DEN).

The DEN is a nationwide, open telephone line that allows federal agencies with jurisdiction over the security of U.S. airspace to share, in real-time, information about a hijacked or suspicious aircraft. It is managed by FAA in its Washington Operations Center Complex (WOCC). Some of the agencies and organizations that continuously monitor the DEN include: DOD (NORAD and NEADS), FAA air traffic field facilities, and the Department of Homeland Security.

b. FAA now records Washington Operations Center Complex telephone lines.

Prior to September 11, FAA did not have the capability to record telephone lines in the WOCC. FAA now records most WOCC telephone lines, including the DEN. Though there is no FAA policy on retention of the recordings from those lines, they are kept for six months as a matter of practice. Priority telephone lines used by the Secretary, the Administrator, and Deputy Administrator, and the lines used for classified voice and video communications, remain unrecorded.

c. FAA instituted new procedures for air traffic controllers on communicating information about a hijacked or suspicious aircraft over the DEN.

On September 11, three FAA divisions—Air Traffic, Civil Aviation Security, and the Office of the Deputy Administrator—were responsible for FAA's response to a hijacked or suspicious aircraft. We discovered five procedures or protocols, three for Air Traffic and two for the Deputy Administrator and Civil Aviation Security staffs, regarding how information was to be provided to DOD about a hijacked or suspicious aircraft. We found that these pre-September 11 procedures provided indirect lines of communication from air traffic controller to DOD about a hijacked or suspicious aircraft. As the Commission concluded in its final report, in this regard, FAA's "existing protocol was unsuited in every respect."

Following September 11, FAA issued a new policy, "Aircraft Hijack and Suspicious Inflight Activities—Response and Notification Procedures," that requires air traffic control facilities to directly report a hijacked or suspicious aircraft to the DEN.⁷ However, four of the five pre-September 11 procedures also remain in effect. In order to avoid confusion about which FAA procedures govern FAA's response to a hijacked or suspicious aircraft, we are recommending that FAA review its procedures and eliminate those that are inconsistent or duplicative.

⁷ FAA Notice 7110.422, dated 11/14/05, is the most recent version of these procedures. It is considered "Sensitive Security Information" and its release is governed by 49 CFR § 1520.

To evaluate the effectiveness of FAA's post-September 11 communication procedures, we reviewed reports by FAA and the House Subcommittee on Aviation regarding the June 9, 2004, flight carrying the Governor of Kentucky to Washington Ronald Reagan National Airport to attend President Reagan's funeral—an incident that resulted in the evacuation of the Capitol.

The Subcommittee's July 2004 report concluded that a number of "key" errors contributed to the decision to evacuate the Capitol. First, FAA allowed the aircraft (bearing tail number N24SP) to enter the Washington, DC Area Defense Identification Zone (ADIZ) with an inoperative transponder.⁸ Second, FAA incorrectly broadcast over the DEN that N24SP had a transponder signal, but that its altitude read-out was not functioning. And, third, FAA failed to identify an aircraft radar return, which did not contain transponder data, as N24SP.

In response to these errors, we found FAA made several changes, including requiring every aircraft entering the Washington ADIZ to have an operative transponder with an automatic altitude readout. FAA also mandated refresher training for all air traffic controllers on, among other things, communicating over the DEN. FAA informed us that there have been no such similar incidents attributable to errors on the part of FAA.

Recommendations

1. FAA should correct its response to the Commission's May 22, 2003, Question for the Record.
2. FAA should consider appropriate administrative action for the two current executives who did not act to correct the record with the Commission. In our view, they had an affirmative obligation to do so in light of the Commission's mandate that included examining, and accurately reporting on, the interaction between FAA and DOD on September 11. The time at which the Air Force Liaison joined the FAA headquarters phone-bridge and established contact with NORAD was relevant to the Commission's mandate.

As a mitigating factor, and to provide some context, we note that at the time, the FAA, including these executives, produced over 6,000 documents and materials to the Commission.

⁸ The ADIZ is defined as the airspace less than 18,000 feet in an approximate 30-mile radius around Washington, DC.

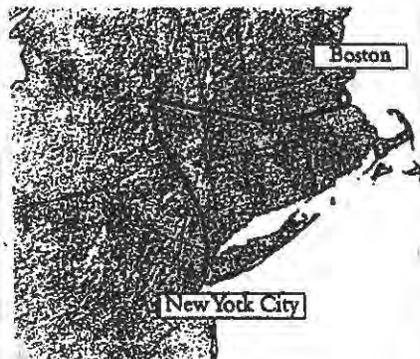

3. FAA should institute a formal policy for the preservation of telephone recordings following notification of hijacked or suspicious aircraft.
4. In order to avoid confusion about which FAA procedures govern FAA's response to hijacked or suspicious aircraft, we are recommending that FAA review its procedures and eliminate those that are inconsistent or duplicative.

#

Appendices

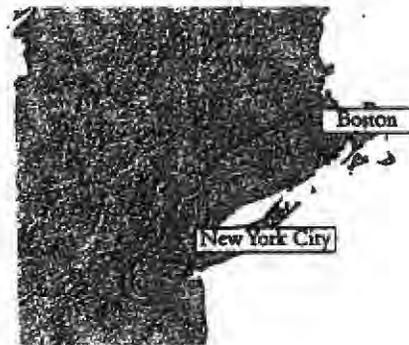

1. Chronology for each of the hijacked flights from the Commission's Final Report. [1 page]
2. NORAD's September 18, 2001, press release, captioned "NORAD's Response Times." [1 page]
3. FAA's September 17, 2001, "Summary of Air Traffic Hijack Events." [13 pages]
4. FAA's September 18, 2001, untitled chronology. [1 page]
5. FAA's response to the Commission's May 22, 2003, Question for the Record. [1 page]

**American Airlines Flight 11
(AA 11)**
Boston to Los Angeles

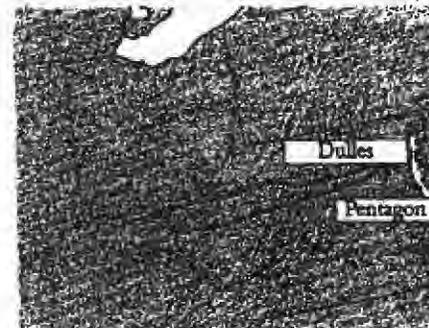

7:59 Takeoff
 8:14 Last routine radio communication; likely takeover
 8:19 Flight attendant notifies AA of hijacking
 8:21 Transponder is turned off
 8:23 AA attempts to contact the cockpit
 8:25 Boston Center aware of hijacking
 8:38 Boston Center notifies NEADS of hijacking
 8:46 NEADS scrambles Otis fighter jets in search of AA 11
 8:46:40 AA 11 crashes into 1 WTC (North Tower)
 8:53 Otis fighter jets airborne
 9:16 AA headquarters aware that Flight 11 has crashed into WTC
 9:21 Boston Center advises NEADS that AA 11 is airborne heading for Washington
 9:24 NEADS scrambles Langley fighter jets in search of AA 11

**United Airlines Flight 175
(UA 175)**
Boston to Los Angeles

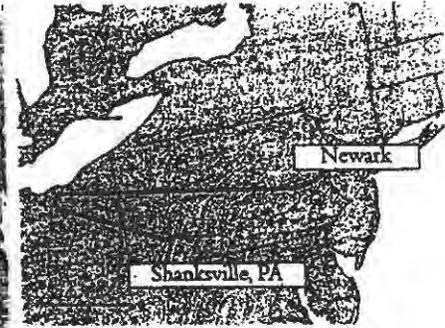

8:14 Takeoff
 8:42 Last radio communication
 8:42-8:46 Likely takeover
 8:47 Transponder code changes
 8:52 Flight attendant notifies UA of hijacking
 8:54 UA attempts to contact the cockpit
 8:55 New York Center suspects hijacking
 9:03:11 Flight 175 crashes into 2 WTC (South Tower)
 9:15 New York Center advises NEADS that UA 175 was the second aircraft crashed into WTC
 9:20 UA headquarters aware that Flight 175 had crashed into WTC

**American Airlines Flight 77
(AA 77)**
Washington, D.C., to Los Angeles

8:20 Takeoff
 8:51 Last routine radio communication
 8:51-8:54 Likely takeover
 8:54 Flight 77 makes unauthorized turn to south
 8:56 Transponder is turned off
 9:05 AA headquarters aware that Flight 77 is hijacked
 9:25 Herndon Command Center orders nationwide ground stop
 9:32 Dulles tower observes radar of fast-moving aircraft (later identified as AA 77)
 9:34 FAA advises NEADS that AA 77 is missing
 9:37:46 AA 77 crashes into the Pentagon
 10:30 AA headquarters confirms Flight 77 crash into Pentagon

**United Airlines Flight 93
(UA 93)**
Newark to San Francisco

8:42 Takeoff
 9:24 Flight 93 receives warning from UA about possible cockpit intrusion
 9:27 Last routine radio communication
 9:28 Likely takeover
 9:34 Herndon Command Center advises FAA headquarters that UA 93 is hijacked
 9:36 Flight attendant notifies UA of hijacking; UA attempts to contact the cockpit
 9:41 Transponder is turned off
 9:57 Passenger revolt begins
 10:03:11 Flight 93 crashes in field in Shanksville, PA
 10:07 Cleveland Center advises NEADS of UA 93 hijacking
 10:15 UA headquarters aware that Flight 93 has crashed in PA; Washington Center advises NEADS that Flight 93 has crashed in PA

NORAD'S Response Times

PETERSON AFB, Colo. --The following timelines show NORAD's response to the airliner hijackings on September 11, 2001.

- * All times are Eastern Daylight Time: NEADS = North East Air Defense Sector, NORAD
- ** Scramble = Order to get an aircraft airborne as soon as possible
- *** Estimated = loss of radar contact
- **** Flight times are calculated at 9 miles per minute or .9 Mach
- ***** The FAA and NEADS established a line of open communication discussing AA Flt 77 and UA Flt 93

American Airlines Flight 11 – Boston enroute to Los Angeles

FAA Notification to NEADS	0840*
Fighter Scramble Order (<i>Otis Air National Guard Base, Falmouth, Mass. Two F-15s</i>)	0846**
Fighters Airborne	0852
Airline Impact Time (World Trade Center 1)	0846 (estimated)***
Fighter Time/Distance from Airline Impact Location	Aircraft not airborne/153 miles

United Airlines Flight 175 – Boston enroute to Los Angeles

FAA Notification to NEADS	0845
Fighter Scramble Order (<i>Otis ANGB, Falmouth, Mass. Same 2 F-15s as Flight 11</i>)	0846
Fighters Airborne	0852
Airline Impact Time (World Trade Center 2)	0902 (estimated)
Fighter Time/Distance from Airline Impact Location	approx 8 min**** 71 miles

American Flight 77 – Dulles enroute to Los Angeles

FAA Notification to NEADS	0924
Fighter Scramble Order (<i>Langley AFB, Hampton, Va. 2 F-16s</i>)	0924
Fighters Airborne	0930
Airline Impact Time (Pentagon)	0937 (estimated)
Fighter Time/Distance from Airline Impact Location	approx 12 min/105 miles

United Flight 93 – Newark to San Francisco

FAA Notification to NEADS	N/A *****
Fighter Scramble Order (<i>Langley F-16s already airborne for AA Flt 77</i>)	
Fighters Airborne (<i>Langley F-16 CAP remains in place to protect DC</i>)	
Airline Impact Time (Pennsylvania)	1003 (estimated)
Fighter Time/Distance from Airline Impact Location	approx 11 min/100 miles (from DC F-16 CAP)

NOTE: This appendix is an excerpt of the complete document (dated September 17, 2001) and contains only the chronologies for each of the four hijacked aircraft.

Summary of Air Traffic Hijack Events

September 11, 2001

American Airlines Flight 11 (AAL11)

Boston – Los Angeles

All times indicated are Eastern Daylight Savings Time

- 0756:27 Boston Airport Traffic Control Tower (BOS) issued taxi instructions to AAL11.
- 0800:00 AAL11 began takeoff roll, runway 4 Right, Boston Logan International Airport. All communications with BOS and with Boston Departure Control were routine and normal.
- 0809:17 **AAL11 established radio contact with Boston Air Route Traffic Control Center (ZBW). “Boston Center, good morning, American Eleven with you passing through one-nine-zero (nineteen thousand feet) for two-three-zero (twenty-three thousand feet).”**
- 0809:22 ZBW acknowledged AAL11. From this time until 0813:31 all communications appear routine and normal. The sector was responsible for six aircraft including AAL11. The flight was instructed to climb to twenty-eight thousand feet, subsequently to twenty-nine thousand feet, and issued a twenty degree turn for traffic.
- 0813:47 **ZBW instructed AAL11 “ American Eleven, now, climb and maintain flight level three-five-zero (thirty-five thousand feet).” There was no acknowledgement to this transmission.** ZBW made two subsequent transmissions to AAL11, neither of which were acknowledged. Between 0813:47 and 0824:53, ZBW made several radio transmissions attempting to contact AAL11. None of the attempts were acknowledged.
- 0814:45 ZBW during intra-facility coordination recognized that **AAL11 appeared to be turning right** but had not acknowledged the climb clearance to thirty-five thousand feet and did not acknowledge any further radio transmissions.
- 0817:59 A brief unknown sound (possibly a scream) from an unknown origin was heard over the ZBW radio.
- 0820:48 **Secondary radar return (transponder) indicating aircraft speed, altitude, and flight information was lost on ZBW radar displays. The aircraft was then observed as a primary radar target only.**
- 0824:38 A radio transmission partially unintelligible stated, “we have some planes just stay quiet and you’ll be ok we are returning to the airport” from an unknown origin was heard over the ZBW radio.

Appendix 3 to DOT/OIG Report on Investigation of 9/11 Commission Staff Referral

- 0824:57 A second radio transmission partially unintelligible stated “nobody move everything will be ok if you try to make any moves you’ll endanger yourself and the airplane just stay quiet” – from an unknown origin was heard over the ZBW radio.
- 0825:00 ZBW began notification based on radio transmissions that a suspected hijack was in progress. The New England Regional Operations Center (ROC), the Air Traffic Control System Command Center (ATCSCC), and the ZBW facility manager were notified. Additionally, controllers began inter-facility coordination with New York Air Route Traffic Control Center (ZNY) of the possible hijacking. Coordination describes the last known altitude as twenty-nine thousand feet.
- 0826:00 AAL11 began southbound turn over Albany, New York. The last known altitude was twenty-nine thousand feet.**
- 0833:59 A third radio transmission partially unintelligible stated “nobody move please we are going back to the airport don’t try to make any stupid moves” – from an unknown origin was heard over the ZBW radio. AAL11 primary radar track was still southbound, and the last known altitude was twenty-nine thousand feet.
- 0834:00 ZBW contacted Cape Terminal Radar Approach Control (located on OTIS Air Force Base) and requested they notify the Military of the events regarding AAL11.
- 0835:00 New England Regional Operations Center advised Washington Operations Center (WOC) of the suspected hijack of AAL11.
- 0836:00 WOC notified Civil Aviation Security Intelligence (ACI), and conferenced New England Regional Operations Center and the Air Traffic Control Systems Command Center (ATCSCC).
- 0838:00 ZBW notified New York Air Route Traffic Control Center (ZNY) of possible hijacking of AAL11.
- 0840:00 North East Air Defense Sector (NEADS) logs indicate they were notified by the Federal Aviation Administration of the events concerning AAL11.
- 0841:00 Military Command (VACAPES) issued scramble order on AAL11.
- 0844:00 ZNY facility manager notified New York Terminal Radar Approach Control (N90) of possible hijacking of AAL11. N90 began internal coordination of the aircraft’s last known altitude (twenty-nine thousand feet) and southbound course.
- 0846:31 Primary radar tracking of AAL11 was lost.**
- 0846:35 Impact at World Trade Center.**

Appendix 3 to DOT/OIG Report on Investigation of 9/11 Commission Staff Referral

- 0850:00 Washington Operations Center activated a Tactical Net at the request of Civil Aviation Security Intelligence (ACI).
- 0850:00 Newark Airport Traffic Control Tower (EWR) advised N90 of possible aircraft crash into the World Trade Center.

AAT-20
September 17, 2001
6:30 AM

United Airlines Flight 175 (UAL175)

Boston – Los Angeles

All times indicated are Eastern Daylight Savings Time

- 0804:55 Boston Airport Traffic Control Tower (BOS) issued taxi instruction to UAL175.
- 0814:00 UAL175 began takeoff roll, runway 9, Boston Logan International Airport. All communications with BOS and with Boston Departure Control were routine and normal.
- 0823:01 UAL175 established radio contact with Boston Air Route Traffic Control Center (ZBW). "Boston, morning, United one-seven-five out of one-nine (nineteen thousand feet) for two-three-zero (twenty-three thousand feet)."
- 0823:06 ZBW acknowledged UAL175. At this point the controller was busy due to the events surrounding AAL11. The sector was responsible for six aircraft including UAL175. All communications between ZBW and UAL175 appear routine and normal. The flight was subsequently instructed to climb to flight level 310 (thirty-one thousand feet) and after radar handoff, was issued a frequency change to contact the New York Air Route Traffic Control Center (ZNY).
- 0840:32 UAL175 established radio contact with ZNY. "United one-seventy-five at flight level three-one-zero."
- 0840:37 ZNY acknowledged UAL 175. "United one-seventy-five, New York Center, roger."
- 0841:32 UAL175 transmitted to ZNY, "We figured we'd wait to go to your center, we heard a suspicious transmission on our departure out of Boston. Someone keyed the mike (initiated radio communications) and said everyone stay in your seats."
- 0841:51 ZNY replied, "okay, I'll pass that along." (The controller ensured UAL175's comments were forwarded to the Operations Manager.)
- 0844:05 US Air Flight 83 transmitted to ZNY "I just picked up an ELT (emergency locator transmitter) on 121.5 (emergency VHF frequency). It was brief, but it went off."
- 0844:09 ZNY acknowledged US Air Flight 83.

- 0846:48 UAL175's assigned transponder code of 1470 changed, first indicating 3020, then changing again to 3321. ZNY air traffic computers do not correlate either of these codes with UAL175. Consequently, the secondary radar return (transponder) indicating aircraft speed, altitude, and flight information began to coast and was no longer associated with the primary radar return. *Note: The controller communicating with UAL175 was also monitoring the flight track of AAL11. Based on coordination received from ZBW indicating a possible hijack, most of the controller's attention was focused on AAL11.*
- 0851:43 ZNY transmitted to UAL175, "UAL175, recycle transponder, squawk code one four seven zero." No response was received from UAL175. The controller made several attempts, repeatedly trying to contact UAL175 for the next four minutes. During this time, the aircraft was also observed making a left turn and descending.
- 0853:24 ZNY controller coordinated internally, asking other controllers if they saw UAL175, or if they knew who the unidentified radar target is on transponder code 3321. None of the other controllers replied in the affirmative. *Note: The unknown aircraft in this and all following times was later confirmed to be UAL175.*
- 0855:00 ZNY controller was busy trying to turn other aircraft away from the aircraft believed to be UAL175. The flight track of this aircraft had changed and was now headed southeast bound.
- 0855:00 *This time is approximate based on personnel statements from ZNY.* A controller-in-charge (CIC) advised the Operations Manager (OM) that she believed UAL175 was also hijacked. The OM advised the CIC that an aircraft had hit the World Trade Center. The CIC began coordinating with the controllers working position and one of the controllers stated that UAL175 appeared to heading "right towards the city." The CIC returned to the OM position and heard a request for military aircraft to scramble. UAL175 was observed in a rapid descent
- 0855:00 *This time is approximate based on personnel statements from ZNY.* A controller working a different position within ZNY reported that two aircraft, a Delta Airlines flight was given instructions to avoid an unknown aircraft. At about the same time a US Airways flight reported taking evasive action from an unknown aircraft. The controller reported that the unknown aircraft was now headed towards New York City. This controller, along with other controllers speculated that the unknown aircraft was an emergency and was heading for an airport to land.

- 0900:00 *This time is approximate based on personnel statements from New York Terminal Radar Approach Control (N90). N90 controller stated "at approximately 9:00, I observed an unknown aircraft south of the Newark, New Jersey Airport, northeast bound and descending out of twelve thousand nine hundred feet in a rapid rate of descent, the radar target terminated at the World Trade Center."*
- 0903:14 Second Impact at World Trade Center.
- 0905:00 North East Air Defense Sector (NEADS) logs indicate they were notified by the Federal Aviation Administration of the events concerning UAL175.
- 0905:00 N90 received notification from the Newark Airport Traffic Control Tower of a second aircraft striking the World Trade Center.

AAT-20
September 17, 2001
6:30 AM

United Airlines Flight 93 (UAL93)

Newark – San Francisco

All times indicated are Eastern Daylight Savings Time

- 0809:18 Newark Airport Traffic Control Tower (EWR) issued taxi instructions to UAL93.
- 0842:00 UAL93 began takeoff roll, runway 4 left, Newark New Jersey International Airport. All communications with EWR, with New York Departure Control, and with New York Air Route Traffic Control Center (ZNY) were routine and normal.**
- 0924:30 UAL93 established radio contact with Cleveland Air Route Traffic Control Center (ZOB), "Good morning Cleveland, United ninety-three, three-five-oh (thirty-five thousand feet), intermittent light chop." The controller was busy, the sector was responsible for sixteen aircraft. Of these, several aircraft were being issued new routes based on the events occurring on the east coast. The controller did not reply to this initial transmission.
- 0925:14 UAL93 again reported on ZOB frequency, "United ninety-three checking three-five-oh (thirty-five thousand feet)." The controller replied, "United ninety-three, Cleveland, roger." *Note: This was the third radar sector within ZOB to communicate with UAL93. The communications with the previous sectors were routine and normal.*
- 0928:19 A radio transmission of unintelligible sounds of possible screaming or a struggle from an unknown origin was heard over the ZOB radio.
- 0928:54 A second radio transmission, mostly unintelligible, again with sounds of possible screaming or a struggle and a statement, "get out of here, get out of here" from an unknown origin was heard over the ZOB radio. At about this same time, the ZOB controller observed that UAL93 had descended, altitude indicated thirty-four thousand, three hundred feet.
- 0929:29 ZOB controller asked UAL93, "United ninety-three, verify three-five-zero (thirty-five thousand feet)." There was no reply. The ZOB controller made several attempts to contact UAL93 without receiving any acknowledgement.**
- 0929:50 ZOB controller began moving other aircraft away from UAL93 due to the lack of acknowledgement of any radio transmissions. Several other aircraft on the frequency confirmed unusual sounds of an unknown origin. The altitude of UAL93 again indicated thirty-five thousand feet.**
- 0931:57 A third radio transmission, mostly unintelligible, may sound like an individual out of breath, more unintelligible words and what sounds like "bomb on board" from an unknown origin was heard over the ZOB radio.

- 0932:31 A fourth radio transmission stated "did you hear that transmission that reported a bomb on board?" from an unknown origin was heard over the ZOB radio.
- 0934:50 ZOB controller observed that UAL93 was climbing without an air traffic control authorization. The aircraft had started a turn to the southeast, also without air traffic control authorization.
- 0938:47 UAL93 altitude indicated forty-thousand seven hundred feet.
- 0939:12 A fifth radio transmission, mostly unintelligible, stated words that may sound like "captain, ...bomb on board, ...our demands, ...remain quiet"
- 0939:59 ZOB notified Great Lakes Regional Operations Center of the screams and statements from unknown origin, believed to be UAL93.
- 0941:00 Secondary radar return (transponder) indicating aircraft speed, altitude, and flight information becomes intermittent and eventually failed on ZOB radar displays.**
- 0944:31 ZOB controller notified Pittsburgh Terminal Radar Approach Control (PIT) North Arrival controller of the unanticipated turn, the loss of secondary radar return and lack of radio communications with UAL93. The ZOB controller also stated that the projected flight path would result in UAL93 passing in close proximity if not directly overhead the Greater Pittsburgh International Airport.
- 0945:00 PIT controller notified the Operations Supervisor of the events surrounding UAL93. The PIT controller also manually initiated radar tracking of the primary radar target.
- 0951:00 After determination by the PIT facility manager to evacuate, the controllers have completed coordination with adjacent facilities and the PIT facility has been evacuated.
- 0956:56 A small contingency of controllers (volunteers) returned to the facility and coordination with adjacent facilities pertaining to return to operational status is completed. The track of UAL93 was no longer visible on the PIT radar displays.
- 1000:00 *This time is approximate and is based on personnel statements from ZOB. A ZOB controller's statement indicated that the pilot of a VFR aircraft reported sighting a United Airlines aircraft at approximately eight thousand feet in the vicinity of the Latrobe, Pennsylvania airport. The pilot also reported that the United Airlines aircraft's landing gear was down, the wings were rocking, and that the aircraft appeared to be in distress.*

1004:00 *This time is approximate and is based on personnel statements from ZOB. A ZOB controller statement indicated that UAL93's primary radar target terminated in the vicinity of Somerset, Pennsylvania.*

1007:00 **In response to a request from a ZOB controller, N20VF, a Falcon Jet reported observing puffs of smoke in the vicinity of UAL93's last known position.**

1041:00 After receiving a telephone call from the Somerset, Pennsylvania police department stating that several "911" telephone calls had been received reporting an aircraft accident, a ZOB operations manager made official notification to Great Lakes Regional Operations Center. *Note: Although this is the officially documented notification time, FAA officials were aware of the accident as these events were reported as they occurred on a critical event teleconference established at the Federal Aviation Administration headquarters building.*

AAT-20
September 17, 2001
6:30 AM

American Airlines Flight 77 (AAL77)
Washington Dulles - Los Angeles
All times indicated are Eastern Daylight Savings Time

- 0812:29 Dulles Airport Traffic Control Tower (IAD) issued taxi instructions to AAL77.
- 0820:00 AAL77 began takeoff roll, runway 30, Washington Dulles International Airport. All communications with IAD and with Dulles Departure Control were routine and normal.
- 0825:49 AAL77 established radio contact with Washington Air Route Traffic Control Center (ZDC), "Center, American seventy-seven with you passing one-three decimal zero (thirteen thousand feet) for one-seven-thousand (seventeen thousand feet)." All communications between ZDC and AAL77 appear routine and normal. AAL77 was subsequently handed off to the Indianapolis Air Route Traffic Control Center (ZID).
- 0840:14 AAL established radio contact with ZID. "Center, American seventy-seven with you, level three thirty (thirty-three thousand feet).
- 0840:16 ZID acknowledged, "American seventy-seven, Indy center, roger, squawk three-seven-four-three." (Squawk is a control instruction to change the transponder setting within the aircraft). AAL77 was subsequently instructed to climb to thirty-five thousand feet and later cleared to navigate direct to the Falmouth navigational aid. When ZID acknowledged AAL77, the sector was responsible for fourteen aircraft; additionally four aircraft were in handoff status to this sector.
- 0850:51 AAL77 acknowledged the clearance to Falmouth. This was the last radio communication with this flight.
- 0854:43 AAL77 began a left turn towards the south without air traffic authorization. The altitude indicated thirty-five thousand feet. Shortly after the turn, the aircraft was observed descending.
- 0856:19 Secondary radar return (transponder) indicating aircraft speed, altitude, and flight information is lost on ZID radar displays. There was no longer any radar return information (either primary or secondary) on AAL77 indicated at the ZID radar displays. *Note: The initial review of radar data, and controller personnel statements conducted by ZID did not indicate any primary or secondary radar returns were displayed.*
- 0856:32 ZID controller attempted to contact AAL77, "American seventy-seven, Indy." There was no acknowledgement. ZID also tried to communicate with AAL77 through American Airlines company radios.

Appendix 3 to DOT/OIG Report on Investigation of 9/11 Commission Staff Referral

- 0858:14 ZID also made several attempts to contact AAL77 through American Airlines company dispatch.
- 0859:00 ZID controllers began coordinating with other controllers to protect the airspace and altitude of AAL77's filed route of flight.
- 0909:00 ZID notified Great Lakes Regional Operations Center a possible aircraft accident of AAL77 due to the simultaneous loss of radio communications and radar identification.
- 0915:00 *This time is approximate based on personnel statements from ZID.* The ZID Operations Manager requested that the Traffic Management personnel notify Air Force Search and Rescue of the missing and possibly downed aircraft. The Operations Manager also contacted the West Virginia State Police advising them of a possible downed aircraft and asks if they have any reports of a downed aircraft.
- 0920:00 *This time is approximate based on personnel statements from ZID.* The ZID Operations Manager contacted the Chicago Air Route Traffic Control Center (ZAU) and advised the ZAU Operations Manager of his concern that AAL77 may have been hijacked and that he (ZAU Operations Manager) should be on the look out (based on events occurring in New York)..
- 0924:00 Great Lakes Regional Operations Notified Washington Operations Center of the simultaneous loss of radio communications and radar identification.
- 0925:00 *Between 0925:00 and 0930:00, this time is approximate based on personnel statements from Dulles Terminal Radar Approach Control (IAD).* Several IAD controllers working radar positions in the facility observed a primary radar target tracking eastbound at a high rate of speed. *Note: The unknown aircraft in this and all following times was later confirmed to be AAL77.*
- 0933:00 *This time is approximate based on personnel statements from IAD.* An Operations Supervisor at IAD advised the White House Office of the United States Secret Service of an unknown aircraft heading in the direction of the White House, fast moving. Meanwhile, a controller was providing the same information to controllers working at the Ronald Reagan Washington National Airport Traffic Control Tower (DCA). The IAD Operations Supervisor also provided continuous updates on a critical event teleconference established at the Federal Aviation Administration Headquarters building.
- 0933:00 *This time is approximate based on personnel statements from DCA.* An Operations Supervisor at DCA was advised by IAD of the unknown aircraft. The Operations Supervisor at DCA immediately notified the White House Office of the United States Secret Service of the unknown aircraft's location and provided continuous updates.

Appendix 3 to DOT/OIG Report on Investigation of 9/11 Commission Staff Referral

- 0936:00 Personnel at DCA issued traffic advisories on the unknown aircraft to a military C130 aircraft that had departed Andrews Air Force Base. When the C130 aircraft (GOFER06) reported the unidentified aircraft in sight, the pilot was instructed to follow the unknown aircraft.
- 0938:00 **GOFER06 reported that the unknown aircraft had crashed into the western side of the Pentagon.**

AAT-20
September 17, 2001
6:30 AM

Appendix 4 to DOT/OIG Report on Investigation of 9/11 Commission Staff Referral

	AAL11	UAL175	AAL77	UAL93
First Sign	08:20 ¹	08:46 ²	08:56 ³	09:28 ⁴
Probable time flight was known to be in distress	08:25 ⁵	08:52 ⁶	08:56 ⁷	09:32 ⁸
NORAD** NEADS*** Notification	08:40*	09:05*	09:24*	NA*
Estimated Crash time	08:46	09:03	09:38	10:04
All times are Eastern Daylight Time				

1. AAL11 secondary radar return (transponder) lost.
2. UAL175 assigned transponder code of 1470 changes; communications lost.
3. AAL77 secondary radar return (transponder) and radar contact was simultaneously lost.
4. Two radio transmissions of unintelligible sounds; possible screaming, sounds of a struggle and "get out of here" is heard over the Cleveland Air Route Traffic Control Center radio. The mode C for UAL93 has descended 700 feet from assigned altitude
5. A radio transmission is heard telling passengers "nobody move everything will be ok if you try to make any moves you'll endanger yourself and the airplane just stay quiet."
6. UAL175 has failed to respond to several calls and is observed turning off course.
7. Aircraft is presumed crashed over Pennsylvania.
8. UAL93 is unresponsive to multiple calls from the controller. Additionally, there are three transmissions indicating a possible struggle aboard an aircraft.

*These times are derived from the review of the NEADS log.

*North American Aerospace Defense Command (NORAD)
Northeast Air Defense Sector (NEADS)

FAA's Response to the 9/11 Commission's May 22, 2003, Question for the Record.

**FAA communications with NORAD
On September 11, 2001**

Within minutes after the first aircraft hit the World Trade Center, the FAA immediately established several phone bridges that included FAA field facilities, the FAA Command Center, FAA headquarters, DOD, the Secret Service, and other government agencies. The US Air Force liaison to the FAA immediately joined the FAA headquarters phone bridge and established contact with NORAD on a separate line. The FAA shared real-time information on the phone bridges about the unfolding events, including information about loss of communication with aircraft, loss of transponder signals, unauthorized changes in course, and other actions being taken by all the flights of interest, including Flight 77. Other parties on the phone bridges, in turn, shared information about actions they were taking.

NORAD logs indicate that the FAA made formal notification about American Flight 77 at 9:24 a.m., but information about the flight was conveyed continuously during the phone bridges before the formal notification.

ORGANIZATION & TELEPHONE NO.: OST-M40, (b)(6), (b)(7)c	TO: _____ INITIAL _____
SUBJECT(S) DISCUSSED: Telephone Line Recording OST Security Policy	

SUMMARY:

He was asked if OST (b)(6), (b)(7)c had a prohibition against recording telephone conversations of the Secretary. (b)(6), (b)(7)c advised that he was not aware of such a prohibition and he has been with DOT since 1980. He advised that he will check with (b)(6), (b)(7)c and see if he has heard of anything. He also was not aware of anyone informally running a request to record special telephone lines for use by the Secretary and the request being turned down.

(b)(6), (b)(7)c was not aware of OST (b)(6), (b)(7)c issuing any prohibitions against recording encrypted/secure telephone conversations. He is also not aware of a national prohibition.

		FILE: 042R0122001	
SUBJECT(S) DISCUSSED:			
Telephone Line Recording Written Determinations			

SUMMARY:

He advised that under DOT Order 1600.17, FAA would need to have a written determination to record telephone lines for public safety or national security reasons. However, no written determination is necessary for all party notices. An all party notification would be one where the parties involved in the discussion are told at the beginning of the conversation that it was going to be recorded.

(b)(6), (b)(7) was not aware of FAA having submitted a written determination, but he was going to check with (b)(6), (b)(7)c to see if FAA had any of file. He also advised that if he did not find one that I contact (b)(6), (b)(7)c in OST General Counsel's office, who is (b)(6), (b)(7)c point of contact on these types of issues.

With regard to recording classified communications on STU/STE telephone lines, he was not aware of a prohibition. He recalled having a discussion with (b)(6), (b)(7)c about that. His only warning to FAA was that any recordings made off the STU/STE phones were classified and would have to be handled accordingly.

Recording of the CCP Lines in the Washington Operations Center Complex (WOCC)			

SUMMARY:

In response to questions posed to her on 6/2/06 (b)(6), (b)(7)c advised that the CCP phone lines are not recorded and could not be recorded because they by-passed the conference bridge, which is where the recording equipment is located. She advised that when they installed the recording equipment they looked into what it might take to record the CCP lines but decide it was not feasible for so few lines. The most important factor was having the lines not be caught in the call queue. Further, there might be situations where the Administrator, her Deputy or even the Secretary might not want to be recorded discussing what-ifs or other pre-operational decisions.

The STE/STU lines are not recorded because Director of Central Intelligence Directive 6/9 and Executive Order 12398 (previously 13292) [sic] prohibit it.

Recording of the CCP Lines in the Washington Operations Center Complex (WOCC)			

SUMMARY:

The CCP telephone lines that are used by the FAA administrator and deputy administrator to call into the WOCC come in directly from the telephone switch, bypassing the conference bridge--the conference bridge is where the WOCC's recording equipment is located. (b)(6), (b)(7)c advised that they set-up the CCP lines to by-pass the conference bridge so that the CCP lines would not go through the call queue. If there were an emergency going on and a call from the administrator or her deputy went into the call queue it might not get answered. She did not think that it was intentional that they did not record the CCP lines. However, she advised that she would need to double check and get back with me. I told her that I had a couple of other questions and that I could email all the questions to her, to which she agreed to respond.

SUBJECT(S) DISCUSSED: Recording of STE/STU telephone lines in the Washington Operations Center Complex (WOCC)			

SUMMARY:

On June 6, 2006, I sent (b)(6), (b)(7)c a follow-up email requesting her assistance in locating provisions in Director of Central Intelligence Directive 6/9 and Executive Orders 12958 and 13292 that prohibit the recording of classified discussions on STE/STU telephone equipment. During this telephone conversation I asked her if she had a chance to do any further research into the regulations she cited. She advised that she had not because she had been very busy. She advised that those regulations did contain the cites that prohibit recording of classified communications. I told her that I was not able to find them in the regulations she cited, I even pointed out that Executive Order 12398, which she cited in her 6/2/06 email to me, did not pertain to classified materials but instead related to budget issues (specifically, the "President's private sector survey on cost control in the Federal Government"). She agreed to find a point of contact that could provide me with the information I was seeking and email the name and telephone number.

SUBJECT(S) DISCUSSED: Follow-up questions related to 9-11 Commission Hearing Held in May 2003			

SUMMARY:

(b)(6), (b)(7)c called to advise that she reviewed the testimony from the May 23rd Commission hearing and after her review recalled what it was that upset her about (b)(6), (b)(7)c testimony. At the time, May 23, 2003, it was her understanding that FAA had an open line established within FAA headquarters that included NORAD. In May 2003, (b)(6), (b)(7)c did not know that FAA had established a conference call that included the NMCC but that they dropped off the call.

During (b)(6), (b)(7)c testimony he did not acknowledge the open line. In his testimony he mentioned that FAA's Boston Center was the only conduit of information and that was through NEADS. (b)(6), (b)(7)c opined that the testimony left the impression that FAA was not talking to anyone else at NORAD, which at the time she felt was erroneous.

Follow-up questions related to 9-11 Commission Hearing Held in May 2003			

SUMMARY:

I asked (b)(6), (b)(7)c who else went to the hearing with her wherein the testimony of a DOD official upset her. She advised that she recalled Secretary MINETTA, a member of his security staff and one other DOT official. She did not think that Shirley MILLER went with her; she did recall sitting with someone else but did not recall a name. She recalled that Jane GARVEY, (b)(6), (b)(7)c and (b)(6), (b)(7)c were at the hearing. I asked her if she might be combining hearings or thinking of the June 2004 hearing. At this point I gave her the Internet address for the 9-11 Commission's website (www.9-11commission.gov) and we went to the hearings sections. We went over the participants in the 5-22-03 and 5-23-03 hearings. With regard to the 5-23 hearing—the subject hearing—she advised that she went to that hearing because Secretary MINETTA was testifying. She was the only person from FAA Public Affairs that went. She recalled feeling very alone during that hearing and did not know if there was anyone else there from the other FAA lines of business.

ACTION REQUIRED?

(b)(6), (b)(7)c agreed to review the transcript from the 5-23 hearing to see if she could recall what about (b)(6), (b)(7)c testimony upset her and to see if it could help her recollection as to who else from the FAA was with her at the hearing.

MEMORANDUM OF INTERVIEW OF DARLENE FREEMAN

On September 16, 2005, Darlene FREEMAN, Director of Corporate Learning and Development, AHD-1, Federal Aviation Administration (FAA), was interviewed in her office located at 800 Independence Avenue, S.W., Washington, D.C. by Special Agent (b)(6), (b)(7)c Office of Inspector General (OIG), United States Department of Transportation (USDOT). FREEMAN was interviewed in conjunction with a July 29, 2004 referral from the National Commission on Terrorist Attacks Upon the United States to the Inspectors General for the Departments of Transportation and Defense. After being apprised of the identity of the interviewing agent and the purpose of the interview, FREEMAN provided the following relevant information:

Immediately following the events of September 11, 2001, FREEMAN was tasked with preparing then-FAA Administrator Jane GARVEY for anticipated congressional hearings. In conjunction with that tasking, FREEMAN assembled a group of FAA employees representing various divisions of the FAA organization to brainstorm about what areas GARVEY would be expected to testify.

During the interview, FREEMAN referred to a briefing book that she created and which includes information that was provided to GARVEY as preparation for her testimony. Her briefing book is divided into 14 tabbed sections; the first two sections deal exclusively with the issue of FAA notification to the military. The remainder of the sections deal with such issues involving aviation security measures put in place post September 11th, the closing of the national airspace and airports. FREEMAN stated that substantive security issues were what was particularly focused upon because it was expected that Congress would require a lot of detail about these issues.

With respect to the issue of FAA notification to the military, FREEMAN recalled that then-Deputy Administrator Monty BELGER was particularly interested in this topic and consequently, FREEMAN directed that the Air Traffic Organization gather information related to this area.

Prepared by:

(b)(6), (b)(7)c

Date Prepared: 09/22/05**DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL**

1/2

~~FOR OFFICIAL USE ONLY~~
(Public availability to be determined under 5 U.S.C. 552)

FREEMAN referred to a document within her records titled, "Notifications to Military," dated September 20, 2001. She stated that it is likely she created the chronology based upon previously created documents that she had obtained from Air Traffic. She explained that she was not the original source of any information contained therein and thus, conducted no independent verification of its content. She recalled though that (b)(6), (b)(7)c of Air Traffic may have shared with her some of New York Center's air traffic logs during the time this document was created.

FREEMAN was shown a copy of what has been identified as the Northeast Air Defense Sector log (NEADS log) for September 11, 2001. She stated that it did not look familiar to her and that she did not believe that Jeff GRIFFITH, former Deputy Director for Air Traffic Services, ever showed it to her.

Within FREEMAN's records was a chart which included times for FAA notification to the military for each of the four flights, herein referred to as the grid chronology. This grid chronology was created by AAT-20 and revised on September 18, 2001. While FREEMAN was certain that she saw drafts of this document, she was able to produce none from her own files. She recalled that Dave CANOLES, Evaluations and Investigations Division Manager, brought her several iterations of the grid chronology because it was a work in progress and because BELGER would make suggestions about what information was needed in the document. FREEMAN recalled specifically that it was BELGER who directed that Air Traffic include "probable time flight was known to be in distress" in the chronology.

FREEMAN additionally stated that she recalled that Air Traffic brought BELGER a draft of a military press release that detailed the military's response times. She recalled that there was discussion regarding a conflict about one of the notification times for which the military was crediting the FAA. FREEMAN stated that the military was claiming that they were notified by the FAA at a time which was impossible because the particular flight was not known to have been in distress at the time. However, because so much time has passed since those events, FREEMAN was not certain about which of the four flights was the focus of the conflict.

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

2/2

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF (b)(6), (b)(7)c

On May 24, 2005, (b)(6), (b)(7)c
 (b)(6), (b)(7)c Federal Aviation Administration (FAA), was telephonically (b)(6), (b)(7)c
 interviewed by Special Agents (b)(6), (b)(7)c and (b)(6), (b)(7)c Office of
 Inspector General (OIG), United States Department of Transportation (USDOT).
 After being apprised of the identity of the interviewing agents and the purpose of
 the interview, AVERY provided the following relevant information:

Within the Washington Operations Center (WOC) there is a conference bridge with approximately 380 telephone lines. There are ten tape-recorders capable of recording conversations that occur on the conference bridge. The default setting is to not automatically record calls taking place on the bridge. They can activate a tape-recorder on any conference call taking place on the conference bridge.

The Domestic Events Network (DEN), which is run over the conference bridge, uses approximately, on average, 100 lines. The DEN is always tape-recorded.

The main number coming into the WOC (202-267-3333), is automatically recorded anytime that phone is answered. There are a total of six lines that can branch off the main number.

There are four CCP (not further identified) telephone lines, which are used for the Administrator and her Deputies to call into the WOC on a priority basis. The CCP lines are intentionally not recorded. The only way a call that comes in on the CCP can be recorded is if the call is transferred to the conference bridge.

The WOC has approximately eight secure telephone equipment (STE) phones. The STE's are set-up to not allow anyone to record the conversations. (b)(6), (b)(7)c
 was aware that there are secure conference bridges that a STE can work on, which could be recorded, however, the FAA does not own such a bridge.

Prepared by

(b)(6), (b)(7)c

Date Prepared: 06/06/05

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

1/2

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF (b)(6), (b)(7)c

The secure video system (SVS) in the WOC is not recorded on the FAA side. The FAA is not the owner of the system; they are merely users of the system. The SVS is managed by the Whitehouse Communications Agency.

The FAA WOC also has one fixed and one portable satellite telephone. The FAA owns the equipment and leases the service. The satellite phones are used as a back-up form of communications should the land lines ever go down. The FAA does not have the ability to record the satellite telephones.

The WOC has three facsimile machines that are on a regular telephone line. The lines that the facsimile machines are on are not tape-recorded.

Any of the administrative office lines associate with the WOC are off the FAA's core phone system and are not tape-recorded.

Any tape-recordings of the DEN are held for 30-days. The FAA uses a THALES recorder to tape-record the DEN, and the other conversations on the conference bridge. The maximum recording capacity of the system currently in place is 30-days, hence, the reason the recordings are kept for 30-days. The tape-recordings can be transferred to a DVD in a computer readable format.

Addendum

On June 1, 2005, (b)(6), (b)(7)c provided the following additional information:

There is currently no documented procedure for maintaining the tape-recordings of the DEN.

REDACTED FOR DISCLOSURE

INTERVIEW OF DOUGLAS GOULD

On May 12, 2005, Manager of Strategic Operations Security, System Operations Security, Air Traffic Organization (ATO), Federal Aviation Administration (FAA), was telephonically (b)(6), (b)(7)c interviewed at his place of business by Special Agent (b)(6), (b)(7)c U.S. Department of Transportation, Office of Inspector General. After being apprised of the identity of the interviewing agent and the purpose of the interview, GOULD provided the following relevant information:

GOULD advised that FAA Order 7110.320 was the notice initially issued after September 11, 2001, which turned into FAA Order 7110.306a. FAA Order 7110.306a dealt with the FAA's handling of suspicious aircraft. GOULD has been unable to find anyone with a copy of 7110.320.

GOULD advised that once a Department of Defense (DOD) fighter aircraft intercept is authorized, the conversation with the fighter aircraft migrates from the Domestic Events Network (DEN) to the "red switch". The red switch is a secure telecommunications network owned and operated by the DOD. The network is used to discuss classified information. DOD controls who is allowed on the network. To GOULD's knowledge, the conversations on the red switch are not tape recorded. He believes this is because he has not heard an announcement to that effect and there is no tone while the network is active.

GOULD advised that today, four years after activation, there still are no MOUs with the agencies that participate on the DEN. The benefits of an MOU would be to document the rules and responsibilities of each participating agency, establish the agency in charge during specified events, and de-conflict authority of the agency in charge during interdictions. He advised that occasionally there is a conflict between the U.S. Customs Air Operations (USCS-AO) unit and the DOD regarding who is going to initiate and take charge during an interdiction.

Prepared by:

(b)(6), (b)(7)c

Date Prepared: 05/13/05

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

1/4

~~FOR OFFICIAL USE ONLY~~
(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF DOUGLAS GOULD

GOULD has noted that those who participate from the Transportation Security Operations Center (TSOC)—an operations center run by the Transportation Security Administration (TSA)—seem to lack aviation knowledge, resulting in inappropriate reactions to certain security events. As an example, GOULD related that when there is a check-point breach at an airport the TSA chief duty officer at the TSOC will order, in addition to dumping a terminal, that all aircraft that are ready to push back do so immediately and that all aircraft on approach to the airport not be allowed to land. Reactions such as those seem, to GOULD, to be an overreaction and have an unnecessary and negative impact the aviation system.

GOULD advised that the FAA does have a standard operating procedure and a training manual for internal use regarding the DEN, however, he did not think it had been signed by the FAA Administrator.

FAA has proposed to the TSA Interagency Procedures Working Group (IAPWG) that a MOU be drawn-up for the DEN but there has not been much movement in development of an MOU. GOULD advised that after two years, a CON-OPS was recently signed with regard to the National Capitol Regional Coordination Center (NCRCC). It started out as being nearly 50-pages but is now down to around 10-pages in length.

Beginning on April 15, 2005, the need for a code word for all aircraft that are to land at DCA will end. About one year ago the TSA and U.S. Secret Service (USSS) stopped reacting to code word authentication failures because there were so many false alerts. After April 15th, only general aviation aircraft landing at DCA are required to receive a roughly 40-minute pre-departure briefing from the TSA and FAA at the NCRCC. There is still a requirement for all those on board the general aviation aircraft to have been vetted through TSA and for a LEO to be on the flight.

The NCRCC is part of the TSOC. Within the NCRCC there is a "POD" that contains an FAA air traffic representative, a USCS-AO, USSS, and NORAD

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

2/4

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF DOUGLAS GOULD

representative on a 24-hour a day, seven-days a week basis. The FBI is also present but only during normal business hours. The FAA representative at the NCRCC monitors the DEN.

At the Potomac TRACON there is an FAA Eastern Region contractor that serves as the DEN monitor. The monitor on duty during the June 2004, N24SP event had Flight Service Station experience and was not accustomed to air traffic issues. GOULD described the DEN monitor at the TRACON as the single point of failure in the N24SP event. She had failed to pick out N24SP's primary radar target in spite of the fact that her radar screen was flashing "RDR" for N24SP—an indication that it was a primary target.

At the time of N24SP (June 2004), the NCRCC FAA representative had a radar feed that contained HOST data only. Immediately thereafter the NCRCC FAA representative was given the same radar feed as is in the TRACON.

The Power Point (PPT) presentation containing the radar depictions from N24SP is a not true representation of what the Potomac TRACON DEN representative saw. The radar depictions in the PPT are from RAPTOR, which used the ARTS radar from the TRACON. The only way to see the same radar picture that the DEN representative saw is to replay the radar at the facility involved. In the PPT, a plus sign, or virgule, on the radar depictions indicates a primary radar return. The circle around the return was likely added by the specialist who put together the slides to make the return more prominent. At a radar terminal, the ATC has the ability to click on the primary radar return and add a data block if one does not exist. Once that is done the return will blink RDR to indicate it is a primary only return. A letter will be appended to the plus sign after the data block is added. The letter will represent the radar sector handling the aircraft. The term CST on the radar depictions indicates that the return is in coast mode.

GOULD has been working on an Automatic Detection and Processing Terminal (ADAPT) system.

INTERVIEW OF DOUGLAS GOULD

With regard to FAA's relationship with DOD, in addition to adding the DEN, the FAA has added liaisons to all the DOD sectors, WADS, NEADS, SEADS, CONR and NORAD. In addition, there are DEN liaisons at the sectors, WADS, NEADS and SEADS. By request of DOD, FAA is moving the DEN liaisons from the WADS, NEADS and SEADS sectors to NORAD and CONR.

GOULD advised that decisions concerning things like the size of the ADIZ/FRZ and separation standards are made at the FAA senior executive level. As an example, any changes to the separation standards require an executive safety study before the standard can be reduced. Things like radar accuracy would have to be taken into account in the study. If one wanted a separation standard that allowed aircraft to go from 5 miles of separation to 1 mile of separation and the radar was only accurate to half a mile, then the two aircraft might collide.

The DOD has the ability to declare an AFIO (Authorization for Interceptor Operations), wherein they take control and responsibility for their own aircraft. GOULD advised that DOD seems reluctant to declare AFIO since the liability during the event, if something like a mid-air collision were to occur, shifts from the FAA to DOD.

In 1996, the FAA removed the military operations specialist positions from many FAA facilities. Since September 11, 2001, FAA has determined that it was a mistake to remove those positions. FAA is in the process of trying to get approval to hire 65 Operational Support Specialist to assist with DEN communications, military liaison, and military exercises, among others activities. GOULD believes this would assist in sensitizing FAA to DOD tracks of interest.

REDACTED FOR DISCLOSURE

INTERVIEW OF DANNY NOEL

On May 13, 2005, Danny NOEL, Manager, Emergency Operations Division (AEO-200), Federal Aviation Administration (FAA), Washington, D.C., and Michael MORSE, Executive Assistant to the Director of Field Operations, FAA, Washington, D.C. were interviewed at their place of employment by Special Agent (b)(6), (b)(7)c U.S. Department of Transportation, Office of Inspector General. After being apprised of the identity of the interviewing agent and the purpose of the interview, NOEL and MORSE provided the following relevant information:

NOEL advised that during joint communications exercises, which were developed by FAA and conducted along with the Transportation Security Administration (TSA) Aviation Security Operations Watch (ASOW), information was injected into the exercises that allowed for the response of FAA air traffic and/or FAA Washington Operations Center (WOC) staff to affect the outcome. The scenarios developed involved only headquarters-level staff and FAA air traffic staff from the Domestic Events Network (DEN). The FAA air traffic aspect was injected into the scenarios by way of paper inserts or people on staff in the WOC who played the role of the air traffic division.

At the conclusion of these exercises, no after-action reports were generated. The reason for not generating after-action reports was because the exercise planners wanted to focus on getting those involved to communicate; they did not want to fix blame for problems identified during the exercises. Though there were no written after-action reports, verbal briefings took place after the exercises.

The aforementioned exercises were primarily conducted during the period June 2002 through January 2003. The goal was to stop performing the exercises once it was perceived that better communication was taking place. However, the exercises actually stopped about the time the second Gulf War began. The main reason for this was because the FAA lacked the resources to continue conducting the exercise and activate the civil reserve air fleet at the same time. Furthermore,

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

1/4

~~FOR OFFICIAL USE ONLY~~
 (Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF DANNY NOEL

TSA had moved out of the WOC and started its own Transportation Security Operations Center (TSOC).

7610.4K is the FAA Order that guides the conduct of exercises.

NOEL advised that regional level exercises might be conducted that do not involve the Emergency Operations Staff (EOS) (i.e., of which he would not have awareness). He is aware that the air traffic division did some exercises that did not involve EOS.

He advised that the after-action report for TOPOFF III, which just recently completed, was still in the process of being finalized.

(AGENT'S NOTE: At this point (b)(6), (b)(7)c joined the interview.)

(b)(6), (b)(7)c advised that the FAA had a series of executive level joint exercises with TSA administrators (or equivalent at TSA) when they were still part of the DOT, which have continued since TSA was moved to the Department of Homeland Security (DHS). The respective agency heads will bring nearly all operational direct reports with them to the exercises. The exercises are geared toward identification of problems and trying to establish changes to identified problems. These are "table-top" exercises that do not involve field components. Any activity that might occur outside the room where the executives are is simulated.

Thus far, five exercises have been completed and a sixth is being planned for May 25, 2005. Given the amount of fluidity in TSA's management it has been difficult, but not impossible, to organize these exercises. With one major difference, that being exercises concerning MANPADS, the executive exercises are focused on the basics.

At the completion of the executive exercises, after-action reports generally are not prepared. During each exercise a note taker is designated. Upon completion of the

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

2/4

~~FOR OFFICIAL USE ONLY~~

INTERVIEW OF DANNY NOEL

exercise the notes are shared amongst the participants. The fourth exercise does have a typed-up, after-action report that was generated and provided to the Under Secretary of policy at DOT. (b)(6), (b)(7)c agreed to provide the reporting agent with a copy of that after-action report. Though most exercises do not have after-action reports, corrective actions are taken based on the lessons learned. (b)(6), (b)(7)c suggested that they might need to do a better job of documenting the results of these exercises.

(b)(6), (b)(7)c advised that there are instances after the exercises where changes are made as a result of lessons learned; however, it is not always possible to make a direct correlation between the change and the specific exercise. (b)(6), (b)(7)c indicated that some items learned from the exercises have been incorporated into the current memorandum of understanding (MOU) with TSA. He agreed to provide the reporting agent with a copy of the aforementioned MOU. Further, he indicated that the blue tabbed pages and the blue highlights are some items that came out of previous exercises.

A new MOU between TSA and FAA is currently in draft and nearly approved by all parties. Some examples of elements developed after exercise five are found in attachment 10, paragraph h., which pertains to the requirement to develop agreements of authority between local air traffic managers and the local Federal Security Directors. This came out of exercise five after disagreements arose as to whom to call in order to decide who should direct an aircraft to land for security reasons.

(b)(6), (b)(7)c also cited some elements in the Common Strategy, dated January 3, 2005, as having elements in it that came from lessons learned during exercises.

For exercises one through four the FAA was responsible for setting up and hosting them. Starting with exercise five it was agreed that each agency would take turns setting up and hosting it. TSA hosted five and will host exercise six. It has been agreed that exercise seven will be hosted by FAA.

MEETING WITH FAA-WOC STAFF

On February 22, 2005, Special Agents (b)(6), (b)(7)c and (b)(6), (b)(7)c met with (b)(6), (b)(7)c (b)(6), (b)(7)c, Federal Aviation Administration (FAA); (b)(6), (b)(7)c FAA; and (b)(6), (b)(7)c (b)(6), (b)(7)c FAA, to discuss policy and procedures concerning the operation of the FAA Washington Operations Center (WOC). During the meeting the reporting agents were provided with WOC policies concerning the handling of hijacked aircraft and bomb threats that were in place on September 11, 2001. Copies of the aforementioned current polices were also provided. A follow-up meeting took place on February 23, 2005, with (b)(6), (b)(7)c and (b)(6), (b)(7)c

The FAA Crisis Management Handbook contains provisions for handling 40 types of crisis events. All divisions within the FAA are bound by the provisions of the Crisis Management Handbook.

On September 11, 2001, the Aviation Command Center (ACC) was a separate room off of the Washington Operations Center. The ACC was activated during a crisis situation, such as a hijacking. The separate room no longer exists, however, an ACC will still be established during a crisis but it is now a part of the operations center complex.

(b)(6), (b)(7)c and (b)(6), (b)(7)c thought that there was an FAA Order that directed Air Traffic management's response to and handling of a hijacked aircraft. However, they did not know the order number.

On September 11, 2001, the WOC was part of the Deputy Administrators Office. On September 11, 2001, Dan NOEL was the manager of the WOC.

Prepared by:

(b)(6), (b)(7)c

Date Prepared: 2/24/05

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

1/3

~~FOR OFFICIAL USE ONLY~~
(Public availability to be determined under 5 U.S.C. 552)

MEETING WITH FAA-WOC STAFF

Within the Civil Aviation Security Operations Manual (CASOM) there is a Communications protocol for handling crisis situations. The CASOM is a handbook as opposed to an FAA order. There are provisions within in the CASOM that set local policy on handling air piracy and aviation bombing threats.

ACI is the Intelligence Division that was a part of the former Civil Aviation Security Division. ACI was a 24 hour-a-day operation.

The Air Traffic Organization has an order pertaining to operation of the Domestic Events Network (DEN).

(b)(6), (b)(7)c was responsible for conducting a review of the WOC following 9/11. Further, (b)(6), (b)(7)c authored a memo titled "Restructuring Emergency Operations Personnel," which is dated October 18, 2001, documenting his recommendations.

No changes were implemented in the WOC following the June 2004, N24SP event, which involved the Kentucky Governor's aircraft. Some changes were implemented at the National Capitol Region Coordination Center (NCRCC) and the Transportation Security Operations Center (TSOC) the later of which is physically located in Herndon, VA.

The FAA WOC uses CONFERTECH phone bridge/teleconferencing software. On September 11, 2001, they used a version of CONFERTECH that is similar to that which is currently in use by the WOC. When the WOC initiates an outbound call, the CONFERTECH software has the ability to display information about the person the WOC called, including the name, which is input by the WOC technician that is running the teleconference, and telephone number. However, when the teleconference is set-up to accept incoming telephone calls the telephone number is displayed but not the name of the party that called into the teleconference.

REDACTED FOR DISCLOSURE

MEETING WITH FAA-WOC STAFF

The WOC did not have the ability to record any of the lines on September 11, 2001. Following 9/11 that capability was added. However, there are some secure communication lines that are not recorded.

The WOC "Guidelist" that was followed and completed on September 11, 2001, is no longer available. The Guidelist is used, in the event such as an aerial hijack, to provide a list of those to be contacted and a form with blanks to indicate the time that each person was contacted. (b)(6), (b)(7)c advised that they have previously looked for the list and believe that it was lost during the renovations to the WOC.

The National Military Command Center (NMCC) was located in the Pentagon. The NMCC was evacuated on September 11, 2001.

(AGENT'S NOTE: (b)(6), (b)(7)c had previously provided the reporting agent with select copies of WOC polices that were in-place on 9/11 and those currently in-place.) (b)(6), (b)(7)c agreed to provide the reporting agents with the dates for any polices that are not already dated. Further, she agreed to verify whether the Crisis Management Handbook, Chapter 4, Air Piracy that was provided as being in place on September 11, 2001 is the correct version of that policy. She questioned whether that is the correct version since tab 4-2, Crisis Management Telephone Net, indicates that "...all emergency nets are recorded."

On September 11, 2001, (b)(6), (b)(7)c
 (b)(6), (b)(7)c someone in the ACC as the Tactical
 Net coordinator.

INTERVIEW OF DANNY NOEL

On April 11, 2005, Danny NOEL, Manager, Emergency Operations Division (AEO-200), Federal Aviation Administration (FAA), Washington, D.C., was telephonically (b)(6), (b)(7)c interviewed by Special Agent (b)(6), (b)(7)c U.S. Department of Transportation, Office of Inspector General. After being apprised of the identity of the interviewing agent and the purpose of the interview, NOEL provided the following relevant information:

NOEL advised that AEO-200 is currently part of the FAA Office of Security and Hazardous Materials (OSHM). Prior to September 11, 2001, AEO-200 was part of the Deputy Administrator's Staff. In approximately October 2001, AEO-200 was reorganized and a Senior Executive Level position was created as its head and it also included the Washington Operations Center (WOC). That Senior Executive position was filled by David CANOLES. However, in February 2004, due to budgetary concerns expressed by Congress, AEO-200, to include the WOC, was removed from the Deputy Administrator's staff, the senior executive position was done away with and it was put under OSHM.

NOEL assumed his current position in March 2000, after (b)(6), (b)(7)c

AEO-200 is comprised of four teams. The first is the Continuity of Operations branch (COOP). The COOP is responsible for providing alternative worksites that include equipment and files containing polices and such for FAA senior leadership and key expertise. The second is Command and Control Communications (C3), which is responsible for providing emergency operations communications support. C3 also maintains FAA's VHF FM and HF radio communications systems for daily and emergency communications usage. C3 is in the process of implementing satellite telephones and converting the Department of Defense's old Auto DIN telephone system to the new Defense Messaging System (DMS). The DMS is used in the air traffic facilities. The third team is the communications security

1/3

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF DANNY NOEL

team, which provides communications security, in the form of cryptography telephone equipment for C3.

The fourth team is the emergency operations team, which is responsible for coordinating personnel with situational expertise during emergencies; preparing, planning and conducting exercises, and handling crisis management. There are primarily five types of exercises in which the FAA participates. The first are interdepartmental, which are national exercises coordinated government wide. An example of such an exercise would be TOPOFF III that concluded last week.

The second type of exercise are the military exercises. During the "Cold War" and immediately thereafter FAA's role in these exercises was to support military mobilizations to Europe. The mobilization exercises then evolved into multiple theater mobilizations and now to more terrorism based exercises.

A third type of exercise the FAA participates in are TSA and FAA senior executive level exercises. These exercises normally relate to air piracy and MANPAD (surface to air missile) issues.

The fourth type of exercises is COOPing exercises. The Federal Preparedness Circular 65 (FPC65), published by the Federal Emergency Management Agency, requires annual COOP exercises. The FAA had been performing COOP exercises since 2000, even before FPC65¹. Further, in 2001, the FAA activated its COOP on a number of occasions.

The fifth type of exercise are communications exercises. The FAA units involved in these were primarily the WOC and Aviation Command Center in Herndon, VA. These exercises were conducted jointly with the TSA until about one year ago. They had the intended purpose of helping to establish a cross flow of information from one organization to the next. For example, the TSA would be injected with one piece of information and then the FAA was injected with another. Neither

¹ FPC65 is dated July 26, 1999. (<http://www.fas.org/irp/offdocs/pdd/fpc-65.htm>)

INTERVIEW OF DANNY NOEL

party would be able to determine the full extent of what was happening unless they shared the information they were injected with. Immediately following 9/11 the FAA and TSA would conduct up to two of these exercises per week. For about the last year neither the FAA nor the TSA has conducted this type of exercise.

Normally, the interdepartmental, COOP, and military exercises are documented with after action reports. However, the TSA and FAA senior executive and communications exercises do not document their after action analysis. The communications exercises were considered "no-fault" and they had verbal briefings after the fact, from which the participants learned where improvements were needed. According to NOEL, after the senior executive exercises it was nearly impossible to get TSA to sit down for an after-action analysis because they were being pulled in so many different directions. NOEL was not aware if FAA conducted its own after action analysis but agreed to check on that point and get back to the reporting agent.

NOEL advised that FAA would like to conduct more cross organizational, FAA-wide, exercises but is hampered by funding problems.

The only exercises that FAA participated in that were no-notice were the communications exercises it conducted with TSA.

AEO-200 does not conduct exercises for the Air Traffic Organization (ATO). The ATO, however, is involved in nearly all exercises. NOEL advised that ATO might conduct their own exercises but that the reporting agent would need to talk with (b)(6), (b)(7)c the ATO emergency planner. Douglas GOULD is part of (b)(6), (b)(7)c staff.

REDACTED FOR DISCLOSURE

INTERVIEW OF DOUGLAS GOULD

On March 29, 2005, Douglas GOULD Manager of Strategic Operations Security, System Operations Security, Air Traffic Organization (ATO), Federal Aviation Administration (FAA), was telephonically (b)(6), (b)(7)c interviewed by Special Agents (b)(6), (b)(7)c and (b)(6), (b)(7)c U.S. Department of Transportation, Office of Inspector General. After being apprised of the identity of the interviewing agents and the purpose of the interview, GOULD provided the following relevant information:

The Department of Defense (DOD) conducts weekly live exercises with the participation of the FAA. Additionally, the FAA also participates in periodic congressionally mandated exercises like TOPOFF¹, which are coordinated by the Department of Homeland Security, and its own quarterly exercises. The FAA's exercises are planned by the FAA Office of Operations and Emergency Planning, which falls under the Security Division. The person primarily responsible for preparing the FAA's exercises is Dan NOEL.

Though the FAA Security Division is the primary point of contact for exercises administered by external agencies, FAA's participation in the exercises are frequently coordinated with the FAA ATO. Most aviation exercises involve air traffic facilities and/or the domestic events network (DEN), which is staffed by the ATO. Further, the ATO is responsible for providing deconfliction during exercises to ensure multiple exercises are not taking place within the same air space and to minimize impact on the national air space.

Following an exercise, there will be a post event teleconference and an after action summary will be prepared, which is referred to as a "hot wash." The agency

¹ TOPOFF offers agencies and jurisdictions a way to exercise a coordinated national and international response to a large-scale, multipoint terrorist attack. It allows participants to test plans and skills in a real-time, realistic environment and gain the in-depth knowledge that only experience can provide. (http://www.dhs.gov/dhspublic/interapp/editorial/editorial_0594.xml)

INTERVIEW OF DOUGLAS GOULD

responsible for coordinating the exercise is normally responsible for preparing the hot wash. Though he was not certain, he thought that NOEL may prepare a hot wash after the FAA exercises. GOULD, however, was unaware of an air traffic facility manager preparing any hot wash specific to air traffic's performance during the exercise.

FAA "piggy backs" on the DOD exercises, thus incidentally providing the controllers involved with training. Many of these exercises involve scenarios where the subject aircraft is acting in a suspicious manner. All of the exercises previously described are planned in advance. The involved air traffic facilities are notified about the exercise in advance and usually bring in extra personnel to staff it. The military exercises are coordinated with DOD through (b)(6), (b)(7)c and (b)(6), (b)(7)c the FAA liaisons at CONR.

GOULD was unaware of FAA ATO conducting its own exercises to test preparedness of air traffic controllers in looking for and responding to things like unexpected primary radar targets. GOULD advised that the FAA Administrator has the authority to require such tests; however, his experience has shown that any increase in controller accountability is not well received.

(Public availability to be determined under 5 U.S.C. 552)

REDACTED FOR DISCLOSURE

INTERVIEW OF (b)(6), (b)(7)c

On March (b)(6), (b)(7)c 2005, (b)(6), (b)(7)c
 (b)(6), (b)(7)c
 (b)(6), (b)(7)c U.S. Department of Transportation (DOT), was telephonically (b)(6), (b)(7)c
 (b)(6), (b)(7)c interviewed by Special Agent (b)(6), (b)(7)c DOT, Office of Inspector
 General. After being apprised of the identity of the interviewing agent and the
 purpose of the interview (b)(6), (b)(7)c provided the following relevant information:

(b)(6), (b)(7)c was hired by DOT in October 2003 and assumed his current position
 in June 2004. As Director of OET he is responsible for the DOT Crisis
 Management Center (CMC), continuity of operations program, continuity of
 government, and CMC surge events¹; coordination of exercises like TOPOFF III;
 and coordinating with NATO and the Regional Emergency Transportation
 Coordinators.

Prior to (b)(6), (b)(7)c becoming the (b)(6), (b)(7)c I (ph) was
 the (b)(6), (b)(7)c

When (b)(6), (b)(7)c started as (b)(6), (b)(7)c was already a 24 hour a
 day operation. He did not know when the CMC was brought on-line 24 hours a
 day. He did not recall who was responsible for bringing the CMC on-line 24 hours
 a day. He suggested that the reporting agent speak with DOT Chief of Staff John
 FLAHERTY.

(b)(6), (b)(7)c believes that when he started as (b)(6), (b)(7)c that the FAA was
 already providing, via electronic e-mail notification to the CMC and senior DOT
 officials, including the DOT Chief of Staff, notice of significant events at the
 FAA. This information is currently sent to Blackberry pagers. There are roughly

¹ Surge events occur when there is a pre-determined incident or threat to transportation causing designated
 personnel from the various DOT operating administrations to assemble in order to handle matters associated
 with the incident or threat.

Prepared by:

(b)(6), (b)(7)c

Date Prepared: 3/22/05

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

1/3

~~FOR OFFICIAL USE ONLY~~
 (Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF (b)(6), (b)(7)c

one to two dozen notices per day. These notices are independent of the information broadcast over the FAA's Domestic Events Network (DEN). The types of information the FAA's sends over the email system include aircraft turning around due to an in-flight emergency, intoxicated passengers, security related events that effect the national airspace, and FAA radar or air traffic facility problems. The CMC receives the notices and alerts from the FAA in a matter of minutes. (b)(6), (b)(7)c opined that the CMC is receiving the information in a timely and efficient manner. He is not aware of any specific initiatives underway to further changes communications between FAA and the CMC.

(b)(6), (b)(7)c thought that the CMC was added to the DEN within the last three months. The CMC watch standers do not participate in the DEN, they just monitor it. However, during events that might require the participation of a senior DOT official, the CMC has the ability to communicate over the DEN. (b)(6), (b)(7)c advised that there was a specific event that caused the CMC to be added to the DEN, however, he could not recall what that event was.

The CMC staff is a mix of staff detailed from the operating administrations, including one FAA employee, contractors and USCG officers.

(b)(6), (b)(7)c is considered an enabler in the proposed DOT Emergency Response Organization. He suggested that the reporting agent speak with COS FLAHERTY if further information about the DOT Emergency Response Organization was needed.

There is one government wide National Response Plan with 15 annexes. Each annex is broken down by function with a primary agency responsible for each annex. DOT is responsible for annex 1.

The CMC does interact with the Transportation Security Administration's Transportation Security Operations Center. The CMC has someone on call to the Homeland Security Operations Center (HSOC) when it is activated. The

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

2/3

(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF (b)(6), (b)(7)c

Interagency Incident Management Group (IIMG) is part of the National Response Plan and when activated is adjacent to the HSOC. The IIMG is staffed by senior government officials who are dealing with strategic, forward looking issues. The HSOC tends to be more tactical and situational.

(b)(6), (b)(7)c was aware of the situation involving the KY governor but was not involved with it. He is not aware of any changes having being implemented after that incident.

With regard to the FAA Washington Operations Center (WOC) and the DEN, (b)(6), (b)(7)c deals with (b)(6), (b)(7)c did not think that (b)(6), (b)(7)c (b)(6), (b)(7)c was associated with the WOC in any way. He believes that (b)(6), (b)(7)c deals with operational issues.

The FAA is the only operating administration that has its own communication center. MARAD will surge into the CMC when they are involved in a large activation of reserve vessels. When they surge, MARAD will use a room adjacent to the CMC.

- # -

INTERVIEW OF (b)(6), (b)(7)c

On March 10, 2005, (b)(6), (b)(7)c Federal Aviation Administration (FAA), Washington, DC was telephonically (b)(6), (b)(7)c (b)(6), (b)(7)c interviewed by Special Agent (b)(6), (b)(7)c U.S. Department of Transportation, Office of Inspector General. After being apprised of the identity of the interviewing agent and the purpose of the interview, (b)(6), (b)(7)c provided the following relevant information:

From approximately (b)(6), (b)(7)c (b)(6), (b)(7)c had been the (b)(6), (b)(7)c to the FAA. In 1990, he started with the FAA as a (b)(6), (b)(7)c in Washington DC. In roughly (b)(6), (b)(7)c he took a position with the FAA Military Operations. In (b)(6), (b)(7)c In (b)(6), (b)(7)c He returned to Washington DC in early 2003 to take an (b)(6), (b)(7)c (b)(6), (b)(7)c In March 2004, he assumed his current position.

On September 11, 2001 (9/11), (b)(6), (b)(7)c was the (b)(6), (b)(7)c (b)(6), (b)(7)c On the Saturday following 9/11 (b)(6), (b)(7)c received a telephone call from (b)(6), (b)(7)c Acting FAA Deputy Administrator, during which BELGER told (b)(6), (b)(7)c that he and the FAA Administrator (Jane GARVEY) had been thinking that on 9/11 things could have been better in the Washington Operations Center. BELGER asked (b)(6), (b)(7)c if he would look at the structure, function and capabilities of the WOC and make suggestions for improvement. (b)(6), (b)(7)c reported to FAA Headquarters on the next Monday and began working on reviewing the WOC. BELGER did not elaborate on what he thought could have been better.

(b)(6), (b)(7)c worked alone on the project but frequently interfaced with (b)(6), (b)(7)c (b)(6), (b)(7)c WOC Director; Danny NOEL, (b)(6), (b)(7)c and (b)(6), (b)(7)c (position unknown).

Prepared by:

(b)(6), (b)(7)c

Date Prepared: 03/10/05

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

1/7

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF

(b)(6), (b)(7)c

(b)(6), (b)(7)c did not prepare a report of his review's findings, however, he did prepare a memorandum titled "ACTION: Restructuring Emergency Operations Personnel," which is dated October 18, 2001. The memo addressed recommendations for reorganization of the WOC and the EOS. (b)(6), (b)(7)c did not memorialize any of his equipment based recommendations.

(b)(6), (b)(7)c found that prior to 9/11 the different lines of business in the FAA, such as Security, Air Traffic and Airway Facilities all used the WOC differently. At the time, both the WOC and EOS staff worked directly for the Deputy Administrator.

Prior to 9/11 there were three organizations involved in communications, first is the WOC, which is responsible for command and control for all communications within the FAA. On 9/11 information was to flow into the WOC and be passed along to the appropriate parties. The WOC staff was responsible for establishing teleconferences.

Next was the Aviation Crisis Center (ACC), which was activated only in select situations and only during major incidents, like a hijacking. The ACC was not run by the WOC, it was separate and was run by the Security Division. Furthermore, the ACC was a separate function from Security's 24 hour a day, seven days a week intelligence watch.

Finally, there was the Emergency Operations Center (EOC). The EOC was activated by the EOS staff on an ad-hoc basis to handle certain types of crisis situations. The EOS staff was responsible for planning exercises, running the continuation of operations (COOP) centers, and managing the civilian reserve aircraft fleet (CRAF). Further, during, for example, weather related emergencies the EOS managed the Crisis Management Center (CMC) (also known as the EOC) for the duration of the emergency. After the Deputy Administrator approved

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

2/7

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

REDACTED FOR DISCLOSURE

INTERVIEW OF (b)(6), (b)(7)c

activation of the CMC, a pre-determined list of staff, depending on the situation, would be called upon to staff the CMC. The CMC was separate from the WOC.

The ACC and the CMC/EOC are essentially the same thing; one is staffed by Security while the other is staffed by the EOS. One or the other could be set-up in the same room connected to the WOC on the 10th floor of the FAA Headquarters.

During his review, HATFIELD concluded that the WOC was merely a communications center as opposed to an operations center. The reason for this assessment was that the WOC lacked staff with an operational skill set. The WOC staff was generalists with an emphasis on telecommunications. (b)(6), (b)(7)b opined that for the WOC to be a true operations center, they need staff with the skills to receive information, interpret it correctly, manipulate the information and turn it into an actionable event. This capability did not exist on 9/11.

As an example, (b)(6), (b)(7)c explained that in 2000 BELGER might not find out about some event until a day or so after and would go into the WOC to express his dissatisfaction with the WOC staff. He did this when he found out that the WOC knew of the event but failed to notify him. It would turn out that the staff was unaware that the particular event was of significance to BELGER and that he needed or would want to be briefed. Occasionally, the staff was unaware that the event was a part of something that BELGER had an ongoing interest in. (b)(6), (b)(7)c opined that having WOC staff with an operational background would help to alleviate the aforementioned problem.

(b)(6), (b)(7)c recommended that the EOS should be just one function under the WOC; they should be merged into one unit. He recommended that the person over the WOC be at the senior executive level¹ and report directly to the Deputy Administrator. Further, the director over the WOC and EOS should have operational skills, such as air traffic or flight standards, as should the shift supervisor.

¹ On 9/11, the individuals in charge of the WOC and the EOS were only grade GS14 and 15.

INTERVIEW OF

(b)(6), (b)(7)c

Further, as (b)(6), (b)(7)c review progressed, he verbally recommended to BELGER equipment, space and communications upgrades. Within three weeks of 9/11 the capability to record the operational lines within the WOC was added.

(b)(6), (b)(7)c opined that it would be important, should another significant event occur, that they be able to reconstruct what happened during the crisis. (b)(6), (b)(7)c worked on implementing the equipment upgrade in the WOC.

After 9/11, the FAA implemented the Domestic Events Network (DEN). As the Director of System Operations Security, (b)(6), (b)(7)c is responsible for the DEN. The DEN is an operational telephone network that is in place at all air traffic facilities. It is available to report any type of suspicious aviation activity. In addition, other government agencies participate in the DEN, including, but not limited to, NORAD, the FBI watch center, Transportation Security Operations Center, all NORAD defense sectors, and Washington Capitol Police.

The DEN is run by operational staff from the FAA's Air Traffic Organization. Though, currently, it is physically located in the WOC, it is not a function of the WOC. He advised that if something of import comes over the DEN the personnel staffing the DEN will lean over to the personnel staffing the WOC and explain what is going on and its significance. It is then up to the WOC to make the appropriate notifications.

(b)(6), (b)(7)c advised that further improvement in the WOC is necessary and explained that the Department of Transportation (b)(6), (b)(7)c is frustration with information coming from FAA. He cited as a recent example, there was a snow storm in Chicago that cause many airport delays. (b)(6), (b)(7)c first learned of this event from the news, not the FAA. (b)(6), (b)(7)c advised that the WOC was made aware of the weather delays but did not pass it along.

(b)(6), (b)(7)c opined that if someone with operational sensitivity had been running the WOC when that information came in they would have known it was a significant issue and thought to pass it along to the DOT Crisis Management

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

4/7

~~FOR OFFICIAL USE ONLY~~
(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF (b)(6), (b)(7)c

Center (CMC), which is like the WOC but located in DOT headquarters. (b)(6), (b)(7)c advised that the CMC is not a participant in the DEN. He opined that the CMC is likely on the pager list for the WOC.

Normally, a weather related incident, such as that described above, would come into the WOC through the FAA Command Center in Herndon, VA. The Command Center has a list of individuals/groups it pages or calls during significant events. The CMC is not normally paged by the Command Center. Whether the WOC pages certain people/groups or not is subjective. The individuals in the WOC are not operational people and can not make the same type of informed decisions about the impact a particular event might lead to and then who needs to be informed. Since the WOC staff does not have operational level skills, they do not always know how to interpret information. If the information does not fit nicely into a preexisting checklist then it might not get passed along to everyone who needs to know. However, (b)(6), (b)(7)c opined that if the information was received by someone with an air traffic background they might recognize its significance and notify additional individuals.

Today, the DEN would operationally manage a hijacking. The WOC would still be involved but at the communications center level. The ACC would still be brought up but also as a communications function.

Prior to 9/11, if an air traffic center or tower confirmed a hijacking they would pick-up the "red phone" and dial the nearest air defense sector. They would then call the Regional Operations Center (ROC) and the Command Center in Herndon, VA. The ROC would in turn call the WOC. (b)(6), (b)(7)c did not know if the call to the air defense sector was listed in an FAA order or policy or if it was just common sense.

Immediately following 9/11 Dave CANOLES was named the Director of Emergency Operations with a direct report to the Deputy Administrator. This was a senior executive position, as had been suggested by (b)(6), (b)(7)c However,

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

5/7

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF (b)(6), (b)(7)c

about a year ago, the WOC reverted back into the pre-9/11 structure. The WOC was moved out from under CANOLES and placed under Security. The reason this was done was to reduce the number of direct reports to the Deputy Administrator.

(b)(6), (b)(7)c thought it was important to have a senior executive over the WOC with a direct report to the Deputy Administrator for purpose of being able to accomplish various tasks across all FAA lines of business. Security is not an operational unit and further, they no longer have the intelligence function.

(b)(6), (b)(7)c opined that there is not much function left for Security.

The ROCs are not on the DEN. The ROCs are really communications centers, as opposed to operational centers.

(b)(6), (b)(7)c

(b)(6), (b)(7)c suggested that the reporting agent speak with (b)(6), (b)(7)c about the DOT Emergency Response Organization.

In commenting on the Commission's most recent report, (b)(6), (b)(7)c opined that there should be a central point of accountability for communications if something were to happen again. His vision is for a Transportation Intelligence and Incident Fusion Center that merges the functions of emergency operations, the DEN, a command center and intelligence into one unit. He opined that there should be a central location for a fusion of information. With the fusion of information the intelligence staff would be able to meld with the incident response staff to make connections between current events and the intelligence that they had been receiving. At this time there is no fusion center in FAA or the DOT.

(b)(6), (b)(7)c also opined that with regard to intelligence, the various government agencies that generate or collect intelligence will receive it and then filter it. They then pass it along to the agencies like the TSA who then further filter the information and then pass along that further filtered information to the DOT.

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

6/7

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF (b)(6), (b)(7)c

After DOT receives the information it is further filtered and then passed along to FAA who filters it yet further until they pass it along to the agency's leaders.

As things presently stand he finds that the operational folks do not necessarily know that they should react a certain way to an event because they do not have prior knowledge that it is bad; because the intelligence had not been passed along to them. On the other hand they might treat another event as though it were bad only to find out that the intelligence folks knew about it and already dismissed, however, the operational folks were again not told about it.

While he served as Air Traffic Division manager in the Eastern region was he not given any intelligence briefings.

REDACTED FOR DISCLOSURE

9/11 COMMISSION, MONOGRAPH #3 BRIEFING

In the February 10, 2005, New York Times is an article by Eric LICHTBLAU titled "9/11 Report Cites Many Warnings About Hijackings; Panel is Critical of F.A.A.". The NY Times article references a previously undisclosed report from the 9/11 Commission heralding new information about FAA's failures leading up to 9/11. The article indicates that the Commission's report claims that even though FAA Security had produced 52 intelligence reports (April 2001 through September 2001) mentioning Bin Laden or Al Qaeda, the FAA Failed to pursue domestic security measures that could have altered the events of 9/11.

On February 11, 2005, the National Archives released an unclassified but heavily redacted version of the Commission report cited in the NY Times article. This report is the Commission's third monograph.

There are two parts to the monograph. The first part is titled: "We Have Some Planes': The Four Flights – a Chronology" and the second is titled "Civil Aviation Security and the 9/11 Attacks". The first part of the monograph is a very detailed timeline of the hijackings. The second part of the monograph cites FAA's intelligence failures. It is critical of FAA's failure to piece together the threat information it was receiving from the intelligence community and its reaction to the threats in strengthening FAA's layered approach to security. The remainder of this summary will focus on the second part of the monograph.

Though the monograph is new the essence of its contents are not. On January 26, 2004, the Commission released, during their seventh public hearing, a copy of Staff Statement No. 3, titled "The Aviation Security System and the 9/11 Attacks". Staff Statement 3 could be an executive summary for part two of the recently released monograph.

Below are some of the significant findings cited in part two of the monograph:

Though the FAA was the US agency primarily responsible for assessing intelligence for its relevance specific to US commercial aviation they were required to rely upon information provided to it from U.S. intelligence agencies, including FBI, CIA and State Department.

FAA had perceived weaknesses in domestic intelligence reporting. FAA did not always receive the domestic intelligence that was collected by the intelligence community.

FAA had no advanced information to indicate that any group was plotting to hijack aircraft (a/c) in the U.S. and use them as weapons.

Before action could be taken to strengthen security, FAA policymakers required either a security incident or “specific and credible” evidence of an “actionable” threat.

FAA had considered that terrorists might use a/c as weapons. However, FAA and air carrier officials perceived the threat as being predominately overseas.

Throughout the 1990’s, FAA Security’s own intelligence assessments expressed concern about the growing threat of terrorists to civil aviation.

Between March 14 and May 15, 2001, FAA conducted classified briefings at 19 of the nation’s largest airports about the growing threat posed by terrorists.

The aforementioned FAA briefings stated that from the hijackers’ perspective, “A domestic hijacking would likely result in a great number of American hostages but would be operationally more difficult. We don’t rule it out....If, however, the intent of the hijacker is not to exchange hostages for prisoners, but to commit suicide in a spectacular explosion, a domestic hijacking would probably be preferable.”

FAA Security communicated threat information it had gathered to agency leadership in the form of daily intelligence summaries (DIS). The chart below lists the break down of the summaries produced during the period April 1, 2001 through September 10, 2001.

Number of FAA DIS’ that mentioned al Qaeda and/or Bin Ladin threats overseas ¹	52
Of the 52, number that mentioned hijacking as capability that al Qaeda was training for or possessed	5
Number of FAA DIS’ that mentioned terrorist suicide operations (not with regard to a/c)	2
Number of FAA DIS’ that mentioned protective measures taken for Genoa Italy G-8 summit to protect against air attack	1
Total number of FAA DIS summaries issued 4/1 – 9/10/01	105

¹ From the referenced footnote in the monograph it appears that some of the DIS’ that discuss al Qaeda talk about overseas threats, while others talk about US interests in the context of military and diplomatic facilities or of commercial interests overseas (See footnote 435).

In July 2001, FAA attended a National Security Council Counterterrorism Security Group (NSCCSG) meeting at the White House to discuss with domestic agencies heightened security concerns. During the NSCCSG meeting the FAA was told that the threat was understood to be abroad.

In June/July 2001, the U.S. intelligence community sensed that "something was going to happen" that summer. During the summary of 2001, an act of sabotage or a traditional hijacking was of concern to FAA.

In 2001, the FAA issued 16 informational security circulars. However, because the intelligence FAA received that summer did not provide details about a specific plot, the circulars did not require a significant upgrade of security. Following the NSCCSG meeting FAA issued 7 circulars. The chart below lists the break down of their content.

Number of FAA circulars that described threats posed by surface to air missiles	1
Number of FAA circulars that described threats overseas	5
Number of FAA circulars that described specific threats within the Arabian Peninsula and/or Israel	1
Total number of FAA circulars issued July 2001 through September 10, 2001	7

From July 27, 2001, through September 10, 2001, the FAA issued four security directives. The chart below lists the break down of their content.

Number of FAA Security Directives (SD) that provided special security for chartered flights to/from Cuba	1
Number of FAA SDs that extended measures for clearing LEOs through sterile areas in airports	1
Number of FAA SDs that added names to the no fly list	1
Total number of FAA Security Directives July 27, 2001 through September 10, 2001	4

FAA officials cited the absence of hijackings as evidence that checkpoint screening was working effectively to stop hijacking.

FAA perceived the overseas threat from hijacking to be on the rise prior to 9/11. FAA cited in a July 17, 2001, proposed rulemaking to improve passenger screening and other security measures the presences of terrorist cells in the U.S. and their interest in targeting the transportation sector. OMB held up implementation of this rule because of concern over costs.

INTERVIEW OF JOHN FLAHERTY

On December 20, 2004, John FLAHERTY, Chief of Staff, United States Department of Transportation (USDOT), Washington, D.C. was interviewed at his place of business located at 400 7th Street, S.W., Washington, D.C. by Special Agents (b)(6), (b)(7)c and (b)(6), (b)(7)c Office of Inspector General (OIG), USDOT. FLAHERTY was interviewed in conjunction with a July 29, 2004, referral from the National Commission on Terrorist Attacks Upon the United States (Commission) to the Inspectors General for the Departments of Transportation and Defense. Also present was Laura McCLURE, Policy Assistant to the Secretary. After being apprised of the identity of the interviewing agents and the purpose of the interview, FLAHERTY provided the following relevant information:

FLAHERTY became interested in the timeline of September 11, 2001, after the USDOT Secretary testified at the 9-11 Commission hearing in May 2003 and the Secretary and his staff spoke with the Commission. During the aforementioned, FLAHERTY became aware that the Commission had information that conflicted with the timeline presented by the military, especially with regard to the flight that hit the Pentagon (AMERICAN AIRLINES Flight 77 [AA77]). Further, FLAHERTY advised he felt that the Office of Secretary (OST) had not yet performed a thorough review of FAA's version of events.

In the aftermath of September 11th, OST concentrated its efforts on enhancing aviation security measures, overseeing direct-action teams, enhancing cockpit security, staffing up the Federal Air Marshal program and establishing the Transportation Security Administration. Up until the May 2003 time period OST had not asked anyone to explain what had happened on September 11th. FLAHERTY was therefore interested in learning what the FAA was telling everyone about the 11th.

Prepared by:

(b)(6), (b)(7)c

Date Prepared: 12/20/04

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

1/5

~~FOR OFFICIAL USE ONLY~~
(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF JOHN FLAHERTY

On a Monday or a Tuesday (June 3, 2003), FLAHERTY went to the FAA and was given a presentation about the timeline of events for September 11th. During the presentation it became clear to FLAHERTY that the FAA had not prepared the timeline for his sole benefit. The timeline appeared to be pre-existing and was quite elaborate. It was during the June 2003 meeting that FLAHERTY first saw FAA's September 11th timelines. FLAHERTY did not know about FAA's communication with the military on September 11th until the presentation.

During the FAA's presentation FLAHERTY raised three issues that he suggested the FAA should be prepared to resolve.

- 1) On September 11th, after AMERICAN AIRLINES Flight 11 was hijacked someone from an FAA field facility called FAA headquarters in Washington DC to provide a report. They spoke with (first name unknown) (b)(6), (b)(7)c (ph). There was a long gap between the point where (b)(6), (b)(7)c received the information and when he passed it along to others in FAA HQ. FLAHERTY opined that the FAA should be prepared to respond to questions about the gap.
- 2) The FAA's timeline presentation regarding AA77 referenced points on a map that depicted when the FAA controller received AA77's radar return. However, the presentation lacked information about the times and distances as the flight progressed towards the Pentagon. FLAHERTY opined that the information did not contain enough detail and was not accurate enough. FLAHERTY was focused on this item due to questions he had received from the press about when the U.S. Government picked-up, on radar, AA77 prior to it having hit the Pentagon. The FAA's presentation did not adequately answer the question for FLAHERTY.
- 3) FLAHERTY also was interested in understanding the sense of urgency the FAA pursued in operational crisis communications on September 11th. He wanted to know minute-by-minute and second-by-second how the FAA handled the information they received.

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

2/5

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF JOHN FLAHERTY

As previously mentioned, FLAHERTY had received questions from the press about when FAA picked up the radar track for AA77. However, FLAHERTY had not received and did not tender any questions about when FAA notified the military on September 11th.

FLAHERTY did not specifically task the FAA with anything as a follow-up to the meeting in June 2003. However, based on certain individuals having previously dealt with him they may have decided to create a consolidated chronology in an anticipatory manner.

Prior to his June 2003 meeting with the FAA FLAHERTY was not aware the FAA had prepared any timelines. A May 29, 2003, e-mail message from (b)(6), (b)(7)c (b)(6), (b)(7)c expressed FLAHERTY's anticipated response from the FAA when he requested to see a timeline. FLAHERTY expected that the FAA would tell him that they could not provide a timeline since the information was with the FBI. The message essentially relates that would not be an acceptable response because the FAA was expected to have kept a copy of everything they provided the FBI.

(AGENT'S NOTE: FLAHERTY was shown a copy of an FAA chronology attached to a June 13, 2003, email message from Shirley MILLER to Lindy KNAPP. The email reads, in part, "[a]t the meeting w/ John... he sounded like he preferred a master chronology w/ everything." The chronology is titled "Sensitive Security Information, FAA Communications Regarding Hijacked Aircraft on September 11th, 2001.")

FLAHERTY advised that he did not recall having previously seen the chronology. Upon a quick review of the chronology, he noted in several places that it lacked sufficient detail while in other places it seemed contradictory. FLAHERTY requested a copy of the chronology and offered to comment on it.

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

3/5

~~FOR OFFICIAL USE ONLY~~
(Public availability to be determined under 5 U.S.C. 552)

REDACTED FOR DISCLOSURE

INTERVIEW OF JOHN FLAHERTY

During his June 2003 meeting with the FAA, FLAHERTY advised he was hoping that their briefing regarding the timing of events on September 11th would match up with the Secretary's recollection of events based upon the real time information he was receiving from the White House. However, according to FLAHERTY, the FAA's timeline of events did not match up with what the Secretary recalled.

FLAHERTY did not recall if the USDOT provided any items during the 14-day period following the Commission hearings in May 2003. During this period those that testified could provide additional information for the record.

FLAHERTY was shown a copy of the FAA's May 22, 2003, question for the record (QFR), titled "FAA Communications with NORAD On September 11, 2001." He advised that could not comment on the item since he could not verify the accuracy of the information it contained.

FLAHERTY advised that his advice to the FAA, had they asked him, upon learning that information in the QFR was incorrect would have been as follows:

- 1) Meet with counsel for USDOT's;
- 2) ensure that their timeline of events was accurate;
- 3) meet with counsel for FAA; and
- 4) meet with the Commission and provide the necessary clarification.

FLAHERTY did not recall that there was a timeline in the Secretary's briefing package that was prepared for his testimony before the Commission. FLAHERTY opined that OST did not have a command of the timeline and, therefore, felt it inappropriate to allow the Secretary to testify to it at the May 2003 Commission hearing.

FLAHERTY advised that during the May/June 2003 time period he was not really following the Commission's hearings.

INTERVIEW OF JOHN FLAHERTY

FLAHERTY advised that in May 2003, the day before the Secretary's testimony, Linda SCHUESSLER came to USDOT to provide a briefing. She began to provide an oral briefing that indicated that FAA headquarters ordered the ground stop on September 11th. Upon hearing this, FLAHERTY told her to stop because he knew that was not true. However, SCHUESSLER "pushed back" indicating that those were the facts. Also present during this meeting was the USDOT Inspector General.

U.S. Department of Transportation, Office of Inspector General
INVESTIGATIVE CASE PLAN

ORIGINAL

CASE NUMBER	CASE TITLE	ORIGINAL DATE
042R0122001	FAA-NORAD Statements to 9-11 Commission	8/26/04

LEAD AGENT:	APPROVED BY	DATE:
(b)(6), (b)(7)c		

ALLEGATIONS OR REASONS FOR THE INVESTIGATION:

Case opened at the direction of DAIGI, DOT-OIG based on a referral from the National Commission on Terrorist Attacks Upon the United States (the Commission). During the Commission's investigation they discovered evidence that public statements made by North American Aerospace Defense Command (NORAD) and Federal Aviation Administration (FAA) officials at a the Commission hearing on May 23, 2003, and elsewhere, regarding the actions of NORAD and FAA officials in responding to the 9-11 attacks were not accurate. The Commission did not investigate whether these statements were knowingly false. The Commission specifically noted four statements made by retired General Larry ARNOLD in his testimony on the 23rd of May as being inaccurate.

- 1) The FAA notified the military at 9:16 a.m. that United Flight 93 (UN93) was hijacked.
- 2) The FAA notified the military of the hijacking of American Flight 77 (AA77) at 9:24 a.m.
- 3) When the Langley fighters were scrambled, their objective was to respond to the reports at 9:16 that UN93 was hijacked and at 9:24 a.m. that AA77 was hijacked.
- 4) [Military] Officials were tracking UN93 and intended to intercept the aircraft if it approached Washington, D.C.

The Commission believes that NORAD and FAA made significant efforts to get accurate information as to what had transpired, within days of September 11th.

The Commission further believes that once accurate reconstruction information was developed by NORAD and FAA they both had the burden of correcting the public record and insuring that information, including testimony provided to the Commission in May 2003, was accurate.

Investigation will be conducted in cooperation with Department of Defense, OIG. DOT-OIG's portion of the investigation will seek to determine whether FAA officials knowingly made false or inaccurate statements at a Commission hearing on May 23, 2003 and/or elsewhere regarding the action of FAA officials in responding to the September 11th attacks.

RULES, REGS, OR STATUTES VIOLATED:	ELEMENTS OF PROOF REQUIRED
18 USC 1001 (FALSE STATEMENTS)	Whoever, knowingly and willfully falsifies or conceals a material fact, or makes any false statements or representations, shall be fined not more than \$10,000 or imprisoned not more than five years, or both.

DOT-0IG INVESTIGATIONS

Dear Mr. Schmitz and Mr. Mead:

During the course of our investigation, the staff of the National Commission on Terrorist Attacks Upon the United States discovered evidence that certain public statements made by NORAD and FAA officials at a Commission hearing on May 23, 2003, and elsewhere, regarding the actions of NORAD and FAA officials in responding to the 9/11 attacks were not accurate. We did not, however, investigate whether these statements were knowingly false. Since we did gather evidence that may bear on this issue, we decided to refer this matter to each of you so that you may take whatever steps you believe are appropriate.

To assist you in examining this matter, we have included copies of the following:

- (1) A Commission staff memorandum regarding NORAD and FAA Statements Concerning Air Defense on 9/11.
- (2) An email from Col. Robert Marr to retired Col. William Scott dated June 2, 2003, which was forwarded to Commission staff.
- (3) The Final Report of the Commission released July 22, 2004; chapter 1 in particular pertains to this issue.
- (4) Commission Staff Statement No. 17, dated June 17, 2004.
- (5) Testimony of NORAD and FAA officials at the Commission's public hearing held on June 17, 2004.
- (6) Testimony of NORAD and FAA officials at the Commission's public hearing held on May 22-23, 2003.

Hon. Joseph E. Schmitz
Hon. Kenneth M. Mead
July 29, 2004
Page 2

If you have any questions about these materials, please call me at 202-331-4065. Please note that the Commission terminates, by statute, on August 26, 2004.

Yours sincerely,

Daniel Marcus
General Counsel

MEMORANDUM FROM THE 9-11 COMMISSION STAFF

Date: July 29, 2004

Re: NORAD and FAA Statements Concerning Air Defense on 9/11

This memo reviews some of the evidence the staff of the National Commission on Terrorist Attacks Upon the United States (known as the 9-11 Commission) reviewed regarding statements by U.S. government officials relating to actions taken by NORAD and FAA officials on September 11, 2001. This memo should be read in conjunction with the Final Report of the Commission released on July 22, 2004, in particular chapter 1 of the Report, as well as Commission Staff Statement No. 17, released on June 17, 2004, and the testimony of NORAD and FAA witnesses at public hearings held by the Commission on May 22-23, 2003, and June 17, 2004.

PRIOR STATEMENTS

On May 23, 2003, at the Commission's second public hearing, representatives of both the Federal Aviation Administration ("FAA") and the North American Aerospace Defense command ("NORAD") testified. Their testimony set forth the times at which the FAA became aware that each flight was hijacked on 9/11; the times at which the military was notified of the hijackings; and how the military responded. Representatives of both agencies have also testified about this subject before congressional committees. They have been interviewed numerous times for media accounts of the response on 9/11. The First Air Force has published an official history, *Air War Over America*, concerning the air defense effort on 9/11.

After reviewing radar data and primary source material obtained via document requests and subpoenas, and after interviewing officials from FAA and NORAD at every level, the Commission staff concluded, as explained in Staff Statement No. 17 and in the Final Report, that significant aspects of the May 23, 2003, testimony before the Commission were incorrect.

Timeline. At the May 23 hearing, retired Col. William Scott presented the Commission with a NORAD timeline of the operational facts of 9/11. This timeline reflected:

- FAA notice to the military of the hijacking of United Airlines Flight 93 at 9:16 a.m. (forty-seven minutes prior to crash).
- FAA notice to the military of the hijacking of American Airlines Flight 77 at 9:24 a.m. (13 minutes prior to crash).
- Both the timeline and Col. Scott's testimony indicated that the fighters at Langley Air Force Base were scrambled at 9:24, seemingly in response to the hijacking of American 77.

Objective. The timeline and Col. Scott's testimony indicated that the fighters were scrambled to meet the threat to Washington posed by American 77.

The representation that the Langley fighters were scrambled to meet the threat posed by American 77 prompted questions from Commissioners Lehman and Ben-Veniste about the details of the Langley scramble. Retired General Larry Arnold explained: "9:24 was the first time that we had been advised of American 77 as a possible hijacked airplane. Our focus--you have got to remember that there's a lot of other things going on simultaneously here--was on United 93, which was being pointed out to us very aggressively I might say by the FAA. . . . We were advised [American 77] was possibly hijacked. And we had launched almost simultaneously with that, we launched the aircraft out of Langley to put them over top of Washington, D.C., not in response to American Airlines 77, but really to put them in position in case United 93 were to head that way." We believe each of the four sentences in this quotation was inaccurate.

Inaccurate Statement #1: The FAA notified the military at 9:16 that United 93 was hijacked.

NORAD's first publicly available timeline of the events of 9/11 was released on 9/18/01, one week after the attacks. Prior to the 9/18 release, NORAD Public Affairs prepared a draft release, dated 9/16/01. The draft release listed the time 9:16 as the notification time for United 93.

Between the 9/16 draft and the 9/18 final release, that time was changed. In the final release on 9/18, the 0916 notification time for United 93 is deleted, and is replaced with "N/A." The release explains that the notification time is "N/A" because the FAA informed NORAD of the hijacking of United 93 while on an open line discussing American 77.¹ The Public Affairs Director stated to Commission staff that he deleted the 0916 notification time because he "lost confidence" in its accuracy, although he could not remember why he lost confidence in the time.

An email obtained by Commission staff in response to the Commission's subpoena sheds some light on why NORAD may have lost confidence in the 9:16 notification time. The email, sent on September 16, 2001, at 11:06 p.m. to NEADS from Brigadier General Doug Moore at CONR, commends the person at NEADS "who dug up the requested information from your logs and tapes," and indicates that it has been passed to "the proper FAA office" which will be "using this data to brief the White House tomorrow" [i.e., September 17]. The email then asks for follow-up information about, among other data points, "United 93, 1408Z [i.e., 10:08], Which center calls with information that UA 93 ... is heading for Cleveland? ... 1415Z [i.e., 10:15], Who reported to NEADS that aircraft had crashed?"² [DOD bates number NCT 0053404]

¹ Commission staff established that the earliest discussion of creating an open line occurred at approximately 9:50, and that the open line may not have been established until well after 10:00. NORAD now accepts that the notification of United 93 as a hijack did not occur over this open line.

² The NEADS log records the time as 10:07 for the entry described by Brigadier General Moore.

This email--and the response to it by NEADS--is significant because it reveals that someone at NEADS had searched the relevant logs and tapes during the first week after 9/11 and identified the notification time for United 93. It is a fair inference that, having identified the notification time for United 93, NORAD "lost confidence" in 9:16 and omitted it from the September 18 release.

The question, then, is why the discredited 9:16 notification time reappeared in NORAD's testimony before the Commission in May 2003. This question is highlighted by the subsequent Commission staff interview of Cherie Gott, a data analyst at NORAD. Ms. Gott told us that a timeline she created based on the 9/18 press release, which reflected no notification time for United 93, was forwarded on May 13, 2003, a week prior to the Commission's hearing, in order to prepare officials for their testimony.

Why was 9:16 reintroduced? Commission staff has obtained an email sent from Col. Robert Marr, the Battle Commander at NEADS, to retired Col. William Scott after the Commission's hearing, which sheds light on the subject. During the May 2003 hearing, Commissioner Lehman asked several questions about the path of the Langley fighters, which traveled directly east, over the ocean, and then north toward Baltimore, before heading west to Washington. Why, the Commissioner wanted to know, didn't the fighters head more directly to Washington, if they had been scrambled to respond to American 77, the plane that struck the Pentagon? Col. Marr addressed this question in his response to retired Col. Scott:

"The answer on AA77 is not easy, nor is it pretty. At the time AA77 was occurring we were focused on UAL93 which was the only confirmed hijack that the FAA had identified to us. My records show UAL93 reported as hijacked at 0916L, once we found it and identified it's [sic] westerly heading, we scrambled Langley at 0924L just in case it turned around toward DC, which it did later. At 0924L we also received a call from the FAA about AA77 with a follow-up call at 0925L. It is easiest to explain the simultaneous scramble order with the AA77 notification as the scramble being against AA77 -- it takes a lot of time to explain to the public that you're scrambling fighters against a plane heading away from the possible target."

Col. Marr, in other words, attempted to explain the circuitous route of the Langley fighters in getting to Washington, D.C., by indicating that they were not in fact scrambled to respond to a report at 9:24 that American 77 was hijacked; they were scrambled in response to the earlier "report" that United 93 was hijacked. Thus, the reintroduction of the discredited 9:16 notification time enabled NORAD to explain to the Commission the odd route of the Langley fighters in reaching Washington.

There were two fundamental problems with the explanation. First, as at least some in the military have known since the week of 9/11, it is inaccurate. The plane had not been hijacked at 9:16; the hijacking did not occur until 9:28--after the Langley fighters were

ordered scrambled--and NEADS was not notified until after the plane had crashed. NORAD informed Commission staff at the close of Commission interviews at NORAD headquarters in Colorado Springs that it now accepts that notification did not occur until after the plane had crashed. Second, as we will now discuss, NEADS was not notified that American 77 was hijacked at 9:24.

Inaccurate Statement #2: The FAA notified the military of the hijacking of American 77 at 9:24.

Although American 77 disappeared from radar and radio contact at 8:56, the first notification to NEADS that American 77 was missing (there is no mention of its having been hijacked at this point) came at 9:34, ten minutes after the scramble had already been ordered at Langley Air Force Base.

One to two minutes later, NEADS received notice that an unidentified plane was six miles southwest of the White House. American 77 crashed into the Pentagon at 9:37:45.

Thus, NEADS did not receive notice that American 77 was hijacked at 9:24. In fact, NEADS never received notice that American 77 was hijacked at all, let alone at 9:24; it received reports (at 9:34) that American 77 was missing, and (at 9:35 or 9:36) that an unidentified plane was near the White House.

What notification did occur at 9:24? The Mission Crew Commander's staff at NEADS maintains a handwritten contemporaneous log of information received and actions taken (known as the "MCC/T Log"). The 9/11 entry in the log at 9:24 records: "American Airlines #N334AA hijacked." This tail number refers not to American 77 but to American 11, the first hijacked aircraft that crashed into the North Tower of the World Trade Center. The subpoenaed tapes confirm that this time corresponds to NEADS's receipt of tail number information on American 11 and to reports that American 11 was still airborne and headed towards Washington, D.C.

Inaccurate Statement #3: When the Langley fighters were scrambled, their objective was to respond to the reports at 9:16 that United 93 was hijacked and at 9:24 that American 77 was hijacked.

Contrary to testimony before the Commission, the Langley fighters were ordered scrambled not because of United 93, which had not been hijacked, nor because of American 77, which had not been reported to NEADS, but because of the mistaken report that American 11--the first hijacked plane--had not hit the World Trade Center, but was heading south for Washington, D.C. The fighters were ordered scrambled initially toward New York, and then vectored toward Baltimore, in an effort to intercept that mistakenly reported aircraft. The best evidence for both this inaccurate report and the resulting scramble is the subpoenaed NEADS tape, which records that at approximately 9:21, the Mission Crew Commander spoke the following to the Battle Cab (where the Battle Commander, Colonel Marr, was located):

"Okay. American Airlines is still airborne, 11, the first guy. He's headed towards Washington, okay? I think we need to scramble Langley right now, and I'm going to -- I'm going to take the fighters from Otis and try to chase this guy down if I can find him. Yeah. You sure? Okay. He's heading towards Langley, or I should say Washington. American 11, the original guy. He's still airborne"

Seconds later, the Mission Crew Commander ordered the scramble of the Langley fighters.

This report of American 11 heading south--the cause of the Langley scramble--is reflected not just in taped conversations at NEADS, but in taped conversations at FAA centers, on chat logs compiled at NEADS, CONR, NORAD, and the National Military Command Center, and in other records. It is the opening report on the Significant Event Conference Call. The mistaken report was also readily acknowledged in interviews of operational personnel.

But in October 2001, for instance, NORAD Commanding General Ralph Eberhart testified before the Senate Armed Services Committee on the sequence of events on 9/11. General Eberhart did not mention the mistaken report about American 11 as a cause for the Langley scramble. Instead, he provided a timeline chart and verbal testimony that listed 9:24 as the notification time for American 77 and implied that this notification prompted the scramble of the Langley fighters.

The General elaborated, in responses submitted after his testimony for the record: "The FAA notified the NEADS that American Airlines Flight 77 was headed towards Washington, DC. NEADS then passed this information to NORAD's Air Warning Center At 0925, the NMCC convened a Significant Event Conference and during that conference, at 0933, NORAD reported one more aircraft en route to Washington, D.C."

NORAD's own Headquarters Intel Chat Log is inconsistent with this testimony, recording at 9:24:39 "original aa flt hijack is now headed to Washington scrambled lfi [i.e., Langley]" and then at 9:25:13 "2 acft that hit wt bldg not repeat not the original hjk aa acft." Furthermore, the Air Warning Center log at NORAD, to which General Eberhart refers, records, at 9:27, that "The original hijack a/c is still a/h and head for Washington, D.C. Otis F15 are trying to intercept the flight." It then records, at 9:36, that CONR has advised of the scramble at Langley: "LFI A/B Quit 25/26/27 3 A/B at time 1333 [i.e., 9:33]." The NORAD Headquarters chat log states, at 9:28: "R[eal] W[orld] Hijacking (original notification) assessed by Intel as headed to Washington DC/2XF-15s in tail chase." [DOD bates number NCT 0005098]

General Eberhart's submission for the record to the Senate Armed Services Committee, moreover, that NORAD reported "one more aircraft en route to Washington, D.C.," on the Significant Event Conference at 9:33 may have been literally true. Consistent, however, with NORAD's own records and the transcript of the Conference, the aircraft that NORAD reported to the Conference was *not* American 77, as the submission for the record implied, but American 11.

The mistaken report that the original American 11 flight was still airborne and heading for Washington prompted the Langley scramble. Because American 11 was reportedly heading south from the Boston/New York areas, and not east, the fighters were scrambled initially north, and then vectored toward Baltimore, in order to intercept the flight before it reached Washington. The fighters were directed to go to Washington directly when NEADS received the report that an unidentified aircraft was six miles southwest of the White House. To a large degree, those circumstances--not the asserted 9:16 and 9:24 notification times for United 93 and American 77--explain the circuitous route of the Langley fighters.³

Inaccurate Statement #4: Officials were tracking United 93 and intended to intercept the aircraft if it approached Washington, D.C.

At the Commission's hearing in May 2003, Vice Chairman Hamilton expressed concern that the detailed timeline presented by NORAD omitted a significant time sequence: when the shoot-down authorization was passed from the President through the chain of command to the pilots. General Arnold hacked away from the claim that the order was received prior to the crash of United 93, indicating his belief that it had been received a few minutes later. Because the NORAD witnesses had testified that they had been tracking United 93 for some forty-five minutes when it crashed, however, General Arnold was able to state with assurance that the flight would have been intercepted prior to reaching Washington, D.C.

The issue of whether the military had been tracking United 93, and was therefore in position to intercept the flight if it approached Washington, DC, arose within days of the 9/11 attacks. On September 15, 2001, General Paul Weaver, overall commander of the Air National Guard which provided the fighters used to scramble Otis and Langley, told reporters that no fighters were scrambled or vectored to chase United 93: "There was no notification for us to launch airplanes. We weren't even close."

That same day, however, Deputy Secretary Wolfowitz stated in a television interview that Defense Department officials had been "following" United 93 and were prepared to shoot it down if it approached Washington, D.C.

Officials have been steadfast since in stating that the military had been tracking United 93 and were in position to intercept and, if necessary, to shoot down the flight. Notably, Col. Robert Marr, NEADS Battle Commander, states in the U.S. Air Force's official history of 9/11, *Air War Over America*: "As United Airlines Flight 93 was going out [west toward Chicago], we received the clearance to kill if need be." Leslie Filson, *Air War Over America* (USAF, 2003), p. 68. Similarly, on an ABC News Special marking the one-year anniversary of 9/11, Colonel Marr made inaccurate statements about the interception of United 93.

³ Human error also contributed. The fighters were sent directly east on take-off, rather than north, and continued east for some sixty miles before turning north.

It is true that Langley fighters were posted high over Washington, D.C. But NORAD now acknowledges that the relevant headquarters--NEADS, CONR, and NORAD headquarters --were completely unaware of United 93 as it was "going out" toward the west. NEADS never learned of the flight until five minutes after it had crashed. NEADS never followed or was able to find the flight on radar, and was in fact still searching for the flight at 10:15, when the MCC/T Log and the subpoenaed tapes record FAA notification that the flight had crashed.

Furthermore, NORAD did not receive any form of shoot-down authority until 10:31. Even then, that instruction was not communicated to the pilots. There were Air National Guard pilots over Washington with rules of engagement allowing them to engage. But they had received their direction outside of the usual military chain of command and did not get into the skies over Washington until after 10:40. In short, the representation that the military had been following United 93 as it progressed, and was by virtue of this awareness in position to intercept the plane, was inaccurate.

KNOWLEDGE OF INACCURACIES

We have focused on finding out what happened on 9/11, not on investigating potential misconduct in the way those facts have been characterized. The following evidence may bear on the issue whether there was knowledge of the inaccuracy of the statements discussed above.

1. *Accurate information was readily apparent in documents, tapes, and other records available to the FAA and the military in the aftermath of 9/11.*

The fact that the Langley fighters were scrambled in response to the report that American 11 was heading to Washington is unmistakably apparent. Its prominence on the morning of 9/11 is reflected throughout the primary source material. It is set forth explicitly in NORAD's Headquarters Intel chat log at 9:24:39, in NORAD's Air Warning Center log at 9:27, and in the NORAD Headquarters chat log at 9:28. It is reflected in chat logs at CONR and at the NMCC. It is corroborated by the tapes from the NEADS operational floor. As noted above, at 9:21 the Mission Crew Commander reports to his superiors: "Okay. American Airlines is still airborne, 11, the first guy. He's headed towards Washington, okay? I think we need to scramble Langley right now" The mistaken report is also the first substantive matter discussed on the Significant Event Conference Call, and is reflected in conversations at FAA Headquarters and FAA Command Center. In short, it is hard for us to understand how anyone seeking to reconstruct the events of 9/11 could miss this information.

Since this information was not mentioned in explaining why the Langley fighters were scrambled and why they were not sent directly to Washington, DC, officials had to seek an alternative explanation. They represented that the military was notified of the hijacking of United 93 at 9:16, and of the hijacking of American 77 at 9:24. We tried to understand if such a misunderstanding was reasonable.

We do not understand the use of a 9:16 notification time for the hijacking of United 93. The 9:16 notification time for United 93 and the 9:24 notification time for American 77 appear to have been derived from the same source: the "MCC/T Log." At 9:16 the log records: "United tail #N612UA/75 50B/." But this tail number corresponds not with United 93 but with United 175, which had crashed into the World Trade Center. A corresponding conversation on the subpoenaed tapes confirms that at 9:16, NEADS was receiving confirmation of the tail number of United 175.

NORAD's removal of the 9:16 United 93 time from its 9/18/01 press release because it "lost confidence" reinforces the question of why the time reemerged before the Commission in May 2003.

The 9:24 notification time for American 77 was theoretically possible. The plane had been hijacked by then. But the tapes from the NEADS operational floor, read together with the MCC/T's log entries, spell out clearly that NEADS received notification that the flight was "lost" ten minutes after the Langley fighters were ordered scrambled, and that NEADS received notice of a plane six miles southwest of the White House a minute later.

Again we believe the 9:24 is derived from an entry in the MCC/T log. It records, at 9:24: "American Airlines #N334AA hijacked." This tail number refers not to American 77 but to American 11, the first hijacked aircraft. The subpoenaed tapes confirm that this time corresponds to the receipt of the tail number information on American 11 and to reports that American 11 was still airborne and headed towards Washington, D.C.

It is possible that officials who reviewed the matter did not attempt to check the tail numbers to see what United and American flights were being mentioned. Since the Air Force relies on tail numbers as an aircraft identifier, such an omission would be unusual. But given the fact that officials also omitted any mention of the mistaken information about the southward progress of American 11, mentioned in so many other sources, such a failure to check the tail numbers of the reports is even harder for us to understand.

2. There is evidence that the FAA and NORAD engaged in an aggressive effort in the aftermath of 9/11 to reconstruct the events of the day, and that this review entailed examining the records that would have established the truth.

There are several indications of the initial FAA and NORAD efforts to understand what had happened. The September 16, 2001, email mentioned above from Brigadier General Moore to NEADS, for instance, commends the person at NEADS "who dug up the requested information from your logs and tapes," and indicates that the information has been passed to the FAA, which "will be using the information to brief the White House tomorrow." The email then asks follow-up questions about which FAA Center notified the military at 10:08 about United 93, and which center notified the military at 10:15 about the crash of United 93.

We have not obtained the documents referred to in Brigadier General Moore's email. We have, however, obtained a document from the FAA entitled "Summary of Air Traffic

Hijack Events," dated September 17, 2001, the day of the White House briefing and the day after the exchange of emails between Brigadier General Moore and NEADS. This was reportedly one of the documents used to brief the White House.

The FAA Summary corroborates the representation in Brigadier General Moore's email that information from NEADS' "logs and tapes" had been forwarded to the FAA. The FAA summary refers, accurately, to the times shown in NEADS logs for the initial notifications from FAA about the hijacking of American 11 and the possible hijacking of United 175.

With respect to American 77 and United 93, oddly, there is no mention in the FAA's "Summary of Air Traffic Hijack Events" of the NEADS notification times. General Moore's prior email implied that NEADS had forwarded this information to FAA. FAA's omission of these particular notification times is suspicious, because these are the two flights where FAA's notification to NEADS was significantly delayed. (The FAA Center learned of the hijacking of United 93 as early as 9:34. NEADS was not notified for more than half an hour--at 10:08. And the notification was performed by the FAA's Cleveland Center on its own initiative--and not by FAA Headquarters.)

Interviews with senior FAA officials have confirmed that the adequacy of the notification to the military was a "topic of hot debate" in the days after September 11 between the FAA and the military. Jeff Griffith, the senior air traffic manager on duty at FAA Headquarters on September 11, recalled having heated discussions with General Arnold and others on the subject. He specifically recalled being told by the military that their position was that no notice had been passed regarding the hijacking of United 93 before it crashed. (This was true.) Because General Arnold was Griffith's point of contact that day and for the next few weeks, moreover, Griffith believes, but is not certain, that General Arnold told him this.

In addition, senior FAA officials have confirmed that FAA Administrator Jane Garvey and Deputy Administrator Monte Belger instructed a group of FAA employees (an "after-action group") to reconstruct the events of 9/11. This after-action group began its work immediately after 9/11 and reviewed tape recordings, transcripts, handwritten notes, logs, and other documents in an effort to create an FAA chronology of events.

One witness, Darlene Freeman, recalled that the group was specifically asked to determine exactly when the FAA notified the military that each of the four planes had been hijacked on 9/11. Several people worked on determining correct times for FAA notifications to the military. Ms. Freeman said the FAA realized this question would be asked by Congress and members of the media. According to Ms. Freeman, the issue of military notifications was of great "interest to the Deputy Administrator." Ms. Freeman stated the Deputy Administrator wanted to know when the FAA told the military that each plane was hijacked and when the military claimed it received notification from the FAA.

Ms. Freeman recalled that NORAD issued a press release--the release of 9/18--on the subject that "caught the FAA by surprise" because they were still working on determining

the correct notification times. She recalls that the Deputy Administrator instructed her to compare the notification times from the NORAD press release with the FAA's times. The FAA then prepared an "internal" briefing document that first week concerning military notifications. The internal briefing document includes a chart that lists the times for FAA notifications to the military.

The chart lists "10:08 a.m." as the military notification time for United 93 and references the NEADS logs as the source for the entry. The document is explicit that the FAA could not have notified the military that United 93 was hijacked at 9:16 a.m. because the plane was not hijacked until 9:28 a.m. No notification time for United 93 was given in either the FAA Summary used to brief the White House on September 17 or the NORAD Press Release of September 18. The 9:16 time was deleted from NORAD's draft press release and replaced, despite the NEADS log entry, with "N/A."

During the week after 9/11, NORAD also detailed an officer with technical expertise from McGuire Air Force Base to begin the process of transcribing the operational tapes from NEADS on 9/11. This officer recalls having been visited personally by General Eberhart during the week or so that he worked on the transcription. His work was suspended when, on September 21, 2001, the tape experienced a malfunction.⁴ He had, however, by that date transcribed the portion of the Mission Crew Commander position on which, at 9:21, the news is received that American 11 is heading south to Washington and the Langley scramble order is issued in response.

We therefore believe both FAA and NORAD made a significant effort, with high level backing, to get accurate information. We can understand initial confusion and uncertainty in the first week, and even the unfortunate reflection of that uncertainty in press materials prepared on 9/17 and 9/18. But, once accurate information was being developed--within days--both agencies had the burden of correcting the public record and insuring that subsequent information, including testimony provided to the Commission in May 2003, was accurate.

3. The official versions of the events of 9/11 overstated the effectiveness of the FAA's notification of the military and the military's response to the attacks.

In the aftermath of 9/11, if they had obtained accurate information about what happened, both NORAD and FAA faced potentially embarrassing realities. The FAA's standard operating procedures for notification of hijackings were disregarded on 9/11. The notifications that did occur, moreover, gave the military no realistic chance to intercept the aircraft, and were sometimes mistaken. NORAD scrambled the Langley fighters in the wrong direction against a nonexistent target. NORAD was, moreover, completely unaware of United 93--the fourth plane--as the flight was heading for Washington.

⁴ The reason for the malfunction is disputed. NEADS claims that the officer accidentally reformatted one of the tapes; the officer denies that this occurred.

None of this information necessarily reflected any negligence or misconduct by Air Force pilots or controllers. Indeed, they seem to have done all they could, given the information available to them.

Nevertheless, the official account seemed superficially plausible. By claiming that the fighters from Langley were scrambled simultaneously with the notification on American 77 and also in response to the hijacking of United 93, there was no need to acknowledge or explain why FAA gave NEADS the inaccurate report that American 11 was still airborne and heading toward Washington--from the northeast (the opposite direction from the approach route taken by American 77).

The official account also appeared to support the claim that the military was tracking United 93 and was positioned and prepared to intercept and to shoot it down before it hit its target in Washington, D.C.

Memorandum

U.S. Department of
Transportation

Office of the Secretary
of Transportation

Office of Inspector General

Subject: **INFORMATION:** American Airlines
Awareness of the Hijacking of Flight 77

Date: November 19, 2004

From: (b)(6), (b)(7)c
Assistant Special Agent-in-Charge, JRI-2

Reply to
Attn of: **JRI-2**
(b)(6), (b)(7)c

To: Todd J. Zinser
Deputy Inspector General, J-2

As follow-up to our November 3, 2004, teleconference concerning American Airlines Headquarters' awareness about the hijacking of American Airlines Flight 77 (AA77), I have spoken with John Azzarello, John Raidt and William Johnstone all formerly of the 9-11 Commission and Chris Christensen outside counsel to American Airlines (AA) and AA's liaison to the Commission.

(b)(5)

(b)(5), (b)(6), (b)(7)c

(b)(5), (b)(6), (b)(7)c

(b)(5), (b)(6), (b)(7)c

¹ AA's emergency procedures require that access to the computerized flight data for an aircraft involved in an event, such as a hijacking, accident, or unruly passenger, be locked out.

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

REDACTED FOR DISCLOSURE

(b)(5), (b)(6), (b)(7)c

(b)(5), (b)(6), (b)(7)c

- FAA Air Traffic Control advised they had lost contact with AA77,
- AA77 was not responding to ACRS messages (similar to email) from AA, and
- AA knew that AA flight 11 had been hijacked.

The screenshot shows a Windows Explorer window with a sidebar on the left and a main pane on the right. The sidebar contains sections for 'Music Tasks' (with 'Play all' and 'Shop for music online' buttons), 'File and Folder Tasks' (with 'Make a new folder' button), 'Other Places' (with 'My Computer', 'My Music', and 'My Network Places' links), and a 'Details' dropdown menu. The main pane displays a list of files with columns for Name, Size, and Type. A tooltip is visible over the file 'Garvey-3', stating 'These tasks apply to the files and folders you select.' The taskbar at the bottom shows the 'start' button, several icons, and two open windows: 'interviews on 'kstreet...' and 'Document - WordPad'.

Dianna Campagna

9-11 Comm.

This is a copy, original is in HQ.

Case Number: 042R0122001

Case Name: FAA-NORAD Statements to 9-11 Commission

Allegations

The 9-11 Commission alleged that certain public statements made by military and FAA officials at Commission hearings and elsewhere, were inaccurate. Specifically,

- The FAA notified the military about United Airlines Flight 93 (UN93) at 9:16am;
- FAA notice to the military of the hijacking of American Airlines Flight 77 occurred at 9:24am;
- Both the timeline and Col. Scott's testimony indicated that the fighters at Langley were scrambled at 9:24 seemingly in response to the hijacking of AA77;
- When the Langley fighters were scrambled, their objective was to respond to reports at 9:16 that UN93 was hijacked and at 9:24 that AA77 was hijacked.
- Officials were tracking UN93 and intended to intercept the aircraft if it approached DC.

The Commission specifically referred to us the question of whether the above statements were knowingly false. They found evidence that the FAA and the military engaged in an aggressive effort to reconstruct the events of the day, that accurate information was apparent in material available to the FAA and the military in the immediate aftermath of September 11th, and that they should have known the aforementioned events were incorrect.

Results In Brief

AAT-20 prepared FAA's chronologies during the month of Sept. 2001

Beginning on 9-11 and continuing through the end of the month, the Evaluations and Investigations Staff (formerly AAT-20) prepared the FAA's initial 9-11 chronologies. All subsequent timelines were based upon these work products.

No timelines reference the 9:16 event, however, the 9:24 event is referenced in most of FAA's chronologies.

FAA and Military Shared information

Within a couple of weeks of 9-11, the former Deputy Director of Air Traffic Services obtained information pertaining to FAA's notification to the military from General Arnold or one of his staff. It is not clear what was provided to the FAA. It was agreed that whatever the logs said is what they would report; however, he later recanted this assertion.

In October 2001 an individual from AAT-20 sent to NORAD HQ copies of FAA's timelines, radar plots, and other miscellaneous information about the hijacked

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

flights. These timelines did not contain military notification information.

AAT-20 did not cross check FAA's data against the NEADS' data

AAT-20 had some FAA military notification data when they prepared the chronologies

During the time that AAT-20 prepared its timelines, it appears they had access to some information from its own sources regarding when they notified the military but did not utilize it.

They had information about the correct time FAA notified the military about UN93 (10:08). This was in a draft of a notification chronology but CANOLES, Director of Air Traffic and Air Safety Investigations (AAT-20) removed it.

The aforementioned appears to be the only military notification information that AAT-20 had available to it while they prepared their timelines; however, we are still exploring this area.

FAA executives provided the Commission with a QFR containing factual errors

In response to former Administrator Garvey's May 22, 2003, testimony SCHUESSLER, OSMUS & BROWN prepared a QFR and submitted it to the commission. The QFR was read into the record on the 23rd. The QFR contained two factual errors,

It states that NORAD's logs indicate FAA notified the military about AA77 at 9:24.

Further, it states that "The U.S. Air Force liaison to the FAA immediately joined the FAA headquarters phone-bridge and established contact with NORAD on a separate line."

We learned from CANOLES, who was responsible for establishing the teleconference, that it played no role in coordinating the military response. He was not consulted in the preparation of this QFR. Further, those responsible for preparing the QFR learned, about two weeks later from the A/F liaison, that she did not immediately join the phone-bridge. Sheryl ATKINS told MILLER that she arrived at the FAA later in the day. Knowing this, nothing was done to correct the public record, instead relying on the liaison's subsequent interview with the Commission for the correction.

The FAA had posted erroneous notification information on the Internet

The FAA had two public websites containing incorrect references as to when the FAA had notified the military about American Airlines flight 77. We brought this

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

to the FAA's attention and they changed both sites to read: "9:20. The FAA establishes an open phone line with other government agencies and the military to share information about missing or suspicious aircraft. (revised entry 10/21/04)." The new statement is consistent with the Commission's conclusions. However, the Commission does point out that this teleconference played no role in coordinating a response to the attacks of 9/11.

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

Case Number: 042R0122001

Case Name: FAA-NORAD Statements to 9-11 Commission

Date Opened: 8/24/04

We are investigating allegations referred to us and the DOD-OIG, from the National Commission on Terrorist Attacks against the United States (9-11 Commission) that certain public statements made by military and FAA officials at Commission hearings and elsewhere, were inaccurate. The questionable statements primarily concern when the FAA notified the military about certain hijacked aircraft.

We have learned that the FAA's Evaluations and Investigations Staff (formerly AAT-20) prepared the FAA's initial 9-11 chronologies. This effort began on or about September 11th and continued through the end of the month. All subsequent timelines we have identified, that were produced by the FAA and which referenced military notification, were based upon the work products generated during that initial period.

Witnesses indicate that AAT-20 had access to some information from the military that they likely received sometime between September 13th and 17th 2001. Though preliminary at this stage, some evidence and testimony suggests that AAT-20 possessed information, from FAA and military sources, concerning the correct time that it notified the military about United Flight 93 (10:07 EDT) but removed it from its final military notification chronology. We are currently working on determining the exact information AAT-20 obtained from the military. Further, we are identifying the extent of the internal information pertaining to military notifications that AAT-20 possessed when it completed its chronologies.

Witnesses have advised that sometime after former FAA Administrator Jane Garvey's testimony before the Commission in May 2003, the Department's Chief of Staff (COS) may have made requested that FAA validate their timeline data. Though we are currently working on pinning down the precise request from the COS, we have learned that the work product apparently generated in response to the COS's request was based on existing timelines. No source materials were reviewed and no further validation was conducted in the preparation of that work product. We have some additional interviews and re-interviews to conduct on the COS request topic.

During our investigation we also discovered that the FAA had two public websites containing incorrect references as to when the FAA had notified the military about American Airlines flight 77. We brought this to the FAA's attention and they changed both sites to read: "9:20. The FAA establishes an open phone line with other government agencies and the military to share information about missing or suspicious aircraft. (revised entry 10/21/04)." The new statement is consistent with the Commission's conclusions. However, the Commission does point out that this teleconference played no role in coordinating a response to the attacks of 9/11.

of Transportation

The Inspector General

Office of Inspector
Washington,

Gary M. Stern
General Counsel
National Archives and Records Administration
8601 Adelphi Road
College Park, MD 20740-6001

Dear Mr. Stern:

I am requesting that a designee from our office be afforded access to the 9-11 Commission's "Team 8" files that your agency is currently archiving. We previously identified for (b)(6), (b)(7)c those items from Team 8's files that we want copied and she has marked them for easy identification. Since you expressed concern to William Owens of our office about the volume of material requested to be copied, my designee will further review the marked items in an effort to narrow the scope of our request for copies.

(b)(6), (b)(7)c provided on compact disks (CD) copies of certain interviews that the 9-11 Commission conducted. However, there are two CDs that appear to be blank and one of the files on a third CD is unreadable. We request another copy of the interview files that should be on the blank CDs and the unreadable interview file from the third CD. A list of the missing interview files is enclosed.

Thank you for your cooperation in this matter. If you require any additional information please feel free to contact (b)(6), (b)(7)c

Sincerely,

Charles H. Lee Jr.
Assistant Inspector General for Investigations

Subject: Heads up- New York Times media inquiry about 9/11 investigation

Jim Dwyer, a general assignment reporter with the New York Times, called regarding a story he is doing for Friday on unfinished business of the 9/11 Commission. At the Commission's last public session in late July, they announced they were referring information to a variety of organizations for further review. Among the items announced in public session was the referral by the commission's general counsel of concerns that NORAD and FAA witnesses lied at one of the public hearings.

We confirmed (since it had been stated by the commission in open session) that we were doing an investigation, that it was ongoing, and that we didn't have a timeframe for completing it. We referred him to DOD IG, with whom he talked.

Mr. Dwyer asked whether this could result in perjury or other charges being filed. We advised that legal options range from administrative to civil and criminal (the latter being referred to federal prosecutors). We noted that we had previously investigated another 9/11 issue that had been declined for prosecution.

Again, the story is expected to appear in Friday's Times. The OIG investigation is expected to be a small portion of the article.

of Transportation

Office of Inspector General

Subject: INFORMATION: 9-11 Commission Interviews
of American Airlines Personnel

Date: November 1, 2004

From: (b)(6), (b)(7)c
Assistant Special Agent-in-Charge, JRI-2

Reply to
Attn of: JRI-2
(212) 264-8700

To: Todd J. Zinser
Deputy Inspector General, J-2

During our meeting on October 13, 2004, you asked if the 9-11 Commission interviewed any American Airlines personnel. At the time I had thought they had not. After further review of the Commission's final report and other materials I have learned that they interviewed approximately 14 individuals from American Airlines, including Gerard Arpey, Executive Vice President.

You also asked about American Airlines' communications with the FAA on September 11, 2001, concerning American Airlines Flight 77 (AA77). In that vein I have ascertained the following, which is presented in timeline format:

8:51am: AA77 transmitted its last routine communication¹.

8:54am through 8:59am: FAA air traffic control (Indianapolis Center) notified American's headquarters that AA77 had deviated from its assigned course, its transponder had been turned off and it was not responding to radio communications. During this period ATC attempted to re-establish communications with AA77 and in doing so sought assistance from American Airlines dispatch.²

9:00am (approximately): Mr. Arpey learned that communication with AA77 had been lost. He then ordered a ground stop for all aircraft in the northeast.³

9:10am (approximately): suspecting that AA77 had been hijacked, American's Headquarters concluded that the second aircraft to hit the World Trade Center was

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

REDACTED FOR DISCLOSURE

AA77. After learning that United was also missing an aircraft, American's Headquarters expands the ground stop nationwide.⁴

9:20am: Monte Belger, former acting Deputy Administrator, FAA, believed that Jane Garvey, former FAA Administrator, had been in contact with the air carriers at this time.⁵ He had not had any conversations with the carriers prior to this point. Though the carriers were not part of the primary net at this stage, they were eventually brought into the net. Mr. Belger did not recall at what time the carriers were brought into the net.⁶

9:25am: FAA's Herndon Command Center and FAA headquarters were aware that AA77 was lost.⁷

9:30am (approximately): Don Carty, CEO American, is on his way into the office and learns that AA77 has vanished. At roughly this same time Mr. Arpey orders all of American's aircraft to land, for which Mr. Carty concurs.⁸

9:37am: AA77 crashes into the Pentagon.⁹

9:20am through 9:45am: Mr. Belger spoke with Bob Baker at American and Russ Chew (possibly American or United), while Ms. Garvey spoke with Mr. Carty at American.¹⁰

Mr. Belger recalled that shortly after he spoke with the Secretary, (sometime after the crash of AA77 into the Pentagon), he recalled speaking with representatives at American Airlines.¹¹

If I can provide additional information on this topic please feel free to contact me.

This memorandum addresses the questions you asked about radar in the National Airspace System and the events of 9/11, particularly the tracking of American Airlines Flight 77. You wanted an explanation of the technical reasons why American 77 was not displayed to controllers when FAA's radar equipment tracked the flight. To explain this, the memorandum will also address how radar works, particularly in the high-altitude environment, as well as changes put in place since 9/11.

As you know, the 9/11 Commission Report stated that American 77 disappeared from the radar scope at Indianapolis Center at 8:56 a.m. when its radar transponder was turned off. Although a reconstruction indicated that FAA radars did in fact track American 77, the aircraft was not displayed to controllers at Indianapolis Center for 8 minutes due to technical reasons. After radar again displayed the target, the Indianapolis controllers did not identify the target as American 77. The hijacked aircraft remained unidentified for 36 minutes as it headed for Washington DC.

Types of Radar Used In the National Airspace System

Radar has provided important benefits to the enhanced safety of civil aviation since the end of World War II. However, radar has some limitations that are not widely known. FAA uses different types of radar which are defined by what technology is used and which environment is the radar used.

- The dominant technology used by FAA is called *secondary* radar. Secondary radar sends an electronic signal to aircraft within range that triggers a unique

response from the aircraft's transponder. When the radar receives the response, the data are then processed and displayed on the controller's scope. Using cooperative aircraft equipment (transponder), secondary radar not only measures the direction (radial) and distance of an aircraft from the radar antenna, it also communicates additional data, such as aircraft identification and altitude. With the cooperative capability of secondary radar, FAA has significantly enhanced the tools controllers use to manage air traffic. For example, radar automation depicts a data block attached to displayed targets on controller displays that allows the controller to readily identify who the target is and monitor critical factors, such as altitude and airspeed. The limitation of secondary radar is the fact that the aircraft must have a functioning transponder for the radar system to acquire the aircraft and display it on the controller's scope.

- The other radar technology, *primary* radar, can track a target (when the radar receives enough "hits") without any cooperation from the target. Primary radar pumps a burst of electromagnetic energy into the sky that hits airborne targets and reflects back to a ground-based antenna. With a hit, the radar system can measure a target at a specific radial and distance from the antenna and depict the target on a controller's display. With enough hits, the radar automation system can display and track the target. Primary radar is limited to determining an aircraft's location and does not provide identification of the target. Because secondary radar has so many advantages over primary, FAA uses primary radar only as a backup system in the high-altitude en route environment.
- It is important to understand that radar automation systems do not display every primary radar hit on the controller's scope. If it did, the scope would become cluttered with false targets and confuse the controller. When the radar receives enough valid hits, the automation system will display a primary radar target, and the scope will display a solid shape called a "blip."
- FAA relies on radar to manage aircraft in two different environments, terminal and en route. In the terminal environment, where time-critical safety decisions are made and the accuracy of aircraft position is of utmost importance, FAA uses short-range radars that are very accurate out to 60 miles. Because terminal radars produce more precise position data, they allow FAA to reduce the distances between departing and landing aircraft. Conversely, for en route air traffic, FAA uses long-range radars that are useful to 200 to 250 miles. Normally, data from short-range radars are not sent to en route controller's scopes, except where en route controllers need short-range radar feed to maintain radar coverage. This type of short-range radar data was discussed in the footnote of the 9/11 Commission Report as tertiary and quadrary radars.

Before 9/11

Before 9/11, FAA operated two basic types of long-range radar. Around the perimeter of the United States, FAA jointly operates with the United States Air Force (USAF) Air Defense radar network new generation Air Route Surveillance Radar-4 (ARSR-4) systems. These radars have been optimized for use by both the FAA and the USAF.

Inside the perimeter of the United States, FAA exclusively operated and used legacy radar systems, most which have been in service for over 40 years. Beginning in the mid 1990s, FAA was working to decommission primary radars used by the en route control centers, such as Indianapolis Center. Because secondary radar is more useful, FAA concluded that the primary radar cost far more than its usefulness merited. FAA believed that primary radars did not play a role in the future of the National Airspace System. As a result, en route controllers use secondary as the main radar source for managing air traffic. In fact, the en route radar system has approximately 2 dozen sites where secondary radar is the only operating radar and no primary radar exists. The extent and location of these facilities is considered sensitive.

Understanding how FAA operated primary radar on 9/11 helps explain why it lost track of American 77. When American 77 turned off its transponder, the aircraft was in an area served by a "secondary only" radar site and no other backup radar used by that sector was tracking the target. On the controller's scope, the target with its identifying data block disappeared and no backup primary radar "blip" showed. When American 77 reappeared in a different area on a controller's scope as a primary radar target, controllers had little basis to identify the unknown primary radar target as American 77. Eleven minutes after FAA's Command Center alerted Dulles TRACON to look for a primary target, Dulles reported an unidentified primary radar target that turned out to be American 77.

After 9/11

Following the terrorist attacks on 9/11, the USAF added both the primary and secondary data feed from 50 legacy long-range systems to the air defense network. Subsequently, the USAF 84th Radar Evaluation Squadron tested all of the systems and reported that they failed to meet FAA's minimum detection standards. Based on their analysis, the 84th recommended further study and, where warranted, optimizing the radars to meet the combined mission needs of FAA and the USAF. FAA has made significant progress towards optimizing the jointly-used radars to provide the necessary data quality to air defense and homeland security organizations.

Also, progress has been made since 9/11 to address the gaps in primary radar coverage. Department of Defense (DOD) has improved its ability to receive and process radar data from FAA. FAA is feeding DOD and Department of Homeland Security data from more

long-range radars and a limited number of terminal radar sites. DOD and FAA are investigating alternative technologies to fill in gaps where no radar coverage exists, particularly in areas west of the Mississippi. For the long term, FAA and DOD, through the FAA's new Joint Program Development Office, are researching a wide range of technologies, such as non-rotational, multi-static, and wide area multilateration radar.

The most important issue facing the continued use of primary radar is who is going to pay for it. Currently, FAA is paying to maintain the existing long-range radars, but has no plans to replace them. It is an open question on whether the budgetary burden of paying for long-range primary radar will be a security funded function or a continuing requirement of the National Airspace System.

If you have any more questions, give me a call at (202) 366-1428.

this stuff is gonna keep on going, we need to take those fighters, put 'em over Manhattan. That's best thing, that's the best play right now. So coordinate with the FAA. Tell 'em if there's more out there, which we don't know, let's get 'em over Manhattan. At least we got some kind of play.¹³⁵

The FAA cleared the airspace. Radar data show that at 9:13, when the Otis fighters were about 115 miles away from the city, the fighters exited their holding pattern and set a course direct for Manhattan. They arrived at 9:25 and established a combat air patrol (CAP) over the city.¹³⁶

Because the Otis fighters had expended a great deal of fuel in flying first to military airspace and then to New York, the battle commanders were concerned about refueling. NEADS considered scrambling alert fighters from Langley Air Force Base in Virginia to New York, to provide backup. The Langley fighters were placed on battle stations at 9:09.¹³⁷ NORAD had no indication that any other plane had been hijacked.

American Airlines Flight 77

FAA Awareness. American 77 began deviating from its flight plan at 8:54, with a slight turn toward the south. Two minutes later, it disappeared completely from radar at Indianapolis Center, which was controlling the flight.¹³⁸

The controller tracking American 77 told us he noticed the aircraft turning to the southwest, and then saw the data disappear. The controller looked for primary radar returns. He searched along the plane's projected flight path and the airspace to the southwest where it had started to turn. No primary targets appeared. He tried the radios, first calling the aircraft directly, then the airline. Again there was nothing. At this point, the Indianapolis controller had no knowledge of the situation in New York. He did not know that other aircraft had been hijacked. He believed American 77 had experienced serious electrical or mechanical failure, or both, and was gone.¹³⁹

Shortly after 9:00, Indianapolis Center started notifying other agencies that American 77 was missing and had possibly crashed. At 9:08, Indianapolis Center asked Air Force Search and Rescue at Langley Air Force Base to look for a downed aircraft. The center also contacted the West Virginia State Police and asked whether any reports of a downed aircraft had been received. At 9:09, it reported the loss of contact to the FAA regional center, which passed this information to FAA headquarters at 9:24.¹⁴⁰

By 9:20, Indianapolis Center learned that there were other hijacked aircraft, and began to doubt its initial assumption that American 77 had crashed. A discussion of this concern between the manager at Indianapolis and the Command Center in Herndon prompted it to notify some FAA field facilities that American 77 was lost. By 9:21, the Command Center, some FAA field facilities, and American Airlines had started to search for American 77. They feared

it had been hijacked. At 9:25, the Command Center advised FAA headquarters of the situation.¹⁴¹

The failure to find a primary radar return for American 77 led us to investigate this issue further. Radar reconstructions performed after 9/11 reveal that FAA radar equipment tracked the flight from the moment its transponder was turned off at 8:56. But for 8 minutes and 13 seconds, between 8:56 and 9:05, this primary radar information on American 77 was not displayed to controllers at Indianapolis Center.¹⁴² The reasons are technical, arising from the way the software processed radar information, as well as from poor primary radar coverage where American 77 was flying.

According to the radar reconstruction, American 77 reemerged as a primary target on Indianapolis Center radar scopes at 9:05, east of its last known position. The target remained in Indianapolis Center's airspace for another six minutes, then crossed into the western portion of Washington Center's airspace at 9:10. As Indianapolis Center continued searching for the aircraft, two managers and the controller responsible for American 77 looked to the west and southwest along the flight's projected path, not east—where the aircraft was now heading. Managers did not instruct other controllers at Indianapolis Center to turn on their primary radar coverage to join in the search for American 77.¹⁴³

In sum, Indianapolis Center never saw Flight 77 turn around. By the time it reappeared in primary radar coverage, controllers had either stopped looking for the aircraft because they thought it had crashed or were looking toward the west. Although the Command Center learned Flight 77 was missing, neither it nor FAA headquarters issued an all points bulletin to surrounding centers to search for primary radar targets. American 77 traveled undetected for 36 minutes on a course heading due east for Washington, D.C.¹⁴⁴

By 9:25, FAA's Herndon Command Center and FAA headquarters knew two aircraft had crashed into the World Trade Center. They knew American 77 was lost. At least some FAA officials in Boston Center and the New England Region knew that a hijacker on board American 11 had said "we have some planes." Concerns over the safety of other aircraft began to mount. A manager at the Herndon Command Center asked FAA headquarters if they wanted to order a "nationwide ground stop." While this was being discussed by executives at FAA headquarters, the Command Center ordered one at 9:25.¹⁴⁵

The Command Center kept looking for American 77. At 9:21, it advised the Dulles terminal control facility, and Dulles urged its controllers to look for primary targets. At 9:32, they found one. Several of the Dulles controllers "observed a primary radar target tracking eastbound at a high rate of speed" and notified Reagan National Airport. FAA personnel at both Reagan National and Dulles airports notified the Secret Service. The aircraft's identity or type was unknown.¹⁴⁶

Reagan National controllers then vectored an unarmed National Guard C-130H cargo aircraft, which had just taken off en route to Minnesota, to iden-

130. "N90 (New York Terminal Radar Approach) controller stated 'at approximately 9:00 a.m., I observed an unknown aircraft south of the Newark, New Jersey Airport, northeast bound and descending out of twelve thousand nine hundred feet in a rapid rate of descent, the radar target terminated at the World Trade Center.'" FAA report, "Summary of Air Traffic Hijack Events September 11, 2001," Sept. 17, 2001. Former NORAD official Alan Scott testified that the time of impact of United 175 was 9:02. William Scott testimony, May 23, 2003. We have determined that the impact time was 9:03:11 based on our analysis of FAA radar data and air traffic control software logic.
131. FAA audio file, Herndon Command Center, New York Center position, line 5114, 9:02:34.
132. *Ibid.*, 9:03; FAA audio file, Herndon Command Center, Cleveland/Boston position, line 5115, 9:05; Michael McCormick interview (Oct. 1, 2003); David LaCates interview (Oct. 2, 2003).
133. FAA Audio File, Herndon Command Center, Boston Center position, line 5115, 9:05-9:07.
134. Joseph McCain interview (Oct. 28, 2003); Robert Marr (Jan. 23, 2004); James Fox interview (Oct. 29, 2003); Davne Deskins interview (Oct. 30, 2003).
135. NEADS audio file, Mission Crew Commander position, channel 2, 9:07:32.
136. Daniel Nash interview (Oct. 14, 2003); Timothy Duffy interview (Jan. 7, 2004).
137. Because the Otis fighters had expended a great deal of fuel in flying first to military airspace and then to New York, the battle commanders were concerned about refueling. As NEADS personnel looked for refueling tanks in the vicinity of New York, the mission crew commander considered scrambling the Langley fighters to New York to provide backup for the Otis fighters until the NEADS Battle Cab (the command area that overlooks the operations floor) ordered "battle stations only at Langley." The alert fighters at Langley Air Force Base were ordered to battle stations at 9:09. Colonel Marr, the battle commander at NEADS, and General Arnold, the CONR commander, both recall that the planes were held on battle stations, as opposed to scrambling, because they might be called on to relieve the Otis fighters over New York City if a refueling tanker was not located, and also because of the general uncertainty of the situation in the sky. According to William Scott at the Commission's May 23, 2003, hearing, "At 9:09, Langley F-16s are directed to battle stations, just based on the general situation and the breaking news, and the general developing feeling about what's going on." See NEADS audio file, Mission Crew Commander, channel 2, 9:08:36; Robert Marr interview (Oct. 27, 2003); Larry Arnold interview (Feb. 3, 2004). See also Colonel Marr's statements that "[t]he plan was to protect New York City." *Films, Air War Over America*, p. 60.
138. Commission analysis of FAA radar data and air traffic control transmissions.
139. The Indianapolis Center controller advised other Indianapolis Center personnel of the developing situation. They agreed to "verticalize" the airspace along the flight's westerly route to the safety of other planes would not be affected. John Thomas interview (May 4, 2004).
140. John Thomas interview (Sept. 24, 2003). According to the FAA-produced timeline, at 9:09 Indianapolis Center "noticed Great Lakes Regional Operations Center a possible aircraft accident of AMERICAN 77 due to the simultaneous loss of radio communications and radar identification." FAA report, "Summary of Air Traffic Hijack Events September 11, 2001," Sept. 17, 2001.
141. FAA audio file, Herndon Command Center, National Operations Manager position, line 4525; FAA audio file, Herndon Command Center, National Traffic Management Officer East position, line 4530; FAA memo, "Full Transcription; Air Traffic Control System Command Center, National Traffic Management Officer, East Position; September 11, 2001," Oct. 21, 2003, p. 13.
142. Primary radar contact for Flight 77 was lost because the "preferred" radar in this geographic area had no primary radar system, the "supplemental" radar had poor primary coverage, and the FAA ATC software did not allow the display of primary radar data from the "tertiary" and "quadrant" radars.
143. David Boone interview (May 4, 2004); Charles Thomas interview (May 4, 2004); John Thomas interview (May 4, 2004); Commission analysis of FAA radar data and air traffic control software logic.
144. John Thomas interview (May 4, 2004); Charles Thomas interview (May 4, 2004). We have reviewed all FAA documents, transcripts, and tape recordings related to American 77 and have found no evidence that FAA headquarters issued a directive to surrounding centers to search for primary radar targets. Review of the same materials also indicates that no one within FAA located American 77 until the aircraft was identified by Dulles controllers at 9:32. For much of that time, American 77 was traveling through Washington Center's airspace. The Washington Center's controllers were looking for the flight, but they were not told to look for primary radar returns.

Subject: ACTION: Inaccurate Posting on FAA
Website, Re: 9/11/01 Chronology

Date: September 27, 2004

From: Kenneth M. Mead
Inspector General

Reply to

To: Marion C. Blakey
Federal Aviation Administrator

As you know, we are investigating a referral from the 9/11 Commission concerning certain inaccuracies in public statements and reports by DOD and FAA officials, involving communications and notifications between FAA and NORAD on September 11.

In the course of investigating, we discovered on Friday that the attached and highlighted Fact Sheet, posted on FAA's website and entitled "Chronology of Events on September 11, 2001 (August 2002)," contained information that the Commission found to be inaccurate. The subject information in this posting concerns FAA's notification to NORAD about the hijacking of AAL Flight 77, which is a central issue in the Commission's referral.

We notified Laura Brown, Deputy Assistant Administrator for Public Affairs, of this discrepancy on Friday, and the Fact Sheet has since been revised (see Attachment 2). One observation, however, is that the new entry is not identified as a recent revision and we believe such a notation, or errata, should be made given our ongoing investigation.

We have already contacted the individual responsible for preparing the original Fact Sheet and will be interviewing the FAA personnel who provided that source information. We will also determine the accuracy of the revised Fact Sheet entry.

Should you have any questions, please feel free to contact me at x61959, or my Deputy, Todd J. Zinser, at x66767.

FOR IMMEDIATE RELEASE
 August 12, 2002
 Contact: William Shumann
 Phone: 202-267-3883

Chronology of Events on September 11, 2001 (August 2002)

- 0800. American Airlines Flight 11, a Boeing 767 with 92 people on board, takes off from Boston Logan airport for Los Angeles.
- 0814. United Air Lines Flight 175, a Boeing 767 with 65 people on board, takes off from Boston Logan airport for Los Angeles.
- 0821. American Airlines Flight 77, a Boeing 757 with 64 people on board, takes off from Washington Dulles airport for Los Angeles.
- 0840. FAA notifies the North American Aerospace Defense Command's (NORAD) Northeast Air Defense Sector about the suspected hijacking of American Flight 11.
- 0841. United Air Lines Flight 93, a Boeing 757 with 44 people on board, takes off from Newark airport for San Francisco.
- 0843. FAA notifies NORAD's Northeast Air Defense Sector about the suspected hijacking of United Flight 175.
- 0846. (approx.). American Flight 11 crashes into the north tower of the World Trade Center.
- 0902. (approx.). United Flight 175 crashes into the south tower of the World Trade Center.
- 0904. (approx.). The FAA's Boston Air Route Traffic Control Center stops all departures from airports in its jurisdiction (New England and eastern New York State).
- 0906. The FAA bans takeoffs of all flights bound to or through the airspace of New York Center from airports in that Center and the three adjacent Centers – Boston, Cleveland and Washington. This is referred to as a First Tier groundstop and covers the Northeast from North Carolina north and as far west as eastern Michigan.
- 0908. The FAA bans all takeoffs nationwide for flights going to or through New York Center airspace.
- * 0924. The FAA notifies NORAD's Northeast Air Defense Sector about the suspected hijacking of American Flight 77. The FAA and NORAD establish an open line to discuss American 77 and United 93.
- 0926. The FAA bans takeoffs of all civilian aircraft regardless of destination -- a national groundstop.
- 0940. (approx.). American Flight 77 crashes into the Pentagon.
- 0945. In the first unplanned shutdown of U. S. airspace, the FAA orders all aircraft to land at the nearest airport as soon as practical. At this time, there were more than 4,500 aircraft in the air on Instrument Flight Rules (IFR) flight plans.

[Original Fact Sheet]

1007. (approx.) United Flight 93 crashes in Stony Creek Township, PA.

1039. Reaffirming the earlier order, the FAA issues a Notice to Airmen (NOTAM) that halts takeoffs and landings at all airports.

1215. (approx). The airspace over the 48 contiguous states is clear of all commercial and private flights.

Notes:

All times are Eastern Daylight. For UTC/Zulu/GMT, add four hours.

Flight departures are actual takeoff times, not scheduled or gate departure times.

factsheets_2002
-08-12.pdf (26 ...

Rick,
Per our discussion

- As of 9-24-04, FAA has a fact sheet dated 8-12-02, titled Chronology of Events on September 11, 2001 on its website that contains the 9:24 entry regarding AA77. The time entry states: "The FAA notifies NORAD's Northeast Air Defense Sector about the suspected hijacking of American Flight 77. The FAA and NORAD establish an open line to discuss American 77 and United 93."
- The Commission concluded that "The notice NEADS received at 9:24 was that American 11 had not hit the [WTC] and was heading for Washington, D.C." Further, they determined that the teleconference set-up between FAA and the military at about 9:20 "...played no role in coordinating a response to the attacks of 9/11..." based on the testimony of the FAA and military personnel monitoring the line. (See pages 34 & 36 of 9-11 Commission final report.)

Today I will bring this to the attention of (b)(6), (b)(7)c
(b)(6), (b)(7)c FAA.

Subject: Re: QFRs

(b)(6), (b)(7)c

I talked to Lynne Osmus, who was the lead at that time and worked with Jane Garvey and others to draft the statement that was sent to the Commission -- i.e., the piece that Ms. Garvey indicates she thought she would be able to send to the staff the evening of the day of the hearing. Lynne believes that was the extent of providing anything for the record. At the time of the hearing, the Commission was just getting organized and they didn't really have a process that they followed for hearing follow up. As I recall it was quite some time before there was a transcript from the hearing.

We did submit the air traffic control chronology (Summary of Air Traffic Hijack Events) as part of the document production to the Commission. We also spent time with the staff here going over what happened that day, viewing a powerpoint presentation that is consistent with the times in the Summary of Air Traffic Hijack Events.

To: Shirley Miller/AWA/FAA@FAA
cc: (b)(6), (b)(7)c
Subject: QFRs

Shirley,

As a follow-up to our discussion last week concerning questions for the record. During Jane Garvey's May 22, 2003, testimony before the 9-11 Commission she was asked to provide QFRs. The references to QFRs mentioned during the hearing are as follows:

On page 102 of the transcript there is a reference to a QFR but it is not clear what the question(s) is/are. (b)(6), (b)(7)c Thank you very much. We have some questions we'd like for you to submit for the record."

QFRs relating to American Airlines 77 (AA77)

Page 117,

"MS. GARVEY: Commissioner, I would like to go back and look at those records more carefully, because that is not consistent with my understanding of it and the timeline that I remember. The timeline that I have, that I remember, is one that had a notification of NORAD twice before the time that you mention, so that there had been three notifications. But, again, I would like to submit that specific timeline for the record, with the first notification being at 8:34."

Page 118,

"MS. GARVEY: My understanding, commissioner, was that the notification [for AA77] was earlier. But I would like to ask that the FAA air traffic control chronology be submitted for the record."

Pages 119-120,

"MS. GARVEY: Right, and I'd like -- I appreciate that. I'd like to submit for the record." (b)(6), (b)(7)c Well, you will double-check it, and you will get back to us? MS. GARVEY: Certainly will. (b)(6), (b)(7)c It would be useful if you could get back to staff this evening. MS. GARVEY: I was thinking that we could probably get the answer this evening..."

Will you please check the FAA's records and provide a copy of what was submitted by or on behalf of Ms. Garvey as her response to the QFRs. If you have any questions please feel free to contact me at (b)(6), (b)(7)c

Thanks

(b)(6), (b)(7)c

9/17/04

(b)(6), (b)(7)c

Below is our interview schedule for next week.
 All those listed below are current or former
 FAA employees.

9/22 @ 1000 Shirley Miller
 Senior Advisor to the Administrator
 She was the FAA's 9-11 Comm Liaison

9/22 @ 1530 Jeff Griffith
 ret. FAA
 he was Gen. Arnold's POSE @ FAA

9/23 @ 0830 Linda Schuessler
 VP for System Operations
 authored "FAA Communications
 w/ NORAD on 9-11-01"

9/23 @ 1500

(b)(6), (b)(7)c

9/24 @ 1000 Lynne Osmus
 Asst. Admin for Security & HM
 also authored "FAA Communications
 w/ NORAD on 9-11-01"

This is all we have scheduled thus far. Please advise if a DOD-IG representative will be participating in these interviews.

You may contact me at [REDACTED] or
by cell at [REDACTED]

Thank
Bill

- At this point, it appears that the FAA source for timelines concerning military notification is Air Traffic (AAT-20).
- We are in the process of determining who at FAA saw a copy of the NEADS log that is referenced in most, if not all, the known FAA timelines containing information about FAA military notice. Jeff GRIFFITH, advised that it is likely he may have seen it but he was not absolutely certain that was the document he received from the military.
- It appears that very early on that FAA noticed a problem with NORAD's 9:16 time entry regarding UN93. All but one FAA timeline seen thus far excludes that time entry. (FAA was not aware that UN93 was in distress until 9:24, see page 33 of Commission report.)
- FAA Public Affairs advised that NORAD floated a draft of their 9-17-01 press release by them and they pointed out the problem with the 9:16 entry. That entry was removed from subsequent versions.
- FAA has kept the 9:24 entry concerning AA77 in their timelines since air traffic's position is that there was an open line between FAA and the military. Air Traffic believed that information was transmitted to the military about AA77 during that open line. [Question: Ask AAT-20 if that was the case then why don't they believe that information concerning UN93 was also transmitted during this open line?]
- As of 9-24-04, FAA has a fact sheet dated 8-12-02, titled **Chronology of Events on September 11, 2001** on its website¹ that contains the 9:24 entry regarding AA77. The time entry states: "The FAA notifies NORAD's Northeast Air Defense Sector about the suspected hijacking of American Flight 77. The FAA and NORAD establish an open line to discuss American 77 and United 93."
- On April 14, 2004, a representative from the DOD-OSD sent a revised 9-11 Timeline to Shirley MILLER at the FAA. In the timeline, which purports to have been provided to the Commission, it indicates that from 9:16 – 9:20 "It is most likely that the first report of UAL93 came into the Battle cab via conference call ... that [was] established with the FAA that morning. ...[I]t is most likely that the UAL93 hijacking was originally discussed over the FAA conference line as a possibility sometime between 0916L and 0922L..." On May 27, 2004, MILLER sent the OSD representative an email expressing concern about the 9:16 – 9:22 [sic] time as notification for UN93. MILLER advised that "...our records indicate that the first sign that we could have possibly thought something was wrong with UN93 was at 0928L..."

¹ http://www.faa.gov/newsroom/factsheets/2002/factsheets_020812.htm

- Military interviews have focused on a March 2004 memo/letter bearing Gen EBERHART's signature addressed to the Commission wherein NORAD attempts to correct its timeline presented during the May 2003 Commission hearing. DOD-IG is still attempting to determine if that memo was actually sent to the Commission.

Ms. Campagna,

I am writing as a follow-up to our meeting on Sept. 10, 2004, that concerned obtaining materials from the 9-11 Commission. As you know, we are seeking information that might be helpful in the DOT and DOD, IGs' joint review of public statements made by NORAD and FAA officials at a Commission hearing on May 23, 2003, and elsewhere, regarding the actions of NORAD and FAA officials in responding to the 9-11 attacks that were not accurate. During the meeting you presented us with copies of various indexes and asked us to review the indexes to identify the items we were interested in receiving copies of.

In the attached documents we have identified the items that DOT-IG is interested in obtaining. The DOD-IG will present a separate request to you.

If you have any questions please feel free to contact me at (b)(6), (b)(7)c

Thanks,

(b)(6), (b)(7)c

Subject: TAPE RECORDING YES OR NO
 (b)(5)

(b)(6), (b)(7)c give me a call (or have (b)(6), (b)(7)c give me a call) regarding the tape recording of the NORAD (DOD) personnel. (b)(5), (b)(6), (b)(7)c (DOT) tape recording the interviews while we are at Colorado Springs. Here is the DOT IG position on this matter:

The decision to tape record the DOD personnel is solely up to the DOD IG which is the lead agency in dealing with the USAF/Civilian (NORAD) people.

So what ever (b)(6), (b)(7)c wants to do is OK with DOT. We just wanted to make sure that what DOT IG does when

interviewing DOT personnel is not taken by DOD IG as, "we (DOT) are required to tape record everyone". If you (DOD IG, (b)(6), (b)(7)(c)) feel that the week would go better, smoother, by not attempting to tape record the interviews, then we can all take notes, compare and write the notes up later.

Just let me know ASAP what the decision is...I plan on leaving the office at 2PM today and take care of some non-work related business, so I need to know if I should be bringing along the tape recorder and blank tapes or not.

If you need to speak with me about this, give me a call at (b)(6), (b)(7)(c) and/or try my cell at (b)(6), (b)(7)(c) or emailing your decision will be fine.

Again...I want to make it clear that you all deal with DOD personnel more than we do and if this coming week will go smoother without the presence of tape recording, that is fine.

Subject: Document and witness lists for matter referred to DoD and DoT

Dear Deputy Inspectors General Zinser and Gimble,

Attached are a list of documents you may want to review and a list of witnesses you may want to interview in connection with your investigation of the matter referred to you by the Commission. I apologize that we have not sent the lists to you sooner. Since our work for the Commission has ended many of our team members (including myself) have taken vacation time to spend with our family. We would have contacted you earlier but it took some time to coordinate everyone's schedule to get their collective input. I have copied Dan Marcus, General Counsel to the Commission, on this e-mail. Please feel free to contact anyone on our team to discuss this matter further. Thank you.

(b)(6), (b)(7)c

Do you Yahoo!?

The following is a list of FAA and DoD documents and materials that we recommend you and your staff review in connection with the Commission's referral.

1. All drafts and final versions of FAA and DoD timelines, chronologies of events and press releases. (A copy of the NORAD draft press release prepared by NORAD's public affairs office was not provided to the Commission).
2. Logs from FAA Washington Operations Center, Command Center, New England Region, Eastern Region, Great Lakes Region, New York Center, New York Tracon, Boston Center, Cape Tracon, Washington Center, Dulles Tower, Reagan National Tower and Indianapolis Center.
3. Timelines and chronologies of events of 9/11 from Herndon Command Center.
4. All documents related to briefing book prepared by FAA working group (headed by Darlene Freeman) for Administrator Jane Garvey in preparation for her Congressional testimony. (Some but not all documents in this category were provided to the Commission).
5. All documents related to chronology of events, FAA awareness of hijacked aircraft and notifications to the military reviewed or prepared by Darlene Freeman and the employees that assisted her in creating an FAA chronology of events of 9/11.
6. Transcripts and tape recordings of all FAA facilities that interacted with the 4 hijacked aircraft on 9/11.
7. Transcripts and tapes of all communications to and from Herndon Command Center regarding the 4 hijacked aircraft.
8. All documents and e-mails related to the Commission's work including, but not limited to, the May 2003 testimony, FAA and DoD responses to subpoenas, and FAA and DoD responses to QFRs. (e-mails and correspondence not received by the Commission).
9. The FAA Summary of Hijack Events of September 11, 2001.
10. The NEADS MCC Tech Log.
11. All chat logs for 9/11 from NEADS, CONR and NORAD.
12. All transcripts (and tape recordings) for 9/11 from NEADS SOCC floor (especially the MCC Op Position (i.e., Channel 2) and the Identification Technician Positions (i.e., Channels 4, 5 and 7)).
13. All documents related to briefings of General Eberhart in preparation for Gen. Eberhart's testimony before Congress in October 2001. (The Commission did not receive documents in this category).

14. All documents related to answers provided by (b)(6), (b)(7)c in response to QFRs from Congress related to October 2001 testimony. (The Commission did not receive documents in this category).

15. All correspondence and e-mails (from 9/11/01 to 7/30/04) to or from NEADS, CONR, NORAD, DoD and FAA regarding chronology of events of 9/11 (particularly e-mails to and from (b)(6), (b)(7)c (NEADS), (b)(6), (b)(7)c (NEADS), (b)(6), (b)(7)c (NEADS), (b)(6), (b)(7)c (assigned to CONR after 9/11), (b)(6), (b)(7)c (CONR), (b)(6), (b)(7)c (NORAD), and NEADS', CONR's and NORAD's public affairs personnel. (The Commission did not receive documents in this category. Given the relevant information in the two e-mails cited in the Commission's Memorandum, we suggest you obtain ALL e-mails in this category of documents).

16. All correspondence and e-mails from DoD public affairs personnel related to the chronology of events on 9/11. (The Commission did not receive documents in this category. Given the relevant information in the two e-mails cited in the Commission's Memorandum, we suggest you obtain ALL e-mails in this category of documents).

17. All correspondence and e-mails from FAA public affairs personnel related to chronology of events on 9/11. (The Commission did not receive documents in this category. Given the relevant information in the two e-mails cited in the Commission's Memorandum, we suggest you obtain ALL e-mails in this category of documents).

18. All documents reviewed or created by FAA Headquarters personnel related to the chronology of events on 9/11 and FAA notifications to the military of hijackings.

19. All correspondence and e-mails related to (b)(6), (b)(7)c conversations with (b)(6), (b)(7)c concerning the events of 9/11 and to (b)(6), (b)(7)c media interviews concerning the events of 9/11. (The Commission did not receive documents in this category. Given the relevant information in the two e-mails cited in the Commission's Memorandum, we suggest you obtain ALL e-mails in this category of documents).

20. All correspondence and e-mails related to (b)(6), (b)(7)c presentation to the Air Staff concerning the events of 9/11 including a copy of the presentation (b)(6), (b)(7)c received from NEADS and/or (b)(6), (b)(7)c (The Commission did not receive documents in this category. Given the relevant information in the two e-mails cited in the Commission's Memorandum, we suggest you obtain ALL e-mails in this category of documents).

21. All correspondence and e-mails from the Air Staff concerning any and all attempts to ascertain the 9/11 timeline of events by NEADS, CONR, NORAD, ANG, ACC and/or the Air Staff. (The Commission did not receive documents in this category. Given the relevant information in the two e-mails cited in the Commission's Memorandum, we suggest you obtain ALL e-mails in this category of documents).

INTERVIEW OF LARRY ARNOLD

On February 11, 2005, Larry ARNOLD, retired Major General, U.S. Air Force, was interviewed at the Office of the Department of Defense, Inspector General (DOD-OIG), 400 Army Navy Drive, Arlington VA by (b)(6), (b)(7)c and (b)(6), (b)(7)c DOD-OIG and Investigator (b)(6), (b)(7)c and Special Agent (b)(6), (b)(7)c U.S. Department of Transportation, Office of Inspector General (DOT-OIG). After being apprised of the identity of the interviewers and the purpose of the interview, ARNOLD provided the following relevant information pertaining to his communications with the Federal Aviation Administration (FAA) following September 11, 2001:

ARNOLD did not recall tasking any of his staff to coordinate production of September 11th timelines with the FAA. Further, ARNOLD did not recall tasking any of his staff with obtaining information from the FAA for preparation of timelines.

Following September 11th, ARNOLD spoke with Jeff GRIFFITH, former Deputy Director Air Traffic, FAA, on nearly a daily basis, occasionally many times in a day. Their discussions pertained to daily operations and future events, not what had happened in the past. He could have had a discussion with GRIFFITH about the timelines but he did not have a specific recollection of such a discussion. ARNOLD did not recall having had a discussion with GRIFFITH concerning discrepancies in the military's and the FAA's timelines. He advised if any did take place he probably "blew them off" since he was more focused on daily operational issues.

The only "heated" discussion ARNOLD recalled having following September 11th was with General Donald COOK, Vice Commander, Air Combat Command, who opined that the Air Force may have shot down UN93. ARNOLD and his staff looked at everything (e.g., radar data, and number of bullets and missiles) and found that the Air Force did not shoot down UN93. Furthermore, COOK had prepared a timeline that disagreed with ARNOLD's, the difference being that

INTERVIEW OF LARRY ARNOLD

COOK reported on when information was received by someone while ARNOLD's timeline depicted when events actually transpired, using radar data.

He observed discrepancies in NORAD's published account of 9/11 and what he understood to be the timeline. As examples, ARNOLD explained that he thought the Air Force had been tracking UN93 before it had crashed even though the Commission says they were not. Further, NORAD had indicated that Langley Air Force Base had scrambled their fighters in response to a notice about American Airlines Flight 77; however, ARNOLD knows that Langley had been responding to the false report about American Airlines Flight 11.

ARNOLD did not recall there being any controversy about FAA's notice to the military in the news media following September 11th.

GRIFFITH may have dealt directly with ARNOLD's operations desk, which was staffed by Brigadier General J.J.C. BOUCHARD, (b)(6), (b)(7)c

(b)(6), (b)(7)c ARNOLD did not know if GRIFFITH made any requests for information from the aforementioned. He advised none of the aforementioned would have needed his permission to provide GRIFFITH with information. He did not recall entering into any agreements with GRIFFITH to use the military's times to report on when FAA notified the military.

Prior to the June 2004 hearings GRIFFITH had suggested to ARNOLD that they review their timelines. ARNOLD told GRIFFITH that they should just tell it like it is.

(b)(6), (b)(7)c

5/3/05

INTERVIEW OF JOHN AZZARELLO & JOHN FARMER

On September 29, 2004, John AZZARELLO, former Counsel Team 8, 9-11 Commission and John FARMER, former Senior Counsel and Team 8 Leader 9-11 Commission were interviewed at the U.S. Attorney's Office, Newark, NJ by Special Agent (b)(6), (b)(7)c and Special Agent-in-Charge (b)(6), (b)(7)c. After being apprised of the identity of the interviewing agent and the purpose of the interview, AZZARELLO and FARMER provided the following relevant information:

The Commission looked at all public source materials and put together what they thought was the most accurate picture they could of what happened on September 11, 2001. When the Commission then looked at the official agency records they discovered that they were different from the Commission's findings. Up until that point the public story of what happened was completely wrong.

AZZARELLO acknowledged that in the end the military did cooperate with the Commission's probe but he described this as a "red herring."

AZZARELLO advised that the question that needs to be asked it at what level did the request to "fudge" the story occur. Further, was it coordinated between the FAA and the military?

The Commission found that if they could show the military something on paper or tape that they would concede. However, gaps exist that have caused a problem in fully recreating what happened that day.

There is a tape recorded conversation between (b)(6), (b)(7)c FAA Washington Operations Center and the FAA Aviation Command Center (ACC), wherein it can be heard that (b)(6), (b)(7)c is telling the ACC that AA11 is heading south. During an interview (b)(6), (b)(7)c recalled obtaining the aforementioned information from (b)(6), (b)(7)c (possibly (b)(6), (b)(7)c On 9-11 (b)(6), (b)(7)c

Prepared by:

(b)(6), (b)(7)c

Date Prepared: 11/17/04

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

1/5

~~FOR OFFICIAL USE ONLY~~
(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF JOHN AZZARELLO & JOHN FARMER

(b)(6), (b)(7)c did not recall telling (b)(6), (b)(7) the aforementioned. The Commission believes this event resulted in the false report that launched the Langley aircraft.

AZZARELLO advised that there are three key pieces of evidence that show that the story FAA and the military related are not true: First, the NEADS tape transcript clearly says AA11 at 9:20-9:21am. Second, the NEADS MCC/Tech log, which is hand printed by the technician. This log was shared with FAA after 9-11-01. CANOLES says that they had access to the military ops logs. CANOLES thought that the military had given it to GRIFFITH. FERRANTE told the Commission that he had not seen the log. FERRANTE is the primary author of the FAA's timelines. FERRANTE told the Commission that he was the sole author and that no one helped him pull together the information for the timeline. Third, FAA's timeline showed 8:40 notice for AA11, 9:05 notice for UN175 but there was no notice for UN175 and A77. The notice for UN93 came at 10:07 in the form of FAA relating to the military that a bomb was on board. This information is contained in the NEADS log. FERRANTE never looked at the NEADS log.

GRIFFITH told the Commission that he did not recall having the NEADS log in his possession but advised that they got what they needed from each other (military and FAA). Further, Gen. ARNOLD and GRIFFITH did a lot of finger pointing and had heating conversations about notice.

Shirley MILLER wanted to know if everyone was being cooperative with the Commission during their interviews. AZZARELLO told her, after the FERRANTE interview, that he seemed to have problems with the NEADS log. MILLER also asked what about the relevance of the 10:07 notice of UN93.

During interviews FAA asked to see the original copy of the NEADS log.

FAA did not offer any witnesses for any items that they did not have tapes for. At 9:24 the FAA did not know where AA77 was and therefore could not have provided notice to the military about that flight.

INTERVIEW OF JOHN AZZARELLO & JOHN FARMER

The FAA was supposed to have the primary net established and just assumed that it was set-up and included everyone. The primary net was not tape recorded. (b)(6), (b)(7)c was sitting on the primary net and said that no information was passed and believed that the military went off the net after the Pentagon was hit. (b)(6), (b)(7)c was on the other end of the line and agreed that nothing was passed. (b)(6), (b)(7)c recalled BELGER asking at one point "where the hell is the military?" BELGER can be heard yelling at 10:15 with regard to UN93.

Some FAA facilities were on the tactical net that was set-up by (b)(6), (b)(7)c. The tac-net was not recorded out of DC but it was recorded in Herndon. (b)(6), (b)(7)c and (b)(6), (b)(7)c listened to it. At 10:15 (b)(6), (b)(7)c can be heard asking if the military is on the line. The Commission concluded that he did this because someone high-level within the FAA was asking him to check. (b)(6), (b)(7)c was not responsible for providing military notification.

The Commission determined that the only open communications that occurred between the FAA and the military did not occur until 10:30, after the fourth aircraft had crashed, which was between Herndon and NEADS.

While the FAA is reconstructing the events of 9/11, they assumed that someone had to have had the military on the primary net. (b)(6), (b)(7)c was at NORAD on 9/11 and the FAA wanted to rely on his recollection of having heard that UN93 crashed in PA. However, the Commission determined that he did not get involved until later in the morning.

AZZARELLO advised that the following items would be helpful to review, media interviews, newspaper accounts, FAA documents including the regional operations center logs and the accident packages. He advised that all the military logs are helpful, NEADS MCC/Tech log and intelligence chat logs.

Darlene FREEMAN told the Commission that BELGER wanted her to look at the military notification issue.

INTERVIEW OF JOHN AZZARELLO & JOHN FARMER

Brigadier General MOORE in CONR spoke to (b)(6), (b)(7)c at NEADS. This is referenced in the 9-16-01 email. General ARNOLD called MOORE to help with operations and to pull together documents for 9/11. An email is sent to (b)(6), (b)(7)c thanking him for getting the information on the 10:08 notice pinned down and wants to talk to the person that dug that up at FAA.

FREEMAN did not recall if she saw a copy of the draft NORAD press release. However, the Commission learned that BELGER had asked her to look at it. The FAA was taken off guard by the press release because at the time they were still working on putting their information together.

The Herndon Command Center was also asked to put together a timeline; an incomplete copy of which the Commission was provided. The Command Center was told to stop working on the timeline. Herndon opined that a good story at Herndon was a bad story in FAA HQ.

(b)(6), (b)(7)c was the FAA official at the Command Center that initially ordered that all the aircraft on 9/11 land. (b)(6), (b)(7)c at the Command Center is on a NOM position that was recorded. Jeff GRIFFITH can be heard in the background ordering all the aircraft to land. (b)(6), (b)(7)c relates that it was already done, including a ground stop.

Linda SCHUSSLER took (b)(6), (b)(7)c to MINETTA's office (b)(6), (b)(7)c
(b)(6), (b)(7)c

(b)(6), (b)(7)c

On 9/11 CANOLES had set-up a separate teleconference with the FAA regions on the 10th floor that also was not recorded. GRIFFITH was upset with the decision to do this. This telcon involved the regional operations centers and included (b)(6), (b)(7)c (b)(6), (b)(7)c. The Commission believes this is where the rebirth of AA11 came

INTERVIEW OF JOHN AZZARELLO & JOHN FARMER

from, with the source being (b)(6), (b)(7)c opined that the rebirth of AA11 came from the airlines.

In the book *Ground Stop* CANOLES is said to have created a timeline of events on his laptop computer. However, today only a print-out of the timeline is available. At one point MILLER was supposed to have a reconstruction of what occurred during this telcon. MILLER provided a list of those present on the telcon.

The Command center did not transcribe a lot of relevant tapes from 9/11.

With regard to a March 2004 memo (AGENT'S NOTE: DOT-OIG obtained a copy of this memo from Shirley MILLER) to the Commission from NORAD, AZZARELLO advised that at the end of the week, while at NORAD, NORAD showed them a copy of a document that looked very similar. In the last version of a similar document, NORAD had abandoned the open line idea. (b)(6), (b)(7)c DOD General Counsel, presented the "new correct" timeline to the Commission however, it still was not correct.

EBERHART told the Commission that he did not look back after 9-11. However, (b)(6), (b)(7)c advised that he worked on transcribing the 36 recorded positions in NEADS at the request of EBERHART. EBERHART specifically asked him if he was doing that. They stopped transcribing tapes and (b)(6), (b)(7)c Ostensibly the reason they stopped was because they were having mechanical problems with the tapes. This is covered in the response QFRs submitted by the military during an Armed Services Committee hearing.

- # -

RECORD OF CONVERSATION

On September 21, 2004, Special Agent (b)(6), (b)(7)c US DOT-OIG, spoke telephonically (b)(6), (b)(7)c cell phone: (b)(6), (b)(7)c) with John AZZARELLO. AZZARELLO provided the following relevant information:

FAA Command Center in Herndon became an issue because during the period 8:00-12:00 they had a lot of positions that were recorded but that had not been transcribed. One in particular had had communication with ZNY (POSITION 14) concerning AA11 and UN175 but primarily just because it was a line that communicated with ZNY, a key FAA center on 9-11. After the 9-11 Commission asked for all the tapes they heard information on position 14 and the NOM position. (b)(6), (b)(7)c was on the line and (b)(6), (b)(7)c can be heard in the background of this tape making statements that are relevant; namely concerning the "rebirth" of American Airlines 11.

He advised that in FAA Boston Center the traffic management unit (TMU) positions were recorded in Boston but had not been transcribed. In Boston Center (b)(6), (b)(7)c MOS, placed calls to NEADS at 9:20 saying that AA11 was still flying. The Commission first learned about this from NEADS, but did not receive the other end of the recording from FAA. They heard from (b)(6), (b)(7)c that "we just got off a teleconference and AA11 is still airborne." The aforementioned report caused the Langley aircraft to be launched. The Commission was never able to learn the origin of the rebirth of AA11.

FAA's notice to NEADS at 9:20 that AA11 was still airborne caused Langley to scramble jets. However, no one at FAA acknowledged that they made this notification.

There is a tape recorded conversation between (b)(6), (b)(7)c FAA Operations Center and the FAA Aviation Command Center (ACC), wherein it can be heard that (b)(6), (b)(7)c is telling the ACC that AA11 is heading south. During an interview

Prepared by:

(b)(6), (b)(7)c

Date Prepared: 09/30/04

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

1/5

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

RECORD OF CONVERSATION

(b)(6), (b)(7)c recalled obtaining the aforementioned information from (b)(6), (b)(7)c (b)(6) On 9/11 (b)(6), (b)(7)c was in New Orleans, LA. (b)(6), (b)(7)c did not recall telling (b)(6), (b)(7)c the aforementioned. This is the information that the Commission thinks resulted in the false report that launched the Langley aircraft.

None of the FAA timelines mentioned the false report of AA11. Commission Staff Statement 17 speaks to this issue.

Commissioner Bob KERREY asked why the military did not throw the FAA under the bus on the notification issue. The theory is that the FAA and the military put a lot of assets into reconstructing the events of 9-11, though they do not admit to having done so.

During a White House briefing on September 17, 2001, the FAA made a presentation. It was during preparation for this presentation that someone may have decided what to say about notification.

Deputy Secretary of Defense WOLFOWITZ made a statement to the press that the government knew of United 93's (UN93) being hijacked but in actuality they did not know that UN93 had been hijacked until after it had crashed.

FAA produced a document upon which was handwritten, "internal briefing document." The document contained a box and a timeline. The document was also titled "FAA Awareness" and listed times that they told the military about the hijackings. (**AGENT'S NOTE:** A document provided to OIG by MILLER was described to AZZARELLO. This contains a box on the top of the first page with various FAA military notification times. AZZARELLO indicated that this document sounded very similar to the document he described.)

With regard to United 93 the aforementioned document had the correct time that the FAA notified the military 10:08. However, the military press release says 9:24.

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

2/5

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

RECORD OF CONVERSATION

Flight UN93 was not even hijacked until 9:28 so the notice at 9:24 could not have happened.

AZZARELLO speculated that the aforementioned timeline came from Darlene FREEMAN as part of the after action group's (AAG) work product. Apparently, the AAG was put together to resolve discrepancies that Monte BELGER advised he was interested in knowing about.

Within six minutes of UN93 being hijacked, (b)(6), (b)(7)c at the FAA Command Center in Herndon, told FAA HQ that a bomb was aboard UN93. Further, (b)(6), (b)(7)c (b)(6), (b)(7)c is told and by 9:34 he tells HQ there is a bomb onboard UN93. HQ sat on that information from 9:34 until past the time of the crash. The DOD HQ found out about UN93 when Cleveland Center called. Monte BELGER was in the Washington Operations Center at the time. (b)(6), (b)(7)c was speaking with BELGER about scrambling aircraft. (b)(6), (b)(7)c and Jeff GRIFFITH were receiving updates on UN93 in HQ at the time.

(b)(6), (b)(7)c was on the primary net at HQ. BELGER was apparently very upset and wanted to know who had the military on the line during the hijackings. At about that time (b)(6), (b)(7)c also presently with TSA, was in Herndon, listening on the Tactical Net and asks if the military was on the line. The military was not on the line.

FREEMAN advised that she saw a draft of a NORAD timeline. She was shown the press release from NORAD. There were discrepancies between FAA's and NORAD's understanding as to when things happened. It caught the FAA off guard that NORAD had published their press release.

FREEMAN prepared the "FAA Military Notification" document; however, she did not perform a low level review of the document. She advised it was prepared by CANOLES and FERRANTE. They had picked apart the data to prepare the document.

RECORD OF CONVERSATION

The first citation in the NEADS MCC logs that they received notice on UN93 was at 10:07 (approximately). No one at FAA wants to own up to having seen the NEADS log. A 9:16 entry in the NEADS log reflects the tail number for UN175. What happened was that ZNY had confirmed for NEADS that UN175 had crashed and NEADS asked ZNY for the tail number. (b)(6), (b)(7)c had given the tail number to the military.

After 9/11, the military claims that they had conferred with FAA. CANOLES says he thinks it was GRIFFITH that had access to the military information. GRIFFITH was the POC for Gen. ARNOLD. ARNOLD says that FAA did not tell them about UN93 until after it crashed.

The FAA "Summary of Hijack Events" was prepared by FERRANTE on 9/17/01. It makes various references to the NEADS logs. However, there are no notice times for UN93 in the document, why? FERRANTE claims that he did not see the log. He says that someone probably provided him with the military times. Shirley MILLER and (b)(6), (b)(7)c asked the Commission why would the FAA put information about military notice in their report after the aircraft crashed.

The Commission found that everyone tapped around the NEADS log and the issue of FAA notice to the military.

The Commission received a memo from NORAD that was sent to (b)(6), (b)(7)c with a proposed timeline that was different than was previously presented, however, the document had no signature. This was sometime before March 2004.

(b)(6), (b)(7)c showed a draft of another timeline and asked the Commission if they thought that was closer to what they were looking for. There were still parts of the timeline that were not accurate.

RECORD OF CONVERSATION

AZZARELLO did not recall seeing any memos from Gen EBERHART that had been sent to the 9-11 Commission correcting the timelines. When the Commission was at NORAD there was a great deal of push-back. It was not until the end of the Commission's investigation that NORAD admitted there was a problem with their timeline.

AZZARELLO described the explanation that a corrected timeline was sent to the Commission as a "red herring." NORAD just wants to be able to say that they cooperated.

CONVERSATION RECORD

On January (b)(6), (b)(7)c 2005 (b)(6), (b)(7)c
 (b)(6), (b)(7)c Federal Aviation Administration (FAA),
 Washington DC (b)(6), (b)(7)c was interviewed at his place of business by
 Special Agents (b)(6), (b)(7)c and (b)(6), (b)(7)c U.S. Department of
 Transportation, Office of Inspector General. Also present was (b)(6), (b)(7)c
 (b)(6), (b)(7)c Acting Director Terminal Safety and Operations Support, ATO, FAA,
 Washington DC (b)(6), (b)(7)c After being apprised of the identity of the
 interviewing agents and the purpose of the interview, (b)(6), (b)(7)c provided the
 following relevant information:

(b)(6), (b)(7)c started with the FAA on December 16, 1981, as an Air Traffic
 Controller in Burbank, CA. On September 11, 2001, he held the position of
 Program Director for Air Traffic Planning and Procedures. In February 2004,
 during reorganization, the title for that position changed to Director Terminal
 Safety and Operations Support. In November 2004 he assumed his current
 position.

(b)(6), (b)(7)c started with the FAA on January 2, 1976, as a Flight Service Specialist
 at the Flight Service Station in Pittsburgh, PA. On September 11, 2001, he held
 the position of Assistant Manager for Enroute and Terminal Procedures Division.
 In February 2004, his title changed to Manager of Terminal Airspace and
 Procedures Division. In November 2004 he assumed his current position.

Air Traffic Planning and Procedures (ATPP) was an Air Traffic policy
 organization within the FAA. They were responsible for generating and
 maintaining the handbook and orders for Air Traffic that describe how controllers
 perform their functions within terminal, enroute and oceanic domains. ATPP also
 generated and maintained policy relating to how an air traffic facility functions,
 from the management perspective. Within ATPP was a group titled Special
 Operations that was responsible for interfacing with law enforcement and the

(Public availability to be determined under 5 U.S.C. 552)

CONVERSATION RECORD

military. Finally, ATP performed planning and system implementation functions and operational security for national security events, such as Presidential movements.

During the February 2004 FAA reorganization, the ATPP was broken into domains; one for enroute facilities, one for terminal facilities and one for flight service facilities. Enroute facilities handle air traffic that is enroute; terminal facilities handle flights' ingress and egress from airports, and flight service facilities handle, primarily for part 91 flights, pre-flight, weather briefings, and in-flight advisories.

Currently, when there is a need for new policy or a need for a change to existing policy, the domain will start the process and send the new or changed policy to System Operations Service for approval. Prior to any policy changes, including new policies, the following steps must be taken, a safety analysis conducted, the policy coordinated with the regulatory branch and the policy circulated to the industry for comment. These procedures are outlined in FAA's operating procedures.

(b)(6), (b)(7)c agreed to provide, with the help of (b)(6), (b)(7)c the following orders as they were on September 11, 2001 and as they are now.

7110.65

7210.3

7110.263

7210.149

7610.4

(b)(6), (b)(7)c advised that order 7110.263 did not exist before September 11, 2001. Furthermore, prior to September 11th, there was no FAA order concerning reporting of suspicious aircraft and/or pilot activities. Order 7110.263 was replaced by order 7110.265 and then finally by 7110.306. The reporting agent was provided with a copy of 7110.306A, dated June 23, 2004, titled "Reporting of Suspicious Aircraft/Pilot Activities".

CONVERSATION RECORD

(b)(6), (b)(7)c also agreed to provide a listing of those agencies that participate in the National Capital Region Coordination Center (NCRCC), which is operated by the Transportation Security Administration (TSA).

The Washington Operations Center in the FAA Headquarters building is run by FAA Security. For further information on that organization (b)(6), (b)(7)c suggested that the reporting agent contact Lynne OSMUS.

The DEN (Domestic Events Network) is run by FAA Air Traffic.

(b)(6), (b)(7)c advised that Systems Operations Services was responsible for investigating the incident involving the Kentucky Governor's aircraft last summer. He agreed to locate and provide copies of any investigative/after action reports and list improvements/changes implemented after the incident.

- # -

Interview with Doug Gould

September 30, 2004, FAA Bldg. 10A, Room 630 at 1430 hours

On September 11, 2001, Mr. Gould's title was Senior Air Traffic Investigator working in the Evaluation and Investigations (AAT 200). His duties were ensuring the safety of the National Air Space in light of an event.

Mr. Gould was working on the 4th floor (Rm. 429) on 9/11 when he received a page about the first hijacked aircraft (AA11 was in Albany at the time of the page). He passed the message to Tony Ferrante and Dave Canoles. (b)(6), (b)(7)c and Dave Canoles went up to the War Room, adjacent to the Washington Operation Control Center (10th Floor), to set up the teleconference (TELCON), now referred to as the Domestic Events Network (DEN). Mr. Gould started the TELCON on the 4th floor while the others were setting up the 10th floor to take over the TELCON (all key members would eventually join). Mr. Gould opened the line with the Call Center and made sure that the TELCON could support more than 30 lines. Dave Canoles called New York and Boston Center to add them to the TELCON. Mr. Gould monitored the TELCON from the 4th floor as well as contacting (b)(6), (b)(7)c in Indianapolis, (b)(6), (b)(7) (not further identified) in Cleveland, and Tony Ferrante in Chicago to join the TELCON (the FAA thought a plane had gone down in Kentucky). Those participating in the TELCON were made aware of each aircraft that was hijacked.

Once the Pentagon was hit, the FAA building was evacuated except for those involved with the TELCON. Mr. Gould left the building around 12:30 am (9/12), but was back in the morning. The TELCON continued to be open for seven days. Mr. Gould and (b)(6), (b)(7) (b)(6), (b)(7) worked 16-hour shifts to cover the TELCON.

During this time Mr. Gould continued to monitor the TELCON and communicated with other key individuals at field facilities by paging messages, not broadcasting. The conversation line of the TELCON was not recorded. There was a line that could record, but it was used for recording the Boston Center replay of the hijack recording. This recording was put in a digital format using Cool Edit 2000 (3 days later they switched to the software that the FBI uses). Boston Center played the recording in an attempt to try and figure out who hijacked the plane.

After about an hour into the TELCON, (b)(6), (b)(7)c (on the 4th floor with Mr. Gould on 9/11) started to take notes on a legal pad to maintain a log. Those on the 10th floor used a laptop computer as a log (also about an hour into the TELCON). Since the laptop was being used, (b)(6), (b)(7) eventually stopped taking notes.

Mr. Gould did not believe that the military was involved with the TELCON. He knows that NORAD never joined the line. The Military Operations Specialist at New York Center was on the TELCON. Boston Center did contact Otis Air Force Base for assistance, but Mr. Gould did not know exactly what that meant because what he heard was (b)(6), (b)(7) reaching out to Otis." Mr. Gould also stated that the Military was communicating with the Herndon Command Center.

In regards to the misinformation of AA11 being in route to DC, Mr. Gould was paged by (b)(6), (b)(7)c (Boston Center) early on that AA11 was squawking hijack and heading to DC. It turned out that the plane was heading south towards the Hudson River. Mr. Gould knew that AA11 hit the WTC based on information coming from Newark during the TELCON.

Mr. Gould did work on after action reports/timeline information, which he had turned over to (b)(6), (b)(7)c (Litigation Office), the custodian of all the 9/11 files. Mr. Gould turned over six boxes of information before he left for a three month detail to Iraq in June 2003, which he received back once he returned. Then he turned the boxes over again to (b)(6), (b)(7)c in March 2004 when he went on another detail to Iraq. (b)(6), (b)(7)c still has the boxes. Mr. Gould also kept everything on his hard drive, which crashed a couple of weeks before the meeting (9/30/04).

Mr. Gould, along with (b)(6), (b)(7)c (b)(6), (b)(7)c and (b)(6), (b)(7)c worked for about a week on putting the Summary of Air Traffic Hijack Events together, which was issued on September 17, 2001. The information the Summary Team collected came from digital voice, radar data, hand notes (usually after the fact), date stamps (time on voice recorder). Some of the time stamps are digital (encrypted) and some are analog (reel to reel so it may be off by +/- 3 seconds).

The Summary Team started collecting data on September 11, 2001. When they requested information it was for specific information. They did not say "give us everything." The focus was on the aircraft activity, not on superficial data. That same evening the Summary Team realized that military notification was going to be an issue. They started with the Boston Center/Otis contact. They did not know who made what call (did not have any physical facts).

Around day 4 or 5 they were tasked with putting military notification into the summary. Mr. Gould does not remember seeing the NEADS log used to put the summary together. He stated that it may be downstairs with (b)(6), (b)(7)c

The Summary Team cross-checked the information for the summary. They pulled out documents, statements, and notes to try and validate the information with other sources. There are draft versions in the boxes Mr. Gould turned over to (b)(6), (b)(7)c

There were no transcripts available when the summary was put together because transcripts take too long.

Without the airlines flying right after 9/11, it was difficult to get data. They had to rely on information over the phone or by fax.

At some point (approximately 6 months) the Summary Team did review military material – RADES data to supplement FAA data. They (b)(6), (b)(7)c and (b)(6), (b)(7)c (b)(6), (b)(7)c received the RADES data from a male sergeant at RADES (Hill AFB) who sent a CD to the FAA.

During the interview Mr. Gould was presented with chronologies, in table or grid format that pertained to the FAA's notification to the military concerning the hijacked aircraft on September 11, 2001. Mr. Gould advised that he and (b)(6), (b)(7)c participated in putting the information for the table together, but he did not format the information into the table.

There is a separate folder for each aircraft, as well as a fifth folder for miscellaneous data. As information would come in, it would be placed in the proper folder (i.e., logs, transcripts). There would be some indication as to whom or where the information came from (like a fax number). Everything that came in regarding 9/11 went to Mr. Gould (except for the classified information). Mr. Gould kept a list (index) of where he got the information and who he gave it to.

The 9/11 Commission had access to everything, but did not review everything. (b)(6), (b)(7)c (b)(6), (b)(7)c was not in the rest of the day (9/30/04). (b)(6), (b)(7)c is going digitize everything.

As for contact with NORAD now – Mr. Gould works with the FAA liaison at NORAD and is part of the Interagency Procedures Working Group, which includes CONR, NORAD and NEADS.

The meeting ended for the afternoon and scheduled for Friday morning when Mr. Gould could get access to the boxes.

This report was prepared by D00-016.

(b)(6), (b)(7)c

INTERVIEW OF (b)(6), (b)(7)c

On December (b)(6), (b)(7)c 2004, Special Agents (SA) (b)(6), (b)(7)c and (b)(6), (b)(7)c (b)(6), (b)(7)c U.S. Department of Transportation (DOT), Office of Inspector General (OIG), (b)(6), (b)(7)c interviewed (b)(6), (b)(7)c (b)(6), (b)(7)c Federal Aviation Administration (FAA), Cleveland Center (ZOB), at ZOB's facility located at 326 E Loraine Street, Oberlin, Ohio, telephone number (b)(6), (b)(7)c. The purpose of the interview was to determine when ZOB provided copies of recordings and transcripts in rough and final form to FAA's Evaluations and Investigations Staff (AAT-20) for communications it had on September 11, 2001. FAA Quality Assurance Specialist (b)(6), (b)(7)c was also present during the interview. (b)(6), (b)(7)c provided substantially as follows:

(b)(6), (b)(7)c
 (b)(6), (b)(7)c On September 11, 2001, (b)(6), (b)(7)c held the position of Support (b)(6), (b)(7)c On September 11, 2001, Quality Assurance Specialists (b)(6), (b)(7)c and (b)(6), (b)(7)c reported to (b)(6), (b)(7)c At the time, (b)(6), (b)(7)c was assigned to FAA Air Space and Procedures Division; he has been a Quality Assurance Specialist for the past one and one-half years. (b)(6), (b)(7)c currently oversees the September 11, 2001, United Airlines Flight 93 file (UAL 93). (b)(7)c advised the aircraft accident package for UAL 93 is no longer maintained in their office. FAA System Operations Litigation Manager (b)(6), (b)(7)c acknowledged the receipt of the accident package of UAL 93 on September 22, 2004 in an e-mail (electronic message) (Attachment 1).

(b)(6), (b)(7)c stated whenever an accident occurs, an FAA form 8020-3 must be completed, and within two hours, AAT-200 (Investigations) must be notified. According to (b)(6), (b)(7)c AAT-200 is usually notified through the regional operations center. (b)(6), (b)(7)c recalled that immediately after UAL 93 crashed, requests were made for a rough transcript of communications between ZOB and "Huntress" (a/k/a North East Air Defense Sector). On September 11, 2001, at 6:53 pm, (b)(6), (b)(7)c e-mailed a brief synopsis of the SATORI (systematic air traffic operational research initiative) replay to (b)(6), (b)(7)c Regional Quality Assurance (Attachment 2). (b)(7)f stated most likely (b)(6), (b)(7)c who is (b)(6), (b)(7)c from the FAA, created the rough draft transcript that was e-mailed to Douglas GOULD, an AAT-200 specialist, and (b)(6), (b)(7)c on September 15, 2001

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

Handwritten signature and initials, possibly 'JW' and 'AMC', in the bottom right corner.

INTERVIEW OF (b)(6)

(Attachment 3). **AGENT'S NOTE:** On December 6, (b) 2004, in a follow-up email to SA (b)(6), (b)(7)c from (b)(6), (b)(7)c wrote, "The correspondence that is titled **"Rough Draft Transcript UAL93"** was prepared by (b)(6), (b)(7)c who was a Quality Assurance Specialist. His best recollection was that he prepared this as a DRAFT around September 15-17, 2004[2001], at the request of AAT-200, for himself and that it never left the building." (b)(6), (b)(7)c explained to SA (b)(6), (b)(7)c that (b)(6), (b)(7)c was unaware this transcript was emailed and believed the rough draft transcript did not leave ZOB.

AAT-20 Specialist (b)(6), (b)(7)c happened to be at ZOB on September 11, 2001 reviewing a matter unrelated to UAL 93. After UAL 93 crashed, (b)(6), (b)(7)c removed the relevant magnetic voice tapes from the building and took them to Washington D.C. According to (b)(6), (b)(7)c the magnetic voice tapes are not supposed to leave the building and ZOB should maintain them in a vault. However, (b)(6), (b)(7)c was instructed to allow (b)(6), (b)(7)c to remove the tapes. A memorandum dated September 12, 2001, lists the recordings and related documentation removed from ZOB by (b)(6), (b)(7)c (Attachment 4). According to an e-mail dated September 6, (b) 2001 sent by (b)(6), (b)(7)c planned to return the tapes to ZOB or around September 17, 2001 (Attachment 5). There is no documentation indicating when (b)(6), (b)(7)c actually returned the magnetic voice tapes to ZOB.

(b)(6), (b)(7)c recalled that (b)(6), (b)(7)c created a wave file(s) of approximately 45 minutes of voice recordings from Lorain sector pertaining to UAL 93. (b)(6), (b)(7)c stated that due to the amount of recordings, it is possible the wave file may have been broken up into separate files. (b)(6), (b)(7)c generated the wave file by making cassette tapes from the SATORI recordings. (b)(6), (b)(7)c then created the files on CD from the cassette tapes. These files were then e-mailed. However, there is no record when the CD was made, nor is there a record of when the e-mail was sent, or to whom. The computer used by (b)(6), (b)(7)c has since been replaced.

(b)(6), (b)(7)c also electronically transmitted voice and data files from the SATORI to AGL-505's SATORI on September 12, 2001 (Attachment 6). **AGENT'S NOTE:** Attachment 6 is not dated nor could a cover page be found.

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

2/4

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF (b)(6), (b)(7)c

According to (b)(6), (b)(7)c, ZOB copied a certain amount of the magnetic voice tapes to cassette before (b)(6), (b)(7)c removed the tapes from ZOB. (b)(6), (b)(7)c stated the rough transcript may have been created from the cassette tapes copied from the magnetic voice tapes. Recordings of the magnetic voice tapes were probably sent via Federal Express on or about September 25, 2001 (Attachment 7). (b)(6), (b)(7)c commented that items being sent from ZOB to FAA Headquarters did not utilize the services of the U.S. Postal Service. Additional voice tapes of UAL 93 were sent to (b)(6), (b)(7)c on or about September 27, 2001; however, which voice tapes were sent is unknown (Attachment 8).

To the best of (b)(6), (b)(7)c knowledge, (b)(6), (b)(7)c created the final partial transcript between ZOB and (b)(6), (b)(7)c that became part of the final accident package. (b)(6), (b)(7)c stated he does not know when AAT-20 received the final partial transcript, but it could have happened around September 13th or 14th, 2001. Doug GOULD sent an e-mail requesting all transcripts by September 19, 2001 (Attachment 9). **AGENT'S NOTE:** In a follow-up email dated December 15, 2004 to SA (b)(6), (b)(7)c from (b)(6), (b)(7)c wrote, "The memorandum titled **"Partial Transcript.....September 11, 200[2001]"** that was dated September 17, 2001 was also prepared by (b)(6), (b)(7)c His best recollection was that this was prepared from the above listed DRAFT, was e-mailed to AAT-200 on or about September 17, 2004[2001] and sent to (b)(6), (b)(7)c who worked in AAT-200 for Tony Mello in AAT-200."

(b)(6), (b)(7)c has no knowledge of any tapes being played over the telephone to personnel in Washington D.C.

On February 26, 2002, (b)(6), (b)(7)c AGL-500, confirmed a request that an electronic transcript of the communications ZOB had with UAL 93 on September 11, 2001 be sent to Doug GOULD (See Attachment 10).

SA (b)(6), (b)(7)c asked (b)(6), (b)(7)c if any other contacts were made between ZOB and the United States military on September 11, 2001. (b)(6), (b)(7)c stated a telephone call from a land line at the ZOB, which was not recorded nor documented, to the Air

1337:42 FL 397, stabilized on southeast heading, approximately 145 degrees.

1337:49 FL 399.

1338:01 FL 402.

1338:16 FL 406.

1338:35 FL 408.

1339:00 FL 407

Atch-3

1339:15 Fourth transmission. Readable, This is the Captain, remain in your seats, something about we have a bomb on board, we are returning to the airport, remain quiet.

1340:33 FL 397

1340:51 Lost transponder. Aircraft in coast track.

1341:31 Controller tracking primary target.

1342:32 Lost data block.

Other information. Approximately 1348, aircraft handed off from LOR (49) sector for IRL (67) sector. Aircraft continued tracking on a primary target southeast, altitude unknown. At 1356:32, IRL controller changed flight plan direct HGR to DCA so that ZDC would have strips and be able to accept hand-off. This was not a result of any communication with the pilot.

At approximately 1402, ZOB DART show two transponder hits. Fourth SATORI in preparation at this time.

Bob Herak

(b)(6), (b)(7)c

Briefing Sheet

Subject: N8583Y flight on 9/15/01

Background: Information requested by FAA HQ

Narrative: Timeline of events

Current Status: Times and information taken from ZOB NTAP Data

Prepared by: (b)(6), (b)(7)c AATM ZOB, (b)(6), (b)(7)c

(0024Z) ZOB received flight plan information on N8583Y showing that he departed 68IS, Casa De Aero Park Airport, Hampshire, Illinois. The remarks section showed the pilot had received FDC Notam 1/9893.

(0033Z) ZOB received the handoff from ZID.

(0107Z) N8538Y flight plan destination was changed to Johnstown, Pa (JST).

(0120Z) N8538Y arrived JST.

(0226Z) N8538Y departed JST to 68IS. (Flight plan data; N8538Y PA30/I 170 JST D0226 080 JST..AIR.V214.ZZV.V144.CLEFT.V38.EON..JOT..68IS).

(0314Z) N8538Y handed off to sector 30 at ZID.

Receipt requested

Subject: Transcripts 9/11/01

I just spoke to AAT-200 and they advised that (b)(6), (b)(7)c is scheduled to depart DC via POV to ZOB to bring back the original reels. Upon receipt of the original reels, ZOB QA has been asked to make certified copies of the reels for (b)(6), (b)(7)c to take back to Washington. We have also been asked to prepare a certified transcript of all communications pertinent to the accident flight. The FBI has asked that all transcripts be completed by COB Wednesday 9/19/01.

(b)(6), (b)(7)c is scheduled to arrive ZOB at approximately 6P and will call the watch desk on (b)(6), (b)(7)c number. He will stay overnight and then return tomorrow.

I'll let the guards know that he is enroute.

Please call if you need any additional info.

(b)(6), (b)(7)c

Atch-5

The following ZOB TMU personnel have seen all or portions of the SATORI.
I am not sure how much of the SATORI they reviewed.

(b)(6), (b)(7)c

viewed on 9/1

(b)(6), (b)(7)c viewed on 9/13/01 at 0930L.

I have viewed all or portions of the SATORI's two or three. Because of problems with the "A" job I reloaded the SAR INFORMATION so data blocks could be displayed.

I also electronically transmitted the voice and data files on all four SATORI's on UAL93 to AGL-505's SATORI on 9/12/01.

The voice files sent were .pac & .pt files NOT .wav files.

1. ZOB has already sent all NTAP data web site STP//172.22.8.31. This was sent last week. If we need to send again, please advise.

2. ZOB will send the DART data today to the same web site address as we used for the NTAP.

3. ZOB AF has advised us that they did not record ERIT data on September 11, 2001.

4. The voice tapes that (b)(6), (b)(7)c requested for AGC (68) Radar associate for 1359-1400Z and the Huntress (MOS) position for 1403-1426 will be FEDEX today.

Please advise if this is sufficient data.

Employee Statements

Please forward partial pertinent transcripts and wave files NLT COB Wednesday 9/19th (deadline with FBI). Statements should be gathered and forwarded as the employee's return to work. All management shall do them today, no excuse. We understand, several facilities may not have logged all actions, so it is critical that this information is captured in statements with approximate times on each notification (very critical). It may be easier to complete a timeline with action/notification taken with time and by whom and have all sign to validate these actions.

Again I thank you all and apologize for being so demanding.. As you know this AM the Administrator will be standing in front of Congress explaining our actions vs. inaction's... Everyone did an exceptional job. Keep your heads up and ensure you all take care of yourselves and families.

To Better Times

Mr. (b)(6), (b)(7)c

Please send, via CC:mail, an electronic transcript of the communications that Cleveland Center received from UAL 93 on September 11, 2001. Please send this information Doug Gould.

(b)(6), (b)(7)c

Atch-10

February 26,

2002

(b)(6), (b)(7)c

In response to your request for the electronic transcript of UAL93, I have discussed the issue with (b)(6), (b)(7)c and we do have a copy. Before we send the data to AAT-200, I want to clarify several issues.

1. We will need a written request for the data (e-mail will suffice). This is a facility policy for security tracking and a record of request.
2. This data should be sent by certified mail to ensure that the data is not compromised. Sending by e-mail is not a secure method and could result in compromising the data.

Upon receipt of a written request, we will promptly send the data to AAT-200.

(b)(6), (b)(7)c

INTERVIEW OF (b)(6), (b)(7)c

On December (b)(6), (b)(7) 2004 (b)(6), (b)(7)c
(b)(6), (b)(7)c

(b)(6), (b)(7) Federal Aviation Administration (FAA), 12 New England Executive Park, Burlington, Massachusetts was interviewed at his place of employment by USDOT/OIG Special Agent (b)(6), (b)(7)c. The interview had previously been arranged by telephone. The reporting agent identified himself and (b)(6), (b)(7)c provided the following information:

(b)(6), (b)(7)c
(b)(6), (b)(7)c as an Air Traffic Controller (ATC). He was assigned to Youngstown, Ohio until (b)(6), (b)(7)c. In (b)(6), (b)(7)c he transferred to an ATC position at Bradley Airport in Connecticut. He subsequently became a (b)(6), (b)(7)c in automation at Bradley Airport. He transferred to the NER office in Burlington, Massachusetts in (b)(6), (b)(7)c

He initially worked in the Air Traffic Requirements Branch and was the NER (b)(6), (b)(7)c. He has a strong radar automation background due to his education. He transferred to Quality Assurance in (b)(6), (b)(7)c and Resources Management in (b)(6), (b)(7)c. He has also had details as an assistant Air Traffic Manager at Bradley and a six month detail as the NER Quality Assurance Manager in 2001.

(b)(6), (b)(7)c at FAA Headquarters in Washington, D.C. Prior to an Air Traffic reorganization that occurred within the last 9-12 months, ATO-S was AAT-20.

He has not been involved in the preparation of any timelines, nor was he specifically aware that he was providing data for any timelines. He did have a role in gathering data, but it was related to radar information.

Prepared by: (b)(6), (b)(7)c Special Agent (b)(6), (b)(7)c Date Prepared: 12/14/04

INTERVIEW OF (b)(6), (b)(7)c

On the morning of September 11, 2001, he was working at the FAA NER office in Burlington. At a little after 8:30 a.m., NER personnel became aware that AMERICAN AIRLINES Flight 11 (AA 11) might have been hijacked. He was told by FAA/NER employee (b)(6), (b)(7)c that AA 11 had not responded to air traffic control commands at around 8:15 or 8:20 a.m. He telephoned Doug GOULD at AAT-20 to give him a heads-up that something was going on.

He was subsequently involved in a number of telephone calls. He spoke to GOULD, David CANOLES, Tony FERRANTE and Tony MELLO from AAT-20. He was asked to get the radar information the various FAA centers and towers that had been involved with AA 11. He was asked to put together travel time and flight path information. NER personnel asked him to go to Boston Center (the Air Route Traffic Control Center in Nashua, New Hampshire) and digitize the audio transmissions involving AA 11.

He headed up Route 3 to Nashua and while he was en route he was notified by cell phone of AA Flight 77. After he arrived in Nashua, he began working on digitizing the audio recordings when the notification about United Flight 93 (UN 93) crashing near Pittsburgh came through.

He converted the audio files to digital wave files and transmitted them by high speed via the secure FAA Intranet to AAT-20 in Washington, D.C. He also made the recordings available to two FBI agents, whose names he could not recall, so that they could listen as well. He took part in a telephone conference with people from NER and Eastern Region and let them know that the recordings were available.

There was a problem at the New York TRACON when they went to retrieve the radar data for AA 11. Something happened in the automation system that scrambled the data from UN 93. He subsequently spent three days unscrambling the data.

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

2/7

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

REDACTED FOR DISCLOSURE

INTERVIEW OF (b)(6), (b)(7)c

He summarized the data that he gathered and prepared a presentation for AAT-20 review. The FBI wanted him to look for a Lear Jet that may have served as command and control for the hijackers, but he could not locate anything. He also followed up on the hijackers turning off the airplane transponders on some flights while changing the transponder on another.

He was shown Outline Attachment 1 (Chronology of September 11, 2001) by the reporting agent, which he reviewed. He did not have any role in preparing the document. He did not receive any specific directions to put any timelines together. The document indicates that it was prepared by AAT-20, which makes sense, as AAT-20 would have been responsible for putting together the parts and pieces from various FAA facilities. Some of his work may have been used indirectly, such as transponder returns. He did no transcript work. This was handled at Boston Center by (b)(6), (b)(7)c who had been tasked by (b)(6), (b)(7)c was the point of contact for NER on 9/11 related issues.

He was shown ROI Attachment 2 (Summary of Air Traffic Hijack Events), which he thought was prepared by (b)(6), (b)(7)c who worked for AAT-20 and is now with AAI. There should also be a version on compact disc with audio. The radar information that he put together may have had a secondary role in the diagrams.

He gathered radar data from all of the Air Route Traffic Control Centers involved, which was known as National Tracking Analysis Program (NTAP) data as well as terminal information from Regan National, Dulles, Bradley, Boston, New York, Albany, Providence, and Pittsburgh. He looked at the flight information from start to finish. He worked mostly independently, but he did need to interact with FAA regional personnel from each region where a facility was located as well as each facility. He also spoke to people at the FAA Technical Center to see if there was an automated method to unscramble the New York TRACON data, which there was not.

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

3/7

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

REDACTED FOR DISCLOSURE

INTERVIEW OF (b)(6), (b)(7)c

He was shown ROI Attachment 3 (an unlabeled chronology) and Outline Attachment 2 (another unlabeled chronology) and he advised that he had never seen these documents before.

As previously noted, the focus of his work was tracking the movement of the aircraft via the radar data. Some of the movements were anomalous to regular routes and he was trying to look at the data and assist the FBI to glean something to track back to the hijackers, including the transponder codes.

Although he began his work fairly immediately during the events of 9/11 and the majority of the work was done within a couple of days, the final work took 1-2 months.

He worked independently, but took direction from AAT-20. Things were a little squirrely after the second plane crash, dealing with two regions and Washington, but things did firm up. For him, things were pretty straightforward. He had an open line with AAT-20 from Boston Center and he knew his analytical capabilities. At various times he spoke with GOULD, MELLO, FERRANTE (b)(6), (b)(7)c and a guy named (b)(6), (b)(7)c from the Indianapolis Center.

He began obtaining data from the centers and towers immediately. The towers and the centers were the only source of information. He did not receive any information from the military. The FAA had pretty good radar coverage. The only information the military would have had that the FAA did not have was altitude information on primary targets.

The radar data is in electronic form, but it is a closed system. He needed someone at each building to extract the information from the closed end system and go to another system to transmit the data to him. He made a lot of phone calls. His duties were known to the towers and centers; he was on a priority list.

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

4/7

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

REDACTED FOR DISCLOSURE

INTERVIEW OF (b)(6), (b)(7)c

He got the data and worked with another FAA employee, (b)(6), (b)(7)c with whom he had written a program called RAPTOR. RAPTOR reads electronic radar information and plays it back on a personal computer. He and (b)(6), (b)(7)c worked together on 9/11 to adapt the program to read radar information from the different systems that were being used by the various centers. It was done on the spot. He and (b)(6), (b)(7)c had actually worked together to develop RAPTOR. Previously, RAPTOR could read only ARTS 3A, which was in use at Boston, Bradley, and Albany. New York TRACON used ARTS 3E, so they had to make sure it worked.

He did not look at any data from outside the FAA. He did listen to the audio recordings with times and compared it to the radar information. He was not asked to alter, nor did he alter, any of the radar information, although it could be changed. It would not be easy. It would also be difficult to find, but it could be found as certain things are embedded into the file.

He did not coordinate specifically with anyone externally or internally. He did not know exactly what everyone, including the FBI, wanted so he did a number of things. He made a picture of the radar with a simulation of what the targets did, such as turns, speeds, and transponder activity. He superimposed the radar data onto topographical maps to see if the planes were following roads, rivers, highways, or flight paths as a way of ascertaining the hijackers' flying ability.

He did not coordinate his results with the military.

He transmitted data to AAT-20 in stages, beginning about one hour after AA 11 hit the World Trade Center. He would finish his analysis from one location and ship it off. He worked until about 1:00 a.m. on September 12, 2001 and took a few hours break.

As far as he knows, his work product all went to AAT-20. It could have gone higher, but he is not aware of that. At some point much later, he was told that AAT-20 needed his data for the 9/11 Commission.

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

5/7

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF (b)(6), (b)(7)c

He was not directed to include or not include any data from his work. The only request he received was to enable the maps to have a zoom-in feature, just like Mapquest. He did not change any data, just the viewing position.

He took direction from CANOLES, MELLO, and FERRANTE. He was not asked to change anything. He had worked with all three before and has a good relationship with each one.

He had nothing to do with including or not including any information in any FAA chronologies.

He has no knowledge of any false reports of AA 11 still being airborne after it had already crashed, in any form.

He did not participate in any briefings for the White House.

He did not receive any data or coordinate any information with the military. He was shown ROI Attachment 4 (Rough Draft Transcript UAL93) and Outline Attachment 3 (Notifications to Military) and advised that he had not seen them before.

SATORI is a system that plays back en-route Center radar information and audio. It is voice embedded.

RAPTOR plays back New York TRACON, Providence, Boston, and Albany towers as well as Regan National, Dulles, and Pittsburgh. RAPTOR could also have audio. Voice can be added to RAPTOR if you had audio by using an audio video capture program. This creates a movie file that can be played on a Windows media player.

He was shown ROI Attachment 6 (references wave files from Boston Center) and advised that he did not prepare the document. He digitized all of the AA 11 audio

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

REDACTED FOR DISCLOSURE

INTERVIEW OF

(b)(6), (b)(7)c

clips from Boston Center from the start until AA 11 struck the WTC. There were 3-4 transmissions the hijackers made, possibly because they were not familiar with the plane's intercom system.

He spends time in Washington and had a lot of information on a computer down there, but the hard drive fried in 2003 or early 2004. The Information Resources people tried to restore it, but they could not. He has no idea what happened to the machine.

INTERVIEW OF ROSALIND A. KNAPP

On December 8, 2004, Rosalind (Lindy) A. KNAPP, Deputy General Counsel, United States Department of Transportation (USDOT), Washington, D.C. was interviewed at USDOT Headquarters located at 400 7th Street, S.W., Washington, D.C. by Special Agents (b)(6), (b)(7)c and (b)(6), (b)(7)c Office of Inspector General (OIG), USDOT. KNAPP was interviewed in conjunction with a July 29, 2004, referral from the National Commission on Terrorist Attacks Upon the United States (9-11 Commission) to the Inspectors General for the Departments of Transportation and Defense. After being apprised of the identity of the interviewing agents and the purpose of the interview, KNAPP provided the following relevant information:

KNAPP has worked for USDOT since 1973 and has held her current position since 1981.

KNAPP recalled participating in a May 21, 2003 meeting with USDOT Chief of Staff John FLAHERTY, in FLAHERTY's office, to discuss Secretary MINETA's upcoming testimony before the 9-11 Commission. The meeting was held at 5:30 p.m. She stated that during this meeting, FLAHERTY advised (b)(5)

(b)(5),

(b)(5)

On the following day, May 22, 2003, KNAPP attended a 4:00 p.m. meeting with Secretary MINETA to prepare the Secretary for his testimony. Also present at the meeting were: FLAHERTY; Shirley MILLER; and Linda SCHUESSLER. She did not recall if Lynne OSMUS or Tony FERRANTE were present. KNAPP recollected that sometime during this meeting, former FAA Administrator Jane GARVEY stopped by after having testified before the Commission that same day. GARVEY had related that Commissioner BEN-VENISTE had questioned her about information she was unable to provide and that she had referred BEN-VENISTE to KNAPP. KNAPP did not recall any specific discussion during

INTERVIEW OF ROSALIND A. KNAPP

the meeting about the accuracy or inaccuracy of the FAA's timeline information regarding notification to the military on September 11, 2001. KNAPP did not know whether the Secretary's final briefing package for his testimony included any timeline information as mentioned above.

KNAPP discussed a third meeting that took place sometime between May 29, 2003 and June 13, 2003. She recalled that FLAHERTY had attended a meeting at the FAA during which he viewed a PowerPoint presentation/demonstration focusing on the four hijacked flights. The presentation included graphics and voice recordings. KNAPP stated that as a result of viewing this presentation, FLAHERTY expressed his desire for a consolidated timeline of the four flights. KNAPP did not recall FLAHERTY raising any particular concerns about the accuracy of the timeline information he had been presented thus far.

During KNAPP's interview, she provided a copy of an electronic message from MILLER to her, dated June 13, 2003. Attached to this message is a document titled, "Sensitive Security Information, FAA Communications Regarding Hijacked Aircraft on September 11th, 2001." KNAPP believes that this document was created in response to FLAHERTY's desire for a consolidated master chronology.

KNAPP was advised that following GARVEY's testimony before the Commission on May 22, 2003, she was presented with a question for the record (QFR) and was asked to follow up with the Commission the next day. KNAPP stated that she did not recall anything about the QFR.

KNAPP was asked hypothetically, however, to discuss how the FAA should correct the public record, if it is later discovered that the information presented in the QFR to the Commission is inaccurate. KNAPP stated that in the best of all possible worlds, the FAA should have told GARVEY that the information included in the QFR was inaccurate and subsequently asked her if she wanted to provide corrected information to the Commission. KNAPP does not think that the

042R0122001

INTERVIEW OF ROSALIND A. KNAPP

FAA relying upon a subsequent staff interview is a valid and/or appropriate way of correcting the record.

REDACTED FOR DISCLOSURE

INTERVIEW OF TONY MELLO

On December 1, 2004, Tony MELLO, Director of Safety Investigations, Federal Aviation Administration (FAA), was re-interviewed at FAA Headquarters located at 800 Independence Avenue, S.W., Washington, D.C. by Special Agents (b)(6), (b)(7)c and (b)(6), (b)(7)c Office of Inspector General (OIG), United States Department of Transportation (USDOT). MELLO was interviewed in conjunction with a July 29, 2004 referral from the National Commission on Terrorist Attacks Upon the United States to the Inspectors General for the Departments of Transportation and Defense. After being apprised of the identity of the interviewing agents and the purpose of the interview, MELLO provided the following relevant information:

MELLO was shown a copy of a "MCC/T Log" with entries beginning September 10, 2001, and asked if this was the document he recalled reviewing in the days following September 11, 2001. MELLO indicated that he did not believe that this document was the one he reviewed. He recalled that while the log he looked at did begin on September 10, 2001, it was only one full page in length, was handwritten, and had no security classifications marked on it. He further stated that the log he reviewed had no information blacked out and did not reference any of the hijacked aircraft by tail number, only by call sign. He theorized that the log he reviewed was obtained through retired United States Air Force Colonel Sheryl ATKINS. He believes that either he or another of the then AAT-20 staff asked Dave CANOLES, Director of Air Traffic Evaluations and Investigations, to retrieve the military log information and consequently, ATKINS retrieved the information.

MELLO stated that his first recollection of seeing tail numbers associated with the four hijacked aircraft may have been on the accident packages that were prepared. During the interview, the four accident packages were given a cursory review and it was noted that the accident package for UNITED AIRLINES Flight 93 was the only one that referenced a tail number (N591UA).

INTERVIEW OF J. DAVID CANOLES

On September 30, 2004, J. David CANOLES, Director, Air Traffic Safety Oversight Service, AOV-1, Federal Aviation Administration (FAA), was interviewed in his office located at 800 Independence Avenue, S.W., Washington, D.C. by Special Agents (b)(6), (b)(7)c and (b)(6), (b)(7)c Office of Inspector General (OIG), United States Department of Transportation (USDOT). CANOLES was interviewed in conjunction with a July 29, 2004 referral from the National Commission on Terrorist Attacks Upon the United States to the Inspectors General for the Departments of Transportation and Defense. After being apprised of the identity of the interviewing agents and the purpose of the interview, CANOLES provided the following relevant information:¹

CANOLES has been in the Senior Executive Service (SES) since 1987. On September 11, 2001, he held the position of Director of Air Traffic and Air Safety Investigations, AAT-20, and reported directly to Jeff GRIFFITH.

CANOLES recalled that shortly after the events began occurring on September 11, 2001, GRIFFITH asked him if he was going to set up a "net," which CANOLES understood to be a conference call. Consequently, between 8:30 a.m. and 9:00 a.m., he directed that a conference call be established in the AT-1 conference room on the 10th floor of the FAA headquarters building. CANOLES recalled contacting Tony MELLO and (b)(6), (b)(7)c from his staff to begin getting the line up and running. (b)(6), (b)(7)c from CANOLES' staff was also one of the early participants on the call. While CANOLES could not recall the names of all of the other participants on the call, as it went on throughout the day, he stated that Division Managers from the New England and Eastern Regions and the Herndon Command Center were brought in early. CANOLES further

¹ During the interview of CANOLES, S/A (b)(6), (b)(7) and the reporting agent believed that a tape recording of CANOLES' interview was being contemporaneously made, however, it was later determined that an equipment malfunction caused the interview not to be recorded. Consequently, this MOI was drafted based upon agents' notes that were taken.

INTERVIEW OF J. DAVID CANOLES

stated that at some point, FAA's liaison to the military, Sheryl ATKINS, joined in on the line. CANOLES stated that while ATKINS participated in the "net," he agreed that the teleconference played no role in coordinating notifications of the hijackings to the military. CANOLES never considered using the telecon for that purpose.

The "net"/telecon line was not recorded but at some point, (b)(6), (b)(7)c brought in his laptop computer and began a written log of information that was being exchanged and received.

CANOLES stated that MELLO, (b)(6), (b)(7)c Doug GOULD, (b)(6), (b)(7)c and Tony FERRANTE were involved in compiling the information contained in the FAA publication, Summary of Air Traffic Hijack Events September 11, 2001. With respect to FAA notification of the hijackings to the military and references to North East Air Defense Sector (NEADS) logs in the timelines of the publication, CANOLES explained that GRIFFITH had received these logs from General Ralph EBERHARDT of NORAD approximately 3-5 days after September 11th. CANOLES reviewed the information contained in the logs, made notes to himself, and presented his notes to his staff.

(AGENT'S NOTE): During the interview, CANOLES provided the interviewers with copies of various documents, including drafts and a final copy of a timeline titled "Notification Chronology." The final chronology contains a notation indicating that AAT-20 revised the document on September 18, 2001, at 14:00 hours. The first page of the "Notification Chronology" contains a grid with each of the four hijacked aircraft across the top row. Along the left side of the grid, the rows are labeled with the following headings: "First Sign," "Probable time flight was known to be in distress," "NORAD NEADS Notification," and "Estimated Crash time." Some of the drafts contain all the left hand row headings while others do not. One draft indicates that the FAA notified NORAD/NEADS about UN93 at 10:08. Under this typewritten time, it is handwritten "N/A." The final

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

~~FOR OFFICIAL USE ONLY~~

(Public availability to be determined under 5 U.S.C. 552)

INTERVIEW OF J. DAVID CANOLES

version of this timeline indicates that the FAA notification time for UN93 was N/A.)

CANOLES advised that the handwriting is his. However, he did not recall why he had his staff change the UN93 notification time from 10:08 to N/A.

To CANOLES' recollection, FAA officials decided to use the NEADS log information as a reference for their notification to the military in the Summary of Air Traffic Hijack Events because the NEADS log information shed a much more favorable light on the FAA than anything the FAA could find about their notification to the military. The discussion about using military times versus what the FAA could find about their notification to the military was discussed within the highest levels of the FAA, to include Monte BELGER.

CANOLES stated that his staff began listening to recordings of the air/ground communications with the hijacked aircraft very shortly after the events of September 11th, either by that evening or by the following day. GOULD and (b)(6), (b)(7)c listened to most of the transmissions.

-#-

NOTE TO FILE

On December 20, 2004, during a DOT-OIG interview, John FLAHERTY, Chief of Staff, U.S. Department of Transportation, was shown a copy of an FAA chronology attached to a June 13, 2003, email message from Shirley MILLER to Lindy KNAPP. The chronology is titled "Sensitive Security Information, FAA Communications Regarding Hijacked Aircraft on September 11th, 2001." FLAHERTY requested a copy of the chronology and offered to comment on it.

On December 21, 2004, the reporting agent provided (b)(6), (b)(7)c DOT-OIG, with two copies of the timeline to give to FLAHERTY during a scheduled meeting with him that afternoon.

INTERVIEW OF (b)(6), (b)(7)c

On October (b)(6), (b)(7)c 2004, (b)(6), (b)(7)c Federal Aviation Administration (FAA), was interviewed at FAA Headquarters located at 800 Independence Avenue, S.W., Washington, D.C. by Special Agent (b)(6), (b)(7)c and Senior Investigator (b)(6), (b)(7)c Office of Inspector General (OIG), United States Department of Transportation (USDOT). (b)(6), (b)(7)c was interviewed in conjunction with a July 29, 2004, referral from the National Commission on Terrorist Attacks Upon the United States to the Inspectors General for the Departments of Transportation and Defense. After being apprised of the identity of the interviewing agents and the purpose of the interview, (b)(6), (b)(7)c provided the following relevant information:

She has been with the FAA since December 1985. She is currently assigned to a project that includes working with (b)(6), (b)(7)c on September 11th data collection. This encompasses gathering all of the FAA's September 11th data, consolidating it, and scanning it for eventual publication on the FAA's website.

On September 11, 2001, (b)(6), (b)(7)c was assigned to the FAA's Air Traffic Evaluations Division Office (AAT-100), and reported to Tom CARMODY, who is now deceased. AAT-100 was an organization within the AAT-20 organization. AAT-200 was a separate organization within AAT-20 and was responsible for aircraft accident investigations.

(b)(6), (b)(7)c recalled that on September 11, 2001, AAT-200 was patched into a conference call that was being run from the 10th floor Command Center. This line went on for several days. (b)(6), (b)(7)c said that the volume on the phone was placed up high so that staff from AAT-200 could monitor the information being exchanged on the 10th floor.

AAT-200 also set up its own conference call with Cleveland and Indianapolis centers. (b)(6), (b)(7)c recalled periodically monitoring this call.

INTERVIEW OF

(b)(6), (b)(7)c

(b)(6), (b)(7)c stated that she does not know whether military representatives participated on these teleconferences even though she recalled seeing some military representatives in the 10th floor Command Center.

(b)(6), (b)(7)c described her involvement in the drafting of the Summary of Air Traffic Hijack Events September 11, 2001 as very limited. She merely participated in typing the composite sequence that appears behind the last tab of the book. She was electronically sent word documents that included chronology information for each of the four hijacked flights and was asked to incorporate this information into an excel spreadsheet. As directed, she cut the information from the documents and pasted it into excel format. She developed none of the information herself and only copied what was given to her. Any references to Northeast Air Defense Sector logs in the composite sequence came from the word documents that were sent to her. Once she completed her spreadsheet, she gave it to either Tony FERRANTE or Doug GOULD.

(b)(6), (b)(7)c stated that radar and voice data from the four flights began to come into FAA headquarters as soon as the evening of September 11th. AAT-20 and AAT-200 employees like FERRANTE, Tony MELLO, GOULD, (b)(6), (b)(7)c Mary STRAWBRIDGE, (b)(6), (b)(7)c and Dave CANOLES were directing the various centers to get their data to them as quickly as possible.

ACTION LEADS

Contact the Quality Assurance managers at Boston (ZBW) and Cleveland (ZOB) Centers to determine when they provided FAA's Evaluations and Investigations Staff (AAT-20) a play back, copy of a recording and a transcript in rough and final form for any communications that its Center may have had with the military on September 11, 2001. Obtain any documentary evidence that supports when each Center transmitted the aforementioned to AAT-20.

We have found that most of the communications between the FAA's Centers and the military occurred between the FAA military operations positions and the North East Air Defense Sector (NEADS) but this is not always the case. In transcripts that have been provided to AAT-20, NEADS is referenced as "Huntress."

JRI-1: ZBW's (b)(6), (b)(7)c is (b)(6), (b)(7)c telephone (b)(6), (b)(7)c. (b)(6), (b)(7)c (b)(6), (b)(7)b may currently be acting for (b)(6), (b)(7)c

INFORMATION

This investigation was based on a referral from the 9-11 Commission that certain public statements made by military and FAA officials at Commission hearings and elsewhere were inaccurate. The questionable statements primarily concern when the FAA notified the military on September 11, 2001, about American Airlines Flight 77 (AA77) and United Airlines Flight 93 (UN93).

As is further elaborated in their referral, the Commission has concluded that at its May 23rd, hearing (b)(6), (b)(7)c 1st Air Force, presented a timeline of events from September 11th that contained inaccuracies. Specifically, (b)(6), (b)(7)c told the Commission that the FAA notified the military about UN93 at 9:16am¹. (b)(6), (b)(7)c testimony also indicated that the fighters from Langley Air Force Base, Langley, VA were scrambled as result of the aforementioned notice, that the military was tracking UN93 and that they intended to intercept the aircraft if it approached Washington, D.C. The Commission determined that there was no hijack report at 9:16am; UN93 was proceeding normally at that time. They further concluded that the military did not receive any notice that UN93 had a problem until ZOB called NEADS at 10:07am (EDT) and advised them that UN93 might have a bomb on board. UN93 crashed in Pennsylvania at 10:03am.

(b)(6), (b)(7)c also testified that the FAA notified the military about AA77 at 9:24am, and that the Langley fighters were also scrambled in response to the hijacking of AA77. During its investigation, the Commission discovered that the notice NEADS received at 9:24am was that AA11 had not hit the World Trade Center. ZBW had contacted NEADS at 9:21am and reported that AA11 was still in the air and on its way toward Washington, DC.

The Commission concluded that at 9:34am, FAA's Washington Center informed NEADS that there was a problem with AA77 "We're looking [for]—we lost American 77." Then, at 9:36am, ZBW contacted NEADS and reported that an unidentified aircraft was closing in on Washington, D.C. AA77 was crashed into the Pentagon at 9:37am.

Witnesses have advised that AAT-20 prepared the bulk of the FAA's 9-11 chronologies. This effort began on or about September 11, 2001, and continued through the end of the month. All subsequent chronologies, which we have identified, that were produced by the FAA and that reference military notifications were based upon AAT-20's work products.

¹ All times referenced in this report, unless otherwise noted, are Eastern Daylight Time (EDT). FAA Air Traffic generally uses Universal Coordinated Time (UTC or ZULU). During the month of September EDT is four hours behind ZULU. Therefore, 12:00 ZULU is 8:00am EDT, 13:00 ZULU is 9:00am EDT, and 14:00 ZULU is 10:00am EDT.

DEPARTMENT OF TRANSPORTATION-OFFICE OF INSPECTOR GENERAL

~~FOR OFFICIAL USE ONLY~~
(Public availability to be determined under 5 U.S.C. 552)

Of the work products produced during this period, there were two of significance; the first is titled *Summary of Air Traffic Hijack Events, September 11, 2001*, and is dated September 17, 2001 (Attachment 2). The second work product has no title but its first page contains a grid with a chronology of four significant events associated with each of the hijacked aircraft, including when NORAD/NEADS was notified, and is dated September 18, 2001 (Attachment 3). Both of these documents indicate that FAA notified the military about AA77 at 9:24 and that FAA did not notify the military about UN93. Further, they use military logs as the source for these notifications. Neither chronology contained any information concerning the false report about AA11 at 9:24am or the actual notice the FAA provided for UN93 at 10:07am.

Witnesses indicate that AAT-20 had access to some information from the military, which they likely received sometime September 13 and 17, 2001. Some evidence and witnesses suggest that AAT-20 had information, from FAA and military sources, concerning the correct time that it notified the military about UN93 (10:08 [sic] EDT) but removed it from its final military notification chronology.

We are requesting that this action lead be accomplished, in part, to assist in determining what information AAT-20 obtained from the military. Further, we are trying to identify the extent of the internal information, which pertained to military notifications, AAT-20 had obtained by the time it completed its chronologies.

During our review of documents from AAT-20 we discovered an electronic copy of ZOB's rough transcript for a conversation between ZOB and NEADS (Huntress) concerning UN93 that had a last save date of September 15, 2001 (Attachment 4). Further, we discovered an electronic copy of an apparently final version of the aforementioned transcript with a last save date of September 18, 2001 (Attachment 5). These transcripts contain the 10:07am conversation that ZOB had with NEADS (Huntress) wherein they notified the military that UN93 might have a bomb on board.

Further, we have located, within AAT-20's records, copies of "wave" files (computerized recordings) for ZBW's military operations position that cover the period of time 8:37am through 8:38am, 8:39am through 8:42am and 8:52am through 8:53am. These files contain a last saved date of September 19, 2001 (Attachment 6). We have been unable to locate any other military operations positions transcripts or recordings from ZBW. We would like to know if this is the extent of the information that ZBW provided to AAT-20 from its military operations positions and if so why. ZBW's military operations position appears to have had the most communications on September 11, 2001 with NEADS (Huntress).

GENERAL QUESTION OUTLINE

Work history, duty stations, titles, grades, etc...

What, if any timelines/chronologies did you participate in preparing or providing data for? What aspect of the timeline were you responsible for? (Please see item 1 attached to these questions, along with ROI attachments 2 and 3.)

Were you involved in any other timelines that you have not been shown?

What was the focus of those timelines? (e.g.; military notification, ground stop, etc)

When did you prepare the timeline(s)?

Who did you work with on this? What was the chain-of-command for the group?

Where did you obtain the data to support the information in the chronology?

When did you start obtaining data from the facilities? In what form? How was it sent to AAT-20?

What did you do to validate the data in the timeline? (Esp. any information from outside sources, such as the military.)

If not, why not?

Did you coordinate your findings with anyone internally or externally?

With whom and when?

Did you coordinate with the military in any way?

With whom and when?

What happened to your work product?

Who was it prepared for?

Who wanted the chronologies prepared?

Who was the timeline and/or data provided to?

For what purpose?

How was it presented?

Who decided what should or should not be included in the timelines? (We have learned that (b)(6), (b)(7)c and John David CANOLES played a significant role in deciding what to include or not to include.)

Why wasn't the 10:07/10:08 FAA notification to the military for UN93 included in the chronologies? (See item 3 attached to these questions.)

Why weren't any of the false reports of AA11 still being airborne after it had crashed included in the chronologies?

Did you participate in preparing any briefings for the White House? When, for whom, etc...?

MILITARY

Did you obtain any supporting data from the military for your timelines?

What data?
From whom?

If you did obtain information from the military, did you look at their source material? If not why not?

Did you coordinate any of your timelines or public statements with the military?

Were you ever provided with copies of any military logs?

Have you seen the "MCC Tech" NEADS/NORAD log? (Please see item 4 attached to these questions.)

Where did you get it?

Did you provide any data to the military?

What data?
To whom?

Were any requests for information from the military refused?

Why and by whom?

Did the military coordinate any of their timelines or public statements with you?

Which timelines/statements
Whom?
When

Please ask (b)(6), (b)(7) to explain the different between SATORI and RAPTOR radar playbacks. Are any voices recordings embedded within either system?

**General Question Outline
Attachment 1**

Chronology of September 11, 2001

American Airlines Flight 11	(AAL11)	Boston – Los Angeles
United Airlines Flight 175	(UAL175)	Boston – Los Angeles
United Airlines Flight 93	(UAL93)	Newark – San Francisco
American Airlines Flight 77	(AAL77)	Washington Dulles - Los Angeles

All times indicated are Eastern Daylight Savings Time

0756:27 Boston Airport Traffic Control Tower (Boston Tower) issued taxi instructions to AAL11.

0800:00 AAL11 began takeoff roll, runway 4 Right, Boston Logan International Airport. All communications with Boston Tower and with Boston Departure Control were routine and normal.

0804:55 Boston Tower issued taxi instruction to UAL175.

0809:17 AAL11 established radio contact with Boston Air Route Traffic Control Center (Boston Center). "Boston Center, good morning, American Eleven with you passing through one-nine-zero (nineteen thousand feet) for two-three-zero (twenty-three thousand feet)."

0809:18 Newark Airport Traffic Control Tower (Newark Tower) issued taxi instructions to UAL93.

0809:22 Boston Center acknowledged AAL11. From this time until 0813:31 all communications appear routine and normal. The sector was responsible for six aircraft including AAL11. The flight was instructed to climb to twenty-eight thousand feet, subsequently to twenty-nine thousand feet, and issued a twenty degree turn for traffic.

0812:29 Dulles Airport Traffic Control Tower (Dulles Tower) issued taxi instructions to AAL77.

0813:47 Boston Center instructs AAL11 " American Eleven, now, climb and maintain flight level three-five-zero (thirty-five thousand feet)." There was no acknowledgement to this transmission. Boston Center made two subsequent transmissions to AAL11, neither of which were acknowledged. Between 0813:47 and 0824:53, Boston Center made several radio transmissions attempting to contact AAL11. None of the attempts were acknowledged.

0814:00 UAL175 began takeoff roll, runway 9, Boston Logan International Airport. All communications with Boston Tower and with Boston Departure Control were routine and normal.

0814:45 Boston Center, during intra-facility coordination recognized that AAL11 appeared to be turning right but had not acknowledged the climb clearance to thirty-five thousand feet and did not acknowledge any further radio transmissions.

0817:59 A brief unknown sound (possibly a scream) from an unknown origin was heard over the Boston Center radio.

0820:00 AAL77 began takeoff roll, runway 30, Washington Dulles International Airport. All communications with Dulles Tower and with Dulles Departure Control were routine and normal.

0820:48 AAL11 secondary radar return (transponder) indicating aircraft speed, altitude, and flight information was lost on Boston Center radar displays. The aircraft was then observed as a primary radar target only.

0823:01 UAL175 established radio contact with Boston Air Route Traffic Control Center (Boston Center)). "Boston, morning, United one-seven-five out of one-nine (nineteen thousand feet) for two-three-zero (twenty-three thousand feet)."

0823:06 Boston Center acknowledged UAL175. At this point the controller was busy due to the events surrounding AAL11. The sector was responsible for six aircraft including UAL175. All communications between Boston Center and UAL175 appear routine and normal. The flight was subsequently instructed to climb to flight level 310 (thirty-one thousand feet) and after radar handoff, was issued a frequency change to contact the New York Air Route Traffic Control Center (New York Center).

0824:38 A radio transmission partially unintelligible stated, "we have some planes just stay quiet and you'll be ok we are returning to the airport" from an unknown origin was heard over the Boston Center radio.

0824:57 A second radio transmission partially unintelligible stated "nobody move everything will be ok if you try to make any moves you'll endanger yourself and the airplane just stay quiet" – from an unknown origin was heard over the Boston Center radio.

0825:00 Boston Center began notification based on radio transmissions that a suspected hijack was in progress. The New England Regional Operations Center (ROC), the Air Traffic Control System Command Center (ATCSCC), and the Boston Center facility manager were notified. Additionally, controllers began inter-facility coordination with New York Center of the possible hijacking. Coordination describes the last known altitude as twenty-nine thousand feet.

0825:49 AAL77 established radio contact with Washington Air Route Traffic Control Center (Washington Center), "Center, American seventy-seven with you passing one-three decimal zero (thirteen thousand feet) for one-seven-thousand (seventeen thousand feet)." All communications between Washington Center and AAL77 appear routine and normal. AAL77 was subsequently handed off to the Indianapolis Air Route Traffic Control Center (Indy Center).

0826:00 AAL11 began southbound turn over Albany, New York. The last known altitude was twenty-nine thousand feet.

0833:59 A third radio transmission partially unintelligible stated "nobody move please we are going back to the airport don't try to make any stupid moves" – from an unknown origin was heard over the Boston Center radio. AAL11 primary radar track was still southbound, and the last known altitude was twenty-nine thousand feet.

0834:00 Boston Center contacted Cape Terminal Radar Approach Control (located on OTIS Air Force Base) and requested they notify the Military of the events regarding AAL11.

0835:00 New England Regional Operations Center advised Washington Operations Center of the suspected hijack of AAL11.

0836:00 Washington Operations Center (WOC) notified Civil Aviation Security Intelligence, and conferenced New England Regional Operations Center and the Air Traffic Control Systems Command Center (ATCSCC).

0838:00 Boston Center notified New York Center of possible hijacking of AAL11.

0840:00 North East Air Defense Sector (NEADS) logs indicate they were notified by the Federal Aviation Administration of the events concerning AAL11.

0840:14 AAL established radio contact with Indy Center. "Center, American seventy-seven with you, level three thirty (thirty-three thousand feet).

0840:16 Indy Center acknowledged, "American seventy-seven, Indy center, roger, squawk three-seven-four-three." (Squawk is a control instruction to change the transponder setting within the aircraft). AAL77 was subsequently instructed to climb to thirty-five thousand feet and later cleared to navigate direct to the Falmouth navigational aid. When Indy Center acknowledged AAL77, the sector was responsible for fourteen aircraft; additionally four aircraft were in handoff status to this sector.

0840:32 UAL175 established radio contact with New York Center. "United one-seventy-five at flight level three-one-zero."

0840:37 New York Center acknowledged UAL 175. "United one-seventy-five, New York Center, roger."

0841:00 Military Command (VACAPES) issued scramble order on AAL11.

0841:32 UAL175 transmitted to New York Center, "We figured we'd wait to go to your center, we heard a suspicious transmission on our departure out of Boston. Someone keyed the mike (initiated radio communications) and said everyone stay in your seats."

0841:51 New York Center replied, "okay, I'll pass that along." (The controller ensured UAL175's comments were forwarded to the Operations Manager.)

0842:00 UAL93 began takeoff roll, runway 4 left, Newark New Jersey International Airport. All communications with Newark Tower, with New York Departure Control, and with New York Center were routine and normal.

0844:00 New York Center facility manager notified New York Terminal Radar Approach Control (New York TRACON) of possible hijacking of AAL11. New York TRACON began internal coordination of the aircraft's last known altitude (twenty-nine thousand feet) and southbound course.

0844:05 US Air Flight 83 transmitted to New York Center "I just picked up an ELT (emergency locator transmitter) on 121.5 (emergency VHF frequency). It was brief, but it went off."

0844:09 New York Center acknowledged US Air Flight 83.

0846:31 Primary radar tracking of AAL11 was lost.

0846:35 Impact at World Trade Center.

0846:48 UAL175's assigned transponder code of 1470 changed, first indicating 3020, then changing again to 3321. New York Center air traffic computers do not correlate either of these codes with UAL175. Consequently, UAL175 secondary radar return (transponder) indicating aircraft speed, altitude, and flight information began to coast and was no longer associated with the primary radar return. *Note: The controller communicating with UAL175 was also monitoring the flight track of AAL11. Based on coordination received from Boston Center indicating a possible hijack, most of the controller's attention had been focused on AAL11.*

0850:00 Washington Operations Center activated a Tactical Net at the request of Civil Aviation Security Intelligence).

0850:00 Newark Tower advised New York TRACON of possible aircraft crash into the World Trade Center.

- 0850:51 AAL77 acknowledged the clearance to Falmouth. This was the last radio communication with this flight.
- 0851:43 New York Center transmits to UAL175, "UAL175, recycle transponder, squawk code one four seven zero." No response was received from UAL175. The controller makes several attempts, repeatedly trying to contact UAL175 for the next four minutes. During this time, the aircraft is also observed making a left turn and descending.
- 0853:24 New York Center controller coordinated internally, asking other controllers if they saw UAL175, or if they knew who the unidentified radar target is on transponder code 3321. None of the other controllers replied in the affirmative. *Note: The unknown aircraft in this and all following times was later confirmed to be UAL175.*
- 0854:43 AAL77 began a left turn towards the south without air traffic authorization. The altitude indicated thirty-five thousand feet. Shortly after the turn, the aircraft was observed descending.
- 0855:00 New York Center controller was busy trying to turn other aircraft away from the aircraft believed to be UAL175. The flight track of this aircraft had changed and was now headed southeast bound.
- 0855:00 *This time is approximate based on personnel statements from New York Center.* A controller-in-charge (CIC) advised the Operations Manager (OM) that she believed UAL175 was also hijacked. The OM advised the CIC that an aircraft had hit the World Trade Center. The CIC began coordinating with the controllers working position and one of the controllers stated that UAL175 appeared to heading "right towards the city." The CIC returned to the OM position and heard a request for military aircraft to scramble. UAL175 was observed in a rapid descent
- 0855:00 *This time is approximate based on personnel statements from New York Center.* A controller working a different position within New York Center reported that two aircraft , a Delta Airlines flight was given instructions to avoid an unknown aircraft. At about the same time a US Airways flight reported taking evasive action from an unknown aircraft. The controller reported that the unknown aircraft was now headed towards New York City. This controller, along with other controllers speculated that the unknown aircraft was an emergency and was heading for an airport to land.

0856:19 Secondary radar return (transponder) indicating aircraft speed, altitude, and flight information is lost on Indy Center radar displays. There was no longer any radar return information (either primary or secondary) on AAL77 indicated at the Indy Center radar displays. *Note: The initial review of radar data, and controller personnel statements conducted by Indy Center did not indicate any primary or secondary radar returns were displayed.*

0856:32 Indy Center controller attempted to contact AAL77, "American seventy-seven, Indy." There was no acknowledgement. Indy Center also tried to communicate with AAL77 through American Airlines company radios.

0858:14 Indy Center also made several attempts to contact AAL77 through American Airlines company dispatch.

0859:00 Indy Center controllers began coordinating with other controllers to protect the airspace and altitude of AAL77's filed route of flight.

0900:00 *This time is approximate based on personnel statements from New York TRACON.* Controller stated "at approximately 9:00, I observed an unknown aircraft south of the Newark, New Jersey Airport, northeast bound and descending out of twelve thousand nine hundred feet in a rapid rate of descent, the radar target terminated at the World Trade Center."

0903:14 Second Impact at World Trade Center.

0905:00 North East Air Defense Sector (NEADS) logs indicate they were notified by the Federal Aviation Administration of the events concerning UAL175.

0905:00 New York TRACON received notification from the Newark Airport Traffic Control Tower of a second aircraft striking the World Trade Center.

0909:00 Indy Center notified Great Lakes Regional Operations Center a possible aircraft accident of AAL77 due to the simultaneous loss of radio communications and radar identification.

0915:00 *This time is approximate based on personnel statements from Indy Center.* The Indy Center Operations Manager requested that the Traffic Management personnel notify Air Force Search and Rescue of the missing and possibly downed aircraft. The Operations Manager also contacted the West Virginia State Police advising them of a possible downed aircraft and asks if they have any reports of a downed aircraft.

- 0920:00 *This time is approximate based on personnel statements from Indy Center . The Indy Center Operations Manager contacted the Chicago Air Route Traffic Control Center (Chicago Center) and advised the Chicago Center Operations Manager of his concern that AAL77 may have been hijacked and that he (Chicago Center Operations Manager) should be on the look out (based on events occurring in New York)..*
- 0924:00 Great Lakes Regional Operations Notified Washington Operations Center of the simultaneous loss of radio communications and radar identification.
- 0924:30 UAL93 established radio contact with Cleveland Air Route Traffic Control Center (Cleveland Center), "Good morning Cleveland, United ninety-three, three-five-oh (thirty-five thousand feet), intermittent light chop." The controller was busy, the sector was responsible for sixteen aircraft. Of these, several aircraft were being issued new routes based on the events occurring on the east coast. The controller did not reply to this initial transmission.
- 0925:00 *Between 0925:00 and 0930:00, this time is approximate based on personnel statements from Dulles Tower. Several Dulles Tower controllers working radar positions in the facility observed a primary radar target tracking eastbound at a high rate of speed. Note: The unknown aircraft in this and all following times was later confirmed to be AAL77.*
- 0925:14 UAL93 again reported on Cleveland Center frequency, "United ninety-three checking three-five-oh (thirty-five thousand feet)." The controller replied, "United ninety-three, Cleveland, roger." *Note: This was the third radar sector within Cleveland Center to communicate with UAL93. The communications with the previous sectors were routine and normal.*
- 0928:19 A radio transmission of unintelligible sounds of possible screaming or a struggle from an unknown origin was heard over the Cleveland Center radio.
- 0928:54 A second radio transmission, mostly unintelligible, again with sounds of possible screaming or a struggle and a statement, "get out of here, get out of here" from an unknown origin was heard over the Cleveland Center radio. At about this same time, the Cleveland Center controller observed that UAL93 had descended, altitude indicated thirty-four thousand, three hundred feet.
- 0929:29 Cleveland Center controller asked UAL93, "United ninety-three, verify three-five-zero (thirty-five thousand feet)." There was no reply. The Cleveland Center controller made several attempts to contact UAL93 without receiving any acknowledgement.

- 0929:50 Cleveland Center controller began moving other aircraft away from UAL93 due to the lack of acknowledgement of any radio transmissions. Several other aircraft on the frequency confirmed unusual sounds of an unknown origin. The altitude of UAL93 again indicated thirty-five thousand feet.
- 0931:57 A third radio transmission, mostly unintelligible, may sound like an individual out of breath, more unintelligible words and what sounds like "bomb on board" from an unknown origin was heard over the Cleveland Center radio.
- 0932:31 A fourth radio transmission stated "did you hear that transmission that reported a bomb on board?" from an unknown origin was heard over the Cleveland Center radio.
- 0933:00 *This time is approximate based on personnel statements from Dulles Tower.* An Operations Supervisor at Dulles Tower advised the White House Office of the United States Secret Service of an unknown aircraft heading in the direction of the White House, fast moving. Meanwhile, a controller was providing the same information to controllers working at the Ronald Reagan Washington National Airport Traffic Control Tower (National Tower). The Dulles Tower Operations Supervisor also provided continuous updates on a critical event teleconference established at the Federal Aviation Administration Headquarters building.
- 0933:00 *This time is approximate based on personnel statements from National Tower.* An Operations Supervisor at National Tower was advised by Dulles Tower of the unknown aircraft. The Operations Supervisor at National Tower immediately notified the White House Office of the United States Secret Service of the unknown aircraft's location and provided continuous updates.
- 0934:50 Cleveland Center controller observed that UAL93 was climbing without an air traffic control authorization. The aircraft had started a turn to the southeast, also without air traffic control authorization.
- 0936:00 Personnel at National Tower issued traffic advisories on the unknown aircraft to a military C130 aircraft that had departed Andrews Air Force Base. When the C130 aircraft (GOFER06) reported the unidentified aircraft in sight, the pilot was instructed to follow the unknown aircraft.
- 0938:00 GOFER06 reported that the unknown aircraft had crashed into the western side of the Pentagon.
- 0938:47 UAL93 altitude indicated forty-thousand seven hundred feet.
- 0939:12 A fifth radio transmission, mostly unintelligible, stated words that may sound like "captain, ...bomb on board, ...our demands, ...remain quiet" – from an unknown origin was heard over the Cleveland Center radio.

- 0939:59 Cleveland Center notified Great Lakes Regional Operations Center of the screams and statements from unknown origin believed to be UAL93.
- 0941:00 UAL93 secondary radar return (transponder) indicating aircraft speed, altitude, and flight information becomes intermittent and eventually failed on Cleveland Center radar displays.
- 0944:31 Cleveland Center controller notified Pittsburgh Terminal Radar Approach Control (Pittsburgh Tower) North Arrival controller of the unanticipated turn, the loss of secondary radar return and lack of radio communications with UAL93. The Cleveland Center controller also stated that the projected flight path would result in UAL93 passing in close proximity if not directly overhead the Greater Pittsburgh International Airport.
- 0945:00 PIT controller notified the Operations Supervisor of the events surrounding UAL93. The Pittsburgh Tower controller also manually initiated radar tracking of the primary radar target.
- 0951:00 After determination by the Pittsburgh Tower facility manager to evacuate, the controllers have completed coordination with adjacent facilities and the Pittsburgh Tower facility has been evacuated.
- 0956:56 A small contingency of controllers (volunteers) returned to the facility and coordination with adjacent facilities pertaining to return to operational status is completed. The track of UAL93 was no longer visible on the Pittsburgh Tower radar displays.
- 1000:00 *This time is approximate and is based on personnel statements from Cleveland Center. A Cleveland Center controller's statement indicated that the pilot of a VFR aircraft reported sighting a United Airlines aircraft at approximately eight thousand feet in the vicinity of the Latrobe, Pennsylvania airport. The pilot also reported that the United Airlines aircraft's landing gear was down, the wings were rocking, and that the aircraft appeared to be in distress.*
- 1004:00 *This time is approximate and is based on personnel statements from Cleveland Center. A Cleveland Center controller statement indicated that UAL93's primary radar target terminated in the vicinity of Somerset, Pennsylvania.*
- 1007:00 In response to a request from a Cleveland Center controller, N20VF, a Falcon Jet reported observing puffs of smoke in the vicinity of UAL93's last known position.

1041:00

After receiving a telephone call from the Somerset, Pennsylvania police department stating that several "911" telephone calls had been received reporting an aircraft accident, a Cleveland Center operations manager made official notification to, Great Lakes Regional Operations Center. *Note: Although this is the officially documented notification time, FAA officials were aware of the accident as these events were reported as they occurred on a critical event teleconference established at the Federal Aviation Administration headquarters building.*

**General Question Outline
Attachment 3**

Notifications to Military

- 8:26am ATSCC informally notifies military representative there about AAL 11.
- 8:34am Boston Center asks Cape TRACON to notify Otis Air Force Base about AAL 11.
Cape TRACON notifies Otis Air Force Base.
Otis says needs authorization from North East Air Defense Sector (NEADS)
- 8:38am Traffic Management Specialist at Boston Center calls NEADS and Airspace Procedures Specialist at Boston Center calls NORAD. New York Center notification record indicates they notified the military regarding AAL 11.
- 8:40am NEADS logs indicate Boston Center notified them regarding AAL 11.
- 8:43am New York Center asks the military liaison specialist at NY Center to get military assistance. (We believe this is still related to AAL 11 but it may be the source of NORAD press release showing 8:43 am notification regarding UAL 175. NY Center was working UAL 175 at that time but everything was still normal.)
- 8:49-9:05am NY Center military liaison specialist contacts Huntress (military facility).
- 9:05am The NEADS logs show FAA notifying them regarding UAL 175.

(Note: This may be the call from the military liaison specialist at NY Center).
- 9:15am FAA Security Intelligence office contacts FBI, CIA, S-60, and state regarding AAL 11.
- 9:16-9:25am NOIWON (CIA network) convened by CIA. NOIWON normally includes the military.
- 9:20am Washington Ops. Center activates the primary net, which includes NMCC and Secret Service.
- 9:24am NEADS logs show FAA notifying them regarding AAL 77.
- 9:26am FAA net logs show discussion of two airplanes hitting WTC (both possibly AAL flights – one out of Boston; 1 out of Dulles). (Note: This may be the source of 9:24 NEADS entry). NMCC and Secret Service on the net.

Federal Aviation Administration

September 11, 2001

0820:48
Secondary radar return (transponder) indicating aircraft speed, altitude, and flight information was lost on ZBW radar displays. The aircraft was now observed as a primary radar target only.

0813:47
ZBW instructed AAL11 "American Eleven, now, climb and maintain flight level three-five-zero (thirty-five thousand feet)." There was no acknowledgement to this transmission and one minute later AAL11 appeared to be turning to the right.

0809:17
AAL11 established radio contact with Boston Air Route Traffic Control Center (ZBW). "Boston Center, good morning, American Eleven with you passing through three-nine-zero (nineteen thousand feet) on two-three-zero (twenty-three thousand feet)." *[Handwritten: through three-nine-zero]*

0826:00
AAL11 began southward turn over Albany, New York. The last known altitude was twenty-nine thousand feet.

0846:35
Impact at the World Trade Center.

0846:31
Primary radar tracking of AAL11 was lost.

AAL11

- 0824:57 A second radio transmission partially unintelligible stated “nobody move everything will be ok if you try to make any moves you’ll endanger yourself and the airplane just stay quiet” – from an unknown origin was heard over the ZBW radio.
- 0825:00 ZBW began notification based on radio transmissions that a suspected hijack was in progress. The New England Regional Operations Center (ROC), the Air Traffic Control System Command Center (ATCSCC), and the ZBW facility manager were notified. Additionally, controllers began inter-facility coordination with New York Air Route Traffic Control Center (ZNY) of the possible hijacking. Coordination describes the last known altitude as twenty-nine thousand feet.
- 0826:00 AAL11 began southbound turn over Albany, New York. The last known altitude was twenty-nine thousand feet.**
- 0833:59 A third radio transmission partially unintelligible stated “nobody move please we are going back to the airport don’t try to make any stupid moves” – from an unknown origin was heard over the ZBW radio. AAL11 primary radar track was still southbound, and the last known altitude was twenty-nine thousand feet.
- 0834:00 ZBW contacted Cape Terminal Radar Approach Control (located on OTIS Air Force Base) and requested they notify the Military of the events regarding AAL11.
- 0835:00 New England Regional Operations Center advised Washington Operations Center (WOC) of the suspected hijack of AAL11.
- 0836:00 WOC notified Civil Aviation Security Intelligence (ACI), and conferenced New England Regional Operations Center and the Air Traffic Control Systems Command Center (ATCSCC).
- 0838:00 ZBW notified New York Air Route Traffic Control Center (ZNY) of possible hijacking of AAL11.
- 0840:00 North East Air Defense Sector (NEADS) logs indicate they were notified by the Federal Aviation Administration of the events concerning AAL11.
- 0841:00 Military Command (VACAPES) issued scramble order on AAL11.
- 0844:00 ZNY facility manager notified New York Terminal Radar Approach Control (N90) of possible hijacking of AAL11. N90 began internal coordination of the aircraft’s last known altitude (twenty-nine thousand feet) and southbound course.
- 0846:31 Primary radar tracking of AAL11 was lost.**
- 0846:35 Impact at World Trade Center.**

Department of Transportation
Federal Aviation Administration

September 11, 2001

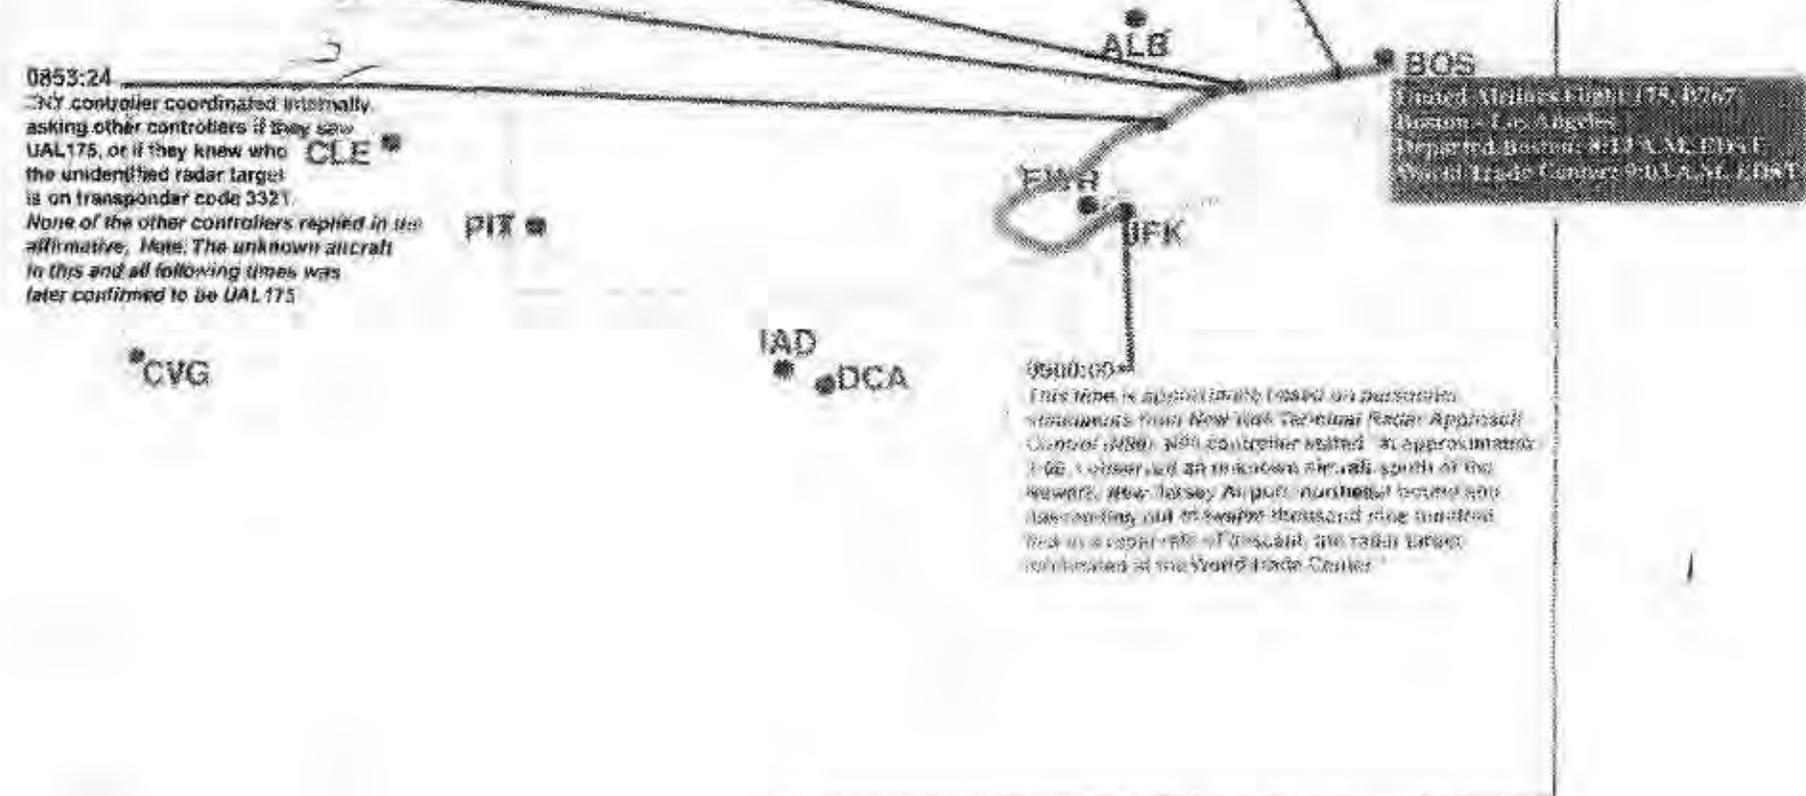

0851:43
ZNY transmitted to UAL175, "UAL175, recycle transponder, squawk code one four seven zero." No response was received from UAL175. The controller made several attempts, repeatedly trying to contact UAL175 for the next four minutes. During this time, the aircraft was also observed making a left turn and descending.

0846:48
UAL175's assigned transponder code of 1470 changed, first indicating 3020, then changing again to 3321. ZNY air traffic controllers do not correlate either of these codes with UAL175. Consequently, the secondary radar (transponder) indicating aircraft speed, altitude, and flight information began to coast and was no longer associated with the primary radar return. Note: The controller communicating with UAL175 was also monitoring the flight track of AAL11. Based on coordination received from ZSR regarding a possible hijack, most of the controller's attention was focused on AAL11.

0823:01
UAL175 established radio contact with Boston Air Route Traffic Control Center (ZSRW). "Boston, morning, United one seven five out of one nine (nineteen thousand feet) for two three zero (twentythree thousand feet)."

0853:24
ZNY controller coordinated internally, asking other controllers if they saw UAL175, or if they knew who the unidentified radar target is on transponder code 3321. None of the other controllers replied in the affirmative. Note: The unknown aircraft in this and all following times was later confirmed to be UAL175.

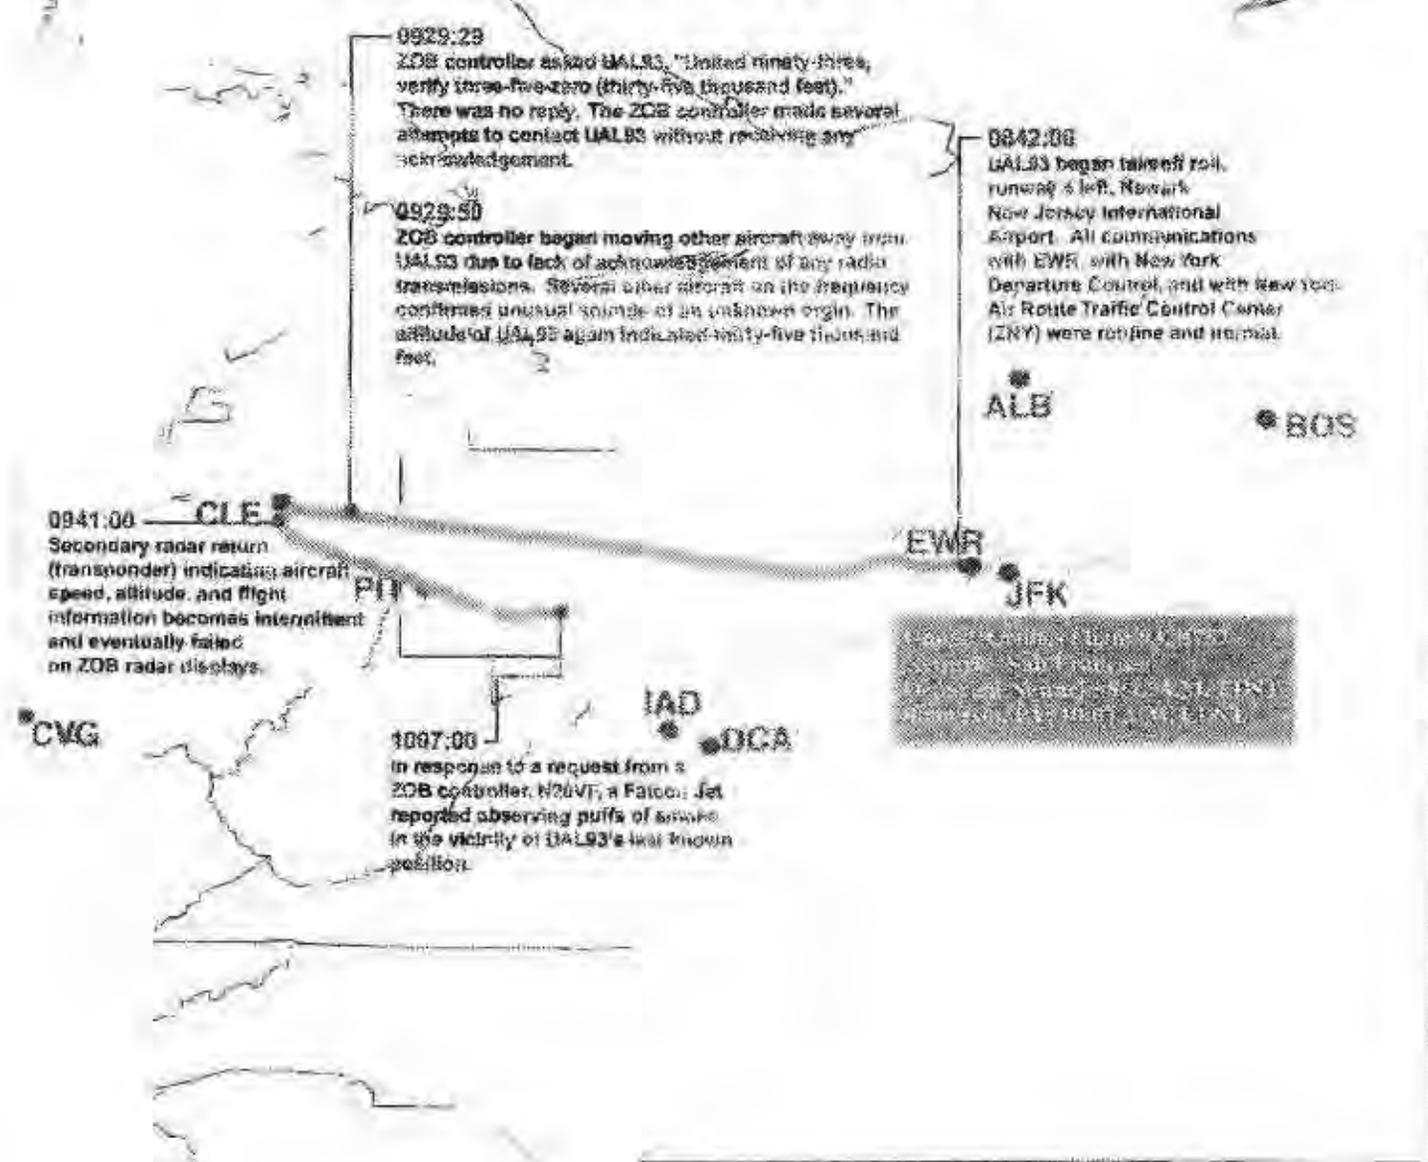

United Airlines Flight 175, 4267
Boston - Los Angeles
Departed Boston 4:11 P.M. EDT
World Trade Center 9-11 A.M. EDT

0900:00
This time is approximately based on personal statements from New York Terminal Radar Approach Control (TRAC). TRAC controller stated at approximately 9:00, observed an unknown aircraft south of the New York New Jersey Airport, northeast bound and descending out to twenty thousand five hundred feet at a speed rate of descent, the radar target recontacted at the World Trade Center.

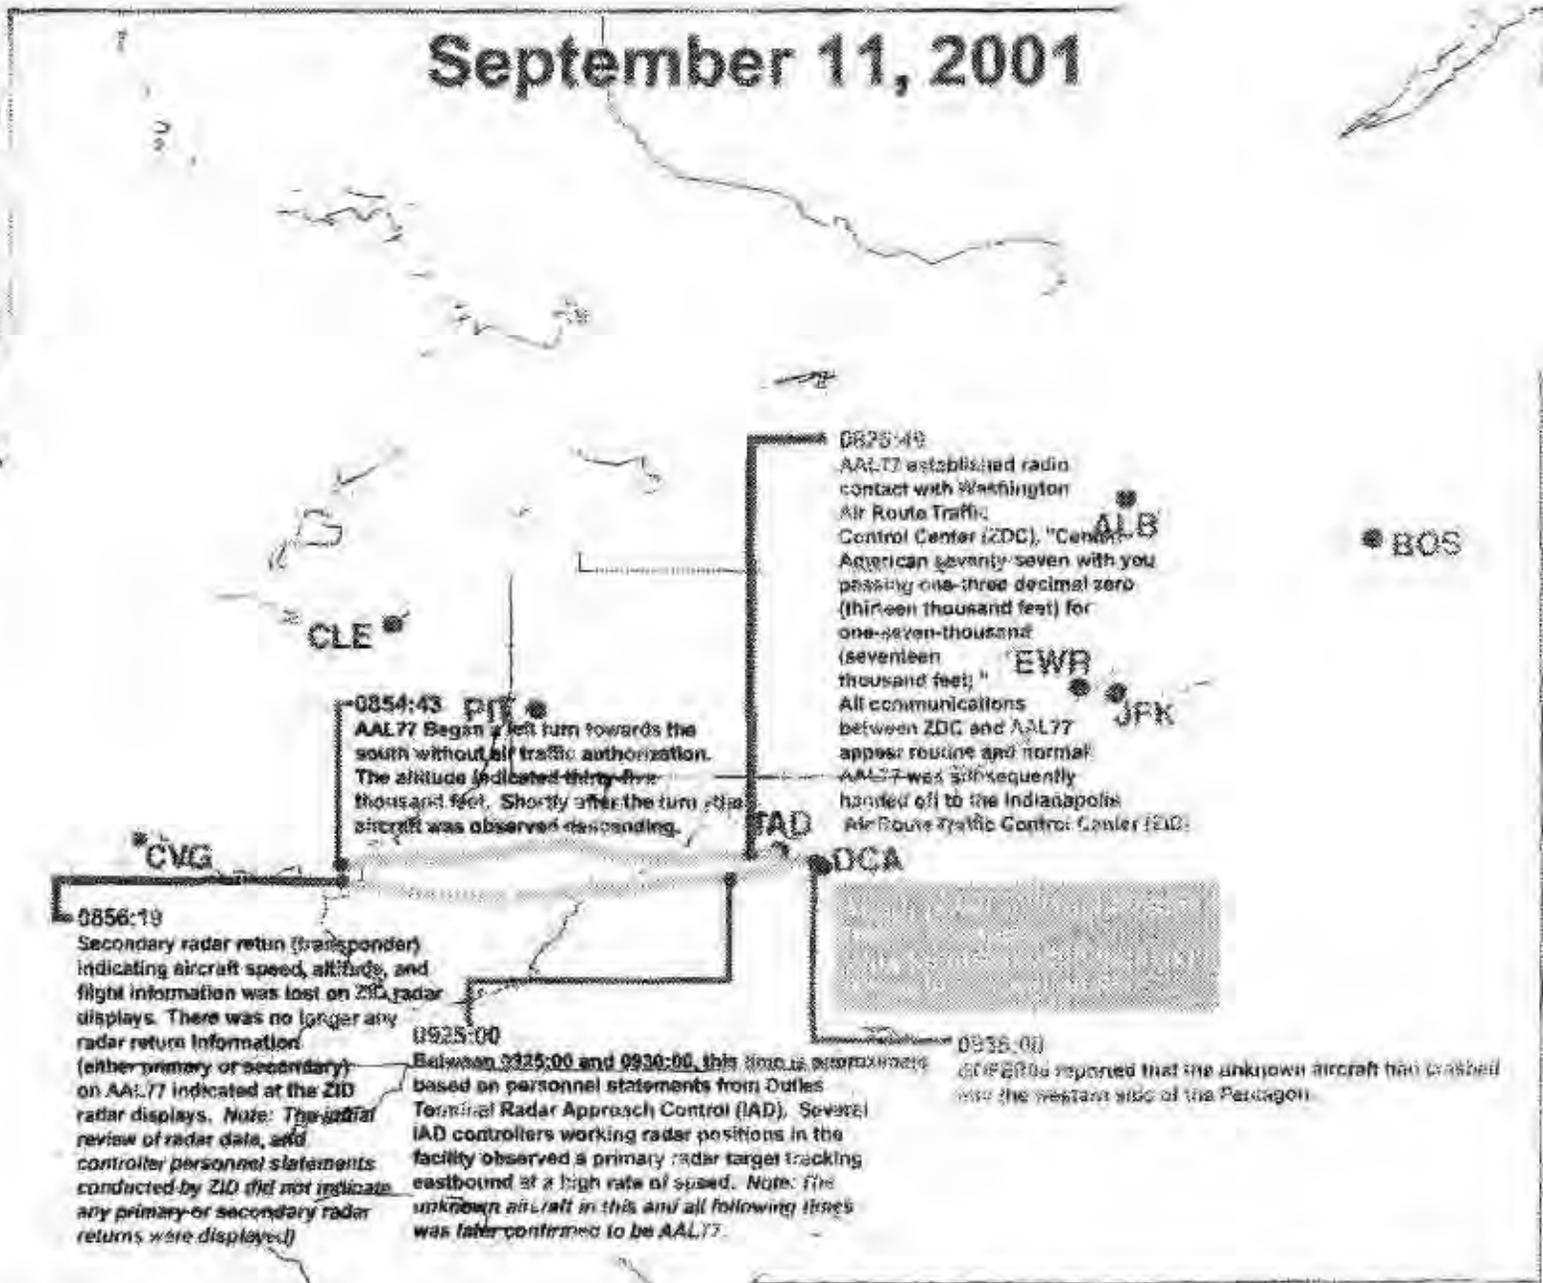

September 11, 2001

September 11, 2001

0854:43 **PIT**
 AAL77 Began a left turn towards the south without air traffic authorization. The altitude indicated thirty-five thousand feet. Shortly after the turn, the aircraft was observed responding.

0826:49
 AAL77 established radio contact with Washington Air Route Traffic Control Center (ZDC), "Center American seventy-seven with you passing one-three decimal zero (thirteen thousand feet) for one-seven-thousand (seventeen thousand feet)."
 All communications between ZDC and AAL77 appear routine and normal. AAL77 was subsequently handed off to the Indianapolis Air Route Traffic Control Center (IAD).

0856:19
 Secondary radar return (transponder) indicating aircraft speed, altitude, and flight information was lost on ZDC radar displays. There was no longer any radar return information (either primary or secondary) on AAL77 indicated at the ZID radar displays. *Note: The initial review of radar data, and controller personnel statements conducted by ZID did not indicate any primary or secondary radar returns were displayed.*

0925:00
 Between 0925:00 and 0930:00, this time is based on personnel statements from Dulles Terminal Radar Approach Control (IAD). Several IAD controllers working radar positions in the facility observed a primary radar target tracking eastbound at a high rate of speed. *Note: The unknown aircraft in this and all following times was later confirmed to be AAL77.*

0935:00
 ATIS reported that the unknown aircraft had crashed into the western side of the Pentagon.

Department of Transportation
Federal Aviation Administration

September 11, 2001

0828:29

ZOB controller asked UAL93, "United ninety-three, verify three-five-zero (thirty-five thousand feet). There was no reply. The ZOB controller made several attempts to contact UAL93 without receiving any acknowledgment."

0828:50

ZOB controller began moving other aircraft away from UAL93 due to lack of acknowledgment of any radio transmissions. Several other aircraft on the frequency confirmed unusual sounds of an unknown origin. The altitude of UAL93 again indicated thirty-five thousand feet.

0846:48

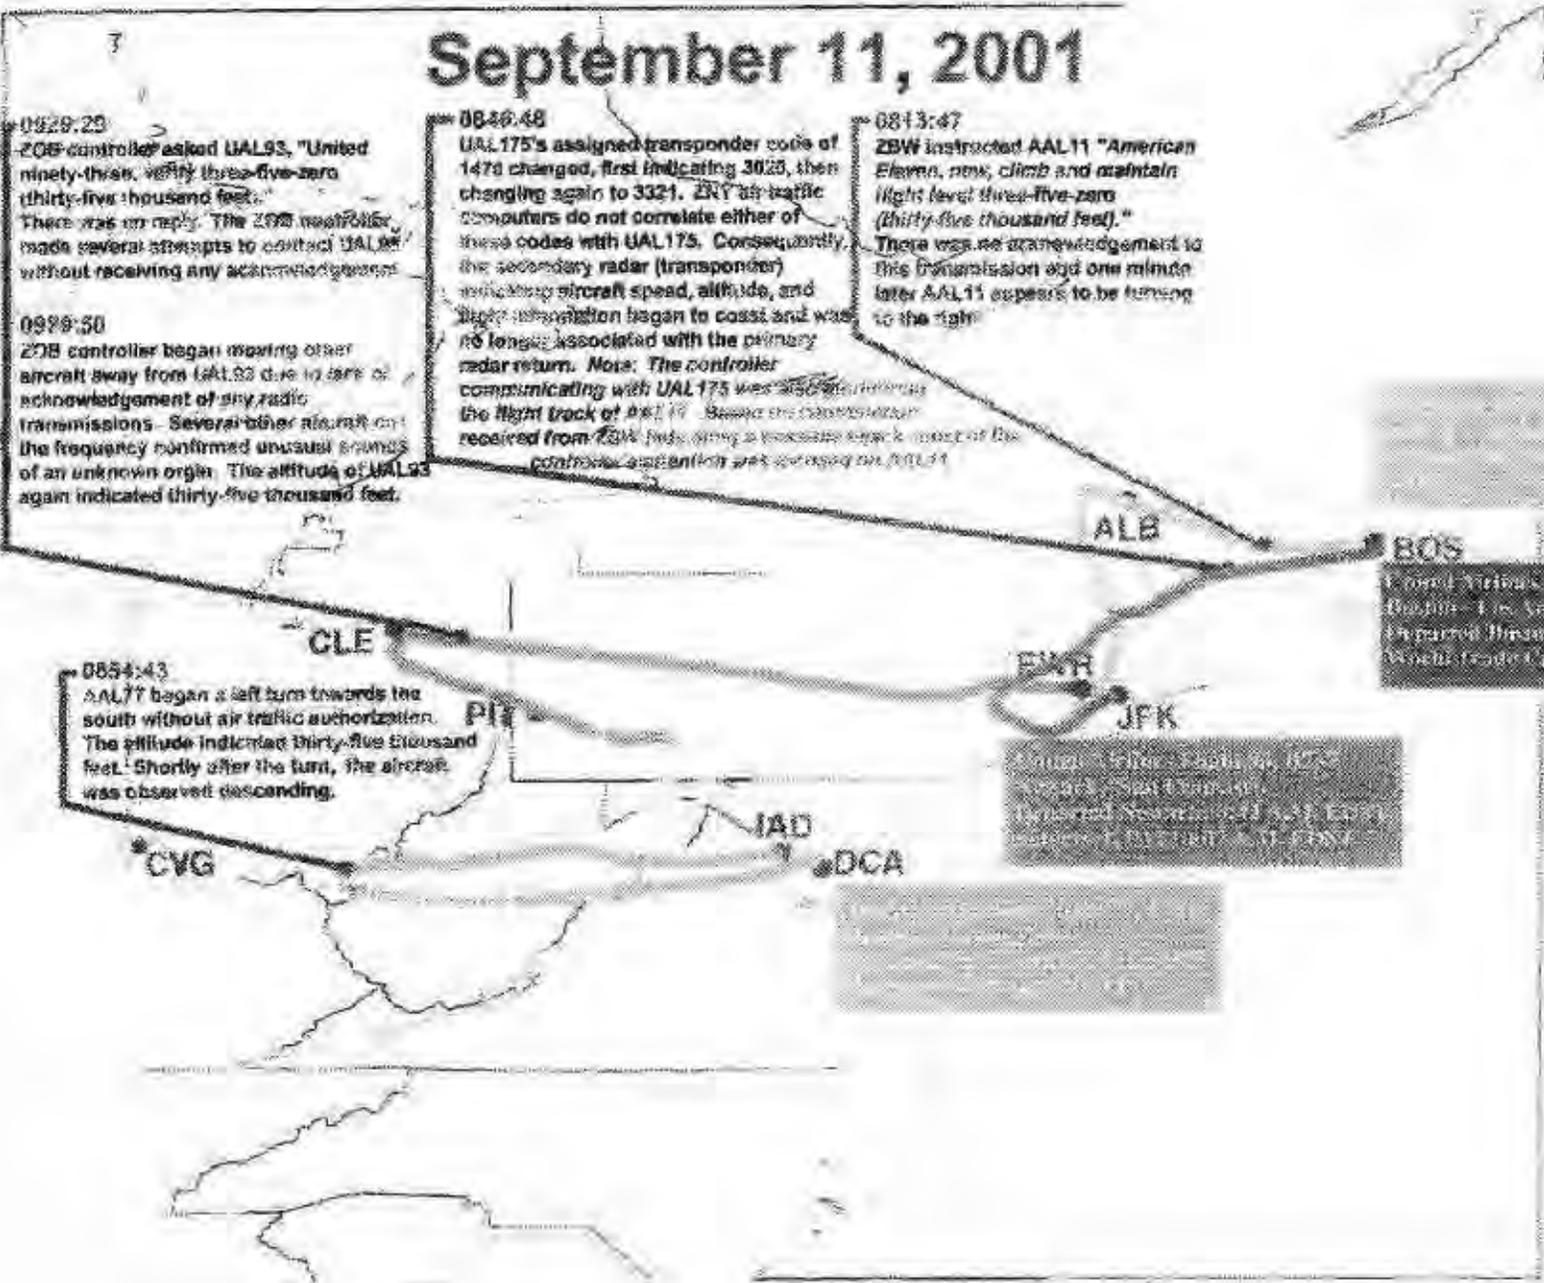

UAL175's assigned transponder code of 1478 changed, first indicating 3028, then changing again to 3321. ZRY air traffic computers do not correlate either of these codes with UAL175. Consequently, the secondary radar (transponder) indicating aircraft speed, altitude, and height information began to coast and was no longer associated with the primary radar return. Note: The controller communicating with UAL175 was 3150. The controller received from ZOB radio only a possible error message of the controller's attention was displayed on 0846:41.

0813:47

ZBW instructed AAL11 "American Eleven, now, climb and maintain flight level three-five-zero (thirty-five thousand feet)." There was no acknowledgment to this transmission and one minute later AAL11 appears to be turning to the right.

0854:43

AAL77 began a left turn towards the south without air traffic authorization. The altitude indicated thirty-five thousand feet. Shortly after the turn, the aircraft was observed descending.

Attachment 3

NOTIFICATION CHRONOLOGY

AAL 11

- 0824:57 Probable time flight was known to be in distress. (A partly unintelligible radio transmission from an unknown origin is heard telling passengers: "nobody move everything will be ok if you try to make any moves you'll endanger yourself and the airplane just stay quiet." This is the second suspicious radio transmission from an unknown origin after the secondary radar return (transponder) for AAL 11 has been lost).
- 0825:00 Boston Center begins notifications within FAA that a suspected hijack is in progress. New England Regional Operations Center is notified.
- 0826:00 AAL 11 begins southbound turn.
- 0833:59 Another suspicious radio transmission is heard.
- 0834:00 Boston Center asks Cape TRACON to notify the military at Otis Air Force Base, (where Cape TRACON is located.) Cape TRACON notifies the military and is advised that authorization to scramble must come from the North East Air Defense Sector.
- 0838:00 North East Air Defense Sector logs indicate that Boston Center notified them regarding AAL 11.
- 0840:00 Military Command (VA Capes) issues scramble order on AAL 11.
- 0845:05 Impact at World Trade Center.

UAL 175

- 0851:43 Probable time flight was known to be in distress. (UAL has failed to respond to several calls and is observed turning off course.
- 0855:00 New York Center controller is busy trying to turn other aircraft away from the aircraft believed to be UAL 175.
- 0905:00 North East Air Defense Sector logs show Boston Center notifying the military.
- 0905:00 Newark Airport Traffic Control Tower notifies New York TRACON of a second aircraft striking the World Trade Center. (Impact believed to have occurred at 0903:14).

AAAL 77

- 0856:19 Probable time flight was known to be in distress. (Loss of radar return information after aircraft turned south without air traffic authorization).
- 0856:32- Indianapolis Center makes several attempts to contact AAL 77 without
0858:14 receiving any acknowledgement. Indianapolis Center also tries to communicate with AAL 77 through American Airlines company dispatch.
- 0859:00 Indianapolis Center controllers coordinate with other controllers to protect the airspace and altitude of AAL 77's filed route of flight.
- 0909:00 Indianapolis Center notifies Great Lakes Regional Operations Center of possible aircraft accident. AAL 77 is presumed to have crashed due to simultaneous loss of radio communication and radar identification.
- 0924:00 North East Air Defense Sector logs show FAA notifying the military.
- 0925:00 Between 0925:00 and 0930:00 (time is approximate based on personnel statements) – Several controllers at Dulles TRACON observe a primary radar target (unidentified but later confirmed to be AAL 77).
- 0933:00 (Time is approximate based on personnel statements) – Dulles TRACON advises White House Office of the U.S. Secret Service of an unknown aircraft heading in the direction of the White House. Ronald Reagan Washington National Airport Traffic Control Tower also notifies Secret Service.
- 0936:00 Washington National Tower issues traffic advisories on the unknown aircraft to a military C130 aircraft that had departed Andrews Air Force Base.
- 0938:00 The C130 military aircraft reports that AAL 77 crashed into the Pentagon.

UAL 93

- 0931:00 Probable time flight was known to be in distress. (UAL 93 is unresponsive to calls from the controller. Additionally, there are three mostly unintelligible transmissions from an unknown origin indicating a possible struggle aboard an aircraft).
- 0916:00 North East Air Defense Sector logs show FAA notifying the military. (Note: We believe this time to be inaccurate since it precedes the indications that UAL 93 was in distress).
- 0939:59 Cleveland Center notifies Great Lakes Regional Operations Center.
- 0944:31 Cleveland Center notifies Pittsburgh TRACON of unauthorized turn by UAL 93 towards Pittsburgh, loss of transponder, and lack of radio communications.
- 1004:00 (This time is approximate). UAL 93 crashes in the vicinity of Somerset, Pennsylvania.

1406:52 HUN huntress (unintelligible) go ahead

1406:55 MOS i believe i was the one talking about that delta nineteen eighty nine

1406:57 HUN go ahead

1406:58 MOS ok well ah disregard that um did you

1407:04 MOS what we found out was that he was not a confirmed hijack however

1407:07 MOS ok i i don't even wanna wouldn't even worry about that right now ah we've got a united ninety three out here are you aware of that

1407:10 HUN united ninety three

1407:13 MOS that has a bomb on board

1407:18 HUN a bomb on board

1407:20 HUN and this is confirmed do you have a mode c sir

1407:25 MOS no we lost his transponder um what we want to know is did you scramble airplanes for that delta eight nineteen eighty nine

1407:32 HUN yeah we did out of selfridge and toledo sir

1407:34 MOS did you did you are they in the air

1407:36 HUN yes they are

1407:37 MOS is there any way we can get them to where this united is

1407:41 HUN ok what i'm going to have you do uh can you give me a lat long on that aircraft

1407:47 MOS what was the last position of that united

1407:50 MOS westmoreland

1407:54 HUN whereabouts is he located sir

1407:56 MOS which is lima bravo echo

1407:59 HUN what is lima bravo echo sir

1408:01 MOS westmoreland

1408:03 HUN westmoreland is lima bravo echo right

1408:06 MOS yeah thats westmoreland airport yeah thats in the pittsburgh area

1408:10 HUN pittsburgh area

1408:11 MOS yes

1408:13 HUN do you have a lat long

1408:15 HUN we have no point for l b e sir do you have a lat long

1408:20 MOS uh no i don't got that available right now

1408:23 HUN do you know where he was going or coming from

1408:26 MOS he was uh ok all i know

1408:36 HUN whatever you have sir go ahead

1408:38 MOS all i know is united ninety three he's got a confirmed bomb on board is what and right now his last known position was in the westmoreland area

1408:51 HUN in pittsburgh pennsylvania

1408:53 MOS which is ah pittsburgh its in the pittsburgh pennsylvania area

1408:56 HUN alright sir no other information is this confirmation via talking to the pilot

1409:03 MOS how did we uh confirm thata the uniteds got the bomb on board

1409:06 MOS i heard it on the frequency

1409:08 MOS ok we heard it on the frequency yes

1409:10 MOS it came across on the frequency

1409:11 HUN which frequency sir

1409:12 MOS thats their confirmation of the bomb

14009:13 HUN which frequency

1409:14 MOS ok i've got two people talking

1409:18 MOS hello

1409:20 HUN hi they're just checking do you have a mode three squawk or anything or last known mode three squawk

1409:25 MOS his last known mode three hold on

1409:38 MOS his last known mode three was fifteen twenty seven

1409:43 HUN copy one five two seven

1409:45 MOS yeah but wait we've got lat longs if you need them

1409:47 HUN yes we have lat longs please lat long

1409:50 MOS three nine five one north zero seven eight four six west

1410:01 HUN ok three nine five one north zero seven eight four six west

1410:04 MOS yes

1410:06 Hun do you have any conformation of any hijackers on board at all

1410:09 MOS all we know is that we heard him say he's got a bomb on board

1410:12 HUN thank you sir alright

1410:14 HUN ok (get those) aircraft scramble towards him

1410:17 Hun sir we're working that right now we have probably six aircraft so far

1410:20 MOS ok

1410:21 HUN but we are working it and we will

1410:22 MOS ok alright can you get back with me

1410:24 HUN sir which center is this which center is this

1410:26 MOS this is cleveland center

1410:28 HUN let me just check stand by one

1410:34 HUN checking with (weapons) sir stand by

1410:36 MOS thank you

1410:51 HUN sir we've got four aircraft two out of selfridge two out of toledo let me see where they're heading currently at this position stand by

1410:58 MOS ok

1411:01 HUN ok currently they were following delta one nine eight nine they're probably going to go ahead and commit towards the bomb aircraft is what i'm being passed they're working on it sir

1411:10 MOS ok

1411:12 HUN they're working on the commitment of united ninety three

1411:16 MOS ok

1411:18 HUN the bomb on board

1411:19 MOS ok

1411:20 HUN i'll call you back with anything that i have

1411:21 MOS alright thank you

1411:22 HUN Thanks

RECORD OF CONVERSATION

On November (b)(6), (b)(7)c 2004, Special Agent (b)(6), (b)(7)c U.S. DOT-OIG, spoke telephonically (b)(6), (b)(7)c with William JOHNSTONE, former team 7 staff member, 9-11 Commission. JOHNSTONE advised that there were several pieces of evidence that allowed the Commission to arrive at the conclusion that at 9:05 am (EDT) on September 11, 2001, American Airlines (AA) headquarters was aware that AA Flight 77 (AA77) was hijacked. The more pertinent evidence came from AA's counsel in a letter dated July 7, 2004. The letter responded to questions for the record concerning AA's awareness about certain items. However,

(b)(5), (b)(6), (b)(7)c

(b)(5)

There were some very minor discrepancies about events during the 9:00a.m. period between information that the Commission had collected. Further, during interviews of the principles at AA, (b)(6), (b)(7)c and (b)(6), (b)(7)c the time that they were saying they were aware that AA11 and AA77 had each been hijacked kept getting later. However, JOHNSTONE added that the time did not change that much for AA77.

JOHNSTONE advised, based on his recollection and notes he referenced during the conversation, that at 8:56 the transponder for AA77 is turned off and the primary radar return is lost. At around 8:58-8:59 the FAA contacted AA and told them that FAA had lost contact with AA77 and asked them to try to contact AA77 via ACRS. At 9:00 (b)(6), (b)(7)c AA, decides, based on lost communication with AA77 and what he knew about AA11, that all AA flights that had not departed were to stay on the ground. At 9:02, AA is told by the FAA that they did not know the whereabouts of AA77. JOHNSTONE advised that his reference for this fact is FAA's Criminal Acts Against Civil Aviation report for 2001, page 40.

RECORD OF CONVERSATION

During the time frame 9:16-9:18 (b)(6), (b)(7)c, AA SOC, and (b)(6), (b)(7)c FAA Command Center, had a recorded conversation. JOHNSTONE advised that this is the only conversation they could find where the possibility of AA77 being hijacked is discussed between AA and FAA. During this conversation, (b)(6), (b)(7)c tells (b)(6), (b)(7)c that AA thought that AA11 was the first aircraft to be flown into the WTC. During this conversation someone can be heard talking to (b)(6), (b)(7)c in the background, saying that AA77 might be the second aircraft flown into the WTC. (b)(6), (b)(7)c relates this to (b)(6), (b)(7)c responds to (b)(6), (b)(7)c by telling him that AA77 might not be the second aircraft to have been flown into the WTC.

Even during this time period, the FAA Command Center was still not certain of the identification of the first aircraft to have been flown into the WTC. AA also was not sure what had happened to its aircraft but knew then that something was wrong with AA77.

The Commission was able to piece together enough information to be comfortable in saying that AA was aware that AA77 was hijacked at 9:05 because that was when AA put into effect the lock-out procedures for the flight. JOHNSTONE did not recall who made the decision to put into effect the lock-out. JOHNSTONE opined that this act is pretty definitive evidence that AA is aware of AA77's status.

AA headquarters did not receive the same type of confirmation that they received from calls from individuals aboard AA77 as they had from those aboard AA Flight 11. From AA77 a flight attendant had called (b)(6), (b)(7)c at about 9:11, who in turn called AA at National. However, the airline staff member with whom (b)(6), (b)(7)c had spoken did not relay the information she received (because, she claimed, she was then being evacuated). Further, Barbara OLSON called her husband, Ted OLSON, former U.S. Solicitor General, who in turn reached out to DOJ. However, OLSON's information never made it to AA.

RECORD OF CONVERSATION

During a time when AA already had one aircraft that was confirmed hijacked and a loss of contact with a second aircraft, AA headquarters had strong circumstantial evidence that AA77 was hijacked. However they lacked direct confirmation.

JOHNSTONE advised that AA had no information that FAA did not already have. AA headquarters did not know about the two calls from the flight.

AA did not communicate its suspicion about AA77 outside of AA with the exception of the call to (b)(6), (b)(7)c

Sometime during the period after the ground stop issued by ARPE but before AA77 crashed, the now deceased vice president for AA, Jim BAKER, spoke with either Monte BELGER or Jane GARVEY or both. JOHNSTONE did not recall if BAKER communicated anything about AA77 during this first call. JOHNSTONE knows about the call through his interviews of AA's personnel in the SOC, who overheard the call. This is documented in one of the memoranda for the record. BAKER's purpose for the call was to find out what the FAA knew. BAKER provided very limited information about AA11 and the FAA told BAKER what they knew about AA11 and United Airlines flight 175. The Commission did not include any of this in its report because they lacked good supporting evidence; there were no tapes of the call, BAKER is dead and BELGER and GARVEY did not have clear recollections of that morning.

RECORD OF CONVERSATION

On November 6, (b) 2004, Special Agent (b)(6), (b)(7)c US DOT-OIG, spoke telephonically (b)(6), (b)(7)c with (b)(6), (b)(7)c attorney, CONDON & FORSYTH, 44th Street and 3rd Avenue, Manhattan, NY. (b)(6), (b)(7)c advised that his firm serves as outside counsel to AMERICAN AIRLINES (AA) and was AA's point of contact to the 9-11 Commission.

(b)(6), (b)(7)c advised that he did not think that AA would agree with what the 9-11 Commission had written on page 33 of their report, which says that at 9:05am "AA headquarters aware that Flight 77 is hijacked." No one at AA had any confirmation that AA flight 77 (AA77) had been hijacked.

The 9:05 time referenced in the Commission's report comes from a specific data point in AA's records. At 9:05, (b)(6), (b)(7)c (b)(6), (b)(7)c on AA's System Operations Command (SOC) floor decided to lock out AA's computer system for AA77 so that only select individuals within AA could access the flight information for AA77. (b)(6), (b)(7)c made this decision based on the following facts:

- The Federal Aviation Administration (FAA), Air Traffic Control, advised they had lost contact with AA77
- AA77 was not responding to ACRS messages from AA
- AA knew that AA flight 11 had been hijacked

(b)(6), (b)(7)c action was not necessarily for a hijacking; AA's emergency procedures require that access to the computerized flight data for an aircraft involved in an event, such as a hijacking, accident, or unruly passenger, be locked out. The information in the computer system primarily pertains to the passenger manifest.

RECORD OF CONVERSATION

On September 11, 2001, at approximately 8:55 am (EDT), either (b)(6), (b)(7)c or (b)(6), (b)(7)c dispatchers and A/T specialist, SOC, AA, received a call from the FAA asking if AA would try to reach AA77.

At 8:59 (b)(6), (b)(7)c sent an ACRS message to AA77 instructing them to contact Indianapolis Center on a specific frequency. At 9:01, (b)(6), (b)(7)c dispatcher, SOC, AA, sent a second ACRS message. At 9:02 (b)(6), (b)(7)c sent a third and final ACRS message, worded the same as his first message. AA77 did not respond to any of the ACRS messages.

Sometime between 9:10 and 9:25, (b)(6), (b)(7)c contacted the FAA's Command Center in Herndon, VA in an attempt to get confirmation that AA11 was the flight that was flown into the World Trade Center (WTC). (b)(6), (b)(7)c also discussed AA's suspicion that AA77 was the second aircraft flown into the WTC. However, FAA did not confirm that for (b)(6), (b)(7)c

(b)(6), (b)(7)c is not aware of any other calls from AA to the FAA concerning AA77.

(b)(6), (b)(7)c was not aware of anyone at AA that knew AA77's transponder had been turned off or that the flight had deviated from its course. (b)(6), (b)(7)c advised that AA received no other information on AA77's whereabouts until after it had crashed into the Pentagon.

(b)(6), (b)(7)c advised that AA responded to the Commission through his law firm. All responses were covered with a letter. He advised that the letter which addresses the time questions from the Commission is dated July 7, 2004.

RECORD OF CONVERSATION

On November (b)(6), (b)(7)c 2004, Special Agent (b)(6), (b)(7)c spoke telephonically (b)(6), (b)(7)c with John RAIDT, former Team Leader, Team 7, 9-11 Commission. RAIDT advised that his team determined that at 9:05am AMERICAN AIRLINES (AA) headquarters was aware that AA flight 77 (AA77) had been hijacked from interviews of managers on duty in AA's System Operations Command Center (SOCC) in Fort Worth, TX on September 11, 2001. They spoke with managers from the SOCC, (b)(6), (b)(7)c and (b)(6), (b)(7)c among others.

It was RAIDT's recollection that AA SOCC concluded that AA77 had been hijacked based on the fact that it was no longer communicating with air traffic control, that it deviated from its course, and that it disappeared from radar. (b)(6), (b)(7)c and (b)(6), (b)(7)c (b)(6), (b)(7)c were the SOCC air traffic specialists and were the only two communicating with FAA. He did not recall that anyone else from the SOCC had communicated with the FAA prior to AA77 crashing.

RAIDT suggested that the reporting agent contact Bill JOHNSTON, former team member, 9-11 Commission, whom he felt might have a clearer recollection for the source of the 9:05 event referenced in the Commission's Report. RAIDT advised he would email (b)(6), (b)(7)c this evening and ask him to call me.

RAIDT was not aware of anyone from AA headquarters speaking with Jane GARVEY or Monte BELGER prior to the crash of AA77. RAIDT's team had spoken with (b)(6), (b)(7)c from AA.

Renee MAY, a flight attendant onboard AA77 called (b)(6), (b)(7)c to tell her what was going on. (b)(6), (b)(7)c in turn, called AA. (b)(6), (b)(7)c spoke with (b)(6), (b)(7)c at AA at National Airport. Just as (b)(6), (b)(7)c hung-up the phone she was told to evacuate and just then heard the explosion at the Pentagon. (b)(6), (b)(7)c did not further act on the information she received from (b)(6), (b)(7)c

Prepared by:

(b)(6), (b)(7)c

Date Prepared: 11/8/04

RECORD OF CONVERSATION

Barbara OLSON, a passenger aboard AA77 called her husband, Ted OLSON, then U.S. Solicitor General, who in turn called DOJ's emergency operations center. RAIDT did not recall that the information from OLSEN made it to AA.

RADIT did not recall that AA or FAA had received any communication from anyone aboard AA77 that directly indicated that the flight was hijacked.

The Commission also listened to tapes from the SOCC and heard (b)(6), (b)(7)c giving instructions [9:16-9:18 timeframe] to others in the SOCC to tell the FAA that they have confirmed a hijacking of American Airlines Flight 11. However, by the time AA called FAA, the FAA had already determined that AA11 was hijacked.

REDACTED FOR DISCLOSURE

RECORD OF CONVERSATION

On November 6, 2004, Special Agent (b)(6), (b)(7)c US DOT-OIG, spoke with John AZZARELLO, former 9-11 Commission Staff member. AZZARELLO advised that the information in the timeline on page 33 of the Commission's report regarding American Airlines' (AA) awareness that AA flight 77 (AA77) had been hijacked came from John RAIDT's and John STONE's team. RAIDT's and STONE's team spoke with the airlines, while AZZARELLO's team spoke with the FAA. The Commission merged the information for the report.

AZZARELLO recalled that the information for 9:05 likely came from (b)(6), (b)(7)c at AA's operations center or SOC. (b)(6), (b)(7)c and others on the operations floor had concluded that since they lost communications with the aircraft and it was not following its flight path that it had been hijacked.

AZZARELLO also thought that the United States Solicitor General's wife was on this flight and that she had called her husband from the aircraft. He recalled that her husband then called AA.

AZZARELLO advised that (b)(6), (b)(7)c then contacted (b)(6), (b)(7)c at FAA's Herndon Command Center. (b)(6), (b)(7)c was on the NOM position at the time, which was between 9:00 and 9:20. (b)(6), (b)(7)c told (b)(6), (b)(7)c that AA believed that AA77 was flown into the WTC. (b)(6), (b)(7)c told (b)(6), (b)(7)c that it was probably not AA77 that went into the WTC but would not tell him which aircraft had.

Even though the time channel on the Command Center's tape was damaged, AZZARELLO advised they were able to determine the time by adding the length of the recording to its determined start time.

AZZARELLO advised that with regard to AA77, in fairness to the FAA, they were reluctant to call AA77 a hijack since they knew nothing about it. Some folks, even within the FAA, assumed it had been hijacked but they had no data to support that

(Public availability to be determined under 5 U.S.C. 552)

RECORD OF CONVERSATION

aside from the aircraft having disappearing from radar. If FAA knew where the aircraft was then they probably could have concluded it was a hijack.

AZZARELLO opined that FAA did not send a bulletin right away to the other centers to look for AA77, but probably should have, especially given that other aircraft had already been hijacked.

With regard to UN93, everyone in FAA HQ knew about that aircraft at an early stage and yet did nothing about it. They all assumed that the military was aware of it, but it was not.

AZZARELLO advised that the reporting agent could obtain RAIDT's telephone number from (b)(6), (b)(7)c

FAA Comments on the Four Planes Staff Monograph by Johnstone/Raidt

Page 26, first full paragraph

This paragraph refers to a footnote that cites the "FAA Operations Center Site Visit and Briefing, June 4, 2003". We cannot find records that indicate information was received at the FAA Headquarters at around 9:00am on 9/11 from a sheriff in Ashland, Kentucky about a commercial aircraft crash nearby. The information communicated to the Commission on June 4, 2003 included a powerpoint presentation that indicates that at 9:09am on 9/11, the Indianapolis Center contacted the Great Lakes Regional Operations Center to report a possible aircraft crash due to the simultaneous loss of radar and radio communications with American 77.

HIJACKER TACTICS

Page 39, Flight Selection

Monograph reads "...aboard large Boeing 757 and 767 aircraft *on which they had trained*. [emphasis added]" There is specific reference to several hijackers having trained on Boeing aircraft configured simulators, and at least one, Hani Hanjour, had been ground-trained and simulator-trained on a B-737. The FAA has no information that they trained *on* the make/model of aircraft used in the attack. In aviation parlance to train "on" a specific aircraft is to actually fly in that make/model aircraft. The FAA has no evidence that any of the hijackers actually flew the actual make/model aircraft used in the attacks but only availed themselves of simulator time.

Page 41, Pilot Training

First paragraph, last sentence

Monograph reads, "These tasks required extensive training and preparation." The information FAA provided Commission interviewers was that each of the pilots followed a typical, average progression in their flight training, which would have prepared them to fly, navigate, and reach an intended destination, i.e., that the exact nature of flight training enabled them to accomplish their mission, and that no "extensive" training or preparation was needed. By virtue of the fact that their training profiles were so typical, no "red flags" were apparent.

Page 41, Pilot Training

Third paragraph

Monograph refers to "...a proficiency rating in multi-engine aircraft operation." The FAA does not refer to any rating as a "proficiency rating" but rather simply as a "rating." Proficiency is something to be maintained on all pilot qualifications.

Page 41, Pilot Training

Third paragraph

The following sentence is problematic: "Atta took Boeing 757 and 767 flight simulator training sessions and received his commercial pilot certificate in December 2000." The sentence implies that the commercial pilot certificate followed the simulator training, but the commercial certificate was not contingent on simulator training. Atta had no type rating in the 757/767, so any simulator time taken before his commercial pilot certification was incidental, i.e., he didn't take the training to get his commercial certificate. This sentence would be more correct and less inferential if it were phrased as in the latter paragraph on Al Shehhi's training, i.e., "...[he] received his commercial pilot certificate....He also received Boeing flight simulator training."

Page 42, Flying the Aircraft

There are several references to the "Flight Management Computer." The correct nomenclature is "Flight Management System," which incorporates several computer systems and redundancy. The meaning is the same, but pilots refer to an FMS or an FMIS, not an FMC.

SWORN INTERVIEW OF
SHIRLEY S. MILLER

BY

SPECIAL AGENT (b)(6), (b)(7)c

INVESTIGATOR (b)(6), (b)(7)c

Thursday, February 10, 2005

2:41 p.m.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

SPECIAL AGENT (b)(6), (b)(7)c Today is February
(b)(6), (b)(7)c 2005. The time is 2:41. We're at FAA
headquarters--what's the building number here?

MS. MILLER: 10-A.

SPECIAL AGENT (b)(6), (b)(7)c 10-A, Room 1015 in
Washington, D.C. My name is (b)(6), (b)(7)c Also
present is (b)(6), (b)(7)c We're from the Office of
the Inspector General, Department of
Transportation, and we're conducting a review of
issues involving certain public statements made by
military and FAA officials at a 9/11 Commission
hearing and elsewhere that are allegedly
inaccurate.

Today we're interviewing Shirley Miller.
Shirley, could you please acknowledge that you're
aware that this interview is being tape recorded?

MS. MILLER: Yes, I'm aware of the
interview being recorded.

SPECIAL AGENT (b)(6), (b)(7)c Will you please
raise your right hand? Do you swear or affirm that
the testimony you're about to furnish will be the

truth, the whole truth, and nothing but the truth?

MS. MILLER: I do.

SPECIAL AGENT (b)(6), (b)(7)c Will you please give your full name, spelling the last for the record?

MS. MILLER: Shirley S. Miller,
M-I-L-L-E-R.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And I understand that you're kind of in position transition right now?

MS. MILLER: Yes.

SPECIAL AGENT (b)(6), (b)(7)c And in the near future, can you just describe what that position was again?

MS. MILLER: The paperwork hasn't been processed, but I'm going to be the head of the Administration--Executive Administration for the Air Traffic Organization.

SPECIAL AGENT (b)(6), (b)(7)c And we've interviewed you previously, I think in late September or early October of 2004.

MS. MILLER: Right.

SPECIAL AGENT (b)(6), (b)(7)c And I think at that

time you had said that on September 11th you were a Special Assistant to the Deputy Administrator.

MS. MILLER: Correct.

SPECIAL AGENT (b)(6), (b)(7)c And at some point you became FAA's liaison to the 9/11 Commission. I think you had indicated that that was--

MS. MILLER: In early June of 2003.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Was there any paperwork generated?

MS. MILLER: No.

SPECIAL AGENT (b)(6), (b)(7)c No 50 or anything like a memo?

MS. MILLER: No.

SPECIAL AGENT (b)(6), (b)(7)c Presumably, the Deputy Administrator asked you to do that.

MS. MILLER: Correct.

SPECIAL AGENT (b)(6), (b)(7)c This is a tad bit off topic of what we initially came here to talk to you about--

MS. MILLER: Okay.

SPECIAL AGENT (b)(6), (b)(7)c --but because this was in the newspaper, I just want to see if you

could point us kind of in the right direction, a couple of things. The New York Times reported, and I think AP picked up today some information and a yet-to-be publicly released report that the 9/11 Commission prepared about, I guess essentially intelligence information that FAA may or may not have had. And they make reference in the news article to--it says "52 warnings in six months."

These--and you can correct me if I'm wrong--these would be like intelligence briefings that FAA might have received. Is that what your understanding is they're referring to in these articles?

MS. MILLER: Well, if you're talking about 52 warnings. I think they're talking about--yeah, they're intelligence, some sort of intelligence reporting that came from the intelligence community prior to my knowledge.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And would those go to security? Would they be the ones responsible for the--

MS. MILLER: (Interposing) They were at

that time, yes.

SPECIAL AGENT (b)(6), (b)(7)c At that time they were. Okay. And if we needed to review that information, who would we need to speak to?

MS. MILLER: Lynne Osmus.

SPECIAL AGENT (b)(6), (b)(7)c Lynne Osmus. Are those still classified, do you know?

MS. MILLER: Yes. Much of that involvement today is classified information.

SPECIAL AGENT (b)(6), (b)(7)c Does FAA by chance have a copy of the redacted report that they reference in the newspaper article?

MS. MILLER: I believe (b)(6), (b)(7)c was trying to obtain a copy.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And that's all I got on that.

MS. MILLER: Okay.

SPECIAL AGENT (b)(6), (b)(7)c And one other thing, if I could. We had been provided with some reports that the FAA had generated that document the changes that the Agency implemented after 9/11, primarily concerning communication in coordination

with the military and that sort of thing. And I was wondering if you could tell us who, if there is a particular person, that--basically who the principal architect for a lot of those changes were. Like who would be the most knowledgeable person to kind of talk about those changes, especially with regard to the communication with the military.

MS. MILLER: Well, in the Air Traffic Organization under System Operations, (b)(6), (b)(7)c

(b)(6), (b)(7)c is really the lead for the communications with the military. So that would be a person you could talk to.

SPECIAL AGENT (b)(6), (b)(7)c And would he have been the one who had worked on, initially, implementing the changes after 9/11?

MS. MILLER: At the time I believe he was still in our eastern region of New York, so the answer is locally he might have implemented, but it was a headquarters-driven thing. So you're hitting us at a time when we had a lot of retirements, and so--I mean the architect I'm not sure is even here.

You know, I mean it was a group effort really. So -- (indistinguishable). But you could--you could certainly work with (b)(6), (b)(7)c and (b)(6), (b)(7)c (b)(6), (b)(7)c who is (b)(6), (b)(7)c (b)(6), (b)(7)c to understand, you know, the changes that we made.

SPECIAL AGENT (b)(6), (b)(7)c And within System Operations, that would include the Washington Operations Center or whatever?

MS. MILLER: No.

SPECIAL AGENT (b)(6), (b)(7)c: No?

MS. MILLER: Washington Operations--well, the Air Traffic Organization "keyst" (ph) that the DEN, which is the Domestic Events Network, is housed in the WOC, but the WOC is not part of ATO. It actually reports to the security organization in that area.

SPECIAL AGENT (b)(6), (b)(7)c So the WOC, W-O-C, the Washington Operations Center, is actually part of security which right now, that would be Lynne Osmus' shop, right?

MS. MILLER: That's right, mm-hmm.

SPECIAL AGENT (b)(6), (b)(7)c Is DEN always run by Air Traffic?

MS. MILLER: ATO, right.

SPECIAL AGENT (b)(6), (b)(7)c ATO. That's all I have on that.

MS. MILLER: Okay.

SPECIAL AGENT (b)(6), (b)(7)c Thank you. Shirley, I don't remember if we had gone over this with you or not, and I just wanted to kind of formally for the record show you a log that we had obtained and see if it looked familiar to you.

MS. MILLER: Okay.

SPECIAL AGENT (b)(6), (b)(7)c And I realize this is a photocopy. It's--and it's--it might be missing a row of information over on the right-hand side.

MS. MILLER: I don't really recall ever seeing this before. It doesn't look familiar.

SPECIAL AGENT (b)(6), (b)(7)c All right. This is a--it's purported to be the Needs Log--

MS. MILLER: Okay.

SPECIAL AGENT (b)(6), (b)(7)c --that is referenced

in most of the FAA material. It's sort of the source for the military notification times.

MS. MILLER: Mm-hmm, okay.

SPECIAL AGENT (b)(6), (b)(7)c But this doesn't look familiar to you at all?

MS. MILLER: Huh-uh.

SPECIAL AGENT (b)(6), (b)(7)c In May--it was actually on May 22, 2003, Jane Garvey testified before the 9/11 Commission. And during the hearing--before we tape recorded we talked about this a little bit--but as you alluded to, during the hearing, Commissioner Ben-Veniste had some questions that Ms. Garvey just wasn't prepared to answer. And I think she came back to FAA and asked if they could help respond to the commissioners' questions.

And this document here entitled "FAA Communications with NORAD on September 11, 2001" was prepared. What can you tell me about this? What do you remember?

MS. MILLER: Well, let's see. I remember that--I wasn't really involved in Commission work

until early June--but I do remember and recall that Jan testified at that hearing. And my recollection is that when she was asked to provide a something for the record to Chairman Ben-Veniste, I guess the night after that hearing she worked with--my understanding--with (b)(6), (b)(7)c Linda Schusseler, and Lynne Osmus to come up with a--you know, the answer that Ben-Veniste was looking for. So that's what I recall.

SPECIAL AGENT (b)(6), (b)(7)c Did you--were you at the hearing?

MS. MILLER: No.

SPECIAL AGENT (b)(6), (b)(7)c (Indistinguishable)
--place with it?

MS. MILLER: No.

SPECIAL AGENT (b)(6), (b)(7)c Had you worked with Lynne Osmus and Linda Schusseler and (b)(6), (b)(7)c on this at all?

MS. MILLER: No, huh-uh.

SPECIAL AGENT (b)(6), (b)(7)c And we had--we had came back to talk to you about this in particular because we'd heard from some folks that you'd

actually been involved in preparing this.

MS. MILLER: Well, that's incorrect.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MS. MILLER: I think people, you know, they associate me with 9/11, and they assume I was working it from the very beginning, and that's just not the case.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Do you know who Cheryl Atkins (ph) is?

MS. MILLER: Mm-hmm.

SPECIAL AGENT (b)(6), (b)(7)c After the May hearing, did you ever have any discussion with Cheryl about the content of this question for the record?

MS. MILLER: I think--I mean I'm not sure how--how to--you know, around that May hearing I had conversations with her. But I do know I had conversations with her, probably in the summertime of 2003 about her recollection of when she came to the building on 9/11, et cetera. And I recall having a conversation with her that she came in later than she originally thought she had, maybe

that she had communicated with, you know, Lynne and Linda, you know, because then when she really started thinking about it, she said she came in after--I think she said after the plane hit the Pentagon.

SPECIAL AGENT (b)(6), (b)(7)c Cam into the building here?

MS. MILLER:

The--(indistinguishable)--Building.

SPECIAL AGENT (b)(6), (b)(7)c Okay. What was the context of the discussion? Why were you guys talking about that?

MS. MILLER: Well, I mean there was the recurring question, line of questioning from the Commission about, you know--he was talking to the military that, you know, on 9/11, and I was just trying to help facilitate discussions between the Commissioner and people could remember or recall what was going on that day.

SPECIAL AGENT (b)(6), (b)(7)c When you guys were talking about that, did the question for the record come up, or was that part of the reason for your

discussion preparing what she was recalling then versus what's in the question for the record there?

MS. MILLER: I don't really recall having conversations with her, specifically, about the question for the record.

SPECIAL AGENT (b)(6), (b)(7)c Do you remember her saying that, you know, she was recollecting differently now? And we're talking about the time when you're talking to her in the summer about what happened versus what she had told Linda back in the spring.

MS. MILLER: No, not really. I mean I don't--I really don't remember exactly when I talked to her and exactly what the, you know, the context was. I don't recall that it was about the question for the record, though.

SPECIAL AGENT (b)(6), (b)(7)c How is it that you're aware of who was involved in putting the question for the record together?

MS. MILLER: Well, I worked on 9/11 Commission issues, and, I mean, when I started working on it this was, you know, something that

had just been done. So I mean I knew it existed, and I knew that there were some questions at the hearing.

SPECIAL AGENT (b)(6), (b)(7)c One of the lines of the question for the record starts right--the sentence in here. It says--it starts right there--"Though US Air Force liaison to the FAA immediately joined the FAA headquarters home bridge and established contact with NORAD," on a separate line. And so in the summer you're talking to Cheryl Atkins, and she's telling you that she might not have arrived at the FAA until maybe after the 3rd airplane that morning, the one that hit the Pentagon. So at some point, presumably, you come to the realization that some of this information in this question for the record is not correct, is that the case?

MS. MILLER: Well, I mean there's nothing specific in here about what time or anything. So I mean, you know, she said she thought she was on the phone with the military commands. I don't---you know, I really didn't have a reason to question

what was--what was already said.

SPECIAL AGENT (b)(6), (b)(7)c Well, it says "immediately joined the FAA headquarters phone bridge," and it--when you say "immediately joined," and when we talk about what happened on September 11, it kind of leaves one with the impression that they might have been involved from the onset of the events that day. And from most of the country's recollection, it would be starting after the first plane hits the World Trade Center.

And what Cheryl has told you during your conversation is that she probably wasn't even in the building until after the Pentagon was hit. So that's at, you know, the second to last event of the day. That's not immediate. And so what I'm wondering is once you realize--once Cheryl has told you that, did you relay that to the Commission in any way?

MS. MILLER: I don't recall.

SPECIAL AGENT (b)(6), (b)(7)c At the time that you were talking to Cheryl Atkins, was the Commission--I think they were doing interviews and

things like that at FAA and military employees.

Does that sound familiar?

MS. MILLER: They were interviewing quite a bit--I mean for over a year, so yes.

SPECIAL AGENT (b)(6), (b)(7)c Do you recall having a discussion with her about her upcoming interview?

MS. MILLER: Well, I--I told her I thought they were going--I mean they had asked for a list of people that were in headquarters, and they wanted to interview both the FAA and military representatives. So she knew that they were coming. But in terms of preparing her, that was done by military people, not us.

SPECIAL AGENT (b)(6), (b)(7)c Could the context of your discussion with her have been with her mentioning that she had an interview scheduled, and she was going to be talking to the Commission?

MS. MILLER: I'm sorry, the context of what?

SPECIAL AGENT (b)(6), (b)(7)c The context of your discussion where in the summer of 2003 she's talking to you about when she arrived at the FAA.

MS. MILLER: I don't--I--I really can't--I don't know what we talked about a year--over a year ago.

SPECIAL AGENT (b)(6), (b)(7)c Okay. If you provided the Commission with any clarification about what this question for the record says versus what Cheryl Atkins had told you, how would you have communicated that to them? Because you said you don't recall, so I'm just kind of trying to understand what your process would have been to communicate something like that to the Commission.

MS. MILLER: Well, there was no formal process, like a normal hearing, like we have with the Appropriations hearings, for example. I mean there was no follow-up from the Commission on the question for the record for any of the hearings that occurred. I mean very little follow-up. So it wasn't a normal--there was a hearing, there's a set of questions, there was a, you know, a process for making sure that got done.

I don't even know exactly how this was communicated to the Commission, if it was.

SPECIAL AGENT (b)(6), (b)(7)c It was, actually.
It was read into the record on the 23rd.

MS. MILLER: Okay. So--but, I--you know, I don't know how that was done. It was done, obviously, since it's in the record, but to follow up with the Commission on this, I don't recall doing that. If I had, it probably would have been through the staff. I mean it would have been through the staff, I'm sure.

SPECIAL AGENT (b)(6), (b)(7)c Would it have been verbal, or would you send it email, or--

MS. MILLER: Yeah. I mean there was a lot of email, a lot of verbal.

SPECIAL AGENT (b)(6), (b)(7)c Do you think that that point of clarification, you know, your discussion with Cheryl Atkins in the summer of 2003 was worthy of clarifying?

MS. MILLER: Well, I wasn't--not really. Because everyone at that point was pretty--I mean time had gone by and they couldn't really recall--she couldn't recall exactly when she came into the building. She really didn't know, she

thought. That's what I recall.

SPECIAL AGENT (b)(6), (b)(7)c Do you think because her recollection was sketchy it wasn't worth possibly mentioning to the Commission? I'm just trying to understand your last statement.

MS. MILLER: Yeah. I mean she didn't have any better time line. There wasn't really anything else to tell them as far as I was concerned. And she had her opportunity to talk to them anyway in--in her interview.

SPECIAL AGENT (b)(6), (b)(7)c Can you think of anything, (b)(6), (b)(7)c

INVESTIGATOR (b)(6), (b)(7)c (No audible response.)

SPECIAL AGENT (b)(6), (b)(7)c Is there anything else you'd like to add along the line of what we were talking about today?

MS. MILLER: I can't think of anything.

SPECIAL AGENT (b)(6), (b)(7)c Anything else, Dave?

INVESTIGATOR (b)(6), (b)(7)c I can't think of anything more.

SPECIAL AGENT (b)(6), (b)(7)c All right. It's

3:06, and we going to go ahead and end the interview and stop the tape.

(Whereupon, at 3:06 p.m., the interview was concluded.)

Gary M. Stern
General Counsel
National Archives and Records Administration
8601 Adelphi Road
College Park, MD 20740-6001

Dear Mr. Stern:

Pursuant to an investigation being conducted by this office, Assistant Special Agent-in-Charge (b)(6), (b)(7)c and Supervisory Archivist (b)(6), (b)(7)c on January 29, 2005, I am requesting copies of the items listed below from the 9-11 Commission's archives. The items we are requesting are responses to questions for the record (QFR) raised during Commission hearings and a chart presented by a witness during a Commission hearing.

Hearing Date	Witness	Description
May 22, 2003	Jane Garvey	QFR, FAA Notification to the Military on American Airlines Flight 77 (AA77).
May 23, 2003	Hon. Norman Minetta	QFR, Division of responsibility between NORAD and FAA on 9/11/01.
May 23, 2003	Maj.Gen. Larry Arnold	QFR, Further information to shed light upon when the military first learned of the hijacking of AA77.
May 23, 2003	Col. Alan Scott	Matrix (chart) containing a chronology of the 9-11-01 attacks.

Thank you for your continued cooperation in this matter. If you require any additional information please feel free to contact (b)(6), (b)(7)c

Sincerely,

Charles H. Lee, Jr.

NATIONAL DEFENSE UNIVERSITY
WASHINGTON, DC

Acknowledgments

When 1st Air Force public affairs officer Maj. Don Arias approached me about writing a book on America's air sovereignty mission and how Sept. 11, 2001, changed everything, I was a little nervous.

How do you tell such a huge, multifaceted story in only a few short chapters? Can you ever give a story of this magnitude justice? I really don't know if you can. All you can do is write the stories you think the reader absolutely must know to get a clear picture of all the changes affecting the mission. Speaking of pictures, how do you gather those essential shots that tell a story all by themselves? Thankfully, Maj. Arias enlisted the help of New Mexico Air National Guardsman and historian Master Sgt. Rod Grunwald, a great photo editor, sounding board, copy editor, grammarian, and wordsmith who gathered countless photos for this project. Thank you for all your help, Rod.

Before I go down the professional list, there's many people I want to thank on a personal level. My biggest thank-you of all goes to my husband and on-site aviation consultant, Mike, who spent endless hours at the park with our daughter, Isabel, while I was sequestered in the office writing a book. There's no way I could have done it without Mike, who had to listen to every single detail about this book every single day for more than a year. Thanks for enduring it all, Mike. I also thank my mom, Paula; sisters Alyson and Betsy; and the rest of my family for helping me get through this as we were all trying to get through losing our dad and hero, John. A firefighter and U.S. Marine Corps Vietnam veteran, he would have loved this story of America's military protecting our homeland.

There are many others to thank for supporting this project. First, I thank retired Col. William A. Scott — an outstanding editor — for his sound

opinion, advice and valuable input. Col. Scott had the answers to any and all questions from, "What's a 'conehead'?" to "What's *Posse Comitatus*?" I truly appreciate all the time you gave, Col. Scott. I am also indebted to retired Maj. Gen. Larry K. Arnold, who wanted this story forever preserved in print. Thank you for your valuable time and many interviews. Special recognition also goes to Col. Bob Marr, commander of the Northeast Air Defense Sector, who gave freely of his time to help with the smallest of details about the air battle on Sept. 11, 2001. Thank you, Col. Marr.

I owe many thanks to the 1st Air Force and Continental United States North American Aerospace Defense Command Region public affairs staff: Maj. Brenda Barker; Staff Sgt. Scott Farley; Master Sgt. Roger Tibbetts; and most of all, Maj. Arias. You were all nothing but supportive through this entire endeavor and Staff Sgt. Farley's editing skills and technical expertise were invaluable!

Several others wholeheartedly supported this project: Lt. Col. Kacey Blaney; retired Brig. Gen. John Broman; Col. John Cromwell; Dr. Charles Gross; Master Sgt. Dale Hanson; Eric Hehs; retired Col. Connie Mac Hostetler; Marty Isham; retired Chief Master Sgt. Bill Johnson; Col. Larry Kemp; Bard Manthey; Dr. Paul McAllister; Maj. Gen. Craig R. McKinley; Gene McManus; Staff Sgt. Mark Morgan; retired Col. Dan Navin; Jerry Schroeder; Master Sgt. Dave Somdahl; Karen Steele; Dr. Rick Sturdevant; Master Sgt. Don Taggart; Brig. Gen. Dave Wherley Jr.; Col. Don Whitehead; Vivian Wilson; and Bob Wright. My sincerest gratitude.

Finally, thank you to the men and women of 1st Air Force and CONR. We can all sleep better knowing you are guarding America's skies.

— Leslie Filson

Foreword

Most Americans remember where they were the morning of Sept. 11, 2001, and will probably never forget. I was in my command center watching live CNN coverage of smoke billowing from the north tower of the World Trade Center, having just scrambled F-15s out of Cape Cod, Mass., toward the possibly hijacked American Airlines Flight 11. When I saw United Airlines Flight 175 hit the south tower, I quickly began to realize this was not a coincidence, that our country was under attack and it was my job to defend against further attacks. Over the next several hours, the men and women of CONR — the Continental United States North American Aerospace Defense Command Region — quickly went about the business of securing America's skies. I am grateful for what they did that day.

We were able to respond quickly Sept. 11 because we had a robust command and control structure in place and some fighter aircraft on rapid reaction alert. The air defense mission, as reflected in the number of fighter aircraft and alert locations, had shrunk over the decades even in the face of the Cold War. To a point, this reduction was justified as the Soviet threat changed from bombers in the 1950s to primarily an Intercontinental Ballistic Missile and submarine ballistic missile threat in the years to follow. Throughout the 1970s and 1980s, the Soviets flew repeated reconnaissance missions off the East Coast of the United States and also developed cruise missile capabilities that posed a threat to the United States. These two facts alone may have kept the air defense and air sovereignty missions alive against air-breathing targets.

With the collapse of the Berlin Wall in 1989 and subsequent dissolution of the Warsaw Pact and the Soviet Union, there was additional pressure to take down our alert aircraft and use that money for other

Photo by Eric Hehs, Code One magazine

Retired Maj. Gen. Larry K. Arnold was commander of 1st Air Force and the Continental United States NORAD Region on Sept. 11, 2001.

Air Force priorities. Only through strong leadership and determination by Gen. Howell M. Estes III, then commander in chief of NORAD, was this country able to sustain any modicum of air sovereignty and air defense. It is important to note that Maj. Gen. Philip G. Killey, the Air National Guard general officer in command of 1st Air Force and CONR during those years, fueled the flame that helped focus Gen. Estes' determination.

When I became the 1st Air Force vice commander in January 1997, the Department of Defense had just released its Quadrennial Defense Review. This document indicated that the Air Force would provide only four fighter alert sites for a "four-corners defense." It was a familiar basketball strategy that had no place in the air sovereignty

U.S. Air Force photo by Staff Sgt. Greg L. Davis

Aircraft maintenance personnel from Shaw Air Force Base, S.C., work on an F-16 late into the night of Sept. 11, 2001. Military personnel from throughout the country were called into action that day as the 14 fighter aircraft on alert exceeded 400 fighter, tanker and Airborne Warning and Control System aircraft just hours after the attacks.

mission. The QDR also called for the reduction of several intermediate Air Force headquarters. Though none of the intermediate headquarters was specifically mentioned in the QDR, 1st Air Force was one of the headquarters on the chopping block. It was only through the actions of Gen. Estes and Maj. Gen. Killey that 1st Air Force continued to exist. Seven fighter alert sites were salvaged — down from 12 in 1993 and 19 in 1991. When Gen. Richard B. Myers became commander of NORAD in 1998, he told the chairman of the Joint Chiefs of Staff that he could provide air sovereignty in name only. He didn't get any more forces.

This was the situation in which we found ourselves on Sept. 11: We had a minimum number of fighters on alert scattered about the country but a well-trained and dedicated command and control system. We took our job seriously, and in briefing

after briefing, reiterated that we believed the greatest threat to the United States was an attack by terrorists, rogues or rogue nations.

In the immediate aftermath of the Sept. 11 attack, we were able to provide command and control of air power over the entire continental United States because the mission had been spared. In 18 hours, we surged from 14 aircraft on alert at seven locations to more than 400 fighter, tanker and Airborne Warning and Control System aircraft on orbit and on alert at more than 60 locations. This was a remarkable job, performed by remarkable people at a remarkable time in our nation's history.

— **Retired Maj. Gen. Larry K. Arnold,**
1st Air Force commander,
December 1997 - July 2002

Introduction

On the morning of Sept. 11, 2001, 14 U.S. Air Force fighters stood alert at seven locations in the Continental United States North American Aerospace Defense Command Region. Aircrews surveyed the glorious fall weather from their alert facilities, updated local airfield conditions, reviewed their Air Tasking Orders, preflighted their aircraft missiles, and maybe enjoyed their first cup of coffee.

In the region's three air defense sectors, air battle managers and technicians sat in darkened rooms, peering into radar scopes aglow with the pulsing green dots of radar returns from aircraft entering the continental United States Air Defense Identification Zone. Region Air Operations Center personnel surveyed sector and NORAD activities and monitored the status of regional radars and communications.

It was a typical morning all-around for a small, tight-knit group of people in a largely unknown and little-acknowledged air sovereignty community.

As this team quietly labored to protect the country from external airborne threats, many Americans cast a concerned but mostly disengaged eye on the Middle East and its spiraling cycle of *Intifada* violence. More laid an interested gaze on the sports page and the upcoming college football season. The country was at peace.

At 8:46 a.m. Eastern Standard Time, American Airlines Flight 11 was deliberately flown into the north tower of New York's famous World Trade Center, transforming it into a smoking black pyre. The gruesome scene was transmitted live by CNN reporting to a shocked America that "a light aircraft has hit the World Trade Center!" Americans gathered somberly in front of their televisions, watching in morbid curiosity as the tower burned in yet another version of "reality TV." At 9:03 a.m., United Airlines Flight 175 speared through the

Two F-16A air defense fighters of the 178th Fighter Squadron, North Dakota Air National Guard, lead an F-15C assigned to the 27th Fighter Squadron, Langley Air Force Base, Va., in formation during a Combat Air Patrol mission on Nov. 17, 2001.

U.S. Air Force photo by Staff Sgt. Greg L. Davis

south tower, bursting into an incandescent ball of burning jet fuel. Curiosity turned to horror, fascination to fear. Many Americans who witnessed the second strike will always remember thinking, "This is no accident, America is under attack!" As the terror mounted in Washington, D.C., and Pennsylvania, air defenders all over the country swung into action. The country was at war.

Out of a great American tragedy, comes a great American story, the epilogue yet to be written. On Sept. 11, heroic efforts were the order of the day both on the ground and in the air. Military commanders from the Air Force's "Total Force" and from all services ran to the sound of the guns — they were knocking down the Continental United States NORAD Region and air defense sector doors, willing to lend a hand. They came in the midst of war's fog and friction, amid the clamor and chaos of air attacks and reports of 21 additional hijackings that day. Against the backdrop of the second tower exploding again and again in replayed images on national television, they picked up telephones, wanting to know where to send their fighters. How many? How far? How soon?

At this writing, the United States continues to fight the war on terror around the world. The military heroes of Sept. 11 continue to serve in their vein of volunteerism, working hand in hand with CONR and the three air defense sectors: flying Combat Air Patrols, standing alert and doing whatever necessary to protect our vital interests. More than ever, the U.S. Air Force, Air National Guard, Air Force Reserve, U.S. Navy, U.S. Army, U.S. Customs, FBI, Federal Aviation Administration, and many more patriots are making America's skies safe and secure.

Since Sept. 11, the air sovereignty mission has grown tenfold and has evolved into a mission of full air defense. For months after the attacks, armed

fighters, aerial tankers and airborne early warning aircraft flew Combat Air Patrols over American cities and national events — 24 hours a day, seven days a week. Aircraft radar detection and command and control capabilities have been radically improved throughout the country through the Herculean labors of the FAA, civilian contractors, airmen, and soldiers.

The mission has come full circle. Before the Sept. 11 tragedy, air sovereignty was viewed by some as a "sunset mission" — an unnecessary relic of the Cold War. It was hard to envision a nightmare where commercial airliners would be used as fuel-air bombs flown by homicidal pilots. Never before were airline hijackings within the United States considered a military responsibility; they were considered a criminal act and a law enforcement issue. Many things changed that day.

One thing that did not change was the dedication of the men and women assigned and attached to 1st Air Force and CONR. Their loyalty to the mission and sense of responsibility to the country never wavered, even when the mission was ignored, under-resourced and unpopular. As the air defense mission vaulted to the forefront of Department of Defense operations, a spirit of cooperation arose among military and federal agencies to keep our country's skies free.

Our lives and our world changed Sept. 11.

Air sovereignty changed Sept. 11.

This book will chronicle that story.

CHAPTER 1

THE COLD WARRIORS: Ready, alert and willing

America's air defense mission changes with Soviet tide

The young airman at the Phoenix Air Defense Sector gazed at the radar screen in awe — there was nothing there. It was a surreal experience, “strange, really, watching all the planes disappearing from the scope,” Bill Johnson remembers. “It was weird to come to work before midnight and just watch the scope gradually go blank. I was stationed at Luke Air Force Base, (Ariz.), at the time, looking all the way from California to New Mexico, and there wasn't anything in the sky.”

It was the ultimate Cold War challenge: For 12 hours on Oct. 14, 1961, virtually all North American civilian aviation was halted so the U.S. Air Force could determine its air defense readiness. Air Defense Command's 41 interceptor squadrons, 25 Air National Guard squadrons and support aircraft from throughout the military — even the Royal Canadian Air Force — fought the simulated air war.

More than 1,000

fighter-interceptors were on full alert when the massive exercise began, and 400 Strategic Air Command bombers and tankers were deployed within 15 minutes to test the air defense ground environment.¹

The North American Air Defense Command exercise — Sky Shield II — was an impressive display of America's air defense capabilities and the greatest war game of Johnson's 30-year career. “During peacetime air defense is very difficult, because you've got a lot of friendly people flying around,” the retired Air Force chief master sergeant says. “During a ‘war’ it's easy, because you know who the good guys are. Sky Shield II was a great exercise, because we really got to fight.”

But what really struck Johnson back then was the talk of Russian trawlers picked up by radar off the East and West coasts of the United States. “They weren't fishing boats, really, but they were out there,” he recalls.

Spies or fishermen —

who's to say? But that autumn of 1961, there was the pervading sense that *the Reds were out there*. It was the Cold War, after all, and the Soviet threat scared the hell out of men, women and children from Topeka to Tupelo. America was facing its fears head-on, using the most sophisticated air defense system ever built to thwart a Soviet bomber attack. Sky Shield II proved the system fairly effective, especially at medium and high altitudes. But it also confirmed a weakness: the hostile, low-altitude bomber plane using electronic countermeasures to jam America's radars.²

Some F-104A “Starfighter” pilots get a bird’s-eye view of San Francisco’s Golden Gate Bridge. The airplanes were assigned to the 83rd Fighter Interceptor Squadron, Hamilton Air Force Base, Calif., long since closed.

“The threat was the bird with the red star,” says retired Air Force Col. Connie Mac Hostetler, an F-101 radar intercept officer at Dover Air Force Base, Del., in the early 1960s. “I was in the 98th Fighter Interceptor Squadron and there were squadrons like ours all over the country and we all did the same thing. We had aircraft on alert, slept in alert hangars — right at the end of the runway in most cases — and if an ‘unknown’ popped up in the airspace, we were scrambled. The controller would send us out to the unknown, we’d fly up alongside it, take a look and report back what we saw.

“We could be awakened in the middle of the night, 1 in the morning, it didn’t make any difference. And we had to be airborne in five minutes.”

Soviet bombers were indeed a high priority for the binational NORAD and its forces. As the fighting command, NORAD had many support organizations at its disposal: Canadian Air Command, the U.S. Air Force’s ADC, Army Air Defense Command, and Naval Forces Continental Air Defense Command/NORAD. At the time of Sky Shield II, a quarter of a million Canadians and Americans were operating a multilayered and interlocking system of sites, control centers, manned interceptors, and surface-to-air missiles to defend against a potential bomber attack.³

New enemy, new war

Forty years later, and for the second time in American history, civilian aviation was halted again. But this war was real. Sept. 11, 2001, was the deadliest terrorist attack the country had ever seen. Hijackers transformed airliners into weapons of war that day, striking America’s most revered symbols and murdering thousands of people in the grim process. A nation’s heart was broken.

The military action was swift: Air National Guard fighters were immediately scrambled in a desperate attempt to take back America’s skies. Amid the chaos, NORAD Commander Gen. Ralph E. Eberhart ordered a modified version of the Cold War plan SCATANA — Security Control of Air Traffic and Air Navigation Aids — to help the Federal Aviation Administration in its efforts to clear the skies. It was the first time it had happened since Sky Shield II.

A new enemy had emerged and spiraled out of control. Several years earlier America’s air defense mission had become one of “air sovereignty” — the protection of America’s air borders from terrorists, drug runners, rogue nations, and unknown threats. The Cold War was over and America’s perception

One thing was constant before, during and after the Cold War: The mission was always focused outward.

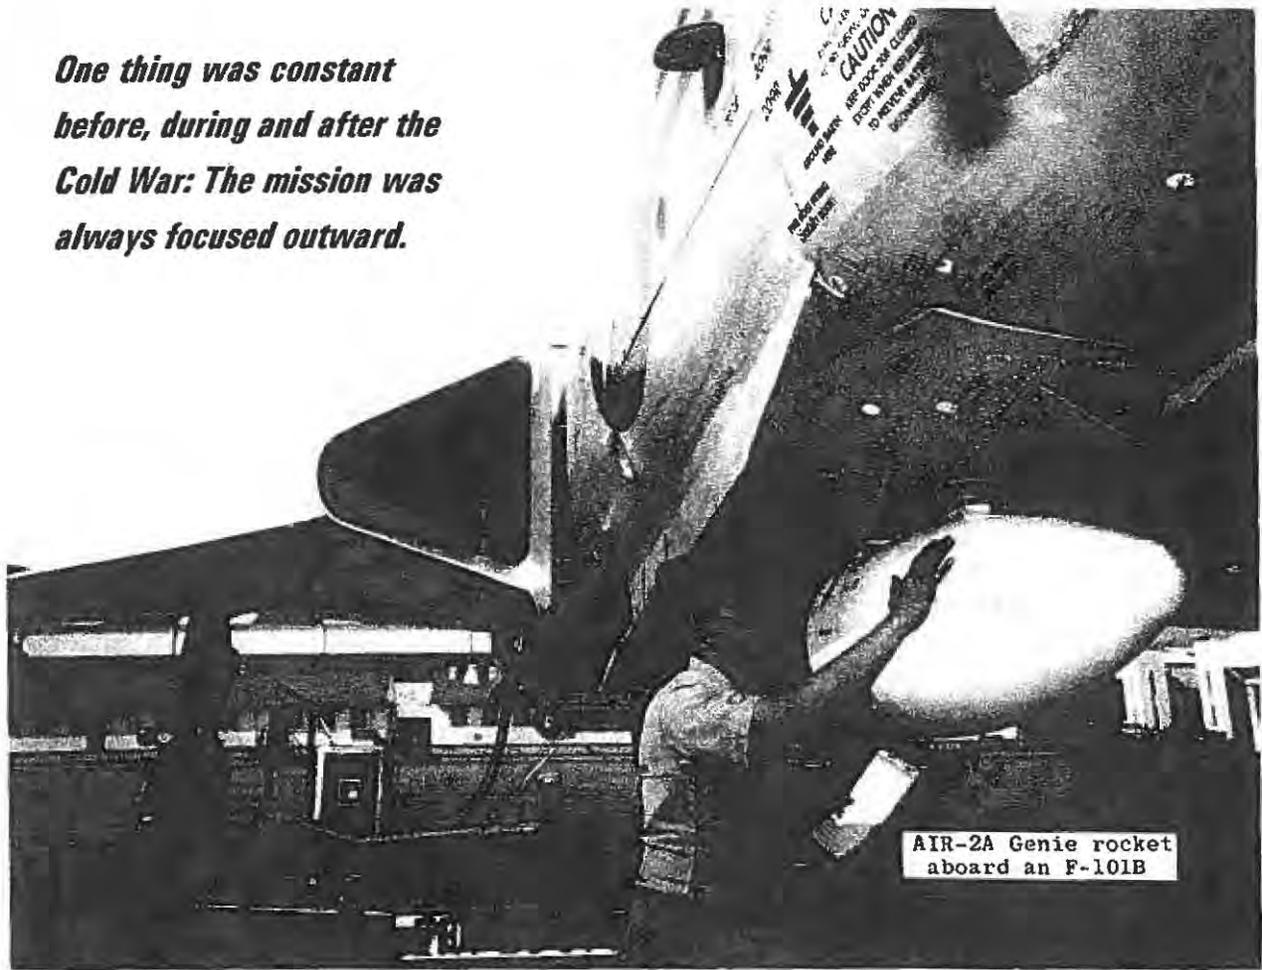

Photo courtesy of NORAD/USSPACECOM History Office

An airman inspects an AIR-2A “Genie” rocket on an F-101B “Voodoo.” When the Voodoo entered service in 1957, it was the heaviest single-seat fighter the Air Force had seen.

of the Soviet bomber threat had changed dramatically.

Seven Air National Guard squadrons were dedicated to the NORAD (since renamed North American *Aerospace* Defense Command) air sovereignty mission before that tragic September morning; 14 fighter jets were on 24-hour alert, ready to fly when called upon. Airmen at the nation’s three air defense sectors monitored the skies around the clock for any unknowns trying to enter sovereign American airspace.

The mission had changed: The last of the regular Air Force’s fighter-interceptor squadrons — the 48th at Langley Air Force Base, Va., — had closed

in 1991, ADC was long gone, Cold War radar sites had for years been abandoned. A few thousand people — a far cry from air defense forces of the 1950s and 1960s — were performing NORAD’s continental air sovereignty mission as members of 1st Air Force and the Continental United States NORAD Region.

“Our emphasis on the air defense role started fading with the meltdown of the Soviet Union,” says retired Maj. Gen. Larry K. Arnold, 1st Air Force and CONR commander from December 1997 through July 2002. “However, we still maintained an air defense capability.”⁴

One thing was constant before, during and after

the Cold War: The mission was always focused outward. "We always viewed an attack from within our borders as a law enforcement issue, not as an air defense issue," Arnold explains. "The reality is that any attack within the United States by any type of weapon has become an air defense issue."⁵

Cold War frenzy

In the four decades between Sky Shield II and SCATANA, America's air defense operations had seen many changes and challenges.

The Cold War frenzy began the summer of 1949 when America learned the Soviets had detonated an atomic bomb. The North Korean invasion of South Korea on June 25, 1950, only made matters worse. The Air Force, fearful of an all-out war with the Soviets, put its air defense forces on special alert. Major weaknesses were discovered, leading to the development of a new air defense command and control structure and Air Defense Identification Zones along the nation's frontiers.⁶

The U.S. Army Corps of Engineers was dispatched, and began building radar sites for America's new permanent air defense network.⁷ By 1951, one of the first command and control stations was under construction at McChord Air Force Base, Wash. America's air defense mission was taking shape and the country was divided into 11 continental United States air defense regions.⁸

Searching for enemy planes wasn't left to the military alone — vigilance was the operative word for soldier and citizen alike. In 1952, the Air Force was actively recruiting for the Ground Observer Corps, civilian volunteers who would eye the skies for bombers penetrating American airspace.

In an era of McCarthyism and backyard bomb shelters, radio spots like this inspired 305,000 people to join: "*It may not be a very cheerful thought, but the Reds right now have about a thousand bombers that are quite capable of destroying at least 89 American cities in one*

raid. ... Won't you help protect your country, your town, your children? Call your local Civil Defense Office and join the Ground Observer Corps today."⁹

Air defense enthusiast Gene McManus was a member of the GOC unit "Hotel Kilo 25 Black" in the mid-1950s in Baltimore, Ohio.

"Back in those days, most of my friends and I were interested in the military and really wanted to be a part of it," McManus remembers. "I was in high school at the time ... we operated out of a small building with no facilities whatsoever, but it had windows you could take out and look through. If we heard an airplane, we'd rush out the door, find it in the air with our binoculars and try to identify it as best we could. We'd 'guesstimate' its altitude and heading and what kind of aircraft it was, and then we'd pick up the phone and call the operator at the filter center for an 'aircraft flash.' I think the whole thing was manned by high school kids. But we filled in the gaps until what became ADC radar sites were implemented."

The GOC performed its patriotic duty until its deactivation in early 1959 when short-range radars were deployed to detect low-flying airplanes.

As Hotel Kilo 25 Black searched for enemy bombers, an even scarier threat was emerging: the Soviet Intercontinental Ballistic Missile, or ICBM. America became painfully aware of this new danger on Oct. 4, 1957, when the Soviet Union launched Sputnik — man's first artificial satellite — into space. What frightened the most astute observer was how Sputnik was launched: by a ballistic missile that could carry a nuclear warhead.¹⁰ With Sputnik came the realization that the enemy could possibly circumvent continental air defenses.¹¹

The Soviet ICBM, heavy on the minds of the Cold Warriors, would ultimately change the nature of the mission. Not everyone agreed how the

Soviets would strike, but the Air Force believed an ICBM attack would be followed by waves of strategic bombers. ¹² The bomber threat alone was very real, but many Congressmen thought money spent on bomber defense was wasted because of the overwhelming ICBM capability. Budget cuts to radar sites and the new Semiautomatic Ground Environment—SAGE—command and control program followed. ¹³

Nevertheless, America's air defenses were mighty. In the late 1950s and early 1960s, nearly 100,000 people were assigned to ADC, the command that provided continental air defense resources for NORAD. ¹⁴ And several Air National Guard interceptor squadrons were participating successfully in the runway alert program. ¹⁵ By the end of 1961, NORAD controlled more than 100 fighter-interceptor squadrons, including some from the Canadian Forces; Boeing-Michigan Aeronautical Research Center, or "BOMARC," unmanned interceptor missiles; and "Nike" surface-to-air missiles. ¹⁶

The SAGE network was completed that year and tied into 78 radar sites on the DEW (Distant Early Warning) Line, which stretched from Cape Lisburne, Alaska, to Cape Dyer, Canada. ¹⁷ The Mid-Canada Line, 1,000 miles south of the DEW Line, and the Pinetree Line on the American-Canadian border, bolstered the radar picture, potentially giving the countries a two- to three-hour warning of a bomber attack. ¹⁸ If the enemy was coming from either the Pacific or Atlantic, the Texas Tower radar platforms on the East Coast, Navy picket ships and dirigibles, and EC-121 early warning aircraft would act as offshore barriers. ¹⁹

Two F-4 "Phantoms" intercept and escort a Soviet "Bear" bomber, the airplane that tested America's air defense force throughout the Cold War. The first of the Air Force's F-4s were delivered to Air Defense Command on May 27, 1963.

Wise SAGE system

Donald Bunce was a weapons controller at the Grand Forks Air Defense Sector, N.D., those booming years. His job entailed the four basic air defense functions: detect, identify, intercept, and destroy, "though we never really got to the last function," the retired Air Force colonel remembers. "We would monitor inbound aircraft from the north, northwest and northeast into our sector and before they got far, we'd identify them as friendly or unknown. If they were unknown, we'd scramble Grand Forks F-101s or F-89s from Fargo, (N.D.), to intercept. We did this by monitoring a radar scope, but SAGE was very new technology then. It was the first automated air defense system ... we had a lot of kinks to work out."

Photo courtesy of NORAD/USSPACECOM History Office

Johnson, too, remembers those early days. A few years before participating in Sky Shield II, his first Air Force assignment was to the SAGE test team in Massachusetts. It was 1955, and he and his fellow airmen were helping develop the AN/FSQ-7, a computer specifically designed for the air defense battle.

“The FSQ-7 actually became the first SAGE,” Johnson says. “It did a great job, although it probably didn’t have one ‘meg’ of RAM. But with SAGE you didn’t have guys plotting airplanes on Plexiglas anymore. With that manual air defense system, you could only see about 200 miles from where you were located.”

In the early 1950s, when airmen charted aircraft positions with a grease pencil, Ground Control

By the end of 1961, NORAD controlled more than 100 fighter-interceptor squadrons, including some from the Canadian Forces.

Intercept sites consisted of a search radar, height-finder radar and devices for communicating with interceptor pilots.²⁰ The high-tech SAGE would use radar and computers to paint a clear picture of the speed, location and direction of all planes in radar range.²¹

“In retrospect ... it was really a phenomenal experience helping put this thing together,” Johnson says. “Most of us GIs were just GIs, we had an assignment and didn’t see ourselves in the same vein as astronauts or anything. But now I realize we were involved in something that had a big impact on the country.”

By 1962, after years of research and development, SAGE was operational at eight regional combat centers and 22 direction centers around the country.²² Each SAGE combat center had many radar sites sending data to its respective SAGE direction center. The SAGE direction center sent the data to its respective air division. The Phoenix Air Defense Sector, for instance, sent its radar data to the 28th Air Division commander at Hamilton Air Force Base, Calif.

As modern and thorough as it was, the Air Force was well aware that SAGE blockhouses were vulnerable to Soviet ICBM attack. In the summer of 1961, even before SAGE was fully operational, NORAD planned for the Backup Interceptor Control system. Studies for an Airborne Warning and Control System were already underway.²³ The command’s own control center at Ent Air Force Base, Colo., wouldn’t stand up to Soviet attack any better than the SAGE blockhouse. Construction of the “rock” — 170,000 square feet of man-made caverns within Colorado’s Cheyenne Mountain — began in 1961 and was completed by 1966.²⁴

Ready to scramble

As the SAGE era progressed through the 1960s, hundreds of fighter pilots continued to guard America's skies from their alert shacks, scrambling to planes like Voodoos and Delta Darts at the first shrill tone of the alarm. Air Force bases dotted the landscape like diners on Route 66. Perrin Air Force Base, Texas; K.I. Sawyer Air Force Base, Mich.; Richards-Gebaur Air Force Base, Mo.; and Malmstrom Air Force Base, Mont.; were just a few ADC installations. Alert facilities were also found at many civil airports, from Atlantic City, N.J., to Walla Walla, Wash.

"There were so many bases in the interior of the country then," says retired Col. John D. Navin, former Vermont Air National Guard fighter-interceptor pilot. "And we had a number of fighter units across the northern tier, because it was popularly believed that a strike from the Soviet Union would come down over Canada. Early on, that's exactly what we were defending against—an attack over the poles."

When that unknown appeared and the alarm sounded, NORAD's fighter-interceptor pilots were ready, whether they encountered a lost civilian prop plane or a Soviet bomber off the coast of New England.

"Deterrence was the name of the game," says former fighter-interceptor pilot and retired Air Force Col. Harry Birkner. "We could not give someone the impression they could come over here and bomb us. That's what we wanted to portray, and that is what we did portray."

The training that pilots like Navin and Birkner received was intense and thorough. All-weather and instrument knowledge was crucial for air defense pilots who often flew their missions at night, when it would be easier for an unknown to enter American airspace.

That mission, in units like the 98th Fighter Interceptor Squadron, was written concisely to-the-

point: *"To provide active Air Defense for the area assigned by achieving and maintaining a high level of Operational Readiness which will enable the unit to detect, intercept, identify, and/or destroy any unknown or unfriendly forces, under all conditions of weather, daylight or darkness."* 25

Retired Air Force Col. Bill Stanfill remembers learning that very mission as a young lieutenant fresh out of flight school in 1966. "I entered Air Defense Command at Perrin Air Force Base, Sherman, Texas," he says. "It was the training base for ADC, and all ADC interceptor pilots went there first. We had six weeks of instrument training in the backseat of a T-33 under the hood. That made us all pretty darn good all-weather pilots.

"There were three interceptors then: the F-101, 102 and 106. Everyone trained on the F-102, then went on to their assignments from there."

Beyond the basics, the Air Force Interceptor Weapons School was the pinnacle of learning air defense for ground controller and flier alike. "I went twice to Interceptor Weapons School, once as a controller and once as a pilot," Birkner says. "It was one of the best schools for aviators I've ever been through. And for air defense, there was no better school and group of instructors anywhere. Controllers and pilots actually got to debrief the mission together, unlike in the real world where controllers are hundreds of miles away."

A former IWS commander, retired Air Force Col. Ron Stull, says the school "was the heart and soul of teaching air defense." Fourteen-hour training days were not uncommon, he says.

According to *SabreJet Classics* magazine, IWS instructors "considered themselves to be the 'elite' of the all-weather interceptor business, as they were always ready to try something new and different. The instructors developed tactics to counter the electronic countermeasures

NORAD'S FIGHTER FORCE

Through the years, NORAD has controlled the following approximate numbers of interceptor aircraft dedicated to its aerospace control mission, like this F-104A assigned to the 83rd Fighter Interceptor Squadron, Hamilton Air Force Base, Calif.

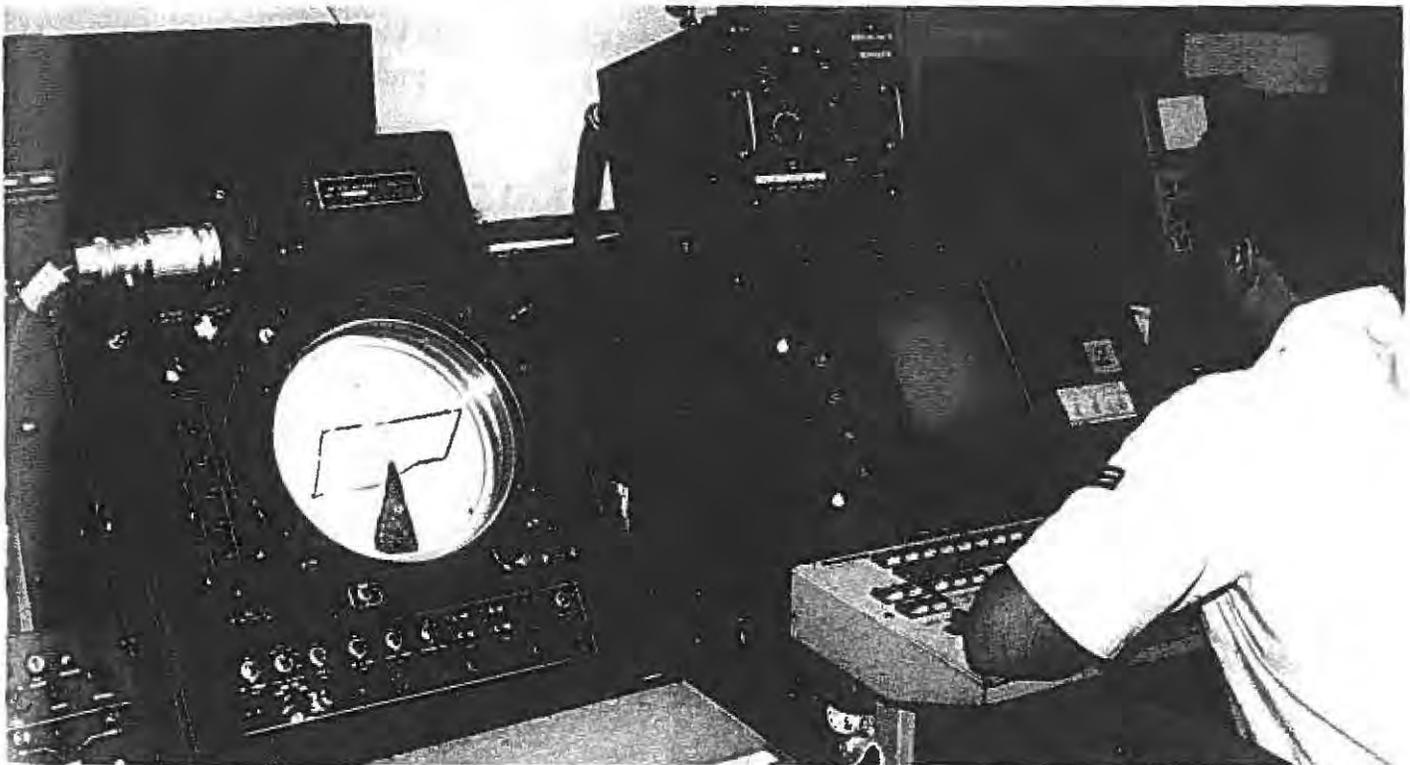

1958	5,800 *
1959	750
1976	325
1990	200
1997	175
2001	20 **

A formation of F-101 "Voodoos" assigned to the 15th Fighter Interceptor Squadron, Davis-Monthan Air Force Base, Ariz., flies through the clouds in this circa 1960 photo. Because of its weapons mix, speed and range, the Voodoo had no equal as an air defense interceptor.

anticipated by the Soviet bomber forces, perfected night firing on multiple target situations and regularly flew (illegally) in weather without an available alternate whenever their area of operations was socked in. The IWS instructors literally pushed the envelope of all-weather tactics to the limit (and beyond) of safety." ²⁶

"The Russians knew they could destroy us, but we also could destroy them."

**— Dr. Rick Sturdevant,
deputy director,
Air Force Space Command History Office**

Dying mission

Between the nation's highly trained air defense pilots and controllers — all using state-of-the-art equipment — America's ability to fend off an air attack remained strong. Air defense, however, was not the Air Force's top priority, and never was. It went back to the days of the Army Air Forces, when in the mid-1940s, air power projection advocates such as generals Carl A. Spaatz and Curtis LeMay saw delivery of the atomic bomb as the primary mission. ²⁷ The idea of offensive air power as the best method of defense dominated Air Force thinking for years to come; air defense planners began fighting the budget battle. ²⁸

Years later, the fight was still on. In February 1966, Defense Secretary Robert McNamara put it this way to the House Subcommittee on Department of Defense Appropriations: "The elaborate defenses which we erected against the

Flight crews from the Texas Air National Guard 147th Fighter Interceptor Group sit alert in this circa 1960 photo. In August 1960 the unit began flying the F-102A fighter-interceptor to guard the Texas Gulf coast.

Photo courtesy of 147th Fighter Wing, Texas Air National Guard

Soviets' bomber threat during the 1960s no longer retain their original importance. Today, with no defense against the major threat, Soviet ICBMs, our anti-bomber defenses alone would contribute very little to our damage limiting objective ... for this reason we have been engaging in the past five years in a major restructuring of our defenses." ²⁹

McNamara was speaking at a tumultuous time for the United States military: the Vietnam War. A policy emerged during this era that had fateful consequences for air defense: "Mutual Assured Destruction," the idea that both superpowers would avoid war because a missile or bomber attack would lead to a devastating counterattack. ³⁰

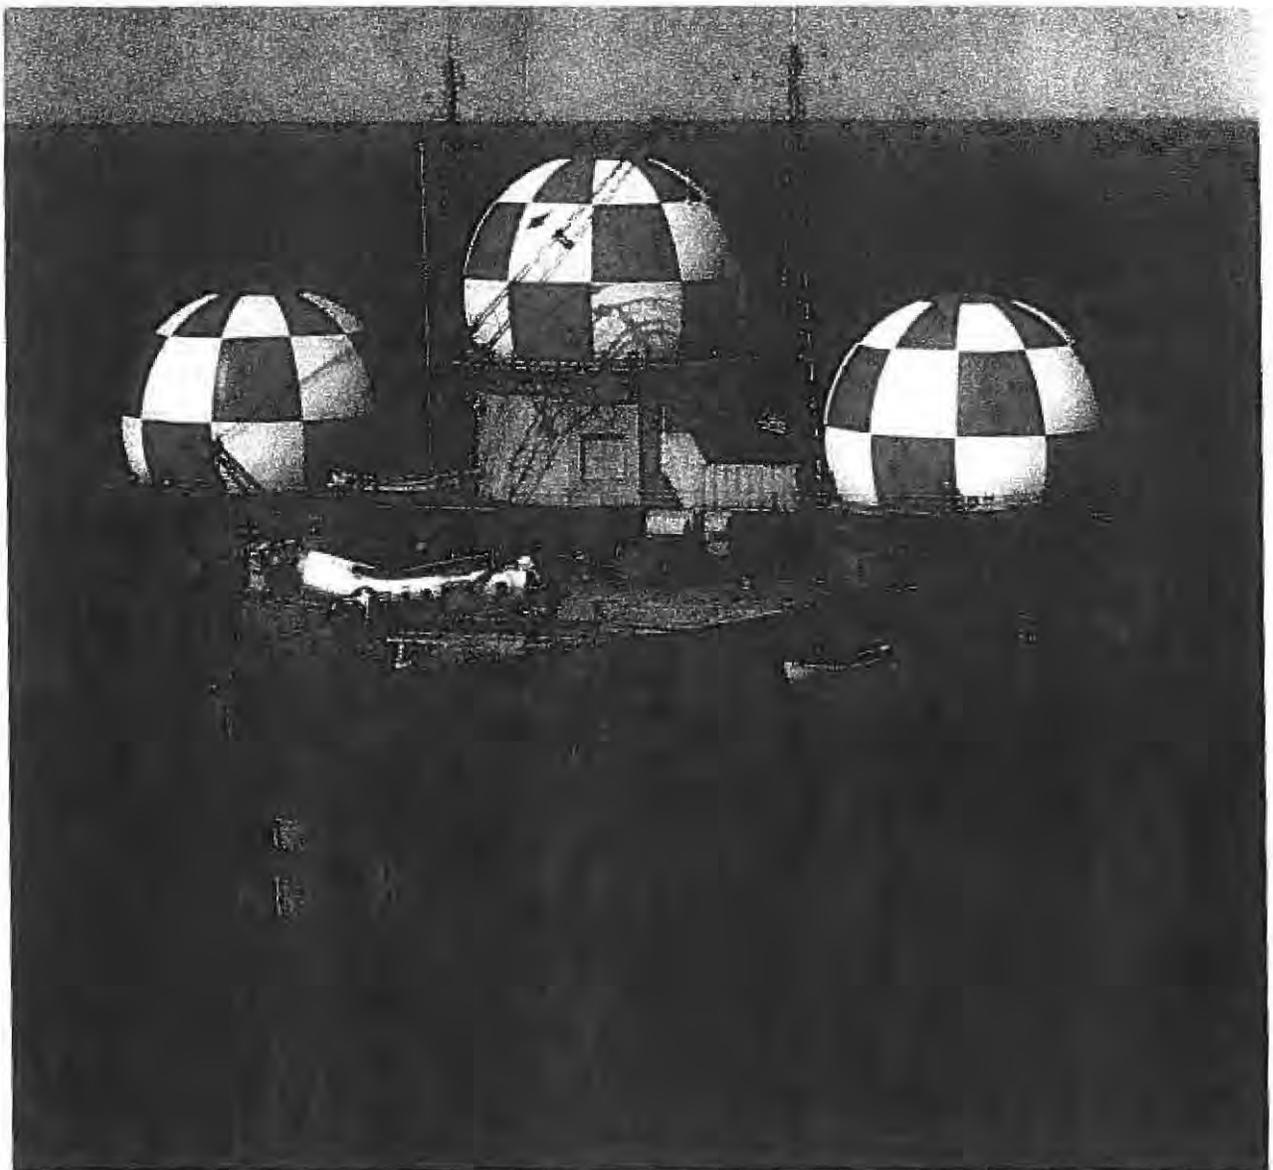

"The MAD concept was employed to avoid nuclear war," explains Dr. Rick Sturdevant, deputy director of the Air Force Space Command History

Office. "The Russians knew they could destroy us, but we also could destroy them. Because each superpower had the capability to obliterate the other many times over, it would have been irrational to engage in direct, full-scale war. Mutual Assured Destruction, which often went by the less alarming euphemism 'nuclear deterrence,' was based on the belief that the Soviet Union would not be likely to launch a first strike if its leaders believed the U.S. would deliver an equally devastating retaliatory blow."

The era of MAD, the ICBM and Vietnam is characterized by many in the business as the end of the traditional air defense mission. "After Vietnam, air defense had really changed," Birkner says, who left the 48th Fighter Interceptor Squadron at Langley for Southeast Asia in 1970. "When there

Right: The U.S. Navy's Airship Airborne Early Warning Squadron One operated manned blimps that were an integral part of the contiguous NORAD radar barrier. The mission of the blimps was to provide warning of an air attack originating from over the North Atlantic in the late 1950s.

Below: The Texas Towers — three manned radar platforms operated in the late 1950s and early 1960s off the East Coast — served as a NORAD control and warning system of over-water attacks. Crews on the towers worked in a perilous environment; on Jan. 15, 1961, Texas Tower No. 4 was ripped apart during a fierce storm. None of the 28 people aboard — a caretaker crew there to renovate the structure that February — survived. The last of the towers, No. 3, was dismantled in March 1963.

Photos courtesy of Marty Isham

were multiple warheads on missiles, it made a little radar site sitting at the tip of Florida somewhere kind of insignificant, and we all accepted that as the mission drew down and went to the Guard.”

As all eyes turned toward Vietnam, 13 regular Air Force fighter-interceptor squadrons closed their hangar doors.³¹

By 1971 there were 12 regular Air Force fighter-interceptor squadrons left in operation; three in the Canadian Forces; and 15 in the Air National Guard.³² The Air Force ADC had been renamed Aerospace Defense Command, and the number of SAGE direction centers in the continental United States had been reduced to six.³³

Retired Air Force Col. Connie Mac Hostetler witnessed the ever-changing mission from an excellent vantage: ADC headquarters in late 1972, upon his return from two tours in Vietnam. Working in the Chidlaw Building, downtown Colorado Springs, Colo., he was responsible for writing operating plans for all air defense units.

“During the time I was in Vietnam, a lot of ADC went over to the Guard units,” he says. “Many of the fighter-interceptor assets went to the Guard and a lot of the fighter-interceptor squadrons folded. The perimeter air defense idea came in and a lot of the internal air defense squadrons closed down.

“The rationale was: ‘Who is going to attack us from the inside? Who is going to attack Kansas City; Lockbourne (Air Force Base), Ohio; or Big Spring, Texas?’ So as the restructuring of air defense began, everyone realized that the Guard

could do the same job as the active duty units and the active duty could be used for active duty needs.”

“I think some people wondered about the Guard,” he says. “But the Guard guys were sharp: their hangars were spotless, you could almost eat off the floor. Their aircraft were extremely good and their crews were good.”

Says retired Air Force Maj. Jim Stumpf, a former F-101 radar intercept officer, 13th Fighter Interceptor Squadron, Glasgow Air Force Base, Mont.: “I got back from a tour in Vietnam and saw all these Guard units with 101s. As I kept watching this happen, the Guard units continued to do good work and take more and more of the mission.”

As America’s air defense posture drew down, one thing remained unchanged: the Soviet threat. The U.S.S.R. continued to develop and refine its bomber defense, even after agreeing to an antiballistic missile treaty in 1972.³⁴ United States policy makers continued to believe a bomber defense was meaningless without a missile defense.

“It was clear to many people in the military, at least in their own minds, that the need for a robust air sovereignty fighter force structure was not necessary,” says Navin, the former Vermont Guardsman and longtime air defense proponent.

“We didn’t all necessarily share that opinion, but there were enough people in the Department of Defense — at the decision-making level — who

***The mission was fading away.
Vietnam was ending, and — in the
military ranks anyway — talk was of
MiG kills and combat, not
continental air defense.***

didn't see it as necessary.”

Air defense did get a shot in the arm in October 1971, when a Cuban airplane landed in New Orleans after flying undetected through American airspace. A congressional inquiry into the incident revealed that the 1,500-mile southern border between California and Florida had become virtually defenseless. In May 1972, Secretary of Defense Melvin R. Laird established the Southern Air Defense Network, which consisted of a reopened radar network along the Gulf Coast and alert fighter-interceptors at four bases.³⁵

By sheer coincidence, the Louisiana Air National Guard 159th Tactical Fighter Group, based in New Orleans, had left the air defense business for a tactical role only months before the Cuban plane flew into the port city.

“It was a big surprise to everyone when that plane came in, but we were even more surprised that we were shutting down our alert mission,” says Chief Master Sgt. Brian Krail, a Louisiana Air National Guardsman since 1966. “We were transitioning from F-102 fighter-interceptors to F-100s at the time of that incident. The F-100s we got were coming out of Vietnam, and they were outdated. The unit was changing. We had gone from a straight air defense mission throughout the 1960s to an air-to-ground tactical mission.”

The Louisiana airmen had spent their Cold War days on alert with loaded F-102s ready to go at the end of the runway.

“We had, right on our ramp, two hangars with F-102s sitting there 24 hours a day, with pilots and crew, 365 days a year,” Krail says. “We practiced mass loads and turnaround loads and all the procedures that go along with air defense. We would load everything we possibly could to get airborne to protect the country. Then we did turnaround loads when they'd come back from the mission, which meant we would refuel and reload the airplanes and get ready to launch for a second attack. All of a sudden we had F-100s on the ramp ... it was a shock to all of us.”

Peacetime protection

The mission was fading away. Vietnam was ending, and — in the military ranks anyway — talk was of MiG kills and combat, not continental air defense.

“All the heroes were those who fought the war in Vietnam,” says retired Brig. Gen. John Broman, who spent most of his 34-year career in air defense at the 148th Fighter Wing, Minnesota Air National Guard.

“There is a tremendous society of brotherhood among fighter pilots, unequaled to anything I’ve ever seen. With air-to-air skills comes tremendous prestige. It’s very difficult to compete with that.

“There’s an old saying I find so true, that ‘generals like to train to fight the last war,’ so after Vietnam, we trained fighter-to-fighter,” the former fighter-interceptor pilot says. “Then the radar environment deteriorated so badly, it almost made no sense to have interceptors. The air defense community had totally given up on the mission, it had been relegated to the Guard.”

By 1976, 20 squadrons played an air defense role — 10 were from the Air National Guard. 36 Aerospace Defense Command — referred to as ADCOM by this time — was responsible for “peacetime protection of air sovereignty and early warning against bomber attack.”³⁷

Photo by Marvin Cox, courtesy of Marty Isham

Only a few short years passed before ADCOM was disestablished — most of its assets absorbed into the Air Force Tactical Air Command. The new organization, Air Defense Tactical Air Command, or ADTAC, was established Oct. 1, 1979.³⁸ It was responsible for air defense under NORAD and reorganized as Headquarters 1st Air Force Dec. 6, 1985.³⁹

As America’s air defense operations were downsizing and reorganizing, Russian “Bear” bombers were frequent fliers in North American airspace, flying off the Canadian and Alaskan and East coasts of the United States. America’s air defenders — many flying F-15s and F-16s by then — were perfectly willing to “escort” them through. The Russians kept NORAD’s 18 fighter-interceptor squadrons fairly busy.⁴⁰

“It’s common knowledge that the Russians flew Tu-95 Bear aircraft off the East Coast of the United States on a fairly regular basis,” says Lt. Col. Mark Stuart, a Soviet strategic systems analyst for 1st Air Force in the mid- to late-1980s. “It was a very busy time for air defense. We took the threat of aircraft penetrating United States airspace very seriously, because the Tu-95 is capable of carrying nuclear weapons. They were flying two-ships (a pair of airplanes) of those ... then they’d deploy

Photo courtesy of Marty Isham

Naval assets, the Bear 'D' and 'F' models, into Cuba. And they were all very capable aircraft at the time."

The Russians were proving a point, says Col. Chip Cumm, commander of the Massachusetts Air National Guard 102nd Fighter Wing alert detachment, Loring Air Force Base, Maine, in the late 1980s. "They wanted us to know they could do it and we wanted them to know we could get to them before they could hurt us," he says. "So our pilots picked them up way, way out over the water. Most of our intercepts were actually closer to Iceland than the United States."

"Those missions lasted five to eight hours, and we couldn't do it without a tanker for refueling," Cumm adds. "Once in awhile the AWACS

(Airborne Warning and Control System aircraft) was there, but other times we just went out and found them on our own. With an F-15 radar against a Bear bomber, it's not as hard as it sounds. You can cover a lot of airspace with an F-15 radar against a bomber-size target at 30,000 feet. You can see them a long way away."

The camaraderie in the detachment — about 25 people — was unbelievable, Cumm says. Like family. And like so many other air defense units before it, it would cease to exist. It was 1993. The Soviet Union was no more. The Berlin Wall had fallen. All regular Air Force fighter-interceptor squadrons had deactivated.

The Cold War was over.

But the professionalism and pride in the mission

would never die.

"Even after it was announced the unit would shut down, we had a no-notice NORAD alert force evaluation and got the first 'Outstanding' rating given to an alert detachment — and that was an Outstanding across the board," Cumm says. "Our people were so good, they could teach the inspectors how to do the business. Nobody did it better."

And when all that went away, "It was horrible ... gut-wrenching to see it close.

"It was the best job I ever had."

NEW ERA, NEW STRUGGLES: Surviving the post-Cold War

CHAPTER 2

**Air National Guard protects America's air borders
from the frightening, wily unknown**

An F-16 assigned to the North Dakota Air National Guard 119th Fighter Wing breaks from a fellow "Happy Hooligan" in blue November skies.

U.S. Air Force photo by Staff Sgt. Greg L. Davis

It was an unusually cold Virginia afternoon, Dec. 6, 1985, the day 1st Air Force reactivated for the third time in history. A precise fingertip formation of four F-15 "Eagles" soared over Langley Air Force Base at the ceremony to celebrate the occasion. As the deafening roar of the jet fighters filled the winter air, Maj. Gen. Buford D. Lary couldn't help but be proud: it was a perfect fly-by and the pilots above were his own, members of the 48th Fighter Interceptor Squadron and part of his new command. First Air Force was taking responsibility for America's air sovereignty and Lary

was becoming the leader of a more focused and — in his words — "cleaner" organization.

First Air Force was replacing Air Defense Tactical Air Command, a staff organization that had lived a strange, confusing existence since 1979. "Nobody even knew what ADTAC was," admits one insider. Although part of Tactical Air Command headquarters and technically in charge of TAC air defense forces, ADTAC was separate from TAC in both structure and operation and never really accepted into TAC's inner sanctum.¹ There was even a nickname for air defenders back then:

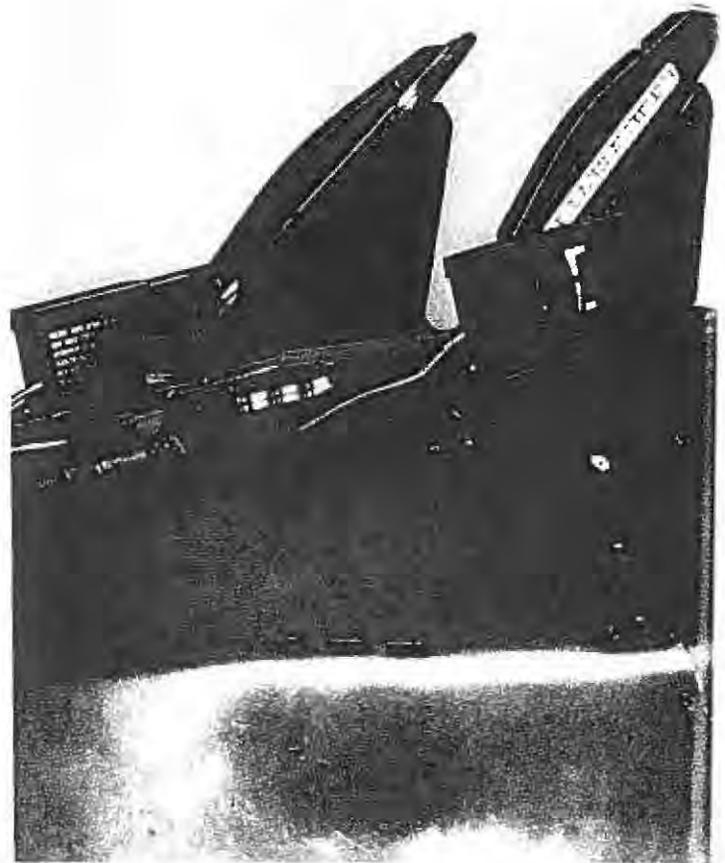

“Coneheads.” Just like the “Saturday Night Live” characters that share their name, the ADTAC folks were the weird neighbors next door.²

The rebirth of 1st Air Force was good for the mission, Lary says. “Morale went up,” the retired lieutenant general recalls. “We were now a command that had a peacetime role, a warfighting role, a command and control system right there at Langley, and our own command post. And we had some well-qualified people to do all this.”

The warfighting role was accomplished with the creation of the Continental United States North American Aerospace Defense Command Region — CONR — in February 1986.³ This ensured air sovereignty remained under NORAD direction; the CONR command structure would parallel that of the Alaskan and Canadian NORAD regions. “I was commander of 1st Air Force in peacetime and commander of the Continental NORAD Region in wartime,” Lary says. “You never are one or the other, you are sort of both, but become beholden to the commander in chief of NORAD in the warfighting role and the commander of TAC in peacetime.”

Air sovereignty had found its niche: Lary had direct lines of communication with NORAD’s four continental air division commanders; the commanders, each with their own geographical area to protect, could launch fighter jets at a moment’s notice. Command and control technicians at the nation’s air defense sectors were eyeing radar scopes for any “unknowns” approaching the borders. They were all working together under the prestige of a numbered air force, the “senior warfighting echelon of the United States Air Force.”⁴ But the years ahead would be challenging as old threats died and new threats emerged.

A pilot from the 120th Fighter Wing, Montana Air National Guard, prepares to lower the canopy of an F-16C prior to leaving on a training mission.

That old threat kept 1st Air Force busy during Lary’s tenure and was alive and well when he relinquished command to Maj. Gen. Jimmie V. Adams in July 1987.

“The Soviet ‘Bear’ bomber was the major threat we faced in sizable numbers, even then,” says retired Gen. Adams. “We were quite busy contending with active scrambles for that intrusion into our sovereign airspace.”

The Soviets deployed bombers to Cuba throughout the 1980s, flying too close to the United States for NORAD comfort. The cat-and-mouse game at 30,000 feet was a nuisance the Air Force

U.S. Air Force photo by Senior Master Sgt. Eric J. Peterson

could handle, but what about the new threat on the horizon? The fast and low-flying Soviet cruise missile could evade radar coverage and presented a new challenge for America's air sovereignty team.

"There was an evolving cruise missile threat associated with the bombers and growing concern about the manned bomber and cruise missile nuclear threat," Adams explains. "And the capability we had against cruise missiles was limited. It is a very small target and very difficult to detect on radar, so I was much more comfortable dealing with the bomber threat."

The American-Canadian partnership at NORAD worked to modernize the aging air defense system and improve the radar coverage the entire mission

relied upon. By the late 1980s the North Warning System was under construction to replace the Distant Early Warning Line arctic radar chain, but wouldn't achieve initial capability until 1995.⁵ The newly created United States Space Command, meanwhile, was charged with providing NORAD missile warning and space surveillance capability.⁶

But North America's strongest line of defense remained its most basic: 52 armed F-106s, F-15s and F-16s operated by both the regular Air Force and Air National Guard. A 1974 Department of Defense study had concluded that two fighters each on continuous alert at 26 sites was adequate to maintain peacetime air sovereignty — a standard that continued through the late 1980s.⁷

Mission impossible?

Despite modernization attempts and the relatively healthy fighter force, a crucial part of America's air defense structure was lost in the 1980s, says retired Brig. Gen. John Broman, former commander of the 148th Fighter Wing, Minnesota Air National Guard. Between 1986 and 1988, 17 of 24 radar sites on the Pinetree Line on the U.S.-Canadian border were closed.⁸ Combined with the subsequent elimination of Canada's Air Defense Identification Zone — ADIZ — air defense on the northern tier was becoming "mission impossible," Broman says. With no ADIZ, all flights originating in Canada and crossing the U.S. border were presumed "friendly by origin."⁹

"When the radar sites closed down, there was a particularly interesting lack of capability," Broman explains. "Eventually there was also no radar coverage along the west coast of Canada. An airplane with enough range could enter Canada from the west and then just turn south to fly over the United States at any altitude below positive controlled airspace without any risk of detection by any air defense radar or any interest by Federal Aviation Administration radar."

For years fighter pilots had sat alert at places like Selfridge Air National Guard Base, Mich.; Niagara Falls International Airport, N.Y.; and Hector Field, N.D. But with no way to identify an airborne threat, or "unknown rider," their very existence was called into question.

As 1st Air Force commander, Adams was faced with a dilemma. In 1988 he recommended NORAD close six alert sites near the U.S.-Canadian border — sites operated by the Air National Guard.¹⁰ "Once we took away the Pinetree Line and ADIZ, I had no way of picking up those unknowns because they were friendly by definition, and that was agreed to by the U.S. and Canadian governments as a way to pay for modernizing the DEW Line," Adams says. "The question I had when I came aboard was: 'If I can't identify these guys as unknowns, why would I want

airplanes on alert to go intercept them?' I had no procedures and no radar in place and no capability to exercise an ADIZ. ... It made no sense to spend all this money on 24-hour-a-day alert. But I was a little naïve about the powers of the Air National Guard, and naïve that it was 50 jobs per alert site. ... I created a real fire storm."

The idea didn't materialize right away, but was a sign of things to come. Peripheral defense

— fighter-interceptors at strategic locations on the rim of the continental United States — was the wave of the future.

By 1990 the Department of Defense called for eventual closure of the northern tier alert sites.¹¹ American and Canadian fighters, in smaller numbers but formidable foes nonetheless, were providing North America's air sovereignty: protection from drug-smuggling aircraft and other unknown airborne threats. But the glory days of air defense — when hundreds of NORAD fighters were ready to intercept and destroy fleets of Soviet bombers — were over.

Fit for a militia

As the Soviet Union crumbled and the decade gave way to overseas operations like Desert Storm and Joint Endeavor, air defense requirements continued to change. America wasn't so worried about Soviet bombers anymore and an attack on U.S. soil seemed unlikely. Money was tight and the Air Force was downsizing and reorganizing. In the early 1990s the Air Force consolidated from 13 to eight major commands and inactivated many proud wings and squadrons; by 1998 it would cut

its 600,000-plus personnel almost in half.¹² As early as 1990, senior leaders were exploring ways to spare the air sovereignty mission from the budget ax.¹³

A smaller 1st Air Force staff moved its headquarters to Tyndall Air Force Base, Fla., in late 1991. All air divisions had inactivated and the continental United States was divided into four air defense sectors. Several 1st Air Force duties had been reassigned elsewhere. By the end of the year, the 48th Fighter Interceptor Squadron — the last regular Air Force squadron of its kind — inactivated, leaving air defense flying to 11 Air

National Guard fighter wings. ¹⁴

With all air defense flying in Air Guard hands, it seemed natural to many that air defense sector operations — the command and control aspect of the mission involving aircraft surveillance and identification — also reside there.

A lead supporter of the idea was Air Force Chief of Staff Gen. Merrill A. McPeak. “The Air Guard had been performing the mission for many years,” says the retired general. “They understood it well. . . Why should they not command the numbered air force that stood at the top of this activity?” ¹⁵

Former Air National Guard director, retired Maj. Gen. Donald Shepperd, says McPeak’s proposal was right on target. “General McPeak felt the Air National Guard had been the guardian of air defense for years and therefore command and control of the mission belonged with the Guard,” Shepperd says. “He also saw great force structure and money problems coming and thought if you put air defense in the Guard it becomes a Guard responsibility. It was one more fight he didn’t have to fight.”

Saving the mission was paramount, Shepperd believes. “The transition of 1st Air Force was about preserving some type of infrastructure simply because it did not seem wise to leave our air borders open. . . At that point it wasn’t about a Soviet attack, but about our air borders and our air sovereignty.”

By 1994, Air National Guard Maj. Gen. Philip G. Killey was in command of the federal mission — unheard of for a militiaman. His organization would become a strange hybrid: subordinate to NORAD, part Air Combat Command (formerly TAC), part National Guard Bureau, and misunderstood by many.

Killey, a South Dakotan and longtime fighter pilot, was to reorganize the entire numbered air force — about 1,300 people — from a regular Air

“The transition of 1st Air Force was about preserving some type of infrastructure simply because it did not seem wise to leave our air borders open. . . At that point it wasn’t about a Soviet attack, but about our air borders and our air sovereignty.”

Force to Air National Guard organization in less than three years. ¹⁶

The Air National Guard fighter wings of 1st Air Force wouldn't be affected. But the airmen at the Northeast, Southeast and Western air defense sectors; the headquarters staff; and two support squadrons; all had to be handled individually. A 1st Air Force transition team was formed to keep the evolving air sovereignty mission going as regular Air Force members were replaced by Guardsmen.

Retired Col. John D. Navin was Killey's right-hand man during the conversion. He emphasizes that the mission was foremost in their minds as they worked to take care of people first.

"We had to keep our people in focus as we turned an entire numbered air force over to Air National Guard command and control," the former Vermont Air National Guardsman says. "Even back then we kept an eye on Soviet long-range aviation capability, and no, didn't envision a wave of bombers coming over the poles like people thought in the 1950s and 1960s. However, we still believed the capability was there, maybe not the intent, but the capability. And we needed to have a capability to thwart that. The newer threat emerging was the rogue actor, the nation-state that had the capability and intent to use cruise missiles. We kept our eye on that threat as we made this transition."

Yes the Cold War was over, but "bottom line, air sovereignty means we need to know who's flying in our airspace," Killey said in a post-transition interview.

"We can't afford to have our skies, our borders

of our airspace, wide open to whoever wants to fly in. We need to know what that traffic is. And we need to have a system of identifying unknown aircraft." ¹⁷

Overshadowed by doubt

As Air Guard members joined 1st Air Force in the mid-to late-1990s, many signed waivers acknowledging their job would end if and when the mission did. Job security was no guarantee given the circumstances. ¹⁸

Historically, the mission had seen its share of struggles. "Air Force strategy through the years was one of forward engagement overseas," explains retired Col. William A. Scott, a former 1st Air Force vice commander with 30 years' Air Force experience in both air defense and tactical operations. "Back in the 1950s, '60s and '70s,

the Air Force world was split into two commands. Tactical Air Command fought wars 'over there,' and Aerospace Defense Command fought wars 'over here.' When ADCOM merged with TAC in 1979, the mission submerged into the 'over there' crowd who had

little time and little patience for homeland defense."

Was the transition of 1st Air Force even necessary? "There were people who did not believe there was any need for the transition of 1st Air Force and CONR simply because they did not see a need for the mission, period," Navin says.

Some believed air sovereignty was robbing from other areas in a time of Air Force-wide cutbacks, he says. Even some in the Air National Guard were reluctant to see money dedicated to homeland air defense, Navin concedes. "People did not see a need for that kind of Air National Guard manpower

"The newer threat emerging was the rogue actor, the nation-state that had the capability and intent to use cruise missiles."

Staff Sgt. Sarah Davis gathers information on an unknown aircraft while "on scope" at the Western Air Defense Sector, McChord Air Force Base, Wash.

in air defense," he says. "People thought it was an absolute waste to put that manpower into a mission area that would totally go away anyway."

In the early post-Cold War years, the military at large believed the air defense threat nonexistent, Scott says. "There were many people in both the Air National Guard and active duty Air Force who didn't believe in the mission," says the former commandant of the Air Force's Squadron Officer School. "The threat at the time was perceived as nil.

"The vast majority of the hurdles 1st Air Force and CONR faced were at the mid-management staff level of colonels and below. The one common thread of responsibility could be found at the highest levels — once given the specific responsibility of air defense and air sovereignty through their positions as commander in chief of NORAD or Air Combat Command, they wouldn't let the mission die."

Washington Air National Guard photo by Master Sgt. Randy La Brune

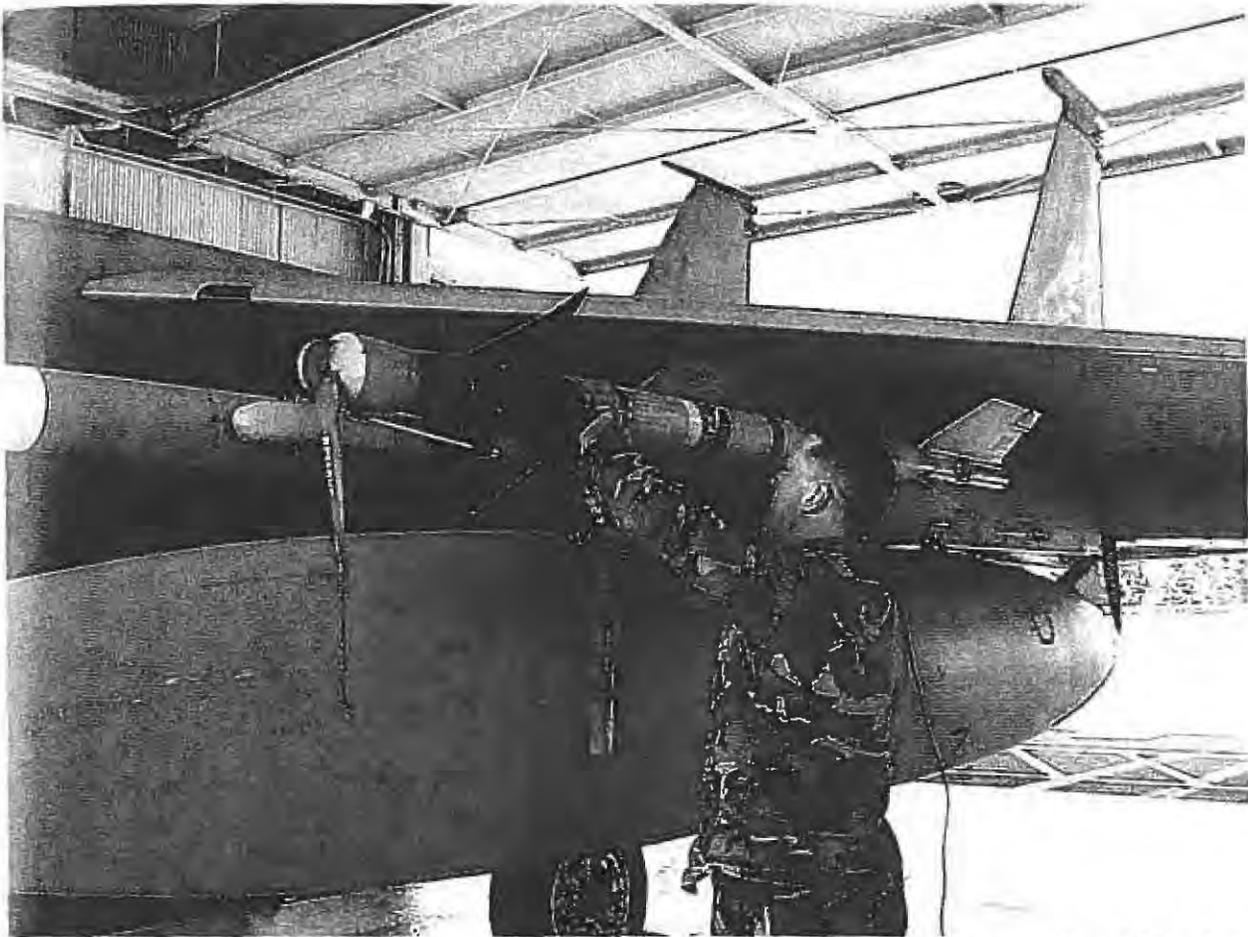

Photo courtesy of Western Air Defense Sector

An Oregon Air National Guard member from the 142nd Fighter Wing prepares an F-15 "Eagle" for flight.

But Scott says the mission remained underfunded and unpopular. A monumental challenge for Navin, Killey and the transition staff was proving to doubting military minds that 1st Air Force was a legitimate organization performing a legitimate mission.

"Major General Killey and I spent more time in the Pentagon trying to convince general officers that the mission was not only viable, but absolutely necessary, than I care to think about," Navin says. "Every single time, you'd walk away from there with that horrible feeling in the pit of your stomach and think, 'We're fighting a losing battle.'"

Shepperd says Air Force leaders may have lost interest in air defense. "We've seen this many times,"

he says. "When a mission is shed to the Guard, the Guard has to really fight for advocacy because there's none left in the Air Force and that has implications for ... funding and political advocacy."

Although the transition wasn't easy and not everyone agreed necessary, Killey believes it was the perfect example of the Total Force concept — the unified powers of the Air Force, Air National Guard and Air Force Reserve.¹⁹ The Air National Guard was relieving the Air Force of an important task as airmen were deploying far and wide and doing much more with

much less. The Air Force didn't have time for the non-war at home; the Gulf War and monitoring no-fly zones in Southwest Asia was much hotter.

Air sovereignty would live by default, Scott says: "Most of what people talked about back then wasn't military action, but the threat of embarrassment to the United States. We didn't think Cuban MiGs would attack us, but they'd embarrass us. That potential for political embarrassment was a problem for us and NORAD."

The reality through the growing pains was the mission itself. Right during the transition, a highly publicized incident reminded people why they were there in the first place.

On Feb. 24, 1996, two Brothers to the Rescue aircraft flew near Cuban airspace and were shot down by Cuban MiG fighter jets. Four people from the Miami-based exile organization were killed.

"First Air Force had the only around-the-clock command and operation centers capable of responding with Combat Air Patrols," Killey said in a 1998 interview. "Our quick and certain response not only proved that we are an indispensable member of the aerospace defense team, but that America was serious about its air sovereignty."²⁰

That winter day was a lively one at Tyndall's Southeast Air Defense Sector. Command and control technicians scrambled F-16s from the alert detachment of the 148th Fighter Wing, Minnesota Air National Guard. In only a few minutes, the pilots were over the blue Gulf waters assisting in the search-and-rescue operation. From monitoring radar scopes to launching airplanes, everyone did exactly what they were trained to do that day: protect America's air borders.²¹

The transition of 1st Air Force to Air National Guard command and control was nearly complete. Critical thinkers in headquarters briefing rooms were discussing the new threat on the horizon. Lurking in the shadows was a dangerous underworld of airborne drug-runners, terrorists and rogue nations with frightening capabilities.

"By about 1995, even before the Brothers to the Rescue incident, people at 1st Air Force were

talking about things like the rogue actors, the nation-states that had the capability and intent to use cruise missiles," Navin says. "We didn't use the word 'asymmetric' but began talking about terrorism."

"And by 1998, many people were talking about 1st Air Force and doing away with the

sectors and said we didn't need the mission," he continues. "That was only two years after the shoot-down of Brothers to the Rescue by the Cuban MiGs. Things fade into the recesses of peoples' minds rather rapidly."

Mission at risk

In December 1997, Maj. Gen. Larry K. Arnold assumed command of 1st Air Force, CONR and a dying mission. Earlier that year, the Department of Defense had released "The Report of the Quadrennial Defense Review." The QDR outlined the conversion of six continental air defense squadrons to general purpose, training or other missions.²² This "four-corners defense" idea called for alert sites at Cape Cod, Mass.; Homestead, Fla.; Riverside, Calif.; and Portland, Ore.²³ The other six squadrons in 1st Air Force, as suggested in the QDR, would convert to a multirole mission.

"There was always a movement afoot to further shut down 1st Air Force, CONR and the NORAD mission in general to the point that I always thought I might be out of there."

**— Retired Maj. Gen. Larry K. Arnold,
former 1st Air Force commander**

Below: Maj. John Larson, an F-16 pilot with the 119th Fighter Wing, North Dakota Air National Guard, completes a mission.

Photo by Master Sgt. William Quinn, 119th Fighter Wing, North Dakota Air National Guard

“When I first moved down to Tyndall as vice commander of 1st Air Force, the QDR had just been released,” Arnold, since retired, says. “I moved to Tyndall and thought, ‘well here I am in Florida, I ought to think about buying a boat.’ And I never bought a boat because there was always a movement afoot to further shut down 1st Air Force, CONR and the NORAD mission in general to the point that I always thought I might be out of there. So I never bought a boat the whole time I was there.

“The QDR didn’t make any sense at all,” Arnold continues. “Four-corners defense might be good for basketball, and that’s where the term comes from ... but it had absolutely no applicability to defending our country. It was ridiculous yet it became popular. So there was a fight just to maintain the number of alert sites that we had. We felt we could operate fairly reasonably with about 10 sites and thought eight was the absolute highest risk we could take. We ended up with seven. I didn’t feel particularly comfortable with seven because there are great large distances between the alert sites.”

The four-corners proposal was met with resistance from NORAD Commander in Chief Gen. Howell M. Estes III, who wrote to the Joint Chiefs of Staff that a minimum of seven alert sites were needed to maintain the nation’s air sovereignty.

In the end, Estes won the battle and alert sites were added at Hampton, Va.; Panama City, Fla.; and Houston, Texas; where all three multirole squadrons would support air sovereignty.²⁴ But Arnold believes the real issue was the move to close 1st Air Force completely “without any alternative way of doing the mission.” There was also pressure to close other numbered air forces, Arnold says, as Air Force leaders searched for better ways to fight wars, which is traditionally through numbered air forces.

As the QDR furor died down, the move to close 1st Air Force did not. By the summer of 1998, Air Combat Command, as the CONR force provider, would search for ways to organize its forces amid

In the Internet age, pride in the air sovereignty mission is displayed on the tail of an F-16 assigned to the 147th Fighter Wing, Texas Air National Guard.

personnel shortages and an increased operations tempo. “I got a call from General (Richard) Hawley, who was the commander of ACC, and he said: ‘My staff has given me a compelling argument as to why we should move all the forces out of 1st Air Force and move them into 8th, 9th and 12th air forces,’” Arnold recalls. “And he allowed me to respond to him. And when I did respond, he left all 10 units in 1st Air Force.”

In another phone call between the two generals, Hawley reiterated to Arnold that the ACC staff was still considering ways to reorganize its numbered air forces. “General Hawley gave them

a very short answer that was exactly the right answer," Arnold says. "It was really a question. He said to his staff: 'I have no position on whether we close 1st Air Force or not, but is there a better way to do the mission?'"

"And that stumped them. I think they thought there was no mission, but as a four-star general, he realized we had to protect our borders. That question alone: 'Is there a better way to do the mission?' put to bed the idea of closing 1st Air Force, at least for awhile."

Hawley says his command was faced with the challenge of best organizing its fighter force at a time of frequent deployments and a serious pilot shortage. "We were trying to figure out how to relieve the personnel tempo of people who were being pulled hither and yond to go cope with Northern Watch and so forth," the retired general says. "(The command needed) more general purpose fighters in the fighter rotation to support the overseas commitments and therefore spread the workload more evenly. ... Most of the 1st Air Force units were specialized solely in air defense, and in our rotations we needed people with a specialty in air superiority and dropping bombs."

"We had two problems," Hawley continues. "We had a lot of numbered air forces and not enough people to man them. The other problem was the operations tempo and personnel tempo and how to get the Air Force organized in a way that we could rotate forces in and out of the fights we had to man on a more rational basis ... to give people some predictability in their lives."

"The air defense issue was one of figuring out a way to absorb the air defense squadrons into the general purpose force structure so that we could use them ... and where that idea fell apart was, 'How do you do this and get the air defense mission accomplished?'"

Although the idea fizzled at Air Combat Command, Hawley says air sovereignty still remained a low Air Force priority. "Many people in the Air Force thought it was a waste of money and time to maintain a dedicated air defense force and the reason is not many people had thought about the basic, national responsibility to maintain sovereignty over our airspace, whether there's a threat to it or not," he says. "Among those who had given it some thought, air sovereignty was important."

A better way?

When the National Guard Bureau began studying 1st Air Force's closure in 1999, Arnold took action. ²⁵ He didn't think there was a better way to provide air sovereignty, but he wanted to prove that to himself and others. He looked toward written doctrine—the Bible of all things Air Force—and says he believed the organization was operating "in a very sound way." But Arnold wanted the issue examined. *Was there a better way to provide continental air sovereignty?*

"I wanted a study before the next QDR that said, 'Here's how we do the mission now, here's alternative ways we can do the mission,'" Arnold explains. "If there was a better way that was doctrinally sound, I was prepared to beat the drums and go do that."

"I wanted a team to talk to the commanders of NORAD and ACC and the leadership all over the Air Force and find out for me, find out if there's no mission," Arnold says. "And I said, 'If there's no mission, we'll shut down now.'"

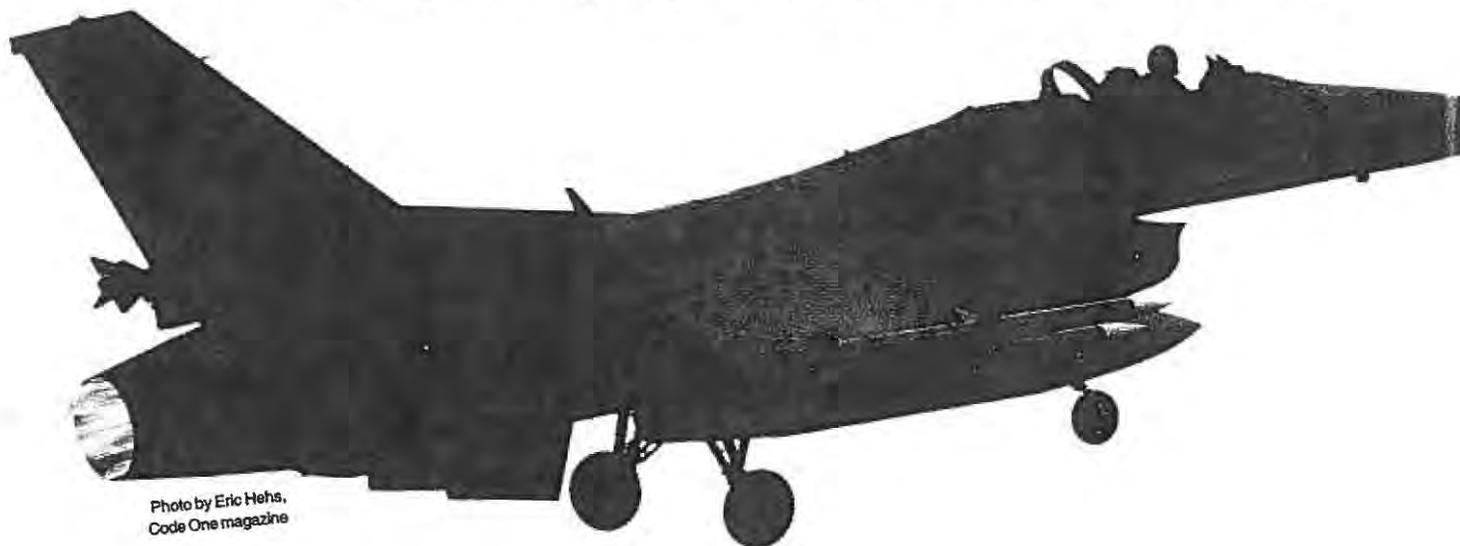

With the backing of Air National Guard director Maj. Gen. Paul A. Weaver Jr., Arnold asked Maj. Gen. Paul Pochmara, a Michigan Air National Guardsman, to form a "Roles and Missions" team. Pochmara was the Air National Guard assistant to Air Force Materiel Command at the time and former commander of the 113th Tactical Fighter Wing,

District of Columbia Air National Guard.

"I was from outside the air defense world," Pochmara, since retired, says. "I flew fighters all my life and when Larry Arnold and Paul Weaver wanted someone to do the study, they wanted someone experienced in fighters with knowledge of air defense, but not a card-carrying air defender. I have sat air defense alert in Japan, but I was never a 1st Air Force-type of person and had never sat alert in the United States. ... I was close enough to the mission to have credibility but far enough away

1999, visiting other numbered air forces, NORAD, the National Guard Bureau, and Air Combat Command to find answers to the questions that kept Arnold guessing. The team was armed with a one-hour presentation that outlined the military's responsibility for protecting the nation's air sovereignty and supported its case with excerpts from the U.S. Constitution, Department of Defense policy and ACC directives.

"Universally, except for going up to NORAD, I think when we walked in the door we were

An F-16 from the Vermont Air National Guard 158th Fighter Wing takes off.

to have credibility. I would not be preaching to the choir."

Pochmara says he initially questioned the need for the study and wouldn't allow himself to be swayed by opinions on either side. "When we put together the team, 1st Air Force wanted me to be an honest broker and I was told to say it like it is," he says. "When I chose the members of this team, I chose some who did not see a need for air defense, some like myself who just didn't know and some from the 1st Air Force staff who were very zealous in their beliefs. ... I assembled people on this team who could balance each other out."

The 12-member "RAM" team set out in late

perceived with neither reticence nor support," Pochmara says. "They weren't necessarily hostile or against us, but we did not walk into friendly audiences either."

Maj. Gen. Mike Haugen, adjutant general of the North Dakota National Guard and RAM team member, says the group discussed everything from technology to the future of the air sovereignty mission to the terrorist threat. "We made some pretty bold predictions in our briefing," he says. "In fact, it included a photo of Osama bin Laden as the world's most dangerous terrorist. ... We didn't predict how the terrorists would strike but predicted they would strike."

Pochmara says the team wanted to convey the definition of air sovereignty. He puts it into basic terms. "You have your house in your neighborhood and you don't want anyone to break into it," he says. "But anyone, at will, can break into your house when you're not there or when you are there. And you can't really stop them. Do you leave your door open, do you unlock your doors because you can't stop somebody?"

"We're not going to do that as a nation; we're going to make some attempt to keep our doors locked and protect ourselves and that's what sovereignty means."

In the end of their year together, the RAM team wrote a report concluding, "there are no better ways, just other ways," to perform the mission. Air sovereignty, the team found, is a valid and necessary military responsibility. Team leader Pochmara found himself a bigger supporter of the mission than he'd realized and the hesitant audiences gained new perspectives. "The overall consensus from people was: 'I understand 1st Air Force is valuable and needs to continue doing the work it does,'" Pochmara says.

Threat of the day

As the RAM team was examining the need for continental air sovereignty, a comprehensive look at America's future was well underway at the highest levels. The United States Commission on National Security/21st Century, led by former Sens. Gary Hart and Warren B. Rudman, released its first of three reports in September 1999. "New World Coming: American Security in the 21st Century," stated that "*America will become increasingly vulnerable to hostile attack on our homeland, and our military superiority will not entirely protect us.*"²⁶

"We should expect conflicts in which adversaries, because of cultural affinities different from our own, will resort to forms and

"We made some pretty bold predictions in our briefing. In fact, it included a photo of Osama bin Laden as the world's most dangerous terrorist."

**— Maj. Gen. Mike Haugen,
adjutant general,
North Dakota National Guard**

levels of violence shocking to our sensibilities," reads an excerpt from the report.²⁷

Discussions of new threats were everywhere, Scott says, yet the move to kill air sovereignty remained. "At about the same time this was all happening, there was an emerging debate within military academic circles about the asymmetric threat to the United States," Scott says. "A number of papers were published as we were struggling to stay alive. People did studies, including the Hart-Rudman study, that said we would get hit by terrorism in the next five years.

"This debate was going on in the mainstream of the Department of Defense as we were struggling for survival. What we picked up from that debate was this: 'We need to define those asymmetric threats as they pertain to our mission.'"

"We thought the primary threat was some sort of poor-man's cruise missile or Unmanned Aerial Vehicle from a commercial ship off the coast, maybe some old rickety freighter out in the Gulf," Scott says. "And in one of our briefings, we pointed out that for \$83,000 you can buy an Unmanned Aerial Vehicle with GPS (Global Positioning System) navigation.

"These guys aren't looking for pinpoint accuracy. If you launch it into a metropolitan area, it's good enough. The objective is to kill Americans, as many as you can. That's what we were targeting."

The 1st Air Force mission brief — the basic presentation explaining what air sovereignty is

Photo by Lans Stout for Code One magazine

The mission of the 144th Fighter Wing, California Air National Guard, and nine other fighter units assigned to 1st Air Force and the Continental United States NORAD Region, would be turned upside down Sept. 11, 2001.

about — spoke to this scary reality. “As we started talking about Osama bin Laden, the examples we gave in our mission brief were the first World Trade Center bombing, the Tokyo Subway, Oklahoma City bombing, and Atlanta Olympics,” Scott says. “What we did was connect those dots. The conclusion we drew was that we had a viable threat.”

The military buzzword, actually an acronym, defined the latest risk: CBRNE — Chemical, Biological, Radiological, Nuclear, and Enhanced High Explosive — weapons, Navin says. “Ages ago, we knew who the enemy was,” he says. “Later, there was recognition on our part that terrorism was a threat, but we thought it was a cruise missile threat.”

How and where would the threat happen? Arnold

tried to get in the minds of the terrorists. His “El Paso example” spoke to the nation’s vulnerability. The geographical hole between alert sites in Houston and Riverside, Calif., was so large that he wouldn’t be able to protect El Paso, Texas, with fighter jets if the need immediately arose.

Adds Scott: “There was no military air threat from Mexico, but ... an asymmetric threat from Mexico. Our experience within Mexico with our counterdrug operation is that there are hundreds of unmanned little airfields you can get into and out of very easily.

“Major General Arnold believed that if a terrorist called and said in one hour he would overfly El Paso and spray deadly gas, we would watch it live on CNN because we could not get aircraft to that location in time to stop it.”

At times it seems like Arnold and his staff were gazing into a crystal ball. But, Arnold points out, “we thought the terrorist attack would come from outside the United States.”

Training exercises at 1st Air Force continued to that effect, and occasionally a serious incident would arise. With all eyes focused outside, a tragedy inside foreshadowed the massive coordination required to handle air operations over our own soil.

On Oct. 25, 1999, professional golfer Payne Stewart was killed in a plane crash two miles west of Mina, S.D. The Lear 35 jet, flying from Orlando, Fla., to Dallas, strayed off course over northern Florida and was heading northwest when it ran out of fuel. The plane, believed to have lost cabin pressure, was tracked by the Southeast Air Defense Sector and later the Western Air Defense Sector. Fighter pilots from the 119th Fighter Wing, North Dakota Air National Guard, were scrambled by the Northeast Air Defense Sector. But it wasn't just 1st Air Force involved that day: Regular Air Force pilots from Eglin Air Force Base, Fla., and Guardsmen from Tulsa, Okla., helped escort the doomed airplane and assist the FAA, which had requested the military's help.

The day ended badly, Arnold says, but “the significant thing was we could not see that aircraft and the sectors worked with the FAA to track the airplane and feed information to us. Using the FAA radar and FAA positioning in order to use our fighters, we were able to divert them from training missions and get units like Fargo (119th Fighter Wing) to escort

the plane. What this proved to us is that we couldn't see and couldn't talk to each other over the central part of the United States.”

Had the incident happened over a weekend, chances are military fighters wouldn't have been able to assist, Scott says. “This happened on a normal workday,” he adds. “And the event led the public to believe we were much more ready than we were. This was a mini-scenario where we were garnering nontraditional 1st Air Force forces to execute an operational mission.”

Not two years later, an operational mission on a much larger scale would unfold over the continental United States. That day — Sept. 11, 2001 — would end horribly.

Terror's eve

The day before America was attacked, NORAD was ready for war. The command was

participating in an annual exercise called “Vigilant Guardian.” It was practice. It was war games that would end with lessons on how to fight the better fight. This make-believe air war would happen off America's shores. This was not an air war over America.

“As much as you brief what could

happen in the future, I think from an intellectual standpoint, we realized the greatest threat to the United States prior to Sept. 11, 2001, was going to be a terrorist attack,” Arnold reflects one year after the tragedy. “But I did not envision that it would be hijacked airplanes run into buildings like that. I thought maybe a plane would be stolen and come

former 1st Air Force vice commander

from outside the United States and have a biological or chemical or nuclear weapon aboard. That was our thought. That is what our mission was about. Our mission was not about the internal threat. It was about the external threat.”

Hijackings were regarded as a law enforcement — not military — issue, and “in the NORAD business, we were looking outward at things coming into this country, and that is what we practiced in exercises,” Arnold says. “We practiced how to get that airplane to land or how to get approval to shoot it down. ... No, we did not envision people hijacking airplanes from within the United States, taking over those aircraft and using them as fuel-air bombs.”

But when the unforeseeable happened Sept. 11, America’s military was able to respond because the air sovereignty mission had been preserved, adds former Air National Guard director Shepperd. “The transition of 1st Air Force to Air National Guard control gave us the ability to maintain air sovereignty in our country,” Shepperd says. “Thank goodness we had the Air National Guard on Sept. 11. Had we taken down our entire air defense structure, we would never have been able to do what we did and wouldn’t have had command and control or liaison with the FAA.”

On that tragic day, America’s air defense forces in the air and on the ground worked closely with the FAA to clear the skies of terror. “In less than an hour ... the whole world changed,” says Col. Bob Marr, commander of the Northeast Air Defense Sector, who would watch young airmen at the radar scopes as they scrambled the fighters, hoping against hope they’d make it to the World Trade Center and Pentagon on time.

The air war over America had begun. The exercise was over.

CHAPTER 3

9.11.01

Air war over America begins

Photo by Lt. Col. Bill Ramsay, 102nd Fighter Wing, Massachusetts Air National Guard

U.S. Navy photo by Journalist 1st Class Preston Keres

DAY OF TERROR:

Nation's air controllers, military fliers and crews fight for America's skies

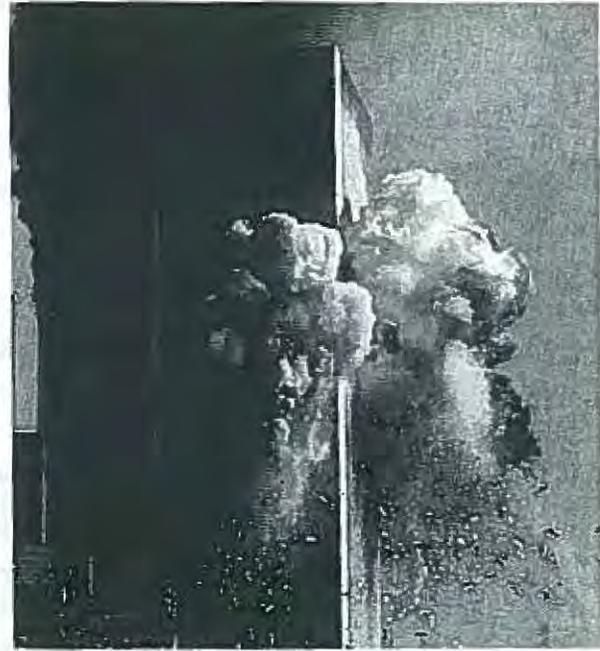

It should have been a perfect day. The skies were clear, blue and beautiful with miles and miles of visibility across the northeast. But what should have been was not. The day's beauty would become ugly and all clarity would fade to a murky fog of hatred, turmoil and terror.

Desperate plea

Massachusetts Air National Guard pilot Lt. Col. Tim Duffy remembers driving into work the morning of Sept. 11, 2001, disappointed he wasn't on the flying schedule. As he drove through the gate at Otis Air National Guard Base on Cape Cod, he admired the "clear-in-a-million" skies any pilot would crave. It was a pretty — even gorgeous — Tuesday, a great day to fly. Duffy never could have dreamed up the scenario that would unfold in only a few hours, never could have imagined what he'd see from his F-15 cockpit 5,000 feet above Manhattan that crisp fall morning.

Around 8:30 a.m., a Federal Aviation Administration controller in Boston phoned the control tower at Otis with a serious request: American Airlines Flight 11 had lost its identification signal and appeared headed toward Manhattan. It looked like a possible hijacking, and fighters were needed — fast.

The 102nd Fighter Wing at Otis was one of seven alert sites in the continental United States, with two loaded airplanes ready for immediate take-off.

"It didn't happen the way it was supposed to or the way you would hope it would come down," Duffy says. "But the way it came down ... it really didn't hurt us at all. We were the ones who were contacted right away and knew about it before the air defense sector."

"About 8:30, 8:35 out by the ops (operations) desk, I got a phone call from one of the sergeants," he continues. "He said, 'Duffy, you have a phone call from tower. ... Something about a hijacking.' As soon as we heard there was something about a hijacking we got moving. That's not something we throw around lightly, that word. I had the radio with me; we call it the brick. ... So I called for 'Nasty' (Maj. Dan Nash) and I to suit up right away."

Lt. Col. Jon Treacy, commander of the wing's 101st Fighter Squadron, phoned NEADS — the Northeast Air Defense Sector — in Rome, N. Y., to report the FAA's request. The sector commander

would have authority to scramble the airplanes. But the FAA had already gotten through to a young tech sergeant at NEADS just reporting for duty that morning. Jeremy Powell answered a call he will never forget.

NEADS: *"Huntress Weapons, Sgt. Powell."*

FAA: *"All right, Boston Center, we have a problem here. We have a hijacked aircraft headed towards New York and we need you guys to, we need someone to scramble F-16s or something to help us out."*

NEADS: *"Is this real-world or an exercise?"*

FAA: *"No, this is real-world, this is not an exercise, not a test." 1*

"I think about that phone call constantly," Powell, since promoted to lieutenant, says. "I think about it all the time."

Photo by Scott A. Gwilt, Daily Sentinel, Rome, N.Y.

U.S. Navy photo by Journalist 1st Class Mark D. Faram

If normal procedures had taken place that morning, Powell probably wouldn't have taken that phone call. Normally, the FAA would have contacted officials at the Pentagon's National Military Command Center who would have contacted the North American Aerospace Defense Command. The secretary of defense would have had to approve the use of military assets to assist in a hijacking, always considered a law enforcement issue.² But nothing was normal on Sept. 11, 2001, and many say the traditional chain of command went by the wayside to get the job done.

Around the country that morning and many mornings before, 14 fighter jets were loaded and ready to intercept unidentified aircraft approaching the United States. Military controllers at three air defense sectors — in the northeast, southeast and

Above: Medical personnel and volunteers work the first medical triage area set up outside the Pentagon after American Airlines Flight 77 crashed into the southwest corner of the building Sept. 11, 2001.

Left: 2nd Lt. Jeremy Powell of the Northeast Air Defense Sector in Rome, N.Y., — a technical sergeant at the time — took an unforgettable phone call from the Federal Aviation Administration Sept. 11, 2001. The FAA was requesting assistance in intercepting the hijackers.

west — were monitoring the air picture, only a hot line call away from pilots on immediate alert. First Air Force and the Continental United States NORAD Region had protected America's air borders for years. But the command hadn't trained for fighting enemies within, hadn't practiced for coordinated attacks in continental airspace — the radars were always looking outward.

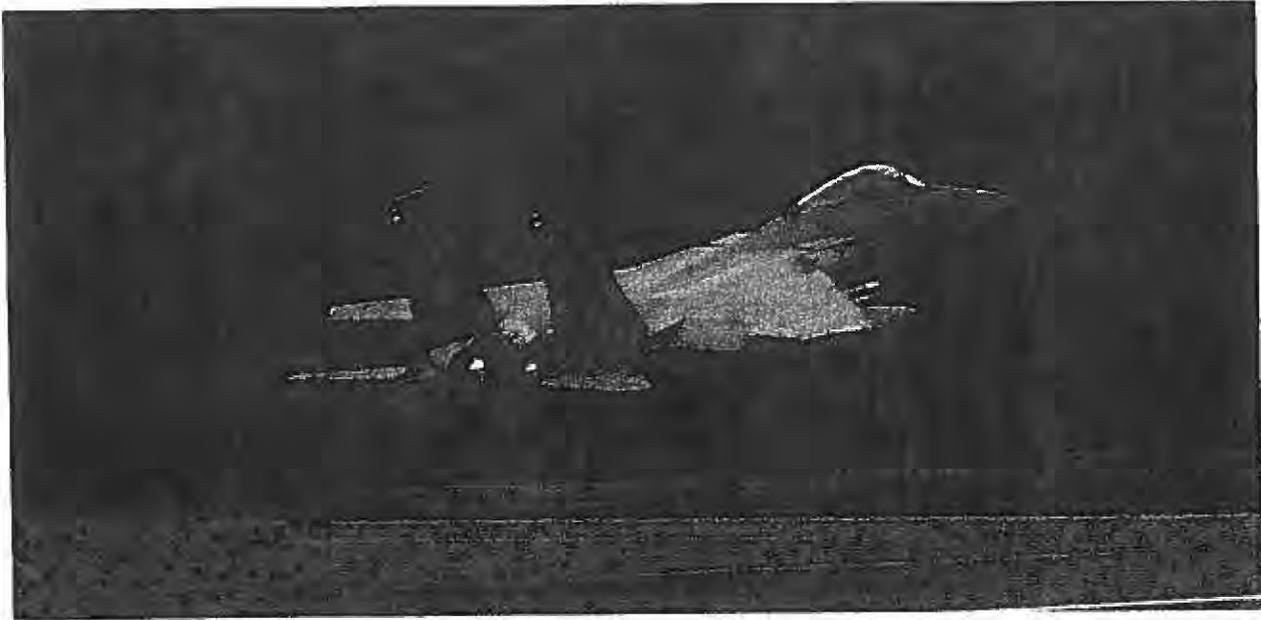

When terrorists took over the skies on Sept. 11, 2001, America's military reacted swiftly. In the northeast, massive efforts began to get every fighter available into the air. Controllers at the Western Air Defense Sector in Washington and Southeast Air Defense Sector in Florida sent fighter pilots into their cockpits to await further orders. Military air controllers worked hand-in-hand with the FAA trying to find possibly hijacked airliners. Military tankers and Airborne Warning and Control System aircraft provided crucial refueling and radar support throughout the day and beyond.

The military response was tremendous on Sept. 11, 2001, and everyone has a story to share of remarkable achievement amid terror and tragedy. But this story focuses mostly on the Air National Guard members who protected America's air borders before that defining autumn day.

That community grew to astonishing strengths in a matter of hours as the 14 aircraft on alert increased to more than 400 fighters, tankers and airborne early warning platforms.³ Naval warships reinforced that presence as they kept watch in the Pacific, Atlantic and Gulf of Mexico.

Armed with a sense of patriotism, pride and volunteerism, the military response was tremendous on Sept. 11, 2001, but with thousands of lives lost and ruined in a calculated terrorist attack, it was a bittersweet triumph.

Above: An F-15 "Eagle" assigned to the 102nd Fighter Wing, Massachusetts Air National Guard, departs the runway at Otis Air National Guard Base. The wing was the first to scramble and fly Combat Air Patrols over New York Sept. 11, 2001.

Robert Von Hagen attaches wings to an AIM-120/AMRAAM — Advanced Medium Range Air-to-Air Missile — loaded on a wingtip launcher Sept. 11, 2001, at the 119th Fighter Wing, North Dakota Air National Guard. Master Sgt. Bradley Johnson, 119th Logistics Group quality assurance inspector, observes. At far left is 119th Fighter Wing Vice Commander Col. Thomas E. Larson. The "Happy Hooligans" provided F-16 combat capability following the terrorist attacks.

Mad scramble

In a strange twist of fate, that very morning the command and control technicians at NEADS were beginning a 12-hour shift for the NORAD exercise "Vigilant Guardian." Across the command from Alaska to Canada and throughout the continental United States, battle staffs were poised to fight the simulated air war. The unusually high state of readiness was a sheer stroke of luck, many would say later, as commanders made unprecedented decisions with astonishing speed and airmen did everything they could to identify and intercept the hijackers.

"Around 8:40 there was a huddle of people around one of the scopes," says Col. Bob Marr, NEADS commander. "I've seen many exercises ... and as I saw that huddle I said, 'There's got to be something wrong, something is happening here.' You usually see that whenever they find a track on the scope that looks unusual; it's usually an indicator that something is getting ready to kick off."

From the battle cab — a glass-walled room overlooking the dimly lighted sector floor — Marr thought the hubbub was part of the exercise. He sent Lt. Col. Dawne Deskins, mission crew commander, to check it out. She came running back, Marr says, with urgency in her voice: the FAA needed help with a possible hijacking; a civilian airliner had just disappeared from the scope and was headed toward New York.

"At this point our mind-set was the 1970s-vintage hijack," Deskins says. "We didn't have a huge concern this aircraft was going to crash. We were thinking, 'let's get some airplanes up to support it, escort it and figure out where it's going to land.'"

Marr ordered Otis F-15 pilots Duffy and Nash to battle stations — pilots in the cockpits with engines turned off. He says the fliers were halfway to their jets when he phoned his boss, Maj. Gen. Larry K. Arnold, 1st Air Force and CONR commander.

Arnold remembers the phone call well. "By the

Photo by Scott A. Gwit, Daily Sentinel, Rome, N.Y.

A tracker "on scope" in the darkened operations room at the Northeast Air Defense Sector, Rome, N.Y. Airmen at NEADS were doing all they could to track and intercept the hijackers on Sept. 11.

time I talked to Bob Marr, he said he had the jets on battle stations and would like to get them airborne," he recalls. "I said, 'Go ahead and scramble them and we'll get authorities later.' ... He scrambled them and in the meantime I picked up the phone and talked to the operations deputy up at NORAD and he said, 'Yeah, we'll work this with the National Military Command Center. Go ahead and scramble the aircraft.' "

It was unfamiliar territory, but Marr knew what he had to do. "My intent was to scramble Otis to military airspace while we found out what was going on," he says.

Somewhere on the radar scopes was American Airlines Flight 11, which had deviated from its Boston-Los Angeles flight plan and was not communicating with FAA ground controllers. Workers at the FAA Boston Center were baffled: The pilots weren't talking and a strange, possibly foreign, voice could be heard saying, "*We have some planes.*"⁴ It was fast becoming a frightening situation. The crew at NEADS was desperate to track and intercept the plane.

"When we received that call, all eyes were over New York looking for search tracks," says NEADS Staff Sgt. Larry Thornton, whose job until then had been searching for incoming flights over the ocean. Those "search tracks" can be tough to locate jumbled among hundreds of cooperative aircraft emitting electronic signatures to the radar scopes.

"Once we were called by the FAA, we could find split-second hits on what we thought we were looking for," Thornton says. "But the area was so congested and it was incredibly difficult to find. We were looking for little dash marks in a pile of clutter and a pile of aircraft on a two-dimensional scope."

Each fluorescent green pulsating dot on the scope represented an airplane, and there were thousands out there, especially over the busy north-

The Pentagon burns into the night of Sept. 11.

east United States. To complicate matters, the sector didn't share much of the FAA's interior radar data, especially at low altitudes, and had to piece together the incoming information. But Master Sgt. Joe McCain believes they saw Flight 11 disappear over New York that morning. "We picked up a search track going down the Hudson Valley, straight in from the north toward New York," he says. "It's very unusual to find a search target, which is a plane with its transponder turned off, in that area. This plane was headed toward New York going faster than the average Cessna and was no doubt a jet aircraft. We had many clues. The plane was fast and heading in an unusual direction with no bea-

U.S. Navy photo by Photographer's Mate 2nd Class Robert Houlihan

con. We had raw radar data only. Everything just kind of fit. We watched that track until it faded over New York City and right after that someone came out of the break room and said the World Trade Center had been hit.”

On Cape Cod, 160 miles to the northeast, the F-15 pilots were ordered to scramble. As the jets rolled down Runway 5 at Otis Air National Guard Base, American Airlines Flight 11, a Boeing 767 with 92 people aboard, perished in the clear blue Manhattan sky. It was 8:46 a.m. Eastern Standard Time, a tragic tick of the clock that forever seared itself into the American psyche. It was the unforgettable moment when the first of hundreds of in-

nocent victims were killed that day.

It was the moment the sleeping dragon of the world's most powerful military was awakened with a start — much as it was 60 years earlier on Dec. 7, 1941. As the scramble lights flashed green at Otis Air National Guard Base, a new kind of war was beginning. When the F-15s took off with fire igniting behind them, flight lead Duffy told his wingman they would fly supersonic. It wasn't standard procedure, but the Gulf War veteran was filled with an irresistible sense of urgency. “This is one of those things I can't really explain why I did it the way I did it,” Duffy says. “When we took off I left it in full afterburner the whole time. So we climbed up, we were supersonic going down to Long Island and ‘Nasty’ (Nash) called and said, ‘Hey Duff, you're super,’ and I said, ‘Yeah, I know, don't worry about it.’”

“At the time I just wanted to get there ... we were high enough that we wouldn't blow out windows or do any damage to anything. I figured if anyone cared later I could probably take the heat for trying to get there quickly. Again, we have no idea what we are going toward. We are taking off to go help somebody and we needed to get there quickly to assess the situation.”

They didn't know American Airlines Flight 11 had just plunged into the twin towers.

Under attack

Could this be the airplane the NEADS controllers were so desperately tracking?

Deskins says they just couldn't be sure. “Our first question was, ‘Are we talking about this hijacked aircraft?’” she says. “Our identification section was asking what type of aircraft it was and Boston Center was reporting American 11 still airborne. So we thought it must have been a weird coincidence.”

But her gut told her differently: “I remember thinking, ‘Oh boy, this is starting to sound really

Photo by Tech. Sgt. Mark Oisen, New Jersey Department of Military and Veterans Affairs Public Affairs Office

The 1st Battalion, 150th Aviation, New Jersey Army National Guard, begins post-attack flight operations over New York in a UH-60A "Blackhawk" helicopter Sept. 11, 2001.

bad," Deskins continues. "I didn't want to jump to any conclusions but it seemed logical that the hijacked aircraft had hit the World Trade Center."

Without much to go on, the NEADS controllers continued to search in vain, struggling to lead the Massachusetts pilots toward the airliner. "I was fighting to get the (plane's) tail number," says Master Sgt. Maureen Dooley, noncommissioned officer in charge of identification technicians. "We were trying to grab at anything we could."

And when the FAA reported that Flight 11 had indeed crashed, Dooley says she felt helpless. "I think everybody did. We were doing everything in our power."⁵

Marr remembers thinking that it must have been a horrible accident. Maybe the pilot had flown too low and lost control upon descent into John F. Kennedy International Airport, N.Y., he reasoned. "I'm thinking this is probably an accident because

there's been a hijack," Marr says. "The guy is going to JFK and every hijack to this date has been an individual who wants to land an airplane somewhere other than where it's supposed to land. ... So we surmise there's been a terrible accident and there's not much we can do about it."

But uncertainty and doubt remained. Says NEADS chief of operations control Lt. Col. Ian Sanderson: "When we got word of the first crash, I heard it but I didn't believe it. I had to go down the hall and look at the TV. And what I remember most is that the hijacking didn't follow the expected profile. It wasn't the type of hijacking we'd trained for. I was thinking, 'this doesn't taste right, feel right or smell right.'"

With the Massachusetts F-15s still headed toward Manhattan, Marr notified New York Air National Guard headquarters to report what he knew. "Our jets are heading down south toward

Whiskey 105 and we don't really have a mission for them at this point, because we don't have any other problems in the air," Marr says.

Whiskey 105, the military training airspace southeast of Long Island, "would put them within a few minutes of New York City to 'CAP' (Combat Air Patrol), burn down gas and wait for further instructions," Marr says. "By this time we start getting CNN showing in the battle cab ... and as we're watching the television we see another aircraft come into view and hit the second tower of the World Trade Center."

Disbelief filled the room. Everyone was floored, Sanderson says: "We had to sort of wrest back control." ⁶

Adds Deskins: "That plane came out of nowhere ... we didn't even know there was a second hijack. Now we knew it was intentional."

From the CONR Air Operations Center at Tyndall Air Force Base, Fla., Arnold and his staff were stunned as they watched the same live images. "When I saw the second plane hit, my thought at the time was, 'My God, was that a replay of the first one?'" Arnold says. "Then I realized there were two smoking holes and not one, and at that time, I think all of us thought it was beyond the realm of probability for two accidents to occur like that. We were under attack at this time."

United Airlines Flight 175 crashed into the south tower of the World Trade Center at 9:03 a.m. with 65 people aboard. Two 767s were gone and it was anyone's guess what might happen next.

"I thought it might be prudent to pull out of the exercise, which we did," Arnold says. "We called NORAD and they were well aware of what had happened obviously. ... As we pulled out of the exercise we were getting calls about United Flight 93 and we were worried about that. Then we had another call from Boston Center about a possible hijacking, but that turned out to be the airplane that had already hit the south tower but we didn't know

that at the time."

At the NORAD command center near Colorado Springs, Colo., an air threat conference call was beginning. Open communication lines were established between top U.S. and Canadian officials to eventually include President George W. Bush, Vice President Dick Cheney and Secretary of Defense Donald Rumsfeld. ⁷ Arnold would find himself on that call when the last suspicious airplane had landed. But that wouldn't be for hours.

In the darkened operations center at NEADS, Marr and the operations crew felt the gravity of

Photo by Scott A. Gwilt, Daily Sentinel, Rome, N.Y.

Lt. Col. Dawne Deskins, Northeast Air Defense Sector mission crew commander, was tracking the movement of American Airlines Flight 77 on Sept. 11, 2001. She had six or seven radar hits before watching the plane's signal fade and disappear from the scope.

the situation. "We had both buildings hit and didn't have any other aircraft at this time except Otis, heading to the World Trade Center in a straight line," Marr says. "At Mach 1 it would take them 16 minutes to get there, that's 10 miles a minute."

Approaching Manhattan, Duffy and Nash were still pursuing Flight 11, trying to get information from NEADS on the plane's location. "I call for bogey dope (target information) and I don't realize American has already hit," Duffy says. "So I'm still chasing American and ... we're going right down Long Island and three or four minutes later I call for bogey dope again and right then they say the second aircraft just hit the World Trade Center. So, confusion in my cockpit: *The second aircraft?*

"I look up and we're about 60 or 70 miles outside Manhattan and I can see the towers burning. ... OK, obviously everything just changed from my personal mind-set. We take off to go help somebody, and now as I look up and can see the burning I say, 'OK, now people are dying.'

"It's kind of hard to explain, but basically you switch into a combat mode where you say, 'OK, this just got real serious real fast.' ... Now people are dying and you're thinking, 'OK, what do I have to do?' And you have to put emotion aside because you don't have time for it."

Hard to believe only a few hours earlier Duffy was thinking about the weather on his drive in to work. "It was one of the prettiest days I've ever flown, literally there was not a cloud in the sky and visibility was probably better than a hundred miles," Duffy says. "It was just crystal clear. When I was driving in that morning and knew I wasn't on the flying schedule I was thinking, 'Oh what a day, what a day to go flying.'"

Now the pilots were shocked and amazed as they watched the smoldering scene below. "We

were going as fast as the airplanes could go," Nash says, then hesitates. "We did everything we could but unfortunately couldn't stop anything."

The F-15s were loaded with extra weapons and fuel because of the exercise and "were ready to engage anything if they had to," Marr says. "But obviously this is peacetime and we have no authority to engage any targets ... but we're thinking New York City is under attack."

More jets would be needed. The NORAD "deep peace" stance meant only two East Coast fighters remained on alert. They were from a detachment of the 119th Fighter Wing, North Dakota Air National Guard. The alert facility at Langley Air Force Base, Va., is several hundred miles from Manhattan, but Marr directed the pilots to battle stations anyway. "The plan was to protect New York City," Marr says.

As tensions continued to build, the FAA took unprecedented measures to clear the skies of the northeast United States. "Air Traffic Control Zero" would soon follow across the nation.⁸

"Now our (Massachusetts) pilots are chasing down traffic that is trying to get on the ground or to Boston or New York," Marr says. "We

didn't know what could have been cruise-missile airliners.

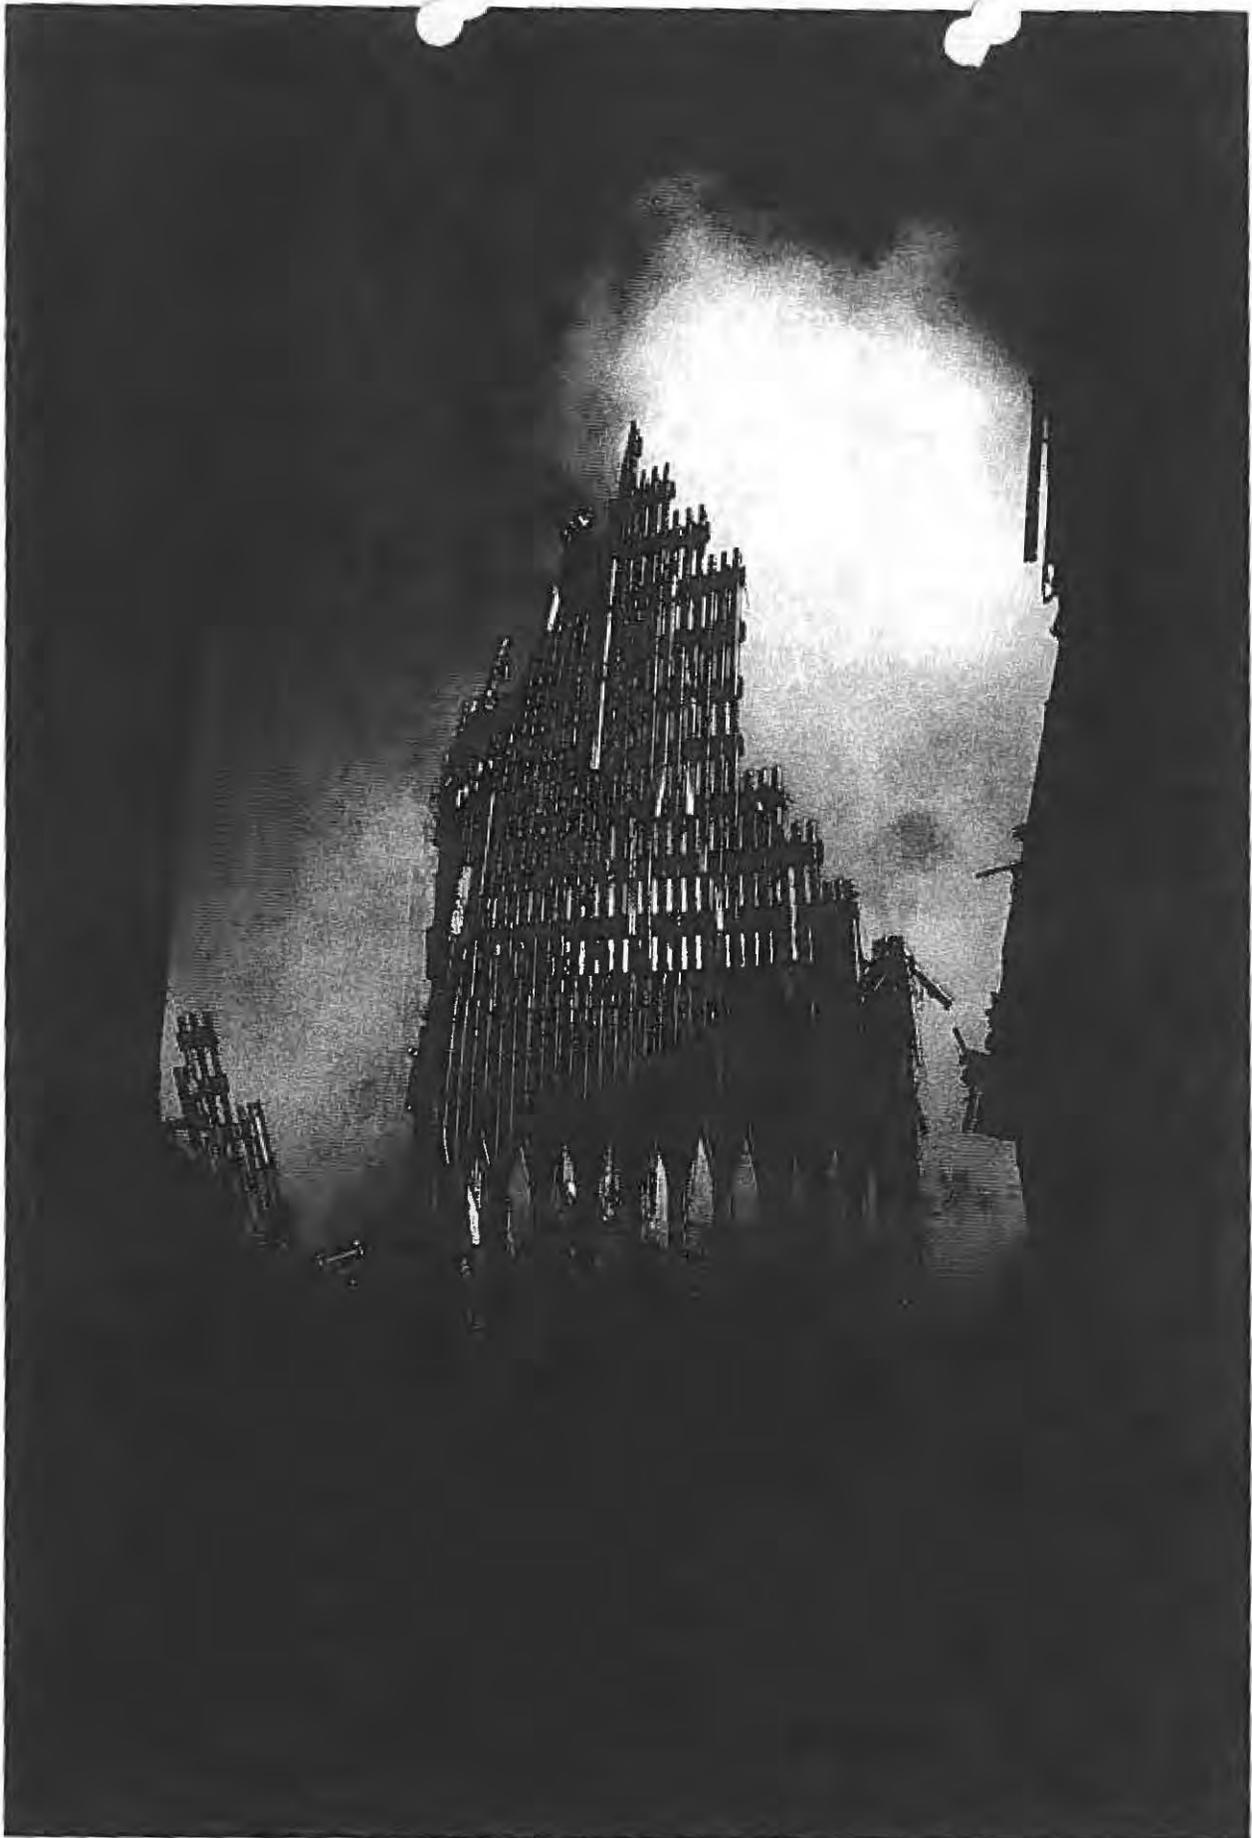

"As the F-15s go over the city, now the fog of war is starting to set in."

On the cool sector floor at NEADS, that fog was thick with misinformation, fear and apprehen-

Family members visit the Pentagon Sept. 15, 2001, to pay respects to their loved ones who died in the Sept. 11 attack there.

sion. Many of the phone calls coming in were rumors and there was little way to confirm or deny them. The pilots above Manhattan, meanwhile, were wondering what would come next as they watched the devastation below.

"As soon as I saw the towers burning, I called up Huntress (NEADS) and said 'Huntress, 4, 5, say mission,'" Duffy says. "What do you want me to do next? What do you need from me right this second?" ... He didn't know what to do."

Huntress would soon have more information: "It only took a couple minutes of us in the area before they came back on and said 'NORAD just took control of all the airspace in the country,'" Duffy says. "Proceed direct to Manhattan and set up Combat Air Patrol.' I said, 'OK, got that.'"

The pilots requested and were immediately given clearance from the FAA to fly at any altitude necessary. "They just gave us the airspace," Duffy says.

FAA: *"We shut all traffic off at Boston Center, no one departing, and we're rerouting all JFK arrivals and Newark Metro airport's (N.J.)."*

NEADS: *"Copy sir."*

FAA: *"I do have a question for you: In case we have any more aircraft that start deviating, we need to know, do you have anyone on alert or is that something that you can do just in case this happens to any more aircraft?"*

NEADS: *"... I've got fighters in Whiskey 105 right now, and I've got a tanker there as well, I've got other aircraft on alert at Langley as well, I'm getting ready to, I've got trackers over JFK, over Boston and that area, just looking for anything suspicious."*

FAA: *"Anything suspicious, OK, and we'll let you know about the internationals. We're not sure what we're doing about them yet."* 9

With little time to grasp what had happened in New York, the FAA continued to report more shocking information to the Northeast sector: American Airlines Flight 77 and Delta Airlines Flight 1989, both 767s bound for Los Angeles, were possibly hijacked. Somewhere over Cleveland, United Airlines Flight 93 bound for San Francisco was still off course.

"The FAA is starting to report more aircraft not following their flight plans," Marr says. "Now we are looking at a host of potential problems. Then we get another call from Boston Center that we have a problem near Washington and 'you'd better check on it.'"

The North Dakota alert pilots were still in their cockpits at Langley Air Force Base. At the squadron operations desk, young F-16 pilot Capt. Craig Borgstrom took a terse phone call from NEADS. "The guy from the sector asked me, 'How many can you get airborne right now?'" Borgstrom recalls. "I told him I had two on battle stations. He then said, 'That's not what I asked. How many total airplanes can you send up?'"

"I said, 'I'll give you three.'"

"And he said, 'Then go!'"

Just as Borgstrom grabbed his gear to join the others, the Klaxon alarm sounded and the red lights turned green in the alert barn. The active air scramble order had been given. It was 9:24 a.m. and the planes were given highest priority over all other air traffic at Langley Air Force Base.¹⁰

"We crank and scramble ... we took off, the three of us, and basically the formation we always brief on alert, we'll stay in a two- to three-mile trail from the guy in front," Borgstrom says. "They (NEADS) were giving us the heading and altitude

of north-northeast up to 20,000 feet. Then shortly after takeoff they changed our heading more north-westerly and gave us max-subsonic.

“That’s as fast as you can go without breaking the sound barrier. I’ve never heard it before in my short career, but I don’t think anyone’s heard that order before.”

The F-16s were being vectored toward Washington, D.C., instead of New York. As they were scrambling, Deskins was watching a suspicious track on the radar scope. “I had the scope focused in on the D.C. area and got blips of this aircraft that appeared to be going in a turn around D.C.,” she says. “It was going fast for where it was located and I remember looking at the guy next to me and saying, ‘What is that?’”

“I probably got six or seven radar returns on it before it faded and was just gone. You’re thinking, ‘What just happened?’ I got this feeling in the pit of my stomach and said, ‘That’s another one.’”

Tech. Sgt. Ronald G. Belluscio, a NEADS se-

nior weapons director technician, sent the F-16s to Washington that morning. “When all of this was happening, we were giving directions as enlisted personnel,” he says. “We were empowered and entrusted to certain tasks that we aren’t normally accustomed to doing to get the job done. I jumped on a frequency, per the senior director, and was told to ask the Langley birds to vector over the Pentagon. I didn’t know it had been hit.”

Majs. Dean Eckmann, Brad Derrig and Borgstrom continued flying max-subsonic. “The sector gave us certain coordinates to CAP over a certain point,” Borgstrom says. “We all dialed in the coordinates to figure out exactly where we were going and we got to our point and we could see from ... maybe 40 miles out, smoke billowing. We started putting things together.

“OK, we’re going toward where that smoke is and as you get closer, you start thinking, ‘OK, maybe there’s some type of attack going on.’ You start correlating Washington, D.C., with New York.

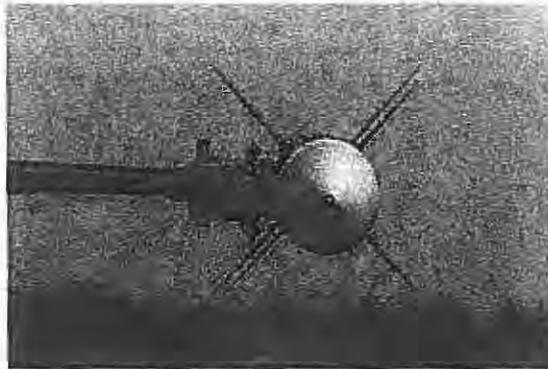

We still have no 'intel' brief of what's going on ... and another building is on fire. ... We knew something terribly wrong was going on. Something severe had happened."

American Airlines Flight 77, with 64 people aboard, had crashed into the Pentagon at 9:38 a.m., but the pilots didn't know that. Borgstrom thought maybe a gas line had burst or a car bomb had exploded. But their mission, he says, was clear: keep all airplanes away from Washington, D.C.

The three pilots, all on different frequencies but sharing a common intra-flight channel, were hearing a lot of chatter but nothing about airliners crashing into buildings, Borgstrom says. "There was some confusion for us, this was very abnormal," he continues. "We were all three on different frequencies ... and were getting orders from a lot of different people."

Only a few minutes after reaching the Washington area, flight lead Eckmann was vectored toward two low-flying aircraft. It was around 9:45 a.m. ¹¹ "As we're coming in, I set up a Combat Air Patrol with air traffic controllers and they come back to me and say there are a couple unknowns heading north on the Potomac River toward the White House," Eckmann says. "We were up in the high 20s and I basically roll inverted and go straight down. It took no time to get there and I get a radar contact on one of them and end up identifying them. One is a military helicopter and the other is a law enforcement helicopter and they're obviously heading toward the Pentagon to aid."

Eckmann flew low over the Capitol and Mall area. "I wanted to clear the area and make sure nothing else was coming in," he says. "I was also looking on the ground for something suspicious and thought if I saw a big fuel tanker truck heading toward the White House I could possibly take him

Arkansas Air National Guard photo by Tech. Sgt. Randy L. Byrd

out with my gun. You have so many thoughts racing through your mind. ... While I'm doing this, Craig (Borgstrom) calls me and says Huntress wants to know the extent of the damage at the Pentagon.

"I fly by the Washington Monument and turn back down and fly over the Pentagon, just to the south of the Pentagon, and tell them the two outer rings have been damaged," Eckmann says. "They asked me if I knew what it was and I told them I guessed it was a ~~big fuel tanker truck~~ because of the amount of smoke and flames coming up and ~~nobody indicated anything about an airplane~~. And there was no airplane wreckage off to the side."

Eckmann says the scene below was shockingly surreal. "It was almost a feeling of disbelief," he says. "Kind of like watching a bad movie. You can't believe what you're seeing, but you're still watching it."

Eckmann would later hear that the presence of a fully loaded F-16 darting overhead was a great comfort to people below. "A lot of people said it made them feel safe," he says. "They looked up and saw an armed F-16 and I guess they started cheering. I heard stories that people went back in after seeing me fly over to help others out. What would have happened had I stayed up high? They wouldn't have seen me. Now they knew they were safe. It was pure luck that I happened to be down

there and called on that initial intercept.”

Shortly, Eckmann would hear an extraordinary request: “*Protect the House.*” A Secret Service agent arrived at one of Washington’s Air Traffic Control towers and wanted to talk to the flight lead.

“I took it to mean protect the White House,” Eckmann says.

Clearance to kill

~~With all available alert fighters in the air, Marr and his crew were still faced with United Flight 93. The plane was headed west, so controllers began looking for any other fighter jets that might be nearby. “We don’t have fighters that way and we think he’s headed toward Detroit or Chicago,” Marr says. “I’m thinking Chicago is the target and know that Selfridge Air National Guard Base (Mich.) has F-16s in the air. We contacted them so they could head off 93 at the pass. The idea is to get in there, close in on him and convince him to turn. ... As United Airlines Flight 93 was going out, we received the clearance to kill if need be. In fact, Major General Arnold’s words almost verbatim were: ‘We will take lives in the air to save lives on the ground.’”~~

But the Selfridge pilots — not part of the NORAD air sovereignty force — were unarmed. Lt. Col. Tom Froling and Maj. Douglas Champagne of the 127th Wing had just fired the last of their 20mm cannon ammunition in routine training. They were oblivious to the events in New York and Washington but heard unusual conversation over their radio frequencies.

“Something strange was occurring and I couldn’t put my finger on what was happening,” Froling says.

A Vermont Air National Guard F-16 from the 158th Fighter Wing patrols the skies above New York City on Sept. 12, 2001.

"Flying over Central Park at 1,000 feet and 500 knots ... trying to identify people, that's just wrong. You should never be doing this over downtown Manhattan, watching the towers burning."

**— Lt. Col. Tim Duffy, F-15 pilot;
Massachusetts Air National Guard**

"I could hear (the FAA) Cleveland Center talking to the airlines and I started putting things together and knew something was up. Then our commander wanted to know if we'd expended our training ordinance. The only thing that went through my mind was maybe there was a problem with our airplane, maybe we missed something and shouldn't have been shooting the gun."

Froling didn't know he was being considered to shoot down an airliner. ~~Without weapons and because United Flight 93 turned away from Chicago, he never faced that decision.~~ The Michigan pilots would safely return to their base. Champagne remembers a squadron buddy running toward his jet as he was taxiing in. "I'll never forget this, it is one of the things I'll remember, I think forever," he says. "I was in the cockpit and I remember him mouthing the words to me, 'It's bad. It's really, really bad.'"

Above Manhattan, Duffy and Nash were given clearance to kill over their radio frequencies, but to this day aren't sure who gave that order. Was it NEADS or a civilian air traffic controller? ¹² Uncertain, they continued to fly over the city.

"Flying over Central Park at 1,000 feet and 500 knots ... trying to identify people, that's just wrong. You should never be doing this over downtown Manhattan, watching the towers burning," Duffy says. "We're down over Newark getting people

away from the airport, and of course we're trying to get them down on the ground, or identify them. As you're coming back, the Statue of Liberty with the towers burning behind it as we're flying around, you're saying to yourself, 'This is nuts.'"

Clearing the skies

"America was under attack," Marr says, and controllers were still grappling with two planes missing and frightening rumors of bomb threats and airplane crashes that really never happened. "In less than an hour here the whole world changed."

Amid the fog and madness, Arnold and his staff were on the phone with Marr; Col. John Cromwell, Western Air Defense Sector commander; and Col. Larry Kemp, Southeast Air Defense Sector commander. They were making fast decisions as the FAA reported more information. At one point during the four-hour ordeal, 21 planes were unaccounted for, Arnold says. "We were concerned about Flight 93 and this Delta aircraft (Flight 1989) and were trying to find aircraft in the vicinity to help out," Arnold recalls.

"We didn't know where it was going to go. We were concerned about Detroit ... and the fighters up there were out of gas with no armament. Then we called a Guard unit in Toledo, Ohio, because we thought 93 or Delta Flight 1989 might be headed toward Chicago. Then NEADS called another Guard unit in Syracuse, New York, and eventually got them moving in the direction of getting airplanes airborne.

"Then we watched the 93 track as it meandered around the Ohio-Pennsylvania area and started to turn south toward D.C. By now the Pentagon has been hit and we have aircraft on orbit, the 'Happy Hooligans' of the 119th at Fargo, North Dakota, (from the Langley alert detachment). They are now orbiting over Washington, D.C., and have been for awhile. As United 93 headed toward D.C., the desire is to move the fighters toward those aircraft.

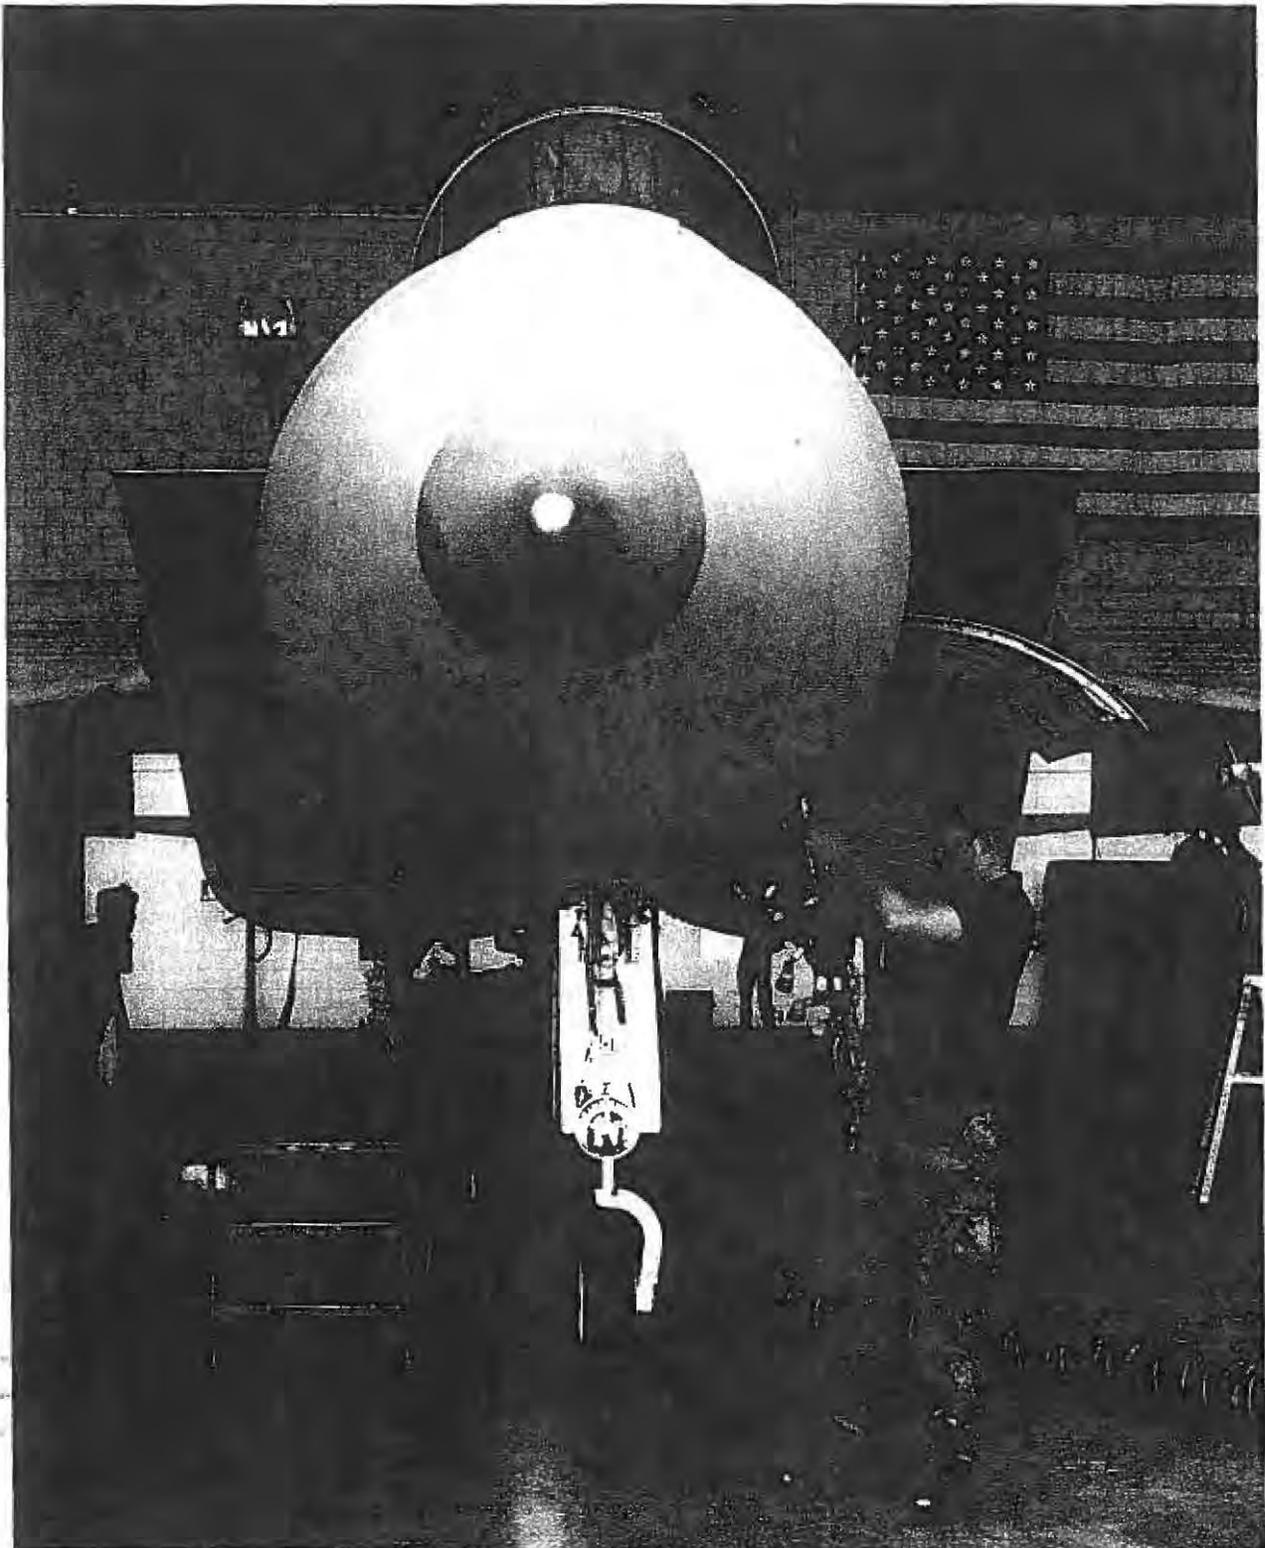

Photo by Staff Sgt. Sandra Niedzwiecki, 102nd Fighter Wing, Massachusetts Air National Guard

Massachusetts Air National Guardsman Senior Airman Joel Milliken, 102nd Maintenance Weapons section, repairs an F-15 during Operation Noble Eagle.

But as we discussed it in the conference call, ~~we decided not to move fighters toward 93 until it was closer because there could have been other aircraft coming in.~~ By now a number of aircraft are being called possibly hijacked ... there was a lot of confusion, as you can imagine.”

Missing planes seemed to be everywhere. “There were a number of false reports out there,” Marr says. “What was valid? What was a guess? We just didn’t know. ... We were in foreign territory; we are used to protecting the shores, way out overseas. Our processes and procedures weren’t designed for this.”

An obscure military plan, “SCATANA” — Security Control of Air Traffic and Air Navigation Aids — would help the FAA in its efforts to clear the skies. The commander of NORAD, Gen. Ralph E. Eberhart, ordered a limited version of the Cold War-era strategy, and allowed essential aircraft like rescue helicopters to fly. The decision was made during the air threat conference call and was backed by Transportation Secretary Norman Mineta.¹³ The SCATANA order had been implemented only once before, and only for war games in 1961.

Through the fray, ~~Marr remembers hearing that the FAA was evacuating its Cleveland Center. He didn’t know why at the time and focused on United Flight 93, headed straight toward Washington.~~ The North Dakota F-16s were loaded with missiles and hot guns and Marr was thinking about what these pilots might be expected to do. “United Airlines Flight 93 would not have hit Washington, D.C.,” Marr says emphatically. “He would have been engaged and shot down before he got there.”

Arnold concurs: “Thad every intention of shooting down United 93 if it continued to progress toward Washington, D.C., and any other aircraft coming toward it that day, whether we had authority or not.”

~~But as the story goes, the pilots were spared the unthinkable. With the now legendary “Let’s Roll” rallying cry, the heroic passengers aboard United~~

Department of Defense photo

Ray Gould, Military District of Washington Engineers, stands in front of the exit point of American Airlines Flight 77 where it stopped moving through the Pentagon. The hijacked airliner had 64 people aboard and crashed at 9:38 a.m.

Airline Flight 93, pushed the terrorists in the cockpit, bringing the airliner to the ground near Shanksville, Pa. at approximately 10:03 a.m. The Boeing 757, with 44 people aboard, reportedly dropped 1,200 feet in 12 seconds. ¹⁴ Lives were taken in the air to save lives on the ground.

The Langley-based pilots were 96 miles away, Marr says. In Cleveland, Delta Flight 1989 landed safely, but the NEADS crew wouldn't learn that until later.

What was going to happen next? Staff Sgt. Mark Jennings, NEADS tracking technician, remembers asking himself: "Was the fourth one the last one and would there be more? It made me sit back and say, 'Is the world falling apart on us?' It was scary and there was a real feeling of uncertainty."

Marr began thinking out loud: "I turned to the staff and said, 'What more can we do? Let's get everyone in the air and see what they can provide us.'"

They needed help and literally went down the list calling every regular Air Force and Air National Guard unit in the northeast. "We just started opening our phone rosters and were trying to figure out which different Air Force units there were in the interior of the United States," Deskins says. "And we called these units individually to see if they could get planes up."

And it wasn't happening like it normally would, she says. Enlisted personnel were calling colonels directly, asking for their help. Rank didn't matter and virtually everyone would commit to getting fighters airborne. "It was unbelievable," says Tech. Sgt. Michael Cavalier, NEADS senior director technician. "There were Guard units I'd never heard of calling us asking how they could help. And we said, 'Yes, take off.'"

Canadian Forces Capt. Brian Nagel, who was chief of NEADS live exercises, says "guys were getting airborne from a news report and phone call from us."

"I called up one unit and the guy says, 'Who are you and what do you want?'" Nagel recalls. "I

told him to go watch CNN and that I'd phone him back. So I phone him back and he says, 'Here's what we've got and here's what we can do for you.'"

As Col. Robert Knauff, commander of the 174th Fighter Wing in Syracuse, told Marr: "Give us 10 minutes, we can arm up guns; give us 30 minutes, we can put heat-seekers on the wings; give us an hour, and we'll put radar missiles on board." The first two Syracuse-based F-16s were up by 10:44 a.m. ¹⁵ Two more fighters were up a few minutes later, but there was no time to load missiles on any of them. The pilots' mission was vague, but they believed an airliner was heading toward Washington, D.C.

"Our pilots were told to get in the air and get

their tasking from NEADS once airborne," says Col. Tony Basile, 174th Fighter Wing vice commander. "The first two airborne were trying to intercept the flight that crashed in Pennsylvania but that airplane had actually hit the ground. ... There were several others NEADS wasn't sure of, so our mission was to intercept those airplanes."

The Ohio Air National Guard 180th Fighter Wing was the first unit outside the East Coast to answer the sector's plea. Controllers notified the wing at 10:01 a.m.; several armed F-16s departed Toledo Express Airport at 10:17 a.m., according to wing records.

Jets from the 177th Fighter Wing, New Jersey Air National Guard, were airborne within an hour after the Pentagon attack, says Col. Mike Cosby, wing commander. And the F-16s were fully loaded.

"The mind-set a lot of old military guys have is

that the Guard is the standby force," Marr says. "But these Guard guys got up very, very quickly."

As pilots and aircrews throughout the country went to battle, historic events were taking place at the highest levels.

"As this is all transpiring extraordinarily rapidly ... some five minutes after United Flight 93 crashed in Pennsylvania, President George W. Bush, through Vice President Dick Cheney, gave authority to shoot down civilian airplanes that looked like they were going to be used as fuel-air bombs," Arnold says. "I have the authority in case of an emergency to declare a target hostile and shoot it down under an emergency condition ... but it was comforting to know we legally had the authority

from the president of the United States.”

The order would go even further in Washington, D.C., where local airspace was declared a “weapons-free” zone.¹⁶ Fighter pilots were given unparalleled orders to fire upon anything around the nation’s capital that refused to respond to Air Traffic Control or NORAD direction.

“The president had declared Washington, D.C., and national capital region to be a free-fire zone,” Arnold says. “That is very unprecedented. It meant if a pilot saw an airplane within a 30-mile radius of Washington, D.C., and couldn’t determine if it was a doctor flying back to his hometown, that pilot was not only allowed to, but expected to shoot that airplane down.”

Some F-16 pilots from the 113th Wing, District of Columbia Air National Guard, were prepared to do it. They weren’t in communication with NEADS that morning but knew their home city was in trouble. The wing, at Andrews Air Force Base, Md., is not part of the NORAD air sovereignty force and did not have an alert mission. But that did not stop pilots there from taking off to protect Washington, D.C., just miles from their own flight line.

Weapons-free zone

As the twin towers were burning live on CNN, weapons officer Maj. Dan Caine was worried. Not only was the country under terrorist attack, but three of the 113th Wing’s F-16 pilots had not returned from a training mission. As the “SOF” — Supervisor of Flying — that morning, Caine was responsible for seeing those jets return safely to base.

“I called the Andrews tower and asked them if any Air Traffic Control measures were starting to go into effect with an eye toward the recovery of our airplanes,” Caine says. “They indicated there was not and I called our contact at the Secret Service. He told me he wasn’t sure, but that things were happening and he’d call me back. It was a very quick, confusing conversation.”

Andrews is home to Air Force One, and 113th Wing pilots are used to working with the Secret Service, but “weren’t thinking about defending anything,” says Lt. Col. Marc Sasseville, commander of the wing’s 121st Fighter Squadron. “Our primary concern was what would happen with the air

traffic system.”¹⁷

But the Secret Service would soon call back: “(The agent) asked, ‘Can you get airplanes up?’” Caine recalls. “Then he told us to stand by and that somebody else would call. When I heard the tone in his voice, I called our bomb dump and told them to uncrate our missiles.”

On the opposite side of Andrews Air Force Base, the 113th Wing munitions crew began unloading bullets and AIM-9 “Sidewinders” from storage sheds. “There were six of us there and we had 28 missiles to unload, and they each have three components” says Senior Master Sgt. David Bowman, 113th Wing munitions supervisor. “And if you

drop one, you can’t use it anymore. We were doing it as fast as we could, because for all we knew the terrorists were getting ready to hit us.”

As the crew carefully but quickly loaded the weapons onto a flatbed trailer, the phone was ringing again at the squadron operations desk. Caine answered a phone call from someone in the White House requesting armed fighters over Washington. “I could hear plain as day the vice president talking in the background,” Caine says. “That’s basically where we got the execute order. It was ‘VFR (Visual Flight Rules) direct.’”

“I handed the phone to my commander and said, ‘I’m going to go fly.’”

Brig. Gen. David Wherley Jr., 113th Wing commander, had just arrived at the operations desk. He would find himself on several phone calls that morning, desperately seeking airborne authorization for his fighters. "I dial the White House JOC (Joint Operations Center) and the news is showing the White House with people running out the front door," Wherley says. "And the phone rings about eight times before somebody picks up and ... they have nobody in uniform, it was all Secret Service people and a team communicating with the president."

A woman at the JOC — the Secret Service command and control center — answered the phone. "I'm thinking these are civilians and they don't deal in the language of the military, the rules of engagement, so I asked her, 'What do they want me to do?'" he recalls. "She was standing next to the vice president (Dick Cheney) and she said, 'They want you to put a CAP up.'"

"Basically what they told me, and this is another one of those things that's clear in my mind ... 'We want you to intercept any airplane that attempts to fly closer than 20 miles around any airport around the Washington area. ... Attempt to turn them away, do whatever you can to turn them away and if they won't turn away use whatever force is necessary ... to keep them from hitting a building downtown.'"

Everything was happening at once, says wing safety officer Lt. Col. Phil Thompson, who was now the acting SOF. "We were taking calls from the Secret Service and Washington Center," he recalls. "We have a special relationship with the Secret Service and know these guys by name and face. ... They were worried about Flight 93."

In the 113th Wing intelligence office, Maj. David

McNulty and Senior Airman Juan Garcia were hurriedly calling every agency from the CIA to FBI to FAA to authenticate the flood of information. "I even called the National Security Agency 24-hour information desk and they knew nothing more than I did," McNulty says. "We were all getting our information from CNN. But the White House JOC told me eight planes were unaccounted for."

Three wing F-16s, meanwhile, were still airborne. "We had gone up to (the gunnery range in) Dare County, North Carolina, to drop some bombs and hit a refueling tanker and come on back," says flight lead Maj. Billy Hutchison. "It was going to be an uneventful day. It was actually a beautiful day."

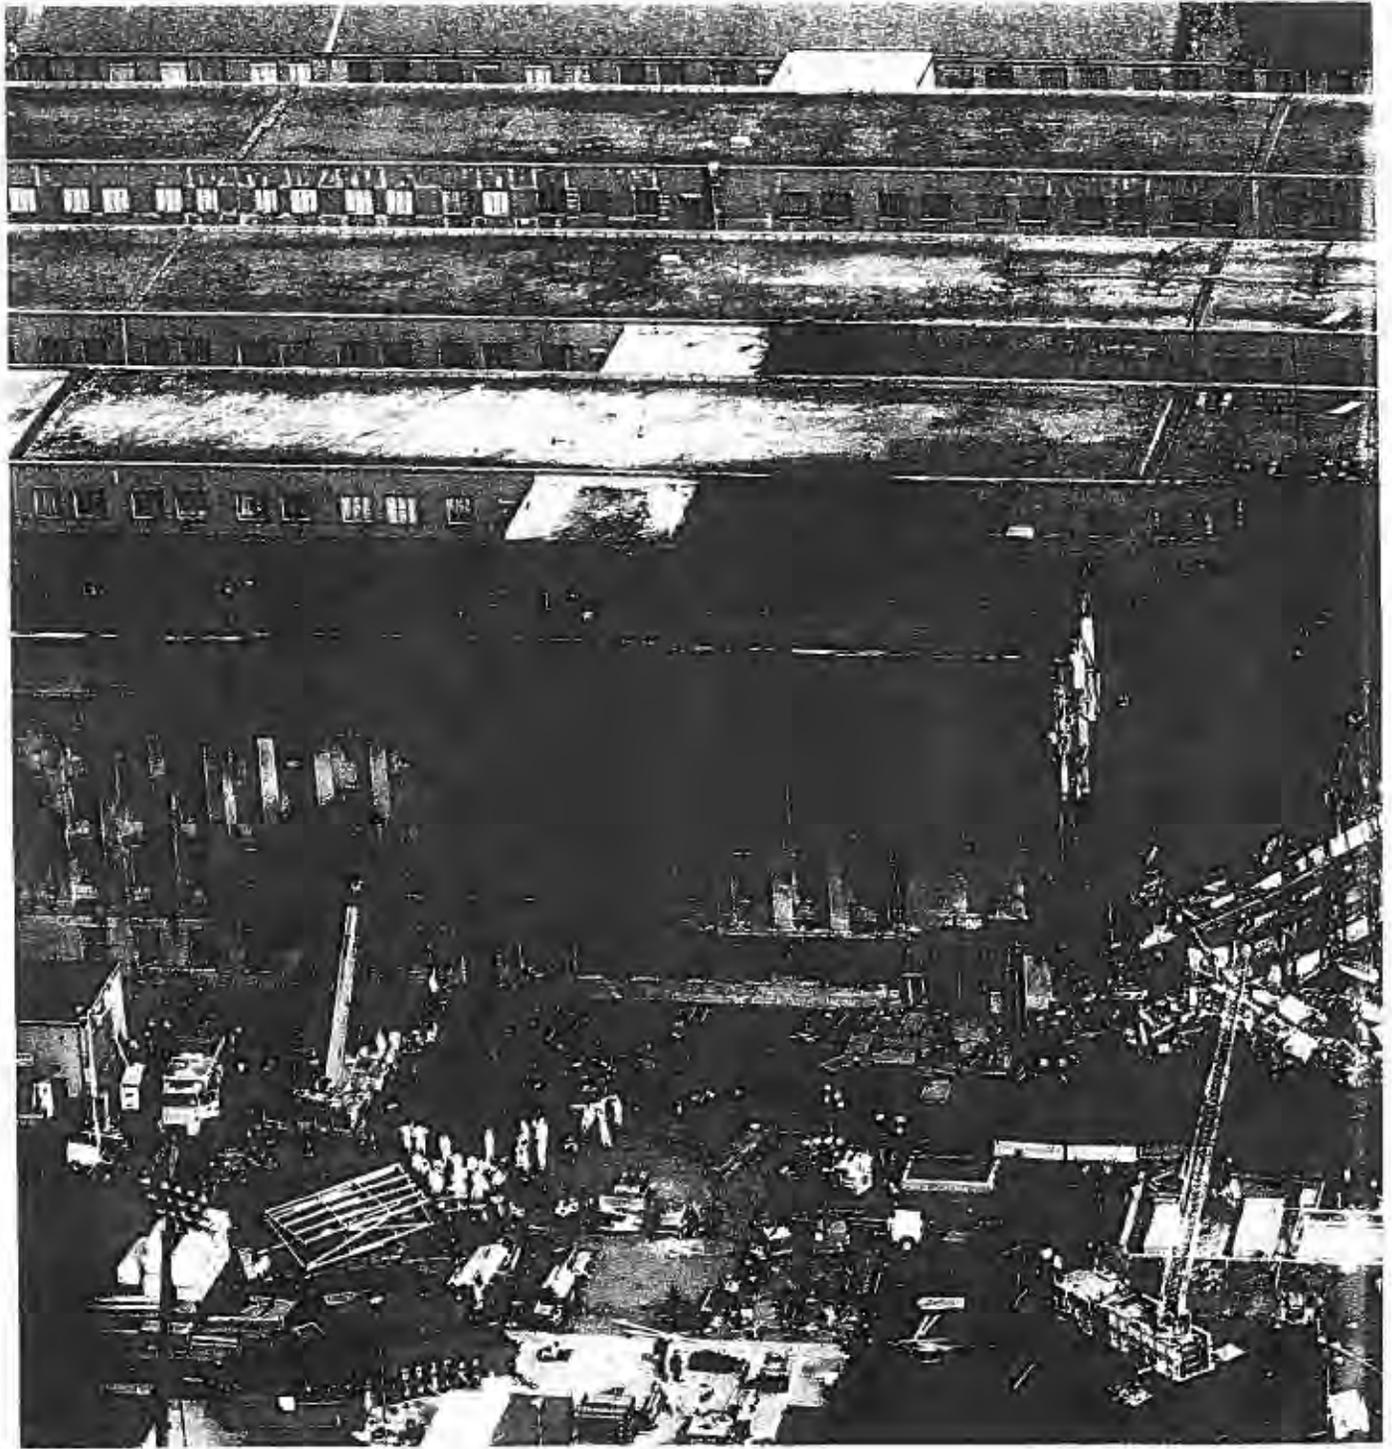

"We're about halfway back when I am able to talk to the SOF, Lt. Col. Phil Thompson, who is at the desk with Brigadier General Wherley," he says. "Because they've seen what has happened on TV, they tell me to return to base 'buster'; buster means as fast as the aircraft will fly. So we light afterburners and we are coming back at Mach as

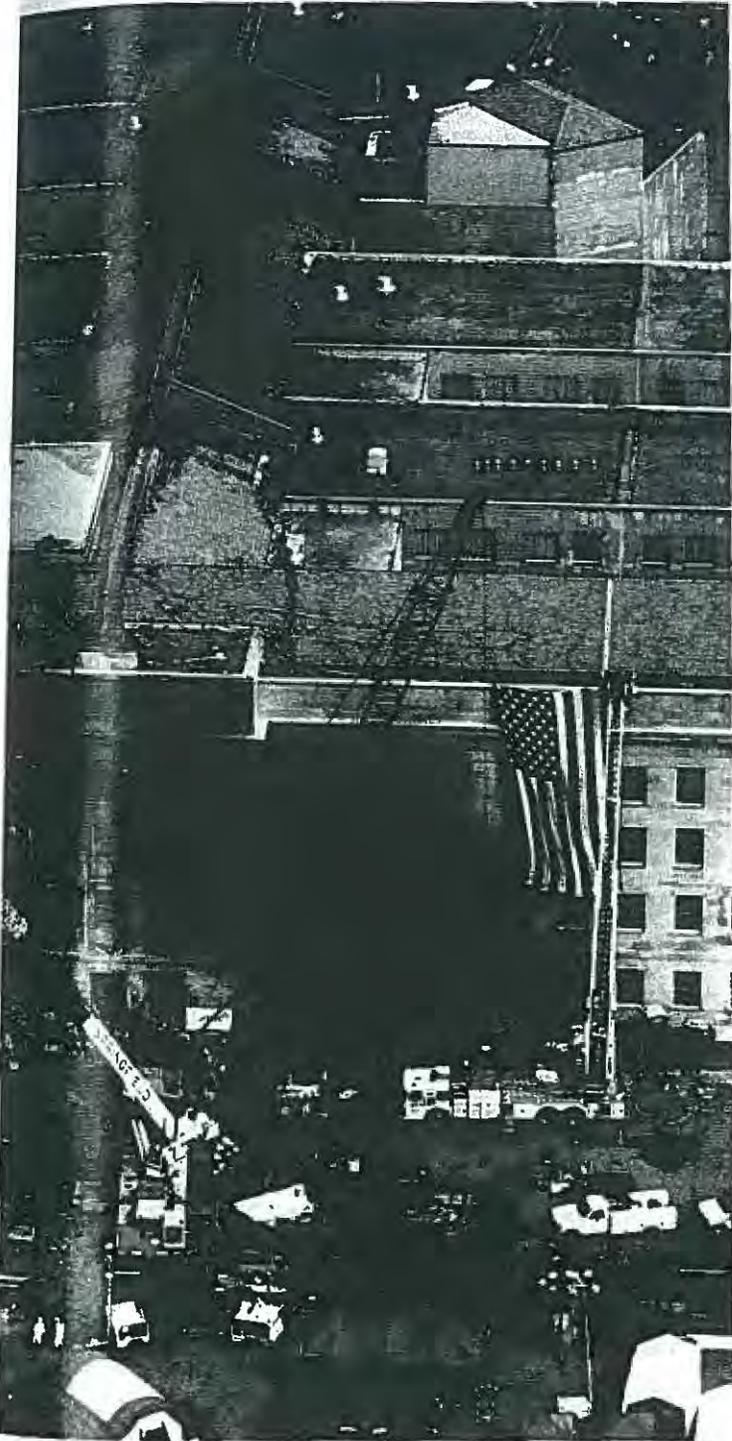

quick as we can get back. ... As I get back, I cross the Potomac River on the south end of Maryland and Virginia, and I see a big column of smoke. It was so clear and there was no haze in the air. I tell the SOF, 'It looks like there's been an explosion near (Ronald Reagan Washington) National Airport. What's going on?'"

"He said, 'We know. Just keep coming.'"

As Hutchison approached the runway to touch down, Thompson and Wherley inquired over the radio about the trio's fuel status. Nobody had enough gas, but Hutchison had the most. Although he was at 2,800 pounds — like one-eighth a tank in your car — Wherley told him to take off again.

Department of Defense photo by Tech. Sgt. Cedric H. Rudisill

An aerial view Sept. 14, 2001, of the destruction caused when a hijacked commercial jetliner crashed into the Pentagon on Sept 11, 2001.

“I was given information to intercept an aircraft coming toward D.C. and prevent it from reaching D.C.,” Hutchison says.

“We had something coming down the Potomac at low altitude,” Thompson says. “Brigadier General Wherley is standing here and we’ve got the tower with the Secret Service agent and they want us to launch anything we’ve got. And the general said, ‘Do it.’”

Hutchison taxied at high speed down the runway and took off at 10:33 a.m. ~~18 “I was already cleared through tower, who is listening to Washington. Approach frantic with what they seem to think are aircraft coming their way. ... There is another aircraft, and it’s United Flight 93. They don’t know what’s going on, but only know the direction it’s coming and apparently have been given information that it’s coming their way.”~~

~~In reality, United Airlines Flight 93 had crashed 30 minutes earlier, but in the haze and fog of war that tragic day, that information was unavailable.~~ Hutchison continued looking for the plane. “I took off without afterburner to conserve fuel, go across the White House over the Georgetown area and continue northwest up the Potomac,” he says.

When Hutchison reached the northern part of the river near Frederick, Md., controllers at Washington Center asked him to change course. “They asked me to turn to D.C. and all the while my gas is depleting,” he says. “And I don’t have live bullets, just training rounds.”

“I terminate the intercept and come back to D.C.,” Hutchison says. “Washington Center is still vectoring me around trying to pick up potential threats to the area which happened to be helicopters actually responding to the Pentagon scene. All the while, when I took off from Andrews, I could see what was going on over the Pentagon because I was so low. But it wasn’t until I actually flew past it that I actually saw it was the Pentagon. I circled at a couple of hundred feet at the most just to, one, investigate, and two, give the people on the ground some semblance of security of an American fighter

coming by. And apparently it changed the mood for a lot of people when they saw that.

"After that point, I'm emergency fuel, the lowest I've ever been in an F-16, and tell Washington Center I must leave and they say I'm cleared to return to base and that two more aircraft are coming out of Andrews."

Sasseville and Capt. Heather Penney were on their way. Before they stepped to the jets, Wherley made very clear what they might have to do: "My translation of the rules to 'Sass' was, 'You have weapons-free flight-lead control,'" Wherley says. "I said, 'Do you understand what I'm asking you to do?'"

"And they both said: 'Yes.'"

"And I told them to be careful. It was important for them to understand that this was weapons-free."

Weapons loaders on the ramp were working feverishly to arm missiles, but there was no time. Sasseville and Penney took off from Andrews at 10:42 a.m.¹⁹ Their planes were loaded with 20mm training rounds, hardly enough to bring down an airliner, they concede. "Sass looked at me and his eyes were just burning," says Penney, a rookie pilot and lieutenant at the time. "We were running to the jets and jumped in our airplanes and we didn't even have a full load on the guns. I'd never scrambled before, I'd never done this."

"I was screaming to the maintainers to pull the chocks and the guys were pulling the pins to arm the guns," she recalls. "We were going without INS (Inertial Navigation System)."

The two were in their jets watching Hutchison take off before them and listening to scants of in-

Airplanes line the runway of Halifax International Airport, Nova Scotia, after being diverted there Sept. 11, 2001. More than 7,000 passengers were affected.

formation on their radio frequencies. "I don't have the whole picture, but have word from Washington National Approach that something is coming," Sasseville says. "We had hot guns, but only training bullets. ... I'm thinking, 'Wow, we're in a little trouble here.'"

Penney and Sasseville would fly at low altitudes over the capital, Pentagon burning in the distance, unaware the North Dakota pilots were hovering around 20,000 feet. The North Dakota pilots were communicating with controllers at NEADS; the Washington, D.C., pilots with civilian controllers at the FAA. The pilots were on different radio frequencies, but would all hear remarkable words on a shared channel: "*Attention all aircraft monitoring Andrews tower frequency. Andrews and Class Bravo airspace is closed. No general aviation aircraft are permitted to enter Class Bravo airspace. Any infractions will be shot down.*"²⁰

"When we took off I hadn't even thought about how I would down an airplane," Penney says. "Later I'm thinking, 'I only have 100 bullets. What am I going to do?'"

"I could make one pass with the gun, maybe I could scrape my gear on the wing, but it didn't hit me until two weeks later that's what they expected us to do. ... I was in war mode; the emotional element wasn't relevant to what I had to do."

Sasseville, an airline pilot on a military leave of absence, also thought about how he might bring down an airliner, and says it was a scary proposition. "We're talking about shooting down a U.S. air carrier with Americans on board, the whole gamut, women and children," he says. "We had no real weapons and we didn't have a whole lot of options. Once you make that decision, how are you going to do that with the limited ordnance you have? In combat, as long as you can disable an airplane, depending on your role, you've done your job."

"I was going into this moral or ethical justification of the needs of the many to the needs of the few," he says. "The passengers on United Flight 93 went through that same thing. They made the

"The events of 11 September were an imponderable, unknowable circumstance. We performed magnificently."

**— Gen. John Jumper,
Air Force chief of staff**

decision we didn't have to make."

With minds racing, Sasseville and Penney continued flying and say they found an aerial ghost town over the normally busy Washington, D.C. Two more 113th Wing F-16 pilots, Caine and Capt. Brandon Rasmussen, would take off a few minutes after them, but their jets would each be armed with hot guns and two AIM-9 Sidewinder missiles.

Chief Master Sgt. Roy Belknap, 113th Wing production superintendent, watched in amazement as crews loaded live ordnance with pilots in the cockpits. "That's the first time that has ever happened here," the 33-year veteran says. "Our guys were hanging live AIM-9s with aircrews in airplanes waiting for us to get done so they could crank and go. What they did was unprecedented."

By the book, it takes three hours to bring weapons from storage sheds and load them on the jets, but on Sept. 11, 2001, it took the 113th Wing weapons crews 45 minutes, Belknap says.

Rasmussen says his adrenaline level was high as he took off toward the great unknown. "Once maintenance armed us up, we took off," he says. "I had never flown with real missiles and had never so much as seen them on the jet."

"We take to the air and are talking to Washington Center on the radio and we're used to working with AWACS (Airborne Warning and Control System) weapons controllers or GCI (Ground Control Intercept). ... We knew NORAD had implemented SCATANA and three things have already been hit when we get up in the air. So we're trying to identify people who are not talking to Air

Traffic Control. ... We probably intercepted five to 10 aircraft apiece."

Although they were in weapons-free airspace, none of the pilots believed anything they encountered was enough of a threat to actually shoot, but "quite a few people got scared out of the air," Rasmussen says. "On that day, we owned the universe over D.C. at any altitude, any location, as long as it was in the interest of protecting the capital."

Adds Caine, "Certainly there were times when rules of engagement triggers were met, but not executed and thankfully so. Cooler heads prevailed or it could have been an even uglier day than it was."

In efforts to clear the skies above Washington, Happy Hooligan F-16 pilots Eckmann and Derrig were directed to intercept some low-altitude unknowns. Those "unknowns" were their military brethren from the District of Columbia Air National Guard.

"Air Traffic Control had started turning everyone away from Washington, D.C.," Eckmann says. "Normally it's a pretty busy area and we were getting vectored on people who weren't obeying that. We got vectored on the D.C. guys taking off out of Andrews ... the military knew they were taking off but Air Traffic Control didn't realize they were military."

The 113th Wing pilots "started in a low Combat Air Patrol and didn't even know we were there," Eckmann says. "They did a fantastic job getting there in the amount of time they did. That was great, considering they weren't on alert. I know how much time it takes to put missiles on planes, and they were fast."

Soon the pilots would all end up on the same frequency. "About halfway through our sortie, we learned about three other F-16s that had been airborne a lot longer than we had," Sasseville says. "We were all airborne at the same time but nobody knew it."

As Sasseville was commanding the low-altitude

Secretary of Defense Donald Rumsfeld conducts the first Pentagon briefing after the terrorist attack there Sept. 11, 2001. He is joined by Gen. Henry H. Shelton, who was chairman of the Joint Chiefs of Staff, since retired, and Sen. John Warner, Virginia.

CAP, the Happy Hooligans commanded their own CAP several thousand feet above. "At first a low CAP and high-altitude CAP emerged," Eckmann says. "It took awhile before we were all talking on the same radio. We had two different units here and two different things going on. I had set up a racetrack CAP and he (Sasseville) had set up a tactical CAP.

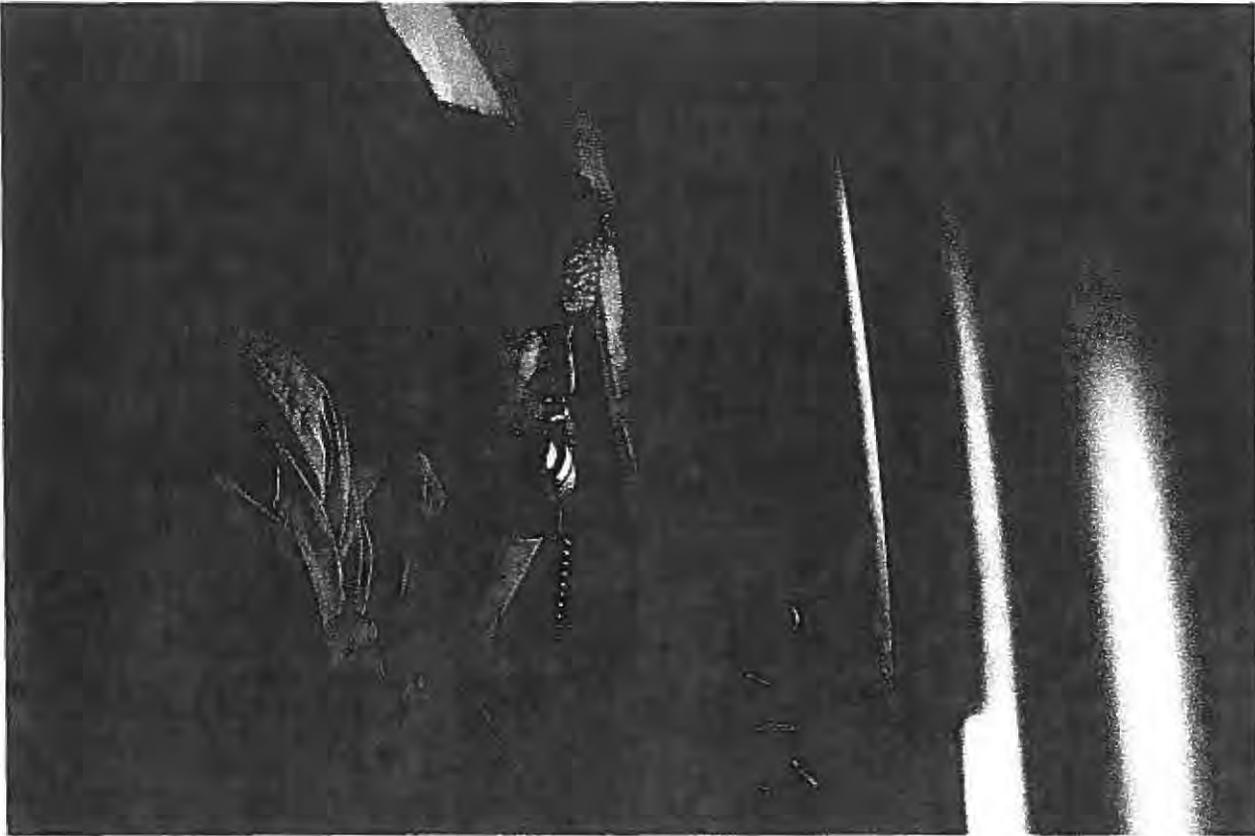

"We eventually said, 'Here's what we're going to do, we'll take care of the high CAP and you guys take care of the low CAP.' As it progressed ... planes started moving up for fuel conservation and soon the lowest CAP altitude was 10,000 feet, but at that time we had everything cleared."

Essential AWACS and refueling aircraft would arrive sent by the CONR and NEADS leaders.

With a good radar picture and enough fuel, Sasseville and the other pilots used Ronald Reagan Washington National Airport as their "bull's-eye." By dividing the airspace into four sections, they could better communicate with the FAA about the locations of unknown aircraft. Virtually every pilot who flew that day has nothing but praise for FAA controllers who quickly learned to speak the language of the military.

"Nobody had trained to do this," Sasseville says. "But everybody pitched in to make it happen. Everybody was doing smart, safe things, from operations crews to the maintainers setting up airplanes and loading live AMRAAMs (Advanced Medium Range Air-to-Air Missiles)."

Gen. John Jumper, Air Force chief of staff, would

After departing Offutt Air Force Base, Neb., President George W. Bush confers with Vice President Dick Cheney from Air Force One during his flight to Andrews Air Force Base, Md., Sept. 11, 2001. The president's aircraft was escorted by armed fighter jets, including F-16s from the 147th Fighter Wing, Texas Air National Guard. The president was a member of the Houston-area unit in the early 1970s.

later reflect: "The events of 11 September were an imponderable, unknowable circumstance. We performed magnificently."²¹

Eberhart, NORAD commander, concurs: "I will always believe there would have been other attacks had we not grounded airplanes and got the fighters airborne."²²

Guarding the president

As Air National Guard pilots were flying CAPs above Washington, D.C., President Bush was departing Sarasota, Fla., on Air Force One. Arnold

and his staff at the CONR Air Operations Center were coordinating the president's movement and scrambling fighters to keep him safe. All the while, reported hijackings were rampant.

"An AWACS was flying a training mission off the coast of Florida," Arnold recalls. "President Bush was in Sarasota and we moved the AWACS toward the president. Then we received tasking from the Secret Service through the Joint Staff and NORAD to follow the president and protect him."²³

Months earlier, Arnold had made arrangements with Brig. Gen. Ben Robinson, then-commander of the 552nd Air Control Wing at Tinker Air Force Base, Okla., for AWACS support during exercises

simulating attacks on the United States. Now the AWACS would be flown in a real-world scenario that only hours before was unimaginable.

"The AWACS pilot thought it was an exercise and we then told him what happened at the World Trade Center," Arnold says. "He realized his responsibility was to follow the president. We told him to follow Air Force One and he asked the question we all asked: 'Where is it going?' We said, 'We can't tell you. Just follow it.'"

The Southeast Air Defense Sector — SEADS — put pilots from the Minnesota Air National Guard 148th Fighter Wing at Tyndall Air Force Base on battle stations. Pilots sat in their cockpits awaiting word to go, but Air Force One moved so quickly they were never scrambled. Alert fighters from Ellington Field, Texas, were scrambled instead. Four F-16s from the 147th Fighter Wing, Texas Air National Guard, escorted President Bush from the panhandle of Florida to Barksdale Air Force Base, La. The president was being escorted by some of his own — he flew F-102 interceptors for the Houston-area unit in the early 1970s.

By the time the president landed at Barksdale, the Louisiana Air National Guard 159th Fighter Wing, New Orleans, already had four of its F-15s loaded with live missiles. The unit, not normally part of the NORAD alert system, was scrambled by SEADS about the same time the president was leaving the base. "As we were all watching the news, the wing leadership decided to configure our jets and get ready," says Maj. Jeff Woelbling, 122nd Fighter Squadron weapons officer. "Our weapons guys were hustling to get missiles on the rails. When I got to the jet, the maintainer told me he needed five more minutes. I said, 'You've got three.' He did it in about a minute and a half."

Nobody knew where the president was headed. "When Air Force One took off out of Barksdale, we were scrambled because SEADS didn't know his route of flight," says Lt. Col. Randy Riccardi, who was the 122nd Fighter Squadron commander at the time. "We were in a four-ship and turned

north toward Barksdale and the president was already airborne. We were 300 miles behind him since SEADS didn't know where he was going."

"It wasn't until the president was near Offutt (Air Force Base, Neb.), that we turned around and came back," Riccardi says. "That was about a 90-minute mission and later, at about 5:15, we were scrambled again."

"We ended up flying a six-hour and 15-minute mission over Houston that night," Riccardi says.

The response in Louisiana that day was indicative of the quick reactions across the Air National Guard map. The military's homeland defense mission was just beginning.

Somewhere in the southern skies was Air Force One, having left Barksdale for an undisclosed location. "When we left Barksdale we didn't know where we were going," says Maj. Shane Brotherton, a Texas Air National Guard F-16 pilot who escorted the president's plane that morning. "We were actually about to run out of gas when a SEADS controller told us a tanker was on its way. We were flying north two miles directly behind Air Force One and didn't know where we'd be landing. They wouldn't tell us, so we just kept getting more gas."

By the time Air Force One landed at Offutt Air Force Base, the F-16s were so heavy from refueling that the pilots had to burn off gas before they could land, Brotherton says. Once on the ground, they had a meeting with the pilot of Air Force One, who asked them about the capabilities of the F-16. The Air Force One aircraft commander couldn't tell them where they were going next, so the F-16 pilots couldn't file a flight plan. They got a candy bar and soda instead.

As the pilots were waiting, President Bush and his team were joining the air threat conference call. By this time, Arnold and Marr were also on the line.

"We were watching potentially hijacked air-

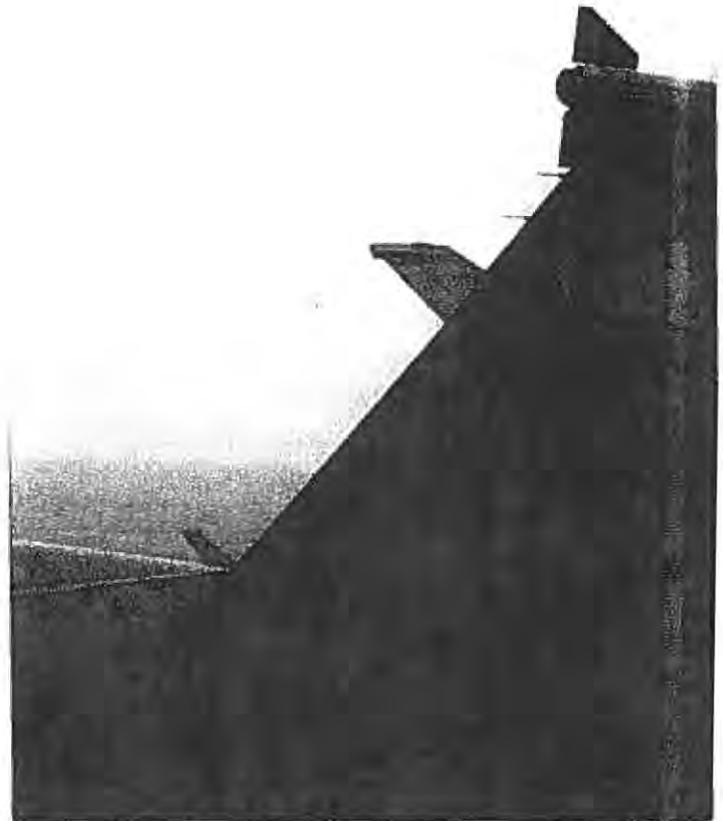

craft," Arnold says. "I'm on the phone listening to the president talk to the secretary of defense and they were concerned about an aircraft that had taken off from Madrid and was going to land at John F. Kennedy International. ... We didn't know where that plane was. About that time, Bob Marr calls me, who was also on the conference call, but called me directly and said, 'We just talked to the airline and that aircraft is back on the ground in Madrid.' "

"I picked up the hot line and said, 'Mr. President, this is the CONR commander. ... No problem with Madrid.' It was valid information and the president said, 'OK, then I'm getting airborne.' "

The F-16 pilots there to escort the president were still waiting word to go. "The Air Force One pilot had gotten our cell phone numbers and said he'd call us when we'd be leaving," Brotherton says. "We were eating our snacks and heard jet noise. It was Air Force One and they'd never called us. We got to the jets and he's taxiing fast and never stopped. Now we're taxiing fast and we blast off. By the time we got airborne, he was 100 miles in front of us. ... Air Force One is fast but you wouldn't think so. But it can move. There were some Sioux City guys (Iowa Air National Guard) up there but the Air Force One pilot told them he'd had the Texas boys with him from the start. All across the country we were playing catch up, because he was moving. And we didn't catch up until we were nearing Washington."

As the president's 747 was approaching Andrews Air Force Base, the North Dakota and District of Columbia pilots were still flying CAPs over the city. A number of fighter jets from across the northeast had joined them. "It was like someone kicked a hornet's nest," one pilot remembers.

Soon the FAA would report an aircraft racing toward Air Force One. Fighter jets quickly intercepted the unknown, a Lear business jet in the wrong place at the wrong time. Air Force One touched down safely at Andrews, surrounded by

armed fighter escorts. The president boarded his Marine One helicopter and arrived at the White House around 7 p.m.

The airplane that had landed in Madrid was the last possible hijacking in the air that day.

From his radar scope, NEADS Master Sgt. Joe McCain believes he saw American Airlines Flight 11 disappear over New York on Sept. 11, 2001. It was 8:46 a.m. Eastern Standard Time, a tragic tick of the clock that forever

Two F-16 fighters assigned to the Texas Air National Guard 147th Fighter Wing are armed and ready to respond to unknown threats. Pilots from the Houston-area unit escorted Air Force One across the country Sept. 11, 2001.

Photo by Lans Stout for Code One magazine

seared itself into the American psyche. It was the unforgettable moment when the first of hundreds of innocent victims were killed that day. Twelve hours later, after a day that seemed like an eternity yet flew by remarkably fast, Joe McCain was home with his family.

"I have three kids and my youngest is 8," McCain says. "I'm sitting there at the kitchen table taking off my boots. It's the worst day I've ever had in the service and my son asks, 'Daddy, are they going to get us?' I told him he was safe, but the next few days I'd be gone a lot.

"That's what brought it home for me."

CHAPTER 4

THE NOBLE EAGLE FLIES: Threat suddenly changes

Air defense new priority as terrorists turn airliners into weapons of war

The images that kept Maj. Gen. Larry K. Arnold awake at night were like eerie plots in a sci-fi horror film: cruise missiles, nukes, biological warfare, chemicals, and airplanes in the hands of terrorists.

“I lie awake worrying,” Arnold told The Associated Press in early 2000. “It is one thing to put a truck inside the twin trade towers and blow it up. It is quite another to be able to fly a weapon across our borders. That is an attack, a direct attack, an unambiguous attack from outside our country.”¹

Then Sept. 11 happened, a twisted nightmare far scarier than Arnold ever could have imagined. With a Cold War mentality that the demons would come from outside America’s shores, Arnold and his staff were blindsided when the fear struck from within. “No, we did not envision people hijacking airplanes from within the United States, taking over those aircraft and using them as fuel-air bombs,” says the retired commander of 1st Air Force and the Continental United States North American Aerospace Defense Command Region. “As much as you brief what could happen in the future, I think from an intellectual standpoint, we realized the

Noble Eagle.**

Photos by Master Sgt. Dean Kuhlman, 148th Fighter Wing, Minnesota Air National Guard

greatest threat to the United States prior to Sept. 11, 2001, was going to be a terrorist attack. But I did not envision that it would be hijacked airplanes run into buildings like that.”

In the world before Sept. 11, Arnold had visions of light aircraft sneaking across America’s air borders to wage biological, chemical or nuclear attack. And he wasn’t convinced the NORAD alert fighter force was big enough to stop it. The asymmetric threat — the small, unknown enemy preying upon the behemoth United States — was a nagging, constant worry. “That was our thought,” Arnold says. “That is what our mission was about. Our mission was not about the internal threat.”

“We thought an attack in the United States was a law enforcement issue, and it was, right up until Sept. 11.”

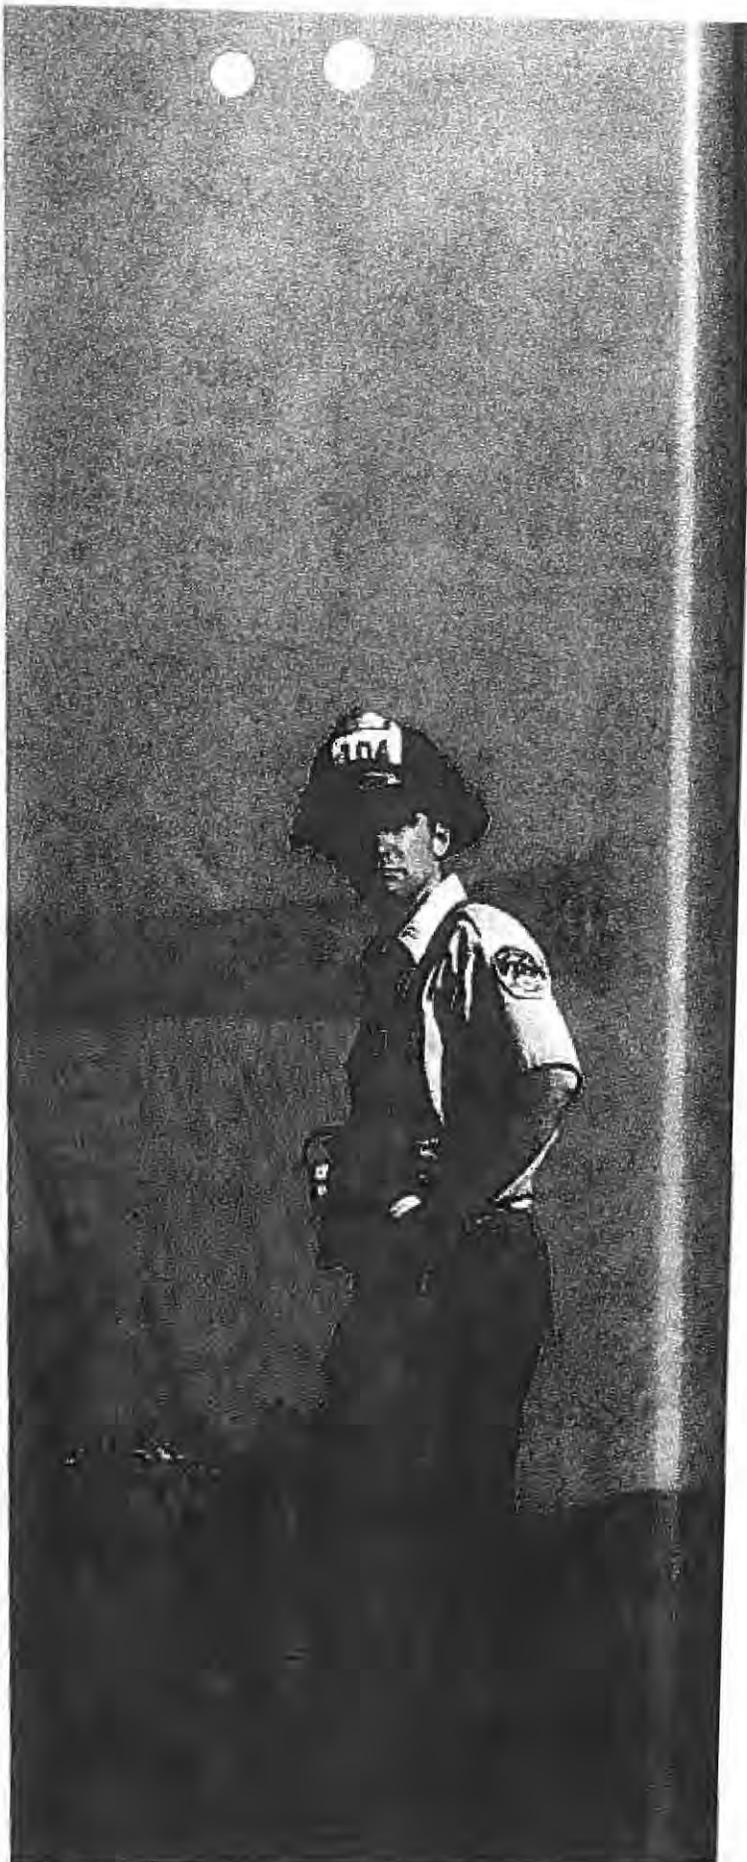

The night of the attacks, 119th Fighter Wing pilot Capt. Craig Borgstrom descended his F-16 “Fighting Falcon” into Langley Air Force Base, Va., after hours of intercept missions over Washington, D.C. As he taxied his aircraft safely in, he still didn’t know all that had happened in his country that day. But the scene through the jet canopy told him everything had changed.

“When we recovered into our alert facility, there were more missiles on our ramp than my eyes have ever seen,” the North Dakota Air National Guardsman says. “At this point, I still had no idea about the airliners. I pulled into the alert barn and there were load teams with missiles and trailers everywhere. I talked to the crew chief and my first question was, ‘What else did they get?’ He wasn’t sure, but thought there were others at that point. I knew a really terrible thing had happened.”

There was a new threat now: It was on the inside and sent America’s air sovereignty mission reeling.

When Arnold went to sleep Sept. 10, 2001, he had 14 alert fighters on his watch, all dedicated to

protecting thousands of miles of American air borders. When Arnold finally went to sleep just before sunrise Sept. 12, America's air sovereignty force had been catapulted into a full-fledged air defense arsenal, with more than 400 alert fighters, Airborne Warning and Control System aircraft and tankers postured for battle.² The seven alert sites around the periphery of the continental United States grew ten times over to 69-plus sites scattered about the country.³ Not even the Cuban Missile Crisis of 1962 saw such a build up of raw air power.⁴ Within days, America's military had a new mission: Operation Noble Eagle. The Noble Eagle name encompasses U.S. military operations associated with homeland defense and civil support to federal, state and local agencies — air defense playing a major role.⁵ More than 30 Air National Guard fighter wings and nearly two dozen refueling wings were immediately mobilized; President George W. Bush, meanwhile, approved the call up of up to 50,000 military reservists.⁶

Long-standing principles succumbed to the rapid response. A Civil War-era military code, the Posse Comitatus Act that prohibits federal troops from performing civil law enforcement duties, was waived at the highest levels. "Operation Noble Eagle operations were cleared of Posse Comitatus issues by the National Command Authorities," says retired Col. William A. Scott, 1st Air Force director of plans, programs and requirements. "The NCA directed this response because law enforcement agencies don't have the capabilities we have to deal with a hijacked airborne threat."

As for formal deployment orders, initially there were none. "The kinds of missions our people were flying were the kinds of missions you'd fly in defense of counterair in any theater deployed to, like Southern Watch or Northern Watch," Arnold says. "But our people weren't deployed anywhere."

Instead of Baghdad, airmen found themselves flying defensive patterns over their own cities and homes like San Francisco and Dallas, a radically different concept for the NORAD

A New York City firefighter pauses amid the devastation of the World Trade Center Sept. 15, 2001.

air sovereignty force. Suddenly, 1st Air Force and CONR were coordinating air defense operations within America and still maintaining the traditional look outward.

“Early on, which made things a lot simpler, Gen. (Ralph E.) Eberhart, the commander of NORAD, named me the Joint Force Air Component Commander,” Arnold explains. “Along with that title, I was the Area Air Defense Commander and along with that the air control authority for the continental United States. ... If someone wanted to fly a plane, they had to come through us, when we the military, still had control of the airspace.”

Essentially, Arnold was responsible for “anything that flew in the United States,” he says, and could order a civilian airliner shot down by one of his own. It was a tall order, but Arnold is a tall man.

Guarding the homeland

In the immediate wake of Sept. 11, civilian aviation was brought to a historic standstill. Hundreds of planes were packed like sardines on Canadian runways in Newfoundland and Nova Scotia.

For several weeks, NORAD and the joint Department of Defense and Federal Aviation Administration Air Traffic Services Cell served as the hub of all government and civilian air traffic in the United States.⁷ In that dramatic twist to NORAD’s traditional mission, scores of fighters, tankers and surveillance aircraft were flying both planned and random Combat Air Patrols across the nation and

Petty Officer 3rd Class Edmond Scott directs an E-2C “Hawkeye” from Airborne Early Warning Squadron 125 into launch position on the flight deck of the USS George Washington (CVN 73), Sept. 13, 2001. round-the-clock sorties over New York and Washington, D.C. Instead of 14 jets, more than 100 fighters were on alert at 30 bases around the country.⁸ Just as many tankers and AWACS were available to counter the domestic air threat.⁹

For F-15 pilots Maj. Robert Martyn and Martin Richard, Operation Noble Eagle began the day they saw the World Trade Center burn. The Massachusetts Air National Guardsmen were some of the first scrambled when hijackers took over the skies Sept. 11. Running to their "Eagles," they were fixated on what they just heard from the 102nd Fighter Wing intelligence officer: *"There could be 20 more of these out there."*

The frantic scramble orders of Sept. 11 evolved into six months of nonstop patrols over cities; "National Special Security Events" like the 2002 Winter Olympics; and key infrastructure across the nation. Martyn, Richard and thousands of other airmen were suddenly and urgently defending their own country against an unknown, intangible aggressor. "We have basically drilled holes in the sky since that day," Martyn said a year after the attacks.

Operations at home bring a unique sense of responsibility. "On missions overseas, there's more of an individual, a personal threat to you," Martyn says. "If your motors quit, you're going to have a

tough life in Iraq. And it's a team burden to the Air Force. Over the States, there's more the feeling you're a policeman. I'm not the one being threatened here. ... The threat is much higher to civilians and everyone else than it is to us. I feel more like I'm protecting my kid than myself. Ultimately, there is no threat to me flying around in an F-15. It's safer than driving around in my car, but Southwest Asia is not like that."

Homeland air defense wouldn't come without costs and presented new challenges for NORAD and its forces. Round-the-clock sorties and the support needed to fly them was stressing the jets, robbing pilots of crucial training and working maintenance troops overtime.

"Right after Sept. 11, and what became very obvious, was the operations tempo of our flying units," Arnold says. "We would have to persuade Air Combat Command and the rest of the Air Force to put Operation Noble Eagle into the Aerospace Expeditionary Forces."

The AEF Center cycles Air Force units through deployments like operations Northern and Southern Watch. "Prior to Sept. 11, we'd been unsuccessful in getting the AEF Center to be responsible for relieving our air defense units when they went overseas," Arnold says. "In the aftermath of Sept. 11, it became critical that we become a part of the AEF system. But it took awhile ... until about November, when we were able to persuade the Air Force there had to be relief, that these people could not do this."

Within the first five months of the operation, Noble Eagle sorties exceeded those flown over Afghanistan for Operation Enduring Freedom.¹⁰ According to NORAD records, from September to December 2001, the command responded to 214 domestic aviation events in response to FAA requests. In 88 of those instances, alert fighters were scrambled; 126 others were diverted from Com-

bat Air Patrols. In the same period a year earlier, NORAD scrambled or diverted fighters 21 times.¹¹

The scrambles — and sometimes intercepts — have drawn their share of media attention. In the summer of 2002, controllers at the Western Air Defense Sector scrambled two Arizona Air National Guard F-16s toward a Cessna squawking a hijack frequency.¹² It turned out to be a rookie pilot who accidentally hit the wrong switch.

In another incident, the Washington-based sector scrambled Oregon Air National Guard F-15s when a pilot threatened to ram his small plane into the tallest building in Portland.¹³ It happened to be the same day a movie was being filmed nearby.

"We scrambled F-15s from the 142nd Fighter Wing in Portland and the pilot saw explosions on the ground," says WADS Commander Col. John Cromwell. "He had a sickening feeling that he failed until he found out the explosions were coming from a movie set."

Commercial flights have been under extreme scrutiny since Sept. 11. "There was a bomb scare on a flight from Honolulu to Seattle," Cromwell says. "We scrambled F-15s to escort the plane over the Pacific into Seattle and it was an uneventful landing. ... If an F-15 or F-16 is on your wing, it's not always a bad thing. Our job is to provide that emergency escort and assist if necessary."

UUU

The air defense boom was hardest in the Northeast, Arnold says, where fighters were flying nonstop over New York and Washington, D.C. Maintenance troops were getting valuable operational training, but pilots were seeing their tactical skills wane.

"Training was just gone," says Massachusetts F-15 pilot Richard. "When you're flying the CAP (Combat Air Patrol), it's mostly flying circles and if you have an intercept there's about four minutes of adrenaline. ... This was a situation we certainly didn't anticipate. But we are a cohesive combat fighter squadron and that's how we made it work. We have maintenance guys who had to leave fairly lucrative civilian jobs in Boston and now have a two-hour commute to work. If people hadn't volunteered and seriously sacrificed, it never would have gotten done."

The sacrifices are felt military wide, but the reserve status of the National Guard means people leave their civilian jobs behind when called to duty. Throughout the ongoing operation, the military has provided assistance to federal agencies in many areas: medicine, engineering, security, military working dogs, logistics, and communications.¹⁴ Operation Noble Eagle is more than CAPs: Guardsmen have been dispatched to the nation's airports, nuclear power plants, international borders, national parks, bridges, and more. Security forces have shouldered a heavy burden. Some 70 percent of Guard members were partially mobilized; the call up can last two years.¹⁵

"Family is first, your civilian job is second and your military job is third," says Col. Mike Cosby, commander of the 177th Fighter Wing, New Jersey Air National Guard. "People have sacrificed, not in the way the people in the World Trade Center or Pentagon did, but they have put their professional and personal lives on hold to come out here and serve the country and have done it with dis-

"People have sacrificed, not in the way the people in the World Trade Center or Pentagon did, but they have put their professional and personal lives on hold to come out here and serve the country and have done it with distinction."

tion. And the American people have recognized that."

In the days and months following the attacks, Atlantic City Air National Guard Base served as a home for several airmen protecting the Eastern skies.

"We hosted units from Houston, Albuquerque, (N.M.), Sioux City, (Iowa), and many more," Cosby says. "They bring pilots, airplanes and a limited number of maintainers and experts in the back shop (fighter wing repair facility), and we provide weather, base operations, intelligence, command post, and gas in the airplanes. They came right in here and rolled with the punches and did a fantastic job of supporting NORAD and the Noble Eagle mission."

Between Atlantic City's 177th Fighter Wing and other units deployed there, more than 1,200 sorties were flown from September 2001 until March 2002, for more than 4,480 hours of flying time, Cosby says. Atlantic City's fleet of F-16s, manufactured in 1983, saw a year's flying time in six months, he adds.

Across the alert force, the 24-hour combat sorties equated to crew rest and scheduling problems, no time for personal leave and 12-hour shifts. "There will be turbulent times between now and until we establish the new normal for America," Cosby said nine months into Operation Noble Eagle. "Everyone from the command posts, security forces to fire departments is doing a great job, but after awhile it has to get to you, working five to six days a week, 12 hours a day."

At various times during Noble Eagle, some 90

Air Force, Air National Guard and Air Force Reserve wings have been under NORAD command and control.¹⁶ Canadian Forces and planes have provided assets for the operation along with U.S. Marine Corps flying squadrons and the U.S. Naval 3rd Fleet.¹⁷

That unwavering support began Sept. 11.

Col. Bob Marr, Northeast Air Defense Sector commander, says 81 Air Force and Air National Guard units helped secure

the skies that day. "The Terre Haute guys (181st Fighter Wing, Ind.) locked down their base as soon as the towers were hit and started loading missiles, anticipating someone would be calling for help, which we did," he says. "The Burlington guys (158th Fighter Wing, Vt.) were some of the first in the air heading straight for New York as a unit that was familiar with the NORAD mission. People were launching jets in record time."

In the six days following the attacks, Air Guard pilots flew more than 600 fighter sorties.¹⁸ A number of the aircrews had never performed in an air defense capacity. And many of the fighters were parked on bases that weren't equipped to store munitions — one of many details that had to be addressed.

"Bottom line, people handled this very well," Arnold says. "People know how to fly CAPs. The biggest problem was somehow personalizing this thing. Some of these units did not know us personally and it's difficult to resolve that. One of the things we eventually did was send some of our people to all the units that were pulling alert and flying CAPs for us around the country. They were a sight for sore eyes for those units. Those units were des-

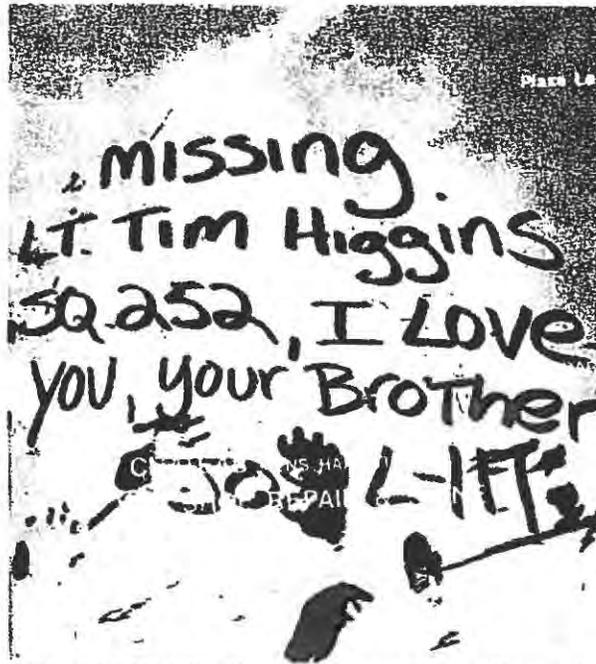

Photo by Tech. Sgt. Mark Olsen, New Jersey Department of Military and Veterans Affairs

perate to talk to somebody at 1st Air Force. People had questions. Alert facilities needed work and we were able to help by being an advocate for that."

At Selfridge Air National Guard Base, Mich., home of the 127th Wing, the local fire department vacated its building so F-16 aircrews had a place to sleep and work. Airmen had been sleeping in tents on the flight line for almost a month after Sept. 11.¹⁹

"We can solve the lack of crew quarters in many different ways," Arnold says. "Some units have rented Winnebagos."²⁰

Housing alert aircraft posed yet another problem, especially in cities with harsh winters. "Before Sept. 11 our mission was to train, so we could afford to let the snow melt before we flew," says retired Brig. Gen. Wayne L. Schultz, former commander of the Colorado Air National Guard 140th Wing near Denver.²¹ An accelerated contract bid resulted in six temperature-moderated shelters to protect the F-16s and keep them in top shape for alert sorties. Even on the coldest days, deicing of aircraft will be unnecessary, improving response times.²² At Andrews Air Force Base, Md., home of the 113th Wing, District of Columbia Air National Guard, five aircraft shelters were quickly built for the new F-16 alert commitment there.²³

Modernizing a mission

Generating thousands of unprecedented combat flights over the continental United States was going to be a feat in and of itself. Since NORAD

had always looked outward, its interior radar coverage was dismal. "Now we were suddenly looking in the interior of the country and didn't have the capability to do it," Arnold says.

Airborne surveillance was an immediate, yet partial, solution in the early days of the operation: Air Force E-3 AWACS, Navy E-2C "Hawkeyes" and U.S. Customs Service P-3s provided radar feeds to forces on the ground and in the air. ²⁴ Navy Aegis cruisers also contributed to the new view inward. ²⁵ But much more was needed to sustain effective 24-hour combat patrols over America. "We had three things to do," Arnold says. "We had to hook up radars so we could see the interior, had to have radios to talk to pilots and a command and control system capable of plugging in all those radars and radios ... so the air defense sectors could actually see and talk to our fighters."

The Air Force began revamping every facet of the mission as mandated at the highest levels of government and the Department of Defense. Air sovereignty fundamentals raced into the 21st century with Mach-like speed.

"We got better at everything we had to do, better at working with the Navy, better at scrambling and controlling airplanes and better with our radars," says Lt. Col. Clark "Buck" Rogers, deputy commander for operations at the Southeast Air Defense Sector, Tyndall Air Force Base, Fla. "The amount of change the air defense business went through is phenomenal. I don't think that in the history of the military you can find more rapid change in such a short period of time. It used to be months of funding and questions. We didn't have any of that. We said, 'You guys need to be on alert and the next thing you know, people are setting up tents and 'Winnebagos.'"

In the world before Sept. 11, America's long-range radars — Joint Surveillance System sites and tethered aerostats around the periphery of the country — were focused on planes coming toward the United States. Flights originating in the country and crossing the interior were automatically considered

friendly.²⁶ And the dated NORAD Q-93 computers could not connect with the scores of FAA radars dotting the interior landscape.

“On Sept. 11, we were looking out — looking for the external threat,” NORAD Commander Eberhart said months after the attacks. “We assumed anything in the United States was authorized to be there and did not constitute a threat. Tragically, we were wrong.”²⁷

One of the greatest technological advances in NORAD’s 45-year history would come immediately on the heels of the terrorist attacks.²⁸ The “NORAD Contingency Suite,” a computer software program purchased with \$9 million in emergency response funds, would link NORAD with several interior FAA radars, giving controllers the capability to view more than 15,000 tracks at any moment per sector instead of 300 tracks before Sept. 11.²⁹

“The beautiful map on the NORAD Contingency Suite enables us to see everything,” says Maj. Sue Cheney, a WADS assistant flight commander. “We can see the airports, see where the planes take off and see the history of a track. We can look at a track and see if it took off in the United States.”

The sharper view — in color on a graphics-intensive flat panel screen — is especially important in the West, where controllers keep a watchful eye on the Mexican border, she adds.

Cheney marvels at how quickly NORAD acquired the new technology. “In only a couple of months we were getting a whole new system installed,” she says. “From the 11th of September, for the Air Force to buy and field a new system, that’s just unbelievably quick. We’d done modernization for the better part of the decade and spent

millions of dollars and got nothing. Two months after Sept. 11, we had a new system for a tiny fraction of that cost.”

That rapid capability arose from a cruise missile defense “Advanced Concept Technology Demonstration” 1st Air Force had been conducting for more than a year — a prescient stroke of luck for NORAD and the United States.

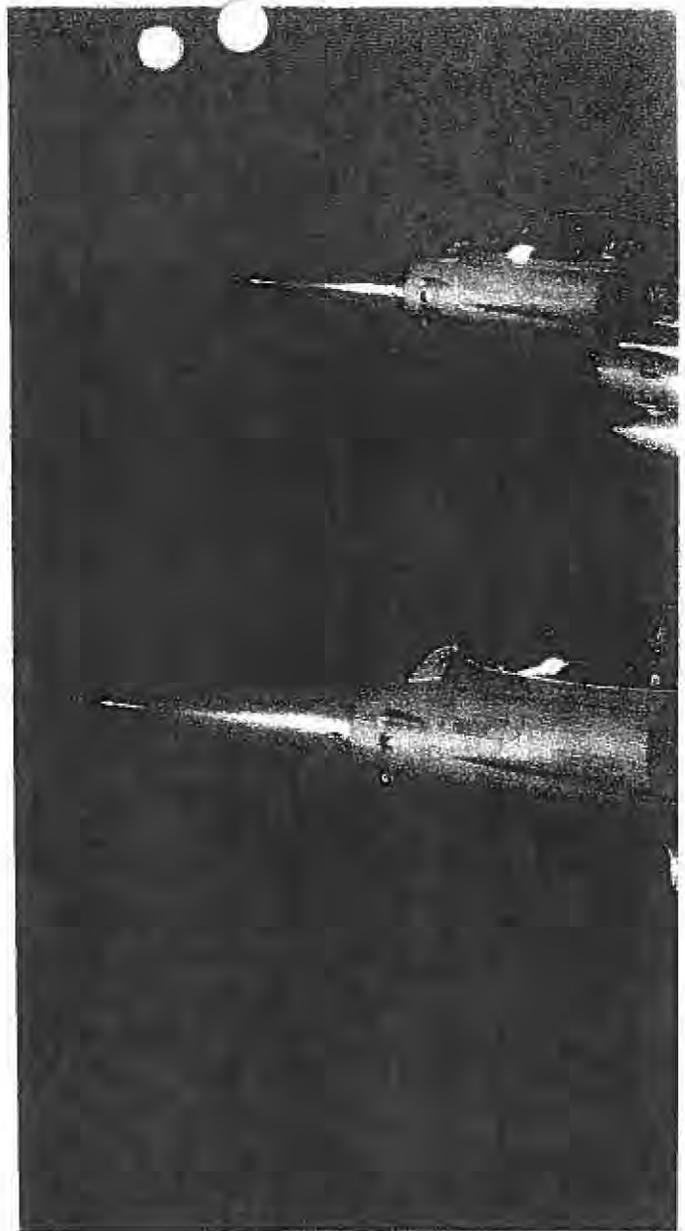

Planning for war

Better radar pictures are just part of the story of how a mission changed overnight. Within a few days of the Sept. 11 attacks, the CONR Air Operations Center, run by the 701st Air Defense Squadron, would become a bona fide war machine.

The heart of Noble Eagle beats at the CONR AOC, the combat center in the continental United States dedicated to its defense. Much like a movie theater, only colder, the AOC is a typical air defense facility: dim, drab and windowless. It’s where highly classified plans to protect the nation are born, approved and disseminated across NORAD. “Our command post, before Sept. 11, had 38 people that ran our AOC day to day,” Arnold explains. “We eventually had 500 people running it.” The first group of what would be more than 400 people arrived within nine days of the attacks, Scott says.

“The importance of the CONR Air Operations Center grew dramatically in the days following Sept. 11,” says retired Col. Joe Kahoe, former 1st

Two F-16s assigned to the North Dakota Air National Guard 119th Fighter Wing fly a Combat Air Patrol mission over Washington, D.C., in support of Operation Noble Eagle.

Air Force and CONR assistant chief of operations. “We always thought we had an important role to play in defense of the homeland. In a matter of days, 1st Air Force and CONR received hundreds of thousands of dollars worth of computers and communications equipment that we had been struggling to obtain for years.”

From the AOC comes the ATO — the Air Tasking Order — for a day’s worth of Noble Eagle sorties. “Combat plans became a huge function,” Arnold says. “We were used to writing a single ATO every week for all our alert prior to Sept. 11 and after Sept. 11, had to write an ATO every day that was larger than Northern Watch and Southern

Photo courtesy of 119th Fighter Wing, North Dakota Air National Guard

Watch combined. This was not a small effort.

“Now you had combat plans people writing the ATO, had current operations people on the floor representing every specialty we had — command and control, AWACS, fighters, logistics. ... We had to have these people on duty. If there was a change to the ATO, we had to adjust the ATO and have the coordination for all of it to happen.”

It was a tough, but attainable task, Arnold says: “I had confidence in our people. We trained daily, we conducted exercises and were inspected so we already knew our people were capable of doing the job. We knew how to run an AOC and how to obtain, allocate and apportion resources.”

Grass roots efforts

High-visibility changes were everywhere as air defense was taking center stage across the terror-struck nation. The Department of Defense 2001 “Report of the Quadrennial Defense Review” would conclude: “*The highest priority of the U.S. military is to defend the Nation from all enemies.*”³⁰ Grass roots efforts at the nation’s air defense sectors were true to the cause.

Master Sgt. Jon Smith is the noncommissioned officer in charge of radio maintenance support at the Southeast Air Defense Sector. His wife gave birth to their first child in an emergency delivery Sept. 7, 2001. When the phone rang Sept. 11, they’d been home from the hospital one night, sleepless and unaware of the unfolding catastrophe.

“Col. (Dave) Webster (SEADS chief of communications and computer systems) asked me what it would take for us to install radios,” Smith says. “I said, ‘Sir, we can install radios wherever we need to as long as we can get telephone circuits.’”

Just a few days after the attacks, Smith and Master Sgt. Bruce Griswold, chief of computer maintenance, loaded up their equipment and headed to Dobbins Air Reserve Base in Georgia. Their mission: wire radios so ground controllers could communicate with fighter pilots flying over Atlanta.

“The point of the radios was to have connectivity,” Smith explains. “The voice circuit and data circuit were routed back to Tyndall over telephone lines so the SEADS operators would have remote control of the radio. Now they could talk to the fighters for Combat Air Patrol missions.”

Smith reported back to his boss. “I told Col. Webster we were looking good here and he said, ‘Good work. The bad news is, I need you to get back ASAP for your day off with your wife and baby. When you get back, I’ll tell you where you’re going next.’”

The next stop was Louisiana. Then Texas —

the president's ranch in Crawford needed protection. Then Arkansas. Another team installing the "radios on a stick," as crews dubbed them, went to North Carolina. Then Tennessee. Then Alabama.

"When you're in a crisis, you want people who can thrive without structure, who can just create it as they go along," says Col. Larry Kemp, SEADS commander.

For several weeks, Smith, Griswold and other SEADS specialists drove around the South, often getting supplies at the local Home Depot, so U.S. Air Force fighters could protect the country. "We had great support wherever we went," Smith says. "People bent over backward helping us out."

Hundreds of miles away at the Northeast Air Defense Sector, airspace specialists initiated an unprecedented 24-hour telephone bridge between the military and FAA. The crucial communication link began Sept. 11 and has been up ever since.

"It took about two seconds to realize that how we operated before Sept. 11 was not going to work," says Bill Ayers, Department of Defense airspace manager for NEADS. "We couldn't get the

Lisa Beamer, whose husband Todd Beamer was killed on United Airlines Flight 93, attends a dedication ceremony March 25, 2002, in Egg Harbor Township, N.J., headquarters of the New Jersey Air National Guard 177th Fighter Wing. A decal depicting Todd Beamer's inspiring words is displayed on Wing Commander Col. Mike Cosby's F-16. The phrase "Let's Roll" has come to represent the heroic spirit of those killed in the Sept. 11 terrorist attacks.

information fast enough."

"This phone bridge brought the command structure throughout the United States into one telephone call," he says.

With all eyes focused on the dense Northeast corridor, the open line has enabled NEADS controllers to assist the FAA numerous times since Sept. 11. "We had a Boston departure turning toward JFK (International Airport, N. Y.) and there was a horse in the cargo hold that was kicking and making a rather large disturbance," Ayers says. "The crew thought it was an unruly passenger."

On an international flight bound for Boston, a Russian passenger retrieved something from the overhead bin and got into a scuffle with a flight attendant. By the time word reached NEADS, controllers believed somebody was rushing the cockpit, Ayers says.

"Before Sept. 11, there were limited communications between the air defense sectors and FAA centers," says Steve Culbertson, FAA air defense

liaison officer for NEADS. "We had no way to talk. Now, we are hooked up to all the FAA centers and the FAA Command Center in Herndon, Virginia."

Adds assistant airspace manager Master Sgt. Jerry Lee, a civilian activated on Sept. 11: "We are able to talk to the FAA in their language and relay that information to our command and control specialists in their language."

Their finest hour

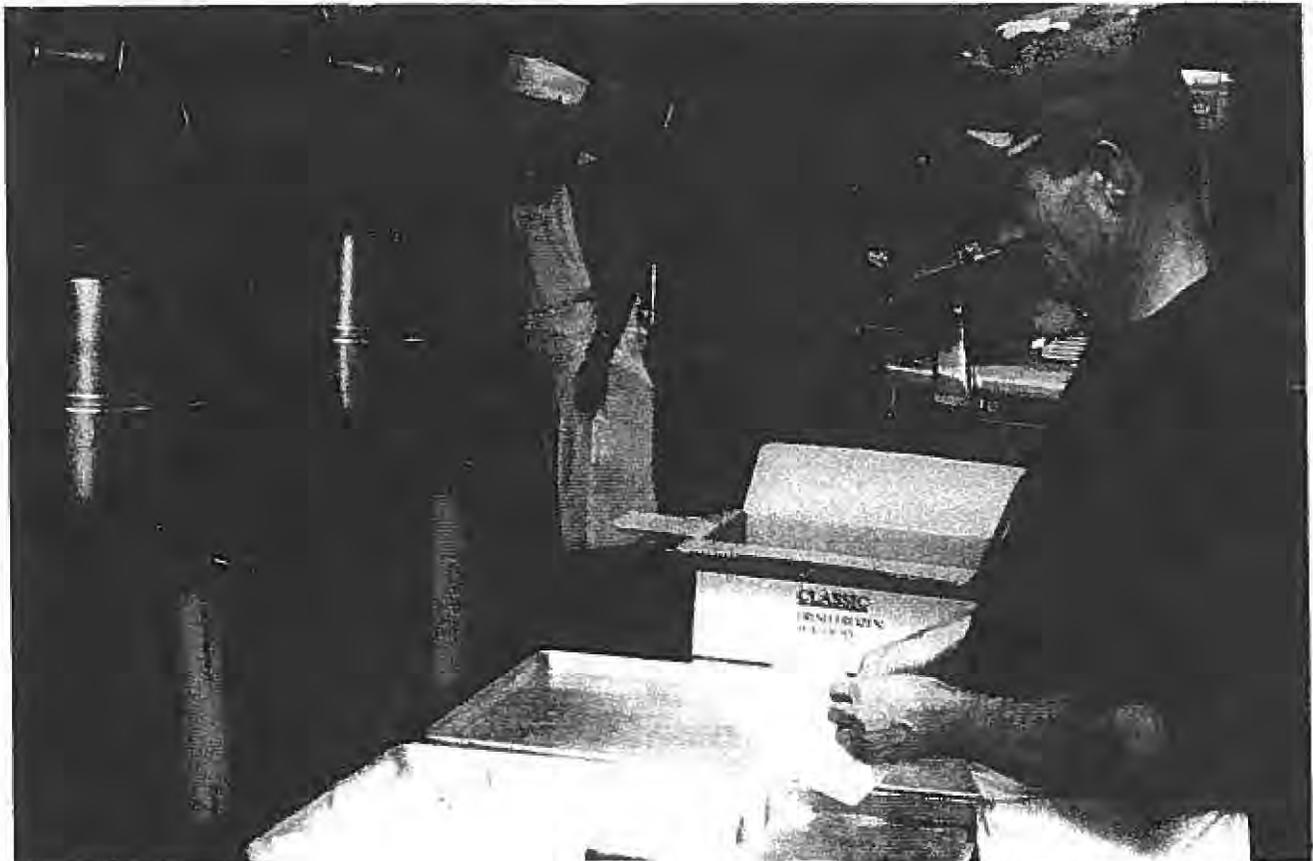

Displays of volunteerism and patriotism were apparent not only across NORAD, but service-wide. "Sept. 11, 2001, was a horrible tragedy," Scott says. "But the great American story of Sept. 11, 2001, is that people were knocking down our air defense sector doors. Guard units everywhere wanted to help. We had every Air Force unit out there saying, 'What can I do?'"

More than 60,000 Guardsmen reported to their bases Sept. 11, says retired Air National Guard Brig. Gen. Paul S. Kimmel, former assistant for operational readiness to the director of the Air National Guard. "I think we did what Guardsmen always do," Kimmel says, "and that's respond and respond well when there's a need. ... The initiative people took on their own without direction was amazing and showed the real value of the Air National Guard."

"This was probably our finest hour since Bunker Hill, and that says a lot."

Guardsmen are tough and resilient, WADS Commander Cromwell says. "People were focused and because of the tragedies, the motivation was there. About 100 of our traditional Guardsmen at WADS were suddenly mobilized and pulled out of their civilian jobs without notice. Everyone, including their employers and families, made great sacrifices."

From the first days of the tragedy well into Noble Eagle, the Air National Guard has been deeply en-

In October, 2001, upon the United States' request, history was made when NATO deployed five of its E-3A AWACS aircraft to support America's homeland defense mission.

trenched in the operation, but “the commitment is to the Air Force,” Arnold says. The Air National Guard provides the majority of CAPs and fulfills most of the alert requirements because of the high number of its units in nearly every state, Arnold says.

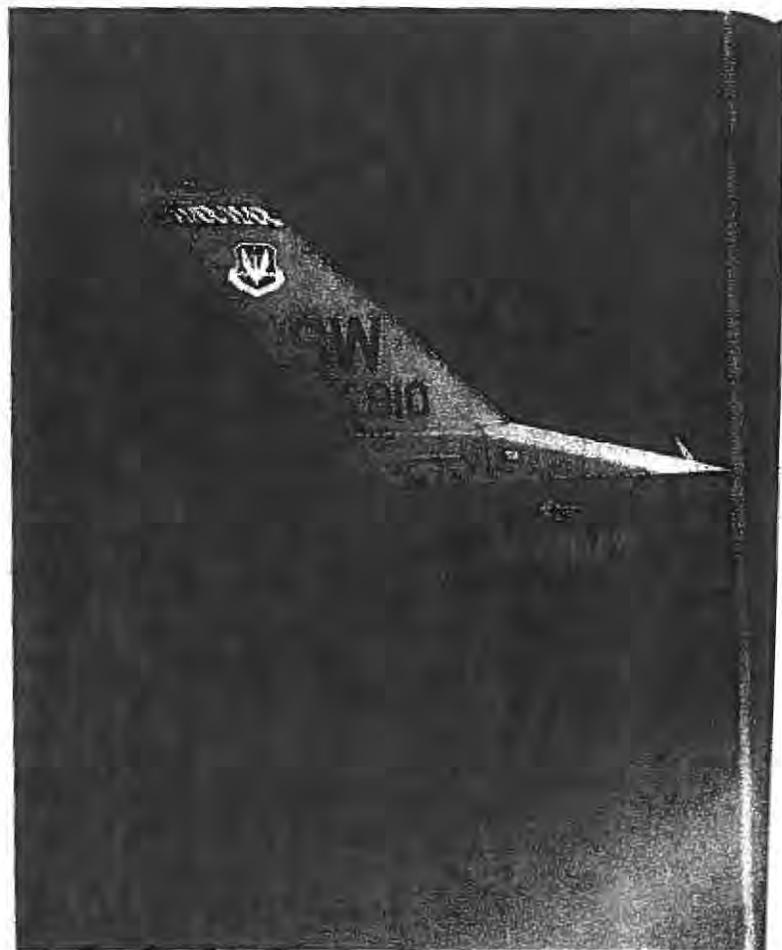

That’s not to say the regular Air Force hasn’t done its share. The 1st Fighter Wing, Langley Air Force Base, Va., for instance, provided F-15 Combat Air Patrol coverage over Washington, D.C., on Sept. 11, and continues to provide its resources. The 33rd Fighter Wing, Eglin Air Force Base, Fla., deployed some of its F-15s to Langley to help in the CAP efforts.³¹

The 366th Wing, Mountain Home Air Force Base, Idaho, has employed three of its squadrons for Operation Noble Eagle: the 390th Fighter Squadron, the 22nd Air Refueling Squadron and the 726th Air Control Squadron.

“We’re a combat unit,” says Lt. Col. Kathy Stoddard, 726th Air Control Squadron commander. “We usually deploy into a battle theater and our team provides radar coverage of enemy territory. Guarding America through Operation Noble Eagle is something we never expected we would have to do.”

“All U.S. military operations require control of air, space and information,” she continues. “We find, fix, assess, track, target, and engage everything of military significance. Our contribution to aerospace power is vital to our forces’ effectiveness and our ability to fight and win with minimum loss of life — and that’s anywhere in the world, including over the skies of the United States.”

The 726th, known as “Hard Rock,” was in-

involved in round-the-clock Noble Eagle operations for 170 days.³² The unit maintained a 97-percent mission readiness rating after deploying members to other air control squadrons in Washington, New York and Nevada.³³ Hard Rock was released from its Noble Eagle tasking on Feb. 28, 2002.

The blood flows backward

The cooperative Noble Eagle spirit was coming from near and far. In October 2001, upon the United States’ request, history was made when NATO deployed five of its E-3A AWACS aircraft to support America’s homeland defense mission.³⁴ Nearly 200 troops from Geilenkirchen, Germany, landed at Tinker Air Force Base, Okla., to assist

Photo courtesy of 552nd Air Control Wing

the 552nd Air Control Wing with its new tasking. The deployment represents the first time NATO invoked Article 5 of its charter, which states a foreign attack on one member is an attack on all.³⁵

"Right now, we are engaged in four theaters of operation," Brig. Gen. Ben Robinson, 552nd Air Control Wing commander at the time, said in November 2001. "Having NATO here ... reduced the risk and reduced the cost of our training."³⁶

America welcomed the troops with open arms, says Col. Jim McNaughton, NATO detachment commander: "It is no longer we, they or a NATO force. We are one group here. ... We've taken these planes to a lot of places, but the reception here has been incredible."³⁷

The NATO aircrews flew more than 360 sorties and logged more than 4,300 flying hours. After more than seven months in the States, they finally got to go home.³⁸

"We are truly honored ... by the appreciation we have been given," says German Maj. Gen. Johann G. Dora, commander of the NATO Airborne Early Warning and Control Force Command. "From a NATO perspective, this 'Operation Eagle Assist' has had a truly historic dimension. After more than 50 years of one-way traffic across the Atlantic, in military support terms, the European NATO member nations were able to return some of the overwhelming support provided by the United States ... to Europe after World War II."³⁹

District of Columbia Air National Guard Maj. Billy Hutchison folds the American flag that he carried with him while flying in the 113th Wing formation over the Pentagon during a Sept. 11 memorial service one year after the attack. Hutchison had flown his F-16 over the Pentagon Sept. 11, 2001.

Eagle still soars

The NATO AWACS had gone home. The constant CAPs were slowing down. Pilots were flying tactical training maneuvers again. But the Noble Eagle was still soaring after logging 22,000 sorties over the United States and Canada between Sept. 11, 2001, and June 28, 2002.⁴⁰ And it may be soaring for awhile.

By early 2003, the Air Force had authorized the extension of more than 14,000 Air National Guard and Air Force Reserve members into a second year, as needed, because of continuing operations Noble Eagle and Enduring Freedom requirements. Of those authorizations, 9,292 were from the Air National Guard.⁴¹

The total Air Force — active, Guard and Reserve — continues to assist federal agencies as needed in protecting the skies of America. “Adjustments in the NORAD air defense posture are driven by the potential threats to North American airspace,” explains Maj. Don Arias, 1st Air Force and CONR spokesman. “The threat assessment takes into account the overall security posture, including the many improvements in airspace security — in the air and on the ground — made since Sept. 11. The best air defense begins on the ground through the efforts of numerous local, state and federal agencies. NORAD and its continental region is integrated with — and will remain available to — civil authorities as a force of last resort.”

If the FAA calls, NORAD and its forces will be there and have responded to hundreds of domestic air security events since Sept. 11. The command still maintains its historic look outward, guarding America’s borders from unknown threats.

Arnold says America expects nothing less. “The public always assumed we could protect this country, and we have,” he says. “The continued vigil over our homeland’s skies is still saving lives and sending a clear message to those who would inflict harm on our citizenry: ‘Never again.’”

42 More information about the Sept. 11 commemorative artwork is available online at rickherter.com.

As part of its official art program, the Air Force selected artist Rick Herter to paint the arrival of the first fighters in New York and Washington Sept. 11, 2001. "Ground Zero, Eagles on Station," above, depicts the first Combat Air Patrol over Manhattan flown by F-15 pilot and Massachusetts Air National Guardsman Lt. Col. Tim Duffy of the 102nd Fighter Wing. "First Pass, Defenders over Washington," right, depicts the F-16 first flown over the Pentagon Sept. 11 by North Dakota Air National Guardsman Maj. Dean Eckmann of the 119th Fighter Wing. The paintings were unveiled Sept. 4, 2002, at the Pentagon. ⁴²

CHAPTER 5

AMERICAN STORIES: Sept. 11 brings new resolve

Air defenders steadfast amid terror and tragedy

Five months after America was attacked, armed fighter jets flew through frigid Utah skies to protect the 2002 Winter Olympic Games. By Sept. 11, 2002, live anti-aircraft missile batteries were deployed in the nation's capital. America's air defense mission had changed so much since that day and the change continues. These seven stories provide a glimpse into the mission on Sept. 11 and evolving operations beyond.

Family hoped against hope

Like bad news often does, it began with a phone call. This one was about a hijacking.

It was early in the morning Sept. 11, 2001, and the phone was ringing at the 1st Air Force public affairs office. Maj. Don Arias was preparing for the day when he took the call from the Northeast Air Defense Sector. There had been a hijacking on a flight out of Boston: American Airlines Flight 77 was presumably headed for John F. Kennedy International Airport, N. Y., and the sector might scramble some fighters. It was an odd coincidence:

across the North American Aerospace Defense Command, everyone was preparing for an air defense exercise simulating an attack on the United States. But this hijacking was no exercise — it was “real-world.”

Arias, the 1st Air Force and Continental United States NORAD Region public affairs officer, hung up the phone, grabbed his press kit and began working on a statement. He'd have to get something together before heading over to the CONR Air Operations Center at Tyndall Air Force Base, Fla., where Commander Maj. Gen. Larry K. Arnold and his battle staff were entering an operational war mode.

“Maybe 15 minutes elapsed and I look up and see the tower smoking on CNN,” Arias says. “I had no confirmation, but knew that hijacked plane had hit the tower. That's when I called my brother.”

Adam P. Arias, a 37-year-old vice president for the trading company Eurobrokers, had been scheduled to attend a meeting uptown that morning. But he'd returned from Jamaica only three days earlier and was just too busy, sending an assistant instead. Now on the phone with his wife, the caller ID screen was displaying his older brother's number. Adam

told Margit he loved her; Margit told Adam to come home. They'd just celebrated their three-year anniversary. They said their goodbyes.

Adam clicked over to his big brother. "Hey everybody, it's the Air Force!" Adam exclaimed to his colleagues in their 84th floor office in the World Trade Center's south tower. "He told me, 'You won't believe what I'm looking at,'" Arias says. "It was some horrendous stuff. He was watching the other tower burn and saw people falling through the air. He saw people jumping. I could hear a lot of commotion in the background and apparently everybody was at the window looking."

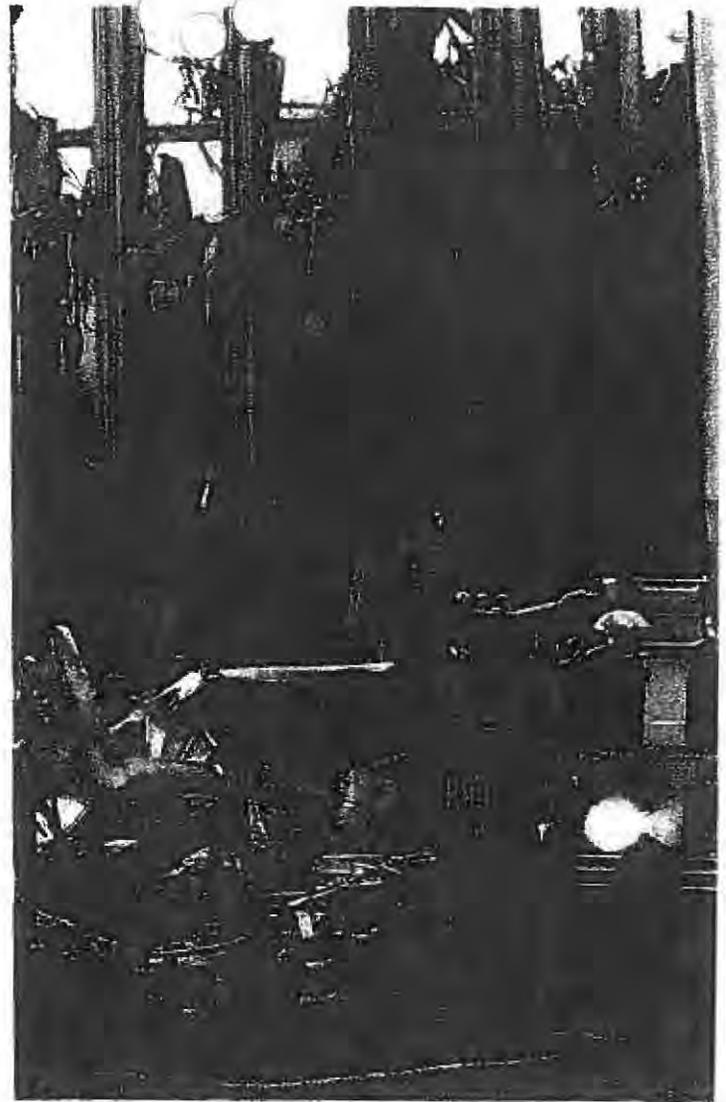

"I told him, 'Hey, we got this call, this could be the hijacked plane,'" Arias says. "He said to me, 'This is prime time. If this is an attack, they're doing it at the right time.'

"I told him to go home and that's the last words I said to him. I don't even know if he heard me because it was such a quick conversation."

Arias later heard what Adam did next. "He went around and told people that he'd talked to me and knew it was a hijacking, because people were content to sit there at their desks," Arias says. "I met a young woman a year later and she told me that Adam physically picked her up around her waist and threw her out of her office. She had wanted to stay because she had so much to do.

"More than a few people credit Adam with saving their lives by throwing them out of the office that day."

A fire engine is parked amid the crime scene at Ground Zero, Sept. 16, 2001. A lone firefighter can be seen in the distance.

As the horrific events continued to transpire in the northeast, Arias and his staff in Florida were on the phone with NORAD, trying to get statements out to the media. Struggling to maintain his professional composure, Arias was on a roller coaster ride of uncertainty. *Where was his brother?* He kept trying Adam's cell phone, leaving message upon message on his voice mailbox, but had to settle for only bits and pieces of information. "My whole family was on the phone and in the meantime, I'm trying to do my job here and popping off calls to my parents, sisters and brothers," Arias says. "One person said they saw Adam transferring elevators on about the 40th floor.

U.S. Navy photo by Chief Photographer's Mate Eric J. Tifford

Other people said they saw him in the street helping the firemen.

"I had a lump in my throat that whole day."

Finally, some good news: A message from their sister Lauren that Adam was spotted — alive. "*Your brother is OK. Your sister called and talked to someone who saw your brother boarding the ferry.*"

"We were totally relieved and I called my brother Tom, who was on his way to Manhattan to go look for Adam and Tom said, 'You know what? I'll believe he's OK when I talk to him,'" Arias says. "Tom knew it was ugly."

Arias, who grew up on Staten Island in the house where his parents still live, knows the city like only a native would. *Where was Adam? Could he have*

gotten out in time? He was picturing the scene in his mind. A proud New York City firefighter for seven years, Arias still wears a miniature of the gold Maltese cross badge of the FDNY around his neck — number 2105. The cross is a popular and time-honored symbol of the fire service, and represents St. Florian, the protector of firefighters. Now many of them were gone.

The day turned to night, and around 8 o'clock, Arias drove home, fearing the worst for Adam, the baby of six children. Mentally, physically and emotionally drained, he sat on the couch with his wife, Karen, also a New Yorker. They couldn't take their eyes off the news.

"I knew that night when I got home and Adam hadn't come home from work, that he was gone," Arias says. "Despite reports that people saw him, we knew. But we were all hoping against hope."

Rumors that emergency rooms were flooded with victims were unfounded. "You were either dead or you got away," Arias says. "There were lots of rumors flying, but I knew in my heart, as only a brother would know, that if he didn't make it home that night and didn't let anyone know where he was, that he couldn't."

Adam's family and friends were canvassing Manhattan, posting fliers and visiting every hospital in town. Arias and Karen, feeling helpless in Florida, stayed up late into the night, crying and watching news reports of people walking home over the familiar Brooklyn and Verrazano bridges, praying one of them was Adam.

Little did they know, Adam's remains were recovered hours earlier but not identified — a sad fact they'd learn days later. Adam P. Arias was the eighth person recovered at Ground Zero. Through peoples' stories and because his body was found near the base of the tower, the Arias family believes he got out alive and was helping firefighters in their rescue attempts.

"I'm not sure what he was doing or feeling or thinking, but I know his last minutes on earth were fulfilling his last act of Christian charity," Arias says. "The very last thing Adam was doing was helping other people. We should all go out that way. He is a true American hero."

On Sept. 13, Arias boarded a military flight to Pennsylvania, where an aunt picked him up and drove him to New York. He spent the day with his family, watching his broken parents cry like never before. The next day, Arias went to his former firehouse, Ladder 36, in the Inwood section of Manhattan, where two old friends just lost their own brothers, among the 343 firefighters killed.

"You got there and you could hear a pin drop," Arias says. "It was very quiet. Usually firehouses are loud, busy places, but this time they were just busy. There were a lot of people working. Even guys who had been retired for years were back to help."

Arias went to the firehouse for a reason — to somehow get closer to Adam, his fun-loving, witty brother, a talented singer who loved singing Frank Sinatra and Tony Bennett classics.

"I went to Ladder 36 to get down to Ground Zero," Arias says. "The truck officer got on the phone and called the police and we got back in the car and got right down to the command center. I hooked up with the New York National Guard once I got there and eventually got on a Humvee right to Ground Zero."

"We had to wear hard hats and breathing apparatus and you could just feel the grit in your teeth. I wanted to see if I could look around and was hoping against hope that I'd maybe find something out about my brother. But it was so immense it would be like looking for a needle in a haystack. People looked like little ants on this huge hill.

Photos courtesy of the Arias family

Top: Adam P. Arias on his wedding day. He and Margit had just celebrated their three-year anniversary when he was killed Sept. 11, 2001.

Above: Adam, left, at his wedding with brother Maj. Don Arias, will be remembered for his great sense of humor.

“Two 110-story buildings had telescoped down to seven stories of twisted steel and concrete. There was not one piece of office furniture, not one personal item you’d see in an office, that had survived. It was just huge pieces of steel, girders, concrete, and paper.”

Amid the six-acre war zone were American flags, stacks of pizza pies and cases of bottled water from all the New Yorkers who came to the rescue workers’ aid.

Arias stayed home with his family for three weeks. It was a tough time. “Staten Island, my home borough, has more cops and firemen than any other borough in New York,” he says.

“We took an extraordinary hit there. It was a depressing place to be. There were funerals and memorial services every single day. It was unbelievable.”

On Sept. 19, detectives knocked on Margit’s door with the official news; Adam’s funeral was Sept. 21 followed by his cremation. The family honored Adam a second time at a memorial service Oct. 13 in Panama City, Fla., where Arias is stationed at Tyndall Air Force Base.

Suddenly Arias found his professional and personal worlds colliding.

“There’s probably no place I’d rather be working right now than in continental air defense,” Arias says. “The first mushroom cloud of World War III will be in New York unless we stop that from happening.”

“I’m a real stakeholder in this mission. I always was, but more so now than ever. It is quite personal for me.”

Indeed, Adam’s death certificate reads: “Cause of Death: Homicide.”

In the months that followed the attacks, the Arias family found a special way to honor Adam’s memory. His little brother was a “self-starter,” Arias says, who worked his way up the corporate ladder without a college degree. Adam and Margit didn’t have children. They loved their nieces and nephews and had a special place in their heart for Vincent, Arias’ son, who is autistic. “Margit knew Adam was very concerned with Vincent and his situation,” Arias

“The very last thing Adam was doing was helping other people.”

— Maj. Don Arias, brother

says. “We’d had a lot of conversations about Vincent, and Margit thought a fitting way to honor Adam was through a scholarship.”

The family founded the Adam P. Arias Applied Behavior Analysis Scholarship for Autism at Florida State University, Panama City campus. The endowed scholarship is awarded to students based on community service, scholastic achievement and financial need.

The Arias family continued to grieve. One year after the attacks, they attended the Sept. 11 memorial service at Ground Zero that honored the approximately 2,800 people killed there. A bell was rung as each victim’s name was read. Margit was one of the readers.

“They started reading the names at the precise minute of the first impact,” Arias says. “As they rang that bell, the wind just started to whip up. It was a huge wind. The southern tip of lower Manhattan is known for being breezy, but this was extraordinary and it seemed like it was changing direction. It wasn’t just blowing in off the water, it was going up, down and in. It was as if the forces of nature were converging on this one spot to make a statement.”

With the graceful music of cellist Yo-Yo Ma filling the blustery air, the winds continued and the names were read, one by one. Including Adam’s.

Sector was 'fighting blind' Sept. 11

Amid missing airliners, bomb threats and a shockingly horrific terrorist attack, radar specialists at the Western Air Defense Sector, McChord Air Force Base, Wash., were "fighting blind" Sept. 11, 2001.

"There was no way we could see the interior of the United States on Sept. 11, 2001," says Maj. Sue Cheney, mission crew commander that day. "That would have required a whole new computer system. ... You know there's a threat coming in, but you can't see it. You're trying to get assets in places you can't see and if you had to scramble them, you'd never be able to talk to those fighters. You'd have to work through the Federal Aviation Administration to get any kind of message to them."

The WADS is responsible for protecting 1.9 million square miles of airspace, from Texas to the West Coast across to North Dakota, but the Q-93 — the huge computer installed in the 1980s with 1970s technology — could not display an interior air picture. With 63 percent of the continental airspace, the radar and radio links at WADS were weaker than those at air defense sectors in New York and Florida. Essentially, the radar scopes at the sector were showing flights inbound from overseas on Sept. 11 and very little over the vast western skies of the interior United States.

"The whole idea of an aircraft being hijacked in the middle of the United States and flown into a big target ... that was one we never really exercised," Cheney says. "It was one we were not really capable of dealing with. If you look at our old Q-93 scope, you've got this enormous hole in the interior of the country. ... We were fighting blind."

As WADS commander Col. John Cromwell

prepared to possibly scramble nearly every fighter west of the Mississippi, communications with the FAA were suddenly more important than ever. "We were told to put Combat Air Patrols up over numerous cities and metropolitan areas and key infrastructure in the western United States," Cromwell says. "Our plate was full in the West and when the FAA asked for assistance, the fighters would talk to FAA controllers. We had no pictures

and no radio. The FAA also did a great job in pointing out where situations were. Between the FAA and the flexibility of the pilots, our intercepts were successful."

In the days before Sept. 11, four fighter jets were on alert out West, ready to respond to unknowns approaching the borders. The F-15s and F-16s are from the 142nd Fighter Wing, Oregon Air National Guard, Portland; and the 144th Fighter Wing, California Air National Guard, Fresno, with an alert station at March Air Reserve Base in Riverside, Calif. But four jets would not be enough that tragic day. In only a few hours, the skies were

Washington Air National Guard photos by Tech. Sgt. Randy LaBrune

teeming with fighters and by the afternoon, more than 100 fighter jets were on alert, Cromwell says.

With initiative from civilian FAA air defense liaison Ed Enkerud, the sector tapped into FAA centers across the West as it guided fighter pilots to targets. Enkerud says an FAA “domestic event network” launched two hours after the initial attack was invaluable. “I got a call from my boss in Washington, D.C., and we all started dialing into one number and started instantaneous communication that is still ongoing,” Enkerud says. “Now we don’t have to dial different facilities. We can talk right now and the line is always open.”

Cromwell says he’s proud of the sector’s response Sept. 11: “People used their training in a brand new scenario. They were innovative, creative and under control.”

Above: Canadian Forces Warrant Officer Scott Budgell and Maj. Cecilia Nackowski monitor the radar scopes at the Western Air Defense Sector.

A calm surrealism Sept. 11 at SEADS

Absolutely “unbelievable.” That’s how Lt. Col. Clark “Buck” Rogers describes Sept. 11, 2001.

The director of operations at the Southeast Air Defense Sector, Tyndall Air Force Base, Fla., says it all happened very fast. “I remember, vividly, turning to our commander (Col. Larry Kemp) and saying: ‘This is a coordinated attack. And it may not stop in the Northeast. We need to get our airplanes up because we don’t know what’s coming next.’

“And that’s exactly what we did.”

The sector put pilots from its three area air defense alert facilities on battle stations — in the cockpit ready to start at a moment’s notice. At Ellington Field, Texas; Homestead Air Reserve Base, Fla.; and Tyndall Air Force Base; fliers were

suiting up and waiting for the Klaxon alarm to sound. The shrill tone would echo in Texas, as pilots were scrambled to escort Air Force One.

Help was coming from across the Southeast. “Fighter wings from across the Air Force — both active duty and Air National Guard — called to assist,” Rogers says. “We told them the country was under attack and the best they could do was load ammo on live airplanes. And that’s what they did. We asked units that already had airplanes on alert to bring up additional airplanes, bring up the spares and get four airplanes loaded and four guys in crew rest.

“There wasn’t a base out there that wasn’t on alert.”

They had to get in the minds of the terrorists. What would they hit? The SEADS area of

responsibility includes Atlanta, Dallas, Miami, nuclear sites, and military bases. "We immediately said, 'Our responsibility is not to protect New York City, but to protect the Southeast. What should we be concentrating on?'" Rogers says.

Rogers was scrambling fighters as the skies of America were being cleared of all civilian traffic. "All flights had to be approved by the appropriate air defense sector, even if it was a military flight," Rogers says. "We disapproved almost everything, but Life Flights got permission to fly."

Extra measures were taken to ensure the flights were legitimate. "We had to call a hospital and ask if they were really expecting a plane with a sick child from Mexico," Rogers says. "Just because it was painted like Life Flight doesn't mean it was Life Flight. Just because it was painted like American Airlines, doesn't mean it was."

Kemp was responsible for final approval of Southeast-area flights in the immediate post-attack

and even approved flights of the Federal Reserve to help get the economy moving again.

The commander says the day's events were surreal. But there was method to what should have been madness. "It was very methodical and structured," Kemp explains. "The training and proficiency kicked in. Everybody had a clear picture of what the big picture was and what they had to accomplish."

Rogers has one positive memory of the day: "I walked out of here at maybe 9:30 or 10 that night. I was pretty dismayed and could not believe what had happened. It was like the end of innocence. But the first thing I saw as I drove out the gate was all the houses on the base with American flags. There were flags in every neighborhood, on businesses, on car dealerships ... everything said 'God Bless America,' 'We Love Our Country,' and 'United We Stand.' It was an amazing outpouring of support."

Left: The Southeast Air Defense Sector area of responsibility includes the Gulf Coast, where F-16 fighter jets of the Texas Air National Guard fly Combat Air Patrol missions in support of Operation Noble Eagle.

Below: In a late 2001 visit to SEADS, Air National Guard Command Chief Master Sgt. Valerie D. Benton, top adviser for enlisted affairs, receives an update on the Straits of Florida from Tech. Sgt. Gerry Myers, a SEADS air surveillance technician.

Photos by Scott A. Gwilt, Daily Sentinel, F

A NEADS technician peers into a colorful map of the regional air picture. The imagery is part of a computer software program NORAD installed after Sept. 11, 2001, that gives controllers the capability to view more than 15,000 tracks at any moment per air defense sector instead of the 300 tracks before Sept. 11.

Fear strikes NEADS Sept. 12; 'mole people' never rest

After Sept. 11, crews at the Northeast Air Defense Sector in Rome, N.Y., didn't think things could get much worse. Helping secure America's skies amid a horrifying terrorist attack, they'd worked late into the evening, got minimal sleep and were back at it the next morning. Certainly Sept. 12 would be calmer — the attacks were over and the North American Aerospace Defense Command was guarding the skies like never before.

But as Tech. Sgt. Ronald G. Belluscio, a senior weapons director technician, peered into his radar scope, he knew something was wrong. "There was a plane, flying low and slow, headed right toward this building," he says. "My first thought was, 'Who is this?' Then it clicked. 'This isn't normal. Who is this guy and why is he headed toward us?'"

The Federal Aviation Administration had surrendered America's airspace to NORAD, all civilian aviation was grounded and the skies were free of anything other than military or emergency aircraft. But the unidentified airplane, headed toward Rome from the south-southeast, kept on coming.

"We thought anyone in the air was either a terrorist or a criminal and this aircraft was beelining straight at us," says Col. Bob Marr, NEADS commander. "We had some F-16s that had been flying Combat Air Patrol over New York City and were headed back to Burlington, (Vt.). We vectored them toward the plane."

Master Sgt. Joe McCain, mission crew commander technician, says Marr was very direct:

"He told the weapons section to get a hold of those aircraft to see if they had enough fuel to get to Rome. He said, 'I want those birds here and now. Light afterburner if you have to!'"

With the Vermont Air National Guard jets diverted their way, Marr ordered the evacuation of the building, leaving himself and a small crew in the operations center. "If we were attacked, the others would be able to come in and finish the mission," Marr says.

Meanwhile, Senior Master Sgt. Thomas Hayes, chief of NEADS Security Forces, directed his staff to hide the evacuees in the trees surrounding the building. From outside, Hayes stayed in radio contact with security forces member Staff Sgt. Mike Bates, the desk sergeant inside the building. Bates relayed the airplane's position to Hayes as security forces members lined up on a hill with guns aimed at the sky, hoping they could down the plane if it came to that.

Bates, a Syracuse, N.Y., police officer in his civilian life, admits he was scared. "It was nerve-racking," he says. "I'm not going to lie. I was nervous and thinking about my family. It still wasn't reality that Sept. 11 had happened. We thought we were under attack and when Col. Marr yelled for people to get out of the building, you could feel the sense of urgency. We knew airplanes weren't supposed to be in the air, yet this guy was coming at us and I was waiting inside the building expecting to hear the guns start firing."

Inside the operations center, Marr says people were shaking at the scopes as they watched on

Security forces members lined up on a hill with guns aimed at the sky, hoping they could down the plane if it came to that.

Above: Two F-16s sit armed and ready outside their new alert shelters at Selfridge Air National Guard Base, Mich. Air controllers at the Northeast Air Defense Sector, Rome, N.Y., have found themselves working with units like Michigan's 127th Wing more than ever since Sept. 11, 2001.

Right: Col. Bob Marr, commander of NEADS, evacuated the sector operations center on Sept. 12, 2001, when an unidentified airplane was heading straight for the building.

radar as the plane got closer and closer. McCain says he was more afraid on Sept. 12 than he was Sept. 11. "The 11th was horrible," he says. "But we had to do our jobs. The 12th was personal."

Adds Belluscio: "It was like slow motion. You could see the distance between the target and the fighters and we didn't think the fighters would make it. I was on the edge of my seat, rocking back and forth thinking it would make the fighters go faster."

But suddenly, the calmer day came when the airplane changed course only miles from the sector operations center. The F-16s were in close pursuit and forced the plane to land at nearby Hinckley Reservoir, Marr says.

From here, the story of that unknown plane becomes NEADS legend. "The word is, the police cut the wings off the plane and put it on a flatbed truck," says Belluscio.

Marr says he never found out who the culprit was, but heard he was a local pilot with a seaplane. Whoever he was, he was flying against all federal regulations in the early days after Sept. 11.

For months, the crews at NEADS worked 12-hour days, six days on, three days off. Days like Sept. 12 were especially difficult, says sector chaplain Maj. Timothy Bejian.

"The stress was enormous," Bejian says. "After Sept. 11, that's what it was like for days on end. As the days went by, I was watching the folks and seeing how they were dealing with the stress.

"People would go out at night and watch the flying squirrels jump from tree to tree. We called them the 'mole people.' It was September and people would arrive in the dark and leave in the dark and didn't see their families. As chaplain, you have to try to bring people back to a point where they can cope. The problem wasn't going to go away and some had a very difficult time."

Bejian puts things into perspective with "The Mole People and the Flying Squirrels," a story he wrote for those guarding the Northeastern skies.

Photo by Scott A. Gwilt, Daily Sentinel, Rome, N.Y.

'The Mole People and the Flying Squirrels'

"... If it weren't for the 'mole people,' the regular people of the world wouldn't be able to walk outside their homes in safety. The world is full of monsters and beasts and all kinds of nasty creatures that would freeze their blood and hurt their children. But the mole people are always watching. They watch by day while the regular people work and their children play. They watch at night while the regular people sleep in their cozy beds or read fairy tales to their children. Why, you ask, are these watchers called the mole people? Well, the answer is quite simple. They gather together in groups, in windowless places, usually arriving while it's dark and staying long hours only to leave while it's dark. Many times they can't tuck their own children into bed and read them fairy tales because they are watching. This bothers the mole people, but they know that it needs to be done. And if ever they see something or someone bad who wants to hurt the regular people, they send a message to their friends the Eagles who outrace the wind to pursue and drive off the beasts and monsters."

NEADS chaplain**

Air refuelers fly in face of terror

Only weeks after flying Combat Air Patrols over Washington, D.C., on Sept. 11, 2001, F-16 pilot Maj. Dan Caine was soaring high above the rugged terrain of Afghanistan.

It was the early days of Operation Enduring Freedom and an early winter evening when Caine, a member of the 113th Wing, District of Columbia Air National Guard, heard familiar voices over his radio frequency. Turns out the same crew pumping 6,000 pounds of JP-8 into his F-16 was the very crew that refueled his fighter low over Washington, D.C., the day terrorists attacked America. It's a small Air Force, Caine reasons, and an even smaller Air National Guard.

America's refueling tanker crews are crucial to the fight against terrorism. From the 117th Air Refueling Wing in Birmingham, Ala., to the 161st Air Refueling Wing in Phoenix, Ariz., the tanker crews keep America's fighters airborne.

Scores of wings across the country have come under 1st Air Force and Continental United States North American Aerospace Defense Command Region command and control at various points since Sept. 11 — all in support of Operation Noble Eagle. The 101st Air Refueling Wing, Maine Air National Guard, is one. The "MAINEiacs" are proud to have refueled fighters over Manhattan the morning of Sept. 11. That day is a vivid memory for KC-135E boom operator Senior Master Sgt. Robert Phair, a 20-year Maine Air National Guard veteran.

"We were out on a local training mission when

all hell broke loose," Phair recalls. "We heard through the Federal Aviation Administration Boston Center that an aircraft had impacted one of the towers and we were completely amazed that something so horrific could happen."

Like many that morning, the crew assumed the crash was accidental. "When we heard that a second

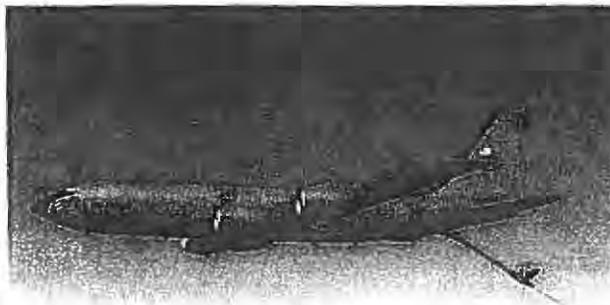

plane had hit, we could detect in the voices of the controllers that it was more than coincidence. We got passed off to New York Center and the controllers' voices were elevated. They were very concerned and asked us to provide emergency air refueling coverage for fighters and we said, 'Absolutely.'"

The civilian FAA controllers requested the tanker's presence about 10 miles off New York City's coastline, Phair says. "We said, 'We can do better than that, we can fly right over Manhattan.'"

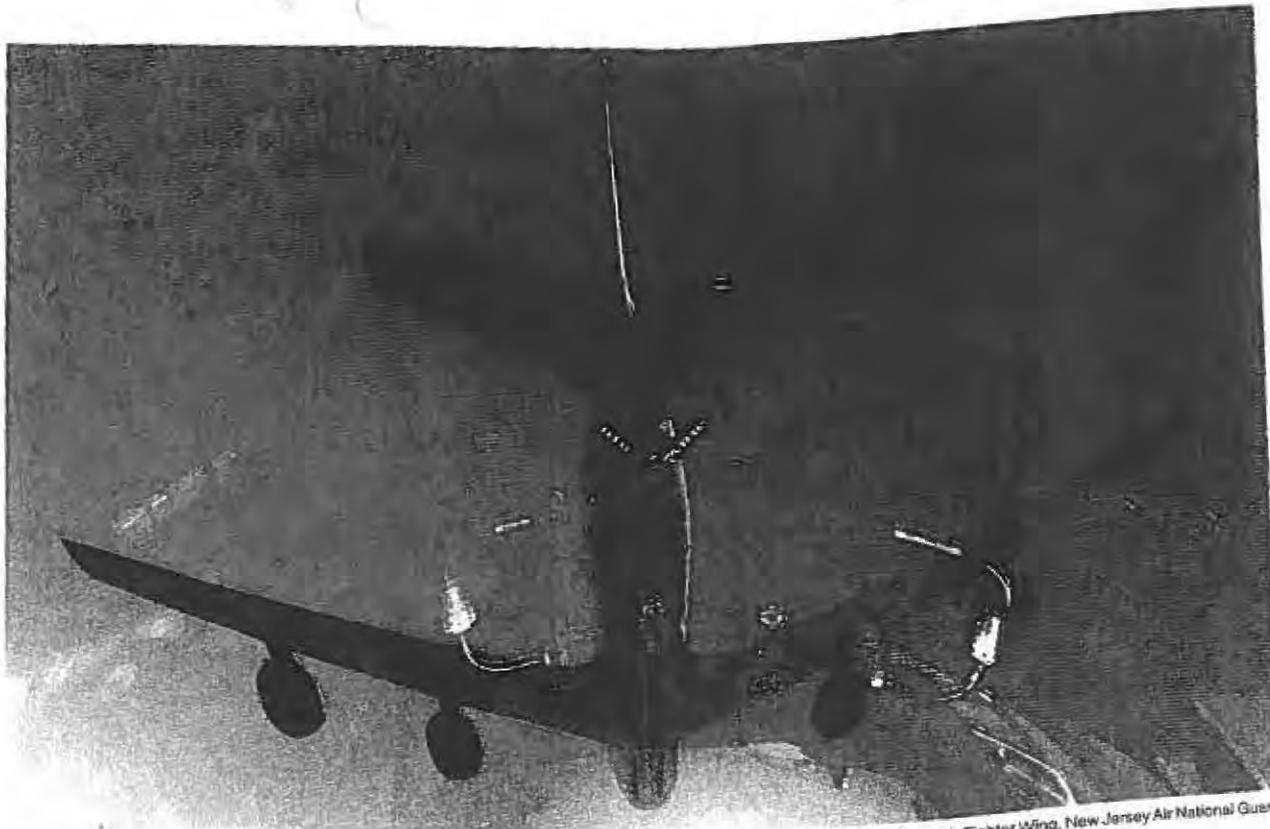

"They said, 'You guys are cleared Manhattan right now.'"

Back on the ground at Bangor International Airport, the MAINEiacs' home base, the scene was one of "mass controlled confusion," says Tech. Sgt. Philip Henderson, a KC-135E crew chief. Watching TV one moment in the break room, crews suddenly found themselves on the ramp preflighting and gassing up the tankers. Soon they'd find themselves airborne, witness to terror below.

"As we approached Long Island Sound, I could see Ground Zero and the smoke drifting eastward," Henderson says. "I went into the boom operator's compartment and went to the window. We were looking out and everybody was pretty silent looking

at the smoke coming up but we couldn't get definite information on what was going on. It's burned into your memory, being up there and seeing the smoke from Ground Zero and seeing the live fighters coming up to you with missiles on them. It was unreal."

At the end of the day, the 101st had diverted two of its airborne aircraft to support East Coast fighters and brought three other KC-135s to cockpit alert within minutes, launching them all.

"It normally takes two hours to generate a sortie up until takeoff," says Maj. Ian Gillis, 101st Air Refueling Wing chief of aircrew scheduling. "That day, we briefed in about 10 minutes and had aircraft ready to launch in just about an hour."

Not one year had passed since that terror-filled

morning, and the wing had already flown more than 508 sorties in support of Operation Noble Eagle, for more than 2,800 hours of flying time. The Maine tankers had pumped more than 11.8 million pounds of fuel into nearly 1,500 fighter jets flying CAPs over the United States.

"At any one time, a third of military aircraft protecting the United States are tankers," Gillis explains. "When you see two fighters on a Noble Eagle CAP, there's always a tanker somewhere above them."

According to Air Force statistics, across America, more than 15,000 airmen from the Air National Guard, Air Force Reserve and regular Air Force flew more than 26,400 fighter, tanker and airborne early warning sorties in the 13 months after the Sept. 11, 2001, attacks.

Olympics protection golden example of interagency cooperation

As international athletes were gliding down the powdery slopes below, armed jet fighters were soaring above Utah keeping the skies of the 2002 Winter Olympics safe.

Only weeks after the Sept. 11 attacks, already tight security grew to include protection of Olympics airspace. As part of Joint Task Force-Olympics, soldiers and airmen supported federal, state and local agencies at the Hill Air Force Base, Utah, Air Security Operations Center. The ASOC, actually the corner of a hangar, brought civilian agencies

and military members together like never before, says Col. John E. Bonner, Western Air Defense Sector director of support. The sector, at McChord Air Force Base, Wash., is one of three continental air defense sectors in the North American Aerospace Defense Command and served as a lead air control agency for the Olympics.

“Before Sept. 11, a large national event was not a concern for NORAD,” says Bonner, who led a WADS contingency to Utah that February. “Never before Sept. 11 did we see internal matters as

Photo courtesy of Western Air Defense Sector

posing a threat. But the president declared the Olympics a 'National Special Security Event,' and we needed a significant presence to protect that airspace.

"The big story is the interagency cooperation and how everyone worked together to make it happen. The Secret Service was in charge of all security, both in the air and on the ground; U.S. Customs was the lead for air security; and the FBI was involved in ground security. The Army played a huge role and flew over 400 missions to support law enforcement and emergency services. ... Our piece was things in the air moving faster than helicopters."

Using an intricate network of radars, radios and sensors employed especially for the Olympics, NORAD, WADS and the Federal Aviation Administration could maintain constant contact and provide constant air coverage of the Games. "We grabbed data feeds from all the low-altitude and short-range radars and brought them back to WADS for display in the NORAD Contingency

Suite, our newest computer system," says Chief Master Sgt. James Hunter, WADS support superintendent. "We needed redundancy in our radar data and high-resolution in our radar picture."

Hunter and 25 other WADS members worked especially closely with the FAA as it imposed temporary flight restrictions around Olympics airspace. The FAA authenticated 6,630 different flights entering restricted areas during the Olympics, Bonner says. There were more than 20 violators, but armed F-16s from Hill's 388th Fighter Wing, on alert and flying random Combat Air Patrol missions over Salt Lake, were ready to intercept when necessary. They were supported by more than 100 NORAD fighters on alert at 30 bases across the country.

The military and other agencies involved logged 3,300 flying hours in support of Olympics air protection, Bonner says. "Those hours were accident-free," Bonner adds, "in some pretty lousy flying weather."

Multilayered air defenses protect nation's capital

Heat-seeking "Stinger" missiles mounted on Humvees ... jet fighters on constant prowl over the city ... airborne warning and control platforms eyeing the skies up high as sensors scan for threats down low. It may sound like a combat zone in a distant land, but this multilayered air defense system has become a familiar sight right in the nation's capital.

Throughout Operation Noble Eagle, a theme has emerged from the North American Aerospace Defense Command: the best air defense starts on the ground. Nowhere has this been more apparent than Washington, D.C., where live anti-aircraft missile batteries have been deployed during high-profile events like the Sept. 11 anniversary and January 2003 State of the Union address.

The joint efforts have brought together hundreds of people from NORAD and throughout the armed services, the U.S. Customs Service, Federal Aviation Administration, and Secret Service. The air defense arsenal has included Air Force F-16s and Airborne Warning and Control System aircraft; ground-based Army "Sentinel" radars and "Avenger" missile batteries; and U.S. Customs Service UH-60A "Black Hawk" helicopters.

"We employ air defense artillery for high-value assets, people, infrastructure, and national government," says Maj. Gen. Craig R. McKinley, commander of 1st Air Force and the Continental

United States NORAD Region and the Joint Air and Space Component Commander. "We provide a third layer of defense for targets that would possibly slip through the fighter Combat Air Patrols and the U.S. Customs and Secret Service barriers that are put in place.

"Air defense artillery is like a goalie in a hockey game. It is the last line of defense before a track of interest would actually make an impact with a

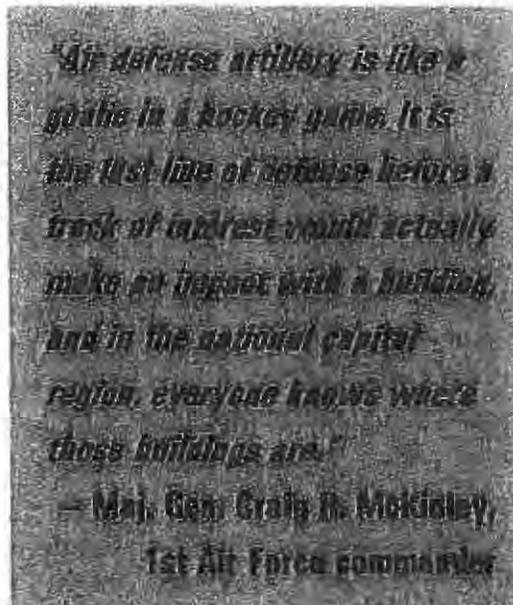

building, and in the national capital region, everyone knows where those buildings are. That is why we heavily defend our nation's capital and seat of government."

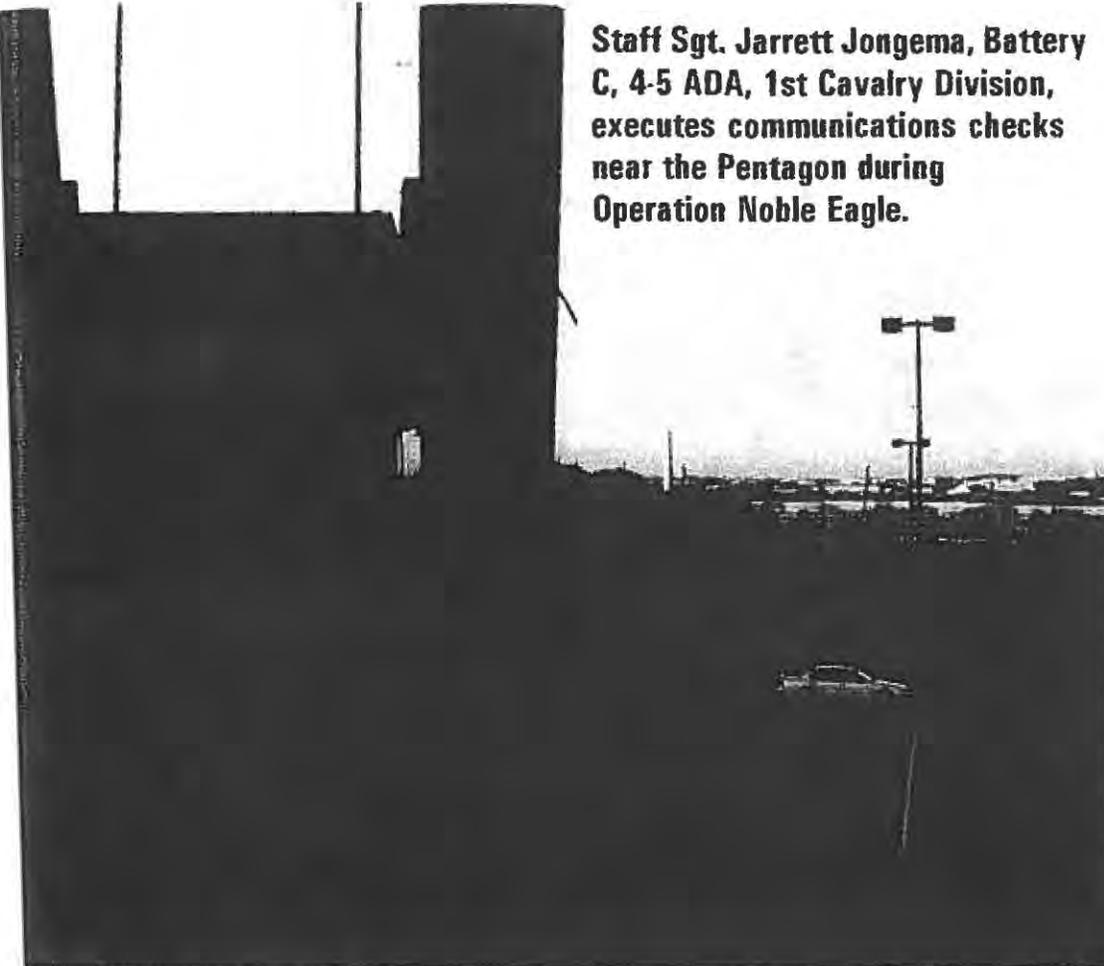

The command and control architecture of that robust air defense artillery includes a mobile system called the "Joint Based Expeditionary Connectivity Center," the "center of the wheel for command and control," on such operations, McKinley says.

"The JBECC is the fusion hub where all the data is

correlated and presented to me, the Joint Air and Space Component Commander, so I can present it to the decision-makers," he says. "It is extremely effective and we've had great success with it."

The JBECC was developed in the mid-1990s under the "Advanced Concept Technology Demonstration" program of the Office of Undersecretary of Defense, which explores opportunities to quickly get emerging technology into the hands of the warfighters. It was born as a "Cruise Missile Defense Initiative" and evolved into

Staff Sgt. Jarrett Jongema, Battery C, 4-5 ADA, 1st Cavalry Division, executes communications checks near the Pentagon during Operation Noble Eagle.

U.S. Army photo by Sgt. Erick Henson

the "Area Cruise Missile Defense."

The advanced programs branch of 1st Air Force began with a Humvee and added different types of radios and communications devices that would give NORAD the clear low-altitude air picture it had been missing.

"JBECC allows us to link into other sensors like Army Sentinel radars, Navy Aegis cruisers and Avenger missile systems," explains Lt. Col. Hutch Davis, 1st Air Force chief of operations integration for advanced programs. "It then correlates these radar inputs into one consolidated air picture."

The JBECC then sends the picture to one of three sector operations centers within CONR, allowing controllers to potentially deploy weapons against cruise missiles, Unmanned Aerial Vehicles and other low-altitude threats.

The concept went "real-world" after the terrorist

attacks on Sept. 11, 2001, says Maj. John Ackermann, 1st Air Force chief of advanced programs demonstrations. On Sept. 12, a JBECC prototype being used by the Army was deployed to Naval Air Station Oceana, Va., and linked the CONR Air Operations Center into AWACS and other East Coast radars. "JBECC tied into the existing sensors that were there but not in the NORAD system," Ackermann explains. "NORAD now had an East Coast air picture it could utilize."

Since then, JBECC has been deployed in several operations, including airspace protection of the 2002 Winter Olympics Games. "The success of this experiment is a big step forward in the development of a single integrated air picture," Ackermann says. "The single picture will give all commanders a common view of the aerial battlefield."

CHAPTER 6

HOME THEATER: NORTHCOM guards air, land and sea

1st Air Force modernizing
to defend skies of a new era

The world is a battleground. That post-Sept. 11 realization led to the most sweeping set of changes to U.S. military structure seen since 1946. ¹

Only eight months after the twin towers fell, Defense Secretary Donald Rumsfeld and Air Force Gen. Richard Myers, chairman of the Joint Chiefs of Staff, announced changes to the Unified Command Plan — the framework for military missions and geographic responsibilities for combatant commanders.

“The new commander will be responsible for land, aerospace and sea defense of the United States,” Rumsfeld explained at the April 17, 2002, announcement. “He will command U.S. forces that operate within the United States in support of civil authorities.” ²

Northern Command, with Gen. Ralph E. Eberhart at the controls, was established Oct. 1, 2002, at Peterson Air Force Base, Colo. The NORTHCOM commander is responsible for homeland defense and still wears the blue Air Force uniform as commander of the North American Aerospace Defense Command, the organization charged with aerospace warning and control for the United States and Canada.

An F-16 assigned to the California Air National Guard 144th Fighter Wing flies a Combat Air Patrol over San Francisco in support of Operation Noble Eagle.

Photo courtesy of 144th Fighter Wing, California Air National Guard

“Military forces will be used when and where needed to augment and assist first responders,” Eberhart explains. “The goal is to be proactive, not just reactive. Nothing is more important for a government to do than provide safety and security and improve the quality of life for its citizens.”³

“We are just like the other regional combatant commanders, with one important difference — the United States homeland is in our area of responsibility,” the general says.⁴

The reorganization shifts the U.S. Joint Forces Command geographic area of responsibility to NORTHCOM and U.S. European Command, enabling U.S. Joint Forces Command to focus on transforming U.S. military forces — another post-Sept. 11 theme of changing the way the military does business.⁵

The NORTHCOM area of operations is vast, and includes the United States, Canada, Mexico, parts of the Caribbean, and the contiguous waters

Airman 1st Class Brian Isaacson, munitions maintenance specialist, 148th Fighter Wing, Minnesota Air National Guard, checks a gantry support leg on a munitions assembly conveyer on Jan. 23, 2002. Isaacson was one of hundreds of traditional Guardsmen activated to maintain the unit's increased operations tempo while supporting Operation Noble Eagle. The 148th is one of 10 Air National Guard fighter wings assigned to 1st Air Force and the Continental United States NORAD Region. Several other air wings are attached to the command for Operation Noble Eagle.

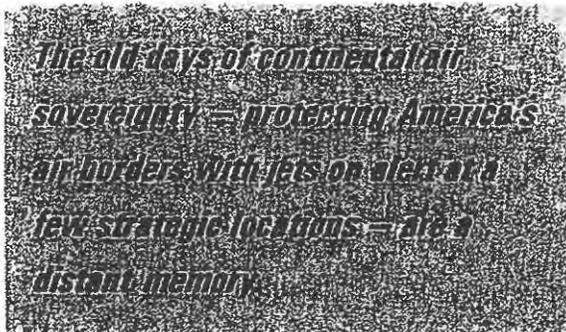

in the Atlantic and Pacific oceans.⁶

The creation of NORTHCOM is historic, says Maj. Gen. Craig R. McKinley, commander of 1st Air Force and the Continental United States NORAD Region. “Not since George Washington have we had a military commander in charge of U.S. forces in garrison at home to defend American citizens. It was a swift action by our government and president to guard our country from further terrorist attack.”

McKinley, who assumed command from Maj. Gen. Larry K. Arnold in August 2002, says 1st Air Force and CONR are working closely with NORTHCOM to counter air threats as his Army and Navy counterparts protect land and sea.

Eberhart calls NORTHCOM a true joint venture. “Our command is built upon a Total Force and total national team concept that includes members from all five services; the National Guard; the Reserves; Department of Defense civilians; and numerous federal, state and local agencies,” he says. “We believe we are redefining ‘jointness’ by forming new partnerships within the DOD and with numerous civilian agencies, as well as strengthening existing ones. Developing these strong relationships is key to our success.”⁷

Eberhart says NORTHCOM is committed to improving “situational awareness by developing a common operating picture for the air, land and maritime domains.”⁸ McKinley and his team at 1st Air Force and CONR share that commitment and are working toward better command and control, a bigger radar picture and enhanced sensor capabilities to counter airborne threats. The 21st century is here and McKinley is leading the charge to catapult the air defense mission out of the Cold War into a new era, where the war seems to be everywhere.

Charting the future

A few days before Sept. 11, 2001, the future of continental air sovereignty was in serious doubt. As late as Sept. 8, discussions at the Air Force's highest levels called for dismantling NORAD's seven alert sites and command and control structure — the heart of the air sovereignty mission.⁹

"Our leaders were seeking to optimize our force posture, and there was no perceived threat," McKinley says. "That rationale was changed dramatically by the events of Sept. 11, when the terrorists sent a message that we are no longer safe in our homes."

The air war over America has been fought ever since.¹⁰ The old days of continental air sovereignty — protecting America's air borders with jets on alert at a few strategic locations — are a distant memory. Operation Noble Eagle requires scores of military fighters on alert at several bases around the country. Radar and command and control capabilities have had to keep up with looking both inside and outside the United States as fighter jets patrol America's cities, key infrastructure and special security events. The mission has changed, and it appears the changes will continue indefinitely.

"We will take 1st Air Force from a 20th century organization designed to defend against a Cold War construct, to a 21st century organization that protects Americans, Canadians and possibly anybody in the Western Hemisphere," McKinley says. "We are charting what this organization is going to look like in 2008 while we continue to fight the air war over America."

"This vision began in late 2002 ... over the next five years we plan to implement change, develop doctrine

and concepts of operations and actually see those things come to fruition. We hope to put in place the means to fund the equipment and facilities that would enable us to carry out this strategy."

McKinley envisions an organization that blends seamlessly into the rest of the Air Force and falls strictly in line with Air Force doctrine, the book on how the "Air Force organizes and employs aerospace power throughout the spectrum of conflict at the operational level."¹¹ He sees the Northeast and Southeast air defense sectors consolidating into one. The Western Air Defense Sector at McChord Air Force Base, Wash., and new Eastern Air Defense Sector, probably in Rome, N.Y., would employ the latest technology to view airspace over the contiguous 48 states and territories like the U.S. Virgin Islands and Puerto Rico.

"Technology will allow us to radically transform the way we see the air traffic over North America," McKinley says. "After Sept. 11, we received a new system that enables us to do a far more efficient

Photo courtesy of 144th Fighter Wing, California Air National Guard

A fighter pilot from the California Air National Guard 144th Fighter Wing is caught on camera. Air defense leaders are working to gain more jobs in America's fighter wings for those fighting the war on terror.

High-Altitude Airships are the wave of the future. The lighter-than-air surveillance platforms are in production at Lockheed Martin.

Courtesy of Lockheed Martin

job controlling, monitoring and identifying traffic, not only outside our borders, but inside. Once that system is purchased en masse, we have the ability to reform, reengineer and reshape ourselves into a doctrinally correct numbered air force.”

“Our goal is to mirror our air forces in Europe and the Pacific,” McKinley says. “We will employ military members from the active duty Air Force, Air National Guard and Air Force Reserve, and will present our forces the way the Air Force presents its forces everywhere.”

A crucial part of the strategy is a bigger and stronger Air Operations Center, McKinley says. The AOC is where war plans for Operation Noble Eagle are written. Planning for the war on terror would continue at this super AOC of the future slated for Tyndall Air Force Base, Fla., operated by the 601st Air Operations Group. In the world of warfighting, Air Force doctrine calls for one AOC per theater, and since the first moments of Operation Noble Eagle, the United States has become its own theater of

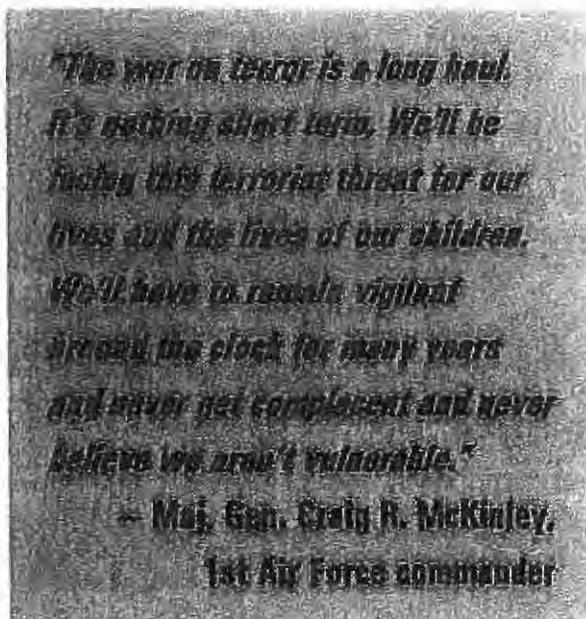

war, McKinley says.

“The war on terror is a long haul,” he says. “It’s nothing short term. We’ll be facing this terrorist threat for our lives and the lives of our children. We’ll have to remain vigilant around the clock for many years and never get complacent and never believe we aren’t vulnerable.”

“This reorganization allows us to be a numbered air force, air operations group and an Air Force forces staff,” McKinley says. “It means we can take good care of our people and design strategy and concepts of operation so we can prevent acts of terrorism rather than just respond to them. This vision allows us to present our force structure to the commander of Northern Air Forces the way combatant commanders present their forces

throughout the Air Force.

“This is a vectored evolution vision, it isn’t total transformation. We haven’t created anything new. It’s a more modern and efficient way of presenting forces to best meet the needs of the new century.”

Retired Col. William A. Scott, 1st Air Force director of plans, programs and requirements, says the mission is simply evolving with the changing times. "Now that NORTHCOM has stood up, our mission has been enlarged to include possible offensive operations and civil support missions," Scott says. "The 1st Air Force and CONR transformation is a continued evolution from our doctrinally correct organization today to a doctrinally correct organization of the future."

McKinley, meanwhile, wears more hats than ever. He serves as the Commander of Air Force Forces for the continental United States; the Area Air Defense Commander; and Joint Air and Space Component Commander, a title that captures the Air Force position that air and space power together create effects that cannot be achieved through either power alone.

Technical edge

Building a modern, futuristic air defense mission means taking full advantage of the latest technology, from "High-Altitude Airships" to ground-based interceptors capable of destroying Intercontinental Ballistic Missiles mid-flight.

"Everything we see today is based on radars

From left, Tech. Sgts. Clayton Lemons and Leonard Mosley of the 147th Fighter Wing engine shop, Texas Air National Guard, make repairs while deployed to Egg Harbor Township, N.J., in support of Operation Noble Eagle.

U.S. Air Force photo by Master Sgt. Tom Louis

and those radars are mounted on the ground,” says Col. Mike Corbett, 1st Air Force and CONR vice commander. “But we can only see line of sight. The curvature of the earth keeps controllers from seeing low altitudes. So low-altitude threats like cruise missiles are not well detected by ground-based radars.”

The mission should someday employ High-Altitude Airships, solar-powered blimps cruising around the atmosphere and feeding air pictures back to earth. The airships, already being studied by the U.S. Army, are bigger than a football field and would stay airborne for up to a year at a time, Corbett says.

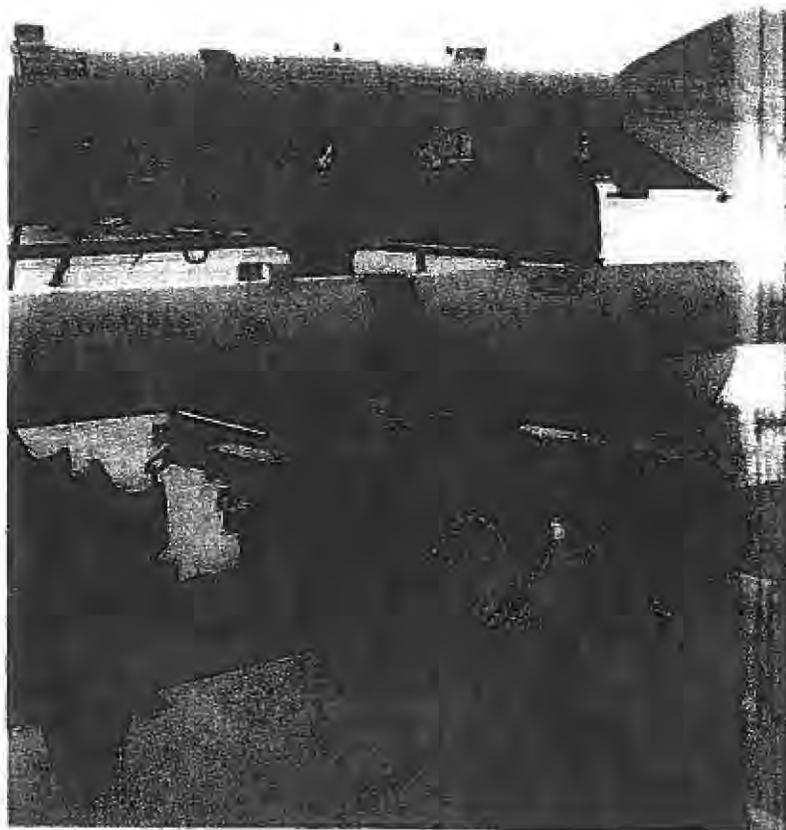

Eberhart spoke before the House Armed Services Committee about this exciting technology and what it means for homeland security.

“The Office of the Secretary of Defense, the Missile Defense Agency, the United States Army, and NORAD are spearheading the effort to demonstrate the technical feasibility of an unmanned, untethered, long-duration HAA (High-Altitude Airship),” the general said in March 2003.

“The prototype airship will stay airborne for one month and carry a 4,000-pound payload. We expect the objective HAA to have the capability to stay airborne for up to a year and carry a payload greater than 4,000 pounds. A robust HAA capability would give warfighters persistent wide-area surveillance of the battle space against a full spectrum of air, land and sea threats.”

First Air Force and CONR hope to combine airship technology with enhanced command and control capabilities by 2004, Corbett says. That’s the same year the United States Missile Defense Agency and its counterparts hope to have a ballistic missile defense in place.¹²

Ground-based interceptors; sea-based interceptors; airborne laser aircraft; and land, sea and space-based sensors; are just part of the technology that will protect against ballistic missiles of all ranges, according to the Department of Defense.¹³

Above: Master Sgt. Jim Rice, 147th Fighter Wing, Texas Air National Guard, signals that an AIM-120 missile is ready for the rack on Dec. 19, 2001. Rice and more than 60 other Texas Air Guard members were deployed to the 177th Fighter Wing, New Jersey Air National Guard, Egg Harbor Township, in the early days of Operation Noble Eagle.

U.S. Air Force photos by Master Sgt. Tom Louis

People first

Modern equipment may be critical in the war on terror, but it's the people performing the air defense mission who are most invaluable.

"The dedication, skill and patriotism of our people and the fact we've done this without a single mishap to date, is a remarkable testament to the great skill and loyalty of everyone out there doing this job," McKinley said in February 2003. "Since Sept. 11, they have done a remarkable job of securing our airspace against further attack."

By April 2003, American and Canadian military forces had flown more than 29,000 Operation Noble Eagle sorties in defense of critical infrastructure and population centers throughout North America.¹⁴

Many Operation Noble Eagle veterans are Air National Guardsmen who were recalled to active duty. "Operation Noble Eagle missions and aerospace warning and control takes people," Corbett said in March 2003. "To date those people have been mobilized and can only be mobilized for a two-year period."

"When it comes to command and control functions, through modernization, we think we can do it with the resources we had prior to Sept. 11," Corbett says. "But for the fighter wings out there doing the alert mission, that isn't the case. There is a real need for a significant number of additional people."

The command is working closely with the Air Staff and National Guard Bureau to create 900 more jobs in America's alert fighter wings, Corbett says.

But it isn't just the military fighting the war, McKinley says. "How we prosecute tracks of interest with our interagency partners is forever changed," the commander says. "We have become America's NATO. We are the centerpiece of that partnership and are working with agencies like the FBI and U.S. Customs just as our partners in

Europe work with various countries to defend NATO.”

“We can’t rest on our laurels,” he adds. “We’ll continue to be challenged. We haven’t suffered a reattack, but that doesn’t mean people aren’t out there planning, plotting and strategizing against us. We must stay vigilant and focused and support the president of the United States and secretary of defense in the war on terrorism.”

“Air sovereignty has changed forever,” McKinley concludes. “Not in my lifetime will we ever see an opportunity to turn the wick down a bit. This will be a very, very lengthy process.”

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case # 042R0122001

SWORN INTERVIEW OF
SHIRLEY S. MILLER

BY

AGENT WILLIAM (b)(6), (b)(7)c

AGENT (b)(6), (b)(7)c

Wednesday, September 22, 2004

9:58 a.m. - 11:21 a.m.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

(b)(6), (b)(7)c : It is 9:58 a.m., we're at --we're at FAA Building 10-A, Room 1010 in Washington, D.C. My name is (b)(6), (b)(7)c, my co-agent is (b)(6), (b)(7)c We're from the Office of Inspector General Department of Transportation and we are conducting a review of issues involving certain public statements made by the military and FAA officials at 9/11 Commission Hearings and elsewhere that were allegedly inaccurate. And we're interviewing Shirley S. Miller today. It says here, please, acknowledge that you are aware that this interview is being tape recorded?

MS. MILLER: Should I say my name?

(b)(6), (b)(7)c : Sure.

MS. MILLER: I'm Shirley S. Miller, FAA and I acknowledge that I'm being interviewed and tape recorded.

(b)(6), (b)(7)c : Please raise your right hand. Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, nothing but the truth?

MS. MILLER: Yes, I do.

(b)(6), (b)(7)c : Can you please give your full name, spelling your last name?

MS. MILLER: Shirley S. Miller,
M-i-l-l-e-r.

(b)(6), (b)(7)c : And what's your current assignment, your current position?

MS. MILLER: I'm on the Air Traffic Organization Transition Team. And I'm just called a transition executive.

(b)(6), (b)(7)c : And what's your grade?

MS. MILLER: It's Federal Executive Service [unintell.].

(b)(6), (b)(7)c : How long have you been in your current position?

MS. MILLER: Well, I'm in a transition state, so it kind of complicated, I was the senior advisor to the Deputy Administrator, until recently, but I don't really even have paperwork that tells me exactly the date that I transferred to the ATO.

(b)(6), (b)(7)c : Do you have a ballpark?

MS. MILLER: Well, I think like for maybe the last month or so.

(b)(6), (b)(7)c Okay.

MS. MILLER: Or couple of months maybe.

(b)(6), (b)(7)c : Can you just very briefly describe what your current duties are?

MS. MILLER: I'm assisting the Chief Operating Officer of the ATO and the Senior Vice President for Transition in essentially standing up the new organization and working through transition issues.

(b)(6), (b)(7)c : And ATO is?

MS. MILLER: Air Traffic Organization.

(b)(6), (b)(7)c : Is that how their routing symbol is, ATO and some numbers?

MS. MILLER: Yes, the FAA--the COO was hired a year ago and we are in the process of standing up a new organization which merges the former Air Traffic and Airway Facilities pieces of FAA and the acquisition organization into one organization to be more performance based and more businesslike.

(b)(6), (b)(7)c : I see. When did you first start with the FAA?

MS. MILLER: In 1988.

(b)(6), (b)(7)c : What was your position and duty location?

MS. MILLER: Budget analyst and I was in the FAA Budget Office.

(b)(6), (b)(7)c : In D.C.?

MS. MILLER: Yes, here in this building.

(b)(6), (b)(7)c : And on September 11, what position were you in?

MS. MILLER: I was Special Assistant to the Deputy Administrator of the FAA in this building.

(b)(6), (b)(7)c : At that time, what grade were you?

MS. MILLER: It was a--we have a different pay system than the rest of DOT, it was called a J-Band in the Core Compensation System.

(b)(6), (b)(7)c : And how long had you held that position prior to the 11th?

MS. MILLER: About three years.

(b)(6), (b)(7)c : Three years?

MS. MILLER: Ninety-eight.

(b)(6), (b)(7)c : Ninety-eight?

MS. MILLER: In August of '98, I became the Special Assistant to the Deputy Administrator.

(b)(6), (b)(7)c : And that continued up until about a month ago, is that?

MS. MILLER: No, From '98, until 2002, when that Deputy Administrator retired, the new Administrator and her Deputy or her team came in and they asked me to stay up here to help them, and so, I've been here. I was up here, essentially, from '98, until a couple of months ago working for the now Deputy Administrator.

(b)(6), (b)(7)c : The reason that we're here to talk to you today is because, as I understand things, that you served as the FAA's liaison to the September 11 Commission, is that correct?

MS. MILLER: Yes, that's correct?

(b)(6), (b)(7)c : And when did that start?

MS. MILLER: In June of 2003.

(b)(6), (b)(7)c : And can you--in that position,

can you just very briefly describe what your responsibilities were?

MS. MILLER: Well, I was key point of contact for the agencies and my responsibility was to ensure that their document requests and all of the materials that the Commission asked for were provided. I was also responsible for addressing any questions they had and try to set them up with different places of expertise within the agency; work on their scheduling for getting interviews completed with our employees as part of their investigation, and, really, just be the go-to person.

(b)(6), (b)(7)c : At that time, who did you report to, who was your boss?

MS. MILLER: Well, Mr. Sturgell, who is the Deputy Administrator currently.

(b)(6), (b)(7)c : Who did you primarily interact with at the Commission if you can pinpoint it down to one or two people?

MS. MILLER: Well, the team that I worked with, included (b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c [ph], and they had one other person, an assistant, (b)(6), (b)(7)c Also, there was another team that was working at primarily security and (b)(6), (b)(7)c [ph], were two of those people that I worked with on that team. The Commission had several teams that were working with issues.

(b)(6), (b)(7)c : Would you spell (b)(6), (b)(7)c

MS. MILLER: (b)(6), (b)(7)c

(b)(6), (b)(7)c : Were you involved in preparing documents for the Commission or collecting documents from within the FAA before they had issued the subpoena?

MS. MILLER: Yes.

(b)(6), (b)(7)c : The, just to kind of give you a comparison, for instance, because I'm not exactly sure what format you guys submitted the documents to the 911 Commission, but the Department of Defense, for example, had prepared a massive computerized index listing all the documents and other materials and things like that that they had

turned over to the Commission. Did you guys do anything similar to that? Did you have, like, indexes?

MS. MILLER: We had indexes, but we don't have a massive computer document where everything's on one document. For example, the volume of documentation that was provided to the Commission. This is just a sample and this is all from Air Traffic facilities throughout the, you know, the facilities that were part of what happened that day. So, they all had indexes that they provided to me, but I mean, this was a massive undertaking. We didn't have time, you know, to put a computer listing together of everything.

(b)(6), (b)(7)c : So there are indexes at separate offices?

MS. MILLER: Yes.

(b)(6), (b)(7)c : In Boston, whatever?

MS. MILLER: Yes, Boston, New York, Cleveland Center, Indianapolis Center. Anyone who was involved in either communications or tracking of the aircraft.

(b)(6), (b)(7)c : I should have asked you this earlier, did you have an assistant or anybody that worked directly with you on this project?

MS. MILLER: It was very ad hoc, most of the interaction--most of the documentation came, obviously, from our Air Traffic facilities, so my--I wouldn't call assistant, but I worked very closely with some folks here in the building and in the former Air Traffic Organization.

(b)(6), (b)(7)c : And who were those people?

MS. MILLER: Well, Doug Gould, G-o-u-l-d, was one, and then he went to Iraq to help out over there, so he was early on, like I'd say last fall through [unintell.] that was October through about March and then he went to Iraq. And then when he left, (b)(6), (b)(7)c [ph], who was also in Air Traffic helped me out. But, you know, it was whoever was around, really.

(b)(6), (b)(7)c Is Doug back from Iraq, now?

MS. MILLER: Yes, he's here.

(b)(6), (b)(7)c : So the indexes that you guys--did you provide copies of the indexes to the

Commission?

MS. MILLER: Yes.

(b)(6), (b)(7)c : Are those copies of all the indexes right there, or--

MS. MILLER: Not all of them, most of them are in here. But I also--the documents that I personally handled, I did my own index for those. So, like, that box there, is--there are some Air Traffic documents, but most of the actual facility documents were handled by Air Traffic.

(b)(6), (b)(7)c : Before you guys out of headquarters turned over materials to the Commission did you guys make copies of those here?

MS. MILLER: We have copies here of what--I have copies of everything that, you know, that I did the index for. Now, when you talk about all the materials represented by this book? No, the originals would remain in the facilities.

(b)(6), (b)(7)c : So, your facilities were turning over copies?

MS. MILLER: Yes.

(b)(6), (b)(7)c : So they would transmit them up

to Washington. And then you would--

MS. MILLER: We'd hand them over to the Commission.

(b)(6), (b)(7)c : You guys didn't make copies before you--

MS. MILLER: No.

(b)(6), (b)(7)c : Do you have any questions about that?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : FAA has a public affairs division, I'm not exactly sure if that's what they call them, but--

MS. MILLER: The Office of Public Affairs [unintell.] systems administrator [unintell.]

(b)(6), (b)(7)c : Do you know who was in charge of that division on the 11th of September?

MS. MILLER: Yes, it was, I think (b)(6), (b)(7)c
(b)(6), (b)(7)c He's gone, that's a political position under another administration. (b)(6), (b)(7)c was the head, I believe, but (b)(6), (b)(7)c was the Deputy, as she is today. She was here [unintell.]

(b)(6), (b)(7)c : And she's still here today?

MS. MILLER: Yes.

(b)(6), (b)(7)c : Do you know if the FAA issued any press releases concerning, you know, time lines?

MS. MILLER: Yes, I know that there was, I believe there was a press release issued. I don't know if there was right after 9/11 or in the days or weeks or whatever, I don't remember that. Public Affairs would have a copy of whatever we did release, if we did release anything. I do know that there was a release, I think, on the anniversary of, like in 2002, and I know that that's in our archives.

(b)(6), (b)(7)c : That press release would have been, like, a time line of events?

MS. MILLER: I don't recall exactly what it was, but I think it had time lines in it.

(b)(6), (b)(7)c : Other than the possibility of this press release we just talked about, are you aware of other public statements or documents that the FAA had made concerning time lines for the hijackings and when it may have notified the

military?

MS. MILLER: Let me think. I don't, I know that both Jane Garvey, who was the Administrator, and Dick [unintell.] who was the acting deputy administrator who I worked for, I know they both testified sometime after 9/11, but I don't remember that they were--I don't remember that there were notification times in that testimony.

(b)(6), (b)(7)c : What about other public documents?

MS. MILLER: Well, I mean, we have, you know, we get a lot of--not a lot of, but we have a document called "Summary of Hijack Events" that was done by our Air Traffic folks after 9/11 that had, I mean it was all time lines, basically.

(b)(6), (b)(7)c : Like this?

MS. MILLER: Mm-hmm, but I'm not sure I would call that a public document. It was done, you know, internally, for our purposes, but I know it went a lot of places. I just don't know how public it was.

(b)(6), (b)(7)c : This document is titled "Summary of Air Traffic Events, September 11, 2001." It says on the bottom the source is AAT-20, what division is that?

MS. MILLER: Well, it's under the old organization, it's under the Air Traffic--the Director of Air Traffic there was a group called Investigations--I don't know, I'll have to look at it, AAT-20 was that group.

(b)(6), (b)(7)c : That's where Doug Gould and Tony Ferrante--

MS. MILLER: Doug worked in there, mm-hmm, Tony Ferrante, at the time John or Dave Knoles. He was the head of that organization on 9/11.

(b)(6), (b)(7)c : Mr. Knoles was?

MS. MILLER: Mm-hmm.

(b)(6), (b)(7)c : Do you know when this document came out?

MS. MILLER: It was done, like, within, I think a couple weeks, I want to say, but I'm not sure.

(b)(6), (b)(7)c : I think I had heard that it

came out around September 17?

MS. MILLER: Well, there's a page in there that says September 17, but [unintell.] abbreviated version of it--

(b)(6), (b)(7)c : This is just an abbreviated version?

MS. MILLER: I can't tell, but [unintell.]

(b)(6), (b)(7)c : No, it certainly doesn't.

MS. MILLER: I think yours might not have the graphics. But like, for example, you can see, here--

(b)(6), (b)(7)c : Oh, okay.

MS. MILLER: I'm not sure if September 17 means that that's the day it was, you know, finalized or what, but [unintell.]

(b)(6), (b)(7)c : Oh, yeah, right there.

(b)(6), (b)(7)c : Was there a request [unintell.]

MS. MILLER: No, we do the internally, because after any--something as major as 9/11, you know, we need to understand what happened here and we were getting our, you know, the tapes and the

radar data in from our facilities and that's how we figured out, you know, certain transitions, certain things happened.

(b)(6), (b)(7)c : So, this was primarily prepared as an internal briefing document, you would say?

MS. MILLER: Mm-hmm.

(b)(6), (b)(7)c : Just to try and kind of finish up the topic of public, are you aware of any other public time lines?

MS. MILLER: Not really, I mean, I don't recall how public, you know, I mean, I was not really involved in, you know, the compilation or anything.

(b)(6), (b)(7)c : Mm-hmm.

MS. MILLER: I only got involved in this when I became the point of contact for 9/11. I mean, I was certainly here on 9/11 and I was certainly involved in a lot of things. But in actually compiling, you know, the time lines and working with the facilities, I had nothing to do with that.

(b)(6), (b)(7)c : Okay. Aside from this summary of air traffic hijacking that we just talked about briefly, are you aware of any other internal briefing documents that the FAA may have prepared in sort of a time line format?

MS. MILLER: Well, Air Traffic produced, I would say several things, you know, they all had basically the same information. I mean, we had logs, you know, from the Ops Centers that indicated, you know, when they were hearing that certain things were happening that day.

I mean, Air Traffic had a situation room going all day that day. And they were trying to record things as they were happening, but it was not, I mean there was no atomic clock or anything like that, it was, like, people's recollection of what they were hearing. There were lots of things being, you know, developed or produced.

(b)(6), (b)(7)c : I have read through a lot of materials that the Commission was provided and that I've seen elsewhere, like, in testimony and such. And I have a list of different items that I

understand that the FAA had produced. One was called "FAA Communications Regarding Hijacked Aircraft on September 11, 2001," are you familiar with that one?

MS. MILLER: See, the problem with the Commission is, they titled things and I have no idea what they are referring to. I mean, we have [unintell.] requests in now--

(b)(6), (b)(7)c : This is a copy of that document.

MS. MILLER: Okay, but, sorry, they do have the right title on this one.

(b)(6), (b)(7)c : They have one, yes.

MS. MILLER: This is something that we pulled together, last, essentially last summer, just to try to pull, you know, sort of all of the different versions of time lines into one master time line, so that we had a better understanding of, you know, the different pieces that were out there. So, it was, really, for internal purposes. We had a meeting here with the Deputy Chief Counsel from the department and, you know, all of the

people in the FAA who were still around or involved in, you know, 9/11 issues. And we decided it would be a good idea if we just incorporated the different chronologies that existed into one.

So, like, for example, in the Air Traffic piece, they didn't have some of the regional office notification time lines, so we incorporated those into this. They didn't have some of the--at the time FAA had security, and they had their own, you know, chronology going that day, so they had different entries that wouldn't have been in this piece, they were different parts of the FAA. So, this was an attempt to try to pull everything into one.

(b)(6), (b)(7)c : Do you know who worked on that?

MS. MILLER: I did.

(b)(6), (b)(7)c : You did?

MS. MILLER: I did, along with, you know, I got pieces from Air Traffic and pieces from Security and pieces, you know pieces from AT security that we still had, because we have people

here today that were here on 9/11, that, you know remained in the area. And then pieces from our regional operations center and our operations center across the hall here.

(b)(6), (b)(7)c : Who worked on that with you or did you do it by yourself?

MS. MILLER: No, I worked with Lynne Osmus who's still head of security and her staff and Tony Ferrante and [unintell.] and the regional operations people. We have regional operations centers in every region. There's one in, you know, the ones that were impacted that day are part of it, one in Boston, New York, and the Great Lakes regional office in Chicago.

(b)(6), (b)(7)c : You said the reason that you guys put that together was to try to consolidate all the different time lines or--

MS. MILLER: Yeah, we just thought it would be a good idea, I mean, it really wasn't used for anything other than we had one piece--one document that had everything that we knew of.

(b)(6), (b)(7)c : And who was involved in the

decision to put that together?

(b)(6), (b)(7)c : Well, myself, Lynne Osmus, Lindy Knapp, I think was in part of the discussion.

(b)(6), (b)(7)c : She's from Counsel's Office?

MS. MILLER: Yes, I think [unintell.] was in the conversation, I'm trying to remember who else, Tony Ferrante. I mean nobody tasked us to do this we just thought it was a good idea. But it was taking pieces that already existed in different parts and pulling it into one document.

(b)(6), (b)(7)c : Had anybody expressed some concern that such a document didn't exist?

MS. MILLER: No, not really, no, it was just--there had already been a hearing, in May of 2003--

(b)(6), (b)(7)c : Right.

MS. MILLER: --and former Administrator Garvey had been questioned about response or notification time to the military, particularly on American 77 when it crashed into the Pentagon. And I know that I had heard indirectly that there was some concern in the Secretary's office about, you

know going back to 9/11 and the days after, there was some discrepancy between our time lines and DOD and NORAD's time lines and so on. I think John Flaherty [ph], particularly, was, he just wanted to make sure that we had all the information that we had done what we could do with the information that we had.

(b)(6), (b)(7)c : Flaherty didn't task you with that.

MS. MILLER: No.

(b)(6), (b)(7)c : And that was last summer?

MS. MILLER: That was, yeah, like, in June.

(b)(6), (b)(7)c : June of 2003?

MS. MILLER: Right.

(b)(6), (b)(7)c : Okay. Where did you obtain the data for that document?

MS. MILLER: From Air Traffic, from Security, from the Regional Operations Centers and our own operations centers.

(b)(6), (b)(7)c : Did you rely on summary data that they had already put together?

MS. MILLER: Yeah.

(b)(6), (b)(7)c : Or did you actually go all the way back to the source?

MS. MILLER: No.

(b)(6), (b)(7)c : So you relied on summary data that those division had--

MS. MILLER: Yes, I used documents that already existed.

(b)(6), (b)(7)c : Okay, so you used existing time lines of other--

MS. MILLER: Yes.

(b)(6), (b)(7)c : So did you do anything at all to validate the data that existed

MS. MILLER: No, other than just making sure that what was--ultimately in here reflected what had produced already, or what had been developed. But I didn't go back to any source data, I didn't go back and listen to air traffic control tapes, I didn't do anything like that?

(b)(6), (b)(7)c : Why not?

MS. MILLER: Because I didn't really, I mean, there was no need to do that.

(b)(6), (b)(7)c : And what happened to that document?

MS. MILLER: Well, you know, I gave a copy to the Commission. I gave a copy to Lindy to give to John, I don't know if she ever did, I mean I assume that he got a copy of it.

(b)(6), (b)(7)c : You gave it to Lindy?

MS. MILLER: Lindy Knapp.

(b)(6), (b)(7)c : Oh, I'm sorry, Lindy to give to Mr. Flaherty?

MS. MILLER: Right. And then, you know, everyone here who worked on it had a copy of it.

(b)(6), (b)(7)c : When you were working on that document did you coordinate any of it with the military in any way?

MS. MILLER: No.

(b)(6), (b)(7)c : Did you have documents from the military that you used?

MS. MILLER: No, no, we did not.

(b)(6), (b)(7)c : If you need to take a break at any time.

MS. MILLER: No, no. Sorry about that.

[Break.]

(b)(6), (b)(7)c : This is (b)(6), (b)(7)c, I turned off the tape recorder for just, like one minute or so, it's 10:30 right now, just to make sure it was working. And to take a quick break, so the interview's going to proceed. So, you said that you hadn't coordinated with the military and that you hadn't, at least, as far as you are aware reviewed any material from the military to prepare that time line.

MS. MILLER: Absolutely, I never reviewed any material from the military.

(b)(6), (b)(7)c : Okay. Do you have that document, I--

MS. MILLER: Oh sure.

(b)(6), (b)(7)c : One question that had apparently come up from the Commission, was in time lines such as this and that other one that you have there that Summary of Air Traffic Hijack Events--

MS. MILLER: Mm-hmm,

(b)(6), (b)(7)c : And this FAA communications regarding the hijacked aircraft?

MS. MILLER: Mm-hmm.

(b)(6), (b)(7)c : Why didn't this time line or the other time line, why didn't they reflect such events, such as like 9:21, it says that Boston Center advised NEEDS that American 11 is airborne and heading for Washington. That particular time at 9:21 is the Commission refers to as one of the phantom hijackings because at 9:21 American 11 has already crashed. How come your time line doesn't reflect that?

MS. MILLER: You know, I didn't produce the source that I used, I didn't produce that so that's one of the questions that you need to ask Air Traffic, when you talk to Tony Ferrante and others, but I will say this, there was a lot of misinformation on 9/11. And so, to put a, we weren't going to record everything that we, you know, that happened that day in this, because we know that American 11 wasn't, couldn't possibly have been in the air now, so there was no point in putting that entry in here. This wasn't like every single, transition that occurred. This was--the

point was to try to, for each flight--I mean, I didn't produce this document.

But the point was to, after 9/11, after we'd gotten in the information that we got from our facilities was to the best of our knowledge based on the information we had and the coordination that Air Traffic had done with the military was to try to come up with a time line of what happened to each one. So, do you understand what I'm saying? There were lots of erroneous, bad reporting that day. Because there was a lot of confusion. So, we're not going to put a, I mean we're supposed to put the actual of what happened, not, you know, that American 11 was still in the air when it was after the fact. After that transition, we figured out that no it wasn't.

(b)(6), (b)(7)c : So, well, who was going to be the consumer of that time line that you have over there just a summary of air traffic hijack events.

MS. MILLER: We were, we thought possibly, you know, others in the Administration, perhaps, even Congress. I don't know who, I mean, you'd

really have to ask Air Traffic the purpose of this, but I would assume that that's what the purpose was.

(b)(6), (b)(7)c : And then for this other one, "FAA Communications Regarding Hijacked Aircraft," who--

MS. MILLER: Mm-hmm.

(b)(6), (b)(7)c : --who did you guys understand would be the consumers of this?

MS. MILLER: Well, they weren't sure, but we thought it was a good idea, to have, as I said, before a consolidated chronology that had the different pieces, it had the Air Traffic piece had, the Security people had; the operations people, and I didn't know where it would go. I thought the Commission might be interested in having a consolidated. I thought, you know people at OST would want it. I didn't know where it was going to go, but I thought it would be a good idea to have it on.

(b)(6), (b)(7)c : Which was produced first, which one--this was produced first?

MS. MILLER: Mm-hmm.

(b)(6), (b)(7)c : This "Summary of Air Traffic Hijack Events?

MS. MILLER: This was done last, in 2003.

(b)(6), (b)(7)c : Did the FAA produce any time lines similar to these for purposes of kind of like lessons learned, to kind of look at what happened and then see where they could maybe make some changes to improve things or say, oh, everything worked perfectly?

MS. MILLER: We didn't produce time lines that led us in that search that could be done. I mean, we knew on 9/11 that we had some communications problems. We didn't need to do a time line to figure that out. So, we, I mean, we had --we didn't have any--there was no formal documents that reflect lessons learned from 9/11. [unintell.] lessons learned, but there's no, like big consolidated book that the FAA produced that said, you know, [unintell.] I mean, we just couldn't do that.

(b)(6), (b)(7)c : Do you know, if anybody ever

talked about doing that and the idea was turned down or it just never came up?

MS. MILLER: No, it, I mean, I believe it, I know it was talked about, but--there was an enormous amount of work going on after 9/11 in the days after, just to get the system going again, get the security measures in place and all those other things, but I don't think, I mean there wasn't enough time in the day to go off and do a lessons learned. Or a real-time lessons learned when we weren't reacting to that.

(b)(6), (b)(7)c : Did you ever have a discussion about what events should or shouldn't be included in your FAA communications regarding hijacked aircraft time line? Like, how did you decide that the erroneous communications, for example, like the one, I think it was the 9:21 event where Boston tells NEEDS that American is still airborne, how did you guys decide not to include things like that? Was that a decision made by you or higher up or among the group?

MS. MILLER: Again, the summary that we

did in 2003, was based on the documents that already existed, okay, so--

(b)(6), (b)(7)c : Similar documents, basically?

MS. MILLER: --yes, the 9/21 entry is not in this book, okay, so, I used this and I used security's pieces, you know, because they had their own what we call the aviation [unintell.] that were going on 9/11 across the hall in the ops center and they had their own log entries. And then we had log entries from the operations centers in the field and in headquarters. So those were the sources that I used. I did not read, I didn't ask Air Traffic to go back and re-examine everything that happened that day.

(b)(6), (b)(7)c : Okay. So, you didn't look at, I think [unintell.] packages for each of the four hijacked aircraft have transcripts of communications, you didn't look at that sort of material?

MS. MILLER: No.

(b)(6), (b)(7)c : Do you have copies of the other source materials that you relied on to

prepare your time line?

MS. MILLER: Yes.

(b)(6), (b)(7)c : Do you have them here?

MS. MILLER: Yes.

(b)(6), (b)(7)c : Just, when we're done, I'd like to take a quick look at those if we could.

MS. MILLER: Okay.

(b)(6), (b)(7)c : Do you have any other questions?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : Give me one second, I want to [unintell.]

MS. MILLER: Okay.

[Lengthy pause.]

(b)(6), (b)(7)c : Are you, and I don't know if this is the exact title of the document or at least the way, I don't know if this is the title that FAA refers to this document, but are you familiar with a document, I have the title, "FAA Communications with NORAD on September 11, 2001?"

MS. MILLER: Do you have a copy of it so I--

(b)(6), (b)(7)c : I don't. I was hoping you could help me with that, too. I can tell you where I got that information from--

MS. MILLER: Okay.

(b)(6), (b)(7)c : --is during the May 23, Commission hearing, Commissioner Ben-Viniste--

MS. MILLER: Mm-hmm.

(b)(6), (b)(7)c : --says, he quotes from the document, he says that he was provided with a copy of a document, called "FAA Communications with NORAD on September 11, 2001" and he says that it was produced by Schuessler and in the transcript it says Asmis, but I think it's Osmus.

MS. MILLER: Osmus, yeah, oh I know what that is, I don't have a copy of it.

(b)(6), (b)(7)c : Okay.

MS. MILLER: So, I believe, you're interviewing Lynne Osmus right?

(b)(6), (b)(7)c : I believe she's on our list.

MS. MILLER: So, she and Linda Schuessler, the evening of the 23rd, I think it was, were trying to help Jane Garvey get a response back to

(b)(6), (b)(7)c . And they came up with a statement and I think that's what that's referring to, but I don't have a copy of it.

(b)(6), (b)(7)c : I've heard reference to another document that--it's supposed to be a time line document and it's just called "Internal Briefing Document," it's handwritten, "Internal Briefing Document," it contains time lines. I don't

MS. MILLER: I know, that's the problem with the way that the Commission referred to documents, okay?

(b)(6), (b)(7)c : Mm-hmm.

MS. MILLER: They didn't necessarily, I mean, if we didn't have a title on it or something, they would just call it something and I had no idea what they were talking about.

(b)(6), (b)(7)c : Yeah, I don't have all of the Commission's documents yet, we're still working on those.

MS. MILLER: You're getting all the Commission's documents?

(b)(6), (b)(7)c : Oh, not all of them, I hope, but at least just the pertinent ones. If I had it, I'd show it to you. And there was another document I heard referenced as "FAA Military Notifications?"

MS. MILLER: I don't know what--I'm not sure what that might be, but I can show you what I think it might be.

(b)(6), (b)(7)c : Okay. Is it easily accessible?

MS. MILLER: I think, it should be. This might be it. I'm not sure if that is the document [unintell.]

(b)(6), (b)(7)c : Okay. This document's not titled, but it has in the footer, it says provided by AAT-20, revised on September 18, 2001, at 1400. So this would have been produced by Knoles group?

MS. MILLER: Mm-hmm.

(b)(6), (b)(7)c : Okay. Could this be one of the source documents you used for your time line?

MS. MILLER: Mm-hmm, I think so.

(b)(6), (b)(7)c : What do you refer to this as?

MS. MILLER: I don't really refer to it.

(b)(6), (b)(7)c : Okay. Do you know why they produced this?

MS. MILLER: I don't know for [unintell.] you can ask them when you interview them. I think it was an attempt to, in the early days, after to try to figure out where we might possibly--if we possibly could have known that there was something wrong, and then, how long did it take us to notify the military. But, as you can see in this, the notification time, I mean, they have an N/A, next to UAL-93 and then the 9:24 time according to the Commission and everything that they learned [unintell.] notified them about American 77, so, I mean, that's what we got at the time.

[Technical interruption.]

(b)(6), (b)(7)c : Is there--is that document listed in one of the indexes?

MS. MILLER: Yes, I'm sure it is, I'd have to research which index it's in.

(b)(6), (b)(7)c : I'd like to get a copy of that.

MS. MILLER: Okay.

(b)(6), (b)(7)c : Did you participate in helping, like Jane Garvey or Monty Belcher or any of the other FAA or former FAA employees prepare for their testimony before the Commission?

MS. MILLER: No.

(b)(6), (b)(7)c : Do you know how that was handled?

MS. MILLER: Yeah, there was a group that was formed to get ready for hearings and Darlene Freeman, who was still with the FAA and sort of a leader and she pulled together people from the different parts of the FAA to work on questions and answers and, you know, that kind of thing. So, they worked, I mean, she had people from Traffic and Security and wherever else she needed them from. And she was the lead on getting them ready for them.

(b)(6), (b)(7)c : Was she in contact with you to get any documents or--

MS. MILLER: No, I mean, after 9/11, I'm really not involved in documents, you know, because of the Commission.

(b)(6), (b)(7)c : Okay.

MS. MILLER: The normal way that things go after an accident or an incident that affected Air Traffic Control facility, [unintell.] their radar data, their transmissions, their tapes, you know, all that becomes [unintell.] in a package. And that's what happened with the with the 9/11 materials. And so, you know, most of what Darlene was doing was just pulling together questions and answers on the hundreds of security issues you know, about, what kind of [unintell.] protection systems do we have, you know, [unintell.] all the myriad issues that would come up in a hearing after 9/11, obviously.

And, as I recall, there were very few air traffic control issues, it was mostly about security in those hearings.

We were following our normal process after an accident on the traffic control side, you know, pulling all that data together to hand over to the EGSC [ph], which we did, and then the FBI took over the investigation as a criminal investigation.

(b)(6), (b)(7)c : I've heard Darlene Freeman's group referred to as like an after action group?

MS. MILLER: I don't think I'd call it that, I think that's way too formal.

(b)(6), (b)(7)c : Okay. I understand that she started working on these issues not long after September 11--

MS. MILLER: Yes.

(b)(6), (b)(7)c : --that sound right?

MS. MILLER: Yeah.

(b)(6), (b)(7)c : And she would have continued all the way into '03?

MS. MILLER: Oh, no--

(b)(6), (b)(7)c : Because the testimony before the Commission didn't start until--

MS. MILLER: May of 2003.

(b)(6), (b)(7)c : Right.

MS. MILLER: And I don't know how Jane Garvey, you can probably find out from [unintell.] how her testimony was developed. I don't know how it was developed, that was, actually before I was even involved in this with Commission work. But,

no, the Darlene Freeman piece was a very short-lived piece, I mean, it was the immediate hearings that occurred after 9/11, which was like a week or two after, maybe, I don't remember exactly.

And I believe there might have been one in November, but the effort that she extended, may be lasted two or three months, at the most, I believe.

(b)(6), (b)(7)c : So, you didn't assist in helping any FAA personnel prepare for testimony in any way?

MS. MILLER: No.

(b)(6), (b)(7)c : What about for any White House briefings?

MS. MILLER: No.

(b)(6), (b)(7)c : Do you know if there were any White House briefings?

MS. MILLER: I don't.

(b)(6), (b)(7)c : Do you know who would be best situated to know that answer?

MS. MILLER: Well, I think Jeff Griffith is probably the most likely person that would have a feel for that, because he would be. He and

(b)(6), (b)(7)c [ph], who was the (b)(6), (b)(7)c on 9/11 were the two people that I remember being involved in any White House discussions. Possibly (b)(6), (b)(7)c who was the head of Air Traffic Services at the time, but I don't--as I recall, it was delegated down to Jeff, Jeff had all the technical expertise in Air Traffic to answer any questions and he worked real close to the military.

(b)(6), (b)(7)c : In your role as sort of a September 11 liaison, September 11 Commission liaison, did you have any interaction with the military at all?

MS. MILLER: With sort of my counterpart with the Office of the Secretary of Defense. At OSD, you know, they have an office set up that [unintell.] intelligence or legal, I'm not sure which group, but anyway, they had a group set up to work the 9/11 issues in the document production and all that. There's a much bigger [unintell.] than ours so, I mean, they had a lot more people working it than we did, but, yes, I had contact with them.

(b)(6), (b)(7)c : And who was that over there?

MS. MILLER: (b)(6), (b)(7)c [ph] and, (b)(6)

(b)(6), (b)(7)c [ph].

(b)(6), (b)(7)c : What sort of coordination would you guys need to do? Can you kind of give some examples?

MS. MILLER: It wasn't really coordination it was--

(b)(6), (b)(7)c : What was the reason for your interaction?

MS. MILLER: Well, let me think, the interaction, really, didn't really have much interaction until like the last few months, I guess, before the June hearings, you know, this year?

(b)(6), (b)(7)c : The June '04 hearings?

MS. MILLER: Yeah, and it wasn't to compare notes, really, it was just sort of to get feedback from them, you know, what they were hearing from the Commission versus what we were hearing from the Commission.

(b)(6), (b)(7)c : Was that time-line issues or--

MS. MILLER: We talked, you know, I went

over there in, sometime early this past summer, I can't remember when exactly. Sometime, maybe it was in the of spring, I don't remember exactly when it was.

And the purpose of that discussion was, just to try to understand what we had heard indirectly from one of the Commission staff, and that was that they said that NMCC, which is the National Military Command Center, or Control Center at the Pentagon was telling the Commission staff that we never notified them about, you know, almost anything, you know, that we never called them. I mean, that's part of our procedure, we have a hijack situation, we would have reached out to them and, in fact we did. But as I understand that what happened was they answered the phone, but it was a push to talk phone and they weren't monitoring it all the time and then, you know they were--they were seeing things differently than we were and they were setting up a different kind of teleconference that we were never part of on the air-threat telephone conference.

And eventually somebody out at our command center ended up on that conference. At least that's what the Commission report said. I have no reason to doubt that. It's just that, you know, we didn't know all that at the time. The air-threat conference call is not anything that would have ever been in our procedures to be part of, you know. So, I think things were happening ad hoc that day as the crisis was unfolding. And, you know, unfortunately, I think we missed each other, you know, in our communications efforts.

So, what I wanted to understand was did somebody really say to the Commission that we never notified NMCC? And, in fact, they told me that day when I met with them at the Pentagon, Tony Ferrante and I went over there. No, no, we told the Commission that you all called us, but that we weren't monitoring that conversation or that phone call, that particular line the entire morning. So, I just needed to understand, you know, that that was the one piece that I needed to understand from them, because all along, we thought we had reached

out to the military. You know, I don't know exactly what time, I'd have to look, but, you know, and then we're hearing from them that, no, we never did, from the Commission, not from the Pentagon, you know, directly. So, the purpose of the meeting that I had with them was to try to understand what had they said to the Commission.

(b)(6), (b)(7)c : Do you think that might have been in--can you definitely say that was before that hearing in June?

MS. MILLER: Yes, definitely before the hearing.

(b)(6), (b)(7)c : You said it was you and Mr. Ferrante had gone over there?

MS. MILLER: Yes, and one of our attorneys who had been working closely with me, (b)(6), (b)(7)c [ph].

(b)(6), (b)(7)c Did, when you went over to that meeting, did you guys bring any data with you, any of your time lines or any other--

(b)(6), (b)(7)c : I had, I had some information

with me, but we never got into that kind of level of discussion.

(b)(6), (b)(7)c : Did you provide them with a copy of it or--

MS. MILLER: No.

(b)(6), (b)(7)c : Okay. Did they show you any of their data or time lines or log books or anything like that?

MS. MILLER: No.

(b)(6), (b)(7)c : Did they provide you with copies of anything?

MS. MILLER: No.

(b)(6), (b)(7)c : At any point, did you share any data that you had with the military folks that you were working with?

MS. MILLER: I don't recall doing anything with them.

(b)(6), (b)(7)c : Did they provide you with anything?

MS. MILLER: I think I got a copy of--I'm trying to remember, of a log, I don't remember exactly what it was. I'm sorry. Let's see, it was

a log that they sent me, but it was almost like it was a summary of different pieces that they pulled together. I don't know, I'd have to go back and look.

(b)(6), (b)(7)c : Do you think you still have a copy of that?

MS. MILLER: Yeah, I think so.

(b)(6), (b)(7)c : Did you get anything else from them?

MS. MILLER: Uh-uh.

(b)(6), (b)(7)c : Just that one--

MS. MILLER: Well, they gave me, they sent me a log and a copy of an e-mail that (b)(6), (b)(7)c (b)(6), (b)(7)c [ph], you know, oh, I know, it was about year-end '03, and it was a copy of an e-mail of what he sent to the Commission or something like that. I can find it for you.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Was this meeting in general just to talk about the notification or were you talking about specific flights relating to the notification?

MS. MILLER: Well, what had gotten--I guess what had gotten me concerned was that in, I mean, the Commission staff was--they weren't leveling with any of us about what they were sort of figuring out, you know. So we were all trying to guess it, as to what they were coming up with.

And so, (b)(6), (b)(7)c one night, was in here and he told me that there was a major break down on 9/11, here in headquarters, particularly about United 93 and that we never notified the military about United 93. And I'm like, I don't understand that, you know, everything that I know about what happened that day, I thought we did. And he said, well, it didn't happen.

So, then I talked to (b)(6), (b)(7)c and said, you know, maybe it would be useful if we came over there and we just, if I could hear it from you all, what did somebody at NMCC say to the Commission. [unintell.] that we hadn't made the outreach to the NMCC that day.

(b)(6), (b)(7)c : In particular to 93?

MS. MILLER: Well, the point is that if

they had been on that conversation, they would have heard about United 93, at least that's what we all thought here. Because we all remember that by, I don't know, certainly before United 93, crashed, that there was an open line going between us and that's what we all remember. You can ask (b)(6), (b)(7)c you conversation ask Jeff, you can ask anybody who was here in headquarters that was involved in anything that day.

So that's what, I mean, none of us could understand how the Commission could be thinking that we weren't talking to the military by that time in the morning, okay, so it was, obviously, I mean, our controllers in Boston, did a great job of reaching out to the military quickly when they were figuring out what was happening.

(b)(6), (b)(7)c : That was something [unintell.] as opposed to NMCC?

MS. MILLER: That's right. And, you know, I was shocked when I read in the report, you know, that we actually, didn't notify--didn't say anything to the military about American 77 until

whenever they say we did in their book. Because we always thought it was at 9:24. That's what our log said. So, that's when the two flights that were really of a concern to me were American 77 and United 93.

(b)(6), (b)(7)c : Your log, what log are you referring to for 9:24--

MS. MILLER: Any of our logs--

(b)(6), (b)(7)c : You're talking about your time lines?

MS. MILLER: --all [unintell.] say 9:22.

(b)(6), (b)(7)c : But your--and you can correct me if I'm wrong, but I think your time lines all reference a military log as the source--

MS. MILLER: Yes, that's right.

(b)(6), (b)(7)c : --for that. Okay. Have you ever seen that log, do you know if anybody at FAA has that log?

MS. MILLER: I don't--when I tried to find that log, everyone who's still here today, you know, basically, the answer is, we don't have it. It would have been destroyed or, you know--I don't

mean destroyed, like, but after some period of time, things we, they are either sent back to the military or destroyed because my understanding is whatever the military sent us they were classified documents. And so there are, you know destruction parameters associated with that. That's what I understand. i never saw anything from the military, any source documents.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Did you ever see any public documents released by the military?

MS. MILLER: No, the only think I remember seeing was a--I think [unintell.] did a press release.

(b)(6), (b)(7)c : Would this be the document?

MS. MILLER: Yeah.

(b)(6), (b)(7)c : That looks like it?

MS. MILLER: Yeah.

(b)(6), (b)(7)c : I didn't get that from the military, it came from some other source out on the Internet. But it claims to be authentic.

MS. MILLER: Well, I mean, okay, but the

one I remember seeing, it has that same information, it may not look exactly--

(b)(6), (b)(7)c : But it looks the same?

MS. MILLER: Yeah.

(b)(6), (b)(7)c : Would this have been one of the documents you used?

MS. MILLER: No.

(b)(6), (b)(7)c : To create--

MS. MILLER: Well, let me say, I don't know what they used to create this, okay? I mean, I don't know, you'd have to ask.

(b)(6), (b)(7)c : Was this document provided to the Commission as part of the FAA's response?

MS. MILLER: No.

[Lengthy pause.]

(b)(6), (b)(7)c : Would you guys have compiled a list of the tail numbers for each of the four flights?

MS. MILLER: A list?

(b)(6), (b)(7)c : Do you have that information, you know I was looking in the [unintell.] reports, for like, 11 and 175 and I didn't see those,

they're not there, I might have just missed it.

MS. MILLER: I don't know.

(b)(6), (b)(7)c : The reason I was asking is because the Commission seems to contribute some of the confusion to the military's use of tail numbers versus FAA's use of flight numbers when referring to different aircraft.

MS. MILLER: But I think, I mean, I could be wrong, but I think when an accident happens the tail number's included.

(b)(6), (b)(7)c : I don't remember if I saw it or maybe I just missed it, interesting.

MS. MILLER: There's a lot of information in an accident package.

(b)(6), (b)(7)c : There sure is. Do you know, once the FAA started to find out that the Commission had some concerns or was just making some determination that some of the notification times, specifically, I think there's a time like at 9:16 or 9:24 that the times that had been put out in the public for those two events, might not necessarily be correct. Do you know what sort of

efforts the FAA had made internally to try to determine what had happened at those two times?

MS. MILLER: That's really not, I mean, if you're asking, maybe you should restate your question, I'm not sure if you're asking me now or when we started understanding that there was concern on the Commission's part, did we do anything, is that what you're asking me?

(b)(6), (b)(7)c : Right, once you started to determine that the Commission might be concerned about those events?

MS. MILLER: Well, I never knew about the 9:16 thing until the report came out, okay?

(b)(6), (b)(7)c : Okay.

MS. MILLER: So, on 9:24, again, I go back to--

(b)(6), (b)(7)c : Are you talking about the formal report or--because I think they make reference to that in their staff statement--

MS. MILLER: Staff statement, is that what you mean, yeah, I mean I guess that's probably about the time that I knew that there was a 9:16

issue.

(b)(6), (b)(7)c : Okay.

MS. MILLER: So, with the 9:24, you know again, I go back to, I knew there was concern about notification on 77 and 93, and, you know, that's what I was trying to understand with the military, you know, before the June hearing, sometime before the June hearing, you know, kind of what they had told the Commission versus what our records showed.

But I didn't get, like, you know, specifics about what NORAD said to them, so--

(b)(6), (b)(7)c : Okay.

MS. MILLER: --I just sort of got general, you know, assurance from them, that, you know, we were sort of in synch, with what we were saying.

(b)(6), (b)(7)c : As far as kind of double checking FAA's records, did it go any further than looking at the time lines that had already been produced? Did you go, are you aware of anybody at FAA kind of drilling down on the issue and saying, well, let's look at our source material, let's check Boston's records; let's check the Command

Center; that sort of thing?

MS. MILLER: No, but you have to remember or keep this in mind, okay, the Commission got hundreds and hundreds of tapes and they had transcribed, hundreds of tapes, when they could be valid; tons of tapes, okay, that we never listened to, okay? We never went through the painstaking process that the Commission went through after 9/11 to get every piece of communication that happened all over the place. I mean, that's what they did. We never did that. We pulled, and you'll have to talk to Air Traffic about this, because they're the ones who can tell you exactly what they did, you know, in the aftermath, but we never went to the extent that the Commission did to understand what happened?

(b)(6), (b)(7)c : How come?

MS. MILLER: Well, the Commission they looked over a year, we don't have that kind of time, I mean, we just didn't do it. We didn't see a need to do it.

MR. OWENS: Okay.

MS. MILLER: We had no reason to believe that there was--we knew what happened, we knew what had to be fixed.

(b)(6), (b)(7)c : Okay. After the Staff Statement 17 came out, did anybody at FAA start to go back and try to look and find out if what the Commission was putting out was accurate or try to verify what the Commission was saying about those two events?

MS. MILLER: No, I mean, I know Air Traffic didn't, ATO, the Administrator did not direct anybody to do that.

(b)(6), (b)(7)c : [unintell.] meeting when you went over to DOD to meet with your two counterparts that were there. [unintell.] at any time?

MS. MILLER: No.

(b)(6), (b)(7)c : You kind of walked away, then, reassured--

MS. MILLER: Yeah, I felt that the issue of the NMCC contact, I felt comfortable that we had at least tried to do what our procedures called for that day. You know, it didn't work, as designed,

but we did make the outreach to them, so I felt comfortable that what we had thought all along and said that we had done all along, that's what we did. And come to find it didn't work out the way it should have, but you know, a lot of things didn't work out that day.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : I recall reading in a couple of the transcripts for the hearings that like Jane Garvey testified at and I think, also, Monty Belcher, that there were some formal questions that they were going to respond to after the hearing. Do you guys have copies of those materials that they provided after those hearings?

MS. MILLER: [unintell.] questions.

(b)(6), (b)(7)c : Do you have final questions for the record of something like that is what they might be referred to?

MS. MILLER: There was never an QFR from [unintell.] hearings June 17 hearing, that I'm aware of. I might not be aware of it, but I don't recall anything.

(b)(6), (b)(7)c : I think there was for Jane--

(b)(6), (b)(7)c : For Jane--

MS. MILLER: I know there were a couple of things that were followed up on and I'd have to go back and see. I think they were security related, if I recall.

(b)(6), (b)(7)c : I'll have to look again myself so I can be more specific.

MS. MILLER: And, you know, I think [unintell.] would have a better recollection on that story, because she was actually, sort of in charge of all this when the May 23 hearing occurred.

(b)(6), (b)(7)c : Okay.

MS. MILLER: I think she got [unintell.]

(b)(6), (b)(7)c : Do you have anymore questions on this?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : If it's okay, what I'd like to do is stop tape recording and can you see if you can find those time line--the other documents for, like Security and the Op Center and stuff that you

relied on to put yours together?

MS. MILLER: Yeah, I think I'm going to need a little bit of time, though.

(b)(6), (b)(7)c Oh, okay.

MS. MILLER: I mean, if you can--are you going to be back in the building later or--

(b)(6), (b)(7)c We can probably stop back after lunch, we've got another interview, like at 3 or something, but not here, it's back at our building, would that give you enough time, maybe by 1:00 or--

MS. MILLER: By when?

(b)(6), (b)(7)c Maybe by 1:00, we probably need to be heading back at least by 2:00 I think. And we'll be back tomorrow two.

MS. MILLER: See, I'm not sure, I mean, I'm--there's stuff all over the place. So, I need to, I'm just not sure how long it's going to take me to look.

(b)(6), (b)(7)c So, will you call one of us when you--

MS. MILLER: Yes.

(b)(6), (b)(7)c --we can come by and pick them up?

MS. MILLER: Yes.

(b)(6), (b)(7)c : Okay.

MS. MILLER: I mean, you know I can give you a copy of this right now.

(b)(6), (b)(7)c Yeah that would be great.

MS. MILLER: It might be helpful for you in another interview.

(b)(6), (b)(7)c We'll conclude then, it's 11:21.

[END OF INTERVIEW.]

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case # 042R0122001

SWORN INTERVIEW OF
JEFFREY GRIFFITH

BY

AGENT [REDACTED] (b)(6), (b)(7)c

AGENT [REDACTED] (b)(6), (b)(7)c

Wednesday, September 22, 2004

[No start time provided] - 5:36 p.m.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

I N T E R V I E W

(b)(6), (b)(7)c : --We're at 400 7th Street S.W. at DOT OIG's Office, Room 7324 Washington, D.C. My name is (b)(6), (b)(7)c my co-agent is (b)(6), (b)(7)c We're from the Office of Inspector General Department of Transportation and we are conducting a review of issues involving certain public statements made by the military and FAA officials at a September 11 Commission Hearing and elsewhere that were allegedly inaccurate. We're interviewing Jeff Griffith. If you could, please, acknowledge that the interview is being tape recorded?

MR. GRIFFITH: Yes it is.

(b)(6), (b)(7)c : Please raise your right hand. Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, nothing but the truth?

MR. GRIFFITH: I do.

(b)(6), (b)(7)c : Can you, please, give your full name, spelling your last name for the record, please.

MR. GRIFFITH: Full name is Jeffrey Wynn

Griffith, G-r-i-f-f-i-t-h.

(b)(6), (b)(7)c : You said you retired from the
FAA in November '02?

MR. GRIFFITH: Correct.

(b)(6), (b)(7)c : And what are you currently
doing?

MR. GRIFFITH: I'm working for a small
company in Bethesda, Maryland, as a consultant.

(b)(6), (b)(7)c : What was your last position at
the FAA?

MR. GRIFFITH: Deputy Director of Air
Traffic.

(b)(6), (b)(7)c : And what grade was that?

MR. GRIFFITH: I was an SES. I can't
remember the FAA equivalencies, I believe it was an
FX-1.

(b)(6), (b)(7)c : Sort of like an SES, was that
Level 1, you think?

MR. GRIFFITH: A four--

(b)(6), (b)(7)c : A four.

MR. GRIFFITH: SES-4 or possibly a 3. I
went into FAA under [unintell.] reform moved out of

OPM direction all our SES's combined into FX-1, 2 or 3. If 1 was the highest, that's what I was. If a 3 was the highest, then that's what it was, I can't remember.

(b)(6), (b)(7)c : How long had you been in that position?

MR. GRIFFITH: I think about a year and a half. I can't remember, I spent a total of six years in FAA headquarters as an SES.

(b)(6), (b)(7)c : So you would have--you said you were a Deputy Director of Air Traffic?

MR. GRIFFITH: Right.

(b)(6), (b)(7)c : So, you would have gotten that position in 2000 sometime?

MR. GRIFFITH: I think so, yeah. I'm sorry I'm not more clear on that.

(b)(6), (b)(7)c : That's all right, I just want to--

MR. GRIFFITH: I can go back on my SF-50s and tell you if you need it.

(b)(6), (b)(7)c : No, I'm just trying to gauge, I was going to ask you what position you held on

the 11?

MR. GRIFFITH: That was it, Deputy
Director.

(b)(6), (b)(7)c : When did you start at the FAA?

MR. GRIFFITH: 1970.

(b)(6), (b)(7)c : In what position and what duty
station?

MR. GRIFFITH: I was an Air Traffic
Controller in Macon, Georgia.

(b)(6), (b)(7)c : I think I remember you saying
on September 11, and you can correct me if I'm
wrong, but on September 11, you were--maybe I'm
thinking of somebody else--anyway where you on
September 11?

MR. GRIFFITH: I was at FAA headquarters,
my office was on the 10th floor. And that's where
I was that day, if you want to know where I was
when we had the first altercation, [unintell.]

(b)(6), (b)(7)c : Yeah, why don't you go ahead
and if you can in a real synoptic format.

MR. GRIFFITH: Okay, I was at FAA
headquarters and now know that I was in a meeting

in the Administrator's conference room and received a page that an aircraft had hit the World Trade Center.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: And so, I went down to my suite where my office is on the 10th floor there and was met by--one of--I had 15 direct reports, 14 of them were SES, but this particular person was responsible for quality assurance, accident investigation--I was met by that individual. And turned on CNN, because our natural instinct was it had to be a smaller airplane, it couldn't have been an airliner kind of thing.

(b)(6), (b)(7)c : Was that Knoles?

MR. GRIFFITH: Dave Knoles, yeah. And I was either met by him or talked to him on the phone, I don't know how much detail you want, because I've been through this so many times.

(b)(6), (b)(7)c : No, you're doing fine.

MR. GRIFFITH: I remember not mentioning my pager when they recorded me over at 9/11 Commission, so if I recall things that sound

different, I want to try and explain them. But, anyway, I talked to Knoles either by phone or in person. And shortly thereafter I went down to our operations center on the 10th floor in the FAA and we began dealing with the issue. At some point I was informed that a second airplane had hit the second tower. You know, and so, we were--the two things that I recall is, number one, I told Knoles to set up a situation line in our suite and get all of our direct reports on line from the regions, there were nine of them, and, you know start collecting information about what's going on in the system. We wanted to know that.

And the next thing I directed him to do was to immediately tell these people to start data collection, meaning radar tracking information; voice communications, and that sort of stuff for accident reporting, because our experience with TWA 800 and John F. Kennedy, Jr., et cetera, et cetera, was that, you know, the phone's going to ring, it's going to be the Hill and the White House or somebody and they're going to want to know

information.

So, you know, we put those two things process. We got in a direct communication with our regions and we began data collection.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: And then for me, I went to the--when I reached the Operations Center I talked directly to the person in the Command Center that worked for me. The guy who worked for me wasn't there, but his deputy was there, so I talked to that person, (b)(6), (b)(7)c

MR. OWENS: That command center is in Herndon?

(b)(6), (b)(7)c : Right. And what I told them was, you know, begin getting information on 88 and normal or unusual situation that occurs from all the centers, we've got 20 centers. And they began doing that. At some point the aircraft hit the Pentagon. And, of course, we were talking about a lot of things over the course of time, but you know, when the aircraft hit the Pentagon, we decided to shut the system down, which we did. And

worked from there. And then the last aircraft went into the field.

(b)(6), (b)(7)c : Do you, I'll probably come back to some questions about your activities on the 11th, first. But I want to try to cover some, I guess, some time-line issues associated with sort of post-event autopsy, I guess, for lack of a better term.

MR. GRIFFITH: Mm-hmm.

(b)(6), (b)(7)c : Do you know what public statement the FAA has made concerning it's notification of hijackings to the military?

MR. GRIFFITH: Well, I know what was said in the 9/11 hearings because I was there.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: I can't say that I know what was said before then.

(b)(6), (b)(7)c : Do you know if any press releases were issued by the FAA?

MR. GRIFFITH: No, I don't know that.

(b)(6), (b)(7)c : Are you familiar with the NORAD press release, have you seen that?

MR. GRIFFITH: I don't recall seeing it.

(b)(6), (b)(7)c : I think we have a copy.

MR. GRIFFITH: I'm not sure I saw it as a press release, I did see this kind of information.

(b)(6), (b)(7)c : Something similar to that?

MR. GRIFFITH: I'm not sure I saw it as a press release.

(b)(6), (b)(7)c : I should just point out that this press release purports to come from NORAD, though I didn't get it from a military source.

MR. GRIFFITH: Oh, okay.

(b)(6), (b)(7)c : Do you know, did the FAA issue anything similar to this in the form of, like, a press release or anything?

MR. GRIFFITH: I don't remember if they did or not, to be honest with you. Just don't remember.

(b)(6), (b)(7)c : Do you know if the FAA issued any, like briefing documents that would have said, you know, became aware of, you know, hijacking of this flight at this time?

MR. GRIFFITH: Yes. Here's what I

remember about that: There seemed to be some questions about what was reported when and, you know, the field people were saying, well, I said this and I said that. And the way the FAA attempted to reconcile that and it was by using a person named Darlene Freeman.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: And Darlene was a senior executive with a law background, very credible individual. And so she was asked to collect information and put together the reporting times between the military and the FAA.

(b)(6), (b)(7)c : About what time period would this have been?

MR. GRIFFITH: I believe it was, maybe, a couple weeks after 9/11.

(b)(6), (b)(7)c : And who would have asked her to do that?

MR. GRIFFITH: I don't know, Darlene didn't work for me.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: I don't want to surmise who

did it because, I mean, I worked at that level.

(b)(6), (b)(7)c : Who did Darlene report to?

MR. GRIFFITH: I'll be honest with you, I don't know. Darlene used to be in my chain of command when she was Deputy Associate Administrator for Air Traffic Services. And then she went on an overseas assignment and came back and I'm not sure what assignment she was on because it was, like, her husband was working and I think she actually took some kind of leave-of-absence or something, but anyway when that assignment was finished, Darlene came back as an SES. But she did not go back into that Deputy Associate because it had been filled. But I know that she was an SES working on the 10th floor.

(b)(6), (b)(7)c : Okay. I should have asked you earlier, who did you work for, who was your boss?

MR. GRIFFITH: My boss was Bill Peacock. He was the Director and then we reported to Darlene's old position which was (b)(6), (b)(7)c [ph], now, the Deputy Associate Administrator for Air Traffic, and then (b)(6), (b)(7)c was the Associate and

then Monty Belcher was the Acting Deputy and then Jane Garvey was the Administrator.

(b)(6), (b)(7)c : Okay. So, I'm sorry, I interrupted you in your--you were saying that Darlene was asked to put together a--try to reconcile--

MR. GRIFFITH: Right.

(b)(6), (b)(7)c : --you said to reconcile some discrepancies, is that what you had said?

MR. GRIFFITH: I don't know if I said discrepancies, but there was--when the logs at the Air Defense Sectors and the logs at FAA were looked at, there were times that didn't match or, you know, there were log entries at one place and not at another. Those kinds of things. And so, and somebody--I don't recall who was asking the question--but somebody was asking the question and so the FAA's response to that was to get all the logs and look at them and write down what they say, you know. Because the law is the record. And, so, that's what we did.

(b)(6), (b)(7)c : Did you participate in that?

MR. GRIFFITH: Yeah, I did, Knoles actually did all the--I assigned all the work to him. You know, for collecting the logs and, you know. And then I had a person I was working with at NORAD, Larry Arnold who was a two-star, and, you know, I contacted Larry Arnold and said, I don't know what's going on with this question about the logs, but, you know, he and i agreed that whatever they say, they say, you know, so, let's find out what they say and report it. And that's, essentially what we did.

(b)(6), (b)(7)c : What questions in the logs existed at that time? Because this would have been, we're talking about the time period within a couple of weeks of September 11, right?

MR. GRIFFITH: I think it was a couple weeks later.

(b)(6), (b)(7)c : Roughly.

MR. GRIFFITH: Yeah, you know. We had, at Air Traffic, we had done our normal process for investigating aircraft accidents and incidents.

(b)(6), (b)(7)c : You guys had put together, I

think that you guys refer to them as Formal Accident Packages?

MR. GRIFFITH: Right.

(b)(6), (b)(7)c : And that's what you're referring to?

MR. GRIFFITH: Right.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: So, we, for many years we've had procedures to do that and they're good procedures. And they involve getting controller statements, getting supervisor statements, listening to voice recordings; looking at radar tracking data; filling out various forms, writing transcripts, those kinds of things. Putting together a complete package.

In this particular case, the protocols for hijacking belonged to the FBI.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: So, our link in hijacks was always FBI. And we had no protocols with DOD for hijackings.

(b)(6), (b)(7)c : Are you talking about

post-event or during?

MR. GRIFFITH: During 9/11.

(b)(6), (b)(7)c : Yeah, I'm sorry, like while in progress or after the fact, like?

MR. GRIFFITH: While in progress. And our protocol was to report it to the FBI. So we put together a very detailed chronology of factual information about all four of the aircraft and where they received their clearances and when they went from one sector to another, one facility to another, time lines. So we had a very detailed chronology of the four aircraft involved in 9/11.

And we presented that to the FBI. Which was responsible for investigating hijackings.

(b)(6), (b)(7)c : Mm-hmm.

MR. GRIFFITH: So, that was the protocol for that.

(b)(6), (b)(7)c : This is not the whole thing, it's not in color.

MR. GRIFFITH: Yeah, AT-20, this is--
yeah.

(b)(6), (b)(7)c : Looking at the "Summary or Air

Traffic Hijack Events" September 11, 2001.

MR. GRIFFITH: Yeah this is what Knoles shop put together. And, like you said, it's probably about this thick.

(b)(6), (b)(7)c : It's got a lot more graphics?

MR. GRIFFITH: Yeah. And Tony Ferrante did most of the work on it.

(b)(6), (b)(7)c : Yeah.

MR. GRIFFITH: That's what I'm talking about, right there.

(b)(6), (b)(7)c : Okay. So is this the document that Freeman participated in?

MR. GRIFFITH: No.

(b)(6), (b)(7)c : So she would have been working on something different? This is just what, because AAT-20 is within Air Traffic, right?

MR. GRIFFITH: Right.

(b)(6), (b)(7)c : And that's Knoles's group, is that correct?

MR. GRIFFITH: Yes.

(b)(6), (b)(7)c : And they kind of do, like quality assurance and aircraft accident

investigations, that sort of thing. Strictly Air Traffic?

MR. GRIFFITH: Yes, that's it. I forgot, we had--I'm just remembering a series of briefings that were given to me before we took information to Darlene, but we actually went into a lot more detail and line-by-line transcriptions and those kinds of things for accident reporting and [unintell.] blankets the whole world just to report on an accident, you report on the people involved, the positions that, you know, the controllers that had talked to the airplanes and, you know.

What we tried to do, was, and again we didn't--you can imagine on 9/11, there were--they had thousands of people working in our organization of 24,000 and so we had thousands of people working on 9/11. Not 24,000, but, you know, in operational facilities, New York Center, you know, they had 500 controllers, and another 200 or 300 staff people there you know.

So, when you look at all those facilities and all the shutdown it did from coast-to-coast,

including oceanic, you know, we have huge oceanic sectors. There were thousands of pieces of information. So, we weren't interested in, you know, what everybody said to everyone else. We just--we tried to find pertinent information that dealt with the accident all four accidents.

And so, the result, that's the difference between what we did and what the 9/11 Commission did. I mean, the 9/11 Commission went out and interviewed many, many people, I don't know how many they interviewed, I mean they talked to air traffic controllers. We talked to the controllers that worked the airplanes.

(b)(6), (b)(7)c : Mm-hmm.

MR. GRIFFITH: But we didn't talk to every controller who was in that building that day, you know. And we didn't go into every facility and take every piece of paper that, you know, that was in their file. We didn't listen to days and days worth of tape recordings, you know. We listened to the one we thought was pertinent.

So we were in a mode on 9/11 thinking, we

did a pretty good darn good job. When you think you've got 4,500 airplanes up in the sky and you know at least four of them have been hijacked, and you don't know how many more will be or could be and you have to put 4,500 airplanes on the ground safely without running into each other, you know, that's a formidable task. And we were feeling pretty good about what we'd done on 9/11.

And then all of a sudden, you know, people started all this criticism and we participated and provided as much information as we knew that we had. But did we listen to every transmission with every airplane in the sky that day or every communication between every aircraft [unintell.] over 600 air traffic controller stations? No, we didn't do that. We looked for pertinent information and reported what had happened.

(b)(6), (b)(7)c : You said Tony Ferrante is the one, the primary author of this, is that safe to say?

MR. GRIFFITH: I would say Tony had the most to do with that document. I mean, he had staff

working for him, but, you know, Knoles was an SES and so, he was letting his people do the work, you know, Tony was a division manager and, you know, sort of the higher level of responsibility you have in any organization, you know, you're working more and are more in an interactive mode with other organizations and with other people rather than spending your time listening to tapes and doing stuff like that.

So, Knoles was asking these people to do this work as I had directed him. So, most of the [unintell.] I got on that document were by Tony Ferrante and he had a guy working for him, his name was Jeff something, I can't remember his name now.

(b)(6), (b)(7)c : The information that's contained in this document, looks like it came from primarily two places, the FAA and the military. Does that sound safe? See there's not every single of these items has sources, but a couple of them do, I think if you look at those ones that I highlighted there.

MR. GRIFFITH: Yeah, those are--they had

gotten that information from this is Northeast Air Defense Sector, Griffiths Air Force Base, which is, I don't know if you've been briefed on how NORAD works, but they're Air Defense Sectors, they've got three of them and then they've got their base out in Cheyenne. But all of the things that happened on 9/11 took place in the Northeast Air Defense.

And we had a person stationed there.

(b)(6), (b)(7)c : Who was that?

MR. GRIFFITH: (b)(6), (b)(7)c--can't think of his last name, but we had a liaison--

(b)(6), (b)(7)c : (b)(6), (b)(7)c [ph]?

MR. GRIFFITH: Yeah, that's the guy. We had a person that was in a liaison position at each one of the Air Defense Sectors and out at Cheyenne. The Cheyenne person would not have been there. I know that we had one, (b)(6), (b)(7)c was up in Northeast. And then we had (b)(6), (b)(7)c [ph] in Southeast. And we had another guy out in Seattle.

(b)(6), (b)(7)c : Okay, so this--like in this one entry here at 8:40 at Northeast Air Defense Sector Log indicate they were notified of the FAA

of the events concerning AAl-11. So how would you guys have gotten that information from NEEDS? Who would have gotten that?

MR. GRIFFITH: Well, there are a couple ways. Tony Ferrante's people could call them and ask them or, you know, actually call (b)(6), (b)(7)c (b)(6), (b)(7)c and say, hey what's in your logs, and gotten their logs, which is one way.

Another way would be, I remember that when we had this fussing going on about who said what and at what time, that I did talk to Larry Arnold and I think one of his colonels may have faxed us some logs or something you know. I can remember seeing copies of their logs. I don't know whether Tony got them or whether they got faxed in.

(b)(6), (b)(7)c : What time period would that have been?

MR. GRIFFITH: Same time period that Darlene was doing her work.

(b)(6), (b)(7)c : This is shortly after September 11, then.

MR. GRIFFITH: I think it would have been

within a couple week later or something like that. I mean I wish I could tell you more about the time, but you know, frankly I was busy doing a whole lot of things.

(b)(6), (b)(7)c : Well, just to kind of help with our discussion, there's two or three different time periods that we're looking at is, you know, shortly after September 11; and again, you know, around May, '03, during those first September 11 hearings--

MR. GRIFFITH: I was gone then so I--

(b)(6), (b)(7)c : --and then periods of time afterwards.

MR. GRIFFITH: Yeah.

(b)(6), (b)(7)c : So you recall that you may have received a fax copy of the log from--

MR. GRIFFITH: Yeah, it seems to me, like, I may have gotten something from one of Larry Arnold's (b)(6), (b)(7)c or something. I mean, I can remember holding something in my hand and was a log, you know, I think it was a NEEDS log.

(b)(6), (b)(7)c : Do you know who the colonel

would have been or who the colonels were that you were dealing with on Arnold's staff?

MR. GRIFFITH: No, I mean I know them but I don't remember their names. When I left FAA, I left [unintell.] turned all my stuff in. So I didn't--I took one of those books--

(b)(6), (b)(7)c : This?

MR. GRIFFITH: Yeah

(b)(6), (b)(7)c : The Summary of the Air Traffic Hijack Events?

MR. GRIFFITH: Yeah. I have a file with all my handwritten notes [unintell.]

(b)(6), (b)(7)c : Who'd you give that to when you left or did you just leave it in the drawer?

MR. GRIFFITH: Heaved it in the dumpster.

(b)(6), (b)(7)c : So you threw it all out?

MR. GRIFFITH: Absolutely. Everything that was classified was turned back in and proper procedures were used to get rid of that and everything that was my personal notes, I just threw it all away.

(b)(6), (b)(7)c : The fax that you said you

think you had gotten, you said you think you gave it to Ferrante for use in preparing this document?

MR. GRIFFITH: I can't say that because Tony may have gotten information on his own, but I can remember when this whole thing was going on, you know. I mean, it appeared to be a significant event.

(b)(6), (b)(7)c : What, September 11?

MR. GRIFFITH: No, the inconsistencies--

(b)(6), (b)(7)c : Oh, I'm sorry, okay.

MR. GRIFFITH: I mean, Larry Arnold and I were trying to put the system back together and trying to get airplanes in the air and we had people stuck all over the world. And you know, somebody kept chipping at us about these entries in these logs, you know. And as far as I was concerned that, you know, okay, well, that, you know, that's not doing anything for me today.

So, I remember talking to Larry and saying, you know, let's get this fixed, you know, and let's get these people off our back, whatever I said, but, you know. And he said, yeah, we

gotta--somebody's interested in this for something, I can't speak for Larry. But I remember that we had a conversation that we said, let's get the logs and let's get them, you know, let's figure out who said what and move on. And to be honest with you, it was the least of my problems that I had to deal with.

(b)(6), (b)(7)c : Reconciling the time differences?

MR. GRIFFITH: Yeah, I mean--

(b)(6), (b)(7)c : Were you working on priorities a couple weeks after?

MR. GRIFFITH: Oh, no, I mean, we were, I mean we were meeting with the airlines and they were saying you're driving us to bankruptcy, you know. And Reagan Airport was closed, nobody was taking off there. And we were prioritizing getting people in the air. We were putting in these massive flight restrictions over New York and over Washington and over Boston.

And the people at Nuclear Regulatory Commission were wanting to put these flight

restrictions around all their nuclear sites in the U.S., you know. I mean there were just things going on that had to be dealt with. So, you know, my focus was on--I was responsible for the day-to-day operation of the system. The airlines were saying we were driving them into bankruptcy. People that use aviation--aviation's a \$900 billion-a-year industry in the U.S. and people were on our backs to get it going.

(b)(6), (b)(7)c : Mm-hmm.

MR. GRIFFITH: And that's where my focus was.

(b)(6), (b)(7)c : Did you guys, before you finalized this, did you provide any advance copies of this document to the military for them to review?

MR. GRIFFITH: You'll have to ask Tony that. Because our purpose in putting that together was, if my recollection is correct, we had to brief the FBI on hijackings.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: And I think that's the

title of it, doesn't it say hijackings on the front of it?

(b)(6), (b)(7)c : Yeah, hijacking.

(b)(6), (b)(7)c : Yeah, Summary of Air Traffic Hijacking.

MR. GRIFFITH: Yes, so, you know, our protocol back then was FBI dealt with hijackings and so we had to provide them with the facts. And I remember Tony dropping in and Knoles and we went into the round-room up there on the 10th floor and I came in and made a cordial, hello. You know, we have our trusted agents here. They're going to give you the information. And I left.

(b)(6), (b)(7)c : This is to the FBI?

MR. GRIFFITH: Right.

(b)(6), (b)(7)c :

MR. GRIFFITH: And I can remember that.

(b)(6), (b)(7)c : So, the focus of this document, really, is to give the FBI information?

MR. GRIFFITH: That's what I believe the focus was on, yeah, there was no intent for us to, we may have given the military a copy of that, but

that was not a DOD-driven document, you know. That was our job.

(b)(6), (b)(7)c : Did the military float any time loans that they were preparing by you?

MR. GRIFFITH: No, not times they were preparing. Like I said, I can remember by some vehicle, and it looked like a fax getting one or two logs, you know, and I can remember going over them. I think I may even have discussed them with Darlene, you know. And our intent was to use Darlene as a senior executive and as a credible individual, you know, with a law degree, that had practiced law in the FAA and, you know, very credible individual that could stand by this document and we'd give her everything that we could. She would stand by the document and say these are the facts as we know them. And I had complete trust in Darlene as an outstanding individual.

(b)(6), (b)(7)c : Do you have anymore questions about this document?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : Once you said that you thought Darlene might be working on a different time line, one that looked different than the one we just looked out?

MR. GRIFFITH: Tony's, yeah, Tony's, yeah. No, Darlene's was different. Seems to me like there were, you know, it just, the format of what we were doing and what Darlene was doing was different, was totally different from Tony had provided there, I mean, as I recall. At least at the briefings that I got, because I remember Tony would come up periodically and I remember they were always in folders, you know. You know these folders you open up and they have the--

(b)(6), (b)(7)c : Like this or?

MR. GRIFFITH: No, they have the little pocket, pocket folders, you know--

(b)(6), (b)(7)c : Oh, okay.

MR. GRIFFITH: --the kind you find at Staples or whatever, but I can remember on the left side [unintell.], you know, and he would brief me on what was in there and so we're going to give this

to Darlene and, great, give it to Darlene.

(b)(6), (b)(7)c : How did you guys decide what to include or not include in here, in this document? And, what I guess, I'm specifically referring to is, I guess there were a couple of occasions where the FAA may have reported to the military that, like American 11 was still in the air, when, in fact, it had already crashed. And also I think in here, it doesn't say that for United 93 that the FAA actually called the military about four minutes after that plane had crashed, as well. How did you guys decide what to include and what not to include?

MR. GRIFFITH: I didn't make any decision on what to include or not. When I [unintell.] open all of this to Dave [unintell.], he already had his direction on, you know, to do accident packages and how to do them.

This is a method that they chose to put together a summary. I don't know if you've seen accident packages or not, but they're pretty thick and then we were going to do four of them and, so,

what they were trying to do was, you know, and they're very good at it, was--towards the end you can open up and see what all four airplanes did with times and what was happening when they lost transponder and all that.

And it was a very good summary aid and provided the legal eagles information the FBI needed. And I'm sure that the FBI asked for our information and we gave it to them, I mean that's just the way those things go. But--

(b)(6) : You don't remember having any discussion about, should we include this and not include that?

MR. GRIFFITH: No, I never micromanaged, you know, I had people who did a good job and believe me, Tony Ferrante knows a lot more about doing that stuff than I did at the time. Because even though I'd done that kind of work in my career, you know, it wasn't my skill set at that time. So, when you know you've got an ace like Tony Ferrante doing stuff for you, you don't worry about something like that.

I do want to comment on your statement that you made about American 11 where you said that we had reported that the flight was still airborne after it had crashed, something like that?

(b)(6), (b)(7)c : I could be wrong, but I think the Commission had reported in their report that there were some phantom reports and that they described American 11 still being airborne?

MR. GRIFFITH: Did you tape the hearing?

(b)(6), (b)(7)c : Pardon me?

MR. GRIFFITH: Did you tape our hearing?

(b)(6), (b)(7)c : No, it's, the transcripts are all available and such, so.

MR. GRIFFITH: What I recommend is you, you know, I know that CSPAN recorded the hearing. I think I'd maybe go and listen to [unintell.]--

(b)(6), (b)(7)c : Which one, because there's a lot.

MR. GRIFFITH: No the hearing--

(b)(6), (b)(7)c : That you were in?

MR. GRIFFITH: Yeah.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: Yeah we were there two and a half hours. But, you know, they played that recording of our individual, of an individual saying something to the effect that, you know, American 11 was still airborne and it was in a certain location, after the fact.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: After the aircraft had already crashed. And, you know, I thought that was a dirty trick. And is consistent of the methodology that the 9/11 Commission used in stating their case.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: Everybody knows that was a mistake and to play that in a public forum, where many, many people were victims were in the audience. And if you could have seen the way those people reacted to that. I mean here was a person out in a field facility. That was doing their best--and I don't know if you've ever sat down in front of a radar display and worked 30 or 40 airplanes at a time or been in a center where you

had 300 airplanes under control at a time, but, you know, that's a pretty intense environment to work in.

And when the whole thing is falling apart in front of your eyes and your responsibility is to keep everybody safe and everybody separated and to react to what's going on around you. If one person, you know, who knows how many inputs of information this person has received in the last 10 minutes makes a phone call and says something like that it's obvious that it was a mistake. And then that is taken, you know, as this is one of the biggest screw ups of the FAA that you had ever seen and make public forum out of it, I think is just incredible.

And if they're sending you down that road, you're going down the wrong road.

(b)(6), (b)(7)c : To be quite honest, I don't have the sense that that was what they were trying to communicate. What I had understood and what I think they thought was relevant about that particular communication was that that--I'm just

going to keep using their terminology--but that report of that phantom aircraft, they think actually caused the Langley fighters to be scrambled. And that if they hadn't gotten that report--if the military hadn't gotten that bank that Langley might have never scrambled any aircraft.

MR. GRIFFITH: May be.

(b)(6), (b)(7)c : So--

MR. GRIFFITH: I mean, we were at war.

(b)(6), (b)(7)c : Mm-hmm.

MR. GRIFFITH: I don't know if you've ever been at war, I have. But, you know, have you ever been in air traffic control center and seen what's going on in those places?

(b)(6), (b)(7)c : I've been in some centers and towers, like New York Center.

MR. GRIFFITH: You've been in New York Center? Plugged in and watched these people work and what they do?

(b)(6), (b)(7)c : I've observed it.

MR. GRIFFITH: Yeah, I mean, you know,

this is, it doesn't get any more real time than a place like New York Center. And, you know, to go through 10,000 pieces of information where, maybe, 500 will be credible or useful, but just outside that window of 500, you know, to start picking up the pieces of what people are doing. And then trying to make it a cause or a reason for something, I think is incredible. And, I just have a great feeling of distrust for what the 9/11 Commission has done.

I've done this as a citizen, as an honest citizen.

(b)(6), (b)(7)c : Mm-hmm.

MR. GRIFFITH: And to support my country. I worked for my country for 36 years and if you check my record, I think it's very credible. And for someone to say that myself and Monty Belcher, you know, may have, I could get the letter out and check the verbiage again, but effectively that we purposely provided incorrect information to hide something, is incredible. And I challenge anybody that tries to nail me with that.

(b)(6), (b)(7)c : I don't think that's the accusation.

MR. GRIFFITH: Well, see, I believe it.

(b)(6), (b)(7)c : You're talking about the letter from who?

MR. GRIFFITH: The letter from the 9/11 Commission to Ken Mead, isn't that the guy you work for?

(b)(6), (b)(7)c : Yes, it is.

MR. GRIFFITH: Yeah, let's go down and read it. I mean, if that's not what we're here about, maybe I'm wrong, maybe this should be over. Certain public statements made by lawyers and FAA officials in a commission hearing May 23, and elsewhere regarding--were not accurate. We did not investigate, however, whether these statements were knowingly false.

(b)(6), (b)(7)c : Mm-hmm.

MR. GRIFFITH: It says we did not gather evidence that may bear on this issue we decided we'd refer the matter to each of you. Incredible, but go ahead.

(b)(6), (b)(7)c : In this Summary of Air Traffic Hijack Events, where you guys reference a military source for something that they attribute to you guys, like, for example, at 8:40 it says Northeast Air Defense Sector log indicates they were notified by FAA of the events concerning American 11. What did you guys do to look at FAA source material to verify that what the military is saying is correct? This is just one example. I mean, there's a couple other areas where--

MR. GRIFFITH: Have you talked to Tony yet?

(b)(6), (b)(7)c : No, not yet.

MR. GRIFFITH: No, well, he--well, this is just an assumption on my part, but I would assume that we would go look for that.

(b)(6), (b)(7)c : In your records?

MR. GRIFFITH: Yeah, we'd play the tapes that says that FAA notified NEEDS, so you know, we would, go to Boston Center or, you know, I mean we had our tapes. So, we would to into our tapes and, you know, try to find something that was consistent

with that. And if we found it, it seems to me like we would have put it in there.

(b)(6), (b)(7)c : To get a really firm answer, we should talk to Tony Ferrante, that would be your suggestion.

MR. GRIFFITH: Yeah, I'd talk to Tony about that. He may tell you, I mean, the more I look at this, he may tell you that he talked to me about putting some of this stuff in there and I told him, you know, I gave some opinions on it. And if he tells you that, I did. But, you know, I pretty much left this up to those guys. We had, I mean, we had this other thing going on where we were up in our Operations Center, which is what I was doing when I heard from them. I mean, we were doing SVTs, you know, with different people.

(b)(6), (b)(7)c What's an SVT?

MR. GRIFFITH: Secure Video Telecons.

(b)(6), (b)(7)c : Okay, this is on September 11?

MR. GRIFFITH: Oh, yeah.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: And we were having report

insurance on secure video telecons frequently during the day and, I can't tell you how many, but gathering information. But we also, I mean, standard procedure for us on a hijack situation is for us to activate a network with the NMCC on that network.

(b)(6), (b)(7)c : Mm-hmm.

MR. GRIFFITH: And then we pump information into the NMCC, that's the National Military Coordination Center.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: And that's standard procedure for us. And we had people up there that, you know, we practice this in exercises and drills, you know, it's not something that we dust the cover off and open the book up, but we practice this at least annually, sometimes more, all these different situations that occur with us. And we practice the things that we do.

And one of the things that we always do is we open up this network, teleconference, if you want to call it.

(b)(6), (b)(7)c : Something,

MR. GRIFFITH: But it's on a secure circuit, you know, it's not just a regular telecon. It's a secure circuit and the National Military Coordination Center is on there and--

(b)(6), (b)(7)c : This is in the Operations Center over at--but that's not--

MR. GRIFFITH: Right, 10th floor at FAA headquarters.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: And that becomes our primary source of information that we know to the military. We can't tell them what's going on blow-by-blow in our facilities because we don't have that information available. But, our managers and other people in the event of hijack are required to report up on certain information.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: So, as we were doing that, we had a person sitting in our room that we believe was transmitting this information over this network and the NMCC was getting it. Well, we now know

what happened was NMCC logged in on that one, set the phone down and picked up another internal DOD secure telecon--

(b)(6), (b)(7)c : Mm-hmm.

MR. GRIFFITH: --and did all the work on that one and while we were putting all this information out, it was just going out into the air. Because the phone or whatever mechanism they use to listen on was, not staffed. Even though they had voiced in on it and said NMCC here.

So when we were getting, when I was getting, you know, I don't know if you have the transcripts of the Command Center there or not, but, I suggest you read them. There was specific information going on about these airplanes that was coming through the Command Center from the centers and, you know, I initially was on the phone with John Raitt and I took another guy and sat him down and put the phone in his ear and said, you know, this is your job and don't leave it. But the idea was that that person was announcing to everybody in the room what was going on. And we had false

reports of hijackings, you know; and we had false reports of aircraft in situations; and we had false reports of other things, you know; a false report that someone reported that one of our Senators in an airplane had crashed in Kentucky, you know?

(b)(6), (b)(7)c : Mm-hmm.

MR. GRIFFITH: I mean, you have to treat all that stuff as real when you're working these things. And so, you know, working through the real information, the false reports and validating information. You know, all this information was broadcast and we had, I think nine people sitting there in positions with headsets on, each talking to different elements. And we, as sure as I'm sitting here, I believe that I had a guy sitting at a desk with a headset on, broadcasting information to NMCC that was being broadcast to all the nine people at the desks and then it was going out. And, you know, we found out that none of that information got to the NMCC, that, in fact, you know, they checked in and sat the phone down.

(b)(6), (b)(7)c When is it that you all found

that that's what happened? I mean before this report came out? Before the 9/11 Commission Report or when is it that you realized that the military wasn't getting all the information you were transmitting? When I say, you, I mean the FAA, not you specifically.

MR. GRIFFITH: Yeah, well, actually, Monty Belcher testified to that, I believe, in our hearing. So, if you get either a transcript of our hearing or if you listen to what people say in our hearing, you know, but that was part of our testimony.

(b)(6), (b)(7)c : Did you--

MR. GRIFFITH: It may not have been at that level of detail--but, you know, I mean, I believe it was brought out in testimony that, you know, our protocol is to hook up this secure event line and voice in at NMCC, are you there? Yes, we're there, you know. And that we believe that the information was going straight into their organization.

(b)(6), (b)(7)c : Did you or your group produce

any other time lines other than the ones we've already looked at, either for internal purposes or external or, maybe even just in draft that never got finalized?

MR. GRIFFITH: Well, there certainly was, in each one of the accident reports, there's transcripts and other things that are required.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: But, as far as I know, outside of required reporting criteria, that Tony's document was a [unintell.] document and then Darlene's report--it wasn't really a report it was a--this time kind of thing, was a separate document, and those were the only two that I can think of.

(b)(6), (b)(7)c : I don't know what the name of this one is, but this is another form of a time line, with--on the first page of the document I have here, it's got, I'm kind of describing it for the tape here--

MR. GRIFFITH: Okay.

(b)(6), (b)(7)c : --a grid with the four

different aircraft and it says first sign, probable time flight was known to be in distress; NORAD NEEDS Notification estimated time of crash. And then at the bottom, in the footer, it says by AAT-20, revised on September 18, 2001 at 1400 hours.

[Lengthy pause.]

MR. GRIFFITH: I mean if you read this and see what people were doing, I mean, what kind of job could anyone have done, see [unintell.] call the White House [unintell.] Vice President [unintell.]

(b)(6), (b)(7)c : Do you recall that?

MR. GRIFFITH: I can't say that I recall this [unintell.] if it says that, I mean, it is what it is.

(b)(6), (b)(7)c : So, that would be Knoles group again, though, right?

MR. GRIFFITH: Yeah, this is Tony. I don't know what inspired them to do this. They might tell you that I asked for it. And I [unintell.]

(b)(6), (b)(7)c : Well, that's, actually, I

think a day after this document, because there's a time reference in this Summary of Air Traffic Hijack Events and it says AAT-20 September 17, 2001, at 6:30 a.m.

MR. GRIFFITH: Yeah.

(b)(6), (b)(7)c : I don't know if that's on all the pages in here, but on some of the pages.

MR. GRIFFITH: Yeah. I wish [unintell.] September 18, I was doing a lot of stuff.

(b)(6), (b)(7)c : This other time line says Chronology of Events, September 11, 2001. And it starts off 11 September 01 8:44 a.m., AAL-11 B767, BOS, LAX lost radar and communications by ZBW, which is Boston Center, right?

MR. GRIFFITH: Mm-hmm.

(b)(6), (b)(7)c : Have you seen this?

MR. GRIFFITH: Uh-huh. Looks like a tighter--Boeing 747 reported by citizens flying up the Hudson.

(b)(6), (b)(7)c : What time was that?

MR. GRIFFITH: 1357.

(b)(6), (b)(7)c : It looks like that's a local

time records right? Because that document looks like it starts off Eastern Time.

MR. GRIFFITH: Yeah, this is going [unintell.] a lot of this is after all the events.

(b)(6), (b)(7)c : You don't remember seeing that before?

MR. GRIFFITH: No. This looks like something, I don't know, this has got information in it--this looks like a mixture of information, but what I--I don't know. I don't know if this was stuff Knoles was getting off of his, you know, when I told you I asked Knoles to set up all the direct reports on a telephone [unintell.]? I don't recognize this.

(b)(6), (b)(7)c : This is a situation room log.

(b)(6), (b)(7)c : The index that covered this document, said it was FAA HQ Air Traffic Situation Log--

MR. GRIFFITH: Okay, well that's what Knoles set up. I didn't read it.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: I had 15 SESSs running that,

I didn't need to do that. No, I didn't read those.

(b)(6), (b)(7)c : The last one that we have to have a copy of, this at the top of it starts, "Sensitive Security Information, FAA Communications Regarding Hijacked Aircraft on September 11, 2001."

MR. GRIFFITH: I think this is one that was provided to the 9/11 Commission, from FAA.

(b)(6), (b)(7)c : Did you participate in preparing that at all?

MR. GRIFFITH: No, the only reason I know that is because I think somehow I had a copy of this--I went on network with the 9/11 Commission people, I think it was last summer, I mean I can get it off my calendar, [unintell.] but this is not from when I was working at FAA, I know that for sure, because we didn't have anything with these headers and footers on it.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: If I remember right, this is something that the 9/11 Commission had provided to them from FAA.

(b)(6), (b)(7)c : Okay. I think, since I don't

remember now. But you had said that Darlene Freeman worked on different time line than the one that your group had produced? And none of those that I've shown you?

MR. GRIFFITH: No, they don't look like the one that I saw [unintell.] It seemed to me that it wasn't on standard size paper. It seems to me like it was on what do you call it 11-by-17 or something like that?

(b)(6), (b)(7)c : 11-by-17? Okay.

MR. GRIFFITH: Well, maybe not 11-by-17.

(b)(6), (b)(7)c : You talking about 14?

(b)(6), (b)(7)c : Legal-size paper?

MR. GRIFFITH: I think it was a little bigger than that, but, I mean, I can remember on Darlene's it seems to me that it was in color and, you know, as you went down this way, it seems to me that there were different pieces of information. I mean, it wasn't--it wasn't a standard what you would view as a transcript. It was something different than that.

(b)(6), (b)(7)c : Do you know who worked with

her on preparing her--

MR. GRIFFITH: No, and maybe what I'm describing is what Tony put together for her from us, but you know, what I remember about Darlene's--about working with Darlene was that we would have these briefings and you know the papers were not standard size paper like we use, they were larger pieces of paper and they were in kind of like a horizontal format and, I don't know whether that's what Tony prepared to give it to Darlene or what she came up with. But I remember we got them folded like this, and you know, I told you about that pocket folder that they had.

(b)(6), (b)(7)c : Mm-hmm.

MR. GRIFFITH: I mean, that's all I remember about that.

(b)(6), (b)(7)c : You said briefings. What kind of briefings are you referring to?

MR. GRIFFITH: When Tony would come up into my office, we had a round table like this one and, you know, I can remember having these pieces of paper.

(b)(6), (b)(7)c : You had briefings that your staff gave to you--

MR. GRIFFITH: Mm-hmm.

(b)(6), (b)(7)c : --and that's what you're referring to?

MR. GRIFFITH: Yeah, yeah. I think that [unintell.] other meetings. But I think we had these with Darlene and we had a similar piece of paper, but that's all I remember about it. The thing I recall is it was not one of these--

(b)(6), (b)(7)c : Not an 8 and 1/2-by-11?

MR. GRIFFITH: Yeah.

(b)(6), (b)(7)c : Did you participate in helping the Administrator or the Deputy Administrator prepare for any congressional testimony or Senate testimony?

MR. GRIFFITH: No.

(b)(6), (b)(7)c : Did you participate in preparing any briefings for the White House or participate in any briefings for the White House?

MR. GRIFFITH: Yes.

(b)(6), (b)(7)c : And when was that, roughly?

MR. GRIFFITH: Well, there was one that was shortly after 9/11, I can't, I don't remember, when. Have you talked to (b)(6), (b)(7)c [ph] at all?

(b)(6), (b)(7)c : No, we're just getting started, so if you ask if we talked to somebody, we'll probably have to say, no.

MR. GRIFFITH: Mike was the guy in charge of security--

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: --on 911 and he and I had to go brief (b)(6), (b)(7)c in a room full of people. It wasn't in the White House, it was in one of the adjacent buildings, not the OEB, but it was someplace across the street from the OEB that we went in. And there were a lot of people there, 25 people, maybe. And the whole issue was about security of the National Capital Region being, I guess from the White House to the Lincoln Memorial to the Capitol.

(b)(6), (b)(7)c : Okay, so it was about present and future issues, is that right? So, security today and into the future, how were you guys going

to secure the airspace?

MR. GRIFFITH: Right. And there were all kinds of [unintell.] in the paper over time, you probably remember when the military brought in these, you know, antiaircraft launchers and put them around the District and--I mean, so it was all classified when we were talking about it, but then, you know, they decided to do public briefings on it when they got into it. But the whole intent was that if a stray airplane comes in here, you know, then we're going to be ready to shoot it down. So that's what that meeting was about.

(b)(6), (b)(7)c : Did you participate or prepare any briefings for the White House about what happened on the 11th?

MR. GRIFFITH: In the SVTs, yeah, the Secure Video Teleconferencing.

(b)(6), (b)(7)c : So that's the SVTs you're referring to are on the 11th?

MR. GRIFFITH: Mm-hmm.

(b)(6), (b)(7)c : So you would have briefed a White House staffer or somebody like that?

MR. GRIFFITH: We had a standard briefing that, you know, you'd go in this room, there'd be these TVs running, I mean, they were so small you couldn't tell who was on them, because they had them sectorized. But (b)(6), (b)(7)c was always there, you know, [unintell.] and then the Joint Chiefs of Staff, and FBI and Department of Energy, FEMA all kinds of people, Coast Guard and so we had these routine reports on the Secure Video Teleconferencing that were done on 9/11 and, gosh, a whole lot after that. They were ongoing. And so, you know, I would participate in them for our organization.

(b)(6), (b)(7)c : For Air Traffic?

MR. GRIFFITH: Mm-hmm.

(b)(6), (b)(7)c : Were there written documents, were there written briefing papers or time lines prepared for this briefings?

MR. GRIFFITH: For the SVTs? No. We took notes, they wanted to know, what's going on, you know, and okay, well, we've got all these airplanes on the ground, we're trying to figure out how to

get them going and we determined that, you know, we're going to have these huge flight-restricted areas in Boston, New York, and Washington.

(b)(6), (b)(7)c : So these SVT conference--video conferences or however you guys are communicating with each other, are basically to discuss present-day and future as opposed to, like, a historical discussion of what happened on September 11, is that--

MR. GRIFFITH: Right, yeah, they were shared it with INTEL, you know, CIA would do an INTEL, I mean you had to have an SCI to get in these things. So they started out with an INTEL Brief and go through that and then we would be just one segment, you know, okay, what about airspace?

(b)(6), (b)(7)c : Did you participate in any briefings, historical briefings, where you guys talked about, you know, this happened on the 11th and this and this and this?

MR. GRIFFITH: No, I delegated on that. My primary communication was with the Administrator and the Deputy Administrator, you know getting the

briefing done and we usually used Tony or Knoles or [unintell.] .

(b)(6), (b)(7)c : Do you know if any of your staff had to provide any historical briefings to the White House?

MR. GRIFFITH: Yeah, I think they did. Yeah, I think, you'll have to ask Tony or Knoles but, yeah, I believe that there were briefings provided to--now you say the White House, I mean there are a lot of people here.

(b)(6), (b)(7)c : I'm referring to a generic like the Department of Transportation.

MR. GRIFFITH: Yeah, because we, you know, we consistently maintained communications with, you know, the what do they call them situation room, I guess it was called, They had a situation room. I don't remember any of those things anymore. Where there was two or three people and I was working over there, (b)(6), (b)(7)c [ph] was one of them. Of course, (b)(6), (b)(7)c .

(b)(6), (b)(7)c : Mm-hmm.

MR. GRIFFITH: I believe that we were

asked to provide that kind of information.

(b)(6), (b)(7)c : Do you have any questions

(b)(6), (b)(7)c

On September 11, when you guys were communicating to outside organizations about the aircraft, you guys referred to them by their flight number is that correct?

MR. GRIFFITH: Yes.

(b)(6), (b)(7)c : In the, I had read that the military, when they were trying to follow the aircraft, were referring to them by tail number, is that your recollection?

MR. GRIFFITH: I recall something like that, yeah. The military had the flight plan information.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: You know, filed by the airline, which includes the tail number or the end number of the airplane. I recall seeing some references to tail numbers, but we didn't have that information.

(b)(6), (b)(7)c : You guys just had--FAA just

had flight numbers?

MR. GRIFFITH: Well, we, you know when we got the flight plan, it was stored in our host, we had the plane number, but, you know, the flight progress strips that our controllers use, it's just pertinent information so it was call-sign type aircraft, ground speed, the altitude, the [unintell.] code to be in flight, you know [unintell.] fixes and that kind of stuff. For us the tail number is not pertinent.

(b)(6), (b)(7)c : Do you remember ever having a discussion with General Arnold or any of his staff after the fact about tail numbers versus flight numbers or anything like that?

MR. GRIFFITH: [NO AUDIBLE RESPONSE]

(b)(6), (b)(7)c : Do you remember providing any material, like any time line source material that the FAA had generated to the military?

MR. GRIFFITH: I think I probably did, you know, I think when Larry Arnold and I got into this thing and I was working with his colonels and two of the guys they had working the desk, yeah, I feel

like I probably [unintell.]

(b)(6), (b)(7)c : What do you think you might have transmitted or provided to them?

MR. GRIFFITH: I think it would have been copies of logs, because that was really the subject of discussion was what was in the logs.

(b)(6), (b)(7)c : What sort of logs does FAA keep?

MR. GRIFFITH: They keep a log that's called a 7230-4 at every operational Air Traffic facility and it's kept at their watch desk. And events of the day are put in that log continuously and--

(b)(6), (b)(7)c : Does someone handwrite these events then or is it--

MR. GRIFFITH: It's pretty much automated now and you've got a PC sitting there and you just 1357 tab, entry.

(b)(6), (b)(7)c : Is it real time or is it after the fact, is it as it's going on or?

MR. GRIFFITH: It could be, whenever I did, I always kept a note pad next to the computer

and made my entries, because if you weren't sitting at the station, you were doing your job, so, write things down, answer phones, and then when you got a break in the action, you came back and transferred your entries into the log, that's the way I did it.

(b)(6), (b)(7)c : So there would be a log for, like, New York and Boston the TRACON and the Towers, and so would there be a log for the Operations Center on the 10th floor at FAA headquarters?

(b)(6), (b)(7)c : They keep a log, but I'm not familiar with it because they didn't work for me they worked for the Deputy Administrator, so I couldn't tell you what was in their logs.

(b)(6), (b)(7)c : What about the Command Center in Herndon?

MR. GRIFFITH: Yeah, they keep a log.

(b)(6), (b)(7)c : They would have a 7230 log?

MR. GRIFFITH: Mm-hmm, yeah.

(b)(6), (b)(7)c : Were there any other types of logs that the Air Traffic folks were generating or just that one that you--

MR. GRIFFITH: Well, you have position logs where you log in and log off; there are all kinds of logs, but as far as what was going on for the operation, the 7230-4 is called report of daily operations and that's where the information is kept.

(b)(6), (b)(7)c : And you believe that these were transmitted to the military, these are what you would have given to General Arnold?

MR. GRIFFITH: If I gave them anything it would be log information, yeah.

(b)(6), (b)(7)c : Do you think you did that?

MR. GRIFFITH: Well, I think so, I'm trying to think back and think through that. And there were questions about the logs. I specifically remember seeing fax sheets of some logs from the military and I believe that, you know, I had somebody or I sent logs back to them. Now that may not be true, but my sense of what was going on at that particular time was that we were trying to get to the bottom of what's in the logs. And, so, you know, we were--Larry and I agreed that

we were going to share with each other. We were going to get to the bottom of what was in the logs. It was a very chaotic day and, you know, obviously, if you have people hundreds of miles apart recording what's going on as they see it, and you're going to get different stories.

And, as I said to you, you know, I mean, there may have been people putting stuff in these logs real time, but I doubt it, at least on the FAA side. The military might have an E-5 or something, you know, directed, ordered to put this in the log, put this in the log, but, you know, the way I did it was I kept accurate notes and then went back and put it in the log.

(b)(6), (b)(7)c : Was one of the issues that you and Arnold and were trying to get worked out the fact that Arnold's, this is in that letter that you've got a copy of, this paragraph right there.

MR. GRIFFITH: I've heard about this [unintell.] debate, often referred to as heated discussion before it picked up that terminology. See, I don't know where they got this information,

but it says Jeff Griffith, the senior air traffic manager on duty at FAA headquarters on September 11 recalled having heated discussions with General Arnold and others on the subject.

(b)(6), (b)(7)c : Of military notification?

MR. GRIFFITH: Yeah. [unintell.] told them that their position was that no notice had been passed regarding hijacking 93, this was true. [unintell.] But the way this was presented to me is, they asked me if I remembered, if I recalled heated discussions with Larry Arnold.

(b)(6), (b)(7)c : This is the Commission asking you>?

MR. GRIFFITH: Yeah, not the hearing but in my--

(b)(6), (b)(7)c : Interview.

MR. GRIFFITH: --interview. And I mean, it's on tape you can go back and listen, but, you know, and I think I said something like, I don't know that they were heated discussions, but, yeah, we had some pretty direct conversations on it. And then for them to say that, you know, recalled

having heated discussions, I mean, I'd recommend you go back and get those tapes and do a comparison. You know.

(b)(6), (b)(7)c : Well, let's just take out the word heated. So, is it true that you and Arnold had some discussions about the subject of military notification?

MR. GRIFFITH: I recall that, yes.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: Yes.

(b)(6), (b)(7)c : And do you recall that, presumably, it's going to be Arnold took the position that there was no notice, that FAA had passed concerning the hijacking of United 93 before it had crashed? [unintell.]

MR. GRIFFITH: I don't know if that was Larry Arnold and I, it might have been one of his colonels.

(b)(5), (b)(7)c : Okay,

MR. GRIFFITH: I mean, Larry had his hands full.

(b)(6), (b)(7)c : Well, then you had a

discussion with somebody at the military concerning that?

MR. GRIFFITH: Well, Larry and I, I recall having a discussion with Larry.

(b)(6), (b)(7)c : About?

MR. GRIFFITH: About the logs.

(b)(6), (b)(7)c : Whose logs or what logs?

MR. GRIFFITH: The logs.

(b)(6), (b)(7)c : The FAA and the military logs?

MR. GRIFFITH: It's what I told you earlier.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: When we were talking about, you know, all of a sudden, you know, these logs became important to somebody and so people kept coming to me and asking me about logs and you know, I finally, I remember talking to Larry Arnold and saying, look, I don't know what's wrong with these logs, but, you know, let's get to the bottom of it and, you know whatever we have to do, let's look at the logs and say what's in the logs. And he agreed to do that.

And over the course of time, you know, I remember talking to a colonel, I can't remember the colonel's name, but that's how it evolved.

(b)(6), (b)(7)c : You don't recall any disagreement that you and Arnold had about times identifications, what I'm getting from what you're saying, it was more, let's just gather information and put it together and see what it says?

MR. GRIFFITH: Sure, yeah. They had entries that we didn't have, we had entries that they didn't have. There was some, if I can remember correctly, there was some inconsistency of times and those kinds of things.

But you know we were going by operational logs that were being filled out by people that were in the heat of battle. And, you know, if you're walking down the street and, you know, somebody grabs you and starts beating your head in and, you know, and then somebody else walks up and starts beating your head in and you know, you go through this for 15 minutes, and you finally get away and go back and write down what you recall about that,

and somebody else is experiencing something 200 or 1,000 miles away and they go back and write down what they recall about a similar situation, you're going to get what they saw at the time and it was what it was.

(b)(6), (b)(7)c : But do you recall having a specific discussion with him about 93, flight 93 and the fax [unintell.] notification--

(b)(6), (b)(7)c : Or any of his staff?

MR. GRIFFITH: Yeah, I remember 93, 93 was something that somebody was digging into. And I don't know who it was or why, but I remember 93 was, for some reason there was something about 93.

(b)(6), (b)(7)c : What's your recollection about the issue at the time?

MR. GRIFFITH: Well, it had to do with whether information had been passed, you know, by the FAA to the military.

(b)(6), (b)(7)c : Because it says here that at the time that you're talking to the military about this, which presumably is shortly after September 11, that the military's position is that you guys

didn't tell them about--I'm referring to the FAA didn't tell the military about United 93 before it had crashed?

MR. GRIFFITH: Yeah.

(b)(6), (b)(7)c : Did your records, at the time, indicate something different than that?

MR. GRIFFITH: Well--

(b)(6), (b)(7)c : I guess I want why are they bringing this up? Did you, meaning the FAA and the military disagree about notification about United 93?

MR. GRIFFITH: Because as I said earlier, we believe that we were given information real time to the NMCC on a secured circuit.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: And we were getting information, you can check the Command Center Logs, I believe you should check the Command Center Logs, there was information coming to us about Flight 93, and, not their logs but their transcripts. Because there's a transcript floating around somewhere in somebody's package about what was being said

between the Command Center and first it was me and then I put Doug Davis in there, but, you know, when we got any information from the Command Center in the FAA Operations Center, about anything, it was broadcast in this room and it was my belief that a person was telling this information directly to the NMCC.

(b)(6), (b)(7)c : And you guys, does FAA have a transcript of that line, was that a recorded line?

MR. GRIFFITH: No, that's run by the Deputy Administrator and I don't know.

(b)(6), (b)(7)c : That's the Command Center, the Operations Center--

MR. GRIFFITH: The Operations Center.

(b)(6), (b)(7)c : In Herndon?

MR. GRIFFITH: No, in headquarters, 10th floor. And we believed that we were pumping information into the NMCC as we were getting it. We also believed that that room that Knoles had set up, the room right next to it or two doors down from there, we had congregated our military liaison people, we had five military liaison people at the

rank of colonel and lieutenant colonel and commander that were on my staff, you know, they were on the AAT staff and, you know, we put them in one of our offices in our suite there and put a stew [ph] phone in there and got them talking to people.

And then, at the Command Center, we have a unit at the Command Center of military people that are there all the time in the military--we call it the services cell. And it's run by a bird colonel and there are a bunch of majors and lieutenant colonels out there and they're always on duty, 24/7. It's called CARF Facility [ph]. But, it turns into what we call a cell, when we have events going on. And we had to believe that there were lieutenant colonels on the operational floor at the Command Center sucking in information reporting it to their people. So, I mean, there were any number of sources of information that we believed were going into the military.

(b)(6), (b)(7)c : Well, when were you first--

MR. GRIFFITH: Well, remember before 9/11,

we had no protocols for [unintell.]

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: We had no protocols with them. We had the FAA Act. We had our Military Operations Handbook, we had a series of what were called Memorandums of Understanding between the FAA and certain elements of the military. And there were processes and procedures that were in place for Airspace Management and those kinds of things, exercises, supporting, you know, supporting, like, Desert Storm and those kinds of things. But there were no protocols to intercept and shoot down hijacked airplanes. There were no rules of engagement for that. The only rules of engagement we had were on drug interdiction airplanes.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: So, I mean, for us at headquarters, you know, to pull out a checklist and say, okay, I'm going to call NORAD and tell them to start shooting down airplanes. I mean, these people that you read about in these logs that said, hey, call NORAD and tell them to scramble some

fighters, I mean, way to go. I mean, it wasn't in their job description. They had no procedures for it, but they said, hey, something's wrong here, I'm going to go out on a limb.

(b)(6), (b)(7)c : Mm-hmm. I think I understand what you're saying and I'm just going to try summarize. With regard to this statement in the 9/11 Commission's referral letter where it says he, meaning Jeff Griffith, recalled being told by the military that their position was that no notice of impasse regarding the hijacking of United 93 before it crashed, it sounds like, and you can correct me if I'm wrong, but it sounds like your position is, you guys had what you understood to be the open line with the NMCC at the time?

MR. GRIFFITH: Right, right.

(b)(6), (b)(7)c : And so, if there were any disagreement between you and the military that would have been the source of it. The military might not have had it reflected in their logs--

MR. GRIFFITH: The NMCC log didn't have any of this stuff in it, as I understand it. I

haven't seen their log, but--

(b)(6), (b)(7)c : But you guys understood that there was an open line?

MR. GRIFFITH: Yeah.

(b)(6), (b)(7)c : And that they should have gotten that information.

MR. GRIFFITH: That was the drill, if you had a hijack, the FBI was the lead; our job was to set up a secure number and the NMCC was one of the respondents on the secured network.

(b)(6), (b)(7)c : What was the name of that network again? Because I don't have a name.

MR. GRIFFITH: I don't recall the name of it. And we have since fixed that, you know, we, in Air Traffic took on the responsibility to set up what we call a something event network which essentially became the telecon that Knoles set that up--

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: --on 9/11, they'll tell you it's still running today, it was never shut down. It was, I mean we put it in a secure mode and we

did all the other things to it, but, you know, we have a continuous circuit that everybody's on, that if anything goes wrong anywhere, it's broadcast on that circuit and people react to it immediately. That's NORAD, that's FAA, that's elements of the military, security elements, everybody's on that line.

(b)(6), (b)(7)c : Well, let me ask you. If the military's saying, well, you guys never told us about United 93, what did you do or ask your staff to do to try to refute that, if anything?

MR. GRIFFITH: Check the logs.

: Check those reports of daily operation?

MR. GRIFFITH: Sure, the Command Center logs, I keep thinking were there, they're not there, but they may be. But, you know, I mean, when you look at the transcript at the Command Center, you know, there's information in there on, I'm not going to try to quote it to you, but, you know, on the activities that were going on that were being reported real time to the Command

Center, real time to the Operations Center and being broadcast to all these people one of which was a person that we believe was hooked in directly with the NMCC. Because when we opened that circuit up, we said, NMCC are you there? And I think it took a period of time an NMCC came on said we are there. And I think somebody even after the fact, found a log entry at NMCC where, in fact, they said they were on with the FAA. And it was at a time that coincided where I think this flight 93, might have been at issue.

(b)(6), (b)(7)c : During your discussions with General Arnold, did you talk to him about the fact that there was this open line and you felt that the FAA was providing them that information?

MR. GRIFFITH: No.

(b)(6), (b)(7)c : That never came up?

MR. GRIFFITH: I don't think it did.

(b)(6), (b)(7)c : What about, like, with his staff?

MR. GRIFFITH: No, I don't think so.

(b)(6), (b)(7)c : But you would have directed

that these Command Center logs and these other logs be sent over to him so they could kind of see for themselves that that was what was going on at the time?

MR. GRIFFITH: Any log entries that we had, I think I'm remembering this right. We went through our logs and, of course, there's a stack of logs this big, because you know, if we have log entries that deal with notification of military or military notifying us, again, show them to General Arnold's people, you know, show them what we've got.

And, you know, I mean, I, see, now when we step back and look at this, I mean, I'm assuming that everything was working the way it should have and that this information, you know, through this secure line, through the military people that were at the Command Center through our military liaison people, you know, and the people in the field, I mean, you know, this was a situation where everybody rolled up their sleeves and jumped in the fight.

And I can remember interacting with these military liaison people, I can't remember at what point they came up to the 10th floor, but, you know, we engaged with those people 24/7 for many days after, just standing the system up and chasing down, you know, what appeared to be airplanes that nobody was talking to, and that kind of stuff.

(b)(6), (b)(7)c : Well, I guess upon reading that you think it's overstating what really went on between you and General Arnold? You don't believe there were heated discussions? More of let's just work it out, just--

MR. GRIFFITH: I don't know whether someone was in my office and overheard a conversation Arnold, I don't know where it came from that we had this heated discussion, but it was all over the place. I have to admit, I'm a pretty tense individual and, you know, in the heat of battle, I'm going to be pretty direct about things. But, I mean, to say that, you know, I have heated discussions, I don't view them as that. So, when people tell me I had this heated conversation with

someone, I have to say, to me a heated conversation means profanity, inappropriate things.

(b)(6), (b)(7)c : Mm-hmm.

MR. GRIFFITH: And I'm not that, I don't do that. But, you know, I can get pretty direct and make sure the point is put across. So, I kind of divide the definition of heated discussion and when you see somebody lose their temper and say all kinds of stupid things. And if people are implying that, I never did that.

(b)(6), (b)(7)c : Mm-hmm.

MR. GRIFFITH: I made that clear when the people over at 9/11 said something to me about it. And I think I said something like, I wouldn't call it heated conversation, you know, I'm sure I was direct in intent, but I didn't get stupid on anybody.

(b)(6), (b)(7)c : Before you testified before the Commission, how did you prepare for your testimony, because you were already retired at that time, correct?

MR. GRIFFITH: Yeah. I was asked--well,

first of all, I went in for the interview, which was just across the street from here.

(b)(6), (b)(7)c : Do you remember who interviewed you?

MR. GRIFFITH: John, John starts with an A--

(b)(6), (b)(7)c : Azarello [ph]?

MR. GRIFFITH: Yeah John, there was another John, there was a (b)(6), (b)(7)c [ph] and there was a female named, I don't have it right, it starts with a D, sort of a Swedish name. And then there was a recorder named (b)(6), (b)(7)c [ph].

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: So, it started with that. They asked me to provide written testimony for the Commission so I wrote up what it was, four pages something like that.

(b)(6), (b)(7)c : Did you have to request any documents from the FAA or from the military to prepare?

MR. GRIFFITH: I didn't request anything from the military, but I think I did ask the FAA if

they could provide me anything that they had provided which is where that thing that had the headers and footers on it--

(b)(6), (b)(7)c : Oh, okay.

MR. GRIFFITH: --that I referred to earlier.

(b)(6), (b)(7)c : That other time lines?

MR. GRIFFITH: Yeah. I'm, frankly, not sure how I got those, but I had some discussions with some people at FAA and said, you know, if you've got anything that you have given them, could I see it or something like that. So, I Washington given a couple of documents.

(b)(6), (b)(7)c : Who would you have talked to over at FAA about that?

MR. GRIFFITH: Shirley Miller.

(b)(6), (b)(7)c : Okay.

MR. GRIFFITH: Then I wrote my--

(b)(6), (b)(7)c : Statement--

MR. GRIFFITH: --and gave it to them and then I got a letter saying they wanted me to appear, so I went.

(b)(6), (b)(7)c : Okay. Anything else, (b)(6), (b)(7)c

(b)(6), (b)(7)c : [NO AUDIBLE RESPONSE.]

(b)(6), (b)(7)c : The--this telephone line with the NMCC is in the Operation Center at FAA right?

MR. GRIFFITH: Yes.

(b)(6), (b)(7)c : Would you have gotten, have had access to the logs for that, you said that's run by somebody other than yourself?

MR. GRIFFITH: Yeah, it's run by the Ops Center, which doesn't work for Air Traffic they work for the Deputy Administrator. And, then, of course, security was keeping their own logs, too. They handle the security on it.

(b)(6), (b)(7)c : Did you have access to the other divisions' logs to provide--

MR. GRIFFITH: No, on those, I mean, I can remember I was included with security on all their briefings and stuff, you know. I can remember they had, like a daily sheet of stuff that, you know, was classified and that was [unintell.] real bright guy, can't remember his name, but--I can't tell you, turns out he was their number one INTEL guy.

And you know, he'd give me his, he'd go over his daily information sheets and stuff like that with me, but I'd never taken any of them because they were classified. I mean, I routinely didn't have access to any logs except the ones that belonged to my organization.

(b)(6), (b)(7)c : How did you come by a copy of that letter?

MR. GRIFFITH: This?

(b)(6), (b)(7)c : Yeah, the referral from the Commission?

MR. GRIFFITH: That's a good question. I got it faxed to me, it says right here, FAA--

(b)(6), (b)(7)c : FAA Dep Admin.

MR. GRIFFITH: Yeah, OFC, so I must have, I don't know, I just have asked Shirley Miller to fax this to me.

(b)(6), (b)(7)c : What does that say, August 3, '04, the date?

MR. GRIFFITH: Mm-hmm, August 3, 2004, 12:02 p.m.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : August 3?

MR. GRIFFITH: Mm-hmm. It was written on July 29 from General Counsel of the 9/11 Commission of the National Commission of Terrorist Attacks Upon the United States I guess is what they're called.

(b)(6), (b)(7)c : Yeah, I think that's their full length name.

MR. GRIFFITH: And since it had my name in it, I never did see it.

(b)(6), (b)(7)c : What did you get a call about it or something?

MR. GRIFFITH: I'm trying to remember how I found out about it. I must have got a call. Shirley Miller is the appointed contact at FAA for this effort, at least I believe she is. I must have asked her if I could see it.

(b)(6), (b)(7)c : I don't have any other questions, (b)(6), (b)(7)c doesn't either. Do you have any questions?

MR. GRIFFITH: No.

(b)(6), (b)(7)c : All right we'll turn off the

wtk

87

tape recorder at 1736.

[END OF INTERVIEW.]

SWORN INTERVIEW OF

(b)(6), (b)(7)c

BY

SPECIAL AGENT

(b)(6), (b)(7)c

INVESTIGATOR

(b)(6), (b)(7)c

Wednesday, September 22, 2004

11:02 a.m. - 12:00 p.m.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

(b)(6), (b)(7)c : --2004, the time is 11:02 in the morning, we are at Building 10-A, FAA Headquarters, 4th Floor. My name is (b)(6), (b)(7)c, I'm with the Department of Transportation, Inspector General, my co-investigator is (b)(6), (b)(7)c (b)(6), (b)(7)c we are from the Office of Inspector General and we are conducting a review of issues involving certain public statements made by military and FAA officials at a 9/11 Commission and elsewhere that were allegedly inaccurate. We are interviewing Mary Kate Strawbridge. (b)(6), (b)(7)c, please acknowledge that you are aware that the interview is being tape recorded.

(b)(6), (b)(7)c : Yes, I am aware.

(b)(6), (b)(7)c : Please raise your right hand. Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, and nothing but the truth?

(b)(6), (b)(7)c : I do.

(b)(6), (b)(7)c : Please give your full name, spelling your last name for the record.

(b)(6), (b)(7)c

I'm

(b)(6), (b)(7)c

(b)(6), (b)(7)c

and the last name,

(b)(6), (b)(7)c

(b)(6), (b)(7)c

: What is your current

assignment--what's your current position?

(b)(6), (b)(7)c

Investigator for Air

Traffic Accidents and Investigations.

(b)(6), (b)(7)c

: What's the routing symbol?

(b)(6), (b)(7)c

Well, we're not allowed

to use those anymore.

(b)(6), (b)(7)c

: Okay.

(b)(6), (b)(7)c

: So, it's ATO-S for

Safety, with (b)(6), (b)(7)c coming in, he doesn't like the routing symbols.

(b)(6), (b)(7)c

: And how long have you been an

investigator?

(b)(6), (b)(7)c

: For about four months,

but I've been in this office since March of 2001, I was working on severity index. And because I'm an air traffic controller, just used as a jack-of-all-trades type of thing, whenever anybody needed any help, I would just pitch in and that.

(b)(6), (b)(7)c : So, in March of 2001, you came to the Air Traffic--you came to headquarters for Air Traffic?

(b)(6), (b)(7)c No, I've been in headquarters since January of 1995, and had several different jobs. And then when they had a new program that was instituted, the Severity Index Program, I came down to this organization to help start that. And it's a grading of air traffic errors, so it's like a--

(b)(6), (b)(7)c : Severity--

(b)(6), (b)(7)c Index.

(b)(6), (b)(7)c : --Index?

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : Organization?

(b)(6), (b)(7)c Well, it's a program.

(b)(6), (b)(7)c : Program.

(b)(6), (b)(7)c An indexing program.

(b)(6), (b)(7)c : And you've been in that program since?

(b)(6), (b)(7)c March of 2001 and then, so, when they needed an investigator, a couple

months ago, I said that I would really like to get out of the Severity Index Program and start doing investigations. So, we don't have a person yet to take my place, so I'm doing both jobs. But as a 2152, that's how, you know, you just are used on anything that comes up with air traffic so that, it's just another person that was able to pitch in and help do stuff.

(b)(6), (b)(7)c : Okay. How long have you been with the FAA in total?

(b)(6), (b)(7)c : August of 1982.

(b)(6), (b)(7)c : And your pay band?

(b)(6), (b)(7)c : Is a J.

(b)(6), (b)(7)c : Who is your direct supervisory currently?

(b)(6), (b)(7)c : Tony Mello.

(b)(6), (b)(7)c : On September 11, 2001, what was your position?

(b)(6), (b)(7)c E: (b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c : And what was the routing symbol then, when you were--

(b)(6), (b)(7)c AAT-200, and I don't recall if we had, like, 202 and that sort of thing, but AAT-200.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c That would be, like, Tony Mello, that's the organization, but we were broken up into 203, 204, I never used it.

(b)(6), (b)(7)c : Okay, but you're part of the AAT-200 organization?

(b)(6), (b)(7)c : Yeah.

(b)(6), (b)(7)c : And who did you report to then?

(b)(6), (b)(7)c : Tony first-line and then Tony Ferrante, second-line.

(b)(6), (b)(7)c : Just briefly describe what your duties were on a daily basis in the Severity Index program.

(b)(6), (b)(7)c Whenever a controller has an operational error that falls in the parameters of the program, which is a radar replayable one, that doesn't had anything to do with MBA, it may be controllers putting airplanes

together, what I do is I look at it to see how close did they get, how fast were they going, what was the closure rate, and the most important thing is whether the event was an uncontrolled event or a controlled event. And you take all that information, there's a pie chart that--it was made up by some scientists up on the 9th floor and a couple of controllers. And it responds to an IG request that we discover how severe the operational errors are. And what it does is it grades them into--it used to be three, moderate, low, or high severity. And then when the IG looked at it they thought that we needed another category, a fourth category.

So, what we did was, we broke up moderate into controlled and uncontrolled. But back then, we only had three, low, moderate, and high. And so what you would do is tell facility that the event that your controller had was low, moderate, or high and then that determined their training capabilities on how to retrain and get the person back to work. And anything that came about, like

letters, answering congressional letters or inquiries from the users, that sort of thing. Any time one of the investigators was buys, if they needed help, I would just pitch in and help with the air traffic aspect of it.

(b)(6), (b)(7)c : [off microphone]

[unintelligible]

(b)(6), (b)(7)c Uh-hu, yes, yes, something like that. I did--

(b)(6), (b)(7)c : I do the--she's the special, we [unintelligible]

(b)(6), (b)(7)c Yeah, and hotline reports, that sort of thing.

(b)(6), (b)(7)c : Were you working on September 11?

(b)(6), (b)(7)c Mm-hmm.

(b)(6), (b)(7)c : Can you just describe, briefly, from the time you found out the events were occurring, what you did or what you were asked to do, what your participation was?

(b)(6), (b)(7)c We were first told that a helicopter had hit the World Trade Center. And

then, of course, we were making telephone calls about that to see what was going on. Because, normally, we would get information from the region that something had happened. But I guess CNN had it first. And Dick Knoles walked through the area, got (b)(6), (b)(7)c and took him upstairs to the 10th floor. I guess he had more information than what we had at that time. We all went down to the end of the hall and that's where we saw the second one occur, like everyone else did. And then they evacuated the building and told everyone to go home.

But in our group, you're considered essential and, so, we didn't go home. What we started doing was calling facilities that were involved and asking them if they had their radar available to us, could we get some tapes, and things like that. So, it was like an accident investigation that was started. And I was real new to that portion of it.

The other thing that started was, they started a telecon on the 4th floor, in the AAT's

one office, the head of Air Traffic where they had open lines and they were trying to gather information that way.

I think that day, we got in on the open lines, so, we were able to listen to what was going on. In fact, it was that day, what was going on in the country, whenever reporting in, whenever facilities were reporting into the Center. So, I was trying to keep handwritten notes, I did have some handwritten notes that were turned in talking about what air traffic issues were going on. They were looking for a couple extra airplanes, you know, one of them that had been tagged had actually gone back to the gate, but he was tagged up and so we didn't know if he was airborne and that sort of thing.

Then we got some of the radar information in, some of the recordings in. I started making some rough transcripts by listening to the radar and the radio transmissions, making some rough transcripts as to what was going on in the air traffic portion of what was happening. All behind,

after the fact stuff.

Then, that continued for several days, where we kept that telephone and that telephone is still going on, actually, upstairs and has been, it turned out to be very valuable to have people listening in that had, you know, decision authority, that sort of thing. And so, it's still ongoing, it's actually a good thing.

Then say, two days into it, maybe, is when Tony Ferrante got back, he was out of town. Dick Knoles was here and Tony Mello were here in the beginning and then when Tony Ferrante got back in town was when things started to gel and taking shape that we needed to get a report out and send over to Congress, like the flight paths and the time line, that sort of thing. And, so, we were producing a lot of stuff for Congress immediately.

(b)(6), (b)(7)c : Within two days?

(b)(6), (b)(7)c : Yeah, working on it.

Yeah, we got some rough things that we did and then one afternoon or morning, I actually took, can't remember his name right now, our group that we had

that puts together our, you know, like, if we had a presentation, those people were out of town, they were on their way back. And, so, but when we had to have these presentations put together, we started using Department of Justice to print some stuff up for us. And I can't remember the man's name, it escapes me. But anyway, I took him over to a building, dropped him off where he was going to have some of the big pictures made. And, then, I remember it clearly because I got stuck in all the traffic jam trying to get my way back. It took me longer to get back than I think it took him to walk. I mean, it was very--I mean, we were just all--Doug Gould and (b)(6), (b)(7)c were getting radar information from the military, probably (b)(6), (b)(7)c [ph] was in on that. And they were trying to match up, you know, because we lost radar with them.

(b)(6), (b)(7)c : Now, this was that day or just within the first week?

(b)(6), (b)(7)c Later on, yeah, later on in the first week. But that first day was mainly, like Wayne was at one of the facilities. I think

he was at Cleveland Center, and he was calling in with reports finding out, you know, anything that he could, he would call in and tell us. Just gathering information, basically. Very preliminary info.

(b)(6), (b)(7)c : Let me go back to the open line that you were talking about. Do you recall, in that open line, that was, I guess, being headed out of the 10th floor whether there was any military participants on the open line or anybody that you spoke to from the military or--

(b)(6), (b)(7)c [ph] might have been one of the people upstairs and she has the military background, she'd gone to the War College and I thought that they were using Anne Moore at that time.

(b)(6), (b)(7)c : Who is Anne--is she an FAA employee?

(b)(6), (b)(7)c Yes, she was an ATT-3 at that point, she was ATT-3 and she sits near Don. And then we have FAA military liaisons and those, oh, gosh, her name is, the names escape me right

now, but they would either, I don't know if they were called up there, but they would have been paged, at least. So, there's that military liaison that we had right in the building.

(b)(6), (b)(7)c what was her, is she some type of liaison or what was that--

(b)(6), (b)(7)c FAA, she was ATT-3, but because of her military background, the FAA allowed her--I think it's a whole year's worth of work to go to the War College. And then came back to the FAA and she--

(b)(6), (b)(7)c : But she did not work for the military?

(b)(6), (b)(7)c No, no, no--

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c --she's an FAA person but with a military background.

(b)(6), (b)(7)c : Okay, but you're not clear whether any--you're assuming that, perhaps, some of the FAA liaison people would have participated, but you're not sure?

(b)(6), (b)(7)c Or gone up to the 10th

floor to help, yeah, I didn't see them up there, but it's just, my recall is that they used them.

(b)(6), (b)(7)c : Those were FAA people or the Air Force liaisons?

(b)(6), (b)(7)c They, actually, they're liaisons, they wear the military uniforms.

(b)(6), (b)(7)c : Okay, yes, okay. You can have an FAA person liaison to the Air Force, these were Air Force individuals were the liaison to the FAA?

(b)(6), (b)(7)c Yeah, there's two of them, normally, and, if I can just remember her last name. She's since moved, or retired, but they actually?

(b)(6), (b)(7)c

(b)(6), (b)(7)c Yeah, (b)(6), (b)(7)c that's exactly right, (b)(6), (b)(7)c and--

(b)(6), (b)(7)c : She an Air Force officer?

(b)(6), (b)(7)c I think so, yeah. And, so they would sit at the end of the 4th floor down here, and it would--I would only think that they would be up there on the 10th floor, later on, of

course, there were analysts definitely up there and (b)(6), (b)(7)c was up there, but on the first day, I'm not sure they called them right away, but I can't imagine that they didn't.

(b)(6), (b)(7)c : And the other person was a guy?

(b)(6), (b)(7)c I think so, I think it--yeah.

(b)(6), (b)(7)c : Do you recall, did you sit in an actually listen--were you listening to the open lines?

(b)(6), (b)(7)c Yes, we had it down here, it was listen only.

(b)(6), (b)(7)c : And the volume was up, high?

(b)(6), (b)(7)c Oh, yeah, yeah, we were all listening to it, in fact, I started notes, not realizing that or not understanding that anyone upstairs was taking notes, but I thought what would be important is to have a time line of when things happened. Of course the times could be off because of what sockeye [ph] was using versus what they were using, but if something I thought was

important happened, I'd like to have a time in there, but it's all longhand and we still have a copy of it. And it's not a whole bunch of information there, (b)(6), (b)(7)c [ph], who got me here, she took over doing that for me for a little while, and then, I think we got involved in our activities and, so, that fell by the wayside.

Part of that office, my gosh, there was so much going on and I don't even know it wasn't recorded, but there was so much going on that it was hard to keep up and, so, it's very disjointed.

(b)(6), (b)(7)c : Did you turn those notes over to the 9/11 Commission?

(b)(6), (b)(7)c Yes, mm-hmm, but we have them here, too, we have the originals if you want to see them.

(b)(6), (b)(7)c : But they were your notes, in-between doing other things and also based on--the time was based on whatever clock was hanging on the wall up there?

(b)(6), (b)(7)c Yeah, mm-hmm.

(b)(6), (b)(7)c : During the open line that you

were listening to, do you recall hearing any discussion about American 11 having still been airborne, even though it was later determined that that was the plane that hit the World Trade--the first tower of the World Trade Center, that whether confusion on the line that, perhaps, that plane was still airborne and headed southbound to Washington, do you recall that being an issue?

(b)(6), (b)(7)c I'd have to look at the notes. I know that it was just totally confusing. Because we had a Delta airplane that they thought was missing and holding somewhere and American, but American 11, specifically, I don't recall that.

(b)(6), (b)(7)c : I think you mentioned earlier that you started getting radar and radio transmissions from the various air traffic centers?

(b)(6), (b)(7)c Mm-hmm.

(b)(6), (b)(7)c : How soon, I mean, on September 11, that night, that day, the next day?

(b)(6), (b)(7)c They had, if we got it that day, I don't remember specifically, but I know that we got it pretty soon after, if it was the

next day, the next afternoon. But at, you know, for us the information, although you had some of the voice in the cockpit noises on one of them, the other one was totally blank and as soon as we lost radar there was nothing else to watch, there was no more transmission, there was no more radar, so it wasn't very useful. That was American 11. The one behind him had more information on it, you know, where you could tell that it was, like, a middle-eastern type accent, that sort of thing.

I don't recall getting any information on that day, but we stayed very late, but I don't remember if it was that night or the next day that we got it.

(b)(6), (b)(7)c : You were getting what, specifically?

(b)(6), (b)(7)c It's called a SATORI replay.

(b)(6), (b)(7)c : Could you spell SATORI?

(b)(6), (b)(7)c Uh-huh, S-A-T-O-R-I.

(b)(6), (b)(7)c : Uh-huh.

MS. STRAWBRIDGE: It's an acronym, I can

get the acronym for you, but what that--and that's what we used for the civilian base, that's the reason why (b)(6), (b)(7)c and I are really the only people who know how to transfer the files and load the files, so when we got them, I was able to do that, but that's what we use on the severity index, it's a voice and radar time, the timing is perfect on it, because you're just using the computer files. And all you have to do is press a play button after you've moved all the files, and you get to see exactly what the controller saw, 98 percent exactly what the controller saw. Every once in a while, you'll have something not quite perfect.

But because of my familiarity with that working with the severity index program, I went in there and started playing the tapes that we were getting from, like New York. I think New York was the first one to send us information.

(b)(6), (b)(7)c : New York Center?

(b)(6), (b)(7)c New York Center, mm-hmm.

(b)(6), (b)(7)c : So they sent you the SATORI

tapes?

(b)(6), (b)(7)c : It's the SATORI, it's like a replay tool.

(b)(6), (b)(7)c : And you think that might have been at least by the next day?

(b)(6), (b)(7)c : Oh, yeah, oh, yeah. They can program immediately, there doesn't have to be any delay at all, it's some--I don't know what the mechanism is, but if I called them right now and said I needed something, I could, depending on their workload, if I needed a number one priority, I could have it within a half an hour.

(b)(6), (b)(7)c : Oh, okay.

(b)(6), (b)(7)c : Is it something that they electronically send you?

(b)(6), (b)(7)c : Oh, yeah, it's on--

(b)(6), (b)(7)c : What type of file is it, are these the WAV files that I've heard about?

(b)(6), (b)(7)c : Well WAV files are rarely with a terminal option, this is, I don't know if you would consider it a WAV file, it might be, but it's actually, the file comes back to us as

an MS DOS program, or a LENOX, maybe, so it comes as a dot-TT and a DOT-PAC file that's directly fed into this machine back there. And I can show you that. It might make it easier to understand. And so those files are all time coded, and so, when you make the file, you don't have to do anything except press play after you've made the file, because they're time coded right there.

(b)(6), (b)(7)c : So, basically, they were sent e-mail and were fed into a specific machine?

(b)(6), (b)(7)c : Not really, e--I think it's probably an FTP, more like File Transfer--

(b)(6), (b)(7)c : But, I mean, over the computer?

(b)(6), (b)(7)c : Yeah, it's a computer FTP.

(b)(6), (b)(7)c : Based on--time, theoretically, you could have got some of them on 9/11?

(b)(6), (b)(7)c : Oh, yeah, we could have gotten them a half hour after it started.

(b)(6), (b)(7)c : And the machine does

[unintelligible] and everything and gives you what you want off the computer line, okay.

(b)(6), (b)(7)c : So, you believe that New York Center was the first to send in these types of--

(b)(6), (b)(7)c : Yes.

(b)(6), (b)(7)c : Who else--

(b)(6), (b)(7)c : We started getting them from Cleveland Center and much later Washington Center. And this was just the en-route side. Doug Gould is--and (b)(6), (b)(7)c are more of the experts on the RAPTOR program, which is another radar replay tool for the terminal side, and they used your actual PCs for that but it's not matched, the voices and the radars are automatically matched you have to do that yourself.

But what they were doing, when they were getting into their radar files, that's how they started putting together FAA radar and military radar to kind of getting a global picture of what was the path. Because the military has radar that we don't have. They have, their radar is for surveillance and so they can get lower-altitude

radar and primary radar.

But for us with air traffic, if it's nothing that, you know, if it's something that we don't need, we ex-it-out. If it's it a primary target below a certain altitude it's too cluttered, so we tell the computer, don't give me all that stuff, but the military radar picks it up. So, that's one reason why we're able to marry those files and find the flight path.

(b)(6), (b)(7)c : That was from NEEDS?

(b)(6), (b)(7)c : Probably NEEDS, but, you know, NORAD, NEEDS, somebody gave Doug--Doug is your expert on that, he and (b)(6), (b)(7)c, but, mainly Doug on putting together those files.

(b)(6), (b)(7)c : And those files are called what, again?

(b)(6), (b)(7)c : RAPTOR, R-A-P-T-O-R.

(b)(6), (b)(7)c : And they are from the--

(b)(6), (b)(7)c : They're from terminals.

(b)(6), (b)(7)c : From terminals.

(b)(6), (b)(7)c : The RAPTORS would have been married with the NEEDS tapes--

(b)(6), (b)(7)c : Mm-hmm, yeah.

(b)(6), (b)(7)c : --information?

(b)(6), (b)(7)c : Mm-hmm and I think they used some of the military information on the en-route event.

(b)(6), (b)(7)c : What [unintelligible] en-route?

(b)(6), (b)(7)c : Well, like American 11, anything in the Center, New York Center, Chicago, Cleveland Center--oh, Indianapolis sent tapes, too, Indianapolis Center sent some. There's were really pretty useless to us, though, because once, at that altitude when the airplane turns off its transponder, we don't get any radar because they mainly don't have primary turned on at that altitude. So, as soon as the transponders were cut off, from then on they're blind, we don't see anything, there's no way to tell what the airplanes were doing. That's when the Center radar comes in, they can match our radar up with whatever was going on in and the Center radar and the military radar could take over..

wtk

(b)(6), (b)(7)c : Would this information then used for the time line that they came up with?

(b)(6), (b)(7)c : Not really--

(b)(6), (b)(7)c : [unintelligible]

(b)(6), (b)(7)c : Well, the time lines, well, in a way, you know our pictures we put out where we said, we had a solid line where we had FAA radar and then we had a dash-line on what we thought was the flight path based on military radar and plotting. You know, if (b)(6), (b)(7)c was able to pull up something on our radar, they went out to the different sites and different sites will have different radar.

So, if, you know, Dulles was on site one, and we got that, but site two might have something different. I'm not using the right words, but they can tell better, but they would go out and say, well, let's pull this nine or let's pull this radar and see if it has some different information on it. And that's where they got that information from the proposed flight.

(b)(6), (b)(7)c : The dotted line--was that

where it said sometimes at the bottoms, you know, update from NEEDS tapes or NEEDS--

(b)(6), (b)(7)c : Mm-hmm, yeah.

(b)(6), (b)(7)c : How soon was (b)(6), (b)(7)c and Doug Gould getting these RAPTOR files from the terminals?

(b)(6), (b)(7)c : I'm not sure, I don't know. I don't know if it would have been that day, it could have been the next day. But that's [unintelligible] back there, and then there stuff is there so we were separated, I just went back and did my thing and tried to get some rough transcripts going, so--I know that they were working on that, but they also considered it very privileged information and they were very secretive about what they were doing with me, probably not with Tony and Tony, but definitely with me.

(b)(6), (b)(7)c : So, what you began to do once you began getting these SATORI replay files from New York, Cleveland, Washington and Indianapolis, you began making some transcripts--rough transcripts?

(b)(6), (b)(7)c : Mm-hmm, just typing up
some--

(b)(6), (b)(7)c : On your own?

(b)(6), (b)(7)c : --right, yeah.

(b)(6), (b)(7)c : So, you would go in there with
the take down a time, handwrite it and then go and
reproduce it in a typed form?

(b)(6), (b)(7)c : I'm sure I didn't turn
those files in because I don't know that I saved
those, I don't know if they're in the box or not,
come to think of it.

(b)(6), (b)(7)c : So, what you're listening to,
then, is what's going on the on the air traffic
tapes what the controllers--

(b)(6), (b)(7)c : Only what the
controllers could hear, not--so the cockpit noises
that I heard were only because someone had keyed
their mike and kept it keyed.

(b)(6), (b)(7)c : Oh, okay.

(b)(6), (b)(7)c : They thought that they
were on the intercom in the back but they weren't,
they were on the air traffic button and, so, that,

of course, the one mistake that was made, is the reason why they were able to get the middle-eastern voices right away because they thought that they were on the intercom in the back but they were actually transmitting on air traffic.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : And then, one of those pilots, I can't remember which flight it is, when they came into the cockpit held down his mike key so you could actually hear the noises of the struggle, that sort of thing and that went out over the air. Even it went out over the air traffic airways is what I--

(b)(6), (b)(7)c : What you were listening to?

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : And you began, were you typing these up into a word format?

(b)(6), (b)(7)c : Yeah, mm-hmm.

(b)(6), (b)(7)c : Just so you could say something like, at 9:28 United Airlines call attempted, no response, stuff like that?

(b)(6), (b)(7)c : Right, yeah, and then

so, you know, American was the first one, the controller times say 11 times to get hold of American with no response. So, what I did, I would back it up and say he told him to turn right at this time, response was normal, he told him to kind of maintain at this time, no response. And then I started trying to track down descended to this altitude and then the [unintelligible] disappears or the target disappears completely. Just trying to put together something so that you could look at it on the paper and kind of make sense of what was going on versus having to go in there and watch it all the time, just like a record.

(b)(6), (b)(7)c : Did you do separate documents for each of the separate centers or was it for each aircraft?

(b)(6), (b)(7)c : Each of the different centers, it was set up that way.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : And, of course, any communication that was going on behind the scenes, any time that, you know, they were just talking to

the, you know, like, if they had called their supervisor over and said, hey, I need help here, that wasn't on anything that I was doing. Mine was just absolute radar and voice that went out over the airwaves.

(b)(6), (b)(7)c : Did you have any--did you look at any military logs or any military transcripts or anything like that?

(b)(6), (b)(7)c : None.

(b)(6), (b)(7)c : You never saw any of those type of documents?

(b)(6) : No, not with the military, I know there's a controversy over that, but that was some of the stuff that I think (b)(6), (b)(7) and Doug kept as "hold close" and there were just certain things that they didn't share. And that was okay, it was just that they were working on stuff that I didn't even know they were working on till after the fact. But I don't remember seeing anything military.

(b)(6), (b)(7)c : You would have known if it was military had you seen it?

(b)(6), (b)(7)c : That it came from, yeah, something that wasn't an FAA facility.

(b)(6), (b)(7)c : Right.

(b)(6), (b)(7)c : And you know when we started talking about when the military was called, those sorts of things, I know they had--somehow they were getting the information and to me, it was where is that information coming from, but I never really got a good answer on it. They said the military logs, it was veiled.

(b)(6), (b)(7)c : So some of the time line information that you were seeing have indications that they were referencing military logs or NEEDS logs?

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : And you would ask questions as to where that information came from?

(b)(6), (b)(7)c : And they'd say, well, it came off a log and it would be some answer like that, it came off a log.

(b)(6), (b)(7)c : And who were you asking this questions to?

(b)(6), (b)(7)c : Well, at one point, we all got together in a bay, there would have been, I don't know, maybe even six people or more in the bay and we were all trying to put the time lines together. That book--

(b)(6), (b)(7)c : This book here--

(b)(6), (b)(7)c : Yes.

(b)(6), (b)(7)c : --this Summary of Air Traffic Hijack Events?

(b)(6), (b)(7)c : Yeah, and at one point someone would do all the typing and then we'd and then we each had, like a specific area that we knew the best. And so if we knew something, we'd say, well this happened at this time, it either got put in or it didn't get put in to the official time line, depending on what they thought was important. Really Tony Ferrante was the leader of the information that got included in here.

(b)(6), (b)(7)c : So, when you asked where, like, where did this time come from?

(b)(6), (b)(7)c : They would say, something off the wall, like, from the logs or

wherever they got the information from, but it was something that I don't ever recall seeing a document.

(b)(6), (b)(7)c : The response was never anything similar to we got this from NORAD; we got this from the Air Force; we got this from NEEDS?

(b)(6), (b)(7)c : I don't remember it being that specific. Because I know, you know, the--later on, after I read things, the CAPE [ph], you know, they were talking about the CAPE, you know, and what time they notified that the times were estimated. And I understand that, you know, that things are going on so quickly that you go back and you add, thinking that you know the right time. And you say, well, I think they called at this time and you write it down. The time line for notifying CAPE, for CAPE TRACON calling whoever they called, didn't see to be important enough to be really, you know, like hammered right down to the second. It was, like, this is an estimated time.

(b)(6), (b)(7)c : I have here the "Summary of

Air Traffic Hijack Events," this is the group that you were talking about that your group had been putting together. Can you--what part of it did you have involvement in drafting?

(b)(6), (b)(7)c : Well, I helped type and then helped to, you know, like, this page would have been done, say, by (b)(6), (b)(7)c --

(b)(6), (b)(7)c : The graphics page?

(b)(6), (b)(7)c : --the graphics page. So, and then--so what they did was, they took the graphics and from here they would have matched up in here, you know, put the most important stuff or what they thought was important on this page, but from some of the rough transcripts that I did and from wherever we found that information is how this came about. So, when American 11 establishes radio contact with Boston, I had a rough transcript on there, but then the facilities started sending us their rough transcripts, so we would take the transcripts, kind of match both of them, see what we thought was important, especially when they started giving us better transcripts on what

happened on ground control, local control.

Because at first, you know, everything was radar. Then we got back into what happened on departure; what happened when he called clearance delivery and ground control and local control. Because that turned out to be important, too. So we would just take those, you know, like, say, what we did was, we were just going to concentrate on American 11, tell me everything you know about American 11, we'd right it down and then we'd say, okay, that's not important, that doesn't really get us any extra value added. And so we would take stuff out, filter it and then came up with document, of what we thought was the most important among--and pick this item.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Who made the decisions as to, well, that's not important, take that out.

(b)(6), (b)(7)c : Mainly Tony Ferrante, he was--he was most instrumental in getting this put together. And you know, because there was a big rush to do it, it was--

(b)(6), (b)(7)c : Yeah. No, I understand, I mean these are questions that someone's going to ask [unintelligible] the situation was or whatever it was, yeah.

(b)(6), (b)(7)c : And then, you have to understand, too, that four accidents all at once, that was way, oh, my gosh, we couldn't even keep the airplane type straight until we set up a board that told you. I mean it was just so much information at once.

(b)(6), (b)(7)c : Like this--9:05 for American--9:05 a.m. for American or for United 175, excuse me, Northeast Air Defense Sector logs indicate they were notified by the FAA of the events concerning 175.

(b)(6), (b)(7)c : And I don't know where that came from. I know that we talked about it and that's where they would have said the logs, but I don't think that we ever saw the logs. Like they weren't put and you know--

(b)(6), (b)(7)c : Or that you ever saw the logs?

(b)(6), (b)(7)c : Right, that I didn't,

someone else, maybe Doug and (b)(6), (b)(7) and (b)(6), (b)(7). I don't know.

(b)(6), (b)(7)c : But they weren't specific in their reply saying logs, saying Air Force--just logs--

(b)(6), (b)(7)c Just the logs, that we got those from the logs, yeah.

(b)(6), (b)(7)c : Nobody asked them or did they just put a hush on everybody and say, don't go bother asking or--

(b)(6), (b)(7)c : No, no, no, it wasn't that. It was more like, I'm fairly new, Doug doesn't know my background, Tony Ferrante knows my background, but they didn't know that I had a secret clearance, that sort of thing and so, and I was only severity index, so, when the investigators do things, it was like a, you know, a clique sort of thing, yeah.

(b)(6), (b)(7)c : Yeah, yeah.

(b)(6), (b)(7)c : And so Doug not knowing my background and they were a little weary of me put off by me, because I actually came down here as

a K-bank and, you know, that caused a little problem, until I said, I don't care about the K, you can take me back to a J, it doesn't bother me a bit, so that happened.

But there was a little, you know, exclusion, you know, I may be part of the group, I'm really not part of the group. It's very exclusionary. So, all of that rolled into it. I mean these thoughts were going through my head all the time. I was, like, where's all this, it was magical to me, where are they coming up with some of this information, it's just magical.

But that's because I don't think they included me in as one of the, you know, one of the close people. And then they didn't know that I had a secret clearance. I didn't think they had secret clearances, but it was, especially for b(6), b(7) and Doug a two-fold probably, that they had dealt with military before and that they were the radar experts in the RAPTOR area and, also, you know, the mistrust of hand-me-down information.

You know there was a big controversy over

how did the middle-eastern accent get put out on the air so fast? Well, what we understood was that Chicago, I mean, Cleveland Center people had a little press conference and said this what we know.

And then, later on, Doug said, well, the FBI wants to keep that under their hat because that was useful information they could have done more research or more investigation, but we kinda--

(b)(6), (b)(7)c Oops.

(b)(6), (b)(7)c : --yeah, we let them know that we know and, so therefore, they were--so I think it's all that folded into it. I don't think it was anything sinister, I think it was more being careful.

(b)(6), (b)(7)c : But ultimately, this is the answer here, at least [unintelligible] the NEEDS logs.

(b)(6), (b)(7)c : And, so, you know, wherever this time frame came from, I'm not real sure, because I wouldn't have had anything to do with that.

(b)(6), (b)(7)c : Okay. Other than this

particular document, did you participate in any other time lines or any other chronologies that were created or is there something else in here you want to show me?

(b)(6), (b)(7)c : No, I know that what we did, early on, and we had to do it several times. We created stuff like this for Congress so they could see it right away. And there's a couple of really big pictures that are still saved back there, but it's just copies of this. So, I think what we were doing is, you know, we gave them pictures, but then that's when they wanted meat to it and they wanted to be able to understand and that's the reason why the time line came forward is that said that we need to get this in a time line that's more easily understood.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : And that's the reason why this was put together. But I don't think that there's any other effort that we did.

(b)(6), (b)(7)c : You don't recall anything else that you would have participated in creating other

than this?

(b)(6), (b)(7)c : Anything that wasn't adjunct to this would be the pictures that went over to Congress. And I didn't really create them or anything, just picked the files and got that--I don't even remember his name, got that person off--I don't think so.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : [unintelligible] basically what she did, though, with the summary of events.

(b)(6), (b)(7)c : Who did you give those four documents to that you created?

(b)(6), (b)(7)c : I kept them on my desk and then, I started coming into work and they started disappearing off of my desk. I don't know who had access to the building, because for a long time the building was empty. I think, either they gave people the day off the next day or something, but anyway, it seemed like our building was empty for a while and then the weekend came around. But, still I had stuff that was missing off of my desk. So, I don't know who would have taken it.

wtk
(b)(6), (b)(7)c : What kinds of things, you mean?

(b)(6), (b)(7)c : The transcript, yeah.

(b)(6), (b)(7)c : Your rough typewritten transcript?

(b)(6), (b)(7)c : Yes.

(b)(6), (b)(7)c : Like the SATORI?

(b)(6), (b)(7)c : Yeah, anything that I did after the SATORI, right, mm-hmm. And so I mean you just don't know--

(b)(6), (b)(7)c : Yeah.

(b)(6), (b)(7)c : --if someone had access to the building, because--now some of these people did stay overnight. I left over night, I have a diabetic cat so I had to be home, I just said, I've got to get home, I could come back, but had to go give a shot and then I had to take the cat to the vet, so we put in some really long hours. But I never spent the night. I think (b)(6), (b)(7) and Doug did spend the night a couple of nights and that's when some stuff was done that, you know, I wouldn't have been part of and wouldn't have known about. So,

you know, all of a sudden, the next day I'd show up and there'd be stuff and I'd go, wow, hmm, how'd that happen. You know that sort of thing just taken aback by it, but I didn't realize that they were all spending the night and staying as late as they were after I left.

(b)(6), (b)(7)c : Okay. Did you find, though, that the information that you had on those documents were compiled into this document?

(b)(6), (b)(7)c : Oh, yeah, mm-hmm, yeah, yeah.

(b)(6), (b)(7)c : Into the "Summary of Air Traffic Hijack Events?"

(b)(6), (b)(7)c : I don't recall anything being on the tapes that I listened to that would have been put in here if it needed to be. I think that everything that was pertinent was put in. Some of it, you know, was you heard screaming, of course those specific screams, of course, we didn't put out on line, we wanted to generalize it, you know, noises in the cockpit or sounds of a struggle. Some of it's much more graphic, but we

didn't--we just lightened that.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : But for the most part, you, were you ever left with the impression that something that was important that you heard about, that rang a bell, that, they was purposely left out of here to--

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : --[unintelligible] what it is, purposely left out in order not to make the FAA look bad?

(b)(6), (b)(7)c : I don't know. I know that there--there were some rumors about that. What I thought didn't happen that way. A lot of people thing that Tony Ferrante kind of, like, filtered information. And, but Tony's always been a target, he doesn't mince words, he's not sometimes the most likable person and he's a little strong. I happen to get along great with Tony, but I know there's a lot of arrows pointed right at him. And understanding that he would know with his experience and background what he highlights should

be.

So, if somebody would say, hey, let's include this, he went, no, I don't think so, he would have a reason why it wasn't included. I can't remember anything specifically, but--now we did work on that, too, that is something that we worked on.

(b)(6), (b)(7)c : That's the time line with the grid on top?

(b)(6), (b)(7)c : Yes, uh-huh, but I thought all that information came from here, but with a different presentation. That happened later on in the week, name escape me, I'm the worst [unintelligible] but names escape me, Darlene--

(b)(6), (b)(7)c : Freeman?

(b)(6), (b)(7)c : --uh-hu, when, it might have been the controversy over the military and when were they notified, that started to boil up. And of course, you know, the military and the FAA are fighting over who didn't give information, you know, there was a lot of finger-pointing going on. We had to put that together to kind of help get

that straightened out for the 10th floor to be able to explain.

(b)(6) : The document with the graph at the top?

(b)(6), (b)(7)c Right, yes, uh-huh, yes. But all of that information should be in here.

(b)(6), (b)(7)c : So the "Summary of Air Traffic Hijack Events." was the first--

(b)(6), (b)(7)c : It was ongoing. So say that draft one of this was out, draft two, and then we had to do that and then we would come back to final--whatever the sequence was, it was, you know, this was an ongoing project for, like, at least two days. And then they would come down and say, we know you're working on that, but Tony would come down and say, but I absolutely have to have something like this done. And that's when the controversy was brewing over when did CAPE get notified.

(b)(6), (b)(7)c : Later in the week, do you recall that there was some controversy when the FAA notified the military and vice versa?

(b)(6), (b)(7)c : Yeah.

(b)(6), (b)(7)c : That doesn't have a print time on it does it?

(b)(6), (b)(7)c : There's various iterations of this document, I've seen this one is revised on September 18.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : And that would have been way later than the first ones that we did and, so, that was still fine tuning. And putting in there information I guess and taking some out or just making it more clear.

(b)(6), (b)(7)c : Did you actually prepare this?

(b)(6), (b)(7)c : I have, I'm not real sure if I did that alone or not. I know I worked on one version of it--worked on one version

SIMULTANEOUS CONVERSATION

(b)(6), (b)(7)c [unintelligible]

(b)(6), (b)(7)c : Who did it go to for finding out okay, this is good we can use it?

(b)(6), (b)(7)c : Darlene Freeman, I think, was the final authority on that one.

(b)(6), (b)(7)c : The document with the grid on top?

(b)(6), (b)(7)c : Right, mm-hmm, yes, that's what I understand.

(b)(6), (b)(7)c : One of the iterations of this document that we've seen, and I don't have it in front of me right now, but with respect to United Flight 93, the NORAD NEEDS notification, on this particular revision it says not applicable or N/A. On one of them that I've seen, it has that 10:08 time on there, 10:08 a.m.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Which actually, the Commission determined that's when Cleveland Center called the military and notified them about the hijacking, which is actually after it crashed. However, it appeared that a decision was made not to keep that on the time line and then put this not applicable there as a notification. Do you recall that discussions or a decision being made to not include that time. Because there's a notification time for all of them, except for this one, and it has--

(b)(6), (b)(7)c : What does it say?

(b)(6), (b)(7)c : Well, it says these times are derived from the--well, this has one star and it says, these are the times that were derived from the review of the NEEDS log.

(b)(6), (b)(7)c : I don't know why that would have done that.

(b)(6), (b)(7)c : Again, you weren't seeing any of these NEEDS logs, correct?

(b)(6), (b)(7)c : No. It sort of rings a bell, but then I don't remember why--

(b)(6), (b)(7)c : Why that notification time of United 93 was taken out?

(b)(6), (b)(7)c : Yeah. I recall some conversation back then that we couldn't prove it or that it doesn't match. Those conversations were going on a lot about the military and the FAA, that there was, like, an estimated where our time was probably estimated also, but whose estimated time was better. So there were a lot of conversations on the accuracy anything the time. Being at a facility, I can understand that, you know, when

things start happening, you just kind of jot things down and then go back to it. So whether you get an accurate time line or not is--

(b)(6), (b)(7)c : Do you remember, though, the controversy specifically, was this particular time that I'm talking about?

(b)(6), (b)(7)c : No, I mean, that was the controversy in general and that's the reason why there document was put together was because of the logs versus what was being said by the military, it was like trying to prove to the military this is the information that we have and so, I wasn't in on any of the tight conversations or the upper level conversations. It's just that would be like the atmosphere, kind of the sort of finger-pointing that was going on.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Recognize this? This is called "Notifications to the Military," dated 9/20/01.

(b)(6), (b)(7)c : Mm-hmm. I would either have helped type that or helped put it together.

(b)(6), (b)(7)c : Again, it has these references to these NEEDS logs.

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : Which you, again, did not see.

(b)(6), (b)(7)c : I don't remember seeing the logs. Now, a lot of times what we'd get out in the bay what he just dictated, you know, Tony or someone would read something--Kevin and I did most of the typing, they would just dictate and we would type. But I don't recall, but I know that I probably helped put this together but where the information came from, I don't recall.

(b)(6), (b)(7)c : You authored a document but, as far--

(b)(6), (b)(7)c : Or taking information from one, you know, from this and putting it on here, whatever happened here.

(b)(6), (b)(7)c : It already existed.

(b)(6), (b)(7)c : Yeah.

(b)(6), (b)(7)c : So, Tony could well have been sitting there looking at something, but you had no idea where he was getting it from, he was just

saying, okay, at 9:38--

(b)(6), (b)(7)c : Right, yeah. I would think that Tony would have the those answers for you.

(b)(6), (b)(7)c : Okay. And Dave Knoles, I keep leaving (b)(6), (b)(7)c out, but Dave Knoles should be involved. And then, again, all these stemmed from information that we already had and it was just kind of compile it.

(b)(6), (b)(7)c : This is called "Notification to DOD Time-line," it begins, Boston Center asks TRACON to notify Otis Air Force Base.

(b)(6), (b)(7)c : Yes. I'm not real sure where this came from. I'm not real sure that our group did this one. I don't know where, I just don't think it was us. What I remember about some of this is I remember Darlene putting together some documents upstairs and then we would be, it would come downstairs to us and then we'd say okay, let's look at this and make sure everything's correct on it. But I don't know if this was one of those or not. But she was instrumental in the military

trying to clear up the controversy about the military, like that was one thing that she was assigned to do, you know, get this information under control or get it right or find out what's, you know, put together this kind of thing. Like Tony and (b)(6), (b)(7)c and she would have been working very closely together to come up with a product.

Even Tony might have been able to type that. It just doesn't look like something that we would do?

(b)(6), (b)(7)c : Tony Ferrante or Mallo?

(b)(6), (b)(7)c : Yeah, Ferrante, yeah.

With the 8:34 a.m., that doesn't seem to me to be something that we would have done. Just the way it's presented there, it doesn't look like our stuff. Could have been, but I don't. This seems to be more--yeah because we do military time, you know, we mainly do military time.

(b)(6), (b)(7)c : Have you ever seen this document before? This is a fax sheet chronology of events of September 11?

(b)(6), (b)(7)c : Uh-uh.

(b)(6), (b)(7)c : This is from the FAA's Website, created I think in anticipation of the anniversary of September 11, and it was published on the Website. Do you recall this being circulated to your staff to review or anything like that?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : Again, it has this notation about the NEEDS--

(b)(6), (b)(7)c : Yeah.

(b)(6), (b)(7)c : --notified NEEDS.

(b)(6), (b)(7)c : I wonder who did that.

Nope, I've never seen that before. Oh, wait, (b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c : Yeah, he's the Public Affairs individual, but he got that from somebody.

(b)(6), (b)(7)c : Okay, so, no, I hadn't seen it before.

(b)(6), (b)(7)c : Are there any other documents that you helped create or really time lines-types of documents, chronologies, that's kind of what we're interested in. Anything else that--

(b)(6), (b)(7)c : I don't remember--I know that we did this, this is, of course, the most important one we thought. And then we started working on--but it was, to me, information that was still taken out of the same--different presentation. And what we did do was go back and check time from one document to another to try and make sure, because you know how you get in trouble for numbers not matching. We went back and tried to match times up between all the documents so that everything would say the same thing. But this being the major production that we had and then everything else was, like, you know, a different version or different information condensed but the same information.

(b)(6), (b)(7)c : Correct me if I'm wrong, when I say this, so the "Summary of Air Traffic Hijack Events" would you say that that is kind of the main time line or main chronology for which other chronologies and other time lines were created were based on?

(b)(6), (b)(7)c : I would think so, just

in my opinion, yes, because it's the most comprehensive. Now it was early on that it was created, so any information that came in new after that could have been, I mean, maybe it got different emphasis after that. But, at the time and what was going on for at least the first week, this was the product of every piece of information that we had at the time.

(b)(6), (b)(7)c : It was put in the production?

(b)(6), (b)(7)c : Yeah.

(b)(6), (b)(7)c : Okay. Anything else? Mary, what's your extension if I need to call you for some additional questions?

(b)(6), (b)(7)c : Okay, it's on

(b)(6), (b)(7)c .

(b)(6), (b)(7)c : We're going to turn off the tape, it's 12:00 p.m.

[END OF INTERVIEW.]

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case # 042R0122001

SWORN INTERVIEW OF

LAURA J. BROWN

BY

INVESTIGATOR [REDACTED] (b)(6), (b)(7)c

INVESTIGATOR [REDACTED] (b)(6), (b)(7)c

Thursday, September 23, 2004

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

(b)(6), (b)(7)c : We are at FAA Building 10-A, Room 908 in Washington, D.C. My name is (b)(6), (b)(7)c (b)(6), (b)(7)c my co-agent is (b)(6), (b)(7)c . And we're from the Office of Inspector General Department of Transportation and we're conducting a review of issues involving certain public statements made by the military and FAA officials at 9/11 Commission Hearings elsewhere that were allegedly inaccurate.

We're interviewing Laura Brown. Laura, if you could please acknowledge that you're aware this interview is being tape recorded?

MS. BROWN: I am.

(b)(6), (b)(7)c : Please raise your right hand. Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, and nothing but the truth?

MS. BROWN: I do.

(b)(6), (b)(7)c : Can you please give your full name spelling your last name for the record?

MS. BROWN: Sure, it's Laura J. Brown, B-r-o-w-n.

(b)(6), (b)(7)c : And what's your current position?

MS. BROWN: I'm the Deputy Assistant Administrator for Public Affairs.

(b)(6), (b)(7)c : And what grade are you?

MS. BROWN: I'm SES.

(b)(6), (b)(7)c : And how long have you held that position?

MS. BROWN: Four years.

(b)(6), (b)(7)c : Four years, when did you start with the FAA?

MS. BROWN: In September of 2000.

(b)(6), (b)(7)c : And you started with the FAA in your current position?

MS. BROWN: Yes.

(b)(6), (b)(7)c : I think that you had said earlier that you dealt with the military a lot concerning post September 11 issues?

MS. BROWN: Right. We established contact with NORAD Public Affairs sometime after September 11 because both of us were getting calls [unintell.] that had to do with some of the same

issues. And so we started talking to each other. And since then we've developed a very close relationship with NORAD because we have a lot of operational issues that [unintell.].

(b)(6), (b)(7)c : And who was your primary contact at NORAD?

MS. BROWN: (b)(6), (b)(7)c [ph] in Shiny Mountain in Colorado Springs.

(b)(6), (b)(7)c : And you said he's actually
(b)(6), (b)(7)c

MS. BROWN: He's (b)(6), (b)(7)c right, because NORAD is--it's the North American Aerospace Defense Command, so they have people from both the Canadian and U.S. military. I've dealt with a lot of other people there, too over the years, but he's been the primary contact.

(b)(6), (b)(7)c : Prior to starting the tape recorded interview, you had begun to talk about a NORAD press release or a military press release?

MS. BROWN: Yeah, this is just the press release that came out on September 17 of 2001. And it was, really, the first time I had seen an

attempt to capture all the times of when the four planes involved in September 11 had taken off; when there were--when NORAD said they were notified about the hijacking by the FAA. And then when fighters were scrambled to try and intercept the planes.

And that was sort of, you know, our initial take on this and was, kind of, I think, our kind of understanding of all these times that have been resolved over the past few years.

(b)(6), (b)(7)c : Where did you actually get this copy of the press, release. I notice there's a number 30 at the bottom of the press release?

MS. BROWN: Thirty--that means that's an old wire recorder's code for the end of the story.

(b)(6), (b)(7)c : I see.

MS. BROWN: And, so, whoever did this, obviously--there was kind of a tradition of press releases, too, where you put a 30 at the end just to show that was the end of the press release.

(b)(6), (b)(7)c : Okay.

MS. BROWN: So, this was either e-mailed

to me or I think it was probably e-mailed to me, but I could have gotten it from their Website, too, I don't remember.

(b)(6), (b)(7)c : Do you know who prepared this over at the military?

MS. BROWN: No. I don't know exactly who prepared it.

(b)(6), (b)(7)c : Okay.

MS. BROWN: And, you know, I'm sure that Public Affairs needed to rely on a lot of these, you know, operational people to pull something like this together.

(b)(6), (b)(7)c : Did they coordinate that release with you or anybody else here at FAA?

MS. BROWN: No, not really. I mean, they just put out the release and sort of said, hey, this is what we're putting out. Because--I think they may have said does this look right to you? But there are a lot of things in here that, for instance, the fighter scrambling and that kind of thing that I wasn't in a position to confirm. But I had a conversation with them about some of their

times that they were noting on here that the FAA notified them about the hijacking because, well flight 93, they didn't have a time and they were getting calls and we were getting calls from reporters saying, what was the time? And I handwrote in this 9:16, I think, based on conversations with people from Linda's office, you know, from our Air Traffic Office. And I think the confusion about this time goes back to the fact that we had an open phone-bridge [ph] operating at that point. And I think some of our--if not all of our Air Traffic people felt that at some point during that conversation, you know, the information had been passed to NORAD, but it was--nobody had taken a pen and written down in the log exactly what time the notification to NORAD was.

(b)(6), (b)(7)c : Mm-hmm.

MS. BROWN: So, it was an extremely confusing time and we had, at one point about 11 planes we were tracking that we thought might be hijacked. And, so there was just information coming in from everywhere, sort of in an avalanche.

So, I think people who normally would be writing things very meticulously in logs, weren't doing that that morning and the lines they were talking on weren't recorded.

So, I think one of the--and I have to say, we knew there were communications problems on September 11. And so, we [unintell.] to domestic events net, we did [unintell.] to try to fix the problem. We made some attempt to go back and reconstruct some of this with NORAD. But from our standpoint going back and reconstructing all the exact times that everything happened was just not the thing we were focused most on. We were trying to improve aviation security. We were trying to get things back in the air. So, we were kind of looking forward more than we were looking backward and trying to do a really time consuming elaborate reconstruction of exactly what happened when.

And it was, you know, it was harder because we didn't have the recorded lines to rely on. And I think we also thought that the FBI was doing the investigation, initially, and that we

just turned everything over to them and then they would come back and tell us, you know, what had happened when and, you know, so it would be kind of a duplicative effort to go back and try to reconstruct all that stuff ourselves.

(b)(6), (b)(7)c : You said you think you got that 9:16 number from Linda Schussler's [ph] offices?

MS. BROWN: Well, Air Traffic from systems operations. Yeah, I'm not sure who I got--who, specifically I got that number from, but that was, I think, initially, was when we were told in public affairs that, you know, they had a phone-bridge operating. And, so, that was, you know, why we put that number in there.

(b)(6), (b)(7)c : And how did you find out about this? Did somebody from NORAD call you?

MS. BROWN: Yeah, NORAD called about it.

(b)(6), (b)(7)c : You said NORAD called you, so that would be (b)(6), (b)(7)c

MS. BROWN: I don't remember who, specifically, I spoke to about this, it was

probably (b)(6), (b)(7)c but I don't know.

(b)(6), (b)(7)c : Who else did you deal with regularly over there.

MS. BROWN: There's a guy named (b)(6), (b)(7)c, who I've spoken with, who is no longer in Public Affairs, but he's somehow still in communications, he may be doing internal communications or something else.

(b)(6), (b)(7)c : Is he a civilian employee?

MS. BROWN: No, I think he's in the military, I believe. I just can't remember what his rank is.

(b)(6), (b)(7)c : Anybody else that you can think of?

MS. BROWN: There were a number of people, I mean, I could probably--they've got a different structure there now, and I guess I'm, you know, thinking of all the people I'm dealing with now. At the time they just had NORAD, now they have merged NORAD and NORTHCOM and so, I deal with a number of people in the same Public Affairs Office that supports NORTHCOM but they work side-by-side

with NORAD and their--the general who's in charge is in charge of both organizations.

The guy who is in Public Affairs who's I think kind of head of Public Affairs now is named (b)(6), (b)(7)c [ph], he's with NORTHCOM. And there's a woman named (b)(6), (b)(7)c [ph], who I've dealt with, too. But I can't remember back around that time. I mean, I could probably look through notes and I might be able to figure out who I was talking to at that time, but--

(b)(6), (b)(7)c : Did the FAA put out any press releases similar to this NORAD one?

MS. BROWN: We put together this time line.

(b)(6), (b)(7)c : It's titled Notification to DOD Time Line?

MS. BROWN: Yeah, and this was really early on. Oh, that's, I think that's my former boss's [unintell.]. And then there was--one of the things we did have good information about was when we had to close the air space, I mean, because that was all on record and all of those things, you

know, we had times for. And these things were done by us. But the things that, excuse me, we didn't always have good times for was when some of the NORAD things happened. And, so, I think, I don't know how we got--I'd have to figure out who put this time line together. There's another guy in the office here who deals with severe traffic issues who helped put together some of these time lines, too.

(b)(6), (b)(7)c : Who was that?

MS. BROWN: His name is (b)(6), (b)(7)c

(b)(6), (b)(7)c : (b)(6), (b)(7)c

MS. BROWN: Yes, he's in Public Affairs.

And so, I don't know how we knew that this was what the [unintell.] log was showing.

(b)(6), (b)(7)c : Did you see any of the military source documents?

MS. BROWN: No, no.

(b)(6), (b)(7)c : Did you ever ask the military for any of the source documents to kind of verify some of the summary information they were presenting?

MS. BROWN: No, I mean, if I had asked for their source information it would be kind of--I guess professionally, I would be questioning how they put their information together.

(b)(6), (b)(7)c : Okay.

MS. BROWN: Do you know what I mean?

(b)(6), (b)(7)c : In our news industry, it's not ethically correct to do that, I guess.

MS. BROWN: Well, I'm not in the news industry, I'm in the public affairs industry, so, you know, if I'm dealing with another public affairs professional, I have to, you know, I have to accept the fact that they've done their due diligence in collecting their information. Now, we've had conversations where I said, well, gee, I'm a little confused about how you guys could be saying this because we think this, you know? But I wasn't really in the position to ask if they had logs to verify what they had put together. I mean, that would be like me saying to you, look I don't really trust the way you put together your work product, here.

(b)(6), (b)(7)c : Was that put out in any type of public document?

MS. BROWN: Actually we might have e-mailed it to reporters, we might have read it--I know we read it verbally to reporters that we dealt with, but I don't think we [unintell.] anywhere.

(b)(6), (b)(7)c : You don't know who created this document?

MS. BROWN: I think that (b)(6), (b)(7)c was involved in creating that and I can bring him in here if you want, but I don't--I think he worked with people in Air Traffic to put it together. It's got--see, it's got (b)(6), (b)(7)c handwriting, I think, (b)(6), (b)(7)c. Yeah, I think he may have had some role in trying to put that together, too.

(b)(6), (b)(7)c : Okay. Do you know approximately when that would have been compiled?

MS. BROWN: Probably late September or mid-September of 2001, it could have been October, I don't know. A lot of my post-9/11 documents were on a hard drive that crashed-- [unintell.] months

after September 11, yeah. So, [unintell.] date on it, but I wasn't able to retrieve some of it. And I can't remember when they rebuilt my computer, but I did lose some of the original material on it.

(b)(6), (b)(7)c : Let me see, you also had--

MS. BROWN: Yeah, that's when we put in the air space restrictions to basically close down the air space.

(b)(6), (b)(7)c : This one's titled Ground Spot Decision International Air Space System September 11, 2001. But this doesn't look like it discusses military interaction at all.

MS. BROWN: No, that was purely just Air Traffic decisions, that wasn't intended to address the whole military notification issue. I mean, we got these questions about the military notification early on, but we then sort of, you know, the focus was on--it was all kind of concern about who actually crossed the air space. And so, some of the questions about military notification kind of died down in the immediate months after September 11. And really didn't sort of come up again, until

a couple of years later when the Commission started, you know, doing a lot of work looking into who said what to who when.

(b)(6), (b)(7)c : Okay.

MS. BROWN: And I think when the Commission had its first hearing and some of the NORAD people testified, some of the things they testified about were they were mentioning times we had never heard before and I think part of the problem with constructing this is neither NORAD nor the FAA had both pieces of the puzzle to put together. So, we had what we had, they had what they had, and we could each try to put together a time line, but I'm not sure--I know that nobody ever put together all the documents that the Commission then collected to look at them all together and say, oh, gee, your log says this, ours says this but we're missing a piece here because they had conversations--and I don't think any of the material from the National Military Command Center, their tapes, had ever been kind of referred to. They certainly hadn't been looked at by us, I

don't think. And I don't think they'd been looked at by NORAD, too. And to introduce that and they had some, you know, pieces of information in there, too. We started to bring together all these times, but none of us could reconstruct individually. And so, you know, I think we learned something from some of the lead tapes and the transcripts of tapes, that we didn't have any way to know because they were on their tapes and we didn't have it recorded. And people either didn't recollect things in their interview or it was never written down.

(b)(6), (b)(7)c : Do you remember what sort of efforts were made within the FAA to try to resolve some questioned times? Like, for example, this time here on this Notification of DOD time line as 9:16 a.m., there's a parenthetical question mark that says [unintell.] log shows FAA reporting UA-93--I mean, I know, from reading the Commission Report that they have here and some other items, that FAA didn't even know that United was hijacked at that point, UA-93.

MS. BROWN: Right.

(b)(6), (b)(7)c : So, do you know what kinds of efforts were made by FAA to try to reconcile issues like that?

MS. BROWN: I think, in Public Affairs, we were trying to put together a good time line because we were trying to answer press questions about it. But we didn't have the information and a lot of the information, I think, was being treated at that point like it was very protected because it was considered part of an FBI investigation.

So, normally, in Public Affairs where we would actually be given some of the source material so that we could go through it ourselves, in this case, you know, we had to go to people and say, look, can you give us this time. And it wasn't--it wasn't, I think, as easy a process as it normally would be because a lot of the information about the time lines of what happened on the planes, neither the Air Traffic information about Air Traffic communication with each of the planes, was very, very closely guarded. I mean, Scott, my boss,

would go into meetings and, you know, they would share transcripts with him and ask him not to share them with anyone else. Or they would take them back, you know, at the end of the meeting.

And so we were, you know, we didn't always have all the direct material, so we were going to Air Traffic and saying, look, we're trying to resolve this question, can you help us with this and help us with the time. So, I think, as you can see, there was a lot of question about whether the times we were getting were accurate; where the information came from; whether the information was accurate and that kind of thing. So, I think, you know, I was never comfortable that we had a really accurate time line of who was notified when, because it never seemed like we could put all the pieces together of that. And it was kind of a moving target all the time.

(b)(6), (b)(7)c : Who were you relying on, internally, for information concerning that?

MS. BROWN: We were relying on people in Air Traffic.

(b)(6), (b)(7)c : Who, specifically?

MS. BROWN: A range of different people, I think, probably Jeff Griffith [ph], (b)(6), (b)(7)c [ph], and (b)(6), (b)(7)c could probably help me out more with this because he was dealing directly with some of those people, too, but, you know, Linda, people from the Command Center, she was at the Command center at the time.

(b)(6), (b)(7)c : Mm-hmm.

MS. BROWN: And some of the information was coming from Shirley Miller, who was an assistant to Monty Belcher [ph]. So you know, I think we were really looking to fairly high-level people to try to give us the right information, because we wanted to get it right.

(b)(6), (b)(7)c : When you said that frequently you guys in Public Affairs would rely on some source material to help you prepare time lines like this or other--

MS. BROWN: Mm-hmm, anything we do.

(b)(6), (b)(7)c --I guess, briefing documents.

MS. BROWN: Right and when we're trying to

write a press release or do anything whether it has to do with Air Traffic or safety, you know, we try to get as much background as we can, briefing papers, that kind of thing. So that we sort of know what the context is when we're putting together whatever we're doing. So we like to have, I mean a lot of information about it. But this was kind of a different process.

(b)(6), (b)(7)c : So, then, what were you guys--what did you have to rely on, then, in this event?

MS. BROWN: We had to rely on going and talking to people in Air Traffic and saying, look, can you help us try to put this time line together, you know, can you give us the times here?

(b)(6), (b)(7)c : Okay, did they give you any documentation in, like, even summary format to help you guys or?

MS. BROWN: I'd have to look through my files and look at, you know, what I have and, you know what we were looking at, but I don't remember seeing a lot of kind of logs and that kind of

thing. I don't remember that kind of thing ever being shared with us.

(b)(6), (b)(7)c : Did you get involved in helping the Administrator or her Deputy prepare for any congressional or Commission hearings?

MS. BROWN: We are usually--Public Affairs is usually involved in any prep for a congressional hearing.

(b)(6), (b)(7)c : Okay.

MS. BROWN: And I was involved in preparations to help prepare Jane Garvey's testimony for the Commission and Monty Belcher and a few other people who testified at the last hearing.

(b)(6), (b)(7)c : Okay.

MS. BROWN: Either (b)(6), (b)(7)c or I would have been involved in anything immediately after September 11. And some of it he was involved in it and I wasn't involved in.

(b)(6), (b)(7)c : I think, if I'm not mistaken--I think and I don't remember the exact date, but in late September 2001, Ms. Garvey might

have testified before a Congressional or Senate hearing about historically what happened on the 11th?

MS. BROWN: Mm-hmm.

(b)(6), (b)(7)c : Are you familiar with that?

MS. BROWN: It sounds familiar, but I can't remember the specific hearing.

(b)(6), (b)(7)c : Do you have, like, a file or something that would have you preparatory documents?

MS. BROWN: Yeah, yeah, I might.

(b)(6), (b)(7)c : And you--would you also have a file, then, for those--the Commission hearing preparations?

MS. BROWN: Yeah, I have files on that.

(b)(6), (b)(7)c : I guess we wouldn't mind taking a look at those if you can make them available.

MS. BROWN: Okay, I mean, yeah, you'd have to give me some time to pull them together.

(b)(6), (b)(7)c : That's fine, yeah, that's fine.

(b)(6), (b)(7)c : I guess, any other files that you might have relating to any other interviews that were given relating to--

MS. BROWN: I've got a few, certainly.

(b)(6), (b)(7)c : Well--

(b)(6), (b)(7)c : [unintell.] a truck. Well, maybe when we're done we could just look at maybe turning over all what you've got and we can pare it down pretty quick.

MS. BROWN:

(b)(6), (b)(7)c : But I think our main focus is reconstruction of this time line.

MS. BROWN: Mm-hmm.

(b)(6), (b)(7)c : You know, that's really what our focus is, I mean--

MS. BROWN: Mm-hmm.

(b)(6), (b)(7)c : --there are other things that you were helping prepare that are related to more security-related issues or what we're going to do to fix it, you know, problems, [unintell.] those things.

MS. BROWN: But to get to go through my

stuff that's from right after September 11, it's just going to take me a little bit of time to do that.

(b)(6), (b)(7)c : Sure.

MS. BROWN: We can do that right after the interview.

(b)(6), (b)(7)c : Okay. Aside from the three documents that we just looked at, are there any other time line documents that you--let's see what I've got.

MS. BROWN: Well, that's really the initial ones that we were doing. We had sort of just basic kind of premise that were for communications with each of the flights, some of the radar plots for each of the hijacked flights. We had, these were printouts, but they were more for what was happening on the flights themselves, rather, than when the military was notified or anything like that.

(b)(6), (b)(7)c : This actually looks like an on going version of that.

MS. BROWN: It is, I think.

(b)(6), (b)(7)c : One on A-8.

MS. BROWN: I think it probably is.

(b)(6), (b)(7)c : Okay.

MS. BROWN: Yeah, it probably similar, I notice there are various versions of this.

(b)(6), (b)(7)c : Okay.

MS. BROWN: So, I just, yeah, I can look through, I have other files, I have a lot of files on this. So, I'll see, you know, if I can find any time lines, but this is really my time line sort of stuff.

When we went back, you mentioned the "U.S.A. Today" story. We had a--we had never done interviews with anybody after--with any of our Air Traffic people and the media after September 11 for a couple of reasons. One was we didn't want for [unintell.] to relive we knew that September 11 sort of endlessly by doing media interviews with them. Also, since the FBI had this investigation going, you know, we were sort of told well, this is the FBI investigation, so we shouldn't make these people available because the FBI is interviewing

them.

So, as it was coming up to the one-year anniversary date, we were getting a lot of requests to get into Air Traffic facilities and that kind of thing. So, we did a lot of preparatory work on all the Air Traffic issues and we did--we decided to do sort of the one-shot deal for the media where they would have one chance to interview all the Air Traffic people. So we did simultaneous press events in Boston, Washington, New York, and then the next day in Cleveland.

(b)(6), (b)(7)c : Okay.

MS. BROWN: And we did it, partly to coincide with the [unintell.] stories, but Allan Levin [ph] wrote, he did hundreds of interviews for it with our folks. And we focused on how we brought the air space down. And I don't think, at that time, we had a lot of questions about military notification. It was--but we prepared a lot of stuff for that that had to do with time lines, but it wasn't so much the military issue. And then, as I said, the military notification issue didn't

really start to come back again, until the Commission started having hearings and started, you know, asking questions about this.

(b)(6), (b)(7)c : Immediately following September 11, what caused this military notification issue to rise to the surface?

MS. BROWN: Because we were getting questions from the media about, I mean, the family members were wanting to know and they were pressing the media to find out what the notification issues were. I mean, this is--the notification issues has always been driven by the families. And, you know, it's frustrating because--here, because I got when the military was notified, I think it's significant to the families to know about their families, but some of the military jets that responded were not armed, could not have shot down the civilian air planes. We knew that the authorization for the [unintell.] hadn't happened in time and so I guess it was [unintell.] for us to keep getting press about, you know, how soon was the military notified because in some ways it seems irrelevant or, it's

not irrelevant, I mean, I think there were very few of us thought that on September 11 the military would have actually shot down a civilian airplane in that time frame which was [unintell.] planes were being hijacked, that that kind of decision would be made [unintell.].

But the [unintell.] the press was quizzing us about it. And so we were, you know, trying to figure out the best we could when the notifications had happened.

(b)(6), (b)(7)c : It was basically questions from the public-driven issue.

MS. BROWN: I think so that's my impression. There were certain family members who were very, very active and very aggressive with reporters and they felt like they wanted to know these things and that reporters were [unintell.] for finding out about it.

And another issue was this issue about whether a gun was on one of the planes or not. [unintell.] satisfied the next morning [unintell.] but that there was not a gun. But what happened

was there was a miscommunication between an airline dispatch person and one of our security people. And it was written in a log that someone had been shot, when, in fact, they hadn't been. And that document was constantly updated and so it was, you know, just, you know, updated to correct the original mistake and it developed this whole idea that there was this conspiracy that we were suppressing this document. Well, the document didn't exist like it had anymore, because it had been updated and overwritten, it wasn't like we kept every separate of every document.

So, I mean, I guess we struggled to get the best time line we could from our discussion with NORAD and Scott and I had a lot of conversations with NORAD about this. And I don't think either of us, really, ever felt like we had, you know, a completely accurate time line. But we kept going back to people and saying, look do you have a better time for this and they [unintell.] we don't have anything that, you know, that marks when we told them about this or when we told them about

that. And that was the answer we kept getting back.

(b)(6), (b)(7)c : Internally?

MS. BROWN: Internally, yes, internally. And I know, we in Public Affairs grappled with this same think, you know.

(b)(6), (b)(7)c : Does Public Affairs get involved with, like White House briefings, as well?

MS. BROWN: Not generally, no. I mean, at least, I wouldn't get involved. The critical [unintell.] is involved, but I don't think Susan [ph] was generally involved in White House briefings.

(b)(6), (b)(7)c : What about, like, preparations for them?

MS. BROWN: Not really.

(b)(6), (b)(7)c : I know--I'm pretty certain that Jane Garvey had to provide questions for the record after her Commission testimony?

MS. BROWN: Mm-hmm.

(b)(6), (b)(7)c : Would you guys have gotten involved in that?

MS. BROWN: I was somewhat involved in the follow-up. We had an immediate [unintell.] to Mr. BenVeniste about, after I think it was the first thing, it might have been the second [unintell.] about who wanted the answer about this time line and I had put together a statement for him. He wanted it by that evening. And so, we put it together after we came back from the hearing. We sat down and put that together. And I think we e-mailed it to Jane who sent it to Mr. BenVeniste.

So, but the other--Shirley Miller is really the person I think--Shirley and [unintell.] who was our current head of security were two of the people, the three of us and Linda were probably the main people helping [unintell.] because we had all been here on September 11. Part of the problem is the Air Traffic organization has kind of turned over, some people have retired, some people have left.

And, so, we were kind of all here and all extremely involved in September 11 and the aftermath. And at the administrative level, then

Greg [ph], my current boss wasn't here then. So, I kind of [inaudible] was the person who was, you know, pulled into this. So, we--throughout the Commission hearings, helped prepare some of the materials and Shirley really has been the focal point for dealing with the Commission, collecting a lot of the information that they requested and faxing it to them, and, also, creating that source for testimony.

(b)(6), (b)(7)c : Do you still have a copy of that document?

MS. BROWN: Which document?

(b)(6), (b)(7)c : The CFR that you guys provided for Jane Garvey?

MS. BROWN: BenVeniste, yeah, I'm sure I have it somewhere, yes. Because sometime after we prepared it, Shirley said to me--I got a press call and I called Shirley about it and I said, look can I just give them the statement we gave to Benveniste? And she said, it probably would be better if you didn't do that, because we all know that part of that statement is not exactly

accurate.

But I felt--

(b)(6), (b)(7)c : Shirley said that to you?

MS. BROWN: Yeah.

(b)(6), (b)(7)c : During your telephone conversation?

MS. BROWN: Yeah, or it might have been in person. So, I think, you now, I think when we sent it to him, we thought it was accurate. And something--I'd have to look at the statement. But I think something after that caused us to question whether something we had said in it was absolutely accurate or not.

(b)(6), (b)(7)c : Do you know how long that was after the statement was given to the Commission?

MS. BROWN: I think it was at least a couple of weeks, at least after that. It might have been longer than that.

(b)(6), (b)(7)c : Do you know what efforts were made to try to verify the information that was provided to the Commission and make it correct that statement?

MS. BROWN: I don't know what we did to correct that statement. Shirley was really the person who was dealing with the Commission on a day-to-day basis.

But, you know, I don't think we ever gave anything to the Commission that we knew was wrong at the time we gave it to them. I mean, I think we were trying to put together the most accurate information we could.

(b)(6), (b)(7)c : If you guys, if you put out something that was inaccurate and later found out, I'm sorry, if you put out something and then later found it was inaccurate, what sort of steps do you guys normally take to try to make a correction?

MS. BROWN: Well, in a situation where you're dealing with the Commission, I mean, Shirley would have--that would have been sort of in her purview, I don't know what she would have done in that case. I mean, if we--in Public Affairs, if we put out something that's not accurate, we try to immediately correct it. And an example would be, we had a press briefing recently with the head of

the [unintell.] safety program. And he was releasing a report that covered a period from the last fiscal year, 2003.

And we had a [unintell.] a serious [unintell.], you know, had dropped dramatically. So [unintell.] if we had any incidents any [unintell.] this year? And she said, no, and I knew that we had one and it happened, we had at least one if not more that had happened in the past month, but were under investigation. [unintell.] but the [unintell.] turned out to be an error, too.

And so, I had talked with him after the press briefing, and he went back and called every single reporter who had been at the press briefing and said, look, I know this is what was said at the press briefing, but what you have to understand is we have a month of data we haven't classified yet, and it's quite possible that there are--that there are increases in that [unintell.] that could end up being interviewed.

So, I mean, we try to correct even a statement like that. I wouldn't want him on the

record saying that we had no incursions and then have them be some classified as [unintell.]

(b)(6), (b)(7)c : Sure. Do you remember who it was that was asking for the information that was provided to BenVeniste?

MS. BROWN: When?

(b)(6), (b)(7)c : I'm sorry, after the fact, you said that you asked Linda--why were you asking Linda if you could release that statement for that CFR.

MS. BROWN: Not Linda, Shirley.

(b)(6), (b)(7)c : I'm sorry, Shirley.

MS. BROWN: Because we were putting it together for the Commission, she was the focal point for the Commission, and I didn't know what the protocol was for a statement which is given a Commissioner, you know, whether that was considered ours to release or whether or whether I had to say to the reporter, well, if you want to [unintell.] for a copy of what we had provided Mr. BenVeniste, and so, I just needed to know whether it was ours to release or whether I had to refer the reporter

to BenVeniste or to the Commission to get it from them.

(b)(6), (b)(7)c : Okay.

MS. BROWN: Do you know what I mean?

(b)(6), (b)(7)c : Do you know who that report was?

MS. BROWN: No, but there were, it might have been, there were several reporters who maintained that site and they were basically pro-family. There was one guy named (b)(6), (b)(7)c (b)(6), (b)(7)c And there was another guy who called me regularly about this. And they were not reporters in the traditional sense. They pretty much exclusively covered the Commission and what the commissioners were doing [unintell.] and what put it on Websites about things related to the Commission.

(b)(6), (b)(7)c : Sort of like (b)(6), (b)(7)c

MS. BROWN: Yeah, well, except--

(b)(6), (b)(7)c : Except (b)(6), (b)(7)c is a little bit more [unintell.]

MS. BROWN: No, this was very limited, and

these guys were, you know, basically when they were talking to you they were speaking for the families and you had to understand that.

(b)(6), (b)(7)c : [unintell.]

MS. BROWN: Not really.

(b)(6), (b)(7)c : Is there anything else?

What's (b)(6), (b)(7)c last name again?

MS. BROWN: It's (b)(6), (b)(7)c

it actually might help with to talk about this time line, if we brought him in, I mean, but I don't know what your protocol is on that is, so.

(b)(6), (b)(7)c : Yeah, we can jus bring him in real quick and--

MS. BROWN: I've actually got a staff meeting that's supposed that happen in this room in about five minutes.

(b)(6), (b)(7)c : Well, maybe we could just come back then, because we were open from 1:00 to--

(b)(6), (b)(7)c : Maybe later in the afternoon, when we have some time.

MS. BROWN: Okay. You want to come back in a little while?

(b)(6), (b)(7)c : Yeah, is that all right?

MS. BROWN: Yeah, that's fine. I'll see what I can pull together for you.

(b)(6), (b)(7)c : What time is good for you guys in the early afternoon?

MS. BROWN: I've got, the staff meeting is at 11:00 and probably lasts about a half an hour, so I'm pretty free and open after that. Actually there's a ceremony over at the Secretary's Office I have to go to and I think that's at 2:00 o'clock.

(b)(6), (b)(7)c : I'm going to stop the tape here, it's at 10:55.

[END OF INTERVIEW.]

SWORN INTERVIEW OF
LINDA M. SCHUESSLER

BY

SPECIAL AGENT [REDACTED] (b)(6), (b)(7)c

SPECIAL AGENT [REDACTED] (b)(6), (b)(7)c

Thursday, September 23, 2004

8:51 a.m. - 9:45 a.m.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

(b)(6), (b)(7)c : Today is September 23, 2004, the time is 8:51 in the morning. We are at FAA Building 10-A, Room 1002, Washington, D.C. My name is William Owens, my co-Agent is (b)(6), (b)(7)c . We're from the Office of Inspector General, Department of Transportation and we are conducting a review of issues involving certain public statements made by the military and FAA officials at 9/11 Commission hearings and elsewhere that were allegedly inaccurate. We're interviewing Linda M. Schuessler. Ms. Schuessler, if you could, please acknowledge that you are aware this interview is being tape rec

MS. SCHUESSLER: Yes, I understand that.

(b)(6), (b)(7)c : Please raise your right hand. Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, and nothing but the truth?

MS. SCHUESSLER: Yes, I do.

(b)(6), (b)(7)c : Would you, please, give your full name, spelling your last for the record, please?

MS. SCHUESSLER: Linda M. Schuessler,
S-c-h-u-e-s-s-l-e-r.

(b)(6), (b)(7)c : And what's your current
position?

MS. SCHUESSLER: Vice President for System
Operations.

(b)(6), (b)(7)c : What's that routing symbol for
that?

MS. SCHUESSLER: We do not have routing
symbols per se, but if you were going to use a
shorthand, you could use ATO-R.

(b)(6), (b)(7)c : And what grade are you,
currently?

MS. SCHUESSLER: An SES.

(b)(6), (b)(7)c : And how long have you held you
held your current position?

MS. SCHUESSLER: Well, we've undergone
realignment, so I've been in this position for
almost one year.

(b)(6), (b)(7)c : When did you start with the
FAA?

MS. SCHUESSLER: In 1974.

(b)(6), (b)(7)c : In what position and what duty station?

MS. SCHUESSLER: Started in the Atlanta Center as an Air Traffic Control Specialist.

(b)(6), (b)(7)c : And on September 11, what position did you hold?

MS. SCHUESSLER: I was the manager at the Command Center.

(b)(6), (b)(7)c : That's in Herndon, Virginia?

MS. SCHUESSLER: Correct, sir.

(b)(6), (b)(7)c : And at that time what grade were you in?

MS. SCHUESSLER: MSS-4. I know that's Air Traffic grade.

(b)(6), (b)(7)c : I think I might have a table somewhere that converts that to FG and then I have another one that converts it to the regular.

MS. SCHUESSLER: Probably rough conversion would be FG-15.

(b)(6), (b)(7)c : And after September 11, how much longer were you in that position?

MS. SCHUESSLER: Let's see, I came to FAA

headquarters, you know, I'd have to go back and double check this. I'm thinking I came to headquarters in May, but I don't remember now whether 200 and--I think it had to be 2002. It's either 2002 or 2003. I can check that for you, though.

(b)(6), (b)(7)c : And when you came to Washington, D.C., what was the first position that you had taken?

MS. SCHUESSLER: When I first came to Washington, I came from the Atlanta Center.

(b)(6), (b)(7)c : I'm sorry, let's move up forward, when you went from Herndon to D.C., what--

MS. SCHUESSLER: Okay, when I first came back from the Command Center, back into headquarters proper, I was the Manager for Investigations and Evaluation. And from that position, I was detailed into the Deputy for Air Traffic Services for a period of about four months. I went back to the Manager of Evaluations and Investigations, was selected permanently for the Deputy for Air Traffic Services and then from that

position to my current position.

(b)(6), (b)(7)c : The Accident and
Investigations Division, that's AAT-20?

MS. SCHUESSLER: Correct.

(b)(6), (b)(7)c : When you were in that group,
were you working for or in the position that I
understand (b)(6), (b)(7)c

MS. SCHUESSLER: That was, when Knoles
left that position, I was his replacement.

(b)(6), (b)(7)c : Okay, so you replaced him?

MS. SCHUESSLER: Correct.

(b)(6), (b)(7)c : When you were in AAT-20, who
was your boss at that time, who did you report to?

MS. SCHUESSLER: Initially, it was Jeff
Griffith.

(b)(6), (b)(7)c : Jeff Griffith.

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c : And after, Jeff retired,
right?

MS. SCHUESSLER: Yeah, Jeff retired and
that's when I was detailed into his position.

(b)(6), (b)(7)c : Okay.

MS. SCHUESSLER: And you can hold the detail for four months. After four months I went back to AAT-20; (b)(6), (b)(7)c came in and he was my boss at that point. That's the point to that Bill Peacock also retired. He was AAT-1. And (b)(6), (b)(7)c moved into Bill Peacock's position as AAT-1 and I moved into Jeff's position as AAT-2.

(b)(6), (b)(7)c: I guess, just kind of cutting right to the chase, The primary issue that we were interested in speaking to you about, you said that you had an opportunity to look through that testimony from May 23, 2003, right?

MS. SCHUESSLER: Correct.

(b)(6), (b)(7)c: And I think Commissioner Ben-Viniste references a document title "FAA Communications with NORAD on September 11, 2001," after you reviewed that are you familiar with that document?

MS. SCHUESSLER: Probably, I did not go get that document after we talked. But as I reconstruct this, I know Ms. Garvey testified and if I'm looking at the testimony correctly, she was

asked about some time frames and the following day is this question, I guess from Mr. Ben-Viniste. I do remember, after Ms. Garvey testified that day, there was some concern about making sure that we had the proper information to give to the Commission on when NORAD was notified.

(b)(6), (b)(7)c : Mm-hmm.

MS. SCHUESSLER: So, actually there were three of us, as I recall that were talking about this, after the fact. Lynne Osmus was one of them, myself and then Shirley Miller. Shirley Miller became the focal for the FAA for gathering the information and being the conduit between the Commission and the FAA.

(b)(6), (b)(7)c : Okay.

MS. SCHUESSLER: So, after trying to make sure we had accurate data, what I remember was, that evening, was calling (b)(6), (b)(7)c

(b)(6), (b)(7)c she was the, as cited here, the United States Air Force Liaison to the FAA. I called and talked to her that evening, you know, just to make sure, because they were-- (b)(6), (b)(7)c was

trying to prepare something for Ms. Garvey to give to the Commission.

And what (b)(6), (b)(7)c had indicated, that, yes, you know, shortly after the incident started occurring, she was notified and she was part of the telecon. And from there, you know she was also talking to some of her contacts in DOD.

And so, a statement was put together, based on that information, as well as, I guess what Lynne and Shirley gathered and I believe that's what this statement is here.

(b)(6), (b)(7)c : And some type of briefing paper was--

MS. SCHUESSLER: I don't know whether it's a briefing paper, whether they just put a short paragraph together. You'd have to go to Shirley, again, she's the conduit between the FAA and the Commission. You know, for myself, I remember getting ahold of (b)(6), (b)(7)c validating with her that, yes, you know, she was part of the Telecon. And as you're sitting in these quarters here. This is where, and I was out at the Command

Center, so I'm telling you this second-hand, but the way I understand it, in this part of the building, this is where a lot of the telecons were set up.

So, again, Jeff Griffith was heading a lot of those telecons up in it may have been this room, I couldn't tell you. And getting phones and people in the headquarters proper, were part of this room and taking actions from Jeff and, perhaps, others. And (b)(6), (b)(7)c at one point, (b)(6), (b)(7)c at one point joined that group.

So, in going back to try and make sure that we had accurate information, after Ms. Garvey's testimony that evening, again, I got ahold of (b)(6), (b)(7)c to validate, you know, when did she become a part of that. Subsequent to, to us talking that evening, she did say, well, you know, Linda, I've thought about this. I want to make sure everybody understand that, yes, I was part of that, but I wasn't in the room, initially, let's, say after the first event.

To her recollection, she remembers being

part of that after the third, the third event.

(b)(6), (b)(7)c : So we should be able to get a copy of that document from Miller?

MS. SCHUESSLER: From Shirley, again, she's been the focal for all of this. I mean, this is in quotes, so I'm, you know, and it looks like it was testimony that's being read into the record, so I would imagine it's a written statement, but I have not seen the written statement.

(b)(6), (b)(7)c : Do you know what that's referred to as, what that, the document or what, if we were to go to Ms. Miller and ask her for that particular information, do we refer to it as something in particular or some--

MS. SCHUESSLER: I don't think so, if you were to put down with Shirley, we have gathered boxes and boxes of information, and there's a lot of information, as far as I say, time lines. You know, we had a, and I'm making this up, but you know, just to elaborate a point. You've got a composite time line of all the events; and then there's another time line, for instance it will

say, you know, Notification to DOD; then there'll be another time line, where it's just Cleveland Center; there'll be another time line for New York Center; another line for New York TRACON. So, there are a lot of time lines in there, all of them were--had the same factual data in there, because those were based on recorded lines. Or if it wasn't a recorded line it would say approximate and that sort of thing.

So, I think probably if you were to go to Shirley and say, you know, after Ms. Garvey's testimony and that evening, you know, you tried to put a statement together for the Commission, somehow you'd have to refer to it along those lines.

(b)(6), (b)(7)c : This was, like, May 2003, at that time, what position was Lynne Osmus in, was she working for you or--

MS. SCHUESSLER: No, she has never worked for me, she has always been in the FAA's security arena, but as far as title, you would have to validate with her what her specific title was.

(b)(6), (b)(7)c : Did you actually gather the data to put together this statement that they're referencing in here or did you have your staff working on it?

MS. SCHUESSLER: No, that evening, I did call Colonel Atkins just to verify because I think that was the concern as we understood it. You know when did DOD through (b)(6), (b)(7)c you know, become aware of some of these events.

So, I got ahold of (b)(6), (b)(7)c and talked to her to find out from her memory, you know, when did she think she joined the Telecon?

(b)(6), (b)(7)c : Did you then e-mail that or to Ms. Miller?

MS. SCHUESSLER: No, it was all verbal.

(b)(6), (b)(7)c : All verbal.

(b)(6), (b)(7)c : I guess in our mind, you know that evening, when we found out we needed to get the information together, it was, you know, time critical to get the information. I called (b)(6), (b)(7)c (b)(6), (b)(7)c and relayed that both to Lynne and to Shirley. Because as far as who put this complete

statement together, I do not know, but if I had to guess, I would say, Shirley, only because, again, she was the focal.

(b)(6), (b)(7)c : The quote in the testimony, one of the sentences, says, NORAD logs indicate that the FAA made formal notification about American Flight 77 at 9:24 a.m. Do you recall reviewing NORAD logs, any military documents yourself to help you prepare this?

MS. SCHUESSLER: No, no, well, when you say that is that our statement or is that?

(b)(6), (b)(7)c : That's the quote that was--it looks like that was the part that was read into the record now. How decent we don't have the benefit of having the document in front of us right now, but. Maybe we could call Shirley, you think she might have that handy?

MS. SCHUESSLER: She is not here, but I don't know whether she, if you want me to, I don't know whether she's off-site at a meeting or what. If You'd like, I can go check and see. And I guess your plans are, also to talk to Lynne, you know,

she may remember some of this, as well.

(b)(6), (b)(7)c : Yeah, would you mind checking, I think it might help.

MS. SCHUESSLER: Here let me see what I can find out.

(b)(6), (b)(7)c : 9:07, we're going to turn the tape off for a second.

[Break.]

(b)(5), (b)(6), (b)(7)c : 9:09, we've turned the tape back on. When you were putting that testimony together, or that document together, what sort of source materials were you using, aside from your memory, if anything?

(b)(6), (b)(7)c : For your discussion with the colonel.

MS. SCHUESSLER: I was that conduit, because, again, if you remember, I was out at the Command Center, during the events of September 11. So, I was not in headquarters.

(b)(6), (b)(7)c : Right.

MS. SCHUESSLER: So, I was the conduit to try and find out from (b)(6), (b)(7)c from her

memory, you know, when did she join the FAA teleconference here in headquarters?

(b)(6), (b)(7)c : Mm-hmm.

MS. SCHUESSLER: So, part, I don't know all the people that the Commission actually talked to, but I would imagine that some of the people that were here in headquarters that were part of that teleconference, were, if not asked that same question, when did (b)(6), (b)(7)c join the group, I just would imagine that would be part of the conversation in the questioning to the people that were here in headquarters. That was not part of mine, because, again, I was not in the building.

(b)(6), (b)(7)c : So, I guess, because it looks like most of what's quoted in here, you could have gotten from memory, except for this part, maybe, here about the NORAD logs. Where would that information have come from?

MS. SCHUESSLER: Well, Shirley may have had access to the NORAD logs, I don't know that. Just to look and compare what their times were.

(b)(6), (b)(7)c : Okay, so, but you didn't have

access to any military records to help you prepare this?

MS. SCHUESSLER: I did not use any military records to prepare this, no.

(b)(6), (b)(7)c : All right. Did you try to access any FAA records to verify what the military source would be saying? Like if NORAD--NORAD log says that FAA told them about American 77 at 9:24. Did you guys try to corroborate that with an FAA source, as well?

MS. SCHUESSLER: I think early on, again, this has been an ongoing issue as far as the time that the military was notified. You know, so I know there have been several people that have looked at our logs, based on what we have been told. And, perhaps, they looked at DOD logs as well. And we know very clearly that they did not match up. And that's why I'm saying, you know, we, I say we, and I was not part of the reconstruction effort, but, typically, and I know this happened in this particular case. You would go back, you would look at the recorded lines. You would validate the times

that you could.

The written logs that we kept in each of the facilities had times written down, too. And they had times that you maybe called DOD to share information. some of that if it was on a recorded line, was ably right on, it's accurate. In others, it would be approximate times.

(b)(6), (b)(7)c : I think, maybe it might help, if you had, maybe a couple of logs that you could just kind of look and see, you know, I don't know, again, whether you've had an opportunity to do that to try and help set things in your mind, you know you've got several different logs and how they matched or didn't match.

(b)(6), (b)(7)c : That's what I'm getting--I understand that a lot of FAA, just in the general sense, personnel, were looking at time line issues and were trying to, for historical purposes reconstruct what happened at certain times during that day.

I guess what I'm wondering is just with regard to yourself , in preparation of this

testimony or the response, what do they call it, questions for the record or something like that? I think that's what this might be part of.

But in preparing this document that Ben-Viniste quotes in here, what did you, yourself do to try to verify, like the military against, like the FAA record? And if there was a dispute, why not point out well, NORAD says that we called them at 9:24, but we can't find a record of that in our logs. Our logs say we didn't call them until such a time or we called them before?

MS. SCHUESSLER: And you probably do need to talk to Shirley Miller. Again, she is the focal, so I know she has had numerous conversations with the staff people on the Commission, just to, I think, just for that very reason, to say, yes, they may have said this, but our logs do not substantiate it, nor do our phone records substantiate it. There was a difference and, as we talked earlier, the events of the day, as they unfolded, people were lacking in handling events and then after the fact, if it was a not a recorded

line, they had not way to accurately reflect the time frame, they would put down approximate time. So, those approximate times that we may have had in our logs wouldn't necessarily match with DOD.

But for this question, for the record, my tasking was to find out from (b)(6), (b)(7)c as a representative of DOD, when did she join the FAA telecon here at headquarters during that day? Because the lines up here were not recorded, there's no way to ascertain, you know, very succinctly the time that DOD was brought on the line. So, all we could do is go back to her memory to say, this is what I think. I joined the conference and then the ongoing discussion.

So, that evening, what I did was call (b)(6), (b)(7)c to say, okay, we're putting together a statement to respond to the Commission for Ms. Garvey. What is your memory as far as when did you join the conference.

(b)(6), (b)(7)c : So, you're--that was your I guess sole responsibility for that particular item?

MS. SCHUESSLER: Right for this particular

question for the record, correct.

(b)(6), (b)(7)c : Well, then we should talk to either Shirley Miller or [unintelligible] about them and, I guess the other questions we've been asking you about that.

I'm just going to call this item that Mr. Ben-Viniste reference here as just a question for the record. Aside from this question for the record on this testimony, what other public statements are you aware of that the FAA has made concerning its notification to the military on September 11?

MS. SCHUESSLER: When you say public statements, would you be including all the information we gave the Commission?

(b)(6), (b)(7)c : Yeah, I think so.

MS. SCHUESSLER: Again, we're talking boxes of information and tapes.

(b)(6), (b)(7)c : Well, let me clarify that a little bit, because I understand that you guys gave them mountains of source material, tapes and reports and formal Accident Packages and things

like that that have some of that data. I guess, what we're more interested in sort of like summary documents. Yeah, like--

(b)(6), (b)(7)c Press releases--

(b)(6), (b)(7)c : Like this is an example of the sort of thing that we'd be looking at. This is the--

MS. SCHUESSLER: I saw that after the fact, yeah, I saw that after the fact. Press releases, I don't know, you could check with our Public Affairs, (b)(6), (b)(7)c to gather that information. And, in fact, again, since Shirley was our focal, she may have that information, don't know that, readily available. I do know, within, I don't know several weeks a month and a half, two months, along those lines, I know I did talk to "Aviation Week" about the event; talked about it in very generic terms. I do believe that we gave the time lines to them. I do believe and (b)(6), (b)(7) may have this information, but I wouldn't. You know, "U.S.A.Today" ran an article. And I would imagine that we gave information and time lines to them, as

well.

(b)(6), (b)(7)c : You said for the "Aviation Week" article that you actually gave the interview?

MS. SCHUESSLER: Yes.

(b)(6), (b)(7)c : Do you remember when that was?

MS. SCHUESSLER: It was in the fall of 2001.

(b)(6), (b)(7)c : Okay,

(b)(6), (b)(7)c : Do you have a copy of that interview?

MS. SCHUESSLER: At home, probably I do.

(b)(6), (b)(7)c : The Public Affairs would have that information?

MS. SCHUESSLER: I would think so. You know, if not, certainly we can get you a copy.

(b)(6), (b)(7)c : For your interview with "Aviation Week," how did you prepare for that?

MS. SCHUESSLER: Sat down with a Public Affairs person, I believe, I don't believe we did any corporate, you know let's sit down and figure out what we're going to say. They were looking from the vantage point, if I remember correctly,

from the Command Center proper.

(b)(6), (b)(7)c : Do you remember during that interview if you guys discussed military notification?

MS. SCHUESSLER: I would imagine there's a statement or two in there about military notification and we would have used the time frames that, you know, very early on. Again, we either had the actual time because of the recorded data or we put in approximate times. But I would imagine that's there, as well. I remember, too, but then, again, I don't know how much of this you've looked at. We have a lot of our FAA facilities that reached out to their contacts in DOT, you know, so we had some of that going on, as well as from the headquarters arena.

(b)(6), (b)(7)c : We talked about public statements. How about internal briefing documents that you're aware of that were prepared concerning military notification.

MS. SCHUESSLER: The only thing I'm aware of, again, I was out at the Command Center when all

this was transpiring. We gave our information that we had gathered to AAT-20, again it was Dave Knoles at the time.

(b)(6), (b)(7)c : Mm-hmm.

MS. SCHUESSLER: They put together various source documents, you know, this, obviously, is one of those documents.

(b)(6), (b)(7)c : The "Summary of Air Traffic Hijack Events"?

MS. SCHUESSLER: Right, okay.

(b)(6), (b)(7)c : What types of things were you getting from Knoles, I mean--

MS. SCHUESSLER: For us, it would be just like all of the FAA facilities, were doing at the time. We would get transcripts of the states of various operational positions that had pertinent data in there about conversations that we out at the Command Center were have with either the airlines, FAA facilities or, in some cases, DOD. Those types of information. Then he took that from all the FAA facilities and if I can look at this one second?

(b)(6), (b)(7)c : Mm-hmm.

MS. SCHUESSLER: This is the kind of a document that he would put all the data together to tell the unfolding of the story. That's not to say that it's all inclusive of all the information that he received from all the facilities, but what he did was condense everything so you can see how each aircraft was handled.

(b)(6), (b)(7)c This document I have here, it's titled, at the top it says Sensitive Security Information FAA Communications Regarding Hijacked Aircraft on September 11, 2001. Are you familiar with that document?

MS. SCHUESSLER: I'm not sure the exact document, but, again, most of the information is information that, you know, I have seen in various other logs, but I don't remember this specific compilation of information.

(b)(6), (b)(7)c : Since you were at the Command Center--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c : --presumably, very shortly

after the 11th you would have been gathering your logs and pulling your tapes and things like that. Do you recall how much, if any of that information you shared with the military?

MS. SCHUESSLER: At that time, I would guess we didn't share any of that. I know from a manager perspective, I was never asked by the military for any information. I did not have any conversations with the military. Perhaps, that call could have come into our Quality Assurance Office, but I think, had that call come in, they would have advised me that they were being asked to provide information, so, no, I don't believe we ever got that request.

(b)(6), (b)(7)c : The, I know, for example, like the Centers have a Quality Assurance Office, did you have one, as well?

MS. SCHUESSLER: Yes.

(b)(6), (b)(7)c : And I also understand like the four centers that were involved with the hijacked aircraft, had prepared formal Accident Packages for that day

MS. SCHUESSLER: Right.

(b)(6), (b)(7)c : Did the Center prepare anything similar to that?

MS. SCHUESSLER: The Command Center?

(b)(6), (b)(7)c : Yes.

MS. SCHUESSLER: No. No, we don't, you know, the Accident Packages, themselves, you know, there's very much a protocol and that is the facility that had the direct involvement and they would be the focal for that. The Command Center does not have any of that responsibility.

(b)(6), (b)(7)c : Did you guys prepare any just impromptu after-action reports or anything like that?

MS. SCHUESSLER: I believe we started doing some of that and all of that was put on hold from a headquarters perspective, they were taking care of all the after-action items and compilations. So, at that point we just forwarded all our information to the AAT-20 office for them to put together.

(b)(6), (b)(7)c : And that would have been

Knoles?

MS. SCHUESSLER: Correct.

(b)(6), (b)(7)c : And who was your Quality Assurance, who was the manager for Quality Assurance at Herndon.

MS. SCHUESSLER: (b)(6), (b)(7)c

(b)(6), (b)(7)c : (b)(6), (b)(7)c

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c : Do you recall if, while you were out at the Command Center, if you guys received any information from the military concerning when certain events occurred, any data, any of their logs or anything like that?

MS. SCHUESSLER: No, and, typically, you wouldn't find that out at the Command Center. Out at the Command Center, you do have what we call a Services Cell, and that is staffed by the military, as well as civilian and, you know, depending on the event that's transpiring. But even between the services Cell and the FAA at the Command Center, I don't remember sharing any information.

(b)(6), (b)(7)c : After you came to AAT-20?

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c : Do you recall receiving any requests from the military or Department of Defense for information about different events from September 11?

MS. SCHUESSLER: No, I don't, most of the work--preliminary work had been done and I think everybody thought, okay, we had gathered all the information that was necessary. And so, that was really kind of a lull. At that point, FAA, I think, we thought everything was completed and we were moving forward. We had all the data, we weren't destroying it then and that sort of thing. But I think that was that lull. And I don't think it really got resurrected again until the Commission came into existence and then they started requesting some data.

(b)(6), (b)(7)c : The Commission?

MS. SCHUESSLER: Yes.

(b)(6), (b)(7)c : Once the Commission started requesting data, do you recall receiving any requests from the military for information?

MS. SCHUESSLER: I don't. At that point I was up here in this office rather than AAT-20.

So--

(b)(6), (b)(7)c : In like May '03 some of the hearings had started and I think you would have still been in AAT-20. The only reason I say that is because the testimony that you look like helped prepare, the Questions for the record--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c : --probably would have been in that role, no?

MS. SCHUESSLER: Not necessarily.

(b)(6), (b)(7)c : Or you could have been in this position already.

MS. SCHUESSLER: Yes, I could have been up here already.

(b)(6), (b)(7)c : Okay, I'm sorry, yeah.

MS. SCHUESSLER: Yeah. And, again, we can get--we can get the dates for you and in my mind, I guess it really doesn't matter what position I was in, you know because there were a lot of people that were, well, probably focal points in the

organization, just because either of their history or because of their expertise. So, because of my history out at the Command Center, I know people came to me for inclusion on different things.

I know David Knoles, when he moved on to his next position for a period of time, they were still relying on him, but I think probably Tony Ferrante then became the main focal in AAT-20, because he was there with Dave Knoles when they were, initially, putting the information together.

(b)(6), (b)(7)c : Mm-hmm.

MS. SCHUESSLER: And he stayed in that position. And while I was here in the Acting Deputy Role, he became the Acting Manager for AAT-20.

(b)(6), (b)(7)c : Do you remember at any point ever requesting any information from the military?

MS. SCHUESSLER: I never did, no.

(b)(6), (b)(7)c : Or your staff?

MS. SCHUESSLER: I don't remember if they went out and asked for any military logs. I don't remember whether Shirley did. I know, at some

point we have had to have compared notes, you know, just because of the questions that came up. As far as a log, I would imagine that we did, you know, either get a log or at least had conversations about what time frames that they had on their log. But, again, I go back to the beginning, I think both DOD and FAA felt comfortable that we were not going to what we would say tamper with our logs to show a good story or whatever story we wanted to tell.

You know, we felt like our logs were as valid as we could make them, and unless you had a recorded line saying otherwise, we were going to leave out time frames alone. We were not going to change them.

(b)(6), (b)(7)c : Well, the reason, I mean, I'm kind of focused on that issue is because I see in a couple of the summary time line documents that the FAA has prepared, they actually, they reference a military log. And I'm wondering how the FAA came to that or obtain that information, do you know?

MS. SCHUESSLER: I would imagine, again,

either Shirley or Tony Ferrante requested the log. Again, because the question came up, you know, our story and time frame was a little bit different than DOD, you know, just to be able to make a comparison.

(b)(6), (b)(7)c : Do you have anymore questions about that?

(b)(6), (b)(7)c : Well, do you recall, other than the question being raised that FAA logs may not correspond with what the DOD logs--was there actually any argument over the times? Was there any dispute, more than just, it doesn't match? Was it more FAA, was there any issue about FAA saying that's not right, this is the right time or vice versa, the military saying, no, our time is right and--

MS. SCHUESSLER: Well, again, the fact, I know those discussions took place. As far as an argument that you need to change yours because our time is right. If, indeed, they had factual data, a tape that said this was the time frame, I think, probably, we would accept that. Now, we do

acknowledge, in some cases, if I remember correctly, there may be a difference of one minute and we based that on the fact that, you know, our time may be a minute off from theirs. But if you're talking 10, 15, 20 minutes, no. Unless you can show me and confirm for me that you've got a tape that indicates this is the time frame, you know, why would I accept your word against what our people are saying? It's that kind of thing.

So, we understand that, unless you've got conclusive proof, it's very difficult to make amendments to what we're showing in our logs.

(b)(6), (b)(7)c : Yeah, I don't think, I mean, I don't think the issue that the Commission had raised concerns, you know, one-minute discrepancies or anything like that.

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c : I mean, the thing that they seemed to be concerned about and that we're kind of focused on is, you know, they had--the FAA doesn't seem to cite this in any of the documents I've seen thus far, but Elise and I are just getting started,

so we haven't seen everything yet.

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c : But like the military says that they had a report from FAA that United 93 was hijacked at 9:16 in the morning, which, as I understand things isn't possible since FAA didn't even know it was hijacked at that point. And then there's another reference to the military receiving notice that American 77 was hijacked at 9:24 in the morning. And there are a couple of documents prepared or at least one document that FAA cites that particular time point.

So, that's the sort of thing we're really focused on. Not minute discrepancies or something like that.

MS. SCHUESSLER: And I can understand that, but you also have to recognize and you probably need to talk to Tony Ferrante, because he really was the gatherer of all this information. He can possibly give you a good validation of, you know, the discrepancies here.

(b)(6), (b)(7)c : Mm-hmm.

MS. SCHUESSLER: But in a complete package, you have to remember that morning that on these open telecons and phone lines, there were more than just these four aircraft that people were talking about.

(b)(6), (b)(7)c : Okay.

MS. SCHUESSLER: So, as you, if you have an opportunity to talk to people, what they will say is things were unfolding so rapidly and it's not just these four aircraft, there was others that are interspersed, so you're throwing out call signs and saying, we don't know where he is, or we think this has happened or that's happened. So, it very--and you hate to say very--easy, but it is quite easy to hear something and think it's maybe a United Aircraft that's in your mind, but, actually, it's another one they're talking about. Either the person verbally stated the incorrect call sign or you heard the incorrect call sign. And the problem is, again, you don't necessarily have he recorded data to be able to correct that.

(b)(6), (b)(7)c : Okay.

MS. SCHUESSLER: So, again, I go back to the beginning and say, none of this, I don't believe is intentional. It's just, as the day unfolded and there's so much going on this open line and telecon and sharing information that people are people and they're making human errors; don't intend to, it's not purposeful. But unless you've got a recorded line to actually go back and correct it, you know, you're stuck with the log that you've got.

(b)(6), (b)(7)c : [unintelligible]

MS. SCHUESSLER: Oh, I know, this is all day long. Some of it's operational, some of it's security.

(b)(6), (b)(7)c : Mm-hmm. Did you participate or actually, did you participate in conducting or preparing for any White House Briefing?

MS. SCHUESSLER: Okay, let me see, because I do security stuff, I'm trying to--when you say White House briefing?

(b)(6), (b)(7)c : Like on the historical event, because I understand there were some briefings on,

you know, what's happening today and what are we doing in the future, but more a focus on historical briefings like--

MS. SCHUESSLER: What happened?

(b)(6), (b)(7)c : --yeah.

MS. SCHUESSLER: I do know, no, the only thing that I can remember is somebody going up to the White House to brief and Jeff Griffith, I mean, that's the time frame I'm kind of gearing myself for, Jeff Griffith went up to the White House to do a briefing. But I don't, you know, I never did any briefing.

(b)(6), (b)(7)c : Okay.

MS. SCHUESSLER: As far as gathering information, I, you know, I gathered information or, actually, the Quality Assurance out at the Command Center gathered information for headquarters. But I don't remember any while I was in headquarters, per se, other than routine gathering information I couldn't tell you whether it was the White House Commission or you know, who it was for, I don't know.

(b)(6), (b)(7)c : Did you participate in any, like, after-action, groups following September 11, kind of gathering information for the Administrator to kind of put together a historical picture?

MS. SCHUESSLER: No, I was, again, I was out at the Command Center.

(b)(6), (b)(7)c : Okay.

MS. SCHUESSLER: And we began some of that out at the Command Center to do some of that. And that's when we got, you know, the direction from headquarters not to do any of that; send all the data that we had to headquarters and they would put all that together.

(b)(6), (b)(7)c : When you guys gathered that data, I think you said, before, I just want to make sure, you sent it to AAT-20?

MS. SCHUESSLER: Correct.

[Lengthy pause.]

(b)(6), (b)(7)c : Do you have anything else?

(b)(6), (b)(7)c : Do you recall seeing any public statements that the military or the Department of Defense may have put out relating to

the time line of events?

MS. SCHUESSLER: Oh, I'm sure they were in the newspaper and I read those, and you know, I think we very openly acknowledged the fact from early, you know, that our time frame didn't necessarily match their time frame.

(b)(6), (b)(7)c : Do you recall whether the military coordinated before putting out any of these press releases?

MS. SCHUESSLER: If they did, they would have coordinated that with (b)(6), (b)(7)c if they did. I think they're Public Affairs, well, unless he was, yeah, I was going to say (b)(6), (b)(7)c was probably not here, maybe (b)(6), (b)(7)c she would probably be the best person to talk to.

(b)(6), (b)(7)c : Martin is the current Public Affairs?

MS. SCHUESSLER: Correct, and Laura, I think, may be his Deputy.

(b)(6), (b)(7)c : Oh, okay, currently?

MS. SCHUESSLER: Currently.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Is there anything else you can think of that could be relevant to what we're--

MS. SCHUESSLER: No, other than, you know, talk to, maybe, a few more people and get a more composite picture, obviously than I can give you. In all my dealings with all the FAA people and all the DOD people that I have talked to, you know, I don't, there is, in my opinion, no intent whatsoever to deceive mislead anybody.

(b)(6), (b)(7)c : Okay, I don't have anything.

(b)(6), (b)(7)c : No, thank you.

(b)(6), (b)(7)c : Thank you.

MS. SCHUESSLER: You're welcome.

(b)(6), (b)(7)c : End the recording at 9:45.

[END OF INTERVIEW.]

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case # 042R0122001

SWORN INTERVIEW OF

(b)(6), (b)(7)c

BY

INVESTIGATOR (b)(6), (b)(7)c

INVESTIGATOR (b)(6), (b)(7)c

Thursday, September 23, 2004

1:11 p.m. - 2:07 p.m.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

(b)(6), (b)(7)c : --1:11 p.m. we are at FAA Building 10-A, Room 908 in Washington, D.C. My name is (b)(6), (b)(7)c, my co-agent is (b)(6), (b)(7)c. We're from the Office of Inspector General Department of Transportation and we're conducting a review of issues involving certain public statements made by the military and FAA officials at 9/11 Commission Hearings elsewhere that were allegedly inaccurate.

We're interviewing (b)(6), (b)(7)c. Would you please acknowledge for the record that this interview is being tape recorded?

(b)(6), (b)(7)c : Yes, I so acknowledge.

(b)(6), (b)(7)c : Will you please raise your right hand? Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, and nothing but the truth?

(b)(6), (b)(7)c : Yes.

(b)(6), (b)(7)c : Will you please state your full name, spelling your last name for the record?

(b)(6), (b)(7)c My full name is (b)(6), (b)(7)c

middle initial (b)(6), (b)(7) as in (b)(6), (b)(7)c which is (b)(6), (b)(7) in (b)(6), (b)(7)c

(b)(6), (b)(7)c : And what's your current position?

(b)(6), (b)(7)c

(b)(6), (b)(7)c at FAA headquarters.

(b)(6), (b)(7)c : And what grade are you?

(b)(6), (b)(7)c

(b)(6), (b)(7)c : And how long have you held that position?

(b)(6), (b)(7)c Since August of 1997.

(b)(6), (b)(7)c : Was that the position you held on September 11, 2001?

(b)(6), (b)(7)c Yes.

(b)(6), (b)(7)c : And were you also a (b)(6), (b)(7)c at that time?

(b)(6), (b)(7)c Yes.

(b)(6), (b)(7)c : Can you describe very briefly what your duties are?

(b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c : I think you said before we started the interview that you had done a little research concerning press releases that the FAA issued following September 11?

(b)(6), (b)(7)c Yes.

(b)(6), (b)(7)c : And what did you find?

(b)(6), (b)(7)c I found that in looking at the press releases issued by the FAA, which are

available on the FAA Website, now, that there were 11 news releases issued by the FAA between September 12, 2001, and December 19, 2001. These dealt mostly with the resumption of flying after 9/11 or restrictions placed on flying after 9/11.

(b)(6), (b)(7)c : Did you find any that dealt with historical time line issues?

(b)(6), (b)(7)c No, not at that time.

(b)(6), (b)(7)c : Are there other press releases after December that might exist concerning time lines?

(b)(6), (b)(7)c There is an FAA fact sheet dated August 12, of 2002, which gives a brief chronology of events on 9/11 of 2001. This was prepared in anticipation of the first anniversary of 9/11. And that fact sheet is also available, now, on our Website.

(b)(6), (b)(7)c : Who actually prepared this?

(b)(6), (b)(7)c I did.

(b)(6), (b)(7)c : You did?

(b)(6), (b)(7)c My name is, as you can see my name is on--

(b)(6), (b)(7)c : This is an FAA News Release,
Fact Sheet --

(b)(6), (b)(7)c Technically speaking, it's a
fact sheet that's available for public
distribution, it's not considered a news release --

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c --because there's no news in
it, if you will.

(b)(6), (b)(7)c : I see.

(b)(6), (b)(7)c It's merely a factual
listing of a chronology of certain events on that
day.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c I know it's a small
difference, but it's says FAA News, in that it
comes from the Office of Public Affairs.

(b)(6), (b)(7)c : I see, okay, yeah, because
across the top it says FAA News--Federal Aviation
Administration, Washington, D.C. and it's got the
ZIP Code. It says for immediate release. Date
August 12, 2002, it's got your name and then phone
number as a contact point and it says Fact Sheet,

Chronology of Events on September 11, 2001. I just want to get that in for the record so we know which document we're talking about.

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : How did you prepare this?

What did you use to get all this information?

(b)(6), (b)(7)c : A variety of sources; the afternoon of 9/11/2001, I compiled--at the direction of the then Assistant Administrator of Public Affairs, Scott Brenner, a list of the flights and the actual information that we had at that time. In other words, the airline; the flight number; the number of people on-board; which airport it departed from; and where it crashed.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : That was the beginning. And that was, again, based--because at the time on the afternoon of 9/11, there was still a lot of confusion, discussion about how many airplanes were, indeed, missing; what had happened; were there any unaccounted for; and at that time, we were trying to get together the basic information

that we knew.

And if it's undated, I can give you a copy of that.

(b)(6), (b)(7)c : Okay, that would be great.

(b)(6), (b)(7)c : And I actually have some corrections that were made in the Air Traffic organization to that and other things. I can show this to you, I can make copies, I'd like to keep that for myself.

(b)(6), (b)(7)c : This fact sheet and this other document these are your copies right now?

(b)(6), (b)(7)c : Yes.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : On the fact sheet, I mean, that's available on the Web.

(b)(6), (b)(7)c : It's on the Internet?

(b)(6), (b)(7)c : Yes, it is.

(b)(6), (b)(7)c : This other document, you've shown us, it says Flights in September 11 Incident.

(b)(6), (b)(7)c : Mm-hmm. I have two copies of that; that's what I prepared at that time.

(b)(6), (b)(7)c : And then this third page that

you gave us has a bunch of handwritten notes on it.

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : And whose handwriting is this?

(b)(6), (b)(7)c : I don't know.

(b)(6), (b)(7)c : Okay. It's--these phone numbers on here, there's a (b)(6), (b)(7)c

(b)(6), (b)(7)c : No. Now--718 is a New York area number, I don't know specifically which one. Now, if you'll, I think--

(b)(6), (b)(7)c : That would be Eastern Region or some facility out in that region.

(b)(6), (b)(7)c : It could very well, be, yeah.

(b)(6), (b)(7)c : And I think that's a New Jersey exchange.

(b)(6), (b)(7)c : Okay, I don't know.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Basically, what we have here is the handwritten notes, it says, please verify times, et cetera, prepared by APA Public Affairs headquarters, return to (b)(6), (b)(7)c ., that is

(b)(6), (b)(7)c [ph], who was and is a

special assistant in Air Traffic here.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : She's in AT-1--at the time that was Air Traffic on a fax number and a phone number for her. Now, whether that is her handwriting or not, I couldn't say. I think--

(b)(6), (b)(7)c : Go ahead.

(b)(6), (b)(7)c : Sir, you actually verified--

(b)(6), (b)(7)c : Basically the Air Traffic organization and the woman I dealt with frequently before and after is a (b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c : You prepared this?

(b)(6), (b)(7)c : Without the handwriting, this is what you saw earlier.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Uh-huh, so then you sent--so this was then sent to Air Traffic--

(b)(6), (b)(7)c : Yes.

(b)(6), (b)(7)c : --for verification?

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : Do you know who in that--to

(b)(6), (b)(7)c

(b)(6), (b)(7)c : Yes, and then she sent it elsewhere and I don't know where.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Now--

(b)(6), (b)(7)c : [unintell.] has her number

(b)(6), (b)(7)c

(b)(6), (b)(7)c : That was her number. That's not--

(b)(6), (b)(7)c : Is she still in that division?

(b)(6), (b)(7)c : Well, there's been a re-org--in other words, we had, at that time, we had what we called Air Traffic--

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : --which was, basically, the organization that ran the air traffic with the controllers. And since then, we've split that into several different organizations. (b)(6), (b)(7)c is still an FAA employee, she works, now in what's called Terminal Operations part of the new Air Traffic organization.

(b)(6), (b)(7)c : So that might not be a good

number for her anymore?

(b)(6), (b)(7)c : No, I have a direct number
for her--

(b)(6), (b)(7)c : Oh, do you, okay.

(b)(6), (b)(7)c : --I do not know what it is,
but--

(b)(6), (b)(7)c : Well, we can get it after.

(b)(6), (b)(7)c : Yeah.

(b)(6), (b)(7)c : Thank you.

(b)(6), (b)(7)c : Now, basically, for, you
know, to understand this. As I said, this earlier
one, the clean copy, if you will, I prepared the
afternoon of 9/11. In preparing the chronology 11
months later, I took that and sent it to Air
Traffic and said are these, based on what you know
now, is this accurate? And this is what I got
back.

(b)(6), (b)(7)c : So you sent it forward to

(b)(6), (b)(7)c

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : --and then it came back--

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : --sometime around August 2002?

(b)(6), (b)(7)c : Yes, mm-hmm, July or August of 2002.

(b)(6), (b)(7)c : I just want to note that this chronology that you have here does not include any information about military notification?

(b)(6), (b)(7)c : It does not, that is correct.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : And that was not really an issue, or the main issue was, okay. The main issue was, okay, what happened after 9/11 at various times, there were different newspaper stories about what happened, when, where each airplane flew.

(b)(6), (b)(7)c : So this document here is one of the first documents that you used to prepare this?

(b)(6), (b)(7)c : Yes.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Actually the corrected--

(b)(6), (b)(7)c : The corrected flights of

September 11 incident is the first document that you used to prepare the FAA release?

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : Did you--do you have any other time lines that you had worked on?

(b)(6), (b)(7)c : I did, use this from NORAD.

(b)(6), (b)(7)c : This is a copy of the North American Aerospace Defense Command, I think this is commonly referred to as their September 17, 2001 News Release, is that your understanding?

(b)(6), (b)(7)c : I don't know.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : It's certainly plausible or logical it would be referred to that way.

(b)(6), (b)(7)c : Just generically, I think it's how people refer to that.

(b)(6), (b)(7)c : Mm-hmm, mm-hmm. Now, I have, for example, a--

(b)(6), (b)(7)c : This news release or this document here that what has been called a news release from NORAD, this would have been a source document for your fact sheet?

(b)(6), (b)(7)c : Yeah, mm-hmm.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : I also have a chronology--oh, a chronology on American Flight 77, which was prepared by the Air Traffic Investigations and Evaluations Office here.

(b)(6), (b)(7)c : It's the AAP20, right?

(b)(6), (b)(7)c : Correct.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : And that is--

(b)(6), (b)(7)c : This says American Airlines Flight 77 AAL77 Washington/Dulles to Los Angeles, all times indicated are Eastern Daylight Savings Time; it's two pages, on the bottom of the second page it says AAT 20, September 15, 2001, 7:00 p.m. Do you know who you would have gotten this from at AAT20, who you would be dealing with?

(b)(6), (b)(7)c : No and it probably didn't come directly from AAT20, but, rather, through the Air Traffic headquarters office here, which is where Patrice is at.

(b)(6), (b)(7)c : Oh, okay.

(b)(6), (b)(7)c : In other words, it would go from AAT-20 to AAT-1 and then to me. Now, I honestly don't recall who specifically gave that to me or exactly where I got it.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Were there specific documents relating to AA-77 at time that you were being asked about it?

(b)(6), (b)(7)c : There probably were, I don't recall specific questions. There were specific questions about all of the flights. And along the lines of when did we know the flight was missing or in trouble and why didn't we track the flight and how did we lose it and a great number of questions of that nature.

And, of course, here in this area, there was, if you will, greater interest in American 77 than in the other three because it was local.

(b)(6), (b)(7)c : When would you have received this document on American 77? Would it have been when you were working on preparing the fact sheet?

(b)(6), (b)(7)c : When, specifically, I don't

know. And it's probable but I don't recall the specifics that in preparing this, that somebody in Air Traffic gave me a copy of that.

(b)(6), (b)(7)c : Okay. So you would have gotten it closer to the time that you prepared the Fact Sheet versus--because this document's dated 9/15/01?

(b)(6), (b)(7)c : Correct.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Yeah. On the 15th I was not--the 15th of September '01, I was not in to the details of that.

(b)(6), (b)(7)c : Okay. Did you have any such documents for--

(b)(6), (b)(7)c : This I would say is not really a source document, it's rather a lengthy chronology that our then historian prepared and whether it was based on what I prepared, in part, went into that document, so that's not a source document, it's more a [unintell.] document.

(b)(6), (b)(7)c : I didn't know FAA had a historian.

(b)(6), (b)(7)c : We did, until he retired, we had a historian.

(b)(6), (b)(7)c : Really? This document's titled Chronology of Attacks of September 11, 2001 and Subsequent Events Through April 30, 2002, Eastern Time [unintell.]. It says it's prepared by FAA Agency historian, [unintell.] as a reference tool. It does not represent an official position of the FAA. And it's many pages. I don't know how many. Who was the historian?

(b)(6), (b)(7)c [ph].

(b)(6), (b)(7)c .

(b)(6), (b)(7)c I don't recall his middle initial, Preston.

(b)(6), (b)(7)c : Do you know when he retired?

(b)(6), (b)(7)c No, probably sometime in '02 or possible in the beginning of '03. We would have that here.

(b)(6), (b)(7)c : He was an FAA employee?

(b)(6), (b)(7)c Yeah.

(b)(6), (b)(7)c : Okay. So, your fact sheet actually would affect this document?

(b)(6), (b)(7)c : Yes.

(b)(6), (b)(7)c : So your fact sheet would have been a source document for that--

(b)(6), (b)(7)c : Correct.

(b)(6), (b)(7)c : --document prepared by the historian?

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : He have like an archive or something like that?

(b)(6), (b)(7)c : He does or he (b)(6), (b)(7)c and when he retired most of that is still here.

(b)(6), (b)(7)c : Where was he situated in the structure?

(b)(6), (b)(7)c : He was in (b)(6), (b)(7)c

(b)(6), (b)(7)c : Oh, okay, okay.

(b)(6), (b)(7)c : And he was, basically, I think he reported to the (b)(6), (b)(7)c

(b)(6), (b)(7)c .

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : And there would be, obviously, in (b)(6), (b)(7)c chronology there are a lot of facts, incidents, whatever that I, you know,

really was interested in, but didn't apply.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : And I don't recall, without looking at it, what details he might have had on military notification. There's a lot in there [unintell.] presumptions [unintell.] that sort of thing.

(b)(6), (b)(7)c : I know that you have some other documents here, I'll just ask you to go through them.

(b)(6), (b)(7)c : Okay, here are some briefing notes that I prepared on 9/11, as we went along. And you can certainly look at those, and I can give you copies.

(b)(6), (b)(7)c : This is really early--

(b)(6), (b)(7)c : Yeah.

(b)(6), (b)(7)c : --12:45 and 2:45, it doesn't look like there's any information in here about military notification.

(b)(6), (b)(7)c : No, because, at that time, we were here in Public Affairs and some of us, at that time, were sitting in the Operations Center

upstairs. We had an open bridge for news medias calls.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : By an open bridge, I mean any reporter could dial a number in here, so there'd be an ongoing telephone news briefing.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : And then after that, we came here and at a time we said, okay, where are we starting. And just as an aid to other--to my colleagues, other Public Affairs officers, okay, this is the situation now.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : The main points. For example, you know, the air space aviation and airport is shut down, it won't open till at least tomorrow.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Basic report to reporters.

(b)(6), (b)(7)c : Do you have any questions about that, (b)(6), (b)(7)c

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : And then I have this, for example, here's a "Washington Times" chronology, shortly after that is prepared by the Associated Press,

(b)(6), (b)(7)c "Chronology of Terror" is the title from the "Washington Times." It's not dated though, I don't see anything in her about military notice.

(b)(6), (b)(7)c : Probably not.

(b)(6), (b)(7)c : It's actually a copy of a "Washington Post" September 12, '01 article.

(b)(6), (b)(7)c : That's just the back of the [unintell.] that doesn't have anything to do with 9/11 at all. That's out of our daily quick report--

(b)(6), (b)(7)c : Oh, I see.

(b)(6), (b)(7)c : --without even looking at it, I'd be willing to bet it's not related. When we do a photocopy, it's back and front and you're just looking, if you will, at the back of the page.

(b)(6), (b)(7)c : It doesn't seem to be. It's related to September 11, but it's not--

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : --so much focused on the hijacking.

(b)(6), (b)(7)c : Again, other--that's really an aside, this is "U.S.A.Today" the next day showing graphics showing how the sky [unintell.] "Washington Post" on September 12 [unintell.] I do have here an AP story from September 19, which appears to be based on that--the NORAD release, if you will.

(b)(6), (b)(7)c : Okay. Yeah, that's I don't even know what to call this AP release. I don't understand their jargon here. I--it looks like just a bunch of, it looks like random letters to--

(b)(6), (b)(7)c : This are probably some keys to--some coding to indicate the specific story.

(b)(6), (b)(7)c : Attacks fighter jet 0486 9/19 at 8:30 a.m.

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : And then in there it's got a couple of references to some FAA notation of military time.

(b)(6), (b)(7)c : That's the North American Aerospace Defense sending newly released data.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Now another very initial source, this is the FAA Military [unintell.] for the 12th which was before crashes and it's very basic information, when you were talking about possible sources for the fact sheet on the chronology, that's another one.

(b)(6), (b)(7)c : It doesn't look like it has any information about--

(b)(6), (b)(7)c : No, it would not have any information about military notification.

(b)(6), (b)(7)c : --no.

(b)(6), (b)(7)c : Here's some other additional background. Again, that's focused more on the various actions the FAA took to limit flying on that day and when did we do it and who did it and what did it cover. I don't think there's anything in there about military notification.

(b)(6), (b)(7)c : It looks like all this paperwork is focused on ground stop issues.

(b)(6), (b)(7)c : Mm-hmm. At that time and after, you know, we got a number of questions when did you stop flying? And the answer, well, there is no one time, it was a gradual process, we did certain things at certain times that affected parts of the U.S.

My recollection, looking back, is that immediately after 9/11, at least when I was doing the questions, I was getting some news media who were not really focused on notification to the military.

(b)(6), (b)(7)c : Do you have anything else in your folder concerning military notification issues?

(b)(6), (b)(7)c : Not that I found in this look, I'd have to look more thoroughly and it was just about 11:30 before [unintell.]

(b)(6), (b)(7)c had given us a copy of a document she had found titled Notification to DOD Time Line?

(b)(6), (b)(7)c Mm-hmm.

(b)(6), (b)(7)c : And if I'm not mistaken she

thought that you had offered that?

(b)(6), (b)(7)c : She mentioned that to me.

I, frankly, don't recall doing that.

(b)(6), (b)(7)c : No?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : Does that look like your
handwriting?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : No?

(b)(6), (b)(7)c : No. She told me she thought
that handwriting is Scott Brenner who was the--he
was the head of Public Affairs, the Assistant
Administrator at that time.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : I don't know if that's true
or not. I--she showed that document to me, it did
not ring a bell, I don't recall compiling that.

(b)(6), (b)(7)c : Okay. I guess that answers
that question, doesn't it?

(b)(6), (b)(7)c : Sorry about that.

(b)(6), (b)(7)c : Could you make any guesses as
to where she might have gotten it?

(b)(6), (b)(7)c : No, I wouldn't know where to start.

(b)(6), (b)(7)c : [unintell.] you said it's on your Website, currently?

(b)(6), (b)(7)c : Yes.

(b)(6), (b)(7)c : Was it immediately put on the Website?

(b)(6), (b)(7)c : On August 12 of 2002 and it's been up there since then.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : As I mentioned earlier, we prepared this in an--

(b)(6), (b)(7)c : The anniversary--

(b)(6), (b)(7)c : --the anniversary coming up we were getting a lot of requests for interviews to go into in-depth reporting, who did what, when, taking to any number of people who were involved.

(b)(6), (b)(7)c : This fact sheet--did you prepare a draft and float that up to Air Traffic?

(b)(6), (b)(7)c : Absolutely.

(b)(6), (b)(7)c : Do you have copies of that, do you think, anywhere?

(b)(6), (b)(7)c : I don't believe, though, I'd have to look.

(b)(6), (b)(7)c : Would you mind double checking that for us and you can get back to us?

(b)(6), (b)(7)c : Sure. I don't recall how many times--it was more than once--that this went through Air Traffic to be reviewed. And I don't know the details of how Air Traffic reviewed it or whatever [unintell.]

(b)(6), (b)(7)c : Would your point of contact on that have been (b)(6), (b)(7)c as well, or--

(b)(6), (b)(7)c : She was one of them, yes.

(b)(6), (b)(7)c : Okay. Is there anybody else that you think you might have dealt with on this fact sheet?

(b)(6), (b)(7)c : Yeah, Mary Ellen Kruf, K-r-u-f, who at that time was the chief of staff in Air Traffic.

(b)(6), (b)(7)c : Is she still over there?

(b)(6), (b)(7)c : No, she retired.

(b)(6), (b)(7)c : Do you recall exactly when she retired?

(b)(6), (b)(7)c : Roughly (b)(6), (b)(7)c

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : That's very rough, don't hold me to it.

(b)(6), (b)(7)c : At least it gives us an idea as to how far back in the record you gotta look.

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : Do you have any questions right now, (b)(6), (b)(7)c

(b)(6), (b)(7)c : What would you have done, you would have e-mailed it to them for review and attached it? How would that--

(b)(6), (b)(7)c : I would think, in that instance, I took hard copies rather than e-mail it as an attachment.

(b)(6), (b)(7)c : Did you get changes to it?

MR. SHUMANN: Oh, I did, but going back to the question you asked. You know, did I keep those earlier drafts? And I just don't remember that.

(b)(6), (b)(7)c : Do you, I mean, you can correct me if I'm wrong, but I'm just kinda looking at this and I just breezed through these potential

[unintell.] documents that you gave me, I notice it doesn't--the first documents don't have everything that your fact sheet has.

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : So presumably there should be some other items that you probably had to rely on to prepare this. Because the most-detailed document that you really have is--well, you've got the NORAD press release.

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : But is this American Airlines Flight 77 time line that AAT 20 prepared.

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : Did you have something like this for all the other flights, as well, or--

(b)(6), (b)(7)c : Not similar to that. Now, there are various--there are some news accounts; major newspapers different from ours. I think I used [unintell.] there were was a number of different sources here. For example, the aircraft type, probably came out, I think that came out the first day. Yeah, mm-hmm, the aircraft type and the

route. I just don't recall what other documents, sources I might have used.

(b)(6), (b)(7)c : Did you--do you remember seeing any data from the military, other than that [unintell.] you were referring to, that NORAD press release?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : Any [unintell.] logs or anything like that?

(b)(6), (b)(7)c : No, none, whatsoever.

(b)(6), (b)(7)c : Did you have any, like, raw source data from FAA that you relied on to create these or did you just have summaries?

(b)(6), (b)(7)c : In some cases, there were summaries in the history of the ground stop, for example, there was a copy of an advisory from the FAA's Air Traffic System Command Center, which says this is the Ground Stop all departures, which means, and this is as of, looks like 9:29 Eastern Time. That was the ground stop [unintell.] nobody takes off. Then there was a later one, which I have seen, I don't think I have--for example,

here's one, here's a case where a Command Center here with slightly revised times for the ground stops [unintell.] variety of--

(b)(6), (b)(7)c : Did you ever interact with the military at all?

(b)(6), (b)(7)c : Not that I recall.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : On the 9/11, itself, which probably predates what you're looking into somewhat. At various times, when I was sitting in the Op Center, they had a display there of messages that would have some messages to military from Secret Service on flight stuff, as well as from the FAA. But that's not a personal interaction.

(b)(6), (b)(7)c : Did you have [unintell.] Public Affairs or a military [unintell.]

(b)(6), (b)(7)c : Not then, not on that day and, afterwards there was some contact with NORAD's Public Affairs. (b)(6), (b)(7)c did most of those, I did a few.

(b)(6), (b)(7)c : When you had to deal with Public Affairs over at NORAD, do you remember who

it was you would talk to?

(b)(6), (b)(7)c : There's a (b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : There was, I'd have to look at some of the lists--I can't remember if he was Army or Air Force, a (b)(6), (b)(7)c

(b)(6), (b)(7)c I will check it, I don't know.

(b)(6), (b)(7)c : Did you ever, like, double check with an FAA source, any of the times and events that were presented here--

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : --beyond the, like summary source document where you were like, well this just doesn't seem right, now can you guys just double check or show me what you've got that supports this? Did you ever do that with any of these?

(b)(6), (b)(7)c : Yeah with the entire document, went through the Air Traffic organization several, more than the one time.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : And ongoing. And in some

cases and it was to review the entire document, do you have any problems, questions, uncertainties about anything here?

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : So they reviewed the entire document. Now, as I mentioned earlier, I don't know the exact desk or people or offices they used in doing that review.

(b)(6), (b)(7)c : Is there anything that you saw when you put this together that concerned you or that you had questions about as far as the times or anything?

(b)(6), (b)(7)c : Not exactly. The only question that came up, you can see why in many cases, it gives the time of approximate?

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : And that is either there would be, in the various published accounts, both internal from the FAA and what appeared in the news media, there were quite different times, 9:00 a.m. or 9:02, things like that. So this represented a compromise. And there's another question as to

whether--in people using different times--are the Washington clocks synchronized? And if they're not, you know that can be a difference of a minute to there.

In one instance with United-93, that Air Traffic taking was the time that the airplane disappeared from radar.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : That's not necessarily the same time it hit the ground.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : There can be a slight difference there, particularly considering where it was in Pennsylvania, as opposed to American 77 hitting the Pentagon or the other two in New York at the World Trade Center. You get the small differences like that.

What I was trying to avoid there is somebody coming back and saying, oh, the "New York Times" says it wasn't 9:15, it was actually 9:17, of course, and I didn't want to--I thought it was fruitless to get into that discussion and that's

why I, frankly, parsed it, if you will.

(b)(6), (b)(7)c : And put the approximate time in?

(b)(6), (b)(7)c : The approximate.

(b)(6), (b)(7)c : You basically relied on Air Traffic word, basically, that this information was correct?

(b)(6), (b)(7)c : Yes, I did not do the original research of going to the different Air Traffic facilities, look at their logs, that sort of thing.

(b)(6), (b)(7)c : But you don't know what Air Traffic did to verify it, though, you don't--

(b)(6), (b)(7)c : Correct, I don't know. Because, as I said, they did come back and said, yes, you know.

(b)(6), (b)(7)c : Who would have come back to you and said yes?

(b)(6), (b)(7)c : I believe it was Mary Ellen Kruf, she would.

(b)(6), (b)(7)c : So she ultimately came back with the final draft of it?

(b)(6), (b)(7)c : Yes, well, there was more than one draft and they would give me changes and I would make those and I don't recall the specifics of were there any other sources or updates or what not and then run it through Air Traffic again until we got, okay, this is it.

(b)(6), (b)(7)c : Did this have to get approved outside of Public Affairs and Air Traffic, before you guys could publish this?

(b)(6), (b)(7)c : I don't recall.

(b)(6), (b)(7)c : What's the normal approval process?

(b)(6), (b)(7)c : The normal process on a news release would be that this would have gone through the Deputy Administrator's office and the Administrator's office. I, frankly, don't recall if it was done in this instance. Because it's a fact sheet, not a news release and it could be that, since it's only a fact sheet, well, Air Traffic could approve that this is all related to Air Traffic, that's enough. I mean, you know, there are no quotes or policy statements or

anything like that.

(b)(6), (b)(7)c : Let me just ask you about this one specific time here, because I've been looking through this document, the fax sheet, I notice this 9:24 entry here--

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : --it's only the--it's the only disputed time I see on here and it says, "The FAA notifies NORAD's Northeast Air Defense Sector about the suspected hijacking of American Flight 77."

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : And then the next sentences says, "The FAA and NORAD establish an open line to discuss American 77 and United 93."

(b)(6), (b)(7)c : Mm-mm.

(b)(6), (b)(7)c : Where did that language in that second sentence come from?

(b)(6), (b)(7)c : I don't recall.

(b)(6), (b)(7)c : Because every other FAA document, I've see so far, just says, usually parenthetical or it'll say [unintell.] log reflects.

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : This one doesn't say that and I was just wondering if you recall how you came up with this language?

(b)(6), (b)(7)c : I don't.

(b)(6), (b)(7)c : Have you looked at the September 11 Report, because they still have some concern--

(b)(6), (b)(7)c : Not--

(b)(6), (b)(7)c : --about this particular entry or this particular time and what happened. This is still on the Internet, right?

(b)(6), (b)(7)c : That's correct.

(b)(6), (b)(7)c : Okay. And the agency, obviously, still considers the stoppings to be valid? Presumably, if it's still on the Internet?

(b)(6), (b)(7)c : Yeah, yeah, mm-hmm. And I quite frankly don't recall--and my name's on it, that about came to me and said I really question this.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Or, you know, where did you

get that? I don't know if it was from within the agency or from anyone outside.

(b)(6), (b)(7)c : Okay. Do you have any questions about that?

(b)(6), (b)(7)c : Uh-uh.

(b)(6), (b)(7)c : Did you ever help prepare the Administrator or Deputy Administrator or any other FAA person or employee to testify before Congress or the Commission concerning September 11?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : Okay, how about for, like White House briefings?

MR. SHUMANN: No.

(b)(6), (b)(7)c : Had you heard anything about, like, that former Administrator, Jane Garvey, had testified in May 2003, are you aware of that, before the Commission?

(b)(6), (b)(7)c : Before the Commission, I was aware that she testified before the Commission, but it's been covered.

(b)(6), (b)(7)c : Did you help prepare any of the questions for the record after she had

testified?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : Were you aware that after the questions for the record, as I understand, things were submitted that there was some concern that the information in them might not have been accurate?

(b)(6), (b)(7)c : I was vaguely aware that there were questions, not so much as to the accuracy as to the completeness of the information. Did the FAA provide all the information that we had which is about the same to me as saying the information you provided was wrong.

(b)(6), (b)(7)c : I understand what you're saying. What information did you understand at the time that there was concern that was missing?

(b)(6), (b)(7)c : I don't know. Just, that, after months, oh, gee, we found something else and provided that to the Commission. But I have no--this is hearsay, absolutely, you know, 23-hand or what have you. And I never heard what the details were.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : And there was, if you will, a general knowledge that there was some dispute or discussion or discrepancy between what the military had supplied and what the FAA had supplied.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : But, again, I don't know what those details were or what the differences were.

(b)(6), (b)(7)c : Do you know who was working on that issue?

(b)(6), (b)(7)c : [unintell.] (b)(6), (b)(7)c certainly much more than I from Public Affairs; Shirley Miller, who is now in the Air Traffic organization, was, I think a prime coordinator, if you will, of material going to the 9/11 Commission.

(b)(6), (b)(7)c : Anybody else that you're aware of?

(b)(6), (b)(7)c : Not specifically. I'm sure there were people in Air Traffic who would be involved. I don't know who they were. Probably, I'm sure there were some in ATC, the General Counsel's Office who were involved. [unintell.] a

function from my part over at the--I'd be a little surprised if they weren't involved.

(b)(6), (b)(7)c : Okay, Do you know, maybe I already asked this question, but I'll ask it again, just to make sure. Do you know what steps, within the FAA were taken to try to resolve that--I don't know how to describe it, conflict or discrepancy between the military and FAA information?

(b)(6), (b)(7)c : No, no.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : And I'm not and wasn't aware of the specifics of the discrepancy or what the discrepancies or differences were.

(b)(6), (b)(7)c : Okay. Just another question about your fact sheet here?

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : Did you have any entries on your--any time entries on your fact sheet here that you had on here and then Air Traffic removed or that you didn't have on here and Air Traffic added, that you can recall?

(b)(6), (b)(7)c : Not that I recall.

(b)(6), (b)(7)c : In either case?

(b)(6), (b)(7)c : I--they didn't delete something that I had, nor did they add something that I didn't have.

(b)(6), (b)(7)c : Who is the ADA-30?

(b)(6), (b)(7)c : That would be the Deputy Administrator's Office, might be Shirley Miller, who at the time was the Special Assistant to the Deputy Administrator, but I don't know that for a fact.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : You say you don't recall Air Traffic deleting anything you had on there or adding anything you didn't have, but you do recall that they made some changes to it?

(b)(6), (b)(7)c : Yeah. They made specific changes to the listings.

(b)(6), (b)(7)c : But you don't recall the substance of what those changes were?

(b)(6), (b)(7)c : And you asked earlier if I had any drafts, and I frankly don't recall if I do. And, obviously, if I do I will provide those.

(b)(6), (b)(7)c : Okay, thank you.

(b)(6), (b)(7)c : One more question about the fact sheet and then I think we'll have pretty much beaten that one.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Did you guys coordinate this, in any way, with the military?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : Did you provide--show them--

(b)(6), (b)(7)c : No, not that I--I didn't. I don't recall that we did in any way. In other words, this is an FAA document and we will stand by that. I don't recall. I certainly didn't or as far as I know the Public Affairs Office didn't coordinate this or show it to the military, by the military, I mean, either NORAD or the Department of Defense or anybody else.

(b)(6), (b)(7)c : Okay. This was published on August 12, 2002, this hasn't changed.

(b)(6), (b)(7)c : That's right.

(b)(6), (b)(7)c : I can't think of anything else.

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

(b)(6), (b)(7)c : --we're at FAA Building 10-A, Room 520 Washington, D.C. My name is (b)(6), (b)(7)c

(b)(6), (b)(7)c my co-agents are (b)(6), (b)(7)c and (b)(6), (b)(7)c

(b)(6), (b)(7)c We're from the Office of Inspector General Department of Transportation and we're conducting a review of issues involving certain public statements made by the military and FAA officials at a 9/11 Commission Hearing and elsewhere that were allegedly inaccurate. Today we're interviewing Darlene Freeman. Darlene, if you could, please, acknowledge that you are aware that this interview is being tape recorded?

MS. OSMUS: I am aware.

(b)(6), (b)(7)c : Will you, please, raise your right hand. Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, and nothing but the truth?

MS. FREEMAN: I do.

(b)(6), (b)(7)c : Would you, please, give your full name spelling your last name for the record.

MS. FREEMAN: Darlene M. Freeman,

F-r-e-e-m-a-n.

(b)(6), (b)(7)c : What's your current position?

MS. FREEMAN: Director of Corporate Training and Development, for the FAA.

(b)(6), (b)(7)c : And what's the routing symbol?

MS. FREEMAN: AHD1.

(b)(6), (b)(7)c : And what grade are you right now?

MS. FREEMAN: I'm an FAA Executive ES, ES-2.

(b)(6), (b)(7)c : And how long have you been in your current position?

MS. FREEMAN: One year.

(b)(6), (b)(7)c : So, you started in September '03?

MS. FREEMAN: August of '03, in this position, yes.

(b)(6), (b)(7)c : And when did you first start with the FAA?

MS. FREEMAN: 1977.

(b)(6), (b)(7)c : In what position and where?

MS. FREEMAN: I started out as a staff

attorney in the Office of the Chief Counsel.

(b)(6), (b)(7)c : And on, September 11, what position did you hold--2001?

MS. FREEMAN: On September 11, 2001, I was Director of Safety and Special Studies in the Office of Deputy the Administrator.

(b)(6), (b)(7)c : What was your routing symbol at that time, do you recall?

MS. FREEMAN: I'm not sure I had one, but, if I did, it may have been--I think it may have been ADA-4.

(b)(6), (b)(7)c : Yeah it says that in here.

MS. FREEMAN: Okay.

(b)(6), (b)(7)c : And just working from September 11 forward, how much longer after September 11 did you continue to hold that position?

MS. FREEMAN: Officially, on paper, I held that position until August of 2003, when I took this position.

(b)(6), (b)(7)c : Okay.

MS. FREEMAN: But I spent the last nine

months of that, I spent on detail at the Department of Homeland Security. So, from about December of 2002 to August of 2003, I was on detail at DHS.

(b)(6), (b)(7)c : What were you doing over there.

MS. FREEMAN: Initially, I worked on the transition team for the, you know, creating the department. And eventually, I ended up as Acting Director for International Policy in the Bureau of [unintell.] and Transportation Security.

(b)(6), (b)(7)c : When you were in ADA before, what grade were you there?

MS. FREEMAN: Same as here.

(b)(6), (b)(7)c : Same, okay. I understand, after September 11, you were asked to participate or lead--I think the 9/11 Commission calls it an After Action Group? I don't know exactly what you guys called it, internally. But could you talk about that for us?

MS. FREEMAN: Yeah, I don't remember what we called it either, but it was essentially what it was was a group that the Administrator at the time,

Jane Garvey, put together and asked me to lead to help prepare for the upcoming congressional hearings. So, I put a group together of representatives from the various offices that I knew would have to do the Q's and A's for the book to prepare.

(b)(6), (b)(7)c : When did that start? When did that group form?

MS. FREEMAN: I don't remember exactly when it was and if there was a date of it for that first hearing, congressional hearings, there's no date on here.

(b)(6), (b)(7)c : Was it days or weeks or months or--

MS. FREEMAN: It was--I would say it was probably days or--probably days or maybe a week.

(b)(6), (b)(7)c : So, the primary goal of the group was to help Jane Garvey prepare for anticipated congressional testimony?

MS. FREEMAN: That's correct. In addition to that and the initial date, after September 11, because I had had a background in aviation

security, I volunteered, I went up to Monty Belcher and you know I volunteered, is there anything I can do in the immediate days following September 11. So, it, my recollection is that, you know, I started putting some information together, you know, and then shortly after that, you know, it turned into a let's put a group together to help prepare for the congressional hearings.

(b)(6), (b)(7)c : And who worked with you on that group?

MS. FREEMAN: Somewhere there's probably a name--I may be able to retrieve the names, but it seems to me that there was somebody from AAT-20, I don't remember if it was Dave Knoles [ph] or Ton Ferrante, but somebody from that group--

(b)(6), (b)(7)c : Okay.

MS. FREEMAN: --AAT-20; there was somebody from Security, at least one person from Security I know, I remember (b)(6), (b)(7)c [ph], and (b)(6), (b)(7)c [ph] being on the group from security.

(b)(6), (b)(7)c : I'm sorry, you aid Leo Boygan?

MS. FREEMAN: (b)(6), (b)(7)c There was somebody

from Aircraft Certification, I believe it was (b)(6), (b)(7)c

(b)(6), (b)(7)c There was somebody from Flight Standards, and I believe his name was Tom Tulah ph. There was somebody from the Washington Operations Center and it seems to me that it was two different people two different times. It seems to me that Dan Noelle [ph] and (b)(6), (b)(7)c [ph], sort of took turns. I think there was somebody from the Chief Counsel's Office, their legislative section, Mary--I forget Mary's last name. Can't remember who else. It was a big group.

(b)(6), (b)(7)c And when you offered your assistance to Monty Belcher, what was he focused on you helping him try to determine or put together?

MS. FREEMAN: What I remember most of all was notification to the military. When did FAA notify the military.

(b)(6), (b)(7)c Okay.

MS. FREEMAN: That was the primary initial focus.

(b)(6), (b)(7)c : Do you know why he was focused on that issue?

(b)(6), (b)(7)c : You know, I can only guess.

No, I really don't know--I don't know why. I think there--I don't know if there was anticipated media interest or there was actual media interest, but I seem to recall that something with the media.

(b)(6), (b)(7)c : And so, what did you do to try to help him figure that out?

MS. FREEMAN: Well, actually, I mean, all I did was, I sort of--I was sort of acting as a staff person, so what I did was to try to make sure, it was almost like a conduit, a messenger between him and the people who had to put the information together. So, what I did is, I worked with Air Traffic mostly, the AT-20 staff. They were putting together a chronology to make sure that they, you know included in the chronology the notice to the military. They were already working on a chronology of the events.

(b)(6), (b)(7)c : And for that particular request, who did you deal with at AAT-20 for that?

MS. FREEMAN: A couple of people and I just remembered somebody else who was on the group,

my group and it all kind of, you know, the group, it was right around the same time for the congressional hearings. (b)(6), (b)(7)c from National Airport from Air Traffic, you know, was on the group.

Initially, I was dealing with Dave Knoles, I think Tony Ferrante, possibly others from the AT-20 staff. And then, eventually, they--they were so busy putting together, they do the accidents investigations, so when there's an air traffic--an event involving air traffic, they were so busy that eventually, (b)(6), (b)(7)c and he was on my group for the congressional hearing kind of became my partner, you know, conduit to Air Traffic. So, I would, you know, he would go off and gather the information.

(b)(6), (b)(7)c : Did you guys develop a work product to answer--

MS. FREEMAN: Yes.

(b)(6), (b)(7)c : --Monty Belcher's question or--

MS. FREEMAN: Well, yes, I mean, the main

work product was this binder here the congressional hearing binder to--it was tabbed, you know, it was designed as you would prepare for a witness at a congressional hearing. It was designed to help the witness answer the questions. And AT-20 put together a chronology, you know, of the events of 9/11 and that became--and that was inserted in this book. But they prepared that. They were going to prepare that anyway, they prepared that when [unintell.]. And that included the notification to the military.

(b)(6), (b)(7)c : Was there a separate military notification work product or--

MS. FREEMAN: There were several, there were several documents and there were several documents that were put together. There was the one that AT-20 was working on--several that they were working on. You know, and they would bring in something, a narrative, you know, and Monty Belcher would say, can you put that in a chart form or, you know, so there were several documents--excuse me--several documents like that. They would bring

it in and he would say, well, it doesn't have the notifications to the military or you didn't include, whatever. Okay, and then they would go back. So, there were several iterations.

And, in addition, it seems to me that at some point I took some of the--I put--took some of the stuff that they had provided and put it in a format or a shorter chronology that I thought, you know, would be helpful for him to see, just the notifications issues. So, there were several--

(b)(6), (b)(7)c : Are those all in here?

MS. FREEMAN: Well, they, I think most of them are, but there's a tab in here called notifications and, for example, this chart here was prepared by AT-20. Notifications to military.

(b)(6), (b)(7)c : This, I'm going to read off a little bit so we know on the recording what we're talking about later. This first chart that you've shown us, it's got--it doesn't have a title on it, but it's got a square block or a grid at the top with each of the four hijacked aircraft. And then along the left-hand side of the grid it says, first

sign, probable time flight was known to be in distress; NORAD NEEDS notification and estimated crash time. Then there's times, presumably for those events.

So, what was, this document you said was prepared by AAT-20?

MS. FREEMAN: Yes, mm-hmm.

(b)(6), (b)(7)c : So that would be Knole and Ferrante?

MS. FREEMAN: Mm-hmm, yes, and it's got a--it says so on the bottom and it has a date, September 18, 2001.

(b)(6), (b)(7)c : Yeah, it says in a footer, provided AT-20, revised on September 18, 2001, at 1400.

MS. FREEMAN: Right. In addition, they had, you know, under Tab 1 of this hearing book, these were the chronologies that AT-20 had put together of the events, these weren't just the notification issues, these were the events, you know, for each of the aircraft. So, those, this, you know, they tried to include just about

everything in there that they had, you know, based on air traffic tapes and whatever else that they thought they could use.

And then they prepared this chart, this was at Monty Belcher's request, the one that you just referred to. In addition, and I believe that I prepared this, based on the information that Air Traffic had given me is a--it's several pages and it's entitled "Notifications to Military" and it's dated 9/20/01 and it's got dates.

And then we had "Notification Chronology," it's dated 9/18/01. We had one for each of the aircraft. And I believe I prepared these based on--everything was based on chronologies that Air Traffic had provided.

(b)(6), (b)(7)c : Did you, yourself, review any source documents to prepare any of the chronologies that you actually, yourself, worked on?

MS. FREEMAN: I don't remember what I reviewed. I do remember--I remember seeing at one point some logs from some of the Air Traffic facilities that I believe (b)(6), (b)(7)c had,

specifically, I seem to recall that he had something from New York Center.

(b)(6), (b)(7)c : Like the Rock Logs I think they refer to ?

MS. FREEMAN: Well, the Rock Logs are the Regional Operations Center Logs, that's different from the Air Traffic logs.

(b)(6), (b)(7)c : Oh, okay.

MS. FREEMAN: The ones that I'm referring to, the ones that the actual Air Traffic facility actually kept. The, I remember seeing some of those, you know, I think it was the Washington Operations Command Center--Washington Operations Center Logs. I may have seen some of the Regional Operations logs, but I don't remember really studying them in detail. But there were members on this group who had them.

Another woman who was on the group was Tracey, I don't remember her last name, but I can look it up and she, she sort of--she was overseeing the regional operations center, so she was the person on the group who was bringing that

information.

(b)(6), (b)(7)c : Did you review any military logs or military source material?

MS. FREEMAN: I don't remember reviewing any military logs. But not to say that I didn't, so, I'm not trying to be--I just don't remember. Now if you showed me something, I might say, oh, yeah, I saw that, but I honestly don't remember. But I do remember seeing--I do remember seeing a press release that the military had put out. And there were--

(b)(6), (b)(7)c : Do you have it?

(b)(6), (b)(7)c : Yes.

MS. FREEMAN: Or a draft press release, I remember seeing that.

(b)(6), (b)(7)c : I guess on this Notifications to Military document dated 9/20/01--

MS. FREEMAN: Mm-hmm.

(b)(6), (b)(7)c : --on their page that starts AAL-77--

MS. FREEMAN: Mm-hmm.

(b)(6), (b)(7)c : --actually looks like it's

dated 9/18/01 at 5:30 p.m. This entry for 0924?

MS. FREEMAN: Mm-hmm.

(b)(6), (b)(7)c : Says Northeast Air Defense
Sector Logs show--

MS. FREEMAN: Yeah.

(b)(6), (b)(7)c : --where would you have gotten
that information from?

MS. FREEMAN: Well, it was either the--I
don't know if it's on the press release, it is on
the press release and, I believe it was on this
chart that Air Traffic prepared, 9:24 and they have
an asterisk, these times are derived from a review
of the NEEDS Log. So, my recollection is that or
at least my belief was that Air Traffic had access
to those logs. If they didn't have access, I know
they were talking to the military.

(b)(6), (b)(7)c : Okay.

MS. FREEMAN: And I do remember seeing
this press release from the military.

(b)(6), (b)(7)c : That's the, I guess that's the
NORAD September, what is that 18th, press release?

MS. WOODS: Yeah.

(b)(6), (b)(7)c : Okay.

MS. FREEMAN: There was also a draft and I think this may have been the final. And I believe there was a draft press release that we saw, initially.

(b)(6), (b)(7)c : That they had sent over here for what purpose?

MS. FREEMAN: I don't know how--I don't know if they sent it over for coordination. I don't know. They didn't send it to me, I just remember seeing it. I just remember that somebody had a draft press release. I remember somebody, you know, walking into Monty Belcher's office with this draft press release from the military. So, Jeff Griffith, who was, he was the Deputy Director for Air Traffic. And he was, Monty Belcher tasked him with communicating with the military on the issue of the press release. So, he ended up, I have this association of the press release with Jeff Griffith. And I know that he ended up talking to somebody in the military and, you know, I wasn't privy to that conversation.

(b)(6), (b)(7)c : Did you have any discussion with the military, yourself?

MS. FREEMAN: No, I did not.

(b)(6), (b)(7)c : Do you remember asking anybody if they could get some information from you or for you from the military?

MS. FREEMAN: I don't ever remember asking, no, at that point, Monty Belcher sort of inserted himself, I don't want to say taking over, but, I mean, he was the boss, so he was, at that point he was directing Jeff Griffith and, you know, to get--to talk to the military to get the information, talk to General So-and-So, it was sort of a--it was Monty Belcher and Jeff Griffith and, you know, at that point, I was working with the group. I had a whole congressional hearing to prepare the Administrator for and there were many, many, many issues that notification of the military, you know, was just one of them. But there were many, many issues I had to make sure to include in the book. So, I don't want to say that I sort of stepped aside on the notification issue, but Jeff

Griffith was handling it. He was working directly with Monty Belcher and I was just kind of trying to stay on top of what it was that was happening.

I think somewhere, initially, at the very beginning, you know, I said one of the things that Monty Belcher asked me to do was to, you know, get some information on when we notified the military. When the draft press release came in, and I believe that it was Air Traffic, perhaps, Jeff Griffith who brought it in to Monty Belcher. You know, at that point, then it became, you know became Air Traffic, primarily working this issue with Monty Belcher, and I was just sort of on the periphery, if you will.

(b)(6), (b)(7)c : Did you have a question?

(b)(6), (b)(7)c : No.

MS. FREEMAN: And can I say something else--

(b)(6), (b)(7)c : Sure.

MS. FREEMAN: --just to make sure I don't mislead anybody. When I was interviewed by the Commission staff they showed me something that

looked like that chronology notification
chronology, Notification to Military--

(b)(6), (b)(7)c : Okay.

MS. FREEMAN: --they showed me a document,
initially they said, you know, they asked me, do
you recognize this, did you prepare this initially?
Initially, I thought, no, I--and then as I looked
at it some more, you know, during the course of the
interview, I told them, I said, I have to say,
again, my memory is faulty, but I have to say this
sounds like I would have written. And so I--and I
don't have a copy of that.

(b)(6), (b)(7)c : Is that this document? This
document is titled "Chronology of Events on
9/11/01" do you think that's it?

MS. FREEMAN: No, I don't believe this is
it.

(b)(6), (b)(7)c : Do you recognize that
document?

MS. FREEMAN: I think this was a document
that was--I think this may have been prepared by
somebody either in the Washington Ops Center or one

of the regional ops centers. It talks about the Net, so the Net was the Net that they activated. So, this was sort of a chronology, looks like it was a chronology from the perspective of the Net that they ran.

(b)(6), (b)(7)c : Because we're led to believe that this was one of the--your group's work product?

MS. FREEMAN: Okay, there were lots of people on the group. And one of the people on the group, I mentioned Dan Noelle and (b)(6), (b)(7)c were there representing the Washington Operations Center. (b)(6), (b)(7)c [ph], I think that's her name, (b)(6), (b)(7)c I think her position was, maybe still is, Special Assistant to the Associate Administrator for the Region, basically, don't know what the exact title is, but that's where the Regional Operations Center report to.

So, (b)(6), (b)(7)c was on the group and she was sort of representing the Regional Operations Centers on the group. And I believe that I--at some point there were so many

chronologies going around, everybody had one. And, you know, Air Traffic seemed, because Air Traffic seemed, they had the discipline of reconstructing accidents, that was their job. They seemed to have the better, the more disciplined handle, I felt, you know putting together the chronology, they were used to doing this, you know, they seemed to be doing it in a scientific objective way.

And so, on this group, I seem to remember, you know, (b)(6), (b)(7)c coming in with chronologies that the Regional Operations Centers had put together, I can't remember if this was one of them. I remember the Washington Operations Center--well, this is what we did and I seem to recall asking Tracey, well, why don't you--this isn't really helpful, there are too many of these going around, why don't you take what the Washington Operations Center has, take what the regions, because there were several regions, take what they, and try to come up with a consolidated chronology from the perspective of the operations centers. You know, try to come up with just one chronology. That may be what this is.

But, to be perfectly honest with you, I didn't have as much confidence in this as I did in the stuff we got from [unintell.] Sorry, I've taken too long.

(b)(6), (b)(7)c : Oh, no.

MS. FREEMAN: Because--and the reason I say I didn't have as much confidence is because the Operations Centers, they're sort of second-hand versions, I mean, they facilitate communications between facilities and they try to keep notes. But I have a lot more confidence in the first-hand, which is the facilities themselves, the Air Traffic facilities and their logs and what were they saying.

(b)(6), (b)(7)c : Okay. Do you remember, going back to this Notification to the Military document or I should, basically, say any of the other time lines that have been put together for military notification there being any discussion or conflict or concern about some of the times the military was showing for things versus what the FAA understood? I'm not just, because I understand that there were,

like, well, ours says, you know, 8:01 and their's shows 8:00 o'clock; I'm not talking about like little one- or two-minute discrepancies, we don't even have a record or I don't remember this, should we go back and check, that sort of thing?

MS. FREEMAN: I seem to have a recollection--recollections are dangerous things, but I have a recollection that the last press release had a time that the military's draft press release had a time on there that had a 9:16 time on there for one of the airplanes that we didn't have any corroboration for from our side. And it was one of those--I'm trying to remember which airplane that would have been. But I remember and this is where the--this is where that chronology that I told you the Commission asked me about, you know, did I prepare, I don't have a copy of, but obviously they got it from the FAA somewhere. In that chronology that they showed me, I included a note saying something like the military says FAA notified them at 9:16, on this particular aircraft, but that doesn't make sense because we didn't even

know it was in trouble or it hadn't even been hijacked at 9:16.

(b)(6), (b)(7)c : Okay.

MS. FREEMAN: So, I remembered that. I remember that was one, you know, it was almost like the military gave us credit for a notification that we couldn't corroborate.

(b)(6), (b)(7)c : Okay, you would have been fortune tellers.

MS. FREEMAN: So, I don't know which one that was. I don't know if that was United 93, it may have been United 93, where, you know, the first sign was 9:28.

(b)(6), (b)(7)c : I think this chronology of events has that time in it.

MS. FREEMAN: Oh, does, it, okay, there you go 9:16. Okay, it was, yeah, United 93. That didn't make sense at all. First sign of any distress with United 19 was at 9:28.

(b)(6), (b)(7)c : Was that brought up to the military?

MS. FREEMAN: Well, it was, that's where

Jeff Griffith steps in. And that's where--Jeff Griffith is now retired, would be your best source of information. Because when that last press release came out, he was tasked by Monty Belcher to go talk to the military about these times.

(b)(6), (b)(7)c : Do you know what, because, I mean, obviously, you guys picked out the 9:16 time as an issue?

MS. FREEMAN: Mm-hmm.

(b)(6), (b)(7)c : Do you know what the FAA did, internally, with the other times that the military was reporting to verify? Especially where their records where FAA says or FAA called?

MS. FREEMAN: I don't know, I mean, you'd have to talk to people at Air Traffic. I don't know, I think they went back and checked against their traffic tapes or logs or something.

(b)(6), (b)(7)c : Was there anybody direction given at, you know, your level or--

MS. FREEMAN: Certainly not at my level.

(b)(6), (b)(7)c : How about higher or--

MS. FREEMAN: No, other than just, other

than, you know, go try to figure out, I mean, we had these times, this press release that came out, the last press release, and I don't remember what day they came out but it was fairly early, they came out with that draft press release and we were still--we, the FAA--were still trying to put the chronologies together and figure out who sent what to whom and when. So, when we got this draft press release, my recollection is that Monty Belcher said to Air Traffic, okay, now we have somebody, you know, obviously, the military, they've kept logs, you know, they seem to, I don't want to say, have their act together, but they seem to have gathered their information very quickly. And so, now we have something to work against. And my recollection is that Monty Belcher asked Air Traffic to, you know, try to figure out, see if any of their times match up to the times that you have. That sort of directions.

(b)(6), (b)(7)c : So Monty directed some type of reconciliation from the FAA.

MS. FREEMAN: Yeah, but reconciliation

isn't quite the right word because that would suggest, you know change your times to reflect what they're saying. And it wasn't that at all, but it was sort of a, you know, that they hadn't, that the draft press release, and so they were getting ready to put out the press release. As soon as they put out the press release, the media was going to be all over the story.

And so, it was we need to get our information together and we need to, you know, we need to figure out, if they say that we told them--that we notified at a certain time, let's find out if our records show that we did. If our records don't show that, let's let the military know that. So maybe they can look at their records to make sure that they have it right. It was more that sort of thing, it wasn't to reconcile let's get it the same, but, you know, they have their records we have ours and we're talking about, you know, mutual conversations, so, you know, let's see what everybody has.

(b)(6), (b)(7)c

And Jeff Griffith was tasked

specifically to work on that?

MS. FREEMAN: To talk to the military, to talk to it was a General, I can't remember his name. Specifically it [unintell.] the press release.

(b)(6), (b)(7)c : Aside from the time lines that you've already shown us, are there others that your group had created?

(b)(6), (b)(7)c : Of this topic, would it include this Military Notification Topic?

MS. FREEMAN: Not that I remember, like I said, there were many drafts, you know, so this was sort of the final one, so there were drafts that were prepared.

(b)(6), (b)(7)c : This is a document called "Summary of Air Traffic Hijack Events September 11, 2001." Was this something that your group had worked on or was this independent?

MS. FREEMAN: No, this was something that AT-20 did, and then--

(b)(6), (b)(7)c : That's not the entire document, it's missing a lot of the graphics.

MS. FREEMAN: Yeah, I know, but I think that this formed the basis for the chronologies that you see in Tab 1. So, I believe that--I don't think it's exactly the same, but it looks the same. So they put this together, this was their thing. This was sort of their reconstruction of the events. They put it together and then when--so when we were putting the book together for the congressional hearing my recollection is that we asked them okay, we need a Tab for the chronology, my recollection is that they used the chronology that they had put together for the book.

(b)(6), (b)(7)c : So, it has the same chronology, then.

MS. FREEMAN: I believe it's--

(b)(6), (b)(7)c : Here we're looking at chronologies previously, under her Tab 2 in her book and now she's referring to chronologies in Tab 1.

MS. FREEMAN: Tab 1, and, right, now the one from the book, oh there it is September 17, it will be interesting to see if this one's dated,

yes, September 17.

(b)(6), (b)(7)c : Okay. This time right here is--the first page anyway--is looks like that same grid--

MS. FREEMAN: That does look like it.

(b)(6), (b)(7)c : But then the subsequent pages look a little different than what you've got, it's more narrative, notification--did you see this before? I copied that a little--

MS. FREEMAN: Is that not the same as this?

(b)(6), (b)(7)c : Notification Chronology--it sure--it sure does look like it.

MS. FREEMAN: Although the one you have doesn't have a date on it. But it looks a lot of what's in Tab 2 of my book.

(b)(6), (b)(7)c : Yeah, it does.

MS. FREEMAN: Okay, the last one looks a little different and that's the 93.

(b)(6), (b)(7)c : Yeah, the one that I have for 93 has the 9:16 entry.

MS. FREEMAN: Oh, it has the 9:16.

(b)(6), (b)(7)c : The one that you have has a note at the bottom about the open line.

MS. FREEMAN: Okay, and this is the one that has-- this was the note that I was remembering: Note, we believe this time to be inaccurate because it precedes the indications that UL 93 was in distress, 9:16.

(b)(6), (b)(7)c : Do you think this was an earlier draft of that?

MS. FREEMAN: I think so, that must have been, my guess that this one was prepared around the time that the draft press release came out which showed the 9:16 time. But, I'm really stretching my memory here. I may be totally wrong about the draft press release saying 9:16. Northeast Air Defense Sector Logs show FAA notifying the military 9:16; maybe I'm wrong, maybe it came out of the logs and not the draft press release. But I have this recollection about 9:16 and so, there it was.

And so, we believed, we included a note on here, we believed this time to be inaccurate. This

is the one where we would have to be fortune tellers as you said. And so my guess is that when we prepared the final one for the congressional hearing, since we believed that time to be inaccurate, that we didn't include it in, you know, the materials that Monty Belcher Jane Garvey were going to be testifying on. My guess is we probably didn't want them to use that time because we didn't think it was appropriate.

(b)(6), (b)(7)c : Probably a good guess, huh?

MS. FREEMAN: Yeah.

(b)(6), (b)(7)c : This binder, then, was given to the Administrator?

MS. FREEMAN: Yes.

(b)(6), (b)(7)c : This is exactly what she had?

MS. FREEMAN: Mm-hmm, yes, exactly what she had.

(b)(6), (b)(7)c : What congressional testimony did she have to give that would have included this information?

MS. FREEMAN: She testified before--she had a bunch of congressional hearings and, I'm sure

somebody could reconstruct what committees she testified before the House, the committees in the House and Senate. And I don't know, I can't tell you, that the notification issue was even asked. But when we were putting the book together--when you're putting a book together like this to prepare somebody for a congressional hearing, you try to anticipate what they might be asked about.

(b)(6), (b)(7)c : Okay.

MS. FREEMAN: And I guess we must have figured that they might be asked about the military notification.

(b)(6), (b)(7)c : Would she have gotten anything ahead of time saying these are the topics we're going to discuss which means she would have known?

MS. FREEMAN: Sometimes we get that. I can't remember with this particular one we did. But the woman, I mentioned, [REDACTED] whose last name I can't remember, who was from the [REDACTED] (b)(6), (b)(7)c [REDACTED] (b)(6), (b)(7)c [REDACTED] and she was on my group. I seem to remember her coming in and saying, here are some of the things you might

anticipate being asked about or that the Administrator might be asked about and we used that as a starting point, you know, when the group first got together, okay, let's assign, you take that one, you take that one, as a starting point for the tabs. But I don't remember where she got that. I don't know if that was her, based on her experience, anticipating what the questions might be or if she had talked to some of the staff on the Hill.

But that's the way we prepare witnesses for congressional hearings. It's a mix of what so-called experts at the FAA guess that the questions might be from talking to staff people on the Hill.

(b)(6), (b)(7)c : Usually the hearings are topic-based, right? There will be a topic but there could be other issues that arise?

MS. FREEMAN: Mm-hmm.

(b)(6), (b)(7)c : Is there, like, a Congressional Affairs Officer or office in FAA that might have a list of all her testimony?

MS. FREEMAN: You could either try the [unintell.] to answer your question. It's AGI [unintell.] government industry affairs and you could ask them, they probably have it, or if not them, the Chief Counsel's Office, the legislative staff, ADC-60, would have it.

(b)(6), (b)(7)c : Okay. Did you work on helping Jane Garvey or Monty Belcher prepare for their hearings before the 9/11 Commission?

MS. FREEMAN: No. I was on detail, as I recall, I was on detail at the time.

(b)(6), (b)(7)c : That would have been, like, May 2003.

MS. FREEMAN: Yeah, I was on detail.

(b)(6), (b)(7)c : Did you help anybody at the FAA prepare for any White House briefings?

MS. FREEMAN: I don't remember specifically. I don't remember specifically. I was asked that by the Commission staff. And I don't specifically remember. I told you that they showed me, you know, some chronology with notes like I mentioned on there. And they asked me, did

you prepare this specifically for a meeting that Monty Belcher had [unintell.], but I can't remember.

(b)(6), (b)(7)c : Going back to this Notification Chronology document, how did you guys decide which events to include in here and which events not to include.

MS. FREEMAN: Air Traffic, prepared the chronology. And so, I mean, they prepared the chronology and, then, you know there was a little back-and-forth. My recollection is that there was a little back-and-forth. You know, Monty Belcher saying, well, you know, have you got whatever information about something, you know, go ahead and use that.

(b)(6), (b)(7)c : Like for example, United 93 here this document in your binder which is dated 9/18, is that what that is--

MS. FREEMAN: Mm-hmm.

(b)(6), (b)(7)c : --doesn't show a time or anything that you guys actually notified the military other than to have that note at the

bottom. And I believe that the Commission determined that there actually was a notification to the military like at 10:07 or something like that.

MS. FREEMAN: 10:08 or something like that.

(b)(6), (b)(7)c : Which was a few minutes after that plane had actually crashed. Did you guys have any discussion about that?

MS. FREEMAN: No, I didn't. My recollection was that from my--from what I knew, from what I was led to believe is that we didn't have any notification time for 93, it was one of those, gee, this was kind of this doesn't look so good, but it doesn't look like we ever notified the military. That's my recollection.

(b)(6), (b)(7)c : So you don't have a recollection that you guys discussed excluding that 10:, I think it was 07?

MS. FREEMAN: No, no, my only recollection was thinking, gee, this doesn't look so good because we never notified them. That was my.

[REDACTED]: Yeah, it's 10:07 that Cleveland Center advised news of American 93 [sic] hijacked. The other thing that I was curious about is for American 11.

MS. FREEMAN: In fact, and I think that's a basis, again to go back to there press release that the military put out, they had an NA, Not Available, notification on 93, which is, you know, that's sort of what we assumed, or at least what I assumed.

(b)(6), (b)(7)c : Did you get a chance to look at this?

MS. FREEMAN: I do not have it, I'd love to one of these days, I just haven't had the time. I read some of the, you know, the newspaper coverage.

(b)(6), (b)(7)c For that American 11 chronology here?

MS. FREEMAN: Mm-hmm.

(b)(6), (b)(7)c : It, the chronology stops at 8:46 and some seconds saying impact at the World Trade Center.

MS. FREEMAN: Mm-hmm.

(b)(6), (b)(7)c : But the Commission, for example, had determined that FAA reported on a couple of occasions after the plane crashed, they reported to the military that this plane was still airborne, and that isn't reflected in this chronology. Do you remember having any discussion with anybody about that?

MS. FREEMAN: I don't remember that at all.

(b)(6), (b)(7)c : So, as far as you're aware, there was no discussion that that should be included or excluded.

MS. FREEMAN: Not that I was aware of.

(b)(6), (b)(7)c : Are there any other time lines in here that reflect notification--

MS. FREEMAN: No.

(b)(6), (b)(7)c --to the military at all?

MS. FREEMAN: No, no.

(b)(6), (b)(7)c : When do you think you got back from DHS?

MS. FREEMAN: It was August of 2003.

(b)(6), (b)(7)c : Okay. When you got back from DHS, do you remember any discussion within FAA about concern on the FAA's part about the information it provided to the Commission concerning when they notified the military or anything like that?

MS. FREEMAN: No, I remember hearing that, you know, I guess it was in the papers and everything about, you know, that there was some concern that the Commission hadn't gotten everything or, you know--

(b)(6), (b)(7)c : This was the subpoena issue, then?

MS. FREEMAN: Yeah the subpoena issue, yeah.

(b)(6), (b)(7)c : Anything about military notification by the FAA?

MS. FREEMAN: Not that I was made aware of, no.

(b)(6), (b)(7)c : Did you help, well, no, never mind, you were not here. It's hard to believe, but I think I'm running out of questions.

MS. FREEMAN: All right.

(b)(6), (b)(7)c : Did you--aside from the stuff in the book here, were there any other, like, internal briefing documents along these lines with military notification that you might have helped prepare?

MS. FREEMAN: The only thing is that chronology that I mentioned to you that I wish I could have asked the Commission for a copy of, but it seemed to me that they had a copy of something and it's been several months since they interviewed me, but it seems to me that they had a copy that looked a lot like this but it had some notes, yeah.

(b)(6), (b)(7)c : Had some handwritten notes on it?

MS. FREEMAN: No, not handwritten. It looked a lot like this, but it pointed out, and in fact this does, too, but I don't, but it, you know, pointed out things like, we don't really believe, like the 9:16 time, we don't really believe that's really accurate because blah, blah, blah.

(b)(6), (b)(7)c : Okay.

MS. FREEMAN: Stuff like that. That's the only thing that I remember--you have the thing that Air Traffic put together.

(b)(6), (b)(7)c : You don't recall any discussion, though, at the FAA about clarifying the record with respect to those questionable times? The 9:16 and--

MS. FREEMAN: I don't remember other than--and that's why I said I was kind of on the periphery at some point, you know, it was--Jeff Griffith was getting directions from Monty Belcher and, you know, he was talking to somebody in the military and he was coming back and reporting to Monty and I wasn't always there when he came back. And so, I, at some point, you know, I was not primarily involved. I was putting together all these other tasks and it was, like, you know, my feeling was, fine, somebody else was working on that, Jeff Griffith was working on that. And he's dealing directly with Monty Belcher, so whether those discussions took place, I don't know. But I don't remember them.

(b)(6), (b)(7)c : I can't think of anything else. I think we'd like to get a copy of this whole binder.

MS. FREEMAN: Mm-hmm

(b)(6), (b)(7)c : Unless there's anything else you can think of (b)(6), (b)(7)c

(b)(6), (b)(7)c : Wasn't there, didn't you just mentioned some whether the Commission said it, about some notifications after impact?

(b)(6), (b)(7)c : American 11 yes.

(b)(6), (b)(7)c : Oh, American 11.

(b)(6), (b)(7)c : You said there wasn't any discussion about whether to include or exclude, but--

MS. FREEMAN: I don't remember any discussions.

(b)(6), (b)(7)c : Any discussion at all--

MS. FREEMAN: About after--I don't.

(b)(6), (b)(7)c : I mean, was all the focus kind of being placed on every other thing that happened up until the crash?

MS. FREEMAN: In a way, yeah, but I do

think some of these notifications are placed after the impact. Let me see.

(b)(6), (b)(7)c : But I think that one, I mean, it's after the fourth plane went down, right? So, maybe that's kind of. I mean, [unintell.] fourth plane crashed, was that the kind of the end of the chronology as far as the FAA was concerned.

MS. FREEMAN: It may be, I don't know.
It--

(b)(6), (b)(7)c : Do you understand?

MS. FREEMAN: Because the estimate for crash time was 10:04 for the last flight. No, I mean, so, for example, here was one, although it's only by two minutes, but the crash time for 175 was 9:03, we show it as 9:03 and the notification at 9:05, so that one was two minutes after.

So, I just, yeah, I can't answer that question, I don't know why the chronologies stopped when they did. I don't remember any discussion or that there was any story to be told or there was anything after. So, it's what we were given by Air Traffic and stuff we included.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : If you wouldn't mind giving us copies of those documents in that binder.

MS. FREEMAN: I can do that. How do I get those to you?

(b)(6), (b)(7)c : Well, if--

(b)(6), (b)(7)c : Do we want the entire binder or just want the stuff that relates to--

MS. FREEMAN: You can look there's a table of contents, if you'd like to see what the other tabs are.

(b)(6), (b)(7)c : Ground stop issues. Yeah, I think it's just 1 and 2. If you have a copy machine we can copy those.

MS. FREEMAN: Okay, sure.

(b)(6), (b)(7)c : Well, we're going to stop recording. It's 4:09.

[END OF INTERVIEW.]

SWORN INTERVIEW OF

LYNNE OSMUS

BY

AGENT WILLIAM (b)(6), (b)(7)c

AGENT ELISE (b)(6), (b)(7)c

Friday, September 24, 2004

10:05 p.m. - 11:01 a.m.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

(b)(6), (b)(7)c : --2004 and the time is 10:05 a.m. We're at FAA Building 10-A, Room 300-East, Washington, D.C. My name is (b)(6), (b)(7)c, my co-agent is (b)(6), (b)(7)c. We're from the Office of Inspector General Department of Transportation and we're conducting a review of issues involving certain public statements made by the military and FAA officials at 9/11 Commission Hearings and elsewhere that were allegedly inaccurate. Today we're interviewing Lynne Osmus. Lynne, if you could, please, acknowledge that you are aware that this interview is being tape recorded?

MS. OSMUS: I am aware, I'm with it.

(b)(6), (b)(7)c : Please raise your right hand. Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, and nothing but the truth?

MS. OSMUS: I do.

(b)(6), (b)(7)c : Would you, please, give your full name, spelling your last name for the record?

MS. OSMUS: Yes, it's Lynne A. Osmus,

O-s-m, as in Mary-u-s.

(b)(6), (b)(7)c : And what's your current position? Assistant Administrator for Security and Hazardous Materials.

(b)(6), (b)(7)c : And what grade are you currently?

MS. OSMUS: I'm an SES.

(b)(6), (b)(7)c : How long have you held that position?

MS. OSMUS: Approximately 18 months.

(b)(6), (b)(7)c : Back, like, in the spring of '03?

MS. OSMUS: I think that would be right. I can actually check the records. The reason it's fuzzy is I was in a special assistant position before that working with the Deputy Administrator doing liaison items with TSA. And then [unintell.] organization, I was working so closely with them, I can't tell you the day I actually moved down here, but I can get that for the record, if you like, it's been roughly 18 months, though.

(b)(6), (b)(7)c : Okay. When did you first

start with the FAA?

MS. OSMUS: 1979.

(b)(6), (b)(7)c : And in what position and what was your duty station?

MS. OSMUS: I was a GS-4 police officer, out at Dulles Airport when that was still owned by the FAA.

(b)(6), (b)(7)c : Wasn't that part of, like, Treasury or something at one point, or did they transfer that function over there?

MS. OSMUS: I don't know what it was before FAA had it, but at that point Dulles and National were both AA properties and there were federal police departments at both of them, staffed by FAA employees.

(b)(6), (b)(7)c : And on September 11, 2001, what position did you hold?

MS. OSMUS: I was the Deputy Associate Administrator for Civil Aviation Security.

(b)(6), (b)(7)c : And what grade were you in that position?

MS. OSMUS: [unintell.] position, as well.

(b)(6), (b)(7)c : And after September 11, 2001, how much longer did you continue to hold that position?

MS. OSMUS: Until the President had responsibility for aviation security transferred to TSA in February of 2002. So, that concluded my actual job in the external aviation security program. That was when I started working for the Deputy Administrator as the special assistant. And the paperwork followed at some point after that. But once TSA assumed programmatic responsibility that was essentially the end of the function I had previously held.

(b)(6), (b)(7)c : But you stayed at FAA?

MS. OSMUS: I did, yeah, I did.

(b)(6), (b)(7)c : And then you held that special assistant position until you obtained your current position, is that right?

MS. OSMUS: Yes, right, uh-huh.

(b)(6), (b)(7)c : I think that you had mentioned, before we formally started the interview, that initially you had been tapped to

provide some liaison for the Commission. Can you kind of describe what your responsibilities were there?

MS. OSMUS: Sure, I'm sure you have all these documents, but I wanted to refresh my memory a little bit in terms of some of the dates. We were first contacted at the department and FAA by the Commission staff in, let me think, I want to say April, but let me just verify that from my notes here. They had--the team that worked on the aviation security issues and air traffic issues contacted Lindy Knapp, how was the lead for the Commission at the department and set up the first meeting--no, I'm not finding it. I think it was April. It was not all that long before their first hearing.

(b)(6), (b)(7)c : So around April 2003?

MS. OSMUS: Right.

MS. OSMUS: And they provided their first list of issues they wanted to talk about and they were primarily aviation security in nature--as soon as I get through paging through here, I'll try to

find that for you. And at that first meeting. Dana Hyde [ph], was there and I think another staff person along with her from the Commission staff. They explained to Lindy that there were different teams covering different subject matter areas and the two that would be primarily associated with the Department and FAA were the ones affecting aviation security and air traffic issues.

And we clarified for a little bit for her, or tried to, the programmatic issues between TSA and FAA. As an example, they were looking for copies of documents associated with new security measures put in effect after 9/11. And we explained, once TSA picked up that programmatic authority, all the files associated with those records went to TSA. We could help them try to figure out where in TSA they resided, but that needed to be a request of TSA at that point.

And then, let's see, so May 7, I think is the first request from the Commission and it's notification of a hearing on May 22 and 23. And it was Nation's Aviation Security Posture as of

September 11, what happened on September 11 relative to hijacking; what security improvements have and should be made to the aviation system in the aftermath of the attack.

So because those were largely--how did hijackers exploit the aviation security system; how did the security measures employed that day comply with applicable policies and regulations; and what were the [unintell.] issues that need to be answered to gain a definitive understanding of what took place on September 11.

So, because of the request so largely focused on aviation security, as was their specific requests in their first document request, I was kind of the lead at that point for FAA because that had been my programmatic responsibility earlier.

(b)(6), (b)(7)c : Before we continue, I'm sorry to interrupt. Who is Lindy Knapp?

MS. OSMUS: Lindy Knapp is the Deputy General Counsel at the department and I think she was acting General Counsel at the time.

(b)(6), (b)(7)c : Oh, at OST?

MS. OSMUS: At OST, mm-hmm, yes. So, as you can see by just my handwritten notes, the first DOT document which was sent to the OT to answer, several of the items actually needed to be redirected to TSA. These are the kinds of discussions we were having with the staff to explain to them what currents currently resided in FAA and what were officially in the possession of TSA.

(b)(6), (b)(7)c : So, this list that you are referencing is from a May 7, 2003, letter addressed to Secretary Mineta from Chairman Kean and Vice Chairman Hamilton.

MS. OSMUS: Right.

(b)(6), (b)(7)c : And the section we're talking about, it says DOT Document Request No. 1. And that looks, I guess, actually from Daniel Marcus at the Commission. But there's eight items in here. So, you guys would have assembled the items that FAA could still respond to?

MS. OSMUS: Right.

(b)(6), (b)(7)c : And then you directed the

Commission over to TSA--

MS. OSMUS: Exactly.

(b)(6), (b)(7)c : --to obtain these other items.

MS. OSMUS: Mm-hmm, yes, exactly.

(b)(6), (b)(7)c : So, it looks like about half of them you guys still could have responded to and the other half, roughly--

MS. OSMUS: Right.

(b)(6), (b)(7)c : Did you guys prepare, like, a binder or something like that to respond or was this such a volume that it would have had to fit into boxes?

MS. OSMUS: I think this first one wasn't all that voluminous. Let me take just a quick look here. This first request wasn't all that voluminous, so it would have either been in a binder or a folder, I don't remember how we actually physically packaged it up.

(b)(6), (b)(7)c : Would that first request be with Shirley Miller, now?

MS. OSMUS: Yes, it will be, I turned over to her everything that we had maintained copies

once we handed over financial responsibility for liaison to her.

(b)(6), (b)(7)c : Were Jane Garvey and Monty Belcher already retired at this time?

MS. OSMUS: Yes.

(b)(6), (b)(7)c : And now we're talking about, like April, May 2003?

MS. OSMUS: Yes.

(b)(6), (b)(7)c : I think one or both of them may have testified in May.

MS. OSMUS: Jane Garvey did.

(b)(6), (b)(7)c : Jane did.

MS. OSMUS: Mm-hmm, she did, indeed, yes.

(b)(6), (b)(7)c : And did you guys put together, like, a briefing book for her?

MS. OSMUS: We prepared her, we drafted the statement that she was--and then, of course, she personalized it, but we did--and we met with her--I met with her two or three times prior to the Commission hearing because she got specific questions to respond to. Have you seen those?

(b)(6), (b)(7)c : Actually I was going to ask

you.

MS. OSMUS: Let me see if I have them. I'm sure I have them in here. And then sat down with her and kind of refreshed her memory and ours going through some of the briefing documents that we had kept after 9/11. I think this is her letter of invitation; no. Dated May 8, that's Jane Garvey's invitation.

[Lengthy pause.]

(b)(6), (b)(7)c : Well, her statement is available on the Commission's Website if I'm not mistaken.

MS. OSMUS: Mm-hmm [unintell.]

(b)(6), (b)(7)c : It says in the letter that the Commission will receive testimony from expert witnesses on three central aviation questions. The second of which says--the second item is "What happened on September 11 relevant to the hijackings?" Now, there--I recall, from reading her statement, that was formally submitted, that there wasn't a lot of detail concerning that particular topic in her statement. There was a

very short discussion in that area. But I was wondering, did you guys prepare some briefing documents for her concerning this second item that she would have been able to review or take with her to the testimony to ref if she had received questions?

MS. OSMUS: We prepared a series of briefing documents or copied ones that we prepared early after 9/11; just to refresh her memory. In her discussions with the Commission staff, which she had several of before the hearing. And then looking at this, she was anticipating questions to pertain very specifically to aviation security issues on 9/11: about how passengers were screened; what the hijackers did in going through screening, that sort of thing. She was not looking at the air traffic pieces on 9/11.

You know, in hindsight we should have looked at every issue we thought there was a possibility of the Commission raising with her. Because obviously, she was surprised by specific flight, air traffic questions that did come up in

the hearing. But that wasn't her sense at all.

And, in fact, I've got some notes in here at all, I think, while I was just jotting down in discussions with her as we were getting closer to the hearing in case we needed to augment her briefing materials or adjust her statement a little bit. And, you know, discussions with (b)(6), (b)(7)c where feedback was what was really good about the system and what wasn't and, I mean, but it was all aviation security focused.

And in the discussions I had with her did not include that they expected to get into the air traffic specifics. And, in fact, understanding that different teams were working different topics, we knew there would be a second hearing for us at some point focused on the air traffic piece, that was just another reason we didn't anticipate that.

(b)(6), (b)(7)c : Do you recall at that time who you were primarily talking with anything the Commission?

MS. OSMUS: I wasn't talking with the Commission very directly. I think I had a

conversation, perhaps, with John Raitt. Jane was having discussions with him and, perhaps, others. Who else was I hearing from? Ken Mead was also testifying at that first hearing as I understand and he had a couple of conversations with me about what he was hearing and wanted to know what Jane's statement was and they were sharing statements and that sort of thing.

I don't remember if I heard from anybody else.

(b)(6), (b)(7)c : Do you know where those briefing materials are now?

MS. OSMUS: The ones that she had?

(b)(6), (b)(7)c : Yeah.

MS. OSMUS: I have no idea. I don't know whether she has them or if she tossed them or--

(b)(6), (b)(7)c : Did you guys keep a copy yourselves?

MS. OSMUS: You know, I didn't keep a copy of everything I gave her. I've got a couple copies in here of things that were faxed to her just because I have the fax cover and I kept it. But

I've got my own personal copies of briefing documents we did after 9/11 that I'm keeping just as reference material and I pulled from them things that she had a particular interest in.

(b)(6), (b)(7)c : Did you provide her with any, like, time lines for her briefing?

MS. OSMUS: I don't remember giving her time lines at all. I know she asked for JL and IT reports on things like effectiveness of EDS, access controls, screener performance, I don't remember giving her time line at all.

(b)(6), (b)(7)c : I think after or during her testimony she was asked to respond to some formal questions. I think they refer to them in the Commission hearing as QFRs or questions for the record.

MS. OSMUS: Mm-hmm.

(b)(6), (b)(7)c : Did you participate in drafting those? MS. OSMUS: Mm-hmm, I did prepare some of the answers, right, mm-hmm.

(b)(6), (b)(7)c : Do you have copies of that?

MS. OSMUS: I don't, I'm sure Shirley

does. Once--it was not long after the Commission that we shifted the focal point to Shirley and she kind of began a repository of the FAA copies of everything that was provided. So--

(b)(6), (b)(7)c : Did you prepare QFRs, specifically, for the topic of the air traffic, the timing of the--

MS. OSMUS: I wouldn't have, no, because that's not my background. The QFRs that pertained to aviation security, I would have been in on the development for those.

(b)(6), (b)(7)c The--where we got your name, specifically, was from a transcript of the testimony--

MS. OSMUS: Mm-hmm,

(b)(6), (b)(7)c --from, it was May 23, and it had you and Ms. Schuessler had been credited with--

MS. OSMUS: Yes.

(b)(6), (b)(7)c : --preparing a document--

MS. OSMUS: I recall that.

(b)(6), (b)(7)c : --titled "FAA Communications with NORAD on September 11, 2001."

MS. OSMUS: Mm-hmm.

(b)(6), (b)(7)c : Do you have a copy of that document?

MS. OSMUS: I don't.

(b)(6), (b)(7)c : Do you recall who worked on that with you?

MS. OSMUS: Yeah, I do, if I can just give you a little background on how it occurred, too?

(b)(6), (b)(7)c : Sure.

MS. OSMUS: I wasn't at the hearing when Jane Garvey testified. But it was carried on CSPAN or something, we were watching it there. And saw the questioning at the specific air traffic; flight-specific data, which I knew she didn't have committed to memory.

And, as I recall, I think it was Mr. Ben-Viniste reverenced DOD testimony. Pardon me, and he read from a statement from DOD and DOD was testifying later in that same hearing. When I talked to Jane about it afterwards, she had not seen DOD's testimony that they were going to present at the hearing. When she heard what Mr.

Ben-Viniste was speaking about. It sounded to her like it was testimony yet to be given from DOD, but current testimony. When, in fact, as we kind of looked back, I believe he was actually referencing statements made by DOD at a different hearing within a couple of weeks of 9/11. At which time, there were still some discrepancies between FAA and DOD in terms of the time line as we knew it then.

When she heard it in the hearing, she thought, there's a current disagreement, which she wasn't aware of. Because she hadn't been in discussions about that. And so part of it was, you know, keying up issues for her a little bit out of context. When I talked to her after the hearing, she was very disappointed in herself in not having kind of anticipated things even beyond what the letter of invitation had been. And was anxious to get back to the Commissioners with a specific [unintell.].

And then later that evening, and I don't remember whether she called me or she called Linda Schuessler or (b)(6), (b)(7)c, but we knew that

Ben-Viniste had contacted her and indicated he wanted specific answers to this issue of when DOD connected to FAA shortly after the events of 9/11.

So, and he said she would either have to come in that night or the next day to answer the questions if she couldn't produce the answer.

So, Linda Schuessler, myself and Laura Brown, who's the deputy in Public Affairs, got together in Laura's office. Linda called,

(b)(6), (b)(7)c --pardon me I'm having a senior moment, it'll come to me in a moment--it will come to me--the [unintell.] office- (b)(6), (b)(7)c

(b)(6), (b)(7)c

MS. OSMUS:

(b)(6), (b)(7)c

at DOD who was the liaison with FAA. And, you know, quickly on the phone they had tried to- (b)(6), (b)(7)c had clearly been in the FAA building on 9/11. She was trying to figure out exactly what time that was. Her recollection, at the time, was fairly early in the morning. And so the statement that (b)(6), (b)(7)c put together based on that conversation was the one that went back to the Commission. And

the one that was referenced the following day at the hearing.

Sometime later, and I want to say, a couple of weeks later, perhaps, but (b)(6), (b)(7)c was in the building on other business and I was talking to Shirley Miller about something and she came into the office and was relating to us she knew that she would be interviewed by the Commission at some point and had been, again, going back through her notes and her recollection and that sort of thing about where she had been on that day and realized that she had actually come to the FAA building later in the day than she had realized.

So, we knew there needed to be some correction there and knowing that she was going to be interviewed, we thought that was the way to clarify the record for that.

(b)(6), (b)(7)c : Clarify the record for?

MS. OSMUS: The fact that (b)(6), (b)(7)c recollection, after she gave it more thought, was that she arrived at the FAA building later in the

day on 9/11 than she had originally thought when talking to Linda Schuessler by phone on May 22.

(b)(6), (b)(7)c : Okay, she arrived later in the building at FAA on 9/11?

MS. OSMUS: Right.

(b)(6), (b)(7)c : So, this document, that's referenced in the testimony, is something that you and Linda and Laura had worked on together or--

MS. OSMUS: The document was, literally, a one- or two-sentence statement.

(b)(6), (b)(7)c : Okay.

MS. OSMUS: Laura typed it on her computer, Linda was standing behind her telling her what the conversation was with (b)(6), (b)(7)c and we were just trying to keep it very simple and straightforward, so it was, literally, a sentence or two, as I recall.

(b)(6), (b)(7)c : Okay, so it was in narrative format--

MS. OSMUS: Right.

(b)(6), (b)(7)c : --as opposed to time-line format?

MS. OSMUS: No, it was literally, I don't know whether Laura still has a copy of that or not, but it was very brief.

(b)(6), (b)(7)c : Before your interview today, did you get a chance to look at the testimony from May 23?

MS. OSMUS: No, I haven't.

(b)(6), (b)(7)c : I didn't bring my copy of that, do you have that one MOI?

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : It was, like, a 9-page one. Thank you. This, we've gone through reviewing transcripts and seen who said what and this item in this report that we have here is supposed to be, it's a quote from the actual transcript, itself, which on May 23, 2003. And on page 78 of the transcript that we have, this is the item from Mr. Ben-Viniste--

MS. OSMUS: Okay.

(b)(6), (b)(7)c : --and in there he reads into the record, I guess, this document that you guys had submitted. Could you just take a look at this?

MS. OSMUS: Sure. Oh, I'm actually Mr. Osmus.

(b)(6), (b)(7)c : Yeah. Which made it even more difficult trying to find you.

MS. OSMUS: Actually more sentences than I would have remembered it being. Okay, that's helpful.

(b)(6), (b)(7)c : What he read into the record, do you think that's the entirety of that document or do you think there was more?

MS. OSMUS: It's actually longer than I remember it being, so I'm sure it's the entirety of it yeah, I shouldn't say I'm sure, since I, you know, but my recollection was it was much shorter, I'd be surprised if it was any longer than that.

(b)(6), (b)(7)c : In the quote in the transcript, like, second-to-last sentence, says, "NORAD logs indicate that the FAA made formal notification about American Flight 77 at 9:24 a.m., but information about the flight was conveyed continuously during the phone-bridge before the formal notification." This reference to the logs?

MS. OSMUS: Mm-hmm.

(b)(6), (b)(7)c : Where did you guys get that information?

MS. OSMUS: Those were logs or time lines that Linda had, I don't know what the origin was.

(b)(6), (b)(7)c : Did you review any NORAD logs, yourself?

MS. OSMUS: I have subsequently, I'm just looking, when Shirley was working with the Commission, I don't know that I had looked at any prior to the hearing.

(b)(6), (b)(7)c : Okay, subsequent to--when do you think that you had a chance to actually review some logs?

MS. OSMUS: From time to time as Shirley got additional requests from the Commission, and a comprehensive time line was put together for all the flights?

(b)(6), (b)(7)c : Mm-hmm.

MS. OSMUS: Shirley and Linda Schuessler and a couple of Linda's folks and I sat down and just went over it--not for accuracy, because I

didn't have the basis for where the numbers were coming from, but things like spelling out acronyms and making sure that to a non-FAA reader it made sense to most. So, I mean, that sort of thing. I've not done any scrubbing of one long against another to analyze time or anything like that.

(b)(6), (b)(7)c : So, when this was prepared, back in May 2003, you hadn't actually reviewed any logs yourself?

MS. OSMUS: No, I don't recall seeing any logs up until that point.

(b)(6), (b)(7)c : Do you know where this reference would have come from?

MS. OSMUS: No.

(b)(6), (b)(7)c : Okay.

MS. OSMUS: I mean, you know, I think as Shirley probably mentioned to you, folks were keeping notes about time from various perspectives, just recognizing what a momentous event had occurred on 9/11. But I don't know what particular source that came from.

(b)(6), (b)(7)c : Would (b)(6), (b)(7)c have

provided that kind of information to you during that, when you were asking her about that during that evening when--

MS. OSMUS: I don't know what she and Linda talked about specifically. It could be, I don't know, they were on, I think Linda called her from her cellphone and they talked for some minutes, but I don't know what the, you know, what the details were.

(b)(6), (b)(7)c : Were you involved in preparing any time lines for either publication to the public or Commission or anybody, or even internal briefings that would have discussed military notification--

MS. OSMUS: No.

(b)(6), (b)(7)c : --aside that item right there that we just talked about?

MS. OSMUS: No.

(b)(6), (b)(7)c : When did you kind of pass the torch on the federal liaison position?

MS. OSMUS: It was after this hearing and I think it was probably around the time we got the

second document request, let me take a look, because, as I recall, that was one that was starting to get voluminous in areas outside of my own organization's record keeping. And it was really, what Shirley and I talked about was how to make it sort of a corporate undertaking because it really touched various parts of FAA. I don't remember what date it was, specifically, though. I probably should have jotted it down because it was a good date for me. But, let me see if I've got anything in here that might reflect that. Few more notes I just found, in case it's of interest to you, as confirmed by the Commission staff, wonder where this came from--this must have come from Lindy Knapp, it's talking about the Commission staff. Again, just continual focus on the aviation security topics for former Administrator Garvey. That's all I have in this folder. I can look elsewhere, if it's of interest to you.

(b)(6), (b)(7)c : I mean, just ballpark, sometime after--

MS. OSMUS: --I would guess, yeah, within

a couple weeks after this hearing, I would guess.

(b)(6), (b)(7)c : Because the hearing was, like, May 22 and 23rd, so it was probably early June--

MS. OSMUS: Early June, yeah, I think that's a good ballpark date.

(b)(6), (b)(7)c from--

MS. OSMUS: Uh-huh.

(b)(6), (b)(7)c : She's actually an employee of DOD?

MS. OSMUS: That's right, I think she's actually retired now, but she was at the time. I believe she retired just a month or two ago.

(b)(6), (b)(7)c : And she was stationed where?

MS. OSMUS: She had an office in the Pentagon and I think she also had an office here in this building, because she was here so often.

MS. OSMUS: So she was, like, a DOD liaison to the FAA?

MS. OSMUS: Right.

(b)(6), (b)(7)c : Was she--

(b)(6), (b)(7)c : Before September 11--I'm sorry, or after September 11?

MS. OSMUS: Both

(b)(6), (b)(7)c : Both?

MS. OSMUS: Right.

(b)(6), (b)(7)c So, she would be, like, in the Office of the Secretary of Defense, something like that do you think?

MS. OSMUS: You know, I've known her for years, I actually don't know where she resided in the hierarchy at DOD.

(b)(6), (b)(7)c : Were there any other DOD folks that you had dealt with post-9/11?

MS. OSMUS: No, no.

(b)(6), (b)(7)c : This--I'm just going to call it a question for the record item that was read into the record on May 23, did you coordinate this at all with the military or do you know if anybody had?

MS. OSMUS: Well, the coordination was the conversation that Linda Schuessler had with (b)(6), (b)(7)c

(b)(6), (b)(7)c I mean, that was the discussion which led to this answer. There wasn't any formal coordination done if that's what you're asking.

(b)(6), (b)(7)c : Other than just a discussion?

MS. OSMUS: Right, by phone, right.

(b)(6), (b)(7)c : And so then, that discussion would have been, like, on the 22nd or something like that?

MS. OSMUS: Evening of the 22nd.

(b)(6), (b)(7)c : Okay.

MS. OSMUS: Yes.

(b)(6), (b)(7)c : It says, "The U.S. Air Force liaison to the FAA immediately joined the FAA headquarters phone-bridge and established contact with NORAD on a separate line." Is that the item that you needed to coordinate with her?

MS. OSMUS: No, that was the information that I believe Linda asked her, you did come, didn't you, and when did you come, that kind of thing. That reference to the liaison is to Cheryl.

(b)(6), (b)(7)c : Okay.

MS. OSMUS: And, again, what was different when we talked a few weeks later was that when she did come and she did sit in on telecons, it was quite a bit later on 9/11 than she had originally

recalled.

(b)(6), (b)(7)c : Did you guys--I think you had said earlier that you had some discussion about making a correction?

MS. OSMUS: Yeah, I mean, we knew after we talked to her again that her recollection was different, therefore, this wasn't accurate as presented. We also knew that she was on the list of folks to be interviewed by the Commission, so we knew that staff would hear it from her and she would make the point about when she, you know, when she came and what she participated on and what she knew firsthand in terms of FAA and DOD communications.

(b)(6), (b)(7)c : So, as far as correcting the record, then, you guys were going to rely on her interview with the Commission?

MS. OSMUS: Yeah, I don't remember, I don't know if Shirley did anything beyond that. It wouldn't have occurred to me to suggest she did, because I figured bringing a person in from-- (b)(6), (b)(7)c was the most direct way for the Commission to get

the info.

(b)(6), (b)(7)c : So the item that really needed correcting here, I'm just trying to be exact so I understand--is it says, immediately joined, and so, when we're talking about immediately, it says here, within minutes after the World Trade Center--

MS. OSMUS: Right.

(b)(6), (b)(7)c : --so that, immediately, really should have been later in the day?

MS. OSMUS: Right.

(b)(6), (b)(7)c : The phone-bridge was still in existence, is that correct? Or would that have not be present without her?

MS. OSMUS: No, it would have been. There were several communications lines set up. I think this one particularly references one that was set up in the air traffic conference room, which was on the 10th floor, kind of down the hall from where Shirley's office is, where Linda Schuessler sits now. And that was--that would have been in existence whether or not (b)(6), (b)(7)c was there or not. It was set up just between our air traffic folks

and major facilities talking about who was doing what kind of information sharing, that sort of thing.

(b)(6), (b)(7)c : Now, have you had a chance to look at the September 11 report--

MS. OSMUS: Parts of it, yeah.

(b)(6), (b)(7)c : --by the Commission? Did you--I guess the Commission has some concerns about some time references and DOD time lines, primarily. And there's two of them, one is 9:16 a.m., the other is this 9:24 reference. And the--I think they had said in their report, and I'm really kind of summarizing it now--

MS. OSMUS: Mm-hmm.

(b)(6), (b)(7)c : --is that the 9:24 reference for American Flight 77 was really a discussion about American 11. And they say, though there was a phone-bridge between FAA and NORAD at the time both the military representative and the FAA representative--and I wish, I knew I should have brought the book with me--

(b)(6), (b)(7)c : I have the--

MS. OSMUS: Yeah, but I need the footnote because it names two people. But they said both of those folks indicated that no substantive notification issues were going back and forth. Is that--would that be the phone-bridge they're talking about?

MS. OSMUS: I don't--I can't answer that without looking at it.

(b)(6), (b)(7)c : Okay.

MS. OSMUS: Again, there was, you know, a phone-bridge in the conference room; there was a telecon set up in the Aviation Command Center; so, I'm not sure which one they were talking about?

(b)(6), (b)(7)c : Do you have access to the Internet?

MS. OSMUS: Mm-hmm.

(b)(6), (b)(7)c : Would you mind if we look something up real quickly?

MS. OSMUS: Help yourself.

(b)(6), (b)(7)c : I just logged in--

(b)(6), (b)(7)c : Because one of the things I was curious about is--

(b)(6), (b)(7)c : Oh, you know what?

(b)(6), (b)(7)c : Oh, there you've got it.

(b)(6), (b)(7)c : [unintell.] I didn't notice it was there.

(b)(6), (b)(7)c : Excellent. Well, it's not quite--otherwise I would have told you these names that are in the footnote here. Okay. Michael Wickert [ph].

MS. OSMUS: Mm-hmm. I know him.

(b)(6), (b)(7)c : Is he the one who was on that conference call in the air traffic conference room?

MS. OSMUS: No, he would have been in the Aviation Command Center, where they have the primary net set up.

(b)(6), (b)(7)c : In Herndon?

MS. OSMUS: No, here. The Aviation Command Center is on the 10th floor.

(b)(6), (b)(7)c : Okay, because I've heard it referenced as the Operations Center.

MS. OSMUS: Yeah. And it does get confusing. The Operations Center and now, of course, it's physically different than it was on

9/11, which makes it even more confusing. On 9/11, there was an Operations Center, which is staffed 24-hours-a-day by communicators, essentially. Now, they report to me, but they set up telecons for people.

(b)(6), (b)(7)c : Okay.

MS. OSMUS: Adjacent to it was another room that, typically, was empty. It had work stations around it. That was the Aviation Command Center. And when there was an incident, that would be stood up by folks in the Aviation Security Organization. Mike Wickert was one of the people in the division that was one of the first-responders in that situation. And that's where the primary net would be set up with a pre-identified list of people to participate in the event of a hijacking, traditional hijacking.

(b)(6), (b)(7)c : Okay.

MS. OSMUS: Such a net was set up on 9/11 and one of the groups always plugged into that net was, I think it was, then NMCC from the military at the time.

(b)(6), (b)(7)c : Mm-hmm. Is that a recorded line?

MS. OSMUS: It wasn't at the time.

(b)(6), (b)(7)c : Oh, it was not.

MS. OSMUS: Hu-uh.

(b)(6), (b)(7)c : Who was the other person, you were saying?

(b)(6), (b)(7)c : On the military side? It says, NMCC Officer (b)(6), (b)(7)c

(b)(6), (b)(7)c : So, he was the pre-identified person at NMCC?

MS. OSMUS: It wouldn't have been a name, it would have been NMCC and a contact phone number for them, and then depending on when the call went out would depend on who would, actually, you know, staffing that position for the NMCC.

(b)(6), (b)(7)c : Who was on the 11th and who would have been on that conference call in Air Traffic's conference room.

MS. OSMUS: I was never in the room when it was on, so this is not firsthand. I understand that--and I really like him, too--Jeff Griffith,

who officially had Linda's job prior to his retirement, was there among others.

(b)(6), (b)(7)c : Was there some pre-identified person at the military that they would have had to contact on that conference call?

MS. OSMUS: My understanding is that was a conference call that was kind of set up in the moment because they knew they needed to talk to their facilities. I'm not aware that they had an SOP in any kind of standard way. It was something, you know, they knew they needed to have discussions among key facilities and set it up, but I think it was an ad hoc teleconference. I mean, obviously, something it was something, you can confirm with the air traffic folks were actually on it, but that's my understanding.

(b)(6), (b)(7)c : Traditionally, telephone lines in those conference rooms are not recorded, as well, right?

MS. OSMUS: Right.

(b)(6), (b)(7)c : Who's the person in the operations center that set up, who was the person

on the staff out there who set up the phone-bridge, who was the person responsible for linking all the numbers together.

MS. OSMUS: Yeah, which operations officer, I don't know off the top of my head. I'm sure that's in the records because Shirley had to track that down in order to have the Commission staff talk with them, but I don't remember who it was.

(b)(6), (b)(7)c : So the only coordination that you participated in with the military was the one involving (b)(6), (b)(7)c and that was, actually, Linda Schuessler who did that, right?

MS. OSMUS: Right, Linda talked to Cheryl, right.

(b)(6), (b)(7)c : So that would be the extent of your involvement in military coordination?

MS. OSMUS: Right.

(b)(6), (b)(7)c : As far as your reviewing, like, military supporting documentation, for any, like summary time lines, after the fact, you had subsequently seen some logs--

MS. OSMUS: Mm-hmm.

(b)(6), (b)(7)c : --that Shirley Miller has?

MS. OSMUS: Yeah, I think it was actually--what I had seen is the, what we called the comprehensive time line, that tracked all the flights. And I reviewed that before it was sent to the Commission staff. Again, not for accuracy of the substantive information from air traffic, but just to make sure that it was understandable to folks that weren't air traffic technical folks. Because I'm not, and if I didn't get it, then we knew we had to make it a clarification.

(b)(6), (b)(7)c : Was that document something that the military was submitting to the Commission?

MS. OSMUS: No, this was one that FAA developed.

(b)(6), (b)(7)c : Got so many different time lines here.

MS. OSMUS: I know.

(b)(6), (b)(7)c : Well, I'll just show you a couple and see if maybe one of these, if you can remember. This first one is titled "Chronology of

Attacks of September 11, 2001 and Subsequent Events Through April 30, 2002. And then parenthetically, it says (Eastern Time was used). That's probably the thickest time line that we've obtained.

MS. OSMUS: Prepared by the FAA's agency historian this time line is a reference tool. Yeah, the one that I looked at, didn't have that little lead in sentence.

(b)(6), (b)(7)c : Okay.

MS. OSMUS: Yeah, this has more in it than the one that I looked at. The one that I looked at had the particulars of the four flights, including communication between FAA facilities that was of relevance. And, obviously, focusing a lot on anything that could be documented about coordination and communication with DOD. This one has a lot more in it than the one that I looked at.

MR. OWENS: Another one, I have here is just titled, simply, "Chronology of September 11, 2001." And it starts off with, you know, American Air Lines Flight 11 AAL-11 Boston to Las Angeles. And it does the same thing for the other three

flights. Unfortunately, I don't see a date or anything on it, but it's 11 pages.

MS. OSMUS: This looks more similar to the one I looked at. I can't tell you if this is, definitively, the final one that was prepared, because I know there were different iterations as we were making clarifications and so forth, but this is the type of time line that I looked at, this type of data.

MR. OWENS: Do you think that would have been in 2003, sometime?

MS. OSMUS: When I looked at it?

(b)(6), (b)(7)c : Yeah. I don't think so, I think it was in 2004, because my recollection--we were trying to scrub that prior to, obviously, prior to the hearing with the air traffic pieces were discussed, which was what, in --was that in June?

(b)(6), (b)(7)c : June of 2004.

MS. OSMUS: So, I'm thinking this would have been a month or two prior to that. Shirley can tell you when it was actually delivered to the

Commission, it would have been just prior to that.

(b)(6), (b)(7)c : I have one more document that might fit what you described. And it's heading says "Sensitive Security Information, FAA Communications Regarding Hijacked Aircraft on September 11, 2001." It's like, it's 15 pages. Flip through a couple of pages. It kind of starts and looks very similar to this--

MS. OSMUS: Yeah.

(b)(6), (b)(7)c : --chronology that I showed you.

MS. OSMUS: Yeah, I see what you mean, yeah. I don't know if I've seen this before or not. Although, I'm sure either myself or one of my staff would have reviewed or contributed to part of this stuff that talks about [unintell.] overseeing the staff which would assemble on the Aviation Command Center and that sort of thing. But, you know, off the top of my head, I can't tell you whether I've seen this exact document or not.

(b)(6), (b)(7)c : Do recall any discussions within the FAA wherein folks within the FAA

expressed some concern about the time lines that were in existence that there might be some inaccuracies or maybe the military's reference to notification was questionable?[inaudible]

MS. OSMUS: No, I mean, you know, in the immediate aftermath of 9/11, I knew from being in discussions with the Administrator and the Deputy Administrator and others, the air traffic side of the house was looking at that issue. But I was up to my ears in our own programmatic responsibilities, so, you know, I knew there were discussions going on.

My understanding was that we--that that had been sorted out and the time line agreed to between the two agencies. And then the next steps to make more robust that communication contact, which air traffic and DOD did. Beyond that, I hadn't heard any concern about time lines or anything.

(b)(6), (b)(7)c : What about externally, like at the Secretary's office level?

MS. OSMUS: No.

[Lengthy pause.]

(b)(6), (b)(7)c : Other than helping prepare Ms. Garvey for her testimony, did you help prepare any types of briefings for other entities, such as, you know, White House briefing or any type of secretarial briefing or anything like that?

MS. OSMUS: Besides the Commission work, you mean?

(b)(6), (b)(7)c : Mm-hmm.

MS. OSMUS: Not for the White House, I attended a meeting with Secretary Mineta, let me think when this was, prior to his interview by the Commission, I don't think it was--it was prior to his being interviewed by the Commission. And really hadn't prepared any briefing documentation, he was there with some of his staff, the Deputy Secretary was there and the Chief of Staff and Lindy Knapp from the General Counsel's office. And there was a briefing book which his staff had put together. I don't believe I input to it. And it was largely kind of refreshing his memory about what happened, what the sequence of events were

after 9/11; how long the air space was shut down and all that sort of thing. And that was a couple of hours, I think with him. And I think that's all in terms of briefing interactions with the department that I had.

(b)(6), (b)(7)c : Did the Secretary's briefing book have any information relating to this military notification issue?

MS. OSMUS: I don't know, I actually never saw the contents of it. It was a thick book but I can't tell you what was in it. I think (b)(6), (b)(7)c (b)(6), (b)(7)c [ph], who was Joe [unintell.] secretary was or Lindy were involved in putting the book together, they were both at the meeting.

(b)(6), (b)(7)c : We had asked earlier about, after the Commission hearing and then a couple of weeks later--

MS. OSMUS: Mm-hmm.

(b)(6), (b)(7)c : When there was discussions with (b)(6), (b)(7)c about the fact that she hadn't come to headquarters until later in the day. It was understood that she would then testify or DOD

representatives would testify and then that would be clarified for the record then--

MS. OSMUS: We expected her to be interviewed.

(b)(6), (b)(7)c : --you expected her to be interviewed?

MS. OSMUS: Mm-hmm.

(b)(6), (b)(7)c : Was there any discussion of recontacting the Commission to clarify Ms. Garvey's previous statements or anything like that?

MS. OSMUS: I don't remember having that discussion. I mean the discussion was as busy as that day was after 9/11, and as busy as people were, it's hard to account for every, even ours, what we were doing.

(b)(6), (b)(7)c : Right.

MS. OSMUS: And I think that's what (b)(6), (b)(7)c was kind of struggling with, as well. Time was compressed and that was the discussion, you know, as memorable a time that that was in its totality, I remember here, busier than I'd ever been in my life, and I can't tell you how I spent next 16

hours. You know, and not truly account for every hour of it. I don't recall that we had a discussion about any kind of formal clarification for the record.

(b)(6), (b)(7)c : So, is it fair to say that there really wasn't that concern to do it because--

MS. OSMUS: Yeah, that's exactly right.

(b)(6), (b)(7)c : --there was--you understood that it would be clarified from the military?

MS. OSMUS: Right. And at the time, too, whatever the final big chronology had not been completed. So whatever clarification of time could be woven into that as well. So, I mean, there wasn't anything we thought warranted a particular, separate action, we didn't discuss such a thing.

(b)(6), (b)(7)c : I can't really think of anything.

(b)(6), (b)(7)c : No.

MR. (b)(6), (b)(7)c: Is there anything else that you would like to add or?

MS. OSMUS: Not that I can think of.

MR. (b)(6), (b)(7)c: Well, we'll go ahead and end

wtk

Case # 042R0122001

SWORN INTERVIEW OF

DANIEL P. DIGGINS

BY

SPECIAL AGENT (b)(6), (b)(7)c

SPECIAL AGENT (b)(6), (b)(7)c

(b)(6), (b)(7)c, DOD, OIG

Wednesday, October 6, 2004

11:21 a.m. - 12:25 p.m.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

I N T E R V I E W

(b)(6), (b)(7)c : Today is October 6, 2004, the time is 11:21 a.m., we are at FAA Building 10-A, Conference Room 840 in Washington, D.C. My name is (b)(6), (b)(7)c, also present today are (b)(6), (b)(7)c with the Department of Transportation, IG and (b)(6), (b)(7)c (b)(6), (b)(7)c, with the DOD IG. We are conducting a review of issues involving certain public statements made by military and FAA officials at 9/11 a Commission hearings and elsewhere that were allegedly inaccurate. Today, we're interviewing Dan Diggins. Mr. Diggins, please, acknowledge that you are aware that this interview is being tape recorded.

MR. DIGGINS: Yes, I am.

(b)(7)c : Would you, please, raise your right hand? Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, and nothing but the truth?

MR. DIGGINS: I do.

(b)(6), (b)(7)c : Would you, please, give us your full name, spelling your last name for the record?

MR. DIGGINS: Daniel P. Diggins,
D-i-g-g-i-n-s.

(b)(6), (b)(7)c : And what's your current
position?

MR. DIGGINS: I'm an Air Safety
Investigator.

(b)(6), (b)(7)c : What division is that?

MR. DIGGINS: It's the Division of AVR.

(b)(6), (b)(7)c : What's your routing symbol?

MR. DIGGINS: AAI-100.

(b)(6), (b)(7)c : What is your current grade?

MR. DIGGINS: GS-15.

(b)(6), (b)(7)c : You're an equivalent right,
because you guys are under, like, an FG?

MR. DIGGINS: FG, I'm sorry, it's an FG,
FG-15, I forgot.

(b)(6), (b)(7)c : How long have you been in your
current position?

MR. DIGGINS: Three years.

(b)(6), (b)(7)c : And on September 11, 2001,
what position did you hold?

MR. DIGGINS: I was an Air Traffic

Investigator in the Air Traffic Division.

(b)(6), (b)(7)c : That's in AAT-20?

MR. DIGGINS: Correct.

(b)(6), (b)(7)c : And how long had you held that position?

MR. DIGGINS: Oh, off and on for 10 years.

(b)(6), (b)(7)c : So, in October 2001, you assumed your current position?

MR. DIGGINS: Correct, October 1.

(b)(6), (b)(7)c : Can you describe for, briefly, what your current duties are?

MR. DIGGINS: I represent the FAA on major aircraft accidents. So, whatever FAA requirements need to be addressed, then I'm responsible to make sure they're addressed when an aircraft accident occurs. Usually, I handle major accidents.

(b)(6), (b)(7)c : And who is your current supervisor?

MR. DIGGINS: (b)(6), (b)(7)c [ph].

(b)(6), (b)(7)c : And who does Lyle report to?

MR. DIGGINS: (b)(6), (b)(7)c [ph].

(b)(6), (b)(7)c : And what's (b)(6), (b)(7)c position?

MR. DIGGINS: He's the Director of Accident Investigation for the FAA.

(b)(6), (b)(7)c : And then who does (b)(6), (b)(7)c report to?

MR. DIGGINS: (b)(6), (b)(7)c .

(b)(6), (b)(7)c : What (b)(6), (b)(7)c position right now?

MR. DIGGINS: He's the Associate Administrator for Aircraft Certification and Regulation, should have brought my org chart with me, I guess.

(b)(6), (b)(7)c : Do you have a staff?

MR. DIGGINS: No.

(b)(6), (b)(7)c : When you were in AAT-20, on September 11, who was your supervisor then?

(b)(6), (b)(7)c : I think it was Tony Ferrante, I think, either Tony Ferrante or Tony Mello, I'm not sure.

(b)(6), (b)(7)c : Were you working on September 11, were you on duty?

MR. DIGGINS: Yes.

(b)(6), (b)(7)c : Can you describe briefly, your

day for us from when you first find out about the hijackings?

MR. DIGGINS: Briefly?

(b)(6), (b)(7)c : If it's possible, the "Reader's Digest" version.

MR. DIGGINS: I was looking over the previous day's events, pilot deviations, accidents, routine things in the morning. And Dave Knoles and Tony Mello came by my office and they said, come with us. I said okay, what's going on? They said an aircraft just hit the Trade Center.

So, I immediately thought it was a small airplane. And on the way up the elevator I asked Dave what happened, what's going on? He says it was an air carrier. I said what's the weather. He says, it clear. And I says, what's really going on here. so we went up to the 10th floor and we started a conference call, some people were already on the bridge on the conference call, some of the New York facilities, I think the military was on the conference call, the Command Center and I'm not sure who else was on there, because it was already

in progress by the time we keyed into it up in the conference room up on the 10th floor.

And we were starting to get organized trying to understand what's going on and we had a white board similar to that. And we were trying to get information and trying to understand the developing events. And somebody's writing whatever they're hearing on this speaker phone up on the white-board there and we're still trying to gain an understanding of what's happening what we should do next.

And we were in a conference room, but there was a TV in the adjoining office, so I tried to go get the TV and to bring it in and run a cable in there so we could actually see the events on CNN and while I was doing that, the second one hit the Trade Center. And while I'm actually moving the TV, the TV's still on, it on a roller thing and all of a sudden the second one hits. And then it was apparent something bad seems to be happening here.

So, I went back downstairs and got my laptop and brought my laptop back up because I

could tell right away the white-board wasn't going to handle things. And, again, I don't know the exact order of things and time was kind of a relative thing at that moment.

So, I started just a Word document and started typing everything I heard in the room, everything I could type and everything I could hear and understand. And I'm the go that started the log. And that went on for probably an hour, an hour and a half or so.

Well, prior to that, probably, within about a half hour or an hour into the log, there was an Air Force lieutenant colonel, I think, I'm not quite sure of her rank. But she came into the room and offered to help. And I don't recall her name at all.

(b)(6), (b)(7)c

MR. DIGGINS: It wasn't (b)(6), (b)(7)c I know (b)(6), (b)(7)c it was somebody else and I don't know who she was. I'd never met her prior and I don't remember ever seeing her after, so I don't know who this individual was.

(b)(6), (b)(7)c : And when did she come in?

MR. DIGGINS: She came into the room, I don't know, sometime between 9:00 and 10:00 o'clock in the morning, I don't know, really, that's a guess on my part.

(b)(6), (b)(7)c : And it was a female?

MR. DIGGINS: It was a female, I think it was Air Force, I'm pretty sure it was Air Force. And she asked me if she could help and I says can you type? And she says a little bit. And I said well, you're probably better than me, sit down and start typing. She says what do I type. I says everything you hear in this room. So, she took over my typing duties from that point.

And I spent most of the rest of the daylight hours in that conference room with Dave Knoles and company trying to assess, fielding phone calls, I remember fielding a phone call from Anchorage, calling Anchorage trying to understand what's happening with a Korean Air, I think it was, or a Japan Air Lines, I don't know.

And things such as that and handling phone

calls for various events that seemed to be lost; aircraft that weren't lost; aircraft that just, I don't even remember there were so many things going on during the day.

Probably later on in the day, around 4:00 or 5:00 o'clock in the afternoon, I went back downstairs to my office and tried to get ahold of the facilities that actually had the ATC radar and the ATC voice tapes and started telling them what I wanted and when I wanted it. And I was talking to the FBI, I mean, the FBI was calling. This conference call that we had going was, I put it on downstairs so I could always hear it in the background and I could monitor it and could speak up when I needed to, the same conference call that was going on upstairs.

So, I was in the process of processing the radar and voice tapes and getting as much information about all the events. By that time we knew there were four different events and try to put it together.

And about midnight, somewhere between 4:00

or 5:00 o'clock in the afternoon and midnight, I actually, we got some of the voice tapes; they were WAV files, digital files at that point and they were e-mailed to me or posted on an FTP site, I don't remember which. But I got digital copies of the voice communication. And, in particular, United 93's communication with Cleveland Center. And I burned a CD of that and took it up to the 10th floor to play it for the Associate Administrator, the Deputy Administrator, actually, and head of FAA security.

(b)(6), (b)(7)c : Which position did you have, or positions from Cleveland?

MR. DIGGINS: I don't remember the position, but basically, it was the segment of the voice where you could actually hear the distress of the pilots in the cockpit. So [unintell.] what position that was.

(b)(6), (b)(7)c : Was their radar position known?

MR. DIGGINS: It was a radar, well it was the radar, it was the position they talked from the

airplanes, so I don't know, if was, using it as a radar, but it could have been some other position. It recorded the actual air-to-ground communication.

(b)(6), (b)(7)c : Now you said that you had--that you think you joined the conference call while it was ongoing?

MR. DIGGINS: Mm-hmm.

(b)(6), (b)(7)c : Based on what you kind of described, it would have been after the first plane had hit the World Trade Center, but before the second plane had hit?

MR. DIGGINS: Correct.

(b)(6), (b)(7)c : And you said that you thought that the military might have been on the conference call, why do you think that?

MR. DIGGINS: Can't give you a solid reason and I don't know if I thought that at the time or looking back I believe that's so, but I can't give you a real reason why I would have been, but somehow I just felt it after the fact, I don't know if I believed it during--some, I can't tell you why, but I just did.

(b)(6), (b)(7)c : Was that line being recorded?

MR. DIGGINS: I have no idea, it was going through the Com Center upstairs so, we weren't recording it so.

(b)(6), (b)(7)c : You guys weren't recording it?

MR. DIGGINS: No, it was just one of those speaker phones that you put in the middle of the table and I had never--I didn't see a recorder in the room.

(b)(6), (b)(7)c : The Female from the military that showed up, did she do anything other than helping you make log entries?

MR. DIGGINS: That's all I asked her to do and that's all I saw her do, but I didn't pay much attention to her after that.

(b)(6), (b)(7)c : Had you ever seen her before?

MR. DIGGINS: No, no.

(b)(6), (b)(7)c : Do you know, who, did someone contact her to come in or--

MR. DIGGINS: Have no idea, she just walked into the room, I had no idea what her position was, I had no idea where she was. She had

a uniform on, no question she had a uniform on. And it just strikes me as a lieutenant colonel-type uniform I don't, I can't tell you why, I just.

(b)(6), (b)(7)c : And you haven't seen her since?

MR. DIGGINS: No. Don't know what her job was, have no idea who she was or where she came from. She offered to help and I said, okay, sit down and type.

(b)(6), (b)(7)c : Who do you recall participating with you on the conference call here?

MR. DIGGINS: Oh, Dave Knoles, Dave Knoles was running it, basically, Dave Knoles and Tony Mello, these are people that are in the room, the conference room. Saber [ph], and I can't remember her last name, she was there part of the time.

(b)(6), (b)(7)c : Who was that?

MR. DIGGINS: There was a woman, but I can't remember whether it was (b)(6), (b)(7)c or (b)(6), (b)(7)c but I don't know either one of them very well, but they--I can't remember who it was; I'm not sure who somebody, that I vaguely knew, but I can't remember

which one it was.

And there were people coming in and out of the room constantly. Jeff Griffith came in and out of the room a couple times. I don't know if you know these names--

(b)(6), (b)(7)c : I do.

MR. DIGGINS: --I'm sure some folks do.

(b)(6), (b)(7)c was in the room. In fact (b)(6), (b)(7)c and I spent September 11 here the first night, he and I were on duty the entire night, I didn't leave for two days. (b)(6), (b)(7)c is our gee-whiz guy.

(b)(6), (b)(7)c : [unintell.]

MR. DIGGINS: He's the guy who does all our computer stuff, if you got a problem he's the guy to see.

(b)(6), (b)(7)c : Anybody else you can think of?

MR. DIGGINS: There were other people in the room, but it's a kind of a blur, I don't really remember, and I didn't know some of the people that came in and out of the room. And there were other people I recognized but I don't remember who they

are.

(b)(6), (b)(7)c : You said Knoles was running the conference call, basically?

MR. DIGGINS: From our room, he was running the call from the headquarters position, but I don't know if that's fair to say he was running the entire conference call, he was doing the communication from that conference room.

(b)(6), (b)(7)c : Is it fair to say that he's probably the one who set that up?

MR. DIGGINS: I have no idea, you'd have to ask him.

(b)(6), (b)(7)c : You said Griffith had come into the room at one point, Jeff Griffith?

MR. DIGGINS: Yeah.

(b)(6), (b)(7)c : Did he express when he came in any displeasure that this conference was taking place or any pleasure that it was taking place?

MR. DIGGINS: The one time I remember him coming into the room, he asked for Dave and they went out of the room.

(b)(6), (b)(7)c : Okay.

MR. DIGGINS: So, whatever that conversation was, I have no idea.

(b)(6), (b)(7)c : You haven't heard what happened with their conversation?

MR. DIGGINS: I wasn't party to their conversation and I didn't ask and nobody told me.

(b)(6), (b)(7)c : Do you recall what facilities were participating in that conference call?

MR. DIGGINS: I remember New York Center, definitely; the Eastern Region Division, Frank Hatfield [ph], I remember him, I can't remember the New York Center Manager's name, but I remember him and Frank Hatfield talking. I think the New York TRACON was on there, too, but I don't remember a specific comment from the TRACON, but I believe they were there. I think there were a couple of New York facilities other than that, But that was initially, but then I remember hearing information from the Central Region and Great Lakes Region, but I can't tell you who was on from those regions, whether they were facility people or regional staff people, I don't know, because there was quite a

conversation about American 77 that disappeared on radar and whether it crashed out in Kentucky somewhere and things like that. And we were getting direct, well, direct, information about that it was lost on radar and things like that. But how many layers that went to prior to us hearing it on the phone, I don't know. So, there were people that had direct with those ATC facilities in those regions.

I remember talking about a Delta 1898 of Delta, I don't know, some Delta that departed Boston headed to the West Coast and up in Cleveland Center's airspace there was some big confusion whether he was squawking hijack or whether, because he fit the profile, I guess.

There was kind of confusion the ATC system, this is my guess of what happened--the ATC system was asking him if he was okay, covertly, I guess and there was a question whether he was another airplane being hijacked and it finally got through that the pilot reported everything is fine, but I guess they ended up landing someplace, I

think it was Cleveland or someplace, I don't remember.

And there was some confusion about whether there was some activity going on in this airplane or what. And it turned out to be no activity, but I guess he did a precautionary landing somewhere. And all that the conversation was back and forth.

A lot of it was trying to figure out where American 77 was. What United 93 was doing and what this Delta was doing, because the first two had already hit the Trade Center and that all bang, bang, bang, and then after that I was trying to figure out what else we had going on.

(b)(6), (b)(7)c : During that conference call, do you remember if there was any--ever any confusion as to the status of American 11?

MR. DIGGINS: Any confusion?

(b)(6), (b)(7)c : Like, especially after it was thought to have hit the World Trade Center. Do you remember a discussion during the conference call that maybe it hadn't hit the Trade Center and it was still en route south-bound?

MR. DIGGINS: No, because I think what was, at that particular moment in time, I was retrieving the TV from the other room. So, I don't think I was very attentive to what was going on at that particular time. So, I don't really remember. I do remember--

(b)(6), (b)(7)c : This probably would have been after both towers had been impacted.

MR. DIGGINS: See my problem is now, because I was immersed in this data for so long afterwards, I can't remember what the differences of what I remember of real time at that time and what I learned since. So, in the early stages it gets a little fuzzy. So I really can't answer that question, because I don't know. It's not clear in my mind.

(b)(6), (b)(7)c : Do you have anymore questions about the conference call?

(b)(6), (b)(7)c : Do you recall any other, you left off at the Central Region, and Great Lakes Region, and New York Center, Eastern Region Division and the New York TRACON. Any other--

MR. DIGGINS: I think the Command Center was on there, too, yeah, definitely Command Center, I remember--

(b)(6), (b)(7)c : In Herndon?

MR. DIGGINS: --yeah Herndon, yeah.

(b)(6), (b)(7)c : After September 11, what sort of, you know, like briefings or after-action reports, or time lines did you participate in preparing?

MR. DIGGINS: A lot. I participated in making detailed packages of each aircraft; radar, all the things that were given to the Commission.

(b)(6), (b)(7)c : Because you guys normally prepare, like, I think they're called formal Accident Packages for accidents, and that's what happened and for the four aircraft that were hijacked in--

MR. DIGGINS: Little more extensive than that, yes, but that was kind of our guideline to start out with.

(b)(6), (b)(7)c : Now, that was--

MR. DIGGINS: I participated in preparing

all those.

(b)(6), (b)(7)c : Now, aside from the formal Accident Packages, what other sorts of documents did you work on preparing or participate in preparing?

MR. DIGGINS: A PowerPoint presentation that showed the positions of all the airplanes relative to each other. And I put voice clips in each one of them, I guess it was shown up on the Hill at some point. But I spent probably four or five days working on that. That actually had a map of the history of the United States and showed all the relative positions so you could kind of get an understanding, but I did all that pretty much by myself. Took the voice clips of all four airplanes and put them in at certain times so they could see the relationship.

I remember talking with the FBI. It's funny, you start talking, things start popping into my memory. Talking with the FBI. I don't remember who it was, but there was an FBI. FBI was on that ongoing conference call, but I had no idea when

they got in there, whether they were in there from moment one, I don't know.

But I remember talking with the FBI on the conference call and then on commercial telephone elsewhere. During, probably the next day, probably September 12, let's say. And they were interested in seeing if there was a command airplane, a command and control airplane flying in the New York area.

So, I spent a great deal of time screening radar data with Doug Gould, I don't know if you're talked to Doug yet or not. But Doug and I spent a whole lot of time screening data looking for a command and control airplane. And we were searching for the needle in the big, big haystack, I guess. And spend quite a bit of time doing that.

Prepared radar down, radar replays.
Prepared snapshots of radar replays, showing, you know, moments in time. Doug and I did most of that.

(b)(6), (b)(7)c : Do you remember how soon after the 11th you had that PowerPoint presentation

completed?

MR. DIGGINS: I think the Administrator had to go on the Hill, I think, I think I had it done the following weekend, something like that.

(b)(6), (b)(7)c : Because the 11th was, like a Tuesday, so you mean that Saturday and Sunday immediately following?

MR. DIGGINS: I believe so, I believe I was here all weekend, like I never left here. I believe I finished it up probably that Sunday night of Monday morning. Something like that. That's just, I'm about 60 percent sure that's the right answer.

(b)(6), (b)(7)c : I think, (b)(6), (b)(7)c and I have seen that PowerPoint and it graphically depicts the Northeastern part of the United States and it shows a plane kind of moving along and tracks it and there are like little bubbles with time and a description pop up.

MR. DIGGINS: That's it.

(b)(6), (b)(7)c : And then at certain points you, like you indicated you have the WAV file

interspersed where you can here, I guess the tape from the radar positions involved or--

MR. DIGGINS: Correct.

(b)(6), (b)(7)c : Okay. Where were you getting the data for that PowerPoint presentation?

MR. DIGGINS: From the WAV files and the radar data from the respective facilities. I had to synchronize the radar times with the voice times and then I had to plot it on a map so it made some sense, take the relative positions. It was a high-work endeavor, looks petty simple but it was hard to get it to match up.

(b)(6), (b)(7)c : Did anybody else work on that with you?

MR. DIGGINS: No.

(b)(6), (b)(7)c : Did you work on any other, like, time line products during that week?

MR. DIGGINS: Yes, basically a time line of all four airplanes. We knew exactly when they took off we know when they called for clearance, taxi clearance, basic time line of the ATC services and anything else that we had a record of or we can

make a record of, anything documented. Radar was documented, data; somebody made a record of conversation or something like that from the facility we would try to include that in there also.

MR. DIGGINS: And I had to throw out my glasses on that one.

(b)(6), (b)(7)c : Is this--

MR. DIGGINS: Yeah, that's it.

(b)(6), (b)(7)c : That's called the--the official one, I think is a little thicker than this and it's in color and it's called "Summary of Air Traffic Hijack Events September 11, 2001"

MR. DIGGINS: Yeah that's it. Yeah this is the time line we worked on, mm-hmm. We had facility logs that we had copies of all the facility logs and we put things in with voice communications and we tried to generalize.

(b)(6), (b)(7)c : I think that document says, on some of the text pages, which as opposed to those graphics pages. If I can find one, here, like it says at the bottom of this one page, it says,

AAT-20 September 17, 2001. Does that sound like, when you guys probably had this done?

MR. DIGGINS: That's when that iteration was done, I don't know if that's the final, but I know it went through several iterations, I can tell you that.

(b)(6), (b)(7)c : I didn't bring the color one, because it's just too thick for me to carry around all the time.

This section here for United Airlines Flight 175; the text section where it shows the different times and has a description of the event. At 9:05 it says Northeast Air Defense Section Logs indicate they were notified by the FAA of the events concerning UAL 175. Do you know where you guys got that information from?

MR. DIGGINS: Somebody's asked me this question before. I think it was 9/11.

(b)(6), (b)(7)c : Was it.

MR. DIGGINS: Probably why you're here.

(b)(6), (b)(7)c : Pretty good guess.

MR. DIGGINS: I can't tell you where that

came from. What I can tell you, in general terms, if I say, if I wrote this, and I don't know if I did, because it sounds like something I would write, if I would write logs indicate or notify of that, then somehow I had something in writing from them and they were sending, faxing us things, sent us things in e-mail. And I remember reading somebody's handwriting, I remember it was handwriting, from the military. and I can't tell you if it was from NEEDS or not. But I remember reading it, but I don't remember if this item came from what I read, but I just remember reading something that somebody sent me from the military and it was a handwritten time line. Now, I don't know if it was created real time or after the fact or, I don't know. I don't know, but I remember somebody sending me something and I remember reading it. And if I said logs indicate, I would have gotten that from someplace in writing.

(b)(6), (b)(7)c : Do you think it was a handwritten log or a handwritten notes that somebody made from a log?

MR. DIGGINS: It looked like handwritten notes that somebody made from the log, but it was prepared in log format, you know, chronological order, but it didn't look like an official. From what I remember, it didn't look like an official log, but things were happening so quickly. I mean, I wasn't paying much attention to official logs at that point. Because I started a log and it wasn't official either. Just for documents.

(b)(6), (b)(7)c : Who worked on creating this time line with you?

MR. DIGGINS: Oh, a bunch of us. Doug Gould and I did most of it, I'd say. And Tony Ferrante, kind of oversaw that operation. You know, he was going back and forth to meetings and things. But Doug and I were the guys that did most of the work.

(b)(6), (b)(7)c : Did you, yourself, have any contacts over at the military in order to get information, like was there a point of contact that you had, like if you had a question or that you actually interfaced with concerning time lines?

MR. DIGGINS: Post-9/11?

(b)(6), (b)(7)c : Yes.

MR. DIGGINS: No. I did have two contacts in the FBI that I had, but I don't remember such contact in the military.

(b)(6), (b)(7)c : Do you recall anything the time this was being created whether the notification information, like the NEEDS information, whether it was a hot topic, was something that was being discussed, you know they needed this information or--

MR. DIGGINS: I recall that it was not a topic, it was just more information of what seemed like billions of bits of information. It didn't have any different level than any other bit of information from my point of view. Things were pouring in; documents were pouring in. People's written notes were pouring in. We had to--Doug and I had to sort through it trying to figure out, well, is there anything here we can use, I mean, from all different people from ends of conversations, you know, and it's funny how people

have conversations and they write personal notes of what they remember from the conversation and some of those personal notes got to us. I think we kept most of them, they'd be in the file, you folks have probably been through them.

But we just tried to reconcile it to see if it made any sense.

(b)(6), (b)(7)c : Did you guys, in order to put this information together, did you make specific requests that the facilities turn over certain things?

MR. DIGGINS: Yes, oh, yeah.

(b)(6), (b)(7)c : And what were you guys primarily focused on obtaining from them?

MR. DIGGINS: I don't think that's a description that I would used, we weren't primarily focused on anything other than send us everything you have.

(b)(6), (b)(7)c : Okay, so it was a very broad request?

MR. DIGGINS: Yeah, I mean, we asked for the routine things for an accident, which we talked

about with Accident Packages, the -4s and the daily records of some of the operations and logs, and anything, but I think we just said, send us everything you have. I'm sure I typed out some e-mails, too, just detailing what I want in addition things like that. This was all real time.

(b)(6), (b)(7)c : Do you still have any of your e-mails from that period?

MR. DIGGINS: Yeah.

(b)(6), (b)(7)c : Do you still have any of these files in electronic format on your computer?

MR. DIGGINS: No, none. I changed jobs, so I don't have the same work station, I even have a different laptops. I left September 30, for my new job, in another part of the building.

(b)(6), (b)(7)c : The wouldn't let you take it with you, huh?

MR. DIGGINS: No.

(b)(6), (b)(7)c : Do you recall anything this point, for example, when Doug was helping you prepare this. Did Doug have a contact with the military that he was dealing with?

MR. DIGGINS: You'd have to ask Doug.

(b)(6), (b)(7)c : you don't know if Doug had one?

MR. DIGGINS: I don't know, but you'll have to ask Doug if he did.

(b)(6), (b)(7)c : Well, you had mentioned you knew the name (b)(6), (b)(7)c, when did you begin interacting with here?

MR. DIGGINS: Oh, probably a year before on some routine military events.

(b)(6), (b)(7)c : How about with respect to 9/11?

MR. DIGGINS: I don't remember having any interactions with her with 9/11.

(b)(6), (b)(7)c : Okay.

MR. OWENS: I've got some draft time lines here that are the format on the pages has kind of got a grid, with the four aircraft across the top and then on the left side, it has different, like, events and then it lists the time for each of the aircraft. Do these look familiar?

MR. DIGGINS: The times or--

(b)(6), (b)(7)c : Well, the documents, does that look like anything you might have participated in preparing?

MR. DIGGINS: No, I didn't do that. First time I've seen that. I've never seen that. Where'd it come from?

(b)(6), (b)(7)c : Pardon me?

MR. DIGGINS: Where did that come from?

(b)(6), (b)(7)c : It's an AAT document.

MR. DIGGINS: No, kidding.

(b)(6), (b)(7)c : At least that's our understanding. This time line here says "Notification to DOD Time Line," that's the title of it.

MR. DIGGINS: I didn't do that and I don't remember ever seeing that.

(b)(6), (b)(7)c : This one says across the top: Sensitive Security Information and it's titled "FAA Communications Regarding Hijacked Aircraft on September 11, 2001."

MR. DIGGINS: I remember reading this just about the way I'm reading it now. I do not know who

prepared it.

(b)(6), (b)(7)c : Do you remember when you saw it?

MR. DIGGINS: It was sometime after I left AT-20, I know that. And I cannot remember what occasion I saw it.

(b)(6), (b)(7)c : Do you think you could have looked at it within the summer of '03?

MR. DIGGINS: Oh, I know I didn't look at it in the summer of '03.

(b)(6), (b)(7)c : So you think it was before that?

MR. DIGGINS: Well, yeah, definitely, but, you know, again, it looks like something I remember reading, but I don't remember where it came from or--

(b)(6), (b)(7)c : Or why you were--

MR. DIGGINS: --it may be something just like that, I don't know. You know, all these documents tend to look alike after a while, because they all have the same information.

(b)(6), (b)(7)c : That's true.

MR. DIGGINS: You guys probably know that better than I do.

(b)(6), (b)(7)c : Yeah, they just have different titles. Here's another one that's just titled, simply, "Chronology of September 11, 2001." And right after that it says American Airlines Flight 11 AAL-11, Boston to Los Angeles and it lists out the other three flights similarly.

MR. DIGGINS: You see the thing is, what this document concludes is a lot of things that I typed, but I don't remember ever seeing anything listed like that.

(b)(6), (b)(7)c : Nothing formatted that way?

MR. DIGGINS: That way, this is what Doug and I spent our time doing, but somebody can clip and put it in a different format, but I don't remember typing that. But a lot of those words in there are the words that I typed.

(b)(6), (b)(7)c : We only have a couple more, so, this one's just titled "Chronology of Events on 9/11/01" and the reason for that sticky is because when the copy was made, we kind of lost, it said

(b)(6), (b)(7)c and then a phone number, so--

MR. DIGGINS: I don't know who Tracy is. I don't know what this is, I don't believe I've seen this before. It looks like they have plenty of chronologies there, huh?

(b)(6), (b)(7)c : A lot. That's a fact sheet, it's dated October or August 12, 2002.

MR. DIGGINS: I remember seeing a fact sheet in this type of format.

(b)(6), (b)(7)c : Okay.

MR. DIGGINS: I remember seeing it quite a long time after September 11.

(b)(6), (b)(7)c : It's our understanding is that was prepared for the one-year anniversary. Do you remember if they ran it by you or you just happened to run across it?

MR. DIGGINS: I don't specifically remember it, but somebody asked me to look at it, but I can't remember who or why or when, but I remember this and I remember it was going to go public. It was going to be a public document or something or the facts on it were going to be

public. So, I'm sorry, I can't remember anymore than that. But I remember seeing that format.

(b)(6), (b)(7)c : Do you have a recollection of what you were asked to look at specifically? Or were you asked to kind of make sure you agreed with what it said, or was it just kind of F.Y.I., this is going out?

MR. DIGGINS: I'm sorry I don't remember, but I--it was prior to release. Somebody asked me to look at it prior to release, but I'm sure not remembering why they asked me to look at it. I can make a guess but I know that's not helpful to you.

(b)(6), (b)(7)c : On this time line, "Summary of Air Traffic Hijack Events" September 11, 2001 that you said you helped work on?

MR. DIGGINS: Mm-hmm.

(b)(6), (b)(7)c : Do you know, who decided what information to include in here or to not include?

MR. DIGGINS: I think it was sort of a joint effort, Doug and I, Doug Gould and I tried to get a start, we started putting things down and I think (b)(6), (b)(7)c was the final veto power and,

perhaps, (b)(6), (b)(7)c but I remember Tony saying take this out, make this say this and do the, you know, things like that, so to say who is, probably Tony Ferrante had more influence in what was included and what was not included, but that was based upon what Doug and I had already put in to begin with. So, you know, if we chose not to put something in, Tony wouldn't know it wasn't in there, so.

(b)(6), (b)(7)c : The time line that we're looking at here is for United 93. And for United 93, there is no military notification time listed in this time line, I believe. And I was wondering if you knew why that was the case?

MR. DIGGINS: Knowing how we were preparing this and the procedure we were using to prepare it, we probably didn't have any written documentation to indicate the military was notified.

(b)(6), (b)(7)c : It's out understanding that Cleveland Center had called NEEDS at, roughly, 10:07 that morning.

MR. DIGGINS: Okay.

(b)(6), (b)(7)c : And that's some, this time line here that you said that you hadn't prepared, which is the one with the grid on the front of it. There's early drafts of this document that list 10:08 as the notification time. And I was just wondering if you could explain why you guys didn't incorporate that into that document.

MR. DIGGINS: Probably because I didn't have anything written, anything in writing or oversight. This thing was never designed to be an absolute legal document. It was designed to give a synopsis of what's gone on in a very short time frame and with gobs of information, lots of information, we tried to be as concise as possible with what we had. If we dropped something out, we wouldn't necessarily know we dropped it out. Because it was just oversight. Or if we didn't have one piece of paper that indicated a log entry with a notification. If we didn't have that, that could explain it. But I can't give you a specific reason why it's not in here.

(b)(6), (b)(7)c : You don't remember a discussion about including or not including that particular time or any other times?

MR. DIGGINS: I'm not sure what you're asking me.

(b)(6), (b)(7)c : I guess, in general, do you remember having any discussion with the folks you were working with on that, about a time event to include or to not include?

MR. DIGGINS: Oh, yeah. We had discussion, you know, but I can't tell you what the subject matter was or what the event was or what the, you know, the time line was, we were trying to make sure the times were right; consolidate it with radar; coordinate it radar, voice, because they're not necessarily the same times, clock times, so you have to-we had people telling us that this is what happened and if they just told us we didn't know whether we should put it in or not because it's based on somebody's telling us, you know. We tried to be as factual as possible.

Sometimes, there's lots of voice

communications in here we decided, well, should we include that one, do we think that helps tell the story of what happened here or was that just a routine call and we dropped that one off. so, those are the type of things that went into editing this document. But I don't recall any of them specifically. Good grief, it was three years ago.

(b)(6), (b)(7)c : The entries that are in here that reflect a military log as the source. This one here at 9:05 for United 175, it says NEEDS log reflects. Did you guys try to go back to an FAA source document to verify or confirm what the military record is saying?

MR. DIGGINS: That's a tough question to answer, because I, if it we had documents available from two different sources, we tried to make sure that the times reconciled. Did we do that in every instance? No, absolutely, not. But I remember doing that on some issues, but I can't tell you what the issues are, I can't tell you what the documents are, but it was basically a common-sense check, does this make sense, if we're going to

write this down as a fact does it make sense. But I can't tell you if that's what was done here.

For instance if we get a log from New York Center that says this, this is what happened to United 93 and then we had a log from Cleveland Center that said this is what happened to 93 or something like that, we'd make sure that the times made some sense. Because people in the heat of battle, when I started my log up on the conference call, I made a mistake by an hour, early in the log. So somebody can make an entry error very easily, which I did.

(b)(6), (b)(7)c : But a lot of these entries were coming off of radar position tapes and things like that--

MR. DIGGINS: Correct.

(b)(6), (b)(7)c : --and they have times embedded in there, right. And all those times should be pretty accurate.

MR. DIGGINS: Pretty accurate, yes.

(b)(6), (b)(7)c : If you would have had for the entries where there is a need for a log or a

military document reference, if you would have had some type of FAA source documents, would you have included that in the chronology?

MR. DIGGINS: I'd like to think I would. You folks have no idea what it was like during that time to try to figure out what's going on. We were just trying to take a gob of information and try to make sense of it so, did we make some mistakes documenting it? I'm sure. I know some of the mistakes I made. But I don't know if we went out and checked other things to see if it reconciled.

If we had things, we tried to reconcile them. If we didn't have them, I don't know what we did.

(b)(6), (b)(7)c : After you guys had published this document, the "Summary of Air Traffic Hijack Events," when you started to get additional information in, that might have changed these time lines, what did you guys do to amend that at all?

MR. DIGGINS: I don't know--I don't remember working on too much after this document was published, I really don't.

(b)(6), (b)(7)c : Is it safe to say that this is sort of the baseline for all future time lines, concerning 9/11? That the FAA put together--

MR. DIGGINS: I'm not going to say that. How would I know that?

(b)(6), (b)(7)c : Do you know when in October you went over to AAI?

MR. DIGGINS: Mm-hmm.

(b)(6), (b)(7)c : Do you remember when?

MR. DIGGINS: It was September 30 something like that, or something however the days shook out.

(b)(6), (b)(7)c : Oh, right at the end, okay.

MR. DIGGINS: And I went up to Ground Zero.

(b)(6), (b)(7)c : What were you doing up there?

MR. DIGGINS: Working with the FBI on the Terrorism Task Force, the FAA liaison. Still am, still tracking bad guys for the FBI.

(b)(6), (b)(7)c : Do you remember a request from the FAA Administrator or her deputy for time line information? Do you remember if you got a

specific request from them? Maybe it wouldn't have come directly to you, it would have gone through the chain of command.

MR. DIGGINS: It would get through Dave Knoles and Dave would come in and say why don't we do this, or, I don't, there was interaction, constantly, around the clock, about trying to get time lines here, but I can't tell you the genesis of that interaction was--

(b)(6), (b)(7)c : Do you know if the Administrator or her Deputy had specifically asked for a time line?

MR. DIGGINS: I think I remember Dave Knoles once saying Monty wants this, Monty Belcher. That's about the limit of my recollection, I'm sorry.

(b)(6), (b)(7)c : Wants this, do you know what this mean?

MR. DIGGINS: Nope.

(b)(6), (b)(7)c : Do you know what happened to the "Summary of Air Traffic Hijack Events"?

MR. DIGGINS: What happened to it?

(b)(6), (b)(7)c : Who were the consumers of this?

MR. DIGGINS: I don't know, I was assuming that the Hill.

(b)(6), (b)(7)c : Do you recall if you participated in preparing any briefings for the White House? Or that would be used by somebody for a White House briefing?

MR. DIGGINS: I think that that PowerPoint that I prepared was eventually going to get over there, too. I think I heard something like that was going to be used for some of the staffers over at the White House.

(b)(6), (b)(7)c : So the PowerPoint that you prepared would have been used for a briefing on the Hill?

MR. DIGGINS: Mm-hmm.

(b)(6), (b)(7)c : And also, possibly, some White House staffers.

MR. DIGGINS: Right, but I heard that after I prepared it for the Hill. So, I mean, when I was preparing it it was for the Hill and then I

heard, eventually it was going to be used for that, I didn't. I gave people my final product and then I checked out.

(b)(6), (b)(7)c : Do you know who would have used your PowerPoint to present to the Hill, would it have been the Administrator or--

MR. DIGGINS: I believe so, that's what I heard, but that's second- and third-hand so I don't have any direct knowledge.

(b)(6), (b)(7)c : Do you know who would have been involved in the White House briefings?

MR. DIGGINS: No.

(b)(6), (b)(7)c : Did you get involved in pulling together any data for the September 11, Commission?

MR. DIGGINS: No, other than just asked me if I had any personal notes, that was easy to answer.

(b)(6), (b)(7)c : And then you were interviewed by them?

MR. DIGGINS: Correct.

(b)(6), (b)(7)c : Have you heard the name Sherry

Gott [ph]?

MR. DIGGINS: No.

(b)(6), (b)(7)c : How about Doug Davis?

MR. DIGGINS: That sounds familiar, but I--it does sound familiar but I can't tell you how or why.

(b)(6), (b)(7)c : Do you have anything else, Phil.

(b)(6), (b)(7)c : Just a couple things. Were you contacted by your public information people, or Public Affairs for any releases to the press regarding the events of 9/11?

MR. DIGGINS: Was I personally contacted?

(b)(6), (b)(7)c : Yes, any of your information time line come back?

MR. DIGGINS: No.

(b)(6), (b)(7)c : And subsequent, is there anyone in DOD that you had contact or might have?

MR. DIGGINS: In DOD?

(b)(6), (b)(7)c : In DOD?

MR. DIGGINS: Nothing comes to mind.

(b)(6), (b)(7)c : Is there anything else that

you'd like to add that you think might be helpful to us?

MR. DIGGINS: I'm still not sure what the issue is. If you'd tell me what you're looking for, maybe I could--shed some light on it.

(b)(6), (b)(7)c : Trying to understand where the information came from for these time lines and where, who decided what to include or not to include in here. And I guess what we're most curious about are these military logs that are referenced in these time lines, as to who saw them and where they're at now and--

MR. DIGGINS: The only thing I remember. I remember handwritten, somebody hand wrote something and I can't tell you who, where or how I got it, but I believe it was faxed to me. But it was hand and it was from some military somewhere, but i can't tell you where or who, if I remember at the time, it was handwritten what went on. And I remember looking at that but I can't tell you if I took data and entered it, I cannot tell you that I don't know. But if I thought it was useful

information and I trusted the source at the time, then I would have included it. I know that's not real helpful to you, but that's what happens.

(b)(6), (b)(7)c : I mean, if that's what happened, that's what happened.

(b)(6), (b)(7)c : Do you recall if you kept it or shredded it, did it have any instructions with it or--

MR. DIGGINS: Meaning

(b)(6), (b)(7)c : Those handwritten notes, like burn before reading, something like that.

[Laughter.]

MR. DIGGINS: No, I didn't shred it, I don't recall any instructions.

(b)(6), (b)(7)c : When you moved, did you leave a file cabinet behind for your--

MR. DIGGINS: On these events?

(b)(6), (b)(7)c : Yes.

MR. DIGGINS: Boxes of stuff, yes. I wouldn't say I left it, it was in our area. I mean Doug and I were just, Doug and I were really working our fannies off trying to make sense of

this stuff. We had duplicate data, we had all kinds of stuff. We had more stuff and probably about 50 percent of it was duplicated. So we had to first try to figure out what the hell we had.

(b)(6), (b)(7)c : Do you have anything else.

(b)(6), (b)(7)c : Have you ever heard of a book called "Air War Over America?"

MR. DIGGINS: No. Is that the 9/11?

(b)(6), (b)(7)c : The official First Air Force Account.

MR. DIGGINS: Recommended reading?

(b)(6), (b)(7)c : No. I'm not recommending it.

(b)(6), (b)(7)c : We'll end the interview. It's

12:25 p.m.

OFFICE OF INSPECTOR GENERAL

Case # 042R0122001

SWORN INTERVIEW OF
PATRICE ALLEN-GIFFORD

BY

SPECIAL AGENT [REDACTED] (b)(6), (b)(7)c

SPECIAL AGENT [REDACTED] (b)(6), (b)(7)c

Wednesday, October 6, 2004

1:40 p.m. - 2:30 p.m.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

(b)(6), (b)(7)c : Today is October 6, 2004, the time is 1:40 p.m., we are at FAA Building 10-B, FAA Headquarters, Fifth Floor. My name is (b)(6), (b)(7)c with the Department of Transportation, Inspector General, by co-investigator is (b)(6), (b)(7)c. We are here to conduct a review of issues involving certain public statements made by military and FAA officials at a 9/11 a Commission hearing and elsewhere that were allegedly inaccurate. We are interviewing Patrice Allen-Gifford. Ms. Gifford, please, acknowledge that you are aware that this interview is being tape recorded.

MS. ALLEN-GIFFORD: Yes, it is and my last name is actually Mrs. Allen-Gifford.

(b)(6), (b)(7)c : Would you, please, raise your right hand, do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, and nothing but the truth?

MS. ALLEN-GIFFORD: Yes, I do.

(b)(6), (b)(7)c : Would you, please, give your full name, spelling your last name for the record?

MS. ALLEN-GIFFORD: My full name is Patrice Allen-Gifford, A-l-l-e-n-G-i-f-f-o-r-d.

(b)(6), (b)(7)c : And what is your current assignment and current position?

MS. ALLEN-GIFFORD: My current position is Executive Officer for Terminal Services in the Air Traffic Organization of the Federal Aviation Administration.

(b)(6), (b)(7)c : And what is that routing symbol within the FAA?

MS. ALLEN-GIFFORD: The Air Traffic Organization has tried to move away from routing symbols but the Terminal Services, as a whole, which is a very large organization, can be referred to as ATO-T, but there are no further routing symbols below the Terminal Services level.

(b)(6), (b)(7)c : Okay.

MS. ALLEN-GIFFORD: So, my position as Executive Officer working almost 100 percent for the Vice President of Terminal Services.

(b)(6), (b)(7)c : Which is who?

MS. ALLEN-GIFFORD: (b)(6), (b)(7)c

(b)(6), (b)(7)c

And what is your grade level?

MS. ALLEN-GIFFORD: I'm a GS-15.

(b)(6)

: And how many--how long have you been with the FAA?

MS. ALLEN-GIFFORD: Eleven years and today's the sixth, three days/four days.

(b)(6): Could you just briefly describe what your duties are in your current position as the Executive Assistant--

MS. ALLEN-GIFFORD: Executive Officer--

(b)(6), (b)(7)c

: --Executive Officer.

MS. ALLEN-GIFFORD: --which is a different position than I had on September 11, 2001.

(b)(6), (b)(7)c

: Okay.

MS. ALLEN-GIFFORD: I can best explain it by the fact that Terminal Services is now an organization that constitutes over 500 air traffic operating terminals, that means towers and terminal radar fix controls, over 500 facilities across the country and a significant number of personnel here in headquarters.

In the ATO, the structure's a little different than we used to be over when we were Air Traffic. And we're broken out now by options, which is why we're terminals. I support the Vice President. I'm basically handling a lot of hot issues, as they would say colloquially; anything coming from the OIG's office, the Secretary's office; the Executive Administrator, on down till it reaches my level.

I review the correspondence before it's to be signed. I handle briefing papers. I assign and receive, edit, review, briefing papers that are to go above our level. And handle a lot of external coordination for him. I may return some of his phone calls, try and make sure that his day is flowing well, and just provide general support on anything that's asked through him of the ATO Terminal Organization.

(b)(6), (b)(7)c : When did you assume this position?

MS. ALLEN-GIFFORD: February 9 of 2004 is when the ATO was coordinated, I'm sorry, was

established as an organization. And that is headed by (b)(6), (b)(7)c, who is our Chief Operating Officer.

(b)(6), (b)(7)c: You say that was February of this year?

MS. ALLEN-GIFFORD: February 9 of 2004. So, officially that's when I assumed this position. Of course, things have has evolved with time as we determined what our organization is.

(b)(6), (b)(7)c: On September 11, 2001, what was your position?

MS. ALLEN-GIFFORD: Special Assistant to the Director of Air Traffic.

(b)(6), (b)(7)c: And who was that, who was the Director of Air Traffic?

MS. ALLEN-GIFFORD: At the time, it was William G. Peacock, known as Bill Peacock. Actually, I'm not sure if it's William, sorry. I think it's just Bill G. Peacock, pardon me.

(b)(6), (b)(7)c: Is he retired?

MS. ALLEN-GIFFORD: Affirmative. I was one of two special assistants and other members of the front office support staff.

(b)(6), (b)(7)c : So, what would you do--what were your daily responsibilities when you were in that position as the Special Assistant?

MS. ALLEN-GIFFORD: Almost anything, each director of air traffic used the staff slightly differently. My focus was primarily on communications, meaning writing letters for the Director; writing all of the employee letters. I was the liaison, the single point-of-contact liaison for Public Affairs, FAA Public Affairs.

Let's say a reporter came to them and said they wanted to do a story on a day in the life at Dulles Tower. So, that's considered a national story, Public Affairs would call me, tell me what they wanted to do. I would work through the then Eastern Region and the facility to coordinate what time we could do that that was operationally convenient or as best possible and put together all kinds of small pieces to make sure that we could get both the best message out, as well as not negatively impact the operation, because safety is always our first priority.

I did that, I did more coordinating, if he was doing a presentation somewhere, all kinds of things relating to any kind of external and internal communication, as well as general special assistant duties.

(b)(6), (b)(7)c : On September 11, were you working that day?

MS. ALLEN-GIFFORD: Yes, ma'am.

(b)(6), (b)(7)c : If it's possible, could you kind of briefly describe what you did that day on a starting from when you learned about the events just beginning to happen?

MS. ALLEN-GIFFORD: I'll do my best. I have to tell you that by a week later, some of it, there are days at that point, just melded together. I did work in the front office, that's on the 10th floor, in FOB-10A, that's in suite 1002. Bill Peacock was at a conference, out of town.

The Chief of Staff, at the time, (b)(6), (b)(7)c (b)(6), (b)(7)c [ph], stopped in my office early in the morning, I don't remember the exact time to say that we had a flight that had gone NORDO, that

means no radio, and had gone off course.

In whatever way she described that to me, the NORDO is not uncommon, flight off course, slightly, it could have been a lot of explanations, but those two things together and the gravity in her voice made me say, Mary Ellen, this sounds like it could be a hijacking. And she said we just don't know anything yet, that's all the information we have.

I don't remember whether my TV was on at the time. I don't remember how I found out, but we learned that the situation was graver. But, still, there was a lot of possibilities, there was a lot of--so I remember that the acting person was Dave Knoles. At some point he came upstairs, his office was not within our suite.

At some point we established a telephone connection with the air traffic control system Command Center in Herndon, Virginia, in our conference room.

(b)(6), (b)(7)c : Let me just interrupt you for a second.

MS. ALLEN-GIFFORD: Sure.

(b)(6), (b)(7)c : We've heard this net or this conference call that was established is that what you're referring to?

MS. ALLEN-GIFFORD: Yes, ma'am. Initially it was, I think and I might be fuzzy on this, I think, initially, it was to connect to the Command Center and after that it became a bridge to the affected facilities, which would have meant Eastern Region first and then at some point and I Dave Knoles would know this better than I, so I would defer, if my statements don't match his, I would defer to his recollection better than mine.

But at some point it became all on route centers and probably some other facilities connected to the Command Center and that was being operated out of the conference room in room 1002. If you've gone there and you've seen the suite, then you can picture the suite, then you can picture this better.

(b)(6), (b)(7)c : Were you involved in actually assisting Mr. Knoles set up this conference--

MS. ALLEN-GIFFORD: No, ma'am, I was not. There was support staff who would have known better than I how you establish a bridge or something like that, I didn't.

(b)(6), (b)(7)c : Did you participate, actually in the conference?

MS. ALLEN-GIFFORD: I sat in the room for much of it, certainly initially, but I was also in and out.

(b)(6), (b)(7)c : Can you kind of recall what time you might have entered that conference call, was it--

MS. ALLEN-GIFFORD: I can't speculate, I really, really can't. I remember going back and forth so the television at the time, the only television--I had one in my office, but it didn't have a cable, that's it. It still didn't have a cable at that point. So, I only had rabbit ears on my TV. So, I only got fuzzy reception on my TV, you can see it over here is a 13-inch, little unit.

The director's office had a very large television that was cabled through DOT cable. And

so, if we wanted to see what was going on CNN, we had to walk in and out of the directors office. So, I remember being back and forth between the two, between watching the TV.

At some point later in the morning, we recognized that we needed to put a TV in the conference room because at that point the conference room was our operations focal. And so we took my television which didn't have a cable. They unhooked the cable from Mr. Peacock's TV because it was in a different room and wasn't of any use to the people in the conference room. They hooked my--they kind of jury-rigged it and got my TV in there so they got benefit of having the news on while they were on the conference.

At some point, I did take notes in there, not handwritten notes, but there was a laptop, you know, immediately someone brought up a laptop and they started taking notes on things. Various people sat there and took the notes at some point. I only did it for a few minutes.

Since I was sitting there, whoever was

taking notes, if they said, what just got said, once or twice I was able to say, okay, that was that, you know, here's what just got said or Eastern Region reported this or something like that. Minor, I had a very minor role. I did stay until 10:00 o'clock at night to be generally at--at some point the FAA made the decision, you know, at the Administrator's level to allow employees to go home if they wished. You probably have that on record. A number of employees did. Key personnel stayed, key personnel needed support. I stayed.

(b)(6), (b)(7)c : So at the time that you went into the room the conference call was kind of already going on?

MS. ALLEN-GIFFORD: There would have been no reason to be in the room until after our--whoever was acting for Mr. Peacock and my recollection is that Dave Knoles must have been acting, because, but he was also in charge of quality assurance. It would have been natural, regardless of who was acting, the managers spaces, the directors, what's their title? Program directors,

came upstairs. Being air traffic controllers, they understood that immediately you have to establish some kind of communications link.

But I was probably in the room when that got established or, you know, in and out. But as people came, they gathered; the senior-most people came, they gathered, they established this conference bridge. They had me take you over and show you the room; it's a small conference room which allows eight to ten people to sit at the table and there's chairs around the periphery, but not a whole lot.

(b)(6), (b)(7)c : Do you recall anybody--anyone from the military being present during this?

MS. ALLEN-GIFFORD: Yes, yes, people came in and out, so whether it was (b)(6), (b)(7)c in particular, I don't remember, I know that there was staff, (b)(6), (b)(7)c there would have been members of her staff, so there was a military detail that was located on--their offices were on the fourth floor, but they were attached to the AT-1, the Director of Air Traffic Office. And so,

don't ask me specifically who, I really just don't remember, but members of that staff were in and out of the room. Probably someone stayed there at all times.

(b)(6), (b)(7)c : The military was on the fourth floor, you said.

MS. ALLEN-GIFFORD: Yes, their offices were located on the fourth floor, but it was the military detail--it was the military liaison office. And that reported to and AT-2 is the colloquial way we refer back in the old days of routing symbols, AAT-1 was the Director of Air Traffic's routing symbol. And that's to make sure that this is not confused with the Associate Administrator of Air Traffic Services which was the level above us. Because often people would say AT-1 was the Director of Air Traffic Services, that is inaccurate. It is the Director of Air Traffic.

(b)(6), (b)(7)c : I'm sorry, you said the military liaison reported to whom?

MS. ALLEN-GIFFORD: To the Director of Air Traffic, I don't know if--my sense, my

understanding is that that's the official reporting line that they are a liaison from the Pentagon to the old AT-1 position.

(b)(6), (b)(7)c : At that time that was Jeff Griffith, is that right?

MS. ALLEN-GIFFORD: Jeff Griffith was AT-2.

(b)(6), (b)(7)c : Two, I'm sorry.

MS. ALLEN-GIFFORD: AT-1 was Bill Peacock, Jeff Griffith was the Deputy Director of Air Traffic colloquially known as AT-2.

(b)(6), (b)(7)c : So your understanding is that this military--

[Interruption.]

MS. ALLEN-GIFFORD: Gosh, you know, I'd have to go back and look at my records, I believe he was AT-2, I don't remember him being, see there must have been a reason, though that Dave Knoles had to establish the telecon, so, Jeff--I remember Jeff being down in the sort of sound-proof room that I'm not supposed to know it exists, you know, what I mean. There's a room there--

(b)(6), (b)(7)c : A secret room.

MS. ALLEN-GIFFORD: --yeah, you just don't know about it, it's, you know, top secret. And that's where certain other communications were taking place of which I have no knowledge.

(b)(6), (b)(7)c : Just so I'm clear, this military detail that you're talking about, the military liaison--

MS. ALLEN-GIFFORD: A number of people.

(b)(6), (b)(7)c : --you understood they reported to Bill Peacock, then, correct?

MS. ALLEN-GIFFORD: Mm-hmm, on paper, yeah, but the coordinated with everyone, whatever needed to happen. You're probably aware that the FAA unlike many countries of the world has a very close coordination in terms of airspace use with the military. And thanks, in part, to that military liaison issues get worked out at very low levels. It's a wonderful relationship. Not that there aren't differences but it's--from everything I've seen in seven years doing Air Traffic work, I think it's an extraordinary relationship that

benefits our country.

(b)(6), (b)(7)c : Was Jeff Griffith a part of this conference call?

MS. ALLEN-GIFFORD: That's what I'm not remembering why Dave set it up if Jeff was AT-2, so I think Jeff must have been in a meeting somewhere and to the best of my recollection, Jeff would have been involved in the other communications that were going on, that were probably with the Deputy Administrator and others at much higher levels.

My recollection is not that Jeff was in the room on this bridge, not most of the time.

(b)(6), (b)(7)c : During the time you were there?

MS. ALLEN-GIFFORD: In and out maybe, but he was not a person leading it initially. And I just would have to go back and look at files to see if that jogs my memory about; but I remember Dave Knoles setting it up; I remember one of our program directors, (b)(6), (b)(7)c [ph], helping out and taking over when Knoles had to leave, I mean we ran that for 24/7 for a while and it eventually evolved

into the what's now known as, gosh what is the actual title of that? The Domestic Events Network.

But it was run, initially, 24/7, right out of that conference room. People were--the first week after September 11, people just voluntarily brought food into the AT-1 suite, it was just, it was constantly people, it was a different kind of effort. There were no office hours, there was just work, Saturday, Sunday, you just came in whenever you could to be of whatever help you could, even if it meant answering the phones; making coffee, anything, just, if your hands--if there was--you'd come in and say, what can I do?

(b)(6), (b)(7)c : Do you have any other questions about that conference call?

(b)(6), (b)(7)c : Do you, I was going to ask about American 11--

(b)(6), (b)(7)c : Oh, okay.

(b)(6), (b)(7)c : --unless you were going to cover that.

(b)(6), (b)(7)c : No, go ahead.

(b)(6), (b)(7)c : Do you remember, during that conference call if there was ever any discussion of American 11 still being in the air after it had crashed into the World Trade Center, like there might have been some confusion as to whether 11 had actually crashed or if it was still south-bound?

MS. ALLEN-GIFFORD: Eleven was the first aircraft?

(b)(6), (b)(7)c : I believe so.

MS. ALLEN-GIFFORD: Yes, there was, but I don't want to call it confusion, though, but--

(b)(6), (b)(7)c : We can use a different adjective.

MS. ALLEN-GIFFORD: That's what I'm saying, I want to nuance that differently for you. This was a very, very difficult thing to get their hands around.

(b)(6), (b)(7)c : Mm-hmm.

MS. ALLEN-GIFFORD: What I saw were people trying to establish precisely what had happened in an environment where it, you couldn't be entirely certain. We had--we had a number of planes that

were, for want of a better term, not exactly accounted for. And so. At some point they put it on the white board, but it wasn't, at the time we didn't over there a white board that made copies or anything. We just had a plain old eraser white board. And they put down the numbers of any flight that the Command Center was telling us was unaccounted for.

And I remember just saying, well is this one this or is this one the one that did this, but I can't tell you that it was American 11, specifically, it might have been the second aircraft to go into the Trade Center. There was speculation, initially, the first aircraft to go into the Trade Center, it looked like the whole, you know, we were just looking at TV, we were just like you guys at that point.

Given our best, though, everybody's looking at it and saying, you know, that must have been a small plane, it doesn't look like a big plane would have, you know. No one--so there's no way to imagine what, at that point, what a

commercial airliner of that size would have looked like going into the World Trade Center. It seemed impossible to imagine.

So, your mind is racing for all kinds of explanations. And, of course, your first thought is always to look for the most benign and to say, you know, guy off course, lost his way, didn't see the Trade Center, how could that be? You know, you want to look for the most plausible explanation given your life experience to that point.

I happen to have worked at the World Trade Center for the Port Authority of New York and New Jersey for eight years. I worked for the person, you know, three levels, the person whose department who led the creation of the World Trade Center. I had information in the back of my mind about how structurally sound that place was. I've been in the World Trade Center at 10:00 o'clock at night when the wind is howling on the 67th floor and you hear the building creaking. Why? Because it was designed to sway 12 inches in every single direction. It was not designed to snap, it wasn't

designed to break. You could not have. There's no way to initially to have ascribed what truly happened to what you saw on the TV in inches. And that's the best I can give you for everything I knew, saw, heard. So, was there confusion? There was uncertainty. There was a lack of ability to be precise. There was a searching for answers because everyone knew how important it was.

But the air traffic way is not to give a definitive answer until you have the data that backs that up. That is just controller mentality, you don't speculate. You deal in facts. I've come to really respect how controllers do what they do, all their interactions. They don't speculate they deal in data points. And then they come to a conclusion and that's irrefutable? Is this helpful?

(b)(6), (b)(7)c : Yes, but one of the things that we had come to understand, and you can help clarify it for us, if you can, is that at some point you may have left the meeting?

MS. ALLEN-GIFFORD: In and out.

(b)(6), (b)(7)c : Okay, in a few--

MS. ALLEN-GIFFORD: Back to my office, it was all in one suite, so.

(b)(6), (b)(7)c : And that you, right and that you may have heard when you left and then came back and reported during the conference call that 11 might still be airborne and heading south-bound towards Washington, D.C., do you remember anything like that?

MS. ALLEN-GIFFORD: No, sir, I have no recollection of the specific words that you're using.

(b)(6), (b)(7)c : Anything similarly?

MS. ALLEN-GIFFORD: It's way too fuzzy in my mind.

(b)(6), (b)(7)c : Go ahead.

(b)(6), (b)(7)c : Let's move away from the conference call to something else now. Were you involved in--and I think you may have mentioned this to me on the phone, but I'll ask you anyway, just for the benefit of our tape--were you involved in preparing any time line types of information,

briefing papers, you know, post-9/11 to kind of capture what had happened on that day? You want to talk about that a little bit?

MS. ALLEN-GIFFORD: Yes, I've been involved over a period of over maybe weeks or months in pulling data from various directions in my role as lead connection to Public Affairs. But, also, in my role just as a special assistant. If somebody said go right back down, here's some data, go type this up and get it to the Administrator, I would have done that. Do I remember specifically, whether I did something for the Administrator? No.

(b)(6), (b)(7)c : Mm-hmm.

MS. ALLEN-GIFFORD: Do I know that at some point I had a chronology, I mean we did our best to put things together drawing data from the facilities that had been affected and mostly from the air traffic control system Command Center because their work is often taped A, and B, they keep logs, that's part of their standard operating procedure. I would have assembled information rather than creating information.

(b)(6), (b)(7)c : Meaning you were given information by other people in air traffic?

MS. ALLEN-GIFFORD: That's a correct statement.

(b)(6), (b)(7)c : We have some different, just kind of flip through it maybe. We have some different time lines that we have been collecting throughout this review.

MS. ALLEN-GIFFORD: Mm-hmm.

(b)(6), (b)(7)c : Can you kind of look through them and maybe see which ones maybe you were involved in assembling or--

MS. ALLEN-GIFFORD: And I might remember, I might not.

(b)(6), (b)(7)c : Okay.

MS. ALLEN-GIFFORD: But it's okay if something looks like something I might have typed, I will tell you.

(b)(6), (b)(7)c : --Yeah, something that you do--just kind of stop when you. This is a "Summary of Air Traffic Hijack Events"--

MS. ALLEN-GIFFORD: Which was not put

together but this cover sheet, for example, wasn't put together by me, but I may have purchased it or something like that.

(b)(6), (b)(7)c : So you were--do you believe you were involved in assembling some of this?

MS. ALLEN-GIFFORD: I may have been involved in assembling some of the data that later was comprised in this together. I did work closely with the Quality Assurance Office and they were pretty much on point for developing this. But there were multiple uses. There were quality assurance uses; and there were also house uses. There was White House information uses.

(b)(6), (b)(7)c : You don't believe you were actually involved in actually drafting any of the information that's contained in here?

MS. ALLEN-GIFFORD: May I take a closer look at all this? So the fact that there are seconds given on this tells me that it must have come from the Command Center, ultimately. There are lots of iteration of the information, of course. I did not, to best of my recollection, I

do not believe that I typed this. Might I have typed information that was used in creating this, yes, probably. It seems like Tony Mello and I sat down and put something together. There were lots of different pieces of paper but I don't remember where they all came from. I mean the Command Center was my primary source, but there may have been other things that came out of facilities where the planes took off from.

So, at some point, I'd have to talk to the person that I think I worked with. I might have had some participation in some version of this. I cannot certify to you that it was this version.

(b)(6), (b)(7)c : Okay.

MS. ALLEN-GIFFORD: Everything was iterative. Again, because there were so many different offices requesting information, what we find out now is, you end up writing pretty much the same stuff but adding and subtracting based on who's asking and what you're providing what their focus is.

Let me say I am giving you my very, very

best recollection.

(b)(6), (b)(7)c : That's fine, that's fine.

Would you look at this entry here, this is relating to the first flight. American 11. It talks about Northeast Air Defense Sector log indicates, blah, blah, blah. Do you recall or have any information about how that information would have made it's way into the time line or--

MS. ALLEN-GIFFORD: No.

(b)(6), (b)(7)c : --do you recall looking at any--

MS. ALLEN-GIFFORD: No, somebody could have given me--during those weeks, I mean, there was so much going on. On September 11 and in the days following, we were called on first to provide so much information to so many different sources. Somebody could have handed me something off a piece of paper; somebody could have e-mailed me their part and then I put it together with somebody else's part. I don't recall this specific data, nor would I have had any personal knowledge of when that took place.

(b)(6), (b)(7)c : So, I guess, just so I'm clear, your function then with respect to this document would have been to kind of to gather information that different people in air traffic or that some other sources would give you?

MS. ALLEN-GIFFORD: That's correct.

(b)(6), (b)(7)c : And you might have participated in actually typing it up?

MS. ALLEN-GIFFORD: Exactly, especially on September 11, they didn't have any secretaries around, the AT-1 secretary whose title is, really, staff assistant, stayed. But there wasn't a lot of, you know, support was coming in the form of managers at that point. My computer was there in the suite. I'm a communications person, I deal with the press. Somebody would have--Public Affairs [unintell.]. And that is not a function that I have now, not primarily, but I still end up because of my years of doing this I still end up involved. I am a compiler of information at this point. I am a carrier outer of duties that anyone would have asked me to do. Can you type this up?

Can you e-mail this, to; can you print this out and get it down the hall to--

(b)(6), (b)(7)c : Right.

(b)(6), (b)(7)c : Would you still have on your computer any of the work product that you generated back then?

MS. ALLEN-GIFFORD: I should, I moved here eight months ago.

(b)(6), (b)(7)c : Okay.

MS. ALLEN-GIFFORD: So, should they changed my operating system, not operating--I don't know the right terms, I don't know much about computers.

(b)(6), (b)(7)c : It looks fancier--

MS. ALLEN-GIFFORD: They changed out my actual hard--they gave me a new computer since September 11, even when I was over there, but it should have transmitted all the data. I moved over here to a temporary location in a cubicle over here until I get an office. In the move, I just can't swear to you whether everything's preserved.

(b)(6), (b)(7)c : Well, would you mind after

we're done talking if we could go down--

MS. ALLEN-GIFFORD: Not at all.

(b)(6), (b)(7)c : --and take a look and see what you have?

MS. ALLEN-GIFFORD: Yep.

(b)(6), (b)(7)c : Anything that you have that is similar to what we're showing you here, we'd like to get.

MS. ALLEN-GIFFORD: And let me say, it is my belief that I don't have anything original. I don't have anything that didn't originate in some other office.

(b)(6), (b)(7)c : Yeah, you might even that said, we might be able to tell by looking at a document where it came from.

MS. ALLEN-GIFFORD: You are, I doubt that, but you're welcome to, you're welcome to look at anything. This is very important to me to give you the best I can.

(b)(6), (b)(7)c : Well, thank you.

(b)(6), (b)(7)c : Were you interviewed by the Commission? Were you interviewed by the 9/11

Commission?

MS. ALLEN-GIFFORD: No, ma'am, I was not.

(b)(6), (b)(7)c : Did you turn over any of your materials that you were talking about?

MS. ALLEN-GIFFORD: I did not have anything that didn't come out of somewhere else.

(b)(6), (b)(7)c : So you didn't have any, like, original material.

(b)(6), (b)(7)c : Original work product. Okay.

MS. ALLEN-GIFFORD: No, and anything I typed on behalf of someone else, it was really theirs not mine.

(b)(6), (b)(7)c : This is called "Notification to DOD Time Line."

MS. ALLEN-GIFFORD: No, I really, no, I don't remember that. That one isn't--

(b)(6), (b)(7)c : You can take it out, do you want to me to take it out?

MS. ALLEN-GIFFORD: No, that's not going to change anything, I don't have a very good memory to begin with but, I mean, my boss can tell me that I wrote something [unintell.] forms [unintell.]

just to remind myself, just because we deal in so much information here. I'd have to look but that doesn't look like something that I would have done.

(b)(6), (b)(7)c : Just for the record, this is titled "Sensitive Security Information FAA Communications Regarding Hijacked Aircraft on September 11, 2001." This is called "Chronology of September 11, 2001, American Airlines Flight 11, AAL-11 Boston/Los Angeles."

MS. ALLEN-GIFFORD: I might have typed some part of that, but, again, I'm speculating really wildly for you, I just don't know. And I did not look back at my stuff since I was on call. I did not, the only thing that I did was look at the press release that Public Affairs told me they have on their Website, not a press release but a--

(b)(6), (b)(7)c : Their fact sheet.

MS. ALLEN-GIFFORD: --fact sheet, yeah.

(b)(6), (b)(7)c : That's in there.

(b)(6), (b)(7)c : Do you need to take a break?

(b)(6), (b)(7)c : Is your antenna missing?

MS. ALLEN-GIFFORD: Yeah.

(b)(6), (b)(7)c : Does it still work?

MS. ALLEN-GIFFORD: It still works, it's not the greatest thing. Darn. But I've already ordered a new one, but it still works, you know this is Nextel service and that never works very well in tunnels and Metros and it doesn't work at all in the Metro. That doesn't look familiar.

(b)(6), (b)(7)c : That one with the grid?

MS. ALLEN-GIFFORD: This one with the grid does not, this graph at the top does not look familiar to me.

(b)(6), (b)(7)c : How about this one, "Chronology of the Tasks of September 11, 2001, and Subsequent Events through April 30, 2002?"

MS. ALLEN-GIFFORD: Does not look familiar to me.

(b)(6), (b)(7)c : I need to put numbers on those, it would be easier to take notes.

(b)(6), (b)(7)c : Mm-hmm.

MS. ALLEN-GIFFORD: Somebody else would have created that and I might have transmitted the data to them or other people might have transmitted

the data to them.

(b)(6), (b)(7)c : That is titled "Fact Sheet Chronology of Events of September 11, 2001."

MS. ALLEN-GIFFORD: And it's issued by the Office of Public Affairs.

(b)(6), (b)(7)c : I guess what we've learned in talking to different folks is that--

(b)(6), (b)(7)c : This is the new one, this one here is the--

MS. ALLEN-GIFFORD: And I wouldn't remember specific times to be able to say, oh, I gave them that line, but not that line--

(b)(6), (b)(7)c : Right, okay.

MS. ALLEN-GIFFORD: I really can't tell you.

(b)(6), (b)(7)c : If Public Affairs told us that they drafted this document and--

MS. ALLEN-GIFFORD: And ran it past us?

(b)(6), (b)(7)c : And run it past Air Traffic to make sure that the information contained was accurate. So they released it. Do you recall that happening?

MS. ALLEN-GIFFORD: There's so much that they give us.

(b)(6), (b)(7)c : And this was released in August of 2002, our understanding is that it was the anniversary, the anniversary of September 11.

MS. ALLEN-GIFFORD: So, I would say to you that is something that they would have done and it would have been through me. Specifically, do I remember, the power of suggestion you having raised it would make me say, oh, yeah, I--but I'm not certain that I remember it, you know, it's been suggested. And it is the likely thing that it would have come to me, had I. If I was there, if I wasn't at a conference or whatever I would have been the person to receive it and put it in front of other people.

(b)(6), (b)(7)c : Who would you have put it in front of.

MS. ALLEN-GIFFORD: Okay, I can only tell you theoretically, who I would have put it in front of. And that would have been, most likely, ATO Vice President Linda Schuessler, who was at the

Command Center, I don't mean just physically, I mean, her post was one of the bosses at the Command Center, on September 11. So, did I run it past her, I can't swear to it. Maybe I just gave it to Jeff Griffith, who was AT-2.

(b)(6), (b)(7)c : Now this would have been a year after--

MS. ALLEN-GIFFORD: And Jeff would have been AT-2, at that time. That would have been prior to his retirement. So, I'm just telling you likelihood, not certainty.

(b)(6), (b)(7)c : I know we're going back. Let me just ask you this. Do you recall there being any having to give Public Affairs any changes to this document or any red flags that were brought up or anything like that?

MS. ALLEN-GIFFORD: I have no recollection that I could point to.

(b)(6), (b)(7)c : Anybody else other than Linda Schuessler and someone in Air Traffic, like Jeff Griffith, anybody else you may, anybody else you think you would have circulated this document to?

MS. ALLEN-GIFFORD: Well, it's possible that I would have put it in front of Bill Peacock, but, you know, Bill Peacock was out of town at a conference so I wouldn't have shown it to him; might have put it in front of Mary Ellen Crause, the Chief of Staff.

(b)(6), (b)(7)c : Okay.

MS. ALLEN-GIFFORD: Don't know. You know, try and follow the chain-of-command. Maybe it went downstairs, and I doubt that it went downstairs to the Quality Assurance Office, but I just, you know, lots and lots and lots of different--and lots of different assignments. And, at some point, even September 11 became basically days that we did and they're over and that's it.

And let me say about my computer, it is my belief, I mean, I was not asked to be interviewed by the Commission, it's my belief that nothing that I had was original enough to stand up and go, hey, you need to look at me. The Chief of Staff told me she was interviewed by the Commission and that sufficed because it was on behalf of all of us.

(b)(6), (b)(7)c : That was Ms. Crouse, right?

MS. ALLEN-GIFFORD: Affirmative.

(b)(6), (b)(7)c : Do you have any questions relative to the time line? Did you assist in preparing any briefing documents for White House briefings or any types of departmental briefings relating to the events of September 11?

(b)(6), (b)(7)c : This would have come out, like, chronologies, like this, this, this and this?

MS. ALLEN-GIFFORD: The main think I regret that I didn't go, like deep into my files and looking, but I didn't think that's what you wanted me to do. I felt that I should just hear your questions and then, say, I can go look and I'll tell you if there's anything that I've left out.

(b)(6), (b)(7)c : Okay.

MS. ALLEN-GIFFORD: Entirely possible; entirely possible. You know, people send me stuff and they say put this together with this document, reformat it and send it to. That's a lot of what I do on a lot of different issues. I mean, it's not

that I don't think that this is one of the most significant things in our history, it's just that the days are long, the amount of information is huge and I did stuff and moved on.

(b)(6), (b)(7)c : Do you have anything?

MS. ALLEN-GIFFORD: Yeah, a couple of things. First of all, there were a lot of people involved, so everybody got to see little pieces. I mean, sometimes I was just running downstairs for sandwiches or something. There were a lot of people milling around in our suite. So, I really can't recall. I didn't, to the best of my knowledge, I didn't make any notes on any of that. There were so many people who were contributing.

And I guess I want to talk to you, if I may, if this is not inconsistent with what your expectation is, about my perception of activities on that day and in the days followed. So, as an American citizen, I was nothing, never not completely awed by the dedication and the skills that people around me brought to this effort.

There was, like, with a flip of a light

switch people turned immediately into, okay, we need to do this, this is what happens next. There was some tension, occasionally. There were people who stayed 24 hours that day. Went home showered, came back maybe 6 hours later. The air traffic controllers in the management positions that I work with up at the Command Center and I had a lot of interaction with the Command Center on a lot of, you know, very little things and very big things.

It was one of the proudest days of my life to be associated with those people. It is my very strong belief that there is no possibility that anyone would ever give misinformation. If someone wasn't sure wasn't sure of something they went back to a record and looked it up.

Are people human and are there errors that can occur in spite of their best efforts? I'm sure. But there is just no doubt in my mind that the people who were leading the communications effort and the recovery, you know, bringing the system back up, landing the aircraft. Those people are amazing and they worked so hard. I mean, Linda

Schuessler, the people who were in that room, I remember (b)(6), (b)(7)c [ph], (b)(6), (b)(7)c, I remember (b)(6), (b)(7)c [ph], there were people there who just immediately turned into, how would you say it, operationally extraordinary people.

People that, you know, normally would just be kidding around with you in the hall, knew exactly what needed to be done to the very best of their ability. So I want to speak to you about people's intentions and strengths. It was an amazing time. And I just wanted that on the record.

(b)(6), (b)(7)c : That's fine, is there anything else or anything else we didn't ask you about that you think we should know about or.

MS. ALLEN-GIFFORD: You can look at my computer, you can look--

(b)(6), (b)(7)c : Did you keep any personal files, you know with your notes or maybe your notes that you kept--

MS. ALLEN-GIFFORD: I kept copies of things that were issued, I don't have them

immediately at hand, again, I've moved. I kept photocopies in case I had to look back, but, for example, I didn't even keep newspaper articles that I recall, maybe one or two. I haven't even used them, you know, nothing I--so in October, I guess, I suggested because this was a natural part of my [unintell.] to Bill Peacock that he really needed to go and thank people in the facilities that were affected. That he, you know, you needed the big guy to go into the facility and say, I'm really proud of what you did.

Because people were terribly emotionally upset. I mean, we even had a controller who lost his wife, as you know. So I made a proposal, I wrote up a proposal. The kind of, you know, hoping from one place to another. He had to use the agency aircraft to get from one place to another. He and the head of Airway Facilities, which also had a role, took two, one-day trips no overnights or anything, went and thanked people. That's the kind of thing I was involved in.

It's already on the record that I was

involved in coordinating, facilitating he interviews by reporters, you know. What other, oh, we created a pin for all of air traffic. The Director told me he wanted a pin to commemorate Air Traffic's role on September 11. We created one.

And we asked people to send in designs, we kind of said, I like this, I like this, it's basically of the American flag and an airplane and it says FAA Air Traffic September 11 and may say something like, we will remember or something. He also then, instantaneously told me he wanted a poem to provide context to go with this. I said, what am I Elizabeth Barrett Browning? And I went and created a poem to go with it. Those were my kinds of duties.

So, can I at some point maybe I could find you a pin and a poem, because I think there are leftovers. But, you know, that's the kind of thing that I did and, oh, wow, that meant so much to people.

Let me tell you that various divisions, every facility in the Southern Region they wanted

to, they had created their own pin and they wanted to use my poem as a context. And I was, like, go create your own poem. Do something that's meaningful to your people. And they said, no, we want to use yours. And I went to the director and he said, just be flattered and let them do it.

You know, that's the kind of thing where I have some original thought. But not in anything operational.

(b)(6), (b)(7)c : The time is 2:30.

OFFICE OF INSPECTOR GENERAL

Case # 042R0122001

SWORN INTERVIEW OF

(b)(6), (b)(7)c

BY

SPECIAL AGENT (b)(6), (b)(7)c

INVESTIGATOR (b)(6), (b)(7)c

Friday, October 8, 2004

9:39 a.m. - 11:14 a.m.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

(b)(6), (b)(7)c : Today is October 8, 2004, the time is 9:39 a.m., we are at FAA Building 10-A, Room 428 in Washington, D.C. My name is (b)(6), (b)(7)c (b)(6), (b)(7)c my co-investigator is (b)(6), (b)(7)c we are from the Office of Inspector General, Department of Transportation and we are conducting a review of issues involving certain public statements made by military and FAA officials at 9/11 Commission hearings and elsewhere that were allegedly inaccurate. Today, we're interviewing (b)(6), (b)(7)c (b)(6), (b)(7)c please, acknowledge that you are aware this interview is being tape recorded.

(b)(6), (b)(7)c I am aware of that, yes.

(b)(6), (b)(7)c : Pease, raise your right hand. Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, and nothing but the truth?

(b)(6), (b)(7)c I do.

(b)(6), (b)(7)c : Would you, please, give us your full name, spelling your last name for the record?

(b)(6), (b)(7)c last name
is (b)(6), (b)(7)c

(b)(6), (b)(7)c : And what's your current
position?

(b)(6), (b)(7)c I'm currently the manager of
System Operations Litigation, Federal Aviation
Administration.

(b)(6), (b)(7)c : System what?

(b)(6), (b)(7)c System Operations Litigation,
I didn't make up the title.

(b)(6), (b)(7)c : What's the routing symbol for
that.

(b)(6), (b)(7)c We don't have routing symbols
anymore.

(b)(6), (b)(7)c : That was a lot easier than
saying System whatever

(b)(6), (b)(7)c Yes, it was.

(b)(6), (b)(7)c : System Operations Litigation.

(b)(6), (b)(7)c System Operations Litigation.

(b)(6), (b)(7)c : And what grade are you
presently?

(b)(6), (b)(7)c I don't know. I'm either a J

or K, I don't know.

(b)(6), (b)(7)c : Are you, like, in transition?

(b)(6), (b)(7)c : Yes.

(b)(6), (b)(7)c : You will be a K eventually,
then?

(b)(6), (b)(7)c : Yes, sir.

(b)(6), (b)(7)c : And how long have you had your
current position?

(b)(6), (b)(7)c : July 1, 2004.

(b)(6), (b)(7)c : And prior to that what
position did you hold?

(b)(6), (b)(7)c : I was a Safety Investigator
for the Investigations Division.

(b)(6), (b)(7)c : Was that AAT-20?

(b)(6), (b)(7)c : AAT-20 was Evaluations and
Investigations Staff. AAT-200 was Investigations
Division, I work directly for AAT-200.

(b)(6), (b)(7)c : And how long did you hold that
position?

(b)(6), (b)(7)c : Under different titles and
names, since September 25, 1999.

(b)(6), (b)(7)c : Quite a while.

(b)(6), (b)(7)c Yeah, it's, you know how things reorganize?

(b)(6), (b)(7)c : Right.

(b)(6), (b)(7)c Same thing, same duty, same responsibilities, different boss, different title.

(b)(6), (b)(7)c : He wanted to call it something different?

(b)(6), (b)(7)c Basically.

(b)(6), (b)(7)c : So you were an investigator for the ST Division?

(b)(6), (b)(7)c Investigations Division. I was an Air Traffic Safety Investigator for the Investigations Division.

(b)(6), (b)(7)c : When did you start with the FAA?

(b)(6), (b)(7)c July 25, 1982.

(b)(6), (b)(7)c : In what position and where?

(b)(6), (b)(7)c Air Traffic Control Specialist, started at Cleveland Center.

(b)(6), (b)(7)c : Oh, okay.

(b)(6), (b)(7)c Then I transferred to Indianapolis Center.

(b)(6), (b)(7)c : So, on September 11, what--you were the Air Traffic Investigator that position--

(b)(6), (b)(7)c On September 11, I was an Air Traffic Safety Investigator for AAT-200.

(b)(6), (b)(7)c : And who was your boss at that time, who did you report to?

(b)(6), (b)(7)c Tony Ferrante.

(b)(6), (b)(7)c : And then who did Tony report to?

(b)(6), (b)(7)c Dave Knoles.

(b)(6), (b)(7)c : And Knoles to Jeff Griffith?

(b)(6), (b)(7)c Either Jeff Griffith or Bill Peacock, I'm not really sure. Bill Peacock was the Director of Air Traffic, Jeff Griffith was the Deputy Director of Air Traffic. I'm not sure--we were staff to those two individuals. and I'm not sure if Dave Reported to Jeff or to Bill.

(b)(6), (b)(7)c : Did you have a staff of your own, or--

(b)(6), (b)(7)c Then, no. Do you mean, Jeff, me, have a staff of my own?

(b)(6), (b)(7)c : Yeah.

(b)(6), (b)(7)c : No, I was just a low-level person.

(b)(6), (b)(7)c : As an Air Traffic Safety Investigator, can you just describe briefly what your duties were?

(b)(6), (b)(7)c : When?

(b)(6), (b)(7)c : Like on or around September 11.

(b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c : Sort of like expert witness for the government?

(b)(6), (b)(7)c : Expert, consultant, liaison, yes.

(b)(6), (b)(7)c : Were you on duty on the 11th of September?

(b)(6), (b)(7)c Yes.

(b)(6), (b)(7)c : And where were you at that day?

(b)(6), (b)(7)c Indianapolis Center.

(b)(6), (b)(7)c : And when did you get back to Washington?

(b)(6), (b)(7)c The next day, the 12th.

(b)(6), (b)(7)c : Did you have to get--

(b)(6), (b)(7)c We drove back.

(b)(6), (b)(7)c : Oh, you drove. Okay. A lot of people drove back.

(b)(6), (b)(7)c Lot of people drove back. I arrived, it was just about midnight he 12th going on to the 13th.

(b)(6), (b)(7)c : My neighbors were at Disney World.

(b)(6), (b)(7)c Wow.

(b)(6), (b)(7)c : And they hitched a ride with some strangers.

(b)(6), (b)(7)c Just to get.

(b)(6), (b)(7)c : Just to get home, yeah, because they couldn't get a rental car. Do you

need to?

(b)(6), (b)(7)c No, she'll [unintelligible]

(b)(6), (b)(7)c : That's a good drive to, because I used to be stationed out in St. Louis and Indianapolis was about, we'd get about there from here and make an overnight.

(b)(6), (b)(7)c I'm originally from Indianapolis and so, we make it in about 10, 10 1/2, and traffic was moving pretty good, police weren't bothering us. We made pretty good time.

(b)(6), (b)(7)c : Did you, after September 11, once you got back to Washington, did you participate in preparing any, like, after action reports or time lines that kind of chronicled what had happened on the 11th? And I'm not so focused on, like the formal accident packages for the four aircraft.

(b)(6), (b)(7)c Yes.

(b)(6), (b)(7)c : I guess, I've got a whole bunch of different time lines that we've collected. And the one that--

(b)(6), (b)(7)c Maybe

(b)(6), (b)(7)c : We're talking about the
"Summary of Air Traffic Hijack Events"

(b)(6), (b)(7)c The whole book, it's a whole
book, it's one of the projects I worked on.

(b)(6), (b)(7)c : You did work on this, the
book, yes.

(b)(6), (b)(7)c Okay.

(b)(6), (b)(7)c : All right. We just--within
our organization we just refer to this as the grid
time line on Military Notification chronology. Did
you work on that?

(b)(6), (b)(7)c No, .

(b)(6), (b)(7)c : Do you know who worked on
that?

(b)(6), (b)(7)c No.

(b)(6), (b)(7)c : Because it says AAT-20 at the
bottom.

(b)(6), (b)(7)c Okay.

(b)(6), (b)(7)c : How about this fact sheet.
This was.

(b)(6), (b)(7)c I've never seen that before.

(b)(6), (b)(7)c : Okay, this is a fact sheet

"Chronology of Events on September 11" dated August 2002. What about this FAA Communications with NORAD on September 11, 2001? It's sort of a narrative in paragraph format?

(b)(6), (b)(7)c I've never seen that before. Not, wait a minute. Yeah, I've never seen that before.

(b)(6), (b)(7)c : What about this one that's just simply titled "Chronology of Events on 9/11/01?" You can take it out of the sleeve if that'll be helpful.

(b)(6), (b)(7)c I don't recall seeing this before, and I do distinguish between I don't recall and I don't I never have.

(b)(6), (b)(7)c : So, when you're saying you don't recall that means you may have but you just don't

(b)(6), (b)(7)c I have no recollection of it.

(b)(6), (b)(7)c : How about this one that's titled "Chronology of September 11" it's got a listing of the four aircraft and their flight weights.

(b)(6), (b)(7)c

This looks familiar and I have no idea, I have no recollection of working on it. To help you, when I came back, I was at Indianapolis Center. When we came back, pretty much, we were assigned airplanes. And for the most part, I took American 77, because American 77 was lost to Indy when it, you know turned around and headed back and I worked Indianapolis Center and I was the most familiar, I was just there, I mean, obviously working airplanes I was there at the time. And, so, it was just natural for me to take that one. So, I worked an awful lot of American 77. I worked on that booklet and you had mentioned about the Accident Packages, you're right, I did and didn't work directly on the Accident Packages, my involvement would have been I write the order of how to investigate an aircraft accident for Air Traffic and I write the order how to put together the packages. I determined which facility was going to do what. So I had, you know, I did have some input in that. And the packages were not released until they got my approval. And I know

you see that in there about the AT packages, and technically your question was correct or your statement was correct, that just to let you know there's just a little bit more to it than that. But, so when it comes to American 77, this does look familiar. And I worked on American 77 to a large degree. But, if you don't ask me about content, I'm not going to know everything.

(b)(6), (b)(7)c : This one, entitled "Sensitive Security Information FAA Communications Regarding High-tech Aircraft on September 11, 2001,"

(b)(6), (b)(7)c I've never seen this before. You guys like some coffee, I've got--

(b)(6), (b)(7)c : This was a chronology that was--actually, it was in a folder, each flight. The copy we have is a black pages with two white labels and one of the labels lists each of the four flights. But the package was put together so that each of the--information about each of the four flights was kind of stapled together separately, as opposed to in one big book.

(b)(6), (b)(7)c This looks familiar. Let me

see something. I've seen this.

(b)(6), (b)(7)c : What in there is making you think that?

(b)(6), (b)(7)c : It's just familiar.

(b)(6), (b)(7)c : Just overall it looks familiar, it wasn't some event or anything like that?

(b)(6), (b)(7)c : No, I saw American 77, again, that was my plane. I don't, I didn't put it together, I have no recollection--I didn't put it together, but I've seen it and I may have provided or obtained some of the information that went into this. And it's pretty big [unintelligible], but I have see this.

(b)(6), (b)(7)c : Do you recall who worked on this "Summary of Air Traffic Hijack Events" aside from yourself?

(b)(6), (b)(7)c : Yes, mm-hmm.

(b)(6), (b)(7)c : Who was that?

(b)(6), (b)(7)c : Pretty much everybody.

(b)(6), (b)(7)c : From AAT-20 at the time?

(b)(6), (b)(7)c : That's a good question, that

answers your question. Specifically, in one aspect or form it would have been Dave Knoles, Tony Ferrante, (b)(6), (b)(7)c Doug Gould, Mary Kate Strawbridge, myself, (b)(6), (b)(7)c was not here, she was on a boat. (b)(6), (b)(7)c. And you know, guys, this is going to sound crazy, I'm sure Tony Mello was there, but right now I just don't remember.

(b)(6), (b)(7)c : Yeah, I was going to ask you about him.

(b)(6), (b)(7)c I'm sure he was there, I just don't remember, and--

(b)(6), (b)(7)c : I've heard the name, like (b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c I was jus thinking of him. I have no specific recollection, but it would shock and appall me if he wasn't part of this. Tom Carmody [ph], Tom Carmody was there, to a lesser degree, but he was there. That's all, I think that's it.

(b)(6), (b)(7)c : You know, I, it's kind of a different subject, I think you know, I remember talking to you about this 872811B or something

(b)(6), (b)(7)c 8020.11.

(b)(6), (b)(7)c : 8020 something yeah, the information you gave me in this other investigation concerning--

(b)(6), (b)(7)c New York.

(b)(6), (b)(7)c : --was exceedingly helpful.

(b)(6), (b)(7)c R2, you I talked to

(b)(6), (b)(7)c : That was me.

(b)(6), (b)(7)c Yeah, they didn't like me too well, because they said, who said that. I said I said it it's true. Matter of fact we just went out with--

(b)(6), (b)(7)c : No, I think I think I left out some of the choice words you had

(b)(6), (b)(7)c I think I was in Houston when we talked.

(b)(6), (b)(7)c : Yes, I think you wee.

(b)(6), (b)(7)c And we just, the IG came out and Senator McCain came out with, you know, okay,

what are you going to do now? Fix this. So, we just, I just, fell a little bit behind. I mean, I have a staff of basically me, right now. But a couple of the IOUs, one of them was to have put out a guidance or a policy saying, okay, you're not supposed create things, you're not supposed to crate, but if you do, but God, don't destroy them, you know, basically that.

So, we just, a memo's gone out now, it's been prepared and circulating, matter of fact Tuesday, I'm supposed to, it's supposed to be signed off, and we'll circulate it fixing that.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c I'm going to say, it had to do with that discussion, it's going to say, listen, this has come to our attention, if you collect something inadvertently, you are not authorized to destroy it unless you check with our office or AEI, who runs Office of Accident Investigation. Only two people that can say, yeah, you can destroy that.

(b)(6), (b)(7)c : When you guys actually

finalize that memo, can you send me a copy.

(b)(6), (b)(7)c Yeah, I've got your address, I've got your card out there.

(b)(6), (b)(7)c : That'll be great.

(b)(6), (b)(7)c Does that have your fax number on it? I'm sorry her name was on top, but that's got the (b)(6), (b)(7)c ?

(b)(6), (b)(7)c : That's it.

(b)(6), (b)(7)c Yeah, I can do that.

(b)(6), (b)(7)c : [unintelligible] Belcher, Monty and all those people about all this stuff?

(b)(6), (b)(7)c : Oh, right, they covered some of the local leads on that case for us. But most of the work, you're talking.

(b)(6), (b)(7)c You want a draft, I can give you a draft.

(b)(6), (b)(7)c : Sure. Except for the folks we needed to talk to you your old shop, the AT-20 folks. Almost all the work was out in Long Island, so--

(b)(6), (b)(7)c So you were the bad man today, huh?

(b)(6), (b)(7)c Well, they called me and they said we can't believe anybody from your shop would take something like this and I said, well, why not, it's absolutely correct and I'm the idiot. You--

(b)(6), (b)(7)c : It came down to questions of interpreting the policy so it was figuring out who, basically understood the policy the best and since he authored most of the policy for Air Traffic, you [unintelligible] can't get any better than the actual author.

(b)(6), (b)(7)c Because I remember telling you that you know, did it happen, yeah, at the lower level, but the stuff wasn't important. And we do have things in there, for example, personnel statements. If you create a personnel statement and you go back and you want to change it, all previous statements are no longer the original and they shall be destroyed. I mean, there's specific guidance for that. But on something like this, if asked, you say no you can't do that.

(b)(6), (b)(7)c : But what you said about destroying the previous ones pertains to--

(b)(6), (b)(7)c : Personnel statements only.

(b)(6), (b)(7)c : --but for, like, near, mid-air collisions that sort of thing as opposed to accidents.

(b)(6), (b)(7)c Well, no, accidents are part of that, too. That's a personnel statement.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c A lot of it has to do--not a lot of it, some of it has to do with the union. And when you get conflicting reports, you sit here and think oh, I know he didn't mean that. Or, I reject your statement, saying wait a minute this isn't within the guidelines, you know, you didn't fill this in, you didn't fill that. Now, if it's weird, because if it's of substance, you don't change it, you're right, you're right, you do an amendment, you know. He has on a blue shirt, and then three days later, I said, no, it was white. You change it, I mean, you make an amendment to it. If it's something simple, like a date's wrong, you just put a line through it and put in a new date.

But if you screw it up, say you handwrite

it when you're supposed to print it, then you just go back and reprint it, hand print it. And you would destroy, does that make it--that's the difference.

But in this case here, what you were talking about, if they would have said, Jeff, can we tape these things, the answer would be flat out, no.

(b)(6), (b)(7)c : Right.

(b)(6), (b)(7)c Just flat out, no. You can't do that. Jeff, we taped them, now what do we do? Well, now that's evidence. Because, just because you put it to writing who says it's not different. And to me anything else would have been an amended statement of what was said to begin with and [unintelligible]. Hold on a second, I'm sorry.

But anyway, I didn't remember you. But I remember talking to you--

(b)(6), (b)(7)c : Yeah, we talked over the phone, I think a couple of times.

(b)(6), (b)(7)c Yeah.

(b)(6), (b)(7)c : But, yeah, the information you

provided was extremely helpful.

(b)(6), (b)(7)c They were wrong.

(b)(6), (b)(7)c : Yeah, they definitely, especially in hindsight should have definitely [unintelligible]

(b)(6), (b)(7)c The real book is much thicker.

(b)(6), (b)(7)c : It is. This one, it doesn't have everything.

(b)(6), (b)(7)c Okay.

(b)(6), (b)(7)c : It's missing quite a few--

(b)(6), (b)(7)c I didn't realize that yesterday till (b)(6), (b)(7)c pulled the book and [unintelligible]

(b)(6), (b)(7)c : I've got enough to carry around, so this one just has the most relevant information that we'll be looking at, so. Where were you guys getting the information for these various events that are chronicled in here?

(b)(6), (b)(7)c From various sources. The way it traditionally works, but this wasn't a traditional situation. If we wanted to know something of that detail, we would go to what was then the regional office. I would call and say,

hey, give me the stuff on American 77, they would call the facilities and get the staff and then relay it back. Under these circumstances, a lot of the rules were broken and what we did was, we'd call and say we need a chronology of events on American 77 from Indianapolis in our Washington Center, Dull, National. They would type something up and ship it to us.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c We put it all together and this was like 14,000 versions, because it was gone through, because we didn't know where it was going to end up, all although we expected about five blocks that's in both directions, six blocks both directions, the White House and the one with the pretty dome on top. So, we went through and I remember poor Dave Knoles going upstairs and then coming back down. I mean, this went on for, God, forever, days, days. They'd send us home to take showers and we'd come back. Days, days, but because you know the times didn't match up, it was just impossible. There's a tendency, especially

in a situation like this, but in any major accident or catastrophe, you know, people aren't real, you know, this is minutes, seconds, days after an accident, and investigations go on forever so people aren't really as accurate, oh, if these morons in Washington want something just put down a time.

But then when you go back and take a closer look, you realize you're seconds off or maybe a minute off. Well, normally, we would just say okay, what's a minute, what's a second, you know we'll work it out later, but we needed it because we knew this was going to be an important document, so the revisions, because the times didn't always match up, to answer your question, from many, many sources.

We cross-referenced documents, we cross-referenced, you know, tapes, transcripts, the -4s, notification, the logs they kept with notification to the military or to the ROCs or to the WOC, the ROC being the Regional Operations Center, the WOC being the Washington Operations

Center, upstairs, and we'd cross--plus our own notes that we kept from various places. We happened to have a guy in Cleveland. I just happened to be in Indianapolis there that set up, not command posts, but we down and stuck our nose into it and said, okay, what's going on. So, we got it from every imaginable source.

Cross-checked them, and came up with times.

(b)(6), (b)(7)c : Some of the data you guys got, especially when you had that much stuff coming in--

(b)(6), (b)(7)c Mm-hmm.

(b)(6), (b)(7)c : --would it be fair to say that some of it was probably, like on tapes and all really accurate, you know, you get your tapes and your times on there and other things were people writing things down trying to keep track of it that way, looking at a clock and one clock may be off from the other?

(b)(6), (b)(7)c : That's fair, absolutely fair, plus, remember there's really two parts to this answer. Some of this had to be recreated, you had to go back and recreated, you know. David, you

wtk

know, yesterday when all this happened, where were you. Sit down, now and write down everything you did and every minute you did it. Duh, I mean, come on.

Plus, I want to use this little analogy here on the board. You have, and you were talking about time. You have all these different facilities, you know, throughout the country. Okay, all type of air traffic facilities and military, so anybody who kept time they could be FAA, they could be military, they could be DEA, CIA, FBI and just then imagine within each one of those acronyms having a whole bunch of little buildings. Now I could take your watch, my watch, this watch, his watch and it's all going to be different. I'm telling you it's going to be different.

Some watches are accurate and some facilities being military and/or FA, they set their clock--

(b)(6), (b)(7)c : By Zulu time.

(b)(6), (b)(7)c --not only Zulu time, but I'm

going to set the clock in my car off my watch. I'm going to set my watch off of my pager. I'm going to set my pager off my cellphone. Now, not only are you going to lose time but the human factor of putting it in. You take that combined with some of these facilities are hard-wired to time, there two types of time the FAA uses: WWV out of Fort Collins and DPS. They're both within nanoseconds of each other so in a legal sense they're the same time. But they could be a nano of a nanosecond off. Those are true times.

September of '01. Duled would have had DVRS, which is visual voice recording system. Okay, their time would have been directly wired to the DPS time or true time. That is true time for government, I mean that is the time [unintelligible] although the government is really WWV, we're switching to DPS, like I said, nano to nano, makes no difference.

Indianapolis Center is, they call somebody on the phone and the time is now 1006, okay, 1006, you know, and that's how it works. So, we're

trying to recreate something--never anticipating something like this happening--where, you know, we really need to get down to seconds here because seconds make a difference. That's not going to happen because Indianapolis Center could be 30 or 40 seconds behind Washington Tower and you would think they'd be the same time, but it's not true.

And then I'd like to go in, guys, to redundancy, ARTS, ARTS is a radar for a terminal, like Dulled or National.

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c The moment you set ARTS, automatically, it's wrong time. Taken in any factor if it's hard-wired, which many of them were not at the time, directly to WWV for true time, every shift, somebody had to go in and reset the clock. The moment you set it it would automatically be wrong, it actually would not keep true time depending on how busy the facility was, time was one of those things that was automatically slowed down.

At the end of a 24-hour shift, it only

would be 7 seconds, it may be 24 seconds, it could be 2 minutes. But we're talking about an environment now, where seconds matter.

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c So, Washington Center could be 7 seconds off Washington National who could be 2 seconds off from Indianapolis Center who could be 30 seconds off for the true time is Dulled and there's no way, it's just impossible to know. So, remember you're not only having to keep that in your factoring, too, but, you know,

(b)(6), (b)(7)c : I don't, I mean, I think for the grand scheme of things for what we're looking at, we're not splitting hairs.

(b)(6), (b)(7)c Okay, you're not going into that detail. A minute or two off.

(b)(6), (b)(7)c : Right, the only point I was making is like if you are over in your area right outside this office and you have just the standard government from the handicaps, you know the wall clock that everybody gets issued, it runs off batteries and you set it by hand. So, if someone's

there and you're duffed someone take this down.

(b)(6), (b)(7)c : That's the clock you're going to look at.

(b)(6), (b)(7)c Yeah, that's true, too.

(b)(6), (b)(7)c : So, that's what I'm saying.

(b)(6), (b)(7)c You're writing it down, but when you get to your radar data and voice tapes, you may write down I did this at 10:46, but the voice tapes said, no, it's 10:47. After a while it does add up, I mean it could add up, but yeah, you're right, the wall clock. I have a couple of atomic clocks at home, only because I think it's cool, but how many people have those?

(b)(6), (b)(7)c : I've got one on my wrist.

(b)(6), (b)(7)c Oh, wow,

(b)(6), (b)(7)c : No, but I just in my previous life of military school, Cost Guard, search and rescue, we called in and everything was on the tape and you could hear the beep, but it was also timed. And that was WWV, Greenwich Mean Time blah, blah, blah, blah.

(b)(6), (b)(7)c So, you know what WWV is,

okay.

(b)(6), (b)(7)c : And we keyed the mike call so and so and they're drowning whatever, whatever call, everything was all timed because it was a historical record.

(b)(6), (b)(7)c Right.

(b)(6), (b)(7)c : But I also know there's times when you just look up at the clock and you go, oh okay.

(b)(6), (b)(7)c Because you never envision in a million years that something like this, hey, is going to happen. And it's just not at the top of your list to make sure you're dead-on accurate.

(b)(6), (b)(7)c : One of the things I've noticed is, we were given a copy of, which I think you may have sent us, as well, for that other investigation. But there is this log that your old shop kept and it said something about NTSB across the top and it'll have like the different aircraft listed out and then there will be grids and it will sort of an item and then when you guys got it or received it from the facilities and the it will

show when you guys transmit it over to the NTSB, does that sound familiar.

(b)(6), (b)(7)c It's something I wouldn't, I stopped doing that kind of stuff years ago after TWA 800, that was the last major accident I did till 9/11. Yeah, in a way it does, and more so, I guess I mean, it wouldn't surprise me that would be something Doug would keep.

(b)(6), (b)(7)c : Yeah, I think Doug said you all kept it.

(b)(6), (b)(7)c I mean, it's more of a record than what we've already given them, so if they ask for us, we can say we gave it to you once, we're not going to mess with this, we don't have time, you know.

(b)(6), (b)(7)c : Well, the, I think that was Gould. I think that was what I had understand the intend was. But also, what was relayed to us that it was sort of a record of when you all were receiving items from the facilities.

(b)(6), (b)(7)c Now are we talking about to give to the Commission later on? Are we talking

about--

(b)(6), (b)(7)c : No, this was immediate aftermath.

(b)(6), (b)(7)c : That's possible, I don't recall that.

(b)(6), (b)(7)c : Okay, well, one of the things I notice, like for this "Summary of Air Traffic Hijack Events" at the bottom of some of the text pages on here, it's got a date of September 17, 2001, so presumably that's a production date or the last run.

(b)(6), (b)(7)c : Last version date.

(b)(6), (b)(7)c : The last version date.

(b)(6), (b)(7)c : One of the things I do recall, now, you're probably right there, we burned through three or four shredders. We, you know, as we replaced something, we wanted to make sure, you know, how, things, you make 15 versions of the same thing. We shredded the old copies, one, because we didn't want things floating around, because they were inaccurate; and we wanted to keep only the most-current copy. Plus, after, a while, you

know, you've seen our little pit over there, it got pretty bad. And, at first, we had so many people here that as time went on, more and the investigations group was the group, everybody, you know, people started hanging around, what's going on, they were curious. Not many, but some.

And we didn't want things walking off. We're very conscientious about things walking off.

(b)(6), (b)(7)c : Well, one of the things I noticed, if you'd look, if we assume the date on the bottom of this is correct, it's the 17th of September, is that some of the items, like, from Cleveland and Indianapolis, which would include some of the tapes and transcriptions weren't received into AAT-20, until, like the 20th of September or even later. And so, what I'm wondering if the information in that one log, which I appreciate that you indicated that you weren't really involved with that log, but if the information in that log is accurate as far as when AAT-20 was receiving it, how were you guys getting this information, were you getting like advanced

drafts of things?

(b)(6), (b)(7)c Oh, yeah, yeah.

(b)(6), (b)(7)c : All right.

(b)(6), (b)(7)c It takes a long time to prepare a transcript when you have to pull together information. And then the transcript has to be correct or it won't get released. They do working copies and stuff like that. A lot of that information was available, you know, within hours, days, depending on what we were asking for. I mean, it really was as easy as picking up the phone and saying, after a while protocol got kind of old, plus there was all these open lines. There was a big one upstairs and we had, which we were monitoring down here and I think we had a second one going, with, you know, you have all the bosses and all they do is boss stuff. And you had all the worker bees. So we were monitoring the bosses, but realistically, we were dealing with the worker bees. Because things had to get done because the bosses would say they want something and we had to go do it. But, yeah, you just ask for it.

(b)(6), (b)(7)c : Okay. How, like if you guys were being sent, I understand that some of the voice tapes were transmitted earlier to you guys, like, in a WAV file format, electronically over the computer, does that sound familiar?

(b)(6), (b)(7)c Possible, because I think a few facilities have that technology. The most common way of doing it is just copying it over the telephone.

(b)(6), (b)(7)c : So they would play it back for you over the phone? You would tape it?

(b)(6), (b)(7)c They'd play it over the phone and we had a Moranz [ph] that we could plug in and it would direct copy.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c I think in some cases, it wasn't Federal Express. I know that (b)(6), (b)(7)c brought down some original tapes from Cleveland, be he was in Cleveland.

(b)(6), (b)(7)c : (b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c : (b)(6), (b)(7)c

(b)(6), (b)(7)c : And I remember him bringing down some stuff, but I don't remember him being around 9/11. He may have stayed up there a little bit, I mean the immediate aftermath, eventually he would pitch in and then he turned around and took the tapes back. And at the time, I think we had the equipment here to be able to play those big magazine tapes, but I don't know if they made copies off those or not, I have no idea.

My, and I don't want to say guess, but I don't guess, but from my experience and my training, WAV files, yeah some of the facilities have that because they would have computer geeks. The majority of them probably would have been taped over the telephone. Eventually, we [unintelligible] with cassette tapes. But in the immediate they would have been done over the telephone. There was just no other way to get it here. Maybe the closer, facilities, you know, Washington Center, Dulled, they could have driven them in.

(b)(6), (b)(7)c : Would that have been that

SATORI?

(b)(6), (b)(7)c : SATORI is different, SATORI is a reply on, for the--off the host for en-route facilities. The radar cannon, is always, as far as I know, posted on an FTP site, a Website. The radar is then extracted into SATORI and recreated. The voice, which is different, the voice would probably have been taken over the telephone and then they sync the two together. And that's--

(b)(6), (b)(7)c : but SATORI was basically plotting the Radar plots.

(b)(6), (b)(7)c A little bit better, it's a picture.

(b)(6), (b)(7)c : Yeah, it's a picture, but it's not the voice.

(b)(6), (b)(7)c Well, no, they sync the voice, when they download it, usually the tapes come in from over the telephone. In today's environment, if you want a SATORI, they would download it and either create a WAV file or they would just Federal Express us a tape and then we would sync them and then send it back.

(b)(6), (b)(7)c : If you guys did, received a voice tape over the telephone, would it have the time stamps on it?

(b)(6), (b)(7)c Maybe, sometimes yes, sometimes, no. Generally not. Because we'd be receiving it in monotone, we didn't have the capability of receiving it in stereo, doesn't mean the only one they had, they played it and we received it, it would have the time stamps but there would be no way of split them. And if we were creating a SATORI, we don't want the time stamp because we'll sync it ourselves or a RAPTOR, we'd sync it ourselves.

(b)(6), (b)(7)c : If you guys received draft transcripts from a facility, how would they normally transmit them to you guys?

(b)(6), (b)(7)c Fax.

(b)(6), (b)(7)c : They would fax them to you? Would you ever get them, like, e-mailed or.

(b)(6), (b)(7)c Some.

(b)(6), (b)(7)c : If you guys had received the actual original tapes for Cleveland immediately

thereafter, would you guys have made the transcripts yourself here--

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : --or would you have waited for them to do it?

(b)(6), (b)(7)c We don't, we may help to do a draft working copy, just to get it to the suits, but we don't do transcripts. One, we don't have the people power and, two, I really frown upon it because I don't want to put my--I mean I don't want to certify something that doesn't belong to me, it belongs to the facility. I don't like vouching for them. I'll vouch for my work, which is really okay, but I'm not going to vouch for the facility. And, of course, our job is to be investigators and put together the pieces.

(b)(6), (b)(7)c : Okay. Do you still have any of your e-mails from that period of time? Did you keep a directory on your computer where you kept all the files that you were working on associated with these time lines and stuff following 9/11?

(b)(6), (b)(7)c I don't ever remember using my

computer for anything to be honest about it. I know that's stupid and it's probably not true. Would I have kept something, I keep everything. That's what I do for a living. I didn't keep any of the e-mails, because I didn't have any. What I've got now has to do with the Commission stuff and the project, you were in the room the other day, that I'm working on. I didn't, no, let me rephrase that. Yeah, I probably would have, because I was the one, I would have sent out the e-mails saying, New York, you're going to do this; Cleveland, you're going to do this; Indy, you're going to do this, Wash--so, yeah, for that, but as far as requesting stuff, I didn't do anything like that, so, yes, I would have kept my e-mails. I probably still have them.

(b)(6), (b)(7)c : We'd like to get copies of any archives like that that you still have.

(b)(6), (b)(7)c : Of everything? From when to when?

(b)(6), (b)(7)c : Well, we're looking at two periods, I think, essentially. Immediately

following 9/11 and preparation of time lines and chronologies and after-action reports that would kind of show when FAA did certain things.

And then, also, other time period we're looking at is connected with the 9/11 Commission, preparing, you know, the Administrator and I guess it would be the former Administrator and her former Deputy, you know, for hearings and things like that. And I had just--I put a request in to the IT folks at FAA and they're going to be coming out to different people to help pull these things off, so I'm pretty sure your name was on that list.

(b)(6), (b)(7)c : Let me show you what I've got here. The Commission that's a whole different story, let's see what I've got here. 9/11 and this is my favorite from a long time ago. Let's just go back September 13, I think it starts, it's as far as I have, can you see it?

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : So this would have been, well you can see the dates, I have no idea who that is, I do remember who that guy was, he was some guy

over here, he was helping [unintelligible] ended up couldn't. That's from the Department of Justice. That's (b)(6), (b)(7)c that has to do with; I'm not sure what that has to do with; this is probably, yeah, this is where I was saying, you remember I told you about facilities, going to do with that. You just tell me what you want, it'll take a couple days to print it all out.

(b)(6), (b)(7)c : Well, I'd like, the IT guys, I asked them to grab these and archive them electronically.

(b)(6), (b)(7)c Okay.

(b)(6), (b)(7)c : And then we can just not waste as much paper, because there's probably only a handful that we really need.

(b)(6), (b)(7)c And then, just [unintelligible] from different dates. Let me spin this around for him. Now see a lot of this is Department of Justice. Some of these are in the wrong place, some of these are jokes. I have one called jokes. You'll find air traffic controllers are a pretty morbid group. Some of these, yeah some

of these are jokes. And then, as you can tell, for example, yeah this is the end of the year, so I really don't have that many, not like Doug and all them would have but yeah you can take what you want.

(b)(6), (b)(7)c : And you also have some folders for, like, there's American 11, there's 777

(b)(6), (b)(7)c Those have to do with Accident Packages, I'm sure that's all, yeah, and these were how to do the packages, which these are part of United's, too. The packages and you can have a pretty of the packages and 93, I don't see 93, do you see it?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c There's one more place, I didn't spell it out, I guess I didn't do anything in 93, yeah, if you guys want this that's fine. Yeah it has to do with the packages, because we were trying to get them released.

(b)(6), (b)(7)c : Would these be with copies of the packages attached?

(b)(6), (b)(7)c No, I don't know, let's find

out. What this is in the process of getting the package correct, because it had to be perfect. these are the mistakes they made, so they have to go back and fix them, that's what that's a copy of, seven pages worth.

(b)(6), (b)(7)c : Man.

(b)(6), (b)(7)c If you want to know a part of history, up there on that shelf, those are the original packages.

(b)(6), (b)(7)c : All four of them?

(b)(6), (b)(7)c Those are the originals. No, those are the originals, not copies.

(b)(6), (b)(7)c : Oh the originals, before you went back and said, you guys are---

(b)(6), (b)(7)c No, those are the final products. I ordered them here, no I'll show you.

(b)(6), (b)(7)c : Oh, in those folders up there, yeah.

(b)(6), (b)(7)c I'm sure you got copies of these, but these are the originals, because this project I'm under these are--these are them.

(b)(6), (b)(7)c : I think the only one I have a complete copy of is 175, because that was the one, New York had done.

(b)(6), (b)(7)c I'd got them all. I have copies scanned in, I don't have the originals scanned in yet. This is what we're doing for that big project. Those are the originals.

(b)(6), (b)(7)c : Well, if you have those already scanned in--

(b)(6), (b)(7)c Oh, and you asked about, I swear to God, that'll be easy, I don't have a whole lot, you can tell I don't have a whole lot because the file is only 735 megs of which most of it is going to be these four things.

This is a copy of everything that was on the S-drive, as of September 4 and the S-drive is a big shared drive. This is a copy of a folder that was on the S-drive, this has to do with Payne Stuart. This was radar provided to the NTSB. This is my project I'm working on now, my files there. Some WAV clips, Smithsonian stuff.

(b)(6), (b)(7)c : Well, I guess.

(b)(6), (b)(7)c My responses to the
Commission.

(b)(6), (b)(7)c : I guess what would be helpful
is if we could just get a copy of that folder, we
can just go through it and--

(b)(6), (b)(7)c and let me just check one more
thing. This should have, I can do that for you
in a heartbeat. Here's the Accident Package for
American.

(b)(6), (b)(7)c : Oh, okay, you've got it
scanned in and everything.

(b)(6), (b)(7)c Well, I scanned in a copy,
there's a difference between, the only difference
really from this point would be a label. Yeah, I
can do it, that's okay.

(b)(6), (b)(7)c : They can all fit on, like one
CD.

(b)(6), (b)(7)c 700, what I'd say 730 some
megabytes?

(b)(6), (b)(7)c : When you guys were working on
putting this together, do you recall seeing any or
obtaining any data from the military?

(b)(6), (b)(7)c Yes. I'm listening, go ahead.

(b)(6), (b)(7)c : Do you remember what it was that you saw, where you guys got it from?

(b)(6), (b)(7)c Specifically, no.

(b)(6), (b)(7)c : There's just, maybe this will refresh your recollection a little, what are we talking, American 111, I think, there's this 8:40 event, and it says here Northeast Air Defense Sector Log indicate and it's got, it says they were notified by FAA.

(b)(6), (b)(7)c Asking me if I saw the logs?

(b)(6), (b)(7)c : Yeah.

(b)(6), (b)(7)c I've never seen the logs.

(b)(6), (b)(7)c : No, okay.

(b)(6), (b)(7)c Matter of fact, I don't remember seeing any of the military logs. Doesn't mean I didn't there's all kinds of paper out there and if we put that thing together, they would have been there to be seen, I just don't remember seeing them.

(b)(6), (b)(7)c : Did you interact with the military at all?

(b)(6), (b)(7)c [unintelligible]

(b)(6), (b)(7)c : Yeah.

(b)(6), (b)(7)c : The only thing I remember, let me get this started.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : Actually it's going to

(b)(6), (b)(7)c : It's going to overflow.

(b)(6), (b)(7)c : It may overflow, let me see how big this is, it is going to overflow.

(b)(6), (b)(7)c : Break at 40 megabytes.

(b)(6), (b)(7)c : We can fix that. Let's do that, let's take that off. That should do it.

(b)(6), (b)(7)c : Is that an 800 meg CD

(b)(6), (b)(7)c : Yeah, I'm pretty sure it is, and then I can just put the, if you really want this stuff for this project, you can have it. Yeah it's big enough.

(b)(6), (b)(7)c : Do you already have, for that project, do you have stuff in that directory that's scanned already?

(b)(6), (b)(7)c : Very little, the packages, very little. We haven't, really started it yet,

nothing officially the packages, you know, the copies of the packages [unintelligible] unofficial but, I mean they're official copies, but they're not the official-official.

(b)(6), (b)(7)c : One of the things I was interested in being able to take a look at were the copies of packages, so if that's not going to be included in--

(b)(6), (b)(7)c No, I'll give them to you. I just have to do two CDs, that's all.

(b)(6), (b)(7)c [SIMULTANEOUS CONVERSATION UNINTELLIGIBLE]

(b)(6), (b)(7)c One thing I remember is that there is a, now you're going to ask me for the site, it was a radar site, from some private corporation. No, disregard that, that was TWA-800, I don't think I had any dealings with the military.

The only thing I could imagine would have been putting together those things or things, because the military is supposed to investigate the same way the FAA does. So questions may have come down the pipeline. And they would have come to me or

someone I work with, but I don't recall, I don't remember anything like that. It wouldn't surprise me, though.

(b)(6), (b)(7)c : So you said you didn't see any of the military data that you recall.

(b)(6), (b)(7)c was there to be seen, which means I probably did, I just have no specific memory.

(b)(6), (b)(7)c : You also said you didn't recall where it may have come from? One of the things, I know you said that you don't recall preparing this or working on this grid military notification time line, but this military notification time line, appears, because of the date in the footer that it was prepared, or finalized more or less around the 18th of September, which was like a day after this---

(b)(6), (b)(7)c The reason I know I've never seen this is I know nothing about the context. I never saw anything [unintelligible]

(b)(6), (b)(7)c : It would seem that this document may have been prepared kind of parallel to

or maybe even the grid time line may have even used the data from the summary.

(b)(6), (b)(7)c : Could have don't know.

(b)(6), (b)(7)c : And one of the things that we have seen, there's an entry in this grid time line for like United 93.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : That says that FAA notified the military at 10:08 and that time was taken out.

(b)(6), (b)(7)c : I don't know. That was an earlier version, I don't know, I could guess, the guess is it was taken out because we discovered it was wrong.

(b)(6), (b)(7)c : One of the things the 9/11 Commission had concluded when they, I guess pulled together the time lines for their report was that this, it's about a minute off, this one here, but this is actually a good time for notification. I guess one of the things I'm wondering is who decided what to include or not to include in these time lines.

(b)(6), (b)(7)c : What do you mean?

(b)(6), (b)(7)c : Well, like somebody concluded that we were not going to include this 10:08 reference because it was marked N/A, and then the final one has N/A in it.

(b)(6), (b)(7)c I remember there was a big thing that we had to be accurate and if we couldn't validate it, we were, you know, not to put in BS stuff, if we couldn't validate it, we couldn't validate it.

Now, I'm guessing, but it's probably a pretty good guess. Let me rephrase that, I'm estimating that the reason that it would have been deleted was because we couldn't validate it because as I told you before, we would take a draft copy of the booklet upstairs or Dave Knoles would take a draft copy of the booklet upstairs and come back down and say these times don't match, we found this and we'd have to go back through and we did it again. I remember we went and we got, actually (b)(6), (b)(7)c was there. He set up this, we set up this back of a map or something a light board or something like, it wasn't a screen but it was like

a screen. And Jeff took a computer and hooked it up to one of our projectors and we flashed it up on this board, every piece of paper that was in that book, well, not every piece of paper, everything with time lines, that was in that book and we had to go through every one and validate every time. And I remember Tom saying something. And we would sit there and as we went around a time would be flashed up there for something for some time line and we all had to have that time. And if there was a disagreement, we had to resolve that disagreement before it stayed.

(b)(6), (b)(7)c : Tom who?

(b)(6), (b)(7)c Tom Carmody, he's dead now.

But, and I remember the times got changed and as weird and because we worked on this thing forever. And even then, it was really, really frustrating for us, you know, tempers were pretty high. But I remember going through that and it was, like, well, who in the hell put that thing in there? And where did it come from when everybody else had something different? But, you know, mistakes were made.

But I remember going through that exercise.

(b)(6), (b)(7)c : Do you remember who was involved in that with you?

(b)(6), (b)(7)c Everybody.

(b)(6), (b)(7)c : Basically the team for lack of a better description of those putting those together from AAT-20?

(b)(6), (b)(7)c Right, absolutely, (b)(6), (b)(7)c

(b)(6), (b)(7)c [ph] would come and go, but Tony Ferrante was heading it up and, you know, everybody was sitting there and everybody had their notes especially the four people, the ones who owned airplanes. And everybody else was just pitching in, too. And it was just, you'd have to understand the kind of organization we are, where it was almost like a free-for-all, you know, we just all talk at the same time, we're controllers, we still hear everybody at the same time. So to anybody who wasn't part of us it was just blah, blah, blah, blah. But it sounds kind of weird, but that's the way we did it. But I remember doing that.

(b)(6), (b)(7)c So what would it take to
validate a time period?

(b)(6), (b)(7)c Agreement.

(b)(6), (b)(7)c : Agreement amongst the group?

So, you guys might have three different sources for
an event that you guys would have to

(b)(6), (b)(7)c Resolve that, we'd have to go
back and make some more phone calls.

(b)(6), (b)(7)c : So you guys would, essentially
have to have like a footnote source for each event.

(b)(6), (b)(7)c What do you mean?

(b)(6), (b)(7)c : Well, like you'd have to have
a source, like--

(b)(6), (b)(7)c We had to have something.

(b)(6), (b)(7)c : You had to have something, you
couldn't just say, well, you know, I seem to
remember somebody typed this up.

(b)(6), (b)(7)c Right, we had to have
something.

(b)(6), (b)(7)c : Like this here says American
11 began south-bound turn over Albany New York.

(b)(6), (b)(7)c Radar data.

(b)(6), (b)(7)c : Presumably you got radar data?

(b)(6), (b)(7)c : Right that would be a good example.

(b)(6), (b)(7)c : ZBW notified New York or New York ARTC of possible hijacking.

(b)(6), (b)(7)c : Could do that through voice, they could do that through their own -4, their personnel--

(b)(6), (b)(7)c : Air log?

(b)(6), (b)(7)c : Administrative log, I mean something. Obviously we can't just make it up.

(b)(6), (b)(7)c : So with this one here you might have something from ZBW, which is Boston, right? And New York Center, so you might have a log from Boston and because it says ZNY---

(b)(6), (b)(7)c : That would be New York.

(b)(6), (b)(7)c : That you tried to make sure the two matched or come to some conclusion.

(b)(6), (b)(7)c : Yeah we had to come to some conclusion, and something like that probably would be tapes.

(b)(6), (b)(7)c : [unintelligible] or

(b)(6), (b)(7)c Whoever.

(b)(6), (b)(7)c : As long as we're having this kind of meeting, one of you would say this came from the tapes and everybody would say----

(b)(6), (b)(7)c Yeah. I've got American 77, this is what my notes show. But other people had other notes, too. Well, that's not what I show. then we'd go back and resolve it. And depending on what the context was, we could have it resolved.

But you know when I mentioned, you know, we'd been here for a long time, everybody was tired. If we saw one more pizza or one more box of donuts, somebody was going to be murdered. And we had our comic-relief times, too, but it was--we were all trying to do what was right. This is my

(b)(6), (b)(7)c

(b)(6), (b)(7)c : I'll stop the tape. It's
10:38

[BREAK]

(b)(6), (b)(7)c : We'll start the interview
back, it's 10:39.

(b)(6), (b)(7)c We had to resolve it somehow,

and it would depend on what needed and what the situation was, how we did it. And sometimes it was this data's more reliable than that data. It would be that simple and so we're going to go with this. But when Dave, what I'm trying to remember, when Dave would come down from taking the drafts up there. And would control the number that we printed of everything, and in the morning he would go back and collect them all, and we would shred them and come out with a new draft. I don't know what he did once he got upstairs. He would come back and say, no, these times are incorrect. And we're sitting there looking at our pieces of paper, thinking, okay, that's not what we have. And we--what information did you have, Dave and I remember conversations like that. That he had information that we didn't.

(b)(6), (b)(7)c : Hmm.

(b)(6), (b)(7)c Well, he was dealing with other organizations, too, so that it's possible it makes sense.

(b)(6), (b)(7)c : Do you know who he was dealing

with?

(b)(6), (b)(7)c What up in that room?

(b)(6), (b)(7)c : With regard to who was he presenting the time lines to?

(b)(6), (b)(7)c Bill Peacock, Jeff Griffith, Trevor Rand [ph], you know the Administrator, the Deputy Administrator, Trevor Rand, Accident Legislation, Legal, the Union was up there. And I'm sure probably a cast of thousands--okay, dozens.

(b)(6), (b)(7)c : But the bosses as you referred to them

(b)(6), (b)(7)c The suits.

(b)(6), (b)(7)c : The suits.

(b)(6), (b)(7)c [unintelligible]

(b)(6), (b)(7)c : Well, what data might he have access to that you guys did not?

(b)(6), (b)(7)c We're only Air Traffic, we only deal with Air Traffic, you know, the FAA's made up of, you know, many, many organizations that aren't Air Traffic.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c Airway Facilities, which are the techies, you know, they own the equipment; automation, which owns the software; the Office of Accident and Investigation, who runs all the accident investigation for FAA,

(b)(6), (b)(7)c : Flight Standards

(b)(6), (b)(7)c Yeah, (b)(6), (b)(7)c crew, (b)(6), (b)(7)c and all them, who (b)(6), (b)(7)c now works for. He had access to the FBI, the military, the CIA, the White House, Congress, obviously, W, by the time he gets to his go cart, oh it was W, he didn't really call me much lately.

(b)(6), (b)(7)c : He didn't call you much lately.

(b)(6), (b)(7)c

(b)(6), (b)(7)c And so, you know, he'd have access that we didn't.

(b)(6), (b)(7)c : Did he ever come down, I mean, and say, you know we've got some information up there, we're going to some of the Air Force's data, and it doesn't match this?

(b)(6), (b)(7)c Dave Knoles is one of the best

guys in the FAA. I love him dearly, he's been my boss until just a few months ago. And do I remember that, does it make sense he would do that? Absolutely. He would do it to us, I mean, he would do it, I mean, he was part of us and you know, we were frustrated because he was the guy bringing the bad news. We have to do this again, and we were frustrated because he was bringing, as I said, but he was one of us. And, but yeah, that would make sense. But do I remember that specifically? Yeah, that would make sense.

(b)(6), (b)(7)c : Do you remember any requests for FAA's information from the military, like maybe assembling some stuff that somebody said, hey, you know?

(b)(6), (b)(7)c You mean, immediately afterward?

(b)(6), (b)(7)c Yes.

(b)(6), (b)(7)c That's a good question, it's going to be one of those things, do I have any specific memory? No. Did it probably happen? Yes. They would have to have called us to get

permission to release it. Because immediately we'd clamp down on everything, seize, immediately.

(b)(6), (b)(7)c : Would you guys have been the ones that he would called directly or it was passed by as a liaison, you know the FAA's got Cheyenne Mountain [unintelligible] I was up there for a week with the DOD people. [unintelligible] mountain and while I'm sitting on the base would they have called you if somebody had approached them, somebody wanting information?

(b)(6), (b)(7)c If the military calls Washington Center and says we want this done. And there's going to be two parts to this answer in the immediate aftermath, which could have been a day, a day and a half, Washington Center says, well, that's nice, I'll get back to you. They would have hung up and they would have called their Region. Their Region would have called us. At some point being realistic, when, who knows, but at some point the order would have been given out giving military copies, but not originals of anything they want. Now when that happened?

(b)(6), (b)(7)c : You don't remember that happening.

(b)(6), (b)(7)c No, but I don't remember that happening, but that happened. Obviously, I mean, you've had a national crisis here. And so that would have [unintelligible] no, you're going to give it to him, we'll give them copies, no originals. No originals leave your building without our permission.

(b)(6), (b)(7)c : But, initially, within the first two days anyway there was a clamp down on everything.

(b)(6), (b)(7)c Yeah, really, you guys are the IG, so you understand, it's not one government. And everybody gets territorial and, okay, and that's the way it works, and because you get burned, so you always go to a higher authority.

But initially, for Air Traffic and the radar, that comes out of the 8020. And so they would come to our office. And that could have all taken place while I was still in Indianapolis. I mean. I remember the order going out: Seize,

seize everything and lock it up. I remember that because I was in Indy when I came out. And I know that transition would have happened, to give them anything--copies of anything they want we're not going to hold back we're going to be full cooperative, which is the right thing to do. I could see that happening.

(b)(6), (b)(7)c : Do you know, who, if that happened, who would have been involved in something like that?

(b)(6), (b)(7)c It could have been one of many people. It could have been as simple as a regional specialist, calling someone like me and me making that decision. Or it could be the White House telling the Administrator. It could happen. And again because of what we were talking about.

The other day, you were down here with Doug and you guys wanted copies of stuff. I love you guys, right? I checked with the boss before I released it. I knew what the answer was, but it's still a CYA government. And, I mean, I knew what the answer was going to be, but just to let them

know.

(b)(6), (b)(7)c : Yeah, because you didn't want your boss to come back after us and saying, what?

(b)(6), (b)(7)c Yeah.

(b)(6), (b)(7)c : And you're thinking, oh, I thought it was okay.

(b)(6), (b)(7)c I've been there before, I've done that before. So, and I knew what the answer was going to be. I released--I had tapes released on that Senator from Missouri, Calahan, I believe it was, I can't remember, that died right before the election in 2000?

(b)(6), (b)(7)c : Yes.

(b)(6), (b)(7)c And I released the tapes without thinking. And--

(b)(6), (b)(7)c : Heard about it.

(b)(6), (b)(7)c --the Administrator, you know, had, I lost about five pounds that day in the backside. And I was wrong and I knew, Duh. Of course you check with Public Affairs on something like that. And I just didn't think about that. It was an accident like any other accident. September

11 wasn't. And so anybody at that level said we're not going to play this game, guys, let it go. And all they would have been seeking for is someone from headquarters to give that permission. No different from a couple days ago. And as I said, it could have been the White House calling Jane, I think it was Jane, or it could have been Garvey. Or it could have been a regional specialist calling somebody in the bay.

(b)(6), (b)(7)c : I think you mentioned earlier, I just want to make sure we understand, do you know who the consumer of this "Summary of Air Traffic Hijack Events" time line booklet was?

(b)(6), (b)(7)c Define consumer.

(b)(6), (b)(7)c : Well, where did it go?

(b)(6), (b)(7)c We made only, under orders from Dave Knoles, (b)(6), (b)(7)c and I--

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c --we only made, we started out to make three copies. Only made three copies, destroyed all, everything after that. Of course we're not stupid, because three quickly became

five, which quickly became ten. But I think there were only. When you meet with (b)(6), (b)(7)c she has a memory like a steel trap. Between 35 and 42 copies, something like that, that was all that were ever made.

(b)(6), (b)(7)c : Wow.

(b)(6), (b)(7)c And we accounted for every one of them. Now, when I say account or every one of them, which means, here's 10, Dave. And then what was left was locked up. And then it was, then Dave would come back down, okay we need three more. Here's three more, Dave.

(b)(6), (b)(7)c : So you would take them out of the original, you would go make more copies.

(b)(6), (b)(7)c Well, initially we only made three copies and then we went upstairs to Graphics on the fifth floor and we'd have them run a few more and we had a priority. And then we ran a few more and then at some point, I remember (b)(6), (b)(7)c and I looking at each other thinking okay this is stupid, just run 30 of them, something like that. And they just, okay, fine, no problem, because it

was a waste of time.

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c And, you know, the writing was on the wall, yeah, we know what's going to happen. So, we didn't make all that many copies.

(b)(6), (b)(7)c : Did you end up distributing them all out of the safe or wherever you were keeping them.

(b)(6), (b)(7)c : Do you have a log of who you gave them to?

(b)(6), (b)(7)c I didn't keep a log, I doubt if a log was kept. Maybe Dave Knoles did. And then over the years, of course, then, you know, then it goes out. And, again, although it took days to prepare this, you know, the investigation, obviously you're here it's still going on. I mean to some degree we knew there was going to be some inaccuracies. There's just no way you're going to take something that massive, no way and make it perfect, unless you're going to get into the Times, it's just not going to happen. But you know, it's good enough for the White House, good enough for

Congress, good enough for the Administrator and the Secretary of Transportation, for the time being. Knowing that something's going to happen down the line, going to be a better investigation, more thorough.

But when they were done handing them out. There was 12 left, guessing, estimating, and we were told to destroy them. They just didn't want extra copies floating around because they are going to be inaccurate after a while. And we were told to destroy them. They weren't because we knew they would want more copies. And they were just secured. And over the years, they every now and then, you know the question would be, does anybody know where we can get an extra copy of those things? You told us to destroy them. Well, yeah, I know, but we also worked with you guys for 200 years. Does anybody have an extra copy?

(b)(6), (b)(7)c : Oh, one of those copies, yeah sure.

(b)(6), (b)(7)c I don't know but if you have to go down and get a smoke, I'm sure that when you

come back there will be one on your desk. And I think there may be only three copies left.

(b)(6), (b)(7)c : So from the original--

(b)(6), (b)(7)c Batch--there was only one batch.

(b)(6), (b)(7)c : --batch 30 or something, okay that was what I was going to ask.

(b)(6), (b)(7)c There was only three or four copies left.

(b)(6), (b)(7)c : Because I think at the at the IG shop, we ended up with three copies of that.

(b)(6), (b)(7)c Have no idea how you got them. Did you go out for a smoke?

(b)(6), (b)(7)c : No, I don't smoke.

(b)(6), (b)(7)c It wouldn't surprise me if you didn't get them you know from Tony Ferrante or somebody, but I know the Commission got one or two.

(b)(6), (b)(7)c : Oh, yeah.

(b)(6), (b)(7)c I don't recall exactly what we made copies of for you the other day.

(b)(6), (b)(7)c : That wasn't one of them.

(b)(6), (b)(7)c Okay, of the stuff, in there

some place because there isn't a file of this, there was a little file here a little file here the cover sheet was put together and things like that. It' not like you click on something and have one of these things.

(b)(6), (b)(7)c : So, it's a compilation of different electronic documents.

(b)(6), (b)(7)c I probably should scan one of those babies in, if I could find an extra copy.

(b)(6), (b)(7)c : We'll all go out for a smoke.

(b)(6), (b)(7)c : Well, if you can't find one, let me know.

(b)(6), (b)(7)c Well, we'll have to because it's part of a FOIA request, I'm going to have to produce it. It's not classified, so we're going to have to do it anyway. I think there's only maybe three copies left.

(b)(6), (b)(7)c : So, you'll probably need to ask those above you what happened to the copies they got?

(b)(6), (b)(7)c The copies that would have been in my control, custody, and are, I either--I

only gave them to one of two people. Dave Knoles or Tony Ferrante. And I controlled them.

(b)(6), (b)(7)c : So the only real--is it safe to say, and you can correct me if I'm wrong. Is it safe to say the only external party you are aware of having received a copy of that document is the Commission?

(b)(6), (b)(7)c Good point, yes.

(b)(6), (b)(7)c : And then us I just told you.

(b)(6), (b)(7)c Only because you told me.

(b)(6), (b)(7)c : Okay. Did you get involved in helping Jane Garvey or Monty Belcher or any of the other FAA personnel that had to testify before the Commission prepare for their testimony?

(b)(6), (b)(7)c No.

(b)(6), (b)(7)c : Did you get involved in, and I guess, I'm trying to think let's just say from 2003 till present, did you get involved in preparing any time lines or revising any time lines since that period kind of in connection with the Commission's work?

(b)(6), (b)(7)c I can find out. And by the

way, I'm going to show you what I have on the computer--your CDs right there. I'll make it easy, there are going to be two documents on there and they're going to be titled National Commission on Terrorist Attacks Upon the United States dated 7/15/03 and one with the same name dated 8/11/03.

(b)(6), (b)(7)c : Mm-hmm,

(b)(6), (b)(7)c I created those documents and those are in the responses and if there are time lines in any of those responses, then I would have created them.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c This one just seems to be a list of things I produced.

(b)(6), (b)(7)c : It's pretty long.

(b)(6), (b)(7)c Yeah, well, it wasn't good enough for the Commission, so the subpoenaed the FAA.

(b)(6), (b)(7)c : Oh, so this is post--pre-subpoena.

(b)(6), (b)(7)c Yeah.

(b)(6), (b)(7)c : Wow.

(b)(6), (b)(7)c : Yeah, you found one of the two people that caused all that. So, anyway it doesn't look like there's a time line there. Now, if there was a time line as part of that result, it would have just been that somebody provided me. So, unless it's on one of two documents, for the Commission, I would not have created any time line.

(b)(6), (b)(7)c : Did about in that particular time, in the area of 2003 up to know, do you have any recollection of, again, receiving any phone calls or have about tell you that they had a phone call come in from the FAA liaison at Peterson Air Force Base, which is NORAD, Colorado Springs, that the Air Force was reviving their or having to revive their time line for something and were looking for some more FAA information during the time lines?

(b)(6), (b)(7)c No, no. Do I recall? Yes, I recall, did that happen? Not with me.

(b)(6), (b)(7)c : Yes, you recall.

(b)(6), (b)(7)c I recall that nobody called me or talked to me.

(b)(6), (b)(7)c : Oh, okay. Yeah that's about when 2003 was when the did the NEEDS tapes.

(b)(6), (b)(7)c : I don't remember exactly, that's why I was saying, let's just, we'll look from January 1, '03. I know the Commission's well they might have headquartered a hearing in January '03, I just don't recall. I know that the hearing that resulted in our presence here today was in May of '03, so.

(b)(6), (b)(7)c I at some point became aware before the end of the--before the Commission came out with its report, there was a controversy with the WatchFox News [ph]. And for a short time, initially, I was involved in preparing--collecting and preparing documents to give to the Commission, and then there was stretch where I wasn't going to have anything to do with it. And then, somehow I got suckered back into it in the latter stages.

(b)(6), (b)(7)c : After the subpoena?

(b)(6), (b)(7)c Yeah, the subpoena came out, there Washington a time period where, you know, fine the Commission, you know, is way off base here

and this is politics, I'm out of it, plus Tony Ferrante and I sort of caused the thing to begin with, that's probably good internal politics, to be honest.

And then something happened, it could have been as simple as I was the one standing outside the door, who knows, and I got suckered back into it. Collecting and preparing stuff to turn over and but I'm aware of the controversy involved in it. Never received a phone call through Fox News.

(b)(6), (b)(7)c : Of the Air Force's [unintelligible] or the time line?

(b)(6), (b)(7)c : There is a discrepancy.

(b)(6), (b)(7)c : Yeah.

MR. MYERS: Or that is an issue.

(b)(6), (b)(7)c : Two out of 13

[unintelligible]

(b)(6), (b)(7)c : Have no idea.

(b)(6), (b)(7)c : Well, the one that's pretty glaring, I think the military had said at 9:16 the FAA made them aware of United 93--

(b)(6), (b)(7)c : I have no comment, don't know.

(b)(6), (b)(7)c : --that airplane hadn't even been hijacked at 9:16, so you know, we're pretty good.

(b)(6), (b)(7)c : After this "Summary of Air Traffic Hijack Events" was published, if you guys had gotten information that was different than what was in here, what sort of revisions of this sort.

(b)(6), (b)(7)c : Once it was created, there were no revisions.

(b)(6), (b)(7)c : Okay so that was it. Were there revised time lines then that were different that you guys work on or--

(b)(6), (b)(7)c : None that I worked on. Because what I do for a living litigation, I do background for all this stuff. I went over to help, because everybody helped and tghen who knows for how long, a week, two weeks later, that I slowly got back out of it and got back into my things relatively slowed down a little bit. But like I said everybody will, as much as we did try, we did everything to make those things accurate, we all knew that it wasn't accurate/accurate that

would come way down the road. But it was something happens, everybody, you know, wants to know what's going on, get me what you got now. I want it accurate, but you know we want to give it to the Administrator, you know, talk to the Secretary who's going to go down to the White House, it's going to be on CNN and so, you know, that's the goal. Is it going to change with time?

[unintelligible] but, anyway, no revisions. Any other time lines come up, don't know. Wouldn't surprise me. That was a snapshot.

(b)(6), (b)(7)c : What you guys knew at that time.

(b)(6), (b)(7)c : Well, the day it was finalized, that was a snapshot of that moment, this is as correct as we can make it, let's go forward.

(b)(6), (b)(7)c : Date of what the 18th of September?

(b)(6), (b)(7)c : 17th.

(b)(6), (b)(7)c : 17 September, so

[unintelligible]

(b)(6), (b)(7)c The moment we did it we didn't

change any data.

(b)(6), (b)(7)c : Do you remember that ever being a request from Monty Belcher about when the FAA notified the military about the various aircraft? Did you ever--do you remember a request, this would be after, you know, this would be probably I think in '03, sometime, a request from the Secretary's office about the time line and it's accuracy and having to go and scrub the data that you got?

(b)(6), (b)(7)c Don't know anything about that. The issue, when it comes to the time line is when people started asking for tapes from the military. The coordination between the FAA and the military because it had to do with the Commission request. I got involved in that.

(b)(6), (b)(7)c : Pulling tapes?

(b)(6), (b)(7)b Yeah, m having people pull tapes.

(b)(6), (b)(7)c : Making more summary, basically summary

(b)(6), (b)(7)c But I don't know about that,

but I don't recall that part. So, I don't want to go as far as saying no.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c But it's possible if there would have been any summary it would have come off the tapes. And, you know, the Commission goes along with this thing but there is this controversy so the Commission asked for tapes, voice tapes, it could be as broad, we could go through the requests, as road as give us all the tapes of any and all communication between the FAA and any military and that's the request I would have made if I was the Commission and maybe they did and I just don't remember.

But for your purposes something along this lines, it would have been my job, I was back in it by them, to write all these people and say, give me all the tapes. They would have sent us in the tapes, we would have packaged them up and shipped them up.

(b)(6), (b)(7)c : Did you send three-year directly to the Commission or did they make a stop

along the way?

(b)(6), (b)(7)c Shirley Miller.

(b)(6), (b)(7)c : Shirley Miller?

MR. MYERS: Yeah. Anything I dealt with went directly to Shirley Miller. I think Doug and them may have let her know the stuff was in and that military would let her know the stuff was in and she may have said, fine, go ahead and ship it over. Only, now that I remember that that I remember a billion boxes on carts going from here down the street on these carts. And that didn't go through Shirley's office. But anything I did, went to Shirley Miller.

(b)(6), (b)(7)c : And then from there on?

(b)(6), (b)(7)c Well, let me back, I'm being factual guys, that's what I do guys, I'm sorry. There would be one or two things I would have given to Tony Ferrante. Tony Ferrante would have given it to Shirley Miller. But after a while he got busy, so he removed himself from [unintelligible] and Shirley and I just did this.

(b)(6), (b)(7)c : So she was the--

(b)(6), (b)(7)c FAA Liaison.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c Senior advisor to the Deputy Administrator and she was the point of contact for the FAA. And after a while as of trust, time whatever, she would, you know, tell Doug, her and Doug got along really good, just give it to him.

There was a woman working for the Commission, I actually met her, she was kind of cute. No, so I can describe her, petite blonde, or dishwasher blonde hair. There had been a couple times when she would ask for something and Shirley was out of pocket, so, actually one time in particular, I, you know, I met her downstairs and I gave it to her, but then gave Shirley a copy.

(b)(6), (b)(7)c : She was with FAA?

(b)(6), (b)(7)c No.

(b)(6), (b)(7)c : She was with the Commission.

(b)(6), (b)(7)c She was working with the Commission.

(b)(6), (b)(7)c : She was working--

(b)(6), (b)(7)c She may have been FBI.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c Working with the Commission,
don't hold me to that either.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c And I know at some point I've
got her name, I know I got her name. And so, there
were a couple of times when Shirley would say send
it to what's his face this stupid guy over there.
They're not going to hear this part. At the
Commission, so I would e-mail both out at the same
time. In my mind, that's going through Shirley,
but technically, I guess it's not.

(b)(6), (b)(7)c : Okay. On the 11th of
September do you remember who the manager of
Quality Assurance was at Cleveland Center?

(b)(6), (b)(7)c No. I want to say Ken Myers
[ph], but I don't remember.

(b)(6), (b)(7)c : Do you know who the manager is
now?

(b)(6), (b)(7)c No.

(b)(6), (b)(7)c : How about Indianapolis?

(b)(6), (b)(7)c It was (b)(6), (b)(7)c and I think he

still is security manager. You're talking about Quality Assurance?

(b)(6), (b)(7)c : Yes, mm-hmm.

(b)(6), (b)(7)c : It was (b)(6), (b)(7)c I know that, and I think he still is.

(b)(6), (b)(7)c : Indianapolis is the--

(b)(6), (b)(7)c : CID.

(b)(6), (b)(7)c : --CID and Cleveland was the OB, right?

(b)(6), (b)(7)c : Affirmative.

(b)(6), (b)(7)c : How about Washington Center>

(b)(6), (b)(7)c : Don't remember, but it's ZDC.

(b)(6), (b)(7)c : I know New York. How about Boston? ZBO, right.

(b)(6), (b)(7)c : Boston is ZBW, it may have been (b)(6), (b)(7)c he's now the current manager, it may have been (b)(6), (b)(7)c

(b)(6), (b)(7)c : I recognize that name.

(b)(6), (b)(7)c

(b)(6), (b)(7)c : Right. Do you know who the QA manger is now?

(b)(6), (b)(7)c : I don't remember.

(b)(6), (b)(7)c : Who at the Command Center Herndon?

(b)(6), (b)(7)c I think it was (b)(6), (b)(7)c [ph] and it still is.

(b)(6), (b)(7)c : That's SQA?

(b)(6), (b)(7)c Yes, I know it's (b)(6), (b)(7)c now I'm 90 percent certain it was then.

(b)(6), (b)(7)c : Did they have a symbol like the Z-symbols or

(b)(6), (b)(7)c ATSCC.

(b)(6), (b)(7)c : I can't think of anything else can you?

(b)(6), (b)(7)c : Just sort of a side question, the formal Accident Packages, do they include the tail numbers of the aircraft?

(b)(6), (b)(7)c Should. This is 1977, 6, well this one didn't. Let's see for American 77, now this is for the Air Traffic Package, understand, it won't be an FAA file, American 77, there's no requirement, but usually they do.

(b)(6), (b)(7)c : Okay. Which one is that you just looked at? Eleven?

(b)(6), (b)(7)c Ninety-three [unintelligible]

(b)(6), (b)(7)c : It's on that title page,
right?

(b)(6), (b)(7)c Yeah, like the third or fourth
page back.

(b)(6), (b)(7)c : [unintelligible] going to have
another Accident Package?

(b)(6), (b)(7)c They'll have a file--

(b)(6), (b)(7)c : A file?

(b)(6), (b)(7)c --of their own.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c Let's see, 93, no, 93 no.

(b)(6), (b)(7)c : All right.

(b)(6), (b)(7)c The way it works, let me--

(b)(6), (b)(7)c : Which one is that?

(b)(6), (b)(7)c Flight Standards will, no
doubt about that. the way it works, the Office of
Accident Investigation which is really AAI, AAI is
over Flight Standards in the hierarchy of things.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c And [unintelligible] AAI, they
would have done an FAA file, and they have forms

they have to fill out for this accident because by law there are nine points we have to cover and the FAA's [unintelligible] investigation. We're Air Traffic, all we do is provide evidence or documentation to support their investigation. We don't do our own investigation other than a cursory review of our services to see if we are in compliance with our own directives. But we provide this package and the file that would go with it. This package goes in an Air Traffic--this is an Air Traffic file, the stuff in the Air traffic file, not all of it, but most of it, would be provided to the IIC, FAA IIC, upon request the NTSB, IIC.

(b)(6), (b)(7)c : What does IIC stand for?

(b)(6), (b)(7)c Investigator In Charge.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c In a situation like this where there is a criminal act, the NTSB is pretty much out of it, the FBI takes over. So, upon request to the FBI, ICC, FBI though is designated, we would turn the copies over to them, they would include it in their files. So, we're just helping with the

investigation and that's our pretty much limited role, helping those who do the investigation by providing evidence, documentation, data and whatever.

(b)(6), (b)(7)c : Do you know, in this case, did the NTSB actually do a report for these aircraft? I'd heard somebody saying--

(b)(6), (b)(7)c I have no clue.

(b)(6), (b)(7)c : --they couldn't because they knew what caused the crash.

(b)(6), (b)(7)c Because it's a criminal investigation.

(b)(6), (b)(7)c : Right.

(b)(6), (b)(7)c And a criminal investigation the NTSB has no authority. The easiest way they could find out is go to NTSB.gov to find out.

(b)(6), (b)(7)c : I could find nothing.

(b)(6), (b)(7)c : Then they would have nothing because they post everything.

(b)(6), (b)(7)c : Correct because these we help up when we talked to Shirley Miller on the tape thing and she was saying the only issue they had

the Commission demanding these and her saying you'll get them when the FBI says I can give them to you, because they classified them initially, for a short period of time .

(b)(6), (b)(7)c : /MR. MYERS [SIMULTANEOUS CONVERSATION UNINTELLIGIBLE]

(b)(6), (b)(7)c The few years the airplane that flew the White House 1 Arrival, as we jokingly called it and flew into the side of the White House was an FBI Secret Service investigation and it was a big turf war. And then, you know, the guy [unintelligible] and the NTSB went packing. But the interesting thing is the FAA under the law can [unintelligible] we still run our own investigation. So, in September 11, the FAA still ran an independent investigation.

(b)(6), (b)(7)c : Did they recover the flight recorders from all the flights do you know?

(b)(6), (b)(7)c Don't remember (b)(6), (b)(7)c would know.

(b)(6), (b)(7)c : (b)(6), (b)(7)c would, it's just a kind of curious thing.

(b)(6), (b)(7)c : [SIMULTANEOUS
CONVERSATION UNINTELLIGIBLE]

(b)(6), (b)(7)c [unintelligible] with that one
far away [unintelligible]

(b)(6), (b)(7)c : The what

(b)(6), (b)(7)c Parts, body parts.

(b)(6), (b)(7)c : Oh,

(b)(6), (b)(7)c When an airplane crashes, you
melt.

(b)(6), (b)(7)c : Right.

(b)(6), (b)(7)c When an airplane crashes,
you're the best evidence, because your impact, your
body fluids will impact upon the gauges and it
leaves shadow and imprints, which will tell us
everything about the--not everything but many
things about the airplane. You can always tell who
was flying the airplane because the thumbs are
broken and the ankles. Because you tense up, they
snap off. And that's the person flying the
airplane, if you can find the hands.

(b)(6), (b)(7)c : Well, that's kind of morbid

isn't it?

(b)(6), (b)(7)c Yeah.

(b)(6), (b)(7)c : The ones in the Towers, there
wasn't much left of anything.

(b)(6), (b)(7)c Yeah.

(b)(6), (b)(7)c : It all melted away.

(b)(6), (b)(7)c Have you guys heard the tapes?

(b)(6), (b)(7)c : Which ones?

(b)(6), (b)(7)c "The" tapes.

(b)(6), (b)(7)c : The hijackers?

(b)(6), (b)(7)c Yeah.

(b)(6), (b)(7)c They're pretty--

(b)(6), (b)(7)c : It's chilling.

(b)(6), (b)(7)c It is, especially in the days
afterward. I remember and you'll meet her later,
Cathrine, she'd go off and she'd cry for a while,
then she came back and said, guys, I can't do it.
And it is pretty--we knew what was going on. It
surprised me when the Commission played the tapes
on TV. Because we would never have released it.
There's a precedent for that an the Challenger,
there was a jet on the West Coast, we would never

have released them, but since they did, we have to.

(b)(6), (b)(7)c : I can't think of anymore questions can you?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : I gave you those CDs.

(b)(6), (b)(7)c : Yeah, I've got them right here. Is there anything else that you think would be helpful or

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : We'll end the interview at 11:14.

[END OF INTERVIEW.]

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case # 042R0122001

SWORN INTERVIEW OF
LYLE A. [TONY] MELLO

BY

SPECIAL AGENT [REDACTED] (b)(6), (b)(7)c

INVESTIGATOR [REDACTED] (b)(3), (b)(7)a

Friday, October 8, 2004

11:36 a.m. - 12:43 p.m.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

I N T E R V I E W

(b)(6), (b)(7)c : Today is October 8, 2004, the time is 11:36 in the morning, we are at FAA Building 10-A, Room 428 in Washington D.C. My name is William Owens, my co-investigator is David Hooper. We're from the Office of Inspector General, Department of Transportation and we're conducting a review of issues involving certain public statements made by military and FAA officials at a 9/11 a Commission hearing and elsewhere that were allegedly inaccurate. Today we're interviewing Tony Mello. Mr. Mello, please, acknowledge that you are aware this interview is being tape recorded.

MR. MELLO: Yes, I am.

(b)(6), (b)(7)c : Please raise your right hand. Do you swear or affirm that the testimony that you are about to furnish will be the truth, the whole truth, and nothing but the truth?

MR. MELLO: Yes, I do.

(b)(6), (b)(7)c : Will you, please, give your full name, spelling your last name for the record.

MR. MELLO: Lyle is my first name, A. that's where Tony comes from, last name Mello, M-e-l-l-o and I go by Tony.

(b)(6), (b)(7)c : What's your current position?

MR. MELLO: Current position, there's been a big shift in air traffic, we're now in ATO and my current position is Director of Safety Investigations.

(b)(6), (b)(7)c : And what grade are you, presently?

MR. MELLO: I'm L band, when we're in full comp, it's an L band.

(b)(6), (b)(7)c : And how long have you held your current position?

MR. MELLO: Well, since the establishment of the ATO, which was about six months ago.

(b)(6), (b)(7)c : Okay.

MR. MELLO: the job is the same as it was back on 9/11, just a different reporting official and a different organization behind him, but my duties and stuff are the same as they were back then.

(b)(6), (b)(7)c : What was the old organization?

MR. MELLO: It was called AAT-20 is the umbrella we were under, my personal position was AAT-201, which was Assistant Division Manager for Investigations, air traffic investigations.

(b)(6), (b)(7)c : And you--how long had you held that position prior to September 11?

MR. MELLO: I'd say about a year and a half, I forget the--about a year, actually, it was about a year as of that time?

(b)(6), (b)(7)c : As of September 2000?

MR. MELLO: Yeah, that's fair to say.

(b)(6), (b)(7)c : And so, essentially, other than an organizational change, you've held that position since September 2000?

MR. MELLO: Yeah, I'm not a deputy anymore, I'm a director, so--

(b)(6), (b)(7)c : A director.

MR. MELLO: --equivalent in the old organization, would have been a division manager, back then I was assistant division, I had someone above me, which was Tony Ferrante, I don't know if

you've heard that name come up. Probably have.

(b)(6), (b)(7)c : And I was going to ask you who you reported to?

MR. MELLO: That was my immediate supervisor, Tony Ferrante.

(b)(6), (b)(7)c : And that was on the 11 of September, Tony was your boss?

MR. MELLO: Yes.

(b)(6), (b)(7)c : And who did Tony report to?

MR. MELLO: We all, we reported to Dave Knoles, which was AAT-20--

(b)(6), (b)(7)c : Right.

MR. MELLO: He was the manager of that and we were one division inside of that 200, which was Accident and Incident Investigation.

(b)(6), (b)(7)c : Today, who do you report to?

MR. MELLO: I report to an actor who's name is (b)(6), (b)(7)c he's acting Vice President of Safety, that's because (b)(6), (b)(7)c was the formal manager and he resigned and went back to U.S.Air. He was from U.S.Air, manager or something, so.

(b)(6), (b)(7)c : (b)(6), (b)(7)c yeah. You'll find

me checking this.

MR. MELLO: Sure.

(b)(6), (b)(7)c : We did a couple of really long interviews and for some reason, I had some technical problems and now I'm paranoid. Do you have a staff then?

MR. MELLO: I have a staff, yes, I mean, it's almost down to nothing, but it's getting ready to come back. What they tried to was take our old function, what we did in AAT and move it into Safety, but now we have this ATO, people started going everywhere. But back in the days of 9/11, we had five investigators, an analyst, staff person. I'm down to one analyst and one staff person right now. But we're going to bid four positions, I'm getting a couple from in-house, so we should be back up hill within two months, hopefully.

(b)(6), (b)(7)c : So, on 9/11 who was on your staff?

MR. MELLO: Let's see, Tony was the division manager, I was assistant division manager; we had Dan Diggins, and he was in the process of

the transition to move, but he's still on paper, belonged to us. (b)(6), (b)(7)c [ph], Mary Strawbridge, Doug Gould, and, I don't know if Bing, (b)(6), (b)(7)c [ph], (b)(6), (b)(7)c was with us yet, I don't thing so. That was the investigation side, okay? People that I supervised also was (b)(6), (b)(7)c (b)(6), (b)(7)c [ph], and they were on the litigation side but it all came under us at that time.

(b)(6), (b)(7)c : Can you describe for us, synoptically, kind of what your duties are?

MR. MELLO: Sure, basically for Air Traffic, we are the quality assurance side of them, we're the internal affairs of them. We basically are the--we keep our hands on the pulse of air traffic. We're reporters, investigators, to accidents and incidents in the system and we report on them daily. We do that from some offices, we do that on-site, we participate with the NTSB on majors; representing air traffic, again. We don't get into the wreckage part of it, we get into the facility part. Whether the controllers do their

job; were the procedures correct. You know, we sit with the lawyers that are helping us get through depositions; helping us get through investigations and interviews like this with the Safety Board.

(b)(6), (b)(7)c : [unintelligible] the TSB?

MR. MELLO: Yes. Any complaints, anything, you know, that comes in through a third-party, something we'd look into it. We're not tied to a region; we're not tied to a facility; we're not tied to either terminal, we kind of can free-flow, so we can go wherever we want. I guess that's why I say internal affairs, you know, they answer to someone outside of the organization, we can look at anything we want.

(b)(6), (b)(7)c : When did you first start with the FAA?

MR. MELLO: Oh, in 1981, right after the strike.

(b)(6), (b)(7)c : What position and where?

MR. MELLO: I was an air traffic controller at La Guardia in New York, La Guardia Airport.

(b)(6), (b)(7)c : So, you're from New York?

MR. MELLO: New England.

(b)(6), (b)(7)c : New England?

MR. MELLO: Yeah, Rhode Island, I was
born.

(b)(6), (b)(7)c : Somebody said that I was with
earlier in the week when we met you in the hallway
they said, sounds like he has a New York accent.
And I didn't hear it.

MR. MELLO: Do you hear it now?

(b)(6), (b)(7)c : No, I don't because I'm
not--I've been living there for a while now, so I
don't even--

MR. MELLO: New York?

(b)(6), (b)(7)c : --pick up the accents anymore.

MR. MELLO: I did my three years there and
I left, too much, not the facility, just hectic. I
was born in a small town, I lived on an island
actually.

(b)(6), (b)(7)c : Where at in Rhode Island?

MR. MELLO: Newport?

(b)(6), (b)(7)c : Newport. Yeah that's lovely.

MR. MELLO: Naval base there, War College.

(b)(6), (b)(7)c : We had an in-service up there last summer that was real nice.

MR. MELLO: That's as far north as I want to go.

(b)(6), (b)(7)c : They still have winter here, so.

MR. MELLO: Yeah, but it's shorter than New England.

(b)(6), (b)(7)c : Were you on duty on September 11?

MR. MELLO: Yes.

(b)(6), (b)(7)c : And where were you at on that day?

MR. MELLO: Basically a couple offices down, my old office was where you were sitting the other day in that room where all the computers?

(b)(6), (b)(7)c : Yes.

MR. MELLO: Used to be two offices I was on the left side, I was the assistant division manager. Yeah, normally a 5:30 in the morning type guy, we do reports and stuff, so I'm in real early.

It's ahead of the traffic, too. But I'm here till 4:00, 4:30, so work on the other end.

(b)(6), (b)(7)c : I was going to say, now that you [unintelligible] 4:00 o'clock in the afternoon, no matter what time you come in.

MR. MELLO: Yeah.

(b)(6), (b)(7)c : Following September 11, did you, I mean, like immediately following, did you participate in preparing, like, any after-action reports or time lines or anything like that to kind of chronicle what was happening that day?

MR. MELLO: Yes, well, I as involved that day with the initial group that was, basically, we put a telecon together and had facilities, mainly the East at first, but finally, the rest of the country on real time working the issues.

(b)(6), (b)(7)c : Was that the teleconference on the 10th floor, was in one of the conference rooms, right?

MR. MELLO: Dave Knoles, which was my boss; Tony Ferrante wasn't here the 11th, he was in Chicago doing some EEO thing, or something, I

think, a hearing or something. So, Dave walked by and this was about--then comes back and I think either reported the first hit at the World Trade or reported a possible hijacking. He said come on, and when we got up there you could just tell, you know the 10th floor was abuzz in the conference room, very hectic. So we started off by just getting a telecon together to start talking to facilities.

(b)(6), (b)(7)c : Was that line recorded?

MR. MELLO: A lot of people asked that. We assumed it was recorded from the WOC. The WOC, Washington Operations Center, actually own the net we were using, we were just utilizing it. So, we thought it was, we found out later that it wasn't and we tried going to the people that were on it, because you know if they recorded it, we could hear everything anyway. But I mean we had lost it listening to tapes and stuff and who had a recording of that actual line, last I knew, from the 9/11 Commission, I don't think they ever found what they were looking for. And we did the Command

Center side of the facilities, now, since then, I know that we have the whole WOC all new equipment and there's the capability there now.

(b)(6), (b)(7)c : What I had heard from some of the folks in the FAA is that, if I understood correctly, that nothing in WOC was recorded.

MR. MELLO: Well, advance, I understand was, that if they said we want this recorded, they had the means to do that, but it would have to be preempted, if I, you know, because they did it with TV and stuff like that, you know, they'd say, yeah, let's record this or, but I don't think that just, yesterday or, hey, let's go grab that, I don't think they had the capability at the time.

(b)(6), (b)(7)c : No, it wasn't like SOP at the time?

MR. MELLO: No.

(b)(6), (b)(7)c : Well, did--do you know if the Center, when they patched in other facilities, would there be a record to show the phone numbers or?

MR. MELLO: You'd have to check with the

WOC. No, these facilities would be calling into a number we gave them, because they'd be calling into this WOC. They maybe went through their region, I don't know, but I would imagine a bill or something would show that, I mean, that would be my guess.

Now, we knew who was on, just by New York Center, Washington Center, Command Center, that kind of thing. We were kind of keeping a dib on the Board. You know, we used a white board that filled up real quick. Double the size of those. And we asked someone to start taking notes try to keep up with what was being said. Hadn't done that kind of thing before, you know learn as you go.

(b)(6), (b)(7)c : So, you were up on the 10th floor or your guys were down here doing this because you they had to patch down to a speaker down here.

MR. MELLO: Doug Gould was down here, I went up with Dave, Doug here, he patched in. He basically did what all the facilities are doing, he just called and got on it, it's an open line.

(b)(6), (b)(7)c : Do you remember if the

military was on the line?

(b)(6), (b)(7)c : I heard military coordination on the line, sometime during that and I can't say it was right at the beginning, I know at least it was within an hour, whereas there was military. I heard military-type coordination, targets 30-miles out, you know stuff that it wasn't a controller of a facility saying. Don't know if that was just someone near a speaker or, you know, were they physically on, I can't say that, but definitely heard communications from the military on that. Now, we had Colonel Atkins who was up there, and I don't know if she was on a separate, but whether it was a secure line or something like that in the next room, kept coming back and forth with different information that was being passed to people above me, you know. Probably sensitive stuff, you know, that I wasn't privy to.

(b)(6), (b)(7)c : Do you know which military unit she was speaking with, like, was it NORAD or NEEDS or--

MR. MELLO: I don't know.

(b)(6), (b)(7)c : --air force base on the phone?

MR. MELLO: I don't know. And we had, oh, what's his name, he's out at NORAD now, Doug Davis? He was doing some coordination, military stuff.

(b)(6), (b)(7)c : No, he's not anymore, he's back here.

MR. MELLO: Is he?

(b)(6), (b)(7)c : As of three or four months ago, I was just out there for the DOD team, they got somebody out of the mountains sitting in a spot right now while they announce the job again. He wasn't out there at the time with liaison.

MR. MELLO: Not September 11?

(b)(6), (b)(7)c : No. He went out there after that.

MR. MELLO: He was here that day, I mean, here at the Command Center, but I mean, I could hear his voice so he was dialed into it somewhere.

(b)(6), (b)(7)c : After the 11th, AAT-20 put together some time lines, some documents. I'm going to show you some documents that we've collected from the FAA. The book, the

infamous--you've got your copy here, you've got the color one.

MR. MELLO: You can use it if you guys want it.

(b)(6), (b)(7)c : We have a little thinner version, it doesn't have all the graphics that yours does. So, this "Summary of Air Traffic Hijack Events," dated September 11, 2001, which there are some pages, some text pages in here that look like AAT-20, September 17, 2001, so it looks like that's when you guys probably finalized this thing. That's on--

MR. MELLO: Yeah, I mean, don't forget it was an ongoing product. We kept putting out drafts, during the--between the, say the 12th actually, probably, 12th and then when we finally got someone to makes us copies and all that, yeah, the 17th sounds pretty--

(b)(6), (b)(7)c : You worked on this?

MR. MELLO: Yeah. Didn't do a lot of the stuff, I did more, you know, I was the supervisor so I was called in, get this, I was more or less

one of the leaders in the group. And Tony Ferrante had come back, he drove from Chicago--I think he must have got in, it was late on the 11th, early on the 12th, so he came in. And he assumed the manager again, I assumed the deputy, and, but I mean, we work very well together, so.

(b)(6), (b)(7)c : I've got some questions specifically about this, but I just want to show you some others. Do you recognize, this is, we just refer to this as the grid time line. The second page says "Notification Chronology" and then there's, like, a page for each of the four aircraft. The bottom of the first pages says by AAT-20, revised on September 18, '01 at 1400.

MR. MELLO: Am I specifically familiar, no, but I mean it's our document and we had to, you know, we had to [unintelligible] on these no doubt about that.

(b)(6), (b)(7)c : So you don't have a specific recollection on this one?

MR. MELLO: No. I mean, you know, I was involved with it, but who actually did that one

page or, you know, I know how everything came together, we tried to find times of everything from--you know we were the collectors, we weren't the authors of the stuff that gave us this information so we'd reach out to this person or that person to put all this together.

(b)(6), (b)(7)c : This is just a one-page one, it says "Notification to DOD Time Line."

MR. MELLO: Mm-hmm

(b)(6), (b)(7)c : Does that look--

MR. MELLO: Yep.

(b)(6), (b)(7)c : --this looks familiar to you?

MR. MELLO: Yep.

(b)(6), (b)(7)c : Did you work on this one or--

MR. MELLO: I'm going to say I worked on everything, I didn't physically type any of this. I was the one probably saying did, you know, did we check with--did we get the tapes we needed from CAPE or did we get the transcript from here or, you know, I'm more or less orchestrating it, I'm not--

(b)(6), (b)(7)c : Do you know who was physically working on putting this document together?

MR. MELLO: Ferrante did some, I know that, I think Cathrine Myers did some typing and Mary Strawbridge did some typing. Typing, I'm talking a book, this specific one, I can't say who. I'm talking they did a lot of the typing out the time based on this information that we gave them.

(b)(6), (b)(7)c : But you remember seeing this one before?

MR. MELLO: Yes, mm-hmm. And I'll go back to the other one, I remember seeing that one before, but the specifics of how it got generated, I don't recall who did it, but I've seen everything in this book.

(b)(6), (b)(7)c : This one here is "Chronology of the Attacks of September 11, 2001 and Subsequent Events through April 30, 2002," I think this was put together by the FAA historian.

MR. MELLO: Is that the lady who wrote the book?

(b)(6), (b)(7)c : I have no idea, I don't even know who the historian was.

MR. MELLO: I know that lady wrote a book

about that, I thought she was the historian or she was working for the historian, she was trying to capture this.

(b)(6), (b)(7)c : That one on America?

MR. MELLO: No, there's another book.

(b)(6), (b)(7)c : Do you have a copy of the book?

MR. MELLO: I have one at home, because she sent me one, she signed it for me.

(b)(6), (b)(7)c : Yeah, I meant to go by GPO and see if I could find a copy of it. Because I've heard it referenced a few times.

MR. MELLO: Yeah, no, but I'm thinking I could get you a copy, while I was here, it's just about that thick and it's soft cover, thought.

(b)(6), (b)(7)c : Well, if you have your copy, you could bring it in, I'm going to be around for the next few weeks, I wouldn't mind just taking a quick look through there.

MR. MELLO: Okay, yeah. But I do have it, it's at home.

(b)(6), (b)(7)c : Now that you've said that,

you're, like, oh, man, where is that thing.

MR. MELLO: Yeah, I know.

(b)(6), (b)(7)c : Do you remember seeing this at any time?

MR. MELLO: No, that's not the format we were using.

(b)(6), (b)(7)c : Okay. How about, there's this fact sheet, this chronology of events on September 11, 2001 and this is document was supposed to have been created in August 2002.

MR. MELLO: It doesn't look familiar to me, it looks like, I mean, it could have been based on information either we provided, but it doesn't look like any of the stuff that we actually created.

(b)(6), (b)(7)c : Now, would, because this came from Public Affairs, would they have run something like this by you, or would it be a higher level or--

MR. MELLO: We would have and we still do this today--they tell us what they need--

(b)(6), (b)(7)c : Mm-hmm.

MR. MELLO: --we give them the information, verify cross-checks, make sure we know where we got it. Then we get it to them, and it could be anything from an e-mail to just a Word document, they take it and put it in whatever format, take out what they don't want to say. You know, they're Public Affairs, you know, they do it from their angle. And that looks like what the finished product was, what we gave them, you know, I can't say right now.

(b)(6), (b)(7)c : How about this document right here, it says "FAA Communications with NORAD on September 11, 2001" and it's in, it's two paragraphs and it's in narrative format. What this is, is it's basically a response to a question for the record from the 9/11 Commission that Administrator Garvey, or former Administrator Garvey had provided.

MR. MELLO: Okay.

(b)(6), (b)(7)c : Does that look familiar to you at all?

MR. MELLO: That document doesn't look

familiar, the content, I know there was an angst to find out notification times and stuff, you know, following 9/11. So, the content of it yes, but that particular document, no, I haven't seen that.

(b)(6), (b)(7)c : This one is "Chronology of Events on 9/11/01.

MR. MELLO: Okay, it looks like it's yeah, I don't know whose it is, but it looks familiar. It looks like it was part of documents we received to verify things.

(b)(6), (b)(7)c : This one's "Chronology of September 11, 2001," and it lists each of the four flights--

MR. MELLO: Mm-hmm.

(b)(6), (b)(7)c : --and their intended routes and then it's a chronology after that.

MR. MELLO: Yes, that looks familiar, yeah.

(b)(6), (b)(7)c : What do you remember about this, if anything?

MR. MELLO: It looks like it may have come out of here or it looks very similar to a time line

that we helped create.

(b)(6), (b)(7)c : When you say out of here, you mean, you're talking it may have come out of that "Summary of Air Traffic Hijack Events?"

MR. MELLO: Yeah, it may have come out of the book you know. I don't know if it's the exact same transcript we have in here or the same summary we have, but it looks very familiar.

(b)(6), (b)(7)c : This one says at the top, "Sensitive Security Information, FAA Communications Regarding Hijacked Aircraft on September 11, 2001."

MR. MELLO: That filtered around sometime during the investigation.

(b)(6), (b)(7)c : The 9/11 Commission investigation?

MR. MELLO: No, no, sometime during our early thing about security information, so, I did see it before.

(b)(6), (b)(7)c : This is a copy of a folder--

MR. MELLO: Accident Package?

(b)(6), (b)(7)c : --no, actually, it's not.

MR. MELLO: No?

(b)(6), (b)(7)c : No, it was a blue folder and inside the blue folder were, like this, for 175, all the information for that flight would have been stapled together in a separate group.

MR. MELLO: Okay.

(b)(6), (b)(7)c : So the four flights were in this folder. My understanding was it was a briefing of some kind.

MR. MELLO: Okay, I could just say the documents came from an Accident Package, just because I can tell, that's we used to own the packages, so I can just tell by things like this, the format, that's ours, so I know, they pulled things out of an Accident Package, probably to create a briefing.

(b)(6), (b)(7)c : I see, okay.

MR. MELLO: I've see these.

(b)(6), (b)(7)c : How, we're looking at the "Summary of Air Traffic Hijack Events," with regard to this document here, and I guess, just in general for the other time lines, that AAT-20 was involved in preparing, how did you guys decide what invents

to include or not to include?

MR. MELLO: We tried to include everything that was either documented or could be verified by a log or had some noteworthy importance to either the flight or the whole incident. We went from a white-board to a laptop computer, some without times, you know, people just started jotting things down. So, we some are like this, some are like that and then, over the next week or two we were trying to reach out somewhere, what time was that said? Well, the log at Boston Center says they said it at that time. Well, that's, then we started putting times with it, I mean, that thing grew over and got probably cleaned up and verified over--between the 11th and the 17th, I think.

And we were getting direction as this thing's going. Spit them out in flights; we want one together; you know, and then the issue came out about the military notification, so there was, then, again, an angst to reach out in all the logs and see what times we did what, you know.

(b)(6), (b)(7)c : What did this, I think you

were using the term angst, about military notification, where does that come from?

MR. MELLO: Well, there was, it came from the 10th floor, which, you know, I got it from my boss, Dave, but it's probably through the Administrator or some down. There was some talk of we didn't notify the military or the military wasn't notified in a timely manner. So we were, to a point, doing damage control, like, yes, we did or here's what we thought we did it, that type of thing, you know.

(b)(6), (b)(7)c : So what did you guys do to try to show when or if you had contacted the military about the various aircraft--what did you guys do to try to determine that?

MR. MELLO: Well, we reviewed facility logs; or listened to, like the CAPE TRACON is one of them where the controller reached out, locally, to Otis. Command Center, we talked with them, interviewed people out there that they had a military liaison person there that they heard the same thing that our people heard out there. And,

you know, at that time, we would assume and that may be the wrong word, that they're notifying their people, that we're notifying our people, you know, as far as notification.

So, it was just an ongoing verification of any piece of document tape or knowledge anyone had, that, you know, that people were called or notified. A lot of them weren't. I think there was one we could not verify. Everyone said, yeah, they were there, we heard them. But did someone reach out and say, hey, I don't think we can verify that.

(b)(6), (b)(7)c : I think that was 93, that last one.

MR. MELLO: Okay.

(b)(6), (b)(7)c : Did you guys have access to information from the military when you were putting that together?

MR. MELLO: We, I remember, and I don't know if it was me, personally, but we had gotten a log from NORAD, and it may have come through Doug Davis, you know, but I remember having a military

log.

(b)(6), (b)(7)c : You remember seeing it yourself?

MR. MELLO: Yes.

(b)(6), (b)(7)c : Do you remember what it looked like, can you describe it?

MR. MELLO: A chronology-type log, you know, daily log I'm talking, like a, you know, one specific day, you know, not an ongoing thing like we had, like we created. Well, like more or less this is our situation room log upstairs from yesterday, something like this. A military log with chronological times of that day and incidents that were going on on the military side.

(b)(6), (b)(7)c : Was it handwritten or typed?

MR. MELLO: Handwritten, the one that I remember seeing.

(b)(6), (b)(7)c : Did it look like it had been faxed in or mailed--

MR. MELLO: Yes, faxed, it looked like something we were getting faxed.

(b)(6), (b)(7)c : Faxed?

MR. MELLO: In fact we burned out a couple of fax machines in there that week.

(b)(6), (b)(7)c : Did you ever have access to any other military information to pull this together?

MR. MELLO: No, not military information on an FAA document, like, Washington talking about NORAD or the Command Center talking about military. You know, I could see coordination with military, but it was on our logs, the only log I talk about seeing was that handwritten faxed--

(b)(6), (b)(7)c : Just one page, one or two pages, it wasn't--

MR. MELLO: It wasn't, no more than two pages.

(b)(6), (b)(7)c : You thought it was NORAD, you're not sure did it say anything at the top?

MR. MELLO: It was NORAD or Northeast Air Defense, yeah.

(b)(6), (b)(7)c : Okay.

MR. MELLO: So, we weren't dealing much with Southeast at the time, it was Northeast and

NORAD, and back then, believe it or not, I didn't know all the little divisions and all that, I learned all that stuff after 9/11.

(b)(6), (b)(7)c : Do you know what happened to that document, the log that you're referencing?

MR. MELLO: Is it missing, because I, like--

(b)(6), (b)(7)c : Like, do you know who you gave it to or--

MR. MELLO: --no, I mean, we cataloged everything, we put everything in an index, my assumption is it's in that, it's still in that.

(b)(6), (b)(7)c : You think it's still in one of those boxes down--

MR. MELLO: Boxes, we made some binders, right, we did, like an index to what's in the boxes and, I mean, I would think that if it's not physically in the binder, there's something in the binder references that it's in a box.

(b)(6), (b)(7)c : Well, would you mind, after the interview, either yourself or having somebody look to see if you can find a copy of that in your records.

MR. MELLO: Okay, I have nothing to do with that stuff anymore, I'd probably go to [unintelligible] because it's in litigation, yeah.

(b)(6), (b)(7)c : Do you want us to ask Jeff, then?

MR. MELLO: Yeah, Jeff or Doug, Doug's, you know, familiar. I've been hands-off that stuff because it's mostly like--

(b)(6), (b)(7)c : Jeff doesn't have a recollection of that document, so, I just, since you do, I thought maybe it would be easier if you--

(b)(6), (b)(7)c : Yeah, but you were upon the 10th floor, right?

MR. MELLO: Yeah.

(b)(6), (b)(7)c : But Jeff wasn't, I mean, he was up down, up and down, back and forth.

MR. MELLO: Yeah, yeah.

(b)(6), (b)(7)c : Because they're planning to come to you about it would be my guess, with is this what you're talking about?

MR. MELLO: So you still want us to go to Jeff or--

MR. MELLO: Well, I can ask him it's not a problem, I don't know where everything is, I know they kind of kept it because they're doing FOIA requests and stuff like that now, I mean, he's handling all that.

(b)(6), (b)(7)c : [unintelligible] try to scan everything--

MR. MELLO: Yeah

(b)(6), (b)(7)c : I think that's a really great idea, you guys won't have to worry about processing a gazillion FOIAs.

(b)(6), (b)(7)c : Yeah, when somebody calls up, we can say, yeah WWW, there it is, go find it yourself.

(b)(6), (b)(7)c : I had, I noticed that a lot of certified copies of transcripts weren't received by AAT-20 until after the "Summary of Air Traffic Hijack Events" was prepared, what sort of data were you guys getting that allowed you to prepare?

MR. MELLO: We'd get either what we called a working transcript or a draft copy. Until the person who created the document, usually the

facility or quality assurance, until they say we've checked and rechecked and rechecked and to the best of our ability, this is what was said, and they certify it.

(b)(6), (b)(7)c : Mm-hmm.

MR. MELLO: Sometimes that waits for the Accident Package to come, which can be months.

(b)(6), (b)(7)c : Right.

MR. MELLO: We need to get things to work on to do this so we will, I am almost 100 percent positive results say that's what we were working off. We were working off either a working draft or a, I should say a working copy or a draft transcript and faith.

(b)(6), (b)(7)c : How were the facilities transmitting that information to you guys?

MR. MELLO: Fax and paper, transcripts would be faxed. I know we did some voice tapes over the phone and recorded it here. But things were coming in every day FedEx, you know.

(b)(6), (b)(7)c : Were you aware if any of those files were being sent over the e-mail, those draft

transcripts and such?

MR. MELLO: Yeah, oh, yeah, definitely, yeah, e-mail and I'm trying to think if we did WAV files back then. WAV files for the voice we do that nowadays, I don't recall if we were doing it then. A lot of the radar data, all those, you know, the index of how the planes were doing and stuff, that was e-mailed.

(b)(6), (b)(7)c : Did you keep an archive of your e-mail messages from that period of time?

MR. MELLO: No.

(b)(6), (b)(7)c : You did not?

MR. MELLO: Um-hmm, no, because I wasn't in he doing it. We were out there, in the "bay" as we call it, you know, those cubicles, there's four of them. We actually pushed everything, that was like our work area for this. We set up screens and, you know, two extra fax machines, extra phones we put in there.

(b)(6), (b)(7)c : Did you keep an archive of any of the electronic files that might have been used for this or any other time lines on your computer?

MR. MELLO: I didn't keep anything.

Again, there was a file 9/11 file on the machine out there, you know, I know there was, like,

(b)(6), (b)(7)c had this document ongoing on--a, I think it was a ZIP drive, and he kept going to the graphics people who were going to produce this to update it, because when, it finally got printed, it was actually, on a disc so, that, and I'm pretty sure that's part of the archives.

(b)(6), (b)(7)c We have a draft of this grid time line, which I realize that you didn't seem to be all that familiar with, but it does say it was prepared by AAT-20, so presumably you guys had this data in some form or another available to you to review. And, for example, this one flight here, United 93, it has a time for military notification as 10:08.

MR. MELLO: Okay.

(b)(6), (b)(7)c : Do you know how the decision was to whether to include the 10:08 and another one that says 9:16 and another one that says N/A, how decisions were arrived at to include

MR. MELLO: So it's the same aircraft, they're talking three different time?

(b)(6), (b)(7)c : Yeah, there's three different times for that one aircraft. Do you specifically remember any discussions about that aircraft or another aircraft?

MR. MELLO: Again, I remember the--let me think, before would just be the, I don't know what the right word is. There was an importance getting military times located.

(b)(6), (b)(7)c : Mm-hmm.

MR. MELLO: And that went on for a day or two, maybe three days. You know, trying to verify and, again, this was just from whatever was documented already and it wasn't documented here, it was documented somewhere else, we were give us this log, give us this log, this says this time, that says that says that time. Maybe the third thing we look at, you know, don't forget, we don't synchronize and I'm not saying that we should laugh that off, but, you know, facility A's time clocks, facility B's time clocks they can be minutes off.

(b)(6), (b)(7)c : Yeah, we're not talking, like, a minute or two, we're talking we're talking about--

MR. MELLO: Yeah, and if it was anything like what it was upstairs, you know, we started off not even taking times, you know. Then we started some times, and the time we heard something over the telecon, you know, we heard New York Center say another one hit the World Trade. Well, that's the time we heard it, so we put that time down. That's not the time the plane hit the building. Because, you know, it hit 10 minutes ago, through this, through that, you know, Things were recreated, you know.

(b)(6), (b)(7)c : Well, the thing that's interesting about this one particular time, for United 93 is that, you know the Commission who, I know, doesn't necessarily leave a good taste in the FAA's mouth, but the Commission had concluded that 10:07. I'm not going to argue about a minute, but 10:07 was the actual time that FAA first notified the military about United 93, which is roughly

three or four minutes after the plane crashed. And you guys have on this time line here, what the FAA had concluded was the correct notification time, but it got removed. And so, I'm wondering did somebody say, well, we couldn't have notified them after, I mean, do you remember any discussion about this.

MR. MELLO: I remember in the 9/11 command, in my interview that question coming up, said how could you notify them after it. And I think my answer to them, more or less, was I don't think we did notify them after it, but if our document says it, I mean, you know, we did, but I wasn't involved in the notification, one, was involved in trying to recreate through existing documents when it happened, but I didn't know anything about it being changed or removed.

(b)(6), (b)(7)c : Yeah, because this is what I don't understand the final it says nothing. Do you remember any discussion if somebody--anybody saying well, we can't have this in there, that looks really, that's embarrassing.

MR. MELLO: I don't remember that. What I remember is, times changing, I'm talking prior to the document going out, the book going out, because, you know, it couldn't have happened then, it happened here, look at this log. You know, that, I'm talking anything, numbers, times were changing, you know. But that specific one the military notification of '93, no. And if we didn't which if that's what it's indicating, it's probably because we couldn't find documentation to support it.

(b)(6), (b)(7)c : Well, I guess, I mean you guys had it right, but you took it off. I guess I'm trying to figure out why?

MR. MELLO: I don't know.

(b)(6), (b)(7)c : This "Summary of Air Traffic Hijack Events" references the NEEDS log or a NEEDS log, which may or may not be what you thought you may have seen.

MR. MELLO: Mm-hmm, right.

(b)(6), (b)(7)c : Here, this is for American 11, it says at 8:40 the NEEDS log indicate they were

notified by FAA. What did you guys do internally to try to verify what apparently this military record was saying with what your records said, because there should be, you know a mate within FAA's records for this event.

MR. MELLO: If you're looking at logs somewhere, there wouldn't be, I mean, we may have just had a one sided, you know, time frame. If something wasn't done on a recorded line or if it wasn't logged by, you know, the people that said it would be maybe that was New York Center, I don't know what it was.

(b)(6), (b)(7)c : I believe it was Boston.

MR. MELLO: Okay, Boston. If Boston didn't put it in their log, NORAD notified us 09/11 and then we get the NEEDS log and NEEDS verified these lines, you know, as we found out weren't recorded, those type of phone lines, well, you couldn't go back to the tape, so we, you know we take the best that we could. Last time I remember about Boston, Boston did have something in their log, I thought, I don't know if it was that

aircraft, but there was something in there about notification. So, that would be our side of it, you know?

(b)(6), (b)(7)c : But am I understanding it correctly, that it just, would any of these if you had no FAA documentation, because it wasn't logged, but the Air Force came up with a document like this one that you said you know the two-pager, you all might--quite possibly would have looked at it and said, yeah, they're saying this here so I mean, you know it's accurate, we're using it, and then you make the note at the bottom that this was drawn from the NEEDS document.

MR. MELLO: That's what I--yeah, that would have been my understanding, we would have done, if we had no documentation and we did see something, we would indicate where the information had come from. But we were trying to use our side of everything, you know. Because I remember, you know, I think something went out in the media about notification. And our relationship for getting information from the military dried up real quick.

You know, we were trying to get, you know, could you tell us the time, and I know they got tough after that to get documents. They probably were trying to do the same thing we were, trying to get all our ducks in order and one we did, when we did it, you know.

Everything went through--had to go through the military people in the building, which was Doug Davis and that shop to get the info.

(b)(6), (b)(7)c : Well, all of your--the references you guys cite in your time line for military notification, come from the military, you guys don't source for any of the notifications in FAA. Like, this one here, 8:38?

MR. MELLO: Mm-hmm.

(b)(6), (b)(7)c : It was actually 8:40, this document says it came from the NEEDS log. This one here, 9:05, for United 175, if you go to your document here, it says it came from a NEEDS log. This one here, 9:24, for 77, not even in this time line, but I've seen this one here, even the source is NEEDS log.

MR. MELLO: Well, if it's in there and we were, either through verification of our stuff comfortable that their time from their log was, I mean, we put it in, I mean, you know, it was verification, I don't know if we would have separated whose it was, if it was both, well, we agreed on the time. I think that's probably what the problem was there, was a disagreement in the time.

(b)(6), (b)(7)c : Do you know who the point of contact was for the military for that log that you had, you had seen?

MR. MELLO: No.

(b)(6), (b)(7)c : Did you, yourself, have any contact with the military after, you know the 11th and working off to preparing these items or any other after-action reports?

MR. MELLO: Me, personally, no. We worked through, either (b)(6), (b)(7)c or (b)(6), (b)(7)c to get something answered or follow-up, that was our field POCs and they, I would hope, would have the name you're looking for.

(b)(6), (b)(7)c : Do you remember Monty Belcher expressing an interest specifically requesting some information on military notifications?

MR. MELLO: Didn't know it was him, but, again, that comes back to my--there was an urgency, there was a--we needed to get military time notification, and I think that was that media thing I was talking about. Whether something came out or the military said we didn't notify them, something came down to verify your notification times. I mean, that became the big issue in a few days after.

(b)(6), (b)(7)c : Do you know what your work product was to answer that request?

MR. MELLO: Well, the final work product was this, this was this, is this, I imagine things went between our military liaison and stuff up to our bosses and eventually to Monty and stuff. Would not have been in the format like this, but just says, hey, American 77 NORAD notified it, you know, I imagine it was just the down-and-dirty, short-and-sweet of it.

(b)(6), (b)(7)c : Do you remember ever getting--and this probably, as I understand things, would have been a year or so after the 11th, maybe even in 2003, ever getting a request that originated from the Secretary's Office about your time lines and verifying their accuracy or anything like that?

MR. MELLO: A year or so after?

(b)(6), (b)(7)c : Mm-hmm?

MR. MELLO: No, no, the only thing I remember, you know, I guess, that would be about Commission time.

(b)(6), (b)(7)c : I think, roughly.

(b)(6), (b)(7)c : Yeah, was check your hard-drives for e-mails and retain everything. There was, something came out when they started going around or when they thought, there may be more documents, they told everyone to inventory everything you have and notify, forget who it was, I think it was Bill Peacock [ph] or someone at the time, that you know, you've given him everything or you have additional, but nothing about the time

line again.

(b)(6), (b)(7)c : Do you remember ever getting a request that you understood originated from the military for FAA's information?

MR. MELLO: I remember, I thought we had a very open exchange at the beginning, I think it, again, got tight-lipped after that because we were both, you know, trying to verify in-house stuff, but I remember, I mean, we were given Colonel Atkins to share with her people, tapes; we were giving her plots of the planes and stuff like that. I don't recall if we actually gave them a log or something like that, but we were kind of open at the beginning.

(b)(6), (b)(7)c : I know, but when, roughly, do you think that stopped?

MR. MELLO: By the time that book came out.

(b)(6), (b)(7)c : Which book is this?

MR. MELLO: The Summary.

(b)(6), (b)(7)c : So within a couple two or three weeks of that--

(b)(6), (b)(7)c : No, this is was from the Summary, two or three almost a week later, not even a week.

MR. MELLO: Yeah, from whether they were not requesting it anymore or I don't remember a direction not to do it, but, you know, that stuff happened early on, but I don't know, maybe we ran out of stuff to give them or there wasn't anything else, but there wasn't no request. They got more into the FBI side of it. They wanted everything and t's--

(b)(6), (b)(7)c : The Bureau did?

MR. MELLO: Oh, God, yes. Joint carriers and task force, we worked with them, that was our big customer, just the entire, you know, after this date, that thing went over there and we were--

(b)(6), (b)(7)c : Do you know who got copies of this?

MR. MELLO: Um--

(b)(6), (b)(7)c : You know, outside of the folks that you work with, but, like, much higher up?

MR. MELLO: No, we, and I don't know, Jeff

actually had it made--

(b)(6), (b)(7)c : Right.

MR. MELLO: --he took the discs to graphics, I don't know how many were made, I mean I've seen a couple stacks, maybe 100 and I know we had to keep giving them to, you know the Administrator, give four copies of three copies, where they went, I don't know. We were told it goes no further than your desk, like to me.

(b)(6), (b)(7)c : So this--

MR. MELLO: But I couldn't--

(b)(6), (b)(7)c : We're talking about the "Summary of Air Traffic Hijack Events?"

MR. MELLO: Yeah. But I know there was a bunch of copies made, don't know where they are, though.

(b)(6), (b)(7)c : What was your involvement in the 9/11 Commission, just in general.

MR. MELLO: Initially, I was going to be the--since I started for AAT-20, Dave Knoles and myself, since I started it, I was going to be the lead to interface with them. It got up to a high

level very quick, Shirley Miller got involved and then they wanted the division versus the assistant division, so Tony Ferrante did a lot of that you know, the interface with Shirley of what we need. After that, I filled in a couple days, you know, if he wasn't here actually I would meet with Shirley, they want this today or they want to go to that facility. Other than that, just my personal interview was the only connection, I had.

(b)(6), (b)(7)c : Do you remember preparing any other time lines specifically for or connected with the 9/11 Commission?

MR. MELLO: We prepared a lot of time lines, the end result is in the Summary book. And so it may have been a draft, that got, you know, updated, verified, but I don't remember any other time lines--I don't remember any time lines past the book. Right after this we had the 587 crash, so our focus went somewhere else real quick.

(b)(6), (b)(7)c : Anything else, Dave?

MR. HOOPER: No.

(b)(6), (b)(7)c : Do you know who the quality

assurance manager at Cleveland Center was on 9/11?

MR. MELLO: No.

(b)(6), (b)(7)c : Do you know who it is now?

MR. MELLO: No, I mean, if the name was said on 9/11, I'd recognize it, you know, I deal with all of the facilities quality assurance [unintelligible] from time to time on incidents and stuff, but the name doesn't come to me.

(b)(6), (b)(7)c : Do you have some way you can look it up?

MR. MELLO: Let's see.

(b)(6), (b)(7)c : I'm having a painfully difficult time finding a good up-to-date FAA directory. They've got the Web one, but it's really, really badly out of date.

(b)(6), (b)(7)c : Yeah the phone numbers are all old phone numbers and--

(b)(6), (b)(7)c : People like you who haven't moved around too much within the organization--

MR. MELLO: I might have new exchanges somebody has moved their exchanges.

(b)(6), (b)(7)c : Yeah, it's really, really,

it's frustrating. Indiana?

MR. MELLO: How about Indy Center?

(b)(6), (b)(7)c : Boston.

MR. MELLO: Boston, I'll get that from the East.

(b)(6), (b)(7)c : And Washington.

MR. MELLO: Washington, okay, okay, thank you. Okay, for Cleveland Center and I can tell you that guy I'm giving you wasn't there on 9/11.

(b)(6), (b)(7)c : Okay.

MR. MELLO: (b)(6), (b)(7)c that's (b)(6), (b)(7)c

(b)(6), (b)(7)c : (b)(6), (b)(7)c ? Do you know their number?

MR. MELLO: (b)(6), (b)(7)c

(b)(6), (b)(7)c :

MR. MELLO: (b)(6), (b)(7)c

(b)(6), (b)(7)c : -- okay.

MR. MELLO: (b)(6), (b)(7)c

(b)(6), (b)(7)c : All right.

MR. MELLO: And at Indy--

(b)(6), (b)(7)c : Mm-hmm.

MR. MELLO: -- it's (b)(6), (b)(7)c [ph]

and the number's (b)(6), (b)(7)c

(b)(6), (b)(7)c : Mm-hmm.

MR. MELLO: - (b)(6), (b)(7)c . Indy 95 percent
sure that (b)(6), (b)(7)c was the manager

(b)(6), (b)(7)c

MR. MELLO: (b)(6), (b)(7)c

at 9/11.

(b)(6), (b)(7)c : Well, actually both those
names look familiar to me.

MR. MELLO: And, let's see [Dials phone
and requests information] Washington Center--

(b)(6), (b)(7)c : Okay.

MR. MELLO: (b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c : Okay.

MR. MELLO: (b)(6), (b)(7)c , he was not there
9/11.

(b)(6), (b)(7)c : Okay. Cleveland not at Great
Lakes?

MR. MELLO: Yes. [Dials phone and requests
information] The person on record is (b)(6), (b)(7)c at
Boston Center, (b)(6), (b)(7)c I guess. He's actually

acting as the Deputy for the facility now, so there's an actor acting as QA manager.

(b)(6), (b)(7)c : Okay.

MR. MELLO: But the number is

(b)(6), (b)(7)c .

(b)(6), (b)(7)c : Okay.

MR. MELLO: The Actor is (b)(6), (b)(7)c I think his name is (b)(6), (b)(7)c and none of those people were there at 9/11. You got some contact I can get to you that book one and.

(b)(6), (b)(7)c : Oh, you were going to see if you could bring that in so we could look at it and then I think you said you were going to try to coordinate with Jeff--

MR. MELLO: Mm-hmm.

(b)(6), (b)(7)c : --see if you guys could find that log or record.

MR. MELLO: Yeah.

(b)(6), (b)(7)c : I think that's it, I can't think of any more questions, unless you have anything to add that you think might be helpful.

MR. MELLO: No, that's about it, really.

wtk

56

(b)(6), (b)(7)c : We'll go ahead and end the
interview, it's 12:43 p.m.

[END OF INTERVIEW.]

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case # 042R0122001

SWORN INTERVIEW OF
ANTHONY STEPHEN FERRANTE

BY

SPECIAL AGENT [REDACTED] (b)(6), (b)(7)c

SPECIAL AGENT [REDACTED] (b)(6), (b)(7)c

[REDACTED] (b)(6), (b)(7)c, DOD, IG

Wednesday, October 13, 2004

1:32 p.m. - 2:55 p.m.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

I N T E R V I E W

(b)(6), (b)(7)c : Today is October 13, 2004, the time is 1:32 p.m. We are at FAA Building 10-A, Room 800-B, Washington, D.C. My name is (b)(6), (b)(7)c (b)(6), (b)(7)c my co-Investigators are (b)(6), (b)(7)c with DOT IG and (b)(6), (b)(7)c with Department of Defense, Inspector General. We're from the Office of Inspector General, Department of Transportation and we are conducting a review of issues involving certain public statements made by the military and FAA officials at 9/11 Commission hearings and elsewhere that were allegedly inaccurate. Today, we're interviewing Tony Ferrante. Mr. Ferrante, please acknowledge that you are aware this interview is being tape recorded.

MR. FERRANTE: I am aware.

(b)(6), (b)(7)c : Would you, please, raise your right hand. Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, and nothing but the truth?

MR. FERRANTE: I do.

(b)(6), (b)(7)c : Can you, please, give your

full name, spelling your last name for the record.

MR. FERRANTE: Anthony Stephen Ferrante,
F-as in Frank-e-r-r-a-n-t-e.

(b)(6), (b)(7)c : And what's your current
position?

MR. FERRANTE: Current position is manager
of the Air Traffic Safety Oversight Division, AOV-
100.

(b)(6), (b)(7)c : And when did you assume that
position?

MR. FERRANTE: July 26, 2004.

(b)(6), (b)(7)c : And what's your current grade?

MR. FERRANTE: EV-2.

(b)(6), (b)(7)c : Is that like an SES
equivalent?

MR. FERRANTE: Yes.

(b)(6), (b)(7)c : And when did you start with
the FAA?

MR. FERRANTE: I started on with the FAA,
June 19, 1982.

(b)(6), (b)(7)c : And what position and where?

MR. FERRANTE: I was an Air Traffic

Control Specialist, hired in at Pittsburgh Air Traffic Control Tower. And I stayed there through 1985 and in November of 1985, I transferred to the Miami Air Traffic Control Tower. I held a variety of different jobs, while in Miami. And I transferred to Washington headquarters, December 3 or 4, right about there, in 1993.

(b)(6), (b)(7)c : On September 11, what position did you hold?

MR. FERRANTE: I was the manager of the Air Traffic Investigations Division, that was AAT-200.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: It was an organization within AAT-20, which was the Evaluations and Investigation staff that reported to the Director of Air Traffic.

(b)(6), (b)(7)c : You said you were a manager, right?

MR. FERRANTE: Yes.

(b)(6), (b)(7)c : And when did you assume that position?

MR. FERRANTE: October of 1998.

(b)(6), (b)(7)c : And how long did you continue to stay in that position after September 11, '01.

MR. FERRANTE: Until July 25, of 2004. My routing symbol may have changed somewhat because of the ATO alignment.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: It went from being the Air Traffic Organization, to the ATO. And, of course, AAT-200 no longer existed, but I did the same function within ATO until I left.

(b)(6), (b)(7)c : On September 11, who did you report to?

MR. FERRANTE: Dave Knoles.

(b)(6), (b)(7)c : And you had a staff?

MR. FERRANTE: Yes, I did.

(b)(6), (b)(7)c : How many people would you say you had here in the District?

MR. FERRANTE: Approximately 18.

(b)(6), (b)(7)c : Eighteen?

MR. FERRANTE: The number has fluctuated over the years, based on budgetary constraints.

But the 18 number I think was the highest headquarters staff we ever had in 200.

(b)(6), (b)(7)c : I think you had said before we started the interview, formally, that your group or you had helped work on this FAA time line or booklet called "Summary of Air Traffic Hijack Events," is that correct?

MR. FERRANTE: Yes, I did.

(b)(6), (b)(7)c : I guess, this is a smaller version in black and white, it's missing a lot of the graphics.

MR. FERRANTE: Okay.

(b)(6), (b)(7)c : And who worked on that with you?

MR. FERRANTE: There were several people. In any investigation we have a lot of different information that comes in. This particular case, we had a ton of information that was coming in. So the primary people who were involved in the investigative review, report, and development of this book would have been (b)(6), (b)(7)c Doug Gould, Mary Strawbridge, (b)(6), (b)(7)c

[ph], (b)(6), (b)(7)c All of them played different roles. Some of it, you know, was collating information; some of it was gathering information; some of it was reviewing radar data.

But those were the people who were here, basically, you know, around the clock, almost.

(b)(6), (b)(7)c : In this document, there's a couple of references, it says, like, AAT-20 September 17, '01, 6:30 a.m.

MR. FERRANTE: Yes.

(b)(6), (b)(7)c : Is that, probably a good date for when this was finalized?

MR. FERRANTE: Yes. And, in fact, I remember that the book was actually produced, printed, I think it was the Monday following September 11. So, that makes sense that that's the 17th. I know we worked on it. We started, probably Friday afternoon and we worked through the weekend to develop it.

(b)(6), (b)(7)c : Was it produced in response to questions in particular or what was kind of the rationale behind it or the reasoning for putting it

together?

MR. FERRANTE: In any accident that occurs within the national airspace system, we did an investigation and a review of the air traffic services that were provided in that event. In this particular case, we treated it as if we had four separate accidents.

Normally, anytime we had an accident, we would generate an Alert Bulletin, and that would go a distribution through some of the Accident Investigation offices; through the Director of Air Traffic; and, occasionally, they even went to the Administrator's level.

In this case, because there was so much information and there were so many requests of information; we had a number of requests from the FBI; we had requests from the NTSB; we put this together, really, as a chronology of what transpired in each of the four flights.

(b)(6), (b)(7)c : So, if I understand what you said, it wasn't necessarily in response to any one
[Simultaneous inaudible conversation.]

MR. FERRANTE: No, it wasn't in response to any specific request, it was designed, we knew we were going to get more and more requests for what took place. So, we started out, writing individual flights. Like we went through American 11; we went through United 175; and I think we did a master chronology of all of them to show the associated time lines when certain things transpired.

For example, when they, you know, left the gates at each individual airport; you know, when they received their air traffic clearances; what time we had the last known ATC communications with them. We did it broken out for each specific flight and then we did a chronology of everything so you could see how things were unfolding throughout the system.

(b)(6), (b)(7)c : Did you have another question? What were you guys relying on to develop each of these events? What was sort of your source data?

MR. FERRANTE: The primary source data were logs from the air traffic facilities that

provided services to the four aircraft. So, we had logs; we had personnel statements, from either the controllers who had communications with the aircraft; or from the management supervisory people who were on duty when it transpired.

(b)(6), (b)(7)c : Were you guys looking at transcripts at that point, yet or--

MR. FERRANTE: We had watch transcripts. I don't think we had any final transcripts at that point. Watch transcripts to us is just the pertinent transmissions to a particular aircraft, whereas, a formal transcript has all the transmissions that are made on that ATC frequency.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: Normally, we would do five minutes before first contact until five minutes after last contact, which is the standard format we follow for all accidents.

(b)(6), (b)(7)c : I've seen reference in this time line and some others that FAA has generated, it says, like in this instance here when you're talking about United 175. It says 9:05 and then it

says Northeast Air Defense Sector, NEEDS log indicate they were notified by the FAA of the events concerning American Airlines 175. Do you remember seeing any documents that the military might have provided?

MR. FERRANTE: No, I didn't, in fact, the first time I actually saw the NEEDS logs was during an interview with the 9/11 Commission and a gentleman named John Azarello, handed me a handwritten copy of an E-plug, and that was the first time I had actually seen their log.

I believe, at the time of the incident, most of the NEEDS--most of the military logs were classified at that time. And just to correct, that was United 175 and I think you read it as American 175.

(b)(6), (b)(7)c : Oh, I'm sorry. United 175, it is, it's UAL 175.

(b)(6), (b)(7)c : When were you interviewed by Mr. Azarello by the Commission?

MR. FERRANTE: It would have been probably in June, may have been late May?

(b)(6), (b)(7)c : Of this year?

(b)(6), (b)(7)c : Of this year of '04?

MR. FERRANTE: Yes, 2004.

(b)(6), (b)(7)c : Oh, okay.

MR. FERRANTE: I have worked with the 9/11 Commission since they formed. But when they finally got to the headquarters interview, that was when the final interview was.

(b)(6), (b)(7)c : That was the first time you actually saw, you feel that you saw the NEEDS log?

MR. FERRANTE: Yes, because he showed me, it was a handwritten log and, if I remember correctly, it had--it had been written Top Secret or either classified--to some extent it had a classification level at the top and then it was crossed out and apparently, now, it was unclassified. But that was the first time that I had seen that log.

(b)(6), (b)(7)c : Do you know if anybody else on your staff had seen that log?

MR. FERRANTE: I don't believe so, I think they were very closely held. See, when we put

together the chronology?

(b)(6), (b)(7)c : Mm-hmm.

MR. FERRANTE: We put together based on what facility logs indicated or what personnel statements indicated. We footnoted a lot of things, for example, in the personnel statements, we didn't think the times were all that accurate in a lot of them. So, words to the effect that time approximate based on personnel statement concerning such and such.

(b)(6), (b)(7)c : Here's an example, it says at 9:00 o'clock, this is approximate based on personnel statements from New York Terminal Radar Approach Control.

MR. FERRANTE: Right. We tried to be as accurate as we could in that, but recognized that we didn't have all of the information, especially considering this was done within a week of the event taking place.

(b)(6), (b)(7)c : Well, it's how would this have gotten in here as a source if nobody had seen the NEEDS information?

MR. FERRANTE: I think we got some of the time from the NEEDS information from Dave Knoles. I think he's the only one that saw any of the NEEDS information

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: Dave, of course ran a telecon up on the 10th floor of this building, and that went for days. In fact, that telecon is still going today.

(b)(6), (b)(7)c : I'd hate to get that phone bill.

MR. FERRANTE: It involved into a 24-hour-a-day and it's now called the Domestic Event Network.

(b)(6), (b)(7)c : Mm-hmm.

MR. FERRANTE: And it's just, you know, all the appropriate people are on there. All the different Air Defense Commands, NORAD, law enforcement, transportation security. So, it's a real-time sharing of what's taking place throughout the NASS, National Airspace System.

(b)(6), (b)(7)c : Would Mr. Knoles have shown

your staff any documents with this information or do you think he just gave you this information verbally or what do you recall about that?

MR. FERRANTE: I recall Dave was somewhat frustrated because it was taking longer than he had hoped for us to put this together. A lot of it was, we didn't have access to a lot of the information we were looking for.

When we started the process of trying to-- who we notified, when we notified them? I mean there were a lot of blanks that we had in terms of the air traffic logs or the personnel statements. Some of it we could get, like on voice tapes, for example, I know that we had the one from Boston Center, where we had a pretty good idea of what transpired, but we didn't have certified tapes yet, which had a time channel on them, because we had a machine that we could read the time channel and when it took place. And we were working off of WAV files, which were the only ones that could be transmitted electronically. Otherwise, the certified tapes had to come through the mail and

that was weeks. Because, if you will recall, right about the same time, we had the anthrax scare.

(b)(6), (b)(7)c : Mm-hmm.

MR. FERRANTE: Mail coming to this building would arrive in Washington, go on a truck to Ohio and be irradiated and come back on a truck. And trucks were often destroyed before that happened.

The only other way we had to get them in here was through Federal Express and, of course, in the initial days, there was nothing flying, so there wasn't any overnight delivery.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: So, fax machines went the lot; e-mail went the lot. But what we couldn't derive from tapes where we had an accurate reference to it, we would use that. I know that some of the information never got, I know, I asked Dave, or I believe I asked Dave, well, we don't have a time for this and he provided some of the times that we--he carried a portfolio with him for a couple of days as we were developing this and if

we had a specific question, there were times when he was able to answer it and times when he wasn't.

(b)(6), (b)(7)c : How would he transmit that information to you guys, was it verbal or--

MR. FERRANTE: When we were putting this book together, what we did was we set up a laptop computer and we had a PowerPoint projector, we were shining it on actually, I think it was a piece of cardboard, so we could read it. So as we were going through the chronology, I think I relied mostly on either Cathrine Myers or Mary Strawbridge who did the actual typing for me.

And, you know, I had a whole group of people and I would ask for, what do we have on American 11? And we'd produce whatever information we could. And from that I would try to derive what we thought was most important in chronology sequence-wise and we would add that in. And, of course, it was on the board so there were three or four different people who were able to look at, no I think that's wrong; no, I think that's right. And, in some of the cases, you know, again, Dave

was trying to have this report done.

He had two or three meetings over the course of the weekend with the Administrator and he would come by and he would ask for certain things and, you know, that would sometimes slow down the process in developing this book.

But at the same time, we would ask Dave, well, we don't have anything on this and what do we know about this? Some of the information I think came from Jeff Griffith, who, of course was Dave's immediate supervisor, at the time. But I don't know exactly where it came from.

(b)(6), (b)(7)c : So, you had no communication with anyone from the military?

MR. FERRANTE: None.

(b)(6), (b)(7)c : And did anyone on your staff have any communication?

MR. FERRANTE: Not that I'm aware of. Most of our initial--and I'm trying to put my head back into, like, the first week of the event. The majority of our work was with the FBI. Because I know we had FBI agents here, like, the day after it

occurred. In fact, I think one time we had the FBI we even had to ask for some linguists to come with them, because we couldn't decipher some of the things that were being said on the tape, only to have them point out that it was in English.

[Laughter.]

MR. FERRANTE: But you know, we're listening and the voice, it sounded like it was foreign and--

(b)(6), (b)(7)c : I think it was foreign wasn't it?

MR. FERRANTE: --these were tapes that we recorded over the telephone--

(b)(6), (b)(7)c : Right.

MR. FERRANTE: --so they weren't of the best quality.

(b)(6), (b)(7)c : They were foreign, right?

MR. FERRANTE: Yes, they were. In the weeks that followed, yeah, we had a lot of contact with the military.

[Simultaneous unintell. conversation.]

MR. FERRANTE: With respect to that book,

I don't think we had anybody from the military at that point. Not in the circle of people we had actually operating.

(b)(6), (b)(7)c : I'm sorry, I cut you off, you brought up--

MR. FERRANTE: Yeah, remember, I said Neil Polancer [ph] came over and he had someone in uniform that had come with him. And they wanted to wanted to watch a replay of some of the radar data that we had. But that's the only recollection I have of anybody from the military at that point. There was a (b)(6), (b)(7)c colonel in the Air Force and (b)(6), (b)(7) was a liaison assigned to this building and I'm sure I probably saw her two or three times during the week. I wouldn't swear to it.

(b)(6), (b)(7)c : Do you have anything?.

(b)(6), (b)(7)c : [unintell.] it wasn't (b)(6), (b)(7)c
(b)(6), (b)(7)c but it was somebody else?

MR. FERRANTE: Yes?

(b)(6), (b)(7)c : Male, female?

MR. FERRANTE: Male.

(b)(6), (b)(7)c : Anything on where they were from?

MR. FERRANTE: No.

(b)(6), (b)(7)c : What service?

MR. FERRANTE: No, don't recall. The reason I recall it is, initially, everything was done through the FBI. And so, anything that we did, we coordinated with the FBI before anybody could see it. So, when (b)(6), (b)(7)c made a request as he came over to see, of course, (b)(6), (b)(7)c former FAA, we all knew Neil, but we still had to coordinate it with the FBI. Now, Doug Gould was the primary contact person I had coordinating things with the FBI, but I do remember (b)(6), (b)(7)c and a military officer, because they were sitting at a computer. The computer was in that same bay that we had set up where we were doing office work.

(b)(6), (b)(7)c : You can correct me if I'm wrong, but I think you started to describe what I kind of see as, like a validation process for the events that you put into your time lines, where you guys were projecting things onto the cardboard?

MR. FERRANTE: Yes.

(b)(6), (b)(7)c : Is that what you would--how you would describe that process or what would you call that?

MR. FERRANTE: Well, validation's a fine word for it. We wanted to be as accurate as we could, we wanted it to be in chronological sequence. So, what we were trying to do is, we were looking for certain things, like we knew that there was a sound of interruption in the cockpit. And we had to figure out where that fit in the sequence of things, because you know, we knew what time they taxied out and we knew what time we had our last ATC communications, for example. So as we went through this, we wanted to make sure that the times lined up as we developed our chronology.

(b)(6), (b)(7)c : So, what sort of factors would cause you guys to keep a time in? What were some of the elements you guys were looking for in order for an event to remain in this time line, like, you know, like this 9:05 thing where we talk about in the NEEDS log, like, what would you guys need to

make sure that you felt comfortable to keep that in there?

MR. FERRANTE: We would have had to have some verification or validation that we had a time that was either from an FAA source or, in this particular case, NEEDS log indicates. Now, with that statement NEEDS log indicates, leads me to believe that we probably got that time from Dave.

(b)(6), (b)(7)c : and what sort of factors would make you guys decide to pull something out of the time line?

MR. FERRANTE: If it had no significance to what had transpired.

(b)(6), (b)(7)c : Did you guys get any direction from those above you as to what should or shouldn't be included in the this time line?

MR. FERRANTE: None whatsoever. Again, nobody specifically asked us to produce this book in this form.

(b)(6), (b)(7)c : Mm-hmm.

MR. FERRANTE: We kind of went our on in trying to put everything together so that it would

answer any question that anybody could come up with in the first few days. Now, I know Dave had some requests for information. Dave was primarily the one who asked us to start putting together the chronologies of what took place. But, to my knowledge, nobody told us what form to put it in. You know--

(b)(6), (b)(7)c : What to include or what not to include?

MR. FERRANTE: We had to beg borrow and steal to get things like this done. We went to a graphics group Monday morning and told them we needed 20 copies of this by 10:00 and they produced it. So there were a lot of people that did a lot of things trying to get things done.

(b)(6), (b)(7)c : I have a different time line that we kind of refer to as the Grid Time Line, because it's got the four aircraft listed across the top of a grid and then some events and then times for each of these aircraft for this event, like, say American 11, United 175, American 77 and United 93. And it says first sign probable time

flight was known to be in distress; NORAD NEEDS notification; estimated time of crash. And then on the second page it starts notification chronology, lists American 11 and it does the same thing for each of the other aircraft. Have you seen this before?

MR. FERRANTE: Yes, I have. And looking at this one it says it says we revised this at 2:00 o'clock on the first.

(b)(6), (b)(7)c : On the what?

MR. FERRANTE: I'm sorry, on the 18th, 2001, that's where I got the first. And I vaguely remember us developing this because there were specific questions that dealt with notification issues, who we notified and when did we notify them.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: And I think this was our attempt to chronologize or develop a chronology of who we told what, when.

(b)(6), (b)(7)c : More specific.

MR. FERRANTE: More specific

(b)(6), (b)(7)c : Do you know where those questions were coming from?

MR. FERRANTE: Everything would have come back to us through Dave. We sort of lived in a cave, I mean, we basically lived here and we ordered food in and we almost never left.

(b)(6), (b)(7)c : We were provided with some earlier drafts of, at least that grid portion of the time line. And one of the earlier drafts of that Grid Time Line has a NORAD NEEDS notification time of 10:08 for United 93.

MR. FERRANTE: Okay.

(b)(6), (b)(7)c : And then somebody, it looks like they pen-and-inked N/A there. Do you know whose handwriting that is?

MR. FERRANTE: No, I don't. You know, if you had asked me this just a couple of months ago, I would have told you that we notified them at 10:07 because that's what I recall reading. And I believe that's what our summary book show. When John Azarello shows me the actual handwritten NEEDS log, I would tell you that we never notified

anybody on United 93. Doesn't show?

(b)(6), (b)(7)c : Not in here, "Summary of Air Traffic Hijack Events," there's a 10:07 event for United 93, but it says in response to a request from a ZOB, which is Boston controller.

MR. FERRANTE: Actually ZOB's Cleveland.

(b)(6), (b)(7)c : I'm sorry, Cleveland. Is it ZBW?

MR. FERRANTE: ZBW, yeah.

(b)(6), (b)(7)c : Sorry.

MR. FERRANTE: That's okay--

(b)(6), (b)(7)c : Cleveland controller--

MR. FERRANTE: --took me years to learn that.

(b)(6), (b)(7)c : --a Falcon jet reported observing puffs of smoke in the vicinity of United Airlines.

MR. FERRANTE: Okay, so that's what we used as a probable crash time.

(b)(6), (b)(7)c : But not as a notification time?

MR. FERRANTE: No.

(b)(6), (b)(7)c : Do you know why that 10:08 was removed as a notification time?

MR. FERRANTE: I would guess this now. And this is only having seen the handwritten note that John Azarello showed me. That when I read his notes or the log that he had from NEEDS notifications, I would suggest to you that we never notified the military on United 93, at all. Now, I don't know if we knew that when we put this together. Again, my primary focus was, on that, I know this was taking place. I think that most of this was done by (b)(6), (b)(7)c and (b)(6), (b)(7)c I believe. Because I don't think we ever had this one projected on the board. But we were all working towards the same things.

(b)(6), (b)(7)c : Is (b)(6), (b)(7)c still with the FAA?

MR. FERRANTE: Yes, he is.

(b)(6), (b)(7)c : We found a--it says a partial transcript. It's for a Cleveland Center and it's the military operations specialist position. And it looks like, according to this document, which is dated September 17, '01, which I guess would have

been, like, a day before--

MR. FERRANTE: Mm-hmm.

(b)(6), (b)(7)c : --that Grid Time Line was produced, there is indications in here that Cleveland Center had given some notice to the military about United 93.

MR. FERRANTE: I know we had to have looked at this.

(b)(6), (b)(7)c : Mm-hmm.

MR. FERRANTE: We probably would have looked at this first either on an e-mail version or on a fax copy of it. So, this appears that the military operations specialist is talking to Huntress?

(b)(6), (b)(7)c : Which is, I think NEEDS.

MR. FERRANTE: Huntress, that's correct.

(b)(6), (b)(7)c : And they're talking about United 93, and I think they report, if you read through there it looks like Cleveland's reporting that they understand that somebody claims there's a bomb on United 93 and that's what gets reported to the military.

MR. FERRANTE: And this could have been how I came up with that 14:04 time frame, that would have been 10:07 in the morning. Because here, the subject is on United 93. But again, the handwritten version that John showed me didn't look like we had notified them at all.

(b)(6), (b)(7)c : That--

MR. FERRANTE: That was from the NEEDS log that he had.

(b)(6), (b)(7)c : That Mr. Azarello showed you?

MR. FERRANTE: Yes.

(b)(6), (b)(7)c : I guess we're just trying to figure out why it is that you guys took that 10:07 reference off of your time lines, because it doesn't really show up anywhere. And at some point, somebody at AAT-20 had it in a draft. And 10:07 is actually after that plane crashed.

MR. FERRANTE: That may have been why it came out. I'm speculating, as well.

(b)(6), (b)(7)c : Did you remember being in the decision or discussion about that?

MR. FERRANTE: You know, there was so much

that was happening and it was happening so fast, I don't have a recall of taking a time line out. It would seem to me that if the airplane had already crashed, we probably would have taken it out because of that. If we confirmed, which I think that the "puff of smoke" that we got from Cleveland Center?

(b)(6), (b)(7)c : Mm-hmm.

MR. FERRANTE: Okay, did that constitute notification to the military when we had a conversation going on an airplane that had already crashed? And I'm just trying to guess on my part now, you know, it's three years ago.

(b)(6), (b)(7)c : I understand. Did you guys have, like, an FTP repository?

MR. FERRANTE: Yes, we did.

(b)(6), (b)(7)c : Has that been referred to as, like the S-drive? What is the S-drive, I've see a reference to that.

MR. FERRANTE: The S-drive is a shared drive.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: So, in other words if we're all on the same network and if I save it on the S-drive, you both have access to it, as well as I have access to it. Which is not the Website. The FTP site is a Website and what we would do with that primarily is we upload radar data because those--the files are very large and can't be e-mailed.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: The FAA has a restriction, I think it's 5 megabytes is the largest e-mail file that they're allow in because it bogs down the system.

(b)(6), (b)(7)c : Well, that's big enough, yeah.

MR. FERRANTE: Yeah. And radar files are significantly bigger than that.

(b)(6), (b)(7)c : Do the Centers have access to the S-drive, as well.

MR. FERRANTE: No, no, you have to be on the local network that we have here.

(b)(6), (b)(7)c : In the building?

MR. FERRANTE: Yes. And, even, you have

to be mapped to that drive, so, for example, on the S-drive, there were probably a couple of dozen people within Air Traffic who were all mapped to that drive.

(b)(6), (b)(7)c : Mm-hmm.

MR. FERRANTE: So, for example, I used to work in Air Traffic Procedures and the shared drive they used was the U-drive.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: And then, when I moved into Investigations, we used the shared-drive. But because I had so many of my old files, I was still mapped and had access to the U-drive from where I was. It's just a shared, primarily, you keep Microsoft Word documents; PowerPoint files. But it--

(b)(6), (b)(7)c : But it's not the same as the FTP repository?

MR. FERRANTE: No. The FTP repository is basically an address on the Web that anybody, as long as you have that address, you can post information to it or download information from it.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: And that was the fastest way to facilitate those large files that we had coming in. You know Boston Center could upload radar data; we could download radar data.

(b)(6), (b)(7)c : I think the FAA had made a couple of notifications to the military on September 11 concerning--that were erroneous, concerning, like, for instance like American 11. After American 11 had crashed, there was some notice that I think it was Boston Center had made to NEEDS saying that they had understood that aircraft was still airborne and on it's way to Washington. I noticed none of that information had made it into any of your time lines.

MR. FERRANTE: I learned that recently. I learned that while working with the 9/11 Commission.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: And I'm not exactly sure what they're referring to because, unfortunately, they didn't know all the particulars to some of the

information they were developing.

(b)(6), (b)(7)c : Mm-hmm.

MR. FERRANTE: So, for example, there used to be--well, there still is--a system called the Enhanced Traffic Management System. And, basically, there's one in Dave's office. It shows you the United States and it shows you every airplane that's flying.

(b)(6), (b)(7)c : Right.

MR. FERRANTE: So, what happens is, all of these different radar sources get sent to Cambridge, Massachusetts, where they get mixed and put out on this display. And they primarily use it for traffic management purposes. In the old days, it used to update every five minutes. I think it's faster than that now, but it used to be five minutes. And it was based on flight plan information. So, once your flight plan information was in there, all right, it wasn't worried about receiving your secondary return or [unintell.]. Because I also heard stories in the early days, specific to American 77, that even after the

aircraft had turned around and had hit the Pentagon, the ETMS display still showed them over Kansas, still flying westbound, because it was based on the flight plan information that was not stored in the computer--

(b)(6), (b)(7)c : So, ETMS--

MR. FERRANTE: --not an actual flight.

(b)(6), (b)(7)c : --ETMS doesn't do any checking on transcounter signals or anything like that?

MR. FERRANTE: No, it gets its information from the host computers in all the different centers. How it works, I don't know.

(b)(6), (b)(7)c : Are you suggesting--did Boston have this system?

MR. FERRANTE: Every one of the centers have it.

(b)(6), (b)(7)c : Oh, okay.

MR. FERRANTE: So, it could have been that someone in Boston Center still saw the airplane flying, right, when, in fact, in Boston Center, we knew that they had lost his transponder before he got to Albany and had turned south-bound. So,

somewhere they were getting some information that said he was still flying.

(b)(6), (b)(7)c : Well, yeah, it did. The Commission, as I understand things concluded that that was the case, that they had had this information about American 11 and had passed it on. I guess what I'm wondering is why that never made it into any of your time lines?

MR. FERRANTE: Because I don't think we knew of it, when it occurred.

(b)(6), (b)(7)c : Okay, all right.

MR. FERRANTE: You know, when we put this together, recognize, first off, I wasn't even here on September 11. I was in Chicago. So, I made it back to the D.C. area, probably 2:00 o'clock in the morning.

(b)(6), (b)(7)c : You drove back?

MR. FERRANTE: I drove back.

(b)(6), (b)(7)c : I borrowed a van from our regional office there and made my way back. So, I came in here, now this would have been September 12. And at that point there was what we called

the--at that point we called it the never-ending telecon. That telecon was going and they were working on restoring the system and how to get airplanes flying again.

So, I asked Dave what time he wanted me to come in. He said, well, you know, get a little bit of sleep and then show up in the morning. I think I came in around 8:00 o'clock in the morning. And that was the first contact I had with the FBI, because they were already here when I came in.

So, between the 12th and the 17th, is when we were trying to gather all the information for that book.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: And there's probably hundreds of things that lot of us have learned in the months that followed or the time that followed. And even more things that we learned when the 9/11 Commission started some of their working.

(b)(6), (b)(7)c : Is it safe to say that after the 17th or in the case of that cleared-time line, the 18th, did that end your group's involvement in

creating time lines--

MR. FERRANTE: Yes.

(b)(6), (b)(7)c : --or exploring that--

MR. FERRANTE: It ended the bulk of it, because at that point, you know, the FAA is required to develop an Accident Package.

(b)(6), (b)(7)c : Mm-hmm.

MR. FERRANTE: I mean, it's part of the charter; the Act of '58, the relationship we have with the NTSB. So, a lot of our focus turned towards developing those accident packages because these were going to be some of the most complicated ones in history. For example, an Accident Package has to list the names of every fatality. And when you're talking about the World Trade Center, we had no way of getting a lot of that information.

So, we had a lot of those issues that we worked through for several weeks. An that' pretty much what our focus was. And then, unfortunately, as luck would have it, you know, the nation's air commerce was flying again and Veteran's Day we had an American 587 crash in New York. And now, we're

on to a different investigation.

So, in terms of the group that we had responsible for this, they had a lot of responsibilities day-to-day. When these four accidents happened, I mean, we were inundated with things. But, although, those day-to-day responsibilities were still there. For example, the group was on-call 24-hours-a-day for anything that happens in NASS. And if you get a pilot deviation, or a runway incursion, or a loss or separation in Los Angeles, at 2:00 o'clock in the morning, we still got those calls and we still had to develop those reports and briefing items, each morning, as soon as airplanes started flying again.

(b)(6), (b)(7)c : I guess you had said, you came to a lot of the realizations that some of the times may not have been right at the time the Commission interviewed you. How about before that, were there times when you were beginning to realize that maybe some of the times that you had put into that book in, perhaps, the Grid Time Line, weren't accurate and, if so, was there any thought of attempting to

revise these documents or anything like that?

MR. FERRANTE: No, there was never an attempt to revise these documents. We put that book together, and I just remembered another point. There's a woman named Darlene Freeman, who, and I don't know what her specific role was at the time, she worked on Monty Belcher's staff.

(b)(6), (b)(7)c : Mm-hmm.

MR. FERRANTE: There were so many activities that started taking place over what transpired on September 11. For example, there was a guy named (b)(6), (b)(7)c [ph], who was off and trying to determine how we're going to secure cockpit doors. He's formerly from the Air Traffic group, as well.

But I know that Darlene pretty much had that responsibility. And then there was an effort to work through the Washington Operation Center upstairs and improve them. And then, of course, Dave Knoles transferred to that organization, himself, in late October of that year.

So there were other groups that had that.

And, again, our responsibility or our role, primarily is we tried to provide the information to people who would request it. Once we had produced that, unless we had a specific request from somebody, we probably wouldn't have gone and done much more with it.

(b)(6), (b)(7)c : Did you participate in preparing any briefings for the White House?

MR. FERRANTE: I don't think we directly did anything for the White House?

(b)(6), (b)(7)c : Or maybe staffers over there?

MR. FERRANTE: The only way we might have done that is if the FBI had been tasked with some of that. Again, 90 percent of our initial work was with the FBI. In fact this was kind of interesting, because the relationship between the FBI and the NTSB was a little bit strained and this goes all the way back to TWA-800, when it was a criminal investigation or it was an accident investigation, because. Because if it's a criminal investigation, of course, the FBI has authority over it. Whereas, if it's an accident, the NTSB

does. So, I think there were some bruised feelings there, because we were doing all our work with the FBI. The NTSB wanted information, as well. We had to coordinate with the FBI in order to release things to the NTSB, which, by statute that's primarily who we dealt with on everything.

(b)(6), (b)(7)c : Mm-hmm.

MR. FERRANTE: So, it was kind of strange. So, directly, I don't believe we did any reports for anybody outside those groups.

One other point that's kind of interest: We developed a PowerPoint presentation and this is some of our interest in the times and the chronology that we developed. Because when we started looking at some of the things that had taken place by what time American 11 taxied out and what time United 93 taxied out, an so forth, when we started looking at it, it almost gave you that eerie feeling that this event was choreographed.

So, then what we did was, we put all of it onto a PowerPoint presentation. And you could see, like 8:00 a.m., American 11 begins take-off roll in

Boston. And then when you see, you know, I don't know specific times, but 8:10, for example, United 93, begins take-off role at Newark. But it was really kind of weird because you saw all of this, like, unfolding at the same time. And to us, this was just our in-the-group observation, it was like it was choreographed.

So, we had put together this PowerPoint presentation. I know we shared that at the military at one point, but it was well after, probably three or four weeks after the event when we had that piece concluded. Because we also saw one that they had put together where they actually took the flight paths of the aircraft and did it over digital mapping that you could really read the street names that they were flying over.

(b)(6), (b)(7)c : That 3-D one?

MR. FERRANTE: Yeah.

(b)(6), (b)(7)c : Yeah. That PowerPoint presentation that you guys put together, was that the one that had the voices interspersed?

MR. FERRANTE: Yes, it is. Yes.

(b)(6), (b)(7)c : This time line, this is a copy of folder, that's what this is the cover to a folder. And, so it's just got like a little label, with the different, the four different flights on it. And then, inside each one, it'll have the information about the flight and then some different time events. Do you remember seeing that before?

MR. FERRANTE: Not with this cover, but, yes, I do. If you look, this is how we initially started, I think on all of this.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: We were doing individual chronologies on what took place. So, this is United Flight 175 and here's a picture of what the controller saw when the transponder changed. And then we did the same, basically, for each flight as we went through.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: And then it was after that when we put the master chronology together and tried to show, time-by-time what transpired

throughout the NASS. So, this was our first attempt--

(b)(6), (b)(7)c : I see.

MR. FERRANTE: --at developing that book.

(b)(6), (b)(7)c : Okay, developing the summary?

MR. FERRANTE: Yes.

(b)(6), (b)(7)c : Okay. Do you know if that document that you're looking at right now, which I think at the bottom is dated September 14--

MR. FERRANTE: September 14.

(b)(6), (b)(7)c : --'01. Do you know if that was used for any White House or Hill briefings or anything?

MR. FERRANTE: No, I don't know.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: The normal flow of information would have been us giving this to Dave Knoles. And Dave Knoles giving it, through his superior, who at that point was Jeff Griffith and Bill Peacock.

(b)(6), (b)(7)c : Mm-hmm.

MR. FERRANTE: And, you know, Dave went to

some of the meetings, I know, in the Administrator's conference room. So, this may have been used there. I think we also provided this type of material to the group that Darlene Freeman led because her effort was up and running within a day or two of September 11, as well. And I know I stepped into a conference room where they were meeting one time, bringing them this type of information, I don't know if it was this specific.

So this is specific to the type of work we did in reviewing voice data. Again, we were trained investigators in determining how the air traffic performed when an event took place. But that was the limit of our investigative abilities.

(b)(6), (b)(7)c : Did you get involved in helping preparing any briefing packages for, like, Jane Garvey or Monty Belcher to testify before the Hill immediately following, like, September 11?

MR. FERRANTE: I'm sure that some of those packages were probably the basis of some of that testimony.

(b)(6), (b)(7)c : Do you remember specifically?

MR. FERRANTE: The only specific thing that I recall that involved Jane's testimony was probably a week or more, because I'm thinking it was, like a Tuesday or a Wednesday after September 11. And that was when we received a copy of the, not necessarily a speech, but it was going to be her opening remarks before Congress.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: And we were looking through to determine if there was anything that was inaccurate in what she was going to say. And we did that in looking through the book we prepared and what her prepared testimony was, I guess that's what they call it. But we did that with--it seems to me that (b)(6), (b)(7)c [ph] would have been the one that put that together.

(b)(6), (b)(7)c : A briefing package for testimony?

MR. FERRANTE: Yes.

(b)(6), (b)(7)c : Who's (b)(6), (b)(7)c

MR. FERRANTE: I think she was a speech writer at--she may be an attorney. I think she's

still here in FAA. But there's only three or four times in my career where I have been asked to review an Administrator's testimony, so I remember the name (b)(6), (b)(7)c because that's generally where they came from.

(b)(6), (b)(7)c : Did you get involved in helping any of the FAA personnel who had to testify before the 9/11 Commission?

MR. FERRANTE: No. I did go on a couple of the interviews of people, well, this wasn't testimony, this was people being interviewed by the 9/11 Commission.

(b)(6), (b)(7)c : Oh, okay. Whose interviews did you go to?

MR. FERRANTE: I went to a group in Hyannis, Massachusetts. It was, well, now, I'm drawing a mental blank. Otis Air Force Base.

(b)(6), (b)(7)c : Oh, okay.

MR. FERRANTE: There's an FAA facility on Otis Air Force Base. And that was the group, if you'll recall in reading through this, there was conversation in Boston Center and Otis trying to

arrange for a scramble because Otis was an FAA facility that was co-located with the military base. So, when the 9/11 Commission first formed, they came over and I spent days with them going through the materials that we had, what we had produced; of course the PowerPoint presentations. And we have a lot of files that we refer to as SATORI, that's the ability to replay radar data, along with voice data from host computers, which are the 20 centers that we have in the U.S. So we did a lot of that type of review. And then when they got in the process where they were going to conduct interviews, what we had tried to do was to send an FAA person with them during those interviews to help them understand the jargon and what meant what.

And I'll give you a for example: They went up to New York Center and they interviewed controllers. And I think this is what precipitated all of this. They learned that there was something called an Accident File and an Accident Package.

Well, the Accident Package is the actual

transmittal that we send to the NTSB. And it has a cover kind of like that black one with just the label on it.

(b)(6), (b)(7)c : Right.

MR. FERRANTE: Now, that's an Accident Package. And in that will be transcripts and there will be radar data and, you know, statements, facility logs and so forth. But the Accident File, I mean it could fill two good-sized paper boxes. Because when you print out radar data, you know, we store it mostly on discs, but when you print it out, it's hundreds of thousands of pages. So, we don't print that out and put it in a book. We'll put what we think is appropriate.

So they went to New York Center and they accused us of withholding information because we had released Accident Packages and not Accident Files. So, we said, okay, great give them everything that's in the file.

So then they came over here and they had these square tapes about this big around. And this is Dana, I don't remember her last name.

(b)(6), (b)(7)c : Hyde.

MR. FERRANTE: Hyde, thank you, from the Commission. She came over and she had this tape and she says, how do I open this? I said, you don't. She said, excuse me? I said you have to have a host computer to be able to play that. She says well, you sent this to us, why do we have it. I said because that's the kind of information that we keep in an Accident file. She well, how do you access it? I said, we don't. She says, you guys don't use these either. I said you have to have a host computer in order to be able to read that. So then she pulled out what's called an ORB. Our centers record on these square tapes. I had a gentleman who even knew what, you know the model number and the name of it, he told me what it was. So, she pulled out an ORB. She said, well what about this? I said, that's an ORB, which is an Optical something disc. She said, well, how do I access this? I said you don't. She said, well why do I have it? I said because you told us we withheld information and that's what we keep in an

accident file. But I have no ability read them, you have to have those computer sources to do it.

So, at that point, because there was all this conjecture that we may have withheld information, they made some arrangements that we would go with them on these interviews. So, I went to Otis Air Force Base. And I think John Azarello might have been in that one. I don't recall who was in the interviews. But when we went there, after we were done, the Commission concluded that having an FAA management official there probably withheld some of their testimony but that they didn't want to appear that they didn't know what they were doing in front of FAA superiors. So we didn't go anymore.

Because I remember being in this interview. This individual made some comments what would have been in my statement. And they said you filled out a statement? He said, yeah, I think so. And I said, now, do you know if you filled out a personal statement or do you think you did. So, he

said, well, I'm not sure. So, I brought the Quality Assurance Officer in. I said did you gather personnel statements after September 11? He said, no. I said okay, then. So, that stopped it right there, it was that simple. Because not everybody's required to give a statement. It's when you have pertinent information that you can lead towards the investigation. But we didn't go on anymore after that.

(b)(6), (b)(7)c : Do you remember if any requests for information had come down to your level that had come from the military, immediately following September 11, when the military was looking for such and such because they needed to prepare a time line of their own or something like that?

MR. FERRANTE: I don't recall any coordination with the military on that. However, if we did, it probably would have gone through Doug.

(b)(6), (b)(7)c : Doug Gould?

MR. FERRANTE: Doug Gould. But I don't

recall any of that happening?

(b)(6), (b)(7)c : Why do you think it would go through Doug.

MR. FERRANTE: Well, he was my primary contact in dealing with outside of the agency in coordinating the release of information. Again, we had to coordinate with the FBI everything, that was an edict that we got from Monty Belcher, nothing gets released unless the FBI agrees to it. So, Doug, was who I tried to funnel most of that stuff through. Because Doug had the contacts with the FBI.

(b)(6), (b)(7)c : Do you remember getting any questions about notification that had come from Monty Belcher, specifically?

MR. FERRANTE: Again, because of the structure of the organization, those questions would have more than likely come to me from Dave Knoles.

(b)(6), (b)(7)c : But wouldn't he say, well, you know, Monty's looking for such and such or--

MR. FERRANTE: He probably would have come

in and said, I need to have this or see if we can get this or do we know anything about this.

(b)(6), (b)(7)c : He wouldn't drop names?

MR. FERRANTE: Probably not. You know, we looked at ourselves as we were supporting the 10th floor. And the 10th floor, of course, was Monty and Jane and Bill Peacock and (b)(6), (b)(7)c And that's still true to this day, most often than not, that the 10th floor is looking for it.

(b)(6), (b)(7)c : That's why somebody asks you a question?

MR. FERRANTE: Yeah.

(b)(6), (b)(7)c : So nobody needs to drop any names, you just know.

MR. FERRANTE: Right.

(b)(6), (b)(7)c : When the September 11 Commission started looking into things, do you remember getting any requests for information about military notification from the Secretary's Office?

MR. FERRANTE: No.

(b)(6), (b)(7)c : Do you remember preparing anything--

MR. FERRANTE: No.

(b)(6), (b)(7)c : --at their request?

MR. FERRANTE: No.

(b)(6), (b)(7)c : Were you one of the initial liaisons to the 9/11 Commission, was that your role or--

MR. FERRANTE: I guess you could say that.

(b)(6), (b)(7)c : After this accident file misunderstanding issue came up with--

MR. FERRANTE: Before that--before that.

(b)(6), (b)(7)c : When you left?

MR. FERRANTE: No, before that.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: The very first time, I think, they came over to the FAA, I was involved from the start.

(b)(6), (b)(7)c : Okay, and because I think at some point Shirley Miller kinda--

MR. FERRANTE: Shirley Miller was the FAA's liaison, so 98 percent of what I did, I provided to Shirley who provided it to the Commission. But you know, after time went by, for

example, (b)(6), (b)(7)c [ph], was one of the ones that they used for doing a lot of the radar analysis. And we had started to build a relationship. And (b)(6), (b)(7)c would call me and I would call Shirley and say, hey, (b)(6), (b)(7)c is going to come over, he wants to listen to a tape, whatever.

(b)(6), (b)(7)c : Mm-hmm.

MR. FERRANTE: She'd say, okay, thanks. So, we generally informed her of when things were happening. But not everything went in and out through her.

(b)(6), (b)(7)c : Do you remember reviewing anything that Public Affairs had put together concerning a chronology from September 11?

MR. FERRANTE: No. Yes, and, no. Yes, I did, but that was during the time frame that we were providing information to the 9/11 Commission, not before we produced any of what we did.

(b)(6), (b)(7)c : That's from August '02--

MR. FERRANTE: Mm-hmm.

(b)(6), (b)(7)c : --I guess that was prepared for the anniversary?

MR. FERRANTE: Mm-hmm. And I'm willing to be that we did see this or someone on my staff saw it, because almost everything in there, I can tell you came from time lines that we had developed, like the book or the earlier versions of the time lines that you saw.

(b)(6), (b)(7)c : So, if you guys were asked to review that you just sort of compared it against the time lines--

MR. FERRANTE: Yes.

(b)(6), (b)(7)c : --you already had in production?

MR. FERRANTE: Yes.

(b)(6), (b)(7)c : You guys have any questions?

MR. LASSARD: Do you know what the source of this right here was--that's highlighted, 9/24?

MR. FERRANTE: I mentioned we had what we called the never-ending telecon. So, in probably the last three of four aircraft accidents that had taken place, prior to September 11, Dave Knoles or myself would set up a telecon with the facility and the region. And that was because it was a real

fast way to get information, if we got a question from, like, a director's office, we were able to ask and get an answer to that right away.

And as we learned more about these, like, who the NTSB investigators were, we'd share that type of information. So, that line took place. And this probably, there was a discussion about, you know, keeping a log about everything that took place in that room. And I know that Tony Mello and (b)(6), (b)(7)c who were both on my staff, that were here in the building that day. And I know that they were upstairs trying to capture, you know, what was said and so forth. So, I would think that this probably came about as a result of that open line being built.

I've also heard and this is through the 9/11 Commission in a meeting I went to at the Pentagon with Shirley Miller, that apparently, there were some other links set up between FAA security and the DOD.

Now, prior to the 9/11 Commission coming into existence, I never participated in any of

those lines. And, apparently, it was common practice that we had a hijacking, FAA security would set up a net and they had all these entities on it.

So, I think it was probably a combination of those events that took place.

(b)(6), (b)(7)c : So you think this is just something that somebody logged as a, okay overhearing the conversation type of thing?

MR. FERRANTE: Yes.

(b)(6), (b)(7)c : Because this is the same kind of thing that shows up in NORAD's time line, as well, you know the 9:24 time.

MR. FERRANTE: I guess I'd have to ask the question, I know at one point, and this was, you know, after-the-fact information, I know that that there was a net set up between the FAA and elements of NORAD, KONAR, I believe it is?

(b)(6), (b)(7)c : Right.

MR. FERRANTE: And I don't remember all the particulars of this conversation, but I believe we went to a meeting at the Pentagon and,

apparently, somebody who had answered that phone, you know, a DOD official, who had answered that phone had, like three different phones going at the same time. So, I think that in some cases, information was being shared on one end but may not have been heard on the other end. And I think there was also, because of the never-ending conference that was going on the 10th floor, (b)(6), (b)(7)c (b)(6), (b)(7)c eventually joined that, and she was, quote, you know a "DOD Representative to the FAA."

(b)(6), (b)(7)c : I think that the 9--we were talking about open lines and military communications, I think the 9/11 Commission had concluded that based on their investigation that they couldn't find a line where information was being passed back and forth in any substantive way.

MR. FERRANTE: I agree.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: And this was, what I learned in that same time line, and I don't know if their report went into much detail about this, but, apparently, there was a line that was established

between FAA security and the DOD. I believe it was KONAR, I don't know the exact names of it, but a DOD official. And this individual had, like three lines that were going at the same time.

(b)(6), (b)(7)c : Which, the DOD person?

MR. FERRANTE: Mm-hmm.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: So, there were times when information was being discussed on this line that, and I don't know all the other parties that were on it, but it would have been multiple parties to this same line then people made assumptions that because the DOD was on the Net that they were getting the same information, as well. Where, in fact, nobody from the DOD was monitoring the line because they had other priorities going on at the same time.

(b)(6), (b)(7)c : Do you have anything?

(b)(6), (b)(7)c : Your staff would not have been the source of this time line, would it?

MR. FERRANTE: This 09/24/ time line?

(b)(6), (b)(7)c : Yes, because it's not in the "Summary of Air Traffic Hijack Events" that I could

find.

MR. FERRANTE: No.

(b)(6), (b)(7)c : Is it, that particular statement?

MR. FERRANTE: See this was done August 12 of 2002, right?

(b)(6), (b)(7)c : Right.

MR. FERRANTE: And so there was the time line that we tried to develop. And what we tried to do is we tried to be as accurate as we could based on information we had received from other FAA facilities. In other words it was on a tape and the tape said it took place at this time, now our tapes could be off by 20 seconds, but, generally they're very accurate, most of them are on the atomic clock now. Or there were personnel statements that we tried to footnote that this time was approximate. So, without having access to the NORAD logs when we developed that, we wouldn't have known that.

Now, in the subsequent months that followed September 11, security probably had logs

that they had generated when they had their net set up in the operations center. So some of this information could have come from those sources, as well.

Now, because remember this was put together by (b)(6), (b)(7)c who is the Public Affairs Specialist. So, no, he might have interwove two or three different sources to come up with this.

(b)(6), (b)(7)c : So, there's the possibility that he got the NORAD's PA release--

MR. FERRANTE: Very possible.

(b)(6), (b)(7)c : --their time line and could have just kind of filled out the time line--

MR. FERRANTE: Sure.

(b)(6), (b)(7)c --as a possibility there. The, you know, LOIS [ph] time line hit the press on the 18th of September did you see that?

MR. FERRANTE: I remember watching it on TV. Parts of it, I didn't particularly like it. No, I never saw this. But I would suggest to you that some of this information would have come from us going to NORAD. And it could have come from

facilities where they might have made inquiry as to what time they took off. It could have come from those first sheets that we put together when we did individual flight segments. Because we had put that together before we came up with the master chronology. And, again, I know I brought information to the group that Darlene was leading one time. And I don't remember exactly what it was. But those were dated on the 14th, which, you know, could have correlated to some of these.

(b)(6), (b)(7)c : I was just curious as to whether you had seen, you know, in the press, the times that NORAD published--

MR. FERRANTE: No.

(b)(6), (b)(7)c : --at any point in time and maybe compared with what you had or that the FAA had to see if they were the same or different or what.

MR. FERRANTE: The only recollection that I have to any of the military time or what NORAD put together is I remember seeing it on, I think it was CSPAN, and this was a little window that was on

somebody's computer display and there was a general who was pointing at charts and that were set up on an easel and there were times on there. And the only thing that struck me, that I recall that the time that their chart said that he crashed and the times that we had thought he had crashed. Now, they relied on, apparently, there was a camera that filmed the impact at the Pentagon? Whereas we were relying on when we lost radar contact.

So, I do remember that I thought there was a difference in the time when we thought he crashed to when NORAD thought he crashed.

(b)(6), (b)(7)c : Was it a difference in minutes or seconds or--

MR. FERRANTE: I think it was about two minutes.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: And again, what I've learned, you know, this one shows FAA notification at 9:16, and I don't know what that's derived from.

(b)(6), (b)(7)c : That's someone's recollection, you know, it was not a, you know, it

was going back and trying to reconstruct the stuff, because we were, quote/unquote, you know the [unintell.] they were [unintell.] they weren't logging the calls and making annotations or anything like that and they all went back to try to reconstruct to their best understanding of what [unintell.] you know what the times were and stuff like that.

MR. FERRANTE: Right. That sounds similar to what we had going on the 10th floor.

(b)(6), (b)(7)c : Oh yeah.

MR. FERRANTE: Because they started writing it on the white board and then of course the white board was going to be filled in no time at all. So, then someone said, hey, let's get a laptop computer and then they tried to transcribe what was on the white board into the laptop while they were still getting inputs. Because I remember reading a draft of that and we had a crash time that was at least an hour off.

(b)(6), (b)(7)c : I think we have a copy of that log from that room.

MR. FERRANTE: I was fortunate, I pretty much escaped that room. Of course being in Chicago helped that.

(b)(6), (b)(7)c : Driving back from Chicago, 13 hours, that's about how long it takes isn't it?

MR. FERRANTE: Yeah. That was an eerie drive, too.

(b)(6), (b)(7)c : There weren't too many people on the highway were there?

MR. FERRANTE: No, actually it was very, very quiet on every highway I went through. And, you know, it had been a while since I used a government vehicle, and they changed the charge card process. I had to call on how to use the charge card. I'm at a gas station, and I was about to buy gas myself. All I knew was I needed to get back to Washington. Had no idea what's going on except what's on the news.

I tried to make calls here several times, 202 Area Code cell phone didn't work real well.

(b)(6), (b)(7)c : I can't think of any other questions, do you have any other questions?

MR. LASSARD: No.

(b)(6), (b)(7)c : D you Elise?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : Is there anything else you'd like to add that you think might be relevant to what we've talked about today?

MR. FERRANTE: Not that I can think of. I would like to say that I think in the initial days following what took place on September 11, I think there was a valiant effort of the people within the FAA and, certainly, within NORAD, as well, to reconstruct what took place. So I was kind of disappointed by some of the statements that I read in the 9/11 Commission. I don't think they gave any credit to the after event activities that took place.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: I was very proud of my group. If you consider from the time they came to work on September 11, which is generally, I had a full staff in by 6:30 in the morning. Most of them worked until midnight, and they worked 7:00 to

12:00 for the next 15 days.

(b)(6), (b)(7)c : So your group concluded around the 26th or so of September?

MR. FERRANTE: Yeah, by the end of September we were pretty much back to our normal operation, which was, you know, we were still 24-hour-a-day coverage that we provide to the air traffic system using five air traffic investigators. I mean, on a good day we were busy. When this happened, we were just inundated.

(b)(6), (b)(7)c : Where is Wayne Pierce working now?

MR. FERRANTE: He still works on the fourth floor as part of the litigation support group.

(b)(6), (b)(7)c : That's where Jeff Myers is, right.

MR. FERRANTE: Yes. Now, in the structure, you know you asked about some of the names that we had in there. We had AAT-100 and AAT-200 both sister organizations that were part of AAT-20. AAT-100 had a very, very small

headquarters staff; so that would have been Cathrine Myers and (b)(6), (b)(7)c In fact that would have been their entire headquarters staff, because the manager was a man name Tom Carmody who was stuck in Colorado someplace.

(b)(6), (b)(7)c : He is--

MR. FERRANTE: He has since passed.

(b)(6), (b)(7)c : --deceased right?

MR. FERRANTE: Yes. And then in terms of how 200 was structured, we had five air traffic controllers who we considered air traffic investigators. And that included myself and Tony Mello, Doug Gould, (b)(6), (b)(7)c and (b)(6), (b)(7)c [ph], (b)(6), (b)(7)c happened to be sailing and she missed the entire event. And the rest of them were there all the time.

Now, (b)(6), (b)(7)c was an analyst who did, we brought her on to be a staff person because, you know the staff work that we had to do was always piling up. And when we assigned it to an investigator who had been on the road for two weeks, we issued too many deadlines. So, we

brought one person in as a dedicated staff specialist that wasn't going to travel. That was Mary Bradley, I'm sorry (b)(6), (b)(7)c And we had a couple of staff assistants that were very concerned in the initial days and kind of stayed with family members, (b)(6), (b)(7)c was one of those. We had a secretary named (b)(6), (b)(7)c [ph], she's still in the organization. And I don't think she had, really, any role or involvement in doing this, because she was working with Dave at that point.

And then, the other folks that we had, because we also had a litigation support group and that would have been (b)(6), (b)(7)c and (b)(6), (b)(7)c at the same time, they both reported to me the same way, as they air traffic investigators did, but their focus is whenever there's an airplane accident, there's going to be a lawsuit against the United States government. Right or wrong, I mean, there always will be. So, they generally take the accident packages and they work with the FAA attorneys and Department of Justice attorneys and try to represent the United States in those

matters. So, they go to depositions and they go to trials.

As luck would have it, on September 11, (b)(6), (b)(7)c was in Cleveland, and I think (b)(6), (b)(7) was in Indianapolis. They were both in centers on different depositions that were taking place. Wayne got copies of the original recordings from Cleveland Center and drove back to Washington with them. And I remember when he showed up with those we made him rent a car and turn around and drive them back to Cleveland Center. I mean it was a real nice gesture on his part, to bring back the originals. But, you know, from Wayne's point of view, Wayne was in the Organization when TWA 800 happened. And, of course, TWA 800, since that started out as a criminal investigation with the FBI, the focus was on chain of custody. So, all Wayne was thinking was chain of custody, I've got to bring these tapes back and secure them.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: Whereas we didn't have the ability to produce certified re-recordings.

Because in order to do that, you have to have the time-channel reader that takes it off the master reel. Now we have them that take them off of cassette tapes. But we didn't have the ability to do that off the master reel. And, then, of course from that certified re-recording you make your certified transcripts, which is what the facilities do, which is why we had Wayne take them back out to Cleveland.

(b)(6), (b)(7)c : When you guys make the copies of those large reel-to-reel onto the cassette tapes the time channel gets recorded on there, as well?

MR. FERRANTE: Yes.

(b)(6), (b)(7)c : Okay.

MR. FERRANTE: In order for a tape to be certified, and you'll hear that in anything that we do that we produce that's going to be made public, someone will come on there and they will say, my name is so-and-so and I'm employed by the Federal Aviation ASH [ph] and I hereby certify this to be a true, re-recording of the original reels concerning whatever the incident is and they'll tell you the

time the tape begins and the time the tape stops.

And we have lots of problems in this building with that, because Public Affairs, wants you to do these big media releases, so they would you know ask us for copies of the tapes that they could release. And then they would say, you know it's got that terrible noise in it this boom, boom, boom all the time and we can't clear that out. I said you have to play them in a stereo system, all you gotta do is play them in the right channel.

Because what it does is it records in stereo. It records in the left channel, I believe it's left channel is the audio portion and the right channel is the time channel at the same time. So, when you play it back then the time reader will tell you what time everything's taking place. But unfortunately, you can't do those over the Internet yet, because you can't record stereo and upload it and download it. Nor can you record stereo over the telephone.

(b)(6), (b)(7)c : So you guys haven't figured out how to do that in the WAV files yet, huh?

MR. FERRANTE: Right. So, we use WAV files, we call them working drafts, they're not certified, but the only thing that's missing is the time channel and the--someone who does the certification.

(b)(6), (b)(7)c : Did you, have you kept copies of all your e-mail messages from September 11 and following?

MR. FERRANTE: I kept a lot of them, probably most of them. I had a computer that crashed probably three years ago and I lost a lot of material in there and I have since changed. I used to be in Air Traffic and I was on the Air Traffic server now I work in AVR which is the Aviation which is the Regulation and Certification, and I've been changed to a new server. I can check and see what I still have. Be happy to do that.

(b)(6), (b)(7)c : That would be great. We had, we put in a request, just to kind of centralize our requests to the IT folks.

MR. FERRANTE: Okay.

(b)(6), (b)(7)c : And they're supposed to be

going around to the units, IT folks and pulling some e-mail messages, and I think yours was on the list. So, they're be coming by to see you if they haven't done so, already.

MR. FERRANTE: I remember that I started a folder called September 11--

(b)(6), (b)(7)c : Yeah, a lot of people did. Did you also keep copies of like electronic chronologies and things like that on your computer's hard drive?

MR. FERRANTE: Yes.

(b)(6), (b)(7)c : I'd like to get a copy of that folder onto like a CD if you can. We can stop by tomorrow and pick that up.

MR. FERRANTE: Okay, that's fine. In fact I kept a copy of that book.

(b)(6), (b)(7)c : The hard copy or the soft?

MR. FERRANTE: Hard copy. You know what? I may have an electronic copy, I may, because I think we put that onto a CD. No, we couldn't have because it had the files in, so it wouldn't have had the radar pictures in it. But I do know that

on my hard drive right now, I have the initial chronologies that you'll see individual flights and I have the master chronology.

(b)(6), (b)(7)c : What we'd like to do is just get the whole folder that you've got with all your September 11 stuff in it.

MR. FERRANTE: Okay.

(b)(6), (b)(7)c : And kind of go from there.

MR. FERRANTE: Okay. and I'll search through my e-mail archives, when my computer crashed and I don't remember exactly when this was, sometime in '02, they tried to replicate all of my e-mails and what it did was, I have two different archives now one's called old archives and one's my current archives. So, if I can access the old archive, I may have all of the original September 11 documents.

(b)(6), (b)(7)c : Oh, okay. Like I said, there should be some IT guys coming around to take a look at that so maybe they'll be able to help you with that.

MR. FERRANTE: Okay.

(b)(6), (b)(7)c : Well, thank you very much,
I'll go ahead and stop the tape. It's 2:55.

I N T E R V I E W

[REDACTED]: Today is October 14, 2004, the time is 9:36 in the morning, we are at FAA Building 10-A, Room 421-B, Washington D.C. My name is [REDACTED] (b)(6), (b)(7)c I'm from the Office of Inspector General, Department of Transportation and I am conducting a review of issues involving certain public statements made by military and FAA officials at 9/11 Commission hearings and elsewhere that were allegedly inaccurate. Today I am interviewing [REDACTED] (b)(6), (b)(7)c could you, please, acknowledge that you are aware that the interview is being tape recorded.

[REDACTED] (b)(6), (b)(7)c : Yes, I am.

[REDACTED] (b)(6), (b)(7)c : Would you raise your right hand, please? Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, and nothing but the truth?

[REDACTED] (b)(6), (b)(7)c I do.

[REDACTED] (b)(6), (b)(7)c : Can you give your full name, spelling your last for the record?

[REDACTED] (b)(6), (b)(7)c Last name is spelled [REDACTED] (b)(6), (b)(7)c

(b)(6), (b)(7)c first name (b)(6), (b)(7)c middle initial L.

(b)(6), (b)(7)c : Do you want to close the door or leave it open, it's up to you?

(b)(6), (b)(7)c : That's okay, we can leave it open, that way (b)(6), (b)(7)c can find us if she gets here.

(b)(6), (b)(7)c : All right. What's our current position?

(b)(6), (b)(7)c : Technically, I am an air traffic safety evaluation specialist.

(b)(6), (b)(7)c : And what division are you working in right now?

(b)(6), (b)(7)c : It's Air Traffic Operations ATO-S, Safety Evaluations.

(b)(6), (b)(7)c : Air Traffic Safety Evaluations Specialist?

(b)(6), (b)(7)c : Mm-hmm, yes, although that's not what I'm functioning as, but that's what my position-of-record is.

(b)(6), (b)(7)c : And can you tell me what the division is again? ATO-S--

(b)(6), (b)(7)c : ATO-S is the generic line of business, and then the division is Safety

Evaluation.

(b)(6), (b)(7)c : What's your present grade level?

(b)(6), (b)(7)c : J.

(b)(6), (b)(7)c : J band?

(b)(6), (b)(7)c [unintelligible]

(b)(6), (b)(7)c : Oh, there you are. How are you.

(b)(6), (b)(7)c : Good morning, how are you.

(b)(6), (b)(7)c : (b)(6), (b)(7)c just joined us. I guess you got here a little earlier than you thought, huh?

(b)(6), (b)(7)c : Yeah.

(b)(6), (b)(7)c : You said that's what your position is on paper, so what are you actually doing right now?

(b)(6), (b)(7)c : I'm working on a training program for air traffic controllers for awareness training focus enhancement, it's called NATPRO, N-A-T-P-R-O. I think now that you're here, we will shut the door, thank you.

(b)(6), (b)(7)c : What is NATPRO?

MS. MYERS: It stands for National Air Traffic Professionalism, NATPRO's the acronym, it's a lot easier to say. It's how we pay attention to paying attention. It's a performance enhancement-based training that focuses on cognitive skills, memory skills, prioritizing, judgment, that sort of thing.

(b)(6), (b)(7)c : When did you start with the FAA.

(b)(6), (b)(7)c : July, 25, 1990.

(b)(6), (b)(7)c : In what position and where was your duty station?

(b)(6), (b)(7)c : My first duty station after being trained at the Academy was New Orleans, Lake Front Air Traffic Control Tower.

(b)(6), (b)(7)c : You were an Air Traffic Control Specialist?

(b)(6), (b)(7)c : Yes.

(b)(6), (b)(7)c : And how long were you down there?

(b)(6), (b)(7)c : Two years, roughly.

(b)(6), (b)(7)c : I used to be stationed in New

Orleans.

(b)(6), (b)(7)c : Oh, what did you do there?

(b)(6), (b)(7)c : Same thing, just--

(b)(6), (b)(7)c : Oh, the OIG?

(b)(6), (b)(7)c : --yeah, the same with the IG, yeah. That airport is actually right on Lake Pontchartrain, isn't it.

(b)(6), (b)(7)c : Yes, it is, it's outside of the sea-wall system, the levy system, the levy system.

(b)(6), (b)(7)c : Oh, that's comforting isn't it.

(b)(6), (b)(7)c : They are nine feet above seal level.

(b)(6), (b)(7)c : Right there.

(b)(6), (b)(7)c : Actually, it's eleven and Moiresant [ph] was only nine feet above sea level. So, that was a tall spot.

(b)(6), (b)(7)c : We lived, like, for a while right on the border of Metairie and New Orleans, right on a canal. And I presume we were above sea level there because there was no level or anything

that we were sitting underneath, so I wasn't so worried about the rain there.

On September 11, what position did you hold?

(b)(6), (b)(7)c : I worked for Air Traffic Evaluations Division and the acronym, at the time, was AAT-100, as a specialist.

(b)(6), (b)(7)c : And when did you assume that position with AAT-100?

(b)(6), (b)(7)c : September 10, 2000.

(b)(6), (b)(7)c : So, it was my one-year one-day anniversary.

(b)(6), (b)(7)c : And who was your supervisor?

(b)(6), (b)(7)c : My manager was Tom Carnady [ph], who is deceased now.

(b)(6), (b)(7)c : And who did Tom report to?

(b)(6), (b)(7)c : Dave Knoles.

(b)(6), (b)(7)c : Did you, yourself have a staff

or--

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : And what were your general duties in that position?

MS. MYERS: I helped to oversee the evaluations program; helped the branch offices, the evaluators that actually conducted the evaluations of Air Traffic Control facilities; I would give guidance, direction, look at trends about the problems that were being found; coordinate with other headquarters elements up here for interpretations or new procedures going into effect, giving them, you know, just coordinate with them give them our opinions about the safety aspect of it. Would make sure that all of the--we had four evaluations branches. That they were all doing things the same way--they'd look at the same things when they'd go into different places and just review what they found, that sort of thing.

(b)(6), (b)(7)c : After September 11, how long did you continue to hold that position or are you, essentially, in the same job?

(b)(6), (b)(7)c : I'm still in the same position, it transferred over to ATO-S, safety ATO reorganization.

(b)(6), (b)(7)c : As I kind of understand

things, I think that you and a lot of other folks that worked in AAT-20, AAT-200, -100 groups, had participated in preparing in what is essentially this "Summary of Air Traffic Hijack Events." Can you just explain for us, generally, what your role in working on this document was?

(b)(6), (b)(7)c : First of all as I understand the structure of the organization AAT-20 was Dave Knoles, that was it, and I think he had a secretary. I knew that AAT-100, my boss, Tom Carnady and myself and (b)(6), (b)(7)c were the only employees at headquarters of that organization. The rest of our employees were the branches. AAT-200 was our sister organization. They were down the hall from us. That was Tony Ferrante was the manager and then a specialist and his group. They did investigations and litigation.

We were sister organizations, but we didn't work closely together all the time on the types of things that they did. I was familiar with what they do as investigators and investigating operational errors and helping to coordinate with

accidents and that stuff with the NTSB and so forth.

So, on September 11, when that happened, my role to help in assembling the book was mainly clerical, mainly administrative; helping just to keep all of the documents sorted and filed and I did typing, I made copies. I collated the books; when into publications and go them bound and did the, you know, the cover, and that sort of thing.

We sort of focused on one aircraft at a time. I worked on United 93. I didn't create anything on my own or anything like that because that's not my normal mode of operation, but I assembled all of the information and did go through that. Looked at the transcript and helped to do some of the summary work on that.

(b)(6), (b)(7)c : So, did you--like, since you did 93, we'll just flip to the 93 section.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : So for this, chronology, your time line that was put together here.

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : So what would you actually, let's just pick this 9:24 and 30 seconds event here.

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : Would you have available to you source documents or was somebody else kind of give you a log?

(b)(6), (b)(7)c : We had, it was very much a group effort and it took several days. I don't remember how long, but it seemed like forever to go through this process. We had some, I don't think they were completely official transcripts from the facilities, but we had some transcript type things. I know Mary Strawbridge worked with me on that and she was in that area and we actually listened to tapes and we jotted down notes of what we felt like--for example, this United 93 established radio contact with--that would have been when we listened to the tapes, we would have jotted down that that's when it occurred. And so the things that were in quotations, that was what we actually heard from the tape or what we actually saw on the transcript.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : And then we put the other words around it. After we went through the process many times from different sources and got all of this information together as much as we could per aircraft.

Then we all sat around as a group and made sure that it made sense that it, you know, that there weren't any typos, that we were saying what we meant to say and that sort of thing. And I can remember sitting there at the computer, you know, with the projector up and I was the typist for most of them, of the four aircraft.

(b)(6), (b)(7)c : When, like, let's say, for example, you guys had a event in here. What sort of things would cause the group to decide to take it out or to not include an event that you guys might have initially in--

(b)(6), (b)(7)c : Well, I don't know that we would have taken out an event per se or--

(b)(6), (b)(7)c : Just to kind of clarify, like, each of these time--

(b)(6), (b)(7)c : You mean like when--

(b)(6), (b)(7)c : --like each of these times and events--

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c : So, like, let's say you had something squeezed in here between, you know, this 9:29 and the 9:31.

(b)(6), (b)(7)c I don't remember, you know, not including something because--I'm not exactly sure what you're getting at. But I believe that our thought process, when we were going through this, is that this was, you know, we're preparing this for our bosses, i.e., mainly the Administrator type kind of thing?

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c And, as you know, managers don't read through everything, they want the key points, the highlights, the important things; here is when things started to go sour; here's what the controller said; here's what we know; these are the facts. So, for example, if you've got this 31 seconds in here, if nothing happened that pertained

to what was going on, then there was no need to include it. If that's what you're--

(b)(6), (b)(7)c : Yeah, I think that's--

(b)(6), (b)(7)c : If you did an actual transcript, line-by-line of every transmission that occurred, that would be a huge document.

(b)(6), (b)(7)c : Right, yeah, I've seen some of the partial transcripts for some of the radar positions that were involved in September 11 and even some of those documents, which I think they tried to boil right down to the point are pretty long. Do you have any other questions about that?

(b)(6), (b)(7)c : Uh-uh.

(b)(6), (b)(7)c : We found this other time line or chronology, which we kind of generically call a grid time line. And it looks like it focuses on, like, military notification. And it says that it was prepared by AAT-20 on September 18 at 1400 hours. Does this look familiar to you.

(b)(6), (b)(7)c : I don't recognize this top sheet at all. No, I don't recognize that.

(b)(6), (b)(7)c : How about the sheets

underneath?

(b)(6), (b)(7)c : That's, I'm not sure, but I definitely don't recognize the top sheet. I don't remember, really, in the stuff that I helped with and looked at, I don't really remember any military stuff at all.

(b)(6), (b)(7)c : Military notification or anything like that?

(b)(6), (b)(7)c : Yeah--

(b)(6), (b)(7)c : Did you get any documents from military or--

(b)(6), (b)(7)c : Right, or any--

(b)(6), (b)(7)c : --any source--you don't recall seeing any source documents from the military?

(b)(6), (b)(7)c : No, no, just strictly what we got from the control towers. And, because I wasn't an investigator like the people at 200, I wasn't here the whole entire time. On the 11th, itself, I was here until the guards went through and said mandatory evacuation and all of that stuff. So, I'm thinking I left about 1:00 o'clock, maybe on that day, because it took forever to get home and I

went and got my kids from school. (b)(6), (b)(7)c was out of town. So, I didn't stay on the 11th afternoon, like a lot of people did.

And then the following Sunday, I didn't come in that day, but the rest of the time I was here, until, I don't know, I guess for that whole week, until, like, Monday or Tuesday of the following week, I continued to help. You know, assemble things, assemble all the information, proof read and that sort of stuff. But there may have been some other--obviously, there may have been other documents that came in because I wasn't here the whole time, like the others were.

(b)(6), (b)(7)c : Did you work on preparing any other time lines, other than this "Summary of Hijack Events" that you can recall?

(b)(6), (b)(7)c : No, not really--just things that were in that book, mm-hmm.

(b)(6), (b)(7)c Do you know who did this one, this grid time line?

(b)(6), (b)(7)c : Uh-uh.

(b)(6), (b)(7)c : ONE of the things that has

come up associated with this grid time line is that there's some earlier drafts of this document that show the military notification time for United 93 as 10:08, which, I don't know if you've looked at the 9/11 Commission Report, I know a lot of FAA people haven't for some reason--

(b)(6), (b)(7)c : I did--I did look at it.

Their findings that came out, was it in July, I think.

(b)(6), (b)(7)c : July or August.

(b)(6), (b)(7)c : And I did read it and I read what I've already talked about the military, you know, that there wasn't good notification and that sort of thing.

(b)(6), (b)(7)c : The Commission had concluded-- had noticed that the FAA was able to give to the military was that United 93 was at 10:08, and like I said that was on an earlier draft of that document and it was removed. And I was wondering if you could tell us anything about that?

(b)(6), (b)(7)c : I don't recall, I know I haven't seen this, I don't recall it.

(b)(6), (b)(7)c : Any discussion about--

(b)(6), (b)(7)c : --anything particular about military notification, I really don't. But I remember the portions that I worked on, was mainly administrative clerical, typing, proof reading and that sort of stuff on the actual times and the summary that you see in that book that dealt with United 93 that I worked on that came from voice recordings from the facilities, from the air traffic facilities or transcripts or notes where we would compare several of us listened to the different tapes and you know, and write notes down and that sort of thing.

So, I don't recall ever hearing any military--anything that the military would have supplied to us or DOD facilities or anything like that, just what the air traffic facilities were, and, again, that was all pretty quick stuff that they sent to us as soon as possible.

(b)(6), (b)(7)c : How about during that meeting where you guys are projecting presumably these time lines up on the screen and kind of, I guess kind of

finalizing and validating the information in them.
Do you remember any discussion about military notification during that meeting?

(b)(6), (b)(7)c : No, I don't, I just don't remember.

(b)(6), (b)(7)c : Do you remember what air traffic facility transcripts you were looking into or that you had--

(b)(6), (b)(7)c : The only one that sticks in my mind was Cleveland Center because it was gruesome.

(b)(6), (b)(7)c : All of their transcripts.

(b)(6), (b)(7)c : Pittsburgh, we had some stuff from Pittsburgh, that's what sticks in my mind, when we were going through it.

(b)(6), (b)(7)c : Do you recall, this is one of--this is a partial transcript, correct? Right here?

(b)(6), (b)(7)c : Yeah, yeah.

(b)(6), (b)(7)c : This is a partial transcript from Cleveland Center that was sent into headquarters.

(b)(6), (b)(7)c : Right, it's from the military operations specialist position in Cleveland.

(b)(6), (b)(7)c : Do you recall reading that or having access to that when you putting this chronology together for 93 or helping to put it together?

(b)(6), (b)(7)c : I just remember from the-- well, when I say the facility--

(b)(6), (b)(7)c : You mean the cockpit recording?

(b)(6), (b)(7)c --the air traffic frequency, the Center Control that United 93 was on. This doesn't look familiar to me.

(b)(6), (b)(7)c : That's not a radar position, so--that's not a part of it.

(b)(6), (b)(7)c : They compared this on the 17th? And then who knows where they got it, I may not have been involved anymore at that time, when subsequent documentation came in, I don't know.

(b)(6), (b)(7)c : Are you familiar with a network drive called the "S"-drive?

MS. MYERS: Yes.

(b)(6), (b)(7)c : And what is that?

(b)(6), (b)(7)c : It's a shared local--it's a shared drive in the room.

(b)(6), (b)(7)c : And who has access to the S-drive? Do the Centers have access or just the people in Washington.

(b)(6), (b)(7)c : The people in this building, like any of the other buildings they would not. And that's one of the two, I don't know exactly which organizations at the time I believe AAT-30 was on and AAT-20 and AAT-10 and perhaps some others, I don't know exactly which organizations, but it was [unintelligible] make it reasonable. I'm talking about the computer people, so that was not overloaded I guess.

(b)(6), (b)(7)c : So, in order for an item to get onto the S-drive, it would have to be put there by somebody within the Washington office, right?

(b)(6), (b)(7)c : Someone in this building that had access to it, yes.

(b)(6), (b)(7)c : Do you know who (b)(6), (b)(7)c is? It's a person, (b)(6), (b)(7)c I don't know what the first name

is?

(b)(6), (b)(7)c : How do you spell it?

(b)(6), (b)(7)c : (b)(6), (b)(7)c

(b)(6) : No.

(b)(6), (b)(7)c : How (b)(6), (b)(7)c [ph]?

MS. MYERS: No.

(b)(6), (b)(7)c : Do you know any of the QA folks out at the Cleveland Center?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : Because ZOB is Cleveland, right?

(b)(6), (b)(7)c : Oh, wait, (b)(6), (b)(7)c I knew him through other things, I think he was there.

(b)(6), (b)(7)c : (b)(6), (b)(7)c ?

(b)(6), (b)(7)c (b)(6), (b)(7)c

(b)(6), (b)(7)c : Oh, okay. Do you have any other questions? Do you remember getting any specific requests from Monty Belcher immediately following September 11 for information about chronologies?

(b)(6), (b)(7)c Not him specifically, I was way down on the totem pole, I don't--

(b)(6), (b)(7)c : Maybe it would have filtered down and somebody would have said you know, we need to get this for Monty or can you help me put this together Monty's really asking?

(b)(6), (b)(7)c : As I said, this wasn't my normal thing, so I was just helping, so they would have probably given that to Doug or (b)(6), (b)(7)c or one of those people that do this all the time. All I know is the 10th floor.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : But not individuals' specific names.

(b)(6), (b)(7)c : So, I guess, you wouldn't know then, as well, if like Jane Garvey was asking for something specifically, either.

(b)(6), (b)(7)c : No, not specifics, just that they were all, everyone was very concerned and Dave Knoles spent a lot of time up on the 10th floor, I'm not even sure exactly where, but he would come down and he would talk to Tony or--

(b)(6), (b)(7)c : Tony Ferrante?

(b)(6), (b)(7)c : --Tony Ferrante or

[unintelligible]

(b)(6), (b)(7)c : Do you remember having to assemble any of FAA's information to provide to the military?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : Do you remember if you guys coordinated any of the chronologies that you prepared, including this "Summary of Air Traffic Hijack Events" with the military?

(b)(6), (b)(7)c : No, I don't.

(b)(6), (b)(7)c : Did you participate in working with Ms. Darlene Freeman--

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : --and she had, I guess worked on some after action groups and this like that?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : Do you know who Darlene is?

(b)(6), (b)(7)c : Vaguely.

(b)(6), (b)(7)c : Okay. Do you remember if you had helped or participated in preparing any briefing packages for the Administrator or about to testify before Congress or maybe do some White

House briefings?

(b)(6), (b)(7)c : No, I didn't.

(b)(6), (b)(7)c : How about for the 9/11

Commission hearings, do you remember helping to put anything together for anybody that had to testify for those?

(b)(6), (b)(7)c : No, nothing like that. All I did was help document information that came in when we responded to 9/11 the boxes, the boxes and boxes and boxes and boxes of paper. And other than that, just, again, on the periphery and fringes of that.

(b)(6), (b)(7)c : Did you keep a copy of this time line or any of the other materials you were working on post-9/11 on your computer, do you still have those?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : How about your e-mail messages and such?

(b)(6), (b)(7)c : I have one still from (b)(6), (b)(7)c

(b)(6), (b)(7)c [ph], was our branch manager our evaluations branch manager that was located at Dulles. And he was asked by the FBI to or the FBI

wanted to interview the controllers out at Dulles and he went along and sat in on those. And he just wrote me an e-mail saying this is what it was like in here, the controllers said go ask the IF [ph] these kinds of questions and that's it.

(b)(6), (b)(7)c : So that's the only, like, 9/11 e-mail you have left?

(b)(6), (b)(7)c : Yeah, yeah. I do, it doesn't have anything to do with the military but way after, like a month or longer after 9/11, my boss at the time, Tom Carnady, was doing some coordination effort with I think it was the FBI for example and he had me help him with that. The FBI wanted to know--they wanted the telephone logs for 1-800 weather briefs for pilots that would have called in to get weather briefings and that was a huge--huge thing. And he needed a database of all the pilot schools, training schools or something like that in certain areas, Florida or whatever, and so I helped Tom with that a little bit, but that's the only follow-up activity I can remember. And those files are huge so I didn't keep them on

my computer, I just turned them over.

(b)(6), (b)(7)c : Is there anything else that you can think about along the lines that we were talking about, the time lines that might be helpful that we haven't asked you?

(b)(6), (b)(7)c : No, sorry.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : I wish I knew the answers and I could say this is what we did, but.

(b)(6), (b)(7)c : Well, we'll go ahead and end the interview, it's 10:09.

[END OF INTERVIEW.]

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case No. 042R0122001

SWORN INTERVIEW OF
KENNETH DOUGLAS DAVIS

BY

(b)(6), (b)(7)c

(b)(6), (b)(7)c

Tuesday, December 7, 2004

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

(b)(6), (b)(7)c : Today is December 7, 2004, the time is 10:05 a.m. We're at DOT NASIF Building in Room 7324, Washington, D.C. My name is (b)(6), (b)(7)c (b)(6), (b)(7)c also present is (b)(6), (b)(7)c We're from the Office of Inspector General, Department of Transportation and we're conducting a review of issues involving certain public statements made by military and FAA officials at a 9/11 Commission hearing and elsewhere that were allegedly inaccurate.

Today, we're re-interviewing Doug Davis. Mr. Davis, will you please acknowledge that you are aware the interview is being tape recorded?

MR. DAVIS: Yes, I am.

(b)(6), (b)(7)c : Would you please raise your right hand? Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, and nothing but the truth?

MR. DAVIS: I do.

(b)(6), (b)(7)c : Would you give us your full name, spelling your last name for the record?

MR. DAVIS: Kenneth Douglas Davis,
D-a-v-i-s.

(b)(6), (b)(7)c : And what's your current
position?

MR. DAVIS: I'm Assistant Branch Manager,
Avionics Systems AIR-130, A-I-R-130.

(b)(6), (b)(7)c : Assistant Branch Manager with
Avionic--

MR. DAVIS: Avionics Systems.

(b)(6), (b)(7)c : And--

MR. DAVIS: And it's AIR-130 is the office
signature.

(b)(6), (b)(7)c : A-I-R?

MR. DAVIS: A-I-R-130, yeah.

(b)(6), (b)(7)c : That's with the Federal
Aviation Administration, right?

MR. DAVIS: Correct.

(b)(6), (b)(7)c : Is that part of Flight
Standards or is that still on the Air Traffic side?

MR. DAVIS: It is part of Aircraft
Engineering, it's, Flight Standards is AFS and we
are AIR, but there all under Aircraft Certification

and Regulation.

(b)(6), (b)(7)c : And what's your current grade?

MR. DAVIS: I am a K-band, equivalent to a 15.

(b)(6), (b)(7)c : And how long have you been in your current position?

MR. DAVIS: Since August 23. So, that's almost four months four months, three and a half months.

(b)(6), (b)(7)c : And prior to that, what position did you hold?

MR. DAVIS: Prior to that, I was the FAA liaison to headquarters NORAD in Colorado Springs, Colorado.

(b)(6), (b)(7)c : How long had you held that position?

MR. DAVIS: Since October 5, 2001.

(b)(6), (b)(7)c : D.C.'s a lot different than Colorado Springs, isn't it?

MR. DAVIS: It is a lot different, yeah, that's why I came--I was here in D.C. before I went there.

(b)(6), (b)(7)c : Oh, were you? Did you like it out there?

MR. DAVIS: I liked some of it, yeah, it's not bad. It's the West.

(b)(6), (b)(7)c : Okay.

MR. DAVIS: And I'm an Easterner, so--

(b)(6), (b)(7)c : Oh, I see.

MR. DAVIS: Good to be out there, though, it was a good time.

(b)(6), (b)(7)c : While you were out there, what grade were you?

MR. DAVIS: A J-Band, 14.

(b)(6), (b)(7)c : A J-Band?

MR. DAVIS: Yes.

(b)(6), (b)(7)c : And can you just briefly describe what your duties were as a liaison out there?

MR. DAVIS: Well, obviously, I got out there shortly after 9/11, so my duties as I saw it were to improve the integration of data and communications between the FAA and NORAD and to fix what was broke on 9/11 and that is getting

airplanes on targets, trying to work out ways to improve response times, improve coordination within facilities and headquarters, and to do exercises, conduct training, facilitate all of that stuff, real, live fly exercises, that kind thing.

(b)(6), (b)(7)c : Did you replace somebody or was that a new billet?

MR. DAVIS: No, I replaced somebody, but the person that I replaced had retired in February of '01, so the position was--

(b)(6), (b)(7)c : So, there was no one there until September 11?

MR. DAVIS: Well, there was someone there, his name was (b)(6), (b)(7)c [ph]. And he was there because NORAD was conducting its annual major exercise and FAA headquarters sent a person to observe/participate from headquarters and that was (b)(6), (b)(7)c so he was in Cheyenne Mountain on 9/11, when things happened.

(b)(6), (b)(7)c : Where is (b)(6), (b)(7)c usually stationed?

MR. DAVIS: Well, at that time, he was a

military reimbursable to the FAA. We do about ten of those, I think on a routine basis. So, he was a Major, an active-duty Major in the Air Force, but he was working for the FAA, loaned to us from the DOD. Currently, he is retired from the Air Force. He retired, I think, in '03. And he is currently working as a contractor and contracts support to the FAA. So, he's in the district area.

(b)(6), (b)(7)c : But he was out there on 9/11 to participate in some real-life exercise that they were doing?

MR. DAVIS: Right, right.

(b)(6), (b)(7)c : So, he wasn't--he didn't have any of your functions that you--

MR. DAVIS: No, he did not. He was there only as an FAA participant/liaison for the exercise.

(b)(6), (b)(7)c : And what time of exercise was it, again?

MR. DAVIS: I'm not sure if it was an amalgam Virgo, NORAD does an annual exercise that involves live flights and training scenarios and I

don't know what the scenario was and I don't know what the name of it Washington, but it was that one.

(b)(6), (b)(7)c : Essentially a large-scale training?

MR. DAVIS: Large-scale training exercise.

(b)(6), (b)(7)c : Like of a hijacking, of a training exercise to resemble a hijacking?

MR. DAVIS: I don't believe that that one was focused on hijacking. NORAD's mission is not just to protect the continent from hijacking. They do a lot of exercising around the traditional NORAD mission, which is Russians coming over the pole and that kind of thing. So, there's a lot of that kind of stuff. It's their air defense mission. And so, I don't know what the training scenario was for that exercise.

(b)(6), (b)(7)c : I see.

MR. DAVIS: There's been a lot of--there was a lot of speculation of it in the papers after 9/11 and after I got there. In 2002, we did a hijack exercise. We, actually NORAD, I said we,

NORAD leased a Delta 757 and flew it and they flew targets on it and that kind of thing. So, they actually went through that. But I don't believe that was being conducted--that type of exercise in 2001.

(b)(6), (b)(7)c : While you were at NORAD, who did you report to within the FAA.

MR. DAVIS: Alton Scott [ph].

(b)(6), (b)(7)c : Alton Scott?

MR. DAVIS: Mm-hmm, he was the Manager for Special Operations, located here on the sixth floor. And all that has been changed now. All the structure's been changed, the organization's been changed. The last four months of my position, I began to report to Cliff Armstrong [ph].

(b)(6), (b)(7)c : Do you remember what Scott's routing symbol was?

MR. DAVIS: Uh--

(b)(6), (b)(7)c : I know you guy aren't really using those anymore, but--

MR. DAVIS: --he was ATP-200. Yeah, the ATO doesn't use routing symbols anymore, so its

ATR--ATO-R and that's as far as the routing symbol goes.

(b)(6), (b)(7)c : So you said for the last four months you reported to who again?

MR. DAVIS: Cliff Armstrong.

(b)(6), (b)(7)c : So, roughly from, like, April, through August approximately?

MR. DAVIS: Somewhere in there, plus-or-minus a month or two.

(b)(6), (b)(7)c : Do you know who Cliff would report to?

MR. DAVIS: Frank Hatfield.

(b)(6), (b)(7)c : Frank Hatfield?

MR. DAVIS: Yeah.

(b)(6), (b)(7)c : Were you the only FAA liaison person out there at the time or was there someone--

MR. DAVIS: Well, I was the only one assigned at NORAD headquarters. There are a couple of folks now that work in Cheyenne Mountain. You know, that's not NORAD headquarters, that is like an air defense sector component of NORAD. NORAD headquarters is at Peterson Air Force Base, which

is about 15 miles away from the mountain.

(b)(6), (b)(7)c : So you were actually at Peterson?

MR. DAVIS: Right, but I spent a lot of time in Cheyenne Mountain, particularly after I got out there because we were staffing up what we called the Domestic Event Net. And I was learning my job. So, I spent the first 60/70-percent of my time in Cheyenne Mountain, pulling shifts and getting acquainted with that before I actually, before I reported, almost totally, to Peterson Air Force Base.

(b)(6), (b)(7)c Did you have--did anybody report to you?

MR. DAVIS: No.

(b)(6), (b)(7)c : What was Hatfield's position?

MR. DAVIS: Hatfield is the Director of System Operations, I believe--Operations Security.

(b)(6), (b)(7)c So, it's Director of Operations Security?

MR. DAVIS: Yes, I believe that's--I believe that's his title.

(b)(6), (b)(7)c : How does Doug Gould fit into that structure there?

MR. DAVIS: I honestly could not tell you.

(b)(6), (b)(7)c : Don't know?

MR. DAVIS: I thought he was a Manager, when (b)(6), (b)(7)c retired, there were about five managers under Frank and I thought Doug Gould became one of those manages, which was, in fact, out in Scott's old position, but the responsibility for the liaisons in the field had moved to Cliff Armstrong and he was one of the managers. So, to my mind he was a manager subordinate to mine.

(b)(6), (b)(7)c : But you're not real certain?

MR. DAVIS: No, I'm not, I don't know what he does today?

(b)(6), (b)(7)c : (b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c : At NORAD, was there somebody at the Air Force that you reported to or that you had some responsibility--

(b)(6), (b)(7)c : I was a liaison to the four-star general. So, I didn't report to anybody,

I was on my own, self-supervised out there, for the most part. But, so, the commander's staff, the four-star commander, has, obviously, a lot of different segments in there but there's intelligence, there's operations, there's logistics. All of them have two-star general over them and I interacted a lot with them.

And then, also below them, obviously, they could kind of branch out more and they have O-6 or full colonel levels down there. Most of my day-to-day interaction was with the O-6 level. Weekly interaction with the two-star and I would, say, bimonthly to every quarter interaction with the four-star.

(b)(6), (b)(7)c : Who was the four-star?

MR. DAVIS: Eberhart [ph].

(b)(6), (b)(7)c : Eberhart and who were the two-stars that you routinely interacted with, if there were a couple?

MR. DAVIS: In the beginning, it was with Eric Findlay, Canadian two-star, who is now a three-star and the deputy commander at NORAD, And

it's Findlay, F-i-n-d-l-a-y. And then he was replaced by Angus Watt, W-a-t-t, also a two-start Canadian, he is the NORAD J-3. I interacted quite a bit with a two-star at CONR, Craig McKinley [ph],

(b)(6), (b)(7)c : CONR?, that's C-O-N-R, right?

MR. DAVIS: CONR, right. Conus [ph] Region Commander.

(b)(6), (b)(7)c : What was his name?

MR. DAVIS: Craig McKinley, he was not on duty on 9/11, Larry Arnold was on duty on 9/11, and he retired shortly after my activity [unintelligible]. So of the two-starts, General Watt is the one that I interacted the most with?

(b)(6), (b)(7)c : Did you interact with anybody at NEADS?

MR. DAVIS: No, that's not my job.

(b)(6), (b)(7)c : The acronym NEADS is N-E-A-D-S?

MR. DAVIS: Correct, Northeast Air Defense Sector.

(b)(6), (b)(7)c : And who were the 0-6s that you generally dealt with?

MR. DAVIS: First one was Colonel Marke Gibson, who is now Brigidere General Marke Gibson, M-a-r-k-e Gibson. And then, it's been a--that position in NORAD, it changes very frequently. The other 0-6s that I interacted with frequently were

(b)(6), (b)(7)c and then, before I left, it was (b)(6), (b)(7)c

(b)(6), (b)(7)c : Do you have any questions about that?

(b)(6), (b)(7)c : No, questions.

(b)(6), (b)(7)c : I understand in the spring of 2003, that the military, I think it was NORAD, specifically, had hired a contractor to help them prepare for some of the upcoming requests from the Commission, the September 11 Commission? And I was wondering if you had dealt with any of those individuals--

MR. DAVIS: Yeah, I did.

(b)(6), (b)(7)c : --and do you recall what their names are?

MR. DAVIS: (b)(6), (b)(7)c [ph] as one of them, and (b)(6), (b)(7)c oh, I'm having a hard time

remembering his last name. And my interaction with them was getting any or all available FAA time lines and information that we had. And I think this was prior the Commission hearings, which is why it was ramping up, because the commander was preparing for his interrogatory, I'm a little fuzzy on the time line.

But, yes, some of my interaction with them was getting any available FAA documents that I could surrounding 9/11. But more in line with translating what they were getting into what they were putting together. Because DOD doesn't speak FAA and they have a hard time understanding what departures and holding and all that other kind of stuff is. So, my job is to make it elementary for them so that they will understand no, it doesn't mean an aggressive-type thing, it means, you know, the opposite type thing. So, that's what I spent my time doing.

(b)(6), (b)(7)c : Do you, I think one of the folks that was working on that went by the nickname of Ski? Does that sound familiar?

MR. DAVIS: Oh, (b)(6), (b)(7)c [ph],
yeah, (b)(6), (b)(7)c [ph]. Yeah, (b)(6), (b)(7)c was a part of that.

(b)(6), (b)(7)c : Did somebody come to you and
make a specific request for information from the
FAA?

MR. DAVIS: Yeah, they've asked me for
specific information that I could provide.

(b)(6), (b)(7)c : Like?

MR. DAVIS: Like time lines.

(b)(6), (b)(7)c : Like time lines?

MR. DAVIS: --that we had.

(b)(6), (b)(7)c : Did they--

(b)(6), (b)(7)c : Of what, time lines of what?

MR. DAVIS: Time lines of the four events
that happened on 9/11. When we had articulated a
coordination and, you know, what our logs showed
for coordinating and what we showed for impact and
everything else that went along with that, when we
made the call to put airplanes down; when we did
all that kind of thing. So, it was, basically, the
general overview time line.

(b)(6), (b)(7)c : And who was making that

request to you?

MR. DAVIS: That guys that you mentioned.

(b)(6), (b)(7)c : One or all three of them?

MR. DAVIS: All three of them. It was

(b)(6), (b)(7)c that was his name, (b)(6), (b)(7)c I believe is his last name. So, all three of them--I was working with them--I was working them in two areas: One was to put together or to provide for them the time line. What we were putting together was a notional time line on what the scenarios would look like if we had in place then what we have in place today, in terms of the coordination, communication architecture.

So, that's what I spent most of my time doing, was trying to give them my expertise and, you know, whether there's any kind of BS-factor in kind of the numbers they're coming up with in the scenario that's trying to be applied to today's--so, I spent most of my time working with them.

(b)(6), (b)(7)c : Did they--the requests that they were making of you, did they provide those to

you in writing, like, in e-mail or a memo--

MR. DAVIS: No.

(b)(6), (b)(7)c : --or was it verbal?

MR. DAVIS: It was verbal.

(b)(6), (b)(7)c : And do you know who they were working for or on behalf of--was it the commander out there or--

MR. DAVIS: Well, it was, everything they were doing is on behalf of the commander.

(b)(6), (b)(7)c : Okay. I guess, maybe, let me narrow it a little bit. Do you know who the contractors were directly reporting to?

MR. DAVIS: No, well, I think they were reporting to NORAD J33.

(b)(6), (b)(7)c : Which is?

MR. DAVIS: Which is Operations, which was, at time, was (b)(6), (b)(7)c and (b)(6), (b)(7)c

(b)(6), (b)(7)c : Okay, (b)(6), (b)(7)c and (b)(6), (b)(7)c

MR. DAVIS: But I don't know, I didn't hire them, obviously--

(b)(6), (b)(7)c : I understand.

MR. DAVIS: --I didn't even know what

company they worked for.

(b)(6), (b)(7)c : I understand.

MR. DAVIS: I only knew they were
contractors.

(b)(6), (b)(7)c : Did you, then, submit your
request up the chain of command?

MR. DAVIS: Yes, I called Alton Scott.

(b)(6), (b)(7)c : Did you get approval or were
you provided with information to provide to the
military?

MR. DAVIS: Yes.

(b)(6), (b)(7)c : And did you give them
something?

MR. DAVIS: Uh, yeah, on a few occasions,
I gave them time lines. Now I would receive them,
generally, by fax--

(b)(6), (b)(7)c : Okay.

MR. DAVIS: --because it wasn't available
in electronic format.

(b)(6), (b)(7)c : If I showed you a couple, do
you think you might recognize?

MR. DAVIS: Maybe. I'm trying to think of

specifically what they were.

(b)(6), (b)(7)c : I don't know if you would have gotten a cover sheet.

MR. DAVIS: No, I've never seen that.

(b)(6), (b)(7)c : Maybe you could flip through there, this is the "Summary of Air Traffic Hijack Events, September 11, 2001" from AAT-20.

MR. DAVIS: These look familiar from a textual standpoint, the graphs you have do not.

(b)(6), (b)(7)c : But the text time line?

MR. DAVIS: Well, I can't tell you if the time lines exact to what I provided, but that's the type of thing that I provided to NORAD.

(b)(6), (b)(7)c : It's looks similar?

MR. DAVIS: Right. I do remember providing graphics, but they weren't, they weren't as clean as these. But, also, keep in mind, when we were looking at this, (b)(6), (b)(7) and his group, we were finding some of this even on-line. Because some of this stuff, FAA had posted on their Webpage, like some of the time line stuff.

(b)(6), (b)(7)c : You mean, like this? This is--

MR. DAVIS: Yeah, exactly right--

(b)(6), (b)(7)c : --a fact sheet--

MR. DAVIS: --that's exactly what they--

(b)(6), (b)(7)c : --dated August 12, 2002.

MR. DAVIS: That's exactly what it was.

(b)(6), (b)(7)c : So you guys pulled that?

MR. DAVIS: Yes, we did pull that. Now I do not recall supplying them with time lines for every flight like this.

(b)(6), (b)(7)c : Which flights did they seem most interested in?

MR. DAVIS: As far as the pure data context goes, there was no specific flight we were focused on, that I recall.

(b)(6), (b)(7)c : Mm-hmm.

MR. DAVIS: In developing the today's scenario, we were trying to get our hands around the first one that went in, because that's the one that's the most critical from the NORAD perspective in response times. Because that's hard given their intercept locations and that kind of thing.

(b)(6), (b)(7)c : So, then you've mentioned a

couple of times what seems to me to be a development of, basically, training scenarios for NORAD. Were the--that's kind what it sounds like you're describing to me that these guys are working on, the contractors.

MR. DAVIS: No, uh=uh.

(b)(6), (b)(7)c : No?

MR. DAVIS: No, they're not--what they're trying to do is put together for the commander a no-kidding time line based on what FAA is going to put together. Because they want to know what FAA's time line reads, not so they can match up, because they understood that--they think there might be some disconnects by a few minutes here and there. And they just wanted to be aware of them.

So, we didn't have any issue with them. When I talked to (b)(6), (b)(7)c, I don't think there was any issue in providing NORAD with what the Administrator plans on putting forward as the official FAA time line, which there's no reason to hide that.

(b)(6), (b)(7)c : Mm-hmm.

MR. DAVIS: It is what it is [unintelligible]. And it's the same way with NORAD's, just that, you know, obviously, we're the two key agencies involved on 9/11, if there's any disconnects, it's just an awareness issue. It's, not, you know, oops, it's now, okay, how'd this happen? How did we say this and you say this? There needs to be a coordinated issue to fix those kinds of things.

(b)(6), (b)(7)c : All right.

(b)(6), (b)(7)c : So, what were they doing, like a compare-and contrast? Is that what they were doing?

MR. DAVIS: Yeah, because, see they--DOD does what they do very well, but they do it in a box. And any time you get inputs from outside, it's slanted their way because of how they do their business. It's very effective, but it's hard to translate. And it's hard to break down because they practice it routinely over and over and over again, so it seems there's things that they do very well. And that's one of them, practicing

[unintelligible] practicing [unintelligible].

So, from that perspective, it's, they never envisioned a scenario like this where they would have to have so much interaction with--as quickly like this. Because prior to 9/11, any hijack that they conducted was a monitor, only, follow to destination. That's all this was, it was never a potential for shoot-down or any other aggressive, hostile action. So, it was never envisioned that we were going to have to take kind of action and be as aggressive as we were, so, I don't believe that the structure for the communication links--well, I know they weren't, that's why I went out there, because they weren't established to be able to deal with the communication issues that we would have in these kinds of events.

(b)(6), (b)(7)c : Here's another time line, it's in grid format.

MR. DAVIS: Yeah, this looks familiar.

(b)(6), (b)(7)c : That' looks familiar? You think, so that might have been something that you

might have provided?

MR. DAVIS: Might have been.

(b)(6), (b)(7)c : There's also, behind this, some more kind of textual formatted chronologies.

MR. DAVIS: Yeah, I don't, I'm not certain about these--possible.

(b)(6), (b)(7)c : But the grid--the grid time line looks familiar to you?

MR. DAVIS: Yeah, the grid--the table looks familiar.

(b)(6), (b)(7)c : Was there anything that the military had asked you to try to get that you weren't able to provide because somebody in your chain said, no?

MR. DAVIS: Not that I'm aware of. I don't recall anything that the boss said they can't have.

(b)(6), (b)(7)c : Were they looking for anything more substantive than prepared chronologies? Were they looking for, like, source material, such as logs or transcripts of radar positions, that sort of thing? Or did they seem to be satisfied--

MR. DAVIS: They--

(b)(6), (b)(7)c : --did they seem to be satisfied with the summary documents?

MR. DAVIS: --they have access to all of those, because of the '84 RADES, and I'll spell that for you, R-A-D-E-S, they worked for the Air Force at, I think Tindle, but you know, they have access to all radar data.

(b)(6), (b)(7)c : To Miller and Egland?

MR. DAVIS: Tingle Air Force Base, I believe, Tingle Air Force Base in Florida.

(b)(6), (b)(7)c : Okay, Egland is in Florida, as well, right?

MR. DAVIS: Yes, it's their main folks that have a lot of radar expertise. The radar structure in the U.S.--FAA and DOD kind of own and share the external radars. They're called JSS Radars, Joint Surveillance System Radars. And, so, because we do, then the DOD has access to ongoing radar information. So, they never asked for radar tapes or voice tapes, those types of things from me.

(b)(6), (b)(7)c : What about logs?

MR. DAVIS: No logs, either.

(b)(6), (b)(7)c : So, it is fair to say, in summary, that the bulk of what you were asked for and what you were providing were basically these summary time lines that we've--

MR. DAVIS: Yes.

(b)(6), (b)(7)c : --or something similar to what we've seen--

MR. DAVIS: Well, I think something that was open to the public, nothing that, to my knowledge, that we couldn't--

(b)(6), (b)(7)c : And this was around the time frame of them getting ready for the Commission hearing? What time frame was this, again?

MR. DAVIS: Well, it had kind of been going on--it was--it seemed to me like we had this ongoing thing for a few months. And I don't recall--

(b)(6), (b)(7)c : I mean, was it immediately, when you got out there, you got out there in October?

MR. DAVIS: No, it was--there was a sunshine period there, when we weren't so much interested about all the time lines yet. But that doesn't mean they weren't, they just didn't bring me into it until later in the period.

(b)(6), (b)(7)c

And you think that was when, again?

MR. DAVIS: You know, I don't know, I don't know exactly. There were a couple things going on: One was the 9/11 Commission staffers coming. But before that, there was--it seemed like--it seems like their preparation was geared actually on some Senate staffers or somebody else coming.

And that's what the presentations were being kind of geared up for. Not necessarily for the commander's deposition or his appearance at the 9/11 Commission, but for other things. Yeah, that seems like that was right, there was somebody coming to Colorado Springs, and I thought it was either the Senate or House of Representatives people and it was part of why things were being

developed.

(b)(6), (b)(7)c : Was there anything that the contractors or the military had asked you for that you had decided, on your own, that you weren't going to go ask those in your chain for?

MR. DAVIS: No, I can't think of what that would be.

(b)(6), (b)(7)c : Is there any reason why the military would say that they had asked you for some information in this effort and that you had come back and told them that you wouldn't be able to provide that to them?

MR. DAVIS: Maybe, but I don't recall doing that. I mean, if it was--the only reason that I could think of going back and saying I can't get it is because the person who has it wasn't available or something like that. But I don't recall--or, unless they were asking for something that we just didn't keep, in terms of a way that we didn't keep things. You know, a different log or different data, you know, we record our data in our logs a certain way. So they may have asked for

something from their military standpoint that I may have told them I can't get that because I don't think we record that.

(b)(6), (b)(7)c : Do you have any questions about? Do you know who (b)(6), (b)(7)c is? I think he was a lieutenant commander at NORAD and J-5, maybe?

MR. DAVIS: J-5 is plans. No, I don't know who he is.

(b)(6), (b)(7)c : No? How about (b)(6), (b)(7)c [ph]?

MR. DAVIS: Yep, I know (b)(6), (b)(7)c .

(b)(6), (b)(7)c : Who was (b)(6), (b)(7)c

MR. DAVIS: He is a retired lieutenant colonel, real smart guy in radars and then went into contract for radar stuff with NORAD. So, he's a contractor out there at NORAD.

(b)(6), (b)(7)c : Would he have been a contractor in, like October of '01?

MR. DAVIS: Mmm, no.

(b)(6), (b)(7)c : He still would have been--

MR. DAVIS: Active duty.

(b)(6), (b)(7)c : --active duty? Do you know

what position he held then?

MR. DAVIS: He was J-33W, I think is what they called themselves, he was the chief of the Aerospace Warning Branch, something like that, I think is what they called it.

(b)(6), (b)(7)c : Did you interact with him at all?

MR. DAVIS: Yeah, in fact, the first six or seven months that I was there, we shared an office.

(b)(6), (b)(7)c : Did you?

MR. DAVIS: Mm-hmm.

(b)(6), (b)(7)c : Do you remember if he was putting together any post-event time-line information or gathering data for the command during the October 2001 time period?

MR. DAVIS: I do recall seeing some files that he was putting together on all four events that were time-line constructions, but nothing else and I didn't know why. But just, in fact, I think he shared them with me, they still might be on the computer back at NORAD at the FAA, I might have

saved those files.

(b)(6), (b)(7)c : He may have e-mailed them to you?

MR. DAVIS: Yeah, he did e-mail them to me, I kept them in storage. So, I saved them, I have to call a guy who's acting in that position now to see if they're still on the hard drive. But they were still very--they were very high-level that I recall and immature in terms of, you know, the development of the whole scenario.

(b)(6), (b)(7)c : Did he ask you to help provide any--

MR. DAVIS: No, he just provided them to me as F.Y.I. He [unintelligible] guys were doing this kind of thing, you know, just for me to keep in touch with.

(b)(6), (b)(7)c : Do you know who he--if he was getting any information from the FAA to help him?

MR. DAVIS: Do not know who he was getting that from, if he was getting it from the FAA at all, I don't know who he was getting it from.

(b)(6), (b)(7)c : Well, would you mind

checking--

MR. DAVIS: No.

(b)(6), (b)(7)c : --on that item we just talked about?

MR. DAVIS: Sure.

(b)(6), (b)(7)c : And, further, if you don't mind, if you have any other e-mail communications where you might have forwarded the request from the contractors up your chain of command for information, maybe you would have gotten e-mailed something? Because I know, because we've been looking at this for a little while, and all of the materials that we've seen, we've seen in electronic format, as well. And so, they may very well have been available electronically and somebody may have, they could have attached them to an e-mail message, as well. So, if you don't mind--

MR. DAVIS: Yeah, I--

(b)(6), (b)(7)c : --checking that, as well.

MR. DAVIS: --can check that, as well.

(b)(6), (b)(7)c : Were you ever asked, from the FAA side, to try to obtain any information from

NORAD or any military unit?

MR. DAVIS: No, not that I recall, but, you know, as NORAD developed their scenarios and developed their briefings for the big thing that they were putting together with these contractors, I would fax it back. If it was classified briefs, I would fax them, possibly. But, no, other than that, no, I kept my bosses informed of what I knew what was going on.

(b)(6), (b)(7)c : But you would be provided with a copy of what the contractors were working on?

MR. DAVIS: Yeah, like I said, I helped--

(b)(6), (b)(7)c : I mean, you would provide it up to Mr. Scott, right?

MR. DAVIS: --right. I assisted them in doing a sanity check and a translation check on the things that they were doing. And time-line check with the new scenario, okay, not the old one. They ran with their time lines that they had established for 9/11 and we were doing a comparison with how much time would be saved given the new communication and coordination of all the other

infrastructure stuff. So, that's what I was working on, mostly, with them--the contractors doing that.

(b)(6), (b)(7)c : Planning for future event issues?

MR. DAVIS: Right.

(b)(6), (b)(7)c : As opposed to preparing briefings for--

MR. DAVIS: Correct.

(b)(6), (b)(7)c : --and that sort of thing?

MR. DAVIS: Right, I was not involved with that. I was not asked to comment on anything the commander was specifically going to be presenting to the 9/11 Commission.

(b)(6), (b)(7)c : So, they didn't provide you with a copy of that?

MR. DAVIS: Not that I remember. I don't recall being given anything from the commander or from the staff as a lead-up to his testimony. I don't recall.

(b)(6), (b)(7)c : What about after the testimony?

MR. DAVIS: Yeah, afterwards--

(b)(6), (b)(7)c : I guess, we all know, right,
the--

MR. DAVIS: --that's right, after the
testimony, it was public knowledge and it was put
on the Website and somebody had it by then. I saw
it after the fact.

(b)(6), (b)(7)c : Did you interact at all with,
I'm confused as to what the gentleman's proper name
is, it's either, like, Allan Scott or William Scott
[ph]? I think he was stationed up at CONR? He may
have been a colonel, do you know who I'm speaking
of?

MR. DAVIS: I do know who you're speaking
of. No, I did not interact at all with him.

(b)(6), (b)(7)c : I believe he presented a time
line during that Commission hearing.

MR. DAVIS: He was also, the guy that said
that Andrews Air Force Base broadcast all this kind
of stuff. At least our guys in the tower
during--he made some remarks. And I saw his
presentation on 9/11, before the 9/11 Commission, I

disagreed with some things that he was talking about. So, yeah, I never interacted with him in any way shape or form. I met him, but there was no interaction.

(b)(6), (b)(7)c : Is it William or Allan?

MR. DAVIS: I think it's Scotty Scott is what they call him.

(b)(6), (b)(7)c : Yeah.

MR. DAVIS: He's a contractor--no, he's not a contractor, he's a GS-15 at CONR, now.

MR. DAVIS: Right. Is it William?

(b)(6), (b)(7)c : All I know is Scotty Scott, so I don't know what his first name is.

(b)(6), (b)(7)c : Were you privy to his time line before it was presented?

MR. DAVIS: I was not, no.

(b)(6), (b)(7)c : What is it that you disagreed with specifically in his--

MR. DAVIS: I don't recall Andrews Air Force Base making--Andrews Air Force Base Tower is operated by the FAA. So there was an FAA controller out there and he claims that somebody

made a transmission that morning, on 9/11 that would indicate something different than what was being talked about in terms of who knew when, that kind of thing.

And to my knowledge that's never been validated. To me, when he made the statement, it was hearsay, it wasn't an accurate, factual statement and it pissed me off. And you know, that kind of hearsay statement to that board, the Commission, like that was what he was doing, that's what it was

(b)(6), (b)(7)c : Do you have anything else? I can't think of anything, else. Is there anything else that you would like to add along the lines that we've talked about?

MR. DAVIS: Well, what's the basis for this? What, why am I here, I guess and what's going on in terms of--

(b)(6), (b)(7)c : Well, the broad issue, obviously, is what I talked about at the beginning for the tapes, which was some allegations that the Commission had raised, I should say concern about

potential inaccurate statements--

MR. DAVIS: By who, though--by--

(b)(6), (b)(7)c : --by NORAD and/or the FAA.

MR. FARMER: --okay.

(b)(6), (b)(7)c : Primarily about when the military was notified with regard to the four hijacked aircraft, because, if you've taken a look at their report; in Chapter 1, they go into a fair amount of detail--

MR. DAVIS: NORAD does?

(b)(6), (b)(7)c : No, the Commission.

(b)(6), (b)(7)c : The Commission.

(b)(6), (b)(7)c : The Commission goes into a lot of detail about this issue, especially towards the latter end of the chapter, going forward with all the details. You can grab it off the Internet if you don't have the book and read all about it.

But we were interested in your interaction with the contractors out at NORAD, because your name had come up, specifically, with regard to what we asked you about, which was--

MR. DAVIS: Developing whatever--

(b)(6), (b)(7)c : --pulling information from the FAA for that.

(b)(6), (b)(7)c : I mean, DOD, IG, this was also referred to DOD IG and they're out there interviewing many people from--

MR. DAVIS: Okay.

(b)(6), (b)(7)c : --side, and we are tasked with interviewing, you know, our mission is the DOT side of it and so, we're kind of interacting with that, getting information from them and then have to go on the other side to verify it to the national Commission.

MR. DAVIS: So, to that extent, then somebody thinks there's a different time line out there is what you're saying?

(b)(6), (b)(7)c : Well, the Commission developed a different time line than what was presented to them.

MR. DAVIS: I haven't read it so I--

(b)(6), (b)(7)c : Yeah--

MR. DAVIS: --I haven't read the report.

(b)(6), (b)(7)c : It's pretty--it's very

detailed, in the report, as to what they think the problems are. So, yeah, we just needed to, essentially cover a base with regard to your interaction with NORAD and then providing information from the FAA and vice versa.

MR. DAVIS: Okay.

(b)(6), (b)(7)c : Unless you have anything else to add?

MR. DAVIS: Well, that's it, I've got two IOU's for you and I'll see if I can get those for you.

(b)(6), (b)(7)c : Can you just give us your office phone number, real quick?

MR. DAVIS: Yeah, I can give you my card.

(b)(6), (b)(7)c : I'll give you my card, as well.

MR. DAVIS: If I have these, electronically, I'll send them to you. I think they are still existing, hope they are.

(b)(6), (b)(7)c : It's just william.owens is the e-mail.

MR. DAVIS: Okay, well, we'll go ahead and

wtk

43

end the interview. It is 10:51.

[END OF INTERVIEW.]

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case No. 042R0122001

SWORN INTERVIEW OF

JANE GARVEY

BY

(b)(6), (b)(7)c

(b)(6), (b)(7)c

Tuesday, December 7, 2004

I N T E R V I E W

(b)(6), (b)(7)c : Today is December 7, 2004, the time is 1:13 p.m. We're at 1615 L Street on the Ninth Floor, in Washington, D.C. My name is (b)(6), (b)(7)c, also present is (b)(6), (b)(7)c We're from the Office of Inspector General, Department of Transportation and we're conducting a review of issues involving certain public statements made by military and FAA officials at a 9/11 Commission hearing and elsewhere that were allegedly inaccurate.

Today, we're interviewing Jane Garvey. Ms. Garvey, will you please acknowledge that you are aware this interview's being tape recorded?

MS. GARVEY: I am aware it's being tape recorded.

(b)(6), (b)(7)c : Will you, please, raise your right hand? Do you swear or affirm that the testimony you are about to furnish shall be the truth, the whole truth, and nothing but the truth?

MS. GARVEY: I do.

(b)(6), (b)(7)c : Will you, please, give your

full name, spelling your last for the record.

MS. GARVEY: Jane Garvey, G-a-r-v-e-y.

(b)(6), (b)(7)c : On September 11, 2001, you were the FAA Administrator?

MS. GARVEY: That is correct, Federal Aviation Administrator, yes.

(b)(6), (b)(7)c : How long did you continue to hold that position after 9/11?

MS. GARVEY: Until August 4 of 2002.

(b)(6), (b)(7)c : As we've spoken before, I think now you're teaching up at MIT?

MS. GARVEY: And I'm doing some consulting and I'm on some boards, yes, that's correct.

(b)(6), (b)(7)c : What's the name of the company we're at right now?

MS. GARVEY: The company is APCO Worldwide, A-P-C-O, it actually stands for Arnold Porter Company.

(b)(6), (b)(7)c : And I had read a sign out front it says they do media communications and some lobbying?

MS. GARVEY: Well, not lobbying, though,

but--

(b)(6), (b)(7)c : Okay.

MS. GARVEY: --much more strategic communication and work with corporations.

(b)(6), (b)(7)c : You, I don't want to spend a lot of time on this, but, on September 11, you were at FAA headquarters, is that correct?

MS. GARVEY: No, On September 11, I was--when the planes first hit, I was with Secretary Mineta in the Department of Transportation on the 10th floor in his office as we were meeting with a European official on an upcoming conference that was to be held in Montreal later on that month.

When the planes did hit, though, within a very short period of time, I was back over to the FAA headquarters where I remained, obviously, not only that day, but for the subsequent days to 9/11.

(b)(6), (b)(7)c : Do you recall what time you may have gotten back over to FAA headquarters?

MS. GARVEY: You know, I'm sort of the specific time I can tell you, was probably within a 15- to 20-minute time period from the time of the

first plane and when John Flaherty came in to inform the Secretary and inform me went back into the Secretary's office, I watched the television that was on at the time. I went and called the Operations Center to see what was going on; to see what they had to report and then, in a very short period of time, after that conversation, returned to the FAA building.

By the time I returned to the FAA building, the second plane had hit, so that gives you, perhaps, some sense of the time period.

(b)(6), (b)(7)c : So sometime between when the second plane hit and then the third plane, obviously?

MS. GARVEY: Yes, that's correct.

(b)(6), (b)(7)c : During the morning of September 11, before, I think it was American 77 had hit the Pentagon; I think, at the time, nobody really knew what that plane was, but by the time the Pentagon had been hit, do you recall if you had had any conversations with any of the airlines?

MS. GARVEY: There were several

conversations during the course of that morning. I won't be able to give you the exact time, but there certainly were conversations with Mr. Don Cardy from American; with Mr. Goodwin from United; and Mr. Leo Mullen from Delta. One point, we weren't exactly sure about the location of some of the Delta planes and were in conversation with Mr. Mullen. So, those conversations, at my level, took place, as I said, throughout the morning. And, clearly, our own Herndon, the Operations Center--were in direct communications through dispatchers throughout the morning. And dispatchers of the airlines, that is.

(b)(6), (b)(7)c : After the hijackings and things started to settle down, if they ever really did. But, after the hijackings, what sort of information were you requesting from within the FAA about what had happened that day? Did you give instruction to any of the divisions within FAA to prepare anything for you for--I'm sure you were probably anticipating or your staff was anticipating that you were going to have to provide

some testimony of things like that?

MS. GARVEY: Well, quite honestly, during 9/11, that was the furthest thing from my mind. And I suspect it was the furthest thing from Monte Belger's mind. Our major and our primary concern during those immediate hours was, of course, the safety of the people who were in the air. I mean, you will remember that there were in excess of about 4,000 planes in the air that day. I'm not going to remember, again, the exact number, but about 4,900 planes that were in the air when the first airplane hit.

It was a beautiful clear day for flying, so those planes were all airborne. So, our immediate issue for those first hours was, really, the safety of those airplanes. There was a great deal of confusion, I thin, that we had certainly seen the President and Condee Rice refer to it as the fog of war and heard that term many times. There was a great deal of confusion on that day as to exactly what was really happening.

We knew that we were in an unprecedented

attack; we knew that it was something quite extraordinary, quite different from what had been--what we had experienced in the past. So, our immediate issue, obviously, during those hours was to locate the planes that were in the air to make sure that we got everyone to a safe harbor.

And I can remember very distinctly and very clearly in the hour or so after that order was given to bring the planes down, watching that map in the Operations room and finally receiving the call from the Operations Center in Herndon saying that all of the planes were within about a 40- to 60-mile radius of a safe destination.

But there were operational concerns at that time. Can we get the planes down safely? First where are the planes? Is there anything else that's happening in the system that we don't know about? Is there--and then how do we get the planes down? And remember that, in the case--in some cases, we were bringing planes down in places that were used to having three or four planes in a day; several planes in a week; small remote airports.

But we had to bring people down very quickly and we had some towers and some facilities that were handling a rate that they had never handled before. They did a remarkable job, obviously, and I think that has been noted many times by other people. So, that was really the focus at that time, in the immediate morning hours of 9/11.

(b)(6), (b)(7)c : At some point, did you make any requests within the FAA for them to start compiling information for you and what did those requests comprise?

MS. GARVEY: Certainly, I think the immediate request that we made was to our field people at the individual airports, particularly the airports where we knew that the planes had originated was to gather as much information as they could and to get that information to the appropriate FBI. And by this time, the FBI was, clearly, the lead agency and our field people and, certainly, our people in headquarters had worked with the FBI in the past and pull as much

information as--answer any questions that they needed to have answered; provide them with the kind of information that they requested.

While that was going on, we were, obviously, very focused with how do we get the system back up and operating again? What do we need to do? What are the safety requirements that we need to put in place to make sure that we can operate and open the system once again. And the President was very clear, I think, in his immediate days to say, we do not want to become such a victim of the attacks that the terrorists have won. We want to show that we can get our system back up and operating.

So, we spent a great deal of time at the close of that day and into the wee hours of that morning and the next several days thinking how can we get the system up again? What security measures do we need to put in place. What additional steps do we need to take? We clearly knew we had to take some additional steps, what do we need to do? So, our focus was, really, pushing ahead and trying to

think of how we get the system back up and operating.

And, tangentially, or at the same time, rather, sequentially, simultaneously--I'm sorry our field offices were providing the FBI with specific information that they were asking for in order for them to do the kind of investigative work that was necessary.

As the days went on and this is more what we're getting to--as the weeks went on, as the days went on, clearly, there was the pulling together of as much information as we could, both for the Secretary's office-- for ourselves, for the Secretary's office and, clearly, for hearings that we would be facing. And it really ran the gamut from what were Security directives? What was the posture of Security pre-9/11? How did we train crew, for example, to the actual events of that day, including, you know, the sequence of events, where was I; where was the Secretary; where were our key people.

I should also mention, I don't mean to be

giving you too much here, but I should also mention that on the day, one of the other concerns that we had was how do we--do we need to prepare for evacuating our senior leadership team to a remote location? Who was going to be put in charge of that? Where were people going to go? And when were they going to go, so that at a certain time, we had to be ready for that. We brought people together and said we have to be, you know, prepared for this and we assigned someone, obviously, you know, to take the lead and they would be the lead person if the President or National Security gave us the go ahead to, you know, to begin the evacuation process.

An issue that I was very concerned with during that day, were the employees, themselves. We had a number of people--step back and put yourself in the context of that workday, we had a number of people whose spouses and family members were working at the Pentagon. We had a couple of controllers, we had one controller whose wife was on one of those airplanes. You know we had a number

of sort of human issues that we were dealing with even within the building.

I went down at one point to make sure that the children in the day care center--we weren't sure what was going on with the--to make sure that the children in the day care center were being evacuated calmly and rationally and safely. So there were a number of issues going on.

I think, given the extraordinary measures and knowing what I know about some of the employees, that is, where their families were on that day, including the Pentagon, I thought people behaved remarkably professionally. They were extraordinarily calm. There was never hysteria in the--certainly, in the administrative offices or in the FAA. People behaved extraordinarily professionally and calmly in the right under anything but ordinary conditions.

(b)(6), (b)(7)c : Well, there were a number of folks in the, I guess the Evaluations and Investigations, as AAT-20, who were working on, you know, reconstructing the events of the day. And

they prepared some time lines, just want to show you a couple of these. This first document is titled "Summary of Air Traffic Hijack Events, September 11, 2001." And this is just an excerpt, it's about yeah, thick and it's in color.

MS. GARVEY: Right.

(b)(6), (b)(7)c : Does that look familiar to you?

MS. GARVEY: Yeah, there were a number of these that were put in place. And as we learned more, I mean, one of the questions that both of--if I can speak for Monte, both of asked at that point, certainly, I was asking, is: You almost had to divide issues into three categories. You know, one category is what do we need to do differently. You know, in other words, what do we need to--in the area of Security in order to get the system up and operating again?

The second is, what did we learn from yesterday? We got through, you know, I think people performed remarkably, in some cases, miraculously--in the case of some of the

controllers and so forth--having said that, it was unprecedented--what do we need to do in terms of media changes? And then the third are sort of the more longer-term issues that you always--and to some degree, some of the information we were pulling together for hearings that might fall into that category.

But, certainly, in terms of the second category: What did we learn? One of the things that became very clear to us is that the communications screen and communication mechanisms that we had in place that had served us very well, I might add, in times of traditional hijacking; in times of, certainly, a kind of the emergency situations that we had set in place in anticipation of Y-2-K, for example. That those were not going to serve us in a time of war as the President had described it, in a time of war.

So, I almost, hesitate to even use the word almost, because it was, virtually, immediately, that is the next day, we began to look at what are some communication challenges that we

had and what did we need to change? And one, obviously, was the kind of notification.

We had a very aggressive and a very proactive controller who kind of jumped a little bit of the chain of command on the notification of that first airplane and we said, well, he did a great job. But how do we--what do we need to do? We had a chain of command that, again, in a time of war is not going to work. We've got to think of something much more immediate. And I know that you probably know about the DEN and the kinds of changes that have been made subsequent to that. So, those sorts of changes were being made, you know, almost immediately post-9/11. But the kind of time line that you were showing me and I'm sure I saw it, there were many of these time lines, they might, each one might be slightly different. Perhaps, with a little bit of additional information or something that is new. But I'm sure, though I don't remember it specifically, I'm sure I did see it.

(b)(6), (b)(7)c : Do you recall if anybody

consulted or discussed with you to include or exclude in any of the time lines that would be similar to this, and, especially because this is what the Commission was focused on when they made the referral, which is military notifications. So, especially with regard to military notification--did anybody consult with you about that aspect of inclusion or exclusion in these documents?

MS. GARVEY: I don't remember it being an explicit conversation. It doesn't mean that we didn't talk about, you know, what do we want to put in there? We obviously want to put in there, you know the specific plane. We, obviously, want to put in, you know, whatever we had in our files. And there may have been a reference to the military notification. You know, I'm not sure I can tell you that, yes, I specifically mentioned that. I think when you say to someone, put together a time line, you're assuming all of the notifications, the DOT notification maybe a communication that you might have had with an airline or a communication

that you might have had, you know, with NORAD or whatever, I would assume that that would, really, be part of it.

(b)(6), (b)(7)c : Do you recall if you had given specific, maybe, like you or Monte Belger had given specific instructions to, you know, the AAT folks who were pulling this data together to include military information--military notification information?

MS. GARVEY: I can't tell you whether I explicitly said that, I just don't recall. I wouldn't--

(b)(6), (b)(7)c : Based on what you said previously, thought that would be something you would have expected to see anyway?

MS. GARVEY: I would assume that you would see it in there. I will tell you, the reason that I think we talked about it is because it did become clear, that some of our communication with military that we felt--and Monte can give you much more on this, I'm sure--but we did, again, the process that we had in the past, which had served us well, we

felt we needed to make some changes.

I mean, I give that controller in Otis, you know, a lot of credit, because if he didn't necessarily go through the chain of command, which one would--one might have expected. But he did the right thing and we said what do we need to do, what do we need to learn from that? How can we make changes that really reflect the period that we were in?

So, that's why I would assume that there would have been, you know, we certainly did discuss the military principles.

(b)(6), (b)(7)c : Do you recall at some point, where you were getting specific questions, though, about military notification? Was it becoming an issue from--

MS. GARVEY: No.

(b)(6), (b)(7)c : --the White House or some other--

MS. GARVEY: No none at all. In fact, I will tell you my recollection is, that the time--the one time I remember being concerned about

it was, frankly, reading a Washington Post article where NORAD had put a time line in and Monte and I both looked at it and said, wait a minute, this looks slightly different from our time line. And I want to back up for a minute and say something that I think is very important. I think one of the things that has been missed is, we simply must learn from it. But I don't want to suggest at all that had the military been notified a minute earlier or two minutes earlier or whatever, or whether there's some relationship between that and whether or not the plane could have been saved or whether somebody actually would have shot down the plane. That is not what I had suggested.

So, I remember reading that article and saying that there seems to be a slight inconsistency. And, in fact, it may have been something that somebody may have even pointed out to me. Maybe it was Monte or, perhaps, one of my senior staff. And we said to Jeff Griffith, look, get with NORAD--Jeff Griffith had a great relationship with NORAD--we'd worked with them, I

mean, this is not a confrontational, you know, relationship. We had been--we had worked with them, we said, look, make sure that we're not at odds here, make sure that we both understand what we're communicating. Make sure the FBI is satisfied with what we're giving them and I would assume that the military is just as concerned about whether the FIB is concerned about it.

And my understanding when I--by the time I had left in August, I mean, all of those issues had been resolved. That the FBI didn't have questions about it. That I had never--I certainly never heard from anyone at DOD that they were dissatisfied or weren't, you know, weren't--if there was any problem or whatever.

(b)(6), (b)(7)c : Do you remember what it was about the information that NORAD had put out at that time that concerned you guys?

MS. GARVEY: Well, it's interesting, because they actually may have had--in their first notification, they may have had a time line for us, that is the FAA, a time that may have been earlier

than what we had down in our notes. But that's the other thing that's very important to know. IS that we knew, because of the unprecedented nature--we did not think it would have been unusual for someone to notified and then made a note of it a minute and a half, two minutes, even five minutes later, just because of the--because of the, you know, the complexity of the issue and the drama of what was happening. And, you know, the intensity that someone may have. So, we said, well, you know, it may be just that people have reported things, just actually made the physical note at a different time.

And, again, that's a change we needed to make. We knew we had to have an institutional way to make sure that people were, even in a time of grave crisis were, you know, were writing it down correctly and were recording it correctly. So, it wasn't anything was like I remember at the time being horrified about, or it being, saying, you know, saying this is something we've got to double check on.

Then again, remember let's go back to the context of the time--my assumption at the time and I believe Monte Belger's assumption at the time was that we had some very serious issues. We still did not know at that time, we are now getting CIA briefings every morning. We are now getting information that is not information that we had always been privy to. We were trying to make decisions going forward.

My view was the FBI was going to take care of piecing together what happened. We've got to learn from it, make sure we've got all the right changes in place--and we thought we had and I believe we did--we've got to think about where we're headed, you know, in the next several days and what does this information mean.

If I had to choose between piecing together a time line that the FBI was focusing on or looking at the CIA information and determining what security directive I was going to put out that day, you can well imagine where my priority would be. And I say that not to minimize it, but to say

that I knew that there were people looking at that, like the FBI and that they would be--if there were problems and anything that they needed, they would certainly ask.

(b)(6), (b)(7)c : I think, I guess a potential concern that the Commission had when they had found--when they had pulled together their investigation and looked at what had been presented to them--

MS. GARVEY: In May--

(b)(6), (b)(7)c : --essentially in May--

MS. GARVEY: --or in June, rather or May, okay.

(b)(6), (b)(7)c : --it was in May of '03, yeah. And then, you know, by the time they got to June of '04 and they really had an opportunity to really cull through all of the data, is I think that they had some concern about, essentially, a cover-up to make the FAA and/or the military look better on that day. And so--

MS. GARVEY: Yeah.

(b)(6), (b)(7)c : --so I suspect that's part of

the reason that they had made the referral to us and to the DOD to explore that issue. So, you know, that's part of the reason why we're out here--

MS. GARVEY: Right and I guess--

(b)(6), (b)(7)c : --so we can talk about that.

MS. GARVEY: --I find it extraordinarily frustrating. I can only speak from the FAA, but I felt, you know, I felt that--and I was not at the FAA when they, really, were doing the bulk of their interviewing and so forth. So, I suppose I should reserve the judgment to some degree. But, certainly, my experience at the FAA during that period, those days and those months afterward, no one was trying to hide anything.

I mean this was a time of war; people were trying to provide as much information as they possibly could and there was a tremendous sense of trying to set up the TSA and make sure we had the right structure in place. You know, we knew that what had served us before 9/11 was not going to serve us. And one simple, small example is how the

crew were trained.

If you look at the regulations for crew training pre-9/11, it is all about negotiation and collaboration, in a sense, with the hijackers. Negotiate--your job is to get the plane on the ground. Your job is to get the passengers back safely. And, you know, if you look at the ten years pre-9/11, that served the country very, very well. And hijackers at that point were always--were much more concerned with the political agenda and the release of political prisoners. I mean, that had to be turned on its head.

Everything--every assumption that we had was really turned on its head, post-9/11. So that became, frankly, much the focus. And it certainly was not trying to cover up.

For me, one of the frustrations is I had looked at some of the testimony in the hearings and so forth, is that during that day, after the second plane hit, it just seemed to me that everything was very open. I mean, we had a net set up where everybody was in.

So some of the issues about when was the official notification to the military seems somewhat--it's hard for me to understand that anybody could think after that second lane hit that there wasn't just full communication among and between agencies and the government. I mean, you know, we were in communication with the White House.

The net was set up, we didn't know what we were dealing with, but we knew it was not a traditional hijacking. So some of what I saw. But, again, I haven't been privy to everything that the 9/11 Commission was able to see. But I can certainly speak for those few months that I was at the FAA. There was never intention--in fact, I thought all of the issues had been resolved by the time I left in August. And, again, the Commission had not moved into gear and they may have been able to look at things that were subsequent.

(b)(6), (b)(7)c : Just kind of going back to the briefing. This is the press release or it might even be a draft, but I think that's pretty much the

final of that NORAD press release that I think is what you referred to--

MS. GARVEY: That may have been what I referred to in the paper?

(b)(6), (b)(7)c : --yes. But going back--

MS. GARVEY: I understand, by the way, that there was a great deal of concern by the FBI at the time because they did not want that information to be public. So, I remember that was, certainly, a piece of the puzzle.

(b)(6), (b)(7)c : But going back to these briefings. I just got a couple of issues that I just need to kind of cover concerning, you know, the cover-up aspect. Did you instruct or recommend or suggest to anyone at the FAA to include information in a briefing similar to this, "Summary of Air Traffic Hijack Events" that was less accurate in order to cast a more favorable light on the FAA?

MS. GARVEY: Absolutely not.

(b)(6), (b)(7)c : Along the same vain as that one, did you instruct or recommend or suggest to

anyone at FAA to revise any of the briefings that they had put together and presented to you to include information that was less accurate to cast a more favorable light on FAA?

MS. GARVEY: No, absolutely not.

(b)(6), (b)(7)c : The--

MS. GARVEY: By the way, can I just say--

(b)(6), (b)(7)c : --sure.

MS. GARVEY: --it would never have occurred to me, even at that time that anyone would even think that they needed to. Everybody was interested in getting at the truth. It would be astonishing to me that anyone would even think that you needed to hide anything or whatever. We weren't thinking like that. We weren't--it was--I mean, even the hearings were not--I saw them as a way to sort of try to figure out together how do we make this--how do we make our system safe? How do we make this--how do we position ourselves in a world that's very different from the world we had known before 9/11.

(b)(6), (b)(7)c : Since you brought up hearings,

when you testified in--before the Commission in May of 2003, you weren't at the FAA any more?

MS. GARVEY: Right and had not been since August of 2002.

(b)(6), (b)(7)c : August of '02.

MS. GARVEY: Yeah.

(b)(6), (b)(7)c : Did anybody at the FAA provide you with, like a briefing package to assist you or did you request that and--

MS. GARVEY: I--

(b)(6), (b)(7)c : --who did you deal with over there.

MS. GARVEY: I have to say that was one of the more frustrating, most, you know, one of, I will say it was the most frustrating hearing in my many years of testifying that I had.

There were, I think, a couple of issues with that. One is that it was very difficult to get information from DOT at that time. The FAA tried very hard. But you may remember, that was a time when there was a lot of concern in the Administration about whether or not they even

wanted to cooperate with the hearing, with the Commission. So, there were issues that were way beyond me, certainly way beyond me. And I suspect, way beyond the FAA about how much information the Administration, at that point, was even willing to share with the Commission. Remember we had a very different posture and this was the very first hearing on it.

Number two, it was my understanding and I remember being astonished that the staff had not talked to anyone at the FAA of its staff. They were going right for the, you know, Administrator, [unintell.], they were going right--so, even the kind of, you know, usual, sort of pre-work that you do where you get sort of a sense of what their greatest concerns are so you can be prepared for it, none of that had happened.

I was told by the Commission that they were going to meet with the Inspector General and with me, which was true and that they were going to cover and what I should cover was what was the state of Security? In other words, what's the

difference between a Security directive and an information circular? You know, what were the regulations? What was the posture of Security at that time? What was our philosophy?

But the next day, the next day the Secretary was going to be testifying would cover the events of the day. So, I would do the sort of--

(b)(6), (b)(7)c : Before?

MS. GARVEY: --yeah, the pre-9/11 and from a Security perspective. And they asked the Secretary about the events of that day, where he was, a little bit about the sequence of things and so forth.

And I was very appreciative of that information because it had been two years since 9/11. I had, while I had not--had been out of the FAA since August. I was going to be limited as to the amount of material I was going to be able to get. And not because they were not being helpful, but there was a larger Administration issue. And, frankly, they've got a lot of things to do jus

every day and here's an outsider trying to prepare for, you know, testimony.

So, I never even--while they gave me a lot of material, the material that they gave me before that hearing was principally, some of the Security directives we had put out and those sorts of things. I don't believe I even brought a time line in that first--if I did, I certainly didn't look at it, because and I don't believe I did.

(b)(6), (b)(7)c : You just answered my next question and I was going to ask you about--

MS. GARVEY: When, by the way, when Commissioner Ben-Veniste, which was the very last question asked me and I don't remember, did he ask me about Flight Number 3, I confused it

(b)(6), (b)(7)c : Flight 77.

(b)(6), (b)(7)c : He asked you about 11--no, I'm sorry that was Mr. [unintell.]

(b)(6), (b)(7)c : The last question.

(b)(6), (b)(7)c : Ben-Veniste, yeah, I think it was 77 and, yeah it was 77.

MS. GARVEY: Well, you know, I simply

confused it in my mind, I thought he was talking about--first I was stunned to get the question because it was, I thought, they were going to cover that the next day. And I can even remember looking at the staff and the staff kind of looking a little surprised, themselves.

So I answered for when the controller in Otis, which is really what I was talking about. And I realized after I left the hearing that I had, you know, not given him the right information. He and I actually spoke by phone that evening. I was concerned about it. And he told me his great frustration was that he specifically had given that question to DOT and he said to the FAA, but I think it only reached DOT. And that no one had answered it. And you know, it was, again, I did not know that. Not being there, not knowing, you know, it was a source of great frustration. I felt I was not as prepared as I like to be for a hearing. And I felt that was, to some degree, I had been a victim of being the first hearing. But then, also, having this sort of tug-of-war between

the Administration and the Commission.

(b)(6), (b)(7)c : I think, I don't remember the sequence of events, but essentially the Commissioner allowed you to provide a question for the record to kind of respond to that time question--

MS. GARVEY: Right.

(b)(6), (b)(7)c : --about 77. And I was hoping you could tell us who. I know four people were involved in pulling--

MS. GARVEY: That together--

(b)(6), (b)(7)c : --that information together for you. Do you remember who it was you got in touch with over there?

MS. GARVEY: Well, I called--two things happened: One is I called the FAA and said, I may have called Lynne Osmus, I'm not sure. And I said, I mean this, we've got a commissioner who is not very happy. He has sent this over--this question over and the FAA has not responded. I didn't even know it was a question and I need to get out of this. I am not a--I am being asked to provide

information that I am not in a position to give.

I would have given Ben-Veniste whatever he wanted, but I was not in a position to do it. I have to say to the Commission that if there are FAA questions, DOT questions, they must direct it to the agency. I am not there. So, that was number one and that was one of the reasons I wanted to talk to him.

I said, you know, we've got to set up a right chain of command here. I think, again, because it was the first one, people weren't really clear about what the chain was. It was extraordinarily frustrating to me and you can probably hear it in my voice to be put in a position to try to answer questions when you don't have access to the material. You cannot imagine anything that is worse or being in a position where I cannot, you know, couldn't direct people to provide it.

So, number one was, you've got to funnel everything through the FAA and through DOT. And, apparently, at that point, I think Lindy Knapp's

office was the point--became the point for DOT.

(b)(6), (b)(7)c : At OST?

MS. GARVEY: At OST, but I think they had to go through OST in the beginning, at least in those first few hearings to get to the FAA, I believe, that was what the Administration and what Justice said.

(b)(6), (b)(7)c : Okay.

MS. GARVEY: And DOT, then, was responsible Lindy, in talking to Justice, this is what they're asking, this is what we provide.

(b)(6), (b)(7)c : I was wondering and this inside information why Justice was involved at such an early stage was--

MS. GARVEY: I think Justice was because there was this terrible controversy about how much the Administration wanted to provide. I could not have testified at a worse hearing, because the ground rules were not clear. And, frankly, the staff had not done its homework of really talking to the people ahead of time so that they were familiar with the questions in their own heads.

I had not been privy to that information for two years. And I was relying on people, you know, in a way that was probably unfair to them. They've got a new Administrator, they've got jobs that they have to do.

This, I understand oh, because I said, but I will tell you, you have to provide something to Ben-Veniste this evening. I have talked to him on the phone. I think he's being, you know, he was frustrated at the hearing. I now understand why his frustration was at the level it was. We sent, you know, you can't leave somebody hanging like that. You owe him something tonight. And I believe Linda Schuessler, who at the time of 9/11 was in the Command Center, I believe she and Laura Brown in the Public Affairs were the ones who actually put it together. But, again, I don't think they did in isolation. I think they talked to people at the FAA. I don't know who they talked to.

(b)(6), (b)(7)c : Yeah, this, the next day, the 23rd, because I believe you testified on the 22nd.

MS. GARVEY: Mm-hmm.

(b)(6), (b)(7)c : On the 23rd, the Commissioner actually read this into the record.

MS. GARVEY: Right, I remember that, yeah.

(b)(6), (b)(7)c : As we've come to understand things, the on the 22nd the folks who worked on pulling this information together for the Commission, had understood that everything was correct in here. But a couple of weeks later, they found out that--especially with regard to one of the sentences in here that it was not correct.

MS. GARVEY: I understand that, yes, I understood that subsequent to that, too.

(b)(6), (b)(7)c : With regard to the Air Force liaison, was that your understanding, as well?

MS. GARVEY: That she was not so sure about that time and so forth, yeah. But, again, that was not, I don't think anyone was doing anything intentional. I think they were doing, you know, going on the best information that they had at the time, but, again, you'd have to ask them.

(b)(6), (b)(7)c : How did you find out about

that?

MS. GARVEY: You know, it may actually have been from the Inspector General. It may have been actually in a conversation. I'm not exactly sure. It was in a conversation with someone from DOT at one point and I think I may have, once again, expressed my frustration about trying to, at that point, just trying to get information.

(b)(6), (b)(7)c : Is this recent or is this--

MS. GARVEY: It may have been before my last testimony, so that was last January, a year ago. It's recent, like recent-recent, no. I mean, it would be--it might have been before-- I had to testify again last January and I wasn't sure. I went in much better prepared the second time because I--and I'll tell you what I ended up doing. I mean, I actually ended up just going through reams and reams of old testimonies and so forth and just, you know, frankly, worked on a lot of it myself.

But, also, I think I had, with the FAA, had been through it. But the ground rules had

changed, the Administration was cooperating with the Commission, so it was a little bit easier to get information. But I think it was in preparation for that, so that would have been a year ago. So, it may have been in just a conversation. Because I remember referring to this. And someone said, well, the one problem is that, you know, the liaison had, wasn't sure.

(b)(6), (b)(7)c : About when she arrived?

MS. GARVEY: Yeah. There is a frustration, I think and I had hoped--and, again, I'm on the outside but--when the Inspector General and I testified at that May hearing, we went back I believe either that day or a couple of days later and debriefed the Secretary just to let him know about the testimony. And I was there, as well. And I remember both the Inspector General and myself saying, you know, you may want to go back to the time line, to the NORAD time line with the military. Just, you know, go through that once again. I remember saying to the Secretary, I think both Monte and I thought, and I think everyone at

the FAA thought, that had been resolved, you know, in the few months in the fall following post-9/11, but clearly, there are some issues.

And, again, maybe as people learned more information maybe as the FBI has learned more, and it may be worth going back and trying to reconstruct it. I don't know if the FAA ever really did that before that next round of hearings.

(b)(6), (b)(7)c : Do you know, did the FAA send this direct to the commissioner or did it go through you.

MS. GARVEY: Oh, it didn't go through me, I believe it went right to the commissioner. No, because at that point, I said, you have to--somehow, DOT has to set up some line of communication, because the problem with the Administration, that has to be resolved. I cannot be resolving it and I cannot be responsible for answering questions, that I simply do not have access to the information.

(b)(6), (b)(7)c : Do you--

MS. GARVEY: But I did ask for a copy of

it, so I know somewhere I've probably got a copy.

(b)(6), (b)(7)c : Well, do you know what steps the FAA took to correct that record with regard to when the liaison arrived?

MS. GARVEY: I do not know.

(b)(6), (b)(7)c : Did anybody consult with you about that that you--

MS. GARVEY: Oh, no, you mean, post-the hearing? No.

(b)(6), (b)(7)c : When they discovered it was inaccurate? What do you think--how do you think something like that should be resolved? Is it--I'm sure--I mean, I could be wrong, but I'm sure things like that happen infrequently, but once in a while--

MS. GARVEY: Sure.

(b)(6), (b)(7)c : --when folks testify before the Congress and things like that. How would one normally resolve something like that?

MS. GARVEY: And, again, I don't know whether they, it only got resolved once the Commission started getting into it more. They may

have thought this was resolved and the way I look--

(b)(6), (b)(7)c : I guess what I'm asking you is, what's your opinion--

MS. GARVEY: What's the lesson learned on that or something?

(b)(6), (b)(7)c : --if something, like, let's say I was involved in this I came to you and said, Ms. Garvey, how do you think we should resolve this?

MS. GARVEY: Well, I'll tell you what I would do. I would let the Commission know immediately. You know, suppose you--I mean, again, I don't know when they found out or what the circumstances were, but let's assume that you found out, even three months later, the Commission is still--I'd let either the Commission--I'd let the Commission know directly.

The other thing that I always thought and I would go back to the time line--I think it would have been and it's always to do hindsight, and it's easy to do it from the outside. But I think it would have been good, perhaps, even with the

Commission. Because I don't--I could be wrong, I don't believe anyone at DOD would not in a knowing way try to manipulate the times and so forth.

There's--it would be a terrible thing. I think I might have been a little more proactive and said let's get the folks from DOD, let's get the folks in the FAA, let's get somebody from the Commission, let's sit down and try to work this out. Let's try to figure this out, not work it out.

[Technical interruption.]

(b)(6), (b)(7)c : 2:03 p.m.

MS. GARVEY: And maybe in line with that, you do lessons learned.

(b)(6), (b)(7)c : Okay.

MS. GARVEY: And they may have. I, you know, I simply don't know, they may have corrected it as soon as they were made aware of it with the Commission, I just don't know.

(b)(6), (b)(7)c : 2:04, we're going to stop the tape and move locations.

[Change of location.]

(b)(6), (b)(7)c : We moved locations, it's 2:08

p.m. I think that you had mentioned that after your hearing in May of '03, that you had a meeting with the Secretary or a debrief with the Secretary of Transportation and our Inspector General may have been there, as well?

MS. GARVEY: Yes, he was.

(b)(6), (b)(7)c : And you can correct me if I'm wrong, but I think that you had said that you had made a suggestion that maybe they would want to--the Department wants to go back and look at the time line? Is that right?

MS. GARVEY: Yeah, well, we made a suggestion and I don't want to, you know, it wasn't--it wasn't made forcefully. But one of the things that we said was sort left was that there were questions about this notion of the time line. And, well, you know, certainly, Commissioner Ben-Veniste had raised issues that what he had was not consistent. and it seemed as though that was an area where people ought to at least be prepared to answer the Commission's questions on it.

And, in fairness, the FAA may believe that

they did answer those questions through the summer months and that they did answer those questions as the Commission moved forward. I think what is sometimes difficult in those sort of investigative or certainly very comprehensive kind of reviews is when the Commission was involved is they get so much data. I remember at one point thinking, you know, probably from the FAA's perspective, the ones that they feel are the most important that they just want to pull out those key pieces and say, you know, you've got two tons of material but here are the four or five pieces or the ten pieces that are most pertinent to these questions that you can submit, you have to ask for a continuance.

And, certainly that whole issue at the time was [unintell.]

(b)(6), (b)(7)c : One of the things that the Commission had concluded in its investigation was that the notification time that the military had presented in the May 23rd hearing with regard to when the FAA notified the military about American 77 and United 83, which were the last two aircraft

in the sequence of four. That the times that the military presented in the hearing was more inaccurate. The military [unintell.] I think it said for American--well, I don't know which it was, but for one of the aircraft they said that the FAA notified them 9:16.

MS. GARVEY: [unintell.]

(b)(6), (b)(7)c : Okay, and then for American 77 it was at 9:24. The briefings that the FAA had put together, none of them that we can see reference that 9:16 time frame, but some of them reference the 9:24 time frame [unintell.]. The Commission had determined that the notification for 77 didn't come at 9:24, it came five minutes later but it didn't--

MS. GARVEY: It didn't come at all.

(b)(6), (b)(7)c : --it didn't come at all and that the notification that the FAA provided for United 93, came at about 10:07 in the morning, these are the times [unintell.], which is actually a few minutes after that plane crashed.

But, again, the time lines that the FAA

has put together in the briefings don't reference that time, either. The Commission had concluded that the 9:24 reference that they were seeing a lot of, actually pertained to a notification that the FAA had been providing concerning American 11, and that the FAA, on the morning of September 11, had believed that American 11 may still, actually, be airborne that late in the morning. And that that information got passed on to the military. And so, I was--one of the questions we have here is, were you aware that the information that the FAA had about American 77 and United 93 was [unintell.] wasn't accurate?

MS. GARVEY: Well, at's assuming--that's assuming that it is inaccurate, no, I certainly was not. And, certainly, when I left, again, when I left in August of 2002, it had been many, many months since we had discussed the time line or the chronology of events and that there had been very limited questions and it was really just around that press release that there had been any questions about and nothing--

(b)(6), (b)(7)c : When is it that you saw that press release [unintell.] began to have those questions?

MS. GARVEY: Well, actually it was the day that it appeared. I didn't see the press release before it was released, it was actually the day--

(b)(6), (b)(7)c : The Post article.

MS. GARVEY: --in the Post article and I'm not going to remember whether I actually looked at it or I suspect it was probably a staff person who said, wait a minute, this may be different from something that we had. And, again, I think our initial reaction--certainly, my initial reaction--is that nothing nefarious, but just given the sort of confusion of that day someone may have written a time down a little bit later or a little bit after the fact. That perhaps this is more accurate, get with Defense, get with FBI, talk it out see where we are.

There was, at that time, no sense that A) anyone had any desire to do anything inappropriate, or B) had any reason to. I mean that just wasn't

the mind set at the time. Mind set at the time was, really, so much [unintell.] mind set at the time was, really, [unintell.] figure out how we can move forward and how we were going to position ourselves in the country, particularly [unintell.] It was really that day that we sort of looked at that [unintell.] discussions.

(b)(6), (b)(7)c : Did you participate or are you aware of anybody within the FAA having participated providing any White House briefings relatively shortly after September 11, concerning--sort of providing historical recon of what had happened on that morning? The reason we're asking is because we--the Commission kept hearing that the FAA had some White House briefings, there were a couple of e-mails from the DOD that referenced White House briefings that the FAA had to do with?

MS. GARVEY: I'm not aware of any briefings in terms of the chronology, that sort of thing. I do know that I accompanied Michael Jackson to a couple of briefings where I think the Deputy Chief of Staff David Cardy was at, but they

were much more, then, focused on where do we go from here? What are some of the issues that are [unintell.] actions that we're contemplating--it may have been discussions of the TSA [unintell.] what Congress was looking at in terms of the new agency [unintell.] in terms of Homeland Security [unintell.]

(b)(6), (b)(7)c : Nothing historical, so to speak?

MS. GARVEY: No, no, not that I, certainly, not that I can remember. And if I think of anything, something in the middle of the night, I will let you know. But, no.

(b)(6), (b)(7)c : I mentioned on the phone to you when we had talked to set this up is, we were interested in seeing if you still had any of these items or any of the briefing packages that you may have gotten for your testimony?

MS. GARVEY: I don't have any of those. The ones that I--I will double check whether they were even stored away. I actually, frankly, after the last hearing, threw a lot of stuff out that was

just, really packed away and is in storage. But is there anything, in particular, that I should be looking for?

(b)(6), (b)(7)c : Well, I mean, what we're primarily interested in is seeing what sorts of chronologies the FAA might have provided to you in preparation for your hearing.

MS. GARVEY: Okay. I did not get any, I'm quite sure, again, I don't want to say it without [unintell.] definition, but I certainly don't remember getting any before the May hearing.

(b)(6), (b)(7)c : Okay.

MS. GARVEY: I did get some post before the January hearing last year, because I remember at that time, thinking it might be a little bit [unintell.] I didn't remember, I don't recall [unintell.] I'll check it, if I do have it, I'll get back to you.

(b)(6), (b)(7)c : That would be great, thank you.

MS. GARVEY: The FAA has probably kept a copy, because I suspect they also provided some to

Monte, as well. I [unintell.] stuff [unintell.]

(b)(6), (b)(7)c : Did you, yourself, have any interaction with the military following September 11, kind of at or along the lines of requesting information from them to help you guys prepare for briefings or things like that?

MS. GARVEY: No, any of that was done at the staff level. Again, the relationship that we had had with DOD has always been a very professional and a very productive one. So, as far as--I was certainly not aware of any difficulties or any problems and there was no reason to communicate. We heavily relied on staff to pull things together and we also relied on staff to let me know if there was a problem. Not [unintell.] directly.

(b)(6), (b)(7)c : I think you had said earlier today that Jeff Griffith, you relied on him for that?

MS. GARVEY: Jeff had a very close working relationship with the military. We also had a fellow by the name of, that was at the time (b)(6), (b)(7)c

(b)(6), (b)(7)c [ph] and (b)(6), (b)(7)c and it was somebody who was our DOD liaison, Cheryl, Colonel Atkins was somebody who was at either DOT or FAA offices quite a bit. So, those are people you would see sort of on the way to the bases. We had DOD people in Herndon who were part of the Herndon team. So, no, the relationship with DOD was pretty--was a very good one. We had worked with them on sharing air spaces issues and [unintell.] before, so it was a very close--a professional relationship with DOD. One that had been pretty productive in the past.

Not one that, you know, necessarily, not one that was a direct line of communication. Certainly, the sort of direct lines in terms of, you know, the Secretary of Defense or anything like that would have been much more at the Secretary's level.

(b)(6), (b)(7)c : Do you have anymore on this?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c : Is there anything else that you would like to add along the lines that we've talked about?

MS. GARVEY: No, I hope I've been able to convey that at least in terms of the time line--the period that I was there from September through that following August. And, again, not to belabor it too many times, but our whole focus was, really, to think about what could we do--what were we going to do from a Security perspective; from a new agency perspective; what were we going to do to really position ourselves, given the kinds of information we were getting from the CIA. That much of the sort of history of the chronology [unintell.] was information that we passed on to the FBI who, then actually pieced together and put together and, certainly, at least in those periods when I was there at the FAA, my understanding was that those issues had really been resolved. And it was a disappointment to me, certainly, personally to hear in May of that following year that some of those issues were not yet resolved. I hope they can be resolved and also that they can be resolved in a way that really takes into account the [unintell.]

(b)(6), (b)(7)c : End the interview, thank you.

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case No. 042R0122001

SWORN INTERVIEW OF
JEFFREY WAYNE LOAGUE

BY

(b)(6), (b)(7)c

(b)(6), (b)(7)c

Tuesday, December 7, 2004

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

(b)(6), (b)(7)c : Today is December 7, 2004, the time is 11:10 a.m. We're at the DOT NASIF Building in Room 7324, Washington, D.C. My name is (b)(6), (b)(7)c

(b)(6), (b)(7)c also present is (b)(6), (b)(7)c We are from the Office of Inspector General, Department of Transportation and we're conducting a review of issues involving certain public statements made by military and FAA officials at a 9/11 Commission hearing and elsewhere that were allegedly inaccurate.

Today, we are interviewing Jeff Loague. Mr. Logue, please acknowledge that you are aware the interview is being tape recorded.

MR. LOAGUE: Yes, I am aware.

(b)(6), (b)(7)c : Would you just raise your right hand? Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth and nothing but the truth?

MR. LOAGUE: I do.

(b)(6), (b)(7)c : Please give your full name and spell your last name.

MR. LOAGUE: Jeffrey Wayne Loague,
L-o-a-g-u-e.

(b)(6), (b)(7)c : What is your current position?

MR. LOAGUE: I am the manager for the Risk Reduction Information Group within the Air Traffic Organization Safety Office.

(b)(6), (b)(7)c : Does that have any type of routing symbol associated with it?

MR. LOAGUE: Under the ATO, I'm sorry, they've eliminated them so all of it's under the heading of ATO-S for Safety. And as I understand it, eventually that's going to go away, too.

(b)(6), (b)(7)c : And how long have you been in position?

MR. LOAGUE: Since April, officially.

(b)(6), (b)(7)c : And on 9/11, what was your position on 9/11?

MR. LOAGUE: I was a computer specialist within the Office of Air Traffic Investigations.

(b)(6), (b)(7)c : What was the routing symbol then?

MR. LOAGUE: AAT-20.

(b)(6), (b)(7)c : And how long did you hold that position after 9/11.

MR. LOAGUE: Up until April of this year.

(b)(6), (b)(7)c : What's your current grade?

MR. LOAGUE: I'm a K-band.

(b)(6), (b)(7)c : In your prior position, what was your grade?

MR. LOAGUE: K-band.

(b)(6), (b)(7)c : So, were you on duty on 9/11--

MR. LOAGUE: Yes.

(b)(6), (b)(7)c : --were you working that day? Okay. And who did you work for, who was your direct supervisor?

MR. LOAGUE: Anthony Ferrante.

(b)(6), (b)(7)c : What do you recall getting involved in on 9/11 as the events started taking place, do you recall--there were different, I know there were teleconferences that were taking place. Do you--

MR. LOAGUE: During the--after the initial impact of the first aircraft that hit the Twin Towers, I became of the incident by my second-level

supervisor which was Dave Cannoles; also the one that established the telecon on 9/11 in the Air Traffic AT-1's office, his conference room.

And he had called down and told us of an incident. So, as part of what we would normally do in investigations, the investigators, Tony Ferrante and the other Air Traffic Investigators had gone up to the telecon to start gathering information as to what was going on.

And, I, as a computer specialist and, generally, the operation or data person, tracking of data. At that point, we had not idea; I didn't have any idea as to the extent of what was happening. All I knew at that point was that an aircraft had impacted a tower. I was on the 10th floor at the time to check an aircraft that had impacted. The sense that I had was that there were things already going around that there may some sort of terror incident or involvement in terms of what was happening. But, early on, I had no indication that that was the case.

(b)(6), (b)(7)c : Were you asked to keep any

type of log information or notes as to what the events?

MR. LOAGUE: No.

(b)(6), (b)(7)c : Did you do any of that on your own, I mean.

MR. LOAGUE: No, I did not. The only information I obtained was following the incident, which would have been later that evening, we started the processing after all aircraft were accounted for in terms of, and this is through the time lining. They started to identify which aircraft were among the talk at ATC. Once all the aircraft were identified in terms of when they were tracking, that's when American 77, we became aware of that and United 93, the last two.

When, after the--I was on the tenth floor when American 77 had turned. I was, at that time, I was in Bill Peacock's Office--are you familiar with the building? That's on the tenth, the northeast corner--west--I'm sorry, northwest corner of the building. So you can see back towards the water, towards the Pentagon and I could see the

smoke coming up from the impact of American 77. American--United 93, had not crashed at that point.

We were already starting to position ourselves for what type of information we were going to start requesting. At that point, we could not request a lot, simply because all the facilities were working as hard as they could to get the aircraft they had in the airspace on the ground.

(b)(6), (b)(7)c : Mm-hmm.

MR. LOAGUE: Diverted to some airport and on the ground. Following those instances, and United 93 crashing, we started making requests: tape requests; radar data requests; those types of thing. What we normally do if this was a regular accident. Never having been involved in a terrorist event, security type, wasn't really sure of what to ask for. So, we relied upon what we normally do for an accident package.

But in terms of taking logs or notes, during there--the process had started of somebody writing stuff down. It started down on a

whiteboard, writing notes and the problem is the whiteboard filled very rapidly--

(b)(6), (b)(7)c : Mm-hmm.

MR. LOAGUE: --with notes and then so that transitioned with somebody taking those notes on the whiteboard and putting them on a piece of paper, which then transitioned over many hours to a laptop being set up in place and somebody starting the take logs there.

So, the information was coming in, but there was no focal, because data was coming in and because of the telecon at various points on the line in one office, there wasn't a source for the information. Information would come in and it would get added to the log, not necessarily--you may find several incidents and the same information being put in there, I recall there may have been two entries in there with two different times. And if the only difference was somebody would be sitting at the computer typing notes, another person would come on to take over relieve that person typing notes, the same information would

come back in and it would just get logged a second time.

So, instead of it being misinformation, it was almost like the person before didn't have time to go back to review the log to see if the entry existed. We didn't have--it wasn't an application, it was a Word document. So it was just a running Word document we were just keeping this log and making the time entries. Part of when we compiled the book was to go back and reference each one of those time entries and decide which one of these two was the correct entry. And that required calling the facility to gain that information. That's the book.

(b)(6), (b)(7)c : Is this the book that you were involved in preparing?

MR. LOAGUE: Involved to the extent of helping to gather together the replay. One of the things as my job was the what we call SATORI. It was a radar replay tool for the en-route environment. And that allowed us to tack the aircraft. So, partly what I was doing was doing

was trying to go into the radar data that we received a few days, a couple of days after the events and track where the aircraft were at that time, in terms of where did we know they were so we could identify time lines, because every radar sweep has date/time associated with it. So that allowed us to build time lines of where the aircraft were.

You've probably seen some of the PowerPoint presentations we put together.

(b)(6), (b)(7)c : Mm-hmm.

MR. LOAGUE: Those time lines came out of those radar data and the voice data, in terms of where they were and what was said and those types of--

(b)(6), (b)(7)c : SATORI is an acronym, isn't it?

MR. LOAGUE: An acronym yeah, Situation--it was, you've probably heard two of them. It started out as Situation Assessment Through the Recreation of Incidents.

(b)(6), (b)(7)c : Okay.

MR. LOAGUE: And then it became a--the latest one had to do with the briefing and a research tool. And I'm drawing a blank on it right now. But it's an acronym for a replay tool that was developed by CAMY [ph]. It's an FAA-developed--

(b)(6), (b)(7)c : From the results of Oklahoma City?

MR. LOAGUE: Oklahoma City, yeah, Center for Aeromedical Research.

(b)(6), (b)(7)c : SATORI, the acronym is SATORI?

MR. LOAGUE: Yes.

(b)(6), (b)(7)c : I've also, I've heard of--

MR. LOAGUE: RAPTOR:

(b)(6), (b)(7)c : RAPTOR:

MR. LOAGUE: That's the terminal version of a replay tool. One is P.C.-based; one is UNIX-based.

(b)(6), (b)(7)c : Which is which?

MR. LOAGUE: RAPTOR is a PC-based product--

(b)(6), (b)(7)c : Okay.

MR. LOAGUE: --works on a computer, but that's because terminal data is much less, there's fewer targets, fewer data elements, so it was actually able to be developed on a PC platform. SATORI, because of all the data, tracking multiple targets within a center, you have to realize the center radar is MOSAIC because you have a radar sensor here, a sensor here and a sensor here. And the processor at the controller's position has to determine, you know, the information as it comes in the source box says which one of these targets--which one of the--it's in overlapping arcs.

(b)(6), (b)(7)c : Mm-hmm.

MR. LOAGUE: Which arc best represents the location of that aircraft. And so, you may have three hits of the same aircraft. The source box determines which hits to present and then that's what's presented to the controller. So, since we get data from multiple sources, you can see the volume of data associated with each radar file. We would end up having to use SATORI to do extractions

would allow us to view those plots so we could see data tabs that the controllers were looking at.

But, you know, we have an advantage. We can back the data up and play it again. The controller gets one chance to look at it, he doesn't get a replay button for himself.

(b)(6), (b)(7)c : RAPTOR is also--it's an acronym, it's RAPTOR?

MR. LOAGUE: O-R, yeah.

(b)(6), (b)(7)c : Do you know what that stands for?

MR. LOAGUE: Radar Approach Terminal, I'm sorry, I'm drawing a blank here, too, but it has--I can get both, I call it up and get you the actual, what the acronyms stand for.

(b)(6), (b)(7)c : I just--I've heard the two terms and I've heard both types of radar system used, don't know if radar systems is appropriate terminology, but, I've heard RAPTOR and SATORI having been reviewed for preparing these time lines.

MR. LOAGUE: That's correct.

(b)(6), (b)(7)c : And I just--

MR. LOAGUE: RAPTOR is a, you have to look at it, RAPTOR gives you an offline means of viewing the data. Meaning, RAPTOR's not creating it, SATORI's not creating the data, the host, in the en-rout environment, that would be the centers, all right has various reports that it runs. And NTAP is National Track Analysis Program. DART--draw a blank on that one, too, but--

[Simultaneous conversation.]

(b)(6), (b)(7)c : It becomes the name?

MR. LOAGUE: It becomes the name, Xerox. So, you, the data is run--processed on the host, so basically, the presentation that was given to the controller, is the same process that we run again. Instead of the data being live and fed to the controller for separating traffic, it's run as a secondary process against recorded data.

So, basically, think of a host as being split in half, one part of the host is live, running operational traffic. The other side of the host is sort of the backup or the maintenance side

of the host so that they can update the programs, off load the data, run these track reports, maintenance reports, those kinds of things. Computer operators do that in the facility.

So they run a report, the same report that creates the position information for the controller so you can see those tracks. So, that process is run against that data again and spit out. Well, if we split that out on the computer paper, right, for like an hour of it, you would have a volume of paper about this tall because it's very difficult to view and the NTAP program was designed back before we had PCs available to use.

So that a maintenance person or an investigator or quality assurance person could look at it and actually see tracks on this paper.

SATORI is just an automated replay of that tabular data. So, all it does, it takes what's already been processed by that, it doesn't create anything. It just reads all the data and displays it on the X/Y coordinates that the information contained in that data tells it to. So, it says,

at this coordinate place this dot. To the right of this coordinate place this data tag. That information is what is contained in that volume. So it just reads all that and displays it on the scope. Now this scale's much smaller than what I'm using, [unintell.] screens are much smaller than what the controller would use.

(b)(6), (b)(7)c : So the SATORI is used to replay radar data that a center would get.

MR. LOAGUE: That's correct.

(b)(6), (b)(7)c : And the RAPTOR is used to replay radar data that--

MR. LOAGUE: Of a terminal.

(b)(6), (b)(7)c : --of the TRACON?

MR. LOAGUE: TRACON, Tower TRACON, any tower facility that has radar fed to it that records it. For instance Dulles has radar feeds on it right now, but they don't record it because that is coming from Potomac. Potomac is providing the radar services and the [unintell.] services for that. Does that make sense?

(b)(6), (b)(7)c : Yes.

MR. LOAGUE: So, if I'm a facility and I have a bright and I can see tracks coming in because I can't see 50 miles from here, but I can see tracks starting to come in, I can look to see aircraft. But that's not my data, that data is being provided to me by another TRACON facility or larger tower with a TRACON environment.

(b)(6), (b)(7)c : Does the SATORI or RAPTOR, do either of those contain a voice--

MR. LOAGUE: The voice is not part of the data, the two have to be merged or are brought together. There is a time code on the voice channel, they're separate systems, right? So and then that's part of the problem. Prior to a SATORI or RAPTOR replay, you had printed--you had the printouts and you had the audio tapes. So, you could flip through the printouts and you could fast forward the audio tapes of the section you wanted.

There's time coding--there's a time stamp on the data and there's a time stamp associated with the voice recording, but the two weren't melded together so that you could actually sit over

the shoulder of the controller and kind of figure out what was going on.

SATORI was the first effort to do just that, taking the time code and synchronizing that with the date time code in the data so that when you would play, the voice was playing in synchronization with the data. That synchronization is not a digital synchronization because we're coming from an analog source, audio tape, it's an analog source to us, so it doesn't have it, although the tape has a time code that the data, once we redigitize it back to the machine, is not embedded in it. So, basically what we create is a one-to-one replay of an audio recording that is synchronized in time to the beginning of the time file for the voice. And then the beginning of the data--let's see how to explain this.

Say I have one more minute of data than I have voice. And my voice starts a minute after the data. Then my time file is going to stay that this starts a minute after, if I hit play right now, this should be no voice for this 60 seconds. But

once this data time matches this voice time, start playing voice in a one-to-one relationship, so we can synchronize the voice to within about 1-thousandth, 1-hundredth of a second. So the margin is real close in terms of for investigation purposes.

(b)(6), (b)(7)c : With the SATORI?

MR. LOAGUE: With the SATORI. Or RAPTOR, I mean it's--

(b)(6), (b)(7)c : Both of them can do the same, RAPTOR's a little different. RAPTOR's a PC-based product, so UNIX-based hardware and PC-based hardware have different capabilities in terms of how much data they can handle, how many processes they can run. It's the difference between windows and UNIX.

RAPTOR, to create a voice-enabled RAPTOR, it has to be combined with a secondary product. RAPTOR records or RAPTOR replays the data. You use a separate voice process, MP3 player some other tool to play the voice and then we use a product called Camtazia [ph] to capture them both. It's

basically a PC recording of the voice and the data that's playing simultaneously on the PC. So, basically, you're playing the RAPTOR, you're playing the voice. You're running almost like a video camera, but it's capturing those digital images right off the screen, anything that's going to the screen is being recorded.

And that gets recorded into a file, that's essentially a video tape because you can't zoom into data targets, you can't do the things that you can in SATORI. But then, in SATORI, I can back up and go forward; I can zoom in; I can look at different views; I can remove or filter by optics anything I don't want. Zero to 10, I want 10 and higher. Whatever you produce in RAPTOR with voice integrated is the view you get. You see you don't--

(b)(6), (b)(7)c : Unless you start it all over again?

MR. LOAGUE: Unless you start it all over again and record a different scenario with the different parameter selected, in terms of altitude

filters. It's an over-simplified way of describing it, but it's just a matter of the PC's version has not gotten to the point where voice can be directly integrated with the data. SATORI's got it; RAPTOR doesn't. We hope to have another product that's being developed now where both will have the same capabilities. One product servicing all our radar systems.

(b)(6), (b)(7)c : Okay.

MR. LOAGUE: That's out in the tech center now, the other guy's doing that.

(b)(6), (b)(7)c : Sorry about that.

MR. LOAGUE: I hope it's relevant, I hope it helps.

(b)(6), (b)(7)c : No, I mean, I've heard those two items mentioned a lot and just appreciate you explaining what--

MR. LOAGUE: It's the best--

(b)(6), (b)(7)c : --they mean, because I didn't have a great understanding, so.

MR. LOAGUE: It's the best capability we had, right, I mean, if you wanted to go back to

some of the other investigations, we had TWA-800. I mean, that was at the beginning of us ever having SATORI. When that first started, the data that was collected from Boston Center, was shipped to the technical center. The technical center had a host, that host computer was about half this room size. That data was fed back into that host computer, because it has a model of what all the centers have. And it piped it out to a display, you see what I mean?

So, you were simulating live traffic with this recorded data. It required, SATORI required you to have a host to do it. Facilities couldn't do that because the host didn't allow them to use it just for the purposes of that, replaying data through it. It was just too difficult and you run the risk of shutting the system down.

(b)(6), (b)(7)c : That would be bad.

MR. LOAGUE: That would be bad considering you know all the other positions that are still controlling traffic. So, SATORI was a means of us first being able to review the data, back in '93 in

an offline system. So, essentially it's a way of taking what already exists and presenting it in a visual picture with movement so you can actually see the targets move. And hear the voice associated with it. It became a better quality assurance tool. It became a better training tool for us.

In this particular instance, it also allowed us to develop a lot of the time lines that you have in there, in terms of those time lines associated with aircraft movement.

(b)(6), (b)(7)c : How long have you been with the FAA?

MR. LOAGUE: Since '92, '91, October '91.

(b)(6), (b)(7)c : So, with respect to this book, then, what specific input did you have into this? Did you create any of the graphics or--

MR. LOAGUE: No, most of the graphics came to us from other sources. The compilation in here came from multiple sources. You've heard of the Air Force Unit Air Force RADES, That's an Air Force Radar unit, they provided some of the graphic

information that we had had that they collected. We share, the agency, this is something I learned then, we share radar sensors with a lot of the Air Force. Our parameter sensors. Some of our internal sensors we share, as well.

So, the 84th RADE was also putting together some information associated with these incidents. And they had some graphics that they had already created, so some of those were included. These were all created by the graphics department up in Air Traffic, some graphics were.

Most of the information that I would have helped provide--there were several people doing it. I, basically, collected the information from the facilities and created the presentations that we have, the stored presentations. So, have you been in to see the presentations?

(b)(6), (b)(7)c : Would that be the PowerPoint that we--

MR. LOAGUE: No, this would be the actual SATORI replay.

(b)(6), (b)(7)c : The NTAG or something like

that?

MR. LOAGUE: No, we did create some of those, but this would have been a radar replay of the--

(b)(6), (b)(7)c : No, we haven't seen them. There's a PowerPoint that we've seen.

MR. LOAGUE: Mm-hmm, that was Dan Diggins and I had put together some of that. Some of that data and the voice in that data came from our SATORI replays, as well.

(b)(6), (b)(7)c : We haven't seen SATORI replays, at least I don't think we have.

(b)(6), (b)(7)c : So, you were contacting the facilities, like, Boston Center and--

MR. LOAGUE: No, we were dealing, we were working through the Regions.

(b)(6), (b)(7)c : Through the Regions.

MR. LOAGUE: We worked through the Regions would contact the facilities to get the information. We have an FTP site on our SATORI machine and the facilities would upload the data, into that machine.

(b)(6), (b)(7)c : So, how soon after 9/11 were you getting that data?

MR. LOAGUE: We had, probably--I wanted to say our first replay was the 11th, September 11 was the first replay we had received. And it was on American 77 out of Washington Center.

(b)(6), (b)(7)c : Who were you working with on this?

MR. LOAGUE: With Investigations.

(b)(6), (b)(7)c : We're talking about the "Summary of Air Traffic Hijack Events: September 11, 2001" this is the book that you referenced?

MR. LOAGUE: That's correct. That's the Office of Air Traffic Investigations AAT-20 and it's Investigations Group AAT-200 prepared this. So, it's from the notes that they had taken and compiled, some of the log entries that were available to fill in the blanks, so it was multiple sources, feeding this to kind of fill in the blanks.

For instance, the American 11 established contact with Boston, well, you wouldn't know that

unless you heard the voice and seen the data. And you got this time down to the seconds because on the SATORI right at the very top, it displays the time of the data. That's how it knows that at this time display this information here.

(b)(6), (b)(7)c : So, who all within AAT-200 was working on this with you?

MR. LOAGUE: Oh, man, there was--

(b)(6), (b)(7)c : You mentioned Dan Diggins.

MR. LOAGUE: Dan Diggins was there; Mary Strawbridge was part of it; (b)(6), (b)(7)c was part of it; Jeff Meyers [ph] who worked in litigation. As a matter of fact you may have heard his name because he has a lot to do with it. He's working with, still, the 9/11 today. (b)(6), (b)(7)c [ph] was working data; (b)(6), (b)(7)c [ph]. Although (b)(6), (b)(7)c may not have been on during that time, I don't think (b)(6), (b)(7)c was on. I don't think he joined the group then. No, he hadn't. And myself, Tony Mello, Anthony--Tony Ferrante. And then Dave Cannoles, of course, he was the director.

(b)(6), (b)(7)c : Who's (b)(6), (b)(7)c

MR. LOAGUE: (b)(6), (b)(7)c works in Accident Investigations now, she was an air traffic investigator at the time of the incidents. So, she was in the office, she changed offices probably more than a year ago, now. She got hired up into AAI, Accident Investigations. Also, that's where Dan Diggins is located Accident Investigations.

(b)(6), (b)(7)c : How do you spell (b)(6), (b)(7)c

MR. LOAGUE: (b)(6), (b)(7)c

(b)(6), (b)(7)c : What about Doug Gould?

MR. LOAGUE: Gould, yes, Doug Gould, Doug Gould was with the group, thank you.

(b)(6), (b)(7)c How about, is (b)(6), (b)(7)c [ph] does that sound familiar?

MR. LOAGUE: (b)(6), (b)(7)c in the New England Region and part or half the team of the developer of RAPTOR. He's half the group that helped, the two people that actually started developing and writing the code to develop RAPTOR at the beginning.

(b)(6), (b)(7)c : He's a programming person?

MR. LOAGUE: He's a programming person;

he's also got a traffic background;, he's worked in Air Traffic Quality Assurance; he's part of the Investigation staff now. So, he's a very intelligent person and he's very well rounded, because he has both sides of the house. Both data and active ATC control.

(b)(6), (b)(7)c : Did he work on this project that developed this book, as you recall?

MR. LOAGUE: He didn't work on the direct input, but he indirectly worked on it in terms of creating the RAPTORS, getting the data. The first, some of the first radar pieces, since he was working in the New England Region, he was closer to the data sources than we were. So, he helped direct some of the efforts out there in terms of the data collection as a point of contact, you know.

(b)(6), (b)(7)c : (b)(6), (b)(7)c [ph]?

MR. LOAGUE: (b)(6), (b)(7)c is (b)(6), (b)(7)c

(b)(6), (b)(7)c and she worked in our Evaluations Group also here at headquarters and she assisted in the creation. There were several people--there

weren't a lot of people who were deciding what to say in the book, but there were a lot of people trying to get the book together because, if you recall, things were moving very quickly.

And so, I remember sitting in the--in my office looking out and they had a projector up on a cubicle wall going down a document and just going over each line item to make sure that they accounted for the right times and that the wording in there was right, there were no misspellings and, you know, because we were trying to get out as quickly as we could. There were multiple sources that we coordinated from; the FBI was constantly calling to get information. Several three-letter agencies were part of coming in to get information surrounding the events.

(b)(6), (b)(7)c : So, who would you say were the main players in deciding what was put into the book?

MR. LOAGUE: Tony Ferrante, he was the Division Manager, so he pretty much directed the flow of the document. Tony Mello, he was the Deputy

and he assisted in the operations side, you know, part of the Investigations; (b)(6), (b)(7)c I remember typing directly on the document, mostly editing versus choosing the words. We, I worked with Mary in getting some of the time frames, the time lines in terms of what the data indicated.

We were looking for, what was the last hit, known hit of the aircraft prior to turning the beacon off, the transponder? All right so within the aircraft and not in every flight, did we hear audio from the pilots. I mean, did we hear transmissions. You're aware that there were some transmissions [unintell.] or after the fact, if you will. Where they were asking--they were asking when did we last know, and, again, we talked about this from the perspective of the controller. The controller's not looking at jus one target, he may have 20 targets or 10 to 20 targets on his scope that he's working.

One target would, basically have just changed color. All right, from a light green to a different color green or from a slash to a dot.

That may not be intuitive, but the data tag would still be there, but what would happen is they refer to that target going into coast. The host has predicted because it gets two sources of information. Primarily radar which is just energy being reflected off the aircraft; secondary radar, which is the transponder information. The two pieces of information are correlated, put together, it says this data tag goes with this primary tag and it puts it together and we get a correlated target.

When they turned the transponder off, the host doesn't want to drop the tag, doesn't want to tell, I mean, the idea is that we don't want it to go blank because then you don't know where the aircraft is, the controller wouldn't have any reference for it. So, they do, they put the tag into coast, which means, it's predictive, it would be the last heading and the last speed it was traveling and it continues to project that for several sweeps later. And then it switches the data tag to tell the controller that the target is

in coast. So, that you know, easier to locate, so as he's doing his scanning of the scope, because he's working this traffic, then he would come back around and see the tag and see that something happened there.

So, what we were looking for was when did that occur? When did the target go into coast? When did we get the last data hit?

(b)(6), (b)(7)c : When the target goes into coast, is the computer still looking at the primary radar return?

MR. LOAGUE: It's doing both, the data or the primary is pinging, the target, the secondary is not receiving, so it's not making the correlation anymore. You see what I mean, so that basically instead of a slash, you end up with a dot on the screen.

(b)(6), (b)(7)c : I forget if it was Indianapolis or Cleveland--

MR. LOAGUE: Indie Center that lost?

(b)(6), (b)(7)c : Yeah, how did that happen?

MR. LOAGUE: There was a--in the area of

coverage that they had, as I understand it, and we later found out that there was a space or a piece of airspace where primary radar was limited. I think of it, I guess, I think of it in terms like a black hole. It was there, it was a space, so something could have turned in that space and it wouldn't have really been known to the controller. He could have reached over and turned primaries on, but because

of whatever the lack of coverage was, it's like radar hits and it just skips this section, this space, there's just nothing coming back. Whether it be because they were false targets or something else, I'm not sure what the trouble was. But we knew that this wasn't recorded.

So, the controller, again, earlier, this coast target says it's going this way, but if somebody would turn around in that space and not know it, you're projecting, you're thinking, you don't know that he's turning around. You don't expect him to turn around. And all of a sudden you see a primary target down here. Well, turns out,

there's some clutter primaries, that's one of the reasons why en-route controllers because of high altitude, don't use primaries is because when you're in mountainous regions and those things you get some false returns. You get returns from hillsides and buildings and things like that. And so, to reduce that clutter, they'll try to filter that out. Because they're only trying to track aircraft.

(b)(6), (b)(7)c : They don't only want to look at the secondary returns?

MR. LOAGUE: They're probably looking at the secondary because that secondary return is the only return that gives them information as to the relative position of the aircraft, altitude, those things; air speed; or ground speed, I should say. So, when the aircraft turned around in there, when it came out, it actually appeared out here somewhere, where the controller's looking for it to go this way, it started going that way.

We didn't find it until we backed into the data, played it over and over and over and started

seeing a track going out the other way. We basically, isolated the track and when it got into Washington Center's airspace, back to here. So, we backed to the point, instead of finding it, because it just, we were trying to isolate a bunch of dots and which one is the track of our aircraft.

(b)(6), (b)(7)c : How about as far as, in this book here, as far as notification information, FAA notifying the military about any events, were you involved in gathering any of that information?

MR. LOAGUE: Not at all.

(b)(6), (b)(7)c : Do you know who was working on that aspect?

MR. LOAGUE: You know, there were a lot of people involved in the telecon that was going on. I don't know who, in terms of was required, responsible, first accident, terror incident, I should say, where it required notification outside normal FAA, looking at it from my perspective, it's an accident. In an accident, you don't really get involved with other groups, unless it's identified later on that it's necessary.

(b)(6), (b)(7)c : Going back to the telecon, you actually sat in on the telecon on the tenth floor or?

MR. LOAGUE: I was in the conference room at the time it was established.

(b)(6), (b)(7)c : On the tenth floor?

MR. LOAGUE: On the tenth floor.

(b)(6), (b)(7)c : And who else was there at that time, if you recall?

MR. LOAGUE: There were several of the directors that were there. I know, Jeff Griffith, Bill Peacock, Dave Cannoles, Monte Belger had been in and out, at some point, not that was much later, not when it was first established, (b)(6), (b)(7)c was part of it, (b)(6), (b)(7)c, so different individuals from different parts of Air Traffic all headquarters staff, that were in and out of the telecon room. The initial telecon was about the impact of the first tower. Following that, you had the second impact, you know, it became a different telecon at that time.

Instead of bringing other facilities up on

the telecon, that's when it became the national telecon in terms of what was going on.

(b)(6), (b)(7)c : You said Peacock, I don't--

MR. LOAGUE: Bill Peacock.

(b)(6), (b)(7)c : --I think he was in New Orleans that morning, wasn't he?

MR. LOAGUE: Was he in New Orleans, it's been so long, I don't remember if he was actually in the room. You know what, you're right he was in New Orleans because later at his retirement party, it was brought up in terms of him coming back.

He--I don't know--

(b)(6), (b)(7)c : You all were joking about it, right?

MR. LOAGUE: Yeah, we were joking about him being in New Orleans because when he had gotten back, he participated in a CFC, much, much later in a CFC fund-raiser, which he got a pie in the face. If you get a pie in the face, you put on a white painter's suit, with full hood and everything and glasses. So there was a photo of that. And so there was some poking of fun at retirement in terms

of that business when he got back from New Orleans.

(b)(6), (b)(7)c : Do you know who the fixtures were in that telecon, like, who the people who seemed to be--

MR. LOAGUE: The primaries?

(b)(6), (b)(7)c : Yeah.

MR. LOAGUE: Dave Cannoles, Jeff Griffith, they tended to be the ones, I know (b)(6), (b)(7)c [ph] from the Command Center, Frank Hatfield from up at Eastern, those were the primary people that were on in terms of what was going on at that time.

(b)(6), (b)(7)c : How about any military people or--

MR. LOAGUE: You know, I don't recall military personnel in terms--I know there are liaisons in the building, and I know there were several of them that were in and out of there I know. But timewise I don't recall. I wasn't there all the time.

(b)(6), (b)(7)c : But at the outset, like when it first was stood up?

MR. LOAGUE: When they first, no I don't

recall the military being up there at first, I mean, not when it first turned--when they first turned it on. I do recall them being in there later, but I just don't know what the time period would be.

And, again, you know, it was several days. I recall, no I was on the first shift at night, that evening when they continued, decided to continue the telecon and go on much later. It's now the DEN, the Domestic Events Network that we have. Being part of that 24-hour-shift in terms of going up and getting information or whatever request there may be. Again, very little up front, because everybody was still trying to recover from what had happened. The ATCs our own airspace was shut down for three days.

(b)(6), (b)(7)c : So you had no involvement in gathering any information from the military or any log information from any military group?

MR. LOAGUE: No, 84th RADES--

(b)(6), (b)(7)c : [unintell.]

MR. LOAGUE: --84th RADES was the only

group, it wasn't collecting information, it was we deal with them because 84th RADES does some of our search-and-rescue tracking. And so we knew they had some radar capability and worked on it, so they provided some of our early PowerPoints that we had seen. Those actually might be the Mpegs you're talking about.

(b)(6), (b)(7)c : Okay.

MR. LOAGUE: So--

(b)(6), (b)(7)c : So, you can see in the text that some of the time lines where there's references to--

MR. LOAGUE: Oh, NEADS, yea.

(b)(6), (b)(7)c : NEADS logs indicate such and such an incident?

MR. LOAGUE: We, I didn't collect that, but I know that they did get information--remember I said this was compiled from multiple sources.

(b)(6), (b)(7)c : Right.

MR. LOAGUE: In Air Traffic at AT-20 was the Investigations Group, the Air Traffic Investigations, but because of the function of

their mission, they were involved in this, they had--the investigators that did go out on accident investigations when accidents occurred. So, they tended to be the group that got called upon to kind of put this together. So, the information, they wouldn't have written it in there. They didn't get a page. But I didn't collect it. I'm not sure who collected that. But I know this was compiled from multiple sources, not just the logs we were keeping upstairs in Air Traffic, but from other sources. In terms of filling in the gaps here in terms of the time line.

(b)(6) : So you don't recall having looked at any--

MR. LOAGUE: Any of those logs? No.

(b)(6), (b)(7)c : --NEADS logs or any--

MR. LOAGUE: Again, my primarily I dealt with the radar data, the voice data, making sure that we got the synchronizations; that the facilities were able to get the data to us so we could get those replays as quickly as we could.

(b)(6), (b)(7)c : What happened to that book

once it was finalized and put together?

MR. LOAGUE: When it was finalized, it was actually printed by the Air Traffic Graphics Office upstairs. So when they put it in final, they took it upstairs and they made color copies of it. This is a color with a, I don't know a press-on binder or something to make it look like, you know a presentation. I remember it being thicker than this.

(b)(6), (b)(7)c : Yeah, we have a--I have a completed binder.

MR. LOAGUE: Okay, so--

(b)(6), (b)(7)c : Who was it prepared for, though, who was the--

MR. LOAGUE: It was prepared for AT-1, it was prepared for Air Traffic to provide the information to the Administrator or the information that we collected at the time. And well, you can see here, that it was put out, you know, from the ninth, here that's what eight days, to get all that together.

(b)(6), (b)(7)c : We pulled that date we wrote

down there on the cover. I don't know what page that is, but--

(b)(6), (b)(7)c : Once this book was finalized--

MR. LOAGUE: Mm-hmm.

(b)(6), (b)(7)c : --were there any further efforts to establish other time lines or revise this time line in any way or was this kind of the final--

MR. LOAGUE: I don't recall there being any other efforts to do that. They may have done some improvements or their office may have, but I don't recall our office doing that. Then, again, I was more or less inundated with just the data requests. By the time this was created, every agency that was doing something that was related to this, was calling, from the FBI, CIA, you name it, they were coming in, they wanted to see the data. So, my time was spent, primarily in ensuring that we had the videos for the presentations to show these, to continue getting better voice data, other samples. There are multiple channels within each facility. One of the things that they're doing now

and had done then was they had to sample each of those channels to see if there were other communications on those other channels.

(b)(6), (b)(7)c : Do you know if a copy of this "Summary of Air Traffic Hijack Events" was run by the military before you guys finalized it?

MR. LOAGUE: I don't recall if it was run by them, but I want to say that they provided input into it. In terms of, I know that the military liaison because he was a Marine liaison and I can't say for sure that it was but I recall having given them a copy of some data, replay data, courtesy copy of a--we took some of the RAPTOR replays and put them on a CD so that you could play it. Monte Belger wanted to see one of our presentations so we had a way of getting it off, just move the SATORI equipment to his office. So we had to put it on a CD. So, we had made some courtesy copies of that so that they could see a presentation. And I remember them getting a copy of it. I don't know if this document was actually run through them or cleared through them.

(b)(6), (b)(7)c : Mm-hmm.

MR. LOAGUE: I mean that was a different person handling that, that was Tony and Mary Strawbridge, herself, with that piece of it. I'm not sure who was routing this around for comment.

(b)(6), (b)(7)c : Did you have any participation in preparing any briefing packages for either the White House or at the Secretary's level or anything related to--

MR. LOAGUE: No, that's part of the reason why that document was created was to do just that is to use that as a source document for answering a lot of the questions that came up. So, after that was created, I thin a lot of people deferred to that package. But I didn't create any other presentations. Other than the initial presentations that I helped (b)(6), (b)(7)c with in the PowerPoint slides, where you would see targets, or you would see the path and then you'd hear some audio and you'd see some pop-up boxes, in terms of things that were going on at that time.

So that was the presentations we created,

but nothing for the White House. At that time, most of those requests that were coming out were high-level. I mean we're talking about it--that's always done at the Administrator's level. None of that really got down to us. I mean, if we got it, they weren't saying it was the White House, they were, like, hey, I need this data or hey, I need that data.

(b)(6), (b)(7)c : Just going to flip through a couple of other time lines real quick and see if you recognize any. This one here is a grid time line, which primarily focuses, obviously, on military notification. That's--do you recognize this?

MR. LOAGUE: Not at all. I know the information that's on there, but I don't recall seeing that.

(b)(6), (b)(7)c : This one here, it says "Notification of DOD Time Line?"

MR. LOAGUE: Again, I wasn't involved in creating any of the documents that went out. So, primarily, I want to say it was Tony Ferrante led

most of that in terms of our office, he was our division manager. So, he would, have, any requests coming down for information would have gone through him and then those would have been assigned to one of the specialists, Doug Gould, (b)(6), (b)(7)c, Dan Diggins.

(b)(6), (b)(7)c : Does (b)(6), (b)(7)c still work for the FAA?

MR. LOAGUE: She's in AAI, she's in Accident Investigations.

(b)(6), (b)(7)c : What about (b)(6), (b)(7)c

MR. LOAGUE: (b)(6), (b)(7)c he's also--he works in the litigation group within the ATO, he and (b)(6), (b)(7)c still work together.

(b)(6), (b)(7)c : What about this Fact Sheet, it's dated August 12, 2002, does that look familiar to you?

MR. LOAGUE: Mm-hmm. (b)(6), (b)(7)c [ph], did he put that out?

(b)(6), (b)(7)c : Yes.

MR. LOAGUE: Okay,

(b)(6), (b)(7)c : Do you know (b)(6), (b)(7)c

MR. LOAGUE: Yeah, I know Bill. Is it a press release?

(b)(6), (b)(7)c : Well, they don't call it a press release, but--

MR. LOAGUE: I mean, it's almost like what.

(b)(6), (b)(7)c : It looks like a press release doesn't it?

MR. LOAGUE: Yeah.

(b)(6), (b)(7)c : It was published on the Website, though.

MR. LOAGUE: I don't remember ever seeing that either. But if you, I would imagine that some of those line entries came off of that book, I mean, because they would have gotten a copy of it, too. Or would have, could have gotten a hold of a copy of it, because there were several copies that were made.

(b)(6), (b)(7)c : This one here, it's "Chronology of Events on 9/11/01?"

MR. LOAGUE: No, I mean, it has no headings other than that title I'm not sure what

that is.

(b)(6), (b)(7)c : I guess I'm just interested in kind of like do these look familiar to you? And then you can tell us--

MR. LOAGUE: The only one that I recall looking at is the book, I mean--

(b)(6), (b)(7)c : The "Summary of Air Traffic--

MR. LOAGUE: --the summary of the hijacking because I actually have a copy of it. And in the office I have a copy of it as well. I don't remember any of the other chronologies, but they appear a lot of them, extractions from the same thing. So--

(b)(6), (b)(7)c : Probably. This one here's "Chronology of September 11, 2001."

MR. LOAGUE: Mm-hmm.

(b)(6), (b)(7)c : It lists the four flights and their--

MR. LOAGUE: Call signs.

(b)(6), (b)(7)c : --call signs and then their departure and where they were supposed to have landed.

MR. LOAGUE: A lot of what, you know, somebody requests and we get it, still, today, too, is that a request will come down. And two people will hear the request. Well, those two people will start a different track of getting the information, so I can only imagine in that type of process that we have in the FAA is that more than one office could have been putting this together. Or two people within the same office could have been doing it. And they put slightly different looks on the output. But I remember a lot of requests coming in. A lot of it duplicate, look, we just gave you that. Yeah, but it doesn't say this, can it say that. I mean, could you include this piece of information with it, because it wasn't in that one that you gave. So, I just know that there was a lot of paper moving up.

(b)(6), (b)(7)c : So, does this "Chronology of September 11, 2001" that--

MR. LOAGUE: No, I don't recall seeing that.

(b)(6), (b)(7)c : And this one here, it says

"Sensitive Security Information--

MR. LOAGUE: No.

(b)(6), (b)(7)c : --FAA Communications regarding Hijacked Aircraft on September 11, 2001?"

MR. LOAGUE: No, that could have been from Mill Ops or something, that kind of looks like their format.

(b)(6), (b)(7)c : And this one starts off, "Classification Unclassified"

[Technical interruption.]

(b)(6), (b)(7)c : We just flipped the tape, it's 12:03 p.m.

That's all the time lines. Just a bit.

(b)(6), (b)(7)c : I think you had before that, again, who were the main people from that AAT-20 group and AAT-200 who were deciding what information to go into the time line?

MR. LOAGUE: Oh, Tony Ferrante was the division manger, so he played a big part in terms of how that document ended up--

(b)(6), (b)(7)c : So, what to include and what not to include?

MR. LOAGUE: I don't know if it was--to my recollection it was include everything we had, you know, to, if you had two pieces of the same information, put the information in there at the appropriate time. So, I know that they were trying to track down, like, I had said before. There may have been two log entries at two different times with the same piece of information.

But because of the way that the logs were being created, another person may have made the same entry at a different time. And so, they were having to track those things down. So, you know, doing follow-up with the Region; doing follow-up with the facilities to make sure that these--the times matched up. So, I know the investigators were doing that piece of it.

So, in terms of what to include what not to include, I can't say that he was deciding what not to include. I thought he was trying to include everything.

(b)(6), (b)(7)c : I guess, one of the things that we've been looking into is that or something

that the Commission pointed out in their report was about United 93, the last flight. That they determined that the FAA's notification to the military about that particular flight was at 10:07, which was, really after the impact of the--after the plane had crashed. And on one draft of that grid time line that we showed you, on an early draft of that, we had seen where that actual notification time had been put in at one point, the 10:07 time. But--

MR. LOAGUE: But was that UTC or local?

(b)(6), (b)(7)c : These are all Eastern times that we're dealing with.

(b)(6), (b)(7)c : Eastern times.

(b)(6), (b)(7)c : I think on all your chronologies--

MR. LOAGUE: They tried to convert to Eastern time?

(b)(6), (b)(7)c : Yes.

(b)(6), (b)(7)c : Right.

MR. LOAGUE: But when they--depending on the source of the data, then they could have gotten

UTC, I don't know if it would have matched up to that, I'm not sure how it happened.

(b)(6), (b)(7)c : I guess.

(b)(6), (b)(7)c : That's what I'm trying to point out so that the final iteration of this document doesn't include that 10:07 time it says not applicable.

MR. LOAGUE: Oh, okay.

(b)(6), (b)(7)c : So, this is right, 10:08 is correct, roughly, I think it was very, very late in the 10:07 time period, so it might have been rounded up to 10:08 here. But this is correct. But somebody made the change to N/A and that's what made it into the final--

(b)(6), (b)(7)c : The final version.

(b)(6), (b)(7)c : Do you remember any discussion at all--

MR. LOAGUE: No.

(b)(6), (b)(7)c : --about that?

MR. LOAGUE: I--I

(b)(6), (b)(7)c : Or any of the other military notifications?

MR. LOAGUE: The only thing would be, again, when there was something in conflict. I mean, they didn't want to include something we could not. Remember, this document, a lot of this stuff came out within a few days of the events occurring, the events of that day. So, the only thing I can think of is it was one of those conflicts, where, one said we did and one said we didn't. Well, if we didn't have something that actually said this is the time or they couldn't lay their hands on it. There was a lot of information coming in, they were using multiple sources.

So, if they couldn't confirm it, then it probably wasn't included.

(b)(6), (b)(7)c : But you don't have a specific recollection about that?

MR. LOAGUE: No, I don't have a specific recollection. That would be my impression, it's not unlike what we would do for a normal accident investigation. We don't necessarily include something that we can't confirm. Because that just leads the investigation in the wrong direction.

So, we want to give accurate information, we want to give the most information we can. But we don't want to give something that could be misleading.

(b)(6), (b)(7)c : Just one last thing: The Commission had also reported out in the report that there were some false reports about American 11 still being airborne--at least one false report that it was airborne.

MR. LOAGUE: There were some American 77--11 or 77?

(b)(6), (b)(7)c : Well, there's was confusion that the report was about American 77, but it turned out that the controller who made the notification was really talking about American 11.

MR. LOAGUE: Or vice versa. See, American 77 is the Pentagon--

(b)(6), (b)(7)c : Is the Pentagon, that's right.

MR. LOAGUE: The only reports--

(b)(6), (b)(7)c : That's the one that disappeared.

MR. LOAGUE: That's correct, but I remember, they--there were some early reports that

I recall coming in from local sheriffs that thought that 77 was down before it hit the Pentagon. The only think I recall is that there were some local sheriff's report or local police that said that there was an aircraft down. And in an areas between Indianapolis and here. And there were some assumptions at that time maybe that that was American 77, if that possibly could have been. I don't remember the--because 77 and 11, you know, you're talking two different areas, one coming out of Boston and going in to the New York area. And one going completely West, so I don't remember that mix-up, I don't recall that.

(b)(6), (b)(7)c : There were, because 11 was the first aircraft involved, and it hit the Trade Center about 8:46 or so in the morning, might be off by a few minutes.

(b)(6), (b)(7)c : That's right.

(b)(6), (b)(7)c : Actually it says 8:46 right here on this time line. So, but after, almost a half an hour later, there's discussion within the FAA about American 11 still being in the air and on

its way to D.C. Do you recall anything about that? It might even have come up during the telecon.

MR. LOAGUE: You know, I don't--I honestly don't recall that conversation.

(b)(6), (b)(7)c : Okay.

MR. LOAGUE: But I can't imagine that it would, unless, again, it's a target that's in coast and somehow it stayed on the scope, the data tag didn't drop.

(b)(6), (b)(7)c : Okay.

MR. LOAGUE: But, even a half hour, within a half hour it would have been out of the airspace and a coast target wouldn't hand off to another adjacent facility. So, I don't recall that.

(b)(6), (b)(7)c : There are--if you could explain what these are, I hope, but I've been in New York Center and some of the other centers. I think on the tenth floor, there are, like radar situational displays and it graphically depicts the United States and it's got all these little blips on it.

MR. LOAGUE: The TSD.

(b)(6), (b)(7)c : Yeah, what does that stand for?

MR. LOAGUE: Traffic Situation Display.

(b)(6), (b)(7)c : My understanding is that Traffic Situation Display takes data which is, essentially comes from the flight plans that the aircraft filed--the flight plans for each of the flights--

MR. LOAGUE: Mm-hmm.

(b)(6), (b)(7)c : --and it pretty much just tracks that information as opposed to radar.

MR. LOAGUE: It is projected.

(b)(6), (b)(7)c : Okay.

MR. LOAGUE: It's projected because it doesn't--although they have a feed, it uses I can't think what the data source, ETMS or some datafeed into the TSD, but it's basically it's what flow control on traffic management group to determine how many aircraft we're going to have in a certain airspace, because it's giving ETAs, you know, based on the information they're getting. And I know there is information that's close to real time, but

most of the information that we see on the TSDs has lapsed a minute or so.

I think there are some offline sites that offer it, I mean, some Websites that offer it that's a minute or two minutes delayed. But that information is--we'd track that. I don't know if that--I'm not sure, if the flight plan data would be removed from that and it still be projecting an arrival on what the routing would have been for it. I mean, that's really a possibility, but I'm not certain.

I would think that if the radar--if the host feeding that system said the target wasn't available, I would have thought it would have been dropped. I'm not sure, I'm not positive. I mean, if you're alluding to the fact that could have been a reason why they thought it was still airborne, if the TSD said it was up, somebody could have said, hey, listen, I've got American 11 right, I don't know.

(b)(6), (b)(7)c : But you don't recall this coming up as--

MR. LOAGUE: I don't recall it being said,
no.

(b)(6), (b)(7)c : --a part of your review of all
this material?

MR. LOAGUE: Not at all. I mean, the
information that we had was that an aircraft hit,
all right. And early on, it was identified, you
know, shortly after that it was American 11, right?
And then they had the other aircraft, too, you
know, the United flight.

(b)(6), (b)(7)c : That's all I have. Is there
anything else that--

MR. LOAGUE: No, I don't know if it was
useful or not, but it was a good hour.

(b)(6), (b)(7)c : Yes, it was.

(b)(6), (b)(7)c : I guess we'll turn the tape
off, it's 12:12.

[END OF INTERVIEW.]

OFFICE OF INSPECTOR GENERAL

Case No. 042R0122001

SWORN INTERVIEW OF

BROOKE LEWIS

BY

(b)(6), (b)(7)c

(b)(6), (b)(7)c

Wednesday, March 8, 2004

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

(b)(6), (b)(7)c : You are going to tape record this, as well?

MR. LEWIS: Yes.

(b)(6), (b)(7)c : Today is December 8, 2004, the time is 10:10. We're at 600 Independence Avenue, FAA Building, FOB 10-B, second floor, Washington D.C.

My name is (b)(6), (b)(7)c also present is (b)(6), (b)(7)c (b)(6), (b)(7)c We're from the Office of Inspector General, Department of Transportation. We're conducting a review of issues involving certain public statements made by military and FAA officials in a 9/11 Commission and elsewhere that were allegedly inaccurate. Today, we're interviewing Brooke Lewis. Mr. Lewis, will you please acknowledge that you are aware this interview is being tape recorded.

MR. LEWIS: I am.

(b)(6), (b)(7)c : I should also note that Mr. Lewis is making his own tape of this interview. Mr. Lewis, will you please raise your right hand?

MR. LEWIS: All right-- (b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c : Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, and nothing by the truth?

MR. LEWIS: I do.

(b)(6), (b)(7)c : Will you please give your full name, spelling your last name for the record.

MR. LEWIS: my name is Robert Brooke Lewis, and the last name is L-e-w-i-s.

(b)(6), (b)(7)c : What's your current position?

MR. LEWIS: I'm a senior attorney at the Federal Aviation Administration in the litigation division.

(b)(6), (b)(7)c : What's the routing symbol?

MR. LEWIS: AGC-400.

(b)(6), (b)(7)c : What's your current grade?

MR. LEWIS: GS-15, as of--I'm not sure

it's actually just happened, it was keyed to the Appropriations Bill, so I assume that it just happened.

(b)(6), (b)(7)c : Are you actually on General Schedule or in the FG?

MR. LEWIS: I am, I'm not sure what you're asking, I am a GS--I'm not accepted service.

(b)(6), (b)(7)c : You're a GS?

MR. LEWIS: Yeah.

(b)(6), (b)(7)c : And how long have you held your current position?

MR. LEWIS: Since, well, the senior attorney position since very recently, but I've been a trial attorney here at the FAA since 1984.

(b)(6), (b)(7)c : One of the reasons that we came here today to talk to you is we understand that in roughly around June of 2004 that you had participated in a meeting with some FAA officials and some officials at the Department of Defense, the Secretary of Defense's Office.

MR. LEWIS: My calendar says that it was May 27. Now--

(b)(6), (b)(7)c : Of 2004?

MR. LEWIS: --yeah, and I'm not sure that that's correct because sometimes the meetings get changed and I may or may not have made the change appropriately on the calendar, but I think it probably was on the 27th, it was a Thursday.

(b)(6), (b)(7)c : Can you tell us about the meeting; who attended and what the purpose of the meeting was.

MR. LEWIS: I looked to see if I have the sign-up sheet. I don't know if you have it. We passed around a sign-up sheet. I can't find mine. I may have been that mine got picked up by somebody else. Shirley Miller may have it. She and I traveled from the FAA Building down there to the Pentagon. And I, frankly cannot remember, because it's been so long, the names of the other people who participated in the meeting. There were a bunch of people from the military and there was a military attorney there. I can't tell you exactly how many people; I would guess about eight to ten. And what are you asking about the meeting?

(b)(6), (b)(7)c : What was the purpose of the meeting?

MR. LEWIS: The purpose--I'm not sure whether I was the cause of that meeting or just one of the causes. I came very late to the 9/11 Commission meetings. My predecessors handled a bunch of interviews before that. But soon after I began to participate by accompanying witnesses to their meetings, John Azzarello, who was one of the 9/11 team members, pulled me aside after an interview and told me that several people at the military had told him that the military had never received any notification of the last two flights, 77 and 93. And that we had better both get our act together or something.

And, actually, I think--you have my notes--that may be in those notes, because it was my habit to take time during breaks and interviews to record some things that happened so that I could bring Shirley up to date as to where things were going, because [unintell.]--

Anyway, because I did not know that before

you told me and because I didn't have any way of knowing whether it is correct or incorrect, I suggested to Shirley at some point that people at FAA and at the military get together and run to ground, whether or not there really was such communication done. Because there were quite a number of recorded telephone conversations between the military and the FAA people that day, I understand, but I also know that a lot of people because of the telephone problems that they were having that day, people used other means than a recording means of communication.

And, so, I was as curious as to what people might have remembered, people who had not yet been interviewed. So, that was the purpose of the interview. At least, so far as I know.

(b)(6), (b)(7)c : What was the outcome?

MR. LEWIS: The outcome was there was much guessing, theorizing as to how means of communication might have taken place between the military and the FAA that might not have been recorded. Where we might look through and I talked

to to find out how some of these avenues of communication might have occurred. And so, we pretty much left the meeting, as I recall, with people resolving we're going to check over here and you're going to check over there and that sort of thing.

(b)(6), (b)(7)c : So the outcome was, essentially--if I can kind of digest it here--that both parties--and when I say parties I'm referring to FAA and DOD, we're going to go back and double check their records, essentially?

MR. LEWIS: That's basically my understanding of it. There was no resolution, we did not--there was no eureka moment at which we decided, oh, okay, now we know how this happened.

The other thing was that the other things discussed at the meeting was, which was the basis for this whole thing, is that there were some public statements that were made by the military and the FAA, to my understanding, that were differing in terms of when notifications occurred for the first two flights. And people were curious

as to how--why they were different, why they were being logged differently by the military and here our purpose was to find out that, also.

(b)(6), (b)(7)c : You were talking with regards to difference to the first two planes, like a minute or two or--

MR. LEWIS: You know, it's been long enough, I don't really remember what exactly. I recall that there was one notification that was listed for one airplane that may have been for another. Again, a lot of this went on before I ever got involved. By the time I got involved, we were talking about some of the or the clean-up people and administrators [unintell.]

(b)(6), (b)(7)c : Do you know what the FAA ended up doing--

MR. LEWIS: No.

(b)(6), (b)(7)c : --in that effort?

MR. LEWIS: No.

(b)(6), (b)(7)c : Do you know who was responsible for performing that at the FAA?

MR. LEWIS: I don't know who was

responsible for actually running these issues to ground and getting the answers, since Shirley and I were the only two people from, you know, if anybody else came there separately, I don't know. She and I went together. My understanding, she was kind of the point person for the 9/11 Commission. And I would assume that, probably, she told other people, but I don't know. I mean, I know that wasn't my function.

(b)(6), (b)(7)c : How soon did--backup, when did Mr. Azzarello make those comments to you and how shortly after those comments from him did you get the meeting calls?

MR. LEWIS: I really don't know that. I don't know. I may even mis-remember whether or not, I'm pretty sure the Azzarello thing occurred first, because I had a notion that, I can open my notes and see if I can find the comment.

(b)(6), (b)(7)c : If you could do that, that might help.

MR. LEWIS: You want to pause the tape a moment while I do this, or do you want to leave it

run?

(b)(6), (b)(7)c : We can leave it running.

[Pause.]

MR. LEWIS: The problem is, as you know, I use these notes--I put these notes all in one great big document because I didn't want to be opening different ones and taking--

[Pause.]

MR. LEWIS: You have a paper copy, I might look through for several numbered--I think there were numbered paragraphs or I may have numbered them later.

(b)(6), (b)(7)c : With regard to that meeting the other folks that might have been present, do you think it's possible that Tony Ferrante may have come with you guys? Do you know who Tony is?

MR. LEWIS: I do know him--I know he went to the [unintell.] meeting. Tony very well might have been there. The best way to find out is to look at that sign-up sheet--

(b)(6), (b)(7)c : Sign-up sheet?

MR. LEWIS: --yeah, do you have it?

(b)(6), (b)(7)c : I don't have it with me, no.

MR. LEWIS: I mean, do you have it?

(b)(6), (b)(7)c : Actually, I don't know that we even have that.

MR. LEWIS: I see there was one passed around, so you should--

(b)(6), (b)(7)c : Well, we'll check on that.

MR. LEWIS: All right. If this is the correct entry, it was after Darlene Freeman's interview [unintell.]. Yeah, on the 8th of April, we had Darlene Freeman's interview. And my recollection is that afterwards, they were walking back to their office and I was walking back to mine.

And John and I were on the street corner had this conversation which I told Shirley about, so that we could kind of get to the bottom of it. And if you look in my notes, at the end of the Darlene Freeman interview, there was an entry, 5:15, Darlene has to leave to pick up her daughter. And then I put, comments to RVL by JA, who is John Azzarello, after Freeman interview paraphrased, so,

those couple of paragraphs, show you why I was concerned that we get the answers to this.

(b)(6), (b)(7)c : What do they say?

MR. LEWIS: You've got them, but you want me to read them?

(b)(6), (b)(7)c : Sure, go ahead and, if they're not too long.

MR. LEWIS: It's a couple long paragraphs, but, I put comments to RVL by JA after Freeman interview, paraphrased, (b)(5)

(b)(5), (b)(6), (b)(7)c

(b)(6), (b)(7)c Find the source of the erroneous information. Shirley and the Administrator are going to testify before Congress and there was late notification in one case or notification to the military. She would want to know it and not be set up. "The military is laying the blame on the FAA: in quotes,

so if you have people--me, if I have people--who have notes and other information, I suggest you come up with it or disprove them--to disprove them. We have a recording of every line at the Operations Floor, at NORAD and your times are not matching up. There was one flight they are saying there was no notification for; no tape has anything and no action was taken by them. What would you think? Again, this is all Azzarello to me.

(b)(5), (b)(6), (b)(7)c

(b)(5), (b)(6), (b)(7)c

However, I do not think it does any good to be secretive about the disparities, they are what they are and are now immutable, since the paperwork says what it does and the tapes are readily available. I suggested, strongly, that his team let us know what the disparities, I'm sorry, what disparities they see and let us--and ask us in time for Darlene to run them down if she is going

to be asked about them. It does no good to surprise her with them next week, since she will simply have to say that she did not know and will have to run down the issue. Whether or not he will do this, I do not know. [REDACTED] (b)(6), (b)(7)c

[REDACTED] (b)(6), (b)(7)c

Last paragraph, frankly, I do not see what they're talking about. I sat there as Darlene explained why her language in the chronology was what it was. Where there was FAA documentation, she cited it; where it came from somewhere else, she cited that, also. If anyone at FAA is privy to what the Commission thinks one or more of our employees made up, altered, et cetera, with regard to the military, let's get the issue out in the open and flush out the truth.

And the purpose of my writing those paragraphs was to brief Shirley so that we could flush these out. The last paragraph, I take it, you understand is me talking, rather than Azzarello talking. Actually, pardon me, the last two paragraphs are me talking, rather than Azzarello

talking. The first one is a paraphrase of what Azzarello said.

(b)(6), (b)(7)c : So, as a result of that conversation with Azzarello, then, you all set up a meeting with--

MR. LEWIS: I don't know who set it up. My involvement in this process was not so intimate as you might think. When people requested interviews, I went with the interviewee and briefed the person on his rights and duties with regard to the investigation and I sat through the interviews.

I told Shirley that this had come up because Azzarello was communicating to all of us when he's talking to me. And what exactly she did with that information, whether she went to the Administrator, I don't know. I mean, I do know that after that time I was told that there was going to be a meeting at the Pentagon and I was invited to come. And my purpose was learning, rather than contributing. Because the people who were at the meeting, knew a lot more about the workings of their offices and, you know, what went

on 9/11 than I did.

(b)(6), (b)(7)c : During the meeting, do you recall, did the Department of Defense relay that their position was that they had told the Commission that FAA had, in fact, made notifications?

MR. LEWIS: I don't recall that being said. I don't recall the opposite being said, either. But then, you know, not everybody and perhaps not anybody who was at the meeting was privy to all of the interviews or what had come out of those interviews.

(b)(6), (b)(7)c : That's interesting.

MR. LEWIS: Let me add one thing, just for clarification: As I said in these paragraphs that I just read to you, the problem that we were faced

(b)(6), (b)(7)c

(b)(6), (b)(7)c

WE were

being told that these things were being said, but we were not able to focus our efforts to try to

find out the answer.

So, on the one hand, he's asking us to prove or disprove this point, but he wasn't offering us, in the way of guidance in terms of who had told them what. They had the interviews and, you know, they had all the tapes. Various people from FAA and the military went into these interviews, so not everybody took notes the way I did. I know what my people said, but I don't know what all the other ones said.

(b)(6), (b)(7)c : I have here, like, a chain of e-mail messages and--

MR. LEWIS: Mine or--

(b)(6), (b)(7)c : Well, I don't know, you're on the Distribution list for two of the message here. Both of which are from Shirley Miller and they're dated June 20 and 21, 2004. So, I'll just let you look at that real quick.

MR. LEWIS: Okay.

(b)(6), (b)(7)c : And there's an attachment to the message, if you kind of flip through there, I highlighted a section that appears to pertain to

you. So, if you could review that.

[Pause.]

MR. LEWIS: Actually there's several, at least three I see here, comments that the meeting put to me.

(b)(6), (b)(7)c : These are the most interesting, the area that's highlighted there.

MR. LEWIS: Okay, and your question is?

(b)(6), (b)(7)c : The item that says, in addition, a staff statement is critical that the FAA person who monitored the air threat conference call knew nothing about what was going on. And, parenthetically, it says, need input from Brooke on interview of Command Center employee who monitored the air threat conference call.

MR. LEWIS: Mm-hmm.

(b)(6), (b)(7)c : So, did you provide for this?

MR. LEWIS: I probably did, I don't specifically remember doing that. But I do remember helping with, you know, when I was asked questions about who said what with regard to some of these issues. I'm sure I did because I was

asked for it. And what I provided would have come out of the notes that you have. Because I sat in on that interview [unintell.]

(b)(6), (b)(7)c : Do you remember what the result of the interview would have been?

MR. LEWIS: There were a couple of people--this is, the person who was interviewed--there was somebody, if I recall, who was asked to monitor the call in a sequestered office out there at the Command Center and at some point, I think, the call got disconnected. I'd really have to look at my notes because there are so many things--I'm fine, thank you. I can go back and look. Do you know the name of that person, because I can search for it?

(b)(6), (b)(7)c : Well, I think the Commission used, I think it was (b)(6), (b)(7)c as the point of reference.

MR. LEWIS: That was the interviewee?

(b)(6), (b)(7)c : That's who they reference in their report as having said, well--

(b)(6), (b)(7)c : He played no role.

(b)(6), (b)(7)c : Exactly.

MR. LEWIS: It doesn't come up under

(b)(6), (b)(7)c

(b)(6), (b)(7)c : I think so.

(b)(6), (b)(7)c : I thought it was (b)(6), (b)(7)c

MR. LEWIS: K?

(b)(6), (b)(7)c

MR. LEWIS: (b)(6), (b)(7)c

(b)(6), (b)(7)c : (b)(6), (b)(7)c

MR. LEWIS: Let's try (b)(6), (b)(7)c first and if it doesn't like that.

(b)(6), (b)(7)c : But I'm not sure (b)(6), (b)(7)c was at the Command Center, I think he was at the Operations Center in D.C.

MR. LEWIS: See some of this nomenclature was new to me, during this process. You know, that I do, primarily air crash litigation. This is a completely new kind of event for me, so I--a lot of this, the workings of NORAD; the workings of our Command Center, the workings of the different people who were--I'm sorry I'm not very good at the terminology. But, I recall that there was a person

out at the Command Center who was asked to listen to a call by somebody else, I think it was by the Air Force, is that what you're talking about? That's the one I was thinking about.

(b)(6), (b)(7)c : And when you're referring to the Command Center, you're referring to the place down in Herndon, Virginia?

MR. LEWIS: Correct. No spelling of Weikert is coming up, so--

(b)(6), (b)(7)c : So, I don't know, because the FAA has used the term Command Center interchangeably between the Center on the tenth floor in the headquarters building--

MR. LEWIS: I know that.

(b)(6), (b)(7)c : --and Herndon--

MR. LEWIS: [unintell.]

(b)(6), (b)(7)c : --because they changed their name.

MR. LEWIS: Right.

(b)(6), (b)(7)c : And so, now, essentially both of them have the name Command Center, unless they've changed the one in the District here,

again.

MR. LEWIS: I'm not sure what it is. I've been here long enough that I habitually call the center out in Herndon CF-squared, which is Central Flow Control Facility, CFCF or CF-squared. And it changed between the Command Center, so, you're right. But if you can give me a name, I can go to that interview.

(b)(6), (b)(7)c : The only name I can give you is (b)(6), (b)(7)c

MR. LEWIS: Well, if these, if (b)(6), (b)(7)c (b)(6), (b)(7)c is the person and he doesn't come up in my notes, it may be that we're talking about a completely different person.

(b)(6), (b)(7)c : So you wouldn't remember what the result of your input would have been here without having to spend quite a bit of time there reviewing your notes, is that correct?

MR. LEWIS: No, I sat in on a bunch of these interviews. And the one that comes to mind is some person out at the Command Center who was asked to monitor a telephone call. Somehow that

call got terminated and he was concerned about it, but by that point most of the action was over with anyway and I--I could probably find that.

(b)(6), (b)(7)c : Was this an FAA employee or, like a liaison?

MR. LEWIS: I believe it was an FAA employee.

(b)(6), (b)(7)c Out at the Herndon--

MR. LEWIS: Yeah.

(b)(6), (b)(7)c --out at Herndon?

MR. LEWIS: Right. See there were military people out there, as well, But I did not sit in on any of the military interviews. So, any interview that I sat in on were with the FAA--

(b)(6), (b)(7)c Just the FAA employee.

MS. WOODS: Well, this is specifically talking about an FAA person.

(b)(6), (b)(7)c : Well, I guess one of the things I'm curious about is this, these sets of e-mails, the June 2000 time frame, I believe--yes, 2004, time frame is when Staff Statement 17 came out because there were a series of hearings during

that month. And Staff Statement 17 turned into the latter part of Chapter 1 of their final report. Have you had a chance to look at their report?

MR. LEWIS: I haven't read it recently. I thumbed through it, but I haven't read the whole thing.

(b)(6). (b)(7)c : Wherein, for lack of a better description, they were very critical of FAA and NORAD communications on the 11th and their reconstruction efforts after the fact.

And one of the things they had been critical of is the fact that FAA had set up a teleconference with NMCC and when they had spoken with Michael Wikert, he had told them, essentially that no--that telephone call didn't really play a role in coordinating military activities. What I'm wondering is, if you are aware that the FAA--aware if the FAA had done any of it's own research after that had come out to try to--

MR. LEWIS: Thank you for pausing, I just turned the tape over and there's been no conversation while it was off.

(b)(6), (b)(7)c : --to refute the Commission's assertion of the fact or issue or item.

MR. LEWIS: If that research was done, it would not have involved me at all, so I don't know.

(b)(6), (b)(7)c : Okay, all right. And this other item, as I'm looking at it again, it says here, the person who monitored the air threat conference call knew nothing about what was going on. And now that I look at that again, I think what that might be a reference to is, there was phone calls coming into the Command Center from, I think it was some of the other centers at the FAA and they were saying, well, what do we need to do? And the Commission alleged that this individual had said, well, I don't know, everybody just left the room or something like that. I don't know if that helps refresh your recollection at all.

MR. LEWIS: That conversation, I understand was on the tenth floor at the building in the FAA building, and not at Herndon.

(b)(6), (b)(7)c : Okay.

MR. LEWIS: By using the word monitor as a

search term, I went through my notes while you were talking and I have come up with the person that was interviewed I, had remembered, And that person is

(b)(6), (b)(7)c

was asked, let's see,

the--he was an FAA employee and he was asked to monitor a telecon by the CARF, the--which is the military unit out at the Command Center. So, I think this may not have anything to do with the interview that you're talking about. He didn't have any input, my understanding is he just monitored this phone. Then you've got those notes, just look for (b)(6), (b)(7)c

(b)(6), (b)(7)c : All right.

(b)(6), (b)(7)c : (b)(6), (b)(7)c

(b)(6), (b)(7)c : (b)(6), (b)(7)c

(b)(6), (b)(7)c : There's just one last thing on this rebuttal. now, concerning the Staff Statement for the Commission. The items that it says that they need input from you on? Do you recall if you had provided the input in writing or if you guys would have had a meeting and you would have just verbalized what they were looking for?

MR. LEWIS: I might have done any or all of those. We had telephone calls back and forth about certain things and I might have said, you know, check this or I may have read from my notes to educate Shirley as to what the correct thing was or identified a person to talk to.

I recall working--putting input a type of input into a draft of that and I think I did it at home and I think I e-mailed it. So, if you know, any e-mails that I provided, should have that with it.

(b)(6), (b)(7)c : Do you still have those e-mail messages, do you think?

MR. LEWIS: Probably so, you know, the computer stores them for a certain length of time, I don't know how long that is.

(b)(6), (b)(7)c : When we're done here, would you mind looking and seeing if you could find that and provide it to us?

MR. LEWIS: Do you know about when that was?

(b)(6), (b)(7)c : Well, this, it says June 20

2004.

MR. LEWIS: All right, I'll look and see if I have any e-mails that would have provided that. I don't know whether--all of what I, you know, we were all trying to get it, the accurate version. So, various people were feeding information into Shirley and mine would have been mostly from this end under my notes.

(b)(6), (b)(7)c : Okay. When did you first get involved with the 9/11 Commission issues?

MR. LEWIS: Let me go through my notes here. The first interview that I have notes for is on April 5, '04.

(b)(6), (b)(7)c : So, that would have, essentially, started your involvement in that?

MR. LEWIS: Pretty much. I mean, I had, until I went into that first interview, I had no involvement.

(b)(6), (b)(7)c : Okay. Except for your supervisor saying [unintell.]

MR. LEWIS: [REDACTED] had been handling this matter and he got overloaded with some other

stuff and, basically, gave it to me.

(b)(6), (b)(7)c : (b)(6), (b)(7)c

MR. LEWIS: Mm-hmm.

(b)(6), (b)(7)c : Do you have anything else that you'd like to add?

MR. LEWIS: My notes probably said it better than I can extemporize, but as I put, when I turned over the notes, I put a paragraph in bold at the beginning of it. I am very concerned, having been a trial lawyer for 20 years with this agency, that we not jump to the conclusion that because people remembered things differently from that day, that they are somehow being untruthful. I think that wrongs them.

I remember that day very clearly, I was at Indianapolis Center, Air Traffic Control Center, because we were taking a set of depositions in an air-crash case. And I remember the confusion, even at that outlying facility. And I can't tell you the order in which things happened that day. Even though, I was, of course, very interested and I was not going to be doing the depositions that day,

that was clear.

But I can't, except for the fact that I got to the gate at something like 9:00, I can't really remember the sequence of things. And I'm not surprised that a bunch of good people trying to extemporize, doing the best they could, mis-remembered exactly what they did and when they did it. The other thing that I am not surprised about is that once the lines of communication were open between the FAA and the military, there were myriad ways in which information might have been passed.

Just to give you one personal example. We have a friend who was at the Pentagon. Her brother was concerned about her safety. He couldn't get through to her line at the Pentagon. He called my wife at home here in Arlington, over the river in Arlington, and she was able to get through. And there were many, many communications like that. And so, I think that we should not take the position, the Commission should not take the position that if it was not recorded it didn't

happen.

People made use of ever possible means of communication. So, my take on these interviews is that the witnesses were being as truthful as they could possibly be. The fact that they didn't remember something perfectly, yea those many months after the facts, is not surprising to me. I see it all the time. See it in cases when I really wish they would remember and they don't. So, that's my take on it.

(b)(6), (b)(7)c : I don't have anything else. It's 10:50, we're going to go ahead and stop the tape.

[END OF INTERVIEW.]

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case # 042R0122001

SWORN INTERVIEW OF
DOUGLAS GOULD

BY

(b)(6), (b)(7)c, SPECIAL AGENT

(b)(6), (b)(7)c, SPECIAL AGENT

DOD AUDITOR, (b)(6), (b)(7)c

Tuesday, November 9, 2004

2:39 p.m.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

I N T E R V I E W

SPECIAL AGENT (b)(6), (b)(7)c: Today is November 9, 2004. The time is 2:39 p.m. We're at FAA Building 10A, Room 632, Washington, D.C. My name is (b)(6), (b)(7)c. Also present are (b)(6), (b)(7)c with the Department of Transportation Inspector General and (b)(6), (b)(7)c with the Department of Defense Inspector General.

We're conducting a review of issues involving certain public statements made by military and FAA officials at a 9/11 Commission hearing and elsewhere that were allegedly inaccurate.

Today we're interviewing Doug Gould. Mr. Gould, will you please acknowledge that you are aware that this interview is being tape recorded?

MR. GOULD: I am.

SPECIAL AGENT (b)(6), (b)(7)c: Will you please raise your right hand?

MR. GOULD: I will.

Whereupon,

DOUGLAS GOULD

was called as a witness and, after being first duly sworn, was examined and testified as follows:

SPECIAL AGENT (b)(6), (b)(7)c: Will you please give us your full name and spell your last name for the record?

MR. GOULD: Sure. Douglas Brian Gould,
G-o-u-l-d.

SPECIAL AGENT (b)(6), (b)(7)c: And what is your current position?

MR. GOULD: Presently I am the manager of Strategic Operations Security under the Systems Operations Office.

SPECIAL AGENT (b)(6), (b)(7)c: What's your routing symbol?

MR. GOULD: ATO-R.

SPECIAL AGENT (b)(6), (b)(7)c: And how long have you been in your current position?

MR. GOULD: Since early July of this year.

SPECIAL AGENT (b)(6), (b)(7)c: Right during the reorganization? Is that about when it happened?

MR. GOULD: Yes. During the reorg I was actually in Iraq. So [inaudible] reassignment.

SPECIAL AGENT (b)(6), (b)(7)c: Okay. Hopefully you knew that.

MR. GOULD: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c: And I think we had interviewed you previously, on September 30th, 2004. It's just that tape didn't turn out unfortunately.

MR. GOULD: I understand.

SPECIAL AGENT (b)(6), (b)(7)c: I think you had said that on September 11th at that time you were a senior air traffic investigator working in the Evaluations and Investigations Branch, AAT-200?

MR. GOULD: 200. Yes.

SPECIAL AGENT (b)(6), (b)(7)c: I'm just going to do some--I had a couple follow-up questions, and then we'll go ahead and go through some of those, the documents that you had given to us.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c: Had provided for us. I think it was like on October 1st, I guess.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c: I think you had

indicated that on the 11th of September 2001, during the infamous teleconference that Mary Kate Strawbridge was taking some notes with a legal pad? That kind of started the log for that tele-conference.

MR. GOULD: There were actually two logs going on. So downstairs on the fourth floor, in the [inaudible] Mary Strawbridge started a log from our perspective. However, there was another log, the official log that has been released, the telcom log. That was generated on the tenth floor, and it probably didn't start for a couple of hours into the sequence of events. But that is the one that was the predominant log that you [inaudible] referring to.

SPECIAL AGENT (b)(6), (b)(7)c: Okay.

MR. GOULD: Now, that one that Mary and then I and a few other people created downstairs, that was, you know, just from our perspective what we heard.

SPECIAL AGENT (b)(6), (b)(7)c: How soon after things started going did Mary--

MR. GOULD: Did we create--

SPECIAL AGENT (b)(6), (b)(7)c Yes. Start creating that log?

MR. GOULD: It had to be fairly quickly. I would say within the first hour she came up with that idea, that we started doing it. And then I know upstairs eventually we got word up there that they [inaudible]. So that was discussed. And I know that [inaudible] sent a laptop and started the log [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Is that when Mary Kate then stopped---

MR. GOULD: No. We [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: Just so we had a cross-reference because, you know, we were doing a lot of things that I'm not sure what they were doing at this point, other than [inaudible] we would know specifically.

So we were doing our thing in coordination basically. We were [inaudible] so we were just trying to keep a record of our activity.

SPECIAL AGENT (b)(6), (b)(7)c: That was a handwritten--

MR. GOULD: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c: Do you guys still have that?

MR. GOULD: Yeah. It's downstairs in the archives.

SPECIAL AGENT (b)(6), (b)(7)c: Is it? Okay.

MR. GOULD: Yes. [inaudible] suspect that log probably went for [inaudible]. Eventually it was consolidated into the log upstairs [inaudible] still retained it.

SPECIAL AGENT (b)(6), (b)(7)c: And I noticed, I think that the tenth floor log, the one that was typed into the laptop--

MR. GOULD: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c: It looks like it's off by like an hour or so. I don't know if that rings any bells with you. I don't think I have a copy of it with me; otherwise, I'd show it to you.

MR. GOULD: [Inaudible].

SPECIAL AGENT (b)(6), (b)(7)c: During the previous

interview, I think you essentially related to us that you guys started collecting data to put together some of the time lines on September 11th and that your request for information from the field offices was very specific. I think that's how you described it to us. You didn't want them to give you everything right away.

MR. GOULD: No.

SPECIAL AGENT (b)(6), (b)(7)c But you said that your focus was on aircraft activity, not superficial data, or words to that effect. And I was wondering if you could kind of just define what you mean by "superficial"?

MR. GOULD: Okay. The data that I would have--that I did, in fact, go immediately after would have been rough transcripts of voice communications [inaudible] aircraft or between facilities or in a facility [inaudible] military.

We requested specific radar data on the individual aircraft that we were concerned about. [Inaudible] probably six that would be [inaudible] five specifics. But there might have been one

other one that we [inaudible].

Then eventually we would have turned to statements [inaudible] give an aircraft [inaudible] adjacent positions that they reached out to, coordinate the movement of the aircraft, operation managers, supervisors, and anybody else that was involved in [inaudible]. And then we have the coordination. There were requests that were generated directly at the command center for very specific logs and/or communications that they had since they were recording [inaudible] as well. So we got their logs [inaudible]. I guess--

SPECIAL AGENT (b)(6), (b)(7)c [inaudible]
paraphrase the term--

MR. GOULD: [Inaudible].

SPECIAL AGENT (b)(6), (b)(7)c I wish I--

MR. GOULD: To put it in context--

SPECIAL AGENT (b)(6), (b)(7)c: I'm sorry. I should have brought up to you, (b)(6), (b)(7)c . I was going to--

(b)(6), (b)(7)c : You know, I had them with me until he grabbed them yesterday to go through. Because I have all my notes from every meeting

[inaudible].

MR. GOULD: It more than likely was a comment regarding the initial investigation was very preliminary and it was based--we were looking for specific sets of information so we could do time lines and provide appropriate information to the bosses to go do their briefing. So it wouldn't have been [inaudible] thorough or a pointed investigation as we [inaudible] similar type of incident other than a hijacking.

SPECIAL AGENT (b)(6), (b)(7)c: When we last talked to you as well, I think you had mentioned we were talking about you guys trying to start collecting information, but you said that that same evening that you guys realized--meaning on September 11th, you guys realized that military notification was going to be an issue. Why do you say that?

MR. GOULD: This mind-set would have been getting the military's response and the overall perception of their ability to [inaudible] the country and the location of a given aircraft, you know, certain segments of the events. Common sense

told me that, okay, where was the notification [inaudible] who were they notifying, and was their response time appropriate and did they use the appropriate assets to respond and what was--the way I was looking at it is what was air traffic's [inaudible] obligation to provide assistance to the military so they could actually do what they needed to do. Did we tell them in a timely manner that we needed their assistance? What was it? You know, go up and take a look at this airplane [inaudible] see anything? Or was it after [inaudible] looking at the aircraft coming into D.C. [inaudible] version of D.C. trying to find this airplane, did we help them locate that aircraft in a timely manner. So those that knew where the guy was, were they talking to the controller [inaudible] and helping them.

The only reason that comes to my mind is military [inaudible] they'll never even put that together because it's not in their job description, they've never been asked to do such a thing [inaudible] intercept, never have.

SPECIAL AGENT (b)(6), (b)(7)c: Is that something that you guys kind of concluded would be of interest on your own, or were you guys already starting to get requests from above or somewhere in your chain of command?

MR. GOULD: I suspect early on that, if I remember correctly, we kind of put it together that that would be an issue just because, you know, our own perception of the timeliness of, you know, getting aircraft [inaudible] or in the area to do something. And then the issue at that point was United 93 [inaudible] a lot of feedback or discussions over that particular item. That was very early on. After that, of course, there was conversation [inaudible]. Documents were generated to address those issues, but that was something early on [inaudible] we discussed [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c: Going through some of the materials that you provided to us after we last spoke, I ran across a couple of names and just want to run them by you and see if you could explain to us their significance, if you can

remember.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c: I saw--it looked like some communication with a gentleman named (b)(6), (b)(7)c (b)(6), (b)(7)c who's a lieutenant commander out at NORAD.

Do you know who--do you remember why he would be--

MR. GOULD: At NORAD? The name rings a bell. During that early phase, the majority of my communications with the military would have been [inaudible] getting radar data, [inaudible] data, and exchange of data. We provided them some; they provided us some. [inaudible] maybe an exchange of chronologies. There were some conversations early on [inaudible] staff and they were looking for some of our data [inaudible] what our time lines were so they could [inaudible]. Then I assume [inaudible] cross type of question and answer [inaudible] their notification [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c: I saw a--you had shared some chronologies and other materials. I think there might have been four items and some e-mails that you sent to a guy named (b)(6), (b)(7)c .

Does that name ring a bell?

MR. GOULD: (b)(6), (b)(7)c ?

SPECIAL AGENT (b)(6), (b)(7)c: Yeah, (b)(6), (b)(7)c .

MS. : [inaudible]. I don't know if we spoke with him or if he--we have something [inaudible].

MR. GOULD: I don't--that name doesn't--

SPECIAL AGENT (b)(6), (b)(7)c: It doesn't ring a bell?

[No audible answer.]

SPECIAL AGENT (b)(6), (b)(7)c: Unfortunately, I couldn't see what the chronologies were because I only had, you know, the paper copies of your messages [inaudible] the attachments--

MR. GOULD: [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c: Well, the attachments are listed in the e-mail message. It's got a little icon and the name of the file. But a printout of the attachments was not behind your--

MR. GOULD: Did you search the hard drive for that attachment? Was it [inaudible]?

SPECIAL AGENT (b)(6), (b)(7)c: There's nothing.

Like I said, there was nothing on your hard drive for September 11th, so that's why I'm [inaudible] to get a copy of those files from you today. So hopefully I'll be able to match up with--the files that you have with the names in your e-mail attachments.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c: So (b)(6), (b)(7)c doesn't ring a bell. How about (b)(6), (b)(7)c

MR. GOULD: [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c: It was just like a little handwritten note or a note that you had a name listed and a phone number, and it said Cheyenne. But I don't know if that was for Cheyenne Mountain or Cheyenne, Wyoming. It was a 719 area code.

MR. GOULD: [inaudible] Cheyenne Mountain, but I don't recall the conversation.

SPECIAL AGENT (b)(6), (b)(7)c: Do you remember Tony Mello (ph) asking you for any information to provide to the military for a Joint Chiefs of Staff briefing? Do you remember anything specifically?

This would have been within about a month or so of September 11th.

MR. GOULD: I recall conversations and the request for time lines, and I distinctly recall them wanting a PowerPoint presentation that we created.

SPECIAL AGENT (b)(6), (b)(7)c: Okay.

MR. GOULD: That's pretty much it. I don't think we provided [inaudible] anything specific other than chronologies and the presentation.

MS. : This is for the Joint Chiefs of Staff?

MR. GOULD: Yes. I do specifically recall the conversation that a request was made for somebody to do a presentation to the Joint Chief.

SPECIAL AGENT (b)(6), (b)(7)c: Do you remember who that came down from to you?

MR. GOULD: I'm thinking maybe that's what I talked to (b)(6), (b)(7)c about.

SPECIAL AGENT (b)(6), (b)(7)c: Okay.

MR. GOULD: That he had called me

mc

[inaudible]. I don't remember. But I specifically remember getting a call directly over that, and then there was another request that came down through--it probably came through Mello [inaudible]. The first one came directly to my telephone [inaudible].

[Laughter.]

SPECIAL AGENT (b)(6), (b)(7)c Just lucky, I guess.

MR. GOULD: Right.

[Pause.]

MR. GOULD: Now, the conversation that I recall was that the Joint Chiefs was mentioned in the conversation. You know, that could have been just a ruse to get me to provide the data in a more timely manner. I don't know whether they thought I may have been--you know, chain of command or I didn't realize that it was a hot item and that I wasn't going to sit on it, but I just remember I received a call and they asked the general question and I gave them what I had.

SPECIAL AGENT (b)(6), (b)(7)c [inaudible] could have been just throwing titles around?

MR. GOULD: They could have been, absolutely. You know, I don't know.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Did they copy all the files off of the [inaudible] for you?

MR. GOULD: [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c If you just want to drag that 9/11 folder onto this [inaudible] my drive, that would be fine.

[Pause.]

[Inaudible comments.]

SPECIAL AGENT (b)(6), (b)(7)c Okay.

[Inaudible comments.]

MR. GOULD: Forty gigabytes.

SPECIAL AGENT (b)(6), (b)(7)c How much?

MR. GOULD: Forty. Which is pretty similar to what you said the other one was.

SPECIAL AGENT (b)(6), (b)(7)c What other one?

MR. GOULD: You said my original had about 40--

SPECIAL AGENT (b)(6), (b)(7)c That's the size of your other hard drive, yeah.

MR. GOULD: This one was 37. It changed.

[inaudible]. Now you've got 68 [inaudible] 42.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Do you guys have any other questions?

MS. : Not so far.

SPECIAL AGENT (b)(6), (b)(7)c It's my understanding that on September 11th, there were more than just what we now know were the four hijacked aircraft that had kind of come onto FAA's proverbial radar screen.

MR. GOULD: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c Do you guys--have you guys documented that?

MR. GOULD: The other aircraft?

SPECIAL AGENT (b)(6), (b)(7)c Yeah, that you guys were following [inaudible]--

MR. GOULD: We did the four, and then the fifth one, which was a Delta aircraft, I did an informal file on that one. That's downstairs in Mr. Myers' (?) archives.

SPECIAL AGENT (b)(6), (b)(7)c Is that the 1989--

MR. GOULD: Yes, the 1989, so we did work that one. There was a lot of [inaudible] to that

one initially so I could probably have 30 or 40 pages of information in that little folder.

Now, the other ones, I know we've worked-- there was a Northwest aircraft [inaudible] diverted to Canada. There was a Korean Air--a number of other ones that we probably had conversations over that we may have requested information on. I don't recall ever creating any briefing items on any given aircraft. I know we worked it, and there may have been just notes, a Word document that was just [inaudible] format type of a reference [inaudible] verbally. And whether or not he took them [inaudible] with it, I don't know. But, yeah, there were a number of other aircraft that were involved that we [inaudible] receive information that highlighted the aircraft or, you know, somebody wanted information [inaudible] FBI, NTSB [inaudible]. But there were other aircraft, other than the--

MS. : But you don't recall any briefing paper--any briefing documents, right?

MR. GOULD: I do not.

MS. : Other than the four--

MR. GOULD: No, I did not ever do any other formal briefing on any of the other aircraft. The Delta and the Korean Air were pretty significant, so there may have been early on a small briefing paper on one of those two. But I'd have to go back and look through the files. I honestly don't remember. I know I did verbals of what we had with the information that was off my notes, from memory, from conversations that I had with the appropriate [inaudible] facilities. I honestly don't recall specifically what was on [inaudible] provided the information.

SPECIAL AGENT (b)(6), (b)(7)c If you were interested in trying to determine what other aircraft you guys were looking at at a given time, you know, in addition to the four hijacked aircraft, what do you think the easiest way to--

MR. GOULD: To determine that?

SPECIAL AGENT (b)(6), (b)(7)c Yeah.

MR. GOULD: To re-create it, I would go to the log from the [inaudible]. I would go to Mary's

handwritten log. And then [inaudible] my e-mail would have been the best source. The majority of all my requests went out via e-mail [inaudible] fire off 20 requests. That would have been the best way for me to re-create [inaudible] that e-mail [inaudible], you know, as the sequence of events [inaudible] pick up the phone, call the specific region that was working that aircraft and give them the call sign and tell them to [inaudible] whatever they need out of it. [inaudible] Air was a big one. I know we did a lot of conversations with them, Delta we did [inaudible] two airplanes.

The other ones, I think predominantly we probably just passed information about where the aircraft was, what communications were--whether or not cockpit doors were secure, and ETAs, once they got on the ramp, when we put them, whether the aircraft was in a secure location, and then, you know, [inaudible] the aircraft. There wasn't a lot of other details that [inaudible]. We were basically just facilitating information for the FBI

or whatever law enforcement wanted that information.

SPECIAL AGENT (b)(6), (b)(7)c I've spoken with the--a few different times with some folks from the 9/11 Commission, and they had indicated that they were able to get some wave files from recordings at the Command Center. Do you guys still have that information?

MR. GOULD: Wave files from--

SPECIAL AGENT (b)(6), (b)(7)c Command Center, yeah. They're--

MR. GOULD: More than likely I'm the one that created the wave files because a lot of facilities didn't have the software and the expertise of how to do it. So a lot of times they either, you know, sent me a tape and I digitized it or I recorded it on the telephone--

SPECIAL AGENT (b)(6), (b)(7)c I guess in particular what I'm interested--I think it's Alan King's position which--LOM or something like that. Is that something that we might be able to get from you guys?

MR. GOULD: Those tapes?

SPECIAL AGENT (b)(6), (b)(7)c That wave file.

MR. GOULD: Yeah, I'll be able to tell you whether I've got them.

SPECIAL AGENT (b)(6), (b)(7)c It's being copied to my drive right now?

MR. GOULD: Yes, sir.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. : It's done. It [inaudible].

MR. GOULD: There's two Command Center folders here for whatever reason. This one is just logs. Command Center [inaudible] documents. Those are logs, too. [inaudible] those reference specific aircraft.

[Pause.]

MR. GOULD: There's some [inaudible] facility [inaudible] where it came from. You see how the structure is on this, individual aircraft, I tried to isolate it a little bit. [inaudible] wave files and then just [inaudible] transcripts [inaudible].

More than likely, you know, immediately following I would not have had a wave file from the Command Center. Even when we went to creating transcripts, which the Command Center did not actually do, they sent us these certified voice tapes, and we sent them to our evaluators to create. So the evaluators maybe created some wave files afterwards. I mean, is there a specific file you're looking for?

SPECIAL AGENT (b)(6), (b)(7)c Yeah, there is, and it's for...

MR. GOULD: [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c position and it starts at, I think, like--is it 8:15 or 8:45?--and runs for a couple of hours. I don't know how many wave files it is. I just know--I have--not with me, but a transcript and I can send you an e-mail.

MR. GOULD: It may [inaudible] Commission or--

SPECIAL AGENT (b)(6), (b)(7)c I think it had been because even the transcript has a very late date on

it, like '03 maybe.

MR. GOULD: The transcripts weren't created until the Commission. They were specifically created for the Commission.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: The Command Center did not post-event do any transcripts. They just provided us [inaudible] provided chronologies for us. They just never [inaudible] involvement that we needed transcripts, so that's kind of a new thing.

SPECIAL AGENT (b)(6), (b)(7)c Well, if it's all right, I'll send you an e-mail with--I think Alan King, and there was [inaudible] different position down there.

MR. GOULD: Right click on the wave file, properties, typically that will tell you who created each PC, if it's a registered PC, who created the wave file. That may help us find out [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Yeah, I don't have the wave files. I have the memo transcript form that you guys put together for the positions. It's

mc

just that the--Alan King's position, I guess there was something wrong with the time channel on the tape.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c So in order to re-create the time for a couple of events on there, I've got to actually have the wave file and run it through and then add that [inaudible] time to whatever the start time is to kind of figure that out.

[Phone interruption.]

SPECIAL AGENT (b)(6), (b)(7)c So is the heat in here like a ploy to keep you out of your office?

[Laughter.]

MR. GOULD: It's terrible, isn't it? It's so inconsistent. Yesterday I froze. Today I'm dying.

MS. : [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c My office is the exact same way. In the summer it's freezing and in the winter it's boiling.

All right. I think during the last

interview that we had with you, you had indicated that you, Dan Diggins, Mary Kate Strawbridge, Katherine Myers, Jeff Myers, and Molly Boyne worked on putting together the summary of air traffic hijack [inaudible].

MR. GOULD: Yes.

SPECIAL AGENT (b)(6), (b)(7)c The information you collected--that you used to put this together came from digital voice tapes, radar data, notes, date-time stamps on the voice recordings, and things like that.

MR. GOULD: Yes.

SPECIAL AGENT (b)(6), (b)(7)c This time line or chronology here is--it's got the grid. We just call it the grid time line. It's got the four flights and then different events and then a time for each of the flights. It says, "First sign probable time flight was known to be in distress. NORAD needs notification, estimated crash time." And the next page starts, "Notification chronology," and then it has American 11, the next page is 175, et cetera.

If I remember correctly, last time you said--I think that you said that you and Diggins had worked on this document.

MR. GOULD: We worked on it when it was in this type of format. I don't recall it evolving into this format.

SPECIAL AGENT (b)(6), (b)(7)c You don't recall it evolving into that grid format?

MR. GOULD: Yeah. I don't. But I do recall putting a number of--I mean, we did these hourly. We did updates on individual chronologies of each aircraft, and then I do recall seeing this but I specifically don't recall working on the physical grid. I just--it's just not a format that, you know, I'm accustomed to.

SPECIAL AGENT (b)(6), (b)(7)c Do you know who did that?

MR. GOULD: This is the one I looked up on the PC to determine the properties, and it came up with [inaudible] as a signature stamp, which just tells me which PC it was generated from.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: And at that time that was a floater. There was no personnel specifically assigned there, so I--

SPECIAL AGENT (b)(6), (b)(7)c That computer?

MR. GOULD: That computer, right. So that workstation. I know a couple people were--we all worked in this bay, you know, so like Katherine's workstation is normally down the other side of the hallway, so she could have been working on it. It all depends--you know, if I can find it in here, I believe we called it a specific name. I'm thinking it was Darlene.

SPECIAL AGENT (b)(6), (b)(7)c The document's name was Darlene?

MR. GOULD: We named it, which tells me-- from Darlene Fieldman (ph).

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MS. : Freeman.

MR. GOULD: Freeman, thank you. She was probably the requester or the purpose of the document being generated. It was Darlene notification, and it tells me that it was created

[inaudible] title, Notification Chronology, date modified September 17, 2001, 10:20 a.m., and the size. And there's one--a couple or three versions. I only see one here.

SPECIAL AGENT (b)(6), (b)(7)c Well, the version I have here is--it says revised on September 18, 2001, at 1400.

MR. GOULD: That was the stamp. Let me open it and see what it says on [inaudible]. This one doesn't have that stamp [inaudible], and it's a different format, too. So I can go back and look-- I know I've seen it. Grid of events, there it is. This [inaudible]. It's called Darlene Notification, grid of events, grid of events three, grid of events two. So there's quite a few [inaudible] it says September 18th, 1400.

SPECIAL AGENT (b)(6), (b)(7)c What's the name of that file?

MR. GOULD: Grid events-- gridofeventsthree, no spaces, gridofeventsthree, and properties are (b)(6), (b)(7)c (ph), title, American 11, September 18th at 3 o'clock in the afternoon

straight up. Oh, I'm sorry. It says created Friday, July 23, 2004, at 10:55, last modified Tuesday, September 18, '01, at 3:00.

SPECIAL AGENT (b)(6), (b)(7)c Does that have a DOT extension?

MR. GOULD: No. It's a Word document.

SPECIAL AGENT (b)(6), (b)(7)c DOC extension?

MR. GOULD: It's DOC. That's strange. I think [inaudible]. It's on your hard drive. That is under the miscellaneous folder.

SPECIAL AGENT (b)(6), (b)(7)c We had seen a couple earlier versions of the document with that grid time line, and the earlier version, like the--what I believe looks like the final version here has no notification time for United 93. It just says NA. And then for American 77, it says 9:24. And I have an earlier version of this grid time line, and it shows a notification time for United 93 at 10:08. And it's got Dave Canoles' handwriting here. It says NA. And the reason we know it's Dave's, because he told us that was his handwriting.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c Do you remember any discussion about changing that time or--

MR. GOULD: I recall during those events we had conversations reference on time because at that point we were--because of the level the documents were going to, we were kind of determining how credible some of our times were depending on what source. There was the conversation whether it was validated via automation, either a digital clock, time stamp on the voice tape, or radar data, or was it physical, a handwritten note that someone was keeping. So as we gathered the information, we may have acquired a time and then later on gone back and said, okay, what was the source. And if it was not a digital stamp, we may have tossed it aside and determined that it was not a formal or official time because we didn't have that stamp. And I don't recall specifically with that document that we did that, but I do recall [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Your process.

MR. GOULD: Yeah, that during the

briefings that we created, we did go back and change some documents because we either invalidated a time, corrected it, or determined that it was not necessarily a valid time because we didn't have the new mechanism to do it other than a handwritten note.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Well, the reason that we're asking about this is because the Commission's investigation determined essentially that the FAA's notification on United 93 didn't come until, like, 10:07 and a bunch of seconds.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c So it would average out to about 10:08. And so you--

MR. : It looked initially--

SPECIAL AGENT (b)(6), (b)(7)c It looked like you guys had it right initially and you took it off. And I had--based--working off of the process that you and other folks in your group had described for us, we had gone through some of the other files that had been provided to us, including he has a copy of your S drive.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c And on the S drive, we found a partial transcript from Cleveland Center's military operations specialist. And this document has got a date in the memo of September 17, '01. And it looks like a valid source for that time. I've got some notes on there that I handwrote so I knew when I got the thing from.

MR. GOULD: Sure. Now, this would have been a valid time that would have been utilized. Now, I guess as you go through the thick of the battle, you may pull a time, and the time gets jotted down but may not recall the source immediately [inaudible] discussion, if you can't recall where it came from, drop it off, go back to research it. But this would have been a valid source.

SPECIAL AGENT (b)(6), (b)(7)c I looked at the document properties, too, and they correspond with the date on that memo.

[Pause.]

SPECIAL AGENT (b)(6), (b)(7)c Do you remember

anything further about that?

MR. GOULD: No, not specifically. That would have been a logical source for the time. It really would have. So I can't imagine why we would have taken it off other than, you know, not recalling where it came from and thinking it was a verbal, from a statement, or office manager's notes.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: If you're asking if we changed it for any other reason, the answer from me is absolutely not. My, you know, [inaudible] the relationship I had with [inaudible] and Canoles is it is what it is. That was our mentality. [inaudible] whatever. We just report what we know. Occasionally we'll put in an opinion. Typically, it's just the facts or our best interpretation of the data on what we know the facts are. You know, we had no drive to spin anything or to change, so under the heat of battle, we created what we did based on the information we had at hand, most of it preliminary. It took us a long time to get the

mc

hard-core data where actually we could formulate answers. But that came later on, and most of the time [inaudible] generated [inaudible] to reflect or to, you know, go back with lessons learned, say we got this one wrong, and [inaudible]. We just didn't do that. We briefed it up [inaudible] went back and re-created any documents and said, no, our time [inaudible]. But, you know, the documents are just based on what we knew at the time.

SPECIAL AGENT (b)(6), (b)(7)c This 10:07 or 10:08 is a few minutes after that plane -- [tape ends].

SPECIAL AGENT (b)(6), (b)(7)c Actually, we had gotten--somebody had a back-up of the S drive on their computer, and that's where we had gotten that. I guess they, like I do at work, [inaudible] get destroyed.

I forget what we were talking about.

MR. : 10:07, 10:08.

SPECIAL AGENT (b)(6), (b)(7)c Oh, right.

MS. : [inaudible].

MR. GOULD: None of the investigators did. [inaudible] conversations about that. That was

something that we [inaudible] thought about it. There was a lot of conversation surrounding it. Nobody asked Dave Canoles [inaudible] the investigators [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c This document is titled "Notification of DOD Time Line." Does that look familiar?

MR. GOULD: No, it does not. [inaudible].
[Pause.]

MR. GOULD: Yeah, I do remember seeing this. We did not--I did not generate it. I don't [inaudible] but I do recall seeing this [inaudible] handwritten notes.

SPECIAL AGENT (b)(6), (b)(7)c What do you recall about it?

MR. GOULD: I just--

SPECIAL AGENT (b)(6), (b)(7)c The format and everything looks--

MR. GOULD: [inaudible] recall seeing it [inaudible]. I don't recall working on it or creating it. I just recall seeing it.

SPECIAL AGENT (b)(6), (b)(7)c Okay. This is a

document entitled "Chronology of the attacks of September 11, 2001, and subsequent events through April 30, 2002." It was created by the historian that used to be in Public Affairs.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c Did you--

MR. GOULD: See that?

SPECIAL AGENT (b)(6), (b)(7)c Yeah.

MR. GOULD: I remember--

SPECIAL AGENT (b)(6), (b)(7)c You can pull it out of the sleeve if you want.

MR. GOULD: A number of folks that came down and wanted to capture events. We gave them access to our files. We did some interviews. I've never seen it before. I knew they created it.

SPECIAL AGENT (b)(6), (b)(7)c Okay. So the folks that came down to look through your files and talk to some of your folks, you think this is what they were working on or--

MR. GOULD: Yeah. I specifically recall Tony Ferrante (ph) coming to us and saying that, you know, the historians are coming to conduct some

interviews and they want to look at some of our chronologies to capture and historically document the events. And also, I believe Mitre CASSD was involved in that [inaudible]. Mitre CASSD, it's a contractor that we have.

SPECIAL AGENT (b)(6), (b)(7)c What do they do?

MR. GOULD: They're basically, I think, [inaudible], if you will. They're a contractor that we often hire to put together presentations or assessment of evaluations of given programs [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Mitre, like in M-i-t-r-e?

MR. GOULD: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c Okay, that Mitre.

MR. GOULD: C-A-S-S-D, Mitre CASSD. I just recall--I think it was (b)(6), (b)(7)c. I recall him coming in. I'm almost positive it was in reference to this.

MR. : [inaudible]?

MR. GOULD: Yes.

MR. : [inaudible].

MR. GOULD: Anytime, 11:00 and 2 o'clock.

MR. : [inaudible].

MR. GOULD: Okay. I just recall (b)(6), (b)(7)c
(b)(6), (b)(7)c coming in. I was in (b)(6), (b)(7)c (ph) office
[inaudible] (b)(6), (b)(7)c and somebody else.

MS. : Does he work for Mitre
CASSD?

MR. GOULD: Yes, he does. I'm almost
positive that's [inaudible] to capture this.

SPECIAL AGENT (b)(6), (b)(7)c: Do you know who
(b)(6), (b)(7)c is? (b)(6), (b)(7)c

MR. GOULD: Yeah, she's an author. Did
she not write a book?

MR. : Yeah, I have that book.

SPECIAL AGENT (b)(6), (b)(7)c You have the book?

MR. GOULD: Yes, I do.

MS. : Do you know where she is?

MR. GOULD: Do I know where--yeah. She's
in Baltimore. She lives in Baltimore.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Isn't she a
contractor for the FAA as well? She shows up on
your phone directory as a contractor?

MR. GOULD: Does she? I recall in the book it lists her relationship with FAA. I think she was retired FAA and joined some other [inaudible] contractor [inaudible]. They retire from us--

SPECIAL AGENT (b)(6), (b)(7)c Retire for five years and come back.

MR. GOULD: Yeah, come back as a consultant or some other [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Do you know who she's working for in particular?

MR. GOULD: Right now?

SPECIAL AGENT (b)(6), (b)(7)c Yeah.

MR. GOULD: You looked her up in the directory?

SPECIAL AGENT (b)(6), (b)(7)c Yeah, that doesn't-- it just lists her routing symbol.

MR. : [inaudible].

MR. GOULD: No, I don't. You know, in the back of my mind, I'm thinking maybe she was with (b)(6), (b)(7)c doing the interviews, but she may have been another interviewer. I think I did three of them.

I know (b)(6), (b)(7)c was there. For some reason (b)(6), (b)(7)c actually bought the book and sent it to me.

SPECIAL AGENT (b)(6), (b)(7)c When you were in Iraq?

MR. GOULD: Yes.

MR. : "Here, you may want to read this."

MR. GOULD: And she looked familiar, so I'm thinking she may have been one of the ones that came--

SPECIAL AGENT (b)(6), (b)(7)c [inaudible] third interview.

MR. GOULD: I think I did her, I did (b)(6), (b)(7)c and somebody was with (b)(6), (b)(7)c And then the third one was somebody else within the agency. [inaudible] the face, but I know there was a third interview.

SPECIAL AGENT (b)(6), (b)(7)c Did you ever see the Mitre CASSD product?

MR. GOULD: No. The only product I ever saw was the book.

MS. : Oh, you mean Mitre CASSD

wasn't working with the historian to produce that--

MR. GOULD: I believe they were. But I don't know because I've never seen what either Mitre did or what--I've never seen that box. I'm not sure whether Mitre participated with the agency's historian to come up with this document or they created something on their own.

SPECIAL AGENT (b)(6), (b)(7)c [inaudible]

MR. GOULD: How do you spell her last name?

SPECIAL AGENT (b)(6), (b)(7)c I think it's (b)(6), (b)(7)c

MR. GOULD: (b)(6), (b)(7)c

SPECIAL AGENT (b)(6), (b)(7)c Just i.

MR. GOULD: (b)(6), (b)(7)c [inaudible]

programming and financial management, ASD-310, physical address is 1250 [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c I actually have it. I just didn't bring it with me.

MR. : [inaudible].

MR. GOULD: I know I saw her before when she came in to do the interview. The interview was basically [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: Basically told spill your beans.

SPECIAL AGENT (b)(6), (b)(7)c There's a website that FAA has set up called FAA Response. Have you seen that?

MR. GOULD: That's in regard to 9/11.

SPECIAL AGENT (b)(6), (b)(7)c It is.

MR. GOULD: I have not seen it, but I've heard a lot about it.

SPECIAL AGENT (b)(6), (b)(7)c Could it be maybe Mitre worked on that?

MR. GOULD: No.

SPECIAL AGENT (b)(6), (b)(7)c No?

MR. GOULD: No. What I recall Mitre--I just recall (b)(6), (b)(7)c interviewing me, and the historical documentation was what was standing out in my mind when I referred to it. I actually know (b)(6), (b)(7)c from the new job, and that's--you know, he actually was in the office last week, and it just totally came back: Hey, I know you. You interviewed me.

SPECIAL AGENT (b)(6), (b)(7)c Do you have a number for (b)(6), (b)(7)c

MR. GOULD: Sure. (b)(6), (b)(7)c

(b)(6), (b)(7)c dot, (b)(6), (b)(7)c at Mitre, M-i-t-r-e, dot-com. Work phone is (b)(6), (b)(7)c It's (b)(6), (b)(7)c

MS. : (b)(6), (b)(7)c

MR. GOULD: Yeah- (b)(6), (b)(7)c . He's actually working aerospace programs. He's a very knowledgeable man.

SPECIAL AGENT (b)(6), (b)(7)c This is a fact sheet that Public Affairs put together, and I guess they published it initially like in August of 2002. It's a chronology of events for September 11th.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c Do you remember if they had run that by you before they put it out or you provided them with any materials to put that together?

MR. GOULD: We provided them a lot of initial information on [inaudible]. After Tony Ferrante returned from Chicago, he predominantly became the focal for sharing information with

Public Affairs. So they'll send a request to him, and either he'll dig it up himself or he'll come to us and just ask for generalized information, but may not tell us it's for Public Affairs.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: So I don't recall specifically any given request that came down from them.

SPECIAL AGENT (b)(6), (b)(7)c This is a document titled "FAA Communication with NORAD on September 11, 2001." When were you in Iraq, again?

MR. GOULD: I was in--I went twice. I went last year from June to the end of August, early September, and then again this year, March through the end of July.

SPECIAL AGENT (b)(6), (b)(7)c So June of '03 through August.

MR. GOULD: Basically right in the middle of the 9/11 Commission.

SPECIAL AGENT (b)(6), (b)(7)c Maybe that was lucky. Does that look familiar to you at all?

MR. GOULD: No.

SPECIAL AGENT (b)(6), (b)(7)c All right. Do you--

Jane Garvey testified in May of '03 before the Commission. Do you remember having to help prepare any briefing packages for her, anything like that?

MR. GOULD: Yeah, I remember the fire drills before that, yes. Predominantly what we did was just go in and dust off our old briefings and, again, gave them to Tony Ferrante. He put out [inaudible] put them in the format and sent them up through the director's office.

SPECIAL AGENT (b)(6), (b)(7)c The Director of Air Traffic?

MR. GOULD: Yeah, Air Traffic, whoever that was [inaudible] '03, [inaudible] Peacock still. We dug out [inaudible] updated and corrected them, but I don't have any recollection whether we did or did not. He may have just taken the documents as they were.

SPECIAL AGENT (b)(6), (b)(7)c This is a document titled "Chronology of Events 9-11-01."

[Pause.]

MR. GOULD: Okay. Looking at--what do I know about it? I've seen it. It looks like--it's

like a master log [inaudible]. The part that confuses me is the CIA comment. That would have been...

SPECIAL AGENT (b)(6), (b)(7)c Was that for the video conference?

MR. GOULD: Yeah, it...

[Pause.]

MR. GOULD: To me it looks like it's the Washington op center log. That's where the majority of these are coming from. But it could be, you know, just a consolidated list. I don't specifically recall. [inaudible] the difference, and that would have been [inaudible]. So that would have been, you know, Canoles and that group. And you've got information from the Washington op center, their log. They've got regional ROC log entries in here, so it's--to me it looks like somebody put this together. [inaudible] utilized all the logs we had at the time. But I would assume this is a document that was created a couple days after the event because we wouldn't have had this information [inaudible] that day or

immediately following. Those logs would have been [inaudible] days.

SPECIAL AGENT (b)(6), (b)(7)c Do you know who created that document?

MR. GOULD: No. You may be able to do a search on the hard drive, and it may be in there.

SPECIAL AGENT (b)(6), (b)(7)c All right.

MR. GOULD: [inaudible] find properties, but I don't recall. I didn't create it [inaudible] acronyms.

SPECIAL AGENT (b)(6), (b)(7)c Do you think it's a relatively fair statement to say that the stuff that you and your group that put together--you put that little footnote at the bottom that says "By AAT-20," and revision date and time?

MR. GOULD: [inaudible].

SPECIAL AGENT OWENS: That's what you guys were trying to do?

MR. GOULD: Yeah. I specifically recall that first day--or maybe it was the second evening that Canoles came in and just reiterated make sure you put a stamp at the bottom, and the phrase was

"so we get the credit" to know the source.

MR. : If you want to call it credit.

MR. GOULD: I just--

SPECIAL AGENT (b)(6), (b)(7)c Or blame, right?

MR. GOULD: That's right. Exactly.

[Laughter.]

MR. GOULD: But that was a pretty standard format, just so it was identified so that later on we could go back and [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c This next document is titled "Chronology of September 11, 2001," and then it lists out each of the four hijacked flights and their--where they came from and where they were supposed to go to. Does that look familiar to you? And if it does, if you could just tell us what you know about it.

[Pause.]

MR. GOULD: I would say initially it looks vaguely familiar, but the data in it [inaudible] the format that I recall using a couple days after the event for a briefing we had to prepare. It was

pretty thorough.

This one looks like a consolidated--I'm trying to recall how we did this. Initially, we broke it down into the four--a chronology based on individual aircraft, there were four separate. But at some point we had a briefing that was requested that we put together for all of them, and it was surrounding the PowerPoint [inaudible] the PowerPoint was created that we consolidated and came up with a stand-alone document that covered all four aircraft in a time line. And then Dave and I discussed the PowerPoint. Dan said [inaudible] graphical presentation of a very abbreviated version of this to give, you know--but this was the initial document that we created as a complete [inaudible]. I know you've got the individual ones.

SPECIAL AGENT (b)(6), (b)(7)c Right.

MR. GOULD: If you look at those and then you--all we did was cut and paste to create this, so it came from--generated from the same actual data.

mc

SPECIAL AGENT (b)(6), (b)(7)c Do you know what the briefing was for that you were having to put that together?

MR. GOULD: At some point around that time frame, we created a briefing for the Secretary's office and it was going to go to the White House.

SPECIAL AGENT (b)(6), (b)(7)c You said "at that time frame." What--

MR. GOULD: Right around the time that we were creating that in the PowerPoint, but I don't recall whether--that was created just prior to our completion of the PowerPoint. You know, that was pretty easy to put together. But it took us a little while to do the PowerPoint. At that point that was a new technology to us. The way we-- through the radar data and the voice tapes and embedded it, that was something--it was really the first time we ever [inaudible]. So that took us a little while to prepare it. In the back of my mind, I'm thinking that we did that and we provided it to Canoles, went all the way up to the tenth floor to the director's office, to the

administrator to be utilized in a briefing I believe at the Secretary's level, and then the PowerPoint was created and they all [inaudible] to the chief of staff at the White House. I know we provided something over there and it was a consolidated briefing. Whether it was just the PowerPoint or a combination or just that, I just don't recall. Make sense?

SPECIAL AGENT (b)(6), (b)(7)c It does.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c Is that PowerPoint on your hard drive there?

MR. GOULD: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Can you look and see what time period roughly that was created?

[Pause.]

MR. GOULD: [inaudible] July [inaudible].
Let's see here.

[Pause.]

MR. GOULD: [inaudible] says June 9th,
this one.

September 21, 2001, 1:04 p.m. I was

thinking it was the 17th or 18th. But that may be when we first created the chronology of [inaudible] zip version of that date stamp.

SPECIAL AGENT (b)(6), (b)(7)c September 21, '01?

MR. GOULD: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: Here's one that's got a date stamp which is the basic--doesn't have the [inaudible] attachment, September 18th. There's one, two, three, four of them, various dates. One was the 18th and two were the 21st.

SPECIAL AGENT (b)(6), (b)(7)c You said September what?

MR. GOULD: 21st, there's two, and then there's one on the 18th.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: I was thinking the 17th, 18th.

SPECIAL AGENT (b)(6), (b)(7)c So you think that PowerPoint was a product that you and Diggins had pulled together to be used over at the Secretary's office--

MR. GOULD: Diggins did all the work, so--

[Simultaneous conversation.]

MR. GOULD: I just pointed him in the direction of how to use it, PowerPoint and what provided in the map--

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: --sent him down that road, gave him the wave files, I gave him the pieces and he put it together. But, yeah, it was--

SPECIAL AGENT (b)(6), (b)(7)c But you seem to recall, though, that it was put together to provide for a briefing at the Secretary's office and maybe even the chief of staff at the White House.

MR. GOULD: Yeah. You know, at that point we were trying to refine and use some of our tools that we had, you know, because it became evidently clear that a lot of people didn't understand air traffic and they couldn't--they couldn't read a piece of paper and put it together about actually how this all could have happened. So that's where we came up, well, let's give them a graphical presentation. We [inaudible] some of the voice tapes and the geographic size of the country to

help them understand, you know, you had a controller here in Boston and you've got a controller here in Indie(?). They're separated by a number of miles. They are not sitting side by side listening to each other, so there's no way they know what's going on.

So we came up with the idea, let's give them a graphical picture and maybe that will help put it into context. So that's why we came up with that. I think at that point it was because they were going to that level and we knew they wouldn't understand. We couldn't [inaudible] people within the building to understand.

SPECIAL AGENT (b)(6), (b)(7)c This next item is a copy--this is the copy of a folder that you actually gave to us from the boxes of records downstairs.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c And I think--I believe--

MR. GOULD: [inaudible]. Was it a blue--

SPECIAL AGENT (b)(6), (b)(7)c I don't remember

what color it was. It might be.

MR. GOULD: Yeah, I think it was a document folder.

SPECIAL AGENT (b)(6), (b)(7)c But I seem to recall that you described this as a package that you guys put together specifically for a White House briefing. Maybe you can clarify for me or just describe what you remember about that. And those were, you know, packages that were put together, and it was kind of stapled together, one for each flight, and putting the different sides of it.

MR. GOULD: Yeah, it was two on one and two on the other.

SPECIAL AGENT (b)(6), (b)(7)c Yeah.

MR. GOULD: Yeah, I recall those. September 14th. This would have been an early one. I think the chronology and the PowerPoint came afterwards. So this was probably--I remember spending--we did this late one evening, putting that together, broke actually--I can't say broke into, but we went to an adjoining organization's supply cabinet to find the blue folders.

[inaudible] yet, but I believe...I said this was the White House?

SPECIAL AGENT (b)(6), (b)(7)c I thought so. Is that what you remember? And that's like a Post-it note that was--yeah, that was a Post-it note at the bottom. It looks like you guys wanted it back.

MR. GOULD: Yeah, I think there's a number of them that--we gave them out. Our concern was because they were preliminary.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: They may fall into the wrong hands. At that point we were getting concerned about some of the information finding its way to the press or some other unauthorized--and Bill in particular had a tendency of taking things and leaving them on a table and walking out.

SPECIAL AGENT (b)(6), (b)(7)c Bill Peacock?

MR. GOULD: Yeah. So, you know, one of the directions of Mr. (?) 's was [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Well, this says Bill AAT-1. That would be Bill Peacock, right?

MR. GOULD: Bill Peacock, AAT-1 is his

mc

routing, September 17th. So that would have been probably the date that he did it. So maybe that-- maybe what we did was we prepared that for the White House and it didn't go over very well, and then that's when we came back and did the chronology. That actually falls in the perspective in my mind that the call came--you know, we did the briefing in that format. Then we did get a positive reception of our understanding of the events and created a consolidated chronology and then the PowerPoint and then went back over. Maybe he just took that portion to the Secretary's office and that's when [inaudible]--

SPECIAL AGENT (b)(6), (b)(7)c Oh, okay.

MR. GOULD: --table and created the consolidated memo to the White House. It could have been that.

SPECIAL AGENT (b)(6), (b)(7)c Do you know who specifically was involved in briefing the White House?

MR. GOULD: I just recall Dave Canoles, you know, requesting the information in a limited

time he gave us to put it together that was for a White House briefing. I distinctly recall him going up--actually, Bill actually came down, too, you know, to get a verbal briefing of where we are and help him understand [inaudible] and that it was for a White House briefing.

SPECIAL AGENT (b)(6), (b)(7)c Is that--I'm sorry. Go ahead.

MR. GOULD: Whether or not, you know, they actually did the briefing or they briefed, you know, each--you know how that works. You brief your boss, then your boss briefs [inaudible]--

SPECIAL AGENT (b)(6), (b)(7)c Right.

MR. GOULD: It eventually gets to the White House, or whether or not they brief the White House [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Around September 17, '01, does that sound like the right time period?

MR. GOULD: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c I just have a couple more things. I know I told you this wouldn't take but an hour. Now I'm already two hours--sorry.

MR. GOULD: [inaudible] okay.

SPECIAL AGENT (b)(6), (b)(7)c The new overview
MPEG--which I guess is like a movie?

MR. GOULD: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c Where did that come
from?

MR. GOULD: The overview MPEG?

SPECIAL AGENT (b)(6), (b)(7)c Yeah.

MR. GOULD: Is that the 3-D graphical
presentation?

SPECIAL AGENT (b)(6), (b)(7)c I think so. It's
the only--the only MPEG I've seen is the 3-D
graphical one. I don't know if FAA prepared one
or--

MR. GOULD: We didn't prepare a 3-D.

SPECIAL AGENT (b)(6), (b)(7)c That was the
military, right?

MR. GOULD: NORAD--yeah. I got a courtesy
copy of a NORAD version. I don't know if NTSD
created it.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: Depending on which one you

have, but it was not us. Our office didn't have the technology to do that.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Well, I have--basically it looks like--sort of like a cheat sheet somebody would use to kind of do a briefing on that new overview MPEG. I was wondering if you could tell me anything about that. And then, in particular, the thing I was obviously curious about because I highlighted it is it says here at the bottom that 924--the 924 event on this document says, "FAA reports possible hijack of American 77. Wash FAA label appears in pulse beam flash between Wash FAA and NEADS"--or NEADS, I guess they like to call it. And then there's a note, and it says, "Our analysts called NEADS to find out which FAA center made the call. NEADS recollected that it was most likely the Wash FAA that made the call. However, there were many players on the line by that time."

Do you know who--if this is somebody from FAA, if there's somebody from FAA that's dealing--having a conversation with NEADS about that

PowerPoint--or that MPEG?

MR. GOULD: Because it's got the classification mark on it, it didn't come from our office [inaudible]. Everything that we handled did not [inaudible] classification on it because we deal--dealt strictly with unclassified information.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: Very rarely did we get anything that was classified. To me, just by seeing that alone, I know it didn't come from our office. Now--

SPECIAL AGENT (b)(6), (b)(7)c It's marked unclassified. I just--

MR. GOULD: But it's got the classification, so, you know--

MS. : For the tape.

[Laughter.]

SPECIAL AGENT (b)(6), (b)(7)c Yeah, I just want to make sure that transcribers aren't worried that this is a classified interview.

MR. GOULD: Unclassified. The unclassified document classification statement

leads me to believe that it came from either the military or our security office.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: At that point our security office wouldn't have created anything MPEG. It would have--it would come to us to do it. So that would make me--lead me to believe this was a military document. So it's probably their [inaudible]. When I got the MPEG, I didn't get this document. This is the first I've seen this.

SPECIAL AGENT (b)(6), (b)(7)c Have you seen this before?

MS. : No, I have not.

SPECIAL AGENT (b)(6), (b)(7)c We're still working on coordinating--she has a lot more boxes than I do.

Do you remember doing any coordination or having any discussions with the folks at NEADS? Which is in upstate New York, right? Yeah.

MR. GOULD: I [inaudible] liaison. They work for me now. At that point, no. I recall the conversation over the log issue and the notifica-

tion to NEADS, but at that point I went through either the facility--the center and their MOS to get the information. I came to the guy that used to be here because this is a military ops [inaudible] used to sit at this desk, and he was our liaison with all the military [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Do we have that [inaudible] there?

MR. GOULD: No. It's Alton Scott.

SPECIAL AGENT (b)(6), (b)(7)c Who?

MR. GOULD: Alton Scott, who is the manager of military operations. So within each sector, which is NEADS, SEEDS, WADS, NORAD, the whole alphabet soup, we had an air traffic control specialist in each one of those as a liaison with [inaudible] commands. And Alton was the manager of those individuals. And so if we had a request, we would send it up to--Alton would have gone to the center responsible for the air space in question, and they would have reached out.

SPECIAL AGENT (b)(6), (b)(7)c On September 11th, did you have a clearance?

MR. GOULD: Security clearance?

SPECIAL AGENT (b)(6), (b)(7)c Yes.

MR. GOULD: I had one just because I was previously at Washington National. So I had a secret. I did not have--my top secret expired when I left the military. So I did have a secret. That's it. And Alton retired [inaudible]. He's still around.

SPECIAL AGENT (b)(6), (b)(7)c In the D.C. area?

MR. GOULD: Mm-hmm. He was a contractor.

SPECIAL AGENT (b)(6), (b)(7)c The FAA?

MR. GOULD: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Do you happen to have a phone number for him? We won't tell him who gave us the number.

MR. GOULD: I have a home number. It is 571--that doesn't sound right-- (b)(6), (b)(7)c That does not sound right. (b)(6), (b)(7)c

SPECIAL AGENT (b)(6), (b)(7)c In AAT-20, did you guys have the ability to store classified material?

MR. GOULD: Yes.

SPECIAL AGENT (b)(6), (b)(7)c You did.

MR. GOULD: I had a safe that was initially signed out to Mr. Ferrante. We may have actually moved the entire 9/11 file into that safe the days following after we felt we had--after that voice [inaudible], we had a voice [inaudible] that came up on national news of the events. A couple days afterwards.

SPECIAL AGENT (b)(6), (b)(7)c Oh, that must have been the impetus behind the "don't say anything" memos. I remember seeing something--

MR. GOULD: Yeah, we had to tape that [inaudible] to some reporter who broadcast it in the Chicago area [inaudible] into lockdown. We moved all our stuff off our desks and locked it into a four-drawer safe. It's still down there [inaudible] but it's empty. That's what [inaudible] so, yes, we did.

SPECIAL AGENT (b)(6), (b)(7)c I can give you a copy of that.

[Inaudible comments.]

MR. GOULD: Home number is (b)(6), (b)(7)c .
And the other number must have been a cell phone

because 3000 doesn't really sound [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Okay. I just have one last thing.

[Pause.]

MR. GOULD: All right. [inaudible] classified document.

SPECIAL AGENT (b)(6), (b)(7)c Yes, it is.

MR. GOULD: It's looks like--

MS. : [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c At least, yeah, where I got it.

MR. GOULD: I've never seen this one.

SPECIAL AGENT (b)(6), (b)(7)c Okay. You don't ever recall seeing that?

MR. GOULD: Never.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: It looks like it's a photocopy.

SPECIAL AGENT (b)(6), (b)(7)c It is a photocopy.

MR. GOULD: I just recognize formats [inaudible].

[Pause.]

MR. GOULD: No, I don't recognize it.

SPECIAL AGENT (b)(6), (b)(7)c All right. There's many references to NEADS log in the time lines. Where were you guys getting that information from that you end up--

MR. GOULD: In the back of my mind, I know I had the NEADS log, and I received a fax copy of it.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: How I got it I don't recall. Where it is today I don't know. We went and looked for it but I couldn't find it. But I know I had it in my hands. I know it was down there in that archive. It may be in there, but it may have just been--you know, now it's shuffled in with something else, you know, and it's really--I would reach out to Jeff Myers and ask him to physically go through page by page of all his documents. It's got to be in there.

MS. : But it's not this document that you just [inaudible]--

MR. GOULD: That is not, no. It is not

SPECIAL AGENT (b)(6), (b)(7)c So you remember something different than this.

MR. GOULD: I remember a typed log.

SPECIAL AGENT (b)(6), (b)(7)c Typed log.

MR. GOULD: Yes. Not a handwritten one.

MS. : Did it have that information though? Did it have those entries?

MR. GOULD: Not all of these. This looks like it's got a lot of other information that's going on during the day that I don't [inaudible]. The log I saw had specific information regarding the events, notification, reactions.

MS. : [inaudible]. Was this shortly after [inaudible] or was this [inaudible] if you remember?

MR. GOULD: I don't honestly remember. I recall seeing some of the documents you have that refers to the NEADS log early on. So I would have to say it had to have been early on.

SPECIAL AGENT (b)(6), (b)(7)c Well, we had spoken--I don't remember if you were there, Bridget, but when you were pulling documents for us--

(b)(6), (b)(7)c : No, I was not there that day.

SPECIAL AGENT (b)(6), (b)(7)c Yeah. We had spoken, Doug, and you were looking at some of the documents that you guys generated that had references to the NEADS log, and there were some that didn't.

MR. GOULD: Had references.

SPECIAL AGENT (b)(6), (b)(7)c Did not, yeah, but the ones that did not were earlier.

MR. GOULD: Yeah. You know, I'm thinking it would probably be [inaudible] just in context probably day two or day three that we would have gotten that because it would have taken the military that long to get the clearance to send the log to us. That's just--this is off the top of my head.

SPECIAL AGENT (b)(6), (b)(7)c Because this document that we've kind of called the White House briefing, the one from the folder had a September 14th date with no NEADS references. And then your September 17th and subsequent documents referenced the NEADS log, so you were surmising, I guess, for

lack of a better term, that you probably got that-- you got access to the NEADS information sometime between the 14th and the 17th.

MR. GOULD: Yeah, I don't recall having it immediately. It was two or three days into it, is what I recall. I just--you know, and then I was surprised when I saw it, when I actually got it. I didn't suspect that we would get it. I figured we'd just get the verbal time.

SPECIAL AGENT (b)(6), (b)(7)c But you remember seeing, you think, something typed?

MR. GOULD: Yeah, I do recall something typed.

MS. : And faxed over here?

MR. GOULD: Yeah, I recall--more than likely, again, it was faxed to probably (b)(6), (b)(7)c because he had a secure fax. So they would have gotten stuff directly from me since I work with NEADS every day.

MS. : (b)(6), (b)(7)c was what, again.

MR. GOULD: (b)(6), (b)(7)c He was the manager of military operations. He used to be APT-

200. So he worked for [inaudible] Jeff Griffith, APT-1, and all the military liaisons that we called them, each in a sector who have [inaudible] the sectors [inaudible].

MS. : You reported to him? All the liaisons reported to--

MR. GOULD: Yeah, they reported to him.

SPECIAL AGENT (b)(6), (b)(7)c And now they all report to you, right?

MR. GOULD: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: He would have been the interface to reach out [inaudible] investigation office [inaudible] come to him. I didn't do it. I don't know whether Dan or Tony or even [inaudible]. It may have been, you know, a request that was made from Peacock to Jeff to [inaudible] just a courtesy copy.

SPECIAL AGENT (b)(6), (b)(7)c The other things, I guess we just--there's a couple of documents that I want to try -- [tape ends].

-- 17 p.m. I was going to say, if I can

T2A

just go to (b)(6), (b)(7)c , I guess, who's your [inaudible]--

MR. GOULD: Yes.

SPECIAL AGENT (b)(6), (b)(7)c --for these materials, because one of the things I was curious about trying to find out is if the security had to set up this primary net, which is the telephone line that the military and some other organizations were supposed to be on, were supposed to have started like around 9/20 or something like that. Does that sound familiar? There was a log for that, right?

MR. GOULD: That conference, that net?

SPECIAL AGENT (b)(6), (b)(7)c Yeah.

MR. GOULD: Yeah, there would have been a log.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: I don't have--you know, I've seen so many logs, I'd have to [inaudible] if I've seen it. But, yes, that was done [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c That AOC, is that--

MR. GOULD: The security group?

SPECIAL AGENT (b)(6), (b)(7)c Yeah.

MR. GOULD: ASH. That's what they are today.

SPECIAL AGENT (b)(6), (b)(7)c I've seen reference to AOC. I think it's AOC.

MR. GOULD: I don't recognize that [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Well, I'll just get with Jeff on that.

MR. GOULD: He's got them all down.

SPECIAL AGENT (b)(6), (b)(7)c I'm sure he'll be happy to--

MR. GOULD: He's presently digitizing all of them [inaudible] piece by piece, scanning the net and getting [inaudible] names so he can quickly identify the documents.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Putting them all in PDF--no, they were using a different format, weren't they?

MR. GOULD: No. I think he was doing PDF.

SPECIAL AGENT (b)(6), (b)(7)c Oh, it was the sound files he was using wave instead of MP3.

MR. GOULD: Yeah, that I didn't
[inaudible].

SPECIAL AGENT (b)(6), (b)(7)c [inaudible] big
files.

MR. GOULD: Maybe it's his way of, you
know, keeping the common folks from [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c All the AOL'ers.
[Simultaneous conversation.]

MR. GOULD: But, you know, once he does
that, well, he can [inaudible] a CD direct
[inaudible]. You've got his name and number?

SPECIAL AGENT (b)(6), (b)(7)c Yeah, I've got all
that. All right. Well, thank you and I apologize.
This ran much, much longer than I had anticipated.

We're going to end the interview. It's
4:20.

[END OF INTERVIEW.]

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case # 042R0122001

SWORN INTERVIEW OF

JOHN DAVID CANOLES

(b)(6), (b)(7)c, SPECIAL AGENT

(b)(6), (b)(7)c, SPECIAL AGENT

Wednesday, November 10, 2004

1:11 p.m.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

SPECIAL AGENT (b)(6), (b)(7)c Today is November 10, 2004. The time is 1:11 p.m. We're at FAA Building 10A, Room 1015, in Washington, D.C. My name is (b)(6), (b)(7)c. Also present is (b)(6), (b)(7)c

(b)(6), (b)(7)c We're from the Office of the Inspector General, Department of Transportation, and we're conducting a review of issues involving certain public statements made by military and FAA officials, at a 9-11 Commission hearing, and elsewhere, that were allegedly inaccurate.

Today we're re-interviewing John David Canoles. Mr. Canoles, could you please acknowledge that you are aware that the interview is being tape-recorded?

MR. CANOLES: Yes. I'm aware it's being taped.

SPECIAL AGENT (b)(6), (b)(7)c Will you please raise your right hand?

SPECIAL AGENT (b)(6), (b)(7)c I will.

Whereupon,

JOHN DAVID CANOLES

was called as a witness and, after being first duly sworn, was examined and testified as follows:

SPECIAL AGENT (b)(6), (b)(7)c Will you please give your full name, spelling your last for the record?

MR. CANOLES: John David Canoles,
C-A-N-O-L-E-S.

SPECIAL AGENT (b)(6), (b)(7)c And you're currently the director for Air Traffic Safety Oversight Service?

MR. CANOLES: Correct.

SPECIAL AGENT (b)(6), (b)(7)c And your routing symbol is AOV-1?

MR. CANOLES: Correct.

SPECIAL AGENT (b)(6), (b)(7)c And on September 11th, you were the Director of Air Traffic and Air Safety Investigations?

MR. CANOLES: Yeah. I believe the correct title was Director of Air Traffic Evaluations and Investigations.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: And that routing symbol at the time was AAT-20.

SPECIAL AGENT (b)(6), (b)(7)c And how long had you held that position before 9-11?

MR. CANOLES: With a couple of interruptions, essentially since about 1991.

SPECIAL AGENT (b)(6), (b)(7)c '91. And then how long after did you continue to hold that job?

MR. CANOLES: I left in November of '01 to take over the Director of Emergency Operations.

SPECIAL AGENT (b)(6), (b)(7)c That's the Washington Operations Center?

MR. CANOLES: Right.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

We had previously interviewed you on September 30th, 2004. And we're interviewing you today because we had some technical problems with the tape recording, and we didn't get down everything we needed to on your notes.

MR. CANOLES: Okay.

SPECIAL AGENT (b)(6), (b)(7)c So, one of the things that we wanted to do was go over some of the documents that you had provided for us during the last interview.

MR. CANOLES: Okay.

SPECIAL AGENT (b)(6), (b)(7)c And (b)(6), (b)(7)c do you have the summary of Air Traffic Hijack Events?

SPECIAL AGENT (b)(6), (b)(7)c Yes.

SPECIAL AGENT (b)(6), (b)(7)c You're familiar with that document? The summary of Air Traffic Hijack Events?

MR. CANOLES: Yes.

SPECIAL AGENT (b)(6), (b)(7)c It's that color-bound book--

MR. CANOLES: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Book that's about a 1/4" thick or so.

MR. CANOLES: Right. Right. It's tabbed with [inaudible] with and so and so.

SPECIAL AGENT (b)(6), (b)(7)c Yes. It looks like that.

MR. CANOLES: That's it.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

This document was prepared by your staff. And I think the last time that you had mentioned that Tony Mellow[ph], and Dan Diggins[ph], Doug

Gould, Jeff Logue[ph], and Tony Ferrante[ph] had participated in putting this together primarily.

MR. CANOLES: Yes. I believe so, as individuals, and probably more. But those are members of my immediate staff.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And what was the reason that you guys put this together?

MR. CANOLES: This started out as, this would have been a synopsis that we would have prepared in the event of any aircraft accident.

Umm, following any fairly major accident, we would many times be roused from bed at 2:00 a.m. and come into the headquarters building, and begin building briefing books and papers for the administrator and others at the head of Air Traffic.

And it would contain similar information as to what this has. You know, a summary of salient events, issues that were pertinent, that might bring the Agency to criticism. Issues that could be systemic in nature that we needed to bring to management's attention, in order that they could

be corrected.

For example, if we found a flaw in a procedure, typically a transcript of voice recordings, or so on and so forth. This document was prepared much along those lines, but of course much broader and much more encompassing, to support the four accidents that occurred that day.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And I may, because we're reviewing, as you might know, some e-mails and other communications between, you know, AT-20 and some of the headquarters staff.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c And I have seen a couple of like little short briefings, maybe a paragraph or so in length at the most, about incidents that have occurred around the country.

MR. CANOLES: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Is it fair to say that most of the documents that you have just described for us involving other accidents would be similar to that? Maybe a paragraph or so? Or relatively a page or less?

MR. CANOLES: Yes. Probably a page. We termed them "alert bulletins" specifically.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: And again the purpose was to give upper management something they could throw in their portfolio and refer to during the day if they get press inquiries, or whatever. And again, just a bare summary of the facts.

This became more elaborate for a number of reasons. You know, specifically you know, we knew it was a document that was going to be referred to in the future; certainly given the magnitude of this collection of a events, versus a simple aircraft accident, we knew this was something people would study for years, and we wanted to build something as comprehensive and correct as we could.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And so then the consumer of this document would primarily be who?

MR. CANOLES: Primarily it was entities within FAA, and the Department of Transportation.

However, I know that we provided copies to the Federal Bureau of Investigation, and perhaps other government agencies. But I couldn't swear to that.

SPECIAL AGENT (b)(6), (b)(7)c Do you know if this was used for any briefings at the Secretary's office?

MR. CANOLES: That was not built on, on September the 12th I accompanied the administrator and the deputy administrator and briefed the Secretary on recorded radar data, and recorded voice tapes that we had collected on September the 11th.

SPECIAL AGENT (b)(6), (b)(7)c Yes.

MR. CANOLES: I don't believe that book was built at that time. And that's the only briefing that I was present at with the Secretary. So, while some of the content in that book was certainly shown to the Secretary, I don't think the book had been constructed at that point. Pieces of it, but not the collection.

SPECIAL AGENT (b)(6), (b)(7)c Okay. I think, you know, based on some date stamps within the

document, which say like "AAT-20, September 17th," '01, and there's a 6:30 a.m. time stamp.

MR. CANOLES: Uh-huh. Two or three days into this bill, you know, as soon as we had enough information to provide our leadership, we'd sit down and bang out an article [inaudible]. Okay. So six hours later, some other snippet would show up, which would not necessarily invalidate the previous bulletin, but it would provide updated information or more information.

And quickly, relatively quickly, within the first couple of days, we realized that it wasn't sufficient to stamp this stuff with the date that it was produced. And we actually started putting times on it.

I don't know how good we were at that discipline, but that was the conscious decision we made, so that we could try to hopefully collect out-dated information and destroy it as we produced the new stuff.

SPECIAL AGENT (b)(6), (b)(7)c Okay. So that was something that you added to try to basically track

what you were producing?

MR. CANOLES: Yeah. Because it became a monumental task.

SPECIAL AGENT (b)(6), (b)(7)c So you said, again on the 12th you went over with whom?

MR. CANOLES: It was the 12th or the 13th. It was with Monty[ph] Belger[ph], the Acting Deputy Administrator, and Jane Garvey[ph], the Administrator. And it seems to me, I did the first briefing for the FBI, and I think that was the morning of the 12th.

So it may have been the next day. I'm not sure which day was which. But I know we briefed the FBI quite early, I think on the morning of the 12th. We might have briefed the Secretary the same morning.

SPECIAL AGENT (b)(6), (b)(7)c Okay. So that around the 12th or the 13th, within a day or two.

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c You went over with Monty Belger and Jane Garvey to brief the Secretary, and presumably he had some of his staff

there.

MR. CANOLES: Umm, you know actually I that the four of us were alone when I did the briefing.

SPECIAL AGENT (b)(6), (b)(7)c Okay. So John Flaherty and--

MR. CANOLES: I don't remember John being there.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

Did you particular in any White House briefings?

MR. CANOLES: No.

SPECIAL AGENT (b)(6), (b)(7)c Were you aware of any White House briefings that the FAA had done concerning 9-11?

MR. CANOLES: Not specifically. I mean I'm sure they were done. They would have been done. But our focal in Air Traffic that did all that contact was Jeff Griffith.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: Jeff had done, in the military and White House liaison in his previous

position, and when he was elevated to the deputy position he [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Would you remember if you guys had gone over to the Secretary's office to help brief them for a White House briefing?

MR. CANOLES: No. The only briefing that I did for the Secretary was the one that I mentioned earlier. I don't ever remember going back to either department or the White House.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: And I had briefed at the White House for other events, and I recall those vividly. But we didn't on this one. Or I didn't. None of my staff did.

SPECIAL AGENT (b)(6), (b)(7)c Do you recall when you had gone over for the secretarial briefing, if you had been giving any taskings during that?

MR. CANOLES: No. My part of that briefing consisted of taking over CD ROMS on which we had recorded radar presentations and voice presentations. And I took those over and actually loaded them onto the Secretary's machine, his

personal computer, and then replayed the events for [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Did Monty or Jane get any taskings, that you can recall?

MR. CANOLES: Not that I recall.

SPECIAL AGENT (b)(6), (b)(7)c I've got the documents that you had given us the last time. So I'll just try to flip through these real quick.

This first one just looks like some notes. What can you add?

MR. CANOLES: To the best of my recollection, this was a piece of paper that I picked up someplace on September 11th. And it was probably in that conference room in which I conducted the telecom that we've discussed.

SPECIAL AGENT (b)(6), (b)(7)c That's the one in the Air Traffic Conference Room?

MR. CANOLES: Yes. And this page starts out with some writing that is not mine, down to about the first half of the front page. Everything that follows on the bottom and on the reverse is my writing. And this appeared to be, as I was on

speaker phone talking to various entities up in the Northeast, these were my notes for myself that I was taking, trying to keep up with things as they unfolded.

SPECIAL AGENT (b)(6), (b)(7)c So, when we're looking at this document, just for the point of reference in the future, there is a phone number. It looks like (b)(6), (b)(7)c .

MR. CANOLES: Right.

SPECIAL AGENT (b)(6), (b)(7)c So everything below that would be your handwriting?

MR. CANOLES: Right. That phone number is my handwriting too.

SPECIAL AGENT (b)(6), (b)(7)c What about this (b)(6), (b)(7)c

(b)(6), (b)(7)c

MR. CANOLES: (b)(6), (b)(7)c is my handwriting. The Services Cell is my handwriting. This little cut-out over here was [inaudible] (b)(6), (b)(7)c DECON[ph], and (b)(6), (b)(7)c . And the phone number is my writing too.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And all of this below and on the back--

MR. CANOLES: Right.

SPECIAL AGENT (b)(6), (b)(7)c I notice on here there's a reference to another aircraft, not one of the four. Or, I think that's Delta Airlines 1989.

MR. CANOLES: Correct.

SPECIAL AGENT (b)(6), (b)(7)c There were, other than, you know, American 11 and 77, United 93 and United[ph] 175, there were other aircraft that you guys were trying to--

MR. CANOLES: Right. A tremendous amount of confusion. Confusion is a bad word. Umm, there were a lot of suspect aircraft. Umm, you know, once these events became known and once the controllers became aware of them, and once management became aware of it, I think everybody was being overly vigilant, if you could have been overly vigilant that day. Perhaps it's a misnomer.

But anything that looked slightly out of the norm suddenly became suspect. So, for example--and I don't know if this is the one--but there was a Delta aircraft somewhere in the vicinity of Cleveland that we were attempting to

have land at Cleveland, or Cincinnati, or someplace like that.

And the pilot was giving the controller a bit of argument about it. You know, "I don't want to go there, I want to go someplace else."

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. CANOLES: And so, you know, I don't know. I didn't hear it all, and I didn't invest[ph] to all of it. But you know, there's a question of you know, "This guy's being uncooperative; maybe he's being hijacked too." So there was a lot of stuff like that going on.

SPECIAL AGENT (b)(6), (b)(7)c There was a [inaudible] United 947 [inaudible].

MR. CANOLES: That would have been Air Canada Coast Guard. This was a note, and as I recall it, the Coast Guard had reported to someone that they had heard calls from three aircraft: A United 947, an Air Canada 065, and a Continental 57, somewhere in the vicinity of Malcolm[ph] or Gander[ph], you know, and reported some type of anomaly with them. Which didn't pan out either.

SPECIAL AGENT (b)(6), (b)(7)c Did you guys put anything together after September 11th that kind of summarized the other aircraft that you guys were tracking in addition to the four hijacked airplanes?

MR. CANOLES: I don't think we ever did.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: It was so sporadic, and I mean, and this record-keeping, by my own admission stinks. We did a lousy job with it. But under the circumstances, it's kind of understandable. But I don't think we ever had a comprehensive enough record that we felt that it would have really been of use to [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Okay.

The next document that we have here from you is just titled, "Chronology of Events on 9/11/01."

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c And it has in the top left hand corner, I think it says (b)(6), (b)(7)c and then it's got a phone extension.

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c Like 78315. What can you tell us about this document?

MR. CANOLES: The handwriting is not mine. This refers to the tactical net; it refers to the primary net. So my assumption is that this was either put together by the Operations Center, or perhaps by Security. I don't recognize it.

This makes reference to the ACI watch, which was aviation security. So I assume that was theirs.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: And somebody obviously gave me a copy of it at some point along the way.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

And this document doesn't, like many of the others that were produced by your staff, it does not have an AAT-20--

MR. CANOLES: Right.

SPECIAL AGENT (b)(6), (b)(7)c Reference or time stamp, or time and date stamp on it.

MR. CANOLES: Yeah. We typically were

pretty good about that. I wouldn't say we did it 100 percent of the time. But it was unusual for us not to put that on production.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

And the next document we have here is titled "Chronology of September 11th, 2001."

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c And it lists the four aircraft, and abbreviations for them, and then their origination and destination points, where they were supposed to have gone.

MR. CANOLES: Right.

SPECIAL AGENT (b)(6), (b)(7)c And it says "All times indicated are Eastern Daylight Savings Time." What do you recall about that time element?

[Pause.]

MR. CANOLES: No. This, well, first of all I don't know where it came from, or who did it. It could have been prepared by my staff. But it doesn't fit the format of what we would have done. But I would at least suggest that much of what is contained in here is derived from work that my

staff did. If my staff didn't put it together. I can't say with authority.

SPECIAL AGENT (b)(6), (b)(7)c The last page has a stamp on it that says, at the bottom left hand corner--

MR. CANOLES: AAT-20, September the--okay, then that was produced by my staff.

SPECIAL AGENT (b)(6) What was the date on that?

MR. CANOLES: September 18th at 7:30 a.m. And this I suspect--can I see the--

SPECIAL AGENT (b)(6), (b)(7)c The book?

MR. CANOLES: The book. This must have been an earlier iteration of--

SPECIAL AGENT (b)(6), (b)(7)c The date in book is actually I think a day earlier.

MR. CANOLES: Oh, really?

SPECIAL AGENT (b)(6), (b)(7)c Yes.

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. CANOLES: Yeah. These times appear to line up pretty good.

SPECIAL AGENT (b)(6), (b)(7)c Do you recall some

requests that might have come in about integrating all of the information together, instead of keeping each aircraft separate? You know, a chronology of each aircraft separate? A request to kind of put it all together, so you could see what was going on, all of the same time? You know, you could see what was going on with the four planes all at the same time?

MR. CANOLES: Yeah. We tried, you know, just for our own purposes, we tried to number it different ways, kind of mixing the data, so that it could be shown to a lay person, so that they could see the whole thing developing at one time.

And I'm sure there were requests. I don't recall any specifically. But I know as we supported the development of information for the hearings, that yeah, I'm sure we were asked to, you know, hey instead of, you know, "Break this out by each airplane so it's an easier reference, or whatever," I don't recall it specifically, but I'm sure that that applies.

And that looks like it was a lift out of

the book. So it looks like pretty much the same date, except the heading's been changed to reflect the four airplanes. It looks like everything was consolidated.

SPECIAL AGENT (b)(6), (b)(7)c Do you remember who that consumer of this would have been, or why you guys would have reformatted it this way?

MR. CANOLES: Shirley Miller was involved in hearing preps, as was Darlene Freeman. Monty--

SPECIAL AGENT (b)(6), (b)(7)c This was for the 9-11 Commission. Right? Or was this for Jane Garvey's--

MR. CANOLES: This was for Jane Garvey's hearing.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: The one that took place on what?, the 15th of September, or the 20th. Something like that.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: I didn't get involved other than, you know, we supplied date to the people who were putting our briefing books together.

So again, that was Darlene and Shirley. There may have been some other people, but I remember dealing with them.

SPECIAL AGENT (b)(6), (b)(7)c That testimony was like on September 15th?

MR. CANOLES: Yeah. That's my guess. But don't hold me to the date.

SPECIAL AGENT (b)(6), (b)(7)c All right.

MR. CANOLES: I know it was, you know, pretty close after the 11th.

SPECIAL AGENT (b)(6), (b)(7)c Just have one more question to ask.

The next document in here is yet another time line.

MR. CANOLES: Yes. It is.

SPECIAL AGENT (b)(6), (b)(7)c And this one, we call it the grid time line. But the first page has a grid with the four aircraft, and then some events, and then some time notations. The first event says "First sign, probable time flight was known to be in distress. NORAD needs notification. Estimated crash time."

And the second page it starts more in a narrative time line format. It says "Notifications to Military."

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c What do you recall about this document?

MR. CANOLES: Okay. As I recall, this was prepared by my staff. And as I recall, this was my attempt, if you remember, or I remember correctly, in the first few days following September the 11th, the media became critical of FAA. And I can't remember the genesis. I don't know if the military complained that we were too late in notifying them, or what the deal was.

But the question of timely notification from FAA to DOT came up. And as I recall, and I think I developed these words, like "First sign," was developed, to say, okay, "This was the first time that any abnormality showed up with this flight."

And then the next category I had was, "Probable time flight was known to be in distress."

So in the case of American 11, the first sign, as I had it tabulated, was at 8:20 a.m. Probable time the flight was known to be in distress was 8:25, meaning that based on the technical review we did of that data, the controller wouldn't have suspected anything wrong with the airplane at 20 minutes after 8:00.

And it wasn't until five minutes later, when a series of other things had occurred, that the controller then might have prudently said, "Something's wrong with the airplane."

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. CANOLES: Somebody sees that it has a mechanical problem [inaudible].

And this was an effort to kind of illustrate that we didn't have from 8:20 to make notification to the military; we had from 8:25 to in this case 8:40 to make notification. Because that's the only reasonable amount of time we had to understand that there was in fact an unlawful interference, or whatever the case.

SPECIAL AGENT (b)(6), (b)(7)c Who was the consumer

of that? The customer for that document?

MR. CANOLES: This was internal FAA.

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. CANOLES: I don't think it was produced, you know, I think it was produced pretty much a part of the routine, trying to explain it to FAA, and for FAA to explain to others how we did and did not act on [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c So who would you have given this to?

MR. CANOLES: This would have gone up my management chain, through Jeff Griffith, to Bill Peacock. It would have been used internally in Air Traffic. It probably would have been given to Accident Investigation. They may or may not have shared it with The National Transportation Safety Board.

Air Traffic would have shared it with the Air Traffic Services Office, and up to and including perhaps [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Okay. Can you remind us who your boss was at the time?

MR. CANOLES: Yeah. I reported directly to Jeff Griffith, and then ultimately to Bill Peacock.

SPECIAL AGENT (b)(6), (b)(7)c So you reported to Jeff, and then Jeff would report to Mr. Peacock?

MR. CANOLES: Right. And the way would did business, you know, I would relate with both of them on a routine basis. If Jeff wasn't around, obviously I went and worked with Bill.

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. CANOLES: So if I prepared a piece of paper like this, and I don't know if they requested it, or we dreamed this thought up on our own, but you know I would have taken it up and given it to Jeff and let him give it to his boss. Or I might have given it to Bill directly.

SPECIAL AGENT (b)(6), (b)(7)c When we were out to see you on the 30th of September, you also had provided for us, and they're not in this stack, but you gave them to us right then at that interview, some earlier iterations of this document.

And one of the earlier iterations had a

military notification time for United 93 of 10:08.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c And I think you had said that the handwriting on this document was yours.

MR. CANOLES: It's mine.

SPECIAL AGENT (b)(6), (b)(7)c And you guys had changed 10:08 to 'NA."

MR. CANOLES: What did we show on the--

SPECIAL AGENT (b)(6), (b)(7)c I think you said NA.

MR. CANOLES: Assuming this was, footnoted. [inaudible] I guess, I don't know. I can't remember why we did that. I didn't cross out the time, but I did put NA underneath it. So to me that means Not Applicable, which was not the correct term to have used. Ummm, I don't know.

And I corrected this one over here from 8:38 to 8:40. Did that show up in the final iteration, 8:40?

SPECIAL AGENT (b)(6), (b)(7)c I think it's 8:40.

MR. CANOLES: Yeah. Okay.

SPECIAL AGENT (b)(6), (b)(7)c Because this

document that we're looking at here looks the most like the final. It's got the same events--

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c That you guys were trying to track. As opposed to this other one, which it looks like you guys were still working on putting the grid together.

MR. CANOLES: Yeah. I don't know. Maybe, you know, we footnoted those as coming from the military's logs. Maybe we went back and on reflection couldn't find it or couldn't prove it, or whatever. So we elected to take that out.

SPECIAL AGENT (b)(6), (b)(7)c Well, you know, we've been collecting a lot of materials from the FAA. And one of the things that we had come up with or found was a transcript from Cleveland Center's military operations specialist.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c Which covered this period of time for United 93. And it actually could be a source document to validate the 10:08 or 10:07 period of time, where the military operations

specialist is in touch with Huntress, which is NEADS [ph].

MR. CANOLES: Huntress. Yeah. Umm.

SPECIAL AGENT (b)(6), (b)(7)c So I wonder if this might refresh your recollection at all. And in the date on this transcript is actually September 17th, 2001. And the date on the grid time line is September 18th of 2001. And actually the narrative even has a later date, which is 9/20 up in that top right hand corner.

MR. CANOLES: This would have been put together as part of an accident package. And I can't even begin to guess when we might have received this particular document at headquarters. If you remember, you know, UPS and Fed-Ex, and all those people weren't operating for a period of several days.

SPECIAL AGENT (b)(6), (b)(7)c That we got electronically and it had been stored on the network drive here in this building.

MR. CANOLES: Okay.

SPECIAL AGENT (b)(6), (b)(7)c On the S drive. So

--

MR. CANOLES: Do you know when you got it?

SPECIAL AGENT (b)(6), (b)(7)c Well, that we're still trying to validate.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c My impression from talking to your former staff downstairs that folks were sending stuff to you as soon as it was available.

MR. CANOLES: Yeah. This is from a military operates specialist position in the Center.

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. CANOLES: And our focus, while yes, we would have collected this later on in the process and used it to bolster, you know, whatever the accident package looked like, we would have focused on the operational positions more so than this.

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. CANOLES: And you know, remember we were looking at the air traffic handling, what the airplanes and didn't say, more than this. So we

would have collected this, and we would have asked for this. But it's my sense that we probably wouldn't have reviewed this, you know, if this came in with five other things, this would have been the last thing to be reviewed.

SPECIAL AGENT (b)(6), (b)(7)c Even if, because the focus of this document is military notification.

MR. CANOLES: Yes. I can't tell you with certainty. I suspect again that this was just a part of the routine dump everything you have for the accident package. We might have at some point gone out with a special request that, "Hey, if you got anything specific to notification of the military, let us know."

But if we had had this, I mean this time is more favorable than that one, we've shown from the military, I believe, isn't it?

SPECIAL AGENT (b)(6), (b)(7)c Well, that one I think might, the local time is, the discussion starts at 10:07.

MR. CANOLES: Yeah--

SPECIAL AGENT (b)(6), (b)(7)c I guess the rub, so

to speak, is that the notification on this one doesn't come until after the plane had crashed into the ground in Pennsylvania.

MR. CANOLES: Okay. Which is most likely the reason they took it out. Because it didn't make sense.

Now, remember we had lost radar identity with that particular airplane. That's--

SPECIAL AGENT (b)(6), (b)(7)c 93?

MR. CANOLES: Yeah. I'm pretty--

SPECIAL AGENT (b)(6), (b)(7)c Because 93 is the one that had crashed in Shanksburg, PA.

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c 77 is the one that went into the Pentagon.

MR. CANOLES: Yes.

SPECIAL AGENT (b)(6), (b)(7)c And that one I know for sure you all lost.

MR. CANOLES: I think we lost both of them.

SPECIAL AGENT (b)(6), (b)(7)c Yes. Okay.

MR. CANOLES: And it seems to me, if I

recall this correctly, that 93 was suspected to have crashed. Wasn't that the one where the state police called us and said they had to report--

SPECIAL AGENT (b)(6), (b)(7)c Yes. 77.

MR. CANOLES: Is it 77?

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. CANOLES: Okay. Then disregard what I said.

But we know sure that the identity on one or both of these airplanes was lost for some period of time.

SPECIAL AGENT (b)(6), (b)(7)c I guess the question that I need to ask on this, because of the variation and the times here, is: In the decision-making process to remove 10:08 from the notification time for 93, was a consideration that it would make that FAA look bad that they weren't able to get a hold of--

MR. CANOLES: No.

SPECIAL AGENT (b)(6), (b)(7)c Or they didn't contact the military until after the plane had crashed?

MR. CANOLES: No. Uh-uh. And I'm only speculating at this point in time. If I made the decision, and presumably I did, because I wrote the "NA" on there, it would have been because I questioned the validity of the data, based on crash time. There was never any appearance, not to make ourselves look stupid--God knows we looked bad enough as it was--

SPECIAL AGENT (b)(6), (b)(7)c So are you suggesting that the reason to put the "NA" was because if the notification time had been after the plane crash, it wouldn't have really made a difference? Is that why it's not applicable? The plane was down, to notify the military after it wouldn't have made a difference?

MR. CANOLES: No. And again, realize that I'm just speculating, because I don't remember the precise decision, but it seems more likely, given the way I think, that if I saw that time after the crash, I would have said, "This is stupid. This either represents a mistake in our data," I would have said "It represents a mistake in our data."

And that's the reason I would have
[inaudible].

SPECIAL AGENT (b)(6), (b)(7)c And this is not from
your records. I have a handwritten log.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c And I just want to
show it to you and see if it looks familiar to you.
And realize it's photocopy.

MR. CANOLES: Yeah. No. I don't, I don't
recall ever seeing this.

SPECIAL AGENT (b)(6), (b)(7)c I know that--

MR. CANOLES: Is this the DODO lab?

SPECIAL AGENT (b)(6), (b)(7)c Yes.

MR. CANOLES: Okay.

SPECIAL AGENT (b)(6), (b)(7)c This first page
here, I know the writing is very faint. But you
see--

MR. CANOLES: Alpha Flight something.

SPECIAL AGENT (b)(6), (b)(7)c It says MCCT log.

MR. CANOLES: Okay..

SPECIAL AGENT (b)(6), (b)(7)c This is the NEADS
[ph] log.

MR. CANOLES: Okay. Okay. [inaudible]

SPECIAL AGENT (b)(6), (b)(7)c I know this starts here as September 10.

MR. CANOLES: Yes.

SPECIAL AGENT (b)(6), (b)(7)c But it moves into the 11th on that page there.

MR. CANOLES: Okay. [inaudible]
"Possible hijack American 11 flight. [inaudible] scrambling at, on American 11."

SPECIAL AGENT (b)(6), (b)(7)c I don't know what's [inaudible].

MR. CANOLES: Something on American 11. [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c And you're saying this doesn't look familiar to you at all?

MR. CANOLES: Uh-uh. Nope. Nope.

SPECIAL AGENT (b)(6), (b)(7)c When we had spoken with you last time.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c Because your time lines for the military notification for all four flights when they actually list a notification

time, always use as their point of reference the NEADS [ph] log.

MR. CANOLES: Uh-huh. Are these times the same, I hope?

SPECIAL AGENT (b)(6), (b)(7)c We'll, yes.

MR. CANOLES: Okay. Good. That's good then. I think I told you before, but I was either shown a log by Jeff Griffith, and this might have been it, but I don't recall if it was, but Jeff either showed me a log, or gave me times off a log that he had gotten from General Eberhart [ph] I believe.

Jeff did all that liaison, so he was the middle man on all this stuff. So I don't remember if he gave me a list of four times, and said, "Here, use these," or if he showed me this and I copied them off. I think he showed a log. And again I can't guarantee it was this one, but it probably was.

SPECIAL AGENT (b)(6), (b)(7)c But you don't have a specific recollection?

MR. CANOLES: You know, I think I do. And

I think I met Jeff in the Washington Ops Center, and I think he showed me a piece of paper. And if I were a betting man, I would say that he showed me a piece of paper, and I jotted down times off of it.

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. CANOLES: But I can't swear to it. We were pretty sleep deprived by then. So perhaps that helped my lack of recollection. But that's probably the way it came down.

SPECIAL AGENT (b)(6), (b)(7)c Well, one of the things we've been trying to obtain from the records in FAA is either a copy of this, or a copy of the notes that you might have made and provided to your staff.

And thus far nobody has been able to provide that. And it's really, as I'm sure you can imagine, based on the referral that the Commission made to us, it's really an important aspect to what we're trying to do.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c And I know there are

volumes of records down on the fourth floor.

MR. CANOLES: Uh-huh. Well, this may help concerning that document. If that is the document I was shown, I believe it was classified, or I was told it was classified at the time.

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. CANOLES: With the indication being: "You can't copy this, and you can't have it." So, you know.

SPECIAL AGENT (b)(6), (b)(7)c But we haven't even been able to find the handwritten notes, or at least nobody's found a sense of urgency to do that yet.

And I think, you know, (b)(6), (b)(7)c and I were talking about this earlier this afternoon. I mean it would be really helpful if you could come up with that source material for all your, the time lines essentially, that the AAT-20 group put together.

MR. CANOLES: I wish I had it. But most likely, I had, you know, something like this piece of paper in my hand, and I would have jotted down

those times. If that's exactly how it took place. And I would have walked downstairs and said, "Here, these are off the [inaudible] logs. Go ahead and put them."

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh. Is that group still in chain of command?

MR. CANOLES: No. Uh-uh. Tony Ferrante[ph] works for me now in my new position, and he was in the chain of command then. Which Tom Mellow and Doug Gould and all the rest of those folks are still in Air Traffic, and I'm outside of it.

SPECIAL AGENT (b)(6), (b)(7)c Linda Schussler [ph] used to be. She just retired. Right?

MR. CANOLES: Right.

SPECIAL AGENT (b)(6), (b)(7)c And she used to be in, I guess their boss?

MR. CANOLES: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Until she retired?

SPECIAL AGENT (b)(6), (b)(7)c [Off mike.] When did retire?

SPECIAL AGENT (b)(6), (b)(7)c [Off mike.]

[Inaudible].

MR. CANOLES: Yeah. She was at the Command Center on 9-11, and then she came in ultimately to replace Jeff Griffith.

SPECIAL AGENT (b)(6), (b)(7)c And who is acting for her right now? Or haven't they appointed somebody?

MR. CANOLES: I don't know. I don't know.

SPECIAL AGENT (b)(6), (b)(7)c Here's what I'm getting it. It would be really nice if somebody from FAA would be able to spend some time going through those boxes downstairs and at least say they've done due diligence. You know, like the Oklahoma City will do for the airmen records?

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c They'll come back and they'll give you a certificate that says, "We searched all our files. We can find nothing related to Airman So and So." Or we can give you those nice blue ribbon copies [inaudible].

MR. CANOLES: We could certainly get that done.

SPECIAL AGENT (b)(6), (b)(7)c That's something that you could help us facilitate.

MR. CANOLES: Okay.

SPECIAL AGENT (b)(6), (b)(7)c That could be very helpful for, you know, both of us, I think.

MR. CANOLES: All right. Let me have Doug Gould, he doesn't work for me, but I think Doug's still the keeper of that material.

SPECIAL AGENT (b)(6), (b)(7)c Actually I think it's Jeff McNair's [ph].

MR. CANOLES: Is it?

SPECIAL AGENT (b)(6), (b)(7)c Yes.

MR. CANOLES: All right. So I'll get in touch with Jeff or Doug and ask them to get in touch with you and find out specifically what you need in the way of certification, and have them do that.

SPECIAL AGENT (b)(6), (b)(7)c All right.

SPECIAL AGENT (b)(6), (b)(7)c Yes. We just believe it would be really helpful, because the majority of the time lines reference that information. And if we can show that, if you find

that document and say that we you had that in your possession and this is what you referred to, I think we could kind of move on [inaudible].

MR. CANOLES: Okay. Oh, again--

SPECIAL AGENT (b)(6), (b)(7)c I mean and if they can't find it, they can't.

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c But--

MR. CANOLES: You can blame me. If this thing went the way I think it went, that's exactly what I would have done. I have jotted down the numbers, the call signs, gone downstairs, and handed it to somebody, and left.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: So.

SPECIAL AGENT (b)(6), (b)(7)c Yeah. I don't want this to come across the wrong way. I mean everybody that we've talked to in FAA, especially down in AAT, the old AAT-20 group has been very, very helpful.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c So it's just, you

know, everybody has got a lot of other things they'd much rather be doing than talking to us, and looking for things for us. But--

MR. CANOLES: What did you call that? A certification search?

SPECIAL AGENT (b)(6), (b)(7)c Just let me get with Ok City and see what it is they call their record searches when they come up with nothing.

MR. CANOLES: Okay.

SPECIAL AGENT (b)(6), (b)(7)c And just so we're kind of consistent there.

MR. CANOLES: Okay.

SPECIAL AGENT (b)(6), (b)(7)c I'm hopefully there's something--

SPECIAL AGENT (b)(6), (b)(7)c I mean we're looking for [inaudible] logs.

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c So that's what they're referred to in all of these time lines. We understand that. They say logs. I mean maybe there is more than one out there. We don't know. We don't know.

SPECIAL AGENT (b)(6), (b)(7)c But this is the infamous log.

SPECIAL AGENT (b)(6), (b)(7)c At least that's what the Commission refers to it as, that's the one the Commission refers to--

SPECIAL AGENT (b)(6), (b)(7)c Right. And NEADS, this is NEADS log. I mean this is a photocopy of their log book. And they've got one of those bound books. And this is it, the MCC Tech Log. And it's got, you know, this is in ZULU time, but they've got their 9:16 reference.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c And 9:24. And as you go onto the next page, we've got the 10:07, or 10:08. I guess it depends on how you would look at it. But you go back to I think it was Cleveland's Military Ops Specialist that it all matches up.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c But clearly the thing that doesn't match, which this all in the Commission's report--

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c Is that tail number that's referenced at 9:16?

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c Is United 175's tail number. Not, now I forget what that craft is [inaudible]

SPECIAL AGENT (b)(6), (b)(7)c 77?

SPECIAL AGENT (b)(6), (b)(7)c Yeah. Not 77. And this one here. Or 93 I think it was. This was referenced in some, like DOD documents as United 93. And this is 175's tail number.

MR. CANOLES: Oh, okay.

SPECIAL AGENT (b)(6), (b)(7)c There's even a little 75 there.

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c And this one here is American 11. That's 11's tail number, not 77.

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c So.

MR. CANOLES: Hmm. Okay.

SPECIAL AGENT (b)(6), (b)(7)c And the transcripts for NEADS from their operational positions support

what they have in their log. They match.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c So.

MR. CANOLES: So then we think that the times that we used in FAA from those logs related to the wrong airplane? Is that what you're saying?

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. CANOLES: Okay.

SPECIAL AGENT (b)(6), (b)(7)c Well, I mean the question really is: Well, what did you guys rely on? I mean did you all have, did you get this?

MR. CANOLES: No.

SPECIAL AGENT (b)(6), (b)(7)c Did you get a copy of this? Did Jeff have this?, or did he have something else that the military provided to him?

MR. CANOLES: I don't know if Jeff had it. Well, Jeff obviously had it at some point, if my recollection is correct. But I can tell you unequivocally, I've never had a copy of it. And so therefore, I'm pretty sure [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c I don't know. Just at this point, maybe the military typed it up and

sent you guys something. But they misinterpreted the tail number.

MR. CANOLES: I don't think they did.

SPECIAL AGENT (b)(6), (b)(7)c So that's why it's so important to try to pin this down. And this one I know is stamped "unclassified," but I believe this. Because this is from the Commission's records. They had obtained an unclassified [inaudible].

MR. CANOLES: It looks like there's been a lot of stuff redacted in it.

SPECIAL AGENT (b)(6), (b)(7)c Yes. On the second page I guess there were some classified entries, and they were unclassified. They crossed those out so they could [inaudible].

MR. CANOLES: Uh-huh [inaudible].

Did you have anything else on that?

SPECIAL AGENT (b)(6), (b)(7)c No. I don't think so.

SPECIAL AGENT (b)(6), (b)(7)c All right. Well, we'll just quickly turn the tape over. [audio break]

SPECIAL AGENT (b)(6), (b)(7)c The tape over, flip sides. It's 2:00, 2:01 actually.

All right. Actually this next document looks like, I think these are from the grid time line.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c It looks like the narrative portion of this. So we've already talked about that. So I think [inaudible].

The next document in here is titled "Chronology of Events September the 11th, 2001." I think there may be some duplicates in here, though.

MR. CANOLES: Okay. This looks like something my staff probably put together. Again, if they didn't do it, you know, much of the information that developed, it looks like is in here.

SPECIAL AGENT (b)(6), (b)(7)c There is also a part of this package that looks like something else.

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c And it starts "Classification, Unclassified." And it says "These

are notes for the new overview impag[ph] or MPG."

MR. CANOLES: Uh-huh. This appears to be a script that would accompany a computer file. And it says, "Here's a list of actions which will take place in the video, corresponding to the NORAD time line of events."

SPECIAL AGENT (b)(6), (b)(7)c So their stuff is actually part of our chronology. Yeah. It just is kind of all mixed up.

MR. CANOLES: Mixed together. But whatever this is appears to have been prepared by the military. I may have seen that video. I think it shows the flight tracks of the four target aircraft as well as the military's response.

SPECIAL AGENT (b)(6), (b)(7)c Is that that three-dimensional representation, do you think?

MR. CANOLES: Yeah. I think it was. Yeah.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

In this document that you think is from the military, it says "Our analyst called NEADS to find out which FAA center made the call." Do you

know if they're talking about FAA analysts, or if this is a reference to the military? This is for the 9:24 event for 77.

MR. CANOLES: I don't know.

Do you have another meeting today that you need to--

MR. CANOLES: I'm good until about 2:30.

SPECIAL AGENT (b)(6), (b)(7)c Okay. I'll try not to be long.

MR. CANOLES: Okay. And this, yeah, you're right. This looks like a continuation. And this is probably an earlier iteration of the book.

SPECIAL AGENT (b)(6), (b)(7)c The summary of hijack events?

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

I think these next groups are just logs. So like this is ADA-30.

MR. CANOLES: That's Ops Center.

SPECIAL AGENT (b)(6), (b)(7)c So the ADA-30 is the Washington Ops Center here on the 10th floor?

MR. CANOLES: It was at that time, yes.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Make another copy of the Ops Center log.

This document is titled "Chronology of Events September the 11th, 2001." Ah, yes. Okay. See, it says, "First impact World Trade Center." It says 9:47 a.m.?

MR. CANOLES: Uh-huh. Yeah.

SPECIAL AGENT (b)(6), (b)(7)c So.

SPECIAL AGENT (b)(6), (b)(7)c It's an hour off.

SPECIAL AGENT (b)(6), (b)(7)c Yes.

MR. CANOLES: Yeah. I think this is the one that was, I think this is the one that was prepared off the telecom that I was running.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: Because I remember there was an hour discrepancy. This started out with, I think it was Dan Biggins keeping notes in long hand, and somebody slid a lap top in front of him, and we were capturing stuff on a white board, and he was copying stuff down off of that, and trying to keep up. And this log was pretty poor. It still is pretty poor.

But I'm pretty sure that's where it came from.

SPECIAL AGENT (b)(6), (b)(7)c This next item looked like some handwritten notes.

MR. CANOLES: Yep. That's my writing.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: (b)(6), (b)(7)c [ph] I don't remember why he was involved in this. (b)(6), (b)(7)c was brought over by (b)(6), (b)(7)c [ph] to kind of help out (b)(6), (b)(7)c after 9-11.

And I've got a phone number up there. I don't know whose that is. United 193, DOD notification, Great Lakes Regional Ops Center at 0939 and 59 seconds. Great Lakes ROC again at 0909. Don't know what [inaudible].

Indianapolis at 0915 Air Force Search and Rescue, West Virginia [inaudible]. That had to do with the suspected crash, I'm sure.

SPECIAL AGENT (b)(6), (b)(7)c Does that look like 77 right there? American Airlines?

MR. CANOLES: Yeah. But somebody wrote that on there.

SPECIAL AGENT (b)(6), (b)(7)c That's not your handwriting?

MR. CANOLES: I don't think so. No.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

Cincinnati?

MR. CANOLES: No. It's Boston.

SPECIAL AGENT (b)(6), (b)(7)c Boston?

MR. CANOLES: Boston, ZBW. Needs TMS traffic management supervisor at NORAD APS. I don't know what that is.

And then 12:37 and 52 seconds Huntress. So these were notes I was taking. I was asking somebody, or perhaps (b)(6), (b)(7)c called and gave me this information for our chronologies. But these were notification times that somehow we put together.

SPECIAL AGENT (b)(6), (b)(7)c And who was Jim Slate again?

MR. CANOLES: (b)(6), (b)(7)c of Washington National Control Tower. And he came over at the request of (b)(6), (b)(7)c. And (b)(6), (b)(7)c was ATS-2. And he came over and worked pretty much

directly for (b)(6), (b)(7)c I think, following 9-11.

SPECIAL AGENT (b)(6), (b)(7)c And what is ATS-2?

MR. CANOLES: ATS was the parent organization of Air Traffic. So Bill Peacock reported to ATS-2.

SPECIAL AGENT (b)(6), (b)(7)c Oh, okay. There is another page behind that note. Is this your handwriting as well?

MR. CANOLES: No.

SPECIAL AGENT (b)(6), (b)(7)c No. Do you know who (b)(6), (b)(7)c is?

MR. CANOLES: Yeah. (b)(6), (b)(7)c I forgot what capacity he was in at this point in time, but he was working for Bill Peacock.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And it says at 1333 EDT on 9/11. So that would be Eastern Daylight Time.

MR. CANOLES: Correct.

SPECIAL AGENT (b)(6), (b)(7)c On 9-11 military, physical joint situation room. And this situation at Washington Ops Center?

MR. CANOLES: It could refer to the telcon

[ph] I was running. Situation Room got pretty wide reviews after 9-11. It could have been the security net. I wouldn't even hazard a guess.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: And I'm not even sure that note is to me. There was also a [REDACTED] in Air Traffic. So it could have been either one of us.

SPECIAL AGENT (b)(6), (b)(7)c Even though your first name is (b)(6), (b)(7)c you go by (b)(6), (b)(7)c So most people know you by (b)(6), (b)(7)c

MR. CANOLES: Yeah. Yes.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

This looks like a daily record or facility operations for Boston TRACON?

MR. CANOLES: Correct. You're getting good at this stuff. It shows you're spending too much time on it.

SPECIAL AGENT (b)(6), (b)(7)c Apparently. This Boston Center here?

MR. CANOLES: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Daily Record of

Facility Operations, ZBW ARTCC.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c Daily Record of
Facility Operations. I don't know what ISP means.

MR. CANOLES: Okay. That's Islip.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: And they are an
international flight service station.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: IFSS. We've only got a
couple of them.

SPECIAL AGENT (b)(6), (b)(7)c Are there in the
same between as New York Center?

MR. CANOLES: No. No. Different building.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: Same neighborhood, different
building.

SPECIAL AGENT (b)(6), (b)(7)c This Daily Record of
Facility Operations, is this--

MR. CANOLES: New York TRACON.

SPECIAL AGENT (b)(6), (b)(7)c Okay. This is Daily
Record of Recall Operations for--

MR. CANOLES: Pittsburgh [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Okay. It's another

--

MR. CANOLES: Dallas [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c [inaudible] IAE.

MR. CANOLES: Yes. All of our facilities are required to do those.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: Washington National [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c DCA.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c It looks like a position log for the TRACON? New York TRACON?

MR. CANOLES: Umm, [inaudible]. Yeah. That must be a computerized version of a facility log.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: And it looks like it deals primarily with traffic management restrictions. Restrictions for [inaudible] over those intersections. Yeah. That's got to from a traffic

management [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c And these times on here are going to be ZULU times. Right?

MR. CANOLES: Yes. Yes.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Here is a record of facility operations for Newark. Right?

MR. CANOLES: Right.

SPECIAL AGENT (b)(6), (b)(7)c This is EWR, that's Newark Airport.

MR. CANOLES: Right. I used to be manager there.

SPECIAL AGENT (b)(6), (b)(7)c Oh, did you?

MR. CANOLES: Yes. Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c How long were you manager out there?

MR. CANOLES: Ohh, 2-1/2 years.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Where did you live when you were out there?

MR. CANOLES: Hitestown [ph].

SPECIAL AGENT (b)(6), (b)(7)c Hitestown.

MR. CANOLES: Exit 33 of the Jersey Turnpike, as I recall. No. Exit 8A. 8A?

SPECIAL AGENT (b)(6), (b)(7)c That's down there a long ways. Wait, is that on the shore?

MR. CANOLES: No. Uh-uh. That was the first place I could afford.

[Laughter.]

SPECIAL AGENT (b)(6), (b)(7)c It's expensive there.

MR. CANOLES: It is.

SPECIAL AGENT OWENS: This is another operations log for?

MR. CANOLES: Washington Center.

SPECIAL AGENT (b)(6), (b)(7)c Okay. For--

MR. CANOLES: New York Center.

SPECIAL AGENT (b)(6), (b)(7)c New York Center is ZNY.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c Washington Center again.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c ZDC.

MR. CANOLES: Uh-huh. New York Center again.

SPECIAL AGENT (b)(6), (b)(7)c Notification record for New York Center. Facility Ops Log for New York Center, ZNY.

Facility Operations Log for--

MR. CANOLES: Indianapolis.

SPECIAL AGENT (b)(6), (b)(7)c Indy Center is EID.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c [Inaudible].

MR. CANOLES: Some of the facilities had multiple logs at different areas of operation. So they might have a north and south area, and they might or might not have separate logs.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: And some of them, again, will, you know, like a military specialist desk will have one, or a traffic management unit, and they all get merged [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c This is an accident incident preliminary notice for Cleveland Center, ZOBART CC.

MR. CANOLES: Uh-huh. And [inaudible] 93. [inaudible] log from Indianapolis Center.

SPECIAL AGENT (b)(6), (b)(7)c EID. And--

MR. CANOLES: Accident report, probably
from Indy Center on--

SPECIAL AGENT (b)(6), (b)(7)c 93.

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c Something for ZOB.

MR. CANOLES: This is from the DART. DART
is a computer replay of the radar.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: 91 in the coast at that
time, the controller at Sector R49 updated the
tract, or the primary tract. 247 [inaudible] lost
[inaudible] at 2 minutes and 49 seconds.

SPECIAL AGENT (b)(6), (b)(7)c What's Mode C?

MR. CANOLES: That's the feature of the
transponder that tells the controller what the
altitude of the airplane is.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: So we lost it, and Mode C
indicates axis which is consistent with our
automation program. [inaudible] because of the loss
of transponder.

SPECIAL AGENT (b)(6), (b)(7)c Okay. This is Cleveland Center ZOB?

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c Log from Cleveland. And that's it.

MR. CANOLES: Uh-huh. Okay.

The thought occurs to me on that needs log, if you haven't done this. You need to ask Tony Ferrante if he's ever seen that.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: And Tony and I work together, and we see each other every 15 minutes. But you might want to officially ask him.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: Because it's possible, I don't think so, but it's possible that at some point later down the road, Jeff Griffith might have given him a copy of it. So he might be able to short-cut the process, if one exists.

SPECIAL AGENT (b)(6), (b)(7)c Okay. He's [inaudible].

MR. CANOLES: No. He's right across the

[inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Maybe we'll get luck and run into him. He's not in your 2:30, is he?

MR. CANOLES: No. No. But I can find him for you.

SPECIAL AGENT (b)(6), (b)(7)c You were interviewed by the 9-11 Commission, and I just have a couple of real quick questions for you from that.

MR. CANOLES: Sure.

SPECIAL AGENT (b)(6), (b)(7)c This shouldn't take more than like five minutes.

MR. CANOLES: Okay..

SPECIAL AGENT (b)(6), (b)(7)c You had indicated to the Commission, which is consistent with what you told us as well, when you said that you personally communicate with NORAD, but you thought that Jeff Griffith had.

MR. CANOLES: Yes.

SPECIAL AGENT (b)(6), (b)(7)c But you do recall that Griffith showed you a copy of NORAD's logs, is what you had told them.

MR. CANOLES: Okay.

SPECIAL AGENT (b)(6), (b)(7)c Another thing that you had mentioned to them was that it says here in their summary of the interview, it says, "Canoles commented that there was a 'debate,'" and it's in quotes," over the timeliness of FAA notification to the military of the flights involved in the attacks as being either confirmed or suspected as being hijacked."

But it doesn't really elaborate on what you are referring to or what you meant--

MR. CANOLES: I think what I meant was a public debate. You know, the media.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: Because I do remember the agency coming out under pretty heavy attack in the first few days. And I don't remember if it was an Air Force pilot or somebody in DOD saying, "Well, if the FAA would have told us sooner, we could have done something."

I forget what the charges were, but I know that became the issue to that.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Do you

remember any debate or disagreement between the FAA and DOD as far as the notifications, or that being communicated to you?

MR. CANOLES: No. Not at all.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: Of course, you know, again realize I had very little contact with the military. Most of that was done by others. So.

SPECIAL AGENT (b)(6), (b)(7)c Okay. I just thought maybe, because your group was kind of pulling all this date together, that maybe that would have been--

MR. CANOLES: You know, I'm sure the data we put together was shared with the military. But, you know, I'm sure Jeff gave them copies of it or something. He would have done that just out of professional courtesy.

SPECIAL AGENT (b)(6), (b)(7)c Just one last thing here. Maybe this will help refresh some of your recollection. Because I think it looks like you did this interview in the spring of '04. So, I guess it's not that long ago.

So anyway it says here, "Canoles recalls seeing the log from NORAD that was reviewed by Jeff Griffith. He recalls discussing the log with Griffith. And he recalls that he and Griffith noticed that there were some ambiguities between the timing of events understood at the FAA and the reflections of events displayed in the log."

Can you provide any clarification on--I guess what I'm most curious about is 'ambiguities.'

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c Like the tail numbers? Maybe. Do you recall noticing?

MR. CANOLES: No. I really don't. Most likely, I don't know if I would have used the word, 'ambiguity.'

SPECIAL AGENT (b)(6), (b)(7)c I think this might have been typed up by lawyers. So--

MR. CANOLES: Oh, my God.

[Laughter.]

MR. CANOLES: Most likely--

SPECIAL AGENT (b)(6), (b)(7)c [Inaudible].

SPECIAL AGENT (b)(6), (b)(7)c This is the

memorandum for the record. We have the tape as well, which we're going to listen to. Maybe that will help.

MR. CANOLES: Most likely from the vantage that I was working this thing, if I detected a difference, it would have been, "Look, their time is different than our time was." That's the best I can think of.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

Do you remember ever getting a very specific request from the Secretary's office? Maybe like even at Flaherty's level, asking for the FAA to put something together concerning military notification.

MR. CANOLES: No. I wouldn't get that anyway. He would have communicated that to Monty or Shirley.

SPECIAL AGENT (b)(6), (b)(7)c But you remember that kind of flowing down [inaudible] OST means to

--

MR. CANOLES: You know, I'm sure we put stuff together like that.

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. CANOLES: At Shirley's request, or Monty's request. But I don't remember anybody saying "The Secretary wants this." He would have been, you know, they take your chronology and pull these pieces out of it. And we shape the stuff, like I said, dozens of different ways for different purposes.

SPECIAL AGENT (b)(6), (b)(7)c In the spring of '03, like late spring, like in May and June, you were already at the Washington Ops Center. Right?

MR. CANOLES: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And so then Linda Schussler would have been in your old position. Right?

MR. CANOLES: Actually I think a guy named (b)(6), (b)(7)c was. And (b)(6), (b)(7)c didn't stay there too long, and then he went to work for [inaudible] the organization transitioned over to [inaudible].

We're not always in the state of flux. We're just doing this gigantic reorganization in Air Traffic right now. So it's pretty goofy over

there.

SPECIAL AGENT (b)(6), (b)(7)c Is (b)(6), (b)(7)c still around?

MR. CANOLES: No. He just retired.

SPECIAL AGENT (b)(6), (b)(7)c Okay. [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Do you know the
name, (b)(6), (b)(7)c

MR. CANOLES: Yes.

SPECIAL AGENT (b)(6), (b)(7)c What was his
position?

MR. CANOLES: (b)(6), (b)(7)c worked for Jeff
Griffith, and did a lot of military liaison work,
back and forth.

SPECIAL AGENT (b)(6), (b)(7)c Would he have been
the one who may have interacted with NEADS, to get
the log?

MR. CANOLES: He could have. But I don't
know.

SPECIAL AGENT (b)(6), (b)(7)c I guess my
understanding is all the military liaison personnel
reported to him.

MR. CANOLES: Yeah. In Air Traffic.

SPECIAL AGENT (b)(6), (b)(7)c In Air Traffic.

MR. CANOLES: That's true. Yeah. But Jeff kept that side of the operation very close to him. So--

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: [Inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Okay.

SPECIAL AGENT (b)(6), (b)(7)c We don't have anything else right now. So we appreciate your time.

MR. CANOLES: Happy to do it.

SPECIAL AGENT (b)(6), (b)(7)c It is 2:24, end of interview.

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case # 042R0122001

SWORN INTERVIEW OF

JEFFREY GRIFFITH

(b)(6), (b)(7)c, SPECIAL AGENT

(b)(6), (b)(7)c SPECIAL AGENT

Friday, November 19, 2004

1:14 p.m.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

SPECIAL AGENT (b)(6), (b)(7)c Today is November 19, 2004. The time is 1:14 p.m. We are at Room 7324, DOT Headquarters, 400 Seventh Street, S.W. My name is (b)(6), (b)(7)c My co-investigator is

(b)(6), (b)(7)c

We are from the Office of the Inspector General, Department of Transportation. And we are conducting a review of the issues involving certain public statements made by military and FAA officials at 9-11 Commission hearings and elsewhere, that were allegedly inaccurate.

Today we are re-interviewing Jeff Griffith. Mr. Griffith, please acknowledge that you are aware that this interview is being tape recorded.

MR. GRIFFITH: I am.

SPECIAL AGENT (b)(6), (b)(7)c Please raise your right hand.

Whereupon,

JEFFREY LYNN GRIFFITH

was called as a witness and, after being first duly

sworn, was examined and testified as follows:

SPECIAL AGENT (b)(6), (b)(7)c Please give your full name, spelling your last name for the record.

MR. GRIFFITH: Jeffrey Lynn Griffith,
G-R-I-F-F-I-T-H.

SPECIAL AGENT (b)(6), (b)(7)c Mr. Griffith, I know you are retired from the FAA. At the time of your retirement, what was your current assignment?

MR. GRIFFITH: Deputy Director of Air Traffic.

SPECIAL AGENT (b)(6), (b)(7)c And how long were you in that position?

MR. GRIFFITH: About two years.

SPECIAL AGENT (b)(6), (b)(7)c And on September 11, 2001, was that the position you were holding?

MR. GRIFFITH: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Now, Mr. Griffith, I've already spoken to you once before, but I want to begin by showing you what's been represented to us as being something called a MEAZ[ph] log, an NCC[ph] tech log, that was the source of some of the time line information that the FAA put

together. I just want to ask you if you recognize that document. Is that the document that you would have obtained from the military shortly after September 11th?

MR. GRIFFITH: Well, I can't say for sure. This is two pages. The document that I recall was one page. It was handwritten, as this document is handwritten. But it was, this document is about 2/3 of a page wide. The one that I recall was about four pages wide. And I don't recall the entries that are on either one of these pages.

SPECIAL AGENT (b)(6), (b)(7)c Just to go over it again, why don't you just discuss how you would have obtained the information from the military. I think you had told us previously that shortly after September 11th, 2001, there were questions raised relating to military notification times.

MR. GRIFFITH: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Can you kind of go over that again, just for the benefit of the record?, and maybe describe how you would have attempted to obtain that type of information from

the military?

MR. GRIFFITH: Well, as you said, questions were being asked about coordination between the FAA the military and the times that different notifications were made. In my role I had been working with Larry Arnold at Tindall Air Force Base in the Southeast Air Defense Sector.

And Larry and I talked about the questions that were being raised, and I said to Larry something to the effect of: "We need to know what was said, and we need to report what was said. It doesn't matter to me who was right or who was wrong, if anybody was right or wrong. But, you know, let's you and I agree to get information and put it together."

And he said, "Yes." And at some point after that conversation, I did receive a, I believe it was a single-page document with handwriting on it. And I reviewed it, and then I provided that information to other people at FAA that were assembling a time line.

SPECIAL AGENT (b)(6), (b)(7)c How soon after

September 11th were these questions being raised about military notification by the FAA? Was it more than a day?, a couple days?

MR. GRIFFITH: No. I don't think it was within a day or two. I think it was maybe a week later, or something like that. It seems to me like some period of time had gone by. But then questions were asked. But I don't think it was a day or two, if I remember correctly.

SPECIAL AGENT (b)(6), (b)(7)c Do you know where the questions were coming from? Do you recall?

MR. GRIFFITH: No. I don't. Because, you know, in my job I was focused on getting the system up and running.

SPECIAL AGENT (b)(6), (b)(7)c Yes.

MR. GRIFFITH: And you know, people asking questions and making such a big deal out of who said what and when. You know. I believe that everybody worked hard on 9-11 and did an outstanding job. And a lot of tough decisions were made in an environment that had been experienced before, nor anticipated that it would be

experienced.

And, you know, our job was the safety of the flying public, getting the airplanes on the ground, and responding to these hijack situations. And that's what we were all focused on. We never had a Defense roll at FAA. It was never our job to provide intercepts or coordinate shoot-down of aircraft, or anything like that.

Our job was the safety of the flying public. And all of these things that had to be done because of the situation on 9-11 were things were done for the first time by people that had to think on their feet and make decisions. And that's exactly what was done.

SPECIAL AGENT (b)(6), (b)(7)c But you do recall that there were some questions being raised while you were dealing with all these other things?

MR. GRIFFITH: Oh, sure. Yeah. You know, we're trying to get the system up and running again.

SPECIAL AGENT (b)(6), (b)(7)c Right.

MR. GRIFFITH: And you know, someone

somewhere, and I don't remember who it was, was calling, and trying to make a big deal out of, you know, what somebody said, and the coordination effort. And you know, we never had a protocol to do the things that I said. Shoot down airplanes, and vector airplanes for intercepts, and those kinds of things.

SPECIAL AGENT (b)(6), (b)(7)c Yes.

MR. GRIFFITH: There were no rules of engagement for it. My office did have people assigned to the Northeast Air Defense Sector and the Southeast Air Defense Sector, and the Western Air Defense Sector in a liaison role, and also at NORAD Headquarters.

SPECIAL AGENT (b)(6), (b)(7)c Once these questions were being raised, and you talked about contacting General Arnold, and he's with CONAR? He was with CONAR?

MR. GRIFFITH: Right. He was CONAR. And he was Commander of First Air Force and CONAR. So he was in charge of all the air defense.

SPECIAL AGENT (b)(6), (b)(7)c Were you tasked with

contacting General Arnold, or did someone at FAA direct you to contact the military to get this things resolved, to get these discrepancies resolved?

MR. GRIFFITH: No. Nobody. That was my job. My job was as Deputy Director of Air Traffic, my job was to run the air traffic system.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GRIFFITH: And any issues as a result of that, you know, I took my own actions and reported to my superiors.

SPECIAL AGENT (b)(6), (b)(7)c Okay. So you called General Arnold? You called him?

MR. GRIFFITH: I called the Air Defense Sector and spoke with General Arnold.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And you said, "Let's get this resolved? Let's get this worked out."

MR. GRIFFITH: Yes. And he was just as busy as I was. And so you know, he had a group of colonels working for him. And I talked to one or two or his colonels as well, because he didn't have

time to go look at logs and do those kinds of things. He was trying to protect the nation from a defense point of view.

So, you know, I talked to a couple of his colonels.

SPECIAL AGENT (b)(6), (b)(7)c I think we had asked you before if you recalled their names. And I don't think you recalled them last time. You still don't recall who they were?

MR. GRIFFITH: No. I don't.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And so what happened after you spoke with them?

MR. GRIFFITH: They provided information. I mean they provided information to us. We had a person, Darlene Freeman, that, she was a senior executive. And she was assigned the task of putting the time line together. And you know, she's an attorney, a very bright individual.

So I provided all the information that I had to her, and then she put the time line together. And you know, I recall it, I reviewed it a couple times along the way. And then I had my

staff review it, who had time to listen to tapes and do all that kind of stuff.

You know, we were making an effort to report as accurately as possible. But we were still trying to stand the system up. You know, the economy was being severely impacted by no airplanes flying, and the secretary was receiving calls from all the CEOs of the airlines and other people that were losing money. And my job was to get this thing running again.

SPECIAL AGENT (b)(6), (b)(7)c Yes.

MR. GRIFFITH: So that was my focus.

SPECIAL AGENT (b)(6), (b)(7)c Okay. So you recall receiving a one-page, handwritten fax? That's your recollection?

MR. GRIFFITH: Yes.

SPECIAL AGENT (b)(6), (b)(7)c And what was the type of information that was in that fax that you received from the military?

MR. GRIFFITH: Umm, it was information similar to what's in this document that you're showing me today. Umm, but it was one piece of

paper and it didn't look the same as this.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And what--

MR. GRIFFITH: I mean it was a log.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GRIFFITH: I remember it being a log.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And what was of particular interest in that document that you received? What was it that you were trying to glean from that document?

MR. GRIFFITH: People were questioning the times of notification between the FAA and DOD. And so in particular I was looking for log entries that would clarify when notifications were made about airplanes being hijacked.

SPECIAL AGENT (b)(6), (b)(7)c And the FAA didn't have that type of information? Had you tried to obtain that information from FAA sources before you went and contacted General Arnold?

MR. GRIFFITH: Well, my staff had all the logs from all the air traffic facilities from the centers that were involved, because their job is to keep a similar log.

SPECIAL AGENT (b)(6), (b)(7)c Yes.

MR. GRIFFITH: And so whenever there is an aircraft incident, including hijackings or anything else, their job is to make an entry in that log. And so we had, as part of the investigation, we had collected all of the logs from all of the facilities, and had reviewed them all, and my staff had briefed me on them.

And of course we provided all of that information to people that needed it.

SPECIAL AGENT (b)(6), (b)(7)c But there were certain times that were missing? Were there certain entries that were missing?, and as a result we had to get that information from another source?

MR. GRIFFITH: I don't think information was missing. I think the questions were about the specific times that the information was accomplished. And I've been in those facilities, a and completed those logs, you know, as a first-line supervisor, as a second-level manager, and as a facility manager.

And you know, when you have airplanes

being hijacked, and crashing, you know, you take the actions that as necessary, and then you go back and fill out your log.

SPECIAL AGENT (b)(6), (b)(7)c Yes.

MR. GRIFFITH: And I can't speak for the people that were filling those logs out. But I can sure tell you that, you know, having worked in those positions, that they were doing a lot of things.

SPECIAL AGENT (b)(6), (b)(7)c Do you recall entry section [inaudible], like for example, this, what's this, ZULU time? I guess?

MR. GRIFFITH: Right. Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c ZULU time?

MR. GRIFFITH: Uh-huh. It's UCT, Universal Coordinated Time. Referred to as UCT.

SPECIAL AGENT (b)(6), (b)(7)c Okay. So this is 9:16, and 9:24 in the morning?

MR. GRIFFITH: Right.

SPECIAL AGENT (b)(6), (b)(7)c Do you recall entries such as these? When you may have had to verify a tail number, or something like that? Do

you recall doing that?

MR. GRIFFITH: Well, we don't use tail numbers on commercial aircraft. The reason the military uses them is because they look at the tail number on the airplane; if they're going to shoot it down, they make sure they got the right one.

SPECIAL AGENT (b)(6), (b)(7)c Right.

MR. GRIFFITH: But we don't use tail numbers. We use the company call sign.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GRIFFITH: We have no knowledge, you know, outside of what the airline filed in their flight plan. But the information that the controller sees on commercial aircraft is not tail numbers. On civil aircraft that are non-commercial of course we use the tail numbers as their call sign.

SPECIAL AGENT (b)(6), (b)(7)c Do you recall having to decipher that, though?

MR. GRIFFITH: No.

SPECIAL AGENT (b)(6), (b)(7)c I guess what I mean is, you know, getting this information from the

military, and saying, "Okay, is this tail number, you know, American 77?, or is it American 11? Or do you recall having anybody you or anybody at the FAA, anybody from your staff?"

MR. GRIFFITH: The staff may have. I'm sorry. I just don't remember that little detail.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GRIFFITH: I mean--

SPECIAL AGENT (b)(6), (b)(7)c Well, let me go back to something for a second. When you got the one-page fax, or what you recall as the one-page fax, you said you reviewed it?

MR. GRIFFITH: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c Would you have taken notes from it?

MR. GRIFFITH: No.

SPECIAL AGENT (b)(6), (b)(7)c No?

MR. GRIFFITH: No. I mean I remember, I reviewed it. And I called my staff and said, "Okay, here is the information. We need to provide this to Darlene." And that's my recall of how I did that.

SPECIAL AGENT (b)(6), (b)(7)c Who did you call?

Who on your staff would you have called?

MR. GRIFFITH: Well, we have quality assurance staff. And there were several people working there. Primarily I was working, the guy running it was Dave Kanols[ph], but the person doing most of the work was Tony Ferrante[ph]. And you know, Tony is the guy that I did most of my work with.

SPECIAL AGENT (b)(6), (b)(7)c So, is it your recollection that you called one of those and gave them the information verbally off of what you received? Or did you give them a copy of what you had gotten? Can you recall?

MR. GRIFFITH: Well, I'm those guys were constantly in my office. Because we were preparing, you know, the incident reports. So, I mean I was seeing them for a large portion of every day.

The only thing I remember about the paper is that while on 9-11 I kept my own logs, a tad[ph] with my here, line to tad with their[ph], that I

carried with me the whole time. And every time that I did something, I made a time entry and wrote down my notes.

And I had a file that I kept all this information in that got to be pretty thick. And I remember that I would have put this in there. So the information I gave to the QA staff had to be copied, or something like that.

But originally the information was faxed to us.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GRIFFITH: And then, of course when I retired I destroyed all the information.

SPECIAL AGENT (b)(6), (b)(7)c So your file that you had where you would have put like a copy of what you had received, and your handwritten notes?

MR. GRIFFITH: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c You got rid of that when you retired?

MR. GRIFFITH: When I retired, yeah.

SPECIAL AGENT (b)(6), (b)(7)c You threw it away?

MR. GRIFFITH: Yeah. I sent a whole bunch

of stuff to be shredded. So.

SPECIAL AGENT (b)(6), (b)(7)c Okay. So you think that whatever you had gotten from--

MR. GRIFFITH: Oh, it's gone.

SPECIAL AGENT (b)(6), (b)(7)c It's gone?

MR. GRIFFITH: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

SPECIAL AGENT (b)(6), (b)(7)c Could another copy have been somewhere else?

MR. GRIFFITH: Oh, sure. Yes. Staff had it. And--

SPECIAL AGENT (b)(6), (b)(7)c So you recall actually giving a copy of whatever you received to the AAT 20 group?

MR. GRIFFITH: Sure. Yeah.

SPECIAL AGENT (b)(6), (b)(7)c Okay. But you don't recall who specifically?

MR. GRIFFITH: No. There were like four of those guys that were constantly working with us.

SPECIAL AGENT (b)(6), (b)(7)c Do you recall showing it specifically to Dave Kanols?

MR. GRIFFITH: No. No. Dave was, he was

busy, you know, briefing the FBI and everybody else.

SPECIAL AGENT (b)(6), (b)(7)c Yes. Do you recall Dave perhaps taking notes, you know, kind of sitting at a table or standing together, and he taking notes from whatever you showed him? You don't recall that?

MR. GRIFFITH: No. It's not Dave's style.

SPECIAL AGENT (b)(6), (b)(7)c To take notes from something you would show you?

MR. GRIFFITH: Well, he always had two or three people with him. He made sure the work was done. But you know, he was doing other things.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

I was reviewing your transcript from the last time we spoke.

MR. GRIFFITH: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c And I think we talked about--correct me if I'm wrong--that you and General Arnold discussed the question about the FAA's notification to the military, and you both agreed that whatever the log said is what you'll

report?

MR. GRIFFITH: Uh-huh. Yes.

SPECIAL AGENT (b)(6), (b)(7)c Was there an agreement to use? Whatever the military showed, was there an agreement to just use what the military showed?, to use their logs as the--

MR. GRIFFITH: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GRIFFITH: Well, because we had two sets of logs.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Was there an agreement to use the military's logs as the main source of notification information, though?

MR. GRIFFITH: Not by me. No. You know, our task was to reconcile the information and report. And there is no one that could say one was right and the other one was wrong. So my intent was to report what was in the logs.

It didn't matter to me if the times were different, because people were doing different things.

SPECIAL AGENT (b)(6), (b)(7)c Yes. Like the one

time line, the summary of their traffic hijack events, I think we showed that to you last time.

MR. GRIFFITH: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c This is a summary of air traffic hijack events, September 11th, 2001.

MR. GRIFFITH: Right.

SPECIAL AGENT (b)(6), (b)(7)c Do you recall looking at that?

MR. GRIFFITH: Uh-huh. I do. Yes. But this isn't what was used to reconcile the logs.

SPECIAL AGENT (b)(6), (b)(7)c No. I understand. But you know, there's entries in the time line where it's like at 8:40 a.m. they say, "Northeast Air Defense Sector logs indicate that they were notified by the FAA of the events concerning American 11."

MR. GRIFFITH: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c You know, references in the MEAZ[ph] log.

MR. GRIFFITH: Right.

SPECIAL AGENT (b)(6), (b)(7)c Would that have been because there wasn't some FAA? I mean that was

because we had to reference MEAZ log because there was no FAA document that gave us that particular information? Do you understand my question?

MR. GRIFFITH: Yes. But this document was never intended to provide that level of detail. This initially was the document that was used to brief the FBI.

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. GRIFFITH: And then it was kept as a source document. So you know, the document that was used to reconcile the logs was the one that Darlene Freeman did. And Tony may have taken some of this information and put it in this report.

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. GRIFFITH: But this was the initial document that was used to brief the FBI and others. I only have about five minutes left.

SPECIAL AGENT (b)(6), (b)(7)c Okay. We're almost done.

So you don't recall any type of agreement?

MR. GRIFFITH: No. No.

SPECIAL AGENT (b)(6), (b)(7)c With them, with the

military about using their times over the FAA times?

MR. GRIFFITH: No. I never made that agreement with anyone. And I was the one doing this. And I couldn't, I can't speak for anyone else. I can speak for myself. And no, I never made that agreement with anyone.

SPECIAL AGENT (b)(6), (b)(7)c Just one more concerning that topic, because I know you've got to get going.

Do you remember seeing this press release that NORAD put out? Do you recall seeing that document?, with the information?

MR. GRIFFITH: Did you show this to me last time?

SPECIAL AGENT (b)(6), (b)(7)c I think we asked you if you had seen it, and I think what I recall you saying is that you might not have seen that information in the form of a press release, but you recall seeing the information or the times in it.

MR. GRIFFITH: Well, I am familiar with some of the information, not all of it in here.

But I don't know that I've seen this press release.

SPECIAL AGENT (b)(6), (b)(7)c But you recall seeing this information in some--

MR. GRIFFITH: Well, some of that information. Yeah. I mean I can't say, you know, I saw it all. But--

SPECIAL AGENT (b)(6), (b)(7)c I think that was put out September 17th, '01.

MR. GRIFFITH: Was it?

SPECIAL AGENT (b)(6), (b)(7)c Yes. By NORAD.

MR. GRIFFITH: I don't know, (b)(6), (b)(7)c I have to tell that this, to me this, it was in the noise. You know, I was so focused on getting this system running, and you know, making sure that we had procedures out there where 9-11 would never happen again.

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. GRIFFITH: And you know, every day I came to working, working to get through that day without another problem. So, you know, people arguing about logs and who said what, it just wasn't a big deal to me.

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. GRIFFITH: And it's still not. You know? My focus was standing up this system. We had flight restrictions all over the country. We had fighter jets intercepting airplanes every day, many times during the day. And we had erroneous reports of incidents.

And you know, my job was to make sure we made it through every day where this wouldn't happen again. And that's where I was focused. You know. I wasn't focused in people pointing fingers and making noise, because I didn't care. And I still don't.

I'm very disappointed in the 9-11 Commission, in you know what's going on here, in that they would advise the Inspector General that I and others provided information, you know, that was inconsistent. It's just amazing to me.

I spent 36 years in the government. I was in Vietnam. I did a lot of things, and I was always a first-line troop. You know?

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. GRIFFITH: And then, you know, to have somebody--last week I got the Secretary's 9-11 Award. I've been gone for two years. You know?

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. GRIFFITH: And this has gone on. And people that I worked for, that I admired, are being drug into the thing. And it just stinks.

SPECIAL AGENT (b)(6), (b)(7)c I mean what we're trying to do and what I'm trying to do is really just try to understand where the information came from in the time lines.

MR. GRIFFITH: My guess is--

SPECIAL AGENT (b)(6), (b)(7)c You know, I'm not trying to point fingers at anybody, or--

MR. GRIFFITH: I don't think you'll ever find that out. Because--

SPECIAL AGENT (b)(6), (b)(7)c Yes. We may not. That's the problem.

MR. GRIFFITH: Because our people, we had thousands of people taking actions, making decisions. Thousands of people.

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. GRIFFITH: I had 24,000 people in my organization. And when 9-11 happened, all the people that were on my management team, you know, it was early in the morning on the west coast, but when 9-11 happened, my team went to work, and didn't go home for a week.

SPECIAL AGENT (b)(6), (b)(7)c I know.

MR. GRIFFITH: You know? So it's like who cares? I don't care. I mean just glad it hasn't happened again.

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MR. GRIFFITH: So I don't think I can do anything else meaningful for you. I'm sorry.

SPECIAL AGENT (b)(6), (b)(7)c Okay. All right. Well, thank you for coming in.

MR. GRIFFITH: You're welcome.

SPECIAL AGENT (b)(6), (b)(7)c And we'll just end the interview. It's 1:40.

[END OF INTERVIEW.]

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case No. 042R0122001

SWORN INTERVIEW OF
LINDA M. SCHEUSSLER

BY

(b)(6), (b)(7)c

(b)(6), (b)(7)c

Thursday, December 9, 2004

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

(b)(6), (b)(7)c : Today is December 9, 2004, the time is 9:59 a.m. We're at DOT NASIF Building in Room 7324, Washington, D.C. My name is (b)(6), (b)(7)c (b)(6), (b)(7)c also present is (b)(6), (b)(7)c We're from the Office of Inspector General, Department of Transportation and we're conducting a review of issues involving certain public statements made by military and FAA officials at a 9/11 Commission hearing and elsewhere that were allegedly inaccurate.

Today, we're re-interviewing Linda Scheussler. Ms. Schuessler, if you could just acknowledge for us that you know this interview is being tape recorded.

MS. SCHUESSLER: Yes, I do.

(b)(6), (b)(7)c Would you please raise your right hand?. Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, and nothing but the truth?

MS. SCHUESSLER: I do.

(b)(6), (b)(7)c Will you please give us your

full name, spelling your last for the record?

MS. SCHUESSLER: Linda M. Schuessler,
S-c-h-u-e-s-s-l-e-r.

(b)(6), (b)(7)c : I believe you recently retired
from FAA?

MS. SCHUESSLER: Correct, yeah.

(b)(6), (b)(7)c : When was that?

MS. SCHUESSLER: November the 3rd.

(b)(6), (b)(7)c : Currently working for?

MS. SCHUESSLER: (b)(6), (b)(7)c

MR. (b)(6), (b)(7)c: And what position do you hold
over there?

MS. SCHUESSLER: Don't hold me to the
exact title--

(b)(6), (b)(7)c Okay

MS. WOODS: [unintell.]

MS. SCHUESSLER: Yeah, (b)(6), (b)(7)c

(b)(6), (b)(7)c something along those lines.

(b)(6), (b)(7)c I think last time we talked
you kind of gave us your work history--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --so we're not going to go

over that again, save some time. The one thing I just would like some, if you could clarify for us. In May of '03 time period, what position did you hold during that--sorry.

MS. SCHUESSLER: In May of '03--some time frames now for me just to, let's see--I was either--I was either back as the Manager for Evaluation and Investigations or in the role of the Deputy Air Traffic--Deputy Director for Air Traffic Services.

(b)(6), (b)(7)c : And that was the position you last held before you retired, the Deputy Director position?

MS. SCHUESSLER: No, we restructured the organization so the correct title of the last position I held was Vice President of System Operations.

(b)(6), (b)(7)c One of the things that we had talked about the last time we spoke was, I think, your role in helping to prepare this Question for the Record--

MS. SCHUESSLER: MM-hmm.

(b)(6), (b)(7)c --that was submitted, I think it was May 22, 2003, after former Administrator Garvey had testified before the 9/11 Commission. And I just was hoping that you could give us a little more detail about your role in preparing this. I think you had said previously that you and Lynne Osmus and Shirley Miller had worked on gathering up some information to prepare this QFR?

MS. SCHUESSLER: Right, and in part of--part of gathering information, I talked to (b)(6), (b)(7)c to try and get a little bit more information from her vantage point, when she joined the telecons. And, if I remember correctly, she gave me some information and I shared that with Shirley and Lynne and they compiled the statement and then, I think, maybe the following day, that's when (b)(6), (b)(7)c said, oh, I'm not quite sure that that's accurate.

(b)(6), (b)(7)c Because I think the part of the statement that applies to your discussion with (b)(6), (b)(7)c it says the U.S. Air Force Liaison to the FAA immediately joined the FAA headquarters

phone bridge--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c : --and established a contact with NORAD on a separate line.

MS. SCHUESSLER: Right.

(b)(6), (b)(7)c : You think maybe as soon as the day after, (b)(6), (b)(7)c had said that that might not be exactly correct? What--can you just tell us as much as you can about that?

MS. SCHUESSLER: Yeah, I mean, if I remember correctly, it was, I don't know late afternoon, early evening when we were trying to pull the information together. And so when I did get ahold of (b)(6), (b)(7)c you know, she shared what she remembered. And, again, you know, it was late in the day, early in the evening. And then upon reflection, I guess, that evening, she came back in and she said, you know, she says, I think, and don't hold me to the exact word that she said, you know, because I don't remember that--you know, but she indicated something to the effect that she was--she remembers she was either on the bridge or

something when something happened. So, that indicated to here that, well, yes, I joined immediately when I got into headquarters but it wasn't immediately when the situation was unfolding.

(b)(6), (b)(7)c : Did she relay this to you or was it to somebody else?

MS. SCHUESSLER: Well, I know, I heard the information, so I would imagine, again, you know, memory is vague, but I would think that she probably advised all of us of that.

(b)(6), (b)(7)c : You think you actually had a conversation with her about that or that you heard it from somebody else?

MS. SCHUESSLER: I think I probably did, only because I was the one that called her.

(b)(6), (b)(7)c : I see.

(b)(6), (b)(7)c : Do you mean would she have come back into the building the next day and had this discussion--

MS. SCHUESSLER: Yeah, right.

(b)(6), (b)(7)c : --with you that she recalled?

MS. SCHUESSLER: Yeah, you know, and you see each other in the halls and, you know, she said, you know, I'm thinking about--

(b)(6), (b)(7)c : She said, you know, I'm thinking about what I talked--

MS. SCHUESSLER: --yeah--

(b)(6), (b)(7)c --about last night and--

MS. SCHUESSLER: --right, right.

(b)(6), (b)(7)c : --I don't think that's exactly right--

MS. SCHUESSLER: Right.

(b)(6), (b)(7)c --is that something like that?

MS. SCHUESSLER: Yeah, you know more informal than, you know, a formal statement or anything along those lines.

(b)(6), (b)(7)c Was she still the liaison at that time?

MS. SCHUESSLER: Mm-hmm, mm-hmm.

(b)(6), (b)(7)c So how did you guys handle a correction for that, because that kind of changes, you know, what was presented to the Commission?

MS. SCHUESSLER: Well, again, I was not

the focus for this, you know, so, you know, I had the information, I think, you know, Shirley and Lynne were aware of the information and, you know, they were more the leads on preparing the statement more so than I.

(b)(6), (b)(7)c : So, Shirley and Lynne were kind of the ones in charge of this effort, so--

MS. SCHUESSLER: Well, I was part of it, but, yeah, I was not the focus of saying, okay, let's put, you know, let's get the statement together and send it over to whoever it got sent to.

(b)(6), (b)(7)c : So, you don't recall how making the correction was handled?

MS. SCHUESSLER: No, nothing further after that.

(b)(6), (b)(7)c : When you guys were working on putting this together?

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c : Did anybody try to contact anybody in AAT-20--the--I understand that maybe you might have been, I guess sitting in the disk that

Dave Cannoles had sat in at one point--so I was wondering, did anybody try to reach out to Dave Cannoles or for Ferrante or Mr. Mello about that?

MS. SCHUESSLER: I--no, I don't believe so, you know, I couldn't, again, I couldn't swear to it, but I don't believe so. But one of the issues here is the fact that this line was not recorded.

(b)(6), (b)(7)c Mm-hmm.

MS. SCHUESSLER: So, the AT-20 group what they had was the recordings and they had the time frames of all the recordings and the statements and that sort of thing. They would not have the time frame of when something like this occurred, because nothing was recorded.

(b)(6), (b)(7)c The reason that I'm asking that question--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --is because it's our understanding that Dave Cannoles was responsible for having established that teleconference and kind of seeing that it stay aloft, for lack of a better

term.

MS. SCHUESSLER: That, again, I wasn't at headquarters at the time, so I don't know--

(b)(6), (b)(7)c : Okay.

MS. SCHUESSLER: --certainly, I know he was involved. I know Jeff Griffith was involved and many, many others, but I don't know the protocol and who did what.

(b)(6), (b)(7)c : Because I think, on 9/11, you were in--you were the manager for the Herndon Command Center?

MS. SCHUESSLER: Correct, right.

(b)(6), (b)(7)c : Do you know who got the phone call from Jane Garvey about putting that together?

MS. SCHUESSLER: No.

(b)(6), (b)(7)c : If it was you, would you, was it you?

MS. SCHUESSLER: It was not me.

(b)(6), (b)(7)c : It was not you? Okay.

MS. SCHUESSLER: I do know that.

(b)(6), (b)(7)c : Okay. This--once the--you guys found out about this statement here that

it--essentially that it--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c : --this immediately joined aspect wasn't necessarily correct, how do you think that should have been resolved with the Commission?

MS. SCHUESSLER: Well, I think, well, you know, as far as the formal statement, I do not know how it was resolved, if it was resolved, along those lines, but--

(b)(6), (b)(7)c Somebody consulted with you and said, you know, Linda, hey, we've got this--this issue's come up?

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c You know, what we had sent up to the Commission, and this was read into the record--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --that this QFR, you know, this aspect right here about immediately joined, you know, that's not exactly what Cheryl's remembering now, how do you--

MS. SCHUESSLER: Right, right--

(b)(6), (b)(7)c --think we should resolve this?

MS. SCHUESSLER: Well, you know, certainly, you need to call the Commission back and say, okay, this is what we have found. And I do know that Shirley Miller did that on several different occasions on different things that when they asked for either statements or recordings or whatever and she thought it was one way, yes, we had it, or no we didn't and then we found out otherwise. I know she was talking to them daily during periods of time.

(b)(6), (b)(7)c Anything else, (b)(6), (b)(7)c

(b)(6), (b)(7)c When you talked to (b)(6), (b)(7)c maybe the next day--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --when she mentioned that she hadn't been--her memory hadn't been correct the night before, did she--was she more specific as to what time she thought that she had joined the con-bridge in relation to the events, maybe? Because I thought in the--when I was reading your

interview from last time, I thought maybe you had recalled that she had [unintell.] coming in, maybe after the start of that and how--

MS. SCHUESSLER: Yeah, that's why I'm saying, you'd have to go back to her because I don't remember all the specifics.

(b)(6), (b)(7)c Okay.

MS. SCHUESSLER: But in her mind, she remembers, no, no, no, she says, I was crossing the bridge when something happened. So, it may have been the third event, it may, you know, I don't know if she was listening to the radio, but I do remember that being the correction on her part.

(b)(6), (b)(7)c So, when you say crossing the bridge, driving in--that's what--

MS. SCHUESSLER: Yeah, she's driving in, what bridge, I don't know.

(b)(6), (b)(7)c You say you understood?

MS. SCHUESSLER: Yeah, yeah. So she joined when she got into headquarters, but she was not immediately on the bridge as soon as it was set up, I mean, that was my understanding in talking to

them the following morning.

(b)(6), (b)(7)c : And you had, subsequently, then, contacted Shirley or Lynne to advise them of what she had said or was this a meeting where you were all in the hall together or--what do you remember about that?

MS. SCHUESSLER: Well, I think probably in this particular case, if I remember, I don't remember whether Cheryl contacted me on one, but let's say, she did, you know, we all made sure the information was shared with Shirley and--

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c At about this same time period--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --in May of '03, it was on May 23, the Secretary had testified before the Commission, as well, were you involved in any of the briefings for the--like, I believe, like a day or two before this, there may have been a briefing for John Flaherty, as Chief of Staff, to help prepare the Secretary's testimony and, then, even

on the 22nd of May, I believe there was another briefing, actually for the Secretary. Did you participate in any of those?

MS. SCHUESSLER: I couldn't tell you dates, but, yes, I do remember being involved in more than one, I would like to think two, but, again, don't hold me to that number. What we were calling prep sessions for the Secretary. And there were a number of us in there. Again, I was not the focal, you know, I was there just when various questions came up. But, yes, I was there on more than one prep session.

(b)(6), (b)(7)c : But this was for the Secretary--was this for Chief of Staff or was this do you recall--

MS. SCHUESSLER: Well, it was for the Secretary, whether John Flaherty was there, I would be guessing. I would guess, yes, but--but, again, I don't specifically recall whether he was there or not.

(b)(6), (b)(7)c : Was time line information being discussed at these, you know, military

notification--was that being discussed at those prep sessions?

MS. SCHUESSLER: I know in the package that was prepared for him, he did have time lines in there. But most of the prep session was more along the lines of, high-level, generic information, rather than, let's walk through the time line. You know, he did have a book with the time line, but I don't remember us talking very specifically through that.

(b)(6), (b)(7)c : I have an e-mail message here from Denise Daniels--

MS. SCHUESSLER: Mm-hmm.

MS. SCHUESSLER: --who I understand is a policy advisor in OST and it's one of the recipients of the e-mail messages got--has your name on here. And it's titled Heads Up and dated May 29, 2003, and I'm just going to read some of this just for our record here.

MS. SCHUESSLER: Okay.

(b)(6), (b)(7)c It says here, (b)(6), (b)(7)c I'll let you look at this when we're done. It says (b)(6), (b)(7)c

(b)(6), (b)(7)c was asked by the Chief of Staff to set up a meeting early next week to get the time line of FAA Air Traffic Communications with NORAD set. He wants to walk through the time line on all four aircraft involved in the attacks. Now, it was mentioned, previously, that this may be difficult because FBI/DOJ have the AT tapes from that day. If that's the case, that will be an issue in the meeting. Evidence given to DOJ without keeping a copy will be a problem for John. And that would seem to elevate the critical importance of any written logs that were created either contemporaneously or subsequently.

We also should be prepared to correlate the information with the time line presented by NORAD at the hearing. And then, parenthetically, it says, including their charts. The next paragraph says, John wants to be able to submit something to the Commission that clarifies that issue and clarifies other issues arising out of the Secretary's statement while the record is open for 14 days.

And, again, parenthetically, it says, I believe that's 14 days from the second date of the hearing. And the last line is, anyway, for those who don't know (b)(6), (b)(7)c I didn't want to be surprised at his call. I didn't want you to be surprised at his call. And it's signed (b)(6), (b)(7)c [ph].

MS. SCHUESSLER: That was (b)(6), (b)(7) who?

(b)(6), (b)(7)c I'm not clear on who the Jeff is?

MS. SCHUESSLER: (b)(6), (b)(7)c

(b)(6), (b)(7)c

MS. SCHUESSLER: I couldn't tell you whether a meeting was set up or not. Let's see, I know we had conversations about the time lines, you know, because our time line was different than NORAD's. We acknowledged that and recognized that. But we also were going by our recordings, you know, so we were looking at the time frames on our time hacks on the recordings and that's what we were using as our official records. So, NORAD, I'm sure, did the same thing. And some things in our logs, as in their logs, indicated actions that were

taken and they're approximate times because people were all doing other things--but could not be confirmed on a recorded line.

So, when we found differences that we could not confirm because of the time hacks on the lines, I think everyone left their time frames the same. You know, as their own agency, rather than change.

(b)(6), (b)(7)c Based on this message, do you know what instruction Flaherty was giving to the FAA with regard to working on their time lines here?

MS. SCHUESSLER: Well, if it's after--if you're looking at May time frame--

(b)(6), (b)(7)c This would be after both Ms. Garvey and Mr. Mineta had testified.

MS. SCHUESSLER: Mm-hmm, yeah, because I remember there was still some concern as far as the differences as to what the time line on all four--information of the time line presented by NORAD, I don't remember, I know I don't remember that, did we submit something? I don't know

whether we did or not.

(b)(6), (b)(7)c Submit something to who?

MS. SCHUESSLER: When he says John wanted to submit something within 14 days.

(b)(6), (b)(7)c I'm not sure about that?

MS. SCHUESSLER: Yeah, because I don't--

(b)(6), (b)(7)c This is, I'll just relay a couple of--

MS. SCHUESSLER: Yeah, yeah.

(b)(6), (b)(7)c --things that we have learned and maybe it will refresh--

MS. SCHUESSLER: Okay.

(b)(6), (b)(7)c --your recollection is, it's our understanding that this e-mail, and maybe some of the meetings that you guys had--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --prepping the Secretary had resulted in Mr. Flaherty and some other folks coming over to the FAA for, like, a demonstration, so to speak where the FAA presented some of the pictorial time lines that you guys had created.

MS. SCHUESSLER: If it was John coming

over to the FAA, I do know I was not involved in any of those. I do not remember having any meetings over in the FAA with that group, none of them. That's not to say that he didn't come in, you know, in our SATORI--

(b)(6), (b)(7)c Mm-hmm.

MS. SCHUESSLER: --and watch that, he may have done that. You would need, probably Tony Ferrante or, maybe, Tony Mello, Doug Gould, one of those three gentlemen would probably be the people that sat with him, if he did that.

(b)(6), (b)(7)c So you're saying that it's your recollection that you didn't participate in any meeting like that?

MS. SCHUESSLER: Especially, if you're saying it was over in the FAA building, I do not remember meeting with John in the FAA building at all.

(b)(6), (b)(7)c Okay. Do you recall if you had learned that he had been over to look at that sort of thing?

MS. SCHUESSLER: I couldn't tell you

that--

(b)(6), (b)(7)c : Okay.

MS. SCHUESSLER: --I mean that's, we had so many people coming in and out looking at the SATORI and trying to get acquainted what it was, I couldn't tell you that.

(b)(6), (b)(7)c I guess, based on that meeting--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --and probably, in part, this e-mail message that we've been talking about, a time line was put together.

MS. SCHUESSLER: A revised time line? I mean because we had a time line, you know, Cannoles and group is that--

(b)(6), (b)(7)c That Summary of Air Traffic Hijack Events and--

MS. SCHUESSLER: And did it have--

(b)(6), (b)(7)c --was sort of a bound and it was color.

MS. SCHUESSLER: --right, okay, and I know Dave Cannoles and group, again, I was out at the

Command Center, so I did not even, quite honestly, I did not even see this until after I got back into headquarters and all the Commission started again. But did they change this based on that e-mail?

(b)(6), (b)(7)c : Well, I'm not sure what--

MS. SCHUESSLER: Okay--because I--

(b)(6), (b)(7)c : --precipitated a change, but this time line, here is the, what we've come to understand sort of the result of the meeting and this e-mail message and--

MS. SCHUESSLER: Because there were several documents that had been prepared and, again, not being at headquarters, I saw everything after the fact. But I do know there were several documents that were prepared in response to various questions, where they came from I don't know. But I know--I found out this, you know, Cannoles and group did this very--

(b)(6), (b)(7)c : Summary of Air Traffic Hijack Events.

MS. SCHUESSLER: --yeah, very, very soon after things occurred.

(b)(6), (b)(7)c And this other document just for, just need to put it on the record so we know about it later--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --it's titled "Sensitive Security Information FAA Communications Regarding Hijacked Aircraft on September 11, 2001." And this is an e-mail from Shirley Miller to Linde Knapp and it attaches, it's dated June 13, 2003 and it attaches the document that we just referenced.

MS. SCHUESSLER: Okay, so that's probably, after all this is said and done, you know, again, Shirley was the focal who put all this together. That's not to say that I didn't look at it and review it. I would imagine I did, but I couldn't tell you that I did. Just comparing previous time lines and putting it down in this kind of a document.

This doesn't jump out as real familiar to me, but I think what she did was put everything together, I mean. that's what it looks like.

(b)(6), (b)(7)c : Do you know if the FAA had

gotten some instruction from the Secretary's office--and our understanding is it may have come from John Flaherty to go look at their time lines and look at your source material and verify the info--do you know if any instruction like that came out?

MS. SCHUESSLER: I don't, you'd have to find out from Shirley, you know, but in most cases, what she was doing was gathering information and putting it together in response, either to the Department's request to do so or the Commission's request to do so. So, you know, as far, especially in this time frame, so I don't know who made the request for that document.

(b)(6), (b)(7)c For the FAA Communications
Regarding Hijacked Aircraft?

MS. SCHUESSLER: Yeah.

(b)(6), (b)(7)c Okay. Do you have any other questions about that?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c Is there anything else you recall about--

MS. SCHUESSLER: Well, let me look at it. Okay, so this document--this statement here, too, sometime after it was established is a little bit different than there, as far as immediately.

(b)(6), (b)(7)c : I guess, the one thing that stands out if I can--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --point you to it--

MS. SCHUESSLER: Yes.

(b)(6), (b)(7)c --is when--and I realize, I think maybe two years have passed, roughly at this point--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --but when we look at the Summary of Air Traffic Hijack Events, September 11, 2001, that booklet, which I think was created on or about September 17, 2001--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --for American 11 and Amer--or United 175, it has some notification times. It says 8:40 for American 11, NEADS, N-E-A-D-S logs indicate they were notified by the FAA concerning

American 11. And there's a similar entry in here for United 175 at 9:05--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --however, there are no entries like that for United 93, if you kind of scroll through here--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --there's nothing in there for that. Nor are there any entries in there, in the summary document for American 77. However, in this document--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --and some of the other time lines--

(b)(6), (b)(7)c Page 12.

(b)(6), (b)(7)c --it's page 12, there is an entry of 9:24 and it says NEADS log shows FAA notified them of the possible hijacking of American 77. Now, it's our understanding that FAA headquarters, the AAT-20 folks, had the information off those logs, yet didn't include it in this document but did in that.

MS. SCHUESSLER: Well--

(b)(6), (b)(7)c : Do you remember any discussions about that or--

MS. SCHUESSLER: --no, I don't, but, you know, I'm going by my history and my background and any time you're gathering preliminary information, you do your darndest to put it together the best you can. But, inevitably, there's mistakes in it. You go back and correct them as necessary or if necessary. I don't know, you know, did the NEADS log, indeed show that, and it just wasn't captured here or is this a false statement? I mean, that's, in my mind, that's where you'd need to look.

(b)(6), (b)(7)c Well the NEADS log does not reflect that entry, at least the actual log.

MS. SCHUESSLER: Okay, so, then, I would go to, if the logs don't reflect it, then what does the re--are there any recordings of notification? If not, then there's no way to validate that that transmission occurred. The only other, well, no, that's not necessarily--were people using unrecorded lines? Because I know out at the

Command Center we had some lines that were unrecorded.

(b)(6), (b)(7)c I think--you can correct me if I'm wrong--I think, the Operations Center in the headquarters building, at that time, many of the lines were not recorded either.

MS. SCHUESSLER: Right, correct, right, right. I mean, so for me--

(b)(6), (b)(7)c So you don't recall any discussion about?

MS. SCHUESSLER: Oh, no, no, and I don't, quite honestly, I don't know how much Shirley used this as a source document to put some of this together, you know, whether she used this as a source document, whether she had, you know, I know we had another draft or two of various time lines and I have seen this--

(b)(6), (b)(7)c That's we refer to that as the grid time line.

MS. SCHUESSLER: Okay.

(b)(6), (b)(7)c : It's our understanding, just to help you refresh your recollection--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --that Darlene Freeman had been involved in the preparation of that. It actually came out of, and you can see in the footer, if it's not covered by a Post-It Note that it came out of AAT-20, but it was used for some of the briefing books for the--no for the Administrator for her testimony and things like that.

MS. SCHUESSLER: Well, okay, and I was not part of the effort to, you know, put a book together. But, again, I, you know, I hate to say this, but, in fact, when you are gathering information, you've got so many documents, you know, you think you have the most current. But, in fact, this document, obviously, from what you're telling me contradicts this one. Did anybody see that? Did anybody correct that? Did anybody flag it and say, oh, you know, we'd better slow down or look into it or mark something to let people know.

(b)(6), (b)(7)c I don't know if contradict is, I mean, I don't want to split hairs--

MS. SCHUESSLER: Yeah, yeah.

(b)(6), (b)(7)c : --but the summary just doesn't contain--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c : The 9:24 entry for American 77.

MS. SCHUESSLER: Okay.

(b)(6), (b)(7)c What were you going to say about the grid time line?

MS. SCHUESSLER: No, I remember seeing this somehow in some--something, but, again, I was not in headquarters when any of this was prepared, nor was I part of putting a book together for the Administrator to testify with.

(b)(6), (b)(7)c We had been told that, I guess, one of the reasons for the development of this, the time line that starts Accident Security Information--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --was that there was a desire by the Chief of Staff to consolidate, instead of listing the chronologies of the four flights by

themselves but to consolidate it also as one continuous time line, do you remember that?

MS. SCHUESSLER: Now that you say that, I vaguely remember somebody talking about trying to consolidate everything into a document. I also remember a discussion as far as, and without looking through all of this specifically, Another request came in to put a document together just with the military notification and nothing else in there. So, yeah, you know, you get various requests from the Commission and from the Department and we would respond. We would react to it. Again, Shirley was the focal for putting that information together in most cases.

(b)(6), (b)(7)c Just to go back, again, you don't recall any specific discussion from the Chief of Staff's Office that there was a, I mean, a concern that the time line with respect to the military notification was inaccurate or that he wanted it to be re-evaluated or looked at again to make sure that everything was--

MS. SCHUESSLER: I, again, I would not be

the person receiving that phone call. But in all this information and documentation, you know, we were going back through and providing more and different and a little bit different, you know, only military or to put all four aircraft together. You know, so it was just--it was an ongoing effort to put things together as far as the specific threat requesting it.

(b)(6), (b)(7)c

In the spring of 2004, the--

MS. SCHUESSLER: I've got my mind set here of here I am and--

(b)(6), (b)(7)c

Yeah, use our time machines and try to transport our memories anyway--the Commission is just, I think, starting to gear up towards doing some interviews, they may have already started or initiated interviews of some of the FAA employees around the country. The--it's our understanding that the Commission, through one of its staff members, had relayed to the FAA that they had some serious concerns about some of the time line information that the FAA has presented. Do you recall receiving any information like that?

MS. SCHUESSLER: No, again, you know, the Commission was working directly with Shirley, Shirley was the focal, so any concerns and issues they had would come to her. And then she would, if we needed to do additional work, she would kind of farm it out to us and say, okay, I need for you to do whatever. So, as far as the specific request from the Commission coming in, I don't recall that. And if it was, again, if it was to re-listen to tapes or logs that probably came out of the AT-20 organization and they would have to go back and review that.

(b)(6), (b)(7)c We had seen some reference in, you know, all of the material that we were looking at that may have come up in some of the interviews of some of the FAA employees by the Commission, that following September 11, out at the Command Center in Herndon, you guys had, initially worked on starting to develop a time line yourself, can you--

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c --tell us about that?

MS. SCHUESSLER: Yeah when everything was unfolding, of course you had (b)(6), (b)(7) [unintell.] who was the operations manager, but not on that day, now he's the manager. So, what I did was tap a person to go follow one of the managers or first-line supervisors around with a pad and pencil to record things. And I said, okay, you go follow that person and, you know, you're hooked by the hips and document everything. So, that's what we used out anything the Command Center in addition to the people keeping their own logs, I mean, like they typically would do. So the handwritten logs went back to Quality Assurance. And, like in any event, you know, we began the process, maybe, I don't, you know, I can't, don't hold me to time frames, it certainly wasn't the next day, because we were still dealing with a lot of things, but all the primary players, we did gather and then the Quality Assurance Office, just to say, okay, let's reconstruct this thing so we can come up with a consolidated Command Center time line because we know they're going to want that at headquarters.

(b)(6), (b)(7)c Right the Quality Assurance Office, you're talking about the one at the Command Center?

MS. SCHUESSLER: At the Command Center.

(b)(6), (b)(7)c Who was the QA manager out there at the time?

MS. SCHUESSLER: (b)(6), (b)(7)c

(b)(6), (b)(7)c (b)(6), (b)(7)c all right.

MS. SCHUESSLER: Mm-hmm--and so we started that effort, I mean, we didn't even, gosh, I think we spent maybe an hour and hour and a half, you know, because we had several logs just trying to say okay what have you got in your log and how are we going to pull all this together. And I guess (b)(6), (b)(7)c in talking to Dave Cannoles the next couple of days, the next couple of weeks--anyway, she was given the direction, the logs that we had that we had already, the written logs, that we had already submitted were sufficient what he was looking for. That and the tapes that we had.

(b)(6), (b)(7)c So that caused you guys to stop whatever, I don't know if it's the right

terminology, but the reconstruction or--

MS. SCHUESSLER: Correct.

(b)(6), (b)(7)c --developing your own time
line--

MS. SCHUESSLER: Correct.

(b)(6), (b)(7)c : --that was what caused you
guys to stop?

MS. SCHUESSLER: Correct.

(b)(6), (b)(7)c So once all that information
was submitted to Cannoles' group, as far as you--

MS. SCHUESSLER: Well, they never got, I
don't know that he ever got the handwritten, you
know, he knew that they existed, because he and
Ellen had conversations about that, but as far as
the--

(b)(6), (b)(7)c The tapes?

MS. SCHUESSLER: --well, I know we gave
some of the tapes to headquarters and the
Commission subsequent to all of that.

(b)(6), (b)(7)c That' was all within the first
couple of days or in the first week?

MS. SCHUESSLER: At least the first month,

you know, I don't, again, couldn't tell you exact time frame but very early on.

(b)(6), (b)(7)c How long did you remain at the Command Center after September 11?

MS. SCHUESSLER: I left in May.

(b)(6), (b)(7)c So after that--

MS. SCHUESSLER: --and went to headquarters.

(b)(6), (b)(7)c --initial work of putting that reconstruction together, that was you don't recall ever going back and having to try to reconstruct any of the events of the day?

MS. SCHUESSLER: No.

(b)(6), (b)(7)c But you guys didn't complete that, either, you stopped because Cannoles said your logs were sufficient?

MS. SCHUESSLER: Correct, correct.

(b)(6), (b)(7)c I don't believe, you know, from what we've read that you guys did any transcripts immediately after 9/11.

MS. SCHUESSLER: Correct, yeah.

(b)(6), (b)(7)c Do you know why that is?

MS. SCHUESSLER: Well, you'd have to really talk to (b)(6), (b)(7)c but I think that was also, part and parcel to some of the discussions--again, I don't think, and, again, this is my personal opinion, I don't believe that people in headquarters thought the Command Center played much of a significant role in the operation of the aircraft, so they were more concerned about the controllers talking to the pilots more so than the Command Center.

(b)(6), (b)(7)c Okay.

MS. SCHUESSLER: Because we're more of a coordination link, so they were more concerned with the pilot/controller interaction and what occurred with the aircraft.

(b)(6), (b)(7)c After the Commission kind of stood up and they started doing some work I think the Command Center did end up doing some transcripts at that point, do you know?

MS. SCHUESSLER: Oh, yeah, there was a lot that I think the Commission requested. I know, initially, they had requested transcripts for all

of the positions which, and I think they did that with the other air traffic facilities, as well, and I think Shirley working, with maybe Tony Ferrante worked with the Commission to, you know reduce the number of transcripts, how many were actually produced, I don't know at this point.

(b)(6), (b)(7)c Do you have anything else?

MS. WOODS: Uh-uh.

(b)(6), (b)(7)c Just trying to make sure to try and cover all the loose ends so we don't have to bother you.

MS. SCHUESSLER: Okay. So, when do you have to be finished with all your findings?

(b)(6), (b)(7)c We don't really have a date yet.

(b)(6), (b)(7)c Do you have a work phone number if I [unintell.]

MS. SCHUESSLER: I can give you, let's see--202--

(b)(6), (b)(7)c Uh-huh.

MS. SCHUESSLER: --785-2600 is the main number.

(b)(6), (b)(7)c : Okay. Are you at, is it a five-day-a-week thing or?

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c Do you know where (b)(6), (b)(7)c (b)(6), (b)(7)c is now, do you have her contact number?

MS. SCHUESSLER: No, but I'm sure you can get it from, let's say, her replacement, (b)(6), (b)(7)c (b)(6), (b)(7)c [ph], is in FAA headquarters, I don't know what his number is, either, but--

(b)(6), (b)(7)c : What's his name?

MS. SCHUESSLER: (b)(6), (b)(7)c

(b)(6), (b)(7)c Do you remember, you were referring to the FAA Communications Regarding Hijacked Aircraft Chronology, do you remember actually working on this yourself or maybe having some of your staff work on that?

MS. SCHUESSLER: Well, I'm sure, as the Deputy Director, some of my staff was working on it.

(b)(6), (b)(7)c Would Ferrante be included as one of your staff members at that time?

MS. SCHUESSLER: Mm-hmm. I'm just

thinking, there was one document, I remember getting in a small circle and I started with the group and then had to leave, I'm wondering whether this was the one. If this is the one, (b)(6), (b)(7)c (b)(6), (b)(7)c was in there. But, I mean, I couldn't tell whether that was the document--this was the document that the people were going over or not.

(b)(6), (b)(7)c : Do you remember what time period that would be?

MS. SCHUESSLER: I mean, it was later, rather than earlier, so, it could have been this time frame, but, again, I couldn't tell you, for sure.

(b)(6), (b)(7)c : Do you remember why you were working on this document, did you get some instruction from above?

MS. SCHUESSLER: Well, if this is the one that there was one document I remember, you know, I'm just thinking numbers now. Shirley and Lynne and (b)(6), (b)(7)c and myself, and I'm thinking there might have been one or two others in there, but I couldn't tell you who they are. To review a

document--a document, again, I, but that may have been early on with the Commission, I don't know, couldn't tell you.

(b)(6), (b)(7)c : And who is--is it Mike Scirillo?

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c And who is he?

MS. SCHUESSLER: He is now the Vice President for System Operations.

(b)(6), (b)(7)c Okay.

MS. SCHUESSLER: Trying to think, on September 11, I don't know his position.

(b)(6), (b)(7)c I've seen a name (b)(6), (b)(7)c

MS. SCHUESSLER: (b)(6), (b)(7)c is in security, he works for Lynne Osmus.

(b)(6), (b)(7)c Is he still at FAA or did he go over to TSA?

MS. SCHUESSLER: No, he's FAA.

(b)(6), (b)(7)c FAA?

MS. SCHUESSLER: Mm-hmm.

(b)(6), (b)(7)c I can't think of anything else, unless there's something else that you'd like

to add along the lines of what we've talked about today.

MS. SCHUESSLER: No, I don't think so, probably reiterate the statement I made when we first talked. I do not believe there was any intentional effort going on to mislead anybody on time frames. I just think this is a massive amount of data and trying to put it together, every time you pick up one rock you see something else that's there and has an impact on something else. And it's just very, very difficult to put all the pieces together.

(b)(6), (b)(7)c

Do you have anything else,

(b)(6), (b)(7)c

(b)(6), (b)(7)c

: No.

(b)(6), (b)(7)c

It's 10:47 we'll go ahead and stop the tape.

[END OF INTERVIEW.]

(202) 546-6666

I N T E R V I E W

(b)(6), (b)(7)c

Today is January 3, 2005.

Today we're interviewing (b)(6), (b)(7)c Also, present today is (b)(6), (b)(7)c with the Department of Defense Inspector General. We're conducting a review involving issues of certain public statements made by military and FAA officials at a 9/11 Commission hearing and elsewhere that were allegedly inaccurate.

And I should have said earlier that we're at the Department of Transportation Inspector General's Office in Cambridge, Massachusetts, which, I think it's 55 Broadway, and we're in the 10th floor conference room.

(b)(6), (b)(7)c

if you could, please, just acknowledge that you are aware this interview is being tape recorded?

(b)(6), (b)(7)c

Yes, I am aware.

(b)(6), (b)(7)c

Would you, please, raise your right hand? Do you swear or affirm that the testimony you are about to furnish will be the truth, the whole truth, and nothing but the truth?

(b)(6), (b)(7)c I do.

(b)(6), (b)(7)c Would you, please, give your full name, spelling your last, for the record?

(b)(6), (b)(7)c [ph] (b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c : I think before we got started here this afternoon, you had indicated you had

(b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c It was (b)(6), (b)(7)c

(b)(6), (b)(7)c : And how do you spell (b)(6), (b)(7)c

(b)(6), (b)(7)c (b)(6), (b)(7)c as in (b)(6), (b)(7)c

(b)(6), (b)(7)c When did you retire from the Air Force?

(b)(6), (b)(7)c I left Washington, D.C., I think 2 August, I believe it was.

MR. OWENS: Of?

(b)(6), (b)(7)c '04.

MR. OWENS: '04?

(b)(6), (b)(7)c Mm-hmm.

MR. OWENS: And what was the last position that you held there?

(b)(6), (b)(7)b I was the Air Force
Representative at Federal Aviation headquarters.

(b)(6), (b)(7)c : What rank did you hold?

(b)(6), (b)(7)c Colonel.

(b)(6), (b)(7)c : And who was your direct report
at the Air Force?

(b)(6), (b)(7)c [ph].

(b)(6), (b)(7)c Where was he stationed at?

(b)(6), (b)(7)c At the Pentagon.

(b)(6), (b)(7)c Did he hold a rank or was that
a civilian--

(b)(6), (b)(7)c He was I OCS.

(b)(6), (b)(7)c So he was a civilian position?

(b)(6), (b)(7)c Yes.

(b)(6), (b)(7)c So, he's assigned to Air
Force?

(b)(6), (b)(7)c Mm-hmm, he is XO [ph], he is
assigned to Air Force XO Off, he's the Air Force
Associate Director for Civil Aviation issues. He
also has a purple hat for DUD, Director of the
Policy Board on Federal Aviation.

(b)(6), (b)(7)c A purple hat?

(b)(6), (b)(7)c I'm sorry that means--

(b)(6), (b)(7)c : It's a term used to where people work for all the services. Army is green, Air Force is blue, Navy is dark blue; so when they're working on joint issues they say they're doing purple.

(b)(6), (b)(7)c : I see, it's a good thing you're here (b)(6), (b)(7)c

(b)(6), (b)(7)c : I'll interpret.

(b)(6), (b)(7)c : I may get lost in these--it's amazing how each little agency has their own little language.1

(b)(6), (b)(7)c : Bureaucracy.

(b)(6), (b)(7)c : And within the FAA, who would you normally report to--that's not the correct word, but--

(b)(6), (b)(7)c Yeah, we had administrative support from the ATO--to the ATO, it was under I guess the V.P. for Operations was the or the title. Prior to that, it was AT-1, the Director of Air Traffic Services.

(b)(6), (b)(7)c : And when you retired in

August, who was the V.P. for Ops at that time?

(b)(6), (b)(7)c

Linda Schuessler.

(b)(6), (b)(7)c

On September 11, who held the equivalent position?

(b)(6), (b)(7)c

There was--that position didn't exist, it was AT-1 and AT-2 back then. So, it was Mr. Bill Peacock and Mr. Jeff Griffith, both since retired. And, as I said, we didn't report to them, they provided our administrative support, the context we worked a lot of issues because I worked with many of the different people all over the building at senior levels, depending on what the issue was.

(b)(6), (b)(7)c

: At the FAA, did you have a staff of Air Force personnel or FAA personnel that reported to you or?

(b)(6), (b)(7)c

I had a liaison unit, of, I think it was 32 people when I left. But they were not all there in D.C., they were spread out over about 8 or 9 geographic locations. So, there in D.C., there was just myself, an administrative assistant, and a contractor for the Air Force side.

Then the Army, the Navy, the Marines, has a representative in the office, as well.

(b)(6), (b)(7)c : But you were only responsible for Air Force?

(b)(6), (b)(7)c Right, I was the senior military rep and we all worked together as a team, but strict chain-of-command rules, I just had the Air Force piece and I was the senior personnel.

(b)(6), (b)(7)c Purple-hat stuff or--

(b)(6), (b)(7)c Yeah, tech--you're learning--technically, it was not a purple office.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c We all reported back to our individual chain-of-command at the Pentagon. It was not a joint or purple office.

(b)(6), (b)(7)c So, when you say you were senior what was that--

(b)(6), (b)(7)c I was (b)(6), (b)(7)c of everyone there, right, so when things happened and we were working joint purple issues, there were a lot of times I would end up more in that role.

(b)(6), (b)(7)c Do you have any other

background questions for her?

(b)(6), (b)(7)c : Not as far as background.

(b)(6), (b)(7)c : I just have some, I guess, if you can give us just a real quick recap on your day on September 11. Then we've got some specific issues that we want to cover that are going to be more current than September 11. So, on September 11, were you working that day?

(b)(6), (b)(7)c Yes.

(b)(6), (b)(7)c And we're talking about 2001.

(b)(6), (b)(7)c Right.

(b)(6), (b)(7)c What time did you report for duty that day?

(b)(6), (b)(7)c I was en route to the building when the first plane hit the World Trade Center. I was on the bridge, kind of almost a view of the Pentagon, so probably five, ten minutes after that, I got to the building.

(b)(6), (b)(7)c Do you think that you got to the building before the second--

(b)(6), (b)(7)c Yes, I did.

(b)(6), (b)(7)c --you did? Okay. And what

happened after you reported to the FAA? What did you do or where did you go?

(b)(6), (b)(7)c

I went to my office.

Everybody was there around the TV. We watched the events unfold. At first, we were kind of hanging back and saying, you know, there's something awful going on with the air traffic system, but it's not a military issue. You know, we know from our own experience being air traffic control officers that when there's mayhem going on, people running around just being nosey asking questions; or sometimes even just going, can I help?. So we kind of hung back at first, waiting to see how it unfolded. But at a certain point, not too long after that, it became obvious that, you know, something really strange is going on and so we--I relocated.

I went upstairs to the 10th floor, I guess it's 10 floors, yeah, 10th floor and what they were putting together at that time an FAA situation room. And, actually, now that I think about it, I had actually gone next door to the SES office, next door, to say, you know, what are we doing here,

what's going on? And what she was doing, and she had, I guess, left and was on her way upstairs, too.

(b)(6), (b)(7)c

Who is that?

(b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c

Do you know how to spell that

last name?

(b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c

And what office was she in?

(b)(6), (b)(7)c

She's he Director of the

Airspace, she's just the closest senior person in that office.

(b)(6), (b)(7)c

About what time do you think

that you had gone up there?

(b)(6), (b)(7)c

It was right after the

airplane hit the Pentagon.

(b)(6), (b)(7)c

Okay.

(b)(6), (b)(7)c

It was, like, right there.

(b)(6), (b)(7)c

Where was your office at in

the building?

(b)(6), (b)(7)c

Fourth floor.

(b)(6), (b)(7)c

Fourth floor? So you actually

got up to the 10th floor about the time that the Pentagon was hit or after--

(b)(6), (b)(7)c No, the Pentagon was hit, there was a small delay because our main office is over there, like, tech-sergeant, NCO, admin support, so it'd be like a secretary and civilian equipment, we [unintell.] phone to call the front office to see if they were okay, then I went upstairs. I was, like, grabbing things and getting ready to go. So there was a slight delay.

(b)(6), (b)(7)c And when you went upstairs, you said that they were putting together a situation room or something to that effect?

(b)(6), (b)(7)c Yeah, they were putting together what the military would call a mini-command post only they called it the Air Traffic Situation Room in Mr. Peacock's office area. They set up, like, a mini-command post. phenomenal job of putting together the right people, the technology, support and everything. It just was growing right there, quick.

(b)(6), (b)(7)c : So this was in the Air Traffic

Manager's conference room or something like that?

(b)(6), (b)(7)c Right, right next to his office.

(b)(6), (b)(7)c Do you know who was in charge of assembling that?

(b)(6), (b)(7)c No.

(b)(6), (b)(7)c Do you remember who you saw there? It's all right if you can recall names.

(b)(6), (b)(7)c The second I walked in the room, I have no idea who was there and who wasn't there. The only person I really remember seeing because he was putting a specific piece of equipment in place was Dave Canoles. Other than that, people came and went all during the next, you know, minutes and hours and we were there until, like 1:00, 3:00 in the morning, something like that. So, it's all together. And I can't say who was right there at that minute.

(b)(6), (b)(7)c : So, once you joined the Situation Room, you stayed there for pretty much the remainder of the day?

(b)(6), (b)(7)c : Pretty much, mm-hmm.

(b)(6), (b)(7)c For, I think you said you were--until 1:00 in the morning?

(b)(6), (b)(7)c Yeah, 1:00, 3:00 in the morning something like that, I don't remember.

(b)(6), (b)(7)c While you were in the room what were you doing?

(b)(6), (b)(7)c Initially, we were doing coordination with some of the people back at NORAD, but, you know, I don't really remember the specifics now of what we were doing and, you know, it could have been that first hour; it could have been eight hours later. We were answering questions and just, you know, helping any way we could, from moving chairs to whatever.

(b)(6), (b)(7)c Now, when you said NORAD, you talked to Peterson or were you talking Cheyenne Mountain? Or did you make the distinction?

(b)(6), (b)(7)c I have no idea where the guy's office is that we talked to. And like I said, I know we talked to them a lot about what was going on and answering questions and coordinating on things, but exact time frame? I don't know.

Worked a lot with their--the FAA people who were out there, because as you know, that was an exercise going on that day [unintell.], but, you know, I don't remember now, who exactly we were talking to; what exactly the specific issues were.

As I told the Commission, we all wish we took notes. It was a hectic day and everybody did a lot of good work, but no one took notes.

(b)(6), (b)(7)c : Wasn't somebody keeping it on, like a computer log in there?

(b)(6), (b)(7)c Mm-hmm, they were, but that was in one room and a lot of the work was going on in many rooms. So, main events were captured on that log, I'm sure.

(b)(6), (b)(7)c : You're primarily an air traffic control background as opposed to [unintell.]?

(b)(6), (b)(7)c Oh, yeah, we're 100 percent traffic control.

(b)(6), (b)(7)c : Do you think that you had started communicating with the folks at NORAD before or after the last plane had crashed?

(b)(6), (b)(7)c Probably after, but I cannot

honestly say anything about the time frame that day I have confidence in because a good friend of mine called me from New York to make sure I was okay. Weeks, maybe days later, I don't know, he was saying something about his phone call to me and I said, blah, blah, when you called me that afternoon, (b)(6), (b)(7)c And he said, (b)(6), (b)(7)c I didn't call you the afternoon, it was around midnight by the time I finally got through to you. So my who personal frame work of time that day was off. I know that, because I would have bet money that (b)(6), (b)(7)c and I talked in the afternoon and he said, (b)(6), (b)(7)c it was midnight. So, I don't feel very confident about my sense of time. Everything moved very quickly that day. I thought he called me in the afternoon, so, I'm not a good judge of being able to give you any accurate time frames.

(b)(6), (b)(7)c : But you feel pretty confident about the timing of events, as far as the Pentagon got hit, you made it--

(b)(6), (b)(7)c Oh, that, I know--

(b)(6), (b)(7)c You, and your staff made a

couple of phone calls and then you all went upstairs?

(b)(6), (b)(7)c --yes, that I know that's that first little beginning before I really started working, I mean, I know that. I know. I know exactly when I was. When the one hit the Pentagon, I became real personal. I remember who I was standing next to; I remember every detail, yeah, a woman putting her arm around me, yeah. I know, I did not go upstairs until it hit the Pentagon.

(b)(6), (b)(7)c Do you have any other questions about that?

(b)(6), (b)(7)c No, you going to jump forward now?

(b)(6), (b)(7)c : Not too far forward yet.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : I was going to cover some initial coordination.

(b)(6), (b)(7)c : Okay, because I have some questions about that. So, go ahead, then I'll.

(b)(6), (b)(7)c : In the immediate period of time following September 11, just to kind of put,

like, a time frame on it, I would say within the first couple of weeks?

(b)(6), (b)(7)c : Mm-hmm.

(b)(6), (b)(7)c Did anybody from the FAA make a request to you to help them obtain any military information, like logs or summary reports about what happened or anything like that?

(b)(6), (b)(7)c : No one asked me for any logs or summary reports.

(b)(6), (b)(7)c : Was anybody from DOD in contact with you? One of the first briefings about--

(b)(6), (b)(7)c About logs and summary reports?

(b)(6), (b)(7)c : Or any reconstructions, like, one of the first things that happened was there was a briefing given to the White House regarding the crash of 93, the one up in Pennsylvania, because there were some allegations that DOD had shot it down. So that information apparently was passed from DOD to FAA. Did that flow through you?

(b)(6), (b)(7)c No, I do not recall seeing

anything like that.

(b)(6), (b)(7)c Did you obtain any logs or anything like that and provide them to FAA proactively?

(b)(6), (b)(7)c No.

(b)(6), (b)(7)c Do you know if FAA obtained any on their own, logs from the military?

(b)(6), (b)(7)c : Within that first few weeks?

(b)(6), (b)(7)c : Within the first couple of weeks?

(b)(6), (b)(7)c No, I don't know. I don't remember. I mean, I know, afterwards, obviously, there was a lot, but that was way after. There was a lot of exchange of information, I think, trying to recreate things, probably, but--

(b)(6), (b)(7)c Did you ask, on behalf of the Air Force or the military, the FAA for any information to provide to the Department of Defense?

(b)(6), (b)(7)c Logs and summary events? No.

(b)(6), (b)(7)c : Was there anybody new following the attacks during that first week or so,

other than your normal chain of command that within DOD that you were interacting with regrading background information, observations, increased hot washes?

(b)(6), (b)(7)c : No, there was, XO did a hot wash, but that's my normal chain of command. And I don't remember the time frame, but it was relatively soon.

(b)(6), (b)(7)c : So, XO did a hot wash?

(b)(6), (b)(7)c : Yes, they did.

(b)(6), (b)(7)c : I'm sorry, I don't know--

(b)(6), (b)(7)c : It's like an after-action--

(b)(6), (b)(7)c : It's like a debriefing--

(b)(6), (b)(7)c : Oh, okay.

(b)(6), (b)(7)c : XO did one relatively quick.

(b)(6), (b)(7)c : Who would have that?

(b)(6), (b)(7)c : Well, it was run out of the vice chief of staff's office, I don't have any other details on it.

(b)(6), (b)(7)c : All right, is (b)(6), (b)(7)c still there, since he was the civilian?

MS. WALSH: Yes, he is, but he was not

there on the 11th of September.

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : The gentleman that was there then is gone, he retired. But Air Force XO did something with them. I don't even know what they did, but they did collect information from us, trying to do it while people's memories were fresh. But it wasn't about logs or timing of events or anything.

(b)(6), (b)(7)c : Just what happened?

(b)(6), (b)(7)c : Yeah, just--

(b)(6), (b)(7)c : Tell me if I went too far ahead--

(b)(6), (b)(7)c : No, go ahead.

(b)(6), (b)(7)c : Immediately after, you were there since--until 2004--

MS. WALSH: Mm-hmm.

(b)(6), (b)(7)c : There were a number of upgrades done connecting NORAD into the FAA's--NORAD CONR NEADS the three sectors into the radars, [unintell.] communications and so on. Were you involved in that or did someone else coordinate

that?

(b)(6), (b)(7)c : No, we were not directly involved in any of that. Let me explain my office and our function--

(b)(6), (b)(7)c : Okay.

(b)(6), (b)(7)c : --because I think that'll put it in context and be helpful for you. We were a liaison office. And I used to tell everyone our mission statement was call 911 call 411, if you needed help or information about the Air Force, FAA, you can come to us; Air Force, if you needed help or information about the FAA, you could come to us. But if there were normal procedures and normal processes you already had established lines of communications and knew your way around the buildings and the issues, they would never come to our office.

So, there was, I mean, we could not, our little, there was just me and these people throughout the FAA, we couldn't handle all the interface that takes place between the FAA and the FAA and the Air force. So, only, like, initial set

up of things, unique things. So, sometimes we would, you know, set up--well, let me tell you the right office to find something for you; let me introduce you to the guy, let me give you a phone number. I don't even think that we did that. When they started to get into really working the acquisition and those kinds of procedures, you know, they were already established connections and using normal processes and procedures.

(b)(6), (b)(7)c Well, I can toss out some names to you, if now's a good time.

(b)(6), (b)(7)c Sure, whatever works for you.

(b)(6), (b)(7)c General Arnold?

(b)(6), (b)(7)c Okay, yes, I know who he is.

(b)(6), (b)(7)c Did you interact with him immediately after--do you recall--

(b)(6), (b)(7)c Define immediately.

(b)(6), (b)(7)c Well, through the 20th?

(b)(6), (b)(7)c Not that I recall.

(b)(6), (b)(7)c But sometime after that?

MS. WALSH: Yeah, we would go to meetings, I had gone back and forth, I had met him several

times.

(b)(6), (b)(7)c : Okay, so you attended some meetings with him--

MS. WALSH: Right, or trips down there.

(b)(6), (b)(7)c Okay.

MS. WALSH: We were more like, trying to think if he was at any specific meetings. We would go by, as the liaison, his office as a courtesy call when we took people for orientation and through CONR and SEEDS [ph] the offices Air Defense piece down there and always do a courtesy call with General Arnold and his successor, but a specific meeting, I don't recall.

(b)(6), (b)(7)c No issue meetings?

(b)(6), (b)(7)c : No.

(b)(6), (b)(7)c Nothing [unintell.] this is the guy that was the battle commander, that type of thing?

(b)(6), (b)(7)c Right.

(b)(6), (b)(7)c What about (b)(6), (b)(7)c

MS. WALSH: (b)(6), (b)(7)c the FAA (b)(6), (b)(7)c

(b)(6), (b)(7)c No, (b)(6), (b)(7)c the retired

colonel, (b)(6), (b)(7)c he was (b)(6), (b)(7)c

(b)(6), (b)(7)c and at the time he was a contractor?

(b)(6), (b)(7)c Is his first name (b)(6), (b)(7)c

(b)(6), (b)(7)c :

Yes.

(b)(6), (b)(7)c :

Wasn't that, no, that's not

the name of the guy I used to talk to. That name does not mean anything to me.

(b)(6), (b)(7)c : Okay. What about (b)(6), (b)(7)c

(b)(6), (b)(7)c :

What, the individual (b)(6), (b)(7)c

(b)(6), (b)(7)c :

No, (b)(6), (b)(7)c [ph], (b)(6), (b)(7)c

(b)(6), (b)(7)c

No. don't recall his name.

Doesn't mean I never met him, I don't remember details--

(b)(6), (b)(7)c What about (b)(6), (b)(7)c

(b)(6), (b)(7)c

Doesn't sound familiar.

(b)(6), (b)(7)c :

He would be out of NORAD

[unintell.]

MS. WALSH: No.

(b)(6), (b)(7)c

(b)(6), (b)(7)c

MS. WALSH: Yes.

(b)(6), (b)(7)c :

(b)(6), (b)(7)c

MS. WALSH: Yes.

(b)(6), (b)(7)c Just, again, as a courtesy
or--

(b)(6), (b)(7)c Well, actually, I worked with
(b)(6), (b)(7)c much, much later on, way into the more
normal Ops peacetime, you know, airspace issues
over locations of CAPS, problems he was having, in
some coordination with FAA. But I believe we're
talking, like, two years ago.

(b)(6), (b)(7)c All right this is was like
after setting up CAPS and--

(b)(6), (b)(7)c This is, like, two years
later, and, like, you know, I don't know it could
have been 12 months later, 18 months, but not
during the heat-of-battle time frame.

(b)(6), (b)(7)c Any contact with anybody in
Public Affairs at DOD or the FAA, again, during
that initial time?

(b)(6), (b)(7)c Not that I recall.

(b)(6), (b)(7)c I don't have any names to toss
out. What about (b)(6), (b)(7)c

(b)(6), (b)(7)c That's not a familiar
name, doesn't ring a bell. Unless he says he

talked to me.

(b)(6), (b)(7)c No, he didn't

(b)(6), (b)(7)c He could have, but I'm sorry,
my memory's not what it used to be.

(b)(6), (b)(7)c I'm done.

(b)(6), (b)(7)c I just want to show you this
log and see if it looks familiar to you. I know
it's a photocopy and I think a little piece of it
might have been chopped off.

(b)(6), (b)(7)c I can tell you, it doesn't
look familiar at all, the fact that it's
handwritten, doesn't look familiar at all. I
fairly certain this is the first time I've seen it.

(b)(6), (b)(7)c : I just wanted--for the record,
that's supposed to be the NEADS NMCC tech log.

(b)(6), (b)(7)c Yeah.

(b)(6), (b)(7)c Within the first couple of
weeks following September 11, FAA worked on sort of
putting together some time lines to reconstruct the
events of 9/11. And one of the things that they
had done, at least, from what we understand, is
obtained some information from the Department of

Defense. Some folks had mentioned your name a few times and said, well, you know, I think we got that information from Cheryl Atkins. Do you think, is it possible that maybe you could have gotten some information? Really, primarily the information that we're focused on trying to get pinned down was when did the FAA on 911 call the military, tell the military that, you know, American 11 was in distress or United 93, that sort of thing?

(b)(6), (b)(7)c Now, x-amount of years later, however many years it is, I don't remember that. I don't. And I can tell you, too, there were 22 people working in that military office because they beefed up the staff, so the phone could have rang and Captain So-and-so answered it and some FAA GS-12, could have said, hey, NORAD had a briefing, we saw it at a meeting, could you get us a copy of that unclassified NORAD briefing? And that Captain said sure, and gave them a copy this item. I don't know. Because that's what our office did, help facilitate, pass information, you know, he would have got permission and I'm--this is hypothetical,

that could have happened. I wouldn't know about that kind of routine information. But I, certainly, personally, don't remember doing that.

(b)(6), (b)(7)c When you were saying that you had, like, 30 people, is that at the point when you retired or--

(b)(6), (b)(7)c No, the 32 people is day-to-day, let's call it peacetime operations, spread out all over the country.

(b)(6), (b)(7)c Okay.

(b)(6), (b)(7)c Two or three at each of the regions; people at Atlantic City Tech Center; couple at Oklahoma City, that were in my personal FAA/Air Force Liaison detachment.

(b)(6), (b)(7)c Okay.

(b)(6), (b)(7)c So, they're spread out all over the--of that 32 peacetime, normal, routine, call 911/call 411 mission, only three of those were physically in that 4th-floor office. Some of them four or five, were in other parts of the FAA building working other things for the FAA.

When 11 September hit, we pulled them out

of their routine peacetime, you know, coordinating on future acquisitions or whatever they did that was not important; we pulled those bodies into my staff; we, you now, called up my reserves, stuff like that to supplement our staff. So, that's where we got, like 20, 22 people, something like that helping, because we had to staff that FAA Situation Room, as well as the Department of Transportation Crisis Management Center, 24/7. So, we pulled in reservists and people like that to help staff.

And they were there--that number went up and down, it fluctuated, depending on what the mission needs were and what hours they needed military there. I think it--maybe in November it had all calmed down, September, October, we probably did that for 60, 90 days, I don't know, don't remember now.

(b)(6), (b)(7)c So, following September 11, you beefed up the staff in the District--?

(b)(6), (b)(7)c Yes.

(b)(6), (b)(7)c --essentially?

(b)(6), (b)(7)c In my office, yeah. Yeah, I brought in--the guys were sitting in Atlanta, I brought them in on travel; I pulled in the guy from the New England office on travel so we could supplement the staff so they could be there to help answer questions and interpret, much the same stuff we did every day, but all surrounding the air defenses.

(b)(6), (b)(7)c Who was your--the administrative assistant--

(b)(6), (b)(7)c : Mine?

(b)(6), (b)(7)c --that you had, yeah, on September 11, who was that?

(b)(6), (b)(7)c

(b)(6), (b)(7)c : (b)(6), (b)(7)c

(b)(6), (b)(7)c Mm-hmm, (b)(6), (b)(7)c

(b)(6), (b)(7)c : Do you know if she's still in the Air Force?

(b)(6), (b)(7)c Yes, she is.

(b)(6), (b)(7)c : Do you know where she is?

(b)(6), (b)(7)c She's still there.

(b)(6), (b)(7)c : She's still there?

(b)(6), (b)(7)c Mm-hmm.

(b)(6), (b)(7)c : And you also said you had a civilian or a contractor?

(b)(6) Contractor, he's gone, he left the company, left the area.

(b)(6), (b)(7)c And who was that at the time?

(b)(6), (b)(7)c

(b)(6), (b)(7)c (b)(6), (b)(7)c

(b)(6), (b)(7)c Mm-hmm.

(b)(6), (b)(7)c Who did he work for?

(b)(6), (b)(7)c ANSER.

(b)(6), (b)(7)c A-N-S-E-R?

(b)(6), (b)(7)c A-N-S-E-R. And neither one of them left that room and came up to the 10th floor that I remember.

(b)(6), (b)(7)c So, they stayed on the 4th floor?

(b)(6), (b)(7)c Right.

(b)(6), (b)(7)c Well, we heard a couple of people had mentioned that you may have been able to, during the hijack crisis provide some military coordination between FAA headquarters and the Air

Force and, I'm just going to take a little leap here--

(b)(6), (b)(7)c Sure.

(b)(6), (b)(7)c But based on the timing of when you were able to get upstairs and really get involved it doesn't sound like that would have been possible. Is that a fair statement or--

(b)(6), (b)(7)c Yes, it's physically impossible. I wasn't there. And even if I was there, I would have had to go, like I did, find phone books and phone numbers. I'm a liaison, I didn't have links to operational mission command posts and stuff. Could I have found the numbers and called them and everything? Yes, eventually, but they already had the numbers elsewhere. They had direct hotlines to them from other facilities. So--

(b)(6), (b)(7)c Do you think the FAA was aware of what you were supposed to be doing there and sort of those limitations, for lack of a better term could serve as somebody who could coordinate military efforts, so to speak?

(b)(6), (b)(7)c

Well, see, define coordinate.

I routinely coordinated military efforts for them; coordinating policy documents; coordinating to have informational briefings given; you know, so I routinely facilitated and coordinated for them, provided them lots of assistance. Could I have picked up the phone and notified someone about a hijack? Eventually, 20 minutes, 30 minutes of going through phone books and phones?

(b)(6), (b)(7)c

I guess, coordinate a response to a hijack.

(b)(6), (b)(7)c

No, I'm not an operational--if you look in the procedures and the regulations, there was, you know, phone numbers and guidance, I'm sure in there, but they worked direct facility to facility. I'm sure people could have made assumptions about my abilities, but I was not physically there, so--and if they were anything like me, though, they'd have a hard time remembering who was where, when, what.

(b)(6), (b)(7)c

Okay.

(b)(6), (b)(7)c

Very stressful, very hard to

recall even immediately afterwards.

(b)(6), (b)(7)c Right. Do you have anymore questions about that period of time, (b)(6), (b)(7)c

(b)(6), (b)(7)c No.

(b)(6), (b)(7)c Well, then we'll follow up on that in the future, unless there's anything else you want to add.

(b)(6), (b)(7)c No, I'm good.

(b)(6), (b)(7)c In the--we're going to move to the point where the 9/11 Commission is formed. And they started to have hearings in early 2003.

(b)(6), (b)(7)c Mm-hmm.

(b)(6), (b)(7)c In May of 2003, I think it was on the 22nd and 23rd, maybe, toward the latter part of the month, Department of Defense testified and FAA, the Administrator, Jane Garvey, had testified. And following Jane Garvey's testimony or during Jane Garvey's testimony, some questions arose about timing of military notification, especially with regard to a particular flight. And do you remember anything about that or?

Because what we had come to understand is

that somebody, following Jane Garvey's testimony somebody had contacted you and asked you some questions to help Jane Garvey respond to the question that the Commission had proposed.

(b)(6), (b)(7)c I don't recall that. That was a long time ago. I don't recall anyone specifically doing that. That was my job, people called and asked for information. I don't recall that, I don't remember.

(b)(6), (b)(7)c : But it wouldn't be out of the ordinary for somebody like (b)(6), (b)(7)c to call you up and ask you a question about this or that? Like, specifically, you know, what were you doing on 9/11? That sort of thing.

(b)(6), (b)(7)c Yeah.

(b)(6), (b)(7)c : It wouldn't be out of the ordinary?

(b)(6), (b)(7)c I'm not sure what you mean, Unless, you mean, for her to say what were you doing on 9/11?

(b)(6), (b)(7)c : Yeah, I mean, I guess, Well, to stop beating around the bush--

(b)(6), (b)(7)c I mean it wouldn't be strange for them to say to me, Cheryl, we saw a briefing or do you remember, back in September there was some guy here from the Pentagon, he was a pilot, he had a flight suit, he gave us a briefing? Do you remember him? Were you in that room? Could you get us a copy of that briefing. That would be something they would ask or do you have a copy of such-and-such report or, you know. By that point, they had worked so much directly with NORAD and had established so many, you know, lines of communications between the staffs at all levels, I don't recall a lot of those kinds of requests.

(b)(6), (b)(7)c : Well, this is pretty specific. And it actually involves your actions. And what we had--what we've come to learn is following Jane Garvey's testimony, a question came up or, actually, I should say, during her testimony, a question came up about notification with regard to American Airlines Flight 77 and that (b)(6), (b)(7)c (b)(6), (b)(7)c had given you a call to kind of help you prepare this item here. And I'll let you go ahead

and take a look at it real quick.

And this is titled "FAA Communications with NORAD on September 11, 2001."

(b)(6), (b)(7)c Okay, so, you have a question about this?

(b)(6), (b)(7)c Well, I'm wondering if you remember getting a phone call?

(b)(6), (b)(7)c Within minutes after the first aircraft hit the World Trade Center?

(b)(6), (b)(7)c : Do you remember getting a phone call in May and I know--in 2003 this would have been after the Commission hearings, it probably would have been, my guess would be in the early evening, and it would have been kind of a frantic, we gotta get this together, the Commission needs this information--

(b)(6), (b)(7)c I don't remember anything specific like that. I couldn't, I couldn't remember back that far, something that specific.

(b)(6), (b)(7)c This is a year and a half ago.

MS. WALSH: Yeah.

(b)(6), (b)(7)c I thought maybe that might

help.

(b)(6), (b)(7)c Yeah, I'm trying. The Commission had already started meeting?

(b)(6), (b)(7)c : They started, actually, I think they might have had their first hearing in January of that year. And this is, this took place during--these were some of the most substantive hearings up to that point, where they were kinda starting to piece together what was happening that day. And the FAA, former Administrator, Jane Garvey, testified, I think it was on the 22nd. Then DOD came in and testified the next day--

(b)(6), (b)(7)c Somebody--somebody coordinated or talked to me about something, because I remember, at some point, I can't tell you when--this could have been before the 9/11 Commission, it could have been after that May 2003, you're talking about. Somebody at some point talked to me about me being notified or something that made me clarify to them that couldn't have happened, I wasn't up there yet. And I don't remember who it was or the timing, but I remember

going, I wasn't there. It could have even been the 9/11 interview guys, but I remember somebody talking to me about something and it was, like, you know, people were really hectic that day.

I remember saying to them, it was a crazy morning, I don't remember who was there and who wasn't and what time they got there and what time they didn't, but I can tell you, for sure, I wasn't there until after because I remember a whole bunch of people went, you weren't? And I remember the reaction of, you're kidding, you weren't? No, I wasn't there. But I don't remember the context. This could have been just a personal over the water fountain discussion, you know, recreating the morning, but I remember clarifying, I wasn't up there then. But the context and who it was, because I remember they were surprised.

(b)(6), (b)(7)c Well, let me just focus on this one sentence here, couple of sentences in this FAA communication with NORAD.

(b)(6), (b)(7)c Sure.

(b)(6), (b)(7)c And it says the U.S. Air Force

Liaison to the FAA, immediately joined the FAA headquarters phone bridge--

(b)(6), (b)(7)c Mm-hmm.

(b)(6), (b)(7)c --and established contact with NORAD on a separate line.

(b)(6), (b)(7)c Mm-hmm.

(b)(6), (b)(7)c Do you think that's a fair assessment of your actions on 9/11?

(b)(6), (b)(7)c I think it's misleading.

Because it says established contact with NORAD on a separate line. I remember making phone calls to NORAD from a phone outside of the conference room because we were all running to use whatever phones we could, it was not a command post where everybody had phones and everything. So, I made phone calls, but I did not do it--this almost looks like I had some kind of hotline or something going with them, and it was not immediately by any way shape or form. I know I didn't talk to them immediately.

Now, was it within two hours, three hours, five hours, but--I may have picked up the phone and started collecting phone numbers, I don't, I did a

lot that day.

(b)(6), (b)(7)c Did you talk to anybody at the National Military Control Center?

(b)(6), (b)(7)c At some point, I don't remember when, but, yeah, I worked with the NMCC.

(b)(6), (b)(7)c [unintell.]

(b)(6), (b)(7)c I don't remember names.

(b)(6), (b)(7)c Okay. (b)(6), (b)(7)c [ph]?

(b)(6), (b)(7)c I couldn't.

(b)(6), (b)(7)c General Sipe [ph]?

(b)(6), (b)(7)c General Sipe was over there?

[Cell phone interruption.]

(b)(6), (b)(7)c Do you know General Sipe?

(b)(6), (b)(7)c Yes, I know General Sipe.

(b)(6), (b)(7)c : You haven't talked to these gentlemen for a while?

(b)(6), (b)(7)c Yeah, I don't even remember him being involved. I know General Sipe because he eventually took over as the deputy XO0, so he was in my chain or command.

(b)(6), (b)(7)c He was in charge of NIMIC [ph]?

(b)(6), (b)(7)c Oh, was he?

(b)(6), (b)(7)c : Yeah.

(b)(6), (b)(7)c Do you know who Shirley Miller
is?

(b)(6), (b)(7)c Mm-hmm.

(b)(6), (b)(7)c : When you said that you had
this discussion with clarifying when you got
involved on 9/11--

(b)(6), (b)(7)c Right.

(b)(6), (b)(7)c : --do you think it could have
been with here?

(b)(6), (b)(7)c Yes.

(b)(6), (b)(7)c But you don't know?

(b)(6), (b)(7)c No, I don't remember, but I do
remember having a clarification discussion and, you
know, and I don't remember if it was over formal or
informal, I do remember clarifying and people
going--so, it's probably happened more than once.

[Cell phone interruption.]

(b)(6), (b)(7)c Do you remember if anybody at
the FAA may have asked you to clarify that point
specifically with the Commission during your

interview?

(b)(6), (b)(7)c No one talked to me about clarifying that point with them. I would remember that, no.

(b)(6), (b)(7)c : Do you remember when you were interviewed? We can look it up. Do you know, remember?

(b)(6), (b)(7)c I don't recall that, it was early '04, that's all I recall.

(b)(6), (b)(7)c Okay.

(b)(6), (b)(7)c How would you characterize your interview, friendly, argumentative?

(b)(6), (b)(7)c It was fine, it was formal. There was one person, in particular, I thought had some--displayed some emotion at a couple of points, but they did a good job, the team. There was some misunderstandings about roles and things I was saying, but somebody was prior military in the group who did an excellent job of clarifying, as well, so it was good--there was some emotion.

(b)(6), (b)(7)c : Do you have anything else? Is there anything else that you would like to add--

MS. WALSH: Nothing that I can think of.

(b)(6), (b)(7)c --along the lines that we were talking about?

(b)(6), (b)(7)c : Just one quick question, again, on the build-up afterwards, who--were you--was there any discussion ever about how DOD and FAA would keep track of the events that occurred if it ever had to be reconstructed again?

(b)(6), (b)(7)c In other words, the documentation, the logs, the tapings or anything?

(b)(6), (b)(7)c : Yes, has anybody ever said, hey, we need a to do a better job--we need to put something on the red switches or whatever? That's an Air Force command and control network.

(b)(6), (b)(7)c Mm-hmm.

(b)(6), (b)(7)c I don't remember that being in any of the lessons learned discussions I was in, but I was not in all of them, at all, So, I don't remember that, no.

(b)(6), (b)(7)c : That's your answer.

(b)(6), (b)(7)c : If we need can we get in touch with you for a follow-up, that sort of thing?

(b)(6), (b)(7)c : Sure.

(b)(6), (b)(7)c : All right, we'll go ahead and
stop the tape. It's 3:04 p.m.

[END OF INTERVIEW.]

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case No. 042R0122001

SWORN INTERVIEW OF
ANTHONY STEPHEN FERRANTE

BY

SPECIAL AGENT [REDACTED] (b)(6), (b)(7)c

SPECIAL AGENT [REDACTED] (b)(6), (b)(7)c

Thursday, February 24, 2005

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

SPECIAL AGENT (b)(6), (b)(7)c Today is February 24, 2005. The time is 11:03 a.m. We're at FAA Building 10-A, Room 1028 in Washington, D.C. My name is (b)(6), (b)(7)c. Also present is (b)(6), (b)(7)c

(b)(6), (b)(7)c We're from the Office of the Inspector General, Department of Transportation, and we're conducting a review of issues involving certain public statements made by military and FAA officials at a 9/11 Commission hearing and elsewhere that were allegedly inaccurate.

Today we're interviewing Anthony Ferrante. Mr. Ferrante, will you please acknowledge that you're aware that this interview is being tape recorded?

MR. FERRANTE: I am aware.

SPECIAL AGENT (b)(6), (b)(7)c Will you please raise your right hand? Do you swear or affirm that the testimony you're about to furnish will be the truth, the whole truth, and nothing but the truth?

MR. FERRANTE: I do.

SPECIAL AGENT (b)(6), (b)(7)c Will you please give

your full name, spelling your last for the record?

MR. FERRANTE: Anthony Stephen Ferrante,
F-as in Frank, -E-R-R-A-N-T-E.

SPECIAL AGENT (b)(6), (b)(7)c This is a follow-up
to, initially, a couple of previous meetings we've
had with you. I guess the most substantive
discussion we had was back in October of 2004. And
I think since we had spoken to you last, you may
have gotten a different position?

MR. FERRANTE: Yes, I have--well, when you
spoke to me last, I had just moved into this new
position. And, you know, my position now is the
Manager and Traffic Safety Oversight. It's a new
service that was created in response to the
establishment of the ATO. So we are the
independent safety oversight service for the air
traffic Organization.

Prior to that I was the manager of the Air
Traffic Investigations Division, and the routing
was AAT-200.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And
currently, whom do you report to?

MR. FERRANTE: Dave Canoles.

SPECIAL AGENT (b)(6), (b)(7)c And what's his current title?

MR. FERRANTE: David is the Director of Air Traffic Safety Oversight.

SPECIAL AGENT (b)(6), (b)(7)c And how many folks report to you?

MR. FERRANTE: Here?

SPECIAL AGENT (b)(6), (b)(7)c Yes.

MR. FERRANTE: Seven.

SPECIAL AGENT (b)(6), (b)(7)c Seven? And who do those include right now.

MR. FERRANTE: Right now it includes (b)(6), (b)(7)c

(b)(6), (b)(7)c

(b)(6), (b)(7)c

and (b)(6), (b)(7)c

(b)(6), (b)(7)c

When the Air Traffic Investigations Division was still around, what policy or handbook did you guys rely on to conduct your investigations?

MR. FERRANTE: We relied on two, primarily: The overall governing handbook, the FAA Order 802011--

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. FERRANTE: --which deals with aircraft accident and incident investigation. And in turn, we had an Air Traffic Quality Assurance order that was FAA Order 7210.56. Both of those were distributed to us.

SPECIAL AGENT (b)(6), (b)(7)c And again, just to kind of confirm. on September 11th you were the manager of the AAT-200?

MR. FERRANTE: Yes, I was.

SPECIAL AGENT (b)(6), (b)(7)c And on that day, who did you report to?

MR. FERRANTE: Dave Canoles.

SPECIAL AGENT (b)(6), (b)(7)c And at that time he was?

MR. FERRANTE: He was the Manager of the Air Traffic Evaluations and Investigations staff, and that was AAT-20.

SPECIAL AGENT (b)(6), (b)(7)c The 911 Commission, I believe, had interviewed you in April of 2004, does that sound about right?

MR. FERRANTE: Yes.

SPECIAL AGENT (b)(6), (b)(7)c And during that interview, I believe that you indicated that you oversaw the production of the book which is titled "Summary of Air Traffic Hijack Events of June 11, 2001;" is that right?

MR. FERRANTE: We have a copy of some excerpts from that. Is that--

SPECIAL AGENT (b)(6), (b)(7)c That is the book. I think you also indicated Dave Canoles was the manager of AAT-20 had--which is the parent of AAT-200, right?--

MR. FERRANTE: Yes.

SPECIAL AGENT (b)(6), (b)(7)c --gave you direction in the preparation of this document, is that correct?

MR. FERRANTE: Yes. Ordinarily, our office would always prepare an alert bulletin any time there was a major accident or incident within the National Air Space System. So this was really--it was our version, almost of an alert bulletin. It was to try to document all the facts, all the details, all of the information that we had

and make it available to the Senior FAA-- (off mike) --

SPECIAL AGENT (b)(6), (b)(7)c Now, you can correct me if I'm wrong, because I think I've seen a couple of alert bulletins before. They're usually just like a paragraph or so in length, is that--

MR. FERRANTE: Generally, ours were usually a page and a half to sometimes two pages.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. FERRANTE: Because we talked about the specifics, you know. We would try to get the weather conditions, what the flight conditions were. Our alert bulletins followed a format in which you had a number of injuries or fatalities in an aircraft accident, and then a brief narrative of what took place. And then we often had additional actions or follow-up actions that needed to take place, because often with an aircraft accident there are things like drug test determination that has to be made, and whether or not we felt, you know, the air traffic system had performed correctly, and what those determinations were.

SPECIAL AGENT (b)(6), (b)(7)c Is the creation of the alert bulletins covered in 802011 or the 7210.56 orders?

MR. FERRANTE: No. That was just an office policy that we had, sort of like an ad hoc report. It was a quick--it was designed to be a quick briefing item. The distribution that I recall, it seemed we went to the Director of Air Traffic; we went to the Office of Aircraft--or Accident Investigation, which is a part of the flight standards organization. They're the ones who actually went and with the FTHBN (ph) determined the probable cause.

Our role in AAT-20 to explain (ph) AAT-200 was to try and determine how the air traffic system performed in any of those incidents or accidents that occurred. Not particularly why the airplane crashed, if there was a flaw with the aircraft. It was how the air traffic system performed.

SPECIAL AGENT (b)(6), (b)(7)c Okay. With regard to the "Summary of Air Traffic Hijack Events," I believe that you had indicated to the Commission

during your interview with them that you and your staff had begun production of this document on Thursday, the 13th, and kind of worked through the weekend. And I guess according to the--some of the dates in here that you guys concluded the preparation of this, or finished it on the 17th of September. Is that about right?

MR. FERRANTE: That is--let's see. September 11th--it's unfortunate that we'll always remember that it was a Tuesday.

SPECIAL AGENT (b)(6), (b)(7)c Yes.

MR. FERRANTE: And the following Monday is when it went to the final printing.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. FERRANTE: So that would be correct.

SPECIAL AGENT (b)(6), (b)(7)c I think you also indicated that you and your staff played a role in preparing this--this I just called it grid time line that specifically deals with military notification issues.

MR. FERRANTE: Yes, we did. And I don't remember exactly what our role was in that, but I

do know it was prepared by the AAT-20 staff, as it so indicated on the bottom. I seem to recall that a gentleman named (b)(6), (b)(7)c and a program analyst we had named (b)(6), (b)(7)c were primarily involved in putting that together. At the time that this was going on, we had--let me see, who was primarily here?--Doug Gould, (b)(6), (b)(7)c Mary Strauberg (ph), (b)(6), (b)(7)c (b)(6), (b)(7)c. And I think that's primarily who from the staff we had in attendance.

And everyone kind of had like a different function. Doug's primary role was he was working mostly with law enforcement entities, primarily with the FBI, because we had to get a release from them for anything that we were letting go outside of the agency. And that included releasing information to the NPSB (ph), which was a normal protocol for us. His actual forte in this incident was radar data analysis along with Dan Diggans. They're the ones who actually looked through the play tracks (ph). They put together what you see in there. There are some pictures that were taken

from radar displays that show the aircraft routes.

Kathryn and Mary Strauberg primarily, you know, sat at a computer and at typing and trying to follow everything that was occurring. And I can't pinpoint what the others do, but I believe that Wayne and Molly worked on this type of a chart.

SPECIAL AGENT (b)(6), (b)(7)c One of the things that Elise and I had done was, you know, went through the different time lines that we could find that the FAA had created and kind of looked at which contained what bits of information and such. And one of the things that became apparent in the "Summary of Air Traffic Hijack Events," is that it only lists notification times for American 11, which it says happened at 8:40, and United 175, which it says happened at 9:05. However, there's no notification time for American 77.

MR. FERRANTE: And notification to?

SPECIAL AGENT (b)(6), (b)(7)c The military. However, this grid time line does contain a notification time for American 77, which it says happened at 9:24. And both of these documents use

sa their source for military notification the NEADS log. I was wondering if you could explain why the 9:24 notification was not included in the "Summary of Air Traffic Hijack Events"?

MR. FERRANTE: I have to think about it for a minute. When we started--

SPECIAL AGENT (b)(6), (b)(7)c You're welcome to look through it here. You're more than welcome to.

MR. FERRANTE: When we started putting this together, everything that went into this initially was something that we could take from either voice recordings or from radar data, which has a time imbedded into it, which was really to see, you know, what time the radar saw a target, or because all of our facilities had voice recorders that have a time channel imbedded in those, you could read out the time that those transmissions were made.

So the idea was to try to be as accurate and as factual as we could. I think along the way we started getting some more bits of information that went into this. For example, the NEADS

notification for American 11 was probably the simplest because we were able to get most of that off of Boston Center voice recordings. We know what time they contacted Otis Air Force Base, for example, and started that process that was arranging to get a scramble. Where some of the other times came from and how they got mixed in, I don't recall exactly how that took place.

I think at one point there was some efforts by Public Affairs to put together a time line of certain things that took place, and I remember reviewing one down the hall in the A-Traffic offices, and that's kind of why we ended up putting all four of the chronologies together because when we started this effort, we had a separate chronology for each flight. Before we finished this effort, we did put all of it together into one format.

SPECIAL AGENT (b)(6), (b)(7)c And the effort you're talking about is the "Summary of Air Traffic Hijack Events" book?

MR. FERRANTE: Yes. The intent would have

been, normally, we would have done one of those briefing sheets, and it would have been probably three or four pages with all the information and a picture of the radar tracks and the flights and so forth for each one of the flights. But then it grew into, okay, let's put everything together; let's make one summary that shows all of it. And that's actually how the book came about.

SPECIAL AGENT (b)(6), (b)(7)c Let me put this down-- (off mike).

MR. FERRANTE: Has your stomach gone numb from that thing yet?

SPECIAL AGENT (b)(6), (b)(7)c Do you specifically recollect seeing that 9:24 time at any point when you were putting the book together?

MR. FERRANTE: Well, there's a footnote that you have on the 9:24 time, and I don't remember what--so--this--after--

SPECIAL AGENT (b)(6), (b)(7)c And this was prepared within a grid time line.

MR. FERRANTE: --throughout a summary review of needs log.

SPECIAL AGENT (b)(6), (b)(7)c The grid time line was prepared a day later.

MR. FERRANTE: Okay.

SPECIAL AGENT (b)(6), (b)(7)c So it really, within one day--

SPECIAL AGENT (b)(6), (b)(7)c Right. I guess this is the concern, Tony, is this--the earliest document that you guys prepared, the "Summary of Air Traffic Hijack Events," especially with regard to military notification, looks like, according to the findings of the Commission, the most accurate document. But as time kind of progresses, other notifications come in that the Commission has determined are inaccurate. And we're wondering what--why did you guys make the decision on the 17th not to include from the needs log which you guys apparently had-- because you make reference to it in the summary--why on the 17th you decided not to include 9:24 in the summary, but the next day you decided to include it in the grid time line?

MR. FERRANTE: I don't know. I can tell you there were a lot of inaccurate times that were

associated with that. And I think some of the times came from a laptop computer that was being used down in the conference room when they had initially set up what we call the "never-ending tell time (ph)." I don't know what the actual name for it was. But some of those times were off, I know, for more than an hour.

I think if you read through our summary, you will find in there that we had some notifications on United, the second--93. I think our report indicated that we made notifications concerning United 93. But I can tell you when I met with (b)(6), (b)(7)c (ph), being interviewed by the Commission, he asked me certain questions, and then he showed me a needs log, which I had never seen before, and he said, "Find that time on this log for me," which I couldn't because it wasn't on any needs log.

The summary actually doesn't contain any notification time for United 93.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. FERRANTE: So--there was one

notification time that I recall he asked me about in my interview, and then handed me a log. It was a handwritten log, and he asked--

SPECIAL AGENT (b)(6), (b)(7)c Mm-hmm.

MR. FERRANTE: May I see it right there? (Pause.) I'm not sure what document they were asking you to compare against this log, because this, the NEADS log, says at 12:40 Zulu (ph), which would be 8:40 Eastern Time--

SPECIAL AGENT (b)(6), (b)(7)c Right.

MR. FERRANTE: --in September. It says, "Possible hijack of American 11." Then at 13:05 Zulu, which would be 9:05 local time in September, it says, "United 175 possible hijack. Boston to--", I think was LAX.

And then if you go down here to 13:24, which would be 9:24, it says, "American Airlines," and then it gives the tail number which is "N-334AA hijacked." I think many FAA documents refer to this 9:24 entry as being American 77, but--I'm sure the Commission pointed out there that that tail number belongs to 11, not 77. They did point that

out.

Now, ordinarily, I would never see the tail number of a US--(indistinguishable)--because this only dealt with a flight number as far as, you know, American 77 and so forth. So that's probably how someone translated that into being the time now as 9:24. The first American aircraft, to our knowledge, has already crashed into the Trade Center. So this must be when we notified them on the second aircraft. That's just conjecture on my part as to how that time may have been put in there as far as 77 notification.

SPECIAL AGENT (b)(6), (b)(7)c Do you know what division within the FAA handles recordation of the N numbers?

MR. FERRANTE: I'm sure when you file your flight plan, which airlines have a different ability to file flight plans than your average general aviation pilot does. And, of course, if you're filing, generally, the A (ph) incidents in November registry anyway, there is a registration office in Oklahoma City that knows the--who the

registered owners are. But as far as which particular airline flight is which particular registration number for that airline, only the airline knows that. Once they included it in the flight plans.

Now, airlines when they file flight plans, use a process that we call "bulk store" (ph), where they just put a whole bunch of flight plans into the FAA computer office at any time. I've never seen how that process works, so I don't know if it's contained in that or not.

SPECIAL AGENT (b)(6), (b)(7)c Well, as part of your office's investigative process, you know, and putting together these time lines, did it include going back to the airlines and talking to them about anything?

MR. FERRANTE: No, because, generally, when we did an alert bulletin, we did like American 77, we do an alert bulletin, and within sometimes hours or at least certainly within days the Office of Accident Investigation, which is AAI, actually put out a booklet, and part of our alert bulletin

would make it into their booklet. But their booklet would say American Flight 77, and it would also have a registration number in there as well.

So they had that ability to go back and work with the airlines and determine which aircraft was on which segment. But I don't know that anyone in air traffic ever did.

SPECIAL AGENT (b)(6), (b)(7)c What's the name for AAI?

MR. FERRANTE: Accident Investigation. They're part of the AVS (ph) organization. And, remember, we changed all the times, so--

SPECIAL AGENT (b)(6), (b)(7)c Yeah, I know.

MR. FERRANTE: It used to be AVR was the Associate Administrator for Regulation and Certification, AVR, which has now become AVS, which--and so the Associated Administrator for Aviation Safety. It was and is still "NIX ABAKEEN" (ph).

Now, within AVS there are various lines like flight standards is AFS, FS certification is AIR, accident investigation is AAI. So they were

AAI on September 11, they're still AAI today, and they're the group that actually goes to aircraft wreckage sites and work with the NTSB in trying to determine probable cause of why the aircraft--but they don't do that on all of them, they do it on the major accidents.

We would often accompany the NTSB and AAI as part of the initial go team, but our role from the AAT-20 or 200 staff was strictly the performance of the air traffic system. So we would not go with them to a craft site; we would go to the air traffic facility that had communications or contact with them and start doing the review if radar data voice tapes and so forth.

SPECIAL AGENT (b)(6), (b)(7)c Do you know, did the AAI prepare anything for September 11?

MR. FERRANTE: I would have to believe that AAI prepared the normal types of accident notifications that they would. Generally speaking, when an accident occurs that either a lost an air carrier, or if a significant or has prominent persons on board, they generate their own version

of an alert bulletin, which you can always tell the different between ours and theirs. They use color printing; we never did. But--and it says "Office of Aircraft Accident Investigation."

And generally, within hours they had a bulletin, and theirs would have a lot more information about the flight crew, the aircraft itself, who owned it, how many cycles it had, you know, the crew's rating and experience and so forth. So they had access to all those databases that had that information.

SPECIAL AGENT (b)(6), (b)(7)c Is (b)(6), (b)(7)c will in charge of that group?

MR. FERRANTE: Yes. But on September 11th he wasn't there. I don't know what--what his position was on September the 11th.

SPECIAL AGENT (b)(6), (b)(7)c Was he still at the Eastern Region, maybe?

MR. FERRANTE: He may have been.

(Both speaking simultaneously.)

SPECIAL AGENT (b)(6), (b)(7)c --standards on Eastern Region, wasn't he?

MR. FERRANTE: He was, indeed, and I think that he spent several months in headquarters as the manager or the Director of Flight Standards Service before he became the Associate Administrator. But I don't know when those moves took place. I first met him Veterans Day 2001. That was when American 587 crashed. It was about two months after the September 11th incident, the crash that occurred in New York, which, of course, prompted a big turnout of the FAA, and that was the very first time I had met him.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And who's in charge of the AAI right now?

MR. FERRANTE: (b)(6), (b)(7)c And I think he was there as well. Our primary focal point is (b)(6), (b)(7)c was there prior to September 11th. (b)(6), (b)(7)c is still there today, and (b)(6), (b)(7)c was really the link between the air traffic side and the accident investigation side. Most of our coordination came through him setting up controller interviews and so forth, filling Board requests.

SPECIAL AGENT (b)(6), (b)(7)c You said you didn't know why the summary didn't include the 9:24.

MR. FERRANTE: We may not have had it when this went to--you know, remember, we came in here. I was in Chicago when the incident actually occurred, so I got back sometime on Wednesday morning. We immediately were on like, you know, 14-16-hour shifts. So Thursdays when I recall we started really getting to putting the chronology together and so forth, and the idea was to have it for Saturday, have it for Sunday. Because I can remember Dave coming down several times and being somewhat frustrated that we weren't done yet, because there was just so much information that we were trying to go through. And we finally got it like 8 o'clock or so on Monday morning. In fact, (b)(6), (b)(7)c I remember, carried it up to our graphics unit and had it printed.

So we may not have had those times available at then. They may have come in later on Monday and then put together on Tuesday. I don't know.

SPECIAL AGENT (b)(6), (b)(7)c You had indicated to the Commission and to us when we had spoken to you that you had not seen the needs log until your interview with the Commission.

MR. FERRANTE: That's correct. (b)(6), (b)(7)c

(b)(6), (b)(7)c provided a copy of it, and again it was the same handwritten version you have now, because I remember thinking or seeing that it had either "Top Secret" or "Classified" written on the top, and it had been crossed out. And he asked me if I had ever seen that before, and that was the first time I'd ever seen that log.

SPECIAL AGENT (b)(6), (b)(7)c You also indicated to the Commission when you were interviewed that you weren't even sure where you obtained the information concerning the needs log that was incorporated into there. Does that sound accurate?

MR. FERRANTE: Yes. Now, some of it I think came from Boston Center. And these sheets were, of course--was American 11 because Boston Center reached out, and they made notification to Otis Air Force Base trying to arrange for a

scramble. It was outside of the protocols of how the FAA normally treated a hijacking event, but in any event those times were available through Boston Center's logs, through Boston Center's voice recordings.

The other times, I don't know how we got each of the different notification times. Some of it, I thought, came from the log that they had developed, and they had it in the room where they were running this outcome from. It was the old director of air traffic process. I still recall that some of it we did not know, and, like they would come down and ask where we were, what we were working. And I'd say, "We don't have the time for this," or, "We don't know what time this occurred."

But if I can--I can remember him, you know--I mean I'll even show you: It was kind of like he had to put his foot up like this, and he opened a portfolio up, and he said, well, "That was that flight," whatever time. What he was reading from I don't know.

SPECIAL AGENT (b)(6), (b)(7)c Well, the--for

American 11 the entry for the military notification says it's at 8:40, and it says here, "Northeast Air Defense Sector (needs--in parentheses--logs) indicate they were notified by the Federal Aviation Administration of the events concerning American, AAL 11."

Presumably, what you're saying here is that somebody saw the needs log, and that's the source for that entry. Does that sound right?

MR. FERRANTE: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

SPECIAL AGENT (b)(6), (b)(7)c But you didn't see it?

MR. FERRANTE: No, I never saw it.

SPECIAL AGENT (b)(6), (b)(7)c And then also for United 175, the entry in your "Summary of Air Traffic Hijack Events" says--at 9:05 it says, "Northeast Air Defense Sector (needs--in parentheses--logs) indicate they were notified by the Federal Aviation Administration the events concerning UAL 175." So again, that would tend to indicate that the source for that entry is the

needs log. Does that sound right?

MR. FERRANTE: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Okay. I guess kind of one of the things that you had told both us and the Commission is that you guys wanted to, or you tried to have a piece of paper to support all the entries that were in your different time lines, is that right?

MR. FERRANTE: Yes.

SPECIAL AGENT (b)(6), (b)(7)c And what we heard from you and some other folks is that you guys didn't--at least at your level--have a piece of paper for this needs log entry.

MR. FERRANTE: Right. When we--when we try to have a piece of paper that we could, you know, actually hold onto something that says "here's when we did that," that's--we relied primarily on those facility logs. Some of the things that we had to rely on were personnel statements, and we put a caveat in there that, you know, the time is approximate based on what we could read from the statement.

SPECIAL AGENT (b)(6), (b)(7)c But that's-- a statement is still a piece of paper. It's a supporting document.

MR. FERRANTE: Right.

SPECIAL AGENT (b)(6), (b)(7)c I guess what we're wondering is sort of, given the lack of real strong support for these need log entries, I was wondering what steps you guys took to go back to FAA's records and tried to--

[END OF SIDE A, TAPE 1, BEGIN SIDE B.]

SPECIAL AGENT (b)(6), (b)(7)c I've turned the tape over. It's 11:33.

It's like I was saying, what sort of steps did you guys take to look at the FAA, or look within the FAA's own records to kind of double-check or verify these entries that you're reporting with regard to the needs logs?

MR. FERRANTE: In the first week that--following September 11th, there wasn't any way for us to do that, because again we relied on facility logs. If there was a log entry that indicated they made a notification, then that was a

piece of paper we could hold onto and say that. If it was on a voice tape we could do that.

But a lot of the facilities made notifications done on either unrecorded lines or on lines that, you know, were so far removed from the operation that people didn't realize it was something that was critical to have in the days and hours that followed. Because some of the material that came out was actually months after the occurrence took place.

And when we used--when we did a normal alert bulletin, we didn't focus on what time we made notifications. Occasionally, we would look for things in a facility log like what time we notified Search and Rescue, or what time we notified, you know, the Crash Fire Rescue Service on an airport, because there were oftentimes when, you know, if you had somebody that was in a survival accident overnight, the, obviously, there's a liability concern that if we didn't make notification until the following morning that we were even missing an aircraft.

So that was really the extent of our involvement in ever using notification times when we made those briefings.

SPECIAL AGENT (b)(6), (b)(7)c I think, if I recall from either the Commission's interview or our interview with you, that the reason that the notification times were eventually included in these documents that your group had put together was because the higher-ups within the FAA asking you that.

MR. FERRANTE: Absolutely. Absolutely. And I can't tell you who told us to do that, but we were told to get the notification times in the chronologies. But left to our own devices and how we investigated aircraft accidents, that was nothing we would have ever picked up on.

SPECIAL AGENT (b)(6), (b)(7)c So that was not something that would have been normal for you to seek out.

MR. FERRANTE: Correct. Except in the case of whether or not we had notified Fire Rescue Services at an airport, or if we had gone through

Search and Rescue procedures for an overview of-- (indistinguishable).

SPECIAL AGENT (b)(6), (b)(7)c Do you think it's fair to say that you guys were comfortable as long as you had a source for your entries?

MR. FERRANTE: I think that's fair to say. But I don't think we had--it is fair to say that, but when you consider a source, we got our direction either through Dave--I know (b)(6), (b)(7)c (ph) was in the area a couple of times. I don't think I saw (b)(6), (b)(7)c other than perhaps on the 10th floor when we went (ph) to him.

SPECIAL AGENT (b)(6), (b)(7)c (b)(6), (b)(7)c

MR. FERRANTE: (b)(6), (b)(7)c But primarily, our information flow was coming in from (b)(6), (b)(7)c or from (b)(6), (b)(7)c It wasn't just, you know, somebody walking down the hall. But, yes, we're comfortable in saying that as long as we got it from another source.

SPECIAL AGENT (b)(6), (b)(7)c So you weren't just talking to somebody in the street--

MR. FERRANTE: Correct.

SPECIAL AGENT (b)(6), (b)(7)c --I guess is what you're trying to say.

MR. FERRANTE: That's what I'm trying to say, yeah. The cleaning crew didn't come by and say, "Put this time in."

(Pause.)

SPECIAL AGENT (b)(6), (b)(7)c During one of our previous interviews with you, you had indicated that there were some items--that's as far as it was defined as some items--that you guys were asked to incorporate into the summary that you felt you didn't have enough supporting material for. What sort of things were you trying to describe?

MR. FERRANTE: Probably the times when we made certain notifications.

MR. FERRANTE: Can I look at this for just a second?

SPECIAL AGENT (b)(6), (b)(7)c Sure.

MR. FERRANTE: Because when I talked to you, you know, part of my discomfort was the conversation that I had with (b)(6), (b)(7)c from the Commission. And I don't remember exactly what that

was, but there was a particular time he pointed to in one of these chronologies, and he asked me about it, and I read it. And then he showed me the needs log. That was when I first saw that needs log, and there was no such notification in the needs log, because he asked me to find it and I couldn't.

And I don't recall exactly what that was related to.

SPECIAL AGENT (b)(6), (b)(7)c That 9/16 notification--

SPECIAL AGENT (b)(6), (b)(7)c Well, 9/16 (ph) was on the needs log which just has the tail number issue. Just like 9:24 is the tail number issue. I thought it was with the United 93, but I could be mistaken. But I definitely remember that conversation with (b)(6), (b)(7)c interviewing me.

SPECIAL AGENT (b)(6), (b)(7)c Well, unless there's another time line that we haven't discovered yet, I don't think your group put together any time lines that have a notification time for United 93 except in the drafts of this grid time line. You guys did have a notification time for United 93. It was

10:08.

MR. FERRANTE: And that could have been--that could have been what he was referring to. I thought it was 10:07, but--

SPECIAL AGENT (b)(6), (b)(7)c Seven or eight.

MR. FERRANTE: --that may have been. But there was one particular entry that he pointed to and said, "Show me this in the needs log," and I couldn't because it wasn't there. So he may have had a draft copy. I don't remember exactly what he showed me, but I really believe it was referenced to United 93 in a notification.

(Pause.)

SPECIAL AGENT (b)(6), (b)(7)c So when we spoke to you previously, the items that you guys were asked to incorporate that you guys didn't think you had enough supporting material for, do you think those were the military notification times?

MR. FERRANTE: I think most of the times on where we made notifications were sketchy at best. And I recall, specifically, that there was a log that was kept from this "tell time" (ph), and I

specifically recall that the crash time for one of the aircraft was off by more than an hour. So I didn't know that all of this was--and I attributed that to, you know, first they're capturing stuff on white board, and then someone's trying to read what's on the white board and capture it not a laptop. Then someone else is erasing something to write something new on the white board, and I wasn't comfortable with some of this. It's a lot cleaner when you've got a radar picture, something you can say, "Here it is. Its time span is incorporated into it."

SPECIAL AGENT (b)(6), (b)(7)c I think a lot of this might have been a little more clear if WOC had recording capability on 9/11.

MR. FERRANTE: I agree. But they didn't.

You know, when I think if you had asked us on September 10th, we all thought they did, at least the group in AAT-200. We all thought they did.

SPECIAL AGENT (b)(6), (b)(7)c I'm surprised they didn't. I never really gave it much thought before

this came up, so--

MR. FERRANTE: Right. I think a lot of people didn't give it much thought before this came up.

SPECIAL AGENT (b)(6), (b)(7)c I don't know that I ever even heard of a WOC before all this, so--

MR. FERRANTE: Well, we--

SPECIAL AGENT (b)(6), (b)(7)c We'll give you until yesterday.

MR. FERRANTE: Yeah. We love our acronyms, you know. We just couldn't live without them.

SPECIAL AGENT (b)(6), (b)(7)c Yeah.

MR. FERRANTE: So we also have ROCS. Those are Regional Op Centers."

SPECIAL AGENT (b)(6), (b)(7)c Okay, yeah, as opposed to the Washington Operation Center.

MR. FERRANTE: And in terms of air traffic we had RATS and HATS, because you had Headquarters Air Traffic and Regional Air Traffic.

SPECIAL AGENT (b)(6), (b)(7)c Going back to this grid time line--

MR. FERRANTE: Okay.

SPECIAL AGENT (b)(6), (b)(7)c --you know one of the drafts of this time line has a notification time for United 93 as 10:08. And Mr. Canoles indicated that this was his handwriting on here, and it was changed. And I was wondering if you could recall what sorts of discussions you guys had concerning this modification of this time line, because the final version, you know, indicates N/A.

MR. FERRANTE: I can't recall a specific conversion on this, but if I remember some of the chronology involving that flight, there was another aircraft that we had reported to us that they observed a puff of smoke. I think 10:08, in the initial time frame we were putting together, was what we were using as a probable crash time.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. FERRANTE: And that's just--you know, that's memory coming out of that. I don't know if that's the case or not.

SPECIAL AGENT (b)(6), (b)(7)c Well, it--

MR. FERRANTE: But how that got translated

into a notification time, I don't know. How it came out--

SPECIAL AGENT (b)(6), (b)(7)c So what you're thinking is that 10:08 is actually a crash time?

MR. FERRANTE: I think that if you look at the chronology for that flight, there was, you know, there's some discussion that after he comes back into radar coverage of Pittsburgh, we lose radar with him again. And then there's another aircraft that reports a puff of smoke. And I think that that's right about that time frame.

So, to me, I think that could have been translated into that, as far as when that occurred.

SPECIAL AGENT (b)(6), (b)(7)c Well, I think (b)(6), (b)(7)c and I discovered the source of that entry in going through the various records that your group had asked the centers to put together. And on September 15th Cleveland Center had sent an email to Doug Gould and (b)(6), (b)(7)c (ph), and a bunch of other folks. I don't recognize their names.

MR. FERRANTE: Okay, (b)(6), (b)(7)c was a Regional Quality Assurance Specialist. (b)(6), (b)(7)c

(b)(6), (b)(7)c (ph) was the--I think the Assistant Manager of Cleveland Center. (b)(6), (b)(7)c (ph) was the manager. I'm not sure who (b)(6), (b)(7)c was. (b)(6), (b)(7)c

(b)(6), (b)(7)c (ph) I think was the Quality Assurance manager at Cleveland Center. (b)(6), (b)(7)c (ph), of course, is here in this building now. He did work in the Great Lakes regional office at the time, and (b)(6), (b)(7)c also worked in the Great Lakes regional office at the time. I think (b)(6), (b)(7)c was the acting Quality Assurance or was the Quality Assurance manager, and (b)(6), (b)(7)c was the Procedures manager.

SPECIAL AGENT (b)(6), (b)(7)c This is at the--

MR. FERRANTE: Within the Great Lakes regional office.

SPECIAL AGENT (b)(6), (b)(7)c At the regional level, okay. So this--this email has two attachments to it, one of which is a rough draft transcript for United 93, and it says a conversation between ZOB, which is Cleveland Center--

MR. FERRANTE: Cleveland Center.

SPECIAL AGENT (b)(6), (b)(7)c Right--and Huntress
Military, which is Northeast Air Defense Sectors--

MR. FERRANTE: Correct.

SPECIAL AGENT (b)(6), (b)(7)c --code name. And we
can see here they've got their discussion at 10:07,
and this thing is indicating 14:070 returning late.
So I mean it looks like you guys had information
about when--and notice about that aircraft was
passed onto needs, and you have recorded it, but
you took it out. I was just kind of curious, and I
was hoping you could shed some light on that.

MR. FERRANTE: No, and, in fact, if we had
looked at that, we probably would have started from
a different time, you know, line-activated
line-ringing. I believe I was talking about DUB
(ph), the 1989? I don't remember what that flight
was on that day. Forget about that, we got to get
United 93, so in reality you can technically say
notification occurred at 14:06 that something was
wrong with United 93, but somehow we got it in here
as 14:08, and 14:08 was really what we're saying is
wrong. We don't have--we don't have them right

now. We don't know if calling through--(indistinguishable)--or coming from.

SPECIAL AGENT (b)(6), (b)(7)c The needs log that you guys also reference in all your documents as to where you got military notification times also contains--it says, "14:07 bomb on board UAL 93 over in Pittsburgh." But you guys didn't include that reference in the documents either.

MR. FERRANTE: Well, again, having never seen this until the Commission started looking at it, and I don't think I ever saw this. It would be interesting if we could go back and--we probably can't at this point--to see when Doug actually opened it, because the flood of information that was coming in, you know, he may have looked at this and may not have even thought it was important when he initially looked at it. Because I didn't recall this being in our archives or our inventory of information.

(Pause.)

SPECIAL AGENT (b)(6), (b)(7)c So you're thinking that you guys might not have had a chance to review

this before you prepared your document?

MR. FERRANTE: Again, Doug's primary role when we were doing this was the interface with the --with the FBI. He was making wave files from the voice recordings. He generated a lot of the pictures that were in here. I don't think Doug had much of a role in the actual text that was going into it. But it was kind of like an open environment, because what we did was we had a big piece of cardboard, because we didn't have a screen or anything. And we projected it up on a wall so that, hopefully, you know, all of us could see it as we're going and try to keep this going right.

So if Doug noticed it, I don't know. But I think if we'd had something like that, we'd have been very comfortable in attaching that and using an actually time in the notification process.

SPECIAL AGENT (b)(6), (b)(7)c So you're thinking if you guys reviewed the rough draft transcript that we just talked about, would you guys have been comfortable--

MR. FERRANTE: Yes.

SPECIAL AGENT (b)(6), (b)(7)c --with that affirmation.

MR. FERRANTE: Again that goes back to we got the actual voice recordings of the sectors for the control positions that were in radio communication with the aircraft. It was months before all of the voice recordings were here from all of the different positions, because it got--you know, in any center you may have 150 or 200 positions that are being recorded at any one time. The one we wanted was the one that had the recordings with aircraft--(indistinguishable)--so that was our first priority.

And again, that was based on our instinctive reaction to an aircraft accident. That's how we normally function.

SPECIAL AGENT (b)(6), (b)(7)c You guys asked the centers to pull their voice recordings. Was there a time limit as to how long before and after an event that they are supposed to hold that data and then start the transcription process?

MR. FERRANTE: Generally speaking, it's

five minutes for first contact until five minutes after last contact. Now, because some of the ways that our voice recordings work, it could be eight minutes before and nine minutes after. But, generally, that's the standard, and that's outlined in FAA order 802011. Five minutes before first contact until five minutes after last contact.

And so, for example, a flight that departed from Boston yet crashed in Los Angeles, we have six hours' worth of recording, because we would have had five minutes before first contact in Boston, and five minutes after last contact on the West Coast. So we would have had all of those radio communications with the aircraft into Cleveland.

SPECIAL AGENT (b)(6), (b)(7)c So Boston would be required to produce six hours' worth of recordings?

MR. FERRANTE: Boston wouldn't have six hours' worth of recordings because--now, Boston--let's just for example say that the aircraft took off at 8:00 a.m. Boston would start their recording at 7:55. Now, if they issued a

frequency change for Boston to New York at 7:30, at 7:35 Boston would stop their recording, but at 7:30 we would have picked up that recording from New York five minutes before contact from New York until five minutes after New York no longer had contact with them. And we'd have done that across the country. So the aircraft actually goes through seven, eight, ten different--

SPECIAL AGENT (b)(6), (b)(7)c Not always from Boston Centers.

SPECIAL AGENT (b)(6), (b)(7)c So last contact for Boston would be five minutes after they passed it off to the next center.

MR. FERRANTE: Correct. And every facility would do the same thing. They would do five minutes before their first contact until five minutes after their last contact. And from that we're able to construct, you know, that flight across the country.

SPECIAL AGENT (b)(6), (b)(7)c Now, 11 stopped responding to controllers within Boston Center's air space, but then continued on into New York

still not communicating. How would you guys--if Boston Center said, "Well, Tony, how shall we handle this? What period of time do you guys want us to produce for you guys?"

MR. FERRANTE: We would have said until five minutes after their last contact with New York Center that had anything to do with American Flight 11. So again, let's assume for a minute that at 8:20 we stopped getting any radio communications at all from American 11, but if at 8:45 Boston Center is still trying to see whether New York Center has established communications with them, we would go until 8:50 with Boston Center.

SPECIAL AGENT (b)(6), (b)(7)c So that plane crashed about 8:45, I think, is what most documents said.

MR. FERRANTE: So at a very minimum, he would have recordings up until 8:51. In all likelihood we have recordings that go for 15 or 20 minutes beyond that, as it's being discussed on different lines from different facilities.

SPECIAL AGENT (b)(6), (b)(7)c Okay. So that's all

you guys would have expected each of the centers to produce is what the order--

MR. FERRANTE: Correct.

SPECIAL AGENT (b)(6), (b)(7)c --required.

MR. FERRANTE: Correct.

SPECIAL AGENT (b)(6), (b)(7)c Was there--at any time did you guys ask the centers to go beyond what the orders were asking or required?

MR. FERRANTE: Within two or three--to actually provide to us?

SPECIAL AGENT (b)(6), (b)(7)c Mm-hmm.

MR. FERRANTE: Not until the Commission asked for, like, I think 8 o'clock in the morning until 11:30 in the morning. The Commission asked for a very wide window of times of all positions. But we had done is within two or three days of the event, we sent out a message to retain all data referenced to September 11th, and we did that for every facility in the country even though, you know, most of the facilities had no involvement at all. We wanted everything secured for that day.

SPECIAL AGENT (b)(6), (b)(7)c So for your office's

investigation, you guys didn't ask them to go beyond the time periods that were required in the order.

MR. FERRANTE: Correct.

SPECIAL AGENT (b)(6), (b)(7)c Okay. So it wasn't until the Commission came into play, which I think was in '03--

MR. FERRANTE: Right.

SPECIAL AGENT (b)(6), (b)(7)c --that you guys asked the centers to produce something beyond what the Board had called for.

MR. FERRANTE: Right.

SPECIAL AGENT (b)(6), (b)(7)c Right?

MR. FERRANTE: That's correct.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. FERRANTE: Again, consider what our role was. You know, we're not an element of law enforcement. Our role was strictly in trying to look at how the air traffic system performed in a particular incident or accident, and I don't know that we would have done much more based on what actually occurred with those flights, because you

really couldn't say that the air traffic system didn't perform or find fault with the system for what we did there.

SPECIAL AGENT (b)(6), (b)(7)c Did you guys conduct any interviews for your investigation?

MR. FERRANTE: We ordinarily would, but in this particular case the FBI wanted to do interviews. The FBI interviewed many of our controllers without two or three days after the event.

SPECIAL AGENT (b)(6), (b)(7)c And under what circumstances would you guys normally interview people? Because I know you require statements to be provided by the controllers who are involved. What else would you guys normally take a look at aside from issuing those statements?

MR. FERRANTE: When an incident or an accident occurs that generates the interest of the NPSB, and the NPSB often goes beyond what the FAA traditionally requires, so, for example, I had a statement that was trying to tell me what the settings were, or whether I saw, you know, weather

radar was painting any precipitation or so forth, the NPSB will often go and ask a lot of probing questions such as: Were you ever trained in the appropriate minimum safe altitude warnings? Did you hear this alarm? When you heard this alarm, did you talk to any other sectors?

So those are primarily when we do interviews. We generally did not do them as a, you know, air traffic investigation all by itself; it was done in conjunction with the Safety Board.

SPECIAL AGENT (b)(6), (b)(7)c All right.

MR. FERRANTE: But in this particular case, the FBI held, I guess, all jurisdiction initially, and they wouldn't even let us release information to the NPSB in the first couple of days/

SPECIAL AGENT (b)(6), (b)(7)c Did you guys--did any of your staff accompany the Bureau during any of their interviews?

MR. FERRANTE: No. But we did have a gentleman named Tom Commity (ph). He passed away about two years ago; he was the one who initially

was trying to help set up where they were going to be and who they wanted to interview. But again, Tom did that from here, and that was--it was kind of like the protocol of calling Cleveland Center, for example, and saying, "The FBI wants to interview the controllers who had any direct contact with Flight 93, and can they be available," on such and such a date? And I don't believe that the FAA had anybody present during those interviews.

SPECIAL AGENT (b)(6), (b)(7)c Are you aware of any interviews being conducted of staff from the Washington Operations Center or the, I think it's the Aviation Command Center?

MR. FERRANTE: The Air Traffic Control Systems Command Center? Is that the--

SPECIAL AGENT (b)(6), (b)(7)c (Interposing) No, the one right here in this building.

MR. FERRANTE: The Aviation System Command Center?

SPECIAL AGENT (b)(6), (b)(7)c I know the acronym's ACC. I forget what A stands for, but I think it's

Crisis, or Command Center.

MR. FERRANTE: That's an element of Civil Aviation Security, or was at that point. No, we wouldn't have been involved in any of that.

SPECIAL AGENT (b)(6), (b)(7)c So there's a bright line there.

MR. FERRANTE: Absolutely. In fact, the only time I have ever had any involvement with Civil Aviation Security, we had an aircraft that erroneously squawked the hijack code, and it was on its way to London. And, of course, he's out of radio contact with any of the FA facilities, so we can only relay information--((indistinguishable)). This goes all the way back to when (b)(6), (b)(7)c (ph) (b)(6), (b)(7)c was the Director of Security. I, of course, was working in 200 at the time. I got the phone call about midnight, and got to spend the evening here until we actually had actual voice coordination with the event, when they would reach London.

But unless they needed something from air traffic, they would never involve us.

SPECIAL AGENT (b)(6), (b)(7)c Is there any single unit within the FAA that would have the ability to kind of collect and collate all the information from the different units into one product or package?

MR. FERRANTE: I think that they were trying to do that in the early days following 9/11. In fact, Darlene Freeman was--put together some sort of a group. I know we gave her a copy of the book that we prepared, and I thought that that was a part of their task to try to bring all the different things from different organizations and to make one big master collection of everything that occurred on that day.

But it--

SPECIAL AGENT (b)(6), (b)(7)c (Simultaneously speaking.)

MR. FERRANTE: I never a product. No, there is no unit in a Disaster Investigations Unit to look at how all the elements interacted with each other, because, really, you have a couple--a few different elements within the FAA that had to

interact with each other on 9/11. But what I keep hearing is, "Well, we didn't look over there because that wasn't our unit. It was somebody else's unit and somebody else's responsibility."

Well, there were also a lot of issues associated with clearance levels. Most of the folks that worked in security dealt with, you know, highly classified information, and most of the people in air traffic didn't have the clearances that were appropriate to be there. So, for example, when you mentioned ACC, I know they used to set up the ACC across the hall in the WOC.

SPECIAL AGENT (b)(6), (b)(7)c Mm-hmm.

MR. FERRANTE: Before they did this modernization of it, they used to have--I don't know, nine of twelve computer terminals that were vacant 99 percent of the year. But when a crisis occurred, you know, security would be there en masse, and they would man those. And we didn't even get to go through there when they actually kind of took over at that.

So unless they needed information from air

traffic, we would not be part of their process. Now, that has gotten much better today in terms of --there's probably still some, you know, raw edges around it now and then. Shortly after the what we called "the never ending tell com (ph)" evolved into the Domestic Event Network, which I believe has now changed names again, the Air Traffic System whatever Center, but it's the same group of people.

SPECIAL AGENT (b)(6), (b)(7)c That's news to us.

Okay.

MR. FERRANTE: So what we did is we had this "tell comment" started that we're getting all this information from, right? Around November/December of 2001 the--(indistinguishable) -- asked me, "We're putting together a 24-hour operation so that we could have this Domestic Event Network to capture all of these things that took place in the system." So, for example, if you had an aircraft that was out of radio contact for 15 or 20 minutes, we never knew it. Never. Because in many cases the Center would find out about it, and then they would treat it as a No Radio Aircraft,

and the coordination would go from center to center. It may get elevated to somebody in the Regional Op Center, but it never got elevated to anybody who was actually trying to bring everything together.

SPECIAL AGENT (b)(6), (b)(7)c Even at the Command Center level, (b)(6), (b)(7)c (ph)?

MR. FERRANTE: The Command Center's primary role is traffic flow management. It's not incidents that occur in the net (ph). Although they do dabble in it, it's really not what their area of focus is. So this Domestic Event Network we set up we ran 24 hours a day, it's still in existence. Initially, when Transportation Security Agency was formed, we sat side by side with the TSA people. And it was probably the best sharing of information that's taken place between these elements for a while.

It's changed somewhat with the Department of Homeland Security. You know, they've moved a lot of their assets out of here, and they brought them into their own building now out in Herndon.

We also had people in that building now--that's called the National Capitol Region and Coordination Center, NCRCC--I believe that's what they call it. But we still have the Domestic Event Network that operates 24 hours a day across the hall, and that is staffed by air traffic people. They put out policy statements--

[END TAPE 1, BEGIN TAPE 2]

SPECIAL AGENT (b)(6), (b)(7)c --five. We just went to Tape Number 2.

MR. FERRANTE: Okay, so I was talking a little bit about the role of the Domestic Event Network and how things have changed. And the example I would offer is, is an aircraft that now is out of radio contact for five minutes. A field facility--say, for example, Cleveland Center--is required to report that information over what we call the DEN. Those lines are open and staffed 24 hours a day.

So somebody in Cleveland has either got that speaker in front of them or that answer it up to their ear all day long. And somebody in here's

got that speaker turned up in case of something. And on that line you've got NEADS, and you've got Secret Service, and Customs, and--I mean all the elements of law enforcement you can imagine.

So the sharing of information is greater than it's ever been before, but I still don't think the answer to your question is one central office that correlates all this information after an event. I don't think that exists yet.

SPECIAL AGENT (b)(6), (b)(7)c Do you know, is that something that you guys talked about outside of the Darlene Freeman--

MR. FERRANTE: I wasn't part of the Darlene Freeman group, you know, but there's so many things happened that caused the FA to look at what we could have done differently or changed. I know they had a group. In fact, Frank Hatfield was the one who led this effort on how we could restructure the WOC. Frank's the one whose now responsible, or the official in charge of this Domestic Event Network.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. FERRANTE: So you might get that person to talk to.

SPECIAL AGENT (b)(6), (b)(7)c Sure. What sort of training does your staff go through outside of--'cause I think a few of them have controller backgrounds--but outside of--

MR. FERRANTE: Well, my staff here, this is the Air Traffic Safety Oversight Service, so it's--

SPECIAL AGENT (b)(6), (b)(7)c AAT-200.

MR. FERRANTE: --so it's the AAT-200 staff. Primarily, I had five air traffic investigators, which is what their title was, and they were all by background air traffic control specialists. So they have either been in the terminal option or in the en route option, Center towers and so forth. We tried to get them all through academy training. There's a quality assurance course that's taught for FAA people in Oklahoma City. That was one of the courses that was always mandatory for them to go to.

There's another course called accident

investigation course that's run by the Transportation Safety Institute, which is a part of Oklahoma City campus but not necessarily attached to the FAA's Academy there. So they would go to that course as well, and then they would receive on-the-job instruction. So, you know, before they ever went to their first facility running an accident investigation by themselves, they have been on two or three others with somebody else as the lead.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. FERRANTE: And, of course, the guidance that we followed comes from the 802011, which is the--the office of primary interest, that is still AAI, accident investigation program. It is their directive, so we just followed, and we had our role in air traffic on what we had to do, what information we had to provide. A lot of it's covered under the statute they created, both the NPSB and the FAA and that relationship.

I think we have a pretty good process, but our focus was not in this type of an event. Our

focus was, obviously, how the air traffic system performed in an accident. And we give them a lot of information and so forth.

SPECIAL AGENT [REDACTED] (Indistinguishable.)

SPECIAL AGENT (b)(6), (b)(7)c My only question was on the orders, the 802011 and the 7210.56. Post 9/11 had there been any major changes to those orders?

MR. FERRANTE: Well, the 8020--both of those orders have changed post 9/11. I don't know that necessarily anything has changed due to 9/11. Jeff Meiers would be the perfect one to talk to. In terms of the 801011, about a year or so ago AAI finally gave their traffic the authorization to make changes to the air traffic portion of that handbook. So Jeff--the used to be done by general notice, what we called GNOT, and we had pen and ink changes, and we knew it was really a mess. We would refer this paragraph back to this paragraph.

Jeff went through and cleaned the whole thing up and really made it so that it was one understandable guide. So, but I don't think

anything was changed, specifically, because of 9/11. Some of the things like retention of information may have changed that kind of was prompted by that, but not solely prompted by that.

SPECIAL AGENT (b)(6), (b)(7)c That's a GNOT still, is it not? I think it was a memo that went out on retention of information?

MR. FERRANTE: That's been a permanent change.

SPECIAL AGENT (b)(6), (b)(7)c Is it permanent now?

MR. FERRANTE: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. FERRANTE: No, normally, what we do, because it takes a while to get things printed, published, and distributed to a field, if we want to put something into effect tomorrow, we send out a GNOT, which is a great way to cascade information out, but it's a horrible way to manage the system, because you have all of these GNOTs that are, you know, they're there, and you're waiting for it to be incorporated into an order. Most of the orders are printed on a predetermined schedule every six

months. So there will be six months before that's going to be incorporated unless, you know, so if today's the cutoff for the August publication, and you turned it in tomorrow, it's not going to be published in the manual until next February. So that it takes that much lead time to get all of this done, back, proofread, and back out to the distribution process. So hence we manage by GNOT order (ph).

SPECIAL AGENT (b)(6), (b)(7)c Do you have anything?

SPECIAL AGENT (b)(6), (b)(7)c Huh-uh.

SPECIAL AGENT (b)(6), (b)(7)c Do you have anything else you'd like to add?

MR. FERRANTE: Not that I can think of. I certainly wish you success in this, and we'll offer again, anything I can do to help, please call any time.

SPECIAL AGENT (b)(6), (b)(7)c All right, thank you.

MR. FERRANTE: Okay.

SPECIAL AGENT (b)(6), (b)(7)c I'm going to stop

wtk

65

the tape. It's 12:11.

[END OF INTERVIEW.]

Case 031H-199-H001

SWORN INTERVIEW OF
JOHN DAVID CANOLES

BY

(b)(6), (b)(7)c, SPECIAL AGENT

(b)(6), (b)(7)c, SPECIAL AGENT

Wednesday, August 31, 2005

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

I N T E R V I E W

SPECIAL AGENT (b)(6), (b)(7)c Today is August 31st, 2005. The time is 1:15 p.m. We are at FAA headquarters building 10A, we're in suite 1024. My name is (b)(6), (b)(7)c. Also present is Elise Woods. We're from the Office of Inspector General, Department of Transportation, and we're conducting a review of issues involving certain public statements made by military and FAA officials at a 9/11 commission hearing, and elsewhere, that were allegedly inaccurate.

Today we're interviewing John David Canoles. Mr. Canoles, will you please acknowledge that you're aware this interview is being tape recorded.

MR. CANOLES: Yes, I am.

SPECIAL AGENT (b)(6), (b)(7)c Will you please raise your right hand.

MR. CANOLES: I will.

SPECIAL AGENT (b)(6), (b)(7)c Do you swear or affirm that the testimony you're about to furnish will be the truth, the whole truth and nothing but

the truth?

MR. CANOLES: I do.

SPECIAL AGENT (b)(6), (b)(7)c Can you please give us your full name, spelling your last for the record.

MR. CANOLES: Sure. It's John David Canoles, C-a-n-o-l-e-s.

SPECIAL AGENT (b)(6), (b)(7)c And what's your current position?

MR. CANOLES: I'm the director of air traffic safety oversight. The routing symbol is AOV1, and I work under the associate administrator for aviation safety, (b)(6), (b)(7)c [ph].

SPECIAL AGENT (b)(6), (b)(7)c And that's a new position since we spoke with you last; is that right?

MR. CANOLES: Yeah. I've been in this about, I think a year and three months now.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Well, like I mentioned before we started the interview, we had some questions that we needed to do a little bit of follow-up on and we also had some things we just

weren't quite understanding, that we hope that you can help us out with.

So the first thing, when we had previously spoken--I forget during which interview, we talked to you a couple times previously--you had indicated that you thought that it was likely that Jeff Griffith, who was your boss around the September 11th timeframe, had shown you a copy of the NEADS log and that from the log you had copied some entries down and then provided that information to your staff, is that--

MR. CANOLES: Yeah, that's--

SPECIAL AGENT (b)(6), (b)(7)c So roughly your recollection?

MR. CANOLES: Yeah. I'm not sure it was NEADS log but it was presented to me as military information that was classified, and it was, as I recall, in a format that looked like a log. So I'm not sure if Jeff ever told me precisely what it was or what the source was.

SPECIAL AGENT (b)(6), (b)(7)c We had shown you this before but I'll show it to you again.

MR. CANOLES: General Eberhart was at NEADS then? Do you guys know? Cause I seem to recall his name being flashed through it.

SPECIAL AGENT (b)(6), (b)(7)c Today, I don't remember, off the top of my head.

MR. CANOLES: Okay. I can't recall if this is exactly what I saw. It's certainly possible.

SPECIAL AGENT (b)(6), (b)(7)c Does it look similar, do you think, in format to the document you might have reviewed?

MR. CANOLES: Possibly, yeah. I really don't--I've got a very vague recollection of Jeff showing me something and I can't, for the life of me, remember exactly what it looked like. But this could have been, and it certainly has--I don't know if the times are consistent with what we later reported as having been derived from military logs or not. I mean if the times are consistent, then in all likelihood this is what I reviewed.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Well, this is--it's kind of hard to read on this copy here but

it says MCCT log, which is the NEADS military, I think it's Command and Control Tech Log--that's what that stands for. So this is the infamous log and the times do comport with what you guys had reported out on some a your documentation.

One thing that we had noticed was that these times here, they're in Zulu or Greenwich Mean Time, so this 1316 entry here would relate to, at that time of the year, I think 9:16 Eastern time.

And we notice that none of the documents that you guys have, that end up like in a final format, contain this 9:16 entry for United 93.

So presumably you guys looked at the NEADS log or the data that you derived from the NEADS log and realized it was inaccurate. Is that--

MR. CANOLES: I don't know. That looks like--well, that entry says United tail number, November 6-1-2 Uniform alpha, slant, 75, I believe. No. 75SOB. So 75 souls on board. So I don't know--I wouldn't--I mean, that's a subsequent entry obviously. It follows to previous entries, one at 1305 and one at 1307, that talks about the airplane

being possibly hijacked, if that's the same flight.

So if that's the case, and if all we were trying to highlight was when we notified the military, if I were doing it today, I would view that as a subsequent entry and therefore not pertinent. So I would just the first times that we had discussed, if that's what I was trying to articulate.

SPECIAL AGENT (b)(6), (b)(7)c Well, maybe to help refresh your recollection about that, that 9:16 entry for some folks, like Department of Defense, and even within the FAA, was thought to belong to United 93.

MR. CANOLES: Okay.

SPECIAL AGENT (b)(6), (b)(7)c And 9:16 had made it into a draft of NORAD's press release as notification time for United 93. At some point FAA realized that that was not a good notification for United 93. The reason we know that is because it's mentioned in some of the chronologies, especially the ones that Darlene Freeman played a role in tailoring or kind of editing.

MR. CANOLES: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c And so what we're trying to do is find out when FAA recognized that 9:16 was not a valid notification time for United 93, and then how you came to know that.

MR. CANOLES: I'm sorry, I can't help you. I don't know.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. CANOLES: Again, my recollection is very, very fuzzy about this whole event with Jeff. But I recall meeting Jeff, and I think it might have even been in the Washington operations center.

I recall meeting Jeff, him showing me a piece or two of paper, may or may not have been this, and he either said, you know, let's use these times or hey, get the times off a this and let's use 'em to make sure we're consistent with what the OD [ph] says. A very short meeting, two-three minutes. There was certainly no substantive discussion about, you know, What do you think this means? or anything like that.

It was more of a here, take this, get what

you need, and then I gave it back to him and left.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

SPECIAL AGENT (b)(6), (b)(7)c Do you recall having to interpret tail numbers from the document that he was giving you or--

MR. CANOLES: No; not right offhand. And I'm not sure we ever did that in any of the materials we prepared. There wasn't a necessity to. I mean, we were more concerned with the flight numbers. That's what air traffic control deals with typically.

SPECIAL AGENT (b)(6), (b)(7)c But you don't remember copying down a tail number and then having to go back and figure out who that belonged to, anything like that?

MR. CANOLES: No. We might have done that. I mean, if that were the only information available to us, yeah, we would have, but I'm not sure we did.

SPECIAL AGENT (b)(6), (b)(7)c Is there any reason to believe in your mind that maybe there is another NEADS log out there?

MR. CANOLES: I don't know if there is. I would not be surprised. I mean, there's gotta be a number of documents, you know, relative to the events that day. I know there were a number of FAA documents, certainly military [inaudible]. Jeff worked closer with the military infrastructure than I did.

So I know what NEADS does, broadly, but I'm not aware of their, you know, their precise setup and how they're substructured, and so on and so forth. But realizing there are various elements of NEADS out there, I wouldn't be surprised if they all didn't have duplicates of this information in one form or another.

SPECIAL AGENT (b)(6), (b)(7)c Do you think it's possible that you guys could have actually used NORAD's press release for--

MR. CANOLES: I don't think so.

SPECIAL AGENT (b)(6), (b)(7)c --your source?

MR. CANOLES: I don't think so.

I remember specifically, whatever I was shown was presented to me that, hey, this is

classified, so can't give it to you, but look at it and get what you need, or here's what you need off of it. I'm not sure exactly which it was.

But, no, I would a remembered if it'd been a press release.

SPECIAL AGENT (b)(6), (b)(7)c If, in air traffic, you needed to find out which flight a tail number belongs to, how would you guys do that?

MR. CANOLES: I could do it a number of ways. FAA logs should readily have that available, because, for example, the security people, once they began working a hijack would have the tail number from their communications with the company.

So that should have been readily accessible here within our assets. Failing that, I could have contacted the company directly and said, hey, what as the tail number of this specific flight on that day and their dispatch office could tell me that.

SPECIAL AGENT (b)(6), (b)(7)c Is the tail number included in the automated flight plan information that the airlines upload to FAA?

MR. CANOLES: It's not transmitted to air traffic facilities that way but it could be in the flight plans filed in the NAS [ph]. I don't know for sure.

SPECIAL AGENT (b)(6), (b)(7)c This was the summary of air traffic hijack events, September 11th, 2001, was created on September 17th, 2001, by your organization. It says here, Source, AAT20.

MR. CANOLES: Yes.

SPECIAL AGENT (b)(6), (b)(7)c This is one a the first published timelines that we could find within FAA, that contains military notification information in it.

There are notification times in the summary for American 11 and United 175, but there are not notification times in here for United 93 or American 77. I was wondering if you could tell us what you recall about that.

MR. CANOLES: Okay. 8:40. Northeast Air Defense Sector NEADS logs indicated they were notified by the FAA of the events concerning American 11. [inaudible] scrambled. 9:05 NEADS

indicate they were notified by FAA, the events concerning United 175.

[Examining documents.]

MR. CANOLES: I don't know. I don't know. From simply a format standpoint, we certainly identified it in the two cases. So I don't know why we did not in these, because if memory serves me correctly, we had times from the NEADS log that we could have put in here. I don't know why we wouldn't have done that.

SPECIAL AGENT (b)(6), (b)(7)c Well, the very next day, on the 18th, you guys, AAT20, prepares this, we call it the Brit [?] timeline, which we talked about during one of our prior interviews.

MR. CANOLES: Right.

SPECIAL AGENT (b)(6), (b)(7)c You do include notification time for American 77 and you source it back to the NEADS log.

MR. CANOLES: Right.

SPECIAL AGENT (b)(6), (b)(7)c And then you have "not applicable" for United 93 but you did have in a prior version of this, 10:08 listed as a

notification time but you took that out and put N/A.

MR. CANOLES: Maybe we--I was just wondering what, I guess emboldened you to choose the time, just a day later, for American 77?

MR. CANOLES: The only thing I can suspect is that--well, is--the 9:24's consistent with the NEADS log?

SPECIAL AGENT (b)(6), (b)(7)c Somewhat?

MR. CANOLES: Somewhat? Okay.

SPECIAL AGENT (b)(6), (b)(7)c There's a 9:24 entry. It says American Airlines N334 double A hijacked.

MR. CANOLES: Okay.

SPECIAL AGENT (b)(6), (b)(7)c NORAD says this entry belongs to American 77. That's in their press release.

MR. CANOLES: Okay.

SPECIAL AGENT (b)(6), (b)(7)c But that tail number actually belongs to American 11.

MR. CANOLES: Okay. All right. Well, that's probably where we derived it from.

SPECIAL AGENT (b)(6), (b)(7)c But I guess, for some reason, on the 17th, you guys have a question about that entry.

MR. CANOLES: Uh-huh. Well--

SPECIAL AGENT (b)(6), (b)(7)c About a day later--

MR. CANOLES: We'd had a question, or we omitted it, and I'm not sure which. The other possibility is that different members of the staff prepared this and prepared this, and I probably, at that point in time, if I reviewed it--I don't even think this was signed out. I'm sure I reviewed it before we passed it upstairs. But I'm not sure I would have gone through and said, okay, do we have four times when we notified the military?

This was certainly generated in response to interest for that, and I believe this was put together at (b)(6), (b)(7)c direction.

SPECIAL AGENT (b)(6), (b)(7)c The grid?

MR. CANOLES: Yeah. And I don't know if (b)(6), (b)(7)c put that in there, or told me to put that in there, or if I--you know--one, a member of my staff pulled it outta log or if information I derived

from the log and took downstairs.

SPECIAL AGENT (b)(6), (b)(7)c Do you think it's possible, when you were reviewing this log--because we don't have flight numbers here--

MR. CANOLES: I could have misread it.

SPECIAL AGENT (b)(6), (b)(7)c --that it's possible--well, the timing--that could be, cause we've already mentioned 11 and 175 up here.

MR. CANOLES: It's very, very possible.

SPECIAL AGENT (b)(6), (b)(7)c That this is probably 77, and--

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c --and that's--

MR. CANOLES: Yeah. That's very likely.

SPECIAL AGENT (b)(6), (b)(7)c --93.

MR. CANOLES: That's very likely.

That's the way my mind works, and that's either a plus or a minus, but I would a gone down and said, okay, American, United, American, United. I could have very well done that.

SPECIAL AGENT (b)(6), (b)(7)c One of the entries in the NEADS log is 10:07. It's 1407 in here,

that's Zulu time. It says: Bomb on board, UAL 93 over Pittsburgh. I don't know what this 152703 means but that's on that earlier line as well. But it says: Bomb on board UAL 93. That's the first actual reference in here to 93.

MR. CANOLES: Okay.

SPECIAL AGENT (b)(6), (b)(7)c And we're wondering why you guys omitted that time in your summary.

MR. CANOLES: Well, the summary was to identify the time that we notified the military, that initial notification was made.

SPECIAL AGENT (b)(6), (b)(7)c This is the summary, right here.

MR. CANOLES: Okay. This is the summary--

SPECIAL AGENT (b)(6), (b)(7)c The FAA summary.
That this--

MR. CANOLES: Yeah. This is just--well, first of all, the fact that the airplane--or the statement that the airplane had a bomb on board is probably erroneous.

SPECIAL AGENT (b)(6), (b)(7)c Why do you think that?

MR. CANOLES: I don't think we ever proved that in any a the cases. At least to my knowledge we didn't. And there was--and I think I mentioned before that there was--you know, by this time the volume of communications had increased to the point where there was a lotta miscommunications about airplanes with bombs on board and facilities having bomb threats, and Pittsburgh tower was preparing to evacuate because they thought the airplane had reversed course to come back and strike the tower, crash into the tower, and all this kind a stuff.

Had I seen that, I would have viewed that as a extemporaneous piece of trash that was floating around about that time, just a miscommunication.

SPECIAL AGENT (b)(6), (b)(7)c That actually is what the air traffic controllers told the Department of Defense, was that there was a bomb on board, because that's what's in FAA's transcript for that position.

MR. CANOLES: And that was from where?

SPECIAL AGENT (b)(6), (b)(7)c From Cleveland.

MR. CANOLES: Cleveland Center?

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh. This is something we had talked about during our prior interview. You guys had, at the time you were preparing your grid timeline, this transcript and other documents from Cleveland.

MR. CANOLES: [inaudible]. This is on the--September the 15th. Hmm. Okay.

SPECIAL AGENT (b)(6), (b)(7)c So you have two different sources for that entry. We'd like to try to figure out if we can learn why it is you guys didn't include it.

MR. CANOLES: [inaudible]. I don't know. This, if this time is accurate, he's making this communication about the time the airplane crashed. This was at 14:06. And we lost the target on the airplane at about 10:04. So maybe it was considered after the fact, so it wasn't considered germane. I don't know.

SPECIAL AGENT (b)(6), (b)(7)c Okay. I think that's basically what you told us during prior interviews. And why would you guys think it

wouldn't be germane because it happened after the crash?

MR. CANOLES: I don't know. I'm trying to reconstruct what the thought process would have been. I don't know. I don't know. You know, it appears to me that we very subjectively picked what we thought to be the most important communications. These aren't all-inclusive, so it looks to me like we kind a picked and chose what we thought was germane, significant, to put into this executive summary type document that we prepared, you know, rather than burden it with a whole lot of extraneous information. Maybe that's what we viewed it as. I don't know.

SPECIAL AGENT (b)(6), (b)(7)c Wouldn't it be relevant to let folks know, even internally, cause I think that's what you had told us the summary which you're holding your hand right now was prepared for, basically internal use.

Wouldn't it be relevant for those in your chain of command to know, well, we were late in letting DOD know about United 93?

MR. CANOLES: See, I'm not--well, that entry doesn't tell me that. That entry would have been useful to tell management that, hey, we were screwed up and we gave the military bad information, or perhaps we gave the military bad information. But I was pretty convinced that once the hijack net started--once the first couple of notifications were made, I was convinced, even though I wasn't there to see it personally, that the military was on board with the events as they were unfolding.

SPECIAL AGENT (b)(6), (b)(7)c What made you convinced of that?

MR. CANOLES: It's just my knowledge of how the system worked in a hijack, that the hijack net was convened, law enforcement, DOD, all the parties were convened, and they began a tactical rapid-fire sharing of evolving information.

So I was pretty sure that once the first one was made known, that they were getting timely updates on everything else.

SPECIAL AGENT (b)(6), (b)(7)c You're basing that

knowledge on your understanding of procedures or because somebody had told you that a net had been established on 9/11?

MR. CANOLES: No. It's just my knowledge of how nets worked.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

SPECIAL AGENT (b)(6), (b)(7)c I guess just one of the--this is a follow-up on that last notification time, though. Do you recall any thought pattern, being either by you or others, that we shouldn't use that time because it may look bad, reflect badly upon the FAA--

MR. CANOLES: No.

SPECIAL AGENT (b)(6), (b)(7)c --or that it was embarrassing to put in a time that--

MR. CANOLES: No.

SPECIAL AGENT (b)(6), (b)(7)c --was after the fact?

Could that have been part of your thought process?

MR. CANOLES: No; no. And, you know, that may have existed at levels higher than me. The

only embarrassment I felt, you know, organizationally and personally, you know, was that our laws were haphazard and that it was so difficult, you know, after the fact when you create this stuff, and, you know, I viewed that as, you know, it was a byproduct of the moment. You know, we were busy doing others things and nobody was paying as particular attention as they should have been at compiling this stuff.

But that's the only embarrassment I felt, and again, it was my feel that once the military got engaged on the first hijack, that they knew about the other events transpiring about as quickly as we did, because that would have been relayed over that net.

SPECIAL AGENT (b)(6), (b)(7)c But that's based on your understanding of procedures as opposed to what actually happened on that day.

MR. CANOLES: Yeah; yeah. Again, I wasn't there, so I don't know; but that's my assumption.

SPECIAL AGENT (b)(6), (b)(7)c You mean as you were putting these documents together, that was in your

mind, that was kind--

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c --in your mind
that--

MR. CANOLES: Very definitely. That hey, this is an academic exercise because we all know that once everybody was convened on that circuit and they start talking about this, then all the other events became known, and while, you know, unfortunately, that wasn't captured because it wasn't reported, to my knowledge. You know, if I were a betting man, I'd bet you a paycheck that if I had tapes of those discussions that day, I could go back and put together a much better story of what actually happened.

SPECIAL AGENT (b)(6), (b)(7)c What steps did you guys take to try to find out if the net was set up and what time it was?

MR. CANOLES: We didn't. That was a security function, it wasn't air traffic function, so we didn't make any attempts to do that.

SPECIAL AGENT (b)(6), (b)(7)c I've heard a few

people just say that before. Is it fair to characterize the situation, that there was a bright line between the divisions and you guys didn't necessarily cross over--

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c --at least at your level?

MR. CANOLES: Yeah, but it was a matter of, you know, need to know versus--you know, what I was concerned with was performance of air traffic. So, you know, I stayed in my compartment, did that. My superiors, including the deputy administrator, had been involved in--had been in the operations center during the time when the hijack net was set up and in operation. So, you know, as far as I was concerned, I had every assurance, not firsthand, but, you know, hey, the boss is in there so this stuff's being taken care of.

SPECIAL AGENT (b)(6), (b)(7)c Just a couple more questions on the 10:08 time--

MR. CANOLES: Sure.

SPECIAL AGENT (b)(6), (b)(7)c --or 10:07 time

reference. In one of our prior interviews with you, you said that you felt that 10:08, that 10:08 time was a mistake in your data. Do you know why you feel that way, or felt that way?

MR. CANOLES: It must have been something you showed me and I looked at it at that time and said I thought it was a mistake. I don't know.

SPECIAL AGENT (b)(6), (b)(7)c Did Griffith, Jeff Griffith or anybody above him give you any direction about what to include or not to include in these briefing documents? I'm talking about just specifically the chronologies, just to kind a try to narrow things down.

MR. CANOLES: I would have interfaced with three or four people. We were doing a lot of work directly with Monte Belger, a lot of work directly with Shirley Miller, and we were doing some work directly with Darlene Freeman, and I think Tony Ferrante was doing mostly interface with Darlene, because that was two or three days after 9/11. By that time I was working almost exclusively with the FBI on stuff.

It is possible that any of those people said, hey, this reads better if you do this, or why don't you take this out--it's confusing. That probably happened. I don't remember anybody saying take this out, it's unfavorable to the agency, because I think personally, I would have kind of revolted at that. So I would have remembered it. But, yeah, it's quite possible we were told to edit things or edits were suggested or whatever.

And I'm sure--at least I think I'm sure. I think I was told, or it was suggested that I get--I think it was suggested, and it probably would have come from Monte, that Jeff go to the military and get their logs and see if they were more consistent than ours, because ours, as I've acknowledged, were haphazard. We missed times.

We had times that were an hour off, and so on and so forth. So, yeah, that strong likelihood [?].

SPECIAL AGENT (b)(6), (b)(7)c You think that log that was classified or that document that was classified was sort of the result of that direction

from Mr. Belger?

MR. CANOLES: If it was. Again, I'm reaching here, but--

SPECIAL AGENT (b)(6), (b)(7)c Had you seen any drafts of NORAD's first press release which was basically their timeline of events from 9/11?

MR. CANOLES: I might have but I don't recall if I did. I recall, at some point, and it seems to me it was something I heard or read in the media, that I recall being surprised that they had better information than we had or their information actually made us look better than our own information did.

SPECIAL AGENT (b)(6), (b)(7)c Look better in the notification realm or--

MR. CANOLES: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c You said you don't remember if you saw any drafts of the press release--

[Simultaneous conversation.]

MR. CANOLES: I don't think I did.

SPECIAL AGENT (b)(6), (b)(7)c Did you have any--I

think you said that you didn't have any direct interaction with Department of Defense. is that correct?

MR. CANOLES: Correct.

SPECIAL AGENT (b)(6), (b)(7)c All right.

MR. CANOLES: With one caveat. There was a DOD--there was an officer assigned to the Air Force who was on loan to FAA, that came up during the telephone conference I was running. That was the only interface I had.

SPECIAL AGENT (b)(6), (b)(7)c

MR. CANOLES: (b)(6), (b)(7)c

SPECIAL AGENT (b)(6), (b)(7)c After the commission was formed, they started having hearings. If I'm not mistaken, I think their second set of hearings was in May of 2003. Did you attend any of their hearings?

MR. CANOLES: No.

SPECIAL AGENT (b)(6), (b)(7)c Do you know if anybody from FAA attended any of the hearings?

MR. CANOLES: I don't know. I was interviewed a time or two.

SPECIAL AGENT (b)(6), (b)(7)c By the commission?

MR. CANOLES: Yeah. By the staff that supported the commission.

SPECIAL AGENT (b)(6), (b)(7)c Did you testify--you didn't testify in the hearings.

MR. CANOLES: No.

SPECIAL AGENT (b)(6), (b)(7)c Did you watch any of the hearings on TV?

MR. CANOLES: I probably did but I--I'm trying to recall any specifics I might have seen. If I didn't watch 'em, I at least saw 'em on the news. I certainly had an interest in them.

SPECIAL AGENT (b)(6), (b)(7)c from the (b)(6), (b)(7)c testified at the May 23rd, 2003 hearing, and during the hearing he testified that FAA provided notice to the Department of Defense about United 93 at 9:16.

Were you aware of that?

MR. CANOLES: I may have been but--

SPECIAL AGENT (b)(6), (b)(7)c At the time, do you remember if you were aware of that?

MR. CANOLES: No. I don't remember.

SPECIAL AGENT (b)(6), (b)(7)c I think you said you couldn't remember why or how you guys learned this but the 9/16 entry for United 93, from what we've heard from other folks, the reason you guys omit it from your timelines is because it's before the aircraft is even in distress. It's still flying normally. I think if you look at your summary there, it sort of indicates that.

MR. CANOLES: Yeah; clearly.

SPECIAL AGENT (b)(6), (b)(7)c If you had heard (b)(6), (b)(7)c testimony, or were aware of it during the commission hearing, would you have taken any steps to make sure that what was being relayed to the commission was correct, to kind of make a clarification or correction, maybe even to make Department of Defense know, hey, you know, what (b)(6), (b)(7)c just said's not right?

MR. CANOLES: Yeah, I think lacking a direct interface with somebody in DOD at that point in time, I'm--I probably would have reported to my superiors that hey, what (b)(6), (b)(7)c said yesterday was inaccurate, and spell it out. I

don't know if I didn't see it, wasn't made aware of it, what the deal was. But I think, yeah, I would have done that if I'd a thought it was significant.

SPECIAL AGENT (b)(6), (b)(7)c Do you ever recall becoming aware that he testified inaccurately? Do you ever recall that coming to your attention, or anyone in your staff, that being discussed?

SPECIAL AGENT (b)(6), (b)(7)c [inaudible] got a handful of questions about American 77 basically.

Outside of a log or a document with some times on it, are you aware if FAA reviewed any other documents from the Department of Defense, or listened to any tapes, of transcripts of tapes?

MR. CANOLES: I'm not aware of it and I probably would have been, so, to my knowledge, no.

SPECIAL AGENT (b)(6), (b)(7)c In this NEADS log, the first reference to American 77 as a flight number is actually not until 13:34, or 9:34 Eastern time.

MR. CANOLES: Right. Well, I see it there. Okay.

SPECIAL AGENT (b)(6), (b)(7)c And that time isn't

included in any of the summary documents, the timelines or chronologies that you guys put together. We were wondering why that is.

MR. CANOLES: I don't know. Now is that the one we didn't have any time for? So we used 9:24--9:24, not 9:34. Okay. This may have been my error. I may have assumed that this was American 77 or someone else may have assumed that and given me that data.

SPECIAL AGENT (b)(6), (b)(7)c The 9:24 entry?

MR. CANOLES: Yeah. Again, I--and I'm saying this in my own defense, I didn't have the luxury of taking these with me some place and studying them in depth, or having somebody else look at 'em for me. What I recall is a very brief meeting where I scratched down some numbers off a this thing and, you know, it's very possible I misread it. Or again, somebody could a handed me four numbers and said these are the times. But I simply don't recall.

SPECIAL AGENT (b)(6), (b)(7)c Did you work with Darlene Freeman in sort of preparing some of the

briefing packages that she was working on for anticipated testimony?

MR. CANOLES: I did, to a small extent. I think Tony did most of it. I was aware that she was doing it. Darlene and I were engaged to be married at this point in time. We've since parted ways. But I was certainly aware that she was working on it. I remember, early on, you know, giving her information. In all likelihood, I gave her a copy of this but I think Tony did most of the follow-on work with her as I recall, and again, that's because I was outta here a lot and tied up with other things.

SPECIAL AGENT (b)(6), (b)(7)c Is it safe to say that you guys then determined from the paperwork that you looked at, that FAA notified Department of Defense earlier than 9:34 then? It was your belief that it actually happened at 9:24 versus 9:34?

MR. CANOLES: I must--

[Start tape side B.]

SPECIAL AGENT (b)(6), (b)(7)c on May 23rd, 2003, also testified that FAA notified

Department of Defense about American 77 at 9:24.

Is it your recollection that at that time you guys would have believed that that was the correct time for American 77? That's what you have in all your timelines.

MR. CANOLES: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Why wouldn't you guys include a reference to the 9:34 entry about letting DOD know that American 77 was lost?

MR. CANOLES: I don't know. Again, my suspicion is if we mistakenly thought that the 24 was the correct time of notification, that's what we were focused on, not the subsequent--

SPECIAL AGENT (b)(6), (b)(7)c Conversations?

MR. CANOLES: Right.

SPECIAL AGENT (b)(6), (b)(7)c One of the things that we were curious about is there's an entry here that folks believe, at 9:16, is for United 93, and FAA even, you know, internally, began to suspect that that's not correct and they make reference to that in some of these summary chronologies.

I don't know if I'm going to find them

real quickly, but there's references to that. You know, NEADS log reflects 9:16 but we not necessarily believe that's true. So you guys suspect, that some of this data even in the NEADS log, might not be correct, and sort of given that, at the time, we're wondering why you guys didn't take some more steps to look further into like this 9:24 entry and such.

MR. CANOLES: Well, first of all, I haven't seen the document you're talking about where we raise that concern. I don't know who generated that. Is that--

SPECIAL AGENT (b)(6), (b)(7)c It was a part of Freeman's [inaudible].

MR. CANOLES: Okay. I don't know. This could a been, you know--again, I don't really this specific example but this could have been part of Tony's follow-up work with her. It could have been something, that during a later review after that timeline was prepared, somebody looked at it and said, "Wait a minute, this can't be right." I don't remember ever being made aware of it or

challenged to go back and run it down.

SPECIAL AGENT (b)(6), (b)(7)c Within the FAA, the best we can kind a piece back together from our investigation is that there were essentially two people who have any recollection specifically about seeing a log that is similar to this NEADS log. That's you and Mr. Griffith.

And you even indicated today, and in a prior interview, that you reviewed this or something similar to what we've shown you here today and copied down some times from it.

And one of the things we're wondering is that if you intentionally misinterpreted any of these times on here to FAA's favor?

MR. CANOLES: Absolutely not. I would never have done that. And understand, my discipline is in accident investigations and my training by the agency and my own personal standards are that I owe my leadership, as bad as the story might be, into every case, so I've got a lotta years of experience of going in and saying, We really screwed this up because--and I would have

had no hesitation whatsoever to [inaudible].

You kind a get used to being a bearer of bad news after a while.

SPECIAL AGENT (b)(6), (b)(7)c Is there anything else that you'd like to add along the lines of what we're talking about today, that you think is relevant?

MR. CANOLES: I'm sorry I can't be more helpful. I wish my recollection were better. These are very small points during a very busy time, I might say. I wish I could be more helpful.

SPECIAL AGENT (b)(6), (b)(7)c Well, thank you. It's 2:09. We're going to go ahead and turn the tape off.

[Whereupon, at 2:09 p.m., the interview was concluded.]

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case No. 042R0122001

SWORN INTERVIEW OF

STEVEN FERRANTE

BY

(b)(6), (b)(7)c , SPECIAL AGENT

(b)(6), (b)(7)c SPECIAL AGENT

Wednesday, August 31, 2005

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

I N T E R V I E W

SPECIAL AGENT (b)(6), (b)(7)c Today is August 31st, 2005. The time is 3:07 p.m. We're at FAA headquarters building 10A, room 1024, Washington, D.C. My name is (b)(6), (b)(7)c Also present is (b)(6), (b)(7)c We're from the Office of Inspector General, Department of Transportation and we're conducting a review of issues involving certain public statements made by military and FAA officials at a 9/11 Commission hearing and elsewhere, that were allegedly inaccurate.

Today, we're interviewing Tony Ferrante. Mr. Ferrante, will you please acknowledge you're aware this interview's being tape recorded.

MR. FERRANTE: I am.

SPECIAL AGENT (b)(6), (b)(7)c Will you raise your right hand.

Do you swear or affirm that the testimony you're about to furnish will be the truth, the whole truth and nothing but the truth?

MR. FERRANTE: I do.

SPECIAL AGENT (b)(6), (b)(7)c Will you please give

your full name, spelling your last for the record.

MR. FERRANTE: Full name is Anthony Steven Ferrante, F as in Frank, e-r-r-a-n-t-e.

SPECIAL AGENT (b)(6), (b)(7)c And what's your current position?

MR. FERRANTE: I'm the manager of the Air Traffic Oversight Division. Excuse me. Safety Oversight Division.

SPECIAL AGENT (b)(6), (b)(7)c Is Dave Canoles your boss then?

MR. FERRANTE: Yes; he is.

SPECIAL AGENT (b)(6), (b)(7)c As I mentioned prior to starting the tape recording, that we're just doing some follow-up, because we've interviewed you, I think a couple a times previously. We still had a couple a questions about certain things and we're kind a confused about some stuff, so we're hoping you can help us out with some of that.

MR. FERRANTE: Okay.

SPECIAL AGENT (b)(6), (b)(7)c Now I know you said previously, I think a couple a times, that you had not seen the NEADS log.

MR. FERRANTE: Is that the handwritten log?

SPECIAL AGENT (b)(6), (b)(7)c Yes.

MR. FERRANTE: That's correct.

SPECIAL AGENT (b)(6), (b)(7)c I think you also mentioned that you had gotten the Department of Defense notification numbers from Dave Canoles. Is that right?

MR. FERRANTE: What we did was we went through primarily FAA sources whenever we could. For example, with American 11 we had pretty good times that were on our recorded lines, FAA recorded lines, with the efforts that were taking place at Otis Air Force Base to scramble fighters, and so forth.

So we tried to use times that we could validate using FAA sources, and for certain things that we didn't have times, then my recollection is that we got those from Dave. In fact I have this vision in my head--and excuse me for one second.

I remember, we had a conversation and Dave had a portfolio, and he had to put his foot up like

this cause he's looking at his portfolio and he was reading from that portfolio some a the times that we had in there.

SPECIAL AGENT (b)(6), (b)(7)c Okay. I think one of the times that may have been initially presented as a notification time for United 93 was 9:16.

Does that sound familiar to you at all?

MR. FERRANTE: No. If I saw it again, then perhaps I would recognize it, but--

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. FERRANTE: Well, see, United 93 was the one in Somerset, Pennsylvania?

SPECIAL AGENT (b)(6), (b)(7)c Correct.

SPECIAL AGENT (b)(6), (b)(7)c Correct. I think one a the time--9:16 is listed as a log entry and it had been portrayed as being a notification time for United 93.

MR. FERRANTE: Okay.

SPECIAL AGENT (b)(6), (b)(7)c But you guys didn't include it in the summary of Air Traffic Hijack Events, September 11th, 2001, which I understand you were sort of the principal architect for.

MR. FERRANTE: Correct.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Do you know why you didn't include that?

MR. FERRANTE: I was probably not aware of it at the time that we developed this. We worked--let's see. On September 11th itself, I was in Chicago. I got back on the 12th at probably around 5:00 o'clock in the morning, 4:00 o'clock in the morning. I was here about 8:00 o'clock in the morning on that day and I think that we started in in real earnest, in putting together a chronology of all the events, some time Wednesday afternoon or perhaps Thursday morning, and we worked on it through the weekend, and I think that we printed that edition of it on the Monday following September 11th.

SPECIAL AGENT (b)(6), (b)(7)c Was this September 17th? I don't know if that's--

MR. FERRANTE: That--yes. That would make--

SPECIAL AGENT (b)(6), (b)(7)c Is that Monday?

MR. FERRANTE: -- [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Do you know if Dave Canoles presented 9/16 to you as a time in the NEADS log and that you guys determined it was inaccurate? Do you know if that was the case?

MR. FERRANTE: No. I don't. A lotta the times were estimated times that were based on personnel statements. Some a the times we didn't have at all.

SPECIAL AGENT (b)(6), (b)(7)c Well, we're just kind a focusing on FAA notification to the Department of Defense times.

MR. FERRANTE: Okay.

SPECIAL AGENT (b)(6), (b)(7)c That's all we're kind of--that's what we're kind a narrowed down to at this point, so--and the point of reference that you guys use and cite in all of your chronologies is the Northeast Air Defense Sector Log. NEADS log. Just to kind a help you.

MR. FERRANTE: Okay.

SPECIAL AGENT (b)(6), (b)(7)c Does that sound familiar or--

MR. FERRANTE: That is--yeah. I remember

those times in Northeast Air Defense Sector logs that indicated--and I think what the word is that we used in the report. So those times would have had to have come from Dave, with the exception that perhaps with American 11, we used it from an FAA source as well, or that we had it from Boston Center, the time that NEADS said that they were notified. Okay. We are on United 93.

And a quick scan through here, it doesn't appear that we made any notifications other than to the Great Lakes Regional Office, and that was at 9:39, and according to what I'm reading through here, 9/16 would have been impossible for us to have notified the military because I don't think we knew of it.

In fact at 9:25, United checked in on Cleveland Center frequency indicating, you know, it was normal. That was the third radar sector to communicate with them and it was routine.

SPECIAL AGENT (b)(6), (b)(7)c So that document is prepared on September 17th. I think there's some date references in the footers, a couple places.

MR. FERRANTE: Okay.

SPECIAL AGENT (b)(6), (b)(7)c So it would be fair to say that on September 17th, at least, you guys would have recognized that 9:16 was not a good time as noticed for United 93.

MR. FERRANTE: Correct.

SPECIAL AGENT (b)(6), (b)(7)c Cause it's still a routine flight basically at that point--

MR. FERRANTE: Correct.

SPECIAL AGENT (b)(6), (b)(7)c --as far as you guys could determine.

MR. FERRANTE: Correct.

SPECIAL AGENT (b)(6), (b)(7)c Is there any reason why you guys would find any--

[Pause.]

SPECIAL AGENT (b)(6), (b)(7)c Okay. Any reason we would find that any of the other entries in the Department of Defense NEADS log would be suspect as the 9/16 entry was?

MR. FERRANTE: If we used their times, that we couldn't validate with this record, then we would have--caused us to say, okay, something's

wrong here, and either our records indicate what somebody else's records indicate. But I had never seen the NEADS logs and so it was impossible for us to make that correlation.

Now I don't know where 9/16 would have come from, or where 9/16 was briefed as having been notification, but in my estimation, we'd a flagged that and said it couldn't have happened, because at 9:25 communications [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Okay. You would have known that on September 17th--

MR. FERRANTE: Yes.

SPECIAL AGENT (b)(6), (b)(7)c --the date of that summary of air traffic hijacking notes.

MR. FERRANTE: We tried to be as factual as we could and as accurate as we could in this development and, in fact, in many cases we have to use times that were estimated, because certain things we had to take from what a supervisor in a personnel statement wrote, for example, or in the case of United 93, I think that it was some time after 10:00 o'clock in the morning where we had

another aircraft report a puff of smoke, and we used that as an approximate crash site [?], because we didn't have radar tracking on [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c But you don't recall any specific discussion about the 9/16 time?

MR. FERRANTE: No.

SPECIAL AGENT (b)(6), (b)(7)c Whether it was accurate, inaccurate. You don't recall that at all?

MR. FERRANTE: No.

SPECIAL AGENT (b)(6), (b)(7)c Yeah, I recognize that you didn't see the NEADS log but you were presented with data--correct?

MR. FERRANTE: Correct.

SPECIAL AGENT (b)(6), (b)(7)c That purported to have come from the NEADS log, because the two flights that you do reference a notification time for in the summary of air traffick hijack events, you source back to the NEADS log; is that right?

MR. FERRANTE: That's correct. So, for example, this is a--back to American 11, and according to our record, at 0840, straight up, it

says Northeast Air Defense Sector NEADS logs indicate they were notified by the FAA of the events concerning American 11.

SPECIAL AGENT (b)(6), (b)(7)c I think there's a similar entry but a different time for United 175 in there.

MR. FERRANTE: Correct. It says at 0905 Northeast Air Defense logs indicate they were notified, and unfortunately, that was about two minutes after the impact had occurred.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Do you recall anybody being tasked with cross-referencing tail numbers from any logs--

MR. FERRANTE: No.

SPECIAL AGENT (b)(6), (b)(7)c --in connection with the tasking, of putting the timelines together?

MR. FERRANTE: No. In fact the first time I--and I didn't even think of it, to be honest with you. In our business, we did the air traffic investigation of events. Another organization called AAI, which is the Accident Investigation Group, generally referenced flights based on tail

numbers. But all of our reported referenced flights based on flight numbers.

So an accident occurs today, the old air traffic group I was with would generate an alert bulletin and we would say United 93, whereas AAI may come out and say UA 411, UA--whatever the registration number was, and in parentheses they would indicate United 93.

So they did the only cross-referencing that I was aware of then, looking at what a registration number was. The records I had access to at that point generally would not have included any tail numbers. It would have been in the original flight plan that was filed, that would have been in what we called our bulk store systems, that the airlines filed in themselves. But it wouldn't have shown up, like, for example, on the flight strips from New York Center or any other air traffic [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Would you have had access to the bulk flight data to retrieve the flight numbers--or tail numbers for each of the

flights?

MR. FERRANTE: Yes, but we would have had to have done that through a field facility or through a flight service station.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Do you have any recollection of tasking anybody with that?

MR. FERRANTE: To my knowledge, we never did that in any of the accident investigations I worked through.

SPECIAL AGENT (b)(6), (b)(7)c In the summary document there, why was United 93's notification time omitted from the summary?

MR. FERRANTE: Well, in reading through this--I mean, there's no time indicated at all, which would indicate to me that we just weren't aware of any notifications that took place for the aircraft.

SPECIAL AGENT (b)(6), (b)(7)c And certainly after September 11th, Doug Gould, I think he worked on your staff--is that right?

MR. FERRANTE: Yes.

SPECIAL AGENT (b)(6), (b)(7)c I show you this

e-mail [?] [inaudible].

MR. FERRANTE: I'm not sure what the first one is in reference to, November 8-5-8-3 (b)(6), (b)(7)c

SPECIAL AGENT (b)(6), (b)(7)c Yeah. The second document is a draft transcript from Cleveland.

MR. FERRANTE: Rough draft of United 93.

SPECIAL AGENT (b)(6), (b)(7)c Jump down to 10:07 Eastern on there.

MR. FERRANTE: Let's see. At 14:07--

SPECIAL AGENT (b)(6), (b)(7)c [inaudible].

MR. FERRANTE: --it says that it's a conversation between G-O-B [ph] and Huntress [ph] Military. The line was activated at 14:03 but at 14:07 they're talking about a bomb.

SPECIAL AGENT (b)(6), (b)(7)c Which air traffic?

MR. FERRANTE: United 93.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. FERRANTE: You know, the conversation goes: Did you scramble yet? Yes. [inaudible] and Toledo. Did you really? Could you give us the lat/lon.

SPECIAL AGENT (b)(6), (b)(7)c And who's Huntress?

MR. FERRANTE: Huntress is a military facility that I believe operated off the coast of the United States, primarily in the New York area.

There are two terms that I've heard many times in my career, in doing the--on the East Coast. One is called Giant Killer. The other is Huntress. I'm not sure if they're one and the same. I think that they're all part of what's also referred to as Baykate [?]. We didn't have a lot of interaction with the military in the role that--

SPECIAL AGENT (b)(6), (b)(7)c What is the date of that e-mail there?

MR. FERRANTE: 9-15-2001, 9:05 p.m.

SPECIAL AGENT (b)(6), (b)(7)c And that's addressed to Doug Gould; right?

MR. FERRANTE: Right.

SPECIAL AGENT (b)(6), (b)(7)c And this is a copy of--and I know you said you didn't see it--but this is a copy of the Northeast Air Defense Sector log. Look at that entry right there, at 14:07.

MR. FERRANTE: Bomb onboard United 93 over Pittsburgh.

SPECIAL AGENT (b)(6), (b)(7)c I wonder why you guys didn't include that information in your summary.

MR. FERRANTE: I couldn't tell you when Doug actually opened this e-mail or was aware of it. Doug primarily was working on radar, recreations of what had taken place. Let's see. 9/15 would have been four days after, so that would have been Friday, I believe. Friday or Saturday.

On Saturday, I distinctly recall we had a projector set up with a laptop computer, and we were trying to go through each one of the flights, in chronological order, and there was myself and (b)(6), (b)(7)c [ph] and (b)(6), (b)(7)c [ph] did a lot of the actual typing on this.

Doug was there, he was still primarily working with radar replay, and--I'm sorry-- (b)(6), (b)(7)c (b)(6), (b)(7)c [ph] was also there. He was working on a PowerPoint presentation that showed the sketches of the four flights as they went across.

So I don't know if Doug was even aware he had this or was aware that what we were doing at

the time, even though we were right next to him.

SPECIAL AGENT (b)(6), (b)(7)c It looks like Doug actually asked for the information from the e-mail. It says this is the information you requested.

MR. FERRANTE: Attached a brief you requested concerning United 93 military interface and November 853 Yankee.

SPECIAL AGENT (b)(6), (b)(7)c Unrelated aircraft.

MR. FERRANTE: Yeah. That call sign doesn't ring a bell at all.

Also, we can confirm we're showing United 93 accident to occur at 14:03, and I think when we printed this book, what did we use for a time?

SPECIAL AGENT (b)(6), (b)(7)c 10:04 probably, or maybe 10:03 and a lotta seconds, or something like that.

MR. FERRANTE: 10:04, time approximate, primary radar terminated 10:07 in response to a request from Cleveland controller, November two Victor Foxtrot, reported observing puffs of smoke in the vicinity of United 93 last known position.

So I would suggest that if we knew this

was the time, we'd have changed this entry to match what Cleveland Center was telling us because now we have an official FAA record indicating it.

SPECIAL AGENT (b)(6), (b)(7)c I mean, we have a very strong belief that you guys did know and the reason we think that is threefold. Number one, the e-mail message and the date of the e-mail message, we found a copy of that draft transcript on the S drive, or--

MR. FERRANTE: [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c --which reported to us as having come from the S drive, with a date on it, roughly, I think it was September 17th or so. So that puts it sort of in the time period that you guys are working on that.

Also this is the grid chronology which we've talked about before at prior interviews. But a draft of the grid chronology contains 10:08 as the notification time for United 93, but it was taken off, and the final version has N/A.

I think during prior interviews you had indicated to us, as long as you had a source for

some information you guys felt comfortable with it, and in the case of United 93 you actually had two different sources. You had the NEADS log Canoles [?] reviewed and provided information to you guys on.

You also had your own transcript of what happened. And we're really trying to understand exactly why it is that you guys elected not to use that information when you had not just one but two different sources for it.

MR. FERRANTE: Well, this is the first time I can recall ever knowing this e-mail existed. So I don't think I've ever seen this before, although I did have access to the share drive, I mean, I was part of that same organization. I wouldn't purport to tell you half of what was on there at that point.

My recollection is that we had (b)(6), (b)(7)c (b)(6), (b)(7)c [ph] and (b)(6), (b)(7)c [ph] were developing this part of it, and are either of those dated as far as when we created them?

MR. FERRANTE: September 18th; a day later.

MR. FERRANTE: A day later.

SPECIAL AGENT (b)(6), (b)(7)c A day later from the summary document.

MR. FERRANTE: The only thing I can think of, why that time's not in there, is we didn't have it at that time or it was an oversight on our part, because if we're trying to show notification times, if we had one it would certainly, should have gone in here.

SPECIAL AGENT (b)(6), (b)(7)c What about the fact that the time is after the plane crashed? Would that have played a role in it?

MR. FERRANTE: No, because we show--we acknowledge in here that with United 175, we notified the military after the airplane impacted the trade center.

SPECIAL AGENT (b)(6), (b)(7)c So you don't think that played any role in the--that wasn't one of the--a reason?

MR. FERRANTE: No. If we were doing that, I would suggest to you that we would have eliminated this other one as well. At 9:03 is when

we show second impact at the World Trade Center. At 9:05 is when the NEADS logs indicate they were notified [inaudible]. Yeah, we put that in the log, in our record of the events. So if we knew of it, I would suggest it was an oversight. I don't think we knew of it at the time.

[Simultaneous conversation.]

SPECIAL AGENT (b)(6), (b)(7)c --cause you have 10:08, though--

MR. FERRANTE: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c --but on a draft, the very next day, for a document that was finalized the very next day. So I'm just, I guess I'm just confused. I'm really trying to see if you can help us understand.

MR. FERRANTE: Now this, we would have probably have been finished with this when we left here Sunday evening, which would have been-- September 17th? If we printed it on the 18th. Saturday, September 17th at 6:30 p.m.

SPECIAL AGENT (b)(6), (b)(7)c Well, Saturday's the 15th, I think.

MR. FERRANTE: Oh.

SPECIAL AGENT (b)(6), (b)(7)c So the 16th would be Sunday. The 17th would be Monday.

MR. FERRANTE: Right. I could tell you by noon, Monday, we'd already gotten copies back from the printer, because (b)(6), (b)(7)c had the whole package on his desk, he brought it to a gentleman named (b)(6), (b)(7)c who worked in a graphics group that's still located on the sixth floor of this building and has been published, you know, printed, so that they were in color and looked at it, because the very first time I saw one, I commented on the fact that it said Summary of Air Traffic Hijack Events, indicating it's air traffic hijack for these aircraft. I think I would have changed that wording, had I known that was going on the cover, but it was already printed at that point.

And that was, you know, probably [inaudible] but by noon, on Monday, I know that they were done.

SPECIAL AGENT (b)(6), (b)(7)c Okay. So you're thinking that the reason United 93, the

notification time is omitted from the summary, and then ultimately from this grid timeline as well is an oversight?

MR. FERRANTE: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Also--

MR. FERRANTE: I don't think any of us would have intentionally overlooked that. It's just not in our character and what we were trying to do. Now--

SPECIAL AGENT (b)(6), (b)(7)c There wasn't any discussion that you participated in or you were told about where folks were directed or thought to omit the time because it would be embarrassing to the FAA?

MR. FERRANTE: No; no.

SPECIAL AGENT (b)(6), (b)(7)c There's another one that's after the crash.

MR. FERRANTE: No.

SPECIAL AGENT (b)(6), (b)(7)c Another one.

MR. FERRANTE: You know, the original discussion I heard about notifications to the military was something along the lines of, you

know, they started this telcon that they had down in the other corner of the tenth floor, and they were trying to keep a log of all these things in there, and there was a (b)(6), (b)(7)c named (b)(6), (b)(7)c and there were some people who said, well, (b)(6), (b)(7)c was in the room, so that would constitute notification to the military.

We didn't use that as an argument that [inaudible] the military was present during the discussions, so--

SPECIAL AGENT (b)(6), (b)(7)c You don't have to hold all these things; just hold the summary.

MR. FERRANTE: Okay.

SPECIAL AGENT (b)(6), (b)(7)c In the summary of air traffic hijack events, there's also not a notification time for American 77.

MR. FERRANTE: Correct.

SPECIAL AGENT (b)(6), (b)(7)c But in your, in this grid timeline, you know, which is dated the next day, there is a notification time for American 77. It says 9:24. And it's also sourced back to the NEADS log. For that one as well, we're wondering

why you didn't include that time in the summary document.

MR. FERRANTE: The only thing I can think is that at the time that we were finalizing and printing this, the group that was doing this, which was primarily myself, (b)(6), (b)(7)c and

(b)(6), (b)(7)c other people were working on this and we may have not communicated amongst ourselves that we had this kind of a timely note [?].

You know, in terms of American 77, up until probably--I don't know, maybe months after the event, is when I learned that we knew more information about that radar source that had been out of service, because I think this says that, you know, we didn't have any tracking at all.

But, in reality, we did have tracking in Indianapolis Center, and which that's from a different, what we call sort box [?].

And the way the sequence of events that I recall is, you know, the controller was making routine transmissions, so everything was fine, and then he had a simultaneous loss of radar and radio

contact, which by our own definition leads to the grounds of an accident and requires notification.

So notification was made to the Great Lakes Regional Office, which is the normal flow of it.

Now somehow, that information from Great Lakes was transmitted either electronically or via voice to all of their facilities, and then sometime after that they got a call from a sheriff's office or a police office reporting an aircraft that had been down, and in our minds that like confirmed the fact that the airplane had crashed.

SPECIAL AGENT (b)(6), (b)(7)c On the 17th, when you're putting the summary together, you have the NEADS log, you're citing it and you're sourcing it for two of the aircraft. But you're not using the 9:24 entry for American 77, for some reason.

MR. FERRANTE: I didn't have a NEADS log.

SPECIAL AGENT (b)(6), (b)(7)c But you had information that--

MR. FERRANTE: Right. We had times that I believe we got from (b)(6), (b)(7) on when notifications were

made on certain aircraft. But I don't think we had a complete picture at that point, not the group that was actually preparing the summary of events.

But it's apparent to me, looking at this, that our office had the information but I don't know that it was shared amongst the right people.

SPECIAL AGENT (b)(6), (b)(7)c [inaudible] had a partial picture of the data from the NEADS log when you're putting together the summary, if I understand you correctly?

MR. FERRANTE: I think we had the times that Dave was aware of from the NEADS log, because I remember distinctly that he was--he had a portfolio and he gave us some of the times that were based on the NEADS log. So I think that while we were typing this, if we had had that, we'd a put that in there.

Now if you look--let me give you this back--these sections on the individual aircraft, not in book form but like on each individual one, these were being sent upstairs almost as fast as we can develop them. I can tell you (b)(6), (b)(7)c at several

points, was nearly exasperated with us because--How much longer? How much longer? because the administrator wanted information and we were trying to be as factual as we could and yet produce these as quick as we could.

So that's why there's a disconnect between who's doing what activities cause there was an awful lot of stuff to gather in those initial days.

SPECIAL AGENT (b)(6), (b)(7)c So the information might not a necessarily been collated.

MR. FERRANTE: We may have had it but we didn't have it in the right place.

SPECIAL AGENT (b)(6), (b)(7)c And you were rushed to put it together.

MR. FERRANTE: Yeah. This was the kind a stuff (b)(6), (b)(7)c [ph] was doing. This is the PowerPoint presentation I referred to.

SPECIAL AGENT (b)(6), (b)(7)c Radar depictions.

MR. FERRANTE: Yeah. Well, it's the flight plan [?] depiction in PowerPoint. It's not a radar. And I know it's in that book somewhere, but there are actual photos or green shots of what

the radar showed at the time. That was the kind a stuff that Doug was doing, and of course he was also working with the FBI and other elements, you know, in providing information. The NTSB was chomping to get information and at one point the FBI told us we couldn't release it until we had their approval.

But meanwhile, we had all of these summaries that we were being, we were using, and we did them one summary at a time. So if we look at American 11, for example, that was the first one. We would go through and we would finish everything we had with American 11, and then the next one we would have worked on was United 175, and what time we finished which one, I don't know, but I know Dave came by several times and needed information on this, or needed a package on this or needed a screen shot from this one.

Because I know we had a couple of, not really heated conversations, but they were tense because of the pressure we were under at the time in terms of, you know, I've got to have this known

[?] and we just didn't have the information.

SPECIAL AGENT (b)(6), (b)(7)c In one of our prior interviews with you about the 10:08 timeframe, or time, notification time for United 93, you had indicated that it might have been taken out of these grid timelines because it was past the point when United 93 had already crashed, and that you guys might have taken it out because of that. Why would that have been, when you kept the notification time in for United 175, when that was past the crash time?

MR. FERRANTE: I don't know.

SPECIAL AGENT (b)(6), (b)(7)c Did you have any--I think you already said that you did not have any direct interaction with the Department of Defense after 9/11. Is that correct?

MR. FERRANTE: That's correct. I had one conversation with (b)(6), (b)(7)c [ph] and it was only because he was making arrangements to get somebody to come over to actually watch a replay of an event. (b)(6), (b)(7)c was--at that point, I don't know if he had left the FAA and was working for the Department

of Defense or not. But (b)(6), (b)(7)c has been a long-time FAA employee that I have known.

SPECIAL AGENT (b)(6), (b)(7)c He was like a liaison at the--

MR. FERRANTE: Yes.

SPECIAL AGENT (b)(6), (b)(7)c --Department of Defense for FAA?

MR. FERRANTE: He may have been at that point; yes.

SPECIAL AGENT (b)(6), (b)(7)c On September 18th, NORAD issued a press release with a timeline of September 11th. Are you aware of that? Did you see any drafts of that press release?

MR. FERRANTE: No. The only press releases I saw, or drafts of is I had a copy of the administrator's draft testimony, that I believe (b)(6), (b)(7)c had put together and sent to us to review, and we did a review of that and I recall that because there was information in there that she had ordered the shutdown of the air traffic system, and shortly after that we got a copy of Secretary Minetta's remarks, whereas he had ordered

the shutdown of the air traffic system.

So we went back to (b)(6), (b)(7)c and said the secretary's going to say that he did this.

SPECIAL AGENT (b)(6), (b)(7)c Did you guys find out who really did it?

MR. FERRANTE: In my mind, Dave Canoles did it along with a gentleman named (b)(6), (b)(7)c and that today, if you ask me the question, I would tell you that it was done almost simultaneously by a number of individuals, including the airlines themselves, because at the time they had what we called the never-ending telcon at that point, where (b)(6), (b)(7)c who was the division manager in the Eastern region was coordinating for a ground stop and asking Dave to do that, and Dave gave him the go-ahead to shut down the arrivals and departures, basically, throughout the Eastern region or all of the New York area.

I know at that point, now, American Airlines had already stopped their own and they were trying to land their flights. United Airlines had already stopped their departures and were

trying to land flights.

So I think, collectively, though, there's a lotta people who were in the process of, or thought they were in the process of shutting down the nets. So although, initially, I would have told you, Dave Canoles, hands down, was the first person to shut down the nets, I think a lot of it happened simultaneously and I think a lotta people believed that they were the catalyst for the closure of nets.

SPECIAL AGENT (b)(6), (b)(7)c So you hadn't seen the press release or a draft, or anything to that effect. Did you attend any of the 9/11 Commission hearings?

MR. FERRANTE: I attended the first one that was conducted at Otis Air Force Base. I'm sorry. The hearings?

SPECIAL AGENT (b)(6), (b)(7)c Yes; the hearings.

MR. FERRANTE: No. I attended an interview at Otis Air Force Base when the 9/11 Commission was interviewing [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Okay. Did you watch

any of the hearings on television?

MR. FERRANTE: No. I might have seen snippets of it in the news.

SPECIAL AGENT (b)(6), (b)(7)c In May 2003, the Department of Defense testified or some former officials from the Department of Defense testified at the hearing and presented a timeline of events from 9/11. Are you aware of that testimony?

MR. FERRANTE: No.

SPECIAL AGENT (b)(6), (b)(7)c Are you aware of the Department of Defense inaccurately testifying about FAA providing notice for United 93 at 9:16 during any of their testimony?

MR. FERRANTE: No. The only inaccuracy in any of the times that I know of is in the crash time of American 77, the Pentagon, because we had one time of what we called the crash time, which was the loss of radar returns we had from the aircraft, and there was a different time that was being used, that was based on surveillance cameras that were available, some time after the fact, parking lot cameras.

So my thought at that point was, well, the FAA radars are synchronized to the atomic clock. I couldn't tell you where the parking lot cameras are or not. But that was when we lost radar footage [?].

SPECIAL AGENT (b)(6), (b)(7)c Do you think FAA's time clocks were a little more [inaudible]

MR. FERRANTE: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Do you know if anybody at FAA, that was working on putting together the chronologies of September 11th, if they reviewed any tapes or transcripts from the Department of Defense?

MR. FERRANTE: None that I know of.

SPECIAL AGENT (b)(6), (b)(7)c Did you participate in preparing briefing packages, along with Darlene Freeman, after 9/11?

MR. FERRANTE: I had one meeting with Darlene--not really a meeting. I didn't really even know Darlene up to that point. She had formerly been like ATS 2 but had been gone for some time. I know I had to bring her a package of

information. I think I brought her these books when she was in a conference room, it used to be the old ARA conference room, I think that were [inaudible] morning meetings now, so it's probably called something different. But that was the only interaction I had with her during this.

SPECIAL AGENT (b)(6), (b)(7)c Did you provide her with some information--

[Simultaneous conversation.]

MR. FERRANTE: I think it was--

SPECIAL AGENT (b)(6), (b)(7)c --and you think you probably provided her--

MR. FERRANTE: --probably these books. I think it was Monday and, you know, because I walked in, there was a room full of people in there, I couldn't tell you who they were, but I think Dave asked me to bring her, you know, a copy of this or maybe even multiple copies of this.

SPECIAL AGENT (b)(6), (b)(7)c Are you aware that there is a NEADS log entry at 9:34 Eastern time, that indicates FAA provided them with information that American 37 was lost at that time?

MR. FERRANTE: Let me look that up in the book. That doesn't ring a bell with me. But did it make it into our summary?

SPECIAL AGENT (b)(6), (b)(7)c I don't think so. I was going to ask why.

MR. FERRANTE: What time was that?

SPECIAL AGENT (b)(6), (b)(7)c 9:34 Eastern. 1334 Zulu.

MR. FERRANTE: I think from our summary, at that point we were pretty much convinced that the aircraft had crashed, we, and I think the FAA, because at 9:15 it says, This time approximate based on personal statements from GIB of Indianapolis Center. The ops manager--

[Start tape side 1B.]

SPECIAL AGENT (b)(6), (b)(7)c --54. We just turned the tape over. So you were reading from--

MR. FERRANTE: This is reading from the 9:15 entry in the summary we prepared, and it's with Indianapolis Center operations manager requested the traffic management personnel notify Air Force search and rescue of the missing and

possibly downed aircraft, relating to American 77.

The ops manager also contacted West Virginia state police, advising them of a possible downed aircraft, and asked if they had any reports of a downed aircraft.

And if NEADS has information that at 9:34 Eastern--we notified them. By that point we're already in process of notifying the ops supervisor of, for the White House and the U.S. Secret Service on an unknown aircraft location. And from what others have told me of this event, and this is told me like right after the event of September 11th, they were using a system called a Traffic Situational Display.

They had big screens out at our command center in Herndon, and according to that display, the flight of American 77 continued westbound for like an hour after it had already impacted the Pentagon.

SPECIAL AGENT (b)(6), (b)(7)c What is that traffic system display pulling data from?

MR. FERRANTE: What it does is it gets its

information from host computers throughout the system and it generates flight plans, and then it goes to a site in Cambridge, Massachusetts, where it's all mixed together because it's twenty different centers of it that are feeding this information and it shows active and proposed tracks.

So if the track had been active, they're gonna continue it, because it knows it's gone to Los Angeles or San Francisco, somewhere on the West Coast, where that flight was headed to. And it's just gonna continue to depict him on its last known route of flight.

SPECIAL AGENT (b)(6), (b)(7)c With regards to the information that Dave Canoles provided to you from the NEADS log, did he provide it to you in bulk, meaning like, oh, here's the information I've gotten from the NEADS log? Or was it piecemeal, like you would go up there and say, hey, do you have some times for American 11 or--

MR. FERRANTE: Actually, I think it was more that Dave came downstairs to where we were.

Dave had a series of meetings throughout, you know, the first few days after those events, where he was gone most of the time.

But he would come down when he needed a copy of something or how we're doing with something, and, you know, I would say, well, we don't have a time for this or we don't know when this occurred, and we don't have a record of it, and that's what I recall as he looked into his portfolio and he gave us a time.

SPECIAL AGENT (b)(6), (b)(7)c It would be specific to an aircraft?

MR. FERRANTE: Yes.

SPECIAL AGENT (b)(6), (b)(7)c He didn't provide you with here's a sheet of paper with all the times I've gotten from that?

MR. FERRANTE: No.

SPECIAL AGENT (b)(6), (b)(7)c In our second interview with you, you had indicated that there was no way for you to verify with FAA's records what the NEADS logs were depicting. I wonder if you could explain why you think that's the case.

MR. FERRANTE: Because in some a the cases where, for example, with American 11, we had time from FAA time source material, Boston Center, that they were on the phone with Otis Air Force Base requesting a scramble. So that was an easy time that we could say, okay, we've notified the military at this point.

But without access to the NEADS logs, we had no way to do any comparisons of what, you know, our material said or their material said. So when we put this together, we tried to base this on whether we had an FAA source that indicated this information, i.e., our voice tapes, radar data, supervisory statements based on their recollections, and so forth.

SPECIAL AGENT (b)(6), (b)(7)c You did have access to the NEADS log. You keep saying you don't have access to the NEADS log but you guys did.

MR. FERRANTE: I did not have access to the NEADS log when we put this together. The first time I actually saw the NEADS log was when John Azarella [ph] showed it to me during the 9/11

Commission meeting.

SPECIAL AGENT (b)(6), (b)(7)c Right. But you sourced the NEADS log in your document twice.

MR. FERRANTE: And I'm sure that we had to get those times from Dave, and we did that.

SPECIAL AGENT (b)(6), (b)(7)c That's how you would have done it. But you could have verified the times that Dave gave you with your own records. No?

MR. FERRANTE: We tried.

SPECIAL AGENT (b)(6), (b)(7)c Are you saying that when you could verify them, then you felt good about them and you would use them, or--

MR. FERRANTE: I think that if our logs and the NEADS log showed the same thing, then we probably wouldn't have referenced NEADS log indicate, because we would have had an FAA source that said what we did, we, the FAA, based on our information. But what we didn't have, time-sourced information that was ours, we tried to annotate where that information came from, i.e., it came from a NEADS log, it came from a personnel

statement. It didn't come from an official FAA source that I could play back a rerecording of that event and let you listen.

SPECIAL AGENT (b)(6), (b)(7)c Okay. And you also said that the support that you guys had for the notification times, meaning FAA's notification of DOD times were sketchy at best, why were you describing them that way?

MR. FERRANTE: Because I don't think we had--at least I had access to any of those times that were in there while this was under development. Even though our office may have, i'm not aware of having those as we create this.

SPECIAL AGENT (b)(6), (b)(7)c "Those" meaning--

MR. FERRANTE: Meaning the chart that you have there with those times. So the times that we were getting--now remember, all of this information that we're first gathering is the actual voice recordings of the controllers who are, either have United on frequency or are trying to initiate, you know, communications with United, or any of the other aircraft. None of those rerecordings that we

went through, and there were hours and hours and hours of them, had any kind of notifications of anybody, with the exception of Boston Central.

So our information on notification was sketchy at best. It was taken from, you know, personnel statements, or what Dave told us on a time [?], with the exception of American 11.

SPECIAL AGENT (b)(6), (b)(7)c And what about Cleveland Center? You're thinking the guys just didn't--even though they sent that over, you guys didn't review it in time to include it?

MR. FERRANTE: I know I didn't review it in time to include it. I don't know that we, as a collective group, I could say that for all of them, because Doug may have very well opened it that evening but may not have thought it was pertinent to what we were doing at the time. He might have been using it for something he was doing.

Or he could have got it at the time and handed it direct to (b)(6), (b)(7)c, who I believe was working on this chart, that we didn't reconcile with this at that time.

SPECIAL AGENT (b)(6), (b)(7)c This chart. You're talking about the grid timeline--

MR. FERRANTE: The grid time.

SPECIAL AGENT (b)(6), (b)(7)c --and this is the summary of hijack events?

MR. FERRANTE: Correct.

SPECIAL AGENT (b)(6), (b)(7)c If you could do it all over, what would you do differently?

MR. FERRANTE: A lotta things. First off, if I could do it all over, I know now that there was a tactical net that was set up between FAA security, and I don't know exactly who's on there, but other elements of the military. That was located up here on the 10th floor of what we now refer to as the Washington Operations Center.

I'd put somebody in there, because it was a way to get realtime information of what was taking place and what was going through.

SPECIAL AGENT (b)(6), (b)(7)c You're talking about while the event's unfolding?

MR. FERRANTE: While the events were unfolding.

SPECIAL AGENT (b)(6), (b)(7)c Let's focus on like after, like reconstruction, just kind a what you're doing now in some respects; is that right?

MR. FERRANTE: Yes. I think that if we could have done it all over again, we'd have selected the questions. But I would tell you, at the time, I don't know that we knew to do anything different, because our job was air traffic investigation. We didn't focus on ever looking at a crash site. We looked at how the air traffic system performed in any given accident or operational error between a controller.

So that was our focus, was to listen to voice tapes and look at radar data, because that was really our universe. We had the ability to play back radar and the ability to play back voice, and we had the ability to merge them together. We didn't think to go out and see if supervisory communications had been reported as well, because in our line a work they generally weren't pertinent to an event.

If a controller is talking with an

aircraft that crashes, on September 10th of 2001, I would never have considered pulling a supervisory or traffic management position rerecording to see what took place there, because I was only focusing on those communications between the pilot and the controller and the radar data that [inaudible].

And I think we did a really good job at that. I don't think we were equipped or had the skills that were necessary in what we ended up going into in this investigation.

SPECIAL AGENT (b)(6), (b)(7)c Just a little beyond what you guys were normally used to trying to accomplish.

MR. FERRANTE: Very much so.

SPECIAL AGENT (b)(6), (b)(7)c So like a military operations specialist position recording wouldn't have been something you would have ever listened to prior to--

MR. FERRANTE: Would have never listened to 'em. Wouldn't have even though to have listened to 'em, unless I had some information that I had to have that because there was a critical piece of

communication on it.

SPECIAL AGENT (b)(6), (b)(7)c So based on that e-mail, somebody in your group did think that that was a critical piece of information but whether it was listened to, or who listened to it--

MR. FERRANTE: Right. I would have really liked to see the message from Doug to (b)(6), (b)(7)c [ph] that prompted the request, because in reading what came back, per your request, I don't know what Doug asked him for. Or what prompted Doug to think like that. Except that the question was, you know, go through and see what time you made any notifications to the military.

SPECIAL AGENT (b)(6), (b)(7)c Well, wasn't the front office asking that question--what time did he call?

MR. FERRANTE: Not initially. Not initially. That's probably the first request we have, was probably late Friday or early Saturday.

SPECIAL AGENT (b)(6), (b)(7)c About that. About military notification.

MR. FERRANTE: About military

notifications.

SPECIAL AGENT (b)(6), (b)(7)c That would have been before like the grid timeline is put together--

MR. FERRANTE: Yes.

SPECIAL AGENT (b)(6), (b)(7)c --and before you guys finalized the summary; right?

MR. FERRANTE: Yes.

SPECIAL AGENT (b)(6), (b)(7)c So it could be Doug's asking the question cause the front office prompted it.

MR. FERRANTE: Very well could be. We got requests for information from basically everybody that was here at the time. A lot of our requests for information during that whole event came from a

(b)(6), (b)(7)c [ph] who used to be a special assistant. So she used to work in the front office with Bill, and, you know, where the request came from, often didn't know. But from our fourth floor vantage point, we seldom, if ever, had interactions with the tenth floor, except through

(b)(6), (b)(7)c and the air traffic organization.

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh. Anything

else?

MR. FERRANTE: I think also, if we had it to do over again, I'd a said we can't do it in this short a time, because I can tell you that time constraints that we worked under to produce a lotta this were just incredible. I had people here between 6:30 and 7:00 o'clock every morning, up until 10:30, 11:00 o'clock every night, and they were just exhausted.

SPECIAL AGENT (b)(6), (b)(7)c I think you had said in a prior interview, that you guys followed the procedures in the BE20.11 order--

MR. FERRANTE: That was our--

SPECIAL AGENT (b)(5), (b)(7)c --for pulling this stuff together; is that right?

MR. FERRANTE: That's correct.

SPECIAL AGENT (b)(6), (b)(7)c Sort of your "bible," so to speak.

MR. FERRANTE: That's correct. BE20.11 is--I don't remember exactly what it's called, but it deals with aircraft accident incident investigation. Now an air traffic incident, it's

like a pilot deviation or somebody broke an altitude, it isn't an event, such as this, that we would ever fallen into. And that deals with what information is required for [inaudible]. For example, we used the standard protocol of using five minutes before a first contact until five minute after last contact, because that's pretty much what we've been trained in forever.

Now if we had stayed with five minutes before first and last, and never broadened out, then I'd suggest this book would look a lot different then. So a lot of it was just trying to come up with it "on the fly."

SPECIAL AGENT (b)(6), (b)(7)c You needed a guide to work from and that's what you guys followed, your standard procedure.

MR. FERRANTE: Right.

SPECIAL AGENT (b)(6), (b)(7)c I can't think of anything else right now.

MR. FERRANTE: Okay.

SPECIAL AGENT (b)(6), (b)(7)c So unless you have anything else that you'd like to add?

MR. FERRANTE: I have a question and you may have to refresh me with some of the material. We talked about United 93 and the NEADS log that shows a notification at, I think it was 9:34?

SPECIAL AGENT (b)(6), (b)(7)c That's American 77.

MR. FERRANTE: Okay. I got the times messed up in my head, then.

SPECIAL AGENT (b)(6), (b)(7)c You had a question about that or--

MR. FERRANTE: Yeah. United 93 and the NEADS log were--and in fact you showed me the transcript that was done by Cleveland Center and the military--

SPECIAL AGENT (b)(6), (b)(7)c Oh. That's the 10:08 notification time for United 93.

MR. FERRANTE: Okay. That was the one that referenced to a bomb [?].

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. FERRANTE: Okay.

SPECIAL AGENT (b)(6), (b)(7)c That's the most troubling for us, Tony, cause we're not getting--

MR. FERRANTE: I understand.

SPECIAL AGENT (b)(6), (b)(7)c --any real clear explanations. You guys--I mean, within FAA and within AAT20, we can show that you guys had information to indicate a notification time from two separate sources, but--and even at one point you guys decide that, you know, hey, we have a time, and you put 10:08 in the grid timeline, and it's taken out and not used, and I don't know if anybody's really given us a very good explanation as to why that is. It just--it's not a good unanswered question.

MR. FERRANTE: I can tell you that the people who worked at AT20 at the time took an awful lotta pride in what they did and that's why they came out and they spent their entire days and nights here for basically two weeks following out of that, because we wanted to find out every bit of information we could to prevent this from ever happening again.

So one a the questions you had asked me was if this would be more favorable to the FAA.

SPECIAL AGENT (b)(6), (b)(7)c If you didn't

include.

MR. FERRANTE: If we didn't include it. And I think that if you look through--and I don't even know if these exists anymore. But if you look through the reports that we generated from AT20, in the years prior to September 11th, based on normal aircraft accidents, we didn't learn about how favorable it was gonna look to the FAA. There were times when we looked at accident cases and we would tell the Department of Justice write the check because we screwed up.

So it wasn't a thought we ever had--Is this gonna make us look bad, or is this gonna make us look good? We tried to be factual. And the only thing I can think is if we may have had an oversight, we might have had a piece of paper in that we didn't know we had. At least I didn't know we had. Because I would think that--and you can probably get this from a lotta different sources in here. The AT20 organization was probably more critical of the FAA and the air traffic organization than all of the air traffic

organization combined, because we really looked at we screwed up in some of these cases.

And this deals with accidents prior to. I mean, there were times when we would have almost shouting matches with some of our air traffic divisions, saying that they needed to drug test employees because they hadn't done their jobs correctly.

So we didn't look at this meaning favorable to all of us.

SPECIAL AGENT (b)(6), (b)(7)c What AT20 was, essentially, the internal affairs for air traffic; is that right?

MR. FERRANTE: Correct; yes.

SPECIAL AGENT (b)(6), (b)(7)c From an operational standpoint.

MR. FERRANTE: And part of our role was getting the bad news. There were times when the FAA did wonderful things and there were times when the FAA screwed up, and I think we called it pretty accurate.

SPECIAL AGENT (b)(6), (b)(7)c All right. I

appreciate your time.

MR. FERRANTE: Okay.

SPECIAL AGENT (b)(6), (b)(7)c: Thank you.

MR. FERRANTE: You know where to reach me.

SPECIAL AGENT (b)(6), (b)(7)c: Go ahead and turn off the tape recorder. It's 4:16.

[Whereupon, at 4:16 p.m., the interview was concluded.]

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

Case 031H-199-H001

SWORN INTERVIEW OF

LAURA BROWN

BY

(b)(6), (b)(7)c, SPECIAL AGENT

(b)(6), (b)(7)c SPECIAL AGENT

Wednesday, August 31, 2005

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

I N T E R V I E W

SPECIAL AGENT (b)(6), (b)(7)c Today is August 31st, 2005. The time is 2:20 p.m. We're at FAA headquarters building 10A, suite 908, in Washington, D.C. My name is (b)(6), (b)(7)c Also present is (b)(6), (b)(7)c. We're from the Office of Inspector General, Department of Transportation and we're conducting a review of issues involving certain public statements made by military and FAA officials at a 9/11 Commission hearing, and elsewhere, that were allegedly inaccurate.

Today we're interviewing Laura Brown. Please acknowledge that you're aware this interview is being tape recorded.

MS. BROWN: Yes. I am.

SPECIAL AGENT (b)(6), (b)(7)c Could you please raise your right hand. Do you swear or affirm that the testimony you're about to furnish will be the truth, the whole truth and nothing but the truth?

MS. BROWN: I do.

SPECIAL AGENT (b)(6), (b)(7)c Will you please give us your full name, spelling your last for the

record.

MS. BROWN: Laura J. Brown, B-r-o-w-n.

SPECIAL AGENT (b)(6), (b)(7)c And what's your current position?

MS. BROWN: Deputy assistant administrator for external communications.

SPECIAL AGENT (b)(6), (b)(7)c As I mentioned before we started the tape, that we just had a few more follow-up questions as we're kind a trying to get things wrapped up and we're hoping you can help us out with.

MS. BROWN: Okay.

SPECIAL AGENT (b)(6), (b)(7)c One of the documents that you had given us was a draft of a North American Air Defense Command press release.

MS. BROWN: Right. NORAD sent that to us, e-mailed it to me.

SPECIAL AGENT (b)(6), (b)(7)c They e-mailed it to you?

MS. BROWN: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c Do you remember who it was that sent that to you?

MS. BROWN: It was (b)(6), (b)(7)c

[inaudible] (b)(6), (b)(7)c [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Okay.

[Background noise.]

MS. BROWN: [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MS. BROWN: He has since gone back to Canada, the Canadian Air Force is not working in towers [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Okay.

When we talked to you previously, you were one of the very first people we interviewed, so we didn't have as much information to ask questions about at the time so--but I think that you had indicated that you had handwritten, next to this, on this draft of the press release, it says United Flight 93, and then it says FAA notification to NEADS--

MS. BROWN: Right.

SPECIAL AGENT (b)(6), (b)(7)c --and it says N/A. I think you had said that you--

MS. BROWN: At the time that, you know, I

went, since we didn't have any numbers in that space, I went to our air traffic folks and said do you know what time this happened, and that was the time they gave me.

SPECIAL AGENT (b)(6), (b)(7)c Do you think they gave you the 9:16? That's what you wrote on there.

MS. BROWN: Right. That's my handwriting.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Would you have communicated that information back to your point of contact at NORAD?

MS. BROWN: We were having--we had a lot of phone conversations at the time and I can't remember exactly but I--we discussed this timeline a number of times, and I think I probably told him look, you know, I went back and got, you know, the number I got was 9:16. I don't know what you have, but, you know, if asked, that's the number I'm going to use.

SPECIAL AGENT (b)(6), (b)(7)c Their final version of the press release actually came out the next day and it stuck with, they stuck with N/A.

MS. BROWN: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c Do you remember anything about that?

MS. BROWN: I remember he said look, we don't have, you know, we don't have any record of that, or we're not--that record--but he said I can't get anybody to give me a time for that, and, you know, so we're just gonna go with that. I said fine, you know, cause we--it was a NORAD document, it wasn't an FAA document, and he wasn't asking me for, you know, my input in terms of changing the numbers. He was asking just--he was sharing it with me because it was what they were going to be giving out to the press.

And (b)(6), (b)(7)c and I had a relationship where we would try to--I mean, we had never spoken to each other before September 11th, we didn't know each other, I didn't know NORAD's phone number, I barely knew they existed, and after 9/11, partly because of this timeline sheet, we started calling each other and saying look, we don't want--because it was a situation where if NORAD had put something out or had started telling people something, and

then--and it was different from the numbers I had, and so I called them and said look, where are you guys getting these numbers? These aren't consistent with what we have.

And so he start--he and I started sharing things with each other, just so we'd know what the other one was saying, so--and we were also getting a lot of operational calls at that point. It was every night, there would be some incident where NORAD would scramble fighters or, you know, we would put up a temporary flight restriction somewhere and we--and for years, you know, until he left, and I continued this with other NORAD people, we tried to coordinate so that we're not pointing fingers at each other and not saying--because it was partly just because they have a lag time in getting operational information usually from the people who are deploying the fighter jets and we have a pretty direct and quick access to our operational air traffic people.

So sometimes he would call me and say hey, you know, did we scramble jets? and I said, well,

yeah, I'm hearing you did; you know. It was that kind a thing.

And so we were--initially, though, NORAD, other people at NORAD were out there saying, well, the FAA told us to do this or the FAA said do that, and, you know, I would calmly say we didn't ask you to do anything--stop saying that!

You know, so we tried to just increase the coordination, so that we weren't two agencies of the Federal Government out there saying different things and pointing a finger at each other, and that was sort of the goal Doug and I had in terms of the communication part of it.

So I mean, we shared stuff but, you know, he wasn't going to try to change anything that was an FAA product and I wasn't in a position to change anything that was a NORAD product, so--you know--nor did I want to. So.

SPECIAL AGENT (b)(6), (b)(7)c Who would you have spoken with at air traffic, that would have given you that information, the 9:16 information?

MS. BROWN: I don't remember. I mean, I

just don't remember. There were a lot of timelines that were being put out. We, you know, made efforts to get the best information and it seemed to change. I mean, over the course of several years it changed several times.

But I mean that's common when we get initial information. I call the ops center, I mean, I'm on call during the evening, every night of the week, and so I get press calls in the evening a lot, and a lotta times it's about an operation which, whether it's, you know, a security issue or some other issue with the plane, and I can tell you almost every incident I deal with, the initial information is wrong, and I tell that to reporters. They understand that, and I, you know, have accepted that over the years, is just--you know--even for major accidents, the information [inaudible].

It's happening during the hurricane right now where, you know, somebody'll say Jackson, Alabama when they meant Jackson, Mississippi, or, you know, I mean it's sometimes small things but

it's sometimes bigger things, too. So, you know, I wasn't surprised that initially, in the first few days after 9/11, we got information, the information changed, and was, you know, as they went through the data, it would change again, and, you know, as you get better information and the investigation progresses, you usually get more precise information.

So, I mean, I wasn't surprised when he changed it.

SPECIAL AGENT (b)(6), (b)(7)c What sort of information were you sharing with Mr. Martin?

MS. BROWN: Just, I mean, op--just basic information.

SPECIAL AGENT (b)(6), (b)(7)c Were you providing him with logs or--

MS. BROWN: No.

SPECIAL AGENT (b)(6), (b)(7)c --anything like that? Or was it--

MS. BROWN: I didn't have logs; no. I mean, no, I--it would be just something like this, you know, any kind of thing would have been put out

to the press. You know, I wouldn't share anything internal with him. But if we were gonna do a press release, if we were gonna do, you know, anything that we would give out to the press, that would be the type of thing that I'd run by him, just--you know--in some cases if we were saying anything that had to do with NORAD, just wanted to make sure that was accurate, they would sometimes put out statements about, that said, it would refer to some air traffic thing in their statement and they would send it to me and say, Is this right? you know, and that's the kind of thing we would share.

SPECIAL AGENT (b)(6), (b)(7)c This is just an excerpt from a larger document, it's titled Summary of Air Traffic Hijack Events, September 11th, 2001.

Do you know if that would have been something you would have shared with Mr. Martin?

MS. BROWN: No. I don't think I even had this. Let me look at it.

SPECIAL AGENT (b)(6), (b)(7)c It was color too.

MS. BROWN: Oh, yeah, I have some of this. I don't know if I have all of this. No, this would

not be the kind a thing I would share with him. No. This is an internal product. This was very closely held. In fact--yeah. No; this was very closely held. I don't even think this is the original draft of this. I could be wrong. Yeah.

No, this, when they initially handed this out at a meeting, they only gave it to--I was in a meeting with (b)(6), (b)(7)c at the time--I don't know if you've interviewed him. But he had a copy of it and he had the only copy for, you know, Public Affairs, and then he later made a copy for me, but that was only--that was weeks after he got his initial copy. I mean, it was very closely held. That would not have been something I would have shared.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

What about this chronology? This is--we refer to it as the grid chronology.

MS. BROWN: I don't think I've ever seen this. You know, I wish I--

SPECIAL AGENT (b)(6), (b)(7)c Are you aware--

MS. BROWN: I wish I had this but I

didn't.

SPECIAL AGENT (b)(6), (b)(7)c Are you aware of any chronologies similar to what we've already shown you, that you would have shared with Mr. Martin?

MS. BROWN: No.

SPECIAL AGENT (b)(6), (b)(7)c Outside of the press release, were there any other documents that he shared with you?

MS. BROWN: Well, he maintained the NORAD Santa Web site, so he would share links to NORAD Santa with me. NORAD tracks Santa.

SPECIAL AGENT (b)(6), (b)(7)c Right.

MS. BROWN: But I can't remember other things that he would share with me. I mean, I didn't even have electronic copies of that. Most of the communication I had with him was by phone or by e-mail. So.

SPECIAL AGENT (b)(6), (b)(7)c Did he provide you with any logs?

MS. BROWN: No.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MS. BROWN: No.

SPECIAL AGENT (b)(6), (b)(7)c Were you aware that with regard to United 93, that at some point shortly after September 17th, or right around that date, that air traffic had determined that 9:16 was not a good time for notification?

MS. BROWN: I knew there was an issue about the notification time and I think we sort of stopped talking to reporters about the notification time because it became clear that there was an issue about it.

So--and I'm not sure, frankly, if I ever used that number with reporters or whether I just jotted it down on that sheet, you know, when I got it from somebody. So.

SPECIAL AGENT (b)(6), (b)(7)c When you would have learned that that was not a good time for United 93 would you have shared that information with Doug Martin?

MS. BROWN: I might have talked to him about it, I mean, because we were getting--I guess we were both very frustrated because we were getting, you know, phone calls from the press about

it and we were a little bit confused about why the exact time was such a crucial issue, because of all the circumstances and all. I mean, you know, we, as I think other people at the FAA have probably told you, we were focused on moving forward and trying to, you know, improve communications, and in fact, you know, my office had improved communications with NORAD a 100 percent.

I mean, I don't believe I'd ever even talked to them before 9/11. So we weren't--you know--nobody in the organization I think was focused on trying to take apart exactly what time anything happened because we were trying to just move ahead and, you know, fix the communications, going forward.

I mean, it was not--I understand that some people believed that the notification issue was of vital importance to learn the exact precise moment that happened but we had no operational reason to understand that number. Do you know what I mean?

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh.

MS. BROWN: I mean, it would not help us

in any way, moving forward, to understand exactly what the number was, and, you know, I think of it--I was thinking of this meeting with you guys, thinking of this issue. It's kind of like Egypt Air 990, the flight that crashed near Rhode Island, that, you know, that they determined that the pilot deliberately, you know, crashed the plane.

SPECIAL AGENT (b)(6), (b)(7)c Right.

MS. BROWN: Well, the NTSB didn't do a full-scale investigation to find out what the mechanical causes of that accident were because it was pretty clear that the pilot had crashed the plane.

So they didn't go back and determine all the details because they--it wouldn't be useful to spend all the money to do that type of investigation, because it wouldn't help us in any way. Do you understand what I mean?

SPECIAL AGENT (b)(6), (b)(7)c I do. After the commission was formed and started getting itself up off the ground, they started to have some hearings.

MS. BROWN: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c If I'm not mistaken, I think their second, or very close to second hearing was held in May of 2003.

MS. BROWN: Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c And I was wondering: Did you attend the hearings? I think it was May 22nd, and then there was another one on the 23rd.

MS. BROWN: I attended--if Administrator Garvey was at the hearing, I probably attended it. I mean, I'd have to look up exactly. But I think I went to all the hearings that FAA people testified at. I didn't go to the hearings that FAA people weren't testifying at.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MS. BROWN: And I think there were two hearings I went--that I remember going to. One was when Administrator Garvey went up for the first time. I can't remember if Secretary Minetta was also at that one.

And then the second one I remember is when there's a panel of four people, Monte Belger, (b)(6), (b)(7)c

(b)(6), (b)(7)c

and Jeff Griffith

testified at. Those are the two hearings I remember. There may have been a third.

SPECIAL AGENT (b)(6), (b)(7)c That you physically attended.

MS. BROWN: That I physically attended. I don't know, I mean I don't know what information you have about when, what the dates FAA people testified on.

SPECIAL AGENT (b)(6), (b)(7)c I don't have them right at my fingertips. They're easy to get off their Web site.

MS. BROWN: Yeah; right. Well, one was--I think you're right--one was in May, one was in July?

SPECIAL AGENT (b)(6), (b)(7)c Uh-huh. I think so.

SPECIAL AGENT (b)(6), (b)(7)c June 2004.

SPECIAL AGENT (b)(6), (b)(7)c July.

MS. BROWN: Yeah; yeah.

SPECIAL AGENT (b)(6), (b)(7)c At the hearing that Jane Garvey testified at, that was in May of 2003.

Do you remember that some officials or former officials from Department of Defense also

testified?

MS. BROWN: Yes; yes.

SPECIAL AGENT (b)(6), (b)(7)c And one of them was

(b)(6), (b)(7)c

Does that sound familiar?

MS. BROWN: I remember a general. Was there a general there too? Yeah.

SPECIAL AGENT (b)(6), (b)(7)c And (b)(6), (b)(7)c

presented a timeline.

MS. BROWN: Uh-huh. And I was really upset. I recall trying to grab one a the NORAD guys afterwards, NORAD public affairs guys, and talking to him about the timeline. I don't remember all the specifics but I just remember, from the testimony, I was surprised by the timeline that they presented, and when I tried to talk to the NORAD guy about it, he just kind a "blew me off."

He was one a the people from NORAD, from Department of Defense public affairs in Washington, and I used to deal with Colorado Springs most of the time, where NORAD headquarters was. So--and I just remember trying to grab him, and he completely

"blew me off," and I just wanted to talk about the timeline issue cause I recall that the numbers that they gave in their testimony were different than what I had seen previously.

SPECIAL AGENT (b)(6), (b)(7)c Do you remember which numbers were standing out for you?

MS. BROWN: No; no. I just remember that it was an issue. That was the main issue I remember from that hearing.

SPECIAL AGENT (b)(6), (b)(7)c Do you remember who it was you were trying to talk to?

MS. BROWN: No. I don't think it was Rob Garza. The guy was very obnoxious to me and I remember saying something about, to one of the other NORAD guys afterwards about it, and he said, oh, don't feel bad, he's like that to everybody.

But I don't remember which public affairs guy it was.

SPECIAL AGENT (b)(6), (b)(7)c After sort of being, for lack of a better term, "blown off" by the DOD public affairs person, did you try to talk to anybody else at Department of Defense or NORAD

about that?

MS. BROWN: Well, I just have because--I must have talked to somebody else because I said--I probably have this guy's card somewhere. But, no, I said look, you know, I must have talked to somebody at NORAD, it's probably (b)(6), (b)(7)c and said look, you know, this guy, you know, I wanted to talk to him about this and he blew me off. But I can't remember the specifics of any conversations after that.

SPECIAL AGENT (b)(6), (b)(7)c Do you remember if any particular flight was at issue? Was there times concerning any particular flight? Or you're not sure?

MS. BROWN: It would probably have been flight 77 or flight 93, I can't remember, though, because, you know, I think most of what--I've never remembered the first two flights being--

SPECIAL AGENT (b)(6), (b)(7)c An issue.

MS. BROWN: --an issue, so--this is [inaudible] must have intercepted somebody.

SPECIAL AGENT (b)(6), (b)(7)c This "closely held,"

as you describe it, summary of air traffic hijack events, do you know if this was used in the briefing package for any White House briefings that anybody might have attended?

MS. BROWN: I don't know. There were briefings at so many different levels, that I couldn't say with any certainty that--I mean, I have a briefing book that was prepared for the White House but--and I don't recall that being part of it. But there were briefings at a lotta different levels. I mean, they had classified briefings, they had briefings with, you know, bigger groups, they had briefings with smaller groups.

I just--I wasn't dealing directly with the White House, so that the person who prepared all the White House briefing materials would have been Mike Morris, and he would have been the person to talk to about that. He's in our security office.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Anything else on the chronologies?

SPECIAL AGENT (b)(6), (b)(7)c [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c I'm looking at something else, it was actually May 22nd that Jane Garvey testified before the commission.

MS. BROWN: Okay.

SPECIAL AGENT (b)(6), (b)(7)c And one of the things I think you had mentioned to us is that at the commission she was asked some questions about some things and she couldn't really recall very well, so she agreed to provide a--

MS. BROWN: A statement to Member Ben-Veniste afterwards; right.

SPECIAL AGENT (b)(6), (b)(7)c Right. And that you worked with, I believe it was Linda Schusseler and Lynne Osmus in typing something up.

MS. BROWN: Right. Uh-huh.

SPECIAL AGENT (b)(6), (b)(7)c Did you--do you know, did you send that over to Jane Garvey or direct to the commission?

MS. BROWN: No. I gave it to Jane. She wanted to provide it to Member Ben-Veniste herself, because he had asked her for it.

SPECIAL AGENT (b)(6), (b)(7)c Okay. I think what

we've learned from some folks is shortly after that little statement was prepared, which is just like a paragraph or so, that some of the information contained in it about basically Sheryl Atkins's activities on that date, that some folks in FAA had learned that that wasn't necessarily accurate?

MS. BROWN: Well, I think--my understanding of the situation was that people either observed Sheryl or talked to her right after 9/11, and she said one thing, and then when we went and interviewed her--or maybe [inaudible], I don't know how it came out--but when she was talked to subsequently, she said she didn't remember being on the telcons that other people thought she had been on when that statement was prepared.

So I mean, I was under the impression, when we did that statement, that she had been on telcons--I mean, the people I talked to said she was on these telcons, she was in direct communication with DOD, and apparently when she was introduced in some capacity after that--I don't know if it was our interview or somebody else's

interview--she said she didn't remember. That's my understanding of what happened.

SPECIAL AGENT (b)(6), (b)(7)c How long after that statement was presented to the commission do you think it was before Sheryl was interviewed by somebody, that that came out?

MS. BROWN: I don't know. I have no idea. I wasn't involved in that part of it.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MS. BROWN: I mean, I wasn't involved directly. I didn't deal with the commission directly at all, except--no, I don't think I dealt--they put me on their, you know, e-mail mailing list with the rest of the press but I didn't have any direct communications with the commission.

One direct communication I had was, I did all the press for the special investigation, the Columbia accident investigation board, I was detailed over to the board to do all the press for them during that, and that was in--the accident happened February 1st, 2003. So one, commission

members had heard--not members--one of the commission staff, she's a lawyer from New York or Connecticut, a female lawyer, had heard that I had done a great job on the press for the special investigation, so she called me to advise them on how to do the press for the commission's rollout report, cause the way I designed the Columbia accident board report to be released, the reporters were very happy with, and they were looking at the way different big reports had been rolled out.

And so I gave her my best advice and I said to her, look, I really don't think you want me to be advising you about this because I work at the FAA and, you're--you know, you haven't had very good things to say about us. I never heard back from her after that. But that's really the only--I didn't--and that's an aside, I'm sorry. But I just didn't--Shirley was the main liaison between the FAA and the commission, and so I didn't even know who else was being interviewed by the commission or, you know, who they were talking to.

I mean, I knew generally, you know,

sometimes, who, you know, who they had talked to, but I wasn't involved in doing that. I was still very actively involved in the Columbia press stuff when they were doing some of this, so--even though I was back here.

SPECIAL AGENT (b)(6), (b)(7)c Once you were detailed to the board. Are you talking about the National Transportation Safety Board?

MS. BROWN: No, they--no. The Columbia accident investigation board.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MS. BROWN: It was originally a product--it was originally set up to be a--it was a NASA standing board but then Admiral Gehman changed the charter so that it became more independent than it had originally been designed to do, because we had been criticized for not being independent of NASA, so--

SPECIAL AGENT (b)(6), (b)(7)c After FAA found out that what was in the statement that was presented to Ben-Veniste wasn't correct, do you know what steps were taken to correct the record for that?

MS. BROWN: Shirley handled all that. Shirley was the one who had the direct communication with the commission and I don't know, you know, what her communication with the commission was on that.

SPECIAL AGENT (b)(6), (b)(7)c That's Shirley Miller?

MS. BROWN: Right.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

So after you sent that statement to Jane Garvey, that was the end of your involvement in that?

MS. BROWN: Right, and I heard some time after that, and, you know, my recollection is it was a while after that. It was not shortly after that. It was weeks after that, I said something to Shirley about it, and she said, oh, and then she told me that Sheryl had said that she couldn't remember the things that we thought that she had been involved in so--but that was weeks later.

SPECIAL AGENT (b)(6), (b)(7)c After the hearing where you noted some of what the military folks

were testifying to about the timelines, you had some concern about, did you express that concern to anybody internally within the FAA?

MS. BROWN: I think I probably talked to the people who went over to the hearing and I can't remember all the people who were over at the hearing, but I know that--I mean, Jane obviously was there and I came back with her. I don't know if I actually came back with her or not. We came back to the building, and we were doing that statement for Ben-Veniste, it must have been 7:00 or 8:00 o'clock at night. It might have even been later than that. It might have been--I remember it was late. It could have been 9:00 o'clock, I mean, but she had promised to give it to him that evening and wanted to get it done.

So--but I prob--I'm sure I talked to Lynne and Linda Schusseler about it. But I don't--I really have no memory, at all, of what, you know, what I said to her.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MS. BROWN: I can't even remember the

specifics of what I was so upset about.

SPECIAL AGENT (b)(6), (b)(7)c Do you have anything else on this?

SPECIAL AGENT (b)(6), (b)(7)c [inaudible].

MS. BROWN: I'm not sure that the thing I was upset about had to do with the specific times in the chronology. It may have been the way one of the NORAD guys characterized the communication with the FAA, and I don't remember, but that's the, sort of trying to think about what I was upset about. That's the thing I'm--that's kind of coming back to me but--

SPECIAL AGENT (b)(6), (b)(7)c What do you mean?

MS. BROWN: That somehow, the way they had talked about their communication with the FAA didn't seem accurate to me.

SPECIAL AGENT (b)(6), (b)(7)c You mean like the detail or the conversation or--

MS. BROWN: No. How it was communicated or whether it was communicated, or, you know, I don't--I haven't looked at his testimony, you know, since then, so I don't remember, but if I saw his

testimony I would probably, you know, have the same reaction. I don't know!

SPECIAL AGENT (b)(6), (b)(7)c I can't think of anything else.

Is there anything that you'd like to add along the lines of what we've talked about?

MS. BROWN: I don't think so.

SPECIAL AGENT (b)(6), (b)(7)c All right. Well, thanks for your time again.

MS. BROWN: Okay.

SPECIAL AGENT (b)(6), (b)(7)c It's 2:53. We're going to turn off the tape recorder.

[Whereupon, at 2:53 p.m., the interview was concluded.]

UNITED STATES DEPARTMENT OF TRANSPORTATION
OFFICE OF INSPECTOR GENERAL

CASE NO. 042R0122001

SWORN INTERVIEW OF

DOUGLAS GOULD

BY

SPECIAL AGENT (b)(6), (b)(7)c

DOT OFFICE OF INSPECTOR GENERAL

Thursday, September 1, 2005

Federal Aviation Administration
Building 10-A, Room 301 West
Washington, D.C.

[TRANSCRIPT PREPARED FROM A TAPE RECORDING.]

MILLER REPORTING CO., INC.
735 8th STREET, S.E.
WASHINGTON, D.C. 20003-2802
(202) 546-6666

I N T E R V I E W

SPECIAL AGENT (b)(6), (b)(7)c Today is September 1, 2005. The time is 3:01 p.m. We're at FAA Headquarters Building 10-A, Room 301 West, Washington, D.C. My name is (b)(6), (b)(7)c. I'm from the Office of Inspector General, Department of Transportation, and I'm conducting a review of issues involving certain public statements made by military and FAA officials at a 9/11 Commission hearing and elsewhere that were allegedly inaccurate.

Today I am interviewing Doug Gould. Mr. Gould, will you please acknowledge you're aware this interview is being tape recorded?

MR. GOULD: I am.

SPECIAL AGENT (b)(6), (b)(7)c All right. Will you please raise your right hand?

Do you swear or affirm the testimony you are about to furnish will be the truth, the whole truth, and nothing but the truth?

MR. GOULD: I do.

SPECIAL AGENT (b)(6), (b)(7)c Can you please give

us your full name, spelling your last, for the record?

MR. GOULD: Sure. It's Douglas B. Gould, G-o-u-l-d.

SPECIAL AGENT (b)(6), (b)(7)c What is your current title?

MR. GOULD: My current title is Acting Director, Systems Operations Security.

SPECIAL AGENT (b)(6), (b)(7)c And what division is that in?

MR. GOULD: That's under Air Traffic Systems Operations, ATOR.

SPECIAL AGENT (b)(6), (b)(7)c As I mentioned to you before we started tape recording that we're working on kind of trying to tie up some loose ends, and there were a couple of things we just were hoping that you could shed some light on for us with regard to FAA's reconstruction efforts following 9/11.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c One of the things that we noted is FAA had received what purported to

be a copy of the Northeast Air Defense Sector log, NEADS.

MR. GOULD: Yes, sir.

SPECIAL AGENT (b)(6), (b)(7)c And one of the times that was on the document that FAA received, as far as notification, was 9:16 for United 93. Let me just show you this document here.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c This just a single-page narrative chronology. It starts off "UAL 93"-- this is from--Shirley Miller gave it to us, but it was supposed to be a product from Darlene Freeman.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c And it says, "At 9:16, Northeast Air Defense Sector log shows FAA notifying the military." And then parenthetically it says, "No. We believe this time to be inaccurate since it precedes the indications that UAL 93 was in distress."

Do you know how you guys determined that this was not a good time for notification?

MR. GOULD: More than likely, the initial

notification of this time was verbal communication that occurred shortly afterwards when we were compiling information, and we more than likely made an inquiry to NEADS and asked them specifically what time, and they gave us the reference. Sometime afterwards I do recall receiving the NEADS log via fax, and I believe when we created these timelines that's what we utilized, is the physical log. Now, the parentheses comment, more than likely that was inserted by Darlene or somebody else beyond my office that put the document together, because I don't recall making that comment, actually, from there. I would have deleted it. You know, if I didn't have valid information, I would have taken it out. Or the information would have been in parentheses that it was believed or rumored or some type of qualifier that the information was not wholly accurate or was questionable. That was just the way the documents were put together.

SPECIAL AGENT (b)(6), (b)(7)c So you would not have included the 9:16 entry if you found it

suspect?

MR. GOULD: If I did not have a second validation of the source, I would not have included it.

SPECIAL AGENT (b)(6), (b)(7)c All right.

MR. GOULD: So that leads me to believe that somebody else put that qualifier on it.

If you want, I can muddy the water a little more. The notification in NEADS, does it specifically say we notified NEADS on United? See, that could be--you know, even though it's under the United 93 file, that could be--that could possibly be misrepresented. That could be the time that we notified NEADS on "something"--it may not just be United 93, it may have been, you know, all the events or one other event. Without looking into it, it's kind of hard to say what the context that is used. Since we handed electronic copy over to, say, Darlene's organization, they could have added it, that something had fallen out. So I'd have to look at the other documents to clarify that.

SPECIAL AGENT (b)(6), (b)(7)c Well, this is the

Summary of Air Traffic Highjack Events, September 11, 2001, that I think you played a role in--

MR. GOULD: Yes, sir.

SPECIAL AGENT (b)(6), (b)(7)c And this is--we're just here looking at the summary--

MR. GOULD: That's just under United?

SPECIAL AGENT (b)(6), (b)(7)c Right. --for United 93.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c I'd just like you to look at that real quick to kind of refresh your recollections.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c The summary of Air Traffic Highjack Events doesn't contain a notification time for United 93.

MR. GOULD: Reference to NEADS.

SPECIAL AGENT (b)(6), (b)(7)c Correct.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c I guess what we're trying to figure out is when, within the FAA, it's likely that you guys determined that 9:16 was not a

pl
good notification time for United 93.

MR. GOULD: Well, by looking at this, I would say it's not. Did you guys go through the other logs to see if there was another 9:16 entry on any of the other aircraft?

SPECIAL AGENT (b)(6), (b)(7)c There is not.

MR. GOULD: There is not. So it's just 93.

At 9:15, on American 77, is when there's a request for somebody to reach out for search and rescue and other things reference American 97--77.

SPECIAL AGENT (b)(6), (b)(7)c Seventy-seven.

MR. GOULD: Seventy-seven. So that may have been, when that report was being put together for Darlene, someone may have cut-and-paste on the wrong aircraft file. One of the things I can do is go down and look at the blue folders that we put together that Jeff has.

SPECIAL AGENT (b)(6), (b)(7)c Which blue folders?

MR. GOULD: There were--there was--

SPECIAL AGENT (b)(6), (b)(7)c They were like this?

MR. GOULD: No. No, that's the accident

package. No, that's a--

SPECIAL AGENT (b)(6), (b)(7)c No, this is not.

This is actually--

MR. GOULD: Oh, you're right.

SPECIAL AGENT (b)(6), (b)(7)c --a blue folder.

MR. GOULD: That was a blue folder, right.

Or a black folder with a sticky on it.

SPECIAL AGENT (b)(6), (b)(7)c Something like that.

MR. GOULD: The document I'm talking about was a tri-folder--it was actually brown--that we put together. One side had transcripts, one side had radar data, and the other side had transcripts and a bunch of other miscellaneous documents. And in there is--and that's how we kept them apart. So, you know, the first thing that comes to my mind is maybe that 93 element was part of this 77 package, because it fit. That had communication with--

SPECIAL AGENT (b)(6), (b)(7)c Actually, it's not.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c 9:16 is an actual entry in the NEADS log.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c And--

MR. GOULD: It is.

SPECIAL AGENT (b)(6), (b)(7)c Yeah. I think initially many folks believed it belonged to United 93--

MR. GOULD: Which doesn't make sense.

SPECIAL AGENT (b)(6), (b)(7)c No.

MR. GOULD: It may have been for American 77.

SPECIAL AGENT (b)(6), (b)(7)c And I guess, according to this note, it says--

MR. GOULD: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c --"we believe this time to be inaccurate since it precedes indications" that they were in distress.

MR. GOULD: Right. So that it-- qualifiers. Yeah. Which makes sense. We wouldn't notify them until afterwards unless there was something amiss. So--

SPECIAL AGENT (b)(6), (b)(7)c I guess we're trying to find out when it is you guys would have known

that. This summary is prepared on September 17th. There are some dates on the footers.

MR. GOULD: Yes. Yes, I recall.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: The notification, American 77-
-I'm sorry, United 93 checked on with INDI. Shortly thereafter there was some garbled transmission. The aircraft deviated altitude-wise, started a slight turn, I believe, and then turned its transponder off. It wasn't until after the aircraft turned significantly, based on the primary radar, that--and we pieced that together with physical voice tapes, were we able to determine that the patrol really didn't realize the airplane disappeared for quite a while and the aircraft was already 180 degrees back the other way--

SPECIAL AGENT (b)(6), (b)(7)c You're talking about 77 right now, is that right?

MR. GOULD: I am, that's right. I'm messing up the numbers. Let me think. 93.

SPECIAL AGENT (b)(6), (b)(7)c 93's the one that crashed in Pennsylvania.

MR. GOULD: That's right. [Inaudible.]

SPECIAL AGENT (b)(6), (b)(7)c Yeah, I'm talking about during reconstruction efforts.

MR. GOULD: Yup. Yup.

SPECIAL AGENT (b)(6), (b)(7)c I don't want you to guess--

MR. GOULD: I don't know, I'd have to--

SPECIAL AGENT (b)(6), (b)(7)c --you know, if you're having a hard time recalling.

MR. GOULD: Yeah, that doesn't make sense, but I don't recall.

[Pause.]

MR. GOULD: No, I don't recall the circumstances of making that entry.

SPECIAL AGENT (b)(6), (b)(7)c Okay. Is it safe to say you don't have a recollection about how you guys would have determined it was inaccurate?

MR. GOULD: The speculation would have been after physically listening to the tapes, because the tapes clearly indicate that we were not made aware that there was an issue until well after that time frame.

() pl

SPECIAL AGENT (b)(6), (b)(7)c With the United 93?

MR. GOULD: Correct. So just based on reviewing the tapes and the transcripts, we would have easily made that ascertainment. That doesn't make sense, because it fell out of order.

SPECIAL AGENT (b)(6), (b)(7)c The other thing we're wondering about is that your records here, the FAA's records, are indicating that 9:16 has come from a NEADS log.

MR. GOULD: Mm-hm.

C

SPECIAL AGENT (b)(6), (b)(7)c And if there's a potentially inaccurate reference to a notification time in the NEADS log, and you guys were able to determine that based on--you know, your records are indicating that the flight is not in distress yet.

MR. GOULD: Mm-hm.

SPECIAL AGENT (b)(6), (b)(7)c I think that's what the Summary of Air Traffic Highjack Events depicts.

MR. GOULD: Yes.

SPECIAL AGENT (b)(6), (b)(7)c As well as, you know, your voice recordings and transcripts and such.

MR. GOULD: Right.

SPECIAL AGENT (b)(6), (b)(7)c If that's the case, did you guys treat the other entries that you're pulling out of the NEADS log to record in your summary as--

MR. GOULD: Inaccurate?

SPECIAL AGENT (b)(6), (b)(7)c --notification times, you know, as suspect? Because you've got here, one entry here is--you guys have determined isn't correct.

MR. GOULD: Correct.

SPECIAL AGENT (b)(6), (b)(7)c So we're kind of wondering what your thought process is there.

MR. GOULD: I don't recall even after--I simply don't recall that entry and seeing that it was out of order to make that connotation. So I don't recall. When we were going through the documents and putting up the transcripts and the chronological order, I don't ever recall not putting an entry down. So that we got from--again, my cutoff was two sources. So, you know, no, I don't recall ever suspecting that information,

pl

because typically it would have been two sources. So either one would have been an employee statement saying I called; a second, it would have been backed up by a log or a voice, unless we qualified it. But I don't--you know. But it's a valid point. It shouldn't lead the entire log to suspect.

SPECIAL AGENT (b)(6), (b)(7)c Mm-hm.

MR. GOULD: But knowing how most of those logs were put together, one incorrect entry, you know, it could have been a typo in the log, because a lot of logs were kept originally as handwritten notes and then compiled after the fact. And a lot of [inaudible] were actually typing up their logs as the sequence of events occurred. They just kept notes and then later transposed. So that time, you know, it could have been a 2-6 or 3-6 or--you know, that would be, you know, my initial impression, is that somebody wrote down the wrong time. But again, I have no way to validate it at this stage.

SPECIAL AGENT (b)(6), (b)(7)c The log, the NEADS log that you said that you think you saw, can you

describe it?

MR. GOULD: The log I recall seeing was handwritten, that--I remember seeing two. Early on, the one I recalled initially was a handwritten, with times on the side. And then I recall seeing, I think, at some point, maybe it was after the commission investigation that I saw a typed version. But the first one I remember seeing was actually handwritten.

SPECIAL AGENT (b)(6), (b)(7)c Okay. I'm just going to show you this again. I know we went over this during one of our prior interviews with you.

MR. GOULD: This is what NEADS provided?

SPECIAL AGENT (b)(6), (b)(7)c That is the NEADS log.

MR. GOULD: You don't have the typed one?

SPECIAL AGENT (b)(6), (b)(7)c I'm not aware there is a typed one. I don't think the commission is either.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c At least they didn't talk about it.

MR. GOULD: Right. I recall--at some point I remember seeing a typed log. It was a formal--

SPECIAL AGENT (b)(6), (b)(7)c Could you be thinking of this, just a NORAD press release from-- that one's actually dated the 17th. The final, I think, went out on the 18th.

MR. GOULD: Well, the document that I'm thinking of actually had--it was a formal document that had columns up the top, it identified the facility on the lower left-hand side, and the left-hand column there was times in the log. And so, I mean, it was very similar to this but it was physically typed out and it had a formal header. And I remember it having "Classified" stamped on it. That's probably why Jeff doesn't have it and I'm just thinking about it, because I do remember it being, I think, stamped "Secret" or something at that time [inaudible].

SPECIAL AGENT (b)(6), (b)(7)c Did the handwritten log you saw, do you recall seeing tail numbers in it versus flight numbers?

pl

MR. GOULD: I simply don't recall the details.

If you look at--tail number--

SPECIAL AGENT (b)(6), (b)(7)c --9:16, there's 1316 Zulu. And then they had 9:24 Eastern time, 1324 UTC.

Do you remember anybody being assigned the task of cross-referencing tail numbers?

MR. GOULD: No, I do not. And I don't think our office was even consider--concerned about tail numbers until we started to put the accident package together. At that time, we just didn't deal with tail numbers [inaudible] until, you know, almost it was an accident, at which point it wasn't, you know, into the event that we would actually look for tail number. That was just for recognizing it. You know, it's to provide a flight standard so there can be certification information. But during the event, I don't recall ever--anybody asking for tail numbers.

SPECIAL AGENT (b)(6), (b)(7)c If you guys needed to find out what tail number belonged to a

particular flight, how in Air Traffic could you go about doing that?

MR. GOULD: The primary function would be call the command center. They would call the company directly.

SPECIAL AGENT (b)(6), (b)(7)c Command center down there in Herndon?

MR. GOULD: Yes. Air Traffic Systems Command Center in Herndon. Today we'd call the airlines directly, but back then the protocol was the Herndon office would call every airlines' ops office on speed dial. We only talked with our [inaudible], so that would have been the protocol.

SPECIAL AGENT (b)(6), (b)(7)c Do you remember anybody getting that tasking?

MR. GOULD: No.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

On that log, if you can kind of move towards 10:07, 10:08 Eastern time, I guess 1407--

MR. GOULD: Mm-hm. "10:07. Found on board United 93 over Pittsburgh, 1527 M3."

SPECIAL AGENT (b)(6), (b)(7)c It's actually, in

the NEADS log, the first reference to that flight. It's not in any of the FAA's chronologies that they put together for September 11th. Do you know why that is?

MR. GOULD: The--

SPECIAL AGENT (b)(6), (b)(7)c Look through your summary here.

MR. GOULD: Yeah. When we put the summary together, I don't recall including any non-FAA information.

SPECIAL AGENT (b)(6), (b)(7)c You guys actually did for 11 and 175.

MR. GOULD: Oh, because we used the notification to--

SPECIAL AGENT (b)(6), (b)(7)c Yes.

MR. GOULD: Yeah, for 11.

SPECIAL AGENT (b)(6), (b)(7)c And [inaudible].

MR. GOULD: But that was through that Boston--

SPECIAL AGENT (b)(6), (b)(7)c Well, I think you source it back to the NEADS log.

For 11, it would be 8:40. For 175, it's

at 9:05, if you want to look at it in the same read.

[Pause.]

MR. GOULD: It's interesting. So all the other times are correct except for that one entry, United--

SPECIAL AGENT (b)(6), (b)(7)c Interestingly, the Air Traffic Highjack Events Summary contains notification times only for American 11 and 175. The next day--and we talked about this a little bit last time we met--this grid timeline is published in file format September 18th--

MR. GOULD: Mm-hm.

SPECIAL AGENT (b)(6), (b)(7)c --and it's got notification times which it sources back to NEADS log--

MR. GOULD: Yes.

SPECIAL AGENT (b)(6), (b)(7)c --down here at the bottom, the footnote. And it's got notification times for 11, 175, but now all of a sudden it's got 77 and then--but it still shows N/A for United 93. And then a draft of this document is actually, it

lists 10:08.

MR. GOULD: The way this book was put together as the flights were broken up to specialists. So not one specialist did all of them. All the information would have been provided, and I thought we set up a Q&A to make sure they were all consistent with the types of information provided. So I'm speculating that possibly one of the specialists, and one of them and not the other, or two of two of the specialists, didn't get the work that they wanted, and those times were important. Or maybe in their stack of documents they figured they didn't have the NEADS log and therefore didn't [inaudible]. I'm surprised we didn't catch that when we were putting it together, because that seems strange.

Just thinking out loud, you know, trying to recollect why that would have been. It doesn't make sense.

SPECIAL AGENT (b)(6), (b)(7)c Let me show you another document here. It's an e-mail dated 9/15, 2001, from (b)(6), (b)(7)c Do you remember who he

is?

MR. GOULD: Yes.

SPECIAL AGENT (b)(6), (b)(7)c He was out at--

MR. GOULD: Cleveland?

SPECIAL AGENT (b)(6), (b)(7)c --QA in Cleveland,
right?

MR. GOULD: Yes. He was at QA.

SPECIAL AGENT OWENS: The first one isn't necessarily relevant to the discussion. It's that second one.

MR. GOULD: "Rough draft. Conversations between Cleveland and Huntress."

[Pause.]

SPECIAL AGENT (b)(6), (b)(7)c The entry in there, like 10:07, right, in the rough draft? Or 10:08?

MR. GOULD: This one?

SPECIAL AGENT (b)(6), (b)(7)c Yeah.

MR. GOULD: Yeah, 10:07.

SPECIAL AGENT (b)(6), (b)(7)c "Forget about that. We got a UAL 93. Are you-- that has a bomb on board."

"A bomb?"

[Inaudible.]

[Pause.]

SPECIAL AGENT (b)(6), (b)(7)c What we're trying to understand is if you guys had two sources. Because you guys cite the NEADS log. So--

MR. GOULD: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c --you had the data from there.

MR. GOULD: Yes.

SPECIAL AGENT (b)(6), (b)(7)c And then you also have--

MR. GOULD: This document.

SPECIAL AGENT (b)(6), (b)(7)c --this document, which you received on e-mail 9/15.

MR. GOULD: On the 15th, so we would have had it, yes.

SPECIAL AGENT (b)(6), (b)(7)c And we also, we got copies of files that were related to us as having come from the S drive, which is your shared network drive, right?

MR. GOULD: Yes, sir.

SPECIAL AGENT (b)(6), (b)(7)c And there was a copy

of this transcript--

MR. GOULD: We could have saved it.

SPECIAL AGENT (b)(6), (b)(7)c --on the S drive as well.

MR. GOULD: I recall seeing this document. I was surprised when I saw it they actually had the name "Huntress" on there. That's just the reason why it stood out, because we barely talk in documents the name of that. For whatever reason, we never refer to it as "Huntress" very often.

SPECIAL AGENT (b)(6), (b)(7)c What is Huntress? It's NEADS, right?

MR. GOULD: Back then, Huntress was the tactical call sign, the command and control center that controlled the physical airspace. So they were an element of NEADS, but they weren't physically NEADS as we know NEADS today. There was a different--today, you know, like VACASE [ph] and we have, like, there's three of them. And, you know, they're tactical CMC, so if you put up an AWACS, that's who that is. Otherwise, it's just radar control, VACASE, and there's a couple of

them. So depending on the mission.

SPECIAL AGENT (b)(6), (b)(7)c Okay. So if you guys had two sources, why wouldn't you include them?

MR. GOULD: We should have. You know, I'm surprised if we didn't. We may have, depending on how they referenced it, we may have taken NEADS as the gospel, because NEADS is the parent to Huntress. I don't know why that wouldn't have been done.

The number of documents that we had, you know, that doesn't surprise me that one may not have been referenced, so we used another--whether or not there was a conscious decision [inaudible] overlook not to put two entries. I would have personally put two entries, put them both in.

SPECIAL AGENT (b)(6), (b)(7)c Okay.

MR. GOULD: So I would have said Huntress at such-and-such a time, NEADS log indicates that's--you know--

SPECIAL AGENT (b)(6), (b)(7)c Do you recall if there was any discussion among the group that was

working on this, including those supervising it, to not include it for a specific reason, such as it would be embarrassing because it came after the crash time?

MR. GOULD: What I recall is that the individual in [inaudible] were giving taskers to put the base documents together on each one, at which point the entire group sat together in front of a projector. It was Mr. Ferrante predominantly, but occasionally Dave Canoles. And we sat down and built some of the various chronologies and discussed it. I don't ever recall anything that, you know, any discussion about anything being embarrassing. We may have questioned the validity of certain entries and wordsmithed them more appropriately, but I don't recall ever deleting something or something being questioned whether or not we wanted to say that because it, you know--I don't recall anything about that. You know, my view when we were putting it together, it is what it is. You know, it's going to come out in the investigation after the event, after we turn it

pl

over to whoever, you know. I had no idea it would get to commission level, but I knew somebody would be looking at it. I was thinking the FSB. So I don't recall that. That would have stood out in my mind, but I don't recall any type of comment at my level.

SPECIAL AGENT (b)(6), (b)(7)c Do you recall any discussion about questioning the validity of that entry, the 10:07 or 10:08 notification time for United 93?

MR. GOULD: Oh, for the Huntress log?

SPECIAL AGENT (b)(6), (b)(7)d Sure.

MR. GOULD: No. No. I think at that point we were taking all the logs at face value. This one we gave more credence because it had seconds, so we assumed that it was off of a timed recording type of a recording device.

SPECIAL AGENT (b)(6), (b)(7)c You're talking about your transcript?

MR. GOULD: Yes, the transcript for United 93. So that, you know, that would have gotten more credence. With this one handwritten, you know, we

would have taken it at face value: this one's handwritten. And unless we had a secondary source to validate it, that's just the, you know, the technique that we used. So without knowing who specifically put the entry in the document, I can only speculate. If that makes sense.

SPECIAL AGENT (b)(6), (b)(7)c I think you said it earlier that it had to have been an oversight.

MR. GOULD: It could have been. It could have been an oversight. You know, we were pulling 20-hour days back then, you know, getting punchy going over the documents over and over and over again. And we could have easily, you know, failed to catch it. That's very plausible. Even with all the people that were working. So I think that it's very possible.

SPECIAL AGENT (b)(6), (b)(7)c Had you ever seen--I showed you that press release from NORAD earlier.

MR. GOULD: Mm-hm.

SPECIAL AGENT (b)(6), (b)(7)c Had you seen that before it was finalized by NORAD?

MR. GOULD: No. Typically NORAD or any of

the military commands, whenever they did a press release or a major briefing, they called and we had verbal conversations. Or they asked for copies of documents, either one of our chronologies or a transcript or something. But I never saw the very little information they did beforehand to proofread it. No, I don't recall ever-- Other offices may have, but I never recall seeing it.

SPECIAL AGENT (b)(6), (b)(7)c Do you recall if anybody else might have? The reason I'm asking is there was a draft issued on 9/16 and it actually contained the 9:16 notification time for United 93.

MR. GOULD: Their--?

SPECIAL AGENT (b)(6), (b)(7)c Their draft did, but the final, they ended up taking that out.

MR. GOULD: Corrected. They changed it. You know, initially my gut would be is if NORAD was doing a press release, they may have called our office to get information. Typically, if they were going to do a press release and wanted it previewed, the protocol back then is it would have gone to the military ops office and they would have

done the proofreading. So that office may have, you know, got documents from us and used them, because when we provided them, we distributed them to that office. So they may have, but I don't recall ever seeing any draft, anything from NORAD. I just remember receiving calls asking questions.

SPECIAL AGENT (b)(6), (b)(7)c Do you remember seeing it in file form?

MR. GOULD: No, I do not recall.

SPECIAL AGENT (b)(6), (b)(7)c Or published in the papers or anything?

MR. GOULD: I don't even recall reading the paper back then. Too busy doing it every day.

SPECIAL AGENT (b)(6), (b)(7)c It would have been the 18th.

MR. GOULD: Yeah, no. No.

SPECIAL AGENT (b)(6), (b)(7)c Did you attend any of the 9/11 Commission hearings?

MR. GOULD: No. The only--it wasn't even a hearing. No, I did not attend any of the hearings. I attended an FBI briefing to victims. That was really the only involvement I had for that

entire--outside the agency. That was it.

SPECIAL AGENT (b)(6), (b)(7)c Did you watch any of the hearings on television as they progressed?

MR. GOULD: Yeah, I did, but not a lot of it. Maybe an hour here or there.

SPECIAL AGENT (b)(6), (b)(7)c One of the very first hearings was held in May of 2003, where Jane Garvey actually testified.

MR. GOULD: Yes. I remember that.

SPECIAL AGENT (b)(6), (b)(7)c And the next day, the Department of Defense had some current and former department officials testifying and they provided a timeline of events from that--

MR. GOULD: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Do you remember that?

MR. GOULD: Yes.

SPECIAL AGENT (b)(6), (b)(7)c Do you remember hearing them testify that FAA provided notice to the Department of Defense about United 93 at 9:16?

MR. GOULD: In the testimony? I don't-- no, I don't recall that.

SPECIAL AGENT (b)(6), (b)(7)c Do you recall that there were parts of a timeline that were inaccurate, in your view or the FAA's view, where you might have discussed it with somebody?

MR. GOULD: During the testimony?

SPECIAL AGENT (b)(6), (b)(7)c During or immediately thereafter?

MR. GOULD: If I had any conversations about what I saw in a testimony, it would have been probably strictly only with Dan Diggins [ph]. I don't recall talking to anybody else about the commission's interviews at all. I do recall talking to him about Ms. Garvey's testimony. The NORAD piece, I don't think so. I may not have watched all of it, but I don't recall talking to anybody about it. But the one person I did talk to I remember specifically, the Garvey's piece, which was Dan.

SPECIAL AGENT (b)(6), (b)(7)c About her--

MR. GOULD: Yes, about her piece. But nothing about the military testified about?

MR. GOULD: No. I wasn't really that

concerned with the military's version of the facts.

SPECIAL AGENT (b)(6), (b)(7)c Do you remember anybody talking to you about it--Hey, you know, these guys, they got it all wrong? Anything like that?

MR. GOULD: No. As a matter of fact, I think I was surprised when the initial accusations came up, and I don't remember the circumstances when I heard that. But I did hear about it, and I'm almost positive, is when your office was tasked to start its investigation. I don't recall hearing about it before.

SPECIAL AGENT (b)(6), (b)(7)c It was about a year ago, as I recall.

MR. GOULD: Well--was it a year or two years ago?

SPECIAL AGENT (b)(6), (b)(7)c It was a while ago [inaudible] one.

MR. GOULD: Okay. That's when--I remember because--

SPECIAL AGENT (b)(6), (b)(7)c It just feels like two.

MR. GOULD: When I heard that, that surprised me, that there was reported inaccuracies.

[Inaudible.]

SPECIAL AGENT (b)(6), (b)(7)c Shall we turn off the tape for a minute?

MR. GOULD: Yeah, can we do that?

SPECIAL AGENT (b)(6), (b)(7)c Yeah, it's 3:41 p.m. We're going to stop the tape for a moment while Mr. Gould takes a phone call.

[Off the record.]

SPECIAL AGENT (b)(6), (b)(7)c Okay, we're reconvening the interview. It's 3:50 p.m.

Doug, I wanted to show you another set of documents here.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c They're part of the e-mail that you sent on October 19, 2001, to (b)(6), (b)(7)c

(b)(6), (b)(7)c Do you know who he is?

MR. GOULD: (b)(6), (b)(7)c

SPECIAL AGENT (b)(6), (b)(7)c I'll just show this to you.

[Pause.]

SPECIAL AGENT (b)(6), (b)(7)c You're sending him
in these e-mails some files--

MR. GOULD: Wav clips?

SPECIAL AGENT (b)(6), (b)(7)c Wav clips and--

[Inaudible comments.]

SPECIAL AGENT (b)(6), (b)(7)c I'm sorry. Let's
look at this one here, October 31st, to Steve
Ruggles.

MR. GOULD: Yup. Yup.

SPECIAL AGENT (b)(6), (b)(7)c You sent him seven
different files, one of which is this--

MR. GOULD: [Inaudible.]

SPECIAL AGENT (b)(6), (b)(7)c Right, is this
American -- chronology brief 3.doc.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c Which is this. And
then also, you sent him different files,
essentially the same thing, for all the different
aircraft.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c But these files that
you sent him, these briefings--or they're

basically, one of the files is a chronology.

MR. GOULD: Yes.

SPECIAL AGENT (b)(6), (b)(7)c But I went back and I kind of looked at this, compared this chronology to all the chronologies that we had gathered up from you guys--

MR. GOULD: Mm-hm.

SPECIAL AGENT (b)(6), (b)(7)c --and this is basically one of the first chronologies that you guys prepared.

MR. GOULD: Right.

SPECIAL AGENT (b)(6), (b)(7)c Very, very similar, if not exactly the same as the one that was in the folders.

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c Which is from--this [inaudible] you had the 13th.

MR. GOULD: Thirteenth, or the 17th?

SPECIAL AGENT (b)(6), (b)(7)c Fourteenth.

MR. GOULD: Fourteenth. Okay. Not the updated one.

SPECIAL AGENT (b)(6), (b)(7)c So I'm wondering why

you guys sent the old document at such a--because this you're sending at the end of October.

MR. GOULD: Right. The chronology that was put together in the summary was put together and stored, I believe, initially on a Zip drive that (b)(6), (b)(7)c kept, because we sent it to graphics. And I don't know if it ever made it to the S drive until later, or at what point it did physically make it to the S drive. There's only two things that come to mind why I would have sent versus this, that he either specifically asked for the black folder--

SPECIAL AGENT (b)(6), (b)(7)b (b)(6), (b)(7)c

MR. GOULD: (b)(6), (b)(7)c or whoever made the request.

SPECIAL AGENT (b)(6), (b)(7)c Is there a physical e-mail request from him? Because--

MR. GOULD: I may have gotten the request verbally and told to send it to somebody, and I just sent it to him. And then this other commander may have been--heard of it and I sent it to him. Looks like he got the [inaudible].

So depending on what he physically asked for, I would have gone to the S drive and pulled out. So, you know, I can't really say why I didn't send him the summary version versus the black book, unless he physically asked for it. He may have just asked for this. Because when we did the--we provided them to a number of individuals, and I believe DOD was involved in some of those, so he may have physically asked: "My general attended a briefing on such-and-such a date. Can you send that document?" So I would have gone to the folder, grabbed it, and sent it. If he asked for the current one, I would have gone through the S drive and looked for the most current pieces [?]. You know, when you saw the S drive, they were pretty clearly documented plus they were time-stamped. So I could have easily--I wouldn't have intentionally picked an old one versus a new one.

SPECIAL AGENT (b)(6), (b)(7)c But you don't have a specific recollection, is what you're saying?

MR. GOULD: Yeah. Correct. I don't.

SPECIAL AGENT (b)(6), (b)(7)c Do you recall if

anybody in the FAA, including yourself, reviewed any Department of Defense tape recordings or transcripts similar to like an operational position at an air traffic control center?

MR. GOULD: Not in my office. I don't recall any of the investigators listening to recordings. The elements that we got from the military that we utilized, they were radar data, a few logs. That's really all I recall. Chronologies. I don't remember seeing any or listening to tapes or anything like that.

SPECIAL AGENT (b)(6), (b)(7)c Let me show you the NEADS log again.

MR. GOULD: Yeah.

SPECIAL AGENT (b)(6), (b)(7)c Look at this 9:34 entry, Eastern time. Zulu. It says 1334.

MR. GOULD: Yup.

SPECIAL AGENT (b)(6), (b)(7)c It says "American 77 flight to L.A. lost, unable to locate."

MR. GOULD: "Unable to locate."

SPECIAL AGENT (b)(6), (b)(7)c None of your timelines make reference to that time period, for

pl

this entry. I just wanted to let you--do you have a recollection about that?

MR. GOULD: Of notification to them reference American 77?

SPECIAL AGENT (b)(6), (b)(7)c Correct. That it was lost. If you look through the log prior to that, that's actually the first real formal notification about 77.

[Flip tape.]

SPECIAL AGENT (b)(6), (b)(7)c The time is 3:57 p.m. We've just turned the tape over.

[Pause.]

MR. GOULD: When we put the summary together on the majority of the previous chronologies, we were doing that based on FAA documentation, initially. We were going through that, grabbed all the transcripts and facility logs, air traffic facility logs; put the chronology together. Then we did our roundtable, at which point the NEADS log was presented, and got direction from I believe it was Ferrante to include non-FAA sources into the documentation, the

chronology. Because initially the scope was strictly our stuff. We wanted to use ACARS [ph] or any other type of source for information. But I do recall at some point we did change and start including other things, and went back and added those. But again, it was modified halfway through the process of documentation.

So really, the only explanation I can offer is that the additional logs were really an afterthought per se, because initially they weren't part of our chronology because that wasn't an aspect we were looking at. We were looking at the physical sequence of events for air traffic, then at some point I recall Ferrante bringing in the fact that notification was an issue and that we needed to start including our notification in it because it wasn't in there, other than the [inaudible]. For some reason, we initially put that in, and then didn't put any more notification.

That's what I recall. So the only thing I can offer is initially it wasn't part of our mission in putting the documents together to put

the Cleveland entries or data from the NEADS log into the chronology, because those were additional coordinations [?]. Because I didn't go by the 8020-3s, which is the notification documents that a facility puts together and add all the notifications, because I knew that would be included in the accident [inaudible]. It wasn't a detail that typically senior executives wanted to know. But then at some point that changed, when somebody physically asked -- what time did you notify the military. [Inaudible.] So we kind of changed wheels a little bit and started including it. So we probably went back--detail wanted to go back and replug in all those. That's the only logical explanation I can come up with.

SPECIAL AGENT (b)(6), (b)(7)c Do you recall specifically a discussion about 9:34, excluding it?

MR. GOULD: No; no. Again, you know, my discussions with everybody, that I was involved in during the documentation phase, and the investigation phase, there was no covert, or discussion that I was privy to, of anybody saying,

you know, or indicating or alluding to the fact that we needed to be, you know, evasive about any of the documentation. Personally, I don't think the management team dissented.

SPECIAL AGENT (b)(6), (b)(7)c You said, again, just so I'm clear, you said that this, what is the NEADS log, doesn't look familiar to you. Other than, you know, I showed it to--

MR. GOULD: No.

SPECIAL AGENT (b)(6), (b)(7)c --you, I'm not sure if--

MR. GOULD: No.

SPECIAL AGENT (b)(6), (b)(7)c --the Commission showed it to you, or--

MR. GOULD: I remember seeing a handwritten log.

SPECIAL AGENT (b)(6), (b)(7)c Did it have that many entries?

MR. GOULD: No. In my mind, I only recall seeing a one-pager. I don't recall seeing anything blacked out, or seeing this. The handwritten log I saw, you know, this was a full page. The lined

portion was a full page, there was no--and it was a one-pager, what I recall. Then I saw a typed-up version, one-pager.

[Phone rings.]

MR. GOULD: Can I take this real quick?

SPECIAL AGENT (b)(6), (b)(7)c Sure.

MR. GOULD: Want to stop the tape?

SPECIAL AGENT (b)(6), (b)(7)c Yes. 4:02.

[Break.]

SPECIAL AGENT (b)(6), (b)(7)c It's 4:04 p.m. We turned the tape back on. I really can't think of anything else--

MR. GOULD: Okay.

SPECIAL AGENT (b)(6), (b)(7)c --to ask you. Is there anything else you'd like to add along the lines of what we've talked about today, or--

MR. GOULD: No. Again, all I can say is, you know, it was--we had tons and tons of documents coming in, and I guess there was really five of us putting most of the documentation together. I'll tell you, from my perspective, there was no intent, in any way, on anybody of that group to withhold

any information, mislead any of the documentation.

That the group has a core set of values. I can honestly tell you that they provided whatever they thought was appropriate based on the circumstances and the normal way we operated at that time. The facts are the facts. We're not hiding anything to delude [?], you know. Our information is public record, and in time, somebody would be reviewing it.

So I'll tell you that, from that core group, there's never any intent to do anything like that. So if there was mistakes, typically, it was "heat of the battle," oversight, that type a thing, coordination with DOD. A lotta that was new for our office, so it was strange. That there was another office, military office that traditionally handled that. So the papers were flying through, so it could have come from a number of sources. Our documents were filed electronically, a number of people edited them for their own use. One of the things we learned, post event, is you gotta find a source on each entry, and if you add, you

identify that--we changed a lotta our protocols,
Dick's [?] issues that, you know, we discovered.
But it is what it is. That's really it.

SPECIAL AGENT (b)(6), (b)(7)c All right. It's
4:06 p.m. and I'm turning off the tape recorder.

[END OF RECORDED SEGMENT.]
