Re: Freedom of Information Act Request #08-0126

We are furthering responding to your March 9, 2008 request for information under the Freedom of Information Act (FOIA), which was received by this office on March 14, 2008. Your request was perfected on April 14 at which time we received your April 14, 2008 e-mail clarifying the scope of your request.

Your request as presently structured, seeks "a digital/electronic copy of each issue of the publication *Amtrak Ink* published between January 1995 and September 2006 or whatever extent digital copies are available." Your April 14 e-mail limited the scope of your request to records that can be located within a three hour search window.

Under cover of my May 1, 2008 letter, you were informed that Amtrak was prepared to release copies of *Amtrak Ink* for the time period of February 2001 through September 2006 on CD, upon payment of processing fees totaling \$39. On May 8, 2008, we received check #697 for this amount. Accordingly, we are releasing the above-mentioned CD.

If you have any questions regarding the processing of this request, please feel free to contact me 202/906-3741.

Sincerely,

A handwritten signature in black ink, appearing to read "Sharon Hawkins", written over a horizontal line.

Bold new fleet plan

Drive to give employees 'the right tools'

When Amtrak introduced its sweeping Service Standards initiative, including the unconditional Satisfaction Guarantee and other major elements, a goal was to give employees the "tools they need to provide world-class guest service."

For on-board service employees, who are at the focal point of the guest's experience, their "tools" are largely our passenger equipment. And, an aggressive new fleet plan promises to give them refurbished, renewed, and properly maintained cars across the system.

The highlights of the plan are these:

- Every 120 days, coaches and sleepers will be taken off line for maintenance and repairs (food service cars will continue on their current 60-day schedule).
- Every four years, passenger cars are to receive a complete overhaul, with upgrading or renewal of systems and related components.
- Every eight years, passenger cars will also receive a total interior enhancement or redesign.

The plan makes maintenance and repairs a standardized and consistent regimen across the system, something that has been lacking in the past. The result will be more reliable and presentable equipment, regardless of the SBU or product line. As the schedule is geared up, guests will start seeing the difference, and employees will live the difference.

More preventive maintenance gives us a better product.

A key new element of the plan is the eight-year interior redesign and enhancement of the entire passenger fleet. Not only will this introduce design consistency within any one trainset—ending the current interior equivalent of the "rainbow fleet"—but also it will mandate needed modern-

Guidelines on train 'holds' issued system-wide

Connections affect \$130 million in revenue

Sometimes quality guest service means planning for when things don't go the way we *did* plan. Good examples are the decisions we make about holding trains so guests on other, late-arriving trains can make their connections.

Because it's such a major factor in guest satisfaction, we're working hard with the freight carriers to improve our on-time performance. But planned connections are not always made. So, as an outgrowth of the weekly meetings that **George Warrington** and the SBU presidents are having on guest service and OTP, a task force was formed to recommend consistent guidelines on holds.

Those guidelines were approved and went into effect Jan. 1. They formalize decision factors and practices that have been routine, but not always consistently followed. The new guidelines empower designated field personnel to hold a train up to 60 minutes to make a connection. Any hold longer than that must be authorized by CNOC.

In accepting the guidelines, management recognized that decisions to hold a train will always be made on a case-by-case basis, but that a consistent system-wide approach

in reaching those decisions must be in place. Warrington recently told the presidents, "It's estimated that up to \$130 million in revenue across the system is attributable to guests connecting from one train to others. We're working hard (to improve OTP), but a number of important connections are still not reliable."

A companion guest-service effort is being introduced with call center agents and ticket agents. Guests making reservations are now being informed in advance when their trip includes a connection that has not been reliable recently. That way, they can consider the options of either accepting our same-day bus link to the connecting train, or making overnight arrangements to ensure them a train connection the next day.

For instance, a pilot program is now being conducted with guests reserving space on the *Texas Eagle* and the *Sunset Limited*, who plan to connect with the *Coast Starlight* in Los Angeles. They are being told that those trains frequently arrive late in Los Angeles, and the different options are being explained fully.

PROMOTIONS IN MOTION

GUEST LETTERS

AMTRAK

T R A I N O F T H O U G H T

As I write this, the company is about to announce its first-quarter results for FY 2001—and, once again, the news is very good. For the period Oct. 1 through Dec. 31, our ticket revenue (\$298.2 million) was up nearly 14 percent from the same period the previous year. And our ridership (nearly 6,000,000) increased 8.5 percent.

Not only did both figures beat our planned expectations, they also showed that we've lost no steam in coming off a record-busting year in FY 2000. Start looking for the reasons behind this business success and you come up with our unconditional Satisfaction Guarantee, smarter pricing and revenue management, and aggressive marketing and partnerships. But the biggest reason is staring at you in the mirror.

George Warrington

There is not a single employee in this company who doesn't play some role in our success. Everything counts. Whether it's a smile and a cordial word for a guest at the end of a long and tiring run for the crew, or a better way of managing even a small part of the business—every one of you makes a difference.

So, what's next? Now that we've proven that we can do it, we're going to aim to do even better. By the time you read this, we will have released our updated Strategic Business Plan, and our Capital Plan. I want you to know about some key points of both plans.

Details of our business plan reinforce that we're on track to meet the congressional mandate to be operationally self-sufficient by FY 2003. But, more important, the plan continues to prove itself as the blueprint we need to be a true business success. So, to make the plan even stronger, we're adding a sixth key strategy.

Since we unveiled the business plan in the fall of 1998, you're heard often about our five key strategies: Deliver consistent quality service; build a market-based network; develop corridor services; leverage partnerships; and revitalize the

Amtrak brand. Now we're adding increased focus on cost-effectiveness to the list, because no successful corporation in America can prosper without that discipline.

As for the capital plan, it's fitting to say that we're breaking new ground. For the first time in the company's history, we've done a long-term analysis of capital needs for intercity passenger rail in the U.S. With those figures in hand, we're going to urge Congress to truly invest in the future of a balanced transportation system for our nation.

This is not simply about funding Amtrak. It is about making the right investments in passenger rail to help alleviate the gridlock and congestion that exists today on our nation's highways and in our aviation system.

Unlike major European nations, where 10 to 15 percent of government transportation spending goes to passenger rail, the U.S. federal investment has historically been around 1 or 2 percent. But we're not even suggesting a major leap. By increasing that capital investment to a little less than 3 percent—or \$1.5 billion a year for the next 20 years—we can modernize the existing national system, and advance high-speed rail development throughout the U.S.

In Congress, leaders from both parties have pledged to pursue a dedicated long-term source of investment capital for passenger rail. And, by the time you read this, there might be at least two members of the president's cabinet with solid passenger rail credentials. Among the nominees, not only does Norman Mineta (Transportation) appreciate the value of an intermodal transportation system, but so does Tommy Thompson (Health and Human Services), who is still Amtrak's enthusiastic board chairman.

We'll keep you informed as we continue our drive for a dependable source of capital investment. But for now, congratulations on another great quarter of business success. You're doing a terrific job, and the proof is in the numbers.

Congress to reintroduce High-speed Rail Investment Act

Leaders in communities and states across the country are supporting federal legislation the—High-speed Rail Investment Act (HSRIA)—that would give Amtrak \$10 billion to invest in high-speed rail projects throughout America. The funds would come in the form of state- and U.S.-supported bonds.

Eleven high-speed rail corridors have already been federally designated. They include: the Gulf Coast, Southeast, Empire, Keystone, Midwest, Pacific Northeast, California, Florida, Northeast, Southwest, and Northern New England. These corridors would qualify for HSRIA funding.

Although the legislation did not pass the 106th Congress before the change of administrations, Amtrak secured a promise from the Republican and Democratic leadership that they would co-sponsor a bill in the new Congress, and work together to get it passed early in the session.

Amtrak to introduce standardized public announcements

Rewards given for 'world-class' delivery

As part of our continuing focus on improved and consistent guest service, Amtrak will soon begin giving standardized public announcements in stations and on board trains across the country.

We looked to station and on-board employees to design announcements that would be informative, welcoming and consistent. This is what our guests expect, whether they are in an Amtrak station in Los

Angeles or Chicago, or on board *Acela Express*, the *Southwest Chief*, or the *Coast Starlight*.

The announcements have been produced both in a booklet form and a CD. Both will be distributed to all guest services employees responsible for making announcements.

After that, those employees will

spend time learning the short scripts and practicing delivering the new announcements. The goal is to start making them nationwide on Feb. 12.

Beginning March 12, some announcers in stations and on-board trains will receive an unexpected visit from Amtrak personnel, who will observe the quality of the announcements. Employees delivering "world-class service" announcements will be rewarded. Thirty-three awards considered taxable income will be distributed to each SBU. Random drawings will be held to select the stations and trains that will be visited.

This latest step in improving our service quality is aimed at increasing guest satisfaction through every phase of the travel experience on board Amtrak.

Congress to reintroduce HSRIA

Continued from page 2
The agreement between Senate Majority Leader Trent Lott and Senate Minority Leader Tom Daschle occurred Dec. 15.

Sen. Lott said, "If you don't have modern equipment, if you don't have the new fast trains, if you don't have a rapid rail system, it will not work. So I support this legislation. "When we talk about bipartisanship, transportation is an issue on which we have been able to work in a bipartisan way...We can do it again."

Sen. Daschle responded, "We are very disappointed this provision was not included in this otherwise praiseworthy legislation. Amtrak supporters will not give up on passing it."

Amtrak's Government Affairs staff worked tirelessly last year to include the bill in the final spending package approved by Congress before it adjourned in December.

"We have really accomplished a great deal in the last year, and could not have gotten as far with the High-speed Rail Investment Act as we did without so much support," said

Sandy Brown, vice president of Government Affairs. "Many people deserve our thanks for their dedication to Amtrak and the future of high-speed rail service in this country."

In addition to Lott and Daschle, many other senators have voiced their support of Amtrak and high-speed rail investment. It is encouraging that so many senators from both sides of the aisle have committed to giving Amtrak the capital funding we need to make Amtrak the safest, most efficient passenger railroad in the world, and a true business success.

The route to our success

Strategic Business Plan Key Strategies

We're all working to meet the goals of a Strategic Business Plan for 1999-2002. The Key Strategies of that plan are designed to create a more modern national rail system, and to lead us to being a business-like, market-based company.

Build a market-based network

Define customer demand, using extensive research, and then match that demand with our system.

Develop corridor services

Work with state and other partners to create or improve rail corridors across the country, drawing from the expertise we've gained in building the Northeast Corridor service.

Deliver consistent quality service

Change the culture of the company to be more customer-focused, and provide a world-class travel experience on every trip.

Revitalize the Amtrak brand

Introduce and support a new brand for Amtrak, to signal a major change to our customers.

Maximize public & private partnerships

Aggressively pursue public and commercial partnerships, through Mail and Express and other programs, which generate the highest returns from the company's assets.

Amtrak's Hewlett-Packard Employee Purchase Program

Buy personal computer equipment and accessories

Amtrak and Hewlett-Packard have created a great opportunity for Amtrak employees to purchase new and refurbished computer equipment and accessories at discount prices.

As part of Amtrak's new partnership with Hewlett-Packard, an Employee Purchase Program has been set up so employees can purchase new equipment (including PCs, laptops, printers, scanners, digital cameras) at 5 to 10 percent below average retail prices. Refurbished products, which carry new-item warranties, can also be purchased at discounts of up to 50 percent.

"Our agreement with HP is a great value to the company because we are directing our purchases to a primary vendor. It's also a great opportunity to share the cost savings with our employees," said **Mike Rienzi**, vice president of Procurement.

Another feature of this program enables employees to visit Hewlett-Packard's website and browse the merchandise *before* making a

purchase. Employees may do the comparison shopping among the wide variety of products and prices in the comfort of their homes.

Frequently asked questions and answers are provided, rebate and coupon information, and a number for technical support are also there for convenience.

In response to the article in the *Employee Advisory* that announced this new program, employees have

been sending in their inquiries for more information on how to register. Instructions for registering can be found on the Amtrak Intranet. From the homepage, click on the *How We Work* icon, then on *Procurement*. On the Procurement page you'll see a link to the program details.

For employees who do not have access to a computer, but wish to purchase any of the Hewlett-Packard items, may call the toll-free number (1-888-999-4747), and provide the following code: generic-epp1.

B R A N D N E W

Barbara Richardson
Executive Vice President

It's now been about seven months since we pulled back the curtain and unveiled our bold new corporate identity on July 6. More and more, that identity is becoming a part of our lives at Amtrak.

Since the unveiling, I've used this space to talk with you about what rebranding means, what it says about all of us and our work product, and how important it is for every one of us to be brand managers, or guardians. That's a central message you've also seen elsewhere, such as in the Brand Management Handbook mailed to employee homes.

Happily, everywhere I've been in the system, employees are excited about the "new" Amtrak. They're proud of what this refreshing change in our image represents—because our brand is truly us. And it's nice to see that clothing and other items with the new identity seemed to be popular holiday gifts!

So, is the transition complete? Of course not, because we simply can't

afford to just discard or repaint everything with the "arrow" on it. We said in July that the full transition could take as long as two years, and that still looks like an accurate estimate.

But a lot has already been done. New ticket jackets are already in use, and new ticket stock is starting to be introduced. All of our advertising reflects the new identity, new uniforms have begun their gradual debut, and the new P-42 locomotives are rolling out. Plus, work has begun on a plan to change the signs throughout stations—a massive job in and of itself.

We're also working on a design plan for our corporate partners to use in their promotions, and one that meets both our own standards and those of our vital state partners. This is going to be an ongoing project, and I thank you for your patience. You're not alone—I've heard of more and more "household-name" national corporations that are going through

the same kinds of gradual transitions. It's just so expensive to do it any other way.

Now that you've all gotten your handbooks and been officially "deputized" as brand managers, or guardians, I think this is a good time for me to turn back this space to the editors of *Amtrak Ink*. They need it to talk about all the great things that employees are doing every day.

I'll be back occasionally, to keep you updated on how we're doing with the transition. For instance, a major milestone later this year will be the introduction of our new long-distance sub-brand, a way of using our new identity to distinguish those wonderful product lines.

In the meantime, stay vigilant in looking out for misuses and abuses of our new brand identity. It's employees who have built the value of our brand over the past 29 years, and it's employees who will hold that value strong. Keep it up.

Amtrak's outstanding achievements from the year 2000

The year 2000 was a memorable period in Amtrak's history for many reasons. During those 12 months, records were set, new partnerships were formed, and Amtrak changed the formula for business success.

This New Year will bring great challenges, but our foundation is solid. Amtrak employees are the foundation of this company and they continue to prove that they are committed to success.

As with years past, Amtrak will count on the contributions from its dedicated employees to make the year 2001 even better.

The achievements from the year 2000 were many. Here are just a few of them:

- ◆ This summer, Amtrak introduced its new brand identity and the unconditional Satisfaction Guarantee. No other national transportation provider offers this kind of no-questions-asked guarantee. Amtrak promises all guests a safe, comfortable and enjoyable experience. Those who feel their experience fell short of expectations are compensated with future free travel.

- ◆ *Acela Express*, America's first high-speed train, began revenue service in December. The new service is competitive with the airline shuttles in travel time and fares, but far exceeds the competition in amenities. Serving guests between Boston, New York and Washington, *Acela Express* is the answer for business travelers in search of comfort and productivity.
- ◆ For fiscal year 2000, Amtrak's ridership (22.5 million) and totaled revenue (\$2.1 billion) were both all-time highs, and it was the fourth consecutive year of growth for Amtrak.
- ◆ The company introduced Amtrak Guest Rewards, the travel industry's most flexible rewards program. It is a huge success, with nearly 50,000 guests now registered. Rewarding the most loyal guests, and luring new ones, the program gives members two points for every dollar spent on Amtrak travel. Points may be redeemed nationwide for future travel and other fantastic rewards.
- ◆ *Acela Regional* made a historical debut in January by being the first fully electrified train to run

between Washington and Boston. Amtrak's Northeast Corridor employees made all-electric service possible by completing the final link of the corridor's overhead electrification system—a 156-mile section between New Haven and Boston.

- ◆ Amtrak announced a major plan early this year to expand its national network. The Network Growth Strategy will eventually expand or improve service in 21 states, add service to 975 new station pairs, add 11 route segments, and grow ridership by 7 percent. It will also double the number of shipping lanes available to Mail and Express.
- ◆ Amtrak continued to maximize new business opportunities. The company is increasingly becoming a key provider of Mail and Express services. In fiscal year 2000, the company earned \$122 million moving goods across America—a 24-percent boost from the previous year—and has plans to increase this to more than \$350 million in the next few years.
- ◆ The new *Pacific Surfliner* service debuted along the San Diego-Los Angeles-San Luis Obispo rail

corridor. The *Pacific Surfliner*, which has replaced the *San Diegans*, will feature nine modern trains by next spring, with enhanced amenities and upgraded stations along the route. By introducing all new trains throughout the entire corridor, guests can expect the same world-class service on board every train, every time.

- ◆ A redesigned Amtrak Intranet went "live" in May and now connects employees, departments and SBUs over a company-wide network. A place to find business resources, job aids, news and information, the Intranet is an evolving communications tool that can help Amtrak re-engineer how it does business on a daily basis.
- ◆ Amtrak Marketing developed several successful campaigns throughout the year to promote Amtrak products and services nationwide, and to better position the company within key markets. As a result, the prestigious Travel Industry Association honored Amtrak with two national marketing awards.

O N T H E R I G H T R A K

Two NEC employees receive accolades from WTS

The Philadelphia chapter of the Women's Transportation Seminar (WTS) honored two Amtrak employees on Dec. 13 during its annual awards dinner.

Laura Ray, NEC senior director of Capital Planning and Administration, and the national president of Women's Transportation Seminar, received the "Woman of the Year" award. Ray has been active on both the chapter and national levels of WTS. She strengthened their scholarship programs, creating a non-profit association for the WTS National Scholarship. Ray has also revised WTS policies to improve the organization's overall financial stability.

Mary Lou Moore, NEC director of Equipment Maintenance and Standards, was also honored with the "Philadelphia Member of the Year" award. Moore received the award for her service on the scholarship committee, her recruitment efforts, and overall dedication to the organization.

Congratulations to both Ray and Moore for their outstanding contributions.

VTrans applauds Amtrak's spirit of partnership

The following is an excerpt from a letter written to George Warrington

from Charles Miller, Rail Division director for the Vermont state Agency of Transportation. Miller wrote to congratulate Amtrak on the start of Acela Express service, and for Amtrak's work to improve passenger service in Vermont.

"From **Stan Bagley**, to the train crews and reservations agents, your employees have shown a willingness to develop and maintain a true 'partnership' in our efforts to attract more customers, and to further develop our Amtrak service. As we move forward, I look toward maintaining and improving that relationship."

Supplier Diversity program continues to support women, minority-owned businesses

In the year 2000, Amtrak continued to demonstrate its commitment to supplier diversity. Last year, Amtrak exceeded its corporate goal of awarding 15 percent of our contracts to minority and women-owned business. This is the 13th consecutive year that Amtrak has exceeded its goal.

On Feb. 5, Amtrak will host an awards ceremony in Washington, D.C., to honor five of these businesses and six Amtrak employees for their outstanding support of the Supplier Diversity program.

Auto Train employees win big

The 15th Annual International On-board Service Odyssey Awards Ceremony was held on Dec. 5, in Orlando, FL. Amtrak's *Auto Train* brought home four awards.

From left to right are the following Auto Train employees: John McCaffrey, manager, Business and Marketing Analysis; Kellie Bonner, safety coordinator; Julie Byrne, chief, on-board services; Milagros Watson, on-board attendant; Joyce George-Forbes, on-board attendant; Sharon Mahoney, general manager; and James Mead, service manager.

Sponsored by the International Trade Publication for Passenger Service, the Odyssey award honors the merits and achievements of airlines, cruise ships, and railroads throughout the world.

All three industries are given awards in each of the following categories:

Food service/catering, tableware, uniforms, on-board service, on-board safety, on-board entertainment, equipment, amenities, terminal services, and Award of Merit.

Auto Train entered four categories and won in all four:

1st place	Food service
1st place	On-board safety
1st place	Award of Merit (for new facility in Lorton, VA)
3rd place	On-board services

"We at the *Auto Train* have always known that we deliver world-class service to our guests. We are so proud to have our service recognized as among the best in the world," said **Sharon Mahoney**, general manager, *Auto Train*.

On-board services at *Auto Train* has made significant achievements over the last couple of years. The accomplishments are a result of the commitment of the entire team; particularly the men and women who support the ticket office, Train and Engine Crews, Mechanical, Human Resources, and training departments.

"The employees at *Auto Train* demonstrate their commitment to consistent, quality service every day. We were up against air and water transportation and we came out on top. This award reassures us that we're getting it right," said **Jim Mead**, service manager, *Auto Train*.

Amtrak's Drug and Alcohol program gets high praise from FRA

Federal Railroad Administrator Jolene Molitoris recently gave Amtrak high marks for its Drug and Alcohol abuse prevention program—saying Amtrak's "level of improvement is unprecedented."

After the agency's 1998 operational review of the program revealed areas that needed improvement, **Lorraine Green**, vice president of Human Resources, provided the leadership and direction, and assembled a professional management team to institute a model drug and alcohol compliance program.

Dr. Malva Reid, formerly the director of the Employee Assis-

"Amtrak's exceptional commitment and investment in personnel and resources in this critical program will undoubtedly save suffering and the loss of lives."

Jolene Molitoris
FRA Administrator

tance Program, was promoted to director of Health Services to provide the day-to-day direction of the restructured operation. Under

the direction of Dr. Reid, five Amtrak employees spent countless hours developing new processes and restructuring the Drug and Alcohol program into a more efficient and standardized operation.

"The team did a phenomenal job," Reid said. "But our level of commitment went far beyond satisfying the FRA. We wanted to have one of the best Drug and Alcohol programs in the industry, and we succeeded."

The team included **Bohdan Baczara**, manager, **Wanda McLaren**, **Margaret Tierney**, **Terry Johnson**, and **John Ward**. On call 24-hours-a-day to assist their

colleagues in the field during the transition, the team designed new training programs, brochures and information packages for federal and company testing. One of their most notable accomplishments was developing a procedures manual. The Drug and Alcohol program is now institutionalized, so the effectiveness of the program is not compromised due to personnel turnover.

"Although Amtrak had a successful operational review, we may still receive fines for specific testing events," Baczara said. "Our continued success will depend on everyone's cooperation."

Amtrak's Marketing team is taking care of our guests – and you – this winter

For the 2000/2001 national ski program, announced last September, Amtrak has teamed up with several major ski resorts, and other partners throughout the country, to promote the benefits of getting to the slopes by train.

Amtrak's exciting marketing campaign—aimed at consumers and the travel trade—includes a national ski brochure, posters, ads in major ski magazines, banner ads on internet websites, and information on www.amtrak.com.

For information on schedules, fares, and connecting rental car and shuttle services to their favorite resorts, guests can call 1-866-SKI-AMTRAK. Our reservation sales agents will refer callers to the resort call centers for lodging and lift ticket information. So far, Amtrak has received about 2,500 calls. By referencing promotion code H071 between now and April 15, guests will receive a 20-percent discount on fares to over 40 Amtrak ski destinations.

New partnership initiatives with Colorado Mountain Express shuttle service, Hertz, and Thrifty Car Rental of Vermont make it even easier to get to the resorts from Amtrak stations.

Employee Discounts

Amtrak Marketing has arranged special discounts for all 25,000 Amtrak employees at the partner ski resorts listed below. In addition, employees can find information about Hertz rental car discounts in Arrow (G/POL/CAR/P9).

Ski Resort	State	Special Offer	Dates Offer Valid	What Employee Needs to Do	For More Information
Aspen	Colorado	25 percent discount off lift tickets (Employee only) Buttermilk, Highlands and Snowmass (Employee only)	Through 4/22/01	Bring Amtrak ID and driver's license to resort ticket window	1-877-701-9463 www.aspensnowmass.com

Killington	Vermont	Free 1, 2, or 3-day lift tickets (Employee only) 50 percent off lift tickets for immediate family	Monday – Friday between March 5 – March 16, 2001 Anytime between March 19 – April 15, 2001	Reservations required seven days prior to arrival. Send fax to Killington at (802) 422-6118 with: Employee name, telephone number, fax number, address of Amtrak location or crew base, photocopy of Amtrak ID, first day you'd like to ski, how many days you're staying, ages of any children, location of lodging (if applicable) Killington will fax back confirmation and other instructions	1-800-432-0100 www.killington.com
Stowe	Vermont	"Stowe Card" for 25 percent off single day lift tickets (Employee only) Free ticket for every six tickets purchased with the Stowe Card	Through April 15, 2001 (Stowe Cards are valid Sunday through Friday, non-holiday)	Bring Amtrak ID to "Spruce Season Pass Office"	1-800-253-4754 www.stowe.com

Fiscal Year 2000 brings success to Amtrak Intercity

Ford Explorer winner

Fiscal year 2000 began with the opening of a new Mail and Express transdock facility in Chicago.

Throughout the year, Amtrak continued to bring new facilities and services on line and increased the shipping service we offer customers. By year's end, Mail and Express showed enough growth and promise to justify a spin-off as its own business unit.

Renovation celebrations

And for our guests, Amtrak made major improvements to stations throughout the system. Memphis, TN; Lake Charles, LA; Marshall and Temple, TX; Culpeper, VA; Spartanburg, SC; and the *Auto Train* facility in Lorton, VA, all celebrated the completion of successful renovation and construction projects.

These projects have provided our guests with more amenities, more comfortable waiting areas, and more modern facilities. In addition, work has begun or continued to improve stations in Pennsylvania, North Carolina, Ohio, Virginia and Oklahoma.

In FY00, Amtrak announced a comprehensive strategy to expand its network over the next several years. The culmination of extensive market research, our Network Growth Strategy has resulted in added frequencies on the *Texas Eagle* and the introduction of two new

services—the *Kentucky Cardinal* and *Lake Country Limited*.

Amtrak also gained more support for the High-speed Rail Investment Act last year. Strong coalitions supporting high-speed rail are developing in the Southeast, Gulf Coast, Texas, and Midwest. A request for proposals

was issued to entertain bids for new high-speed trainsets to operate in the Midwest. And in an encouraging development, the U.S. Department of Transportation designated 11 new

high-speed rail corridors around the country, and numerous extensions, located primarily in Amtrak Intercity.

In some of the most noteworthy achievements from FY2000, 47 exceptional Amtrak Intercity employees received President's Safety and Service Awards; one was rewarded with a new Ford Explorer for having perfect attendance; and another employee received one of the railroad industry's highest

honors—the Burch Award for Safety.

The awards kept coming. The Amtrak-operated USPS Celebrate the Century Express Tour was honored with the U.S. Department of Transportation's Design for Transportation 2000 Award. And Amtrak's partnership with the Oklahoma DOT, BNSF and the *Heartland Flyer* Coalition received the President's Award for Rail from the American Association of State Highway Transportation Officials.

The year 2000 was filled with many accomplishments—too many to list here. Amtrak thanks all the dedicated employees in each SBU for their commitment to success.

Acela Express

Mail and Express

Safety Day sparks interest among guests

On Dec. 13, the Northeast Corridor held its last quarterly Guest Safety Day of 2000. To help educate guests on how to stay safe in stations and on board our trains, volunteers distributed 45,000 pieces of safety literature at locations all along the NEC. Volunteers also handed out approximately 7,000 ice scrapers, to help prepare our guests for the winter weather, and to promote safety in all areas of their lives.

At 30th Street Station in Philadelphia, guests also received a high-voltage demonstration. The Engineering Department brought out one of four "high voltage units" to hold a demonstration on the dangers of coming in contact with Amtrak's electrification system.

Each High Voltage Unit is a model of the catenary, an engine and people, who are

Jack Backert delivers a shocking demonstration

represented by hot dogs with pipe cleaner arms. The units generate 15,000 volts of electricity, which essentially cook the hot dog when it comes in contact with the wires. The demonstration was performed for guests in the station every half-hour, and Engineering instructor **Jack Backert** was present to answer questions and provide the necessary safety protection.

The exhibit also included scenarios such as a downed power line in a puddle and a kite string tangled in power lines.

The demonstration attracted a lot of attention, and hammered home the dangers of being on the tracks and near overhead wires.

NEC President's Safety Committee has identified the following dates as Guest Safety Days in 2001

March 15
June 14
Sept. 13
Dec. 13

Notice: Changes for 2001 Railroad Retirement tax

The Railroad Retirement system consists of two tiers: Tier I, which is the railroad industry's equivalent to Social Security, and Tier II, which is the employee pension benefit.

During the year, Tier I and Tier II taxes are deducted from an employee's paycheck until the salary paid that person reaches a designated amount. Congress sets those maximum salary amounts that are subject to tax, and both amounts are increasing in 2001.

The Tier I tax rate is 6.20 percent (TX EE T1 RRTA displayed on check stub). In 2001, taxes will be deducted at that rate until the salary paid the employee reaches \$80,400, which is up from \$76,200 in 2000. The maximum that can be withheld for Tier I taxes this year is \$4,984.80.

The Tier II tax rate is 4.90 percent (TX EE T2 RRTA displayed on check stub). In 2001, taxes will be deducted at that rate until the salary paid the employee reaches \$59,700, which is up from \$56,700 in 2000. The maximum that can be withheld for Tier II taxes is \$2,925.30.

The Medicare Hospital Insurance tax rate is 1.45 percent (TX EE HI RRTA displayed on check stub), and there is no annual maximum for this tax.

Amtrak West Intranet site has arrived

The Amtrak West Intranet site has arrived and can now be accessed from the Amtrak Intranet homepage. To access the site, click on the *SBU Home* icon in the upper right corner and then click on Amtrak West.

In the coming months, the site will be regularly updated, so

please check back for the latest information and highlights.

As the Amtrak West site expands to include more from the field and various departments, it will become a more comprehensive communications tool for Amtrak West employees, and an additional information resource for employees across the company.

Service Recognition Program improved

In response to recommendations made by employees, the service recognition program is being improved.

As of Jan. 1, employees celebrating service anniversaries of at least five years will receive a "Magic Box." It will contain such items as a certificate signed by Amtrak's president and CEO, and instructions for ordering a wider variety of gifts, depending on the years of service.

The box will also include a service recognition pin that reflects the new corporate brand identity. Pins for 10 years' service and above will feature different gemstones for each level, from an amethyst at 10 years, to a diamond at 30 years.

Employees at the 25-year level and above will also have the option of choosing between two newly designed watches and a ring. The vendor will send all

As of Jan. 1, employees celebrating service anniversaries of at least five years will receive a "Magic Box."

gifts to employees' homes within six weeks of the order being placed.

Employees asked for more meaningful ways of recognizing their service, and Amtrak had to maintain a balance between those preferences and responsible cost management. Fortunately, the new service award program achieves both goals.

RAILWAY ROUNDUP

Amtrak 'Recipe for Adventure'

On Dec. 9, Amtrak hosted a group of travel writers on board train #90, the *Silver Palm*, from Ft. Lauderdale to Tampa.

The theme of the tour, "Recipe for Adventure," was based on the variety of foods and ethnic influences found around the state.

Amtrak's Marketing department worked closely with the product line in both preparing and conducting this tour. **Mike Latiff**, Atlantic Coast Customer Service manager, coordinated a special "Floribbean" menu that consisted of fresh chicken and salmon. **Dick Weaver** and **Barbara Golden**, Florida Marketing managers, worked with Visit Florida, its official tourism promotion agency, to coordinate ground transportation with Hertz.

Once on board, the group was given a tour of the train, and had the opportunity to interview on-board employees about Amtrak's service. The group was very impressed with the on-board service and the convenient connections that our Florida routes provide, proving how successful things are when Marketing and the product line work together.

Couple weds on rails

Robert Willaford and Felice Rowland said their "I do's" on Dec. 9, before 40 guests in the dining car of Amtrak's *Silver Meteor*, as it made its way from

The newlyweds

1999 after 42 years. His new bride said she was surprised by her husband's idea for a wedding on the rails.

The diner car was decorated in green and white streamers, red bows and bells. Amtrak picked up the tab for the wedding cake, refreshments and nonalcoholic champagne to celebrate the occasion.

Berlin Station celebrates 100 years

On Dec. 12, residents in Berlin, CT celebrated the station's 100th Anniversary. Amtrak employees **Bill Sample**, stationmaster, Berlin; **Kevin Regan**, stationmaster, New Haven; **John Fredericks**, and some local residents were all dressed in vintage costumes for the grand occasion. The celebration

Winter Haven, FL, to Orlando

"I married in a church the first time," said Willaford, who retired from CSX Transportation in

looked almost like the station's opening day 100 years ago.

Pictured above (left to right) Michael Canterbury-OBS, Gregory Vutler and Henry Carpintero-Bridges & Buildings (B&B), Jackie Hewing, Vernest Cantrell-OBS Safety Couriers, Ruben Negrere, B&B, and Jack Grizely, foreman, B&B.

Western Business Group Safety Advisory

Michael Canterbury says, "Thank you Western Business Group Safety Couriers and Chicago Yard Engineering Department." He has just used the newly constructed walkway for On-board Services personnel to move between the crew base and departing or arriving trains.

Santa, CNOC employees attend Radio City Music Hall show

On Dec. 9, a group of employees from the Crew Management Services boarded Train #162 from Wilmington to New York, to attend the Radio City Music Hall Christmas Spectacular.

Thanks to Q-team members **Chris McNamee**, **Shirley Bannon**, **Mario Bobbato-Clark**, **Jean Hornyak** and **Sue McNamee** for organizing the trip. Special thanks to **Suzanne Dill**, secretary, Crew Management Services, who played Santa and distributed candy canes to kids and adults on-board the train.

Suzanne Dill, "Santa," and Leroy Shepherd, lead service attendant.

From left to right, Bill Sample and John Fredericks as "Uncle Sam," are surrounded by local townspeople in Victorian elegance.

AMTRAK IN THE NEWS

"The concept of a single station seamlessly linking Amtrak and commuter trains, local and regional buses and taxis is such a natural, it's a wonder Raleigh hasn't attempted it much earlier. The people designing downtown Raleigh's intermodal station aren't wondering anymore. Within 10 years, a traveler could board a commuter train bound for the hub, switch to Amtrak train for a ride to Charlotte, and on return, grab a bus or cab home."

"Coordination might solve transportation woes,"
News & Observer, Dec. 12, 2000

"It's important that we are prepared to meet the 107th Congress in January. Many new members will need to be

educated on rail issues. It will take more than the efforts of your Washington lobbyists. Individuals in the industry will be called upon for grass roots help. Letters, telephone calls, and visits to your representatives are a must if the industry is to benefit from their deliberations."

"Will the 107th Congress favor rail?" Railway Age,
Nov. 30, 2000

"Like millions of Americans who fly a lot, one traveler says he is really ticked off. He's angry at the way airlines treat their passengers. He's annoyed by flight delays, and he's frustrated about crowded airports and jammed highways. He took Amtrak from Washington to

New York recently. He said the trip took about three hours, but it was surely a lot more pleasant than the air shuttle."

"High-speed trains could ease airport congestion."
The Seattle Times Travel,
Nov. 19, 2000

"To help prop up its balance sheet, Amtrak is busy building its mail and express business, which hauls letters, packages and even freight for such clients as the Postal Service and UPS. Within a few years, that too could bring in a few hundred million dollars in additional revenue."

"Amtrak's last train,"
Time.com, Nov. 28, 2000

"It's all aboard for Amtrak and NASCAR driver Rusty Wallace...For its alliance, Amtrak hopes to launch promotions tying its service to the race tracks...Sports has proved to be an effective lure for boosting ridership. [Barbara Richardson executive vice president] attributed a 30-percent increase in ridership [last] spring to the Garciparra-Rodriguez, campaign. She hopes to reap the same benefits from NASCAR's lengthy season, which crisscrosses the country and spans February to November."

"Amtrak hitches its marketing train to Rusty Wallace,"
Sports Business Journal,
Dec. 7, 2000

Safety in switching

Recognizing the hazards of railroad switching operations, the Federal Railroad Administration (FRA) formed the Switching Operations Fatalities Analysis (SOFA) Working Group in February 1998.

The group reviewed fatal incidents and developed recommendations for reducing fatalities in switching operations. Assembled within this group were representatives from the FRA, Association of American Railroads, United Transportation Union, Brotherhood of Locomotive Engineers, American Short Line and Regional Railroad Association.

From this review the SOFA group was able to identify trends in the cause of these incidents. They became the foundation for the analysis and recommendations in their final report. Accompanying the report was a list referred to as the "Five SOFA Lifesavers."

In our support for safe-operating practices, Amtrak encourages the usage of the "Five SOFA Lifesavers" listed above.

FIVE SOFA LIFESAVERS

Lifesaver 1:

Discuss safety at the beginning of a job and when work changes.

Lifesaver 2:

Communicate before action is taken.

Lifesaver 3:

Protect against moving equipment.

Lifesaver 4:

Secure equipment before action is taken.

Lifesaver 5:

Mentor less experienced employees to perform service safely.

Winter weather: When others can't get over or off the ground...

Amtrak employees get you there

Amtrak employees provide our guests with the best possible service, despite the winter weather. Before the turn of the New Year, much of the country experienced severe weather conditions. Chicago was in the midst of one of its coldest Decembers in over 100 years. And on the East Coast, New York and other northern states were hit big with snow and ice.

Amtrak Intercity President **Ed Walker** sent out a letter in January commending employees at every level in the SBU for having done a remarkable job in the face of extraordinary conditions.

Walker said, "I have been continually impressed by the dedication, hard work and perseverance displayed by my colleagues here at Amtrak Intercity. You have my sincere thanks and appreciation for your extra efforts and my personal assurance of continued support from the entire management team."

Northeast Corridor President **Stan Bagley** also sent a letter to corridor employees to praise the work they did over the New Year's Eve weekend, when a severe storm threatened to cripple travel in the region. Employees from various divisions, the Engineering Department, product lines, Crew Management, and others, kept trains running on the NEC without any major delays. Hard work and good

contingency planning made that possible.

Looking ahead, Amtrak Intercity managers have focused on contingency plans and a series of action steps to help employees better serve our guests this winter. Those actions include: winterizing equipment and facilities; redeploying equipment; temporarily suspending some services through January to increase reliability throughout the system; rescheduling select managers to provide 24-hour management oversight and support; and providing employees with hotels and meals where necessary.

Frequent and accurate communication is essential during weather emergencies. While Amtrak Intercity stays in close contact with CNOC and the Reservation Sales Call Centers, the SBU is developing additional communication tools to ensure that employees and guests have accurate and timely information on how the weather will affect services.

Service failures due to bad weather are stressful for both employees and guests. Amtrak continues to identify ways to improve the aspects of guest service that are under our control. Both Walker and Bagley praise the personal effort, attention and care Amtrak employees provide our guests when severe weather hits.

New fleet plan

continued from page 1

ization. Superliner I cars haven't been modernized since 1975, and the "new" Superliner II cars joined the fleet in 1979.

And, scheduled redesigns will reinforce Amtrak's strategy of continually revitalizing the corporate brand.

In the same way that we're building a market-driven national rail network, the nature of the fleet redesign will be based on market research. If the preferences of guests read "mauve"—so it will be. And nothing is impossible, even a total reconfiguration of the car. Again, it will be based on what the market wants, and on the input of the on-board staff.

What's more, we don't have to wait eight years for the initial reconstruction. The first redesigns are under way for the "long-distance" fleet, including the bi-level Superliners

and the single-level Viewliners.

Right now, **Barbara Richardson**, executive vice president; **Anne Hoey**, vice president of Service Operations; and **Ed Walker**, president of Amtrak Intercity, plus senior members of their teams, are evaluating concepts proposed by leading design consultants.

Work will be scheduled to begin as part of the FY 2002 capital program. Every Superliner I and II car—about 420 cars, including sleepers and diners—will be gutted and completely rebuilt in the new design. The goal is to have the new "Superliner III" fleet refurbished within three years. The new design will debut with the introduction of the newly designated long-distance sub-brand. That new sub-brand identity should be unveiled later this year.

Is your mailing address current with the RRB?

Each year, the Railroad Retirement Board (RRB) sends you a BA-6 form that details your service months and eligible compensation earned for the last calendar year. It's important that every employee review the information on this form for accuracy.

You can ensure that the form reaches you in a timely manner by calling the RRB office to confirm your mailing address. You can find the nearest office by looking in the telephone directory under United States Government. A change of address can also be sent to the RRB headquarters at the address shown on the back of the BA-6, or faxed to (312) 751-7190. Be sure to include your Social Security number.

Keep your address current with the RRB. It's the best way to stay informed about your future benefits.

2001 Amtrak wall calendars are in

A great gift for rail fans

The Amtrak wall calendar for 2001 has an overall blue background with two orange pinstripes, and features the Amtrak Promise. The image across the top has five "lifestyle" photos superimposed over a streaking *Acela Express* trainset. It is a fresh new look. **Jane Melhorn**, director, and **Jim Frantz**, designer, of Amtrak Design & Identity Management created the design.

The calendars are available to Amtrak employees, retirees and their families and friends, at a moderate price. The more calendars you order, the less each costs. Checks, money orders and credit cards are welcomed; taxes, handling and shipping are included. For credit card orders, please include complete number, expiration date and your name as it appears on the card. Visa, MasterCard, Discover/Novus and American Express will be accepted.

Prices:

1.....\$6	7.....\$22
2.....\$10	8.....\$24
3.....\$14	9.....\$26
4.....\$16	10.....\$28
5.....\$18	11-25.....\$2.50 each
6.....\$20	26-50.....\$2.25 each

Please send all orders and inquiries to: Western Folder Distributing Company, P.O. Box 7717, Itasca, IL 60143. Make checks payable to: Amtrak Calendar. Also, for your collection, we have a limited supply of calendars from prior years. Please write us for available years and prices.

Amtrak announces special fares, drives business to travel agents

Program benefits agents, guests, Amtrak

Amtrak is working closely with travel agents to increase ridership and revenue.

With the support of the American Society of Travel Agents (ASTA), Amtrak has launched a unique program that benefits both leisure travelers and travel agents.

Under this program, travelers are eligible for a 10-percent discount on Amtrak long- distance trains and selected short-distance trains with a coupon redeemable only through a travel agency.

"This program is a win-win-win situation because it offers a generous discount to travelers and generates business for travel agents and Amtrak," said Bill Maloney, ASTA executive vice president and COO.

To take advantage of the special fares, travel must be booked and ticketed between Jan. 12 and Feb. 24, and travel must be completed by May 24.

GUEST LETTERS

An Amtrak employee writes a short note to praise the world-class service her aunt received—from beginning to end—on a recent trip to Pittsburgh.

"My aunt's travel experience was superb, and she is raving to anyone who will listen about the service she experienced on her trip from Paoli to Pittsburgh [Keystone Service]. The train even arrived in Pittsburgh 15 minutes early.

She said it made her feel very special and important to have the redcap meet her at trainside in Pitts-

burgh and take her bags to where her son was waiting for her. More important, she will willingly and enthusiastically buy another ticket to ride the train again. Please pass along to the crew and station people a sincere THANK YOU from my entire family. You all deserve many blessings for making the experience so enjoyable."

Sincerely,

K. Ranowsky

Amtrak Law Department

Beware of costly '809' phone scam

Don't respond to e-mails, phone calls, or web pages that tell you to call an "809" phone number, it could cost you \$24,000 or more.

How does the 809 scam work? You will receive an urgent message on your answering machine or your pager, which asks you to call a number beginning with area code 809 for more information. If you call from the U.S., you will apparently be charged \$2,425 per-minute.

Why it works? The 809 area code is located in the British Virgin Islands. The 809 area code can be used as a

"pay-per-call" number, similar to 900 numbers in the U.S. Since 809 is not in the US, it is not covered by U.S. regulations of 900 numbers, which require that you be notified and warned of charges and rates involved when you call a "pay-per-call" number. Further, whereas many U.S. phones have 900 number blocking to avoid these kinds of charges, 900 number blocking will not prevent calls to the 809 area code.

This scam has been identified by the National Fraud Information Center.

Amtrak unveils long-term capital plan

New business plan also released, aggressive cost management highlighted

Amtrak has publicly released its first-ever long-term capital plan to help relieve the nation's chronic highway and airport congestion and provide more rail service for travelers.

The 20-year plan, which requires \$1.5 billion in federal capital each year, would continue to give us a reliable source of long-term investment funds as we eliminate our operating subsidy. It is designed to modernize and expand the passenger rail system nationwide, accelerate plans for high-speed service in 11 federally-designated corridors, and attract billions more in non-federal investment.

portation congestion are at their highest levels. The \$1.5 billion in annual federal funding, together with state and private funds, would enable Amtrak to modernize equipment and improve service reliability, meet federal safety requirements, and provide a significant down payment for the development of high-speed rail corridors.

The plan argues that the potential for passenger rail has been weakened by a large "Rail Investment Gap." Intercity rail currently receives less than 1 percent of all transportation spending.

What is the federal "Rail Investment Gap?"

The Rail Investment Gap is the historic under-investment in passenger rail capital needs. This means that we've received significantly less federal funding than other modes of transportation, and less than what has been authorized by the government. And, Amtrak has never enjoyed a stable source of federal funding, unlike other modes of transportation.

The capital plan is part of Amtrak's annual strategic business plan, which lays out our major business initiatives and a financial plan for achieving operational self-sufficiency by FY2003.

Amtrak honors exceptional minority and women-owned businesses

Six employees recognized for supporting supplier diversity program

Amtrak's Business Diversity department hosted a ceremony at Washington Union Station last month to honor five businesses for their exceptional service to Amtrak.

The awards ceremony is Amtrak's annual event to recognize minority and women-owned businesses, as well as Amtrak employees, for their outstanding contributions and commitment to Amtrak's supplier diversity program.

"These business owners represent the best from each of the ethnic groups comprising our supplier

Five of the six employee award recipients shown here with their supervisors, along with Rienzi, Warrington and Hightower.

diversity program," said **George Warrington**, who was there to present the business owners with their awards. "They deliver superb

supplies and services to Amtrak in a timely manner and at a very competitive price."

The objective of Amtrak's Supplier Diversity Office (SDO), led by director **Roscoe Swann**, is to maximize the use of minority and women-owned businesses. The goal is to procure at least 15 percent of the company's services from them.

"The awardees truly encompass what Amtrak is trying to do through this program," said **Wanda Morris Hightower**, vice president of Business Diversity.

TRAIN OF THOUGHT

You're probably hearing a lot this month about the financial picture of Amtrak, and you may not be sure whether the picture is good—or not so good.

I can understand that, because I get these questions all the time. There's nothing more important to me than talking honestly about this company, how we're doing, and where we are headed. To help me, I've asked a group of about 70 people to reach out and, face-to-face, talk with employees about how we're doing. Both last month and this month, these "ambassadors" have been all over the company with small groups of employees in their local work units, talking and answering questions.

How are we doing? I'll be frank. On one hand, we're setting new ridership and revenue records virtually every week, and every month. On the other hand, we're facing a very serious need to manage our costs better. We have to do a better job—right now. It's that simple.

Now I know these messages seem contradictory, but they are both very real. We are growing, but our costs have also been growing, far too quickly for the good of the company. As planned, our federal

operating support will continue to decline. So, if we don't seize control of the growth in our costs, we're not going to be able to meet our financial obligations.

Cost management is not easy, but it is critically important. At our company-wide management conference in January, **Arlene Friner**, the chief financial officer, said there's been a "lack of attention" to cost management, and that we're now left with "no room for error."

Don't be misled, though. As the ambassadors will tell you in their briefing blitz, we're on the right track. Teams of employees are working on plans for more than 40 different cost management projects. In addition, we all need to stay focused on building revenue with our Satisfaction Guarantee. And, what's more, we're optimistic that in 2001, Congress will provide us what we've lacked for 29 years—a reliable, long-term source of capital investment funds.

So there are different sides to the Amtrak picture. That's not surprising. We're a large and complex business. Just stay with us as we work together toward the same goals, and we can all build an Amtrak that rewrites history.

George Warrington

The 107th Congress reintroduces the High-Speed Rail Investment Act

Just one day before Amtrak released its new Strategic Business Plan, more than half of the Senate signaled their support for greater investment in passenger rail.

Fifty-one senators have co-sponsored and reintroduced the High-Speed Rail Investment Act (HSRIA) of 2001. The legislation, which passed the House last year, but was not included in the larger final spending bill, would provide Amtrak with \$12 billion in state- and federally-supported bonds over 10 years to invest in high-speed rail projects throughout America.

The HSRIA has generated incredible support throughout the country. The U.S. Conference of Mayors; the American Association of State Highway and Transportation Officials; the American Public Transportation Association; and the country's Transportation Secretaries and Commissioners all support the HSRIA, as do unions, businesses, environmental advocates, and a host of others.

"Make no mistake about it: High-speed rail isn't just for the Northeast. It's for every part of this country."

To Amtrak, the reason for such widespread and growing support for high-speed rail is simple: America is facing increasing gridlock on highways and in the air, and people are looking for a comfortable and convenient alternative.

Passenger rail is an efficient way to invest federal funds. Currently, rail gets less than 1 percent of all federal transportation spending. New highway and air capacity is very expensive, and

space for it is limited. By contrast, a dollar invested in rail delivers 5-10 times more capacity than a dollar invested in highways, and the rights-of-way already exist.

Major efforts are under way across the nation, including projects in 38 states, to plan and implement upgrades to existing passenger rail corridors, so that Amtrak can provide improved and faster access to the nation's urban business centers.

"Make no mistake about it: high-speed rail isn't just for the Northeast. It's for every part of this country," **George Warrington** said at the news conference to announce the new bond bill. "Everybody's looking for relief, and they don't have to look that far. High-speed rail is going to make a tremendous difference to the quality of life in our country. That's why I look forward to working with the President and the new Congress to pass this critical legislation."

Caltrain receives prestigious ISO certification:

The only passenger rail operation in Western Hemisphere to do so

The Caltrain Commuter Service has become the first passenger rail operation in the Western Hemisphere to receive ISO 9002 certification.

The International Organization for Standardization (ISO) is a federation of national standards bodies from 130 countries around the world. As a non-governmental organization, ISO's mission is to promote the development of standardized practices to facilitate the international exchange of goods and services.

Caltrain received formal certification for the management system they developed and implemented during the last five months of 2000. To receive ISO certification has been compared to receiving the "Good Housekeeping Seal of Approval." It

"Most of what we already did fit the standard, we just didn't know it."

assures that products are produced and processes are followed by meeting well-defined standards of quality and consistency.

The ISO standards were developed to help manufacturers and service providers develop a quality-conscious approach for their research, testing, manufacturing, and support operations. Certification requires that a company set-up and document all of

its procedures, including the procurement and storage of materials, the manufacture and delivery of products, employee training and customer support.

To receive certification, after developing and documenting its procedures, a company must then be audited by an ISO-certified board to ensure it is in compliance with the established standards.

"Most of what we already did fit the standard, we just didn't know it," said **Dave Nogar**, general manager, Caltrain Commuter.

ISO certification is a powerful marketing tool and an effective form of distinction from other companies. Customers have more confidence in

products and services that conform to international standards.

"This ISO certification highlights that Amtrak is moving forward as a world-class organization, capable of meeting and even exceeding international standards for quality," said **Lew Wood**, assistant general manager, Caltrain Commuter.

Acela Express brings NBA All-Stars to Washington in comfort and style

L. to R. Coach Brown, NBA players, Polin, Williams and Warrington at the "NBA Train" press conference in Washington.

During the weekend of Feb. 9, downtown Washington, D.C., was jammed-packed with visiting and local sports fans. They scurried from one event to the next, hoping to get a glimpse of some of the "larger than life" stars in town for the weekend.

It was NBA All-Star Week, and at the center of all the excitement were the players visiting D.C. to compete in the All-Star Game on Feb. 11. Amtrak and the NBA teamed-up that week to bring some of the all-stars into the city on Acela Express.

NBA executives, coaching staff, and players from the New Jersey Nets, Philadelphia 76ers, and San Antonio Spurs rolled into Union Station on Feb. 9 to a large crowd of media on the platform and screaming fans inside the station.

Acela Express, carrying the Nets' Stephon Marbury and Kenyon Martin; the 76ers' Eric Snow; Tim Duncan of the Spurs; and All-Star coach Larry Brown, began its run in New York, making stops in Newark and Philadelphia before arriving in D.C.

Inside Union Station, Washington Mayor Anthony Williams and Abe Polin, majority owner of the Washington Wizards, joined **George Warrington** in welcoming the players to D.C., and to America's first high-speed train.

"Acela Express is a train for winners, and we are pleased that more and more professional sports teams are chartering Amtrak trains to travel to games in the Northeast Corridor," Warrington said.

"Our partnership with the NBA is a terrific showcase for the competitive advantages Acela Express offers between Boston and Washington, D.C."

"Our partnership with the NBA is a terrific showcase for the competitive advantages Acela Express offers."

In case you were wondering; yes, the players were able to sit comfortably and stretch their long legs, and there was plenty of space in the overhead compartments for them to store their luggage. Acela Express delivered the players to the nation's capital in comfort and style.

Throughout All-Star Weekend, Amtrak was also a sponsor of the NBA Jam Session, and several other events, including the Magic Johnson Foundation's Salute to Black Fashion, and "The Beat in the Heart of our Nation" fashion show and gala fundraiser.

Media huddle on the platform awaiting Acela Express and some NBA All-Stars.

The route to our success

Strategic Business Plan Key Strategies

Since the 1998 launch of its new strategic direction, Amtrak has taken significant steps in rising to the challenge of reducing its reliance on federal funds to support operations. Driving Amtrak's actions are six key strategies.

Build a market-based network

Define customer demand, using extensive research, and then match that demand with our system.

Deliver consistent quality service

Change the culture of the company to be more customer-focused, and provide a world-class travel experience on every trip.

Revitalize the Amtrak brand

Introduce and support a new brand for Amtrak, to signal a major change to our customers.

Operate a cost-effective business

Identify specific accounts, large functional areas, policies and procedures, organizational structures and back-office costs that have potential for improved cost management.

Leverage public & private partnerships

Aggressively pursue public and commercial partnerships, through Mail and Express and other programs, which generate the highest returns from the company's assets.

Develop corridor services

Work with state and other partners to create or improve rail corridors across the country, drawing from the expertise we've gained in building the Northeast Corridor service.

New uniforms continue to evolve to best 'serve' employees nationwide

Employee input into the design of Amtrak's new uniforms did not stop with the initial rollout of the pieces on the Northeast Corridor. In fact, shortly after unveiling the new uniforms last year, a sample of employees from around the country were gathered in focus groups to suggest ways Amtrak could enhance the uniforms, with respect to job function, region and climate.

Prior to these meetings, employees were surveyed and asked to identify uniform qualities most important to them.

Across all job functions, the same issues emerged as being most important: 1) Uniform is easily identifiable as an Amtrak uniform; 2) Looks professional; 3) Clearly communicates the service he/she provides; 4) Looks approachable; and 5) Looks familiar.

The focus groups were held with employees last summer in Jacksonville, FL, Chicago, Seattle, and Los Angeles. The groups included men and women, food service and sleeping car attendants, conductors, ticket agents, baggage handlers, and red caps. Those working short- and long-distance trains were also included.

Stan Herman, the designer, or his assistants, were present at each session to listen to employees, and to evaluate the kind of adjustments needed to accommodate their needs.

In discussing their impressions of the uniforms, employees talked about how practical and functional (i.e. comfort, mobility, durability) the pieces are for particular jobs; the appeal of the new look and style; how appropriate they are for various climates; and whether the accessories complement the overall look.

Employees rated these various qualities and more specific ones on a scale of one to 10. Overall, the new uniforms were perceived to be professional and commanding authority and an improvement over existing uniforms. The station and OBS uniforms were the best received.

However, conductors expressed concerns about ensuring that their uniforms were distinguishable from other crafts. They also had reservations about how well the pieces accommodated their equipment.

Baggage handlers and red caps especially liked the cargo pants, but recommended a stronger visual link between pieces so guests can more easily identify them. A suggestion was made to use the Amtrak logo or a patch that displays the job function. And red caps will get a new style of cap that clearly identifies them.

Since the meetings were held, Herman has made changes based on the feedback he received from employees. Those changes, which included offering a different color shirt and removing the button-down collar on the female blouse, were approved and implemented by the manufacturer.

"We've done quite a few things based on what we heard from employees and guests," said **Dianne Ross**, manager, Uniform Program. "We were able to address many of the concerns and make some really positive changes." (See chart for examples of uniform improvements.)

Some adjustments, such as incorporating more branding, will be made immediately. Other more substantial changes to the uniforms are still under review.

Amtrak's new uniforms are a signal of change—one visual example of the company's brand revitalization. Along with employees' renewed commitment to service success, the uniforms complement the new brand and convey a forward-moving company.

The rollout schedule for the rest of the country will be announced soon.

Employee Concerns	What We Did
1) More branding	1) Logo buttons & patch on baggage/red cap shirts
2) Breathable shirt fabrics	2) Introduced tencel, and a new poly-cotton
3) Belt loops on female slacks	3) Done
4) Embossed logo buttons on the jacket, shirts	4) Jackets will have logo buttons
5) Job function on hat	5) Will specify on name tags
6) Clip-on ties for safety purposes	6) Done
7) Hooded sweaters for cold weather w/logo and job function on hood	7) To be included in the outerwear collection

Management Conference: Managers discuss new formula for success

As Amtrak enters the third year of its Strategic Business Plan, the company continues to build on its mandate to create a modern national rail system, and to make steady progress on the charge of reaching operational self-sufficiency.

Nearly 500 managers, representing every facet of Amtrak's business, gathered in Philadelphia in January for the 2001 Management Conference. They spent two days discussing our progress and how Amtrak is changing the way it does business, while focused on two goals—managing our costs better, and reaching operational self-sufficiency by 2003.

The theme of this year's conference was "Changing the Formula for Business."

The conference opened with highlights of some of the many accomplishments that have brought Amtrak business success over the past year. They include the uncon-

ditional Satisfaction Guarantee, smarter pricing and revenue management, and aggressive marketing and partnerships.

Senior managers talked about the aggressive steps they are taking to ensure continued corporate-wide success: generate additional revenue; reduce costs; improve service reliability and guest satisfaction; explore new business opportunities and strengthen existing partnerships; push for investment in passenger rail, and more.

One point that was stressed throughout the conference is Amtrak's need to spend smart and manage costs better. To help drive home that point, some of the managers were selected to be contestants in the game, "Who Wants to be a Million-Dollar Saver."

Modeled after the popular TV show, "Who Wants to be a Millionaire," a Regis Philbin impersonator asked the contestants increasingly tricky ques-

tions. The questions ranged from, What's the best way to add to the bottom line of any business? (Manage costs well) to brain teasers such as, How much cash will Amtrak have on hand at the end of FY01 if it meets all budget goals, including aggressive cost management? (Zero).

Five guest speakers shared their opinions, or talked about business practices that have brought them success.

NASCAR driver Rusty Wallace shared stories of how teamwork leads to success. Sen. Joseph Biden, a long-time champion of passenger rail, promised his continued advocacy for more investment in passenger rail nationwide. Robert Krebs, chairman of Burlington Northern Santa Fe, emphasized the value in

listening to customers and empowering employees. Ted Leonsis, vice chairman, AOL, encouraged managers to think outside the box and to use technology to modernize business practices. And Jim Adamson, CEO of Advantica (Denny's restaurants), shared some of the benefits he has experienced in diversifying his workforce.

L. to R. Amtrak West contestants Bill Duggan and Liz O'Donoghue, play "Who Wants to be a Million-Dollar Saver," with Regis impersonator asking some tough questions.

ON THE RIGHT R A K

Tacoma Amtrak Station staff named USDOT 'Best Practice'

For their participation in and continued support of the Amtrak *Cascades* "Schools on Trains Safety Program," the Tacoma Station Amtrak staff was recently named a U.S. Department of Transportation "Best Practice."

The safety program offers discounted train tickets on the Amtrak *Cascades* to students, teachers and chaperones in the Pacific Northwest to visit such places as the Seattle Aquarium, the Washington State Capitol, or the destination of their choice. As part of the program, Operation Lifesaver arranges a presentation with the participating school group on the

importance of "Look, Listen and Live" train safety on and around railroad tracks.

Schools on Trains provides an educational adventure, an invaluable opportunity to educate children on the importance of rail safety, and it introduces a new generation to rail travel.

The Tacoma staff has been instrumental in developing and implementing the program in Tacoma. From Bellingham, WA, to Beaverton, OR, more than 6,500 students have participated.

Rail advocate commends service success

"On *San Joaquin* train # 711, Jan. 20, my wife and I had the great pleasure of being served breakfast by lead service attendant, **Walter Abram**.

He was warm, friendly, full of smiles and very efficient. Mr. Abram could be a role model for all Amtrak service attendants."

Regards,
George Gaekle
Board member
San Joaquin Valley Rail Committee

Washington Mechanical's second A.R.A.S.A. training milestone

Wellington Gibson, Foreman I, is the second Foreman I at Washington Mechanical to successfully complete the Foreman II, 24-week training course. He is now a qualified bidder for a vacant Foreman II position.

General manager, **Daryl Pesce**, and general foreman, **Frank Cover** developed the mechanical curriculum to train Foreman I employees.

L. to R. Daryl Pesce; Wellington Gibson accepting a plaque for his accomplishments; Frank Cover; and assistant general manager, Mike Kapela.

Employees pay tribute to African Americans

Events held to celebrate Black History Month

African Americans and their contributions to American culture were spotlighted last month in educational displays, live performances, interactive workshops, and more, at Amtrak stations across the country.

February was Black History Month and employees carried out a fantastic line-up of events that captivated guests in our stations, passersby, and the employees themselves.

In Washington, Amtrak kicked-off its celebration on Feb. 1, with a performance by the Duke Ellington Jazz Ensemble, as well as the unveiling of an exhibit: "Freedom to Play: The Life & Times of Basketball's African-American Pioneers."

In Philadelphia, Chief Ron Frazier applauds performers and Amtrak for saluting African Americans during Black History Month

Other events included a Black Doll show; a fashion show and art exhibit called, "Coming to the U.S.: African Art and Fashion;" a Black Arts Festival to showcase the work of local artists; and cultural performances.

Northeast Corridor employees kicked-off their celebration with a

Black Business Expo, featuring both local vendors, and some from as far as Australia.

Members of the Tilden Middle School Show Choir treated the crowd to a performance of their original song, "Acela." The song encourages railroad safety, and was inspired by Philadelphia Officer **Doug Paige** and his outreach to the school children.

A tasty "Just Desserts" contest for employees was held. And a sweet ending to the month-long celebration were performances by R&B and Jazz musicians Roy Ayers, Rochelle Ferrell, and Billy Paul.

Amtrak Intercity got a jump-start on its festivities on Jan. 31, beginning with an art exhibit and a musical performance by the Bob Gunthrie Jazz Quartet.

A three-week-long Great Hall Mural Project in Chicago Union Station was truly a work in progress. More than 20 students of the Little Black Pearl Workshop created a vivid mural on over 400-sq. feet of wooden panels in the station. The theme of the inspired piece was, "Sowing the Seeds—How Passenger Rail Transported African-American Culture."

In a Feb. 14 event called "A Valentine to Chicago," Amtrak chief of On-board services and poet, **Glenn White**, paid tribute to the late

The Duke Ellington Jazz Ensemble performs pieces composed by jazz legends

Pulitzer Prize winning poet Gwendolyn Brooks by reading from his work and sharing his memories of Brooks, whom he met while working on the *LakeShore Limited*. Special valentines were also distributed featuring a quote from Brooks' poem, "To be in love."

A day-long Cultural Fair featured interactive activities and several exhibitors celebrating history and issues important to Amtrak's African-American employees and

their community at large. Amtrak Safety and Mechanical participated by showcasing safety and railroad inventions developed by African Americans.

Miami employees held their first-ever Black History exhibit. Their creative displays helped to tell the story of many African-American achievers. The exhibits also featured artifacts, photographs and clothing from African countries.

Amtrak West welcomed visitors on Feb. 1 to a national traveling exhibit honoring African Americans in U.S. labor history.

The exhibit salutes A. Philip Randolph, founder of the Brotherhood of Sleeping Car Porters. Randolph used the power of the labor union and the unity it presented to demand significant social changes for

Budding artists from the Little Black Pearl Workshop do some preliminary sketching for their mural.

The Satisfaction Guarantee: Becoming the core

“Just two years ago we stood here talking about the ‘wacky idea’ of an unconditional Satisfaction Guarantee—and today it’s redefining Amtrak’s brand and becoming the core of how we manage our company,” said **Anne Hoey**, vice president of Service Operations.

Hoey made that statement to attendees at Amtrak’s annual Management Conference in January, just before she

and others on a special panel launched into the specific ways that the Satisfaction Guarantee will help guarantee real success for Amtrak. The power of the Satisfaction Guarantee is that, through our guests, we learn the weakest areas in our service.

Right and Ready

Information gathered when we issue Satisfaction Guarantee certificates will continue to fuel the improved

maintenance practices that will result in Right and Ready equipment. We are not there yet, but we’re moving in the right direction.

Unsatisfactory equipment maintenance is the second-highest driver of all guarantee requests, after OTP (many OTP issues are driven by equipment failures as well.) These requests are directly related to equipment failures or shortcomings in how equipment met the guest’s needs for comfort. True Right and Ready is going to take new approaches to fleet maintenance.

The new goal is *reliability*, not availability. Mechanical personnel are working to develop new performance criteria, overhaul and replacement

plans, and periodic maintenance schedules.

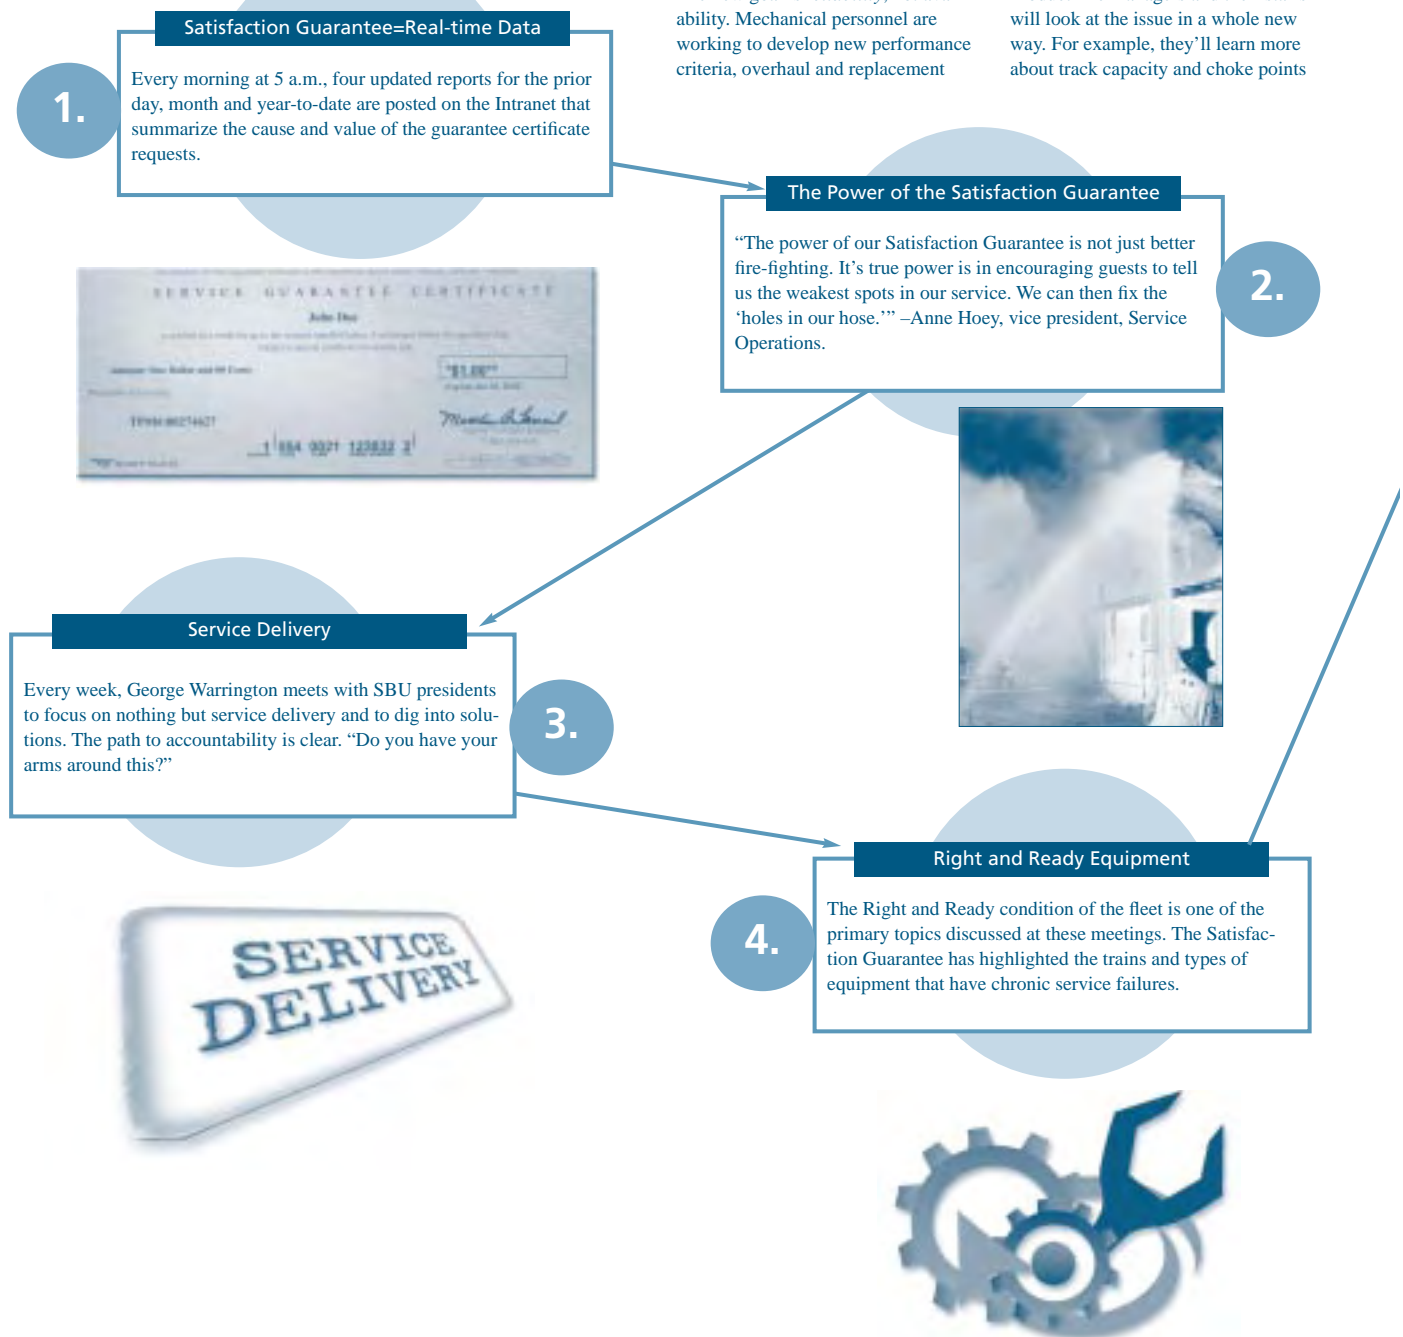

On-time Performance

Sixty-eight percent of all guarantee requests are the result of the lagging on-time performance of our trains, and how we respond to our inconvenienced guests. This is more true on our long-distance trains, where guests are eight times more likely to request a guarantee than on shorter distance services.

We need to rev-up everything we’ve ever done to improve OTP.

Product line managers and their staffs will look at the issue in a whole new way. For example, they’ll learn more about track capacity and choke points

How the process works: A Right and Ready example

re of how we manage our company

across the entire national rail system; identify alternative routing or schedules; understand how incremental decisions made daily affect OTP; and focus on new reporting and communication methods.

Train Connections

Another way to improve OTP is to make better decisions about holding trains so guests on other, late-arriving trains can make their connections.

New guidelines went into effect on Jan. 1 that empower designated field personnel to hold a train up to 60 minutes to make a connection. Any hold longer than that must be authorized by CNOC. Decisions to hold a train will always be made on a case-by-case basis, but now there is a consistent system-wide approach in place to help managers reach those decisions.

Other avenues are being explored to help us understand the patterns of

delays so that we can adjust our schedules accordingly. Amtrak also continues to work closely with the freights.

It may be that to reliably deliver connections, we'll have to lengthen some layovers. An exciting prospect then arises in determining how to create a station environment where guests feel they can settle in for the wait—and Amtrak can make a little money in the process. Chicago has begun designing a "connections lounge," and Los Angeles is testing attractive overnight layover packages for guests.

Amtrak is mounting extensive efforts to solve our two most perva-

sive barriers to consistent, quality service—reliable equipment and OTP. Our third major goal is to keep employees—especially those on the front lines of service success—engaged in these critical elements of Amtrak's business success.

"We need to keep talking about our business, keep the direction and goals clear, provide support and resources, and the training necessary to achieve quality performance," Hoey said. "And above all, remember recognition. We all need to get and give credit, recognition and encouragement for the progress we're making."

Amtrak launches new Employee Referral Program

Rewarding employees for referring qualified job candidates

Just like Amtrak rewards its guests for frequent travel, our company is rewarding employees for their advice on filling positions. Under the new on-line Employee Referral Program, employees are rewarded for successfully referring candidates to the Human Resources Department for all open non-agreement-covered vacancies.

The Employee Referral Program enables Amtrak to attract the highest quality candidates while reducing our cost per-hire. And if your candidate is hired and completes 90 days of employment, you'll collect points that are redeemable for Amtrak merchandise.

Some of the benefits of the new program are:

It's Easy to Use — It requires no additional software, hardware, or AT resources. The company benefits by having a program that is easy to manage, and employees benefit by being able to submit and track their referrals online.

Saves Money — By increasing the number of employee referral hires, Amtrak decreases the fees associated with outside placement agencies and other hiring sources.

Provides Constant Communication and Feedback — Employees referring candidates will have 24-hour access to their personal account and check the status of their referral at any time.

It's easy to refer a candidate:

Under the new on-line Employee Referral Program, employees are rewarded for successfully referring candidates to the Human

Resources Department.

• You may access the Employee Referral Program via the Internet, (<http://www.teamrewards.net/Amtrak>) or on the Amtrak Intranet. From the Intranet homepage, click on the

Employees icon, then on the Employee Referral Program link.

• Referrals will be reviewed in accordance with existing Human Resources recruitment and job posting procedures.

• Your personal account will be automatically updated as referred candidates move through the hiring cycle. If your referred candidate is hired and completes 90 days of employment, referral points will be added to your account. These referral points are redeemable for Amtrak merchandise listed on the web site, (<http://www.teamrewards.net/Amtrak>) under the *Rewards* section.

Amtrak and Cabrini College committed to continuing education

Many of the country's junior and four-year colleges offer continuing education courses to help working professionals keep their skill level and knowledge base current and marketable.

More adults are heading back to school in the evenings and on weekends. While a good education is worth the time and effort, many people are hampered by the excessive travel time involved in commuting to and from classes. In addition, conventional degree programs often take several

Both chose to attend Cabrini because of its accelerated degree program, great staff, and Cabrini's innovative approach to assisting adult learners.

years to complete—a commitment that many adults are unable to make.

Overcoming these obstacles is exactly what **Cindy Cole** and **Jim Walls** of Amtrak's System Operations & Police Services had in mind when they initiated a partnership with Cabrini College, a liberal arts school located outside Philadelphia.

When Cole and Walls made the decision to return to school to pursue their degrees, both chose to attend Cabrini

because of its accelerated degree program, great staff, and Cabrini's innovative approach to assisting adult learners. Both Cole and Walls are graduates of Cabrini's Bachelors program in Organizational Management, and both are currently pursuing their MBAs.

Through Cole and Walls' efforts, Amtrak and Cabrini College have signed a contract providing on-site classes in several locations around Philadelphia. The classes satisfy the major requirements for earning a bachelor's degree in Organizational Management. The program is aimed at adults with at least three years of work experience, and preferably some college credits. Cabrini also offers other accelerated classes, and life learning credits for students who require additional credits to complete the 123 required for a degree.

The first bachelor degree program in Amtrak history, better known as "Amtrak Alpha," began last November, at CNOC Wilmington. The group just completed their first module, Group & Organizational Behavior.

Sue McNamee, a secretary with System Operations and Police Services, said, "The classes have not only provided me with tools to use in my work life, but they are really fun! In just 18 months I'll have my degree—how great is that!"

Northeast Corridor President **Stan Bagley** talked with members from the first class at CNOC, and emphasized his commitment to the on-site program.

Beth Carey, Cabrini's director of graduate & professional studies, registers the first student in Amtrak's first B.A. degree program, Sue McNamee.

"One of the things that I most appreciate about this project was that Cindy and Jim presented the idea to me to elicit my support. This is the kind of initiative and commitment to employees that I value in managers," Bagley said.

Harold Burke, a project manager who works at CNOC, is another Amtrak Alpha student. "The program offers several benefits, but I'm most excited about the travel time it is going to save me. The program is so well organized that I can finally look forward to completing my second degree," Burke said.

A second class of 24 students was scheduled to begin at Philadelphia's 30th Street Station in February. Plans are under way to begin a third program there this month.

Information sessions are scheduled at Amtrak's Mid-Atlantic Call Center in Philadelphia, where there has been overwhelming interest in the program. Amtrak is also investigating similar education agreements with schools located in other cities, and exploring other means to help its dedicated employees complete their degrees.

"We see innovative learning opportunities for our employees, like online

classes and distance learning," Cole explained. "We'd like to see this program expand across the entire company." According to Walls, "Just about anybody who really wants this bachelors' degree can enter the program without depleting their bank accounts."

The agreement with Cabrini provides Amtrak employees with a 20-percent discount off tuition, and the program qualifies for Amtrak's Educational Assistance Program. Students entering this program also are eligible for federal Stafford student loans.

"I have encountered a lot of excitement from our employees who are participating in the Cabrini program," said **Ron Frazier**, vice president, System Operations & Police Services. "This is an excellent opportunity for educational development, and I'm so pleased that it has received the corporation's support."

If you would like more information on this program, please contact either Cindy Cole at colec@amtrak.com, or Jim Walls at wallsj@amtrak.com

Mary Ann Lorimer, manager, System Operations and Police Services

RAILWAY ROUNDUP

Amtrak celebrates renovation of Raleigh station

Amtrak celebrated the \$584,000 restoration of one of its busiest passenger rail stations in North Carolina, and paid tribute to outgoing North Carolina Governor Jim Hunt, during a ceremony in December at the Raleigh Amtrak station.

Restoring Amtrak stations is important because they aren't just buildings, they are Amtrak's front door--presenting our guests with their first impression of Amtrak. The newly restored station was paid for with federal funds authorized by Congress. Its upgraded amenities are an example of Amtrak's focus on providing excellent service and value to its guests.

George Warrington attended the ceremony, where he praised Gov. Hunt's contributions to passenger rail service in the state, and presented him with plaque to honor him for his dedication and service.

FRA thanks Amtrak

John V. Wells, acting administrator of the FRA, wrote a letter to **George Warrington** thanking Amtrak for its support and commitment to safety.

Amtrak provided two locomotive shells for use in impact tests at the Transportation Technology Center, and donated an Amfleet car shell

L to R: Jay McArthur, general manager, Atlantic Coast Business Group; George Warrington; North Carolina Gov. James Hunt; North Carolina DOT Deputy Secretary, David King; and, Raleigh Mayor Paul Coble.

for use in fire safety tests at the Aberdeen Proving Ground.

Wells said, "These tests with real-world equipment, such as what Amtrak has so kindly provided, are indispensable in that they allow for the calibration of the computer models used in research and development efforts. Thus, Amtrak's donations allow us to improve the quality and timeliness of our work--to the benefit of the real passenger industry, its staff and customers, and the nation."

Amtrak teams up with sports center for disabled

Amtrak is now an official sponsor of the National Sports Center for

the Disabled (NSCD), an internationally recognized leader in therapeutic recreation. Other sponsors include United Airlines, Well Fargo Bank, Hertz, Texaco, and Pepsi.

As a sponsor, Amtrak will enjoy regional and national exposure through a variety of events at the NSCD in Winter Park, CO. Some of the events include the Wells Fargo Bank Cup ski race in February, which features top World Disabled racers, amateur skiers, and Denver Broncos football players in three days of competitive skiing. It is the largest fundraiser of the year for the NSCD, and attracts approximately 5,000 people from around the world.

Pass-rider policy for cars on Auto Train

Effective Feb. 13, Red, White, and Blue employee discounts for cars on *Auto Train* stopped being tied to the discount levels for coach seats or sleepers.

ARROW has been reprogrammed so that there is now a separate "matrix" for car space. This means that the color designation for a coach seat or a sleeper won't necessarily match the color for the car space. For example, you could get:

- Coach – blue, car – blue, van – white
- Sleeper – white, car – blue
- Coach – red, car – white

The charges that will apply for each type of accommodation, and for the car, will depend on its designated color. In many cases, this will reduce what you pay, and allow for refunds that you wouldn't have gotten before. For example:

- Sleeper – white, car – white. The sleeper sells out, but the car space doesn't. You'll get a refund for the car charge.
- Coach – red, car – blue. You'll pay for coach, but the car space is free.
- Coach – blue, van – red. You'll travel free in coach, but will have to pay for the van space.

Retirement**January 2001**

Amtrak honors minority businesses

continued from page 1

"This is the 13th consecutive year that Amtrak has exceeded its goal, and we look forward to many more years of business success."

The six employees, all from the Procurement Department, were recognized that day for their contributions to the program in the areas of outreach, administrative support and bringing minority and women-owned business to Amtrak.

"Supporting Amtrak's SDO is an important component of the procurement function because it allows our supplier base to reflect the fabric and value of diversity inherent in the communities and guests we serve," said **Marilyn Jamison**, winner of an employee award. "I truly believe in our program and its goals."

Mike Rienzi, vice president of Procurement, was on hand to congratulate the members of his team for earning such high honors.

"It's with great pride that I thank each of you for your support of the supplier diversity program," Rienzi said. "I thank you for serving as effective ambassadors of the Procurement Department, which is above all dedicated to good customer service."

Warrington thanked the leadership and members of the Supplier Diversity, Procurement and Business Diversity staffs for making a difference. "I am committed to a very strong diversity program in this company, particularly with respect to the business community and business interests with diverse backgrounds," Warrington said.

Amino Louro, president of LAL Construction, an award recipient said, "Amtrak is a great organization to work with. To have this award really gives us the sense that we are not alone, but part of a team that can work together to get the job done."

It's your Employee Broadcast System

As one of the Service Standards initiatives, improving the communications infrastructure, Amtrak implemented the Employee Broadcast System (EBS) a year ago this month.

As an employee, you are able to call a 24-hour, toll-free number (1-877-AMTRAK1) to access the EBS, which includes the Amtrak News Line and Amtrak Employee Comment Line, as well as global, regional and departmental messages. The system also includes the Amtrak Job Line, which is

accessible to both employees and non-employees.

To listen to the News Line, Comment Line, or the global, regional and departmental messages, you will be asked to enter your eight-digit Employee Identification Number (EIN), which is found on the top left corner of your paycheck stub (it is not your Social Security number.) Callers for the Amtrak Job Line do not need to enter an EIN.

The EBS allows for senior management and department managers to broadcast vital information to their

staffs, and to collect data through question and answer voice-mail boxes. Managers are encouraged to provide new department messages on a weekly basis. Automated call handling will immediately direct messages to the appropriate question or answer box, without subjecting callers to waiting for a long time.

When you access departmental messages, the EBS relies on personnel information stored in the Human Resources database. Those employees who have had a recent departmental change may

want to verify their personnel information with their local HR office to ensure that their calls will be routed to the correct department message box.

The EBS has many features. For a list of some of its potential uses, visit the Amtrak Intranet, or send your comments and questions via e-mail to: vmsupport@amtrak.com. We encourage the use of this powerful communications tool. You will find it most valuable in supporting your business needs—we guarantee it.

REPORT CARD

Year-to-date through December FY01

Financial Performance

	FY01 Actual	FY01 Plan	Better or worse?
Budget results ¹ (millions)	(84.3)	(83.8)	0.5 worse
Operating ratio ²	1.48	1.50	0.02 better
Ridership (millions)	5.96	5.84	.12 better

Operating Performance

	FY01 Actual	FY00 Actual	Better or worse?
Ridership (millions)	5.96	5.49	0.47 better
Customer satisfaction ³	84	84	- unchanged
On-time performance	76.1%	80.2%	4.1% worse
Total employee injuries ⁴	429	400	0 worse ⁵
Total guest injuries ⁴	738	633	105 worse

¹ All revenue plus federal operating funds and RRTA contributions, minus cash expenses.

² This is a measure of expense against every dollar of income. For example, an operating ratio of 1.50 means we spend \$1.50 for every \$1.00 we earn.

³ For the three months ended November 1999 and November 2000.

⁴ As of February 15, 2001.

⁵ Based on a 5.1 ratio for FY01, and a 4.8 ratio for FY00.

Amtrak unveils long-term capital plan

continued from page 1

The financial plan projects average annual growth from FY2001 to FY2005 of 4.7 percent in ridership, 8.7 percent in ticket revenue, 28.5 percent in Mail and Express, and 8.1 percent in total revenue.

After factoring in our federal operating support, and our equipment depreciation allowance, we'll have an operating loss of \$119 million this year. That's why the business plan makes clear the need for diligent cost management

practices. We need to spend smart.

While we'll fall short of our original plan for FY2001 (largely because of the delay in *Acela Express* service), various cash management practices will enable us to continue on our glidepath to zero federal support for operations.

Since FY1999, Amtrak will have cut federal operating support from \$318 million to only \$59 million this year. We will reduce that to \$40 million in FY2002, and eliminate it in FY2003.

PROMOTIONS IN MOTION

Amtrak receives awards for advertising excellence

Five Amtrak ad campaigns awarded

Hospitality Sales and Marketing Association International has recognized Amtrak advertising campaigns for their outstanding creativity. The worldwide association honored Amtrak with five awards, including two golds.

Amtrak and E. James White Communications, the marketing agency that assists Amtrak in developing campaigns that creatively promote our products and services, were recognized for demonstrating creative advertising excellence in two categories.

In the "complete campaign" category, Amtrak received gold awards for its Satisfaction Guarantee campaign and Fall travel promotion. Amtrak also

picked up a silver award in the same category for its West Coast Tour Directory.

In the "brochures category," Amtrak won bronze awards for its *Pacific Surfliner* launch and 2000 Travel Planner.

Amtrak promotes 'Buy one, Get one FREE'

On Feb. 12 and Feb. 16, Amtrak ran advertising in 15 markets nationwide to promote our "Buy one, get one FREE" offer.

The objective of the advertising was to jump-start sales for long-distance travel in these selected cities. The offer is good through March, with dates designated for sales and travel.

The fare promotion will also appear on www.amtrak.com during the sales period.

BENEFITS CORNER

Keep More of What You Earn

It's that time of year again. Tax time. If you're looking to reduce your tax bite in the future, consider the tax advantages of retirement savings accounts.

First, there's your Amtrak Retirement Savings Plan. It's tax-advantaged in two ways:

- **Pre-tax savings.** Your contributions are deducted from your pay before they are taxed, so your taxable income is reduced, and you pay less in current taxes.
- **Tax-deferred growth.** You don't pay taxes on your contributions and any earnings until you withdraw money from the plan when you retire, which could be many years from now. So your money can grow more rapidly because the whole amount is earning a return.

If you're not in the plan, check it out. Call Vanguard at 1-800-523-1188. If you are in the plan, remember that the more you contribute—up to the IRS limit of \$10,500 in 2001—the more you will save in taxes.

Second, if you're in the plan, and you're already contributing to the limit but want to save even more in taxes, consider an individual retirement account. You've got until April 16, 2001, to contribute to a 2000 IRA. Here's a bird's-eye view of two major types of IRAs.

Traditional IRA. You may be able to deduct your contributions to a traditional IRA on your federal income taxes. Subject to certain regulations, an individual may make an annual contribution of \$2,000. Earnings on your contributions grow tax-deferred. Withdrawals are subject to ordinary income taxes and possibly a 10 percent federal penalty tax if you are under age 59.

Roth IRA. Contributions to a Roth IRA do not qualify for an up-front tax deduction. However, you can withdraw your contributions and their earnings tax-free if the account has been established for five years. If you are under age 59, and have had the IRA for less than five years, your withdrawals may be subject to a 10 percent federal penalty tax.

Comparing Tax Benefits. The Roth IRA is particularly attractive for investors who think their tax rate during retirement may be higher than their tax rate today. In effect, the Roth IRA allows you to "lock in" what your tax rate is today. On the other hand, if you expect your tax rate to be lower when you make withdrawals—a strong possibility in retirement—a traditional IRA could save you more both today and in the future.

You can learn more about which IRA may be right for you by calling Vanguard's Retirement Resource Center at 1-800-669-8623, or by visiting www.vanguard.com.

GUEST LETTERS

The following is an excerpt from a letter sent to **Mike Chandler**, product line manager, Coast Starlight.

On Jan. 9, I had the privilege of being a passenger on the *Coast Starlight* from Los Angeles to Emeryville.

[I want] to express my appreciation and gratitude for the "first class" service and professionalism displayed throughout my trip. I stress the word 'throughout' as the crew and staff aboard the *Coast Starlight* made sure that every need and want was accounted for (at times they were thinking for me!). I was most impressed with the conductors (specifically, **Cindy** and **Sandi**, from Los Angeles to San Luis Obispo, and **Scott** and **David** from San Luis Obispo to

Emeryville), as they perform a multitude of tasks with swift efficiency and thorough dedication. Their tireless dedication to train movement, safety, customer satisfaction and service cannot be understated.

All members of the staff were courteous, friendly, dedicated and thorough in their tasks. The meal service was excellent and the equipment well maintained. You should be commended on operating such a wonderful operation and should feel blessed to have dedicated people in your charge. Thank ALL of you for a most memorable ride!

Gratefully,
Mike McClendon

Mail and Express being redefined

One of the realities of our business is that we're about more than serving guests. Significant portions of our revenue come from other segments, such as commercial partnerships. And now one of the biggest of those segments, Mail and Express, is redefining itself.

In the past fiscal year, Mail and Express contributed \$122 million to Amtrak's business success, a 25-percent increase over the previous year. However, despite those healthy numbers, the company had projected that they would be even higher.

**We will now concentrate on three
basic customer groups.**

**Each is a "niche" market
for which the freight railroads
do not compete.**

So, what was wrong: The nature of the business, or the projections? A little bit of both, perhaps. As a result, we're changing our Mail and Express strategy, and being more realistic about projections.

A key change will be a more sharpened focus, and even greater collaboration with the freight railroads. We will now concentrate on three basic customer groups. Each is a "niche" market for which the freight railroads do not compete. They are: 1) Mail and periodicals, 2) Perishables (our partnership with ExpressTrak), and 3) Premium truckload customers, offering schedules and prices that are competitive with truckers using non-stop team drivers.

Amtrak revs up with NASCAR's Rusty Wallace

Amtrak has partnered with famed racecar driver Rusty Wallace to help us enter the fastest growing spectator sport – NASCAR. There are over 10,000,000 fans, and 72 percent purchase goods and services endorsed by the race drivers. And 62 percent of this market travel around the country on vacations and to the races.

Rusty will be wearing Amtrak's logo prominently placed on the front of his race uniform. Rusty is one of the most interviewed drivers in the NASCAR circuit, and is also a major spokesperson for NASCAR. Rusty is a proven champion.

Racecar fans can join Rusty's "2 the Track" travel club online at www.amtrak.com or www.rustywallace.com. Enrolled members will receive a 15 percent discount on coach fares when traveling to a specific NASCAR race, and a 10 percent discount on coach fares when traveling at other times of the year. Amtrak will also be building special train promotions with Rusty within the next several months. For up-to-date activities, visit our website.

The new Mail and Express business plan calls for complete cooperation with the freight railroads as partners, with sensitivity to their commercial markets and operating priorities.

Employees 'blitzed' on Amtrak's financial status, cost management actions

The blitz is on. Managers across the company are now conducting a mid-winter information blitz, briefing employees in small gatherings. It's an opportunity to talk face-to-face with employees about Amtrak's financial status, and the critical importance of cost management.

Employees are learning about some of the many cost management initiatives that are now being implemented, and others that are being evaluated to determine their level of cost-savings.

See pages 6-7 to get up to speed on what Amtrak is doing to manage costs.

Vince Nesci, acting chief mechanical officer, gives information blitz at Wilmington Mechanical facility.

Anne Hoey, vice president, Service Operations, gives presentation to employees at the Wilmington Maintenance Facility.

T R A I N O F T H O U G H T

You may have seen newspaper stories recently about the company planning \$200 million worth of actions to increase revenue and cut costs. There will be some tightening around routes, training costs, and more. And the company is going to get rid of some equipment, including three jumbo jets.

No, we don't have any jumbo jets at Amtrak.

The company was Northwest Airlines. And the point is that we're not the only ones trying to reduce expenses and increase revenue.

Our efforts don't mean we're in a crisis, with across-the-board job cuts and other severe measures. But they do mean that everything that costs us money or provides income is being thoroughly reviewed.

In two years—2003—our operating revenues have to meet or exceed our operating expenses. We're on track to reach that point, but this is going to require discipline, focus and vigilance. And that means digging deep into how we manage our business. It's an opportunity for us to discover ways to be more efficient, without sacrificing safety or service quality.

Already there are nearly 80 cross-functional and cross-departmental

teams studying projects that have potential annual savings of from \$500,000 to \$6 million (see pages 6 and 7).

This isn't about cutting service. We are building—and expanding—a market-based network. Any change in service will be market-driven. There are no plans to eliminate routes except the Lake Country Limited. (This service began last year, based on Mail and Express business potential. That business didn't materialize, but we'll continue to pursue other expansion ideas.)

And, as I said, this also isn't about across-the-board job cuts. We're taking advantage of natural attrition, non-filling of vacancies, and furloughs. While bumping rights make the total impact difficult to assess, a minimal number of management and agreement-covered employees are expected to be affected.

Our business plan is working. We're on track to meet the mandate to be operationally self-sufficient by 2003. And if we meet all the aggressive, but realistic goals we've set, Amtrak will be stronger financially and more in control of its destiny than it has ever been.

And we don't have to get rid of any jumbo jets.

George Warrington

Two new high-speed trains added to Acela Express Service

Enhancements also introduced for Metroliner Service

Last month, Amtrak gave its guests two more reasons to jump on board *Acela Express*.

Two new high-speed trains were added to the service. One train runs non-stop between Washington and New York in less than two and a half hours. The other train goes roundtrip between Boston and New York, supplementing the Washington-Boston roundtrip train that inaugurated the service on Dec. 11.

Ridership and revenue numbers for the two new trains were not available at the time this issue of *Ink* went to press. But ridership aboard the original train climbed steadily through the winter, and on-time performance continues to excel.

Acela Express

Amtrak will phase in more *Acela Express* Service through the end of the summer. A total of 20 high-speed trains will be used to run 19 daily roundtrips between New York and Washington, and 10 daily roundtrips between New York and Boston.

Metroliners: Adding service and 'quiet cars'

Also beginning last month, Amtrak increased *Metroliner* Service between New York and Washington, with additional trains on Saturdays and Sundays.

A fifth roundtrip train was added on Saturdays, and the Sunday schedule increased from eight to 10 roundtrips.

In addition to providing more service for our guests, Amtrak expanded a new amenity introduced in February on *Metroliners* 106 and 107.

The *Washington Post* calls them "Peace Trains." They are newly-designated "quiet cars," which give guests relief from disruptive cell phone conversations and the constant clatter of other electronics.

The concept of a quiet car came from our business travelers. Many of them were complaining about the noise levels—specifically from cell phones—and wanted a designated area where

Details announced on first-ever 20-year blueprint for California rail development

On March 6, Amtrak and the state of California unveiled a 20-year improvement plan for rail passenger service.

The \$10.1-billion plan is a bold vision in response to the growing gridlock in California's vast and complex transportation system. It is designed to increase mobility and to provide more choice for travelers.

It is designed to increase mobility and to provide more choice for travelers.

"Amtrak can play a significant role in meeting future transportation challenges in California," said Amtrak West President **Gil Mallory**. "Through phased-in improvements, bolstered by a strategic vision developed with local, regional, and state leaders, passenger rail will provide solutions for enhancing quality of life in communities while supporting economic growth."

Goals were established in the improvement plan for the states'

Amtrak West President Gil Mallory announces the release of the California improvement plan.

existing and emerging rail corridors and projects ridership growth of 300 percent over the next 20 years. It envisions:

- Hourly service between Los Angeles and San Diego, with travel time under two hours
- Increased frequencies between the Bay Area and Sacramento, and other improvements that would triple ridership over the next 20 years
- The first downtown Los Angeles to downtown San Francisco service in 30 years
- New or expanded services to Las Vegas, Palm Springs, Monterey, Reno and Redding

The plan provides a blueprint to guide future rail planning in three

"Amtrak can play a significant role in meeting future transportation challenges in California."

Amtrak West President
Gil Mallory

phases: immediate (up to 3 years), near-term (4-8 years), and long-term (9-20 years). It prioritizes specific improvement projects that would reduce congestion in the state's four primary intercity rail corridors: San Diego to San Luis Obispo; Bakersfield to Sacramento; San Jose to Sacramento; and Los Angeles to Oakland/San Francisco.

The first three are among the five busiest passenger rail corridors in the country, and San Jose to Sacramento is the fastest growing passenger rail route in the nation.

This plan is the result of a major community-based planning initiative. Four task forces reviewed existing service, defined future needs, and identified projects for improving commuter, recreational, and business travel, as well as freight rail operations. Task

force members included local elected officials, California Department of Transportation, freight and commuter railroads, rail advocates, and the FRA.

Copies of the California Passenger Rail System 20-Year Improvement Plan can be obtained online, at www.amtrakwest.com/califuture.

The route to our success

Strategic Business Plan Key Strategies

Since the 1998 launch of its new strategic direction, Amtrak has taken significant steps in rising to the challenge of reducing its reliance on federal funds to support operations. Driving Amtrak's actions are six key strategies.

Build a market-based network

Define customer demand, using extensive research, and then match that demand with our system.

Deliver consistent quality service

Change the culture of the company to be more customer-focused, and provide a world-class travel experience on every trip.

Revitalize the Amtrak brand

Introduce and support a new brand for Amtrak, to signal a major change to our customers.

Operate a cost-effective business

Identify specific accounts, large functional areas, policies and procedures, organizational structures and back-office costs that have potential for improved cost management.

Leverage public & private partnerships

Aggressively pursue public and commercial partnerships, through Mail and Express and other programs, which generate the highest returns from the company's assets.

Develop corridor services

Work with state and other partners to create or improve rail corridors across the country, drawing from the expertise we've gained in building the Northeast Corridor service.

Amtrak to discontinue year-old Lake Country Limited Service

The company announced last month that it will discontinue service on the year-old *Lake Country Limited*, effective Sept. 23. The 98-mile service, which began in April 2000, runs between Chicago and Janesville, WI.

In a letter to Amtrak Intercity employees, President **Ed Walker** stressed that the action was a strategic business decision, based on market response to the service. Analysis had indicated a potential for Mail and Express business on the route. But, despite some enthusiastic marketing efforts, the projected business did not materialize.

Walker said the decision is not the start of route and service slashing at Amtrak, adding, "Like any successful company, we are simply making a prudent business decision and eliminating a service that is not meeting expectations."

"Like any successful company, we are simply making a prudent business decision and eliminating a service that is not meeting expectations."

Amtrak Intercity President
Ed Walker

While Amtrak's analysis and reasoning were sound, predicting the success of new services is never a sure thing. Does that mean we'll stop looking for opportunities to grow our business? Of course not. But we

don't have to keep services that do not meet business expectations.

Remember, our Network Growth Strategy is rooted in being responsive to the marketplace. And in this case, the marketplace has demonstrated that adequate Mail and Express business on this route does not exist.

Decisions like this are what Amtrak means when it says it will "operate like a business," but it doesn't mean we will stop looking for expansion opportunities.

The company is required by federal law to provide 180 days notice when eliminating rail passenger

service. So we will continue to provide service until Sept. 23. However, from March 24 through Sept. 22, that service will be reduced to Saturday-only.

O N T H E R I G H T R A K

PREPARE training pays off

Lola Lee, train attendant on the *Coast Starlight*, sent a card to Human Resources consultant **Pat Bell**, and training instructor **Jeanette Resendez**, thanking them for the emergency evacuation training she received in the PREPARE 2000 class. Lee wrote: "Thank you for giving me the tools that I needed to perform my job effectively. As you know, I was in a derailment that happened on Dec. 7, 2000. A lot of the information that you gave me in class came flooding back to me. Thanks to you, I was calm, cool and prepared."

Jordan honored as a 'Mover and Shaker'

Cedestra Jordan, NEC general manager of Safety and Environmental Control, was honored last month as a recipient of the 2001 "Movers and Shakers" Award.

In recognition and celebration of Women's History Month in March, Jordan received the award for influencing the social, political, and economic fabric of the Philadelphia Metropolitan area.

"This is an exciting time to be a member of the Amtrak team. Being recognized in celebration of Women's History month says a lot about Amtrak's commitment to diversity, and the impact that our commitment has on the communities we serve," Jordan said.

Jordan's extensive civic activities include being the director of the Women's Transportation Seminar, an alumni board member for the Stetson School of Business and Economics, and a member of the Pennsylvania and District of Columbia Bar Associations.

Rewarding 'world-class' station, onboard announcements**Employee's style grabs guests' attention**

What makes a good public announcement? You take a good script, and place it in the hands of an employee who cares about guest satisfaction. This employee will then speak slowly, pronounce the words clearly, vary the pitch, pause for effect, smile while speaking, and practice, practice, practice! Just ask **Sharon Greene**.

"PUH-leeze watch yourrrr step when BOARD-ing and keep ALL CHIL-dren well in hand. THANK yewwww for CHOOSE-ing AM-trak, where our PROM-ise is Sat-is-FAC-shun Guar-an-TEED."

There is the distinctive, resonating voice that has echoed through the loudspeakers at Baltimore Penn Station—it belongs to usher Sharon Greene.

For guests whose commutes send them scurrying through the station on weekdays between 5 a.m. and 1:30 p.m., Greene's train announcements were potent enough to jar travelers from their early morning haze, and to provide a jolt of

Sharon Greene, usher, Baltimore Penn Station

mid-day energy for the later crowd.

One day last month, *Baltimore Sun* newspaper reporter Kevin Cowherd visited the station and was so impressed with Greene, he wrote a feature story on her that appeared in the *Baltimore Sun*.

Responding to her feature story, and the positive responses to her technique, Greene said, "I think it's wonderful. I've had people call me a star and warn me not to let my head swell!" "Most of all I want people to understand me. It's important for people coming through here, some for their first time, to know exactly where they have to be and when," she said.

On Feb 12, Amtrak unveiled new public address announcements. The purpose was to

provide prompt and consistent station and train announcements for our guests.

Each business unit was involved in the development of the new announcements. A team of employees scripted public address messages for the 29 most frequent announcement events. Safety and service were recurring themes in each category for stations, on-board and conductors.

A recognition program was held from March 12-April 12, 2001. Qualified observers visited onboard crews and stations in each business unit. Announcers who were prompt, professional, and delivered the announcements with excellence became eligible for an award drawing on May 1. Their names and locations were also spotlighted on the Intranet. Employees selected in the drawing will receive taxable gift certificates.

To hear the new announcements, call the Employee Broadcast System, using the toll-free number, 1-877-AMTRAK1. Select option 8, then enter your 8-digit employee I.D. number (found on your paycheck stub under your name). Follow prompts.

Amtrak brings family together

Donesta Lay has been an Amtrak employee for more than 28 years. During that time, she has spent her career working with our guests, either on the phones or in person.

As a result of assisting a guest at the Jacksonville, FL station, Donesta's whole life came full circle.

Donesta has described herself as a "milk-carton kid," having been taken from her California home by her babysitter when she was 11 years old.

Donesta lived with her father after her parents separated when she was only four months old. When she was 11 years old, her father was confined to a hospital for four-months, while recuperating from an injury. During that time Donesta was being cared for by a babysitter.

After he was released from the hospital, her father found that the babysitter had taken Donesta and moved across the country, by passenger train, from the Pacific Coast of California to the Atlantic Coast of Florida.

Donesta was raised by her "babysitter," and was never permitted to ask questions. She never knew what had become of either her father, or her mother. All she did know was her father's name, "Snowden," and that her original home was in Los Angeles.

Donesta Lay

In April 1999, a distraught woman came to Amtrak looking for assistance in getting to Bakersfield, CA to see her ill mother. Donesta helped the woman, and immediately became intrigued when she learned that "Snowden" was the woman's name. "I asked her if she thought we might be related," said Donesta. But the woman said she wasn't sure.

Last November, Donesta received a call from Carol Snowden, the woman whom Donesta had helped at the station more than a year

earlier. According to Donesta, the woman's brother, from Riverside, knew a Gaston Snowden in Bakersfield—who had a daughter, named Donesta—and the rest is history.

Donesta called her father, and this past Christmas holiday she had a meaningful reunion with him and his family. Donesta has also been in contact with her mother, and she will travel cross-country, again by train, to visit her mother on Mother's Day.

Donesta discovered that both sides of her family had searched for her over the years, and had missed her and loved her. She also has learned that she has gained a whole new family, with a slew of aunts, uncles and half-brothers and sisters.

Right Care...Day One

On-duty Injury medical management program

"A program like Right Care...Day One was long overdue and is one of the best ways to show our employees that we really care."

Lorraine Green, VP Human Resources

"Right Care...Day One" is an on-duty injury medical management program. A joint labor/management team began its development in 1999.

The program was designed to improve the access Amtrak employees have to quality medical care through occupational health facilities and medical case management. The pilot program was offered in the Mid-Atlantic area until May 2000, and has since been implemented throughout the country. Right Care...Day one consists of:

- **24-hour Injury Reporting Hotline:**

The most recent enhancement to the program, this toll-free hotline was established for supervisors to report all on-duty injuries. The Reporting Hotline is operational 24-hours-a-day, 7-days-a-week.

- **Occupational health facilities:**

A team of management employees, with the assistance of union representatives, selected occupational health providers who are trained to help employees deal with work related injuries.

- **Medical Case Management:**

Amtrak has contracted with a healthcare company, Continuum, to provide medical case management to employees who are injured on the job. With medical management

there is a reduction of lost time attributed to on-duty injuries. If necessary, a case manager is assigned to work with the employee throughout his or her recovery and when ready, recommends returning the employee to work.

- **Transitional Work Program:** One of the most important aspects of recovery is being able to return to work as soon as medically possible. Employees who participate in Right Care...Day One are eligible to participate in the Transitional Work program, which provides opportunities for modified/restricted duty or alternative work assignments. Modified duty is your regular job assignment modified to accommodate your medical restrictions. Employees may be given alternative work assignments (jobs internal or external to Amtrak) until they are medically ready for modified or full duty. The alternative work assignments do not conflict with collective bargaining agreements.

The Right Care...Day One program was well received in the Mid-Atlantic area. There were a number of successes experienced, beginning with better management of employees' care. "Employees must be assured that the company will act responsibly and provide them with the highest quality of medical care when they are injured. With the assistance of our labor unions and vendors we feel we are accomplishing that goal" said **Pat Clarke**, regional director, Law department.

"It's the best thing since managed care, very professional. They do exactly what they claim."

Darnell McNeil,
foreman, C&S

Employees who participated in the program found it to be very beneficial. According to **Darnell McNeil**, a C&S employee who participated in the Transitional Work program, "It's the best thing since managed care, very professional. They do exactly what they claim."

Wilmington and Bear were among the first locations where Right Care...Day One was implemented. According to **Vince Owens**, local president for the IBEW, said "The program has a lot of merit and is very positive." Similarly, **Mike Hill**, general chairman of the IAM said, "I support the program and believe it's very good for employees."

To continually enhance our systems, the Right Care...Day One committee recently established the 24-hour hotline for reporting injuries. This system, when fully operational, will provide tremendous benefits for early intervention and referral information for the occupational health network. Starting immediately, all supervisors are to report all injuries by calling the

hotline at 1-800 505-5549. This will enable us to test the system in full operation and take care of any "bugs." When a supervisor calls, an injury care coordinator (ICC) will take information regarding the incident and complete the Form 260 while on the telephone with the supervisor. The ICC will fax the completed 260 back to the supervisor for his/her review and signature, along with the employee's personal statement. At this time, the supervisor is required to fax the signed

"Employees must be assured that the company will act responsibly and provide them with the highest quality of medical care when they are injured."

Pat Clarke,
regional director, Law

Form 260 to Central Reporting and the appropriate Claims office.

This employee program has been well received and has broad support. We look forward to the continued cooperation from all supervisors to obtain the full benefit of Right Care...Day One.

Dr. Malva Reid, director of Health Services

Pacific Northwest Amtrak service shaken up by earthquake, floods

Amtrak employees help passengers, crew on stopped trains

"All employees involved in minimizing the inconvenience to our guests during that challenging time are to be commended."

Amtrak West President
Gil Mallery

On Feb. 28, just before 11:00 a.m. local time, the Pacific Northwest experienced an earthquake estimated at 6.8 on the Richter scale in the Seattle-Tacoma area, with an epicenter located south of Tacoma, near Olympia, WA. As a result, all Pacific Northwest Rail Corridor service was suspended.

Standard operating procedure following an earthquake, or an event of this nature, is to halt all rail traffic pending a thorough track inspection.

The earthquake affected the *Cascades*, *Coast Starlight* and *Empire Builder* services, leaving guests and employees on stopped trains. Amtrak dispatched management and staff to help guests and crews, and to assist with operations. They worked tirelessly to reaccommodate travelers en route from other Amtrak trains, and those who could not

depart origin cities because of the canceled services.

There were no injuries to employees or guests as a result of the earthquake. Amtrak equipment did not sustained any damage.

About a week following the earthquake, Southern California had several days of severe storms that brought heavy rains, flooding and high winds. Service was canceled on many *Pacific Surfliner* and *Coast Starlight* trains. The Union Pacific railroad, which owns the tracks over which those two services operate, closed the section of track between Santa Barbara to San Luis Obispo.

"All employees involved in minimizing the inconvenience to our guests during that challenging time are to be commended," said Amtrak West President **Gil Mallery**. "Any

time service is canceled the situation is difficult. I want to thank the employees of Amtrak West for rising to this challenge."

When severe weather changes rapidly, regular conference calls are held to monitor the status of the weather, operations and customer accommodations. At least twice daily, personnel from Amtrak West operations, all product lines, Public Affairs, Customer Relations, Mechanical and Engineering, as well as representatives from the owning railroad carriers—the Burlington Northern Santa Fe and Union Pacific—meet to assess the unfolding situation.

Amtrak West services have been affected in previous years due to severe weather, most recently during the El Niño storms of 1998 and 1999.

Cost Management Cost Management Cost Management

What Amtrak is doing to manage costs

Can you rank the following items according to dollars spent last year through Amtrak inventory? Start with the most costly item: A) Ni-Cad batteries for Amfleet, HEP, and Horizon equipment; B) Pantographs for AEM-7 locomotives with autodrop system; C) White bleached paper towels; D) Concrete ties.

The correct order is: C) Paper towels at \$838,000; A) Batteries for Amfleet equipment was a close second at \$830,000; B) Pantographs, \$504,097; and D) Concrete ties, \$415,000.

Anne Hoey, vice president of Service Operations, answers questions from Bear employees.

Tom Butler, general manager of the Bear maintenance facility, challenged employees with that quiz, which he sent by email last month. He received over 500 responses, but the first to send in the correct answer was **Betty Tronco** in Philadelphia.

Whether it's with an informal quiz, or the well-organized information blitz our managers are now conducting, the goal is the same—to raise awareness of Amtrak's continuing need to manage costs.

Cost management, cost management, cost management. We should all get used to hearing those two words. They have not just become a part of our "business vocabulary," cost management now drives the decisions we make every day in managing our business.

Is it really necessary to count paper towels?

It's vital. Our costs have been growing far too quickly. And at the same time, our federal operating support continues to decline. We are focusing on every possible area where there is potential for cost savings—from paper towels to locomotive fuel consumption.

As a part of the information blitz, employees are learning about some of the many cost management initiatives (CMIs) that are now being implemented, and others that are being evaluated to determine their level of cost savings.

Managers are looking at scores of CMIs already—and the total grows every week. The projected cost savings from each initiative range from \$100,000 to more than \$6 million per year.

Employees ask informed questions about Amtrak's financial status.

CMI #2— Credit Card Efficiencies

Problem: Interchange fees and credit card fraud.

Project goal: Save \$1 million per year in reduced fraud, interchange fees.

OVERVIEW:

Interchange fees on some transactions are being charged at the highest rate, because Amtrak's current authorization link does not enable us to pass all required data to the credit card processor.

Amtrak loses about \$2.5 million to credit card fraud each year. The company doesn't have the ability to analyze this fraud by sales channels because of the way data is transmitted by our existing systems.

SOLUTIONS:

Upgrade to a standard authorization link to reduce interchange fees.

Require a card identification number for all credit card sales over the phone and Internet to reduce fraud.

Collect sales channel data to enable analysis of fraud by channel.

CMI #22— Materials Consumption

Problem: Amtrak does not have adequate control over consumable inventory items; use of these items is high.

Project goal: Save \$1 million per year in operating costs.

OVERVIEW:

Potential for waste and misappropriation of products.

Inconsistent procurement and charge-out procedures.

Excessive numbers of items are "expensed" (bought outside inventory).

SOLUTIONS:

Recycle some cleaning cloths, gloves (annual cost savings: \$400,000+).

Enforce procedures on replenishing vs. replacing first-aid kits (annual cost savings: \$100,000).

Facility managers responsible for an incremental 10-percent reduction in consumable inventory categories

The "cards" you see on these summaries of just some of the Management Initiatives (CMIs) studied by special teams, and each project has far more details than shown here. Each project believes that if all the CMIs implemented, they could save \$1 million every year. Another \$1 million identified for round two that

Cost Management

Bear employees get the facts on Amtrak's cost management actions.

CMI #24— Travel Policy Revisions

Problem: Amtrak's business travel policy is not routinely followed; enforcement is inconsistent.

Project goal: Save \$500,000-750,000 per year in travel costs.

OVERVIEW:

Appropriate verification of expenses is not required in all cases.

Travel arrangements often not made with approved corporate travel agency.

\$50-per-day meal limit treated as an allowance; not all receipts required.

Policy doesn't reflect current fiscal reality.

SOLUTIONS:

Prior approval required for all business travel that will incur expenses.

Written justification for travel required, with analysis of lower-cost alternatives.

Approval required for all meetings costing more than \$1,000 (off-site, travel required).

Required approvals raised to Management Committee, department-head levels.

CMI #33— Conductor and LSA Remittance

Problem: Amtrak's remittance operation is open to significant risk of lost revenue and theft. We do not have good cash controls.

Project goal: Generate \$5 million per year in bottom-line benefit (cash generation, cost reduction, revenue improvement).

OVERVIEW:

There has been inadequate attention to the entire process; some elements offer disincentives to generating revenue improvement.

Inattention increases possibilities for overlooked revenue and theft.

SOLUTIONS:

Require product line managers to review or audit remittances by conductors. (Pilot audits reveal some significant shortages).

Combine cash-fare ticket stock forms and on-board ticket/invoice form 713, to create accountability for credit-card stock.

Implement standard on-board fare that includes a surcharge.

What about our record ridership and revenue growth? Doesn't that add millions to the bottom line?

This past fiscal year we set new Amtrak records for both ridership and revenue. Mail and Express continued to grow as a revenue source for us, with an increase of almost 25 percent. *Acela Express* will be phased in gradually. Looking further ahead, the service will generate up to \$180 million in additional revenue for us.

Our Satisfaction Guarantee is another great success. Since the guarantee was introduced last July, it's been helping to increase our revenue, and it's building a stronger and more loyal customer base. We're also getting smarter about revenue management, and the pricing of our product.

Financial challenges

Despite the record growth in ridership and revenue in FY2000, we did not "make plan." That's the handful of key financial targets that the Board of Directors holds us to.

Cost management: Here's what we're already doing

Amtrak is not planning any across-the-board workforce or service reductions.

We will manage staffing levels, mostly through attrition, non-filling of vacancies and furloughs.

Our cost-management actions are about digging deep into how we spend and how we generate money; finding ways to work smarter and more efficiently; reduce costs; and make money without sacrificing passenger safety or service quality.

CMI #31— Food and Beverage

Problem: Performance in revenue accounting, linen control, first-class meal vouchers, crew meals, and reusable equipment has been inconsistent; results in lost revenue, waste, unnecessary costs.

Project goal: Generate \$5 million per year in bottom-line benefit (cost reduction, additional revenue) in the areas of food, beverage, related support items and operations.

OVERVIEW:

Some policies supporting food and beverage service are outdated and ineffective; support and enforcement has been inadequate or inconsistent.

SOLUTIONS:

Standardization of lounge/café prices across system.

New accountability procedures for linen and laundering.

Enforceable accounting practices for reusable support items.

Increased management attention to LSA revenue performance and remittances.

Yolanda Mentz, manager; Yvette Perkins, team leader; Robin McDonough, director, Budget Analysis & Coordination; Jay Lawrence, senior director, Reservation Sales in discussion following presentation to Riverside RSCC sales agents.

Right now, we've identified more than 70 areas of our business where there can be significant cost savings. Here are just some of the projects we are looking into:

- Strictly monitor on-board revenue accounting, including enforcing procedures for linen control/laundry, first-class meal vouchers, crew meals, and reusable equipment.
- That initiative has the potential to generate \$5 million per year in bottom-line benefit (cost reduction, additional revenue).
- Systemwide, we will now purchase all of our computer equipment from one manufacturer, Hewlett Packard. Between big discounts, and savings on maintenance and warranty provisions, this could save us almost \$2 million a year.
- We have renegotiated our office supply contract, for a savings of \$1 million a year.
- Along with shutting down locomotives to conserve diesel fuel, we're going to develop a schedule so that locomotives can refuel only at the lowest-cost locations—and save at least \$1 million a year.

Work group hashes out cost management initiatives.

Those are just a few examples. We think those projects, and many more we're working on, can save the company in the hundreds of millions of dollars.

Each month in *Amtrak Ink*, we'll feature at least one CMI so you can stay informed about what the company is doing to regain control of our costs.

Remember, in addition to focusing on cost-management actions, and our on-going assessments of business practices, we need to stay focused on building revenue with our Satisfaction Guarantee. Keep our guests at the center of everything we do—keep them coming back.

these two pages are quick of the nearly 40 Cost (CMIs) that are being s, and then implemented. re detail, and many more here. But the company MI projects are ld save Amtrak over \$50 ther 40 CMIs have been o that will begin soon.

CMI #5— Vehicle Policies

Problem: Amtrak has not updated policies relating to the acquisition and control of leased, owned and managed vehicles since 1988. Although older data is unreliable, fleet appears to have doubled since 1995.

Project goal: Decrease expenses associated with vehicles by \$1 million per year initially. In recent weeks, Amtrak has already reduced budgets for vehicle expenses by \$5.6 million.

OVERVIEW:

There is no standardized profile of vehicles across the corporation.

We have not dedicated staff resources to managing vehicle assignments.

The company needs to review its policy on garaged vehicles, vehicles used for commuting, and the related tax implications.

Maintenance and damage claims need to be centrally managed.

SOLUTIONS:

Redefine control process, including justification for all vehicles, and purchase approval requirements.

Return unnecessary vehicles; create motor pools at major locations.

Reduce number of employees commuting with Amtrak vehicles.

Deploy lower-cost GSA vehicles, instead of leased vehicles.

Centrally manage maintenance.

Bob McGowan: 43 years of exemplary service on the railroad

Bob McGowan, former vice president, equipment and CMO, retired in February, after 43 years of railroad service. Following is an excerpt from a feature article written by Walter Przywara, a staff writer for the Wilmington Dispatch. The article chronicles McGowan's notable career, and gives us a glimpse of a unique individual, and a truly remarkable railroader.

On Dec. 2, 1957, **Robert F. McGowan** left his home in Brooklyn, NY and drove two and a half hours to Harmon, NY to report for his first day of work with the New York Central Railroad (NYC). It was the start of a 43-year railroad career that would take Bob from his humble beginnings as an NYC machinist apprentice, to his retirement on Feb. 2, 2001, as an Amtrak vice president. Bob's career path is an impressive success story of talent, dedication, and lots of hard work paying off.

As an apprentice making \$77.77 a week, Bob was soon on his way to work with management trainees in a NYC program that provided in-depth exposure to every phase of railroad activity. Through this program he worked in signal, track, finance, engineering, advertising, freight, and other departments. On the mechanical side he worked in every one of

Delaware Sen. Tom Carper, with the McGowans, praised Bob's railroad career.

the shops, and also worked in most of the major terminals and facilities. He derived valuable first-hand knowledge and got a thorough education in how to handle the complex day-to-day freight and passenger operations of the NYC. In just a few years he gained a wealth of practical experience that has taken others decades to achieve.

The NYC sent Bob to Cleveland, OH, to work on a cost-control project. During his seven years at Cleveland, he was the driving force that led to the installation of the first computers to be used by a railroad: IBM 360/20 computers installed in the Mechanical Department. Just 28 years old, he was rapidly making a name for himself in the industry.

In 1968, when the NYC and the Pennsylvania Railroad merged to form the

Penn Central (PC), Bob traveled to the shops at Beech Grove, Indiana, to establish and head the Production Control Department. Following his Beech Grove assignment was a transfer to Baltimore, MD, as a master mechanic.

After transferring to the PC's New York City and New Jersey Division in 1973, Bob had 1,440 people working for him. He was responsible for seeing that the 700 daily passenger trains operating from his territory each day were properly serviced. He was also in charge of some freight trains. With this tremendous responsibility came a salary of \$19,000 a year.

Next it was on to Philadelphia to join the chief mechanical officer (CMO) staff. It was 1975, and Amtrak had just bought the General Electric E-60 Locomotives. In 1976, Bob went to work for Amtrak at Sunnyside, NY, running the passenger operations until 1977. Then it was back to Philadelphia to again oversee the locomotive side, as well as Amtrak's multiple unit trains.

In his next assignment, Bob was working on the redesign and rebuilding of Amtrak facilities across the country. This was followed by a brief stint as assistant general manager of the Wilmington Shops, and then on to Philadelphia again, now as assistant CMO. This involved taking over some facilities from other railroads, and running all or part of commuter operations on the East and West.

Bob returned to the Northeast Corridor as the CMO when Amtrak established the SBUs. His duties now encompassed the engineering and regulatory departments, heavy repair shops, mechanical functions plan, and instituting preventive maintenance and overhaul programs for coach cars and locomotives. The

"I have really enjoyed my railroad career; it has been a wonderful experience."

Bob McGowan

implementation of Bob's maintenance programs resulted in dramatic improvements in equipment reliability, on-time performance, and customer satisfaction.

When asked about his retirement plans, Bob said that there are many opportunities for him to assist those seeking to upgrade or to initiate passenger rail service. Dottie, his wife of 43 years, also has some "honey-do" chores waiting for him at home.

Of his 43-year railroad odyssey, he unassumingly states, "I have really enjoyed my railroad career; it has been a wonderful experience." Bob paid a compliment to his co-workers, saying that it has been a pleasure for him to have worked with so many outstanding people, and very much so with all of the great people at Wilmington, Bear, and Beech Grove.

Amtrak Technologies points to the stars

L to R: C. Gettys and T. Wiley display their bronze stars; E. Donovan, and G. Hill.

Amtrak Technologies has presented four employees with engraved brass stars in recognition of their outstanding technical, business-focused and revenue-enhancing contributions to Amtrak.

These "star" recipients were the first under Amtrak Technologies' Star Achievement (ATSA) Recognition program, newly created by CIO **Robert Gale**.

"I'm struck by the tremendous dedication, enthusiasm and talent displayed by our staff," Gale said. "As a corporation, it is critical that we encourage our employees and contributing partners to continue creating, developing and maintaining the numerous technologies that contribute to the dynamic IT environment here at Amtrak."

For **Tom Wiley**, **Eileen Donovan**, **Charles Gettys** and **Guy Hill**, the bronze star also rewards validated recognition of their creativity, customer-focused work ethic, and determination to get the job done.

Wiley, HR consultant, was lauded for "pulling out all the stops" to speed up the (personnel) process

to convert a large number of contractors to employee status.

Donovan, Amtrak Technologies application director, received her star for displaying exemplary leadership, particularly in adapting and implementing technologies to support the Satisfaction Guarantee.

Gettys, senior programmer, was credited for his extraordinary efforts in ensuring the success of Amtrak's disaster recovery exercises, critical to the corporation's ability to quickly recover application systems and reduce losses that would be incurred in the event of a Data Center crisis.

Hill is a systems developer who recently converted to employee status. He was the quiet force behind a number of systems and projects whose improvement or completion resulted in well over \$500,000 in cost savings to Amtrak.

If you would like to nominate an employee for an Amtrak Technologies award, please contact **Beverly Harper**, the program's administrator, at ATS 777-4501.

A M T R A K I N T H E N E W S

Improving Amtrak's service in the South is a good idea. The Northern states over the years have gotten the lion's share of money from the government from motor fuel taxes. Now it's time for us Southerners to get some money back, but not at the taxpayers' expense. Having high-speed rail service between major metropolitan areas would make for more intercity travel in the South.

"Expand Amtrak, but not at taxpayers' expense," News & Observer, Feb. 10, 2001

Amtrak freight customers, that includes produce suppliers, slaughterhouses, juice packers, beer producers and even ice cream manufacturers, are shifting freight from the highway to refrigerated boxcars on Amtrak trains coast-to-coast. Publishers, meanwhile, are using Amtrak to move pallets of magazines and other time-sensitive mailings to regional postal facilities. Amtrak's scheduled mail and freight-express grew by 25 percent to \$122 million in revenue last year.

"Time Sensitive," trafficWorld, Feb. 19, 2001

Floridians say they want fast trains crossing the state, and the distant rumble being heard is apparently Amtrak barreling down the line. With Amtrak's proven experience running bullet trains, and financing looking like it will soon be in place, the nation's primary passenger railway appears to be a natural choice to head up the high-

speed rail. Lawmakers and transportation experts say Amtrak can put its knowledge of fast trains to good use.

"Backers of trains look to Amtrak," Key West Citizen, March 14, 2001

By 2007, officials hope another train going through Iowa City will be able to connect University of Iowa students to Chicago. This train would be part of the Midwest Rail Initiative, a project to link several Midwestern cities between Cleveland, Ohio and Omaha, Neb. The high-speed line would go up to 110 miles per hour. Officials estimate that 2,000 rail jobs and 4,000 construction jobs would be created.

"Amtrak might hit Iowa City by 2003," Daily Iowan, Feb. 12, 2001

Amtrak has a new offer for business travelers in the Northeast Corridor. Last year Amtrak did an experiment to see whether customers would like to be shielded from the blips and bleeps of the technology revolution. The "quiet car" concept is now popular on Amtrak, a request that came from business travelers. One traveler said the "quiet car" is long overdue. People shouldn't be able to talk on cell phones on trains since they're not allowed to use them on planes.

"Peace Train," The Washington Post, Feb. 28, 2001

Amtrak's Northeast Corridor trains are carrying more passengers than the top three airlines. People are

tired of sitting in traffic on the freeways, and sitting in long holding patterns of airports. Imagine traveling in one hour or less from St. Louis, to Kansas City, Mo., or imagine avoiding the drive time to the airport, and arriving one hour before departure. Isn't a high-speed rail system between cities within a 300-mile radius of another possible? It would cost money, lots of it. But if we can finance a space

program, spend billions on military hardware, including a Star Wars system, couldn't we finance a high-speed rail system?

"Americans are riding the tails again," St. Louis Dispatch, Feb. 12, 2001

"Coordination might solve transportation woes," News & Observer, Dec. 12, 2000

R E P O R T C A R D

¹ All revenue plus federal operating funds and RRTA contributions, minus cash expenses.

² This is a measure of expense against every dollar of income. For example, an operating ratio of 1.50 means we spend \$1.50 for every \$1.00 we earn.

³ For the three months ended January 2001 and January 2000.

⁴ As of March 15, 2001.

⁵ Based on a 5.2 ratio for FY01, and a 5.0 ratio for FY00.

RAILWAY ROUNDUP

Time Management booklet available from HR offices

Amtrak is continuing to improve Payroll and Human Resources processes.

Amtrak's new SAP HR/Payroll System coordinates with the Labor Collection and Labor Pricing systems. This past January, a new Time Management feature was implemented on SAP. A key function of Time Management is processing employees' pay.

The efforts of supervisors and others in helping Amtrak ensure employees are paid the right amount on each payday are appreciated. To help assist personnel who are responsible for time and records keeping, HR has created a Time Management booklet. It was designed to be a reference tool, and contains details on forms and processes.

If you have any questions about the new SAP Time Management feature, or need more copies of the booklet, contact your local HR office.

Remember, on-time paperwork means accurate and on-time pay!

Midwest service restoration

After weeks of sustained severe winter weather Amtrak Intercity successfully restored service in Michigan and Wisconsin that had been temporarily suspended. Amtrak intercity welcomed guests back and showed our appreciation for their patience with thank you letters and posters, complimentary coffee and breakfast treats and a special "companion rides free" fare good on all Michigan routes.

Twenty years of safety trains

Amtrak carried over 4,800 students on four special trains this January and February, marking the 20th year Amtrak has operated the West Palm Beach Safety Patrol Trains.

Amtrak's commitment to safety and service makes train travel the preferred method of travel between West Palm Beach and Washington D.C. for members of the Safety Patrol.

Texas Eagle service improved

Last month, Amtrak resumed operation of its Chicago-San Antonio

Texas Eagle, on a single route through the east Texas cities of Marshall and Longview.

The *Texas Eagle* began providing daily service through Marshall, Longview and Mineola last May. At the same time, Amtrak was operating on two separate routes over a small section of the *Texas Eagle's* route between Texarkana and Big Sandy, TX. As a result, the southbound *Texas Eagle* served two stations on its Marshall and Longview route via a bus connection from a nearby community.

This practice ended when Amtrak resumed operation over a single route through Marshall and Longview.

"These changes are consistent with Amtrak's ongoing commitment to put our guests at the center of everything we do," said **Joy Smith**, general manager of the Southwestern Business Group."

ORB clock dedication in Raleigh

As a part of the Raleigh dedication ceremony last December, **George Warrington** and local RedBlock Captain, **Steve Guyton**, hung the

L to R; George Warrington and Steve Guyton hang Operation RedBlock clock.

first Operation RedBlock clock in the Southern region.

The clock hangs at the Administration and Crew Support facility, where Amtrak's Raleigh-based T&E and OBS employees go to work. These employees work our *Silver Star* and *Carolinian* trains. Charlotte, Richmond and Washington employees also go on duty in turnaround service here.

The Southern region RedBlock captains and the steering committee funded the purchase of these clocks to be hung at most crew sign-up locations in the Southeast, South and Southwest. The clocks feature the 1-800-rblock mark-off number.

Transition to new identity on schedule

Last July 6, Amtrak unveiled to the world its new look, the bold corporate brand identity that would begin replacing the original "arrow."

One of the important points made then was that the transition would be a gradual one. The estimate was that it could be the summer of 2002 before the full transition is completed. Today, nine months later, that estimate still looks good.

Many milestones have been passed, and the massive switch is on schedule. The change is being done in the most cost-effective way possible, which has become particularly important in the current era of strict cost management. Supplies are being used up before being replenished with items branded with the new identity.

These are just some of the ways in which the new image has already become part of our work environment:

- More than 20 of the 65 new P-42 diesel locomotives we're buying, bearing the new branding, have been accepted and placed into service.

- New tickets and ticket jackets have started appearing as old supplies are exhausted, and new paychecks will start appearing late this summer.
- All Amtrak advertising is now rebranded, as is the Amtrak web site.
- Employee service awards have been redesigned with the new identity, and the President's Service and Safety Awards will be soon.
- New-branding templates for letters, memo, and fax cover sheets are now available on the Amtrak Intranet and through the PC network.
- A redesign plan for all station signage is almost complete.

Remember, another important message from the July 6 unveiling was one of brand management. Our brand—which is really everything the public thinks of

Amtrak, and not just a logo—is a valuable asset. As the visual face of that brand, our new identity must be protected. That's the job of all of us, everyone who's helped build the value of the Amtrak brand.

Be on the lookout for improper use of our new brand identity, and contact either **Debbie Varnado** (ATS 777-4662), **Joyce Greene** (ATS 777-4080), or **Jane Melhorn** (ATS 777-2651). And, to request the use of our new brand identity, register at www.brandadmin@amtrak.com.

P-42 Genesis diesel locomotive bearing Amtrak's new brand identity.

Corrections

In the February 2001 issue of *Amtrak Ink*, the page one story ("Bold new fleet plan") stated incorrectly that the Superliner I cars had not been modernized since 1975. The new Superliner Is were ordered in 1975 and 1976, for delivery beginning in 1980. The story also stated incorrectly that our Superliner II cars joined our fleet in 1979. The Superliner IIs were ordered in 1991, for delivery between 1993-95. Amtrak Ink regrets the error.

In the March 2001 issue of *Amtrak Ink*, the page two story ("Congress reintroduces HSRIA") incorrectly stated that the 2001 High-Speed Rail Investment Act would provide Amtrak with \$12 million in state- and federally-supported bonds over 10 years to invest in HSR projects nationwide. The 2001 HSRIA would provide Amtrak with \$12 billion.

Where's my train?

Train status information and service success

The goal is to
always have the
very latest
available information.

Each year, Amtrak handles more than 20 million guest inquiries on train status. Providing accurate, up-to-date train status information for guests can make the difference between a returning guest and a dissatisfied traveler.

Over the last few months, Amtrak's Train Status Project Team, in collaboration with personnel from each SBU, station agents, Freight Affairs, CNOC, and Amtrak Technologies, has taken a number of steps to improve the quality and reliability of the train status information communicated to our guests.

Information given to guests is based on arrival and departure times reported by station and on-board personnel. The goal is to always have the very latest available information. So, new standards have been adopted to measure the effectiveness of how train status information is reported. The objective is to:

- Report arrivals and departures within 10 minutes of these events.
- Provide an ETA/ETD for the next station each time a train will depart or arrive 20 minutes late or more.

Each day, information is captured relating to the reporting time of arrivals, departures, ETAs and ETDs at each station. Reports are produced overnight and made available each morning on the Amtrak Intranet to monitor our progress toward achieving the reporting objectives. This is an excellent tool for reviewing train status entries for the previous day or over a period of time.

Here's how you can access these Train Status reports on the Intranet. Click on the *Reference Library* icon, then on the link for *Reports*, then on the *Train Status Reports* link.

'Taking Safety On The Road'

On March 5, the NEC Safety & Environmental Control Department rolled out a new safety awareness program titled "Taking Safety on the Road."

Members of the department plan to spend more time meeting face-to-face with employees to discuss the NEC's overall safety performance. In addition to their normal field activities, the safety staff will dedicate three days each month to "Taking Safety on the Road" — a program that will share the NEC's safety goals with employees and help individuals identify ways to work safely.

For FY2001, the department is aiming for a 13 percent reduction in employee reportable injuries, bringing the ratio down to 3.5. The reportable injury ratio indicates how many reportable injuries occurred for every 200,000 hours worked.

A reportable injury is one that requires more than first aid and must be reported to the FRA.

Reportable injuries include those that require lost time or restricted duty, prescription medication or injections by syringe (other than tetanus), sutures, splints, casts or other forms of immobilization, and/or subsequent visits to a medical professional for treatments.

Cedestra Jordan, the department's general manager, hopes to enlist the support of all employees in helping the NEC meet current safety challenges.

"Our employees need to understand what our 3.5 reportable injury ratio goal is all about. We hope that our new slogan — Safety Drive for 3.5 — will focus everyone's attention on meeting this year's goal."

ORGANIZATIONAL UPDATE

Gerri Mason Hall has been promoted to vice president of Business Diversity and Strategic Initiatives for the company. She was most recently assistant vice president of Human Resources.

Mason Hall will be responsible for building on Amtrak's recent successes, such as our awarding 16 percent of Amtrak's business supplier contracts to disadvantaged business enterprises, enhanced multicultural marketing efforts with partner Chisholm-Mingo Group, and sponsorship of a wide range of multicultural activities.

She was honored last year as a recipient of a President's Service and Safety Award for Business Diversity.

Richard Sarles has been named Amtrak's vice president of Capital Programs.

Sarles is responsible for implementing the high-speed rail program, overseeing the design and construction of contracts for the high-speed

trainsets, and electrification of the railroad from New Haven to Boston.

Before joining Amtrak in 1996, Sarles worked for the Port Authority of New York and New Jersey. His most recent position was assistant director of Interstate Transportation for Capital Programs, which included improvements to the PATH rail system and the bridges and tunnels between New Jersey and New York City.

Dale Stein has been appointed the new treasurer for Amtrak.

Stein was most recently a planning manager for Mobil's worldwide Gas and Power division. Prior to that, he served as director of Project Finance for Mobil's Corporate Treasurer's office.

In his various positions within Mobil Oil, he directed treasury operations of subsidiaries worldwide, including debt and equity structuring, cash management, foreign and internal controls.

Mail and Express

continued from page 1

This approach has led to an increased willingness among freight railroads to negotiate market-based partnerships that are focused on specific commercial opportunities.

A benefit of the redefinition is that it will require no major changes to current Mail and Express operations, although they will be simplified. That, along with improved information technology for shipment scanning and tracking, will provide better service and lower internal costs.

Last fall, Mail and Express was separated from Amtrak Intercity and established as a separate strategic business unit. Its president is **Lee Sargrad**, who came to Amtrak after 15 years in the rail freight industry, most recently as vice president of Sales and marketing for Triple Crown Services.

high-speed trains

continued from page 2

they could work and rest peacefully. Amtrak tested the idea last year and found it was a hit with guests.

"We've had customer demand from both Washington and Philadelphia," said **Lynn Bowersox**, NEC vice president of Communications and Public Affairs. "People who are frequent travelers need an escape. They would rather be unplugged from time to time."

Metroliners 114 and 115 are the latest trains to add quiet cars. *Northeast Direct* 151 and *Acela Regional* 170 have them as well.

There is no additional charge for guests to sit in the quiet cars. The seats are filled on a first-come, first-served basis.

PROMOTIONS IN MOTION

1-2-Free!

This spring, family or friends can get away for a weekend trip or a nice vacation with the Amtrak 1-2-Free special offer.

Yes, 1-2-Free fares are back this spring. With this offer, the first guest pays full fare, the second guests gets 50 percent off, and the third person travels free. All Amtrak trains are included in this promotion except the *Acela Express*, *Metroliner*, Auto Train, and joint Amtrak/VIA Rail Canada service.

In addition to radio, newspapers, television and magazine advertising, Amtrak did a direct mail promotion to 350,000 families featuring the 1-2-Free offer. The first 500 family travelers to contact Amtrak received an Amtrak Kids Fun Pack. This mail promotion included African-American and Hispanic-American families.

The 1-2-Free offer is available for sale through May 12, 2001.

**Special fares for race fans**

As part of Amtrak's new partnership with NASCAR driver Rusty Wallace, race fans will be

offered a 10-percent discount for travel to upcoming races across the country.

This partnership, first announced in November, marks Amtrak's first entry into the country's fastest-growing spectator sport.

The discount coupon for race fans is 10 percent off the best available fare. To receive a coupon, fans may visit Rusty Wallace's merchandise trailer at the Daytona 500 and pick up the special Amtrak brochure that includes the coupon. The discount is available for future travel to designated races and locations.

The smallest race fans may also take advantage of this discount. Up to two children, ages two to 15, may travel at half price when accompanied by an adult paying the discounted adult fare. Race fans should contact Amtrak at 1-877-835-8725 for details. Fans may visit www.amtrak.com/promotions to find out how to save even more with a Rusty Wallace membership card.

Amtrak guests save on VeteransAdvantage membership

Through our exclusive partnership with *VeteransAdvantage* Inc., the first online private-sector benefits company for military veterans and their families, veterans may enroll in the *VeteransAdvantage* program at a 50 percent discount through May 31, 2001.

The partnership between Amtrak and *VeteransAdvantage*, first announced last November, offers veterans a discount when traveling on Amtrak. Members receive a 10 percent discount on rail travel when making reservations through a travel agent, or by presenting their *VeteransAdvantage* Membership Card at any Amtrak ticket counter.

**Amtrak Scenic Adventures**

Amtrak's new Scenic Adventures brochure highlights America's beauty as only Amtrak can show you onboard 12 of our most scenic routes. The brochure invites guests to take a trip just to enjoy the great scenery along the way. The trains included in the brochure include the *Adirondack*, the *Vermont*, the *Lake Shore Limited*, the *Pennsylvanian*, the *Cardinal*, the *Capitol Limited*, the *Southwest Chief*, the *Texas Eagle*, the *California Zephyr*, the *Empire Builder*, the *Coast Starlight*, and the *Cascades*. Revenue generated from these routes account for 20 percent of Amtrak's total revenue.

The National Traveler magazine awarded the *Adirondack* last year as "one of the 10 best rail trips in the world." The heightened awareness of the *Adirondack* route generated from that article resulted in double-digit increases in ridership and revenue. Building on the success of

the *Adirondack*, Amtrak created a Scenic Adventures brochure designed to promote other Amtrak scenic routes across the country.

Amtrak partners with Post Cereal

This spring, Post Cereal is introducing their value size HONEY-COMB cereal box. Big box ... big league values. Post will be distributing 1.8 million cereal boxes across the country, beginning April 2001, in major grocery stores and WalMarts. Honeycomb is one of the "Top 10 Brands" of all sweetened cereals and appeals to both kids and adults. What does Post Cereal and Amtrak have in common? Both are official sponsors of Major League Baseball.

To leverage our sponsorship with MLB, Post invited Amtrak to participate in its Wall of Values promotion. Among other Wall of Values partners, Amtrak's special family offer is prominently displayed on the front and back of the cereal box, with a collectible discount coupon inside for a free child fare with the purchase of one Amtrak adult fare. The coupon permits travel for the period April 1 through Dec. 15, 2001.

Amtrak receives nationwide exposure in a new distribution channel, targeting kids and promoting family travel.

North America Rail Pass

The North America Rail Pass is a product offered jointly by Amtrak and VIA Rail Canada to our guests as a flexible and adventurous way to see

North America.

The pass gives our guests the opportunity to experience a dream vacation full of culture, history, beautiful scenery, and the opportunity to meet interesting people at a great value – 30 Days, 2 Countries, 1 Pass.

The pass is designed after the popular European rail passes. In FY'00, over \$2 million was generated from the sale of the pass.

Consumers are also directed to Amtrak's website www.amtrak.com/promotions/details.html for interactive, sample itineraries.

OBS chief positions updated to better meet guest, employee needs

Amtrak and the American Railway and Airline Supervisors Association (ARASA) have agreed to change the duties and responsibilities of the chief of on-board service position to better meet the needs of guests and employees.

The revised agreement-covered positions, now called product line supervisors, will create a group of employees dedicated to enhancing our service delivery capabilities.

"ARASA supervisors will continue to be a key ingredient in Amtrak's success. They will expand the areas where we can offer support to front-line employees," said **Jay Fountain**, ARASA general chairman, and a chief of on-board service. "These positions will also create new opportunities for advancement into management positions for ARASA's diverse group of employees."

Since the on-board service chiefs program was established 17 years ago, Amtrak has fundamentally changed the way it does business. "We are guest-focused and dedicated to providing the kind of high-quality service that is making a competitive difference in the marketplace. We are committed to practicing Service Success and to guaranteed satisfaction for our guests," said **Ed Walker**, president of Amtrak Intercity.

Product line supervisors will provide a broad range of supervisory support for frontline employees that will include acting as liaisons with terminal, mechanical and commissary depart-

ments to ensure Right and Ready trains, and acting as coaches and support resources for on-board personnel.

"I give my personal commitment to making sure that this initiative is not a one-time event, but a true transformation of this position," said Walker. "This is a great initiative, and a good example of how labor and management can work together to develop programs that benefit our employees, the corporation, and our guests."

According to Walker, the product line supervisors will be stationed at strategic locations throughout the Amtrak system, including train originating and terminating points, as well as en route points to provide consistent support to onboard personnel. They will spend between 40 percent and 80 percent of their time riding trains, depending on their location and schedule.

The supervisor position will offer a clearer career path for employees wishing to enter management positions, especially in the customer services area. They will gain supervisory, policy and procedural experience and be provided performance feedback through the use of Amtrak management's goal-setting and performance evaluation system.

Briefings will be held throughout the Amtrak system to advise employees of the ARASA agreement including rates of pay, location of jobs, bidding process, relocation and training benefits.

Position now called 'product line supervisor'

Romano named Amtrak 'Police Officer of the Year'

Chicago Amtrak Police Investigator **Eric Romano** has been named Amtrak's "Police Officer of the Year" for 2000, and was also honored recently by the Cook County Crime Stoppers for "Excellence in Law Enforcement."

Investigator Romano was honored for his courage and heroism while conducting a drug interdiction in Chicago Union Station on Dec. 12, 2000. As part of a special task force team that included a Drug Enforcement Administration agent and a Chicago Police officer, Romano was questioning two men who had just gotten off Train #49, the

Investigator Eric Romano reads the official mission and vision of the Amtrak Police.

Lake Shore Limited. During questioning, one of the men said the bulge in his jacket pocket was money. As he opened his jacket, Romano saw a firearm in the man's waistband and shouted, "Gun!"

The man reached for the gun immediately, and his companion also drew a firearm. During the resulting struggle and exchange of gunfire, the two suspects were shot. One died at the scene, and the other died several days later. The Chicago police officer was shot in the leg, but was treated and released.

It was learned later that the gunmen were armed with .40 caliber Glock semi-automatic weapons, carried several additional magazines, and were wearing bulletproof vests.

Happy 30th, Amtrak!

George Warrington

It was just after midnight on May 1, 1971, that *Clocker* #235 pulled out of Penn Station in New York, headed to Philadelphia. And, with that first departure, Amtrak was born.

We've come a long way since then—and I don't mean just going past Philadelphia. Today, 30 years later, we're a proven success story in the national travel industry. We offer a vital transportation option to more than 500 communities across the country. We share the joy, comfort, and productivity of train travel with millions of travelers every year. And we plan for the promise of even greater achievements in years to come.

In Amtrak News 10 years ago, a reservations agent was asked, "Where will Amtrak be in 10 years?" He said he hoped that our company would be "recognized as an innovative leader in the transportation industry," and that he would be working in a modern call center with the latest in computer and telephone technology.

Oscar Hayes was a great fortuneteller. Today we're shaking up the industry with our unconditional Satisfaction Guarantee, and leading-edge companies are eager to talk with us about partnership opportunities. And Oscar? He's a team leader in the sparkling Riverside reservations center.

So let's bring out the crystal ball ourselves—what will we be in another 30 years from now?

Imagine Amtrak as the premier high-speed rail operator in the world. Starting from the successful seed of *Acela Express*, we can build similar service in corridors all across the nation.

People are already putting out the welcome mat. Our High-Speed Rail Investment Act, being seriously considered now by Congress, has been endorsed by the National Governors' Association, the National Conference of State Legislatures, the U.S. Conference of Mayors, and more than 40 other organizations.

I also think, 30 years from now, we'll be an even more respected member of the transportation industry. That's because America will have had that much more time to wonder how we can squeeze in more highway lanes, or where we'll come up with the billions of dollars to expand just one airport. And public authorities will turn increasingly to passenger rail, where, for every dollar spent on expansion, they get 10 times the passenger capacity then if that dollar is spent on expanded highways.

It's going to be an exciting journey. Thanks for bringing us this far—and get ready for a great ride.

First half of FY2001 shows growth in ridership, revenue nationwide

Increasingly, Amtrak
is building a loyal
customer base, and
attracting
first-time riders
every month.

Results for the first six months of the current fiscal year (Oct. 1, 2000-March 31, 2001) reveal that more than 11 million guests rode on Amtrak. This is great news; not only for us, but for all the travelers looking for relief from cramped airplane seats and bumper-to-bumper traffic.

The 11-million travelers who choose Amtrak between October and March, represent a 7-percent increase in ridership over the same period last year. Ticket revenue, \$564.3 million, was up 12.2 percent compared to this same six-month period last year.

As we celebrate Amtrak's 30th anniversary in May, it's fitting to recognize the steady rise in ridership and revenue our company is experiencing. Increasingly, Amtrak is building a loyal customer base, and attracting first-time riders every month. In just the last year, Amtrak

has served more guests with guaranteed satisfaction than any other year in our history.

Among the highlights of the most recent results was the popularity of Amtrak West service, with double-digit increases in ridership and ticket revenue. The *Texas Eagle* experienced an 18-percent increase in ridership, and an impressive 20-percent increase in ticket revenue compared to the first half of last fiscal year.

Acela Express is beating all projections. Since its launch last December, 55,000 guests have used the service, and revenue has exceeded expectations by 4 percent. On April 29, Amtrak doubled *Acela Express* service between Boston, Providence and New York, providing two morning and two afternoon roundtrip on weekdays, and introducing weekend service.

Quik-Trak sales break monthly record

In March 2001, Quik-Trak sales achieved a significant milestone—exceeding \$19 million in monthly sales for the first time. Since the introduction of Quik-Trak Ticket Express six years ago, sales have been rising steadily.

For the first six months of FY01, Quik-Trak issued more than 1.75 million tickets nationwide and generated \$103 million in sales. This growth represents a 40-percent increase in ticket volume, and a 50-percent increase in sales, over the same period last year.

Many factors have contributed to the continued success of Quik-Trak:

- SBU's and several state partners have provided funding to make 154 kiosks available in 64 stations, nationwide.
- Expanded Quik-Trak functionality has enabled guests to purchase multi-ride tickets, reserve travel for future times and dates, select seat assignments for *Acela Express* and use Amtrak Guest Rewards numbers to accumulate points for travel purchased.

"Quik-Trak allows ticket agents to spend extra time with guests who have involved itineraries and require additional time at the window."

Harry Rogers,
ticket office manager, NYP

- Station initiatives, such as promoting Quik-Trak on LED displays, and having station agents assist new Quik-Trak users, have also been very successful in attracting customers to the kiosks.

Another critical element of Quik-Trak's success is the ability of the kiosks to generate tickets for Amtrak services. "Station managers have played an integral role in ensuring the readiness and proper functionality of the kiosks," states **Chuck Simmers**, who manages Quik-Trak for the Customer Relationships and Revenue Department.

Harry Rogers, ticket office manager at New York's Penn Station, talked about the added value Quik-Trak offers guests. "Quik-Trak has provided the ability to issue just-in-time service for our last-minute guests," he said. "Quik-Trak allows ticket agents to spend extra time with guests who have involved itineraries and require additional time at the window."

To assist station managers in their efforts, a new monitoring tool, a web-based Kiosk Manager, will soon be released. The Kiosk Manager will enable the ability to monitor Quik-Trak hardware, software, and ticket stock status via a web-browser, accessible from any workstation. Quik-Trak operational problems will be detected instantly and maintenance requests can be filed more quickly—reducing the length of any outage.

In addition, more sophisticated Quik-Trak reports were recently developed with the assistance of **Paul Gawalt**, manager, Distribution Analysis, in Customer Relationships and Revenue.

The new reports highlight sales trends by kiosk, enabling station managers to identify high- and low-producing

kiosks, as well as locations with the greatest Quik-Trak growth. This information will help stations strategically locate kiosks to maximize their ticketing potential, and to better serve Amtrak guests.

With the current growth trends, and the introduction of new technology to assist with monitoring sales and machine readiness, Quik-Trak sales will continue to set new milestones, and provide guests with a "Quik" alternative in purchasing Amtrak services.

The route to our success

Strategic Business Plan Key Strategies

Since the 1998 launch of its new strategic direction, Amtrak has taken significant steps in rising to the challenge of reducing its reliance on federal funds to support operations. Driving Amtrak's actions are six key strategies.

Build a market-based network

Define customer demand, using extensive research, and then match our system with that demand.

Deliver consistent quality service

Change the culture of the company to be more guest-focused, and provide a world-class travel experience on every trip.

Revitalize the Amtrak brand

Introduce and support a new brand for Amtrak, to signal a major change to our guests.

Operate a cost-effective business

Identify specific functional areas, policies, organizational structures, and back-office costs that have potential for improved cost management.

Maximize public and private partnerships

Pursue public and commercial partnerships aggressively, through Mail and Express and other programs that generate the highest returns for the company.

Develop corridor services

Work with state and other partners to create or improve rail corridors across the country, drawing from the expertise we've gained in building Northeast Corridor services.

Amtrak West's Calderon honored for environmental excellence

The American Association of Railroads (AAR) Environmental Affairs Committee honored **Tami Calderon** last month for starting a workplace recycling program that has cut trash by more than a third at the Los Angeles Yards.

Calderon, a RideShare coordinator in Los Angeles, was the first runner-up among six people nominated for the John H. Chafee Environmental Excellence Award. Chafee, a Rhode Island Republican senator who died in 1999, was the author of landmark environmental legislation.

The award honors rail employees who have gone beyond their normal duties to implement environmental programs. All the Class I railroads are encouraged to nominate an employee for the Chafee Award. **Lisa Murdock**, who nominated Calderon, is director of Environmental Policy and Programs, and represents Amtrak on the committee.

Almost two years ago, Calderon spearheaded recycling efforts for white office paper and printer and toner cartridges at the LA Amtrak station and at the yards. The program has grown to include pallets, cardboard, plastic bottles, newspapers left by commuters, and much more—reducing the amount of waste sent to landfills by 35 percent.

Last year, 350,000 pounds of paper was recycled. Two trash compactors have been eliminated, saving \$30,000. Another \$3,700 was saved by refilling toner cartridges.

"The success of our recycling program was made possible first of all because my manager, **Jill Moyer**, supported my idea from the start and allowed me the time to implement it. Also, the success truly belongs to

Tami Calderon accepts AAR's award from Amtrak West President **Gil Mallory**.

each and every employee in L.A. that continuously supports such a great program," Calderon said. "I hope they take pride in knowing their efforts will leave a better environment for future generations."

In 1999, Calderon's coworkers recognized her commitment to environmental excellence. She received a President's Service and Safety Award for Environmental Achievement.

Calderon was unable to attend the AAR awards event in Washington, D.C. **Roy Deitchman**, assistant vice president, Amtrak Environmental, accepted the plaque on her behalf.

O N T H E R I G H T R A K

Joyce Greene named 'Outstanding Woman in Marketing'

Joyce Greene, director of Brand Advertising for Amtrak, has been named one of America's outstanding women in marketing by *Ebony* magazine. She was honored in April during *Ebony*'s second annual Outstanding Women in Marketing and Communications awards luncheon in New York City.

"This award is particularly special because it's recognition from the industry and from my peers," Greene said. "It also means a lot to my family to see me honored for the work I do."

The award was created to recognize African-American women who have spearheaded changes in corporate marketing and advertising programs to reflect growing multicultural audiences. Greene was one of 12 women honored for their efforts to help companies become more aware of the need to target multicultural consumers in all aspects of their marketing.

"I think African-American women bring a certain sensibility to this industry that helps us tap not only into the African-American market, but the larger multicultural market. Women are great influencers, particularly in transportation. We are often administrators who make purchasing decisions, and we are the travel planners for our families. My knowledge of this group and my frame of reference can make all the difference in creating appeal and successful messages."

Greene joined Amtrak in 1972. She has managed numerous Amtrak national and regional marketing programs, including multi-media advertising campaigns, major market and grass roots promotions, advertising, direct marketing, merchandising, and partnerships.

A native of Washington, D.C., Greene has won many awards for her creative and innovative marketing and advertising programs.

Employee honored for years of dedication to education

Joe Johnson, a conductor at the Chicago yards, received an Award of Appreciation from the Amtrak Intercity HR Development department in March. The award acknowledged his years of dedication to the New-Hire Assistant Conductor Training program.

Upon retiring from 30 years in the U.S. Army, Johnson joined the Penn Central Railroad. He served both the Penn Central, and later Conrail, as a conductor. Johnson joined the Amtrak team during the 1986 takeover of freight railroad operating crews.

Both in the military and on the railroad, Johnson has always been involved with training. With the new assistant conductors, he works on safety and car handling techniques during their field exercises.

Johnson says that Amtrak provides better training than any railroad ever did in the past. As far as the new generation of operating crews, Johnson said, "They're a better grade of people. More astute and much more diverse."

Vietnam veteran returns to the country with aid for the needy

Peter Birrow, equipment engineer with our MBTA Commuter Rail contract, was drafted into the Army in 1968. Stationed in the Central Highlands of South Vietnam, he was a radio operator for a rifle company commander.

Although it has been more than 30 years since he was in Vietnam, some of his memories are still fresh.

Peter Birrow gives out clothes, novelties and toys to children in the Phu Bai village near Hue.

Wanting to reconnect with some of the men he served with in the war, Birrow turned to the Internet three years ago. He found a veterans website for his unit, and was reunited online with a few of his comrades.

Word spread, and reunions were held in 1999 and 2000, bringing together almost 200 of the veterans. This year, nearly 300 Vietnam veterans are expected to gather in Kansas City.

From the emotional reunions, rekindled friendships, and the desire to do something good, a core group of the men decided to return to the Central Highlands of Vietnam—where they were almost 33 years ago. They would raise money for donations, gather clothes, toys and trinkets and distribute them to the poor.

Fourteen of the men organized a trip from Seattle to Seoul, Korea. From there, they would head to South Vietnam.

Political unrest caused a ban on tourist travel in the Central Highlands. So instead, the men's journey took them from Saigon to Hue, down the East Coast to Nha Trang and back to Saigon. They visited different cities and historical sites, including the Reunification Palace and the War Crimes Museum in Saigon, and Marble Mountain and China Beach in Danang.

"We were there for 14 days and saw a country that is very much at peace with the world," Birrow said. "In the village of Duc Pho, we distributed toys to the children, clothes to the families, and gave \$300 to the school administrator for teaching supplies. In all, we distributed over 100 pounds of clothing to schools, villages, and the homeless," he said.

"This entire experience has been incredible. From getting reacquainted with some of my former colleagues from Vietnam, to meeting face to face with the people in that country, it was a 'twice in a lifetime' trip."

Silver Spoons

*The following is an excerpt from an article written by **Rene Dominguez**, lead service attendant, Miami.*

The life of an OBS employee brings new and exciting adventures. We have the luxury of traveling, meeting new people, and occasionally changing the life of one of our guests.

This was true in March, on one of our *Silver Service* trains from Miami to New York.

This night, a gentleman named Mike walked up to me in the lounge car with a spoon handle and asked if

there was any way that I could shape it into a ring. "Excuse me?" I said.

The gentleman and his girlfriend had just spent the week in Miami, and were heading back home to Philadelphia. "I can't think of anything that could top our vacation than to ask her to marry me...tonight! The only thing is...I don't have a ring!" he said.

Like a newborn jeweler, my creative juices went to work. I looked behind the bar for anything that could resemble a band of love. I noticed that our Sutter Home wine bottles

Silvia is ecstatic after Mike slips the "engagement ring" on her finger.

had both gold and silver gaps. I decided as the night went along to save one of each. I had a plan.

As soon as I had the caps I needed, I began work on my masterpiece. With scissors and some tape to cover any sharp edges, I created a ring that could have passed for maybe six or seven karats—it was huge!

I coordinated with Chief Cruickshank and Mike to make sure Silvia, his lovely bride-to-be, was sitting in her seat.

Then, over the loud speaker... "Ladies and gentleman, we have a very special moment that is about to occur here on Amtrak train #92. Take it away Mike!" And in that instant, Mike got on one knee to face Silvia and then said that magical phrase, "Will you marry me?" She said yes.

Silvia screamed and a shower of tears poured from her face as Mike placed the gaudy ring on her finger. You could hear the "sighs" and "ahhs" from the other guests in the car.

We all wished a grateful Mike and Silvia a long and prosperous life together.

The Beatles song, "A Day in the Life" came to mind. It's true, the life of an Amtrak employee brings many new and exciting adventures. And sometimes we can change lives too!

Amtrak police officer receives two prestigious awards

continued from page 1

They were later identified as fugitives who had fled Maine after a series of burglaries. Authorities had pursued them in connection with the theft of \$30,000 in cash and automatic weapons. When confronted by Romano and his teammates, the two suspects were traveling under aliases and were en route from Syracuse to Tucson, AZ.

"I am extremely flattered and proud, but I am not solely responsible. My fellow officers are to be commended for their actions."

Eric Romano,
Amtrak Police Investigator

Amtrak Chief **Ron Frazier** expressed his gratitude. "Eric is to be commended for his immediate reaction to control an extremely dangerous situation. I am most grateful that this incident did not result in significant

injury to any of the three officers, or to bystanders in the station."

Romano was recognized by the Crime Stoppers group for his alertness and quick response in a life-threatening situation, actions that also earned him an Amtrak Medal of Honor.

"I am extremely flattered and proud, but I am not solely responsible. My fellow officers are to be commended for their actions," Romano said. "I truly enjoy my job. There are no doubt difficult days, but I am very grateful to be a part of the Amtrak Police Department, and to have the opportunity to work with my fellow officers."

A long record of model performance is behind his being named the Amtrak Police Officer of the Year for 2000. He has been involved in the seizures of large quantities of drugs, handguns, and cash. Romano joined the department in 1993 as a certified tactical and field-training officer, and was assigned to the Western region, based in Chicago. In 1994 he was made a temporary sergeant, and later joined the task force of DEA, state, and local law enforcement officers.

New York celebrates Black History Month

New York Penn Station's Black History Month display has been a popular event in the past. As a result, this year **Mike Gallagher**, superintendent of Customer Services, asked the organizers to move the display from the Customer Service and Ticket Office area into the station to share the festivities with Amtrak guests.

To prepare for this, **Phillip Rudolph**, B&B foreman, also a contributing Black History Month artist, arranged for portable walls to be built that would display the artwork and information.

The main rotunda of the station became center stage for many national and local musicians, artists, celebrities and vendors.

Weekly programs were put together by the Diversity Committee for what was a month-long celebration.

The kick-off event included 10-year old jazz saxophonist, Jamal Thompson; poet/actress Carolyn Evans, who re-created "Famous Women of Color;" and well-known jazz bassist Curtis Lundy and his Trio. The month-long celebration included participation and assistance from others, such as WBGO Jazz Radio; The New York Caribbean Cultural Center; Black Entertainment Television; and Sister to Sister Magazine, just to name a few. A highlight was a performance by the world-renowned ARC Gospel Choir, who brought the commuter traffic in the station to a standstill.

New England Division 'Springs into Safety'

Kids "Spring into Safety" with Amtrak.

Amtrak teamed up with Operation Lifesaver, the MBTA and the FRA in Boston South Station last month to launch a new public service announcement campaign, and to help local kids "Spring into Safety."

A group of second, third and fourth graders from the Most Precious Blood parochial school in Hyde Park gathered in South Station to view the new campaign, and to learn about railroad safety.

The Operation Lifesaver campaign discourages life-threatening behaviors

ranging from driving around crossing gates, to using the railroad as a jogging track.

"Tracks are for Trains, Not People" was the message of the day. Chief **Ron Frazier**, vice president System Operations and Police Services, emphasized this point when he addressed the group of children.

The children were also treated to a safety-themed magic show performed by **Harry Barnes**, Amtrak Police Department Community Resource Officer. Barnes enlisted some audience members and used sleight-of-hand, and other tricks to convey the anti-trespassing message.

Steve Alleman, general manager, New England Division, was on hand to welcome the children to South Station. **Cedestra Jordan**, general manager NEC Safety and Environmental Control, emceed the event.

The Operation Lifesaver campaign discourages life-threatening behaviors ranging from driving around crossing gates, to using the railroad as a jogging track.

Northeast Corridor President, **Stan Bagley** said, "Amtrak's goal is that someday, the idea of crossing tracks and loitering along the railroad will be as taboo in our communities as the casual stroll across the Massachusetts Turnpike."

Amtrak recognizes National Operation RedBlock Day

The month of April was Drug and Alcohol Awareness month.

In recognition of this, April 25 was designated as National Operation RedBlock Day. On this day, team members representing over 128 active workplace communities across the country engaged in activities to inform, educate, and promote awareness of the Operation RedBlock program.

Operation RedBlock takes a humanistic approach to dealing with drug and alcohol abuse in the workplace.

Workers with drug or alcohol problems are confronted confidentially by their

peers and rehabilitated—instead of punished, fired, and forgotten. It combines the traditional values of union fraternalism with progressive management, enabling people to help people.

On April 25, Amtrak colleagues across the system were united in supporting their fellow co-workers in need of assistance. Employees also heard a voicemail broadcast from **George Warrington**, who commended the ORB volunteers for their commitment to a safe workplace.

A newsletter has been posted on the Operation RedBlock website

(www.RedBlock.com) that contains important messages from Warrington, the SBU presidents, and other Amtrak senior executives. It also features letters of support from top union officials representing the TCU, TWU, UTU, BLE, and ARASA. The newsletter is also available via the Amtrak Intranet. Click on the *Staying Safe* icon, then on *Office of System Safety*. Follow the Operation RedBlock links from there.

For more information, contact a local team member, union representative, or the ORB office at ATS 728-2822.

Amtrak at 30—Celebrating our dedication to

Happy anniversary Amtrak! On May 1, Amtrak turned 30 years old...Time flies when you're building a successful national passenger railroad.

Amtrak's newest locomotives--P42s--arrive in Chicago. 2000

Twenty-seven current employees scattered across the system came onboard with Amtrak in 1971. Some of them could probably share a few stories about what observers and skeptics had to say in the '70s about the newly-created

passenger railroad called "Amtrak." After all, trains were hopeless relics of the past, they said, and Amtrak was little more than a concept on paper.

Amtrak owned no track and didn't have any operating employees. Although it had acquired ownership of a considerable number of old railroad cars and locomotives, the trains continued to be both operated and maintained by the same private railroad employees who had done so before Amtrak took over.

From its meager beginnings, Amtrak was expected to grow into a successful passenger railroad, one that would connect people and cities over a national network.

Fast-forward to a brand new century and a more modern Amtrak. A passenger railroad with record-breaking ridership and revenue; an unconditional Satisfaction Guarantee, *Acela Express*—America's first high-speed train—the emerging High-Speed Rail

Inherited reservation system, "The Drum." 1971

New Amcoaches arrive. 1975.

Investment Act; and a growing list of partners and supporters. Not bad for a company that wasn't expected to last more than a year or two!

It's clear that Amtrak has done more than just "last;" we've prospered.

More and more, we're becoming the transportation mode of choice. Ironically, it is the expansion of the passenger train's rival, the airplane, that has helped bring about a renewed interest in passenger trains.

Growing increasingly tired of crowded airports and cancelled flights, and of the country's gridlocked highways, frustrated travelers have turned to Amtrak. With us they find relief, and a more comfortable, relaxing way to travel.

From our call center agents, to station and on-board personnel committed to Service Success, to Amtrak's backshop employees ensuring our trains are Right and Ready for our guests, Amtrak is making it easy for guests to come back again and again.

New Turboliner equipment put in Empire Service. 1976.

Amtrak moved quickly in the 1970s, despite the challenges, to build a promising future. The foundation created then has resulted in the Amtrak we've become today. Enjoy a quick glance back to the '70s and see where they have brought us today.

The Amlounge joins Amfleet service. 1976.

New Pacific NW Cascades Service debuts with Talgo equipment. 1998.

Acela Express Inaugural arrives Boston South Station. 2000.

While making market-based decisions, developing high-speed corridors, and practicing smart revenue management are all important in building our business, keeping the guest at the center of everything we do—every train, every day—is essential.

Guest-focused service is the catalyst for growing ridership and revenue and building a loyal customer base—these are the things

that will help us secure at least another 30 years as the nation's passenger railroad.

As we celebrate Amtrak's 30th birthday, it is fitting to offer a special word of thanks to Amtrak employees—both past and present. When nearly the whole world said that passenger rail in the U.S. was finished, the men and women of Amtrak never gave up and never gave in. They kept the faith—and our railroad—intact. That is still the case today.

We continue to count on the contributions from the Amtrak workforce—the foundation of this company—to help us work through the challenges ahead, and to achieve even greater success.

So, happy 30th birthday Amtrak. And thanks to all of you who have been instrumental in helping Amtrak reach this milestone.

Congratulations to the following employees who will celebrate 30 years with Amtrak in the year 2001. These employees have helped to create history, thanks to their dedication, support and loyalty.

COST MANAGEMENT

Below are mini-profiles on just three of the dozens of Cost Management Initiatives the company is looking at that might help us reduce costs, build revenue, or both.

CMI #26—Locomotive Fuel Consumption

With the goal of saving Amtrak more than \$3 million per year in operating costs, this team has identified four procedural changes that would reduce the dollars spent on locomotive fuel.

Our locomotives often idle at stations and burn diesel fuel for several hours. As a result, more money is being spent on locomotive fuel than necessary.

Amtrak's existing policy requires that locomotives be shut down if they will be out of service for four hours. This is not achieving the intended results because the time frame is too long, and the requirements are broad and often misunderstood.

Amtrak could generate more than \$3 million in annual cost savings, and 3.45 million gallons of fuel per year, by doing four things:

- Shutting down trailing locomotives no later than 15 minutes after arriving at the final terminal (in accordance with the revised Standard Maintenance Procedure).
- Requiring shut down of all locomotives if they will not be used within the hour (except in accordance with exceptions in the revised SMP).
- Assign locomotives to each dispatched train based on the train's makeup, e.g. horsepower and trailing tonnage.
- Require isolation or shut down of locomotives not required on certain trip segments, e.g., "tow" the shutdown and unused locomotives to where they are needed (except in accordance with exceptions in the revised SMP).

"We realize that other factors such as on-time performance may affect the potential for savings. But we also know that Amtrak can achieve significant cost savings with 100 percent compliance from our locomotive engineers and mechanical personnel," said team leader, **Travis Hinton**.

CMI # 2 Credit Card Efficiencies

To achieve its goal of saving the company \$1 million per year, the CMI #2 team is targeting two main problem issues—interchange fees and credit card fraud. Here, we'll address fraud.

Amtrak loses about \$2.5 million to credit card fraud every year. We do not have the ability to analyze this fraud by sales channels (Quik-Trak, ticket window, Internet, call center), due to the way the data is transmitted by those systems.

What we can do is address fraud in advance payments—or when people use a credit card to book a reservation.

"With the advance payment option, we have seen the different ways Amtrak is vulnerable to fraud," said **Jim Hatzold**, director of Sales Support. "We've come up with some procedures that will make it very difficult for people to book reservations using someone else's credit card."

One of those procedures requires people to provide our sales agents with a card identification number, in addition to the account number, to book a reservation. It is a three or four-digit number printed on credit cards. Unlike the account number, this number is not embossed, so it isn't transferred to receipts. A person will no longer be able to book a reservation using only an account number found on a receipt. They will need to have the card in hand to provide the identification number.

Dear Colleagues:

Cost management has become a factor in everything we do, everything we plan. It means we're taking steps that every successful corporation in America follows, year after year. It means we're taking advantage of every opportunity to control costs and generate more revenue.

It's true that every cost is being examined. But that doesn't mean that the doors are falling off, and that thousands of jobs are going to be lost. It means we're discovering ways to be more efficient, without sacrificing safety or service quality.

Here are the facts:

Our service standards will be kept high.

This isn't about cutting service. Any reductions in route segments or frequencies will be made on the basis of what the market wants or doesn't want.

This isn't about wholesale job cuts. Yes, some management and front-line positions have already been lost, and there could be more. We will manage staffing costs mostly through attrition, non-filling of vacancies, hiring freezes, and some furloughs. Altogether, we expect furloughs to affect only a minimal number of both management and agreement-covered employees.

Our business plan is working. We're on track to meet the mandate to be operationally self-sufficient by the 2003 fiscal year. And if we meet all the aggressive—but realistic—targets we're setting now, Amtrak will be stronger financially than it has been in its history.

To make this work, every one of us has to think "cost" in everything we do. If you've got ideas, let your supervisors know about them—because this is an effort that can help us all.

Sincerely,

George D. Warrington
President, Chief Executive Officer

CMI #6: Bus Contracts

The team of managers assigned to CMI #6—Bus Contracts—was given the goal of saving \$1 million a year on our bus contracts. Their first discovery was that, of our total annual bus costs of \$19.3 million, all but \$2.4 million is either reimbursed under state rail service contracts, or limited to the amount of bus fares actually collected. In either case, there is no net cost to Amtrak.

But that would make the target of \$1 million in savings very difficult to reach. Then they discovered that our costs for the current fiscal year were headed to be almost double the budgeted \$2.4 million, or \$4.6 million.

Although there were several reasons, the principal culprit was a 35-percent contractual fee increase by one of our major bus vendors, for connections with *Silver Service* trains in Florida. So the team started analyzing every bus route with a profit-and-loss comb. They also looked for contracts that could be re-bid for better terms.

The bottom line was they found bus routes that were coming nowhere near to supporting themselves, and fee agreements that were no longer competitive. The team moved quickly to eliminate some poorly used services, get better terms on contracts, and make pointed recommendations for better oversight of our bus system in the future.

As a result, our net bus costs, on an annualized basis, are being reduced by \$1.6 million—from \$4.6 million to \$3 million. True, that's still \$600,000 more than what we planned and budgeted. But it's a lot better than \$2.2 million more.

RAILWAY ROUNDUP

A repeat performance

Every Amtrak guest is special, some are just more well-known than others. Such is the case with S. Epatha Merkerson.

Even if they don't know her name, millions would recognize her as the tough and intelligent homicide lieutenant, Anita Van Buren, on NBC's Emmy-winning television series, "Law and Order." But quite a few Amtrak employees also know the actress as a recurring guest on the Washington-New York run. Merkerson has been commuting from her home in Maryland to her job on the set in New York for seven and a half years.

She loves riding Amtrak, and usually travels about once a week depending on how her episodes are scheduled. Even though her commute from Maryland to New York is lengthy, she relishes the much-needed relaxation. "I really look forward to it because it gives me personal time," she says. "I think that it's really cool that Amtrak has started Quiet Cars."

In her opinion, Amtrak employees and stations are just as terrific. "The conductors, the service folks and the reservation agents are great. It's really an excellent ride."

Trip of a lifetime

Amtrak hosted some very special young people in March, when 12 members of the Boys and Girls Club of Greater Knoxville traveled from New York Penn Station to Washington, DC, on *Metroliner* #115. It was all part of a special trip for some underprivileged teenagers from Tennessee, made possible by generous contributions from Amtrak, Marriott, Kraft Foods, Delta Airlines, Continental Airlines and others.

Lynn Duncan, vice president of Development for the Boys and Girls Club of Greater Knoxville, escorted the group on their trip. The children earned the trip by doing well in school, and being involved in community and school activities.

"I want to encourage them, to let them know that they can be anything they strive to be, and that there is a life for them outside a housing project," Duncan said.

Oliver Childs, manager of Charter Train Operations, arranged to provide the 9800 car to the group for the Amtrak leg of the journey. They had the entire car, including the conference room, TV and video. He made sure there were beverages and snacks on board.

Geri Tolson, service manager, Acela product line, makes friends with a guest from the Knoxville Boys and Girls Club.

"For most of them, they had never been outside Tennessee before. It was the first time away from home, the first time on a plane, in a hotel, in a taxi, a ferry or a bus, or on a train," said **Ed Mruk**, assistant general manager for the *Acela* product line.

'Sugar on Snow'

Riding Amtrak is always a treat, but guests riding on the *Vermont* enjoyed an even sweeter ride on March 24 and 31, when Amtrak held "Sugar on Snow" parties onboard.

The sugary soirees, organized by **Kevin Chittenden**, product manager for the *Acela* product line, celebrate a Vermont tradition of pouring maple syrup on shaved ice. This sweet treat is accompanied by doughnuts and—for adventurous eaters only—sour pickles.

National Park Service volunteers also hop on board to promote the "Trails and Rails" program, and to talk about Vermont's history. Chittenden and representatives from Vermont's tourism office were on hand to serve up the treats.

To sweeten the pot even more, guests riding from any Vermont location into Springfield, MA, paid only \$15 round trip. "It's a perfect day trip," Chittenden said. "Last year the parties were a big success. This year, they were even better." Bon appetit!

Amtrak renames coach café car on Pacific Surfliner

The coach café car onboard the *Pacific Surfliner* has recently been renamed the "Sea View Cafe and Lounge."

Formerly known as the Pacific Surfliner Shoppe, the cars were renamed to better reflect the scenic coastal view guests enjoy during the 347-mile route between San Diego and San Luis Obispo.

In the new Sea View Cafe and Lounge, guests will continue to

enjoy fresh, healthy menu selections, which feature local wines and microbrews.

The *Pacific Surfliner* corridor extends through 32 cities and six counties from San Diego to San Luis Obispo. There are 11 daily round-trips between San Diego-Los Angeles, with four daily round-trips continuing north to Santa Barbara, with one round-trip extending to San Luis Obispo.

Capitols increase daily frequency

Amtrak's popular *Capitols* service, connecting the San Francisco Bay area with Sacramento and Silicon Valley, is now offering even more trains.

Effective with the April 29, National Timetable change, daily roundtrips between Sacramento/Auburn and Oakland increased from seven to nine. Additional weekend and

holiday service between Oakland and San Jose has also been added. The four round trips between Oakland and San Jose Monday thru Friday have increased to six round trips on Saturday, Sundays and holidays.

The *Capitols* represent the fastest growing corridor in the nation. In Fiscal Year 2000, the *Capitols* led the West with ridership increases of more than 40 percent, serving a total of 767,756 guests.

San Francisco Amtrak station relocates to historic Agricultural Building

In April, the San Francisco Amtrak station relocated from the Ferry Building to the historic Agricultural Building on San Francisco's waterfront.

The Agricultural Building was constructed in 1915, and was the first centralized postal facility for San Francisco. The building has housed an office of the U.S. Department of Agriculture since 1925, and was listed on the National Register of Historic Places in 1978.

In addition to providing Thruway Motorcoach connections to the *Capitols* and *San Joaquins*, the San Francisco station is an important embarkation point for guests boarding the *Coast Starlight* and *California Zephyr* across the bay in Emeryville, CA.

REPORT CARD

Year-to-date through March FY01

Financial Performance

	FY01 Actual	FY01 Plan	Better or worse?
Budget results ¹ (millions)	(182.9)	(182.4)	(0.5) worse
Operating ratio ²	1.50	1.50	- unchanged
Ridership (millions)	11.31	11.37	(0.06) better

Operating Performance

	FY01 Actual	FY00 Actual	Better or worse?
Ridership (millions)	11.31	10.57	0.74 better
Customer satisfaction ³	81	81	- unchanged
On-time performance ⁴	77.8%	80.8%	(3.0)% worse
Total employee injuries ⁵	648	630	18 worse
Total guest injuries ⁵	1238	986	252 worse

¹ All revenue plus federal operating funds and RRTA contributions, minus cash expenses.

² This is a measure of expense against every dollar of income. For example, an operating ratio of 1.50 means we spend \$1.50 for every \$1.00 we earn.

³ For the three months ended February 2001 and February 2000.

⁴ As of April 16, 2001.

⁵ Based on a 5.2 ratio for FY01, and a 5.0 ratio for FY00.

G U E S T L E T T E R S

Dear Amtrak:

I am writing to commend one of your employees for fulfilling Amtrak's "Promise: Satisfaction Guaranteed."

I was a guest on #19 from New York to New Orleans on March 5th. Upon waking up about 4:00 a.m., "Paul" was coming out of the cafe car. "Could I get a cup of boiling water?" I asked. He beckoned me to follow him; gave me the water and a set of utensils. I thought to myself that he might have been just going off duty and locked up the cafe car; instead, he decided to take the time to assist me.

This single act of courtesy exemplifies Amtrak's "Promise: Satisfaction Guaranteed." Thank you.

Amtrak Guest

Dear Amtrak:

I had the pleasure of riding the new *Acela Express* from Boston to New York...From the moment of arrival at South Station's delightful First Class Lounge until arrival in New York, the service and personnel were superb. The on-board crew was sincerely attentive, and made every effort to make our travel experience a memorable one. The staff in the First Class car was

solicitous, courteous and downright pleasant, a far cry from some other recent Amtrak experiences.

The car was visually stunning, comfortable, and amazingly quiet! On-board service was splendid, with instant requests for cocktails, followed by a very good meal, excellent wine, and a tasty dessert. Most remarkably, not long after we had finished, we were pulling into Penn Station, on time.

I have been riding Amtrak since your inception 30 years ago, and have watched Amtrak progress in fits and starts, offering some of my finest and worst travel experiences. The progress has been slow, but noticeable over the years, and I believe you may finally have gotten it right.

In talking to fellow passengers, I heard nothing but kudos and amazement (most were first-time riders), with many saying their shuttling days were over...

Best wishes to you in your continued efforts to provide us all with a new and vital rebirth of rail passenger service in the United States. We're counting on you.

Amtrak Guest

Dear Amtrak:

On March 17, 2001, at about 11:30 p.m. I was on Amtrak Train No.5 heading to visit my son for a couple of days before heading home. We derailed when we were close to a town called Nodaway in Iowa.

I'm writing this letter to say "Thank You" to the locals, Amtrak, the E.M.T's, police, ambulance, Red Cross, Salvation Army, the hospitals, hotels, and restaurants. The staff at the Clarion Hotel and Restaurant was wonderful. They were very patient and kind. Thanks a MILLION! You'll never know how much I appreciate what you all did for me.

I also want Amtrak to know that I finished my trip back home on Amtrak. People should know that I would certainly travel on Amtrak in the future.

I would like to add that on our last stop, just before the derailment, we picked up several young people on their spring break who were going skiing. At the accident I saw them helping out the older people and also helping out people with children. I would give those young

people all a Big Beautiful Star if I could for what they did to help out. Thanks a lot. You young people don't get enough recognition, for the good you do.

A Thankful Friend Forever.

Dear Amtrak:

I would like to bring to your attention the honorable and admirable actions of two of your employees on Friday, April 13. I accidentally left my wallet, checkbook and medicines on the floor of the train I arrived on from Trenton, NJ. When I realized it, I contacted **Mr. Walker**, who took quite a bit of time with us to help us find the right train (which of course was being cleaned and turned around). When we found the right car, **Ms. A. Nicholson** was just finishing cleaning it. She gave us back everything intact. It was wonderful to have someone of so much honesty and integrity. I think you should know what good employees you have. Thank you.

Amtrak Guest

A M T R A K I N T H E N E W S

The problem with travel is getting there. Long check-in lines, cramped gate areas and delayed departures conspire to make flying a first-class hassle, not something to enjoy. Although not the fastest way to get there, and not always the cheapest either, traveling by train has its benefits. Amtrak...seems determined to clean up its sullied past image.

"Kick back, take the train on your next trip." Free Lance-Star, Fredericksburg, VA, March 3, 2001

Having been an avid train buff for many years, I was delighted to see the article about Amtrak testing the tracks from Miami to Jacksonville with a possible stop in Vero Beach, FL. I believe there is a great need for this type of service to our fine city. Last May, I took a train ride from Vero Beach to Philadelphia. For me it was a wonderful experience to see our Southern states and cities and not worry about driving.

"Vero Beach needs Amtrak presence," Press Journal, Vero Beach, FL, March 13, 2001

Major capital funding for Amtrak is overdue. The American public needs Amtrak, especially in the Northeast. Taxpayers can travel from Washington to Boston with ease. Amtrak employees are not allowed to go on strike. They have been told that they would cripple the nation. However, every year the government says it will not continue to fund Amtrak. It's hard to understand why the government funds airlines, buses and highways yet Amtrak cannot be funded.

"Amtrak is well worth government support." News Journal, Wilmington, DE, March 2, 2001

Passenger rail service is missing from the Treasure Coast transportation menu. It's great that Amtrak—which Congress is weaning from nearly 30 years of subsidies—is making such plans for Florida. Knowledgeable people evidently believe this market has potential; let us hope it becomes a reality.

"Trains and Florida's future," Editorials, Stuart News, Stuart, FL, March 4, 2001

When we see the overcrowded airports, the overcrowded highways, there's just no question that we need to keep the rail passenger capabilities to have an overall transportation system in our country. If we lose the rail system, we will never be able to regain it, because if we lose the railroad tracks or they deteriorate, we will not be able to buy the right of way to ever bring back rail.

"Railroad backers want modernization funds," Business & Society Transportation, March 17, 2001

Members of the National Conference of Black Mayors and other officials said that high-speed passenger rail service is an option that must be considered to make transportation convenient and accessible for all areas nationwide. The Mayors endorsed the High-Speed Rail Investment Act of 2001, which would provide \$12 billion in financing for the construction of rail service in America's cities. The legislation would enable Amtrak to partner with

states and use bonds to build new high-speed tracks, upgrade existing routes and purchase new locomotives and coaches.

"Mayors Support High-Speed Rail," Atlanta Inquirer, Atlanta, GA, March 17, 2001

Amtrak is doing no better or worse in its use of tax dollars, but the argument goes to the fact that the United States needs a transportation policy that includes Amtrak passenger rail in the mix. Removing Amtrak, or any passenger rail conveyance, from the current transportation mix would only incur greater travel risk and congestion. Amtrak is the seventh largest carrier of passengers in the United States, ranking behind United, American Delta and TWA airlines.

"Amtrak should get same help as nation's airlines, highways," Post-Tribune, Gary, IN, March 30, 2001

BENEFITS CORNER

Market timing rarely works

Investment notes from Vanguard...

When the stock market goes south, or threatens to, it's always tempting to move your Amtrak Retirement Savings Plan assets from stock fund investments into more conservative vehicles like money market and bond funds. Shifting money from stock funds to cash or bond investments when you anticipate a market downturn is called market timing.

Market timing rarely works, because you have to sell before prices drop, then buy back in right before the market rallies and prices rise. Like it or not, market swings can be dramatic and they're impossible to predict.

By staying invested, you will hit rough patches from time to time. But you should also benefit from the market's historic long-term positive trend.

The chart shows how \$1,000 would have grown over 10 years under three scenarios. Those are if the investor had stayed in stocks for the best 10 months of market performance; the best five months; or just stayed in stocks the whole 10 years.

By moving your money out of stocks during down times, you run the risk of missing out on short- and long-term rallies.

Growth of \$1,000 in the Standard & Poor's 500 Index

(12/31/1990 to 12/31/2000)

10 best months' returns:	\$2,356.50
Five best months' returns:	\$3,253.35
Staying invested in the S&P 500 Index:	\$5,016.24

Source: The Vanguard Group

Dollar-cost averaging—a better strategy

Investing the same amount of money on a regular basis—without regard to market movements—is known as dollar-cost averaging. By participating in your plan, you practice dollar-cost averaging automatically via payroll deductions. This approach ensures you buy more shares when the price is low and fewer shares when the price is high. As a result, your average cost per share will always be lower than the average market price of the shares.

Amtrak's award-winning marketing and communications

Amtrak has won 10 national marketing and communications awards. The Transportation Marketing and Communications Association will formally present the awards in June.

The Amtrak award winners were selected from among 170 contest entries. The highest honor in each category is the Award of Excellence, followed by Merit Awards. Following are the projects and programs that have been recognized, along with the team leaders of those efforts.

Awards of Excellence

Acela Express launch—**Lynn Bowersox**

Arrive Magazine—**Maryanne Roberts**

Student Advantage—**Linda Park**

Fall Advertising campaign —**Carmen Walsh, Joyce Greene**

Awards of Merit

Ski Program—**Michael Weinberg**

Thomas and the Magic Railroad—**Linda Park**

AARP promotion—**Linda Park**

Travel Planner—**Linda Park**

Pacific Surfliner launch—**Cyndi Darlington**

Amtrak Ink—**Dave Narsavage, Leslie Beers and Meeka Jackson**

'Tourism Works for America'

The 18th Annual Celebration of National Tourism Week is scheduled May 6-12. Sponsored by TIA (Travel Industry Association of America), Tourism Week was designed by the U.S. Congress in 1983 to draw public attention to the importance and benefits of the U.S. travel and tourism industry. This year, the push is to create tourism awareness at the grassroots level.

On May 9, the 18 million tourism industry's employees are asked to "Wear Red" to signify that tourism provides one of every eight people in the U.S. with jobs. This effort will help to communicate with people that our diverse and dynamic industry provides varied career opportunities for people.

According to a TIA news release, there is a widespread perception that hospitality and tourism industry can only support low-paying, low-skilled jobs, with little opportunity for growth or advancement. But, in fact, last year alone, travelers spent \$582 billion in communities across the United States. And that funds a lot of excellent jobs!

Learn more about tourism at the TIA Website, www.tia.org

Congressional support grows for Amtrak and high-speed rail

On June 26, the U.S. House of Representatives passed the federal transportation spending bill, which includes Amtrak's FY2002 funding. The legislation funds numerous needs throughout the country, from highway construction to air traffic control improvements. It would provide \$521 million to Amtrak starting Oct. 1, 2001, for capital investment projects and other priorities.

Federal support for Amtrak falls mostly under two categories: capital infrastructure projects, such as new track, facilities and rail cars, and operating costs, such as most salaries and day-to-day service expenses.

In FY 2002, Amtrak is scheduled to receive \$40 million in federal funds

to support operating costs. This continues a significant reduction in our dependence on federal operating assistance. In 1999, for example, Amtrak used \$318 million in federal operating assistance. By 2003, operating support will be eliminated completely.

The money from the FY2002 transportation bill, combined with some remaining FY2001 capital funds, would enable Amtrak to invest approximately \$600 million in infrastructure improvements next year.

After passing the House, the transportation bill then went to the Senate for consideration sometime after the Fourth of July congressional recess.

In a second important legislative development this summer, supporters of high-speed rail development welcomed the introduction of the High-Speed Rail Investment Act (HSRIA) by 125 members of the House of Representatives on June 27.

The HSRIA was co-authored by Reps. Amo Houghton (R-NY) and James Oberstar (D-MN), and is designed to help ease traffic gridlock, as well as create jobs and economic opportunities in many communities throughout the U.S.

If passed by Congress and signed into law, it would authorize Amtrak to issue bonds of up to \$12 billion over 10 years, with the proceeds

This year's 2001 President's Service & Safety Awards recipients gather to be honored at a special ceremony in Washington D.C.

Details on the honorees, page 8.

Amtrak takes fans to the NASCAR races

Dover Downs event a 'monster' success

Amtrak partner and NASCAR favorite Rusty Wallace took to the rails in May to make a big announcement—Amtrak's *Monster Mile Express* would carry race fans to the June 3 Winston Cup Series Race at the Dover Downs Speedway in Delaware.

Wallace made the announcement during a news conference onboard the *Carolinian*. He talked with guests, signed autographs, and jumped from one media interview to another to talk about our special train.

But race fans who missed this *Monster Mile Express* aren't out of luck. Amtrak will run a second *Monster Mile Express* train to Dover Downs on Sept. 23. Our regular

trains will take fans to 32 of this year's 36 Winston Cup Races.

Amtrak's *Monster Mile Express* carried nearly 300 pumped-up NASCAR fans to the June race. The special train originated in New York, with stops in Newark, Trenton, Philadelphia, and Wilmington.

Unlike the drivers in the actual "Monster Mile," our guests enjoyed a relaxing and stress-free trip, and they raved about the on-board service. It was such a clear choice for getting to the races that many said they'll look into booking for future races.

In addition to satisfying our guests, the *Monster Mile Express* attracted positive media coverage. The CBS local affiliate in Salisbury, MD, showed up to greet the train in

Onboard the Carolinian, Rusty Wallace autographs a helmet for a race fan.

Wyoming, DE, on the day of the race. The Dover Downs event and Amtrak's special train also made the front page of the *Wilmington News Journal*.

Amtrak's partnership with NASCAR began with our recent sponsorship of Rusty Wallace, one of the circuit's leading drivers. The "Rusty 2 the Track Travel Club" offers race fans a 15-percent discount on Amtrak travel to the races, and a 10-percent discount on travel at other times.

Amtrak thanks all of the employees who helped with this special move,

Inside

PROMOTIONS IN MOTION

Amtrak West introduces entrees

T R A I N O F T H O U G H T

Several weeks ago, I was pleased to have the opportunity to address the National Press Club in Washington. This is a prestigious forum, and in the days leading up to the speech I gave a lot of thought to what I wanted to say, because it has been a time of both great opportunity and great challenges for all of us. I wanted to be sure that the audience—reporters, business leaders, public officials and others—understood our dedication to the highest quality of service, yet the often conflicting nature of our mission to serve a national need and become operationally self-sufficient.

I was proud to not only share some of the success stories reflecting the fundamental changes going on in the company, but to also credit the employees who've worked so hard. As I said, our success is owed to the 25,000 hard-working men and women here who are making it all come together.

Just recently we saw some of those champions being honored as President's Service & Safety Awards recipients. Being able to represent dedicated colleagues like that was why I was so proud to share our story at the National Press Club.

While we still face many challenges ahead, I think we will in fact meet our goals. But it will take a very strong effort. As I've said recently, the delay in the delivery of *Acela Express* trainsets has adversely affected our revenue. And while ridership and ticket revenue are at all-time highs, the soft economy has driven results below our expectations. This has meant a redoubling of our cost management and revenue generation measures, organizational reviews, and increasingly tightened budgets to ensure that we're as efficient and cost-effective as we can be. I understand that this is not done easily, but I do believe it is necessary for us to reach our goals, and I appreciate the hard work and the hard decisions being made.

George Warrington

There's also another kind of challenge we face—mission conflict—but it's something that only our country's transportation policymakers must resolve, not Amtrak. As I told the Press Club audience, you might say our history is the "Tale of Two Amtraks." One Amtrak is working hard to serve a national passenger rail network as a more customer-focused, market-driven organization. The other is striving to meet the expectations of operational self-sufficiency. Surprisingly, we're working toward both expectations. But no passenger railroad in the world operates profitably in a classic commercial sense—covering its operating expenses, capital costs, taxes, and showing a profit.

I fully believe we'll meet operational self-sufficiency in 2003. Look at the record: We've slashed operating support from \$318 million in FY99, to a projected \$59 million this year.

But it's time for federal policymakers to make the choices about what a national passenger rail system provides, and how it should be funded.

Our 20-year proposal for capital funding calls for increasing the federal investment in intercity rail to 2.5 percent of the U.S. transportation budget, to maintain current needs and expand high-speed rail service. I hope that's the model adopted by federal policymakers for the future of passenger rail in this country.

While this debate over mission conflict goes on, I know that the way all employees have helped transform this company by putting the guest at the center of everything we do has positioned us to be successful in the long run. At a time of national frustration with travel options, our Satisfaction Guaranteed service has allowed us to stand out from the pack.

Let me again thank you for your commitment and hard work, and your efforts as we move ahead.

Amtrak formalizes relationship with the American Red Cross

Amtrak has signed a Statement of Understanding with the American Red Cross (ARC), formalizing a relationship of cooperation in times of emergency.

The two organizations are committed to work together on passenger rail disaster planning, preparedness, and response.

Amtrak and the ARC have worked together before, but it was the

derailment of the *City of New Orleans* at Bourbonnais, IL, in March 1999, that led to formalizing our working relationship.

Employees from both organizations were able to save lives because they had been trained in emergency response. In addition to the ARC workers who rushed to the scene, more than 100 Amtrak employees from across the country did the same. They all acted with courage

and professionalism in leading our guests and each other to safety.

A few months after the accident, **Anne Hoey**, vice president of Service Operations, met with the head of disaster services for the ARC. He had heard how well employees from both organizations had worked together during that accident. He wanted to discuss what lessons had been learned, and how to provide the best care during any future incidents.

Capitol Corridor's one-millionth guest

On June 6, Angela Smart, a 25-year-old sales manager for Hotel DeAnza in San Jose, became the one-millionth guest on Amtrak's Capitol Corridor trains. The event marked the first time that ridership on the Capitol Corridor hit one million in 12 months. Smart commutes daily from her home in Sacramento on the 5:25 a.m. train to her job in San Jose, a three-hour trip.

At a ceremony in the San Jose Diridon station, Smart said, "The train's safer than driving. You can just relax." Smart says she spends the first hour of her trip sleeping.

Jay Commer, general manager of the California Corridor, escorted Smart off the train in front of numerous television cameras. "The Capitol Corridor is not even 10-years-old and the ridership is exploding," said Commer. "With the freeways congested and travelers frustrated, we have nowhere to go but up."

Smart was presented with tickets to an Oakland Raiders home game and a getaway trip to San Francisco on the train, with accommodations for two nights at the Holiday Inn.

The *Capitols*, which operate between Auburn, Sacramento,

Angela Smart, the Capitol Corridor's one-millionth guest, is greeted by the media.

Oakland/San Francisco and San Jose, is the fastest growing service in the country, with a 41 percent increase in ridership in 2000, and over 50 percent in 2001.

Employees recognized for delivering announcements with excellence

More than 160 employees have been honored with certificates of recognition for excellence in public announcements in stations and on board trains.

Earlier this year, a company-wide initiative was launched to improve the quality and consistency of our announcements to guests at all of our facilities. Providing them with up-to-the-minute and accurate information is one of our most important services, and certainly a critical factor in the way our overall service is judged.

So to judge just how well we're doing, qualified supervisors visited stations

and onboard crews across the country this spring to observe the quality of newly designed announcements on four characteristics: content, clarity, timeliness and warmth. The supervisors frequently commended announcers on the spot, made recommendations where improvement was needed, and reported their findings at the end of the survey for later formal recognition.

The names of all the announcers were posted at various work locations, on the Amtrak Intranet, and the Employee Broadcast System.

Great announcements have something in common. They are delivered by confident people who are prepared, committed, and take pride in their work. They grab your attention because of the sincerity and pride they exude. Our guests benefit greatly from our employees' professionalism.

From all the employees at Amtrak, our very special thanks go to all the announcers who use their talents to keep our guests well-informed, and who further secure our reputation for high-quality service.

The route to our success

Strategic Business Plan Key Strategies

Since the 1998 launch of its new strategic direction, Amtrak has taken significant steps in rising to the challenge of reducing its reliance on federal funds to support operations. Driving Amtrak's actions are six key strategies.

Build a market-based network

Define customer demand, using extensive research, and then match our system with that demand.

Deliver consistent quality service

Change the culture of the company to be more guest-focused, and provide a world-class travel experience on every trip.

Revitalize the Amtrak brand

Introduce and support a new brand for Amtrak, to signal a major change to our guests.

Operate a cost-effective business

Identify specific functional areas, policies, organizational structures, and back-office costs that have potential for improved cost management.

Maximize public and private partnerships

Pursue public and commercial partnerships aggressively, through Mail and Express and other programs that generate the highest returns for the company.

Develop corridor services

Work with state and other partners to create or improve rail corridors across the country, drawing from the expertise we've gained in building Northeast Corridor services.

ON THE RIGHT R A K

Damian Garden receives two top honors for commitment, exceptional performance.

26-year Track department veteran, known for his selfless attitude and love for the railroad. In New Haven, Garden is the consummate "go-to" guy.

In addition to receiving the Burch Award, Garden is also a recipient this year of a President's Award for Sustained Excellence. He was honored, along with 45 employees and passenger rail advocates, at the President's Awards ceremony in June.

Each year, the prestigious Dr. Gary Burch Memorial Award honors a railroad employee who displays exceptional devotion to safety. Railroad workers nationwide are eligible for the recognition, and are customarily nominated by colleagues or supervisors.

This year, one of our own took home the award. **Damian Garden**, a track supervisor in New Haven, CT, was recognized for his outstanding work ethic and dedication to safety. He is a

Currently, Garden oversees inspection of all track and switches located between New Haven, CT, Boston, MA, and Springfield, MA. **Henry Marcell**, director of Safety-Engineering, nominated him for the Burch Award based on his "unyielding efforts to maintain our track to the highest standards."

Garden received the Burch Award from Mrs. Bette Burch during a meeting of the National Association of Railroad Passengers in Washington, D.C.

'Parcel G' facility opens in New Haven

The New Haven Locomotive S&I Facility, also known as 'Parcel G,' officially opened on May 16, with a ribbon-cutting ceremony and dozens of employees on hand.

Included in those who participated in the ceremony were NEC General Manager **Steven Alleman**, and Asst. General Manager **James**

Turngren, who expressed their thanks and appreciation to the Engineering employees who helped build the new facility.

Parcel G replaces the existing Motor Storage Facility, which had dispatched and stored diesel locomotives. Parcel G is equipped for locomotive changes from diesel to electric on through trains from Springfield to Boston, and electric to diesel locomotive changes on through trains from the west to Springfield and Boston.

Building tracks at the New Haven facility, from L. to R.: Chris Colbroski, Dave Vanderbilt, Ron Damoto, and John O'Donnell.

Employees, volunteers renew Orlando station

Group effort saves \$10,000

In anticipation of the kick-off of a national travel show in Orlando, the introduction of the Florida Rail Pass, and the announcement of our partnership with Florida State Parks, all on the same day in May, **PJ Sherban** and **Hank Koppelman** of Marketing and Brand Management agreed that the Orlando station needed a little sprucing up. After all, thousands of people would be passing through it—Amtrak should look its best.

When Koppelman approached the *Silver Service* product line with the idea of repainting the station, their response was immediate; "We will buy the paint if you can help supply the volunteers." Koppelman recalled, "This was an excellent cooperative effort between the Marketing and product line staff."

John Barry Sr., manager of Customer Services, Central Florida, and **Barbara Golden**, Brand Marketing manager, North/Central

Valencia College Volunteers and Bishop Moore High School students at work.

Florida, took over from there, and coordinated the project to renew the Orlando station.

The station hadn't been repainted in at least 10 years and the paint had begun to chip. The tile inside the station was in fair condition, but needed work. Some landscaping was also needed.

Several volunteer organizations, and others who just wanted to help, were contacted. They included "Hands on

Orlando," 23 students from Bishop Moore High School, 10 members of the "Valencia College Volunteers," seven members of the Civilian Club, two people from American Rail Tours of Orlando, and three members from "Keep Orlando Beautiful."

Working in between train times, in the evenings, and in alternate shifts, the

employees who rolled up their sleeves to help included, **Dick Weaver**, **Marcia Kostival**, **Rick Mangru**, **Marvin Scott**, **David Anderson**, **Marilyn Martinez**, **Noah Bradshaw**, **Nelson Lecour** and **Charles Cash**.

After two weeks, including weekends, the project was completed, and the Spanish-style train station was revived.

The initial estimate for an outside contractor to handle the job was

\$15,000. But this team of workers got the job done for \$5,000.

The ceilings and walls had been repainted. The tiles had been power washed, and the landscaping consisted of potted palms, trimmed trees, colorful flowers and other greenery. Thanks to the efforts of the Orlando employees, and the volunteers, visitors can appreciate the beautiful station.

By **Julienne Joseph**, Corp. Employee Communications Intern

"This was an excellent cooperative effort between the Marketing and product line staff."

Signage for the HSR project receives four distinctive awards

The creators of new signage developed as part of Amtrak's high-speed rail project have been awarded four prestigious awards. These signs, representative of our new brand identity, are intended for use throughout our system as station upgrades occur. The first of the awards was a gold medal presented by the Industrial Designers Society of America. The design company of Calori & Vanden-Eynden submitted the Amtrak HSR signage project, which was judged on criteria including appropriate aesthetics, appeal, and ecological responsibility, as well as design innovation and benefit to the client and business. Their entry was included in the June 25 edition of *Business Week*.

That design company and Amtrak were also awarded "The American Corporate Identity 17" Award of Excellence for signage and environmental graphics, in recognition of the

**"The best projects
can only be realized
with a client who
has a vision and
the fortitude to pursue
their goal."**

Amtrak signage project. The award recognizes built environments as an extension of brand identity.

The Society of Environmental Graphic Designers (SEGD) presented Amtrak with its third award, the Insight Award. **Ellen Taylor**, director of Station Program and Planning, accepted the award on behalf of Amtrak. The SEG Board of Directors recognized Amtrak as a client who consistently commissioned environmental graphic design programs that have significantly enhanced or

promoted opportunities for the field of EGD education. Some examples of this kind of work include identity graphics, signage, exhibit design, mapping and themed environments.

Amtrak was said to be an overwhelming choice for this award. According to one of the leading designers on the international scene, "the best projects can only be realized with a client who has a vision and the fortitude to pursue their goal."

The fourth award was presented by The American Institute of Graphic Arts (AIGA). This honor was given again to Calori & Vanden-Eynden for the Amtrak signage project and is noted as one of the most selective statements on design excellence and innovation. A survey of these selections will be published in AIGA's virtual gallery, and exhibited in AIGA's New York gallery in October.

B E N E F I T S C O R N E R

Saving enough for retirement

Experts estimate that you'll need 70 to 80 percent of your pre-retirement income to maintain a similar standard of living in retirement. Your Amtrak Retirement Savings Plan is one of the best financial tools available to help you meet your retirement needs. But it's important to start as early as possible and to contribute as much as possible. Here's why:

Railroad Retirement/Social Security can't do it all. Your Railroad Retirement benefit will provide just a portion of what you'll need in retirement.

The cost of living continues to rise. Inflation, while relatively moderate in recent years, may not remain so over the long run. Even if inflation remains at current levels, it will cut your purchasing power in retirement.

You could have a long retirement. Americans can expect to live an average of 20 to 25 years in retirement. With the trend toward early retirement and improved health care, your retirement could stretch to 30 years or more.

Maximize your savings

Your savings can snowball in the Amtrak plan because you don't pay

taxes on your earnings until you withdraw the money. But if you're not saving the maximum allowed, you're not giving yourself the best chance to save enough for retirement. Worried you can't afford it? Try this approach:

Set aside an amount you're comfortable with now. Many people find that contributing 4 percent or even more of their paychecks can be relatively painless.

Increase your contributions by 1 percent each year. (If you earn \$30,000, that's less than \$6 a week.) Before you know it, you'll have reached the maximum.

For an extra boost, consider dedicating pay increases to savings. For example, if you get a 3 percent raise, increase your contribution to the plan by 3 percent.

Plan for your future

Vanguard's website at www.vanguard.com offers interactive calculators, worksheets, and planning tools to help determine if you're saving enough for retirement. Select Personal Investors, then click on the Education, Planning, & Advice tab. Under Financial Planning Solutions you'll find the following:

Vanguard Online Planner. Create a personal financial plan online. You can choose from four options: retirement planning, college planning, investment planning, and estate planning. As a registered website user, you can save and return to your data for up to 12 months.

Vanguard Navigator Plus®. If you prefer to plan offline, you can download Navigator Plus for free.

Calculators, Worksheets, and Research Tools. See how the tax advantages offered in the Amtrak Retirement Savings Plan helps you save more; take a brief quiz to test your investment risk tolerance and receive guidance on choosing funds; see how compounding makes your savings grow over time; and more.

Navigator Plus is a registered trademark of The Clark Capital Management Group Inc., and is licensed for use by The Vanguard Group.

Good news for commuters

Wouldn't it be wonderful if we could save money coming to work?

Good news, now you can. There is a new benefit program that will enable employees to substantially cut their commuting expenses for parking, carpooling and public transportation. Even better news—you will use pre-tax dollars to do so.

High-speed rail support

Continued from page 1

going to upgrade existing rails, build new high-speed lines, purchase high-speed trains, and eliminate or improve grade crossings. To obtain funding for rail projects in their regions, states would need to match 20 percent of the project costs.

More than two-thirds of the proposed investment would be spent outside the Northeast Corridor in other high-traffic corridors, including California, the Pacific Northwest, the Midwest (with Chicago as the hub), the Southeast, Florida, the Gulf Coast, and Texas.

Similar legislation was introduced in the Senate earlier this year with strong support from Senate Majority Leader Tom Daschle (D-SD), Minority Leader Trent Lott (R-MS), and 55 other co-sponsors.

Amtrak, governors, mayors, local business leaders, and organized labor are actively supporting both bills. Last year, the HSRIA passed the House, but did not come up for a vote in the Senate. Backers of the bill are hopeful for passage in both houses of Congress this year and for the support of President Bush, who has not taken a position on it yet.

Hearings on the bond bill are scheduled for July.

Continued on page 16

Amtrak's cost-cutters

1 Mike Nee, who works at the New Orleans terminal, told us he saved the company some bucks for vehicle repairs. The price for labor on one vehicle was \$204, which he thought was too high. After he questioned the charges, the vendor reduced the bill to \$154. Mike saved \$50.

We heard from **Terry Douglas** and **Tom Fortune** in Jacksonville, who told us that a group of management and agreement-covered employees there got together for a team-building exercise. They painted the exterior of the operations building, after receiving an estimate from a contractor for \$3,500 to do the job. The employees spent \$500 for materials and lunch, saved \$3,000, and developed some team spirit among the employees.

3 Stephanie Pritchard saved \$439 on office supplies for her group. Instead of purchasing new supplies and print cartridges, she took a few minutes to check her inventory and found enough items in stock to fill her order.

4 Tim Otto from Jacksonville said an employee team made a decision to terminate a lease agreement. Some time ago, Amtrak leased several highway trailers to accommodate additional express shipments and bulky materials, but the trailers were used sporadically. The employees agreed to use our own Railroaders instead, and saved the company money.

5 Norel Pride in St. Louis told us how Amtrak exceeded a guest's expectations, and at the same time saved Amtrak some cash. A guest enroute from Chicago to Los Angeles got off the train in St. Louis, went into the station, then missed the train as it departed the station. The ticket agent contacted the onboard crew, and arranged for the guest to reboard the train at a nearby location. Hotel, meals, and air travel would have exceeded \$500.

6 Hank Pauley made a business trip to New Orleans, where he spent seven days. Rosenbluth Travel got him the lowest hotel rate, which was \$109 per day. When he checked in at the hotel, he inquired about a lower rate (AARP, AAA, Amtrak business, etc.). The hotel checked their rates and found one for \$99 per night. Just asking resulted in a savings of \$70.

7 Henry Blackmon in Chicago received a vendor's instructions to ship a cooling fan to another facility by air. He contacted the sender and asked why air shipment was needed. It wasn't. The item was sent by ground service for the price of \$205. Had the item been air shipped, it would have cost \$2,266. Savings: \$2,061.

Amtrak Ink shines the spotlight on some of the many employees whose efforts to save Amtrak money are paying off. More and more, employees are uncovering areas where costs can be cut or avoided. And, thanks to a special E-mail address called "WE," set up by Amtrak Intercity Employee Communications, employees can submit their cost-cutting "pearls," which are then shared with their colleagues. Each of these cost-savings pearls is an example of how we can all practice good cost management.

8 In Chicago, Diane D'Andrea and **Lucy Ulrich** scrambled to cancel overtime calls originally made when vacancies were anticipated due to training. Diane heard a rumor that the training classes were being canceled. She verified that classes would not be held and with Lucy, quickly canceled the overtime. Savings: \$644.

9 Angela Bajdan of Milwaukee found out that two Amtrak employees were traveling to Milwaukee on business. She made reservations for them at a hotel used by Amtrak T&E crews, got them the crew rate, and saved \$100.

Larry Allen of Milwaukee told us how the baggage department employees there gave the 36-year-old station's waiting room a new look. The employees recently replaced 60 seats with new cushions and back covers. Had they hired a vendor, they would have spent \$10 per cushion. Instead, the employees did the work themselves and saved approximately \$600.

11 Frank Lapp and **Mike McCarthy**, who work in Chicago, monitor each inbound corridor train for stock that is about to expire. They recently found more than 100 sandwiches that were about to expire. The sandwiches were sold on the next train, otherwise they would have ended up on the charity cart. Approximate savings: \$300.

Message from Amtrak West President Gil Mallory:

"As you know, California is in the midst of an unprecedented energy crisis, and it is uncertain when the current energy problems will be resolved. In addition to increasing consumer energy costs, the threat of rolling blackouts is expected to continue and likely worsen throughout the summer months..."

"In addition to being aware of what you should do in the event of a blackout, I am asking each of you to conserve power whenever possible without compromising safety. There are some easy tips we can all use to conserve energy, while at the same time reduce energy costs. For example, turn off all computers, monitors, printers, scanners, and ARROW monitors not being used. Use e-mail where possible instead of faxing. Turn the lights off in your office when you go to lunch or attend meetings, and close shades or blinds during the early morning or late evening hours to reduce solar heat. Set the furnace thermostat at 68 degrees or lower, and the air-conditioner thermostat at 78 degrees or higher.

"While other Amtrak West locations outside California and areas across the country are not yet directly affected by California's energy problems, these tips, in addition to saving energy, are measures that make good sense and save money. Any savings achieved, as a result of our energy saving efforts, will certainly benefit Amtrak's bottom line."

13 Janice Schultz in Sanford has been saving money on invoices from vendors. For instance, one of her weekly invoices carries the statement: "Pay by X date and you may deduct..." It is usually \$200 or more each week. That's over \$800 a month. To take advantage of the savings, she makes sure that these invoices are processed as soon as she gets them.

14 Jerry Bridgforth in Jacksonville received a bill for repairs made to a forklift. The bill for parts and labor totaled \$475. Bridgforth thought the \$245 charged for labor was high. The vendor agreed and knocked \$100 off the price.

15 Jim Hughes says a little effort reaps big rewards. A situation came up where he needed bus transportation for guests traveling between Port Huron, MI, and Sarnia, Canada. He called **Jeri Brown**, the ticket agent at Port Huron, explained the situation, and asked her to get a few buses. The first company she contacted had only one bus available, but the company was willing to make two trips for the price of \$416. The second company offered her two buses with a \$1,200 price tag. Even though Jeri knew that using one bus would create additional work for her, she considered how much money she could save Amtrak. Because of her willingness to go the extra mile, Amtrak saved \$784.

16 Rick Degman and members of the *Crescent* product line group are saving some money. The group recently moved to new offices in Meridian, MS. They searched for an affordable office cleaning service there, but the best rate they got was \$225 per month to clean five offices. Instead, they've decided to do the vacuuming, dusting, and trash removal themselves. So, with the purchase of a refurbished vacuum cleaner and some cleaning supplies, they'll save their product line and Amtrak over \$2,400 per year.

Amtrak West wins prestigious Labor Management Award

Amtrak West has received a 2001 Labor Management Award by the Union Label and Service Trades Department (UL&STD) of the AFL-CIO.

The award, instituted by the UL&STD in 1988, recognizes an employer that has shown its commitment on two fronts. First, the employer displays a commitment to the collective bargaining process. Second, the employer is committed to producing quality, competitive, union-made products or services in an increasingly difficult market. In addition to Amtrak West, Fenton Art Glass of Williamstown, WV, also received the award.

"The companies we honor today illustrate the point that positive labor relations, consideration of worker concerns, and a commitment to excellence are not only desirable, they are also critical elements for a successful enterprise," said Charlie Mercer, UL&STD president.

Amtrak West was nominated by the Brotherhood of Railroad Signalmen (BRS), based on the company's

consistent proactive approach to labor relations.

"Amtrak West management routinely holds labor management meetings for the purpose of solving problems immediately," said Dan Pickett, international president of the BRS. "When a problem is identified, the company initiates action to correct it."

**"The companies
we honor today
illustrate the point
that positive
labor relations...
are critical elements for
a successful enterprise."**

*Charlie Mercer,
UL&STD president*

Gil Mallery, president of Amtrak West, accepted the award at the opening of the 2001 AFL-CIO Union

L. to R. Rich Trumka, secy. and treasurer, AFL-CIO; Daniel Pickett, Int'l president of BRS; Gil Mallery, Amtrak West President, holding labor/management award; and Charles Mercer, AFL-CIO

Industries Show in Los Angeles. "The dedication of Amtrak West's workforce is the key to the success of our product lines and their popularity and satisfaction among our guests," Mallery said.

Amtrak West employs approximately 2,500 from various railroad unions. Some examples of Amtrak West's proactive approach to labor relations include:

- Amtrak West is the only rail employer in California that ensures BRS members will be covered by the Railroad Retirement System for work performed under long-term intercity railroad contracts with two regional transit authorities.
- When the Bay Area Authority wanted to hire full-time signal employees to install grade-crossing

warning signals, Amtrak successfully proposed a plan to temporarily transfer union-represented signal employees from elsewhere in the company to handle the job.

- Amtrak West acted as an intermediary to provide adequate pay and benefits for workers. Most recently, when the BRS sought to ease financial strain on employees working in high-cost areas around Los Angeles and San Francisco, Amtrak arranged for an added \$1,200 in monthly per-diem payments for BRS members under the terms of existing agreements. In the past such payments had been limited only to construction employees on the system.

Amtrak West safety notes

Special trains take safety seriously

Amtrak West and Operation Life-saver participated in two successful "Officer on the Train" events in May, citing and warning 63 motorists and pedestrians who placed themselves in danger by trying to beat the train at crossings, or by trespassing on the tracks. These events serve to educate pedestrians, drivers, police officers and the media about the dangers of trespassing on or driving across the tracks.

"These events are a great opportunity to team railroad police and operational folk with local law enforcement. It provides law enforcement the engineer's perspective of the dangers that are observed daily by train crews," said Captain **Jim Martino**, Amtrak/Caltrain Police.

PREPARE 2000 saves a life

Have you ever wondered how you would react in an emergency situation? Would you stay calm and recall everything you learned in the training course you took? **Brenda Lettengarver** did.

Lettengarver, manager of Operating Rules, attended PREPARE training in November 2000. And on May 29, her skills were tested.

Robin Brown, Amtrak West manager of Employee Services, was choking on a piece of candy when Lettengarver performed the Heimlich maneuver on her, dislodging the candy from her throat, and perhaps saving her life.

Brown described the experience and her appreciation: "I am extremely grateful to Brenda because it had gotten to the point that I felt as if I was losing consciousness. After the candy was dislodged, I continued to have trouble breathing," she said. "Brenda was able to calm me, which enabled me to breathe. In addition, she stayed with me for a time to ensure that I was in good condition. I am certain that if it wasn't for Brenda's fast thinking and caring attitude, I would not be able to [talk to] you today."

Lettengarver said, "I am thankful Robin is okay and feel fortunate I came in contact with her when I did. Thanks to Amtrak offering this course, I was able to act."

COMTO honors Amtrak as an outstanding 'Corporate Citizen'

The Conference of Minority Transportation Officials (COMTO) presented Amtrak with a Corporate Citizen Award during its annual conference in June. The conference theme was "Global Transportation: Bridging Multi-Modalism."

According to Davitta B. Early, COMTO's interim executive director, Amtrak was recognized for its consistent demonstration of commitment to COMTO by supporting its conferences, maintaining corporate sponsorship, and particularly in 2001, for sponsoring student travel to this year's event.

Gerri Mason Hall, vice president, Business Diversity & Strategic Initiatives, accepted the award on Amtrak's behalf.

COMTO was founded in 1971. Its original concept was to bring together senior minority transportation officials. Now, with six regional and 25 local chapters throughout the country, COMTO provides networking opportunities for small, minority, female-owned and disadvantaged businesses seeking contract opportunities within the transportation industry. It is also known for its training and education programs, scholarships and research.

Gerri Mason Hall, vice president of Business Diversity, and Roscoe Swann, director of Supplier Diversity, accept the COMTO award on Amtrak's behalf.

President's Service & Safety Awards

Outstanding employees awarded company's highest honor

In a ceremony held June 22 at the Hyatt Regency Hotel in Washington, D.C., some of Amtrak's most talented and dedicated employees and external partners received the company's highest honor—a President's Service & Safety Award.

The awards program recognized 45 individuals for accomplishments in calendar year 2000. They made outstanding contributions to the corporation, and exhibited exemplary work performance and leadership that support Amtrak's values. The men and women honored this year were selected by the toughest judges in the industry—their own colleagues.

A committee comprised of 34 employees from each SBU and corporate headquarters received more than 724 nominations from employees across the country. After careful review and research, the committee selected the winners of this year's awards.

During the awards ceremony, Amtrak President George Warrington expressed his admiration for the award recipients and the contributions they have made.

ACHIEVEMENT

MBTA Commuter Rail Frog Shop Team Somerville, MA

Accomplishment can come in many forms, but this may be the first President's Award for Achievement given to a frog team.

Being honored are **Christopher Galloway**, **Mark Tufts**, **Hank Przedpelski**, and **John "Jack" Reilly**, all members of Amtrak's MBTA Commuter Rail Division.

The group has produced a portable milling machine that will replace the time consuming process of hand-grinding track frogs after they have been welded. What previously took four to eight days to complete can now be accomplished in just one day.

If you didn't know, a frog is the part of a switch that enables a wheel to transfer from one track to another.

This machine, a one of a kind piece of equipment, was created to further improve the production capabilities of the Cobble Hill Frog Repair Shop. In addition to enhancing production, the machine eliminates the dust and fumes normally associated with the grinding process. This is an important added safety benefit that greatly reduces the risk of health hazards normally associated with hand grinding.

Enhanced productivity, improved safety, and increased flexibility can all be used to describe the benefits of this new portable milling machine. The successful design, development, and operation of the machine is evidence of this team's creative vision and proves the power of teamwork.

John E. McCaffrey Jr. Manager, Business & Marketing Analysis, Lorton, VA

John McCaffrey has left his mark on Lorton, VA. He managed design and construction of the new *Auto Train* terminal, mechanical, and administration buildings, a new track layout—and he even oversaw the landscaping.

John provided the immense coordination and oversight needed for a facility built through the cooperative efforts of both Amtrak labor and outside contractors.

With his leadership—including hours of personal time—the project was completed within budget, ahead of schedule, and without any disruption of train service.

The result—a customer-friendly and attractive facility that flatters the Amtrak brand, and meets the expectations of every *Auto Train* guest.

The new station offers seating for 450 guests, larger restrooms, improved employee facilities, upgraded retail, and commercial and food service areas. And, a new platform is now long enough to accept the entire consist of up to 50 cars.

John is accustomed to major projects. He led the reconstruction of our corporate offices at Union Station in Washington, and construction of the new call center in Riverside, California.

Thanks John, for adding one of the system's most attractive new stations to your list of achievements.

Thomas W. Yerge Electronic Technician, Odenton, MD

Genius. It lies in those who look at something complicated and costly, and see a better and less expensive alternative.

Thomas Yerge, an electronic technician, meets that criterion.

He troubleshoots problems with the wayside cab signal system on the Northeast Corridor. In simple terms, the system applies signal messages to the rails in the form of coded pulses, and those messages are then received by passing locomotives.

Tom decided that the many electro-mechanical relays used in the system were expensive to maintain and replace. Electronic relays would be better. But, they cost at least \$1,000 each, and would require an expensive redesign and rewiring of the system.

But Tom designed electronic relays that would work in our current system, without modifications. And, he designed them so they could be manufactured in our own signal shop in Lancaster, Pennsylvania—at a materials cost of less than \$100 per unit.

Amtrak gets a device that is much more reliable, much easier to maintain, and which will mean fewer failures and train delays—all for a tenth of the normal cost.

Thank you, Tom, and congratulations on your President's Award for Achievement!

BUSINESS DIVERSITY

Irma E. Garcia Team Leader, Western Reservation Sales Call Center, Riverside, CA

Amtrak is proud to honor **Yolanda Mentz**, **Irma Garcia**, and their colleagues at the Riverside call center with a President's Award for Business Diversity.

Yolanda and Irma were key elements in the solution to an important marketing and guest service challenge. Amtrak and the state of California had decided to launch bilingual advertising along the *San Joaquin* and *Pacific Surfliner* routes. And that would mean that Spanish-speaking guests would call Amtrak and expect service in their first language.

Gene Price, director of the Riverside call center, presented the challenge to Yolanda, the center's operations manager. She and Irma, a newly promoted team leader, are "can do" types. They decided they were up to the challenge. The two worked tirelessly, and Gene never wavered in his own commitment to serve the large and growing population of Spanish-speaking guests. Within three months, the Spanish desk, Amtrak's first specialized language desk, was operational.

Every goal of the ambitious project was achieved. Thanks to Gene, Yolanda, Irma, and others at Riverside who helped in this important effort, Amtrak was able to prove again that every guest is at the center of everything we do.

CHAMPION OF THE RAILS

Alandra Abrams Music Teacher, Tilden Middle School, Philadelphia, PA

Music can be a magnet—and it can inspire great ideas. An Amtrak community resource officer discovered that when he walked by the classroom of **Alandra Abrams**.

The officer was at the Tilden Middle School in Philadelphia to talk about the dangers of trespassing on railroad property. As he walked through a hallway, he discovered Alandra, directing a rehearsal of the school's performing arts student choir. Jokingly, the officer said, "We could use you to sing about railroad safety."

To Alandra, that sounded like a wonderful challenge.

Not only did she write a song about *Acela*, but she also developed a small play that would help carry its message about the dangers of playing on or near railroad property.

Since then, the Tilden choir has performed the *Acela* song at numerous community functions, schools, colleges and senior centers, and the group was also featured at Amtrak's Management Conference in Philadelphia. Best of all, railroad trespassing and vandalism incidents near Tilden and a nearby high school have declined.

Alandra's creative talents have helped promote safety, Amtrak, and the *Acela* brand. And they have demonstrated how a "champion of children" can also be a Champion of the Rails!

Senator Joseph R. Biden Jr. State of Delaware

Senator Kay Bailey Hutchison. State of Texas

Senator **Joe Biden** of Delaware, and Senator **Kay Bailey Hutchison** of Texas are two of passenger rail's strongest champions.

Senator Hutchison became a powerful leader on passenger rail issues through her chairmanship of the Senate Commerce Committee's Subcommittee on Surface Transportation. For instance, she responded to the cry from cities and towns along the *Texas Eagle* route—from Marshall, to Mineola, to Fort Worth—to preserve their train service. Under her leadership, a partnership was formed that has helped produced significant ridership and revenue growth for the route.

Senator Biden demonstrates his support for Amtrak every day Congress is in session—he commutes between Wilmington and Washington. Our honorary on-board service "employee" is often seen chatting up guests, offering assistance, and asking them what they think of Amtrak.

Even with everything he has done for Amtrak, what Senator Biden did in the closing days of the 106th Congress was truly remarkable. For the first time in his 28 years in the Senate, he threatened to lead a filibuster. He said he would do so if the High-Speed Rail Investment Act was not included in the final budget bill.

Senator Hutchison shares that passion for the importance of passenger rail. She understands that America faces a national transportation crisis that limits economic growth, restrains urban mobility, and undermines our quality of life. For that reason, she

has joined Senator Biden as a lead sponsor of the High-Speed Rail Investment Act.

For their extraordinary vision and commitment, we are proud to honor Senator Kay Bailey Hutchison and Senator Joe Biden as Champions of the Rails.

Governor James B. Hunt Jr. Former Governor, State of North Carolina

North Carolina is a model of how a state passenger rail program should work, and the person most responsible for that is **Governor James B. Hunt Jr.**

The *Carolinian* and the *Piedmont* trains, both highly regarded by guests, are subsidized by the state of North Carolina. The state also owns the *Piedmont* equipment, including the locomotives. This \$6-million annual investment is just one example of Governor Hunt's advocacy for passenger rail.

He has been a leading supporter of the High-Speed Rail Investment Act, and he joined with several other governors in spearheading the Southeast High-Speed Rail Corridor project.

And, it was Governor Hunt who led the effort to acquire the North Carolina Railroad Company. Owning that 317-mile infrastructure, from Morehead City to Charlotte, gives the state the ability to develop future plans for intercity and commuter rail service.

Governor Hunt has sponsored initiatives to protect every grade crossing in the Raleigh-Greensboro-Charlotte corridor, and to study the separation of highway and rail traffic throughout the state. Recent improvements at nine Amtrak stations in the state were financed in part or entirely by the state, thanks to Governor Hunt's interest in passenger rail service.

Amtrak is pleased to honor Governor Hunt as a Champion of the Rails.

North Carolina Train Hosts Association Glenn Payne, president, accepts on behalf of the association.

There's something special about riding a train with superior service. Prime examples are the *Piedmont* and the *Carolinian*—thanks largely to the members of the **North Carolina Train Hosts Association**. Whether arriving in or departing from North Carolina, you will be greeted by them as your smiling hosts and hostesses.

They are there, nearly every day, caring for guests, just as they have been doing for 11 years—with no charge to Amtrak.

Because of their experience, they can anticipate needs, and accommodate them before anything is even said.

Always cheerful and knowledgeable, they rise to a challenge. For instance, senior citizens and the physically challenged are among their favorite guests. And when trains are late, the volunteers circulate among the waiting guests and others, providing reassurance and Southern hospitality.

Members of the North Carolina Train Hosts Association enhance guest satisfaction, and they have contributed immensely to the quality and safety of passenger rail service in North Carolina.

They are truly Champions of the Rails.

William A. Pollard, D.D.S. Conway, AR

Dr. William A. Pollard of Conway, AR, began his passion for passenger rail while working his way through college as a ticket clerk at the Little Rock station. Today, Dr. Pollard maintains a successful dental practice, and continues to promote Amtrak.

Through his involvement with the Arkansas Tourism Commission, towns and cities along major highways in the state have erected signs directing travelers to Amtrak stations. The Malvern station has been renovated, and an Thruway Motor-coach connection now serves Hot Springs—one of the nation's most popular resorts.

When elimination of the *Texas Eagle* was proposed, Dr. Pollard rearranged his patient schedule to attend every hearing in Austin, Texas, rallying support for the service.

But his boldest achievement has been as a member of a successful pilot to establish a local revenue management team for the *Texas Eagle*. With Dr. Pollard's knowledge of regional demographics and economic trends, he and his fellow team members have continued a record-setting pace of growth for the train.

The success of the *Texas Eagle* is attributable to grassroots community involvement, and there is no greater example than the dedication of Dr. William Pollard—a Champion of the Rails.

ENVIRONMENTAL SAFETY ACHIEVEMENT

Dennis R. Gilbert Sr. Maintenance of Way Repairman Foreman, Perryville, MD

Dennis Gilbert, a Maintenance of Way repairman foreman, is being honored today for an idea that increases the ease and environmental safety of a common task.

That job is the removal and replacement of wooden block ties that are embedded in concrete. Dennis devised a way of doing it with no damage to the concrete, minimum stress to the track structure, and full environmental sensitivity. And, the company is saving thousands of dollars.

Dennis came up with a system that uses a high-pressure water stream to shred the embedded ties into mulch. The process takes little more than two minutes.

Everything happens within a box that is attached to a vacuum truck hose. All remedial oils, grease, and creosote are captured and disposed of properly, and not released to the environment. The previous method was time-consuming, damaging to both the concrete and the roadbed, and cost about \$1,000 per tie. Now, that cost has been reduced by more than half.

Dennis Gilbert is a vanguard employee—he places Amtrak's key corporate goals and values at the forefront of his daily work. For his ingenuity and leadership, Amtrak honors him with the President's Award for Environmental Safety Achievement.

SAFETY ACHIEVEMENT

Harry H. Barnes Jr. Police Officer, New York, NY

Since joining the Amtrak Police Department 16 years ago, Officer **Harry Barnes** has made safety his personal specialty. He saw that the railroad environment creates unique safety risks, and he dedicated himself to providing educational material to the public, and to other police, fire, and rescue agencies.

He's presented hundreds of safety programs to children in communities along the right of way. To hold the children's attention, he developed a magic show to augment important safety messages. His "presenter" creations include *Sam the Robot*, *Chrissy Crossing*, *Forgetful Freddy*, and *Skip the Clown*. The response to his entertaining programs has been overwhelming, with numerous requests for return visits. He accommodates all that he can, even though most of the presentations are made on his personal time.

Harry has also been an Operation Lifesaver presenter since joining Amtrak. He has traveled from Rutland, Vermont, to Washington, D.C., presenting to thousands of children, young adults and seniors.

Amtrak is proud to honor him with the President's Award in Safety Achievement, and to name him as the recipient of the prestigious Charles Luna Memorial Safety Achievement Award.

Jeffrey A. Merriman C&S Maintainer, Washington, D.C.

Look around you—there may be at least one person nearby who owes their safety awareness to **Jeff Merriman**. Just in the past year alone, Jeff has trained more than 2,000 Amtrak employees in subjects such as back safety, MoveSmart training, winter weather preparedness, and overall safety awareness.

Jeff is a model of commitment to safety. His record reflects a professional who not only leads by example, but who is also eager to protect the welfare of his colleagues.

Jeff, an assistant inspector for Engineering, is president of the General Manager's Safety Committee for the Mid-Atlantic Division. He has also served as chairman of the President's Safety Council for the Northeast Corridor.

Among many safety accomplishments, Jeff was responsible for safety compliance and planning on two major construction projects within the NEC—and both were completed with perfect safety records. He's participated in guest safety days and safety performance reviews, he's actively involved in Operation Lifesaver—and much more.

Jeff Merriman is truly a professional who is dedicated to getting everybody home safely. And that concern for his teammates has earned him the President's Award for Safety Achievement.

SAFETY COMMITTEE OF THE YEAR

Michigan Safety Committee

Dave Kuhns, ticket agent, Dearborn, MI, accepts on behalf of the committee.

For the nearly 200 Amtrak employees who work in Michigan, there's no question who should be the Safety Committee of the Year. And Amtrak agrees—the honor goes to the **Michigan Safety Committee**.

The committee's five members feel a responsibility for the safety of their colleagues at two T&E crew bases, one OBS crew base, and 26 stations. Employees report that members are "constantly" on the property, looking out for the safety of others. Monthly meetings are held at a different station every time, and members hand-deliver safety recognition items, a monthly newsletter, and other material.

That personal involvement has won them the respect of both management and front-line employees. Since the committee was restructured a couple of years ago, injuries have been reduced substantially.

The committee has earned a reputation not just for talking about safety, but also for getting things done. In safety walkabouts, if they're told about something broken that creates a hazard, it gets fixed. During safety audits on cars and engines, if they see anything that needs attention, it gets taken care of.

For its pursuit of a safe environment for employees and guests alike, the Michigan Safety Committee deserves recognition as the Amtrak Safety Committee of the Year.

STATE PARTNER

Governor Gray Davis State of California

Paul Cunningham accepts on behalf of Governor Gray Davis.

Governor Gray Davis of California is one of the nation's leaders in recognizing the potential of passenger rail. Just within his own state, he has done more to improve passenger rail corridors than any other governor in California's history.

Governor Davis has made transportation one of his top priorities for record levels of state investment, along with education and health care. His commitment has made California one of Amtrak's most enthusiastic state partners.

From two sets of *Pacific Surfliner* equipment last year, to an additional \$98 million of funding this year, he is expanding Californians' travel choices in a variety of ways. And, Governor Davis has also been a vocal supporter of the High-Speed Rail Investment Act being considered by Congress. His position has helped to broaden the base of support for rail corridors throughout the country.

The leadership of Governor Gray Davis is making the vision of faster and even more convenient train service in California an ever-growing reality. Because of his leadership within the state and nationally, Amtrak is privileged to honor him with the President's Award for State Partners.

Theresa Gren Rail Communications Specialist, Washington State DOT Stan Suchan Communications Manager, Washington State DOT

One of Amtrak's strongest state partnerships is the one we enjoy with the Washington State Department of Transportation. And no one personifies the partnership any better than the DOT's **Stan Suchan** and **Theresa Gren**.

Much of the success of the highly popular *Cascades* service can be attributed to the early efforts of Stan and Theresa.

They insisted that the new trainsets reflect both market and Amtrak employee preferences. Even today, Theresa and Stan interview guests and Amtrak employees to get new ideas.

Working with Operation Lifesaver, they developed the "Schools on Trains" program. It gives students a chance to experience train travel, and learn about railroad safety. The program is sold-out annually, and is now a nationwide model.

From statewide television broadcasts, to information-sharing trips to our call centers, Stan, Theresa, and their Washington colleagues are partners who deliver. Last year, *Cascades* ridership was more than five times its 1993 total, and revenue was more than eight times its opening total.

more recipients on next page

continued from page 9

Councilman Joe Kellejian

Solana Beach, CA

The Honorable **Joe Kellejian**, known to many of his constituents as "Mr. Coaster," is a perfect example of what it takes to receive a President's Award as a State Partner.

A member of the city council of Solana Beach, he has supported the growth of both statewide and regional passenger rail for many years. In 1994, he joined the North County Transit Development Board, and spent two terms as chairman. He was pivotal in the launch of the *Coaster*—the successful southern California commuter service owned by the North County Transit District and operated by Amtrak.

He is also a member of the San Diego Association of Governments, and serves on its High-Speed Rail Task Force, and he chaired the North Coast Transportation Study Committee. He now serves on a special sub-committee that makes recommendations about transportation needs in the region.

Mr. Kellejian has worked for years to obtain funding for various rail projects, including the east-west line between Oceanside and Escondido, and a grade separation project in his own community.

Joe Kellejian's pledge to the growth of rail service in California is praiseworthy, and Amtrak is proud to consider him an honored State Partner.

Secretary Sid Morrison

Washington State DOT

Service and leadership are hallmarks of **Sid Morrison's** career. He has served his fellow state residents since 1967, both in the U.S. House of Representatives, and the Washington State Legislature.

Sid's arrival as Secretary of Transportation eight years ago came at a crucial time for passenger rail in the Pacific Northwest. Visionary regional leaders had developed a sensible plan to gradually upgrade local Amtrak service. The concept of modern rail service was new, and funds were limited. However, through the strength of his personal credibility, Secretary Morrison brought together the necessary support for rail improvements.

His hard work and willingness to take a risk launched the *Cascades* service to record-setting success. With Sid's leadership, the DOT introduced new trains, improved stations, and provided faster, more frequent Amtrak service. Ridership and revenue skyrocketed, and the *Cascades* quickly ranked at the top of Amtrak's national system in guest satisfaction.

But Sid doesn't feel that his work is done. He continues to fight for improved passenger rail service, including support for the High-Speed Rail Investment Act, modern train control technology, and station upgrades, particularly for Seattle's historic King Street Station. Amtrak is proud of honor Secretary Sid Morrison as a State Partner.

SUSTAINED EXCELLENCE

Carol Bowersox

Sales Agent, Mid-Atlantic Reservations Sales Call Center, Philadelphia, PA

For more than 23 years, **Carol Bowersox** has been the voice of Amtrak to thousands of callers, a job she loves. Her enthusiasm can even be measured—Carol's performance has exceeded every standard at the Philadelphia call center for the past five years.

Over that time, she has generated more than \$1 million in reservation sales and ticketed revenue every year. Consistently, she has a passion for finding the most innovative way to meet the guest's schedule and budget guidelines.

When asked to describe Carol, colleagues and supervisors responded without hesitation: "Nothing short of amazing...extremely courteous...impeccable manners...unsung hero."

Although Carol works the slower afternoon/evening shift, her sales average \$680,000 more than those of the typical agent, and she handles an average of 7,000 more calls.

Because of her pleasant personality and rich sense of humor, she's great at handling dissatisfied callers. Some have even written Amtrak to commend Carol as a representative of the company's image.

Carol Bowersox never seems to have a "bad day"—she just does the right thing, no matter what. That dedication makes her a natural choice for a President's Award for Sustained Excellence.

Lisa A. Castillo

Service Attendant, Los Angeles, CA

Doug G. Wheeler

Service Attendant, Los Angeles, CA

Service attendants **Lisa Castillo and Doug Wheeler** have worked as a team for six years, providing superior service.

As one guest on the *Southwest Chief* wrote, "we were served by two very professional, energetic and friendly employees."

Colleagues say it's a joy to see the pair work, sensing how one can help the other. Although fast and efficient in an always-busy diner, they still treat each of their guests as they would in their own homes.

A mayor riding a special train for the U.S. Conference of Mayors wrote, "They were the best dining car workers that I've seen in all my years riding Amtrak." According to the product line general manager, revenue in the dining car is always high when the Lisa/Doug team is at work.

Their strength is in turning unhappy guests into Amtrak fans. As a colleague said, "I have seen their magic work many times." Because of their special abilities, they were asked to train new-hire classes, and have been doing that as a team since 1989.

For the entire Amtrak team, there could be no better example of Sustained Excellence than the team of Lisa Castillo and Doug Wheeler.

Damian C. Garden

ARASA Track Supervisor, New Haven, CT

According to a colleague, **Damian Garden** "does the work of 10 people." But by the numbers, Damian is a one-of-a-kind professional.

An ARASA track supervisor in Connecticut, he has been out in the New England weather for more than a quarter of a century, ensuring that our guests remain safe.

He received the prestigious Dr. Gary Burch Memorial Award, administered by the National Association of Railroad Passengers. The annual award honors one employee from all railroads who displays exceptional devotion to safety.

Damian's abilities make him the "go-to guy" for many others. He has earned the respect of not only his crew, but also his peers and supervisors. He is unselfishly loyal to his company, and to the men and women he works with every day.

That strength of character motivates others to perform consistently at his level of excellence. His positive attitude, combined with an enormous command of track knowledge, led to his selection as a mentor for others in the department.

Amtrak is a better place with Damian Garden. He is a model of Sustained Excellence.

William L. Howell

Conductor, New York, NY

Welcome to **Bill Howell's** train. He'll do more than just collect your ticket—he'll provide you with a memorable experience. For more than nine years, Bill has been a Northeast Corridor conductor noted for enthusiasm in providing every guest with first-class treatment.

Bill's professionalism and positive attitude are contagious. A supervisor said if there is a service disruption, she is always "absolutely relieved" if she discovers Bill is aboard the disrupted train.

Bill was an early and enthusiastic supporter of Amtrak's new commitment to guaranteed satisfaction. In fact, he was one of the employees chosen to announce the program in employee rallies. And that's his smiling face on the first advertisements for the program.

He lives the guarantee. For years, he's decided whether the best solution is an upgrade, or a complimentary drink or snack. But the most effective response may be Bill himself, with that great warm smile, and the impeccable display of his tailored Amtrak uniform.

Whoever the guest, whatever the situation, whether it's 2 p.m. or 2 a.m., Bill will always provide first-class service. His Sustained Excellence is truly making a difference.

Dale Loggins

Reservations Sales Agent, Midwestern Reservation Sales Call Center, Chicago, IL

The achievements of reservations agent **Dale Loggins** speak for themselves. But consider this phenomenal accomplishment: This is the second consecutive year that he has received a President's Award for Sustained Excellence.

In fact, Dale's results in the year 2000 have been called "one of the best years ever" in the history of Amtrak for a sales agent.

Since joining Amtrak in 1993, Dale has substantially exceeded performance standards every year. His exceptional job performance has resulted in an extraordinary amount of revenue to support Amtrak's business plan to become operationally self-sufficient.

Never in eight years has Dale fallen below 100 percent productivity for a month. The level of 100-percent productivity is difficult to obtain for one day, let alone an entire month.

In addition to being a superior performer, Dale is well liked by all his colleagues. He is known for his positive outlook and integrity. His manner and performance combine to form a powerful motivator for everyone who works with him.

Through his hard work, perseverance and creativity, he truly epitomizes the best that Amtrak can be. Dale Loggins, you are one of Amtrak's finest.

M. Steven McConnell

Senior Multimedia Producer, Wilmington, DE

Steve McConnell has been the energy behind hundreds of Amtrak videos—literally and figuratively.

Steve takes a personal interest in every project, and he'll do whatever it takes to meet the deadline and satisfy the client.

As his clients soon realize, there is no passive connection when you work with Steve McConnell. His enthusiasm rubs off on everyone—you can't help but be drawn in.

He may be behind the camera, cheerfully engaging the subject, or he might be locked away inside the editing suite in Wilmington, but Steve's eye is always on a positive impression. His caring and love for Amtrak, its employees, and its guests will always come through.

One day might find him on Capitol Hill or inside an executive office; the next day he could be onboard a train or crawling through tunnels. But he's always looking out for the people around him. To Steve, every Amtrak employee is a client.

One task means more to Steve than any other: the annual video profiles of the President's Awards recipients. This year, Amtrak is proud to turn the camera around, and to honor Steve McConnell for Sustained Excellence.

Jane C. Melhorn

Director, Design & Identity Management, Washington, DC

After talking with **Jane Melhorn's** colleagues and clients, an awards committee member said he was getting a picture of "a calm sea on the surface." But, he said, "below that quiet surface, there's unlimited life, activity, and strength."

Jane is relentlessly dedicated to a world-class visual image in everything associated with Amtrak. Her design work is everywhere in the system. Whether it's a ticket or ticket jacket, a brochure or poster, or a calendar—you've benefited from Jane's abilities.

She is responsible for dozens of designs that have to meet her exacting standards each year. But, as a key member of the Brand Transition Task Force, it's her job to protect the use of our new brand identity everywhere. There may be no item in the country bearing Amtrak's brand signature that hasn't been either created or reviewed by her.

It's not only employees who feel the effect of Jane's work. Whether onboard or in stations, our guests enjoy examples of Jane's dedication to presenting a world-class image in everything associated with Amtrak.

Quiet, calm, accommodating. One of the company's finest, Jane Melhorn has earned recognition for her Sustained Excellence.

Heureuse Polycarpe Pierre*Carmen Helper, Sunnyside, NY*

Heureuse Polycarpe Pierre, called Ms. Polly by co-workers, is an excellent example of dedication and sincerity. She is a "behind the scenes employee," but one who plays a real role in providing quality guest service.

Ms. Polly has broader responsibility than many carman helpers. She ensures that supplies are provided on time to the coach cleaners who work at Sunnyside. But, as important as that task is, she has chosen to do even more.

She makes sure the cleaning department is running as smoothly as possible. For instance, she has drastically reduced the cost of cleaning cloths. She thought they could be washed and reused, instead of discarded after one use. She convinced her supervisor to buy a washing machine, and now the department is saving thousands of dollars.

This is just one of many ways, for the past 22 years, she has made the work of her colleagues easier, or protected company resources.

Ms. Polly is a proud and caring person who takes her job seriously. She puts the guest at the center of everything she does, and she appreciates that teamwork leads to success.

Heureuse Polycarpe Pierre is a role model of Sustained Excellence.

Benedicto Vilca*Gang Watchman, Sunnyside, NY*

Benedicto Vilca, known to his teammates as Benny, has been described as a quiet but busy "track bee." His bursts of enthusiasm and great job performance have earned him the respect and admiration of colleagues and supervisors alike.

His perpetual positive attitude is a boost to everyone. He is treasured for his professionalism, and his willingness to show both new and seasoned employees the skills needed to do a superb job, and still work safely.

And when it comes to safety, he practices what he preaches. In a 25-year career, he has maintained a perfect safety record.

A man of many skills, he typifies what teamwork and cooperation is all about. Currently, he is a watchman for the Queensboro Bridge project in Sunnyside Yard.

Working the tracks for an entire career takes hard work, commitment, dedication, and stamina. Just weather conditions alone are enormous obstacles to good working performance. But through it all, he has done the job well, and kept a calm and mild-mannered attitude.

He always exceeds expectations, and he inspires others. As his teammates say, his smile lights up Sunnyside Yard. Congratulations Benny, on your award for Sustained Excellence!

Ronald J. Walker*Trackman, Philadelphia, PA*

To many, **Ronald Walker** is known as Ronnie. To others, he's "Pee Wee," a nickname that suggests a smaller man. But he was given that name affectionately by friends and coworkers who recognize him as a true giant.

Hired by Amtrak in 1976, Ronnie has worked as a trackman and a work equipment operator. He's now in the Northeast Corridor's Mid-Atlantic Division, working out of Philadelphia.

His coworkers describe him this way: "good-natured... a natural leader for young trackmen... and dignified." And his supervisor calls him "what a track person should be."

Ronnie is also a strong family man whose life revolves around his family and faith. His influence is recognized by many. A high school teacher of one of his daughters said, "You can tell what type of person he is by the way his daughters handle themselves in school."

One coworker said, "You know that song, 'Lean on Me,' the one that says everyone needs someone to lean on? Well, Ronnie is that person for us all."

There is no small praise for Ronald "Pee Wee" Walker. And that's why he's being honored with a President's Award for Sustained Excellence.

Larry Williams Sr.*Baggageman, Miami, FL*

If you're at the Amtrak station in Miami, you'll see evidence of 27 years of contributions by **Larry Williams**.

Officially, Larry is a baggage man. And he's a great one—his jovial and respectful attitude makes every guest feel like the most important person in the station, truly at home in Larry's environment.

But there isn't any job that Larry won't do to make his station better. He volunteers to clean windows, plant roses, maintain the landscaping, or anything else to beautify the Miami station.

And he boosts the morale of colleagues with his upbeat attitude, and his ideas for improvement. It's not unusual for Larry to prepare a large meal at home and bring it in to treat his teammates.

There's also a good bit of Santa Claus in Larry. He wants no child in a distressed neighborhood to pass the holidays without a gift—even if that means paying for the toys himself.

To the people at the Miami station, and the guests who pass through it, Larry Williams is their silent hero. And because he's Amtrak's hero, we honor him with a President's Award for Sustained Excellence.

VALOR**Ginger L. Brown***Assistant Conductor, Kansas City, MO***Keith J. Burks***Engineer, Kansas City, MO***Lewis R. Buckner Jr.***Conductor, Kansas City, MO*

Ginger Brown, assistant conductor; **Keith Burks**, assistant locomotive engineer; and **Lewis Buckner Jr.**, conductor, would be the first to say they did nothing their colleagues wouldn't do.

Based in Kansas City, they had just come aboard the *Southwest Chief* in the night of March 14, 2000, as the train headed toward Los Angeles.

Approximately 2 a.m. on the 15th, just southwest of Topeka, Kansas, the train derailed. Six Superliner cars and nine Mail and Express cars were off the track. Some cars lay on their side in a muddy cornfield. The only sound was from a cold driving rain.

Ginger, Keith, and Lewis jumped into action. Working with other employees, they climbed down into dark cars and helped move guests and colleagues to safe locations. They went from car to car, calming and reassuring our guests. And they directed emergency responders to the injured.

Because they carried flashlights or light sticks, the three were being called the "Guiding Light Leaders" by guests and colleagues. Their actions typified the entire crew, which was commended by guests and investigating officials.

Amtrak is proud to honor Ginger Brown, Keith Burks, and Lewis Buckner Jr. for their display of valor, and for their representation of their teammates.

John F. Dooley*Manager Train Operations, New York, NY***David C. Karpinski***Foreman II, New York, NY*

Some say that New York City is the heart of Amtrak's Northeast Corridor operations, but others like to joke that there's no heart in New York. **John Dooley** and **David Karpinski** are heroes who offer evidence to the contrary.

John is manager of Train Operations at Penn Station. David, who joined Amtrak as a coach cleaner, is a Foreman II.

But both jobs turned heroic on March 15, 2000. Separately, the two men heard that someone had been struck by train 174 in the station, and they hurried to the scene. They arrived to find an injured person trapped under the equipment.

Although it was a dangerous situation, neither man hesitated. John and David crawled under the then live equipment. Working together, they were able to free the person, who was brought out for immediate treatment by emergency service personnel.

Thanks to the courageous actions of John Dooley and David Karpinski, an Amtrak guest was quickly removed from a life-threatening situation and given important medical treatment. Their display of valor proves that when it comes to finding a heart in New York City, you might find it wearing an Amtrak hardhat.

Eric J. Romano*APD Investigator, Chicago, IL*

On Dec. 12, 2000, while conducting a drug interdiction at Chicago Union Station, Amtrak Police Investigator **Eric Romano** was in a life and death struggle with two heavily armed men.

Investigator Romano was working that day as part of a special task force that included a DEA agent and a Chicago police officer. While the three were questioning two men who had gotten off the Lake Shore Limited, Investigator Romano spotted a gun.

When he alerted his fellow officers, both of the suspects drew firearms. For a moment, the Chicago officer was being held hostage by one of the two men. In a brief gun battle, both suspects were fatally wounded.

Later, it was learned that they were fugitives. Both were armed with Glock .40 caliber semi-automatic weapons, and were wearing bulletproof vests. One had vowed to a friend that he would never be taken alive.

In addition to the President's Award for Valor, Investigator Romano has been honored by the Amtrak Police as its "Officer of the Year." And, he is the third officer in the history of the department to receive its most prestigious award, the "Medal of Honor."

2001 President's Service & Safety Awards Committee**First Row (left to right)**

EMPLOYEE MILESTONES

Beginning in mid-1976, through 1977, labor agreements were signed that transferred thousands of Northeast Corridor jobs from Conrail to Amtrak. For the next few months, you'll see a long list of employees celebrating their 25th anniversary--congratulations to all of you.

RAILWAY ROUNDUP

Trails and Rails

During the Memorial Day weekend, Amtrak extended its "Trails and Rails" program on the *Vermont* and *Adirondack*.

In partnership with the National Park Service, Trails and Rails is aimed at educating people about the natural and cultural heritage of the nation's parks. Narrated onboard tours are designed to attract sight-seers who are not traditional visitors to national parks.

Vermont passengers can take advantage of the program when traveling between Burlington Essex Junction and Amherst, as the train winds through the Green Mountains. Those on the *Adirondack* can enjoy the tour between Yonkers and Hudson in the Hudson Valley region and between Saratoga Springs and Westport.

The Trails and Rails program started six years ago on the *Sunset Limited*.

Amtrak launches aggressive safety campaign

More than 100 Philadelphia elementary school children joined Amtrak and Operation Lifesaver to announce an aggressive safety campaign on June 6.

The event included the airing of a series of new public service announcements, as well as a program presented by one of Amtrak's Community Relations Officers.

Joining Police Chief **Ron Frazier**, vice president of Systems Operations, was SEPTA Chief of Police

Richard Evans. In addition, Larry Wilson, assistant deputy mayor for Transportation for Philadelphia, read a proclamation by Mayor John Street declaring June 6 as "Philadelphia Railroad Safety Day."

Each year, nearly 1,000 people are killed or injured nationwide in track-related accidents while on railroad property, making it imperative to spread the railroad safety message, particularly with summer approaching and children having more free time to play outside unsupervised.

11th Annual OL ceremony held at Washington Union Station

On May 16, Amtrak hosted the 11th Annual Operation Lifesaver Day and Congressional Appreciation Awards ceremony at Washington Union Station. The theme of this year's event was "Take Safety to Heart," and this theme was showcased in the new public service announcements that were shown at the event.

The recipient of this year's award was Rep. Martin Sabo of Minnesota. Some previous winners of the Congressional Appreciation Award include Senators Frank Lautenberg, Trent Lott, DOT Secretary Norman Mineta, and Senator Kay Bailey Hutchison, co-sponsor of the Railroad Grade-Crossing Act of 1994.

Barbara Richardson, Amtrak executive vice president, was the featured speaker. She reiterated Amtrak's commitment to Operation Lifesaver and grade-crossing safety.

Busy at the Midwestern RSCC

April was a busy month for the Midwestern Reservation Sales Call Center. It included recognizing National Operation RedBlock Day, participating in Parent-Child Day, and hosting the Amtrak Historical Society.

On National Operation RedBlock Day, employees enjoyed participating in demonstrations of dancing exercises, and treadmill and lifecycle use. Participants learned how exercise could relieve tension, particularly the kind that can result from sitting for long periods in front of a computer. And, T-shirts displaying "Doing Our Best to Relieve Our Stress" were available for purchase.

The mission and purpose of Operation RedBlock was reinforced so that newer employees are aware of the important role ORB plays in our workplace. Videos were shown to illustrate the influence of alcohol and stress on individuals in any workforce.

Employees celebrated Parent-Child Day by hosting a series of events for children, including a tour of workstations to learn how they

Javon Butler learns about reservations sales from his grandmother, sales agent Marguerite Butler.

function. The best part was seeing the parents on the phone, with their sons and daughters listening with headsets to see what it's like in the real world of reservation sales.

The center was also host to the Amtrak Historical Society for its seventh annual conference. It was an enjoyable and educational event, and we were honored to have been able to showcase the Midwestern RSCC.

All three events were a great success and an inspiration for everyone who participated.

By: Gary Knutson, manager, and Mark B. Little, team leader

This year's attendees were also able to tour eight private cars owned by several freight railroads and private citizens.

Every 115 minutes a train collides with a vehicle or a pedestrian somewhere in this country. This sobering reality is why Amtrak continues its commitment to grade-crossing safety and trespass prevention. Supporting Operation

Lifesaver, along with the educational outreach of hundreds of Operation Lifesaver presenters, will save lives.

Amtrak's Office of System Safety would like to thank all the Amtrak employees who pulled together to make this event a success.

GUEST LETTERS

This letter was submitted by Neyna Johnson to **June Norfleet**, service manager, Midwest Corridor (IL/MO), to commend **Dale Chapman**, a ticket agent at the Amtrak station in Springfield Illinois.

Dear Ms. Norfleet:

On the evening of April 8, I rushed to the train station to pick up my ticket to travel to Chicago the next morning. After joking with Dale at the ticket counter, (I ride frequently) I proceeded to respond to one of his questions and choked on the piece of hard candy in my mouth. The candy was lodged in my windpipe and I couldn't breathe. My friend, who was with me, began the Heimlich maneuver on me, but was unable to dislodge the candy.

Dale recognized that I was still having difficulty and ran out of the ticket office to begin performing the Heimlich on me. After several attempts, the candy was finally dislodged and I was able to breathe again.

He [Dale] is truly my hero, and although I did not take the time to put my incident in the local newspaper, praise, honor, and recognition should be given to Dale. I would not have lived to tell my story had Dale not come forth to my aid. Although I am tardy in giving this to you, my gratefulness is no less sincere. Amtrak should be very proud to have someone like Dale as an employee.

Sincerely,

Neyna Johnson, M. S.
State Long Term Care
Ombudsman

Dear Amtrak:

It's my pleasure to send this letter to Amtrak thanking you for correcting what could have been a disastrous experience.

I had a paid reservation to travel Philadelphia to Washington...I had paid for it on my VISA card the previous week.

I arrived at the station, swiped my credit card through the machine and the reservation came up as nonexistent... A secretary told me the reservation had been cancelled out because it hadn't been paid. I only had 15 minutes to catch the train so it was going to be tight. He sent me to a supervisor who worked with me until we fixed the problem. It seems there was a duplicate reservation under my name that was paid, so he issued the tickets, just in time.

Yesterday, in every instance, if there was a way to make my trip better, it was done. I am extremely impressed with Amtrak's new focus and I hope all companies, my own included, use this story as an example of how going the extra mile promotes good will and good word of mouth.

Thank you for this example that service guaranteed isn't always about refunds; it's about service.

Sincerely,

F. Feldman

Dear Amtrak:

Recently I returned from a trip that included the *Texas Eagle*, *Lake Shore Limited*, *Acela Express*, and the *Cardinal*.

Commendations are in order for all these teams, but especially the *Cardinal*.

I would like to single out train chief **Harry Kabel**, and the train crew working this service for their courtesy, professionalism, and detail to service.

I can truly tell you that their efforts made my trip on the *Cardinal* exciting, pleasurable and a joy for me.

Sincerely,

Coppinger
Arlington, TX

Dear Amtrak:

I just wanted to drop you a note of thanks. My wife and I just completed a lifelong dream—a cross-country journey via rail. We spent a lot of time planning, and we felt it would be fun, but it was beyond our expectations.

I have been marketing merchandising all of my life, and have felt that the attitude of a company's employees reflects the tone set by management. This being the case, you and your team are doing an excellent job.

Unfortunately we didn't get the names of the persons who made our almost 8,000 mile trip so memorable. [But] the car attendants, dining car personnel, the conductors and chiefs that we came in contact with were extremely nice and always concerned about our comfort and well being.

We have sung, and will continue to sing your praises to everyone who is willing to listen. And if you need an advocate for Amtrak, we are only a phone call away.

Sincerely,

Mr. & Mrs. Morgan

Amtrak's Dispute Resolution Office – Who We Are and What We Do

The Dispute Resolution Office of Amtrak's Business Diversity and Strategic Initiatives Department handles the company's internal complaint process for addressing claims of discrimination, harassment and retaliation. In addition to filing an internal complaint with the Dispute Resolution Office, employees have the right to file complaints of discrimination, harassment, and retaliation with federal, state and/or local government agencies authorized to handle such complaints.

The Dispute Resolution Office is:

- A neutral evaluator of workplace issues and disputes
- Responsible for addressing and resolving internal complaints of discrimination, harassment (including sexual harassment), retaliation, and unfair treatment on the basis of one's race, sex, color, religion, national origin, age, disability, veteran status, sexual orientation, or other personal characteristic protected by law
- Authorized and committed to taking appropriate corrective action (including disciplinary action, up to and including termination) where misconduct and/or violation of company policy are found

Dispute Resolution Offices are located in Chicago, Illinois; Los Angeles, California; New York, New York; Philadelphia, Pennsylvania; and Washington, DC.

How You Can File A Complaint?

You may file a complaint with the Dispute Resolution Office if:

- You are a current, former, or retired Amtrak employee
- You applied for a position with Amtrak
- The complaint is filed with the Dispute Resolution Office within one year of the date of the alleged discrimination or within one year of the time at which you learned of the alleged discrimination, whichever comes first

Complaints may be filed with the Dispute Resolution Office:

- By visiting the nearest office in person and completing a formal complaint form
- By telephone or e-mail
- By writing the Dispute Resolution Office

If you believe that you have been discriminated against, harassed, or retaliated against, you have the right to file a complaint with the federal Equal Employment Opportunity Commission (EEOC) and/or a state or local fair employment practices agency even if you file a complaint with Amtrak's Dispute Resolution Office. There are various federal laws (such as Title VII of the

Civil Rights Act of 1964, the Americans with Disabilities Act, and the Age Discrimination in Employment Act of 1967) which prohibit employment discrimination. In addition, many states and local jurisdictions have anti-discrimination laws. A person claiming discrimination must file a complaint with the EEOC within certain time limits. Generally, a complaint must be filed with the EEOC within 180 days after the alleged discriminatory conduct occurred. However, in states where there are state/local agencies with authority to deal with discrimination complaints, complaints must be filed with the EEOC within 300 days after the alleged discriminatory conduct occurred. In order for a complaint to be timely filed with the EEOC, these time limits must be met even if an employee files a complaint with Amtrak's Dispute Resolution Office.

How the Internal Complaint Process Works:

Amtrak takes discrimination complaints very seriously. Therefore, complaints filed with the Dispute Resolution Office will be addressed and resolved as promptly as practicable.

Once a complaint is filed:

- You will receive written confirmation of your complaint
- Your complaint will be evaluated by the Dispute Resolution Office to determine whether the complaint is timely filed, whether the complaint concerns matters handled by the Dispute Resolution Office, and the most appropriate manner in which to resolve the complaint
- Whenever possible, the Dispute Resolution Office will attempt to resolve your complaint by using alternative resolution methods such as mediation, facilitated open dialogue, and neutral intervention within 30 days of the date that your complaint was filed
- Where the use of early resolution methods is not appropriate (such as where sexual harassment or retaliation is alleged) or where the early resolution attempt is unsuccessful, the Dispute Resolution Office will conduct a thorough fact-finding investigation. This investigation will be completed within 90 days of the date your complaint was filed
- At the conclusion of an investigation or successful early resolution attempt, the Dispute Resolution Office will notify you in writing of the results

Amtrak policy prohibits retaliation against any employee who reports or files a discrimination or harassment complaint, or who participates in or cooperates with an investigation into such allegations. Any employee who believes that he or she has been subjected to retaliation should immediately contact the Dispute Resolution Office.

Complaints can be filed by calling toll-free to the Dispute Resolution Office hotline: 1-877-351-8338

Dear Amtrak:

This is a letter commending the quick-thinking action and compassion of one of your employees aboard the *Coast Starlight* on April 22. He is **Chris Baruxes**, a dining car [attendant].

Unfortunately, I choked on a piece of fish, which completely stopped my breathing. Mr. Baruxes was immediately at my side and took charge calling for the conductor, as he applied the Heimlich maneuver consistently until my throat was cleared and breathing restored.

I am eternally grateful to him for I feel he saved my life.

Also, your other employees, from the conductor on down the line, kept their eyes on me for the rest of the journey expressing their concern for my welfare.

Thank you so much Amtrak officials for your wonderful crew!

Most sincerely yours,

Mrs. E. Rees
Beaverton, OR

Dear Amtrak:

I am an elderly person. My age is 100. I recently went on several trips to Washington, New York, and Boston. I take these trips either on or after my birthday in January. I was supposed to go to Washington, D.C. to meet the president (then it was Clinton); however, things got kind of mixed up (the election results, Clinton leaving, Bush taking over, etc.)

I booked passage on #30. The train crew took very good care of me, even seeing that I was put on #66 for Boston. When I returned, everyone seemed to want to help me on and off the various trains in all the cities involved. I ended my trip by taking #30 from New York City...All concerned in assisting me on my trip were a big help to me. I missed my appointment in Washington [but] I was told that I would be remembered in 2002. So I write to you thanking you for all my pleasant trips.

Sincerely,
W. Bender

PROMOTIONS IN MOTION

Amtrak and Icelandair to offer first joint rail/air trips to Europe

Amtrak has teamed up with Icelandair to provide a unique travel experience, introducing the first joint rail/air trips between the U.S. and Europe.

Beginning May 31, domestic and international travelers can now purchase a ticket from Icelandair for travel between Washington, D.C., or Philadelphia, to destinations in Scandinavia, the United Kingdom, and Continental Europe. Guests will travel on Amtrak from Washington or Philadelphia, connecting to Icelandair's daily flights at Baltimore/Washington International (BWI) Airport.

Under this "codeshare" arrangement, a first for travel in the U.S., travelers simply make one reservation for both rail and air travel. The train portion of the ticket will show an Icelandair flight number.

Our partnership with Icelandair is another way Amtrak is developing strategic partnerships to create an inter-modal travel experience that is convenient and cost effective for our guests.

Amtrak, MBNA introduce Amtrak Guest Rewards credit card

In May, Amtrak and MBNA America Bank announced their agreement to offer a co-branded credit card. It's a move that will provide added benefits for our loyal guests.

Beginning this summer, cardholders will earn points with every purchase that they make—whether they are buying a ticket for travel on Amtrak or buying dinner at a favorite restaurant.

The Amtrak Guest Rewards credit card will offer a low interest rate and no annual fee, making it easily the card of choice for program members. The card will essentially replace the Amtrak Smartrak Rewards card introduced about two years ago. Card applications will be available this summer in many Amtrak stations and over the Internet.

Amtrak sees increase in ridership among seniors, guests with disabilities

Ridership among seniors increased almost 8 percent, and nearly 6 percent among our guests with disabilities last year, following successful group-targeted marketing campaigns.

During 2000, 1.8 million seniors traveled on Amtrak trains, an increase of almost 8 percent over 1999's 1.7 million travelers. The most popular routes traveled by seniors included the *NortheastDirect*, *Pacific Surfliner*, *Empire Builder*, *Coast Starlight*, and *San Joaquins*.

Last year, 184,000 disabled guests took advantage of discount fares to travel on Amtrak trains, an increase of nearly 6 percent over 1999's

Amtrak West introduces innovative entrees

Amtrak West is giving *San Joaquin* and *Cascades* guests another tempting reason to ride the rails. Exciting new menus are delighting guests, making their travel experience even more memorable. **Erik Robinson**, director of Food and Beverage, and **Gay Banks Olson**, *Cascades* service manager, worked with the states of California and Washington to select the tasty menu items.

The *San Joaquins* regionalized its dining and lounge car entrees to better meet the tastes of its expanding ridership. In addition to revamping the menu, the *San Joaquins* have repositioned the dining car to the center of the train to allow easy access and increased visibility. Guest response to these changes has been positive, as increased food service revenues reflect.

Further north, the *Cascades* service between Seattle and Vancouver, B.C., offers appetizing menu items designed by nationally recognized chef **Kathy Casey**. Onboard since April, the menu is receiving fabulous reviews from our guests.

Casey is an acclaimed chef, columnist and author of numerous cookbooks. She was hailed by Craig Claiborne in the *New York Times* as an "inventor of dishes that dazzle the eye and the palate."

BENEFITS CORNER

Continued from page 5

Under the Commuter Reimbursement Benefit program, there are two types of commuter reimbursement accounts. The first is the *Transportation Reimbursement Account*, which helps cover mass transit expenses (e.g. farecards, tokens), or car pooling expenses. The second account is the *Parking Reimbursement Account*. This account will help employees pay for parking expenses (e.g. parking at or near Amtrak work locations, or near a location where you carpool or take mass transit).

These accounts will work similarly to other spending accounts enjoyed by Amtrak employees. The employee contributes money to the account from his/her paycheck before federal, state (except New Jersey and Pennsylvania residents), and railroad retirement taxes are withheld. So, you are paying for eligible expenses

with pre-tax dollars. That's a big cost savings!

In any given month, commuting expenses can be reimbursed from your own account—up to \$65 for mass transit and carpooling expenses and \$180 for parking. For employees who currently park at Washington, D.C. Union Station, or the Kansas City station, your deductions will automatically be made pre-tax. You don't have to enroll in this benefit.

If you don't use all the money in your account, you may roll the money over to the next month, and even the next year. And, you can check your account balance via the Internet, at www.shps.net. Reimbursements will come quickly through direct deposit, or by check.

Satisfaction Guaranteed —you bet!

Editor's note: This letter describes a perfect example of how the Satisfaction Guarantee can work. We make a promise...if we can't deliver, we apologize and do what's necessary to satisfy the guest, then thank the guest for being our customer... it works! It's the way it should be. The Satisfaction Guarantee has now been in effect for a year. Next month, Amtrak Ink will review the program's year-end results. We think you'll be "satisfied" with the picture.

April 18, 2001

Dear Amtrak:

On March 20, 2001, you wrote to me as a result of my problem in arriving in New York by Amtrak three hours late on Saturday, Dec. 23.

I am pleased to report your automated credit came through in my March Visa statement, a copy of which is enclosed. You can be assured of my appreciation for the way you handled this matter.

You can see the credit was issued March 21, and, the very next item under this credit is a charge of March 4, in the amount of \$2,789.39. You will be pleased to know this is for an Amtrak trip later this summer.

We are proud to have Amtrak continuing to serve us for our future travel needs.

Thank you for your consideration.

Sincerely,
(A satisfied guest)

Product line supervisor training held in six cities

A training course was held in six cities across the country to ready 155 former OBS chiefs for their new responsibilities as product line supervisors.

The chief positions were changed to better meet the needs of guests and to provide more consistent support for front-line employees. Because those in the new product line supervisor role will provide a broad range of support, training in several areas was necessary.

Dolores Fritch, manager, Human Resources Development, and **Jeff Kocar**, Human Resources consultant, developed the two-day training course, and were the primary presenters at sessions held in Los Angeles, Seattle, Chicago, Miami, Wilmington, and Washington, D.C. The training course included rules overview, leadership skills, team-building, safety, cost management, job responsibilities, and auditing.

"The sessions were very positive. We learned that the supervisors wanted to focus on the leadership, coaching, and team-building aspects of the position," Kocar said.

The duties of each product line supervisor will vary, but they all received the same training so they would be prepared to fill in for others if necessary.

Some will have more administrative duties and be responsible for food and beverage audits and linen inventory, for example. Others will spend most of their time onboard trains to be a resource for train crews, while others will work the train platform and in stations.

continued on page 7

Florida's East Coast closer to rail service

With the arrival of summer, more than the weather is getting hot in Florida. The development of both high-speed and intercity rail service has moved to the front burner through the combined efforts of Amtrak, the state, private partners and freight railroads.

Amtrak Intercity and FEC Railway signed an agreement in June to restore passenger service to Florida's East Coast after a 30-year absence, providing two new daily roundtrips between Jacksonville, West Palm Beach and Miami. New Amtrak station stops would be added in St. Augustine, Daytona Beach, Titusville, Cocoa/Port Canaveral, Melbourne, Vero Beach, Fort Pierce and Stuart.

The FEC agreement is key to Amtrak's plan to double Florida service from three roundtrips daily to six. Amtrak and FEC Railway are working with the Florida

Department of Transportation and local communities to secure funding for track, signal and siding work, as well as station development.

Service would begin phasing in a year after the start of construction. Amtrak service from Jacksonville would ultimately include three roundtrips to Miami—two down the coast and a third via Orlando; and three roundtrips to Tampa—two via Orlando and a third via Ocala and Dade City.

Meanwhile, Gov. Jeb Bush has signed legislation creating a Florida High-Speed Rail Authority, the first step toward meeting a Constitutional Amendment approved by state voters last fall mandating a statewide high-speed rail system. Amtrak's Capital Programs Department has been working with the Florida DOT in planning the first leg of the route between Tampa and Orlando down the median of I-4. The system ultimately would extend to Miami, Jacksonville and Naples.

Amtrak worked closely with Coast-to-Coast Rail, a coalition of 34 major central Florida employers, to gain an endorsement of the High Speed Rail Investment Act. Coalition members include SunTrust, Disney, Universal Studios and Verizon. The organizers of Tampa/Orlando's bid to host the 2012 Olympic Games will cite the prospect of high-speed rail service as part of their bid.

George Warrington

Amtrak is in the middle of a cash crunch, and it isn't being made any easier by all the hits the economy has been taking. One of the first places that the effects of a weakened economy start to show up is in travel. The financial reports being announced by the airlines certainly reflect that.

In messages to employees last month, I said we haven't been meeting the targets we set before the economy began falling. That has forced us to be even more aggressive in our cost management efforts. As a result, we're reviewing every aspect of our business, and that careful process that will continue through the summer.

In order to achieve our goals and meet our financial obligations, we're going to need to make some tough decisions. Some actions might be taken before the Oct. 1 start of our new fiscal year. Others might be put off until later in the fall—or they might not be necessary at all.

I know that uncertainty is a distraction to you at best, and annoying at worst. I apologize for that, but it's just the way the budget process works. In fairness to every part of our business, and the hopes we have for our company, we have to put almost everything on the table. And only then, after all the options are weighed, can decisions be made.

Back in February, with the briefing blitz that reached more than 9,000

employees in small settings, we started letting you know about our serious need for better cost management. We said we'd have an operating loss of \$119 million this year, why that was happening, and that we were looking at measures that could save us \$270 million annually for the next several years. We said everything was being looked at. And that's just what we're doing.

So the situation is certainly no surprise to you. But that doesn't make the uncertainty of the next couple of months any easier. I understand that. But I also won't deceive you. To protect ourselves, we need to plan next year's budget—starting October 1—with the assumption that the economy will continue at a sluggish pace. Depending on those conditions, and our own business performance, either fewer or more cost-cutting measures will be needed.

With all that in the background, please try to keep your focus on doing the same great job that has allowed us to keep setting revenue and ridership records—despite our slips in cost management. Even with the softened economy, our ticket revenue so far has been up about 10 percent over the same period last year.

Our guests deserve your great service. Just as important, keep your focus on staying safe. Because you deserve that.

Amtrak improves commitment to environmental protection

Amtrak provides environmentally efficient service in some of the nation's most densely populated and congested corridors. Passenger rail service generates less air pollution and uses less energy per passenger mile than either highway or airplane travel. However, there's always room for improvement.

Nearly two years ago Amtrak launched the Environmental Management System. An aggressive, three-year program, it was created to identify environmental impacts and risks, enhance our planning efforts, measure and reward superior performance, and promote environmental awareness among our employees and our partners.

In addition, local field environmental specialists (FESs), responsible for day-to-day environmental compliance, work with SBU environmental managers to provide facility management support. The corporate environmental department also provides services such as training and procedure development; regulatory agency interface; and technical support.

As part of meeting everyday compliance obligations, the department has undertaken a series of 51 annual facility audits, designed to quickly identify and correct any deficiencies. It is expected that 69 large and medium facility audits will be completed over the next three years.

The department has also begun developing an improved database that tracks environmental permitting, and it has increased Amtrak's recycling programs.

"I want to commend the many people within the company who for the past two years have worked very hard to improve our environmental practices," said **George Warrington**.

A year ago, Amtrak's top executives signed an environmental policy that will help further our commitment to be an industry leader in environmental protection. This policy commits us to three important principles: environmental leadership, stewardship, and compliance.

Bush to appoint Mineta to Amtrak board

President Bush has announced his plans to appoint U.S. Secretary of Transportation Norman Mineta to the Amtrak Board of Directors for a five-year term.

Mineta's appointment fills the vacancy created when Secretary Tommy Thompson resigned in May. Thompson's resignation followed his appointment to Bush's cabinet as secretary of Health and Human Services. He had served as Amtrak's board chairman since his appointment by President Clinton in 1998.

Traditionally, the secretary of transportation has served on the board, and by law, only one federal employee may serve on the panel. So Thompson's resignation was required in order for Mineta to be appointed.

Prior to joining the Bush administration, Mineta served as Secretary of Commerce under President Clinton. He is also a former member of the House of Representatives. As a member of Congress, Mineta championed increased investment in the transportation infrastructure.

The other five members of our board include vice chairman, Gov. Michael Dukakis, Sylvia de Leon, Linwood Holton, Amy Rosen, and Mayor John Robert Smith. One vacancy remains to be filled.

CMS, Delaware to develop computer-based training for dispatchers

More computer-based instruction is on the horizon for the Amtrak workforce.

Helping to set the standard for this modern approach to training, Amtrak's Workforce Development department has teamed up with Crew Management Services and a consulting firm called Alternative Learning Solutions (ALS) to produce five comprehensive computer-based training (CBT) courses. All five courses are currently being offered to new-hire dispatchers at CNOC in Wilmington.

The courses have been designed for the dual purpose of training new crew dispatchers, and as a refresher resource for experienced dispatchers.

"This CBT program will significantly reduce the costs and time associated with classroom training," said **Mike Kates**, general manager, Crew Management Services. "Additional CBT development is planned for FY02 to provide consistent interactive training for CMS assignment clerks."

Glen Stickler, senior manager of Human Resources Development, said, "Since CBT is more interactive than book or classroom instruction, it's more likely that dispatchers will retain the information because they are a participant in the instructional process."

Amtrak has produced CBT before but not to this magnitude or complexity. The new CBT includes full motion video, simulators, and advance technology that makes the

instructional process more enjoyable for trainees.

"We are really excited about this project and the possibilities for technologically advanced training for our employees," said **Boyd Crouse**, project manager, CBT development. "Computer-based instruction is the way to go because it enables you to work at your own pace, and you get immediate feedback as you work through the exercises."

The project team developed the programs in-house, with ALS providing programming support, for about \$150,000. **Sol Carey** of Employee Service Support, and **Meeka Jackson** from Corporate Communications, provided the voiceover and on-camera talent. **Frank Hogan** and **Ed Flexer** of Crew Management Services had the challenging task of creating the detailed script of instructions that guides users through the courses. Retaining outside contractors to do the work at the same level of quality would have cost between \$500,000-\$700,000.

In support of employee development, the Delaware Economic Development Office provided grant money to develop the CBT program. That money was part of the original agreement for Amtrak to build the CNOC facility in Delaware.

L to R. From Amtrak Workforce Development, **Glen Stickler** and **Boyd Crouse**; **Mike Kates**, **Ed Flexer**, and **Frank Hogan** of Crew Management Services; **Don Cushine** and **Bill Morrison** from Service Operations; **Joanne Bedwell** and **Helan Graft** of DEDO; and **Rob Boschetto** from ALS.

The route to our success

Strategic Business Plan Key Strategies

Since the 1998 launch of its new strategic direction, Amtrak has taken significant steps in rising to the challenge of reducing its reliance on federal funds to support operations. Driving Amtrak's actions are six key strategies.

Build a market-based network

Define customer demand, using extensive research, and then match our system with that demand.

Deliver consistent quality service

Change the culture of the company to be more guest-focused, and provide a world-class travel experience on every trip.

Revitalize the Amtrak brand

Introduce and support a new brand for Amtrak, to signal a major change to our guests.

Operate a cost-effective business

Identify specific functional areas, policies, organizational structures, and back-office costs that have potential for improved cost management.

Maximize public and private partnerships

Pursue public and commercial partnerships aggressively, through Mail and Express and other programs that generate the highest returns for the company.

Develop corridor services

Work with state and other partners to create or improve rail corridors across the country, drawing from the expertise we've gained in building Northeast Corridor services.

Penn Station emergency drill a success

There's a report of a disabled train and smoke in the East River Tunnel leading into New York Penn Station—what should we do?

Stay calm, for one. It takes only one frantic person to escalate the situation and endanger hundreds of people. That was one of the key messages of the latest in a series of inter-agency emergency preparedness drills held by the Metropolitan Division.

The emergency scenario was realistically staged and then safely resolved by responders from Amtrak, the Long Island Rail Road, NJ Transit, New York fire, police, and emergency medical services, and the FRA. The drill demonstrated the necessity of close coordination between all the agencies involved.

"Coordination and communication is key in the handling of an emergency of

this potential magnitude," said **John Fiumano**, the division's fire safety manager. Before the drill, Amtrak's safety professionals held many planning sessions to ensure that everyone was aware of their roles.

Fortunately, Penn Station's rescue procedures are not often implemented. But drills like this ensure that the correct responses stay so ingrained that they become second nature for all front-line supervisors.

When the code "500" was sounded, everyone snapped into action. All the needed notifications were made, and appropriate personnel were dispatched. On-board crew members on the "disabled" LIRR train communicated with passengers and shut down the air conditioning to prevent smoke from being drawn into the train. At the same time, all emergency

responders were hurrying to their predetermined locations.

The cooperative nature of the exercise was emphasized when an Amtrak locomotive rescued the LIRR train, with crews from both railroads following special coupling procedures. Once safely in the station, "injured" passengers were treated by the city's emergency medical technicians.

Evaluators and observers were stationed at every critical location, to assess achievement of the goal of "safety for all participants." This drill was also the first opportunity to practice the new conference feature of the way-side telephones in the East River Tunnel.

Drills such as this enable Amtrak, other railroads, and New York City's "bravest and finest" to be ready for any emergency.

O N T H E R I G H T R A K

Amtrak Intercity holds its annual Recycling Slogan Contest

Did you know that in fiscal year 2000, almost 660 tons of the waste (about 24 percent of the company's total) from Chicago Union Station was recycled? The cost savings was about \$25,000.

Chicago recycling program also saved more than 11,000 trees, over 4,600,000 gallons of water, nearly 20 tons of air pollution, more than 2,700,000 kilowatt-hours of energy, and almost 2000 cubic yard of landfill space.

In recognition of these efforts, and in honor of Earth Day, Amtrak Intercity held its annual Recycling Slogan Contest in April. The inventor of the catchiest recycling slogan was rewarded with a \$500 savings bond, and the slogan will appear on flyers and posters throughout the business unit.

The contest was open to Amtrak Intercity employees only, but they were allowed to collaborate with family and friends. More than 200 entries were received. **Becky Johnson** of the Engineering Depart-

L. to R. Ellen Jurczak of Chicago Safety and Environmental, slogan winner Becky Johnson, and Amtrak Intercity President Ed Walker show the "big" \$500 savings bond Johnson received for submitting the winning slogan entry.

ment submitted the winning entry. Her slogan: "Train your self to recycle."

Johnson didn't spend a long time tossing around slogan ideas. "I just came up with one," she said. "I am adamant about recycling."

Amtrak video judged 'Platinum Best of Show'

The Aurora Awards, an independent film and video competition, has recognized the achievement of two Amtrak employees for their creative video production called, "Getting To Know Us."

Eileen Magee, project manager, Engineering, and **Steve McConnell**, senior producer, Corporate Communication's Multi-Media department, put their expertise and talents together to complete the informative video. It was created to showcase Amtrak's modern CNOC building in Wilmington, and the various services provided by Crew Management Services, where Magee was a manager at that time.

McConnell's passion for the technical aspects associated with production, combined with Eileen's flare for writing and producing, resulted in an exceptional product that was distributed to Train & Engine and On-board Services crew bases throughout the country, and various Amtrak training centers.

Eileen Magee and Steve McConnell hold the awards they received in recognition of their artistic achievement.

The video was judged "Platinum Best of Show" in its category by The Aurora Awards organization. It was entered against projects from private and corporate production groups, advertising agencies and television stations in the U.S. and Europe. The competition included entries from Fox Movie Channel, the History Channel, Lifetime Television, and the Learning Channel.

Employee treats Seattle Area students to train ride to Portland

Elementary school students from the Federal Way School District in Washington state who show promise to be good students and citizens were treated to a train ride on the *Cascades*, courtesy of Amtrak employee **Eugene Montgomery**.

As part of Project KOSS (Keep Our Schools Safe), a program founded by Montgomery and his wife Myla to support students who are positive role models, Montgomery worked with the school to choose the students and organize a train trip from Seattle to Portland. Montgomery, a sleeping car attendant on the *Empire Builder*, split the costs of the trip with Amtrak.

Renewal comes to Merced station

Amtrak's Merced station is the gateway to one of North America's greatest natural wonders—Yosemite National Park. It's also one of the busiest on the California Corridor product line.

The station was originally a Santa Fe station that was built around the end of World War I. But by the late 1990s, it was in need of some major repair. That's when an enterprising group of people got together to renovate the facility.

The ticket counter, besides being accessible to our disabled guests, is very open and guest friendly.

Beginning in 1995, **Michael Albanese**, of the Amtrak West Engineering Department, started working with CalTrans, the city of Merced, and Carol Grimes, the Amtrak agent in Merced, to plan and design a new station. He incorporated changes into the new station that not only

The lobby area of the newly remodeled Merced Amtrak station features a lamppost from the original station, built by the Santa Fe railroad near the end of WWII.

made it look better, but also made it more functional.

The new ticketing area was designed so that the agent had an unobstructed view of the waiting room, the bathroom entrances and the public phones. To improve guest safety and security, a surveillance system was installed that would monitor the outside of the station. This, combined with an electronic locking door system, made the Merced station one of the most secure in the Amtrak system.

The baggage room was greatly expanded, and an easy to use system of roll-up doors leading trackside made the baggage process much smoother.

Albanese designed the baggage room so that a baggage conveyer belt can be easily installed when the station becomes even busier. The ticket counter, besides being accessible to our disabled guests, is very open and guest friendly, but can be secured by a sliding window.

Besides modernizing the station, Albanese

worked hard to retain the charm and Spanish Colonial Revival style of the original station. Hand-cut wooden corbels from the original station along with the original Santa Fe Merced station sign were incorporated into the northern façade of the new building. An original lamppost from the Santa Fe station was also put on display in the lobby of the new station.

Using funds from Amtrak, the city and the state, the project was completed under budget.

Manager, Training
Los Angeles, CA*

*Eugene Montgomery leads kids from the Federal Way School off a *Cascades* train.*

"I need to help stop the violence," said Montgomery. "The only way I know how to do that is take all the money I can muster and spend time with these kids." He took out a loan to cover additional expenses, such as T-shirts and trophies for the 24 lucky students.

Montgomery hopes to expand the project next year. "Eugene is a gentleman who is always a pleasure to work with," said **Rich Mason**, product line manager, Pacific Northwest Corridor. Mason worked with Montgomery to implement the program. For more information about Project KOSS, or to donate, call 253-661-0880.

Good is the enemy of great!

Behaviorist Neil Dempster, of Clearview Performance Systems, delivered a clear and simple message—packed with a punch. His presentation to the call center staff included a basic, but intriguing idea: Good is the enemy of great.

In other words, if we come to work every day thinking “good” is good enough; we have no motivation to do better. To extend our potential, we must commit to working more effectively and efficiently.

**In other words, if
we come to work
every day thinking
“good” is good enough,
we have no motivation
to do better.**

While at a conference for call center executives, **Jay Lawrence**, senior director, Reservation Sales, first heard Dempster’s message. The message, Lawrence felt, was neither job nor industry specific, and it was clear to him that his call center managers and supervisors would benefit from this concept—indeed, everyone could benefit.

The basic message is that the most important job function is to be incrementally better tomorrow than we are today.

The EffortSteps™ is a model that Neil uses and describes in his presentation. It is designed to help supervisors more effectively coach employees toward

Sue White proudly displays her Soaring Eagle award.

incremental performance improvements through small reinforcements. His message also underscores the importance of employees being self-managed. The EffortSteps™

model is now part of the team leader evaluation process at all the call centers.

Gene Price, the Riverside call center’s director, knows that the effectiveness of any training program is enhanced if it is properly followed up. So the Soaring Eagle Award was created to keep the concepts learned in class fresh in the minds of the team leaders.

Every month, a team leader in Riverside is voted Soaring Eagle of the month by his or her peers. Team leaders work together closely, sharing ideas that boost employee morale and productivity. Using the EffortSteps™ process makes supervisors eligible to be voted Soaring Eagle of the month. When Sue White was voted the first Soaring Eagle, her sales team had tipped more calls to our partner Hertz than 37 other teams in the desert call center.

Individuals who commit to learning something new every day are more effective in their work lives, as well as their personal lives. What have you learned today?

*By Susan A. White, Riverside, CA
(Winner of the first Soaring Eagle Award.)*

Amtrak carries some special guests aboard the ‘Freedom Express’

Editor’s note: Amtrak is prominently featured in the February 2001 issue of families magazine, which is published by the New Jersey Developmental Disabilities Council. Following is an excerpt from an article titled, “The Freedom Express.” It highlights the experiences of some of our guests who rode Amtrak’s special ADA charter.

Brenda Klauditz with her two sons, Daniel 17 (left), and Andrew, 12

Nearly 200 guests, most of them people with disabilities riding with their families, boarded the *Freedom Express* to Washington, D.C., last October, headed to the “March for Justice” on Capitol Hill.

In preparation for the event, Amtrak removed seats from the train to accommodate guests using wheelchairs and scooters, and accessible restrooms were available on each car.

At 6:00 a.m., the train boarded guests in New York City, making stops in Newark, Metro Park, Trenton and Philadelphia, on the way to the rally scheduled for noon that day.

Amtrak employees are committed to providing guests with exceptional service. The reactions of the guests onboard the *Freedom Express* proves that their efforts are not going unnoticed.

Brenda Klauditz boarded the train with her husband Ed, and her two sons Daniel and Andrew. Daniel, 17, has cerebral palsy, dyslexia and is unable to speak; however, that

wasn’t enough to keep him from traveling to the Capitol.

“If Amtrak and the Council [Americans with Disabilities Act Council] hadn’t gotten this [the accommodations] together, many people would never have gone,” Klauditz said.

Anita Clavering documented her experiences on the special train. She wrote, “I met a wonderful gentleman named **David Nelson**, who works for Amtrak as a disability/advocacy specialist. David made sure that all of us were accommodated wonderfully, and he was just so very cordial to all of us.” She went on to say, “The entire Amtrak staff, both boarding and on the train, was indeed very accommodating, which made our trip both ways fully enjoyable.”

Hopefully, the guests’ experience on the *Freedom Express* helped them feel a little closer to the goal that they were marching for that October afternoon—equality and justice.

A gradual transition to the new brand identity

It’s been just over one year since we unveiled our new brand identity.

Slowly but surely, product lines are depleting supplies and merchandise that show the original arrow or their individual logo. They will replenish their stock with items featuring Amtrak’s new logo as they become available.

Like other product lines, the *Southwest Chief* is selling much of its “old” merchandise on board the train.

“We’ve been able to sell a lot of the items we have in stock, like hats, shirts, key rings, and pins,” said **Patsy Hall**, service manager of the *Southwest Chief*. “We’re just about sold out of the hats, and the mugs have been the most popular seller. I’ve even had people call me asking for mugs from other trains as well. People collect these things as souvenirs from their travel on Amtrak.”

The *Coast Starlight*, often satisfying merchandise requests from Asian tour groups, has also done well with sales.

Sales are strong in stations and in some independent shops. For example, our collectibles are sold at “Barbara’s Best

Sellers,” located in Amtrak’s Boston station; The “SEPTA Store” in Philadelphia; and “Antiques Etc.” in Oklahoma.

The *Auto Train* is applying the new brand to a variety of materials. Amtrak’s graphic designers have rebranded the Auto Train ticket jacket and created a new design for on-board menus that reflect our new identity. A new car carrier for the service bears the new logo, as do several ads and promotions for the service.

In addition to the *Auto Train*, a menu design has been approved that will help to continue the rebranding process on board many of our other trains. The menu designs will be implemented the next time menus are printed, which is scheduled for later this fall.

Also, **Dianne Penn** of Amtrak’s Uniform Program is working with others to develop a uniform rollout schedule for *Amtrak Intercity* and Amtrak, beginning with fitting sessions this fall.

As we’ve said before, the full transition to the new brand is a gradual one. There’s lots to be done. The Brand Transition Task Force continues to work steadily to develop a rollout schedule for a variety of items that will be seen across the system.

New ticket jacket for the Auto Train.

Marketing department makes strides to improve ridership, revenue for long-distance train service

Amtrak's long-distance train services provides an opportunity for our guests to relax and enjoy the beautiful scenery and on-board amenities. And, the Amtrak Marketing department's Long-Distance Train Brand Organization (LDTBO) has been busy developing promotions and programs that tout these benefits to potential customers.

The LDTBO, consists of 41 individuals, but the department's achievements over the past year were made possible by the collaborative efforts of many more employees, and our long-distance train crews.

The team has pulled together to find solutions to the preferences and requests presented to us by our long-distance guests. Following the "Satisfaction Guarantee" mantra, the team has adopted the "whatever-it-takes" approach when addressing these issues.

According to **P.J. Sherban**, assistant vice president of Marketing and Brand Management, the greatest challenge with long-distance train travel is time. Many guests would like the experience of traveling cross-country by rail, but they don't have the time.

Delays are another concern for our guests traveling long distance. Amtrak is introducing a new genera-

tion of P-42 Genesis locomotives. When asked about how the 85 new locomotives would help reduce delays Sherban said, "They give us better reliability, therefore improving on-time performance. That's the overriding point—the newer the equipment, the more reliable and efficient the performance."

An important element of increasing ridership on our long-distance trains is creating promotions that appeal to our guests and draw them to our products. The LDTBO has done just that.

The Amtrak Ambassador Program targets seniors, retired citizens, and individuals who just love to travel. These "ambassadors" are volunteers who assist with Amtrak events and help promote Amtrak to people in their areas. They are rewarded with free travel for their efforts.

Another example is the "Florida Rail Pass" promotion, which was offered to permanent residents of Florida in May. Guests who purchase the special pass between May 10, 2001-May 10, 2002, are allowed unlimited travel within the state of Florida for one year.

In the last year, the LDTBO has participated in more than 100 promotions, including partnerships, marketing strategies, NASCAR endorsements, product lines and

Florida Rail Pass promotion

travel agency promotions—just to name a few.

The organization has executed 84 radio and television promotions worth \$1.6 million, at a cost to us of \$116,000, plus trade-out tickets.

For example, we sponsored a giveaway with Philadelphia radio station WALC to promote a game between the 76ers and the Orlando Magic. We donated five trips from Philadelphia to Orlando, each for two guests, in exchange for on-the-air exposure of Amtrak service. The prize included accommodations at the Orlando

Marriott, rental car from Hertz, and tickets to the Philadelphia vs. Orlando basketball game. This promotion alone generated \$30,000 for Amtrak.

The LDTBO has many more promotions planned. For example, Amtrak is teaming up with the New York Lottery to create the "In the Lottery" promotion. This will give Amtrak exposure in over 10,000 locations in the New York area.

It has also created a promotion with the Albany Law School Institute of Legal Services. Lawyers looking for continuing education credits can earn them while riding the train. With this promotion, Amtrak received exposure to over 10,000 law firms.

The great effort of the LDTBO and the train crews has provided Amtrak with definite results. The organization is proud of what they have accomplished, and will remain committed to doing "whatever it takes" to provide our guests with great service. Any questions concerning the LDTBO and its promotions should be directed to **Patrick Little**, at (202) 906-4077, ATS 777-4077.

*By Julieanne Joseph, intern,
Corporate Employee Communications*

Crew Management Services reorganizes for renewed focus

"We are committed to providing our customers with superior service, plus cost management and accountability."

When Amtrak decided to revamp its image, it introduced a revitalized brand identity, a rededication to service, and the travel industry's first unconditional guarantee of guest satisfaction.

The key element was our renewed commitment to service. In order to keep setting ridership and revenue records, we must deliver world-class service to both guests and our internal customers. To meet that goal, Crew Management Services (CMS) has evolved.

After a management restructuring, CMS is now better aligned with field operations. **Michael Kates**, the new general manager of CMS, said, "We realize the responsibility we have in proving world-class service, because what we do affects the lives of 7,000 front-line employees serving guests every day."

The restructuring followed a careful analysis of what were then current processes, along with a request for

opinions and advice from the field managers served by CMS. After the self-examination, it was decided that the operation needed to refocus itself.

Three assistant general managers are now dedicated to the SBUs: **Milton Lundy** for the Northeast Corridor, **Robert Schmitt** for Amtrak West, and **Quin McRae** for Amtrak Intercity. Other staff reorganization adds to the renewed focus of the department.

Dennis Smith and **Monica Miller** head Verification, and **Debra Allen** manages the Assignments function. **Terry Berkey** and **Gary Kennedy** supervise the On-board Services department. Five managers are acting as "chief dispatchers" in Crew Dispatching, providing around-the-clock service every day of the year. They are **Maria Bobbato-Clark**, **Joe Carroll**, **Patrick Kerr**, **Mike Goldsmith**, and **Arno Adamari**.

The most significant part of the restructuring involves process improvement. For instance, training lesson plans for

new CMS personnel have been revised to provide a strong foundation for customer service. **Kerry Gregory**, supervisor of Operations Support, is the new trainer. She will also distribute a monthly "CMS Report Card." As part of the CMS commitment to providing field managers with the assistance they've requested, the new reporting system will track absenteeism and crew-associated costs.

Work has begun on improving many assignments and verification processes through automation. CMS recognizes that every error has a relative cost, so the new programs will hold the department accountable, plus provide immediate answers to field managers.

Better communication, both within the department and with the field, is also being stressed. "We are committed to providing our customers with superior service, plus cost management and accountability," Kates said.

Supervisor training held

continued from page 1

Their goal is to help maintain high-quality service, which will involve being a liaison with terminal, mechanical and commissary departments and service managers. They will be stationed at locations throughout the Amtrak system, including train originating and terminating points, as well as en route points.

"These supervisors will enable Amtrak to create a much needed balance between front-line employees and management so that we can stay on top of what is working onboard the trains and what isn't," said Fritch. "There is a real commitment from our senior executives and ARASA (American Railway and Airline Supervisors Association) to this new position and our goal of enhancing service delivery."

The supervisor position will provide a clearer path for employees wishing to enter management positions, especially in the guest services area. They will gain supervisory, policy and procedural experience, and be given feedback on their performance using the same goal-setting and performance evaluation system for management employees.

In the next four to six months, service managers will meet with supervisors to discuss their progress and set goals for fiscal year 2002.

This group attended the first phase of the product line supervisor training in Miami, one of six cities where the training was held.

**They will
gain supervisory,
policy and
procedural
experience.**

"This is an evolving position, and I think there was some apprehension at first. But the training gave them a sense of what's expected of them," Kocar said. "This is a great opportunity for the first group of supervisors. They are the pioneers and can help shape this position."

The first training course was held on June 4 in Chicago, and all of the supervisors have been trained. Kocar will be holding conductor remittance classes, and the supervisors will also need to be operating rules qualified. Planning is on-going for the second phase of training scheduled for this fall.

ASK THE DOCTOR

"Ask the Doctor" will appear periodically to answer employee questions about health, wellness, and healthy work practices. The source is Dr. Cheryl Opalack, Amtrak's corporate medical director, and a founding member of the American Osteopathic College of Occupational and Preventive Medicine.

Summer's heat and bugs

Q For track workers like me who work out in the sun, how do we prevent heat-related injuries?

A The Occupational Safety and Health Administration (OSHA) has developed a Heat Stress Card. It provides simple prevention tips you can use, including drinking water every 15-20 minutes, and avoiding alcohol, coffee, tea, and caffeinated soft drinks—they all dehydrate the body. Workers are encouraged to protect the face, ears and neck with sunblock and hats; alternate work with rest periods in a cooler area; and wear lightweight, light-colored clothing.

Q I heard that Lyme disease is prominent in the summer because of moisture and humidity. What is Lyme disease, and how can I protect myself from it?

A Lyme disease is a bacterial infection transmitted by the bite of deer ticks and western black-

legged ticks. Symptoms include a slowly expanding red rash at the site of the bite, and flu-like symptoms—fatigue, headache, stiffness in muscles or joints, etc. You can prevent infection by wearing light-colored clothing, long sleeve shirts, and by tucking pants into socks or boot tops. You should also apply insect repellents containing DEET (diethyl-m-toluidide) to clothing and exposed skin. Try to avoid areas that are likely to be infested with ticks, particularly in spring and summer, when nymphal ticks feed.

Q I've read about the West Nile Virus. How is that a threat to us here, and what can we do about it?

A Mosquitoes and some birds may carry the West Nile Virus. The disease originated in Egypt and was first recognized in Romania in the late '90s. It arrived in the U.S. via birds imported by the Bronx Zoo. In the last two years there have been 62 clinical cases of the virus in the U.S., resulting in seven deaths. Symptoms include fever, chills, and other flu like symptoms. As with anything involving mosquitoes, you can avoid infection by using insect repellent and wearing full coverage of cotton clothing. Drain stagnant water, and install window and door screens.

Engineering Management Associate Program

L. to R.: Management associates Carla Johnson, Frank Vaida, Smitha Varaghese, Kerry Engelhardt, and Ruga Eskender, along with Alison Conway-Smith, NEC vice president, Engineering.

Amtrak's Engineering Department has passed another milestone, with the graduation of six employees from its Management Associate Program.

The program is not a new one, but it has been enhanced to better meet today's business needs for qualified managers in the field of engineering.

Personnel from Engineering's Organizational Effectiveness Department recruited the associates at job fairs, campus interviews, and conferences. They are all recent college graduates with engineering degrees.

Through a rotation process, the year-long training allowed the associates to explore various disciplines in Engineering, both in the field with "hands-on" experience, and in the office with various projects.

A June 15 graduation ceremony was held for the six associates: **Carla Johnson, Ruga Eskender, Frank Vaida, Smitha Varghese, Kerry Engelhardt** and **Nayer Mirnasiri**. Alison Conway-Smith, NEC vice president and chief engineer, and many other Engineering personnel were there to congratulate the graduates. **Hattie McCoy**, director of Special Projects for Engineering's Workforce Planning Unit, opened the ceremony.

Each associate gave a presentation on a project he or she had to complete during training. Their achievements covered database development, assisting in the completion of two bridges, a garage project, and analyzing data to help in our efforts to enhance the infrastructure.

continued on page 12

COST MANAGEMENT

Below are mini-profiles on just four of the dozens of Cost Management Initiatives the company is looking at that might help us reduce costs, build revenue, or both.

CMI 76: Fleet Maintenance Supplies

Amtrak spends more than \$2 million a year on the supplies we use to keep our trains clean.

The team assigned to CMI 76 has identified current practices that could be improved for the most cost-effective means of purchasing supplies.

Several items on Amtrak's list of 55 fleet maintenance supplies are defined as "single source." This means we purchase the products from one vendor. Additional vendors could be approved for a bidding process, possibly leading to a better pricing arrangement.

In the past, similar items have not been grouped together in bid packages. This has resulted in lower volumes and lower price discounts per order. The team recommends centralizing the procurement of these items and creating bid packages. We could take advantage of larger discounts and bulk purchase opportunities.

The team is also investigating shifting to generic brand supplies where appropriate. For example, Amtrak spends \$180,000 a year on a popular name-brand cleaner. As consumers, we know that there is a price mark-up for brand name items. But buying a generic brand item does not necessarily mean you've substituted quality for savings.

"Approval of multiple vendors, grouping similar items in bid packages and shifting to generic brands are expected to reduce costs by about \$200,000 annually," said **David Herendeen**, team leader, and director of NEC Maintenance and Equipment.

CMI 27: Optimizing Locomotive Fleet, Cash Generation

The goal of CMI 27 is cash generation.

The team assigned to this two-part CMI is charged with a) implementing a plan that optimizes the use of Amtrak's locomotive fleet, and b) getting the greatest value from our surplus F-40s.

During the last year we started delivery of 87 new P-42 locomotives from General Electric. These more sophisticated and efficient locomotives have three-year warranties that will reduce our maintenance costs. They also create a surplus of locomotive power. That could allow us to retire the F-40s, which are less efficient and require high-cost maintenance. We could generate cash by having them all stored, leased or sold by the end of this year.

Second, when Amtrak split into three strategic business units in the 1990s, a once centralized process of making fleet allocation decisions became less efficient. The team is now optimizing our resources by looking at the "highest and best use" of locomotives from the company perspective, not just the business unit level.

The short-term solution to the fleet allocation problem is to replace all F-40s with better utilization and assignment of the P40s and P42s. A committee of the chief mechanical officers has agreed on a schedule to accomplish this. They will standardize maintenance as much as possible so there are fewer parts and tasks required.

The team's long-term solution is to develop a model that will consider route, consist size, tonnage, running time and mileage in determining the appropriate motive power necessary to run our service. The model would constantly reevaluate our locomotive utilization and performance across the company.

Meanwhile, another element of the CMI 27 team is exploring the best way to market and sell the surplus F-40 fleet and parts to generate cash for the company.

CMI 65: Discretionary Telecommunications

The team assigned to CMI 65 is looking at cutting costs associated with long-distance calls, calling card usage, cellular phones, pagers, and more.

Their analysis isn't finished, but one cost that needs immediate attention is directory assistance calls. Although the cost of these calls is not evident to the manager of a department, the company has spent over \$42,000 on them this year. The team projects that we will spend more than \$81,000 on directory assistance service by the end of the fiscal year.

It is important that we minimize these costs. For example, when possible, use alternative sources to directory assistance, such as the Intranet directory and Yellowpages.com.

What about long-distance calls?

Amtrak authorizes a telephone access code for employees who need to make frequent long-distance business-related calls. The charges for these long-distance calls are covered by Amtrak, and are tracked to your authorized telephone access code.

Telephone service is an Amtrak resource, and it is against policy to abuse this resource for personal use. Details on the Amtrak Telephone System (ATS) are found in section CS-2 of the Policies & Procedures Manual, and on the Intranet FAQ page, found under the "Ask Us" icon.

As part of CMI 65, every Amtrak employee who has an authorized access code can now view on the Intranet a personal report on the calls charged to their authorization code.

Also, managers can view all calls charged to their ResCen(s), by individual access. Security has been established to allow only ResCen managers to view detailed data that lists accessed long-distance telephone numbers.

You can access these reports from the Intranet by clicking on "What's new on the Intranet," from the homepage. Next, scroll down to the link, "Find out about long distance calls charged to you!" Then you will see two links for Telecommunications Expense Reports. Select either "Individual use" or "Manager's summary."

CMI 18: Package Express

Our Package Express business consists of three primary elements: Walk-ins, accounting for 70 percent of revenue; regular accounts, representing 20 percent of the revenue; and bulk shippers, bringing in about 10 percent of the total revenue.

The team assigned to CMI 18 has a goal of generating \$500,000 per year in cash generation, cost reduction, and/or revenue improvement for the Package Express business.

Several ideas are now being considered that would help Amtrak meet its cost management targets for Package Express:

Begin billing all customers at point-of-sale. This will simplify the process, reduce clerical errors, and improve cash flow by 60 days.

Identify lanes with excess baggage capacity, and secure customers willing to use this capacity on a take-or-pay basis.

Restructure rate table for bulk shippers, and apply rates commensurate with actual volumes. Expected results: An additional \$100,000 per year.

Generate additional revenue through national accounts and special moves (e.g. motorcycle events).

"The potential for Amtrak to generate additional revenue with Package Express is so great, I am 100-percent committed to this," said **Camille Thomas**, Sales and Marketing manager, Package Express. "We have identified areas for process improvements, as well as opportunities to build the business."

REPORT CARD

Year-to-date through June FY01

Financial Performance

	FY01 Actual	FY01 Plan	Better or worse?
Budget results ¹ (millions) ²	(211.7)	(195.4)	407.1 worse
Operating ratio ³	1.49	1.45	0.04 worse
Ridership (millions)	17.46	18.03	0.57 worse

Operating Performance

	FY01 Actual	FY00 Actual	Better or worse?
Ridership (millions) ⁴	17.46	16.54	0.92 better
Customer satisfaction ⁵	82	85	3 worse
On-time performance	76.4%	79.5%	3.1% worse
Total employee injuries ⁶	1004	950	54 worse
Total guest injuries ⁶	1803	1558	245 worse

¹ All revenue plus federal operating funds and RRTA contributions, minus cash expenses.

² This is a measure of expense against every dollar of income.

For example, an operating ratio of 1.50 means we spend \$1.50 for every \$1.00 we earn.

³ For the three months ended February 2001 and February 2000.

⁴ As of July 13, 2001.

⁵ Based on a 5.2 ratio for FY01, and a 5.0 ratio for FY00.

⁶ As of May 2001

RAILWAY ROUNDUP

New Purcell Depot

A crowd of about 200 gathered in June to witness the official dedication of the new Amtrak depot in Purcell, OK.

The Oklahoma DOT supplied the grant for the \$240,000 building. On the day of the dedication, many in attendance showed their pride in the new depot by wearing T-shirts that said, "I helped build it."

Amtrak's *Heartland Flyer* visits the stop, which is unstaffed, twice a day. However, the depot opens for a short time before the trains arrive so guests can enjoy the memorabilia, keepsakes and souvenirs on display inside the new facility.

Purcell has a railroad history. It was named for E.B. Purcell, a dispatcher for the Atchison Topeka and Santa Fe railroads, and the tracks of what is now the Burlington Northern Santa Fe follow the South Canadian River through Purcell.

Amtrak represents innovation and change at conference

Amtrak was highlighted as an example of successful innovation and change at the recent "Change 2001 Conference & Expo" in San Francisco. The annual conference aims to help companies "maximize organizational effectiveness, innovation, and sustainability."

This year, **Richard Phelps**, vice president of Service Standards, and **Yvette Delemos Robinson** of the consulting firm PricewaterhouseCoopers, represented Amtrak as presenters. The theme of their segment was, "All Aboard: Using training as a lever for organizational change."

Phelps and Robinson discussed how Amtrak has used Service Success training to help transform the company into a more guest-focused organization, and as a forum to improve the communication between management and front-line employees.

Describing the reaction the pair received after their presentation, Phelps said, "The comments we received were all positive, both about the way Amtrak accomplished the training within a very tight timeframe, and about the demonstrated improvement in service delivery. It was a really awesome experience. We were being compared to Bank of America, Nortel, 3M, Continental Airlines, and Hewlett-Packard."

The Capitols celebrates additional frequencies and a new partnership for transfer passes with AC transit, the local bus service in the east bay at the Oakland station in Jack London Square. L. to R.: Mayor of Oakland, Jerry Brown; Director of Caltrans, Jeff Morales; Richmond City Council, Irma Anderson; Amtrak G.M. California Corridor, Jay Commer; AC transit Director, Chris Peoples; and Eugene Skoropowski, managing director, California Corridor Joint Powers Board Authority.

Tukwila – New Amtrak Cascades stop for Seattle suburb

On June 1, Amtrak and the state of Washington announced a new Amtrak *Cascades* station stop in Tukwila, a suburb of Seattle.

The station is located just a few miles from the Seattle-Tacoma International Airport. Currently, local cab and bus service provide transportation between the Tukwila station and the airport.

The Tukwila station is also served by the Sounder commuter service. The new stop for Amtrak will allow for connections with the *Cascades* service and Sounder commuter stops.

Amtrak and the California Arts Council

Amtrak West and the California Arts Council will sponsor more than 500 arts and cultural events around the state throughout this summer. From the Sacramento Jazz Jubilee, to the Napa Valley Wine Auction, to the California Strawberry Festival in Oxnard, Amtrak and the Arts Council are partnering to

bring visitors to the events on the train or Thruway bus.

Amtrak has chosen one event a month to highlight Amtrak's role in sponsoring the community events. In June, **Vernae Graham**, director of Public Affairs and Media

A treasure on the move

Amtrak had a very special "guest" in July, when a rare copy of the declaration of Independence traveled to Philadelphia. Hollywood producer Norman Lear, owner of the copy, and his guests were traveling to take part in the city's Independence Day Festivities.

Lear's copy of the Declaration of Independence is one of only 20 that still exist, and one of four that are privately owned. It was discovered in an old frame that had been purchased at a rummage sale.

There were 200 copies printed for the Colonies immediately after the original was signed in 1776. Over the years, most of the copies were lost, or destroyed. Only these few copies remain.

The original Declaration of Independence is at the National Archives in Washington, D.C. However, it has been placed in storage for the next year while its display case is being renovated.

Being of considerable value, Lear's copy was delivered to Washington's Union Station under tight security, it was closely guarded through to its destination.

Lear's guests included actor Rob Reiner and actor Morgan Freeman. Many Amtrak employees in Washington and Philadelphia contributed to the success of this high-profile move.

Relations for Amtrak West, joined with a parade participant dressed up as a colorful "Alien Eyeball" to promote taking the *Pacific Surfliner* to the Santa Barbara Summer Solstice festival at the Santa Barbara train station.

In July, Amtrak joined with the International Mariachi Conference and Festival in San Jose to promote travel on the *Capitols*.

In August, Amtrak will promote taking the *Pacific Surfliner* to San Diego's City Fest and in September, to the Los Angeles Mexican Independence Celebration.

A timely decision

New York Penn Station is always busy with on-the-go commuters and eager tourists, so it's especially important to keep things running on-schedule.

Walter Ernst, general manager, Metropolitan Division, assembled an expert panel to address the issue of on-time performance.

Joan McDonnell, manager, Business and Marketing Analysis, facilitates the weekly panel meetings. "Things have gotten off to a terrific start," she says. "We're always looking for ways to maintain and improve our Customer Satisfaction Index (CSI) ratings, and this is a step in the right direction."

The panel focuses on creative and effective ways to enhance on-time performance. "We want to encourage more communication with front-line employees. It's important to keep them in-the-know about what's happening throughout the station," Joan explains. "Recently, we handed out a weekend advisory listing all events in New York that could cause potential delays. It was very well-received." Employees were able to gear up for events like the Puerto Rican Day Parade and Belmont Stakes without skipping a beat.

The customer-savvy group includes **Howard Carter**, assistant general manager, Customer Service; **Steve Falkenstein**, deputy division engineer; **Mike Gallagher**, superintendent, Customer Service; **Don Herman**, assistant general manager, *Acela* Product Line; **Larry Lohman**, mechanical superintendent, Rensselaer and **Gary Violano**, assistant general manager, Terminal Services, Sunnyside Yard. They'll meet through the summer to keep Penn Station running like clockwork.

Visit the Amtrak Intranet from home

New technology now allows employees with home computers and Internet access to visit and browse through the Amtrak Intranet. The connection is called the Amtrak Remote Access Intranet Link, or RAIL.

Here's how to get to RAIL from your home PC. Open up your Web browser and go to this Internet site: www.rail.amtrak.com. Then follow the directions to download and install the necessary software. The whole process should take 15-30 minutes, depending on the speed of your modem and Internet connection. You must be operating with Windows 95, 98, or 2000; have 4 MB of free disk space; and have a browser version that is at least as recent as Internet Explorer 5.0. Our Intranet is set up to be the most compatible with Internet Explorer. You can use other browsers, such as Netscape 4.5, but some reports on the Intranet are formatted in a way that they're only viewable with Internet Explorer.

As part of the installation process, you'll have to register for authorization, which is just the system's way of confirming that you're an active Amtrak employee. So you will need the eight-digit employee ID number that's on the front of your paycheck.

If you have any problems completing the download and installation process, call this special toll-free number for RAIL: 1-866-AMTRAK5, or (866) 268-7255.

If you're in the market for a new home PC, Amtrak employees can get discounts offered by our provider, Hewlett Packard, on new or reconditioned computer equipment. On the Intranet homepage, click on the How We Work icon, then Procurement, and finally HP Employee Purchase Program.

And, if you're looking for an Internet service provider, Microsoft is going to offer an attractive deal to Amtrak employees. Details about this offer will be made available soon.

Management Associate Program

continued from page 7

The attendees, many of whom were the associates' mentors and sponsors, applauded their achievements.

Joe Guzzi, senior program director, Track Maintenance and a sponsor to Varghese, encouraged the associates to "Be a sponge and absorb from others."

Several of the guests who attended the ceremony, including Conway-Smith, are former graduates of a

management associates program with other railroads, and spoke highly of the valuable educational experience it provides.

Each graduate was presented with a certificate of completion, an engraved *Acela* desk clock, and best wishes for a successful Amtrak career from the proud Engineering Department.

By Eileen Magee, project manager, Engineering

Commitment to environmental protection

continued from page 2

And this June, Amtrak reached an agreement with the U.S. Environmental Protection Agency. The EPA agreement settles storm water permitting, monitoring and record-keeping issues from 1996 and 1997.

As part of the agreement, we will pay a \$500,000 fine and complete two environmental improvement projects at a cost of about \$900,000.

Roy Deitchman, Amtrak's assistant vice president of Environmental Services, said, "We want to do a

better job with respect to environmental compliance, and we're working hard to improve our practices. Our goal is to become a railroad industry leader in environmental compliance and stewardship."

EPA Administrator Christine Todd Whitman said, "I commend Amtrak for its cooperation in this settlement and for the aggressive steps it has taken to correct the environmental deficiencies in its operations."

President's Safety Contest winners

Each year, during the President's Service & Safety Awards ceremony, the President's Safety Contest winners are recognized. The awards are presented to the commuter operation, mechanical shop, SBU and call center that have the best employee reportable injury ratio per 200,000 work hours.

For the fiscal year 2000, the winners are the *Coaster Commuter Service*, the

Wilmington Mechanical Shops, the Midwestern Reservation Sales Call Center, and the Northeast Corridor SBU.

Congratulations to the employees of these organizations for their contributions to providing a safe working environment for themselves, their co-workers, and our guests.

*Northeast Corridor Ratio: 4.0
Accepting the SBU award is Daryl Pesce, general manager, Mid-Atlantic Division, Northeast Corridor.*

Mail & Express: The Amtrak advantage

The *Southwest Chief* is now too big to fit the station platform in Kansas City. High-revenue Mail & Express business has expanded it to over 30 cars. That's good—but it creates a challenge, which symbolizes the ongoing balancing act that is M&E.

Over the past five years, M&E revenue grew from \$60 million in 1995 to \$122 million in 2000—more than double. But we suffered some growing pains. Scarce Amtrak resources were stretched too far, and a reassessment of strategy was needed.

A new expansion plan

To enable clearer performance measurement, M&E separated from Amtrak Intercity as a separate business unit under president **Lee Sargrad**. Then a multi-departmental strategic design team came up with a new business plan focused on *controlled* growth.

Under that plan, M&E is being integrated into passenger operations to minimize disruptions through close coordination with all Amtrak departments, labor, and freight railroads.

Attention is paid to costs, with M&E offering customers services that are both deliverable and cost-effective.

A key to the new plan is long-haul traffic. That business not only commands the highest prices, but also minimizes effects on on-time performance. "In the past, we tried to be all things to all people," said **David Arganbright**, senior director of M&E planning. "Now we're going to target our efforts and exploit our competitive advantage."

'Catch the next wave in travel'

Visit the all-new amtrak.com

If you have yet to visit our all-new website at amtrak.com, you're bound to be impressed.

Amtrak Marketing & Brand Management launched the enhanced website in July. The first impression is that it is

sleek, cool, and inviting. It has taken on a whole new look.

But the look isn't the only thing that has changed. Amtrak.com reflects suggestions made by our guests and integrates the new and improved reservation system that we announced in June. Here are some of the new features and exciting

changes our guests will discover:

- Simplified navigation
- Improved, consistent information for all stations, trains and destinations
- Fast Fare Finder on all train and station pages

- Ability to search for stations, destinations, trains and promotions by region
- Quick and easy access to schedules and fares, no user IDs and passwords required
- Secure member profile speeds guests through booking process
- Guests receive an automatic E-mail confirmation

Amtrak.com is expected to generate more than \$100 million in ticket sales this year. More than three million people visit the site each month, and more than 800,000 tickets will be purchased online this year. These statistics make amtrak.com one of the top travel websites.

New pass privileges announced

Dramatic changes to our pass rider policies were announced last month by **Stan Bagley**, executive vice president of Operations. Increased privileges include *Acela Express* and certain reserved trains in the Northeast, the Midwest, North Carolina, and West Coast corridors.

Effective Aug. 30, the changes now make it easier for you to ride. Plus, as **Maryann Piento Vilas**, a Philadelphia ticket accounting clerk, put it, "Employees will know what we are all about, and it will be easier for us to promote our service."

Acela Express

For *Acela Express*, employees can now enjoy the same personal pass and business travel privileges in Business class as they currently have on *Metroliner* Service. As the *Metroliner* Service phases out, the new policy allows more schedule options to employees traveling on Amtrak business.

First class service for personal travel (after paying the fare upgrade) will be available soon, after ARROW programming changes are completed.

BENEFITS CORNER

TRAIN OF THOUGHT

George Warrington

I want to talk about safety.

On the railroad, most of us start our day with a focus on safety. With regular briefings we strive to ensure that our workplace is safe, all the time. It's a subject that must always be our top concern.

In July and August we had three serious safety incidents involving our co-workers. Two of them were critically injured and another was fatally injured while on duty at the Maintenance of Way facility in Wilmington.

It's also at times like these that each of us—especially our colleagues in the shops, in the yards and along the tracks—should check ourselves. Is safety our first priority? Over the past couple of months, managers throughout the system have accelerated the push for safe work practices by all employees.

For example, our systemwide safety program includes a range of activities, such as fire and rescue training onboard our equipment, guest safety awareness blitzes, and safety stand downs for our shop and field employees.

All safety programs conducted in the field and systemwide, along with the ongoing efforts of our safety personnel, are intended to remind us all to devote our full attention to guest, employee and operating safety.

But what about you? How do you think about safety? Do you have a positive attitude? What do you do to promote a safe work environment—not only for yourself, but for your colleagues as well?

Over the past couple of months, managers throughout the system have accelerated the push for safe work practices by all employees.

We know the safety basics—wearing protective gear and following specific protocols. Those are the essentials. You can also commit yourself daily to plan each day's activities, and to think about the possible risks. As part of that planning, identify solutions, and then re-evaluate those decisions. Yes, there's work to be done and often time is short, but there's always time to ensure a safe environment for everyone.

California, PNW states approve over \$200 million to fund Amtrak service, capital work

California, Washington and Oregon have approved over \$200 million to fund Amtrak service and finance capital improvements.

California Gov. Davis has signed the state's FY01-02 budget, authorizing \$91 million of new capital funding for rail projects and \$67 million for continued operation of the *Pacific Surfliner*, *San Joaquin* and *Capitol Corridor Services*.

The legislature approved the governor's request for the appropriations from the state's general funds, demonstrating strong support for growing passenger rail service in the state.

The projects were chosen from the *California Passenger Rail System 20-Year Improvement Plan*, a study Amtrak funded and managed in

cooperation with the state, the Federal Railroad Administration, local elected officials, commuter and freight railroads. They include:

- Triple track between Los Angeles and Fullerton on the Pacific Surfliner route
- Double-track between Pittsburg, CA and Oakley on the San Joaquin route
- Double track the Yolo Causeway between Davis and Sacramento on the Capitol Corridor route

Amtrak West operates 50 trains daily on these three state-supported routes. The 20-year plan calls for additional trains, faster trip times, greater rail capacity and more frequent service throughout the state.

In more good funding news, the Washington state legislature has approved \$30.65 million for operations, maintenance and marketing of the *Cascades* service for FY 02-03. Amtrak West operates 11 trains daily for the *Cascades*.

In addition, Seattle's King Street station construction and other infrastructure projects will receive capital funding of \$20.5 million. Approximately \$1 million was allotted for the Washington Fruit Express program, which would haul produce on the *Empire Builder*.

Oregon adopted a new state budget for FY02-03 that includes \$10 million for two years of operations of the Oregon segment of the *Cascades*.

Mail & Express: Reliable service attracts customers

continued from page 1

The Amtrak advantage

Our national network offers something no other railroad can—a coast-to-coast trip under one management. Having a car handed off from one railroad to another can cost the shipper as much as several days of added time, plus hundreds of dollars more.

Acela Express is to our others trains what *any* Amtrak train is to a freight train. The fastest freight will cross the country in five days. We can do it in as little as three days. Team-driven trucks can also go cross-country in three days, but at a much higher cost than Amtrak. Even with that cost advantage, shippers are willing to pay a premium for our speed, consistency, and reliability.

Another advantage we have over trucks is size. To move three truckloads of oranges across the country in four days takes three pairs of team drivers. But just one Amtrak refrigerator car can carry that same load. It can join other M&E cars on a cross-country train with no additional crew requirements. Because of that efficiency, the shipper pays 10-20 percent less than if he had used the team-driven trucks.

Marketing 1-2-3

The new M&E marketing plan is focused on three segments of the transportation market: less-than-truckload (LTL); less-than-carload (LCL); and both refrigerated and premium truckload. These high-paying segments are easily integrated into passenger operations, and have requirements that match our strengths.

Amtrak has been handling LTL and LCL business since day-one. For instance, the U.S. Postal Service, Amtrak's single biggest customer, paid over \$80 million last year to move first- and second-class mail in baggage cars, mail handling cars, express cars, and RoadRailers.

A new computerized shipment tracking system, due to be fully implemented next year, will help expand the business. "This kind of information is as important to the customer as moving the shipment," said **Ken Asztalos**, vice president of M&E marketing. "You can move a product faster and cheaper, but if you can't tell the customer where their shipment is, you won't have that customer for long."

Amtrak is also leading the way in moving high-value refrigerated perishables. With its marketing partner ExpressTrak, Amtrak is re-entering a lucrative market largely abandoned by the freight railroads decades ago. Interestingly, other railroads are now following our suit. However, "Our fast service, coast-to-coast network, and competitive prices can't be matched by freight railroads or truckers," said Sargrad.

So far, new "reefers" have carried oranges, lemons and other citrus fruit for distribution giant Sunkist from Los Angeles, Bakersfield and Oakland to Philadelphia, Detroit, Hartford, Chicago and Jacksonville. And soon, apples from eastern Washington may move east in our gray and blue cars. "We could fill all our M&E slots with just reefers," says **Mike Cleary**, leader

of the refrigerated marketing team. "The market is that huge."

Carriers in the premium truckload market specialize in moving small shipments on guaranteed schedules. Examples include United Parcel Service, Roadway Express, and Federal Express. Each trailer represents tens of thousands of dollars in payments by individual shippers. But that same trailer also represents tens of thousands of dollars in penalties if shipments are late. As a result, premium carriers have increasingly turned to Amtrak for our fast and reliable service.

Premium service requires...premium service

We market M&E as a premium service that can demand premium prices. But to retain that business, Amtrak must provide premium service every time.

Just as guests expect to arrive safe and on time, M&E customers expect the same for their shipments. Some dissatisfied guests don't complain, they just never come back. It's the same with owners of late of damaged shipments—they just ship with someone else the next time. And, like with our guests, shippers tell friends and colleagues about their Amtrak experiences, good or bad. The shipping community is very small, so word spreads quickly.

Employees have to be committed to meeting or exceeding the expectations of M&E customers. This means loading cars and RoadRailers properly to avoid damage, consistently scanning mail and periodicals, containing costs, and

ensuring that cars make trains and connections. "Our employees have done a great job in making us a player in the premium market," Asztalos said. "We need to maintain that focus on service excellence."

Every department plays a role. For instance, "It's not M&E employees who run the trains, load the cars and track the shipments," Sargrad said. "Every employee plays a part in determining whether we succeed or fail."

By Tracy Davis, Mail & Express, Chicago

The route to our success

Strategic Business Plan Key Strategies

Since the 1998 launch of its new strategic direction, Amtrak has taken significant steps in rising to the challenge of reducing its reliance on federal funds to support operations. Driving Amtrak's actions are six key strategies.

Build a market-based network

Define customer demand, using extensive research, and then match our system with that demand.

Deliver consistent quality service

Change the culture of the company to be more guest-focused, and provide a world-class travel experience on every trip.

Revitalize the Amtrak brand

Introduce and support a new brand for Amtrak, to signal a major change to our guests.

Operate a cost-effective business

Identify specific functional areas, policies, organizational structures, and back-office costs that have potential for improved cost management.

Maximize public and private partnerships

Pursue public and commercial partnerships aggressively, through Mail and Express and other programs that generate the highest returns for the company.

Develop corridor services

Work with state and other partners to create or improve rail corridors across the country, drawing from the expertise we've gained in building Northeast Corridor services.

Amtrak, MBNA introduce the Amtrak Guest RewardsSM Credit Card

The summer may be winding down, but Amtrak is just getting warmed up — to give our guests even more appealing reasons to travel on Amtrak.

Amtrak and partner MBNA American Bank (NA) have introduced the new Amtrak Guest Rewards MasterCardSM credit card.

As part of our guest loyalty program, which is growing faster than expected, the credit card enables

guests one more way to earn valuable points toward their Amtrak Guest Rewards account.

We've highlighted just a few of the benefits of the Amtrak Guest Rewards credit card from MBNA. They are:

- 500 Amtrak Guest Rewards bonus points after you make first qualifying transaction(s) with the card.
- Earn points for every retail purchase dollar spent and additional points for Amtrak travel purchases.
- No annual fee and a 1.7 percent introductory Annual Percentage Rate (APR) for balance transfers and cash advance checks.
- 24-hour MBNA Customer service to help guarantee your satisfaction.

- Purchase protection and extended warranty coverage, plus a credit line of up to \$100,000 with the Platinum PlusSM card.

Remember, this special program is available to employees too! Informational brochures and enrollment forms will soon be available in many stations. Or, to obtain more information, employees and guests can consult amtrak.com.

* Participation in the Amtrak Guest Rewards program is subject to the terms appearing in the Member's Guide, or at amtrak.com. Annual point earnings obtained with the use of the credit card are capped: Preferred credit card customers may earn up to 50,000 points and Platinum Plus cardholders earn up to 100,000 points. Balance transfer and cash advance transactions will not earn points. Complete details will be provided with the credit card. This credit card program is issued and administered by MBNA America Bank, N.A. All credit decisions are the sole responsibility of MBNA. Platinum PlusSM is a service mark of MBNA America Bank, N.A.

Amtrak bringing rail service to downtown Louisville, KY

New Mail & Express facility in Jeffersonville debuts

With shovels in hand, Louisville Mayor David Armstrong, other local officials, and Amtrak representatives, had an Aug. 2 groundbreaking for track construction that will bring the *Kentucky Cardinal* into the city's renovated Union Station.

As part of the ceremony, the group then boarded a special train that took them across the Ohio River to Jeffersonville, IN, to inaugurate Amtrak's newest Mail & Express facility.

They were greeted by Jeffersonville Mayor Tom Galligan at the new facility that will offer a transfer dock with 4,000 square feet of covered space. It is equipped with 10 truck docks, and will permit simultaneous loading of six Amtrak express boxcars.

The new terminal also includes an electronic truck scale and track that can accommodate 10 Roadrailer units. Mail & Express shipping is provided by Amtrak's *Kentucky Cardinal*, which travels daily between Jeffersonville and Chicago.

"Our Mail & Express program is designed to provide service that is complementary to the current shipping

industry," said **Lee Sargrad**, president of Amtrak Mail & Express. "By continuing to upgrade our facilities in key markets like Louisville, we can expand on our ability to provide local shippers with expedited service and connection on a national network."

"Our Mail & Express program is designed to provide service that is complementary to the current shipping industry."

Lee Sargrad, president of Amtrak Mail & Express

"We are pleased to be part of a healthy and effective partnership between Amtrak and the nation's freight railroads," said Peter Gilbertson, chairman of the Louisville and Indiana Railroad, which will provide switching services for the new facility. "Local businesses taking advantage of Amtrak's Mail & Express services will be pleased with the capabilities and efficiencies of the new facility in Jeffersonville."

Amtrak Technologies announces 'e-learning'

Amtrak and Element K, a web-based training provider, are delivering computer training to you—right to your work PC, or home computer if you have an internet connection.

The "e-learning" program became available in June and is designed to make it easy and convenient to learn new computer skills or refresh old ones. You can even explore new topics. And, doing it online means that your education fits into your schedule—at the office, at home, or on the road.

Learn software packages including Microsoft Office, (Access, Excel, Word, PowerPoint, Project, Outlook), Microsoft Windows, Lotus Smart Suite, Front Page and more.

Two course libraries are available to Amtrak employees: Office Productivity (English only) Library and Computer Professional Library, and two types of courses: self-study and instructor-led. To preview the courses available, visit the Element K web site at www.elementk.com (e-learning/Catalog).

"This program benefits individual employees and the company."

Richard McGarity

To access courses, you must register with Amtrak's AT Department to request a subscription. For information, contact Patricia Lusk, Amtrak Technologies, at plusk@amtrak.com, ATS 777-4996/(202) 906-4996. Or see the Amtrak Intranet (Employees/Education & Development/Computer Training). Subscriptions are free to you and your department. Please note that the most instructor-led courses will require a textbook, which may be purchased right on the site via credit card.

"This program benefits individual employees and the company because the training is offered on software used in the business environment," said **Richard McGarity**, manager of Technical Training & Information Delivery. "Employees are encouraged to always seek to learn new skills."

Introducing On-board Fares: A new policy for on-board ticket sales

Amtrak's new policy, part of CMI 38, eliminates the reference to a penalty, and requires guests to pay an on-board fare—or an "at-the-door" price for travel.

Amtrak has introduced a new On-Board fare system to simplify on-board ticket sales for guests and train crews.

On-board Fares (OBF) has replaced our previous policy that imposed a \$7 "penalty" when guests boarding at open staffed stations purchased tickets onboard.

Amtrak's new policy, part of CMI 38, eliminates the reference to a penalty, and requires guests to pay an on-board fare—or an "at-the-door" price for travel. The OBF is the basic fare plus \$9, or plus 50 percent when the basic fare is less than \$18. It has also been posted in the conductor's tariff book.

Through various forms of communication, we are advising our guests that tickets are less expensive when purchased in advance, and that for a premium, tickets are available onboard the train.

The previous policy was inconsistently applied, and guests were often

frustrated when "penalized." Conductors frequently waived the surcharge as a form of service recovery. (Historically, the penalty had been applied to less than one-fifth of on-board sales).

The OBF is not intended to be a revenue generator for Amtrak, but instead to encourage people to purchase tickets before they board the train.

Unlike the previous \$7 surcharge, the OBF is non-negotiable. However, if a guest has reserved a seat at a lower price than the basic fare, that reservation will appear on the conductor's manifest and will be honored. This eliminates situations where unticketed guests told conductors what fare they had been quoted by a call center agent.

Introducing the OBF also provides an opportunity to achieve:

- Greater consistency in on-board ticket sales

The OBF is not intended to be a revenue generator for Amtrak, but instead to encourage people to purchase tickets before they board the train.

- An incentive for guests to purchase travel through less costly channels
- Fewer distractions for our crews
- The elimination of the unfriendly terms "penalty" and "surcharge"

There are rare instances when the OBF may be waived, such as when the reservations and ticketing system has failed. In that case, the agent will notify the conductor at a boarding station that they were unable to ticket guests in advance.

O N T H E R I G H T R A K

Creative cost management praised

Lew Wood, general manager of the Beech Grove Facility, has written personal letters to several of his employees, commending them for using their imagination and resources in managing costs and generating revenue. These employees not only provide examples of good cost management practices, they are also a reminder of why Amtrak employees are the company's most valuable assets:

Mike Milburn has built a Viewliner coffee station light at a cost of \$150, versus a vendor cost of \$1,100. The savings from the installation of his high-quality product could total \$47,500.

Jim Liddle, Ken Fletcher, Harvey McCann, and Dan Roberts devised a way to generate \$2,700 per year for Amtrak. The four analyzed our current practice of selling worn carbide tips as scrap, and found we could make more by selling them as used carbide. Our recovered costs will rise from \$56 per year to just over \$2,700 annually.

Amtrak conductor extraordinaire celebrates 60 years on the railroad

For longtime Amtrak employees, working on the railroad is more than just a job—it's a way of life. Conductor extraordinaire **Dennis Corsale** is a prime example.

Since his teen years, Corsale has spent almost every day pursuing his passion for trains. This July marked his 60th year on the rails, so his pals in Albany celebrated the diamond anniversary in grand style.

In 1941, Corsale began his career with the Delaware & Hudson Railway Company in Saratoga Springs. After serving overseas in World War II, he returned to the states and to the rails,

Dennis Corsale, a 60-year railroader.

Superliner II restrooms get system upgrade

On-board employees working Superliner cars: Help is on the way! The long-standing challenge of odorous and blocked toilets appears to be solved.

A team at the Beech Grove maintenance facility has applied a new coating within pipes and completed the installation of a "constant vacuum" system in more than 20 Superliner II sleepers and trans-dorms, with the rest of the fleet to come.

The work, led by project manager **Vyn Sonn**, involves two elements. First, eroded pipes are repaired and

coated internally with a new substance used successfully by the Navy in submarines. Second, the toilets are converted from an "on demand system," in which a blower is engaged by the flush button, to a constant vacuum system.

The new system maintains a constant vacuum in the piping, with the motor restarting whenever the vacuum falls below a preset level. The two-pronged conversion has proven itself effective in eliminating odorous leaks, and in improving the effectiveness of the evacuation system. Superliner I equipment is already equipped

with the constant vacuum system, and is service proven.

"Our goal is to convert the entire Superliner II fleet," said **Vince Nesci**, chief mechanical officer. "Forty cars will be completed by the end of this fiscal year, and Amtrak has committed to funding the conversion of the remaining sleepers, dorms, and lounge cars next year."

Installation of the more efficient toilet system costs Amtrak about \$60,000 per car. It should bring an end to most guest complaints about toilets—and make the lives of many on-board employees more pleasant.

Spotlight on the Washington Terminal

The Washington Terminal Company (WTC) first began operations in the early 1900s. That's when President Theodore Roosevelt signed a law "to provide for a Union Station in the District of Columbia" — a terminal that would service the multiple railroad companies that came into the capitol.

The WTC provided switching service for station owners and tenants at Washington Union Station, serviced rail passenger equipment, and operated the station. In 1981, Amtrak purchased a piece of the WTC operation, and by 1985 absorbed about 1,800 management and agreement-covered employees into Amtrak's organization. In order to merge the WTC with Amtrak, 10 separate labor agreements had to be negotiated.

In 1984, **Stan Bagley**, now executive vice president of Operations, was assigned to merge the WTC and Amtrak, and was instrumental in keeping the "pride in the past" by maintaining the WTC colors on Engine #738. And **Daryl Pesce**, current general manager of the Washington Terminal, has continued the tradition. For the Amtrak employees who started out working for the WTC, this engine is a visible reminder of the origins of this tight-knit group, a group that has a lot of pride in its past and in the work its members do today.

Pictured with the WTC engine are: K. Gordon, J. Banks, T. Boyd, J. Morgan, P. Ryan, S. Sochirin, R. Morgan, J. Ebersole, F. White, C. Brickhouse, J. Redmon, D. B. Kinney and W. Costello.

WTC employees not pictured include: S. Phifer, A. Sharp, D. Liverette, C. Schramm, M. Hanes, J. Elden, S. Simmons, R. Alexander, M. Parker, M. Shaw, K. Russell, G. Curry, J. Gore, T. Graves, D. Mascetti, R. Becraft, T. O'Neal, R. Sturey, M. Butler, R. Lyons, M. Stencil, R. Hale, M. Easton, D. Garrett, S. Desantis, J. Clark, J. McDonough, R. Myers, W. Dempsey, S. Parker, H. Staughton, M. Dempsey, C. O'Dell, D. Ayers, M. Hamilton, R. Drozynski, B. Rowland, C. Weakley, N. Kisendaffer, E. Price, D. Simms and M. Hibbert, C. Auvil, D. Moffett, C. Harris, B. Exum, D. S. Liverette and J. Eskeu, R. Peters and M. Gossman.

Amtrak initially employed about 172 WTC Train and Engine (T&E) employees, and today, about 50 of those remain. Each day, the crew dispatchers ensure that the terminal operation is adequately staffed so that the T&E crews, along with the K-tower and control center employees, and the trainmasters can safely execute about 700 car moves for the nearly 200 trains that come through Union Station. There are 12-yard diesels used to perform these switching movements, but only one of the engines, Engine #738, still bears the colors and markings of the WTC.

Highlighting achievements:

Department of Business Diversity marks its second year

Recognizing the need to put in place a formal structure to reflect Amtrak's core value of diversity, Amtrak President **George Warrington** obtained approval from our Board of Directors to establish Amtrak's Department of Business Diversity & Strategic Initiatives. In the summer of 1999, the first staff members settled in and charted a course for change.

Left to right, Hugh B. Price, president & CEO, National Urban League; Gerri Mason Hall, vice president Business Diversity & strategic Initiatives; and Stan Bagley, executive vice president, Operations

Since its inception, the department has created and maintained an atmosphere of inclusion.

Since its inception, the department has created and maintained an atmosphere of inclusion. During this calendar year, a special emphasis was placed on ensuring that Amtrak functions as a responsive and responsible corporate citizen — both to our guests, and in the communities we serve.

Under the leadership of Vice President **Gerri Mason Hall**, the department has been the primary

force behind several programs and events. These programs include sponsoring an intern from the Ronald H. Brown Foundation, assisting in bringing about a new corporate travel partnership with the National Urban League, sponsoring the NAACP's ACT-SO Awards program, and hosting nearly 100 girls between the ages of seven and 17 at Washington Union Station for "Take Our Daughters to Work Day."

The Ronald H. Brown Foundation Inc.

The Foundation was formed in 1996 to carry on the vision of the late Secretary of Commerce, Ronald H. Brown. Its mission includes the establishment of the Center for Politics and Commercial Diplomacy. The center aims to train

present and future leaders by providing a unique opportunity for students and executives to learn valuable skills in the areas of nonpartisan political development and commercial diplomacy. The Brown Center program combines classroom and

practical experience through internship placements at key Washington organizations. Business Diversity was pleased this summer to host one of the Foundation's interns, Middlebury College senior Michael Luke.

The NAACP ACT-SO Awards

Amtrak was a Silver Sponsor of the NAACP's ACT-SO awards program

held at its 92nd Annual Convention in New Orleans this past July. The ACT-SO ("Afro-Academic, Cultural, Technological and Scientific Olympics") program, often referred to as the "Olympics of the Mind," recognizes the achievements of young people in the areas of science, humanities, business, and in the visual and performing arts. These young people participate in local and regional competitions, and then compete on a national level at each year's convention.

The Amtrak brand was prominently displayed in the awards program, the conference booklet, and on screens during the awards presentation. The awards ceremony was videotaped (it will be shown on various networks throughout the coming year) and web cast. During the ceremony, Mason Hall had the opportunity to make remarks concerning Amtrak's commitment to "helping students reach not just their destinations, but their destinies, as well."

The National Urban League

On July 1, Amtrak and the National Urban League entered into a new corporate travel partnership. Because of Amtrak's desire to build diversity not only in the workforce, but also in our customer base, we welcomed the opportunity to work with a partner of the stature of the National Urban League.

Through this partnership, Amtrak will provide a discount on rail transportation for league employees, and its subsidiaries, on *Acela Express* and *Metroliner* Services on the Northeast Corridor. League employees will receive a 15 percent discount in Business class travel.

In addition to the partnership, Amtrak was also pleased to sponsor of this year's National Urban League Conference, held at the Washington Convention Center from July 28 to Aug. 1. The *Acela* display was in a booth during the conference's four-day Exhibit Showcase. Amtrak also provided transportation for league staff traveling to Washington and hosted a pre-gala reception where Gerri Mason Hall and **Stan Bagley**, executive vice president of Operations, met briefly with National Urban League President & CEO, Hugh Price.

'Take Our Daughters to Work Day'

In April, Business Diversity sponsored Amtrak's "Take Our Daughters to Work Day" at Union Station in Washington,

D.C. The day's theme was "Girl Power! — What Girls Want — What Girls Need."

Nearly 100 young ladies joined their parents, neighbors, mentors and friends for a day of activities designed to increase the awareness and interest of these young women about careers in transportation and the railroad industry. *Washington Post* columnist Donna Britt served as the morning program's Mistress of Ceremonies.

The young ladies were exposed to "Messages of Power from Amtrak's Women of Power", including **Barbara Richardson**, executive vice president; **Pamela Montgomery**, project manager, Service Operations; Officer **Hazel Alfred**, Amtrak Police; and **Lorraine Green**, vice president of Human Resources.

Moving forward

As we move forward, we need to credit the contribution provided by Wanda Morris Hightower, who led the department's efforts when it was first established. She contributed greatly to its success during her tenure as vice president.

The Department of Business Diversity plans several new partnerships and sponsorships of events designed to continue to raise diversity awareness, both internally and externally. Planned for the coming months are sponsorship roles with: the Congressional Hispanic Caucus, the Congressional Black Caucus, the U.S. Small Business Administration's Minority Enterprise Development Program ("MED Week"), and the National Minority Supplier Development Council.

Mason Hall and the Business Diversity team are confident that supporting these multicultural organizations is not only the right thing to do, but also will lead to increased ridership as we share the Amtrak experience. And at the end of the day, that's great business!

This program from the Daughters Day event features some of Amtrak's women of power and little known facts about women in transportation.

Gerri Mason Hall talks with summer intern Michael Luke about how to shape his summer work experience.

S A F E T Y

APD, Caltrain launch right-of-way safety blitz

To help reduce the number of fatalities and injuries along Caltrain's property, Amtrak and the commuter service engaged in "Operation Safe Tracks," an aggressive zero-tolerance safety blitz along the 77-mile rail corridor. With the combined force of local law enforcement, sheriff's agencies and our own Amtrak Police Department, the four-day blitz resulted in a total of 246 citations and four arrests for trespasser and highway rail violations.

"This is the largest operation I've been involved in here at Amtrak,"

Jim Martino, captain, San Jose APD said. "The awareness we're bringing to the community and to local law enforcement agencies should go a long way in reducing trespasser incidents."

Amtrak Police Chief Ron Frazier announces Operation Safe Tracks at a press conference. He is joined by Caltrain representatives and San Mateo, CA law enforcement.

Martino, who is also an Operation Lifesaver assistant chairperson, was recently named as APD's local commander in San Jose, where the department is contracted as the full-service law enforcement provider to Caltrain.

Seventeen fatalities occurred last year along the Caltrain corridor spanning from Gilroy to San Francisco, one of the highest incident rates in the country.

Backing up a commitment made to Caltrain's executive director to provide the necessary resources to reduce fatalities and injuries, Amtrak Police Chief **Ronald Frazier** initiated "Operation Safe Tracks."

The operation was launched at a press conference, where Caltrain's board Vice Chair Mike Nevin, Chief Frazier, and San Mateo Police Chief Susan Manheimer committed to working together to save lives through enforcement and education.

The launch received wide coverage from newspaper, radio and television accounts, highlighting the deployment of Track Star I, APD's 206B III

Bell Jet Ranger helicopter, and announcements of a newly initiated APD bike patrol unit.

A member of the bike patrol unit, Amtrak Police Detective John Mumford stands in front of Amtrak's "Track Star I".

The bike patrol unit is staffed by two dedicated Amtrak Police detectives,

John Mumford and **Mike Cuevas**, who received widely accepted support from the community and partnering agencies. The flexibility of the bike unit was demonstrated throughout the blitz as the detectives patrolled onboard the trains and along the right of way.

A new Juvenile Diversion Program was also initiated during the week of the blitz. Under the program, youths who are caught trespassing or lesser railroad violations have the option of attending OL rail safety education classes with their parents, instead of being cited and referred to the juvenile court system.

"The combination of enforcement and education is the formula for saving lives," said Chief Frazier. "The commitment of all the officers involved in Operation Safe Tracks is to be highly commended, and I am assured that they will continue to be dedicated to this life-saving mission."

Bear complex employee wins prestigious safety award

Albert J. Feeley Sr., a safety and environmental Foreman III at the Bear maintenance facility, is a recipient of the Harold F. Hammond Safety Award for calendar year 2000, in the category of "Outstanding Safety Achievement by an Individual Railroad Employee."

With Amtrak since 1976, Freely has been involved in different facets of safety for about 12 years.

Nominees for the Hammond Safety Award represent outstanding individuals from railroad companies throughout the U.S. The contest also recognizes railroad companies with outstanding safety records.

Christine S. Marks, director of Mechanical Programs, nominated Feeley for the award. "I think he truly exemplifies all of the behaviors that a Hammond winner should possess. His constant presence on the shop floor and on the facility grounds enables him to identify, report, and help correct hazards to prevent possible accidents and injuries," Marks said. "He exhibits a high degree of safety awareness and displays exemplary work performance."

Feeley accepted his award at a ceremony held in Washington, D.C., and cited the team spirit and combined efforts of the Safety department and safety committee in meeting their goals. After the ceremony he said, "Safety training, specific structured programs, a strong safety presence, practicing good house-keeping around the facility, and setting high levels for safety standards is a great combination for success in achieving Bear's safety objectives."

Michael Annone, Bear Maintenance Facility

Safety in big numbers

The Communications department in Providence, RI, just keeps going, and going, and going! They recently celebrated 3,000 injury-free days. For insiders, this remarkable achievement comes as no surprise.

"We do whatever it takes to get the job done," says technician **Rich Atkinson**. "And we always do it safely."

Atkinson estimates that the unstoppable group began their safety streak way back in '92. "I can't even remember when it all began," he mused. "Safety is just a way of life for us, whether we're out in the field or behind a desk."

Of course, this injury-free streak didn't happen by accident. "The employees come to work each day and make a conscientious effort to keep safety first."

"It isn't just about management. It's an effort on the part of each and every employee," said **Jim Smith**, interim Communications supervisor.

Thumbs up to technicians **James Bodnar**, **Robert Proulx**, **Bob Sampson**, **Joe Santere**, **Jim Langan**, **Craig Pedro** and **Charles Haskins**, **Jim Smith** and former Communications Department Supervisor **Bill Boland**, for this jaw-dropping achievement.

Denver, Kansas City achieve impressive injury-free milestones

Employees of the Kansas City Mechanical department have gone four and a half years without an injury. To what do they attribute their success? They say looking out for one another and taking pride and satisfaction in working as a team.

Denver Union Station employees have recently celebrated three years of working injury free. The Denver Safety Committee, along with safety Chicago instructors John Falaris and David Pryor, honored the employees with a three-day breakfast and luncheon cookout at the Denver Terminal.

Western Business Group managers **Phil Larson**, **Shannon Davis** and **Leonard Sandoval** were on hand to cook up breakfast burritos and grill burgers and brats for the safety conscious group.

We salute the following Denver Union Station employees: **Terry Ferregut**, **Maria Chaidez**, **Ron Sherley**, **Denise Nelms**, **Arzelia Borne**, **Cliff Sims**, **Noval Jackson**, **Kris Malone**, **John Burrell**, **Greg Fondren**, **Guy Cavey**, **Harold McDowell**, **Roxi Winslow**, **Bill Stricherz**, **Eugene Cornish**, **Kim Davis**, **Frank Graham**, **Jeff Holmes**, **Laura Jensen**, **Mike Markle**, **Jimmy Means**, **Ted Wang**, and **Louise Rivas**.

C O S T M A N A G E M E N T

Amtrak's cost-cutters

1 Joyce Brown in Chicago received two credit card payments fortickets with missing credit card numbers. She did an ARROW search, located the passenger's name, departure date and confirmed the missing number. A total savings of \$68

2 Chuck Cooke who works in Chicago told us that the UP Railroad now requires the engine crew on all trains using the Moffat Tunnel to have access to self-contained breathing apparatus, in case of emergency. Provisions requirement include routine inspections of these respirators. Amtrak contacted a vendor whose monthly service checks for 12 respirators would amount to \$21,252. Instead, **Hank Pauley** trained the Denver Safety Committee to do the inspections, saving Amtrak \$21,252 annually.

3 Mery Elyn Baron-Pocius in Chicago saved us \$100. She reviewed an invoice for payment and discovered a late payment charge of 1.5 percent hidden in the "other charges and credits."

4 Vincent Rosa in New Orleans received two invoices for the same job. A service technician and a trainee came to his facility to do some maintenance repairs and submitted a bill for \$954. When Rosa questioned the cost, the company told him they were billing Amtrak for services of two technicians—one who did the job and a trainee. Rosa disputed the matter, received an apology from the company, and was reimbursed \$477.

5 Elaine Barnett in New Orleans received an invoice from a company with an outstanding balance of \$2,226. After checking her records, she recovered \$1,460 in payments already made. A big savings for Amtrak.

6 Patrick Keough from San Antonio told us the folks there saved Amtrak \$2,100. The lighting conditions outside the station needed work and a contractor charged them \$2,500 to do the job. The safety improvement team did the work themselves for \$400. A big difference!

In the June/July issue of Amtrak Ink, we put the spotlight on some of the many employees whose efforts to save Amtrak money are paying off. Here's another installment of the same. To all of Amtrak's creative cost-cutters, thank you.

7 Mary Jennings from Chicago worked with Senator Herbert to amend legislation in Oklahoma to reduce the cost for a liquor license on the Heartland Flyer from \$1,000 per year to \$100. Legislation passed, saving Amtrak \$900 per year.

8 Bill Kolacke from Beech Grove told us that New Orleans needed two emergency brake valves for their P-42 locomotives. These valves were irreparable and the cost to replace each valve would run \$1,000 each. Instead, he suggested doing a MOD 9644 to reduce repair costs. The mod repairs came up to \$138 for each valve, saving the company \$1724.

The following was sent in by **Althera Stiggers** in Ivy City, Washington, D.C.

"**Bob Huber** and **Ron Ellifritz**, who are responsible for FDA Compliance, came up with the idea of cleaning and sanitizing potable water nozzles in a washing machine. These nozzles are used with special hoses to funnel drinking water into a car's holding tank. The nozzles were being replaced once a week.

"Bob, Ron and I placed 70 water nozzles in a washing machine with a germicidal cleaner in the wash cycle, and bleach in the rinse cycle. In 40 minutes, we saved the company \$1,540 (the cost of 70 nozzles), and potentially \$84,480 a year."

Below are mini-profiles on just two of the dozens of Cost Management Initiatives (CMI) the company is looking at that might help us reduce costs, build revenue, or both.

CMI 79: Channel Management

So far in fiscal year 2001, sales booked via our interactive channels (Internet, Quik-Trak, and VRU) have grown by more than \$50 million. However, despite this strong growth, interactive channels are only projected to handle 18 percent of Amtrak's total FY01 sales.

These interactive channels complement our distribution system by handling information inquiries and simple reservation transactions in a cost efficient manner. By shifting

more of these transactions to the interactive channels, our call center and station agents can focus on improving sales and problem resolution.

The CMI 79 team plans to increase the use of the interactive channels by heightening the public's awareness of these options, and improving their functionality and performance. A marketing/communications plan will be developed to encourage their use.

Technical enhancements are under way to enable guests to purchase Amtrak's promotional fares using our interactive channels—something that can't be done today. And, exciting improvements are also in progress for each of the channels.

Speech recognition for the VRU will enable callers to obtain assistance by

speaking to the automated system. A new booking engine and content management system for our all-new amtrak.com—launched in July—will make the website easier and faster to use. And more options will be available on Quik-Trak, including AAA discounts.

CMI 5: Vehicle Policy & Procedures

The team assigned to CMI 5 is charged with identifying ways to decrease the overall expense associated with vehicle leasing, maintenance, fuel and associated expenditures.

The team members determined that Amtrak has not uniformly managed the deployment or standardization of

its fleet across the system. Vehicle fleet size has grown over the years due to an increase in projects and funding sources. And when projects were completed, surplus vehicles might have been retained.

So, in an effort to rationalize our fleet, a justification by user managers has been incorporated into our new policies.

An overall reduction in vehicle costs has been given a top priority. The CMI team developed new policies and procedures that require routine reviews of operating and inspection expenses, and for managing vehicle maintenance schedules.

To facilitate this, the Engineering department has been providing key

RAILWAY ROUNDUP

Kids learn rail history, safety, boost ridership in Amtrak West

Since its inception last year, the "Schools on Trains" program has enabled over 31,000 kids to travel Amtrak while learning rail history and safety.

The students visit state capitols, museums, historical sites, aquariums, and other educational destinations aboard the *Cascades*, *Pacific Surfliner*, and *San Joaquin* services. Operation Lifesaver (OL) presentations are offered to all groups to drive home the message of staying safe around trains and railroad tracks. The OL message to "Look...Listen...and...Live" is one the children share with their parents.

The Schools on Trains program offers significant reduced midweek promotions to school groups to increase

ridership during non-peak travel times. Amtrak Sales Manager **Tom Sponsler**, Caltrans Marketing Manager **Dennis Winger** and Washington State DOT employee **Theresa Gren** are the masterminds of the program.

"What a great way to expose youth to the benefits of train travel, while providing schools an economical and educational field trip," said **Cyndi Darlington**, senior director, Amtrak West Sales and Marketing.

According to research done by Yesawich, Pepperdine & Brown, kids have a strong influence in family vacation choices, so Amtrak is interested in exposing this important group to the benefits of train travel.

Amtrak, in partnership with Washington, Oregon and California, offers this program through website bookings and direct mail advertising to schools. The program is continually being enhanced; with California currently developing teacher lesson plans to accompany the real-life experience of their train trip.

Next Stop, Vegas

Chances of hitting it big with the lottery are one in a million, but a few lucky gamblers still managed to strike it rich.

Amtrak guests in the New York area sent their non-winning scratch tickets to the New York Lottery in the hopes of hitting a different kind of jackpot—the chance to enjoy a free train ride to Saratoga Springs and an action-packed weekend of horseracing, entertainment and yes—betting.

The stakes were high—over 25,000 losing lottery tickets were mailed in and 50 were selected in the lottery's "second chance" drawing.

On July 28, the lucky winners hopped aboard the *Adirondack* from New York City to Saratoga Springs. Joined by New York Lottery TV hostess Yolanda Vega, the guests enjoyed a ride complete with an authentic Mummies Parade Banjo Player, thanks to **Tom Pyle**, *Empire* Service general manager and

Todd Garafano, *Empire* Service marketing manager.

When they arrived in Saratoga Springs, the winners were treated to a day at the Saratoga Race Track's Paddock Tent courtesy of the New York Racing Association and they pocketed a cool \$100 in spending cash courtesy of the lottery. After a busy day at the track, guests explored downtown and then lounged in luxury at the Saratoga Hilton Garden Inn.

"Everyone had a fantastic time," said Garafano. "This was a terrific way for guests to unwind and enjoy the fun side of Amtrak."

Special thanks to **LSA Mickey Darby**, Metropolitan Division Terminal Services, and the *Empire* Service product line for making our guests feel like a million bucks!

Richmond intermodal station offers convenient connections for Amtrak guests

Over 150 elected officials, representatives of California state and regional agencies, Amtrak guests, local residents and rail advocates turned out to celebrate the Richmond Intermodal Station grand opening on July 19.

After a \$1.9 million renovation, including a new center-loading passenger platform, Richmond is the only station in the San Francisco Bay

Area with connections between Amtrak, Bay Area Rapid Transit (BART), and AC Transit. The work was funded by state and local partners.

"Nearly 100,000 guests traveled through the Richmond Station this year, compared to 66,000 last year—an increase of nearly 50 percent," said **Jay Commer**, general manager of the California Corridor. "Amtrak is proud to be a part of a broad coalition of organizations and agencies that support the future of passenger rail in this community."

Twenty-six *Capitol Corridor* and *San Joaquin* trains serve Richmond each day. And, BART carries 5,300 commuters to and from Richmond daily.

The new facility is expected to provide major growth for Amtrak and added convenience for East Bay passengers. The station is a centerpiece of the new and innovative Richmond Transit Village, where housing, commercial businesses and complete Amtrak station are planned.

Jeff Morales, director of the California DOT, said the connection is a much-needed state improvement. "This is the kind of investment we should be making in California," Morales said.

REPORT CARD

Year-to-date through July FY01

Financial Performance

	FY01 Actual	FY01 Plan	Better or worse?
Budget results* (millions)	-\$246.9	-\$178.0	\$68.9 worse

Total Guest injuries ⁴	2,107	1,814	293 worse

* All revenue plus federal operating funds and RRTA contributions, minus cash expenses.

² This is a measure of expense against every dollar of income.

For example, an operating ratio of 1.50 means we spend \$1.50 for every \$1.00 we earn.

³ For the three months ended February 2001 and February 2000.

⁴ As of Aug. 15, 2001.

⁵ Based on a 5.6 ratio for FY01, and a 5.0 ratio for FY00.

Cost Management

continued from page 8

performance measurement tools on a monthly basis to all SBU fleet managers and senior management.

The team has also redefined purchasing approval requirements, and now policy requires annual re-justification of vehicles.

Since the beginning of their effort, team leader **Bill Auye**, director NEC Audit and Finance, and **John Parola**, chief engineer, Track department, report that the vehicle group has received justification on 75 percent (as of 8/13) of the current fleet. Additionally for FY01, 304 vehicles have been returned as of July 25.

While the remaining 25 percent of the fleet may not necessarily be "unjustified"—and in fact many of these are covered by contract service operating agreements—this points to the need for responsible managers to turn in their overdue fleet reports, the team tells us.

"We're still looking at other ways to better manage our costs, and the fleet in general," Parola said. "A few of the areas that have been targeted are the accuracy of mileage reporting, maintenance costs, the routine completion of logbooks and trip sheets, and more timely accident reporting."

Mid-Atlantic RSCC embraces a 'celebration of cultures'

Employees at the Philadelphia call center have been presented with a unique way to recognize and celebrate the diverse cultures within our office.

Agents have been encouraged to let managers know about our ethnic or cultural backgrounds, and how we can all celebrate diversity in the workplace.

A centrally located display case has been designated to feature the artwork, souvenirs, relics and other precious items on loan from employees.

So far, three cultures have been recognized. Black History Day was celebrated in February. Employees were encouraged to come to work in African garb, and black art, literature, and many other cultural items were displayed throughout the office. In

March, employees celebrated Irish culture on St. Patrick's Day with shamrocks, balloons, and "the wearing of the green."

A Native American display in May featured Native American head-dresses, a bearskin rug, pottery, woven baskets, and dolls.

There's more to come. In the coming months the center's celebrations will include a Latin American festival, a German festival, and an Italian American day.

Everyone's encouraged to participate. Having a greater understanding of the diverse backgrounds in the call center has enhanced employee relations, stimulated morale, and introduced a greater sense of appreciation of our colleagues.

Carmen Crayne, team leader, Mid-Atlantic RSCC

Racking up awards for excellence

Amtrak was honored with 10 marketing and communications awards recently at the Tranny awards ceremony held July 20, four of which were Awards of Excellence.

The Tranny Awards Program was designed by the Transportation Marketing and Communication Association to recognize organizations and programs within the transportation industry that create innovative solutions to transportation issues. Over 100 groups participated in this year's competition, and Amtrak was one of 15 winners.

In the category of Publications, Amtrak took top honors for the new *Arrive* magazine. Amtrak saw the opportunity to reinforce its new *Acela* brand with a colorfully designed, 36-page, glossy, bi-monthly magazine, *Arrive*. The magazine reflects many of the *Acela* color and design elements, and provides the mix of information, features and events Amtrak's ridership seeks and

deserves. *Arrive* is distributed in seatbacks of all trains traveling in the Northeast, including the new high-speed *Acela Express*.

The second top award was presented in the category of Special Events. To promote the launch of America's first-ever high-speed rail service, Amtrak created a spectacular, daylong, launch event on November 16, 2000. With events scheduled from morning to night, from Washington to New York to Boston, this was an opportunity for Amtrak to celebrate this milestone and launch a new product.

Amtrak also received an Award of Excellence for the media and marketing partnership formed with Student Advantage. Because of the overwhelming success of the partnership, the team received the Award of Excellence.

We also received awards for the Fall 2000 advertising and promotions campaign, and for *Amtrak Ink*.

AMTRAK IN THE NEWS

If gasoline continues to increase in price, there must come a time when the public will realize how much better it would be if we could have at least once-a-day service on all Amtrak routes and some new routes.

"Amtrak is a vital service," Florida Times-Union June 2001

The demand for high-speed rail service is being driven at the grass-roots level, not only to relieve congested roads and airports, but also to drive economic prosperity. However, it cannot be accomplished without a stronger federal role. Between New York and Washington, Amtrak already commands nearly 50 percent of the rail-air market. With the introduction of premium service north of New York, Amtrak aims to capture significant portion of that market as well.

"Acela Express heads Amtrak expansion drive," TrafficWorld, July 2001

Not only in quality of movement, but in quality of the environment, such improved rail could beat the skies and surface roads. As concerns about energy and global warming grow, trains could serve to reduce US greenhouse gas emissions - 33 percent of which come from motor vehicles.

Likewise, increased rail use could shrink the mounting airplane emissions in the upper atmosphere.

"Bring back the trains, fast" The Christian Science Monitor, July 2001

America faces a transportation crunch. Airports are overcrowded and highways are strained. Amtrak should be viewed not as a perennial problem but as a potential solution.

"Amtrak: Part of the solution to our traffic woes," The Washington Post, July 2001

While large investment in highway and aviation infrastructure must continue in order to adequately maintain our systems, further expansion in these modes on our nation's congested corridors is increasingly expensive and difficult. However, vital improvements in rail capacity can provide a viable alternative for intercity travelers who face rising congestion.

"Amtrak: Shaping a new transportation vision with rail," Rail, Spring 2001

The federal government continues to impose restrictions and demands on Amtrak that does not apply to other modes of transportation. With the

ever-greater highway and airport congestion, and increasing concerns about pollution, we should be building up train service, not tearing it down. The central problem in providing support for Amtrak has been the ridiculous assertion that it must run as a for-profit business, while highways and airports don't have to...No wonder Amtrak can't compete. The treatment of Amtrak is very bad public policy, and gets worse and worse as America gets more and more congested.

"Stop Starving Amtrak," The Providence Journal, August 2001.

What do passenger and freight have in common? We both relieve highway congestion, save energy, and save lives. We share infrastructure. Together we should push hard to carefully design a new federal investment strategy that will end capacity constraints that currently exists, clearing the way for passenger and freight users to better co-exist. That can only be done with a massive federal investment that rivals the current commitment to highways.

"The industry should speak with one voice," Railway Age, July 2001.

Not so long ago, passenger trains were dying in California. Now business is so good that Amtrak and the City College of San Francisco are offering a free course in how to be a railroad assistant conductor. The conductor training class is a pilot program, a first for both the passenger railroad and City College. There's no college credit for the course, no tuition, no guarantees of having a job after the course, just a job interview.

"Amtrak offers students chance to get on track," San Francisco Chronicle, June 2001

Even critics of Amtrak—and there are many—believe that quality high-speed rail passenger service can help address growing congestion on the nation's highways and in the air. But expecting it to be achieved without federal subsidies isn't reasonable. The uncertainty, stress and lack of long-term commitment to rail-passenger service by Congress can only undermine Amtrak's capacity to deliver a quality and reliable service.

"Rail Corridors," Patriot - News, August 2001.

GUEST COLUMN

There is a real sense
of urgency about
how to save our
national system,
and bring us to
the 21st-century level
of service

Dear Valued Employees:

We are in the midst of a restructuring here at Amtrak. The focus will be to consolidate various functions, which will encourage all employees to work together as we strive to become better organized and more efficient.

I was watching C-SPAN one evening when they were airing an Amtrak hearing that had been held a few days before. I was so impressed with the congressmen who testified on our behalf. I received great hope from the experts who spoke about the need for a sound national passenger railroad system that will relieve congestion on highways and freeways, and ease pollution woes.

One speaker said that President Warrington must have one of the hardest jobs in America, adding "George is a nice guy, but he is not a miracle worker." And he called on Congress to fund us to the level we need to operate an efficient passenger railroad that all of our citizens can depend on.

Most of the speakers admitted that we have not been funded properly by Congress to provide the kind of transportation service the public deserves and needs. Most called for a global, futuristic vision for Amtrak. And many congressmen, Republicans and Democratic alike, used the French high-speed rail system, the TVG, as a model that we should be working toward.

I was surprised, and pleased by the knowledge, commitment and passionate support we have in Congress. There is a true sense of urgency, and your hard work has not been in vain. The chairman twice said, "You get what you pay for." Despite declining financial support from Congress, remarkably we have still survived.

We are now in the political limelight and we have great friends, as well as people who misunderstand our position. There is a real sense of urgency about how to save our national system, and bring us to the 21st-century level of service that the citizens of Japan and France enjoy.

I urge everyone to stay informed, read newspaper articles, and listen to the great debates about our future—watch the next wave of Amtrak history unfold.

And most important, remember that a sound defense is a stellar performance. Your great work is being recognized and applauded in high places.

Let's stay strong and focused.

Sincerely,
Team Leader, Susan A. White
Riverside, Ca. 7/29/01

New pass privileges

continued from page 1

National Corridors

A new "flash pass" option has been added for employee pass travel on a number of corridor services. By showing their pass, employees can ride on a stand-by, unreserved basis in reserved coach service on designated trains. The process will be similar to what is already permitted for unreserved coach travel. No reservations are made, and no tickets are issued. (Dependent children without their own passes need open tickets, as they currently do for all trains, including those that are unreserved.)

As in all stand-by travel, employees

must relinquish seats to revenue guests when there are standees.

In addition, employees can still utilize Red, White & Blue policies. They all remain in effect. Employees may elect to reserve space, and pay the same fares (on Red and White trains) as before. Employees who have paid a fare are not required to relinquish their seats. But, guests would certainly appreciate that voluntary gesture of courtesy.

Details on the new pass policies can be found on the Intranet and in ARROW. You can also contact the Amtrak Pass Bureau or Travel Services.

BENEFITS CORNER

Annual benefits enrollment period

All Amtrak employees will soon be able to make elections for 2002 benefits.

Agreement-covered employees - Oct. 1 through Oct. 23

If you are an agreement-covered employee, the open enrollment period for 2002 benefits begins on Oct. 1 and runs through Oct. 23.

If you are not making changes to your benefits, you do not have to do anything during open enrollment!

However, you must enroll if you:

- Are switching from the Comprehensive Medical Plan to the Network Plan or vice versa; or
- Wish to participate in a health care spending account or dependent day care spending account in 2001 (even if you are a current participant).

Sometime after September 22, you will receive an enrollment package that contains an enrollment form and workbook. To enroll or make a benefits change, call the AmPlan Helpline at 1-800-481-4887 anytime during Open Enrollment. The system will lead you through the enrollment menus.

Management Employees - Oct. 29-Nov. 16

Management employees who want to make a change to any of their benefit options need to do so during the enrollment period that will begin on Oct. 29 and runs through Nov. 16.

If you do not want to make changes to the benefits you have now, you do not have to do anything.

However, if you wish to participate in one of the following benefit plans for 2002, you must enroll (even if you are a current participant) for the following benefits:

- Spending accounts (health care and/or dependent day care);
- Prepaid legal services; or
- Personal financial planning services.

Enrollment kits for management employees will be mailed on Oct. 22. To enroll or make a benefits change, call the ChoicePlus Helpline at 1-800-704-7987. The enrollment system is available 24 hours a day during the open enrollment period.

Amtrak responds to national tragedy:

Employees step up to the challenge

New York City and Washington, D.C.

Whether you were in a station or facility that morning, on board a train, or out in the field, Amtrak employees everywhere were doing their part in running the railroad. Then air traffic, and briefly our own operations, came to a halt.

U.S. Transportation Secretary Norman Mineta grounded all commercial flights and closed the major airports in the Northeast. Amtrak stopped all service on the Northeast Corridor for several hours.

Once the safety of our operations could be reasonably assured, service was quickly resumed. Amtrak's response that day, and in the days that followed, was unprecedented.

Whether policing our facilities, inspecting tunnels and walking tracks

We will all remember what we were doing on Sept. 11, 2001, when news broke of the terrorist attacks on

to ensure their security, moving equipment and resources to where they were needed, or handling the thousands of calls that flooded our reservation system, employees jumped into gear. And that was just the first day.

For three days following the attack, Amtrak was the only transportation service available connecting New York to the rest of the country. With the continued disruption of the nation's aviation system, we filled the transportation gap by adding cars and trains in the Northeast, on the West Coast, and on long-distance trains so that people could get to their destinations and loved ones. We also reached out to the airlines, accepting airline tickets from travelers for about week.

In addition, Amtrak provided free transportation for victims' relatives, military personnel, Red Cross workers, other emergency services workers, and airline personnel. For instance, emergency workers aiding in the recovery efforts only had to display their badges for free passage in the Northeast Corridor.

In another unprecedented move in the following week, Amtrak brought a group of 37 U.S. Senators from Wash-

ington to New York, so that they could survey the damage at "ground zero" first-hand.

American Red Cross workers wait on the platform at Washington Union Station before boarding a special train to "ground zero" in New York.

Employees pitch in to help at stations

Anticipating the increased activity in their stations, NEC managers put out a call for volunteer assistance.

Within minutes, volunteers were in place, helping to serve volumes of guests who filled the stations. The additional challenge was that many of the guests were unfamiliar with rail travel.

Restructuring program promotes management accountability

Positioning our company for future growth is the key objective of the corporate restructuring first announced in July. While the tragic events last month have had an enormous impact on our company, it is important to move ahead with these plans to ensure stable leadership and to respond to new business opportunities.

At its foundation, restructuring means giving managers more responsibility and accountability for their actions, streamlining our decision-making, and reducing overall management costs.

The restructuring creates four executive vice president positions, forming the core operational leadership of the corporation. **Barbara Richardson** will continue in her position as executive vice president, Marketing, Sales, and Brand Management. The departments reporting to Richardson are Marketing and Brand Management, Marketing Research, Customer Relationships and Revenue, and Corporate Communications.

Stan Bagley is executive vice president of Operations, a position he assumed in July. Business unit and

TRAIN OF THOUGHT

George Warrington

Emotionally, many of us are still recovering from the tragedy that struck our country last month. But you need to know how much your professional dedication has meant – and will continue mean – to our nation's recovery.

Like Americans everywhere, the Amtrak family did its part to those most in need in the terrible moments that followed the morning of September 11. I deeply appreciate the long hours—around-the-clock service—that many of you worked. I am extremely proud of each and every one of you, and of our company. Just when needed the most, we rose to the call.

Working with the American Red Cross, we rushed tons of supplies to the rescue and recovery teams in New York. We were proud and privileged to carry firefighters, police, and emergency medical service personnel to and from New York. We carried family and friends of the victims, particularly between Washington and New York City. Stories came back to me of how caring and sensitive our crews were with these saddened guests. We helped our airline colleagues, providing transportation for their crew members. With mail banned from the holds of passenger jets, we put all available resources at the disposal of the U.S. Postal Service, and in just the first week after the tragedy, we carried 237 extra carloads of mail. We even teamed up with our partner, ExpressTrak, to bring a carload of 220,000 donated apples and pears from the state of Washington to the New York rescue

workers. Taped to the boxes were cards and pictures from local children, growers, and packinghouse employees.

Our response was witnessed and appreciated by millions of people across America. "We needed the railroad before, and we need it now more than ever," said New York Senator Charles Schumer. "Amtrak is the backbone of our transportation system," said American Red Cross President Dr. Bernadine Healy in a letter to me. And let me say it in my own way: I have never been more proud of the Amtrak family than I am today.

As I am sure you're aware, many things are different now at Amtrak because of September 11th's attack. Most noticeably, we have stepped up our security measures. I ask not just for your cooperation with the Amtrak Police Department, but for an added sense of vigilance to help them do their job. We all need to work together and make it our personal responsibility to protect the safety of our colleagues and guests, and the security of our operations.

Your tireless efforts in responding to this national tragedy did not go unnoticed, either by me, or by the media and our guests—many of whom were new to us. Your relentless resolve and spirit of volunteerism in the face of unexpected challenges was an inspiration. And your compassion with troubled or grieving guests was simply extraordinary.

Again, I am enormously proud to be a part of the Amtrak family. Thank you for all that you did.

Restructuring update

continued from page 1

system operations have been united under his office, along with standards and policies for Service Delivery, Engineering, Transportation, Environmental, and Maintenance of Equipment. He is also responsible for the newly formed System Safety and Security organization, as well as a new Employee Development organization, which is a consolidation of most of the training functions throughout the company.

Chief Financial Officer **Arlene Friner** is executive vice president and chief financial officer. Now consolidated under a re-engineered CFO organization are all resources for financial planning, budgeting, and forecasting, as well as Procurement, Materials Management, and the

administration of freight railroad contracts.

The Law and Real Estate departments, along with the office of the Corporate Secretary, has been consolidated under the Law Department, led by Executive Vice President and General Counsel **Jim Lloyd**.

Some organizational changes have also been made within the Human Resources, Labor Relations, Business Diversity and Strategic Initiatives, and Government Affairs departments. All will continue to report to **George Warrington**, president and CEO.

People within the strategic business units continue to report to their respective SBUs, focusing on the delivery of our products and services, and the forging of new local-commu-

nity, state and private partnerships. Restructuring reviews of three remaining departments (Capital Programs, Northeast Corridor Engineering, and High-Speed Rail Mechanical) are continuing.

While the majority of those in management employee positions will not be affected by restructuring, about 500 positions have been redefined or eliminated, with the greater share of these being redefinitions. Because of vacancies and other factors, it is impossible to calculate how many jobs will be eliminated at this time. However, in addition to providing a stronger management structure, this part of overall restructuring is expected to result in annual savings of approximately \$28 million.

Satisfaction Guarantee: A year of success

It's been just over a year since Amtrak changed the face of travel by offering the industry's first unconditional satisfaction guarantee. What's the verdict? And what have we learned?

The evidence is overwhelming that the program has been a success. Ticket sales have risen dramatically, with guaranteed service surely a key factor in that increase. And guests coming back to use guarantee vouchers are booking even more travel than they originally bought.

Plus, thanks to the new customer service database used to fulfill voucher requests, we now have an enormous amount of information about where we need improvement. It's what **Anne Hoey**, vice president of Service Operations, first described as "turning up the pressure in the hose, so we can see where the leaks are."

In a Presidents' Meeting, **Ed Walker**, president of Amtrak Intercity, said, "This data is absolutely the best tool we've ever had to work with in improving the quality of our service."

But there have been disappointments, too. On-time performance is still a challenge, as are consistently "Right and Ready" trains. And the "Service Success" goal needed to trigger incentives for all employees has yet to be reached—although we remain close.

Successes

Sales. During this first year of the program, we issued just over \$6 million in guarantee vouchers. But ticket sales increased by \$120 million.

Incremental revenue. When guests redeemed vouchers, they bought 46 percent more travel. For instance, a \$100 voucher would be applied toward \$146 in second-trip fares.

No abuse. The computer database will identify anyone who is obviously abusing the program, claiming repeated dissatisfaction. But there have been no such cases.

Presidents' Meeting. This weekly event places the focus on guest service within the highest executive level of the company—something that's never happened routinely before.

Data. Product line general managers are now getting detailed, specific, real-time information about their products and staffs—and they're acting on it.

OTP focus. Because on-time performance is the single largest factor in guarantee voucher requests, the heat has been turned up more than ever on "what can we do?"

Disappointments

OTP results. We still need to apply the same culture of creativity and imagination to on-time performance as with guest service.

Ticket sales have risen dramatically, with guaranteed service surely a key factor in that increase.

We need more investment in equipment, more partnering with freights, and more managing in ways we haven't come to yet.

Right and Ready. There's been tremendous improvement, but this has proved to be far more than an "overnight" fix. A good deal of that is due to funding restraints. But Superliner cars are being overhauled, toilets are being fixed—and everything associated with Right and Ready will continue to show improvement.

Incentives. We set the right goal for financial incentives—only one dissatisfied guest out of every 1,000—a standard that our guests deserve. But we need to find a way to recognize improvement while we work toward that goal.

What have we learned?

We've learned that we can be a leader within the travel industry. Companies are starting to point to us as a best-practice model.

We can now ask ourselves, "Is there anything the guarantee has caused us

to do that we wouldn't want to do anyway, in order to be a true world-class customer service company?" And we know the answer.

Where we go from here was summarized by Anne Hoey: "Don't take the employees for granted—they're the key to continued success. Managers have to support service recovery efforts. We can't backslide to the Amtrak of old when employees were afraid to show initiative and creativity."

The route to our success

Strategic Business Plan Key Strategies

Since the 1998 launch of its new strategic direction, Amtrak has taken significant steps in rising to the challenge of reducing its reliance on federal funds to support operations. Driving Amtrak's actions are six key strategies.

Build a market-based network

Define customer demand, using extensive research, and then match our system with that demand.

Deliver consistent quality service

Change the culture of the company to be more guest-focused, and provide a world-class travel experience on every trip.

Revitalize the Amtrak brand

Introduce and support a new brand for Amtrak, to signal a major change to our guests.

Operate a cost-effective business

Identify specific functional areas, policies, organizational structures, and back-office costs that have potential for improved cost management.

Maximize public and private partnerships

Pursue public and commercial partnerships aggressively, through Mail and Express and other programs that generate the highest returns for the company.

Develop corridor services

Work with state and other partners to create or improve rail corridors across the country, drawing from the expertise we've gained in building North-east Corridor services.

Redondo Junction flyover: An engineering marvel

Spectators marvel at Redondo Junction flyover.

Northern Santa Fe stack train passed beneath it, marking a milestone many believed would never occur.

Mineta called the \$47 million bridge an "engineering marvel." Stretching more than half a mile, it eliminates the delays often caused by passing passenger trains, freight trains

and street traffic, and reduces travel time on Amtrak and Metrolink trains.

"Relieving congestion on shared intercity, commuter and freight rail corridors is a critical priority for both Amtrak and the state of California," said **Gil Mallery**, president of Amtrak West. "The benefits of the Redondo flyover are helping to build momentum for implementation of the 20-Year Passenger Rail Plan for California."

"Relieving congestion

on shared intercity, commuter and freight rail corridors is a critical priority for both Amtrak and the state of California."

Gil Mallery,
president of Amtrak West

The flyover is part of the Alameda Corridor Project, a 20-mile long rail cargo expressway that links the ports of Long Beach and Los Angeles to the transcontinental rail yards near downtown Los Angeles. The \$2.4 billion project includes funding from multiple federal, state and local sources, as well as private investment by the railroads and others.

Amtrak responds to tragedy

continued from page 1

Revenue, were just two of the 40 volunteers in Washington. "Most of the questions I handled were about our schedules," Porter said. "Others were more specific, such as, 'Can I trade my airline ticket for a rail ticket?' or 'Can I exchange this train ticket for another?'"

In Boston, **Kevin Scullin**, asst. general manager of South Station, said he got an immediate response from volunteers from the Rules, Safety, Engineering, and Sales departments, and others.

Mark Rose, asst. general manager for the Washington, Baltimore, and BWI stations, said in a "thank you" e-mail to volunteers after the rush subsided, "You helped make a positive, lasting impression on these travelers. Each of you made a difference by being here with us, and I thank you for your dedication and support."

Just in case the tragic and unaccustomed circumstances were troubling to any of the volunteers, the

Barbara Richardson (Rt.), Amtrak executive vice president, stands with Dr. Bernadine Healy, president and CEO of the American Red Cross, and pledges Amtrak's commitment to run special trains as necessary to New York for the A.R.C.

Employee Assistance Program even offered "group diffusing" sessions.

Amtrak moves more than people

Amtrak proudly assisted the American Red Cross in the recovery efforts in New York by donating the use of a train to transport thousands of packages of emergency medical supplies.

A special Amtrak train dubbed the *Clara Barton Express* left Washington Union Station on Sept. 13, bound for New York City. The consist of mostly Mail & Express cars carried 30,000 Red Cross comfort and cleanup kits; pallets of beverages; Visine eye cleaner; and dust masks donated by both Lowes Home Improvement Centers and Home Depot.

Washington state growers and shippers also donated more than 2,200 hundreds of cases of apple juice to the

Dr. Bernadine Healy puts on a dust mask. It was one of thousands sent to New York via Amtrak, along with other critical supplies.

American Red Cross. ExpressTrak, a partner company that ships freight behind Amtrak passenger trains, donated the refrigerated railcar for the shipment and Amtrak provided a free cross-country trip to New York.

New security measures for employees and guests

As a result of the Sept. 11 attacks, Amtrak has established several new security measures that affect all employees and our guests.

Both management and agreement-covered employees are now required to wear their company photo identification card ("flash pass") at all times while on Amtrak property.

Employees without visible identification may be asked by Amtrak Police officers to provide proof of identity.

Amtrak provided free transportation for victims' relatives, military personnel, Red Cross workers, other emergency services workers, and airline personnel

If you don't have an Amtrak employee photo identification card, please contact your local Human Resources representative.

For the added protection of guests, Amtrak ticket agents will now ask for photo identification from guests

18 years and older when selling tickets or checking baggage. Passengers using automated ticketing terminals in stations will not have to produce photo identification, as credit card information may be used for internal security purposes.

Amtrak has also produced a bomb threat card that was distributed to all employees with their paycheck stubs. The card provides tips on how to handle a bomb threat received over the telephone. Employees are asked to keep this card near their work telephone.

As we move forward in this new security environment, other measures will be put in place. In addition to our own measures, we are working closely with other law enforcement agencies, and coordinating with their security procedures.

Amtrak in demand

"We needed the railroad before, and we need it now more than ever," said U.S. Senator Charles Schumer (D-NY).

Schumer was part of a bipartisan group of 16 senators who immediately supported Amtrak's request for \$3 billion in emergency federal funds. The senators sent a letter to President Bush and Secretary Mineta, urging them to support the package of funding for safety, security and capacity needs. More than half of the money would be used to improve the railroads' capacity, reliability, infrastructure and equipment.

"Considering the uncertainty facing our airline industry, it is of fundamental importance that Amtrak is provided with the tools to continue to handle additional capacity in a safe and efficient manner during this crisis period," the letter said.

When the airlines were grounded, Amtrak immediately demonstrated its value as a key element in a national intermodal transportation system. Within days after Sept. 11, we had double-digit ridership increases. Although some of that has naturally diminished, several factors are likely to cause a sustained increase in ridership. They include permanent cutbacks in airline service, and new FAA security requirements that are adding as much as an hour to the total airport and flight experience.

A tribute

To the employees who have lost family or friends in the horrible tragedy, the staff of *Amtrak Ink* sends its deepest sympathies. And to all the employees who went above and beyond to ensure that Amtrak operated smoothly and safely in the midst of chaos, we thank you.

Health Services offers tips to help employees cope

In the aftermath of the terrorist attacks, employees have asked about tips for handling the various emotions they are experiencing. Amtrak's Health Services office wants you to know that feelings of shock, anger, anxiety, fear, or sadness are normal reactions to such a tragedy.

People who have experienced, or have witnessed a traumatic event may have difficulty in concentrating or making decisions. Some even experience physical symptoms like headaches, stomachaches, and tiredness. Even thoughts of the event can trigger emotions from previous trauma.

It's when these reactions begin to interfere with your daily activities and your ability to function that you should consider seeking the help of a professional.

Health Services has compiled the following information that may help you and your family to cope with these unsettling feelings:

Get support from people you love and trust. Talking about the event can help you process it and feel more in control.

Avoid using substances (alcohol, drugs, medication) to handle your emotions. These substances only give you a temporary feeling of relief. You still need to deal with the underlying emotions.

Limit your exposure to news coverage. Overexposing yourself to news coverage and pictures of the attack can increase the time it will take to get back to normal. Plus, images of the disaster can be extremely frightening to children.

Let your child be more dependent on you. During this difficult period, children need comforting and frequent reassurance that they're safe – make sure they get it.

If your child seems to be exhibiting feelings that concern you, seek advice and guidance from your child's physician. Your physician can provide age-appropriate information for coping with disasters. He or she also has resources if your child needs to be referred to a specialist in dealing with children's fears.

ON THE RIGHT R A K

Here's another example of how employees put the guest at the center of everything they do:

On Saturday, Aug. 18, a guest on the *Pacific Surfliner* mistakenly took the wrong luggage off the train at Glendale. The bag contained important medication belonging to another guest who was getting off in Oceanside.

Keith Porter has a guest-focused work ethic.

When the guest with the bag reported the mistake, **Keith Porter** took the call here at the call center. Knowing that Glendale is an unstaffed station, Keith took it upon himself to travel there and retrieve the missing luggage. He then took it to the Los Angeles station and put it on the next train to Oceanside. Finally, he called

the guest in Oceanside to tell her which train was returning her bag and medication.

Keith's action was a prime example of "going the extra mile." He may have saved the company time and money, but most important, he satisfied two guests by not only meeting, but exceeding their expectations.

Riverside RSCC

Amtrak Intercity, Midwestern RSCC employees volunteer for Jerry Lewis MDA Telethon

While Americans nationwide celebrated Labor Day with picnics, barbecues, and other festive events, Amtrak employees and their friends and family helped the Jerry Lewis Muscular Dystrophy Association raise \$56,780,603 to benefit people affected by neuromuscular diseases.

Amtrak Intercity machinist **Jim Pitts** has been an MDA Telethon volunteer for 30 years. Last year, he asked his fellow Amtrak employees to join him in answering phones and providing

Employees Kathy Barge, Bonnie Schwartz, Romanda Davis, Josie Harper, and Cynthia Rogers.

support to the annual telethon. They readily agreed.

Employee volunteers included: **Romanda Davis, Bonnie Schwartz, David Pryor, Josie Harper, Sharon Slaton, Juliette Jordan, Derrick Douglas, Cynthia Rogers, Josephine Guede, Colleen Dickerson, Sharon Odom, Mike Turner, Tim O'Leary and Anne Yang.**

Thank you to all the employees and other participants for taking time to make a difference.

By: Sharon Slaton,
Amtrak Intercity employee and
telethon participant

APD Officers are TOP COPS!

Three Amtrak Police officers have received Honorable Mention in the annual TOP COPS Awards presented by the National Association of Police Organizations.

Sgt. **George Reutter**, Investigator **Maureen Powers**, and Officer **Anthony Kisielius** were recognized for their extraordinary contributions as an anti-graffiti and illegal

dumping unit, making 133 arrests in 2000. Disposition of those cases resulted in nearly \$20,000 in restitution.

TOP COPS are nominated by fellow officers and selected from hundreds of nominations by an independent awards committee.

Congratulations to Amtrak's TOP COPS!

Looking out for each other in a crisis

Things were on schedule that morning. Managers' pay checks had been processed the day before, and now **Carol Wolfe**, senior

director of Payroll, and her Washington staff had begun work on the checks for approximately 23,000 agreement-covered employees.

It was Tuesday, Sept. 11, and everything was on track for the Friday payday. Until the urgent calls came down the hall: "Evacuate the building—now!"

A payday hung in the balance. As soon as she reached her home, Wolfe was booting up her home PC and phoning **Jamie Sanford** of her team. The two spent the next seven hours setting up electronic links with Payroll, and with Chase Manhattan Bank in Florida. By 7:00 p.m., the approximately 16,000 employees who have direct-deposit of their pay were taken care of.

Carol Wolfe describes how a group effort from her staff ensured employees' paychecks were processed.

Now, how to get printed checks to the 7,000 employees who choose that option. Early Wednesday morning, Wolfe and her staff were back in the office, working out the logistics. Because of the national air traffic stoppage, FedEx and other shippers were not options. Rail came through again.

"We were confident we could reach the East and the Midwest by Friday. But the real challenge was about 1,200 checks for Amtrak West," Wolfe said. "So, for the first time in the history of Amtrak, we shipped checks to the West Coast by train. And thanks to a lot of people along the way, we did OK."

continues on page 10

Employees observe day of prayer, remembrance

President George W. Bush declared Friday, Sept. 14 a day of national prayer and remembrance. **Stan**

Bagley, executive vice president of Operations asked that employees observe a moment of silence around noon on that day. He also ordered all tower horns, locomotive horns and watchman horns sounded at 12:05 EST, in tribute to the fallen and missing in New York, Washington and Pennsylvania.

After hundreds of employees and station guests observed a moment of silence, **Tom Kane**, supervisor of Customer Services at Philadelphia's 30th Street Station, played "Taps" on a trumpet, and then led the crowd in singing "God Bless America."

Images of Heroism

As Amtrak transported firefighters and emergency personnel into New York City, there were many poignant

Bill Conaty, assistant general manager of NEC Customer Services, bows his head as Tom Kane plays "Taps" at the foot of the Walker-Hancock Angel statue at 30th Street Station.

moments as employees and guests responded to images of heroism.

In New York, a group of firefighters in full gear were waiting to board train #79. As the announcement was made, and they rose to leave, the entire waiting room rose with them, and gave the firefighters a standing ovation.

In New Haven, 30 firefighters in full gear arrived on a densely populated platform to board train #95 to New York. Among the guests on the platform was a priest, and the firefighters stopped to ask for a blessing. The priest conveyed his blessing over their bowed heads, then shook their hands as the waiting guests broke into applause.

continues on page 10

Dear Amtrak:

Editor's note: We received dozens of letters from guests across the country, thanking Amtrak for coming through for them in the days following Sept. 11. Below are excerpts from a few of them.

“ I wanted to take this opportunity to call to your attention an outstanding experience I had while recently traveling on Amtrak. Last week, I took the train from Chicago to Emeryville, Calif., due to the tragic situation in New York. I had sleeper accommodations and my attendant from Portland to Emeryville was Mr. **Ronald Harris**. I was so impressed by his professionalism that I wanted to make sure that Amtrak is aware of the superior service that Ron is providing to your customers. Obviously, the week of September 11 was difficult for all Americans. Added to the stress was the task of those who were stranded by the airlines to quickly make other arrangements to travel. I chose Amtrak and will be eternally grateful that I did. From Portland to Emeryville I had a sleeper and the distinct pleasure of having Ron Harris as my sleeping car attendant. He was so positive, professional and kind that I was overwhelmed. He not only made my stay on Amtrak a truly unforgettable pleasant experience, but he also put me at total ease with the current situation in America. I have shared my wonderful experience while riding Amtrak with everyone I know and will continue to do so. I travel a great deal for business and pleasure and have decided to make Amtrak my preferred method of transportation. I owe it all to Ron! He is the greatest, and I hope that Amtrak knows just how lucky they are to have someone like Ron on their staff. Thanks again for the great trip. ”

“ I was one of the many folks trying to get out of New York City on Wednesday, September 12. My two colleagues and I arrived at New York Penn Station at about 9:30 a.m., to find what certainly must have been holiday travel volume. All of Amtrak staff at Penn Station and on board our southbound Acela train provided the highest level of customer service I can ever recall experiencing in the many years I've enjoyed rail travel. Everyone in New York was under a great deal of stress, and your team maintained composure and helped us all to get home to our loved ones. Thank you! As far as I am concerned Amtrak employees are a few of the many heroes we have in America. ”

“ Please thank your Amtrak customer service employees for me. I appreciate your help and your services during this difficult time. I think your company is doing a great service for all of us. ”

“ On behalf of the Board of Governors, I want to join Dr. Healy [president and CEO, American Red Cross] in thanking you and your associates for the generous provision that you made to the Red Cross last week. Providing a relief train to transport supplies and Red Cross personnel to New York was a humanitarian act for which we are most grateful.

While the extensive loss of life and destruction is numbing, the spirit of volunteerism that was spontaneously forthcoming from the American public was truly inspirational.

Again, our gratitude to you and to Amtrak. ”

“ I know you are very busy, but I felt it important to let you know that I have spoken with two of your representatives in the last two days, and both were absolutely wonderful, and helped in every way they could. I imagine they must be under terrible stress. The busy signals and long wait on hold indicate they are getting an enormous number of calls, but you would never know it by their voices and attitude. They were a pleasure to work with. Thanks to all of you and God bless America. ”

“ An Amtrak guest told us that in spite of all the chaos last Tuesday, folks at the station in Chicago, on board Train #3-*Southwest Chief*-to Kansas City, and the entire staff I was involved with, they were a credit to your operation. I had not been on the train for a few years, but after this excellent experience at such a difficult time, I will be back more often. You have a great operation, and everyone there certainly stepped it up to meet the incredible demands put on you by the unfortunate events of the week. Thanks for getting me home safely. ”

“ It is with great thanks to Amtrak that I write this e-mail. My 70-year-old in-laws, visiting from Ireland, were traveling on Amtrak on that terrible Tuesday. Coming from New Haven and headed for us in Washington, their train was held just outside New York as the chaos began.

Throughout the day, my husband and I kept calling 1-800-USA-RAIL, and people there kept us abreast of the status of the train. We knew about every movement of the train. They even contacted Washington Union Station for us, and assured us that the station—which was previously closed—would be open.

When my in-laws arrived safe and sound, they were thrilled at the service they received from the Amtrak crew. They said they were treated very well and felt secure, even when they had to evacuate New York's Penn Station. When we picked them up, I expected them to be frightened and tired. But they were calm and well fed—thanks to Amtrak.

Thank you very much for all that you do. ”

“ Thank you so very much, we are so grateful to you and your service. God Bless and keep you all safe. ”

“ It's 3 a.m., Thursday, Sept. 13, 2001. We're rolling northbound through the night on Amtrak Train # 92-The *Silver Star*-somewhere south of Hamlet, North Carolina. I awoke from my slumber just a few minutes ago, almost moved to tears at the thought of being home later today. I am still shell-shocked by the horrors I saw on CNN and CBS last night in my Florida hotel room. The images of the World Trade Center and our Pentagon under attack are still hot in my mind, unbearable to consider in their enormity. The Hoboken, just across the Hudson from the World Trade Center disaster, my wife awaits my safe return. I miss her terribly tonight. Flying home was a practical and emotional impossibility for me. Not a white-knuckle flyer by any stretch of the imagination—I'm a private pilot—I could not bear to board a plane under the developing circumstances. Upon hearing the awful news that fateful Tuesday morning, I immediately booked myself onto Amtrak for my long ride home back to New Jersey. Although sleepers were unavailable and I did not relish the thought of a 27-hour ride in coach, I knew that Amtrak would be the fastest way for me to return home during the crisis. Fifteen-and-a-half hours into the trip, we are rolling through the Carolina night, nearly 300 passengers, many of us infrequent, if not reluctant Amtrak customers. The train is overbooked tonight, but unlike a flight, we are able to take extra people by seating them in the lounge. Despite

additional time at stops to handle the crowds, we're less than an hour late. No one is complaining. We're not complaining because we will all be at our destinations by afternoon today. We stopped for red signals, slow for speed restrictions, the seats could be more comfortable, but we are happy. We are moving, progressing, and on a night like tonight, it's almost miraculous. Except for an exhausting drive up I-95, there is no way to get home. Amtrak is an essential service. In times of national crisis or weather emergencies these trains are a vital lifeline for business travelers like me. Sure, I love trains, but I'm also practical. Time is precious to me, so trips of over 500 miles are always via air. But when weather or air traffic control problems interfere, you'll find me on the train. Survey my fellow travelers and most of them will tell you the same thing. We must continue to fund Amtrak, to ensure that America does not stop when crisis hits. Without Amtrak's regional and long-distance service, we cannot ensure the continued safe and reliable arrival of passengers and mail in times of national emergency. Thank you Amtrak, thank you for bringing us home. No planes are flying, the roads at home are blocked, but the train carries on. The tortoise is beating the hare tonight. We are grateful, all of us grateful to be home later today.

“ I want to thank you again for your help. I contacted Amtrak letting them know that my husband left Wenatchee, Washington on Train #8-*Empire Builder*-headed to Chicago. Due to the disaster situation and under the circumstances he was traveling, I was very concerned because of his health problems. I contacted Amtrak and they informed me that the train was running 90 minutes late. Your assistance in informing me that train was O.K. and it was on its way was comforting. Please let your managers know that their Customer Service employees are very prompt and courteous, and I really do appreciate it. ”

“ I was on the *Crescent* returning from a business trip on Tuesday, September 11. I'm writing to compliment everyone on the crew that day. I was traveling from Charlotte, North Carolina to New York City. **Martin** on my sleeping car knows how to treat his passengers very well. The main compliment is that everyone was concerned with our well being during the tremendous tragedy in Washington, D.C., and also in New York. Thank you. ”

“ Please forward this to the company's President. I live in Jacksonville, Fla., and I would like to give the highest praise possible to two of your employees at the Jacksonville station. My son-in-law who works at the Pentagon is missing at this present time. My wife needed to be with our daughter so we arranged for her to travel by train. We wanted our niece to travel with my wife so we tried all day on the computer and by phone to get reservations but we couldn't get through. By faith, we went to the station we were told that there were no seats available. At the station we met one of your EAP Counselors, who explained the situation and offered to see what she could do. Well, my hat's off to Amtrak, my wife and niece boarded Train 98-*Silver Meteor*-out of Jacksonville. We thank you from the bottom of our hearts, and may God bless you. ”

“ I wanted to thank you and your outstanding crew in regards to the handling and service that my co-worker and I received on board the train on September 11 from St. Paul, Minneapolis, to Seattle, Washington during the terrible tragedies in New York and Washington, DC. I was to fly out of Minneapolis on September 12, but knew I couldn't fly out for some time, so my co-worker and I booked our fare on Amtrak to return home. I was on Train #7-*Empire Builder*-and the crew was working so hard due to extra slew of travelers who had been stranded due to the closure of airports. The crew was courteous and friendly, made sure everyone was comfortable, and prepared meals that were outstanding. My co-worker and I were relieved to get back to Seattle. Our families were happy to know that were safe and sound and on our way home via the train. Thank you and your awesome crew during this sad and scary time. ”

“ I just wanted to say thank you for running the extra trains on Tuesday September 11. I work downtown San Diego and was able to get home to my children on that horrendous day. Thanks to your special 1:00 p.m. train. I've been riding since the very first day of operation. I knew the *Coaster* would be special from the beginning but the NCTD has gone above and beyond its duty on numerous occasions. Thank you so much. ”

“ Amtrak's response to the national emergency is more than welcome. Hopefully, additional funding on an emergency basis can be sought and received to repair any and all equipment currently at Amtrak's Beech Grove and other locations, and put into service all the Heritage cars and locomotives that are in storage. Commuter equipment otherwise not in service on weekends should be used in high density corridors to accommodate those who be unable to travel due to lack of equipment. Thanks again for your prompt response in a time of need. ”

“ I'm writing to tell you how wonderful all of your people were during this crisis. We were stranded in New York, and your employees at Penn Station could not have done more. There were thousands of people panicking and striving for transportation. Your people were kind, helpful and worked incredibly diligently to help everyone get home. The attendants on the train were the same. Some of them worked more than a 24-hour shift. We really appreciated it. Again, please thank all of your employees for us in some way. ”

Amtrak
Ink

Where is my new uniform?

No, the rollout of Amtrak's new uniforms did not stop with the first distribution on the Northeast Corridor.

Shortly after unveiling the new uniforms last year, a sample of employees from across the country were gathered in focus groups to suggest ways Amtrak could enhance the uniforms, with respect to job function, region and climate.

We told you earlier this year in *Amtrak Ink* about some of the design changes that were made to the uniforms based on your feedback.

A schedule had been developed for fitting employees in Amtrak Intercity and Amtrak West.

But Amtrak's primary focus this year has been on cost management. We're dedicated to managing our costs better and spending more wisely. So, due to budgetary reasons, the continued distribution of new uniforms has been put on hold. We'll keep you updated.

Restructuring update

continued from page 2

Employees whose positions were directly affected by consolidation, redefinition or elimination were personally notified the first week of October and given information about their options, including applying for the redefined positions. Beginning Oct. 4, the Human Resources Department began daily postings of the new positions and the hiring process began.

Through Oct. 31, the Voluntary Early Retirement Plan is being offered to approximately 350 eligible management employees. Informational meetings are being held around the country for eligible employees with questions about the plan.

All employees are strongly urged to speak with Human Resources representatives about job postings and the hiring process. Employees are also encouraged to check bulletin boards and e-mails for additional Employee Advisories, and monitor the Amtrak Intranet site for more information.

Amtrak's voice response unit now has a 'human' quality

Our guests will rave about it—satisfaction will increase—and they'll come back to Amtrak again and again.

Many guests can now experience one of the most exciting enhancements to Amtrak's automated reservations system—speech recognition.

Since last year, Amtrak's Telephony Team has been working with a company called Speech Works to enhance our automated system. "The team has made significant technology enhancements to the system, which is commonly referred to as the VRU or Voice Response Unit," said senior director Robert Hackman. "Our goal is to replace the entire touch-tone VRU with speech recognition technology by February 2002.

Many guests can now experience one of the most exciting enhancements to Amtrak's automated reservations system—speech recognition.

The first part of this multi-phase project, focusing on train status, has been launched successfully. As of Oct. 1, most callers to 1-800-USA-RAIL who choose the automated option for train arrival and departure status are greeted by a friendly voice

"This improvement in the VRU's call-handling rate translates into a reduction in the time sales agents spend on routine arrival and departure inquiries."

Vince Zagorski,
Director of Telephony

that walks them through the process of getting the information.

Callers say the details needed, and then the VRU responds with the actual or estimated arrival and departure information from ARROW. The caller can even probe for more detailed information on a train's last reported location.

The technology is so advanced that there is an exchange of dialogue between the caller and the VRU. Under the older touch-tone technology, callers frequently complained that the process of navigating menus was cumbersome and frustrating. Many would get overwhelmed with the options and transfer to a "live" agent.

For example, prior to the speech recognition enhancement, only 40 percent of callers completed their

train status inquiry in the VRU without the assistance of a sales agent. Now, 75 percent of these callers are being processed successfully through speech recognition. Ultimately, speech recognition is expected to contribute significantly to Amtrak's cost reduction efforts.

"This improvement in the VRU's call-handling rate translates into a reduction in the time sales agents spend on routine arrival and departure inquiries," said **Vince Zagorski**, director of Telephony. "It allows the sales agents to focus more on other revenue producing activities. This is a great example of technology partnering with agents—not replacing them.

For the caller, it means the elimination of wait time to speak to an available agent to get train status. The end result is an increase in guest satisfaction.

So, for our 1,500 agents who listen to guest complaints about the VRU, things are looking up! That's what we want you to tell our guests too. Encourage callers to use the new system and explain its new efficiencies.

Over the next year, Amtrak will implement other improvements to the VRU; expanding its capabilities to handle credit card payments, special discounts and promotions, and station and baggage information. Speech technology is an important component in our efforts to keep Amtrak's call centers among the best in the transportation industry.

The ease of eTrax coming soon

On those days when a "simple" administrative task turns into a huge chore, you probably wish there was an easier way.

Help is coming. Submitting or approving payment requests, travel authorizations, expense reports, and material requests for non-inventory items will be easier with eTrax. It's e-business software that will help you perform some of those duties easier, quicker, and smarter. Amtrak will introduce eTrax over the next year, beginning with a pilot phase in November.

"This is not just a procurement project," said **Mike Rienzi**, vice president of Procurement. "eTrax will change the way we run our business, the way we spend our money. Employees are going to have an easier time doing their jobs,

and Amtrak is going to have an opportunity to reduce costs."

Rienzi and eTrax team members went on the road in August and September to give employees in major locations a glimpse of the software, which is currently used at about 40 of the Fortune 100 companies. Employees saw how users of the software will be walked through the creation of various on-line documents. Once submitted, the electronic documents will be automatically routed by e-mail to the necessary "approvers." Employee response to the new process has been favorable.

This will help reduce costs, improve the requisition-to-pay process, and standardize financial controls. Financial control policies are being reviewed and updated, and they will be built into our eTrax software.

"We need to get more financial controls in place, and this is going to help us to do business easier," said **Stephanie Audette**, corporate Controller. "I'm very, very supportive of it."

On-line transactions will be processed and recorded in eTrax—giving employees the ability to track their requests and monitor spending. With access to complete, accurate data, we'll pinpoint areas for improvement and make adjustments.

When eTrax is fully implemented, employees will no longer complete paper-form requests or complete MRs in the AAMPS requisitioning system. However, AAMPS will still be used for inventory purchasing. Starting in November, users will be trained on the new processes and software.

eTrax

BENEFITS CORNER

Notice of breast cancer benefits

If you or a covered dependent is suffering from breast cancer and a mastectomy is performed, Amtrak medical benefits will cover:

All stages of reconstruction of the breast in which the mastectomy has been performed

Surgery and reconstruction of the other breast to produce a symmetrical appearance

Prostheses and physical complications for all stages of mastectomy, including lymphedemas (swelling associated with the removal of lymph nodes)

Coverage for breast reconstruction and related services is subject to the deductibles, coinsurance, and copay amounts that apply to the medical plan in which you are enrolled. The above benefits apply to both management and agreement-covered employees.

For more information about these benefits, refer to the Department of Labor notice on the Women's Health and Cancer Rights Act of 1998. That is available at the following website:
www.dol.gov/dol/pwba/public/pubs/finalq&a.htm.

RAILWAY ROUNDUP

Amtrak's Bakersfield station, awarded for its design and construction.

Bakersfield station celebrates first birthday

On Aug. 22, Amtrak officials were joined by local residents and state and local dignitaries in celebrating the first anniversary of the Bakersfield Amtrak Station.

Bakersfield Mayor Harvey Hall received an award from Caltrans for design and construction of the new

station. Over 351,000 people passed through the station in its first year. It is the seventh busiest station in Amtrak West, with ridership up 8 percent since last year.

"People from far and wide have come to see the station's timed fountains, beautiful red rock architecture, and glass encasement," said **Bill Duggan**, Amtrak West vice president of Customer Service and Operations.

The California Passenger Rail System 20-Year Improvement Plan calls for 10 new trains through Bakersfield, plus faster trip times.

White Rock, British Columbia: Amtrak to resume service after 20 years

Residents, public officials, and media representatives gathered at the train station in White Rock, British Columbia, on Aug. 30 to celebrate something pretty special. For the first

Gil Mallery at the podium announcing the resumption of passenger service to White Rock

time in 20 years, an Amtrak train stopped at the seaside town.

The northbound *Cascades* train stopped, and Amtrak West President **Gil Mallery** and White Rock Mayor **Hardy Staub** detrained. They were greeted by Canadian customs officials, Royal Canadian Mounted Police, officials from the Semiahmoo Nation, and others.

There was a ceremonial signing of an agreement between Amtrak and the city to resume *Cascades* service to this quaint Canadian town five minutes north of the U.S. border.

Mallery said, "With the support we're seeing today and strong political support in both Canada and Washington state, I'm convinced the second-

train to Vancouver will run and White Rock will be a part of that service."

White Rock would be the second Canadian stop along the route before arriving in Vancouver, BC. Issues covered in the agreement include resolving customs and immigrations issues, investment in a platform and station, and Canadian investment that will allow a second roundtrip between Seattle and Vancouver, BC.

Amtrak Intercity Guest Safety Blitz

Amtrak Intercity Safety Department recently launched a Guest Safety Blitz in an effort to raise awareness and reduce guest injuries.

Historically, the last week in August through Labor Day is one of the busiest travel weeks for intercity trains. So, Safety personnel throughout the Intercity took that opportunity to "blitz" each train line that week by passing out safety brochures to guests boarding trains at staffed stations.

A safety quiz was on the last page of the brochure and guests were asked to complete it and drop it in a collection box. About 15,800 guests were personally contacted during blitz week. The safety department hoped for a 10 percent response to the quiz but received well over 30 percent!

There was also a 54 percent reduction in guest injuries for that week as compared to last year's statistics. The week also showed no injuries to any On-Board Service or operating crew.

By: *Josie Harper, Safety, Chicago*

Employees observe day

continued from page 5

With many trains carrying at least two or three firefighters and rescue personnel that week, such short, yet powerful moments undoubtedly occurred in locations throughout the NEC. While the gestures may have been small, the showing of support from guests and employees were sources of comfort to many.

Schezel Pough, a station supervisor in Los Angeles, was working the swing shift at L.A. Union Station and spent the week of the tragedy handling the crush of airline passengers trying to get on our trains. Among the scurrying passengers was movie producer/director **Spike Lee**, a New Yorker who was trying to get back home to his family. Pough also assisted FBI agents and FEMA nurses in getting on to sold-out trains so they could assist in the rescue efforts.

Do not send out e-mail warnings

Well-meaning employees sometimes transmit system-wide e-mail messages, warning of computer viruses, or rumors of other general security threats. You are urged: Please leave that task to the experts.

Unfounded warnings create unnecessary stress and concern. In the overwhelming majority of cases, e-mail messages from outside the system urging recipients to "send this to everyone you know" are hoaxes. They are designed to frighten people and clog e-mail systems.

If you get an "urgent" e-mail warning of this type, do not distribute it throughout the company. Forward it to Information Security at Amtrak Technologies: infosec@amtrak.com. They have unique resources enabling them to confirm the validity of a warning or threat. If they find the message is legitimate, they will post an advisory to the entire system immediately.

Coming through in a crisis

continued from page 5

Most of the checks arrived Saturday, and some on Sunday. **Stephanie Audette**, Amtrak Controller, called the entire accomplishment a "Herculean effort." Wolfe just said, "A lot of people from different departments made this happen."

A special salute to **Darryl Carr**, **Leonard Villamor**, **Sheila Poindexter**, **Sonya Huckleby**, **Arshell Qualls**, **Lemette Goldston**, **Bill Engstrom**, **Michael Hill**, **Bobbie Nicholson**, **Sal Rodriguez**, **Officer Brenda Breeden**, **Charlie Miller**, and **Sandy Thompson**.

Employee receives distinguished award

Kevin Rossbach, manager of the Baltimore District Amtrak Claims department, has earned an Associate in Claims diploma, and the distinction of graduating with the highest cumulative grade average on the examinations in that program. And for that reason, the Insurance Institute of America will present Rossbach with a Distinguished Graduate Award.

The AIC program is a time-intensive course for claims professionals, which covers law, insurance, and practices relating to personal injury and property damage claims and litigation. Rossbach's impressive work ethic enabled him to successfully balance course work while being involved in the implementation of the pilot program for Amtrak's Right Care Day One. Formal recognition of his award will be published in the Oct. 22 issue of the National Underwriter magazine.

Amtrak West employees meet commuter challenges

Thousands of commuters boarded

Caltrain, *Coaster* and *Metrolink* trains on Tuesday, Sept. 11, for a routine trip to work. Confusion, fear and shock soon hit everyone as word spread of the multiple attacks on America.

Eager to return home and reach their loved ones, people turned to the commuter rail providers for prompt service. And the Peninsula Corridor Joint Powers Board (*Caltrain*), North County Transit District (*Coaster*), and Southern California Regional Rail Authority (*Metrolink*) looked to Amtrak, as their operator, to make it happen. Our employees responded. They met constantly changing requests, expanded service where needed, and provided comfort to many.

Amtrak is extremely proud of these employees. The letters from the three agencies are testament to the caliber of service Amtrak provides its commuter partners.

Amtrak is extremely proud of these employees.

The letters from the three agencies are testament to the caliber of service Amtrak provides its commuter partners.

We recently began a five-year contract to operate the *Coaster* service, 18 trains daily between San Diego and Oceanside. In August, Amtrak was announced as the top-ranked firm to continue operating and maintaining the *Caltrain* service—80 trains daily from San Jose to San Francisco. And Amtrak has operated *Metrolink* service since 1992, running 128 trains daily in Los Angeles and four surrounding counties.

Amtrak West celebrates Caltrain contact renewal

Amtrak Peninsula Corridor Service employees were recognized at a barbeque for their efforts toward Amtrak being recommended for the renewal of the *Caltrain* commuter contract. Once final, the agreement with the Joint Power Board will renew Amtrak's contract to operate and maintain the *Caltrain* commuter service for the next five years.

Amtrak President **George Warrington** and **Stan Bagley**, executive vice president of Operations, attended the event in San Jose. They were joined by **Gil Mallery**, president of Amtrak West; **William Duggan**, vice president, Customer Services and Operations; and **Dave Nogar**, general manager, Caltrain.

Warrington thanked the employees for their dedication and commitment, saying, "The key to us retaining this contract has been your focus on safety, guest service and other performance factors."

The group then went north to visit the Emeryville station for an update on the Station Host Program launched by Amtrak volunteer Doras Briggs. Next stop—the Oakland Maintenance Facility.

Amtrak PCS employees celebrate their efforts toward the Caltrain contract renewal. Photo credit: Robin Reynolds

There, **Twilva "Cookie" Simpson**, supervisor of Material Control, led the group through the Material Shop, where she was complimented for her organization of cost-saving initiatives. Warrington commended employees and gave them an update on funding for the new maintenance facility.

In both San Jose and Oakland, Warrington raffled off tickets for the San Francisco 49ers home opener. **Diana Booker**, conductor; **Jerry Weber**, signal maintainer; and **Katherine Tolson**, coach cleaner; were the lucky winners. Amtrak and the 49ers are involved in a joint sports marketing campaign for the 2001 football season.

Amtrak winning editorial support

In the wake of the Sept. 11 tragedy,

increased attention is being given to the importance of federal investment in an intermodal transportation system.

As a result, Amtrak is winning positive support from the editorial boards of some of the nation's leading newspapers. Just in one week in September, favorable editorials were featured in the *New York Times*, *Washington Post*, *Philadelphia Inquirer*, and the *Hartford Courant*.

Referring to the need for alternative modes of transportation, the *Post* said, "Increased Amtrak use has underscored what its supporters have said all along—that train service remains an essential part of the country's transportation system...the long haul for Amtrak demands far more attention than it has ever won in Congress."

The *Post* concluded, "During the lifetime of Amtrak, the government has put nearly 70 times more money into highways and aviation than into the train system. If Congress is serious about maintaining or increasing railroad travel, lip service about the

virtues of riding the rails won't do; more capital must be committed."

The *New York Times* noted recent proposals for emergency funding for Amtrak, but said "Congress must also adopt a more sensible long-term strategy...(it) should now focus on investing in economically viable high-speed service in heavily traveled markets, and create a dedicated rail trust fund for Amtrak like the funds that pay for highway and aviation infrastructure projects."

After noting that federal highway subsidies will exceed \$32 billion next year, the *Inquirer* said, "Amtrak gets \$336 million in federal operating aid. That is an unacceptable number. As they work with the airline industry to repair the damage from (the Sept. 11) calamity, President Bush and Congress need to find the time, the will and the money to enable Amtrak to play its proper role in the nation's transportation network."

The *Hartford Courant* said one positive legacy of the Sept. 11 attacks would be "a more balanced transportation policy," adding, "The populous Northeast could be the perfect proving ground for greater emphasis on rail travel."

LETTER TO THE EDITOR

Dear Editor:

As an American Muslim, I want to express to my fellow employees my horror and outright condemnation of last month's barbaric attacks on our great nation. They have filled my heart with deep sadness and sorrow.

Islam, a religion of tolerance, expressly forbids acts of terror. Muslims worldwide hold the human soul in high esteem and consider any attack against innocent human beings a grave sin. The Holy Qur'an (5:32) says: "Whosoever kills an innocent human being, it shall be as if he has killed all mankind, and whosoever saves the life of one, it shall be as if he had saved the life of all mankind."

As you may know, many Muslims also worked at the World Trade Center and are undoubtedly among the victims. American Muslim doctors and volunteers are among the great teams of medical, rescue, and general support personnel who are

treating the injured, helping the victims' families and friends, organizing blood drives, and raising donations.

We must avoid blind recrimination in the U.S. against Muslims, Arabs, and other minorities. That sort of hate and violence only perpetuates the terrorists' motives of tearing apart the unity of our nation.

The strength and greatness of Amtrak and our nation is firmly built on the diversity of our people, and how we embrace each other and our guests in our varied races, languages, religions, and cultures.

I know that many of my Amtrak colleagues join me in praying that we continue to support each other in this trying time.

A.E. Serag

Engineering, Philadelphia

Internet access offer from Microsoft

continued from page 1

end of that trial period can do so at a cost of \$21.95 per month.

If you register for the 90-day promotional offer, then decide not to keep the service, you must cancel your registration before the end of the 90-day trial period. If you don't, you'll have to pay \$21.95 for the following month.

To make it more convenient for those who want to try the MSN Internet service, Microsoft has provided installation disks—one is packaged with this issue of *Amtrak Ink*. To accept the promotional trial period of 90 days, follow the directions on the disk. You will need to provide Microsoft with a valid credit card number, to be used in the event you continue the service at \$21.95 per month. All agreements are made between you and Microsoft.

With Internet service at home, remember that you can access the Amtrak Intranet through the Amtrak Remote Access Intranet Link, or RAIL.

Here's how to get to RAIL: Open up your Web browser and go to this Internet site: www.rail.amtrak.com. Follow the directions to download

To make it more

and install the necessary software. You will need the eight-digit employee ID number that's on the front of your paycheck. You must be operating with Windows 95, 98, or 2000; have 4 MB of free disk space; and have a browser version that is at least as recent as Internet Explorer 5.0. Our Intranet is set up to be the most compatible with Internet Explorer.

If you have any problems completing the download and installation process, call this special toll-free number for RAIL: 1-866-AMTRAK5, or (866) 268-7255. Already, nearly 600 employees have completed the process and are enjoying their home access to the Amtrak Intranet.

Amtrak's 2002 wall calendar at a glance

Amtrak's 2002 wall calendar features a striking close-up image of an Acela Express trainset. The dynamic design was created by Jane Melhorn, director, and Jim Frantz, designer, of Amtrak's Design & Identity Management.

The calendars, which will be available later this fall, are available to Amtrak employees, retirees and their families and friends, at a moderate price. The more calendars you order, the less each costs. Checks, money orders and credit cards are welcomed; taxes, handling and shipping are included. Make checks payable to: Amtrak Calendar. For credit card

orders, please include complete number, expiration date and your name as it appears on the card. Visa, MasterCard, Discover/Novus and American Express will be accepted.

Prices: 1 = \$6; 2 = \$10; 3 = \$14; 4 = \$16; 5 = \$18; 6 = \$20; 7 = \$22; 8 = \$24; 9 = \$26; 10 = \$28; 11-25 = \$2.50 each; 26-50 = \$2.25 each.

Please send all orders and inquiries to: Amtrak Marketing Distribution, P.O. Box 7717, Itasca, IL, 60143-7717. Or, call 1-800-400-1229, and have your employee ID number ready to receive a 15 percent discount.

Congress addresses Amtrak's role

Congress is focusing with greater urgency on key policy questions concerning the future of America's passenger rail service and many observers expect legislators may well try to tackle a variety of issues in 2002 ranging from the development of high speed rail corridors to the composition of today's network.

Since 1971, Amtrak's federal mandate has required it to "completely develop the potential of modern rail transportation to meet the intercity and commuter needs of the United States." Four years ago, Congress additionally required Amtrak to maintain revenues at or above its operational costs, excluding capital investments.

Testifying before a Congressional committee in early November, Amtrak President and CEO **George Warrington** again urged that lawmakers eliminate these two conflicting policy mandates and instead define the role of intercity

passenger rail, aligning resources in addition to its own revenue to meet operating and capital costs.

In his testimony, Warrington stated, "For the past four years, Amtrak employees have been working hard to meet the self-sufficiency deadline and hold the national system together. But the practical effect is that we must cross-subsidize the unprofitable, public-service routes with revenues from profitable routes and other commercial activities. That leaves no money for reinvestment in the existing system, and it drives up operating costs because we are unable to modernize our plant, equipment, and technology."

Warrington went on to say, "For 30 years, Amtrak has labored under the weight of a business model that does not work. It's time to fix the model. We must seize the opportunity to clearly and honestly define the

continued on page 2

Cost management wrap-up for fiscal year 2001

The cost management initiative (CMI) gained momentum early in fiscal year 2001, as teams of Amtrak employees dedicated themselves to finding ways Amtrak could save money or generate revenue.

Working toward the goal of improving our financial performance and operational self-sufficiency, our cost management actions are about digging deep into how we spend and how we generate money; finding ways to work smarter and more efficiently, and making money without sacrificing safety or service quality.

What do we have to show for all the hard work? In fiscal year 2001, Amtrak achieved between 80-90 percent of its financial targets for the cost management program. Just as one example: Last year our goal was to reduce travel costs by \$300,000. We closed out FY 01 having reduced travel costs by \$5 million.

The CMI depends upon employees and their valuable knowledge of Amtrak's business practices to examine how we can reduce costs, while continuing to maintain service levels. A list of potential cost saving ideas began to form and quickly

continued on page 3

'Team Acela' competes in Marathon

As a part of our Acela 2001 sports campaign, Amtrak was a proud sponsor of the 2001 New York City Marathon. We welcomed Ludmila Petrova, the defending women's champion, aboard *Acela Express* after an enthusiastic send-off at Washington Union Station.

But Amtrak support "runs" even deeper. "Team Acela"—14 of our own would-be champions—were also cheered at the send-off event. Wearing Team Acela jerseys, they planned to represent Amtrak by running in the Nov. 4 marathon, joining 30,000 other runners from around the world.

Petrova finished second in the women's 10K. And, we're proud to

announce that each member of Team Acela completed the marathon, and with some pretty impressive times. Amtrak President **George Warrington** sent each member a note with congratulations and praise.

Congratulations to all the employees who participated in the 2001 NYC Marathon. To finish is to win!

Marathon champion Ludmila Petrova is greeted by Sujuanika Blanks, a first class car attendant on *Acela Express*.

AMTRAK®

T R A I N O F T H O U G H T

George Warrington

Looking back on this first year of the new century, I am enormously proud of the outstanding efforts of each and every Amtrak employee upholding the commitment to provide world-class service to our guests. This is especially true as our country and the people we serve have endured some difficult times in recent months.

At a time when fewer people are flying and hotels across the country are welcoming fewer guests, our system, taken as a whole, is maintaining steady ridership. We served hundreds of thousands of guests over the Thanksgiving holiday, and will be prepared to do the same during the Christmas and New Years holidays. Despite the economic recession of the past eight months, it is clear that travelers know that they can count on Amtrak for comfortable, enjoyable and satisfaction-guaranteed service.

In the course of the past year, we've made many improvements to our service. Our web site was recently overhauled to make it easier than ever to book travel and get information. As a result, on-line ticketing has doubled in the last 12 months. As a modern e-business, we're better able to meet the needs of our customers and bring greater results to the bottom line.

On the operations front, Amtrak was awarded another five-year contract to operate the *Caltrain* commuter service. Additionally, three Pacific Northwest states approved more than \$200 million to fund Amtrak service and to finance capital improvements.

This month, we are also celebrating the first anniversary of *Acela Express*, America's first true high-speed train. Our guests have continued to rave about *Acela Express* for its comfort and

speed. By the end of the year, more than one million passengers will have ridden *Acela Express*, a real testament to its continually growing popularity.

Speaking of a million passengers, the results are in from the fiscal year (ended September 30) and despite the recession and its impact on the leisure travel market, our ridership was up 1 million guests over the previous 12-month period. We are working very hard to market ourselves to maintain a share of leisure travelers and to continue to expand the business travel sector. Employees everywhere are sharing in this effort, especially on the front lines, where the personal touch is our greatest asset.

In the year ahead, policymakers will renew their discussion about the role of passenger rail in this country. It's a discussion that I've been advocating for months. You've heard me say before that it is critical that conflicting policy mandates be reconciled.

Straight and honest discussion must occur about the operating and capital costs needed to support efficient, reliable passenger rail service. In the end, I hope this will result in a consensus about the role of passenger rail in our nation's transportation system and an alignment of resources – revenue and federal and other investments – that sustain it and enable it to grow.

Regardless of the Amtrak debate in Washington, we will continue to do what we do best—operate a railroad and serve our guests.

I am grateful for the dedicated work of so many employees these past 12 months. Thank you for all you do in serving our guests and please have a warm, safe, and peaceful holiday season.

Congress addresses Amtrak's role

continued from page 1

role of passenger rail, and provide the policies and financial commitments to ensure we do it right."

It is expected that in addition to Amtrak and congressional plans, President Bush will offer his own ideas for the future of intercity passenger rail early in 2002. While officials such as new deputy Transportation Secretary Michael Jackson and Federal Railroad Administrator Alan Rutter have become increasingly involved in these policy questions, no details have surfaced from the Bush Administration at this point. Additionally, it is expected that the Amtrak Reform Council, a presidentially-appointed

panel not affiliated with Amtrak, will offer its own ideas on passenger rail reforms early next year.

Intercity passenger rail here in the United States and in other similar industrialized nations has always depended upon a combination of passenger-related and other revenues along with public monies to meet both operational costs and capital or infrastructure needs. But federal support for Amtrak, currently at \$521 million annually, has been substantially lower than other federal investments such as highways (\$32 billion), airports (\$14 billion) and transit systems (\$6 billion), as well as less than that provided to similar passenger rail systems around the world.

Washington's growing interest in the future of intercity passenger rail has been raised by the looming conclusion of Amtrak's current authorization, a five-year blueprint for capital and operating investments by the federal government. These annual appropriations have been only half the authorized levels set by Congress, resulting in lowered capital investments and decreased system reliability. With a new multi-year federal authorization necessary to be in place by October 1, 2002, the coming debate on the nation's passenger rail system may very well chart the future for Amtrak well into the next decade.

Cost management for fiscal year 2001

continued from page 1

blossomed into a substantial cost reduction program.

Early this year, Amtrak managers used a company-wide mid-winter information blitz to talk face-to-face with employees about our financial progress and the critical importance of reducing costs.

Meanwhile, **George Warrington** and **Arlene Friner**, executive vice president and CFO, assigned teams to the growing number of specific initiatives that employees were identifying as potential moneymakers or money-savers for Amtrak.

"A successful CMI starts with getting the right people involved to research the cost issue and to provide creative solutions for improvement," said **Anne O'Brien**, senior director, Cost Management. "Next, it takes team diligence to see the project to full implementation."

In other words, employees are the force behind Amtrak's financial success. The financial benefits Amtrak received last fiscal year didn't find us; employees found them.

Take a look at just a few of the successful CMIs that added millions to Amtrak's bottom line in FY01:

CMI 5/Vehicle Fleet: +\$5,200,000. This team worked to ensure vehicle leasing and related expenses were reduced, and unnecessary vehicles

"A successful CMI starts with getting the right people involved to research the cost issue and to provide creative solutions for improvement."

Anne O'Brien, senior director, Cost Management

were returned. The target of 274 returned vehicles was exceeded.

CMI 24/Travel Policy: +\$5,000,000. Significant savings reflect a company-wide effort to reduce travel costs. This CMI created a formal process for travel justification.

CMI 27/Locomotive Fleet Cash Generation: +\$4,600,000. Although there was no specified target, \$4.6 million was received from sales of excess locomotives, and another \$2.4 million is expected in the first quarter of FY 02.

CMI 26/Locomotive Fuel Consumption: +\$1,100,000. This CMI required the shutdown and isolation of locomotives to reduce energy costs. Most of the benefits were seen in Amtrak Intercity.

We've also successfully negotiated millions of dollars in annual savings in existing contracts with our vendors.

"Employee participation and commitment have been essential in achieving the desired results. It's so easy to lose sight of progress—staying power is key," Friner said. "Support from senior management is also critical. Without that, this project goes nowhere."

There are dozens of CMIs that were successful and many people to thank for guaranteeing their success. In the process of saving or making money for Amtrak, these employees benefited in ways that have nothing to do with dollars and cents.

The teams researching various cost issues and developing new practices realized how critical colleagues in other departments were to their success. Along the way they built a network of contacts across the organization and learned about other aspects of our business. So cost management FY01 was a success in more ways than one.

So where do we stand now? How are we approaching cost management in fiscal year 2002? We focus on the CMIs that haven't realized full financial benefits for Amtrak. The teams are taking different approaches with those CMIs, and continuing to talk with informed colleagues. This is how many of the FY02 financial targets were established.

Also, employees are submitting cost saving ideas with an estimated target via the Amtrak Intranet. This is the kind of

employee involvement that fuels the success of the cost management initiative. A cost management suggestion link on the Intranet homepage makes it easy for employees to submit their fresh ideas for reducing costs.

As we stay focused and continue to work toward our financial goals, the continued improvement to our bottom line will be evidence that it's more than a fleeting program. Cost management now drives the decisions we make every day in managing our business.

The route to our success

Strategic Business Plan Key Strategies

Since the 1998 launch of its new strategic direction, Amtrak has taken significant steps in rising to the challenge of reducing its reliance on federal funds to support operations. Driving Amtrak's actions are six key strategies.

Build a market-based network

Define customer demand, using extensive research, and then match our system with that demand.

Deliver consistent quality service

Change the culture of the company to be more guest-focused, and provide a world-class travel experience on every trip.

Revitalize the Amtrak brand

Introduce and support a new brand for Amtrak, to signal a major change to our guests.

Operate a cost-effective business

Identify specific functional areas, policies, organizational structures, and back-office costs that have potential for improved cost management.

Maximize public and private partnerships

Pursue public and commercial partnerships aggressively, through Mail and Express and other programs that generate the highest returns for the company.

Develop corridor services

Work with state and other partners to create or improve rail corridors across the country, drawing from the expertise we've gained in building Northeast Corridor services.

Veterans Advantage program boasts added benefit

Lt. Gen. Martin R. Steele USMC (Ret.) welcomes those attending the Intrepid Sea-Air-Space Museum's Annual Veterans Day Ceremony. Seated (L. to R.) are Chaplain W. Kloner, David Lim, vice president of Marketing, Amtrak; H. Scott Higgins, chairman of Veterans Advantage; Maj. Gen. Nels Running USAF (Ret.), Keynote Speaker Col. Paul William Bucha US Army (Ret.), recipient of the Congressional Medal of Honor.

Because overall travel has been sluggish since the Sept. 11 attacks, President Bush is urging Americans to get out and see America. To help boost interest in travel, he proclaimed the week of Nov. 11 as "Veteran's Week," to honor men and women serving our country.

In support of this effort, Amtrak, in conjunction with our partner Veterans Advantage, Inc. (a private-sector paid membership group that gives veterans discounts on products and services), is offering a 50-percent rail fare discount to its members. The partnership, launched in February, normally offers members a 10-percent discount. The discount will be increased to 50 percent for members traveling Nov. 11 through Feb. 28, 2002.

Amtrak announced the promotion on Nov. 11 at the annual Veterans Day Ceremony held aboard the U.S.S. Intrepid Museum, a National Historic Landmark, which is berthed on the Hudson River in New York City.

The ceremony was led by Lt. Gen. Martin R. Steele USMC (Ret.), president and CEO of the Intrepid Sea-Air-Space Museum, who read a proclamation from President Bush. Scott Higgins, chairman of Veterans Advantage, quoted George Washington, who in 1789 said, "The willingness with which our young people are likely to serve in any war, no matter how justified, shall be directly proportional as to how they perceive the

continued on page 12

Ground zero remembered

Philadelphia's 30th Street Station was home recently to a poignant and moving tribute to the victims of the World Trade Center disaster.

As employees and guests entered the North Waiting Room, they came to a structure of three twisted, steel beams, rising from a triangular base littered with concrete fragments and other debris. Six steel panels attached to the beams displayed photos taken at "ground zero." Atop one of the vertical beams, the American flag stood tall.

Titled "September 12," the sculpture resulted from a trip to ground zero by **Jim Audley**, director of special projects, Engineering. He was a rescue volunteer there, joined by his friend of 40 years, Bill Keokosky. At the time, no photos of ground zero were publicly available. Using an

inexpensive camera with what turned out to be heat-damaged film, Keokosky began snapping pictures.

Amazingly, the photos came out. He and Audley wanted to share the perspective with others. After sketching a triangular structure symbolizing faith, family, and country, the two began making the design a reality.

"This came about after seeing the tragedy first-hand and knowing that everyone else has been compelled to be involved in some way," said Audley. "It's meant to convey what it was like; what you can't experience from a television screen."

Close to 50 Amtrak employees, representing all crafts and positions, plus some private donors, helped make the memorial possible. About

20 employees actually fabricated the work, using donated materials. Allegheny Iron and Metal Co. of Philadelphia contributed a ton of steel, and the rubble and debris came from the Penn Coach Yard. No materials from ground zero were used.

"I called the Iron Workers Union to volunteer to go to New York when it all happened, but they told me they had enough help," said **Frank Jaworski**, engineer, track welding. "So, when I got the chance to work on this, I felt it was a good thing that allowed us to show we cared."

Lynn Bowersox, acting senior vice president of the NEC, said, "This is yet another example of how Amtrak has stepped up to answer a need during this tragic and fragile time in our nation's history. I'm proud to work

World Trade Center memorial is displayed at 30th Street Station in Philadelphia.

with such thoughtful and talented individuals."

After two weeks, the sculpture was moved to the Baltimore station, and it is currently in Washington Union Station. Thanks to all the Amtrak employees who helped make this remarkable memorial a reality.

Chicago call center unites for disaster relief

On Oct. 12, the Midwestern Reservations Sales Call Center in Chicago was proud to contribute \$1,011 to the American Red Cross for the Disaster Relief Fund. The donation came through the diligent efforts of their Operation RedBlock, Safety, and Social committees.

"It is gratifying to know that in a time of need people will demonstrate their

unity and compassion to support a worthy cause," said team leader **Mark Little**. "Sometimes, when the unexpected is devastating, just showing you care can make a world of difference. We want to thank everyone for their support."

"The generosity and compassion demonstrated by the employees at the call center is a source of great pride and inspiration to me," said **JoAnn Anderson**, director of the call center. "I am not surprised at this gesture, for I have witnessed this spirit of generosity displayed numerous times before. The employees here have a tremendous heart and are not afraid to show it!"

By: *Mark Little, team leader, Chicago RSCC*

Chicago call center employees show their support for the Sept. 11 victims.

Riverside call center... giving from the heart

A fundraising effort similar to Chicago's (see story left) was mounted at the Riverside call center immediately after Sept. 11. As the country gathered its thoughts, team leaders **Sandi Poirot** and **Mike Eisenberg** thought about what could be done to help, both as individuals and as Amtrak employees.

With the help of fellow team leaders **Peggy Beverage** and **Kay Umbarger**, the group came up with the idea of collecting "pocket change" from the 800-plus employees of the Western center. Supported by Director **Gene Price** and Operations Manager **Yolanda Mentz**, the project was a huge success.

In two weeks, the Riverside call center collected \$1,120 for the American Red Cross, and \$1,004 for the New York City Firefighters' Fund. Though the amounts may be small compared to large corporate donors, the feelings that contributed to these individual donations were huge—and from the heart.

By: *Mike Eisenberg, team leader, Riverside RSCC*

(L. to R.) Peggy Beverage, Mike Eisenberg, Gene Price, Yolanda Mentz and Sandi Poirot display the results of their fundraising efforts.

Amtrak and Red Cross still working together

"So many of us felt
helpless but wanted
desperately to
do something.
This is it.
This is what I could do."

Barbara Knight,
blood drive coordinator

Amtrak holds at least two blood drives a year, but the one on Oct. 11 held special significance.

Exactly one month after the Sept. 11 tragedies, Amtrak and the American Red Cross held a blood drive in the Starlight Room at Washington Union Station. About 130 employees stopped by to give blood or make a donation. Ninety-three units of blood were collected, as well as \$1,300.

The drive was such a great success that the Red Cross highlighted it in an article, "Amtrak-Red Cross relationship strengthened by blood drive," which was posted on their website.

Jean Hughey and Judy Wilson donate blood.

"What better way to honor them than to give in this way," said **Barbara Knight**, Amtrak coordinator of the blood drive. "So many of us felt helpless but wanted desperately to do

something. This is it. This is what I could do."

Dr. Jerry Squires of the Red Cross thanked Amtrak for its ongoing support. In addition to that blood drive and others we host throughout the year, we donated the use of our trains to carry critical supplies to New York after the terrorist attacks.

"We can't do the type of work we're here to do without partners—our partner is Amtrak," Dr. Squires said. "Following the tragedy, Amtrak stepped up to the plate. Because of Amtrak we were back in business, and that's pretty incredible."

Acela Club Restaurant opens at the MCI Center

Overlooking the action-packed event floor of the MCI Center, the contemporary Acela Club Restaurant offers American bistro cuisine and attentive hospitality.

Is Amtrak now in the restaurant business? No, not quite. But we are tapping in to a big business—sports.

Sports generate big bucks, and Amtrak has found a great way to direct some of that business our way.

As part of the Acela sports marketing campaign, we have opened the Acela Club Restaurant in one of Washington's biggest sports venues.

On Nov. 2, Amtrak President **George Warrington** was joined by two big names in Washington sports for the grand opening of the exclusive Acela

Club Restaurant at the MCI Center in Washington, D.C.

As part of our expanded partnership with Washington Sports and Entertainment, owner of the MCI Center, the arena's club-seat concourse has been renamed the Acela Club Level, and the club-level restaurant has been branded with the Amtrak signature and renamed the Acela Club Restaurant.

Sports attract a young and active population—people who are on the go for both business and pleasure. We want to reach those people and increase their awareness of high-speed train service. The opening of the restaurant is just one component of Amtrak's larger sports marketing effort.

With the Acela name so prominently displayed in the restaurant, and on other signage throughout the arena, we can reach some key audiences.

Abe Pollin, chairman of Washington Sports and Entertainment and the NBA Washington Wizards, and Ted Leonsis, chairman of the NHL Washington Capitals, were at the arena with Warrington for a ribbon-cutting ceremony and official unveiling of the new restaurant.

"Amtrak is proud to be on the same team with the Capitals and Wizards to help make Amtrak passenger rail service more popular than ever," Warrington said. "Our new high-

Acela Club diners get a fantastic view of game action.

speed *Acela Express* has enjoyed a terrific inaugural season and with this partnership it will soar even higher."

As part of the restaurant's rebranding, the Acela name adorns china, menus, napkins, the restaurant's glass doors—even Acela Root Beer.

ON THE RIGHT TRACK

Yes, a dog named "Amtrak."

A new 'leash' on life for a dog in training

Editor's note: A guest tells us how employees helped secure "Amtrak's" future.

"I thought you might like to know about a wonderful experience that my wife and I had at the Amtrak station in Orlando, FL.

"While waiting for the train, we noticed that several passengers were feeding and comforting a large, stray dog—his ribs were showing, and he had several sores on his body.

"The station master explained that the abandoned animal had been hanging around for nearly a week, living off the hand-outs. After a brief consultation, we decided to turn in our tickets and bring the dog home in a rental car.

"The Amtrak people were simply terrific! They helped us with a rental car ...called a cab... and found a scrap of rope to use as a leash. Before we left the station, it was clear that our new dog must be named, "Amtrak."

"Amtrak now lives a happy and healthful life in State College, PA."

A special flag display

Before Sept. 11, **Bill Sheehy**, a conductor at the 8th Street Yard in Los Angeles, displayed an American flag in his car. It had just been presented to him at his father's military funeral.

On Sept. 12, Sheehy walked into **Pete DiMola's** office, flag in hand. "Could the flag be draped on Train 3 and travel across the western United States?" Sheehy asked, wanting to share his father's spirit and patriotism with others. Realizing the flag would be destroyed on the trip, DiMola, assistant general manager of Terminal Services, suggested the flag stay at 8th Street Yard for everyone to see.

An impromptu ceremony followed. Sheehy and fellow employees proudly raised the flag, then lowered it to half-staff in remembrance of those lost on Sept. 11. During the national mourning period, employees gathered at the flag for candlelight vigils at dusk.

The pride was evident in Sheehy's eyes. "My dad, Walter Passet, was a proud American who served in World War II. I am so pleased to share his patriotism with others—his spirit soars with us daily."

Planting the seed for future travel

Matt Cahoon, manager of Guest Services for the *Coast Starlight*, overheard a conversation away from work in which Los Angeles redcap **Robert Smith** was being praised for providing exceptional service.

Cahoon stepped in and introduced himself. Four women were meeting

in Los Angeles, two traveling on the MTA's Red Line and two on *Metrolink*. They had a pleasant and memorable Amtrak experience by meeting Smith. He was proactive in his assistance to the women, and made promises he delivered right on time.

One of the women told Cahoon, "Bob was his name. He was the most wonderful employee. He treated us just like we were royalty."

Smith left these guests with a fantastic impression of Amtrak, which they are already sharing with others. When these four plan to travel again, Amtrak will come to mind as a customer-friendly way to travel.

'Old Glory' flies at the Lancaster station

For **Bill English**, like many others, the events of Sept. 11 triggered a new reverence for the American flag.

English, who had been at the Lancaster, PA radio shop since 1982, could not remember a flag being displayed there. He was on a mission to raise the American flag above the station. He would learn that his colleague, **Tom Garrity**, B&B supervisor, had the same goal.

Within a week, English, a lead radio technician, and B&B foreman **Dale Glick**, took to the station roof to see what had to be done with the existing flagpole. After some rehab work to the pole, and adjustment of the station flood lights, a flag donated by **Rich Esposito** of the *Keystone Service* was raised over the station. Also participating in the project from the ET

The American flag now flies over Lancaster station.

department were **Rich Dengler**, **Ed Bogush**, and **Bob Mauger**.

"After 25 or more years, Old Glory flies from the Lancaster Amtrak station" English said. "I thank everyone involved in this project."

Guest Satisfaction, that's the ultimate goal. And, the guest here is Sen. Hillary Clinton (D-NY), who is being directed to her train at New York's Penn Station on Sept. 26. Personally assisting the senator are, (L. to R.) **Steven Clark**, **Adolfo Broegg** and **Marco Villegas**, all B&B inspectors, each with more than 25 years of service.

Dear Governor [Dukakis]:

I would like to sincerely thank you for your call to me after the horrific tragedy of September 11, 2001. ... You expressed to me the offer that Amtrak would waive the fee for our members traveling to New York City to provide assistance and to attend funerals.

I am pleased to report that our members have been travelling to New York City daily and Amtrak and your associates and employees have welcomed them with open arms. Amtrak's professionalism and courtesy has been nothing short of exemplary.

... I would like to express to all the officials, directors and employees, our sincerest thanks. Amtrak is a class operation and we will be forever in your debt.

Sincerely,

Robert B. McCarthy
 President

Massachusetts Bay Transportation Authority
 Jane Swift Governor
 Kevin J. Sullivan Secretary and MBTA Chairman
 Robert H. Prince, Jr. General Manager

Dear Mr. Lydon [General Manager, MBTA]

On Tuesday, September 11 ... the city of Boston was faced with an unprecedented evacuation of the city. Tens of thousands of people left the city within two hours, from North and South Stations, using the commuter rail.

This evacuation was carried out in a highly professional and orderly manner through the spirited teamwork and superior performance of Amtrak Intercity and Amtrak Commuter Rail employees and supervisors and MBTA Railroad Operations staff, combined with the united support provided by the MBTA and Amtrak Police Departments.

Through the MBTA Write To The Top and the Feedback Programs, we have received numerous emails filled with praise and recognition of the effort that was put forth during this extraordinary event. ...

On behalf of the MBTA please extend our thanks to all involved for their dedicated and unselfish contribution.

Sincerely,

Anna M. Barry
 Director of Railroad Operations

Congress of the United States
 House of Representatives
 Washington, DC 20515

Dear Mr. Warrington:

The terrorist attacks of September 11 have undoubtedly changed our national transportation system forever. We are writing to thank you for your strength and leadership during this time of crisis and national tragedy. ...

We are also writing to pledge our assistance in providing Amtrak with the resources it needs to institute more stringent security procedures. We have joined with several of our colleagues in writing a letter to Secretary of Transportation Norman Mineta, expressing that sentiment. You have our commitment that we will continue to pursue financial support for Amtrak.

Once again, thank you for answering America's call in our time of need. We look forward to working with you to provide a safe and secure national rail passenger system.

Sincerely,

Jack Quinn
 Chairman
 Subcommittee on Railroads

Bob Clement
 Ranking member
 Subcommittee on Railroads

Dear Amtrak:

I traveled on your train, number 164, from Boston South Station to New York Penn Station on Sept. 16... When I arrived at South Station in Boston, I was extremely touched by the help and accommodation of your staff. I hadn't purchased a ticket, nor had the money to do so. Fortunately for me, you exchanged my airplane ticket for a train ticket and I was able to get to New York to be with my family.

I feel your company has been very accommodating during these horrible times, not just from a business point of view, but also in a compassionate way. You helped thousands of Americans reach their loved ones, and for that I am very grateful.

Sincerely,

An Amtrak Guest

Dear Amtrak:

I want to compliment the Amtrak organization and the crew of your train for the thorough, efficient and professional manner in which the security measures were carried out. We were kept informed concerning procedures and delays, and were updated on the events as news became available. Speaking for myself, I felt very safe knowing the security checkouts and precautions were being handled competently.

These Cascades team members are recognized for their exceptional service and concern for guest safety during this difficult time: Jay Kiely; Alex Rodriguez; Ronda Altergott; Erik Lawrence; and Mike Dingess.

Sincerely,

An Amtrak Guest

American Red Cross
 of Massachusetts Bay

 617-375-0750 fax

Dear Governor [Dukakis]:

... Your assistance during these difficult days and your continued support of the Red Cross has been outstanding. We are especially grateful for your offer to coordinate with Amtrak to bring desperately-needed people and supplies to New York. ... Support like this has been and will continue to be crucial to our ability to provide critical humanitarian services. ... On behalf of the entire Mass. Bay Red Cross, I sincerely thank you.

Mark Robinson
 Acting Chief Executive Officer

JOSEPH R. BIDEN, JR.
 (Delaware)

United States Senate
 WASHINGTON, DC 20510-2052

Dear Mr. President [Bush]:

Last week's devastating attacks demonstrated the vulnerabilities of our national transportation system. I applaud your efforts to make air travel more secure and pledge my full support to working with you towards this goal.

... Like the rest of our public transportation system, Amtrak will also be required to invest in additional protections to ensure the safety of its passengers.

Amtrak rose to the challenge last week and demonstrated once again that it is an indispensable part of our national transportation system and our economy. It also proved to be a critical part of our nation's homeland defense as it not only carried an increased passenger load, but also allowed for the efficient transfer of goods and services across the country. Now we must also rise to the challenge and provide Amtrak with the type of support it deserves.

Therefore, as you move forward in making decisions about helping certain segments of the transportation industry, I hop you will include Amtrak. ... This is a small investment for this essential component of our transportation system and one that I hope you will support.

Very truly yours,

Joseph R. Biden, Jr.
 United States Senator

The inequity of Amtrak's federal support—compared to that given other forms of transportation—has attracted the attention of some of the nation's most prominent syndicated editorial cartoonists.

The Breen cartoon top left, speaks to a change in public sentiment regarding travel intentions.

The Herblock cartoon bottom right, is notable for two reasons. It was distributed before the attacks, but it seemed to predict a sentiment that many others would soon share. Second, it was one of the final Herblock cartoons. Herbert Block, 91, and the winner of three Pulitzer Prizes for cartoons, died in early October.

The Oliphant cartoon, was inspired by congressional approval of \$15 billion in emergency funding for airlines soon after the Sept. 11 terrorist attacks.

Andy Rooney speaks out on trains

CBS correspondent
Andy Rooney

Editor's note: Following is the transcript of the commentary made by noted CBS correspondent Andy Rooney on the "60 Minutes" show of Sept. 30. It is reprinted here with the permission of CBS News.

Some people are afraid of everything. Other people aren't afraid of anything. A lot of Americans are afraid to fly now and it's ridiculous. You're more likely to win the lottery than die in a plane crash.

Fear of flying is bad for the airline business—they've been in financial trouble for years anyway, and it got worse on September 11th.

Airlines have treated us so badly over the years, it's hard to feel sorry for them. You feel sorry for the good people who work for airlines.

Congress has voted to give them \$15 billion in emergency relief and I don't understand that. Railroads have been in financial trouble for 50 years. Why

doesn't Congress give railroads \$15 billion?

What ever happened to travel by train anyway?

This country is dotted with abandoned or little-used railroad stations. Cute stores have moved in.

In New York, they tore down the magnificent Pennsylvania Station. Michigan Central Station in Detroit, an architectural gem, was abandoned; its idle tracks rust away waiting to be boiled down.

There are thousands of miles of empty railroad tracks running contiguously with crowded highways.

Our heavy loads should be moved on steel rails instead of rubber tires on highways where trucks play accordion with the cars.

There are 1,345,000 railway freight cars in the United States. Each one can carry several times as much cargo as the biggest truck.

Using railroads would reduce our use of oil.

It takes 1,500 gallons of fuel for a plane to fly from New York to Chicago with 100 people on board. A train with 1,000 people can make the same trip on fewer than 300 gallons.

The United States is way behind in train travel, as anyone knows who's been to Europe or Japan. Trains everywhere are better, faster and more luxurious.

There's no greater feeling of luxury and satisfaction than being whisked 500 miles closer to your destination while you sleep on a fast-moving train.

Trains are seldom delayed or cancelled. They run in sunshine or in snowstorm, oblivious to wind and water.

If the government is going to give the airlines \$15 billion, it ought to run the airlines. Or maybe jump-start travel by giving taxpayers \$15 billion worth of tickets to go where they wanted, how they wanted.

Secretary Tommy Thompson is honored in a dedication ceremony

Sylvia de Leon and Amy Rosen, Amtrak board members and long-time friends of Secretary Thompson, participate in the champagne christening of the P42 locomotive Amtrak dedicated to Thompson.

"This is one of the greatest honors of my life."

Those were the words spoken by U.S. Health and Human Services Secretary Tommy Thompson on the day Amtrak honored him for his years of service as chairman of Amtrak's Board of Directors.

His distinguished career of public service includes a strong and consistent commitment to intercity passenger rail as an engine of economic development, increased mobility, and urban revitalization. He has made countless contributions to the improvement of passenger rail service in this country.

That's why on Nov. 1, in a special ceremony at Washington Union Station, Amtrak dedicated a P42 loco-

motive to Thompson. That type of locomotive was selected because it represents Thompson's connection to the Midwest. It is inscribed with his life-long title and name, "Governor Tommy G. Thompson."

The locomotive was displayed on Track 20 at Union Station. Amtrak employees were invited to attend the special occasion hosted by Amtrak President **George Warrington**.

At the ceremony, Sylvia de Leon, an Amtrak board member and friend of Thompson, said it best, "Amtrak is honored to have a friend like you—one with inspired vision and commitment."

Thompson is the former chairman of Amtrak's board of directors (and former governor of Wisconsin) and

has been appointed to President Bush's cabinet as Secretary of Health and Human Services. But we know Secretary Thompson as one of Amtrak's most loyal supporters and vocal champions through the years.

"There's something about the sound of a train," Thompson said. "My passion for trains began many years ago. Our history is great, but America still needs a strong, passenger railroad. It's important for economic growth and for linking communities and people. So we have to continue to spread that message to policy makers and citizens alike."

Following remarks by Warrington and Thompson, the locomotive was formally dedicated and received a champagne christening. A reception in the Starlight Room followed.

Employees hit the greens for Operation RedBlock

The fall weather was gorgeous, and all participants were in generous spirits at the Operation RedBlock Coaster Golf Tournament held in Fallbrook, CA.

Forty golfers attended the annual tournament. In support of the continued education of Amtrak employees, the players donated \$600 to Operation RedBlock, Amtrak's employee-run drug and alcohol prevention program.

"RedBlock is the best program ever implemented at Amtrak," said **Caesar Jimenez**, a Maintenance of Way worker for Coaster, and newly elected RedBlock captain. "So many lives and jobs have been saved. It's amazing how everyone opened up their wallets for this good cause."

First place went to the foursome of **Danny O'Connell**, engineer; **Jim Hunt**, conductor; **Rick Dahl**, transportation manager; and **Tom Merriweather**, an attorney in private practice.

Conductor **Dennis Brown** took home the closest-to-the-pin award, and O'Connell also won for the longest drive.

In addition to Jimenez, the organizers included **James Mewes**, C&S department, and **Angie Starr**, administrative assistant. Thanks to the vendors, and product lines that donated prizes. And, of course, thanks to the charitable golfers.

Caesar Jimenez and Angie Starr, proud to have been a part of the successful tournament.

RAILWAY ROUNDUP

Restored Gainesville depot dedicated

A report from Glenn Jones, director of the Texas Association of Railroad Passengers (TXARP).

The 15th Annual Depot Day Festival in Gainesville, TX, featured the dedication of the beautifully restored 1902 Santa Fe depot.

The first passenger train arrived at this site on Jan. 2, 1887. Today, Gainesville is the first stop of the southbound *Heartland Flyer* in Texas, just after crossing the Red River.

We had a great location for the TXARP booth at the festival, and I wound up being overwhelmed with visitors. I soon ran out of Travel Planners, bags, time tables and the like. Fortunately, extras were brought. This was expected to be a small event, but I estimate we gave out more information on passenger rail than at any show I have attended. We brought chairs, but never got a chance to sit down!

I was joined by Roger Carter, a colleague from Oklahoma. **Merle Hogue** from the Texarkana Amtrak station brought those much-needed additional supplies.

Preparing for service to downtown Louisville

Setting the stage for the return of Amtrak to downtown Louisville in December, we have restored Superliner sleeper service to the *Kentucky Cardinal*, which now operates daily between Chicago and Jeffersonville, IN.

The return of sleeper service, followed by the return of intercity rail service to Louisville Union Station, should be catalysts for growth of the *Kentucky Cardinal*. The train had a 12.7-percent increase in ridership during the past fiscal year. In its second full year of operation, the *Kentucky Cardinal* served 29,201 guests during FY01.

"The *Kentucky Cardinal* has performed above expectations from the beginning," said **Don Saunders**, acting senior vice president of Amtrak Intercity. "We expect thousands more to take advantage of our service to Chicago and beyond once the train is extended into Louisville's downtown station."

The *Kentucky Cardinal* began service between Chicago and Jeffersonville, IN, on Dec. 18, 1999, ending a 20-year absence of passenger rail service in the Louisville metropolitan area. The train also has intermediate stops in Dyer, Rensselaer, Lafayette, Crawfordsville and Indianapolis, IN.

LA 8th St. Yard aces environmental audit

Employees at 8th Street Yard mechanical facility in Los Angeles were honored for outstanding environmental efforts.

In August, an employee task force led by **David Pirenian**, foreman II, began the arduous task of cleaning up the yard. Working around the clock, **Rufino Casal**, **Jose Flotte**, **Billy Hollis**, **Armen Megrabyan**, **Marcel Perez**, **Chris Ramirez**, **Raul Rubio**, **Arcadio Santos**, **Victor Smith**, and general foreman **Ralph Sais** met the challenge. They collected trash, inspected hoses and pipes, and identified and marked items such as hazardous materials, recyclable materials, and more.

Eleven employees were recognized for environmental excellence; five are pictured here. (Top row) Jose Flotte and Armen Megrabyan. (Front row) Rufino Casal, David Pirenian, and Billy Hollis.

Within one week, the yard sparkled. Auditors from Amtrak's Environmental department were impressed, and presented Asst. General Manager **Pete DiMola** with an exceptional audit.

"We enjoyed the challenge," said Pirenian. "Our goal was to show that 8th Street Terminal Services had the best-kept facility in the system. With that goal in mind, we worked hard to accomplish our task," DiMola said. "The audit may be over, but the spirit of teamwork instilled in all our employees is still alive."

Over 300 employees work in the yard, which services about 60 cars and locomotives daily.

Amtrak West wins WasteWise Award

Amtrak West won the U.S. Environmental Protection Agency's 2000 WasteWise Award, recognized as a "Program Champion" for the solid waste reduction activities at Los Angeles Union Station, and terminal facilities at the 8th Street Yard and Redondo Junction.

Tami Calderon, employee coordinator, accepted the award on behalf of the SBU.

Amtrak is one of 39 companies recognized as a Program Champion by the EPA for promoting and implementing new ways to reduce waste. Amtrak

Grand opening of Amtrak Martinez station

Newly built and serving more guests every year, Amtrak's Martinez station is now an intermodal facility.

On Sept. 22, local residents, state and local dignitaries joined **Gil Mallery**, senior vice president of Amtrak West, at the grand opening and dedication ceremony for the new Martinez Amtrak station. Mayor Michael

Menesini officially opened the station with a ribbon cutting ceremony, as the Alhambra High School band and choir filled the air with music.

The Martinez station serves eight daily *San Joaquin* trains; 18 *Capitol Corridor* trains; two daily *Coast Starlight* and *California Zephyr* long-distance trains, and Amtrak Thruway motorcoaches.

"We are seeing a renaissance of rail throughout the country," Mallery said. "Martinez already knows what the rest of the country is beginning to find out—that rail is a viable part of the nation's transportation system."

"Governor Gray Davis has made congestion relief one of his highest transportation priorities," said Jeff Morales, director of the California DOT. "One important tool in the governor's initiative is to increase the state's intercity passenger rail program. New and convenient facilities such as the Martinez Amtrak station will help encourage riders to climb aboard the trains."

(L. to R. foreground) Linda Lewis, Martinez City Council member; Sen. Tom Torlakson; Jeff Morales, Caltrans Director; Martinez Mayor Michael Menesini; and Gil Mallery, senior vice president of Amtrak West.

West used revenue generated from recycling to buy promotional items from recycled materials, saved 500 pounds of materials and \$3,000 by refilling toner cartridges, and saved \$33,700 through the elimination of two trash compactors.

WasteWise is a voluntary EPA program, and it has recognized company award winners since 1996.

Rediscovering the Discovery...

Amtrak kicks off a new phase in its partnership with the National Parks Service "Trails and Rails Program"

Representatives from Amtrak, the National Parks Service and the University of Missouri at Columbia were host on Nov. 3, to over fifty guests celebrating the Lewis and Clark Corps of Discovery experience. As part of this three-year salute to the Lewis and Clark Expedition and the Western Expansion of America, Amtrak and the National Parks Service will provide on-board presentations, narrated by the NPS Trails and Rails volunteers.

"Because of our partnership with Amtrak, we can take the National Parks programs beyond the boundaries

of the parks," explained Jim Miculka coordinator of the NPS Trails and Rails program. **Anne McGinnis**, Amtrak's Midwest Marketing Manager also pointed out that the "NPS program is curriculum-based, so it can be incorporated in social science lesson plans for Missouri schools."

Amtrak's *Empire Builder* and *Kansas City Mule* traverse these routes of history and great natural beauty, and they provide the perfect setting for these informative presentations. Amtrak's *Empire Builder* guests, can experience the programs during the summer. Amtrak's Missouri guests, have weekend programs from late winter until fall. The program along the Missouri River changes with the seasons, from winter eagle watching to fall foliage. Missouri guests can experience the program everyday from Memorial Day until Labor Day.

The Expedition's mission was to chart the new land, identify wildlife and create a connection between the existing communities within the land. Amtrak can play a unique role in the preserving of this national chronicle, and the effort they made to bring the people of these communities together.

Another year injury-free for El Paso

By the end of FY01, the El Paso, TX crew base completed yet another year injury-free. For the 13 years that the El Paso T&E crew base has been operating, there have only been two reportable injuries, and 11 of those years have been injury-free.

When asking **Dave Morgan**, service manager for the El Paso crew base and Zone 12A, why this outstanding safety record continues year after year, he says, "When you look at the employees here in El Paso, you see a group of professionals who take great pride in their safety record as well as every aspect of their jobs. All of us have the same goal, and that is to make sure each crew member goes home safely to their family every night. The employees here really do care about each other's safety, and that means more than anything when it comes to avoiding injuries."

Joy Smith, general manager of the Southwest Business Group, says, "El Paso's safety record is a fantastic accomplishment. They have stayed focused as a role model for the rest of us in the Southwest Business Group, and I am proud of them all."

Of the 30 crew base employees, 21 have worked injury-free for 12 years

"El Paso's safety record is a fantastic accomplishment."

**Joy Smith, general manager
Southwest Business Group**

or more. These employees include Conductors **George Arredondo, Roman Barragan, Juan Fernandez, John Marcee, Norman Marestein, Jimmy Moreno, George Natividad, Oliver O'Bryant, Danny Smith and John Wylie**; Engineers **Robert Berroteran, Bill Herron, Nickee Keene, Karl Kinstle, Edward Kollar, Roland Napoles, Charlie Torres, Ruben Villareal and John Stutes**; B&A Clerk **Lupe Medina**; and Ticket Clerk **Gilbert Page**.

*By: Dave Morgan
service manager, El Paso Crew Base*

Amtrak's international sales team courts travelers

Did you know that Amtrak serves South Africa, India, Australia and China?

No, we're not expanding our rail service to global markets. We're selling Amtrak to travelers from around the world.

Amtrak's International Sales team, including sales managers **Malcolm Smith** and **Steve Landi**, and senior director **Cyndi Darlington**, works with travel agents and tour operators in more than 70 countries to educate them on our products and services.

International Sales attends large trade shows, hosts travel suppliers from overseas for training seminars, and works on cooperative marketing agreements with vendors to get Amtrak's message out. And it's working. FY00 international revenue was more than \$15 million, and FY01 revenue is showing significant growth.

Another benefit is that overseas visitors are mainly interested in Amtrak's long-distance trains, and often travel during off-peak times. This is a market that can play a big role in building our business.

So the next time you meet someone in the station or on the phone who is planning to use Amtrak during their visit to the U.S., give them a smile and thank them for choosing Amtrak.

Amtrak's Sales team works with travel agents and tour operators in more than 70 countries to educate them on our products and services.

A M T R A K I N T H E N E W S

The critics need to understand that Amtrak provides a national benefit, and like air and highway travel it cannot survive unsubsidized. Congress should clear the way for bonds for high-speed rail.

"Face it rail needs subsidy." Los Angeles Times, October, 2001

It's clear now that rail travel is not just a nostalgia trip, but a crucial third leg of nation's transportation system. It took the grounding of the airlines to demonstrate what the United States should have recognized decades ago — this nation needs a strong passenger rail system. Now it's clear that it was a mistake to heavily subsidize aviation and automobile travel, but leave passenger rail stuck in the station. The plain truth is the United States needs a national high-speed rail system, whether it makes money or not.

"Get back on track." The Oregonian, October, 2001

Journeywoman congratulates Amtrak for the incredibly fine job they did moving travelers out of Chicago in the aftermath of the terrorist attacks. They anticipated properly and were well prepared to deal with the crush of extra travelers who weren't able to fly home as planned. Extra staff and supervisors were brought in to service these many new customers and to keep the ticketing lines moving as quickly as possible. Despite the many demands put on Amtrak staff they remained pleasant, polite and willing to help.

"The Journeywoman.com newsletter" October 2001

Advocates say high-speed rail is a competitive alternative to planes for trips of 500 miles or less. With expected airport security delays, they figure train trips of 45 minutes to two hours can compete with the shortest plane trips or intercity drives.

"Terrorist attacks increase interest in high-speed rail." Sarasota Herald - Tribune, October 2001.

The train, one of America's oldest forms of transportation, may become a come-back mode of choice as travelers look for alternatives to airline travel. Amtrak transported medical supplies, emergency personnel and victims' families to New York City after the tragedy, and hauled tons of extra mail across the country. And, Amtrak helped airline ticket holders by scheduling scores of additional trains.

"Back on track." The Philadelphia Inquirer, September 2001.

Amtrak is not just a Northeast phenomenon. The fastest growing Amtrak services can be found in California and Washington. The Los Angeles-San Diego Pacific Surfliner route is now the second busiest in the nation after the Northeast Corridor. Three-dozen states from across the country are now actively working on plans to develop faster, more convenient rail service. The states are willing to invest their own resources in passenger rail. But they continue to look to Congress for the same type of federal funding commitment that

launched our highway and aviation systems. That request has assumed new urgency.

"Congress should help Amtrak." Providence Journal Bulletin, October 2001.

The need for high-speed rail networks is clearer than ever, and additional funds are needed for new rail security measures and service improvements. Besides meeting new demands and responding to emergencies, there are other reasons to support rail investment. First, high-speed trains provide an alternative to congested highways and runways...Second, trains are more energy-efficient. They use about half the energy per passenger mile than planes do, according to studies done by the Department of Energy. Third, trains help prevent sprawl. In many communities, train stations are centrally located, which can spur downtown development.

"America turns to rail—when will Congress." The Sun, October 25, 2001

PROMOTIONS IN MOTION

Amtrak is prominently featured in a scoreboard advertisement at a football game between the 49ers and the Falcons.

Amtrak 'kicks off' with the 49ers

Sponsoring the NFL San Francisco 49ers for the 2001 football season was the first of many sports marketing programs Amtrak West kicked-off this fall.

In-field signage, radio sponsorships, and end-zone seating are just parts of the overall program. It's the first of its kind in the west, although sports sponsorships by Amtrak have been a major fixture in the NEC for years.

In addition to the 49ers activities, Ed McCaffrey, Denver Broncos Pro-Bowl wide receiver, has recorded a special Amtrak radio ad. On home game days, "Oakland Raiders Legends" ride to the game from stations along the Capitol and San Joaquin Corridors. Lucky fans can talk with such past Raiders stars as Mervyn Fernandez, Marv Hubbard, and others.

On the college front, UCLA football is hosting Amtrak tailgate parties, and has given Amtrak title sponsorship of the UCLA Women's Soccer Cup. Stanford is hosting an Amtrak booth at football games, and is throwing a "Big Game" party for 100 Amtrak guests.

Radio networks for Oregon State, the U. of Oregon, and the U. of Washington are also hosting promotions and Amtrak tailgate parties. At the U. of California, a special game train has been organized, and Amtrak is giving away a chance to travel to Arizona with the Cal football team.

"These partnerships allow Amtrak to 'score' new riders, and let our guests know Amtrak is a viable transportation choice for travel around the

country," said Cyndi Darlington, senior director of Sales and Marketing for Amtrak West.

Amtrak sponsors Back on Track America™

Amtrak and America Online are major sponsors of Back on Track America™, a grassroots coalition of corporations, non-profit organizations and business experts. The coalition is dedicated to helping support small businesses nationwide during these challenging economic times, particularly since Sept. 11.

Back on Track America launched a six-month nationwide rail tour in November to bring information, advice and free counseling directly to small businesses. Top experts in finance, human resources, marketing, technology, and legal issues will travel from city to city aboard Amtrak.

The experts will be joined by hundreds of volunteers, best-selling authors, and well-known entrepreneurs in a series of free public events in more than a dozen cities, including New York, Boston, Chicago, Dallas, Los Angeles, and San Francisco.

"Amtrak is pleased to have the opportunity to support the efforts of Back on Track America by providing transportation for the team," Amtrak President George Warrington said. "It is vital for all areas of business to work together to build the strength of America's small business community. It's these small businesses that are the economic heart of so many American communities."

Veterans benefit

continued from page 3

veterans of earlier wars were treated and appreciated by their country."

Higgins added, "In the context of Washington's words, I want to take this opportunity to acknowledge Amtrak for what they are doing for veterans."

David Lim, Amtrak's vice president of Marketing, participated in the ceremony. He announced our support for this program, and provided details on the 50-percent discount offer.

The program ended with a moment of silence in honor of POW-MIAs, and presentation of a wreath in honor of the nation's heroes, followed by a 21-gun salute and "Taps."

Security, Safety Departments consolidate

Safety has always been the number one priority for Amtrak. But, we are now taking it one step further. Because the work of safety and security are often intertwined, the Amtrak Police and System Safety departments have consolidated forces. In addition to strengthening existing partnerships, this newly formed department — System Security and Safety — will boost efficiencies and prevent duplication of efforts.

Since the consolidation more than two months ago, the department has visibly stepped up security and safety measures. Here's a quick overview of the newly implemented policies. We ask your help in enforcing them.

For Employees:

All employees must display photo IDs while on Amtrak property.

The Employee Watch Program helps target suspicious persons, objects or activities on or around trains, facilities or rights-of-way. Suspicious activity should be reported to the Amtrak police at 1-800-331-0008. You are the eyes and ears of Amtrak, so we ask you to please continue your heightened vigilance.

For Guests:

Effective Oct. 8, guests boarding at any station between Washington and Boston are required to have a ticket prior to boarding the train. Conductors will not ticket guests on board any train between these two locations.

Photo identification is necessary to purchase tickets from conductors on board trains in other areas of the country.

All guests 18 years or older must present a valid photo ID.

Guests may be required to answer security questions when purchasing tickets or checking baggage. A parent or guardian must purchase tickets for guests under age 18. (Valid photo IDs include a driver's license, government-issued ID or employee ID, passport, or university, college or high school ID.)

In addition, an automated computer program will continue to crosscheck ticket purchases and reservations against names on an FBI watch list. This includes transactions at Quick-Trak kiosks, ticket counters, and online.

Other measures:

The Amtrak Police Department will maintain a heightened presence in stations and facilities, on platforms, as well as on many trains. Station entrances and exits will be patrolled and access will be restricted as necessary.

K-9 units will be on heightened patrols throughout major stations.

Amtrak will continue to partner with federal, state and local law enforcement agencies in their efforts to apprehend individuals suspected of illegal activity.

The Security & Safety Information Center publishes regular "updates" regarding security and safety issues. To offer comments and ideas you have for future topics, please e-mail us at the Security & Safety Information Center or call the employee comment line by dialing 1-877-AMTRAK1.

Passenger rail service returns to Maine

Amtrak's 45-state passenger rail network grew one state larger last month, as strong, long-standing popular support and an active grassroots campaign helped to bring about brand new service between Boston, MA and Portland, ME.

On Dec. 14, Amtrak, state and local officials gathered in Boston's North Station to celebrate the launch of the *Downeaster*.

Several prominent figures were on hand to mark the beginning of *Downeaster* service, including Gov. Angus King of Maine, acting chairman of the Amtrak Board of Directors, Michael Dukakis; chairman of the Board for the Northern New England Passenger Rail Authority, Jonathan Carter; acting general manager for the Massachusetts Bay Transportation Authority, Mike Mulhern; President and CEO of the

Greater Boston Chamber of Commerce, Paul Guzzi; and Maine Senators Olympia Snowe and Susan Collins. After their remarks, Conductor **Al White**, who served as conductor on the last train from Portland over 30 years ago, proudly stood next to Track 7, raised his voice and called out, "All Aboard!"

With that, the nearly 400 invited guests moved out to the platform and began boarding as Gov. King christened the engine for good luck.

The inaugural trip lasted over four hours as the train made a whistle-stop tour, allowing each town to welcome the *Downeaster* with local fanfare and festivities. However, the regular service makes the 114-mile trip in about two hours and 45 minutes, stopping at a total of seven stations in three states.

L. to R.: Gov. Michael Dukakis and Maine Senators Olympia Snowe and Susan Collins look on as Gov. King christens the inaugural train.

Downeaster service makes four daily round-trips between Boston and Portland, stopping at Wells in Maine, Dover, Durham and Exeter in New Hampshire, and Haverhill in Massachusetts. The service will also make a seasonal stop at Old Orchard Beach in Maine, from June through September. Plans are also in the works for a stop at Saco, ME. The *Downeaster* service is the only form of transit linking Portland and the other coastal stops to Boston.

Capitol Corridor celebrates 10 years

Amtrak's *Capitol Corridor* service is the fastest growing service in the country. In its 10 years of operation, it has grown 300 percent to 18 daily trains, and ridership has jumped more than 530 percent to over 1.1 million guests annually. That's reason to celebrate.

To commemorate the 10-year anniversary of the *Capitol Corridor* service, a gala dinner was held last month at the California State Railroad Museum in Sacramento.

Citing a steady growth in ridership, Thomas Blalock, chair of the *Capitol Corridor* Joint Powers Authority Board, said, "Riding the train offers travelers an alternative to driving Interstate 80, which the train route parallels, and the trains are an economical, comfortable and reliable way to travel between downtown Sacramento and cities in the Bay Area."

The corridor parallels the highly congested I-880 and I-80 highway corridors between San Jose, Oakland/San Francisco, Sacramento and Auburn. Amtrak Thruway Motorcoaches provide dedicated connections between the trains and a number of areas in the Central Coast, Northern California, and Nevada.

At the gala dinner, **Gil Mallory**, senior vice president of Amtrak West, reminded the guests that six years ago, the *Capitol Corridor* was in danger of elimination in the face of a

Bush signs railroad bill

President Bush signed the Railroad Retirement and Survivors' Improvement Act of 2001 into law on Dec. 21, making the holidays a bit more special for many Amtrak employees.

The new legislation, more commonly referred to as the 60/30 bill, revises retirement benefits and contains financing/investment changes for railroad employees. It's based on recommendations from rail labor organizations and freight carriers.

One of the highlights of the bill is that it restores full early retirement eligibility at age 60 for railroad employees with 30 or more years of service. From 1974 until 1983, all employees could retire at age 60, without any reduction in Tier 1 benefits, if they had 30 or more years of service. Legislation enacted in 1983 provided full retirement at age 62. If an employee age 60 or 61 retired with 30 years' service, he or she took a 20-percent reduction in

George Warrington

With the start of the New Year, I'm confident that the positive results of 2001 will prove to be a foundation for success in 2002.

As you know, it has long been our goal that *Acela Express* would prove itself as the model for the type of high-speed rail system that we could introduce in any of the nation's 10 other federally designated high-speed rail corridors. And that's exactly what's happening.

As 2001 drew to a close, more than four out of every 10 *Acela Express* and *Metroliner* trains were sold out every day. We have stacks of favorable reviews from the media, with reporters and writers raving about the quality of the product, and the service provided by our onboard personnel. That's a testament to our commitment to deliver service excellence.

Because of the continuing success of *Acela Express* and other achievements, our support from governors, mayors, and business and community leaders is getting louder and louder. There's now more agreement than ever among policymakers that a truly balanced and intermodal transportation system must include a larger role for passenger rail, particularly within the nation's 11 high-speed rail corridors.

With that kind of growing support, I am increasingly optimistic about the resolution of what I call our "mission conflict," the impractical and destruc-

tive expectation that an inadequately capitalized company is capable of providing an extensive national public service and meeting a political definition of operational self-sufficiency.

From a resolution of Amtrak's mission and adequate funding to support it, we must start the process of developing higher-speed rail to connect major population centers, as a far more efficient alternative for the one-third of all domestic flights today that are 350 miles or less.

Fortunately, it appears that Congress is going to get engaged. Additionally, it appears that the Bush Administration may offer its vision of what U.S. passenger rail should be in the future. Debate is being driven by not only recent events, but also the expiration this fall of our current federal authorization.

So we have an exciting year ahead of us, one in which I think Amtrak will enjoy some well-deserved recognition. Your unfailing commitment to guest service and teamwork kept us ahead of every challenge last year. You have gotten fully energized in the effort to manage our costs and improve our productivity, and I urge you to maintain your resolve. We can't reach our goals without you.

I'll be proud to serve with you in making 2002 a milestone year for us all. Thank you for keeping faith in our product, and the power of genuine guest service.

Liquidation plan overturned

Congress has overturned a requirement that Amtrak submit a draft liquidation plan by Feb. 7.

Amtrak had been required to submit a plan to Congress after the Amtrak Reform Council, a federally-appointed body established in 1997 to oversee Amtrak spending, determined last November that Amtrak would be unable to become financially independent by 2003.

Amtrak and its supporters had expressed concern about the draft plan's effect on the company's relationship with creditors and lenders.

"The measure we passed sends a clear message that there are no plans to liquidate Amtrak," said Sen. Joe Biden of Delaware. "Congress sent a strong message saying Amtrak will not have to plan for its own liquidation—a requirement that wastes Amtrak's time and wastes the

"The measure we passed sends a clear message that there are no plans to liquidate Amtrak."

Sen. Joe Biden of Delaware

limited resources Amtrak has to meet the goal of self-sufficiency.

"We can not afford to ignore the lessons Sept. 11 taught us about the interdependence of our transportation system, and the vulnerability of that whole system when even one part is seriously disrupted—a lesson that the Amtrak Reform Council either failed to learn or simply chose to ignore. We in the United States Senate will not allow Amtrak

to be railroaded into extinction," Biden said.

Congress is now able to take on the task of defining the mission of our national passenger rail system, and to align financial resources to meet that mission, when considering Amtrak's funding reauthorization next year.

The language excusing Amtrak from submitting the plan is included in the defense appropriations bill for 2002 that Congress approved in December. In that bill, Congress also voted Amtrak an additional \$100 million for critical fire and life safety improvements in the New York Penn Station tunnels complex. While the company welcomed the additional funding, it expressed disappointment that Congress did not fully fund a request related to increased security costs Amtrak has incurred since Sept. 11.

Amtrak signage standards online

As part of the campaign to gradually introduce the company's new brand identity, some standards for station and office space signs are now available online.

Signage standards were originally developed in 1995, but have now been updated to reflect the new color scheme. A further update to include the new corporate identity will be made within the next several weeks. Sign standards have been incorporated into Amtrak's brand management web site because signs represent an impor-

tant component of our identity, even when those signs don't use the new logo.

If you have one of the 1995 signage standards binders, please visit the web site for the most recent information on colors and formats. The address is: www.signage.amtrak-brandmanagement.com. Or, it can be accessed from the main brand management site. If you're not

As with other applications of the logo, all design layouts with the new brand identity require approval from the Brand Management Team.

already authorized for access, you'll need to register online.

Within the new site, you'll find standards for basic directional and room identification signs. Those standards should be followed in all new signs for stations and Amtrak office space. The update coming in the next several weeks will include standards for exterior station identification and ticket office graphics.

As with other applications of the logo, all design layouts with the new brand identity require approval from the Brand Management Team. Approval information is available on the web site.

Designers, vendors and employees who complete a simple registration form can access the brand management web site. There has been positive response to the online format, which replaces printed manuals. It allows more flexibility in adding, correcting, and updating information, based on user responses. The format is another example of Amtrak moving into new technologies to more effectively manage our brand.

Amtrak tests ticketing at the gate

An all-reserved train is minutes away from leaving one of our busiest stations at a peak travel time. With coattails and carry-on bags flying, a breathless guest rushes up and presents the gate usher with a ticket. The wrong ticket—for a later train. And the ticket desk is hundreds of yards away. How's that for a challenge in managing guest satisfaction?

The company has tested a high-tech way to help the usher, and to guarantee satisfaction. It's a mobile ticketing workstation called "Mobi-Check." With a wireless connection to ARROW, the device is a fully contained ticketing unit, including a LED message sign and public address system.

It comes from the IER Corporation, the manufacturer of the 450 ticket printers recently installed under the Station Automation project. It was just tested in Washington Union Station for about a month at essentially no cost.

Ken Koehler, senior director, Customer and Sales Support, said, "This was a deal we could not refuse."

Mark Rose, the station's assistant general manager, Customer Service,

Mobi-Check earned positive responses from both ushers and the agents assigned to work the device.

managed daily operation of the device. Rose said, "We wanted to test the value of having the ability to provide ARROW-related services throughout the station, not just at the usual fixed points. This technology could better position us to meet the travel demands of our fast-paced, time-sensitive guests."

Services tested at boarding gates during the evaluation included ticketing; ticket exchanges, and upgrades; and, additional security check.

Mobi-Check earned positive responses from both ushers and the agents assigned to work the device. They reported that several guests expressed their appreciation for having this ticketing option available.

The project team is compiling its report now, and will make its recommendation to senior management soon.

Mohamed Ghazzar, a ticket agent at Washington Union Station, assists a guest at the Mobi-Check workstation. Ghazzar says, "It's great for helping customers at the last minute."

The route to our success

Strategic Business Plan Key Strategies

Since the 1998 launch of its new strategic direction, Amtrak has taken significant steps in rising to the challenge of reducing its reliance on federal funds to support operations. Driving Amtrak's actions are six key strategies.

Build a market-based network

Define customer demand, using extensive research, and then match our system with that demand.

Deliver consistent quality service

Change the culture of the company to be more guest-focused, and provide a world-class travel experience on every trip.

Revitalize the Amtrak brand

Introduce and support a new brand for Amtrak, to signal a major change to our guests.

Operate a cost-effective business

Identify specific functional areas, policies, organizational structures, and back-office costs that have potential for improved cost management.

Maximize public and private partnerships

Pursue public and commercial partnerships aggressively, through Mail and Express and other programs that generate the highest returns for the company.

Develop corridor services

Work with state and other partners to create or improve rail corridors across the country, drawing from the expertise we've gained in building Northeast Corridor services.

O N T H E R I G H T T R A K

Christmas on the Lake Shore Limited

Christmas Day in Chicago was a jolly one for many travelers at Union Station.

With great holiday cheer, Ole Saint Nick greeted children and the young at heart as they waited inside the station and relaxed onboard trains.

The *Lake Shore Limited* crew, along with Santa—A.K.A. engineer **Terry Chenore**—entertained passengers for hours. He was Santa all the way to Toledo!

L to R: Conductor John Harbin, engineer Terry Chenore as Santa Claus, and assistant conductor Leroy Rushing.

"They made it a lot of fun. I usually don't work Christmas Day, but I'm glad I did," said **Linda Latronica**, lead agent, Chicago Customer Services. "They're just the best crew. And by the end of the night on the *Lake Shore Limited*, nothing was stirring—not even a mouse."

Hollywood calls

Arshell Qualls, who works as a travel clerk at Los Angeles Union Station, is making a splash in Hollywood. Qualls has a part in an episode of a TV show called "The Steve Harvey Show." She appears in the "Lavenda's Baby Shower" episode, which was scheduled to air early this month.

The up-and-coming actress has had small parts in a number of projects, including the feature film, "Why do Fools Fall in Love." She was also seen in a recent Amtrak video about Service Success.

Philadelphia RSCC answers the call

Sixty years separate the events of Dec. 7, 1941, and Sept. 11, 2001. Many things changed in that time, but what remains unchanged is the ability of

(L. to R.) Team leaders Barbara Schmidt and Betty Fleming.

Americans to give selflessly. And, the folks at the Philadelphia Reservation Sales Call Center are no exception.

When the initial shock of the WTC and Pentagon bombings wore off, people began planning what they could do for the victims of these attacks. Team Leader **Betty Fleming** organized a bake sale, and then a chicken-wing day. Volunteers **Barbara Schmidt**, **Sharlene Gregg**, **Celestine Hill**, **Paula Phillips-Evans**, **Reggie Davis** and retiree **Fran Genovese** gave freely of their personal time to make the events a success.

Tim Walker, customer support agent, suggested that the proceeds from the vending machines, normally earmarked for gift certificates at Christmas, be donated by employees on a voluntary basis. With the approval of management, and help from team leader and employee vending committee chairman **Lee Sperling**, the program surged ahead. Nearly 200 employees participated.

In all, \$1,900 was collected from the food sales, and \$2,900 from the gift certificate donations. All proceeds were donated to the American Red Cross.

Amtrak honors America

Albany-Rensselaer is going "artsy" in honor of America's heroes. **Andrew Pellettieri**, artist-in-residence (and baggage clerk), has created a patriotic mural that is a spirited addition to the station's concourse. It's a touching tribute to America's pride and bravery through the years.

Pellettieri and his work in progress.

The mural highlights many American icons, including the Statue of Liberty, the emblems of New York City's police and fire departments, and of course Old Glory. Its inscription reads "We extend our thanks to America's heroes, past and present."

Always modest, Pellettieri is quick to thank his creative colleagues for their suggestions and support. "My fellow employees took great interest in this project and helped to speed along its completion. All that's left are some finishing touches," he said.

Foreman **Ray Guzowski**, as well as mechanics **Don Rivers** and **Charlie Ertz-Berger**, built the wall; lead baggage clerk **Joe McCallion Jr.** and baggage clerk **Fred Hiller** contributed to its design. All the employees share the sentiment expressed by Pellettieri's tribute.

Employee comes to passenger's aid

Ed Palmer, an AMT-2 instructor in the Metropolitan Division ET department, performed a life-saving service recently for a passenger onboard a New Jersey Transit train. Just as the commuter train left the Newark station, a call came over the public address system for medical assistance in the last car.

Fortunately for the ill transit passenger, Palmer, who is also an emergency medical technician, was already in the last car, sitting at the opposite end.

Palmer made his way through the crowded car until he found the passenger on the floor in apparent convulsions. As he checked the man's vital signs he found a medical identification bracelet, which identified him as a diabetic.

With his knowledge and many years of EMT experience, Palmer concluded that the convulsions were probably the result of insulin shock. He immediately asked if anyone had any orange juice. Thankfully, someone did. And, very quickly after being given the orange juice, the passenger began to come around. He later told Palmer that he had taken his insulin that morning, but had not eaten.

By the time the train rolled into New York, less than 15 minutes later, the ill passenger was fine and off to work. Palmer's training and quick thinking averted a potentially deadly situation.

Donation helps protect K-9 officer

Thanks to the generosity of postal employee **Jeff Campbell**, one of Amtrak's K-9 officers is working with some extra protection. Last month, Campbell presented Officer **Mike Apostolico** with a bulletproof vest for his canine partner, **Cijo**.

Campbell runs the annual Police Survivors Motorcycle Run, a charitable event that raises money to benefit law enforcement causes in Pennsylvania and New Jersey. This year's run had 17,400 participants and raised \$56,000.

He used some of that money to purchase face shields for horses in the mounted police, and to purchase bulletproof vests

Officer Apostolico and Cijo thank Jeff Campbell for his donation.

for K-9 officers like Amtrak's Cijo. Officer Apostolico was thrilled with the donation, and with the peace of mind that comes with knowing his partner is that much safer on duty.

'Well done, Miss Matthews!'

This past month, **Anitra Matthews**, a network instructor at Amtrak West's Oakland Maintenance Facility, took on responsibility for a drive to collect books for donation to the local school system. The book drive was a project of the facility's Employee Networking Committee.

From the beginning, Matthews created posters that advertised the drive; she put together nice display bins for the different locations, (i.e. stations and administration buildings) from Sacramento to Bakersfield. She delivered the bins, picked up the books, counted them, and distributed them to three different schools in the Oakland area.

The 1st Annual Amtrak Employee Networking Committee's Friends of the Library Book Drive was a big success, collecting almost 700 books for local schools in need. Committee members placed posters and collection bins at Amtrak stations and mechanical facilities throughout the California Corridor. The committee was created in Oakland in 1999 by a group of dedicated employees who wanted to provide Amtrak employees with a safer work environment and an atmosphere of unity.

She accomplished a lot, and this unselfish attitude is refreshing to see. It's nice to know we have thoughtful, dedicated employees working for Amtrak. She is very involved with the Networking Committee, which she started in our facility. The committee has held events and fundraisers to help raise money for employee functions, which help support a team spirit and morale.

I believe a "Well done, Miss Matthews" is in order. Keep up the great work Anitra!

By: **Dan Roberts**, general foreman Oakland Maintenance Facility

Dukakis visits Amtrak Intercity staff in Chicago

Susan Reed, reservation agent, talks with an Amtrak guest as Gov. Dukakis monitors the call.

Dukakis stressed the need for Congress to earmark dedicated funds for rail, just as they currently do for airports and highways.

Chicago Amtrak Intercity employees had the pleasure of meeting former Massachusetts Governor and current Acting Chairman of the Amtrak Board, Michael Dukakis, when he was in Chicago Dec. 13.

Dukakis was in town to "review the troops" and drum up support for Amtrak and high-speed rail in the Midwest.

Dukakis's day started with a radio interview on WGN's popular Spike O'Dell show, which was followed by his keynote speech to business, civic and political leaders at the City Club Breakfast. Many times over the course of the day, Dukakis stressed the need for Congress to earmark dedicated funds for rail, just as is currently done for airports and highways. Dukakis stated that the amount needed would be a fraction of the \$45 billion in subsidies that airports

and highways receive annually (and which does not include the \$15 billion bailout that airlines received shortly after the Sept. 11 attacks).

Accompanied by Senior Vice President **Don Saunders** and Government Relations Vice President **Cheryle Jackson**, Dukakis then went to Chicago Union Station where he was warmly greeted by Amtrak employees. He offered his commendations to everyone for their dedication and hard work, especially during the Sept. 11 crisis, and answered several questions. His next stop was a crew briefing on the *Empire Builder*, which was followed by a lunch with business leaders sponsored by the Chicagoland Chamber of Commerce.

Next was a meeting with Mayor Richard Daley where Dukakis pressed for support for a high-speed

rail network in the Midwest with Chicago as its hub. Dukakis pointed out that a regional high-speed system that connected Chicago with Detroit, St. Louis and Madison, WI, among other cities, could be run by Amtrak and tied in with other regional high-speed rail hubs on the East and West Coasts and in the Southeast and Southwest via long-distance service.

Dukakis ended his day at the Reservation Sales Call Center and where he met with employees and answered questions. In addition, he also put on a headset and took a guest call with one of the reservationists.

In addition to thanking all the employees for their hard work this year, he also said he would do his best to fight for the funding Amtrak needs to do a better job.

Ground Zero workers receive vacations, courtesy of Amtrak and SouthCoastUSA

In appreciation for their courageous efforts, Amtrak and SouthCoastUSA, a regional tourism partnership, have provided 550 vacation packages to rescue workers at New York's Ground Zero. The project, called "Operation Open Arms," is the Gulf Coast region's way of saying thank you by offering a getaway to the men and women who are working so tirelessly on the recovery efforts.

Each of SouthCoastUSA's convention and visitor bureaus contacted its members and area businesses to create vacation packages, which

include accommodations, meals from local restaurants, tickets to local attractions, and rounds of golf. Amtrak will provide transportation, donating 200 tickets to the project.

"When SouthCoastUSA called, we embraced their plan to provide these getaways to some of our most heroic Americans," said **Barbara J. Richardson**, Amtrak executive vice president. "We're pleased to have the opportunity to show our appreciation."

SouthCoastUSA is a coalition dedicated to promoting leisure travel to

the United States' Gulf Coast region. The coalition includes the convention and visitor's bureaus and chambers of commerce from cities in Florida, Alabama, Mississippi, and Louisiana.

Amtrak's partnership stems from the route of its *Sunset Limited*, which travels along the Gulf Coast as it makes its way from Orlando to Los Angeles. Other Amtrak product lines that travel to the Gulf Coast region include the *Crescent* (New York-Atlanta-New Orleans) and the *City of New Orleans* (Chicago-New Orleans).

President Bush signs bill into law

continued from page 1

Tier 1. The new law basically upholds the earlier provision.

The bill also eliminates a cap on monthly retirement and disability benefits, lowers the minimum service vesting requirement, and provides increased benefits for some widows and widowers.

The financing sections of the new law provide for the investment of railroad retirement funds in non-governmental assets, and make adjustments in the payroll tax rates paid by employers and employees, among other things.

Following are brief details about the bill:

Benefits:

60/30 retirement. The new law eliminates the early retirement reduction applied to the annuities of 30-year employees retiring between the ages of 60 and 62, if their annuities begin Jan. 1, 2002, or later.

Maximum provision. There is no longer a limit on the amount of combined benefit payments an employee and his/her spouse may receive on a monthly basis. The cap was intended to prevent benefits from exceeding an employee's creditable earnings prior to retirement.

Basic service requirement. The minimum eligibility requirement for

regular railroad retirement annuities was lowered from 10 years of completed service to five years, if performed after 1995.

Survivor benefits. The new law establishes an "initial minimum amount" that is based on the two-tier annuity amount that would have been payable to the employee at the time the widow's or widower's annuity is awarded. The initial minimum amount is computed for the survivor's Tier II amount, which is equal to 100 percent of the employee's Tier II amount. Under prior law, the survivor's Tier II amount was equal to 50 percent of the employee's Tier II amount; only the Tier I amount equaled 100 percent.

Financing/investment

Railroad retirement funds can be transferred from the Railroad Retirement Accounts to a new National

Railroad Retirement Investment Trust, whose board of seven trustees is empowered to invest trust funds in non-governmental assets, such as equities and debt, as well as in governmental securities.

In the future, a qualified non-governmental financial institution, rather than the Treasury Department, will issue railroad retirement benefit payments. The Railroad Retirement Board would select the institution. In the meantime, retirement payments will continue to be processed through the U.S. Treasury.

Complete text of the news release issued by the Railroad Retirement Board (RRB) is available at www.rrb.gov. Employees with specific questions should contact the RRB office nearest them.

Outstanding Amtrak achievements from 2001

Amtrak employees made the year 2001 a memorable one. During the past 12 months, it was the great efforts made by employees that enabled Amtrak to establish new partnerships, sustain safe operations, expand our presence in the travel and sports markets, and give people plenty of reasons to try Amtrak again and again.

The New Year will bring great challenges, but our foundation is solid.

More than one million people have enjoyed the exceptional service and amenities onboard *Acela Express* during its first year on the rails.

Amtrak employees are that foundation, and they continue to prove that they are committed to success. As always, Amtrak will count on the contributions from its dedicated employees to make the New Year even better.

Here are just a few of the past year's many achievements:

Amtrak responds to Sept. 11 tragedy: When the nation's sense of security was shaken, Amtrak employees kept the railroad running safely so that people could unite with family and loved ones. For three days after the attacks, Amtrak was virtually the only transportation service available connecting New York to the rest of the country. In the days to follow, Amtrak provided free transportation for victims' relatives, military personnel, Red Cross workers, other emergency services workers and airlines personnel. Our trains also carried thousands of emergency medical and recovery supplies to Ground Zero.

One-year anniversary of high-speed rail and *Acela Express*: More than one million people have enjoyed the exceptional service and amenities onboard *Acela Express* during its first year on the rails. Ticket revenue total nearly \$100 million. *Acela Express* was designed to be the quietest, smoothest-riding train in America's passenger rail service—and it is. It was also meant to boost Amtrak's competitive edge against the airlines for travel between Washington and Boston—and it has. *Acela Express* widens the gap between rail and air for a quality on-board experience.

Amtrak Guest Rewards: Although Amtrak Guest Rewards was introduced late last year, 2001 has been a phenomenal development year for the program. Our guests earn points for every dollar spent on Amtrak trips. Those points can be redeemed for train

trips, and other rewards such as hotel stays, rental cars, gift certificates, and more. The benefits are clear to our guests. The program now boasts 300,000 members. By making it more rewarding to travel on Amtrak, this program is helping to build a more loyal customer base and increase revenue.

Amtrak brings service to Maine: With its newest service—the *Downeaster*—Amtrak now makes stops in Maine, New Hampshire, and Massachusetts, and is the only form of transit linking Portland and seven other coastal towns to Boston. Service and amenities onboard the four daily roundtrip *Downeasters* have been designed to meet the needs of business travelers, as well as those venturing to Boston for a day of historic sightseeing, or to the coast of Maine for an enjoyable day at the beach.

Amtrak is awarded Caltrain and Coaster contracts: Beating out several tough competitors, Amtrak won contract renewals for both *Caltrain* and *Coaster* commuter services. Amtrak has operated the *Coaster* service since 1995, and has maintained an exceptional safety and OTP record. Celebrating the renewed *Caltrain* contract, Amtrak President **George Warrington** thanked employees for their dedication and commitment, saying, "The key to us retaining this contract has been your focus on safety, guest service and other performance factors."

Beating out several tough competitors, Amtrak won contract renewals for both *Caltrain* and *Coaster* commuter services.

20-year blueprint for California rail development: Amtrak and the state of California released the first-ever comprehensive improvement plan for passenger rail service. The plan responds to the growing gridlock in California's vast and complex transportation system by increasing mobility and providing more choice for travelers.

1-800-USA-RAIL gets "human" quality: Many guests can now experience one of the most exciting enhancements to Amtrak's automated reservations system—speech recognition. Converting Train Status and Schedules and Fares to speech recognition is just the beginning of a multi-phase project to replace the entire touch-tone VRU with this modern technology. Callers to 1-800-USA-RAIL who choose these automated options are greeted by a

continued on page 11

Amtrak celebrates double milestones for *Acela Express*

One successful year of service: One million guests served and \$100 million in revenue.

***Acela Express*, America's first true high-speed passenger rail service, is poised to be the model for high-speed passenger rail service throughout the country.**

Amtrak employees have provided our guests with exceptional on-board service and *Acela Express* has provided them with a smooth, quiet ride that keeps them coming back again and again.

Dec. 11 was the one-year anniversary of *Acela Express*, and employees were invited to help celebrate its success and to welcome the addition of a new frequency out of Boston. The new frequency brought the total number of departures from Boston to nine, just one shy of the full schedule of 10.

The celebration was at Boston South Station, and Gov. Michael Dukakis, acting chairman of Amtrak's Board of

Directors, spoke about the importance of high-speed rail, not only in the Northeast, but also throughout the country.

By the end of 2001, *Acela Express* had carried more than one million people and had brought in over \$100 million in revenue.

From the beginning, Amtrak's prediction was that once at full service, the high-speed train would post annual revenues of \$300 million, and net \$180 million. We are still confident that will happen. All indications show that *Acela Express* will eventually make a net contribution of \$180 million over and above what we did before the new service.

In the first few months of service, ridership and OTP presented some challenges. But by the end of December 2001, Amtrak was experiencing many sold-out trains daily in first and business class, and OTP was well into the 80 percentile.

Amtrak's *Acela Express* can be the model for high-speed passenger rail service nationwide. Local and national leaders see the potential benefits that a nationwide network of high-speed corridors would have for both their regional economies and the nation.

In partnership with Amtrak, many states have already invested hundreds of millions of dollars in inter-city rail projects. And moving ahead, dozens of states are working with Amtrak on the development of high-speed rail service.

Until expanded funding is available to invest in the infrastructure for high-speed rail around the country, Amtrak will stay focused on operating an exceptional service within the Northeast. *Acela Express* is truly a model: Employees

December 2000: *Acela Express* inaugural arrives in Boston.

committed to providing exceptional on-board service and to maintaining the trainsets, and guests enjoying unparalleled comfort and convenience.

Right Care...Day One

The evidence is in and the diagnosis is clear: Right Care...Day One, Amtrak's medical care management program, is making a real contribution to the well-being of employees who have sustained job-related injuries.

Right Care...Day One is a voluntary on-duty injury disability management program. It gives injured employees prompt access to the highest quality medical care through a specially designed network of occupational health providers. Employees who join the program may also be provided with a case manager – such as a registered nurse – to help them throughout the recovery process.

Finally, the program gives employees the opportunity to return to produc-

tive employment as quickly as possible through transitional work. When able, employees are given the option to work their regular job assignment modified to meet their medical restrictions, or to be assigned an alternative-work assignment until they are ready for full duty. These alternative assignments are either internal or external to Amtrak. The alternative work assignments do not conflict with collective bargaining agreements.

Right Care ...Day One is a joint labor-management project originally piloted in the Mid-Atlantic Division of the NEC in May 1999. It proved to be tremendously successful in reducing lost-time days, and was rolled out across the Amtrak system starting in October 2000.

For FY2001, its first year of corporate-wide operation, Right Care...Day One achieved a 39-percent reduction in lost-time days. Thanks to the program, the average number of lost-time days per injury has decreased from 46 to 27.

The Right Care...Day One program helps create a win-win situation for Amtrak employees and for the company. Employees receive top-of-the-line medical care from specialists, are able to choose from a wide array of medical options to aid in their recovery, and can make a gradual transition to full duty. Amtrak benefits by having a healthy, full-strength work force.

"Right Care...Day One is a great example of how labor and manage-

"Day One is a great example of how labor and management, working together, can really change things for the better."

Joe Bress, vice president of Labor Relations

ment, working together, can really change things for the better," said **Joe Bress**, vice president of Labor Relations. "It is well on its way toward becoming an integral part of our corporate culture."

Seventeen cities receive grants from the GASF to revitalize local rail stations, economies

Seventeen cities, including several that Amtrak serves, have been honored for their efforts to preserve, restore and improve local rail stations. Honorees were selected to receive \$265,000 in grant money from the Great American Station Foundation (GASF), a national non-profit corporation that promotes economic development through the revitalization of active railroad stations.

The winners were selected from 52 applications submitted by communities in 24 states. Individual grant amounts ranged from \$2,500-\$30,000.

"These grants provide money to support local efforts to revitalize these important public spaces and trigger additional economic development," said Hank Dittmar of the GASF. "We're pleased at the level of interest displayed in station revitalization from around the country,

and particularly happy that this year's grant winners combine economic revitalization with the provision of convenient transportation choices."

To promote development beyond the doors of the stations, grantees include those stations with the potential to provide a variety of travel options including Amtrak, commuter rail, intercity bus, and local transit as well as support vehicle, bicycle and pedestrian activity.

"Station revitalization can provide the spark that brings downtown back to life," said John Robert Smith, chairman of the foundation's Board of Directors and mayor of Meridian, MS, which revitalized its Amtrak station a few years ago. "Our station project in Meridian has sparked over \$18 million in investment in our downtown at the same time that it has prompted a boom in Amtrak ridership."

For a detailed summary and photo of each winning project, along with more information on the Great American Station Foundation, visit www.stationfoundation.org.

The 2001 honorees include

- Kingman, AZ
- Fresno, CA
- Grand Junction, CO
- Hollywood, FL
- 79th Street Station in Miami, FL
- Centralia, IL
- Mattoon, IL
- Normal, IL
- Lawrence, KS
- Louisville, KY
- Natchitoches, LA
- Edgewood, MD
- Deming, NM
- Myrtle Beach, SC
- Wharton, TX
- Brookfield, WI

Employees displaced by fire thank coworkers for support

One night in October 2000, three fires in the Boston area left over 120 people homeless, including three of our coworkers and their families.

Andrea O'Connor and **Luann Litif**, both coach cleaners at Boston's Southampton Yard, and **Michael Nee**, an assistant conductor in Boston, lost everything to fire and water damage. Along with their families, the three were placed in emergency housing provided by the city of Boston.

A story in *Amtrak Ink* last year informed readers that an emergency fund had been established for the employees, and that donations of money or items for the families were being accepted.

Now, a little over a year later, O'Connor, Litif, and Nee want to extend their deepest appreciation to every Amtrak employee who donated, and to those who supported them in other ways during their difficult time.

"The kindness of people who I've never met, and probably never will, was overwhelming to me, and I think about their many kindnesses every day. God bless everyone at Amtrak. I don't think there could be a place to work for that is more like a family than here," O'Connor said.

The organizers of the relief fund received close to 100 calls regarding the effort. Some people sent change,

others took up an office collection, and others sent personal checks. All was appreciated and went a long way.

Almost \$7,000 was raised and divided between the three, as were the usable goods that were donated.

"Everyone was so helpful, with the time I needed off, and there was plenty of that, the money came in handy. Thank you to everyone, and a safe and blessed holiday to everyone at Amtrak," Litif said.

AMTRAK IN THE NEWS

We need Amtrak ... not just when we feel air travel is unsafe, but as another source of transportation. Increased train travel would reduce the crush of air travel that is overburdening airports and causing expansions to be inadequate even before they are completed. An expanded rail system would also reduce the amount of automobile travel and help improve the air qualities we discovered September 11. We need our trains.

"September 11 events remind us we need Amtrak." The Oakland Tribune, October 2001

Congress' 1997 requirement that Amtrak wean itself from federal operating subsidies may be appealing to those who oppose most federal largess, but Amtrak is more than another example of what some see as federal welfare. It's a vital link in the nation's transportation system. Congress should recognize that fact and remove the self-sufficiency deadline and then act to shore up Amtrak's equipment, routes and security needs.

"Lift Amtrak's deadline." Register Guard, Eugene, OR, November 2001

The self-sufficiency requirement imposed on Amtrak is stupid. No passenger railroad anywhere in the world pays its own way; neither do other forms of transportation in the United States. From the airlines (currently being bailed out with billions of tax dollars) to the cars and trucks that travel on government-built free highway. To let Amtrak go down the drain—or even to let it continue to limp along without the support and resources it needs—would be folly.

"Amtrak Folly." Times, Trenton, NJ, November 2001.

We give \$15 billion in aid to the airlines but refuse to help Amtrak, which has substantially increased its services in the last few months. Amtrak needs money to upgrade its infrastructure, which would cost much less than what is consistently paid to support air travel and highways.

"Amtrak deserves aid." Editorial Letter, The New York Times, December 2001

RAILWAY ROUNDUP

Foster children ride Amtrak for a day of fun

About 100 foster children got a chance to ride the *Crescent* to Meridian, MS, for a day of fun.

Amtrak donated four one-day outings to the Rowell Foster Children's Positive Plan (RFCPP), a non-profit corporation that supports enrichment activities for young people in foster care in New Orleans. Actress Victoria Rowell founded the organization, and the premiere of her latest project, Showtime's "Feast of All Saints," was a fundraiser for the group. Amtrak sponsored RFCPP at the premiere in New Orleans on Oct. 24, and followed up by donating train trips for the children.

On Dec. 1, the first group of 25 kids, along with Rowell, boarded the *Crescent* in New Orleans. When they arrived in Meridian, MS, the group was greeted by Amtrak board member, Mayor John Robert Smith. After a quick lunch in the historic Meridian train station, a trolley took them to various sites in the city for a day of sightseeing.

The 100 children are from the Bethlehem Children's Treatment Center and the House of the Family School, which have long histories of caring for foster children. In addition, guides from Amtrak's "Trails and Rails" program provided the children with historical information along the route.

"Meridian is a great place for children to live and visit. I am proud to show these kids a good time in our great city," said Mayor Smith. "It's great to work with Amtrak and the Rowell Foster Children's Positive Plan to give these young children a chance to experience the joy of long-distance train travel."

Acela Express children's video available in stores

Amtrak and Trainfans, Inc., a creator of entertainment products, have produced a children's video/DVD featuring *Acela Express*. In "Kayla and Alec Ride the Acela Express," two young friends enjoy a train journey from Boston to Washington, D.C. and learn about riding the rails. It also includes segments on the construction and maintenance of the trains. Most major book and video retailers carry the product.

A grand affair in Columbia, SC

Once again, the Amtrak team in Columbia, SC, hosted a holiday party—and 15,000 people attended.

Phillip Jones - Operation Lifesaver volunteer and ventriloquist, with child grand prize winner.

For the past seven years on the Thursday before Thanksgiving, the station has hosted an event known as Vista Lights. The evening celebration ushers in the holiday season for the Vista neighborhood, but people from far and wide come to combine the festivities with a night of shopping, dining, and fun.

The day actually starts earlier, with a live broadcast on the "Good Morning Columbia" radio show on station WIS. Listeners call with questions about the day's activities, and to share their Amtrak travel experiences. Amtrak employees are at the station all day, providing travel information, answering questions, and promoting Operation Lifesaver and rail safety.

Employees look forward to their roles among the neighborhood crew of 40-50 volunteers who prepare and present the festivities. They offer much of their own time and resources to plan the event, decorate, and set up displays.

Vista Lights features entertainment by local musical groups, delicious food, and door prizes for all ages, including guest passes to the Columbia Museum, wooden whistles for children, and the grand prize of a deluxe round-trip for two adults on Amtrak.

Pappy Sherrill, a renowned local fiddle player who has been featured every year at Vista Lights, played his final note at this year's event. He died just two weeks later, and he will be missed.

Ticket agent, Columbia, SC

Play (foot)ball!

Diehard college football fans appreciate any game, but they'll always tip their mugs to the legendary Army-Navy rivalry. And when the two service academies took to the field on Dec. 1 for their annual game, Amtrak was in the thick of it.

Army and Navy typically duke it out in Philadelphia. This year, Amtrak continued its tradition of transporting the Secretary of the Navy and the

Secretary of the Army, along with their staffs and guests, to the big game. The train pulled out of Washington Union Station right on time, and made a flawless trip to Philadelphia and back.

Guests gushed over Amtrak's timeliness and friendly service. (The trains arrived early on both legs of the trip, a welcome relief for excited fans!) Both trips were staffed entirely by T&E, mechanical, station services and Acela product line volunteers. Score a touchdown for Amtrak's terrific performance!

It's a wrap

Amtrak rang in the holiday season colorfully. In late November, New York travelers got some gift wrapping out of the way at the annual 3M holiday gift wrapping contest at New York Penn Station.

Guests competed for the "most creative wrapping job," and they also learned some tricks for securing those oversized and tough-to-wrap presents. Hint: Use plenty of tape!

MARC and VRE hosts successful Toys for Tots drive

Every year, Commuter Services coordinates a MARC and VRE toy drive.

In a balancing act of brief cases, laptops, and tote bags, VRE commuters

manage to bring in their toys to leave onboard the trains. Those toys are then collected by VRE mechanical employees at the Coach Yard in Washington, and are organized for pick-up by the Marine Corps.

Guest son MARC trains take their toys to Gate A in Washington Union Station, where they are greeted by Santa (Timmy O'Neil) and his helpers from the Terminal Services Safety Committee: Art Tram, John Eskew, Jim Hardy, Frank Hudson, Bruce Rowland, Roxanne Wilmot, and many others who help with this event. Also on hand are representatives from the Marine Corps Reserves to collect toys and donations.

This year, MARC collected over \$4,850 in donations and 1,098 toys, and the VRE collected \$9,300 in donations and over 1,130 toys. This makes the combined cash total from commuters and Amtrak employees \$14,150 — over \$3,000 more than last year's drive!

"The desire of people in the Washington area to help others in need is certainly evidenced by the overwhelming generosity of those who participated in this year's Toys for Tots drive," said Linda Davenport, Commuter Services.

Amtrak West enjoys Holiday Open Houses

Station agents and staff at various Amtrak West stations served refreshments, and solicited food and toys for needy families during their annual Holiday Open Houses throughout December. The food and toy drives benefited charitable organizations like the U.S. Marine Corps' "Toys for Tots," and "Families First."

Station staff led the efforts to generate goodwill and thank the communities for their support all year. The stations that voluntarily participated were Bakersfield, Martinez, Van Nuys, San Luis Obispo, San Juan Capistrano, Davis, and Fresno, San Diego, Santa Ana, and Edmonds.

When asked about how their event went, Mike Garetti, of the Van Nuys station, responded, "Very nice! Gail Cunningham and Dolly Dappa did a great job. We got lots of donations for our toy drive. Krispy Kremes donated 20 dozen doughnuts. Starbucks donated coffee. Local stores donated gift certificates."

Amtrak teams up with local Marine Corps for another successful Toys for Tots drive.

Alice Pinkney, from the San Diego station said "We decorated the station interior and gave out candy canes to all our guests. It made us feel good."

Steve Keller, at the Martinez station, reported, "The station was full of people. Santa was there, along with the kids' choir from St. Catherine's. A lot of toys were collected, and we had plenty of food, cookies and apple juice, thanks to Salli Spoon. And we honored our volunteer train spotter, Jim McLaughlin, with a banner in the station."

Thanks to all of our excellent station staff for their hard work!

Capitol Corridor celebrates 10th year

continued from page 1

national route restructuring. "But thanks to the foresight of those who founded the service, who invested in the service, and who formed partnerships to continue funding, guiding, and working together – we are presiding over the fastest growing service in the nation," he said.

Gary Burke, a popular conductor on the service, called out his usual "Goooooood Morning!" when requested by Estelle Shiroma, a representative from the CC Riders, an informal group of guests who regularly ride the *Capitols*. Shiroma listed the "Top Five Reasons to Ride the Capitols" at the gala.

The California Passenger Rail System 20-year Improvement Plan calls for service to grow to 36 trains a day – or hourly service – between San Jose and Sacramento, and additional service north, eventually extending to Reno. Under that scenario, ridership is expected to reach 3.1 million guests annually.

Top Five Reasons to Ride the *Capitol Corridor*

(by Estelle Shiroma)

5. If you think you're a dull person, you can tell people that you take the train to work. That immediately makes you more interesting.
4. It's the easiest way to meet hundreds of people that you can call your friends. You can get legal, medical, and financial advice from fellow riders.
3. If you take the early train, you can get to work before your co-workers. That will make you look more productive and dedicated.
2. If you fall asleep on the train, your favorite morning conductor will greet you with a wakeup call that sounds something like... "Goooooood Morning!"

And the No. 1 reason to ride the Capitol Corridor trains ... (drum roll, please)

1. The train takes cars off the highways and helps the environment. You can smile when you see the backup on I-80, especially on a Friday night.

Amtrak service returns to Louisville's Union Station

For the first time in over 20 years, on Dec. 4 an Amtrak train journeyed over the beautiful Ohio River with its official destination being downtown Louisville, KY.

Louisville Mayor Dave Armstrong, Amtrak Intercity Senior Vice President **Don Saunders**, and other dignitaries made the inaugural trip connecting Amtrak's *Kentucky Cardinal* train service from Jeffersonville, IN to the historic Union Station in Louisville. A large, enthusiastic crowd and a strong contingent of news media gathered to witness an historic "Golden Spike" ceremony.

"Bringing this long-absent train service back into our downtown will deliver benefits to passengers and our community, and build on our efforts to make Louisville a better place to live, work and play," said Mayor Armstrong. "Visitors will step off the train at historic Union Station and be in walking distance of several amenities and attractions in the downtown area. Additionally we have other transportation connecting at Union Station so passengers from Amtrak can connect to locations throughout the city and beyond."

In addition to the Amtrak service, Louisville's Union Station is the hub of the Transit Authority of River City (TARC) and provides connection with Greyhound bus service as well.

"Strategic partnerships and inter-modal connections like these are vital to the continued growth of the national passenger rail system," said Saunders. "Amtrak has been pleased to work with the City of Louisville, TARC, and our rail partner to connect this important passenger market with the rest of the country by rail."

The *Kentucky Cardinal* began its daily, overnight service from Chicago to Jeffersonville, on Dec. 18, 1999, ending a 20-year absence of passenger rail service in the Louisville metropolitan area. The train has performed above expectations, and has experienced steady ridership and revenue growth. By the end of FY01, after its first two full years of operation, ridership had grown 12.4 percent, to 55,109 guests. And, now that Amtrak is serving Union Station, growth in ridership is expected to continue.

Amtrak achievements from 2001

continued from page 6

friendly voice that walks them through the process of getting the information.

'Quiet Cars' on the Northeast Corridor: In response to rave reviews from Amtrak guests during its pilot program, Amtrak's wildly popular Quiet Car is now on nearly every weekday train, including *Acela Express*, between Washington-New York-Boston. On most trains, this designated car is the first coach car behind the locomotive. "In this society of increasing noise, it's nice to be able to give our guests a small oasis," said **Stan Bagley**, executive vice president of Operations. "With the Quiet Cars, people have a chance to unplug for a

short time from the wired society we live and work in."

The return of daily service to Louisville, KY: Daily service has returned to Louisville, KY, completing the final leg in the *Kentucky Cardinal's* journey from Chicago, IL. Amtrak now provides daily service on the train with two daily departure/arrival times. The *Kentucky Cardinal* began its daily, overnight service from Chicago to Jeffersonville, IN, on Dec. 18, 1999, ending a 20-year absence of passenger rail service in the Louisville metropolitan area. The train has performed above expectations and has experienced steady ridership and revenue growth.

Home link to Amtrak Intranet getting upgrade

Amtrak Technologies (AT) will be making a major upgrade to the software that provides access to the Amtrak Intranet from home PCs.

That link is called the Remote Access Intranet Link, or RAIL. Since its introduction late this past summer, nearly 800 employees have downloaded it onto their home PCs.

The improvement will have technological benefits for AT, and it will enable authorized users to have home access to other applications, such as ARROW, the SAP database, and more.

Even though those benefits will be transparent to most users of RAIL, all current users will still have to re-register, and download the upgraded software. After a certain grace period, the current software will no longer be operational.

Our RAIL technology team apologizes for the inconvenience, but this is a necessary improvement. Users will be notified when the upgrade is ready early this year, and AT will guide everyone through the steps that must be taken.

PROMOTIONS IN MOTION

New promotion features sweepstakes for free travel

Whether it's a trip to the mountains to ski or an excursion to the beach for some fun in the sun, Amtrak can get you there, and guests can bring along a friend for free. Beginning in January, Amtrak is offering a buy-one-get-one-free offer on select routes from coast-to-coast and kicking it off with a free travel sweepstakes.

Amtrak's buy-one-get-one-free winter promotion is available for purchase from Jan. 2 through Feb. 21, 2002, for travel Jan. 9 through Feb. 28, 2002.

Guests can take advantage of the winter promotion and enter to win great prizes by logging onto www.amtrak.com. Through the On Track to Win sweepstakes, amtrak.com visitors can register to win fantastic

prizes. The sweepstakes' grand prize winner will receive a complete air/rail package for two to any Amtrak destination, hotel and rental car accommodations, and \$500 cash.

In addition to the winter promotion, families traveling together can enjoy even greater savings. Two adults may travel using the buy-one-get-one-free promotion with up to four children ages 2 to 15 traveling at half price.

Members of Veterans Advantage and Student Advantage are also eligible for even more savings as the winter promotion can be combined with these discounts.

The winter promotion is available on many of Amtrak's most popular routes. However, it is not available on Amtrak's *Acela Express*, *Metroliner* and *Auto Train* services.

BENEFITS CORNER

Retirement 401(k) savings plan improvements

Effective Jan. 1, 2002, Amtrak's retirement 401(k) plan has been improved to help you save more for the future.

Increased contributions

The maximum amount you may contribute to your account on a tax-deferred basis will increase from \$10,500 to \$11,000. This limit will go up \$1,000 each year for the next five years.

Also, Amtrak has increased the maximum percentage of pay that you may contribute to your account:

will increase each year until it reaches \$5,000 per year in 2006.

Saver's credit

Employees who contribute to the retirement 401(k) savings plan (or an IRA), and who fall into certain income brackets, may be eligible for a special tax credit. The amount of the tax credit will be 10 to 50 percent of your contributions, depending on your income.

The amount of federal income tax you owe will be reduced, dollar for dollar, by the amount of the tax credit you are eligible to receive. For example, if your tax credit is \$500, the amount of your income taxes will be reduced by \$500.

	Management Employees		Agreement-covered Employees	
	2001	2002	2001	2002
Tax-Deferred Contributions	12%	40%	10%	40%
After-Tax Contributions	5%	10%	N/A	N/A

Extra contributions for older participants

Employees age 50 and older may contribute an additional \$1,000 per year to their accounts — increasing the maximum contribution amount to \$12,000 in 2002. The limit for extra annual contributions

For additional information about the improvements to the retirement 401(k) savings plan, contact the Amtrak Benefits department at (202) 906-3913, or Vanguard at 1-800-523-1188. You can also visit the Vanguard website at www.vanguard.com.

***The tax credit is limited to the first \$2,000 of your contributions.**

Income Tax Filing Status	Adjusted Gross Income	Your Saver's Credit Rate*
Married, filing joint	\$0 - \$30,000	50% of contribution
	\$30,001 - \$32,500	20% of contribution
	\$32,501 - \$50,000	10% of contribution
Head of household	\$0 - \$22,500	50% of contribution
	\$22,501 - \$24,375	20% of contribution
	\$24,376 - \$37,500	10% of contribution
Single, married filing separate, qualifying widow or widower	\$0 - \$15,000	50% of contribution
	\$15,001 - \$16,025	20% of contribution
	\$16,026 - \$25,000	10% of contribution

Laptop theft

The use of laptop computers to accommodate business travelers and remote access is growing. Unfortunately, so are the incidents of laptop thefts.

Beyond the theft of the equipment, the greatest loss is often the critical information that was stored on the laptop. Laptops may contain valuable and/or proprietary information. In addition, laptops may be used to store personal information such as bank and credit account numbers and social security numbers.

One out of every 10 laptops sold this year will end up stolen; the reconstruction of stolen laptop files will cost \$1.5 billion dollars in 2002; there are over 360,000 laptop thefts every year—and most of them are preventable.

In most cases, laptop theft is made easy because laptop owners fail to take precautions to prevent theft. Police, security experts and even laptop thieves themselves suggest the following precautions to prevent laptop theft:

For the office

Do not leave laptops unattended, in an open and unsecured area. When in the office, secure your laptop and place it out of sight when you're away from your desk, or use a locking device to fasten your laptop to your desk.

For travelers

Don't use a standard, easily identifiable carrying case.

Remove organization logos on bags or luggage tags. Don't let your laptop case "advertise" what kind of information may be inside.

Attach an ID label or "return to owner" notice to the bottom of your laptop.

Arrivals and departures

If you have to rest the case on the floor, lean it against your leg.

Keep your laptop with you when in lines at newsstands, coffee shops, rest rooms, etc.

Beware of scams and distractions at security check points. Your laptop may be stolen from the x-ray conveyor belt when you're not looking.

On board planes, trains and buses

Don't stow your laptop overhead, place it under the seat in front of you. Otherwise, the laptop may be stolen.

When using the laptop, be aware of other passengers "shoulder surfing" data on your screen.

On the road

Be alert to risks of theft or loss when using rental cars, taxis, buses and shuttles, or while on parking lots or in garages.

Secure and conceal your laptop in the trunk, if you must leave it in a parked car, but not while people may be watching.

In hotels

Keep your laptop on your shoulder during check-in and check-out.

Store your laptop in the hotel safe or in the safe in your room.

If you must leave your laptop in your room when no safe is available, don't leave it out in the open.

Other laptop safety tips

Be sure your laptop is in no danger of falling or dropping.

Follow virus prevention procedures to avoid infection.

Don't loan your laptop to unauthorized users.

Keep your business laptop for business use.

Amtrak announces management actions

Proposes strong federal support in FY03 budget

"Passenger rail has reached a critical crossroads, marked by a flawed policy model, requiring that Amtrak follow both public service and commercial mandates. While policy-makers debate how to put passenger rail on a solid foundation for the future, we are taking action to hold the system together and stepping up to responsibly manage the company."

With these words, Amtrak President and CEO **George Warrington** announced a series of business actions on Feb. 1 valued at \$285 million for this year to address recent financial and political uncertainties. Warrington further urged Congress to appropriate \$1.2 billion in funding in the coming fiscal year to preserve the national system.

Despite recent growth in passenger revenues and commercial lines of business, a number of key factors beyond the company's control have had an adverse impact on Amtrak's bottom line. The continuing economic recession is projected to cost Amtrak \$120 million in less-than-anticipated revenues through the

At a press conference on Feb. 1, Amtrak President and CEO George Warrington discusses actions the company is taking to address current financial and political uncertainties.

end of September. Additionally, the Amtrak Reform Council's November opinion that the company will not become operational self-sufficient caused a loss of \$52 million in financing. Amtrak also expects to pay \$16.5 million in previously unanticipated security costs in connection with measures taken since Sept. 11.

Speaking at a news conference in Washington, D.C., Warrington said Amtrak will defer approximately \$175 million in capital investments this fiscal year. These projects include equipment refurbishment and overhauls, capacity and reliability improvements, as well as technology, station and facility upgrades. However, the company will continue to invest in projects that address safety, environmental and reliability needs, including the fire and life-safety improvements in the New York tunnels. Operating expenses will be further cut by \$110 million through several actions, including a 10-percent reduction in management employees and a 3-percent reduction in labor agreement-covered employees. This will mean a reduction of about 1,000 positions out of Amtrak's current workforce of 24,600. In addition, the company will freeze or reduce spending in many areas such as hiring, travel, vehicles, non-essential training, marketing, advertising, computers, and materials and supplies.

Web site completes banner year

No matter how you measure it or spell it, www.amtrak.com is a winner. Our Web site is delivering improved guest service, increased sales, and reduced costs.

Just look at the numbers. In its six-year history, the site has posted either double-digit or triple-digit growth in sales every year. What does that mean for Amtrak? It means millions of satisfied guests, and millions of dollars in revenue and cost savings.

When the site debuted in 1996, Amtrak's goal was to provide potential customers with more information about routes and schedules in a convenient, informative and effective way. But goals evolved naturally, and that led to the launch of an online reservations system. That came in February 1997, and the site took off. That's where this success story really begins.

Having online reservations put us ahead of even the largest airlines. Amtrak was one of the first travel companies to offer that capability. In February 1997, only Alaska and

Southwest Airlines had full-service online reservations systems. We were a leader in the technology then, and we remain a leader today.

But even the best things can be improved. And cost pressures meant the company had to encourage public usage of the most cost-efficient distribution channels. Technological advances, coupled with the introduction of Amtrak's new corporate brand identity, led to the decision to rebuild www.amtrak.com from scratch.

A new mission was defined. Instead of just focusing on generating sales, the site would strive to strengthen the connection to our guests. It would do

so through a sense of community, and through access to a broader range of rail-related travel information.

Approval of capital funding for a complete redesign of content came on Oct. 28, 2000, and the race was on. By November, **Kathleen Gordon**, AVP of E-Commerce,

Black History Month

AMTRAK®

TRAIN OF THOUGHT

The challenges Amtrak faces, as detailed in this month's cover story, did not suddenly arise. We operate today in a climate of conflicting federal and economic policies, surrounded by uncertainty about how and when policymakers will address the future of our national passenger rail system.

Amtrak has been under-capitalized for decades, which constrains our success. Yet, we have dual mandates to develop rail transportation to meet the country's needs, as well as to reach what is a politically-constructed standard of commercial success. These twin expectations are unique in the world: no other national passenger rail system has flourished without substantial government support for infrastructure and operating support to offset unprofitable public services, nor successfully been restructured without such support.

On top of these systemic challenges, we are also faced with a weakening national economy and other recent events beyond our control, including post-Sept. 11 security costs, and the money we lost in unrealized financial transactions because of the recent Amtrak Reform Council conclusion.

The cumulative impact of these realities create financial and political uncertainty. To strengthen this company and ensure that we meet our obligations to our employees, our customers, and our creditors, I am determined to manage this company responsibly. The actions we are taking are necessary until the federal government takes responsibility for defining the scope of our passenger rail system and ensuring that we get adequate, predictable funding that supports the system's requirements.

I'm very proud of what everyone in this company has achieved. Over the past five years, our ridership has

grown nearly 20 percent and our total revenue has grown 38 percent. Our dependency on federal support for operations has declined by 80 percent. Our flagship *Acela Express* service now hosts 10,000 guests every weekday, and for the first time since the jet age began, more people take the train between Washington and New York than all the airlines combined. And those are just a few of the highlights I could cite for you.

Frankly, despite our challenges, the strength of our service is widely and increasingly valued, and I sense a changing attitude in Washington that may itself bring change. The chair of the Senate transportation committee, Senator Hollings, underscored this change, remarking earlier this month that the way in which Amtrak performed after Sept. 11 "served as proof that we must recognize the importance of rail service and its associated infrastructure, and invest in it accordingly." The senator went on to say that he will introduce legislation to provide a blueprint for the future of passenger rail service for America. "My proposal will fully fund existing long distance trains, provide for the development of regional corridors and address the safety and security needs of Amtrak," he said.

In the four years that it has been my privilege to serve as Amtrak's president and CEO, I have often been humbled by the strength and fortitude of my colleagues. Over the next few months, as the political process proceeds and Amtrak approaches a decisive crossroads, I know that each of you will continue doing your jobs safely and well. That is how you have always responded in difficult times, and that is why we will prevail today.

George Warrington

U.S. Conference of Mayors shows strong support for Amtrak

New Orleans Mayor Marc Morial speaks to the press in Washington, "It's time for America to catch up with Germany and France — to build a first-class system."

The U.S. Conference of Mayors came to the nation's capital last month on a mission: to urge President Bush and Congress to support funding reauthorization for Amtrak, and to develop a national rail policy that includes expanded intercity passenger service.

Led by the conference president, New Orleans Mayor Marc Morial, nearly 300 mayors came to Washington to meet with President Bush and demonstrate their strong support for Amtrak.

"We need to make an unequivocal commitment to passenger rail in America — a commitment to Amtrak and its viability," Morial said. "We need expanded passenger rail service not only in inner cities, but also

Mid-Atlantic RSCC sends agents home

At the Mid-Atlantic Reservation Sales Call Center in Philadelphia, they call it “Extended Agent” — we’ll call it a good idea.

Taking the lead from a concept that became popular with businesses about 15 years ago, the center is testing the feasibility of having sales agents work from home.

The effort was first proposed about four years ago, when hundreds of employees signed petitions and presented them to the TCU and **Jon-Roger Maranda**, director of the center. But because the focus then was on opening a new center in Philadelphia and moving from the suburbs, the idea never took off — until last year.

With a buy-in from TCU General Chairman Tony Santoro and Local District Chairman Richard DeLuca, the project gained momentum. Maranda formed a team including **Mark Haynesworth**, director of Reservation Sales & Revenue; **Ja’far**

Paulette Waskiewicz, one of 10 agents participating in the Extended Agent program, takes a call from her home PC.

Abdus-Samad, manager of System Support; DeLuca; and **Frank Gallelo**, manager of RSCC Operations. The team established guidelines for an extended agent program, and agreed last summer to conduct a pilot.

“The union felt it would be something positive for employees; and from the Amtrak standpoint, it was something else to have in our tool-bag,” Maranda said. “If down the line we choose to

make it an official program, we’ll have the research and data to justify it. That’s the whole purpose of this pilot.”

The first test group of five agents went online at home last November, with a budget of \$25,000 available to set-up workstations. Funds were still available for the second group of five agents scheduled to go online this month.

Major equipment purchases weren’t

continued on page 7

Amtrak announces business actions

continued from page 1

“These are tough decisions to make, and I fully recognize the impact the actions will have on the hard-working men and women of this railroad and their families,” said Warrington.

Amtrak has recommended that Congress and the administration provide \$1.2 billion in funding for the railroad next year. This level of funding is required to meet the basic needs of today’s system in fiscal year 2003. The appropriation will fund \$840 million in basic and mandatory capital investments for equipment and infrastructure needs, \$160 million in excess railroad retirement tax obligations and \$200 million to support the long-distance train network. As a contingency in the event of insufficient federal funding next year, Warrington also said that Amtrak will issue a notice by March 29 indicating it may suspend the service of 18 long-distance trains after Oct. 1, if necessary. If Congress appropriates \$1.2 billion for FY 2003, Amtrak plans to continue to serve the network as it does today.

Warrington said that an “on-time” reauthorization of Amtrak in Congress is necessary to define the scope of the national system and to provide appropriate funding. “While Congress works at its own pace to determine the role passenger rail will play in our national transportation system, we will continue to manage responsibly, building on the accomplishments our employees have achieved under difficult circumstances,” he said.

Following are some definitions that may be helpful when reading about the changes and challenges that Amtrak will be facing during the next few months:

Appropriation An amount of money provided by Congress in a piece of legislation. Typically, there are 13 appropriations bills to be passed every year by Oct. 1, and Amtrak’s federal grant is contained in the transportation appropriations bill.

Authorization A Congressional action that establishes a program by means of legislation, and sets funding limits for the program.

Capital Money used for major purchases and long-term maintenance for things like fleet, facilities and infrastructure. (e.g. rolling stock, office space and track beds, etc.)

Infrastructure The “foundation” or assets of the corporation (e.g. right-of-way, tracks, facilities and fleet.)

Net loss Refers to the actual difference between earned income and cash expenses of the company. Does not include non-cash items, such as the loss in value of a depreciating asset.

Operating loss A loss as defined under the Generally Accepted Accounting Principles (GAAP) and includes non-cash items, such as depreciation.

Operational self-sufficiency A federal mandate requiring Amtrak to cover all operating costs (except an annual tax liability called Excess RRTA) with its own revenues, and not a share of its annual federal grant for capital purposes.

Reauthorization An authorized continuation of a previously established legislative program.

Over the last five years, Amtrak has achieved record ridership and revenue growth. Ridership has risen 19 percent. Ticket revenue is up 40 percent. And overall revenue from all business lines has increased 35 percent to \$2.1 billion. Amtrak employees have already achieved savings of \$180 million this year, and are on target to save an additional \$118 million next year through focused cost-management initiatives.

These efforts were recognized recently in a report from Department of Transportation Inspector General Kenneth Mead. “We don’t see a quick-fix solution such as ‘let’s split it up into three parts or privatize it,’” Mead said. “For what it has been charged to do, it’s amazing that Amtrak has gotten this far.” But despite the company’s focus and success on continuing to minimize expense growth, chronic underinvest-

ment in passenger rail has driven up maintenance and interest expenses, as well as capital debt service.

In his remarks, Warrington urged Congress and the Bush administration to resolve the conflicting policy mandates that require Amtrak to operate many money-losing routes while also meeting the test of commercial self-sufficiency. “Resolution depends upon a real decision on the kind of passenger rail system America needs, as well as consensus on the question of public capital and operating support and how that support is provided,” Warrington said. “The answers to these questions require a fundamental change: a new federal commitment of responsibility to work with all appropriate interests so that the system’s scope and public investment are clearly defined.”

The route to our success

Strategic Business Plan Key Strategies

Since the 1998 launch of its new strategic direction, Amtrak has taken significant steps in rising to the challenge of reducing its reliance on federal funds to support operations. Driving Amtrak’s actions are six key strategies.

Build a market-based network

Define customer demand, using extensive research, and then match our system with that demand.

Deliver consistent quality service

Change the culture of the company to be more guest-focused, and provide a world-class travel experience on every trip.

Revitalize the Amtrak brand

Introduce and support a new brand for Amtrak, to signal a major change to our guests.

Operate a cost-effective business

Identify specific functional areas, policies, organizational structures, and back-office costs that have potential for improved cost management.

Maximize public and private partnerships

Pursue public and commercial partnerships aggressively, through Mail and Express and other programs that generate the highest returns for the company.

Develop corridor services

Work with state and other partners to create or improve rail corridors across the country, drawing from the expertise we’ve gained in building Northeast Corridor services.

O N T H E R I G H T R A K

Snacking for charity

Harrisburg, keep on snacking — the money you spend on soda is going to a good cause. In the past, funds from vending machines were used to purchase food or clothing for employees. But this year, the Harrisburg Employee Fund Committee donated their surplus to the needy.

Conductors **Clarence Wrightstone** and **A.J. Golden** were concerned by a local newspaper article that reported charitable donations had plummeted over Thanksgiving. They alerted the committee, and **Deborah Rodriguez**, ticket clerk; **Stan Shearer**, electrician; **Linda Garrity**, clerk; **John Livingston**, clerk; and **Clyde Smith**, conductor, put their money where their mouths were. Their unanimous vote assured that \$500 would go directly to the Central Pennsylvania Food Bank and the Bethesda Mission, a local homeless shelter.

At the check presentation, **Jennifer Williamson**, director of communications for the Food Bank, gave everyone food for thought: just one dollar for a bag of Doritos or a soda provides \$17 worth of food to the needy, thanks to bulk prices. So keep on munching!

New Haven:
Driven to donate

Thanks to the hard work of **Lynda Pantalena**, supervisor of Customer Services, New Haven’s second annual holiday food drive was a sweet success. **Kevin Regan**, manager of Customer Services, made the original suggestion of a food drive to benefit New Haven’s less fortunate residents. And Pantalena got “cooking” for the holidays, placing boxes in the station and working

closely with the Connecticut Food Bank to promote the drive. Sure enough, Amtrak employees and guests responded to the call with mountains of canned goods. This year, Pantalena estimates they collected about at least 1,200 pounds of food. “It was a terrific success,” she reported, adding that they “hope to continue the food drive each year.”

Just before Christmas, baggage employees delivered the non-perishable poundage to the food bank, where it was distributed to sick and needy New Havenites.

Philadelphia Award

Congratulations to **Lynn Bowersox**. In December, while she was acting senior vice president for the Northeast Corridor, she received the “Philadelphia Award” from the Philadelphia Chapter of the Women’s Transportation Seminar.

This annual award recognizes those who provide leadership by mentoring, offer a supportive environment in which employees can grow and succeed, commit themselves to excellence, and promote the transportation industry in the Philadelphia area. Bowersox was honored at a dinner in Philadelphia.

Golden opportunities

One-hundredth of a second is the winning advantage that put speed skater J.P. Shilling into the 1,500-meter event at the Winter Olympics. Shilling made the U.S. team at the U.S. Long Track Olympic Trials, held in Kearns, UT, in December.

The stepson of **Lloyd Clark**, an Amtrak conductor based in Washington, D.C., Shilling has been

Philadelphia call center
brings holiday cheer to
special people

Because the holidays are a time for spreading cheer and sharing gifts among friends, two teams at the Philadelphia RSCC made a special impact on residents of the Langhorne Gardens Home for Senior Citizens, and the Christ Home for Children.

At the suggestion of team leader **Barb Schmidt**, the Customer Support and Refund Desks collected close to \$800 to buy clothes, shoes and toys for the children at Christ Home, and to sponsor a bingo party at Langhorne Gardens.

With the enthusiasm and hard work of **Maria Kobrinsky**, **Jolyn Sykes**, **Kathy Davis** and **Jody Miller**, both departments did an excellent job in sharing their giving spirit with others.

Barb Schmidt presents some special gifts to some special people.

competing in national races since he was 12. Clark, an Amtrak conductor since 1989, grew up in Lake Placid, and has been involved with speed skating nearly all his life. He’s worked closely with his stepson, helping him to reach this goal.

Shilling has competed in races around the world, including the World Cup 5,000-meter event held last month in the Netherlands.

His Olympic race, scheduled to take place Feb. 19 in Utah, will highlight Shilling’s speed-skating career. As he told *Baltimore Sun*, “This is everything. This is like the Super Bowl. This is the show.”

Congratulations, J.P.—and Lloyd. Go for it!

Teamwork benefits
monthly guest

Bruce Hoffman, manager, Engineering Mechanical, became a saving angel to a distraught monthly commuter recently. Hoffman was heading to work one morning when he was approached by Judi Scioli, a Philadelphia-Baltimore commuter and loyal Amtrak guest. Scioli had lost her monthly ticket and was highly concerned about replacing it. Noticing Hoffman’s Amtrak ID as he walked nearby, she turned to him for help. He explained that passes weren’t his area, but he exchanged business cards with Scioli and promised to help.

When he got to work at CNOC, Hoffman talked with **Pam Montgomery**, project manager, Service Operations. He explained that Scioli had been commuting on Amtrak for years, and she had receipts for her ticket purchases, as well as reward

points. Montgomery immediately phoned the concerned commuter for more information, and then made a few more calls to complete the replacement process.

By that afternoon, Scioli had a letter of confirmation faxed to her office, along with authorization to ride the train for the remainder of the month. Scioli was so grateful that she generously sent tins of gourmet cookies as a token of her appreciation.

With just a little teamwork and a few phone calls, Bruce and Pam were able to make a big difference for a loyal guest, and demonstrate the finest customer service Amtrak has to offer.

Secret Service
honors APD hero

Amtrak Police Investigator **Eric Romano** was among a trio honored last month by the Former Agents (U.S. Secret Service) Association for their heroism during an incident in late 2000.

Romano, a Chicago police officer, and a Drug Enforcement Administration agent were involved in a gun battle in Chicago Union Station. The Chicago officer was being held hostage by two armed fugitives. The fugitives died in the battle, and the Chicago officer was wounded. All three officers, who were part of a drug interdiction task force, received awards from the Secret Service association.

Investigator Romano, who joined the Amtrak Police Department in 1993, was also named APD Officer of the Year in 2001, and received the President’s Service & Safety Award.

Blizzard bombards Buffalo

Over the holidays, Mother Nature’s special gift to Buffalo was a doozy — seven feet of snow. The excitement of a white Christmas dimmed as roads were blocked and cars were buried. Even some Amtrak guests were temporarily stranded, but the worrisome weather didn’t stop our employees in Buffalo, NY, from providing “primo” customer service.

Several employees used four-wheel drive vehicles to navigate drifts in search of snacks and drinks for guests. A spacious mailroom was transformed into a makeshift lounge — quick thinking by the Mail & Express Department. Engineers and baggage clerks toned their muscles shoveling snow, while Mechanical employees and station ticket agents assisted weary travelers disembarking from trains.

Howard Noll, supervisor of Customer Services, and **Mike Halloran**, service manager, kept station operations running seamlessly, bringing in contractors from Rochester to help clear snow with mega-tractors. With the support of our Mechanical crews from Niagara Falls and the handiwork of General Foreman **Jim Schoenhals**, the tracks were cleared and guests were back on their way ASAP.

Web site delivers

“Amtrak’s Web site will continue to change to reflect the demands of our customers ... ”

The Amtrak Web site team: (L. to R.) Front row Judith Palfrey, manager, Internet Marketing; Kathleen Gordon; Lenetta McCampbell; Mary Cortina, director, E-Commerce, AT. Back row - Roger Seitzinger, director Web design, Marketing & Brand Management; Steve Lebo; Steve Nishiura; Tom Krotchko, director Web architecture, AT; Jim Yarnall; Carlene Hardie, AA, Marketing & Brand Management; Maurice Owens, Web developer, AT.

continued from page 1

had formed a core team led by **Lenetta McCampbell**, director of Internet Sales:

- **Cyndi Darlington**, AVP, Marketing, Amtrak West

Key stats for *www.amtrak.com*

80% Increase in sales, FY01 vs. FY00

9/20, 11/3 Days when reservations reached \$1 million

6,769 New one-day Thanksgiving on-line bookings record

80% Share of reservations converted to tickets

Double Customer response rate to promotional e-mail, compared to industry average

The ‘reviews’ from customers

I liked the site very much. I will surely give it five points. This site is providing all the necessary information, it has a very special feature called “Plan your trip.” I also liked the links “Fast Fare Finder” and “Check Train Status.”

It was easy to find what I was looking for. I found this site is very well managed, and the information is in the proper order.

Vivek T., 12/4/2001

It has improved a lot. I can’t believe it is the same site I used to use. It is self-explanatory, easy to navigate and full of information.

Kelly M., 12/4/2001

Schedules and fares were very neatly organized. I liked the flow structure of the site. Appropriate prominence was given to most everything.

Denis L., 12/4/02

- **Joyce Greene**, Sr. Director, Brand Advertising & Sales Promotions
- **Steve Lebo**, Sr. Internet Product Developer, Amtrak Technologies
- **Steve Nishiura**, Director, Content Management
- **Linda Park**, Director, Customer Segmentation Marketing
- **Karina Van Veen**, Manager, Corporate Communications
- **Jim Yarnall**, Manager, Product Development

More broadly, the entire implementation team included a wealth of experienced professionals from Marketing, Amtrak Technologies, and Procurement. In addition, 11 different internal and external “stakeholder” groups were consulted. See the “Team Roster” for the full implementation team.

The team set an aggressive nine-month schedule for itself. Creative concepts had to be developed; a new navigation structure had to be defined; and the infrastructure had to be built at AT’s Manassas facility. By the end of the nine months, more than 1,200 Web pages and 700 graphics would be created, and put through hundreds of hours of testing.

And everything had to be completed on time, on budget.

And, on July 29 — it was.

Gordon said these were the secrets to success:

- Participation by people and organizations across Amtrak
- Strict adherence to a detailed project plan
- Weekly team meetings to review progress and issues
- Regular customer review of creative and functional options

The new site was launched, and suspense built. Like actors after opening night, team members waited nervously for the first reviews. The numbers spoke loudly: immediate success!

In the first month after launch, the site’s sales grew from 7.9 percent of Amtrak’s total revenue to 9.7 percent. To make a jump of that magnitude would typically need as much as six months.

Then, with the increased interest in rail travel following Sept. 11, the site reached even higher. It booked 16.4 percent of Amtrak’s total revenue during Thanksgiving, and 15.4 percent of revenue during the entire year-end holiday season.

The beat goes on for FY02:

- Revenue forecast is \$176 million, up from \$111 million in FY01
- Sales now at 13.2 percent of Amtrak revenue, up from 7.8 percent at this point in FY01
- Site attracted 1.43 million individual customer visits in December

Amtrak’s Web site will continue to change to reflect the demands of our customers, and to provide the quickest and most cost-efficient channel for ticket sales. Visit www.amtrak.com to learn more about Amtrak’s E-Commerce champion, and to see for yourself how technology can help to drive sales.

Amtrak employees keep the mail moving for USPS after

"As chaotic and confusing as it all was, so many Amtrak employees stepped up to the challenge and did whatever they could to move the mail. I think everyone had a feeling it was something they could do to help the country during this crisis."

Morrison Manner,
director of M&E Sales

Jerry Young, of the Philadelphia mail facility, prepares to log-in mail that has just arrived.

President Bush encouraged the country to "get back to normal" after the Sept. 11 terrorists attacks, but day-to-day operations for Amtrak's Mail and Express (M&E) employees was anything but "normal."

In the months that followed the tragedies, some mail handlers at M&E facilities and stations were handling twice the usual amount of mail. Despite anthrax concerns in some areas, employees took safety precautions and continued to work. And, there was no time for everybody to catch a second wind before being hit by an especially busy holiday mail period.

Amtrak employees kept the mail moving. Our customers thank you, and so does Amtrak. You enabled this company to be a reliable service provider for our existing customers, and the new customers who hopped onboard in their time of need.

Amtrak and the USPS after Sept. 11

The United States Postal Service (USPS) is Amtrak's biggest commercial customer. We serve a market niche, moving mail and periodicals across the country, although the service moves much of its mail by air on passenger and freight aircraft. But when planes were grounded Sept. 11, and new restrictions were put into place on passenger airlines, the USPS looked to Amtrak for help even more.

Within hours of the tragedy at the World Trade Center, **George Warrington** was on the phone with Postmaster General Jack Potter, offering Amtrak's assistance. "We needed solutions quickly, so we appreciated the extra effort of the entire Amtrak team," said Paul E. Vogel, USPS vice president, Networks Operations Management. "Amtrak is a great company to do business with, and your efforts after 9/11 were another clear example of the long-term partnership that has existed between our companies."

On Sept. 11, operations personnel from both organizations held the first of many daily conference calls to begin organizing the massive effort to accommodate extra mail with additional equipment, and to coordinate the efforts of employees and facilities in the Northeast and Southeast.

The M&E Desk at CNOC was working to allocate extra cars, coordinate connection trucking, switching and tracking, while the Mechanical Department maintained passenger and M&E cars and kept shop counts low. Facility managers joined the sometimes twice-daily calls to report on how their facilities were handling the influx of mail. Having a direct line to the postal service

customers, M&E Sales personnel contributed critical information.

Things were chaotic in the beginning. It wasn't only the USPS calling. Other customers who were in a jam because of the air restrictions were calling; and so were new customers — all looking to Amtrak to help them satisfy their customers. They wanted to know: "How many cars do you have available? ... How much space do you have? ... What kind of volume can you handle? ... Where do your trains go?"

Morrison Manner, director of M&E Sales, said he and many others stayed in constant contact with USPS national and regional Emergency Control Centers, providing information, making arrangements, and trouble-shooting. In many cases, short-term changes to contracts had to be made to keep the mail moving.

"Even with all these efforts, often mail trucks just showed up at Amtrak facilities without any advance notice," Manner said. "As chaotic and confusing as it all was, so many Amtrak employees stepped up to the challenge and did whatever they could to move the mail. I think everyone had a feeling it was something they could do to help the country during this crisis."

Systemwide, from September-December, the volume of mail Amtrak handled for the USPS increased by about 2,000 lines (car and truckloads), generating revenue of \$4.7 million above the base contract.

"**Kevin Dant**, in particular, (M&E Sales, Philadelphia) did a superb job for the entire East Coast," Manner added. "He stayed on top of the changing needs of the USPS and worked with USPS staff, many of whom had never used Amtrak services."

Manner also praised the work of **Bruce Hueg** and his team at CNOC, who were at the center of Amtrak's systemwide operation, providing equipment planning, trucking support, station guidance, customer service and operational status reports. Many 16-hour days were required.

Systemwide, from September-December, the volume of mail Amtrak handled for the USPS increased by about 2,000 lines

(car and truckloads), generating revenue of \$4.7 million above the base contract.

Three M&E locations deserving special recognition are Philadelphia, Washington, and Charlotte.

The new Charlotte facility was forced to open ahead of schedule to receive the overload of mail. Short on M&E staff, others at the Charlotte station worked overtime to meet the demand. Trainmen, engineers, ticket clerks, baggage handlers — they all worked together to make it happen. It's a small facility with limited staff, but they did the work of dozens.

Michael Payne coordinated truck schedules and equipment supply, and maintained daily contact with CNOC to ensure that the postal service got the cars it needed. **Amy Sine** was another key player. Although assigned as the product line agent in Charlottesville, VA, she volunteered to work the Charlotte mail facility, becoming the lead person there. Working long hours, Sine learned the M.A.I.L. System and taught others how to use it.

Vinnie Roth heads up the Washington M&E team at Ivy City. His team includes **Charlie Gardin, Louis Sachter, Larry Moore, Tyrone Jackson**, and 12 outstanding mail handlers. Taking safety precautions, dock employees at Ivy City continued to handle mail in the midst of anthrax events nearby. Our facility tested negative for anthrax, as did those in New York and Philadelphia.

In Philadelphia, the mail count from September-December had increased to 58,000, from 37,000 pieces during the same time in 2000.

"The first week of December was an unbelievable challenge for Philadelphia, because major direct mailers dropped several weeks of mail they had been holding due to the anthrax scare — and the holiday mail was starting. Trucks even had to be diverted to Washington and Harrisburg," M&E's Dant said. "This was the first time Harrisburg handled carloads of mail — they normally handle only a few pieces a day."

It's impossible to list the names of every employee and facility that played a role in responding to 9/11 and the holiday period. Consider this article a tribute to you all, for your hard work and dedication during those challenging months. Following are a few words of praise from your colleagues.

"The M&E Desk did an excellent job managing the additional business and abnormal service after 9/11. And the group kept all our regular customers apprised of last-minute changes," said **Walter Lock**, general manager of Service & Delivery at Philadelphia's 30th Street Station. "**Ben Cornelius**,

er September 11

Tyrone Richardson, also of the Philadelphia mail facility, is up to his neck in mail.

Bruce Hueg, **Len Fundalewicz**, and **Derrik Thompson** did an exceptional job coordinating the record-setting extra lines for USPS.”

Don Muscat, M&E field manager in Toledo, OH, extended special thanks to **Phil Paden** and the Pittsburgh staff for handling one to two trucks of Florida mail almost daily from mid-September through early December. He also noted **Vickie Blynt** and the Toledo staff, and **Jerry Bridgeforth**, **Tim Otto**, **Israel Stallings** and the entire Jacksonville staff, for handling enormous additional volume. Muscat also thanked the Charlotte staff, saying, “It took individuals from various crafts to pull this one together, and they did it.”

Kenyon Williams, M&E service manager at the Dock Street Terminal in Harrisburg, said, “At a moment’s notice, mail was transloaded into express cars, and extra blocks of equipment were built whenever possible. All this was done because of a unified effort from our employees.”

Calvin Cole, M&E Chicago, said they had triple the usual volume of mail. He praised all M&E employees, but particularly tipped a hat to **Kecia Gillespie**, **Sarah Pickering**, **Vashon Edmondson**, and **Ed Baker**, who monitored mail volumes and equipment, and maintained constant communication with managers and CNOC.

Cole thanked Mechanical for maintaining M&E equipment to accommodate demand, and all the individuals behind the scenes. “Thanks to everyone for stepping it up a notch during a critical time, displaying what a valuable asset Amtrak is to the country, the USPS, and the world.”

While facilities on the East Coast had a critical job to do, **Charles Parham**, M&E field manager in Los Angeles, reminded us that employees in Amtrak West also had an expanded role to play. “Our northern California area added two

The postal service’s

from the previous year.

delivery locations at Oakland and San Francisco, the L.A. basin post office was provided with RoadRailers to transport mail to the East Coast, and we delivered mail to San Diego, Santa Ana and the L.A. International Airport.”

Holiday mail performance

The postal service’s 2001 holiday volume was actually down 20 percent from 2000, but Amtrak’s share of the work doubled from the previous year. Our 2001 USPS holiday revenue was \$1.6 million, compared to \$800,000 in 2000, and no additional resources were added.

Five locations had exceptional results from the holiday period. The *Auto Train* group ran 83 RoadRailers from Lorton to Sanford between Dec.4-Dec. 24, for dispatch to Florida postal facilities.

Chicago increased network volume connecting to western trains, and in Jacksonville, carload and RoadRailer volumes doubled. Philadelphia experienced a 35-percent increase in outbound loadings. **Mike Jerew** and his Richmond staff doubled their normal holiday mail volumes. And, Washington saw a 150-percent increase in outbound loading, including loading of all RoadRailers moved on *Auto Train*.

Other mail handling facilities that really stepped up their performance during September-December 2001 include Miami, Raleigh, Springfield, New York and Louisville.

Mid-Atlantic RSCC sends agents home

continued from page 3

necessary because the agents are using existing equipment and software. Their workstations have a secure Windows operating system, and remote dial-in capability to allow the agents to connect to ARROW seamlessly and securely. Surprisingly, the most expensive element of the program has been for software licenses.

The project team always knew that the real question would be: Could team leaders supervise agents at home? Agents work under the most rigid structure of any other employee group at Amtrak. Performance is measured to the minute. Would this same structure still be effective outside the call center?

The answer is yes, as proven by the first pilot group’s exceptional on-phone ratings. “Their success validates our management model,” Haynesworth said. “It tells us that we can manage an agent anywhere.”

For the first reporting period in January, the initial pilot team led all the in-house teams in two categories, on-phone rate (98 percent) and attendance. The team generated an impressive revenue average of \$832 per hour during the period.

Becoming a pilot group member was a competitive exercise. Those selected were top performers who had excellent attendance and RailRes proficiency. The first group included **Doug** and **Debbie Ketels**, **Barb Landler**, **Connie Gaughan**, and **Paulette Waskiewicz**. In the second group are **Ruth Arties**, **Carol Bowersox**, **Beth Burke**, **Mike McGinley**, and **Ramona Buchanan**. Also, computer techs **Alice Blount**, **Desiree Garnett**, and **Jeffrey Renson** are setting up home workstations to troubleshoot any technical problems that may occur.

The Ketels were the first agents to go online. In less than two weeks they reported feeling less stress, and they were thriving in a calmer work environment. They felt more connected to the customer.

For Ruth Arties, working at home will save her a 50-mile roundtrip commute to the call center. “I’m really looking forward to that!” she said. “I know I’ll do an excellent job. I can be comfortable in what I wear, more relaxed, and have a more personable interaction with the customer.”

The testers are under the watchful eye of team leader **Donis Gonnella**, which they say makes them feel more connected than when they were in-house. Gonnella is always in touch, sending them messages that appear on their screens at home, plus voice mail,

e-mail, pager and team pages in ARROW. Proud and protective of her team, she’s made herself available to them at any time.

From a monitor room in the call center, Gonnella can watch the real-time display to keep track of her team’s productivity, and she can listen in on their calls. She listens for courtesy words and phrases, product knowledge, the guest’s name said at least once, and a complete recap of the reservation profile, including instructions regarding photo I.D. and baggage.

At the Philadelphia center, a typical in-house team is 20 agents. The hope is to expand the group of at-home agents to the same number, so that more realistic comparisons can be made.

“The other agents are asking when the program is expanding because they’re eager to jump onboard,” Gonnella said.

The team attributes their excellent attendance record to Gonnella’s advice about establishing a daily routine. Although they no longer commute, she encourages them to behave as if they were—getting up on time, dressing, allowing time for breakfast or coffee. The point, she tells them, is to log in for your shift just as if you’re sitting at your PC in the call center — refreshed, alert, and ready to interact with customers.

Team members report to the call center once a week for meetings. That’s when they can ask questions and make suggestions, receive new program or RailRes upgrades, and report any technology glitches they might be having. It’s an important time to gather data and establish a benchmark for an expanded program.

Having at-home agents is even earning Amtrak “pollution credits” that can be sold to other companies. The center has partnered with another test program sponsored by the EPA and the National Environmental Policy Institute. This program allows companies with at-home workers to accumulate credits they can use, or sell to other companies that need them to achieve pollution standards.

For example, the Ketels had worked on different shifts, and they drove into the call center separately. In the first month they worked from home, they saved a combined 37.5 hours of commuting, and more than 566 pounds of pollutants. A formula determines the volume of pollutants that would have been emitted by a specific commuting vehicle.

Thanks to the extended agents, Amtrak has already earned credits for having saved its first ton of pollutants.

RAILWAY ROUNDUP

Amtrak Technologies Stars shine bright

Amtrak Technologies (AT) has created the Amtrak Technologies Star Achievement program to recognize AT employees and partners who have made significant contributions to the

information technology environment at Amtrak.

Recipients are selected quarterly, with the most recent being saluted at a departmental meeting in December. Here's a glance at the four "stars."

Lawrence Leblanc has exceptional customer service skills. As a senior systems analyst for NEC Operations, his ability to provide speedy evaluations and quotes for new installations enables the client

Top to bottom: Robert Cole, Robert Peck, Stevan Lebo, and Larry Leblanc.

to make informed decisions that result in increased productivity.

Bob Peck, manager of Client Services in Washington, has been instrumental in reducing the time it takes to resolve LAN and e-mail problems. Currently, 96 percent of all LAN e-mail problems are solved within two business days. Many are resolved within hours.

Bob Cole, systems developer, Operations, was named a "star" for his innovative and cost-saving ideas. For instance, he played an integral role in the development of the Station

Auto Train excels again

The *Auto Train* has again been recognized for their "world class" service at the annual On-Board Service

(L. to R.) *Auto Train* employees, Tommy Farr, superintendent, Sanford Mechanical; George Russell, carman, Sanford; Julie Byrne, product line supervisor; John McCaffrey, manager, Business operations; Sharon Mahoney, general manager; Danette Young, on-board attendant; William Ferguson, on-board attendant; and Jim Mead, service manager, accept *Auto Train's* awards for outstanding service.

Automation hardware and software, and its implementation. Present him with a challenge, and he comes up with a solution.

Stevan Lebo, senior Internet product developer, E-commerce, was instrumental in helping Amtrak reach a significant milestone last July. That's when the company launched a completely redesigned website, www.amtrak.com.

The content management project team, led by Lebo, met an early launch date and delivered the project within budget. Then, when systems maxed out on Sept. 11 and 12, he and an operations team worked around the clock to keep the site going. A response he designed drastically reduced a bottleneck and enabled guests to access the booking engine. He kept his team focused, coordinating all AT efforts and those of outside contractors until the site was fully restored.

Magazine awards ceremony. This awards program offers recognition to organizations striving for excellence in the food service industry.

The 16th Annual International On-Board Service Odyssey Awards ceremony took place Jan. 11 in Orlando, FL. The black-tie event recognized airlines, cruise lines, railroads and terminal concessions for excellence in their services.

Auto Train was entered in four categories for 2002, and won in the following three categories:

- Diamond Award (first place) for On-board Service
- Diamond Award (first place) for Equipment (*Auto Train* Lounge Car)
- Sapphire Award (runner up) for Food Service

"I am very proud of the entire *Auto Train* team," said **Sharon Mahoney**, general manager of the product line. In 2001, *Auto Train* received four Odyssey Awards, all of which are displayed in the Lorton station.

New air-rail station opens in Newark

Links between air and rail travel along the Northeast Corridor are a lot more convenient these days, thanks to a new train station — the Newark [NJ] Air-Rail Station. The station was built by a partnership including Amtrak, the Port Authority of New York and New Jersey, and New Jersey Transit.

The intermodal station is linked to Newark International Airport by AirTrain, a 1.9-mile monorail that stops at all passenger terminals. With their Amtrak ticket stubs, guests arriving at the new station can take the monorail to the airport. The cost of the monorail is included in the price of the Amtrak ticket.

The station is a key element in a new partnership between Amtrak and Continental Airlines to launch next month, the first multi-city plane and train partnership in America. With a single call to Continental Airlines or to a travel agent, guests will be able to book travel between four of our busiest East Coast gateways — Philadelphia, Wilmington, Stamford and New Haven — and any of 300 cities Continental serves worldwide. They'll connect through the new Newark Air-Rail Station.

More than 30 Amtrak trains stop at the Newark airport station every day, and service has been growing briskly since the station opened.

Michael Dukakis (R.) welcomes one-millionth guest and his family.

Acela Express speeds to one-million mark

On Dec. 22, the NEC celebrated another impressive milestone, as the one-millionth *Acela Express* guest boarded train #2255 in Boston. Michael Dukakis, acting chairman of Amtrak's board of directors, welcomed the surprised guest and his family with complimentary upgrades to First Class, passes to use ClubAcela, and a variety of *Acela* merchandise.

Acela Express service has been in operation for just over a year now. From its start in December 2000 until Dec. 10, 2001, the high-speed service has taken in \$107 million in ticket revenue. With the Jan. 28 schedule change, there are now nine weekday departures from Boston's South Station, and 13 weekday departures from Washington Union Station.

Kudos to everyone who made this *Acela Express* success possible!

Don't upgrade to XP

If you're thinking of upgrading your office desktop PC to the new Microsoft XP operating system—please don't.

Right now, Windows NT and 2000 are the primary operating systems approved for our PCs, along with some isolated uses of Windows 95 and 98. Neither Windows XP nor ME have been approved yet for Amtrak use, and computers upgraded to those levels cannot be maintained within our support structure.

When those operating systems are discovered, the PCs will be removed from the network and reconfigured. That process could result in an unavoidable loss of data. Plus, the cost of those services will be charged to your department.

Amtrak Technologies (AT) will continue to develop and implement the most effective and cost-effective options for our PCs at the appropriate time. They urge you to allow them to continue that process, and they thank you for your cooperation.

Amtrak, Continental announce new code share

“In the list of what’s
in and out for 2002,
what’s out is the
Delta shuttle
and what’s in is
Acela Express.”

Continental President
Larry Kellner

Amtrak and Continental Airlines have created the first comprehensive plane and train partnership in America. The new code share agreement becomes effective next month.

With a single call to Continental Airlines or to a travel agent, guests will now be able to book travel between four of Amtrak’s busiest East Coast gateways — Philadelphia, Wilmington, Stamford and New Haven — and any of the 300 cities Continental serves worldwide. They’ll connect through the new Newark International Airport Rail Station.

The new rail station is key to the connection, whisking passengers between our trains and Continental’s planes in as little as 10 minutes. But there’s even more for Continental and

Amtrak guests. As a brand loyalty incentive for Continental OnePass members and a revenue-generator for Amtrak, the railroad announced it would offer 1,000 Continental frequent flier miles to *Acela Express* passengers traveling roundtrip between New York Penn Station and either Washington D.C. or Boston. Additionally, Amtrak Guest Rewards passengers will be able to bank Continental miles to their Amtrak program accounts.

“In the list of what’s in and out for 2002, what’s out is the Delta shuttle,” said Continental President Larry Kellner, “and what’s in is *Acela Express*.”

Amtrak President **George Warrington** echoed Kellner’s observation. “Two years ago, we had a little more than a third of the New York — Washington

end point to end point rail/air market — we’ve now got half the business and are continuing to grow. And, it’s not just there, but dramatically between Boston and New York as well.”

Kellner said he expects as many as 500 Continental passengers a day to pass through the rail station, between his planes and Amtrak’s trains.

Amtrak also has a code share with Icelandair, which offers special travel rates for employees of both companies, and their immediate families.

Under the agreement, employees and their loved ones can travel to Europe from Philadelphia and Washington. They can ride on Amtrak to the BWI Station, take the quick shuttle bus transfer to the airport, and fly on Icelandair to any one of eight major cities in Europe.

Amtrak Assistant Conductor Sheila Wilkerson inspects the airbrakes on an outbound Surfliner train at Los Angeles' Union Station. The process of inspecting and testing airbrakes on our equipment changed somewhat when the FRA's new safety regulation went into effect on Jan. 1, 2002. Amtrak transportation employees are studying the new regulations to clarify how their job-related duties and responsibilities will be impacted.

FRA Reg. 238 effective

As of last month, a new FRA regulation, “Passenger Equipment Safety Standards (49CFR 238),” requires that any Amtrak employee or contractor responsible for performing brake tests or train inspections must be qualified as a Qualified Person (QP) or Qualified Maintenance Person (QMP). The regulation mostly affects T&E crews, mechanical employees and contractors.

Transportation managers have been holding weekly briefings with T&E employees since last August to educate them on the new FRA regulation. Managers and other employees have also been studying “bite size” portions of the new code each week.

In addition, **Vince Nesci**, Corporate vice president and CMO, and **George Binns**, senior director, Standards and Compliance, established committees to each be responsible for the different areas of the regulation. The committees were headed by **Mark Murphy**, **Karl Ginther**, **Harry Glembocki** and **Ed Schoen**, and included SBU representatives.

The groups headed by Murphy and Glembocki designed the maintenance

forms (SMPs and MAPs), and developed the maintenance plans and schedules. Ginther worked on linking the required employee qualification documentation to the Workforce Management System. Schoen and the air brake instruction staff developed and delivered the qualification courses.

Nearly 5,300 employees and contractors have gone through qualification and certification courses Training was given at 65 locations, including initial terminals, 1,000-mile inspection points, and back shops.

We can be proud that Amtrak met all the requirements and made a smooth transition into the new regulation. We can also be proud that our qualifying courses were so complete, they are used by the FRA to train its inspectors, other commuter railroads and the American Public Transportation Association.

For those who will need to perform any of the affected work, but have not yet been qualified, classes are still continuing at many of the original locations. If you have any questions about these classes, contact your local training staff member.

Want to get Amtrak news electronically?

Cost management is a way of life at Amtrak now, so we at *Amtrak Ink* are looking at ways to reduce some distribution expenses. Your responses to these four questions could help us decide whether it’s practical to make changes.

Please mail this questionnaire to Amtrak Employee Communications, 60 Massachusetts Ave., NE, Washington DC 20002. Or, fax it to ATS 777-3306 (202-906-3306). If you’d prefer to use e-mail, send us a note at amtrakink@amtrak.com and just list your responses to the four questions (or just the first question, depending on your circumstances). We’ll figure it out. Thanks.

- Do you have access to the Internet from a computer at home?
 - ☐ Yes (Continue to question 2)
 - ☐ No (You do not need to complete the rest of the questions. Thank you.)
- In an effort to reduce our postage costs, we’re thinking of delivering some Amtrak-related communications to you through your personal e-mail. In order to do this, you would need to supply us with your home e-mail address. Would you agree to provide your home e-mail address so that you could receive some Amtrak communications electronically?

 - ☐ b. Access *Amtrak Ink* from the Amtrak Intranet

PROMOTIONS IN MOTION

Expanding Acela service, doubling AGR points for guests

For the convenience of our guests, Amtrak has expanded *Acela Express* service between Washington, New York and Boston. And as an added benefit, we're doubling the Amtrak Guest Rewards points for guests who book travel on *Acela Express* between New York and Boston, through Feb. 28, 2002.

As a member of the Amtrak Guest Rewards program, guests earn points every time they travel on Amtrak. The points may be exchanged for an exciting variety of rewards including free travel on Amtrak, hotel and car rental awards, airline miles and gift certificates from nationally known retailers.

The expanded *Acela Express* service includes an earlier weekday departure from Boston, six additional weekend frequencies between New York and Boston, and seven additional roundtrips between New York and Washington.

Ride the Rockingham Race Special

In a special one-day event on Feb. 24, race fans can ride the *Rockingham Race Special* train non-stop from Raleigh to the North Carolina Speedway for the 400 NASCAR

Winston Cup Series race.

Continuing our partnership with Rusty Wallace to promote the benefits of taking rail to the races, Amtrak will take guests to the tracks this year, and offer great deals on ticket packages to sweeten the

ride. Even better, if our guests are members of Track Travel Club, they can get an additional 10 percent off the rail portion of their fare — and kids travel for half-price.

For the Rockingham race, fans can choose from three great fare packages that include amenities such as a pre-race pit tour, admittance to the Turn 2 Amtrak hospitality tent, and continental breakfast, BBQ lunch, and all beverages.

One of the drivers they're sure to want to see is #2 Rusty Wallace, who is on a 16-year winning streak. His

final 2001 season statistics: one win, eight top-five finishes, and 14 top-10 finishes in 36 races.

An Amtrak Capitol Service train stands in front of the Oakland station in Jack London Square, wrapped and ready for those who want to "Yahoo!"

Guests get connected with Amtrak and Yahoo!

Last month, Amtrak rolled out the first Internet-enabled passenger trains. With cars wrapped in Yahoo!®'s signature purple and yellow colors, the interactive trains are now in service and offer guests access to Yahoo! content and services while on-the-go.

Thanks to a recent promotion agreement with the Internet service provider, Amtrak can provide guests with the ability to surf the Web, free-of-charge, as they travel for business or pleasure. Monday through Friday, for the next six months, Yahoo! and Amtrak, along with Compaq Computer Corp., will bring the Internet to three of Amtrak's most popular services for business travelers, *Acela Regional* in the Northeast Corridor, the *Capitols* in Northern California, and the *Hiawathas* in the Midwest.

The award-winning Compaq iPAQ® Pocket PCs with color screens put the power of a desktop PC in a to-go device. Complete with wireless modems and Internet service, the Pocket PCs are mounted in the cafe cars or coaches.

Guests are excited about the promotion and the added convenience it offers. Now, instead of waiting to get back to the office to access important emails from their Internet accounts, they can retrieve them on the way. And looking forward to some downtime after clocking out, one frequent business traveler plans some evenings by checking the online movie listings.

"Amtrak trains connect their guests-on-the-go with the nation's top destinations, and now Yahoo! can go with them. We are thrilled to be working with Amtrak and Compaq to help millions of Yahoo! users stay on top of their business and personal lives while traveling in the comfort of a train," said Christopher Wu, Wireless Yahoo, Yahoo! Inc.

U.S. Conference of Mayors meets with Bush

continued from page 2
in the suburbs and rural areas to alleviate traffic congestion and increase economic development opportunities in our communities."

As representatives of millions of travelers, the mayors view a sound rail policy as being essential for the nation's economy and its security. During their meeting with Bush, they advocated investing in passenger rail — especially high-speed passenger rail — to complement our important investments in highways and aviation.

The U.S. Conference of Mayors was established in 1932, and two of its primary roles are to promote the development of effective national urban/suburban policy and to ensure that federal policy meets urban needs.

"Sept. 11 showed the weakness and disconnects in our transportation structure. But within two hours, one mode was back up serving passengers—Amtrak," said John Robert Smith, mayor of Meridian, MS, and an Amtrak board member. "We need a balanced system, one that's built of intercity high-speed rail corridors. It must be built with the same will, zeal, and determination as when the highway system was built," Smith said. "If you build it, they will ride. Now is the time to act."

Following the news conference, about 150 of the mayors demonstrated their support for Amtrak by taking *Acela Express* to New York for the conclusion of their annual winter meeting.

Black History Month

Helping Amtrak kick-off its observance of Black History Month, Broadway star Savion Glover made special appearances in Washington, New York and Chicago this month. A Tony Award-

winning tap dancer, Glover performed an interpretive dance that celebrates the legacy of African Americans on the railroad. See the March issue of *Ink* for a complete wrap-up of Glover's dynamic performances, and other Black History Month activities.

Amtrak president to lead New Jersey Transit

Amtrak Chairman Mayor **John Robert Smith** announced on March 7 that **George Warrington** would step down as president and CEO of Amtrak to become executive director of New Jersey Transit. Warrington, 49, has served as Amtrak's chief executive since his appointment by the Board of Directors in December 1998.

In a statement and subsequent meetings with employees, Smith lauded Warrington for his strong leadership and emphasized that the board would move quickly to appoint a new president.

"Thanks to his visionary and determined leadership, Amtrak's business performance has never been stronger and the foundation that he has built has positioned us well for the future," said Smith. "George will continue to serve as president and CEO until an interim successor is named and I want to assure every employee of this company that we are fully committed to staying the course when it comes to Amtrak's future."

Warrington accepted the offer from New Jersey Gov. James McGreevey to head New Jersey Transit, the nation's third largest transit agency. The commuter agency serves 226 million passengers annually through rail and bus systems. In naming him to head the agency, Gov. McGreevey said that Warrington was "the leading rail expert in the nation." Smith and the board reluctantly accepted

Warrington's decision to resign, noting that the decision was a personal one by the New Jersey native to pursue a new and exciting opportunity in his home state.

**"Thanks to his
visionary and
determined leadership,
Amtrak's business
performance has
never been stronger
and the foundation
that he has built has
positioned us well
for the future,"**

**John Robert Smith,
Amtrak Chairman Mayor**

In a statement thanking Amtrak colleagues, Warrington said, "I feel I have been privileged to work alongside the hardest-working, most dedicated employees I've ever known. I feel indebted to all of you for the pride with which you've helped create a more efficient, business-focused organization."

"In my time at Amtrak, I am proud to have made a difference," said Warrington in a news conference with Gov. McGreevey in

Amtrak board elects Smith as chairman, Dukakis as vice chair

"Working with President Bush, Congress, governors, mayors and business and community leaders across this country, I'm committed to securing sufficient funding for Amtrak's national network in the year ahead and — in the long-run — helping policymakers ensure the kind of rail service our nation needs."

Those are the words of Meridian, MS, Mayor **John Robert Smith**, the new chairman of the Amtrak board of directors. Mayor Smith was elected to the position last month, and former Massachusetts Gov. Michael Dukakis was elected again as vice chairman of the board.

Mayor Smith has been a board member since June 1998. In addition to the Amtrak board, Smith is chairman of the National Corridors Initiative, an advocacy organization for the development of high-speed rail corridors, and the Great American Station Foundation, which promotes community economic development.

"I believe very strongly that our country's economic competitiveness and the mobility of all Americans depends upon a vital national passenger rail system," he said.

PROMOTIONS IN MOTION

GUEST COLUMN

ORGANIZATIONAL UPDATE

Black History Month

In Washington, D.C., Amtrak's Business Diversity & Strategic Initiatives Department kicks off Black History Month events with the first of four appearances by Broadway star Savion Glover. See page 5 for details.

Caption: (R.) Gerri Mason Hall, vice president of Business Diversity, welcomes Glover (second from left) and local radio personalities to Amtrak.

TRAIN OF THOUGHT

George Warrington

As the president of Amtrak, I have enjoyed being able to reach out to each of you through this monthly column. This one is particularly important to me, because I wanted to discuss my resignation. It was a difficult decision for me to make. But above all else, you should know that I made the decision strictly for personal reasons.

Since coming to Amtrak in 1994, many of you have heard me say, “It’s all about making a difference.” That’s something I heard from my parents as a kid growing up, something I came to understand and embrace as a young man, and something I have encouraged all of you to do in your daily work for the railroad.

Frankly, I feel I have been privileged to work alongside the hardest-working, most dedicated employees I’ve ever known. I feel indebted to all of you for the pride with which you’ve helped create a more efficient, business-focused organization.

Together, we’ve launched exciting new services like *Acela Express* and the rebranded *Pacific Surfliners*. Our focus on customer service was made clear with the implementation of the Satisfaction Guarantee and the Amtrak Guest Rewards program. And, we’ve expanded our commuter and commercial business lines and established critical partnerships that will continue to help us grow.

With your help, we’ve continued to operate a national network, despite some formidable financial challenges. And I’m very proud that you’ve done so while providing the highest levels of customer service. I’m happy to report that the success of these efforts was made evident by our strong February ridership results, which were the highest in our history for that month.

In my tenure as president, I really do think that working together on these efforts — and so many more that I cannot possibly begin to mention them all — we really have made a very big difference.

But, my decision to leave was not

about Amtrak, but a personal one to take on another challenging opportunity. I will be returning to my home state to lead New Jersey Transit, where there is yet another opportunity for me to make a difference.

I know that by returning to NJ Transit I have a rare opportunity to create positive change in one of the largest transportation agencies in the nation, serving 226 million passengers each year. I started my career there — and I still know many of the people on the front lines and in communities across the state. And, in my new position, I will also be able to maintain a close working relationship with Amtrak.

Deciding to leave Amtrak was difficult in many ways, but it was made easier when I recognized all the progress we’ve made together in recent years. I know it’s a foundation that my successor and all of you will build on.

I may be changing trains, but I have great confidence in the team driving Amtrak. The leadership here is strong, but there’s still a lot more to be accomplished at Amtrak.

Our nation’s policymakers must decide what kind of passenger rail system America needs and align the resources necessary to fulfill that vision. I know that the Amtrak Board of Directors is going to fight hard for a sufficient federal appropriation in 2003 and a reauthorization that ensures a strong passenger rail system.

As a practical matter, I will continue to serve as president and CEO until the board names an interim successor. The board will also conduct a nationwide search in the coming months for a new president who will help Amtrak capitalize on all the progress we’ve made together.

In closing, let me again tell you how privileged I feel to have worked with you and to have shared your dedication to our guests in providing them satisfaction-guaranteed service. You truly have made a difference. Be assured that you will always have my support.

Board elects new leadership

continued from page 1
Gov. Dukakis nominated Mayor Smith to be chairman. “The mayor has been a superb board member and an eloquent champion of a modern, national, high-speed rail system,” said Gov. Dukakis. “He has the skills to harness the energies of our fellow board members and our dedicated employees to build the

kind of first-class passenger rail system that America deserves.”

Dukakis served previously as acting chairman and vice chair of the board. Other members of the board of directors include former Virginia Gov. Linwood Holton, Sylvia de Leon, U.S. Transportation Secretary Norm Mineta, and Amy Rosen.

Philadelphia RSCC agents catch the surfers

While the majority of e-mail comes from North America, a good portion comes from countries such as Great Britain, Germany, Israel, Japan, Singapore and Australia.

The Associated Press recently reported that 143 million Americans, or approximately 54 percent of the population, were surfing the net, with two million new users being added every month. As *Amtrak Ink* has reported, the company is reaching out to that growing market on the World Wide Web.

Since the Amtrak Web site was launched in late 1996, e-mail inquiries have been directed to the Philadelphia call center. Today, a dedicated team is necessary to answer the thousands of inquiries being received weekly through www.amtrak.com.

Team Leaders **Betty Fleming** and **Linda Hinds** oversee the seven-day operation and offer direction to their agents on how to best handle questions and comments. The agents also handle a portion of the phone calls received by the center.

While the majority of e-mail comes from North America, a good portion comes from countries such as Great Britain, Germany, Israel, Japan, Singapore and Australia. Some of the most common questions are:

- “What’s the best fare from (point A to point B)?”
- “Where can I find out about the Rail Sale bargains?”
- “What’s the stop closest to my home?”
- “Do you offer discounts for ... ?”

Some not-so-common questions are:

- “My cousin Bruce works at Union Station in LA. Could you ask him to give me a call?”
- “Does Amtrak offer service to the U.S. Virgin Islands?”
- “What’s the fare from Brussels to Milan?”
- “How can I transport my hang glider from Goleta to Oceanside?”

Add to this mix compliments and complaints on our services, job resumes, and advice from computer techies on how to supercharge the Web site, and you have a fairly accurate picture of a typical day.

By Chuck Shillingford, customer support representative, Mid-Atlantic RSCC

James Weinstein now heads NEC

Bowersox appointed v.p. of Operations and Maintenance

James Weinstein

On Feb. 4, Amtrak welcomed **James Weinstein** as the new senior vice president of the Northeast Corridor. Weinstein replaces **Stan Bagley**, who was promoted to executive vice president of Operations last October.

Weinstein has a solid foundation in transportation. Most recently he served as commissioner of the New Jersey Department of Transportation. Weinstein also chaired the New Jersey Transit Corporation board of directors, and from 1999 to 2001, he served on the board of the Port Authority of New York and New Jersey. Prior to this, he served as the first chairman of the Port of Philadelphia and Camden, and as commissioner of the Delaware River Port Authority.

As head of the NEC, Weinstein directs its business and operating units, including all train operations from Maine to Virginia, and the commuter contract services within Connecticut, Maryland, Massachusetts and Virginia.

“I am honored to be here,” he said. “Amtrak is a great organization, and the Northeast Corridor is a critical part of the operation. I am aware that these are difficult times, but I believe that if we focus on doing our jobs and growing our business, we will get through this period and see better times again.

“I am looking forward to working with every employee in the NEC,” he continued. “I don’t think this is a job that can be done by spending all my time in an office. So, I plan to be out and about.”

As one of his first actions in office, Weinstein appointed **Lynn Bowersox** as vice president of NEC Operations and Maintenance. Weinstein credited Bowersox for her exceptional leadership in the corridor, especially in her role as acting vice president before his appointment.

In her new position, Bowersox will be a critical link for Weinstein in providing day-to-day operational oversight of the NEC, including train operations, infrastructure maintenance, equipment maintenance, safety, and customer services. Her focus will be on providing safe, reliable, efficient, customer-focused operations in line with our business plan goals. Together they will focus on increasing *Acela Express* service, and on delivering the highest quality of guest service.

Weinstein is a graduate of Seton Hall University and first began a career in journalism as a reporter for the *Courier News*, *The Newark Evening News*, and the *Philadelphia Bulletin*.

The route to our success

Strategic Business Plan Key Strategies

Since the 1998 launch of its new strategic direction, Amtrak has taken significant steps in rising to the challenge of reducing its reliance on federal funds to support operations. Driving Amtrak’s actions are six key strategies.

Build a market-based network

Define customer demand, using extensive research, and then match our system with that demand.

Deliver consistent quality service

Change the culture of the company to be more guest-focused, and provide a world-class travel experience on every trip.

Revitalize the Amtrak brand

Introduce and support a new brand for Amtrak, to signal a major change to our guests.

Operate a cost-effective business

Identify specific functional areas, policies, organizational structures, and back-office costs that have potential for improved cost management.

Maximize public and private partnerships

Pursue public and commercial partnerships aggressively, through Mail and Express and other programs that generate the highest returns for the company.

Develop corridor services

Work with state and other partners to create or improve rail corridors across the country, drawing from the expertise we’ve gained in building Northeast Corridor services.

O N T H E R I G H T T R A C K

Five years injury-free is worthy of recognition

“It is with great pleasure that I write this on behalf of the employees working at the Memphis, TN, Amtrak station. They have gone injury-free for five years and I want to thank them,” wrote **Bonita Quinn**, a product line supervisor. “From the dungeons of the old station, to the trailer they had to work from for three years, and when Mail & Express started coming through Memphis — they still operated in a safe manner.”

Quinn sent a letter to *Amtrak Ink* requesting that her employees be recognized for their accomplishment.

Congratulations to the following people: **Barbette Jones**, lead ticket agent; **Connie Reynolds**, ticket agent/baggage; **Barbara Payne**, ticket agent/baggage; **Robert Rodgers**, ticket agent/baggage; and **Kenneth Carter**, ticket agent/baggage. These employees service the *City of New Orleans*, train 58/59.

“This can be done with the proper working tools and safety briefings each day prior to beginning work,” Quinn said of her employees’ safety success. “I especially appreciate the respect they give one another in their daily operations of the Memphis station, while remaining guest friendly in all aspects of their jobs.”

Lucky number seven

Washington, D.C.-area Baggage/Mail & Express employees just celebrated their seventh injury-free year, and manager **Vinnie Roth** can’t stop praising his skilled team’s dedication.

“These employees have about 20 years of experience each performing this type of work,” Roth said. “They’re highly skilled in the operation of heavy equipment and motorized vehicles, and that’s reflected in their performance.”

Roth has the right to brag — his mail handlers account for \$25 million in annual mail revenue, and his baggage agents load and unload 16 trains each day.

To honor the seven-year milestone, **Daryl Pesce**, general manager of the Mid-Atlantic Division, presented Roth with a plaque. **Lee Sargrad**, senior vice president of Mail & Express, **Jon Tainow**, vice president of Customer Services Operations, and **Mark Rose**, assistant general manager of Customer Services, also joined in the presentation.

‘Amtrak—United We Stand Moving America’

At the end of January, a rare blanket of snow in California did nothing to dampen the enthusiasm of reservation sales agents being recognized for outstanding achievement.

More than 500 agents from the Riverside call center received recognition for outstanding performance in fiscal year 2001. Categories were: *Schedule Adherence* — Being available to service guests a minimum of 98 percent of the time; *One Million Dollar Club* — Booked revenue of \$1,000,000 or more, with a minimum of 40 percent ticketed; *Advanced Payment* — One credit for every hour on the phone; *Ticketed Revenue* — 55

Railroad Retirement Benefits Fair

Got retirement questions? If so, the Railroad Retirement Benefits Fair was the place to be.

The all-day fair was held for Amtrak employees on Feb. 14, at Washington Union Station. Its purpose: to answer employees’ questions regarding retirement benefits, savings and investments, and more.

Representatives from Amtrak’s Human Resources Department, the Railroad Retirement Board (RRB), and the Vanguard Group were there to provide answers.

Representatives staffed desks and gave employees personal consultations. They provided information on RRB annuity estimates, retirement health and welfare benefits, and retirement savings plan enrollment and investment funds.

“That was great. I came prepared with my questions in mind and they were answered,” said **Dianne Penn**, after meeting with Robert Battle from the RRB. “I have a plan after retirement and I need to be fully aware of my options.”

Steve Fritter, legislative director for the UTU, Washington, organized the fair, with the help of conductor and legislative representative **Larry Tkachenko**, and others in the UTU. **Roe Tana**, of Amtrak’s Human Resources Department, pulled together the benefits and Vanguard portions of the fair.

“Railroad law changed as of January with the 60/30 bill. The UTU was instrumental in getting that bill through Congress,” Fritter said. “There’s good news here, and I thought this was a good time to get the information to employees—to tell them the truth about retirement.” He said the UTU would like to duplicate the fair in other Amtrak locations.

(Foreground) Dianne Penn gets information about her railroad retirement benefits from RRB representative Robert Battle.

percent or greater ticketed revenue; and *Perfect Attendance* — No full-day absences, late arrivals or early departures.

A special pin was designed by sales agent **Judi Stone** to help commemorate these special achievements. The pin’s inscription was simple but profound: Amtrak — United We Stand Moving America.

By Susan A. White, team Leader, Riverside

A keen eye for resourcefulness

Thanks go to **Angie Silva**, Amtrak West Bus Operations, for her excellent idea to recycle obsolete envelopes.

She had discovered 32 boxes of the green and white envelopes, or “pouches,” that are used to send train reports to accounting offices. These pouches were all pre-addressed to the Glendale Revenue Accounting Office address, which is no longer in opera-

tion. Therefore, the pouches would ordinarily have been trashed.

But, Angie hated to see such waste. She reached **Kate Isom**, manager of Corporate Forms Programs, who confirmed that the pouches could be used again by labeling them with a correct address. She asked Silva to ship them to Western Folder, Amtrak’s distribution vendor, where they would be recycled.

Angie did just that, saving \$1,700 worth of pouches from being wasted. So we join Kate Isom in saying, “Thanks, Angie—nice work!”

FY01 President’s Safety Contest winners announced

The President’s Safety Contest winners have been determined. Awards go to the SBU, commuter operation, shop, and call center having the best employee reportable injury ratios per 200,000 work hours during fiscal year 2001 (Oct. 1, ‘00-Sept. 30, ‘01).

Congratulations to every employee who made these honors possible. Thanks go to the award winners and all those who keep guest and employee safety a priority.

The formal presentations of these awards will take place at the 2002 President’s Service & Safety Awards ceremony.

President’s Service & Safety Awards

Miami hosts young performers in Black History Month celebration

Miami employees held a Black History Month celebration on Feb. 23, inviting youth from local schools to showcase their talents in art, poetry, dance and crafts. The employees sponsored the event at the Miami station and cooked all the food that fed the dozens of kids in attendance.

Marvin Jones, University of Miami law professor, spoke to the young crowd, as did managers **Mike Latiff** and **D.C. Stokes**. There were also several vendors present. Many Amtrak employees brought their families to the celebration. Seen above serving food to some of the young performers are: **Larry Williams Jr., Cassandra Oliver, Marion Shaw, Marcie Jones** and **Gloria Smith**. Ticket agent **Tony Keldo** (far right) is also getting a taste.

Were you watching last month when tap dancer extraordinaire Savion Glover performed in the closing ceremony of the Winter Olympic Games? *Pretty impressive.*

What's *really* impressive is that just days before, Glover was performing in an Amtrak station, entertaining employees and station crowds.

In fact, to help Amtrak kick off its observance of Black History Month in a big way, Glover made special station appearances in Washington, New York, and Chicago in February. He performed interpretive dances that celebrate African-Americans on the railroad. They were created especially for Amtrak's Black History Month events.

His performance at Chicago Union Station aired as a segment on the TV show "Artbeat Chicago."

Glover's three Amtrak performances honored a unique group of African American railroad workers of the early 20th century. They used dance-like movements and chants to ease their tedious work in building the nation's railroad.

These workers, known as Gandy Dancers, used different chants to coordinate specific tasks and to provide both physical and emotional motivation for the crews. A lead singer, or caller, used a chant to direct his crew, and each caller had his own signature chant. The workers took their name from the railroad tools they used, which were produced by the Gandy Company.

Complementing the performances was an exhibition by artist Jose Ortega. Originally from Ecuador, Ortega now lives in Toronto and New York City, and he creates commissioned works for clients worldwide. Like Glover's dances, the artwork on display at the events was created especially for Amtrak's Black History Month celebration, and it depicted the life of a Gandy Dancer.

At each event, employees and the public learned more about the legacy of the Gandy Dancers with the presentation of a portion of the PBS documentary, "Gandy Dancer." Copies of the video were also provided to smaller Amtrak stations

across the country so that it could be shown in guest waiting areas.

Amtrak's Business Diversity & Strategic Initiatives Department sponsored the events. Glover won a Tony Award in 1996 for his production of "Bring in 'da Noise, Bring in 'da Funk."

Pullman porters honored in black history exhibit

Amtrak and American Family Insurance welcomed visitors to a national traveling exhibit from the A. Philip Randolph Pullman Porter Museum in Chicago.

The exhibit helps promote an on-line registry to honor the living and deceased members of the Brotherhood of Sleeping Car Porters. It will ultimately be developed into a permanent commemorative exhibit at the Chicago-based museum. Both CNN and Headline News featured the museum and the exhibit in February.

"As the nation's passenger railroad, we have a profound respect for the contributions of A. Philip Randolph and the Pullman porters," said **Larry Allen**, a Milwaukee service manager. "Amtrak is proud to sponsor this exhibit and to

Glover performs with a backdrop of original artwork by artist Jose Ortega; and to the right, film footage of the Gandy Dancers at work on the railroad.

offer Milwaukee residents the opportunity to learn more about the important role African-Americans played in developing America's railroads."

During the heyday of railroad travel in the 1920s, the Pullman porters worked aboard trains, attending to the needs of passengers. The Pullman Palace Car Company built, owned, and operated the majority of passenger trains during this era. In the beginning, the Pullman Company hired only African-American men for the job of porter. A. Philip Randolph used the power of the labor union and the unity it represented to demand significant social changes for African-Americans nationally.

Randolph organized and founded the Brotherhood of Sleeping Car Porters,

Art by Jose Ortega

the first African-American labor union to work under a contract with a major U.S. corporation. He later became an instrumental figure in the civil rights movement of the 1960s.

The Pullman Porters National Historic Registry is a historic registry for all African-American railroad employees from 1863 to 1969. Living porters, dining car waiters, and descendants of the railroad workers may register via the museum's Web site at www.aphiliprandolphmuseum.org, or call 1-888-460-8123.

The Harlem Ambassadors

Also in February, Amtrak was laying the groundwork to team up with some very important ambassadors—the Harlem Ambassadors.

Amtrak joined with the Harlem Ambassadors to celebrate our country's rich diversity and to promote the importance of staying in school and staying off drugs. The Ambassadors, a talented basketball team of five men and one woman, recently launched their nationwide tour with Amtrak as the basketball team's official transportation provider.

For the past four years, the Harlem Ambassadors have used their fantastic feats of basketball trickery to spread their message to young people in cities, towns, and military bases throughout the U.S., Europe, and Asia. The Harlem Ambassadors Basketball Show features high-flying slam dunks, dazzling ball-handling, and hilarious comedy routines. Typically, the undefeated Ambassadors challenge a team of locally chosen stars to an action-packed game of basketball with all game proceeds going to a local non-profit community organization that benefits children.

"Amtrak is excited to partner with the Harlem Ambassadors because the corporation enthusiastically supports the team's message of hope and tolerance," said **Gerri Mason Hall**, vice president of Business Diversity and Strategic Initiatives. "The Ambassadors will share their message coast-to-coast in many of the 500 communities that Amtrak serves."

Capitol Hill developments help shape c

Editor’s Note: *Several developments on Capitol Hill over the past month will be instrumental in shaping the debate about the role of passenger rail in America. This article highlights the recent developments.*

What kind of system do we want as a nation, how much are we willing to pay for that system, and what will be the source of that funding.

The legislation, called the National Defense Interstate Rail Act, would provide a bold vision for passenger rail by aligning the necessary level of resources with much-needed infrastructure improvements, and by making high-speed rail corridors a national priority.

“It is evident that we need to re-evaluate our nation’s rail passenger policy,” said Sen. Ernest F. Hollings (D-SC). “A strong federal role was required to establish the interstate highway system and the federal aviation network. And now, federal investment in passenger rail infrastructure is critical.”

Sen. Hollings, chairman of the Senate Committee on Commerce, Science and Transportation, introduced legislation in March that would authorize \$4.6 billion a year for Amtrak. The legislation, called the National Defense Interstate Rail Act, would provide a bold vision for passenger rail by aligning the necessary level of resources with much-needed infrastructure improvements, and by making high-speed rail corridors a national priority.

Introduced on the heels of Amtrak’s funding request of \$1.2 billion for fiscal year 2003, Hollings’ proposal

calls for significantly more than what the federal government currently invests in passenger rail today. Under the Hollings bill, the Northeast Corridor would get \$1.3 billion annually, all for capital projects, including expected growth. Another \$1.55 billion annually would go to the development of other high-speed corridors (the DOT has already designated 11 of these corridors).

Long-distance trains would receive \$580 million annually, with \$360 million reserved for operating expenses. State-supported routes and short-distance routes would receive \$270 million annually, and \$1.3 billion would be authorized for rail security, including life-safety upgrades for Baltimore and New York tunnels, plus preliminary design work for replacement of the 125-year old Baltimore tunnel.

At the end of February, Amtrak President **George Warrington** appeared before the House Appropriations Subcommittee on Transportation and presented a strong case to support Amtrak’s funding request of \$1.2 billion for FY 2003. He made clear that while it would meet current needs, this level of appropriation would not be enough to cover capital backlog, the development of higher-speed, higher-capacity corridors, and funding for additional security measures.

Emphasizing that temporary fixes are no longer an option, Warrington also stressed the need for Congress and the administration to look beyond the next fiscal year and answer three key questions: what kind of system do we want as a nation, how much are we willing to pay for that system, and what will be the source of that funding. Amtrak commended Sen. Hollings’ proposal as the first to answer those three questions, stating that for the first time, there’s a proposal on the table that provides stable long-term funding, clearly defines a federal role in the development of rail — and importantly, high-speed passenger rail — and articulates a transition from the long-distance network to a connected network of high-speed corridors.

Strong federal leadership and funding were essential to the development of the interstate highway system and our nation’s aviation system. Since 1971, when Amtrak began service, \$25 billion has been spent on passenger rail; during that same time, \$750 billion has been invested in highways and aviation.

Amtrak believes Sen. Hollings has taken a strong step in the right direction, although there’s no doubt that the debate surrounding the role of passenger rail in America will continue for some time this year. But there is now new momentum and urgency to that debate.

Earlier in February, Warrington appeared before the House Subcommittee on Railroads and outlined some of the most prominent successes and challenges Amtrak has experienced in the last five years. The company has seen ridership increase 19 percent, to 23.5 million passengers, and a ticket revenue increase of 40 percent to \$1.1 billion, with overall revenues up 38 percent to \$2.1 billion. Amtrak has grown its profitable commuter and commercial business lines, launched America’s first high-speed service,

Debate about passenger rail in America

established pivotal partnerships, and strengthened our commitment to guest service with the Satisfaction Guarantee and Amtrak Guest Rewards, a customer loyalty program.

Amtrak’s greatest challenges stem from its dual mandate to provide a public service and to generate a commercial profit, Warrington said. No passenger railroad system in the world operates without significant capital investment.

In discussing the challenges Amtrak faces, Warrington said that:

- The operation of long-distance trains will never be profitable on a classic commercial basis
- We have been successful in generating funding through private markets, but that has increased our annual debt service payments.
- Income from financing transactions had to be applied toward the self-sufficiency goal, rather than as working capital to compensate for uncontrollable events
- Despite increased revenue generated through ventures such as our Mail & Express business, it’s insufficient to cover the costs of running a system that includes long-distance trains
- Even though ridership and revenue have grown considerably since 1996, we have instead been judged, in large part, by the self-sufficiency requirement

In short, said Warrington, after Congress presented Amtrak with a self-sufficiency mandate, the railroad has tried very seriously to make it work. While it was a critically important tool to enhance revenue and cut costs, Warrington stated, it also proved to be inappropriate, impractical and destructive.

Warrington pointed out that the national passenger rail system receives less than one percent of all federal transportation spending. He explained that there is no national rail system in the world that operates without substantial public funding for infrastructure, and many countries support train operations. And, that passenger rail is the only mode of transportation in the U.S. that does not have guaranteed appropriations and a dedicated source of capital funding.

Before concluding his testimony before the transportation subcommittee, Warrington quoted Kenneth Mead, the

DOT Inspector General, who had recently stated, “For what it has been charged to do, it’s amazing that Amtrak has gotten this far.”

Mead’s comment mirrors those he made in a January interview in the Wall Street Journal: It would be possible for Amtrak ... to meet the letter of the self-sufficiency law. ... [But] the sacrifices made to achieve the self-sufficiency mandate would compromise the physical and financial integrity of any future passenger rail company, whether it operates as Amtrak or another entity or entities.”

Congress and the Bush administration are empowered to set Amtrak on a clear path toward success and reliability. Amtrak believes the key is in the answers to those three fundamental questions: what kind of system do we want as a nation, how much are we

willing to pay for that system, and how are we going to pay for it.

Inspector General Mead echoed this position in testimony earlier this month before the Subcommittee on Transportation, Committee on Appropriations. “Amtrak’s failure to eliminate its need for operating assistance has detracted attention from the more critical issue, which is how much capital investment will be needed to sustain a system of intercity passenger rail. Any system of passenger rail—profitable or not—will require substantial and continuing capital funding. Even if Amtrak (or a successor) were to succeed in becoming operationally self-sufficient, it would still require substantial external assistance to address its capital needs.”

Mead has concluded, as he testified that, “the primary issue of funding needs to be resolved first.” Rejecting privatization as a cure, Mead stated, “These needs would not just go away by handing the system or parts of it over to another entity. What it will cost to continue and begin to expand passenger rail in the United States is not dependent upon whether Amtrak is the operator or not. The debate over whether a private company or government entity should be established solely for the purpose of administering the rail infrastructure investment program is irrelevant if there is no assurance that adequate capital funding has been secured to invest in the system.”

“In fact, privatization is not likely to be an option unless adequate funding is secured. If the Northeast Corridor were to be franchised “as is,” with its \$15 billion in long-term capital investment needs, few investors would find it a good bargain.”

Mead advised the committee to focus on the real question: funding. “The question of what kind of system is best for the country is inextricably intertwined with the question of how much the country is willing to pay for such a system. The answers to both questions are most appropriately left to the administration, the citizens of the United States, and their elected representatives.”

For a full copy of George Warrington’s recent testimony, log onto www.amtrak.com and go to “press room.” Testimony by Inspector General Ken Mead can be found at www.oig.dot.gov.

“The question of what kind of system is best for the country is inextricably intertwined with the question of how much the country is willing to pay for such a system.

**Kenneth Mead,
DOT Inspector General**

Thanks for the memories

Gaddy retires

With longer job tenure than the age of most of our employees, **Conway Gaddy**, track foreman at the Perryville Maintenance of Way crew base, has been the model of experience. He retired at the end of February after nearly 52 years of working on the railroad.

He first hired with the Pennsylvania Railroad in April 1950 as a track worker. Gaddy made the foreman roster in 1971. And then he became the constant presence, as the railroad's ownership changed from the PRR, to Penn Central, to Conrail, and finally to Amtrak.

Gaddy attributed his ability to serve so long to realizing early that he needed the job more than the job needed him. Or, as he told his hometown newspaper for a story at his retirement, "You have to like yourself for the job to like you."

For the past 32 years, Gaddy has had perfect attendance, and he's only had one injury in his entire 52-year railroad career.

"I'm not exaggerating when I tell you that he is a wonderful and generous person," said **Debbie Berenger**, secre-

Conway Gaddy

tary at the Perryville crew base. "I can honestly tell you that I have never heard one single complaint from this man. Every day, for years without fail, he greeted us with a huge smile and said 'You've never had it so good!' That will stay in our hearts forever."

In honor of Gaddy's many contributions, **Sandy McCardle** of CETC came up with a great idea. With the permission of Norfolk Southern, we renamed a new switch that had been installed in February. It's now officially the "C. Gaddy Switch."

Conway, you'll be greatly missed at Amtrak. We wish you the best in the next chapter of your life.

BENEFITS CORNER

Get the 411 on FMLA

The Human Resources Department wants employees to have all the facts regarding the Family Medical Leave Act (FMLA). So, HR will periodically address FMLA issues in *Amtrak Ink*.

Amtrak's FMLA policy (PERS-47) was distributed to employees in March 2000. That policy and a helpful employee guide have since been published on the Amtrak Intranet.

If you have a question regarding the FMLA policy, procedures for processing requests, or any related issues, please fax your question to ATS 777-2010 (202/906-2010) in Washington, D.C., or ATS 761-3409 (213/391-3409) in Los Angeles. An HR professional will respond to you directly, or your question and our answer will be published in *Amtrak Ink*.

When submitting a question, be sure to include your name and a daytime phone number where you can be contacted.

Q: What is FMLA?

A: The Family and Medical Leave Act (FMLA) is a federal statute. It stipulates that employers must allow eligible employees to take unpaid leave, for up to 12 weeks, 60 days, or 480 hours in a 12-month period.* Under the statute, eligible employees may take FMLA leave for the following three reasons:

- The birth of your child, or the placement of a child with you for adoption or foster care
- To care for your own serious medical condition
- To assist in the care of your spouse, parent, or child with a serious health condition

* Although this is the standard FMLA allowance, it may vary by state.

Class is in session — just watch the screen

Mike DeAngelo explains to on-line travel agents how to interpret Amtrak data on their screen display.

Remember that ad where a bunch of business types are in a video teleconference, all looking very tightly buttoned, but one woman, joining from home, is wearing bunny slippers?

When **Mike DeAngelo** conducts classes for 15-20 travel agents on how to book and ticket for Amtrak, he could wear bunny slippers. Not that he would. But he could.

His students might be gathered in the same training room in, say Los Angeles.

Or they could be sitting in front of PCs scattered around the country. But DeAngelo never has to leave his Philadelphia desktop and speaker phone to lead an on-screen class. “OK, I’m going to type in that destination, and watch what happens...”

Convenience and cost management are happy partners in a new training option being used by our system-wide Travel

Agent Service Center in 30th Street Station. Thanks to technology, service center representatives are spending less time — and money — on the road.

“We get about 400 calls a day from travel agents, asking for immediate help with a reservation,” explained **Claudine Conaway**, director of the center. “But we also get many requests for formal training. Until we received use of this new program, we had to travel and conduct all that training at the agencies. Now we can do a lot of it from right here.”

The program is a feature of Sabre, a major global distribution system that many travel agents tap into when booking and ticketing for their customers. Thanks to the courtesy of Sabre, since last month Amtrak trainers like DeAngelo have been convening training classes online, leading travel agents through the intricacies of issues like our product and city codes.

During a typical two-hour class, participants are on a telephone conference

call, and the Sabre screen each person is looking at is being controlled by DeAngelo. They watch him key in demonstration scenarios, and listen to his explanations. DeAngelo can give screen control to any of the travel agents, for hands-on exercises.

“It’s important for us to continue training, because there’s quite a bit of turnover among travel agents,” Conaway said. “The new ones think that working within our system is difficult, but once they get the training, they find that it’s no big deal.”

As the year began, nearly 50 travel agencies were on a waiting list for Amtrak training. Without the online resource, Conaway estimated that it would take one trainer as much as six weeks — all out of the office — to whittle through the list. More and more of that training will now be done online, in much less time, and at no cost to Amtrak.

And Mike DeAngelo won’t be wearing bunny slippers. But he could.

‘Apology, thanks from Amtrak late in coming’

The following article about Amtrak was published in The Chicago Tribune last month. It speaks to the value of superior guest service — what a difference a simple apology makes.

I felt soothed as
I gathered up
my belongings,
newly determined to
speak out not only
for saving the
agency, but also for
improving it with
high-speed service.

The announcement came over the intercom at 5:53 p.m. Monday: “Amtrak would like to apologize for the delay in our arrival today,” said a woman’s voice. “And we’d like to thank you for choosing Amtrak.”

I looked out the window of the train in order to watch pigs fly, for that, I assumed, would surely come next.

Amtrak apologize? Amtrak express gratitude to its passengers?

I’ve often taken the train from Chicago to Ann Arbor, MI, to visit my parents over the last 21 years, and this was the first time I’d ever heard words of regret or appreciation from any Amtrak employee aside from the cafe car attendants.

The thanks were no big deal, really. Most merchants and service providers offer them ritually as part of the lubricant that civilizes commercial transactions. I usually offer them in return, in fact, as silly as it may sound when I thank a hot dog guy for selling me a hot dog. But the apology was huge. Even rote apologies alleviate resentment and build trust, even affection. No one expects any business to run flawlessly — least of all a transportation company subject to the whims of weather, aging equipment and route impediments over which it has no control — but we expect it to aspire to perfection and to signal that by expressing regret when it falls short.

Amtrak has long seemed resigned to mediocrity. When I’d arrived at the station in Ann Arbor 45 minutes in advance of the scheduled departure,

two employees were sitting behind a bulletproof window doing absolutely nothing. They posted no sign and made no announcement, so I had to go up and ask if the train would be on time.

“It’s about 50 minutes late,” one of the men said. That’s all. No contrition. No reason given. Not even a hint of shared exasperation.

The only announcement they made came as the train was pulling in. I cocked my ear for “thanks for your patience,” “have a pleasant trip” or some other customer-friendly grace note.

After all, Amtrak’s woes had been in the papers all weekend: Operating at a \$1.1 billion deficit, planning to cut employees and long-distance routes while begging Congress and the president for an enormous subsidy in next year’s budget, clearing its throat to sing the disappearin’ railroad blues.

If ever the time was right for some grass-roots public relations, the 2 p.m. arrival of an 1:11 p.m. train on the very day the Bush administration released a budget proposal giving the railroad less than half of what it says it needs was that time.

The politics are simple. Elected officials are going to save Amtrak as we know it only if the people demand it, and the people are going to demand it only if they don’t think of Amtrak as an indifferent behemoth — a Postal Service on wheels.

But alas. No friendly words at the station and none from the conductor or the unseen voice on the train’s public

address system that welcomed us aboard and blandly announced that we’d be at least an hour late to Chicago.

I’m not a train lover nor am I afraid to fly. I take Amtrak home because it’s more comfortable, direct and economical than flying, and almost as fast door-to-door, even though the train is nearly always late. But it’s a close decision. And discriminating customers like me — not buffs and phobics — will determine the future of intercity passenger rail.

I was brooding along these lines when I heard the first sign of improvement. The train pulled off on a siding and came to a halt, as it does every so often on this trip. “We will be stopped for five minutes to allow the eastbound train to pass,” said the announcer, violating what I’d assumed was an Amtrak rule not to explain to passengers why a train isn’t moving until at least half an hour has passed.

She did this at least once more during an unscheduled pause in the journey. And then, out of nowhere, as we were nearing Union Station an hour and 15 minutes behind schedule, came the apology I thought I’d never hear.

I felt soothed as I gathered up my belongings, newly determined to speak out, not only for saving the agency, but also for improving it with high-speed service. Apology accepted! And hey, Amtrak, thanks for the ride.

By Eric Zorn

RAILWAY ROUNDUP

Don Saunders speaks on dedication day for the new Ft. Worth intermodal station.

Amtrak gets intermodal in Ft. Worth

Enthusiasm for intercity and commuter rail passenger service in Texas was evident at the recent dedication ceremonies for the new intermodal transportation facility in downtown Fort Worth.

The Jan. 12 event attracted hundreds of rail enthusiasts in the face of some stiff competition — a major livestock show and rodeo that was in town.

Amtrak officials, community volunteers and regional leaders joined board members from the Fort Worth Transportation Authority (the “T”) and representatives from the Dallas Area Rapid Transit (DART) to formally dedicate the Fort Worth Intermodal Transportation Center.

‘Quiet Cars’ debut on Amtrak’s Capitol Corridor trains

It was only a matter of time. Quiet Cars have hit the West Coast.

Amtrak’s Quiet Car debuted in January 2000, as a pilot program on one train out of Philadelphia. The program soon expanded to virtually all routes along the Northeast Corridor. The popularity of this program has now reached California.

At the request of a number of regular riders on *Capitol Corridor* trains between Sacramento-Bay Area-San Jose, one car on each train is now being designated as a Quiet Car.

Amtrak’s Quiet Car is designed for guests who want to read, work quietly or rest while traveling to their destination, without being disturbed by noisy cell phones and beeping pagers.

Conductors may dim overhead lighting, but reading lights can be used and emergency lights will remain lighted. Luggage bin doors will remain closed between stops.

The day-long celebration included tours of the building, an Amtrak equipment display, entertainment, free refreshments, and lots of information about how to ride buses and trains for work and play. Event organizers served more than 10,000 hot dogs to guests before running out!

Participating were “T” Executive Committee Chairman Dave Ragan, DART Board Chairman Robert Pope, State Representative Kim Brimer, Amtrak Intercity Senior Vice President **Don Saunders**, and Fort Worth Mayor Kenneth Barr. John Bartosiewicz, president and executive director of the “T,” served as master of ceremonies.

“Investments in intermodal connections like we now have in Fort Worth are vital to the continued growth of passenger rail service, both regionally and nationally,” said Saunders. “There is growing recognition that intercity passenger rail is a critical component of a city’s transportation system and economic development. Amtrak’s guests will surely benefit from the convenience and amenities of this facility.”

Business and community leaders cut the ceremonial ribbon and began to tour the new facility. It is home to DART, Amtrak, and the customer service center for the “T.” The facility features a kiss-and-ride area for commuters, and retail outlets are planned.

NBA, Amtrak treat kids like all-stars

In February, Philadelphia hosted the NBA All-Star Game. Amtrak took the opportunity to join with the NBA and give some New York City kids the ride of a lifetime.

The young fans rode *Acela Express* to Philadelphia along with NBA players, who included New Jersey Nets’ Kenyon Martin, and the Atlanta Hawks’ Shareef Abdur-Rahim.

In addition to a cool ride on America’s high-speed train and meeting the players, the kids received free tickets to the All-Star Jam Session. For Amtrak, it was a great opportunity to use our partnership with the NBA to showcase the advantages of rail with our young guests.

Commuter rail employees aid local police

An Amtrak track maintenance crew demonstrated the power of awareness

Actress Bo Derek gives an autographed copy of her new book to Acela passenger Zaida Ismatul.

‘Live on Acela Express’

Amtrak welcomed actress Bo Derek on board *Acela Express* in February. Derek, who leaped into the national spotlight in the 1979 film *10*, was featured in Amtrak’s “Live on *Acela Express*” event series. She signed copies of her new book, *Riding Lessons: Everything that Matters in Life I learned from Horses*.

Derek’s book chronicles her life, and her life with her husband; the late film director John Derek. A lover of horses, Derek uses her intuitive understanding of the animal as a metaphor for the nuances of human relationships.

“Live on *Acela Express*” has also

Chef Strausman whips up a mean dish at high-speed.

featured appearances by best-selling novelist David Baldacci, and New York celebrity chef Mark Strausman of Campagna restaurant fame, who presented a cooking demonstration. An upcoming event on April 23 and 25 will feature a wine tasting hosted by the Sonoma Wineries.

With his high-speed cooking demonstration, Strausman shared his culinary expertise and promoted his cookbook, *The Campagna Table: Bring the Style and Cooking of the Italian Countryside into Your Own Home*. The demo taught busy professionals how to prepare tasty meals in a hurry.

“It was a huge success,” said **Cecilia Cummings**, director of Media Relations in the Northeast Corridor. “We’re looking forward to hosting more events like this in the future.”

The events are confined to a small area of the train, so non-participants won’t be disrupted. But judging from Chef Strausman’s smashing success, almost everyone wants an encore. Bravo to everyone who makes *Acela* a five-star production!

— and a carefully timed door opening — in maintaining security for our Boston Commuter Rail customers.

While working on the tracks near Sullivan Square Station on Jan. 2, Boston Maintenance Crew Two saw a vehicle pull up near the right-of-way. A man left the vehicle and started running in their direction. Almost immediately, a local police cruiser arrived and the officers began pursuing the man on-foot. As the suspect neared the parked Amtrak vehicle, one of the crewmembers opened the truck door, knocking the man to the ground.

He tried to flee but two other crewmembers tackled and restrained him until the police officers arrived and took the suspect into custody.

The man had allegedly stolen drugs from a nearby pharmacy. Because of the crew’s quick response, he was apprehended, and there was no disruption to our rail service.

Kudos to foreman **Joe Powers**, asst. foreman **Bob Shaponick**, welder **Paul Marion**, roadway machine operators **Ron Dumais** and **Ed Olson**, and truck driver **Mike Flaherty**, for your quick response.

Amtrak Intercity headquarters moves

It's official: Amtrak Intercity headquarters are no longer located in the tower of Chicago Union Station.

Major components of the project

- Complete restoration and renovation of the existing building, including the 112-foot-high Great Hall ceiling
- Creation of 480,000 square feet of technologically advanced office space with operable windows
- A Harrison Conference Center (a division of Hilton Hotels) with up to 300 guest rooms, and 35,000 square feet of conference space
- Development of 150 luxury condominium units with excellent views, private parking and a private entrance
- More than 60,000 square feet of retail and restaurant space; accessible from both the street and the Great Hall
- Direct connection to the recently opened 70,000-square-foot Multiplex Wellness Center across Canal Street
- The renovation does not include the passenger concourse, ticketing areas and train platforms, and existing Amtrak and Metra (commuter) rail operations will not be affected. Our guests' experience will be enhanced by the many new amenities, restoring the vibrant atmosphere of the early days of the station.

Instead, employees who once worked in those offices now occupy two floors of a building only a block away. The new address of Amtrak Intercity headquarters is 525 W. Van Buren Street, Chicago, IL 60607.

The move to a new location only involved office workers in the tower. Employees who work in the station proper (ticket clerks, baggage handlers, Amtrak police, etc.) were not affected.

Although the employees who occupied the offices will miss the Union Station office location, the decision to leave the tower was

based on both business and safety considerations. In addition, the relocation will reduce daily operating costs for the company, and increase the profitability of Chicago Union Station through redevelopment of the tower.

"I want to thank all the employees who made this move a success," says **Don Saunders**, senior vice president of Amtrak Intercity. "They displayed a great deal of cooperation and teamwork to make this happen seamlessly."

Meanwhile, plans are moving forward to restore and rebuild the historic station into a major development including office space, a hotel-conference center, condominiums, and retail space. The station will become the centerpiece for redevelopment of what's known as the West Loop in the downtown area.

The building is a historically significant element of Chicago's transportation heritage, as well as the Golden Age of intercity rail travel. The redevelopment project, designed by Lucien Lagrange Architects, enlivens a building envisioned by Daniel Burnham's 1909 Plan for Chicago.

As originally conceived and designed, Chicago Union Station was to be a high-rise structure, but was never completed. Burnham envisioned the station as one of three monumental structures facing the West Loop, along the south branch of the Chicago River. One of those buildings, the Northwestern Station, is gone. The second, the United States Post Office, was constructed just to the southeast of our station.

Construction is expected to begin as early as November, with completion as early as fall 2004.

Amtrak, GASF — partners in revitalizing communities

The American public's interest in rail and the revitalization of rail stations is greater than ever today.

People are realizing that station revitalization projects can create a "front

office and retail. Studies prove that revitalization projects increase Amtrak ridership by 20-30 percent. And they build new and larger constituencies for rail.

Tambra Wishart. "We're already a major stop for Amtrak. Now we want people to get off the train and walk around. The study will help the project get into the regional transportation plan and become eligible for state and federal funding."

Funding is already in place for renovation of the historic Santa Fe Depot in Fresno to accommodate rapidly increasing Amtrak ridership. But a \$15,000 GASF grant will fund a master plan focused on creating an intermodal hub.

GASF grants range from \$2,500 to \$30,000, and non-profit organizations, as well as government agencies, can apply. "The key issue for a lot of communities is startup funding," says Hank Dittmar, president of the foundation. "There are federal funds to rehab stations, but no money for planning, design, appraisal, leasing, or devising an operating plan."

Erich Strebe of the GASF said, "We want to work with communities that see intermodal transportation as key to economic redevelopment. Amtrak employees know train stations better than anyone, and they know which communities should apply." Applications are available at www.stationfoundation.org, and they're due April 12.

By Gloria Ohland, GASF

A revitalized Union Station in Grand Junction, CO.

door" to their communities, expand transportation choices, leverage other investments and remake downtowns into hubs of community life.

Stations represent an enormous investment in space and infrastructure, and are often the grandest public architecture communities have. Because stations were often built to house offices, restaurants and sometimes hotels, they're well suited for mixed-use development, and the constant foot traffic is good for both

illustrate the kind of projects GASF is looking for. Both host Amtrak trains.

Grand Junction received \$25,000 to study how to redevelop historic Union Station as an intermodal plaza, including a newly renovated historic hotel, expanded convention center, and the winding, tree-lined Main Street, where shops, outdoor cafes and two historic theaters make it a favorite stroll.

"This is all in a walkable five-block area," said Mesa County planner

GUEST COLUMN

There's something about a train that's magic for my neighbor, Herb Rogge. I met Herb when I moved to Florida a couple of years ago. He spotted my Amtrak baseball cap, and we became instant buddies. I found out that Herb loves Amtrak, and has traveled most of our routes.

What's wonderful to me is that not only does Herb travel by Amtrak, he has nothing but good things to say about our employees and our equipment. Overall, he has been very pleased with our service.

Listening to Herb
and his wife talk
excitedly about their
trips, and their
satisfaction with
our service, makes me
proud to be an
Amtrak employee.

Herb and his lovely wife, Ilma, have traveled over 54,000 miles with us. For their 50th wedding anniversary in 1995, they took the *Sunset Limited* to Los Angeles, the *Coast Starlight* to Portland, the *Empire Builder* to Chicago, the *Lake Shore Limited* to New York, the *Clocker* to Newark, and the *Silver Meteor* back to Palatka, FL.

Herb Rogge

Last year, while on the *Empire Builder*, Herb fell and broke three ribs. He was taken off the train by emergency personnel and flown home. He was disappointed, because he had planned to see the famous Horseshoe Curve in Pennsylvania on a later leg of the journey. So — he and Ilma went back to complete the trip.

This time, the itinerary included the *Sunset Limited*, *Coast Starlight*, *Zephyr*, and the *Three Rivers*. He finally saw the Horseshoe Curve, taking pictures to add to ones from all his Amtrak trips and lots of other Amtrak memorabilia.

Listening to Herb and his wife talk excitedly about their trips, and their satisfaction with our service, makes me proud to be an Amtrak employee. I asked them if they've planned their next Amtrak experience. Ilma said, "No," but Herb just smiled and winked. I bet he's already mapped out their 60th wedding anniversary trip!

continued from page 1

Trenton. "Over the last five years, we have increased Amtrak's ridership and revenues to all-time records, launched *Acela Express*, North America's first high-speed train, and raised customer service standards. We also developed stronger partnerships with many states, cities and commercial partners, including some right here in New Jersey." (See Warrington's *Train of Thought* column on Page 2.)

Numerous public officials praised Warrington's contributions. Among them was U.S. Transportation Secretary Norm Mineta. "George has performed admirably. The position of president of Amtrak has been one of the most challenging assignments in the transportation industry over the last several years." Former Amtrak

board member and Delaware Sen. Tom Carper stated, "George Warrington performed a great service to Amtrak and the country. I am sorry to see him go and he will be missed. During George's time at the helm, Amtrak made real improvements."

Amtrak board Chairman Smith met with groups of employees in Washington and Philadelphia following the announcement of Warrington's resignation and emphasized that the board is moving quickly to appoint an interim successor and conduct a nationwide search for a permanent president and CEO. "We're very pleased with the progress we're making and look forward to sharing some good news on this front shortly," said Smith.

PROMOTIONS IN MOTION

Employee discount on Las Vegas rail package

Key Holidays, in conjunction with Amtrak, is sponsoring four "Las Vegas Fun Trains."

This is not the proposed Amtrak Las Vegas service scheduled to begin operation in 2003, but it's an opportunity for all Amtrak employees and the general public to enjoy a unique rail experience.

Amtrak employees are offered a 15-percent discount on any package. There will be four trips: April 12, 16, and May 3, 7. These special packages include:

- Roundtrip train from Los Angeles (or Riverside) to Las Vegas

- Two nights at selected hotels
- Special coupons for discounted meals, shows and attractions
- Depot/hotel transfers
- Deli lunch served on return train—Friday train also includes a light dinner
- All taxes, and more

Prices are per person (double occupancy), and range from \$195 to \$385, depending on the selected hotel.

Call Key Holidays for more information and a brochure at 1-800-783-0783. Identify yourself as an Amtrak employee and be prepared to provide your employee I.D. number.

ORGANIZATIONAL UPDATE

Lynn Bowersox has been appointed vice president of NEC Operations and Maintenance. James Weinstein, new senior vice president of the NEC made the announcement earlier this month.

Bowersox will be a critical link for Weinstein in providing organizational continuity and decision-making. She will be responsible for day-to-day

operational oversight of the NEC to assure the integration of the units responsible for train operations, infrastructure maintenance, equipment maintenance, safety, and customer services. Her focus will be on providing safe, efficient, customer-focused operations in line with our business plan goals.

Despite uncertainty, progress on federal appropriation continues

With Amtrak’s ability to run all its current services in fiscal year 2003 at stake, uncertainty about the level of federal support continues, despite several encouraging signs that have appeared on the horizon.

Most recently, the Senate Budget Committee included Amtrak’s entire \$1.2 billion minimum needs request in its FY 2003 budget resolution. That resolution could be passed in April. Although, it does not carry with it the force of law, it is a blueprint of what a majority of the Senate would recommend the appropriators provide in funding for Amtrak. For us, it is a positive step toward an appropriation that is sufficient to maintain all services. This action occurred after Senate Commerce Committee Chairman Ernest Hollings, and others including Delaware Sen. Tom Carper, secured the signatures of 52 Senators in support of this funding level.

Additionally, it was reported that Rep. Jack Quinn, chair of the House Railroad Subcommittee, was preparing a one-year reauthorization of at least \$1.2 billion for Amtrak next year. A spokesman for Quinn was quoted on April 6, “This is pure and simple a way to give them money

to survive without cutting routes.” This legislation could be introduced as early as next week.

Another important piece of legislation making its way through Washington currently is a comprehensive funding and rail development bill – the National Defense Rail Act — sponsored by Sen. Hollings. This bill authorizes \$1.3 billion in one-time costs in FY 2003 and provides for \$4.6 billion annually from 2003 to 2007 for capital needs, operational support and development of high-speed rail corridors. The legislation has attracted 30 co-sponsors and its support is growing.

However, the uncertainty of the legislative process has required Amtrak to make preparations in the event of a shortfall. On April 5, outgoing president **George Warrington** wrote governors of the 46 states that Amtrak serves, warning that the company would be faced with difficult decisions without a sufficient federal appropriation. Warrington’s letter cautioned the governors that while 18 long-distance trains have been cited as being at high risk of being discontinued, other routes, services or programs are similarly at risk.

Warrington and Amtrak board members have made it clear that they are working very hard to secure an adequate level of federal dollars to preserve all current services, but have also acknowledged that because the appropriation is not expected until the late summer or early fall, the scope of the system in FY 2003 remains uncertain. Should this appropriation be insufficient, only at the beginning of the fiscal year in October would route structure decisions be made. Amtrak is not required to provide the usual 180 days notice to terminate service in a situation where service depends upon a sufficient level of appropriation. However, in keeping with the spirit of the law, the letter to the governors served to advise them of Amtrak’s financial circumstances and the choices which may be faced, despite the latest encouraging news.

Commenting on the situation, Sen. Carper, a former Amtrak board member, said “given the demands on every budget dollar, securing \$1.2 billion for Amtrak is going to be a steep hill to climb.” Carper added, “Many of us are willing to make that climb, but supporters of passenger rail service — mayors, governors, passen-

TRAIN OF THOUGHT

John Robert Smith
Chairman of the Board of Directors

As we say our farewells to **George Warrington** this month, I wanted to take an opportunity to reflect on his leadership and also look to the future. First, let me say a word about George’s leadership these past four years. There’s no question that our company’s business performance is stronger than ever, thanks to George. Our ridership is strong, revenue is up and guest satisfaction has improved. The fact is, George is leaving this company in a lot better shape than it was four years ago.

Of course, that credit has to be shared with all of you who have worked so hard to deliver world class guest service. Clearly, Amtrak’s employees are the key to our success. I’m going to be moving around the system, talking with as many of you as I can. Last month, I had the privilege of meeting scores of employees as I walked through our facilities in Washington, D.C., and Philadelphia. It was an energizing experience, and I’ll be doing more of this.

What I saw time and again was the type of spirit, passion, and concern for our company that gives me such hope for the future. I didn’t have to tell anyone about the latest from Congress — I find that you are well-informed and many of you have asked how you can help. That’s involvement.

Let me tell share a little bit of what I’ve been saying in my field visits. First, I wouldn’t have taken this post if I didn’t think we have a future together. I know you’re doing your part—putting the guest at the center of everything we do. And I can assure that we’re doing our part — putting

the facts about Amtrak at the center of the debate in Washington.

Facts like record ridership and revenue — we had the best February in the history of the company — speak to our important role in a balanced national transportation system. We are also doing a better job managing our costs, in spite of things we can’t control, like the economy, post-Sept. 11 security costs, and other factors.

Congress and the Bush administration are both aware of our achievements — and they’re hearing from their constituents. I’m confident that a reasonable solution will emerge from this debate. For instance, many of you know about the bill introduced by Sen. Ernest Hollings, called the National Defense Interstate Rail Act. That bill would provide \$4.6 billion a year to help us meet our capital costs and operating expenses, and it already has 30 co-sponsors.

I have to caution you, this congressional debate is a long and complicated process, and we can’t predict the result. But proposals like that of Sen. Hollings show that many members of Congress are serious about providing Amtrak with some long-sought stability. And let me tell you something — those schemes to split us up and sell us off aren’t finding much support in Washington.

The board is committed to an Amtrak that maintains and grows a national passenger rail system. And it’s committed to supporting you as you provide world-quality guest service. You’re the key to our success.

Appropriations process continues

continued from page 1
gers — are going to have to raise their voices over the coming months for the president and the Congress to hear.”

Tips on writing a member of Congress

Many employees have asked how they can write a member of Congress to urge support for Amtrak’s federal grant for fiscal year 2003.

There are two restrictions: You cannot write a letter on company time, and you can’t use company property, such as letterhead or an office PC. As with any good letter, state your opinion early, be factual, and keep it to one page.

New board chairman visits employees on the job

Amtrak Chairman John Robert Smith gets familiar with the work of a ticket agent in Washington, D.C.

Amtrak Chairman John Robert Smith met with employees in both Washington, D.C., and Philadelphia last month, assuring them that “we’re working to protect your future,” and creating favorable impressions in the process.

Mayor Smith, who is mayor of Meridian, MS, said it was important for employees to know that the

Board of Directors is working aggressively to ensure that Amtrak has the

funding and leadership it needs to succeed. He repeated those messages with dozens of employees throughout Washington Union Station and Philadelphia’s 30th Street Station.

Walking casually through Washington’s ticketing area, crew base, and onboard an *Acela Express* train about to take on guests, Mayor Smith introduced himself to every employee he saw, and thanked them, as he put it, “for what you do to help us all succeed.”

In answer to questions, he emphasized that the board was determined to convince Congress of Amtrak’s need to be reauthorized at sufficient funding levels. He assured employees

that an interim successor to **George Warrington** “will be onboard as soon as possible — we’ve already talked with some excellent candidates.”

A similar walkabout in Philadelphia, including a tour of the Centralized Electrification and Traffic Control facility, was well received. Having just met Mayor Smith, one employee said, “It’s so wonderful to hear such a positive attitude. It’s reassuring to see that he’s focused and really cares.”

The new chairman seemed energized after the two days of meeting with employees: “I want to do more of this. This has been great.” Plans are in the works for Smith to visit with more employees around the system.

Dukakis brings positive message to Amtrak West

“It’s nice to know that the decision makers understand what we’re up against out here in the field, and are fighting to keep a national passenger railroad.”

Barbara Brennan, Human Resources consultant

Amtrak West employees in the Pacific Northwest met recently at the Seattle maintenance facility for an informal question and answer session with the Amtrak board vice chairman, Gov. Michael Dukakis. Many who attended left with a growing confidence in Amtrak’s future.

“I appreciate his enthusiasm for his position on the board, his positive approach for the future of Amtrak, and his struggle to keep Amtrak in the limelight” said **Meredith Lesley**, trainmaster. Product line Supervisor **Ralph Reed** added, “Gov. Dukakis made us feel Amtrak will be a viable railroad long into the 21st century.”

Diane Ruddy, staff assistant for the *Empire Builder*, said, “He was very informative, straightforward, personable, and he didn’t blow smoke at us.” Assistant Conductor **Brad Swartzwelter** added, “I agree with

Gov. Dukakis (standing on the right) speaks to employees at the Seattle maintenance facility.

what Gov. Dukakis said — that Amtrak is only asking for a fraction of what the other forms of transportation already have.”

Barbara Brennan, Human Resources consultant, said, “It’s nice to know

that the decision makers understand what we’re up against out here in the field, and are fighting to keep a national passenger railroad. I feel more hopeful about Amtrak’s future knowing people like Gov. Dukakis are supporting our efforts.”

Along with the former Massachusetts governor’s board duties, his schedule for the last few months included teaching public policy courses at UCLA. Prior to the Seattle session, he had also met with employees in the Oakland maintenance facility, congratulating them for record-breaking ridership and revenue.

Amtrak, Illinois DOT hold ‘Downstate Day’

Cheryle Jackson, V.P. of Amtrak Intercity Government & Public Affairs, welcomes visitors to the first Downstate Day.

Amtrak and the Illinois Department of Transportation held the first “Downstate Day” in the Great Hall at Chicago Union Station on March 14.

The day-long event began with a brief program honoring the victims and heroes of Sept. 11. They are memorialized by a sculpture erected in the Great Hall by Amtrak employees who volunteered at Ground Zero.

Other activities during the day focused on the critical role Amtrak played during the week of Sept. 11, and Amtrak and IDOT’s efforts to get back to the business of America — specifically tourism.

The event was held to promote travel to Illinois. Representatives from a variety of destinations and attractions

Ten drawings were held for free round-trip Amtrak tickets to anywhere in Illinois that Amtrak serves from Chicago.

were on hand to provide information about the new, easy way to buy Amtrak vacation packages to downstate Illinois. Ten drawings were held for free round-trip Amtrak tickets to anywhere in Illinois that Amtrak serves from Chicago.

The vacation packages being sold include lodging and free transportation to and from the local Amtrak stations. Some packages also offer such features as tickets to a dinner theatre, golf outings, bicycling, gaming, gourmet dining, and more. Packages are available from Butterworth Travel at 1-800-966-1333.

Downstate Day also included music provided by the Grammy-nominated Jazz Studio Orchestra from Western Illinois University, Macomb, IL.

Gerri Mason Hall

Mason Hall named among '25 Influential Black Women In Business'

Amtrak's **Gerri Mason Hall**, vice president of Business Diversity and Strategic Initiatives, has been honored as one of the "25 Influential Black Women in Business" by *The Network Journal* magazine.

Mason Hall, who is featured on the magazine's March cover, is responsible for developing key diversity strategies, policies, and initiatives. Under her leadership, Amtrak has launched a comprehensive initiative to provide diversity training for all 25,000 employees nationwide, expanded recruitment of women and minorities, and developed an employee forum program to openly discuss issues of diversity among union and management employees.

"I have been blessed with many opportunities to work closely with prominent black women in business who served as mentors. All of these women took a leap of professional faith and gave me leadership responsibilities relatively early in my career," said Mason Hall.

Mason Hall brings years of service and commitment to her current position. Since joining Amtrak in 1997, she has served as assistant vice president of Human Resources and senior director of Training and Development. Previously, she worked for the U.S. Commission on Civil Rights as the deputy assistant staff director. A native of Washington, D.C., Mason Hall received her law degree from The George Washington University and holds a bachelor's degree in English from Vassar College.

The Network Journal, a New York-based magazine for black professionals and small business owners, honored this year's "25 Influential Black Women in Business" at its annual awards event in March. The awards program coincides with Women's History Month, and recognizes a select group of women for achieving significant professional success.

Three employees save coworker's life

On March 18, at about 7 a.m., 52-year-old **Willard Ates** suffered a heart attack.

Ates, an employee in Beech Grove's Coach Shop 3, stopped breathing. Fortunately for him, and all of us who care about him, three of his coworkers rushed to action. **Dean Kiggins**, pipefitter, **Don Bossingham**, carman, and **Jim Troxil**, manager of Coach Shop 2, began CPR, reviving Ates. But twice more he stopped breathing, so the men continued their lifesaving efforts. As Ates failed a third time, paramedics arrived and brought him back with a defibrillator, drugs and assisted breathing.

Ates was taken to a local hospital in stable condition. Medics said that his life was undoubtedly saved because of the quick and determined action of his co-workers. To rescuers Kiggins, Bossingham, and Troxil — thank you.

By Lew Wood, general manager, Beech Grove

Engineer pulls blind woman out of frigid Lake Michigan

It may have been just a lucky coincidence, but for **Phil McGee** it was a sign from a higher power. And for a

blind woman named Consuelo, it was a new lease on life.

McGee, a locomotive engineer in Chicago, just happened to park his new car along Lake Michigan one February afternoon to thumb through the owner's manual. As he did, a young woman ran up, desperately pleading for help. Her 60-year-old mother had accidentally stepped off a nearby pier, and plunged into the cold waters below.

Phil McGee

McGee ran over to the water's edge, and "when I looked in I saw the woman. I took my shoes and sweater

off and jumped." The air temperature was just above freezing — warm for February in Chicago, but not weather for a dip in Lake Michigan.

Luckily for the woman, McGee was quick and composed. "I grabbed her and swam to a place where I could support her at a pier piling," he said. "She was quite calm and receptive. I told her to kick her legs and move her arms to keep her circulation going until the fire department came."

After a frigid 15 minutes, emergency responders arrived. The woman was treated for hypothermia, and McGee was kept in the hospital for about an hour until his core temperature returned to normal.

Although coworkers now kid him and call him Superman and Aquaman, McGee doesn't feel like a hero. "I don't look at it in that way," he said. "I had the capability [to save her]. For whatever reason I was in that place. I feel it was divine intervention that allowed me to be there."

Phil was later recognized by the Chicago Police Department for his heroism. We add our congratulations for a job well done.

Big sales reap rewards in Florida

The southern Florida ticket agents pictured here are among six who sold the most Florida Rail Passes during the period of May-December 2001. (L. to R.) **Theresa Rodwell**, Miami; **Anthony Keldo**, Miami; **Steve Slowiak**, Ft. Lauderdale; and **Rick Karolyi**, Miami. (Back row L. to R.) **Dick Weaver**, Ft. Lauderdale Marketing Department, and Barbara Golden, formerly with the Marketing Department. The two winning agents not pictured are **Maureen Malone**, Winter Park; and **Joe Carreiro**, Tampa.

For their achievements, the agents were presented with awards that included Florida State Park Annual Family Passes, an Amtrak key chain and pen set, and a Gulfport Casino Getaway Package.

"The competition was tough and close," said **Armando Arbucias**, Customer Services in Miami. "Agents were promoting the pass with our guests by every possible means. It is an incredible offer — a full year of unlimited travel within the state for just \$249."

Since the inception of the Florida Rail Pass Incentive Awards program in May of 2001, Florida ticket agents

Winners of the Florida Rail Pass Incentive Awards.

have sold enough passes to generate over \$300,000 in revenue. "We are very excited about the continued growth in sales and have several things planned to promote the rail pass," said **Hank Koppelman**, director of Marketing & Brand Management. "We have recently completed a direct mail campaign to all season ticket holders of the Florida Panthers. There will be radio advertising for the rail pass, in conjunction with Amtrak sponsorship of the Florida Marlins Major League Baseball team, and we'll be working with all Florida Colleges and Universities to offer the pass to their students who are residents of Florida."

Investigator Powers receives ‘Officer of the Year’ award

Maureen Powers

Amtrak is pleased to announce the selection of Investigator **Maureen Powers**, Mid-Atlantic Division, Philadelphia, as the Amtrak Police Department’s Officer of the Year for 2001.

Investigator Powers was chosen for this prestigious award for her outstanding performance, her overall ability, and her tenacity and team spirit. Those qualities resulted in her being named the APD’s Officer of the Month three times in 2001. She also received a National Association of Police Officers “Top Cops Award” in 2001, as well as the Citation of Merit from the city of Newark.

Because of her determination and skills, Investigator Powers was assigned to 97 investigations handled by her division during the year.

Her successes include an investigation into a series of thefts from the underground parking garage at 30th Street Station. A suspect was apprehended, and four rental vehicles were recovered. But rather than just close the cases, Powers began analyzing her investigative data. Her analysis led to a partnership with the rental companies, and the implementation of some new crime-prevention procedures.

In another case, Powers helped in the arrest of a suspect who confessed to the aggravated assault of a SEPTA conductor. She was persistent in her investigative work, including surveillances, tedious review of surveillance tapes, distribution of a wanted poster and continuous follow-up with train conductors.

In addition, immediately following Sept. 11, she stepped forward and assumed a leadership role in the efforts to enhance Amtrak’s security at 30th Street Station.

Investigator Powers also serves as an officer of the Peer Support Program, which she was instrumental in developing. In this program, similar to Operation RedBlock, the American Federation of Railroad Police and the APD are committed to establishing methods for substance abuse prevention, or ways to identify and help treat officers with substance abuse or emotional problems. She has given many hours of her personal time, out of concern for her fellow officers.

Investigator Powers is being honored for her consistent and diligent effort to provide the best police work possible. She will receive her award at a Philadelphia ceremony in October.

APD partners with MTA

Amtrak Police Chief Ron Frazier signs the MOU as **Daryl Pesce**, general manager of the Mid-Atlantic Division, and Virginia L. White, acting administrator of the MTA look on.

On March 4, Amtrak Police entered into their second cooperative agreement with an outside law enforcement agency.

The APD and the Maryland Transit Administration (MTA) police force signed a Memorandum of Understanding (MOU), which allows the two police forces to pool their resources in dealing with emer-

gency situations. It will also help ensure officers’ safety and enhance the investigative resources and emergency response capabilities of each agency.

“America’s railroad police departments have long recognized that the nature of our work demands close relationships with our partners operating in the same jurisdictions where we perform our duties. This agreement reinforces the long-standing, excellent cooperation between our respective police departments,” said Amtrak Police Chief **Ron Frazier**.

Downeaster service enjoys early success

The newest addition to Amtrak’s family, the *Downeaster* service between Boston and Maine, has received an enthusiastic welcome from New Englanders. In February, more than 25,800 passengers boarded the train, which made its inaugural run in December.

The *Downeaster* trains make four daily trips in each direction, and on Feb.19, a stop at Saco, ME was added to the route. And this June, *Downeaster*

trains will add a seasonal stop at Old Orchard Beach in Maine, as well.

Since its inception, more than 85,000 guests have taken the Maine service, generating nearly \$1 million in revenue. Ridership growth has been so encouraging that the Northern New England Passenger Rail Authority and Amtrak are exploring the possibility of adding additional cars to the route’s busiest frequencies.

The route to our success

Strategic Business Plan Key Strategies

Since the 1998 launch of its new strategic direction, Amtrak has taken significant steps in rising to the challenge of reducing its reliance on federal funds to support operations. Driving Amtrak’s actions are six key strategies.

Build a market-based network

Define customer demand, using extensive research, and then match our system with that demand.

Deliver consistent quality service

Change the culture of the company to be more guest-focused, and provide a world-class travel experience on every trip.

Revitalize the Amtrak brand

Introduce and support a new brand for Amtrak, to signal a major change to our guests.

Operate a cost-effective business

Identify specific functional areas, policies, organizational structures, and back-office costs that have potential for improved cost management.

Maximize public and private partnerships

Pursue public and commercial partnerships aggressively, through Mail and Express and other programs that generate the highest returns for the company.

Develop corridor services

Work with state and other partners to create or improve rail corridors across the country, drawing from the expertise we’ve gained in building Northeast Corridor services.

Two major advertising campaigns show the

**The dynamic
camera effects and
edgy techno music
heighten the visual
appeal of the spots.**

A fresh, contemporary image defines the new advertising campaign Amtrak launched in the Northeast in March to promote *Acela Express*.

Designed to generate even greater ridership and revenue, and to position Amtrak as the clear, popular choice for business travelers in the Northeast, the advertising features the high-speed trainset and three Amtrak employees in two TV commercials, along with newspaper and travel trade print advertising, and radio spots.

The *Acela Express* TV commercials speak to a progressive, on-the-move audience: “*Acela*. Keep Moving.”

Shots of a sparkling platform and bustling station were taken at Washington Union Station. An aerial view shows the high-speed train moving down the tracks on the Northeast Corridor spine. The dynamic camera effects and edgy techno music heighten the visual appeal of the spots—fresh

faces, glimpses of the train’s exterior and interior, and a mid-air look at the landscape and Susquehanna River. Overall, the pace is fluid; interchanging both fast and slow motion, the commercials convey the moving sensation of being carried along by the train.

The best of what *Acela Express* has to offer is expertly packaged in 30-seconds—exceptional guest service from Amtrak employees and onboard amenities, such as the Quiet Car, power outlets at every seat, and conference tables throughout the train.

With interior shots of the train showing guests engaged in different activities, in one commercial, a single word floats onto the screen with each image—either Polish, Relax, Refresh, or Connect. The same messaging technique is used in the second commercial to describe additional benefits of riding *Acela*—Plug in, Order up, Spread out, Sit back. The message: *Acela Express* gives travelers the tools to work and the comfort to relax when on the move.

Commercial production

“It doesn’t just happen in the Marketing Department. No commercial we do happens without employees,” said **Joyce Greene**, senior director of Brand Advertising & Promotions. “From planning to making it happen, employees are key.”

The Marketing group worked with advertising agency E. James White Communications and Flying Tiger Films to produce the commercials. Amtrak’s goal was to create a high-quality product within budget, and on an extremely tight schedule. So from concept development to filming, an extraordinary effort was required by dozens of Amtrak employees. Employees from many departments and crafts took on new and critical behind-the-scenes roles to make the production a success.

“We had the cooperation of people from Operations to the NEC product line, Legal to Risk Management, as well as Transportation, and a cast of many more. They were selfless in their time, energy and enthusiasm, and we are tremendously grateful,” said Debbie Varnado, interim director of *Acela* Advertising, and director of Merchandising.

To say the least, it was major logistical challenge that required constant communication and coordination. The expertise of Amtrak employees was invaluable in everything from scouting locations, orchestrating track and station activities, coordinating food, wardrobe and other essentials, to managing people and responding to their needs.

“Employees handled every minute detail. They were right on,” Greene said. “Our people moved in concert with a high-speed production company, and all

Left to right, Lance O’Connor, of Flying Tiger Films, and **Manuel Vega** and **Jeff Machalette** from the Amtrak production team “take five” from work on the set. They were part of a larger team of people who played key supporting roles in the production of the *Acela Express* TV commercials.

The Chisholm-Mingo Group worked with Jam Productions to develop the TV commercials for Amtrak’s 2002 spring campaign. Jam Productions Director Lionel Coleman shares a moment with the Amtrak Sanford, FL, team, who helped make the filming of the commercials possible. Left to right, **Louis Beckley**, electrician; **Tommy Farr**, Auto Train superintendent; **Lionel Coleman**; and **Benny Butler**, supervisor.

Amtrak creates miles of smiles with its 2002 spring promotion

On the national front, Amtrak’s 2002 spring promotion, “Many Happy Returns,” is a high-energy campaign promoting Amtrak’s great service at a great price — 30-percent off adult fares on many trains, plus 50-percent off fares for kids.

The campaign was created by the renowned Chisholm-Mingo Group, which was recently chosen by Black Enterprise Magazine as advertising “Agency of the Year.” It is also the agency that Amtrak partners with for its multicultural marketing.

In addition to an African-American director, Lionel Coleman, and the agency’s female and Hispanic producer, Evelyn Badia, several African-American and Hispanic actors have key roles in the spring campaign, which includes high-energy TV commercials, radio spots, and print, Internet, and consumer magazine advertising.

To reach a diverse audience, the campaign also features Spanish-language advertising, as well

as advertising in African-American and Internet sites. For example, the commercials, “Escapate y Sonreír (Escape and Smile), is a Spanish language commercial adapted specifically for the Hispanic market. It includes seniors, young professionals, and students among the actors and models, reflecting the diversity among Amtrak’s riders.

Darlene Abubakar, Amtrak Director of Advertising & Promotion, said, “It’s important to be working with Lionel, Evelyn and the Chisholm-Mingo team on this campaign because of the diversity of thought and people involved in the commercial and throughout the campaign. It mirrors the diversity of our riders and speaks to us all,” she said. “The Hispanic television commercial was developed, which is very exciting.”

Amtrak ads will appear in many magazines, including Ladies Home Journal, Parade, Heart and Soul, Essence, and on the Internet sites, including Travelocity.com. En Español, Tom Joyner.com.

Darlene Abubakar, Amtrak Director of Advertising & Promotion, gets a lesson from Jam Productions Director Lionel Coleman on how to work with the members of the Chisholm-Mingo Group.

contemporary, high-energy sides of Amtrak

that company could do was praise them. Even when modifications were made, they were flexible—just outstanding.”

Three employees go prime time

Why hire “professional talent” when you already have the talent onboard?

Lead service attendant **Lilia Holmes**, and two conductors, **Eric Toulson** and **Anne Coyne**, were featured in the commercials. There were many other exceptional employees to choose from, of course. But these three fit the bill exactly. They represented the diversity of the company, they actually worked the positions needed for the commercials, had friendly, professional demeanors — and they weren’t camera shy!

At first unsure of how to interact with the actors and models in front of the cameras, the employees soon found their stride when they relaxed and behaved naturally, as if they were interacting with actual guests. That’s when they shined.

“Overall, it was a great experience. I enjoyed talking with the producers and director, and seeing how it all came together. I was surprised at the amount of work that’s involved in producing a commercial—I never realized how much I loved my own job,” joked Anne Coyne. “When I told my family and friends I was going to be in an Amtrak commercial, I think they all thought I was going to be this big superstar. I

guess it was my big Hollywood moment,” she laughed.

The three learned that producing a commercial could be both exhilarating and grueling. The intense three-day shoot meant 12-hour days for them, and 14-hour days for the production crew. Many of those hours were spent waiting for just the right moment to film a brief action shot.

“A special note of thanks to Amtrak’s talent—Lilia, Eric, Anne, and Melissa [an extra] for their infinite patience. The ratio of actual filming to waiting is hard even for the professionals and your people were just terrific,” said Dana Cole, of E. James White Communications.

All worth it

Employees in Philadelphia were given a preview of the commercials before they aired. Their overwhelming response was that the commercials hit the mark. They felt proud to be Amtrak employees, and happy Amtrak is still going after ridership, building a loyal customer base—still competing.

Greene, who has been with Amtrak for 28 years, said, “This is one of my proudest moments. I’ve been giving agencies direction for years to cast Amtrak as contemporary, relevant, and cool. This is it. This is it.”

Lead Service Attendant **Lilia Holmes** is one of three Amtrak employees featured in the Acela Express commercials.

“Employees handled every minute detail.

They were right on.

Our people moved in concert with a high-speed production company, and all that company could do was praise them.”

Joyce Greene, senior director of Brand Advertising & Promotions

American publications like *Time*, one of the three “onnie” (Get Away) magazine commercial targeted at the Hispanic market. It features professionals, and celebrates the ridership. The director of Advertising & Promotions was really great fun and the rest of the team was also the first to be on the camera, while other advertising agency look on.

Director of Advertising & Promotions Director of the camera, while other advertising agency look on.

Thank you

Dozens of Amtrak employees were instrumental in the production of the *Acela Express* commercials. The Marketing team extends its appreciation to all those who were on the set, behind the scenes, and in supporting roles. There are far too many people to name individually here, but you know who you are. Thank you for all your hard work, time and commitment.

PROMOTIONS IN MOTION

New 'Select' tier for Amtrak guest loyalty program

Almost a year and a half ago, Amtrak introduced one of the most flexible rewards programs in the travel industry — Amtrak Guest Rewards. Building and retaining a loyal customer base is critical to our bottom line.

Thanks to our front line personnel and call center agents, who have done a fantastic job of promoting the benefits of being a loyal Amtrak rider, more than 300,000 people have signed up to reap Amtrak Guest Rewards.

Members earn points for every dollar spent on Amtrak trips. When they've earned enough points, they can redeem them for free Amtrak travel, or other rewards, such as hotel stays, rental cars, retail gift certificates and airline miles.

Now, there's even more. Amtrak has created a new Select tier for the loyalty program, offering extra rewards to members who have earned 5,000 points on Amtrak travel (excluding partner and bonus points) during a calendar year.

Select members can enjoy extra rewards, including bonus points, seating upgrades, special offers, priority service for reservations, and limited one-day passes to ClubAcela locations in the Northeast Corridor. Of course, with Acela and Metroliner passengers earning 500 points for any

Washington-New York-Boston segment, Select status can be achieved with only five roundtrips in a single year.

This new tier identifies and rewards our most valued guests. We know from our research that these members spend about \$4,200 per year riding Amtrak. Coming in contact with a guest carrying a Select member card or bag tag provides the perfect opportunity to go beyond good customer service, to ensuring an exceptional experience on Amtrak from start to finish.

Travel Planner promoted in packet

The 2002 Amtrak Travel Planner, the perfect guide to help travelers create their vacation or travel getaway, was offered in a popular national direct-mail packet that went out in March. The "Treasure Chest" packet went to 375,000 qualified and seasoned travelers, with an emphasis on seniors.

Promoting the Travel Planner within the multi-travel packet generates an awareness of the Amtrak brand as another choice among other strong travel companies. The insert cross-promotes Amtrak Vacations, the North

America Rail Pass and the Air Rail Program — all programs featured within the Travel Planner.

Amtrak participated in the Treasure Chest mailing last fall and received better than a 4-percent response rate, which is excellent. Amtrak also generated more response than any other participant in the fall mailing.

Employees can pick-up a copy of the Travel Planner inside stations, or order a copy online, at www.amtrak.com. Tell your friends and family about popular travel offers, such as the North American Rail Pass and Air-Rail, as well as the many programs and products that enhance the experience of traveling by train.

A partnership worth reading about

Amtrak and the Barnes & Noble Corporation recently began a joint venture in enhancing the library on the Coast Starlight's exclusive Pacific Parlour Car, Amtrak's first class lounge.

Sleeping car guests enjoy the reading, and Barnes & Noble enjoys the advertising and product placement. It's an innovative arrangement fash-

ioned by Amtrak West director of Marketing Carol Shannon, and

Jerry Griffo, the Coast Starlight's product line supervisor.

"The library has always been one of the most popular features of the Pacific Parlour Car," said Griffo, "and this enhancement is just another way we can continue to increase the

strength and visibility of the Coast Starlight brand."

"We were buying the books before, but with the recent fiscal initiatives we simply could not afford to keep up our inventory," said Service Manager Matt Cahoon. "Enter Carol Shannon and the marketing team who went on

the hunt for a company to partner with, to supply us with books."

"I think it's a great idea," said Coast Starlight General Manager Michael Chandler. "We provide our guests with a variety of interesting and informative reading material, and

Barnes & Noble receives exposure and credit. I can't think of a more widely respected partner in this venture than Barnes & Noble."

RAILWAY ROUNDUP

Amtrak West honored for campaigns

The Hospitality Sales and Marketing Association International (HSMIA) has honored Amtrak West’s Marketing department for two outstanding 2001 campaigns.

Amtrak won a Silver Adrian Award for the California Kids Half-Price campaign, and a Bronze Adrian Award for the California Rail Pass launch in the travel partners category. The Kids Half-Price outdoor campaign helped increase awareness of Amtrak’s everyday discount. The program contributed to a huge 30-percent gain in kids’ ridership on California routes last summer.

The rail pass launch featured ads, brochures and e-mails targeted to both travel agents and consumers. The result has been continued growth in sales of this exciting new product. Images of Amtrak West’s *Pacific Surfliner* trains and the Amtrak brand signature were figured prominently in the award

shows, held at a Hollywood hotel. The HSMIA Adrian Awards competition is the largest and most prestigious of its kind. Last year, the contest attracted entries from 52 countries. The awards honor and showcase the best in hospitality and travel advertising, marketing materials, public relations, and Web site design and development. Congratulations to the award-winning Amtrak West Marketing department for providing quality and innovative marketing products that contribute to increasing ridership and revenue.

‘Java Stop’ opens at the Martinez Amtrak station

Up for a quick jolt of java? Amtrak West is inviting travelers passing through the Martinez station to swing by the new Java Stop. While waiting for their train, guests can now enjoy a gourmet cup of coffee and a bite to eat in this quaint coffee shop located inside the station. The shop opened on Feb.12.

Amtrak electrician turns the power on politics

In the past year, Amtrak lost an electrician, and “the people” gained an advocate. Sophie Maxwell, who had been with our Peninsula Corridor Service, operating Caltrain, was elected as a supervisor in San Francisco. Ironically, she was also appointed to Caltrain’s governing body, the Joint Powers Board. The following is adapted from a story published in the San Francisco Chronicle. Good luck, Sophie!

While raising her son, and now her grandson, Sophie Maxwell worked as a master electrician for the Santa Fe Railroad, and then for Amtrak. Her 20-year membership in the IBEW continues to be an important part of her.

“The railroad has been good to me, and I support its growth in our city,” says Maxwell. Her career had been redirected partly by her own hand, but also because her community needed her. And she heeded its call.

“I’m not the Lone Ranger here,” she says. “I’m here because my people wished me to be. I never forget them when making my decisions.”

In her brief tenure on the board, the electrician-turned-politician has fought for her district, especially in attempting to improve its environmental health. “The more involved I got, the clearer it became that our community lacked a voice in city politics. I decided I had to try to be that voice.”

With little in the way of a campaign fund, Maxwell threw herself into the race against the San Francisco mayor’s handpicked candidate. It was discouraging, she said, but she kept on moving ahead.

“We went door to door to door!” she laughs. “My strategy was just to keep talking, keep walking.” It paid off. Maxwell was elected with 55 percent of the vote.

Despite the fact that much has been made of her late entrance into the public arena, Maxwell maintains that age 50 should not be considered over the hill.

“It’s a different world now! Women are much more active, we’re living longer and better,” says the yoga-and-meditation devotee. “Women should not see age as limiting.”

Does she have any advice for women looking at radically altering their lives at this age? She laughs. “Yes. If you have a passion, go after it — because others will join you. When you are designing your future, aim high! And have fun with it. As my mother always told me, ‘If you have a gift, give it.’”

Celebrating St. Patrick’s Day

*The Miami Crew Base celebrated St. Patrick’s Day on March 15. A group of Irish-American Amtrak employees created a display on Ireland, and the history of St. Patrick and of Irish-Americans in the United States. Some even brought in their crests to prove that they were Irish-American! The employees served up corned beef and cabbage, with potatoes, salad and bread and green Gatorade. Train attendant **Ed Maler** is seen here checking out the display.*

For those early morning guests who want a little something extra to go with their java, the menu includes muffins, bagels, and salads, as well as other espresso drinks, regular coffee, smoothies, and teas.

Circle the wagons

This famous Western call to arms is certainly true at Amtrak’s three Reservation Sales Call Centers. Philadelphia, Chicago and Riverside Sales Agents understand how important their individual and collective performance is to our company’s future.

Having to “do more with less” has not dampened the spirit of call center employees. If anything, they are more resolute in their determination to see this company succeed. Sales agents understand that every minute they spend interfacing with our guests is an opportunity to sell yet another bedroom, another seat on *Acela Express* or secure another credit card payment.

As the revenue drivers of Amtrak, our sales agents know what is at stake. And each month their performance statistics prove to be a testimony to their high level of commitment.

For example, in fiscal year 1997, the average reservation sales, per hour, was \$667 per agent. In FY01, agent sales reached nearly \$870 per hour. And, currently through March FY02, agent sales exceeded \$900 per hour.

On-phone adherence figures, (productivity time), climbed from 93.5 percent in FY97 to 97 percent in FY01.

In FY97, credit card sales (money immediately accessible to Amtrak) topped out at approximately

\$51 million, or 26 percent of total sales. In FY01, credit card sales soared to nearly \$300 million, or 40 percent of total sales. And, fiscal year to date, credit card sales are nearly 50 percent of our total sales and climbing.

In addition to recognizing our reservation sales agents, we want to applaud the superior efforts of our ticket clerks, on-board crews, and support staff everywhere.

Because of employees like you, we are moving forward in the midst of the most formidable challenges. Continue to “circle the wagons” and band together. Ultimately, we will succeed!

Espanol en classe?

Steve Joyce, an Amtrak account consultant at the Travel Agent Service Center (TASC) in Philadelphia, was applauded recently for delivering the first “Amtrak in Spanish” training class for Spanish-speaking travel agents using the Sabre automated reservation system.

Sabre allows subscribing travel agents to book and ticket Amtrak reservations. Myrna Choy, the Sabre training representative, said, “Joyce’s helpfulness and knowledge were a major factor in turning this class into a great success.”

His contribution went beyond just the agents in the class. Choy said the class was also a learning experience for her, and she will pass along her knowledge to many other Sabre subscribers.

Quik-Trak sales continue to soar

Quik-Trak ticketing machines, located in 80 cities nationwide, are now handling 48 percent of Amtrak credit/debit card sales. In stations like New York, Philadelphia, and Washington, over 60 percent of each station’s credit sales go through Quik-Trak machines. The machines are averaging more than \$25 million in sales monthly, and are Amtrak’s most cost-effective ticketing distribution channel.

Harry Rogers, manager, Customer Service in New York, says “Quik-Trak is an incredible benefit to our operation and keeps the crowds moving through our busy facility.”

Jim Hatzold, director, Station Sales Support, says because of easy use and new expanded customer features like

AAA discounts, Amtrak Guest Rewards and promotional discount offers, guests are using Quik-Trak more than ever.

The NEC has recently installed several Quik-Trak machines in new locations, including the Newark International Airport Rail Station, as well as the Boston North and Portland, ME, stations in time for the start of the new Downeaster service. Machines were also installed at several Amtrak West stations, including Vancouver, Everett, and Edmonds, WA; Eugene, OR; Richmond, Sacramento, Martinez and Suisun, CA.

For a complete list of Quik-Trak ticketing locations, including a self-help

Customer Service in New York

demo for first time Quik-Trak users, please visit www.Amtrak.com.

Chuck Simmers, manager, Quik-Trak Sales, says that with a new web-based software tool, managers can now monitor machines under their jurisdiction from their own desktop. The software monitors the status of all machines and provides detailed information on ticket stock levels, printer and credit card device failures, etc.

This new monitoring tool, coupled with a commitment from all station management, has increased availability of machines, resulting in continued increases in sales revenues.

Chuck Simmers, manager, Quik-Trak Sales, Washington, D.C.

Chairman Smith makes a sweet recommendation

“Her cheesecakes are
truly New York-style
cheesecakes. They’re
good, solid and rich in
flavor. And she offers
an array of flavors.”

Amtrak Chairman
John Robert Smith

Tammy Craddock of Columbus, MS, was just like many other stay-at-home moms: she cooked for her family, worked with the PTA and volunteered for her children’s fund-raisers. But back then, in 1983, Craddock said her passion was cooking and her specialty was baking desserts.

“Every time there was a fund-raiser I was baking something,” said Craddock, a former schoolteacher. “I just wanted to do anything I could to help my kids out.”

Eventually, she said, the demand for her breads and desserts began to grow so much that she decided to sell them. So she started her own company and began selling cheesecakes. Today, her company, Jubilations, has been around for 14 years and offers more than 40 different flavors of cheesecake. Last month, Craddock found out her

cheesecakes would be added to the national menu on Amtrak trains.

Craddock’s cheesecake was originally placed on the Crescent menu in 1997, on the recommendation of Amtrak Chairman **John Robert Smith**, mayor of Meridian, MS. The train travels from New Orleans to New York, stopping twice a day in Meridian. At that time, Smith was working with Amtrak’s food service committee and was asked to recommend a dessert for the fabled Crescent passenger line.

“Her cheesecakes are truly New York-style cheesecakes,” Smith said. “They’re good, solid and rich in flavor. And she offers an array of flavors.”

Smith’s recommendation led to the food service choosing Craddock’s cheesecakes for the *Crescent*. “I got a

call from the committee and they told me they were stuffed and couldn’t eat another one,” she said. Now, after nearly five years of being served on the *Crescent*, Craddock’s dessert will be offered on every Amtrak train.

Craddock moved from her home kitchen into a production plant in 1990, where her cheesecakes are still being made today. But, she said every cheesecake is still made like it was in her kitchen in 1983 — by hand. “The mixers are a little bigger but the ingredients are still the same and everything is done by hand,” Craddock said.

Adapted from an Associated Press article written by Fredie Charmichael, March 17, 2002.

GUEST LETTERS

My daughter and I were booked to travel with Amtrak on Jan. 4, from Deerfield Beach, FL, to Raleigh, NC, on train 92.

On our arrival in Raleigh, we found that the entire city had come to a complete stop due to snow. I was at a complete loss as to how to get home because cab companies were not running that day. We had no one to call to come pick us up, because we’re new residents and we don’t have those connections established yet.

An Amtrak employee, **Darin Stoick**, arrived at work around the time that we were learning that our ability to get

home was about zero. Before I knew it, Mr. Stoick had pulled his car to the front door and told me that if we were to get home, he’d simply have to take us there himself.

Mr. Stoick demonstrated a wealth of patience and good humor as we made our way through a maze of exits, detours and stranded vehicles. It took him well over an hour to get us home, and maybe longer to make it back to work.

My hope is that Amtrak recognizes Mr. Stoick’s behavior as well above and beyond the call of duty. He is definitely

one of those rare individuals who possess an intrinsic sense of altruism and goodness that is easily recognizable in his behavior.

A satisfied customer

An 11-year-old train fan from Ohio sent the following letter to Amtrak. It’s reprinted in its original format.

I took an Amtrak train ride to Az. It was the best trip I ever took! Me, my Grandpa and grandma went over Christmas break. It was a smooth ride and all the cooks, maids and engineers were ALL So nice!

The food was great and I loved the Observation Car. Pretty much that’s where I spent most of my time. I watched 3 movies, played my gameboy, and looked out the window. We saw so many cities! We got to see the Golden arch, Mississippi river, and the Sears tower! I would love to do it again but I heard that it’s going to be torn down!!! Now why would they want to do that. I’m sure a lot of people agree when I say that They Can’t Tear It Down! That would be a shame! My name is Todd Corbey, I’m a fifth grader at Ottawa Hills and I would love to take that train ride again.

B E N E F I T S C O R N E R

Tax-free dollars

Taxes are inevitable — but some of them can be avoided.

As part of its benefits package, Amtrak offers Flexible Spending Accounts to all employees. You can enroll in any of four spending accounts that cover certain health care, day care, commuter transit, and commuter parking costs that are not already covered by other plans. Employees can place pre-tax dollars into the funds to cover those costs.

The accounts create a win-win situation. Participants use tax-free money to pay some expenses, and thus reduce the amount of their income that is subject to federal taxation. And Amtrak benefits by saving some payroll taxes.

Here’s how it works. When you enroll in a Flexible Spending Account, you specify the amount you want deducted from your pay. That amount is deducted before taxes are calculated, and then deposited into your spending account. You then use that money to pay the specified expenses.

The two commuter spending accounts, the Transit Reimbursement Account and the Parking Reimbursement Account, are open for enrollment at any time.

Enrollment in the other two accounts, for health care and day care, can only be done during your benefit plan’s open-enrollment period. For those accounts,

enrollment at other times is only permitted when you have an IRS-qualified change in your family status.

Here are the major features of the commuter spending accounts, in which you can enroll at any time:

Transit Reimbursement Account—Contribute up to \$100 per month in 2002 on a tax-free basis to pay for qualified carpool or mass transit expenses. Can change contribution amount monthly. Can roll over leftover money to the next month.

Parking Reimbursement Account—Contribute up to \$185 per month in 2002 on a tax-free basis to pay for qualified parking expenses. Can change contribution amount monthly. Can roll over leftover money to the next month.

With the health care and day care spending accounts, if there is money left in either of those accounts at the end of the year, under IRS law, that money is forfeited. So you have to be careful in deciding how much to have deducted.

However, this “use it or lose it” rule does not apply to the two commuter accounts.

For further information on any of the Flexible Spending Accounts, contact either your local HR benefits specialist, or your benefits provider.

Protecting your retirement investments

In the wake of the Enron bankruptcy, Amtrak Human Resources has received several questions from employees concerned with the safety of their money in the Amtrak Retirement Savings Plan.

Q *Could the misfortunes of Enron employees — who watched much of their 401(k) savings evaporate overnight — be repeated at Amtrak?*

A No. Because the Amtrak Retirement Savings Plan does not offer a company stock fund as an investment option, the problems of Enron cannot be repeated at Amtrak. The source of most of the losses for Enron 401(k) participants was an excessive concentration in company stock. A company stock fund is inherently riskier than other mutual funds because it is not diversified — it invests in the stock of only one company.

The Enron situation underscores the fundamental benefit of mutual funds: diversification. The typical mutual fund spreads its assets across hundreds of securities in different market sectors, affording a level of

diversification that few individual investors could achieve on their own. While this broad diversification does not fully protect investors from the risk of loss from an overall decline in the financial markets, it serves to lessen the loss from a sharp decline of any single stock, as in the case of Enron.

Q *How do 401(k) regulations protect assets in the Amtrak plan?*

A Your contributions and any employer contributions you own through vesting are yours, and they are protected by federal regulations. The Department of Labor requires that all plan assets be separated from the company’s assets and placed in a trust, which is a legal arrangement under which a fiduciary, or trustee, holds title to the assets specifically for the benefit of plan participants.

In short, you have control over your money in the Amtrak Retirement Savings Plan. And can take it with you when you’re eligible for a distribution from the plan.

Red Cap joins bear family

Hardcore Amtrak guy cradles the little Red Cap teddy bear as the stuffed star returns from a photo shoot. “Awww,” says a woman in the elevator. “Can I have him?” “No,” barks Hardcore Amtrak guy. “He’s mine.”

Behold the power of a teddy bear. “They transcend age and gender,” explained **Debbie Varnado**, director of Merchandising, Marketing and Brand Management. “A cuddly bear brings out a good side in us — the little child that’s still in us.”

Her brood recently got bigger with the addition of the Red Cap, who is already developing an enthusiastic following. In the Amtrak merchandise family, he joins Engineer Brown Bear, Engineer Panda Bear (boy and girl), Rusty Wallace Racing Bear, and Ace the *Acela* Bear. They’re all available at both www.Amtrak.com, and at the Yahoo! Store Web site.

Debbie Varnado prepares the camera-shy teddy bears for their photo op.

Since the collection began with Engineer Brown more than five year ago, the bears have been a hit with the public. Thousands of sales have not only helped the bottom line, but the bears have brought the Amtrak brand into households across the U.S.

Each new family member takes about six months for design tweaking and production. “We’re working on a conductor bear and an Amtrak Police bear right now,” Varnado said. Hardcore Amtrak guy can’t wait.

Board appoints David Gunn as new Amtrak president and CEO

Veteran transportation executive **David L. Gunn** took the reins at Amtrak May 15, becoming the railroad's seventh President and CEO since 1971. Voted unanimously by the Amtrak board of directors on April 25, Gunn succeeds George D. Warrington, who had served as President since 1998.

In a statement, Amtrak board Chairman **John Robert Smith** said, "David Gunn comes aboard with exceptional experience and the leadership skills to guide Amtrak at a time of tremendous opportunity for the railroad. He brings to Amtrak an international reputation of reinvesting in better track and fleet, enhancing service, improving financial performance and planning for the future."

Gunn has spent a great deal of his career revitalizing ailing transit systems. He spent 1984 to 1990 as head of the New York City Transit

David L. Gunn

Authority, where he earned substantial credit for making vast improvements in the quality of the transit system he inherited. Subways and buses had been in poor shape and public dissatisfaction was widespread, yet Gunn quickly made a reputation for getting rid of graffiti and getting the system back on track by investing billions in much-needed capital improvements. From 1991-1994, he led the Washington, D.C., Metro system, securing major

financing from Congress and local governments to complete miles of the subway network.

In his most recent role, Gunn was chief general manager of the Toronto Transit Commission. From 1995 to 1999, he increased ridership and developed a program for rebuilding the commission's 1,500 buses. Since leaving Toronto, he has served as a transportation and government consultant.

Beginning his career at two major railroads — the Illinois Central Gulf and the Atchison, Topeka and Santa Fe — Gunn also has experience with freight railroads. And, he has played key roles at SEPTA in Philadelphia and the MBTA in Boston. Along the way, he has developed solid working relationships with labor, local communities, businesses and all levels of government.

Two partnerships will improve service quality for employees, guests

Amtrak has signed a new computer services agreement with IBM that will improve the performance of our critical business systems while saving about \$85 million in related costs. The seven-year agreement with IBM replaces a contract signed with the company in 1994.

Amtrak's computing infrastructure is critical to the service we provide our guests. Although the availability of most of our business systems, such as operations, financial and human resources systems, as well as critical distribution systems such as the Arrow reservation system, have improved in recent months, IBM is working to further enhance their performance. For example, IBM will ensure that Arrow is running properly 99.9 percent of the time. IBM is providing similar service level commitments for other information technologies that support Amtrak's business needs, such as Quik-Trak, desktop, local area and wide area

networks, voice long distance and other telephony.

**"Experts in the industry
have told us our deal
with IBM represents
outsourcing 'best
practices' and is a
'high value' proposition."**

**Bob Galey, Amtrak Chief
Information Officer**

Over the next six months, IBM will also deploy new tools that will expand the capabilities of our Help Desk, allowing employees to get most of their desktop computing problems solved more quickly than was possible in the past. In addition, IBM will help us resolve a higher percentage of PC and printer prob-

lems the first time a technician visits employees' work area.

IBM will continue to provide all the services they have delivered in the past, including mainframe and telecommunications operations, and Help Desk and desktop support services. Through the new agreement, IBM is bringing new technologies and service level commitments to Amtrak that will improve the performance of our computing infrastructure while reducing technology costs. IBM has agreed to pay fees if it doesn't meet its stringent quality commitments.

The new contract is flexible enough to accommodate technology changes Amtrak may be able to benefit from in the future. We will have access to IBM's technical and consulting talent, which we will draw on to address problems and maximize opportunities. IBM will also participate in strategic decisions where

Amtrak employees participate in Earth Day

AMTRAK IN THE NEWS

TRAIN OF THOUGHT

Mayor John Robert Smith
Chairman of the Board of Directors

Dear Co-worker:

The past month was one of change for all of us. First, we are welcoming a new president, David Gunn, a veteran transportation leader, who is anxious to get started. When he arrives, he will find a dedicated and committed team, which this past month proved its strength in responding to the Florida derailment. I am certain that he will also find a company with a deep-rooted and unshakable commitment to safety. Let me share some thoughts with you about these topics.

First, we are very fortunate to have Mr. Gunn come aboard, as he brings with him vast experience and keen leadership abilities. Mr. Gunn was the chief executive of the transit systems of New York City, Washington D.C., and Toronto, and played key roles at SEPTA in Philadelphia and the MBTA in Boston. He began his career in the 1960s at two major railroads — the Illinois Central Gulf and the Atchison, Topeka and Santa Fe.

Mr. Gunn has a well-known reputation for investing in track and fleet, enhancing service, improving financial performance, and planning for the future. He has developed solid working relationships with labor, local communities, businesses and all levels of government. As Mr. Gunn considered the position, he also came to appreciate the dedication, hard work and commitment of every employee at Amtrak, and the successes that we've enjoyed. Like all of us, he shares a commitment to a strong national passenger rail network.

As I have often said, there are certainly challenges ahead, but I am confident that Mr. Gunn is the right person at the right time to lead this company forward. He will tell you himself that he is eager to roll up his sleeves, join forces with all of you, and chart a

strong course for our future. I expect that after Mr. Gunn hits the ground running on May 15, he and I will also be hitting the road to visit employees across country this spring. We look forward to Mr. Gunn having a first-hand chance to meet and listen to you.

Let me address the *Auto Train* derailment. I know that whenever we experience an accident, we all feel a collective concern about those involved. Frankly, my heart ached for those who suffered a loss, and for those who were injured. I am sure that all of our thoughts and prayers have been with these passengers, their families and friends.

I must say though that I am also very proud of the employees from all levels, and from many areas throughout the Amtrak system, who dropped everything to travel to the site and assist in so many ways.

It would be impossible to mention all who were involved in this tremendous effort. But let me share a few stories. Many of you already know the story of Amtrak employee Harry Gissendanner, who, even while injured, heroically helped others as much as possible before seeking medical attention himself.

So many of our on-site team members worked tirelessly to provide individual care for our displaced guests after the accident. In one case, we learned that an elderly couple was about to celebrate their 53rd wedding anniversary. Upon hearing of this momentous occasion, our team arranged for a gift basket of snacks, balloons and an anniversary card. The gifts were placed in the couple's hotel room — which we'd arranged, ready for their drive home the next day. Of course, I cannot fail to mention *Auto Train* General Manager Sharon Mahoney.

continued on page 12

President Bush fills remaining vacancy on Amtrak board

President Bush named Dallas lawyer David Laney, former chairman of the Texas Transportation Commission, to the Amtrak Board of Directors on April 30.

The appointment requires Senate confirmation, and will fill the only vacancy on the seven-member board.

Laney is currently a practicing attorney and partner at a Dallas law firm. He was chairman of the Texas Transportation Commission from 1995 to 2000, as well as a member of the North Texas Turnpike Authority from 1995 to 1997, and the Texas Turnpike Authority from 1998 to 1999.

He holds a bachelor's degree from Stanford University and a law degree from Southern Methodist University.

Other members of the Amtrak board include Amtrak President **David Gunn**, Chairman John Robert Smith, Vice chairman Michael Dukakis, Transportation Secretary Norman Mineta, Silvia deLeon, Amy Rosen, and Linwood Holton.

The wonder of Julie ...

Guests say Julie makes a wonderful impression

**By this summer,
Julie will be able
to price and sell
special promotions
and handle credit
card payments.**

Who can handle 500 customer calls simultaneously, arriving from all parts of the country, 24 hours a day? Julie can.

Who is Julie? People *really* want to know. “Julie” is the friendly voice of Amtrak’s new speech recognition system. She greets callers who dial into the popular 1-800-USA-RAIL automated reservations line, also called the Voice Response Unit (VRU). This technology is so advanced that there is an actual exchange of dialogue between the caller and the VRU.

With the voice quality and functionality now so much like that of a human, the Amtrak Telephony team decided to give the VRU a name. So, she is called “Julie,” after the real-life woman who provided her voice. A native of Chicago, Julie has worked in the broadcasting and voiceover industry for 18 years.

Over the last few years, 18 percent of callers have interacted with Amtrak’s touch-tone VRU, which led them through various options that could be cumbersome and confusing. But since Julie came on board last fall, that

number has increased by more than 50 percent. Read what some of our guests had to say after talking to Julie:

“Kudos for Amtrak! I just heard the new voice activated system and spoke with ‘Julie.’ What a terrific idea! I loved the warm voice on the

other end, the ease of making the reservation. It was much more conversational — like speaking to a travel agent. I had to smile when I heard her say “got it. Let’s see what I can find for you.” Amtrak just keeps getting better and better!

— M. Guzman

“I’ve just used your automated arrival and departure service on the telephone and wanted to compliment Amtrak for such an impressive automated system. Having braved many automated telephone systems, I’d have to say yours is by far the best with the prompt and convenient voice activated responses.”

— J. Curtin

As we first told you last October, Amtrak’s Telephony Team has been working with SpeechWorks, a leader in speech recognition. The goal was to replace the entire touch-tone VRU system with this new user-friendly technology. In this multi-phase project, train status was made available nationwide last fall while schedule, fares and reservations is being rolled-out this spring.

Julie is an important component in Amtrak’s strategy to keep costs low by offering guests self-service options for routine inquiries. The speech recognition technology has improved the VRU’s call-handling rate, which frees up sales agents to focus more on other revenue-producing activities.

What’s on the program for this summer?

By this summer, Julie will be able to price and sell special promotions and handle credit card payments. She will also memorize all the information that the caller has provided and make it available to a sales agent if the caller needs to transfer to an agent at any time—all this to deliver a premium service to our guests.

How do they do that?

Julie’s winning performance has been two years in the making. It has required the work of a diverse cast of artists and technicians from SpeechWorks, Amtrak Technologies, and the Call Center Telephony Team.

Amtrak’s experienced sales agents provided real life call scenarios for the development team. Artists developed a dialog that would resonate with callers. And, speech scientists perfected Julie’s timing and tone — that had to be just right to provide a satisfying experience for our guests.

Julie was now ready for rehearsals and studio recordings.

In February 2001, Julie went “live” for the first time, handling train status calls from a few area codes. Her dialogue was tweaked throughout the summer, so that by November 2001, she was handling an average of 6,000 train status calls a day. The public reacted so positively that her stellar performance earned Amtrak’s Telephony Team the SpeechWorks “Best Practices Award for 2001.”

Today, Julie operates from eight powerful state-of-the-art speech VRUs, communicating over a complex network that moves voice and data from coast to coast and is always available to service our guests with a smile.

The route to our success

Strategic Business Plan Key Strategies

Since the 1998 launch of its new strategic direction, Amtrak has taken significant steps in rising to the challenge of reducing its reliance on federal funds to support operations. Driving Amtrak’s actions are six key strategies.

Build a market-based network

Define customer demand, using extensive research, and then match our system with that demand.

Deliver consistent quality service

Change the culture of the company to be more guest-focused, and provide a world-class travel experience on every trip.

Revitalize the Amtrak brand

Introduce and support a new brand for Amtrak, to signal a major change to our guests.

Operate a cost-effective business

Identify specific functional areas, policies, organizational structures, and back-office costs that have potential for improved cost management.

Maximize public and private partnerships

Pursue public and commercial partnerships aggressively, through Mail and Express and other programs that generate the highest returns for the company.

Develop corridor services

Work with state and other partners to create or improve rail corridors across the country, drawing from the expertise we’ve gained in building Northeast Corridor services.

The team that brought Julie to life on the VRU: (L. to R.) **Jason Brown**, Telephony; **Ja'Far Abdus-Samad**, Technology; **Jackie Singh**, A.T.; **Lori Brodsky**, SpeechWorks; **Doug DeLia**, testing coordinator; **Luc Foisy**, Customer Relations.

O N T H E R I G H T R A K

CNOC inspector breaks glass ceiling

Inspector **Lisa Shahade** has received the “Breaking the Class Ceiling” award from the National Center for Women & Policing.

Inspector Shahade was honored, among a few other high-ranking women in law enforcement, at the organization’s annual conference on April 30, in Washington, DC. The keynote speaker at the conference was Brigadier General Wilma L. Vaught, the first female general of the U.S. Air Force.

Inspector Shahade, who is based at CNOC in Wilmington, was recognized for being one of the women in the United States who has attained a high-ranking position in a law enforcement agency. Her many accomplishments within the Amtrak Police Department over her 14 years of service, make this award a well-deserved honor.

Chief **Lonnie E. Bennett** attended the award ceremony, representing the Amtrak Police Department. Congratulations Inspector Shahade on this noteworthy recognition.

Linda Woodson

Woodson chosen to chair Operation Lifesaver council

Linda Woodson, an Amtrak EAP counselor based in Jacksonville, FL,

has been elected chair of Operation Lifesaver’s Program Development Council (PDC). Her election also makes her a member of the Operation Lifesaver Board of Directors for the duration of her two-year term. She previously held the position of chair-elect while serving as Amtrak’s manager of Passenger Safety & Operation Lifesaver.

The PDC develops highway-rail grade crossing and trespass prevention safety programs, emphasizing the Three E’s: education, engineering and enforcement. The council consists of representatives from different railroads, the FRA, FHA, railroad unions, police and safety organizations, and various transportation agencies.

Speaking about her continued involvement in Operation Lifesaver, Woodson said, “As an EAP counselor,

I call crew members who are involved in critical incidents with vehicles or pedestrians. In the aftermath of these incidents, the effect on the train crews is often overlooked. We as a corporation have an obligation to remain committed to Operation

Lifesaver programs, not only to help prevent collisions, injuries and loss of life at grade crossings and on railroad rights-of-way, but to do our best to eliminate the trauma they cause our fellow employees.”

A masseuse from New York’s Alexandra Body Care provided soothing massages for guests on board Acela Express.

the Spa at Four Seasons in Philadelphia, and New York’s Alexandra Body Care. Massage therapists gave chair massages aboard five *Acela Express* trains on the day of the tax deadline. And later in April, the Sonoma Wineries Association conducted a wine tasting tour of the Northeast, serving some 15 wines on trains No. 2164 and 2167.

Live on Acela Express

On April 12th, noted baseball writer Dan Schossberg signed copies of his book “The Baseball Almanac: Big Bodacious Book of Baseball” while traveling on *Acela Express*. He is one of several authors to be featured in the “Live on *Acela Express*” series, which debuted last November.

On April 15th, *Acela Express* took the sting out of the tax deadline with onboard massage therapy offered by

We’ve got mail

This year, New York Penn Station will produce an additional \$296,000 in mail revenue, thanks to the addition of a new mail line on train #97 to Florida.

Brisk USPS business prompted Amtrak to add the extra mail line to the train in mid-March. **Frank Volkar**, manager of Customer Service for Mail Baggage & Express, says the increase in business is due to

Amtrak’s reliability. “The continually increasing volume is partly because the USPS recognizes Amtrak’s commitment to meeting their ever-changing needs,” said Volkar.

Ann Landers says ...

A letter to Ann Landers in the *Portland Oregonian* on April 30, 2002, spoke highly of an Amtrak West employee, Red Cap **Jerry Holcombe**. The following is an excerpt from the letter:

Dear Ann,

“I would like to take this opportunity to thank (porter) Jerry from the Portland, Oregon, Amtrak station for his wonderful help this past Friday afternoon.

My mother (age 86) and I were traveling via Amtrak train and bus service to Grant’s Pass. Our train was delayed leaving Tacoma due to a freight train that was stopped on the tracks.

Therefore, we were delayed on our arrival to Portland. Our connecting bus was waiting for us. My mother does not move very fast and we were directed to Jerry. He was so kind ...

Thanks Jerry — your care and consideration of guests and their special needs brought special recognition to yourself and to Amtrak!

Supervisors get trained in fire-rescue

Miami product line supervisors attended a class this month on Passenger Train Emergency Response with the Miami-Dade Fire Department Fire and Rescue Team.

The first part of the class was held at the Miami-Dade Fire-Rescue Headquarters in Miami. It consisted of classroom training, with educational videos and a lecture conducted by **Frank Garrard**, an Amtrak conductor who is also a qualified Fire-Rescue instructor. The second part of the class was held at the Amtrak Miami station, where the Miami-Dade Fire Rescue Team staged mock rescues of “victims” (product line supervisors) using a sleeper, a coach and an engine.

All of the participants received a Certificate of Achievement. Three of the product line supervisors assisted in the *Auto Train* derailment three days later.

Members of the Miami-Dade Fire Department Fire and Rescue Team safely rescue a “victim” (product line supervisor **Jeff Cruickshank**) from the cab of a train.

San Joaquin adds service between Bakersfield and Sacramento

Photo by Josie Simpson

A large crowd gathers at the Lodi train station, anticipating the arrival of the San Joaquin.

Amtrak launched the sixth *San Joaquin* train between Bakersfield and Sacramento, CA, on March 18, providing additional service to the central valley, a rapidly growing region of California. This new service adds a morning departure and an evening return, which means that for the first time, central valley commuters may visit the state capital of Sacramento on the same day. This doubles the direct service between Sacramento and Bakersfield. Sacramento leisure travelers can also travel between central valley destinations more conveniently and with greater flexibility.

Kick-off celebrations for the new

service began with an inaugural train ride at the southern end of the route in Bakersfield and continued at station stops along the routes all the way to Sacramento.

This inaugural service provided a special occasion for the residents of Lodi. The train pulled into the newly refurbished Lodi train station for the first time in 31 years. The Lodi station was built in 1907 and had not served passengers since 1971. Nearly 1,000 excited Lodi residents and train passengers greeted the incoming train.

Gil Mallery, sr. vice president of Amtrak West and VIP guests traveled northbound from Bakersfield to

Sacramento. City and county officials, state legislators, commercial partners, representatives of the California Department of Transportation, local media, and Amtrak took part in the inaugural programs.

“Welcome to the Amtrak family for the first time in 31 years. We’re delighted to be in Lodi and we won’t let you down,” Mallery said.

Four other *San Joaquin* roundtrip trains operate between Bakersfield and Oakland. New Amtrak Thruway Motorcoach routes were also added to serve the additional Bakersfield to Sacramento *San Joaquin* trains and accommodate the increase in

Improving service quality

continued from page 1

technology can improve the quality of service Amtrak provides its guests.

“Experts in the industry have told us our deal with IBM represents outsourcing ‘best practices’ and is a ‘high value’ proposition,” said **Bob Galey**, Amtrak’s chief information officer. “I’m very confident that with our new partnership costs will stay low and service quality will increase. We’re getting quite a lot more for quite a bit less,” he said.

With this agreement, Amtrak saves about \$1 million each month through lower long- distance and computing fees. If, over time, prices in the marketplace decline for these services, we can take advantage of those lower prices.

“A lot has changed in the information technology world since we signed our last agreement with IBM

in 1994,” said **Brad Burch**, senior director for Amtrak Technologies business operations. “This agreement enhances our ability to serve our guests by taking advantage of the ‘best practices’ IBM has developed through its work with other leading transportation companies.”

GetThere

Also last month, Amtrak and a company called GetThere, agreed to work together to make rail travel even more accessible to business travelers.

Under this new agreement, travelers who book their reservations on GetThere’s online corporate travel reservation system will now be able to book travel on Amtrak all in one visit, on one Web site. GetThere will integrate Amtrak reservations into its system, making rail travel available in the system used by more than 800 of

the country’s top corporations, including half of the Fortune 200.

Online air, car rental, and hotel reservations have become a significant and fast-growing percentage of corporations’ travel bookings. With the integration of Amtrak reservations capability, GetThere users can view rail options alongside air travel options and make a selection. Once complete, a user’s reservation will include any rail selections in the context of their complete reservation and itinerary, rather than as a separate booking.

“As Americans increasingly choose Amtrak as their travel alternative, the ability for business travelers to book their entire trip online, including rail, means an even greater number of travelers will consider Amtrak when making their business travel plans,” said Executive Vice President **Barbara Richardson**.

Brand guidelines ensure strong public image

Branding is not just a logo placed at the top of Amtrak stationery or on the side of a train. It’s the service we provide, it’s the employee that answers the phone, the directional signage to our trains, the red cap that greets our guests, and the hot coffee in the café car.

Everything a company does communicates a message about its brand. In essence, you are the brand — valuable and worthy

of protection. To ensure that we stay true to our brand, please be diligent in complying with the following branding processes:

Get approvals There is a process to get approvals for use of the logo and interim wordmark. The process is outlined in the brand management handbook, “It’s Our Brand,” and online at brandadmin@amtrak.com. In addition, if there are questions about the how to use the brand, those questions must be brought to the Brand Task Force for resolution before a project or work proceeds.

Allow plenty of time We are all pressed for time and managing deadlines with fewer resources. However, managing a brand takes time, and even with guidelines, answers can’t be finalized in a day. Please be sure that requests are submitted to the proper people with plenty of time for turnaround. It is imperative that you wait until you receive a response.

As we have worked through the transition period to a new brand identity, the Brand Task Force has been flexible with how the brand has been used. And still, there have been instances of improper use and work moving forward without proper approvals.

Let’s do our part to protect the Amtrak brand. Following the guidelines will help ensure a strong brand identity.

Employees at a brand training class complete exercises designed to help them understand the value of our brand, why it’s important and how to use it.

Prestigious awards honor employees for their commitment to safety

Bette Burch honors Henry Marcell with the distinguished Dr. Gary Burch Memorial Award.

Dr. Gary Burch Memorial Award

The National Association of Railroad Passengers and the Burch Award Committee awarded **Henry Marcell** the 2001 Dr. Gary Burch Memorial Award. The Burch Award ceremony was held April 25, in Washington D.C.

Marcell was nominated by the Connecticut Department of Transportation, and selected from a national pool of outstanding nominees for his extraordinary contributions toward passenger safety over the course of the year. He was safety director of the NEC System Safety Department in 2001, and currently works in the Engineering Training Group.

Marcell clearly met the criteria for Burch award recipients. His unyielding dedication to safety is a shining example of Amtrak’s efforts to maintain a stellar safety program.

The Burch Award honors Dr. Gary Burch, who was chief of the Ear, Nose and Throat Clinic at Eisenhower Hospital at Fort Gordon, GA. Dr.

Burch was fatally injured in a passenger train derailment on July 31, 1991, while traveling on Amtrak’s *Silver Star*.

E. H. Hammond Award

At a May 2 ceremony attended by former Transportation Secretary Rodney Slater and new FRA Administrator Allan Rutter, *Auto Train* employee **Dennis Overhold** received a Certificate of Commendation from the Harold F. Hammond Award committee.

The commendation is awarded to railroad companies to recognize continuing improvement in employee safety over a period of at least two consecutive years, and also for specialized activity that contributed significantly to improved safety performance.

Overhold is chairman of the safety team that supports the Lorton facility and the *Auto Train*.

“Congratulations to Dennis for being recognized by the Hammond Award committee. He has done a great job leading the safety committee that supports *Auto Train*,” said **Peter Hall**, director of Safety, Amtrak Intercity. “We are very proud of his achievements, and wish him well as he continues in this leadership role.”

John H. Chafee Environmental Excellence Award

Kenneth Moore was recognized as a finalist for a John H. Chafee Environmental Award, presented by the Asso-

FRA Administrator Allan Rutter presents Dennis Overhold with a Certificate of Commendation.

ciation of American Railroads at an April 18 ceremony. Sen. Lincoln Chafee presented Moore with a plaque to honor his commitment to environmental excellence.

Moore, a craft employee who works at 30th Street Station in Philadelphia, was the winner of a 2000 Amtrak President’s Award for his environmental work. He redesigned and operates a vacuum truck for the Engineering department. The truck collects and safely disposes of waste, such as leaves and debris, sand from engines, and other material, from along the tracks.

“Mr. Moore has an outstanding record of environmental achievement, so he was our clear choice as a nominee for the Chafee award,” said **Roy Deitchman**, AVP Environmental Department.

Moore was joined at the ceremony by his wife; his supervisor, **Dan Karczeski**; **Lisa Douglas**, chief of staff for **Stan Bagley**, EVP of Operations; and Roy Deitchman.

Amtrak salutes \$2.4 billion Alameda Corridor

“Relieving congestion on shared intercity, commuter and freight rail corridors is a critical priority for both Amtrak and the state of California.”

Gil Mallery, Senior Vice President of Amtrak West

Ceremonies honoring one of the nation’s largest public works projects, the \$2.4 billion Alameda Corridor, were held April 12 in Los Angeles, CA. Reflecting the project’s major significance, more than 1,000 people, including U.S. Secretary of Transportation Norman Mineta, California Gov. Gray Davis, Los Angeles Mayor James Hahn, and Amtrak West Sr. Vice President **Gil Mallery**, along with many others, attended the opening ceremonies.

The Alameda Corridor is a 20-mile route that travels through eight cities. It includes a series of bridges, highway underpasses and overpasses, and street improvements that separate freight rail, passenger rail and street traffic.

The centerpiece is the Mid-Corridor Trench, a 10-mile, below-ground trainway that runs parallel to Alameda Street. By consolidating four railroad branch lines, which serve the ports of Los Angeles and Long Beach, the Alameda Corridor eliminates more than 200 at-grade crossings. By eliminating these crossings where rail and street traffic conflict, traffic congestion, and

air and noise pollution are significantly reduced. Although the trench is a freight-only corridor, as a unique part of the ceremony, *Metrolink* ran passenger trains through it for this one-time event.

Amtrak participated in a key component of the project, the Redondo Flyover Bridge, which was dedicated in August 2001. The \$47-million bridge, which stretches more than a half mile, not only reduces rail and street traffic congestion, it also reduces travel time on both Amtrak and *Metrolink* trains. Amtrak’s *Pacific Surfliner* daily service includes runs over the Redondo Flyover, with close to 1.5 million passengers last year.

“Relieving congestion on shared intercity, commuter and freight rail corridors is a critical priority for both Amtrak and the state of California,” said Gil Mallery. “The Alameda corridor along with the Redondo Flyover are essential elements in increasing reliability, reducing trip times, and creating capacity to add new service. It’s helping to build momentum for the implementation of the 20-Year Passenger Rail Plan for California.”

Today Amtrak operates 24 trains daily over the flyover, 22 *Pacific Surfliners* and the *Southwest Chief*. With the 20-year plan projecting hourly service between San Diego and Los Angeles, the number of trains will increase to 34 daily. The growth of the nations second busiest passenger rail corridor is projected to reach 5.76 million.

To enhance visibility for safety at this prestigious event, a special Operation Lifesaver train, arranged by the Southern California Grade Crossing Safety Team, was positioned directly across the trench behind the podium where officials presented their speeches. The train — which symbolized the unique partnership between an array of companies that support Operation Lifesaver — included an Amtrak F59 locomotive, an historical locomotive from the local Pacific Harbor Line, and a locomotive each from BNSF and the Union Pacific.

Operation Lifesaver is a national non-profit public safety program dedicated to saving lives at highway-rail, grade crossing, and rights-of-way.

Acela speeds through airlines' shuttle customer base

Acela Express

There has been a fundamental market shift in the Northeast when it comes to air and train travel. Market research is showing that more people are choosing the train than the plane than ever before. In fact, for the first time since the jet age began, more people (58 percent) are taking the train between Washington and New York than the plane.

Between New York and Boston, Amtrak's share of the market has grown by more than 50 percent in recent months. The proof is not only in the ridership numbers, it is also in the advertising.

For the first time, the airlines are competing with Amtrak — by name — to win back customers. U.S. Airways began newspaper advertising featuring a harried businessman and a message: "Time flies, it doesn't wait

for a train." A Delta Airlines ad launched in April features a jetliner zooming past a train and a reminder for travelers: "Planes are faster than trains."

Of course, Amtrak has been increasing its own advertising now that *Acela Express* is nearing its full complement of frequencies. The fierce competition comes at a time when travelers are facing longer waits at airports and a new security-related "no bathroom breaks" policy on some shuttle flights. Consequently, thousands of travelers who had once traveled by plane in the Northeast on U.S. Air and Delta shuttle flights have turned to *Acela Express*.

In an interview with Dow Jones News Service, **David Lim**, Amtrak's vice president of Marketing and Brand Management said, "I'm pretty sure that in the history of commercial avia-

tion/advertising and marketing, no airline has ever spent money against a train." Lim spent more than 20 years at U.S. Airways. "It clearly benefits us because it raises the awareness of the Amtrak and *Acela Express*."

Amtrak guests can be more productive when they travel, walk around freely, use cell phones throughout the trip, and log on to their laptop computers using the power port at each seat. (Airline passengers are allowed to use cell phones before the plane doors close for a takeoff, and after they open following landing.)

"Customers want more control of travel time," Lim said. "Shuttle customers who have migrated to *Acela Express* ... have discovered that the benefits of *Acela Express* travel far outweigh any time differential because they can be productive."

After more than 90 years, 'JO Interlocking' gets updated

When the project is completed, the redesigned track and switch layouts will eliminate the bottlenecks and clearance limitations routinely experienced at JO Interlocking.

New York Penn Station has seen a lot of changes, but its track and switch configuration has largely remained the same for nearly a century. As passenger cars became wider, and commuter and intercity train traffic increased, Amtrak started exploring how to adapt the track and switch configurations to enhance and restore capacity.

After about five years of planning and preparation, Amtrak forces began work in April to completely redesign and reconfigure a major, multiple-switch track junction within Penn Station, known as the "JO Interlocking." The project will reduce rail traffic congestion and facilitate future service expansion in the station.

Over the course of the project, which will take 16 months to complete, Amtrak's track, signaling and electrical department employees will reconfigure and replace more than 17 track switches and track segments at JO Interlocking. Construction work will be performed only during weekends to minimize any disruption to rail traffic and weekday commuters.

The project will affect rail, crossties, and switches, as well as signal wiring, third rail and catenary, which will be

reconfigured and tested at the conclusion of each weekend's work. As a result, significant portions of the station's tracks will be taken out of service each weekend during the project.

When the project is completed, the redesigned track and switch layouts will eliminate the bottlenecks and clearance limitations routinely experienced at JO Interlocking. The construction will restore capacity and improve overall train traffic flow for the more than 1,000 weekday train movements that move through Penn Station's 21 tracks and 120 switches on a daily basis.

The project's cost of \$22.5 million is being jointly funded by the three railroads that use Penn Station: Amtrak, MTA Long Island Rail Road, and NJ TRANSIT. Amtrak's portion comes from funds that were previously set aside for the project.

This major track project is only one of many ways in which this busy rail center's capacity may be increased. Signal systems, track approaches outside the station, maintenance facility modifications and dispatching enhancements are some other areas of ongoing study and implementation at Penn Station.

At Albany, no more wait for freight

Albany-Rensselaer's Engineering Department has recently completed the construction of the much-anticipated freight bypass track at the new Albany-Rensselaer station. Crews constructed the 1,100-foot track throughout the past year, and now large shipments can easily operate around the high-level platforms.

This isn't the only change in store for Albany-Rensselaer. The freight project complements ongoing improvements; including the construction of the new

station and parking garage, a pedestrian bridge, high-level platforms, retail space, post office, track and signal modifications, plus three realigned passenger tracks. In addition, the Post Road Branch connection has already been relocated.

Amtrak is scheduled to move into the new station this summer. Employees are anticipating the change of venue because the new building will be much larger and have better parking facilities. The new station is owned by

the Capital District Transportation Authority, and will house all Albany-Rensselaer station and transportation employees.

Empire product line General Manager **Phil Larson** is especially happy about the change of scenery. "Not only will the new facility be more spacious and attractive, we also think the enhancements will help increase ridership. I'm excited about the move." Thumbs up to everyone who made these upgrades a reality!

Auto Train derails in Florida, many provide help

On the evening of April 18, the northbound *Auto Train* derailed just after 5 p.m., in Crescent City, FL, about 44 miles north of Sanford. Within

hours, Amtrak's customer care team arrived to help in the relief efforts.

There were four fatalities, none of which were employees. More than 150 were injured; and many were admitted to local hospitals, including one employee. The train was carrying 418 guests, 34 employees, and 200 vehicles at the time of the derailment. The cause of the accident has not yet been identified. The National Transportation Safety Board is leading the official investigation, which is focusing on the report of misaligned track.

During the next critical 24-48 hours, families began arriving in

Florida, as did more than 100 employees from different areas of the company. Employees provided aid and comfort to the families while they

waited for their loved ones to be accounted for. Every effort was made to support the relatives of the passengers who died.

Working around the clock, the customer care team set up a command center at the Sleep Inn hotel in Orlando to assist both injured and uninjured guests and their families with personal needs, local hotel accommodations, food, and other essentials.

In addition to the tremendous efforts of its own personnel, Amtrak received extraordinary support from local police, emergency workers and the Red Cross in the rescue and assistance efforts.

Many of the passengers and crew, who themselves had been bumped and bruised, were assisting others in getting out of the overturned cars. Removing emergency windows, they pulled people to safety and distributed luggage.

Dining car Chef **Harry Gissendanner**, the most seriously injured among the crew, said he was preparing to serve dinner when he heard the train's brakes squeal. Though he couldn't recall, witnesses said Gissendanner helped some people from the train before seeking medical attention. Gissendanner suffered second-degree burns that will require several skin grafts. He remained hospitalized for about three weeks.

While many employees provided emotional support for the passengers, families, and crew at the site, there were many other employees working feverishly behind the scenes at the command centers in Orlando, Crescent City, CNOC, Sanford and Lorton. There was media clamoring for interviews, transportation and

lodging logistics to coordinate, communications to be written, and so much more that every single person had a job to do.

"It was inspiring to see representatives from various business units and multiple disciplines working together with little or no rest to meet passengers needs and resume operations as quickly as possible," said **Kathleen Cantillon**, director of Communications for Amtrak Intercity.

A team in Jacksonville set up their own command center in the lobby of a hotel where some of the passengers were staying. In addition to their own efforts, they encountered many citizens who wanted to help.

"I saw quite a few citizens of Crescent City that had masking tape stickers on their shirts that said 'worker.' These were regular citizens, waitresses from bars and restaurants, teenagers, and really just the locals who came into action to help immediately," said **Sue Dwelle**, an administrator in Jacksonville. "I found out that the Winn Dixie food store had sent truckloads of water, soft drinks and paper goods out to the site when the accident first happened."

Dwelle said she arranged for four drivers from Yellow Cab to be accessible to passengers staying at the hotel through the weekend. "They all gave me their home phone numbers and cell phones for us to contact them for anything we needed in the way of transportation. They were as much a part of our team as anyone ... they were a God-send!"

The tracks were opened April 21, with the northbound *Silver Star*, train #92, being the first Amtrak service through the area.

May 1, 2002

As you can well imagine, the Auto Train offices remain very hectic. All of us are slowly recovering from the traumatic and heartrending experience of April 18th.

It will be awhile before I am able to personally thank you for your compassion, hard work and perseverance in assisting the Auto Train guests with the many tasks that were required, as well as getting our train back in service. It is times like this when I realize why I have spent over 28-years with Amtrak through the many restructures and painful budgetary problems. It all comes down to the many wonderful people I have had the privilege of working with.

The Auto Train always provides many unique challenges and April 18th was no exception. But with all the talent and support provided to the Auto Train team by you, every challenge was met with kindness, care and concern. I have just now begun to read the many newspaper articles where guests had wonderful accolades to share about the on-board crews and the Amtrak employees who helped in the days following the accident.

To everyone involved at the Customer Service Command Center in Orlando, the site Command Center in Crescent City, CNOC, Sanford and Lorton employees, thank you for the immense support and wonderful job that you did! As always, I am proud to be part of such a great team.

With great appreciation,

*Sharon Mahoney
General Manager, Auto Train*

eTrax gets a nod of approval from Amtrak employees

"Amtrak Intercity is an enthusiastic supporter of eTrax," said **Kris Economos**, Amtrak Intercity chief of staff.

"Since our operations and staff are so geographically stretched, eTrax is providing us with an opportunity to expedite our procurement requirements quickly, from start to finish. We see the potential for even more benefits,

such as standardized accounting, commodity and expense account reporting."

Thanks in part to the helpful feedback

from employees who participated in the eTrax pilot program, all corporate departments are online with the new software.

The software implementation follows a successful "road show" last fall, when eTrax team members traveled to major locations to hold demonstrations of the new software with employees who would be using it. Employees were able to test the software and identify the aspects that would be most beneficial them and their departments.

The response from employees has been favorable, and eTrax is seen as an asset to those responsible for handling payment requests, travel authorizations, and material requests

for non-inventory items, for example.

"The eTrax program is a valuable tool which has helped me to increase my productivity by simplifying payment requests and material requests," said **Dennis Smith**, an Engineering budget analyst in Philadelphia. "Two big thumbs up!"

The software automates Amtrak's spending processes, which results in improved requisition-to-pay procedures, standardized financial controls, and reduced costs. Employees can also expect less paperwork and easier, smarter processing. Beginning in May, paper forms will no longer be accepted.

(L. to R.) **Mike Rienzi**, VP of Procurement Payable; and **John Venturella**, director of Procurement, celebrate the corporate rollout of eTrax.

RAILWAY ROUNDUP

East meets west

On April 17, Boston South Station extended a warm welcome to Japanese Consulate General Tadamichi Yamamoto. Yamamoto spoke at Club *Acela* to an audience of Amtrak employees, as well as a gathering of Japanese Tour Operators visiting from the Far East. The group was in Boston to discuss tourism promotion strategies with other travel professionals.

The Japanese guests viewed station operations firsthand, and were treated to a tour of the bustling station. **Malcolm Smith**, manager of International Sales, organized the entire event. **Kevin Scullin**, assistant general manager of Customer Service, was especially pleased to welcome the group of international travelers. "It was a nice opportunity for them to see the station and a great way to help promote tourism," he said.

Amtrak ticket office arrives at Stamford station

The Stamford train station is celebrating a new addition — an Amtrak ticket office that opened on March 30. In the past, Amtrak contracted with Metro North to sell our tickets at Stamford. By staffing our own ticket offices at Metro North stations in Stamford and New Haven, and installing Quik-Trak machines in other outlying locations, Amtrak was able to cut costs while increasing customer service in the busiest locations.

Lead clerk **Noelle Lynch** and ticket agents **Roberta Johnson**, **David Samuels**, **Jose Antelo** and **Florence McClain** now bring their flair for customer service to the station. Now, Lynch and her team are available to assist on-the-go guests in Stamford from 7 a.m. until 10:00 p.m., daily.

"Noelle's tops," said **Harry Rogers**, Customer Service manager. "She and her staff have really done a terrific job pulling this off. This is an excellent way to enhance our commitment to guests."

Lynch, who was previously a ticket agent in New Haven, confirms that guests are coming in droves. "We've been open just three weeks, and already we've been extremely busy," she reported after the ticket office opened. Just one more way Amtrak makes customer satisfaction number one!

Amtrak golfers raise funds for Operation RedBlock

The 10TH Annual ORB Golf Tournament was recently held on a beautiful Southern California day in Hemet, CA, at the Seven Hills Country Club. Dennis Brown, Amtrak West conductor and Operation RedBlock Captain, organized the annual Operation RedBlock event with the assistance of several Operation RedBlock team members from Amtrak West.

The tournament was a big success with over 70 players joining the competition for trophies and prizes. The players and their guests, who emptied their wallets to support the cause of promoting a

drug and alcohol-free workplace at Amtrak, raised over \$700.

The Annual ORB Golf Tournament creates an opportunity for management and labor to interact in a recreational setting. The tournament has become an extraordinary opportunity to meet and support the Operation RedBlock mission.

Ed Walker, senior vice president, Operations, presented the tournament trophy to **Jay Fountain**, general chairman, ARASA/OBS. Fountain accepted on behalf of the victorious labor team, which included Brown, train attendant **Rick Fisher**, **Steve Schweitzer**, TCU district chairman, and lead service attendant **Garrett Nelson**.

Amtrak West Operation RedBlock chairman and locomotive engineer **Dennis Tracy** commended all those who attended for supporting the efforts of the Amtrak West Operation RedBlock workplace teams. The next tournament will be held in Hemet on Dec. 1, 2002.

Southwest Chief begins new service to Riverside, CA

Hundreds cheered the *Southwest Chief* as it pulled to a stop in Riverside, CA on April 29 — the first time in 27 years. The Riverside County Transportation Council (RCTC) and Amtrak hosted the event as VIPs and honored guests traveled to Riverside to inaugurate the new stop. After dignitaries detrained at trackside for the celebration, the historic train resumed its route from Los Angeles to its ultimate destination, Chicago.

Members of RCTC, guests, and a representative from Gov. Gray Davis' office boarded the train in Fullerton to participate in this historic event. Trackside festivities were arranged for excited residents and guests as they awaited the train's arrival. Clowns, balloons, and a troop of Native American dancers entertained the crowd. Booths from Operation Lifesaver, The Grand Canyon Railway, Amtrak Marketing, and the Transportation Communications Union provided information on the many services available to the community.

"I applaud Amtrak and the Riverside County Transportation Commission for providing this exciting resource. By offering local residents a convenient means of transportation and enhancing opportunities for tourism, the new stop will prove to be an invaluable asset to the Riverside community," Gov. Gray Davis wrote in a special letter read at the ceremony.

"It's a grand moment for Riverside and Riverside County to be reconnected with the nation on these ribbons of steel," Riverside County Supervisor Bob Buster said.

The downtown Riverside station was built by the RCTC in 1993. The railway station is currently served by *Metrolink* trains that travel to Los Angeles and Orange Counties and is one of the most heavily used *Metrolink* stations in the region.

"Despite the late-evening hour, many people showed up at the Riverside station to celebrate the return of service by the *Southwest Chief*. The station was decorated with balloons, and the celebration included clowns, music and Native-American dancing."

"Amtrak is delighted to provide Riverside with another transportation option," said **Brian Rosenwald**, Amtrak's Western Region general manager of Customer Service. "Now, the Downtown Riverside Train Station is a national train station, and The *Southwest Chief* will reconnect this community to our nationwide rail network system."

Bringing Amtrak back to Riverside is also a key element of Riverside's business development efforts, and it reiterates the city's history of support for the railroad. The Amtrak Reservation Sales Call Center employs over 800 local individuals, and is situated about 10 miles from the downtown station. This makes Amtrak one of Riverside's largest employers.

Amtrak employees participate in Earth Day

Rosa Nesmith had her hands full the day she and many of her coworkers at the Wilmington Shop cleaned-up the facility grounds.

Frank Lombardo (standing) and **George Vansant** work together to clean-up a creek near the Wilmington Shop.

Armed with great attitudes and a shared purpose, Amtrak employees in Washington, D.C. and at the Wilmington Shop participated in Earth Day — right in their own back yards.

Earth Day is a global celebration of the environment that is recognized each year on April 22. The purpose of Earth Day is to increase awareness, responsibility and action toward a cleaner, healthier planet through various events and campaigns.

Amtrak’s corporate Environmental Department celebrated the day by participating in the Baltimore National Aquarium’s “Wetland Restoration” project.

In partnership with the National Park Service, the Aquarium is working on the project to restore and monitor a created tidal wetland at Fort McHenry National Monument in Baltimore. Tidal wetlands are crucial to the Chesapeake Bay because they filter runoff, prevent erosion, and improve water quality by offsetting waste that could damage sensitive coastal areas.

More than a dozen employees from the Environmental Department volunteered in the National Aquarium’s April 13 Field Day at Fort McHenry. After a brief presentation on the Chesapeake Bay’s conservation efforts given by the aquarium’s senior manager of Conservation, the Amtrak team rolled up their sleeves and began collecting debris. By the

Back Row Standing: **Jack Schweitzer**, **Scott Bohnhoff**, **Andy Girardi**, **Jay Ervin**, **Chuck Ervin**, **Wanda McLaren**, **Cary Ervin**, **Roy Detichman**. Second Row Sitting: **Robert Noonan**, **Daniel Wolfe**, **Carole Wolfe**, **Lorelee Martin**, **Camille Ross**, **Kari Sheets**. Front Row: Aquarium Team Leaders: **Mary** and **Tammie**. Not pictured: **Kittrell Knight**.

end of the day, they had collected more than 18,000 lbs of debris, and a new appreciation for preserving our environment.

“It’s amazing the amount of trash we were able to pick up in just those few hours. It really makes you more aware of your responsibility to the planet,” said **Andy Girardi**, field environmental specialist, Mid-Atlantic.

Scott Bohnhoff, director of Environmental Compliance, agreed saying, “I realized how everything we do affects

the environment, from the water and marine life, to the plant and animal life. The wetland restoration day really opened my eyes.”

Wilmington Shop employees recognized Earth Day all week long, from April 22-26. More than a dozen employees got to work, moving around the facility and the surrounding area collecting debris and putting materials in their proper place. The group collected 650 lbs of scrap metal, and filled three dumpsters and 49 large trash bags with ‘stuff.’

AMTRAK IN THE NEWS

Amtrak is popular with Hastings College students from Colorado, who have a safe and relatively inexpensive way home. “It’s easy and cheaper than flying,” said Denae Parker, a senior from Arvada, CO.

Amtrak has been struggling financially and the *California Zephyr* through Hastings in south-central Nebraska is one of 18 long-distance routes it has talked about ending ... The railroad hopes to obtain more federal funding to keep its operations going.

Senior Susantha Weerasinghe of Grand Junction, CO, and sophomore Todd Nielsen of Denver use the train. “It is a really convenient way home, especially in the winter,” Weerasinghe said. Getting to Grand Junction by car in the winter can be impossible because it is hard to get over the Rocky Mountains.

“Amtrak popular among Hastings College students,” Associated Press Newswires, April 16, 2002

Why is Amtrak important? Our nation’s population is growing every day. Imagine in 20 or even 10 years how many people will be trying to get around our country. If we only have two modes of transportation we are going to be in a seriously congested and polluted mess. We need to build up our rail passenger network now. If Congress lacks the foresight and foolishly dismantles Amtrak, we as a nation will eventually pay for it dearly. The solution is for Congress to fund Amtrak — intelligently and properly — now.

“Fund Amtrak,” The Salt Lake Tribune, 4/17/2002

Two weekends ago, friends persuaded me to ride the train to Vancouver, B.C. (I suspect they dragged me along just to beat me at Scrabble during the journey.)

But on the good side, I won one Scrabble game and made a discovery. The Amtrak *Cascades* service is about the best way to travel to that Canadian city. It certainly beats spending time trapped in the traffic jam at the border.

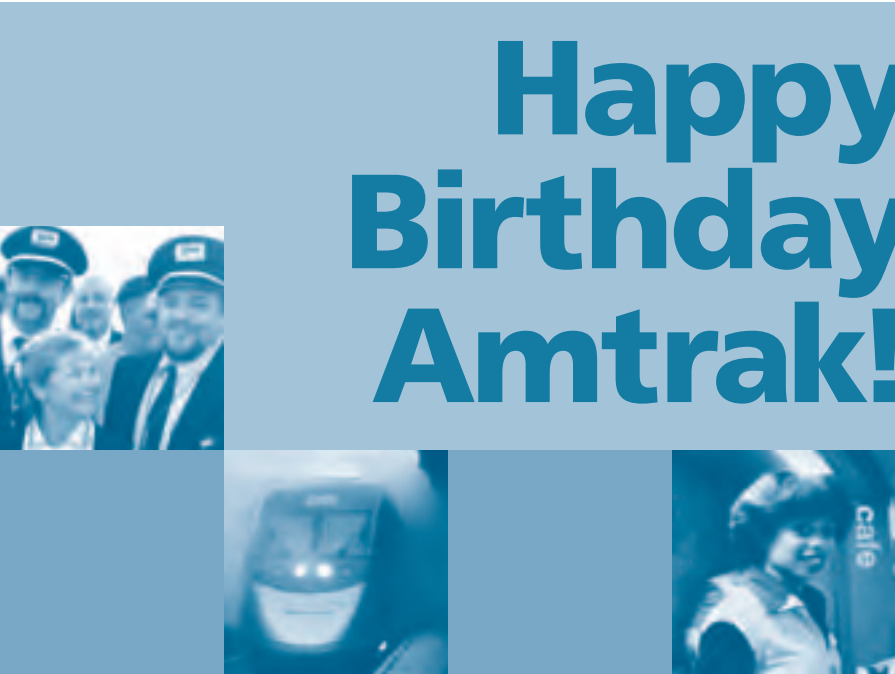

The Amtrak run, with its comfortable cars, leaves Seattle’s ugly-duckling King Street Station at 7:45 a.m. daily. (Pity that Amtrak doesn’t have the bucks to fix the place up.) Four hours later, travelers disembark at Vancouver’s swell-elegant vintage train station.

The return trip departs at 6 p.m. daily. And here’s a revelation: The border crossings are virtually painless. One-way fares range from \$23 to \$35. For \$11 extra, there’s an upgrade to business class.

And that’s only part of the story. The train route hugs the water, offering postcard scenery. There are on-board movies, laptop plug-ins, bistro service and white-tablecloth dining.

Call me a believer.

“Making tracks to Vancouver,” Seattle Times Local News, Monday, April 15, 2002

Happy Birthday Amtrak!

Thank you to all of the employees, past and present, who have been instrumental in building and sustaining our national passenger railroad.

With each passing year, we continue to find that the valuable contributions from the Amtrak workforce — the foundation of this company — are what help us to work through the challenges and achieve even greater success.

1971
MAY 1
2002

Employees begin using eTrax

continued from page 9

From the start, the eTrax team has been committed to building an initiative that helps employees perform administrative tasks with ease, and helps Amtrak meet its cost reduction targets.

“We understand that eTrax represents a new way of doing business,” said **Joe Sousa**, senior director of Procurement & Administration. “That’s why we involved many individuals from different areas during our pilot. We wanted to make sure we had a broad perspective in

redesigning processes and building this software,” he said. “We wanted to anticipate employees’ concerns and respond to them quickly.”

To learn more about eTrax, employees may access a Computer-Based Training (CBT) course on the Amtrak Intranet, under How we Work.

The eTrax team is continually interested in your feedback. If you have comments or questions, please contact the eTrax Help Desk at (728)-1466, or eTraxHelpDesk@Amtrak.com.

Train of Thought

continued from page 2

By coincidence, Sharon and her team of managers were on the train at the time of the derailment. Sharon, along with her team and on-board crewmembers immediately sprung into action, helping to direct our aid to both injured and uninjured passengers.

Thanks, too, for the fact that nearly all the employees had just recently completed the P.R.E.P.A.R.E. refresher training. This class prepares our employees for just this kind of emergency by training them how to stay focused on what needs to be done. One guest, who was in the dining car during the derailment, told us that just afterward he heard an employee calling out. Recently trained, she calmly and clearly gave her name and told everyone she was in control and asked if everyone was all right. He said he’d never forget that voice — it gave him incredible comfort and removed any sense of panic.

Amtrak employees were also on the scene in Southern California immediately upon hearing of the *Metrolink*-BNSF collision on April 23. While Amtrak doesn’t provide or service the equipment, *Metrolink* engineers and conductors are Amtrak employees

contracted to commuter service. Our Amtrak West operations and engineering teams jumped into action as if the collision has been an Amtrak incident — a response that was deeply appreciated by *Metrolink*, as it had never experienced an accident of this magnitude. Amtrak’s quick and helpful response demonstrated to *Metrolink* that it can count on our unparalleled expertise and resources in an emergency.

Amtrak employees have a history of pulling through in times of need for our passengers and all those we serve. For these tremendous efforts, I give all who were involved my deepest appreciation and thanks.

In closing, let’s continue to stay the course on safety, keeping a safe and secure railroad as our top priority. Stan Bagley put it best last month: “Each one of us is responsible for our own safety and we also share responsibility for the safety of our guests and co-workers. We must all lead by example and stay keenly focused on our objectives.”

Sincerely,
John Robert Smith

Gunn appointed as Amtrak president

continued from page 1

Gunn, who will be moving to Washington, D.C., from his home in rural Nova Scotia, said that he took the job because he considered it a challenge and that Amtrak is in a critical time and needs help. “Railroading has been my life,” he said in an interview. “If I can do something to turn the momentum around, then I should.”

“While we face substantial financial and physical challenges, I’m convinced that by securing adequate operational and capital funding, we will be able to rebuild our plant and equipment in an effective and efficient manner, and continue to provide a high-quality service to the traveling public,” Gunn said.

Amtrak Chairman Smith said Gunn will focus energy on vigorously

pursuing an adequate level of federal support in FY 2003, and working to secure a federal reauthorization that charts a clear course for America’s passenger rail system.

Gunn has plans to visit employees across the country this spring and summer. He has already taken some preliminary steps, meeting with staff at corporate headquarters in Washington and riding *Acela Express* to meet with on-board employees and others earlier this month.

“No doubt there are challenges ahead, but I am confident that David is the right person at the right time to lead Amtrak forward,” said Smith. “All of us certainly look forward to working with him.”

Gunn makes tracks

The Pacific Division welcomed David L. Gunn, Amtrak's president and CEO on his trip to meet with employees and to experience local service. In September, Gunn traveled to Seattle, via Chicago, on board the *Capitol Limited* and the *Empire Builder*. Upon arrival in Seattle, he was welcomed by workers eagerly waiting at trackside.

At an informal "meet-and-greet" setting, Gunn met with over 100 employees. He addressed a variety of questions that ranged from where he believes our company is going, to our on-time performance issues with the Union Pacific Railroad.

"It goes without saying Mr. Gunn's short visit to Seattle was a breath of fresh air. I feel we are headed in the

Amtrak President David Gunn speaks with a group of employees while visiting the Seattle station.

right direction to operate a passenger service that all Americans will be proud of and is here to stay," said **Elle Skyles**, conductor in the Seattle yards.

She was not alone in her sentiment upon meeting Mr. Gunn.

Following the employee meeting, Gunn was given a tour of Seattle's King Street Station, where Pacific Northwest managers **Gay Banks Olson** and **Tom Spees** provided an update on the progress of the station renovation project.

Gunn next travelled to Portland, OR, aboard the Amtrak *Cascades*. While on board he was joined by members of the Washington Department of Transportation to discuss the various partnerships in the region.

"He's a real railroader," said locomotive engineer and Operation Redblock Chairman **Dennis Tracy** during a Portland employee meeting. "He

Congress recesses without final action on Amtrak funding

The question of how much annual federal support Amtrak will receive in FY 2003 will continue unresolved 100 days into the fiscal year, as Congress recessed without taking action on transportation and other funding measures in November. (Under a temporary formula based on the actual federal cash Amtrak received in FY 2002, the government is providing funding to Amtrak at an annual rate of

\$1 billion, or about \$2.8 million per day through Jan. 11, 2003.)

"We're being funded by what they call a Continuing Resolution," said Amtrak President and CEO David Gunn, "but it seems to me that's a misnomer because it only continues the un-resolution of our federal support."

Amtrak's ability to make ends meet when its temporary federal support is

\$160-million short of what it will need for the full year is based on the company's cash liquidity. Amtrak started fiscal year 2003 with a \$160-million cushion thanks to a \$205-million emergency federal appropriation this past summer, cash management and the DOT loan. Secondly, while overall revenues were weaker than expected in October due to the

TRAIN OF THOUGHT

David L. Gunn

I have just completed a 10-day trip on Amtrak. I rode the *Cardinal* to Chicago, the *California Zephyr* to Oakland, the *San Joaquin* to Bakersfield, the bus to Los Angeles, the *Pacific Surfliner* to and from San Diego; the *Sunset Limited* to New Orleans; and the *Crescent* back to Washington.

All in all, it was a great trip. I met hundreds of you. I visited the Chicago, Los Angeles and New Orleans maintenance facilities. I must say that by and large your attitude and your enthusiasm give me a real boost.

Between Los Angeles and New Orleans, I was even pressed into Red Cap service handling baggage. There was a freight derailment east of El Paso, so trains #1 and 2 had to turn back at El Paso and Alpine (which are about a four-hour drive apart). We had to bus the passengers between these two points. Everything went smoothly for the passengers, so far as I could see, but there was not enough room on the buses for the checked baggage.

We loaded an Amtrak mechanical truck with the baggage, secured the mound of bags with ropes, and Victor and I took off through the desert night.

We looked like something out of “The Beverly Hillbillies,” but we found Alpine and # 1, unloaded the truck and then reloaded the passengers.

Around 11 p.m., the dining car crew served dinner (and I went straight to bed). We were about five minutes late into New Orleans. The passengers were great; generally philosophical about events.

Amtrak President and CEO David Gunn was a keynote speaker at the official groundbreaking ceremony for the \$88-million construction program for track and station improvements. The improvements will support additional Capitol Corridor trains between Oakland and San Jose. The event was held on Sept. 27 at Amtrak’s Jack London Square Station in Oakland.

When the project is completed, additional passenger and freight trains will operate between Oakland and San Jose with increased reliability and reduced travel time, therefore improving the attractiveness of Capitol Corridor trains as an alternative to the congested I-880 corridor. Amtrak currently operates nine round trips on the Capitol Corridor, with an additional round trip added on Oct.

All in all, it was a
great trip. I met
hundreds of you.
I visited the Chicago,
Los Angeles and
New Orleans
maintenance facilities.
I must say that by and
large your attitude
and your enthusiasm
give me a real boost.

I could start naming individuals who performed in an exemplary manner, but the list would be too long, and I might forget someone.

This trip has reinforced my views that improving our equipment must be a top priority. It is imperative that our shops rise to the challenge.

P.S. The food and service were great, but one does get tired of beans and carrots every night.

27. Other benefits include taking trucks off the highways by allowing more freight trains, improving air quality, and thus contributing to the overall improvement in quality of life for Californians in the Bay Area.

The construction project will span 45 miles and include added tracks and upgraded infrastructure along the Capitol Corridor between Oakland and San Jose, plus added parking and access improvements at the existing Fremont, Great America/Santa Clara and Emeryville stations.

In addition, this construction program includes a future Capitol Corridor station at the Oakland Coliseum, which will have an intermodal connection to Bay Area Rapid Transit (BART) trains and serve Oakland International Airport through

Additional service slated for California Bay Area

The construction project will span 45 miles and include added tracks and upgraded infrastructure.

AirBART shuttle buses and the future BART Oakland Airport Connector.

The \$88-million program is financed through the Governor’s Traffic Congestion Relief Program (TCRP), California Department of Transportation (Caltrans), and funds from local cities and communities.

Maria Contreras-Sweet, secretary, California Business, Transportation & Housing Agency, Jeff Morales, director, California Department of Transportation, Jerry Brown, mayor, city of Oakland, Tom Blalock, chairman, Capitol Corridor Joint Powers Authority, and Tom Mulligan, director of Passenger Operations, Union Pacific, joined Gunn in the festivities.

For more information regarding this exciting project, please see: www.amtrakcapitols.com.

Amtrak holds 9/11 ceremonies

Whether it was in a public tribute or in a private moment of silence, Sept. 11 was a day when Amtrak employees honored the men and women who lost their lives in the tragic events of last year.

In the rotunda of New York Penn Station, people gathered in a remembrance day ceremony surrounding “September 12”, the 14-ft. tall steel sculpture created as a memorial to the victims and heroes of Sept. 11. Representatives of all three railroads operating out of the station participated.

The people who came to pay tribute heard speeches given by law enforcement officers, remarks by Amtrak officials and watched the posting of colors by the Amtrak Police Department (APD) Honor Guard.

Customers Services employees handed out seven dozen flowers to people in the crowd, along with pens that said, “Remembrance Day 9-11-01—We will never forget.” For Amtrak employees, there were lapel flowers donated by a Penn Station vendor.

Also included in the hour-long ceremony was a benediction given by a priest from St. Michael’s church in New York and the laying of flowers at the memorial display.

Moments of silence were observed marking the times when the first and second airliners struck the World Trade Center Towers.

“I personally received numerous e-mails, letters and verbal compliments from passengers expressing how they were deeply touched by the ceremony,” said **Mike Gallagher**, superintendent of Customer Services. “With the help of my staff, APD Officer **John Feehan** and others in the police department, we put together a ceremony we thought would appropriately honor the memory of everyone we lost last year.”

The special New York ceremony concluded with remarks, the recovery of colors by the Honor Guard and a rendition of God Bless America by Penn Station Supervisor **Barbara Ann Martin**.

In Philadelphia, people gathered around the Walker-Hancock War Memorial (the Angel statue) inside 30th Street Station, and all business in the station ceased for a minute from 8:46 to 8:47. At that time, a bell was rung four times to honor those who perished aboard the four airliners. **Tom Kane**, manager of Customer Services, played Taps and led the crowd in a rendition of God Bless America. A wreath and sign was also placed at the base of the Angel.

Seattle Amtrak employee **Paula Cullinane**, lead TPMS

“We as a team at Auto Train Sanford wanted to do something special for 9/11. We decided to decorate the lead locomotive on Train #52 with flags and bunting to show our support,” said **Tommy Farr**, superintendent of Terminal Services.

A memorial wreath stands at the entrance to the main hall at Chicago Union Station. Similar wreaths were placed in many of Amtrak’s major stations.

The Seattle Chorale and Orchestra performing Mozart’s ‘Requiem’ in Seattle’s Safeco Field on Sept. 11, 2002, with Maestro Gerard Schwarz.

Kathy Jackson, a Seattle-based LSA, displays a flag she has sewn and embroidered. Approximately 5 feet by 4 feet, the flag is embroidered with ‘SEPTEMBER 11, 2001,’ and under that is a gorgeous skyline of NYC, with the twin towers and white stars in the background.

At Philadelphia’s 30th Street Station Tom Kane, manager Customer Services, played ‘Taps’ and ‘God Bless America’ during their Sept. 11 Moment of Remembrance ceremony

In New York’s Penn Station, the Amtrak Police Department’s Pipe and Drum Corps provided a moving tribute to those lost at the World Trade Center. Many in attendance were deeply touched by their performance. Among the several selections played were ‘Going Home’ and ‘Amazing Grace.’

clerk and an alto section leader in the Seattle Symphony Chorale, performed with the “Rolling Requiem” on Sept. 11. With performances of Mozart’s Requiem in every time zone, beginning at 8:46 a.m., the Rolling Requiem was a worldwide choral commemoration of all those lost and those who helped save lives on Sept. 11.

A memorial was placed in all of Amtrak’s major stations (Washington, Philadelphia, New York, Boston, Chicago, Los Angeles) earlier in the week.

The memorial included a wreath on a stand roped off in an area highly visible to passengers and employees. Signage that paid tribute to the victims was displayed with the wreaths.

‘September 12,’ was on display for the ceremony at New York Penn Station. The idea of the sculpture was conceived after, **Jim Audley**, a director in the Engineering Department, and his friend volunteered at the WTC site for four days. Along with a team of volunteers, including many Amtrak employees, the sculpture was built with donated materials, but none actually from the WTC site. During the past year, the sculpture has been displayed at many Amtrak stations.

Volunteers not pictured: **Gary Knutson**, manager MRSCC; **Toya Muse**, coach cleaner; **Jim Pitts**, machinist.

Chicago Amtrak employees assist with MDA Telethon

For the past three years, on Labor Day, the Jerry Lewis Muscular Dystrophy Association Telethon has been a labor of love for Amtrak Inter-city and Midwestern call center employees and their families.

Answering phones and taking pledges, Amtrak employees were proud this year to be a part of the MDA's most

successful telethon ever, raising over \$58 million dollars to benefit people with neuro-muscular diseases. Even the youngest volunteers, children of Amtrak employees, played a much needed role of helping to mail out the thousands of pledge cards while learning the value of giving selflessly.

Claims representative **Cecil Wingo** said, "I personally hope that everyone has a chance to volunteer at an event like this in their area. Once you are there in person to hear the life stories of the families who have children and spouses diagnosed with MD, you will never look at MD in the same light again," Wingo said. "I plan to spend my next Labor Day manning the telephone here in Chicago knowing contributions are being raised to give hope to those less fortunate than us."

MRSCC Manager **Gary Knutson** said that he left with a feeling that he made a difference. **Cynthia Rogers**, assistant general manager, Eastern Business Group, said she feels that, "More and more people should join in and give their time to community service." **Cheryl Jones** said, "It was one of the most rewarding experiences

I've had. Seeing people affected by these diseases from eight months to 80-plus years made me appreciate how blessed I am." **Rebecca Eaton** agreed, saying that "The experience of being side by side with my fellow co-workers was truly special — I can't wait to participate next year!"

Giving a helping hand

On July 15, I noticed a woman with two large bags who just got off the *Capitol Limited*, she was trying to get to VRE. She tried getting a cart from the cart machines, but was having no luck. Two Amtrak off-duty yard conductors, who had both finished their shifts and were headed home, saw the the woman and the problem she was experiencing. So, they helped her to the elevator, carried her bags to the VRE train and placed them on board for her. The woman was very happy for their help and offered them a tip. Both declined to take it.

This act is exactly what customer service is all about — give a hand when needed. That act will go a long way toward keeping customer loyalty. **Kenneth Russell** and **David Liverette** deserve a big thanks for being aware of Amtrak's customer needs.

By Paul Gewalt, Customer Relationship and Revenue

Washington Terminal Track Department goes injury free — for three years!

A group of 24 employees who make up the Washington Terminal Track Department has worked injury free since Feb. 18, 1999. This group has accumulated 1,258 days injury free as of July 31 — quite an accomplishment, considering this group is responsible for all track maintenance in Ivy City and Washington Terminal.

Assistant Division Engineer **Willie Powell** and Supervisor **Mark Jenifer** attribute the group's success to staying focused on safety.

Congratulations for this outstanding accomplishment go to: **Derek Bragdon**, **James Brown**, **John Carter**, **Otis Clopton**, **Arthur Cobb**, **Durant Gaskins**, **John Gerding**, **Bryan Green**, **Jan Grim**, **Walter Haggerty**, **David Jackson**, **Mark Jenifer**, **Prophet Jones**, **Calvin Kirby**, **William Lighty**, **Lonzo Lowery**, **Francis Mattei**, **Rock Merrill**, **Arthur Middleton**, **James Norris**, **Thomas Price**, **David Sanford**, **Robert Smith** and **Joseph Wiegel**.

Amtrak begins FY2003 with cautious optimism

"We can't run a railroad on the morning's lunch money and we won't. We're making the case that Congress must act responsibly, and I am hopeful that they will."

Amtrak President
and CEO David Gunn

continued from page 1

continuing slump in the travel business, Amtrak managers appear — at least for the moment — to have done a better job at keeping the lid on their budgets during this first month of the fiscal year.

Can the "continuing resolution" continue forever? Not likely, says Gunn. "We can't run a railroad on the morning's lunch money and we won't. We're making the case that Congress must act responsibly, and I am hopeful that they will."

Based on that faith, Gunn has fashioned a capital and operating plan for FY 2003 aimed at turning around several years of neglect and deterioration in plant and equipment. One initiative of the plan provides for the

repair of about 26 pieces of wrecked and damaged equipment that has accumulated at facilities in Indiana and Delaware.

In November, Amtrak called back almost 50 people to the Delaware car shop at Bear and 46 workers at Beech Grove, Indiana. The work at Beech Grove should put about 16 pieces of Superliner equipment back in service by the end of FY03, essentially creating two new long-distance train-sets. At the Bear facility, repair on 10 damaged single-level cars will restore badly needed equipment to our corridor operations.

Amtrak will also be making critical investments to its infrastructure, including the construction of a new

maintenance facility in Oakland, California. Amtrak and Caltrans are sharing the cost of the \$65-million project, and completion is expected within two years. Gunn presided over the facility's groundbreaking in mid-November. (Look for a story in a future edition of Amtrak Ink.)

Gunn discouraged optimism that Amtrak had turned a corner this month, warning, "we're not out of the woods yet," and, in a recent memo, encouraged employees to ignore this month's election results and instead focus on their jobs: "Regardless of who controls Congress, no one will support an inefficient operation, but they will support a businesslike, professional company."

Historic train documentary premieres on *Southwest Chief*

"The Super Chief documentary captures the great history and tradition of the showcase train of the Santa Fe Railway."

Gregg Konstanzer, Amtrak assistant superintendent for the Southwest Division

Informing passengers of the legendary train that preceded Amtrak service from Los Angeles to Chicago, a new documentary about the Super Chief premiered aboard Amtrak's *Southwest Chief* in August.

For the on-board premiere of "Super Chief: Speed, Style, Service," documentary narrator Michael Gross, perhaps best known for his role on NBC's "Family Ties," and producer Richard Luckin, an award-winning documentary producer/director, introduced the film, signed autographs and discussed the storied history of passenger rail.

"The Super Chief documentary captures the great history and tradition of the showcase train of the Santa Fe Railway," said **Gregg Konstanzer**, Amtrak assistant superintendent for the Southwest Division. "We were excited to premiere this documentary, which not only connects viewers with the past, but also informs them of the Amtrak service that continues to carry people between Los Angeles and Chicago."

The documentary tells the story of the so-called "Train of the Stars" in the words of 28 individuals — from the retired president of the Santa Fe Railway to current Amtrak employees.

The Super Chief operated between Chicago and Los Angeles from 1936 to 1971. During its day, almost all major movie stars of the period rode the Super Chief because of the quality of service and cuisine on this extra fare, extra fast, all-pullman train. The

A passenger talks with Michael Gross and Richard Luckin about passenger rail.

program describes encounters with James Cagney, Gary Cooper, Bing Crosby, Lena Horne and Elizabeth Taylor, as well as former presidents Harry Truman and Dwight Eisenhower. The *Southwest Chief* is still the train of the stars, carrying well-known actors and entertainers such as Benicio Del Toro, Shirley Jones, Diane Keaton, John Madden, Cher, Michael Jackson and Melissa Gilbert.

Much of the filming for the scenery used in the documentary, and of current rail accommodations, was done on board the *Southwest Chief*. For the premier, passengers were thrilled to view the documentary on the *Southwest Chief*, becoming part of railroad history, as they crowded into the Sightseer Lounge each day of the trip from Los Angeles to Chicago. After the showing, Gross and Luckin

mingled with the passengers and shared stories of their colorful railroad backgrounds. They sold many VHS copies of the documentary to passengers during the premiere trip, and the videotape remains on sale in the train's lounge car for about \$22.

As a grandson and great-grandson of railroaders, Gross has been a life-long railroad fan, particularly of the former Santa Fe Railway. Gross is an amateur railway historian, photographer, and award-winning railroad modeler. Producer Richard Luckin has been an active collector of railroad memorabilia for the last 35 years. He has authored five collector books that have become standard reference materials for collectors of china sets used on old passenger trains.

Broken and cracked yaw damper assemblies on *Acela Express* trains

On Aug. 11, a broken yaw damper bracket plate was found on one of Amtrak's high-speed trainsets. This led to a temporary cancellation of all *Acela Express* service while the other trainsets were inspected.

There are four bracketed points and eight bracket plates on each *Acela Express* locomotive that attach the yaw damper to the carbody. The yaw damper absorbs lateral forces and stabilizes the rotation of the truck (wheel and axle assembly). If a significant failure occurs and it breaks free, it can cause a clearance problem or compromise the integrity of the carbody where it attaches to the trucks. In a worst-case scenario, this could potentially cause a derailment.

As inspections of the trainsets proceeded, more cracks were found. Since Amtrak's new HHP-8 electric

locomotives are of similar design, they were also inspected and similar defects were found. Cracks were also found at the point where the brackets attach to the carbody frames. Most of the cracks are invisible to the naked eye; therefore, the inspection process requires a dye penetrant used by airframe mechanics to find cracks in airliners. It looks like thin pink furniture stain and gravitates into cracks where it forms a dark visible line.

A temporary repair process has been developed by the manufacturer (a consortium of Bombardier of Canada and Alstom of France) and approved by Amtrak and the Federal Railroad Administration. It involves grinding and welding the area around the crack. The incidence of cracking has decreased significantly. Progress has therefore been made in getting both

high-speed trainsets and HHP-8 locomotives back in service.

Amtrak progressively increased the number of *Acela Express* trainsets in service from five in late Aug. to 12 (of the 18 currently delivered) trainsets in late September. The majority of *Acela Express* scheduled trains are operating although a few are running with Amfleet-style equipment. The passengers are returning as service is restored although the loss of business in August cost Amtrak approximately \$9 million in critically needed revenue. A full resumption in service can occur when permanent yaw damper repairs are completed, along with the more than 200 other modifications required to bring the performance of the trainsets up to requirements. Completion is expected sometime in 2003.

Chicago Terminal Team — movin' the trains out on time

"Good communication
is the key. We know
what's expected
early and work
to get it done."

Nick Floro,
pipe fitter technician

In September, Chicago Terminal employees achieved a 91.6-percent on-time performance record for trains departing Chicago Union Station. Just shy of their 92-percent goal, this accomplishment marks the terminal's highest on-time performance record since October 2000. June, July and August reported on-time performance at 78 percent, 81 percent and 80 percent, respectively.

The tremendous improvement in September is due to the efforts of the dedicated employees from crafts that include coach cleaners, mechanics, carmen and ready crew.

Jim Poe, Chicago Terminal assistant superintendent, said, "Certain changes contributed significantly to September's success. First, we adjusted our repair and cleaning routine. At one time, these jobs were performed simultaneously. Now, repairs start in the early afternoon and go through the night, and the coach cleaners begin in the morning. We're finding problems and correcting them earlier. We have also increased hours and staffing to support a 24-hours, seven-days-a-week schedule. Most important, we have worked hard at fostering a team atmosphere where

mechanical, along with transportation, engineering, commissary and each of our departments pulled together to reach this milestone."

Mechanical foreman and 27-year employee, **Helen Raymond** said, "I'm impressed and proud of our accomplishment. It demonstrates good teamwork." **Nick Floro**, a pipe fitter technician who has worked for Amtrak 28 years said, "Good communication is the key. We know what's expected early and work to get it done."

Congratulations Chicago team, for moving our trains out on time.

Amtrak and Caltrans work together to 'Spare the Air' in California's Central Valley

"Every person who
chooses to take the
train instead of
their car helps
to reduce harmful
vehicle emissions."

Gil Mallery, vice president,
Planning & Development

Amtrak and Caltrans have recently created a new partnership with the San Joaquin Valley Air Pollution Control District to support the district's Spare the Air program and other initiatives to prevent air pollution. June 6 marked the first day of the Spare the Air summer season.

This year's Spare the Air program, a state-wide effort to reduce pollution by promoting public transportation, features support from businesses and public agencies. The Valley Air District has joined with Amtrak in promoting train travel on the *San Joaquins* as a means of improving air quality in the central valley. On Spare the Air days, the district asks people to cut back on

driving and other activities that send pollutants into the air.

"Every person who chooses to take the train instead of their car helps to reduce harmful vehicle emissions in the San Joaquin Valley," said Gil Mallery, vice president of Planning and Development. "The partnership will go a long way toward furthering the environmental goals of the Valley Air District, and boosting Amtrak ridership."

"Caltrans-supported *San Joaquin* passenger trains have always provided an important alternative to automobiles between Bakersfield and Sacramento," said Warren Weber, chief, Caltrans Division of Rail. "The partnership with the Valley Air district allows both agen-

cies to be more effective in getting this message across."

One thousand Spare the Air travel kits were distributed to children or parents riding on *San Joaquin* trains to kick off the season. The kits contained a toy, travel activities and information about the district's Clean Air Kid's Club and Spare the Air programs.

In March, Amtrak added a second round-trip train between the San Joaquin Valley and Sacramento, doubling direct service to/from Sacramento and providing more transportation options for residents of and visitors to the growing San Joaquin Valley. The *San Joaquin* ridership grew to over 734,000 passengers last fiscal year.

Gunn makes tracks

continued from page 1
knows his stuff and he will help us get through this difficult time," said Tracy. UTU Local Chairman and Conductor

At Amtrak's Jack London Square Station in Oakland, CA, Amtrak President David Gunn talks with local media representatives .

Dirk Sampson asked Gunn about his thoughts on employee morale. "You give employees the tools to do their jobs, and morale will get better," said Gunn in response. "That's my management philosophy, and what I intend to do." Employees cheered!

Gunn left Portland on board an Amtrak motorcoach for Salem, where he picked up the *Coast Starlight*. His overnight ride landed him in Sacramento, CA, where he was able to meet a group of employees eager to shake his hand and say thank you.

Arriving in Oakland, Gunn was greeted by a crowd of enthusiastic commuters, politicians and Amtrak

employees, where he participated in a groundbreaking ceremony to kick-off the \$88-million track and station improvement program that will enable the area to support additional Capitol Corridor trains between Oakland and San Jose (*see story on page 2*). Special speakers at the event included Jeff Morales, director, California Department of Transportation, and the Honorable Maria Contreras-Sweet, secretary, California Business, Transportation & Housing Agency.

The final stop on Gunn's first tour of Amtrak's Western region culminated at the Oakland Maintenance Facility where the informal meeting with employees there centered on the November groundbreaking for the new Oakland Maintenance facility.

"We are looking forward to the new facility and having the tools to keep improving on our already good performance statistics," said **Jay Commer**, district superintendent for the Bay District. "This facility has been a long time coming and our team is ready."

Gunn intends to travel more of the system, meet employees and familiarize himself first hand with all of Amtrak's services.

President's Service & Safety Awards

Award recipients chosen from pool of outstanding employees

In a ceremony held Oct. 10, 2002, at the Hyatt Regency Hotel in Washington, D.C., some of Amtrak's most talented and dedicated employees and external partners received the company's highest honor — a President's Service & Safety Award.

The awards program recognized 32 internal employees and 7 external business partners for accomplishments in calendar year 2001. Our external winners are commended for championing passenger rail service, and their positive voice for Amtrak. Employee winners met strict criteria, made outstanding contributions to the corporation, and exhibited exemplary work performance and leadership that support Amtrak's values. The toughest

judges in the industry — their own colleagues, selected the men and women honored this year.

A committee comprised of 32 craft and management employees, from all of the geographic regions, received more than 368 nominations from employees across the country. Each committee member dedicates countless hours of research for every nomination. After a thorough process, the committee selected the winners of this year's awards.

During the awards ceremony, David Gunn expressed his admiration for the award recipients and the contributions they have made.

ACHIEVEMENT

William Breneman

Deputy Division Engineer for Track
Perryville, MD

Bill Breneman must have wondered, "Hmm, now that's good, but how can I make it even better?"

A couple of years ago, a group of engineers developed what's called a Multi-Purpose Maintenance Vehicle — or MPMV. This machine contained almost everything needed for daily track maintenance.

But last year, Bill Breneman made it a whole lot better. Even with the MPMV, a separate work train of hopper cars was dispatched whenever there was a need for ballast, along with a ground crew to manually regulate the flow of ballast to the roadbed. Bill saw the possibilities for big increases in efficiency and safety, as well as reduced locomotive wear and tear. What came off his drawing board was a redesigned, 100-ton ballast car inserted as the third unit in the MPMV, with onboard controls for hydraulically driven hopper doors.

Now, the entire daily maintenance program on the Northeast Corridor sector served out of Perryville is handled with one crew operating the MPMV. Among many other benefits, this eliminates the ballast train, which costs \$2,500 per day, not including the ground crew expenses. It's faster, cleaner, safer and cheaper.

The MPMV ballast car project was in the finest tradition of Amtrak achievement.

Richard Gadbois

Acela Manager, Philadelphia, PA

Picture this: you are riding an Acela Express high-speed train in the Northeast Corridor, when the train comes to a stop. The conductor comes over the PA system and announces your train is inoperable and you will have to transfer trains, but you are nowhere near a station. Normally, you would have to walk across ballast to transfer from one train to another, which is a safety hazard for employees and guests alike.

Richard Gadbois was very familiar with this process, but had a better idea. He talked with his supervisor Don Knapik about his concept of a transfer bridge.

Richard set out to create a final product that satisfied the FRA, Amtrak and ADA requirements. He identified the need, and helped secure materials for a strong, flame retardant, and easy-to-handle bridge that would prevent passengers from being electrocuted during a train-to-train transfer.

Richard spent a lot of his own time researching and coordinating this project, and he made his idea a reality. Now, almost all trains in the Northeast Corridor are equipped with transfer bridges, allowing passengers to safely transfer to another train — what an achievement! Richard's basic concept, ingenuity, and diligence have helped prevent passenger and employee injuries in a traditionally problematic situation.

Wayne Parker

Reservation Sales Agent, Philadelphia, PA

Amtrak is fortunate to have many outstanding sales agents working in its three call centers. However, this past year, one agent, Wayne Parker of the Philadelphia call center, accomplished something truly outstanding. He booked over \$3 million in reservations during

FY2001. What's more, \$2.2 million of the reservations he booked were purchased by guests. What a record!

Out of more than 1,000 reservation sales agents throughout the Amtrak system, Wayne is the only one to have achieved such milestone. In fact, in the 29-year history on Amtrak's automated reservations system, no one has ever topped the \$3 million mark in bookings or exceeded 2.2 million in ticketed bookings.

So how did he do it? High-pressure sales tactics? Nope. Just the opposite in fact. Wayne's helpful, courteous manner with every potential guest, no matter how simple or complex their inquiry, are the ingredients to his success.

Wayne Parker is a self-motivated individual who clearly enjoys his job. Through the combination of winning customer service skills, effective sales techniques, and strong work ethic, Wayne's achievement is truly one for the record books.

BUSINESS DIVERSITY

Southeast Marketing Group

Atlanta, GA; Charlotte, NC; Meridian, MS; Miami, FL; New Orleans, LA

Hank Koppelman

The Southeast Marketing Group leaves no stone unturned in their efforts to increase Amtrak's awareness among diverse communities.

The promotional outreach efforts of Hank Koppelman, Sharon Gilbert, Dick Weaver, Bob Hardin and Jerome Trahan have yielded the dual benefit of demonstrating Amtrak's commitment to serving diverse communities, as well as building ridership.

Moreover, their bridge building within various diverse communities has helped increase Amtrak's profile. The Southeast Marketing group embodies diversity as a core value at Amtrak.

Deborah Wetter, general manager of the Gulf Coast Business Group, has worked with the Southeast Marketing Group for three years, and as a result, their

diversity marketing has tremendously increased. For example, the *Crescent* route closely follows the Civil Rights Trail. The group has done several highly visible promotions in conjunction with specific events commemorating the Civil Rights movement, promoting the *Crescent* as a unique way to visit points and events along the trail.

Sharon Gilbert

Jerome Trahan

Dick Weaver

Bob Hardin

CHAMPION OF THE RAILS

Doras Briggs

California Station Host Program; Emeryville, Martinez and Oakland, CA

When you're in love with traveling by trains, but not an employee of Amtrak, what can you possibly do to enhance the quality of passenger rail service?

If you're Doras Briggs, you create a way to get involved. More than anything, she tenaciously focuses on improving Amtrak

customer service, and works closely with Amtrak employees toward that end.

Doras' most recent project was to formulate the California Station Host Program. She envisioned a station host as being a volunteer who would interact with passengers in the busy California Bay Area depots. After 18 months of hard work she implemented chapter one of the California Station Hosts program in Emeryville in March of 2001.

Doras personally recruited, screened, trained and monitored the pilot group. Within six months, the effort was successful enough to be expanded to the Oakland, and Martinez stations, with more than 24 volunteer hosts. These hosts are energetic and enthusiastic about Amtrak, and the future of passenger rail service. There is no shortage of positive feedback from passengers and employees, and the successful model may be expanded across the Amtrak system.

Doras Briggs, an elegant, passionate, and driven — she is truly the undisputed featherweight Champion of the Rails!

U.S. Senator Ernest F. Hollings

State of South Carolina

Sen. Ernest "Fritz" Hollings is the chairman of the Senate Commerce, Science, and Transportation Committee, which has oversight over Amtrak, as well as the other modes of travel. The chairman has been a long-time supporter of Amtrak. He,

along with last year's award recipients Senators Joe Biden and Kay Bailey Hutchison, believe in our goal to provide this country with an efficient passenger rail system.

Here are some examples of his support for Amtrak: He sponsored the Rail Security Act of 2001; the Railroad Advancement and Infrastructure Law for the 21st Century; and co-sponsored HR-2329, the High Speed Rail Investment Act of 2001. On March 6, 2002, he introduced the National Defense Rail Act, which would reauthorize Amtrak and provide both a policy and funding framework for building a viable national passenger rail system.

Sen. Hollings believes safety and efficiency are essential elements to our economic growth and the quality of our lives, and the passenger rail can provide both. Today we recognize Sen. Fritz Hollings as a Champion of the Rails.

Arthur L. Lloyd
Board Member, Caltrain, San Carlos, CA

"In the four decades that I have known Art Lloyd, not a single individual comes to mind who has contributed more to the future of rail passenger service," says Bruce Heard, friend, colleague, and former Amtrak manager.

Even before there was an Amtrak, America's passenger rail services had a strong ally in Arthur L. Lloyd. Art has a decades-long history of advocacy for passenger rail in America, and now for Amtrak. He is a respected, knowledgeable leader in driving transportation policy in support of train service, and an effective agent-of-change in increasing investment and expanding Amtrak service in California, in the West and throughout the country.

His contributions to the railroad industry have greatly benefited contemporary and future railroading. But as a founder, director and officer of numerous railroad historical societies for over 60 years, Art continues to work toward preserving railroad history. In the late 1960s and early 1970s, Art played a key role in assembling the outstanding collection of railroad locomotives, cars and artifacts that became the foundation for today's California State Railroad Museum in Sacramento, the nation's premier railroad collection.

Art Lloyd's energy and continued dedication to the preservation and improvement of rail passenger service in this country is unsurpassed — he truly is a Champion of the Rails!

Susan Miculka
*Volunteer, Trails and Rails Program
New Orleans, LA*

In the year 2001 she volunteered over 900 hours and presented 150 programs to 5,000 Amtrak guests. Who's that dedicated? Susan Miculka, that's who.

Susan began as an Amtrak volunteer in 1994, with the inception of an innovative program partnership between Amtrak and the National Park Service. This program, called Trails and Rails, provides Amtrak passengers en route entertainment in the form of educational, historical, natural history and contemporary information.

But Susan was the first to volunteer. She has participated in every aspect of the process from the initial startup, volunteer recruitment and training, volunteer scheduling, script writing and research (regarding routes, scenery, fun facts).

Joy Smith, general manager of the Southwest Business Group, said that Susan adds excitement to the trip and is good at selling Amtrak's service. Smith said that by the time Susan boards the train and gives her presentation, the passengers are transformed into entertained and happy guests.

Trails and Rails has proven so popular that it has received its own budget from Congress, and has gone nationwide, with a volunteer pool of 300 covering 21 train routes. The program would not be where it is today without Susan's dedication, hard work and the 10,000 plus volunteer hours that she has donated since 1994. Her contribution to the quality of rail passenger service is extraordinary. Three cheers for this exceptional Champion of the Rails!

U.S. Representative Jack Quinn
State of New York

In his fifth term representing New York's 30th district in the U.S. House of Representatives, Congressman Jack Quinn does not tire in working for his home state, or in his support for Amtrak.

Rep. Quinn has a special interest in Amtrak and has been one of our most vocal advocates. He is an original co-sponsor of the High-Speed Rail Investment Act of 2001, and The Railroad Retirement and Survivor's Improvement Act of 2001.

When the Amtrak Reform Council released its statement early in 2002 urging for the liquidation and restructuring of Amtrak, the congressman publicly expressed his disagreement. In response to the council's findings he said, "I am committed to ensuring the viability of passenger rail service throughout this country, and so are many of my colleagues, both in the House and Senate."

He has pointed out that having to cut costs and lay off workers illustrates the need for Congress to make some decisions about sufficient funding for Amtrak. In every challenge confronting Amtrak, Jack Quinn has shown his support. For that, we honor him as a Champion of the Rails.

ENVIRONMENTAL SAFETY ACHIEVEMENT

Paul Agren
*Roadway Mechanic (uppercase "M"), Providence
Maintenance of Way Facility, Providence, RI*

In January 2001, Paul Agren led a major cleanup effort at the Providence Maintenance of Way Facility. The cleanup project began in preparation for an environmental audit. Paul contributed a considerable amount of off duty time researching the issues and trying to find solutions.

Before he began managing the waste stream generated by the Providence base, their disposal costs were \$1,200 per month. After finding a recycling company and organizing a recycling program for the facility's waste material, waste disposal at the Providence facility dropped to \$500 per month. Paul also found another recycling company that would dispose of wood and concrete ties. The wood is chipped and sent to Maine, to be burned for energy, and the concrete is pulverized and used as aggregate for other products. As a result, Amtrak received a very favorable finding from the audit.

Paul's initiative has paid off. He has found ways to reduce the facility's disposal cost by recycling everything from wooden pallets to the rubber hoses used on ballast regulators. He is frequently seen sorting, cleaning up, and doing spot checks, and is always on the lookout for ways to improve the facility's environmental safety practices. Paul is considered by his supervisors and co-workers to be the driving force behind the facility's cleanup and its ongoing recycling programs.

Paul Agren, you're a true environmental safety champion.

Paul Santa Anna
Supervisor, Mechanical Department, Boston, MA

Amtrak's environmental field personnel say that the Commuter Rail Service and Service and Inspection Building in Boston, where Paul Santa Anna works as a Mechanical Department supervisor, is a model for environmental compliance.

Paul routinely takes time to inspect and check his area for anything out of the ordinary that could be an environmental or safety hazard. On many occasions Paul has taken the lead on making environmental improvements at the facility, some of which took shape as the result of his periodic inspections. For example, Paul developed a more efficient system for the proper storage of materials that the employees use on a daily basis. This system insured that any environmental hazards were eliminated, and that the materials were easily accessible to his co-workers.

In addition to the physical improvements that Paul has made at his location, he has also developed and implemented new procedures for particular job functions so that the employees under his supervision are better informed and diligent about complying with environmental requirements.

Paul's work location is periodically audited by Amtrak's Environmental Department to insure compliance. Having been called a model for environmental compliance, this environmental safety achiever has it covered.

SAFETY ACHIEVEMENT

Jim Martino
Captain, Amtrak Police Department, San Jose, CA

Captain Jim Martino is a leader and an outstanding example to his peers, as well as to the communities he serves.

As an OL trainer and chairperson for law enforcement in the central region, Jim's on- and off-duty time is spent proactively educating the public on railroad safety. He has conducted countless presentations for fire and police personnel and assisted in training police SWAT teams in emergency preparedness throughout several West Coast states.

In the San Joaquin Valley, Jim was instrumental in organizing the San Joaquin Taskforce 2000 along the San Joaquin corridor. The taskforce holds railroad safety events to educate the public on grade crossing safety, and the corridor area has experienced a steady decline in accidents, which can be attributed to the taskforce's efforts.

Jim is a leader at Caltrain. He created Caltrain's first Officer on the Train event in 2001, sponsored Operation Safe Tracks and launched a new bicycle patrol as well as a program that seeks to educate young people about safety along the right-of-way.

Jim is a leader in his community. He is involved in local activities such as National Night Out and does safety and security presentations on the local cable TV channel in conjunction with the local police. Jim Martino embodies safety achievement.

Richard White
Station Agent, Customer Services, Columbia, SC

The praise for Richard White flows freely and comes from numerous sources. But there's one thing everyone should know, Richard has affected positive change in his effort to save lives through his dedication to Operation Lifesaver (OL).

The highlight of his career was obtaining Caboose # 14006 for the Operation Lifesaver Beautification Project at the Columbia Amtrak Station. To cap a dream almost three years in the making, a dedication ceremony for the caboose was held, and the Lt. Governor of South Carolina joined Richard in championing Amtrak, the importance of spreading the OL message: "Look, Listen and Live."

Richard is a certified Level I OL presenter and also serves on the South Carolina OL Advisory Committee. He shares the message of railroad safety on his own time at schools, businesses and community organizations. He has organized the OL float for holiday parades, grade-crossing blitzes, public service announcements, and programs such as Highways to Die-ways; Take Safety to Heart and Columbia's annual Vista Lights celebration, where he interacts with local ventriloquist Phillip Jones, another Operation Lifesaver volunteer, getting the OL message out to all attendees.

"Richard always has a kind word to say — always a smile on his face. Why? Because he loves his community, and he loves Amtrak. He has a rare and precious gift to transcend boundaries, and the ability to effectively teach and motivate others," said Janice Cowen, the Operation Lifesaver coordinator for the state of South Carolina.

They say Richard shines. Because of his passion for communicating Operation Lifesaver's safety message whenever and wherever he can, and for his commitment to promoting Amtrak in his community, we are proud to honor Richard White with a President's Award for Safety Achievement.

SAFETY COMMITTEE

Lorton Safety Committee
Lorton, VA

Deb Mullings

Robert B. Jones, Jr.

Lance O. Kendall

The entire Lorton facility, including train and engine, mechanical, onboard and station employees, was injury free in 2001. And, the *Auto Train* reduced injuries by 44 percent from the year before, surpassing their goal by 36 percent. These impressive statistics are the result of the diligent work of the Lorton Safety Committee: Dennis Overvold, Sandy Flournoy, Robert B. Jones, Jr., Lance O. Kendall, Sandra Thompson-Lake, Deb Mullings, and Ha Roop.

This committee feels a personal responsibility for the safety of all the employees and passengers at the Lorton facility. Meeting on a monthly basis, the team educates employees in safe work practices,

makes recommendations for improving conditions, reviews and analyzes accidents, and develops measures to prevent future injuries.

Under the leadership of Chairperson Dennis Overvold, these team members have found creative ways to promote safety. A few examples of their handy work include providing safety task lists so their co-workers can focus on particular issues and encouraging employee recognition in the area of safety improvements and achievements.

This safety team stays busy with their efforts to educate their co-workers on staying safe. Congratulations team, you've earned a President's Award for Safety Committee of the Year.

Sandy Flournoy

Dennis Overvold

Ha Roop

Sandra Lake-Thompson

Richard E. Hutchison

*October 10, 1942 – August 16, 2001
Repairman, Wilmington Shops, Wilmington, DE*

Hired in December, 1988, Richie was with Amtrak for more than 12 years, during which time he developed many friends among his co-workers. He was always ready to lend a hand, even financially, to those less fortunate than he.

When it came to heavy equipment Richie could operate or repair anything, and do it very well. He did it all. Landscaping or repair, dragstrips to marinas, boats or cars, it didn't matter to Richie. His heart was in his work.

"Quiet" is not a word that described Richie. At the maintenance facility, in his strident, cacophonous world, Richie could be heard above it all—he'd make you laugh.

For Amtrak and the BMW, Richie was a sincere friend who will not be forgotten.

His friends were thankful for the opportunity to know him, and for the camaraderie he offered. With his kind of special friendship, everything else he did was just icing on the cake. His wife June, kids, and grandkids are all good people, and he was extremely proud of them.

Richie Hutchison may never have won a Nobel Prize, nor ever had a testimonial dinner in his honor, but in the words of his long-time friend and co-worker, Brian Lee Hart, "he did touch our hearts in ways that will never be forgotten."

STATE PARTNER

State Senator Jim Costa

Fresno, CA

Sen. Jim Costa is a member of the Transportation Committee and Budget Subcommittee, which has jurisdiction over transportation. He is also the leader in the California legislature in supporting Amtrak and passenger rail in the state.

In the early 1990s, Senator Costa developed voter approved statewide bond proposals to invest over \$2 billion in California's rail lines. During his tenure in the legislature, he has been responsible for billions in capital support for rail investment in the state.

While he was President of the National Council of State Legislatures, he formed an intercity rail committee and authored Congressional resolutions in support of high-speed rail and Amtrak. A strong supporter of high-speed rail, he recently introduced a bill that would provide \$9 billion in bonding authority for planning and construction of a high-speed train system in California.

Due to term limits, Sen. Jim Costa will retire this year. But there is no doubt that this dedicated state partner will continue to be a champion for positive change for Amtrak and passenger rail across this country.

Amtrak honors Senator Jim Costa today not only for his commitment to passenger rail, but also for his tremendous leadership in support of Amtrak.

David King

Deputy Secretary NCDOT, Raleigh, NC

David King is a visionary, a dynamic and well-respected leader in the transportation field. Working with a driving force, he has been a consistent advocate for Amtrak and for building support to secure greater federal investment in passenger rail.

During his 29-year tenure with the North Carolina Department of Transportation (NCDOT), he has been

the catalyst in pushing the state's rail passenger program into a position of national leadership. Because of his efforts, the North Carolina Rail Division is one of the most valuable supporters Amtrak has among state rail services.

He was instrumental in developing the state-sponsored Carolinian and Piedmont passenger train routes, and showed great foresight and planning as he pushed the NCDOT to implement an innovative program to make crossing safety improvements between Charlotte and Raleigh, which laid the foundation for high-speed operations.

David travels to Washington frequently to testify before committees of jurisdiction and meet with individual members of Congress and the administration to discuss the need for a dedicated source of funds to improve our national rail infrastructure and develop high-speed rail.

David King is a very credible advocate for passenger rail, and a unique state partner for Amtrak — one who deserves recognition for the difference he has made for passenger rail service.

SUSTAINED EXCELLENCE

Frank Gallelo

Manager, Reservation Sales Call Center, Philadelphia, PA

For 29 years, Frank Gallelo has exemplified everything you look for in an Amtrak employee — loyalty, professionalism and vision, all combined with a tireless work ethic. His commitment to Amtrak's success has been a tremendous benefit to the corporation.

Frank is currently the manager of call center Operations in Philadelphia. But with nearly three decades at Amtrak, Frank has racked up a long list of accomplishments. Just to name a few...

Frank was a key figure in testing the new ARROW system before it came online in 1981. Fast forward to fiscal years 2000 and 2001, Frank's call center team achieved the best attendance rate and best on-phone rate, followed by the lowest average talk time and a second-place ranking in revenue/man hours.

He was part of the management team launched the first satellite call center, which paved the way to use part-time workers at the call centers. And he played a key role in the transition to a new automated call distribution System, achieving greater efficiencies in call handling and revenue generation (the average sales agent went from \$650/hour to almost \$800/hour).

Today, as in years past, Frank's focus is on greater efficiency and increasing revenue and cost savings. For his many years of sustained excellence, we say thank you.

Michael Gregg

Machinist, Mechanical Department, Washington, D.C.

Have you ever met Mike Gregg? He's the Wheel Guy. Involved in Amtrak's wheel truing program since 1984, he was there when the original wheel-truing machine was first installed. Since then, Mike has been involved in all aspects of wheels and machine maintenance and overhauls,

including all major repairs.

Mike is an expert in the area. In 1994, when Amtrak implemented a quality assurance program, Mike was placed in a leadership position so he could assist in the training of all wheel true operators in the facility under this program.

Looking to enhance his skills and make even greater contributions on the job, Mike spent countless hours learning very detailed processes so that he could become certified in different areas. He is qualified as a lead quality assurance systems auditor by both the American Association of Railroads and ISO 9001 — outstanding credentials for someone in his line of work.

This is what his co-workers have to say: "He is outstanding ... his attitude is the best ... he's there for you ... in 18 years I've never heard him say "no" ... no-one can compare to his level of knowledge and professionalism ... when we'd get new equipment, Mike would go and get himself qualified ..." That's one dedicated wheel guy.

Congratulations Mike. The wheel of fortune says you're up! — For a President's Award for sustained excellence.

Peter E. B. Herron

*Director, Rolling Stock Damage Unit,
Claims Department, Albany, NY*

How can one man single-handedly add \$30 million to Amtrak's bottom line? Peter Herron knows. He's the one-man Rolling Stock Damage Unit in New York who seizes every opportunity to secure money for Amtrak.

Peter helped develop the first industry-standard Flat Rate Manual, which the insurance industry has adopted. For example, when a locomotive plow is damaged by a grade-crossing accident, all damages are now documented, and charged back to the third party who caused the accident. Like your own car insurance, rates to fix each piece of your automobile are standardized, and are accepted across all industry lines. In putting this manual together, Peter has now become a nationally recognized expert on rolling stock damage.

Peter's boss, Charles Mandolia says that Amtrak has always pursued third party losses in huge cases, but the smaller cases had fallen through the cracks. In the past, lawyers were hired to pursue these cases. Bypassing litigation saves Amtrak big dollars. Although the program officially began in 1996, Amtrak was able to secure over \$6 million on cases that were stuck in litigation prior to 1996 with the use of the Flat Rate Manual.

Charles says Peter's efforts at third party cost recovery are fueled by dogged determination. His sustained excellence has resulted in real dollars for Amtrak.

Craig Kirkeby

Red Cap, Customer Services, Portland, OR

Craig Kirkeby has been called Amtrak's ambassador for customer service. Craig regularly exceeds customers' expectation and has been doing so for over 20 years.

As the red cap on duty at Amtrak's Portland, OR, station, Craig is always courteous to our passengers and makes the effort to anticipate their needs. If Craig can't satisfy a customer, then it might just be impossible.

He not only affects our passengers in a positive way, but by his example and demeanor he also instills in his co-workers the desire to provide customers with exceptional service. Craig's co-workers recount many occasions when he assisted a disabled passenger, an elderly person or a new traveler who was unsure of where they should go or what to do.

Craig's personality adds to the enjoyment many passengers experience at Portland's Union Station. He is always willing to lend a hand, suggest a good place to visit or advise a new traveler on what to expect from their ride on Amtrak.

His planning and attention to detail allows for a smooth flow through the station and enables our passengers to board in an orderly fashion. Craig's record of sustained excellence is one we would all do well to emulate.

THE PRESIDENT'S SERVICE & SAFETY AWARDS COMMITTEE

The President's Service & Safety Awards Committee consists of employees from across the company, representing every region, craft, and department. They are selected for their departmental knowledge and understanding of Amtrak operations, as well as their ability to be objective and respected performers in their positions.

Committee members must assure that all awards recipients have performed or contributed far beyond their expected duties and responsibilities, and are well-respected by their peers. They spend a great deal of time interviewing nominators, department heads, supervisors, and co-workers to gather information and verify all facts — while still performing their regular job duties.

They then prepare and give a presentation on their researched nominations to the full committee, which then votes on whether or not the nomination meets the category criteria. If

so, a follow-up presentation is given, with the committee giving a final vote.

To provide continuity, four committee members from the prior year are selected as group coordinators, who serve as immediate points of contact for the committee members.

The chairperson monitors the nomination and presentation processes to ensure a fair and thorough research for all nominations, and also plans the logistics of the award festivities. And, the corporate advisors to the committee bring a level of history and continuity to the process.

Those who have participated in this program find it valuable and rewarding, and a process well worth the time and investment. Amtrak's employees are its most valuable resource — we salute you all and congratulate this year's recipients of Amtrak's President's Service & Safety Awards.

1st Row, L to R: L. Harris; K. Scott; E. Magee; L. Persley; S. White; L. Richards; L. Beers. 2nd Row, L to R: E. Nora; D. Stencil; J. Mruk; M. Bennett; D. Polk; J. Thompson-Fredrick; K. Belger; K. Lake B. Lewis

Lead Service Attendant, Customer Services, Washington, D.C.

When we talk about exceptional customer service, impeccable character, neatness, and a focus on putting safety first, we're describing Lake B. Lewis, lead service attendant on the Northeast Corridor.

Described as poetry in motion, Lake's positive work ethic and way with people improves the service quality for our guests. Every soda is served with a lemon or lime and pre-packaged food is presented with flair.

No one can predict the moods of the traveling public. No matter. Lake is a seasoned professional who has a calm, gentle way of appeasing our guests when problems occur. If you're having a bad day, he picks you up, if you're having a good day, he celebrates with you.

Revenue is increased because of Lake's finesse and ability to sell, whether it's in the Café Car or on a special move. Special moves for dignitaries and politicians have generated upwards of \$100,000 annually for Amtrak, and they require confidentiality. Because of his integrity and outstanding service, Lake is one of only a handful of people entrusted with the responsibility.

Lake Lewis has been described as the best LSA out there — the epitome of a service attendant. He has sustained excellence for decades at Amtrak. One of his colleagues said that if he had to pick one LSA to travel with his mother, it's Lake B. Lewis.

John Mackey

Reservation Sales Agent, Reservation Sales Call Center, Philadelphia, PA

Over the past decade Amtrak passengers whose calls are routed through the Mid-Atlantic Reservation Sales Call Center in Philadelphia have benefited from John Mackey's diligent customer service efforts. His broad knowledge of Amtrak routes, regulations and fares turn simple telephone inquiries into revenue producing sales.

From June 1990 to March 1999, John miraculously maintained an on-phone productivity rate of 100 percent, YES, 100 percent during those nine years. He is the recipient of numerous awards and complimentary letters from customers near and far.

John's peers and supervisors say his energy, ability to motivate and enthusiasm are tireless and contagious.

When Amtrak enacted the Satisfaction Guarantee program, John began working in the newly formed Customer Relations Department. He was proactive in resolving all customer related issues using Amtrak service recovery techniques. He was soon promoted because of his proven record of calming the most aggravated individuals, his caring attitude and his willingness to help solve problems. His attitude is that any customer or employee problem should be handled with care, courtesy and promptness. His performance was again dubbed exemplary.

John Mackey, thank you for being a model of sustained excellence.

John Marenholz

Equipment Operator, Engineering Department, New Haven, CT

John Marenholz has been an equipment operator since 1976. The professionalism and attention to detail he shows while operating equipment is second to none. John has the ability to operate over 50 pieces of equipment with the highest level of proficiency.

Co-worker Gary Noto says, "John is one of the safest and conscientious operators I have ever had the pleasure of working with in my 27 years at Amtrak ..." Equipment Manager Gary Stafford agrees saying, "In 25 years, I can't remember one time when the equipment broke down from John not using it properly." That's money saved because there's no down time, no equipment repairs.

Since John has seniority, he could have his pick of prime positions and shifts, but over and over again he has bid positions that are the most demanding or difficult because he knows he is needed. He is the type of individual that, during idle times when the machine or machines he is operating is not needed, he is out on the tracks with his gloves on lending a hand to the other guys.

Dave Cerrito worked side by side with John as his foreman and summed up why John is deserving of an award for sustained excellence when he said, "John Marenholz is the best equipment operator on the railroad."

Eugene Montgomery

Sleeping Car Attendant, Empire Builder Seattle, WA

Mountains of letters in Eugene Montgomery's file attest to the quality of service that he consistently provides his customers. When passengers board Eugene's *Empire Builder* sleeper, a professional in a clean crisp uniform with a warm friendly face greets them. He is conscientious, accommodating and courteous — a class act.

He has set a high standard for customer service, so it's not unusual for Eugene to go the extra mile for the comfort of his passengers. By being attentive to them, he can turn an adverse situation into a pleasurable experience. He talks with managers to offer solutions to problems so they won't be repeated. Because of his focus on service, he is proficient at upgrading coach passengers to sleeping accommodations, which increases revenue.

For the community, Eugene serves as a volunteer school-teacher. He has also started a program for inner-city children, which rewards students for achieving. Winners receive a free Amtrak trip between Seattle and Portland. Initially he covered the expenses but Amtrak saw the program's merit and now helps with the costs.

The smile you see today on Eugene's face is the same smile that has welcomed Amtrak passengers since his first day in 1975 on the Floridian. With his admirable character, pleasant personality and sustained excellence, Eugene shines as an example for all sleeping car attendants.

H. Richard Moulder

Ticket Agent, Customer Services, Philadelphia, PA

Dick has been with Amtrak since 1985 and has more than 60 letters of commendation in his personnel file. The letters are from passengers and supervisors alike. And, they all attest to his dedication, his perseverance and his professionalism. His outstanding performance is a result of his high

standards and personal values, and his many kindnesses have been noted repeatedly.

One passenger wrote of the restoration of her faith in Amtrak when Dick assisted her after she lost her ticket to New York. Another passenger wrote, "Our train to Philadelphia from Washington was late, so the D.C. station staff substituted MARCtrain equipment and got us to Philadelphia on time, plus informed us that we were due a rebate. In Philadelphia, I almost did not apply for the rebate, assuming that it would require endless paperwork. Mr. Moulder opened up a special window and handled all the rebates for all passengers in an expeditious and courteous manner."

Letters like the above fill his personnel file. His customer service has brought recognition to Amtrak, and he has been rewarded the Bronze Star on several occasions. Dick has also been recognized for his perfect attendance and his on-time performance. Dick Moulder truly carries the spirit of what sustained excellence should be.

Maureen Powers

Criminal Investigator, Amtrak Police Department, Philadelphia, PA

Since joining the Amtrak Police Department in 1994, Maureen Powers held a number of positions to include patrol, bicycle unit, anti-graffiti unit and criminal investigator. Her list of accomplishments over the past eight years is long, and her service to the community is worthy of praise.

In 2001, Maureen handled 97 investigations resulting in 22 arrests, and handled 50 percent more credit card fraud cases than the average officer.

Investigating a rash of car thefts at 30th Street Station, Maureen discovered that the suspects were posing as rental car employees. After recovering four stolen cars, she created a partnership with the car agencies and a crime prevention plan for parking lot and rental company employees.

Immediately following the September 11, 2001, tragedy, Maureen was instrumental in addressing security improvements to include the procurement and placement of physical barriers at various Amtrak stations and increased security measures within station interiors.

From 1999 to 2000, Maureen and the Anti-Graffiti and Illegal Dumping Unit arrested 163 graffiti bandits. She created a database that helped with vandal identification, and Amtrak was awarded almost \$20,000 dollars in restitution.

Maureen's sustained excellence has been recognized by numerous awards, including 32 letters of commendation, the Department's Exceptional Achievement Award, and Customer Service Award, 2001 Top Cop Award, and a Citation of Merit from the City of Newark, Delaware. Investigator Powers is also the 2001 recipient of the Amtrak Police Department's highest honor, Officer of the Year.

George Reutter

Sergeant, Amtrak Police Department, Philadelphia, PA

On the strength of his record of getting the job done, Sergeant George Reutter was given the charge to improve the visual quality of the Northeast Corridor in preparation for the launch of Acela Express service in 1999. George in turn selected two officers and formed the Anti-Graffiti and Illegal Dumping Unit.

Through various investigative methods, working with local police departments, schools and community groups, and infiltrating the Internet sites of known vandals called "taggers," his group handled over 506 cases, resulting in 251 arrests and over \$20,000 in restitution to Amtrak. In addition, George has worked with the B&B Department to have graffiti removed, and fences repaired and installed along the Corridor.

In just a few years, George has become an expert in his field, and has gone on to instruct a gang identification seminar for the Mid-Atlantic Great Lakes Law Enforcement Network, which encompasses over 300 officers.

For his sustained excellence, George has received numerous awards including Officer of the Month, the Exceptional Achievement Award, customer awards, 22 letters of commendation from internal and external partners, and a Life Saving Medal. He has also received a Citation of Merit from the City of Newark, and an Honorable Mention from the National Association of Police Officers as a Top Cop in Pennsylvania.

D. Steve Tomlinson

Supervisor, Engineering Department, Philadelphia, PA

As an ARASA safety liaison who works on the operating side of engineering, D. Steve Tomlinson could be confronted with natural disasters, derailments, and equipment failures on any given day. To be prepared even for the unknown, Steve has unified his work groups into extended families

that keep safety a top priority.

Steve's leadership qualities have developed from experience on the job and a decorated tour in the military. Since 1977, Amtrak has benefited from Steve's talents and efforts, and he has had a positive affect on the communities where he has been assigned. As a track supervisor for the Atlantic City project during the eighties, he helped to deliver the three-year, \$70 million dollar project on time and on budget. The people of Atlantic City reap the benefit of his dedicated service every day.

His coworkers say that Steve's objective to improve productivity is evident in the way he teaches others. He is known for offering solutions, not just presenting problems. He focuses on individuals and helping employees improve so that they can do their jobs better.

Steve is described as the man who gives 110 percent to every task he is presented, every time, and he has sustained this level of excellence for the past 25 years.

VALOR

William J. Taylor

Criminal Investigator, Amtrak Police Department, New York, NY

On Sept. 11, 2001, William J. Taylor was directed to respond to the World Trade Center after the first tower had been attacked. As he arrived on the scene, he witnessed the plane crash into the second tower. He radioed into the FBI command center what he had seen and requested that air traffic be shut down.

He then ran down to the entrance of 5 World Trade Center, where he moved pieces of the plane's fuselage aside so that firemen and New York police could enter unobstructed. For the next 45 minutes, as debris fell around them, William and another FBI agent helped people frantically trying to flee from the collapsing building.

Investigator Taylor has been a member of the Amtrak Police Department since 1980. In 1998 he was assigned to the FBI Joint Terrorist Task Force. As a member of the Task Force, he is responsible for tracking, investigating and responding to terrorist actions. His life was at risk from the moment he arrived at the scene of the World Trade Centers but he worked to save lives. His actions brought honor on the Amtrak Police Department and to the corporation. For this, we recognize William T. Taylor with the President's Award for Valor.

Amtrak President Gunn visits Lorton station

Auto Train Service Manager Jim Mead receives congratulations from Amtrak President David Gunn for his five years of service.

With a calendar that’s been full since May 15 with congressional hearings, budget reviews and press interviews, Amtrak President David Gunn has had precious little time to get out to see his railroad and visit with employees.

However, on a rare opportunity, he did just that on August 16. An early visit to the Lorton *Auto Train* facility provided the chance for him to meet and visit with about 60 *Auto Train* employees. Scheduling that morning proved to be bittersweet. Unfortunately, the train arrived late that morning. However, the

result was that more employees had the opportunity to meet Mr. Gunn.

In an informal meeting, Gunn met and spoke with employees personally, and provided them with information about major issues facing Amtrak.

A special day for Service Manager **Jim Mead**, August 16 marked his fifth anniversary with Amtrak. Recognizing this event, Gunn and former Chief Operating Officer Stan Bagley remarked on his achievement and presented Mead with his five-year pin and “Magic Box.”

Although his time was limited, Gunn’s visit was appreciated. **Sharon Mahoney**, *Auto Train* general manager, said, “we really appreciated Mr. Gunn taking the time to visit our Lorton facility. The employees take great pride in their work and reputation of the *Auto Train* service, and we were eager to show it off.”

As Gunn’s schedule gets settled, he’ll be visiting more sites and have the opportunity to meet with more employees.

Trails & Rails program — continued success

“With an all-volunteer program, this is a great perk for Amtrak passengers and easy on Amtrak’s tight pocketbook.”

Dan Engstrom, Trails & Rails-Lewis and Clark coordinator

With the successful Trails & Rails program, the National Park Service and Amtrak have teamed up to bring Amtrak riders interpretive presentations onboard the train. Very popular on many other Amtrak routes, the Trails & Rails program came to the *Empire Builder* route in 2001. Much of the route runs through North Dakota, Montana and Washington along the historic Lewis and Clark trail.

National Park Service volunteers on board the *Empire Builder* make presentations with interesting facts about the train’s route, answer questions and display reproductions of artifacts, all with the purpose of enlightening and entertaining travelers along what’s referred to in Montana and North Dakota as the “High Line.” The focus of the presentations is on the Lewis and Clark expedition, but volunteers also provide information on the fur trade, Northern Plains tribes, the military in the West, home-

steading and history of the building of the Great Northern Railway.

“With an all-volunteer program, this is a great perk for Amtrak passengers and easy on Amtrak’s tight pocketbook. We are receiving a great deal of praise for the program at minimal cost,” said **Dan Engstrom**, *Empire Builder* product line supervisor and Trails & Rails-Lewis and Clark coordinator.

In addition to the interpretive guides script, a special 28-minute condensed version of the Ken Burns production “Lewis & Clark — Corps of Discovery” is aired in the Sightseer Lounge. Certain departure dates have also hosted special Native American storytellers and cowboy poets and musicians to add to the fun and excitement of the journey on the *Empire Builder*.

“Over 350,000 passengers have learned something of our nation’s cultural and natural history as a result

of the educational partnership between the National Park Service and Amtrak,” said Jim Miculka, program director and liaison with Amtrak.

The Trails & Rails program allows the National Park Service to reach out to a diverse audience beyond our park boundaries, and provide educational opportunities to people who may not traditionally visit our National Parks. We look forward to working with Amtrak to develop additional programs and routes, particularly as we enter into the events commemorating the bicentennial of the Lewis & Clark expedition.”

The Trails & Rails program for 2002 began this summer, operating between Seattle, Washington, and Shelby under the direction of the Klondike NHS, Seattle, Washington, and between Minot and Williston, North Dakota, to Shelby, Montana, under the Ft. Union and Knife River NHS. The summer program ended on Sept. 7.

Environmental training course now available on Amtrak’s Intranet

As part of our agreement with the U.S. EPA, all Amtrak employees must be trained in Environmental Awareness.

Amtrak’s Environmental Department has developed a series of Environmental Awareness Training programs that identify and explain the major environmental issues regarding Amtrak’s operations and activities. And, as part of our agreement with the U.S. EPA, all Amtrak employees must be trained in Environmental Awareness.

There are four types of awareness training, which include: Environmental Awareness for Engineering employees; Environmental Awareness for Mechanical employees; Environmental Awareness for Supervisors of Engineering and Mechanical employees; and General Environmental Awareness.

The Engineering, Mechanical and Supervisor Training Programs are targeted for employees who are

directly involved in the maintenance or servicing of rail cars, locomotives, track, track structures, bridges, substations, buildings, and signal systems, etc.

The General Environmental Awareness course is intended for all other Amtrak employees, and this includes train operations personnel (on-board, T&E, station, reservations), and office personnel (both management and craft) who support Amtrak functions in an indirect capacity (financial, secretarial, administrative, etc.)

To accommodate the varied needs and schedules of our employees, the training is offered in both in the classroom and on the Amtrak Intranet. It can be found under How We Work / Operations / Environmental Home. The course takes at least one hour to complete.

The instructor-led training course is designed for groups of 10 or more in a classroom setting, and is available by contacting your local Field Environmental Specialist or Environmental Manager to schedule classes.

As a part of the training, you will be asked to take a “knowledge check” about the information you have read. This is not a test. And, you are not required to submit your results for scoring. However, you are requested to continue reviewing the information until you can answer at least 20 of the 25 questions correctly. Upon completion of the training, Amtrak’s training records system, SAP, will be automatically updated to show that you have completed this training requirement.

A spotlight on
Mr. George Burns

Despite his youthful appearance, **George Burns** began his railroad career in 1963, nearly forty years ago, as a food specialist with the Seaboard Coast Line railroad. He became a chef with Seaboard in 1971, and “hired out” with Amtrak in March 1974.

During his tenure, Burns has met and served many notable people. Of those, one of the most famous was U.S. Senator Howard H. Baker, Jr. In a letter to Burns, Baker stated, “You were very kind to take your time to see that we were pleased with our food, and we were grateful for the fine service and cuisine.”

Many of Burns’ co-workers and supervisors comment about his quiet demeanor. Supervisor **K. D. McKinney** said, “No matter what you say to him, he keeps a smile on his face.”

Burns retired on July 14, 2002. George Burns, “Here’s to you!” And, enjoy your retirement — you will truly be missed.

ADA Sensitivity Training pilot project

Forty-seven thruway bus drivers based in Orlando and St. Petersburg, FL, participated in a unique ADA Sensitivity

Amtrak Thruway bus drivers from Martz/First Class, Inc. participate in an ADA training project.

Training pilot project on Oct. 3 & 4. The project was unique because it was developed and conducted by people with disabilities. Martz/First Class, Inc. contractor for Amtrak’s connecting thruway service in Southwest Florida agreed to have their employees targeted for the ADA training project.

The training event included a role-playing segment where the drivers teamed up in pairs.

One role-played the customer with a disability, and the other provided the necessary boarding assistance. The drivers were given the option of

being in a wheel chair, wearing vision simulator goggles or ear covers. After being taken off the bus, they reversed roles and boarded again. Several drivers chose to experience more than one disability.

“What a ride!” said one driver as he was lowered from the bus while riding the vehicle’s lift. Bob Dasch, Martz/First Class Safety Training manager, was kept busy demonstrating the safety equipment on and off the vehicle.

After the role-playing exercise, the drivers participated in an interactive discussion with their trainers, managers and program developers. This was their opportunity to ask questions and make comments about their feelings and experiences. Many of the participants commented on the free dialogue between themselves and the presenters. “We could ask any questions we had without worrying how we asked them,” commented several drivers. “This training was very important and will make a difference in the way drivers view their passengers,” Stanley Johnson, general manager of Martz/First Class St. Petersburg operations, said after the two days of training.

RAILWAY ROUNDUP

Mayors continue to play key advocacy role for Amtrak

New leaders were appointed to the Amtrak Mayor's Advisory Council (MAC) at the annual meeting of the U.S. Conference of Mayors on June 20. The Amtrak Mayor's Advisory Council was created in 1999 to develop stronger relationships between Amtrak and the nation's mayors.

Mayor Jack Ellis of Macon, GA, and Mayor Michael Guido of Dearborn, MI, were appointed co-chairs of the MAC joining Mayor Ken Barr of Fort Worth, TX, and Joe Griffo of Rome, NY.

Cheryle Jackson, Mary Jennings and Ray Lang as well as **Quentin Kelly** from Government Affairs were on hand to inform the mayors of the challenges

facing Amtrak and to ask for their support. The mayors voiced support for the current national system; for \$1.2 billion for Amtrak in FY03; and for securing \$55 million in a supplemental appropriation for repairing wreck-damaged equipment currently stored at Amtrak's maintenance facilities.

At the end of the meeting, Mayor Patrick Hays of North Little Rock, AR, made a motion for the MAC to support Amtrak President David Gunn in his advocacy for maintaining a national system. The motion was adopted unanimously.

Amtrak MARSCC receives grant from Commonwealth of Pennsylvania

Amtrak's Mid-Atlantic Reservation Sales Call Center has received

\$13,900.00 from the Pennsylvania Department of Community and Economic Development under the Guaranteed Free Training Program. **Barry Schaffer**, team leader of the Training Department at the MARSCC, applied for and received the grant with the assistance of Bucks County Community College.

The program is designed to assist companies either based in or having a significant presence within the Commonwealth. It offers training to permanent, full-time employees in

Jon-Roger Maranda, (left) director of the MARSCC accepts \$13,900.00 WEDnetPA check from **Barry Schaffer**, training team leader.

basic skills related to manufacturing or technology-based businesses, including biotech and environmental-tech companies. Employees must be frontline or first-level management, and be a Pennsylvania resident to qualify for the program.

Information technology training includes the teaching of a variety of high-tech skills to succeed in the workplace. Some of the training elements include applied manufacturing technology, e-business/commerce, Web site design and development, software engineering and computer programming. MARSCC funds have been earmarked for the training of personnel involved with customer assistance related to the Amtrak Web site, Customer Relations training and maintenance of the Tivoli customer database, as well as Excel training at Bucks County Community College.

WEDnetPA, the Workforce and Economic Development Network of Pennsylvania, is a partnership of 35 community colleges universities and technical education providers throughout the Commonwealth, formed to implement the Guaranteed Free Training Program and other education and training initiatives.

Under direction of APD, Explorers take top honors

Amtrak's Law Enforcement Explorers took first place in the hostage negotiations portion of the Law Enforcement Post competition on June 27.

Law Enforcement Exploring is a work-site based program for young people ages 14-20 who have an interest in careers in law enforcement. Law Enforcement Explorer posts (e.g. search and arrest procedures, crime scene and accident investigation, vice and narcotics) help youth to gain insight into a variety of programs that offer hands-on career activities.

Amtrak's Law Enforcement Post 3000 was formed in 2001, after Chief **John O'Connor** expressed an interest in the program. Officer **Harry Barnes** began the process to form an Amtrak-sponsored post and began holding weekly meetings at Penn Station in New York.

Explorer Post 3000 took part in the summer Law Enforcement Post competition, sponsored by Learning for Life, New York City, and hosted by the NYPD. The areas in which the Explorers could compete were felony car stop, white-collar crime, bomb call response, hostage negotiations, arrest/search/seizure and close order drill. Hundreds of Explorers from all over New York City competed, representing posts from the NYPD, NYC Transit, Customs, DEA, Corrections, FBI and Amtrak.

Post advisor Officer Harry Barnes and the Explorers

From left, front row: **Sanjay Lall, Edmon Penn (with trophy), Godfreyda Penn.** Back row: **Officer John Feehan, Andrew Vishnudot, Bovendra Lall, Tony Toolsie, Isadora Rocourt, Angelica Turner, Izusa O'Garro, Officer Thomas Ikey.**

spent many hours practicing, learning and preparing for each of the topics. On competition day, they received assignments for felony car stop and hostage negotiations. Although they did very well in the car stop competition, they were outstanding in hostage negotiations, taking first place. They were not only able to negotiate the release of the hostage, but also the surrender of the hostage taker without incident.

"I am so proud of these kids," Officer Barnes said. "They prepared by doing classroom study and high adventure training. They work hard and it pays off."

Congratulations to Officer Barnes and all the members of Post 3000 for their hard work and dedication.

ADA Sensitivity Training

continued from page 13
The ADA Sensitivity Training pilot project was developed by the Disability Senior Task Force of the Amtrak

The ADA training project was unique because it was developed and conducted by people with disabilities.

Customer Advisory Committee (ACAC). Over the past several years, passengers with disabilities and senior travelers have been recognized as a segment of the traveling public having some special needs that Amtrak could meet. It became apparent to the task force that a unique ADA pilot project, which incorporated people with disabilities and seniors in the

development and actual training of front line employees, could yield some results that would be useful to Amtrak.

Along with the involvement of Martz/First Class bus drivers, the project required community-based disability organizations willing to participate including Sarasota Suncoast Center for Independent Living and the Tampa Bay Self Reliance Center for Independent Living. The Suncoast Center, executive director, Daniella Szado was instrumental in securing the endorsement of the Florida Association of Centers for Independent Living for this project at their meeting in Orlando.

This was an all-volunteer project of the ACAC, which is composed of 25 citizens from all over the country. In November 2000, a special task force was formed to look at specific issues of people with disabilities and seniors and to make recommendations to Amtrak for service improvements.

Amtrak, Metrolink and Caltrans launch program to make travel easier

Amtrak, *Metrolink* and Caltrans have launched a new “Rail 2 Rail” program that gives Southern Californians more train travel options.

Under this program, *Metrolink* monthly pass holders who use the Orange County or Ventura County lines will be able to ride any *Pacific Surfliner* train or Amtrak bus within the trip limits of their pass for no additional charge. Similarly, *Pacific Surfliner* passengers will be able to ride any *Metrolink* train within the limits of their ticket at no additional charge.

In addition, where weekend service wasn’t previously available to *Metrolink* riders, monthly pass holders on the Orange and Ventura County lines will be able to ride *Pacific Surfliner* trains seven-days-a week, within the limits of their pass.

As an extra benefit, Southwest Airlines, the premier carrier at Burbank Airport, will offer its passengers a free round-trip ride on either Amtrak or *Metrolink* between

Burbank Airport and Union Station for free during the first 90 days of the program.

“Rail 2 Rail is about convenience. It’s about giving passengers the option to choose the train that works best with their schedule,” said Caltrans Director Jeff Morales. “But this is only the beginning. *Metrolink*, Amtrak, and Caltrans are working together to coordinate their schedules, their fares, and their ticketing to make the entire train experience easy, economical, and enjoyable.”

Metrolink is Southern California’s regional commuter rail service and is in its 10th year of operations. The California Department of Transportation (Caltrans) partners with Amtrak to provide service on three intercity rail corridors in California.

Passengers save up to 35 percent with MasterCard fall promotion

Amtrak and MasterCard have teamed up to offer travelers super savings. Passengers traveling this fall will receive a 30-percent discount off the best available rail fare when using

their MasterCard. Tickets must be purchased from Oct. 15 through Oct. 31, for travel Oct. 18, 2002 through Feb. 28, 2003. MasterCard holders get even greater savings by logging on to www.amtrak.com. By making online reservations, travelers receive an additional 5 percent discount — for a total savings of 35 percent.

Watch for Amtrak’s fall promotion ads in October issues of *USA Today*. Amtrak’s MasterCard promotion is a terrific way for passengers to see America and save.

Amtrak takes fans to Chicago Bears Games

So, what do hundreds of football fans do when they can’t see their beloved Chicago Bears in downtown Chicago? They take to the rails, of course.

The home of the Bears is Soldier Field along Chicago’s lakefront. However, during the 2002 season, the stadium is under construction, and the Bears are playing at the University of Illinois’ Memorial Stadium in Champaign, IL.

Stepping in to assist with transportation from Chicagoland to Champaign is Amtrak. Working with two distinct

charter groups, Amtrak developed service plans that met the needs of fans and railroad partner, Canadian National as well.

On most game days this fall, two trains operate from Chicago Union Station to Champaign. The trains themselves could not be any different. The Champagne Train is composed of private railroad cars and is popular with groups, while the CHAMPtrain is geared for the individual fan.

Operation of these trains has really been a team effort, with input and support received from many departments within Amtrak. The work force at the 16th St. diesel shop even assigned locomotives carrying numbers that correspond to the numbers worn by Bear greats.

Bill O’Dea, manager of Terminal Services, with his encyclopedic knowledge of railroading, has personally monitored operating performance.

The fortunes of the Bears aside, the successful operation of these trains have only reinforced the notion that Amtrak is indeed a viable alternative in intercity transportation.

Women’s Health Coverage

Your medical benefits provide coverage for mastectomy-related services including reconstruction and surgery to achieve symmetry between the breasts, prostheses, and complications resulting from mastectomy (including lymphedema). This care is covered in

the same manner as other medical care. In other words, deductibles, co-payments, and co-insurance may apply. Please see your 2003 benefits enrollment workbook for additional information about your benefits coverage, or call the Amtrak Benefits Service Center at 1-800-481-4887.

New Medical Claims Approval Procedures for 2003

Due to a new Department of Labor law, the amount of time a benefits administrator (such as UnitedHealthcare, Aetna, etc.) may take to approve or deny health care claims has been

shortened. You will receive detailed information about the new claims approval procedures with your benefits confirmation statement.

LETTERS

I am writing to inform you of some extraordinary efforts taken by a 10-year-old boy in Littleton, CO, to save the *California Zephyr*. Jack Wheeler, now a fifth grader at Lois Lenski Elementary School, is passionate about trains. Jack read in the Denver Post last spring that the *California Zephyr* may be facing insurmountable financial difficulty. Jack, on his own, wrote a letter to his principal of his school and received permission to set up a “Save the *Zehpyr*” table at school. He created posters and flyers asking the children to have their parents contact the legislature (with a citation to the appropriate legislative web site). Jack also has distributed these flyers at grocery stores, country clubs, other schools, as well as to friends and family.

Additionally, Jack has written letters to President Bush, Senators Wayne

Allard and Ben Nighthorse Campbell imploring them to help your train. Jack’s efforts cannot fairly be summarized in this brief letter, however, I believe his efforts should be known to you. Jack has expended countless hours of energy (his letters include historical information and factual research) and I would love to share these letters/flyers with your company.

I wanted you to know that in the midst of your apparent struggle, there is a little boy in the world fighting the best he can to be heard. He is doing it out of the passion he has for trains and the love he has for Amtrak.

Please contact me if you would like more information on the grassroots campaign launched by Jack.

Sincerely and respectfully yours,

K. Wheeler

New calendar

Amtrak’s 2003 wall calendar features a striking visual of the Amtrak *Adirondack* passing by the Bouquet River in New York. **Jane Mruk**, director of Amtrak’s Design & Identity Management, created the dynamic design.

This year there will be fewer calendars printed as part of a cost-savings initiative. With that in mind, there will not be as many calendars available to the departments. However, the calendars are available to Amtrak employees, retirees and their families and friends, at moderate prices through Amtrak’s website, www.amtrak.com/store. The more calendars you order, the less each costs.

Prices

1	\$7
2 –5	\$5 each
6-10	\$4 each
11-25	\$3 each
26+	\$2.50 each

For additional details visit www.amtrak.com/store or send your orders and inquiries to: Amtrak Marketing Distribution, P.O. Box 7717, Itasca, IL, 60143-

7717. Or, call 1-800-400-1229. Checks, money orders and credit cards are welcomed; taxes, handling and shipping are included. Make checks payable to: Amtrak Calendar. For credit card orders, please include complete number, expiration date and your name as it appears on the card. Visa, MasterCard, Discover/Novus and American Express will be accepted.

Amtrak collector calendars are available for the following years: 1980, 1981, 1983-1986, 1988-1991, 1993-2002. Please call 1-800-400-1229 for more information.

Amtrak Technologies announces updates

Virtual Private Network (VPN), Remote Intranet Access Link (RAIL) upgrade

On Oct. 15, Amtrak Technologies (AT) made a major upgrade to the software, Remote Access Intranet Link (RAIL), that provides access to the Amtrak Intranet for home and external users.

The new improvements have technological benefits for end-users and AT. The upgrade also enables authorized users to have home access to other applications, such as ARROW, the SAP database, and more.

Since its introduction last year, over 800 employees have downloaded RAIL onto their home PCs.

With the new upgrade, access now requires a Customer Service Request (CSR) submitted using eTrax. The CSR should include the applications that you need to access. Once you are approved, you will be forwarded instructions. Then, you will be allowed to download the new software and register to use RAIL. Once you have registered, your account will be activated within 24 business hours.

Problems should be reported to the Amtrak HELPDESK at 1-800-772-HELP. General questions can be emailed to VPNM@amtrak.com.

Intranet access update

To make the Amtrak corporate Intranet easier to use, and easier for Amtrak Technologies to support, the access address has been changed.

New name: <http://intranet.nrpc>

For example, to access news on the Intranet go to <http://intranet.nrpc/news>. To find employee information go to <http://intranet.nrpc/employees>.

One of the big advantages to the new name, in addition to being shorter and easier to remember, is that the new name will be permanent. It will stay the same even when the underlying system hardware is changed. This way Intranet addresses can now be put into documents and policies. Please be sure to update your bookmarks and any documentation you give to other people. The old addresses (<http://wasint01/> and <http://10.51.8.41/>) will eventually stop working.

Groundbreaking ceremony held for new Oakland maintenance facility

Amtrak and the State of California broke ground in November for a new, \$65-million state-of-the-art maintenance facility in Oakland, California. The new maintenance facility, replaces the current 1916-era facility and will provide superior working conditions and enable Amtrak employees to better maintain, repair, service and inspect trains, improving efficiency and allowing for the continued growth of passenger rail service in California.

“This new maintenance facility will bring more efficient service to passenger rail travelers and improve conditions for our employees,” said Amtrak President David Gunn. “Investments like this symbolize Amtrak’s commitment to the future

Who do I work for?

Who do you work for?

With last summer's company-wide reorganization, the Strategic Business Units were abolished, the company was returned to a more traditional railroad operating structure and corporate functions were realigned as well. The goal of this streamlining effort has been to better increase authority and accountability for decision-making on the operations side of the business.

But who do you work for? And where exactly do you fit in on the org chart? Everyone should be able to name his or her immediate supervisor. But after that, it may get a little confusing, especially with all the recent changes.

Reorganizing a company the size of Amtrak (with 22,000 employees) does not happen overnight. It takes time. While changes to our operations must be transparent to passengers, our organizational structure needs to be visible — and understandable — to all employees. So what's the bottom line on the reorganized Amtrak? First, there are 10 major departments reporting up to President

Gunn. These departments and their department heads are:

Business Diversity & Strategic Initiatives
Vice President Gerri Mason Hall

Finance
Chief Financial Officer Deno Bokas

Government Affairs
Vice President Joe McHugh

Human Resources
Vice President Lorraine Green

Labor Relations
Vice President Joe Bress

Law
General Counsel & Corporate Secretary Alicia Serfaty

Marketing & Sales
Vice President Barbara Richardson

Operations
Senior Vice President of Operations Bill Crosbie

Planning & Business Development
Vice President Gil Mallery

Procurement & Materials Management
Vice President Michael Rienzi

Operations keeps the trains running

With about 20,000 employees, the Operations Department, led by recently hired Senior Vice President Bill Crosbie, is the single largest department in the company. Chances are that if you work for Amtrak, you work in Operations.

Reporting directly to Crosbie are four major system line departments and two support departments:

- Operations, led by Vice President Ed Walker, is responsible for train movement, station operations, terminal services, mail contracts and on-board services. About 15,000 employees in seven operating divisions and four support offices report directly to Walker. The divisions and their general superintendents are New England (**Mike DeCataldo**), New York (**Walter Ernst**), Mid-Atlantic (**Daryl Pesce**), Southern (**Joe Wall**), Central (**Don**)

TRAIN OF THOUGHT

David L. Gunn

By the time you read this, the calendar page will have turned to 2003. Some years are best behind us, and that can safely be said for '02. I don't have to rehash the details, but let's move forward.

Our focus this year is to stabilize the company, rebuild our plant and equipment, and live within the budget. So far, we've done a pretty good job of staying on budget. The revenues haven't been what we've expected, but on the other hand, we're doing a better job on the expense side.

As you know already, our \$3.4 billion budget assumes \$1.2 billion in federal support. Through Jan. 11, we will have gotten about \$300 million. I hope that Congress will appropriate the rest in January. I will let you know if it does. If it doesn't, you will certainly hear from me as well.

Now let me tell you where that money is going that is different than in previous years. First, we are putting more money into infrastructure and equipment repairs, like repairing and returning to service 26 wrecked or damaged cars at the Bear and Beech Grove shops. A number of workers have been called back to do this and make other improvements.

Second, over the next two years, we are going to ask the states to make up the difference (the operating loss) on our partnership services. This will take some time, but we can no longer afford to cover losses from our state-supported services.

A third major change is that while we'll keep moving mail, we are beginning to phase out most of our express service. The economics just don't support continuing this line of business in the manner we have, and it has degraded our passenger service.

Like I said, it will be a very lean year. Departmental budgets show it, and managers know it. However, we are making advances toward restoring stability, rebuilding our technical competency and reinforcing accountability. If we had another \$100 million, it would be used for more equipment repairs and reinvestment in our plant. But we don't, so we will simply have to make every dollar we have go as far as it can.

Now is the time to stay diligent. Our ability to show people we can responsibly manage this money and the basics of our business will have a lot to do with the future of our company.

What we really need is a reliable and predictable source of funding. Nobody likes this hand-to-mouth existence. We have worked hard to make our case in Washington, and we will continue these efforts with the new Congress. As I have said before, I'll keep you informed of any important developments.

As I continue to ride trains and visit different locations, your spirit, tenacity, and commitment to hard work continues to give me confidence. I appreciate your determination to make this thing work.

Who do you work for?

continued from page 1

- Saunders**), Pacific (**Joe Deely**) and Southwest (**Richard Phelps**). The support offices and their leaders are Mail and Express (**Lee Sargrad**), System Operations (**Jon Tainow**), Transportation (**Steve Strachan**) and Service Delivery (**Kevin Scott**).
- Mechanical, headed up by Chief Mechanical Officer Jonathan Klein, who joined the company in July, is responsible for all car and locomotive fleets, including all mechanical operations, such as the back shops and the high-speed rail contract.
 - Engineering is responsible for infrastructure maintenance, capital improvements and construction involving the fixed plant, track,

- signals, B&B, etc., and overall compliance of federal regulations and engineering standards. This department is led by Chief Engineer David Hughes, who joined the company in September.
- Security & Safety, led by Amtrak Police Chief Ron Frazier, includes the Amtrak Police Department and the protection they provide for the safety of the railroad, employees and all who travel with Amtrak, and as well as the establishment of a the coordinated safety and hazard management effort responsible to the needs of the entire corporation.
 - Environmental, headed up by Assistant Vice President **Roy Deitchman**, is responsible for

of the company.

continued from page 2

Mason Hall, is responsible for dispute resolution through investigation, mediation and resolution, and ensures that personnel policies and practices focus on valuing diversity. Externally, the department ensures full utilization of minority, women-owned, and disadvantaged businesses in the procurement process.

The Chief Financial Officer, Deno Bokas, keeps watch over corporate financial resources, including controllership and accounting transactions; the corporate treasury; and our financial planning and analysis functions. The CFO also has responsibility for Amtrak Technologies.

Government Affairs, led by Vice President Joe McHugh, provides Congress, the Administration, state and local elected officials, and other

stakeholders with Amtrak’s funding requests and documentation required to support federal appropriations. This includes sending an annual Legislative & Grant Request to Congress outlining Amtrak’s federal funding needs and legislative requests. The department also supports Congressional efforts to enact legislation to reauthorize funding for Amtrak.

In the Human Resources department, Vice President Lorraine Green manages Amtrak’s compensation and benefits administration; occupational health services, including drug and alcohol testing; career counseling; employment test administration; recruitment; staff planning; HR information systems; and regulatory compliance.

The Labor Relations Department is led by Vice President Joe Bress. The

departmental functions include the negotiation of national and local labor agreements; contract administration; claim and grievance administration; and, jointly with HR, the administration of the union medical plan.

The Law Department provides legal representation; litigation and advice; conducts EEO investigations; and agreement-covered employee discipline hearings. It also is responsible for the management of records and information, and real estate holdings. The department is led by General Counsel and Corporate Secretary Alicia Serfaty who is also responsible for relations with the Amtrak Board of Directors.

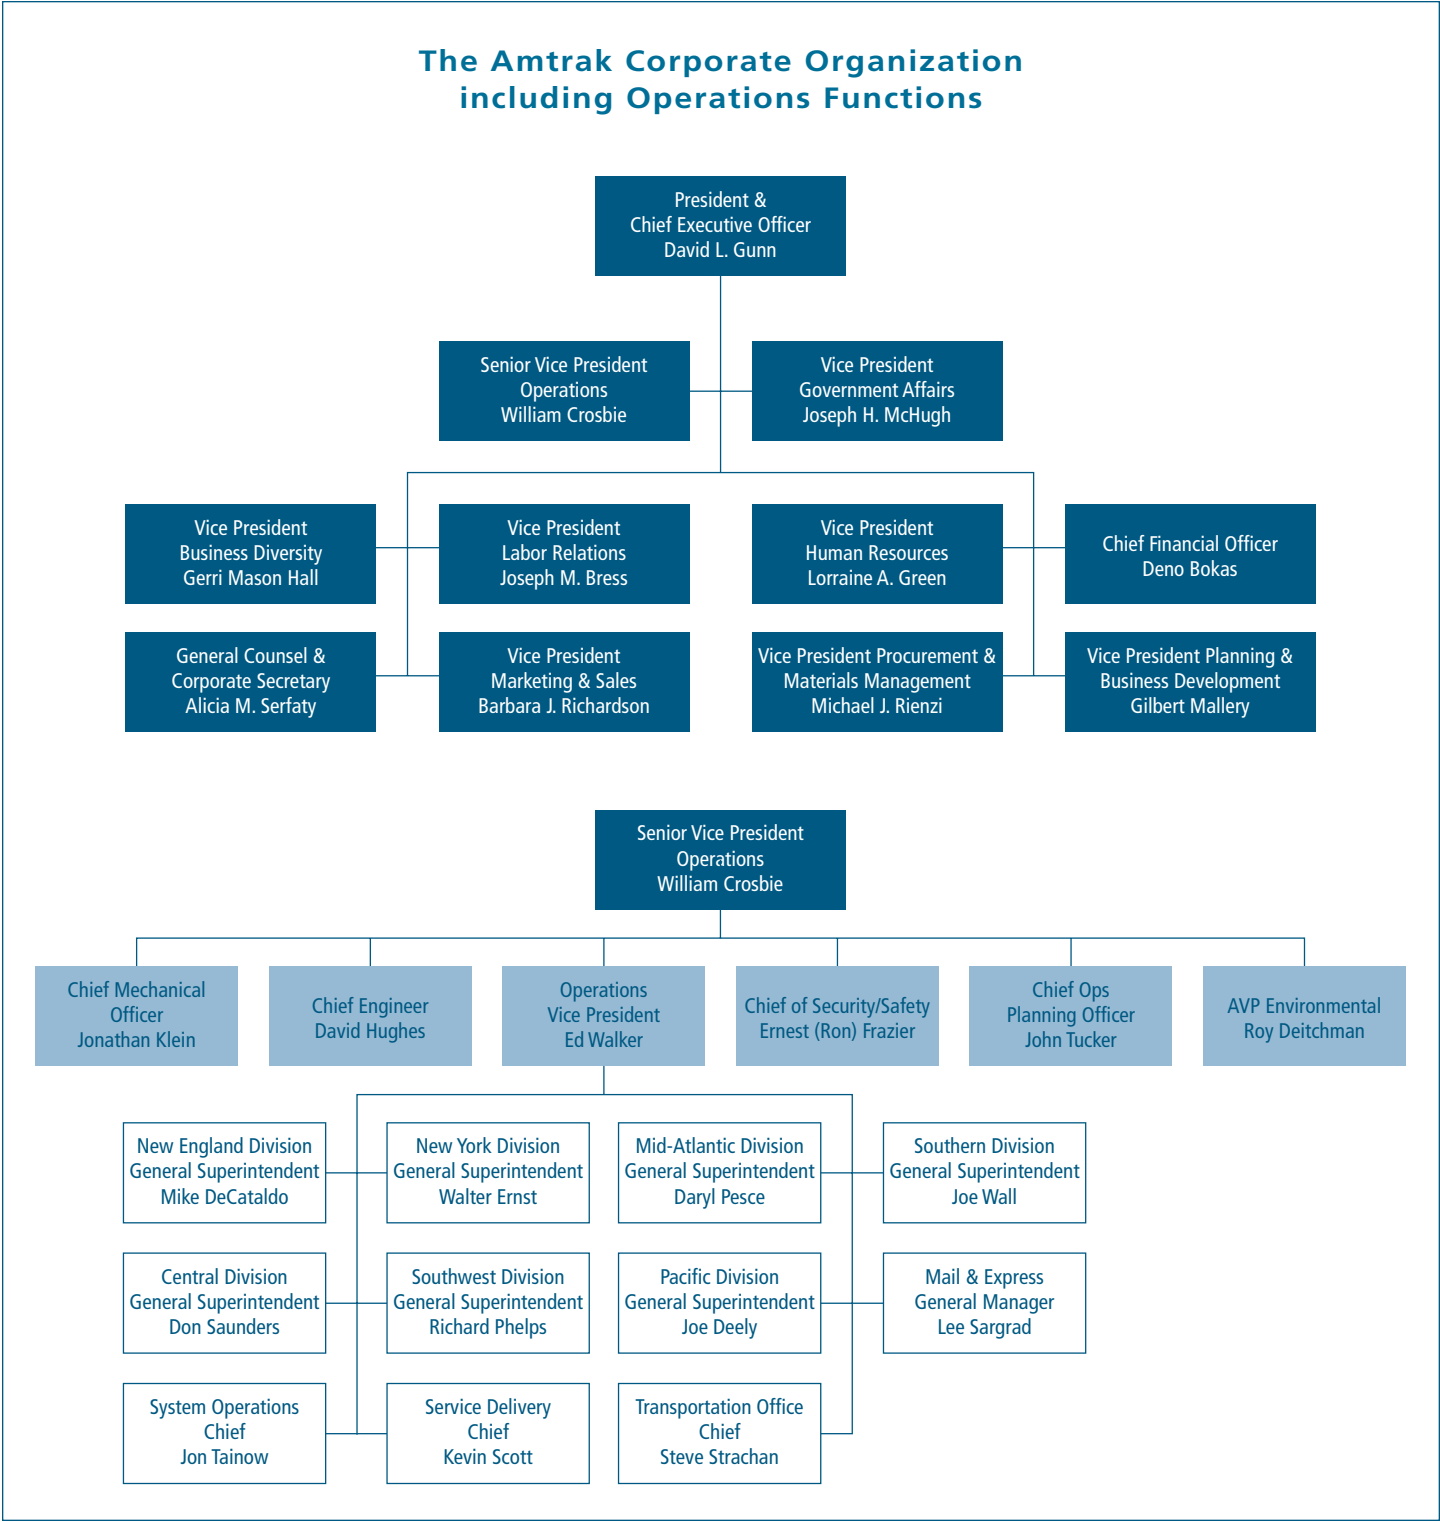

Marketing & Sales, headed by Vice President Barbara Richardson, is responsible for all internal and external communications, marketing and promotions, sales distribution, the call centers, market research and pricing, revenue management and charter services.

The key functions of Planning & Business Development, led by Vice President Gil Mallery, include state and commuter relationships, route profitability and performance measurement, freight railroad administration, strategic and capital planning, policy and performance, and business planning and development. The department is also focused on developing consistent policies, and standards and programs that are aimed at strengthening financial performance and fostering business partnerships.

Procurement & Materials Management, headed by Vice President Michael Rienzi, oversees procurement and vendor spending; the materials management for Amtrak’s warehouses; and is the administrator of the automotive vehicle fleet, asset sales, mail-rooms and WUS building services.

With a better understanding of how the corporation is structured, employees can see more clearly where and how their roles fit into the bigger picture.

However, in the end, while knowing whom you work for is important, knowing your work, doing it well, safely and efficiently is more important to your success, and the success of the company.

O N T H E R I G H T R A K

The Niles Gang: (L. to R.) **Jamie Turtle**, Manager **Frank Hall**, **Pat VantZelfde**, Foreman **Jim Roberts** (kneeling), **Bob Boyce**, **Howard Pursely**, **Dennis Hawrys**. Not pictured: Project Engineer **Gary Covell**, **Jack Smith**, **Dave Hagemann**, **Frank White** and **Ken Harbert**.

Employees give Niles Station a spectacular look

Amtrak's historic Niles, MI, rail passenger station is undergoing an exterior facelift. Under a federal- and state-funded grant of \$540,000, Amtrak employees are replacing the old top of rail asphalt platforms with new 600-foot, ADA-compliant, concrete platforms. In addition new rail, ties and drainage for the track system were installed, and the asphalt walkways and apron around the station will be replaced with brick pavers and planters. The brickwork and landscaping will be completed in the spring by local contractors.

The station has appeared in at least three movies: "Continental Divide"

with John Belushi, "Midnight Run" with Robert DeNiro, and "Only the Lonely" with John Candy. It was in the latter movie, "Only the Lonely," that the famous station's Christmas lights display got started. Each

year Amtrak staff along with the Garden Club and the City of Niles, light up the station for the Christmas season. This is now one of the most popular events in Western Michigan and a big event in the City of Niles.

Bells and whistles on board *Acela Express*

Their special day, Oct. 19, 2002, began with the sound of the *Acela Express* train whistle, combined with another unique set of bells — wedding bells that is — that chimed during the special wedding ceremony on board train # 2250 bound for New York.

Family and friends joined Amtrak employee **Tom Yerge** and his bride

Melody on their special train ride as they vowed their love to each other. "Some of our party had never experienced a train ride and they were blown away by *Acela*," said Yerge, an electronic technician in Washington.

"Melody fell in love with *Acela* when she took her first ride on a short trip from Washington D.C., to the BWI station stop in Maryland after the conclusion of the 2001 Amtrak Presidential Awards ceremony. When we were discussing our wedding plans, I asked her if she would like to be married on a train. She asked me if it could be on the *Acela*, and from there, our plans just took off. Everything had turned out the way we had hoped for," Yerge said.

The Rev. **Gilbert Edwards** from the Amtrak Baltimore B&B Department officiated the ceremony while a close watch was made as the train traveled from Washington Union Station on to the state of Maryland. The ceremony had to be completed while the train traveled through Baltimore County or the

marriage license would be invalidated. The ceremony officially concluded at 9:40 a.m. — a coordinated effort of timing and mileposts!

After the train passed through Philadelphia, the newlyweds were whisked off to the first-class car where a bottle of champagne awaited them.

Tom and Melody wish to thank **Robert Bryan**, **Ed Mruk** and the Amtrak crew on board *Acela Express* 2250, for making their special day possible.

Tom Yerge and his bride Melody wait to board *Acela Express* 2250, where their wedding ceremony will be performed.

Positive results in Illinois

Amtrak, Illinois Department of Transportation, Union Pacific Railroad, Federal Railroad Administration and Association of American Railroads demonstrated a second of its kind satel-

lite-based technology system needed to bring high-speed rail to the Chicago-St. Louis corridor.

The Positive Train Control (PTC) system, which uses satellite technology to pinpoint train

locations, and enhances safety features such as crossing gate controls and train speeds, is one element in the process to provide 110 mph train travel between Chicago and St. Louis.

Bob Kollmar, project manager for the Amtrak portion of this initiative stated, "The success of this demonstration event required a major investment by several departments including Planning and Business

Development, Operations, Mechanical and Engineering. The dedication and commitment of the Amtrak team ensured the achievement of this 110 mph demonstration train."

On October 31, Amtrak Engineer **Steve Fleming** operated the high-speed demonstration train. He said "This has been an ongoing project since July. Several practice runs took place in order to achieve this goal. We tested the train at various speeds starting at 90 mph, then 100 mph and finally, 110 mph." Fleming, a 14-year Amtrak employee, began his railroad career in 1981 as a brakeman for Illinois Central Railroad. "I can't wait until it happens for real." Fleming said.

Conductor **J. C. Butch Hayes** heard a lot of "oohs" and "ahhs" from the passengers. "They were astonished because they didn't think we could achieve these high speeds with such a smooth ride." Hayes felt the move toward implementing high-speed rail in the Midwest is "long overdue and really beneficial."

The test results will be reviewed and evaluated by Lockheed Martin Corpo-

ration, the prime contractor, for compliance with the scope and mission. Using satellites, future components of the PTC system will not only pinpoint a train's location, but also will control speeds to help avoid train-to-train collisions, adhere to posted speeds, provide roadway worker on-track protection and monitor the "health" of crossing gates and flashers.

Three Amtrak locomotives that are normally used in the Chicago to St. Louis corridor are currently equipped with the PTC equipment in preparation of the future implementation of the system. Nearly \$140 million in state, federal, and private funds have been invested in upgrading the Chicago to St. Louis corridor in the past ten years. It is anticipated that trains could travel at 110 mph on this 120 mile section of track sometime in 2004, which could cut up to one hour off the travel time between Chicago and St. Louis.

"We are pleased to help demonstrate to the traveling public the incremental progress that is already being made toward high-speed rail in the Midwest," said **Michael Franke**, senior director of Planning for the Midwest.

L to R **Bob Kollmar**, director, Planning and Business Development; **Angela Brazzale**, manager, Planning and Business Development; **J. C. Butch Hayes**, conductor; **Larry Light**, senior technology director, Communications and Signals; **Steve Fleming**, Locomotive Engineer.

and alcohol-free
workplace.

At this year's Operation RedBlock conference held in Philadelphia, your agreement-covered representatives worked alongside all levels of management to discuss new avenues to make the workplace drug and alcohol free. This year's theme, On the Right Track, was designed after the Operation RedBlock and Employee Assistance Program's new Web site located on the Internet at www.redblock.com.

The annual conference has many functions. All year, team leaders throughout the country volunteer in their respective work communities promoting a drug and alcohol-free workplace. Once a year they gather at the conference for additional training and education by way of seminars, classes, meetings,

fellowship and special speakers. Many Operation RedBlock leaders use their personal vacation time to attend this important event.

"The conference provides needed training and motivation," said **David Hardimon**, Los Angeles carman and Operation RedBlock Captain. "Every

RedBlock situation is unique, and having the tools to help our fellow

employees can save a job or a life," Hardimon said.

New York Congressman Charlie Rangle was a special guest at the conference, and he encouraged the troops in his heartfelt speech. "We need trains, and I will fight for the future of Amtrak. Keep working safe out there."

David Gunn, Amtrak's president and CEO was greeted with enthusiasm as he spoke to the group. "You are the leaders of this successful and innovative program. Congratulations on a job well done but this is a fight that never ends. Working safely and providing a drug and alcohol-free environment is pivotal to the success, the very survival of our company," said Mr. Gunn.

Representatives of various unions from Northwest Airlines joined the conference to learn from the groups' successes. Several other leaders in the travel industry have modeled their drug and alcohol prevention programs after Operation RedBlock.

Bobby Bonds, director of both programs was pleased with the outcome of this yearly gathering. "Countless volunteer hours go into making our programs a success. Behind the scenes, hundreds of volunteers who are caring and involved form a network that is committed to a drug and alcohol-free workplace. We are dedicated to saving jobs, as well as the health and well being of our fellow

colleagues. We don't advertise our successes because we remain a confidential program, confidentiality is the key," said Bonds.

"Although ORB's conventional role is to provide prevention, assessment, intervention, and referral services to employees and their dependents, we seek innovation through enhancing our ongoing responsibility to provide emotional, psychological and spiritual help to people in need through continuous training and partnerships with groups such as the Employee Assistance Program and the Amtrak Chaplain Program," said **Ed Adams**, Labor Coordinator.

Operation RedBlock (ORB) is a labor-developed, company-adopted drug and alcohol prevention and intervention program. The program emphasizes awareness, education, and prevention committees. ORB aims to change attitudes, to reduce the tolerance of nonusers to job-related drug and alcohol use, and to encourage users to seek assistance. All inquiries remain confidential. The telephone number to reach the Operation RedBlock team for mark-offs or information is open 24 hours a day at 1-800-44R-BLOC or 1-800-447-2562.

You can also find more information on the Amtrak Intranet or go to the official Operation RedBlock website at www.redblock.com on the Internet.

New maintenance facility

continued from page 1
of passenger rail both in the state of California and throughout the nation."

This investment represents another example of Amtrak's successful partnership with the state of California to improve passenger rail services. As part of the joint capital investment, Amtrak has committed \$27 million toward construction of the facility, while the state of California will invest \$38 million.

"California is one of Amtrak's strongest partners and has a deep business interest in ensuring that the maintenance of the state-owned equipment is first-rate," said Warren Weber, manager of the California DOT Rail Program. "The state invested funds in the new Amtrak Oakland maintenance facility to protect the state's investment in train equipment and build upon the success of passenger rail service in California."

The new 22-acre facility will occupy former railroad property and include a main shop and a service and inspection

area. It will be equipped for service, maintenance, inspection and repair and train washing. The new facility will allow improved conditions for existing and new functions.

Such as:

- Preventive maintenance for 17 locomotives, previously performed in Los Angeles
- Preventive maintenance for 78 California Cars
- Daily turn around servicing for the *Capitol Corridor*, *San Joaquins*, and *California Zephyr*
- It will be located 1,500 feet from Amtrak's existing maintenance facility in West Oakland.

The new Oakland Maintenance Facility will have a positive economic impact on the surrounding area by building up to approximately 200 jobs to Oakland's job base. In addition, the facility will have the capacity to meet future demand as both the state-supported *San Joaquin* and *Capitol Corridor* services continue to grow.

"California is one
of Amtrak's strongest
partners and has a
deep business interest
in ensuring that the
maintenance of the
state-owned equipment
is first-rate."

Warren Weber, manager of the
California DOT Rail Program

Robin Reynolds

Luerean Van de Streek, manager of maintenance scheduling and the liaison between Caltrans and Amtrak, was chosen by her peers to represent Amtrak employees (here with David Gunn) in the groundbreaking ceremony.

In less than 24 hours, Engineering accomplishes monumental task

It is a commendable achievement that a project of this magnitude be accomplished in less than a 24-hour period.

In this story, we take an inside look at how Amtrak's Engineering Department quickly responds to an emergency situation and resolves the crisis in less than 24 hours.

11 a.m.

On Friday, Aug. 8, a few minutes after the hour, a truck hauling a trailer and ship container, struck and damaged the Monument Street railroad bridge in Baltimore, MD. The container became wedged under track two of Amtrak's Northeast Corridor.

Not long after the truck became wedged under the bridge, Baltimore Electrical Foreman, **Jim Matthews**, was on his way to another job when he spotted the container jammed under the bridge. Parking his vehicle, Matthews rushed over to the scene of the accident to view the damage and to provide his first-hand observations to structural engineers for a quick determination of what to do next.

Steve Wilson (L.) Bob Willnecker (center) and Dave Settlemire, of the Bridge Rehab Gang R-901, installing new floor beam.

Jeff Thompson (L.) and Dave Settlemire install connection bolts at the stringer/floor beam connection.

11:30 a.m.

Seeing some distortion and tearing of the steel members that make up the floor system, Jim called his supervisor, **Paul Roddy**, assistant division engineer of Structures. It was approaching 11:30 a.m., as Matthews was explaining to Roddy that the bridge had been struck and that some of the floor system members appeared to be damaged. Roddy immediately notified CETC that the Monument Street bridge, serving the Northeast Corridor's mainline, was out of service for all tracks until an on-site inspection could be made. Roddy next called the Corporate Engineering offices and talked to Senior Director of Structures **Charles Yordy** and informed him of what he knew. Roddy said he was on his way to Monument Street and would provide additional details once he arrived.

11:40 a.m.

By 11:40 a.m., Yordy was in conversation with Senior Engineer **Joe Lileikis** who was near Perryville, MD. It was now a little before noon, and holds were placed on two of the three tracks, drastically curtailing service over the bridge. Lileikis replied that he and the Rehab gang supervisor, **Steve Dietrich** were on their way to Monument Street and would provide an assessment as soon as they arrived.

Noon

A little after noon, Lileikis and Dietrich arrived at the bridge. The local Track Department personnel as well as Amtrak Claims were on site. The truck was still jammed under the bridge but Lileikis was able to inspect enough of the steel to determine that track three was not in jeopardy of causing a derailment, and at 12:30 released that track for a train to operate over it at reduced speed. Meanwhile, Dietrich was making calls to his gang members to load up and head to Baltimore from their work site in Perryville.

1 p.m.

By 1:00 p.m. members of gang R 901 were arriving on site. Lileikis contacted the System Structures office where Yordy and Senior Engineer **Nenita Santos** had copies of the bridge floor system plans. Lileikis provided detailed information on the location and nature of the damage to the floor beam supporting track two, and proposed several repair scenarios. A replacement floor beam had been located near Baltimore station and he needed dimensions from the bridge plans for comparison purposes. Further

investigation revealed that this floor beam would provide a suitable replacement for the damaged one.

3:30 p.m.

By 3:30 p.m. the jammed trailer had been dislodged from under the bridge and towed away. The common girder between tracks two and three could now be properly inspected and Lileikis determined that track three was suitable to be returned to timetable speed. The floor beam could now be inspected closely and proved to have been extensively damaged, making repair both time-consuming and a costly proposition. Lileikis determined that the best solution to the problem was to use the floor beam that was on hand to replace the damaged one.

4 p.m.

At 4 p.m., the replacement effort was organized with all involved departments.

8:50 p.m.

By 8:50 p.m. the Baltimore track department under Supervisor **Ray McAllister** and Assistant Division Engineer of Track **Josh Lepman** had stripped the track from the bridge ties, removed two panels of bridge ties and opened up a bay on either side of the damaged floor beam. In the mean time, the Rehab gang had been working below deck to remove connection bolts

10 p.m.-10:30 p.m.

Between 10:00 and 10:30 p.m. the east and west stringers which are framed into the floor beam had been removed,

J. Lileikis

A truck hauling a trailer and ship container strike the Monument Street railroad bridge in Baltimore, MD.

and by midnight the floor beam itself had been taken out.

As it turned out, the new floor beam had to be modified to fit the location where the old floor beam had been removed. This was due to the fact that the length of the new floor beam was slightly greater than that of the old. Lileikis provided the technical guidance for the field forces to confirm connection hole patterns, and to make the necessary modifications to make the new beam fit.

1 a.m.-5:45 a.m.

By 1:00 a.m. the beam modifications were completed. The beam was next fitted into position and stringer attachments begun. Since the new floor beam was not an exact duplicate of the old one, various on-going modifications to connections were made to facilitate installation of connection bolts. This process lasted for approximately four hours, by which time, at 5:45 a.m. Saturday morning, all the connections had been made between stringer and floor beam and girder.

The Baltimore track department then replaced the bridge track panel and connected the rails. ET removed ground stick protection and C&S began applying bond wires.

7:16 a.m.-8:22 a.m.

By 7:16 track 2 had been restored to service for 30 mph to observe the first train over it. After a northbound passed without event over the repaired structure, track 2 was restored for normal speed at 8:22 a.m.

**By 7:16 a.m. track 2
had been restored to
service for 30 mph
to observe the
first train over it.**

It is a commendable achievement that a project of this magnitude to be accomplished in less than a 24 hour period. Special recognition must go to Supervisor Steve Dietrich and the members of R 901 who are: **Cliff Cook, Jim Coursey, Dave Settlemyre, Ray Singleton, Wayne Sutton, Jeff Thompson, Bob Willnecker and Steve Wilson.** Assisting was Baltimore Division welder **Hugh Devlin.** Thanks to the dedication and drive of these men, the Northeast Corridor experienced many fewer delays that would otherwise have occurred.

Without the engineering expertise and guidance of Joe Lileikis, who has developed the Rehab gang into an exceptional work unit, this major project could not have been accomplished with the speed or quality shown Friday night and Saturday morning. Joe and his gang are a tribute to the finest qualities of Amtrak Engineering.

*Charles Yordy, Senior Director
of Structures, Philadelphia*

Innovative program improves safety at Chicago Union Station

At Chicago Union Station, employees are responsible for 150 tons of baggage belonging to 6,000 passengers, and for 1250 tons of mail and express freight daily. This work presents numerous challenges in safety performance. These are the challenges being addressed by a new behavior-based safety initiative called EAGLES, the Employee Alliance for Great Levels of Excellence in Safety.

The Human Factors Program of the Federal Railroad Association Office of Research and Development selected Amtrak's Chicago Union Station as the location for this pilot project. All employees in the station, as well as the Mail & Express mail dock and express dock, are included in the program. Past safety programs have focused more on creating rules of avoiding danger rather than how to do specific kinds of work safely. This new type of behavior-based safety program is designed to increase communications between employees and to reward positive safety behaviors.

The EAGLES steering committee, consisting of 10 TCU union members and two supervisors, took a four-step approach to addressing safety issues:

- Reviewing past problems
- Observing safety related work behaviors
- Providing feedback to employees
- Creating an action plan to improve worker safety

Amtrak Director of Safety, **Peter Hall**, credits the EAGLES initiative with having a powerful positive impact. As Hall points out, "Most people have good intentions about recognizing good performance when we see it. However, without a system for giving positive feedback, we frequently give negative feedback when we see something that worries us ... Now the workforce receives continuing feedback and reinforcement for what they are doing right."

**"We finally have
a program that
provides the front-line
employees the ability
to control their own
safety with the support
of management."**

Don Saunders,
general superintendent
of the Central Division

Don Saunders, general superintendent of the Central Division, has always believed that the majority of injuries at Amtrak are behavior-based. He recognized early-on in the pilot, that, "We finally have a program that provides the front-line employees the ability to control their own safety with the support of management."

The EAGLES initiative has also had an important impact on morale, as the steering team members have become peer trainers. According to Hall, this activity sends a strong message. When personnel who are taking the training see their coworkers in charge of the sessions, it becomes very clear that this safety initiative is serious about having the engagement of team members at all levels.

The best part about this process is that it works. Chicago Union Station was having two to three station injuries per month before this process started. As a result of implementing the Behavioral Safety system, there have been only three injuries in the last six months. These are very positive results and the EAGLES team should be very proud.

For more information on the EAGLES initiative, read the related article in the August 2002 issue of Perspectives in Behavioral Management.

EMPLOYEE MILESTONES

Congratulations to All of You!

Best-selling author David Baldacci signs copies of latest novel aboard *Acela Express*

David Baldacci, the Washington D.C., lawyer turned best-selling novelist, signed copies of his latest book, *The Christmas Train* while aboard *Acela Express* in November.

David Baldacci appears as part of the “Live on Acela Express” series to sign his latest book, *The Christmas Train*.

Perhaps best known for his thrillers *Absolute Power* and *Last Man Standing*, Baldacci’s remarkable versatility is demonstrated in this uniquely entertaining new tale. *The Christmas Train* takes place aboard Amtrak’s *Capitol Limited* and *Southwest Chief* trains between Washington and Los Angeles.

Baldacci’s appearance was another installment of “Live on *Acela Express*,” a series of on-board events showcasing Amtrak’s high-speed rail service as a unique environment where business travelers on the Northeast Corridor have the opportunity to encounter exciting events and personalities en route. “Live on *Acela Express*” has also featured appearances by actress Bo Derek, celebrity Chef Mark Strausman, Boston Red Sox legends Jim Rice and Bruce Hurst, and New York Yankees legends Paul Blair, Rick Cerone, Rich “Goose” Gossage, and Mike Pagliarulo.

Baldacci boarded *Acela Express* at 4 p.m. at Washington Union Station and signed copies of the book between Washington and New York. The book was available for sale on board the train, and the event provided an opportunity for passengers to purchase a unique holiday gift.

A letter from David Baldacci

To the Men and Women of Amtrak:

*My love of trains started, as it did for many others, when I was a kid, and has never diminished. Now, that adoration has culminated into my new novel, *The Christmas Train*. The story chronicles one man’s frolicking, heartwarming, and hilarious journey across America on Amtrak’s *Capitol Limited* and *Southwest Chief*.*

For me trains are the best way to travel, easily beating zipping across the skies at 500 mph or stuck in traffic on major interstates. Train travel allows you not only to see the country, but also meet your fellow Americans. As a writer there are few places that beat a train for gathering story material.

I want to thank all the people at Amtrak who shared their stories and experiences with me, while I was writing the novel. For me trains are living things, in a way, yet I know it’s the people who work them that are the heart and soul of the thing.

I hope when you read the book that you both enjoy it and find that I did you justice.

*Respectfully,
David Baldacci*

Equal parts hilarious, poignant, suspenseful, and thrilling, David Baldacci’s *The Christmas Train* is filled with memorable characters who have packed their bags with as much wisdom as mischief, and shows how we do get second chances to fulfill our deepest hopes and dreams, especially during the season of miracles.

Take that cart and make it new

Creative Cost Savings in Seattle

Brainstorming by the safety team brought about the question, could the catering carts (scheduled for the scrap-yard) be adapted?

The Seattle station safety committee identified both a problem and solution related to the train sets utilized on the Pacific Northwest Amtrak *Cascade Service*. The European design of the Talgo equipment has a baggage car floor that is several feet lower than that of conventional equipment. As a result, using standard baggage floats to deliver baggage to these train sets meant crews having to reach above their heads to take bags from the float.

To correct this potential safety hazard, the safety team at the station suggested the acquisition of “Low Boy” carts that are closer to the ground and level with the baggage car floors on the *Cascade Service* equipment. However, new carts were not a cost-effective choice, as they retail for more than \$3,500 dollars each.

Brainstorming by the safety team brought about the question, could the catering carts (scheduled for the scrap-yard) be adapted? Safety team member and welder, **Neil Thomas**, without hesitation said, “Sure they could!”

Welder **Neil Thomas** proudly displays the refurbished low-boy baggage cart.

True to his word, Thomas was able to secure enough parts to fabricate three “Low Boys”. He used these parts along with his own considerable skill with a torch and in very short order was able to provide new equipment perfectly suited to our task. Total cost in labor and additional parts came to

less than \$500 dollars for the three carts — a savings of \$10,000 dollars. Congratulations to the Seattle safety committee for your efforts not only in financial savings for Amtrak, but your innovation and teamwork led to more effective and safe baggage handling for the Pacific Northwest.

RAILWAY ROUNDUP

Amtrak Coaster Conductor **Ricky Rhoton** and his wife Nyla enjoy the holiday ambiance.

Southern California employees celebrate the holidays

Employees in the San Diego and Los Angeles crew bases have been gathering each year to celebrate the holidays and enjoy the spirit of the season. This year's event was held at the Town & Country Resort in San Diego. **Jack Wilson**, assistant superintendent, Road Operations, Southwest Division said, "this employee-organized and sponsored event is a special time that we look forward to each year." Music, dancing, good food, and special door prizes highlighted the elegant evening.

Surrounded by over one hundred employees and guests, Amtrak

Conductor **Marisol Munoz** was applauded for her untiring efforts in bringing the two locations together at this annual event. "We work hard all year, so we appreciate the time together to reflect on the past, unite in friendship and to celebrate the New Year," said Munoz.

Angels in the outfield at Anaheim Station

Firemen and Police Officers swarmed the Anaheim station — but not for an emergency call — they joined the crowd of fans and train passengers that wanted to watch the 2002 Baseball World Series!

"It was like actually being in the outfield," said **Susie Brown**, Anaheim station agent. "You wouldn't believe how many folks just stayed to watch the game, and experience the energy," she said. The Anaheim, CA, station is located in the parking lot of Edison Field, frequented by the Amtrak's *Pacific Surfliners* and *Metrolink* commuter trains on the second-busiest passenger rail corridor in the nation.

"We played the series games on our station television set, but if felt like having a front-row seat," said **Randy Salisbury**, Anaheim ticket clerk. "The thunder sticks boomed right through the glass walls and you could feel the crowds' response even before you saw it on television," said Salisbury.

Red-shirted Angel fans joined our regular passengers in the station - as you couldn't be in a more convenient location, even if you couldn't get a ticket to the game.

Amtrak stations open their doors to the community for holiday cheer

Amtrak's Portland Union Station held a holiday open house on Dec. 21, 2002, and accepted toy donations in support of the "Great Toy Drive" from local news Channel 8. Everyone donating a toy received an Amtrak *Cascades* free companion coupon. The public was invited to walk through a *Cascades* train which was on display with its distinctively sleek, European-design. Booths and other displays included a model train and railroad safety displays from Operation Lifesaver. Santa held a drawing for a model train set, while the Tualatin High School choir provided holiday music.

Amtrak's Edmonds Station hosted their open house on Saturday, Dec. 7 where the public was invited to exchange a new unwrapped toy or a donation of food for a "free companion fare" coupon. All toys collected will be donated to U. S. Marines "Toys for Tots" program and food collected will be donated to Northwest Second Harvest Food Drive. Guests were invited to enjoy refreshments, and visit with Santa. Displays included Operation Lifesaver, Washington State Department of Transportation, Victoria Clipper, and Great Northern Railroad Historical Society. Frank Remington, a retired telegrapher demonstrated the Morse code and Swamp Creek & Western Model Railroad Club with 2,000 ft. of track on display.

The San Luis Obispo community was invited to the station open house on Saturday, Dec. 14, 2002, where Amtrak hosted complimentary cookies and

apple cider. The public visited with Santa and donated toys to the U.S. Marines "Toys for Tots" program.

Woman convicted for filing false claim against Amtrak

A woman who claimed to be the widow of an Amtrak employee who perished in the *Sunset Limited* derailment in Mobile, AL, on Sept. 22, 1993, was convicted in Federal District Court on criminal charges related to her scheme in filing a \$5-million lawsuit against Amtrak for the employee's death.

The Amtrak Office of Inspector General/Office of Investigation conducted the investigation after receiving a tip from an unidentified source that marriage documents provided by the woman were falsified. The woman was able to perpetuate her scheme with the assistance of others who falsely claimed that the marriage had been performed.

The woman had previously received a settlement, as the deceased Amtrak employee's wife and "lawful heir" of more than \$1 million from Warrior and Gulf Navigation Company. This company is the owner of the barge that allegedly struck the CSX-owned railroad bridge, knocking the tracks out of line causing the eastbound *Sunset Limited* to crash into the Bayou Canot.

Office of Inspector General/Office of Investigations special agents worked closely with prosecutors from the United States Department of Justice to successfully prosecute this case. The investigation took four years to bring the case to conclusion. The week-long trial was held in Jackson, MS, where the jury convicted the defendant on three counts of mail fraud and three counts of money laundering. She was sentenced Jan. 23, 2003, to 71 months in prison and to pay \$1 million restitution to the barge company.

New Amtrak station opens in Everett, WA

With the loud but romantic blast of the train's horn, the *Empire Builder* pulled into the Everett, WA station on Tuesday, Nov. 12, 2002, commemorating the beginning of passenger rail service to the city's new transportation facility. This first stop celebrated the city's nine-year journey from an idea to reality and included approximately 500 people — among them Everett city officials, Amtrak employees and some surprise celebrity guests.

Passengers onboard the special inaugural trip included "Elvis," "Dorothy," from the Wizard of Oz, and "Santa," who rode the train to celebrate this momentous occasion. "Years of effort have paid off for the city of Everett and Amtrak — we are happy to be here today," said **Kurt Laird**, Amtrak's district superintendent for the Pacific Division in Seattle.

The Everett Station is a shining accomplishment, giving travelers and commuters an efficient, modern and beautiful base for train and bus service. The four-story building itself is a sight to behold, inside and out, from its red brick and copper-tiled roof to the interior

A spike is hammered by **Kurt Laird**, district superintendent, Pacific Division-Seattle, at the grand opening ceremony of the new station in Everett, WA.

decor that seamlessly melds cultural history with modern comforts. An inventive use of funding from state and local entities included higher education monies, which provide the upper floors of the station for college and masters-level education, a training center, and job resource programs.

Amtrak operates six daily trains out of the Everett Station, joining intermodel partners, Sound Transit, Greyhound, Community and Everett Transit with transportation service from the station.

Amtrak returns to historic Kansas City Union Station

After an absence of 17 years, Amtrak returned to Kansas City's Union Station with the opening of a new \$4.6-million passenger ticketing and boarding facility. Amtrak employees, government officials, civic leaders and rail enthusiasts celebrated the grand opening of the new facility with a ribbon-cutting ceremony, Dec. 17, in Union Station's Grand Hall.

L to R - Union Station employee, **Jennie Hanna**; District Service Manager, **June Norfleet**; Union Station employee, **Janie Hon** and Marketing Manager, **Anne McGinnis**.

The new facility includes: a baggage check-in and ticketing counter; a 2,000 sq. ft. waiting room featuring five of the original wooden benches from the station's north waiting room; and an elevated walkway that leads to stairs and an elevator providing access to the boarding platform. A large historic wall clock will be installed soon. Funding for the new facility came predominantly from the federal Surface Transportation Program and Amtrak.

"Investments in passenger-friendly facilities, like we once again have in Kansas City, are central to the continued vitality of regional and national passenger rail service," said **Brian Rosenwald**, superintendent of Passenger Services. "We said when we left in 1985 that we would be back again. It took 17 years, but here we are."

Serving between 400 and 1,000 passengers a day, the Kansas City station, is the 62nd busiest station that Amtrak operates nationwide. Kansas City Ticket Agent **Shannon Gadson** was a part of the team that helped to make this event a success. "For twelve years, passengers have told me stories of the hustle and bustle during their travels in and out of the original Union Station. Now I can share that experience. I feel like I've gone back in time," Gadson said. "It's a pleasure to come to work."

Station volunteers, Mr. and Mrs. McMasters, and **Brian Rosenwald** (right), superintendent of Passenger Services, at ribbon-cutting ceremony

Ticket Clerk, **Linda Saunders** has worked at the Kansas City Amtrak station for 29 years. "I've gotten a lot of good comments. Everyone is elated that we're here. It's a different atmosphere ... it's nice."

Amtrak had offices in the deteriorating Union Station from its creation in 1971 until 1985. During its last year there, Amtrak operated inside a plastic bubble erected within Union Station's Grand Hall because heat and air conditioning to the entire station had been turned off.

In 1985, Amtrak relocated to a small boarding office at 2300 Main Street, and Union Station closed to the public. Union Station reopened in 1999 after a \$118 million renovation. Amtrak pledged at that time to one day return to the historic train station.

"Amtrak moving to the original historic facility confirms the continuity of our service. It was a wonderful tribute to Amtrak's longevity to see retirees of twenty years, veterans and new employees side by side sharing this momentous occasion," said District Service Manager, **June Norfleet**. "The station is a national treasure. Everyone should come and see it."

PROMOTIONS IN MOTION

Amtrak announces rollback in fares

New coach fares up to 25 percent less

Amtrak announced a fare rollback last week that makes rail travel a better value than ever before. The rollback in coach fares is available on many of its long distance routes from coast-to-coast. These new fares, available beginning Jan. 7, are up to 25 percent less than previous fares.

With these new, lower fares passengers have another reason to take Amtrak, whether they are traveling for business or for pleasure. "With this rollback in fares, we hope to not only stimulate interest in rail travel, but also to provide a draw for the travel industry as a whole," said **Barbara J. Richardson**, Amtrak's vice president of marketing and sales.

The fare rollback is available for coach travel on most of Amtrak's long distance routes, such as Chicago and Los Angeles; New York and Miami; Los Angeles and Seattle; and Chicago and Washington, to name a few. In

addition, on some routes, fares for sleeping accommodations may also be discounted.

But, it does not apply to travel between cities in the Northeast Corridor.

Also on Jan. 7, Amtrak launched its Winter Promotion with a Free Companion Offer. With this promotion, when passengers purchase one ticket, they will receive a companion's ticket for free. Passengers traveling alone may receive a 25 percent discount.

Combined with the fare rollback, the winter promotion offers incredibly competitive fares for travel on many of Amtrak's routes.

These offers are available for sale through Feb. 15, 2003, for travel Jan. 10 through August 28, 2003. To take advantage of the winter promotion, passengers should log onto www.amtrak.com, call 1-800-USA-RAIL, or visit a local travel agent and mention code H255 for the free companion fare, and code H259 for the discount for single travelers. All fares are subject to availability.

Cultural Celebrations Committee created

There are a number of cultural observances that Amtrak has celebrated over the years: Black History Month, Women's History Month, Hispanic Heritage Month, "Take Our Daughters to Work" Day, Native American Heritage Month, Asian American/Pacific Islanders Month, and National Disability Awareness Month, to name a few.

Now is your chance to participate in the planning and execution of some of these observances. Amtrak is creating a Cultural Celebrations Committee, and your involvement is needed.

The committee will be expected to provide support and assistance to Amtrak employees staging celebrations on Amtrak property. At present, the observances and dates are as follows:

February Black History Month

March Irish-American Heritage Month

March Women's History Month

March Greek Independence Day: A National Day of Celebration of Greek and American Democracy

April 8-14 Pan American Week

April 22-29 Jewish Heritage Week

Late April Take Our Daughters to Work Day

May Older-Americans Month

May Asian/Pacific American Heritage Month

Mid-September-Mid-October Hispanic Heritage Month

Oct. 6 German American Day

October National Disability Employment Awareness Month

November National American Indian Heritage Month

You can be a part of the committee for the entire year, or for just one event, or for any number of events in between. To join the committee, or for more information, contact **Rodney Ruffin** at ATS 777-3929, or Bell (202) 906-3929 or via e-mail at diverseb@amtrak.com.

You wanted blue

“A good uniform makes employees feel proud to be part of a team and is a reminder that we’re here for a purpose — to serve our passengers.”

Dianne Ross,
uniform manager

It’s your uniform, and it’s going to change, again. Change back — to blue. Why? Because that’s what you wanted. And, after a thorough review of the Amtrak uniform program, Mr. Gunn and senior managers agree.

For years, uniformed staff — from ticket agents to conductors — were outfitted in traditional railroad blue, mirroring the threads of Amtrak’s predecessor railroads. Something of a change came in 1999, when, as part of the company’s effort to revitalize the Amtrak brand, it rolled out a more modern combination of gray and blue to be worn initially by employees working in the northeast where *Acela Express* was beginning service. The plan then was to gradually expand the use of the new uniforms by all staff nationwide.

Over the past three years, however, the new uniforms have come up short in ways other than the sleeves. Despite the gray uniform’s tropical blend, for comfort, fit and appearance, the older blue uniforms remained more popular, especially among on-board staff. The fabric of the traditional blue uniforms has also been proven to be somewhat more durable than the gray.

Consequently, the company has decided to make several alterations. The first change is that the gray uniforms will not expand west and south to clothe employees, but — for the time being — stay where they are. According to Amtrak uniform program manager, **Dianne Ross**, the company has stocked a sizeable amount of pants, jackets, shirts and accessories

and it would be financially irresponsible to switch over to blue today and let the gray go to waste. “Simply put, it’s a lot of money,” said Ross, “and we can’t afford to be wasteful, especially now. In about two years’ time, the gray will phase out and we’ll all be in blue.”

Ross said nothing gets more attention among employees than uniforms, and it’s only natural. “It’s how you look in public — and that’s important. Back in the ‘70s, we had a tropical weight uniform that wasn’t durable. It didn’t hold its shape, it wasn’t cool in summer and wasn’t warm in the winter. That’s when we went to the blue, the gabardine fabric blue. And that worked.”

Given the change, is there enough blue to go around the rest of the system? As it turns out, not quite. In fact, train service employees working in blue today who need to replace their uniforms will have their pick of new interim blue garments as necessary, while traditional, custom-cut gabardine uniforms are restocked in inventory. “The gabardine is an 11.5 oz. year-round fabric for conductors and that’s very popular, very comfortable and keeps its shape,” said Ross. “But because it is popular, it’ll take us about eight months to get it special-ordered, tailored and into the system.”

In the meantime, those in blue will continue to order the interim blue, and, until the stock runs out, those in gray will stay in gray. Garments that are well maintained have a longer life expectancy, so employees are encouraged to be sure their uniforms are clean and in good condition at all times. The employees who receive a uniform allowance, which is geared for this maintenance, are expected to use it accordingly.

“A good uniform makes employees feel proud to be part of a team and is a reminder that we’re here for a purpose — to serve our passengers,” said Ross. “The gray is a good uniform, but our experience has shown it hasn’t been as durable or popular as the blue. I’d like to think that a mark of good management is recognizing the facts and acting on them. That’s what we’re doing with our uniforms — giving them a performance evaluation and making changes that best suit our employees.”

You wanted blue — so there it is.

Pass Policy update

Demand for *Acela Express* service has returned, and this means as much space as possible must be made available for passengers.

To accommodate this demand, the informal practice of allowing employees to travel without tickets on *Acela Express* will no longer be permitted. All employees must present a valid ticket for the *Acela Express* train being ridden. In November, a message from Ed Walker, vice president of Operations, reminded employees that pass travel rules restrict employees from unticketed travel on *Acela Express* trains.

However, there is also a goal to maintain travel benefits for employees. So, the flash pass policy has been extended to the Northeast Corridor’s *Metroliner Service*, in addition to the reserved

Acela Regional trains on which it is already permitted.

The Pass Policy regarding *Acela Express* and *Metroliner Service* is as follows:

- No flash pass privileges on *Acela Express*, and
- No commuting on *Acela Express* (using either flash pass or business travel privileges).
- However, the flash pass privilege has been extended to include *Metroliner* trains in addition to the reserved corridor trains on which it is already permitted.

A summary of the revised pass policy was distributed with Walker’s message. Please contact Employee Communications if you need a copy of the policy.

*Delaware back shop facilities keep
the fleet in good repair*

Locomotive overhauls and other equipment maintenance is performed at the Wilmington Maintenance Facility, where this High Horsepower locomotive was lifted off its trucks using two 100-ton cranes. See story on Amtrak's mechanical facilities in Wilmington and Bear, DE, on **page 3**.

Beech Grove returns equipment to revenue status

Amtrak returned two Superliner II sleeper cars to revenue service on January 30 at Amtrak's heavy-repair shop in Beech Grove, IN. These two double-decker cars are the first to be repaired in a backlog of 105 cars that have been awaiting work at the Beech Grove Maintenance Facility and the Bear and Wilmington shops in Delaware.

"The successful return to service of

these cars shows what we can do when provided with adequate resources," said **Lew Wood**, general manager for the facility. "We hope Congress will continue to provide the funds needed to repair more cars and we thank those who have supported Amtrak locally and in Washington," said Wood.

Beech Grove Mayor Warner Wiley oversaw the ribbon-breaking ceremony putting the first car back into service and was joined at the podium by Indianapolis Mayor Bart Peterson. Representatives from the offices of Senator Evan Bayh and Congresswoman Julia Carson were also on hand to show their support.

In the fall of 2002, Amtrak President David Gunn reallocated resources to begin the repair of passenger cars needed to meet demand and restore Amtrak to a state of good repair. Amtrak had deferred heavy repair work since

Lew Wood, general manager of the Beech Grove repair shop, addresses the media, public officials and workers gathered to celebrate the roll out of the first passenger cars repaired since the wreck-repair program was re-started last fall.

Amtrak strives to stabilize railroad

Federal funding is crucial to meeting goals

After four months of uncertainty over the level of federal support for Amtrak, the Bush Administration appropriated \$1.05 billion on February 20 to Amtrak for FY '03 to support the operating and capital needs of the company's \$3.3 billion budget.

Additionally, Amtrak received a deferral on the repayment of the \$100 million federal loan due this year; effectively giving the company \$1.15 billion in total support. While this falls \$50 million short of the \$1.2 billion Amtrak sought, Amtrak President called the FY '03 budget "probably doable." "We are already struggling to live within our budget due to weak revenues, so we have been given an additional challenge — which is tight."

The distribution of funds for this fiscal year will be in the form of grants from the U.S. DOT. Amtrak will be working very closely with the DOT and FRA to ensure that the distribution of funds will proceed in an orderly fashion to avoid any interruption in operations.

As it does every year, on February 18, Amtrak submitted its FY '04 federal funding recommendation to Congress. The \$1.8 billion request is aimed at continuing the company's recent reforms, as well as addressing years of deferred maintenance on plant and equipment.

To reverse the many years of federal under-investment in capital programs, Amtrak seeks to make basic improvements to existing equipment, infrastructure and service to ensure safe and reliable passenger rail service. "We have bridges, switches, tracks and equipment that are deteriorating. If we continue at this pace, we will be facing some really tough choices," said Gunn. Assuming Amtrak gets the funding it needs in '04, Gunn said the company plans to go beyond barely making-do on a year-to-year basis and instead begin returning the

**"Amtrak's 5-year
plan will bring
long-needed stability
to the railroad and
allow policy-makers
to address broader
questions about
the future of
passenger rail."**

David Gunn, Amtrak

President and CEO

railroad to a state of good repair.

Planning beyond '04 is already underway. Gunn has directed the Planning and Business Development Department to create a 5-year capital plan. The plan is due to be released in April and is expected to recommend \$1.8 billion to \$2 billion in federal funding per year. This plan is designed to inform the reauthorization discussion on Capitol Hill, and to guide the detailed budgeting process for FY '04-'08, which is currently underway. The plan will outline a program to return plant and equipment to a state-of-good repair, and focus on reliability and quality of existing service. It will also include measures to improve operating efficiency through continued organizational streamlining and improved service. "Amtrak's 5-year plan will bring long-needed stability to the railroad and allow policy-makers to address broader questions about the future of passenger rail," Gunn said, adding that "it will be realistic and achievable, and refocus the company on its basic mission to provide customers with safe, secure and reliable passenger rail service."

TRAIN OF THOUGHT

As we enter the spring season, the two things that most often come to my mind are spring cleaning and the spring construction season. I hope that you are looking forward to getting back into high gear as much as I am now that the weather is beginning to cooperate. We've already made some progress in a number of areas, such as the work at Beech Grove and Bear, but there's still a lot more we must do. Still, our budget is going to be very tight this year, and we will have to watch every penny.

Congress appropriated \$1.05 billion to us for this fiscal year and deferred the \$100 million federal loan we obtained last summer. In effect, we received \$50 million less than we requested for our capital and operating needs. We should be able to make it to the end of the fiscal year, but as the money's going to come to us through U.S. Department of Transportation grants, we're going to have to work closely with the DOT to ensure that there's no interruption in the cash — that would put us right back in the soup.

At the same time, I cannot emphasize enough our need to build credibility by showing that Amtrak is not only being stabilized, but that we are reversing the chronic deterioration of our assets. We've

implemented cost-cutting and cost-controlling mechanisms. In the first five months of the year, we've beaten our expenses goal by \$61.1 million, but unfortunately revenues fell short by \$62.9 million. This performance is good, considering the extensive shortfall in ticket revenues.

As I said, we're getting equipment out of our back shops and into revenue service. Beech Grove has returned Superliner sleeper cars 32032 and 32053 back to service after being damaged in a derailment outside of Salt Lake City, UT in September 2001. A third car, trans-dorm 39044, was released on February 23. At our Bear facility, four out-of-service cars have been returned to service: car 44249 has been back in service as 82520 since November; 21273 was returned as 82092 in December; car 21280 left Bear in January as 21780; and Amfleet One car 21092 was returned to service as *Metroliner* car 21792 in February. Two more out-of-service cars will be leaving Bear at the end of March. And speaking of spring cleaning, we are disposing of nearly 200 pieces of unusable equipment so far this year — and picked up \$4 million in doing so.

Whatever Congress has in store for the future of intercity passenger rail,

David L. Gunn

we are going to need several years of sufficient public funding — and this will mean more support than Amtrak is used to getting. Last month, I recommended to Congress that Amtrak receive \$1.8 billion in FY '04, an amount approved by the Board of Directors. This amount of investment will enable us to go beyond making-do and to tend to badly needed improvements in plant and equipment facilities.

As you should know by now, there are no dramatic or quick fixes. We need to continue to focus on our core business, improve our on-time performance and reliability, and most importantly, run a safe railroad. Thank you for doing your part.

P.S. I will be checking up on the progress of your spring cleaning.

Equipment rolls out at Beech Grove

continued from page 1

1999 due to a lack of funding, and with the FY '03 appropriation, approximately \$20 million has been budgeted for wreck repair. President Gunn had stated that Amtrak could not afford to wait to begin repairing cars, as the company would lose money by not being able to meet demand.

The Beech Grove Facility handles

heavy repair for all Superliner cars, built from 1903 to 1907, it is the largest, with over 109 acres. The eight main buildings of the facility consist of over 80,000 square feet of under-roof shop space. These two passenger cars and another, car 39044, are the first results of their labor, and the beginning of a plan to repair 21 cars over the next 18 to 24 months at Beech Grove.

The first of the wreck-repair rollouts, Superliner II sleeper car 32053 breaks through ribbon at the Beech Grove event.

Both Superliner sleeper cars 32032 and 32053 had been awaiting repair after their September 11, 2001 derailment on the California Zephyr outside of Salt Lake City, UT. When the cars derailed, they remained upright; therefore the primary damage was to the bottom of the cars and to each end. Both cars sustained similar damage, and were shipped at Beech Grove on October 6, 2001.

The bottom of these cars required the replacing or repairing of five of the eight electrical undercar junction boxes, replacement of all 480-volt cable, and over 75 percent of all 27-pin conduit and wiring. The undercar covers and rock guards were repaired or replaced, and two of the four undercar draft sill gussets were replaced. Damage to the A and B ends required repairing lower collision posts, coupler carrier pockets and draft sill pockets. It was also necessary to replace the jacking pad channels,

Equipment rolls out at Beech Grove

continued from page 2

jacking pads, sill steps, side corner skirts, corner grab iron pockets, and grab irons. And, the couplers and diaphragms were all renewed.

To bring these cars back into full service, employees worked meticulously repairing the air brakes, renewing air conditioning units, adding new water heaters, new electric door operators, new toilets, and repairing all freeze damage. All systems were tested. The interior of the cars received new carpet, cushions, drapes, decals, and wall coverings in the deluxe bedrooms. New car-body windows were installed,

and Amtrak's new Phase VI livery was applied to the cars.

With the returning craft employees, the Beech Grove facility is now able to re-establish the process of wreck repair and effectively manage the workforce for optimal productivity.

The wreck-repair process generally begins with the repair of four to five cars simultaneously; with the assessment of the damages dictating what sequence the work is performed. All cars must be jacked to repair undercar damage and work the gear and couplers. If the car has substantial structural damage, the

structural damage must be repaired first. The work on five cars is spread over seven tracks, with one open track between the two jack positions and one open track for material. The open spot between the jacks is a work area for pipe fitters, electricians and carmen, where all undercar wiring, piping, and other materials are prepared to go onto the car.

In addition to the obvious repair needed for a wrecked or damaged car, there are also standard renovations that take place. "Surprise" repairs can also be discovered after the work has begun — which

amounts extra repair-time. When working with materials, the "kit" system is often used. Materials are specified, collected, logged and numbered for each kit, and placed with each piece of equipment. As the work progresses, this system helps maintain efficient, organized control of individual material needs.

"As of this date, we have returned three cars to service. The third car, number 39044, was released on February 23, 2003. Our goal for this fiscal year is to return 14 cars to service, and we are confident that our terrific team will reach that goal," said Wood.

Delaware shops work to meet challenges of modern-day railroad

Amtrak's mechanical operations are performed in three back shops and nearly three dozen Service and Inspection (S&I) facilities located throughout the country. The three back shops, located in Wilmington and Bear, DE, and in Beech Grove, IN, perform the heavy repairs and overhauls on all our equipment; while the S&I facilities perform the routine and preventive maintenance, cleaning and periodic inspections.

With much equipment in a wreck-repair status or long overdue for overhauls, Amtrak has stepped up its effort to repair this equipment and return it to revenue service. With so much of our fleet currently out of service, we have not always been able to meet ridership demands. And given the financial restraints and demands under which we've been operating for some time, maximizing existing resources and generating revenue is a must.

In another story in this issue, *Amtrak Ink* reports on the wreck-repairs currently going on at Beech Grove. However, equally important is the work being done in Wilmington and Bear to stabilize the rest of the fleet. These two shops perform the heavy repairs and overhauls that consist of major body and engine work on all of our cars and

locomotives. It's at these facilities that the rebuilding and remanufacturing occur, and the 365-day preventive maintenance programs are performed. These facilities are also responsible for all things mechanical, such as the complete general overhauls on brake valves, pantographs, air compressors, air conditioning, trucks, radiator assemblies, and all electrical components for cars and locomotives, such as circuit boards and traction motors, as well as components from wheels to seat cushions.

Wilmington Maintenance Facility

Celebrating its hundredth year in operation, this facility has seen many transformations. And recently there's been another. With the advent of new technologies, the railroad is evolving. It's necessary that we become more factory-like and more proficient in production. We're becoming technologically driven, purging the old and useless from storage and yards. With these changes, some rail equipment, like the E-60 locomotives, is becoming obsolete and being dismantled and sold for scrap.

In a partnership with Alstom, the facility recently completed the

remanufacture of twenty-nine AEM-7 locomotives. The program upgraded systems to micro-processor controls, increased HEP capacity, and converted to AC traction with regenerative braking. Shop craftsmen developed the electrical and mechanical interfaces between a service-proven car body and the electrical equipment using the latest technology.

Currently, facility fabricators are working in conjunction with Bombardier personnel to modify HHP and HSTS side sills and yaw damper brackets to eliminate recurrence of stress cracks that disrupted Acela Express service when discovered last summer.

The facility here is also producing the heavy overhauls for the remaining fleet of twenty-two AEM-7 DC locomotives. This program includes the overhaul of all propulsion, head-end power, auxiliary locomotive power, trucks, rotating equipment, cab amenities, safety appliances, and painting of the interior and exterior car body. Additionally, employees are learning about the new HHP locomotives to be able to perform the light overhauls that will need to be done, including the setting up of test equipment for the high-speed

trucks, body repairs, electronics and traction motors.

At the same time, other teams are preparing to begin a long-deferred diesel switcher overhaul program. Starting with eight locomotives in FY04 this program will take three years to complete twenty-five units and include replacement of the prime mover, main generator, air compressor, trucks, various control equipment and cosmetic upgrades.

The challenge for Wilmington employees is learning new technology. Fortunately, because Wilmington is part of the electric railroad, the feeling here is that if it's worth knowing, it's worth learning. This is what our employees are adept at doing; they're technically open-minded and technically curious. Without this desire to learn new ways, there would be no moving forward in the current railroad industry. The bottom line is, as it always has been, whoever knows the railroad, owns the railroad.

Due to the consolidation of companies in the supplier industry and the resulting disarray, it has become especially challenging to work with some suppliers. In many cases, the employees at this facility must design and build their own parts or

'Above and Beyond'

In late December, Officer Paul Machovina, of Florida's Altamonte Springs Police Department, was at his wits' end. He had just spent three hours with yet another transportation company trying to get two siblings returned safely to family members. Under difficult circumstances, the two children had been separated from their mother and were now stranded 800 miles away from their nearest relative, and they had no money.

Reservation Sales Agent John Grady is recognized by the Altamonte Springs Police Department for going 'Above and Beyond.'

His next call was to Amtrak. His luck changed when he spoke with Customer Service Specialist **John Grady** at the Riverside Call Center. Because the children had no money to travel, Grady called **Sid Birckett** into action. The Superintendent of Passenger Services in Jacksonville, FL, agreed to donate two tickets from Orlando, FL, to Huntington, WV.

Since the children still needed money to eat once on board the train, Grady encouraged members of the Altamonte Springs Police Department to contribute enough money so that the children could buy food.

Within two weeks of the incident, the Florida police department sent a special plaque to Grady with the following inscription: Thank you for going above and beyond the call of duty ... you made the difference in the lives of two very frightened young people. In a letter, Chief of Police Robert Merchant, Jr. wrote, "Your compassion and desire to help these two teenagers get safely home speaks volumes about your character and about your company's level of customer service. On behalf of the Altamonte Springs Police Department, thank you very much."

John Grady has been in service to Amtrak since 1980.

*Sue. A. White, team leader,
Riverside, CA*

Kindness shines on board

The winter holidays are a busy time of year for everyone and it's easy to get caught up in the hectic pace of the season.

While traveling in the Northeast Corridor aboard train 173 on December 24, several passengers observed an elderly gentleman who appeared to be disoriented as to where he was going and why he was even on the train. Fortunately for this gentleman, Conductor **Larry Solomon** was on duty that Christmas Eve. After learning about the situation, Solomon took the time to sit and talk with the gentleman and ask him some questions.

Solomon was able to get enough information to phone a member of the man's family from the train. The family then made arrangements to meet the train and receive their Christmas visitor.

One of the observant passengers, Mrs. Carol Robinson, was so impressed by Conductor Solomon's actions that she contacted the Philadelphia Call Center and spoke with Team Leader **Harry Denno**. For Robinson and those passengers around her, this was a made-for-Christmas-TV movie happening before their eyes. And, Robinson was determined that Solomon's kindness and efforts not go unnoticed by Amtrak.

Thanks, Larry Solomon, for your kindness. And, thanks also to Mrs. Carol Robinson and Harry Denno for passing along the word.

Amtrak Empire Builder crew saves passenger's life

A 19-year-old woman who recently rode Amtrak's *Empire Builder* and experienced a medical emergency is alive and well today, thanks to a well-trained, quick-thinking Amtrak crew.

The woman, a passenger aboard Amtrak Train # 7 on February 18, began to miscarry while the train was in a rural area between Whitefish and Libby, MT.

Crewmembers, who were veterans of Amtrak's PREPARE classes and had been trained to handle onboard emergencies, sprang into action, according to Assistant Superintendent **Timothy A. Branson**, who also was aboard the train.

Conductor **Joseph S. Loran**, a member of UTU Local 117 in Vancouver, WA, assessed the situation and immediately called Engineer **Aaron Rowe**, asking him to radio for emergency assistance, Branson said. The situation was complicated by the train's location

in the Flathead Tunnel, but the crew remained calm until radio communication could be established.

Because the train was at least 45 minutes away from a medical center, the engineer, working with BNSF dispatcher Gary Armitage and chief dispatcher **Jack Miller**, arranged to meet an ambulance just outside Riverview. "With the assistance of a deputy sheriff from Lincoln County and a BNSF special agent, the ambulance arrived at the same time as the train," said Branson.

Meanwhile, Loran had located on board a doctor who began tending to the woman. Loran, along with assistant conductor **Phillip Q. Brown**, also a member of Local 117, and Lead Service Attendant **Lois Christerson** brought first-aid supplies, gloves, towels and water to the doctor, who grew concerned over the passenger's loss of blood and weakening pulse.

A well-prepared ambulance crew from Libby arrived at the meeting point, administered oxygen, started an I.V. solution, and rushed the patient to a hospital in time to save her life, said Branson.

"Unfortunately, the baby couldn't be saved," said Branson. "But the entire crew all came together and did an excellent job in the face of a life-threatening emergency. I happen to supervise that train, and I was more than impressed with what I witnessed. These people, including **Steve Bushnell** and **Dan Gustafson**, who teach the PREPARE classes locally, deserve a lot of credit for handling a critical situation quickly and correctly."

*John H. Horvath, UTU NEWS/
Public Relations, Cleveland, OH*

Amtrak on-target for safety goals

The first quarter of fiscal year 2003 ended with good news in safety. The system-wide reportable injury ratio for each 200,000 hours worked was 3.6, results that compare favorably with our 3.8 FY '03 goal. Reportable injuries — events that require medical treatment exceeding basic first aid, prescription medication or that result in restricted work activity or days away from work — are used throughout general industry to

measure workplace safety performance.

While applauding employee safety performance, Chief **Ron Frazier**, Amtrak's Chief of Security and Safety, extended a challenge to all employees to maintain the trend. "It is important that we not be diverted from our number one priority — staying safe," said Chief Frazier. "Strict adherence to safety and operating rules remains fundamental to our injury prevention efforts."

The frequency of passenger injuries showed marked decreases compared to the first quarter of the past fiscal year. Injuries to passengers on board trains decreased 12 percent and mishaps involving passengers on platforms and in station areas decreased 10 percent. Amtrak's goal for FY '03 is to reduce the total number of passenger injuries by 10 percent. Our train and engine crews and station personnel deserve recognition. Their concern, vigilance and

willingness to intervene helped achieve these important reductions.

If you have any questions concerning Amtrak's safety programs, contact Chief Safety Officer **Cedestra Jordan** at ATS 734-2263 or Director of System Safety and Field Operations **Michael Pollick** at ATS 734-2039. Let's stay focused. After all "Safety Is Where the Heart Is."

New initiatives aim to increase ridership

The weak economy, potential terrorist threats and concerns about war are causing fewer Americans to travel long distances. Many who do travel are choosing to go short-distances, often driving to their destinations. Business travel is also down, and as many companies have cut their travel budgets, these reductions have hit the travel industry's bottom line.

Given these current trends in travel, the Marketing and Sales Department has put into action a number of initiatives designed to entice more people to leave home and come aboard. While these initiatives are offering the traveling public attractive opportunities, they are selling seats that would otherwise remain empty.

The good news is that we have benefited from travelers going short-distances and people who opt for rail travel over flying. As a result, our short-distance trains such as California's *Surfliners*, *Capitols* and *San Joaquins*, and the Northeast Corridor's *Regionals* have done well. Because of the increase in short-distance trips, ridership for the first quarter was 2 percent over projections. However, since these tickets are lower-priced, revenues came in 9 percent lower than expected.

Short-Distance Travel

To capitalize on the short-distance

travel trend, the marketing team launched several promotions to attract business and leisure passengers. For our 500,000 Amtrak Guest Rewards members, there was a Buy-Two-Get-One-Free offer promoted in print and on radio that began in December and ran through February. Amtrak Guest Rewards members could earn a certificate for free roundtrip travel on *Acela Express* and *Metroliner* Services when they purchased two roundtrips between Boston, New York and Washington. Certificates are redeemable for travel to any *Acela Express* destination between April 22 and August 28, 2003. Additionally, television ads continue to promote frequency and on-board amenities, and plans for a spring campaign are currently underway.

Also in the Northeast, in conjunction with the new 10th *Acela Express* roundtrip service between Boston and New York, which began January 27, a new *Acela Express* service was added on the South end. To introduce this new service, Amtrak is offering a special \$59 fare that is good for business class travel and is available between January 27 and April 25. It applies only to the new 8:30 p.m. Washington-New York departure of Amtrak's *Acela Express* train number 2118. "Fifty-nine dollars is the lowest price we have ever published for *Acela Express* travel," said **Barbara**

Richardson, Amtrak's vice president of Marketing and Sales. *Acela Express* tickets are typically more than twice that amount.

Long-Distance Travel

To promote long-distance travel, in early January Amtrak lowered coach fares by up to 25 percent. Additionally, on some routes, fares for sleeping accommodations were also discounted, and we increased group discounts.

At the same time, Amtrak announced the Winter Promotion. The offers included a free companion ticket for each ticket purchased, or a 25-percent fare discount for passengers traveling alone. These promotions were offered for sale from early January to mid-February for travel January 10 through August 28, 2003. Families traveling together were offered an even greater savings. Up to two children, ages two to 15 could accompany each fare-paying adult at 50 percent off. Also in February, working closely with one of our travel partners, AAA, we jointly promoted through their large network of agencies a Kids-Ride-Free-on-Amtrak offer.

E-Commerce

To leverage all available communications tools, several promotions are offered online and through other electronic means.

"For families planning a vacation, the special online fares may be combined with Amtrak's everyday discount for children, allowing two children, ages 2 to 15 to accompany each fare-paying adult at 50 percent off the discounted fare. The online fares may also be combined with Amtrak's senior and Student Advantage discounts.

The special online fares are available for sale from February 21 through March 14, 2003 for travel February 26 through August 28, 2003.

"With almost 24 percent of all ticket purchases being made online, our Web site continues to grow as a popular choice for travelers," said Richardson. "More and more of our passengers seek the convenience of booking online, and in turn, we're providing irresistible fares to hundreds of destinations as an added incentive to log on."

Amtrak also benefits from its relationship with its newest online partner, Hotels.com. After booking reservations through our call centers, customers can be directly transferred to a Hotels.com representative who can assist them with hotel reservations.

Results

Following the industry trend, compared to last year, long-distance ridership was down in the

continued on page 11

Taking safety on the road

The safety of our passengers and employees continues to be our number one focus. In a nationwide effort, Office of System Security and Safety is partnering with operating and support areas to "Take Safety on the Road."

February 14th marked one of many planned system-wide safety outreach efforts promoting employee and passenger safety. Capitalizing on the goodwill of Valentine's Day, the "Safety is Where the Heart is" campaign resulted in contact with thousands of employees and passengers. Employee handouts identified three important safety subjects: proper lifting, avoiding slips/trips/falls and performing safe switching operations. Passenger handouts, which were provided with tickets, as seat-drops and through direct contact at stations and on board trains, included travel tips that addressed safety at stations, on trains, and when boarding and detraining. In some locations, Hershey candy "kisses" were provided along with

handout material to stimulate interest and participation.

Employee-focused safety activities occurred throughout Amtrak's operating divisions, and at mechanical facilities, reservation call centers and corporate headquarters. Led by senior staff, management, employee committees and labor joined to meet with workers face-to-face during all work shifts.

"Identifying ways to prevent injuries and increasing general safety awareness were our primary goals," stated **Cedestra Jordan**, Amtrak's Chief Safety Officer. Jordan also identified other beneficial outcomes including valuable employee and passenger feedback on safety issues.

Grade crossing and trespass safety were also targets for "Safety is Where the Heart is." **Alvin Richardson**, Amtrak's newly appointed Operation Lifesaver officer, partnered with Operation Lifesaver's (OL) national headquarters to arrange for an OL presence

at many Amtrak stations system-wide including Atlanta, Baltimore, Jacksonville, Miami, Birmingham, New Orleans, Los Angeles and Omaha. Multimedia displays and an assortment of handout materials were utilized to promote highway-rail grade crossing safety and trespass prevention. Marmie Edwards, Operation Lifesaver's vice president of Communications, joined Amtrak representatives at Washington Union Station to share valuable safety information with passengers, guests and employees.

Operation Redblock committees utilized a variety of events across the system on February 14th to promote the combined message of "Safety is Where the Heart is" and "Redblock Has You at Heart." Activities included candy raffles, bake sales, dessert and doughnut walkabouts, and numerous "meet and greets." Redblock activities were conducted

L. to R. **Marty Burke, Al Ruxton, Maryla Urban, Katrina Coleman, and Jack Fisher** from Philadelphia's Mail/Repro Center receive safety handouts from Chief Safety Officer Cedestra Jordan.

at twenty-nine separate work locations including New York, Albany, Philadelphia, Pittsburgh, Wilmington, Washington, Richmond, Jacksonville, Miami, Shelby, Denver, Los Angeles, San Bernardino, and Oceanside.

We appreciate the safety commitment of every Amtrak employee as we continue our journey of "Taking Safety on the Road."

Passenger rail security and Amtrak's 'Employee Watch Program'

How you can help

Concern about security remains high among Americans, now 18 months after the terrorist attacks of September 11. While our passengers and all Americans don't want to live in a state of fear and suspicion, it is important that Amtrak employees remain vigilant on the job.

Between February 7 and February 27, the federal government held the Homeland Security Advisory System Threat level at ORANGE (High, High Risk of Terrorist Attacks). Since then, the threat level has returned to YELLOW (Elevated, Significant Risk of Terrorist Attacks). While the Amtrak Police Department responded accordingly by maintaining a high level of security, employees are being asked to do their share by being aware of their surroundings and by remaining vigilant in the workplace. As you know, non-specific threats against transportation infrastructure have been made in the past and we must recognize that the safety and security of our co-workers and passengers are our top priorities.

Amtrak's Employee Watch Program was established to help make our stations, trains and other facilities a more secure environment. Being aware of suspicious circumstances or activity and reporting it to the Amtrak Police Department is vital to our security.

Every employee is essential to the success of the Employee Watch Program. You should know the environment and the routines — what is considered ordinary — in your work areas. You know who belongs in your shop, office and yard. You know who belongs on your train, on the rights of

way, and in or around restricted areas. Improperly parked or abandoned vehicles are obvious to you. Strange or suspicious behavior attracts your attention. Be alert and do your part by reporting such activity immediately to the Amtrak Police Department, which can be reached 24 hours a day, at (800) 331-0008.

Every employee is essential to the success of the Employee Watch Program.

You should know the environment and the routines — what is considered ordinary — in your work areas.

The following important information about the Employee Watch Program describes how you can do your part to make Amtrak safe for its employees and passengers.

Tips to be A.L.E.R.T.

Alert employees are vital to the security of our customers and our fellow employees — stay alert for suspicious activity and report it if it occurs. While staying alert may seem like common sense, busy people often forget to be mindful of the following tips:

Ask questions Of course, it is always important to be polite when asking customers or others a question about what they are doing. However, if you are truly concerned about a person's activity, it may be best not to ask — use your judgment. Remember, all employees are required to wear identification badges at all times. So if someone unfamiliar to you is without an ID, don't hesitate to ask questions. Request to see an ID, and if he or she fails to produce one, report the incident to the police.

Lock up Make sure doors to restricted areas, including offices, station areas and gated property, are always locked. If you leave your work area for an extended period of time, lock office doors behind you and/or let a co-worker know of your absence.

Expertise: Know your limitations You are not expected to be a security expert. The following questions, however, will help to train your eye to detect suspicious objects: Is the suspect package or bag in a concealed location? Does the item have any obvious characteristics —

does it look like a bomb? Is there any wiring or circuitry evident? Is the item

seeping any powders or liquids, or emitting a strange odor? Were any suspicious persons seen in the vicinity of the item? Knowing these answers will help the police when you report the incident.

Report suspicions Report any suspicious persons, activity, or objects immediately. If a criminal act has occurred, be prepared to answer these questions for the police: When and where did the event take place? How many people were involved? Were there any witnesses? Can you describe the suspects?

Trust your instincts These tips can give you some guidance, but it is impossible to define all the objects, persons and circumstances that might be deemed suspicious. You must trust your instincts and follow up on them. If anything appears questionable to you, always contact an Amtrak police officer.

What to Report to the Police

WHAT What is it? A package, peculiar behavior, etc. If it is a package, provide description and size. Compare it to familiar items if possible — size of fist, looks like a hair spray can, etc.

WHEN What time did it happen or when did you find it?

WHERE Where did it take place?

WHO Who discovered it? Are there any witnesses? Can you describe the suspect(s) — height, hair and eye color, identifying tattoos or scars, what they were wearing?

HOW Can you describe the vehicle or provide a license plate number (if applicable)?

Receiving a Bomb Threat

Receiving a bomb threat is terrifying. Be calm and focused. Bomb threats must be taken seriously and require appropriate action.

Protocols for responding to bomb threats will vary depending upon your position at Amtrak. If you are the one who gets the phone call, try to alert your supervisor and the Amtrak police while you continue the call. Maintain a calm and courteous tone to encourage the caller to remain on the line. If possible, pretend you are having difficulty hearing. A lengthy exchange may elicit details about the location of the bomb as well as help the police to identify the caller. If possible, write down the exact wording of the threat. Keep the caller talking by asking for further information:

- When is the bomb going to explode?
- Where is the bomb right now?
- What does the bomb look like?
- Why did you place the bomb?
- What is your name?

The amount of information the caller is willing to reveal will determine how you should proceed:

Employee Watch Coordinator Linda Downing, DE. Coordinates security concerns.

If you are not able to speak to the caller, call the police. Provide whatever information you can. Be guided by advice from the police.

If the caller gave a specific location, call the Amtrak police to coordinate the response. Identify the location of the packages. If no device is found, maintain heightened vigilance.

If a bomb is discovered, mark the location and move away from the area. Notify Amtrak police management.

Identifying Suspicious Packages or Bags

You are on the scene. You are familiar with the route and the passengers; therefore, you can notice abnormal circumstances. Here are some tips on what to look for. Notify police about suspicious activity. Keep in mind that suspicious activity is often dangerous and can be life-threatening. Make a bag or package suspicious by visually connecting it to a person or other in the area if possible. Unattended baggage is a red flag, but immediate action should be taken when other factors are present.

- An individual with a bag or package that appears suspicious when they appear nervous or return immediately.
- A bag has been left in a restricted area. This becomes a red flag if an attempt has been made to place the bag in a restricted area of plain sight.
- A seated passenger with suspicious packages on his or her lap refuses to place them in storage or to relocate to an adjacent seat.

Officer Doug Paige, Employee Watch coordinator for the Mid-Atlantic North Division, provides Linda Downing, usher at Philadelphia's 30th Street Station with some valuable security tips.

Coordinator Officer **Robyn Parker** visits CNOC employees in coordinators across the country are reaching out to employees, ty awareness, sharing on-the-job security tips and addressing

Ask customers and ea if a specific bag belongs ey saw the owner recently. ggage should always raise a mediate action should be er factors are involved:

al walks away from a other item. This becomes hen ... the individual vious or hurried and does not diately to claim the property.

een left in a station waiting ecomes suspicious when ... has been made to conceal trash can or somewhere out it.

ssenger is holding bags or his or her lap. This becomes hen ... the passenger lace the items in overhead o remove them from an it.

Handling Suspicious Packages or Bags

When it comes to suspicious packages, we often speak of how to “handle” them. But that term can be misleading. The most important rule is that suspicious objects should never be touched. A shipping box or carry-on bag may conceal an explosive device or dangerous substance, and handling such an item might fulfill the criminal’s intent by triggering an explosion or exposing people to a harmful substance. Below are several tips which may be helpful:

- Avoid contact with the package or bag in question.
- Contact the Amtrak police at (800) 331-0008.
- If you come in contact with the package, wash your hands thoroughly with soap and water, then cleanse your face.
- If possible, control the area to prevent others from entering until police arrive.
- Have the building or station manager shut off the ventilation system to prevent possible circulation of fumes or toxins.
- Make a list of witnesses should the Amtrak Police need to give a list to the proper authorities.
- Take no further action until police or the hazardous material team advise differently.

Chemical and Biological Agents

Chemical and biological agents come in many forms and merely discussing them is frightening. This is exactly the reaction criminals want when using them. Fortunately, these incidents have been rare around the

world and Amtrak has qualified police officers trained in bio/chem-terrorism. However, if you suspect such an attack, clear the area and contact the Amtrak police.

Employee Watch Volunteering

Amtrak police officers cannot be in every station, yard, or maintenance facility for our security. That’s why it is so important for employees to do their part in reporting suspicious circumstances and activities. Helping to ensure a safe and secure environment starts with you. If you are interested in becoming an Employee Watch Volunteer, or if you have any questions about the Employee Watch Program, please contact the coordinator in your area. Above is a list of Amtrak Police Department program coordinators who may have already contacted you about Employee Watch Program information.

Do your part to safeguard our passengers, employees and the public. Follow these simple measures, stay alert, and report suspicious circumstances and activity to the Amtrak police at (800) 331-0008.

Delaware shops make strides

continued from page 3
components by reverse-engineering what we currently own.

Bear Shops

The Bear shops provide high-volume car overhauls and some wreck repairs. The shops are also catching up on some deferred maintenance of our Amfleet equipment. The four-year brake and truck overhauls have been expanded to include a light overhaul of the air conditioning, heat controls and door controls — all using components that come from the Wilmington facility.

For the most efficient production schedule, it becomes a three-part race. The first part is the Purchasing Department — how fast can they get the parts purchased and delivered. The second is the Wilmington Locomotive Shops — how fast can they overhaul the air conditioning and refrigeration, and the door operating components and control panels. And the third is Bear — can they replace these parts on the cars as fast as Wilmington can overhaul them and get them to Bear. And, can all of them do it right.

There are about 600 Amfleet Is, IIs and cab cars in the overall fleet. Approximately one quarter of the fleet is to be light-overhauled at Bear each year, and 60 of those cars have been done already this year. And, the car upholstery must be refurbished at the same rate. Twenty to 30 food service cars will go through a real capital program, such as new bathrooms and new interiors, and there are about a half-dozen wrecks, or car shells that are a mix of coach, café and lounge cars that are almost finished being reassembled.

Similarities

Both the Wilmington and Bear operations must meet the challenge of becoming lower-cost facilities. They must also become more ingenious at industrial engineering, and get a better, more practical control of our suppliers so that we can dictate and specify our price and quality. And we must scrap the junk and repair the fleet.

All of our facilities have awakened to a new era. We’ve made tremendous strides with getting the people back on the job to do the work, and the results are beginning to roll off the production line. This is tough work, and it’s just the beginning.

RAILWAY ROUNDUP

Celebrities take *Pacific Surfliner* to Super Bowl XXXVII™ pre-game extravaganza

On January 23, a Business class car on Amtrak's *Pacific Surfliner* was transformed into a celebrity car for a trip from Los Angeles Union Station to this year's "Gridiron Glamour" fundraiser and fashion show in San Diego, CA.

Amtrak Managers **Don Wong, Brian Hart, Mike Chandler, Dee Mason, Carol Shannon, and Vernae Graham** were just a few of the Amtrak employees who participated in the event.

More than 40 celebrity partygoers hopped on board the Gridiron Glamour Express for a Southern-style catered dinner courtesy of the HollyRod Foundation, a non-profit charity organization dedicated to providing financial, physical and emotional support to people afflicted with Parkinson's disease. Actress Holly Robinson Peete and her husband, NFL quarterback

Rodney Peete founded the organization in 1997.

As sponsors, Amtrak received headline corporate branding on all banners, press releases, brochures and magazines; brand association with the NFL and all celebrity supporters; inclusion in all press releases generated by the HollyRod Foundation about the program, as well as mention in an article in

InStyle magazine. In addition, association with the HollyRod Foundation and this diverse event generated significant positive publicity from various entertainment media including "E" Entertainment Television, People and US magazines. The television program Access

Hollywood covered the entire Gridiron Glamour weekend from the train ride all the way through the fashion show and featured Amtrak as a major sponsor.

Among the more than 500 people who attended the HollyRod Foundation's Gridiron Glamour fashion show on Saturday, January 25 were Amtrak Board Chairman Mayor John Robert Smith and wife, Kelly. "We were pleased to help sponsor such a worthy event, and the international exposure Amtrak

received was a win-win for all of us," said Smith.

"Gridiron Glamour" is an annual Super Bowl weekend celebrity luncheon that features a fashion show and auction. Proceeds from the event will benefit the Salk Institute for Biological Studies and Norris Comprehensive Cancer Center & Hospital at the University of Southern California. This year's fashion show included entertainers from television and film as well as professional athletes.

Coaster commuter service breaks records for Super Bowl weekend

The Amtrak-operated *Coaster* commuter service set new passenger records over the three-day Super Bowl weekend. Extended service was offered to allow football fans convenient access to all the activities scheduled around the big game at Qualcomm Stadium in San Diego. The record three-day passenger total included the busiest day in *Coaster* history with nearly 15,000 fans using the train on Saturday, January 25. Fans of all ages crowded into every available southbound *Coaster* train to avoid a difficult commute and tough parking situation in San Diego for this international sporting event.

Ed Kasparik, manager of Commuter Rail Services for the North County Transit District (NCTD) who owns the *Coaster* service, praised the efforts staff and transit partners. "I'd like to thank the many volunteers who staffed our *Coaster* platforms to sell tickets during the weekend. We're also very grateful to Amtrak, the contract operator of the *Coaster*, and to the San Diego Trolley and its fine staff for the outstanding effort they provided all weekend long," Kasparik said.

Coaster commuter rail service, between Oceanside and San Diego, typically sees weekend ridership for Friday and Saturday at approximately 6,600 passengers, with no operations on Sunday. But the service transported more than 25,700 passengers on the three-day Super Bowl event.

"Our employees rose to the occasion and did an outstanding job moving so many people in such a short time," said **Joseph Yannuzzi**, superintendent Commuter Operations, of the Amtrak *Coaster* operation. "Great attitudes and a willingness to go above and beyond are some of the qualities of our employees here — which will all contribute to Amtrak continuing to serve NCTD in this important commuter contract," said Yannuzzi.

ORGANIZATIONAL UPDATE

Chicago Call Center to close in December

In late January, Amtrak announced the closure of the Chicago Reservation Sales Call Center by December 31, 2003. This difficult decision is the consequence of a substantial decline in call volume as more travelers use other electronic means to make reservations and buy tickets. This trend has been witnessed in all sectors of the travel industry, from car rental agencies to airlines, cruise ships and passenger rail.

At Amtrak, the number of calls to the Reservations Sales Call Centers (RSCCs) has declined sharply, from 2.1 million calls in December 2000 to 1.2 million calls in September 2002. Overall, the number of calls is down 20 percent

over last year, and down 32 percent to date this fiscal year.

Amtrak has taken steps to lessen the impact of this downturn in calls. Last year, Amtrak decreased call center staffing levels through attrition. However, when attrition did not keep up with the shift in demand, Amtrak then reduced the RSCC workforce by 88 positions in late summer 2002. Since that time, Amtrak has continued to rely on attrition.

While these strategies succeeded in reducing overall staffing levels, the company continues to find itself with too much facility capacity. We are not alone in this regard, and in the last six months, others in the industry have reduced the number of their call centers as well.

Chicago is the smallest of our three call centers and roughly equal to our current excess capacity. By retaining our two larger facilities on opposite coasts, Amtrak maintains operational flexibility and coverage of a wide range of time zones.

To help lessen the impact on employees, Amtrak has provided nearly a year's notification period so that those affected may have ample opportunity to consider their options. As the operations of the Chicago call center are phased out through this year, efforts will be made to assist those who work at the call center during the transition to work within Amtrak or outside the company.

Acela Regional Changes Name to Regional

To help customers traveling the Northeast Corridor better distinguish between our services, the *Acela Regional* officially became known as the Regional on March 17. We learned from our customers that confusion between the names *Acela Express* and *Acela Regional* has persisted since *Acela Regional's* introduction in January 2000.

To help assist passengers with this transition, stations in the northeast received ticket stuffers describing the choices passengers have from Newport News to Boston. The mark of a good business isn't always making the best decision out of the gate, but having the wherewithal to listen to our customers and make changes when necessary.

Long-distance trains offer new expanded menu

Amtrak will introduce new dining car menus on all of its long-distance trains (except *Auto Train*) in April 2003. The new spring-summer menu consists of three distinct menu cycles with additional menu selections provided on each cycle. Amtrak wants to offer an increased variety of high-quality meals for passengers traveling on long-distance trains. Under this concept, passengers will dine on one menu on their outbound trip and enjoy the dining experience of a different menu on the return trip on that same train. In most instances, passengers connecting to a different long-distance train will experience a different menu from what was offered on the previous train.

Here are a few highlights of the new menus:

- Additional items have been added to each meal period.
- A number of entrees have been reduced in price, yet portion sizes have increased on selected menu items.
- Coffee, tea, milk or juice will be included in the price of the main entree for all meals. Of course, all meals for first class passengers are covered in the price of their train ticket.
- One breakfast entree (a quiche or frittata) will also be available on the lunch menu for late risers.
- A Gardenburger (vegetarian burger) will be available on each of the three lunch menus.
- The tossed side salad previously available only at dinner will now be available with selected lunch entrees.
- The dinner rolls have been upgraded and will now be available also with selected lunch entrees.
- Six dinner entrees will also include a vegetarian selection, and an evening's special, both priced in the \$9 to \$11 range.
- The evening's special will be different on the second evening of the trip.
- Dining car patrons will have the option of ordering the dinner beef selections and the

catfish selection "blackened" with Cajun seasoning.

- Three different desserts will be available on each of the three dinner menus. The fourth dessert selection (vanilla ice cream) will be available on every dinner menu.
- A selection of wines (Merlot or Cabernet Sauvignon; Chardonnay or Sauvignon Blanc) will be available with dinner at a price of \$8.00 per half bottle.

Amtrak is pleased to offer a greater menu variety and more value for passengers traveling on long-distance trains. The actual spring-summer menus (all three cycles) will be available on Amtrak's Intranet this month.

Service updates

New Amtrak Capitol Corridor timetable provides 22 trains a day

On January 6, Amtrak's California Capitol Corridor added one round-trip to total 22 weekday trains and 19 weekend trains. These added departures increase the schedule choices we offer our customers. Included in the new timetable is an additional morning train from Sacramento to Oakland, which will enhance the overall schedule on the line between Sacramento to San Jose.

New schedules for Pennsylvanian and Keystone Service

On February 10, Amtrak restored the *Pennsylvanian* to its original daylight schedule between Pittsburgh and New York. Unlike its predecessor, the new *Pennsylvanian* will operate through to New York, eliminating the need for passengers to switch trains at 30th Street Station in Philadelphia.

Since 1998, the *Pennsylvanian* operated between Philadelphia and

Chicago to support Amtrak's Mail and Express operation. Amtrak announced last year that it would discontinue the Express operation.

Additionally, changes were made to train schedules along the *Keystone* line between Harrisburg and Philadelphia - offering the same number of trains, but at more convenient times.

Amtrak adds Acela Express service

In January, Amtrak added a new 10th *Acela Express* roundtrip between Boston and New York. This brings the total number of premium weekday departures to 19 between the two cities.

Also in January, a new *Acela Express* service was added on the South end, from Washington to New York. The addition of train #2118, which departs Washington, D.C. at 8:30 p.m., was introduced with a special one-way fare of \$59, which is valid through April 25, 2003. The new fare is available only in Business class, and only on train # 2118.

Michigan DOT changes staffing to reduce costs

When renewing their annual contract with Amtrak last fall, the Michigan Department of Transportation (MDOT) reviewed cost-savings initiatives that would reduce the operating support they would need to provide for the two state-supported Michigan trains, the *Pere Marquette* and the *International*. As a result, MDOT chose to un-staff three stations, Port Huron, East Lansing and Flint, along the route of the *International*, which took place in early January. Due to the fluid nature of the situation, additional changes may affect both the *Pere Marquette* and the *International*. Customers must now purchase their tickets in advance or, if traveling last minute, may be able to buy tickets from the conductor on board if seats are available. Accommodations have also been made to keep the un-staffed stations open during train service hours.

Changes to Missouri service to off-set reduced funding

Amtrak receives operating support from the state of Missouri on two daily trains that provide service between Kansas City and St. Louis — the *Missouri Mules* (#301/306) and the *Ann Rutledge* (#303/304). Because the state has approved a lower level of support for those trains, the Missouri Department of Transportation and Amtrak have agreed to implement some cost-cutting measures, similar to those changes made in Michigan, designed to meet the state funding shortfall.

Effective April 1, the station agent positions in Kirkwood and Jefferson City, MO, will be eliminated. Arrangements are being made to keep the stations open during the day to serve most train passengers. Because passengers will no longer be able to buy tickets in the station, and the train is reserved, they should purchase their tickets in advance through the Web site, by calling 1-800-USA-RAIL, or through a travel agency.

New initiatives aim to increase ridership

continued from page 5

first quarter by 16 percent. However, in January, the trend was up by 1 percent. And coach seat sales, which were down in the first quarter by 13 percent, also showed a positive trend upward of 3 percent. And finally, while it's still difficult to attract travelers for overnight trips, sleeper sales also improved. While the first quarter

showed a drop in sales by 24 percent, the improvement in January was a drop of 13 percent.

Overall, the ridership is increasing slightly without hurting revenues. In other words, we're not giving it away. But revenues are still down compared to last year and our budget target.

Coming this spring

The Spring Promotion campaign, which begins in March, will continue the advertising trend with programs like the 1-2-Free offer, which will be promoted on television, radio and in print. The AAA promotion is designed to help get families on board this summer. At the same time, an Internet promotion will start. In addition to these national

programs, there are local programs coming up. An example is the California 50-percent off program, which is currently running and valid for travel through March 30.

Although the future can't be predicted, Marketing and Sales will be focusing their energy and resources into persuading travelers to take the train.

Amtrak names Fergus Award winner

In celebration of Black History Month, Amtrak's New England Division Diversity Advisory Committee has announced that the Boston Commuter Mechanical Department has won the first annual Leroy Richardson Fergus, Jr. Diversity Award. The award is presented to the department within Amtrak's New England Division that best exemplifies the company's commitment to valuing and understanding diversity among its employees and passengers.

This year's award was presented to the 500 employees of Amtrak's Commuter Mechanical Department in Boston, which was recognized for its commitment to fostering the positive qualities and benefits of a diverse workforce. The department

also exhibits strong community interaction, which includes participation in job fairs hosted throughout the Commonwealth of Massachusetts to recruit employees of diverse backgrounds.

Leroy Richardson Fergus, Jr. began his career at Amtrak as a trackman in 1977. Through hard work and dedication, he rose to the position of Special Assistant to the General Manager in Employment Relations, the first employee to hold this prestigious position. In his role, Mr. Fergus used his skills in negotiation and conflict resolution to combine the pursuit of business goals with a commitment to diversity. Mr. Fergus succumbed to cancer in March 2000. His dedication to diversity lives on through this award.

David C. Warner

The picture tells the story ...

On February 18, during one of the worst snowstorms in recorded history on the East Coast, an Amtrak *Regional* train glides through the snow at Claymont, DE, providing service to otherwise stranded travelers.

President's Safety Contest Winners for FY '02

At the end of each year, the System Safety Department reviews safety performance rankings for each operating group. At that time, the President's Safety Contest award winners are announced.

In prior years, the awards were presented to the SBU, Commuter Operation, Mechanical Shop, and Reservation Call Center that have the best (lowest) employee reportable injury ratio per 200,000 work hours. However, Amtrak's operating and support functions were reorganized during recent months. As a result, SBUs were eliminated and Divisions were reorganized. The new President's safety FY '02 contest categories, winners, and ratios are:

Best Safety Performance for FY '02

Metrolink Commuter Service

Metrolink commuter trains, operating in Southern California, carry more than 34,000 commuters each day. Amtrak has been operating these commuter trains for the Southern California Regional Rail Authority since 1992, and as such has helped to significantly reduce congestion on the state's highways.

See story on page 6

Mail and Express Restructure Aims at Improvements to the Bottom Line

Restructuring of Amtrak's mail and express business to mail-only will increase network productivity, simplify operations, improve service to passengers and better Amtrak's bottom line in FY '03 by \$4.2 million, according to plans detailing how the company will exit the unprofitable portion of its express business and restructure the mail business in response to reduced volume.

The restructuring plan is being implemented in three phases. The first two phases, scheduled to be completed by the end of April,

are aimed at eliminating most of the express service and improving passenger schedules and services that don't provide an adequate return on investment. For example, the plan reduces the number of trains that operate with non-passenger equipment from 20 to seven, ends en route switching at nine locations; the largest of which are Toledo, OH; Harrisburg, PA; and Kansas City, MO; does away with Chicago terminal mainline pick-ups and eliminates the Washington-Springfield mail trains.

Crosbie Discusses Goals for Operations Department

Editor's note: Amtrak Ink recently sat down with Bill Crosbie, senior vice president of Operations, to hear what his plans are for the Operations Department.

Amtrak Ink: Since you are new to Amtrak, please tell us about yourself.

Crosbie: I started as Amtrak's new senior vice president of Operations on January 6, 2003. This position replaces the former Chief Operating Officer position. For those of you who don't know me, I come to Amtrak with 18 years of experience in the railroad and transit industry. I have worked primarily for CP Rail and the Toronto Transit Commission in various positions within their operating departments.

On January 5th, I left Oakville, Ontario, Canada on board train 64 to join Amtrak and help return Amtrak's operational focus to that of a traditional railroad. It became apparent very quickly that Amtrak employees share the same passion I have for the railroad. The employees I've met are proud of what they do; they care deeply about the future of Amtrak and of the national passenger rail system.

Amtrak Ink: What are the goals and objectives for the department?

Crosbie: Of course, our main objectives are tied in to the goals and objectives laid out by Mr. Gunn. We need to return the fleet and the infrastructure to a state of good repair, we must improve on-time performance, and we need to develop and implement preventive maintenance programs in all areas. We also need to improve the quality and delivery of our customer service. For example, we need to improve the state of our washrooms, our public address announcements, on-board service and the quality of our food selection.

Amtrak Ink: What kinds of management tools do you use to bring the operational focus to that of a traditional railroad?

Bill Crosbie joined Amtrak in January 2003 as senior vice president of Operations.

Crosbie: Since Mr. Gunn joined Amtrak, tools have been put in place to manage and stabilize the company, such as detailed organization charts, a zero-based operating budget, a state of good repair capital budget and monthly performance reports that measure our success. One of my responsibilities is to implement these tools — I'm very familiar with them and plan to apply them to all areas of the Operations Department. In the three months I've been with Amtrak, I've started to structure an Operating Department with lean management, a clear chain of command, and clearly defined roles and responsibilities and accountability.

**"As we move forward,
our budget process
and reporting tools
will be a key element
of our success."**

Bill Crosbie, Senior Vice

President of Operations

Amtrak Ink: How will you account for and measure the department's success?

Crosbie: As we move forward, our budget process and reporting tools will be a key element of our success. Each area within the Operations Department will establish goals and objectives and

continued on page 9

TRAIN OF THOUGHT

Next month, I will complete my first year at Amtrak. It has not been boring. As you will remember, the first few months were consumed with our cash crisis — negotiating a \$100 million loan from DOT and securing a supplemental appropriation from Congress.

In addition to the struggle to maintain solvency, we had to focus on the future. First we began the process of reorganizing the railroad. The goal was to streamline the management structure; eliminate layers and concentrate decision-making authority for functional areas. The SBUs are gone, the regional boundaries are gone, thus the chain of command is shorter and hopefully more responsive.

We created a realistic and defendable budget, incorporating quantifiable goals and objectives and tight control over staffing. It has been painful. Jobs were abolished and action was taken to reduce costs. Over 1,000 jobs were elimi-

nated, a call center closing was announced, we exited the money-losing express business, and eliminated two trains that had been previously added to support the express business.

“In addition to the struggle to maintain solvency, we had to focus on the future.”

Some very important steps were taken to begin to restore our rolling stock to good condition. Beech Grove and Bear began returning wrecked and out of service cars to service. By the end of April, 15 cars will be back in action. We began to restore over-haul programs that had been discontinued years ago. Two AEM 7 DC locomotives have been rebuilt. We have laid out a good

David L. Gunn

facilities program for next year, and we are ordering the material.

Banning extraordinary events, we will make our FY '03 budget — something we must do if we are to rebuild our credibility with Congress and our own board, which, by the way, has been very supportive and helpful through these difficult times. I think this can be done — if we are responsible and maintain our attention to the budget and our passengers.

Mail and Express Restructure Aims at Improving the Bottom Line

continued from page 1

Already, Amtrak has modified the *Pennsylvanian* service from an unproductive Philadelphia-Chicago route to a better-performing New York-Pittsburgh route. In early July, the railroad will terminate the *Kentucky Cardinal* between Indianapolis and Louisville, which had been started in 1999 solely on the justification of an express business plan that did not materialize.

Mail and express service has been eliminated altogether in eight cities: Atlanta, GA; Harrisburg, PA; Jeffersonville, IN; Lynchburg, VA; Milwaukee, WI; San Antonio, TX; Seattle, WA; and Springfield, MA. The elimination of these services allows Amtrak to run shorter, lighter-weight trains, which require fewer locomotives, which in turn saves on expenses. Specifically, it reduces locomotive requirements on trains by 30 units and eliminates the need for nine switch engines — thus cutting down on locomotive maintenance and overhaul costs.

These actions are predicted to result in \$8.2 million in fuel savings and \$4.5 million in maintenance savings, annually. Additionally, fewer boxcars (a reduction of 300 cars) and roadtrailers needed reduces equipment maintenance expense by \$1.4 million per year. Storing or selling this equipment allows Amtrak to utilize its newest, most efficient locomotives; the equipment being returned to the fleet will improve maintenance rotation schedules, while the surplus equipment will go into storage or be sold.

Additional operating and scheduling improvements are planned for later this year under the third and final phase of this initiative, but these changes are not yet finalized.

All of these changes will not only help Amtrak's bottom line, but also improve the company's ability to deliver better customer service through better schedules and connections, improved on-time performance and a smoother ride. Both passengers and the United

The elimination of these services allows Amtrak to run shorter, lighter-weight trains, which require fewer locomotives, which in turn saves on expenses.

States Postal Service will benefit from shortened trip times and improved on-time performance.

The restructuring of the express business, combined with reduced mail volumes from the U.S. Postal Service led to the elimination of nearly 300 management and agreement-covered positions between January and April 2003 in the Transportation and Mechanical Departments, and a significant cutback in contract personnel at express facilities.

Amtrak Issues New Spring/Summer 2003 Timetable

An Inside Look at Creating the Timetable

The Spring/Summer 2003 Timetable is on its way to stations across the country. But the route from the printing press to Amtrak passengers is only the final step in a long journey. Here's an inside look at the complicated process of creating a new timetable.

While railroad technology and equipment have improved over the years and the travel time between stations has shortened with every service and schedule improvement, one important need for Amtrak passengers that will never change is for accurate and reliable printed train schedules.

"It is an understatement to say that it's a very difficult process, particularly when balancing competing and disparate internal and external interests."

Walt Peters, Senior Director,
Network Scheduling

The printed train schedule, or timetable, has played a key role in the development and success of the railroad, and it traces its roots back to the beginning of railroad history. Railroads have long relied on a means of providing their customers accurate train information, whether those customers are passengers or business partners moving goods by freight. In the late

1800s, the impact of rail travel on commerce was so great that the railroad timetable, which included the public train schedule, was called the "Official Guide of the Railways." Historically, this guide included a consolidation of train schedules submitted by all freight companies and was printed monthly. It was as essential to businesspeople at the turn of the century as *The Wall Street Journal* is today.

The "Official Guide of the Railways" has evolved into two separate entities — one for internal railroad use called the operating timetable, and another for public use known as the public timetable. The operating timetable is a comprehensive internal document sometimes referred to as the "Road Map of the Railroad." This 100-plus page document includes train speeds, mileposts, stations, details, instructions, train meets, dwell times, and is printed yearly or as needed. In contrast, Amtrak's public timetable, generally distributed in the fall and spring each year, contains detailed information that the public needs — train times, station locations, amenities, onboard services, connecting

services and general policy and procedures information.

Developing the public timetable is a complex process that requires a series of negotiations and concessions. The process involves

numerous stakeholders, from the freights to local commuter agencies, all with different interests.

First, the realities of the physical space over which the lines must operate are taken into account. Then, these realities are measured against the business needs of the organization. Factors such as the

number of main tracks, the route through interlockings and grade crossings, single track and the availability of sidings, and the maximum authorized speed, may dictate one schedule. But the conflicting demands of more frequent passenger service, more convenient schedules for commuters, connectivity and running time improvements may dictate another.

Additionally, timetable developers must also anticipate and compensate for exceptions that might occur over the scheduling period. Exceptions

can include emergency outages, catenary installations and bridge reconstructions, to name a few. These issues are difficult to anticipate but play a major role in the success of a regional schedule.

"The process of creating the public timetable is a true exercise in

continued on page 5

Highlights of the 2003 Spring/Summer Timetable

New National Timetable Highlights

Three eastbound long-distance trains — the *Southwest Chief*, *California Zephyr*, and *Empire Builder* — operate on new schedules which improve connections to the *Capitol Limited* and *Lakeshore Limited*. The first three trains arrive daily in Chicago between 3:20 p.m. and 3:43 p.m. The *Capitol Limited* departs for Washington at 5:35 p.m. and the *Lake Shore Limited* departs for New York at 7:00 p.m. Previously, the trains left at 7:00 p.m. and 7:45 p.m., respec-

tively. In addition, the new eastbound *Southwest Chief* schedule provides a new, timely connection to the *Ann Rutledge* in Kansas City for passengers traveling to St. Louis. The *Southwest Chief* arrives in Kansas City at 7:14 a.m. to connect to the *Ann Rutledge's* 7:55 a.m. departure for St. Louis, where it arrives at 1:35 p.m., saving passengers more than seven hours over the previous schedule.

New Northeast Timetable Highlights

New frequencies added to the Springfield Line increase weekday

service from 11 to 16 trips from Springfield, MA, to New Haven, CT. Service is increased from 10 to 14 trips on the weekend. Additionally, fares have been reduced substantially, with the monthly commuter pass between Springfield and New Haven decreasing from \$284 to \$171.

New Boston-Washington, D.C., Overnight Service

The *Federal* (see related story on page 5) offers new overnight service between Boston and Washington, D.C., and replaces the *Twilight Shoreliner*. The new

service departs nightly at 10:00 p.m., allowing for breakfast before arrival. For passengers continuing south of Washington, added train service through Newport News will take them to points south.

Added Frequencies on Capitol Corridor

Capitol Corridor service in California increases from 11 to 12 weekday trains, which offers Bay area commuters more travel choices.

O N T H E R I G H T T R A K

Front row, left to right: Fran Sullivan, team leader, Mark Jordan, CRD representative, and Diane McConnell, team leader, with members of the Customer Relations Desk staff.

The MARSCC Mobilizes to Help a Friend in Need

On January 31, Mid-Atlantic Reservation Sales Call Center Customer Relations Desk (CRD) Representative **Mark Jordan** felt as if the world had collapsed on him and his family after an electrical fire consumed his home and all of their belongings. While the Jordans managed to escape unharmed, their beloved dog, Meadow, perished in the blaze. All that remained were family photographs and wedding videos, which Jordan managed to retrieve on his way out of the conflagration.

As word of the Jordans' misfortune spread throughout the Philadelphia call center, CRD

Team Leaders **Fran Sullivan** and **Diane McConnell** took up a collection. In a short period of time, cash contributions, as well as food, clothing, bedding and housewares, flowed in for Jordan, his wife Erica, and their children.

Special Service Agent **Reggie Davis** purchased gift certificates to restaurants and raffled them off. CRD Representatives **Barbara Rouse** and **Boni Szymanski** donated ceramic dolls and "pamper baskets" that they respectively created for two other raffles. Other CRD personnel donated their time and effort to organize and hold a successful bake sale. In all, more than \$2,500 was presented to the Jordans. This total does not include personal contributions or other goods that they also received.

Jordan and his family are temporarily living in an apartment

Taking the Plunge

Bob Goldstein, an equipment engineer for Amtrak in Baltimore, arrives early to prepare for the Polar Bear Plunge, an annual event held to raise money for Maryland's Special Olympics. Held at Sandy Point State Park by the Chesapeake Bay Bridge, the event is in its seventh year, earning more than \$400,000 for the cause this year. On January 25 more than 2,000 participants, including Maryland's Gov. Bob Ehrlich, took the plunge into the icy waters.

until the necessary repairs to their home can be completed, which could take up to a year. The fire has significantly changed Jordan's outlook on life. "I never thought that something like this would happen to me. One day you think that everything's just the way you want it, and it's gone the next. I realize now that my faith was

being tested and I see each new day as a gift."

Jordan and Erica expressed their gratitude for the kindness and generosity of Jordan's co-workers as they accepted the proceeds and household goods. The Jordans leave no doubt that the hearts of their friends at the MARSCC are among those gifts.

Service Standards Manual Guides Employees

Ensuring the delivery of consistent, high-quality service to customers is a primary goal of all Amtrak employees. The Service Standards Reference Manual for Management Employees is designed to help employees meet and exceed this goal — delivering dependable service from train-to-train and station-to-station throughout the entire Amtrak system. For the first time in Amtrak's history, this dynamic resource ties together — in a single document — system-wide company policies, procedures and standards that apply to the services that Amtrak Train Service and On-Board Service employees perform. The manual is designed to assist Supervisors and Managers in the coaching of employees, and is to be used as a reference in their everyday duties.

Because the business environment and the expectations of customers can change, the manual is subject to frequent revision. "The

most successful companies are those that can read change and make corresponding adjustments in their business practices and standards. This manual provides the most current Service Standards for the delivery of our service based on the new Amtrak organization," stated Ed Walker, vice president of Transportation. He also noted that manual revision pages would be published semi-annually, concurrent with the spring and fall timetable changes. Operations Standards Updates (OSUs) are distributed to employees to inform them about more immediate changes in policies and procedures that go into effect before the next revision cycle.

"We're all in this together, and your hard work and dedication are the keys to our success," said Walker. "Remember to stay focused on safety, on-time trains, revenue optimization, and customer services that exceed what our passengers expect."

continued from page 3

collaboration and teamwork,” said **Walt Peters**, senior director, Network Scheduling. “It is an understatement to say that it’s a very difficult process, particularly when balancing competing and disparate internal and external interests,” said Peters. The scheduling team led by Peters facilitates the schedule development process, and spearheads the Timetable Coordinating Committee. The Timetable Coordinating Committee consists of delegates from Amtrak operations and internal stakeholders, such as representatives from the Mechanical, Terminal Services and Finance departments. The actual process of building the public timetable begins when each department submits suggestions for schedule changes to its representative on the committee. The committee works to develop a timetable that

“The production process is much more complicated than just printing train times in a schedule grid.”

Linda Park-Verdi,
Manager, Marketing
Operations Support

parties. In the end, the arrival time remained as it had been, 8:40 a.m.

Once a general consensus is made, the timetable production and distribution process begins. “The production process is much more complicated than just printing train times in a schedule grid,” said **Linda Park-Verdi**, manager,

Marketing Operations Support. “Marketing focuses on combining all of the schedule collateral in a design that is easy to understand, and features incentives for future

improves service and offers passengers more convenience and options. The committee members assure that all suggested changes are reasonable and consistent with the goals of their department. The proposals are combined into a docket, which is published for further research and feedback.

The committee must be certain that it solicits the feedback of all key players in the process. Typically, proposed schedules are then submitted for response from Amtrak, state agencies, freight railroads, and commuter agencies. It is critically important that schedules are not developed in isolation. For example, when determining the new time schedule for the *Southwest Chief*, a potential conflict arose concerning the approach of train # 3 to Los Angeles. Because the train switches from the BNSF to Metrolink territory, and the frequency of the Metrolink commuter trains conflicted with the newly proposed timetable, a resolution was needed that suited the

customers to travel on Amtrak,” added Park-Verdi. The Marketing team works closely with the Scheduling, Communications, Customer Services, Sales Distribution, Legal, Intermodal Services, Marketing and Government Affairs Departments to ensure accuracy of the information. Advertisements, service notes and advisories are developed to support the train services and routes in the schedule.

The master timetable is printed in several forms: A Northeast Timetable, a National Timetable, and 23 individual wallet cards and panel schedules for specific corridors and long-distance routes. “The biggest challenge is ensuring timely service to both our internal and external customers and accommodating input changes as we prepare the document for press,” said **Joe Wenclawiak**, group manager, Marketing Operations Support. Amtrak’s Spring/Summer Timetable becomes effective on Monday, April 28, 2003.

Timetable Development Challenges

Timetable development must account for a variety of specific operational challenges. For example, in generating a schedule, developers must calculate:

- The number and length of available tracks and routes to and from platforms
- The time required to move customers to and from trains and to clear platforms for the next incoming train
- Available parallel or conflicting paths
- The speed profile of the train type and its stopping patterns
- The number of train sets available during the planning period
- Equipment maintenance and performance
- Minimum clearances between trains, overtakes (trains following at different speeds) single track restrictions and siding conflicts
- Input from riding observations (a study conducted from the headend of a train to determine optimum run times from station to station)
- Equipment turn times
- Crew turn times
- Deadhead equipment moves
- Station dwell times
- Seasonal weather fluctuations
- Holiday special events
- Fluctuation in demand during seasonal peak and low travel periods

Enhanced Overnight Service between Boston and Washington, D.C.

On April 28, Amtrak introduced the *Federal*, a new overnight train between Boston and Washington, D.C., that replaces the *Twilight Shoreliner* and provides improved service, more amenities and better departure and arrival times.

Previously, the southbound *Twilight Shoreliner* departed Boston at 9:05 p.m. and arrived in Washington at 5:50 a.m. the next morning, while the northbound train departed Washington at 9:25 p.m. and arrived in Boston at 6:20 a.m. The new *Federal* will depart both cities nightly at 10:00 p.m. and arrive at 7:30 a.m. in Washington and 8:15 a.m. in Boston. This change enables passengers to enjoy breakfast on the train and arrive at a more convenient time, especially for those on business travel. As an added service, First class passengers may pre-board the train as early as 9:00 p.m. at both cities.

The *Federal* includes three services: a reserved First class sleeper, reserved Business class and unreserved Coach class seating. First class sleeping car amenities include complimentary wine and cheese in the evening and, in the morning,

breakfast served in the sleeper or in a reserved section of the café car. The breakfast is equivalent to that enjoyed by First class *Acela Express* passengers. Business class amenities include complimentary non-alcoholic drinks, a pillow and blanket, and a newspaper in the morning.

As *Twilight Shoreliner* service south of Washington has been terminated, the *Federal* will now connect southbound passengers to *Regional* train # 77 at 8:00 a.m. and receive connecting passengers from the northbound *Regional* train # 76 at 6:40 p.m.

Service enhancements on board the *Federal* include the addition of a new On-Board Service position, the Business Class Attendant. This new position is responsible for providing personalized, quality service to Business class passengers, assisting with luggage, and assisting in providing food and beverage service. The Business Class Attendant is also responsible for en-route cleaning and trash disposal.

Through June 30, Amtrak is promoting the *Federal* by offering passengers 30 percent off regular coach fares.

Metrolink — Southern California's Fastest-Growing Railroad

Amtrak Expertise Contributes to Growth of Commuter Rail Service

The blue and white bi-level commuter cars traveling throughout the California Southland have become so familiar to Southern Californians that it is easy to forget that just ten years ago there were no *Metrolink* trains. In those days, the Los Angeles port system was handling over 30 percent of containers coming into the United States from overseas. With much of this traffic transferring to freight trains in the area, rail lines in Southern California were congested and competition for space with Amtrak intercity service was great.

Freight congestion in Southern California was becoming an obstacle to establishing commuter service in an area of the country known for its congested freeways. To ensure the success of passenger rail service, an alliance was formed in the early 1980's to assess community needs, purchase rail lines, and develop an inspired vision for viable commuter rail service in Southern California that would rapidly become known as *Metrolink*.

The vision expanded in 1989 when residents of various counties voted to pass sales tax increases to pay for transportation improvements. Support for the cause grew in 1990 with the passage of three State Bond initiatives — Propositions 108, 111, and 116 — which provided additional funding for the start-up of a new commuter rail system. When five Southern California counties agreed to build and operate this regional rail service, a joint powers authority called the Southern California Regional Rail Authority (SCRRA) was born.

Immediately, requests for proposals were issued and fierce competition to maintain and operate the service ensued. Amtrak was awarded the contract (by a slim one-percent margin) to provide train and engine operations, dispatching, and maintenance of equipment of the new commuter service known as *Metrolink*. "Amtrak won this important role in this burgeoning service at a pivotal time. We won the bid and became partners with what would become the fastest growing commuter rail service in the United States because we were the best one for the job. No other company has more experience in operating successful commuter operations," said **Richard Phelps**, general superintendent, Southwest

required the many years of expertise and experience that Amtrak could provide, and Amtrak employees rose to the challenge.

Amtrak fostered partnerships with Burlington Northern, Union Pacific, Southern Pacific and the San Diego Northern Railroads to create the *Metrolink* dispatching center which is now located in Pomona. Well-established lines of communication were critical to coordinate the growing 507 route-miles of track in Southern California. Four railroad companies use this right-of-way, much of it single-track.

The Amtrak *Metrolink* dispatching center was established with a small group of seasoned dispatchers who came from Amtrak and freight railroads. "It was an exciting time and an education process for the SCRRA and Amtrak," said Phelps. "Growth of the service was happening at an astounding pace — we needed to keep up with the daily changes and challenges that were occurring very rapidly." Amtrak employees contributed to the design of the \$2 million state-of-the-art dispatching facility, which has since become a model for the industry. Included in the facility is an earthquake monitoring system called the "CUBE" (Cal Tech/United States Geological Survey Broadcast of Earthquakes) that monitors earthquake activity in the Southern California region, and will notify the dispatching center within two minutes of any major earthquake that may affect the railroad.

"*Metrolink's* dispatching, source of pride for Amtrak to the plate and delivery service. When SCRRA assumed the dispatching October 2002, our Amtrak this was due, in part, to they had set through high and superior on-time performance said **Tommy McDonald**

"No other company has more experience operating successful commuter"

Richard Phelps, general superintendent, Southern California Regional Rail Authority

the Amtrak *Metrolink* employees in *Metrolink* challenged to be the best of not only under the leadership management, but their performance scrutinized by SCRRA. employees working on the operated commuter service country have two primary customers: Passengers, and Transportation Agencies who own

The Amtrak *Metrolink* 1 which has a total over 30 experience, has worked favorable working environment has become one of the most places for Amtrak Train employees," said **Ed Quinn** superintendent. Crew members over the length of the ten currently employing 110 employees. "Our 10 & 11 'railroad years' of experience outside operator can make road experience Amtrak commuter agencies it of call. SCRRA-instigated audits have proven that *Metrolink* employees maintain high level of performance

In 1994 Amtrak demonstrated expertise and commitment both the SCRRA and the Southland of California devastating 6.7 magnitude earthquake hit the densely populated San Fernando Valley. Due to the "Northridge Earthquake" this disaster inflicted over billion dollars in physical damages, including the closure of 11 overpasses on some busiest freeways in Los San Fernando Valley. The earthquake did not damage tracks in the area. *Metrolink* tional rail cars to increase

Conductor **Dwain Brooks** readies train # 314 headed from Los Angeles to San Bernardino.

Division, and former general manager for *Metrolink's* Amtrak operation. *Metrolink* trains emerged on the Southern California scene on October 26, 1992, with 24 trains per day. The new passenger railroad service

Amtrak, Metrolink & Caltrans Create Innovative Service Options

Amtrak and *Metrolink* have initiated a new service integration program called Rail 2 Rail. This program improves the efficiency and appeal of both rail systems in Southern California by allowing rail passengers the convenience of taking the first available trip to their destination — whether it is on a *Metrolink* train, an Amtrak *Pacific Surfliner* train, or Amtrak Thruway Motorcoach.

The Planning and Business Development and Marketing departments, working with partners at *Metrolink* and Caltrans, introduced the program on September 5, 2002. The program integrates schedules, fares and marketing, and has proven to be an excellent way to lure more travelers to the rails. Since the program's inception, the results have been tremendous and have propelled the *Pacific Surfliner*, which travels on the nation's second-busiest corridor, to record ridership and ticket revenues. Since the start of the program, more than 100,000 customers have taken advantage of this ticket reciprocity.

"The goal of the Rail 2 Rail program was to better integrate these two Southern California services," said Gil Mallery, vice president of Planning and Business Development. "We are now providing travelers with more service options and as a result, overall ridership is up," said Mallery.

Under the program, *Metrolink* monthly pass-holders may ride any Amtrak *Pacific Surfliner* train or Amtrak bus within the trip limits on their *Metrolink* pass at no extra charge to the rider. *Metrolink* reimburses Amtrak for these costs. In addition, Amtrak ticket holders can ride *Metrolink* at no charge, giving them access to more than double the number of trains within the limits of their ticket.

In addition, both *Metrolink* and Amtrak accept all tickets valid for travel between Los Angeles Union Station and Glendale, Burbank, or Burbank Airport stations at no additional charge to the rider. As a result, passengers now have

up to 37 trains from which to select for travel in this corridor.

Through a partnership with Southwest Airlines, an additional benefit of the Rail 2 Rail program started in the fall of 2002. Amtrak and *Metrolink* allowed Southwest Airlines passengers free travel between Burbank Airport and Los Angeles Union Station in either direction. In return, Southwest Airlines heavily promoted the Amtrak connection in airports throughout the state, through their e-mail itineraries, and in promotional materials.

Overall, the program significantly increases travel options in some of the most congested corridors in Southern California, with minimal additional costs to the operators. Other upcoming enhancements are planned as part of Rail 2 Rail, including a joint timetable, integrated connections, and shared ticketing machines. Watch for more information on Rail 2 Rail, and watch for ridership and revenue on the *Pacific Surfliner* to continue showing outstanding results.

onstrated its itment to id the entire rnia, when a nitude earth- ly populated y. Dubbed rthquake,” l over \$40 ysical the collapse some of the Los Angeles and in the y. Remarkably, the damage the railroad etrolink leased 14 addi- rease capacity and

immediately went to work building a new rail line extension and six new stations so that people who lived in areas such as Santa Clarita, Lancaster, and Oxnard could get to work in the Los Angeles area. Astonish- ingly, the station construction projects were completed in only six weeks. Metrolink, assisted by the Army Corps of Engineers, amazed the community by building the first two stations in only three days.

The rapid construction of station stops required the equally swift deployment of personnel. Amtrak train and engine crews became qualified in record-breaking time, and began to operate the new line extension in less than one week. The commu- nity responded and embraced commuting by train. In fact, the new service between Lancaster, Santa Clarita and Los Angeles had some train consists of up to 14 cars and carried over 22,000 passengers per day, until freeway service was eventually restored. Amtrak received local and national commendations for the profes- sional manner in which service was extended to the Lancaster community with such short notice.

Throughout the disaster, Amtrak Metrolink’s mechanical personnel were able to absorb the additional maintenance with only minor adjustments in the work force. Amtrak’s qualified personnel were essential in keeping Metrolink operational during this significant natural disaster. In fact, during Amtrak’s watch, and throughout the entire time that Amtrak held the Maintenance of Equipment contract, equipment availability never dropped below 98 percent.

An example of Amtrak’s ingenuity in providing equipment and resources became evident when a new supplier for wheels was sought by the agency. The Amtrak team located and certified a new wheel supplier, and facilitated the adop- tion of acceptable standards for moni- toring Metrolink train wheels on equip- ment operated over BNSF tracks.

Metrolink passengers board at the Burbank Airport train station.

In addition to spearheading a solution to this problem, Amtrak coordinated commu- nications with the FRA, the AAR, and the

Amtrak, Metrolink & Caltrans Rail 2 Rail Partnership Wins Award

California Department of Transportation (Caltrans) Director Jeff Morales praised the Rail 2 Rail partnership between Amtrak, Metrolink and Caltrans at the 16th Annual Excellence in Transportation Awards. The innovative program won the Excellence in Transportation Award in the “Intermodal Transportation” category. These prestigious awards are viewed as the “Oscars” of California’s transportation industry. The program features some of the best and brightest accomplishments in the field.

“This event is the department’s opportu-

nity to showcase the finest in transporta- tion innovation and ingenuity,” said Morales. “These projects not only enhance our rail and highway traveling experience but improve the quality of life in our neighborhoods, communities and environment.”

Since 1986, the annual competition has provided an opportunity to salute those dedicated to solving California’s trans- portation challenges. A panel of judges representing transportation, environ- mental, engineering, and community interests selected the winners.

Keynote speakers at the Rail 2 Rail event held at the Burbank Airport include (left to right): Gil Mallery, Amtrak; David Solow, CEO, SCRRA; Dios Merrero, Executive Director, Burbank-Glendale-Pasadena Airport; State Senator Jack Scott, 21st District; Tony Harris, Chief Deputy Director, Caltrans; Bill Alexander, Chairman, SCRRA & Mayor, City of Rancho Cucamonga; Francine Oschin, Metrolink Board Alternate; Mike Munoz, Marketing, Southwest Airlines.

This program allows Metrolink monthly pass holders access to Amtrak Pacific Surfliner trains within the same route at no additional cost. “We are extremely proud of this program and all that it offers to rail passengers in the Southern California Region,” said Cyndi Darlington, senior director, West Sales and Marketing. “We think it is an excellent example of transportation entities working together to create the best possible options for the customer.”

individual freight railroads involved. Amtrak’s Delaware shops did supplemental wheelwork in the early periods before the new supplier was able to achieve an adequate, continuing level of wheel-set production work.

The Metrolink system has grown to seven routes with 53 stations on more than 307 miles of track. Amtrak Metrolink crews safely transport over 35,000 passengers per day. Today, Amtrak supports the SCRRA by not only providing crews for 137 daily trains during the work week, with reduced service on weekends, but also providing crews for special trains. These special-service trains, including weekend beach trains that carry passengers from inland Cali- fornia cities to the beach during the summer and fall seasons, have become increasingly popular.

In addition to operating mainte- nance-of-way work trains, Amtrak Metrolink operates prom trains, shopping trains, and a special Christmas train that includes seasonally inspired entertainment at selected Metrolink stations. The largest one-day event for Metrolink special-train service is the Southern California NASCAR races. Up to eleven trains

converge within a one-hour period on limited trackage at the California Motor Speedway in Fontana. After detraining thousands of passengers, these trains are moved for servicing, restaged, and prepared for the return journey.

Amtrak has also partnered with SCRRA in an award-winning Metrolink Amtrak fare integration program called Rail 2 Rail, (see related story on page six). This program allows Metrolink monthly pass holders access to Amtrak Pacific Surfliner trains within the same route at no additional costs. “We cannot lose focus that here in Southern California, the majority of our riders are commuters going to and from their work- place or school,” said McDonald. “Rail 2 Rail gives commuters more service options that more closely match their schedules, while increasing the appeal of train travel for both Amtrak and Metrolink.”

More than 100,000 Metrolink commuters have taken advantage of this innovative program since its inception in September 2002. “The success of this program and Metrolink overall, is due to the focused teamwork of the front-line employees, including dispatchers, conductors and loco- motive engineers. Their professionalism and commitment to excellence is what truly matters in making all of our customers happy,” said McDonald.

Four Locations Honored with APD Chief's Safety Award

The first Amtrak Police Department Chief's Safety Award ceremony was held this year on March 13 in recognition of those APD officers who worked injury-free during fiscal year 2002. To be eligible for the award, the field location must have at least seven officers assigned during the recognition period, and all officers at that field location must have an injury-free year — a particular challenge last year for all law enforcement offices throughout the country.

Last year four APD locations met this challenge — Chicago, New Haven and New London, CT, and Trenton, NJ.

At the ceremony held to honor the two New England Division stations were Amtrak's Chief of Police **E.R. (Ron) Frazier**, Esq., Chief Of Patrol and Special Operations **John O'Connor** and Capt. **Robert W. Smith** of the New England Division.

In his remarks, Chief Frazier told the group that the goals he set this year are to reduce workplace violence and to achieve an overall safety ratio goal of 3.8 percent. In his comments Frazier said, "Things have changed a lot since September 11, 2001. Police officers have always had to be vigilant and alert. But now, with our country on elevated alert threat levels, and in military action overseas, we have

New London Amtrak Police receive 2002 APD Chief's Safety Award (L. to R.) Capt. R. W. Smith; Police Officer **Paul Saraiva**; Sgt. **James Moran**; Chief Frazier; Police Officer **Tracie McCain**; Chief John O'Connor. Not pictured: Police Officer **Valerie Brown**; Police Officer **David Neyes**; Police Officer **Gregory Zujus**; Police Officer **Tracie Wilkie**

to be even more careful, more alert, more prepared. Homeland Security starts with you."

District Superintendent **Scott**

Howland of New Haven spoke briefly, congratulating his two field offices for their efforts in remaining injury-free for one year. He also thanked all the officers for being visible and giving the passengers a sense of security. He further stated that the sergeants in both New Haven and New London, CT, have done a stellar job keeping their officers safe.

The awards were made to the two

field offices, followed by Sgt. **William Bessette** who, on behalf of the American Federation of Railroad Police, congratulated the two field offices.

Chief O'Connor added his congratulations and stated that the railroad industry is listed as the fourth most hazardous occupation — adding that railroad policing is even more dangerous than that. "Officer safety cannot be stressed enough. You cannot go about your job thinking that any part of it is routine," said O'Connor.

The trophy will go to each field location during the course of the following year. However, the trophy will not go to Trenton, as APD no longer has a presence at that station. The trophy will reside for three months in New Haven, three months in New London and then travel to Chicago.

New Haven Amtrak Police receive 2002 APD Chief's Safety Award: (L. to R.) Sgt. **Lynwood Pollard**; Capt. R. W. Smith; Police Officer **Joseph Agnellino**; Chief Frazier; Police Officer **Cliff Tucker**; Police Officer **Humberto Centeno**; Police Officer **Bert Augmon**; Police Officer **Lawrence Musso**; Chief John O'Connor. Not pictured: Police Officer **Angel Miranda**

Service Updates

Update on Amtrak's Michigan Services

In early April, Amtrak and the Michigan Department of Transportation reached an agreement to continue the operation of the *Pere Marquette* and the *International* for another three months. The previous six-month agreement for the service expired on March 31. The three-month extension will allow the trains to continue operating at least through June 30, during which time the two parties will work on a long-term solution for funding the service.

Amtrak has asked the Michigan Department of Transportation (MDOT) for \$7.1 million for FY '03, but MDOT cannot legally sign a contract for that amount, as state law prohibits the department from spending more than \$5.7 million annually on the service. As a result of the cap on state support, Amtrak and MDOT agreed last fall to sign a six-month agreement

for \$2.85 million (one half of the \$5.7 million capped amount) and use the time period to seek a change in the state law.

Rep. Lauren Hager, (R-Port Huron), introduced legislation to lift the cap on operating support for the state-supported service in Michigan. At a hearing in the Michigan House Transportation Committee on March 27, members of the committee voted by a 12-2 margin to approve his legislation. The legislation will now go to the Michigan House of Representatives for consideration by the full body, and then if successful in the House, to the Michigan Senate, before finally heading to the desk of Gov. Granholm for final signature.

If and when the legislation is approved, Amtrak and MDOT will then negotiate an agreement that will allow the state to pay Amtrak the entire \$7.1 million for the operation of the trains for the fiscal year.

Crosbie Discusses Goals for Operations Department

continued from page 1

prepare a detailed FY '04 zero-based budget. This budget will be used to measure the actual performance through our monthly performance report. I will insist that the performance measurements be displayed in each work place and be updated monthly.

Amtrak Ink: How do you think our goals and objectives for FY '03 affect the future of Amtrak?

Crosbie: The capital program for FY '03 is focused on returning our infrastructure to a state of good repair. I cannot stress enough the importance of doing what we said we would do

in FY '03. The credibility of our FY '04 grant request is dependent on our success in FY '03.

Amtrak Ink: What would most employees say about your management style?

Crosbie: I think they would say that I'm very straightforward. I ask co-workers to always provide me with the straight facts — don't speculate or sugar-coat the situation. In order to work together to solve problems, I need to understand the details. I hope they'd also say that I am personable — I am looking forward to continuing to meet all of my co-workers. In the meantime, stay focused on our objectives and operate safely.

RAILWAY ROUNDUP

New Passenger Information Area Unveiled at Antioch Amtrak Station

Project Jointly Funded by Amtrak and California DOT

A new passenger information area at the Antioch Amtrak Station was unveiled at a ribbon-cutting ceremony on February 24. At the ceremony, Antioch Mayor Donald P.

Freitas led a group of speakers that included state Sen. Tom Torlakson and Warren Weber, manager, Division of Rail, California Department of Transportation.

The Antioch Station, which is a wide platform shelter, includes benches in a protected area for customer seating. The new area offers an enclosed information

room, where passengers may obtain timetables and other travel information brochures while waiting for Amtrak's *San Joaquin* trains. The room is shuttered and locked when not in use, and staffed by volunteers when open.

Antioch is served by eight daily Amtrak California *San Joaquin* trains, four southbound from

Oakland through the Central Valley to Bakersfield, and four northbound return schedules back to Oakland. At Bakersfield, connections to and from Los Angeles Union Station and other Southern California destinations are available using Amtrak Thruway Motorcoach service.

Hotels.com Is One of Amtrak's Newest Partners

Amtrak now offers lodgings for its customers through Hotels.com. With hundreds of destination choices throughout the U.S., Amtrak customers calling our Reservation Sales Call Centers can experience seamless travel. From the Amtrak train, to the Hertz rental car, to the luxury of a hotel room secured through Hotels.com, passengers can have it all with virtually one phone call.

Reservation sales agents are encouraged to close each sale by asking, "Do you need a rental car or hotel when you reach your destination?" **Pamela Clark** has perfected this dialogue. As a full-time agent in Riverside CA., she has sent 253 calls out of 2,323 calls handled, or 10.9 percent, to

This is a winning proposition for all concerned — Amtrak earns a percentage of the money from room space and rental car sales, while the partners benefit from the referrals. This adds up to better customer satisfaction and more revenue for Amtrak.

Hotels.com from December 16, 2002 to January 31, 2003 — more than any other sales agent in the company.

When an agent sends a call to Hotels.com, Amtrak callers are greeted with, "Hotels.com, Amtrak's hotel partner!" If the customer is pleased with the discount offered by the Internet wholesaler and then wants to rent a car, the Hotels.com representative then sends the call to Hertz, another major Amtrak partner.

This is a winning proposition for all concerned — Amtrak earns a percentage of the money from room space and rental car sales, while the partners benefit from the referrals. This adds up to better

customer satisfaction and more revenue for Amtrak. During the month of February, all three call centers booked a total of \$705,408 in hotel rooms.

Hotels.com is the Internet's largest specialized provider of discount accommodations worldwide. Offering savings up to 70 percent off of regular room rates, it contracts with properties in advance, by volume, insuring broad options and availability. With clients like Days Inn, Hilton and even the Waldorf Astoria in New York City, customers enjoy many choices. Other major partners of Hotels.com include Continental Airlines, Northwest Airlines, US Airways and Delta.

PROMOTIONS IN MOTION

Spring Travel on Amtrak is 1-2-Free

Offering Passengers More Travel Options

Passengers will be excited to learn that Amtrak is rolling into spring with its 1-2-Free fare promotion. With 1-2-Free, groups of three traveling together to the same destination may take advantage of great savings when they purchase the first ticket at the full adult price, the second ticket at half the full adult price, and then receive the third ticket for free. That means groups of three can save 50 percent off regular fares. Even when only two people are traveling together, it's a great deal. Solo passengers can also enjoy a 25 percent discount, making Amtrak the best way to take a spring break.

"Our 1-2-Free promotion offers

great fares for travel on many of Amtrak's routes nationwide," said Barbara J. Richardson, Amtrak's vice president of Marketing and Sales. "1-2-Free follows our successful winter promotion which created great interest in rail travel and resulted in increases in ridership on some routes."

Amtrak's 1-2-Free fare promotion — plus the 25 percent discount for solo travelers — is available for sale March 16 through April 30, 2003 for travel March 19 through August 28, 2003. With the 1-2-Free offer, the first fare may be combined with Amtrak's senior, disabled or Student Advantage discounts. The second fare is always half off the full adult fare and the third fare is free. 1-2-Free passengers must travel together and because seats are limited, customers should act quickly,

booking reservations at least three days in advance of travel. Amtrak's 1-2-Free promotion will help boost ridership with passengers planning spring or summer travel.

Poetry in Motion On Board the *Acela Express*

Amtrak and the American Poetry & Literacy Project teamed up to celebrate to celebrate National Poetry Month. During the month of April, Amtrak distributed 6,000 copies of *Across State Lines: America's 50 States as Represented in Poetry* for the reading pleasure of *Acela Express* travelers.

The books are supplied by the American Poetry and Literacy Project, a national non-profit organization that donates poetry books to hospitals, schools, libraries and other public organizations.

ORGANIZATIONAL UPDATE

Diesel Exhaust Warnings

Editor's note: *The following article was published by the System Security and Safety Department in a Security & Safety Update on January 17, 2003. It is reprinted here for the benefit of all employees.*

Amtrak recently joined the major freight railroads in California in settling a California Proposition 65 lawsuit concerning warnings to the general public about diesel exhaust emissions from locomotives. California Proposition 65 is a state law enacted in 1986 that is designed to reduce exposures to listed harmful chemicals.

In 1998, the California Environmental Protection Agency's Office of Environmental Health Hazard Assessment (OEHHA) completed a comprehensive health assessment of diesel exhaust. This assessment formed the basis for a decision by the California Air Resources Board (ARB) to formally identify particles in diesel exhaust as a toxic air contaminant that may pose a threat to human health. Several major railroads operating in California made the decision in 1999 to begin publishing newspaper warnings

about diesel exhaust emissions.

California rules require notices when residents may be exposed, over a 70-year period, to a concentration 1/1000th of the threshold level of potential toxic effects. Certain major rail lines and yards might reach this threshold concentration. It is interesting to note that concentrations of diesel exhaust particulate measured near major highways can be 10 to 50 times higher than the level near railroad tracks. However, state-owned facilities, such as highways, are exempt from Proposition 65 warnings.

Under the terms of the court-approved settlement, Amtrak, UP, BNSF and several shortline freight railroads must place quarterly notices in newspapers throughout the State of California. These notices state:

"Railroad locomotives and related equipment used in transporting goods and passengers are powered by diesel engines and emit diesel exhaust. Diesel exhaust is a chemical known to the State of California to cause cancer, and contains chemicals known to the State to cause birth defects or other reproductive harm.

Some people near railroad operations are exposed to diesel exhaust. Exposure depends on many factors, including the type and intensity of railroad operations, how close you are to the facility, how much time you spend there and whether there are other sources of diesel exhaust in your area.

The railroads have initiated a number of measures to reduce the amount of diesel exhaust generated by our operations. We are committed to delivering freight and moving passengers in a safe and environmentally responsible way."

The settlement also requires notice to employees who work in California, which Amtrak has accomplished by posting signs at selected facilities in California and in all locomotives and rail passenger cars that could operate in California. These signs read:

California Proposition 65 Warning: Diesel engine exhaust and some of its constituents are known to the State of California to cause cancer, birth defects and other reproductive harm.

In terms of potential employee exposure to diesel exhaust, the September/October 2002 issue of

the *American Industrial Hygiene Association Journal* contained an article titled "Diesel Particulate Matter Exposure to Railroad Train Crews." This study of two major freight railroad operations was performed to assess the exposure to diesel exhaust particulate matter by engineers and conductors. A total of 19 different locomotives manufactured between 1968 and 1997 were included in the study. The results showed that exposure to diesel exhaust particulate is much lower for train crews than for miners, is comparable to background urban exposures, and is lower than but comparable to exposures for truck drivers.

Please contact the Office of System Safety at (302) 683-2065 if you have questions about diesel exhaust exposure matters. Your local Field Environmental Specialist (FES) or Division Environmental Manager can answer questions about the EPA clean air regulations on diesel exhaust.

Amtrak Initiatives Stimulate Ridership in March

Similar to the rest of the travel industry, Amtrak has felt the effects of the war in Iraq and the ongoing sluggish economy. However, the price reductions taken in January and marketing promotions that continued through the war, helped to sustain and even increase our ridership. The challenge continues on the revenue side, where year-to-date ticket revenues are 10 percent below last year and budget. In short, we are attracting passengers, but are not meeting our revenue targets.

In March, for instance, we carried the highest ridership ever (almost 2.07 million trips), 2 percent ahead of last year and 4 percent ahead of the budget. But ticket revenues dropped 12 percent below last year and 13 percent below budget. More than \$5 million of the revenue shortfall is attributable to the slowdown on travel during the war, and \$500,000 of the loss is a result of

service disruptions — cancellations on *Acela Express*, the *Coast Starlight* service detour and work on the *Piedmont* line.

Benefiting from the fare reductions taken earlier this year, long distance trains continued to show strong ridership growth; an 11 percent increase over last year and 13 percent favorable to budget. However, revenues are remaining at 20 percent below last year and our budget.

To build back revenue and stimulate more ridership, Marketing and Sales is now taking new actions in the Northeast.

First, on the Springfield line, between New Haven and Springfield, with the April 28 schedule change, frequencies will increase from five daily roundtrips to eight. Fares will be reduced 20 percent to 65 percent to attract more riders to

**To build back
revenue and stimulate
more ridership,
Marketing and Sales
is now taking
new actions
in the Northeast.**

the additional service. The new fares should be especially enticing to commuters and multi-ride customers.

On *Acela Express*, a detailed analysis showed that the decrease and decline of ridership and revenue between Boston and New York was overshadowing the positive performance between New York and Washington. A new \$99 maximum Business class fare has

been put in place on the northend, with an added benefit of double Amtrak Guest Rewards points. Additionally, to fill First class seats, a maximum \$50 step-up has been put into place.

"Ridership on the southend on *Acela* has been pretty good, but we really need to get people's attention with something bold on the northend," said Marketing and Sales Vice President Barbara Richardson. "The \$99 fare ought to capture attention, especially as we're going to promote this heavily in the end-point and intermediate markets in print and radio."

Through the month of April, a detailed train-by-train analysis is being completed on each long distance train to review pricing and marketing by segments and for the entire route to determine next steps.

Employees Attend ‘The Path of Change’ Diversity Training

In February 2000, Amtrak launched a full-scale diversity training program for its employees through the Employee Diversity unit of the Office of Business Diversity.

By May 2001, 23,000 employees had completed “Charting the Course for Change,” a diversity training program designed by Amtrak in conjunction with the New Haven Consulting Group.

The goals of the training included providing an opportunity for employees to discuss issues concerning diversity, developing and using skills to communicate effectively in a diverse organization, and providing an understanding of Amtrak’s Equal Employment Opportunity Policies.

The company’s diversity training program mirrors Amtrak’s commitment to diversity, as described in its mission statement:

Amtrak will create the model for corporate diversity in the new millennium. Our focused approach to creating and maintaining an inclusive environment for individuals from all backgrounds will

establish the standards by which other companies will be measured for their diversity efforts.

“We found that the initial course contributed to a more inclusive working environment and employee awareness of both Amtrak corporate policies and employment laws,” stated Gerri Mason Hall, vice president of Business Diversity. “Additionally, for many Amtrak employees, diversity training served as an introduction to this department. Employees have now come to view this office as a valuable corporate resource.”

In January of this year, the Diversity Department spearheaded the company’s refresher diversity training program, titled “The Path of Change.” To minimize costs, all of the training takes place in-house. Classes are conducted on Tuesdays, Wednesdays and Thursdays, and are expected to run through the end of May. Over 2,000 management employees who participated in the first course must attend this refresher course. As of this writing, nearly 1,500 employees have completed the course.

The goals of the refresher training include providing a review of Amtrak’s employment policies, an examination of the key employment laws that affect employees and their supervisors, and an overview of key Amtrak resources available to assist employees with certain workplace situations. “This refresher course helps managers understand their role and responsibility in executing Amtrak’s Diversity Policies,” added **Kathryn Weathers Belger**, director, Employment Diversity.

As an additional cost-cutting measure, a small group of qualified Amtrak employees completed an intensive three-day internal training program administered by New Haven Consulting Group, during which these employees were trained to conduct some of the refresher training sessions.

Recognizing that a number of departments had undergone reorganization since the inception of the training, Business Diversity briefly paused the scheduling of classes in early April. This enabled the team to re-allocate resources as needed, further ensuring the

“This refresher course helps managers understand their role and responsibility in executing Amtrak’s Diversity Policies.”

Kathryn Weathers
Belger, Director,
Employment Diversity

most efficient and cost effective delivery of training. So, how is it going? Industry standards show that when 25 or 30 employees are scheduled for training classes of this type, typically 18 show up on any given day. Amtrak’s training attendance has averaged 25 attendees per day. “Amtrak is exceeding industry standards for attendance because of the commitment from Mr. Gunn and members of the Executive Committee to make employment diversity a priority,” noted Hall.

Progress Continues at Bear and Beech Grove

Twelve Additional Cars Return to Revenue Service

Amtrak is making progress in the return of cars to revenue status this fiscal year with a total of 15 new cars back in service at the end of April. In addition to the first three cars overhauled through February, five more Superliner cars have been completed at the Beech Grove facility, and Bear mechanics have returned seven Amfleet cars to revenue service through April. In March, *Amtrak Ink* reported on repairs completed to bring back to service three of the 105 wrecked cars at the Beech Grove Maintenance Facility and Bear Car Shops.

Progress continues at both facilities in support of Amtrak's recently-

issued five-year strategic plan (*see detailed story on page 6*) to repair passenger cars needed to meet demand and to restore the plant and equipment to a state of good repair. The plan includes a four-part fleet rehabilitation program emphasizing the retirement of very old cars, the repair of wreck-damaged cars, overhauls to achieve intended asset lifespan and remanufacturing to extend the lifespan beyond original design. Amtrak intends to substantially increase the reliability and availability of passenger cars and locomotives. On average, only 81 percent of cars on corridor trains

continued on page 5

Amtrak's Five-year Strategic Plan is the company's blueprint to restore the railroad to a state of good repair. For detailed coverage of the plan and the Engineering Department's contribution to the plan, see page 6.

AEM-7 DC Heavy Overhaul Project Underway

Plans are underway at the Wilmington Maintenance Facility to overhaul 21 AEM-7 electric locomotives, which operate in the Northeast Corridor, over the next three years. At a cost of \$810,000 per locomotive, this overhaul project will extend the life of Amtrak's electric locomotives and improve reliability.

Wilmington mechanics have overhauled two locomotives this year; locomotive #952 was released first in January 2003 and #915 was released in April. "With much of the work on the remaining five underway, we're perhaps fifty-percent complete for this fiscal year," said **John Wood**, superintendent of Wilmington Locomotive Maintenance Facility. "Our goal is to have seven locomotives back in service by the end of September 2003."

Overhauls involve stripping the

Locomotive #915 sits in the Wilmington Locomotive Maintenance Facility after a major overhaul in April 2003.

locomotive down to the metal, then rebuilding the trucks, replacing a major portion of the hi-voltage cables and replacing many components. The locomotives are then repainted with Imron, a high-quality high-gloss paint known for its superior chemical resistance and long-lasting durability. Typically, mechanics perform limited overhauls on AEM-7s every three years; these locomotives have not had overhauls of this magnitude in 23 years.

Surplus Equipment Disposal Nets \$4.5 Million to Date

Amtrak has generated nearly \$4.5 million in cash from the sale of 246 units of retired rolling stock since October 2002, as part of an aggressive effort to dispose of unusable or surplus equipment and other assets. Additionally, the company is currently awaiting bids on 83 other units, and sale has been approved for 68,000 wooden ties for more than \$850,000.

The sales to date have included:

- 53 Santa Fe Hi-Level cars
- 72 material handling cars
- 96 F40 locomotives
- 23 wrecked cars
- 23 rail rack cars
- 23 Heritage cars
- 11 switcher locomotives
- 5 flat cars
- 4 baggage cars and 1 baggage/dorm car
- 3 E60 locomotives
- 3 Metroliner cars

- 3 Heritage Lounges
- 3 wrecked Superliners
- 3 cabooses
- 2 tower cars
- 1 tool rider car
- 1 wrecked mail handling car
- 1 table car
- 1 box car

The items listed for sale also include miscellaneous roadway equipment, such as air compressors, generators, tampers, ballast regulators, spike pullers, parts carts, and portable light units.

Amtrak has been disposing of its unusable or surplus equipment since the early 1970s. For the past 12 years, **Betty Ann Hastings**, a manager in the Material Disposal group for Materials Management, has worked closely with the Mechanical and Engineering departments to help rid Amtrak of surplus equipment. In October

One of the pieces of equipment taking up three miles of track, switch engine #749 was removed from Beech Grove March 26.

2002 Hastings assembled a working list of surplus equipment that included rolling stock damaged beyond repair and other surplus equipment for disposal. Hastings sent a solicitation notice to a list of potential buyers, inviting competi-

tive bids on the equipment, "as is."

"Disposing of surplus equipment not only translates to cash for Amtrak, but also rids our facilities of equipment that is just taking up space," said Hastings.

continued on page 3

TRAIN OF THOUGHT

When I arrived at Amtrak on May 15 of last year, the corporation was in serious trouble. Amtrak faced insolvency. Sometime in July, we would miss our payroll. The physical plant had been allowed to deteriorate. Heavy maintenance of cars and infrastructure had ceased several years ago — over 100 cars were wrecked or damaged and out of service. Fiscal controls were inadequate. We would be unable to close our books for FY '01 until September of the following year. There was no regular reporting of financial results. The organization was poorly defined and did not lend itself to effective decision-making. Amtrak's management was top heavy — 84 people had "vice president" on their title. The budget process was ineffective, and there was no control over staffing. Our credibility as an organization was in tatters.

We have seen a reduction in our total costs from FY '01 to FY '02, and we expect the trend to continue from FY '02 to FY '03. We have a long way to go, but it is a start.

Our immediate goal in June and July 2002 was to secure funding to allow us to survive into FY '03. However, at the same time, we had to lay a prefoundation for the future. The board of directors and I set a goal to have in place by October 1 a functional railroad organization, a zero-based budgeting process, and public reporting of financial and physical results. We also began focusing on controlling expenses. We were successful — we secured a loan from DOT and a supplemental appropriation from Congress that allowed us to make it through the end of the year and avert a transportation crisis. We entered FY '03 with a budget that was essentially zero based and that focused available resources on beginning the rebuilding process, as well as controlling expenses.

Expenses at the railroad are dropping as the result of many actions,

while maintenance activity is increasing. We have redirected resources into basic maintenance and restored vital programs. We are rebuilding wrecked, out-of-service cars and should have 15 cars back in service by May. To bring our passenger equipment to a higher state of reliability and utility, we have begun to restore the overhaul of cars simultaneous with their four-year inspections. On the infrastructure front, our track-laying system train will be back in service in May after sitting idle for a number of years, and it will be removing aged wooden ties and replacing them with concrete ties. With a thousand fewer people now versus 12 months ago, we are doing all this with a smaller budget, and we are doing it effectively. We have seen a reduction in our total costs from FY '01 to FY '02, and we expect the trend to continue from FY '02 to FY '03. We have a long way to go, but it is a start.

We have closed our FY '02 books, six months earlier than last year and they are publicly available. Our board receives complete GAAP financials, three weeks after the end of each month. Barring forces beyond our control — we plan to make our budget for FY '03, although our cash situation will be perilous. In any event, we must restore our working capital — a necessary requirement for any business.

Earlier this year, we sent to Congress our board-approved FY '04 funding request for \$1.812 billion of which \$1.044 billion would be spent on capital investment and \$768 million for operating support. The capital investment would be used to continue the restoration of our fleet to improve reliability, service and revenue, fulfill our statutory mandates, and make critically needed infrastructure investments to the existing national system and the Northeast Corridor. There is no new borrowing assumed in this budget, nor any expansion of service.

While there are some policy-makers who are unhappy with Amtrak, there is little agreement on the specifics of how to reform the railroad. What is needed, no matter how we define this reform, is a detailed plan which deals with the legal, financial, and physical realities of Amtrak. The progress

David L. Gunn

we are making so far is the result of a plan — many small steps that already and will ultimately continue to improve our service and financial results. It will not make us profitable; it will make us better. There is no single, simple solution to the Amtrak problem. One cannot be developed overnight — it will take time and thought. One of the first things we should do is dispose of the myths about Amtrak.

Myth #1

Amtrak can be profitable No national rail passenger system in the world is profitable. Without public subsidy, there will be no passenger rail transportation systems in the United States.

Myth #2

The private sector is dying to take over our services Remember why we were formed. We are what is left of a once privately run enterprise.

Myth #3

Long-distance trains are the problem This is perhaps one of the biggest myths. If on a fully-allocated basis, you might start to save significant amounts of money after a number of years. Focusing on this problem is not going to save Amtrak. This approach is a red herring.

Myth #4

Labor Costs are the problem Our wage rates are comparable with the freight industry. Wages are not the problem; generating a higher level of productivity, that is the challenge. It is management's duty to seek such improvement.

Myth #5

The Northeast Corridor (NEC) is profitable The NEC may cover most of its above-the-rail

Surplus Equipment Disposal Nets \$4.5 Million to Date

continued from page 1

Amtrak's rolling stock is a crucial financial investment and asset for the company. When this equipment is no longer functional, and does not provide a return on the investment, it becomes a liability — not an asset.

As the company's operational

needs change, it's critical that the equipment inventory matches these needs. "Any rolling stock that doesn't meet current functional standards or is not cost-effective to repair is considered for disposal," said Mike Rienzi, vice president, Procurement and

Materials Management.

Eighty-five of the F40 locomotives and the Santa Fe Hi-Level cars that were sold were removed from service more than six years ago and stored at Beech Grove, where they occupied approximately three miles of track space. The switcher locomotives, cabooses, flat cars, tower cars and rail rack cars were sitting at various Amtrak locations, such as Sanford, FL; Hamden, CT; Wilmington, DE; and North Brunswick, NJ. The roadway equipment, which includes air compressors, generators, tampers, ballast

regulators, spike pullers, parts carts, and portable light units, was located mainly at Wilmington, DE; Perryville, MD; and North Brunswick, NJ.

All of Amtrak's rolling stock not currently in use is continually being evaluated for return to service or stored for future revenue service. Rolling stock deemed worthy of repair has been slated for major overhaul work at one of Amtrak's backshops in Beech Grove, IN, Wilmington or Bear, DE. (See related story on page 1.)

Caboose 14031 is parked in the Chicago yards. Sold March 11, it was removed from the property April 30.

Table car 8600, sold April 18, sits in Sanford, FL. It will be removed by May 30.

Retired Equipment Dismantled and Scrapped

In addition to selling retired equipment "as is," Amtrak also sells some equipment as scrap metal. At the Wilmington Maintenance Facility, E60 locomotive #620 is being cut and dismantled for sale as scrap. At press time, the Wilmington Facility has cut and dismantled two E60s for scrap, as well as one AEM-7. There are plans to cut and dismantle additional equipment later this year.

Environmental Project Fosters CT Wetlands Growth

Travelers on the Connecticut Shore Line route between Branford and Stonington, CT, this spring may see new vegetation growing in the wetlands on the north side of the track as a result of a special environmental project undertaken by Amtrak.

As part of a 2001 Consent Decree with the U.S. Environmental Protection Agency (EPA), Amtrak agreed to improve seven culverts that enable flow between the ocean and upstream waterways along a segment of the Connecticut Shore Line route. Because the culverts became restricted by debris, phragmites (cattails) and other plants were stifling the growth of vegetation that is healthier for the marshland eco-system. The project was designed to improve the flow of salt water from the ocean to the inland wetlands north of the tracks, thereby increasing the salinity of the

Buildings and Bridges (B&B) crew members survey Culvert 95.79 in Clinton, CT. The culvert was one of seven rehabilitated as part of Amtrak's Supplemental Environmental Project. Left to right: **Russell Hodge**, B&B foreman; **Kenneth Newton**, Structures supervisor; **George Raymond**, B&B foreman, **Benny Drain** B&B mechanic.

wetlands and fostering the growth.

Amtrak Engineering employees working on the project first received special "Wetland Sensi-

tivity" training to perform the construction work while minimizing any impacts to the wetland environment. The construction work included repairing or

increasing the height of head walls, excavating creek channels, removing silt deposits, re-grouting culvert interiors and installing bioengineering materials. The project work began in 2001 and was completed in January 2003.

As a measurement of the project's success, in 2000, the north end salinities were as low as 2 parts per thousand (ppt), compared to the Long Island Sound (salt water) salinity of around 30 ppt. As the construction phase of the project was completed, salinity measurements collected in September 2002 indicated results of 12 to 29 ppt.

The work completed by Amtrak on these culverts will help foster the growth of more productive wetlands with cord grass or other low-lying plants. Over the next few years, this should become an improved habitat for fish and shore birds.

Wilmington Electronic Technician Finds Solution for Burn-Out

A \$55 Solution to a \$600 Problem

The unrelenting resolve of Electronic Technician **Bill Judefind**, a 25-year veteran of Amtrak's Wilmington Maintenance Facility, to improve the performance of the PA units on Amtrak passenger cars has saved the company hundreds of thousands of dollars.

Judefind found that the amplifier module boards (A20092) in the PA units, when used on Amfleet cars, were burning out. This destruction was the result of high-voltage surges running through the trainline, which passes the communication signal through the train consist, thus overloading the PA board components, such as board connectors, transformers, resistors and electronic audio switches. These overloads — depending on the duration and magnitude — could render the entire PA system inoperable.

Bill Judefind, an electronic technician at the Wilmington Maintenance Facility, is shown with his newly-developed protection module boards that prevent the Public Address units from burning out.

Between 1994 and 2000, Amtrak purchased hundreds of Generation 4 PA units from Safetran Systems, at an average cost of \$2,300 per unit, to improve channel capability, music isolation, and audio functions. Prior to the installation of these new units, the Wilmington Shop technicians would see very few burned-out boards, perhaps one or two a year. However, after the units were put in place, an unusually high number was being returned to the shop with burned-out boards.

Determined to solve the problem, Judefind discovered that the new board design did not isolate train-

line connections, and that absence of basic fuse protection and various other common components contributed to the board's destruction. On his own initiative, he created a "protection module board" that stops the surge of voltage from getting into the PA unit, thereby preventing the amplifier board from burning out. This modification board contains isolation audio transformers, fuses and diodes that provide protection against faulty voltages.

"I knew that there was a creative solution to this recurring problem, and I was determined to find it," said Judefind.

Judefind convinced his management to submit his design to Safetran Systems. Safetran deemed this component a viable solution to the amplifier board burnout and incorporated Judefind's design, at a cost of \$55 each, into future PA units. Safetran donated the first 250 add-on protection boards to Amtrak. To date, 405 PA units have been modified by the Wilmington Shops,

thus resulting in a \$55-solution to a \$600 board-replacement problem — a savings of more than \$220,000.

"Bill Judefind is a study in diligence," said his supervisor, **Bob Kanicki**, foreman of the Electronic Repair Facility at the Wilmington Maintenance Facility. "His persistence and his eagerness to find a cost-effective resolution is a model for the entire Wilmington facility. He is a dedicated worker

and Amtrak needs more like him."

Amtrak Caltrain Team Commended for Averting Disaster

A potential grade-crossing catastrophe was averted on February 26, 2003, in Mountain View, CA, thanks to the swift responses by and teamwork of local police authorities, Amtrak *Caltrain* Operations and an Amtrak *Caltrain* engineer.

At approximately 7:20 p.m., the Mountain View Police Department received an emergency call about a disabled vehicle on the tracks at the Rengstorff Avenue grade crossing. While en route to the scene, Officer Kevin Solomon noticed a northbound *Caltrain* Commuter train on its way to this location. Recognizing the potential

Jesse Bryant (L.) is congratulated by Conductor Keith Moore, UTU chairman for local #84.

Amtrak Conductor Honored for Rescuing Passengers

At a ceremony held in Burbank, CA, on April 21, Amtrak Conductor **Jesse Bryant** received the coveted Brass Lantern Award from the United Transportation Union for his bravery on a day in January when he helped injured passengers escape from twisted train wreckage. On January 6, a Ford F-350 truck was struck by and consequently derailed a four-car *Metrolink* commuter train traveling in rush-hour traffic. The engine and all four passenger cars derailed; two were overturned. The truck driver was killed and 34 passengers were injured, two critically.

Conductor Bryant, suffering from minor injuries himself, repeatedly entered the overturned wrecked

cars to rescue passengers. Bryant and the Critical Incident Team successfully freed a number of passengers from the wreckage; most suffering from minor cuts and bruises.

UTU International Vice President Tony Ianone presented Bryant with the award. "The Brass Lantern Award is UTU's way of recognizing members' extraordinary efforts in extraordinary circumstances," said Byron Boyd, UTU International President. "Conductor Bryant risked his life, again and again, to rescue as many passengers as he could. He is a true hero."

The Buena Vista accident is still under investigation by federal authorities.

for imminent disaster, Officer Solomon radioed two Mountain View police dispatchers to alert *Caltrain's* communications headquarters.

Keith McNerney, manager of Amtrak *Caltrain* Commuter Operations, took the call from police headquarters and immediately aired an emergency broadcast to all trains in the vicinity about the situation.

Upon hearing the emergency broadcast, Amtrak *Caltrain* Engineer **Jim Smith** immediately placed train # 91 into emergency status and applied the brakes to the locomotive. Smith stopped the train before reaching the trapped vehicle, but the train got close enough for him to see a frightened 16-year-old driver at the wheel.

At a ceremony held at the Penin-

sula Corridor Joint Powers Board meeting in March, board members presented all those involved with a commendation for exemplary performance under demanding emergency conditions.

"We are proud to display this commendation from the Peninsula Corridor Joint Powers Board. Lives were saved as a result of the responsiveness and professionalism of this whole team. This event underscores the importance of working with local authorities to promote train safety and awareness. This was a textbook example of everyone performing their duties and keeping a focus on safety," said **George Erickson**, superintendent of Commuter Operations for Amtrak *Caltrain*. The commendation is currently on display at the Amtrak *Caltrain* offices in San Jose, CA.

Amtrak Launches Food and Wine Web Page

Train travelers are just one click away from discovering the pleasure of fine dining on board most long-distance trains. Launched on May 1, Amtrak.com's new food and wine page offers customers the opportunity to learn about the company's expanded dining car menu and wine selection.

Customers visiting the food and wine Web page can read about new expanded dining car menu options, including a new selection of wines. As part of an on-going effort to upgrade the wine offerings aboard trains, wine tastings led by Superintendent of Passenger Services **Brian Rosenwald** were conducted at Chicago's Wishbone restaurant with a small group of Amtrak employees.

As the superintendent of Passenger Services for the Central Division, Brian Rosenwald is directly involved with the food and beverage service development and delivery for many Amtrak trains. As Amtrak's in-house wine connoisseur, Rosenwald has brought wine programs to several Amtrak lines, including wine tastings held aboard the *Coast Starlight* featuring local

Additions to Wine Selection

The following wines, selected for their quality and value, enhance passengers' dining experience:

- Meridian Vineyards 2001 Chardonnay (Santa Barbara, County, CA)
- Cavit 2001 Pinot Grigio (Delle Venezie, Italy)
- Callaway Vineyards 2001 Coastal Selection Merlot
- Beaulieu Vineyards (BV) 2000 Cabernet Sauvignon Coastal Vineyards-Cabernet

wines. Rosenwald is one of only 150 Certified Wine Masters worldwide.

New expanded dining car menus were adopted on long-distance trains in April, offering passengers an even greater variety of entrees, desserts and wines. The menus offer passengers a variety of new selections for breakfast, lunch and dinner

— many with larger portion sizes and reduced prices.

"These new menus offer an opportunity to enjoy the on-board dining experience with a broader choice of high-quality meals prepared by our on-board chefs — a clear competitive difference setting us apart from other forms of transportation," said Amtrak President David L. Gunn.

The expanded menus are a part of a new meal rotation Amtrak has developed to improve the dining experience on board long-distance trains without raising food service operating costs. The new meals are offered on three different menus, which rotate concurrently on different trains, ensuring passengers are offered a variety of meal selections. The system allows passengers to dine on one menu on their outbound trip and enjoy a different menu on the return trip

— even if it is on the same train service. Additionally, in most instances, passengers connecting to different long-distance trains will be offered a different menu from their previous train. This allows passengers who spend several days traveling up to three different menus, each with a variety of selections and an improved quality in the entrees served.

To learn more about the wine selection and Amtrak's new dining car menu, visit the food and wine page at www.amtrak.com.

Progress Continues at Bear and Beech Grove

continued from page 1
are available for revenue service. Under the plan, 90 percent of corridor cars would be available. Similarly, while only 71 percent of long-distance fleet is available today,

... Bear mechanics
will have exceeded
their fiscal year goal
by returning
12 passenger cars
to service.

the four-part initiative would increase availability to 89 percent.

Bear Car Shops

In November 2000, Amfleet I Coach 21092 was removed from service after a yard move collision in Albany, NY. After wreck repairs were made on approximately 30 feet of side damage, one complete corner post and end wall, and steps, it was converted to *Metroliner* Coach car 21792, and released February 28, 2003. Also damaged during a yard move in Albany in April 2000, Amfleet I Coach car 21280 sustained damage to the vestibule step area, corner post and one complete end wall. In

January 2003, it too, was released for service as a *Metroliner* Coach.

Amfleet I Standard Café cars 20044 and 20048 came to the Bear Maintenance Facility in April 2000 for overhaul. These cars were put into storage until work began in the fall of 2002. After inspecting the cars, in addition to necessary overhauls, damage to the coupler pocket area of both cars was found. Café car 20044 was returned to revenue service March 18, 2003, and 20048 returned on April 3, as *Metroliner* Dinettes 28351 and 28352, respectively.

These cars were not only wreck-repaired, but also overhauled and upgraded; new bathrooms were installed and the interiors were upgraded. The overhauls involved changing all major components including control panels, air conditioning systems, air breaks, trucks and electrical wiring.

Between October 2002 and April 2003, mechanics at Bear also performed complete overhauls, interior upgrades and new bathroom installation on three non-wreck cars. Amfleet I Coach car 44249 had been in storage at Bear since December 2001. And, Coach car 21273 had been awaiting repair at Bear since January 2002. These two cars became part of the Capstone

Superliner Diner car #38033, sits on the tracks tilted at a 15-degree angle as a result of the March 18, 2001, derailment of the California Zephyr in Nodaway, IA.

conversion program, which involves upgrading existing Amfleet cars to provide a consistent level of new service on the *Regional* trains. Released as Amfleet Capstone Coach cars, 44249 returned to service as 82520 on November 25, 2002, and 21273 as 82092 the following month, on December 13.

Amfleet Café/Dinette car 48221 was brought to the heavy-duty maintenance facility for overhaul,

interior upgrade and bathroom installation. This Café/Dinette car was a part of the High-Speed Rail testing program, and had not been in revenue service since April 2001. It was released as Amfleet full Dinette car 43353 in April 2003.

Bear's goal for the fiscal year is to complete overhauls on nine cars, seven of which were done by the

Strategic Five-year Plan Aims at Operational Reliability, State of Good Repair

Engineering Department Plan To Make Key Infrastructure Investments

Editor's Note: *This is the first in a series of Amtrak Ink stories that examines selected components of the Strategic Plan FY '04-'08. This article focuses on the details of the Engineering Department's FY '04-'08 Capital Plan, and takes an in-depth look at the movable bridge program.*

Years of public under-investment have led to deferred capital investments and the deterioration of Amtrak's infrastructure, fleet and other assets and no working capital to handle unforeseen events. As Amtrak currently implements changes to the company's organizational structure, financial reporting and accountability mechanisms, and strives to operate more efficiently and cost effectively, its main priority for capital investment is to bring the railroad to a state of good repair.

The strategy behind the plan is to make calculated and selective investments that restore value and efficiency to the railroad.

At a meeting on April 24, Amtrak management presented its board of directors a detailed five-year plan designed to achieve that goal. The strategy behind the plan is to make calculated and selective investments that restore value and efficiency to the railroad. The aim is to stabilize the existing railroad by returning the plant and equipment to a state of good repair, controlling the operating deficit, and restoring liquidity to the company. The price tag for meeting this goal is \$1.8 billion in '04 and drops to about \$1.5 billion in '08 in capital and operating spending. The capital needs per year will range between \$800 million and \$1 billion, and operating loss, including debt service, is projected at \$744 million in '04 declining to approximately \$650 million in '08.

The Niantic River Bridge in East Lyme, CT, opens for marine vessel traffic. The bridge has been plagued by operating failures due to cracked steel girders and other structural problems.

Slated to be rebuilt by 2008, the Thames River Bridge is a key transportation link on the route between New York and Boston. The bridge's bascule lift will be replaced with a vertical lift structure.

The three main components of Amtrak's five-year capital plan reflect investment needs in three areas: infrastructure (Engineering Department), fleet and facilities (Mechanical Department), and other

(including Environmental Compliance, Amtrak Technologies, Procurement, and other departments). Each of these groups has developed a comprehensive five-year capital plan.

The capital plan reflects a detailed inventory of the company plant and equipment and the shape in which it operates today. On the infrastructure side, the goal is to target those assets that are at or near the end of their useful life. These include major interlockings; wood ties on main tracks; substations, transformers and rotary frequency converters; catenary poles, wire and supporting hardware; and CETC control centers. Much of Amtrak's high-voltage electrical equipment and catenary structure dates back to the original installation by the Pennsylvania Railroad in the 1930s and earlier on the Harrisburg and Hell Gate lines. Major bridges and tunnels date to the early 1900s, and many inter-

lockings have not been renewed since the early east Corridor Improvements in the late 1970s and ea

Bridging the Gap

At a total of \$167 million for the five-year period, the movable-bridge program is a significant component of the Engineering Department's structures plan. By the end of 2008, two of the thirteen movable bridges Amtrak owns will have been replaced, a third bridge will be under construction, and eight more will have been upgraded.

"Over the years, we have made repairs to bridges only as they have become inoperable or nearly inoperable. The implementation of this bridge program gives Amtrak an opportunity to cost-effectively maintain its bridges over the long-run," said **Jim Richter**, deputy chief engineer, Structures, "not to mention mitigate costly delays and service disruptions, and improve service."

The Thames River Bridge in Groton, CT, one of ten movable bridges on the NEC, is a key bascule (drawbridge) bridge on the route between New York and Boston. A complete engineering assessment of the bridge conducted in the early 1990s found considerable wear of the trunnion bearings, which support the bridge as it opens and closes. The bearings are not in an easily-accessible location; their failure could cause the bridge to become inoperative for as many as six weeks while the bearings are replaced. An outage of this magnitude on a key transportation link between New York and Boston is a risk that Amtrak and the Northeast states cannot afford to take — some 5,400 Amtrak riders daily would have to transfer to buses at New London to complete their trips during such an outage.

Replacing this bridge is not just about its effect on Amtrak passengers, however. The Thames River is home to a naval submarine base, the General Dynamics shipbuilding plant, and numerous marinas that serve commercial fishermen and recreational boaters. If the bridge fails in the down position, it could disrupt naval operations and local industry and tourism.

After studying all the alternatives, it was decided to replace the bridge's bascule lift

with a more modern and reliable vertical lift structure, the span of which is raised and lowered between two towers. The new bridge will be fabricated off-site and floated into place, minimizing disruption to rail and boat traffic.

This deteriorated bearing and shaft, a component of the machinery that drives the Niantic River Bridge up and down, contributed to the inoperability of the bridge.

Updated machinery components, such as new bearing and shafts seen in this photograph, provide a temporary solution to the Niantic River Bridge's malfunctions.

The second movable bridge slated for replacement by 2008 is the Niantic River Bridge in East Lyme, CT. Built in 1907, this bascule bridge has had a number of operating failures due to cracking of the steel girders, and misalignment and distortion of the track girders and flanges. Some partial repair work involving steel rehabilitation and the replacement of gearing and control apparatus has enabled Amtrak to continue to use the bridge, which had over 4,000 openings for boats last year, but only for a limited amount of time. Over the past four years, Niantic Bridge failures have caused an average 80-percent increase in rail traffic delays per year, and an average 44-

percent increase in delay minutes per year. Preliminary plans for the bridge's replacement include construction of a new bascule span and approach spans on a new alignment.

The first construction phase of a new bridge to replace the Portal Bridge, a bridge that crosses the Hackensack River in New Jersey, is slated to begin in 2008. The Portal Bridge is a swing bridge, which opens and closes by swinging from a center pivot. Unlike the current structure, the new high-level, two-track bridge will provide ample clearance for marine vessels to pass through the channel of the river.

Phase two of the project will build an additional two-track structure to support Amtrak and

New Jersey Transit rail traffic between Newark and New York Penn Station. High-level bridges at Portal are critical to solving the congestion problem that is impacting northern New Jersey and New York, problems that will only worsen with the planned opening of Secaucus Transfer Station later this year.

The upgrades planned for eight movable bridges include new miter rail assemblies for Shaws Cove swing bridge in New London, CT; drive machinery upgrades on the Bush River Bridge near Perryville, MD; structural upgrades at Dock Bridge in Newark, NJ; and new electrical, mechanical and structural components on the South Branch lift bridge in Chicago and the Trail Creek swing bridge in Michigan City, IN. Additionally, the Spuyten Duyvil Bridge, a swing bridge that connects Manhattan with the Bronx and provides the only direct rail access to Penn Station from upstate New York, will experience replacement of electrical and mechanical components and fender system upgrades to maintain adequate protection against marine vessels. Improvements will also be made to machinery and electrical components on the Mystic River swing bridge in Mystic, CT, and the Connecticut River bascule bridge near Old Saybrook, CT.

been systematically during the early days of the North American Movement Plan program in the early 1980s.

At and facilities, heavy maintenance deferred since 1999; major facilities is at an all-time low and cannibalized equipment and non-standard equipment proliferated.

Investment has been focused on operating costs and maintenance of both infrastructure and equipment. Less Amtrak is able to spend through sufficient funding in basic plant and maintenance of intercity service is jeopardized.

ign an

The department's five-year plan lists the required investment in the track, structures, signals, electric traction & Life Safety in the Northeast Corridor and Philadelphia — Harrisburg, New York, and New Haven — and the Central, New York and Southwest Divisions.

The plan improves and maintains the track by addressing the replacement of failed structure assets, most of which are on the Amtrak-owned portion of the corridor, which extends 245 miles from Schenectady, NY, south to New Haven, CT, to the Massachusetts state line. The plan is designed to improve capacity — and prevent major failures.

"Our biggest infrastructure challenge is the foundation for the future," said **David Hughes**, senior vice president.

The engineering plan includes 16 interlockings; 16 concrete ties; installing 16 ties; repairing and replacing 16 bridges (the Schuylkill River in Philadelphia and New York City); and upgrading 200 miles of catenary and other necessary infrastructure.

From 2009-2013 will cost \$1.0 billion, mostly for the replacement of one-time major projects will not have been completed in decades.

The plan, with the exception of

selected bridges and tunnels, most of the NEC track, signals, structures and electrical traction will be in relatively secure and maintainable condition.

Track

By the end of 2008, NEC main line track will be built on concrete ties and free of long-term speed restrictions. Some 26 interlockings will have been renewed, replacing wood ties with concrete panels and upgrading components, such as switch points, signal relays and fasteners. The current wood configuration is obsolete and is difficult and costly to maintain under

heavy traffic conditions. No further investment in main line track is expected until after 2020, other than normal life cycle replacement and interlocking reconstruction, which will continue through 2014. By 2008, the NEC feeder lines will also be in a state of good repair as will the Central, Southern Pacific and Southwest Divisions.

Electric Traction

While Amtrak built a new electric traction system from Boston to New Haven in the late 1990s, the most heavily-traveled segment from New York to Washington is nevertheless plagued by 70-plus-year old

electrical equipment that supplies 200 million watts of power daily to Amtrak and six commuter agencies. Of the 70 old high voltage substations between New York and Washington, 42 will be updated by 2008, and the balance updated by 2013. Of the 953 miles of transmission lines on the Corridor, 584 will have been rehabilitated, with the rest done by 2013. Of the 1,254 miles of catenary, all but 259 will have had hardware and insulators replaced by 2008. Out of the 9,200 catenary poles along the route, 4,000 will be repaired or replaced by 2008 and the

Train of Thought

continued from page 2

costs, but it is an extremely costly piece of railroad to maintain. Railroads, both passenger and freight are extremely capital intensive. The NEC is not profitable and never will be. Sure, private groups might be interested in having it, but they would take it only with the promise of massive capital infusions, i.e. subsidies.

Myth #6

There is a quick fix — reform

The word reform is like catnip to those interested in a quick fix to Amtrak. If the answer were quick and easy, we would have solved the problem long ago. What needs to be done is to tightly manage the company and its finances and begin to make incremental but critical improvements to plant and equipment. As I stated before — there is no silver bullet.

The only way to bring discipline to large organizations like Amtrak is to build a tight structure, hire and retain competent managers and employees and institute a strict budget process. My philosophy for managing includes five basic tools:

- an organization with minimum layers, individual accountability for specific functional areas, organization charts documenting the chain of

command and all authorized positions;

- clear goals and objectives;
- an operating budget based on monthly staffing levels;
- a detailed multi-year capital budget; and
- a monthly financial reporting and performance reporting for specific responsibility centers and projects.

With these five tools in place, you can manage. They also keep you honest. For too long Amtrak did not have a process that created internal accountability, and the annual funding provided by Congress has always left it close to the edge. So it is no wonder why the problems we have had are both significant and recurring. Even with tighter management and better financial accounting, there are still big risks. However, through better management, we will be able to avoid these recurring financial crises, which divert attention from the real problems and decisions that need to be made.

At some point, Congress will consider reauthorization of Amtrak. This is when the future of rail passenger service will be decided. In the year that I have been here, I have been struck by the amount of attention that

Amtrak generates without real progress occurring in addressing the long-term funding problems that everyone knows exist. I realize that Amtrak is partly to blame for this paralysis of action; recurring crises distract us from the central issues that should be discussed. However, despite the best management that could be brought to this railroad, without support for a realistic investment over the next few years, we will always remain on the edge and the problem will grow worse, risking a real disaster either physically and/or financially. We need to have a focused discussion on the future of passenger rail — not doing so will soon produce unwanted consequences.

We have developed a five-year strategic plan for capital and operating budget (there's a story about the plan in this issue of *Ink* that you should read and there will be more to come). I believe it is both a practical and pragmatic plan that shows what needs to be done and what can be accomplished with a consistent level of funding from FY '04 through FY '08. We will stabilize Amtrak and bring the railroad up to a state of good repair. Our equipment will be in good condition — and on regular maintenance cycles, which means improved reliability and utilization, and the backlog of critical

needs to our Amtrak infrastructure will be significantly reduced. Regardless of what policymakers decide is the future for Amtrak or rail passenger service in the United States, I would argue that the steps outlined in the five-year plan are essential and would have to be done in any case. The first down payment on that plan would be in FY '04.

Our plan also represents the least expensive and least disruptive course of action for the Congress. Unfortunately, in the past few years, a troubling pattern has emerged of creating new oversight responsibilities as a substitute for a real discussion on the issue. This is a “mugs game,” a distraction with no real benefit to anyone unless the goal is to interfere with this company reaching fiscal stability and a state of good repair. Repairing and improving this railroad is our immediate goal and is in everyone's interest. We have a five-year plan that will accomplish this. Each of you will have a role in making this plan a reality. Your role will range from carrying out the rebuilding to serving our customers. Over the next few months we will give you the details of our plan. It was developed by Amtrak employees, not consultants — it's practical and doable — I think you'll like it.

Progress Continues at Bear and Beech Grove

continued from page 5

end of April 2003. On target for completing the overhaul of five additional cars by May, Bear mechanics will have exceeded their fiscal year goal by returning 12 passenger cars to service.

Beech Grove Maintenance Facility

With the overhaul of eight Superliner cars complete, employees at the Beech Grove Maintenance Facility are on track to meet their goal of returning 14 cars to revenue service by the end of the fiscal year. These eight include three cars reported on in the March issue of *Amtrak Ink*, which were completed by February, and five additional cars released in March and April.

Each of these five cars arrived at Beech Grove as a result of train derailments. On July 8, 1999 in Eagle Lake, TX, the *Sunset Limited* overturned, causing the entire left end of Superliner sleeper car 32065 to be replaced from the roofline to the coupler pockets at the bottom of the car. In addition to the wreck

repair, overhaul on this car included repairing inner duct work, air filter systems and door pockets. It was released for revenue service March 23.

On October 22 in Palm Springs, CA, the *Sunset Limited's* Coach car 34035 derailed in a leaning position, requiring repair of extensive damage to the bottom sides and both ends of the car. Once repairs were complete, it was returned to service in April 2003.

Other incidents that brought cars to Beech Grove include the July 29, 2001, *Texas Eagle* derailment in Annapolis, MO, the result of which sent two cars to Beech Grove. Both Superliner I sleeper car 32019 and Lounge car 33015 derailed upright, sustaining extensive undercarriage damage. Also, on March 17, 2001, the *California Zephyr* derailed in Nodaway, IA, damaging Superliner Diner car 38033.

All of these cars sustained heavy damage to the bottoms, sides, roofs and ends of the cars, which is typical of the damage seen in

Carman welder and twenty-year employee, **Joe Messer** repairs the commode of Superliner sleeper #32065 after it was involved in the 1999 Texas Eagle derailment in Eagle Lake, TX.

derailments. These cars, manufactured in the 1970s, also required complete overhauls and interior upgrades. The interiors of the cars received new carpet, cushions, drapes, decals and plastic wall coverings in the deluxe bedrooms.

“Getting these cars repaired, over-

hauled and back in service is one of our main priorities,” said **Lew Wood**, superintendent of the Beech Grove Car Shop. “And, as a result of the commitment of all the employees at Beech Grove, operational efficiency and reliability will be improved.”

Service Updates

New Amtrak Thruway Service Connects Portland to Freeport, ME

A new Amtrak Thruway Motor-Coach service is now offered in Maine between Portland and Freeport. Operated by V.I.P. Tour & Charter Bus Company, the new service, which began May 3, 2003, connects to and from Amtrak's *Downeaster* trains at the Transportation Center in Portland.

Freeport, a beautiful coastal Maine village, offers shopping that includes more than 170 upscale outlets (including the world-famous L.L.Bean), designer shops, B&Bs, restaurants and much more. The Freeport Explorer will operate on Saturdays, Sundays and selected holidays, and takes approximately 45 minutes travel time.

OSHA Requirements for Records Access

The Occupational Safety and Health Administration (OSHA) requires employers to provide employees with access to their medical and occupational exposure records. Amtrak provides this information to employees through the Safety Department for exposure records, and through the Medical Department for medical records.

Please contact the offices listed below if you want to see your records. This notice is published annually to comply with the provisions of OSHA requirement 29CFR 1910.20.

Amtrak Releases Details of Five-year Strategic Plan

continued from page 7
remainder by 2013. Additionally, the new or refurbished catenary system will permit 150 mph operation between Washington and New York in the designated areas. The plan also upgrades Hell Gate Line catenary, which dates to the original installation of electrified service on the Northeast Corridor by the New Haven Line in the early 1900s.

Signals and Communications

According to the plan, all manned towers will be closed (except for K Tower at Union Station, which will be replaced after 2009) and new centralized traffic control centers will manage all train movements on the NEC by 2008. In addition, Advanced Civil Speed Enforcement System (ACES) will be completed between New York and Washington, permitting 135 mph operations in many areas and enhancing safety by automatically stopping trains that exceed proscribed limits. In addition, more than 2,000 track signal relays will be replaced, greatly enhancing reliability.

Structures

The Engineering Department's structures plan, which will range in cost between FY '04 and '08 from \$57 to \$89 million, includes plans to entirely replace the Miamicock River undergrade bridge in Connecticut, including both the substructure and the superstructure. Two of the ten movable bridges on the NEC will be rebuilt — the Thames and Niantic River bridges, also in Connecticut. Both bridges were built in the early 1900s and their unreliable movable lift mechanisms are a source of frequent train delays between Boston and New York. The five-year plan also includes design of a replacement for the Portal Bridge across the Hackensack River in New Jersey, with construction scheduled to start in FY '08 and continue into the FY '09-'13 period. A conceptual design study is included in the plan to replace the Baltimore tunnels, which were built after the Civil War, and suffer from severe water infiltration making them difficult to maintain under heavy traffic. During the five-year period, the Engineering Department also proposes, on an annual basis, to replace an average of 2,200 bridge ties, convert four to

five bridge decks to ballast decks, and upgrade 25 to 35 undergrade bridges.

Stations

An annual average of about \$21 million over the five-year period is set aside to address structural and building deficiencies at major Amtrak-owned stations including Penn Station, New York; 30th Street, Philadelphia; Baltimore; Wilmington; and Chicago Union Station, among others. Platforms at Newark, NJ, where overcrowding is a major issue, will be upgraded in conjunction with New Jersey Transit. In addition, the program includes a stations assessment program and funding for improvements recommended through the assessment. A major emphasis of the assessment program will be on American with Disabilities Act (ADA) improvements necessary to meet a 2010 compliance deadline.

Fire/Life Safety and Other Major Projects

The five-year plan continues Amtrak's Fire/Life Safety program in the New York tunnels in conjunction with the FRA and Long Island Rail Road that began in the early '90s. New Jersey Transit also contributes to the effort through the Joint Benefit Program under which NJT expenditures for Main Line infrastructure improvements in New Jersey are matched by Amtrak funding for NY tunnels work. The extensive, \$900-million program will extend into the FY '09 to FY '13 timeframe. It includes structural, ventilation and egress improvements to the two Hudson and four East River Amtrak-owned tunnels into Manhattan. This category also funds partnerships, such as the Shell-at-Grade interlocking reconstruction project and freight-funded route upgrades in Rhode Island, on the Hell Gate Line in New York and in the Philadelphia to Baltimore area.

In a two-volume document, the Engineering Department's five-year plan provides, detail-by-detail, the vision for bringing Amtrak's infrastructure back to a state of good repair. "This plan is by no means a wish-list," said Amtrak President David Gunn, "it represents what we have to accomplish to restore stability and reliability to the infrastructure and keep us out of the soup."

P R O M O T I O N S I N M O T I O N

Internet-only 25-percent Discount Fares; New Sleeper Car Virtual Tours

For a limited time — May 1 through June 15, 2003 — Amtrak passengers save 25 percent off best available fares by booking online at www.amtrak.com for travel May 6-December 18.

Reservations are required and must be made online using promotion code H315 a minimum of five days prior to travel. Tickets may be upgraded to include sleeping accommodations upon payment of the applicable charges. The special fares are not available on *Acela Express*, *Metroliner*, *Downeaster*, peak departures of Amtrak's *Regional* service or any departure requiring the purchase of a peak or unrestricted fare. Blackout dates and other restrictions do apply.

Additionally, Amtrak's Web site now features virtual tours of Amtrak's sleeping rooms, a travel diary written about travel onboard

the *Coast Starlight*, and guides to some of Amtrak's most popular destinations.

Kids Ride Free On The Auto Train All Summer

Amtrak's Kids Ride Free summer promotion is currently in progress on the *Auto Train*. The promotion, which runs through August 23, 2003, for travel dates between June 16 and August 28, 2003, is a popular summer vacation option for families.

"Because passengers travel with their cars — including SUVs — on the *Auto Train*, this unique train trip is ideal for families with small children," said Barbara J. Richardson, Amtrak's vice president of Marketing and Sales. "And, with our Kids Ride Free summer promotion, the price is right, making *Auto Train* the best way to travel the East Coast this summer while avoiding the traffic and fatigue of a long car trip."

This promotion is available on the *Auto Train* only, and passengers must travel together. Reservations are required and must be made at least five days in advance of travel. Up to two children ages two to 15 may travel for free with each full-fare paying adult. Because availability is limited, customers should act quickly.

Amtrak Issues New Vacations Brochure

Redesigned Amtrak Vacations brochures, featuring 27 new travel

packages, were distributed in April to key business partners and Amtrak stations across the country.

This 40-page marketing tool features color photos of on-board accommodations, includes helpful tips for riding Amtrak trains, and outlines the Amtrak Vacations terms and conditions. Over 200,000 brochures have been distributed to 22,000 travel agents, 54,000 prior Amtrak Vacations customers, consumers, and staffed Amtrak Stations.

Sixty percent of Amtrak Vacations reservations are made by customers directly through Amtrak Vacations, managed by Amtrak's tour operator Private Label Travel; about 40 percent of Amtrak Vacations packages are sold through travel agencies.

Amtrak Vacations are leisure package travel deals that include bundled rail, hotel, car rental, and sightseeing tours. Amtrak Vacations include popular destinations such as New York, Chicago, San Francisco, and the Grand Canyon. This year, package offerings have been expanded from 20 to 47, with the goal of attracting customers to a wider experience of

rail travel, and to encourage an increase in ridership on Amtrak's long-distance trains.

A new feature of Amtrak packages is transportation from rail station to hotel, a frequently requested option for many customers. Amtrak Vacations packages also include access to Amtrak Vacations Customer Service, which offers 24-hour daily assistance to customers. Amtrak's Air/Rail

program is also included in the brochure; a popular combination for customers who want to experience long-distance train travel, but are short on time. Passengers can take the train in one direction and return by air, or vice versa. The average rail ticket for an Amtrak Vacations package is \$655.

Hoppy Trails

After a day of passing out candy to *Heartland Flyer* passengers, *Heartland Flyer* Coalition Webmaster, Ron Herendeen (dressed as the Easter Bunny), joins the crew on the platform at the Ft. Worth, TX, Amtrak Station. (L. to R.) Conductors **Jimmy Nuncio** and **Robert Villarreal**, "Easter Bunny," Lead Service Attendant, **Pacita Perrera**, and Engineer **Steve Perry**.

Timetable Focus Groups Held in 4 Cities

The Sales and Marketing Department held focus groups consisting of business and leisure travelers in four cities — Oakland, Chicago, Philadelphia and New York City — on May 5 and 6 to gather information that will enhance Amtrak's timetables' ease-of-use and readability of content.

"The primary objectives of the focus groups are to measure how well our timetables are meeting the needs of the consumer and how we can improve on our weaknesses,"

said **Linda Park-Verdi**, manager, Marketing Operations Support.

Through the focus groups, the department expects to learn about a range of issues, such as customer demographics, timetable functionality, ease-of-use, and whether there should be additional information included in the timetable — all from the perspective of the customer. The information learned at the focus groups will be used to improve the upcoming fall 2003/winter 2004 timetable.

"Picture Our Train"

2004 Wall Calendar Photo Contest

Your photograph will adorn the walls of train lovers everywhere, if you win the "Picture Our Train" contest. Simply enter your photo of an Amtrak train (sporting our current logo) and your image could be

featured on Amtrak's 2004 wall calendar! The First Prize Winner will also receive a \$250 gift certificate to the Amtrak Store and a photo credit on the calendar. The Second Prize Winner will receive a \$100 gift certificate to the Amtrak Store. Contest ends July 7, 2003.

Amtrak's 2003 wall calendar was among the most popular in Amtrak history, selling out weeks after it became available. Will the 2004 wall calendar rival the popularity of the 2003 calendar? Enter the 2004 "Picture Our Train" Wall Calendar Photo Contest and your photograph could make next year's calendar a best-seller!

SAFETY FIRST!!! As always, Amtrak reminds you to stay out of danger — stay away from tracks and the railroad right-of-way. Remember, our trains move quickly and quietly.

Do not trespass on railroad property or on private property adjacent to the railroad. Do not climb or approach railroad structures, towers, or wires. Stay in public access areas, and away from railroad structures and moving equipment — in stations, on sidewalks, or in parking lots. All participants expressly release Amtrak from all liability for personal injury and loss or damage to personal property, and expressly assume the risk of harm. Remember, tracks, trestles, yards and equipment are private property — trespassers are subject to arrest and fines.

2004 Amtrak Wall Calendar Photo Contest Official Rules

Contest: Best original color photograph featuring an Amtrak train with the current Amtrak Logo (as seen above) and livery visible.

How to Enter: Mail an 8 x 10 color photograph suitable to be enlarged to approximately 25 inches (horizontally) to: 2004 Calendar Contest, Amtrak, 60 Massachusetts Ave, N.E., Suite 4E-315, Washington, D.C. 20002. The photograph must be clearly labeled on the back with entrant's name, day and evening phone numbers, address, and email address (if available). The front of the photograph may not include names, signatures, or other identifying marks. Finalists will be contacted to submit their original transparency, slide or negative for use in producing the calendar with the winning photograph. Entries

must be postmarked by July 7, 2003 and received by July 10, 2003. This contest ends July 7, 2003 at midnight EDT. No digital photographs will be accepted. No purchase necessary. Only one entry per person.

Eligibility: This contest is open to legal residents of the United States, 18 years of age or older at the time of entry. Amtrak employees and their families are eligible; except Calendar Contest judges, Amtrak Marketing employees (as listed on the company's organizational chart 10.3) and their families, and Amtrak Corporate Communications employees (organizational chart 10.4) and their families are not eligible. Amtrak advertising agencies and their families are not eligible. Amtrak reserves the right to verify eligibility qualifications of any winner.

Conditions of Entry: By entering this contest, entrant agrees that the photograph submitted is original to entrant and he or she owns all rights to the photograph. Entrant further agrees to these Official Rules. By entering this contest, the selected first-prize winner hereby grants Amtrak a license to use, copy, display and modify the winning photograph on the 2004 Wall Calendar and for other collateral related to the promotion of the calendar and use his or her name in connection therewith. Amtrak shall not be responsible for late, lost, incomplete, damaged, misdirected, illegible, or postage-due entries. Entries will not be acknowledged or returned.

Entrant agrees to stay away from moving trains, tracks, structures, and railroad property. Entrant agrees to release Amtrak from all liability for injury, damage to or loss of personal property, and all other losses, and expressly agrees to bear all responsibility for and to assume the risk of all harm.

Prize: The First Prize is a \$250 gift certificate to the Amtrak Store and the display of the winning photograph on the 2004 Amtrak Wall Calendar with photo credit. The Second Prize is a \$100 gift certificate to the Amtrak Store. All taxes are the sole responsibility of the winner. No prize substitution, cash substitution, or assignment or transfer of prizes is permitted, except by Amtrak for reason of unavailability in which a prize of equal or greater value will be awarded. All prizes will be awarded.

Winner Selection: The prizewinners will be determined on or about July 16, 2003. All entries will be reviewed by the Amtrak 2004 Wall Calendar Review Panel, and finalists will be reviewed by the Judges' Panel. The judges' decisions are final. The First Place and Second Place winners will be notified by telephone, mail and email, if provided. The First Place winner is required to sign an affidavit of eligibility, publicity release and copyright license, and return it properly executed within 7 days of attempted notification as a condition of awarding the prize. If prize notification is returned as undeliverable or the winner fails to return the affidavit, release and license, as applicable, the winner will be disqualified and an alternate winner will be selected. If, in Amtrak's opinion, there is any suspected or actual evidence of tampering with or alteration of any portion of the contest, Amtrak reserves the right to terminate the contest.

Winners List: For the names of the winners, after August 15, 2003, visit www.amtrak.com/photowinners.html, or send a self-addressed stamped envelope to: 2004 Calendar Contest Winner List, Amtrak, 60 Massachusetts Ave, N.E., Suite 4E-315, Washington, D.C. 20002. Requests received more than sixty (60) days after the completion of the entry period will not be honored. Vermont and Washington residents need not send stamped envelope.

General: Amtrak is a registered service mark of the National Railroad Passenger Corporation. This contest is subject to all federal, state, and local laws. Void where prohibited by law. U.S. law governs this contest.

Mechanical Five-year Plan Rebuilds Fleet

Increases Car and Locomotive Availability

Editor's note: This is the second in a series of stories that takes an in-depth look at Amtrak's Five-Year Strategic Plan FY '04-'08. This article examines the Mechanical Department's 2004-2008 Investment Proposal and focuses on its plan to return long-distance trains to revenue service.

Under the Five-year Strategic Plan, federal grants to support operations and capital investments would range from \$1.8 billion in FY '04 to about \$1.5 billion in FY '08. The planned annual capital needs are between \$800 million and \$1 billion, while the anticipated operating loss, including debt service, is projected at \$744 million in FY '04 declining to approximately \$650 million in FY '08.

The Five-year Plan outlines capital investments in three key areas: Infrastructure (as directed by the Engineering department), Fleet and Facilities (Mechanical department), and general services (including Environmental Compliance, AT, Procurement, and Real Estate).

The fleet faces major challenges. While Amtrak has returned to service 17 wreck-repaired cars so far this year, currently about 26 percent of passenger cars and locomotives, or about 590 pieces of equipment, is unavailable for service on any given day. More than

95 locomotives and over 235 cars are out of service for routine repairs or extended inspections. An additional 259 locomotives and coaches are stored at facilities around the country, either as wrecks or units which should be scrapped.

For railroad professionals, the rolling stock business has become extremely daunting and frustrating. Many of the firms which once thrived in this business have failed. Due to consolidation and globalization in the industry, suppliers have gone out of business — and that's just one of the complicated issues the mechanical shops have to manage. To succeed in this climate, Amtrak requires the best of its people working in the Mechanical department.

Putting this equipment back in service and operating reliably is key to the plan to boosting revenues. This effort will save tens of millions of capital costs by deferring the need to purchase new equipment and, just as importantly, will make operations more efficient by preventing the need to constantly cut and paste consists in yards in response to equipment failures.

The result of recent under-investment at Amtrak has been increasing pressure on operating costs and declining reliability of

continued on page 5

Amtrak Continues Progress on Wreck-repair Program

Released from the Bear Car Shops on May 23, Metroliner coach car #21703 is Amtrak's 17th car returned to revenue service this fiscal year. The coach car arrived at the heavy maintenance facility as Amfleet I coach car #21003 in November 2000 after a yard move wreck in Albany, NY. After overhaul, installation of new bathroom modules, and repair to the corner, end sheets, steps and about 15 feet of siding, the Amfleet I coach was converted to a Metroliner coach.

Mechanics at Bear also overhauled Amfleet Club Dinette car #48156 which was released on May 9. Manufactured in the mid 70s, the Dinette car was a part of Amtrak's High-Speed Rail testing and had not been in revenue service since August 2002.

Ridership Grows on Strength of Discounts and Long-Distance Trains

March and April Ridership is Best Ever

Amtrak's continuing efforts to increase ridership and revenue resulted in record numbers of passengers in March and April. In these two months, nearly 4.2 million trips were made on Amtrak, up 2.4 percent over the same period last year, and largely attributable to an aggressive winter and spring promotion of discount fares.

Meanwhile, market analysis and pricing strategies are continuing to focus attention on increasing ticket revenue. April ticket revenues of nearly \$104 million fell 7 percent below last year, which is slightly better than the current trend of 10 percent behind last year's pace. (Overall, ticket revenue trails the

budget forecast by \$87 million for the year, but at the same time, total expenses have under-run the budget by \$89 million, keeping the company on-budget through the first seven months of the year.)

What's driving the rise in ridership? West coast corridor trains, strong long-distance train performance, and growth in the Northeast Corridor *Regional* service are the answers.

California services continued to break records in April with *Pacific Surfliner* ridership up 25 percent and *San Joaquins* ridership up 12 percent over last year. Ticket revenues for the *Pacific Surfliner*

continued on page 6

Jack Fund, electrician at Beech Grove, works on the heating elements of an A. O. Smith style water heater that will be installed into one of the wrecked Superliner cars.

TRAIN OF THOUGHT

After several years of sitting idle in Wilmington, the Track Laying Machine (TLM) began work on May 12, replacing old wood crossties with new concrete ties. Up until now, we've been repairing track here and there as needed with less efficient mechanical

**We are moving ahead;
whether it is
rebuilding equipment
or three-quarters
of a mile of rail
a day, that's
measurable progress.**

equipment, or simply slow-ordering the track.

I remember traveling to Washington last May when I came to Amtrak and seeing the TLM sitting idle at Wilmington. I thought what a shame that this equipment should sit in the weeds. Getting the track-laying machine back to work means a great deal to me. Through mid-November, the plan is to install over 100,000 concrete ties — approximately 40 miles of track converted to concrete in Delaware, Maryland and Pennsylvania — adding more reliability and capacity for our High-Speed Rail operations and

commuter partners. This work is an important step in revitalizing the corridor and an important part of our five-year strategic plan to bring the railroad up to a state of good repair. The TLM is a sight for sore eyes (just take a look at the photographs in these pages).

Another sight to see was the equipment display here at Washington Union Station on May 15. Employees from Bear and Beech Grove came here to show examples of their wreck-repair and remanufacturing accomplishments this year. Approximately 400 people came by to take in the tour. The quality of the work performed, which included wreck-repaired Superliners and a rebuilt Amfleet Dinette car, is an example of progress for the company and pride in a job well done by those who fixed the cars.

As many of you know, especially those of you in procurement, engineering and the mechanical shops, we have already begun to put in orders for long lead-time materials we need for the next fiscal year. While we do not yet know next year's budget or how much we will get from Congress, I simply made the decision to move forward because the work must be done if we are to survive.

Last month, I respectfully wrote to Amtrak board members that unless they had specific objections, we were moving ahead with ordering material. Some time ago,

David L. Gunn

DOT outlined its plans for reforming passenger rail. I have my own doubts about this word "reform," as I told you in Myth #6 last month, but I have no doubts as to our responsibility at this moment. In my letter to board members, I wrote that our capital plan is necessary to protect federal investments that have been made to date, regardless of the shape of reforms that may someday be agreed to by federal policymakers. Protecting those investments and running a safe and reliable railroad requires a state of good repair, no matter what is ultimately decided.

We are moving ahead; whether it is rebuilding equipment or three-quarters of a mile of rail a day, that's measurable progress. My personal thanks to all of you who are getting this work done.

In Memory of Wayne Edenfield

Amtrak mourns the loss of Larry "Wayne" Edenfield, 53, of Macclenny, FL, who passed away on May 7. A railroad veteran with nearly 30 years' service, Edenfield was hired by Amtrak in 1986 as a locomotive engineer, and was assigned to the Jacksonville, FL, crew base. Wayne was a loving husband and father of three children, and a deacon and Sunday school teacher with the First Baptist Church of Macclenny.

Edenfield passed away as a result of injuries he received in the line of duty in the May 6 derailment of the *Silver Star*, which struck a lumber truck at a marked grade crossing in Hinesville, GA.

On May 10, coinciding with Edenfield's memorial ceremony, Amtrak trains across the country sounded a single long horn blast. Our thoughts are with his family and friends, and his memory will continue to reside in the hearts and minds of his family at Amtrak.

Amtrak Equipment Display Highlights Results of Wreck-repair Program

On May 15 at Washington Union Station the Mechanical department put on display five cars and one locomotive. Three of the cars and the locomotive had been rebuilt, restored or overhauled. The other two cars, both awaiting repairs, provided contrast.

Employees from the Bear Car Shop in Delaware and the Beech Grove Locomotive and Car Shops in Indiana were on hand to guide visitors through the equipment and provide information about the repairs.

The equipment was visited by members of Congress and the press, as well as employees, both local and from outside the Washington area. **Michael Frates**, manager of High-Speed Rail in Boston made a trip to Washington to see the display and to support the workers. Impressed with what he saw, Frates passed his appreciation along to those who made possible this excellent presentation, and to the company's craftspeople for their outstanding work.

Above: Walking through this rebuilt Amfleet Dinette, **Edna Smith** and **Piper Holloway**, both managers in Sales Distribution and Customer Service, observe the details finely crafted by the Bear Car Shop employees. This car had been out of service since February 2000, and returns to service as a Metroliner Dinette.

Left: Standing beside the equipment are (L. to R.) **John Mattson**, general foreman and **Angelo Brown**, sheetmetal worker from Bear; **Paul French**, electrician and **Dennis Watson**, acting general foreman of wrecks from Beech Grove; **Dan Stessel**, manager Media Relations, Washington; **Mike Milburn**, national coordinator and **Butch Vick**, carman welder from Beech Grove; and **Sterling Rapposelli**, electrician from Bear. (Not pictured: **Jeff Bocock**, carman from Beech Grove.) Their hard work played a major role in putting this equipment back into revenue service.

Amtrak Raises Operation Lifesaver Awareness

Congressional Appreciation Award Presented in Washington, D.C.

Amtrak and Operation Lifesaver (OL) safety partners around the nation joined together the week of May 12-16 to observe "Take Safety To Heart," a national campaign to focus media and public attention on grade-crossing issues and to raise the visibility of Operation Lifesaver activities. About every two hours in the U.S., a freight or passenger train strikes a person or a vehicle. Unsafe driving or people trespassing on railroad tracks cause the vast majority of these incidents.

At a May 14 event at Washington Union Station, Operation Lifesaver's president, Gerri L. Hall presented Congressman Nick J. Rahall, II (D-WVA) with the Operation Lifesaver Congressional Appreciation Award. Rep. Rahall was honored for his efforts on behalf of highway-rail and pedestrian safety nationwide. The event welcomed guests from Capitol Hill, the Federal Railroad Administration and national transportation organizations. "It is always a great pleasure for Amtrak to host Operation Lifesaver's annual Appreciation Awards Ceremony. We are true safety partners with

Operation Lifesaver in every sense of the word," said Chief Ernest R. Frazier, Sr., Esq., chief of System Security and Safety.

"Congressman Rahall's understanding of the importance of safety around tracks and trains and his support for Operation Life-

saver has made a difference in highway-rail safety," said Operation Lifesaver International President Gerri L. Hall.

On May 16 in Wisconsin, 20 teachers and chaperones accompanied 80 elementary school children aboard the *Hiawatha* from Sturte-

vant to Milwaukee to hear members of the local OL talk about grade-crossing safety. While on board, the children were given a tour by Conductor **Richard Misunas**.

The group, organized by Bulletin and Assignment Clerk **Linda Bansemer**, was also treated to a tour of the Milwaukee station and platform, and was given a demonstration of the Sixth Street Suspension Bridge. "Linda's commitment to OL and to the community is outstanding," said **Larry Allen**, service manager.

The Federal Highway Administration credits Operation Lifesaver with helping to save 11,000 lives and preventing 54,000 injuries at highway-rail grade crossings since 1972. Preliminary 2002 federal statistics show total deaths, injuries and incidents from vehicle-train collisions are lower than they were in 2001. However, the number of pedestrians killed while trespassing on railroad tracks and property is on the increase; preliminary federal statistics for 2002 indicate that pedestrian trespasser deaths rose nearly 7 percent over 2001.

Students from Edward Bain Elementary School gather in front of a locomotive in the Milwaukee Station before their trip on the *Hiawatha* back to Sturtevant, WI.

Amtrak’s Track Laying Machine Returns to Service

In mid-May, Amtrak’s Track Laying Machine (TLM) began work on the concrete tie renewal program in Amtrak’s Northeast Corridor after having sat in storage at the Wilmington Maintenance Facility for

An impressive collection of machinery and technology, the TLM is 223 feet long and just over 10 feet high, weighs 175 tons and replaces approximately 14 ties per minute.

several years due to lack of funding. With funding now restored, Amtrak is on target to have 40 miles of Northeast Corridor track renewed with the installation of 109,034 new concrete ties by mid-November. Since 1978, when the TLM equipment was delivered to Amtrak from the Canron Railgroup, the equipment has installed 2.63 million concrete ties in the Northeast

Corridor, 184,000 wood ties on the Atlantic City Line, and 32,000 wood ties on the Harrisburg Line. However, while the concrete tie renewal program was on hold, necessary track repairs were done by spotting-in wood safety ties, or by issuing slow orders over the track.

An impressive collection of machinery and technology, the TLM is 223 feet long and just over 10 feet high, weighs 175 tons and replaces approximately 14 ties per minute.

The main components of the Track Laying System (TLS) are:

- The TLM (or P-811) is a self-propelled machine driven by a 420-horsepower diesel engine with a 600-volt generating system that powers four drive bogie, or coupler units. Using a unique design of conveyors and hydraulic components, the TLM simultaneously removes old rail and cross ties, while laying new rail and concrete ties.
- Two self-propelled gantries, a moving framework that transports the new concrete ties from the tie cars to the TLM, and returns the old wood ties back to the tie cars for storage.
- Sixteen loaded tie cars that hold 176 concrete ties each, and two

Counterclockwise from top left: Maintenance of Way employees, using the Burro crane, set up new rail in position for the TLM. TLS tie cars seen at a curve provide a partial perspective of the system consist length. From within the TLM, workers remove the spikes from the old wood ties.

empty tie cars. The tie cars are equipped with auxiliary rails that, when coupled with bridge rails (they span the gap between cars), form a continuous running rail used by the gantries to traverse between the tie cars and the TLM.

- The spike-pulling car is pushed by the TLM and is equipped with two spike pullers that extract the spikes that secure the rail from the outside the gauge, enabling the rail to be spread and the ties removed.

The overall operation of the track laying system is broken into six sepa-

rate work groups. The first is the head-end unit, which prepares the track for the TLM by removing anchors, sets up the new rail and prepares the ballast section for the operation of the track laying machine.

The next is the TLM, which removes the old rail and ties and installs the new rail and ties.

The TLM is followed by the clipping unit, which performs the most critical function. This unit applies the fasteners that clip the rail to the tie and cuts in new, insulated joints that are vital elements of the track signal system. The clipping unit also applies thermal distressing to the rail, which ensures the track structure will not buckle in the heat of summer and will not pull apart in the cold of winter.

Following this is the surfacing unit, which restores ballast back to the track structure, ensuring that the vertical and horizontal alignment of the track complies with all engineering design standards.

The welding unit welds rail ends to form a continuous seamless ribbon of rail over which the trains operate.

Additionally, a staging base is located at the Bear Car Shops in

Clockwise from above: 1. The Ballast Cribber plows off ballast shoulder in preparation for TLM operation. 2. The TLM rail lining station, looking ahead at the complete material exchange. 3. The Pettibone swing and cart are used to cut out or add rail for proper thermal adjustment after the TLM has installed new ties. 4. Material exchange is complete, as the box car trails the end of the TLM. 5. New concrete ties and clips are seen in the foreground, while old wood ties are seen in the background.

Top, while working on the Improvement Project (KOP) in Fraxier, PA, the tie gang performs maintenance to ensure the ties installed along the Harrisburg Line. Trackperson, Dave Kerl, and Trackpersons Dave Cook and Dave Hooten take the plates away from the old ties as new ties are installed on the track.

Delaware where the tie cars are loaded with new concrete ties, and when the tie cars return, the old wood ties are unloaded.

The system is operated by 125 agreement-covered employees – six American Railway & Airway Supervisors Association (ARASA) supervisors, 119 Brotherhood of Maintenance of Way Employees (BMWE) employees, and three management employees, all of whom directly support the operation over a seven-day week, working four 10-hour days. The employees come to the

work site from Maryland, Delaware, Pennsylvania, New Jersey, Connecticut and Rhode Island.

There are two work-train crews that sustain the operation; a night crew that removes the old wood ties and replaces them with new concrete ties on a daily basis, and a day crew that supplies the surfacing operation with ballast. Local divisional forces, such as Communications and Signals (C&S) Electric Traction (ET)

and Bridges and Buildings (B&B), are also available, as needed, to support the overall operation. This system requires all engineering disciplines working together to successfully complete the track renewal.

Mechanical Five-year Plan Rebuilds Fleet

continued from page 1
both infrastructure and equipment. Unless Amtrak is able to turn this picture around through sufficient capital investment in basic plant and equipment, the future of intercity passenger rail is in jeopardy.

Retire, Repair, Rebuild the Railroad

The goal of the Mechanical department's five-year \$1.6 billion investment plan is to maximize the revenue generating capacity of the existing fleet and to lower routine operating costs. This means rebuilding the existing fleet, retiring obsolete equipment, improving shops and parts availability, standardizing the fleet configurations, keeping new acquisitions to a minimum and reducing operating maintenance costs. The proposal's strategy is to retire, repair, and rebuild the existing fleet, making few acquisitions, the end result of which is a smaller, more consistent and reliable fleet. By restoring the existing fleet to a state of good repair, the Mechanical department expects to boost reliability and increase equipment availability.

Under the five-year plan, total fleet size for Amtrak-owned passenger cars and locomotives will decrease from about 2,275 units currently to about 2,055 by FY'08. Plans call for storing, selling or scrapping about 335 units, while less than half that amount — or 114 units — will be purchased new. Retirements will include virtually all Heritage equipment, work engines and E-60 electric locomotives, while most F-40's will either be sold or put in storage. About 75 units of the Heritage equipment will be replaced, with preliminary plans calling for use of a Viewliner shell to which Amtrak owns the design. In addition, 25 new work engines will be purchased for yard switching and roadway maintenance and construction. On the non-passenger equipment side, 64 aging auto racks will be retired and replaced.

Despite downsizing the passenger car and locomotive fleet by about 220 pieces of equipment, however, the strategic plan projects that equipment available for service will actually increase by about 150 passenger cars over the course of the five-year plan, from an available fleet of about 1,310 to about 1,460 by the close of FY '08. Specifically, at an expected availability rate of 90 percent, there will be about 45 more cars at the ready for corridor service when compared to today's fleet. Similarly, in five years' time the long-distance fleet will

operate at an availability rate of 89 percent, resulting in 100 more cars on hand for long-distance service. While the locomotive fleet will have been downsized by about 120 units the expected availability rate of 86 percent will result in having only six fewer locomotives in service.

The increase is the result of replacing or retiring older equipment; regularly overhauling existing equipment to ensure reliability; minimizing running repairs and streamline maintenance operations so that equipment is in and out of our service and inspection facilities and doesn't sit idle for days at a time.

These two Superliners were involved in the Capitol Limited derailment on July 29, 2002 in Kensington, MD. They are stored at Beech Grove and are awaiting damage estimates.

About two-thirds of the additional equipment available for service will be used in long-distance service which, combined with an aggressive wreck repair program, will help alleviate a growing and shortage of specialty car types, including sleepers.

Also, by increasing equipment reliability and availability of the existing fleet, Amtrak is able to wring maximum value from it capital investment and save literally hundreds of millions that might otherwise be required to purchase new equipment to deliver the same level of service. Combined with its remanufacturing program to extend the life of existing equipment, Amtrak's fleet plan delivers a high return on a modest investment of Federal dollars in intercity rail.

Most of the capital investment will go to work performed at the company's three major heavy repair shops — Bear Car Shop in Delaware; the Wilmington Locomotive Shop, also in Delaware; and the Beech Grove Locomotive and Car Shops in Indiana. (The *Acela* trainsets are not included in this program, due to the outsourcing of the maintenance.)

According to the plan, the cost of bringing the existing passenger car fleet to a state of good repair by 2008 will be \$825 million, slightly more than half of the total investment in rolling stock. Over the next five years,

about 1,570 light and heavy overhauls and remanufacturings (a one-time reassembly that involves replacing materials with new, more modern designs) will occur. Included in this effort is work on 728 Amfleet I and II cars at the Bear Car Shop at a cost of \$354 million, including the upgrade or conversion of 19 cab cars.

Also included in the \$825 million passenger car program is \$63 million for wreck-repairs, which will include upgrades of mechanical systems, new toilets and interiors. For example, thirty-eight cars are scheduled to go through the Bear Car Shop over the next five years, for repairs totaling \$32 million. At the end of the five-year period, five complete 125 mph trainsets are expected to be available for service from the pool of cars now stored as wrecks. By 2008 Corridor passenger car availability is expected to rise from 80 percent to 90 percent.

Two of the seven AEM-7 DC locomotives scheduled for heavy overhaul this year have already been returned to service. Under the plan, overhauls of the locomotive fleet, to be performed at the Wilmington Locomotive Shop and the Beech Grove Shops, will cost \$315 million, with \$52 million of that amount earmarked for wreck repairs. Seven AEM-7 DC locomotives are slated for heavy overhaul in FY '04 and another seven in FY '05 at a cost of \$810,000 per locomotive.

The plan calls for the purchase of 25 new switch engines with most older models being retired. In addition, 57 aging F-40 diesel locomotives will be retired or stored and 11 E-60s will be retired. These retirements, combined with an aggressive overhaul program for locomotives (such as the MP-15s, AEM-7s, and newer P-42s) will raise the availability of locomotives from a low 68 percent today to 86 percent in FY '08.

Going the Distance

Much of the remanufacturing effort will be dedicated to the company's long-distance trains. Two hundred forty-eight cars of the 1981 vintage Superliner I long-distance fleet will be completely torn down and rebuilt. The cost of remanufacturing these cars will be \$180 million. Over half of the 114 Amfleet II coaches will be rebuilt, as well as most of the Amfleet II Business and Lounge cars.

The only new passenger car purchases will be dedicated to the long-distance fleet. These will be made to replace the exhausted

P R O M O T I O N S I N M O T I O N

Heartland Flyer Hosts Summer Wine Tasting

Passengers traveling between Fort Worth, TX, and Oklahoma City, OK, will enjoy monthly wine tasting events this summer on Amtrak's northbound *Heartland Flyer*. The wine tastings, held in the lounge car, began on May 10 and will continue on the first Saturday of each month through August 2.

Each wine tasting features one or more of 13 Oklahoma wineries. Representatives from the Canadian River and Nuyaka Creek wineries were on board during the May event pouring six wine varieties for passengers to sample.

Amtrak.com Features MapQuest

Amtrak and MapQuest, a leading online mapping, routing and global location-based services company, announced an agreement to integrate MapQuest Business Solutions software on Amtrak.com. With just a few clicks Amtrak passengers now have the ability to access locations of — or directions to — any of the more than 500 railroad stations across the country, making travel planning with Amtrak easier and more convenient.

Visitors to Amtrak's Web site are now able to search for the locations of any Amtrak stations from coast-to-coast. Passengers may locate Amtrak stations at their point of departure, their final destination or any point in between by using "Station Finder" — powered by MapQuest — on the site. In addition, MapQuest provides detailed driving directions to and from rail stations and offers maps to assist

Amtrak passengers in planning their travel itineraries.

Amtrak's Web site has enjoyed record growth recently in both visits and online bookings. Currently, 24 percent of all Amtrak ticket sales are completed through the Web site, representing an increase of more than 52 percent over last year. The percentage of total ticket revenue booked online — 24 percent in April — is significantly higher than many corporate airline Web sites, and it continues to grow. The company's Internet sales have averaged more than 100 percent growth per year over the past five years and are expected to exceed 2.4 million online bookings and \$330 million in online sales this year.

Amtrak Takes Fans to the Tracks on the Monster Mile Express

For the third year in a row, Amtrak's *Monster Mile Express* carried hundreds of NASCAR fans to the famed "Monster Mile" at the Dover International Speedway in Delaware. This year's special run traveled to the Winston Cup Series in Dover on June 1, 2003.

Amtrak, which normally does not offer service to Dover, ran this special train to deliver fans to the Dover International Speedway, the largest sports destination in the Northeast. The *Monster Mile Express* offered NASCAR fans Coach class service complete with food service in the café car. The train departed from New York Penn Station, making stops in Newark, Trenton, Philadelphia and Wilmington on its way to Dover. Race fans from the Washington

and Baltimore areas also made convenient connections to the *Monster Mile Express*.

Fans can purchase tickets for the Monster Mile's fall race, which will be held in Dover on September 21, 2003.

Kids Ride Free in the Midwest, California, and North Carolina

Families planning train travel this summer can take advantage of Kids Ride Free promotions along several California, Midwest, and North Carolina routes. Amtrak's Kids Ride Free promotions offer families great summer savings, while boosting Amtrak ridership and revenue on these routes.

California

Amtrak is offering a Kids Ride Free on Weekends promotion for travel on California's *San Joaquins*, *Capitol Corridor* and *Pacific Surfliner*. This offer is valid for two free children's rail fare tickets with the purchase of one qualifying adult ticket and is valid through June 29, 2003.

Additionally, Amtrak is partnering with the Los Angeles Convention and Visitor's Bureau (LACVB) to attract families to Los Angeles. In conjunction with LACVB's summer Kids Free LA campaign (offering free admission for kids at major hotels, attractions and entertainment destinations), Amtrak is offering a Kids Ride Free to LA coupon for travel on the *Pacific Surfliner*, *San Joaquins*, *Coast Starlight*, *Southwest Chief*, *Sunset Limited* or the *Texas Eagle*. The offer allows up to two free children's rail fare tickets with the

purchase of one full adult fare. Travelers can obtain coupons in local newspaper inserts and on the Internet at www.Expedia.com or KidsFreeLA.com. This offer is valid for sale from May 28, 2003 through August 25, 2003 and for travel beginning May 31, 2003 through August 28, 2003.

Midwest

Children in the Midwest can get a free ride this summer when traveling between Chicago, IL, and Milwaukee, WI, on Amtrak's *Hiawatha* service or between Chicago and Grand Rapids, MI, on the *Pere Marquette*. Both promotions are valid for one free child's rail fare ticket with the purchase of one adult ticket.

The *Hiawatha* Kids Ride Free promotion is valid for sale and travel through August 28, 2003 and is good for travel Friday, Saturday and Sunday only. Amtrak's *Pere Marquette* Kids Ride Free offer is available for sale through August 25, 2003 and good for travel through August 28, 2003. The *Pere Marquette* offer is valid Monday through Thursday only.

North Carolina

Amtrak and the North Carolina Department of Transportation Rail Division are partnering to offer a Kids Ride Free summer travel promotion. From June 2 through August 28, 2003, one child rides free with one regular fare adult on the *Carolinian*, *Piedmont* and *Silver Service* trains between cities in North Carolina.

The offer is valid for sale and travel through August 28, and must take place Monday through Thursday.

Ridership Grows

continued from page 1

were up 15 percent; *San Joaquins* were up 14 percent, and the *Capitol Corridor* saw 6 percent growth.

Ridership on long-distance trains increased 19 percent above last year and 15 percent favorable to budget, primarily in Coach class. While long-distance revenue fell short 7 percent against last year, this was a 13-point improvement from March when revenue on long-distance trains was down 20 percent. Marketing and Sales is currently analyzing pricing structures on long-distance trains to increase revenue in these markets.

Regional service between Washington and Boston continued to see an increase in ridership, with a 4

percent increase over last year. At 519,000 passengers in April, this service carried about a quarter of the total ridership — the highest of any train service and the highest for the *Regional* ever.

"We are clearly attracting ridership, but our yields are down in part due to economic conditions, but also in part because *Acela Express* ridership continues to be a challenge on the north-end between New York and Boston," said Barbara J. Richardson, vice president of Marketing and Sales. "As a result, *Acela Express* ridership and ticket revenues are down from April a year ago, however with the start of our new fares, we

expect changes in future numbers."

While April 30 marked the last booking day for the Amtrak spring promotion, April 28 was the start of new fares and advertising between New York and Boston. On the Springfield to New Haven Line, the schedule was substantially increased (weekly shuttle and through trains rose from 80 to 108) and fares were greatly reduced. Secondly, the *Acela Express* north-end Business class fare was capped at \$99, with a First class ticket only an additional \$50.

Preliminary results on both routes are very positive. The Springfield-New Haven weekly ridership jumped nearly 40 percent and weekly revenue rose by \$65,000

(comparing the average of the six weeks prior to the change with the week of May 5). North-end *Acela Express* ridership grew by about 20 percent, while ticket revenues stayed even (comparing the average of the six weeks prior to the change with the week of May 5).

On another important front, the company continues to show success in selling tickets through its most efficient channel, the Internet. April Internet sales of \$28.3 million represented a 36 percent increase over last year and a 24 percent share of total ticket revenue. The Internet-only 25 percent off promotion, which began on May 1, is expected to sustain Internet sales figures.

Service Updates

Three Rivers Passengers Offered Enhanced Menu Choices

Passengers on Amtrak’s *Three Rivers* were recently introduced to a new improved level of food service. After more than two years of boxed-meal service in the café car, *Three Rivers* passengers now enjoy hot-plated meals served on linen tablecloths with floral centerpieces in the lounge car. This new menu offers two distinct lunch and dinner entrees prepared and served by the on-board staff.

On the April 28 inaugural trip, On-board Service (OBS) employees and **Lenore Slimbock**, superintendent of Passenger Services for the Mid-Atlantic Division, were given instruction on meal preparation and presentation from Tim Costello, executive chef of GateGourmet International. As Amtrak’s food purveyor, Gate-Gourmet International manages the commissary operations and purchases, stores and delivers food for the entire Amtrak system.

Slimbock, who initiated this menu change with the help of a team coordinated by Director Food and Beverage **Pete Humphries** and Manager On-board Service **Chuck McHugh** stated, “Our passengers were surprised and delighted with both the enhancement and presentation by our OBS Staff. It is our goal to increase passenger satisfaction and food service revenue by giving our customers a product that is both attractive and desirable. This change will further the goals of the corporation and increase the satisfaction of our valued passengers. Our OBS team is proud of their service and in

no small measure is a major reason for the success of this new program.”

Amtrak & Metrolink Partnership Promotes Easy Ticket Access

Amtrak and *Metrolink* have agreed to the development and deployment of a new generation Ticket Vending Machine (TVM) in the Southern California region. The newly-designed machines will be installed at all 57 *Metrolink* stations and seven Amtrak stations serving over 40,000 daily riders who travel on and around the nation’s second busiest corridor. The first installment of 137 new machines will be launched this summer.

Passengers may purchase an Amtrak or *Metrolink* ticket at the new machines, as well as the new joint Amtrak/*Metrolink* trip tickets. The joint ticketing program is designed to broaden passengers’ access to multiple transportation systems, and to provide better communication on connections and transfers, and easier access to schedules and tickets.

“Amtrak and *Metrolink* are setting a new standard by providing our passengers with the convenience of easy ticket access. With the success of the Rail 2 Rail program, our passengers in the Southern California region now have so many options — why not make it easier to purchase their tickets?” said **Darrell Johnson**, director of Planning, California.

These new machines will provide Amtrak tickets for passengers who have already booked reservations on www.amtrak.com or at 1-800-USA-RAIL for travel anywhere in the country.

Amtrak Honors its Own

Amtrak Human Resources Manager **Paul Bello** was instrumental in establishing a Washington, D.C., support group consisting of Amtrak employees who had (or still have) loved ones serving overseas during the Iraq war. Bello’s son, Lance Cpl. Tim A. Bello, U.S. Marine Corps, is still in Iraq, and like many others, he will be for a few months to come.

“War looks very different when you know someone who is on the frontlines for you,” said Bello. “The drama of the conflict has ended and so has the media attention. But our men and women are still there and need your support in the empty quiet hours more than ever.”

Amtrak recognizes the sacrifices made by employees who are in active-duty service, as well as the concerns of employees who have family and loved ones serving in the armed forces at wartime.

We take this opportunity to recognize and honor the following employees currently on Military Leave of Absence, either on the front lines in Iraq, in another capacity in the U.S. or anywhere in between. Their efforts and contributions are appreciated.

Picture Our Train!

Don't let this opportunity pass you by on the tracks! Submit your 8 x 10 photograph of an Amtrak train to the "Picture Our Train" 2004 Wall Calendar Contest before the contest ends on July 7, 2003. The First Prize Winner's photograph will be featured on Amtrak's 2004 wall calendar and will receive a \$250 gift certificate to the Amtrak Store. The Second Prize Winner will receive a \$100 gift certificate to the Amtrak store. Check official contest rules for how to enter and eligibility at www.amtrak.com/contestrules.html

Mechanical Five-year Plan Rebuilds Fleet

continued from page 5
Heritage car fleet currently being used in the East. A total of 75 new passenger cars will be purchased to replace 97 retiring Heritage cars built in the 1950s and 60s (an additional 36 Heritage baggage cars also will be retired). At a cost of \$150 million, the new Viewliners will be used on long-distance trains in the East. Fifty of these new cars will be configured as combination diner-lounge cars, each replacing two Heritage cars.

All of the Superliner II cars (the sleepers, Transition Sleeper, Diners, Lounges and Coaches) will undergo heavy overhauls at Beech Grove over the next five years. Beech Grove currently has 48 Superliner long-distance cars awaiting wreck-repair. Some of these cars will require major overhauls while others with minor "fender-bender" damage need fewer repairs. Note: The estimated cost to restore this equipment is \$30 million once completed, this effort will result in four more long-distance trainsets.

In addition to the retiring of the Heritage fleet, nine hopelessly wrecked hulks will be sold for scrap: seven Superliner I coaches, one diner and one Amfleet II coach.

Rainbow Fleet

Another problem plaguing productivity at Amtrak has been the proliferation of multiple car types over time. Currently, in the single level fleet — consisting primarily of Amfleet I, Amfleet II, and Horizon cars, but excluding Heritage coaches that will be retired — there are currently 26 car variations in service. Maintaining parts for all these car types has become an unnecessary problem that negatively impacts productivity because specialized productions lines must be set up to accommodate the various car types. Standardizing the variety of rainbow fleets currently operating throughout the system will improve reliability and cut down on costs. For example, LSAs trav-

eling on the Northeast Corridor today may experience nine different types of café car. Efforts now underway will consolidate the café car options to only three. By 2008, the number of single-level Amfleet and Horizon car configurations will shrink from 26 to nine. By dramatically reducing the number of car types Amtrak operates and defining standardized configurations that can be used interchangeably in varying consists and service offerings, the Mechanical department's plan streamlines the fleet while reducing maintenance costs and improving terminal operation.

Non-Passengers Cars

The size of the mail, express, and auto carrier fleet will drop significantly due to the exit of the express business. Eighty new auto carriers will be purchased to replace all 64 cars that Amtrak currently owns, but the majority of the express and material handling cars will be retired.

Shops and Other Mechanical Initiatives

Improvements to Amtrak's shops will require \$88 million over the five-year period. The program includes \$12.5 million to improve the three heavy-repair shops, make modest investment in service and inspection facilities and complete the Oakland Maintenance Facility. Under the program, a number of dilapidated buildings at maintenance facilities will be torn down. The list of unsafe buildings to be eliminated includes Car Shop III at the Beech Grove facility that was built in 1914 and was badly damaged in a recent tornado, and the Wilmington Roundhouse.

In addition, the plan includes about \$85 million over five-years to implement specific fleet modification campaigns (such as installing disaster lighting), undertake car and locomotive mandatory programs, overhaul maintenance of way equipment and supplement existing inventories.

Miss Smith goes to Washington

Miss Cecily Smith, of southwest London, who travels to the U.S. to take 30-day First class excursions on Amtrak trains almost every year since 1996, is accompanied by President David Gunn on her way to boarding the Capitol Limited in late April. The trains Smith has taken include the Lakeshore Limited, California Zephyr, Empire Builder, and Coast Starlight. A world traveler, Smith told Amtrak Ink she preferred Amtrak because, "one airport looks the same as the next, the clouds look all the same. Aboard Amtrak, you see the country."

Procurement Plan Supports Five-year Goals

In railroading, when you say “shop,” you’re often talking about sending a piece of bad equipment off to be fixed. But there’s another kind of “shopping” going on at Amtrak in support of the five-year strategic plan aimed at reversing years of deferred maintenance on equipment and structures. Its fancy name is Procurement and Materials Management.

The Bear warehouse facility operates using the ASAP/Exacta warehousing system. The Procurement and Materials Management department plans to acquire the ASAP/Exacta system for Chicago, Ivy City and Los Angeles.

While the repair and replacement of bridges, tunnels, tracks and trains is more visible and gets more public attention, buying equipment (such as non-revenue trucks and other heavy equipment); purchasing, cataloging and storing spare parts; and utilizing state-of-the-art software to inventory these assets makes these other, more visible parts of the five-year plan possible.

“Without a process backing up the center-stage repair projects, the five-year strategic plan could suffer unacceptable delays and unnecessary cost overruns,” says Amtrak Vice President, Procurement and Materials Management Michael Rienzi. “But with the right process in place and constant focus of attention, in the long run, we end up saving millions of dollars and thousands of hours in productivity for everybody involved.”

The Procurement and Materials Management department’s role in the five-year capital plan consists

of three major components: automotive, materials management and procurement. Each of these areas performs a distinct and separate function, but together they support the goal of a cost-effective Amtrak in a state of good repair. The overall budget for the Procurement and Material Management portion of the \$8 billion five-year plan is \$42.7 million. A small

figure, perhaps, but vital to the plan’s overall success.

Automotive

Amtrak currently uses approximately 2,230 non-revenue vehicles for a wide range of activities and facilities such as track, signal and structures maintenance; mechanical maintenance facilities operations; work crew transportation and Amtrak

Police. Of the total, Amtrak leases 1,353 vehicles from the General Services Administration (GSA) for a monthly fee and mileage charge. Since GSA-leased vehicles are replaced periodically as part of Amtrak’s contract with the agency, the GSA vehicles are not included in Procurement’s automotive replacement plan. Of the remaining 877 vehicles, Amtrak owns 566 and leases 311. These vehicles will be evaluated for replacement over the five-year period.

Amtrak has not had a formal capital plan for non-revenue vehicle replacement since 1996. Many vehicles in the fleet have exceeded their life cycle, and are incurring increased maintenance costs as well as negatively affecting productivity by being unavailable for service. The Procurement and Materials Management department employed a replacement methodology based on various vehicle criteria, including age, mileage and gross vehicle weight. Vehicles were considered for replacement if they were at least 12 years old or had accumulated 100,000 miles and weigh more than

continued on page 3

Another Wreck-repaired Car Joins the Fleet

After a complete overhaul, interior upgrade and bathroom module installation Amfleet I full Dinette car #43354 arrives at Washington Union Station on June 5, as part of the Regional Service. As Amtrak’s 18th car returned to revenue service, the Dinette was part of the High Speed Rail testing and had not been in service since November 2000, when it arrived at Bear Car Shops as Amfleet I Café car #43014. The Dinette was released from Bear on May 29.

Ridership Grows as Company Plans New Approach to Fares and Advertising

Amtrak’s ridership remained strong this spring as evidenced by record passenger ridership in March, April, and May. Increasing ridership was a strategy that the Marketing and Sales department launched in response to double-digit declines last fall. By decreasing fares in January and promoting them with advertising, Amtrak successfully achieved new ridership records, such as a 19 percent growth in long-distance trains. Now that the ridership trend is so strong, Amtrak’s marketing strategy is focusing on improving its passenger revenue, which is about nine percent lower than last year.

Why is ridership up, but revenue still down? In short, there’s been a fundamental change in the market.

Until last year, for example, demand for Amtrak services remained strong, partly due to travelers’ changing behavior following September 11. In the face of this strong demand, Amtrak was able to maintain a fare structure that was supported with seasonal promotions designed to attract riders to most non-corridor services, such as “One-Two-Free,” “Buy One, Get One,” or “25-percent Off.”

In the last 12 months, however, travelers have become even more price-sensitive and are looking for increased flexibility. They shop for the lowest possible price and they keep shopping until they think they’ve got it. They also object more than ever to black-out dates,

TRAIN OF THOUGHT

This summer, our Track Laying Machine will be working on segments of track along the Northeast Corridor and additional cars will be released from Beech Grove and Bear to revenue service. These accomplishments are real measurements of progress; our approach to restoring value to intercity passenger rail must be incremental and targeted — there are no quick fixes in the work we are doing. Our approach means putting the right pieces in place first. We've concentrated on creating a traditional railroad structure, tightening our budget process, and focusing on our core business. We now have a five-year strategic plan aimed at bringing the railroad to a state of good repair and we're moving forward with ordering materials to make that happen.

As we continue along in a focused and orderly manner, we need to keep an eye on how our work affects other important areas of our business. One area that I recently realized needed more attention is the Planning and Busi-

ness Development department. Headed by Gil Mallery, this department is responsible for state and commuter relationships and contracts. As such, the structure of this department needed to be changed to more closely reflect our current management structure and the types of services and support we provide to the states and commuter agencies, with attention to contract administration and strategic planning.

The reorganization should be complete by mid-August and will decrease the size of the group from 43 to 21 employees; nine of those positions will transfer to the Operations and Engineering departments, and two new positions will be created in the Finance department, unfortunately resulting in a net reduction in workforce of 11.

While the overall number of jobs will decrease, the new department will be more focused on contract administration of our commuter and state contracts. The state and commuter contract administration positions will be responsible for

David L. Gunn

implementing a more standardized approach to meeting our contract obligations. Six new positions will be created. One person will be responsible for commuter contracts in the East with Connecticut, Maryland, Virginia, Pennsylvania, Delaware, New Jersey, and the Long Island Railroad. Another position will be accountable for the state contracts in Vermont, Maine, New York,

New National Café Menu Presents Passengers with Fresh Alternatives

Amtrak Responds to Passenger Preferences

Amtrak's new café car menu, introduced this month, is part of a continuing effort to enhance Amtrak passengers' meal experience on long-distance trains. The café menu has been tailored to reflect passenger requests for a better selection of affordable, good quality meals.

"This national café menu change, combined with the introduction of the new dining car menus in April, offers our passengers a wider variety of fresher, healthier foods while they travel throughout our system," said **Pete Humphreys**, director of Food and Beverage Standards and Operations.

The Marketing and Sales department conducted focus groups around the country in March to learn more about passenger meal habits and to determine whether Amtrak is on target with new menu initiatives. Results show that coach passengers rely on the Café car food selection for sustenance during their journeys. Coach customers told Amtrak that they often travel for

days on the train and want satisfying meals that are warm and filling — not snack items that are often unhealthy and seem stale.

"This national café menu change ... offers our passengers a wider variety of fresher, healthier foods ..."

Pete Humphreys, Director of Food and Beverage Standards and Operations

The most significant change to the café menu takes place in the sandwich section. Focus group participants were particularly critical of the lack of choices, as well as the freshness of sandwich bread. In response to this feedback, the new menu features a more varied, and higher-quality selection of sandwiches. Three rotating menus, or cycles, of sandwiches have been developed to provide variety

across the national system. Cycled sandwiches come in three price categories and include such choices as, grilled boneless chicken breast with various sauces, "deli style" turkey, ham, and smoked turkey, and a value selection of tuna salad, chicken salad, or an Italian combination. Three new non-cycling items are also available; a large Angus® beef burger with cheddar cheese, a Garden-burger® with cheddar cheese or a Hebrew National® all-beef hot dog. Breakfast sandwich changes include cycled items such as ham, egg and cheese on a muffin; sausage, egg and cheese on a bagel; and Canadian bacon, egg and cheese on a muffin. An omelet and Swiss cheese sandwich is also available as a fixed-menu item.

Three rotating hot entrees have also been added to the menu: meatloaf, lasagna, and Santa Fe chicken. New hot snacks include spicy chicken wings, higher quality soups (mine-stone, chicken and shells), pepperoni pizza (plain is still avail-

Correction

In the June 2003 issue of *Amtrak Ink*, the following name was omitted from a list of employees currently on Military Leave of Absence. *Amtrak Ink* regrets the error.

Dangerfield, Dominic S.
Baltimore District

Procurement Plan Supports Five-year Goals

continued from page 1

ten thousand pounds in gross vehicle weight. Following this formula, the department plans to replace 50 non-revenue vehicles for a total cost of \$7.1 million during fiscal year 2004. Examples of vehicles to be replaced during FY '04 include nine track inspection pickup trucks, two track inspection Suburban vans, eight boom trucks with hi-rail capability (trucks that can travel on both highways and over tracks), six grapple trucks, one truck tractor, two fuel and lubrication trucks, two roto dump trucks, five heavy duty mechanics vans, four track welding trucks, four chemical welding trucks, and seven miscellaneous trucks, three of which have hi-rail capability.

Most of these vehicles will be used to support mechanical and engineering projects in the Northeast, where most of Amtrak's right of way and six of its major maintenance facilities are located.

The plan for vehicle replacement in the fiscal years 2005 through 2008 includes 63 vehicles in FY '05 costing \$7 million, 43 vehicles in FY '06 costing \$4.3 million, 14 vehicles in FY '07 for \$1.7 million and 24 vehicles in FY '08 for \$2.8 million. The overall cost of the automotive vehicle replacement program in the five-year plan is nearly \$23 million. Replaced vehicles will be disposed of so that the total number of owned and leased vehicles will remain unchanged.

Materials Management

Materials management improvements during the five-year capital program cover a range of equipment and facility replacements and enhancements. Much of this part of the plan revolves around warehousing and movement of spare parts and materials inventory. During FY '04, the plan encompasses purchase of material handling equipment, facility improvements and installation of vending machines for personal protective equipment, small tools and cleaning supplies. In the out-years, reconfiguration of regional warehouses to the ASAP/Exacta management system and construction of two entirely new material warehouses is planned.

Material handling equipment such as forklifts and other items totaling \$230,000 is budgeted for FY '04. Beech Grove Maintenance Facility, Rensselaer Maintenance Facility, Sunnyside Yard, Chicago Yard and Los Angeles Mechanical Facility are all slated to receive forklifts as part of the plan. Currently, forklifts at

these locations are generally greater than 15 years old and are frequently out of service. Maintenance facilities in Philadelphia, Providence and New Orleans will receive items such as a power jack, stacker and storage cabinets, respectively.

Managing procurement activities in a major railroad operation such as Amtrak is a huge undertaking.

Facility improvements totaling \$1.1 million in FY '04 include renovations worth \$510,000 at the Chicago Material Control Facility, such as new HVAC systems, elevator replacement, new dock plates, pallet racks and shelving. At Los Angeles' Redondo Junction facility, \$207,000 in additional warehouse stacking systems, a new structural mezzanine and new pallet racks are planned. Northeast Corridor maintenance-of-way bases will receive such items as a new overhead heating system and upgraded security (Adams, NJ); a new roof, bay doors and heating plant (Perryville, MD); improved paving and security system (Providence, RI); and new roofing and bay doors (Odenton, MD). Improved security and theft prevention systems will be installed in the Miami Hialeah Maintenance Facility and Beech Grove.

Also in FY '04, vending machines activated by employee identification cards will be installed at maintenance facilities. These machines will dispense such day-to-day necessities as small tools, cleaning supplies, gloves and safety glasses. A pilot project

using one of the machines produced significant savings in reduced materials usage, fewer out-of-stock situations and better inventory control.

In fiscal years 2005 through 2008, major projects are budgeted to significantly improve efficiency, protect material assets and facilitate the plan to bring Amtrak to a state of good repair. The largest single project is the construction of a new, 82,000-square-foot material warehouse at the Wilmington Maintenance Facility. Costing \$6 million, the building will provide inventory storage capacity to support the expanded mechanical and maintenance-of-way work equipment activities that are becoming Wilmington's responsibility. Planned for start-up in FY '05, the new material warehouse will replace a 95-year-old building whose leaky roof and otherwise deteriorated condition as well as its inadequate size are key reasons to build the new facility.

Another new material warehouse at Sunnyside Yard in New York, costing \$2 million, is scheduled to be built in FY '06. It will replace a more-than-90-year-old facility that has inadequate dimensions for storage and deteriorated plumbing, heating and structural components.

Also in FY '06, the plan calls for installation of the ASAP/Exacta

warehouse management system at Chicago, Ivy City and Los Angeles. Already installed at Bear and Beech Grove, the system combines software with state-of-the-art industrial automation to provide cost-effective warehousing. ASAP/Exacta permits accurate inventory control and quick access to needed supplies and components from warehoused inventory. Total acquisition cost of the ASAP/Exacta system, to be expended over three years starting in FY 2006, is \$4.4 million. All materials management proposals for the five-year plan total \$16.4 million.

Procurement

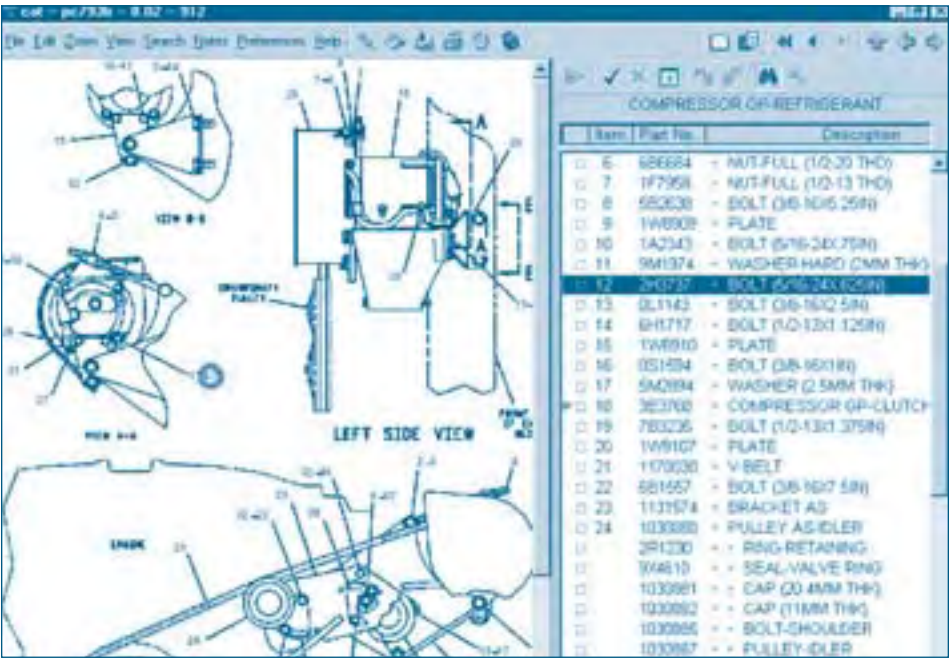

Managing procurement activities in a major railroad operation such as Amtrak is a huge undertaking. Hundreds of millions of dollars worth of construction contracts, equipment, and repair parts and supplies are constantly flowing through a vast and complex supply chain of vendors, shippers, warehouses and maintenance shops. Additionally, vendor services such as fuel delivery and crew transportation – to name just a few – must be monitored and accounted for and invoices for such service promptly paid. Inefficiencies in any part of this complex chain can result in considerably increased operating costs through lost parts inventory or late payment charges. The focus of the proposed \$3.34 million investment in procurement technologies is designed to increase productivity and reduce costs. It involves expanding the technology of Amtrak's existing eTrax program to include invoicing, category management and analysis. The new technology will also enhance the features of the existing LinkOne electronic parts catalog and expand its use to more maintenance locations.

ETrax electronic invoicing involves purchase and implementation of the Ariba invoicing module. The process of invoicing and reconciliation in any Accounts Payable department is the most laborious, time-consuming and error-prone step of the procurement cycle. Ariba Invoice replaces manual and paper-intensive activities with efficient electronic invoicing. Combined with the capabilities of Amtrak's eTrax system, Ariba Invoice provides user-friendly interactions and real-time supplier communications for better time and resource utilization and cost efficiency.

Integrating the Ariba Invoice system will enable Amtrak to automate supplier interactions and

This three-man line truck features a 42-foot boom, an auger for digging poles, and a pole claw for loading poles. The five-year procurement vehicle replacement plan includes the purchase of eight boom trucks.

Materials management will become more efficient with the implementation of LinkOne, a software-based electronic parts catalog and information system that will be available system-wide on the Internet, the Intranet or on CD.

ON THE RIGHTRAK

Attending the May 7 event held to recognize employees from the Niagara Falls Mechanical department who were injury-free are (L. to R.) first row: **Larry Maciejewski**, carman; **Anthony Smith**, coach cleaner; and **Bruce Macie**, foreman. Second row: **James Schoenhals**, general foreman; **James Gangloff**, sheetmetal worker; **Frank Romano**, carman; **Ray Wigdorski**, electrician; and **Mike Halloran**, road foreman. Third row: **Steve Urbanski**, machinist; **Pete Heitz**, carman; **Phil Larson**, New York District superintendent; **Larry Lohman**, manager Terminal Services; and **James Slowey, Jr.**, foreman. (Not shown are: **Michael Brenda**, coach cleaner; **Walter Brenda**, electrician; **Dennis Dombrowski**, machinist; **Jerry Franklin**, coach cleaner; **Lynda Midgett**, coach cleaner; **Brian Mitzel**, electrician; **Margo Walker**, coach cleaner; **Marquesha Walker**, coach cleaner; and **Jeremy Widmer**, carman.)

Employees Recognized for Injury-free Service at Niagara Falls

The Mechanical department forces at the Niagara Falls Shop, a group of 20 employees, has gone six years without a reportable or lost-time injury, with some employees achieving 25 years injury-free. On May 7, **Phil Larson**, district superintendent, and **Patrick Colliere**, division safety officer, presented the group with individual certificates to those

with years of injury-free service. General Foreman **James Schoenhals** said, “They’re a great, unique group, and they’ve made their presence at Amtrak known with their hard work and dedication.” This group is responsible for the nightly servicing and maintenance of two trains, and the servicing of four additional trains that travel through the Niagara Falls and Buffalo stations. All the work is performed outdoors on two stub tracks.

Amtrak Employee Recognized for Environmental Excellence

Paul Agren (second from left), a roadway mechanic with the Engineering department in Providence, RI, is honored with a Finalist Award at the John H. Chafee Awards for Environmental Excellence ceremony, and appears with Sen. Lincoln Chafee (D-RI) (left) and James Connaughton, Chairman of the White House Council of Environmental Quality (second from right), and Rep. Sherwood Boehlert (R-NY). The ceremony, sponsored by the Association of American Railroads, was held in Washington, D.C., on April 30, 2003. The AAR awards program honors railroad employees whose efforts contribute to improving the environment. Agren was recognized for his recycling initiatives that led to both cost-savings and resource recovery at the Providence Maintenance of Way Facility. Agren was honored by Amtrak for his environmental initiatives in Providence with a 2002 President’s Service and Safety Award, which he received at a ceremony held in Washington last October.

Amtrak Committee Contributes to Service Delivery

The company’s “eyes and ears” in the field, Amtrak’s Customer Advisory Committee (ACAC) meets twice a year to share its rail passenger experiences with several Amtrak staffers and make recommendations to improve service.

At the most recent meeting in Portland, OR, on May 4 and 5, the group covered a wide territory of issues — from special service requests, to train status on Amtrak.com, to the new menu cycle on long-distance trains (which got good reviews).

These meetings are Amtrak’s chance to hear from ACAC members and to share ideas that enhance service, ridership and revenue. For example, the committee’s Disabled and Senior Task Force reported on its efforts with Amtrak staff to improve special service requests on board trains for passengers with disabilities and seniors. The task force also discussed station services.

One of the more important functions served by the committee is to make recommendations on initiatives aimed at increasing ridership. At the meeting in Portland, it was recommended that Amtrak offer wireless Internet access at major stations and look into the feasibility of offering access on board trains to better attract business travelers. Amtrak is seriously exploring both ideas.

ACAC members’ personal opinions and the feedback they get from fellow passengers help the company measure its service-delivery success. For example, committee members expressed delight over the new dining car menu and its cycles — passengers appreciate the expanded options and variety of food.

“Amtrak has a secret weapon in ACAC,” said Kate Warr, ACAC Administrator. “Our committee members are advocates who offer productive recommendations because they want to see the company succeed.”

After every meeting, ACAC suggestions are noted and taken back to respective Amtrak departments for consideration. **Kevin Scott**, Amtrak’s chief of Service Delivery, is also the company’s liaison to the committee. “The members’ observations are of great value to us, because they are informed and sincere,” noted Scott.

Throughout the year ACAC members write detailed reports for the company about their Amtrak travel experiences. Each member is required to take a minimum number of trips on Amtrak annually at their own expense, though the exact number depends on the region in which the member lives. ACAC members also meet with Amtrak management and staff to provide constructive feedback and suggestions on services and other company initiatives designed to improve passenger satisfaction and ridership. While on trains and in stations, committee members often solicit and receive comments — both good and bad — from other passengers.

“Amtrak has a secret weapon in ACAC.”

Kate Warr, ACAC Administrator

Sometimes members are at the right place at the right time. Alma Goodwyn, ACAC member and a “regular” on train 196 between Washington and New York, sent an e-mail to Amtrak officials lauding the efforts of Conductor **Brandon L. Bordrick** from Wilmington and his crew (Assistant Conductors **Jason Hernandez** of New York and **Kathleen Zigman** of Delaware) for tending to a passenger who was overcome with a rapidly-growing fever on an evening in April. “Not only did they bring her ice to cool her down, but they helped her detrain in a manner that wouldn’t upset her young daughter waiting on the platform. Conductor Bordrick and his crew were extremely compassionate and professional,” wrote Goodwyn. “You would have been very proud had you been there.”

Formed in 1997, the Amtrak Customer Advisory Committee consists of 25 volunteers from all over the country who ride and support Amtrak. The committee’s mission is based on four principles:

- Establish and maintain consistent and responsive communications between Amtrak and its customers;
- Improve the quality of service from the customer’s point of view;

Amtrak Chef Makes Meals on the Move

One hundred and eighty-five passengers boarded the sold out *Texas Eagle* on the afternoon of Thursday, June 5 in Chicago. For many of these passengers, the highlight of their journey is sitting with new friends and seeing the countryside while enjoying a meal in the Dining car. But what the travelers on this day do not realize as they are seated for their 5 p.m. reservation and make their dinner selections, is that preparation for their dining experience had begun hours earlier when Chef **Dianne Clayton-Lofton** began her shift at noon.

Before the train even leaves the station, a long-distance chef must obtain the necessary supplies from the commissary, make sure the train is stocked with the proper cooking utensils, inspect and prepare the work area and verify that all kitchen equipment is operating. During the trip the chef is required to record food and refrigeration temperatures, manage the food inventory and ensure that all kitchen equipment and work surfaces are properly cleaned and sanitized. The chef must also manage and direct all aspects of cooking techniques according to Amtrak standards and ensure that the workload is evenly divided with the food specialist. Once the chef's tour of duty is complete and the train returns to its originating city, the chef must take inventory of the kitchen stock, complete necessary accounting forms and report any equipment defects to the lead service attendant (LSA).

On a regular basis, Clayton-Lofton's four-day tour of duty begins in Chicago where the *Texas Eagle* departs at 3:20 p.m. The train arrives the following day at 3:15 p.m. in Fort Worth, TX, where on-board crew members stay overnight. The following day they board the northbound *Texas Eagle*.

First Stop — The Commissary

On the afternoon of June 5, Clayton-Lofton reports to the crew assignment office, gets a copy of the passenger manifest and heads for the commissary. All food and kitchen items are preordered for each train and stored at the commissary, which is operated by Amtrak's food purveyor Gate-Gourmet. A review of the manifest helps Clayton-Lofton decide if the par — the usual stocking level of an item — will need to be adjusted for any item. The par, predetermined by On-board Services Manager **Dan Small**, is based on past ridership trends and other information, such as the day of the week and the season. The manifest provides additional information about groups traveling or special meal requests, and therefore helps the chef make quantitative decisions about the items needed for the trip.

Clayton-Lofton, with the help of Service Attendant **Sophia Koutsikos** and Food Specialist **Kevin McMiller**, reviews the supply list by checking five storage crates stacked over five feet high to

Passengers Ken and Vicki Blair celebrate their third wedding anniversary in the Diner car of the *Texas Eagle*. The on-board crew helped to make the evening special by preparing a unique table arrangement.

confirm that the correct number of each item ordered is available. Over 200 items, such as lemons, yogurt, cereal and bottles of steak sauce, must be accounted for.

While checking for the 48 Delmonico steaks that had been ordered, Clayton-Lofton finds only 24, and immediately writes up a backorder; anytime there is a discrepancy, it must be documented. "The entrées are the most expensive — that's where your money is," says Clayton-Lofton. "It's very important to check these items carefully because if you're short and don't catch it, Amtrak gets charged, and those Delmonico steaks are \$18.50 each."

Once all items are accounted for, Clayton-Lofton and McMiller

head for track 20 to await Gate-Gourmet's delivery and load the boxes of supplies onto the train.

How to Cook for 100 People on a Moving Train

Unknown to passengers, just steps below the diner area of the two-level Dining car, is the kitchen equipped with 11 refrigerators, six warming drawers, four steam trays, six freezers, four ovens, a microwave, grill, dishwasher and enough pots pans and cooking utensils to prepare meals for every passenger.

Clayton-Lofton and McMiller check the entire kitchen area for cleanliness and begin preparation for the 5 p.m. dinner. On this day, the *Texas Eagle* is carrying two sleeper cars; one to be terminated in San Antonio and the other that continues on to Los Angeles. Knowing this, Clayton-Lofton begins to prepare for a large dinner crowd of at least 100 passengers. Being familiar with the route and the region she predicts, "The Delmonico steak will be the biggest mover."

Patches of rough track cause the kitchen to jostle and water in the sink to splash as Clayton-Lofton begins to clean, season and bake twenty Cornish hens. Potatoes are cleaned and scraped for baking. Dinner salads are prepared and stored in the refrigerator. The roasted corn, green beans, mashed potatoes and rice are placed in the steaming trays until dinner begins. Delmonico steaks line the countertop awaiting orders for rare, medium or medium well-done.

As the train approaches Pontiac, IL, at 5 p.m., passengers trail into the Dining car. McMiller loads salads

(Above) After four days on the road, the *Texas Eagle* on-board crew gathers in the Dining car anticipating their return to Chicago. (L. to R) Service Attendants Sophia Koutsikos and Wendel Napper, Food Specialist Kevin McMiller, LSA Wanda Walton. Front Center Chef Dianne Clayton-Lofton. (Above right) Chef Clayton-Lofton carefully checks boxes at the commissary to make sure that the items ordered are received before the train departs. (Above center) Clayton-Lofton prepares pancakes, French toast and eggs for the 6 a.m. breakfast call. (Right) LSA Wanda Walton and Clayton-Lofton sit in the Dining car completing the Revenue Accounting form that tallies the Diner car sales for the four-day trip.

(Facing west into the station) The center switch could not be occupied at the same time as the switches on either side. To increase track usage in these locations, Amtrak started with track and switch changes extending to points fanning out near the train (whose rear car is visible).

(Facing east toward the East River Tunnels) A crossover located beyond view has permanently replaced the severed-diamond frog crossing on the right. That crossover and the turnout visible in the foreground replaced a double slip switch connecting to the diamond crossing.

New York Engineering Forces Complete JO Interlocking Reconstruction

Successful Testing Concludes A Quarter Century Of Restrictions

Following more than five years of planning, computer-based testing, and major field research, and after a successful field test conducted Saturday, May 31, 2003, Amtrak has removed train movements restrictions that have clogged operations since 1975 at JO Interlocking, located underground at the east end of Penn Station in New York. The interlocking reconstruction project, which was funded by Amtrak, Long Island Rail Road and New Jersey Transit, was completed June 5 — six months ahead of schedule and \$2 million under budget — and will increase train capacity within the interlocking and allow for removal of long-standing restrictions.

“The significance of the work parameters cannot be understated.”

Walter R. Ernst, General Superintendent New York Division

The project, a collaborative and coordinated effort among all three railroads, involved moving tracks several inches apart to restore the necessary clearances, enabling simultaneous parallel moves in and out of Penn Station from the East River tunnels. New switches, rail, and ties were installed. In addition, relocating the track required adjustments of signals, catenary, third rail, and utilities; therefore, all the Engineering disciplines were involved.

On a typical weekday, over 290 trains from all three railroads pass through JO Interlocking as they move between Pennsylvania Station and East River Tunnel Lines One and Two. Because it was not

possible to reduce train movements through this busy interlocking during the rush-hour periods, the reconstruction was done during extended weekend outages over a 15-month period, starting on Friday evenings, through Monday mornings, completing all work by 5 a.m. The 5 a.m. Monday requirement was unforgiving — contingency plans to divert trains to other stations and passengers to other modes were standing ready for implementation if track was not restored on time.

“The significance of the work parameters cannot be understated,” said **Walter R. Ernst**, general superintendent of the New York Division. “The JO Project presented monumental design, construction and operation problems and had a major effect on capacity. No other New York Division projects were as complex; none required identifying and establishing such a complete commitment of all three carriers, and none had the potential for so much disruption if the railroad was not fully restored as promised on Monday morning,” said Ernst.

Particularly vulnerable during the reconstruction was the *Empire* Service, which Amtrak runs between New York and Albany, Montreal, Toronto and Chicago. Even under normal circumstances, these trains are difficult to accommodate due to station and track configuration that makes only a limited portion of the station accessible to these trains. Those portions of track were most often blocked by the reconstruction effort. “For the *Empire* Service, there was no ‘just use another track’ option,” said **John Meller**, Amtrak assistant superintendent of the Penn Station Control Center (PSCC). Special *Empire* programs were implemented, in which some trains were

equipped with an engine on each end and were turned in the station rather than moved to or from Sunnyside Yard, avoiding the construction areas. Other *Empire* trains were moved to and from Sunnyside Yard by reverse movements in the North River Tunnels using 1,500-foot sections of third rail rebuilt and reenergized just for this purpose.

“The collaboration between the Engineering and Transportation departments was essential to maximize production and maintain service — in other words, they kept the railroad working around the reconstruction,” said Ernst.

The Pennsylvania Railroad completed JO Interlocking in 1910, allowing trains to move between Penn Station and the East River Tunnels. Two of the four East River Tunnels to pass simultaneously within the interlocking were removed and as railroad passed through, the length (from 77 feet to 100 feet), and critically, in width (from 10 feet, 9.75 inches), the tunnels swive collisions as the trains passed. In 1974, Penn Central completed the most critical reconstruction of JO Interlocking.

Rea Interlocking Named

The Memory of Samuel Rea is Honored

Amtrak cut Rea Interlocking (pronounced ‘Ray’) into service on May 19, 2003, completing the most recent phase of new signal and switch installations and allowing for greater train access between New York City’s Penn Station and Newark, N.J.

The name Rea comes from Samuel Rea, a vice president of the Pennsylvania Railroad in the late 19th century who spearheaded the charge to increase the railroad’s access into and through New York. A native of Hollidaysburg, PA, Rea supervised the New York Improvement Project from 1900 to 1910. He continued to work his way up the ladder and later became president of the railroad.

“Rea was selected as the name for the

new interlocking in honor of the memory of Samuel Rea, a vice president of the Pennsylvania Railroad in the late 19th century who spearheaded the charge to increase the railroad’s access into and through New York. A native of Hollidaysburg, PA, Rea supervised the New York Improvement Project from 1900 to 1910. He continued to work his way up the ladder and later became president of the railroad.

(Looking west into Penn Station) A newly constructed switch (foreground) put into service at the close of the JO Project. Note the third rail in the photo. No other terminal in North America uses both 750VDC third rail and 11KVAC overhead catenary propulsion systems on the same trackage.

In two major areas, switches were lined away, blocked and spiked to prevent routing trains in these areas. This reduced capacity and kept delays to a minimum.

Construction

ailroad installed JO to allow trains Pennsylvania Station and River Tunnel tracks ly on adjacent tracks ng. As decades passed nger cars increased in to 85 feet) and more feet, 7.75 inches to 10 potential for side- rains passed one

l Railroad isolated ons on the south side and restricted parallel

train movements over two specific switches for certain types of equipment, enforced by Block Operators and Levermen on duty at JO Tower.

Twenty years later, two passing Long Island Rail Road trains reported contact in an area of adjacent track known to be close, but previously thought to be free of conflict. Analysis of the situation, which involved re-enactment of contact scenarios, resulted in the restriction of simultaneous moves on approximately two-thirds of the routes available within the interlocking. While this analysis revealed that sideswipe collisions within

JO Interlocking would often amount to a small scratch or a momentary contact, this was nevertheless not acceptable by railroad safety standards. Sideswipe conditions can rapidly change within a single geographic area of track due to constantly changing factors such as speed, weight distribution, and degree of curvature.

In 1996, Amtrak, the Long Island Rail Road and New Jersey Transit recognized that train traffic through Penn Station would soon increase so significantly that restrictions on simultaneous moves through this area would become intolerable to the operations of all three. Faced with this predicament, the carriers agreed to identify a solution to enable the safe resumption of parallel movements through all areas of JO Interlocking and work collaboratively to fund and manage the implementation of the solution. Using computer-modeled simulations of projected service levels, the railroads determined that removal of the restrictions would increase the number of trains per hour moving through JO by 12 percent.

Commenting on the completion of the project, Project Manager **Augie Juliano** said, “This project required a combination of high levels of competence and teamwork and everyone came through.”

“The success of the JO Interlocking reconstruction project is due to the cooperation between the three railroads, whose representatives meet regularly as a ‘Tri-Venture’ group to manage capacity planning in the New York Terminal. In addition, the planning and management skills of **John Pielli**, assistant division engineer, Track, who planned the staging of the trackwork and insured that each weekend

the Amtrak employees accomplished their work according to plan,” added Ernst.

“We knew that with increased services ... our window of opportunity to bring all of the necessary forces together to complete this project would be lost.”

F. Clark Hampe, Director
Operations Planning

One of the driving forces behind the project schedule was the significant increase of train movements expected with the opening of the New Jersey Transit Secaucus Transfer Station, just outside of the North River tunnels, in fall 2003. “We knew that with increased services, major capitol project schedules and the Life-Safety Project, our window of opportunity to bring all of the necessary forces together to complete this project would be lost,” said **F. Clark Hampe**, who is in charge of Operations Planning for the New York Terminal.

Other major capital projects continued unabated during the JO Project, including construction work in the North (Hudson) and East River Tunnels for the Life Safety Project, and New Jersey Transit’s major Seventh Avenue Concourse project, not to mention regular maintenance work, scheduled to complement the JO track outages.

and for Railroad Giant ered With Completion of Project

preserve the Rea’s contribution e of New York that ll today,” said ral superintendent, .
rovements involved High Line across s, the North River en Hill and the n Station and its e East River ide Yard, as well as on with the Long aining that railroad n using the new locking is carved on Interlocking, 00s.

Originally, trains operated through the territory using direct current (DC) electric power with the supply coming from a third rail. Electric operation extended into New Jersey to the old Manhattan Transfer facility where the DC electric engines were swapped for steam locomotives. Manhattan Transfer allowed passengers arriving from points west of Newark the choice of going to Jersey City via the original main line route that is now owned by PATH, and to New York utilizing the new High Line route that the Northeast Corridor uses today. Approximately seven years after Pennsylvania Station New York was opened, the Hell Gate Bridge was finished and direct Boston-Washington service was established over the route used to this day.

Train Status Available in Real-Time on Selected West Coast Trains

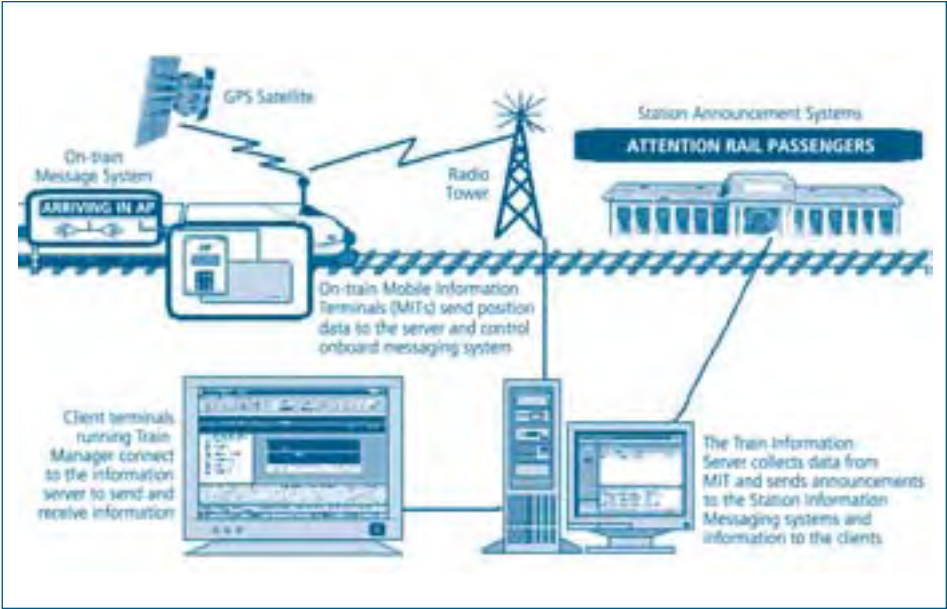

New System Ready for Passenger Use

Passengers in California, Oregon and Washington now have the latest train status information in stations and on platforms.

In May and June, Amtrak launched a long-awaited Passenger Information Display System (PIDS) that provides passengers with real-time train status information in the West. The new system is now available along the *Capitol* Corridor in California, and in locations in

Oregon and Washington that feature *Cascades* service.

The PIDS system is a unique communication system that uses Global Positioning Satellite (GPS) technology to transmit train arrival and departure information to specific stations and platforms. Using GPS technology, a hardware device located in each train transmits messages to a dedicated train information server. The

server contains each train’s schedule, and disseminates information on its whereabouts to select stations and platforms.

Signage in the station and on platforms displays the train’s number, on-time status, and its destination. ADA-compliant visual displays and audio announcements provide passengers with important information, which is updated every five minutes. Passengers can also access up-to-date train status details on Amtrak’s Web site for trains equipped with this technology.

“Amtrak Technologies regional support worked diligently with multiple vendors to ensure each location was properly prepared for this service,” said Larry Klein,

senior director for Amtrak Technologies. Amtrak Technologies coordinated with vendors to identify, procure and install the necessary communication circuits, display system hardware, computer hardware and software. “Our main objective is to provide uninterrupted and accurate up-to-date information to passengers and the employees who serve them,” said Klein.

Thanks to this new technology, Amtrak Operations Centers in Wilmington (CNOC) and Oakland now track these specific West coast trains in real-time.

Plans are underway to outfit additional train routes, such as that of the *Coast Starlight*, this summer.

Procurement Plan Supports Five-year Goals

continued from page 3

enhance the company’s relationships with suppliers. It automates and streamlines every step in the invoicing process, reducing the cost and improving the efficiency of Amtrak’s Accounts Payable process by allowing vendors to enter invoices directly into the system. This eliminates the need for manual data entry by Accounts Payable staff and automatically matches and routes invoice exceptions to the purchaser for reconciliation. All Amtrak departments will gain a clearer understanding of the

invoice processing cycle and, consequently, an ability to make better and more strategic management spending decisions. The cost of implementing eTrax electronic invoicing is \$2.1 million spread between FY ‘04 and FY ‘05.

Another software-based procurement initiative that will greatly improve efficiency is the LinkOne™ electronic parts catalog. LinkOne is a graphical content management and distribution solution for complex equipment and assemblies. First developed

for the Union Pacific Railroad, LinkOne enables equipment manufacturers, their customers, service agents and mechanical forces to view on their computer screen and purchase or issue the exact part needed for the job.

The LinkOne system makes all forms of electronic parts and service information available at the touch of a key via the Internet, Intranet or CD, including parts catalogs, repair manuals, operating and commissioning instructions, maintenance and repair procedures, visual opera-

tional aids, product alerts and safety bulletins, and product updates and notices. LinkOne is currently being used as a stand-alone tool by the Mechanical department.

“Materials management and procurement procedures may not be glamorous, but without an accurate and efficient method of managing these critical business functions, the more high-profile projects such as tracks, trains and structures don’t get fixed,” said Amtrak President David Gunn.

Ridership Grows as Company Plans New Approach to Fares and Advertising

continued from page 1

exchange fees and Saturday-night-stay requirements. The reasons behind this change in behavior include the slow economy, the Iraq war, the SARS threat and the country’s continuing economic difficulties. The entire travel industry is feeling the impact. The airlines, for example, have slashed both capacity and prices attempting to survive in this new environment.

Beginning in August, Amtrak will realign its pricing and advertising strategy to better fit the demand of travelers today. The changes will also recall the easy-to-use fares of railroading’s past. Specifically, Amtrak plans to capitalize on its already comparatively simple, flexible, and reasonably-priced services with three strategies:

- Simplify pricing further;
- Simplify “revenue management” — how we “manage” or set our fares, and;

- Change advertising focus.

For pricing, Amtrak plans to do away with constant nationwide discounts, and instead focus on developing reasonable fares that will sell the service. This means that for long-distance trains, Amtrak will not rely on discounts to build demand, but instead will set prices to levels that reflect value to the passenger without discounts. Amtrak plans to introduce these fares in August. In addition, Amtrak will develop new ways of communicating its fares. This fall, for example, Amtrak will publish Northeast Corridor fares in the timetable for the first time in 20 years. Setting fares at Amtrak has traditionally been a hands-on operation in which predictions were made about passenger demand on each train and prices were set accordingly, then adjusted day by day against the predictions and previously set prices. For passengers, this meant there was no way of knowing if the fare was

too good to pass up or about to come down. Amtrak is changing this practice. Now, it will set the share of seats at each price point and sell out the price points from lowest to highest in order. Only in the case of a sudden, large group of passengers booking or an early sell-out will Amtrak revert to its former system, and then, only selectively will this occur. In this way, passengers will know that by booking as early as possible, they will be rewarded with the lowest fare possible.

Third, and most important, Amtrak plans to change its advertising direction. Until now, passengers have seen advertising that primarily emphasizes discounts. Starting this fall, they will see advertising that highlights the advantages of traveling by train plus the value of our everyday low prices. Consequently, Amtrak’s ads will feature destinations and regular low prices for the cities in which the ads appear. Of course,

just as its customers want flexibility, Amtrak itself will try to stay flexible in this new strategy, acknowledging that if market conditions change, it could still selectively discount some fares. (And existing group discounts, such as AAA and NARP will continue unchanged.)

As part of its overall strategy, Amtrak will continue to drive sales to the most appropriate sales channel to maximize customer service and cost-effectiveness. For long-distance trains, for example, this will generally mean encouraging passengers to call (800) USA-RAIL. For simple point-to-point services, customers will still have additional options, such as www.amtrak.com.

By simplifying fares and how they are managed, as well as changing its advertising to emphasize destinations and price, Amtrak is aligning its focus with the top priorities of the traveling public today: value and flexibility.

Train of Thought

continued from page 2

Pennsylvania, and North Carolina. In the Midwest, a position will be created for our state contracts in Missouri, Illinois, Wisconsin, and Michigan. In the West, one person will be responsible for our commuter contracts with *Metrolink*, *Coaster*, *Caltrain*, and the *Sounder* operation. Another position will also be established to handle our state contracts in California, Oregon, Washington and Oklahoma. Two additional positions will be dedicated to state-shared infrastructure capital investments in the East and West.

In the past, Planning and Business Development became involved in areas outside of contract adminis-

tration, such as marketing and service planning. The new structure will ensure that the focus on contract administration is not diluted by other tasks. Departments such as Marketing and Sales, Human Resources, Procurement, Mechanical, Engineering and Transportation will handle all activities within their respective areas, and Amtrak standards and policies will be followed in all cases. With this change, we will become more efficient by having clear lines of authority and unambiguous responsibilities.

Under the new structure, our General Superintendents will have the primary responsibility for

maintaining the day-to-day relationships with our commuter and state operations. Our commuter and state partners will also see clearer lines of authority and responsibility and will benefit from this day-to-day attention from the General Superintendents.

The second set of changes will occur in strategic planning. The strategic planning group will continue to coordinate long-term capital planning, and monitor the progress we’re making on the strategic plan. Additionally, we will refocus the direction of our national network strategy, with an emphasis on providing better information for staff and policy-makers

on the performance and public benefits of our long-distance trains as well as opportunities for improving those services. Finally, we will create one new senior and two supporting positions to focus on our corridor strategy with states. This team will head up the effort to capitalize on the combined strengths of Amtrak and the states to advance incremental corridor development — which the states support.

I will continue to keep you informed about the progress of this restructuring and our other efforts. Thank you for all the hard work being put into the rebuilding of our railroad.

P R O M O T I O N S I N M O T I O N

Youngsters practice with New York Mets catcher and first baseman, Jason Phillips, while attending Amtrak Kids Day at Shea Stadium.

Amtrak Kids Win a Day with the NY Mets

New York area Amtrak employees were invited to enter their children's names in a drawing to be one of 40 Amtrak kids, ages 6–16, to participate in an Amtrak Kids Day clinic held at Shea Stadium and hosted by the New York Mets on June 8. The clinic included on-field instruction with New York Mets players Ty Wigginton, Jason Phillips, Jeremy Griffiths and coach Rick Waits.

After the clinic was over, the children visited the Mets Fan Fest activity center, where kids sat in a replica of the "Mets Dugout," tested their pitching and hitting technique in batting cages, and tried their hand at sports announcing.

Following the Fan Fest, the kids stayed for the afternoon game against the Seattle Mariners.

Amtrak Rolls Back Florida Rail Pass Fares

Florida passengers this summer can take advantage of rolled-back Florida Rail Pass fares. The pass, exclusively for Florida residents, is available at its introductory price of \$199 through August 15.

The summer discount may be used for business or leisure travel on four Amtrak services that travel through the state — the *Palmetto*, *Silver Meteor*, *Silver Star* and *Sunset Limited*. Florida residents may use the Florida Rail Pass to travel to 33 destinations within the state on board Amtrak trains or Thruway motorcoach connections.

"Whether it's a trip to the beach,

theme park or baseball game, Amtrak is the best way for local residents to beat the busy summer traffic," said **Dick Weaver**, Amtrak's Florida sales and marketing associate. "These passes are perfect for a weekend getaway, a week-long vacation or for college students."

First introduced in the summer of 2001, the Florida Rail Pass has consistently surpassed sales projections. In just two years, Amtrak has sold more than 2,600 passes. Last year 93 percent of those sold were purchased at Amtrak stations in Florida.

Internet-Only Discount Boosts Online Sales

On May 1, Amtrak launched the "Great American Canvas" promotion offering customers a 25-percent rail fare savings available exclusively through the company's Web site through June 15. The promotion helped boost the percentage of tickets sold online to 26 percent for the month of May and 24 percent through the year.

More than 336,000 customers booked over \$45 million in rail travel during this six-week promotion, including an all-time record sales day on June 9, when nearly \$1.5 million in tickets were booked.

With close to four million visits from customers during the promotion, Amtrak.com has become one

of the most popular Web sites in the travel industry. Part of the attraction is how easy it has become for customers to plan a long-distance trip. Launched along with this promotion was a new 360-degree virtual-reality tour of sleeping accommodations, a Dining and Lounge car, along with guides for seven top destinations that were prepared by *Condé Nast Traveler* magazine. Amtrak also introduced an online tutorial for booking accommodations.

By giving our customers more information about accommoda-

tions, Amtrak helps increase sleeping car bookings by 10.8 percent. In fact, the average value of a reservation grew 7 percent during the sale due in part to the increase in sleeper bookings.

Amtrak Releases New Travel Guide

Amtrak's newest travel brochure, *Amtrak America*, was released in early June. The 54-page brochure features the Amtrak system map, on-board services and amenities, and city highlights along the routes.

The travel guide helps Amtrak customers plan trips and provides travel agents with a tool to promote and sell Amtrak train service. A smaller version of the former *Travel Planner*, *Amtrak America* promotes Amtrak Guest Rewards, Amtrak merchandise, Air Rail and Amtrak Vacations.

The guide also includes information about making reservations, obtaining tickets, traveling with children, passengers with disabilities and sleeping accommodations.

Seven hundred and fifty thousand copies were printed and distributed to travel agencies and trade shows, Amtrak stations, reservation sales call centers and other Amtrak locations.

Amtrak's Belmont Special Sells Out

Over 550 passengers took the hassle out of traveling to the races by taking advantage of Amtrak's Belmont Stakes package. Due to

the enthusiastic customer response, the package sold out days before the race. The Belmont Stakes horse race, held on June 7 at New York's Belmont Park, was so successful that additional cars had to be added to meet passenger demand. The southbound Belmont train was 11 cars in length —

longer than any of the platforms at the Albany/Rensselaer station — and required special boarding procedures.

The Belmont package included roundtrip transportation to New York on selected Amtrak trains, connecting transportation on the Long Island Rail Road, Grandstand admission to Belmont Park and a *Post Parade Magazine*.

This all-inclusive package tailored for Upstate New York residents offered travel to New York from Albany, Hudson, Rhinecliff and Poughkeepsie at fares ranging from \$45 to \$60 per person.

Amtrak Recognized for Marketing Initiatives

Last month, the Transportation Marketing and Communications Association recognized Amtrak's outstanding advertising efforts with five "Tranny" awards. Annually, these awards are presented to marketing professionals for the creativity and excellence of their work.

A Tranny Award of Excellence was presented to Amtrak for print advertising for the *Coast Starlight* service. Amtrak also won four Tranny Awards of Merit. In the multi-cultural advertising category, Amtrak was recognized for its work promoting Black History Month; in the advertising campaign category, Amtrak was honored for its 2002 *Acela Express* brand campaign and for its integrated communications campaigns. Amtrak received two awards, one for marketing a new Amtrak/Yahoo! on-board partnership, and the other for promoting the joint Amtrak-Metrolink Rail 2 Rail service.

Amtrak Chef Makes Meals on the Move

continued from page 5

into the elevator that lifts the meals from the kitchen up to the dining area, which are then placed on the tables by Service Attendants

Wendel Napper and Sophia Koutsikos. As the Dining car staff sends meal checks down the chute to the kitchen, McMiller shouts, “Three Italian entrées all day,” indicating to the chef that he has three orders for ravioli primavera. Meanwhile, Sleeping and Coach car attendants continuously enter the kitchen requesting meals to go.

With steaks sizzling on the grill and chicken baking in the oven, the temperature in the kitchen rises. But the warmth does not hinder the stream of meals moving from the kitchen to the Dining car. As dinner slows down and dessert orders begin sliding down the chute, Clayton-Lofton and McMiller prepare to shut down for the evening. Close to 8 p.m., McMiller realizes that the dishwasher is malfunctioning — a problem which is later quickly remedied at the next station stop in St. Louis, MO, by Electrician **Gerald Kalicki**.

With the dishwasher back in order, McMiller loads the dishes as Clayton-Lofton cleans the kitchen. Unprepared food suitable for use the following day is refrigerated. By the time the train leaves St. Louis, close to 10 p.m., the chef begins counting each of the cooked but unsold items that will be discarded and recorded at the end of the trip on the Revenue Accounting form.

Rise and Shine

The next morning at 5:30 a.m., Clayton-Lofton and McMiller report to the kitchen for the 6 a.m. breakfast call. Pancake batter is mixed. Grits, bacon and sausage are cooked and stored in the steam trays, and the breakfast orders are ready to be filled.

Chef Clayton-Lofton and Food Specialist Kevin McMiller review dinner orders before sending them to the Dining car.

“Eighty-six the quiche,” Clayton-Lofton says, informing the dining car crew that the spinach quiche was sold out. Normally quiche is a slow seller on this route, but surprisingly it sold out early during this meal period.

South of Little Rock, AR, freight congestion causes the *Texas Eagle* to lose time. With the train operating over six hours late, Clayton-Lofton and LSA **Wanda Walton** realize they need to make adjustments to provide both lunch and dinner. Because of the scheduled 3:20 p.m. arrival into Fort Worth, lunch is typically the last meal served. However, when the train is expected to arrive later than 7:30 p.m., dinner must also be served. This can be a tricky decision to make because the train may make up time, arriving much earlier than anticipated.

“When making decisions like this, you must put the customer first,” said Walton. “I don’t want anyone leaving our train hungry because the train was running behind. We are going to offer dinner and everyone who wants to eat will have an opportunity to do so.”

After working hard to prepare lunch and dinner, they once again proceed to clean and shut down the kitchen as the train reaches Fort Worth at an earlier-than-expected 7:15 p.m.

Returning to Chicago, the Crew Encounters the Unexpected

Saturday’s return trip for the on-board crew turns out to be quite eventful. It begins around 5 p.m. when one of the two locomotives derails just outside of Dallas, causing a power outage — and dinner to be served later than scheduled.

At dinner, passengers Ken and Vicki Blair, dressed in tuxedo and wedding gown celebrate their 3rd wedding anniversary. On this special occasion, they are treated with carved rose-shaped tomatoes in their salads and sculptured foil swans on the table. Napper turns an ordinary cooking pot into an elegant ice bucket for chilled champagne, graced with carnations and draped with white cloth napkins making the entire meal presentation a memorable experience.

Just as dinner ends, Clayton-Lofton and Walton respond to a water shortage in the Dining car that will affect the next morning’s breakfast by making alternate plans. When instances like this arise, the LSA and chef always have to be ready to implement other options. Fortunately, there was no need to act on those plans because the train replenished its water reserves at the Little Rock and St. Louis stations allowing breakfast and lunch to be served the next day.

Chef Completes End of Trip Duties

As the train reaches Bloomington-Normal at 6:30 p.m. on Sunday, Clayton-Lofton assists Walton as she completes the Revenue Accounting form. This report accounts for all the items received from GateGourmet at the start of their trip and whether those items were sold, discarded or returned to stock when the train returns to Chicago. As Walton reviews each item, any questions regarding discrepancies are directed to Clayton-Lofton who, throughout the trip had recorded stock information after each meal period.

By the close of this four-day trip, Clayton-Lofton and McMiller cooked 180 breakfasts, 108 lunches and 227 dinners.

A graduate of the Cooking and Hospitality Institute of Chicago, Clayton-Lofton has been a chef with Amtrak for 15 years. During this time she has seen and adapted to menu changes and a variety of situations. “You have to manage circumstances that are specific to the railroad. As an Amtrak chef, I have to remain flexible and ready to handle situations that most restaurant chefs out there don’t experience.”

Customer Advisory Committee

continued from page 4

- Provide direct input to management about customer perception of service.
- Facilitate inclusion of customer observations into service monitoring and modification.

The May meeting also included the election of new ACAC officers. Out-going Chair Dr. Margaret Ann Hughes (Flagstaff, AZ) and Vice Chair Robert Dabney, Jr. (Washington, D.C.), handed the

baton over to newly-elected Chair Rick Pontham (Nashville, TN) and Vice-Chair Jon Bathke (Minneapolis, MN).

The full committee meets twice a year and its four Rail Service Area Committees, Long-distance West, Short-distance West, Long-distance East and Short-distance East meet separately at other times of the year. Currently, the committee is in the process of filling several open slots.

New National Café Menu

continued from page 2

able), and Chicken Cup of Noodles®.

For a lighter and healthier choice, two new rotating salads have been added to the menu including a Caesar, and Santa Fe salad. A non-cycling fresh cut fruit salad including cantaloupe, honeydew, and red grapes, is also offered. There are now a wider variety of sweets and desserts. Green Mountain® coffee, which has been used on the Northeast Corridor for the past seven years, is replacing Hills Brothers®. Green Mountain is a

significantly better grade of coffee; their Harvard Blend is a rich, smooth blend that appeals to a wide spectrum of coffee drinkers.

“Tools such as focus groups and surveys are essential to understanding what our passengers want,” said Humphreys. “Meeting the service needs of our customers is an evolving process, and we will continue to listen to both our employees and our customers to ensure that our menus offer the quality, variety and value our customers deserve.”

APD Officer Apprehends Grenade Wielding Suspect

Amtrak board Chairman John Robert Smith (left) and APD Chief Ron Frazier (right) pay close attention as Officer **Rodney Chambers** gives the Amtrak board of directors an account of his June 9 encounter with a robbery suspect at Amtrak's Washington, D.C., Union Station.

After wrestling a hand grenade away from the suspect, Chambers clutched the grenade for about 15 minutes as he waited for the bomb squad to arrive. Sgt. **Tony Epps** remained with Officer Chambers during those harrowing 15 minutes.

Upon arrival of the Capitol Police bomb squad, the grenade was checked and found not to contain an explosive charge. But, Chambers had no way of knowing this at the time.

APD Chief of Patrol **John O'Connor** said that Chambers' response to the incident "epitomizes what all law officers do. Officer Chambers ran to the danger, not away from the danger."

FRONT LINE FOCUS

Editor's note: *The following are excerpts from letters written by Amtrak customers who found their experience with our front line employees worth noting.*

Dear Amtrak,

My wife and I booked a trip west aboard train 5 (the *California Zephyr*), south aboard train 11 (the *Coast Starlight*), and then home aboard train 4 (the *Southwest Chief*) using your 2-for-1 winter promotional fare.

On our out-bound trip, April 11, 2003, we had the good fortune of meeting **Mr. (Steven) Williams**, our car attendant. However, he is much more than that — he is a walking and talking guidebook for the route train 5 takes. Having been a ... history teacher for a number of years, I can attest to the fact that Mr. Williams had all of his facts, dates and information correct. Besides taking excellent care of his 44 beds and their occupants, he provided us with a steady stream of American history —

both past and present — from the time we boarded in Chicago until we got off in Emeryville. He is truly an Amtrak asset ... Mr. Williams made this trip aboard Amtrak the absolute best we have experienced to date.

Dear Amtrak,

By way of background, we are long-time users of Amtrak, and are members of the Guest Rewards program ... Thus we feel a bit qualified to make comments on our last trip. It involved train 91 (the *Silver Star*) from Washington, D.C., to Orlando on 3 to 4 May ... and back again on train 91 on 11 to 12 May, 2003.

Of particular note was our attendant, **Mr. Leon Jones**, who we had on the way down to Orlando. We have had many car attendants for our sleeper accommodations over the years. He was one of the best we have ever had in all our travels. He did his job professionally and without much fanfare or having to be asked.

Information Technology Plays Vital Role in Strategic Plan

As an assignment clerk at the Consolidated National Operations Center (CNOC) in Wilmington uses the Labor Management System to fill out the train and engine crew requirements for a particular train, a station ticket agent in San Diego's Santa Fe Depot uses the ARROW system to issue tickets. Meanwhile, the mechanical employees at Beech Grove utilize the Work Management System to manage repairs and overhauls, while the Procurement and Materials Management staff order materials needed for those repairs through the Amtrak Accounting Materials and Purchasing System. As all these activities take place, a passenger at Penn Station skips the line at the ticket counter by using the Quik-

Trak machine. From the front-line to the back-office, Amtrak employees use hundreds of automated applications every day to get their work done.

Information technology is an invisible presence behind Amtrak's efforts to better monitor train movements, improve ticketing distribution channels, and keep track of revenues and the workforce. Simply stated, information technology enables Amtrak to run a more efficient railroad.

Amtrak Technologies, on its own, with vendors, and with Amtrak departments as partners, affects every employee and all of our passengers. Employees who have desktop and laptop computers

Amtrak Maintains Strong Ridership Numbers in June

*Pricing Strategy Aims to Boost Revenue
as Ridership Strength Continues*

June marked the fourth consecutive month that Amtrak enjoyed record ridership numbers. Overall, 2.1 million trips were recorded in June, representing an almost 7 percent increase in ridership above last year.

On the revenue side, while ticket revenues fell 4 percent below last year, it was an improvement from the declines that we experienced in previous months. Additionally, when food and beverage revenues were added, total passenger revenues were nearly on target with our latest forecast.

Ridership results on long-distance trains continued to be noteworthy with an 11 percent ridership increase over last year. The *Empire Builder*, *Texas Eagle*, *Silver*

Meteor, *Auto Train* and *Sunset Limited* saw significant increases over last year. Changes made to the *Pennsylvanian's* schedule in February continued to yield nearly double increases in ridership and in a 67 percent increase in revenue.

Also, continuing with strong performances were the corridor trains, such as the Chicago hub trains, the Northeast *Regionals* and the *Pacific Surfliner*, which saw a ridership increase of almost 30 percent over last year.

The ridership also remained strong on *Acela* north of New York and on the Springfield Line as a result of fare and frequency changes made earlier this year.

(After) Car #31533, returned to service in June, is being cleaned at the Chicago Yards by Coach Cleaner **Jean Hart**.

(Before) Sitting at the Beech Grove Mechanical Facility, car #31533 awaits wreck repair.

Wreck Repair Update

Superliner I Smoking car #31533, released from Beech Grove Maintenance Facility on June 29, is Amtrak's 21st car returned to service this fiscal year. The car sustained heavy damage to the entire right side and right side roof as a result of the March 2000 *Southwest Chief* derailment.

Beech Grove mechanics made repairs to common exterior items such as the cut lever channels, sill steps, all side corner trim skirts and all corner grab-iron pockets. In addition, several equipment room doors were replaced and gears and couplers were renewed. The smoking car also sustained heavy under-car damage, which required replacing all of the conduit and wiring harnesses and repairing or replacing five of the eight under-car electrical junction boxes.

Other cars released in June include Superliner II coach car #34107 released from Beech Grove on June 22 and Amfleet I Club Dinette #48157 released from Bear Car Shops on June 12. The Superliner Coach arrived at Beech Grove after the 1999 *Sunset Limited* derailment. The Club Dinette was wrecked in a June 2001 yard move in Washington, D.C.

TRAIN OF THOUGHT

Let me tell you where we stand today as a railroad, some interesting things that have happened recently in Congress that affect our railroad and what I think is going to happen, as well as what must happen, next month.

First, we are continuing to manage our business well and we will make our budget. We now have in place a functional organization with far fewer layers of management. We have a comprehensible, detailed five-year plan in place that clearly states the capital projects car-by-car, milepost-by-milepost that are needed to get the railroad back to a state of good repair. We've taken the first steps in that plan by increasing maintenance activity and returning over 20 wrecked cars to service. Ridership in recent months has never been higher. As I said, barring the unforeseen, I am confident we will achieve our FY '03 budget. Given where we were last summer, that's pretty significant.

Last month, Amtrak's Board of Directors approved the FY '04 budget, which as you know, depends upon a \$1.8 billion federal grant. The biggest part of that grant will fund a \$794.4 million capital budget, which is more than double the \$334 million we expect to spend this year. It's all about capital. We have kicked the can down the road so far — there is no more road.

I cannot overstate the importance of our spending money on capital projects in the year ahead and have minced no words with Senators and Representatives on this subject. Last month, aging catenary wires gave up the ghost near the Hell Gate Bridge in New York. This small incident alone caused a 24-hour service disruption between New York and Boston. We also lost two electric engines to serious fires last month; a testament to years of deferred maintenance. While we now have a program in place to

rebuild our DC AEM-7s, we're sending them out no faster than they're falling apart. Two moveable bridges in Connecticut, the Thames River and the Niantic River bridges, are in danger of failing and causing major and costly disruptions on the Northeast Corridor at any given time. Deferred maintenance has led to growing slow-orders on the Northeast Corridor and costly en-route equipment failures across the system. At present, only 81 percent of the Amfleets are available, and only 71 percent of the long-distance cars are available.

The old notion that Amtrak can limp along every year led to a false sense of what is needed to run a railroad and, as a result, the railroad was pushed to the edge.

Hopefully that is over.

Operating by triage and the hope that our plant and equipment will hold out a little longer is no longer an option. Our funding must be based on the realities of running a safe and operationally sound railroad.

The interesting thing in Congress that I mentioned at the beginning of this message to you is that most members agree with us. Last month, 219 of the 435 Representatives signed a letter calling for passage of our \$1.8 billion funding request. Our two authorizing committees in the House and Senate proposed separate bills that would fund Amtrak at \$2 billion a year for three years and at \$2 billion a year for six years, respectively. However, there are some in Washington who think that \$580 million or \$900 million is sufficient to run the railroad — they're wrong.

Congress went out for its annual summer vacation without taking final action on the transportation spending bills from which Amtrak receives its federal funding. This leaves only a short time in

David L. Gunn

September for Congress to act before October 1 arrives and we're into the next fiscal year.

Meanwhile, at the end of last month, President Bush issued his plan for Amtrak. You can read my memo to our Board of Directors about this plan on page three.

We need Congress to pass a bill that will give us the tools to keep us on track. In the meantime, we will continue to move forward and continue to order long-lead material to meet the requirements of our capital projects in FY '04. It is absolutely critical that we continue to plan as though we will get the money.

In addition to rebuilding cars and railroad, we also began to rebuild our credibility by sticking to our plans, running our business the right way, staying on budget and being straightforward about our situation. I thank you for your efforts to this end.

While it will be difficult, I think that getting the federal funding to bring us back to a state of good repair and maintain adequate operating standards is possible. I will continue to keep you updated.

P.S. Updates and other important information are frequently posted in the Employee Advisories. If you don't get a copy personally, you should find them posted on the bulletin boards in crew bases and other facilities.

comprises the northernmost 38 miles of the Northeast Corridor. The line, which runs from Boston's South Station to the Massachusetts/Rhode Island state line, sees an average of 129 commuter trains, 37 Amtrak trains, and four freight trains on any given weekday.

Amtrak Continues to Maintain High-Speed Attleboro Line

After sixteen years as the commuter rail operator for the Massachusetts Bay Transportation Authority, Amtrak's contract for providing transportation, engineering, dispatching, and mechanical services ended on June 30. While the new contractor, Massachusetts Bay Commuter Railroad

Company, assumed most of the commuter operations on July 1, a vital relationship between Amtrak and MBTA continues, as the railroad remains in charge of maintaining and dispatching the Attleboro Line.

Owned by the Commonwealth of Massachusetts, the Attleboro Line

Strong Ridership in June

continued from page 1

Sustaining the ridership success, but focusing on improving revenue is the priority of Marketing and Sales. As a result of pricing and marketing analysis, Amtrak is implementing a new pricing strategy in August designed to regain revenue. At the end of July, fare adjustments were completed on long-distance trains to create everyday low prices, which will move Amtrak away from having to offer ongoing national discounts.

Additionally, the approach to revenue management has changed. Seats will be sold from the lowest price point first and prices will increase as lower fares sell out. This will eliminate the need to predict demand, which causes constant price fluctuations for passengers. The new approach will give passengers some assurance that if they book early, they will be more likely to get a lower fare rather than waiting later or at the last minute.

Consequently, the company's marketing approach will change to position Amtrak as the best way to travel at great value prices. The uniqueness of train travel will be highlighted. Targeting various regions and cities, Amtrak's advertising will inform consumers about destinations along the routes accompanied by the fares for specific city pairs. All the elements are designed to cut down on the guessing and save passengers time spent on researching. The look of the ads will also appeal to the nostalgia of train travel, and will reflect the company's back-to-basics approach.

The objective of the pricing and marketing strategy is to make rail travel an appealing and easy decision to make, and to simply take the work out of traveling. Next month's issue of *Ink* will include a preview of Amtrak's new advertising campaign.

Invoicing Fuel Through eTrax Better Manages Amtrak Resources

To better manage Amtrak's expenses and resources, the Procurement and Materials Management, Finance, Operations, and Mechanical departments in a joint effort have implemented an eTrax Fuel Invoicing Initiative that enables Amtrak to pay its fuel vendors directly, based on the actual amount of fuel received, and helps the company better monitor and analyze fueling trends across the country. As a result, Amtrak expects to save \$300,000 to \$400,000 annually through the use of eTrax.

Using the new program, Amtrak employees take data from the fuel delivery receipts and enter it into eTrax. This data entry not only generates the payment request, but also provides the information that allows Amtrak to automatically

track its fuel usage. Forty-seven terminals located across the country fuel locomotives or provide fuel for emergency situations. At these locations, 91 employees are involved in the locomotive fueling process and receive the fuel receipts.

This new process provides a more accurate and timely purchase record, provides payment to vendors more quickly, and streamlines the employee workload by reducing paperwork. The previous fuel billing process was more time consuming — fuel vendors were required to provide Amtrak with paper invoices that were used to create a payment request in the eTrax system.

Instrumental in the planning and requirement identification stages

continued on page 12

Gunn to Board: Implications of Bush Rail Plan

Reprinted in its entirety is the following memo from President Gunn to the Board of Directors on July 30, 2003, regarding President Bush's proposal for Amtrak:

We have reviewed the administration's proposed Passenger Rail Investment Reform Act of 2003, and I believe you should be aware of its implications.

The timelines in the bill start with passage of the legislation and extend for six years.

The board is given six months to prepare a transfer plan. This requires creating three independent companies:

- Residual Amtrak;
- Passenger services operating company; and
- Infrastructure company

Obviously, the plan requires:

- Organization charts;
- Staffing levels; and
- Budgets

Each company would require the creation of separate overhead functions:

- President;
- Human Resources;
- Labor Relations;
- Finance;
 - CFO
 - Controller
 - Treasurer
 - Payroll

- Legal;
- Diversity; and
- Procurement

At the end of the first year, the transition must be complete and the companies incorporated, which would require articles of incorporation, by-laws, changes in board structure, etc.

Also, at the end of the first year, you would have to have contracts for service to have been negotiated between the entities. This is a very complex undertaking.

Simultaneously and by the end of year one, a proposal for an interstate compact for service and maintenance of the Northeast Corridor would have to be presented to the eight Northeast states and the District of Columbia. This arrangement would in essence be controlled by the Department of Transportation through a new Northeast Corridor Compact Commission. The legislation is vague as to what will occur if the Compact is not formed.

At the beginning of year two, there would be three companies:

- Residual Amtrak;
- Passenger Services Corporation; and
- Infrastructure Corporation

The legislation provides for the federal government to fund capital

grants to overcome deferred maintenance in year three to six, but only if the Northeast Corridor Compact is formed.

It is not clear who would advocate for the ongoing funds necessary to run service and the costs for the creation of these new entities. All of this occurs with a \$50,000 voluntary severance available to existing Amtrak employees.

I think you can appreciate the enormity of the task you would be given. You will be attempting to run a railroad, which is in serious physical difficulty. There is apparently no attempt to address deferred maintenance until year three. You will be losing skilled hourly workers and a significant portion of your management to the severance arrangements or resignations. At the same time, you will be attempting to fill key existing vacancies and newly created positions in the surviving companies; and you will be continuing to address existing financial control issues while you tear apart the Finance department.

In essence, you will be responsible for the operation, safety, and reliability of a company whose assets are deteriorating, and whose organization is in turmoil.

There are many other provisions in the proposed legislation concerning:

- Long-distance routes;
- Liquidating real estate;
- Debt;
- Exclusive Rights;
- Common Stock; and
- Preferred Stock, etc.

These provisions too are fraught with problems, but I will not bore you with a discussion of these because they are largely irrelevant, given the impracticality of organizing the corporate structures to accomplish the threshold legislative goal of breaking up Amtrak into three separate new entities.

In all my 39 years in the industry, I have never seen anything like this proposed legislation. The closest parallel would be the privatization of British Rail and the separation of their operations and infrastructure maintenance. In that case, it took years to accomplish and it consumed billions of dollars in government funding. We know the results of this endeavor. You have been given one year and no money. I realize, too, that this is only one of what will be several legislative proposals concerning the future of Amtrak and rail passenger service. I also know that none of this will happen overnight. I am proceeding to carry out the capital and operating budget which you approved.

ON THE RIGHT RAK

El Paso Employees Celebrate Safety Achievement

Southwest Division employees stationed in El Paso, TX, celebrated working 2,500 days injury-free at a luncheon held on June 17, 2003, in the El Paso station. The group, consisting of 21 Transporta-

tion employees, two ticket office employees, one Operations supervisor, and one Road foreman, serve the *Sunset Limited* and *Texas Eagle* trains between Alpine, TX, and Maricopa, AZ.

From left to right: Locomotive Engineer **Bill Herron**, Conductor and Safety Committee Officer **Danny Smith**, Locomotive Engineer and Safety Committee Officer **Ruben Villareal**, Conductor and Safety Committee Officer **John Wylie**, Road Foreman and Safety Committee Officer **Dave Morgan**, Conductor and Safety Committee Officer **George Natividad**.

Sunnyside Yard Passes EPA Audit for Third Straight Year

Employees at Sunnyside Yard in New York can now breathe a bit easier — literally. The New York Maintenance facility at Sunnyside Yard successfully completed its annual U.S. Environmental Protection Agency (EPA) audit in May. At press time, Sunnyside Yard was the only major Amtrak facility to have gone three years without a potential EPA violation finding as a result of an audit.

As part of Amtrak's Consent Decree with the EPA, railroad maintenance facilities are subject to periodic internal audits for environmental compliance. These inspections are scheduled based on the size of the facility; major facilities are scheduled yearly.

Gary Violano, superintendent of the Sunnyside Yard facility, gives

(L. to R.) **Harry Seubert**, field environmental specialist; **Sean Daly**, general foreman; **Chris Payne**, utility worker; **Joseph Sanchez**, manager; and **Gary Violano**, superintendent, all of Sunnyside Yard Terminal Services.

credit for this accomplishment to both proper management and strong leadership. "This could not have been done without several key participants. **Harry Seubert**, our field environmental specialist,

has the knowledge to monitor our compliance. He is also an active participant in formulating corrective and follow-up remedies to potential problems. He doesn't just monitor our compliance; he works

with employees to ensure proper practices are followed."

Violano cites another key team member in the New York Division, Environmental Manager **Rich Mohlenhoff** who is an expert in environmental regulations, particularly with state and local authorities. Mohlenhoff works with the facility managers as partner in establishing proper procedures. Both he and Seubert have also managed several facility improvements, such as the installation of the new Locomotive Fueling Facility.

"Of course, none of this would be possible without the involvement of all our skilled craft workers, who have been trained in environmental awareness and make sound environmental practices part of their everyday work," said Violano.

Amtrak Police Department Recognizes 'Officer of the Year'

On July 1, Sgt. **Brian Ravert** was selected as the Amtrak Police Department's 2002 "Officer of the Year" for his overall performance and outstanding commitment to law enforcement.

Among his accomplishments, Sgt. Ravert has displayed exemplary performance as supervisor of the Amtrak Police Department's National Communications Center in Philadelphia where approximately 2,900 calls for service are received each week. He has consistently ensured optimum performance of the agency's communications officers and their efficient

and effective response to emergency and routine calls for service.

In addition to his regular duties, Sgt. Ravert also streamlined and formalized the Amtrak Police training process while initiating several new programs such as Basic Communications Officer Program, Computer Aided Dispatch, Emergency Notifications, APD Orientation, Railroad and Police Terminology and a Communications Training Officer Program.

Sgt. Ravert's consistent drive for excellence was also demonstrated by his significant contribution to

Amtrak Police Department's "Officer of the Year," Sgt. **Brian Ravert**, responds to a call at the National Communication Center in Philadelphia, PA.

the National Communications Center's achievement of Public Safety Communications Accredita-

tion from the Commission of Accreditation for Law Enforcement Agencies, Inc.

New Hire Training Supports Peak Travel Season

As summer is Amtrak's busiest travel season, departments throughout the company prepare for the expected increase in ridership. Maintenance facilities work to repair and release cars to service to meet the greater demand for equipment. Reservation Sales Call Centers adjust staffing levels to handle the increase in inquiries. Operations examines the allocation of equipment to better accommodate passenger demand, and Human Resources recruits, hires, and trains additional employees to fulfill the on-board staffing needs. As part of the Human Resources department, Employee Development ensures that the newly-hired front-line employees acquire the skills and training required to serve passengers during this peak travel season.

Toward the end of spring, Employee Development Coordinators **Roberta Orebeaux**, located in Washington, D.C., **Alfredo Gomez** and **Jeff Kocar** in Chicago, IL, and **David Redding** in Los Angeles, trained 115 individuals for service and train attendant positions across the system. Service attendant (SA) training teaches new employees how to serve dining car passengers and train attendant (TA) instruction trains them to serve coach and sleeping car passengers.

During an Emergency Preparedness class in Los Angeles, Dave Redding shows new hire train attendants how to perform CPR.

These new hires came from all walks of life, including college students, teachers, accountants and restaurant servers. "I don't think

most people appreciate how important the recruiting and hiring process is," said Redding. "This year our Human Resources office in Los Angeles did a great job of bringing in a lot of very talented new OBS employees in a relatively short amount of time."

Training lasts approximately three weeks and is divided into three phases: classroom instruction, hands-on equipment skills and student training trips. During each phase, coordinators employ the talent of some of Amtrak's best train and service attendants to help train the new hires. "These employees do the job every day," said Employment Development Manager **Curt Bormann**. "Their participation adds to the dynamics of the class and presents a real-life perspective that students and instructors really appreciate."

Phase I — Classroom

The railroad is a unique working environment to which most people are not accustomed, so instructors repeatedly emphasize the importance of performing duties safely. As part of phase one, railroad safety is taught to help employees understand how to carefully walk around equipment and through the rail yards. To prevent injuries, employees practice proper boarding and detraining. Students

also participate in a two-day Emergency Preparedness class, which gives instruction on how to properly respond to passenger and train emergencies.

Because it is vital for front-line employees to know how to interact with passengers, customer service skills are emphasized throughout the entire course. "A lot of people take the train for the dining experience," said Orebeaux. "Our attendants are taught to offer service that

enhances the customer's entire travel experience."

Instructors also teach a one-day customer service workshop which stresses interpersonal skills such as

Alfredo Gomez demonstrates the proper way to get on and off the train during a service attendant new hire training class in Chicago.

greeting passengers with a warm smile, formally addressing customers by their last name and thanking passengers for their patronage. "Not only do our new hires practice the technical skills, such as upper- and lower-berth bed-making and emergency evacuation," Kocar said, "but they also develop interpersonal skills such as communication and teamwork."

**"This year our
Human Resources

OBS employees in a
relatively short time."**

David Redding, Employee
Development Coordinator,
Human Resources

Timetables, tickets, and manifests are another important part of new hire training. Employees are taught to read and understand various ticket types, such as those printed at an Amtrak ticket office, which differ from hand-written, group, and travel agency tickets. With this training, employees know how many people are on board, where they board and detrain, and whether passengers have special needs, such as service animals or special meal requests. In addition, all new service and train attendants review policies associated with the Americans with Disabilities Act and are taught how to assist passengers with disabilities. To learn Amtrak's routes, schedules, train connections, and

frequencies, students also study Amtrak's National and Northeast Corridor Timetables.

During this phase, trainees are also acquainted with station procedures by taking a tour that includes the baggage department, boarding gates, tracks, ticket office, and passenger services.

Phase II — Hands-on Skills

New hires begin phase two by familiarizing themselves with rail cars and crew base and commissary operations at the yards. While getting to know the equipment, students practice emergency evacuation procedures and learn the location and operation of emergency equipment, exit windows, and wheelchair ramps. A tour of the commissary helps employees see what type of refrigerated, frozen, and dry items are available and how they are stored.

New employees also take a short-distance trip to observe crew members performing their job duties. During a recent trip from Chicago to Milwaukee, new hire train attendants were surprised at how fast and efficiently the station and on-board crews were able to board 300 passengers on the *Empire Builder*.

As instructors progress through phase two, training becomes more job-specific. Train attendants learn how to inspect Coach and Sleeping cars for cleanliness, equipment defects and necessary supplies. Among other duties, they are taught how to operate and speak on the public address system. Because of the awkwardness of making upper and lower beds in a confined space on a rocking train, two full days are spent practicing proper bed-making. "When the new hire train attendants first saw the bedrooms during their hands-on training," said Kocar, "they

Service Delivery That Delivers

An Inside Look at Amtrak's Service Delivery Group

The sun rises as the *Southwest Chief* treks across the mountainous landscape just west of Flagstaff, AZ, and passengers get a whiff of fresh coffee and bacon. As train #4 heads toward Chicago from Los Angeles, many passengers begin the second day of their journey ready for breakfast.

Thanks to planning and research by Amtrak's Service Delivery department, passengers are offered a variety of amenities and meal choices. Perhaps they want fresh fruit and a spicy omelet served on china and white-linen tablecloths in the Dining car. Maybe they fancy a cup of steaming coffee and a hot breakfast sandwich from the Lounge car,

"Instead of just saying 'here is the standard, just do it,' we endeavor to build consensus by including all Amtrak departments in the decision-making process."

Kevin Scott, Chief,
Service Delivery

served by an employee dressed in a crisp blue uniform. They may wish to dine in the privacy of their sleeping accommodations, play a game or watch a movie in the Lounge car. The architect behind the availability of these on-board services and amenities is Amtrak's Service Delivery group, which is responsible for

ensuring the delivery of consistent and quality customer service.

The Service Delivery department leads the design, development, and implementation of four critical areas of passenger services: Food and Beverage Standards, Contract Catering, Service Delivery and Standards, and Revenue Accounting and Protection.

"Our group helps establish official policies that apply to real-world situations and provides the tools employees need to do the job," said **Kevin Scott**, chief of Service Delivery. "Instead of just saying 'here is the standard, just do it,' we endeavor to build consensus by including all Amtrak departments in the decision-making process," said Scott.

The Service Delivery department consists of 35 management and 49 agreement-covered commissary employees. Amtrak's 23-year veteran Budget Analyst **Tim Robinette** oversees the \$90 million Service Delivery operating budget and focuses on containing costs. Tim also manages the \$79 million Food and Beverage revenue budget. "My goal as a financial person is to help our managers decrease our operating expenses while food and beverage revenue increases," says Robinette. "The best way to achieve success is to keep tight controls over managing costs in product and labor."

Food and Beverage Standards

The Food and Beverage Standards group, managed by **Leon McLaurin**, senior director, develops train menus and manages food service delivery. The group recently updated and standardized Dining car and Café car

menus that offer passengers an expanded variety of meals and snacks. Focus groups provided input on food selection, brand, quality, and cost.

"The best way to achieve success is to keep tight controls over managing costs in product and labor."

Tim Robinette, Budget Analyst,
Service Delivery

"My staff has a combined total of more than 100 years of experience in the food and beverage industry. They have been very effective in working with field organizations to develop quality food and beverage programs while improving the financial performance of the service," said McLaurin.

The Food and Beverage group is launching a nationwide cash register program to equip food service cars with a specialized system that will capture revenue and enforce employee accountability. The cash registers generate customer receipts, and facilitate an employee's check out at the end of the trip with its continuous audit capacity. At press time, implementation of the cash register program was completed on *Acela Express*, *Auto Train*, *Empire Service*, *Cardinal*, *Vermont*, *Carolynian*, *Pennsylvanian*, *Three Rivers*, and the *Silver Service* trains. The group's goal is to load all Amtrak food service cars with cash registers by the end of the year.

The group is also developing a pilot program that will provide culinary training for Amtrak chefs with Amtrak's Executive Chef **Gil Lamar**. Jobs have been posted for the Traveling Chef program and employees interested in joining this pilot will undergo personal training with Chef Lamar. Traveling chefs will ultimately ride trains to instruct, coach, and provide one-on-one creative input to other Amtrak chefs.

Contract Catering Operations

Tom Hall, senior director, Catering Operations and Contract Catering Management, is responsible for the policies, procedures and contract management associated with Amtrak's food vendor, Gate

Gourmet. Amtrak Directors, **Tom Szachacz**, New York, and **Mike Dwyer**, Los Angeles, oversee the day-to-day operations of the catering facilities and focus on streamlining functions and controlling costs. For example, year-to-date labor costs are \$1.3 million favorable to budget, and on-board stock costs are currently \$3.5 million favorable to budget.

"Improving controls in catering facilities, in the transferring of stock, and ensuring accuracy and product quality are the primary goals of this department," said Hall. "The contract team has done a great job while pushing our contractor to provide better service and value at appropriate costs."

Service Delivery and Standards

The Service Delivery and Standards group led by **David Nogar**, senior director, National Service Delivery, is responsible for developing on-board service standards to ensure consistent delivery and quality of service. The group also communicates policy changes, standardizes on-board announcements, conducts internal audits, mediates station-staffing issues, oversees the distribution of on-board movies, and manages the complex uniform program.

A milestone achieved this year was the first printing and national distribution of the Service Standards Reference Manual for Management Employees. The manual incorporates company policies, procedures and standards that apply to the work Train Service and On-Board Service employees perform. The manual is designed to assist Operations department supervisors and managers in coaching employees, and is used by managers and on-board service employees as a reference in their everyday duties. Available in print and on Amtrak's Intranet, the manual is updated when new policies are established or changed. The group plans to introduce a new service manual this fall that will apply to station service employees.

During Amtrak's restructuring last year, Nogar's group worked closely with the superintendents of Passenger Services to reconstruct the Amtrak uniform policy. The group implemented a national uniform policy that restructured contracts with six uniform vendors and facilitated a smooth transition for the 5,700 Amtrak employees who wear the navy blue, *Acela* gray, and Amtrak police uniforms.

Amtrak's Service Delivery department Food and Beverage team: (Front Row, L. to R.) **Jack Davis**, senior analyst, Food and Beverage Standards and Specifications; **Karen Shannon**, senior analyst, Food and Beverage Information Systems; **Leon McLaurin**, senior director, Food and Beverage Standards; **Michael Hampton**, senior analyst, Point of Sale System Support. (Second row) **Anytra Brown-Sanders**, data administrator, Food and Beverage Standards; **Gil Lamar**, executive chef. (Top Row) **Pete Humphreys**, director, Food and Beverage Standards and Operations; **Glenn Robinson**, manager, Food and Beverage Standards.

Richard Adams (center), lead service attendant, is joined by **Karen Shannon**, senior analyst, Food and Beverage Systems, and **Michael Hampton**, senior analyst, Point of Sale System Support, on board Acela Express 2170 as Adams prepares to set up stock prior to departure.

Emmanuel Kamara, Amtrak chef, is joined by **Gil Lamar**, executive chef, **Jack Davis**, senior analyst, Food and Beverage Standards and Specifications, and **Pete Humphreys**, director, Food and Beverage Standards and Operations, in the kitchen of the Capitol Limited.

Revenue Accounting and Protection

Senior Officers **Brett Carter** and **Dan McFadden** work closely with the Inspector General’s office, Passenger Services, Labor Relations and Transportation departments to ensure Amtrak policies regarding revenue accounting and revenue protection are followed.

“The Service Delivery department performs many functions, but our ultimate goal is to give front-line employees the tools to create a unique experience for our passengers.”

Kevin Scott, Chief,
Service Delivery

The duo’s focus is policy enforcement, and performs audits on accounting and reporting procedures that not only provide a snapshot of employee compliance, but also alert

the group to schedule training in problem areas.

For example, credit card charge-backs, or the company’s inability to collect on a credit card charge, have always been a problem on trains. “Through Brett and Dan’s persistence in training managers and craft employees to follow Amtrak’s credit card acceptance policy, the company has gone from a loss of \$55,000 per month on credit card charge-backs to less than \$20,000,” said Scott.

To date, McFadden’s conductor remittance review process has identified over \$1.4 million dollars of non-remitted revenue.

“The Service Delivery department performs many functions, but our ultimate goal is to give front-line employees the tools to create a unique experience for our passengers. Those employees and the services they deliver are the face of Amtrak. Whether it’s the aroma of a great breakfast reaching the Sleeping car at 6 a.m., or the sounds of an entertaining movie in the Lounge car at 6 p.m., the on-board services we provide make the difference between Amtrak being simply a mode of travel and an enjoyable travel experience,” said Scott.

New Hire Training Supports Peak Travel Season

continued from page 5

were amazed at how the closets, bathroom and furniture fit into such a small compartment.”

Passenger seating procedures are also an important part of the course. Attendants must know how to handle groups, families, passengers with special seating requests and how to board and seat passengers based on their destination. While train attendant instruction covers Coach and Sleeping cars, service attendant training focuses on dining car service.

Service attendants learn how to take inventory of dining car supplies, such as salt and pepper shakers, sugar, and ketchup, and are taught how to prepare the Dining car for the upcoming meal. For example, the SA makes sure the coffee is brewed and juice is available when preparing for breakfast service. Because passengers often want to know how a meal is prepared, service attendants are taught to speak knowledgeably about menu items. They are also expected to move with agility through the Dining car holding a tray of hot beverages and meals as the train travels at speeds of up to 90 miles per hour. Time, patience, and a lot of practice are required to develop proficiency with this challenging skill.

“When the new hire train attendants first saw the bedrooms during their hands-on training, they were amazed at how the closet, bathroom and furniture fit into such a small compartment.”

Jeff Kocar, Employee Development Coordinator, Human Resources

Phase III — Student Trips

During the final phase of training, the students work alongside a veteran employee. This offers new hires their first opportunity to put to use their classroom and hands-on training. Upon successful completion of the course, new hires are released to their crew bases, receive their trip assignments, and join front-line employees to deliver quality service to the summer travelers boarding Amtrak trains nationwide.

Amtrak Receives Public Works Award for Kansas City Station Renovation

The Kansas City Metropolitan Chapter of the American Public Works Association presented Amtrak, consultant/engineer TransSystem Corporation, and contractor Turner Special Projects with a Historical Restoration/Preservation Public Works Project of the Year award for the renovation of the Amtrak Arcade at Union Station in Kansas City, MO (above). The award was accepted by Project Director **Frank Hall** on May 21.

The Kansas City Amtrak station was originally built in 1914. Amtrak vacated the deteriorating structure in 1984 and began operating from a nearby facility. After 17 years and a \$4.6-million investment, passenger rail service returned to the newly renovated Kansas City Amtrak station on Dec. 17, 2002.

Amtrak Continues to Maintain High-Speed Attleboro Line

continued from page 2

Recognizing the value of retaining dispatching control over this very busy segment of the corridor, Amtrak reached an agreement with the MBTA earlier this year to continue to maintain and dispatch the Attleboro Line at no cost to the MBTA. This new agreement allows Amtrak to sustain high-speed rail service on the north end of the Northeast Corridor, ensuring good on-time performance. Because MBTA is familiar with Amtrak’s experience in maintaining and dispatching this high speed, multi-user corridor, it chose Amtrak to continue to control this territory rather than turn it over to the new commuter rail operator.

“This agreement is a win-win for Amtrak and MBTA,” said Gil Mallery, vice president, Strategic Planning and Contract Administration. “The MBTA benefits from our expertise and knowledge of the track, while Amtrak safeguards its high-speed rail service in an

extremely busy segment of the Northeast Corridor.”

When Amtrak began operating MBTA trains in January 1987, it ran 270 weekday trains, 114 Saturday trains and 68 Sunday trains. By the end of the contract, service had grown to include 462 weekday trains, 174 Saturday trains and 142 on Sunday over the 362-mile system in Massachusetts and Rhode Island. After the MBTA issued its Request for Proposals in 2002, Amtrak made a business decision not to continue its service, out of concern about new liabilities that would have to be assumed under a new contract. Nonetheless, Amtrak was committed to ensuring a smooth transition to the new service operator.

Ensuring this transition was a multi-faceted process that involved complex negotiation between the two parties. One of the most critical areas was the handling of personnel matters. The MBTA required its new contractor to hire

“This agreement is a win-win for Amtrak and MBTA. The MBTA benefits from our expertise and knowledge of the track, while Amtrak safeguards its high-speed rail service in an extremely busy segment of the Northeast Corridor.”

Gil Mallery, Vice President, Strategic Planning and Contract Administration

almost all of Amtrak’s 1,600 existing agreement-covered and

non-agreement personnel to provide a seamless transition in service. Other examples of the complexity of the transition were the joint inspections and the assessments of the 362 passenger cars and 83 locomotives that the MBTA owns or leases. Rolling stock and right-of-way maintenance, use of shared stations, separation of ticketing and administrative functions, inventory practices and records, environmental permitting, procurement contracts, personnel, waste management, and evaluation of the 320 non-revenue automotive fleet were among the numerous issues that were part of the negotiating of the changeover.

In a note to employees, Amtrak President David Gunn thanked the employees who operated the lines and said that they “should be proud of the work they’ve done for the past 16 years.” On the evening of June 30, the transition from Amtrak to the new contractor was made without a hitch.

Information Technology Plays Vital Role in Strategic Plan

continued from page 1

know AT for its support services. The computers, networks and software that help run and support the business — from producing payroll checks, to keeping track of the company's finances, to purchasing materials, to managing the maintenance of the trains — are managed by AT. AT is also responsible for providing and maintaining the electronic interfaces to Amtrak's business partners such as travel agents, benefit management companies, the U.S. Postal Service, and federal, state and local tax authorities.

**"The relationship
with the customer
begins with these
[distribution]
channels."**

**Bob Hackman, Senior Director,
Distribution Systems Support**

While Amtrak Technologies is responsible for the vast majority of the management of information technology and technology projects, other groups within the company are also involved to help manage the business, run the trains, and communicate with customers.

The Engineering department's Systems Management group, for example, collects and analyzes infrastructure data. One of the tools this department employs is the Track Geometry Car, used on the Northeast Corridor, which gathers, stores and analyzes eight different measurements per foot of track.

Another example is the Distribution Systems Support group within the Sales Distribution and Customer Service department, which makes modifications to ARROW and manages other distribution channels, such as the company's voice recognition system, better known as "Julie."

"The relationship with the customer begins with these channels," said **Bob Hackman**, senior director, Distribution Systems Support. "Our group is responsible for maintaining and updating

reservations, information, and ticketing systems."

AT partners with other Amtrak departments to meet the needs of their respective functions. "We are a service organization," said Chief Information Officer **Bob Galey**. "We work in partnership with departments across Amtrak to build the tools they need to run their end of the business."

Amtrak's five-year strategic plan is a roadmap to bring the railroad to a state of good repair. Just as plans are being implemented to lay new track on the Northeast Corridor and to return wreck-repaired Superliners to long-distance service, it is vital for Amtrak's information technology to also maintain a state of good repair. As part of the five-year capital plan, the information technology component relies on \$93 million in funding for FY '04 through FY '08.

Continuous maintenance of the company's computer network is critical, as the company's networked computing needs grow and support more functions of the business. To improve the reliability and its management of the network, AT is creating a baseline infrastructure to support server-based application systems in the event of disaster recovery, replacing obsolete servers and aging networks, and expanding storage capacity.

The five-year plan also calls for a company-wide replacement of all 7,800 personal computers and workstations that use outdated operating systems within the next three years.

Operations Systems

The five-year plan addresses technology needs that support transportation, engineering, and mechanical operations. A new computer-based training and testing program for all of the operating crafts is slated for FY '04. The system will provide initial and re-qualification training for a range of employees; including engineers, conductors, assistant conductors, and Maintenance of Way track foremen.

In FY '04, the company's high-speed train simulator will be converted to a simulated diesel or electric locomotive operating with any type of Amtrak conventional equipment. New software will

Washington Union Station Ticket Agent **Kathy Coleman** looks up schedule information in ARROW.

allow Amtrak to build any freight or passenger consist from the instructor station and help measure an engineer's progress.

Improving the ARROW system's support for train operations is an important component of the capital plan. Some of these improvements include accepting Automated Equipment Identification data from freight trains operating on Amtrak property, as well as data from Amtrak trains operating on freight property; adjusting inventory levels based on actual train consists; and calculating revenue-per-car-day figures by train, car, and month.

**— just as plans are
being implemented
to lay new track on
the Northeast Corridor
and to return
wreck-repaired
Superliners to
long-distance service,
it is vital for
Amtrak's information
technology to also
maintain a state
of good repair.**

The development of electronic yard sheets for every major terminal will enhance CNOC's capacity for tracking equipment by type, by condition, and by train. These projects will help ensure equipment, consist, and manifest integrity and improve the allocation of resources by CNOC. In addition, the central repository for

on-time performance data that currently exists will be improved.

An Enterprise Asset Management System for Maintenance of Way employees, to be implemented in FY '04, will help the Engineering department track maintenance and construction activity, including the collection of real-time labor and reimbursable equipment data, and labor productivity assessment. The system will also collect and manage track, signal and electric traction inspection data.

In FY '04, the introduction of the Train and Engine crew paperless time tickets will be completed. This project will provide these employees real-time Web-based access to their payroll information and will reduce staffing of Crew Management Services.

Marketing and Sales

Amtrak's information technology five-year plan for Marketing and Sales calls for a variety of enhancements to its reservations and sales systems. In FY '04, the initial focus will be on the ARROW Reservation System, Quik-Trak self-serve ticketing machines, call center technology, and Amtrak.com. Enhancements to ARROW will include the ability to handle "multiple forms of payment" for a ticket, if for example, a customer wishes to pay for a new reservation with an exchange ticket and a credit card.

Over the next four years, Amtrak will continue to enhance the ARROW system, expand and improve call center and station reservations systems, and integrate customer information across all sales systems so that our customers will have a more seamless and customized sales experience. Amtrak's call centers will get replacements for agents' aging desktop PCs, and network systems

Amtrak Values Employees in National Guard and Reserve Signing Ceremony

At a July 21 ceremony in Washington, D.C., Amtrak President David Gunn was joined by Department of Defense officials and employees who have served on Military Leave of Absence to sign the Statement of Support, a document that guarantees that employment will not be denied because of service in the National Guard or Reserves, that job and career opportunities will not be limited or reduced, and that leaves of absence for purposes of military training will be granted, without sacrificing vacation time.

As an employer, Amtrak supports the Uniformed Services Employment and Reemployment Act (USERRA), which ensures job protection and rights of reinstatement to employees who participate in the National Guard and Reserves. Currently, nearly 36

(L. to R.) Principal Deputy Assistant Secretary Craig Deuhring; Col. Kasse Andrews-Weller, D.C. Committee, Employer Support of the Guard and Reserve (ESGR), Maryland Chair; Amtrak President David Gunn; Lt. Col. John Tansill, project officer, Marketing and Employer Services, National Committee for ESGR; and Col. Thomas Hart, U.S. Airforce and ESGR.

Amtrak employees are fulfilling their military obligation.

As the United States continues to

fight its war against terrorism, the armed forces depend on personnel from the National Guard and

Reserves to help meet their staffing needs. These two branches of the armed forces are staffed with volunteers who enlist for a designated time in service and who are subject to being called-up for active duty during time of war.

The signing was attended by Principal Deputy Assistant Secretary Craig Deuhring and Lt. Col. John Tansill from the National Guard, Fred Samuelson, Maryland Ombudsman for USERRA Compliance, Boyd Cook, Maryland and District of Columbia State Chair, and Col. Kasse Andrews-Weller, D.C. Committee, Employer Support of the Guard and Reserve, Orfeo “Chuck” Trombetta, Jr., Army Reserve Ambassador, and Lt. Col. **Michael Sternfeld**, U.S. Army Reserve, who is also an Amtrak conductor.

Amtrak Reservation Call Center Reaches Ten-Year Milestone

Ten years ago, Riverside, CA, a city with an aggressive approach to economic development gave Amtrak a deal it couldn’t refuse by offering the company a location to build its new Western Reservation Call Center. The reservation center integrated reservations sales agents from Los Angeles and the city of Corona. The new facility soon became the second largest employer in Riverside behind March Air Force Base.

The 51,000 square foot structure, located 70 miles southeast of Los Angeles, offers amenities such as indirect lighting to reduce glare on computer screens and ergonomically correct workstations,

providing employees with an efficient and comfortable work environment, and conveniently located lockers and vending machines. Employees enjoy a full kitchen, outdoor fountain, and can use the weight room and volleyball court on their rest time.

The workspace is divided into four quads containing 425 workstations; one quad is a training room with an additional 50 workstations. Currently, the building houses 650

union and non-union full- and part-time reservations sales agents and support staff.

“We are proud of the fact that the building and all of the tools inside foster a dynamic work environment for our employees,” said **Gene Price**, director, Reservation Sales, Riverside.

Companies such as American Express, Disney and the U.S. Postal Service have modeled call center facilities after the Western Reservation Call Center, and Amtrak has received two Beautification Awards from the city of Riverside for the building’s aesthetic contribution to the city.

Below, construction begins on the Western Reservation Sales Call Center in the spring of 1992.

Right, in 2003, the state-of-the-art Riverside Reservation Sales Call Center employs over 600 people from all parts of Riverside County.

Information Technology Plays Vital Role in Strategic Plan

continued from page 9

updates from Token Ring to Ethernet.

New Quik-Traks will be strategically deployed at stations throughout the system in late FY '04 and early '05 to improve customer service and help manage station operating costs.

These projects will help ensure equipment, consist, and manifest integrity and improve the allocation of resources by CNOC.

While the company's current Web site was launched in 2001, it will be redesigned and rebuilt over the next five years. In 2004, the company will build a more advanced booking system that will, for example, present schedule and

fare options together on a single screen. Starting in 2005, the Web site will include the Amtrak Guest Rewards program, which currently resides at another Web address, and offer customers customized information based on their profile. For example, when a customer signs on to Amtrak.com they will be served information based on previous bookings and their own personal travel preferences.

This approach will also enable everyone in the sales process, from reservation sales agents in call centers to station agents, to recognize customers and purchase patterns, make appropriate offers, and either increase the value of the sale or reduce the amount of time for a given transaction.

Amtrak also plans to expand its use of the Internet to allow international and domestic travel agents, tour operators and corporate accounts to book online directly. This direct access will

reduce or eliminate many service fees that Amtrak currently absorbs.

Upgrades to Amtrak's voice recognition system, "Julie," will include the ability to cancel and rebook reservations and enhancements to speed customers' time spent with Julie, thereby improving the sales experience for our repeat customers and reducing the total transaction time.

Other Partners

Projects that will support the Finance department's functions include a corporate-wide account receivables system to more efficiently generate invoices and provide management reporting for receivables in excess of \$100 million per year. The plan also calls for the replacement of the company's General Ledger System, known to many as FIS, and for the replacement of the current revenue accounting systems and upgrade. These systems will

improve financial reporting and processes throughout the company.

"We are a services organization. We work in partnership with departments across Amtrak to build the tools they need to run their end of the business."

Bob Galey, Chief
Information Officer

A Legal Records Management System and a Litigation Support System will be created in FY '04 for the Legal department in order to more efficiently manage cases and records.

Round House Gets Flattened

Formerly a part of the Wilmington Car Shops, the Old Round House is demolished after being out of service for 20 years. The Old Round House was a half-pie shaped structure built in the early 1900s to service steam locomotives and coal tenders that fed water and coal to the boilers. Prior to 1983, the facility was used to store out of service diesel engines. The demolition was completed in early June.

Burnout

Engine #930 sustained extensive damage to the converter cabinet, the engine aisle way wiring, and its upper body as a result of a June 30 fire that started in the locomotive's converter cabinet. The locomotive was on train #157 on its way to Washington.

The fire demonstrates what can happen without a regular overhaul program in place. Engine #930 was last overhauled on Dec. 13, 1989. The locomotive will receive a general overhaul at the Wilmington Locomotive Shop as one of the seven overhauls slated for FY '04. Deferred maintenance also resulted in a recent fire on Engine #922.

Better Managing Amtrak Resources

continued from page 3

for this project was **Kris Economos**, manager, Operations Management for the Central Division. Her background in finance and operations provided the expertise necessary for the development of this program.

To ensure a smooth transition to the new system, the Procurement and Materials Management department developed a detailed rollout plan that identifies key contacts and process participants, user training, and an implementation schedule. The implementation schedule included a pilot phase that began June 16 in the Mid-Atlantic Division, which maintains three tank facilities, in Philadelphia, Wilmington and Washington, and two emergency facilities, in Richmond, VA, and Pittsburgh. By

June 19, approximately 118,000 gallons of locomotive fuel were recorded on eTrax, representing close to \$97,000 in fuel billing. Information gathered during the pilot phase was used to enhance the software to better meet Amtrak's needs.

Economos, along with other divisional managers acted as regional coordinators and were involved in creating the divisional sponsors group. The divisional sponsors tested the system during the pilot phase and provided the feedback necessary for tailoring the program to best fit Amtrak's needs. Along with Economos, the coordinators group included **Nancy Ernest**, Mid-Atlantic Division; **Harry Bachrach**, New York Division; **Paul O'Mara**, New England Division; **Danny Abboud**, Southern Division; **Jim**

Bates, Pacific Division; and **Lois Cunning**, Southwest Division.

These coordinators were key in this project, as they rallied the troops who provided the critical feedback during the pilot phase.

The final version of the eTrax program is being phased-in to the remaining divisions — the New York and New England divisions at the end of June, the Southern and Central divisions in July, and the Pacific and Southwest divisions by the end of August.

Feedback from employees associated with the development and implementation of the new program has been overwhelmingly positive. From the start, employees were eager to begin using eTrax to improve efficiency and accuracy in the locomotive fueling process.

Once the nationwide program is fully implemented by early September, the Accounts Payable department will no longer accept paper invoices for locomotive fuel transactions. At least two weeks prior to the cut-off date, AP will notify vendors that they will no longer accept paper invoices.

Mike Rienzi, vice president of Procurement and Materials Management, said, "Although adjustments like these may seem difficult to implement at the organizational level, I am confident that we can make the changes necessary to control our locomotive fuel purchases and streamline operations at Amtrak. Furthermore, eTrax's user-friendliness will simplify the process for employees who perform these tasks."

FRONTLINE FOCUS

Dear Amtrak,

Once again, we would like to commend two employees whose cheerful attitudes added a pleasant note to a recent trip.

Car steward **Kevin Grisham** continued to smile and be pleasant to all passengers even when there was a problem switching engines in Albany and the train was delayed several hours. I'm sure his warm and cheerful attitude helped those passengers who might have been perturbed at the delay. We were fortunate in having him responsible for our car.

Ticket agent **Marie Coleman** was a delight to work with as I straightened out a small ticketing problem in the Chicago station. I left her counter with a big smile on my face.

Dear Amtrak,

I traveled from New York to Boston, and as luck had it, left my cellular phone on the train. I contacted Amtrak to report my lost phone. I was pleased that only three hours later, Mr. **Martin Butler**, a conductor on that train, called me saying that he had found my phone and the he would be happy to send it to me by mail. The phone indeed arrived within a couple of days.

I would like to commend the Amtrak staff, and in particular Mr. Butler, for the efficiency and professionalism with which they handled my case. Amtrak should be proud to have such employees.

Amtrak Maps Financial Plans for FY '04

Amtrak's board-approved FY '04 budget, included in the Five-year Strategic Plan, establishes a new vision for a traditional railroad and a goal of returning the railroad to a state of good repair.

A budget is the numerical representation of a company's operating plan — the services and functions the company performs. What an operating plan says in words, a budget says in numbers. A solid budget is a financial roadmap to improve efficiency, reduce costs, and increase revenue.

This coming fiscal year budget is different from those of recent years — when the budget did not reconcile the fiscal, physical, or legislative realities of the company. Over time, Amtrak exhausted its sources of liquidity, working capital was consumed and by 2002 most major assets were mortgaged. Amtrak's budget process was ineffective, reporting was inadequate, and fiscal controls collapsed.

Now, however, as Amtrak nears the close of FY '03, it is on track to achieving its fiscal year budgeted result, ending the year with approximately \$100 million in working capital, assuming full receipt of the \$1.043 billion in federal funding.

Amtrak's FY '04 federal funding request is \$1.8 billion, the highest amount Amtrak has ever recom-

mended. This figure reflects an \$11.6 million increase in the operating budget over FY '03 (what it takes to run the railroad on a day-to-day basis), while the capital plan (improvements and repairs needed to the plant and equipment) reflects an increase of \$460 million.

"We have submitted to Congress and the administration the details of our \$1.8 billion FY '04 funding request. If we receive less than our request, our capital program will continue to languish," said Joe McHugh, vice president of Government Affairs.

The FY '04 budget is zero-based. In other words, it is based on the specific identification of specifically defined work for a specific cost. This budgeting process is new to Amtrak, and replaces the historic "trend-based budget."

Operating Budget

Amtrak's operating budget is based on a traditional railroad structure with reduced layers of management and a strong focus on core operations — what it takes to run a passenger railroad. The employee headcount is controlled by organizational charts, which reflect the strategic assignment of resources to programmed work, particularly in the engineering and mechanical disciplines. The oper-

continued on page 4

More Wreck-repaired Cars Return to Revenue Service

before

after

Above is a before and after close-up of the grab iron section of Superliner II coach #34129, released from Beech Grove in mid-August as Amtrak's 23rd car returned to revenue service. The car arrived at the maintenance facility as a result of the Auto Train derailment in Crescent City, FL, last April. Mechanics replaced several equipment room doors, renewed gears and couplings, and repaired cut lever channels, sill steps, all side corner trim skirts, and all corner grab iron pockets. All conduit and wiring harnesses were replaced due to heavy damage to the under-car.

On July 16, Amfleet I Metroliner car #21704 was also returned to service. After a September 2001 yard move wreck at the Ivy City yards in Washington, D.C., Bear Car Shop mechanics performed a complete overhaul, wreck repair, interior upgrade, and bathroom module installation.

July Ridership Sets Records

Amtrak's summer season was a successful one, as the company continued to boost ridership and revenue figures. With over 2.2 million passengers in July, ridership for five straight months this spring and summer set all-time records. If the company sustains this level of ridership, it may serve 24 million passengers in 2003, the best result in the company's history.

A number of factors helped foster this growth, including the fare reductions made earlier in the year, a change in revenue management, and targeted local and national marketing efforts. In addition, signs that the travel industry is slowly turning around may have also helped boost the numbers in July.

Fifteen routes posted double-digit ridership gains in July. The *Empire Builder*, *Texas Eagle*, *Cardinal*,

Sunset Limited, *City of New Orleans*, *Auto Train*, and *Silver Meteor* were among the long-distance trains that contributed double-digit ridership. In addition, the *Pennsylvanian* continued to do exceedingly well — with 97 percent ridership growth — since its schedule change. Overall, long-distance trains saw ridership growth of 10 percent over last year and revenues were 1 percent below last year.

Regional trains and Chicago hub trains, such as the *State House* and *Wolverine*, also showed strong performance, and the *Pacific Surfliners* posted a 33 percent increase. *Acela* and *Metroliner* trains together posted a modest 3 percent gain over last July. On balance, short-distance ridership

FY '04 Funding Request to FY '03 Forecast

	FY '04	FY '03 (Forecast)	Change
Operating Costs	581.5	569.9	11.6
Debt Service			
Interest	162.9	155.8	7.1
Principal	116	107.6	8.4
Capital Program	794.4	334	460.4
DOT Loan Repayment	100	0	100
Working Capital	57.3	(124.1)	181.4
Total Federal Subsidy	\$1812.1	\$1043.2	\$768.9

TRAIN OF THOUGHT

At the end of this month, we will close the financial books on FY '03. Barring any unforeseen problems, we'll have met our responsibility to end up on-budget for the year. Though there is room for improvement, we have done a good job keeping expenses to a minimum and under budget. While revenue has fallen short of our goal, our ridership has grown strongly in recent months. If this trend continues to the end of the fiscal year, we'll have served more passengers this year than ever before.

To rebuild the railroad and give our passengers safe and reliable service, we will need \$1.8 billion in federal support in FY '04. When it is provided to us, our federal support will more than double the dollars spent on capital projects (\$794 million), while we essentially hold the line (\$581 million) on what we need to cover our operating costs.

The FY '04 budget represents the

first year of our five-year plan to stabilize the existing system and bring the railroad to a state of good repair. It will produce a fleet that will have seen 100 long-distance car remanufactures and/or overhauls, and 20 percent of the Amfleet cars will be overhauled. By next fall, we will have replaced 89 miles of rail and over 160,000 ties on the Northeast Corridor and reconstructed seven interlockings, among many other accomplishments. (Details on the FY '04 budget are covered in this issue of *Ink*.)

We've begun ordering long-lead materials needed for our FY '04 capital projects (also covered in this issue) and we are not going to waver from this plan — we will continue full speed ahead. When Congress gets back from its Labor Day vacation, I hope it will decide to support our request for \$1.8 billion. However, based on the past, there's a good chance that when the fiscal year begins on October 1, this

David L. Gunn

issue won't be decided and, for a while, we'll be supported by a Continuing Resolution like last year. (A Continuing Resolution is simply a fancy term for "the deadline's here to decide what to do, but we haven't decided what to do, so we'll continue to support you with something until we do.")

I assure you that I will continue to keep you informed about this process. Let me worry about our appropriation from Congress; I need you to continue to focus on running the railroad.

Amtrak Manages Power Outage Outrage

Amtrak employees worked for days to recover from the impact of the power outage that blanketed the Northeast on the afternoon of Thursday, Aug. 14, and halted many trains in the Northeast Corridor and as far west as Michigan.

The power outage was the largest ever in North America, affecting 50 million people and forcing Amtrak to work around the affected areas, as far south as Newark and north to New Haven.

Soon after the outage began at 4:10 p.m. ET, it quickly became obvious to Amtrak's Consolidated National Operations Center (CNOC) that this was not a momentary power outage, as CNOC and Amtrak Police Department staff focused on locating trains stranded on the road, especially in Metro-North territory, where there was absolutely no power.

On-board crews did their best to keep passengers on those stranded trains informed, comfortable, and safe. On northbound train # 2166, stuck on the Hell Gate Bridge, Conductor **Brian Radovich** authorized the Café car attendant to provide passengers with food and beverages free of charge and crew members to safely remove as many windows as possible in order to

make the cars more comfortable. In addition, passengers with special needs were identified and accommodated.

Meanwhile, back at CNOC, a conference phone line was set up and kept open for problem-solving and frequent status updates. Nearly every 60 minutes, conference calls, lead by **Thom Chawluk**, senior director (East) at CNOC, provided key Amtrak personnel from Operations, to the Call Centers, to Corporate Communications the latest information throughout the crisis.

Amtrak Operations worked through the night to get passengers to accessible destinations safely. Train service to and from New York's Penn Station, which had no commercial power and was closed to the public for some time, was suspended for hours. Because Amtrak could not get trains from Boston to New Haven, arrangements were made to return southbound trains already in route from Boston back to Boston. Several trains at Newark, NJ, were turned to go south, a considerable challenge since the outage spared the catenary, but not the signals. Some of the equipment slated for that evening's *Clocker*, *Keystone* and *Regional* rush-hour service was trapped at the darkened Sunnyside Yard in New York. The rush-hour

timing of the outage made things all that much more complicated.

By 8:30 p.m. Thursday night, only very limited service in and out of Penn Station was available. Amtrak crews worked long hours, to the point of being unable to cover their jobs for the next day. Meanwhile, Amtrak continued to publicly urge passengers in the Northeast to put off travel plans to New York until power was fully restored.

With still no overhead or signal power on the Hell Gate and the Metro-North lines, an abbreviated operating plan was put together late Thursday night for the following day: No service between New York and Boston, limited service between Washington, D.C., and New York; no *Clocker* service; and limited *Empire* service.

On Friday, recovery efforts were hampered not only by the slow restoration of power, but also by the shortage of available crew and equipment. Amtrak's recommendation to travelers to New York and points north to delay their plans was effective, as traffic in stations along the Northeast Corridor was light on Friday morning. Yet as news of partial restoration of power spread throughout the day, stranded

Amtrak Infrastructure Liability Risks

Reprinted in its entirety is the following memo from Amtrak President David Gunn to the Board of Directors on Aug. 21, 2003, regarding Amtrak's urgent need to address deferred maintenance issues and the resulting reliability risks. An attachment to that letter, "Amtrak Infrastructure Reliability Risks," addresses these issues specifically, and is also reprinted here.

As you know, I have been insistent that our Five-year Capital Plan be progressed regardless of Amtrak's long-term status. The attached paper gives you some of the reasons for my sense of urgency.

After the recent blackout, we find ourselves down to one 1935 12,000-volt feeder cable through the East River tunnels. If that cable fails, a significant loss of our Northeast Corridor service as well as New Jersey Transit operations is likely. The replacement of this cable will not be quick or easy.

The Northeast Corridor electrification depends on 1935 138,000-volt cables through Baltimore, which are failing. These cables are located in the tunnels north and south of the station. It is a race against time to replace these cables.

Regarding the track structure, over 200 track miles of rail is past due for replacement. Four hundred miles of track is past due for undercutting.

The good news is that we are mobilizing to correct the major deficiencies through our capital plan. As I have told you, we are ordering long lead-time materials. We have reactivated our TLS (Track Laying System) and we will have completely rebuilt 37 miles of track by the end of FY '03. We will install nearly as much rail this year as in the last six years. We will be able to make real progress in FY '04.

Amtrak Infrastructure Reliability Risks

Office of Amtrak
Chief Engineer
August 21, 2003

Introduction

The purpose of the following is to illustrate, simply, the threats that exist to reliable service if investment levels are not increased.

Listed are a few examples of asset failures or near failures that place the reliability of service in the Northeast Corridor in question. Any one of these situations creates the possibility of a major outage of service on significant parts of the Northeast Corridor affecting not only Amtrak, but

New Jersey Transit, Long Island Railroad and other commuter railroads in the system.

Track

Ballast Replacement (Undercutting)

The track sub-structure is made up of ballast, sub-ballast, road bed, and drainage.

Good performance of the track requires a minimum of 12 inches of clean ballast below the bottom of the ties (top ballast).

This work is accomplished by Ballast Undercutting. Undercutting operations should be done on a 20-year cycle and for the NEC that requires a minimum of 44 miles of track to be undercut and have ballast replacement each year. Only an average of 16 miles of undercutting per year has been accomplished over the last 5 years. Over 400 miles of track is in a deferred condition for undercutting. In FY '03, we are doing 24 miles of this work and plan for 81 miles in FY '04. This work must continue until recovery is achieved.

Total Track Renewal with Concrete Ties and Rail

Total Track Renewal with concrete ties and rail is a program for recovery from deferred maintenance for the track structure of the Northeast Corridor (NEC).

This total track renewal concept was adopted in 1978 and 2.3 million concrete ties were installed in the NEC over 871 miles of track by 1998. Unfortunately, this program was suspended in 1998 and only recently restarted this year. With the suspension of this program, many miles of main track

in the NEC had to have speeds reduced to as low as 60 MPH for the safety of trains. With the restarting of this program in FY '03, 97,000 ties will be installed representing 37 miles of track renewed. Additionally 181,000 ties, over 69 miles of track, are planned renewal in FY '04. This program will continue until all main tracks of the NEC will have seen track renewal in 2007.

Rail Replacement

Rail wears out in two ways: one is through fatigue, which is a fracture originating internally from repeated load cycles, and the other is through loss of material from mechanical abrasion. The main cause of rail failure on Amtrak is mechanical abrasion.

"The good news is that we are mobilizing to correct the major deficiencies through our capital plan."

David L. Gunn,
Amtrak President

Average rail life on Amtrak is 40 years. In the case of curve wear, the life can be as little as seven years. This results in the requirement to replace on the average 43 track miles of rail annually in the open main tracks of the Northeast Properties. As with other track infrastructure assets, the rate of replacement of rail has not kept up with the annual requirements. Only 40 track miles were replaced in the last seven years for an annual average of 5.5 track miles per year. In FY '03, we are replacing 29.3 track miles and have planned for 89 track miles in FY '04.

Structures

Movable Bridge Replacements

Thames River and Niantic River bridges are two of eleven movable bridges owned by Amtrak on the Northeast Corridor. Both were built in the early 1900s as bascule bridges that open up to allow marine vessels to pass through the bridge. Both were

designed for occasional openings, but with current rail and boat traffic, their combined total openings are more than 6,000 times per year. While both bridges are structurally sound, the machinery and movable components that open the bridges have deteriorated to the point where they no longer open and close reliably. Repairs have been made over the years, but no longer offer a viable solution. Both bridges periodically fail to open or close and have caused 1,462 minutes of train delay from 44 separate failures during the past year. The capital program includes replacement of both bridges, with Thames to start in 2004, and Niantic in 2005.

Communications and Signals (C&S)

County Interlocking

County Interlocking was built in the 1950s. During that era, most of the signal tower and case wiring in the U.S. was manufactured by the Kerite Company and marketed as "TC Green" tower and case wire. Over the years, the insulation on this wiring has deteriorated and is now becoming a hazard to installations like County throughout the United States. As the insulation breaks down it begins to ooze a brown sappy substance that conducts stray currents between conductors, and from conductors to the ground. As the deterioration continues, the insulation becomes brittle and begins to crack and pieces of insulation start to fall off, exposing bare copper conductors. This leads to short circuits and reliability problems.

The situation is made worse by heat and humidity. This summer's heat and humidity has caused a serious problem at County Interlocking. As an emergency short-term measure, the C&S department has begun replacing the wiring while testing for ground leakage currents every hour around the clock. This is a slow tedious process that must be carefully done to prevent making matters worse by causing short circuits where copper conductors are exposed. Since most of the signal equipment at County is obsolete and at the end of its life cycle, we are planning to replace the whole installation with a microprocessor based system, as a short-term fix.

There are many more signal installations on the Harrisburg Line that are of the same vintage as County and also contain TC Green wire.

continued on page 10

This diagram shows a cross-sectional view of typical track structure.

Amtrak Maps Financial Plan

continued from page 1

ating budget also reflects seasonal variation in headcount and reasonable vacancy rates. The headcount is budgeted to be more than 10 percent lower in September

FY '04 than was authorized in May 2002. The FY '04 operating budget also assumes reasonable labor settlements such as the recent tentative agreement with the Transportation Communications Union, and for the first time after several years an equivalent merit pool for management.

Capital Budget

The FY '04 capital budget launches the first year of Amtrak's Strategic Five-year Plan, which is designed to improve the stability of the company and to bring existing plant and equipment to a state of good repair by 2008. Here's where the \$1.8 billion request really has an impact.

Amtrak is working to overcome the result of years of deferred maintenance. Given the current state of unpredictability of Amtrak's physical plant and equipment, any significant cut in maintenance activity will result in immediate and serious complications. Deferred maintenance has led to mounting slow orders on the Northeast Corridor and costly en-route failures across the system. Continued deferral of essential capital work and the impact of service disruptions will undo the progress made in restoring physical assets. It will also affect Amtrak's already limited cash resources, ultimately placing current financial discipline in jeopardy.

Amtrak President David Gunn recently sent the Board of Directors a memo illustrating examples of how years of deferred maintenance poses imminent threats to the railroad's infrastructure and the company's ability to run safe and reliable train service. (A copy of the memo is reprinted in this issue.)

One of the many examples is the overhead electrification in the south end of the Northeast Corridor. "The Northeast Corridor electrification depends on 1935 138,000-volt cables through Baltimore, which are failing. These cables are located in the tunnels north and south of the station. It is a race against time to replace these cables," Gunn explained in the memo.

Production

By renewing plant (buildings), property (land), and equipment (locomotives, cars, vehicles) with capital dollars, the company extends the economic life of its plant and equipment. Amtrak's Mechanical and Engineering departments have developed strategic production schedules for FY '04 capital projects that rely on \$330.91 million and \$340.04 million, respectively, in funding.

Providing the applicable parts arrive in time, over 35 Superliner I Sleepers will be remanufactured and over 40 Locomotive heavy equipment overhauls are scheduled to take place at Amtrak's Beech Grove Locomotive Shop located in Indiana. Beech Grove is scheduled to do general overhauls for F-59 Locomotives, providing the parts are available, which will be the first time a central back shop will overhaul locomotives for the West.

At the Bear Car Shop in Delaware, the FY '04 production schedule includes the remanufacturing, overhaul and repair of 150 Amfleet I and II Coach and Café/Club cars.

At Amtrak's Wilmington Locomotive Shop, the Mechanical department's focus will be on locomotives needing overhauls, primarily the diesel switchers and AEM-7s. Maintenance and overhaul of 35 additional locomotives are scheduled to take place in FY '04.

Amtrak's FY '04 capital infrastruc-

ture budget includes the renewal and reconstruction of track, structures, communications and signals, electric traction, and fire/life safety projects. These projects include the installation of over 160,000 concrete ties and the replacement

of nearly 90 miles of rail. Over 30 miles of communication cable and 40 miles of cable fiber will be installed. Bridges will be upgraded, including the replacement of 836 bridge ties and five signal bridge upgrades. Seven interlockings will be reconstructed, and over 22 turnouts will be installed or renewed.

Revenue

Amtrak's FY '03 ticket revenue has been depressed by factors such as the unstable economy and the war in Iraq. However, strategic pricing measures and targeted local and national marketing initiatives have yielded record ridership figures. The Marketing and Sales department's primary goal is to generate \$1.28 billion in passenger ticket revenues in FY'04.

"While the Marketing and Sales department is responsible for ticket sales, boosting ridership and generating revenue, we are constantly working to ensure that revenue is generated in the most cost-efficient way possible," said Barbara Richardson, vice president of Marketing and Sales.

Risks and Assumptions

When developing a company's budget, an analysis of risks and assumptions must be made. Amtrak's Strategic Five-year Plan is based on a number of assumptions, primarily the appropriation of federal funding for the company, which is currently being debated in Congress.

Economic realities also play a major role in the success of any budget. Amtrak's FY '04 budget is based on the assumption of .5 percent economic growth, along with stable fuel pricing. While health care costs increased substantially in FY '03, the budget assumes that these costs will continue to increase in FY '04. The budget also assumes \$109 million of cost reductions still to be determined.

Fiscal Year '04 budget figures include the phase-in of a new policy regarding the funding of state-supported services. Under the FY '04 policy, states assume responsibility for direct train and route costs not covered by train revenues. Amtrak is responsible for all interest, equipment and depreciation, and system overhead costs.

"For the first time ever, all states will be charged the same costs at

continued from page 4
the same rate for state-supported Amtrak services,” said Gil Mallery, vice president of Strategic Planning and Contract Administration. “Many states will have a higher contribution than last year and despite the fact that states are going through severe fiscal crisis, all states have secured support from their legislatures to maintain their current levels of existing service in ‘04,” said Mallery. “It is a testament to the public’s support for rail that we have been successful in this endeavor.”

Making Progress
Scheduled production work on Amtrak’s equipment and infrastructure depends on the availability of essential materials. Amtrak has already started the process of purchasing new materials for FY ‘04 work on cars, locomotives and infrastructure. Long-lead-time requirements for ordering these materials, in many cases a year in advance, mean that time is needed to ramp up capital programs to full production (see related article in this issue).

“It is a testament to the public’s support for rail that we have been successful in this endeavor.”
Gil Mallery, Vice President of Strategic Planning and Contract Administration

In his memo to the Board of Directors, Gunn noted, “As you know, I have been insistent that our Five-Year Capital Plan be progressed regardless of Amtrak’s long-term status. We are ordering long-lead time materials. We have reactivated our TLS (Track Laying System) and with it we will have completely rebuilt 37 miles of track by the end of FY ‘03. We will install nearly as much rail this year as in the last six years. We will be able to make real progress in FY ‘04.”

Orders for FY ‘04 Capital Project Materials Begun

The five-year capital plan is designed to bring stability to Amtrak and addresses the needs of plant and equipment that have seen years of deferred maintenance. As Amtrak prepares to start the first of the five years detailed in the plan, the company has begun ordering of some of the essential materials needed to start next fiscal year’s capital projects. In a letter dated July 21, Amtrak President David Gunn informed key members of Congress that the company had to begin work on these projects, and because of the lead-times required for some materials, the company had begun placing orders for some essential items. Because of the deteriorating state of much of Amtrak’s equipment and infrastructure, this process is a race against time.

With the Engineering and Mechanical departments’ ‘04 production plans starting soon, required materials need to be on site in accordance with each production schedule. Accomplishing this is extremely difficult and complex; and doesn’t always go smoothly. In fact, some materials such as concrete crossties and turnouts may require purchase commitments for multiple out-years, according to Michael Rienzi, vice president of Procurement and Materials Management.

“Planning and ordering materials and equipment for the capital program is an intensive process of breaking down the engineering and mechanical production plans into the actual bills of material required for each task. After purchase specifications are defined, a continuous monitoring of the acquisition process must continue so that deliveries coincide with the work schedules,” noted Rienzi.

“We work with Materials Management to inform them about exactly what parts we need, such as car parts for overhauling and remanufacturing work done here at Beech Grove, and when we need them, in order to proceed with programmed jobs,” said Lew Wood, superintendent, Beech Grove. “The on-time delivery of appropriate (to specification) materials is critical to the entire

production process — if we don’t have the materials we need, it holds up the schedule,” said Wood.
Over the past 20 years, the railroad supply industry has seen a great deal of consolidation. Many manufacturers of parts and rolling stock are simply no longer in business, and those remaining often keep inventories at minimal levels. Additionally, since most rolling stock manufac-

turers today are not U.S.-based, replacement part orders often stretch through layers of vendors to their ultimate destinations in Canada and Europe. It is not unusual for a vendor to require eight to 12 months of lead-time for orders.
The items listed in the box below are examples of materials that have been ordered for FY ‘04 capital projects:

FY ‘04 Capital Program Advance Material Orders

Quantity	Item	Approximate Value
100	Track Miles of Continuous Welded Rail	\$13.0M
190,000	Concrete Ties	\$14.5M
20,000	Wood Ties	\$.7M
60	Turnouts, Crossovers, Crossings, and Mitre Rail	\$7.6M
100	Transformers and Circuit Breakers	\$9.5M
81	Switch Machines, Switch Layouts, and Associated Signal Cable	\$2.0M
34	Units of Maintenance of Way Work Equipment, e.g. Tampers, Cranes, Ballast Cars (Upgrades), Catenary Vehicles	\$5.0M
50	Units of Maintenance of Way Automotive Equipment, e.g. Track Inspection Vehicles, Boom Trucks, Grapple Trucks, Rotary Dump Trucks	\$7.6M
Multiple	Capital Spares for High-Horse-Power (HHP) Locomotives	\$4.0M
8	Engines for MP-15 Switcher Locomotive Overhauls	\$1.0M
21	Engines for F-59 Locomotive Overhauls	\$5.3M
8	Transformer Re-insulations for AEM-7 Diesel Car Overhaul	\$2.8M
744	Club Seats for Amfleet and Horizon Upgrades	\$2.0M
82	Dry Storage Modules for Amfleet Upgrade	\$1.1M
432	Shower and Toilet Modules for Superliner Overhaul	\$11.3M
600	Disaster Lighting Kits for Amfleet Upgrade	\$1.3M
100	Amfleet MGS (wheel-slide) Control Systems	\$.8M
80	Purchase of new Auto Carriers for <i>AutoTrain</i>	\$25.8M
10	Purchase of new Switcher Locomotives	\$9.3M
8	Purchase of new GP-40 Locomotives (overhauled)	\$5.8M
14	Purchase of Rail Diesel Cars	\$42.0M
Total		\$172.4M

Department Highlight Government Affairs

When a company's future is highly dependent on federal funding, whether it's a defense contractor or a pharmaceutical manufacturer, you can bet there's a phalanx of Gucci-loafer-wearing lobbyists working the halls of Congress on its behalf.

On the other hand, you work for the company that hosts no fancy getaways for members of Congress to Hawaii in December, and does not contribute a dime to anyone's re-election campaign. So how is it Amtrak received nearly \$1.2 billion last year in federal funding or most recently earned the endorsement of 219 members of Congress for its requested \$1.8 billion in FY '04?

Much of the credit belongs the railroad's hard-working Government Affairs department led by Vice President Joe McHugh. Both motivated and very busy, this team of 17 people represents the company not only on Capitol Hill in Washington, but also in the statehouses and city halls in the 46 states and hundreds of communities served by Amtrak.

The majority of the department is based in Washington, D.C., with field staff in New York, Chicago, and Oakland. Responsibilities are defined by who works with the U.S. House, Senate, and state and local governments. While duties often overlap among the small staff, each person is responsible for advocating on Amtrak's behalf with elected officials and their staffs.

McHugh, who joined Amtrak in 1994, was appointed to his current position by Amtrak President David Gunn in 2002 and is responsible for Amtrak's legislative strategies needed to secure the company's state and federal funding needs. He also oversees Amtrak's day-to-day interactions with Congress, the White House, and other federal and state agencies.

McHugh, a lifelong railfan and Pennsylvania native said, "Our fortunes rise and fall on our credibility. Luckily, in a very short time span, our reputation has turned around because of David Gunn, and it has made our jobs much easier. Mr. Gunn spends a good deal of time meeting with members of Congress and other elected officials, and it pays off because they view him as a no-nonsense manager and straight-shooter." McHugh adds, "I really feel that I have one of the best jobs in Washington. My task is very clear and I just do the best job I can on behalf of Amtrak and everybody who works here."

"Many people ask me what they can do to help our Government Affairs office," McHugh said. "My simple advice is don't be afraid to talk to your member of Congress and Senators about Amtrak and its importance to our nation's mobility. Secondly, we all have the responsibility each day to do our jobs and treat our passengers right. That is the biggest contri-

bution each of us can make. Among elected officials, their own experiences or those of their constituents frequently shape Amtrak's reputation. When something goes wrong, passengers write to Mr. Gunn and they write their Senator — and I hear from both of them."

While McHugh emphasizes that employees' relationships with the public

Joe McHugh, Vice President,
Government Affairs

are most important to Amtrak's future, he says his staff still has a lot to do. "Nobody wants to go through the survival crisis of the last few summers again, not even our biggest critics," McHugh said. "We had to do it, but it was incredibly distracting. We need to get away from this yearly battle for money — our five-year plan, if approved, will give us some stability and bring the railroad to a state of good repair."

This month, the department's primary focus is the federal appropriations process. Annually, there are usually four funding levels suggested for Amtrak. They come from the White House, the House of Representatives, the Senate, and of course from Amtrak. The Congress and administration must reach an agreement for Amtrak to receive funding. Just prior to taking their summer break, the House Appropriations Committee voted to fund Amtrak with \$900 million next year, an amount so low that it would force Amtrak to shut down most of its network. However, this action may precipitate a showdown in the House, as 219 members support funding Amtrak with twice as much money. The 219 members signed a letter endorsing \$1.8 billion for Amtrak; the most signatures of any support letter in Amtrak's history. "Given the demands for funding and its limited supply, getting this many members to sign a funding letter for Amtrak was a good sign for the level of support we enjoy," noted **Marcus Mason**, senior director of Government Affairs, and the staffer responsible for all relations with the U.S. House of Representatives.

Much of the action occurs far from Washington, D.C., however. For example, members of the department's field offices will be on the road much of the next few months along Amtrak routes meeting with local and state officials to educate them as much as possible about Amtrak's plans for the future. **Ray Lang** of the Government Affairs Chicago office recently spent a week visiting mayors and other elected officials in the cities and towns served by the *Empire Builder* in Montana.

"The communities served by Amtrak in Montana are heavily dependent upon the train and use it for essential transportation, tourism, and commerce," Lang said. "Basically, I tried to reinforce Amtrak's commitment to continue service to those communities and established relationships with the communities that will be helpful to Amtrak as it works to develop support for its five-year capital plan and the reauthorization bill next year." At the end of his trip, Lang met with Montana Governor Judy Martz. The governor presented Lang with a recently-completed study the state conducted, which shows that Amtrak service generates approximately \$13 million a year to Montana's economy.

Employees can see the work of Government Affairs on the railroad as staff escort governors, senators, and representatives on state or federal business, or conduct informational trips for legislative staff, such as learning about the Track Laying Machine, the company's five-year plan, or Northeast Corridor Operations. The Government Affairs department recently worked with the Engineering department and the New York Division on a trip for twenty governmental aides in a special consist of a CSX Transportation theatre car, an Amtrak Café, the track geometry car, and an AEM-7 locomotive. "The trip, up the Northeast Corridor from Washington to New York, was a chance for key staff to see exactly where many of our five-year plan investments are being made," said **Caroline Nielson**, senior director of Government Affairs, who is responsible for relations with the U.S. Senate. "The trip also highlighted the complete operations of New York Penn Station."

Considering the constant changeover of people in government — whether it is an administration, each new Congress, federal and state agencies, or elected officials from the communities along the line — a lot of hard work must be done to educate them and encourage passenger rail investment. While many Amtrak employees stay with the company for 20 or 30 years, the average political appointee is in the job for only about 18 months. "With each new face, we often find ourselves starting all over again," says McHugh.

2003 Congress

The timelines below are a snapshot of the world of the author, not the world of the reader. The timelines that take place on the Amtrak website are the ones that take place on the Amtrak website.

2003 Amtrak August 2003

February 3, 2003: The House passes the budget request, which includes \$1.8 billion for Amtrak.

February 15, 2003: The House passes the grant request of \$1.8 billion for Amtrak.

February 20, 2003: The House delays FY '03 (which includes \$1.043 billion) funding level was the deferred request.

March 21, 2003: The House passes the FY '04 Budget Request. The House vote. The House vote for Amtrak.

March 21, 2003: The House passes an amendment to the FY '04 Budget Request (which includes \$1.8 billion) that increase funding from \$900 million to \$1.8 billion, which uses the P.L. 105-271, which passes 51-49.

March 26, 2003: The House passes the FY '04 Budget Request, which assumes that Amtrak will receive \$1.8 billion.

April 11, 2003: The House passes the House Report does not include Amtrak. The Senate passes the same day by a 51-49 vote.

June 25, 2003: The House passes the Appropriations Committee report of \$1.8 billion FY '04 funding for Amtrak.

July 11, 2003: The House passes the Transportation bill, which includes \$580 million for Amtrak.

July 30, 2003: The House passes a significant amendment to the Transportation bill, which includes \$580 million for Amtrak. The House passes the Transportation bill, which includes \$580 million for Amtrak.

Next Steps: The House is expected to mark up the Transportation bill in early September. The House is expected to mark up the Transportation bill in early September.

2003 Amtrak August 2003

January 8, 2003: The National Passenger Rail Act provides \$4.61 billion for upgrades, high-speed rail, and other projects. In addition to the DOT to the DOT.

June 24, 2003: The House passes the star (D-MN), Br

Congressional Timeline

Below provide a glimpse into the complex authorization and appropriations processes on Capitol Hill. Amtrak's Government Relations Department is responsible for informing and monitoring these processes.

Amtrak Appropriations Timeline

2003

February 20, 2003: President Bush releases his FY'04 budget, which includes \$900 million for Amtrak.

May 5, 2003: Amtrak formally submits its FY'04 request of \$1.8 billion to Congress.

October 10, 2003: President Bush signs the long-term FY'03 Omnibus Appropriations bill, which includes \$1.43 billion for Amtrak. (Amtrak's FY '03 request was the equivalent of \$1.143 billion due to repayment of a \$100 million loan to DOT).

October 2003: The House of Representatives passes the Surface Transportation Budget Resolution (H. Con. Res. 95) by a 215-212 vote. The House Budget Resolution assumes \$900 million for Amtrak.

November 2003: Senator Byrd (D-WV) offers an amendment to the Senate Budget Resolution (S. Con. Res. 100) that increases the assumption for FY '04 Amtrak funding from \$900 million to \$1.8 billion. The amendment, which is tied to the President's tax cut proposal as an offset, passes the Senate by a 56-44 vote.

December 2003: Senate passes a FY '04 Budget Resolution that assumes \$1.8 billion for Amtrak by a 56-44 vote.

January 2003: Budget Resolution Conference Report is passed by a 216-211 vote. The Conference Report does not specify any assumed funding level for Amtrak. The Senate agrees to the Conference Report that assumes \$1.8 billion for Amtrak by a 51-50 vote.

February 2003: 219 House members send a letter to the House Transportation Committee urging full funding of Amtrak's FY '04 funding request.

March 2003: The House Appropriations Subcommittee on Transportation, Treasury, and Independent Agencies passes a vote on an FY '04 Appropriations bill that includes \$1.8 billion for Amtrak.

April 2003: The House Appropriations Committee passes a significantly modified version of the bill that the subcommittee passed. Changes to the bill include the increase of \$320 million in Amtrak funding to bring the FY '04 funding level up to \$900 million. Rep. James Walsh (R-PA) offers an amendment to increase Amtrak's funding to \$1.4 billion, with the tax cut as an offset, which passes by a voice vote.

May 2003: The Senate Appropriations Committee is expected to mark up its version of the Transportation-Treasury bill in early September. The House is expected to take up the Transportation-Treasury bill passed by the House Transportation Committee in early September.

Amtrak Reauthorization Timeline

2003

January 2003: Senator Hollings (D-SC) introduces the Passenger Rail Defense Act. This bill would provide \$1 billion annually for Amtrak, security for high-speed rail, and infrastructure rail improvement. The bill includes a \$35 billion authorization to provide loans and loan guarantees.

February 2003: Representatives Young (R-AK), Oberstar (D-MN), Brown (D-FL), and Quinn (R-NY) intro-

duce the Amtrak Reauthorization Act of 2003. This act would authorize an appropriation to Amtrak of \$2 billion yearly for 2004, 2005, and 2006.

The same representatives introduce the Railroad Infrastructure Development and Expansion Act for the 21st Century (RIDE-21). This bill would authorize states to issue \$12 billion in federally tax-exempt bonds and \$12 billion in federal tax credit bonds for infrastructure improvements for high-speed passenger rail infrastructure. In addition, this legislation expands the Railroad Rehabilitation and Infrastructure Financing (RRIF) loan program by increasing funding authority from \$3.5 billion to \$35 billion.

June 25, 2003: The Amtrak Reauthorization Act of 2003 and RIDE-21 are approved by the House Transportation and Infrastructure Committee.

June 26, 2003: Terms of Amtrak's Chairman of the Board John Robert Smith and Vice-Chairman Michael Dukakis expire. No replacements have been nominated by the President.

June 26, 2003: The Surface Transportation Safety Reauthorization Act of 2003 is approved by the Senate Commerce Committee. This Act represents the Commerce Committee's portion of the TEA-21 reauthorization legislation. An amendment offered by Senator Hutchison (R-TX) was accepted that would authorize an appropriation of \$2 billion yearly for Amtrak for six years and create a Rail Infrastructure Financing Corporation (RIFCO) as a placeholder for more detailed language to be added in the future. In effect, this amendment creates a rail title in the surface transportation bill.

July 27, 2003: The Passenger Rail Investment Reform Act of 2003 is released by the Bush administration. This bill would break up Amtrak into three separate entities, including an operating company, infrastructure company, and Northeast Corridor compact. No funding levels are identified to implement this legislation. All rail funding would continue to be available only through the appropriations process.

July 30, 2003: Senator Hutchison (R-TX) introduces the American Rail Equity Act (AREA). This bill is cosponsored by Senators Burns (R-MT), Lott (R-MS), and Snowe (R-ME) and would provide \$2 billion a year for Amtrak over the next six years, establish a rail office at the Department of Transportation, and create a non-profit organization called the Rail Infrastructure Finance Corporation (RIFCO). RIFCO would be able to underwrite \$48 billion in federal tax credit bonds to pay for rail infrastructure improvements.

Next Steps: The TEA-21 reauthorization process may continue in both the House and Senate in September. The House Transportation and Infrastructure Committee intends to mark up its version of the surface transportation bill in September. The Senate Environment and Public Works Committee may mark up its version as well. Funding issues have not been worked out and it is unclear whether further progress can be made on the bill this fall. The rail title will be addressed on the Senate floor once the overall surface transportation bill progresses to that point.

Senators Hollings (D-SC), Carper (D-DE), and Lautenberg (D-NJ) are working on Amtrak reauthorization legislation that they expect to introduce in September.

House Transportation and Infrastructure chairman Don Young (R-AK) is expected to seek floor time for his Amtrak reauthorization legislation and RIDE-21 in September or October.

Mitch Warren contributed this timeline.

Power Outage Outrage

continued from page 2

travelers began to arrive at stations hoping to resume their travel.

Signal problems on the Hudson Line continued to plague *Empire* service, as trains experienced significant delays. While access to Sunnyside Yard had improved slowly, intermittent telephone outages made critical communication difficult.

While no trains were expected to run between New York, New Haven, and Boston on Friday, the northbound and southbound *Federal* surprised the skeptics, as they were the first trains to travel through the previously-affected region late Friday night.

By Saturday morning, a handful of service adjustments were made on the Northeast Corridor as Amtrak endeavored to reposition its manpower and equipment. However, Michigan service continued to grapple with significant delays on Saturday, as that region continued to suffer from the outage.

On Sunday, August 17, Amtrak operated on a normal weekend schedule, and employees involved with this recovery effort got some well-deserved rest.

Thanks to the talent and hard work of Amtrak employees on trains and at facilities throughout the system, the welfare of passengers traveling during this crisis was safeguarded.

Bruce Van Sant contributed to this story.

July Ridership Sets Records

continued from page 1

grew 7 percent and revenues increased 2.5 percent over last July.

Simplification of Amtrak's pricing structure and a new marketing focus is expected to keep this momentum going. Starting this fall, Amtrak will set the share of seats at each price point and sell from lowest to highest as they become sold out. The sooner passengers book their travel plans, the less expensive their fares will be.

This fall, you won't see television advertising promoting seasonal discounts. Amtrak's targeted advertising, most of it in print media, will promote reasonable fares for city-pairs in the top 21 markets. Radio advertising in the top six long-distance markets will also publicize the benefits of rail travel to favorite destinations from those cities. In addition, the campaign will encourage customers to book their travel on Amtrak.com for an additional five-percent discount.

"We've done the research and minimized the guesswork for the customer," said Barbara J. Richardson, vice president of Marketing and Sales. "We're offering reasonable fares to locations that are relevant to the customer, making travel on Amtrak the most obvious travel option."

Chicago to Detroit Track Improvements Completed

On July 23, 2003 Amtrak Engineering employees led by Division Engineer **Dave Klouda** and Deputy Division Engineer **Robert Olson** completed the upgrade of two miles of track at the Three Oaks siding, 16 miles west of Niles, MI. This \$1.7 million project, funded by the Michigan Department of Transportation, improves ride quality and reduces delays by allowing trains to increase travel speeds from 30 to 45 miles per hour on a key segment of Amtrak's Chicago to Detroit corridor, which serves eight Amtrak and two Norfolk Southern trains a day.

When two trains travel in opposite directions on the same track, one train is diverted via a turnout to another track, allowing the other train to pass. Assistant Division Engineer **Rodney Pena** and his crew completed the installation of new turnouts by changing the design of the siding, increasing the weight of the rail, and installing new switch machines with electronic circuit controllers.

Track Supervisor **Gary Covell** oversaw the installation of new

continuous welded rail during the summer of 2001. To accomplish this, signal and track employees removed 270 sections of the old jointed rail and welded together 16 quarter-mile sections of new rail, forming two miles of continuous track.

As part of this upgrade, control of the switches and signals was transferred to a new computer-based system, known as a Vital Harmon Logic Controller (VHLC). Design and procurement of this micro-processor continued throughout 2002. Previously, dispatchers controlled this area using an electric system that utilized technology dating back to the 1970s. Signal Supervisor **Thomas Drake** directed the final upgrade by replacing hundreds of old relays and signal mechanisms.

"The successful completion of this project demonstrates how well Amtrak and the state of Michigan worked together to improve rail service and provide a true benefit to our passengers," noted Klouda. Construction, which began in 2001, was completed two months ahead of schedule and within budget.

Three Oaks project Engineering employees: Front row, L to R: Signal Maintainer **Gary Hanlin**, Electronic Technician **Fred Hogue** and Radio Maintainer **Frank Britton**. Back row, L to R: Signal Maintainers **Mike Garvey**, **Jim Chaney**, **Dwaine Keeton**, **Gary Tilley**, Signal Foreman **Kevin Miller**, Equipment Operator **Ron Carpenter**, Electronic Technician **Paul Elrod** and American Railway and Airway Supervisors Association (ARASA) Communications and Signals Supervisor **Thomas Drake**.

Signal Maintainer **Jim Chaney** completes the installation of a new switch while track employees distribute ballast and install new ties at Three Oaks.

Mason Hall Receives Excellence in Diversity Award

Gerri Mason Hall, Amtrak's vice president of Business Diversity, was recognized by *Savoy Professional* magazine for her contributions to the corporate diversity business community, in particular for promoting diversity through Amtrak's supplier diversity program.

At *Savoy Professional's* Excellence in Diversity awards ceremony in Detroit, MI, last month, Mason Hall accepted the 2003 Chairman's Award from Robert Ingram, associate publisher of *Savoy Professional* magazine.

Amtrak's supplier diversity program, established in 1971, has been a vehicle for Amtrak to forge business relationships with

Gerri Mason Hall, vice president Business Diversity, is awarded the Savoy Professional Excellence in Diversity Award.

minority and women-owned businesses nationwide. Since the program's inception, Amtrak has consistently met its supplier diversity objectives and exceeded its goal of awarding at least 15 percent of its procurement volume to minority- and women-owned businesses for 15 consecutive years.

Rensselaer Maintenance Facility Passes EPA Audit for Third Straight Year

Employees at the Rensselaer Maintenance Facility take pride in their working environment — a trait made obvious by their recent accomplishment. The facility has joined ranks with Sunnyside Yard in the recent completion of its annual Environmental Department audit in June. The Rensselaer facility has also gone three years without a potential U.S. Environmental Protection Agency (EPA) violation finding as a result of an audit.

As part of the Amtrak Consent Decree with the EPA, railroad operational facilities are subject to periodic internal audits for environmental compliance. These inspections are scheduled based on the size of the facility, with major facilities scheduled yearly.

Larry Lohman, superintendent of the Rensselaer Maintenance

Facility, credits his team with providing the right guidance and applying good management skills to accomplish this goal.

"Without the dedication and determination of these employees to do the right thing when it comes to environmental issues, we could not have achieved our goal," said **Lohman**. "**Mitch Hebert** and **Jim Khachadourian** are both instrumental in providing employees with the information they need and have monitored our regulatory compliance, addressing needs before they become problems." **Harry Seubert**, field environmental specialist for the New York Division works with Hebert, Khachadourian, and facility personnel to monitor compliance with environmental regulations and make sure environmental controls are in place and operating.

P R O M O T I O N S I N M O T I O N

Station Agents Team Up to Increase Amtrak Guest Rewards Enrollments

Amtrak's Guest Rewards "Ask Me How" program rewards front-line employees at the top 30 revenue-generating stations who boost Amtrak Guest Rewards enrollments by 20 percent between Aug. 18 and Nov. 18, 2003. This incentive program is open to front-line ticket agents, station information agents, and First class lounge representatives at the stations listed in the box below.

Working as a team, employees can reach the 20 percent goal by enrolling 700 new members a week, or if each agent enrolls two new members per week. When the goal is met, these employees will receive a thank-you gift.

In early August, a kick-off breakfast was held at the top five stations — Chicago, Washington, Boston, Philadelphia, and New York. **Gail Reisman**, senior

director of Marketing, **Ron Levine**, manager, Customer Relations, and Loyalty Marketing managers, **Valerie Lear** and **Daniel Guerzon** attended the events to answer questions, distribute information generate employee enthusiasm and participation. On average, 15,000 members enroll in the Amtrak Guest Rewards program every month.

College-bound Students Save 50 Percent on Amtrak

Amtrak is making college visits a little easier for high school students across the country with a Campus Visit Discount Coupon. The coupon provides a 50-percent discount on the lowest rail fare to students and up to two parents or guardians when visiting prospective colleges.

Students can obtain the discount by logging on to www.campusvisit.com/amtrak. The coupon must be signed by the students' high school counselor

and presented to the Amtrak ticket agent or travel agent upon ticket purchase. Amtrak's Campus Visit Discount Coupon is valid for purchase through Dec. 8, 2003 and travel through Dec. 15, 2003.

Rail 2 Rail Completes Successful First Year

In its first year, Amtrak and *Metrolink's* Rail 2 Rail program has served more than 225,000 passengers in Southern California. To celebrate this milestone, Amtrak is offering all *Metrolink* monthly pass holders free weekend travel on Amtrak *Pacific Surfliner* train or Amtrak Thruway Motorcoach service traveling to destinations north of Los Angeles Union Station.

The Rail 2 Rail program allows *Metrolink* monthly pass holders to ride any Amtrak *Pacific Surfliner* train or Amtrak bus within the trip limits of their *Metrolink* pass at no additional charge. In addition, Amtrak ticket holders can ride *Metrolink* at no charge, giving them access to more than double the number of trains within the limits of their ticket. The anniversary promotion begins Saturday, Sept. 6, and runs through Sunday, Nov. 16.

"Rail 2 Rail was created to offer Southern California's commuters broader travel options," said **Brian Hart**, Sales and Marketing associate in Los Angeles. "The increased connectivity and joint ticket acceptance between the two

transportation providers has proven to be a hit among *Metrolink* and Amtrak passengers, and has brought in many customers new to rail."

Sun Belt Athletic Directors Experience Travel On Board the Crescent

As part of Amtrak's partnership with the Sun Belt Conference, thirteen athletic directors and staff conducted their summer meetings while traveling on board the *Crescent* from New Orleans, LA, to Tuscaloosa, AL. The trip was designed to promote future team travel to conference games and to give conference decision-makers a first-hand look at train travel to sporting events for teams as well as alumni.

The Sun Belt Conference, one of the nation's sports leagues, represents teams from universities across the country, such as the University of New Orleans and University of North Texas. Amtrak's partnership with the Sun Belt Conference includes travel for conference members in exchange for television, print, and radio exposure.

"Our partnership with the Sun Belt Conference is an important contribution to our marketing efforts this year," said Marketing Manager **Jerome Trahan**. "Partnerships like this help bring new passengers who previously might not have considered train travel."

Service Update

Nappanee Station Renovation Complete

Amtrak Director of Government Affairs **Ray Lang** (foreground, second from right); Nappanee Mayor Larry Thompson; and Todd Ziegler, regional director of the Historic Landmarks Foundation were among the guest speakers at a July 11 dedication ceremony to celebrate the restoration of the historic Nappanee, IN, Amtrak station, which serves over 2,500 passengers a year on the Three Rivers route.

The original depot, owned by B & O Railroad, was built in 1908. In 1995, the city of Nappanee received two grants; a Build Indiana Fund Grant for \$50,000 to purchase the depot and a Transportation Enhancement Activity Grant for \$252,920 for the renovation. The depot was purchased by the City of Nappanee in August 2000 and restoration was completed in June 2003.

Amtrak Infrastructure Liability Risks

continued from page 3

Amtrak is currently working on some of them as well.

Dock Interlocking

Dock Interlocking tower is located immediately east of Newark Penn Station. It is one of the oldest interlockings on the Northeast Corridor and is manned around the clock, seven days per week. Dock was built in 1929 and many revisions were made in the 1950s and 1960s. When these revisions were made, TC Green wiring was used and now Dock also has similar problems as encountered at County. The wiring at Dock has not deteriorated quite as badly as County but it is still posing a reliability

problem that will only get worse with time. The heat and humidity of this summer has accelerated the decomposition of the wiring at Dock, and we are now replacing it one wire at a time, under traffic. Dock is scheduled for a total replacement in our five-year plan, and will be completed in 2008. The replacement equipment will eliminate the tower and allow the interlocking to be remote controlled

from the dispatching center in New York. With new equipment, Dock will be a reliable installation. There are two additional manned towers between Philadelphia and New York. Union and North Philadelphia towers are much the same as Dock. They also have TC Green wiring and outdated equipment. They are also scheduled to be replaced in the five-year plan, which will lead to better reliability and a reduction of operating costs by eliminating the need for around the clock operators and allow us to remote control them from our dispatching centers.

Electric Traction

Hell Gate Catenary Failure

On July 16, 2003, a hardware failure on a suspended (floating) beam catenary system on the Hell Gate Line caused an interruption of service between Boston and New York of more than 12 hours. Similar failures are possible at any time and cannot be avoided without rebuilding or replacing the system, since many points of failure are not visible without completely disassembling the catenary hardware.

The five-year capital investment plan includes \$48M for the replacement of the suspended (floating) beam catenary on the Hell Gate Line, which has been in service since the early 1930s, as well as funding for rehabilitating over 450 miles of fixed tension catenary between New York and Washington. Currently, Amtrak's 70+ years high voltage network provides over 200 million watts of power to Amtrak, MARC, SEPTA, and NJ Transit trains along the Northeast Corridor.

Even after the catenary failure was

This suspended (floating) catenary on the Hell Gate Line has been in service since the early 1930s.

repaired, service remained precarious since two of the four transformers that supply catenary power to the Hell Gate Line were damaged. Failure of any one of the remaining transformers that power the catenary would have interrupted service to Boston for days.

Catenary Feeder Cables through East River Tunnels

During the recent commercial power blackout of 2003, one of three 12,000-volt cables feeding power from Sunnyside Yard in Queens to Manhattan's Penn Station complex failed. The three cables were part of the original electrification system installed by the Pennsylvania Railroad in 1935. Another of these cables has been out of service for several years. Amtrak is now relying on a single cable, with no backup system, to feed traction power to the busy Manhattan Terminal. These cables need to be replaced to insure reliable train service as well as the safety and comfort of our passengers traveling through the East River tunnels to and from Manhattan. This cable replacement is part of the five-year program and must be coordinated with the Tunnel Fire and Life Safety Program because the conduit and cable system is in the bench wall of the East River Tunnels.

Oil Filled Transmission Lines through B&P Tunnels – Baltimore

Amtrak operates a 138,000-volt transmission system between New

York and Washington that feeds power to substations along the route. The transmission system is primarily aerial, but the tunnels through the Baltimore area require an underground high voltage cable system. The high pressure oil filled cables through the B&P Tunnels just south of Baltimore's Penn Station and the high pressure oil filled cables through the Union Tunnels just north of the station were installed in 1935 and have been subject to leaks and are on the verge of failure. Amtrak has made costly repairs to the system and in FY '02 began an emergency project to replace the high pressure oil filled cable system with a modern high voltage cable that is not subject to the costly environmental clean up when a break in the piping system occurs. When a failure occurs in one of cables, we isolate the system from the major sources of the power in the Philadelphia area. Replacement of the antiquated cable with modern state-of-the-art cable will cost over \$5M. This will eliminate these problems and assure reliability, and is part of our five-year program.

Electrical distribution and transmissions systems are designed with redundancy of supply sources and distribution lines. Major segments of system redundancy for Amtrak's traction power system are in a deteriorated state. If a segment fails, a catastrophic interruption similar to which occurred in the recent major blackout of 2003 may result on Amtrak's Northeast Corridor.

A 70-year-old electric power feeder cable shows deterioration.

Nearly 90 Years of Employee Service Recognized

Working aboard the *Silver Star* on their last trip before retirement, Service Attendant **Warren Exson**, and Train Attendant **Alonzo Blake**, are greeted by Amtrak President David Gunn during the train's layover in Washington Union Station on July 30.

Hired in June 1973, Exson, who worked out of the Jacksonville crew base, was known for his flawless paperwork and his great attendance and safety records. Blake started his career at Amtrak in March 1974, and worked out of the Miami crew base. He worked the sleeping cars, receiving many commendation letters over the years for his excellent service to

passengers. Blake was also known for his excellent attendance and safety records.

Also at Washington Union Station, Amtrak President Gunn showed his appreciation to several employees who were being honored in June at a celebration attended by approximately 100 of their co-workers. Being recognized for their dedication and years of service were: **Stanley M. Foscue**, supervisor, Customer Service — hired April 1993; **Lawrence P. Moore**, foreman, Mail Baggage and Express — hired September 1984; and **Raymond Garnett**, lead station cleaner — hired September 1984.

Service Attendant Warren Exson (left) makes a point while talking with Amtrak President Gunn (right), who join both Exson and Train Attendant Alonzo Blake to congratulate them while on their last trip before retirement.

Passenger Wayne Bender on the Road Again

While waiting to complete another leg of his around-the-country Amtrak trip, Chicago area resident Wayne Bender chats with Amtrak President David Gunn in the ClubAcela lounge at Union Station in Washington, D.C., last month. A rail fan, Bender worked the Springfield to New Haven run on the New Haven Railroad for 21 years. The 102-year-old, who travels on his own, plans to take more train trips in the future.

Southwest Chief Chosen to be Amtrak's 2004 Calendar Pin-up

Amtrak's *Southwest Chief* will adorn the walls of train fans everywhere, thanks to the photography skills of Santa Fe resident Billy Turney.

Among the many entries submitted by individuals all over the country to compete in Amtrak's "Picture Our Train" 2004 Wall Calendar Photo Contest was Billy Turney's photograph of the eastbound train #4 as it passes through Apache Canyon in New Mexico. Turney's photograph won first prize, which means that his photo will be featured on the 2004 wall calendar with photo credit and he will receive a \$250 gift certificate to the Amtrak store. The second prize, a \$100 gift certificate to the Amtrak store, was awarded to Alex Mayes of Fairfax, VA, for his shot of the *California Zephyr* as it passes Boulder Creek near Rollinsville, CO.

Turney's interest in trains began when, as a young boy, he and his father would visit Lamy, NM, to watch the *Super Chief* pass by. A civil engineer, his father taught

Turney about how train engines and railroad bridges work.

Having taken photographs since he was small, Turney studied photography in college. Trains were the first subjects on which he focused his camera. "A museum showing of original photos of the first trains in Colorado in the 1880s by the famous William Henry Jackson inspired me at a young age," Turney told *Amtrak Ink*.

When Turney read about the contest on www.amtrak.com, he immediately thought of photographing the *Southwest Chief* in Apache Canyon. "Due to the remoteness of the canyon and that the narrow canyon is typically in a combination of bright sunlight and deep shade, I knew it would be a challenge," noted Turney.

Amtrak appreciates all of the interest in and submissions to the "Picture Our Train" contest. The 2004 Amtrak wall calendar featuring this photograph will become available on www.amtrak.com/store in October for \$7 each.

FRONTLINE FOCUS

Dear Amtrak,

We recently had the opportunity to travel up to Washington D.C., on train #98 and returning on train #91. We left Winter Park, FL, on June 6 and came home on June 9.

We were met at the sleeping car by **Fred Gissentanner**. Fred had a great big smile on his face as he greeted each passenger and he assisted us on board. Stephen [my husband] is handicapped and has an electric oxygen machine and he also uses an electric wheelchair. We could not transport his own wheelchair so we had to depend on the help of others for assistance.

Fred had all our information and knew exactly what Stephen's needs were. When we entered Bedroom H, Fred had magazines and two bottles of cold water sitting on the table. After the rest of the passen-

gers were boarded, Fred came into our room to ask if we wanted anything at all, he would be more than happy to get it for us. He offered to bring our dinner and breakfast to us. We declined the invitation for him to bring us our dinner because the diner was the next car. When we returned to the bedroom after dinner, Fred had the bed down and it was so inviting.

In the morning, Fred brought us coffee and orange juice and we did ask him to bring our breakfast. We just cannot say enough about Fred. We know that if he treated us with his first class service that his other passengers were treated exactly in the same manner. This was probably our last train trip for quite a while, but with our memories it will last. Thank you for having such a quality crew base.

New Advertising Strategy Launched to Promote Low Fares, Grow Revenue

*Ridership Continues
Growth Despite Blackout*

Promoting Amtrak's new simplified, low fares, the Marketing and Sales department introduced a new advertising campaign last month in 70 markets across the country.

The campaign, which is designed to continue the past fiscal year's ridership and revenue momentum, also represents Amtrak's new back-to-basics approach to marketing and pricing.

Over the last few months, Amtrak has taken several steps to simplify its fares. First, fares have been set very competitively, eliminating the need for national, across-the-board

seasonal discounts. Second, revenue management has also changed by filling inventory from the lower levels and increasing prices only as demand rises, so that the earlier customers book, the less expensive their ticket will likely be.

Besides the low fares, to raise awareness about Amtrak's destinations, the new advertising will feature specific city-pair fares. The idea is to give potential passengers the information that they need to make a travel decision. Also, as part of the new marketing approach, for the first time in 20 years, two pages of

sample fares will be published in the Oct. 27 timetable.

In short, Amtrak wants to take the work and guessing out of travel planning for its passengers.

The new campaign, created by Arnold Worldwide, relies primarily on newspaper, radio, and Internet ads. This approach, especially the news-

continued on page 11

27 Cars Returned to Service in FY '03 21 Slated to be Returned in FY '04

Thanks to the hard work and dedication of mechanics at Bear Car Shops and Beech Grove Maintenance Facility, 27 cars were returned to service in FY '03. Of these 27 cars, 22 had been involved in accidents and the remaining five were non-wreck cars, which had been in storage for up to two years at the Bear Car Shops.

During FY '03, Beech Grove mechanics achieved their goal of returning 14 wrecked cars to revenue service.

The last three cars completed in FY '03 from Beech Grove are Superliner I Dining car 38037, Superliner II Dining car 38060 (top) and Superliner II Lounge car 33034, wrecked in the March 2001 California Zephyr derailment in Nodaway, IA.

In FY '03, Bear mechanics returned to service 13 previously wrecked or damaged cars. Of the 13, they repaired eight wrecked Amfleet cars, exceeding their FY '03 goal of seven. The final car released from Bear in September was Cab car 9641 (bottom). The Cab car sustained damage to the right front corner during a March 2003 yard move in Boston.

The heavy-duty maintenance shops are projected to return 21 cars to revenue service in FY '04. Bear Car Shops will repair and release one non-wreck and nine wreck cars, and Beech Grove is scheduled to return 11 cars to service.

Amtrak Closes FY '03 With an Eye on FY '04

Last fiscal year, Amtrak took measures to reverse the effects of years of deferred maintenance, and begin the road to a state of good repair. That move was none too soon.

Some of the equipment in the Amtrak fleet had not seen regular overhauls in many years, and more than 100 wrecked cars were just sitting in a graveyard of useless clutter.

Adding to the clutter and taking up space was a stockpile of old, decrepit equipment that was of no use to the company, and some

pieces of equipment were good for nothing but scrap. Contributing to the FY '03 bottom line, the sale of these items came to more than \$4 million. Additionally, the sale of old wood ties added another half million to the budget.

The condition of the rail bed contributed to slow orders, resulting in reduced on-time performance and rides that were less than smooth and comfortable for Amtrak passengers. Moveable bridges were in danger of failure, and signals and the electric traction system have been long in need of repair and replacement.

Mechanical Department

The Mechanical department had a productive FY '03. With a goal of getting wrecked and damaged cars back into revenue service as soon as possible, the Bear and Beech Grove mechanical shops returned to service a total of 27 cars that were wrecked or damaged. Additionally, overhauls and upgrades were performed to cars and locomotives that increased the percentage of available cars as well as the reliability of those cars.

One of the reasons for not completing every goal was associated with the consolidation of

suppliers — and, in some cases, the lack thereof. However, this is the closest Amtrak has come to sticking to its goals and its budget and meeting both in over a decade. It is because of the discipline exercised in keeping within budget and maintaining focus that the significant accomplishments mentioned below were realized.

Bear Car Shops

This facility returned eight wrecked Amfleet cars to service, surpassing its goal of seven, and bringing the total to 13 wrecked or damaged cars returned to service by the end

continued on page 5

TRAIN OF THOUGHT

I want to share a few thoughts as we look back at FY '03 and start a new fiscal year.

While some of our FY '03 accomplishments may not be all that meaningful to those who don't know anything about Amtrak, I am really proud of the things we did last fiscal year, and you should be too. We finished FY '03 pretty close to budget, keeping expenses down. In a tough travel industry climate, not to mention a blizzard, blackout, and hurricane, we set a ridership record. While at times the funding picture was uncertain, we managed to avert any financial crisis. Finally — and this is very important — FY '03 was the first year since FY '95 that Amtrak did not borrow any money or get a supplemental appropriation at year-end to make it through the year. That fact speaks volumes.

In the past year, we've literally cleaned up our act — whether it's by keeping a clean shop, or practicing transparent and clear accounting principles. We've laid nearly 40 miles of concrete ties, undercut over 20 track miles, and returned to service over 20 wrecked and damaged cars that were otherwise sitting around the backshops. And we've prepared the big shops for a very aggressive overhaul program. (You can read more about the details of our accomplishments in this issue of *Ink*.)

As if to remind us of how urgently-needed these repairs are, we had

more than our share of service delays and disruptions because of failing equipment and infrastructure. This will continue until we make real progress in restoring our plant and equipment to a state of good repair.

As you know, October kicks off the first year of our five-year capital plan. As I write this, Congress has not yet voted on our federal funding request. But we can't wait, and I won't. We need to keep building and focusing on bringing the railroad to a state of good repair.

You've heard the different funding amounts for FY '04 — we've requested \$1.8 billion, the House of Representatives voted to fund us at \$900 million, and the Senate Appropriations Committee approved \$1.346 billion in funding, with deferment of the DOT loan. While the \$1.346 is encouraging, it's not enough. The \$900 million figure is a non-starter.

As we continue to educate members of Congress about our needs, you can do your part by staying focused on giving 110 percent to your job. We must remain committed to carrying out the public service for which we're responsible and we must continue to work together as one. We have only just begun to rebuild and we have a great deal of work ahead of us.

On another note, as you know, there isn't a train going anywhere that I wouldn't want to be on. So I ride

David L. Gunn

them often, and I get to talk to a lot of employees. It's a chance for me to hear the good, the bad, and the ugly. Our jobs can be stressful, especially for front-line employees who deal directly with the public. I want our OBS and station employees to know that although it is your job to provide passengers with personalized and quality service, I recognize that it can be hard to keep a smile on your face when we are short on equipment and face other problems.

But I'm counting on you to step up to the plate and maintain a high-level of professionalism and service when things don't go as planned. Please continue to keep our passengers informed about delays and other service disruptions, and let them know when you don't have all the information. They would rather know that than nothing at all. We're all consumers — when things go wrong, we expect extra attention.

I appreciate the many letters I get from passengers who tell me that

continued on page 12

Oakland Maintenance Facility One-third Complete

Progress is being made at the construction site of the new Oakland Maintenance Facility, located 1,500 feet from the current location Amtrak shares with Union Pacific. The new facility will replace the current 1916-era facility, and will enable Amtrak to better maintain, repair, service and inspect trains.

"The entire project is more than a third complete," said **Harry Schneider**, project manager, Amtrak Engineering. "It is exciting seeing walls go up and real progress being made," he said. Facility walls are being formed and foundations for the Maintenance Building and the Service and Inspection area have been poured. The drop table is being

Correction

The September 2003 issue of *Amtrak Ink* included a table listing materials ordered for FY '04 capital projects. One of those items was incorrectly identified as transformer re-insulations for AEM-7 diesel car overhaul. It should have read, transformer re-insulations for AEM-7 Direct Current overhaul. *Amtrak Ink* regrets the error.

Fall/Winter Timetable Changes Direction

At a glance, employees and passengers may not recognize the changes in Amtrak's Fall 2003/Winter 2004 System Timetable, arriving at Amtrak stations across the country in mid-October. But one look inside reveals big changes from previous timetables.

Using information gathered from employees and focus groups held in May in Philadelphia, New York, Chicago, and Oakland, Amtrak's Marketing Operations Support department created one of the most comprehensive timetables ever published.

Effective Oct. 27, 2003, the new timetable reflects the company's back-to-basics approach to advertising and promoting its services and fares. This strategy seeks to

provide customers all the information they need to easily book travel on Amtrak.

With a welcome aboard message from Amtrak President David Gunn, the timetable has been redesigned for ease-of-use, providing customers a lot more information than previous timetables, including sample fares, clearly outlined connecting information, and descriptions of on-board services. Thirty-three train- or corridor-specific wallet cards and panels are also available at stations.

One of the most obvious changes is the consolidation of the National and Northeast Corridor timetables. With the new 128-page timetable, passengers will no longer have to refer to two different books when

their travels involve connecting Northeast Corridor service to a long-distance or other train and Thruway services outside the Northeast.

It's Only Fare

Three pages of sample fares for city pairs in top markets help take the guessing out of travel. For example, passengers will quickly find the cost to travel between New York and Orlando, Chicago and Kansas City, or Philadelphia and Washington, D.C. Also included in the fare section are descriptions of Amtrak's membership discount programs, such as Student Advantage, AAA, Veterans Advantage, and NARP, as well as the everyday discounts for seniors, children and groups.

Easy Trip Planning — Start to Finish

Another notable change is that the train schedules are color-coded by geographic region — Northeast, East, Midwest, West and West Coast. Each of these sections offers region- and train-specific information. Questions like "What types of services are offered in different parts of the country?" or "Can I get meals onboard the train and what is the cost?" are answered within each of the sections. Photographs describe the type of equipment used and accommodations offered and a regional map provides a snapshot of trains operating in each region. In addition, passengers are informed about which train operates over which host railroad and about connecting Thruway motor-coach services. Some commuter and transit information is also provided, along with descriptions of region-specific products like the California Rail Pass.

The "Chicago Service at a Glance" chart in the Midwest section quickly identifies connecting times for trains arriving and departing Chicago.

In the East section, the *Auto Train* has more prominent placement in the timetable than in previous years. Recognized as one of Amtrak's premier services, additional space is allocated to highlight the uniqueness of this service — when to arrive at the station, vehicle size requirements, and special amenities offered onboard, including complimentary dinner and continental breakfast.

The cover of Amtrak's Fall/Winter System Timetable features the California Zephyr traveling near Granby, CO, and highlights Amtrak's Web site, www.amtrak.com.

The timetable includes a new section on how to book your trip on Amtrak, which offers information about making reservations, through www.amtrak.com and "Julie," Amtrak's automated agent, as well as ticketing options such as Quik-Trak and advance payment.

New Fall/Winter Timetable Highlights

Added Acela Express/Metroliner Service

New frequencies added to the Washington, D.C., to New York route increases weekday service from 12 to 13 roundtrips. With the addition of an 8 a.m. departure from Washington, and a 6 a.m. departure from New York, passengers can now depend on hourly weekday morning departures.

Passengers traveling between New York and Washington also have a wider choice of service during afternoon peak travel times. With the addition of the daily 3:30 p.m. *Metroliner* and the 4 p.m. *Acela Express*, premium service trains depart from New York every half-hour between 3 p.m. and 5 p.m. Additionally, a new 6:45 p.m. *Acela Express* departure from Boston to New York offers commuters a late evening travel option. Peak

travel days are now effective Monday through Friday to provide a more consistent and easy-to-understand schedule.

Empire Service Restores Sunday Afternoon Train

Sunday mid-afternoon *Empire Service* returns with the addition of a 3 p.m. departure from Niagara Falls, arriving in New York at 11:45 p.m.

Cardinal Service Extends to New York

The *Cardinal* tri-weekly service, previously operating between Chicago and Washington, D.C., extends to New York, offering travelers new stops in Baltimore, Wilmington, Philadelphia, Trenton, Newark, and New York. Additionally, the *Cardinal* operates on a new schedule departing Chicago 45 minutes earlier, at 7:30 p.m.

While the system map was previously often overlooked at the back of the timetable, this timetable features the four-color system map behind the front cover. The map gives customers a sense of Amtrak's system-wide services and augments the station location directory by including a quick reference for finding the page for a particular train route.

Sections dedicated to how to use the timetable and purchase tickets give clear instructions about Amtrak's efficient sales channels, including www.amtrak.com, Julie (Amtrak's voice response agent) and Amtrak Quik-Trak Ticketing Express service.

Amtrak terminology can be intimidating to first-time riders. What is a Quiet Car? What is a Superliner? Who is Julie? Answers to the most commonly asked questions are listed in a glossary. A section on tips for traveling on Amtrak helps passengers enhance their travel experience by offering suggestions about safely walking through the train, traveling with children, and dining choices on board.

The innovative design and informative content was developed by Marketing Operations Support Manager **Linda Park-Verdi** and Marketing Operations Support Group Manager **Joe Wenclawiak**.

"We listened to our passengers and our internal customers, and incorporated the most useful and up-to-date information. The redesigned timetable offers our customers accurate information that is easy to access and understand. Communication and teamwork are critical to ensuring a timely and accurate timetable product. We had a great team in this production process," said Park-Verdi.

Amtrak Merchandise Sold on Select Trains

In addition to Amtrak's wide variety of food service offered by lead service attendants aboard the *Vermont*, *Capitol Limited* and *Southwest Chief*, these employees are now offering passengers a selection of popular merchandise this fall in a test of three products.

The company is closely monitoring the sales of the products — a black cotton baseball cap

featuring the Amtrak logo, a stainless steel Amtrak lapel pin, and a silvertone Amtrak luggage tag — and will determine whether to expand the offering to other trains or change the selections. At press time, the lapel pin (\$2.25) and luggage tag (\$7) were the

biggest sellers, while the baseball cap (\$9) was not far behind.

"We're very pleased with the initial results of the sales during this test," said Chief Marketing Officer **David Lim**. "The response from passen-

gers on all the services has been very positive. For many, buying the cap or the pin is a nice way to remember their time aboard an Amtrak train or as a present for family or friends."

Amtrak's Marketing and Sales department joined forces with the Service Delivery group to create the merchandise offering and sales test.

Three trains with diverse characteristics that serve different parts of the country were chosen so that the results of each train could be evaluated. On long-distance trains today, Amtrak offers packaged food goods, some personal items and playing

cards, but no Amtrak merchandise. New inventory controls established through supplier GateGourmet enabled the merchandising team to begin testing the products aboard the three trains in August. The pilot is expected to run through October.

New On-board Route Guides to Hit Long-distance Trains

Amtrak's popular long-distance route guides are being refreshed and reprinted. Amtrak's Marketing and Sales department is in the process of revising 15 long-distance route guides, with the first one stocked onboard the *California Zephyr* in June. The remaining 14 route guides will be available on board trains starting in mid-October through early 2004.

"Amtrak is the window to America. The journey is not just seeing the sights, but also learning about history and gaining insight into the towns and country that passengers travel through. Our regular passengers have come to rely on the guides to tell the story of their trip. The Marketing department wants to be sure that it is a tradition that they can rely on for a long time," said Barbara

Richardson, vice president of Marketing and Sales.

Last updated in the late 1990s, each guide includes a history of the route, information about train stops along the line, suggested

photo opportunities, and noteworthy sights. The new guides also highlight popular programs, such as Amtrak Guest Rewards, Amtrak America, and Amtrak Vacations. Customers will not only be able to read the guides on board, but also at www.amtrak.com.

Over 50,000 copies of each route guide will be printed and distributed

on board trains, and to select stations along each route. Look for the next three route guides for the *Southwest Chief*, *Coast Starlight*, and *Sunset Limited*, later this month.

Workers pour concrete into the new trainwasher walls at the Oakland Maintenance Facility.

Oakland Maintenance Facility One-third Complete

continued from page 2

formed and the train washer location is nearly two-thirds complete.

The new Amtrak facility will permit servicing and inspection of the entire trainset, including locomotives. Currently, locomotives are sent to the UP facility in Roseville or to Amtrak's Los Angeles facility for locomotive wheel truing and wheel changing.

When completed, the facility will provide maintenance and repairs for 17 locomotives, as well as continued maintenance on 78 California Cars that are stationed in Oakland.

"The facility's layout will provide improved daily turn-around service for the *California Zephyr*, *Capitols* and *San Joaquin* trains, because everything needed is within the facility. We no longer have to go

out on the main line to turn trains, or send equipment out for these repairs," said **Steve Greene**, mechanical superintendent, Oakland, CA.

Included in the design of the facility are features that will improve maintenance practices, enhance parts storage and control, and provide adequate storage tracks. "Because Amtrak will control its train movements within the Oakland property, crews will be able to perform their tasks with increased productivity," said Master Mechanic **Gerry Mescal**.

Last November, Amtrak and the state of California broke ground on the jointly funded \$65 million Oakland maintenance facility. The project is scheduled for completion in October 2004.

The chart below outlines some of the project highlights from August through September 2003:

- Completed South And North 5th Street Parking Paving, Striping And Fence.
- Grade Slab For Sewer Truck Building And Started Retaining Wall.
- Completed Drop Table Concrete Slab And Pile Caps And Installed Drop Table Pit Access Stairs.
- Completed Wheel Truing Pit Base Slab.
- Excavated Mechanical Building Area.
- Set Concrete Ties, Removed Existing Track And Set Rail At WYE.
- Install Soil Nail Wall For Retaining Wall.
- Completed Concrete And Retaining Wall For Fuel Tank Area.
- Completed Underground Work Between Fuel Tank And S&I Area.
- Completed Rinse Slab, Curb And Equipment Pad And Set Trench Drains.
- Completed Breaking Piles, Concrete Work, Electrical Mechanical And Plumbing Grid.
- Completed Base Slab For Exit Corridors And Split Rail Pit At S&I Building.

FY '03 in Review

continued from page 1

of the year. Bear mechanics also met their goal to have 10 Amfleet interiors upgraded.

In addition, 20 of the 21 Amfleet cars scheduled for overhaul were completed in the six-month cycle at the end of the year. Seventy-nine of 90 couplers and draft gear overhauls scheduled were performed and over four hundred and thirty of the 500 Amfleet cars scheduled for new exterior decals were done.

In addition to the planned work schedule, the Bear shops completed an unscheduled project that involved replacing interior cushions on over 110 Amfleet cars and tooled-up four AEM-7 brakes.

Beech Grove Locomotive and Component Shops

All 14 scheduled Superliner wreck repairs were completed and the cars returned to service, and two of the three Heritage Dining cars slated for overhaul were returned to service. In addition, mechanics completed overhauls on all 18 Heritage car air conditioners that were planned, and all 44 planned overhauls on GE diesel locomotives. On a six-month schedule, four Heritage Parlor cars were overhauled out of the five that were planned. The facility completed 235 of the 306 planned couplers and draft gear overhauls.

Like the Bear Car Shops, Beech Grove mechanical forces also completed an unscheduled project of replacing interior cushions on 50 double-decker Superliner cars.

Wilmington Locomotive Shop

The Wilmington facility completed all seven scheduled general overhauls on AEM-7 locomotives, and exceeded its goal of 158 Amfleet component set overhauls, with 162 completed.

The facility completed a number of unscheduled projects including, installation of Advanced Civil Speed Enforcement System ACSES train control systems (cab signals) on nine P-42 locomotives; storing of 22 P-40 locomotives; making yaw damper bracket and roof skirt modifications on 32 of the 40 *Acela* power cars that needed to be fixed; completing 21 yaw damper bracket and 12 roof skirt modifications on HHP-8 electric locomotives (including 6 MARC locomotives); and repairing three HHP-8 locomotive trucks.

Engineering

Working with a \$333 million capital program, the Engineering department accomplished a great

deal during FY '03. Building on what it accomplished this past fiscal year, a new program management system is being implemented in FY '04 that will enhance project management and program controls.

While the Engineering department has worked on a number of initiatives that are mentioned below, the divisions have also accomplished several notable engineering projects. The Central Division completed the upgrade of two miles of Amtrak-owned track at the Three Oaks siding near Niles, MI. Additionally, the New York Division, as part of a joint initiative

Locomotive 620 is the first of the old E-60s that were dismantled and sold for scrap.

with Long Island Rail Road and New Jersey Transit (NJT), completed the reconstruction of JO Interlocking at the east end of New York Penn Station – six months ahead of schedule and \$2 million under budget. The New York Division also assisted with NJT's Secaucus Transfer Station project in New Jersey, which was one of the most significant and complicated rail projects undertaken in the Northeast Corridor. Amtrak performed track, signal, catenary and electric traction work, for which the company was reimbursed by NJT.

Track

In FY '03, the Track department resurrected the Track Laying System (TLS). This system, which replaces old wood ties with new concrete ties, had not been operational for several years due to lack of funding. In addition, the Track department made significant progress in the procurement of long-lead-time materials and equipment in preparation for the significantly more extensive FY '04 Track Program.

FY '03 track program accomplishments include the following:

- Renewed 38 track miles with 100,000 concrete ties
- Replaced 9 track miles with continuous welded rail
- Undercut 24 track miles
- Installed 44,800 wood ties in 61 track miles
- Replaced 1,856 timbers at 11 interlockings
- Completed renewal of Menlo Interlocking and 3 turnouts on the NEC and partially reconfigured 3 interlockings

Structures

Amtrak owns over 1,200 bridges, with the average age of these structures approaching 100 years. The FY '03 Capital Structures Program included improvements to movable bridges, renewal of open-deck bridge ties, conversion of open-deck bridges to ballast deck, and improvements to bring undergrade bridges, retaining walls, culverts, facilities, and stations to a state of good repair.

Overall, improvements were made to 45 bridges, including conversion of 11 open-deck bridges to ballast deck, which eliminates the need for future bridge timber renewal, and provides for improved ride quality and increased speeds.

Amtrak's 13 movable bridges are among the busiest in the country in frequency of openings for marine vessels, with several bridges opening nearly 4,000 times per year. This opening frequency, together with the time-sensitive *Acela* service, makes reliability a critical issue for these bridges. The FY '03 program made electrical, mechanical, and

structural improvements to eight movable bridges.

Bridge ties on open-deck bridges require periodic renewal. The FY '03 program resulted in the renewal of 1,184 bridge ties on 20 undergrade bridges.

In FY '03, improvements were also made to retaining walls and culverts as well as the installation of 3,200 linear feet of right-of-way fencing.

Maintenance Facilities

Amtrak has facilities for maintenance of way, mechanical, and transportation functions at several locations, both on and off the Northeast Corridor (NEC). Minimal investment has been made in recent years to these facilities, which has contributed to the decline in the state of good repair. However, in FY '03, improvements to electrical apparatus were made to Washington Union Terminal and to the Rensselaer Maintenance Facility.

Communication & Signals (C&S)

The FY '03 program for C&S included interlocking renewals and upgrades, copper and fiber cable installation and replacement, Centralized Electrification Traffic Control (CETC) upgrades and enhancements, and continuation of the installation of an Advanced Civil Speed Enforcement System (ACSES).

The C&S department replaced the east end of North Philadelphia interlocking, the central instrument house at Holly Interlocking in Wilmington, DE, and installed Brayton Interlocking in Providence, RI. Design work was also progressed for the replacement of Lehigh and Dock Interlockings.

Copper cables necessary for the reliable and safe operation of Amtrak's signal and communications systems must be repaired or replaced when they have deteriorated to the point that they barely meet Federal Railroad Administration's requirements. Repairs and replacements to signal cables along 140 miles of the NEC were planned and completed. Copper communications cables, as well as emergency telephones, were installed in the Baltimore tunnels to enhance safety.

Fiber optic systems improve the reliability of communications and eliminate the need to lease circuits necessary to control interlockings and to access radio base stations. Fiber optic cable installations have begun on the Hell Gate

continued on page 9

Secaucus Transfer Station Opening Ushers New Era of Rail

After decades of planning and eight years of construction, the \$600 million Secaucus Transfer Station, dedicated by New Jersey Transit as the Frank R. Lautenberg Rail Station at Secaucus Junction, opened for weekend service on Sept. 6, 2003. The 50,625 square foot transfer station complex, which occupies a 28-acre site in the meadowlands four miles west of Manhattan, makes possible — for the first time ever — direct connections between Amtrak's Northeast Corridor and all rail lines serving northern New Jersey.

"The Secaucus Transfer Station project, constructed through a joint partnership between Amtrak and New Jersey Transit, unifies virtually the entire NJT rail network."

Walter Ernst,
general superintendent,
New York Division

Since the first survey stakes appeared in the ground along the High Line right-of-way, Amtrak employees have been witness to the construction of one of the most significant and complicated rail projects undertaken in the Northeast Corridor.

"Taken as a whole, the changes along the three-mile stretch just west of the North River Tunnels have been monumental," said **Walter Ernst**, general superintendent, New York Division. "The Secaucus Transfer Station project, constructed through a joint partnership between Amtrak and New Jersey Transit, unifies virtually the entire NJT rail network."

High-Speed Trains Pass Through Secaucus

Because the station was built in the middle of a two-track railroad, a traditional side-platform station would have clogged the Northeast Corridor, as passengers entering and exiting commuter trains would cause dwell times well beyond the hourly capacity of the railroad.

Originally, the primary goal of the station track plan was to enable NJT train stops without affecting Northeast Corridor through-trains. To achieve this, the station was built with four tracks that allow trains

stopping at Secaucus to do so on a track off the high-speed tracks (at least in the peak travel direction). But with overall train volumes along the NEC requiring a train to run every two minutes (and some not stopping at all at Secaucus), the operation will require some trains to "overtake" a stopping train while traveling at 90 miles per hour and then merge back in with other trains departing Secaucus — all within the space of three miles.

"Think of a fast-food 'drive-thru' lane with cars leaving the road, picking up their bag of food, and then rejoining traffic. In the meantime, many other cars have gone by without stopping. It's a little more complicated when your 'car' weighs 600 hundred tons, but the principle is the same," explained **Drew Galloway**, senior director, High Speed Corridors, Strategic Planning.

Aged Infrastructure

The tremendous volume of trains and commuters in both New York and New Jersey (the most densely-populated state in the Union with a greater density per square mile than that of Japan), forced the state of New Jersey to invest in a commuter rail solution to meet the interstate and intrastate demand. Complicated by an aged commuter rail system built in the 1800s, the rail network in New Jersey was largely dysfunctional and in a state of disrepair. The Secaucus Transfer Station was an obvious part of the solution, but it did not come quickly or easily.

Secaucus Transfer Station

On weekdays, over 400 eastbound and westbound Amtrak and New Jersey Transit passenger trains run in and out of New York on the upper-level Amtrak NEC track of the Secaucus Transfer Station, while 113 daily runs of the Main, Bergen County and Pascack Valley Line, run underneath the NEC on NJT's intersecting lines. On the NEC level, two through-main tracks and two addi-

tional station tracks serve three high-level station platforms, each approximately 12 car-lengths long.

On the lower ground level, NJT's Main, Bergen and Pascack Valley Lines merge to the north of the facility into four tracks running through two high-level island platforms in the station. Connecting passengers use escalators, stairs or elevators to a third, upper-most concourse level, pass through a card-reading fare barrier and then move down to the appropriate level for their connection.

Originally conceived strictly as a rail connection station, the transfer station was designed and constructed to ultimately support massive overbuilds (shops, restaurants, and office buildings), providing a site for significant real estate development.

Of the two track levels, the Amtrak NEC level is by far the busiest. Currently, 21 weekday trains pass through the facility per hour in the peak travel direction, with 10-15 trains per hour in the reverse peak direction. With the advent of weekday train service through Secaucus at the end of the year, 22 to 23 peak direction trains are expected to run through the facility per hour, with several moving to the tracks at the inner platform, stopping to handle connecting passengers and then merging back out into the NEC flow. Currently, four to five Amtrak trains pass through Secaucus in both directions during peak travel periods each hour.

Full weekday service awaits resumption of the PATH (Port Authority Trans-Hudson) service between Newark and the World Trade Center, which was severed on September 11,

2001. The Secaucus project was delayed over one year because of the September 11 events and resulting travel patterns changes.

Construction Challenges

Construction elements within this three-mile portion of the Northeast Corridor included the realignment of existing tracks to new tracks on new bridge structures, construction of two station tracks on three platforms, one additional main track on each side of the station and construction of four interlockings — including two with high-speed switches allowing 80 mph diversions that enable access to the station and movement from the station with little or no effect on trains passing through the station. While NJT's Main, Bergen County and Pascack Valley Lines are not electrified, all NEC track required new AC catenary for electric traction.

"Now, the entire system is unified through this station and it will be a huge challenge to operate the system as one. New York train dispatchers will be instrumental in making this work."

F. Clark Hampe, director,
Operations Planning

One of the earliest construction tasks involved moving Amtrak's 138,000 Volt AC transmission lines to a series of new 150-foot towers, built to completely by-pass the station area.

"Faced with the potential of disrupting or severing Amtrak and NJT Northeast Corridor services, Amtrak early on imposed very stringent track outage time frames and safety requirements on the project," said Deputy Division Engineer **Richard "Butch" Bernaski**.

Despite revising all evening and night schedules, construction on the NEC level took place while trains continued to move past the site on tracks that remained in service, or during track outages, with tracks removed from service and/or traction power de-energized. These

An aerial view of Secaucus Transfer Station looking southwest. At right, Northeast Corridor tracks enter the station.

I Connectivity

outages were limited to one track for five hours each night and to a few 55-hour weekend track outages limited to one track for short distances. Construction managers knew that these windows did not provide enough time for critical tasks, such as pile driving on the right-of-way, so alternatives were sought to maximize time – any time – available for work.

The search for work time meant that many outage times were measured in minutes between trains, even at night. Relying on experience with projects requiring time-critical track and power outages, Amtrak forces established a regular night field train dispatcher position whose territory focused on the three miles surrounding the project area.

Located at Bergen Interlocking, less than half a mile from the station site, the Bergen field dispatcher coordinated traction power and track outages with project management, engineering foremen and contractor personnel, arranging for track protection between train movements when necessary. Several total traction power and track outages on both main tracks to drive piles, move steel beams, place catenary cross beams, build the catenary system over new tracks and alignments, and erect signal bridges were successfully accomplished between late-night trains. The night dispatcher was instrumental in protecting work areas and ensuring safe train movements through the area.

New Technology

With only two tracks in use in the area prior to the project's construction, Amtrak and NJT developed a sophisticated signal system to safely and expeditiously facilitate train volume. The High Density Interlocking-Signal System (HDIS) was put into action to allow trains to operate through the area, with as little as two minutes apart and at speeds of up to 90 mph. Combined with high-speed 80 mph switches to and from the station, and with as flexible a track layout as geometry permits, the area is now equipped to handle a high number of train movements — almost one train in either direction every other minute.

"A new track and signal system design was necessary to allow trains

to make station stops at Secaucus without causing delay to through-Amtrak and NJT trains," explained Galloway. "The detailed configuration of this intricate system was critical to the movement of so many trains through the area."

The new signal system eliminated fixed wayside automatic signals (signals placed along tracks that automatically indicate track condition and block occupancy) and was designed and installed in stages between Newark and New York. The system uses only cab signals (signals located in the engineer's cab that indicate track occupancy or condition), rather than a combination of cab signals and fixed wayside automatic signals. Six signal aspects are employed, with varying code rates allowing movements at normal speed, 80 mph, 60 mph, 45 mph, 30 mph, and restricted speeds. There are so many short blocks that signals could not be provided for all of them between interlockings. While the new system makes it possible for trains to move two minutes apart at speeds up to 90 mph, maximum capacity of the system is reached at 60 mph during peaks; a concession to the greater number of trains expected to be operated during the critical commuting hours.

Schedule Challenges

"It is this blending operation of merging and exiting trains under such heavy volume conditions that is unprecedented," said **F. Clark Hampe**, director, Operations Planning, New York Division. "Smooth operation of this project will require constant attention by Amtrak and NJT operating departments. Also, the upper and lower level NJT lines always functioned independently; their operations never required coordination. Now, the entire system is unified through this station and it will be a huge challenge to operate the system as one," noted Hampe, "Amtrak's New York train dispatchers will be instrumental in making this work."

The complexity of the train movements will also affect operations planning methods. "The schedule change process will now require lead times of six to twelve months to reach agreement between agencies, compared

A New Jersey Transit train travels through the station on the Northeast Corridor.

View of station overlooking the Main Line tracks that lead to the Secaucus Transfer Station. The NJ Turnpike is shown in the foreground.

Left (opposite page), the Secaucus Transfer Station plans include mixed-use commercial development above the transfer station, which will expand the complex to 3.6 million square feet.

Below, the Secaucus Transfer Station is a central location for rail commuters to transfer to all rail lines serving northern New Jersey.

with the typical three month timeline," added **Walter Peters**, senior director, Network Schedules. "Almost every train Amtrak runs to New York was rescheduled to fit into the new plan," said Peters.

Because maintenance of the Secaucus infrastructure will rival the complexity of that in Penn Station, NY, Amtrak's Engineering department will need to plan its activities far more in advance than previously considered. "The bar is raised on nearly all aspects of the operation," added Hampe.

Making the Connection

This portion of the Northeast Corridor was originally built as part of the Pennsylvania Railroad's New York Improvements that included the North River Tunnels, Pennsylvania Station, the East River Tunnels and Sunnyside Yard. Known locally as the High Line, this segment of track passed over the tracks of the former Erie Railroad and the Delaware, Lackawanna & Western Railroad (DL & W) near their New Jersey terminals since the opening of New York's Pennsylvania Station. Through years of mergers, acquisitions, abandonments and changes in public attitudes toward rail transportation, the Pennsylvania Railroad (PRR) High Line through

the Meadowlands, its North River Tunnels and its Pennsylvania Station New York terminal, provided the only direct, high speed long-distance access to Manhattan from the west.

With other lines limited to connections with ferries or the slow, subway-like Hudson & Manhattan (predecessor to PATH), regional planners wanted to tie the network of suburban rail lines fanning into northern and western New Jersey from ferry terminals at Jersey City and Hoboken into the PRR's efficient, well-constructed east-west route. The idea remained dormant into the 1980s until, faced with increased population density and a highway system unable to handle increasing traffic, the Secaucus Transfer Station was conceived.

"Secaucus Station is the culmination of a long series of capital improvements in New Jersey, starting over twenty years ago with extensions of electrification on the North Jersey Coast Line. Projects such as Mid-Town Direct, the Pennsylvania Station East End Concourse, the Montclair Connection and now the Secaucus Transfer Station have all been successful in making the NEC, and the New York Division in particular, one of the most challenging railroads to operate anywhere," said Ernst.

Red Caps Give Passengers a Lift

Red Caps Add Value to Amtrak Service

Navigating Chicago Union Station can overwhelm many Amtrak travelers — especially when grappling with excess luggage and chasing exuberant children. However, passengers express a sigh of relief when Red Cap **Mark Owsiany** offers his assistance.

While most would expect Owsiany's job to be physically demanding, it is much more complex than just repetitively lifting and loading heavy pieces of luggage. A red cap must know station, routing, schedule, and ticketing information. To successfully do his job, Owsiany must remember the schedules of the 51 Amtrak trains that travel in and out of Union Station each day and must also be familiar with the Chicago area destinations served by Metra commuter service. Most important, the red cap must perform his duties safely while providing Amtrak passengers with courteous service.

In Chicago, red caps are often the first Amtrak employees to meet arriving trains. After long journeys, travelers welcome luggage assistance and a ride in a motorized "people mover" down the two-block-long platform to the station. As Owsiany explains, "A warm smile and a helping hand adds tremendous value to our product and a lasting impression on our passengers. On their return trip, passengers are reassured when they walk into the station and recognize the familiar face of the red cap they met on their last trip."

On a chilly Thursday morning, Owsiany starts his 6:30 a.m. shift by getting his assignment sheet from Lead Red Cap **Chester Owsiany**, who happens to be his brother. The lead red cap is a rotating position responsible for reviewing daily train schedules, adjusting staffing levels, and scheduling red caps to meet

specific inbound trains. The morning assignment sheet includes trains arriving at Union Station between 8:30 a.m. and 3:30 p.m. Owsiany is assigned to meet the *Hiawatha* arriving at 7:57 a.m., the 9 a.m. *City of New Orleans* and the 10:58 a.m. *Capitol Limited*.

After reviewing his assignment sheet, Owsiany checks the computer to see if his trains are on schedule. Using this information, Owsiany manages his time to carry out another aspect of his job — assisting passengers boarding outbound trains.

Union Station red caps are stationed on the main floor near the information counter. Passengers entering at the main entrance on Canal Street can use the house phone to call Passenger Services for red cap assistance. Two red caps are also dedicated to assisting passengers in the Metropolitan Lounge, where sleeping car passengers relax and enjoy complimentary beverages while waiting for their train.

Three key tools — radios, people movers, and luggage carts — help red caps provide good customer service. Each red cap is assigned a radio, which links them to the Passenger Services department and other red caps. The motorized people mover is driven by the red cap and designed to seat up to four passengers. A luggage cart can be connected to the rear of the people mover, creating a 14 foot-long vehicle that must be carefully maneuvered through the crowded station.

Every red cap is required to complete training provided by the Amtrak Safety and Security department before being authorized to use a people mover. The red cap must be alert for children who dart

Red Cap Mark Owsiany positions the wheel chair lift to assist a detaining Cardinal passenger.

through the two-foot gap between the luggage cart and the people mover and wary of passengers boarding or detaining on the narrow platforms.

"It's really hectic during the morning rush hour when thousands of commuters are passing through the station," Owsiany said. "Getting the people movers through the station is almost an art form."

When Owsiany became a red cap 17 years ago, people movers did not exist and red caps had only luggage carts to transport baggage through the station. Since Chicago Union Station began using people movers about ten years ago, they have proven to serve the dual benefit of improving customer service and increasing the red caps' efficiency.

"With the elderly population growing," said Red Cap **Hafeez Muhammad**, "we're seeing more and more elderly passengers who need assistance. Many are unable to walk long distances or carry luggage. The people movers are an excellent and necessary tool for assisting our older travelers."

Around 8:30 a.m., Owsiany receives a call for a wheel chair lift for passengers detaining the *Cardinal*. Owsiany gets the lightweight aluminum rectangular lift, rolls it down the track and positions it next to the exit of the coach car. By turning the lever in a circular motion, the floor of the lift rises to the level of the train, creating a ramp for the passenger and the train attendant to wheel the chair onto. Once the passenger is safely on the ramp, Owsiany lowers the ramp to the floor allowing the passenger to wheel himself off and onto the platform.

While Owsiany awaits the arrival of his next train, streams of customers approach him with

questions. "Can you tell me where the ticket office is?" "What time does the train headed to Kalamazoo leave?" "Where can I catch the train for Milwaukee?" Owsiany has answers for each.

When a gentleman asks where to check luggage, before taking them to the checked baggage window at the ticket counter, Owsiany first asks the man's destination. After learning that it is Red Wing, MN — an unstaffed station that does not offer baggage service, Owsiany instead directs him to the lockers to store his bags until the train arrives.

After responding to customer inquiries, Owsiany is called to track two to assist passengers arriving in a private car attached to an Amtrak train. While assisting the passengers, he is mindful of his obligation to meet the inbound *Lake Shore Limited* scheduled in at 10:58 a.m.

Owsiany completes that task in just enough time to meet the coach passengers on the approaching *Lake Shore Limited* at track 24. Along with Reservation and Information Clerk, **Sharon Reeves**, Owsiany assists four elderly passengers and their luggage onto the people mover.

At the end of the day, Owsiany turns his equipment over to the red cap on the afternoon shift and briefs him on the day's events. After 17 years on the job, Owsiany still enjoys it. "Every day is different," Owsiany said. "I get a chance to meet new people every day. I remember helping Pearl Bailey in the station. Another time I met a man traveling with a large box that he later told me was carrying a Picasso," he continues. "This job gives me the opportunity to get a glimpse into lives and experiences of travelers from all over the world."

After arriving in Chicago on the *Capitol Limited*, passenger Bette Clifford and her three sisters sit in the people mover while Owsiany takes them to check their baggage on their connecting train.

FY '03 in Review

continued from page 5
Line and the Empire Connection.

While a request for proposal was underway in FY '03 for the replacement of the CETC systems in Boston and Philadelphia with a more modern, cost effective, and secure system, the CETC upgrades included the installation of new voice recording systems, a new Uninterruptible Power Supply (UPS) system and the replacement of console hardware.

ACSES is mandated by the FRA in New England and where trains exceed 125 miles per hour between New York and Washington. In addition to enforcing speed restrictions, ACSES enforces a positive stop at interlocking home signals displaying a stop signal. In FY '03, software was developed and tested to provide an automatic release to trains once the home signal has been cleared. This required the installation of a data radio network

over most of the system.

Electric Traction (ET)

In FY '03, the ET department completed more than 30 miles of catenary hardware renewal at critical interlockings and main line high-speed tracks between Washington and New York.

ET continues to replace and upgrade the more than 70-year-old traction power system. A new traction power transformer was installed in FY '03. Four more transformers have arrived, with nine more scheduled to arrive in FY '04. In addition, maintenance-intensive components of these systems, as well as failing circuit breakers, have been replaced with upgraded technology.

Work also began in Baltimore, MD, with the installation of a duct bank between Union Tunnel and the substation in Baltimore for the oil-filled cable-replacement

project. The installation of this cable will be contracted out.

There is a \$9.6 million carryover into FY '04 for the Electric Traction Program. The primary reasons for the carryover are delays in receiving sub-station and transformer material.

Fire and Life Safety

During FY '03, the Fire and Life Safety Program completed the following jobs:

- Major excavation work required to start the forming of the new ventilation structure at Weehawken, NJ
- Penn Station Ventilation Project (all seven fan rooms within Penn Station)
- Emergency bench wall ladders installation within the East River and North River Tunnels
- Handrail Project within the East River Tunnels
- Installation of Nolan rail carts

- within the Penn Station Complex
- Installation of the Phase I Supervisory Control and Data Acquisition (SCADA) System
 - Commencement of the portal access security improvement at the Bergen and Long Island City Portals

The FY '03 Fire and Life Safety Capital Program was budgeted for \$91 million in FY '03; due to a delay in awarding four major construction projects, the funding required for FY '03 was reduced by \$44 million.

The work for the next five years has been clearly identified in the components of the Five-year Strategic Plan (FY '04 - '08). It will be tough to accomplish, but the imminent future depends on it. Much was accomplished at Amtrak during the past year and these efforts have proved to be a good start. But the rebuilding must continue.

Amtrak Wins National Travel Award for 'Julie'

Amtrak's automated agent, "Julie," is not just another pretty voice, according to the Travel Industry Association of America, which recently awarded Amtrak the Odyssey Award for the voice response unit.

Vince Zagorski, Amtrak's director of Telephony and Information Systems Support, and his team were awarded the top honor in the Travel Facilitation category. It is one of 10 national travel awards that will be presented at a ceremony later this month.

Considered one of the most sophisticated reservations applications in the travel industry, Julie was designed to increase customer satisfaction by replacing the often-cumbersome touch-tone system with a better service option for routine calls, all the while keeping call-center costs contained. Few, if any other companies in the travel industry, use speech recognition to handle the complex tasks that Julie manages with Amtrak's schedules, fares, and reservations.

Since Julie began communicating with passengers in October 2000, the system has reached several milestones. For example, Julie began providing train status

information in 2001; offering schedules, fares, reservations and promotional discounts in 2002; and accepting credit card payments in 2003. Through August 31, 2003, 9.2 million calls have been satisfied by Julie, 1.5 million reservations have been made and \$150 million in revenue has been booked.

The Odyssey Award, established in 1952, recognizes excellence and exceptional achievement in travel promotion and public and community service activities.

"The award is a special tribute to the many people who have worked to make Julie a success," Zagorski stated. "This recognition is a direct result of their talent and expertise."

Customer Relations and Revenue technical employees contributing to the success of Julie include Speech Systems Analyst **Jason Brown**, ACD Analyst **Clyde Coatney**, Telephony Technology Analyst **Robert Early**, and Call Center Telephony Support Specialist **Jerri McKeever**. Also assisting with the project were Director of Call Center Systems Support **Mark Haynesworth** and Managers **Ja'far Abdus-Samed**, **Abul Badruddoza** and **Randall Stillman**.

Amtrak Guest Rewards® Members Receive Free Companion Certificate

Amtrak Guest Rewards members can take advantage of Amtrak's "Take Two Round Trips and Receive a Free Companion Ticket Anywhere Amtrak Goes" offer during the *Acela Express/Metroliner* fall advertising campaign.

The campaign targets business travelers and promotes Boston to New York \$99 or less fares and the free companion promotion. The free companion offer is valid for AGR members who travel two round trips or four one ways on *Acela Express* or *Metroliner* service between Boston and Route 128; to and from Stamford, New York, Newark, and Metropark; and between Washington, D.C., and New Carrollton.

The companion certificates are valid for Business class on *Acela* and *Metroliner* service and Coach on all other trains. Passengers traveling through Dec. 22, 2003, will be eligible to receive the companion certificate. Certificate reservations must be booked between Nov. 8, 2003, and Dec. 16, 2004, and are valid for travel Jan. 5, 2004, through Dec. 16, 2004.

Passengers Save by Booking Online

Passengers can save an additional 5 percent off Amtrak fares by booking their reservation on www.amtrak.com during Amtrak's long-distance train fall campaign.

The campaign features sample fares for city pairs in 21 markets, including Chicago, New York, Los Angeles,

Seattle, San Francisco and Washington, D.C., and feature illustrations by Michael Schwab, one of America's leading graphic artists. The discount is offered to passengers booking online by Dec. 13, 2003, and valid for travel through April 2004.

Schools Promotion Generates Revenue

West Coast states and Amtrak are building future ridership by introducing school children to train travel with special offers to school groups. Through the Schools on Trains program, states issue targeted mail and Web site solicitations offering group round trips as low as \$5 per student, which fill otherwise empty seats.

The state of Washington began promoting school group offers in 1999, and California and Oregon followed in 2000. California's program, known as Kids 'n Trains, marked the 50,000th student to participate in the program last spring. Through June 2003, these combined programs have generated 143,887 riders and over \$384,000 in revenue. By introducing adult chaperones to rail service, the program attracts additional full-fare groups of adults and youth organizations that travel in the same corridors at regular group fares.

California Kids Learn About Train Travel

Amtrak's West Marketing team is sponsoring a train and travel program for fourth-grade students in California designed to build interest in trains and

develop children into future train riders. As part of the Scholastic/Amtrak School Program, Scholastic Publishing is producing curriculum that incorporates trains and uses Amtrak as the basis for the

learning modules. The program, scheduled to begin mid-October, is provided to teachers at no charge.

Four different lessons on geography, language arts, science, and math involve train travel. As part of the program, teachers are offered the opportunity to take the children on a train ride through the state's Schools on Trains program.

Each student also receives a four-color, two-page flyer to take home to their parents that includes a Kids Ride Free coupon and family at-home activities related to train travel.

Fans Meet Former Raiders Players En Route to the Games

Oakland Raiders fans taking the *San Joaquins* or *Capitol Corridor* trains to Raiders' daytime home games this season will rub elbows with former players and have an opportunity to take photographs and get autographs, while being served refreshments and participating in contests for prizes.

Select *San Joaquins* or *Capitol Corridor* trains take passengers to the Jack London Square-Oakland Amtrak station where Amtrak's Thruway motorcoach conveniently delivers fans to and from the coliseum entrance.

Delaware Transportation Festival Held at the Wilmington Amtrak Station

The 15th Annual Delaware Transportation Festival was held at the Amtrak Station in downtown Wilmington, DE, on Sept. 27. The daylong festival, sponsored by Amtrak, the Delaware Department of Transportation and DART First State, showcased changes taking place along Wilmington's waterfront, adjacent to the Amtrak station, which include construction of a new multi-level parking

garage for Amtrak passengers.

Train enthusiasts toured Amtrak equipment; a Wilmington and Western Railroad steam locomotive; a Reading FP-7, a vintage diesel locomotive; and cars from Norfolk Southern. Amtrak passengers traveling to the festival on select trains received a 20-percent discount.

Chicago Union Station Hosts Downstate Day

Thousands of commuters, visitors, and Amtrak customers passing through the Great Hall of Chicago Union Station got a chance to learn about downstate Illinois Amtrak destinations during Amtrak Downstate Illinois Day, sponsored by Amtrak and the Illinois Department of Transportation (IDOT).

On Sept. 10, representatives from 12 downstate communities and three regional tourism agencies were available to answer questions and distribute literature about cities and tourist attractions along Amtrak's downstate routes, such as the *Statehouse* and the *Illinois Zephyr*. Those stopping by the Amtrak table also entered a drawing to win free Amtrak tickets for travel anywhere in downstate Illinois.

During the event, Marketing Director **Tracy Robinson**, Marketing Manager **Anne McGinnis** along with **Jennie Clafflin**, chief of IDOT's Rail Passenger Operations Unit spoke to passengers about Amtrak's routes and cities as they distributed National Timetables and Amtrak America travel brochures.

Amtrak Guest Rewards Members Can Travel and Win

This fall, Amtrak Guest Rewards members traveling on any Amtrak train, including *Acela Express* and *Metroliner*, between Sept. 15 and Oct. 31, will be automatically entered for a chance to win a trip to the CBS Radio Sports National Football League (NFL) Big Game Chalk Talk in Houston, TX, during the Big Game weekend in February 2004. During that weekend, Westwood One Radio will also select and present an NFL player with the Amtrak Player of the Year award.

The sweepstakes prize includes roundtrip airfare for two, three-night hotel accommodations in Houston, attendance at Westwood One's CBS Radio Sports Big Game Chalk Talk and an opportunity to meet the Amtrak Player of the Year.

Kyle Kenyon (kneeling) of Bass Lake Elementary School is the 50,000th student to take part in California's Kids 'n Trains program. Kenyon and his classmates rode the San Joaquin on a field trip to the state capitol in Sacramento.

September 11 Observance at Penn Station

Members of the Amtrak Police Department Pipe and Drum Corps join New York Division employees and the general public at Penn Station to honor those who

perished on Sept. 11, two years ago. The observance included a wreath-laying ceremony and white carnations offered to customers.

New Advertising Strategy

continued from page 1

paper advertising, gives Amtrak an opportunity to raise awareness and provide more detailed information about destinations, fares, and the advantages of train travel. Television advertising is more suited to communicating major discounts rather than detailed information.

The print ads feature illustrations by celebrated graphic artist Michael Schwab, whose logo and poster designs have won prestigious awards.

The fall campaign is designed to build on Amtrak's successful ridership growth over the last year. At press time, year to date, ridership is 2 percent ahead of budget and last year. Although revenues are below budget by 10.5 percent and last year by 6.7 percent, improvements are being made on the revenue side.

August capped Amtrak's summer travel season with about 2.2 million trips, up 7 percent from last year. Had the railroad not been affected by the power outage, it would have set yet another ridership record in August. Starting in March, Amtrak had recorded monthly ridership records for five consecutive months.

While the power outage caused an estimated loss of 50,000 trips (31,000 of which were on *Regionals* and *Acela Express*) and about \$2.6 million in revenues, short-distance trains showed strong ridership gains with an overall gain of 6 percent. Double-digit ridership growth on trains such as the *State House*, *Hiawathas*, *Illini*, *Heartland Flyer*, and *Pacific Surfliners* contributed to the strong performance of the short-distance trains.

Also worth noting in August is that fare changes that went in effect at the end of July were already showing results. August was the first month that long-distance train revenues exceeded last year's. Overall, long-distance train ridership was up 14 percent over last year. Eleven of the company's 16 long-distance routes made double-digit gains in ridership. The *Silver Meteor*, *Auto Train*, *Texas Eagle*, and *Sunset Limited* were among the more notable contributors. Ridership on the *Pennsylvanian* continued its meteoric rise with a gain of 106 percent over last year, which is attributable to the change from a Chicago — Philadelphia service to a Pittsburgh — New York service.

THE 2004 AMTRAK® WALL CALENDAR

Order your 2004 **full-color** wall calendar featuring the Amtrak® *Southwest Chief* as photographed by Billy Turney, winner of the Amtrak "Picture Our Train" Wall Calendar Photo Contest.

Amtrak is a registered service mark of the National Railroad Passenger Corporation.

California Railroad Safety Week

In a statewide effort to raise public awareness about motorist and pedestrian fatalities and incidents at highway-rail crossings in California, Amtrak, Metrolink, the Metropolitan Transit Authority, Caltrans (California D.O.T.) and Operation Lifesaver kicked-off Railroad Safety Week, September 8-14, 2003. California Assembly Member Longville introduced concurrent resolution number ACR 130 to officially dedicate this week to railroad safety.

Pictured, left to right: Eric Jacobsen, president, California Operation Lifesaver, **Lois Cunning**, chair, Southern California Operation Lifesaver, and **Richard Phelps**, general superintendent, Southwest Division, inspect one of the wrecked cars on display in Los Angeles during Railroad Safety Week.

Amtrak and TCU Agreement is Ratified

Amtrak and the Transportation Communication International Union (TCU) have reached agreement on a new contract that provides wage increases for about 5,000 clerical, station, tower, and reservation employees.

The contract provides for wage increases equivalent to those in the arbitrated TCU National Freight settlement. After rolling in the full existing 75-cent COLA, Amtrak TCU employees will receive a 3.5 percent wage hike on Oct. 1, 2003, followed by increases of 3 percent on July 1, 2004, and 3 percent on Oct. 1, 2004. The wage agreement runs through Dec. 31, 2004.

Changes to the medical insurance

plan are also similar to those contained in the national freight contract, although Amtrak workers' monthly health premium contributions will be approximately 25 percent lower. Amtrak members will contribute \$50 per month effective Oct. 1, 2003, and \$75 per month beginning Oct. 1, 2004.

The contract was ratified by a margin of 1,138 votes to 774. Union members voted on the contract during a month-long mail-balloting process that ended Sept. 10. The TCU contract agreement is the first settlement for any group of Amtrak workers in the current round of negotiations that began in 2000.

FRONT LINE FOCUS

The following are excerpts from letters written by Amtrak passengers who found their experience with our front-line employees worth noting.

Dear Amtrak,

This is a quick letter to say thank you to all the employees of Amtrak that worked ... during the now infamous 2003 Blackout.

I am very pleased to tell you the individual initiative of your Penn Station Customer Service Staff was outstanding. Not only did they keep me, another 50 or so riders on 172, informed but they saw an opportunity to help us all and get us out of the powerless city. Apparently, a bus was scheduled to go back to New Haven for another run but it was not scheduled to carry anyone ... But your folks saw this and acted independently and with tremendous caring and filled the bus with north-bound travelers. They then (went) so far as to coordinate with the driver to stop in Stamford!

I can tell you that after 25 years of travel on every available public transport system, the experience from last week, when every company was being challenged with events well beyond their control, has

made me an Amtrak fan for life. I believe you have the best method of reliable and comfortable transportation for the eastern corridor and can assure you that whenever my travel plans call for it, I am yours!

Dear Amtrak,

Recently, my wife and I were visiting in San Diego, CA, and took the opportunity to ride Amtrak's *Pacific Surfliner* to Los Angeles. During the trip, my wallet came out of my pocket and I did not discover the loss until I was in the Los Angeles Union Passenger Terminal. I went directly to the lost and found clerk, **Patty Ryan**, and she said she would try to locate my wallet immediately.

An Amtrak employee found it when the train got to Santa Barbara and the wallet was returned to me the next day without any cash or credit cards missing.

I want to commend Patty and **Kathi Jurgensen**, the baggage clerk in San Diego, for their diligence, professionalism, and customer-friendly attitude. In fact, all the Amtrak employees along our route were outstanding. You have a great team on the *Surfliner*.

VITAL STATS

for August 2003

	Month		Fiscal year-to-date	
	Budget	Actual	Budget	Actual
Safety				
Reportable Injury Ratio*	(goal) 3.8	4.8	(goal) 3.8	4.0
Ridership	2,130,080	2,174,370	21,696,028	22,096,708
Total Expenses	\$267,020,000	\$260,167,000	\$3,053,419,000	\$2,921,307,000
Total Operating Revenue	\$178,123,000	\$164,015,000	\$2,015,601,000	\$1,898,822,000

* Number of reportable injuries per 200,000 worked hours.

Train of Thought

continued from page 2
although they experienced delays or other unforeseen events, the high-level of on-board and in-station service made all the difference. Our front-line employees make the difference between a loyal passenger and someone who never rides Amtrak again. Keep up the good work.

P.S. I just want to again tell you how proud I am of the job everyone did before, during, and after Hurricane Isabel. We were prepared, well organized, and

made excellent operational decisions. While the hurricane mostly affected service on the East Coast and the Midwest, our success in managing through the storm was due in large part to the changes made to the company's structure which allowed front-line employees to do their job with minimum confusion and second-guessing. We had a plan, stuck to it, and all of the pieces of the puzzle came together. I couldn't have asked for a more professional handling of the situation.

President's Service & Safety Awards Ceremonies to be Held Systemwide

This year, Amtrak President's Service & Safety Award recipients will be honored at nine events (listed below) held throughout the Amtrak system. In addition, employees celebrating their 30-year anniversary in 2003 will also be recognized.

President's Service & Safety Awards Ceremonies

Beech Grove Mechanics Work Toughest Wreck This Year

As a result of the April 18, 2002, Auto Train derailment in Crescent City, FL, Superliner II Sleeper 32090 is the most heavily-wrecked car that Beech Grove mechanics will work this year.

The damaged end corners of the car (above) were completely rebuilt (right), including removing and replacing the end sheets, corner posts, upper collision posts, grab iron pockets, and upper side sheets, as well as the roof from the end of the car to the second window. Mechanics cut out and replaced all of the structures in these areas.

The lower left side of the car was also repaired. The fluting, which is the car's exterior skin, was removed so that the structure of the car could be repaired and new fluting could be installed.

The derailment also caused significant damage to the bedrooms on both corners of the car. Ceiling panels, wall panels, air ducts, doors, lighting fixtures, and floor heating were repaired or replaced. As with all of the wrecked cars, a rebuilt air conditioning unit, a new water heater, and rebuilt door operators were installed. Once the toilet and plumbing repairs are complete, and new cushions, drapes, and aisle carpet are installed, Superliner II Sleeper 32090 will be back in revenue service.

Amtrak Breathes New Life Into Idle Equipment and Parts

With a lot of initiative and new-found inventory, employees at Beech Grove have recently transformed three Heritage dining cars into sharp-looking additions destined for the *Lake Shore Limited* service between New York City and Chicago. Two more are underway.

The cars (#8558, #8559, and #8528)

were built by the Budd Company in 1949 and 1950, and had been in Amtrak service for many years. But until their general overhaul this fall, the first two had been in storage in Beech Grove for more than a year (each without an overhaul in more than 10 years), while the third limped along, looking every one of its 53 years.

continued on page 2

Amtrak Ridership Tops 24 Million for the First Time

*Amtrak's Back-to-Basics Approach Continues
to Simplify Train Travel, Attract Riders*

More than 24 million passengers rode Amtrak in fiscal year '03, the highest annual ridership the company has ever experienced in its 32-year history and a nearly 3 percent increase in ridership over last year.

The record didn't come easily to Amtrak, however, as during the past 12 months the railroad struggled with the effects of the war in Iraq, an economically-troubled travel industry, the Northeast's President's Day blizzard, the multi-state August black-out and, most recently, Hurricane Isabel.

However, overall, short-distance train ridership grew about 2 percent, while the long-distance network saw 5-percent more passengers than last year. Trains in the three western divisions increased ridership by 10 percent, while the four eastern divisions experienced a decrease of 1 percent.

Short-distance trains in the east, such as the *Regional*, *Metroliners* and *Acela Express* continue to account for more than half of all passengers, with *Regionals* ridership up nearly 4 percent. While *Acela Express* ridership decreased as a result of fewer departures in

2003, per-departure ridership increased about 3 percent.

The Biggest Gainers

The most significant increase in the east — and nationwide — occurred on the *Pennsylvanian*, with a 64-percent jump in ridership over last year. This was due mostly to a change in the route and schedule. While previously a Mail and Express-based train between Chicago and Philadelphia, the service was altered in February to run in the daytime between Pittsburgh and New York. Most of the ridership increase has been seen between New York and Philadelphia.

Other major gainers in 2003 included:

<i>Pacific Surfliner</i>	26 percent
<i>Pere Marquette</i>	22 percent
<i>Texas Eagle</i>	20 percent
<i>Silver Meteor</i>	15 percent
<i>City of New Orleans</i>	14 percent

Overall, ticket revenues for the year ended Sept. 30, 2003 totaled \$1.2 billion.

Back-to-Basics Approach Continues

Amtrak's back-to-basics approach

continued on page 6

Before Amtrak's *Lake Shore Limited* leaves the Chicago yards, Coach Cleaner Tommie Hill vacuums the carpet inside Heritage Diner 8559.

TRAIN OF THOUGHT

I have just completed a 12-day trip across the country, by train of course. The trip was occasioned by three things. First, we've moved our recognition ceremonies — the President's Service and Safety Awards — out of Washington to the field and started including 30-year veterans. Secondly, we wanted to reassure our supporters that we are committed to the national system. Lastly, I wanted to see for myself the new maintenance facility under construction in Oakland, as well as some other changes we're making.

I believe that the local recognition ceremonies were well received. The people who attended were an impressive lot representing thousands of years experience and dedication.

We were able to meet with a large number of supporters, including Mayor Dale Niewoehner of Rugby, ND, and Montana Gov. Judy Martz, who rode with us for three hours through her state.

Lastly, the Oakland maintenance facility is taking shape and should be completed on schedule and within budget (\$65 million). For the

first time, we will have a good facility for our *Capitol* corridor, *San Joaquins* and *Zephyr* services. We will have a diesel shop, S&I pits, a car washer, a drop table and a wheel truing machine. We should move into it in a year or so.

Other items of note regarding maintenance facilities, the Southwest division has corrected a problem in their Los Angeles facility by installing grates over open pit areas. The consultant who designed the facility apparently thought they were building a Transit barn.

Chicago has reopened Brighton Park to complete the removal of inspection from Beech Grove. This must be done to permit the heavy overhaul of 102 long-distance cars in FY '04. The shop looked good. The yard is empty of the scrap cars that were there. The warehouse is filling up.

The passenger waiting areas in Chicago are being expanded and spruced up with new HVAC and some new furniture.

The only sad note on the trip was the impending closing of the

David L. Gunn

Chicago call center which was announced almost a year ago; sad, but inevitable and necessary.

The trip itself was good. Trains were well patronized and on time (maybe I should ride all the time — the Starlight was early into Sacramento). Some early results of the overhaul program were visible, the Pacific Parlor car, for example. However, it will take a while to deal with the maintenance backlog.

P.S. After a 12-day trip with only two nights in a hotel, I can tell you I can sleep on the train. In fact, when I got home and in my own bed I kept waking up and wondering why we'd stopped.

Amtrak Breathes New Life Into Idle Equipment and Parts

continued from page 1

Spurred by the critical need to increase the railroad's availability of rolling stock and thanks to the diligence of the Procurement department's local storekeepers, unused material was exhumed this spring that had been ordered for a diner overhaul program that ultimately had been suspended years ago. These parts were simply collecting dust at the Beech Grove warehouse.

Beech Grove mechanics first began work on car 8528, as it had extensive mechanical problems. The other two cars followed. Using the plumbing fixtures, refrigeration, and air conditioning system materials that were already in stock, Beech Grove mechanics began bringing the cars to life. All the kitchen appliances, such as bun warmers, steam wells, hot plates, griddles, convection ovens, coffeemakers, toasters, and

microwave ovens that had been in storage were installed. The electrical components were either overhauled or replaced; and new interior furnishings, such as carpeting, cushions, paneling, table-tops, sub-flooring, floor rubber, and windows that were in the storehouse were installed.

Using previously purchased materials, employees completed work on air brakes, draft gears and couplers, and end diaphragms. Interior sheet metal work in the kitchen area and car body paint and striping was also performed.

The work done on these diners was done quickly, and it was done well. It is designed to last at least five years, until new cars can be purchased to replace them.

Coach Cleaner Tommie Hill fills the potable water tank of Heritage Diner 8559 before it departs for New York on Oct. 15.

Currently, Amtrak owns 40 aging Heritage diners, of which 26 continue to be used in the East. The railroad's five-year capital plan calls for the retirement of all 40 cars by 2008, when they are planned to be replaced by Viewliner-style cars. These new cars will be configured as combination diner-lounge cars, each replacing two aged Heritage cars. But for now, Amtrak passengers can enjoy their meals in these bright new diners whose overhaul is a credit to the employees of Beech Grove.

Dennis Watson of the Mechanical department in Beech Grove contributed to this story.

FY '03 Closed with Over \$5.5 Million From Surplus Equipment Sales

The removal and sale of 370 pieces of unusable rolling stock and other equipment from Amtrak's yards and facilities during FY '03 generated over \$5.5 million in revenue, the Material Disposal group of Amtrak's Procurement and Material Management department reported last month.

This rolling stock and equipment had been stored at Amtrak Service and Inspection (S&I) facilities in Albany, Chicago, New Orleans, and Sanford, as well as Sunnyside Yard, Bear Car Shops, Beech Grove Locomotive and Car Shops, and the Brighton Park and

Tool car 17073, used to haul tools and supplies, was scrapped after being removed from the Wilmington Maintenance Facility on July 18.

Wilmington maintenance facilities.

The removal effort has helped to ease congestion at the railroad's facilities. Equipment that sat at Brighton Park occupied more than

half a mile of track space; at Bear more than a mile; and at Beech Grove over three and a half miles. Not only were these items an eyesore, they also took up space that could be better used to service and maintain operating equipment.

The list of removed items includes equipment that was sold outright and equipment that was sold as scrap. Most of the rolling stock sold was built in the 1950s and

purchased by private car owners. Turboliner, Metroliner, and baggage/box cars, maintenance-of-way rolling stock, wrecked cars, and E-60 locomotives were among

Equipment Sold in FY '03

3 E-60 locomotives
5 baggage/box cars
11 Turboliner cars
6 Metroliner cars
1 auto carrier

the pieces sold to scrap companies.

Other items sold included ties, rails, and roadway equipment such as generators, air compressors, and material handling pushcarts.

The Sound and the Fury

Hurricane Isabel Strikes with a Vengeance

It was not a surprise. Actually, it was predicted with a great deal of accuracy. Hurricane Isabel, however, was unstoppable. So the best Amtrak could do was be prepared to handle its impact.

By Monday, Sept. 15, Amtrak was tracking the storm. As it became evident that the East Coast would fall directly in the storm's path, creating many problems for Amtrak and its customers, a 24-hour watch team was put together at the Consolidated National Operations Center (CNOC) in Wilmington.

On the morning of Thursday, Sept. 18, Isabel, classified as a category 2 hurricane with winds of about 100 mph, made landfall on the Outer Banks of North Carolina. Not far away, the routes of the *Silver*

Service, the *Crescent*, and *Auto Train* were in the predicted path of the storm and all its fury. Headed northwest, the storm would hit North Carolina and Virginia, as well as the south end (New York to Washington) of Amtrak's Northeast Corridor.

For Amtrak, this also meant that train service in the storm's path would be affected.

The 24-hour crew at CNOC, headed by Jon Tainow, chief, System Operations, began to consider service cancellations. With passenger safety a priority, the challenge was to operate whichever trains possible to minimize passenger inconvenience, and yet prevent passengers and train equipment from becoming stranded enroute.

Thom Chawluk, senior director, Eastern Region Operations, Chris Jagodzinski, senior director Western Operations, and Bruce Van Sant, director, Fleet Planning, began the difficult task of identifying which trains would be held at what locations and, in some cases, would then be turned to provide other service. The Crew Management staff worked closely with field supervisors to ensure trains were properly staffed. Don Cushine, senior director, System Operations, handled support issues.

On Thursday, at 7 a.m., an open telephone line to field operations staff was established at CNOC and monitored on a 24-hour basis by the CNOC crew. As train services were altered, the information was shared in real-time with field staff.

And as field conditions changed, that information was shared in real-time with the CNOC crew. During scheduled updates, approximately 15-20 CNOC staff members would participate in the call. Other times, there would be a minimum of two to three individuals at CNOC on the call, standing by to alert everyone in case of last-minute changes.

Also at CNOC, on a 24-hour basis, were representatives from Engineering and the Amtrak Police department. The Engineering department, led by Joe Guzzi, division engineer, Mid-Atlantic Division, had another open telephone line that was also monitored nonstop. This line was one of the most critical to the success of the

continued on page 5

Amtrak Gears Up For Thanksgiving Travel

With Thanksgiving right around the corner, plans have been made to help handle the increase in holiday travelers. To better accommodate passengers, between Tuesday, Nov. 25 and Sunday, Dec. 1, cars and frequencies have been added to certain routes and several schedules have been changed from unreserved to reserved service.

This Thanksgiving, travelers in the Northeast can benefit from 70 additional trains operating on Amtrak's *Acela Express*, *Metroliner*, *Regional*, and *Empire Service*. Twenty-six of these trains are *Acelas*, a significant increase in

their availability from previous Thanksgivings. All trains in the NEC — except *Keystone* and *Clocker* services — are being operated on an all-reserved basis during that time period. To supplement Amtrak's regular fleet in the Northeast, 51 cars are borrowed from MARC, SEPTA and New Jersey Transit commuter services.

In the Pacific Northwest, eight additional trains have been added to Amtrak's *Cascades* schedule and for the second year, California's *Pacific Surfliner* schedule has been changed to offer all-reserved service during the holiday.

To meet passenger demand in the Midwest during this heavy travel period, extra cars are planned to operate from Chicago to Detroit and St. Louis. Capacity is also being added to Amtrak's *Illini* and *Illinois Zephyr* traveling to downstate Illinois cities, the *International* serving Chicago to Toronto, and the Chicago-Minneapolis segment of the *Empire Builder*.

Notices advising customers about the Thanksgiving schedule were distributed to stations in the Northeast Corridor, Pacific Northwest and Southern California, along with seat drops on board the

relevant trains. A special Northeast Corridor Thanksgiving holiday timetable was also published and distributed mid-November for use at stations along that route.

Amtrak Releases FY '04 Goals

Among the most important changes in the past 18 months at Amtrak has been the establishment of annual goals and objectives for each of the company's departments. To more fully communicate the goals throughout the railroad, *Amtrak Ink* is publishing a condensed version of them for the first time (unfortunately, the limits of space precluded us from printing all departmental objectives). While every department shares the same corporate goals to reduce costs, control absenteeism and improve its safety record, each department also developed detailed, functional-specific goals. Taken together, these goals are the blueprint for returning Amtrak to a state of good repair.

Transportation

- Improve on-time performance of all routes
- Continue to reduce T&E operating rule violations
- Implement service improvement initiatives and improve passenger response to food and on-board and station announcements
- Work with Amtrak's Public Health and Environmental department to meet public health and FDA standards

Environmental

- Develop, update, deliver, and monitor environmental training
- Develop and implement policies and procedures for Amtrak's Environmental Management System (EMS) Audit Program
- Implement Amtrak's Environmental Management System at field locations
- Manage portfolio of national environmental capital projects
- Manage the audit and sampling program to evaluate compliance with standards
- Provide standards, approval, and information for all processes within Amtrak related to meeting Federal food service sanitation requirements

System Safety and Security

- Implement a Crime Reduction Program targeting larceny and vandalism
- Implement a Security System Plan to review, update, and implement approved programs
- Publish and distribute a System Security Handbook to all Amtrak employees on the proper handling of security-related incidents
- Integrate and utilize a Corporate Emergency Preparedness Plan (CEPP)

- Publish a Workplace System Safety Management Plan online and a System Safety Handbook for distribution to promote safety awareness, hazard elimination, and injury prevention

Operations Planning

- Reallocate equipment to yield net benefits of \$2 million
- Coordinate the development and implementation of labor productivity initiatives
- Implement changes and improvements to services to yield net benefits of \$8 million
- Assure that proposals and agreements between Amtrak and states, localities, and developers are operationally achievable
- Re-negotiate five expiring host-railroad operating agreements
- Generate and implement improvements to long-term strategic relationships with host railroads

Mechanical

- Continue overhauls and rebuilds of Amfleet, GE locomotives, AEM-7 DC
- Start overhauls and rebuilds of Superliner I sleepers, MP-15s, F-59s
- Start AEM-7 AC and HHP8 light truck COT&S
- Continue light overhauls
- Order replacement and rebuild switchers, and replacement auto racks
- Start DT² gangs to protect against spot crises
- Repair wrecked cars/locomotives
- Opportunistically scrap or store equipment
- Implement more frequent inspections at yards and terminals

- Improve reliability of fleet for passengers, crews, OTP, and safety

Engineering

- Reduce Level 1 defects per mile by 5 percent; reduce Level 2 defects per mile by 10 percent
- Achieve FRA reportable injury ratio goals; reduce operating rule violations
- Implement a "morning after" labor reporting system to improve daily management of straight time and overtime
- Complete planned work on track, catenary, communications and signals, and structures

Government Affairs

- Secure enactment of FY '05 Appropriation and Amtrak reauthorization for existing system
- Secure support for Amtrak at the state and local level – focusing on a new funding paradigm between Federal and State governments
- Proactively support efforts at state administrative and legislative levels to secure state funding for operation of state-supported trains and for capital investments to improve passenger rail service

Business Diversity

- Complete all investigations involving consent decree cases within 85 days; complete all other investigations within 95 days
- Conduct 10 management briefings to increase awareness of Harassment Policy and mediation
- Complete FY '04 functional Affirmative Action Plans (AAPs) and hold briefings; gather data for FY '05 AAPs

Labor Relations

- Reach wage & rule contract settlements
- Continue labor/management committee efforts on the Joint Medical Administration Committee (JMAC)
- Hold 30 training sessions with line and staff officers to increase knowledge and effective use of the labor agreements to improve

productivity and service, while minimizing incorrect application of agreement rules

Human Resources

- Develop and implement an Amtrak succession plan
- Develop and implement a company-wide standardized diversity recruitment process for positions "D" level and above
- Reduce the financial impact of vision health care cost by converting to a self-insured plan
- Develop and implement an Amtrak training plan that will reduce the overall administrative cost by 10 percent
- Develop and implement company wide procedures for medical leave of absence and FMLA (Family Medical Leave Act)

Finance

- Financial Analysis: improve automation of delivery and submission of departmental and project status reports utilizing new reporting system, Financial Gateway; use Financial Gateway to allocate rescenter budgets and forecasts to train route level consistent with RPS
- Treasury: manage financing transactions required through the year; construct a new cash forecasting model that conforms to GAAP format; implement systematic balance sheet forecasting and incorporate in new cash forecasting model
- Controller: reduce receivables and bad debts; reform and revitalize the costing group for the Northeast Corridor; reduce duplicate vendor payments; continue to strengthen internal controls
- Financial Planning: implement operating budgeting system using Financial Gateway System; develop automated capital budget and forecast system using Financial Gateway; develop FY '04 balance sheet budget and monitor results
- Amtrak Technologies: produce a strategic plan for technology that rationalizes the current systems architecture against

each major business department's and for the most effective systems at the least cost; continue to move toward a workforce that is predominately employee based (i.e., non-contractor); insure that Amtrak gains full benefit from the IBM outsourcing contract and relationship

- Maintain a state of good repair for all production software systems

General Counsel

- Reduce sexual harassment litigation exposure through training
- Reduce litigation costs and improve employee medical care through increased utilization of Right Care—Day One Program
- Implement coherent records retention schedule

Real Estate

- Increase advertising revenues through the increased sale of station, onboard and billboard advertising
- Complete construction of the 30th Street parking garage in Philadelphia, PA
- Continue to reduce the amount of rented office space
- Sell approximately 12 acres of excess Amtrak-owned property in Detroit, MI
- Pursue Request for Proposal for the development of property into revenue-producing assets

Marketing and Sales

- Deliver FY '04 ridership and revenue targets (\$1.28 billion)
- Identify, develop, and implement Amtrak service and product improvements
- Open fare decision-making process and improve communication of the structure
- Maintain marketing programs in support of, and in partnership with, state-funded services
- Improve the content and the dissemination of timely information to employees about corporate priorities and engage them in accomplishing company-wide objectives
- Provide the news media and Amtrak passengers with accurate and timely

information throughout all types on communications, from services to business and public affairs initiatives

- Decrease costs for sales and distribution by continuing to shift customer purchases to the low-cost channels

Procurement and Materials Management

- Facilitate procurement and materials management programs to establish "state of good repair"
- Implement proactive automotive maintenance program
- Achieve procurement savings, including savings via reverse auctions
- Implement eTrax eInvoicing program
- Install 50 vending machines for disbursement of personal protective equipment and maintenance, repair and overhaul materials
- Reduce waste and improve tracking and accountability; achieve inventory "Fill Rate" of 93 percent

Strategic Planning and Contract Administration

- Implement a consistent policy for state-supported services through state contract negotiations and planning
- Improve the operating ratio of the corporation through commuter contract negotiations and pursuing commuter opportunities
- Coordinate negotiation of major infrastructure and capital funding
- Manage Amtrak's Northeast Corridor electricity contracts
- Recovery of electricity costs and complete new capacity and use study to better allocate electricity costs among users
- Lead Amtrak's multi-year strategic planning process and support policy development
- Maintain and update Five-Year Strategic Plan FY '05 to '09
- Position Amtrak and provide national leadership in the development of strategic rail corridors

Isabel cleanup by the Mid-Atlantic Division Electric Traction continues. Assistant Division Engineer Jack Evans (white hat, right) and Supervisor Ken O'Neil (white hat, center, talking on the mobile phone) and their team were on the job throughout the storm.

The Sound and the Fury

Hurricane Isabel Strikes with a Vengeance

continued from page 3

operation. Through this line, Engineering staff riding the train's head end provided firsthand information regarding downed trees, power lines, and other track blockage. Additionally, Communications and Signals staff provided live updates on loss of power to switches, and Electric Traction kept the CNOC crew updated on the status of overhead catenary lines. This on-the-ground reporting enabled CNOC staff to determine which trains would be cancelled and when it would be safe to begin dispatching again.

By participating in the 24-hour CNOC line, all three Reservations Sales Call Centers were staying abreast of the service disruptions. Working with this information, sales agents were assigned callback duty to contact as many passengers as possible. Sharon Murphy, a Philadelphia call center reservations sales agent, said, "Most passengers were pleasantly surprised that Amtrak called them to advise of the service disruptions and thanked me for doing so." Amtrak's Voice Response Unit (VRU) was updated with up-front announcements to expedite call handling. Agents also answered hundreds of calls, responding to customer questions about annulled trains, refunds, late trains, and rescheduled service.

Train annulments began on Wednesday. Trains scheduled to depart that day from Florida and Chicago would have placed them in the storm's path the following day. Affected trains included the *Silver Service*, *Carolinian*, *Piedmont*, and *Auto Train*. And, from Chicago, Wednesday's eastbound *Capitol Limited* was also cancelled and the eastbound *Lake Shore Limited* was terminated in Albany

on the Thursday, Sept. 18. Regional service south of Washington into the Tidewater area of Norfolk and Newport News was also discontinued. Alternate service was not to be provided, as in most cases, it would not be able to operate.

By Thursday morning, all service south of Washington, with the exception of some local Florida service, as well as most trains between the East and Chicago were annulled. And by 4:30 p.m., service between Washington and New York was also affected.

Fortunately, by the time the storm reached the mid-Atlantic area late Thursday, winds ranged from 30-40 miles per hour and Isabel had been reclassified as a tropical storm. The reduced winds helped to hold down the amount of destruction that would have resulted from a much stronger storm. Still, Amtrak service was disrupted by downed trees and catenary wires, and short-circuited switches. In some low-lying areas, such as Washington, D.C., and New York tunnels, flooding became a problem. And, some stations in North Carolina and Virginia lost all power.

During the storm period, Amtrak experienced other service disruptions. Amtrak's Mail and Express Service Desk worked to make alternate arrangements to handle the company's multi-million dollar U.S. Postal Service business. For a six-day period, beginning Sept. 17, the desk arranged alternate transportation to handle mail service lanes between such points at New York and Jacksonville, Philadelphia and Chicago, Washington and Toledo, and Chicago and Boston. General Manager Lee Sargrad said, "The Postal Service was delighted with Amtrak's efforts

continued on page 6

Standing on the track at the scene of the mock crash, Beech Grove Police Chief Elbert Davidson Jr. briefs student volunteers about their role as victims in the exercise. After the students were positioned in the vehicle, Chief Davidson created a challenge for the rescue teams by jamming the vehicle doors, making it difficult to gain access to the victims.

Operation Lifesaver Workshop Features Disaster Drill at Beech Grove

Showing their commitment to help eliminate grade crossing collisions, employees at Amtrak's Beech Grove Car Shops participated in a Mass Casualty Mock Disaster Drill as part of Operation Lifesaver's Region Four Workshop. Sixty workshop participants attended the Sept. 18 drill to see firsthand what takes place in the aftermath of a train and vehicle collision.

Beech Grove Superintendent Lew Wood hosted the drill to help educate Operation Lifesaver (OL) members about safety at railroad crossings. The drill also provided local emergency response teams an opportunity to practice their skills in a passenger train disaster scenario.

The exercise, spearheaded by Beech Grove Safety Manager Jim Goodlet with assistance from Amtrak Claims Representative Parrish Gross, included a Superliner Dining car and Sleeping car, an Amtrak locomotive, and a wrecked vehicle.

Officers from the Beech Grove Police Department and the Beech Grove, Perry Township and Franklin Township Fire Depart-

ments responded to the scene. Emergency responders found volunteer students from Beech Grove High School, painted with fake blood and posing as the victims injured in the collision and Indianapolis Service Manager Dave Dudley in the locomotive as the injured engineer. Sergeant John Keller and other Amtrak Police officers assisted in the rescue efforts and established a triage unit for the victims that were removed from the vehicle and train.

Beech Grove employees from all crafts helped set up the collision scene and video footage was taken by Safety Coordinator Jerry Toller that will be used by the participating emergency response teams for training purposes.

Operation Lifesaver is a nationwide program dedicated to eliminating grade crossing collisions. Indiana OL State Coordinator Tom Kinser thanked the Beech Grove team for making the drill, which was covered by local news stations, "a huge success."

Jim Goodlet contributed this story.

The Sound and the Fury

continued from page 5
during Hurricane Isabel. We showed that we have the ability to be flexible and provide service during the worst weather conditions." Rick Fallica, the director of Surface Operations for the Postal Service, sent Amtrak a congratulatory note, saying, "On behalf of the Postal Service Operations Group, I want to thank you and everyone involved for the recovery plan and fine reporting

that Amtrak did during this catastrophe called Isabel."

By Friday morning the most of the damage was done. Only time would take care of water subsiding, trees removed from tracks, switch circuits restored, and other damage repaired. Service out of Washington was cancelled, there was limited service southbound from New York, and service was reduced on the Philadelphia to

Ridership Tops 24 Million

continued from page 1

for attracting passengers is paying dividends. During the past year, Amtrak has made a number of changes to its pricing structure and has rolled back many coach fares. During the coming year, Amtrak plans to continue promoting the ease of train travel to build passenger loyalty and improve revenue results.

Kicking off its back-to-basics approach earlier this year, Amtrak's Marketing and Sales department began to make fare and service adjustments designed to catch the attention of passenger and spur ridership and revenue. For example, the Springfield-New Haven Line increased ridership by 38 percent and will increase revenues by \$2 million annually resulting from the combined impact of adding five weekday frequencies to the line and a fare reduction. Thirteen percent more riders took Amtrak on the Boston-New York leg of the *Acela Express* after the company adjusted that fare to an appealing \$99, a move expected to increase annual revenue by \$1.8 million.

In September, Amtrak unveiled a new advertising campaign designed to build on the momentum created by last fiscal year's ridership and revenue growth and to highlight the company's back-to-basics appeal. The campaign targets 70 markets across the country, and promotes straightforward, low fares for specific city-pairs throughout the year. By eliminating the past practice of offering seasonal discounts, customers may now travel whenever and wherever they want, taking advantage of competitive and

straightforward prices. Because the advertising campaign is designed to educate customers about Amtrak's services and destinations, Amtrak's advertising now mostly appears in major newspapers, better allowing Amtrak to reach customers and providing more detailed information about fares and destinations.

In other back-to-basics adjustments in October, Amtrak expanded the peak and off-peak periods on *Acela Express* and *Metroliner* service to Monday through Friday and decreased fares on the *Keystone* service. To stimulate local commuter traffic, passengers traveling between Philadelphia and Harrisburg on these trains now benefit from fare reductions from 25 percent to 55 percent.

Passenger-type Discount to be Made Standard

Yet another step designed to simplify Amtrak travel for passengers will be the January 2004 adoption of a standard 10-percent passenger-type discount for seniors and affiliated membership organizations such as Student Advantage, Veterans Advantage, and seniors. (Amtrak's 50-percent discount for children and the 15-percent disabled and mobility-impaired discount will be unaffected by this change.)

Amtrak Ink will continue to provide updates on the railroad's ridership performance and back-to-basics marketing approach throughout the new fiscal year. Look for coverage of the railroad's year-end financial results in the next issue of *Amtrak Ink*.

In Box

Do you have department news or information about upcoming events? Submit an appropriate story, news or photo to *Amtrak Ink*. Published stories will credit the author as a "contributing writer." Please submit your story to *Amtrak Ink* via e-mail to ecom@amtrak.com; or via mail to Amtrak Ink, 60 Massachusetts Ave., NE, Washington, DC, 20002, by the following deadlines:

For the January Issue December 8, 2003

For the February Issue November 7, 2004

Harrisburg line. As the day progressed, where possible, services were restored. It would be late in the day before many trains resumed service and not until Saturday before most corridor trains were operating. Train service south of Washington was mostly restored by Sunday, Sept. 21.

It would not be until Saturday, Sept. 27, when all service was restored to Newport News, that

operations were back to normal.

But, it was the round-the-clock commitment of the employees who monitored the storm, adjusted the service, manipulated the consists, rode the trains, cleared the tracks, installed generators, repaired switches, re-scheduled crew members, answered passenger calls, and helped passengers on board who were the heroes during this major weather-related disruption.

Seniors at AARP Convention Get Advice from Amtrak Advocate

Doras Briggs (left), one of Amtrak's biggest supporters, appears with Marilyn Hummer, manager AARP Travel Products, at AARP's 45th anniversary celebration, "Life@50+," in Chicago. Briggs, who has been honored by Amtrak with a President's Service and Safety Award for Champion of the Rails in 1999 and 2002, volunteered to help Amtrak marketing staff Alan Orchison, Claudine Conaway, Tracy Robertson, Susan Claudelli, and Catrina Schneiblein, director of Marketing from Amtrak Vacations to answer questions and give travel advice to seniors.

The AARP conference offers 200,000 square feet of exhibit space to vendors focused on the senior market, and each year brings 14,000 visitors to the Amtrak booth where they are provided with information about Amtrak and its advantages for seniors.

Amtrak's Pacific Surfliner Celebrates Ridership Milestone

Celebrating the historic ridership milestone, are (left to right) Richard Phelps, general superintendent, Southwest Division; Assistant Deputy Director for California DOT Tony Harris; Dennis Trujillo, California DOT; and Robert Roy Jr., the Pacific Surfliner's two-millionth passenger.

Amtrak and state partners of California's *Pacific Surfliner* celebrated the more than 25 percent increase in FY '03 ridership over last year by recognizing the two-millionth passenger to ride the service in ceremonies held on Sept. 30, 2003.

Guest speakers touting the successful service joined the *Pacific Surfliner's* first-ever two-millionth passenger, a Navy Seal officer stationed in Coronado, BMC Robert Roy, Jr., a regular commuter on the *Pacific Surfliner*, at events held in San Diego, Los Angeles, and Santa Barbara.

Rockettes Kick Off Amtrak Promotion

Above, twelve Radio City Rockettes launch Amtrak Vacations' Radio City Christmas promotion at Philadelphia's 30th Street Station on Oct. 7. A second performance was held the same day at Washington's Union Station. The general public and Amtrak employees joined in the launch.

Right, Amtrak Northeast Corridor employees can take advantage of special discounts on select Radio City performances of The Radio City Christmas Spectacular and A Christmas Carol — The Musical.

Radio City Christmas Spectacular

The 2003 edition of this Radio City Christmas Spectacular starring the world's greatest entertainers, returns for its 71st season at Radio City Music Hall!

Receive a part of an American tradition and experience such a show stopping variety as the "Miracle of the Woodlands," the magical "Living Nativity," as well as Santa's return to the Music Hall in the exciting 3-D stage ride.

Radio City is offering Amtrak employees two special benefits for the Radio City Christmas Spectacular in New York:

- Buy one ticket, get one free! Save 50% on show tickets to all nonpeak, pre-Thanksgiving performances.
- Save \$7 on all nonpeak, post-Thanksgiving performances.

The Amtrak employee discount offer is valid for the shows listed on the attached schedule for the Radio City Christmas Spectacular in New York.

For tickets, Amtrak employees call Ticketmaster Christmas Hotline at 212-367-1500 or go to www.ticketcity.com, the Radio City or Madison Square Garden Box Office or visit any Ticketmaster outlet and use CODE AMTRAK to save \$7.

Times and Qualifications: Offer subject to availability. Offer valid only on New Year's Eve or peak performances in January. \$7 savings after taxes or service. A \$100 Offer may not be combined with any other offer. Tickets are non-refundable and non-transferable. A \$100 fee change is included in the price of each ticket. Please note and other rules are subject to specific performance changes. Ticket price may vary.

A Christmas Carol — The Musical

This is your last chance to experience the spirit of Christmas the new way! You will be regally transported to Victorian England when you step inside The Theater at Madison Square Garden to witness Dickens' holiday classic. The costumes, the sets and even an amazing feature presented will have you feel as if you're visiting in the middle of London on Christmas Eve, 1842. A Christmas Carol — The Musical, the story you know, told in a way you never imagined from November 28 through December 27, 2003.

Radio City is offering Amtrak employees a special discount offer for A Christmas Carol in New York:

on tickets to select performances of A Christmas Carol. Offer is valid on all weekday performances through December 27, the Thanksgiving weekend shows, the 8:00 p.m. shows on Saturday, December 6 and 13, and the 5:00 p.m. shows on Sunday, December 7 and 14.

For details, call the Ticketmaster Christmas Hotline at 212-367-1500, go to www.ticketcity.com, the Madison Square Garden or Radio City Box Office, or visit any Ticketmaster outlet and use CODE AMTRAK to save 50%.

Times and Qualifications: Offer is subject to availability. Offer valid only on New Year's Eve or peak performances in January. \$7 savings after taxes or service. A \$100 Offer may not be combined with any other offer. Tickets are non-refundable and non-transferable. A \$100 fee change is included in the price of each ticket. Please note and other rules are subject to specific performance changes. Ticket price may vary.

Open Enrollment for 2004 Benefits

The annual Open Enrollment period for 2004 benefits will take place Nov. 10 through Nov. 23, 2003. This year, there is a single Open Enrollment period for Amtrak employees, which includes both management and agreement-covered personnel.

During this year's Open Enrollment period, employees may make changes to benefits elections that will become effective on Jan. 1, 2004. All benefit changes for 2004 must be made before midnight on Nov. 23, 2003.

To enroll:

- Log onto the Amtrak benefits website: www.amtrak-benefits.com; or
- Call the Amtrak Benefits Service Center at 1-800-481-4887.

In early November, the Amtrak Benefits Service Center mailed an

enrollment package to all employees' homes. This package contained an enrollment guide and a personalized worksheet that listed the employee's current benefits selections.

Employees need to enroll if there will be:

- A change to current election(s);
- Participation in a Health Care or Dependent Day Care Reimbursement Account in 2004; or
- Participation in Prepaid Legal Services in 2004 (Management employees only).

If you do not wish to change your benefit elections, you are not required to enroll. However, you must enroll by the deadline to participate in a Health Care Spending Account, Dependent Care Spending Account, or Pre-Paid Legal Plan (management employees only) in 2004.

For answers to questions about benefits or how to enroll, employees should call the Amtrak Benefits Service Center at 1-800-481-4887. Customer Service Representatives (CSRs) are available Monday through Friday (except holidays), from 8 a.m. to 8 p.m., Eastern time. However, during Open Enrollment, CSRs will be available on Saturday and Sunday (Nov. 15, 16, 22, 23) from 8 a.m. to 5 p.m., Eastern time.

New Government Rule Allows Tax-Free Reimbursement of Over-the-Counter Drugs

On Sept. 3, the U.S. Department of Treasury and the IRS announced a new rule that designates over-the-counter drugs as eligible expenses for tax-free Health Care Spending Accounts. The types of non-prescription drugs included in the

ruling are those taken to alleviate or treat illnesses or injuries.

Women's Health Notice

Amtrak's medical benefits provide coverage for mastectomy-related services including:

- Reconstruction and surgery to achieve symmetry between the breasts;
- Prostheses; and
- Complications resulting from mastectomy (including lymphedema).

This care is covered in the same manner as other medical care and deductibles, co-payments, and co-insurance may apply. For more information, please see the medical benefits summary plan description, enrollment guide, or call the Amtrak Benefits Service Center at 1-800-481-4887.

FRONT LINE FOCUS

Dear Amtrak,

I was on a passenger coach on train #90 on Aug. 16 departing from Deerfield Beach, destination Newark, NJ. When I embarked in Deerfield Beach, I was tended to by Mr. Joe E. Esteve.

I must bring to your attention, as a frequent traveler on Amtrak, in all of my rail travels, I have never been so impressed with anyone as I was with Mr. Esteve.

His respect, attitude and manners were the best!!! Though extremely busy he still had the time to address the needs and requests of his passengers. His pleasant and appealing attitude was the ultimate.

He sure aimed to make the passengers as comfortable as possible.

Looking forward to more travel with Amtrak and hopefully more people like Mr. Esteve. I remain a very happy Amtrak traveler.

Sincerely,

Patricia O.
Lincoln Park, NJ

Dear Amtrak,

Living in the Denver area for a number of years, I have had the opportunity to have contact with a number of station agents and conductors that work out of Denver.

Harold McDowell has sold me Amtrak tickets on at least four different trips to our Union Station in Denver. He is always the consummate professional! He handles each of his customers with courtesy and professionalism. He is ALWAYS of good nature and goes out of his way to assist people ... I can honestly say that it appears that customers go away satisfied and in good spirits. I only wish all of the station agents that I have encountered throughout the U.S. were like Mr. McDowell.

Harold McDowell shows a willingness to do a much better job than most ... he is truly a fine Amtrak family representative and a model to his peers.

Sincerely,

William D.
Wheat Ridge, CO

Preliminary Year-end Figures Show Financial Progress

Preliminary and unaudited figures for fiscal year 2003, while not final, show Amtrak making financial progress. In the wake of the SBUs' elimination, the company made a number of changes last year, including the major restructuring of the express business and the expiration of the Massachusetts Bay Transit Authority contract.

In FY '03, Amtrak received \$1.043 billion in federal funding (\$48.6 million of which was received in the first week of FY '04), and closed the year with approximately \$147.5 million in the bank.

While those in the railroad business understand that Amtrak is not, and never will be profitable, others not familiar with the intercity passenger rail business may think the company fiscal year results are bleak.

**"The preliminary
year-end numbers
point to a year of
solid progress for
the company."**

Deno Bokas

Chief Financial Officer

"Given the realities of the railroad, the unforeseen events that caused disruptions, and the travel climate in FY '03, the preliminary year-end numbers point to a year of solid progress for the company," Amtrak's Chief Financial Officer, Deno Bokas noted.

Amtrak provided service to over 24 million passengers in FY '03,

the highest annual ridership in the company's history. Significant year over year ridership increases on trains such as the *Pacific Surfliner* (up 26 percent), the *Empire Builder* (up 13 percent), and the *Pennsylvanian* (65 percent) led to this record.

While ridership set records, the company's ticket revenues totaled \$1.2 billion, \$76 million less than that reported in fiscal year 2002, and \$140 million unfavorable to budget.

A number of unplanned factors negatively affected the revenues Amtrak had expected to reach at the end of the year, including a weak business and leisure travel economy across all modes of transportation, the Iraqi war, a winter blizzard and fall hurricane in the Northeast and Mid-Atlantic, a

major summer power outage in the Northeast, and other significant causes of service disruptions beyond the control of the railroad.

Total revenue, which includes revenues such as those generated from the company's contract with the U.S. Postal Service and state-supported train services, was \$2.1 billion; \$152 million less than last year, and \$111 million less than the company had budgeted for the year.

Preliminary results indicate that Amtrak's enterprise-wide push to minimize and control expenses contributed to ending the year \$140 million (4.2 percent) under budget in total expenses. Because expense savings exceeded the revenue shortfall, Amtrak's preliminary operating loss was favorable to budget by \$20 million.

Acelas Back on the Road

Wilmington Maintenance Facility mechanics have completed the yaw damper repairs and roofskirt replacements needed on a total of 61 Acela power cars and HHP locomotives. The last of the 40 Acela power cars and 21 HHP locomotives repaired were returned to service the first week of November.

Congress Reaches Tentative Agreement on Amtrak Funding

In mid-November, House and Senate conferees tentatively agreed to fund Amtrak at \$1.23 billion in FY '04. The agreement also includes deferral of the repayment of the 2002 \$100 million DOT loan.

The proposed appropriation, which would come to Amtrak in the form of FRA grants, falls short of the \$1.8 billion the company has requested to address capital needs. However, after both houses reached tentative agreement on the size of the grant, Amtrak President David Gunn said, "This number

[\$1.23 billion] will allow us to continue to operate the national system. We will have to assess the impact of this funding level on our current budget over the next month."

At press time, the legislation had not yet been finalized. However, the level of funding is expected to remain unchanged as the legislative process continues.

Final passage of the bill may take place after the New Year, when both the House and the Senate return from their respective breaks. It will then go to the White House for signature.

H A P P Y H O L I D A Y S !

TRAIN OF THOUGHT

As I write this, the legislation containing our funding level has yet to become law, but we expect that the \$1.23 billion agreed to by House and Senate conferees in mid-November will be the amount Amtrak is appropriated for FY '04.

It's because we accomplished what we said we were going to do that confidence in Amtrak is building.

We had requested \$1.7 billion (or \$1.8 billion without deferment of the \$100 million DOT loan); \$900 million to cover the operations deficit plus interest and debt service, and \$800 million for our capital program.

The \$1.23 billion (with deferment of the loan) will clearly cover our operating expenses but we'll have to adjust our capital budget. We will give priority to equipment overhauls, track and signals. Some important and necessary projects

will be deferred. However, we will continue to make progress and 2004 should be another stable year.

We got the \$1.23 billion because we're rebuilding our credibility — because we're producing results. Ridership is at record levels. We've returned to service nearly 30 wrecked and damaged cars, we're re-instituting regular and badly needed maintenance and overhaul programs, we've rebuilt nearly 55 miles of track with over 140,000 concrete ties and completed 40 miles of catenary hardware renewal along the Northeast Corridor.

In one sense we should be proud of our accomplishments; \$1.23 billion is the highest appropriation we've ever received. We finished FY '03 on budget with cash in the bank and some important maintenance initiatives underway. For the first time in years we didn't have to borrow money or mortgage any assets.

Over the next months, we'll be analyzing what our most immediate needs are, and we'll have a better sense about what projects we'll have to defer. After the first quarter (at the end of January), we'll do a progress report about how we're doing with the federal

David L. Gunn

grant we work out with the FRA.

It's because we accomplished what we said we were going to do that confidence in Amtrak is building. We've got to stay the course and let Congress and the general public see that our sole focus is to contribute quality intercity passenger rail as part of the larger national transportation picture.

We should have enough money to continue the momentum we started last year. I feel pretty good about what we've done and the prospects for 2004.

Happy holidays and look forward to a happy, safe, and on-time New Year!

October Revenues Jump 7 Percent

All Long-distance Trains Experienced Vigorous Ridership Growth

Changes put in motion in FY '03 have contributed to the over 2 million trips recorded in the first month of fiscal year 2004, setting a new October ridership record. As it starts out FY '04, Amtrak's significant increases in both ridership and revenue over FY '03 are positive signs for the company.

While October saw a nearly 11 percent increase in ridership, it also produced a 7 percent increase in revenues over October '03 and \$4.8 million more than the company had anticipated for the month. Every single one of Amtrak's long-distance trains experienced double-digit ridership growth, and several saw increases of over 50 percent (*Silver Star* 55 percent, *Capitol Limited* 55 percent, *Sunset Limited* 50 percent). In total, long-distance train ridership grew 31 percent over last October; 35 percent over

Amtrak's budget expectations; and revenues grew 10 percent over last year, exceeding budget by 9 percent.

Resulting in a revenue boost of 6 percent, ridership on short-distance trains rose 8 percent, with 12 routes experiencing double-digit gains. In the Northeast Corridor, the *Acela* and *Metroliner* services also experienced improvements, with a 7 percent increase in riders and 6 percent increase in revenues.

The encouraging reports can be attributed to a number of factors. For example, the economy seems to be rebounding.

Amtrak's marketing and sales changes implemented during the last fiscal year contributed to October's strong showing. The national advertising campaign launched in September, based on

the company's simplified fare structure and designed to promote the railroad's lowest fares to its most popular destinations, appears to be capturing the attention of current and prospective riders. The company's new approach to revenue management is also aiding in the results.
