At a recent interview on C-Span, Amtrak President David Gunn attributed the positive trends to a number of factors. "I think we're making a lot of progress," he told viewers, "October was a pretty good month for us. We've really gone back to being a basic railroad and I think we've done some things that are right."

Gunn added that the simplification of the fare structure and the advertising of fares contributed to growth in riders and revenues in October.

Worst Natural Disaster Hits Southern California

"Eight Days of Hell," screamed the headline in one of Southern California's largest newspapers, the *Orange County Register*. During the week of Oct. 25, front-page news, radio reports and television images told the nation about the nine major Southern California fires that roared over 750,000 acres, burned over 3,000 homes, and killed 22 people. While fires raged inland, Amtrak remained on top of the situation, making frequent announcements to passengers to inform them that specific routes were safe and clear.

**"We kept the
Pacific Surfliner trains
moving as safely
as possible when
major freeway arteries
were shut down
and people were
stranded."**

Tom Gambrel, Manager,
Operations Support

The Operations center located in Oakland, CA, and the Consolidated National Operations Center (CNOC) in Wilmington, DE, held frequent conference calls with managers and staff during the course of the week.

"We kept the *Pacific Surfliner* trains moving as safely as possible when major freeway arteries were shut down and people were stranded," said Tom Gambrel, manager, Operations Support.

On Oct. 26, all *Pacific Surfliner* service between Los Angeles and Santa Barbara was suspended. "Passengers were calm and understanding. They realized that Amtrak had their safety in mind, and they remained patient and

hopeful for a change in the situation," said Jack Wilson, assistant superintendent, Transportation.

The *Southwest Chief* experienced delays when the Cajon Pass, a major artery through the San Bernardino Mountains, caught fire. "At one point we could not even get our busses through there safely," said Gregg Konstanzer, assistant superintendent, *Southwest Chief*. "Trains 3 and 4 turned around on either side of the fire, and passengers waited patiently

for safe passage," said Konstanzer.

Tragedy affected a number of Amtrak employees, as many were evacuated from their homes, only to await the fate of their home and possessions. Some lost everything, escaping with their lives and a few boxes.

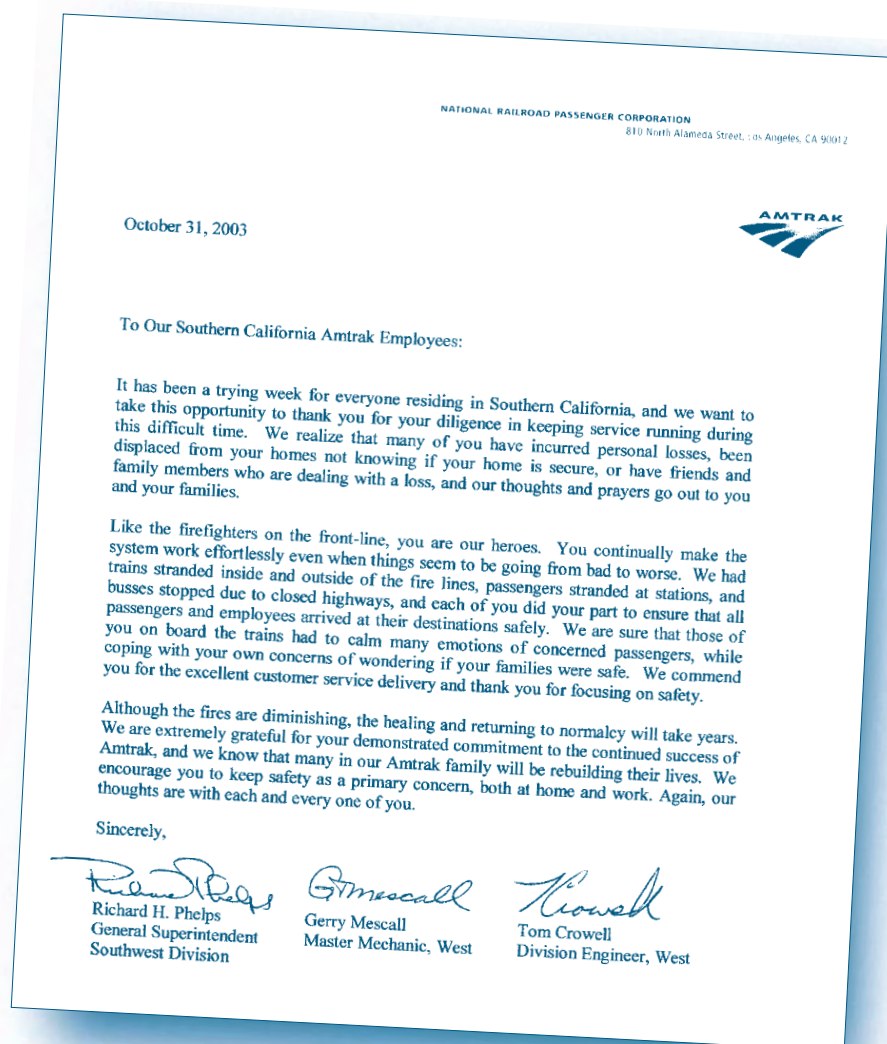

"My in-laws lost everything," said Jim Hicks a ticket agent in San Diego.

"The flames spared my home, but my family was evacuated," said Los Angeles Trainmaster Brian Sims,

Editors Note: This letter was sent to all Southwest Division employees as an expression of gratitude for their exemplary service during the Southern California firestorms.

who lives in Lake Arrowhead, CA.

"We were one of the lucky ones," said San Diego Crew Assignment Clerk Mary Suchin. "Our newly built home in Scripps Ranch burned to the ground. But the good news is that we were scheduled to move in the next day — so all of our possessions were in storage."

Preliminary Year-end Figures Show Financial Progress

continued from page 1

After accounting for depreciation and other non-cash expenses, the company's preliminary adjusted loss for FY '03 was \$678 million, \$47 million over last year's loss, but only \$7 million over what was budgeted. This is a remarkable result, considering the \$111 million revenue shortfall.

The encouraging trend experienced in the last quarter of FY '03 continued its momentum into the start of FY '04. Last month, Amtrak reported an 11 percent increase in ridership over Oct. '02 and nearly 10 percent above the company's budget for the month. Each of the company's long-distance trains experienced

double-digit gains in ridership versus the prior year, resulting in overall long-distance ridership growth of 31 percent and a 10 percent increase in revenue.

The increased October ridership translated to a \$7 million increase in ticket revenues over last year and \$4.8 million ahead of the company's budget for the month.

In addition, the preliminary expense figures for October were 3 percent favorable to last year and 1 percent favorable to budget.

The positive results can be attributed to the strengthening of the economy, Amtrak's new marketing and pricing strategies, and its fall advertising campaigns.

Preventive Maintenance Returns to Brighton Park

Opening a new mechanical shop is a significant challenge. Expanding the scope of a maintenance program is a complex undertaking. Doing both concurrently and successfully is one of the biggest tests facing the Chicago Mechanical and Transportation teams, as Amtrak reopens its Brighton Park facility.

As part of Amtrak's five-year capital plan to restore equipment to a state of good repair, the company revived Chicago's Brighton Park Maintenance Facility in late September.

The facility, which was closed in 2001, provides preventive maintenance on trains operating from Chicago that were previously serviced at the Beech Grove Car Shop and the Chicago Yards. Servicing these cars at Brighton Park on a 92- and 365-day cycle, instead of sending them nearly 200 miles away, improves efficiency and allows Beech Grove mechanics to focus their efforts on major wreck-repair and overhauls.

Brighton Park is operating under the Mechanical department's new equipment maintenance program, which, as of Oct. 1, 2003, doubles the number of over-the-pit inspections conducted per year. Previously, Amtrak's fleet was serviced only twice a year; every 180 and 360 days.

Cars are slowly being phased into this 12-visit-per-year program, which involves eight brief 30-day visits, three 92-day visits, and one annual preventive maintenance (PM) slot. The same inspection cycle is being introduced at Los Angeles, Hialeah, Ivy City, Sunnyside and Sanford. Facilities in Rensselaer, Philadelphia, Seattle, Oakland and other terminals may be asked to contribute.

It will take a full year to move the fleet from a 180- and 365-day cycle to a 30-, 92- and 365-day cycle. Amtrak is still establishing the procedures and assembling the material to convert its massive national fleet to a more intensive preventive maintenance effort and schedule. Fiscal year 2004 material used at Brighton Park is budgeted to eventually reach \$3 million per year.

With this new cycle, a car will first undergo thorough annual PM inspection,

followed by a simple touch-up inspection at 30 days, and then a more intensive PM at 92 days. This 30- and 92-day cycle is repeated through 365 days, when the car is up for its next annual PM. This expanded maintenance rotation cycle will help improve the reliability and comfort of Amtrak's fleet.

The 30-day maintenance program performed at the Chicago yards includes inspection of the wheels, shock absorbers, electrical cables, emergency lights, doors, carpets, refrigerators and public address systems. Cars requiring quarterly and annual maintenance are serviced at Brighton Park.

Getting Ready to Open Shop

To ready the facility for its new function, 45 unusable cars that sat at Brighton Park for the last two years were sold, scrapped, or moved to other locations between July and October.

After the decision to re-enlist Brighton Park was made, coach cleaners, laborers, electricians, foremen, carmen, material control clerks, clerical and sheet metal workers positions were filled. Tracks located on the grounds and within the maintenance facility that hadn't been used in a couple of years were inspected and new ties were installed by foremen and trackmen. Supplies were ordered and partially stocked, painting, plumbing and electrical work was

Material Control Clerk Kevin Smith stocks the shelves of the Brighton Park warehouse.

completed and in August the cars in need of quarterly maintenance began to arrive at the facility.

Cars Start Rolling In for Service

Cars ready for quarterly and annual inspections are removed from the trains at the Chicago Yards and shuttled to Brighton Park by Chicago's Transportation employees. Consolidated National Operations Center (CNOC) works closely with the Mechanical department to ensure that the required cars are removed from the train. After completing the maintenance cycle, cars are returned to the yards, coupled to the trains, and prepared for departure from Chicago Union Station.

The first eight cars to undergo 92-day inspections at the revitalized facility were Superliner I Coaches 31006 and 34057, Superliner I Diners 34057 and 38015, Superliner I Sleepers 32026 and 32002, and Amfleet I Dinettes 20252 and 48230.

Far more involved than the monthly inspection, the 92-day preventive maintenance program requires 120 hours to complete and includes undercarriage work that involves checking and repairing brakes, trucks, water waste systems and electrical components.

The annual PM visit involves detailed maintenance in which the entire interior, exterior, undercarriage and electrical

system is inspected, cleaned and repaired. After completing the maintenance cycle, cars are returned to the yards, coupled to the trains, and prepared for departure from Chicago Union Station.

Stocking the Shelves

Material Control employees at the Brighton Park warehouse receive, store, disperse and record the inventory necessary to support the 92-day and annual preventive maintenance programs.

The reopening of the warehouse required a significant amount of preliminary work, with three shifts operating every day. Materials were needed to repair the loading docks, overhead doors and material handling equipment. Racking and shelving units were erected to provide storage for over 1,500 items, many of which are currently on order because the parts had not been replaced for years.

Over the years, the facility has been reopened to serve various purposes. After closing in 1981 as a result of consolidation of the Chicago area maintenance facilities to the Chicago Yards, Brighton Park was resurrected and expanded in the late '80s to provide preventive maintenance for Superliner, Heritage, Horizon, and Amfleet cars until 1996, when the facility closed due to budgetary constraints. Between 1999 and 2001, Brighton Park mechanics serviced and maintained Express cars and RoadRailers.

"By reopening this facility and implementing more frequent inspections," said Master Mechanic Tom Wozniak, "equipment will be better maintained and passengers can depend on better service."

Mechanic Leroy Moore repairs the commode in Superliner Sleeping car 32002 as part of the car's 92-day inspection.

Achievable Results Sought in Augmented Accountability Program

Amtrak's inspector general estimates that between 10 to 15 percent of Amtrak's total food and beverage FY '03 revenues were lost to remittance errors, inconsistent application of procedures, condemnation, theft, miscoding, and accounting errors. Yearly financial losses from these errors are estimated to total \$7 million.

To augment the company's auditing resources and to address this issue in a comprehensive way, 17 operations supervisor positions located across the country have been reinstated and shifted to the Service Delivery department to supervise the Audit and On Board Services Training program designed to recoup losses and retrain employees on accounting procedures.

"We have millions of dollars at risk out there in our commissaries and on board trains," said Kevin Scott, chief of Service Delivery. "Providing the resources to

recover these losses is the basis for this new program," said Scott.

While still providing support to the Operations department at their respective work locations, the operations supervisors' primary focus will be conducting on-board service and conductor remittance reviews, supervising and training employees on board trains, reviewing trip packets, and helping on-board service employees better understand accounting procedures.

For example, Amtrak chefs are now accountable for their inventory, a change made in September 2003. "Operations supervisors will help chefs know what this new responsibility means, and how they are accountable," said Tom Hall, senior director, Food and Beverage.

The 17 operations supervisors are being trained in Wilmington, DE, Chicago and a number of locations in the West, where they are learning how to carryout the new responsibilities. On-board auditing

includes analyzing product usage, and how to spot "red flags," such as acute changes in stock usage and remittances. Working with the commonly referred to 'Chapter 14 Procedures' from Amtrak's Service Standards Manual, operations supervisors will become well-versed in all of Amtrak's accounting procedures.

GateGourmet, Amtrak's commissary food provider, will also fall under the purview of the new program. Operations supervisors will check on order accuracy and conduct periodic stock audits on returns of food and alcohol.

"This new program will keep our contractor in check," said Mike Dwyer, director of Food and Beverage Contracts. "We have to ensure quality product delivery, and having the staff to provide detailed analysis will help with accountability," said Dwyer.

The annual labor cost of the 17 American Railway & Airline

"Providing the resources to recover these losses is the basis for this new program."

Kevin Scott,

Chief of Service Delivery

Supervisors Association (ARASA) union positions will be offset by the expected increase in recovered revenues and improved sales.

The Service Delivery department has included revenue increases in its FY '04 Food and Beverage budget. "These are achievable numbers," added Hall. "With the help of these new positions, the Service Delivery department will ensure that Amtrak revenues are secured, and that employees benefit from accounting and inventory procedures training."

Amtrak Advisory Committee Names Employee Award Recipients

Exemplary customer service delivery, Amtrak's Thruway bus service, and ADA compliance were just a few of the issues discussed at last month's Amtrak Customer Advisory Committee (ACAC) meeting in Wilmington, DE.

The 23-person committee, dedicated to enhancing Amtrak service, ridership, and revenue, in many ways serves as Amtrak's own voluntary service delivery focus group, providing information based on the committee members' Amtrak travels and making recommendations that are useful to Amtrak management.

As such, ACAC members come across the best and the worst of Amtrak service delivery. At the November meeting, ACAC formally announced the first recipients of its newly formed Employee Customer Service Awards program, which honors five front-line employees who demonstrate consistent and exemplary customer service. The awards are made twice a year, and are announced at ACAC's bi-annual national meetings.

The first five employees to be honored are Marlene Koob, station manager in Seattle; Greg Herold,

assistant conductor on trains #300 and #303; Daryl Reid, train #196 conductor; Flora Jones, sleeping car attendant on train #92; and John Turk, sleeping car attendant on train #19.

The five award recipients, chosen from a list of front-line employees nominated by ACAC members, met a range of criteria, including consistently upholding Amtrak's on-board service standards and exhibiting exceptional concern for passengers in difficult circumstances. Each ACAC committee recognizes employees within its committee jurisdiction — Long-distance West, Short-distance West, Long-distance East, Short-distance East and the Disabled and Senior Task Force. The recipients will be honored by ACAC members and members of Amtrak management at their respective crew bases in December and January.

Committee members are required to make a specified number of Amtrak trips, after which they submit trip reports to Amtrak management. Recognizing the value of Amtrak's Thruway bus network as an important feeder service to the trains, the committee has also begun to submit Thruway

service trip reports. In FY '03, ACAC members submitted 347 trip reports, covering over 175,000 rail miles, and volunteered over 6,000 hours.

Some of these hours were spent conducting station outreaches, another relatively new ACAC initiative, in Seattle, Raleigh, Albany, Portland, and Wilmington.

"The station outreaches are a productive way to engage with passengers and to collect their input on Amtrak service, while it's still fresh in their minds," noted ACAC Chair Rick Ponthan.

Other meeting highlights included congressional and promotional and sales updates from Joe McHugh, vice president, Government Affairs, and Barbara Richardson, vice president Marketing and Sales. Mike Frazier, director, system operations, led the group on a tour of the Consolidated National Operations Center (CNOC) and explained the functions of the center. To support their knowledge of Amtrak's service policies, ACAC members received and reviewed copies of the Service Standards Manual.

ACAC Bi-annual Employee Awards Criteria

- Initiates and fosters an atmosphere that promotes consistent exemplary customer service.
- Has demonstrated unprecedented awareness and concern for the passenger in unusual or stressful situations.
- Executes Service standards consistently:
 - Safety Regulations
 - Professional Communication Skills
 - Personal Appearance
 - Performs consistently with Amtrak's commitment to high quality customer service and integrity in the workplace.

Chicago's Lake Street Interlocking Project Reaches Halfway Mark

One Track at a Time

Faced with failing infrastructure, rising maintenance costs, and increasing traffic, Amtrak and METRA commuter services have joined together to reconstruct the aging Lake Street Interlocking (LSI) located on a seven-block stretch extending from the north side of Chicago Union Station to Canal Street.

Chicago's Engineering employees have reached the mid-point of the five-year project aimed at reducing congestion, enhancing capacity, and renewing the interlocking that handles an estimated 320 movements each weekday.

**"We expect
the rebuilt track
to provide many
years of trouble-free
operation with
minimal maintenance."**

Rodney Pena,
Assistant Division Engineer

Reconstructing LSI involves completely rebuilding the track, the sub-grade and drainage system under the track, and the power and signal system — at a cost of \$78 million. Funding for this project is shared between Amtrak (12 percent) and METRA (88 percent), a formula based on the number of trains each company operates over the interlocking.

Over the years, the costs of maintaining the interlocking, built in 1923, have been rising. Cables and switch machines, which date back to the 1920s, required costly special-made parts and the signals needed constant repairs. With the interlocking only steps away from the Chicago River, mud had seeped through the concrete subgrade and contaminated the ballast. When track was needed to replace track sections made of 130-pound rail, which has not been manufactured in over 20 years, similar rail had to be purchased from brokers at inflated prices, then modified at an additional cost to meet track requirements. In January 2001, Amtrak began the lengthy process

of bringing the interlocking to a state of good repair.

When the project is finished in December 2005, several miles of track; 59 signals; 62 switch machines; and specialized track work including 19 turnouts, 11 single crossovers, three double crossovers, and two double slip switches will have been installed. The rebuilt LSI will handle the added capacity in 2006 when METRA doubles its North Central Service from 10 to 20 trains per day departing from Chicago Union Station.

In addition to track and signal upgrades, the old manually operated lever-style-interlocking machine is being replaced with a microprocessor-based system. With the click of a mouse, this new computer-based system will allow train directors stationed at the Lake Street tower to monitor and initiate signal and switch changes that direct the movement of trains through the interlocking.

"Each day is a little bit different and presents a different challenge," said Train Director Doug Mathews. "Most of the Lake Street train directors have 25 or 30 years' experience; we know how to handle complications such as train delays, signal malfunctions, or track upgrades, to move trains as safely and expeditiously as possible."

Halfway There

After working seven months to complete four phases of the 17-stage project, Engineering employees performed the successful cutover of the newly constructed Canal and Lake Street sections of the interlocking on Oct. 24. The 25-hour cutover process involved Track and Signal employees who performed a series of Amtrak and Federal Railroad Administration (FRA) tests to allow train travel over the newly completed section of the interlocking while discontinuing use of the old track and signal system.

These four phases were the most complex of the project so far. The tracks were reconfigured to establish additional parallel routes to bring trains in and out of the station. Employees installed and tested 16 signals, 18 switch

LSI Gang Watchman/Track Foreman Peter Eklund signals the track gang to wait in the clear as the Empire Builder departs Chicago.

Signal Maintainers Victor Reap and John Vaughn inspect the newly installed N453A slip switch at the Lake Street Interlocking.

With track and signal upgrades complete, the newly constructed section of the Lake Street Interlocking reduces congestion for Amtrak and METRA trains.

Inside the Lake Street Tower, Train Director Doug Mathew (right) guides a train by operating the old interlocking machine, while Steve Pivoney (left) lines up a train with the new signal panel, which is being used temporarily until the old interlocking machine is discontinued. Once the upgrade project is complete, both the old and new interlocking systems will be discontinued and train movement will be directed by a new computer-based microprocessor.

continued from page 6

machines, four turnouts, two single crossovers, one double crossover, and one double slip switch — all within the limited space of two city blocks.

The work was performed with minimum train delays, without schedule changes, annulments, or suspended service. "It's like rebuilding a toll plaza without shutting down the highway," said Staff Engineer Steve Reynolds.

"One of the biggest obstacles we're facing is the heavy traffic flow."

Rodney Pena,
Assistant Division Engineer

"One of the biggest obstacles we're facing is the heavy traffic flow," said Assistant Division Engineer Rodney Pena. On a typical weekday during daylight hours, continuous train movement through the interlocking — including two *Empire Builder* trains, 14 *Hiawatha* Service trains, and 156 scheduled METRA trains — allows (at most) 12-minute windows for track outages on some main tracks. "Additionally," continued Pena, "the lack of storage space and limited rail access to the work site makes it extremely difficult for materials to be delivered." These challenges forced workers to accomplish as much construction as possible at night, while making every effort to minimize disturbance to residents in nearby high-rise buildings.

Amtrak forces, led by Pena, and Track Foremen Pete Avalos and

James Coburn, removed and installed the track and ballast while subcontractors installed the new subgrade and drainage system. The track was built with 136-pound rail on both wood and concrete ties. "We expect the rebuilt track to provide many years of trouble-free operation with minimal maintenance," said Pena.

Under the direction of Project Engineer Ray Weinel and Foremen John Rameriz and Troy Mason, Signal employees installed the new switch, signal, and track circuits. The electric switches are equipped with 480-volt electric heaters that melt the snow and ice on the track during Chicago's frigid winters.

"Obsolete air-operated switches, used to divert trains from one track to another have been replaced with new electric switches, which are more reliable and require less maintenance," explained Weinel. New tri-color LED signals that project green, yellow and red lights were installed to safely guide trains through the interlocking. The LED signals are more cost effective than the old white-light position signals, which are being phased out.

"The Track and Signal employees working safely under difficult conditions contributed to the success of what we've accomplished so far," said Project Manager Robert Olson.

Division Engineer Dave Klouda added, "The employees' efforts, along with the joint commitment of Amtrak and METRA to allocate funding to this project, will result in the first total reconstruction of the interlocking in 80 years and yield long-term cost savings and improved service to our passengers."

Bear Mechanics Begin FY '04 Work on Wrecks

Metroliner Coach 21908 is the first wreck-repaired car that Bear Car Shop mechanics returned to revenue service this fiscal year. As a result of an October collision at Sunnyside Yards, the car sustained damage to the corner post, step, and door frame. The car was returned to service Nov. 19.

Kinship Cuisine on the Capitol Corridor

Many of the 100,000 passengers who use the *Capitol Corridor* trains in the Bay area every month are regular riders, who, by making the service part of their daily routine, develop bonds with fellow passengers and Amtrak crew members.

Recently, passengers invited four *Capitol Corridor* conductors to dinner during the crew's layover in the city of Auburn. Conductors Michael Chappel, Jack Effner, Rebecca Gittleman, and Seth Squires joined the passengers for dinner at two Auburn restaurants. At one of the restaurants, the

owner and avid *Capitol* rider, Patricia Enochs, was so excited about hosting the Amtrak crew, that she provided hors d'oeuvres and came out of the kitchen to greet the dinner party.

"Amtrak is very proud of the relationship our crews have developed with our core riders. *Capitol Corridor* riders continue to be a very vocal and supportive group of the service," said Gregg Baxter, assistant superintendent of road operations in Oakland, CA. "The friendships are a testament to the quality service provided."

Mr. Monopoly Brings in the Bucks

General Foreman Mike Fricka laughs with Mr. MONOPOLY before the "Reading Railroad" departs Chicago Union Station on Oct. 16. Forty-eight contestants aboard the chartered Amtrak train played the popular board game as they headed for the 2003 National MONOPOLY Championship in Atlantic City.

Engineering Department Leads in Safety for FY '03

Leading Amtrak's three major operating departments with the lowest reportable injury ratio, the company's Engineering department safety performance during last fiscal year was nearly 11-percent lower (better) than the corporate goal of a 3.8 ratio.

The Engineering department concluded FY '03 with a ratio of 3.4 injuries for every 200,000 hours worked, a 15-percent decrease over FY '02 and the second consecutive year of reductions. Two Engineering divisions, New York and Mid-Atlantic, were primary contributors to the safety success of the department, with reportable injury ratios of 2.8 and 2.4, respectively.

The department undertook a number of initiatives last year that contributed to the reduction of injuries, one of the most notable of which was an increase in field-level supervision. Agreement-covered supervisors began directly participating in the division engineers' daily calls to discuss and recognize individual participation and provide constructive comments.

In addition to these morning conference calls, Northeast Corridor division engineers and key production management began participating in the department's call conducted by Bruce Willbrant, the deputy chief engineer for Maintenance of Way, during which each injury was

discussed so that similar incidents can be prevented. Willbrant's question to participants, "What are you doing for safety today?" sets the tone for discussions. "Our goal is not simply to be better every year," said Willbrant, "We want to compete with the Engineering departments from other Class I railroads." Realizing the need for strong participation in safety programs at all levels of management and labor, Joe Guzzi, Mid-Atlantic division engineer, added, "We need to get everyone involved, that's how a safety culture is fostered."

One-on-one meetings with division engineers also began last year to provide feedback regarding safety performance, as did the routine distribution of safety-related messages and injury updates. A one-week workshop for Engineering department supervisors and management began during FY '03, reinforcing the department's goals.

On-going Programs Drive Home the Message

In addition to the safety initiatives that began last year, the Engineering department has had in place variety of on-going safety-related programs and initiatives that help drive home the work-safely message to field-level employees. To increase awareness of health and safety requirements, employee safety and health fairs held throughout the Northeast

Amtrak's Chief Engineer David Hughes reviews departmental goals with supervisors and managers during an Engineering workshop.

Corridor include a variety of internal and external groups and agencies, such as Amtrak's prescription eyewear provider and safety shoe supplier.

Other on-going programs include monthly safety calendars, seasonal safety themes, safety "blitzes," and quality job briefings, all of which contribute to worker safety awareness and knowledge. Comprehensive accident investigations demonstrate an immediate and constructive departmental response and support individual accountability.

Giving credit to the safety officers and safety liaisons, Steve Falkenstein, New York Division engineer, said, "These individuals are valuable resources and have helped us successfully implement programs." Falkenstein cites the division's use of the Unsafe Condition Report to correct physical plant deficiencies

and the recently developed Fall Protection program for Communications and Signals employees as two examples. He also believes that management and supervision's support of safety must remain visible to employees.

Amtrak's Engineering department employees deserve recognition for their efforts to work safely during the past fiscal year. Their success was built on a strong foundation: responsibility, accountability, teamwork, and common sense. "Our department is committed to reducing injuries and maintaining zero tolerance for safety violations," said Chief Engineer David Hughes. "I'm convinced that safety performance is a barometer of the overall performance of the organization."

Michael Pollick, System Safety Department, contributed this article.

FY '03 On-duty Reportable Injury Numbers Lowest in Amtrak History

By focusing on safety and operating rule compliance, conducting quality job briefings, and identifying potential job hazards, Amtrak completed FY '03 sustaining the fewest number of on-duty employee reportable injuries for any year in its history.

Reportable injuries are those that require medical treatment exceeding first aid or that result in lost time or restricted duty. Based on the number of reportable injuries for every 200,000 hours worked, the corporation achieved a 3.9 ratio, a 7 percent reduction compared to FY '02. Amtrak's efforts to focus on passenger safety also resulted in a significant decline in the number of reported on-board passenger injuries in FY '03 — a reduction of 21 percent.

Chief of System Security and

Safety Ron Frazier acknowledged that although the company fell short of its 3.8 goal, the reduction in employee injuries was significant. "Our employees deserve credit for working more safely, and local supervision and management should be recognized for their safety leadership," said Frazier.

Engineering led major operating departments with an overall reportable injury ratio of 3.4, followed by Mechanical (3.9), and Transportation (4.6).

Groups achieving the lowest employee reportable injury ratio in each of the five following categories are:

- Engineering: Mid-Atlantic Division (2.4)
- Mechanical: Wilmington Shops (2.3)

- Transportation: Mid-Atlantic Division (3.7)
- Reservation/Call Center: Philadelphia (0.5)
- Commuter Service: Metrolink (1.3)

Vice President of Operations Bill Crosbie noted, "The 21-percent decrease in passenger injuries we experienced during FY '03 says a great deal about the company's commitment to safety and the way we conduct business. The reduction in passenger injuries is especially gratifying since overall ridership increased 3 percent during this period."

The greatest decrease in passenger injuries — approximately 24 percent — occurred aboard Amtrak's trains. With a goal of at least a 10 percent reduction over

FY '02, this improvement is significant. The Central, Mid-Atlantic, New England and Southern divisions all realized major decreases. Station-related injuries were down 5 percent.

The reductions in passenger injuries can be attributed to a system-wide effort by Amtrak's on-board and station personnel to identify "at-risk" passenger behavior and to intervene quickly and decisively to eliminate potentially hazardous situations. Through training and awareness efforts, focus has been directed to safety-sensitive activities including boarding and detraining, body posture and footing while trains are in motion, travel on escalators and stairs, and movement and placement of luggage.

Michael Pollick contributed this article.

Track Geometry Cars Keep Amtrak in Line

"We're Making Tracks" — this statement is part of Amtrak's critical message to its passengers, stakeholders, and to Congress. "Making Tracks," or more specifically repairing and replacing the right-of-way infrastructure, is a major component of the company's critical and aggressive five-year plan to bring the railroad to a state of good repair.

Part of keeping tracks in good repair includes the upgrade and replacement of rail and ties. Amtrak's Track Laying System (featured in the June edition of *Amtrak Ink*) lifts rail from the roadbed and removes old, worn ties and replaces them with new concrete ties before returning the rail back to the roadbed, clipped to the new ties.

Once back in place, the rail must then be periodically tested for meeting required geometrical specifications for rail alignment, gauge (distance between the rails), profile, curvature, track elevation (banking), and gravitational-force (also known as g-force) measurements for lateral and vertical ride quality.

Years ago, track inspectors using hand measurements performed the process of testing tracks for meeting these specifications manually. Amtrak's first Track Geometry Car (TGC), put into service in 1977, was a Plasser American EM-80, a self-propelled buggy car, which was slow, cumbersome, a challenge to keep running, and measured no more than about 3,500 miles of track per year. It required maintenance-of-way pilots for operation and taking track out of service, and it covered the Northeast Corridor just once a year.

When Amtrak planned to operate trains at 125 mph in 1983, the

Amtrak's Track Structure Assessment Vehicle (TSAVe) is a self-propelled track geometry survey vehicle with GRMS (Gauge Restraint Measuring System) capabilities as its primary mission.

Federal Railroad Administration (FRA) required that the company measure the track geometry with a TGC every month, which was impossible to accomplish with the EM-80. Advances in technology enabled Amtrak to develop a TGC capable of performing this task and the EM-80 was retired in 1986.

The "Corridor Clipper," car #10002 (known as the "ten thousand two") is one of three TGCs currently in service on the Northeast Corridor. The Clipper is a converted Amfleet car, originally coach #21191, which was transformed at Beech Grove in 1984 to its current form.

Put into service in June 1985, the car was the first TGC in the world to have a non-contact, servo-optical, inertial measuring system. The system uses gyroscopes and accelerometers similar to an airplane's navigation system, to measure how the car "flies" down the track. A second system of optical sensors, and distance transducers locate the rails. The combination of these measurements is converted to track geometry by the on-board computers. This system allows the car to measure track while operating in-revenue trains, without restriction, at speeds up to 125 miles per hour (the car has

also been tested up to 135 mph). The original measuring system on the car was developed jointly by Amtrak, FRA and a vendor, Ensco, Inc. It was specifically designed to operate in a revenue train consist traveling at full track speed, while collecting accurate track measurements — something that had never been done before.

Amtrak pioneered this type of non-contact system and this method of testing, which is now a worldwide standard for track-measuring cars. Although used primarily in the Northeast Corridor, the 10002 can operate throughout the system.

Another car in the TGC fleet is the TSAVe (Track Structure Assessment Vehicle), car #A68402, a Plasser American EM-GRMS self-propelled test car, so named because of its Gauge Restraint Measuring System (GRMS) that measures the strength of the rail, ties, and fastening system of the track, in addition to a much upgraded geometry system similar to the system used on the original EM-80. GRMS testing is required by the FRA for all tracks carrying trains operating at speeds over 125 mph. It is also used to assess the condition of wood-tie tracks, not an FRA requirement. Amtrak purchased the car from Conrail during the Norfolk Southern-CSX break-up in 1999 for a fraction of what it would cost to buy one new from Plasser.

The third and newest car in the fleet is the 10003, an *Acela Express* coach built to be placed within the *Acela Express* train's consist as a seventh car. The FRA requires that the track geometry be measured monthly for all track that allow speeds over 125 mph and that a car of similar dynamic performance to the passenger cars be used for this testing.

To fulfill this requirement, Amtrak advanced the state-of-the-art in track measuring by developing a

The system's computers are housed in two six-foot-high industrial component racks. Four of the computers use a Windows operating system, while three use QNX, a real-time based operating system used for data acquisition and Global Positioning Satellite tracking of the car.

system for the 10003 that utilizes the next generation optical inertial system. When the 10003 was put into service in 2001, it became the first TGC in the world to measure track at 165 mph. Although last summer, the French National Railroad (SNCF), after seeing what Amtrak was doing with the 10003, had a vendor demonstrate an optical inertial system in a TGV trainset at 188 mph on the TGV Sud-est line in France.

The very necessary track inspection function provides a complete evaluation of the track geometric conditions. The TGCs measure 16 parameters of track shape defined by the FRA and MW1000, and 4 parameters of carbody and truck acceleration. Each measurement is taken once per foot as the cars travel down the track. (Traveling at 150 mph, that's 4,400 measurements per second.) The cars automatically compare the measured values against the maintenance and safety thresholds in the MW1000 and FRA Standards, and produce a real-time report for the track maintenance personnel on board the car.

Each of the TGCs plays a vital role in providing Amtrak with timely and critical data that enables the company to maintain a watchful eye for potential defects in track structure. The effect of this information is that Amtrak can quickly determine necessary repairs that will ensure ride quality from the crucial perspective of both passenger safety and comfort.

Michael Trosino and Marty Perkins, both from the Engineering department, contributed to this article.

The AMTK10003 car is part of an *Acela Express* train consist, dedicated solely to track testing. Technicians use the instrument and testing area to edit and publish information as it comes off the car's systems, and railroad supervisors learn the condition of their railroad and review data that show areas that need repair.

2003 President's Service and Safety Awards

This year, Amtrak honored its best and brightest employees at nine regional President's Service and Safety Awards ceremonies. From Los Angeles to Boston, over 1200 people, including Amtrak President David Gunn, coworkers, and family members, recognized the outstanding achievements of the award recipients. Employees celebrating their 30th anniversary were also recognized at the events.

In a letter to those attending the events, Gunn said, "All of these recipients exhibit the kind of commitment, resourcefulness, and inspiration that all Amtrak employees should emulate."

Published here are excerpts from the accomplishments of each of the award recipients.

Clockwise from top left: David Gunn kicks off the Philadelphia President's Service and Safety Awards ceremony in Philadelphia on Nov. 13, 2003.

The following President's Service & Safety Awards recipients were recognized at the Los Angeles ceremony on Oct. 15. Front Row (L. to R.) Sue White, team leader; Alice Pinkney, station agent; Carol Crego, district manager; Jay Glass, detective; John Clayborne, detective; Monica Pisciotta, ticket agent. Second Row: Gary Hurst, red cap/baggage; Robert Boyd, conductor; Tim Rennegarbe, FDA inspector and cleaning; Debbie Dew-Wood, district manager; Lynn Berberian, superintendent Passenger Services; Michael Hill, manager stations; Craig Cook, electrician journeyman; Lois Cuning, manager Operations Management; Michael Chandler, superintendent Operations; Dustin Davis, manager Maintenance of Equipment; Leonard Villamor, assistant superintendent; John Stutes, engineer; David Gunn, president; Charlie Torres, engineer; Robert Berrotean, engineer; Charles Roebuck, manager On-board Services; Jimmy Moreno, assistant passenger conductor; Bill Herron Jr., engineer

L. to R. Carmen Crayne, team leader; President David Gunn; Linda Hinds, reservation sales

agent; Eleanor Gravely, team leader; Milagrosa Martinez, team leader; and Richard Montini, team leader, are members of the Mid-Atlantic Call Center Diversity Advocacy Group and are award recipients in the Business Diversity Category.

Recognized with the Safety Achievement Award is the El Paso Crew Base. Front row (L. to R.) John Stutes, engineer; Charles Torres, engineer. Back row: David Morgan, group nominator; Jimmy Moreno, passenger conductor; Robert Berrotean, engineer; David Gunn, president; George Arredondo, passenger conductor; Oliver O'Bryant, passenger conductor; and Bill Herron, engineer. Missing from photograph: Norman Marestein, passenger conductor; Juan Fernandez, passenger conductor; Ed Kollar, engineer.

L. to R. Sgt. Brian Ravert; Annette Irons, manager; President David Gunn; and Officer King Lee are members of the National Communications Center Accreditation Team and are award recipients in the Achievement Category.

Achievement

Annette Irons, Manager, Philadelphia, PA
King L. Lee, Police Officer, Wilmington, DE
Brian P. Ravert, Sergeant, Philadelphia, PA

Due to the dedication and professionalism of a group of Amtrak Police Department (APD) National Communication Center (NCC) employees, the NCC was accredited by the Commission on the Accreditation of Law Enforcement Agencies (CALEA) in November 2002.

The NCC is a 24/7 public safety answering point, similar to a city's 911 center, responsible for facilitating nationwide security and protection of Amtrak's property, employees, passengers, and physical assets. The NCC is staffed with sworn and non-sworn personnel who process, coordinate, and dispatch police activity for approximately 35 APD field offices located nationwide, including most major cities.

To achieve accreditation, the NCC was required to meet 214 standards, addressing all

aspects of the operation, including organizing, directing, recruiting and training.

When Amtrak Police Chief Ron Frazier decided that the NCC should strive for CALEA accreditation — independent of APD's CALEA accreditation — the NCC had to create and implement programs and procedures that were new to the NCC. These initiatives were exceptionally time consuming and required a great deal of effort above and beyond the team members' regular assigned duties.

Elmer Glassing,
Construction Supervisor,
Philadelphia, PA

Elmer Glassing has been employed at Amtrak since 1980, when he was hired as a signalman in the Engineering department.

Glassing, through his leadership and with the assistance of Communications and Signals (C&S) Inspector Robert Fritz, and Mainte-

nance of Way Repair Foreman Dennis Gilbert, designed and developed a mobile power unit that reduced the time interval between signal failure and signal system restoration. The system he designed also enabled a faster response time and was more efficient than the generators previously used, and it translated to nearly 60-percent in cost-savings to Amtrak.

This achievement truly belongs to Mr. Glassing, who developed the technology and brainstormed the costs. The C&S 100-cycle Dual-Power Generating Unit is an asset to safety and saves Amtrak thousands of dollars.

Elmer's nominator Chuck Irvin says, "Mr. Glassing's dedication to providing our passengers an infrastructure that is reliable and safe is reflective of all the employees here in the Perryville Maintenance of Way group. He provides a high-integrity, fine supervisory example."

William R. Judefind,
Technician-S, Wilmington, DE

William Judefind began his career on Nov. 5, 1979 as an electrical technician, and is now considered the Wilmington Maintenance Facility's "go-to guy." Judefind's co-workers describe him as unique and genuine, and they say he goes beyond the call of duty — always ready to share his expertise when called upon.

The amplifier module boards in the Amfleet public address (PA) units were burning out as a result of high-voltage surges running through the train's communication signal line, which can cause the system to overload and become inoperable.

Judefind discovered that the new board design did not isolate trainline connections and that the absence of basic fuse protection, among other things, resulted in a voltage surge that contributed to the board's destruction. Judefind created a Protection Module Board that stops the voltage surge, thereby preventing it from burning out. Judefind convinced his management to submit his design to Safetran Systems and the company incorporated the design into future PA units. More than 405 PA units have been modified by the Wilmington Shops — a savings of more than \$220,000.

Judefind's supervisor Bob Kanicki says, "His persistence and his eagerness to find a cost-effective resolution is a model for the entire Wilmington facility. Amtrak needs more dedicated workers like him." William Judefind is definitely an unsung hero.

Business Diversity

The Mid-Atlantic Reservation Sales Call Center Diversity Advocacy Group

Carmen Crayne, Team Leader

Eleanor Gravely, Team Leader

Linda M. Hinds, Rate & Information Clerk

Milagrosa Martinez, Team Leader

Richard N. Montini, Team Leader

It was just after Thanksgiving 2000 when a group of Mid-Atlantic Reservations Call Center (MARSCC) employees came together to broaden the scope and diversity of the upcoming December holiday season.

Carmen Crayne, MARSCC team leader, viewed the holiday season as an opportunity to bring people with differences together, rather than to draw lines of separation. Realizing that the demographics of the 600-plus employees at the call center mirrors that of our nation, Carmen put together a team of five call center employees from varied backgrounds and cultures. The team became a multi-cultural resource for raising awareness of various ethnic and cultural differences within the department and the company.

The team organized a year-long celebration of diversity and cultural differences, starting in February 2001 with Black History month, into 2002 with an observation of the Republic of India's New Year's Day in January, and throughout the rest of the year with celebrations of Irish, Native American, and German

and Latin American cultures. Also noted were the accomplishments of great American women, as well as local female employees and the strength of American patriotism.

The year ended with a celebration in December that featured one display case housing Chanukah, Christmas, and Kwanzaa greetings and items. What set this celebration apart was the heartfelt participation from the employees. By researching and volunteering their family heirlooms and personal items, they put a personal tone to understanding different cultures.

Nominator Ronald DeShields notes that the initiatives of the Diversity Advocacy Team have fostered a more productive working environment — which translates into increased revenue for Amtrak.

Environmental Safety

Dustin L. Davis, Manager
Maintenance & Equipment,
Oceanside, CA

Dustin Davis started his Amtrak career in 1986 as a Passenger Conductor and worked his way up to become manager, Maintenance & Equipment in the Mechanical department of the Coaster Commuter service in 2000.

Because the position of environmental specialist was vacant for almost two years, Dustin took on the additional responsibilities of managing the Coaster facility's environmental program. Davis conducts most of the environmental activities such as routine sampling and inspections and record-keeping, but also performs his own Storm Water Pollution Prevention Program (SWPPP), saving Amtrak the expense of paying a contractor to do the job.

When the Coaster facility was audited by Amtrak's Corporate Environmental department in January 2002, the report included 14 positive findings, the highest number of positive findings of any audit performed at an Amtrak-operated facility. This record-setting achievement was the result of Davis' dedication and attention to detail.

His nominator, Tami Calderon, describes him as a "hands-on" manager, who is committed to environmental and safety best practices and to taking the initiative to implement those practices.

Safety Achievement

The El Paso Crew Base, El Paso, TX

George M. Arredondo, Assistant Passenger Conductor, El Paso, TX

Robert Berrotean, Engineer

Juan Fernandez, Assistant Passenger Conductor

William H. Herron, Jr., Engineer

Edward Kollar, Engineer

Norman D. Marestein, Assistant Passenger Conductor

Jimmy R. Moreno, Assistant Passenger Conductor

Oliver L. O'Bryant, Passenger Conductor

John D. Stutes, Engineer

Charles F. Torres, Engineer

Employees at the El Paso crew base don't just talk about safety — they make it a reality. In 2002, this crew base accomplished a major milestone, by working 2,332 days injury-free.

El Paso transportation employees work on board the *Sunset Limited*, a train with challenging on-time performance issues. The crew's supervisor, Joy Smith, said, "This excellent group contributes to Amtrak's bottom line with their innovative ideas about how to provide a safe journey for both passengers and employees. I have never seen a more committed group of employees."

Involved in various community safety programs, such as Operation Lifesaver and Operation RedBlock, these employees' volunteer activities is second nature to them. Even in a service disruption, off-duty employees are on hand to help.

These employees have found ways to make the best of difficult situations, and work toward providing safe passage for employees and passengers, and embody the word SAFETY.

Southern California Operations Safety Committee

Lynn D. Berberian, Superintendent Passenger Services

Robert L. Boyd, Passenger Conductor

Michael R. Chandler, Superintendent Operations

Craig L. Cook, Electrician Journeyman

Carol Crego, District Manager Stations

Lois K. Cuning, Manager Operations Management

Michael J. Hill, Manager Stations

Gary K. Hurst, Red Cap/Baggage

Linda A. Nies, Ticket Agent

Alice Pinkney, Station Agent

Monica T. Pisciotta, Ticket Agent

Timothy J. Rennegarbe, Inspector FDA & Cleaning

Charles B. Roebuck, Manager, On-Board Services

Jack T. Wilson, Assistant Superintendent Road Operations

Deborah Dews Wood, District Manager Stations

Leonard M. Villamor, Assistant Superintendent Stations

The Southern California Operations Safety Committee was voted most improved in FY '02, with a 75-percent reduction in reportable injuries on the *Pacific Surfliner*, and 52-percent reduction in reportable injuries in the Southwest Business Group.

The 17-member safety committee, made up of management and craft employees from Mechanical, Transportation, On-board Service and Catering, impacts the safety of approximately 1,100 employees and approximately 2.7 million passengers in the territory from San Luis Obispo to San Diego and west to San Bernardino, CA.

"The commitment from both labor and management is the key to their success," said Richard Phelps, general superintendent, Southwest Division. "The team has aggressive goals, defined tasks and recorded follow-up; they definitely are the best of the best."

Working closely with the state of California (Cal Trans), the committee developed an engaging onboard safety brochure for passengers and added *Pacific Surfliner* station-specific chapters to the Down Line Station Safety Briefing Book. This initiative is especially

helpful to extra-board employees who may not be familiar with each station's unique hazards.

The committee's enterprising ways to promote the safety of Amtrak's passengers and employees have certainly paid off.

Sustained Excellence

John E. Clayborne,
Detective, Albuquerque,
New Mexico

Detective John Clayborne joined the Amtrak Police Department (APD) in June 1984 and in 1996, was the first Amtrak Police officer to be sworn in as a member of the U.S. Drug Enforcement Administration Transportation Task Force.

He has made 61 arrests, including those of four dangerous fugitives, and has seized approximately 1,290 pounds of controlled substances and property valued at \$7,280,489.

He also keeps watch over employees and passengers at the Albuquerque, NM, train station.

John has been awarded the APD's Exceptional Achievement Award, the Terrorism Response and Hazmat Response Medals, as well as several Officer of the Month awards. He is also the recipient of the International Narcotic Enforcement Officers Association Award for outstanding service, and 23 customer commendation letters.

John Clayborne gives 110 percent in any situation. can always be counted on to respond to the needs of the department, and exhibits sustained excellence around the clock.

Simuel Denson, Service
Attendant, Jacksonville, FL

Hired in March 1974, Simuel Denson has risen through the ranks from waiter to train attendant. While Denson's low-key demeanor and positive attitude have been consistent throughout his nearly 30 years, he is known for delivering quality customer service while skillfully up-selling Amtrak products and services.

Rudy Bautista, an on-board supervisor in Orlando, has served with Simuel in the trenches often and says, "If I were starting a business, I would try to steal him away from Amtrak."

In 1998, a former supervisor said it best: "I had the pleasure of working with you on board and personally know what a true professional you are. Your performance as a service attendant in Jacksonville is consistently the best. Your company loyalty, honesty, and integrity virtually go unmatched. Your contributions to Amtrak over the years have been many. Your great customer-service skills epitomize what our business must strive to be. It goes without saying that we all benefit from having someone of your caliber to work with."

Michael H. Eisenberg,
Team Leader, Riverside CA

A year after he began his Amtrak career as a New York Reservation Sales Office agent in 1985, Michael Eisenberg transferred to the Western Reservation Sales Call Center, now located in Riverside, CA.

Eisenberg's proposal to create a "rate desk," which would be staffed by sales agents who assist fellow agents with pricing policies, complicated reservations, and handling disgruntled passengers, was adopted. This concept continues to be in use at the call centers today.

From rate desk clerk to team leader, Eisenberg's initiative and leadership skills remained unswerving. Eisenberg set a record with 14 straight months of achieving number one in the Goal Rush program, which measures agent performance — an achievement never yet been duplicated.

Eisenberg continues to hit high marks in the Goal Rush program, is the only four-time winner of the Team Leader of the Year award, winning in 1997, 1998, 2000 and 2002, and was runner up for the award three times in 1996, 1999, and 2001. Eisenberg holds the current record for top sales and has maintained perfect attendance since 1992 — 11 straight years!

Justin L. Frederick, Chef,
New York City Crew Base

Chef Justin Frederick takes pride in his work and people take notice. Since he began his Amtrak career in 1974, Justin's exceptional work ethic has prompted letters of commendation and three nominations for the President's Service & Safety Awards in 1986, and two in 1989.

Justin is a man of many chefs' hats. He has worked as a Human Resources Development department supervisor in New York, training employees how to properly handle food, and was one of the Amtrak chefs to attend the Culinary Institute of America (CIA). As a traveling chef, he was responsible for training food specialists and chefs on long-haul trains, such as the *Crescent*, the *Lake Shore Limited* and the *Cardinal*.

Justin's goal is to provide all passengers and crew a fine dining experience aboard the trains. Justin is the shining example of the true meaning of sustained excellence.

Jay C. Glass, Detective,
Portland, OR

Jay Glass began his Amtrak career in 1993 and has served as a detective with the Amtrak Police Department (APD) since then. He consistently receives above-average performance evaluations and has been commended for his work ethic and candor.

Stationed in Portland, OR, Detective Glass is the only APD officer responsible for responding to incidents that occur on railroad property in seven states. His job requires extensive travel, usually at a moment's notice, particularly as a member of Amtrak's Threat Assessment and Response Team.

Detective Glass received the Western Division Officer of the Month Award in September 2002 for his exemplary investigation efforts concerning a dangerous sexual predator who later was sent to prison.

Whether he's on security detail at the Salt Lake City 2002 Olympics or at the 2000 Democratic National Convention in Los Angeles or at the Portland station, Jay consistently achieves at a high level. Detective Glass is clearly an asset to the department and to the corporation.

Charles A. "Chuck" Herndon,
Passenger Conductor,
San Francisco, CA

Chuck Herndon began his railroad career on the Southern Pacific Railroad in September 1972 as a conductor/brakeman/switchman. When Amtrak took over the operation of the Caltrain commuter service in July 1992, Herndon became not only a conductor but also a trainer, training over 200 Caltrain conductors.

"Chuck has provided consistent professional training to our transportation employees here at Caltrain," said George Erickson, superintendent of Caltrain. "He is our go-to person for training, and his efforts to bring a higher standard of training have truly made a difference in keeping this important contract," said Erickson.

Herndon specifically focuses on safety with new hires, including hazard recognition and injury avoidance. His conductor trainees have learned first-hand that safety is truly, "do as I do," and his leadership at Caltrain deserve recognition.

Donald M. Jackson,
Chef, Seattle, WA

Since beginning his Amtrak career in April 1976, Chef Donald Jackson has received numerous letters of commendation, many of them from gastronomically grateful passengers.

A graduate of the Culinary Institute of America, he has prepared more than a million meals on various trains; from the original Hiawatha service cooking on presto logs and sterno cans with dry ice refrigeration, to the newer Superliner kitchens. Chef Jackson was chosen to assist in the original design of the Amtrak *Cascades* food service and menus.

Every one of his past supervisors refers to Don Jackson as the most competent and professional chef they have ever managed. Food service and quality can make or break a train trip, and Don's history of uncompromising quality, continual extra effort, and rich personality set him apart from all of his peers.

Annette M. James,
Lead Service Attendant,
New York City, NY

Within a month after being hired in August 1983, Annette James was promoted by her supervisors from service attendant to lounge car lead service attendant, and a year later to dining car lead service attendant.

Annette's warm personal touches are evident to passengers, whether it's during a holiday or for personal celebration. Annette puts extra effort into making passengers feel special or outfitting the diner with holiday decorations, such as special tablecloths and aprons.

Annette's fans are numerous. She has received letters from a nine-year old girl celebrating a birthday and senior citizens celebrating their wedding anniversaries. One passenger said, "Dinner in the dining car was a delight...Annette was without a doubt, the best steward I have experienced since Amtrak took over from the Southern Railway."

There are many special people in this world, and Annette James is at the top of the list.

**Mack Jones, III,
Train Attendant,
Jacksonville, FL**

Mack Jones, better known as "The Mack Attack," a train attendant who began his Amtrak career in March 1974, takes pride in his appearance as well as his work performance.

Mack's polished appearance has served as a model in several films and seminars about proper uniform standards. A true team player, Mack is known for helping out in the dining car, doing whatever needs to be done to deliver quality service. He's also driven passengers who have been stranded at the station to their final destination.

Mack is known to pay particular attention to passengers with special needs. Most passengers leave his train feeling like a VIP, because that's how Mack treats them.

According to Mack's supervisor, "He's the finest train attendant anywhere." It is this type of dedication and pride in performance that keeps his passengers riding Amtrak time and time again.

**Willie R. Logan, Legal
Assistant, Washington, DC**

Starting with Amtrak as a contractor in 1984, Willie R. Logan was hired to work on a number of arbitration cases, during which he supervised a staff of up to 25 temporary employees responsible for the reproduction of documents for attorneys and other experts working on these cases.

Willie was offered a full-time position with Amtrak as a litigation support specialist responsible for management of the Law department's reproduction center and its library and in 1994 he was promoted to legal assistant.

Willie's resource management initiatives include converting the department's hard copy library to a searchable, electronically based library, and maintaining the department's copier and micrographic so that it goes well beyond its expected life span. At one time he was operating the oldest Kodak copier in the Washington, D.C. area. Both of these initiatives contributed noteworthy cost-savings.

Willie has been a highly valued member of the Law department over the years because of his can-do and cooperative attitude, quality work, and dependability.

**Michael C. McKenna,
Assistant Passenger
Conductor, Chicago, IL**

After starting his Amtrak career in 1986 as an assistant passenger conductor, Mike McKenna became a safety engineer/coordinator. Instrumental in promoting the growth of RedBlock and other safety training, Mike schooled over 700 employees in safety.

Between 1989 and 1992, Mike helped organize the Midwest Division RedBlock Phase I training, and later became chairman of the Intercity North RedBlock Phase II training group. In 1999 he helped turn the RedBlock office into a Safety and RedBlock Training Center, which offered safety-related courses for Train and Engine, On-board Services, Station Services, and crew base employees.

Last year, Mike worked with the Human Resources department to organize, edit, and deliver Prepare 2002 training to MDWC, Eastern, Western, and Southwest Business Group employees. During Mike's tenure as a safety coordinator, the Midwest Corridor was under the established injury ratio for three of four years. In 2000, the Midwest led the Intercity with the lowest injury ratio for that year.

Mike is now a passenger conductor and continues to be intensely involved in all safety efforts on board and off.

**Brian P. Ravert, Sergeant,
Philadelphia, PA**

Soon after he was hired as an officer of the Amtrak Police Department's (APD) Philadelphia Patrol Division in June 1989, Brian Ravert was promoted to the rank of sergeant. He has passed the Lieutenant Promotional Exam and remains on the current lieutenant eligibility list.

Over the past 13 years, Sgt. Ravert has been awarded 20 letters of commendation and three Officer of the Month awards. In addition, he has accrued over 1,170 hours of training, resulting in numerous advanced certifications that exceed basic police officer requirements.

Last year, Brian prepared the APD National Communications Center (NCC) for Commission on the Accreditation of Law Enforcement Agencies (CALEA) accreditation, which was granted in November 2002. One of the accreditation requirements was the implementation of an NCC Communications Training Officer (CTO) Program, for which Brian was responsible. As a liaison to the Department of Justice, Brian is the agency coordinator of the Department of Justice's National Crimes Information Center (NCIC/JUST), which gives APD access to NCIC/JUST information and resources.

Sgt. Ravert's dedication to law enforcement and to APD demonstrates his sustained excellence over his Amtrak career.

**Sarah E. Ray, Human
Resources Manager,
Washington, D.C.**

Sarah Ray began her career with Amtrak in the Human Resources department in 1977 as a personnel clerk and was later promoted to Human Resources manager.

Even though recruitment is Sarah's main responsibility, she extends beyond her job description to handle whatever task arises, establishing a comfortable and team-oriented environment for her staff.

Wardell Thomas, who works for Sarah and who nominated her, says, "Sarah not only talks the talk, but walks the walk." He goes on to describe Sarah as friendly, inviting, approachable, fair, dedicated, accommodating, empathetic, a team player, and a true leader.

Mindful of time and financial budgets, she ensures that time-sensitive positions are filled promptly and will schedule off-site interviews for managers within one day to keep their travel expense at a minimum. Always looking for cost-free opportunities to promote Amtrak, she participates in job fairs or other events in local communities and networks with companies, government and community agencies.

**Barbara A. Ruditis,
Lead CSR, Mid-Atlantic
RSCC, Philadelphia, PA**

Starting out as a reservation sales agent in September 1993, Barbara Ruditis is now a Customer Relations Department (CRD) lead agent who has received numerous letters from customers who appreciate Barbara's high level of professionalism and caring demeanor.

Barbara has assisted in the Emergency Hot Line and was a key component of the Train of the Month Program designed to familiarize agents with Amtrak's different train routes, a project for which she was nominated for a President's Service and Safety Award.

Known for her ability to teach others, Barbara was accepted into the Mid-Atlantic Reservation Sales Call Center Train the Trainer Program. In 1999 she became a rate quotation clerk, assisting sales agents and team leaders with pricing complicated itineraries. As a customer relations representative since 2000, Barbara solves the most difficult customer problems and handles complaints while remaining pleasant and calm.

Barbara wants the best for her company and the best for her customers. Barbara Ruditis is the best of the best.

Albert A. Scala, Assistant Superintendent, Commuter Service, Washington, D.C.

Since he began his career at Amtrak in 1974, Albert Scala has occupied a variety of positions including locomotive controller and manager consist, assistant director of Operations, and manager of schedules.

After ten years at Amtrak, Mr. Scala was promoted to transportation manager, and as such played an important role in the shift of train and engine service employees from freight railroads to Amtrak in 1986.

In June of 1992, when Amtrak was contracted to operate Virginia's Railway Express (VRE) commuter service, Albert transferred to the Washington Commuter Service department as the assistant general manager and superintendent of Operations.

VRE started service with only eight trains, and Mr. Scala supervised two service managers and 24 T&E service employees. Since then, VRE has grown to 32 trains per day with a crew base that includes two service managers and 42 T&E service employees.

Mr. Scala's focus on customer service and knowledge of operations has made him the backbone for the VRE commuter operation, and this service a success for Amtrak.

Francis R. Spence, Sergeant, Wilmington, DE

Amtrak Police Department's (APD) training sergeant, Sgt. Frank Spence has been a member of the APD force since November 1976, and a supervisor since January 1981. In his 26-year career, Frank has never been injured, and holds 24 years of perfect attendance. Sgt. Spence has been Officer of the Month and has been awarded APD's Exceptional Achievement Medal for the arrest of individuals who stole from the Wilmington Shops.

Sgt. Spence maintains all department training records, which include certification, first aid and CPR, and firearms, as well as police academy training and all other mandatory programs, and has implemented training programs throughout his tenure. Sgt. Spence has developed partnerships with police academies and training schools attended by APD officers.

His professional appearance and knowledge of function protocol usually garners him the "Sergeant at Arms" assignment at department gatherings. Sgt. Spence truly exemplifies sustained excellence and upholds corporate values every day.

Francis P. Sullivan, Jr., Detective, Raleigh, NC

Frank Sullivan is a coalition-builder who rose through the ranks to become an Amtrak Police Department (APD) Detective. Detective Sullivan attained the rank of sergeant in Boston in 1994, and later detective in Raleigh, NC in 1997.

For over a decade, Frank Sullivan was very involved with the American Federation of Railroad Police (AFRP), representing the officers of the New England Division and also serving as regional vice president from 1986 until 1995. As a member of the Amtrak Police Department Safety Committee, he organized and chaired the first-ever Transportation Police Injury Reduction Workshop Safety Symposium involving a number of divisions.

In North Carolina, Frank helped establish the North Carolina Safety Improvement Team, and in coordination with the Raleigh Police Department Special Operations Bomb Unit, conducted a simulated event to test Amtrak's emergency preparedness plan. As a result Frank was asked to participate in Governor Easley's Task Force on Terrorism.

Frank Sullivan's steadfast integrity and a willingness to work with others are great assets to Amtrak.

Cynthia J. Vaculin-Wise, Train Attendant, Seattle, WA

Train Attendant Cynthia Vaculin-Wise started her Amtrak career in 1976 as a sleeping car attendant, then a service attendant and then chief of On-board Services in 1993.

Her excellent job performance over this 27-year period reflects Ms. Vaculin-Wise's attention to detail and the pride she has in her work. Always the professional team-player, Cynthia consistently makes an extra effort to exceed customer expectations.

Cynthia has received nearly 70 letters of commendation and numerous positive comment cards. "I get more letters about Cynthia than anyone can believe," said Gary Erford, On-board Services manager.

These letters and her excellent performance over the years are evidence of her ability to offer high-quality service while contributing to the company's cost savings and revenue potential. At her own expense, Cynthia places little extras, such as cookies, candy, and travel literature in the sleeping car rooms.

Cynthia Vaculin-Wise is considered by many as a model on-board service employee and a shining example of sustained excellence.

Bruce R. Van Sant, Director, Fleet Planning, Philadelphia, PA

Bruce Van Sant, also known as "The Maestro," joined Amtrak in August 1980. Because of his talent for orchestrating operational plans within hours of any given service disruption situation, employees throughout the Northeast Corridor draw on his problem-solving expertise.

In 1996, Bruce updated and converted to electronic format the Equipment Plan and Data Manual, originally created by the Mechanical department in 1989 and used by a number of departments. He also created the NEC Shopped-Equipment Status Report and the NEC Consist Book, from which the National Consist Book was developed.

Bruce also created NEDSTATS, which is a program that allows the user to look at ridership, reservations, over bookings, inventory, and train capacity for equipment distribution for daily trains, as well as during the holiday programs for the Northeast Corridor.

A true self-starter, Bruce freely shares his skills and tools with others. Ultimately, "The Maestro's" efforts have organized and centralized a great deal of critical data, simplifying work for many employees.

Susan A. White, Team Leader, Riverside Reservation Call Center

Susan White started her career with Amtrak on Jan. 25, 1989, as a reservation sales agent in Los Angeles, CA, and shortly thereafter was promoted to acting team leader and assistant trainer. In December of 1995, White was officially promoted to the team leader position, and in 1996 she won the Sales Excellence Award for leading her team to reaching highest sales figures ever. In April of 2001, White was chosen by her peers at the Riverside Call Center as the recipient of the first Soaring Eagle Award for excellence.

Known for her unconventional management style, White has been seen marching around the building disseminating information to her team and leading them in songs like *I've Been Working on the Railroad*. When performance productivity standards changed in early 1996, Sue initiated a motivational exercise that involved rocks she had carefully chosen from a beach in the Cambria area of California.

Well liked by her team, peers and management, White is a motivator with many first-rate attributes.

Posthumous

Larry W. Edenfield, Engineer, Jacksonville, FL

Amtrak mourns the loss of Engineer Larry "Wayne" Edenfield of Macclenny, FL, who passed away on May 7, 2003 as a result of derailment of the *Silver Star* at a marked grade crossing. A railroad veteran with nearly 30 years' service, Edenfield was hired by Amtrak in 1986 as a locomotive engineer, and was assigned to the Jacksonville, FL, crew base.

"Larry Edenfield was a veteran locomotive engineer with an excellent record," said Amtrak President David Gunn. "This tragedy touches us all and we mourn his untimely passing."

"It was a privilege working with Larry," said Kevin Kilby, Amtrak dispatcher for the Southern Division in Jacksonville. "Dispatchers get to know enginemen extremely well, he was one of the best engineers I have ever known," said Kilby.

On May 10, coinciding with Edenfield's memorial ceremony, Amtrak trains across the country sounded a single, long horn blast in his honor. Wayne Edenfield will continue to reside in the hearts and minds of his family at Amtrak.

'Right Care...' A Success from Day One

Prior to the implementation of the "Right Care...Day One" program, Amtrak employees averaged 59 lost-time days per lost-time injury. Since the program began in 1999, this statistic has been cut in half. Overall, more than 600 employees have voluntarily participated in the program, which facilitates a smooth and safe transition to their regular full-duty jobs.

Amtrak's goal, when it comes to an injured employee, is to ensure the employee receives the best and most appropriate medical care and support for their work-related injury or illness, and to promote a safe and healthy return to work. To this end, Right Care...Day One, a joint labor/management initiative, is a medical case-management program designed to ensure that if an employee sustains an on-duty injury or illness, he will receive the best and most appropriate care.

The program began as a pilot in May 1999 in the Mid-Atlantic Division, including the Wilmington and Bear Maintenance Facilities, and the Mid-Atlantic Reservations Sales Call Center for most union and non-union employees. When it became a national program in 2001, concentrated training seminars for supervisors, managers, union representatives, providers, and employees took place in a number of Amtrak locations throughout the year.

How Does It Work?

Amtrak's partnership with Continuum Healthcare, a national case-management company, ensures that injured employees get the care they need, when they need it. This is accomplished with a team of specially trained professionals, including a select network of occupational health and emergency medical providers, nurse case managers, and transitional work coordinators experienced in the management of work-related injuries.

The network providers have agreed to several guidelines, including making every effort to see Amtrak employees within 30 minutes of their arrival. Once seen, the medical provider will attend to the employee and answer all their questions related to their injury or illness.

Use of these services begins with one simple phone call from a supervisor.

In addition to completing the Amtrak Form 260, the employee's supervisor reports the employee's

on-duty injury or illness through the Amtrak toll-free Injury Report Hotline (1-800-505-5549). Use of the Injury Report Hotline is now mandatory, as it improves the timeliness of reporting on-duty injuries, expedites the provision and coordination of appropriate medical care, and facilitates the exchange of necessary information among all interested parties. Depending on the severity of the injury or illness, the employee will be provided with a dedicated injury-care coordinator and telephonic nurse case manager from Continuum. When appropriate, an injury-care coordinator contacts the employee within 24 hours of receiving the call from the employee's supervisor.

Studies have clearly demonstrated that there is a direct connection between timely initial reporting of an on-duty injury, and a safe and expeditious return to work. The sooner a claim is reported via the Amtrak Injury-Reporting Hotline, the sooner an employee enjoys the benefits of having a medical care professional assigned to assist in the healing and rehabilitation process.

Should the employee be unable to return to his full duties, the transitional-work coordinator will work with the employee, and his or her supervisor, health care providers, and claims agent to identify jobs that can be modified to comply with the employee's restrictions. If job modification is not an option, the transitional-work coordinator will place the employee in an alternative job – either inside or outside of Amtrak – until the employee can return to the regular position. If the employee reaches maximum medical improvement and is unable to return to the regular job, the transitional-work coordinator will assist the employee by providing a full range of vocational services, through a Vocational Rehabilitation Counselor. These services include supportive counseling, directive guidance, and the exploration of re-training options.

Continuing Success

Everyone benefits from Right Care...Day One. The injured employee has access to appropriate medical treatment from the onset of an injury/illness and is supported by a team of professionals enabling a safe and expeditious return to a normal lifestyle. Supervisors enjoy the earlier return of a valuable team member. The community benefits from the public service of healing employees.

PROMOTIONS IN MOTION

Five-year-old Wins Amtrak and Lionel Essay Contest Kids Tell Why They Like Trains

Anna Peckham did not realize she was submitting the winning essay when she wrote, "Macaroni and cheese was good" on the Amtrak and Lionel Essay Contest entry form while riding on Amtrak's *Empire Builder*.

Over the summer, Amtrak partnered with Lionel to sponsor an essay contest for children 12 and under to explain why they like riding Amtrak trains. Contest results indicate that kids like the train for many of the same reasons adults do,

with looking out the window at the scenery and dining on the train ranking as the top two responses.

Selected on Sept. 8 as the grand-prize winner, the five-year-old native of Seattle was one of 355 children who entered the contest for a chance to win a Lionel Limited Edition Freedom Train, valued at \$799. In addition to Peckham, eleven first-prize winners won a New York Central Limited Lionel train set. Entry forms were available on the *California Zephyr*, *Coast Starlight*, *Empire Builder*, *Southwest Chief*, *Sunset Limited*, *Pacific Surfliner*, *San Joaquin*, *Amtrak Cascades* and the *Capitol*s.

FRONTLINE FOCUS

Dear Amtrak:

For my mother's 80th birthday, our family gave her a trip back to her birthplace in Londonderry, VT. My mother is mobility impaired and requires oxygen. We decided to book her travel by train, accompanied by my teenaged niece as her caregiver, even though the fare was more than twice as expensive as advance purchase airfare.

The departing schedule [from Florida] was very reasonable, however, her return travel included a layover of more than 12 hours in Washington, D.C., beginning after midnight.

I spoke with many different Amtrak agents on many occasions regarding my concern that my elderly mother and young niece would have to spend the night in Union Station. I was always told there were no other options, different trains or routes. We were reluctant to get a cab and a motel in D.C. after midnight and we began to think that train travel would not be acceptable.

Our thoughts and attitude about Amtrak changed when, during a phone call to the 800-number, she happened to talk to agent Jerry Spevak. What a remarkable Amtrak representative he is.

First, he arranged a conference call to include me (in Georgia) and my mother (in Florida). Mr. Spevak suggested, as an alternative to the Washington layover, a connection in Wilmington, DE, instead. It would be an earlier arrival and a better location. He was even able to direct us to a motel close to the station, even providing directions and a phone number. Because of this help, we were able to make acceptable arrangements, which "saved" the trip.

Mr. Spevak was extraordinarily helpful, and his actions showed that he really cared about the passengers and their travel on Amtrak. This was our first experience with Amtrak, and because of the service provided by Mr. Spevak, my entire family and I now plan to use Amtrak as often as we can for our travel.

Sincerely,
Doris B.
Savannah, GA

Dear Amtrak:

I am writing to commend Mr. Ray Apostol, who was the car attendant on sleeper 0830 on train #8 from Seattle to Chicago on Oct. 17. Mr. Apostol is one of the most professional on-board employees I have encountered since I first began traveling by train in the '40s.

From the moment he greeted me and took charge of my luggage, I recognized that here was someone who would do his utmost to see to the welfare of the passengers assigned to his car. His manner never changed, even though our train was delayed 19 and a half hours. Mr. Apostol continued to smile and made certain that the rooms were always in good order, the coffee freshly brewed, with soft drinks, water, and ice readily available.

Largely because of the efforts of Mr. Apostol, this latest, but not last, trip on Amtrak was remarkable. I commend Mr. Apostol to you as an outstanding representative of Amtrak.

Sincerely,
Bob V.
Cuyahoga Falls, OH

Dear Amtrak:

My wife and I took our first Amtrak trip last week after forty-two years of marriage. We went on a round-trip from Fayetteville, NC, to New York City. We could not believe the room we had around our seats on the coach going to New York. The ride was smooth, and the people who worked with Amtrak were super nice and helpful.

My wife needed a wheelchair to get from the train station to a car in New York. When we started home, she needed a wheelchair to get from the street to the train. All I had to do was let someone who worked with Amtrak know it, they got a wheelchair and helped us get where we needed to go, along with our luggage.

Returning home from New York, we rode on a sleeping car. The meal Amtrak served us was just delicious and we got a good night's rest.

The people who were working on the train were as helpful as they could be. What a great trip we had, and we plan to start saving money now for another trip on Amtrak later. We learned a great way to sightsee is to take a train.

We are telling a lot of people what a great trip we had riding on Amtrak.

Our luggage was handled with care on Amtrak; it was in just as good a shape when we picked it up, as it was when we dropped it off.

Everyone who likes to travel should have the joy of going on Amtrak.

Thanks Amtrak for making traveling a real pleasure.

Yours truly,
Paul H.

The Gunpowder River Bridge is a critical link between Wilmington and Baltimore on the Northeast Corridor. Decayed wood timbers and deteriorated steel beams were replaced with concrete.

Bridge Work Ensures Operational Reliability

Northeast Corridor passengers may not notice a difference in the quality of their ride across Amtrak's Gunpowder River Bridge, but the work done by the railroad's Engineering forces this past fall certainly will make a difference in the operational reliability and structural integrity of the crossing.

As part of its FY '03 capital program, the Engineering department completed significant repairs on the aging ballast deck bridge in

early November, transforming it from a potential operational risk to a smooth and reliable connector on the Northeast Corridor.

The bridge, located between Wilmington, DE, and Baltimore, MD, is an extremely important link on the mainline, without which the NEC would be severed. Because of the importance of this bridge, it is not an item for which maintenance can be put off.

Marketing Restarts Advertising to Continue Strong Ridership Trend

The Marketing and Sales department is launching advertising campaigns after the first of the year to ensure that the strong ridership and revenue trend of the first quarter continues.

Through the end of November, the fiscal-year-to-date ridership was up 11 percent over last year, and also more than 9 percent ahead of the budget plan. Ticket revenue was \$214.6 million or 9 percent ahead of the FY '03 figures and 6 percent ahead of the budget goal.

The results were driven by record-breaking ridership (2.1 million passengers) in November, nearly 12 percent more than a year ago, and a gain of more than 9 percent over the budget plan, making this the highest November ridership (and the highest Thanksgiving-week ridership) in the railroad's history.

The credit for these gains goes to a strengthening travel economy and Amtrak's new Back to Basics approach to marketing — featuring lower and simplified fares, a new revenue management approach and advertising that highlights fares, destinations and

the benefits of train travel—coupled with the company's continuing effort to provide more reliable and better service.

During January, Marketing will roll out long-distance advertising in more than 70 markets served by the railroad across the nation. Like the fall advertising, it will again put an emphasis on the value of Amtrak's regular low fares and the city pairs in which they are available. Also as in the fall advertising, the campaign will focus mostly on newspaper, radio, and Internet ads. The nature of print advertising, which will carry the greatest proportion of the ads, allows Amtrak to provide the kind of detailed information about services and destinations that can turn readers into riders.

As a result of the earlier success, the advertising will again feature the images and artwork of Michael Schwab, which will soon become easily recognizable as Amtrak's advertising.

In February, Marketing will unveil a new advertising look for *Acela Express*. The newspaper adver-

Amfleet I Food Service Car Remanufacturing Underway

Only two months into FY '04, mechanics at the Bear Maintenance Facility completed the remanufacturing of six Amfleet I Dinettes, some of which had not been overhauled in eight to ten years. Currently there are about 18 to 21 types of food service cars in Amtrak's system; once the remanufacturing project is complete it will be reduced to three — full Dinettes, full Club cars, or Club Dinettes. By the end of this fiscal year, Bear mechanics will have remanufactured 64 Amfleet I food service cars.

The cars underwent heavy over-

hauls, which took 4,000 hours to complete and involved replacing the diaphragms, couplers, trucks, brakes, 480 train line cables, control panels, evaporators, under-car refrigeration equipment, and air conditioning units. The interiors were gutted and upgraded with new booths, carpet, bathroom modules, and plastic wall and ceiling panels.

The first six cars completed and returned to service in October and November 2003 were Amfleet I full Dinettes 28364, 43360, 28365, 28366, 28367, and 28368. At press time, four more cars were scheduled for heavy overhaul in December.

Amfleet I Dinette 28366 is open for business. After being remanufactured at Bear Maintenance Facility and returned to service on Nov. 20, 2003, the Dinette leaves Washington Union Station as part of train #138 headed for New York. The last heavy overhaul performed on the food service car was in November 1995.

TRAIN OF THOUGHT

The holidays have come and gone and a new year is before us. I hope you enjoyed time with friends and family and had a little time to yourself.

I have a home in Nova Scotia, where I like to spend the holidays and my time off. Over the holidays, I shoveled a lot of snow, chopped some wood, and cooked and baked. I enjoy spending time there — it gives me the chance to reflect in peace and quiet. Plus, I get a lot done at the house.

I'd like to share with you some of the thoughts I had over the holidays. At the risk of sounding like a broken record, I think we've made a lot of progress over the last year and a half. The progress we're making is — and has to be — incremental. But as we continue to improve, and as the accomplishments become more noticeable, people's perceptions of Amtrak change for the better.

While it's not yet a done deal (as of the time I write this), we're close to getting the proposed

\$1.23 billion in federal funding. The funding is less than we asked for, but should allow us to operate the railroad and to address some of the capital projects that are necessary. As our FY '04 budget takes shape over the next couple of months, we'll know more about how we modify our capital program.

So far, we've started FY '04 with considerable growth in both ridership and revenue. We've put in place regular preventive maintenance and overhaul programs that, in time, will notably increase our fleet availability. We're being smart about how we use the resources we have, and about minimizing expenses. I think we're starting to see solid signs that the company is stabilizing.

What's dangerous about the positive momentum we're experiencing is the temptation to get too comfortable and rely on momentum alone to carry us further. This is exactly the time for us to recognize that we still have a

David L. Gunn

lot of work to do and this is no time to get too comfortable.

We all have FY '04 goals and objectives toward which we're striving. It's not fluff or just talk. As those individual and department goals become realized, we get closer and closer to having a stable, reliable, and safe passenger railroad.

You should be proud of where we are today, and where I think we're headed. We're on the right path. We need to stay on that path, and keep up the good work. I consider that my holiday gift.

It's Been Coming and Now It's Here ...

FY '03 Engineering Excellence Awards Presented in December

Building suspense with intriguing "It's Coming" e-mail messages to Engineering department employees, Chief Engineer David Hughes let the cat out of the bag. The "it" is the FY '03 Engineering Excellence Awards program, the winners of which were honored in mid-December at an event in Newark, NJ.

The Excellence Awards were presented to on-corridor and off-corridor Engineering divisions that achieved the highest total score for performance improvement year-over-year in the safety, finance, and customer service categories.

The FY '03 On-corridor Engineering Excellence Award was earned by the New York Engineering Division, which had the highest overall improvement over FY '02 with a total score of 62.5 for all three categories. Competing for the on-corridor awards were the New England Engineering Division, the New York Engineering Division, and the Mid-Atlantic Engineering Division.

The New York Engineering Division took the highest score in both safety and customer service, which

New York Division Engineer Steve Falkenstein (right) is recognized as "head coach" for the spirit of teamwork he instills in his division's employees. Bill Forman, deputy division engineer, presents Falkenstein with a football signed by all the New York Engineering team members for his role in leading his team to winning the On-corridor Engineering Excellence Award.

resulted in the highest score overall. However, the finance category top scorer was the Mid-Atlantic Engineering Division, with a score of 17.0. Additionally, the New England Division was recognized for having the greatest reduction in absenteeism; a 5-percent improvement over last year.

The Central Division, which achieved the highest overall improvement over last year with a total score of 36.8, won the FY '03 Off-corridor Excellence Award. Off-corridor performance was measured by improvement in two categories, safety and finance. Competing for

Coach Cleaners Keep it Clean

A Night in the Life of Los Angeles Third-shift Coach Cleaners

The third shift at the Los Angeles 8th Street Yards moves like a symphony orchestra of diverse and well-trained musicians. The conductor of this middle-of-the-night orchestra is Ilene Lara, also known as the third-shift general foreman, who makes sure the players are in position to produce beautiful music, and they do.

"Timing is everything.

We have a set number

of hours to accomplish

an ever-changing

amount of work."

Ilene Lara, General Foreman

At 1 a.m. on a Tuesday morning, the entire third shift joins General Foreman Lara as she leads the morning's safety briefing. The team listens intently to the safety rule of the day, number 1609B, which stresses ladder safety. The sixteen coach-cleaning employees then receive their assignment to get the trains clean and ready for the day's service.

After the meeting, safety committee member and Lead Coach Cleaner Carol Cornelius, a 17-year veteran of Amtrak, hands out safety supplies from Cornelius' locker in the lunchroom. This morning's requirements include gloves, flashlight batteries, and safety vests.

Before the third shift arrives, trains are strategically lined up on the Service and Inspection (S and I) facility tracks for inspection, refueling, servicing, and cleaning. On a typical day, trains are serviced in order of priority — since *Pacific Surfliner* trains #562 and #564 will

be released from the yards at 5 a.m., they are cleaned first.

The buzz around the cars is almost palpable, as the third-shift coach cleaners split up and begin washing, sweeping, mopping, spraying, dusting, polishing, deep cleaning, and re-stocking trains. As Cornelius stocks each railroad car with tissues, toilet paper, trash bags, and the like, her eyes catch things that need to be fixed, cleaned, and re-cleaned. She is the only coach cleaner responsible for stocking each of the 25 cars this morning.

"Carol is the go-to person, the one person who can do it all," said Carol's supervisor, Foreman Marlon Phillips, also a 17-year veteran of Amtrak. Carol also checks the time-cards for accuracy and helps with the scheduling of employees.

Cornelius is quick to add that the third shift has a real sense of pride for the work it accomplishes, and that teamwork is the only way the trains are cleaned on time. "If something is missed, we can catch it before the trains leave the S and I area," added Cornelius. "We all help each other and try to put out a quality product."

The need for teamwork is crucial, particularly during peak holiday travel seasons. "During Thanksgiving week, we worked on over 40 cars in our shift without extra cleaners, and it was a challenge," said Cornelius, who is also responsible for calling crews for approved overtime.

Coach Cleaner David Ruiz vacuums the *Coast Starlight* lounge car while Coach Cleaner Don Davis cleans the Parlor car. "This is the most popular car on the *Starlight* and it needs to sparkle," said Davis. Sometimes the *Coast*

Starlight reaches the Service and Inspection facility late, only hours before it is scheduled to depart. "We have to clean the *Surfliners* first, no matter what, because they are the first trains that are scheduled to be released, but when the *Starlight* is late, we all pitch in to turn it around," said Cornelius.

This morning's crew in charge of shampooing rugs brings out the massive carpet-cleaning machine. Coach Cleaner Paz Gomiz joins her colleague Raymond Duran in making this tough job look easy. "Sometimes the machine is broken, and we have to scrub the carpets by hand," said Duran. "That's when we really need to pull out the elbow grease and watch the time to be sure we get the trains out on time."

"Timing is everything," said Lara. "We have a set number of hours to accomplish an ever-changing amount of work." Circumstances change with the number of cars to be cleaned, the status of the equipment, or job staffing levels.

Lara receives notice that a *Coast Starlight* Parlor car door is not operating correctly, and attempts to radio for parts. "We found a track that may work for the door," says Lara, as she radios her three third-shift foremen to fix the door.

Meanwhile, Coach Cleaner Martha Gamiz, vacuums Superliner Sleeping car, as Ready Crew member David Richardson checks the beds.

Coach Cleaner Don Davis cleans the *Coast Starlight* Parlor car.

Cornelius moves to the Diner to stock supplies, and lends a hand moving the heavy floor mats so the floor can be hosed and mopped. "I want to learn everything I can as a coach cleaner," Cornelius adds.

At 7:15 a.m., Lara receives the call she was dreading — the broken Parlor car door track can't be fixed by the scheduled departure time, so the entire car needs to be swapped out. Lara asks the crew to bring up another Superliner lounge from the preventive maintenance line.

The coach cleaners had the now-defunct Parlor car spotless and ready for delivery, but now they will have a new challenge — only a few hours remain to deliver the *Coast Starlight* on time. They don't know the state of cleanliness of the car being brought to replace the Parlor car, and have to work together to bring it up to quality standard.

"I'll be right over," says Cornelius.

Lead Coach Cleaner Carol Cornelius removes the Superliner Dining car floor mats to ready the floor for cleaning.

General Foreman Ilene Lara receives a report on the third-shift train line-ups at the Los Angeles 8th Street Yards.

Coach Cleaner David Ruiz vacuums the *Coast Starlight* lounge car.

New York Tunnels Program Extends Its Reach

Fire and Life Safety Program Moves Full Steam Ahead

Amtrak's Engineering department recently managed the completion of one of the many projects that encompass the first phase of the company's multi-faceted Fire and Life Safety Program. The 11-year, \$900-million program jointly funded by Amtrak, New Jersey Transit, the Federal Railroad Administration, and the Long Island Rail Road, is aimed at upgrading ventilation, egress, structural, and other systems in New York Penn Station and the Amtrak-owned tunnels that lead in and out of Manhattan.

The impact the two Hudson River and four East River tunnels have on the economy of New York and surrounding areas is awesome. Considering the complexity of the tunnel system, it is vital that the infrastructure support the traffic under every conceivable circumstance. Explaining how important it is to have the entire system in top condition, Fire and Life Safety Program Director Steve Alleman remarked, "You have to think of Penn Station at the bottom of the hill, and the tunnels feeding into it."

**"You have to think
of Penn Station at the
bottom of the hill,
and the tunnels
feeding into it."**

Steve Alleman, Fire and Life
Safety Program Director

The Dec. 15 completion of the New York Penn Station Complex Ventilation Project provides 11 new bi-directional fans strategically located throughout the station at platform level to provide exhaust and ventilation in case of emergencies and extraordinary air-quality circumstances.

Powered via three new electrical substations, these fans are controlled using the Supervisory Control and Data Acquisition (SCADA) system, which provides centralized, computer-driven control of the ventilation systems to Amtrak's manager of operations at the Penn Station Control Center.

The project required installation of new substations, and construction and modification of the seven fan rooms in which the fans reside. Some track outages were necessary to construct the flues that connect the roof of the tunnel with the ventilation system.

Following a detailed examination of the tunnels' condition in an Amtrak- and FRA-commissioned report (known as the Schirmer Report), planning for the Penn Station Ventilation Project and other targeted work on the six Amtrak-owned tunnels began in 1997.

Built in 1905, the tunnels were originally equipped with ventilation systems that did not anticipate the heavy traffic and special circumstances the infrastructure experiences today. In 1997, work began on improving communications, repairing tunnel leaks, enhancing emergency power, improving heat and smoke detection systems, and installing bench wall handrails and ladders in the tunnels. In addition, all six of the tunnels' floodgates, which were in use in the 1940s but not operable in the 50s and 60s, were on the list of items to be repaired.

At the end of fiscal year 2003, over half of the projects begun in 1997 were finished. For example, tunnel bench wall handrails and ladders are now complete, and the scope of the floodgate project is done.

The events of Sept. 11 shed more intense light on the need to improve the security and infrastructure of the tunnels. A special \$100-million federal grant for Homeland Security in early 2002 augmented the railroad's improvement program that was already underway. The program

**"Managing the project
in-house and with
fewer people not only
yielded a cost-savings
to the program, but it
also fostered a real
sense of ownership
and accountability."**

David Hughes, Chief Engineer

was put in the care and management of Amtrak, with joint fiscal partnership from the other players.

"What happened as a result of Sept. 11, is that we went from projects dedicated to improving the tunnels, to a full-fledged, comprehensive program," noted Alleman.

The success of Phase I of the Fire and Life Safety program (2002 through 2008) relies on the completion of six major projects: The New York Penn Station Ventilation Project, the Fire Standpipe Project, the Weehawken Ventilation Project, the Long Island

City Ventilation Project, and the 1st Avenue Ventilation Project, as well as the projects begun in 1997, at a cost of approximately \$315 million.

Originally, the overall program was managed by outside consultants who oversaw private contractors responsible for each of the projects. About nine months ago, those functions were brought in-house, so that full-time Amtrak employees were responsible for managing the projects. Lead by Alleman, six Amtrak project managers work with an outside construction management team that supervises the day-to-

day execution of the projects. Because of the complex nature of the entire program, an Amtrak project integration team runs the program's finance, scheduling, and project reporting functions.

"Managing the project in-house and with fewer people not only yielded a cost-savings to the program, but it also fostered a real sense of ownership and accountability," noted Chief Engineer David Hughes.

Phase I Projects Underway

When the two-mile tunnels were originally constructed nearly a century ago, the fire standpipes only reached 200 feet into the tunnels; making it difficult to quickly reach a fire deep within. At the end of fiscal year 2003, Amtrak had completed a number of milestones associated with the completion of the Fire Standpipe Project, which will result in a total of 16 miles of remote, computer-controlled standpipe infrastructure in all six tunnels and Penn Station. This improvement allows responding fire department personnel greater access to the fire suppression system throughout all tunnels.

The 1905 construction of the North River Tunnel in New Jersey included an opening on the roof of the portal for ventilation purposes, which was covered in the 1940s by the Pennsylvania Railroad. Correcting this ventilation risk, along with upgrading the ventilation system with new computer controlled bi-directional fans, installing new stairways and constructing a completely new seven-story ventilation portal structure in Weehawken are some of the goals of this project, which is currently one-third complete.

On the other side of Manhattan and across the East River, the Long Island City Ventilation Project is underway. This job will also include new bi-directional fans, new staircases, new substations to power the ventilation system and a new three-story ventilation structure. An innovative tunnel shield has been constructed and installed in the roof of the tunnel to isolate train traffic from the on-going work. This tunnel-shield concept is the first of its kind and will serve as a model for other tunnel work.

A rendering of part of the 1st Avenue Ventilation Project will require cr. downtown M. University Hos

The fire standpipe work in progress in the East River Tunnel contributes to the goal of installing a total of 16 miles of standpipe in all six Amtrak tunnels.

of the nine-story structure in Manhattan that will be part of the First Avenue Tunnel ventilation system illustrates the complexity of the project. This structure, the construction for which involves many phases and other heavy equipment in the middle of Manhattan, will sit only nine feet from a New York University Hospital building.

The design for the First Avenue Tunnel Project, a particularly complex project involving easement agreements and special construction considerations, is now complete. Amtrak recently reached agreement with New York University on the project, which is required because the ventilation system sits on the New York University Hospital grounds. The construction of the new structure will call for kid-glove care, as the south side of the ventilation structure will sit only nine feet from the hospital and noise, dust, and vibration concerns will take priority. The end result will include the new nine-story structure, a new ventilation system with new stairways, and bi-directional fans.

“What happened as a result of Sept. 11, is that we went from projects dedicated to improving the tunnels, to a full-fledged, comprehensive program.”

Steve Alleman

tion system with new stairways, and bi-directional fans.

All the ventilation shafts in the tunnels will have new scissor-step stairways, which have landings that enable emergency crews to pass those being evacuated.

The scope of Phase II, which would run from 2008 – 2013, is currently under design. The focus of this phase will be the rehabilitation of the tunnel infrastructure.

Critical Bridge Work Ensures Operational Reliability

continued from page 1

After recent annual inspections revealed significant wear such as decayed timber decking boards and deck girder span steel deterioration, the two-track bridge was placed on the list of FY '03 structures to undergo component replacement.

Built in 1913, the nearly 5,000-foot-long bridge was originally a movable bridge that allowed small boats to pass. Later, Amtrak rendered the draw span inoperable and converted the bridge to ballast deck by placing timber boards across the steel beams.

The bridge is made up of nearly 190 26-foot concrete spans, a 43-foot long deck girder span and a 30-foot thru girder span.

The 73-foot segment that required the work was made up of the deck girder and the thru girder; the entire deck girder span was replaced with a new steel I-beam span encased in concrete and the rotten timber boards were replaced with pre-cast concrete slabs.

The project, a coordinated effort between Bridge Rehab. Gang R-901, Mid-Atlantic Division Track, Communications and Signals, Electric Traction forces, and System Track production gang employees, entailed a sequence of activities, including removing the existing rail (panel by panel), ties, and ballast; dismantling the decomposed timber decking and

installing concrete beams and/or slabs; replacing the track (again, panel by panel); dumping new ballast; surfacing and realigning the track with Amtrak's high speed Continuous Action Tamper; and then welding it back together. Each track was then visually inspected before it was returned to service. Many of the components for the projects were fabricated by Bridge Fabrication Gang H-109 in Wilmington.

Joe Lileikis, senior engineer of structures explained, “Coordinating the timing is crucial to getting a project like this done. Each phase of the project was dependent on the successful execution of the phase before it — and these phases took place at different times of the day, with a range of teams, calling for very different types of equipment, all in a very short period of time.”

“The work done to ready the bridge for the project was extensive,” noted Bill Breneman, assistant division engineer. “The prep work, such as attaching ballast retainers to the bridge and installing handrails, was important to accomplish the job safely.”

The work on track 2 (the southbound track) took place in September and track 3 (the northbound track) work began late October and was returned to service on Nov. 1. Five weeks (for each track) of preliminary work was necessary to prepare the bridge for the construction.

“The work done to ready the bridge for the project was extensive. The prep work, such as attaching ballast retainers to the bridge and installing handrails, was important to accomplish the job safely.”

Bill Breneman,

Assistant Division Engineer

In order to minimize the impact on NEC traffic, one of the two tracks was kept open while work was being performed on the other, while dispatchers directed northbound and southbound trains on the open track. In addition, a major portion of the work such as removing the track panels and the preliminary work was performed at night.

“A very experienced passenger might notice a smoother ride over the bridge,” said Lileikis. “But what’s important to note is that if this bridge wasn’t repaired soon, we might have had passengers noticing that there was no service at all on that end of the corridor.”

An Acela train passes, as the Bridge Rehab. gang remove decaying components.

Recognized for working nine years without an injury, the Washington, D.C., Mail and Express Facility employees were honored at a Nov. 10 event. (L. to R.) Ulysses Redd, foreman; Leon Copeland, baggage handler; George Butler, baggage handler; William Ferrell, baggage handler; Ricardo Davis, baggage handler; Charles Gardin, foreman; David Gunn, Amtrak president; Tyrone Jackson, baggage handler. (Missing from photo: Tony Long, Cedric Barnes, James Nelson, Jacob Wills, Kenny Boarders, Mitchell White, Lewis Satcher, Vincent Young, Wilber Powers.)

Mail and Express Facility Employees Recognized for Safety Milestone

November 10 marked, to the day, the ninth consecutive year the Washington, D.C., Ivy City Mail and Express group has worked without an employee injury.

This achievement is significant, given the nature of the Mail and Express operation. The team, made up of 11 baggagemen, two extra-board positions and two foremen, work a seven-day, two-shift operation, in all weather conditions, loading and unloading Amtrak rail equipment and U.S. Postal Service trucks. Many of the containers these employees handle

weigh hundreds of pounds and must be pushed or pulled into place. Each employee is a qualified, skilled forklift driver able to work in tight locations to safely and efficiently load rail cars.

Amtrak President David Gunn, Ed Walker, vice president of Transportation, and Daryl Pesce, general superintendent of the Mid-Atlantic Division attended a luncheon in November to recognize this special milestone. Gunn spoke of the financial impact to the corporation and the importance of every employee's contribution to the bottom line.

Weathering this Winter Could be a Breeze

Amtrak recently put into service a new forced-air blower truck to help fight the snow and ice that can block track and signals, and freeze switches, causing rail service to shut down. The new vehicle, an AF1 Blower manufactured by RPM Tech, is a commercial-grade high-rail truck that includes an auxiliary engine-driven air-blower assembly used for rail or road maintenance. The forced-air blower, painted a visible lime-yellow color for maximum safety, removes snow or debris around switches and rails and performs other clearing tasks.

Always on the alert for new technology, Amtrak's Engineering department was impressed with the machine's efficiency and arranged to make the purchase in time for the winter. While the company has other effective snow-removal equipment in Boston, Chicago, Philadelphia, New Haven, New York, Washington, and Albany, that equipment is rail bound or must be moved over the road by truck. The new snow blower vehicle, which will be stored in Wilmington, is roadworthy and also capable of rail travel so it can be moved when required by storm conditions.

Richmond Station Once Again Becomes a Main-street Attraction

Richmond's Main Street Station, which had not seen passenger rail service since 1975, again serves Amtrak passengers as of Dec. 18. The station, which is owned by the city of Richmond and serves the downtown area, sat vacant for a number of years. It is now restored to its original 1901 splendor, through the efforts of public and private organizations. The station plays a major role in the revitalization of the downtown area and will become a regional transportation hub as an intermodal facility.

On Dec. 17, an event to celebrate the opening was attended by state and local officials, former Amtrak board member Gov. Linwood Holton and many train enthusiasts.

Improvements Yield Accolades

Editor's note: The following excerpts from a letter to Amtrak from the Ohio Central Railroad System reflect the noticeable improvements the company is making.

I just want to congratulate and thank Amtrak for the marked improvements I have noticed in both my business and personal travel this past year. Prior to 2003, traveling via train was sporadic due to a lack of confidence in on-time reliability and scheduling.

Beginning with a family trip to New York City on the *Pennsylvanian*, followed with an overnight business ride on a sleeper car to Boston, I found the trips to be extremely agreeable and the service outstanding. Building on my newfound certainty that Amtrak had made a significant turnaround, I began recommending Amtrak as our company's preferred mode of travel for business trips.

I am pleased to report that colleagues' ventures throughout the Mid-West, Southeast, as well as numerous jaunts on *Acela*, have all been well received. With most stations being conveniently located in the downtown areas of the cities we travel to, we have also been able to cut down on costly rental cars and all of the hassle that modern day air travel brings.

As 2003 comes to a close, we will only be increasing our use of Amtrak for 2004. Currently we have rail trips planned to Florida, Chicago, Colorado and Philadelphia (not to mention vacations). Keep up the good work.

Sincerely,

Leonard Wagner

Best-selling Author Clive Cussler Rides West Coast Rails

Author Clive Cussler takes a break from book signing to pose with Amtrak Marketing Directors Carol Shannon (left) and Dee Mason (middle) on the Dec. 2 Pacific Surfliner. Traveling in Business class between San Diego and Los Angeles, Cussler met passengers, recited tales, and autographed his latest novel, *Trojan Odyssey*. On Dec. 4, two book signings were also held on the Coast Starlight from Los Angeles to Oakland.

Publicity generated by press releases, on-board and station posters and Cussler's and Amtrak's Web sites, drove Cussler fans to purchase tickets just to get an opportunity to meet the master storyteller. "Passengers came from all over the country to get autographed copies of the first edition of his new book," said Shannon. "One couple came all the way from Australia to ride both trains with Cussler."

PROMOTIONS IN MOTION

Cruise Rail Partnerships Yield Ridership, Revenues

Participation in Amtrak's Cruise Rail program, which began as a pilot 15 months ago, continues to rise steadily. Participation in the program has climbed steadily every month since the program's launch in June 2002, closing out FY '03 with over 8,000 passengers and revenues exceeding \$540,000.

When the Cruise Rail program began, Amtrak partnered with Holland America and Carnival Cruise Lines, offering passengers a 15-percent peak and 25-percent off-peak discount on rail and accommodations if purchased in conjunction with a cruise. In early 2003, Windjammer Cruises was added to the program. In exchange for offering passenger discounts, Amtrak benefits from promotion of the program by participating tour operators. At minimal cost to Amtrak, the program provides increased revenue, exposure, and association with strong travel industry brands.

Recent reports show the *Regionals*, *City of New Orleans*, *Coast Starlight*, *Crescent*, *Empire Builder* and the Silver Service trains are the most popular Cruise Rail program routes. Plans for FY '04 include partnering with Princess, Royal Caribbean, Norwegian Cruise Line, Delta Queen Steam-

boat, and Celebrity cruise lines.

Reno Passengers Come Aboard for Fun

This winter, passengers who love snow and fun can enjoy both while traveling to Reno, NV, aboard Amtrak's 2004 *Fun Train* and *Snow Train*. Amtrak is partnering with tour operator Key Holidays to once again offer the popular seasonal tour packages to Reno. The trains depart from Emeryville and Sacramento and each package includes round trip travel on a chartered Amtrak train, two nights' hotel accommodations, and lunch on the return trip.

Both trains are operated by Amtrak and offer passengers wintertime sightseeing, strolling minstrels, and live entertainment in the special Piano Lounge car as the trains travel through the snowy mountains.

Snow Train travelers can listen to historical narratives en route, while passengers on the *Fun Train* enjoy games and dancing during the seven-hour journey. Beginning Jan. 27, the *Snow Train* will run once a week through March 16 with round-trip costs, including hotel, ranging from \$179 to \$269. The *Fun Train* will operate eight round trips beginning Jan. 9 through March 26 at a cost of between \$199 and \$339. Rail only packages are also available.

FY '03 Engineering Excellence Awards

continued from page 2

the Off-corridor Division Engineering Excellence award were the Central Engineering Division and the West Engineering Division. The West achieved the greatest reduction in absenteeism, with a 5-percent improvement over last year.

The department's Partnership Award, which recognizes the coordination between departments necessary to carry out infrastructure improvements to the corridor, was presented to the Transportation Division that managed the most 55-hour-plus track outages in FY '03. The New York Transportation Division won this award, with 189 55-hour-plus track outages associated

with work performed using the Track-laying System (TLS) and by the Switch Exchange System (SES) gangs. The Mid-Atlantic Transportation Division followed with 109 outages for the TLS and undercutter gangs; and the New England Transportation Division had 72 outages for the undercutter and Springfield Line tie gang and a tunnel project.

At the December ceremony, Hughes attributed the department's success to the professionalism and dedication of its employees. "Because people are focused on doing the basic things well, every day, this company is seeing the improving levels of performance that we see today."

FRONT LINE FOCUS

Dear Amtrak:

While on route to Seattle, we were on the first leg of our journey from St. Louis to Kansas City when we realized we had left the container with my insulin (I am diabetic) back in St. Louis. We told our conductor, Mr. James R. "J.R." Lewis of our problem, and with his help and many phone calls (most made on Mr. Lewis's cell phone because ours did not work in the area), we were able to contact a Walgreen's near the Kansas City terminal and they delivered the insulin, via taxi, to your station. The Kansas City station personnel paid the taxi driver for us.

We believe that these people went "above and beyond the call of duty" and they should be recognized.

Sincerely,

Mary V.
Gig Harbor, WA

Dear Amtrak:

While traveling from Stamford, CT, to Washington, D.C., shortly after I

boarded Amtrak I started to have an asthma attack. Mr. John Walton was very helpful and caring during the situation. He arranged for the train to stop at the next station and for an ambulance to transport me to the hospital. He stayed with me and talked with me during this scary time.

Also, Mr. Walton phoned my emergency contact several times while I was in the hospital to see how I was doing. He inquired as to what train I'd like to be booked on and made those arrangements. Mr. Walton knew that arriving in Washington that day was important to me. He clearly went above and beyond the call of duty.

I've had the pleasure of riding Amtrak several times to several destinations and have been pleased each time with the friendliness and helpfulness of the Amtrak employees.

Sincerely,

J. Burns

Beech Grove Blasts Rainbow Fleet

A \$250,000 investment in the Beech Grove shop has made a world of difference as the facility standardizes the outside appearance of Amtrak's 432-car Superliner fleet. The January installation of a new water blaster eliminates the previously laborious

and cumbersome task of removing Superliner decals and striping by hand.

While the new livery, or graphic design, was applied to 15 Superliner cars that were wreck-repaired, Beech Grove employees now have

the tools they need to effectively carry out the job. Now, as cars cycle through Beech Grove for scheduled overhaul and remanufacture visits, the standardization process will move forward more quickly.

"The changes to the exterior and our continuing efforts to redesign the interior reflect Amtrak's commitment to modernizing the entire fleet of Superliner equipment," said Beech Grove Superintendent Lew Wood.

The updated look is a product of Amtrak's Industrial Design team that developed the new livery for the exterior of Amtrak's equipment as part of its Phase 6 Livery project, completed at the end of FY '02.

The "candy stripe" appearance is part of a Superliner decal package

continued on page 10

After applying the logo to Superliner II Sleeping car 32090, Carman Steve Anderson and Lead Carman David Riordan remove the application tape from the decal.

President Signs Funding Legislation

On Jan. 23, President Bush signed legislation that includes \$1.2 billion in federal funding for Amtrak, including deferment of the repayment of a \$100 million DOT loan. The funding ensures Amtrak's ability to undertake capital projects and operate all services in FY '04.

Since Oct. 1, the company has been operating with funds coming from Congress under a continuing resolution, at a prorated \$1.043 billion funding level.

New Winter Acela Express Ad Campaign Kicks Off

Continuing the momentum of the first quarter and in preparation for the slowest part of the travel season, the Marketing department launched an *Acela Express/Metroliner* advertising campaign on Feb. 15. Following the recent long-distance winter campaign that was kicked-off in January, both promotions continue to reflect the company's back-to-basics advertising approach.

Acela Express/Metroliner Campaign

A new advertising look has been created for Amtrak's *Acela Express* and *Metroliner* service. As with the long-distance campaigns, this creative features illustrations by Michael Schwab and was tested in focus groups in Washington, D.C., New York, and Boston.

The new ads carry a retro look, yet

are bold and contemporary in their creative style. The look makes Amtrak's promotion stand out, a theory validated by the research results gathered from the focus groups. The train schedule frequency in each market and the \$99 north-end fare, along with the product amenities continue to be promoted. The ad campaign will run through June.

Additionally, to continue to entice passengers to enjoy the *Acela Express* and *Metroliner* experience, a change to discounted fares that started on Jan. 6 now allows all passenger-type discounts, such as AAA, children, and seniors, to be available on weekends and holidays.

Similar to the fall campaign, both the long-distance and *Acela/Metroliner* campaigns will be measured based on ridership and revenue gains. Also, given that the *Acela Express/Metroliner* campaign has a completely new creative approach, this campaign will be measured through quantitative research to gauge awareness and changes in

purchasing behavior and the associated incremental ridership and revenue.

Strong Ridership and Revenue Trends Continue Through First Quarter

Ridership and revenue numbers continued to show strong results

TRAIN OF THOUGHT

We are continuing to make progress in a number of areas to improve our operational reliability and return the railroad to a state of good repair, so I want to update you on our progress.

Now that we have \$1.2 billion in federal funding allocated to our budget, I think we can expect another year of stability. While the \$1.2 billion is short of what we asked for, the essential fleet and infrastructure work will continue. We're going to continue the progress we're making, but maybe not as quickly as we'd originally planned. After we present a revised capital budget to the Board of Directors this month, I'll share with you the details of what our plans are.

I'm optimistic about our progress so far and think we're on solid ground for the year. Last month, I spoke at an Association of American Railroads conference in San Diego. I told the group about the progress we've made. We ended the first quarter (October through December) on a pretty good note. Fiscal year through December, ridership was up 10 percent over last year (and 9 percent favorable to budget), while ticket revenues rose 8 percent (and 7 percent favorable to budget). Overall, we closed the first quarter \$38.6 million ahead of budget (including depreciation); \$21.9 million favorable to budget in revenues, and \$21.7 million favorable to budget in expenses. I told the conference attendees that we reorganized the company to operate as a traditional railroad. We've implemented tight

budget and head count controls, and have one set of financial books that, like most businesses, use GAAP accounting principles. We're watching our finances and measuring our progress very closely, on a monthly basis (and typically two to three weeks after the end of the month we produce a complete set of financials).

We've set well-defined goals and objectives, we've established organizational charts based on need and driven by programmed work. We've created a structure with clear lines of authority that relies on accountability. We have a project-specific capital plan that is no wish list — it's a must list.

**Now that we have
\$1.2 billion in
federal funding
allocated to our budget,
I think we can
expect another
year of stability.**

We will slowly improve the reliability of our fleet by focusing heavy overhauls and remanufactures at the back shops, returning to a 30-, 92-day and annual service and inspection cycle, and restoring regular overhaul programs, and our Engineering forces are undertaking major structure and track work.

All of these changes are necessary to not only bring the railroad, but also faith in Amtrak, to a state of

David L. Gunn

good repair. These changes make sense, but they weren't getting done before. I think the numbers and the growing confidence in Amtrak show that it's working.

The people at the AAR conference were generally pretty impressed with our progress, even if they were distracted by all that good weather. Next winter I will invite them up to my house in Nova Scotia — where the weather is a little different this time of year.

On another note, I recently returned from a cross-country trip on 29, 59 and 1 (with a side trip to see our track in Michigan), and I must say, I was impressed with the crews I met. The westbound trip on the *Sunset Limited* was a lot less eventful than the trip I took a while back train 2, when due to a derailment, I handled passengers' luggage between El Paso and Alpine, TX. On this trip, I helped the crew members unload their luggage at Alpine (where they were changing crews), just to keep my qualification current. By the way, the trains were very busy.

**"Travel shouldn't

A Touch of Class

Standardized Amenities Simplify Service Delivery

Just as Amtrak standardizes and simplifies its fleet, pricing, and other areas of the business, an ongoing focus to develop consistent standards the classes of service is becoming more visible to passengers.

A system-wide look at what defines First, Business, Coach class and Sleeping car accommodations revealed inconsistencies as a result of a number of factors, particularly the prior Strategic Business Unit structure of the company. Consequently, Amtrak is establishing consistent national standards, to

clarify what amenities are offered in which classes of service so that both passengers and employees know what to expect.

"Travel shouldn't be complicated," noted Service Delivery Chief Kevin Scott. "There should be no ambiguity about what service passengers receive and about what amenities employees should offer."

Blue Blankets, White Towels and Read All Over

A number of changes are being made to the amenities offered in the Sleeping cars. A new

A Touch of Class

Standardized Amenities Simplify Service Delivery

meals, a morning newspaper, bottled water in their rooms, and evening turndown service. With 500,000 of these cards available, sleeping car attendants should have plenty on hand.

Complimentary beverage service that consisted of coffee, tea, juice, and soda has been modified. As of Jan. 1, Amtrak no longer offers sodas and cranberry juice but continues to offer coffee, tea, and orange and apple juice from 6 a.m. to 9:30 a.m.

“Consistently meeting passengers’ expectations and delivering high-quality service requires persistent and diligent attention to the amenities we offer, down to the quality of the towels and blankets.”

Barbara Richardson,
Vice President of Marketing
and Sales

An examination of the costs associated with all-day beverage service and passenger demand led to the decision to change the beverage service. “Even the best hotels don’t offer unlimited bottled water to their customers. However, in response to passenger input, Amtrak will continue to offer

water on request,” explained Tom Hall, senior director, Contract Food and Beverage.

Starting in February, the rose-colored blankets on the long-distance trains will be replaced with new Amtrak-blue blankets, which are similar to the ones currently in use in every way but are consistent with the Amtrak color scheme. While Amtrak continually changes out old, worn and soiled blankets (12,000 over the course of a year), the new blankets will be swapped out over the course of three months as cars enter preventive maintenance cycles. The rose blankets no longer acceptable for passenger use will be donated to local charities, such as the Union Rescue in Los Angeles and Second Harvest in Seattle.

Over the next several months, passengers traveling in Sleeping car accommodations will notice plush towels. Not only does the quality of these towels far exceed what passengers are currently provided, but the bath towels are also 20-percent larger than those currently being used. As the summer peak season approaches, higher-quality washcloths, hand towels, and bath towels will be phased in to long-distance train service. Amtrak replenishes its towel stock regularly over the course of a year — much more frequently than any hotel or restaurant.

Choosing the right grade of towel isn’t as simple as one would think; after identifying nine acceptable grades of towels, Service Delivery

This tent card is placed in each First class sleeping room. It informs passengers about offered services, including evening turn-down service and a morning wake-up call.

department employees presented the top three samples to Amtrak Customer Advisory Committee (ACAC) members for their recommendations. The savings achieved as a result of contracting with a new laundry vendor enabled the company to purchase these higher quality (and therefore more expensive) towels, thereby making the upgrade cost-neutral to the company.

After passengers wake from their blue-blanketed slumber, and dry off their morning shower with a plush towel, Sleeping car passengers can peruse their copy of *USA Today* provided on the weekdays and the local paper on the weekends. On the Northeast Corridor, First class passengers are offered the *New York Times* every day. To achieve cost-savings and to simplify the newspaper distribution process internally, Amtrak has issued a Request for Proposals (RFP) for bidding from category management vendors — one vendor working with multiple local vendors to manage the system-wide distribution of all the complimentary newspapers the railroad offers.

Amtrak is updating its passenger information as well, and in the spring, Route Guides will be available on 15 long-distance trains. Sleeping car passengers interested in learning about the route they are traveling can read about the historical and geographical significance of the route, among other facts provided.

Beyond the Sleeping Cars

Toiletries already made available to long-distance First class passengers free of charge upon request will soon also be available for sale to coach passengers in the Lounge and Cafe cars. Standardized choices of toothpaste, toothbrushes, and other toiletry items have been identified and will be

stocked in Lounge cars by early spring.

Now that most Cafe cars are equipped with cash registers, Amtrak has implemented a receipt policy used by many restaurants and retail stores. Signs placed in these cars inform passengers that if they don’t receive a receipt at the time of their purchase, it’s free. This policy helps lead service attendants account for purchases and inventory.

Amtrak’s Quiet Car®, available on *Acela Express*, *Metroliner*, *Regional* and Capitol Corridor trains, has become increasingly popular. Amtrak recently instituted a policy that preserves the integrity of the Quiet Car, meaning that passengers seated in the Quiet Car must refrain from speaking loudly and from using cell phones or other electronic devices that are audible to other passengers, even in the case of a sold-out train.

In addition, as of Jan. 15, the Quiet Car is designated the car next to the First class car on all *Acela Express* and *Metroliner* consists. Special Quiet Car signs, seat-back cards, LED signs and conductors’ announcements inform passengers about Quiet Car service. Also effective Jan. 15, Quiet Cars were expanded to weekend *Acela Express* service.

“Each of these changes — on its own — may be subtle. But when you look at the whole picture, it all comes together,” said Barbara Richardson, vice president of Marketing and Sales, who, together with Transportation Vice President Edward Walker, is leading the effort to establish these national standards. “Consistently meeting passengers’ expectations and delivering high-quality service requires persistent and diligent attention to the amenities we offer, down to the quality of the towels and blankets,” added Richardson.

A First class sleeping car is set up to welcome passengers. Included with the set up is a card that provides passengers information about their First class amenities.

Individual Employees' Contributions Count Toward Operations Department Goals

The following letter from Sr. Vice President Bill Crosbie outlines the Operations department goals for FY '04.

Dear Amtrak Co-workers,

As I begin my second year at Amtrak, I want to remind everyone in the Operations department about the importance of the goals we have and how they all fit together to improve our operating reliability and ultimately improve on-time performance, while keeping the safety of our employees and passengers our top priority.

The Operations department, which accounts for about 90 percent of Amtrak's workforce, has in place eight key goals that each of the six departments strive to meet in FY '04. Informing and reminding our employees about goals and objectives helps each employee understand the role they play in the success of the railroad. To that end, I've directed my staff to dedicate space on bulletin boards in each work location so that all employees know how we are doing on a monthly basis.

Goals and objectives serve many functions. They're used to help illustrate the mission of a group or department, they define a common goal toward which a group of people or a department should be striving. Goals also measure progress and foster personal accountability as well as a team-oriented working environment.

Goals and objectives are solid numbers. When you measure performance, it not only indicates how well or poorly we're doing in an area, but it also reveals other areas for improvement. For example, if we are measuring on-time performance for a route on a host railroad and we see a declining trend, asking ourselves why may tell us that the delays are associated with an increase in slow orders. As we continue to look at the reasons for the delays, we may find that slow orders have increased because of track conditions. We can then use this information in our discussions with the host railroad to request an action plan for the track, which will ultimately improve on-time performance.

Measuring how we do helps managers target problem areas and learn from practices that improve performance. For example, if we are measuring on-time performance for the Northeast Corridor and we see an

improving trend, again asking the question why a number of times may reveal that the delays associated with catenary failures have decreased due to the replacement of the suspension and span hardware under the state of good repair capital budget.

Most Amtrak employees know that keeping the trains running on time safely is tougher than it sounds, particularly when there are so many factors that are potential obstacles to achieving safe optimum on-time performance. But achieving on-time performance (OTP) is the core around which many of the Operations department's goals and objectives revolve.

The first goal of the department, which is the corner stone of all of our goals and objectives, is to achieve system-wide OTP of 85 percent. Right now, the system's OTP hovers around 75 percent. We need to improve performance on all our routes by reducing the delays over which we have control. We're tracking these delays on a monthly basis, and have assigned OTP goals according to six specific service categories: *Acela Express* (94 percent), Amtrak-dispatched corridor (90 percent), non Amtrak-dispatched corridor (85 percent), long-distance (70 percent), Amtrak-operated commuter (95 percent) and initial terminal departure (95 percent).

In order for Amtrak to reach the OTP goals, we have to meet the other seven goals. For example, we have to improve the reliability of the fleet by reducing the number equipment failures. We have reorganized the Mechanical department and are now implementing regular overhaul and preventive maintenance cycles. I know that it will take a while for things to cycle through, but our FY '04 target is to have fewer than 1.25 non-FRA defects within 30 days of the last inspection and zero FRA defects for the first 45 days after a car's been inspected at a Service and Inspection facility.

Just as we're asking the Mechanical department to meet this goal, we're also asking the Engineering department to maintain the infrastructure in a state of good repair while minimizing the impact of that work on OTP. So we've set targets for the Communications and Signals, Electrical Traction, Structures, and Track groups to each reduce the

Bill Crosbie (R.), sr. vice president of Operations, listens while Communications and Signals maintainer Jeff Merriman describes effective safety initiatives.

minutes of delay by 5 percent from the FY '03 actuals.

The Operations Planning group also has goals it must meet to contribute to improved OTP. We have five host railroad agreements that expire in FY '04 (Canadian Pacific, CSX Transportation, Norfolk Southern, SCRRA, and Maine/MBTA). These are opportunities for Amtrak to identify areas where we can reduce costs among other ways to come to reach agreements that support improved OTP.

Amtrak's utmost priority — safety — is critically important. While all of Amtrak's departments must work to reduce employee and passenger injuries for obvious reasons, the truth is that keeping these numbers down also contributes to improving OTP. System-wide, in FY '04 we need to see a 12 percent reduction in injuries per 200,000 hours worked over last fiscal year (to 3.4 from 3.9). This seems like a stretch but in FY '03 we went from a ratio of 4.3 to 3.9; a 10 percent reduction. On the passenger side, our goal is to achieve a 10 percent drop in the number of passengers hurt.

In addition, APD Chief Ron Frazier is working to achieve a 5 percent decrease in the number of larceny criminal cases and vandalism criminal cases that take place on our trains, in the stations and on Amtrak property.

Naturally, the health and safety of our passengers and employees is most important, and compliance with federal, state and regulatory environmental and public health

mandates is vital. Our goal for FY '04 is to increase the percentage of public health inspections that are rated satisfactory from 85 percent (in FY '03) to 87 percent, and to maintain the number of potential environmental violations at last year's rate of 1.24 per audited facility.

We also need to meet the company's goal of controlling absenteeism. The FY '04 absentee rate target for non-agreement covered employees is no more than 1.5 percent, and the target for agreement-covered employees is no more than 3 percent.

I know that some of these targets may sometimes seem daunting, but we wouldn't have set them if they were not attainable. The trick is for everyone to stay focused and committed to their respective goals and objectives — if someone in one Operations department isn't working to meet that group's goal, it affects another department, if not the whole system.

By meeting of our goals and objectives, each employee contributes to the success of the railroad. Please keep them at the forefront of your mind as you do your job, and stay safe.

Sincerely,

William L. Crosbie

Transportation Sees Major Improvement in First-quarter Safety Record

As the department responsible for Amtrak's overall operation, the Transportation department accounts for nearly 44 percent of all the work hours generated by the railroad. As such, the compliance of safety and operating rules by engineers, conductors, on-board, and station personnel is critical to the safety of employees and passengers, and to the railroad's overall bottom line.

The first quarter of FY '04 was characterized by decreases (improvements) in important safety and operational indices. The total number of Transportation department employee on-the-job injuries decreased 21 percent, compared to the first three months of last fiscal year. Reportable injuries — those serious enough for Amtrak to report to the federal government — decreased 26 percent during the same period.

Transportation also achieved an 11-percent reduction in the number of major operating rule violations — those that could directly impact the safety of our crews and passengers, and/or the condition of our equipment and right-of-way.

According to Chief Transportation Officer Steve Strachan, the department has directed its focus on employee behavior. "We need to pay greater attention to how our employees work," said Strachan, "and when necessary, identify smarter and safer ways to perform

basic tasks. Running trains safely is our mandate."

During the past several months supervisors and managers throughout the department have stepped-up the frequency of field audits, making a point to speak with employees and discuss safety- and operation-related subjects whenever possible. Audits are based on the principles of the Safety Training and Observation Program (STOP), encouraging employees to share their views on how best to perform tasks, to identify potential hazards, and ways to eliminate them.

"Teamwork is necessary to deliver safe and efficient service, not only between labor and management, but also among the various crafts that support the overall effort," noted New England Division Superintendent Mike DeCataldo.

The New England Division, one of Transportation's seven major operational groups, champions employee-focused initiatives. DeCataldo credits a number of factors for the Transportation department's contribution to New England's reportable-injury-free December. "It's not one individual program or activity that makes the difference, but a combination of several," contends DeCataldo. "Our audit programs, train rides, job briefings, and focus on high-frequency-injury areas such as lifting, slips, trips, and falls have all paid dividends. Our safety commit-

Keep on Trucking

(L. to R.) Machinists Gerard Lyons, Jim Cook, Kirt Flowers, Enrico Giangiulo, Fleet Officer Al Dowd, Machinist Joe Sokolowski, Foreman George Rueger, and Machinists Ralph Asplen III and Ceasar Pirelli.

Philadelphia Truck Shop Maintains Significant Safety Record

While they're a small group, their safety accomplishment is sizeable. Amtrak's Philadelphia Truck Shop, made up of a manager, one foreman and seven machinists, has gone six years injury-free. Since 1990, the group has experienced only one reportable injury, which occurred in the summer of 1997.

"Most of the employees in the shop have been working together for so long that they really know and look out for each other," explained Bob Jones, director, Automotive. "In addition, by putting employees in positions that maximize each person's particular expertise, George Rueger (the foreman) minimizes the potential for injury."

"The one word that helps account for this accomplishment is communication," said Foreman III George Rueger. "Whether we're discussing issues at a safety briefing, or working out a difficult problem with a truck, we're always communicating."

According to Fleet Officer Al Dowd, the men behind this safety record can be found over, around, and under trucks in the shop or out along the tracks. Part of the Procurement department's Automotive Group, the two-shift operation works on vehicles as large as tractor trailers and as small as the tugs used by the baggage department.

tees also play an important role in the injury-prevention process by providing a forum for craft

employees to contribute their comments and suggestions."

Michael Pollick, director of System Safety, contributed this story.

Amtrak Manages Change with the Close of Chicago Call Center

After 32 years of service, the Midwestern Reservation Sales Call Center (MRSCC) in Chicago closed its doors on Dec. 31, 2003.

The approximately 2.7 million calls that had been managed by MRSCC annually are now handled by Amtrak's two other call centers in Philadelphia and Riverside, CA. The functions carried out by the Group Desk and the Special Accounts lines are now administered by the Riverside office, and the Ticket-by-mail (TBM) operations (Chicago mailed nearly a million tickets annually) are now divided between already-established TBM offices in Riverside and Philadelphia.

Double-digit decreases in call

volume at Amtrak's three call centers over the past two years due to the increasing popularity of reservation sales alternatives such as www.amtrak.com, Amtrak's voice response unit "Julie," and Quik-Trak machines, resulted in the closure of the Chicago call center. A plan to manage the transition of 253 Transportation Communications Union (TCU) employees and 17 management employees minimizing adverse impact on call center and Central Division operations was implemented.

While Amtrak was required by contract to give six months' notice to affected employees, those at the call center were informed nearly

twelve months in advance to allow time to consider career options, change positions, or relocate to the other call centers.

After the closure announcement was made last January, 65 of the affected employees accepted the relocation allowance and transferred to the Western Reservation Sales Call Center in Riverside or to the Mid-Atlantic Reservation Sales Call Center in Philadelphia.

"While necessary, this was a difficult move for a number of Central Division employees. We wanted to

At the Riverside Call Center, Team Leader Jamie Sorenson assists Reservation Sales Agent Carol Muscari, a recent transfer from the Chicago Call Center, as she works the outbound marketing desk.

make sure that we used all the resources available to ensure a smooth transition," noted Central Division General Superintendent Don Saunders. "Everyone involved

Engineering Expertise on the West Coast Generates Revenue

Working closely with other Amtrak departments, state partners, and commuter agencies the Amtrak Engineering department is playing a vital role in passenger rail corridor development by contributing vast railroad construction expertise to various projects. By providing know-how and hard work for ongoing construction projects, Amtrak offers a unique value to its partners in transportation.

One example of this expertise can be found on the 60-mile San Diego Northern Railway (SDNR) located between San Onofre and San Diego. Here, Amtrak entered into a five-year “On Call Engineering Services Contract” with North County Transit District (NCTD), the agency that owns the *Coaster* commuter service and the SDNR. Since the contract began in 2002, Senior Project Manager John Eschenbach and his team of specialists have brought over \$1 million in revenue to Amtrak.

“The expertise Amtrak contributes adds value to the \$35-million contract to operate *Coaster*, and helps us manage the on-time performance of the four railroads (Amtrak’s *Pacific Surfliner*, *Metrolink*, BNSF, and *Coaster*) that run on the SDNR,” said Joe Yannuzzi, superintendent of Amtrak *Coaster* Commuter Operations.

Amtrak’s five-year contract with the agency includes right-of-way construction management, and

oversight for projects on the SDNR, including the coordination of performance and inspection of work by third parties. Typically, this means installation of turn-outs, destressing welded rail, tie renewal and surfacing, installation of and upgrades to grade crossings, building of locomotive shops, platforms, stations, maintenance facilities, pedestrian underpasses, grade separations, bridges, and installation of automated signal control systems. Amtrak Division Engineer Tom Crowell and Dan Weatherby, director of Communication and Signals, provide engineering support on all this construction.

One of the most recent contract projects, completed in December 2003, was the construction management and inspection of a \$1.2-million tie-replacement project. A total of 11,000 ties were replaced with new timber cross ties on 39 miles of track. All construction took place at night and afforded minimal impact to service on Amtrak’s second-busiest corridor.

“Keeping this mostly single-track railroad running requires an enormous amount of communication and teamwork,” said Sy Morales, senior engineer of Track and Structures for the *Coaster* operation. The skills and labor of Amtrak *Coaster* Maintenance-of-Way (MoW) forces, managed by Morales, complete the contract services on time and with minimal impact. For example, the *Coaster*

Crews install switch number 24 turn out on the SDNR in Encinitas, CA.

Crews replace four spans on SDNR bridge number 223 in Oceanside, CA.

10-man flagging gang, supervised by Foreman Roger Butler, provides federally required protection for contractors working along the right-of-way, and ensures safe working conditions within the rail corridor. All flagging charges are reimbursable through third-party contractors, which, in addition to the contract, generate revenue for Amtrak.

“The engineering services we deliver are a ‘win-win’ for NCTD and Amtrak,” said Eschenbach. “The team can make real-time decisions that dramatically affect things like on-time performance, train scheduling, quality of workmanship, and continue to maintain control of the railroad during the implementation of track and structures projects.”

John Eschenbach, senior project manager, Amtrak Engineering, checks track at new switch on SDNR.

The following are examples of the On Call Engineering Services Contract work that significantly impact the right-of-way for this busy corridor.

Project	Location	Cost	Completion
Track Work Two new control points and 1.7 miles of double track	Encinitas	\$4 million	4/04
Bridge Span Replacement The replacement of four spans, bridge 233	Oceanside	\$785,000	2/04
Tie Replacement Replacement of over 11,000 ties on 39 miles of track	San Diego County	\$1.2 million	12/03
Track Work Two new control points, and 2.6 miles of double track	San Diego	\$6.1 million	6/03
Bridge Replacement Replace burned timber bridge at milepost 259.6 with new concrete bridge	San Diego	\$1.2 million	11/03

Marketing Efforts Attract International Travelers

Amtrak's 2004/2005 USA Rail® Pass brochure entices international travelers to visit the United States by rail, describing how convenient and enjoyable traveling through the country on Amtrak can be. Released in late January and distributed to 40 countries, the brochure is one of several marketing tools Amtrak's Marketing department uses to attract travelers from outside of the United States.

"The USA Rail Pass is an excellent means for our overseas visitors to enjoy Amtrak service and appreciate all that America has to offer, and is a key element in capturing a larger piece of the international market."

International Sales Manager

Craig White

Although overseas travelers represent less than 1 percent of Amtrak's passengers, the revenue potential — 41.9 million overseas travelers to the United States in 2002 — is significant. Despite a 9-percent decrease in international travel worldwide due to such factors as

the war in Iraq, the outbreak of SARS, and a sluggish international economy, Amtrak's overseas ridership and revenue remained steady, generating \$5 million in international sales and attracting approximately 75,000 travelers in each of the last two years. However, increased marketing efforts and focused advertising in key markets are expected to yield 6-percent growth in international sales in FY '04.

Changes to the USA Rail Pass reflect Amtrak's efforts to appeal to the international customer. In past years, Amtrak offered six USA Rail Passes, however, based on customer feedback and in line with Amtrak's fare simplification plan, the 2004 USA Rail Pass offers international customers four clear travel choices; the National, Northeast, East, and West USA Rail Pass.

The brochure has been published for many years and is eagerly anticipated by Amtrak's overseas customers. It is Amtrak's main form of promotion in many countries, highlighting Amtrak routes and services. While Amtrak serves passengers from countries as diverse as Korea, Israel, Chile, and

Finland, USA Rail Pass customers come primarily from Canada, United Kingdom, Germany, Australia, and Japan. Because these five countries represent over 50 percent of all of Amtrak's international passengers, the 12-page rail pass brochure is available in English, German and Japanese. It is also available in Spanish to benefit many Spanish-speaking countries.

International Sales Manager Craig White is responsible for promoting Amtrak overseas through various channels, using the brochure, e-mail promotional messages, overseas tradeshow, and Amtrak's Web site to familiarize international travelers with Amtrak's services.

White works closely with 48 independent general sales agents in 40

countries, making sure that they have necessary tools to effectively sell and promote Amtrak services. These representatives attend shows and hold seminars about the company's routes and services for travel agents.

Amtrak International Sales Representatives Barbara Maurizio, Terri Gallelo, and Evelyn Gautier, at the Mid-Atlantic Call Center in Philadelphia, support the sales agents by resolving issues and answering day-to-day questions. These three individuals, along with White, are the voice of Amtrak to many of the general sales agents.

In addition, White works with the Travel Industry Association of America (TIA) to promote travel to the United States in the overseas market. As part of last year's TIA "See America" campaign, Amtrak's services were promoted aggressively in the United Kingdom with special advertisements in the London *Sunday Times*, which has a circulation of 1.4 million. A promotional piece was also developed and mailed to 7,000 British travel agents that specialize in selling travel in America.

"International travelers typically enjoy long-distance trains that allow them to see and experience America outside of the big cities," said White. "The USA Rail Pass is an excellent means for our overseas visitors to enjoy Amtrak service and appreciate all that America has to offer, and is a key element in capturing a larger piece of the international market."

Craig White, manager of International Sales, contributed to this story.

What you need to know about traveling on a USA RAIL® PASS:

- A valid non-US/Canada passport is required to purchase an Amtrak® USA Rail® Pass. Passes are also sold to permanent residents of U.S. territories.
- Passengers must present their USA Rail Pass on board at an Amtrak office for issuance of tickets to be used on the train. Be sure to carry your passport with you at all times.
- Passes listed are for Coach class travel and are in U.S. dollars. Passes are valid for either 15 or 30 days of travel with unlimited stopovers as specified.
- Passes are valid for travel on all Amtrak trains except Auto/Train, Amtrak Express® and Metroliner® services, and certain thruway connecting services.
- Reservations are required for travel on select lines.

We recommend that reservations be made prior to arrival in the U.S. and as far in advance as possible.

PEAK OR OFF-PEAK

Peak Periods:
January 1 - 4, 2004
May 28 - September 6, 2004
December 10 - January 5, 2005

Off-Peak Periods:
January 5 - May 27, 2004
September 7 - December 9, 2004
January 6 - March 26, 2005

Non-peak travel January 1, 2004 through March 26, 2005, and on weekdays to large metropolitan areas.

Children's Fares
Children ages 1 to 12 ride half price when accompanied by a child-free paying adult. (Up to two children per adult.) One child under 2 per adult may ride free.

Tickets and Cancellations
The USA Rail Pass is refundable prior to travel. Once travel has begun the pass is non-refundable. Penalties may apply for failure to travel. Sleeping Car open 7-day price-to-departure. Ask your agent for more information.

NORTHEAST RAIL PASS
Travel from the highest point all the way to Montreal and Niagara Falls.

5-Day	\$145 Off-Peak \$170 Peak
15-Day	\$165 Off-Peak \$205 Peak
30-Day	\$225 Off-Peak \$260 Peak

EAST RAIL PASS
Explore the historic sites of Colonial America to Florida, and from the East Coast to Denver, the Mile High City.

15-Day	\$210 Off-Peak \$325 Peak
30-Day	\$270 Off-Peak \$405 Peak

CALIFORNIA RAIL PASS

From the beauty of San Diego and the excitement of Los Angeles to the Sierra Nevada Mountains and the outdoor playground of Lake Tahoe, the California Rail Pass let's you see all the diversity of California. The pass allows you to visit as many destinations in California as you like. You may travel 7 days within a 15 day period.

Off-peak travel includes unlimited travel on the coast and in the Central Valley. The California Rail Pass also includes travel on the Sierra Nevada and the Lake Tahoe area. Ask your agent for more information.

WEST RAIL PASS
Expand the western territory that stretches from Chicago down to San Diego and across the plains, deserts and mountains to the Pacific Coast.

15-Day	\$210 Off-Peak \$325 Peak
30-Day	\$270 Off-Peak \$405 Peak

Capitol Limited Sleeping Car Attendant Les Jones assists passengers with their luggage in Washington, D.C. after the busy three-day Martin Luther King weekend. Ridership for the first quarter on the Capitol Limited was up 43 percent above budget plan and up 49 percent over the same period last year.

New Winter Acela Express Ad Campaign

continued from page 1

for the month of December and for the first quarter of FY '04. The railroad posted gains throughout the system, with significant growth in long-distance sleeping car ridership.

System ridership for the October through December time period was nearly 6,340,000, an almost 10-percent increase over the first quarter of FY '03, and more than 9 percent over this year's budget plan.

Ticket revenues mirrored the ridership gains. The first-quarter ticket revenues tallied \$327,000,000, which was nearly 8 percent over last years' revenue for this period, and nearly 7 percent over this year's budget plan.

The positive result for the month of December was achieved with just over 2.1 million passengers for the month, 7 percent more than a year ago and a gain of more than 9 percent over the budget plan. Ticket revenues for December of \$112,380,000 reflected the ridership growth and were more than 4 percent over a year ago and 7 percent higher than budget goal.

Long-distance Trains

Long-distance sleeping-car ridership increased in December by 17 percent over last year, and by 24 percent the first quarter of the fiscal year versus the same period a year ago. The *Empire Builder* saw the greatest increase overall in ridership for the month of December, with a 43 percent increase over a year ago. During the first quarter, this train posted a 49 percent increase over the same period last year. The *Capitol Limited* and the *Southwest Chief* also saw increases in ridership in December of more than 34 percent. For the first quarter of FY '04, the *Southwest Chief* saw a ridership increase of nearly 37 percent, while the *Capitol Limited* and *California Zephyr* recorded ridership increases over last year of 43 and 45 percent, respectively.

Amtrak's new advertising focus and marketing promotions, coupled with fare rollbacks, and online booking incentives have contributed to these encouraging results, along with the company's continuing effort to provide more reliable and better service for customers.

Amtrak Paints Roadway Machinery with Safety in Mind

Hundreds of pieces of maintenance-of-way equipment, including high-rail vehicles such as large trucks and track patrol vehicles, are showing off their new lime-yellow color.

As part of its focus on safety, Amtrak began painting DuPont's 7744 lime-yellow color on railroad specialty trucks and roadway machinery early last year. The new color scheme was selected because medical researchers concluded that vehicle color plays an important role in accident reduction and prevention, and that lime-yellow is the most visible color, therefore the best color selection for emergency vehicles. Additionally, employee safety vests are bright orange, and the contrast between the orange vests and the new lime-green equipment is much greater—adding another safety advantage for employees.

Charlie McMahon, director, Maintenance Equipment and Vehicles, recognized the advantages of using the lime-yellow color instead of the more prevalent orange. Shortly after joining the Engineering department in 2002, he spoke with the research team of Drs. Stephen Solomon and Gary Williams (optometrists who have published their research on the visibility of emergency vehicles in the *Journal of Safety Research*, a publication of the National Safety Council).

After McMahon sent a proposal to Amtrak's Chief Engineer David Hughes and Deputy Chief Engineer

Bruce Willbrant, the company moved forward with this safety initiative. The first piece of equipment painted in the lime-yellow color was a "jimbo," or a car top material-handling machine.

As equipment is ordered or overhauled, it will be painted using the new color scheme. Painting all the equipment will become an integral part of the overhaul. All new machinery and special railroad trucks will be ordered in lime-yellow.

The small machines (such as spikers and cribbers) will be painted at the maintenance-of-way shops. Because of environmental painting restrictions at the shops, large pieces of equipment are painted at state and federal Environmental Protection Agency-approved facilities.

The new color was not an employee favorite from the start, but once employees realized how much more visible the new color is, they realized that it contributes to a safer work environment.

Based on production season requirements and demands for machinery, McMahon said approximately 25 new machines and 60 overhauled machines will be painted each year. There is no additional cost to use this color, and no special preparation is required for the color.

Charles McMahon, director of Maintenance, Equipment and Vehicles, contributed to this story.

Heartland Flyer Arrives 16 Minutes Earlier

Amtrak's Heartland Flyer sits at the Fort Worth, TX, station as Conductor Robert Villarrel (right) reviews the manifest and Assistant Conductor Velida Breakfield (left) assists passengers leaving the train. The Heartland Flyer now operates on an improved schedule (arriving at its final destination 16 minutes earlier), as a result of a signal upgrade project completed by the Oklahoma Department of Transportation.

Employees are Reminded of Business Travel Etiquette

Amtrak employees are often required to travel for business, and when they do, rail is of course the preferred mode of travel. Employees must conduct themselves in a professional and business-like manner when traveling, and remember that their fellow revenue passengers are the ones who make this travel possible.

Employees whose jobs require business travel should be mindful of the policies and procedures associated with their travel. Just as important, on-board service employees should be familiar with these policies, and know what is expected of their colleagues traveling on a business pass. While these policies can be accessed in full on the company's Intranet, the following policies should serve as a reminder to all employees.

Booking Business Travel on Trains

Train travel for Amtrak employees is governed by the requirements outlined in the current version of the Pass Policy, Section PERS-22 of the company's procedures manual. Business travel is limited to Amtrak employees who have been assigned Business Travel Privileges, or who have obtained a valid Travel Voucher. Using the business travel privilege for any travel other than Amtrak company business — particularly for commuting to and from work — is strictly prohibited.

Sleeping car travel must use non-revenue Business Travel Bedroom space, if offered and available at the time of the reservation or Standard Bedroom if Business Travel Bedroom is unavailable. Deluxe Bedroom business travel is

permitted for no charge only if Business Travel Bedroom and/or Standard Bedroom space is unavailable at the time of booking and a Business Travel Voucher specifically permitting the no-charge upgrade is obtained. Otherwise, business travel in Deluxe Bedroom space is permitted only if the employee (at the employee's expense) pays 80 percent of the difference between the accommodation charge for the Deluxe Bedroom being booked and the full Standard Bedroom accommodation charge.

Travel Etiquette

Employees traveling on business should always be sure to identify themselves to members of the crew, to tell the crewmember where he or she works and what their job is, and to repeat this process as crews change during the trip. On long-distance trains, employees should become familiar with the train consist, and offer to assist the crew as needed in the event of an emergency or service disruption. Amtrak employees should always display Amtrak photo identification on company property. Dressed in appropriate business or business-casual attire, employees should select less-desirable seats (seats over the wheels for example) and should always surrender their seat when standees are present.

Meals On Board Trains

Reimbursement for meal expenses is outlined in Travel Policy and Reimbursable Business Expenses, Section FI-14 of the procedures manual, and is obtained by submitting an Employee Expense Report. While there seems to be some confusion about whether meals are

business expenses while traveling aboard a train, here's the bottom line: business travelers are not entitled to complimentary meals, even when traveling in First class. Accordingly, employees must inform the Dining car staff that they are on business travel prior to being seated so that they will not offer complimentary meals.

Employees should always receive a meal check receipt from the lead service attendant. If a receipt isn't provided by the LSA, employees should request one. When paying for meals, it is preferred that credit cards are used, rather than cash, to minimize the amount of cash collected on board.

Things to Observe

On-board service employees who come across an employee pass rider who is not complying with the business travel policies should ask the employee if they are familiar with the policy and ask them to abide by the rules. If there is any resistance of the part of the employee, the on-board service employee should take note of the employee's name and/or contact his or her supervisor once the trip is complete. Not understanding a policy or forgetting is one thing; however, skirting business travel policies is unacceptable.

While on board, employees should ask themselves the following questions about the basic service issues that are very important to Amtrak customers' satisfaction.

- Are receipts for food and beverage purchases provided to customers when a cash register is available?
- Are announcements being made for station stops, safety

reminders, and food service operations?

- Are timely and informative announcements being made when delays are incurred?
- Do members of the crew appear neat and well groomed? Do they meet uniform and appearance standards?
- Are conductors or assistant conductors and other members of the on-board crew visible?
- Are customer's requests handled graciously and quickly? Is the car being kept clean?
- Are the restrooms being kept clean and well stocked?
- If employees observe or experience any serious deficiencies in any of these service areas, point them out to the conductor for resolution. A brief trip report should be submitted (via e-mail) to the appropriate general superintendent identifying any serious deficiencies noted.

Close of Chicago Call Center

continued from page 5
with preparing for the transition worked together to make sure all the pieces fit together."

Representatives from Human Resources, Passenger Services, Labor Relations, the Employee Assistance Program, TCU, and Employee Development were on hand to explain options, define processes, and address employees' questions at forums held by the MRSCC and the Central Division. In addition, seminars conducted by the Amtrak Benefits department, the Vanguard Group, and the Railroad Retirement Board provided employees important information about their options. Outside career

guidance was offered by the Chicago Mayor's Office of Workforce Development, the Illinois Department of Commerce and Economic Opportunity, the Illinois Department of Employment Security, and the Illinois AFL-CIO Member Assistance Program.

In November 2003, all remaining employees bid on positions during the "Sadie Hawkins" bid process. In this process, all TCU positions in Central District 1 were re-posted and jobs were awarded based on employee seniority. By the end of January, approximately 125 employees without sufficient seniority to hold positions were

furloughed from the call center and Central Division.

Approximately 65 Chicago call center employees were awarded positions in Chicago Union Station. This presented a transitional challenge, as many of these employees had never held positions outside of the call center. To prepare employees for their new positions, Employee Development instructors conducted training for employees moving to ticket agent, accounting, and receiving positions. Additional training was held for Union Station's janitorial staff and station laborers. Employees who took positions in the Baggage, Reservation and Information,

Passenger Information Display System, and Mail and Express departments, underwent on-the-job training working alongside experienced employees. In addition, employees in certain job categories also were trained in the areas of safety, customer service, and uniform and grooming standards.

"The closing of the Chicago facility was transparent to our customers, who continued to receive the high level of service they're accustomed to at Amtrak," said Acting Senior Director of Reservation Sales Jon-Roger Maranda. "That is a tribute to those who worked hard to manage the transition."

Beech Grove Blasts Rainbow Fleet

continued from page 1

that consists of an Amtrak-blue vinyl band below a double red and white reflective stripe, manufactured by 3M, that extends the length of the car. The package for each car also includes reflective decals produced at Beech Grove, as well as Amtrak logos and signage for use on Coach and Business class cars.

With the right tools available at the Bear Car Shops, the standardization of Amfleet cars has proceeded more quickly. Since 1985, employees at Bear have used a walnut blaster (which shoots powerful streams of crushed walnut shells and is located in the facility's grit blast room) to remove the striping and decals on Amfleet cars. As a result, Amfleet cars do not have the many layers of adhesive-backed striping that have built up on the Superliners.

Between August 2002 and January 2004, the new livery was applied to 342 Amfleet I and 106 Amfleet II cars during overhaul, remanufacture, and preventive maintenance visits at the Delaware facility.

New Water Blaster Takes the Stripe Away

The Beech Grove water blaster removes the old design during the car wash process by shooting sharp streams of water at the force of several thousand pounds per inch. "With the water blaster, we've reduced the time it takes to apply the new livery from eight to four hours per car," said Lead Carman David Riordan.

Once the clean car arrives from the wash, employees apply the new Phase 6 Livery by stroking it up and down with a four-inch squeegee until the entire design is smoothly applied. "Applying each section of the stripe to the car by hand is like hanging a 12-foot long and 24-inch high sheet of wall-paper sideways," added Riordan.

Once the stripe is in place, employees affix approximately 75 decals — all manufactured at Beech Grove at a cost 80-percent less than the vendor's decals. Created using a software program, the decals are sent to a machine called a "plotter" that cuts and prints the material to size. The Phase 6 Superliner Sleeping car decal package costs approximately \$25 to make in-house while the vendor cost for the identical package is \$145. Beech Grove's FY '03 production of decals, including those made of magnetic materials, static window cling, glow-in-the-dark vinyl, and contravision (material that has the appearance of a tinted window), resulted in a cost savings of \$124,000.

Design Removal Challenges

Since Amtrak began using adhesive-backed vinyl striping and decals in the mid-70s, changing the look of the equipment has been a long and awkward process at the Beech Grove facility. In an effort to standardize the look of Amtrak's first trains known as the "rainbow trains," acquired from different railroads in 1971, the first livery — consisting of a red, white

(Above) Carman Steve Anderson and David Riordan apply tape used to attach the decal to the side of the Superliner car.

(Left) Lead Carman David Riordan cuts an Amtrak logo, produced at the Beech Grove Decal Shop, for the new Phase 6 Livery Superliner design.

and blue painted stripe with an arrow at each end — was applied.

In 1975, when the Beech Grove facility was purchased, Amtrak changed to an adhesive-backed reflective stripe. From that date to the mid-90s, each time new striping was needed, three employees wearing rubber gloves, paper suits, and respirators to mask the strong ammonia smell, worked eight hours to remove the old vinyl with paint stripper and a putty knife. The use of paint stripper was discontinued in 1996, when it was determined to be an unacceptably hazardous material. Since paint remover could no longer be used, the new design was applied on top of the old.

Over the years, Beech Grove employees have tried a number of methods of removing the vinyl stripes. One paint stripper

removed the vinyl, but not the glue; another biodegradable paint remover, while safe to use, was not effective. A sand blaster, which is a hose that shoots strong streams of sand, damaged the windows and would not remove the glue. A walnut blaster, while used successfully to remove a single stripe on the Amfleet cars, was also ineffective at removing the layers of film on the Superliners. Employees then resorted to scrapping the stripe off with a razor, removing the glue with a chemical, and applying the new striping and decals — all of which took 72 hours per car.

"Unfortunately, many of these methods didn't work because the adhesive backing, manufactured to be strong enough to remain intact for seven years, was almost impossible to remove," explained Foreman Jim Allison.

David Riordan, lead carman, contributed to this story.

Amtrak Offers Special Fares to the 2004 St. Louis Mardi Gras

Passengers traveling to the St. Louis Mardi Gras, the third-largest in the world, can take advantage of Amtrak's special 20-percent discount. Travel must take place between Feb. 5 and Feb. 29 and the discount is valid on Amtrak's *Ann Rutledge*, *Kansas City Mule*, *St. Louis Mule*, *The Statehouse*, and the *Texas Eagle*.

Discount Hotel Rooms are Just a Click Away at Amtrak.com

Passengers booking rail reservations on Amtrak's Web site now have access to the lowest prices in hotel accommodations by linking directly to Hotels.com.

Upon completing their Amtrak reservation, online customers will see a new link that reads, "Click here if you need a hotel!" With a single click, customers arrive at the Amtrak/Hotels.com reservation page, where they can search for hotels by destination, city, date, and brand. The new online functionality builds on Amtrak's existing three-year agreement with Hotels.com, under which

Amtrak's reservation agents transfer customers interested in discount lodging to Hotels.com.

Hotels.com is Amtrak's preferred hotel provider, offering discount lodging at over 8,000 properties worldwide, including properties

convenient to Amtrak's 500 destinations in the U.S. and Canada.

Amtrak Guest Rewards Members Earn Free Travel

Amtrak Guest Rewards (AGR) members may receive free travel

certificates on *Acela Express* or *Metroliner* service by taking advantage of the AGR "Buy Two Roundtrips and Get One Free" offer during the *Acela Express/Metroliner* Winter/Spring campaign launched on Feb. 15. The campaign promotes schedule frequencies in each market, the \$99 fare on the north end between New York and Boston, and the free travel offer.

To be eligible for a free travel certificate, AGR members must first register to participate in the promotion and then purchase two roundtrips or four one-way tickets between Boston/Route 128 to and from Stamford/New York/Newark, between Boston/Route 128 to and from Washington/New Carrollton, or between Philadelphia and Boston/Route 128. Qualifying travel must take place on *Acela Express* or *Metroliner* service between Feb. 15, 2004 and April 15, 2004. Free Travel certificates may be redeemed for travel on *Acela Express* or *Metroliner* service between June 15, 2004 and Aug. 31, 2004.

Amtrak and the Boston Celtics Observe Black History Month

Amtrak teamed up with the Boston Celtics to promote Black History Month in February. Pioneers in breaking barriers to African-American athletes in the NBA and professional sports, the Celtics was the first team to draft an African-American player when the team selected Chuck Cooper in the second round of the 1950 draft.

The Celtics have consistently put together a powerful program in recognition of Black History Month, and this year, they invited Amtrak to serve as sponsor of the Celtics' "Promote the Quote" Black History Month program on Feb. 5 at the Charlestown Boys and Girls Club. Gerri Mason Hall, vice president of Business Diversity and Strategic Initiatives, joined Celtics' coaches, players, and 25 to 30 students who interpreted famous quotes from Martin Luther King, Jr.

The students each wrote a brief essay on the meaning of Dr. King's Quotations. "Amtrak is particularly proud to have been associated with this event,"

said Mason Hall. "We're always proud of our celebrations of cultural diversity. What makes our association with this event doubly gratifying is the opportunity to demonstrate our commitment to young people as well."

The sponsorship also included a half-time presentation at the Feb. 6 Celtics home game against the Atlanta Hawks in which Mason Hall and a member of the Boston Celtics donated a check to the Charlestown Boys and Girls Club.

In addition, throughout the month of February, Amtrak sponsored a Black History Month page on www.celtics.com that displays a co-branded Amtrak/Boston Celtics logo and highlights the accomplishments of Celtics players in breaking the barriers for African-American professional athletes. Finally, Amtrak sponsored 30-second television vignettes on the importance of celebrating Black History Month that aired on Fox Sports Network and were played during games at the stadium.

Amtrak Cascades Passengers Offered Two For One Deal

Amtrak has partnered with the Portland Visitors Association (POVA) to offer travelers in the Pacific Northwest a "Big Deal 2 for 1" fare. During this special offer, two passengers can travel for the price of one on Amtrak *Cascades* trains and associated thruway bus service. Passengers traveling to popular events, such as the Portland Jazz Festival held in early February, may take advantage of this special offer by calling POVA and obtaining the special discount code. The "Big Deal 2 for 1" is valid for sale and travel through May 27, 2004.

Pooch Provides Lessons in Math, Geography and Amtrak

Amtrak Conductor Pablo Cortes III passes AMS the stuffed animal bulldog whose name stands for Antigo Middle School, to San Diego Station Agent Alice Pinkney after its ride on the Pacific Surfliner from Los Angeles. AMS is reaching celebrity status as it travels the country on Amtrak. The dog is a learning tool of the Wisconsin school's sixth grade class, helping children learn about geography and math. AMS has garnered positive Amtrak publicity in newspaper and television stories nationwide. Starting its journey in its pet carrier in October, AMS has so far covered over 13,000 miles of Amtrak service.

FRONT LINE FOCUS

Dear Amtrak:

I was a passenger on train #257 traveling from New York City to Albany-Rensselaer. When I boarded the train at Penn Station, I noticed a passenger who was acting strangely and had started following me. Throughout the ride he exhibited behavior that made me very uncomfortable. When I started to get scared I immediately told someone.

The first person I found was John Evans who worked in the café car. As soon as I explained what was happening, he immediately came to my aid. He had me move to the Business class section, which was just beyond the café car, so he could monitor if the man started following me again. He also stayed with me until the train was empty and walked me through the station to meet the person who was waiting for me.

I just wanted to tell you how grateful I am to your employee. Many people would have opted to not get involved or would have dismissed it by saying it's not their job. The incident was a frightening experience for me and I am thankful for his help.

Sincerely,

Tanisha M.
Albany, NY

Dear Amtrak:

This is a letter of commendation for an Amtrak employee by the name of Jaime Merino.

Mr. Merino is stationed at the Los Angeles train depot baggage claim section. When I traveled from Sacramento to Los Angeles, frankly I had a bad experience with some Amtrak employees, so when I arrived at the train depot baggage claim section I was quite relieved to meet with someone who takes his job seriously and conducted himself so professionally.

Upon my arrival [in Los Angeles], I immediately called my family, and after wasting at least \$4 on the public telephone, I was not able to reach anyone. When I asked Mr. Merino to use his telephone, he loaned me his personal cell phone. He was patient and kind and understanding, and assured me he would watch my luggage.

As a senior citizen with a hearing disability, it really is a pleasure when I meet with people such as Mr. Merino, who is easygoing and patient, even as he assisted others.

Sincerely,

Alicia L.
Sacramento, CA

Laney Announces Player of the Year

Amtrak Board of Directors Chairman David Laney announces the selection of this year's Amtrak Player of the Year, the New England Patriots' quarterback, Tom Brady. Broadcast at the Super Bowl's halftime over 500 Westwood One radio networks, the message reached over seven million listeners.

Funding Request Submitted to Congress

*Detailed FY '05 Plans
Rely on Full Appropriation*

Last month, Amtrak submitted to Congress its annual request for federal funding for the coming fiscal year. Based on what the company expects it will need in FY '05 to operate the railroad and to maintain and improve its fleet and infrastructure, the request totals \$1.8 billion, or \$1.7 billion, with the Department of Transportation loan forgiven.

Amtrak's FY '04 budget is nearly \$1.4 billion: \$1.2 billion in federal funding Amtrak will receive this year (FY '04) plus the carryover of more than \$150 million from FY '03. In other words, this fiscal year Amtrak should have nearly \$1.4 billion in real dollars to operate the railroad and, for the most part, continue its commitment to the state of good repair. (A detailed account of what Amtrak's revised FY '04 budget entails will be available in an upcoming issue of *Amtrak Ink*.)

Breakdowns of the FY '04 revised budget and the FY '05 request

figures are available in the charts accompanying this story.

"This request for FY '05 should not be a surprise to anyone," said Amtrak President David Gunn. "When we announced our five-year plan, we said we'd need about \$1.7 billion in FY '05, and that is what we've proposed." (The postponement of the \$100 million loan repayment to FY '05 bumps the number to \$1.8 billion.)

Gunn added that although this year's budget should be sufficient, the company would need a full appropriation in FY '05, "...if we are to continue rebuilding the railroad according to our strategic plan and eventually return our plant and equipment to a state of good repair."

Full funding of Amtrak's request would mean that the infrastructure would continue to get a necessary infusion of resources. A few examples of the company's plans for FY

Amtrak Strives to Meet Workplace Development Needs

Amtrak's training needs are as diverse as its workforce, the range of crafts, and its geography. Inside this issue of *Ink*, is a comprehensive look at how Amtrak's employee development needs are met.

Ridership and Revenue Trends Continue

Gains Made Despite Harsh Winter Weather Throughout the System

Despite snowfall and record-breaking cold in the Northeast and Chicago, an avalanche shutting down the *Empire Builder*, and weather conditions that caused cancellations — all of which resulted in increased shortages of Amfleet equipment and Viewliner sleepers — Amtrak posted both ridership and ticket revenue gains for the month of January, for fiscal-year-to-date compared to the same period a year ago, and this year's budget plan.

In total, during the last two weeks of the month, 60 trains were cancelled in the east and several sleepers were

pulled from long-distance trains.

System ridership for the October-through-January time period was over 8 million, a more than 8-percent increase over the same period in FY '03, and 7.6 percent over this year's budget plan.

Ticket revenues for this period mirrored the ridership gains. The ticket revenues for the four month period tallied nearly \$419 million, which was 6.5 percent over last year's revenue for this period, and more than 5 percent over this year's budget plan.

The positive result for the month

of January was achieved with just over 1.8 million passengers for the month, 3 percent more than a year ago and 1.5 percent favorable to the budget plan. Ticket revenues for January of nearly \$92 million reflected the growth in ridership and were more than 3 percent over a year ago and 1 percent favorable to budget.

Long-distance Trains

Long-distance sleeping-car ridership increased in January by 4 percent over last January, and increased by 19 percent fiscal-year-to-date compared to the same

period a year ago. The *California Zephyr* saw the greatest increase overall in ridership for the month with an increase of 31 percent over January 2003, and for the first four months of FY '04, the route experienced a 42-percent increase over the same period a year ago.

Amtrak's advertising in January was directed away from generic ads and deep discounts and focused on communicating everyday low fares and popular destinations. A template approach to print ads allowed customization by market while building brand awareness with a consistent look over the long term.

TRAIN OF THOUGHT

Last month, we faced critical equipment shortages due to the vulnerable state of our fleet. Snow, ice and abnormally long periods of unusually cold temperatures did a number on our cars, resulting in Amfleet equipment shop counts as high as 125 and many cancellations.

Simply put, this is the cost of years of deferred maintenance. Doing inspections only twice a year and performing only minimal maintenance, as was done in prior years will catch up with you, and it did this winter. Previous practices tried to extend the life of the cars and components beyond a reasonable point. For example, the door motors should be changed out every four years, but were not. So when you combine worn-out motors with snow and ice that gets stuck in the door pockets, it further weakens the motors' windings and that results in a bad order car that is taken out of service.

Here's another example. Instead of properly fixing malfunctioning Ogontz valves (the exposed valve that drains water from the car to keep the pipes from freezing) as part of a regular maintenance check, mechanical personnel plugged defective valves to keep them from erroneously dumping water. Because there were insufficient resources dedicated to regular maintenance or overhaul, mechanical forces had to make this quick fix in order to get the car back out on the road. Unfortunately,

nately, the result is that when no one is notified that the valve is plugged, and a car with a plugged valve sits in the yard in the freezing cold (without power), the pipes burst and it's a big mess.

Everyone worked really hard to overcome and manage the situation. Everyone—from transportation employees, ticket agents and call center agents, who put their own frustrations aside to handle angry and frustrated passengers, to the mechanical employees who strove to do their best—did an outstanding job. I know it was tough. I thank you for your commitment and dedication.

The good news is that with spring on its way, the weather has warmed up and repairs on the cars continue to be made. The other good news is that a 30- and 92- and 365-day preventive maintenance schedule is in place and heavy overhauls are being done. But employees need to be patient; it will take quite a while to dig our way out of the hole. Don't forget that progress is incremental.

On another very different note, let me address something that is very disquieting to me. The vast majority of Amtrak employees are hard working, dedicated people who are upstanding citizens in their communities as well as at Amtrak. However, as many of you know, a number of employees have been found to be cheating the company and we are investigating many more.

David L. Gunn

Thieves will not be tolerated on our railroad. I have made it clear to all management that I want them off the property and off the payroll. Additionally, as some of these thefts involve thousands of dollars of losses to the company, certain employees may also be subject to federal and state criminal prosecution.

The actions of these individuals also give ammunition to those who are looking for reasons to discredit Amtrak. This is not only committing a crime by stealing from the company, but it also threatens the railroad and your livelihood.

One last note. It's spring cleaning time again. Please take the time to clean out outdated files. Get rid of things that you're not going to use again. Don't be wasteful, though. Recycle office supplies that are still in good condition. Make sure your facility, crew base, station, workstation, or your office is clean and safe.

Beech Grove Mechanics Shift Work to Light Wrecks in February

Cars frozen by prolonged below-zero temperatures in January and February resulted in an equipment shortage throughout the Amtrak system, causing Beech Grove mechanics to shift their priorities by working on two slightly wrecked cars that could be repaired and returned to service sooner than those more heavily damaged.

While 11 wrecked cars at the Beech Grove Car Shop are slated to be returned to service in FY '04, the equipment shortage forced mechanics to repair Superliner I Sleeping car 32023 and Coach car 34097. These two cars were selected for repair because mechanics could turn both of them around in 1,800 hours, compared to the 4,000 to 5,000 hours

Coach car 34097 is scheduled to be returned to revenue service in early March.

required to repair other cars.

Both cars arrived at the Beech Grove facility in November 2003 and on Feb. 16, Sleeping car 32023 joined the consist of the *Capitol Limited* operating between

Chicago and Washington. Coach car 34097 is scheduled to be returned to revenue service in early March.

Mechanics repaired the gears, couplers, left side, and roof of the Sleeping car. A hot-water heating system, carpeting, curtains, and cushions were also installed and the interior water piping was replaced.

When repairs are completed on Coach car 34097, about ten feet of the car's exterior will have been replaced and new piping and carpet will have been installed.

Cycle Five Menu to Be Introduced in April

On the cover of Amtrak's newest Dining car menu is a quotation from singer Willie Nelson that reads, "Most people have that fantasy of catching the train that whistles in the night." Although the traditional train whistle has long-since been replaced by modern locomotive horns, the time-honored experience of dining on board the train has not been replaced, only improved.

One of those improvements began last year with the introduction of cycled Dining car menus, which rotate in sequence to offer passengers traveling a couple of days different menu items. The fifth and final cycle of Amtrak's menu series debuts on April 7.

"Passengers really enjoy the selection offered by the cycled menus," said Pete Humphreys, director, Food and Beverage Standards and Operations. "The new items in the fifth menu enhance the total menu offerings, and now, passengers are never bored with the Dining car experience."

Each cycled menu offers standard fare, but rotates in new menu offerings for better variety. New items on the cycle five breakfast menu include a freshly made three-egg vegetable omelet filled with mushrooms, broccoli, and onions; and a Southwestern quiche, made with pinto beans, onion, jalapeno peppers, red and green peppers, cheese, roasted tomatoes, and seasonings. Each entrée is served with breakfast potatoes or grits, and a hot biscuit or croissant.

For lunch, the fifth menu introduces a tuna salad and Swiss-cheese sandwich on wheat bread, made with albacore tuna, or the choice of a freshly baked individual-size pepperoni pizza. Kids can enjoy kid-proof meal choices for lunch and dinner that include Kraft macaroni and cheese, chicken tenders, hot dogs, and pizza, at an affordable price range.

New dinner choices include a classic 10 oz. New York strip steak, grilled to preference, a rack

of lamb seasoned with fennel, herbed halibut filet, and chicken cacciatore, which is simmered with mushrooms, bacon, tomato, white wine, and tarragon. The cycle five menu introduces the newest vegetable choice called the "Key West Blend" made with green beans, carrots, yellow carrots, and red peppers.

Dinners are priced from \$9 to \$19 and include a dinner salad, and coffee, tea, milk, or juice. A new wine card, currently under development, lists the qualities of four varieties. Wine choices include a vintage coastal cabernet sauvignon from Beaulieu Vineyard, a classic coastal merlot from Callaway, a soft and complex chardonnay from Meridian Vineyards, and a dry and elegant white wine from the Cavit Collection. The wine card will offer menu suggestions to pair with each particular vintage.

Dessert choices on the fifth menu are mouth-watering. The new additions include the "rockslide

brownie," a rich chocolate brownie topped with caramel, piled high with brownie cubes, toasted pecans, and drizzled with milk-chocolate ganache; and a fruit "strawberry bar," a crisp graham crust, strawberry jam, moist butter cake, creamy cheese filling, finished with strawberry jam and toasted sugared almonds.

Introduced last April, the long-distance Dining car menu-cycle plan is designed to offer passengers a different meal experience as they transfer from train to train. For example, passengers connecting from the *Sunset Limited* to the *Coast Starlight* will experience different cycled menus and a greater variety of choices. Three of the five menus are rotated for a period of six months. When the cycle five menu is introduced next month, menus number two and three will be cycled out, so that menus number four, five and one will be offered through the summer.

Test Kitchen Opens for Business in Wilmington

Amtrak's first-ever test kitchen, which includes the same type of equipment found on long-distance trains, opened its doors in February at the national training center in Wilmington, DE. The mock-galley serves a range of purposes, including hands-on training for new hires, chefs, and food specialists, where employees can become FDA- and Amtrak-certified while updating and learning skills.

"Training chefs in an actual Dining

car just doesn't work very well," said Pete Humphreys, director, Food and Beverage Standards and Operations. "Because of the demand for equipment, there were times that our training kitchen had to go out on the road."

In addition, the kitchen provides a suitable setting in which to prepare, test, and sample food products from vendors to determine whether they meet Amtrak's high standards for on-board fare.

The test kitchen includes a flattop

Gate Gourmet Executive Chef Tim Costello, who is permanently assigned to the Amtrak account, prepares a meal in the new test kitchen.

President David Gunn officially opens the test kitchen in Wilmington. (L. to R.) Senior Analyst Jack Davis, President David Gunn, Executive Chef Gil Lamar, Amtrak's first Traveling Chef Hashim Abdul-Salaam, and Pete Humphreys, director Food and Beverage Standards and Operations.

grill, a commercial convection oven, a steam table, a microwave, a commercial refrigerator/freezer, a worktable, a sink, and even a dishwasher. Also located in the test-kitchen area is a mock Dining car table, set with Amtrak's china and glassware, used for professional photo opportunities and taste tests.

"In the past, chefs had to make do,

sometimes trying out new techniques and recipes in their own kitchens at home. With the opening of the Food and Beverage Evaluation and Training Center, we are developing a curriculum that encompasses quality, practical training, and a certification process for our chefs and other on-board employees," added Kevin Scott, chief of Service Delivery.

Funding Request Submitted to Congress

Detailed FY '05 Plans Rely on Full Appropriation

continued from page 1

'05 include the installation of another 180,000 concrete ties and replacement of 80 more track miles of welded rail. The program also includes repairs to 25 under-grade bridges and replacement of 4,500 more bridge ties.

Using nearly \$350 million in dedicated capital funds for improving the reliability and availability of the fleet, Amtrak plans to complete 192 heavy overhauls, 126 remanufacturings, and 20 wreck-repairs in FY '05, among other fleet-related programmed work. Amtrak's equipment availability rates should increase as cars and locomotives cycle through regular preventive maintenance and overhaul programs, the lack of which for so many years has resulted in a backlog.

About \$90 million would be dedicated to other capital investments, such as those associated with environmental compliance and upgrading of the technologies Amtrak uses.

Building Blocks on Solid Foundation

After consecutive years of financial instability in 2001 and 2002, Amtrak made significant progress in FY '03, restoring financial controls, establishing a functionally based organization, focusing on the core business and implementing programs aimed at rebuilding the infrastructure and the fleet.

The company ended FY '03 with record ridership of 24 million, and with over \$150 million in cash, despite lower-than-forecasted revenues. This surplus was in part the result of tight financial controls that lead to a reduction in core expenses (\$103 million below budget). For the first time in eight years, the company got through the year without resorting to borrowing money. "This is a good start toward a state of good repair and a solid foundation on which to rebuild the railroad," said President Gunn, "but we are by no measure out of the woods. There is still much work to be done."

This progress represents a move away from only a couple of years

ago, when years of excess borrowing and deferred maintenance caught up with the railroad. The vulnerability of Amtrak's fleet was evident last month, when snow, ice and sustained unusually cold temperatures in the Northeast put out of service a high number of Amfleet and Viewliner cars in the shops. With a capital program dedicated to production and heavy repair, Amtrak has implemented regular maintenance and overhaul schedules for the fleet and has begun to work through the backlog of capital projects that accumulated over the years, but this will take time.

Future Plans

When it was released last year, the five-year plan anticipated needs that ranged from \$1.8 billion (in 2004) to under \$1.5 billion (in FY 2008), and offered detailed accounting of what capital improvements needed to be addressed to approach a state of good repair by FY '08; ranging from the installation of 428,000 concrete ties (162 miles of track) and the replacement of 270 miles of rail, to the replacement of two movable bridges, to the opening of new maintenance facility in Oakland, and implementation of a thorough fleet rehabilitation program designed to increase the availability of cars and locomotives.

Later this spring, Amtrak will release an update of the five-year plan for FY '05 through FY '09, the focus of which will continue to be state of good repair and improving equipment reliability.

What the future holds for intercity passenger rail in the U.S., as well as for Amtrak, is very much in the hands of the Congress and the Administration, as it has always been. While policy-makers debate what form intercity passenger rail should take, Amtrak continues to serve the millions who depend on the railroad as it strives to address the result of years of deferred maintenance.

"We can inform, but we can't control the big policy debate — and we shouldn't try to," said President Gunn. "In the meantime, we've got to work hard at what we

can control — running the railroad and making and implementing plans to address the physical state of the railroad. Long-range capital

planning in this business is tough to do when every year's appropriation is uncertain. But without it, this railroad won't last."

Device Speeds Public Health Inspection Process

The Environmental department's newest public health inspection tool may look like a simple gadget, but its functions save the company money and time, and improve productivity.

A Compaq IPaq handheld computer now enables Amtrak's four public health regional coordinators to record, distribute, and manage food service inspection data in real time, speeding the railroad's on-board public health food inspections.

The commercially available devices replace a cumbersome and time-consuming process for reporting public health food service inspections based on hand-written data and faxed forms. Much time was consumed faxing these forms to the appropriate people for corrective action. For example, an inspector would take notes on board a train,

which would then be used to complete a paper form. Once back in the office, the coordinator would fax the reports to departments such as Mechanical and On-board Services for appropriate action and response. Often times, the list of recipients grew to a dozen or more, with uncertain results on the receiving end. Additionally, the inspection data was also faxed to the Public Health group's administrative support employee, who manually entered the information in a database.

"By automating the reporting and distribution process, we knew that we could better serve our customers — the Amtrak Mechanical and On-board Services personnel — who need to take immediate steps to keep us in Food and Drug Administration compliance," explained Roy Deitchman, assistant vice president, Environmental. "Using the off-the-

shelf IPaqs has saved time and money, and the help and lessons learned by the AT department will enable other groups at Amtrak to more easily implement handheld PC systems."

Today, the public health coordinators enter the food service car inspection data directly on the handheld device, generate reports, and e-mail the reports to multiple recipients (including CNOC, On-board Services, and Mechanical) at downline locations. The device also directly inputs the information to the department's central database.

Based out of Washington, New York, Chicago, and Los Angeles, Amtrak's public health coordinators are responsible for conducting inspections on trains, and at commissaries and watering points. Food service inspections are conducted to verify that Amtrak

standards and FDA regulations are in compliance.

As part of its goal to automate the reporting and distribution of public health inspection information, the public health group teamed up with AT to identify the most appropriate tools and software programs. Rather than contracting with a consultant to custom-build reporting tools, the team chose this ready-to-go handheld computer device. In addition, a software company modified and loaded the devices with software that met the department's specific needs. The devices use a Sprint PCS Vision card, which works as a cell phone connection to communicate the information.

The group plans to add the use of IPaqs for commissary and watering point inspections in the near future.

Wi-Fi Service Coming to a Laptop Near You

This summer, Amtrak is expanding its wireless Internet (Wi-Fi) service to six Northeast Corridor stations. Wireless Internet service became available in Washington Union Station's Club *Acela* Lounge last summer, followed by the *Capitol Corridor* service that offered onboard Wi-Fi service as a pilot program last fall. This new wireless service offers passengers the convenience of communicating online, checking e-mail, or surfing the Internet at any of these Wi-Fi-enabled Amtrak locations and trains.

"Our arrangement with a proven wireless carrier such as AT&T Wireless allows Amtrak to better serve our technologically savvy passengers."

Sally J. Bellet, Vice President
Real Estate Development

An agreement signed in January between Amtrak and AT&T Wireless allows travelers with a Wi-Fi-enabled laptop or personal digital assistant (PDA) to access the Internet at the Providence, Route 128, New York, Philadelphia,

Wilmington, and Baltimore stations, where more than one million travelers pass through each weekday. At each of these stations, dozens of visitors at a time can log on to the system.

AT&T Wireless will be responsible for the design, installation, management, operation, and maintenance of the Wi-Fi systems in each of the six stations.

"Amtrak is excited to offer our customers with busy schedules an opportunity to save time by getting their work done while visiting our stations," said Sally J. Bellet, Amtrak vice president of Real Estate Development. "Our arrangement with a proven wireless carrier such as AT&T Wireless allows Amtrak to better serve our technologically savvy passengers."

To get connected, AT&T Wireless customers enter their password online, while others may make a \$9.99 online credit card payment to receive unlimited access from a single location for a 24-hour time period.

Amtrak's *Capitol Corridor* service is the first intercity train in the United States to offer onboard Wi-Fi service. The pilot program began with the installation of Wi-Fi in one car, enabling access to 30 passengers at a time. The Capitol Corridor Joint Powers Authority

California passengers access the Internet while traveling aboard a Capitol Corridor train.

(CCJPA) is conducting Wi-Fi trials on additional cars in its fleet over the course of several months to determine the feasibility of expanding the program. In addition, the California Department of Transportation and CCJPA are developing a proposal to equip the entire state-funded intercity rail service (including Amtrak's *San Joaquins* and *Pacific Surfliner*) with Wi-Fi service.

Informal polling of passengers by Amtrak's *Capitol Corridor* employees found that customers are eager to be productive while in transit, leaving more time for family and other interests. This new onboard technology provides an opportunity for Amtrak's

Capitol Corridor to better serve the community of business and leisure travelers.

Since October 2003, Wi-Fi service has been offered to passengers free of charge as part of a pilot program offered by CCJPA, PointShot Wireless, and other vendors along the 170-mile rail corridor between Sacramento, Oakland, and San Jose, CA.

Jim Allison, senior planner for the CCJPA, said, "Wi-Fi service enables passengers to make the best use of their time while traveling, which in turn leads to increased customer loyalty and new passengers who opt to take the train rather than drive or fly."

Amtrak Sets Training Goals That Focus on Results

For new employees and experienced Amtrak veterans alike, comprehensive training is the key to ensuring that the company's workforce is ready to safely and effectively meet the challenges presented by the work they are expected to perform. To efficiently provide first-class passenger service in a safe environment, Amtrak employees must gain the technical expertise, develop leadership qualities, and implement safe work practices that enable them to meet the demands of the job.

While a few departments accommodate their own critical job-specific training needs, such as the Amtrak Police department's basic and advanced police training programs, which cover topics like criminal investigation and firearms training, most of Amtrak's training needs are provided by the Human Resources (HR) department, which is headed by Vice President Lorraine Green. The HR training group, Employee Development, is guided by Assistant Vice President of Human Resources Paula Porter. The group aims to meet Amtrak's learning needs by providing courses in the areas of required regulatory-compliance programs and employee skills development.

Headed by Senior Director Stephanie Pavlakis, the Employee Development group consists of three teams, each supporting a different technical skills-

training function for the Customer Services, Engineering, and Mechanical departments. Employee Development also offers these departments core programs that assure the company's compliance with regulatory training mandates such as the Federal Railroad Administration's requirement for training in *Passenger Equipment Safety*, *Roadway Worker Protection*, and *PREPARE* (emergency response procedures).

The staff members of the Employee Development department take a proactive approach to providing consistent quality training while striving to reduce training costs. For example, by maintaining fixed training facilities in Philadelphia; Lancaster, PA [see sidebar story about this Communications and Signals facility]; Newark, NJ; Midway-Groton, CT; and Baltimore, MD the team has reduced its overall annual training costs by \$300,000.

Customer Services Training

The Employee Development Customer Services Training group is responsible for new-hire, regulatory, and refresher training programs that will improve the skills of train crew, on-board services (OBS) and station services employees. New-hire programs are also conducted for OBS employees, ticket agents, and assistant conductors.

Conductor Training Moves to Wilmington

This year, the Transportation and Human Resources departments are working together to improve the overall quality and consistency of conductor training for the Transportation department. The Amtrak Training Facility in Wilmington, DE, is the home base for locomotive engineer training. Including assistant conductor new-hire training at this facility will broaden the scope of training for Transportation department employees and will present many opportunities to link subject matter and to improve the overall experience for the trainees. The new-hire conductor program will be launched this month at the Wilmington facility. While some classes will continue to be held in their respective regions to meet current staffing requirements, the railroad's goal is to hold all new-hire assistant conductor classes in Wilmington by the middle of 2004.

To assure optimum staffing levels, the Human Resources' workforce planning, recruiting, and training departments must work collaboratively to place 150 new assistant conductors in service by the end of the fiscal year. The seven-week program for these conductors is designed to support the four key areas of responsibility for conductors: leadership, train operations and safety, revenue, and

customer service. To accomplish this, the program includes courses in employee skills, operating rules, safety, and customer service.

The program includes the hands-on application of skills in a railroad yard environment, where the new conductors learn how to safely throw switches, couple and uncouple cars, apply handbrakes, and use hand signals to communicate with the engineer, in addition to learning about mechanical and braking systems.

In the classroom, several days are devoted to revenue collection and remittance procedures, customer service and emergency preparedness. After completing the program, the new conductors return to their home crew bases for additional job familiarization that includes activities such as shadowing experienced crew members and on-the-job training assignments. Each new assistant conductor is evaluated periodically to determine his or her rate of progress and whether additional training is needed.

Currently, an innovative model train layout is being used to help students understand the complex rules related to safely moving Amtrak trains. These are not the Lionel toy train sets Santa used to leave under the Christmas tree. The specially designed track layout simulates the specific types of

Train and Engine Crews Manage Resources to Keep the Ride Safe

Amtrak's Operations department has introduced advanced *Crew Resource Management* (CRM), a comprehensive one-day training package for Train and Engine employees, supervisors, and evaluators, which utilizes case-study examination of rule violations to analyze root-cause and effect.

First launched in the Southwest Division, the classes will be made available to all Operations departments by the end of 2004.

"The goal of Amtrak's advanced CRM program is to give employees the tools to do their job, safely and efficiently, putting to use proven techniques and concepts that will decrease rule violations, and provide a safe environment on the railroad," said Ed Walker, vice president, Transportation.

The CRM concept started in the airline industry (known as Cockpit Resource Management) after investigations of airline incidents revealed that although the actions

of one member of the crew may have been directly responsible for an incident, other members of the crew realized, or should have realized, what was happening — but failed to act in time to prevent it. Reports indicate that this inaction may have been the result of a number of factors, including complacency, inattention, failure to communicate, personality conflicts, and even the overall "culture" of the industry that encouraged almost unquestioned deference to the crew captain.

While originally implemented in the airline industry, the CRM concept has been adapted to the railroad industry. Amtrak's CRM training program advances a three-pronged approach to safely managing day-to-day operations; technical proficiency, situational awareness, and teamwork and communication.

The first area covered in the class, technical proficiency, promotes

system knowledge (knowledge and understanding of the rules) and procedural knowledge (adherence to rules and procedures). In some cases, there is a failure to properly apply a rule or a lack of awareness that the rule is relevant to a situation. In other cases, employees may think they are in compliance of a rule while overlooking important aspects of the rule.

The second concept, situational awareness, involves recognizing the surrounding environment, including deteriorating and potentially dangerous situations. Some causes of failure are complacency, fatigue, distraction, fixating on a problem, or information overload. In the class, crew members learn techniques to manage their workload and recognize deteriorating situations and verbalize their concerns so that the crew can work together to come up with solutions.

Teamwork and communication involves talking to fellow crew

members and taking corrective action as a group. While employees don't knowingly put their train or crew at risk, sometimes there are natural impediments to teamwork and communication. For example, employees may compartmentalize their responsibilities by thinking "it's not my job," and therefore not see the big picture or the entire situation. When information flow is hindered, crew members may not be aware of critical information and don't have the opportunity to recognize a potential problem.

"During the training, employees analyze actual rule violation situations and discuss how CRM tactics could have influenced the outcome," said System Rules Analyst George Forero.

When evaluated, Train and Engine employees are not only assessed on their aptitude to meet Amtrak's performance criteria, but also on how well they put into action CRM concepts and techniques.

Manager of Operating Rules Brenda Lettengarver demonstrates switching and signaling concepts to a group of new-hire assistant conductors using the new model train layout.

track conditions an Amtrak conductor may encounter on the road or in an Amtrak train yard environment.

Using un-electrified HO scale Amtrak cars, the model train layout allows the instructor to demonstrate a wide range of complicated train movement concepts. Reading switches; recognizing fouling points; understanding frogs, interlocking limits, spots and double-spots; wyeing trains; making shoving moves; and placing track flags are just some of the training objectives the layout helps to explain.

"The students are quick to grasp switching and signaling concepts. Visualizing the switches on the layout was much better than me just drawing on the board," said Brenda Lettengarver, manager of Operating Rules.

Dee Fritch, director of Employee Development/Customer Services Training, spearheaded this enhancement in conductor training. Using input from conductors and front-line managers from the Transportation and Rules departments, a team headed by Amtrak Conductor Instructor Jeff Kocar designed and constructed the model train layouts in Chicago. Model train layouts are currently being installed at Amtrak's regional training centers.

Training Reservations and Ticket Agents

Ticket agent training also takes place at the Wilmington Training Center, as well as at other training facilities in Los Angeles, Chicago, and New York. At the Wilmington facility there are 16 workstations that provide new-hire agents access to Arrow, Amtrak's reservation, information, and ticketing system. Using "STARS," a front-end software application that makes Arrow user-friendly, agents learn how to create, modify, and sell all types of reservations and services. Under the guidance of an instructor, the three-week curriculum reflects the demands of the real-world job. Using a "test" system that simulates the real environment of train reservations, ticket sales, and accounting, agents in training can create a reservation, sell the ticket and account for the sale

without impacting actual inventory or financial systems. Effective communication skills, customer service, special service requests and workplace-safety courses are also part of the program.

Amtrak's Reservation Sales department trains its reservation sales agents (RSAs) at the Reservations Sales Call Centers in Riverside, CA, and Philadelphia. In regular hands-on training sessions, agents learn about ongoing enhancements to the Arrow reservation system and "RailRes," another front-end software that is similar to Stars, which was designed for use in the reservations offices. Additionally, the training team conducts regular refresher and product update training to the staff of 1,100 agents.

Apart from the Employee Development group, separately the Amtrak Reservation Sales department trains its new-hire reservation sales agents (RSA) at the Reservation Sales Call Centers in Riverside, CA, and Philadelphia. New-hire sales agents attend a four-week, classroom course that prepares these potential agents to answer customers' questions about Amtrak's routes, services, schedules, and fares. A major part of the training includes hands-on practice on the reservation system. RailRes, a front-end software similar to STARS enhances system usability and reduces new-hire training time. RailRes prompts agents to enter specific data in required data fields. It allows agents to focus on customer service and not on the skills needed to obtain information. Additionally, the Reservation Sales team presents refresher and update training to the full staff of 1,100 agents on a regular basis.

The Training Track

The Employee Development Engineering Training group develops and delivers customized, instructional programs using advanced technology, detailed lesson plans, and interactive lessons for Engineering employees. Each year, the course development

Training Center in Lancaster Gives Employees the Right Signal

For the past three years, on average more than 100 Amtrak Brotherhood of Railway Signalman (BRS) employees per year attend training for the position of signal maintainer at Amtrak's Bernard E. Britcher Training Center. The facility features modern classrooms and training labs with various full-scale working switch machines and track circuits that are utilized in the training sessions.

The training labs, designed to train employees on all types of circuitry used at Amtrak, provide students with the hands-on experience necessary to build, maintain, and repair the equipment they will encounter in the field. The labs also allow students to demonstrate their ability to troubleshoot a range of equipment failures simulated by the instructors.

The *Signal Maintainer Training* program is designed to train newly hired employees to become signal maintainers. The training is made up of four modules, each a four-week program that consists of both classroom and hands-on training. Following every module, signal trainees spend several weeks in the field applying the skills they've developed before progressing to the next session. While those trainees are in the field, the Signal School training staff begins training the next

group of signal trainees. This schedule allows the staff to cycle more than one group through the school at any given time, thereby fully utilizing the training facility. Once they've completed the four modules, Communications and Signals (C and S) employees are tested and demonstrate their mastery of the skills to become qualified as a signal maintainer.

The center is also the home of Nida CBT (computer-based training) Electronics Training labs. The program associated with these labs is a two year, two-day per month, college-level program that prepares Maintenance-of-Way and Maintenance-of-Equipment employees for electronic technician positions. The program enhances the skills of the participants so that they are able to troubleshoot problems quickly and efficiently, resulting in fewer train delays and increased on-time performance. The Nida Corporation, born out of the aerospace industry, is a world leader in design, development, and installation of sophisticated electronics training systems.

Located in Lancaster, PA, the training center was opened in 1980 and provides technical skills training for C and S department employees from the Mid-Atlantic, New York, New England, Central, and Pacific divisions.

(L. to R.) Training class participants Jason Foster, Instructor Steve Bagosy, Jim Downey, Jim Jennett observe as Walter E. Miller tests a switch mechanism.

Training Goals Focus on Results

continued from page 7

team works with the division engineers to design a curriculum that includes content in safety, corporate policy, regulatory compliance, and specialized technical skills through a variety of classes that range from *Confined Space, Fork Lift, and Fall Protection to Welding, Track Safety Standards (MW1000), and Signal Construction Standards.*

While most training is delivered using traditional instructor-led delivery, Engineering Training also utilizes computer-based delivery for programs such as the electronics training and a new telecommunications training course.

"The students are quick to grasp switching and signaling concepts. Visualizing the switches on the layout was much better than me just drawing on the board."

Brenda Lettengarver,
Manager of Operating Rules

To meet safety and regulatory training requirements, employees are scheduled to attend mandatory workshops, and after successful completion, they receive several types of regulatory compliance qualifications or re-qualifications. In 2003, instructors trained and re-qualified over 3,200 employees in *Drug and Alcohol Awareness, Roadway Worker Protection, and Environmental Housekeeping.*

To satisfy technical skills training requirements, the Engineering training team offers courses such as *Track Buckling Countermeasures, Track and Switch Inspection, and Flood Response Training.* The

cornerstone of the technical skills training program is the comprehensive *Track Safety Standards program (MW 1000)*, a requirement for all track foremen and track inspectors who inspect, maintain, and construct Amtrak's high-speed tracks. Technical skills training also includes a specialized track equipment program to qualify employees to operate a variety of on-track maintenance and construction equipment.

Engineering Training also provides instruction for Mechanical and Transportation department employees on Amtrak's *Electrical Operating Rules (AMT II)*. To clearly demonstrate the dangers of working around live electricity, a visual demonstration unit recreates the result of contact with catenary wire, which provides vivid reinforcement to the discussion of consequences of not following proper procedures. The demonstration unit has a particularly strong effect on new employees enrolled in the 10-day *Engineering New-Hire Training* program.

Amtrak's *Right-of-Way Contractor Safety Training* program is designed for contractors that must access Amtrak property and conduct work on and along the right-of-way. Instructors cover information on railroad operation and rules, safe work practices, and security concerns. The cost of this training is charged to the contractor; last fiscal year Engineering instructors trained approximately 11,000 contractors and recovered \$500,000 in training costs.

Coaching the Coach Car Repairers

Mechanical employees in all seven divisions and Amtrak's three backshops make use of the education and training services of the Employee Development Mechanical Training group, which provides comprehensive instruction and guarantees compliance with mandated regula-

Employee Development instructors Debbie Pirrami and John Gelner provide detailed information regarding legal consequences of non-compliance during a Contractor Safety Training workshop presentation.

tory training. Instructors train Amtrak employees at facilities in Beech Grove, Boston, Chicago, Los Angeles, New Haven, New York, Philadelphia, Washington D.C., and Wilmington, as well as contractor personnel in 50 outlying areas. In calendar year 2003, Mechanical Training offered over 1,100 classes to more than 4,100 participants.

Working closely with the Mechanical department's maintenance facilities staff, the Chief Mechanical Officer's staff and state and federal regulations officers, the team provides regulatory training for backshops, service points, turn-around points, and contractors. Employees holding positions in the Mechanical department such as carman, electrician, machinist, sheet metal/pipe fitter and supervisor must undergo training in Environmental Protection Agency, Food and Drug Administration, Federal Railroad Administration and Occupational Safety and Health Administration regulatory requirements, with courses such as *Passenger Equipment Safety Standards, Refrigerant Recovery and Certification, Sanitation, and Car Watering Procedures.* The instructors also cover safety topics such as Blue Flag/Blue Signal, Confined Space Entry, and technical skills training on passenger car and locomotive systems.

Current projects include qualification of personnel on *CFR Part 232*, the standard for brake system safety for freight and other non-passenger trains and equipment, and end of train devices. A system-wide re-qualification program for *CFR 238 Passenger Equipment Safety Standards* is also underway. Courses concerning passenger car, freight equipment, and single car test devices, on procedures recently released by the American Public Transit Association (APTA) and the American Association of Railroads (AAR), are currently being developed and are scheduled to be available in June.

Leadership Skills Development

Employee Development is currently assisting several departments with the development and implementation of supervisor-development programs using internal resources, including subject-matter experts, as well as external resources. For one program, Employee Development has partnered with local community colleges to offer a fresh perspective and a new level of training to the supervisory employee's educational experience. This training is part of the overall training plan for management employees and is currently being reviewed and redeveloped with a goal to focus on improving effectiveness and productivity.

Under the leadership of Ed Walker, vice president of Transportation, supervisors in that department are attending a five-day course designed to strengthen their leadership and management skills. The program was designed, developed, and implemented by Employee Development in collaboration with Cecil Community College's Mid-Atlantic Transportation and Logistics Institute. The program includes training in conflict resolution, coaching, and corroborative skills as well as topics specific to the transportation supervisor (i.e., derailment investigation, workplace safety, conductor responsibilities, overview of Amtrak's drug and alcohol program and Crew Resource Management.) Approximately 50 percent of the target audience has completed the program, which will be followed up by a three-day reinforcement class. A similar program will begin in July for the Passenger Services department supervisors.

Training and Technology

Found on the Intranet home page, under the "Employees" tab, then "Education and Training," the online Education and Development Catalog gives employees detailed information about training opportu-

Amtrak Train Crew Rescues Snowmobile Accident Victim

The Amtrak train crew aboard the *California Zephyr* helped rescue the victim of a snowmobile accident when its rider was struck by a Union Pacific freight train in the Sierra Nevada Mountains on Jan. 14.

A UP freight train, which was just ahead of train #6, had just struck a snowmobile on the Lower Cascade trestle, which is 40 to 50 feet over the Lower Cascade River. The rider was injured with what appeared to be a badly broken leg, and the snowmobile was precariously perched next to the train and on a small ridge of snow.

In the cab of train #6, Engineers Rich Edson and Joe Burk, along with Safety Officer Peter Hall offered to carry the victim to town to receive medical assistance. The

area was unreachable by vehicle, and the nearest town, Soda Springs, was six miles away. The UP and the victim agreed and the freight moved east so that Edson could guide train #6 slowly to the location of the victim.

Meanwhile, Conductors Mel Jackson and Kevin Kelly, and Senior Operating Rules Officer Paul Manger found an emergency medical technician (EMT) aboard the train who immediately volunteered to help. Jackson had the train stop with the dorm car adjacent to the victim so the EMT and conductors could reach the wounded woman to administer first aid.

Just then, a California Highway Patrol helicopter appeared overhead and found a safe spot to land

California Zephyr crew members cleanup the right-of-way following the rescue of an injured woman in the Sierra Nevada Mountains.

alongside the train. After about 20 minutes of preparing the victim for air travel, she was on her way to the hospital via helicopter. In order to clear the track for the train, Kelly and Manger pulled the damaged snowmobile out of the

way, mindful not to let it slip into the ravine.

The professional manner in which Kelly, Manger, and Hall handled the emergency is a tribute to Amtrak's focus on safety and training.

Retired Locomotives Move to Museums

In an effort to preserve the value and tradition of America's railroad history, Amtrak has donated an E-60 electric locomotive and a F-40 PH diesel engine to two of America's premier railroad museums. Both locomotives, which had become obsolete, contribute to the annals of railroading.

In January, the Railroad Museum of Pennsylvania arranged to ship Amtrak's E-60 locomotive #603 to its final resting place in Strasburg, where it will be on display for museum visitors. Built by General Electric in 1975, the 183-ton locomotive is the last of the E-60s in Amtrak's fleet. The E-60s were purchased by Amtrak in the mid-70s and were the first new electric

Electric locomotive #964, as it appeared in the late 70s and was most recently operated by Amtrak as engine #603. It will be displayed in the Railroad Museum of Pennsylvania with its original engine number.

locomotives that operated along the Northeast Corridor. With the arrival of the AEM-7 locomotives in the 1980s, the E-60s have been slowly phased out over the years.

Amtrak's diesel locomotive #307 is scheduled to arrive at the North Carolina Transportation Museum in Spencer in early March. The F-40 PH is an example of the type of locomotive used to pull the nation's passenger trains from the late 70s through 2001, after which more efficient engines became available and the last of Amtrak's F-40 locomotives was taken out of service. At one time, Amtrak had as many as 216 F-40 locomotives in service. Locomotive #307 was retired with almost 3 million miles.

Training Goals Focus on Results

continued from page 8

nities provided by various departments at Amtrak, including Employee Development, Locomotive Engineer Training, Amtrak Technologies, Human Resources, Business Diversity, Environmental, and Law. The catalog provides overviews and enrollment information for all of the programs currently available through internal and external training resources, including information on professional development courses available at off-site workshops through American Management Associates (AMA) that are offered with corporate discounts. Supervisory approval is required to attend these workshops and all costs are charged to

the employee's department. To enroll, employees are required to submit an Amtrak Training Request form, NRPC 3102, to Employee Development by following the directions found on the site.

The Intranet site also provides detailed information about all computer-based courses available online through both Amtrak's Intranet network and the Internet. Using computer-based instructional delivery methods enables the company to meet its training needs nationwide. Supplementing the company's limited training resources, the Amtrak Intranet offers training opportunities in a variety of topics. Over the past year,

Employee Development has worked with Amtrak Technologies to expand the library of computer-based training programs to include courses in business skills and workplace safety. Courses offered online range from *The Basics of Effective Communication*, *Managing Projects*, and *Leading Effective Meetings to Hand and Power Tool Safety*, *Heat and Cold Stress*, and *Slips, Trips, and Falls*. Employees may also take online courses that are currently offered by Amtrak Technologies and other departments that are accessed through the Internet. These courses are available to all Amtrak employees and most can be accessed via a home PC. And, best of all, these

interactive, self-study courses are offered to employees free of charge.

Plans for the Future

This fiscal year, the Human Resources departments, which include Workforce Planning, Recruiting, and Employee Development, are meeting with other Amtrak departments to analyze their training requirements and plan training strategies that will provide a workforce that has the skills, knowledge, and abilities Amtrak employees will need in the future.

This story was contributed by the Human Resources Employee Development department.

GateGourmet employee Ruth Smith hands Coast Starlight Sleeper Attendant Thomas Gaughan Amtrak's new blue sleeper blankets.

Sleeping Car Amenities Update

They're here. The *Coast Starlight*, *Southwest Chief* and *Sunset Limited* are equipped with the new Amtrak blue blankets. The *California Zephyr*, *Lakeshore Limited*, *Capitol Limited* and Silver service trains are currently being supplied with new blankets as they cycle through periodic maintenance in Chicago and Miami and should be fully

equipped within the next 60 days.

There is also news on the towel front. New towels, which are 40 percent larger and 30 percent heavier than the ones currently being used, will be phased into service as the old ones are replaced in time for the summer travel season.

Transit Transfers Transition Train Travelers

San Joaquins passengers can make connections from Amtrak stations to buses and light rail in Central California free of charge and free of hassle by taking advantage of the Caltrans/Amtrak transit transfer program, already a hit on *Capitol Corridor* trains.

Making the connection is easy. Upon request, Amtrak conductors give passengers a free two-part validated transit transfer, which is good through the dates punched on the transfer. One part is valid for an immediate connection, and the other can be used within the validation date for a return trip to the train. Passengers then provide the transfer to the transit operator.

Passengers on *San Joaquins* trains may transfer to AC Transit buses (except trans-Bay buses to San

Francisco) at Amtrak stations in Richmond, Emeryville and Oakland; to County Connection buses at the Amtrak station in Martinez; to Sacramento Regional Transit buses at the Amtrak station in Sacramento; and to light rail at the K Street Mall, a few blocks from the Sacramento station.

Capitol Corridor passengers at Amtrak stations in Fairfield/Suisun, Santa Clara, and San Jose may transfer to AC Transit buses (except Trans-Bay buses to San Francisco), at train stations in Richmond, Berkeley, Emeryville, Oakland, Hayward and Fremont; to County Connection buses at the Amtrak station in Martinez; to Davis Unitrans and YoloBus at the Amtrak station in Davis; and to Sacramento Regional Transit buses at the Sacramento Amtrak station.

Amtrak Vacations Brochure Highlights Easy Trip Planning

It's out! Over 450,000 copies of the Amtrak Vacations catalog were distributed in January to Amtrak Vacations customers, travel agents, and Amtrak stations across the country.

Amtrak Vacations passengers may choose from 65 travel destinations, over 330 hotels, resorts, and lodges, and more than 200 tours and attractions that range from major theme parks to dinner cruises. And, passengers with limited time may prefer Amtrak's Air Rail packages that offer train service in one direction and air travel in the other on United Airlines.

This year for the first time, group discounts are available through Amtrak Vacations. Passengers traveling in groups of 20 or more can save 20 percent off of the lowest available rail fare when booking a vacation package.

With one telephone call, travelers can reserve vacation packages that include rail, hotel, transfers, car rental, and sight seeing tours to many popular destinations such as Orlando, New York, Chicago, San Francisco, and the Grand Canyon.

Chargers Fans Choose Amtrak

Ridership on the *Pacific Surfliner* soared during last year's football season, attracting an average of

1,865 passengers on game days, many of whom attended San Diego Chargers' home games. Between September and December 2003, the *Pacific Surfliner* operated seven "Chargers Express" trains between Los Angeles and San Diego, which (excluding two games played over the Thanksgiving and Christmas holiday) led to a 67-percent ridership increase on game days and 74-percent growth in ticket sales, compared to no-game days.

Successful ridership and revenue gains can be attributed to targeted promotions in Los Angeles and Orange County, on the San Diego Chargers' Web site, on www.amtrak.com, and through local print and radio advertisements. In addition, the Miller Brewing Company organized special groups (over 110 passengers on each trip) that traveled to five of the seven

home games. Passengers were offered a fare that included round-trip rail travel from Los Angeles to San Diego and a trolley transfer to Qualcomm Stadium in San Diego.

"The success of this program reflects the commitment of Amtrak, Caltrans, the San Diego Chargers, and the Metropolitan Transit Development Board to offer football fans a stress-free travel alternative," said Marketing and Sales Director Dee Mason.

Illinois Kids Discover Through Train Travel

As the *State House* travels between Chicago and St. Louis, what major river does it cross? Answer: The Mississippi River. Illinois fourth-graders are

improving their map skills by finding answers to questions like this using the "American Journeys Learn About Illinois" program, sponsored by Amtrak and Illinois Department of Transportation and developed by Scholastic.

Similar to the Scholastic/Amtrak Schools program on the West Coast, the program includes customized lessons on geography, language arts, science, and math created around Amtrak routes and services. Students receive a four-color two-page flyer to take home that includes a Kids Ride Free coupon and in-home activities related to train travel. Launched in mid-March, the program is estimated to reach over 830,000 teachers, students, and parents.

Musical Railroad

The Scott Miller and The Commonwealth band serenades Amtrak passengers at Washington's Union Station while on the "Scott Miller Amtrak Crescent Whistle Stop Tour," which consisted of a number of cities, from New Orleans to Nashville, in February. An accomplished singer, Miller's rock and roll repertoire includes a range of songs about train travel, including one about the Crescent.

Employees Inducted Into Engineering Corps

Three employees were inducted into the Engineering department's "Corps of Near Engineers" for providing the resources to train the Engineering department's employees, for the expertise that helped create the department's Strategic Five-year Plan, and for the top-level resolve and support for helping the department achieve its goals. Together, they have helped position the department to make its contribution toward a state of good repair.

To show his appreciation for this spirit of teamwork, Chief Engineer David Hughes recognized three non-Engineering employees for their outstanding contributions to

You may not want them laying track, but the members of the newly formed "Corps of Near Engineers" are considered honorary members of the Engineering department. (L. to R.) Senior Director of Capital Planning John Conlow (left), President David Gunn, and Assistant Vice President of Human Resources Paula Porter.

the department at a light-hearted ceremony in Washington in January.

Inducted into the corps as captains were Assistant Vice President of Human Resources Paula Porter, who manages the department's Employee Development training function (see related story in this issue) and Senior Director of Capital Planning John Conlow, who is part of the department's strategic planning team. President David Gunn was inducted at the highest rank attainable — Five Star General — for his commitment to restoring the railroad and his support of the Engineering department's efforts to sustain a well-functioning infrastructure.

Employees at Adams MoW Base Reach Safety Milestone

For the 18 men stationed at the Adams Maintenance-of-Way Base in North Brunswick, NJ, Jan. 9, 2004, marked 900 days injury-free for the base's Buildings and Bridges crew. The base is home to a supervisor, two electricians and three work gangs: Carpenter Gang #0443, Plumbing Gang #0423, and Welding/Inspection Gang #0452.

The crew attributes their working safely to their supervisor, Chuck Dochnahl, who ensures that every employee understands the task at hand and all safety hazards they may encounter before they walk out the door. The employees, who average between 20 to 25 years of experience on the railroad, take pride in what they do.

Chuck Dochnahl, (second from left) supervisor, Bridges and Buildings, displays the Safety Recognition plaque awarded to the Adams Maintenance-of-Way crew for working 900 days injury-free as of Jan. 9, 2004. Pictured at the Feb. 1 ceremony with Dochnahl are (L. to R.) Robert Santini, assistant division engineer, Structures and Facilities; John Nizolek, senior engineer, Structures; and Steve Falkenstein, division engineer, New York Engineering Division.

FRONT LINE FOCUS

Dear Amtrak:

I'm writing this letter to let you know I appreciate an individual that works for you.

I took the train from BWI to New York on Dec. 26. It was a hectic morning and I was toting a bunch of packages and a suitcase.

When the train pulled into the station, all the folks waiting on the platform rushed toward the doors of the train. During the confusion, I left my tote bag on the platform. I discovered this when we settled into our seats and I felt ill, as I had decided not to carry a purse. So my wallet, checkbook, return tickets, etc., were all in the bag.

In a panic, I asked the conductor what to do. He said he would call the station and have them check the platform. A few minutes later he came and told me that another conductor aboard the train, Frederick Elliott, had the bag. He said the conductor had seen it on the platform and figured it belonged to someone who was in the throng that had just boarded, so he put the bag on the train.

I am so very grateful and I think of Mr. Elliott when I'm rushing around and I remember to slow down. Thank you for your observant employees.

Karen N.
California

Dear Amtrak:

My wife and I are nearly 80 years old and use Amtrak whenever possible. My wife, who is nearly blind and suffers other debilitating ailments, enjoys travel by rail and we both appreciate very much the service Amtrak provides.

She had round-trip reservations to travel alone from Everett, WA, to West Glacier, MT, [an unstaffed station] on the *Empire Builder*. Because of her disabilities and luggage, I approached the station agent, Mr. Leslie Stumm, to see if a porter was available to assist her in boarding. He answered there was not. But his wife, who was nearby, heard our conversation and offered to assist her, carefully describing what she would do to make her boarding both safe and timely.

On my wife's return to Everett, the agent recognized me as I entered the station. He let me know when the train would approach and offered to see to her baggage since her car would be some distance from the station. I heartily accepted, as I would be needed to assist my wife.

My wife and I frequently travel on the Amtrak *Cascades* and have remarked how helpful your personnel have been. But this particular kindness was outstanding and we are grateful.

Sincerely,
Donald T.
Anacortes, WA

A Funny Thing Happened on the Way to the Baltimore Symphony Orchestra

Mike Famiglietti, a baggageman in Baltimore, recounts to Washington, D.C., NBC affiliate NEWS4 reporter Darcy Spencer how he recovered a Guarneri del Gesù violin. The violin, valued at \$3 million, was inadvertently left behind by violinist Giron Kremer on an *Acela Express* train when he detrained at Baltimore's Penn station. Famiglietti and Washington, D.C., Lost and Found Clerk Joseph Butler were interviewed by Spencer about their respective roles in the return of the violin to its owner.

New Spring Timetable Features Service Improvements

Amtrak's 2004 Spring System Timetable features service improvements throughout the system, most notably increased frequencies on the Northeast Corridor and new Chicago to Port Huron service. Effective April 26, the timetable offers all the information passengers need to make informed travel decisions.

***Acela Express* and *Metroliner* Highlights**

The number of *Acela Express* trainsets in service on weekdays increases from 14 to 15, thereby allowing for increased frequencies. Four new *Acela Express* frequencies (11 a.m. and 7 p.m. departures from Washington, and 12 noon and 2 p.m. departures from New York) replace two *Metroliner* trains between New York and Washington, increasing weekday *Acela Express* service from 13 to 15 roundtrips. Northbound departures from Washington are available every hour on the hour from 5 a.m. to 8 p.m., and southbound departures from New York take off hourly from 6 a.m. to 9 p.m.

Passengers traveling on Sundays have twice as many *Acela Express* service options between New York and Washington, from three to six round trips. Also on Sundays, *Acela Express* service between Boston and New York increases

from three to four trips with the addition of a 3 p.m. train from Boston and a 2:03 p.m. departure from New York.

To close a 90-minute gap in southbound service to BWI, train #2151, which originates in New York, makes a stop at BWI. New Carrollton, MD, has been removed as a weekend stop for *Acela Express* and *Metroliner* trains, however, hourly *Regional* service continues to be available for passengers traveling to New Carrollton.

While passengers are offered more *Acela Express* and *Regional* service this spring and summer, there will be fewer *Metroliner* choices, with four *Metroliner* trains operating between New York and Washington on weekdays.

A new round of First class menu options is available on *Acela Express* and *Metroliner* service, including new Tapas items (see related story in this issue).

Added *Regional* Frequencies

To address the high number of passengers standing on *Regional* trains during heavy travel times, two new weekday trips departing southbound from New York have been added at 3:30 p.m. and 4:30 p.m. A 3:05 p.m. Friday-only *Regional* train

Revenue and Ridership Gains Continue in February

Numbers for the Month Better Than Last Year

Amtrak continued to post ridership gains in February, despite the impact of cold winter weather on a vulnerable fleet in the first weeks of the month. The railroad carried over 1.8 million passengers — Amtrak's highest February ever and 5 percent more passengers than February 2003. Ticket revenues for the month, at \$91.2 million, were 8 percent better than a year ago, but fell short of this year's budget goal by 4 percent.

However, ridership was down 5 percent against the company's budget goal, due to a combination of factors. The severe cold weather

in January and February caused freeze damage to both Amfleet equipment and Viewliner sleepers that resulted in equipment shortages in the East. Many *Regional* and *Metroliner* departures during the first half of the month had to be cancelled, and Viewliner sleeper shortages affected the *Federal*, *Crescent*, *Cardinal*, *Silver Star* and *Silver Meteor*, and *Lake Shore Limited* services throughout the month. Overall, on-time performance declined, particularly on long-distance trains. There was also a slight softening in the travel

continued on page 4

Bombardier/Alstom and Amtrak Reach Agreement

Amtrak reached an agreement with the consortium of Bombardier/Alstom regarding their respective legal disputes associated with the \$1.2 billion high-speed rail program. The settlement was announced in a joint statement released March 17.

The agreement settles Bombardier's lawsuit and Amtrak's countersuit, and moves up the transfer of the maintenance responsibility from the Northeast

Corridor Management Service Corporation (NECMSC) to Amtrak to October 2006. The transfer was originally to take place in 2013.

The maintenance program covered performance and maintenance, for a ten-year period, of 20 high-speed *Acela Express* trainsets, the purchase of 15 additional high-speed electric locomotives, and the construction of three new maintenance facilities.

TRAIN OF THOUGHT

The security of our passengers and employees is getting a closer look in the wake of the commuter train bombings in Madrid, Spain last month. While this attack exposes the vulnerability of all forms of public transportation because they are open systems, there are a number of things that we can all do—and must do—for our safety and security and that of our passengers. While Amtrak has not been the target of a specific and credible threat, we need to be vigilant.

What can you do to help? First, it is important that every employee recognize that our passengers look to us as figures of authority and responsibility. That means that each and every one of us must act professionally and responsively with our passengers at all times that we’re on the property and wearing our identification.

Second, be alert.

It may sound simple, but there is a lot of power in the watchfulness of 20,000 employees. You know your own work environment better than anyone else. Last month, an alert maintenance-of-way worker in France discovered a bomb hidden

in the right-of-way south of Paris and quickly notified the authorities, who successfully deactivated the device.

If you see something unusual or suspicious, call the Amtrak Police Department at (800) 331-0008.

Be alert to unattended packages and baggage at stations and on-board trains. On-board staff should not hesitate to ask, “Is this your bag?” or when notified by passengers of something amiss – someone acting strangely or a suspicious package – to investigate it immediately. If in doubt as to what to do, contact your supervisor or the Amtrak Police Department.

Third, wear your identification at all times. If you come across someone you don’t recognize who doesn’t have identification displayed, you are obligated to ask them for it. All of us must have employee identification visible at all times while on Amtrak property — I wear mine around my neck. That means the office, the train, the station, the yard, everywhere.

Finally, copies of an employee security handbook are being

David L. Gunn

distributed to all employees this month. I am asking every employee to review the handbook and familiarize yourself with the security procedures related to your job. You are responsible for knowing two things; your own responsibility for security on the job, and who you communicate with – your supervisor, the APD – when you see a problem.

These are simple actions, but like the actions of the railway worker in France, they can and will make a big difference in our railroad’s security. Our highest priority is the safety of all passengers and employees—and their security as well.

Track Work Resumes After Winter Break

This spring, track work resumed on the Northeast Corridor to continue the company’s FY ’04 capital program. Along the corridor, three large units of equipment can be seen working to improve the railroad’s infrastructure.

In mid-February, the Rail Change Out (RCO) machine began work in New Jersey laying rail between Ham Interlocking (near Trenton), and north to Midway Interlocking (toward New Brunswick). The RCO, which automates the rail change process, is scheduled to install 38 miles of Continuously Welded Rail (CWR) on tracks # 2 and # 3 by mid-April. When that work is completed, it will move to the New England Division to complete work on another 38 miles of track.

Like the Track Laying System (TLS), the RCO is a constantly moving machine that removes old rail, sets it off to the side, and threads in new CWR.

After being put to rest in mid-December for the winter, Amtrak’s Track Laying System (TLS) was back at work on March 8. This

fiscal year, approximately 180,000 concrete ties will be laid between Trenton and Wilmington. This spring, the TLS will begin in north-east Philadelphia, working south toward Wilmington. It will then move back north to work between northeast Philadelphia and Morrisville, PA.

Amtrak’s undercutter, which eliminates track surface defects

by renewing the ballast, resumed work on March 1. This spring, the undercutter will be working at locations in Maryland, from the Bush River Bridge south to New Carrollton. The undercutter is expected to renew approximately 50 miles of ballast in various locations between Philadelphia and Washington this fiscal year.

Amtrak's TLS is scheduled to install 180,000 concrete ties on the Northeast Corridor this fiscal year.

More Amtrak Trains Become Smoke-free

In keeping with the consumer demand for smoke-free environments, Amtrak is expanding its onboard no-smoking policy to include six long-distance trains that operate with Superliner equipment. Effective April 26, smoking is prohibited on the *Southwest Chief*, *Empire Builder*, *California Zephyr*, *Texas Eagle*, *Capitol Limited*, and the *City of New Orleans*.

Passengers traveling on trains aboard which smoking is not permitted may smoke at designated station stops announced by the conductor. To avoid being left behind, passengers are advised to remain on the platform near the train, prepared to reboard immediately upon hearing the locomotive horn or the “all aboard” call from Amtrak personnel.

To help enforce the policy, it is being made to known to customers via notices posted in stations, on amtrak.com, and in the spring timetable. On the phone, reservations sales agents remind passengers that these trains no longer permit smoking. In addition, conductors have been provided sample scripts to communicate the new policy.

The decision to ban smoking on Superliner trains was based on several factors. Previously, smoking on Superliner equipment was allowed in a separate room on the lower level of a designated coach. However, as passengers entered or exited the room, smoke rose to the upper level coach seating area, causing dissatisfaction among non-smoking passengers.

Analysis of ridership data conducted in January 2004 by Amtrak’s Market Research and Analysis department found that

prohibiting smoking on long-distance trains does not adversely impact ticket revenue or ridership. Additionally, any losses in the ridership of smokers appear to be offset by an increase in traffic from those highly allergic to tobacco smoke. This analysis was conducted on the 34-hour *Coast Starlight* route, which became non-smoking in the mid-90s and the 65-hour *Sunset Limited* trip, which has restricted smoking since the summer of 2003.

The smoking urns attached to the wall and seating bolted to the floor will ultimately be removed, allowing much needed additional space. Recommendations for utilizing the added space include adding lower-level seating, checked baggage, or carry-on luggage storage space. Until a decision is made, the door of the smoking room will be sealed.

Smoking is still permitted on the *Auto Train*, *Crescent*, and Silver Service trains; however, the company continues to review the viability of completely prohibiting smoking on board all trains.

“The meal choices are a significant component of the overall First class experience,”

Pete Humphreys,
Director of Food and Beverage Standards and Operations

Electrification of Crossovers on Northeast Corridor Maximizes Flexibility

New England Division Engineering forces this winter completed a long-term crossover electrification project in Massachusetts that provides greater flexibility and helps support on-time performance goals on the Northeast Corridor.

When the northend of the Northeast Corridor was electrified in January 2000, crossovers at a handful of interlockings were not wired for electric train operation due to budgetary constraints.

“As a result... the northend better supports the busy Amtrak Northeast Corridor... by providing greater transportation flexibility and keeping on-time performance at higher levels.”

David Hughes, Chief Engineer

Acela First Class Passengers Savor New Menu Items

Amtrak’s *Acela Express* First class passengers are in for a treat. A number of treats, actually. Inaugurated on April 28, the First class spring /summer menu offers *Acela’s* frequent customers a range of new meal options.

Because *Acela Express* First class passengers often tend to be frequent riders, offering a broad variety of appealing meal options is critical. The First class menu runs on a two-year cycle, with distinct spring/summer (from April to October) and fall/winter (October to April 2005) selections, which then repeat the following year. Within each season’s menus, there are four cycles that rotate every other Wednesday. Passengers may select from three choices at breakfast, lunch, or dinner.

“The meal choices are a significant component of the overall First class experience,” said Pete Humphreys, director of Food and

Beverage Standards and Operations. “If we served the same old rubber chicken dinner every day, our passengers would not get the high-quality first class service they expect from *Acela Express*.”

Most of the items offered in this cycle are new. One of the more popular items in the last menu was a bruschetta bar, which offered lighter fare for passengers not wanting a full lunch or dinner meal. Working with the same concept, the new menus offer Tapas, which are bite-size samples of a range of items. For example, a passenger may make a Tapas order that includes a duck terrine, smoked salmon, mousse and herb shrimp, a pumpernickel round, and crackers.

One of the changes to the new menu was made as a result of employees’ input. Because employees advised Amtrak’s Food and Beverage group that passengers don’t ask for dessert at lunch, this item was taken off the lunch menu; yielding a cost-savings. Instead, passengers may opt for a Ghirardelli chocolate to eat after lunch or save for later in the day.

The First class menus are also offered on *Metroliner* First class service, albeit modified due to equipment constraints.

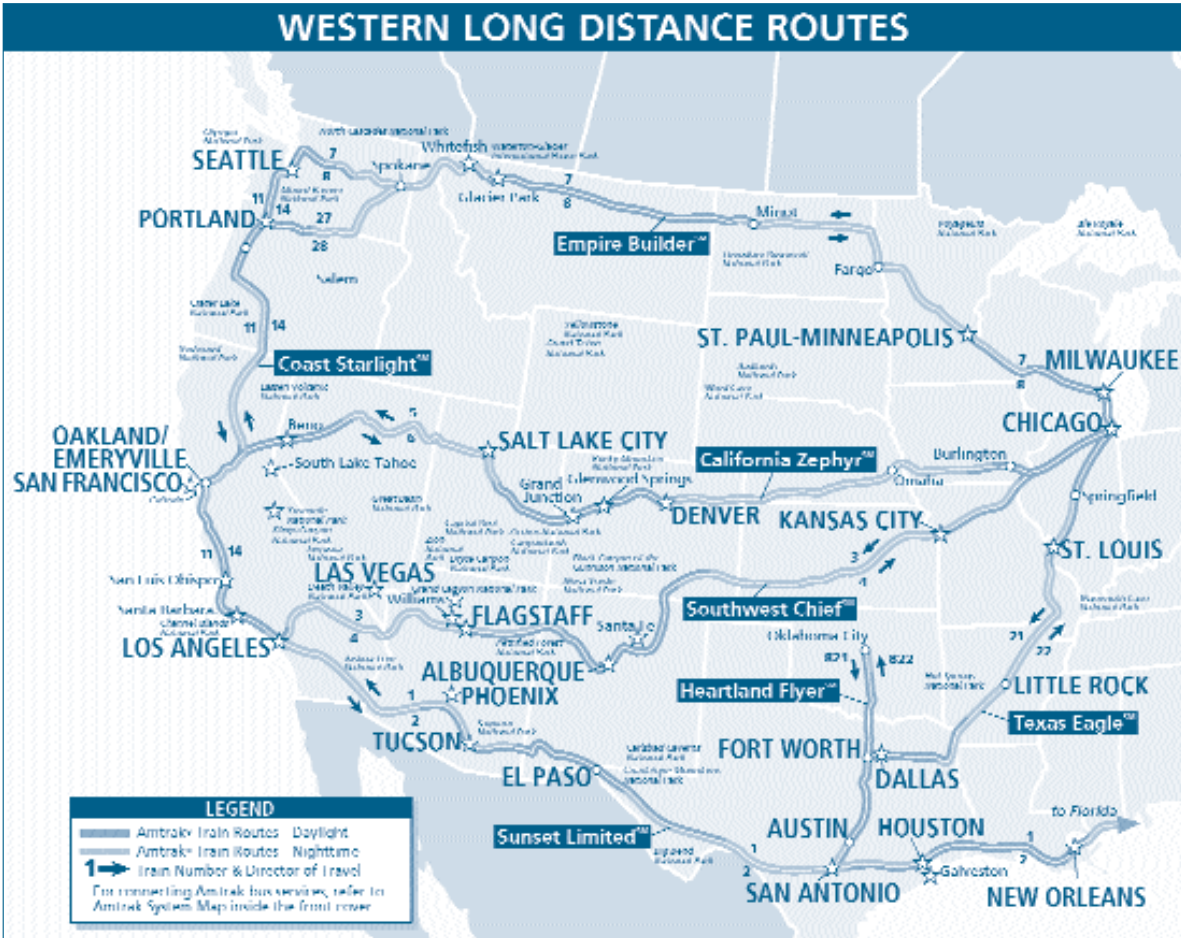

where de-energizing the power system caused loss of catenary power at Amtrak’s South Hampton Maintenance Yard. Because cutting the power at Canton Junction this winter could have resulted in freezing trainsets in South Hampton Maintenance Yard (thereby causing delays to maintenance and the morning service), coordination between Mechanical, Transportation, and Engineering personnel was crucial. While much of the construction at Canton Junction was completed with a single-track power outage, there were several nights during which both tracks were de-energized.

“As a result of the completion of this project, the northend better supports the busy Amtrak Northeast Corridor and commuter service by providing greater transportation flexibility and keeping on-time performance at higher levels,” said Chief Engineer David Hughes.

New Spring Timetable Features Service Improvements

continued from page 1
between Washington and New York; 9:19 a.m. Saturday and Sunday morning departures from Philadelphia to New York, and a 2 p.m. weekend New York to Boston

and Port Huron, MI, replace *International* service that operated between Chicago and Toronto, Canada. *Blue Water* trains provide daily morning departures to Chicago and return afternoon and

The Western region map includes color-coded routes that identify daytime and nighttime travel for passengers who want to plan their scenic trips accordingly.

express train are also added to reduce crowding during peak travel periods.

Additionally, an 11:35 a.m. *Regional* train is added between New York and Washington to eliminate the gap in mid-morning service.

Trains #66 and #67, which formerly operated as the *Federal*, are designated in the new timetable as *Regional* service trains and operate on a slightly adjusted schedule between Washington and Boston.

Empire Corridor Schedule Changes
Adirondack train #71, operating Saturday and Sunday, departs New York two hours earlier at 7:45 a.m. to provide a more convenient arrival, just in time for dinner in Montreal at 5:50 p.m.

New Blue Water Service Replaces the International
On Saturday, April 24, Amtrak and the Michigan Department of Transportation (MDOT) will operate a special inaugural train between Port Huron and Niles, MI, to launch the new *Blue Water* service, which begins April 25. The *Blue Water* trains #364 and #365, with daily service between Chicago

West Coast Updates
Passengers traveling on Amtrak's *Capitol Corridor* service between Oakland and Sacramento arrive ten minutes earlier as a result of schedule improvements along the route.

In addition, six weekend *Pacific Surfliner* trains serve San Diego's Old Town station, offering travelers attractive daytime round-trip schedules from Los Angeles.

Staying on Track
A useful addition to the regional sections of the spring timetable is information about upcoming track upgrade projects that affect train schedules or services. For example, while

paging through the Western region section, passengers planning summer travel on the *California Zephyr* learn about schedule changes as a result of track work in June and July. In addition, East Coast customers will see that *Empire Service* schedules have been lengthened to accommodate track improvement work along the route.

In honor of its 75th anniversary, the *Empire Builder* is featured on the cover of the timetable, copies of which arrived at stations throughout the system on April 16. A painting created by artist and train enthusiast J. Craig Thorpe depicts the train as it travels just outside of Glacier National Park, MT. The spring timetable continues to reflect the company's back-to-basics approach to advertising and promoting its services in a customer-friendly format. The timetable is a comprehensive collection of national train schedules arranged by region, which includes sample fares, Amtrak policies, and other pertinent travel information.

Ohio Route Changes
Ohio passengers have a wider choice of service with the addition of Sandusky and Elyria stops (also served by the *Capitol Limited*) to the *Lake Shore Limited* route. Additionally, the Bryan, OH, station stop is transferred from the *Capitol Limited* route to that of the *Lake Shore Limited*.

Revenue and Ridership Gains Continue in February

Numbers for the Month Better Than Last Year

continued from page 1
industry nationwide. On whole, for February '04, it is estimated that the equipment failures cost the railroad an estimated \$1.6 million in ticket revenues.

Despite a 7-percent reduction in scheduled departures during February, attributed mostly to weather-related equipment shortages, premium (*Acela Express* and *Metroliner*) ridership on the corridor was up 2 percent. This increase was led by *Acela Express*, which was up 10 percent on the northend, and up 9 percent on the southend. Ridership on *Regional* trains also improved, up 13 percent versus last year.

The same factors — the decline in the travel market, equipment shortages, and on-time performance — resulted in long-distance revenues 3 percent shy of budget. Viewliner sleeper equipment shortages resulted in an estimated loss of \$350,000 in February ticket revenues, a 12-percent decline in Viewliner Sleeping car revenues compared to February 2003. By contrast, Superliner sleeper ticket revenues grew 9 percent this year against last year. However, an estimated loss of \$1 million in long-distance ticket revenues for February is expected to be the result of reduced on-time performance, which slipped to 10 points below a year ago through February.

Year-to-date Figures Show Gains Against Last Year and Goal
Fiscal year-to-date numbers for ridership and revenue are ahead of last year's figures for the same period and are also ahead of budget goal. Ridership from October through February, at 10 million trips, is 8 percent over the same period last year, and 5 percent over budget goal. Ticket revenues of nearly \$510 million are up 7 percent against this time last year and 3.5 percent above budget goal.

Cleanup of Sunnyside Structure Underway

As trains travel southbound to New York's Penn station, they pass a Railway Express Agency (REA) building located on the grounds of Sunnyside Yard in New York. Until recently, what passengers saw from the train resembled a junkyard filled with corroded debris, and employees arriving at work saw a decaying and polluted work environment.

In March, Amtrak completed the first phase of a project to cleanup, and ultimately, demolish, the REA building at Sunnyside. The company's goal of improving the railroad's state of repair includes ridding its property of debris that litters yards, right-of-way, and facilities. Cleanup of this eyesore began in mid-January with the removal of soil and debris around the building and will culminate with the demolition of the building this summer.

"The lot wasn't just an eyesore; it invited criminal activity and was a real detriment to employees' feeling good about where they work. The work being done at the site is very tangible evidence of how serious Amtrak is about cleaning up our facilities," said New York Division Master Mechanic Don Knapik.

To ready the area for the ultimate flattening of the building, the first phase of the project involved removing debris and soil from a nearly three-and-a-half-acre area surrounding the building. The soil was backed up against the building as high as 30 feet in some areas. In

by Amtrak employees, including environmental, engineering, and safety personnel. The on-site work was overseen by Engineering Project Manager Augustine Juliano. Because low-levels of contaminants were present in the soil, continuous air monitoring was conducted.

completed in 1909. Amtrak acquired the building when it purchased Sunnyside Yard from Penn Central in 1976. At that time, the building was vacant, as REA's package express operations had ceased in 1974.

The lot surrounding the REA building at Sunnyside Yard is ready for demolition of the structure later this summer. Not long ago, the lot resembled a junkyard full of soil and debris. Photo credit: William Schulz

addition, old equipment including vehicles, trucks, cranes, and front-end loaders abandoned by the last tenant trashed the lot.

The magnitude of the project is best conveyed by the amount of garbage hauled out of the facility. Over 14,000 tons of soil, 1,900 cubic yards of concrete, 900 tons of construction debris, and 500 tons of metal were removed from the site.

"When you consider that the average dump truck carries between 20-25 tons, you really get sense as to how much was removed from the site," said Rich Mohlenhoff, senior environmental coordinator in the New York Division.

The cleanup work was performed by specialized contractors in coordination with and supervised

Sunnyside employees were notified about the air monitoring, and no air quality problems arose.

"The contractors and Amtrak worked very closely to make sure that the operation was done properly, keeping the safety of Sunnyside employees the highest priority," noted Harry Seubert, Sunnyside environmental coordinator and 30-year Amtrak veteran.

Phase two of the project will involve asbestos abatement in the 42,000 square-foot structure before it is demolished this summer. As with the first phase, air monitoring will be conducted during the course of the second phase.

Built in the 1920s, the REA building was not part of the original site of Sunnyside Yard, which was

The building remained vacant between then and the mid-1990s, when the property was leased to a demolition contractor, who improperly used the property for storage and left a dump when he was evicted in 1999. During that period and up until its cleanup, the building and the surrounding area fell victim to vandalism and other illegal activity.

While not classified as a historic building by the New York State Historic Preservation Office, the structure still reflects some of its former grace with sophisticated brickwork. According to those who are familiar with the building's original splendor, the REA building featured mahogany paneling and marble floors.

Oakland Maintenance Facility Construction Nears Completion

Construction on Amtrak's maintenance facility continues in Oakland, CA, with completion slated for the end of September 2004. The steel framing for the maintenance building is being installed, as well as construction of the service and inspection pit, and the wye East and wye West tracks. Currently, the \$65-million facility is approximately 75 percent complete. Photo credit: William Hill

PROMOTIONS IN MOTION

Rail Pass Offers Residents Unlimited Florida Travel
The popular Florida Rail Pass is once again being offered to Floridians for a year's worth of unlimited travel at a single low price. Using the rail pass, Florida residents may travel to popular destinations and attractions for a fraction of what an individual rail ticket costs.

The pass may be used to travel to 33 destinations within the state on Amtrak's *Palmetto*, *Silver Meteor*, *Silver Star* and *Sunset Limited* trains. Passes are good for one year from the date of purchase for unlimited coach travel throughout Florida. A special anniversary purchase price of \$199 is available from April 1, 2004 through Aug. 27, 2004.

First introduced in the summer of 2001, the Florida Rail Pass

continues to grow in popularity, with rail pass sales through mid-March up 9 percent over last year. For students heading to college or families visiting Walt Disney World, the Florida Rail Pass is a convenient and economical way to travel.

Advance reservations and ticketing are not permitted. On board the train, the passholder must present the pass along with valid photo identification. The pass may be upgraded (on board with the conductor) to include sleeping accommodations, if available, with the payment of the applicable accommodation charge. Also, for a fee, ticket agents may upgrade Florida Rail Pass holders to business class seating.

Passenger Complaints Decrease and Praise Rises

Feedback from passengers — good and bad — is of great value to any company. This is particularly true for service-oriented companies like Amtrak, since it helps target problem areas, continue successful programs, and identify trends.

In the first quarter of FY '04, Amtrak received over 32,000 letters, phone calls and emails. The majority of these — 80 percent — came in the form of phone calls, with letters (15 percent) and emails (5 percent) comprising the remainder.

Most service companies hear from customers when they are dissatisfied and Amtrak is no exception. Approximately 94 percent of comments received in the first quarter were complaints. Despite the number of complaints — over 46,000 — this was a 6 percent decrease over the same period one year ago. Conversely, the number of times Amtrak was praised by passengers rose to 1,776 — an increase of 37 percent over the first quarter of '03.

One typical commendation came from former U.S. DOT Chief of Staff Michael Huerta, who recently sent an email stating, “I rode the *Crescent* from Lynchburg, VA to Washington. It was a great trip — the service was good, the train was on time (arrived Union Station a half hour early!). I had never taken one of the long-distance trains before and was impressed with what I experienced. I'll definitely do it again.”

Of course, most passengers write to Amtrak because the service fell short of their expectations. While it is disappointing to hear that Amtrak has failed to live up to the standard passengers expect, it is useful to put their complaints in context. Less than one percent of all trips result in a passenger complaint. Often, the basis for the complaints is beyond Amtrak's control. Nonetheless, Amtrak uses

the information gained from the complaints to pinpoint problem areas and improve service.

“Many companies respond to customer comments and stop there,” said Barbara Richardson, Vice President of Marketing and Sales. “Amtrak capitalizes on this resource to help shape goals and objectives and take action that will later build ridership and revenue.”

The complaints and information gathered are used in three ways. First, the complaints are sent to the appropriate manager for follow-up, which may range from changing a simple procedure to initiating a comprehensive investigation. Letters that are sent to President Gunn most often receive replies from him or a member of the executive committee. Second, the information is compiled and repackaged into detailed reports — by train and by route — which can be accessed by employees via Amtrak's Intranet. Finally, the information is shared with the railroad's executive committee and other senior managers, to reveal problematic trends that must be addressed.

At the center of this process is the Customer Relations department, which receives, catalogues, and processes all passenger comments regarding the company's services. Emails and phone calls are received by the department's Customer Relations Desk (CRD) agents in the Mid-Atlantic Reservations Sales Call Center in Philadelphia. Letters are routed to the department's Office of Customer Relations (OCR) in Washington, D.C., which works closely with the CRD to develop appropriate policies and language in response to specific concerns. The OCR handles the responses to all three forms of correspondence and enters the data from each of these sources into a centralized customer comments database.

Responding to the thousands of passengers who both praise and complain about the railroad's service is a never-ending task, and is often, by definition, a thankless one. However, for passengers, reliability means more than simply running the railroad on time; it also means accepting responsibility when things go wrong and having a system in place to fix those problems — and caring enough to fix them. Thanking customers for their comments, acknowledging shortcomings where they occurred, sharing that information with employees who can make a difference and using that data to address systemic problems are all part of running a good railroad.

Bombardier/Alstom and Amtrak Reach Agreement

continued from page 1

Under the terms of the agreement, the parties will drop all claims against each other relating to the program and the consortium will be entitled to receive up to \$42.5 million against approximately \$70 million that Amtrak previously withheld.

In addition, the parties will amend the maintenance services contract for the trainsets, allowing Amtrak to assume responsibility for the trains' maintenance beginning in October 2006.

“Instead of continuing to spend unnecessary time and money on costly and attention-diverting litigation, the full focus of our efforts will now be on improving the performance of *Acela Express* and delivering the best service we know how for the passengers who enjoy and depend on it,” said Amtrak President David Gunn.

FRONT LINE FOCUS

Dear Amtrak:

I would like to acknowledge the invaluable assistance given to me in February by Merrill Perkins, stationmaster at Old Saybrook, CT. He helped me in retrieving a bag that I left on train the train from New Haven. The bag contained several essential items, including my medicines and medical records and my address book. In other words, this was a potentially serious loss.

When I discovered the loss and spoke to Mr. Perkins an hour later, he immediately called the train on its way to Boston and spoke to a conductor. A few minutes later, the conductor called to report that he had found the bag. He brought it to Old Saybrook two hours later on his return trip.

Luck was with me from several standpoints, but Mr. Perkins' efficiency and extremely accommodating personality were essential. My wife and I travel frequently on the Shore Line East and we have observed Mr. Perkins for more than a year. He remembers the names of his customers, and he is cheerful, responsive, and helpful — he likes his work and it shows. The result is that he is well liked by his colleagues on the train as well as by his customers.

Sincerely,

Sidney W.
Niantic, CT

Dear Amtrak:

My husband and I were on the *Sunset Limited* from Los Angeles to Orlando in January. We had a good experience with our car person. Her bathrooms were the cleanest I have ever seen and we have traveled on Amtrak since 1998. She came down to the handicap section every breakfast, lunch, and dinner to take orders for those who could not go to the diner of the lounge and she would bring their food to them. Her name is DeLouris Benton, a Los Angeles-based train attendant. She made the trip a very pleasant experience.

Coming back from Orlando we had a very nice person for an attendant, Gary White out of Los Angeles. He was very helpful and considerate. There was a problem with someone in the handicap section so he moved us upstairs. He had to find a seat with electricity for me for my breathing machine when I sleep. He had to move someone of that seat for me and find a place for him. He had a rough trip trying to move people out of the handicap section and to deal with the person who disrupted the whole train. He handled it very well.

Sincerely,

Betty H.
Whittier, CA

Black History Month Contest
Caps Off Month of Events

Systems Developer Rosalind Floyd of the Amtrak Technology department receives a copy of *Songs Of My People*, signed by editor Eric Easter, from Gerri Mason Hall, vice president of Business Diversity (photo left). Floyd tied with Robert Ahrens, team leader, Riverside Call Center, with Reservation Sales Director Gene Price (photo right) to win first prize in Amtrak's 2004 Black History Month contest by answering 20 contest questions correctly. Both winners also received a Starbucks gift certificate.

One hundred and fifty employees participated in the contest included in the weekly Employee Advisory during the month of February.

The Black History Month Contest capped off a month of events across the country, including art exhibits and live blues and jazz music concerts held throughout the month in New York's Penn Station. In Miami, employees from stations, on-board services, the crew base and the Mechanical department participated in an event honoring black women, which included choirs, dancers, and children singing and reciting poetry, and exhibits that told stories of African queens and notable African American women. In Rensselaer, NY, the maintenance facility observed the holiday by honoring black intellectuals, renaissance men, civil rights leaders, and notable jazz musicians in our American history.

TSA Launches Security Screening Pilot

Amtrak Continues Security Information Campaign

Recent terrorist attacks on passenger rail in Europe this year, including the deadly Madrid bombings in March that claimed nearly 200 lives, has increased public attention on the security of passenger rail in the United States and prompted a new federal pilot project to test passenger rail security measures.

While the open nature of the nation's passenger rail systems makes the adaptation of an airport-style security system impossible, transit authorities, commuter rail providers, and Amtrak have all stepped up their security measures in recent

months. Additionally, the Transportation Security Administration (TSA) began a 30-day pilot program this month at the New Carrollton, MD, rail station to test advanced security screening devices.

Passenger screening at New Carrollton by the TSA is scheduled Monday through Friday. Carryon items are screened through an automatic x-ray machine and passengers are screened as they briefly stand in a portal that detects traces of explosive materials. A secondary screening may be

required if either machine registers a positive detection.

According to the TSA, the rail passenger security screening pilot program at New Carrollton is to test new technologies and identify best security practices in a rail environment. The agency hopes the pilot will yield information on the technical issues surrounding passenger screening in rail and mass transit stations.

The TSA developed leaflets and posters to advise passengers of the testing.

Last month, Amtrak kicked off a series of employee initiatives to emphasize the importance of a security-conscious workforce.

"Maintaining a secure environment is up to each and every one of us," said Senior Vice President of Operations Bill Crosbie.

continued on page 3

Revenue and Ridership Numbers for March Continue to Uptrend

Amtrak set a record for the highest March ridership ever, with 2.13 million passenger trips for the month, 3 percent higher than a year ago.

March '04 ticket revenues of \$104.6 million were nearly 6 percent favorable to last year and slightly positive (up \$0.4 million) to forecast, although they were below budget goal by 1 percent.

For fiscal year-to-date through March, both ridership and ticket revenue were 7 percent above last year's figures and 3 percent over the company's budget goal.

Although the company attained the highest ridership ever for March, the number fell short of budget goal by 3 percent as a result of a drop in ridership on long-distance trains due to a softening of the overall travel market and on-time performance issues. Additionally, in the East, Viewliner sleeper equipment shortages affected ridership on the *Silver*

Meteor, the *Silver Star*, the *Federal*, the *Cardinal*, and the *Crescent*.

The West also experienced drops in ridership on the *Cascades* and all three California corridors, possibly due to both the weak local economy and last year's Buy-One-Get-One (BOGO) offers, which drove up ridership.

Acela Express ridership and ticket revenues — both south and north of New York — performed well compared to last year and against budget plan. In particular, *Acela* southend ridership was up 11 percent versus last year, while northend ridership was up nearly 19 percent (with a 5-percent ticket revenue growth). By contrast, *Metroliner* ridership and ticket revenues fell below a year ago and below budget due to less appealing departure times and the continuing market preference for *Acela* service.

Regional ridership and ticket revenues performed very well in March; ridership was nearly 4 percent higher than budget and

revenues were on par with budget. Southend *Regional* ridership was up 15 percent compared to last March, and southend *Regional* ticket revenues were up 11 percent.

The impact that promotions and advertising had on the Amtrak Guest Rewards (AGR) program resulted in \$19 million in ticket issuance revenue generated by AGR members in March, 21 percent higher than March '03 and the highest single-month AGR

bookings to date. Nearly 14,000 AGR members registered to participate in the "Buy Two Roundtrips and Get One Free" winter/spring promotion. AGR members generated \$9.6 million in *Acela* and *Metroliner* revenue ticket issuance during March, which was 26 percent higher than March a year ago; and members booked 24 percent of all *Acela* and *Metroliner* reservations, the highest figure for the program to date.

continued on page 4

Head of the Class

Proud to celebrate their accomplishment are members of the first class to graduate under the new consolidated training program for assistant conductors. The seven-week assistant conductor training program, held at the Wilmington Training Facility, ended with a graduation ceremony on April 23. Of the 12 graduates, seven were Amtrak employees coming from positions in ticket offices, Mail and Express, Reservations Sales, and On-board Services. Pictured are (L. to R.) Instructor Andrea Eichler, J.J. Kavanaugh, Michael Duncan, Ricarda Burrell, Latosha Morgan, Tywina Phillips, Peter Bolden, Nadia Sayad Kasrawi, Myron Claiborne, Robert Pullia, Joseph Lewis, Jr., Kay Ledwick, Del-Mar Hines, and Instructor Art Guyton.

TRAIN OF THOUGHT

There’s been a lot of spring cleaning lately on the railroad. We are cleaning up our offices, our yards, our stations, our maintenance facilities, our right-of-way, and all other Amtrak property. This isn’t just something nice to do — it’s a must do. And it isn’t something just for spring — but the whole year-round.

First, there’s safety to consider. Keeping a neat facility decreases the chance of someone getting hurt. Second, there’s security. Sloppy, unkempt environments invite criminal activity because the perpetrators think that no one’s minding the shop.

There are other reasons, too. Getting rid of the clutter and junk forces people to become organized — the more organized you are, the more efficient you are. Plus, the better organized you are, the better you use resources and the less waste occurs. We’re also finding a surprising amount of good material mixed in with the junk.

Cleaning up also sends a message to our passengers that we care about our railroad. Whether it’s an unclean bathroom on a train, or old ties rotting along the route, it’s unappealing to our passengers. Make sure your uniforms are clean and presentable. If a passenger is greeted by an employee in a soiled uniform, it really makes for a bad first impression.

Another reason to keep things in order has to do with feeling good about our jobs and where we work. Coming to work at a yard littered with debris is depressing. Our facilities should reflect the high standards we’ve set for ourselves and the pride we have in our work.

An example of the good cleaning job we’ve been doing is on the Harrisburg Line. The rail program there will soon give us 110 mph track. But there’s a lot of junk on the right-of-way. This year, Engineering has been getting rid of old ties that have been clogging the right-of-way and yards for years. At Zoo Interlocking (in Philadelphia) alone, we’ve picked up 50,000 scrap ties. Some of the ties were in piles that had been sitting around for a decade. Now we’re getting a cleaned-up right-of-way.

Speaking of progress, I was in our Chicago facilities last month, and I saw a lot of progress there. The track and platforms at Union Station were clean, and the offices didn’t have a lot of clutter. A lot of buildings and office spaces have been painted and work is being done to upgrade worn floor surfaces. The yards were also in much better shape — the number of mail and express cars, trailers, bogies, and coupler-mates that had been sitting around and getting in the way of the day-to-day operations was reduced by half (they went to storage or were sold).

David L. Gunn

However, I did notice a lot of 480 and communication cables laying in the tracks at the yards. These cables are not only a tripping hazard, but also a waste of resources. Someone may be tempted to throw them all out, thinking that they are all bad.

I also walked through Penn Coach Yard not long ago, where there’s a major effort underway to recover and manage our maintenance-of-way materials. That project is monumental — but once complete, it will be our model for the rest of the system.

I have many other reasons to keep things clean, and so should you. Please make it your responsibility to keep things in order, clean, professional. Take a look around you and take the time to make your piece of Amtrak presentable.

Righting the Right-of-Way *Harrisburg Line Cleanup Shows Substantial Improvement*

Significant progress is being made toward cleaning up Amtrak’s Harrisburg Line. While getting rid of debris and scrap ties is part of the railroad’s on-going efforts to clean up its yards, facilities, and right-of-way, the work being done on the line also moves forward Amtrak’s plan for a comprehensive upgrade of the infrastructure between Philadelphia and Harrisburg.

A four-year plan to complete a thorough rail, tie, and surfacing program on the track is underway to restore the line to 110 mph by the fall of 2006. While considerable improvements have been made to put in order the right-of-way, the work continues.

Since last August, Engineering crews have been focused on

getting rid of the debris and scrap ties. By the end of March, Engineering crews had picked up in excess of 29,000 scrap ties and are in the process of picking up another 30,000.

About 18,000 of the 29,000 ties picked up were taken to Zoo interlocking in Philadelphia where they were added to an existing stockpile of more than 15,000 ties. At the west end of Zoo, another stockpile of more than 15,000 ties was sitting. Engineering contracted with a salvage company to pick up all of these ties at Zoo. Another stockpile of ties has been created at the Chester Valley spur, near Downingtown, which is added to nightly. Before the project is

complete, 20,000 ties will be piled and cleaned up at that site.

Amtrak is disposing of an additional 25,000 scrap ties stockpiled at Roy Yard near Harrisburg prior to 2002, half of which had been there ten years or longer. All of these sites have seen a tremendous improvement in appearance and are now in compliance with the railroad’s environmental policies.

The crew uses a large piece of maintenance-of-way road equipment, called a Georgetown Rail “Slot Machine.” This is one of a series of maintenance-of-way open-end articulating gondola cars, which are large, four-sided open-topped cars that receive the ties and debris picked up along the

Beech Grove Facility Makes the Grade

Amtrak’s Beech Grove mechanical facility garnered a record number of positive findings and no potential violations in its most recent Environmental Compliance Audit, conducted annually by Amtrak’s Environmental department.

The 11 positive findings noted by Amtrak’s Director of Environmental Compliance Chris LoRusso are the most for any of the large Amtrak facilities that are audited on a yearly basis, such as Sunnyside Yard, Ivy City, Southampton Street Yard, and the Los Angeles Yards.

About 15 or 16 audits are conducted on a ten-month cycle, averaging about two per month, by two auditors in Amtrak’s Environmental department. As part of Amtrak’s environmental management program, the audits assess how well Amtrak facilities comply with Environmental Protection Agency and state environmental regulations and company environmental practices.

The 11 positive findings in the 2004 audit reflect the initiative the Beech Grove facility has taken to exceed the minimum expected of them in the area of environmental performance and compliance.

“The record that the Beech Grove facility has achieved and its consistent improvement over the past four years is excellent,” noted Roy Deitchman, assistant vice president, Environmental. “With the large number and complexity of the mechanical processes at Beech Grove, they have taken extraordinary steps to excel in their daily environmental performance.”

The facility’s on-site environmental staff, Environmental Coordinator Bill Lowes and Environmental Specialist Dave Young, along with Charlie Lin, director of Technical Services in the Environmental department, work with Beech Grove employees to reach the goals set to achieve an environmentally safe workplace as well as an environmentally safe setting for the surrounding Beech Grove and Indianapolis communities.

This year’s environmental audit of Beech Grove noted excellent housekeeping and record-keeping practices.

“The environmental support staff here really takes ownership of projects and program management,” noted Beech Grove Superintendent Lew Wood. “They work very closely with everyone to maintain environmental compliance and stewardship,” he added. One of the positive findings was the high level of skill and knowledge the support staff possess and how they put it to good use. For example, they have instituted a pilot program for water-based washers at various locations throughout the facility, rather than continuing to use solvent-based cleaners that contain toxic or hazardous materials and that generate hazardous waste.

“The facility is well-managed and management makes every effort to achieve environmental goals and compliance — they really get the word out. The staff and employees display a good knowledge of environmental awareness,” said Chris LoRusso.

While housekeeping was recognized as a positive finding during the 2003 Environmental Compliance Audit, it was also documented in 2004 — a very difficult achievement for a facility the size of Beech Grove. The facility had gotten rid of tons of waste debris, and there was little trash, if any, noticed. The shops were clean, with everything in

its place. Posting of actual work practices at various locations, such as used oil filter disposal and aerosol can management, was also noted as an effective tool in making environmentally sound practices a habit.

Other positive findings included the elimination of an Industrial Wastewater permit from the city of Indianapolis. As a result of having been in compliance with wastewater discharge regulations for years, the facility no longer needs a special

permit from the city. According to Amtrak Environmental Counsel Michael Stern, this kind of decision is rarely made.

The audit identified environmentally sound technologies being utilized, such as the facility’s water blaster. The water blaster, used to remove decals from coach cars, contains no chemicals or solid media (like walnut shells), only water. By choosing this process, the facility has minimized waste and eliminated possible impacts to the environment.

The accompanying chart shows the positive results Beech Grove has achieved over the last four Environmental department annual facility audits.

Audit Year	# of Positive Findings	# of Potential Violations
2001	7	1
2002	5	1
2003	7	0
2004	11	0

TSA Launches Security Screening Pilot

Amtrak Continues Security Information Campaign

continued from page 1

“While we have security measures in place, there’s also a lot of power in the watchfulness of 20,000 employees.”

Alert railroad workers in France earlier this year discovered track-laid explosives, an incident Amtrak points to as an example of how important it is that Engineering, Mechanical, and front-line employees maintain a high level of security awareness. Additionally, railroad passengers frequently look to Amtrak conductors, ticket agents, and others for guidance and information on security matters.

To reinforce the importance of security-alertness, early last month, new *Employee Security Handbooks* were distributed to all employees, and managers held meetings to discuss security issues and each employee’s role in upholding a secure workplace for co-workers and passengers. As part of this effort, employees were encouraged to speak with their managers about any security-related questions they may have, and to contact the Amtrak Security Information Center if they have questions managers are unable to answer.

“The environmental support staff here really takes ownership of projects and program management.”

Lew Wood
Beech Grove Superintendent

Track Improvements Impact Amtrak Operations

Editor's note: This is the first in a series of stories that provides an in-depth look at Amtrak's relationships with its freight railroad partners. Upcoming issues of Amtrak Ink will include stories that focus on the changes in the way host railroads conduct infrastructure improvement projects and their effects on Amtrak operations.

This spring, Amtrak departments are executing plans made months ago to tackle freight railroad track work projects disrupting service on a number of routes during Amtrak's summer and fall travel season. Freight railroads, such as CSX Transportation and the Union Pacific Railway, are conducting infrastructure projects to improve track conditions, minimize or prevent delays, and provide a safer and more comfortable ride on several Amtrak routes. To ensure that these projects are carried out with the least impact on customer service and revenue, a variety of changes are being made to the affected routes.

One of the most significant service changes taking place affects Amtrak's popular Silver Service routes — the *Silver Star* and *Silver Meteor* — which operate between New York and Miami. Between April 23 and June 22, Amtrak's *Silver Meteor* service is being suspended so that a major tie installation and rail replacement project may be completed by CSX.

Between Savannah, GA, and Jacksonville, FL, CSX plans to install 58,000 concrete ties, 40,000 wood ties and 9,000 feet of rail. During this period, the track work is being performed four days a week from eight to 10 hours a day, beginning at 6 a.m.

To accommodate Amtrak passengers affected by the suspension, the coaches, sleeping cars and diner used on the *Silver Meteor* were added to the consist of the *Silver Star*. Additionally, in order to ensure that the *Silver Star* is not severely delayed by this project, it is temporarily operating almost two hours earlier than its normal schedule to allow travel through the work area before daily project work begins.

Other Amtrak services affected by this track work include the *Auto Train* and the Silver Service Thruway bus connections. Thruway buses that connect with the *Silver Meteor* are not operating and buses connecting to the *Silver Star* are operating earlier during this period.

Although the *Auto Train* continues to operate on its normal schedule during this track work project, it will encounter delays while traveling over the renewed track. Normally, the *Auto Train* operates at speeds of about 70 mph through that area. However, after new sections of track are installed, trains must travel at slower speeds until the new track settles in place. Adding to this delay is the reduction in the number of hours available for Amtrak and CSX trains to operate on the track. The same number of trains that normally operate over a 24-hour period are being squeezed into 14- to 16-hour periods, causing congestion and subsequent delays on the route.

Often when track maintenance projects occur, schedules are adjusted, trains are rerouted, and/or alternate transportation is provided. Rarely, if ever, is an entire route canceled due to track improvement work. However, in order to accommodate the infrastructure projects and minimize customer inconvenience and revenue loss during this period, these unusual measures had to be taken on the Silver Service route.

Nonetheless, improvements to the infrastructure are necessary to prevent track deterioration, which causes speed restrictions and delays in service. In the long run, Silver Service passengers will reap the benefits of this infrastructure project with improved ride quality and reliability of the service.

Track maintenance projects are also affecting the *California Zephyr* service this summer. Every day, passenger and freight trains push through Colorado's winding mountains west of Denver, with wheels grinding into the curved metal rail and causing gradual track deterioration. To maintain a safe rail network, the UP is replacing approximately 82,000 ties and 11 miles of curved rail along the mountainous route.

While this work is in progress, the *California Zephyr* is traveling on an alternate route non-stop between Denver and Salt Lake City. During four eight-day periods between June 7 and July 31, the train will detour through a southern Wyoming route, previously used by Amtrak's *Pioneer* train that was discontinued in 1997. During this period, an Amtrak bus will connect passengers between Denver, Glenwood Springs, and Grand Junction, CO. This detour may be a disappointment to passengers who look forward to the scenery between Denver and Grand Junction. Fortunately, the alternate route, roughly following the original transcontinental route built in 1869 offers passengers broad vistas of the high plains. Amtrak Marketing has successfully parlayed this detour to an advantage for the railroad, enticing many rail fans to make reservations for this unique ride.

Revenue and Ridership Numbers for March Continue to Uptrend

continued from page 1
Ridership on long-distance trains fell 1 percent below last March and 5 percent below budget. Long-distance train ticket revenues were up 5 percent from last March, but were off budget by 2 percent. The revenue loss attributable to the Viewliner shortage for March is nearly \$400,000.

Ridership increases were noticeable on two long-distance trains despite the equipment shortages. Both the *Cardinal* and the *Palmetto*, for the third time running, have seen double-digit ridership increases for the month. In March, *Cardinal* ridership rose 24 percent over a year ago, and the *Palmetto* saw a 16-percent increase over last March.

Ridership growth on short-distance trains increased for the third month in a row on the *Hiawathas*, with a 13-percent increase over last March, and the *Pennsylvanian* with a 24-percent increase over last year. The ridership gains on the *Pennsylvanian* are a result of the business decision last spring to change the schedule and route for this train.

Interested in Owning One of Those Cool Acela Posters?

In response to employee requests, posters of the artwork being used in the current *Acela Express* advertising campaign are now available for sale at the Amtrak store on amtrak.com. The 24" x 36" posters feature illustrations by Michael Schwab, one of America's leading graphic artists.

Use your 15-percent employee discount to buy one or all four posters seen all over the Northeast Corridor. Each poster sells for \$5 and the set of four costs \$15. Once you've selected which posters you want, call 1-800-400-1229 to place your order. Don't forget to provide your employee identification number.

Law Enforcement Officers Crack Down on Violators, Gain Railroad Safety Education

Seeking to promote rail safety, educate law enforcement and the general public, Amtrak, *Metrolink*, Burlington Northern Santa Fe (BNSF), Union Pacific Railroad (UPRR), and Operation Lifesaver representatives joined the California Highway Patrol and local police officers in a crackdown on motorists and pedestrians who ignore rail-related traffic laws in an Officer-on-the-Train event held on March 30 through April 1 in California's Ventura and Santa Barbara counties.

Amtrak, *Metrolink*, BNSF and UPRR put together a special train consisting of locomotives or railcars from each group, including a special private car called the "Silver Lariat," used in many Operation Lifesaver events. The special train was operated over grade crossings in both counties throughout the exercise.

The results from the three-day event were staggering. In just under 20 hours and along a 40-mile stretch of track, 195 pedestrians and 30 motorists were cited for railroad and right-of-way violations.

"And these numbers don't count the ones that got away," said Amtrak Manager of Emergency Preparedness Dave Albert. "In this area over the last few years, six people have lost their lives in over twenty incidents involving motorists, trespassers, and trains. These communities are committed to reducing the number of incidents by educating law enforcement officers and the general public about the dangers of railroad grade crossings and trespassing," added Albert.

The most recent incident involved a 15-year-old high school student who was killed in March when she stepped in front of a train.

Locomotive engineers and conductors know that with every trip they make, there may be one or more close calls with a vehicle or person. The Officer-on-the-Train (OOT) program provides law enforcement officers an opportunity to ride in a locomotive and experience — first-hand — the danger of motorists disobeying the laws at highway-rail grade crossings or pedestrians trespassing on railroad property.

The program educates law enforcement officers that may be unfamiliar with vehicle and penal code violations associated with rail operations.

Officers also learn how to handle a grade-crossing collision investigation, and receive emergency numbers and information about procedures associated with stopping a train in cases when continued train movement would be hazardous to persons or property.

Because the locomotive is limited to carrying up to four persons at one time, a video monitor installed in the OOT special train's locomotive provided a live shot of the right-of-way that enabled representatives from the media, dignitaries, and law enforcement officials not riding the head-end to see the violations from a locomotive engineer's perspective.

In addition to having officers in the locomotive, patrol vehicles were staged at the railroad crossings over which the events occurred. Law enforcement officers stopped offenders and issued either a warning or a citation.

On the first day of the event, two patrol cars pulled over a Dallas

truck driver. She was given a \$275 citation after failing to allow enough time for her 18-wheeler to get through the crossing at Rice Avenue in Oxnard. The crossing gates bumped the rear of her trailer as the special train approached the intersection.

Participation of local media is critical to each of these exercises. By videotaping violations and interviewing Operation Lifesaver, railroad, and law enforcement representatives on board the train and at grade crossings, local media broadcasts the "Look, Listen, and Live" message to radio, print, and television audiences.

Operation Lifesaver officials believe that federal statistics show their public education campaigns are effective. The number of crossing incidents nationwide has dropped by nearly 75 percent since their message advocating rail safety began over 32 years ago. In 1972, there were approximately 12,000 collisions between trains and motor vehicles; the figure

dropped to 3,072 in 2002, the most recent year for which national figures are available. In 2002, California led the nation in train-pedestrian fatalities, with 90 people killed. The state came in second, after Texas, in train-vehicle fatalities, with 30 fatalities.

"Sometimes, the safety message makes a stronger impact when it's accompanied by a ticket from law enforcement officers," said Eric Jacobsen, president and state coordinator of California Operation Lifesaver. "'Look, Listen, and Live' is not just a slogan — it saves lives," added Jacobsen.

The Southern California Safety Team, comprised of members of California Operation Lifesaver, passenger, commuter, freight, and light rail agencies, as well as regulatory agencies, works toward the goal of reducing grade-crossing and trespasser incidents. The group sponsors at least six OOT exercises each year, combining resources to focus on the region incurring the majority of incidents.

Watchful Employee Takes Action

As assistant superintendent of Commuter Services for Engineering, Bob Simon is used to looking at rail. But while riding his bicycle one evening in San Martin, CA, Simon noticed something as he was about to ride over a grade crossing — and his ensuing actions helped many who will never know.

Simon, who works for Amtrak's *Caltrain* commuter operation in San Jose, returned home after completing his work assignment on Easter Sunday evening. Wanting to wind down and relax, he decided to go for a bicycle ride.

While on his ride, something at the Church Street grade crossing caught his eye. A civil engineer trained in FRA safety, and these days more focused on security, Simon looked down the track toward the signal. What he

noticed was an insulated rail joint that appeared to be separating. On closer inspection, he realized that the bolts had sheared off the joint and the rail had pulled apart one and a quarter inches, and knew that there could be trouble ahead for the *Coast Starlight*, due shortly.

Had this been a regular rail joint, the joint separation may have broken the signal communication, thereby giving an approaching train a signal to stop.

However, because an insulated joint separates blocks, the signal communication for the block ends at the joint. Therefore, the signal ahead was showing clear for a track speed of 79 mph.

Simon grabbed his cell phone and dialed the 800-number for the Union Pacific Railroad (UPRR) posted on the signal box. Simon explained the situation in detail to the UPRR dispatch office and was given authority by the supervisor to walk the *Coast Starlight* over the rail. Simon, who is trained to do this, conducted a job briefing with Amtrak Engineer

Jay Binns, and then, while staying in constant communication with Binns, he carefully observed each wheel as it crossed over the joint. After minimal delay, the train continued on its way.

Additionally, two UPRR freights as well as four morning *Caltrain* commuter trains were later scheduled down the line, however the UPRR was able to complete the necessary repairs prior to these trains passing.

Considering the condition of the joint, the clear signal, and the next track inspection not scheduled until the following day, there may have been a mishap.

Amtrak encourages its employees to be watchful around the workplace. Thanks to Bob Simon's vigilance and quick thinking, the *Coast Starlight*, the trains behind it and their passengers crossed that segment of track that day unaffected.

It's Friday afternoon, just ahead of a holiday weekend. Students queued up at the ticket windows in Boston's South Station are anxious to purchase their Amtrak Student Advantage (SA) memberships so they can take advantage of the discounts offered on their trips. The ticket agent checks each student's school identification cards, collects the membership fees and issues temporary SA discount coupons right out of the Arrow ticket printer. Then the students' discounted train tickets are sold, completing a series of transactions that generate extra revenue for Amtrak.

Tariffs Group Makes the Connections

As the westbound *Southwest Chief* leaves Gallup, NM, a couple bound for Los Angeles asks the conductor collecting tickets if a sleeping compartment is available. As it happens, the occupants of a standard bedroom recently left the train in Lamy, NM. After the conductor calculates the upgrade charge using his *Conductor's Memorandum Tariff* and the *Discount Table for On Board Sales* book and writes the upgrade ticket, the couple moves into the compartment, anticipating a comfortable night of restful sleep.

The spring/summer schedule and train consist adjustments have been installed in the Arrow reservations system, and the Western Reservations Sales Call Center has completed a cross-check of the printed timetable with the information in Arrow. As a result, teams of reservations sales agents at both Reservations Sales Call Centers in Riverside and Philadelphia work through the list of passenger itineraries affected by the changes. Passengers holding reservations are notified about new train departure times and room assignment changes and are offered routing or schedule alternatives when connections are no longer possible.

What Do These Situations Have in Common?

They all rely on the back-end functions performed by the Tariffs and Schedule Management group. These scenarios represent just a small sample of the front-line activities supported by the group, a subset of the Sales Distribution and Customer Service department in Washington, D.C. Lead by Group Manager Chris Baker (and overseen by Greg Behun, director, Distribution Systems Support), the team is comprised of six distribution systems specialists who develop and enter codes and other data into the Arrow reservation system that allows for the sale of Amtrak's products and services. The group also composes and disseminates tariff policies and procedures, performs Arrow reservations system testing and troubleshooting, and provides counsel and customer service to numerous other Amtrak departments.

Where Do Fares Come From?

To understand the group's role in the business, it's helpful to learn how the fare structure is built. Amtrak's fares are determined by a number of business factors, such as market demand and competition, which are evaluated by the Market Research and Analysis and the Pricing and Revenue Management groups.

A committee made up of a number of departments, such as Marketing, Government Affairs, and Planning and Contract Administration, determine the policies that govern how the prices apply to the company's products and services.

The fare structure is made up of a number of elements such as tariff rules, types of passengers, and inventory codes; all of which work in concert to determine the price a passenger pays for any given trip. Once the basis for the fare structure is set, the Tariffs group fleshes out the details, scrutinizing it for conflicts and anomalies, and developing an implementation schedule.

The Tariffs group publishes and distributes Amtrak's fares information in two ways; electronically within the Arrow reservations system, and as a collection of printed documents called the *Conductor's Memorandum Tariffs*. A host of front-line employees including reservations sales agents, ticket agents, customer service

employees, travel agents, and refunds clerks use the fare data in Arrow to answer customer inquiries, make passenger reservations, issue tickets, handle customer service issues, and process refunds and other adjustments.

Conductors are supplied with the

Amtrak's fare structure is made up of a number of interrelated elements:

Tariff rules - the policies that govern how, when, and where the fares may be applied to a passenger's itinerary.

Types of passengers - demographic profiles that provide certain types of discounts to customers (children and seniors, for example).

Prices - the market-based dollar value of each trip segment

Inventory codes - the units of sell-able space on board trains.

The Tariffs group develops publications that help front-line employees understand and implement tariff rules.

Conductor's Memorandum Tariff, a condensed publication that exists for each route in the Amtrak network. A companion publication called *Discount Tables for On Board Sales* contains rules for applying certain types of discounts to onboard transactions. Conductors use these books to look up fares and review specific tariff rules for handling onboard ticket sales and selling accommodation upgrades.

Amtrak’s Revenue Management group and the Tariffs group work together closely to maintain an efficient pricing system and to achieve the revenue goals set by the company.

While the Tariffs group installs and maintains the elements of Amtrak’s fare structure in Arrow, the Revenue Management group monitors and regulates the fares in the reservations system. By adjusting the quantity of each inventory class that is available for sale, revenue managers maximize Amtrak’s revenue potential by shepherding passenger demand onto those trains with greater amounts of unsold space.

For the Tariffs group, implementing a large-scale fare change takes weeks of preparation that involves analysis, data processing, coordination with an outside printing vendor, and development of an implementation and communications plan. Currently, major fare changes can take place up to six times within the fiscal year. Additional smaller adjustments are accommodated on a more frequent basis, as needed.

For a Limited Time Only!

The Marketing department initiates most of Amtrak’s promotional discounts that expand Amtrak’s visibility and improve its share of the travel market, thereby increasing ridership and revenue. The Marketing department first proposes a fare discount campaign and works with the Pricing and Revenue Management and Market Research and Analysis departments for review and recommendations.

Once the Pricing and Revenue Management department approves the proposal, it is forwarded to the Tariffs group for development and communicating the change to a range of sales channels. This role is multi-faceted and includes verifying and refining the terms and conditions of the offer; assembling a written summary of the terms and conditions for the advertisement; loading the detailed terms and conditions in Arrow; and providing sales agents advance notification about the offer and pricing and ticketing instructions.

In calendar year 2003, the group published 74 national or regional promotions and 205 fares orders. In addition, the group manages or supports pricing and tariff functions for a host of other on-going programs, such as Student Advantage®, Amtrak Guest Rewards, and Amtrak Ski Fares, among many others.

The Flip Side – Schedules and Connections

Just as the fare structure is essential for selling Amtrak’s services and products, so is the collection of schedules and connections that help make the journey work for customers. Currently, there are over 3,000 train and Thruway bus schedules and more than 7,000 train-to-train connections that are manually entered in the Arrow system — nearly all of them by the members of the Tariffs group.

Typically, changes to train schedules are made by the Operations Planning, Transportation, and Mechanical departments, in concert with other partners.

“Virtually every part of the business has benefit from their insight, effort, and enthusiasm.”

Matt Hardison
Chief of Sales Distribution
and Customer Service

These changes involve the train’s routing, frequency, station times, consist and onboard service information. All of this information is sent to the Marketing department, which publishes the timetable, and to the Tariffs group, which revises the information in Arrow. After the train has been added to the reservations system, it is integrated into the rest of the Amtrak network with connections to other Amtrak trains and Thruway buses.

In addition to the twice-yearly schedule adjustments that occur in April and October, the Tariffs group continually updates schedules and connections to ensure that Arrow accurately reflects changing operational conditions brought about by contract changes with host railroads or state partners, Thruway service providers, service disruptions, track work projects, consist changes, and train position reporting requirements.

While entering schedule adjustments and building train connections in the reservations system is currently a laborious and time-consuming process, a number of upcoming system enhancements will provide greater efficiencies and a better end product for front-line employees.

Testing, Testing 1-2-3

Amtrak Technologies (AT) continually makes changes or repairs to Arrow, and the Arrow User Acceptance Testing group must test the revisions by emulating agents and executing a large variety of transactions. The Tariffs group actively plays a part in this testing function by working closely with their counterparts in Station Support, Reservations Sales, Amtrak.com, the Voice Response Unit (a.k.a. “Julie”), Amtrak Vacations, travel

agent systems representatives, RailRes and RailRes/STARS administrators, revenue managers, Operation Center managers, and Revenue Accounting. Since all of these other systems and departments rely heavily on the proper functioning of Arrow, it is imperative that the supporting links remain intact and operational.

The group also ensures that after each modification is made by AT, all of the rules pertaining to price eligibility and application are still accurately recognized by the Arrow system. In addition, the previously loaded schedule updates and connections are also checked to ensure they still perform as expected.

Internal Customer Service

Because the Tariffs group handles a substantial volume of inquiries and reports of problems from front-line employees, other Amtrak departments, and external business partners, it often serves as an information clearinghouse.

But even as such, the work the group performs is not well known to many employees. Matt Hardison, chief of Sales Distribution and Customer Service said, “The Tariffs and Schedule Management group is highly skilled with a combined 155 years of Amtrak experience. Virtually every part of the business has benefited from their insight, effort, and enthusiasm. Ironically, it is precisely because they do their jobs so well that most employees have very little familiarity with the group or the role they perform for Amtrak.”

A Kids Ride Free on Capitol Corridor trains promotion is communicated to reservation sales agents, ticket agents and many other via the Arrow reservations system.

Rail 2 Rail Program Introduced on Coaster Routes

Pilot Program Offers Commuters More Travel Options

Using their monthly *Coaster* pass, commuters traveling between San Diego and Oceanside, CA, may benefit from a ticket-sharing partnership program that allows them to ride Amtrak’s *Pacific Surfliner* at no cost.

Modeled after Amtrak and *Metrolink*’s extremely successful Rail 2 Rail program, this pilot program began April 1 and will run through October.

“We are looking forward to the success of the *Coaster*/Amtrak program,” said Southwest Division General Superintendent Richard Phelps. “Ridership and revenue

has increased for *Metrolink* and Amtrak, partly because passengers have so many more choices. Now, San Diego passengers also benefit from the increase in train options,” added Phelps.

Recognizing the success of the Amtrak/*Metrolink* program, the North County Transit District (NCTD) agreed to a six-month trial program that allows commuters who purchase a \$130 monthly *Coaster* pass to hop aboard an Amtrak train if they miss the *Coaster*, or to use the *Pacific Surfliner* (within the same travel zone) on days and times

when the *Coaster* is not running. Amtrak offers 12 weekend roundtrips on its *Pacific Surfliner* line between San Diego and Los Angeles (with additional trips to Santa Barbara, Goleta, and San Luis Obispo) compared to only four round-trip *Coasters* from San Diego to Oceanside on Saturday, and none on Sunday.

NCTD has printed a public timetable integrating the *Coaster* schedule with Amtrak’s *Pacific Surfliner* service between San Diego and Oceanside.

“With gas prices escalating, the Rail 2 Rail alternative is becoming increasingly attractive for commuters heading to and from San Diego. Many commuters who have been reluctant to give up their cars in the past are now looking for a more

affordable option,” said Joe Yannuzzi, superintendent of *Coaster* Commuter Rail.

Amtrak and NCTD will assess the program after the six-month period and determine whether it will be made permanent.

**“Now, San Diego passengers
also benefit from the increase
in train options.”**

Richard Phelps
Southwest Division General Superintendent

National Parks Vacations Packages Explore America’s Beauty

This year, travelers may take Amtrak to explore 10 new park destinations that extend from the National Parks of San Francisco, CA, to the monuments of Washington, D.C. By taking advantage of the “See America’s National Parks with Amtrak Vacations” promotion, customers may book reservations on any of the 13 packages Amtrak has to offer.

Travelers may call Amtrak Vacations to customize a park package of their choice that includes rail travel, hotel accommodations, sightseeing tours, Hertz car rentals, and National Park passes.

The Rocky Mountain National Park package is one of this year’s newest additions, offering tourists a chance to experience Denver’s amazing lakes, the great peaks of the Rocky Mountains, and 359 miles of trails with views of animal wildlife such as coyotes, moose, and elk. Package prices start at \$235 plus rail fare and include two nights’ hotel accommodations, and sightseeing tours of the Rocky Mountain National Park, Pikes Peak, and the Air Force Academy.

Travelers destined for San Francisco may purchase a Golden Gate National Recreation Area package, also new this year, that features a visit to the Muir Woods National Monument, a helicopter tour with a view of Alcatraz Island, and a California Wine Country tour. Two nights’ hotel and sightseeing packages start at \$395 plus rail fare.

Acela Express Travelers Get Tax Day Relief

To ease the stress of tax deadline day, *Acela Express* passengers traveling between New York and Washington on April 15 had the opportunity to relax with complimentary massages given by licensed massage therapists. Tax day travelers also participated in wine and cheese tastings, sponsored by Stonehedge Winery of Napa, California and Artisanal Cheese Center of New York.

Amtrak Guest Rewards Members Enjoy Spa and Golf Rewards

The *Acela Express*/*Metroliner* spring advertising campaign continued into April with the April 15 introduction of a Golf and Spa promotion targeting Amtrak Guest Rewards

(AGR) members. With the purchase of any two roundtrips or four one-way tickets on *Acela Express* or *Metroliner* trains, members are eligible for a spa treatment and a round of golf at a wide variety of salons and golf courses throughout the Northeast Corridor.

Each member may earn up to three complimentary spa/golf packages valued at up to \$100 each. To qualify, passengers must register with AGR online or by phone and complete travel by June 15. After qualifying travel is completed, golf and spa treatment certificates will be mailed directly to qualifying members within four to eight weeks.

Amtrak Guest Rewards Partners with Omni Hotels

Amtrak Guest Rewards members may earn points for qualifying stays at Omni Hotels — AGR’s newest partner. Members who present their Amtrak Guest Rewards number while making a reservation or checking in will receive 500 points per qualifying stay, and as a special offer, members may earn double points between May 1 and June 30, 2004.

Amtrak Players Suit Up to Play “Knick for a Night”

Twenty-four lucky fans dressed in authentic New York Knicks practice jerseys exited the NBA locker room to participate in Amtrak’s “Knick for a Night” Fantasy Game Sweepstakes, held at Madison Square Garden in April.

Through a partnership with Madison Square Garden, two Amtrak-sponsored teams, coached by Knicks celebrities, Earl “the Pearl” Monroe and Charles Smith, battled on the Garden’s floor on April 14. The roster included Amtrak Guest Rewards members, Amtrak corporate partners, Amtrak employees, and winners of Amtrak’s online “Knick for a Night” Fantasy Game contest on the Knicks Web site.

The teams were well matched and the game remained close until the end. A corporate accounts guest, Marcus Copeland, from the law firm of Fried, Frank, Harris, Shriver & Jacobson, made the winning shot with 2.4 seconds left on the clock.

Planning Begins for *Empire Builder* Service Anniversary

The *Empire Builder* has traversed the nation's great northern plains for almost 75 years, joining America's Midwest to the Pacific Northwest via the Twin Cities, Glacier National Park, and Spokane, WA. On June 11, 2004 — the 75th anniversary of *Empire Builder* service — Amtrak, Burlington Northern Santa Fe (BNSF), Canadian Pacific Railway (CP), state partners, historians, local businesses, rail enthusiasts, and many others will mark the date with special events at Amtrak stations along the train's route.

Artist and rail enthusiast J. Craig Thorpe created an *Empire Builder* 75th Anniversary commemorative poster that will be displayed along the route and is available for purchase. In Chicago's Union Station, rail historian Joe Welsh is scheduled to speak on the history of the service.

Commemorative events are being planned in Seattle, WA; Portland, OR; Whitefish, and Havre MT; Minot, ND; St. Paul/Minneapolis, MN; Milwaukee, WI; and Chicago, IL. Events will be arranged around the *Empire Builder* schedule and will include guest speakers, refreshments, giveaways, and media opportunities. Once the details on the special events taking

place are finalized, they will be posted on Amtrak's Web site.

"Going out West is a fascination that started over 200 years ago with Lewis and Clark and has been part of our heritage and spirit since," said Gary Erford, manager, Onboard Services. "This train began with an inspiration to explore, and started long before the first spike of the Great Northern Railway was ever driven," Erford added.

President Thomas Jefferson commissioned the epic journey of Meriwether Lewis and William Clark to explore the Missouri River and find a route to the Pacific Ocean by way of the Columbia River in 1803. The "Corps of Discovery" left Illinois on May 14, 1804. In spring 1805 they reached the headwaters of the Missouri. In November, after an arduous crossing of the Rockies and descent of the Columbia, they reached the Pacific near present-day Astoria. Portions of the Lewis and Clark route (1804-1806) are either crossed or paralleled by the *Empire Builder*.

The former Great Northern Railway inaugurated the service on June 11, 1929. Named after its founder, James J. Hill, who was affectionately known as "The Empire Builder," not only for the

transcontinental railroad that he built, but also for his vision of and leadership for the overall growth and development of the Great Northern States, through which his railway ran. The service debuted in Chicago, St. Paul, and Seattle with coaches, tourist Sleeping cars, and standard Sleeping cars, presenting a variety of choices to the traveler. Its Dining car carried forward a tradition of excellence in dining and personalized service, and the Lounge-solarium provided maid service, barber and valet service, shower and bath facilities, and tea service each afternoon. In 1930, NBC was the first to broadcast "live" radio to the train, and many radio vignettes were actually performed on board the train.

After World War II, the Great Northern Railway unveiled a streamlined *Empire Builder* calling it the "Postwar" *Empire Builder*, with innovative services and accommodations that included new reclining-seats, a coffee shop, Dining car, and Pullman Sleeping cars.

In 1951, the train became an entirely new streamliner with modern equipment that included a "ranch-themed" coffee shop, a semi-formal dinette area, and a

Lounge car featuring "western frontier" leathers. In 1955, Dome Coaches and Dome Lounge cars were added, presenting expansive sight-seeing opportunities across the Great Plains, through the majestic Rocky Mountains, Glacier National Park, and over the Cascade Mountains.

Amtrak took over the route in 1971, and in 1979 introduced an all-new *Empire Builder*, the first Amtrak train to include the bi-level Superliner cars. Today, the *Empire Builder* maintains an 86-percent on-time performance, running over two roads now owned by BNSF and CP. In FY '03, the train carried over 415,000 passengers, an increase over the previous year of 13 percent.

Dan Engstrom contributed to this story.

California's *San Joaquins* Are 30 Years Young

Amtrak and the California Department of Transportation (Caltrans) celebrated 30 years of *San Joaquins* service in California's Central Valley, Sacramento and Bay Area on March 29 with special anniversary celebrations on selected trains, commemorative souvenirs, and refreshments. As part of the state's \$73 million annual operating partnership with Amtrak that includes the *Capitol Corridor* and the *Pacific Surfliner*, the *San Joaquins* route is the fifth-heaviest traveled Amtrak route.

"The *San Joaquins* have experienced record ridership for each of

the last three years (FY '01 – FY '03), and while ridership is down slightly so far this year, ticket revenue has increased over

10 percent for the first six months of FY '04 compared to the same period last year," said Joe Deely, general superintendent for the Northwest Division.

Amtrak began rail passenger service in the Central Valley on March 6, 1974 with a single roundtrip between Oakland and Bakersfield. In 1979, the state of California

began a partnership with Amtrak, and soon after, a second roundtrip was added. A third roundtrip was added in 1989 and a fourth in 1992.

The fifth roundtrip began operation on Feb. 21, 1999, which included direct service between Bakersfield and the state capitol, Sacramento. Another Bakersfield to Sacramento train was added to the schedule in 2002.

Today, *San Joaquins* service extends throughout central California with four daily roundtrips between Oakland and Bakersfield and two daily roundtrips between Sacramento and Bakersfield. The trains are equipped with coaches, and combination coach/baggage and diner/lounge cars. *San Joaquins* meal offerings consist of tray-service meals in the diner/lounge car, sandwiches, snacks, and beverages. Bicycles may be carried on, and checked baggage is available on all trains.

Amtrak's Thruway motorcoaches connect the *San Joaquins* to Sacramento, Reno, and Carson City, NV; to Redding and Red Bluff; to Yosemite National Park; to the Northwest California coast, including Eureka; to the Central Coast and San Luis Obispo; and to Los Angeles and many other locations in Southern California.

Trains have played a significant role in California's transportation system since 1855, when the Sacramento Valley Railroad began service between the Sacramento waterfront and the city of Folsom. Soon after, rail lines were extended up and down the central valley from Sacramento to the San Joaquin Valley and into the Sierra foothills.

Amtrak Employees Receive National Recognition for Safety and Environmental Initiatives

John H. Chafee Environmental Excellence Award

Working in the Amtrak Mechanical department’s Maintenance and Equipment group for the *Coaster* Commuter Service, Dustin L. Davis was recognized as a finalist for the John H. Chafee Environmental Excellence Award. The

award, sponsored by the Association of American Railroads, was presented to Davis for his many positive contributions toward improving the environment at the Amtrak-operated facility located in Camp Pendleton, CA.

At the April 21 ceremony held at the U.S. Capitol in Washington, D.C., Sen. Lincoln Chafee (R-RI) presented Davis the award, which honors his father’s legacy as a leading environmentalist who understood and promoted the environmental advantages of rail transportation. Davis was also recognized by Amtrak in 2003 with a President’s Service and Safety Award for Environmental Safety Achievement.

Dr. Gary Burch Memorial Safety Award

As a safety liaison for Amtrak’s maintenance-of-way supervisors and employees, Tomlinson ensures that track maintenance employees and supervisors who work on the right-of-way understand and

Amtrak employee Steven D. Tomlinson was recognized for his safety achievements with the Dr. Gary Burch Memorial Safety Award for 2003.

comply with all workplace safety rules. The annual award, which honors the victim of a 1991 passenger train derailment in South Carolina, goes to the individual judged to have done the most to enhance passenger railroad safety. The Burch family has sponsored the award since its establishment in 1994. This year’s ceremony, hosted annually by the National Association of Railroad Passengers, was held in Washington, D.C. on April 21.

Medical Leave Process is Standardized

In the past, the process for placing employees on medical leave of absence varied by location. Now that the process has been standardized system-wide, it's important that employees are aware of the process changes and familiar with the documentation requirements to avoid the stress of potentially having their job status affected.

Because it is Amtrak's goal to avoid any problems regarding employees' employment status or income, it is important that all the required steps outlined below are followed.

Submitting a Medical Leave of Absence:

Employees must notify their supervisor when they plan to be out of work for more than five consecutive workdays due to medical reasons. The employee's supervisor or department representative must first complete and sign a *Personnel Action Form (NRPC 2000)*, which places the employee on medical leave of absence, and forward the form to Human Resources (HR).

Agreement-covered employees will then be placed on unpaid or paid leave in accordance with the employee's collectively bargained agreement, and non-agreement covered employees and ARASA supervisors (in accordance with their collectively bargained agreement) will be placed on short-term disability.

The employee will receive from HR a medical leave of absence (or short-term disability, in the case of non-agreement covered employees) information package. The information package contains a letter outlining the procedures for submitting medical documentation and the return-to-work process. For management and ARASA supervisors, a copy of the *Short-Term Disability Income Policy - P/I Number 7.29.0* and labels for sending medical information to the Health Services office are included.

The package also contains:
Treating Physician Medical Status Report and Statement of Disability, Form 2717

The employee must complete the top of this form and submit it to the treating physician(s) who must complete and sign the bottom portion. The form must be faxed or sent by U.S. mail to the appropriate Health Services office to be received within 10 calendar days from the first date of the employee's absence. If this documentation is not received within

10 calendar days, the employee is expected to return to work immediately, unless a direct communication regarding the delay is made to a Health Services staff member and the employee has received a concurrence for the delay.

For the employee to remain on authorized medical leave and for medical benefits to continue, the form must be updated by the treating physician(s) and then faxed or sent by U.S. mail to be received by the Health Services Office every 30 days from the date of the initial request, unless Amtrak Health Services advises differently. Failure to furnish this required information within the 30-day timeframe may result in a denial or interruption of medical benefits.

Railroad Retirement Board's Sickness Benefits for Railroad Employees, Form UB-11

The employee may be entitled to sickness benefits from the Railroad Retirement Board (RRB). Included in the package sent to the employee by HR is information regarding these RRB benefits. If entitled to these benefits, the employee must submit the required documentation directly to the RRB within 10 days of the onset of the illness or injury. Failure to submit these forms to the RRB in the time specified jeopardizes the benefits the employee may be entitled to receive.

Family Medical and Leave Act (FMLA) Application, Form 3108 and Certification of Physician or Practitioner's Form

If the employee qualifies for leave under the Family and Medical Leave Act (FMLA) of 1993, the medical leave will run concurrently with FMLA leave. The FMLA leave entitlement is 12 weeks, 60 workdays, or 480 hours within a consecutive 12-month period (or as indicated under applicable state laws).

If the employee qualifies for FMLA leave, in addition to completing the *Form 2717*, the employee must also complete the *FMLA Leave Application and Notice, Form 3108*, and the medical provider must complete the *Certification of Physician or Practitioner's Form, WH-38*. If the medical condition qualifies under FMLA, and the employee meets FLMA eligibility criteria, the employee will be entitled to the benefits of the FMLA. If the FMLA form is not submitted within that time, the medical leave will not be designated as FMLA and the employee will not be enti-

tled to the benefits of the FMLA.

If the employee returns to work prior to the expiration of the FMLA leave, a position will be available, as governed by the employee's collective bargaining agreement or management policy.

Prescription and Over-the-counter Drug Pamphlet, Authorization, Form 3133 and Wallet Card

This pamphlet outlines Amtrak's policy on the use of prescription and over-the-counter medications. If the employee's treating physician is prescribing or recommending the use of medication that may interfere with a safe work performance, *Form 3133* must be completed and faxed to the appropriate Health Services office prior to the employee's return to work.

Returning to Work

If the employee has been on authorized medical leave of absence for 11 to 29 days, and has been cleared for a return to work by the treating physician, the physician(s) must provide the necessary medical information and complete the "Returning to Work Status" section of *Form 2717* and fax or send it by U.S. mail to the appropriate Health Services office.

If medical restrictions have been placed on the employee's return to work, the Health Services office will review the form and discuss the return with the employee's supervisor. The supervisor will inform the employee directly about working with these restrictions. If there are no medical restrictions, once Health Services has received the form, the employee will be allowed to return to work.

If an employee is absent for 30 days or more, in addition to the return-to-work requirements above, Amtrak's Health Services office will determine if both a return-to-work physical and/or a drug screen are required. If so, the employee's supervisor will send the employee to an occupational health facility for the designated examination.

Returning to Work for an On-duty Injury

For employees on medical leave of absence for an on-duty injury under the Right Care...Day One program for less than 30 days, the Transitional Work Officer will notify the employee's supervisor by e-mail to complete *Form 2000* to return the employee to either modified or full-duty status.

For employees who have been on medical leave of absence for 30 days or more, the Transitional Work Officer will advise the supervisor to complete the *NRPC Med 1 - Authorization for Examination or Treatment Form* for the employee to go to the Amtrak-approved occupational health facility for a drug screen and/or physical.

FRONT LINE FOCUS

Dear Amtrak:

I am writing this letter to express my appreciation for service I received while traveling on the Southwest Chief leaving Chicago for Los Angeles on Jan. 31, 2004.

I traveled in a sleeper car, 331 I believe, and a man named Tommy Webb was our sleeping car attendant. He was helpful, upbeat, polite, and had a delightful sense of humor. Our train arrived 10 hours late and his good nature played an important part in making it tolerable and at times even fun. I also appreciated the fact that he took the time to answer questions about the railroad.

I wanted to point Tommy out to you, as he is definitely an asset to Amtrak. I hope that you may have received other letters expressing appreciation for him as well.

In addition, I would just like to say that this was my first cross-country train trip. I had a very positive experience and I am now sharing my enthusiasm for travel by train with my friends.

Thank you very much.

Sincerely,

Pamela H.
Hurleyville, NY

Dear Amtrak:

On February 28, 2004, we traveled from Chicago to New Orleans aboard your sleeper car. Our attendant was John Turk and he gave us, as well as all his passengers, such outstanding service that we wanted to write to commend him. John was not only friendly and helpful, but he anticipated our needs. He was motivated, informative, and eager to please. John answered all of our questions and was quite knowledgeable of not only the train but also the particular areas of the states that we passed through. He provided all of his passengers with a tidy fruit and cheese buffet as well as beverages. We felt truly catered to. We believe that John was sincere in his efforts and seemed to take enjoyment in his profession. He made our trip to New Orleans very pleasant indeed. If we ever travel to New Orleans again, we will make sure that John Turk is aboard when we book the trip!

Sincerely,

Darryl M. and Debra M.
Oxford, MI

Righting the Right-of-Way
Harrisburg Line Cleanup Shows
Substantial Improvement

continued from page 2

right-of-way by a clam-shell-shaped grapple bucket that is extended on a boom out over the side of the cars. A second slot train was added at the end of March, doubling crews' efforts, giving them the capacity to pickup approximately 1,200 ties per night.

Earlier this year, the crew cleaned about 20 miles of ditch lines and culverts on the Harrisburg Line using Loram's "Badger Ditcher," an automated-production ditching machine. Operating on the track, this machine uses a large cutting wheel to remove debris and sediment from the ditch, which is then fed on a conveyor belt for distribution along the right of way, away from the ditch, or loaded material into hopper cars for disposal at an alternate location.

Since early April, trees and brush also have been cut from over 35 miles of the company's electrified catenary and transmission lines on both the Harrisburg Line and on transmission lines that feed the Harrisburg Line. An additional 31 miles have been identified where trees are encroaching on the electrical system.

As the look of the Harrisburg Line improves, so does the work on the upgrade. A detailed story about the work being performed toward the upgrade will be published in an upcoming issue of Amtrak Ink.

Operations Branch Releases Second Quarter Results

In a letter to employees published in the February issue of *Amtrak Ink*, Amtrak's Senior Vice President of Operations Bill Crosbie focused on the importance of setting and meeting goals to ultimately improve the operation and ensure the company's success. In the letter Crosbie identified eight key goals for the Operations department, which makes up approximately 90 percent of the company's workforce.

Improve On-time Performance

The fundamental goal for the department, which can be achieved through meeting all other goals, is to improve the systemwide on-time performance rating. A goal has been set for on-time performance to be no less than 85 percent. At the end of the first quarter, systemwide OTP was at 74.2 percent, the second quarter OTP decreased to 72.3, resulting in a year-to-date through March systemwide OTP of 73.3 percent. This trend is seen across the system and is due primarily to winter conditions in January that were more severe than in recent winters and resulted in a January 2004 OTP of 69.5 percent. A contributing

factor later in the quarter was seasonal track work that began as winter ended. An exception to the trend was in the Amtrak dispatched Northeast Corridor, where *Regional* and *Clocker/Keystone* services showed a small improvement from 77.1 percent in the first quarter to 78.3 percent in the second quarter.

Improve Fleet Reliability

Reducing the number of equipment failures improves fleet reliability for passengers and crews. To make progress on the reliability of the fleet, the Mechanical department was reorganized and regular overhauls and preventive maintenance cycles were implemented.

In general, production was below plan for the first and second quarters. The single largest problem with production was the extreme

continued on page 4

Community Greet's Arrival of Blue Water

A crowd gathers at the Niles, MI, station to welcome the *Blue Water* inaugural train as it reaches its final destination. Originating in Port Huron, MI, on April 24, the inaugural train stopped at each of Michigan's nine stations on the *Blue Water* route where local celebrations were held. On board the train, invited guests from cities along the route joined Amtrak CEO David L. Gunn, Michigan Department of Transportation Director Gloria Jeff, and other local and state officials to commemorate the restoration of daily morning service to Chicago, with an evening return trip to Michigan. Amtrak's *Blue Water* service became effective April 25.

Ridership Gains in April Break Record

April ridership of 2.2 million passengers was a 4-percent increase over the same month a year ago and the best April result ever for Amtrak.

Through the first seven months of FY '04, Amtrak ridership stood at 14.3 million, 6.4 percent ahead of last year (13.5 million) and 2.5 percent ahead of the budget target (14.0 million). However, ridership for the month of April fell short of the railroad's forecast by 1 percent, due in some measure to poor on-time performance, affecting ticket revenues and CSI scores.

Ticket revenues of \$107.3 million for April were 3 percent higher than last year, but 4 percent below the budget target. The year-to-date results for FY '04 show ticket revenues of \$722 million, or 6 percent ahead of the same period for last year (\$680 million) and 2 percent better than the budget target.

In the Northeast Corridor, April ridership on the *Regionals* was up significantly with a 15-percent increase over last April. A portion of this growth may be attributable to the 4 percent drop in *Metroliner* ridership, which was likely due in part either to on-time performance issues (*Metroliners* saw a 22-point drop in on-time performance) or fewer scheduled departures. Other double-digit ridership increases over last year included the *Capitol Limited* with a 35-percent increase, the *Wolverines* with a 13-percent increase, the *Heartland Flyer* with an 11-percent increase, the *Pere Marquette* with a 15-percent increase and the *Pennsylvanian* with a ridership increase of 19 percent attributable to its change in schedule and city pairs.

Regional ticket revenues outpaced last year by 13 percent or \$600,000. However, on the whole, short-

distance trains were below budget by \$2.9 million, with fewer *Metroliner* frequencies accounting for \$1.7 million of this shortfall.

Ticket revenues on long-distance trains in April dropped \$1.6 million below budget — the Silver Service trains combined brought in \$400,000 less than expected, unlike their March performance in which they were slightly favorable. There will be an additional anticipated loss in ridership and revenue on the Silver Service because of track work, which resulted in the cancellation of the *Silver Meteor* through June 23. Although the consist of the *Silver Star* has been augmented and its schedule modified to accommodate passengers from the *Silver Meteor*, preliminary analysis in early May suggests a \$200,000 ticket revenue loss in April was attributable to this service disruption.

See page 12 for details

TRAIN OF THOUGHT

While most people take it easy during the summer, we are hard at work on the railroad. The summer season can be challenging for front-line employees, whether it is contending with first-time vacationers or managing the expectations when delays or slow-orders occur. For employees working for the railroad, it is the peak time for repair, replacement and rebuilding. Our goal is to get it all done on time and on budget.

So far, we've been doing a good job of holding the line on expenses this year. Our mid-year production numbers — the track we've laid, the equipment we've restored — are significantly higher than last year. Please read the details of what's been done in this issue of *Ink*. If we stay focused, we'll have a good result by the end of the year.

As we sit down to chart our course for FY '05, we need to be realistic about what we can accomplish while continuing to keep expenses down. We need to program our work and know exactly where the dollars are going and why.

We've picked off a lot of the low-hanging fruit, resolving some of our equipment maintenance problems and beginning to get track and other infrastructure to a state of good repair. We're getting a lot done, but we're still far from out of the woods.

I think that the fruits of our labor over the past year are becoming evident to our passengers. While they may not notice the new concrete ties we've laid on the Northeast Corridor, for example, they may notice the newness of

David L. Gunn

the Amfleet food service cars we've remanufactured. Let's continue to show the country what Amtrak can do.

Have an enjoyable and safe start to the summer.

California's Caltrain Offers Express Service

New *Caltrain* "Baby Bullet" express service provides morning and evening rush hour passengers faster trip time on California's commuter route between San Jose and San Francisco. The service runs along the 47-mile commuter corridor in just under an hour, meeting the demand for commuter service from passengers going south to San Jose's Silicon Valley and north to the San Francisco hub.

Launched on June 7, the express service offers five trains in the morning and five in the evening running northbound and southbound, stopping at only six of the system's 34 stations — San Francisco, Millbrae, Hillsdale, Palo Alto, Mountain View and San Jose Diridon. Two of the southbound morning trains and two of the

northbound evening trains will make an additional stop at the San Francisco 22nd street station, part of *Caltrain's* recognition of the continuing "reverse commute" market being experienced on *Caltrain* service. The trains travel at the top speed of 79 miles per hour, but because there are limited stops, end-point travel is reduced by nearly 40 minutes.

"Unlike many other large metropolitan areas, the San Francisco Peninsula has commuters coming and going in both directions — northbound and southbound," noted Jay Commer, Superintendent of Commute Operations. "This new service, the highest level of service offered in the railroad's 141-year history, enhances the

current schedule with more convenient and faster options for commuters."

Working with the Peninsula Joint Powers Board, Amtrak assisted in revamping the entire *Caltrain* schedule to provide the limited-stop service. Saving a third of the trip time from end to end —

from an hour and a half to just under an hour — did not come easily. Years of planning and the completion of a two-year, *Caltrain* Express (CTX) railroad reconstruction project set the stage for the express service.

Bullet train schedules were simulated to determine where third and fourth track areas in the rail corridor, specifically in the Bayshore, Redwood City, and Sunnyvale/Lawrence areas, would be added to allow local trains to stop at these intermediate stations while Baby Bullet express trains could pass on inside tracks. Test trains were run with Baby Bullets and local trains to assure the operation would fit schedules and interlockings could be set for the passing of Bullet trains at key points.

The \$110-million construction program began in the spring of 2002. All weekend train schedules were temporarily suspended to provide the 200-plus contract crews full access to complete the weekend work "blitzes."

The reconstruction involved removing jointed rail, installing 13 new interlockings and wood and concrete ties, and replacing approximately 30 route miles of signaling with reverse direction speed signals, all dispatcher-controlled from the San Jose Dispatching Center through

Conductor Ticket Delivery Improves Advance Payment Ticketing Process

“Offer AP — Obtain tickets from conductor on board the train.”

After making a reservation, sales agents are prompted by this message on their computer screens to offer Advance Payment to passengers who will board at stations that are sometimes closed.

A new Conductor Ticket Delivery program, available at Amtrak stations that are not open every day, expands the number of stations where AP tickets may be obtained. It also provides trouble-free on-board ticket delivery to passengers who make last minute AP reservations. The ticketing option has been available at certain unstaffed stations in Missouri and on the *Downeaster* routes since February.

The advance payment option allows customers to pay for their reservations in advance with a credit card through a call center sales agent, through “Julie,” or online at amtrak.com, then obtain their tickets by mail, at a ticket office, or at a Quik-Trak machine.

Advance payment is an essential ticketing method, accounting for 43.2 percent of the \$1.3 billion in ticketed revenue in FY ’03 — a 7-percent increase over FY ’02. This fiscal year through mid-May, AP ticket revenues of \$411 million are up 10 percent over last year, accounting for 45.8 percent of ticketed revenue in FY ’04.

The Conductor Ticket Delivery pilot program was developed in response to station staffing reductions made in early 2002 when some stations, formerly open daily, were closed on certain days and others were entirely unstaffed. As a result, some passengers paid for their travel through the Advance Payment process but found the departure station was unstaffed on the day they were departing. For example, the station at Topeka, KS, which previously had been open every day, began closing on week-ends in March 2002. Passengers who made reservations using Advance Payment on Friday for a Sunday departure, arrived Sunday morning only to find that the station was closed. This created problems for the passenger, who would naturally not want to pay a second time, and for the conductor, who had no ticket to collect.

In response to these issues, station agents and conductors at select locations developed a temporary solution to improve customer service and minimize on-board ticket sales. The station agent reviewed the passenger manifest for down-line stations that were closed, printed the AP tickets for passengers boarding at those stations, and gave them to the conductor. After checking identification, the conductor presented the ticket to the passenger and then collected it, in accordance with the procedures. On the rare occasion when the passenger did not travel, the conductor turned in the ticket at the next staffed ticket office where the space was canceled and the ticket was refunded. This method provided a solution for the on-board ticket sales dilemma at the partially staffed stations.

During this same period, a reduction in funding from the state of Missouri resulted in the unstaffing of the last two staffed stations — Jefferson City and Kirkwood — on the route between Kansas City and St. Louis. Due to heavy ridership on this route, on-board ticket sales and cash handling became unmanageable. “At times when the Missouri State Fair or other popular events, such as Oktoberfest, were held, hundreds of passengers would board at unstaffed stations,” said Sales and Marketing Manager Anne McGinnis.

This led McGinnis and then-District Manager of Stations June Norfleet to recommend that the ticket agents at the two staffed anchor stations, Kansas City and St. Louis, issue the AP tickets for the intermediate unstaffed stations for delivery by the conductor.

With the cooperation of a number of employees such as Director of Stations Pat Willis; Senior Director Sales and Reservation Systems Support Greg Behun; and many others, a plan for a pilot program was developed in Missouri. At the request of the state of Maine, the unstaffed stations on the *Downeaster* route between Portland, ME, and Boston, MA, that did not have Quik-Trak machines, were also included in the pilot.

After gaining some experience with this concept, the team of employees recommended a series of reservation system enhancements to determine when the conductor-delivered ticketing option should be offered to the customer. “The conductor delivery method should only be offered as the last resort. We want to steer the customer toward using the most cost-effective ticketing methods, such as Ticket-by-Mail or Quik-Trak,” said Behun.

Therefore, conductor ticket delivery is not offered if the

sales along the unstaffed Missouri and *Downeaster* route, but also improving the overall AP ticketing process by expanding and formalizing the method that was being used at partially staffed stations.

“This conductor ticket delivery process is a true benefit to our customers,” said John Rowland, a conductor on the Missouri service. “Under the old system, if passengers boarded without a ticket, conductors could only issue a one-way ticket. After arriving at their destination, the customer would have to go to the ticket office to obtain his or her return ticket, or if the station was unstaffed, the ticket was purchased on the return train. With the formalized AP process, we can save the passenger time and frustration by delivering the entire round-trip ticket on board.”

“When the customer can deal directly with Amtrak and get the ticket from the conductor, we’ve kept the sale in-house and created a positive experience for the customer and the conductor.”

Pat Willis, Director of Stations

boarding station has a Quik-Trak machine, a ticket office is open at the time of departure, Ticket-by-Mail is an option, or if the reservation is made too late for the issuing station to print the ticket.

Other requirements included building into the Arrow system a means of designating which stations had downline ticket-issuing responsibilities. Next, the team had to look at each station and determine the proper time to issue tickets from that station before the train arrived. For example, a small station issuing tickets for other small down-line stations may only need one to two hours’ advance time to handle the AP reservation, while larger and busier stations might require up to 12 hours’ advance notice to allow the station agent time to print the tickets in between handling other responsibilities.

Since the program has worked so well on the Missouri and *Downeaster* routes, plans are being made to expand it to include more unstaffed stations on routes where issuing stations can be identified.

“By expanding the capacity to offer AP to more customers, the company improves cash flow and saves money. It also reduces the need for passengers to turn to a travel agency, thereby reducing the fees paid for travel agency commissions,” said Willis. “When the customer can deal directly with Amtrak and get the ticket from the conductor, we’ve kept the sale in-house and created a positive experience for the customer and the conductor.”

Late this summer, the conductor ticket delivery option offered at the reservation sales call centers will become available to customers making reservations through amtrak.com.

As the pilot program progressed, record-keeping procedures that outlined a clear chain of custody for tickets and required conductor, passenger, and station agent signatures for receipt and return of tickets were established.

The program, officially launched in mid-February, was successful in not only overcoming the challenges associated with on-board ticket

FRA Releases 2003 Rail Safety Figures

Fatalities Are the Lowest Ever Recorded

The Federal Railroad Administration last month announced a record low number of rail-related fatalities and highway-rail grade crossing fatalities, among other significant improvements in rail safety in 2003.

Based on preliminary data, there were 862 rail-related fatalities last year. Grade crossing collisions or trespassings accounted for 96 percent of these fatalities. The number of rail-related deaths last year was the lowest on record, and was 10 percent lower than 2002.

In 2003, highway-rail grade crossing fatalities dropped to a record low of 324, 9 percent fewer deaths than last year, and more than 47 percent less than 1994.

Also hitting an all-time low was the number of highway-rail grade crossing incidents — 2,919 in 2003.

Nineteen railroad employees perished as a result of on-duty safety lapses last year, the lowest number ever reported. Reportable injuries dropped 10.5 percent over 2002 and 30 percent since 2000.

“These numbers reflect the focus everyone in the railroad industry has put on safety,” said Chief Safety Officer Kevin Grant. “It just goes to show that it’s not just talk — the efforts of our employees and the partnerships with Operation Lifesaver and many others are paying off.”

Passenger Screening Pilot is Launched by TSA

Flanked by Transportation Security Administration personnel, Department of Homeland Security Under Secretary Asa Hutchinson addresses questions from the media at a press conference held at the New Carrollton station on May 4.

The event launched the start of the 30-day TSA passenger screening pilot and was also attended by Rear Adm. David M. Stone, Acting Administrator of the Transportation Security Administration, and officials of Amtrak, Maryland Rail Commuter, Washington Metropolitan Area Transit Authority and the U.S. Department of Transportation.

Operations Branch Releases Second Quarter Results

continued from page 1

winter weather experienced in January and February and its impact on an already vulnerable fleet. Service was severely impacted as approximately 80 cars froze in Chicago and another 60 or more froze in the Northeast. Shop counts were negatively impacted, as focus shifted from production to repairing cars. As a result, smaller programs, such as Bear’s wreck repair and cab car remanufacture were not begun; and some of the larger programs, such as Bear’s food service Amfleet and Beech Grove’s heavy Superliner overhauls, were slowed down; and 30-day inspections were missed.

Arrangements have been made to keep similar occurrences from impacting the fleet, including the following:

- Convert old GP-40 switch engines to GP-38-3s with working head-end power, which will keep cars from freezing while being switched.
- Repair and upgrade door freeze protection on the Amfleet Is and IIs.

- Repair and install freeze protection on Horizon and Viewliner cars.
 - Replace old and worn out door motors as material becomes available.
- Compared to the same period in FY ’03, the number of medium and heavy overhauls and remanufactures completed increased significantly, as seen in the chart below:

October - March			
Mechanical Production	FY ’04	FY ’03	Change
Car Remanufactures	22	5	17
Heavy Car Overhauls	40	0	40
Locomotive Overhauls	22	21	1
Baggage Car Overhauls	12	0	12
M of W Equipment Overhauls	11	0	11
Wreck	7	8	-1
Switcher Acquisitions	0	0	0
AEM-7 Transformers	3	0	3
Facility Improvements	\$.350M	0	\$.350M
Mandatory/Modification Programs	\$1.7M	0	\$1.7M

Another significant Mechanical accomplishment includes the work done on the first F-59 road locomotive at Beech Grove this winter. This is the first F-59 in-house overhaul and the first use of Amtrak’s Beech Grove Shops to support the West Coast fleet operating on the *San Joaquins* and *Capitol Corridor*

routes in California. Seven F-59s are scheduled for FY ’04.

Additionally, an MP-15 switch engine was rebuilt at the Wilmington Locomotive Shop and was near completion at the end of the second quarter. Released into service in April, the MP-15 is the first diesel switcher overhaul completed at Wilmington in recent years. Eight more MP-15s are scheduled for rebuilding in FY ’04.

Reduce Unplanned Minutes of Delay

The Engineering department works to maintain the infrastructure while minimizing the impact track work has on the company’s on-time performance. The drivers of train delay minutes are the physical failures of the four infrastructure disciplines — signals, electric traction, structures and track. Engineering met and exceeded its goals in these four disciplines for the first half of FY ’04, which resulted in a 4.2 percent decrease in the number of unplanned minutes of delay.

Engineering increased its focus on reducing signal and electric traction

advanced radio wave communication systems. Amtrak provided significant support for the track and signal construction during the two-year project.

In addition to engineering reconstruction and support, work on this project by Amtrak’s Mechanical department included preparations and maintenance for 17 new bi-level passenger cars and six high-horsepower MP-36 locomotives and planning for train consist turn-arounds at each terminal, as well the maintenance on work-train cars and locomotives. Amtrak also provided the labor, equipment and materials for work-trains in the construction areas to assist multiple contractors with materials for track reconstruction, turnout replacement and signal and inter-locking test trains. Nearly 200 maintenance-of-way work-train cars and four work-train locomotives worked around the clock during each weekend blitz.

Operations Branch Releases Second Quarter Results

continued from page 4

failures by establishing a joint effort between System Engineering and the division staffs to identify root causes that can be resolved with current resources within 90 days.

Overall production for the first six months is on schedule and was significantly greater in FY '04 than the same time period in FY '03. Momentum continues to grow with the installation of concrete ties as well as the replacement of continuous welded rail (CWR). During the first quarter, both programs were affected by the early onset of winter, and for most gangs, there were very few days of production during the second quarter. However, the trend in April indicates all FY '04 projects will be completed.

October - March			
Engineering Production	FY '04	FY '03	Change
Concrete Ties Installed (Each)	54,884	0	54,884
Wood Ties Replaced (Each)	0	0	0
Continuous Welded Rail Installed (Track Miles)	36.3	8.0	28.3
Undercutting (Track Miles)	22.7	0.0	22.7
Turnouts Installed (Each)	8	1	7
Bridge Ties Replaced (Each)	1,052	174	878
Ballast Deck Bridge Conversion (Feet)	445	368	77
Signal Cable Replaced (Miles)	11.9	15.5	-3.6
Electric Catenary Hardware Renewed (Miles)	41.3	12.5	28.8

The company's right-of-way clean up campaign in the first half of the year yielded significant progress, which included the disposal of 93,000 ties between Philadelphia and Washington, while the disposal of another 58,000 ties is currently underway on the Northeast Corridor. Additionally, 40,000 ties were picked up for disposal on the Harrisburg Line. There were 750 tons of scrap metal removed between Philadelphia and Washington, while another 200 tons of scrap metal are scheduled for disposal in Baltimore.

Additionally, completed infrastructure improvements include the crossover electrification project at Holden and Canton Junction interlockings in Massachusetts, the surfacing of New York Tunnels, and the third rail renewals in the East River Tunnels, all of which either enhance service and reliability, or reduce maintenance requirements. A tree and brush cutting program was also implemented following last winter's storm disruptions that will help to reduce future service interruptions.

Reduce Employee and Passenger Injuries

The Engineering, Mechanical and Transportation departments all have critical programs in place to reduce injuries. As a result of the bad weather over the winter period, there was an increase in the number of injuries due to slips, trips and falls. The worker reportable injury ratio, which is based on the number of reportable injuries per 200,000 worked hours, was 4.1 in the second quarter, up from 3.6 in the first quarter.

The overall ratio is driven by Transportation (due to the magnitude of person hours worked), which recorded a 3.4 ratio in the first quarter, with the rate increasing in the second quarter to

4.4. The Mechanical department improved from 5.4 to 4.5, but is still considerably above the 3.4 ratio goal.

Increase Satisfactory Public Health Inspections and Environmental Audits

The overall composite score for satisfactory public health inspections was 83 percent year-to-date through March, which was short of the overall goal of 87 percent, but reflected a slight improvement over the first quarter. The composite score includes the number of satisfactory inspections for food cars (79 percent), commissaries (96 percent), and water points (88 percent). The low food car inspection score was primarily due to unacceptable refrigerator and freezer temperatures, malfunctioning toilets and lack of hot water. Working with the Sanitation Task Force (a corporate committee comprised of 12 managers from the Public Health, Mechanical, Transportation, Environmental and Law departments), each division and master mechanic is developing a plan to address the deficiencies.

There were nine environmental audits completed during the first half of the fiscal year. The audit results show continued improve-

ment, especially at sites audited in previous years. The audits conducted added up to a ratio of 1.22 potential violations per audit, slightly better than the goal of 1.24 potential violations per audit. Increased positive findings show more awareness of environmental requirements and improved environmental stewardship. However, improvements are still needed in the areas of spill and pollution prevention.

Reduce Operating Costs and Improve Operations With Host Railroads

There are four host railroad agreements that become eligible for renegotiation during FY '04 (Canadian Pacific, CSX Transportation, Southern California Regional Rail Authority (SCRRA) and Maine/MBTA), and others where negotiations are ongoing (Canadian National, Norfolk Southern). Renegotiating these contracts provides Amtrak an opportunity to reduce costs, improve the operating relationship, and redesign on-time performance incentives and penalties. Active negotiations include Canadian Pacific, Canadian National, CSXT and Norfolk Southern.

Reduce Larceny and Vandalism Criminal Cases

Larceny criminal cases were 18 percent better than plan for first and second quarters and year-to-date. Vandalism criminal cases were 11.8 percent worse than plan for the first quarter, however, second quarter was 4 percent better than plan, with the overall figure through March at 5 percent better than plan.

The Police and Security department will continue efforts to reduce larcenies, vandalisms and drug trafficking occurring on the system. The plan for meeting these goals and reducing crime, corporate vulnerability and risk includes promoting employee and passenger security awareness; security training; and developing solid work relationships with federal, state and local law enforcement agencies.

The Amtrak Police Department's National Communications Center received during the first half of FY '04 a total of 172 calls reporting suspicious activity (packages, persons, vehicles). During this period, the company remained at threat level orange 23 percent of the time, however nearly 50 percent

of the calls were received while at this heightened threat level period, indicating an increased vigilance on the part of employees, passengers and the public.

Additional Efforts to Ensure a Successful Operation

A new Transportation Supervisors workshop was implemented for front-line supervisors during the first half of FY '04. The program stresses skills that include communication, time management, conflict management, teamwork and problem solving, as well as technical skills such as crew resource management, revenue audits, derailment investigations and drug and alcohol testing. Nearly 175 front-line managers have attended the classes, which are offered in Wilmington, Chicago, Los Angeles and Oakland and are taught by ranking officers in the Transportation department as well as training facilitators.

During the second quarter the Engineering department completed its year-long Supervisor's Training Course. Approximately 340 supervisors were trained in safety, leadership, drug and alcohol testing, business applications and manpower management. Development of a similar course for foremen has begun and will be given over the next twenty-four months to approximately 450 foremen.

Additionally, new menus have been implemented on lounge cars throughout the system. The new menu standardizes offerings of items enjoyed by passengers, which has been reflected by increased sales. New menus have also been implemented for *Acela Express* First class service and a new amenities package has been introduced on long-distance trains that includes new blankets and a "Welcome Aboard" card that lists the standardized First class services offered throughout the system.

The results for the first half of the fiscal year are encouraging, though not entirely on track for meeting FY '04 goals. "As you can see, we are making progress in some areas, but others still require significant improvement. The key is to focus resources and effort on these areas, and to operate safely," noted Senior Vice President Bill Crosbie.

Amtrak Adapts to Freight Railroad Industry Changes

Editor's note: This is the second in a series of stories that provides an in-depth look at Amtrak's relationship with its freight partners. An upcoming issue of Amtrak Ink will include a story that focuses on how Amtrak works with its railroad partners on a day-to-day basis.

In response to rising operating costs and significant growth in traffic, the freight railroad industry has shifted in recent years toward more efficient methods of conducting infrastructure maintenance. Although track improvements have long-term benefits, these cost-saving methods can have a significant impact on Amtrak operations and can result in delays, reroutes, and schedule adjustments on affected routes.

"One reason track work has become more disruptive to Amtrak service is that railroads have reduced the number of local work forces across the rail network that previously performed track repairs as needed," said Amtrak's Assistant Vice President of Host Railroads Paul Vilter.

Previously, these local gangs worked around train schedules during short stretches of time, and moved on and off the track operating smaller machinery and seldom completely shutting down a line for repairs. While trains traveling through the work area encountered speed restrictions and delays, major service changes such as reroutes and schedule changes were not as prevalent twenty years ago as they are today. While having a gang on-hand to fix problems as they occurred worked well, maintaining smaller gangs and equipment scattered throughout a widespread rail network was very expensive.

Vilter noted that to contain costs, railroads have since moved toward high-production techniques. "They have put their resources into larger gangs — sometimes known as 'super gangs' — that are comprised of large numbers of employees who move around the rail system rebuilding track on a predetermined schedule," said Vilter. "Because of the huge territory these gangs cover, when a significant track problem occurs, it may take weeks or months to bring a large gang to the site and may

sometimes cause long periods of slow orders in the troubled area until the work is completed."

Nonetheless, the amount of work large gangs can accomplish in weeks would take the smaller localized forces working around the traffic months to complete. The super gangs operate large and highly productive machinery, similar to Amtrak's Northeast Corridor Track Laying Machine, which cuts into track, and removes and installs a mile of rail in a day. As the work is being performed, the railroad is typically shut down for eight to ten hours a day, only allowing traffic flow during the remaining time.

"These mass production maintenance methods — which involve a huge investment in technology and equipment — allow gangs to concentrate their efforts and complete the work in a relatively short time," said Vilter. These investments include the installation of ties and rails, the implementation of procedures such as lubrication, which extends asset life by minimizing the interface between

Burlington Northern Santa Fe's P811, similar to Amtrak's Track Laying Machine, renews concrete ties and rail as it passes over the track.

the wheel and the rail, and advanced technology that grinds the rail to reduce the number of defects.

The railroads also conduct what is known as a "jamboree" or "blitz," bringing many different gangs together to completely shut down, tear out, and rebuild a stretch of railroad over several days. A jamboree enables several projects to be accomplished simultaneously instead of shutting down the railroad on different occasions to complete one project at a time. For example, during a jamboree, gangs will typically complete conventional maintenance projects that include tie, rail, and surfacing work while simultaneously performing other projects, such as bridge repair or replacement,

brush cutting, railroad crossing rebuilding, or signal repairs.

During March, CSX Transportation conducted a jamboree on the *Sunset Limited* route and shut down portions of its line between New Orleans, LA, and Jacksonville, FL. Fifteen tie and rail gangs, comprised of more than 800 employees completed 54 miles of surfacing, rebuilt two bridges, and replaced 75,000 ties and 18.5 miles of rail. Timely completion of this enormous amount of work would not have been possible if the track remained open between short maintenance-of-way shifts.

After service is disrupted for a period of time, the rail line opens, and the gangs move to other work sites. Although shutting down the railroad interrupts Amtrak operations, passengers ultimately benefit from a smoother ride and safer, more reliable service.

More Traffic - Less Track

Another factor that drove the freight industry toward mass production maintenance practices was the greater concentration of

trains traveling over fewer miles of track. From the 1940s through the 1980s, freight railroads were losing business to the trucking industry, which caused the railroads to seek ways to shrink their physical plant to fit their diminishing business. To

accomplish this, the railroads downsized through workforce reductions, railroad mergers, and route eliminations. Class I Railroad employment has gradually dropped from 458,000 in 1980 to 154,000 in 2003. Over the same period, the amount of track owned by the freight railroads decreased from 271,000 to approximately 170,000 miles, but the loads carried by the freight trains increased from a standard weight of 263,000 to 286,000 pounds per freight car, causing more wear on the track and accelerating degradation.

After years of downsizing, the freight railroad companies were faced with new growth in time-sensitive intermodal traffic. From the early 1980s through 2003, an 89-percent increase in traffic — mostly due to the phenomenal

intermodal growth in the 1990s — strained many railroads' operations. For example, BNSF's Transcontinental route between Chicago and Los Angeles typically operates a train every 20 minutes — amounting to nearly 80 trains a day. Even though a significant amount of additional main line trackage was constructed, the railroads were still faced with the dilemma of trying to sustain on-time performance, maintaining the infrastructure, and extending their assets while being pressured to keep the tracks open while operating at, or close to, capacity.

"Compared to the traditional railroad traffic of boxcars and coal or grain loaded directly onto the rail car, intermodal traffic is time sensitive and truck competitive," explained Mike Franke, Senior Director Planning and Business Development. "Trucks bring shipments straight off the highway to the train. These shipments must be picked up on time and delivered on time. United Parcel Service, for example, is one of Burlington Northern Santa Fe's largest customers and they have a very high demand for precise delivery. If the freight railroads cannot deliver the shipments on time, they will lose the business to the trucking industry."

Expect the Unexpected

Notification from the host railroad informing Amtrak of the scope and impact of an upcoming project launches a series of actions intended to accommodate the track work with the least impact on revenue and customer service. Just as the freight railroads plan how they conduct infrastructure projects, Amtrak decides upon a set of actions to respond to these disruptions. Meetings with representatives from several departments including System Operations, Customer Relations and Revenue, Transportation and Passenger Services, are held to develop and execute a plan.

Service disruptions resulting from track improvements can range from minor to severe delays — and even cancellations. Sometimes these delays are planned and sometimes they are unexpected. For example, track work between Denver and Chicago seldom impacts the *California Zephyr*, trains #5 and #6, because the train primarily operates between those points at night and the railroads typically work during the day. Knowing this, the BNSF railroad

tries to plan its work after the east-bound *California Zephyr* runs. However, complications can occur when Amtrak trains travel over two railroads that are both performing infrastructure improvements. For example, if the east-bound *California Zephyr* is delayed on the Union Pacific Railroad before it arrives in Denver, the track work scheduled east of Denver on the BNSF route is affected. The

BNSF has gangs and equipment ready to work, and must decide whether to begin work as planned or to wait for the *California Zephyr* to go through, which

can result in unexpected delays to Amtrak's train. This type of unexpected delay is not unique to the *California Zephyr* and occurs system-wide.

Experience is the Best Teacher

Amtrak's decision to reroute the *California Zephyr* this summer is a result of lessons learned from problems faced last summer with unexpected delays due to track improvements. Last year, Union Pacific Railroad officials asked Amtrak to hold the eastbound *California Zephyr* for two hours at Grand Junction, CO, so that track gangs could work between Denver and Grand Junction. The railroad planned to work the area on alternating eight-day cycles for six weeks. Amtrak agreed, adjusted the crews' schedules, and distributed notices to inform passengers of the delays in service. Unfortunately, the train sustained delays when the gangs were unable to clear the track at the agreed upon time. This type of setback caused congestion, compounded the planned delay, and frequently resulted in late arrivals in Chicago, which forced many passengers traveling to east coast destinations to miss their connecting trains.

"Our biggest frustration is that even after we (Amtrak and the freight railroads) put together a good plan, our freight railroad partners are sometimes unable to deliver," said Travis Hinton, superintendent Road Operations. "For example, the freight railroad may state that our trains will be delayed by an hour based on the amount of track work they need to perform. In turn, we communicate that

message to our passengers. Unfortunately, sometimes the railroads underestimate the impact of residual congestion associated with track work and our trains encounter longer delays than anticipated. Running the trains, setting up busses, and rearranging the crews take time, but those are not the most complex parts of the operation. The biggest struggle is being able to consistently deliver

what we promise to our customers," added Hinton.

This year, the Union Pacific Railroad notified Amtrak of track work planned for the same area, and requested that

trains be held for three to four hours. Recognizing that this would result in delays and missed connections similar to or worse than those encountered last summer, Amtrak decided to detour the train through Wyoming.

In this instance, as in most where service changes are planned, other factors were weighed such as accommodating customers and crews, while maintaining on-time performance. By taking an alternate route, passengers would miss one of the biggest attractions — the scenery — as they travel through the Rocky Mountains. Passengers provided bus transportation between Denver and Grand Junction would be inconvenienced, and those traveling to smaller towns such as Provo and Helper, UT, would not be served at all. However, rerouting the train allowed the majority of passengers who are not boarding or detraining in the affected area to arrive at their destinations without incurring significant delays, and reducing the odds of missing connecting service.

To make the reroute work, the location where the operating crews change had to be moved from Grand Junction, CO to Green River, WY, where hotels were secured for the crews' layovers. Because Amtrak conductors and engineers are not qualified to operate through Wyoming, Amtrak worked with the Union Pacific to get pilots to lead crews through the unfamiliar terrain.

Whenever trains are rerouted, a range of equipment considerations come into play. It is important that equipment is rerouted to locations

where it can undergo its routine maintenance cycles. The Operations team must also determine if cars must be added to or removed from the consist, as a result of these route changes.

Once the operating plans are finalized, changes must be communicated to passengers and the general public through Amtrak reservations sales agents, front-line employees, travel agents and local news media. Information is loaded in the Arrow/RailRes reservation system so it can be accessed by reservation and station agents. Customers are informed of service changes through callbacks made by reservation sales agents, notices

distributed at stations and on trains. Complementing this effort, Amtrak's media relations department advises newspapers and broadcast outlets in the affected areas of the change. Additionally, certain planned service changes, such as those that affected the *California Zephyr* and the Silver Service are included in the Summer/Spring 2004 System Timetable and are posted on amtrak.com. By communicating through multiple measures, every effort is made to inform and accommodate passengers when disruptions in service occur.

A tie gang, led by two tie cranes, works along a BNSF Oregon route.

Ridership Gains in April Break Record

continued from page 1

Additionally, Viewliner Sleeper equipment shortages continued to have an impact on the Silver Service trains as well as the *Federal*, the *Cardinal* and the *Crescent*. Viewliner Sleeper revenue fell 15 percent below last April due mostly to the equipment shortage.

While the overall CSI goal for the year is 82 percent, the CSI score has declined from 81 percent for fiscal year-to-date to 79 percent for April. The year-to-date CSI score for long-distance train on-time performance at the end of April was down 7 points year-over-year. The score was also down 3 points

for the short-distance trains, and down 2 points for the *Acela* and *Metroliner* trains.

These scores are consistent with the on-time performance issues many trains had in April. Against a systemwide on-time goal of 85 percent, the April performance rating dropped in April to 73 percent. On-time performance for long-distance trains in April was down 5 points from last year, down 22 points for *Metroliners*, down 2 points for *Acela Express*, down 7 points for *Regionals* and the *Cascades* dropped 11 points.

Sign Me Up!

The Fredericksburg, VA, platform sports new signage as part of an effort to improve passenger communications at the station. Because the

station is unstaffed, Amtrak personnel at the Alexandria station have been performing an excellent job of remotely announcing train arrivals in Fredericksburg by using the Public Address system installed by the *Virginia Railway Express (VRE)* for their passengers using the east side platform. Through a cooperative effort with *VRE*, Amtrak will soon improve the PA system at Fredericksburg by placing additional loudspeakers on the west side platform and lower level of the station.

Amtrak and CSX are in talks to ultimately provide Washington and Richmond stations special real-time access to the CSX dispatching system, so that the larger and better-staffed stations can monitor and announce train arrivals at the Fredericksburg station via the enhanced PA system.

Amtrak Police Department Honors Officer Chambers

Amtrak Police Officer Rodney L. Chambers, of the Mid-Atlantic South Division in Washington, D.C., was named “Officer Of The Year” for 2003.

Officer Chambers was chosen to receive this prestigious award for his extraordinary act of courage, risking imminent personal danger to himself to protect others.

On June 9, 2003, Officer Chambers was on patrol in Washington Union Station when he was dispatched to respond to a call for service resulting from IPC Security reporting that a male had put a grenade in a trash receptacle. Officer Chambers responded to the First Street location where an IPC security officer identified the suspect. Officer Chambers approached the suspect and instructed him to put his hands on the wall. The suspect removed a piece of cloth that he was holding, revealing a grenade. He immediately pulled the pin and attempted to drop the grenade.

Officer Chambers pinned the suspect against the wall while wrestling the grenade away from him, while holding down the grenade spoon to prevent detonation. At this time, a U.S. Capitol Police officer arrived on the scene and assisted in controlling the suspect.

As the suspect was being taken into custody by the U.S. Capitol Police officer, Officer Chambers moved to a location a safe distance away from onlookers while continuing to hold down the spoon on

Officer Rodney L. Chambers receives the Amtrak Police Department “Officer of the Year Award” from President David Gunn at the ceremony in Washington D.C. on May 12.

the grenade. Chambers was now joined by Sgt. Tony Epps of the APD who kept the dispatcher informed while keeping onlookers away from the area. Officer Chambers maintained this position for approximately 15 minutes while waiting for the arrival of the U.S. Capitol Police’s Explosive Ordnance Disposal (EOD) team. During this period of time, a search of the suspect’s bag revealed a second grenade.

Ultimately, both grenades were found to be inert. However, while he held the grenade in his hand, Officer Chambers he had no way of knowing this.

The suspect was indicted on two counts of threatening and conveying false information concerning the use of an explosive and has since been convicted and is currently serving a prison term.

Chicago Employee Receives AAR Hammond Safety Award

The Association of American Railroads recently recognized Dave Haffner, a mechanical superintendent at Chicago’s 16th Street Yard, for his contributions to employee safety. Each year, the AAR bestows the Harold F. Hammond Award to an individual railroad employee who demonstrates outstanding safety achievement. Especially worthy nominations for the Hammond Award are recognized with Certificates of Commendation, and Haffner was one of eight railroad employees honored with a certificate.

Haffner’s commitment to safety is evident in the way he manages the yard. During the past year, Haffner implemented a seat inspection and repair program after safety concerns related to the cab seats surfaced. Due to his direct involvement, the problem was rectified in a period of just a few weeks. When the Shop Safety Committee expressed concerns over the condition of the running-side pit lights, Haffner personally expedited the required work order to ensure speedy completion of needed repairs.

As co-chairman of the Chicago Terminal Safety Committee, a labor-management committee made up of craft safety committee chairpersons and department managers, Haffner was instrumental in initiating the “Safety Violation of the Month” program. The program identifies safety rule and procedure violations

observed by the safety committee. In addition, the committee’s monthly “Safety Flash,” is sent to all managers in the Chicago Terminal, raises awareness and educates employees about potential risks from hazards.

Haffner played a key role in expanding the use of a computer-based broadcast system developed by the facility’s Car Department Safety Committee. This system, called AMTV, broadcasts safety news, tips and safety rules of the day over television monitors in lunch-room areas throughout the Chicago maintenance facility. AMTV was originally developed for the Car Shop employees, and was aired only in their lunch area. When Haffner joined the CTSC, he saw considerable value in this information system. AMTV broadcasts can now be seen at the 14th street lunchroom, the 14th street transportation crew-room and the 16th street locomotive shop lunchroom.

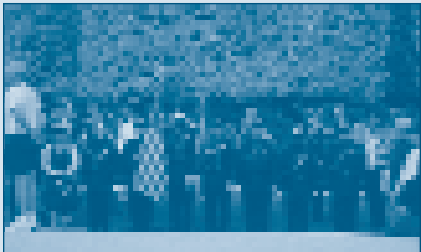

Haffner is recognized and respected for his pro-active posture toward safety and his eagerness to include the 119-person workforce and local safety committees in the accident prevention process. His leadership and example have helped the locomotive shop develop a positive attitude toward safety — one that directly impacts the product supplied to customers.

Beginning his Amtrak career at Brighton Park Turbo facility in October 1975, Haffner has served as the facility manager in New Haven and more recently, as the director of the locomotive shop at Beech Grove. Haffner has been the superintendent of the locomotive shop at Chicago’s 16th Street Yard for the past four years.

APD Participates in National Police Week

Amtrak Honor Guard members (L. to R.) Sgt. Richard Ronaldo (New York); Investigator Glen Cosner (Washington); Officer Charles Wroten (Wilmington); Officer Anthony Knox, Investigator Alex Colon, Officer Ronald Hunte and Lt. Robert Collins (New York), participate in the Emerald Society and Pipe Band March and Service at the National Law Enforcement Memorial in Washington, D.C. The event was held during National Police Week, May 9-15.

Amtrak Safety Committee News and Team Milestones

Mid-Atlantic Safety Committee

The 3.2 reportable injury ratio achieved by the Mid-Atlantic Division during the first seven months of this fiscal year is not only below Transportation’s goal of 3.8, it is also a testament to the commitment of the Mid-Atlantic Division Safety Committee and its

role in making the division a corporate leader in safety.

The Mid-Atlantic Division Safety Committee is the only one in the entire Amtrak system that encompasses an entire division. While it is smaller in size than some other regions, it is nevertheless one of the busier, and therefore more likely to encounter safety threats.

The division’s safety committee was established in November 2003 at the request of Daryl Pesce, general superintendent of the Mid-Atlantic Division. The committee, which includes representatives from the division’s departments and craft safety teams, meets monthly and reviews injuries and injury trends, distributes “Safety Alerts” and

examines accident investigation reports, among other activities.

The division committee also conducts monthly safety walkabouts to increase safety awareness, provide useful safety- and health-related information, and to stimulate discussion among workers and

Amtrak Secures Record Number of Communications Awards

Amtrak was the star of the show at the Transportation Marketing and Communications Association conference last month, winning nine “Tranny” awards, the most won by any company.

Established over 50 years ago, the TMCA Tranny Awards program recognizes the best in marketing and communications campaigns in the transportation industry.

Amtrak’s Marketing and Sales department won three of the top honors — Awards of Excellence — for its Amtrak Vacations Brochure, the E-commerce Canvas Campaign and the *Pacific Surfliner* Two-millionth Passenger event. Six Awards of Merit were received for AGR Select Members Kit, the New System Fall 2004 Timetable, the USA Rail Pass Brochure, the Scholastic/Amtrak Program, AGR Web Site Re-launch and the Long-distance Train Advertising Campaign.

“Taking away more Tranny awards than any other company within our field speaks volumes,” said Vice

President of Marketing and Sales Barbara Richardson. “I am really proud of the energy and creativity our team puts into its work.” Nearly 200 marketing and communications entries — a record number — were submitted by transportation organizations for consideration in ten categories: Single Advertisement, Advertising Campaign, Direct Marketing, Communications Collateral, Publications, New Media, Audio Visual, Special Events and Media Relations. To qualify, each submission had to focus on organizational or marketing communication within the freight or passenger transit industries and reflect particularly creative and strategic thinking.

AWARDS OF EXCELLENCE

Kids’ Promotions Aim to Boost Vacation Ridership

Families traveling on the Piedmont, *Carolinian*, *Hiawatha*, *Auto Train* and the *Capitol Corridor* may take advantage of great summer savings during Amtrak’s Kids Ride Free promotions.

North Carolina

Amtrak and the North Carolina Department of Transportation are partnering to offer the popular “Kids Ride Free” summer travel promotion from June 1 through Aug. 15, 2004. One child may ride free with the purchase of one regular adult, senior or disabled rail fare on the *Carolinian* and the *Piedmont* between cities in North Carolina.

Hiawatha

Children in the Midwest may enjoy free weekend travel on Amtrak’s *Hiawatha* service between Chicago

and Milwaukee. The offer is valid for up to two free children’s rail fare tickets with the purchase of one regular adult, senior or disabled rail fare. The “*Hiawatha* Kids Ride Free on Weekends” promotion is valid for sale and travel through Aug. 28 and is good for travel on Fridays, Saturdays and Sundays.

Auto Train

Families planning to visit Florida’s theme parks or Washington, D.C.’s historic sights will benefit from *Auto Train*’s “Kids Ride Free” summer promotion. Up to two children may ride free with each regular adult or mobility-impaired adult fare through Aug. 27, 2004.

Capitol Corridor

Children may enjoy a free ride everyday except Friday on Amtrak’s *Capitol Corridor* service. The introduction of the “Mid-week Kids Ride Free” promotion

augments the ongoing “*Capitol Kids Ride Free on Weekends*” offer and allows up to two children to travel free with each adult fare purchase. The Mid-week Kids Ride Free promotion is valid through Sep. 2, 2004, and the *Capitol Kids Ride Free on Weekends* offer is valid through March 20, 2005.

Amtrak Adds Two New Cruise Line Partners

Amtrak has negotiated new agreements with Norwegian Cruise Line and American West Steamboat Company, making them partners in Amtrak’s Rail and Cruise discount fare program. They join existing partners Carnival Cruise Lines, Holland America Line and Windjammer Cruises in making it easy to combine the pleasure of rail travel with the excitement of a cruise.

The “Rail and Cruise” discount is available to passengers who travel

on Amtrak through Dec. 15, 2005, in conjunction with a wide variety of cruises offered by these cruise lines. The program offers Amtrak rail travel at a discount of up to 25 percent (for both coach and sleeping accommodations) between cities throughout the U.S. and Canada and the homeports currently served by the Amtrak partner cruise lines.

The Rail and Cruise discount fare must be booked in conjunction with the cruise itinerary and is valid on all Amtrak trains except *Acela Express*, *Metroliner* and *Auto Train*. The discount cannot be used in conjunction with any other Amtrak discount or promotion except the child’s fare discount.

ACAC Pays Tribute to Outstanding Employees

The second round of employees to be honored by the Amtrak Customer Advisory Committee for outstanding customer service this year was announced at the group's spring meeting, held in Milwaukee. Award recipients are selected by ACAC members on a bi-annual basis and are front-line employees who demonstrate consistent and exemplary customer service.

This spring and summer, four front-line employees from around the country will be presented with Employee Customer Service Awards by ACAC members and supervisors at their respective crew bases. The employees, *Southwest Chief* Sleeping Car Train Attendant Rene Cardonne; Reservations Sales Agent Stanley DuBois (Riverside Call Center); Reservations Sales Agent Tyson Gardner (Philadelphia Call Center); 30th Street Station Usher Raymond Harold are recognized for their contributions to providing passengers high-quality service and care.

The award recipients are chosen from a list of front-line employees nominated by ACAC members, and meet a range of criteria, including consistently upholding Amtrak's on-board service standards and exhibiting exceptional concern for passengers in difficult circumstances.

This past winter, ACAC members traveled to the first five award recipients' crew bases to make the award presentations in person.

The first five employees to be honored were Marlene Koob, station manager in Seattle; Greg Herold, assistant conductor on trains #300 and #303; Daryl Reid, train #196 conductor; Flora Jones, sleeping car attendant on train #92; and John Turk, sleeping car attendant train #19.

Seattle Station Manager Marlene Koob is presented an award by Amtrak Customer Advisory Committee Chair Rick Pontham for her consistently upbeat attitude and cheerfulness when handling passengers' requests.

As an assistant conductor on trains #300 and #303, Greg Herold puts passengers and their needs first. Amtrak Customer Advisory Committee Vice-chair Robert Dabney, Jr. and member Nancy Kurten offer their congratulations at the Chicago crew base.

New Orleans crew base manager Jim Brzezinski joins ACAC Chair Rick Ponthan in honoring Sleeping Car Attendant John Turk's exemplary customer service.

Employee Customer Service Award recipient and train #196 Conductor Daryl Reid is joined by (L. to R.) Road Trainmaster Frank Fullmer, Don Herman, assistant superintendent Road Operations, ACAC Vice-chair Robert Dabney, ACAC Short Distance East Chair Alma Goodwyn, and General Superintendent Walter Ernst at Penn Station in New York.

Silver Star Sleeping Car Attendant Flora Jones is a shining star in the eyes of ACAC and its vice-chair, Robert Dabney, Jr.

Amtrak Safety Committee News and Team Milestones

continued from page 8

between management and agreement-covered employees. Attention is focused on important safety topics such as preventing slips, trips and falls; understanding material safety data sheets; knowing emergency escape routes; and promoting good housekeeping.

Sharon Mahoney, superintendent of Washington Commuter Services and the committee's chairperson, attributes much of the team's success to keeping focused on the group's goals. "Our committee adheres to a formal agenda and time limits during meetings, and we close each meeting with a review of the Project Task List that clearly identifies for the group key items that require our attention and action," said Mahoney.

The Task List, which also serves as a resource to employees, reflects what action has been taken on which

safety items. It identifies the required steps to complete a task and assigns a department, group or individual to work on resolving and improving a safety item. The status of each task is also described, keeping everyone focused on the priorities. The Task List can be found on bulletin boards throughout the division.

Empire District Safety Committee

The Empire District Safety Committee, which represents all crafts and the district major operational areas, has played a key role in helping promote safety and reducing injuries throughout the district. One group in the Empire District, the Niagara Falls Mechanical department, is approaching in June seven years without a reportable injury — a noteworthy accomplishment for these 19 employees who work

outdoors to ensure the safe and efficient functioning of our passenger cars and locomotives. Station personnel and Train and Engine crews in the district also achieved a safety milestone, with only one reportable injury from August 2003 to January 2004.

Members of the Safety Committee were joined by Walter Ernst, general superintendent; Steve Strachan, chief transportation officer, Thom McCann, regional safety office for the Transportation department, Pat Collier, safety engineer for the New York Division and Phil Larson, general manager for the Empire District, in paying tribute to these accomplishments at ceremonies in Niagara Falls, Rochester, Syracuse, Utica, Schenectady, and Rensselaer in February.

continued on page 11

Do you know a frequent Amtrak traveler that might have good customer service suggestions to offer?

The Amtrak Customer Advisory Committee is currently recruiting new committee members to fill vacancies of members whose terms expire at the end of September.

Chartered by Amtrak, the committee is comprised of volunteers who represent the diversity of passenger service needs and desires. Members serve as Amtrak's eyes and ears, offering Amtrak management the passenger's perspective on customer service issues and policies.

The ACAC seeks candidates who are Amtrak passengers from all regions of the country. Candidates may be business travelers, vacation travelers, people with disabilities, seniors and students.

Members attend two national meetings per year within the Amtrak system, as well as regional meetings.

Applications for ACAC membership must include (1) a letter of interest explaining how the candidate's travel, customer, educational, and work experiences can benefit Amtrak and the committee's work, (2) a resume, (3) a list of the short- and long-distance Amtrak trips that the candidate has taken during the past twelve months and (4) planned trips for the next twelve months.

Completed application packages should be mailed by August 31 to:

Ms. Kate Warr
Amtrak Customer Advisory Committee
900 Second Street,
NE Suite 308
Washington, DC 20002
Fax: (202) 408-8287
E-mail: acac@amtrak.com

All candidates will be given full and careful consideration based upon ACAC's need for regional and demographic representation. Thank you for your interest and support!

Amtrak and NARP employees and their relatives may not serve.

Amtrak Safety Committee News and Team Milestones

continued from page 10

New Kids on the Block

Recently, two new safety committees were created at the request of Ed Walker, vice president of Transportation. One of the teams is based at Amtrak's Consolidated National Operations Center (CNOC) in Wilmington, DE, and the other at Corporate Headquarters in Washington, D.C.

The eleven-member CNOC Safety Committee plans to provide visible safety leadership and to implement programs and activities that will raise safety awareness throughout the facility. Initial target areas include security, housekeeping and safety rule compliance. Shirley Bannon, executive assistant to the chief of systems operations and Tom McCann, transportation safety officer, jointly chair the committee.

The Corporate Safety Committee includes staff representation from all departments included on the executive management team (Government Affairs, Business Diversity, Labor Relations, Operations and others). Members from the opera-

tional group include Transportation, Mechanical and Engineering. The committee's primary goal is to disseminate information about evacuation procedures, injury prevention and other safety-related issues to employees at Corporate Headquarters. The committee plans to work closely with the Mid-Atlantic Division and the Commuter Safety Committees to address employee concerns and safety issues. One of committee's first initiatives is an employee health and safety fair on June 24th in the Starlight Room in Washington Union Station. Transportation Department Specialist Barbara Knight chairs the committee, and Alvin Richardson, Amtrak's Operation Lifesaver officer serves as co-chair.

Team Milestones
Trenton – Passenger Services
The Trenton Passenger Services department celebrated a major safety achievement at the end of April — more than 2,060 days (or almost six years) without injury.

This totals nearly 140,000 injury-free work hours.
New York – Mail, Baggage and Express
The New York Penn Station Mail, Baggage, and Express department has successfully completed one year without injury on March 22. Working more than 83,000 hours without an injury is a notable accomplishment for these employees, who exert considerable physical activity and do heavy lifting throughout their shift.
Washington, D.C. – Track Department
The Washington, D.C. Track department has undergone 250,000 hours injury free since Feb. 22, 1999, a major milestone for a track sub-division. Credit for this accomplishment rests with a core group of employees who have remained in the department over the past several years.

New York Division
Maintenance-of-Way Repairmen
From 1990 through April 2004 the Maintenance-of-Way repairmen in

the New York Division have worked more than thirteen years injury free, the longest running streak in the division and a record that exceeds 250,000 work hours. The group attributes their success to on-the job vigilance and to remaining focused on the task at hand.
The Crescent On-board Service Crew
The Crescent's on-board services crew has been injury free since August 2003, when a dump truck struck the train at a highway-rail crossing. Crescent employees, safety committee members and managers have improved safety initiatives, such as pre-departure safety briefings and a program of enroute safety audits to identify potential hazards. These measures have led to safety improvements, such as the modification of the Dining car storage areas.

PICTURE OUR TRAIN

Enter the Amtrak “Picture Our Train” 2005 Wall Calendar Photo Contest and your photograph could adorn the walls of train lovers everywhere. Enter your photo of an Amtrak train (sporting the current logo) to have your image featured on the Amtrak 2005 wall calendar! The First Prize Winner will receive a \$1,000 Amtrak travel voucher and a photo credit on the calendar. The Second through Fifth Prize Winners will also receive Amtrak travel vouchers. Contest ends July 30, 2004.

SAFETY FIRST!!! As always, Amtrak reminds you to stay out of danger — stay away from tracks and the railroad right-of-way. Do not trespass on railroad property or on private property adjacent to the railroad. Do not climb or approach railroad structures, towers, or wires. Stay in public access areas, and away from railroad structures and moving equipment — in stations, on sidewalks, or in parking lots. All participants expressly release Amtrak from all liability for personal injury and loss or damage to personal property, and expressly assume the risk of harm. Remember, tracks, trestles, yards and equipment are private property — trespassers are subject to arrest and fines.

2005 Amtrak Wall Calendar Photo Contest Official Rules

Contest: Best original color photograph featuring an Amtrak train with the current Amtrak Logo and livery visible.

How to Enter: Mail an 8 x 10 color photograph suitable to be enlarged to approximately 25 inches (horizontally) to: 2005 Calendar Contest, Amtrak, 60 Massachusetts Ave, N.E., Suite 4E-315, Washington, D.C. 20002. The photograph must be original and it, or any substantially similar one, may not have been published, nor have won, or be currently entered in any other contest. The entrant must own all rights to the photograph, including copyright. The photograph must be clearly labeled on the back with entrant’s name, day and evening phone numbers, address, and email address (if available). The front of the photograph may not include names, signatures, or other identifying marks. Finalists will be contacted to submit their original transparency, slide, negative or digital image with a resolution of 300 dpi at approximately 25 inches across for use in producing the calendar with the winning photograph. Entries must be postmarked by July 30, 2004 and received by August 3, 2004. This contest ends July 30, 2004 at midnight EDT. No purchase necessary. Only one entry per person. Amtrak shall not be responsible for late, lost, incomplete, damaged, misdirected, illegible, or postage-due entries.

Eligibility: This contest is open to legal residents of the United States, 18 years of age or older at the time of entry. Amtrak employees and their families are eligible; except Calendar Contest Review Panel Judges, Amtrak Marketing employees (as listed on the company’s organizational chart 10.2) and their families, and Amtrak Corporate Communications employees (organizational chart 10.3) and their families are not eligible. Amtrak advertising agencies and their families are not eligible. Amtrak reserves the right to verify eligibility qualifications of any winner.

Conditions of Entry: By entering this contest, entrant agrees that if he or she is selected as a prizewinner, he or she will assign all rights to the photograph, including copyright, to Amtrak by executing an assignment agreement and Amtrak will own all rights to the photograph and may use it for any purpose. If a winning photograph includes a recognizable image of an individual, the winner must have that individual sign an Amtrak publicity release form. Entrant further agrees to these Official Rules.

Responsibility of Entrant and Liability Release: Entries will not be acknowledged or returned. Entrant agrees to stay away from moving trains, tracks, structures, and railroad property. Entrant agrees to release Amtrak from all liability for injury, damage to or loss of personal property, and all other losses, and expressly agrees to bear all responsibility for and to assume the risk of all harm.

Prize: The First Prize is a \$1,000 travel voucher and the display of the winning photograph on the 2005 Amtrak Wall Calendar with photo credit. The Second Prize is a \$500 travel voucher, the Third Prize is a \$250 travel voucher, the Fourth Prize is a \$150 Travel Voucher, and the Fifth Prize is a \$100 Travel Voucher. Travel vouchers shall be valid for one year from date of issuance and all travel is subject to availability and to Amtrak’s contract of carriage. All taxes are the sole responsibility of the winners and finalists. No prize substitution, cash substitution, or assignment or transfer of prizes is permitted, except by Amtrak for reason of unavailability in which a prize of equal or greater value will be awarded. All prizes will be awarded.

Winner Selection: The finalists will be determined on or about August 4, and prizewinners will be determined on or about August 6, 2004. All entries will be reviewed by the Amtrak 2005 Wall Calendar Review Panel, and finalists will be reviewed by the Judges’ Panel. The judges’ decisions are final. The prizewinners will be notified by telephone, mail and email, if provided. All finalists will be required to sign an affidavit of eligibility, publicity release and copyright assignment, and return it properly executed within 7 days of attempted notification as a condition of awarding the prize. If prize notification is returned as undeliverable or the finalists fails to return the affidavit, release and license, as applicable, the winner will be disqualified and an alternate finalist will be selected. If, in Amtrak’s opinion, there is any suspected or actual evidence of tampering with or alteration of any portion of the contest, Amtrak reserves the right to terminate the contest.

Winners List: For the names of the winners, after August 31, 2004, send a self-addressed stamped envelope to: 2005 Calendar Contest Winner List, Amtrak, 60 Massachusetts Ave, N.E., Suite 4E-315, Washington, D.C. 20002. Requests received more than sixty (60) days after the completion of the entry period will not be honored. Vermont residents need not send stamped envelope.

General: Amtrak and the Amtrak logo are registered service marks of the National Railroad Passenger Corporation. This contest is subject to all federal, state, and local laws. Void where prohibited by law. U.S. law governs this contest.

FRONT LINE FOCUS

Dear Amtrak:

I am writing this letter to compliment your employee, Richard (Talmy), who was our lounge car attendant on the *Coast Starlight* from Los Angeles to Salinas, CA.

Even though Amtrak’s coastal route offers some of the most beautiful scenery in the world, it was Richard’s informative commentary that made the trip especially memorable. His knowledge of the history, biology and botany of the California coastal area is impressive. The fact that he does this commentary through his own initiative is admirable.

Because we ride the train for pleasure, the importance of Richard’s contribution to Amtrak should not be underestimated...Richard’s attitude of doing the best job possible and going far beyond what is expected, makes him a valuable asset to Amtrak. He definitely gives customers first class service on the *Coast Starlight*, and we hope to see him again on future Amtrak excursions.

Sincerely,

C. Lundgren
Waialua, HI

Dear Amtrak:

My husband and I were delayed in Washington traffic and were almost certain we would miss our morning *Metroliner* to New York.

As we debarked at Union Station we were fortunate to meet Red Cap Louellyn Fry who professionally negotiated our baggage and us to the ticket machine to purchase our reserved ticket, then swiftly led us off to the gate where he located a cart, and amazingly, had us on the train with only moments to spare! Wow — he was pleasant, fast, courteous, and certainly a welcome help to us.

Mr. Fry is a valuable member of your team — his quick and effective response helps give us the positive feeling that we have for Amtrak!

Sincerely,

D. Martin

Annual Update of Five-year Strategic Plan Released

Recommendations for Corridor and Network Services Made

Updating Amtrak's five-year strategic plan last month, Amtrak President David Gunn said that the railroad's state-of-good-repair focus will continue to be Amtrak's top budget priority, but, for the first time, recommended that states, the freights and the federal government should join together to address rail corridor development and to protect and upgrade key long-distance routes owned by the freight railroads.

In briefings for the news media and transportation officials in Washington, D.C. on June 29, Gunn was joined by representatives from several states and freight railroads that advocate federal support of rail development.

"The update to the five-year plan continues the effort we began last year to provide specific and precise details on exactly how every dollar is to be spent to bring the Amtrak system to a state of good repair," said Amtrak President David Gunn. "However, states and freight railroads face serious problems of capacity, congestion and reliability, and there is a growing consensus within the rail industry that we must come together to address these challenges."

The five-year plan first identifies the company's requirements for capital investments in the areas of infrastructure, fleet, and system support. To accomplish the goals established in the plan, Amtrak recommends annual federal funding averaging about \$1.6 billion for FY '05 – FY '09 and proposes federal funding of \$1.8 billion in FY '05. The majority of federal support is used for capital improvements to the existing system and to bring facilities and equipment to a state of good repair.

Federal operating assistance from '05 to '09 is targeted to remain at \$570 million for each of the five years. Federal funding for capital improvements ranges from a request of \$767 million in '05 to \$939 million in FY '06, then down to \$767 million in FY '09, as the railroad catches up with deferred maintenance needs.

Infrastructure Production

Amtrak continues to strive to address the backlog of investment needs. The infrastructure component of the five-year plan maintains its focus on reaching a state of good repair, at a total cost from FY '05 to FY '09 of \$2.1 billion. This involves

May Marks Fourth Consecutive Month of Record Passenger Ridership

Amtrak ridership continued its record march through May as the railroad served 2.2 million passengers — the best May result in history. This is the fourth month in a row that Amtrak surpassed its best ridership total and puts the railroad on track to finish the year serving a record 25 million passengers.

The 2.2 million passengers reflect a growth of 4.4 percent over May one year ago. Year-to-date, with 16.5 million trips recorded, ridership exceeded last year's figure by 6 percent (the fiscal year ends Sept. 30).

Ticket revenue of \$108.4 million in May was 3.4 percent over last May's ticket receipts. The number

fell short of the FY '04 budget target by only 1 percent. This brought the year-to-date ticket revenue tally to \$830 million — 6 percent over last year and 1 percent better than the budget target.

Overall, short-distance train service did well in May, with ridership and revenue figures exceeding both FY '03 results and FY '04 goals. Due in part to changes in the spring schedule, *Acela Express* recorded a 13-percent increase in ridership over last May and a 12-percent increase against this year's budget target. Ticket revenues on *Acela* were also up about 14 percent from last year and up 12 percent against the budget target.

The Empire Builder Celebrates 75 Years

Senator Patty Murray (D-WA) is joined by Rep. Jim McDermott (D-WA) and many others as they kick off the *Empire Builder's* 75th anniversary at the King Street Station in Seattle on June 11. An estimated 300 to 400 people filled the station to wish the train a happy birthday.

See collage inside for more commemorative photographs.

Photo credit: Jeff Schultz, WSDOT Rail Office

TRAIN OF THOUGHT

Last month, I took part in some of the many celebrations associated with the 75th anniversary of the *Empire Builder*. People from all over attended events along the route and rode the train to celebrate the anniversary.

But it was much more than a birthday party. For some, it was a commemoration of the history that the railroad has in their families and communities, for others it was recognition of the value the train brings to the community.

The events underscored the importance of making passenger rail available to these communities. In Seattle, the eastbound *Empire Builder* anniversary was launched by Sen. Patty Murray, Rep. Jim McDermott and about 300 to 400 others. While I wasn't there, I understand that the passionate speeches from Sen. Murray and Rep. McDermott and other Amtrak supporters were energizing.

Before I boarded the train on June 11 in Chicago, I had an opportunity to meet some Chicago employees and passengers who filled Lounge G to kick off the festivities.

Starting in Chicago, there were events packed with a lot of people at nearly every stop along the route. Most of the events were sponsored by Amtrak in partnership with communities and local advocacy organizations. But some of the celebrations were planned by the communities themselves, with no formal planning or coordination with Amtrak.

The train consist included the historic dome car used on the *Empire Builder* when it was part of the Great Northern Railway in the 1950s. It's a very special car and the last one we own. On board, train enthusiast and artist Craig Thorpe signed commemorative posters (you can get some via the Amtrak store) of his rendering of the *Empire Builder* for invited guests, advocates, public officials and passengers.

At the platforms and stations we were greeted by governors, lieutenant governors, members of Congress, mayors, state legislators, local businesses and members of the community who showed their support for Amtrak and its long-distance trains. Some, like Wisconsin Gov. Jim Doyle and Montana Lt. Gov. Karl Ohs, rode with us on the train. There were proclamations, special exhibits, lectures from historians and many activities taking place. One of the proclamations was read by the mayor of La Crosse, who in the spirit of the event, wore a suit and a top hat.

In Williston, we were met by a crowd of people — it seemed as though half the town was there — that we weren't expecting. They created their own event.

The National Park Service had a big event at East Glacier, with Black Feet Tribe members and many others. In the spirit of nostalgia, the park service also had a line of its old passenger shuttle buses lined up at the station.

David L. Gunn

Whitefish was the biggest event along the route. Even though we arrived an hour and a half late at 10:30 p.m. (a freight train broke a knuckle), it seemed as though most people were still there. In fact, the engineer blew the horn to make certain people cleared the platform.

I met many interesting people on the *Empire Builder*. I met newlyweds — a former Conrail division engineer and model train store clerk — on their honeymoon. I invited a kids' church group that was headed from Minot to Seattle to work at a homeless shelter to visit the dome car.

It's inspiring to see the support we have across the country. While fanfare and cake may bring people together, it's the railroad that binds them. For many, it's the best alternative to get to their destination. For some, it's the only alternative. It's true for the *Empire Builder*, just as it's true for our other long-distance trains.

Amfleet Overhaul Program on the Move

The Amfleet Coach car heavy overhaul program is well underway at the Bear Car Shop this fiscal year, with the completion of 31 Amfleet I and 14 Amfleet II Coach overhauls through June 2004. By the end of the fiscal year, 47 Amfleet I and 20 Amfleet II Coaches are scheduled to be overhauled completely.

The overhaul process for the Amfleet I and II cars is essentially the same — the Amfleet Is, built in the early 1970s, and Amfleet IIs, built in 1981, were last overhauled between four and six years ago.

This year, a push-pull modification is being installed for the first time on the Amfleet II coaches to enable

the cars to operate with either an electric or diesel locomotive on one end and a cab car on the other end. This modification already exists on a number of the Amfleet I cars and will be installed on those undergoing overhaul this year.

Each overhaul involves improvements that will better protect the cars from freeze damage.

"A number of steps are being taken during the overhaul process to help prevent a repeat of last winter's equipment shortage that resulted from days of sub-freezing temperatures," said Bear Superintendent Tom Butler. The heat tape, which wraps around and protects the water fill lining in the

restrooms and sink areas, is being replaced. Additionally, the drain and threshold heaters are being replaced to protect those areas from freezing and to prevent snow and ice from building up and forming around the side doors.

"The water dump valves, which drain the water from the car when the ambient air temperatures reach approximately 39 degrees, are also being rebuilt," added Butler.

"Overhauls are performed every four years to coincide with each car's Federal Railroad Administration mandated maintenance visit, known as a COTS (clean, oil, test, stencil), in which the control valves on the air brakes are cleaned,

Annual Update of Five-year Plan Released

continued from page 1

carrying on the work begun last year, such as rehabilitating the track and interlockings, replacing old and failure-prone bridges, replacing the signal system that dates back to the 1930s, replacing the transformers (see story in this issue of Ink) and completing the New York Tunnels Fire and Life Safety project.

Infrastructure production is at its highest levels in over 20 years, and capital investment in this area in FY '04 is two-thirds higher than in FY '03. The progress this fiscal year includes the reconstruction of five interlockings on the Northeast Corridor, including the Harrisburg Line; installation of 181,000 concrete ties; undercutting of over 50 miles of track and replacement of 100 miles of track. More than 1,600 bridge ties are scheduled to be replaced, and 23 undergrade bridges upgraded. The Communications and Signals teams are busy improving and upgrading signals on the Northeast Corridor and in the Central Division, and the ET department is slated to complete the installation of over 80 miles of catenary hardware to replace 65-year-plus-old apparatus, among other objectives.

Fleet Improvement

The five-year plan for the fleet calls for investment of nearly \$1.5 billion over the course of the next five years, and comprises a total of over 800 overhauls and 600 remanufacturings. In addition, eleven coaches will be converted to cab cars. The wreck-repair program assumes repair on 20 passenger cars and 6 locomotives annually. The railroad continues to retire old locomotives and coaches that are costly to maintain, such as the Heritage cars, and plans to replace Auto Train's aging auto carriers with 80 new ones.

Amtrak's effort to improve fleet availability and reliability established in last year's five-year plan progresses. Unlike years past, the railroad's backshops in Wilmington and Bear, DE, and Beech Grove IN, now focus on programmed heavy overhaul and remanufacturing work, as well as wreck repair. A revised Service and Inspection schedule also improves preventive maintenance of the fleet. As this work proceeds, Amtrak is beginning a fleet standardization program that minimizes the many kinds of car types, ultimately eliminating the rainbow fleet look and feel that has developed over the years.

In FY '04, over 100 heavy overhauls and remanufacturings of passenger cars are taking place. Locomotives undergo heavy maintenance in the backshops, as part of a national and coordinated maintenance program. Seven AEM-7s and nearly 50 diesel locomotive overhauls are also slated for this fiscal year. In addition, four locomotives will be converted to switch engines, and 10 new switchers will join the work train fleet this calendar year.

System Support

The System Support segment of the five-year plan depends on nearly \$400 million in funding. System support consists of the functions of Amtrak departments such as Environmental, Marketing and Sales, Procurement, Finance (including Amtrak Technologies), Transportation and the Amtrak Police that sustain and streamline the core activities of the railroad.

Corridor Development

The second part of the five-year plan describes how, for the past year, Amtrak has worked with representatives from numerous states to analyze rail corridors, their congestion and capacity challenges, and their capital investment needs. Amtrak's role was to help develop near-term investment plans with associated benefits for each corridor and highlight those that are 'ready-to-go' to receive federal capital funding. The result of this effort is a proposal that presents a unified approach to a corridor initiative, one that also has a goal to increase corridor speeds and provide more frequent service.

The plan includes corridors that have full support of state and local policy-makers. The corridors have detailed capital and operating plans, and are approved by the host railroads. What's missing is the availability of matching federal funds.

"What we found was a number of states that are ready, willing and

able to make immediate capital improvements to decrease trip times, add capacity and improve reliability," said Strategic Planning and Contract Administration Vice President Gil Mallery, whose department conducted the study.

Last year, the Bush administration called for federal and state partnerships to develop passenger rail. While Amtrak has questioned other elements of the proposal, it plans to support these partnerships by working closely with the states to win federally matched capital investments. Ridership in existing corridors is growing from 17 million in 1999 to a projected 21 million in 2004.

Working together, Amtrak and the states evaluated those corridors that met Tier I criteria and their potential for future development. Tier II corridors met more than half the criteria. The criteria served to measure and analyze the stage of development and include elements such as a long-term master plan and a near-term investment plan that includes a market forecast, operating expense forecast, infrastructure investment plan, equipment investment plan, host railroad acceptance, agreement to fund a 20-percent match and an agreement to cover any operating deficit for new frequencies.

"While this proposal is contained in Amtrak's strategic plan, it reflects what the states have told us they want and need. We're joining with them in recommending that federal support go toward the development of these corridors. This puts all the information together in one document," Mallery added.

"What we found was a number of states that are ready, willing and able to make capital improvements to decrease trip times, add capacity and improve reliability,"

Gil Mallery
Vice President, Strategic Planning and Contract Administration

A corridor is defined as existing routes that run up to 500 miles, with multi-frequency day service that connects metropolitan regions. The service offered would have to be convenient and time-competitive with other modes, such as car or air travel. Ideally, the corridor is also a piece of the intermodal pie, linking to other modes, such as transit and airlines.

The eight Tier I corridors are located in Pennsylvania (Harrisburg - Philadelphia), North Carolina (Raleigh - Charlotte); Wisconsin

(Chicago - Milwaukee - Madison); Illinois (Chicago - Springfield - St. Louis); Oregon and Washington (Eugene - Portland - Seattle); and California (three: San Diego - Los Angeles - Santa Barbara - San Luis Obispo; San Jose - Oakland - Sacramento - Auburn; and Oakland/Sacramento - Bakersfield).

The four Tier II corridors are Boston - Portland, ME; Washington, D.C. - Richmond, VA; Chicago - Detroit, MI; and Seattle - Vancouver, B.C.

Threats to the Viability of the Railroad Industry

The Strategic Plan also highlights a serious vulnerability in the national rail network. Increased freight traffic, with its concentration on a limited number of routes, and the absence of adequate cash flow to sustain necessary track programs all result in a capacity crunch and growing number of delays to intercity passenger trains on both long-distance routes and corridors. Complicating this issue is the fact that, as a result of cost-cutting measures, the freights are abandoning and downgrading secondary lines.

"There's more traffic, fewer lines, and no wiggle room," said Chief Operations Planning Officer Ralph von dem Hagen. "And it's really wearing on the entire system."

The country's railroad network is increasingly strained, both in terms of congestion and the condition of its infrastructure. Over the last 20 years, the amount of track owned by freight railroads has dropped to 170,000 miles from 271,000 miles. At the same time, the loads carried by the freights have grown to

286,000 pounds per freight car from 263,000 pounds per car. Freight railroads currently carry 40 percent of intercity freight and traffic on the shrinking network is expected to grow 40 percent by 2020.

To address this problem, in the third and final section of the five-year report, Amtrak recommends that the federal government take the lead in working with states and the freight railroads to fund a program of matching investments

Northeast Corridor Transformer Replacement Project Has Traction

The aging electrical network of Amtrak’s Northeast Corridor infrastructure is among the railroad’s greatest vulnerabilities when it comes to reliable train service.

However, to counter this problem, the Electric Traction (ET) department is in the process of replacing 70-plus year-old traction power transformers along the 220 miles of track between Washington, D.C., and New York as part of Amtrak’s Five-year Strategic Plan. One hundred power transformers are planned for replacement by 2008, at a cost of

over \$50 million. The new and more efficient units yield Amtrak up to \$10,000 per unit per year in energy savings.

The transformers, which lower the Amtrak-owned transmission electrical system voltage of 138,000 volts to the 12,000 volts required for catenary power, enable electric trains to operate on the railroad. Amtrak owns and maintains between two and four transformers in substations (depending on the power needs of particular segments

of track) located every seven to 10 miles between Landover, MD, and the portals of the Hudson River tunnels in New Jersey that lead into Penn Station.

The Perryville substation crew moves a new transformer onto its base for permanent installation.

First installed in 1933 as part of the original electrification of the railroad, these aging 130,000-pound transformers are beginning to fail and require replacement. Because of their age, the transformers and components require frequent maintenance. For example, the seals dry out and leak oil, and the antiquated interior mechanisms break down.

“Over the years, ET forces have maintained the units with stopgap measures. The new transformers

The 102,000-pound transformers are transported on 120-foot-long, specially designed low bed delivery trailers. The railroad will replace 22 old transformers this fiscal year.

and auxiliary equipment significantly reduce the frequency and level of maintenance we have to perform,” said Bill Carney, senior engineer ET Design.

As of June, 14 of the new 102,000-pound transformers — six in the New York Division, and eight in the Mid-Atlantic Division — have been placed in service this fiscal year. The New York Division ET team, under the leadership of the Division Engineer Steve Falkenstein and Assistant Division Engineer Brian Button, completed the installation of six units in five substations in New Jersey, including one that is also part of a New Jersey Transit Morrisville Yard project.

The Perryville and Baltimore substation forces, under the direction of Mid-Atlantic Division Engineer Joe Guzzi and Assistant Division Engineer Walt Foura, installed eight traction power transformers so far this fiscal year. Another eight traction power transformers are scheduled for installation in both divisions by the end of the year.

The installation of the transformers also involves the replacement of other components that are part of the entire transformer package, with more reliable and efficient auxiliary parts. The new solid-state relay protection systems are computer-driven rather than mechanically driven, and can automatically take the transformer offline before catastrophic damage occurs. The existing two-pole, oil-filled breakers, which required constant maintenance, were replaced with a modern vacuum breaker that requires minimal maintenance after 400 automatic openings, whereas the old breakers had to be overhauled at least 10 to 12 times each year. In addition, the 138,000-volt disconnect switch on the primary side of the transformer

was replaced with modern disconnects and motor mechanisms that require much less upkeep.

As with other sectors in the railroad supply industry, many of the manufacturers that provided the Pennsylvania Railroad components for its electrification project some 70 years ago are either no longer in existence, or don’t build transformers that meet the current needs of Amtrak. Consequently, the Amtrak ET Design staff, lead by Mike Insogna, technical director ET Design, developed a modern specification and identified technically qualified manufacturers for the production of the transformers.

This story contributed by Robert Verhelle

Renovation Begins at Chicago’s Metropolitan Lounge

Work has begun on the renovation of Chicago Union Station’s Metropolitan Lounge. Originally built in 1991, the lounge currently seats 80 and is being expanded to accommodate 140 passengers and provide additional luggage storage space. During construction, which began June 16, the Metropolitan Lounge is temporarily located adjacent the station’s large waiting area, known as the Great Hall. The cost of renovation, including new furniture, is budgeted at \$450,000.

Amfleet Overhaul Program on the Move

continued from page 2

oiled, tested and stenciled with the maintenance completion date,” said Assistant Superintendent James McDowell.

To accomplish this and other under-carriage work, the car is lifted about four feet high. While the car is in the raised position, the trucks are removed and taken to Bear’s truck shop where they are inspected and overhauled with rebuilt disc and tread units, new wheels, hoses, speed sensors and electrical wiring.

Over a 17- to 18-day period, pipefitters, car repairmen and electricians work together in several stages to complete each overhaul. When the car arrives at the facility, the seats are removed and taken to the Bear seat shop where they are overhauled with new recline mechanisms, snack tables and plastic coverings.

During the overhaul process, the main 480 trainline cable, heating and air conditioning control panels, air conditioning units, door operators, door control panels, batteries, weather stripping, windows, couplers and their components, diaphragms, carpet and cushions in each car are also replaced.

A disaster lighting modification was incorporated into this year’s overhauls. The 12-volt disaster lighting is designed to work during

a power outage and an emergency lighting failure. When the power in the car shuts off, the battery-operated emergency lighting comes on. If the main car batteries become disabled, disaster lighting, which has its own battery and power source, is activated.

At a forecasted cost of \$217,000, each Amfleet I overhaul requires approximately 2,000 hours to complete and is performed by approximately 50 employees. To complete an Amfleet II Coach overhaul, forecasted at \$219,000, 22 employees work a combined total of 2,250 hours. After all the components are reinstalled and required tests are performed, the Amfleet Coach is cleaned and returned to service.

The overhaul process is also the railroad’s opportunity to continue to standardize the look and configuration of its fleet. The primary difference between the interior blueprint of the two types of cars is that the Amfleet II Coaches were designed for long-distance travel with fewer seats that recline farther and larger windows than the Amfleet I cars, which primarily operate on short-distance Northeast Corridor routes.

Within each of the Amfleet I and II fleets, however, many styles, seating

capacities and configurations exist. To standardize the fleets’ interior appearance, the cars overhauled this fiscal year will be the first to display one Amfleet I configuration, which seats 70 to 72 passengers, and one Amfleet II, which seats 60.

In June, Bear mechanics completed overhauls on Amfleet I cars 82536, 82537, 82538 and 82504 and Amfleet II cars 25065 and 25098.

Mechanics Bruce Barr, Chuck Ballard and Steve Lombardi remove a coupler while overhauling Amfleet I Coach 82071 at the Bear Car Shop.

Keeping with the TEMPO

The Buzzard Run band plays in a packed Texas Eagle Lounge car during a weekend live music pilot. (L. to R.) Brenda Allen, David Kimbrough, Dennis Graves, Ed Hagan and Bernard Allen.

Texas Eagle passengers were serenaded aboard the train over the course of a weekend in May. The Buzzard Run Band, a Missouri bluegrass band, performed in the Lounge car on the Texas Eagle two hours in the morning and afternoon, in each direction between Longview and Austin. The band

played as part of a pilot sponsored by the Texas Eagle Marketing and Performance Organization, to see how passengers respond to live entertainment aboard the train. Band member Dennis Graves, also a TEMPO member, suggested the performance pilot.

Impact of Equipment Shortage Felt in Second-quarter Passenger Comments

During the second quarter of the fiscal year, January through March, Amtrak passengers sent 37,000 letters, phone calls and e-mails to the railroad about its service — 97 percent of them complaints. This amounted to about one complaint registered for every 100 passengers during the quarter.

Compared to the same period last fiscal year, there was a 15-percent increase in commendations and a 16-percent rise in the number of complaints.

The railroad typically receives more comments from passengers in the second quarter — 5,000 more than the first quarter — following the busy holiday travel periods in November and December and as a result of adverse winter weather conditions.

Second-quarter complaints about areas such as on-time performance, the equipment, and personnel, were

22 percent higher than the same time period last year. Just under half (42 percent) of the comments received from passengers in this period were related to on-time performance. In January alone, the harsh winter weather conditions contributed to an OTP of 69.5 percent. While OTP rose to 73 percent by the end of March, it was still below the 85 percent OTP goal.

The five most often-registered complaints about Amtrak’s equipment were related to the restrooms, climate control, unsatisfactory accommodations, unavailable accommodations and the general cleanliness of the train. Equipment complaints comprised 20 percent of all passenger grievances.

“Last winter was a tough one for Amtrak,” said Senior Vice President of Operations Bill Crosbie. “We learned some hard lessons and have taken some steps to

better prepare our fleet for these conditions next winter.”

One such step is to convert old GP-40 switch engines to GP-38-3s with working head-end power, which will keep cars from freezing while being switched. In addition, freeze protection equipment is being repaired, upgraded, and installed on Amfleet Is and IIs, Horizon and Viewliner cars. The

company also has plans to replace worn-out door motors that contributed to the equipment problems last winter.

Of the 37,000 comments received by the Customer Relations department last quarter, 81 percent were by phone, 14 percent through letters and 5 percent via e-mail messages.

Amtrak Strives to Improve Performance with its Railroad Partners

Editor's Note: This is the third in a series of stories that describes Amtrak's day-to-day relationships with its railroad partners.

In light of an often-challenging rail environment over which Amtrak trains travel, with increasing inter-modal traffic, heavy congestion, and significant track work disruptions, Amtrak divisions put forth a concerted effort to build and maintain solid relationships with their host railroad partners. Day-to-day communications between Amtrak and the railroads is instrumental in strengthening these relationships, improving service and staying abreast of upcoming issues that may affect Amtrak service. At the core of these relationships are contractual agreements, negotiated every five to ten years, between Amtrak and each railroad and governed by the Rail Passenger Service Act of 1970, under which Amtrak was created.

Within Amtrak's Operations Planning department, the Host Railroad group, led by Assistant Vice President Paul Vilter, develops these operating agreements, which are divided into two sections. One section is rights and obligations; the other is compensation. The rights and obligations section delineates Amtrak's right to use the railroad and receive services, and the host railroad's obligation to maintain the rail line at certain speeds and comfort levels. In addition to the administrative and payment provisions, this section also sets forth Amtrak's and the railroad's liability arrangements that designate what each party is responsible for paying in the event of a train incident, such as a grade crossing collision or train derailment.

The compensation section of the agreement outlines the costs Amtrak is required to pay for services provided by the host railroad and performance incentives or penalties that the railroad can earn or pay. According to the Rail Passenger Service Act, Amtrak has a right to operate on any railroad in the United States at incremental costs. These costs, which totaled approximately \$74 million in FY '03, include payments to the railroad for the wear and tear of the rail line caused by Amtrak trains and services provided by the railroads such as watering and fueling cars and locomotives, inspecting brakes and maintaining certain

stations. These types of services are generally provided at small stations or on rural long-distance routes where Amtrak does not have significant staffing, such as Albuquerque, NM.

Compensation paid by Amtrak, in addition to these fixed costs, is based on the quality of service provided by the railroad — which Amtrak defines as on-time performance and reduction in delays — and is described in the incentive section of the contract. Incentives are paid to the railroads on a sliding scale on a route-by-route basis if they move between 81 and 100 percent of Amtrak's trains across their railroad on time during a calendar month. Conversely, if the host railroads deliver less than 70 percent of Amtrak trains on time, penalties are assessed as outlined in the contractual agreement.

The host railroads collectively earned \$25 million in incentive payments during FY '03. However, if every railroad had delivered every train on time, the railroads would have earned \$86 million in incentive payments. "One of the biggest challenges is encouraging the railroads to operate Amtrak trains on time when faced with pressure and greater incentives from their freight customers to deliver on-time shipments," said Senior Director, Contract Management Gary Reinoehl.

"It's a basic conflict over resources," added Vilter. "Their traffic is growing and their capital to expand capacity is limited. In some areas, they do not have enough capacity to handle their own core customers' traffic efficiently."

Operating Crews Learn Host Railroad Rules

Within the framework of these operating agreements, typically, the divisions' and Operations department employees informally communicate with the host railroads on a daily basis to keep the trains operating safely and in a timely fashion over the railroad. To help ensure safe operating practices, Amtrak's Rules department develops annual training curriculums based on the operating practices of Amtrak and the particular railroad over which the crew will be operating.

The *Empire Builder*, for example, operates over the Canadian Pacific railroad between Chicago and Minneapolis, MN, and on the BNSF from Minneapolis to Portland, OR, and Seattle, WA. Crews operating over that route must be trained in both railroads' rules. Similarly, crews operating in the New York Division out of Albany operate over and are required to be qualified in the rules of several different railroads including Canadian Pacific, CSX, Norfolk Southern, Metro-North Commuter Railroad and Amtrak's own Northeast Corridor.

Additionally, Amtrak's road foremen regularly spend time traveling over the host railroads to monitor Amtrak crews and ensure that they are complying with the operating rules and operating plan developed in collaboration with the railroad. The road foremen communicate with the host railroad on a regular basis — sometimes as often as every day — to address issues regarding the safe operation of the trains over their railroad.

Building Bonds Help Build Performance

A number of factors within Amtrak's control impact its ability to operate on time over the host railroads and it is crucial that Amtrak work closely with the railroads to keep the trains on schedule. When Amtrak trains depart their initial terminal late, it affects the schedules of other trains operating on the railroad.

"It also affects Amtrak's credibility when communicating the importance of on-time performance to our railroad partners," said Travis Hinton, superintendent of Operations. "Therefore, we try to do everything possible to ensure that we deliver on Amtrak-related issues." After an on-time departure, it is also important that Amtrak crews stick to the schedule by getting the trains in and out of the stations within the planned dwell time.

Working with the railroads to tackle on-time performance issues has proven successful on some routes and has been a struggle on others, due to a variety of reasons. Many Amtrak employees who work regularly with the railroads agree that in order to maintain

good relationships with the railroads and constantly work toward improving performance, the host railroads' leadership must commit to delivering Amtrak trains on time across their territory. Amtrak President David Gunn meets with his counterparts at the major railroads to foster relationships and reinforce the importance of the railroads' senior management communicating their commitment to Amtrak to their employees in the field.

However, many internal issues such as limited capital for infrastructure improvements, significant business growth that results in capacity issues and crew shortages, can sometimes impede a host railroad's ability to deliver on its pledge.

Some of the most severe delays in Amtrak's system between April 2003 and March 2004 were encountered on the *Sunset Limited* route. Specifically, these delays were encountered in the Southwest Division between Los Angeles and El Paso, TX, due to challenges the Union Pacific is facing with crew shortages and capacity issues. Other heavy delays on this route occurred in the Southern Division between New Orleans and Jacksonville, where CSX also experiences heavy freight congestion and inadequate rail infrastructure. Currently, Amtrak's *Coast Starlight* and *Cascades* routes between Portland and Eugene, OR, are experiencing significant delays, also due to crew shortages on these UP routes.

Although the Pacific, Southwest and Central divisions hold bi-weekly conference calls with the UP to critique and improve performance, the divisions have achieved little success in these locations due to the UP's inability to deliver services as agreed. In addition, Amtrak and UP's frequent disagreements regarding UP's performance in dispatching Amtrak trains make resolution of these issues challenging.

In spite of these difficulties, Amtrak's relationship building has paid off in other territories. The BNSF railroad, with which Amtrak Operations communicates regularly and which handles several lines where Amtrak's western long-distance trains operate, has been very responsive to Amtrak delay-related issues. Typically, when

problems are brought to its attention, the railroad provides feedback and corrective action to address Amtrak's concerns. Of the \$25 million dollars in incentives Amtrak paid to the host railroads last fiscal year, over \$17 million was earned by the BNSF.

Another route on which Amtrak has successfully accomplished performance improvements by working with the host railroad is the City of New Orleans, which operates between Chicago and New Orleans on the Canadian National Railway. Historically, the City of New Orleans had been experiencing frequent delays associated with the CN's dispatching procedures. In November 2003, the Central Division began working closely with Tracy Miller, the CN's newly appointed general superintendent, to improve the performance on that route. Miller has demonstrated a sincere interest in running Amtrak trains on time, and since January 2004, the City of New Orleans has shown noteworthy on-time performance improvements.

Central Division General Superintendent Don Saunders strongly supports the value of building bonds with host railroad partners.

"Building relationships with the railroads is essential to receiving reasonable dispatching of our trains," said Saunders. "When there are concerns regarding the handling of our trains, that bond assists us in determining the root cause of the delay and allows us to work with the railroad to determine better ways they could have handled our train on that particular day."

Host railroad roles are reversed on portions of the New York and Mid-Atlantic divisions, where Amtrak owns and operates the Northeast Corridor over which a number of commuter authorities operate. These divisions have relationships with agencies such as the South-eastern Pennsylvania Transit Authority and New Jersey Transit Rail Operations. From a number of NJT terminals, over 200 NJT trains operate daily over the New York Division's territory.

Every month, meetings between the three railroads are held to discuss operating statistics for the current and past months. "The local operating groups of Amtrak, NJT and SEPTA consider these meetings, which are hosted by each railroad on a rotating basis, to

be a constructive way to interact with each other," said Tom Pyle, superintendent of Operations and Commuter Services.

"Not only do we evaluate any major service disruptions that have occurred, but we also look ahead at the issues we know are on the horizon that will affect either railroad," added Pyle. An example of this is the extended weekend track outages taking place this summer at the Morris Interlocking in Pennsylvania. Amtrak's Engineering department is rebuilding the interlocking with concrete turnouts, crossovers, rail renewal and catenary.

For the last ten years, Amtrak's New York Division has also been conducting bi-monthly meetings with CSX and Metro-North railroads, a collaboration known as Partners in Performance. Initiated by Amtrak about ten years ago, the meetings have proven successful in improving communications and resolving operating problems. Metro-North's management staff joins Amtrak during these meetings. Partners in Performance meetings held with CSX include non-agreement covered as well as agreement-covered employees,

including train dispatchers, engineers and conductors.

Regular meetings, conference calls and day-to-day communication between Amtrak and its railroad partners take place throughout each of Amtrak's Divisions. Although these methods may not consistently result in significant operating improvements, in the long run both Amtrak and the host railroads benefit from fostering these relationships.

"The value of rail, whether it's freight or intercity passenger rail, is a vital component of the country's transportation system and economy," said Senior Vice President of Operations Bill Crosbie. "The stronger the bond between the railroads, the better potential for a viable and thriving national rail network."

Burlington Northern Santa Fe's P811 track renewal machine hauls concrete ties to an Oregon work site.

Business Diversity Offers New Refresher Diversity Training Schedule

Amtrak’s Business Diversity department kicked off its most recent round of Diversity Training refresher classes for management employees last month. Implementation of the program started in June with sessions held in Boston and New York, and by the end of June, training was also completed in Chicago, Philadelphia, Wilmington and Washington, D.C. Training will be scheduled throughout July and August in Los Angeles, Oakland, New Orleans, Jacksonville and Seattle.

Amtrak’s Diversity Training program makes clear the corporation’s position on diversity and provides employees the background and information necessary to work successfully in a diverse environment.

This year’s refresher training program has been modified from last year’s in two ways. First, the management course has been changed so that it is appropriate for new hires and those who never received refresher training since the

initial training in 2000. There has also been a version customized for all members of the Amtrak Police Department, which is offered separately, where feasible.

At the end of August 2003, the Business Diversity training target audience of 2,146 management employees had all attended refresher training. “The awareness and understanding of diversity has noticeably permeated the entire organization,” said Kevin Marshall, director of Employee Diversity. “There is today a greater value placed on the concept of diversity, compared to the years prior to the initial training in 2000.”

For management employees who have never attended refresher training, class attendance is mandatory. Management employees who have not yet been scheduled should check with their supervisor to sign up for a class.

Scheduled to be available at the beginning of FY ’05, an online training course is also being developed by the Business Diversity department. The interactive Web-based course will be available on the Intranet and will communicate Amtrak’s expectations regarding discrimination and harassment issues. The course will be used for remedial training and will coincide with corrective or disciplinary action.

And in yet another effort to focus on diversity, the Business Diversity department in April released a revised Anti-Discrimination and Anti-Harassment Policy that,

although maintains the essence of the original policy, now provides clarification regarding the types of behavior deemed problematic and more information on the process for filing and addressing a complaint. The revised policy is available on the Amtrak Intranet, under Library/Policies/Amtrak Policy and Instruction Manual.

Employees who don’t have access to the Amtrak Intranet or have questions about the policy, may contact the Business Diversity department Hotline by calling 1-877-351-8338.

“The awareness and understanding of diversity

has noticeably permeated the entire organization.

There is today a greater value

placed on the concept of diversity,

compared to the years prior to the initial training in 2000.”

Kevin Marshall
Director, Employee Diversity

May Marks Fourth Consecutive Month of Record Passenger Ridership

continued from page 1

Regional train service in the Northeast continued an upward trend in May, with ridership numbers that exceeded last year’s by nearly 10 percent and above the budget target by nearly 3 percent, while revenue increases kept pace with ridership figures. Ridership and ticket revenues on West Coast corridor trains also performed well. *Pacific Surfliners* recorded a remarkable 17-percent increase in ridership over last May and nearly 12 percent better than the budget target. The *Cascades* also performed well, going nearly 10 percent over last May and close to 4 percent over budget target.

Chicago hub routes performed well, although the *Wolverines* fell short of the budget target by 8 percent. Both ridership and ticket revenue numbers in May for the *Downeaster*, the *Carolinian* and the *Piedmont* fell below last May’s numbers and below this year’s budget target.

Ridership and ticket revenues for long-distance trains on whole were down compared to a year ago and budget, hampered by equipment

constraints, on-time performance and summer track work. Contributing to this drop is the temporary service cancellation of the *Silver Meteor* due to CSX track work through July 6. Despite the demand shifts to the *Silver Star* and to the *Palmetto*, the cut in service cost the company about \$1 million in lost ticket revenues in May alone.

The total market performance of the long-distance trains continued to be affected in June, as track work impacting the *Capitol Limited*, *Silver Meteor*, *California Zephyr* and other services continued.

“Track work affecting our long-distance service has proved to be

an exceptional challenge for Amtrak this summer,” said Barbara Richardson, vice president of Sales and Marketing. “We recognize the long-term benefit for our passengers, but in the short-term it has held us back this summer.”

On-time performance continues to adversely affect passenger ridership on some routes. The *Sunset Limited’s* ridership in May was about 30-percent below both last

year and budget target, as on-time performance for that train has been at zero percent for three consecutive months (March ’04 through May ’04). May OTP for all Amtrak was at 73 percent (versus 76 percent last year); for long-distance trains it was 38 percent (versus 46 percent last year); and 75 percent for short-distance trains (versus 80 percent last year).

“Track work affecting our long-distance service

has proved to be an exceptional challenge

for Amtrak this summer,”

Barbara Richardson
Vice President, Sales and Marketing

Ridership and Ticket Revenue for May 2004

Month of May	FY’03/Actual	FY’04/Budget	FY’04/Actual
Ridership	2,104,916	2,186,303	2,196,559
Ticket Revenue	\$104,843,586	\$109,937,794	\$108,426,009
Fiscal Year-to-date	FY’03/Actual	FY’04/Budget	FY04/Actual
Ridership	15,569,283	16,171,429	16,526,894
Ticket Revenue	\$785,262,177	\$820,108,084	\$830,241,941

Federal Rail Security Pilot Screens Baggage

The federal Transportation Security Administration began testing checked baggage screening at Washington Union Station on a small number of long-distance trains in June as the second phase of its Transit and Rail Inspection (TRIP) program. The test was expected to conclude June 30.

Through TRIP, the TSA is testing and evaluating the use of various security technologies and protocols for possible use in passenger

rail. Federal security officials expect the tests will provide them with better information about the practical benefits and possible obstacles to screening rail passengers and their baggage.

The first phase of TRIP was the test screening of passengers for explosives at the New Carrollton rail station in May. Amtrak and MARC passengers were screened as they passed through a portal that detects traces of explosive mate-

rials, and their carryon items were screened for explosives through an automatic x-ray machine.

Preliminary results from this test show that the equipment worked well, and that public acceptance of the test was good. In fact, some passengers asked for “compliment cards.”

The second test at Washington Union Station screened long-distance checked baggage for explosives, as well as items placed in temporary storage, unclaimed baggage and express cargo.

“While Amtrak and transit agencies have security measures in place, none of these security screening processes had been tested on the railroad before,” said Don Thompson, Director of Passenger Security at the TSA.

Signage at Washington Union Station's ticket counter advises passengers checking their bags about the screening process.

“The TSA sincerely appreciates the hospitality and cooperation of numerous Amtrak employees who helped make this pilot project a success,” he added.

Amtrak continues to work very closely with the Department of Homeland Security and the TSA on matters of rail security.

Activity Book Keeps Kids Busy On Board

As Amtrak returns to a back-to-basics approach to marketing and on-board service, the company has reintroduced a totally redesigned children's activity book. The new 24-page, full-color book is designed to generate interest in train travel for children in the six- to 11-year age group. The complimentary book will be available for distribution in Lounge cars on board all long-distance trains by August.

Amtrak's last activity books were created in the late '80s, however when supplies were exhausted, budget shortages prohibited ordering additional books.

To get input for the new book, Amtrak held its first-ever focus group meeting with children. The informal meeting was held with children of Amtrak employees in Washington, D.C., on April 22. Based on the feedback received from the kids, the appearance of the book was changed so that it looks less like a textbook. Additionally, other kids' activity books were reviewed by the agency with which Amtrak worked, for guidance on what stimulates kids' interest.

“The Amtrak activity book offers a great opportunity to communicate to our younger passengers through visuals and games and will make their train travel fun,” says Linda Park-Verdi, Marketing Operations Support. “It uses graphics, games and fun facts that are educational, interesting and informative. Not to mention the fact that it serves as a great tool for parents to keep their kids engaged.”

Children account for more than 60 percent of family travel decisions and families choose to travel on Amtrak because it is a good value and offers an enjoyable experience. In FY '03, nearly 954,000 children traveled on Amtrak — divided almost evenly between long-distance and short-distance trains and generating almost \$22.5 million in ticket revenues.

Some of the book's activities include “Brain Strain on the Train,” “Learn to Read a Timetable,” along with crossword puzzles and word scrambles.

Amtrak Route Guides Return to Long-distance Trains

On-board Resource Welcomed by Passengers

Back by passenger demand, Amtrak's Route Guides are once again found on board long-distance trains. Continuing its effort to get back to basics in its marketing initiatives and on-board services, Route Guides will soon be aboard all 16 long-distance trains (including the *Vermont*, the *Ethan Allen*, the *Adirondack* and the *Pennsylvanian*). Updated guides are currently available on the *California Zephyr* and the *Southwest Chief* and will be available for distribution on board the remaining long-distance trains by the end of the summer.

By providing historic facts and information about landmarks and scenic photo opportunities in areas through which the trains travel, the guides enrich the trip experience for passengers and position Amtrak as a unique mode of travel. Each guide also includes a map that lists all the stations on the route along with milepost locations and a panel timetable with scheduled times.

Amtrak's previous train-specific Route Guides were available on board long-distance trains about 10 years ago. However, due to budget constraints, printing of the route guides was discontinued.

The updated route guides will be placed in each Sleeping car room and will be available in the Lounge car for coach passengers to pick up. They will also be distributed to select stations along each route, as well available to customers through amtrak.com.

Empire Builder Celebrates 75 Years of Service

Annual Update of Five-year Plan Released

continued from page 3

to improve capacity for key segments of the freight railroad network. These investments would not necessarily be limited to lines on which Amtrak operates, but would be based on a series of factors to target the segments of the system most in need of work.

"Amtrak has a unique perspective on this issue, because our trains travel over all of the railroads, every

day," said Paul Nissenbaum, assistant vice president, Strategic Planning and Contract Administration. "What we are concerned about is that there are large segments of our route system that could be lost to downgrading or outright abandonment. These actions would not only affect passenger train operations, but could have severe impacts on local economies — and this needs to be addressed."

Nissenbaum added that identifying ways to bolster the national railroad network is a work in progress and that Amtrak plans to continue to further develop the concept. "We're just getting started on this, but this is an important issue to tackle because if ignored, it will adversely affect rail passenger service and the nation's economy."

Despite the accomplishments Amtrak has achieved over the past two years, risks still exist. "Our progress has been incremental and steady, thanks to the hard work of Amtrak employees across the country, to rebuild plant and equipment and to improve service for our passengers," said Gunn. "But the whole network would be jeopardized if we are underfunded, suffer a major system failure or some other calamity beyond our control."

The plan is available on the Web site at amtrak.com/press

Schenectady Station Upgrades Vitalize City Gateway

Members of the Schenectady, NY, community celebrated improvements made to the rail station. The upgrade was made possible with donations from local businesses and individuals in the past year totaling more than \$7,500. The funds, raised by the Chamber of Schenectady County, were used to purchase new decorative planters, interior artwork, murals and benches for the rail platform.

Plans to continue the renewal of the station include a new roof, a display of historic items and other enhancements.

Sports Marketing Gears Up with Summer Promotions

Amtrak Sweepstakes Match Fans with Tennis Legends

As part of the sports marketing summer program, tennis fans may win a trip to New York to attend the U.S. Open Tennis Championship and share a suite at the game with a tennis legend, by entering the "Express to the Open" sweepstakes. Launched on June 14, the sweepstakes offers four grand-prize winners round-trip transportation to the U.S. Open on *Acela Express* or *Metroliner*, shuttle service to and from the USTA National Tennis Center, hotel accommodations and a pair

of luxury suite tickets to the championship on Labor Day.

Amtrak Guest Rewards, members who sign up to participate by phone or online will automatically receive a sweepstakes entry for every completed trip on *Acela Express* or *Metroliner* trains between June 14 and July 23, 2004. Others can enter the sweepstakes by mail or by visiting amtrak.usopen.org. Only two entries per day by any method will be accepted. The sweepstakes is open to residents in Connecticut, Delaware, Massachusetts, Maryland, New York, New Jersey, Pennsylvania, Rhode Island, Virginia and Washington, D.C.

Amtrak and the 11th Caller Win Big with Miami Radio Promotion

An investment of approximately \$250 in round-trip train tickets resulted in nearly \$40,000 in radio advertising for Amtrak during the "Baseball at the Bay" Father's Day promotion held in early June. Amtrak Southeast Marketing and Sales partnered with the Florida Marlins and Miami's Clear Channel Radio WBGG to offer listeners a chance to win tickets to the Marlins versus Tampa Devil Ray's baseball game held in Tampa on June 25. In addition to tickets to the game, two winners received round-trip transportation on Amtrak and hotel accommodations at an Amtrak Vacations Best Western hotel.

Amtrak Machinist
Recognized for Eagle Eye

Luis Gomez, a Caltrain machinist in San Jose, CA, was presented with the facility's Eagle Eye Award for discovering sheared shroud bolts and cracks in the main engine cooling fans on MP 36PH-3C locomotives. Discovered while Gomez was performing scheduled preventive maintenance, this defect could have caused serious damage and injury, had it not been identified and repaired quickly.

Machinist Luis Gomez (center) accepts an Eagle Eye Award from Mechanical Assistant Superintendent Iosif Ivan on May 14, 2004. Richard Campbell (left) is Gomez's general foreman at the Caltrain facility in San Jose, CA.

Five similar locomotives, all less than a year old and still under warranty, were inspected following the discovery. One additional locomotive was found to also need repair. Both units were immediately pulled from service until replacement parts were obtained and installed. As a precaution, the remaining 23 locomotives in the fleet were inspected for similar defects, without incident.

Empire Engineering
Department Receives
Safety Recognition

Whether building new infrastructure, maintaining buildings and the right of way or fighting snowstorms, the New York's Empire Engineering department subdivision has gone over 460 days through May 2004 without an FRA-reportable injury.

New York's Empire Engineering subdivision is recognized with an Engineering Excellence Award for their safety achievement – over 460 days injury free through May 2004.

FRONT LINE FOCUS

Dear Amtrak:

I wish to compliment Amtrak on its good service during my travel to central Illinois this past month.

In particular, I wish to make special mention of one of your dining car employees who works as a server. Meg Collins worked the dining car from Seattle to Chicago on train number eight.

Everyone that shared the tables she was serving had nothing but praise for the way she did her job. She seemed to set a happy mood for the whole car. This I have seldom encountered on Amtrak or anywhere else.

I believe in giving credit where credit is due. And that is certainly appropriate in the case of this good employee.

Ben J.
Fox Island, WA

Dear Amtrak:

Rob Brown, a Pittsburgh terminal employee in Customer Service restored my confidence in Amtrak. Rob works the midnight shift, 11 p.m. to 7:30 a.m. I was very concerned and anxious when I called to inquire about train #40. I told Rob that I had called a cab company to pick up my son. After several calls between Rob, the cabby and myself, I was much more relaxed and awaiting my son's arrival at 4:30 a.m.

My son arrived on time. Rob assisted my son and was very friendly and welcoming. My son told me he was amazed that everyone is so friendly and knows him by name.

I feel that Rob went above and beyond the call of duty by putting a concerned parent at ease. I would love to know that a person of his caliber and integrity is recognized by the company he represents at four in the morning.

Thank you for employing such helpful people.

Marci K.
Bentleyville, PA

APD Runs with the Torch

Seven members of the Amtrak Police Department assemble at the Washington, D.C. office before participating in the 19th Annual Special Olympics Law Enforcement Torch Run in June. The APD was one of 40 federal and local law enforcement agencies involved in the run that benefited the local chapter of the Special Olympics. Pictured are (L. to R.) Sgt. Thomas Cook, Officer Kevin Dauphin (in front), Officer Rodney Chambers, Officer Brenda Rivera, Officer Eugene Simms, and Security Officer Maurice Jackson. (Not pictured is Officer Victor Paz.)

Amtrak To Acquire New Commercial Motor Vehicles

Before a brand new waste disposal truck rolls off the assembly line and is delivered to an Amtrak work site, there are a surprising number of steps that are taken to make the acquisition. This multi-stage process is a part of Amtrak’s Vehicle Replacement Program, instituted this fiscal year to replace obsolete, worn out or high-cost leased commercial motor vehicles with more efficient, reliable equipment that boasts the latest in safety and technology.

Through June 2004, 30 commercial motor vehicles have been replaced and released to Amtrak locations across the country; the remaining 24 will arrive by the end of the fiscal year. As part of a special accelerated purchase, 32 additional vehicles that were originally in the FY ’05 plan were moved up to be delivered before Dec. 31, 2004. In addition to these 32 vehicles, 29 more will be delivered as part of the FY ’05 plan.

The Procurement and Materials Management department’s \$20 million five-year capital replacement program aims to replace 40 percent of Amtrak’s commercial motor vehicles by the end of FY ’05. These vehicles will be key oper-

ational tools to more efficiently allow Amtrak employees to fulfill our goal of getting the railroad back into a state of good repair. As each new truck is manufactured and delivered to work sites, the old worn-out vehicle it is replacing is

scrapped or sold — the program does not increase Amtrak’s fleet of commercial motor vehicles.

Of the 17 different types of specialty vehicles being replaced, one is brand new to Amtrak: the X-5 Track Patrol. This vehicle moves across the rails equipped with a generator and high-intensity lighting. The X-5 is designed for inspectors who, in the past, examined the track by foot. The track patrol vehicle provides a safer means for inspectors to cover greater territory and enables inspections to be conducted at night.

Other vehicles have been updated to address the changing needs of the railroad and its users, to meet the need for greater efficiency in fuel consumption and emissions and to take advantage of opportunities to incorporate safety enhancements. These enhancements include improved seating to provide a smoother ride and better lighting packages for travel in all weather

Challenges Slow Summer’s Ridership and Revenue

This summer’s freight railroad congestion and construction, and Amtrak’s own equipment shortages are making for a tough summer for passengers and crews. The summer’s challenges are also slowing the railroad’s ridership and revenue growth.

In June, Amtrak reached another ridership record as both ridership and revenue were about 3 percent above last June. However, both ridership and revenue fell below

projected budget levels by 3 percent and 4 percent, respectively.

Year-to-date through June, ridership was 6 percent ahead of last year and 1.5 percent ahead of budget. Revenue year-to-date is up 5.5 percent from last year and slightly ahead of budget.

“We are continuing to grow our ridership base, but the summer’s operating conditions and the low-cost air competition on the East

Coast are having an impact on our revenue side. Long-distance sleepers and Acela Express bring in our highest revenue. As a result of the challenges that they are facing, we are not likely to achieve our ticket revenue target this year,” said Barbara Richardson, vice president of Marketing and Sales.

“Despite the revenue picture, it will still be possible for us to finish the year with a record number of ridership because the short-

distance, lower-fare trains are performing so well.”

In June, on-time performance system-wide dropped to 64 percent, compared to 71 percent last year. The long-distance trains were especially hindered as on-time performance continued to decline on congested freight lines. On-time performance for long-distance trains was down 12 percent to 26 percent. It was 38 percent in May and 48 percent in April. Among those at the bottom of the OTP scale were the Sunset Limited at 0 percent for the fourth consecutive month, the Coast Starlight at 5 percent and the California Zephyr at 8 percent.

Besides historic levels of freight congestion, summer construction on the freights is also taking a toll. For example, work completed at the

Ridership and Ticket Revenue for June 2004

Month of June	FY’03/Actual	FY’04/Budget	FY’04/Actual
Ridership	2,129,697	2,258,278	2,185,175
Ticket Revenue	\$109,407,843	\$116,953,011	\$112,368,362
Fiscal Year-to-date	FY’03/Actual	FY’04/Budget	FY04/Actual
Ridership	17,698,980	18,429,707	18,712,069
Ticket Revenue	\$894,670,020	\$937,061,095	\$942,610,303

TRAIN OF THOUGHT

For every month since the beginning of this year, Amtrak’s ridership has been the best ever, and we are on track to serve a record 25 million passengers this year. At the same time, however, this summer has brought a number of challenges our way, especially for our long-distance trains — unprecedented freight congestion and construction, a shortage of equipment and poor on-time performance.

I will be blunt. These things wear on all of us, most of all those of you on the front lines. Whether you are in on-board service, a call center or an S and I facility, it is painful to know that the Sunset Limited’s OTP for June was zero. That the long-distance trains’ overall OTP in June was 26 percent. That for all trains it was 64 percent. It’s not been fair to our passengers or to those of you who serve them. No one wants to ride a train that’s constantly given to delays — or have to explain why.

We are doing some things to turn this around, but the changes won’t all come instantly.

I’ve been talking with the top executives at the freights to seek their

help in getting our trains over their roads on schedule. It’s tough for them, though, as a lot of summer track work must be done and their networks are in a near-crisis state of dysfunction.

But there are things here at our railroad that we can do, and will be doing. In Transportation, Ed Walker and his team have been taking steps to alleviate the problems, like canceling trains in circumstances where we know extraordinary delays will occur. We may also invoke other measures on some trains where we just can’t deliver the level of service we’re currently offering. In Mechanical, Vice Nesci and others are making changes to increase our equipment availability. I hope by the time you read this those changes will have occurred. Scores of others throughout the company are doing their part as well.

In the meantime, as frustrating as these problems are, it is more important than ever to deliver to our passengers the best, most courteous service possible. I will never throw in the towel trying to fix our problems. Don’t give up on serving our passengers the best you know

David L. Gunn

how. In many ways, this challenge is unprecedented, as our growing ridership is putting ever-greater strain on our ability to serve it. It is a problem we all recognize and share, and I am bound and determined to fix.

Thank you for your efforts. I will continue to keep you updated on our progress.

Bear Returns its First Capital Wreck to Revenue Service

Released on June 30, the first car completed in Bear Car Shop’s Capital Wreck-repair program was unlike most in the Bear shop program — it was not involved in a collision. Although Bear mechanics have repaired and released five other cars with minor wreck damage this fiscal year, these car repairs were not part of this capital program. Amfleet I Coach 82539 met the criteria for the Capital Wreck-repair program, which includes a minimum repair

costs, excluding overhaul work of \$50,000. The capital program is designed to get damaged equipment back in service, and the Amfleet Coach, which required interior bodywork, overhaul and repairs comparable to those performed on typical wrecked car, had not run in revenue service since 1997, even though Amfleet I Coaches are in short supply.

In 1997, the car traveled to 27 cities from Washington, D.C., to Raleigh, NC, as part of the Great American Station Foundation’s Whistle Stop Tour. To prepare the car for the tour, Bear mechanics stripped out the seats, luggage racks and bathrooms and installed new lighting and electrical components. Once stripped to the foundation, the car’s interior was redesigned, to become part of the seven-car exhibit train that traveled the country to celebrate the renaissance of train stations.

After the tour, the car was stored for several years before it arrived at the Bear Car Shop until it was made a part of the wreck line in April 2004. During the rebuild process, mechanics removed and replaced the car walls where holes had been drilled to support exhibit frames, restored the luggage racks and reinstalled electrical components. Additionally, the car was completely remanufactured to include rebuilt seats, new bathroom modules, upgraded interiors, overhauled air conditioning units and push-pull modifications to enable the cars to operate with either an electric or diesel locomotive. After mechanics worked approximately 2,400 hours, the car was returned to service. Bear mechanics expect to complete five more capital wrecks by the end of the fiscal year.

Heavy Maintenance Program for Locomotives Becomes Centralized

Last year’s Five-year Strategic Plan set the stage for a national and comprehensive heavy maintenance program for Amtrak’s locomotive fleet. Previously, heavy maintenance programs — major repairs, overhauls and remanufactures — were managed by the SBUs, product lines, or not at all. The five-year plan launched a shift from an inconsistent locomotive heavy maintenance program to a national program centered at the company’s backshops, which began this fiscal year.

Presently, locomotives all over the system — from those at the engine house at Redondo to the shops at Rensselaer — are now using the Beech Grove Locomotive and Car shop and the Wilmington Locomotive Shop for heavy maintenance.

The change is a return to a more traditional railroad, with centralized heavy maintenance shops, centralized system-wide, and materials management processes. Once complete, this centralized program will split heavy repairs for the diesel locomotives at Beech Grove and the electric fleet at the Wilmington shop, making the Beech Grove and Wilmington backshops the backbone of the locomotive heavy maintenance program.

This shift simplifies what had become complicated and incoherent catch-as-catch-can maintenance for the company’s loco-

The change is a return to a more traditional railroad, with centralized heavy maintenance shops, centralized system-wide, and materials management processes.

Instituting material management of the national program through the company’s Procurement department results in cost savings to the company. By consolidating its buying power, Amtrak has more influence over its vendors and can exercise better warranty management. Also, under the centralized program, the company benefits from direct supervision of the work and clearer lines of accountability, as well as enhancing the knowledge of its mechanics.

Some of these changes are already underway. For example, earlier this year Beech Grove began overhauling previously orphaned F-59s for the West Coast. Over the past year, the backshop has dedicated money, time and brainpower to supporting the West Coast fleet. This is not only the first time the F-59 work is conducted at Beech Grove, but also the first time the overhaul is conducted by Amtrak mechanical forces.

Another example of progress underway is the overhauls the Wilmington shop is doing on the MP-15 switchers, work that is new to the shop.

The P-40s and P-42 road diesels (also known as Genesis locomotives) used on long-distance routes, were built by General Electric. Most of the locomotives’ major components continue to be sent out to GE, such as the motors, alternator and generator, the air brakes and the electronics. But, for the first time, some GE motors are being repaired at Wilmington, as well as some F-59 motors from the West Coast. While in the past some maintenance on the P-40s was done at Rensselaer, all the heavy work will be done at Beech Grove. Dual Mode P-32s used on the Empire Corridor will also be shipped to Beech Grove for maintenance.

Currently maintained by the Northeast Corridor Management Service Corporation, the maintenance of the Acela Power cars will be managed by Amtrak in October 2006.

Over five years (2005-2009), overhauls are scheduled for over 320 locomotives. According to the updated five-year plan released last month, locomotive availability is expected to increase from 76 percent to 85 percent, due in large part to the return of locomotives to a regular overhaul cycle. In FY ’04, approximately 60 locomotives will be overhauled.

The maintenance required on locomotives depends on the design of the equipment and how it’s used. Generally, most locomotives require light to medium overhaul every 3 to 6 years, medium to heavy overhaul every 5 to 10 years, and remanufacturing over 12 to 20 years.

Locomotive #461 was among the first F-59s, used on the West Coast, to be overhauled at the Beech Grove facility.

F-59	All Switch Engines

tives. For example, the MP-15 switchers used in New England were supported by the Rensselaer shop, while other EMD switchers were maintained at the Wilmington shop, except for the West Coast switchers. Some of the F-59 engines used on the West Coast were cared for in Los Angeles, while others were maintained by a contractor. The P-32-8s and HHP-8s had no heavy maintenance “home.” The result was orphaned locomotives and no central procurement process.

Over five years (2005-2009), overhauls are scheduled for over 320 locomotives.

Foreman Training Reinforces Traditional Railroad Structure

New training for Amtrak’s Engineering frontline foremen started in May 2004, after the completion of 17 supervisor workshops. Like the supervisors’ training, the frontline foreman workshop aims to provide frontline leaders with the full authority they once had to make decisions and take action. It is designed to emphasize the authority, responsibility, and accountability of the position of foreman within the structure of a traditional railroad organization. “It’s about making a difference,” says workshop leader Bill Albritton.

The workshops will be conducted throughout the system, and all of the railroad’s 400-plus foremen will participate over the next year and a half.

Traditionally, foremen were responsible for managing all aspects of a job, including the gang makeup, production, and ensuring safety and security. Over the years, this role has become diminished, a trend that has occurred throughout the entire railroad industry.

“With this training, we’re reinforcing the traditional railroad structure and chain of command to ensure that there’s no question about who is in charge. We’re redirecting the focus to the foremen, so that they’re empowered to do their

jobs as the first line leaders,” said Chief Engineer David Hughes. “Foremen used to be king,” says Deputy Chief Engineer Bruce Willbrant. “They are key to driving safety, the budget and how the work gets done,” added Willbrant.

“What we’re aiming for is clear lines of responsibility that yield improvement in safety and productivity. These classes are about sharpening the saw — we’re providing our foremen the resources they need to make the decisions we’re asking them to make,” added Hughes.

The four-day workshop is held twice a month. It is different than most Engineering Department training, in that it focuses on the leadership responsibilities of these first-line supervisors, as traditionally defined, rather than technical knowledge that they already possess. Lead by Bill Albritton, the interactive curriculum also focuses on safety, productivity and improving and ensuring the quality of the end-product.

The 20-person class frequently breaks out into multi-discipline groups for case study discussions. Using problem-solving techniques, the groups analyze and develop solutions to the case studies.

Learning modules are used to encourage interactive discussion on a range of topics including, Factors Impacting the Climate and Culture of an Organization — Making a Difference.

“It’s all about basic blocking and tackling,” says Albritton. “The climate and culture of an organization is impacted 85 percent by direct frontline leadership. Communicating expectations and following up on them are critical. Feedback is the ‘Breakfast of Champions’. People respect what they expect you’ll inspect,” adds Albritton. Other modules include Six Fundamentals of Safety, Thinking as A Business Owner, and “Spark Time” — Increasing On-Track Production Time.

To measure the efficacy of the workshop, foremen who attend the training may submit feedback anonymously. Comments from the most recent sessions include, “I came into this training feeling as though the new management of this company felt we did not know what we are doing. I’m leaving with the feeling that you believe we know what we are doing and only need to change the “process” in which we do it,” and “Didn’t want to attend — glad I had the chance to attend — time well spent.”

The feedback received so far has been positive. Constructive feedback — such as one comment about spending more time on the issue of workplace violence — is welcome, as the curriculum is continually fine-tuned to meet its objectives and the instructional needs of the foremen.

Upon completion of the workshop, each foreman develops a personal action plan related to his or her area of business responsibility, for immediate implementation in the field. This augments Engineering’s focus of increasing field presence of its frontline leaders.

Division Engineer Joe Guzzi (left) listens to Lancaster Track Foreman Bruce Rhodes, who makes a point to his fellow participants as they return to class from their breakout sessions.

New York Division Teams Pass Four Year Safety Milestones

Whether maintaining or installing high-voltage equipment for building power, lighting, vent fans, sump pumps or standby power, the New York Division Bridge and Building department 60-cycle gang has gone more than four years without an FRA-reportable injury.

The division’s Communications and Signals Communication Gang Q102 and the Radio Technicians have also gone more than four years without an FRA reportable injury while maintaining and installing communications and radio systems, which are critical to the successful operations on the west end of the New York Division. Both gangs were recently recognized by the division’s Engineering department for their accomplishments and for setting high safety standards for others at Amtrak.

The Bridge and Building department 60-cycle Gang is recognized for four years of injury-free service (May 2000 through May 2004) with a Safety Recognition Award from the New York Division. 1st row (L. to R.)...(names coming)

Amtrak To Acquire New Commercial Motor Vehicles

continued from page 1

and lighting conditions. Improvements in hi-visibility paint and markings and easier ingress and egress for drivers and passengers have also been incorporated into some new vehicles. Additionally, due to the danger of fire and emissions, vehicles which may operate in the New York tunnels are powered by diesel engines, which emit little or no harmful fumes, and are equipped with scrubbers to further clean the exhaust.

Because Amtrak has not invested in an extensive replacement program since the mid-90s, many of Amtrak's commercial vehicles are over ten years old and have more than 100,000 miles, resulting in escalating maintenance costs and decreasing productivity. To address this issue, a team of employees from Procurement and Materials Management began working with the vehicle users from Engineering, Mechanical, Operations and Amtrak Police to identify and replace those vehicles in a state of disrepair.

"Every vehicle has a life expectancy," said Regional Fleet Officer Sam Watson. "Once the vehicle passes a specific point in its life cycle, it reaches the point of diminishing returns. It becomes more efficient in the long run to replace the vehicle and not spend money on costly maintenance."

Targeting Replacement Vehicles

Acquiring a fleet of heavy-duty specialty type commercial vehicles — defined as having a gross vehicle weight of over 10,000 pounds — is far more comprehensive than the typical consumer purchase that involves visiting a dealership and selecting the model, style, color and cost. First, the Procurement staff goes through a database to identify vehicles that are either over ten years old or have more than 100,000 miles. This initial list is refined after incorporating information received through vehicle inspections conducted at field loca-

"This program is an efficient use of capital funds because it has a measurable impact on the operational budget."

Mike Rienzi
Vice President, Procurement and Materials Management

tions by the Procurement team, and further drilled down through input provided by the vehicle users.

"An eight-year-old waste disposal truck with low mileage may not be identified for replacement in the initial data sweep," said Senior Director of Procurement Larry Beddis. "But, through feedback from the users we may learn that

Engineering's Senior Director of Roadway Equipment and Vehicles Charlie McMahon. Highly utilized leased equipment is also part of the program. "If a production team only uses a vehicle during a summer track work project, it makes sense to lease it. But, if a vehicle is used 85 percent of the year, it's more cost effective to own it."

Equipped with hi-rail guide wheels that allow the vehicle to move across the tracks, N9 grapple trucks can be driven from the road to the rail. Eight new N9 grapple trucks were purchased for use as material handling vehicles.

the truck needs replacing because of its deteriorating condition caused by the wear and tear it endures."

Certain vehicles that Amtrak leases from the U.S. General Service Administration are also targeted for replacement, such as those that are not readily available when needed. For example, the Engineering department frequently uses buses to transport gangs to and from their work site.

"We learned that the GSA does not have a lot of buses. So, when a bus breaks down and a lease is unavailable, it stresses the transportation needs of our production gangs. In FY '05, we will be purchasing buses to avoid getting in that kind of a situation," said

example, the multi-purpose G-8 boom dump truck used to pick up and load small equipment was previously designed with an operating dump bed and a center-mounted crane used to lift and load. However, truck operators indicated that the dump bed was rarely used, and recommended not to include it in the specifications for new orders — saving money that otherwise would have been spent. It was also learned that the positioning of the crane limited its ability to lift from all directions.

Vehicle Users Provide Valuable Advice

Once the replacement list is complete, Regional Fleet Officer Sam Watson works with the users to establish the vehicle specifications. The drivers provide insight as to what is and is not needed in a unit and often their advice saves money. For

As a result, the crane was modified from a center to a rear mounting that enables the crane to lift and load from infinite radius points.

After the vehicle specifications are finalized, vendors are solicited through a formal request for proposals process and various evaluation criteria are used to award the contract.

Vehicle Inspecting, Testing and Training

In instances where several vehicles of the same type are being built, Watson and McMahon go to the manufacture's facility to examine the first near-completed unit and conduct what is known as a "first article inspection." At this time, the vehicle is thoroughly inspected and modifications are recommended to ensure that not only the first unit is correct, but that all the other units follow suit.

After the vehicles are delivered, an in-service testing session is held with 15 to 20 users. The truck operators are trained to use the new equipment and have an opportunity to make suggestions for improvements of future purchases. Based on the complexity of the vehicle, training can range from two hours, such as with a waste disposal truck in-service, to eight hours for a material-handling vehicle, like a grapple truck. When the training is complete, the vehicles are placed in service at the users' locations.

"This program is an efficient use of capital funds because it has a measurable impact on the operational budget," said Mike Rienzi Vice President, Procurement and Materials Management. "When capital is spent to replace aging, worn or leased vehicles, the money previously spent on vehicle breakdowns and leases can be shifted to routine and preventive maintenance to extend the life of the vehicles."

"Once the vehicle passes a specific point in its life cycle, it reaches the point of diminishing returns. It becomes more efficient in the long run to replace the vehicle and not spend money on costly maintenance."

Sam Watson
Regional Fleet Officer

Chicago Hub Clerks On the Go

Chicago Clerks Manage Fast-Pace Environment

During the summer travel season, an average 6,000 Amtrak passengers visit Chicago's Union Station every day. While some may only pass through briefly, others' travel plans may call for more time at the busy station. Chicago Union Station's team of 25 reservation and information clerks are equipped to make their stay and travel plans as enjoyable and smooth as possible.

Chicago Union Station's reservation and information clerks start their day by reviewing the "Game Plan," a document that lists employee work assignments, delayed trains and other pertinent information affecting service and a safety rule of the day.

They also review the boarding totals for each train, the track from which each train will arrive and depart and the daily connection report that shows how many passengers on each inbound train are connecting to other outbound trains.

Armed with this information, along with huge doses of patience, stamina and kindness, the R and I clerks are ready to cover the Passenger Services office in the station, the information desk, or boarding gates, to which they're assigned on a rotating basis.

Not to be confused with reservation sales agents located at the call centers, reservation and information clerks are station employees whose days are filled with passenger inquiries, late trains and passengers who have missed their train connections. The R and I job function at Chicago Union Station is similar to positions at other locations. In some larger stations in the Northeast, like Washington Union Station, usher gatemen positions are responsible for boarding passengers and gate control, while information clerks assist passengers with questions, concerns and connections. In Los Angeles, employees holding travel clerk positions perform duties similar to Chicago's R and I clerks, and at many small stations, ticket agents handle all customer service-related functions.

Dispatch the "Away Team"

On June 27, the eastbound Southwest Chief, scheduled to arrive in Chicago Union Station at 3:20 p.m., was operating approximately 12 hours late with 128 passengers who were going to miss their

connections in Chicago. On this day, R and I Clerks Wesley Brown, Marisela Castaneda and Irma Finch were assigned to the "away team." A concept implemented at Chicago Union Station several years ago, the away team is dispatched aboard trains to address the delays, missed connections, or other travel dilemmas that cause passengers frustration and anxiety. Managing these issues on board cuts down on the time passengers may have to wait at the stations and reduces the level of angst.

The team boarded Amtrak's west-bound Southwest Chief at 3:15

local hotels requesting a certain number of rooms. Bus companies, and occasionally airlines, are contacted to provide alternate transportation. Passengers housed

overnight are also provided taxi fare to and from the hotel, as well as money for meals.

Unfortunately, when first-class passengers miss their connecting train and are provided overnight hotel accommodations, the First

of situations that are handled by the front-line employees."

Hotel and transportation costs for the 128 passengers on the late Southwest Chief on June 27th

During the summer travel season,

an average 6,000 Amtrak passengers visit Chicago's Union Station every day.

totaled \$7,500. Through June of this fiscal year, alternate transportation costs resulting from misconnected trains arriving at Chicago Union Station were approximately \$133,000, while hotel costs reached nearly \$195,000.

"Hold That Train"

One of the most frequently heard questions R and I clerks hear from passengers is why not simply hold the connecting train until the late train arrives. Of course, that's a perfect solution for the passengers aboard the late train, but an inconvenience to others who are in the station ready to board the connecting train.

Many variables are weighed when considering how to manage the effect a late train has on the operations of the railroad. One important consideration is staffing. The schedule of the operating crew does not allow much leeway when faced with long delays. Crews must report for duty at a specific time, and no more than 12 hours later they must be off-duty, or violate the hours-of-service rule. If a crew reaches its 12-hour limit, the train is forced to wait until another operating crew can be contacted and transported to the train. This may sometimes take several hours, depending on the accessibility of the train's location.

Because Chicago serves as a national hub, it's particularly important that Amtrak trains depart Chicago's Union Station on time. Late trains impact the schedule of other trains, particularly between 2 p.m. and 6 p.m., when most of the long-distance trains arrive and over 100 Metra trains travel to and from the station.

"When we hold a train and deviate from our standard operating plan, it stresses our track capacity, and in many cases, we are preventing another train from entering that track," said Saunders.

Mary Barnes, R and I clerk directs passengers to trains as Station Manager Eddie Jakes oversees Union Station's traffic flow.

p.m. to Fort Madison, IA, where they boarded the eastbound Southwest Chief at 11:11 p.m. For the next four hours, while en route to Chicago, the three clerks met with each passenger, explaining travel options and processing the necessary paperwork to mitigate potentially long and exhausting waits in Chicago.

In these circumstances, R and I clerks must determine the most feasible option to offer on a case-by-case basis. Prior to boarding the train to Fort Madison, these clerks reviewed the reservations of the passengers who would miss their connections and determined whether to offer them a later Amtrak train, alternate transportation or overnight hotel accommodations. When missed connections are anticipated, calls are made to

class sleeping accommodation that was originally reserved may no longer be available the following day, particularly during the busy summer season. While customers may understand the situation, they are frequently unhappy to learn that they will be seated in coach for the duration of their trip. The R and I clerks' role is to offer those passengers a sincere apology for the inconvenience, a refund of their unused sleeping accommodation and complimentary meals in the Dining car.

"We have a lot of great employees who are often put in tough situations," said General Superintendent Don Saunders. "Chicago is at the crossroads of Amtrak where trains arrive from everywhere, and many arrive late, creating a variety

“Not only will we have 280 passengers unhappy because we held their train,” added Station Manager Bill Pedroza, “but we will also have another 200 passengers upset because they are sitting on an inbound train close enough to Union Station to see the skyline, and we can’t let the train into the station because the tracks are full.”

Additionally, by leaving the initial terminal late, Amtrak’s train misses its slot among the freight trains and is pushed further behind schedule. The problem is further compounded if passengers on a train that is held are connecting to other trains. For example, if the eastbound Capitol Limited is held in Chicago to await passengers from a late-arriving train, it may in turn cause other passengers connecting to long-distance trains in Washington, D.C., to miss their train.

It is frequently a numbers game, as Station Manager Kathy Melson explains, “If a westbound train operating two hours late has 60 passengers connecting to an eastbound train with 280 passengers, it makes better business sense to inconvenience 60 customers as opposed to 280.”

Communication is Key

It is a top priority of the on-board service employees to inform passengers of the reason for delays, whether due to host railroad congestion or problems within Amtrak’s control.

Over the years, R and I clerk and 31-year employee Stan Jackson has been a part of many away teams. “We’ve found that when the on-board crews keep passengers informed and provide beverages, and in many cases meals, passengers are a lot less upset about being behind schedule,” said Jackson. “And, even under difficult circumstances, passengers are often grateful when we sit down with them and discuss their options.”

Another vital aspect of the R and I clerks’ job is to keep the passengers informed while at the station. The clerks regularly make announcements to let passengers know when trains are ready for boarding and when trains will be late. To keep passengers informed, R and I clerks rely on receiving timely and accurate information from Amtrak’s Operations and Mechanical departments.

Communication is critical when mechanical failures occur that affect train departure schedules or passengers accommodations. If a Lake Shore Limited sleeping car is removed due to mechanical problems and that causes a holdup, it is essential that the Mechanical

other employees informed about the status of the train’s departure.

Gatekeepers – An Integral Part of the Boarding Process

Acting as gatekeepers, clerks stationed at the north and south boarding gates are responsible for meeting trains, boarding passengers and ensuring the safety of passengers as they board and detrain. They are charged with the check-in process for families with small children, seniors and passengers who require additional assistance. About 30 minutes prior to departure time, the R and I clerks, working in tandem with the conductor, coach and sleeping car attendant begin the boarding

The Fetting family stops by the Passengers Services office to obtain information from R and I Clerks Jan Maloney and Stan Jackson.

department communicate that information as soon as possible to Operations. The Operations department in turn advises employees working in the station’s Passenger Information Display System group, which is responsible for disseminating the information to station managers and R and I clerks. Getting this information as early as possible allows the R and I clerks to keep passengers and

process. Before passengers are allowed to pass through the boarding gate, the clerk must check each person’s ticket to make sure they are boarding the correct train on the correct date.

While the away team processes “misconnects,” and gatekeepers help board passengers, clerks at the information desk greet streams of passengers with questions such as,

“Where is the ticket office? What time does the Texas Eagle leave? When will the train from Grand Rapids arrive? How do I get to Midway Airport?” Prepared with a wealth of information, the clerks respond to each customer’s inquiry.

When customer concerns cannot be resolved at the information desk, the ticket office or even on board the train, passengers are directed to the R and I clerks assigned to the Passenger Services office.

According to R and I Clerk Jan Maloney, “The environment is extremely fast-paced and it’s important to think on your feet. You have to be able to find a creative solution to problems you may never have faced before and problems that may not necessarily have rules and guidelines. And even if there are guidelines, often there is little time to check the book or call a manager, because you have to solve the problem right away, before a passenger misses a train or bus connection.”

In spite of the challenges, R and I Clerk Mary Barnes says, “Whether I’m helping a passenger find a senior family member or helping them locate a lost item, I enjoy doing everything I can to assist passengers on and off the train.”

“While many stations have to make unexpected changes to their schedules,” explained Chicago Union Station Assistant Superintendent Jeff Snowden, “the sheer volume of trains arriving at Chicago and the number of connections that are made, make the Chicago R and I clerks, by far, handle more connections — and misconnections — than at any other location.” Whether stationed at the boarding gates, the information desk, the Passenger Service office, or on an “away team,” these front-line employees will attest that no two days are ever alike.

“We have a lot of great employees who are often put in tough situations.

Chicago is at the crossroads of Amtrak

where trains arrive from everywhere, and many arrive late, creating a variety of situations

that are handled by the front-line employees.”

Don Saunders
General Superintendent

Boston Mechanics Raise the Bar

Engine 948 arrived in Boston one day in June with reports of smoke coming from the lead truck. An inspection revealed that the grease seal on the #3 axle was defective and grease was leaking out of the gearbox, requiring immediate repair.

Because it was impossible for the locomotive to go over the road with a damaged seal, the wheel set had to be replaced in Boston. The challenge for Boston mechanics was that the Service and Inspection facility has no drop table with which to replace the bad wheel set.

Never having come across this kind of situation before, the Boston crew made arrangements to receive a wheel set from Wilmington and to rent a 150-ton crane to lift the engine. They called on the expertise of Washington, D.C., Carman Mark Osborne and Machinist Rob Lear to help walk them through the wheel replacement, via crane. The Washington crew instructed the Boston machinists Jim Pointer and Dave Elwin and laborer Pete Butler how to properly lift the locomotive and complete the wheel change.

While the situation was not ideal, the challenge was surmounted and problem solved, 11 hours later.

Boston crews lift Engine 948 with a crane to remove a defective wheel set.

A new wheel set, sent from the Wilmington Shops, is in position to replace the damaged wheel set on Engine 948 at the Boston Service and Inspection facility.

Corroding Air Conditioners Cause Customer Complaints

As Amtrak's ridership continues to hit all-time highs, every seat is important, particularly during the peak summer months.

It's no wonder that Amtrak passengers become angry when they have to pass up an empty seat because air conditioning condensation has leaked from the ceiling to the seat below. Although this problem has been found only intermittently on Amfleet equipment, it's one that has intensified since early this past spring.

Amtrak's Mechanical department has adapted a solution to the problem so no seat goes empty for this reason.

The advancing age of the Amfleet equipment was the contributing factor to the leaking condensation

problem. After more than 25 years of use, the galvanized steel frames that secure the air conditioner evaporator coil assemblies to the car ceilings were corroding because of long-term exposure to condensation. As a result, airflow and vibration caused corroded pieces of metal to break off in large flakes and clog the entrance to the tubes that drain the water from the drain pans and out of the cars. Unable to drain out, the water eventually overflowed the drain pans and then spilled over to the seats below.

Addressing the problem was made difficult because not only were the two types of HVAC systems on Amfleet equipment obsolete, but also there were no existing technical drawings for Mechanical department employees to use.

Amtrak Can Take You to the Convention

The arrival of the president of the United States and about 50,000 Republican National Convention delegates, VIPs, reporters and others to New York City to attend the convention at Madison Square Garden in late August will challenge Amtrak's daily operations.

While Amtrak will operate according to the normal published schedule during the convention, the railroad will require reservations for all Northeast Corridor trains (with the exception of the Keystones and Clockers) from Aug. 28 through Sept. 2.

Multiride tickets, such as monthly passes, will be honored on the trains that regularly accept them.

During the convention, access to Penn Station will be very limited. Only two of the eight entrances and exits will be open, one at 7th Avenue and 32nd Street, and the other at 34th Street. Red Cap service will be available at both locations. In addition, all streets adjacent to the station will be closed to pedestrian and vehicular traffic, with the exception of 32nd Street, between 6th and

7th avenues, which will be open to pedestrians.

The 34th Street entrance will accommodate mobility-impaired passengers. Because the taxi stands that typically serve Penn Station will not be available, dispatching of taxis will occur near the accessible 34th Street exit.

To facilitate the operation of the station this week, Penn Station personnel will be posted at the closed exits to assist passengers who may be confused by the temporary changes. In addition, signage, seat drops and other public notices have been issued by Amtrak to give passengers advance notice to adjust their schedules. Amtrak advises passengers and commuters accustomed to their routines to give themselves more time than usual, to avoid delays.

New York's Penn Station handles approximately 1,000 trains daily, between the services offered by Amtrak, Long Island Rail Road, New Jersey Transit and Metro North. Planning for operational contingencies during this period is key, particularly since all of this traffic operates on only 21 tracks.

Amtrak has been working closely with the U.S. Secret Service and other agencies to have in place a special security plan for New York Penn Station that will be in effect during the convention. For example, stepped-up security measures will be taken on trains to and from Penn Station and passengers may notice a greater-than-usual police presence representing a range of law enforcement agencies.

During the Democratic National Convention, held at the Fleet Center in Boston July 26-29, North Station was closed. The station, which is just below where the convention was held, serves Amtrak's two daily Downeaster trains, which were suspended during that event.

The arrival of the president of the United States and about 50,000 Republican National Convention delegates, VIPs, reporters and others to New York City to attend the convention at Madison Square Garden in late August will challenge Amtrak's daily operations.

T and E Timesheets Go Paperless

To help ensure the accuracy of paychecks, allow instant access to payroll information and enable crew dispatchers to better communicate with Train and Engine employees, the Crew Management Services group, with assistance from Amtrak Technologies, has implemented a Paperless Timeticket System.

The installation of 218 computer terminals at T and E crew bases across the country began in September 2003 and will eliminate close to 18,000 hand-written time sheets that conductors and engineers complete each week. Through July, 102 computer systems were installed at 30 locations that include all Northeast Corridor crew bases.

The new electronic system reduces administrative costs, improves the award and displacement notification process and provides a better means of monitoring and verifying payroll submissions, saving the company over \$1 million a year.

The electronic system provides the Crew Management Services staff a tool to better manage the payroll process, reduce the chances of mistakes when processing timesheets manually, and pinpoint fraudulent and inaccurate timesheets submissions.

Employees using the new system have real-time access to their earnings, minimizing the chances of inaccurate paychecks. For example, if an employee is off work one day to attend jury duty, documentation must be submitted with his or her time sheet to get paid for the day. Under the old system, if the timesheet is submitted without proof of jury service, the request for pay is denied, but the employee does not learn of the denial until the check is received. By using the PTT system, employees will no longer have to wait until their paycheck arrives to review their

weekly earnings. If the check scheduled for processing shows earnings that are different than what the employee submitted, by reviewing the paycheck electronically the employee may request an adjustment before the check is printed.

Prior to the development and implementation of the electronic method, all T and E employees were required to fill out and turn in their timesheets in a drop box at their crew base. The timesheets would be removed from the box and sent via Federal Express to Crew Management Services located in Wilmington, DE. The Crew Management staff would verify the timesheet and process the payment. If employees return from their tour-of-duty too late in the day to submit a time sheet, or if the FedEx delivery is delayed en route and arrives in Wilmington after the Friday deadline, the employees could be short a day or more on their next check.

“Moving to PTT not only significantly reduces the number of late payroll submissions, but also eliminates Federal Express shipment costs, which totaled \$110,000 in FY ’03,” said Robert Schmitt, director Crew Management Services. Other savings include timecard printing and storage costs of about \$63,000 a year.

The paperless system also eliminates the need for the crew dispatcher to contact employees to notify them of job awards and displacements — and the cost associated with failing to reach them, estimated at \$60,000 a year. For example, if an engineer is awarded a job that causes a junior employee to be displaced, and the displaced employee has not been notified, on the first day of the awarded job, both employees show up for work. Even though only one engineer will work, both employees must be

paid for the day because the displaced employee did not receive advance notification. The new system allows the crew management staff to notify employees of job awards or displacements through the paperless timeticket computer terminal.

In the Northeast Corridor, where Amtrak owns most of the stations and has local Engineering employees on-hand to perform the cable installation and electrical work, physical installation of the paperless timeticket terminals can take as little as a few weeks. However, it can take months to install the equipment at off-corridor sites that are owned by a city, the freight railroad or historical preservation agencies.

Paperless timeticket terminals will be installed in the majority of the crew bases by the end of FY ’04, and in all T and E locations by early 2005.

Paperless timeticket terminals will be installed in the majority of the crew bases by the end of FY ’04, and in all T and E locations by early 2005.

Amtrak Recognized for ‘Train of Hope’

Vermont Gov. James Douglas recently conferred his proclamation on the Stowe Weekend of Hope, a program for Cancer survivors, to Amtrak. The weekend program is coordinated by the Stowe Weekend of Hope trustees, which votes each year to bestow this honor on a deserving organization that contributes to the success of the program.

This year, Jim Dinehart, Amtrak’s Marketing department manager for the New England Sales Region, received the proclamation for his efforts in coordinating Amtrak’s Train of Hope, which for three years has carried cancer survivors from Washington, D.C., and points between, to Waterbury, VT.

Dinehart, who spearheads the special move, sets the tone for the

trip. One passenger flew from Seattle to Washington just to ride the train to Waterbury. “In your professional lifetimes, I wish you all a partner as receptive, genial and productive as Jim. He just “gets it,” said Jo Sabel Courtney, events and international accounts manager at the Stowe Area Association.

More Kids Ride Free Offers Big Savings for Families

Members of AAA may take advantage of Amtrak's "Kids Ride Free" program. With each paying adult passenger, up to two children (age 2-15) will ride free. This offer is valid on all Amtrak trains and routes that honor the AAA discount, except for the following services: Downeaster, joint Amtrak/Via rail service to Toronto, 7000-8999 series Thruway Bus service, and Acela Express and Metroliner trains during peak and shoulder travel times. Tickets must be purchased before Aug. 31, 2004, and the offer is valid for travel Aug. 1 through Dec. 15, 2004.

The promotion, which is currently offered on the Piedmont, Carolinian, Hiawatha, Auto Train and Capitol Corridor, has also

been extended to the southern end of Amtrak Crescent's route between Greenville, SC, and New Orleans and in New York state.

The Crescent offer is valid from July 6 through Sept. 1, 2004, and allows one child (age 2-15) to ride free with one full-fare adult, senior or disabled discount traveler; a second child may travel at one-half the regular adult fare. Reservations must be made three days in advance to receive the promotional fare.

Kids may ride free anywhere in New York state to and from any station west or north of Albany/Rensselaer. For each full-fare paying adult, two children may ride for free. Travel is valid throughout the summer and fall, until Nov. 15, 2004.

Red Sox Fans Take a Legendary Ride on Acela

Acela 2159 was transformed into the "Red Sox Legends" train on June 29 as it carried fans from Boston's South Station to New York City to witness the rivalry between the Red Sox and the Yankees at Yankee Stadium. Red Sox legends such as Bob Montgomery, Jim Lonborg, Mike Andrews, Sam Horn and Red Sox Vice President Sam Kennedy made their way through the train signing autographs and posing for photos with fans.

Amtrak Sales and Marketing quickly sold out special packages for the event that included the trip on the Acela Legends train, tickets to the baseball game, hotel accommodations for one night in New York and a return ticket on Amtrak. "The success of this package was so strong, we expect that next year's numbers will

increase dramatically," said Amtrak Marketing's Tara O'Brien. Passengers also received autographed baseballs and a commemorative tee shirt.

Andrews, also CEO of the Jimmy Fund, a non-profit group associated with the world-renown Dana Farber Cancer Institute in Boston, helped sponsor the event and was joined by two families whose children are currently being treated at Dana Farber.

Legendary Red Sox players gather around a fan as the Acela Legends train travels to the big game (L-R) Jim Lonborg, guest Alan Krensky, Bob Montgomery and Sam Horn.

Empire Service Travel Guide Now Available

Travel agents, convention and visitors' bureaus and thousands of others are promoting the sites along the Empire Corridor with the arrival of a new travel guide, New York by Rail.

The publication, similar to the system-wide Amtrak America travel guide, advertises Empire service destinations, such as Times Square in New York City, the Depot Theater in the Westport, NY, train station and Niagara Falls. It also includes articles about the history of railroads in New York state written by Empire State Passengers Association President Bruce Becker, and about the Amtrak/National Park Service Trails and Rails program on board the Adirondack.

The magazine was produced at no cost to Amtrak as part of an agreement between the Marketing department and Martinelli and Slocum Publishing — a publishing company that has produced visitor guides and travel magazines for the upstate New York area for over thirty years.

The guide has been distributed to 30,000 travel agents in eighteen states and 70,000 guides were mailed to visitor and convention bureaus, travel information centers, chambers of commerce and hotels. The travel guide is also available at all Empire service stations.

Central Reporting Achieves Best Audit Results Since Inception

Amtrak’s Central Reporting Office was issued an accuracy rating of 95.5 percent for the precision of Amtrak’s 2003 reports associated with injuries. In May of 2004, a team of six FRA inspectors analyzed Amtrak’s records associated with injury and other FRA reportable events that occurred in calendar year 2003 and identified only eight defects in the reporting. This high rating issued by the FRA reflects positively on both the Central Reporting Office that is responsible for coordinating this information and the untold number of field managers and supervisors that properly completed and supplied the

required paperwork and updates to ensure accurate reporting.

Amtrak is required by law to report certain accidents and injuries to federal and state agencies. Amtrak’s Central Reporting Office was created in November 1993 so that the railroad would meet its legal obligations and plays an important role in the corporation’s overall safety program.

Central Reporting receives, analyzes and inputs over 3,000 injuries and 500 accidents each year for Amtrak and the five commuter agencies that it operates. A trained and dedicated eight-member team is responsible for managing and reporting this data.

Some 10,000 documents arrive at the office via fax, e-mail or regular mail each year. The documents are sorted and routed to one of five analysts for coding and input based on injury types, including employee injuries, passenger injuries, commuter-related and rail incident-related injuries.

Central Reporting meets its responsibilities by maintaining focus on three key objectives: reduce accident and injury reporting inconsistencies, improve Amtrak’s internal control procedures for accident and injury reporting and focus greater attention on pro-active accident and injury prevention efforts by helping management understand how,

where and when accidents and injuries occur. As a result, the railroad saves money by avoiding in fines and other costs associated with problems uncovered in FRA audits.

Each year, the FRA audits Amtrak’s findings to review record-keeping practices, the accuracy of the company’s data. And, while a leader in the industry, Amtrak and its Central Reporting office has shown improvement every year with this year’s audit results being the best.

FRONT LINE FOCUS

Dear Amtrak:

We recently had the pleasure of traveling on your California Zephyr train from Chicago to San Francisco. The trip was made especially enjoyable thanks to the dining car steward, Ms. Diane Cox. Ms. Cox was extremely professional, well organized, friendly and very personable. The positive attitude and efficiency of Ms. Cox and the dining car staff added tremendously to our enjoyment of the trip.

Amtrak staff of Ms. Cox's caliber make us look forward to our next train trip.

Sincerely,

Eugene P.
Englewood, FL

Dear Amtrak:

It's always pleasant to write about an employee that has given us more than satisfactory service. So we are hoping the pleasant feelings of your employee continue to be with us on the entire trip.

Mr. Angelo Mendez of the Tampa station waited on us. There are six of us that take these trips together and we had not all been able to be here at the same time to make the arrangements for this next trip. So when we were getting near the end of the planning stage, three of us went to the station. Mr. Mendez had to start at the beginning, make the changes that were not completed and issue the tickets. He took his time and explained everything to us in detail. He is a very sincere gentleman, serious about his job and yet has a great sense of humor that adds to his demeanor. Mr. Mendez is one of those people that when you leave the presence of his company, you know he did his best for you within the ramifications of his position.

Please pass on our expression of appreciation to Mr. Mendez's superiors. We appreciate all that he did for us and the way he presented himself while working with us.

Sincerely,

Sylvia M.
Plant City, FL

Challenges Slow Summer's Ridership and Revenue

continued from page 1

beginning of July by CSX on the Nahunta Line, which required the cancellation of the Silver Meteor and capacity expansion on the Palmetto and Silver Star, resulted in a loss of more than \$3 million.

Equipment shortages and substitutions are also continuing. The company is short on Superliner sleepers, which has caused the California Zephyr and Southwest Chief to be short. To help make up for the missing space, dorm sales on the Texas Eagle, California Zephyr and Southwest Chief have had positive results. In June, more than \$240,000 was generated through dorm sales.

Despite the long-distance challenges, the short-distance trains continue to reach higher and higher ridership milestones. On the West Coast, in June, the Pacific Surfliners exceeded 200,000 riders for the first time in a month and the Capitols passed the 100,000

milestone. The Midwest regional trains are showing double-digit growth. Both ridership and revenue were up about 7.7 percent over last year on the Regionals in the East.

Acela Express continues to show strong results, but when Acela and Metroliner are combined, ridership is down 3 percent compared to last year and 10 percent against budget.

There are two factors for this downtrend. The first is OTP, which was at 72 percent in June. The other market impact is the increased competition among low-cost air carriers, which is especially true in the Philadelphia-Providence and Boston markets. Between April and June, Amtrak has lost 15,000 trips and \$1.6 million. Most of the lost trips are off-peak or weekend travel.

Enhanced Site Makes an Entrance

Promotion Aims to Drive Traffic to New Amtrak.com

Amtrak unveiled its new online look earlier this month, with the launch of a completely rebuilt Amtrak.com site designed to provide customers more information about their train and travel options, help them book reservations faster and more easily arrange and customize their travel planning.

Part of the railroad's marketing campaign initiated this month is centered on driving business to the new Amtrak.com.

"The campaign is designed to persuade first-time Web site users to give Amtrak.com a try," noted Vice President of Marketing and Sales Barbara Richardson. "Prospective online customers will learn more about Amtrak services and amenities than ever before, and loyal customers will appreciate the ability to customize their trip planning preferences."

National advertising will promote the new site and a 10-percent discount. Customers who book online between Sept. 12 and Dec. 15

may take advantage of a 10-percent discount on all fares, except *Acela* and *Metroliner* service.

Artwork specifically designed for Amtrak.com will appear in the campaign. In addition, the national marketing promotions featuring new Michael Schwab artwork will support getting the word out about the new site.

Not only does Amtrak.com offer customers a fresh look and feel, but it also puts forward dozens of new features, enhancements and updated information.

Building the company's back-to-basics approach to communicating its services, Amtrak decreased the number of steps necessary to book a ticket, giving viewers more options

and greater flexibility via a simpler interface. Consumers may now see fare information immediately along with schedules to allow for easier

comparisons and identification of the most cost-effective and convenient itinerary. The site's new fare finder provides more options and enhanced functionality, including the ability to search by schedule or fare.

Not sure what cities Amtrak serves? Amtrak's site uses the power of MapQuest's mapping and driving directions features so that travel shoppers may see all stations within their desired search radius, and click to specific information about the stations that interest them. The site also provides up-to-date information about Amtrak station locations.

The new booking engine also makes it easier for passengers to view, choose and upgrade accommodations and to know what amenities to expect on board.

The Amtrak.com site offers personalized service not available online in the past. Individuals may save personal preferences and travel-related information — all intended to make the booking process simpler and faster.

While the redesigned site is filled with information organized in such a way that customers' questions are answered before they think to ask them, some passengers may have additional questions. If an Amtrak.com viewer has a question about the booking process or other travel-related information on a specific page of the site, he or she may access a list of most frequently asked questions without losing their place and interrupting the booking process.

Dear Co-workers,

There have been a lot of organizational changes over the past two years, and I'd like to take this opportunity to give you a sense as to where we are at this point.

We have a plan in place to overcome the challenges we face on a daily basis — it's our Five-year Strategic Plan, our capital projects. It will take us five years to fully execute it and reach a state of good repair.

Meanwhile, we continue to evolve with the needs of the railroad. Our organization is a work in progress — the operative word is progress. That doesn't mean that results come instantly, a lot of these

changes will bear fruit incrementally and I ask for your patience as we strive toward reaching our goals.

Sincerely,

William Crosbie

Operations Department Structure Defined

Stabilizing the financial health of Amtrak, including instituting cost-controls, didn't happen overnight. Focusing the company's efforts on its core business and reverting to a centralized and more traditional railroad structure with a concentrated goal toward reaching a state of good repair also doesn't happen overnight.

Over the past two years, Amtrak's Operations department has experienced numerous changes designed to establish the structure necessary to proceed with the strategic direction the company has taken. During this period, Amtrak moved from a decentralized structure to one that has organizational charts,

programmed work and clearer chains of command.

The Operations department, which makes up nearly 90 percent of the company's workforce, is considered to be the heart of the railroad. The department, headed by Senior Vice President of Operations William Crosbie, is made up of seven departments of varying sizes and functions. Generally, all of these departments experienced significant change with the dissolution of the Strategic Business Units and subsequent consolidation of functions. In addition to, and as a result of those changes, some departments have not seen significant

continued on page 4

TRAIN OF THOUGHT

The next couple of months, I'll be doing a fair amount of travel as I crisscross the system to participate in the President's Service and Safety Award events in October and November.

Last year, we began holding the award presentations in several regions of the country. Doing this provided a more personalized atmosphere and allowed more employees to attend — we also invited employees celebrating their 30th anniversary. I really enjoyed the events, which honor the achievements of outstanding Amtrak employees. This year, we expect to have a record number of award recipients.

I'll be headed to Chicago (Oct. 5), Seattle (Oct. 8), Sacramento (Oct. 11), Los Angeles (Oct. 14), Philadelphia (Oct. 19), New York (Oct. 20), Jacksonville (Nov. 1 and Nov. 18), Washington, D.C. (Nov. 3) and Providence (Nov. 10) and will have a chance to visit offices, crew bases, and maintenance facilities — including the opening of the new maintenance facility in Oakland on Oct. 12. And, by now, it should go without saying that I will be doing all my travel on our trains.

Let me shift gears and talk to you about Amtrak's budget for the coming fiscal year, which starts Oct. 1. After two years of relative financial stability and no short term borrowing, we should end our current year without cash problems and within budget.

As you know, in addition to the more than \$2 billion revenue we generate annually, we depend on more than \$1 billion in federal money to cover capital projects and operating costs. At the time that I write this, it looks as though Congress will not pass a bill for next year's funding anytime soon, so we'll be operating on what they call a Continuing Resolution. This means we'll be funded at the level we're funded this year (\$1.217 billion) until such time as they approve funding for FY '05.

But when Congress does get around to considering our funding, probably after the new year, we must be prepared for a tough fight to protect what we've been able to accomplish. Let me explain why: To meet our state-of-good-repair capital goals, our capital spend rate has picked up rapidly in recent months. At this high level of production, we can't just slow it down in FY '05. If we're underfunded, it won't just be the capital projects taking the hit, but the entire railroad's operation.

The Board has approved our Five-year Strategic Plan, which includes the funding level for FY '05.

We've dedicated a lot of planning, time, money and labor to our infrastructure and equipment capital projects. We have undertaken the largest capital rebuilding effort in recent years. Our Mechanical and Engineering forces have never been so productive. With the full head of

David L. Gunn

steam we've developed, getting anything less than \$1.5 billion (or \$1.6 billion if we're required to pay back the \$100 million DOT loan) next year will create a cash problem. (For the record, we've asked for \$1.7 billion — with continued deferment of the loan).

It's important that we stick to the plan because our capital assets still suffer from extensive deferred maintenance. However, by FY '09 — if we stick to it — we will have restored most assets to a state of good repair.

If we get \$1.5 billion, we'll have to slow down or defer some capital work as it is. If we get less, we'll have trouble. Right now, the most important thing that all Amtrak employees can do is to do their jobs well. Attention to safety and security, passenger service and your professional responsibilities should continue to be everyone's primary focus.

I will continue to keep you informed of developments in this column and through the Employee Advisories.

Beech Grove's Remanufacture Program Underway

The first of three Superliner I sleeping cars to be remanufactured this fiscal year at Beech Grove was completed last month, and 20 more are slated for FY '05.

A remanufacture, also known as a rebuild, differs from an overhaul, in that it is a one-time teardown and reassembly that usually includes new and better designs.

The new cars are equipped with the latest in bathroom modules that include improved exhaust ventilation, new toilets, sinks, fixtures, flooring and updated fiberglass walls and ceilings. A 32-inch ADA-compliant door is also installed in the lower-level restroom.

Superliner I Sleeping car 32016, released in August, is updated with brand new bathroom modules.

Some of the rebuilding may not be evident to the passenger. For example, anti-lock brake systems, designed to save money and wear-and-tear on the wheels are installed. In the equipment room, all major components are renewed and new hot water heaters and 250-gallon water tanks are installed. The waste treatment systems, which are overhauled off-site, include new vacuum blower motors, electrical components and new load sensor indicators that display the status of the system and whether it requires service.

Remanufactured cars also include new waste system piping, draft gears, couplers, diaphragms and

Ridership for July Ahead of a Year Ago, Overall Performance Sluggish

Economy, Equipment Constraints, On-time Performance Weaken Results

July’s ridership and revenue results reflect a slowdown attributable to a lull in economic growth. Also contributing to the drop in ridership and revenue growth was poor on-time performance by *Acela* and equipment constraints on the higher-priced long-distance trains. On-time performance issues also affected service off the Northeast Corridor, with system wide OTP at only 63 percent for the month of July. The strong performers for the month were the short-distance trains.

Ridership for July was up 1 percent compared to last year, but nearly 4 percent below budget. Revenue was even with last year, but about 5 percent below budget. Year-to-date through July, ridership was up more than 5 percent versus last year and slightly ahead (1 percent) of budget. Year-to-date, ticket revenues were nearly 5 percent above last year and even with the budget.

Economic Slowdown

The ridership and revenue trends of July mimic those of June as a result of the slowdown in the economy, including declining job creation and a drop in the stock market. The economic trends traditionally have the greatest impact on the Northeast — particularly on the south end, which is dominated by *Acela* and *Metroliner* business travelers.

As such, compared to last year, *Acela* and *Metroliner* ridership was down about 9 percent and ticket revenues were down 7 percent. North of New York, ridership on both *Acela* and *Regional* trains grew by 10 percent over last year. A look at the last week of July shows that the Democratic National Convention did not have an impact on ridership and revenue in the region, except on the *Downerster* train, which was cancelled during that week.

Between New York and Washington, on the south end of the corridor, *Acela* and *Metroliner* ridership decreased by 14 percent, while, the *Regional* trains grew by 7 percent — due in part to diversion from *Acela* and to the service’s own ridership growth. A loss of \$500,000 a month and 5,000 trips between Philadelphia-Boston and Providence is attributable to the competition from low-cost air carriers.

On-time performance for *Acela* and *Metroliners* in July was 66 percent; year-to-date OTP is 74 percent.

Ridership and Ticket Revenue for July 2004			
Month of June	FY '03/Actual	FY '04/Budget	FY '04/Actual
Ridership	2,223,358	2,336,615	2,246,398
Ticket Revenue	\$114,933,270	\$120,804,982	\$115,123,611
Fiscal Year-to-date	FY '03/Actual	FY '04/Budget	FY '04/Actual
Ridership	19,922,338	20,766,322	20,958,467
Ticket Revenue	\$1,009,603,291	\$1,057,866,077	\$1,057,733,915

Corridor Trains

Aside from *Acela* and *Metroliners*, short-distance trains performed well systemwide. In the Northeast Corridor, ridership and revenue for *Regionals* were both up 5 percent compared to last year. The West Corridor trains were up nearly 5 percent on ridership, and revenue was 6 percent ahead of last year and on budget. The *Pacific Surfliner* had its highest monthly ridership ever in July. Chicago Hub ridership was 9 percent ahead of last year and revenue was 12 percent ahead — exceeding the revenue budget by 3 percent. Of note is the continued strong performance of the *Blue Water*, with ridership that was 37 percent better than last year’s *International*, which it replaced, and revenue that was 24 percent ahead.

Long-distance Service

Long-distance train performance was hampered in July by equipment constraints. Trains were operating at near capacity with peak load factors for both coach and sleepers on long-distance trains in the mid-to-high 90s. Compared to last year, ridership on Viewliner sleepers was down 13 percent and Superliner sleepers were below by 4 percent. Revenue for both was down 5 percent versus last year due to equipment constraints. The shortage of sleepers on the *California Zephyr* and *Southwest Chief* accounted for approximately a \$700,000 revenue decline.

Dorm car sales during the month on the *City of New Orleans*, *Texas Eagle*, *California Zephyr* and *Capitol Limited* generated \$370,000 in July.

In total, long-distance ridership in July was 6 percent behind last year and revenue was 5 percent below. On-time performance continued to be a challenge at 29 percent for long-distance trains. Year-to-date long-distance train performance is at 43 percent.

August results are not expected to improve over July’s, as track work continued to delay trains or cause cancellations. Additionally, severe weather disrupted services along the entire East Coast and a fire in Oregon caused disruption to the *Coast Starlight* operation.

Fall Campaign

Amtrak is looking to the new fall advertising campaign to kick-start the new fiscal year. Starting this month, a new campaign featuring more illustrations by acclaimed graphic artist Michael Schwab will appear across the country.

Continuing the back-to-basics approach to marketing launched last year, the campaign advertises low fares for specific city pairs for both long-distance and *Acela* and *Metroliner* service.

The long-distance campaign is visible in Amtrak’s top 21 markets,

via major newspapers, radio and Parade Magazine, among others.

The *Acela/Metroliner* promotion, which appears in major Northeast and national newspapers and business magazines, also features an Amtrak Guest Rewards double and bonus point offer. Members may earn double points on each qualifying trip between specified city pairs, plus an additional 3,500 bonus points for every two round-trip or four one-way tickets purchased.

Separately, a promotion targeted at Northeast Corridor travelers publicizes the newly rebuilt Amtrak.com and a limited-time 10-percent discount for tickets booked online, with the exception of *Acela* and *Metroliner* service. The fall campaign will also help drive customers to the new site.

[see related story in this issue](#)

Presidential Campaign Trail Hits the Rails

Democratic presidential candidates John Kerry and John Edwards embarked on their campaign’s “Believe in America” swing through the country last month via a special Amtrak train. The candidates visited communities throughout the Midwest and West, during a five-day swing aboard the train, which started in St. Louis and ended in Kingman, AZ.

Operations Department Structure Defined

continued from page 1

cant changes in organizational structure, while others have.

Transportation

The largest of the seven is the Transportation department, which is headed by Vice President Transportation Ed Walker. The department was created as a result of the reorganization that became effective in October 2002, and represents a consolidation of many of the functions that were previously conducted at the SBU level.

locomotive assignments and fleet planning. The Crew Management Services group ensures that Train and Engine and On-board Service crews are scheduled and replacements identified as necessary.

The Transportation Office is responsible for spelling out and monitoring compliance with the railroad's

forth all the rules, policies and guidelines on-board service crews need to deliver the service they were hired to provide.

The changes to the menus are brought about by the group's Food and Beverage team, working with its contractor, *Gate Gourmet*. The group continues to work toward the standardization of amenities, and improving the quality of service.

good repair for its workforce. In other words, its objective is to focus on the hiring, training and evaluating of its employees.

"We're now at a stage at which we need to dedicate more resources toward our employees," said Walker. "We need to bring the right people through the door, provide consistent training and properly evaluate their progress, which will in turn help us know how we're progressing as a service-oriented company."

In the past, hiring needs were not centralized, so planning, staffing and training took place on

an ad-hoc basis. Workforce planning is vital. For example, because the training of engineers requires

two years, the department must forecast its workforce needs to avoid shortages.

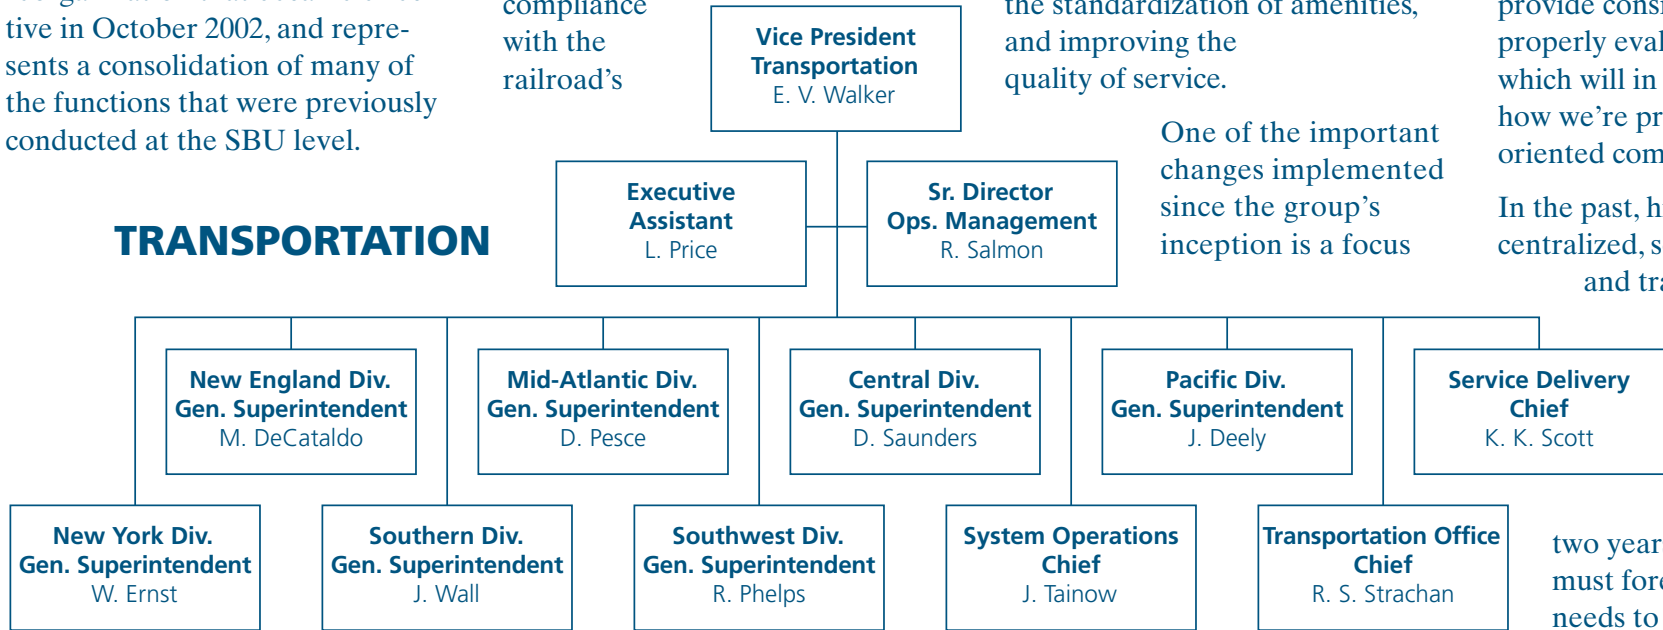

Working with its own departments and Human Resources, the Transportation department is developing a plan that will result in high-quality hiring criteria, the means by which to plan for vacancies and attrition for better allocation of work system wide, and consistent evaluation practices.

As part of this plan, Transportation and Human Resources are considering aptitude testing train, engine and on-board service candidates.

Engineering

About 3,500 employees make up the Engineering department's Track, Structures, Communications and Signals, and Electric Traction functions.

Headed by Chief Engineer David Hughes, the Engineering department is a major contributor to the state-of-good-repair goals the

Following up the reorganization, the Terminal Services group was shifted from Transportation to the Mechanical department.

Responsible for the day-to-day operations of the railroad, the department was created to establish consistent practices and procedures across the system. The outcome is a railroad that generally operates and serves passengers according to the beat of one drummer. There is central control over accounting, more equitable allocation of resources, and fewer territorial issues than there were with the previous, fragmented system.

"We're now all part of the same team, and everyone is held to the same service quality and cost yardstick," said Walker.

More than 9,400 employees, including the system's seven divisional general superintendents and all front front-line employees, such as train and engine crews, on-board services and station employees make up the department.

This department also consists of the functions that sustain Amtrak operations and its services. The System Operations group is essentially responsible for 24/7 monitoring train operations for the entire system, making daily car and

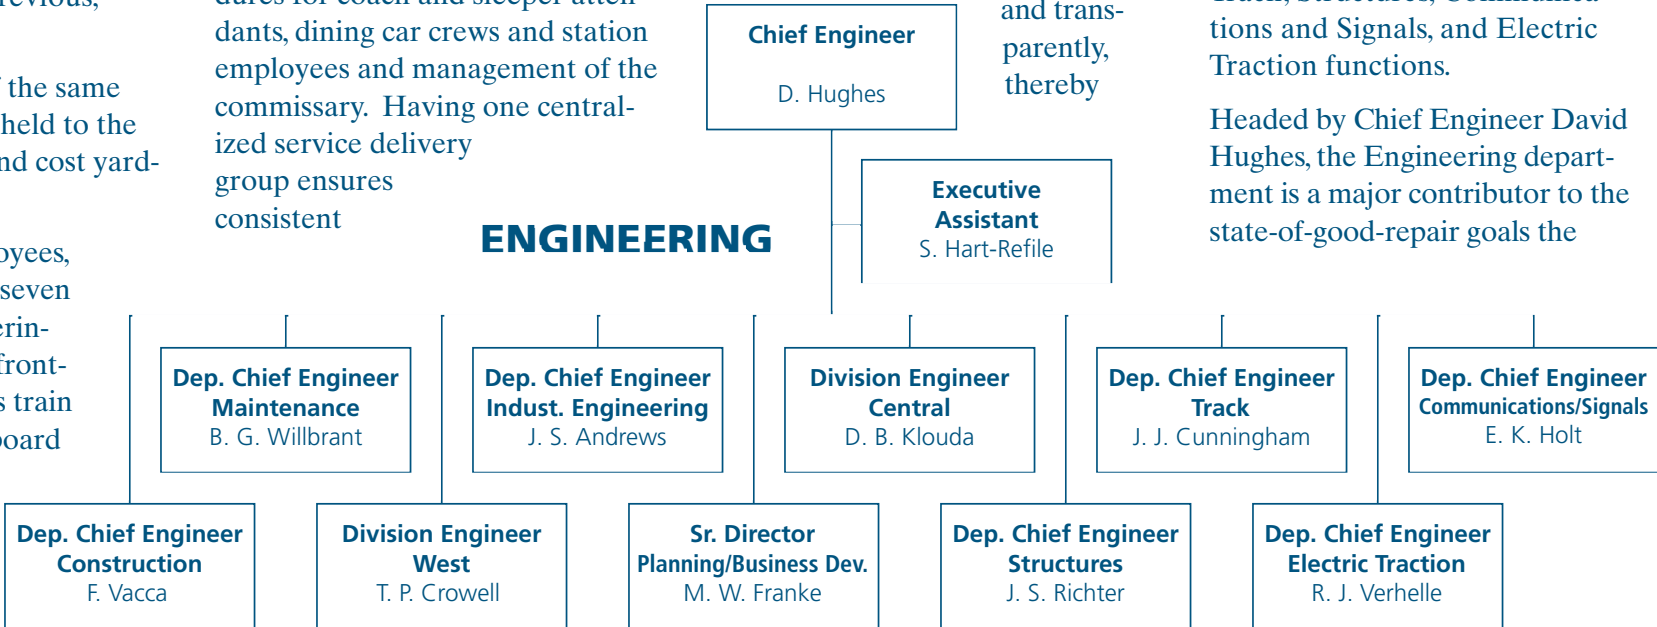

operating standards and rules procedures, which are adjusted according to the needs and requirements of the railroad. The group also investigates every injury and operational failure (such as rules violations). The group works closely with engineers and conductors to identify the causes of violations and collaborate to find solutions to keep those violations to a minimum.

The Service Delivery team identifies standards and directs compliance for all aspects of on-board service delivery, including procedures for coach and sleeper attendants, dining car crews and station employees and management of the commissary. Having one centralized service delivery group ensures consistent

on revenue accountability. New revenue procedures and cash registers on board trains add up to cost control and provide crews the tools they need to ensure proper accounting of the company's money.

Responsible for the department's budget, the Operations Management department is the administrative arm of the Transportation department. The benefit of having one central, managerial function is that the same practices for administrative requests, headcount and staffing, and budgets are applied

systemwide and transparently, thereby

service standards and allows the group to decrease costs by taking advantage of economies of scale when purchasing food and amenities. Published by this group, the Service Standards Manual sets

eliminating potential conflicts of interest and supporting the ability to forecast and manage expenditures.

With a solid organization in place, the Transportation department's main goal is to achieve a state of

company has outlined in its five-year plan. Adjustments made to the organization have enabled the department to conduct the programmed work in the plan. In fact, Engineering's productivity has

LED Station Signs Keep Midwest Travelers Informed

Midwestern passengers may rely on new LED signs for regular updates on train arrival times, service changes and other pertinent travel information at eight Illinois and five Michigan stations. This Flexible Messaging System enables employees to send messages from computer terminals at stations in Springfield, IL, Kalamazoo, MI, and Chicago to LED signs at down-line Michigan and Illinois stations.

The LED Informational Signage Project is funded by the states of Michigan and Illinois.

“The LED signs have the capability of displaying up-to-the minute information to our passengers, information that is vital especially to those passengers at unstaffed locations or stations that are not open for all train departures,” said Illinois Department of Transportation Section Chief of Passenger Rail George Weber.

Typically, a brief standard message scrolls across the sign that directs passengers to Amtrak.com or 1-800-USA-RAIL for travel information, followed by another message that displays the train scheduled arrival time. If the train is delayed, the agent sends a

Springfield, IL, Ticket Agent Joe Sullivan updates the message to be displayed on LED signs at Illinois stations.

priority message — which is updated every 15 to 30 minutes — to each affected station on the route indicating how late the train is running.

According to Springfield Ticket Agent Joe Sullivan, “By utilizing the Arrow system and with the help of conductors who call our station with train status updates, I can provide passengers with the most current information available.”

Springfield ticket agents generate messages to be displayed in Joliet,

Dwight, Pontiac, Bloomington-Normal, Lincoln, Springfield, Carlinville and Alton, IL, while the Kalamazoo agents input data for Kalamazoo, Grand Rapids, Holland and St. Joseph, MI, stations.

When trains depart Chicago Union Station, Chicago’s Passenger Information Display System clerks send train departure messages to be displayed at all Illinois and Michigan stations for outbound trains departing Chicago. Additionally, the PIDS department generates all messages for the Niles station.

“We rely heavily on the station agents — the backbone of the system. Because they understand the importance of getting timely information to our passengers, they conscientiously update the system

“We rely heavily on the station agents — the backbone of the system. Because they understand the importance of getting timely information to our passengers, they conscientiously update the system on a regular basis,”

on a regular basis,” said District Manager of Stations John Bueschel.

Amtrak’s Engineering department, with the assistance of Amtrak Technologies, began installing the Flexible Messaging System at the end of FY ’03. Over the following months technical challenges with the wireless modems used in Illinois and the DSL lines in Michigan kept the system from becoming consistently operational. As the network problems were being resolved, procedures were established and training was held for agents responsible for generating and updating the messages.

As a result of continual technical improvements and updated guidelines that outline schedules for messages to be entered, it is expected that the system will provide a great service to Michigan and Illinois passengers. “As we monitor the LED system and find that its use continues to be a benefit to the traveling public, we may look to expand it to our other state-supported corridors in Illinois,” said Weber.

Pere Marquette Turns 20

Former first lady of Grand Rapids Judy Helmholt reenacts the 1984 christening of the Pere Marquette on the occasion of its 20th anniversary last month. Helmholt was joined by Grand Rapids Mayor George Heartwell, U.S. Senator Carl Levin, representatives from the Michigan Department of Transportation and many local, state and federal officials to mark the event. The Grand Rapids – Chicago service has served nearly 1.5 million passengers in the last two decades.

John Bueschel
District Manager of Stations

New Transit Center To Replace St. Louis Station

Amtrak’s St. Louis station will finally get its long-awaited facelift. The city of St. Louis has developed and approved plans for a new intermodal transit facility, construction for which is scheduled to begin this spring and to be completed in 2006.

Meanwhile, next month Amtrak plans to move into a new 4,000-square-foot interim station, which replaces the “temporary” passenger facility that Amtrak has occupied since 1978, when the operation was moved from Union Station to improve train operations.

The concrete foundation is poured in mid-August for the interim St. Louis station, which is scheduled to open mid-October.

The construction of the interim station is necessary because the current station facility is located within the footprint of the construction site for the new intermodal center. The interim station will also house the crew base and mechanical operation on a permanent basis once station operations are moved to the new intermodal center.

Although the current station and associated buildings were meant to be only temporary, they were determined to be appropriate for the scope of the St. Louis service at the time. After 26 years, the current station, parking area, crew and mechanical facilities are well past their design life.

Working to improve what is currently available for passengers and employees, Amtrak’s Central Division Engineering staff, based in Chicago, has designed an interim facility that will immediately improve Amtrak’s presence in St. Louis.

Amtrak's Next Generation Web Site: a Sustained Team Effort

Visitors to the newly unveiled Amtrak.com Web site may not immediately notice the changes. The familiar blue and orange-yellow color scheme still announces the Amtrak brand, and the logo continues to beam reassuringly from its usual place in the upper left-hand corner of the home page.

But a closer look reveals that this is not the same Amtrak.com.

The redesigned Amtrak.com site is scheduled for launch this month, and despite the subtlety of the changes to the site's look and feel, almost everything is different. The site now provides a wide range of new functionality, allowing customers more power and flexibility in how they book and manage reservations. Every piece of content has been refreshed and the user interface made easier to use.

Behind the scenes, a variety of substantial improvements allow the E-Commerce team and its partners to work more efficiently. The changes are anything but subtle.

A GOOD START

Early versions of Amtrak.com served the railroad well. At the time of its most recent revision in July 2001, online sales amounted to nearly 8 percent of Amtrak revenue. Three years later, in July of 2004, that share had grown to almost 29 percent — a much higher percentage than most airlines, and an average of almost 10 percent better than the hotel industry.

But Amtrak's Kathleen Gordon, senior director of Amtrak's E-Commerce team, knew that Amtrak had only begun to tap the power of the Web to deliver service to Amtrak customers. Gordon, with more than 30 years' experience at Amtrak, had seen plenty of changes in the way customers interact with the company. While the Web site was doing a good job, Gordon challenged the E-Commerce team to raise the bar.

REBUILDING THE SITE

Despite the success of Amtrak.com, the time was right for a redesign.

"Two to three years is a fairly typical timeframe for a substantial relaunch of a major site in the travel industry," says Allen Sebrell, principal marketing officer for the E-Commerce group. "The Web is such a valuable tool that key competitors are consistently investing to add upgrades and new features."

As a first step, the team articulated its basic goals: "Everything was designed with two basic objectives in mind — addressing our customers' needs, and meeting our business goals," notes Roger Seitzinger, E-Commerce creative director.

To better understand customer needs, they started by listening to what Amtrak customers were saying. "Clearly, our customers would provide us with the best insights about how the Web site could be improved," notes Amtrak's David Lim, chief, Marketing and Sales Promotions. "Our customers are without a doubt our most valuable resource. There's no substitute for the real-world perspective they provide," says Lim.

John Wood, principal marketing officer, E-Commerce Communications, knows how valuable customer input can be. He constantly monitors customer communications. "Many of the site's improvements and new features were based on suggestions our customers made over the last two years," Wood says.

Usually, deciding whether to put a suggestion into practice was a simple matter of determining whether the requested feature could be cost-effectively implemented and would provide a substantial benefit to the core base of customers who used the site.

In response to customer demand, for example, the team added "upfront pricing" to Fare Finder, the site's train availability tool. Many people were frustrated that

**"The product really sells itself;
we just got out of the way."**

The Web team: (L. to R.) Roger Seitzinger, Carlene Hardie, Allen Sebrell, Jim Yarnall, Kathleen Gordon, John Wood.

Along with upfront pricing, customers now also have the ability to cancel reservations made through the Web site, and process refunds to their credit cards. Making this function available online has the potential of saving Amtrak thousands in transaction costs.

The team also re-evaluated the process by which customers book seat upgrades and sleeping accommodations online. "Now, upgrading to First or Business class seats or reserving a sleeper is seamlessly integrated into the booking flow," says Jim Yarnall, director of E-Commerce Systems. "We just made it easier for customers to do what they want to do," adds Seitzinger. "The product really sells itself; we just got out of the way."

Roger Seitzinger
E-Commerce creative director

Other enhancements include improving the Fare Finder, and moving Train Status to the front page. "Providing self-help resources like the train status tool works for everyone," notes Gordon. "Customers are happy to have information at their fingertips, the call centers are relieved of the burden of answering tedious train status queries, and the company stands to save millions by shifting unproductive calls to the Web."

The team also conducted an extensive competitive analysis of other travel-related sites. Given Amtrak's uniqueness in the travel arena, however, not all practices observed on other sites were directly relevant to the way Amtrak does business.

In addition to airline sites and travel portals like Travelocity and Orbitz, the E-Commerce team looked in other places not quite so obvious. City metro train pages provided some useful lessons, as well as some international rail sites. Standard-bearing leaders in e-commerce, like Amazon.com and Google were also consulted. "Our aim was to make this a world-class site," says Gordon.

THE TEAMWORK BEGINS

Marketing's vision of the new site was only one piece of the work required to make the new Amtrak.com a reality. Amtrak Technologies (AT) and Marketing formed a team to develop the site from the ground up. One of the earliest decisions the team made was to select SITA, a leading software developer of information services for airlines and travel-related companies, to develop the new booking engine.

Steve Trus, director of AT E-Commerce, led his group in coordinating several technology components, each of which were required to complete the project. AT designed the hardware architecture and worked with the Manassas Data Center to install it. AT increased its own capacity by adding a software developer to jointly develop the system with SITA. This move

positions AT to more cost effectively support the site with less reliance on outside vendors.

Another key task AT managed was to move customer profiles from the old site to the new. “We wanted to keep our customer data secure, so we managed this part ourselves,” said Marilyn Peifer, senior technical lead.

“Some parts of the project made sense to manage jointly,” explained Trus. “Our testing efforts and project management were best managed together, since each group brought different perspectives. This interaction ensured the success of the project.”

UNDER THE HOOD

Many of the changes to the site, although invisible to customers, will have a big impact on their ability to accomplish their goals. “The redesign gave us the opportunity to revisit and radically improve the underlying technology,” says Yarnall.

One such behind-the-scenes enhancement involved changing the way the Web site exchanges information with Amtrak’s reservation and information system, known as Arrow. Formerly, the Web site pulled data from Arrow by a method called “screen-scraping,” which required reading mainframe output line-by-line and character-by-character. “To say the least, it wasn’t the most sophisticated solution,” says Yarnall.

Communication between the Web site and Arrow is now handled primarily by XML, a state-of-the-art technology for tagging data for use by Web sites. “XML permits us to access and manipulate data in a way that is completely independent of how it is displayed and formatted,” explains Yarnall.

Another big change, perhaps more noticeable, is a tighter integration of the site’s editorial content and reservation booking system. In the previous version of the site, pages containing content (such as route descriptions or information about special offers) resided on pages separate from those providing the online tools that would allow customers to make a reservation. AT Manager Steve Lebo adds, “We’re now using Akamai Technologies to seamlessly integrate our systems and improve our site performance.”

Today, this is no longer the case. Editorial content describing the many attractions along the *City of New Orleans* route, for example, now sits side-by-side with the reservations tool that allows the customer to book that very trip. As a consequence, customers always have easy access to the booking flow. “We’re removing obstacles to the booking system, and making it easy for customers to start making reservations almost anywhere on the site,” says Seitzinger.

Yarnall explains that a big part of the effort involved getting enhancements to Arrow to support the changes the E-Commerce team wanted in the Web site. “We worked with AT’s Arrow program-

what they can do, and how they can do it.

As part of the comprehensive content overhaul, the site now provides relevant “help” wherever it’s needed. Dozens of pieces of pop-up help text now answer customers’ questions about a variety of topics — from how to use the Fare Finder to the exact dimensions of a sleeping accommodation. “Visitors to the site don’t have to leave the booking path to hunt down information,” says Seitzinger. “Instead, we serve it up to them — where and when they need it.” And again, it’s a win-win situation: customers get the information they want, and Amtrak saves the cost of a call.

But beyond the ordinary obstacles presented by a project of this magnitude, the E-Commerce team members encountered a few thorny challenges they had not anticipated. In November, the project’s content management integrator, Granitar, suddenly and unexpectedly closed its doors. Gordon credits the Procurement department’s Rich Coyne for adroitly resolving the sudden quandary by securing the services of former Granitar employees for the project. “He saved our launch date,” says Gordon. “The consequences could have been disastrous.”

COMING ALL TOGETHER

By May, the new site began to come together. The E-Commerce team received delivery of a new booking system, and most of the site’s content had been written, edited and put into place. The team then put the site through several rounds of rigorous quality assurance testing. Technical and software issues were uncovered, diagnosed and resolved, and in September, the new site was ready to be launched.

LOOKING FORWARD

“There’s no better travel-related e-commerce site out there,” says Barbara Richardson, vice president of Marketing and Sales. “The release of our new Web site continues to keep Amtrak ahead of our travel industry peers.”

“We’re excited about seeing the site increase its customer base and its performance. Our use of industry-standard technology and platforms will enable continued growth,” says Kay Duggan, senior director of AT.

While satisfied with the results of their efforts, team members continue to look forward to improving the site. Plans are afoot for improving the search engine. They’re also discussing providing call centers with additional administrative tools to help customers using the site. Improvements to the way the site is marketed through e-mail are also in the works.

Contributed by John Slavney

The AT Team (L. to R.) Stephen Oates, Jamal Watts, Rod Moss, Marilyn Peifer, Steve Lebo, Tom Krotchko, Jonathan Miller, Debbie Chang, Steve Trus.

mers to make changes to Arrow to let us do more with data and serve our customers better,” says Yarnall.

NEW WORDS

The team also undertook a thorough refresh of all editorial content on the site — a project that entailed writing hundreds of new pages, editing all existing content, and creating an entirely new information architecture. In the process, the team developed a comprehensive style guide for the Web site, governing everything from consistent capitalization to the appropriate tone to adopt when writing online copy for customers. “The goal is to provide content that is relevant to our customers’ purposes,” says John Wood. “Anything that fails to help them accomplish a task, or get the information they need, was thrown out.”

The result is both a leaner and more informative site that provides customers with a clear path to learning about what Amtrak offers,

NOT WITHOUT CHALLENGES

Although the results make the site look simple, the redesign project itself was unusually complex, requiring coordination of several concurrent projects. In early stages, the team had to account for no less than twelve separate projects in development. Each project was essential to the relaunch, and each needed to be completed on time to keep the project on schedule.

To make sense of the interdependencies between the individual projects, and to effectively track progress, the team developed a detailed integrated project plan. As Steve Trus comments, “We developed a chart to see all the projects on the same timeline and their interaction — we wound up with a chart that was 2 feet by 3 feet. No one could keep all the tasks straight in their heads. The plan was essential to helping the team keep its eye on the critical path, mitigating risks and avoiding delays.”

PROMOTIONS INFORMATION

Marketing and Advertising Promotions Available on the Intranet

Employees with questions, suggestions or an interest in the latest advertising and marketing promotions will find a wealth of information on Amtrak's Intranet.

By accessing the Intranet, employees may find information about grassroots marketing and advertising programs, special

promotions, events and radio promotions taking place through Amtrak's National Marketing, Marketing East and Marketing West programs.

Marketing East highlights Amtrak's partnership with the Peabody Essex Museum in Salem, MA. Employees surfing through the Southeast section may learn about recent sports marketing initiatives, such as promotions with

the WNBA Charlotte Sting or the Baltimore Orioles.

Updated monthly, the site is accessed via the Intranet home page, in the My iDesk section.

Wisconsin Stopover Tickets Offer Unlimited Travel

Passengers traveling between Chicago and St. Paul-Minneapolis may make unlimited stopovers for

one low price with Amtrak's new Wisconsin Stopover Ticket. For \$75 each way, passengers may travel on Amtrak's *Hiawathas* and *Empire Builder* to ten Illinois, Wisconsin and Minnesota destinations. The Wisconsin Stopover Ticket is valid for sale from Aug. 31 through Dec. 16, and valid for travel Sept. 7 through Dec. 16.

Beech Grove's Remanufacture Program Underway

continued from page 2

electrical cable. The push- and kick-pad door operators are also replaced as well as the windows, walls, flooring, carpet, cushions, drapes and berths. The public address system is repaired and, if necessary, replaced. All light fixtures in the sleeping cars are replaced with an updated look and are equipped with brand-new disaster lighting, which becomes activated when the battery-operated emergency lights fail.

New walls, ceilings and non-skid flooring installed in the rebuilt cars

allow for faster, easier cleaning practices. The difficult-to-clean carpeted walls and ceilings throughout the car are removed and replaced with painted or aluminum core surfaces that are easily washed with mild detergents and soft cloths that will not damage the finish. The floor carpet, which had previously been glued and nailed down, is installed with clips that enable coach cleaners to quickly remove and replace small sections of the carpet when necessary. In other areas,

such as the restrooms and aisles, non-skid flooring is applied, which no longer requires high-gloss coating and is easily cleaned with a damp mop. Special training will be held system wide to instruct coach cleaners on the proper way to clean and maintain remanufactured sleeping cars.

Before it joined revenue service, the car traveled to Washington Union Station and other facilities to provide some coach cleaners and on-board service crews the opportunity to examine the latest genera-

tion of the sleeping car and to offer suggestions for improvement.

The remanufacturing process is accomplished with approximately 50 employees working various shifts during an eight-week period — at a cost of about \$1.1 million per car.

Operations Department Structure Defined

continued from page 4

increased its volume of capital work, to \$396 million in FY '04 from \$231 million in FY '03.

Changes made to the organization more efficiently manage the quality and amount of work the department has undertaken and clearly delineates the department's responsibilities — more closely resembling a basic railroad than in past years.

One of the Engineering department structural changes that took place as a result of the 2002 reorganization was the absorption of the engineering compo-

nent of the Northeast Corridor high-speed rail project.

Other changes have also paved the way for better project management. A single Production department was created to monitor and direct the work being conducted on all projects, rather than having projects managed by various deputy chief engineers for each of the department's disciplines. Bringing all these functions under one umbrella has improved

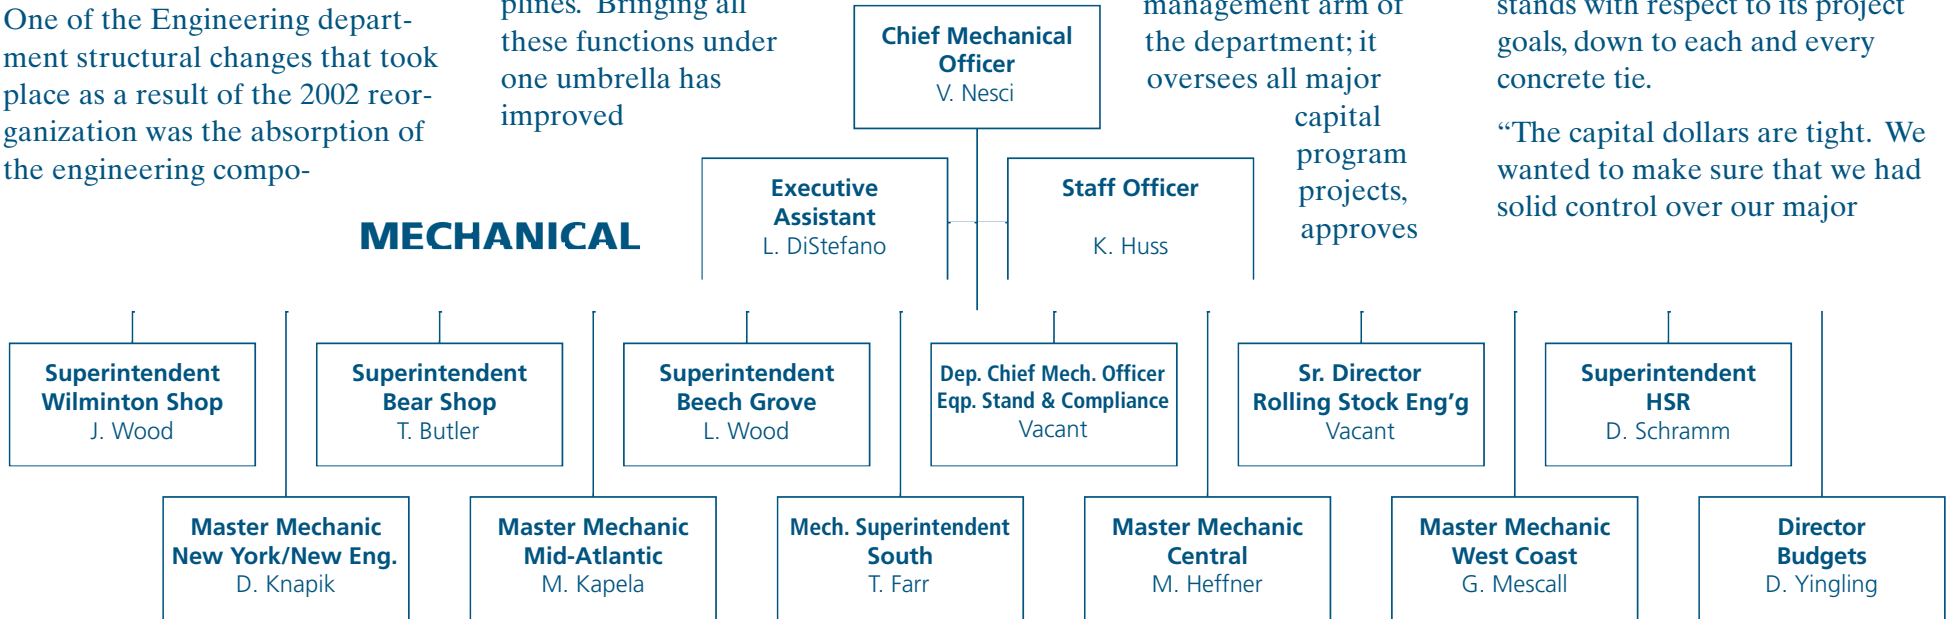

the utilization of equipment and materials. It also resulted in an approximate 15 percent reduction in technical and administrative personnel that took place last fiscal year.

All major capital projects are overseen by a new position, deputy chief engineering, Construction. The Construction group is the program management arm of the department; it oversees all major capital program projects, approves

the projects and ensures that they are managed effectively. It also sets uniform standards for contracting, project planning and reporting that were previously inconsistent and unsystematic.

These centralized functions enable the Engineering department to institute unit production goals. On a daily, weekly and monthly basis, the department knows where it stands with respect to its project goals, down to each and every concrete tie.

"The capital dollars are tight. We wanted to make sure that we had solid control over our major

projects,” said Hughes. “The end result is a tighter department that is better organized to carry out its responsibilities and meet its objectives, and that has established credibility inside and outside of the railroad.”

Hughes’ main goal is to maintain the infrastructure in a state of good repair while minimizing the impact of the work on the railroad’s on-time performance.

Mechanical

The Mechanical department has experienced recent changes designed to establish a more traditional railroad structure that better facilitates reaching the department’s goals and objectives, namely improving the reliability of the fleet by reducing the number of equipment failures. This structure also streamlines the chain of command and assigns clearly defined accountability within the department, which is run by Chief Mechanical Officer Vince Nesci.

Most of the organizational changes were complete by Oct. 1, 2003, modifying the reporting structure for mechanical positions throughout the system. From that point on, mechanical positions that had been part of Transportation (with the exception of some small outlying locations, such as San Diego, Harrisburg and Richmond) became part of the Mechanical department. Mechanical forces supporting commuter services, also previously part of Transportation, report to the Mechanical department. The department consists of approximately 5,000 employees.

The Mechanical department’s organizational changes facilitate directing work to the proper facilities to take on the poor health of the fleet. For example, the resumption of programmed work for regular overhauls, remanufactures and wreck repair at Amtrak’s backshops addresses the deferred maintenance issues the railroad must overcome. More frequent and regular tune-ups at the Service and Inspection facilities have been established, moving from a 180- and 360-day schedule to a 30-, 92- and 365-day cycle, thereby extending the life of the fleet.

Environmental

Assistant Vice President Roy Deitchman is

responsible for Amtrak’s Environmental department, which develops standards for environmental control and public health including food services, monitors compliance with state and federal and Amtrak’s public health and environmental stan-

dards and serves as project manager for Amtrak’s \$20-plus million environmental capital program. The department develops Amtrak’s environmental and public health policies, procedures and training. Integration of the previous business unit environmental managers into one company-wide organization has increased efficiencies and provided more streamlined emergency response to environmental incidents such as accidental major spills of diesel fuel.

Operations Planning

With a solid foundation of a traditional railroad in place and momentum gaining on the progress of the five-year plan, focus shifts to the railroad’s service. Just as the company has rebuilt its organization, and restores its infrastructure and equipment, it must examine the effectiveness of every factor that contributes to Amtrak service.

Enter the Operations Planning department with a mission to figure out what makes the most sense for the railroad from an operational and economic perspective. Run by recently appointed Chief Operations Planning Officer Ralph von dem Hagen, the group examines all

aspects of current service on a route-by-route and system wide basis for maximum efficiency and utilization. A number of factors contribute to operations planning — market demand, load

factors, equipment availability, commuter service, schedules, connectivity, crewing, station staffing and the freight railroads, to name a few.

The department is uniquely positioned to conduct this analysis, as the department is responsible for leading and supervising train operation planning, managing day-to-day relationships and leading negotiations with freight railroads, including incentive programs.

“The Operations Planning group represents our next initiative. It’s tasked with coming up with answers to questions that haven’t

been asked in a long while — does this train meet demand, are we using equipment in a way that makes sense, are we making the most of our resources,” added Crosbie.

The group also serves as the intermediary between the Transportation department and the Engineering department to accommodate outages associated with major capital projects. By building large-scale projects into schedules, the group mitigates or completely eliminates the affect of the work on the passenger.

Safety

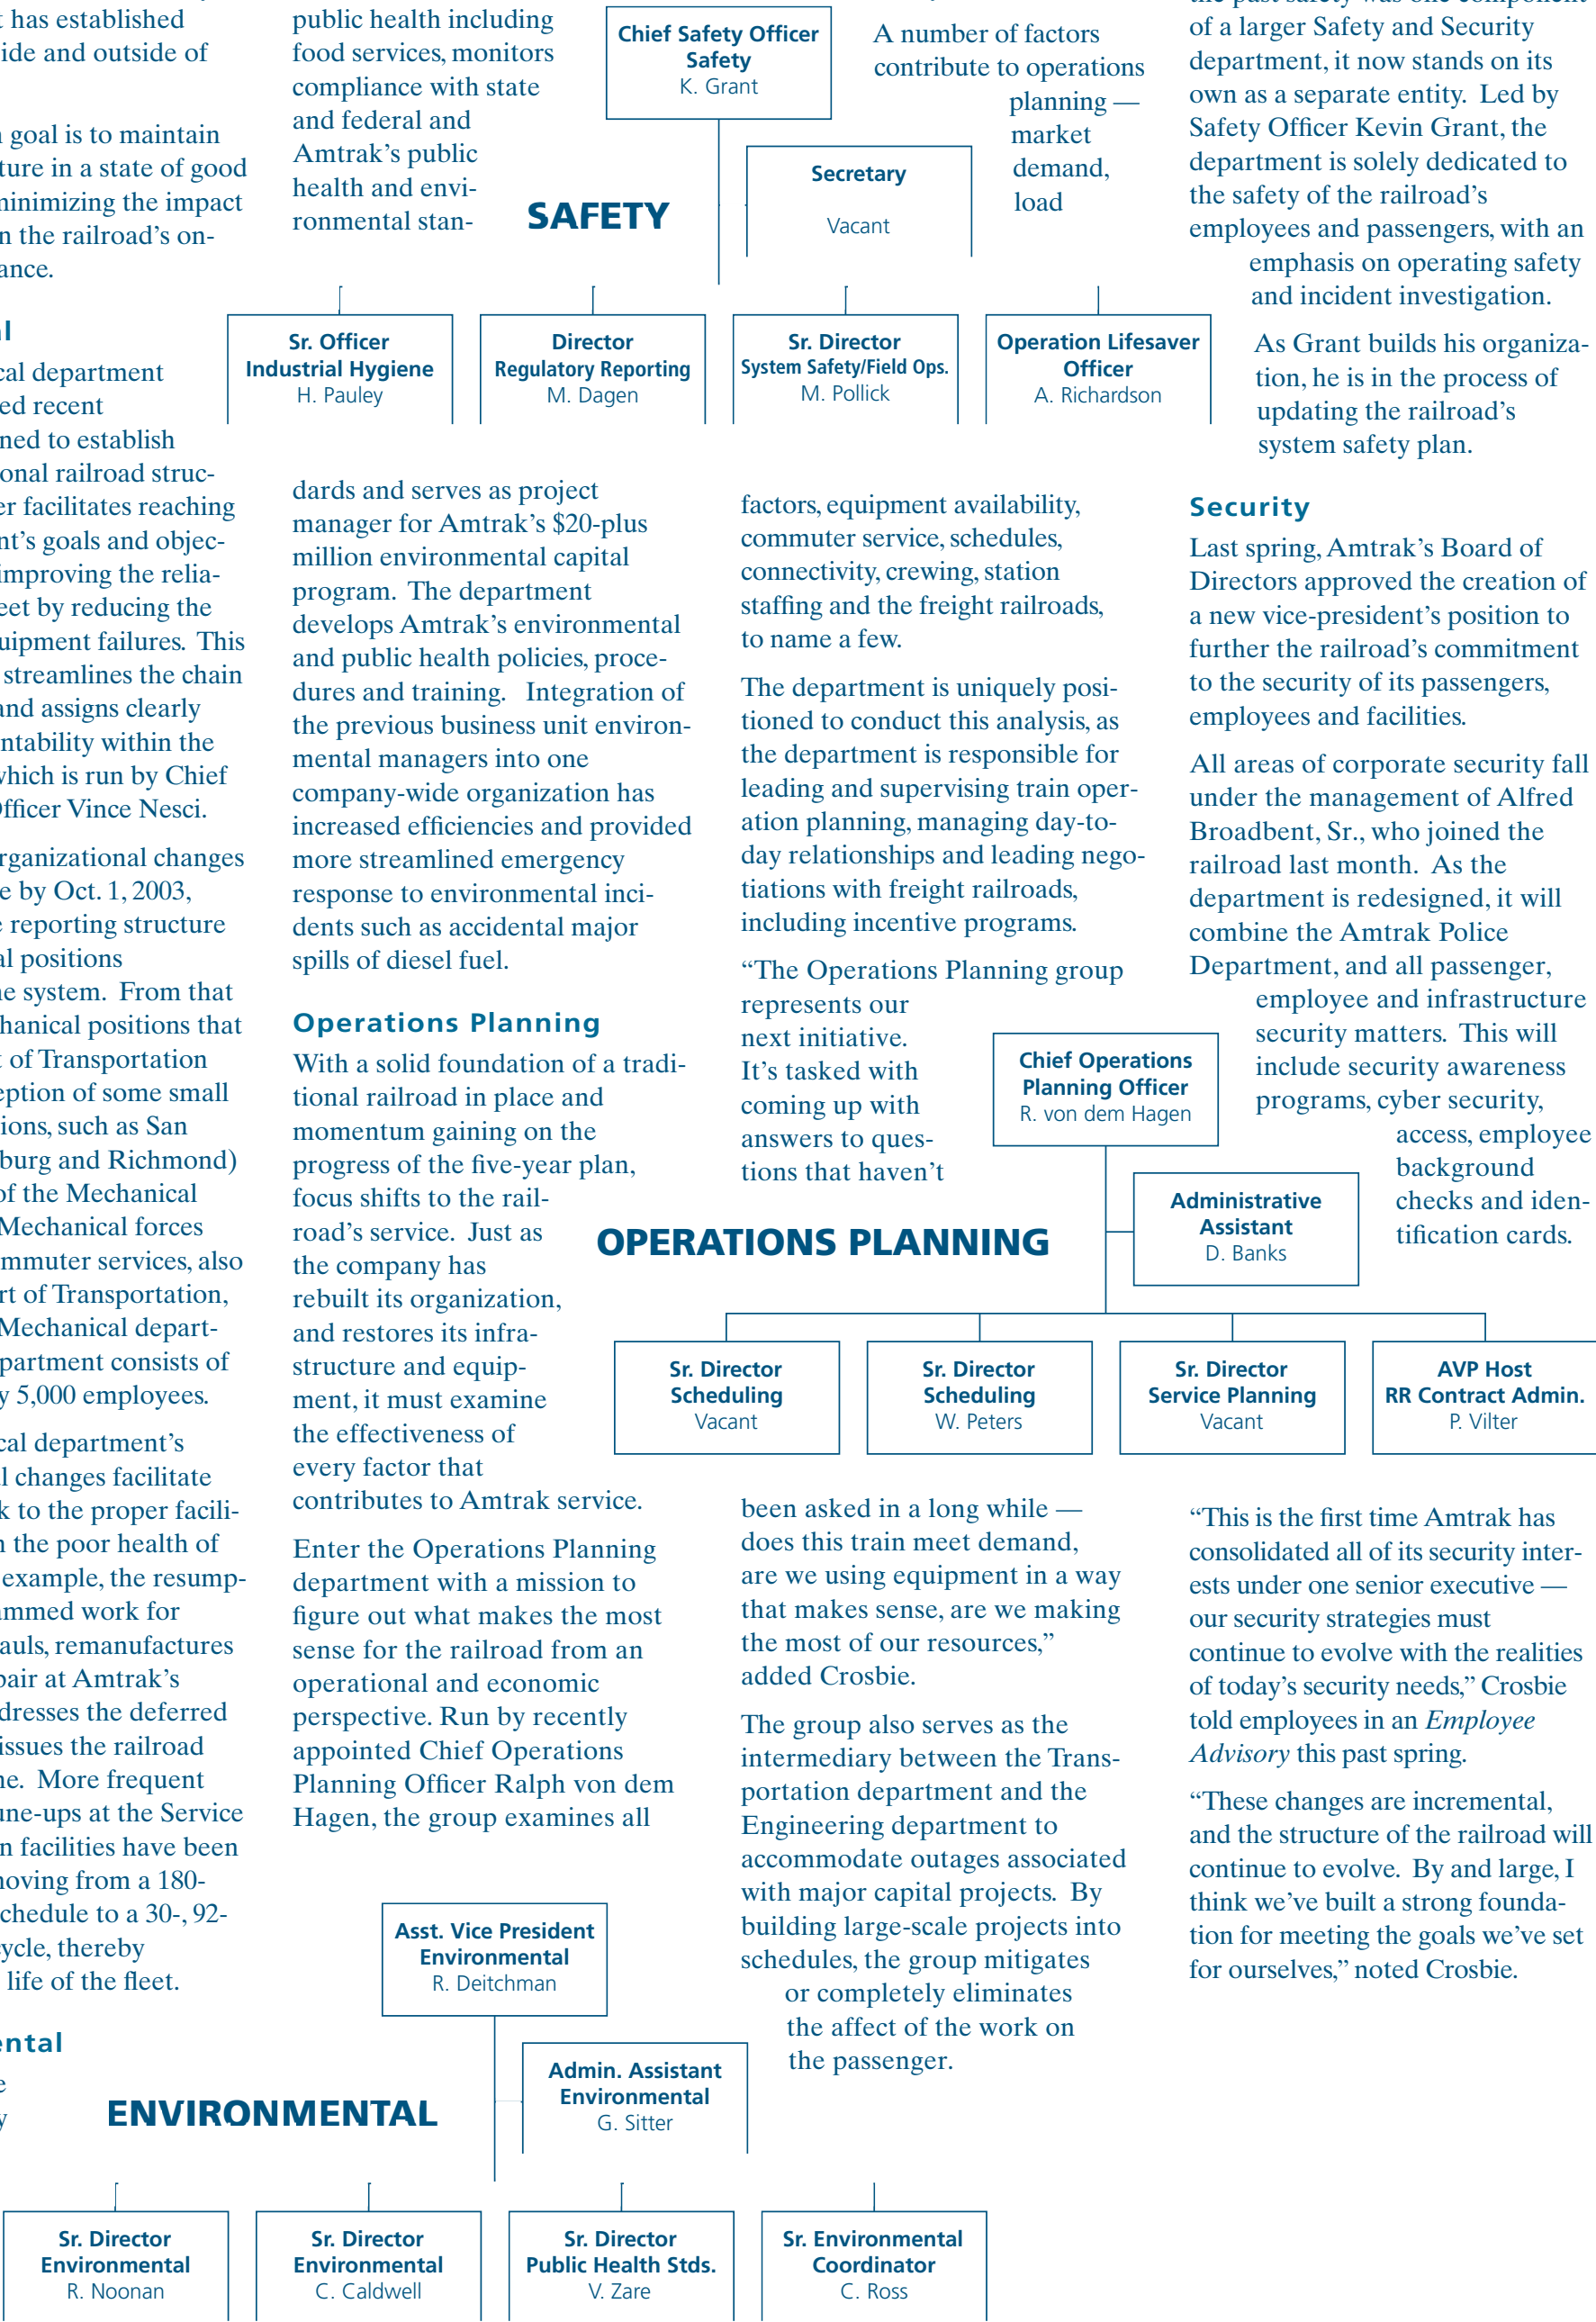

The railroad’s Safety department was recently modified; whereas in the past safety was one component of a larger Safety and Security department, it now stands on its own as a separate entity. Led by Safety Officer Kevin Grant, the department is solely dedicated to the safety of the railroad’s employees and passengers, with an emphasis on operating safety and incident investigation.

As Grant builds his organization, he is in the process of updating the railroad’s system safety plan.

Security

Last spring, Amtrak’s Board of Directors approved the creation of a new vice-president’s position to further the railroad’s commitment to the security of its passengers, employees and facilities.

All areas of corporate security fall under the management of Alfred Broadbent, Sr., who joined the railroad last month. As the department is redesigned, it will combine the Amtrak Police Department, and all passenger, employee and infrastructure security matters. This will include security awareness programs, cyber security, access, employee background checks and identification cards.

Bridge and Building Foreman Aids in Rescue

While on bridge watch for high water resulting from heavy rain in Delaware, Bridge and Building Foreman Sean Diamonte helped rescue two teenagers who were rafting during torrential rains that flooded the region in mid-July.

On the afternoon of July 12, the Mid-Atlantic region experienced heavy rainfall — approximately seven to eight inches fell in a period of about six hours causing flash flooding in the area.

Diamonte was dispatched a few miles south of Wilmington, to the undergrade bridge at White Clay Creek in Stanton, DE, to watch for high water that could force debris onto the tracks.

As he watched the bridge, he noticed a raft headed downstream. As it approached the bridge, he could see that the water level, which was five feet above normal and above the bottom flange of the bridge, would prevent the raft from passing through.

When the rafters reached the bridge structure, they slammed into the web of the bridge. The teens fell overboard, and climbed up on the bottom flange, holding on to the outriggers that support the walkway. At this point, they were stranded on the girder, with no way to climb up or across to get back to shore.

Diamonte called 911 and informed them of the situation. He also called CETC to request a hold on #3 track so the rescue team could safely go out on the bridge to retrieve the two rafters.

One week after two teenagers nearly drowned in a flash flood, their raft is still stuck on the bridge where a bridge inspector, Sean Diamonte, helped facilitate their rescue.

As the two clung to the side of the bridge screaming for help, Diamonte assured them that assistance was on the way. Shortly thereafter, emergency crews, along with the Maryland State Police arrived at the scene. The rescue team, joined by Diamonte and two state troopers, lowered a life vest on a rope to the stranded teens. Each was raised to the track level and taken to a waiting ambulance.

While the boys were cold and bruised, Diamonte’s quick thinking helped ensure their safe rescue from potential disaster.

Magnolia Room Blossoms with Help From Employees

A water main break at New Orleans Union Passenger Terminal in July flooded the station and filled the recently renovated First class passenger lounge with about three inches of water. The spirits of the group of employees who had recently refurbished the Magnolia Room were dampened, but not all was lost.

The team’s advisor, Station Manager Janet Harvey, called the agents before dawn that morning and told them to dress down — there was work to be done. The lounge was out of commission for about two weeks following the flood while cleaning and repairs were made.

Not long before the flooding occurred, the lounge had undergone a significant facelift. The upgrade began in January, when Harvey received the approval and a limited budget for the project from General Superintendent Joe Wall. She put together of team of Passenger Services employees who put in all the work, as well as used some personal time and personal items, for the renovation.

With the lounge open to the public, employees painted the interior, the furniture was cleaned or repaired and painted, the carpet was shampooed, and lighting was purchased. Employees contributed prints and posters that were attrac-

tively framed and hung on the walls to decorate the room. To balance the room, Bert Bertin created a window effect on an opposite wall. He put up a mirror, added a window treatment and created a faux window.

Pat Diecidue, then a lead agent, custom-built a glass-door cabinet fitted with a padlock that securely housed a television satellite box and card.

The final touch was a silk magnolia arrangement that was placed over the doors.

While certain Passenger Services employees were key players on the project, the rest of the station’s

employees kept the station operating, making the entire group at New Orleans Union Passenger Terminal responsible for the blooming success of Amtrak’s Magnolia Room.

Passenger Services employees at New Orleans Union Passenger Terminal created the window treatment that covers the front glass wall and frames the doorway in the Magnolia Room, as part of the renovation undertaken by the employees.

Providence Gang Sets Safety Milestone

Front Row (L. to R.): Supervisor Larry Deveran, Joseph Allen, Dennis Court, Norman Gomes, Alphonse Braddy, Foreman Ken Patriaca, Back Row: John Ruggiero, Ron Taylor, Foreman Joe Patriaca, Foreman Paul Bjorkman, John Earle, and Gary Cartwright. Missing from photo: Assistant Division Engineer Andy Pedro, Don Ginaitt, Steve Knott, and Joshua Danis.

Working under sometimes precarious and adverse conditions, such as replacing bridge decks, rebuilding bridge structures, and a host of other challenging tasks, the Providence, RI, Bridge and Building department has worked injury-free for five years, from Aug. 2, 1999, to Aug. 2, 2004.

Being aware of employees’ needs and giving them the proper tools to get the job done in a timely fashion is what supervisor Larry Deveran attributes to his gang’s safety achievement. He also added that communication with employees on a day-to-day basis plays a big role in safety — being there for employees and earning their respect, trust, and support.

Available to Amtrak First class passengers in New Orleans, the Magnolia Room reflects renovations completed by the station’s Passenger Services employees.

Amtrak Committee Honors Quality Employees

Members of Amtrak’s Customer Advisory Committee traveled to locations across the country this summer to honor front-line employees who were awarded the committee’s Customer Service Awards. The first round of FY ’05 Customer Service Award recipients will be announced at the next ACAC meeting in Albany, NY, in October.

As an usher at 30th Street Station in Philadelphia, Raymond Herold diplomatically directs passengers and dispenses information in a calm manner, even during a crisis. He was joined by (L. to R.) Assistant Superintendent Rick Gadbois, Manager Stations Keith Manning, ACAC member Alma Goodwyn, Superintendent of Passenger Services Lenore Slimbock, ACAC Vice Chair Robert Dabney and General Superintendent Daryl Pesce.

Southwest Chief Sleeping Car Attendant Rene Cardonne’s aptitude for quality service delivery is acknowledged by ACAC.. (L. to R.) General Superintendent Richard Phelps, ACAC Administrator Kate Warr, Assistant Superintendent of Passenger Services Patsy Hall, Cardonne with his wife and two sons, and Superintendent of Passenger Services Lynn Berberian.

Philadelphia Reservations Sales Agent Tyson Gardner is recognized by ACAC members Matt Losee (L) and Robert Dabney (R) for the quality of the service he provides. Gardner’s crew joined the event to honor him for his consistent professionalism.

Riverside Call Center Reservation Sales Agent Stanley DuBois’ friendliness and determination to find a travel solution distinguishes him from other employees. Joined by his team, DuBois was presented the award at the call center. (L. to R.) ACAC member Nancy Kurten, Reservation Sales Agent Stanley DuBois, Operations Manager Mary Dickson, Riverside Call Center Director Gene Price.

FRONT LINE FOCUS

Editor's note: This past summer, Amtrak experienced an unprecedented drop in its on-time performance. As Amtrak President David Gunn mentioned last month in his Train of Thought column, this has "not been fair to our passengers or to those of you who serve them." However, faced with this adversity, many employees have gone the extra mile to keep passengers informed and make them as comfortable as possible. Those extra efforts go a long way, as noted below.

Dear Amtrak:

I would like to recommend passenger car assistant Michael Huggins for the highest recommendation for this service aboard the *Coast Starlight* from Los Angeles to Seattle.

The train was an hour and a half late when we boarded at Klamath Falls, OR, and three hours late into Seattle, and the Pacific Northwest was in the grip of a record heat wave. In the face of these extremely trying circumstances, Mr. Huggins performed his work well beyond the call of duty, and with exemplary humor and personal dignity.

In the course of the trip, Mr. Huggins responded cheerfully to numerous requests from his passengers, and helped arrange for the unscheduled transfer of connecting passengers to buses at Eugene, smoothly handling a situation that could have caused considerable annoyance.

Mr. Huggins' service stands out all the further for two reasons: first, the *Coast Starlight* is not his normal run; and second, he and the rest of the train crew knew that, due to the train's late arrival, the crew would have to sleep aboard the train and be back on duty before a full night's sleep would have been possible.

Sincerely,

Mark D.
Seattle, WA

Dear Amtrak:

Recently, my wife and I took a most enjoyable cross-country adventure on Amtrak from Worcester, MA, to Yosemite National Park, San Francisco and Seattle. Surely, all three destinations are worthy in their own right, but our vacation experience was greatly enhanced by traveling on Amtrak the entire way.

On our trip of more than 8,500 miles, we encountered many ticket clerks, conductors, train attendants, dining car workers and even a few bus drivers. All of them were good, but two stood out as being especially cheerful and conscientious. Kevin Grisham, the sleeping car attendant on car 4911 [*Lake Shore Limited*], and Evelyn Johnson, a dining car waitress on train #5 [*California Zephyr*].

Mr. Grisham provided unsurpassed service for riders who were fortunate enough to be in his car. He walked through the car frequently asking if there was anything he can do for us; he replenished the bottled water without being asked; he gave safety instructions on the PA system; and he personally escorted all of the passengers down to the dining car for dinner.

Mr. Grisham and Ms. Johnson, combined with the fantastic scenery, comfortable cars and tasty food, certainly reinforced my belief that "getting there is half the fun." The trains were on time and the equipment was in good working order. But, I have seen both of these fine people perform just as well when the conditions were less than ideal. Last December, we left Chicago with Mr. Grisham on sleeper 4820. By the next day's arrival in Worcester, the train was six hours late and the water pipes had broken in the cold. Mr. Grisham walked through his car offering passengers warm towels. My first encounter with Ms. Johnson was four years ago when the *Zephyr* was five hours late. The dining car crew had somehow been able to find enough food for an extra meal, but Ms. Johnson was humorously apologizing for the lack of desserts.

Both Kevin Grisham and Evelyn Johnson unquestionably are Amtrak ambassadors of good will.

Sincerely,

Robert W.
Worcester, MA

Kathy Janega-Dykes, President and CEO of the Santa Barbara Conference and Visitors Bureau and Film Commission (left) and Santa Barbara Mayor Marty Blum (right) bestow Amtrak Sales and Marketing Associate Brian Hart with the Star Tourism Golden Trumpet

Award. Presented at a ceremony held in July at the Santa Barbara station, the award honors individuals and institutions that have positively influenced the promotion of Santa Barbara as a world-class tourism destination. The organization recognized Amtrak for its promotion of car-free travel to Santa Barbara that yields low impact on the environment and high impact on tourism revenues. More than 100,000 passengers visit the Santa Barbara Amtrak station annually.

Fall Timetable Ushers New Schedules, Policies

The arrival of Amtrak's Fall/Winter Timetable, which becomes effective Nov. 1, not only publicizes new schedules and service improvements, but also introduces a number of policy changes that will affect passengers.

Some of the most significant schedule changes outlined in the timetable are the direct result of the railroad's exit of the mail hauling business. This decision offers an opportunity to adjust schedules that were previously driven or constricted by the mail contract, some of which are reflected in this timetable and others will be realized in the spring schedule change.

The *Palmetto* service began as a New York-Savannah train, and was extended to Jacksonville to accommodate a mail-hauling contract in 1988. In 2002, the service began

operating as a coach-only train New York to Miami, via Tampa.

As a result of the closure of the mail business, *Palmetto* trains 89 and 90 no longer serve Florida, operating between New York and Savannah only as of Nov. 1. Reverting to a schedule that was in place in the 1980s, the train offers more convenient daylight service to the Southeast. Cities that will no longer have rail service — Waldo, Ocala, Wildwood and Dade City — are connected by motor-coach with the *Silver Star* at Lakeland and Jacksonville.

While the *Silver Star*, trains 91 and 92, continues its New York to Miami run via Orlando, it also begins serving Tampa and Lakeland (previously served by the *Palmetto*) on Nov. 1. This route change also restores sleeping car

accommodations and dining car service to those cities.

The schedule of the New York-Pittsburgh-Chicago *Three Rivers* was designed to meet the needs of the mail business when it was extended to Chicago in 1996. Without that business, the service changes significantly. Now, a single train through Pittsburgh — the *Three Rivers* — will depart daily from New York at 1:15 p.m. and Chicago at 10 p.m. Next-day arrivals are 7:45 a.m. in Chicago and 7:28 p.m. in New York.

The second phase of this transition takes place in March, when service on this train west of Pitts-

burgh will be eliminated, following the legally required notice to the communities that will no longer be served by Amtrak; Youngstown, Akron and Fostoria OH, and Nappanee, IN.

continued on page 9

Oakland Maintenance Facility Opens in November

The much anticipated 22-acre, \$71 million Oakland Kirkham Street Locomotive and Car Repair Shop opens its doors for business on Nov. 1, 2004, following a ribbon-cutting ceremony that took place on Oct. 12.

A joint project with the state of California (Caltrans), the facility is located adjacent to the Union Pacific mainline and was modeled after the Los Angeles locomotive and car repair shops.

Prior to the opening of the new facility, Amtrak paid Union Pacific a fee plus the cost of fuel to service locomotives at the old West

Oakland facility. "Units will return to service much faster than before because they will be serviced in-house," said Stephen Greene, superintendent of Mechanical. "They will not need to be sent to

Los Angeles for preventive maintenance." Amtrak will also service and repair the *Coast Starlight* and *California Zephyr*, which serve Oakland as part of their route, at the new facility.

"We're proud of all of the hard work that went into the construction of the facility, which was completed on schedule and within budget," said Chief Mechanical Officer Vince Nesci. "The facility will be utilized to increase the fleet

reliability of our locomotives and keep the West Coast fleet in a state of good repair."

The Oakland shops have a total of 13 tracks. Five tracks serve the maintenance building, and two S and I tracks can accommodate four complete train sets at any given time. Four staging tracks used to build consists can hold eight trains undergoing service and inspection simultaneously. An additional track is used for storage, and a wye track is used to accommodate the turning of train sets. The wye is useful for the *California Zephyr*, as it needs to be cut and wye'd before returning to service each day.

The new facility has the capacity for all preventive maintenance and mechanical repair work, including drop table and wheel machine work, on the entire fleet of locomotives and cars.

Taking advantage of modern technology to adhere to strict environmental requirements, the new facility features a wastewater treatment system that uses a Dissolved Air Flotation (DAF) system, which is the most efficient type of treatment for oily wastewater generated during train washing, fueling and locomotive maintenance activities. Oil and grease, metal particulates and other solids are removed from the wastewater before it is discharged to the sewer system.

The train wash system, though similar to other train wash systems in Amtrak maintenance yards across the country, also cleans the top of the cars as they go through the washer. A new product called SparkleSeal Plus, acts as a rinse aid, to decrease spotting on the train windows.

Material control efficiency is greatly improved by the modern

continued on page 7

A locomotive occupies the service pit at the new Oakland maintenance facility. The Service and Inspection tracks can house up to four train sets at any given time.

TRAIN OF THOUGHT

As you may know by now, the operating and capital budget for FY '05 was approved by the board of directors late last month. This \$1.5 billion budget represents the third year of our strategic plan to bring the railroad to a state of good repair through an aggressive capital program to reduce the backlog of deferred maintenance and other problems that you know about all too well.

While there are a number of uncertainties and risks that may affect the plan the board approved, we need to move forward with it at this time.

The budget depends upon our meeting our revenue and expense targets for the year and upon a \$1.5 billion federal grant to support our train operations and the capital projects we've scheduled for the year. It also depends on getting relief from repayment of the \$100 million loan we secured from the U.S. Department of Transportation two years ago.

There are risks in this budget, too. If on-time performance continues to erode, it will have an impact on our revenues. If we can't complete the capital work we've scheduled, that may have an impact on revenues. The reliability and availability of *Acela Express* trainsets is another risk (we plan a high of 15 in service on weekdays), as it is the

premium revenue-generator of the fleet. Other unknowns include the cost of fuel and the condition of the national economy and the travel industry in '05.

There are other kinds of risks, as well. As I said last month, if Congress does not pass an appropriation for us, we'll most likely be funded through a temporary measure, a continuing resolution as they call it, at our current rate of funding — \$1.2 billion. How long that might be is anyone's guess at the moment. If and when Congress does pass a transportation spending bill that includes our appropriation, it might very well be at a level less than \$1.5 billion. If it is substantially less, we'll have trouble, just as I said in this column last month.

Consequently, it is only prudent that we be prepared for funding shortfalls. You plan for all of the contingencies and work your hardest for the best outcome. As I've said many times, underfunding Amtrak at the \$900 million proposed by the DOT at the start of this process, will shut down the railroad. But we are yet a long way from staring that proposition in the face and I am trying as hard as I can to get what we need to continue to run the railroad.

I am proud of everything we have achieved in the past two years to

David L. Gunn

rebuild our plant and equipment, and improve the reliability of the service we provide our passengers. Certainly, there are things that are beyond our complete control, such as the gridlock crisis in the freight rail system.

But each of you as employees of Amtrak has more influence on our securing public funding than you think. The influence comes from simply doing your job well. It comes from your commitment to safety, security and passenger service. And it comes from the recognition by others that at its core, Amtrak is made up of people dedicated to a strong passenger rail service.

As developments occur, I will continue to update you in this column and in the Employee Advisories.

Amtrak Exits Mail Shipping Business

Last month's announcement by Amtrak that the railroad would cease hauling mail for the U.S. Postal Service came after a thorough examination of the benefits and costs to the bottom line, according to managers in the Transportation department. In the final analysis, management determined that the costs, including delays, outweighed the benefits.

Amtrak's exit from the mail business also reflects its stepped-up focus on its core business — intercity passenger rail service — and is expected to yield schedule improvements, with most to come with the spring schedule adjustment.

As management considered its contract with the U.S. Postal Service, the resources needed to make capital expenses for mail and express equipment and for running trains solely to accommodate the contract did not merit dedicating

the resources to continue the mail business.

"Mail and express no longer makes business sense for Amtrak and has negatively impacted the quality of our passenger service," Amtrak President David Gunn told Amtrak employees in a recent *Employee Advisory*. Gunn indicated that all mail and express activity would be concluded by early October.

The withdrawal of the mail and express business has affected some employees, many of whom have the opportunity to remain with the company in other capacities.

Shedding the mail business improves train operations, as the switching of mail and express cars at terminals and en route and the associated delays no longer affect passenger service; mail handling delays in cities such as Chicago, Toledo, Philadelphia, Washington, St. Paul-

Minneapolis, Los Angeles and Jacksonville are eliminated.

The mail business required specialized equipment unrelated to running a passenger railroad, and leasing and maintaining the equipment was costly. As part of a broader agreement with Norfolk Southern, Amtrak is arranging for the disposal of railroaders, bogies and other equipment used exclusively in the mail and express business.

In addition, the mechanical forces that conducted maintenance and repairs on equipment can now redirect their efforts to bringing the fleet to state of good repair without distraction.

Amtrak is adjusting service — the *Palmetto*, *Three Rivers* and *Pennsylvanian* — that had been driven by the needs of the mail business, concurrent with the Nov. 1 schedule change.

Chicago Operations Centralization Plan Reaches Halfway Mark

Amtrak Assumes Dispatching of its Michigan Line

Amtrak’s Central Division Transportation and Engineering forces have reached the midpoint of a long-term plan to consolidate the Chicago Operations Center’s six dispatching locations into a new 24-hour modern facility located within Chicago’s 14th Street Mechanical and Transportation facility at the Chicago Yards.

In February 2004, Amtrak assumed the dispatching of eight Michigan Service trains and one local freight train that operate over the Michigan Line — 100 miles of Amtrak-owned track from Porter, IN, to Kalamazoo, MI. Previously dispatched by Norfolk Southern Railway from Amtrak’s Trail Creek Drawbridge Tower in Michigan City, IN, this territory is now in the hands of Amtrak train directors.

Closing the tower and relocating the dispatching duties to the new center in Chicago enables Amtrak to control movement of all trains traveling over its own track outside of the Northeast Corridor and brings the Operations Center one step closer to centralization of the operation.

“We’re controlling our own destiny by eliminating the middleman,” said Trainmaster Tom Pape. In the past, a Norfolk Southern operator at the tower received directions from his or her dispatcher in Dearborn, MI, who in turn notified Amtrak. Now, Chicago train directors make all of the decisions regarding the movement of trains across that territory. “It’s easier for us — if there’s a problem, our train directors can address it immediately,” Pape continued.

The new facility is equipped with the latest technology that includes dedicated communication lines between the dispatching center and the Michigan Line, and a Train Control System that enables train directors to remotely control the operation of the bridge and the

movement of trains. A DSL line and five cameras were also installed at Trail Creek to enable train directors to monitor the marine traffic in the creek via the computer system at the Chicago Operations Center.

“The infrastructure, built with the capacity to support all six

governs the operation of the railroad. While different sections of the NORAC book of rules apply to various users including train directors, conductors, engineers and maintenance-of-way employees, train directors are required to be versed in all areas.

fied in July. They were also responsible for drafting the Amtrak Michigan Line Train Director’s Manual, a reference guide for the incoming train directors, and the Michigan Line Timetable that outlines the schedules of operation.

To relocate the dispatching center, Deputy Division Engineer Bob Olson and his signal team moved the computer systems from the Drawbridge Tower to the 14th Street Operations Center. The signal crew also instructed the train directors how to use the newly installed computer system to apply and remove Temporary Speed Orders. These orders are applied in a variety of situations, such as when maintenance-of-way work requires a reduction in train speed or when there is a change or defect in the condition of the track.

The Drawbridge Tower is the third of six interlocking towers to be closed as part of the centralization project, which began six years ago with the closing of Amtrak’s Lumber and Harrison Street towers that controlled Amtrak’s five-mile stretch of track at the Chicago Terminal. After shutting down these locations, the dispatching functions were shifted to Amtrak train directors at the existing Lake Street Tower.

Last year, the New Orleans Tower that controlled the tracks at New Orleans Union Passenger Terminal was closed and dispatching over that section of track was done by remote control at Chicago’s 24-hour 21st Street Tower, which also handles train movement for a mile-long section of track near the tower.

In 2005, the 21st Street operation will be relocated to the 14th Street Yard and plans are in place to consolidate the Lake Street location to the Chicago Operations Center by the summer of 2006.

“We’re halfway there — once all the train directors are in one location, we will be able to support a 24-hour operation, provide improved supervision and oversight while taking advantage of increased efficiency and the newest technology,” said Superintendent of Operations Travis Hinton.

At Chicago’s 14th Street Operations Center, Train Director Diane D’Andrea monitors the Michigan Line console control that allows her to view the position of trains, and via remote control, initiate switch and signal changes that direct train movements.

dispatching centers, is insulated from all commercial power outages,” said Division Engineer Dave Klouda. The facility is constructed with back-up generators to provide continuous power supply and its own separate heating and air-conditioning systems. “If the whole city of Chicago goes dark due to a power outage,” added Klouda, “we can still dispatch trains.”

In preparation for controlling the Michigan Line operation, between March and July, five train director trainees and four transportation managers completed five weeks of intense training on NORAC Operating Rules, the program that

In addition to the five-week program conducted by the System Rules department in Chicago, the trainees also underwent three weeks of schooling at the Wilmington Training Center. To better understand the territory and the operation, train directors also spent a week with the Norfolk Southern operator at the Drawbridge Tower.

Diane D’Andrea qualified as a train director in July and described the training, and the job, as very demanding. “We were tested every day,” said D’Andrea. “After working 33 years in functions like the ticket office and crew assignment, I worked hard to understand railroad procedures and terms that were totally unfamiliar to me. But, in the end, it was worth it. I love the job and I’m glad I found the tenacity to succeed.”

The transportation managers, who had previously gone through NORAC training, operated the Michigan Line dispatching center until all the trainees became quali-

“It’s easier for us — if there’s a problem, our train directors can address it immediately.”

Revenue and Ridership Numbers Reflect Trying Month

With more than 160 trains either cancelled or suspended in August due to hurricanes and tropical storms in Florida and the Southeast, flooding in Virginia and upstate New York and a tunnel fire in Oregon, it's no surprise that the ridership and ticket revenue for the month took a hit.

The Republican National Convention in New York City, a lagging economy and competition from low-cost airlines also had a negative effect on Amtrak's bottom line in August, while continued on-time performance issues and equipment constraints added to the decline. In spite of all this, the overall figures for fiscal year-to-date are holding against budget because of strong performance earlier in the year.

For the month of August, ridership of 2.18 million trips was even with last year, but 9 percent below budget. August ticket revenues of \$104.6 million were 5 percent below last year and 13 percent below budget, which was the lowest August revenue in five years.

For fiscal year-to-date, ridership through August was at 23.1million trips, which was 5 percent over last

year, and steady with budget; while ticket revenues of about \$1.16 billion were 4 percent over last year and 1 percent below budget.

Because of the Republican convention, ridership to and from New York City between Aug. 27 and Aug. 31 was down 27 percent (compared to the same five days last year) and resulted in estimated lost ticket revenues of \$1.7 million. Despite last August's Northeast power outage, which suppressed demand for nearly one week, August '04 ridership and ticket revenues for *Acela Express*, *Metro-liners* and *Regionals* stayed even with August '03 levels, but fell short of '04 budget goal. The lagging economy also continued to affect the market, as have low-cost carriers.

Long-distance train ridership and ticket revenues in August fell well below last year's levels and missed the FY '04 budget by 17 percent for ridership and 19 percent for ticket revenues, with heavier losses in sleeper class.

Due mostly to weather and the resulting service cancellations, the Silver Service in August '04 alone

fell \$1.8 million short of '03 ticket revenues, with another \$0.8 million shortfall traceable to *Auto Train* and *Sunset Limited* cancellations. Additionally, of 27 scheduled *Sunset Limited* departures in August, only 15 operated completely — four were cancelled and eight were annulled or started at New Orleans.

On West Coast corridor services, *Pacific Surfliner* ridership was up 15 percent over last August — a record for the month, and the highest monthly total in the history of the service. The *Capitol Corridors* also did well, up nearly 8 percent in ridership and more than 4 percent in ticket revenues over last August.

In the Midwest, the Michigan corridor showed strong ridership on all three routes, and exceeded last year's 12-month totals with still a month to go in the fiscal year. The *Wolverine* passenger counts were up 12 percent, the *Pere Marquette* was up by 18 percent, and the *Blue Water* rose by double-digit percentages every month since it replaced the *International* last spring.

Customer satisfaction scores stand in the high 70s, with Amtrak's on-time performance for August at 67 percent, down two points against last year. Long-distance trains were at 31 percent, down 11 points against last year; *Acela's* on-time performance was 76 percent, up 11 points from August '03.

The September numbers are currently being analyzed, however it's anticipated the last month of the fiscal year will also prove to be a challenge. The Republican convention continued to have an effect through the first few days of the month and hurricanes continued to cause train cancellations. Looking to counter the affects of those weather-related service cancellations and boost year-end revenue, along with the regular fall promotions, a special promotion was implemented in September to bring ridership back to the Florida market. The program is valid for travel on all Florida trains, including *Auto Train*, and offers customers a 20-percent discount off the best available coach fare.

Poor On-time Performance Generates Frustrated Passenger Complaints

With on-time performance worsening this summer, Amtrak received a record number of customer complaints in the form of phone calls, emails and letters.

Additionally, the summer's freight railroad congestion and construction, Amtrak's own equipment shortages and severe weather conditions combined with the poor on-time performance to suppress ridership 9 percent below the budget target (*see related story in this issue*).

Customer complaints rose most sharply in August. As hurricanes and tropical storms besieged Florida and the Southeast, flooding strained operations in Virginia and upstate New York and a tunnel fire in Oregon wreaked havoc on the railroad's capacity to operate, customer contacts jumped 63 percent over August a year ago. About 50 percent of these contacts were OTP complaints. System-wide OTP in August dipped to 67 percent, two points lower than August 2003.

"While it's not surprising to receive more comments from our passengers in the summer, the sharp spike in August reflects the unusual challenges we faced that month and how they affect our passengers," said Vice President Marketing and Sales Barbara Richardson.

Third-quarter Comments

In the third quarter of the fiscal year (April through June), passengers contacted Amtrak over 42,000 times by letter (13 percent), phone (81 percent), and e-mail (6 percent) with 71,065 complaints and commendations. Not surprisingly, 96 percent of the comments were complaints (68,510) and 4 percent (2,555) were commendations. Compared to the same period in FY '03, this represents a 1.6-percent decrease in commendations per 1,000 passengers and a 6-percent rise in complaints per 1,000 passengers. Forty-five percent of third-quarter complaints centered on on-time performance problems

And the Winners Are . . .

Amtrak's 2005 wall calendar will showcase an *Empire Service* train, as it travels along the Hudson River in New York.

The First-prize winning photograph, of a southbound *Empire Service* train as it passes Bannerman's Castle (located on Pollepel Island about 55 miles north of midtown Manhattan), was submitted by Scott Hartley of Connecticut.

The railroad's "Picture Our Train" 2005 Wall Calendar Contest drew more entries than last year and ended with five deserving prize winners:

1st Place
Scott Hartley

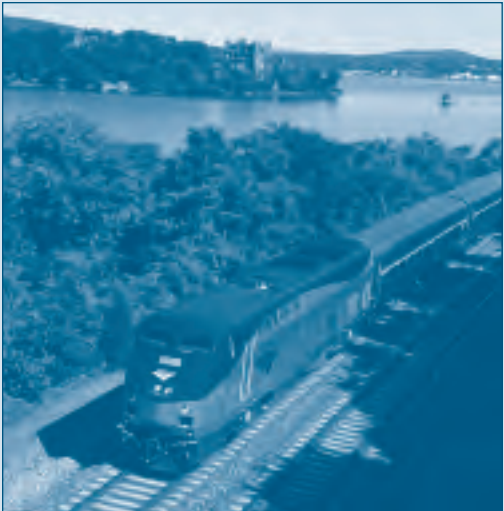

2nd Place
Michael McFadden

3rd Place
Phil Gosney

4th Place
Mark Meyer

5th Place
Michael Rapchak, Jr.

Congratulations to the winners and thank you to all those who participated in the contest. Amtrak looks forward to next year's contest.

and 19 percent were related to equipment issues.

Throughout the third quarter, Amtrak encountered a number of operating challenges, ranging from

track work projects, to freight traffic, to weather-related delays that negatively affected on-time performance.

Dear Co-workers,

Last month, the Southern Division received a beating from tropical storm and hurricane force storms Bonnie, Charley, Frances, Ivan and Jeanne — all within the span of several weeks. While we are accustomed to managing major tropical storms, the frequency and potency of these storms hit us hard. At the time that I write this letter, we’ve still got Hurricane Jeanne knocking on the door along with two more months of hurricane season left.

During this brief period, we experienced a number of states of emergency and evacuations. Many of our employees were evacuated, only to return to homes damaged by the storms. Thankfully, none of our employees was hurt. In spite of all this, many of our employees helped protect our facilities, equipment and the limited services being offered.

On the railroad, we experienced flooding, damage to transformers and fallen trees. Despite our best efforts to secure our stations and facilities, we incurred some damage to stations and facilities, some of which were without power for extended periods of time. Just a few examples of the damage include the destruction of the Kissimmee platform canopy, and the West Palm Beach windows were blown in. The Orlando station sustained roof damage and the Sanford station experienced roof and interior damage so significant, that as I write this, the building is currently uninhabitable. The *Auto Train*/Mechanical Administration building roof needs extensive repair and the *Auto Train* station suffered damage to the roof and to the outside passenger area. Preliminary estimates to restore these facilities are over \$1.5 million.

Thanks to our employees’ dedication to getting the job done right, the damage we sustained was relatively minimal, given the size of the storms and the potential for large-scale destruction.

With the safety of our employees and passengers our first priority, we curtailed and suspended service with each of the storms. Florida service and some service to New Orleans were severely impacted — and revenue for both August and September will reflect it. In August alone, preliminary numbers show a \$2 million loss in ticket revenue to the storms.

All of the Transportation department employees should be commended for working together with other departments around the clock to make sure we secured our stations and equipment. We held numerous daily operations calls with various departments, to make coordinated decisions regarding the safety of our employees, customers and service, as well as protecting equipment and facilities. We made operational decisions on a daily basis, taking things one day at a time.

On another very different note, I’d like to share my perspective on the changes that have taken place as a result of our getting out of the mail business. The mail and express business had taken a toll on our core mission and related delays were causing passenger discontent. The exiting of the mail business provided us an opening to make adjustments to our routes. As you know by now, the *Palmetto*

will no longer serve Florida, as it will operate between New York and Savannah only, starting Nov.1. Some folks may remember that the *Palmetto* (which originally ran New York–Savannah) was extended to Florida in 1994 because of a mail contract. With the change to the *Palmetto*, we should have a bit less congestion on the road. The *Silver Star* will serve Tampa and Lakeland, cities that were served by the *Palmetto*, and will bring back First class service to Tampa.

While I know that some employees in this division — as well as a few others — may find these changes difficult, it is in the interest of serving our passengers that we exist. We have great employees and we will do all we can to place those affected in other areas.

Another development in the Southern Division involves one of our partner states, North Carolina. The state has really taken a leadership role in recognizing the contribution of the railroad to its transportation infrastructure and its economy. The state’s enthusiasm for passenger rail is exceptional, both in terms of station and track improvements. The North Carolina State Department of Transportation is committing state and federal funds to improving existing track, building segments of new track and installing signal systems. Working with its freight railroad partners, NCDOT completed track work between Raleigh and Greensboro that cut travel time by 20 minutes, and increased efficiency and reliability of the railroad. The next phase of infrastructure improvements, which will take place between Greensboro and Charlotte, involves rebuilding of double track in specific segments of the railroad, replacing turnouts with higher-speed turnouts and super elevating track to enable trains to run faster on curves.

On-time performance continues to be a major challenge for this division and the level of congestion on the road is an impediment to achieving our on-time performance goals. As of Aug. 31, on-time performance for the division this fiscal year is a bleak 50.8 percent. While recognizing that freight traffic on the Class I railroads grew 89 percent (revenue ton-miles) from the early 1980s to 2003, the size of the rail network has also shrunk significantly during that period. The result is more traffic on fewer lines and dismal on-time performance for us, particularly in the Southern Division.

One last note, and it’s good news. For the first time in its history, the entire Southern Division had an injury-free month in August. Taking extra precautions pay off, not only when battling hurricanes, but every day. I am extremely proud of our employees for taking safety seriously and setting this safety record. I also want to THANK each person in the division for their efforts and encourage them to keep up the good work!

Sincerely,

J. D. Wall
General Superintendent – Southern Division

Recovery Program Brings Travelers Back to Florida

Drivers entering New York city are greeted by a message on the outdoor video board at the entrance of the Holland Tunnel that states: Amtrak and Florida are Back in Business. This message is part of The Florida Recovery Program, a joint campaign between the Southeast Marketing Group and Florida’s Convention and Visitors Bureau to bring travel back to Florida after multiple hurricanes and tropical storms devastated residents and put a halt to the state’s tourism industry.

And of course, Amtrak’s goal is to fill seats on its four trains traveling to and from Florida. From the start of Hurricane Bonnie on Aug. 12 through Hurricane Jeanne, Amtrak lost more than \$6 million in ticket revenues. During the two-month period, 147 trains were cancelled and more than 175 trains were truncated.

Restoring ridership on the Florida trains is critical, as together they account for more than \$100 million in annual ticket revenue.

The Recovery Program features a 20-percent discount off the lowest available rail fare to passengers traveling to or from Florida on Amtrak’s Silver Meteor, Silver Star, Palmetto and Auto Train. This promotion is valid for sale through Oct. 25, 2004 and good for travel through Oct. 28, 2004.

In addition to the Holland Tunnel message, the program is being promoted via press releases issued to cities along the route, postings on Visit Florida and major Florida

CVB Web sites and print advertisements in Miami, Orlando, Fort Lauderdale, Savannah, GA, and Columbia, SC. Additionally, Florida destinations and services, particularly Auto Train, are being featured in Amtrak’s national fall print advertising campaign, which began in September. Employees may obtain more information on this program by visiting the Marketing site on the Amtrak Intranet.

Troubled Bridge Over Water

Thames River Bridge Undergoes Emergency Repair

Engineering forces last month worked around the clock to make emergency repairs to Amtrak’s Thames River Bridge, a bascule bridge between New York and Boston. This was the most recent episode of a number of urgent fixes made to the bridge’s machinery in the past 15 years.

Located in Groton, CT, the bridge is a key transportation link that the railroad cannot afford to have become inoperative — it would sever the north end of the Northeast Corridor. Its operation is not only vital to passenger rail service — it’s also a key transportation link to a number of other entities. The Thames River is home to the U.S. Naval Submarine Base in Groton, the U.S. Coast Guard Academy, commercial facilities that rely on marine transportation, a shipbuilding plant and marinas that serve commercial fishermen as well as recreational boaters.

The machinery that raises and lowers the bridge is worn out and requires constant monitoring. Its failure could cause the bridge to seize up during operation, blocking the channel and preventing rail operations.

Either way, the bridge is Amtrak’s responsibility to maintain. Replacement of the bridge was highly recommended as a result of an engineering study conducted during repair in the early 1990s. Plans and specifications were developed, but the project was not pursued due to budget constraints. Instead, the railroad has had to respond with immediate short-term fixes.

“These days, with limited funding, we take a gamble on which piece of the infrastructure is going to go first,” said Chief Engineer David Hughes.

Built in 1919, the bridge is on the railroad’s list of priority capital projects and its replacement is

Engineering forces work around the clock to complete emergency repairs on the Thames River Bridge south counterweight trunnion. Broken bolts that were found during an inspection led to this weeklong effort.

Located in Groton, CT, the Thames River Bridge is a key transportation link between New York and Boston that has undergone a series of urgent fixes.

“This is the only game in town. Should the bridge lock in the up position, it will shut down rail service between New York and Boston,”

Charles Yordy
Director, Structures Maintenance

slated for completion in 2007. The plan involves replacing the existing bascule lift with a vertical lift bridge, the span of which is raised and lowered between two towers.

The bridge’s worn machinery includes trunnion bearings, which facilitate the raising and lowering of the bridge span. (Think of a trunnion as a giant axle on which the bridge pivots when opening.) The trunnions support the entire weight of the bridge as well as the four million pound counterweight as the bridge is raised and lowered. As with other bridges of this design and age, the counterweight trunnions commonly present the most problems.

Each counterweight trunnion assembly at this bridge is held in place by a series of eight bolts. Following a thorough assessment of the bridge in 1990 that found

significant wear on the trunnion bearings and overstressing of these bolts, an emergency repair was conducted that involved boring holes to accommodate three-inch-diameter bolts.

In 1995, an inspection found that the newer bolts on the south counterweight were breaking. Another emergency repair was done in which an additional eight holes were bored between the existing bolts to accommodate one-and-seven-eighths-inch diameter by four and one-half-foot bolts.

Fast forward to July of this year, when the gang responsible for inspecting the aging machinery on Amtrak’s bridges found two broken one-and-seven-eighths-inch bolts on the south counterweight trunnion. Subsequent ultrasonic testing revealed a third

bolt that was still in place, but had fractured.

Engineering gangs worked two 12-hour shifts every day for a week to replace the bolts. This required using air tools to drive out the old bolts and then drilling out the holes, which had become irregular in diameter, due to a decade’s worth of wear and shifting of the multiple layers of structural plates through which they pass.

Replacing the bolts is tedious because it’s done bit by bit — driving the old bolt out six inches at a time, cutting the bolt six inches at a time, and then pushing the new bolt in a bit, pulling it back out to ream the hole and pushing it back in further. Forcing the work could damage the threads.

The support gangs prepared the bridge during the day, doing everything from building scaffolding, to setting up lights, to getting the reamers — the sharp cutting tool that cuts the abnormalities in the holes — together.

While the work was completed in a week, scrutiny of the bridge’s machinery continues on a daily basis.

“There’s a point at which you need to stop repairing and get on with the replacement,” said Charles Yordy, director Structures Maintenance.

The Engineering department is in the process acquiring its own portable ultrasound equipment to test for fractures and other defects. Two machinists will attend a class to be certified on the machine’s operation and will conduct frequent ultrasound inspections of the bolts to catch breaks before segments fall out of the bearing assembly.

The problems Amtrak is facing are very common to bascule bridges of the same age and type. This is true of roadway as well as railroad bridges. However, a highway department may shut down a bridge and direct drivers through a detour; Amtrak does not have that luxury.

“This is the only game in town. Should the bridge lock in the up position, it will shut down rail service between New York and Boston,” added Yordy.

The Thames River Bridge is one of the 13 movable bridges Amtrak owns, 10 of which are on the Northeast Corridor.

Transportation Department Summer Safety Initiative is a Success

Due to the success of a recent safety initiative, the Transportation department reduced injuries related to slips, trips and falls by 65 percent during June, July and August. The initiative's top three achievers were recognized by Ed Walker, vice president of Transportation, when he announced the award winners at a department meeting held in September.

The Pacific Division won the Transportation department's Gold Award for achieving an 88-percent reduction in the number of injuries resulting from slips, trips and falls this summer, compared to last summer.

Proud of his division's accomplishment, General Superintendent Joe Deely said, "The managers and employees really focused on doing things the right way. And it paid off — it shows that when we focus our efforts we can make a difference, and in this case, it resulted in a safer work environment for our employees and passengers."

The Silver Award was made to the Southern Division for having the fewest — reporting only one — of these types of injuries over the three-month period, which represented an 86-percent reduction compared to the same period in FY '03.

The New England Division received the Bronze Award with an

83-percent reduction in injuries related to slips, trips and falls during the summer months.

The genesis of this initiative was a noticeable spike in injuries experienced by the Transportation department during the summer of '03, a high percentage of which resulted from slips, trips and falls. Committed to making a difference in FY '04, the department's leadership addressed the problem at a general superintendents' meeting held last May in Boston. They agreed to implement a summer safety initiative that incorporated a spirited competition between the divisions.

The challenge was two-fold; to see which division would have the lowest number of these types of injuries, and which would achieve the greatest reduction in the number of these injuries.

To launch the initiative, Chief Transportation Officer Steve Strachan and his staff developed a targeted campaign that centered on using MoveSMART® techniques for preventing such injuries. The program included supervisor guides, employee briefing materials and safety posters that showed Amtrak Transportation department employees using the MoveSMART "Three Points of Contact" techniques. The materials featured conductors and on-board service employees using the specific tech-

niques that focus on three areas of high-frequency injury: walking through the train, getting on and off trains and using stairs.

Transportation department managers and supervisors distributed the materials to employees at job briefings, tailgate sessions and all safety meetings. The posters were displayed at all crew bases, where employees seemed to take particular notice because fellow crew members were on the poster. Managers and supervisors observed behavior on trains, platforms and in stations to coach employees about how to avoid putting themselves in situations that put them at risk for injury, and to point to safe practices. Transportation department employees practiced the "Three Points of Contact" so well that fall injuries dropped from 10 in June to eight in July and down to five in August.

Walker praised the team for making a difference, noting that the reduction in injuries accomplished by Transportation department employees was remarkable. "If we take personal responsibility for safety, we can continue this positive trend," he added.

Based on the improvement shown by the department, a similar campaign targeting lift injuries will begin in October.

Oakland Maintenance Facility Opens in November

continued from page 1

stockroom that contains a storage system that maximizes storage density and minimizes vertical storage usage. In addition, a digital monitoring system is in place to monitor the stock. The issue room, where parts are distributed, is open year-round, 24-hours a day for mechanical staff material requirements. Another improvement over the previous facility is the new loading dock that vastly enhances the receiving process and includes 3,000 square feet of storage capacity.

A test train is run through the Oakland Kirkham Street Locomotive and Car Repair Shop.

Of the approximate 375 employees who begin calling the facility their home base on Nov. 1, 150 are mechanical employees. The remaining employees belong to the Train and Engine, On-board Service and Administration departments. For a more efficient operation, all employees will work from a consolidated crew base, which will be housed in an extensive temporary trailer complex.

While the facility is fully equipped to handle its workload, the last phase of the construction, scheduled to take place during 2005, will include more space for administration, the relocation of the Oakland commissary, and the new combined crew base.

Kiewit Construction served as the main contractor on the project and DMJM/Harris Companies led the construction management, along with Amtrak's engineering team of Tom Crowell, division engineer, Wayne Pusey, director of Engineering Services, and Project Manager Harry Schneider.

Fleet Update: Superliner I

Released on Sept. 10, Superliner I Sleeping car 32012 is one of the three Sleeping cars that was remanufactured at the Beech Grove Car Shop during FY '04.

Dear Amtrak Co-workers:

As Amtrak starts a new fiscal year, I wanted to take this time to reiterate the company's prohibition against discrimination and harassment based on legally protected characteristics, known as protected group status. Amtrak is committed to creating an environment that is professional and respectful toward all employees and our customers. Since Amtrak is only as good as we make it, it is up to each and every one of us to do our part in creating a respectful workplace. Valuing diversity and eliminating discrimination and harassment based on protected group status is an important step toward creating a respectful workplace and making Amtrak a great place to work.

Earlier this year, Amtrak issued the Anti-Discrimination and Anti-Harassment Policy (P/I Number 5.2.0), which replaces Amtrak's Harassment Policy (DIV-2). While the gist of the message remains the same, the Anti-Discrimination and Anti-Harassment Policy gives clear and specific examples of what can constitute discrimination and harassment. Specifically, the policy prohibits discrimination and harassment (including sexual harassment) based on race/color, gender, age, religion, disability, sexual orientation, national origin/ethnicity, veteran status, or any other legally protected characteristic. The policy also prohibits retaliation and explains the process for filing a complaint. Discrimination, harassment and retaliation will not be tolerated at Amtrak. Therefore, proven incidents of prohibited conduct will result in appropriate discipline (up to and including termination) and corrective action.

If you feel that you have been discriminated or retaliated against or harassed because of one of the legally protected characteristics described above, or if you have witnessed such conduct, you are encouraged to report the incident to the Dispute Resolution Office (DRO) of Amtrak's Business Diversity Department. You can contact DRO through its toll-free hotline (1-877-351-8338), by calling a DRO office, or by submitting a written complaint to the DRO. The DRO has offices in Los Angeles, Chicago, New York, Philadelphia and Washington, D.C. The DRO does not handle general complaints of harassment. Therefore, you should report complaints of intimidation, verbal abuse and disrespectful-ness that are unrelated to your protected group status to your department head.

Amtrak values its diverse employees and customers and expects you to do the same. Please do your part by familiarizing yourself and complying with the Anti-Discrimination and Anti-Harassment Policy.

Contact DRO if you have questions about the policy or complaint process.

Sincerely,

Gerri Mason Hall
Vice President
Business Diversity and Strategic Initiatives

followed for lodging and addressing internal complaints of discrimination, harassment or retaliation.

3.0 POLICY

Amtrak strictly prohibits discrimination and harassment based on a covered individual's race/color, sex (including gender), religion, national origin/ethnicity, age, disability, veteran status, sexual orientation or other personal characteristics protected by law. Amtrak also strictly prohibits retaliation. Violation of this policy constitutes an act of serious misconduct that can result in disciplinary action, up to and including termination. This policy applies to all applicants and employees (current and former), whether related to conduct involving fellow employees or a third party (e.g., customers, outside vendors, persons doing business with Amtrak, and company visitors). Conduct prohibited by this policy is unacceptable in the workplace and in any work-related setting outside the workplace, such as during business trips, layovers, business meetings and business-related social events.

4.0 DEFINITIONS

4.1 Discrimination Unfair treatment of or preference for an individual because of his/her personal characteristics protected by law. This may include, but is not limited to:

- Taking an adverse employment action such as firing someone, refusing to hire someone, or promoting someone less qualified because of race, age, disability, or other protected personal characteristic.
- Assigning individuals who work with clients or customers to certain departments, accounts or jobs because the client or customer demands or requests individuals of a certain race, religion, national origin, or other protected personal characteristic.

4.2 Harassment Unwelcome conduct (including sexual misconduct), whether verbal, physical or visual, that is based on a person's personal characteristics protected by law. This may include, but is not limited to:

- Conduct (including sexual misconduct), whether verbal, physical or visual, that threatens, intimidates, offends, belittles, denigrates, or shows an aversion toward an individual or group because of a person's protected personal characteristics.

Equal Employment Opportunity: It's Your Job

Amtrak is committed to providing true equality for its employees and a work environment free of discrimination or harassment. Only in a professional, business atmosphere in which employees are treated with respect will we be able to provide our customers with the high quality of service they deserve. In order to meet these goals, the cooperation of every one of Amtrak's employees is needed. The message of inclusion and equal employment opportunity applies to all Amtrak employees and to all Amtrak operations, including the company's commuter operations: Shoreline East; Maryland Rail Commuter; Virginia Railway Express; Peninsula; Metrolink; and Coaster.

Amtrak will not tolerate discrimination or harassment based on an individual's race, color, religion, sex, national origin, age, disability,

sexual orientation, or veteran's status. Amtrak will administer its hiring, discipline, promotion, compensation, benefits, training and all other company activities in compliance with this policy.

Likewise, no Amtrak employee should subject another employee or customer to discrimination or harassment of any sort. Racial, ethnic, religious, or sexual slurs have no place at Amtrak. This includes graffiti and printed material, as well as jokes and comments. Appropriate discipline — including termination when warranted — will be used to address any violations of this policy.

Managers and supervisors should consult the Human Resources department or the Business Diversity Department's Dispute Resolution Office if they have any questions or concerns about the administration of this policy. Employees

who believe this policy has not been followed may seek assistance from their department managers or file a complaint with the Dispute Resolution Office.

David L. Gunn
President and Chief Executive Officer

*Anti-discrimination
and Anti-harassment
Business Diversity

RESPONSIBILITY

Vice President of Business Diversity and Strategic Initiatives

2.0 PURPOSE

This policy defines Amtrak's prohibition against discrimination, harassment and retaliation and describes the procedures to be

Fall Timetable Ushers New Schedules, Policies

continued from page 1

Northeast Corridor

Schedule changes on the Northeast Corridor include a few new frequencies and more convenient schedules. A new *Acela Express* weekday and Sunday round trip is added between Boston and New York, by extending existing Washington-New York trains. To meet the demand for a train that reaches Boston before 10 a.m., the first *Acela* weekday departure from New York leaves 40 minutes earlier, arriving in Boston at 9:50 a.m.

In response to requests for a late Sunday evening train from New York to Boston, a new Sunday *Regional* train, #166 (which departs Washington at 4:25 p.m.) extends from New York to Boston, arriving there just before midnight.

The fall/winter schedule offers hourly peak-hour *Regional* service between Washington and New York on the half hour, and weekend *Regional* service, for the most part, on an hourly basis. To better manage capacity and guarantee passengers a seat on busy

weekend trains, *Regional* trains become all-reserved on Saturdays and Sundays.

In the past, Empire Service was unreserved between New York and Albany, but became all-reserved west of Albany, which caused some confusion. To simplify passengers' travel and offer passengers travel planning flexibility, *Empire Service* trains no longer require reservations.

The *Maple Leaf*, which operates between New York and Toronto, has been designated all-reserved, for the comfort of its long-distance passengers.

Off-corridor

A new stop on *Hiawatha* trains, which operate between Chicago and Milwaukee, will begin serving the Milwaukee Airport, Mitchell Field in the fall. Offering train service to the airport, which is located just outside of the city, will also provide those in suburban Milwaukee a convenient travel option to Chicago.

Service between New York and Charlotte on the *Carolinian*, trains

79 and 80, operates on a faster schedule, due in large part to no longer requiring mail handling in Philadelphia. Train 79, from New York to Charlotte, will run 36 minutes faster, and the northbound 80 will arrive in New York 42 minutes faster.

No significant changes are made to the schedules of most of the long-distance trains, such as the *Southwest Chief*, *California Zephyr*, *Empire Builder*, *Texas Eagle* and the *City of New Orleans*.

In California, minor trip time improvements are made to the San Joaquins, and the ten-minute travel time improvements on the *Capitols* that were in effect in the spring continue.

The timetable highlights the sleeping car amenities that passenger will find aboard, including new route guides for all long-distance trains but the Silver Service, which will be available by November.

Policy Central

Amtrak continues to identify ways to make travel planning and the travel experience simple and hassle-free for its passengers.

As a result, a number of policy changes become effective with the new timetable. To avoid trains that become uncomfortable and unsafe due to excess baggage, Amtrak will now require its passengers to strictly comply with its baggage policy. The policy allows two carryon pieces per passenger (not including purses, briefcases, and laptop bags) with each piece not weighing more than 50 lbs. or exceed dimensions of 28 inches x 22 inches x 14 inches, and three pieces of checked baggage, also not exceeding 50 lbs.

While the actual policy does not change, its implementation does. Using all the communications channels available to Amtrak, the railroad advises passengers that baggage exceeding the limits spelled out in the policy will not be permitted aboard.

A more flexible and consistent refund and exchange policy is also effective Nov. 1. In addition to simplifying life for passengers, the adjustment simplifies the process for ticket agents and reservations sales agents.

Previously, Amtrak imposed a penalty on the exchange of most non-corridor tickets. Under the new policy, exchange fees will be completely eliminated, and passengers will not be charged a fee to

exchange tickets for tickets of equal or greater value.

If the cost of a new ticket is less than the original ticket, a passenger may elect to receive an exchange voucher for the full value of the difference that can be used toward future travel, or receive a refund of the difference that is subject to Amtrak's new 10-percent refund service charge.

The policies associated with refunds used to vary according to the service — refund fees applied to some services, but not to others. As of Nov. 1, a 10-percent refund fee will apply across all Amtrak services and to all classes of service.

Customers may receive full credit on most unused tickets by using the value toward future travel purchases. Or passengers may request a cash refund or credit to a credit card — subject to a 10-percent service charge, up to a maximum of \$100 per transaction on any single reservation.

The cancellation policy for First class and Business class accommodation charges is also modified. In the past on Amtrak's Premium services (*Acela Express* and *Metroliner*), passengers canceling a reservation within an hour of departure were permitted to use the accommodation charge value only on the same date. With the new more flexible policy, passengers canceling within an hour of departure may use the full ticket value toward the purchase of future travel for up to one year on any Amtrak service. This new policy will now also apply to cancellations of Business class accommodations on Amtrak's non-Premium trains.

Another development taking effect in November is the designation of all trains as smoke-free, with the exception of the Auto Train. Passengers who wish to take a smoking break will be allowed to do so only at stops designated as such by the conductor. However, passengers will be asked to remain on the platform near the train and to be prepared to reboard immediately upon hearing the locomotive horn or the "all aboard" call from the conductor.

Bedroom nomenclature has also gotten some attention from Amtrak's management. Over the years, Amtrak passengers have commented that names such as "standard" and "deluxe" do not accurately describe the rooms, so Amtrak is modifying the names of

Baggage Policy

While Amtrak's two-carryon, three checked baggage rules have been in place for some time now, for the safety and comfort of passengers, strict compliance with these rules will be enforced starting November 1, which is also the effective date of the new Fall/Winter Timetable.

To provide front-line employees the support to enforce this policy and to ensure that passengers are not caught off-guard, a public education campaign is taking place this month. Passengers are advised that the policies will be put in force, and that if the quantity or weight of baggage exceeds the limits, it will not be accepted aboard the train.

Many employees, particularly on-board services employees, have seen the mountain of carryon baggage passengers bring aboard the train. The baggage usually gets in the way, in some cases resulting in an obstacle course aboard the train. This is hardly the enjoyable environment passengers deserve, but it also presents a serious safety concern for employees and passengers alike.

Starting in November, carryon baggage will be strictly limited to two pieces per passenger (not including purses, briefcases, and laptops) and each piece may not weigh more than 50 lbs. or exceed dimensions of 28 inches x 22 inches x 14 inches.

At stations and where baggage service is available, passengers may check three pieces of baggage per passenger, each of which may not exceed 50 lbs. Up to three additional pieces may be checked for a service charge.

In addition, special items (such as skis, golf bags and surfboards) must be properly packed; for which a service charge may apply. Passengers will be also reminded that all baggage must have identification tags, with their name and address.

To get the word out to the public, notices are being placed everywhere from the Amtrak web site to hundreds of stations. Job Aids for reservation agents, ARROW messages and employee advisories are also being published. Customers purchasing ticket by mail, through Amtrak Vacations, and at stations will receive a ticket stuffer, or advisory, putting them on notice that the limits will be strictly enforced. Our business partners and organizations such as the National Association of Railroad Passengers are also being advised of the enforcement effort.

Amtrak Exits Mail Shipping Business

continued from page 2

While *Palmetto* service began as a New York-Savannah train, it was extended to Jacksonville to accommodate a mail-hauling contract in 1988. In 2002, the service, trains 89 and 90, began operating as a coach-only train New York to Miami, via Tampa.

As a result of the closure of the mail business, this service returns to its original New York-Savannah route on Nov. 1. Communities that will no longer have rail service —

Waldo, Ocala, Wildwood and Dade City — will be connected by motorcoach with the *Silver Star* at Lakeland and Jacksonville.

While the *Silver Star* continues its New York to Miami run via Orlando, it will begin serving Tampa and Lakeland (previously served by the *Palmetto*) on Nov. 1. This route change will also restore sleeping car accommodations and dining car service to those cities.

The schedule of the New York-Pittsburgh-Chicago *Three Rivers*

was designed to meet the needs of the mail business when it was extended to Chicago in 1996. Without the mail business, the service will undergo significant changes. With the new timetable, both the *Three Rivers* and the *Pennsylvanian* will be replaced by a single New York-Pittsburgh-Chicago train, which will run roughly according to the schedule of the current *Three Rivers*, but without a sleeping car.

The second phase of this transition takes place in March, when service on this train west of Pittsburgh will be eliminated, following the legally required notice to the communities that will no longer be served by Amtrak; Youngstown, Akron and Fostoria OH, and Nappanee, IN.

Amtrak’s package express service, which offers small package shipping to more than 100 cities, is unaffected by these changes.

Equal Employment Opportunity: It’s Your Job

continued from page 8

- Epithets, slurs, or negative stereotyping based on race, age, religion, or other protected personal characteristic.
- Jokes, nicknames, or gestures about a person’s disability, sexual orientation, veteran status, or other protected personal characteristic.
- Mocking someone who speaks with an accent.
- Written, printed or graphic material, including magazines, screen savers, posters, and cartoons containing offensive, denigrating, or demeaning comments or pictures based on a person’s protected personal characteristics.
- Display of offensive, denigrating or demeaning objects related to a person’s protected personal characteristics.

4.3 Retaliation Threats or actions taken to get even with or punish an individual for (1) reporting discrimination or harassment; (2) assisting in making a discrimination or harassment complaint; (3) cooperating in a discrimination or harassment investigation; or (4) filing a complaint with the Equal Employment Opportunity Commission (EEOC) or other government agency authorized to handle discrimination and harassment complaints. This may include, but is not limited to:

- Disciplining, changing work assignments of, more closely scrutinizing, providing inaccurate work information to, or refusing to cooperate or discuss work-related matters with an individual because the individual filed a complaint with the Dispute Resolution Office.
- Covering up or attempting to cover up discriminatory or harassing conduct.

4.4 Personal Characteristics Protected by Law Race/color, religion, sex (including gender), national origin/ethnicity, age, disability, veteran status, sexual orientation or other personal characteristics protected by federal, state, or local laws prohibiting employment discrimination, such as Title VII of the Civil Rights Act.

4.5 Sexual Misconduct Unwelcome sexual advances, requests for sexual favors and other verbal, visual or physical conduct of a sexual nature. Sexual misconduct may involve individuals of the same or different gender. This may include, but is not limited to:

- Explicit sexual propositions, sexual innuendo (sly remarks), sexually suggestive comments, or sexually oriented “kidding,” “teasing” or joking.
- Sexually oriented leering, whistling, or gestures.
- Commentary about an individual’s body, sexual prowess or sexual deficiencies.
- Displaying, storing, distributing or transmitting pornographic or sexually oriented materials using Amtrak equipment or facilities. For example, calendars, e-mail messages, Web sites, screen savers, posters, and cartoons.
- Repeated unwanted sexual flirtations or requests for dates.
- Possessing, reading, or viewing sexually oriented material at work.
- Intentional physical contact, of a sexual nature such as patting, pinching, grabbing or brushing against another person’s body.
- Conditioning employment (or the promise of business) with Amtrak on the provision of sexual favors.

5.0 PROCEDURES

5.1 An employee who feels that he/she has experienced or witnessed any conduct that is prohibited by this policy should notify his/her supervisor/manager, department head, or the Dispute Resolution Office of Amtrak’s Business Diversity Department. The Dispute Resolution Office can be reached by calling its toll-free hotline at (877) 351-8338.

5.2 Employees should file complaints as soon as possible after the alleged violation of this policy, but in any event, no later than one year following the alleged violation. Amtrak encourages, but does not require, that an employee’s complaint be in writing.

5.3 Once a supervisor/manager or department head becomes aware that discrimination or harassment may be occurring, either from personal observation or as a result of an employee coming forward, he/she is required to report the perceived misconduct immediately to the Dispute Resolution Office in Amtrak’s Business Diversity Department.

5.4 The Dispute Resolution Office is responsible for investigating complaints of discrimination and harassment on behalf of Amtrak. Once a complaint is reported to the Dispute Resolution Office, an investigation will be initiated. The investigation may include individual interviews with the parties involved and, where necessary, with individuals who may have observed the alleged conduct or may have other relevant knowledge.

5.5 Every complaint will be treated confidentially to the extent practical, keeping in mind that investigation of the complaint may require its disclosure to certain individuals during the course of the investigation. If it is determined that immediate action is required to prevent any further harass-

ment/discrimination, the Dispute Resolution Office will notify the appropriate Executive Committee member or department head. The Executive Committee member or department head will be asked to take interim measures to address the alleged harassment/discrimination pending investigation by the Dispute Resolution Office.

5.6 At the conclusion of an investigation, the Dispute Resolution Office will determine whether the allegations were founded, unfounded or inconclusive and notify the complainant in writing of the results. If it is determined that the allegations are founded, Amtrak will take corrective action, including discipline up to and including termination, as is appropriate under the circumstances. The refusal to implement corrective action or the obstruction of corrective action designed to remedy a violation of this policy may result in sanctions or disciplinary action.

5.7 The making of intentionally false accusations of discrimination or harassment or the provision of intentionally false information regarding a complaint is also prohibited by this policy. Persons found to have made intentionally false accusations or who have provided intentionally false information may be disciplined, up to and including termination. Complaints made in good faith, although not found to be valid, will not be considered false accusations.

5.8 All employees are expected to cooperate fully in investigations of perceived discrimination or harassment by (1) disclosing complete and accurate information in response to questions by the Dispute Resolution Office; and (2) not concealing information or obstructing investigations. The failure to cooperate in a Dispute Resolution Office investigation may result in sanctions or disciplinary action.

Open Enrollment For 2005 Benefits

This year, there will be only one medical benefits Open Enrollment period for all Amtrak employees. For both agreement-covered and non-agreement-covered groups, Open Enrollment for 2005 benefits will take place from Oct. 22 through Nov. 12. If you wish to change your benefits for 2005, you will need to complete the enrollment process by midnight on Nov. 12.

To enroll or change your elections for 2005:

- Logon to: www.amtrakbenefits.com; or
- Call the Amtrak Benefits Service Center at 1-800-481-4887.

If you are not making any changes to your benefits, you don't have to do anything — your benefits in 2005 will be the same as those you have now, with these exceptions:

If you are a current participant in a Health Care Spending Account, a Dependent Day Care Spending Account, or Prepaid Legal Services (non-agreement-covered employees only) and wish to continue participation in 2005, you must complete

the enrollment process for these benefits.

Shortly before the start of Open Enrollment, you will receive a package of materials:

- A personalized worksheet showing the benefits for which you are eligible to enroll;
- A workbook that reviews benefit changes and provides information about enrollment.

When you receive these materials (they will be mailed to your home), review them carefully.

Any changes you make to your benefits will become effective on Jan. 1, 2005. The Open Enrollment period is the only time you may make changes to your 2005 benefits, unless you have a family status change.

For additional information about your benefits, call the Amtrak Benefits Service Center at 1-800-481-4887. Customer Service Representatives are available from 8 a.m. to 8 p.m. Eastern time, Monday through Friday (except holidays).

Amtrak Police Officer Wins Prestigious "Top Cops Award"

Officer Rodney Chambers is the first Amtrak Police officer to be honored with a Top Cop award from the National Association of Police Organizations.

Recognized for his courage in the line of duty, Amtrak Police Officer Rodney Chambers is the first APD officer to win a Top Cops Award from the National Association of Police Organizations (NAPO).

John Walsh, of FOX TV's

"America's Most Wanted," hosted the Sept. 11 awards event in Washington, D.C.

The Top Cops Awards program pays tribute to law enforcement officers from across the country for outstanding service to their

communities. Officer Chambers was recognized for the heroism he displayed last June while on patrol at Washington Union Station. He wrestled a hand grenade away from a suspect who had pulled the pin and then attempted to drop it. The grenade was later determined to be inert, but Officer Chambers did not know it at the time of the encounter.

Top Cops are selected by an independent awards committee of law enforcement officials from a pool of hundreds of nominations submitted by fellow officers. Officer Chambers is one of 33 police officers to be honored and 79 officers who will receive honorable mention awards.

Past honorable mention recipients from the Amtrak Police Department are Officer Doug Paige ('98), Sgt. George Reutter ('01), Investigator Maureen Powers ('01) and Officer Anthony Krisielius ('01).

FRONT LINE FOCUS

Dear Amtrak:

I wish to bring to your attention a fine individual who handled our recent reservation so as to have everything come out satisfactorily. He is John Romania who is in Customer Service, in the [River-side] center.

John, to his credit, took our reservation and was able to combine the best and make it come out, as it should. I am still unclear as to how Amtrak is handling LL seating fares, but I have sent e-mail to your Internet Web site that addresses that very problem.

From my view, he appears as a bright star in a fading galaxy.

Customer service is obviously there to “iron out the kinks,” and John does a superb job of doing just that. You will be fortunate to have more people of his caliber working aboard as well as off the trains where the customer has his first employee encounter — on the phone.

My wife and I opted to take the train even though a lower fare was available on Northwest Airlines. We are hoping that these four train journeys will be pleasing and uneventful.

Sincerely,
William D.
Wheat Ridge, CO

Dear Amtrak:

I am writing today to compliment the honesty, integrity and commitment to customer service of three very outstanding employees.

I accidentally left my wallet on #513 out of Portland. It was full of all my credit cards, ID, checkbook and \$100 in cash. As you can

imagine, I was frantic later when I discovered it was missing. I rushed immediately to the Tacoma station to see if it had been turned in. A kind clerk named Brad Brailsford gave me the name and number of Security and promised to be on the look out for my wallet.

Later that evening, at 10:20 p.m., I received a call from Nathan Yurth, who wanted to let me know that he had found my wallet while cleaning the train. He apologized for the lateness of the call, but thought that I would want to know of its safety before I went through the hassle of canceling my credit cards and checks. To my amazement, he told me the wallet was in tact — credit cards, check book, ID and money. We agreed that he would turn my wallet in the next morning to his father [Martin Yurth] who also works for you.

The next morning, Mr. Yurth called to tell me that my wallet would be sent on the next train to Tacoma, care of Brad Brailsford, and I could pick it up at 2:10 p.m. My wallet arrived as promised, in a sealed envelope, and fully in tact.

I am so impressed with the personal attention and care your staff took to safely return my wallet. I am especially impressed with young Mr. Yurth. He asked me for nothing and in return for my wallet or his good character, and was only concerned about returning my wallet safely and quickly.

I thank you for your fine staff from the bottom of my heart; they have renewed my faith in human nature and should be commended for their good deeds.

Open Enrollment For 2005 Benefits

Women’s Health Coverage
In the event that you or your dependents suffer from breast cancer, Amtrak medical benefits provides coverage for reconstruction and surgery to achieve symmetry between breasts, prostheses, and complications resulting from a mastectomy, including lymphedema.

Coverage for this care is provided in the same manner as other medical care, with deductibles, co-payments, and co-insurance still applying. Please consult your medical benefits summary plan description, enrollment guide, or call the Amtrak Benefits Service Center at 1-800-481-4887 for more information.

Fall Timetable Ushers New Schedules, Policies

continued from page 9
its sleeping rooms to better describe its overnight train accommodations. This move minimizes any confusion over what passengers may expect when booking a reservation.

Beginning Nov. 1, sleeping accommodations equipped with showers, toilets and a vanity will simply be called Bedrooms. The smaller rooms that rely on shared restroom facilities, a bed-and-breakfast on steel wheels, will again be known as Roomettes. On Viewliner equipment, Roomettes do include their own toilets.

“Long-time Amtrak riders may remember the name Roomette from the past as a room that included a single bed,” noted Marketing and Sales Vice President Barbara Richardson. “While the current Roomettes accommodate up to two people, some of our passengers have found them most comfortable when traveling by themselves.”

The larger rooms designed for families will continue to be called Family Bedrooms and the designation of the wheelchair-accessible sleeping rooms, known as Accessible Bedrooms, will also remain unchanged.

A Look at FY '05 Mechanical Goals

Mechanical Department Makes Progress in 2004

The Mechanical department begins the new fiscal year with an aggressive capital program to return to service overhauled and remanufactured cars and locomotives from the backshops and to conduct regular preventive maintenance and inspections at terminal shops.

Last year saw a heavy workload for the Mechanical department, but some good results in the output of shop work. However, Amtrak continues to face considerable challenges due to the long-term effects of prior deferred maintenance, remanufactures and overhauls.

“Last year, we worked steadily in FY '04 toward a state of good repair for our fleet, and we made good progress. The goals we’ve set for this fiscal year reflect more steady growth and progress,” said Chief Mechanical Officer Vince Nesci.

FY '05 Goals and Objectives

The department has established five goals for fiscal year 2005 that are designed to address the department’s main concern — to have in service and ready for service a sufficient and reliable fleet. The objectives the department must accomplish this year to meet these goals include execution of the FY '05 fleet capital program, acquisition of rolling stock, more frequent inspections in yards and terminals, improving reliability of the fleet for passengers and crews to improve on-time performance and safety, improving overall fleet availability, reducing labor costs and continuing national Mechanical department processes.

Fleet State of Good Repair

Light overhaul work is typically limited in scope and is characterized by minor structural repair or replacement of parts. Heavy

Los Angeles Machinists Vic D’Agustino (left) and Paul Malumian change the traction motor wheel assembly for the P-42 GE locomotive due to thin rims discovered as part of the quarterly inspection process.

overhauls are characterized by a complete teardown with some upgrades and structural repairs. Remanufacturing involves a one-time teardown and reassembly enabling the asset to greatly extend its expected useful life. In a remanufacture, materials are replaced with new and often improved designs and the struc-

tures may be significantly redesigned.

Slated for heavy overhaul and remanufacture this year at the Bear and Beech Grove backshops are 220 passenger cars; including 35 Café/Lounge cars, 83 coaches, and eight Cab cars in the Amfleet line; 10 Café cars and 18 coaches in the

FY '04 Closes Ridership Record

Amtrak ended FY '04 with an all-time-high ridership record. Amtrak carried more than 25 million passengers in FY '04, exceeding last year’s year-end ridership by over one million passengers but falling slightly short of budget (-1/2 percent) and meeting the goal the railroad set for itself.

Ticket revenues for FY '04 totaled \$1.26 billion, which is 3 percent

ahead of year-end ticket revenue for FY '03. Amtrak continued to post record ridership numbers early in the year and exceeded FY '03 ticket revenue numbers for all but two months of the year.

While the railroad kicked off the fiscal year with a strong showing, it was offset by a downward trend during the second half of the year. The first four months of FY '04

posted steady gains in both ridership and ticket revenue numbers that exceeded both budget and FY '03 figures. The ridership numbers during this period averaged 8 percent over both '03 figures and budget. The revenue during that period averaged 6 percent over '03 and 5 percent over budget.

After the first of the year in January, a number of economic

factors, such as the war in Iraq, a weakened economy, high unemployment rates, a poor job market and competition from low-cost airlines took a toll on the railroad’s early progress. Additionally, in the second quarter, heavy snowfall and record-breaking cold in the Northeast and Chicago and an avalanche along the *Empire Builder* route resulted in the first of many weather-related service cancellations and delays that Amtrak would experience during the rest of the year.

In the fourth quarter, Amtrak long-distance service was affected by natural disasters, such as hurricanes, flooding and fires that resulted in service disruptions and re-routes affecting 325 trains in

Ticket Revenue	\$1,216,260,257	\$1,284,729,170	\$1,256,424,267

TRAIN OF THOUGHT

Since Oct. 4, I have traveled quite extensively on our system attending President’s Service and Safety Award events around the country. Once again, I had the opportunity to meet many of you and see our facilities. I am always inspired by your attitude and commitment.

While in Oakland, we dedicated our new maintenance facility. The Oakland facility was a \$71 million facility, which our Engineering department brought in ahead of schedule and under budget. For the first time, we will have a drop table and wheel-truing machine on site. Opening the new facility goes a long way to strengthening our relationships with the Capital Corridor and the state of California who also helped fund the construction of the maintenance facility. In my 40 years in the industry, I have seen too many railroad facilities closed or torn down, so it is nice to open one up for a change.

We also opened a new First Class Lounge in Chicago, which should significantly improve the service to our customers. The old facility

had HVAC problems, plus it was rather cramped.

While exiting the mail and express business was painful, the benefits of returning to our core business – moving passengers – were evident. The Chicago Terminal is fluid once again and en route delays and mechanical problems with boxcars and RoadRailers have been eliminated. The Spring Timetable will incorporate many improvements as a result of returning to a passenger-only operation.

Last week, I also had the chance to ride a VIA train from Montreal to Halifax. I wanted to experience their service and ride the new Renaissance equipment, which was imported from Great Britain. VIA employees are much like Amtrak employees. They are a good bunch and dedicated railroaders. I think there would be some benefit in exchanging ideas between our companies. The President of VIA, Paul Côté and I discussed ways of engaging in such an exchange.

By the time you read this, the election will be over and we will be back before Congress seeking our

David L. Gunn

appropriation for FY ‘05, which will probably be half over by the time it is all figured out. (What a way to run a railroad.) While I am not clairvoyant, I am hopeful that we will be able to continue rebuilding our plant and equipment because the best argument for funding I have is your ability to run a quality, efficient service.

Amtrak Dedicates New Oakland Maintenance Facility

Amtrak and the state of California dedicated the new, jointly funded \$71 million Oakland Maintenance Facility on Oct.12, 2004, among a group of enthusiastic rail partners, employees and fans. The modern facility, which opens for business on Nov. 1, will improve the efficiency of the mechanical operations supporting Amtrak’s regional and long-distance train services in California.

The facility has the capacity to meet future demand as the state-supported *San Joaquin* and *Capitol Corridor* services continue to grow ridership.

“We’re proud that this new facility was completed on time and on budget,” said Amtrak President and CEO David L. Gunn. “I’ve been in the business 40 years, and I’ve seen more railroad facilities close than open. The key is incremental improvements. Now we’ll be able to focus on improving our service,” added Gunn.

Joining Mr. Gunn were Amtrak’s Board Chairman David Laney, California DOT Chief of Rail Warren Weber, and state Sen. Tom Torlakson. Citing Caltran’s support for the project, Weber stated, “I never thought today was going to happen. The road to this facility was 20 years in the making.”

The Chairman of Amtrak’s Board of Directors David Laney, introduces Warren Weber, chief of Rail Transportation for the California Department of Transportation, at the Oakland Maintenance Facility dedication ceremony last month.

Facility at Penn Coach Yard Opens for Business

Follows Aggressive Cleanup Effort

This fall, Materials Management and Mid-Atlantic Division Engineering employees at Philadelphia's Penn Coach Yard will begin using a new material control facility for procurement and storage of equipment and materials.

Over the course of the summer, construction began on the material control facility, comprising three new maintenance-of-way materials management buildings at the Penn Coach Yard in Philadelphia, following 10 months of aggressive cleanup and recovery of maintenance-of-way materials.

The nearly yearlong project was designed to clean up the facility and build a materials control facility to support the work of the Mid-Atlantic Engineering forces at the yard. The effort involved the sale of 45 Connex boxes (large shipping containers), and removal of 32 sheds and/or trailers and two old rail cars, all of which were used to store materials.

In addition, 338 gross tons of scrapped track materials (switch materials, spikes, bolts, plates, points, frogs, joint bars), 186 gross tons of miscellaneous scrap steel were removed and sold and two obsolete baggage cars were sold for \$72,000. An additional \$220,000 of material was recovered and returned to inventory.

The dysfunctional state of the yard, and many like it across the Amtrak system, was due to a number of factors, including the lack of a secure warehouse and yard storage capacity. There was also no provision for construction debris, material returns, assembly area or other functional space to perform these tasks.

"We must provide our employees with the support they need to work as efficiently as possible," said Chief Engineer David Hughes. "Penn Coach

Yard is now a much more user-friendly place to get work done. We really appreciate Mike Rienzi and the Procurement department for taking the lead to get this project off the ground."

The new facility, which is administered by the Materials Management staff, eliminates waste and disorganization, and mitigates inefficiency.

In addition, the reorganization of the grounds has vastly improved the previously disheveled yard that became an uninspiring work environment.

The area also became an eyesore to passengers traveling to and from Philadelphia; a glance out of the window provided a view that left a poor impression of Amtrak.

The major facility improvement comprises four buildings; one rehabilitated building, known as Building K, and three new buildings.

Materials, scrap and debris litter the B and B compound of the Penn Coach Yard before the clean up and materials recovery effort began.

Building K, which was previously used as a Bridge and Building facility, now houses working materials for each discipline: Track, Electric Traction, Bridge and Building and Communication and Signals. The focus of the renovation was in the interior of Building K, which involved creating four separate bays, one for each of the disciplines. Each bay is separated by fencing and includes racks and shelving units for storage of materials used in daily operations.

Construction of the new structures began in October, and the last of the three new buildings will be complete in late November. As each structure is complete, it is

majority, materials acquired for specific capital projects that are planned for the year. Building Number Two is designed to store gasoline-powered tools and flammable material used by all four disciplines. Building Number Three, a large three-sided storage shed, is intended to accommodate large items, such as cable reels and electric traction insulations.

Cleanup

Implemented in January, the facility improvement plan first required

deteriorating reels was re-reeled onto useable reels and some reels of excess cable were sent to the Perryville, MD, facility; C and S items, such as relays, were delivered to the C and S warehouse in Lancaster, PA; and four central instrument houses (aluminum sheds equipped with air conditioning and heat to protect delicate electronic signal equipment) were transferred to Sunnyside Yard.

All track materials that were scrap, obsolete or surplus were removed, empty cable reels were sold, and all excess concrete ties removed and sent to other facilities for utilization.

The grounds were tested for toxicity, resurfaced and paved with crusher run, a fine stone mix. New lighting and security fencing will be installed throughout the yard once the construction is complete.

While the rehabilitation and construction of the buildings was done by a contractor, Engineering department employees contributed to the design of the structures, so that the facilities met the needs of the work gangs. The department also reviewed and submitted comments on all of the plans.

"We worked as a team toward common goals," said Material Control Manager Harvey Short. "The crews at the yard were enthusiastic about this project — their home base was a mess and it required a dedicated team and dedicated funds to make it right."

Putting the Resources in Place

The materials management function was centralized as a result of Amtrak's dissolution of the Strategic Business Unit structure in 2001, and over the course of 2002, materials management was incorporated with the Procurement department.

Because there was no central materials management system in place, it was difficult to account for equipment and supplies, and almost impossible to benefit from economies of scale and to make the most of the resources already available.

Previously, maintenance-of-way materials were purchased on a project basis and charged when received, as opposed to being purchased as inventory and charged when installed.

Vice President of Procurement and Materials Management Mike

The same B and B compound is now wiped clean of scrap and debris and is home to a new materials control building and two others being constructed.

massive cleanup of the area and recovery of the materials that were spread throughout the yard.

A team of four Materials Management employees and 11 Maintenance-of-Way employees combed

through the yard, identifying materials to be stored for future use, redeployed to another Amtrak facility, scrapped or sold.

The team worked with each department

to determine the usefulness of items retrieved and to find homes for displaced tools and materials. For example, cable from

"We knew that we could achieve cost-savings as well as keep expenses down as a result of putting this department in place. Since centralization we have recovered inventory in excess of \$35 million."

Mike Rienzi
Vice President of Procurement and Materials Management

furnished with the relevant supplies and put into operation. Building Number One is dedicated to housing material control inven-

Random Ticket Check Begins

Amtrak passengers will be randomly asked to produce valid photo identification to conductors on board all trains starting this month under a new policy adopted at the direction of the federal Transportation Security Administration (TSA).

The random ID checks will be based on a passenger's ticket number and will be conducted on approximately 10 percent of all passengers. If the name of the

passenger on the ticket and the passenger's ID do not match and a reasonable explanation for the difference is not provided, conductors are being required to alert Amtrak Police for further investigation.

"Earlier this year, the Department of Homeland Security issued a directive we were to adopt," said Al Broadbent, vice president of Police and Security. "Unlike the airlines, we operate in an open environ-

ment, but there are steps we can take to make us more secure."

Passengers were informed about the new policy with Passenger Service Notices in stations, on amtrak.com and with on-board announcements made by conductors. Employees were advised of the implementation of this new security course of action via Security Update and an Operations Standards Update.

Facility at Penn Coach Yard Opens

continued from page 3

Rienzi oversees this now-centralized department. "Getting this issue under control is a big priority for the railroad," said Rienzi. "We knew that we could achieve cost-savings as well as keep expenses down as a result of putting this department in place. Since centralization we have recovered inventory in excess of \$35 million."

"Because all of our capital work is programmed, we have a pretty good sense as to what we need, enabling us to make decisions about inventory, rather than ordering on an ad-hoc, project basis. Having an inventory system and the facilities in place, like the one now at Penn Coach Yard, makes planning easier and facilitates the efficient work of the crews," he added.

While cleanup and materials recovery is taking place through the Amtrak system, the Penn Coach Yard is the first of a number of major locations across the Amtrak system targeted for renovation.

Preparations in Place for Busy Season

As Amtrak approaches its busiest travel period of the year, the Thanksgiving holiday, it is prepared for the hundreds of thousands of travelers who choose to travel by rail.

Nearly 60 additional trains will serve Northeast Corridor this Thanksgiving, including 26 more *Acela Express* departures. To ensure the comfort of Amtrak passengers during the hectic holiday season, all trains (except *Keystone* and *Clocker Service*) will

require reservations between Nov. 22 and 29.

On the West Coast, all *Pacific Surfliner* trains will require reservations between Nov. 23 and 29. Metrolink Rail 2 Rail tickets will not be honored on the high-travel days of Nov. 24 and 28.

Amtrak *Cascades* will offer additional service over the holiday period. Making all regularly scheduled stops between Portland and Seattle, one additional roundtrip will be offered on Nov. 24 and 25,

while two additional round trips will be offered on Nov. 28.

Because of equipment limitations, not all of these extra trains will offer the same amenities expected on most Amtrak trains, such as Café service and reclining seats. Passengers who feel inconvenienced by the change in service aboard those trains, may ask for a 20-percent-off discount coupon for use on a future trip with Amtrak.

Amtrak Conducts FBI SWAT Training

During an FBI SWAT training class, local law enforcement officers participate in a mock drill inside a *Capitol Corridor* car. Fifteen FBI agents from the Sacramento area and four Suisun, CA, Sheriff's Department SWAT Unit officers attended the eight-hour training in July conducted by Amtrak Police Detective Pete Van Nuys and Road Foremen Brody Heilman and Larry Follis.

The class provided area officers familiarity with passenger train emergency procedures and Amtrak's *Capitol Corridor* and *San Joaquin* equipment, including an F-59 locomotive. The instruction included locating the emergency entrances and exits, managing hostage or terrorist situations on a moving train and separating coach cars in an emergency.

Chef Certification Program Launched

Challenge yourself to do better. Every time you do a routine, do it faster, more accurately. Make it taste better, look better. A dozen dining car chefs learned this simple recipe for success during Amtrak's Chef Certification classes launched in September at the training facility in Wilmington, DE.

Developed by Gate Gourmet and Amtrak's Food and Beverage department, the Chef Certification class supports Amtrak's efforts to standardize the ingredients, quality, taste and presentation of meals prepared in the Dining car, while still providing passengers with a variety of meal choices.

Using a specially designed training manual and hands-on demonstrations, the course is designed to teach all — approximately 200 — Amtrak chefs the procedures necessary to ensure passengers receive the same meal prepared the same way, whether they are traveling on the *Southwest Chief*, the *Crescent* or on any other Amtrak long-distance route.

"Amtrak chefs have varying experience levels," stated Food and Beverage Director Pete Humphreys. "So, we developed this certification course to narrow that gap and to provide an avenue for implementing new policies and standards that yield a higher level of consistent meal preparation and that better serve passengers."

Humphreys added that his department and Gate Gourmet have been working since early this year to develop the training manual and pilot program. After the manual was complete, six Food and Beverage managers attended a pilot class last summer to fine-tune the curriculum and ensure that enough time was allocated for each topic.

The three-day Chef Certification class is held once a month at the Wilmington Test Kitchen, which opened in February 2004. Construction of the test kitchen, which contains the same type of equipment as an actual dining car kitchen, was part of an overall plan to provide a site to train Food and Beverage employees, develop new recipes and evaluate and test new products.

"The kitchen is only large enough to accommodate six chefs and one manager per class," said Senior Analyst Jack Davis. "Therefore, at a rate of 72 chefs a year, it will take about two and a half years before all of Amtrak's chefs are certified. After we've trained the chefs, we plan to move on to the food specialists."

Traveling Chef Hashim Abdul-Salaam observes Chefs Roger Harris and Raymond Jusay as they practice tomato-slicing techniques.

Quality Meals Build Customer Confidence

Amtrak has taken a number of steps to improve the consistency of its meal service. Over the past several years, the Food and Beverage department has standardized the Dining car menus across the Amtrak system, which has improved meal presentation. The fully prepared, already seasoned dishes reduce the need for additional spices and condiments that may change the flavor of any given meal.

Gate Gourmet's Executive Chef Tim Costello, who has worked with Amtrak on menu development for the past four years, facilitated the classes. "The ability to offer standardized quality meals system-wide builds customers' confidence in our dining services and saves the company money," said Costello. "Now instead of purchasing a lot of food items from a variety of vendors, we're purchasing multiple items from fewer vendors — at a better cost. For example, reducing the number of bread suppliers from five to one saved \$120,000 a year," Costello continued.

Assisting Chef Costello are Amtrak's Traveling Chefs Robert Elder, Hashim Abdul-Salaam and Mike Woods-Hulse, who travel throughout the Amtrak system to observe meal preparation and food handling practices and address any deficiencies.

"The traveling chefs were instrumental in gathering information from the field that was incorporated in the certification program," stated Humphreys.

Let the Class Begin

Chefs attending the first class in September had the opportunity to meet and listen to railroad dining car expert and author of *Dining by Rail*, Jim Porterfield. He spoke to the group about the importance of their jobs to the industry and the evolution of food service on trains. Attendees also had an opportunity to view videos from two major suppliers, Great Western Beef, Amtrak's primary beef supplier and Cuisine Solutions, provider of

many of Amtrak's pre-cooked entrees. Each video walks viewers through a plant tour and describes how the products are prepared.

Day one of the program includes a section on chef accountability, conducted by the Service Delivery staff, which establishes and clarifies the chef's key areas of responsibility, including financial accountability, inventory control and stock inspection. The section also covers proper food storage and handling as well as meal preparation and service. Stock verification, which is performed jointly with the lead service attendant, is also covered. Additionally, chefs review meal check procedures, which in part, emphasize that orders are not to be filled before a completed meal check is received.

Public health managers also conduct a Sanitation and Food Safety Review that includes the public health refresher course that food service employees are required to take every two years.

Chefs David Villeneuve and Darryl Simmons prepare pizza during the Dinner Preparation section of Amtrak's first Chef Certification class held in September.

The first day concludes with a breakfast service review that comprises menu item demonstrations, such as preparing, filling and plating omelets.

Blue Cheese Dressing, Please

In response to customers' demand for a more substantial salad choice than the side salad offered at lunch and dinner, an entrée salad was added to the lunch menu. As salad has become a quite popular menu choice, the second day of class covers the proper handling, storing and serving of lunch and dinner salad mixtures. Even though the chef is not responsible for salad preparation, he or she must oversee its preparation and make sure the service attendant, lead service attendant or food specialist prepares and serves it properly.

The certification course helps chefs understand how vital it is for the food service team to work well together. "The service attendants have to take the orders properly and offer the customers all available

options, while the chef must prepare the meal properly, and pay close attention to details such as the type of salad dressing, entrée sauce and dessert garnish," added Humphreys.

While most meats prepared by chefs do not require cutting, it is nevertheless important that chefs are knowledgeable about the safe and proper use of knives onboard a moving train. Therefore, day two also includes instruction on how to properly handle and sharpen various types of knives.

Other topics included in the curriculum are sandwich preparation, heating and assembly, and dessert thawing, heating, plating and garnishing. And, as part of the hands-on training, lunch is prepared and enjoyed by the entire class.

Prepare, Plate and Serve - Dinner Service Review

On the last day of training, special attention is placed on dinner preparation, an area where traveling chefs report the most discrepancies between Amtrak's standard and what is actually served. The most common variance is found in the heating times. Even though most entrees are precooked, they are sometimes heated in the oven too long. For example, if a stuffed chicken breast or piece of salmon that only needs to be baked for 20 to 25 minutes is cooked for an hour it will result in a dry and tasteless meal.

As part of the Dinner Service review, the six chefs are divided into teams of two and each team is required to plate 24 meal checks in 30 minutes. The chefs are allowed an hour to prepare the side items such as rice, baking potatoes and vegetables.

After the meals are plated, each team is critiqued in areas such as proper cooking or heating times and plate presentation. The facilitator checks the doneness of the entrée, observes if items are placed on the plate correctly and makes sure sauces are added properly — and only when ordered.

At the conclusion of the three days, chefs may find that some of the cooking techniques taught are new, while others are revisited. "This is the first time that Amtrak has offered a comprehensive and formal program of study in this area," said Service Delivery Chief Kevin Scott. "The beauty of this program is that it brings everyone together in an actual kitchen setting, where chefs can learn from themselves and their peers."

Dear Co-workers,

Over the last several months, a lot has taken place here in the Central Division and I'd like to share some of the highlights with you. To begin with, recipients of this year's President's Service and Safety Awards were announced in September. I was proud to learn that the Central Division's Chicago Terminal Safety Improvement Team was the recipient of the railroad's Safety Committee of the Year award, along with two employees recognized for Valor and one for Sustained Excellence. As I write this (Oct. 20), I look forward to joining David Gunn next month in congratulating all the deserving Central Division and Chicago-area employees on their accomplishments at the Chicago PSSA ceremony.

In September, the Central Division's Transportation departments, both Operations and Passenger Services, concluded FY '04 with year-end staff meetings. Ed Walker, vice president of Transportation, was the keynote speaker and urged the staff to continue to make a difference in FY '05. We spent a lot of time outlining the goals for this fiscal year in areas such as safety, public health, customer service and communication, just to name a few. Both meetings were productive and a great opportunity to rally the troops around our objectives for FY '05.

Also in September, Amtrak's Sanitation Task Force visited Chicago to conduct a facility and equipment public health inspection. This audit awakened Chicago, and the company, to our need to refocus attention on consistently following policies and upholding the solid public health and sanitation standards we set in recent years.

The commissary operation was outstanding, but the housekeeping in other areas, such as the yards, tracks and certain parts of the buildings, needs improvement. We also need to work harder on sanitation practices on board the train. Three inbound trains were cited because employees were storing personal food in refrigerators and for improper labeling and storage of sanitizing solutions.

On a more positive note, last month, we opened our new expanded Metropolitan Lounge at Chicago Union Station with added luggage space, new furniture and flat screen monitors. These improvements will greatly enhance customer service for our First Class passengers as they travel through the crossroads of the country.

You may have read about another station improvement in the September issue of Amtrak Ink. Construction of the St. Louis interim station is almost complete. Local employees are eagerly anticipating its opening, scheduled for this month, where they will work until the new and permanent St. Louis intermodal transit facility opens, which is slated for FY '06.

First-time train travelers Fred and Sherry Morrison enjoy watching the new flat-screen television while they relax in Chicago's recently remodeled Metropolitan Lounge. The Morrison's cross-country trip included travel on the Sunset Limited, City of New Orleans, Empire Builder and Coast Starlight.

On the marketing front, I want to mention how pleased I am with the 2004 Illinois Scholastic program, a joint program with the state of Illinois and Amtrak, which promotes train travel among Illinois fourth-graders through the American Journeys: Learn About Illinois program. The program has been so well received that we are repeating it again in 2005.

As it is with other divisions, on-time performance continues to be a major challenge for the Central Division. Even though performance in the Midwest — particularly in Michigan and Illinois — is steadily improving, the level of congestion faced by our long-distance trains over the host railroads is an impediment to achieving our on-time performance goals.

Through the end of FY '04, on-time performance for the division is at 65 percent. This level of performance makes it tough on everyone — Train and Engine, On Board Service and station employees — to deliver the quality, consistent customer service that our passengers expect and deserve. I am, however, confident that with dedication and a true desire to perform at our best, we can meet and exceed our passengers' expectations.

In spite of these challenges, I want to thank each employee in the division and throughout the railroad for their efforts in helping us improve our service and I encourage everyone to keep up the good work!

Sincerely,

D. L. Saunders
General Superintendent – Central Division

Michigan City Track Upgrade Increases Speed

Amtrak's Engineering forces have completed the upgrade of 2.2 miles of Amtrak-owned siding in Michigan City, IN, that serves one freight train and eight *Wolverine* trains a day.

The project included the installation of track made of 136-pound continuous welded rail and two turnouts that allow trains to operate at faster speeds as they enter and exit the siding.

A computer-based system has been installed that enables train directors stationed at the Chicago Operations Center to monitor and initiate signal and switch changes that direct the movement of trains through the siding. These improve-

ments will provide passengers with a smoother ride and increase speeds through the siding from 30 mph to 45 mph.

After working since the spring to complete the project, track and signal employees performed the final series of Amtrak and Federal Railroad Administration tests to allow train travel over the newly completed siding on Oct. 22.

Running adjacent to the diverted Michigan City, IN, drawbridge, the new turnout, installed by Amtrak's Engineering forces, enables trains to travel at increased speeds.

Slimbock Takes the Wheel

Heads New York Division

Following the retirement of New York Division General Superintendent Walter Ernst, Lenore Slimbock was appointed to the position October 1. During her tenure with Amtrak, she has held a number of positions within New York division. Most recently, she has served as the Superintendent of Passenger Services for the Mid-Atlantic division since October of 2002.

“Lenore brings an ability to enthusiastically lead the New York Division management team and the entire workforce across the division to accomplish the Transportation department goals,” said Vice President of Transportation Ed Walker.

Slimbock was selected as general superintendent because of the solid reputation she’s established over the last two decades. Her well-rounded experience reflects her knowledge of almost every facet of the railroad and the jobs she has held are the proving ground for running a dynamic and complex division.

Since becoming general superintendent, Slimbock has told division employees that her three priorities are personal safety, operational safety and customer service.

Slimbock is taking a number of steps to achieve the Transportation department’s goal of 3.3 FRA-reportable injuries per 200,000 hours worked, such as holding one-on-one meetings between management and each employee on their accountability roster to keep safety at the forefront of each manager’s and employee’s mind. Supervisors and safety committee members participate in monthly Walk About Days, which are dedicated to addressing specific hazards and injury types. In addition, thorough investigations are to take place following an injury, with NRPC

Form 405 completed within 72 hours, and safety performance reviews conducted for all employees returning from injury.

The plan to reach the Transportation department’s operational safety goal of 2.8 instances per 200,000 labor hours involves observations from management; including train-riding audits, the tracking of feedback and follow-up with employees, and immediate response to and investigation of operating rule violations.

Slimbock says she plans to focus on the fundamentals of customer service, such as making sure that clean stocked and staffed trains are dispatched from the initial terminal on time, making management staff available to help employees in stations, on board trains and at crew bases, ensuring regular communication with employees and providing them with the tools they need to do their jobs well.

Previously responsible for stations from Newark to Richmond, Slimbock has supervised all crafts and classifications of employees, with the exception of Amtrak Police. As assistant general manager of the Terminal Services organization, she managed train and engine, mechanical, station and engineering employees. When she served as the general manager of the Acela product line, she oversaw all operations, from the on-board services to the catering operations.

“Operationally, New York is the busiest division in the system,” said Slimbock, “but I am looking forward to the challenge. I’m looking forward to leading a great group of people whose ideas, motivation and energy will be the strength of our success.”

Chief of Police Joins Amtrak

Sonya Proctor, Amtrak’s new chief of police, brings to Amtrak a wealth of experience gained from a wide variety of positions she has held in the field of law enforcement. Proctor joined Amtrak as chief of Police and Security last month.

Proctor most recently served as the chief of Police and acting town administrator of Bladensburg, MD, and has previously served as deputy director of Maryland’s

Office of Crime Control and Prevention. Proctor also brings to Amtrak more than 20 years of experience with the Metropolitan Police Department of the District of Columbia, where she worked her way up through the department, from police cadet to interim chief of police.

“Chief Proctor is an experienced leader in our profession, and she will bring with her the skills, knowl-

eTrax Provides Employees One-stop Shopping Online

ETrax isn’t just for filing expenses and processing payment requests anymore. Using eTrax to order goods and services allows Amtrak to purchase items at bulk rates while giving its employees the flexibility to order what only their departments need, when they need it.

Considered a one-stop shopping resource for employees who are responsible for ordering supplies and services, eTrax provides Amtrak the capability to develop national supplier contracts and to achieve cost savings and cost controls. Using eTrax, employees who typically order supplies can simply go online to access catalogs from some of the company’s approved vendors to order materials and services.

Using a standardized system to place orders saves time and resources. Employees receive their goods and services faster because they can order directly from the vendor, since all of the contractual agreements have already been made. Additionally, Accounts Payable no longer processes invoices for every purchase made because billing and payments are made automatically.

“Shopping for supplies and services online makes a lot of business sense as it saves employees time, manages inventories and saves resources,” said Bud Reynolds, director of eProcurement. “We’re really only at the tip of the iceberg in realizing the full benefits of eTrax.”

The online catalogs are for non-inventory items only, such as uniforms, small tools, office supplies, copiers, software, fasteners, auto parts and desktop computers. Currently, Amtrak has nine catalogs available through eTrax, including Cintas for

uniforms (conductors, etc.); CL Presser for small tools and related items; Corporate Express for office supplies; Lanier Worldwide for copiers and fax machines; Software Spectrum for business software products; UZ Engineered Products for industrial fasteners and related items; NAPA Auto Parts for automotive parts; Western Folder Distributing Co. for travel planners, timetables, ticket jackets; and MoreDirect for computers and computer peripherals.

A team of representatives from the Procurement and Materials Management and Finance departments, as well as representatives from the contracted suppliers, began the design and development of the program in early 2002. Access to the first catalog, Corporate Express, was offered to users in the spring of that year.

Since the program was initiated, it has continued to grow by offering access to more catalogs and making improvements to the current ones. Some catalog improvements include a wider selection of products in the UZ Engineered Products catalog, easier-to-use search capabilities in the CL Presser catalog, and an expanded selection of products in the Corporate Express catalog.

Additional catalogs will be added as new contracts are negotiated, and future enhancements to the system include home page updates, easier-to-use search capabilities, broader catalog descriptions and content, a wider selection of suppliers and a greater selection of goods and services from which to choose.

Questions regarding the various online catalogs should be directed to the eTrax HelpDesk at ATS 728-1466 (215-349-1466).

edge and abilities to have a positive impact on the Amtrak Police Department,” said Vice President of Security Alfred Broadbent.

She has undergone training in combating threats that currently face the United States, including counter-terrorism and weapons of mass destruction. She has received several awards and honors, such as Maryland Police Department’s Police Woman of the Year and she

Amtrak Strengthens Its Focus on Public Health

Despite four consecutive years of steady improvements in its public health practices, a recent decline in public health indicators has led Amtrak to refocus its attention to this important area of concern.

Amtrak scores itself on public health indicators and uses these scores to assess its compliance with public health standards and the prevention of food-related illnesses. The scores are the result of 568 routine inspections of food service cars, watering points and commissaries, conducted by Amtrak’s Public Health team during FY ’04.

Ratings are based on a number of factors in the Food and Drug Administration 2001 Food Code and as required by the Amtrak Public Health Standards, developed in 1997. A conditional rating means that critical violations — those violations that can lead to a food-borne illness — exist and need to be addressed and corrected as soon as possible. A satisfactory rating is given when no critical violations are found.

These guidelines are upheld by four Amtrak’s Public Health managers who are responsible for covering their respective regions. John Parke, in the Northeast, Al Cooper, in the Southeast, Clayton Pape, in the central region and Howard Malberg in the West. Under the direction of Senior Director Victor Zare and with the assistance of staff administrator, Bill Hamlin, these certified public health professionals inspect 12 dining cars, a minimum of eight other food service cars along with other Coach and Sleeping cars every quarter. They also inspect every commissary in their region at least once per quarter. Additionally, each

the same type of inspection, because less food handling takes place, there is less room for error,” added Zare.

Of the 435 food service car inspections conducted last fiscal year, 323 were rated satisfactory and 112 were rated conditional. During the same period, two of 58 commissaries and

Public Health staff administrator, Bill Hamlin assists Senior Director Victor Zare as he inspects the warming drawer in the kitchen of the Empire Builder after its 46-hour journey from Portland.

seven of 75 watering point inspections were rated conditional.

The majority of violations resulted from mechanical failures. Infractions that led to the conditional ratings include improper refrigerator or freezer temperatures, dishwashing machine malfunctions, toilet failures and pest control issues.

Hand Washing is Key

“One of the more basic practices the public health team continues to reinforce is the importance of adequate hand washing,” Zare noted. Food service employees are required to

corrections in their daily practices,” said Cooper.

Employees should also follow the FDA guidelines for self-monitoring of temperatures,” added Pape. To fulfill these guidelines, employees should check and record refrigerator and freezer temperatures up to five

percent in FY ’03 to 91 percent in FY ’04, they remain well above the goal of 87 percent. Local Amtrak personnel are trained on the inspection procedures and are required to audit the watering point at their location each week.

As part of their training, employees learn how to properly check the hose that attaches to the train to ensure it is in good condition. They are also trained to ensure that back-flow preventers, which are valves that prevent water from backing up into the main water supply, are working properly. During the Public Health manager’s yearly water point inspection, the records maintained by the local staff are reviewed to make certain that the watering point is being inspected each week.

Water on the train is also tested to ensure that it meets Amtrak’s own standards as well as those set by the U.S. Environmental Protection Agency. Random water samples are collected and sent to an independent laboratory to be tested and returned the following day. Both Amtrak and the EPA require that the water be tested for coliform bacteria, which is an indicator that harmful bacteria may be present; and fecal coliform, which is a more serious finding of intestinal bacteria.

Amtrak standards go a step further to include a Heterophic Plate Count (HPC) test, which indicates that while there is no evidence of coliform or fecal coliform, an atmospheric bacteria is present, which may not be harmful, but should be eliminated.

Positive test results are categorized by one of three levels and are accompanied by a set of recommendations for each. Level One is a

times a day — when the food service car is opened, closed and once during each meal period.

Commissary Inspection Scores are on the Rise

Amtrak’s 14 commissaries, operated by Gate Gourmet with oversight by Amtrak contract managers of the Service Delivery department, are inspected quarterly to ensure that standards are met in a number of vital areas. At a 97 percent satisfactory rating, up from 91 percent in FY ’03, commissary scores continue to show improvement. Among other areas, in commissaries, public health inspectors make sure the refrigerator and freezer temperatures are checked three times a day and food is properly transported from the commissary to and from the train. They also check shelf life labels and see to it that food products are rotated in the proper manner — otherwise known as FIFO — first in first out. The Service Delivery staff works closely with Gate Gourmet, the Public Health group and the FDA to ensure that housekeeping, sanitation and food handling regulations are carefully followed.

Watering Point Inspections Receive Good Marks

The water tanks on Amtrak trains are filled with water, supplied by the local municipality, before the start of the trip and en route at any of Amtrak’s 74 approved watering facilities. Although watering point scores dropped slightly from 92

finding of HPC bacteria and it is required that the car be drained, flushed, refilled with a bleach and water solution, drained again and then filled with water. A Level Two finding of the presence of coliform requires the same sanitizing methods as Level One but also requires the car to be re-tested after

Packaged salads and pizzas squeezed into the refrigerator of the Coast Starlight Lounge car do not allow adequate air circulation to maintain proper refrigeration.

“There is no substitute for tapping into our employees’ knowledge. They have tremendous insight into what is actually happening on board our trains.”

Richard Phelps
General Superintendent

year public health managers are required to inspect every watering point in their region and to collect a minimum of one water sample from twenty cars and one sample from a water hydrant each month.

Food Service Car Inspection Scores Slip

“System-wide, we are concentrating on public health practices in Food Service cars, particularly Dining cars, where FY ’04 scores saw the greatest decline,” said Zare. “Although Lounge and Café cars are subject to

wash their hands frequently, particularly when entering the food service car and before and after handling food. Employees learn these procedures during food-handling training, which they are required to attend every two years.

“We are known as inspectors, but we try to be public health educators. We go out to the field and are proactive about talking to employees about the problems we are finding and teaching them how to make

the tank is refilled with water. When fecal coliform is present, the results are categorized as Level Three and in addition to draining, flushing and re-testing, the car cannot return to service without approval from the testing laboratory.

“The good news is that no Level Three results have been found in over seven years,” said Zare.

Public Health Team Collaborates with Local Sanitation Task Force

Amtrak’s Public Health team works closely with each division via a monthly sanitation team call to discuss the leading trends in violations, review practices and implement plans of action.

Public health inspections alone are not sufficient to see to day-to-day operations. “We depend heavily on the divisions’ internal sanitation teams and the employees in the field to carry out our recommendations,” said Zare.

During discussions at the Southwest Division’s Sanitation Task Force Team call held in August, Public Health managers found that the majority of food service car critical violations were attributable to mechanical malfunctions, specifically, inadequate refrigerator and freezer temperatures. As part of

within the unit. “Due to the size of the par (the usual stocking level) and the fact that many of the items stored are perishable,” said General Superintendent Richard Phelps, “the LSA is often forced to cram as much food as possible into the freezers and refrigerators.”

As a result of these findings, the task force, working closely with the Service Delivery group, is conducting a study to determine the maximum amount of food that can be stored without causing ventilation and cooling problems while serving the en route needs of our employees and passengers.

Phelps explained that the two groups are also working together to examine and adjust pars for certain trains according to usage and passenger loads. As an example, the LSA in the Lounge car of the *Coast Starlight* informed the division that he is issued 24 salads — which take up considerable refrigerator space — for his trip to Seattle. “On many trips, he sells only about six to eight salads while on others he may sell all of them, so this looks like a prime item we must monitor carefully and adjust as necessary,” continued Phelps.

“There is no substitute for tapping into our employees’ knowledge. They have tremendous insight into what is actually happening on board our trains.”

The Service Delivery staff is also looking at alternative packaging methods to reduce space requirements where possible while the division Mechanical personnel work to ensure that the refrigeration units are mechanically sound and operating at required temperatures.

“One thing to consider,” Zare explained, “is that Amtrak’s food service operation is very complex and problems are not always as simple to solve as those in a stationary restaurant. For example, a restaurant would have municipal water directly connected to the building, the same people coming in to the same kitchen day after day, regular mechanics making repairs and enough equipment and supplies to last for weeks.”

“Conversely, the water on Amtrak cars last hours instead of days, and tanks are refilled by different people at different locations throughout the country. Unlike a restaurant, we have different food service employees working in different kitchens every day. Our equipment might be repaired by a mechanic in

FY ‘04 Closes Ridership Record

continued from page 1

August and September alone causing a revenue loss of \$7.2 million. Additionally, the Republican National Convention, held in New York City, from Aug. 30 through Sept. 2, cost Amtrak an estimated at \$3.3 million. Meanwhile, other issues, such as track work, freight congestion, reduced capacity due to sleeper car shortages and poor on-time performance also contributed to the downtrend that affected both ridership and ticket revenue on long-distance trains.

However, in spite of these challenges, a number of long-distance trains performed well. The *Cardinal* finished FY ‘04 with a 23-percent ridership increase over last fiscal year and 19-percent ahead of budget, while ticket revenue was nearly 35 percent ahead of last year and more than 25 percent ahead of budget. *Capitol Limited* ridership increased by more than 17 percent ahead of last year and nearly 11 percent over target, while ticket revenues on this route were close to 8 percent ahead of FY ‘03 and over budget by 1 percent.

In the Northeast, *Acela/Metroliner* showed a ridership and revenue gain of 1 percent over the previous year. The Boston-New York-Washington *Regional Service* ridership exceeded 6.4 million passengers, an increase of 9.5 percent over FY ‘03.

In the Midwest, all three routes in Michigan showed double-digit increases, including the new state-supported Port Huron-East Lansing-Chicago *Blue Water*, which replaced the *International*.

In California, *Pacific Surfliner* trains carried more than 2.3 million passengers, an increase of more than 7 percent over FY ‘03. The *Capitol Corridor* trains carried more than 1 million passengers, a gain of 2.3 percent, in part due to the improved spring ‘04 travel schedule, which reduced travel time by 10 minutes.

Washington, D.C., one day and in Los Angeles another. And, Amtrak kitchens travel along rough roads. How many restaurants actually shake, rattle and roll? Given the limited space and unusual working conditions, our crews do an outstanding job,” added Zare.

For FY ‘05, the ticket revenue forecast has been set at 4.6 percent above the FY ‘04 numbers at more than \$1.314 billion. Marketing initiatives for FY ‘05 continue with the back-to-basics and grassroots approach to advertising. Featuring illustrations by acclaimed graphic artist Michael Schwab, this fall’s systemwide advertising campaign, which continues through Dec. 15, builds on the previous campaign. It showcases low fares, city-pair pricing and the many Amtrak destinations available to the traveling public. The campaign targets 21 markets and Field Marketing is covering 39 additional markets.

Additionally, in conjunction with the re-launch of Amtrak’s Web site, a promotion targets Northeast Corridor travelers, publicizes the newly redesigned site and offers a limited-time 10-percent discount for all tickets (except *Acela* and *Metroliner*) booked online. The fall campaign also directs customers to the redesigned site.

Another fall marketing initiative includes a recovery plan for the Florida trains, which dwindled significantly following the series of hurricanes experienced by the state this past summer.

“While we closed the year with record ridership, it would have been even higher, had we not encountered so many obstacles in the last quarter,” said Barbara Richardson, vice president of Sales and Marketing. “As we continue to recover from some of the challenges of last quarter, there are some things starting to work in our favor. Of course, Thanksgiving is always a high point for us; a new schedule has been put in place with service improvements and newly remanufactured equipment is being returned to service. And finally, hurricane season is just about over.”

Public Health Manager Clayton Pape examines the area under the sink for possible violations during an inspection of the Southwest Chief Dining car.

their investigation, the task force met with the lead service attendants to review these findings, solicit their first-hand experience and evaluate procedures for loading food in the freezers and refrigerators of Lounge and Dining cars.

It was determined that one of the factors that contributed to the refrigeration problems is the overstocking of refrigerators and freezers which obstruct the fans and ventilation system, thereby blocking the airflow

A Look at FY '05 Mechanical Goals

Mechanical Department Makes Progress in 2004

continued from page 1

FY '05 Preventative Maintenance Inspection Goals for Terminal Shops					
DIVISION	30-DAY IN-LINE CAR	QUARTERLY CAR	ANNUAL CAR	QUARTERLY LOCOMOTIVE	ANNUAL LOCOMOTIVE
Southern Division	1,974	900	266	156	32
Mid-Atlantic Division	1,974	1,752	468	281	21
New England and New York Divisions	4,089	207	54	162	32
Central Division	2,256	816	199	450	126
Southwest and Pacific Divisions	1,880	606	128	141	41

Horizon fleet; and 28 sleepers, seven coaches, 11 Diner/Lounge cars and six Transition/Dorm cars in the Superliner fleet. Also included for the first time is a program to overhaul 12 *Pacific Surfliner* coaches. Other equipment in line for overhaul includes 40 Maintenance-of-Way work cars, and 20 Baggage cars.

The fleet program will also target light overhauls of 55 Amfleet passenger cars, 34 Superliner passenger cars, three Horizon Coach cars, 20 Viewliner passenger cars, and 13 Heritage passenger cars.

Locomotives scheduled for heavy overhaul include four MP-15, three SW-1, one SW-1001, five GP-38 non-passenger engines, also known as switchers, 40 P-42s, two DM-32s, eight F-59s diesels, and seven electric AEM-7DCs, which

include one Marc commuter locomotive. Scheduled for light overhaul are 11 AEM-7 and eight HHP-8 locomotives.

The wreck-repair program will focus on 10 Amfleet passenger cars, 10 Superliner passenger cars and six locomotives.

Also incorporated in to the FY '05 Mechanical plan is the acquisition of 80 new auto carriers, 10 diesel switchers, and the conversion of five GP-40s to switch engines.

Preventive Maintenance and Inspections

Frequent inspections at yards and terminals including light, medium, and heavy car inspections are critical to sustaining the repair work completed in heavy overhauls. Preventative maintenance at department terminal shops, including increased maintenance

cycles now on 30-day, quarterly and annual cycles, will improve fleet availability and reliability.

“With the focus on state of good repair, we’ve reinstated the overhaul programs in the backshops and more important, increased the frequency of planned maintenance on the fleet between overhauls,” said Nesci. “The 180-day and 360-day inspection intervals that used to be in effect, were essentially doubled to become three quarterly (92 day) and one annual inspection, to raise our fleet to a state of good repair at a more rapid rate than we had previously seen. Our goal is to lower the quantity of unplanned maintenance we perform while simultaneously increasing fleet reliability through our planned maintenance programs,” added Nesci.

Revenue Enhancement

By tracking, recording and monitoring train delays by defect and equipment type, and examining root causes of each failure, such as electrical, HVAC, bathrooms, or brake malfunctions, the Mechanical department plans to initiate actions to do what is necessary to address chronic deficiencies. For example, when a part in the HVAC system fails again and again, the trend may lead mechanics to redesign the part, instead of continually fixing it.

Reduce Costs

A reduction in the department’s costs can be achieved through the control of overtime at terminal shops and backshops, reduction in absenteeism and by maintaining a safe work environment. Working closely with the Procurement and Materials Management department also helps keep costs down, benefiting

from economies of scale. “By defining Mechanical material requirements up front, Amtrak can truly benefit from bulk pricing,” said David Yingling, director of budgeting, Mechanical.

Ability to Execute

Making sure that proper processes and resources are in place to support the department’s objectives is a priority. These processes range from the Work Management System, to a new Production Planning and Logistics department to be established this year, which will coordinate scopes of work with material requirements, logistics, and schedules throughout the entire Amtrak system.

FY '04 Progress

The Mechanical department’s production in FY '04 resulted in significant progress in maintaining passenger cars, locomotives, and non-passenger equipment. Major components, tooling and personnel were positioned in the backshops to carry out last year’s aggressive capital program. When major parts were not commercially available, vendors were found to design and build replacement parts.

In prior years, preventative maintenance programs were accomplished in the backshops in lieu of capital programs.

Last year, passenger car maintenance consisted of 188 light overhauls, 93 heavy overhauls, 61 remanufactures, 19 wreck repairs, and seven Superliner I baggage modifications.

Locomotive repair programs continued to yield solid progress in FY '04, and consisted of seven AEM-7 overhauls, 45 passenger diesel overhauls, six switcher overhauls, four switcher conversions, and six wreck repairs. In addition, the Mechanical department completed an overhaul program for 31 pieces of Maintenance-of-Way work equipment for the first time in recent history, and delivered 32 overhauled baggage cars.

Carman Lance Johnson removes the ceiling panels in the Superliner Dining car while readying the car for preventive maintenance at Los Angeles 8th Street Yard. The wind machine (right photo) attached to the rear opening of the car, is then used to blow all dirt and debris out of the car using compressed air.

Employee Training to Bolster System Security

Amtrak, in conjunction with the Transportation Security Administration, the National Transit Institute and freight partners, launched a system-wide *Railroad Security Awareness* course this month designed to provide employees the skills and knowledge to understand their role in safeguarding the security of the railroad, and to convey how each employee can contribute to the security of the system.

The purpose of training, which is required for all employees, is to demonstrate simple steps employees can put into practice to safely protect the railroad against terrorist threats. This training is not designed to alter employees' responsibilities — it reminds employees that maintaining security awareness is a necessary and natural part of working at Amtrak. It stresses that it's not only important to observe, but also to report suspicious activity.

"After undergoing the training, employees will be able to describe the nature of the threat against railroad systems, and be able to

describe their role in reducing the vulnerability of the railroad against a threat or terrorist incident," said Senior Director of Employee Development Stephanie Pavlakis. Because of its size, complexity and inherently open nature, America's passenger rail system requires the vigilance of its employees. Attacks on rail systems such as the 1995

While security measures and plans are in place, the reality is that the key to protecting our rail system is an alert and motivated workforce.

Sarin gas attack in Tokyo or the more recent bombing of the rail system in Madrid are sobering reminders of the vulnerabilities of passenger rail. While security measures and plans are in place, the reality is that the key to protecting our rail system is an alert and motivated workforce. Because of employees' day-to-day front line contact with the railroad, its equipment and its passengers, they are in a unique position to notice and report suspicious activity.

Because all Amtrak employees are required to complete it, the interactive two and a half hour *Railroad Security Awareness* program is offered in a variety of forms. In addition, some of the five learning modules that comprise the program are tailored to reflect the circumstances that are unique to a variety of railroad job classifications.

Some employees will take the course via Amtrak's Intranet, a convenient way to accomplish training for those employees who have Intranet access. The program will also be offered via CD and computer for those locations that do not have network Intranet connectivity. In both cases, employees will need access to an Amtrak computer workstation with sound capabilities to view the program.

The requirements for this training will also be met through instructor-led presentations conducted during the annual Engineering Training Camps and as part of the PREPARE refresher training program for Transportation employees. The program contains basic safety and security awareness concepts, as well as comprehensive training focused on concerns specific to the stations, facilities, equipment and rights-of-way of our national railroad system.

Honing employees' awareness, surveillance, response procedures and self-protection skills is essential to system security. With this training, employees will better recognize suspicious activities, packages, devices and substances, report the information to supervisors and minimize exposures and injuries while help is on the way — while always preserving personal safety. "In order to provide America's traveling public with a safe and secure mode of transportation, we must all recognize the seriousness of the threat and develop a vigilant attitude. Both on and off the job, we are the eyes, ears and voice of Amtrak and every day we must make security awareness a part of our way of life," stated Al Broadbent, vice president of Security.

Ken Rannels contributed to this story.

Beech Grove Coach Shop Demolished

Beech Grove's Coach Shop 3, originally built in 1914, is being demolished. The structure was pulled down this fall, after it had been out of service for over four years due to inoperable heating, substandard plumbing and restroom facilities and structural damage. The building was slated for demolition in 2002 after a tornado caused significant damage to the already deteriorating building. Prior to 2000, Superliner overhauls were performed at the 150,000-square-foot facility.

Riding on Amtrak Becomes More Rewarding

Amtrak Guest Rewards members will be excited to learn about new enhancements to the AGR program that begins next year. Starting Jan. 1, members will always earn at least 100 rail points per trip on any Amtrak ticket for any dollar amount less than \$50. Members will continue to receive two points per dollar spent for tickets \$50 and up and *Acela Express* and *Metroliner* passengers, traveling between select city pairs, will continue to earn 500 points per Business Class trip and 750 points per First Class trip.

Select Plus Coming in 2005 On March 1, 2005, Amtrak will introduce Select Plus, a third tier level of the Amtrak Guest Rewards Program. Members who earn 10,000 rail points during calendar year 2004 will qualify as Select Plus members for one year beginning March 1, 2005 and receive additional benefits that include a 50-percent bonus on rail point earnings, free-companion vouchers for coach travel and unlimited Club Acela, Metropolitan Lounge and First Class lounge access throughout the Amtrak system.

Currently, the AGR program offers its members the opportunity to receive added rewards as a Select member. Members who earn between 5,000 and 9,999 rail points during calendar year 2004 will qualify as Select members for one year beginning March 1, 2005 and receive benefits that include a 25-percent-point bonus on every trip, a one-class upgrade for two seats (provided space is available and excluding sleeping accommodations) and a single day pass access to Club Acelas, Metropolitan Lounges and First Class lounges throughout the Amtrak system. Members must re-qualify each calendar year to continue receiving either Select or Select Plus benefits. Members may obtain more information on these changes by visiting www.amtrakguestrewards.com or in the Amtrak Guest Rewards newsletter, Amtrak Guest Rewards Update Fall 2004, that was mailed to member's homes in late October. Current Guest Rewards Select members also received a special announcement letter mailed to their homes in late October.

Rolling Stock Wheel Maintenance Measures Up to AAR Certification

Amtrak’s newest maintenance facility in Oakland is taking steps to obtain the highly sought after Association of American Railroads quality assurance certification, joining Amtrak’s nine wheel truing facilities and two wheel shops that have attained AAR M-1003 Quality Assurance Program certification. This rigorous process is important to Amtrak because M-1003 certification ensures Amtrak facilities and shops maintain the highest standards for all processes associated with removing wheel defects and maintaining wheels in optimum condition.

The Association of American Railroad’s M-1003 certification is a quality assurance program that is similar to the ISO-9001 Quality Management System used by other industries for ensuring quality assurance. These standards define benchmarks for industries to help guarantee that quality products are produced. Because AAR’s program is a railroad-specific standard, the M-1003 program includes product-specific requirements for wheel truing, an important process that removes defects, keeps wheels in optimum condition, extends wheel life and ultimately improves ride quality for passengers.

Amtrak mechanical facilities holding AAR M-1003 quality certification for wheel truing are Chicago at 14th St., Chicago at 16th St., Los Angeles, Seattle, Hialeah, Boston, Albany, New York and Washington’s Conventional facility in Ivy City. Also at Ivy City, high-speed train sets are trued on a machine that is equipped to cut both sets on the truck at the same time. The AAR certification process has begun in Oakland, with M-1003 certification scheduled to be achieved at the end of this year.

In addition to wheel-truing facilities, Amtrak wheel shops at Beech Grove and Wilmington hold AAR M-1003 certification. The shops build new wheel sets by mounting the wheels, brake discs, and bearings onto axles. They also receive scrap wheel sets from the field, to be remanufactured according to AAR standards.

Quality Control and the AAR

The AAR, one of the nation’s oldest trade associations, represents Amtrak, some commuter railroads, and major freight railroads of the United States, Canada and

Mexico. The Association of American Railroads is involved in all matters that require cooperation between railroad entities to provide an efficient, safe and inter-linked system. AAR creates and sets many railroad standards and regulations, and its oversight of technical regulations has evolved

Quality Assurance Designee Paul Storbakken sets up the computer to true a single wheel on the Seattle facility’s UPM wheel truing machine.

from publishing the standards and regulations, to providing inspectors and auditors to review, observe and ensure compliance.

Amtrak wheel shop compliance with AAR technical standards has been a requirement for many years, but in the early 1990s Amtrak’s Wheel and Axle Committee determined that wheel shops and wheel true operations should have the M-1003 Quality Assurance certification as additional assurance that regulations and high standards were being met.

In the case of Amtrak’s wheel operations, this means that not only is there a required AAR audit of the quality program requirements at Amtrak, but also a physical inspection of the wheels produced and observation of the processes, either building wheel sets or truing wheels, by an AAR inspector. The extra inspection processes render the program more effective and examines a wider scope than the ISO-9001 standard provided for other industries.

Amtrak developed procedure

manuals for wheel shops and wheel truing operations, and set out to achieve 100 percent M-1003 certification for all Amtrak Wheel True and Wheel Shop facilities. These manuals address all 24 elements of the AAR M-1003 Specification for Quality Assurance. Included with the manuals are Local Work

Instructions that clearly define how all of the processes are to be performed and documented.

What’s Going on In There?

Mechanical personnel inspect wheels on a daily basis at every initial terminal prior to departure. It has always been Amtrak’s policy

to exceed FRA regulations with respect to the inspection and servicing of rolling stock. Therefore, if a defect is found or if the wear on a wheel exceeds limits, the defect will be recorded and the wheel set shipped to one of the nine wheel truing facilities or two backshops to be re-profiled or remanufactured.

Everyday operation can lead to various wheel conditions that require special attention. Conditions range from thin or chipped flanges and shelled tread, or spalling of the tread surface caused by wheel-to-rail wear and debris strikes; to flat spots caused by heavy braking and failure of the anti-slide system, which is similar to anti-lock braking systems found in automobiles.

At the Seattle wheel truing facility, General Foreman Bill Skok adjusts a light while he inspects a wheel.

Wheel specialists inspect the wheels to determine their overall condition. Any defect or condition is verified and the wheel is spotted, or placed, on the wheel true machine. The wheel true machine shaves layers of material off the wheel to correct the defect or restore the correct wheel profile. There are many factors that affect the time involved in the process and the number of wheels trued per train. These variables include the types of defects being cut as well as the severity of the defect. Every effort is made to ensure that the wheels are trued within the car’s scheduled layover time to prevent delays.

Seattle

Last year, the Seattle Wheel Truing Facility was the latest Amtrak facility to achieve the M-1003 Quality Assurance Program certification. The Seattle mechanical shop’s wheel truing machine is a computer-controlled Simmons Under Floor Wheel Profiling Machine (UPM) that automatically probes all of the critical parameters in order to determine how much reprofiling needs to be done.

Seattle’s UPM is one of the only machines that has the capacity for servicing every piece of rolling stock in Amtrak’s inventory. For example, the UPM accommodates Amtrak Cascades Talgo-built equipment used in the Pacific Northwest. Talgo’s independent wheel set — wheels that are set on a split axle, with the wheel assemblies working independent of each other — is repaired using the UPM.

Because of the unique and sophisticated design of the Seattle wheel truing machine, Amtrak’s quality assurance program did not apply. In addition to bringing the Seattle facility in compliance with Amtrak’s QA program, work was also begun to attain AAR certification. With the help of Amtrak’s Equipment Standards and Compliance department, led by Manager Jim Morris, the Seattle group, including General Foreman Bill Skok, Quality Assurance Designee Paul Storbakken, and Ollie Cone, a wheel truing machine consultant and retired Amtrak employee, took steps to expedite the AAR certification. Assisted by Quality Assurance Inspector Bob Rapp, they

Passenger Services Supervisors Undergo Leadership Training

Amtrak’s Transportation department and the Employee Development group implemented new leadership training for Passenger Services supervisors in October at the training center in Wilmington, DE. The weeklong class gathers supervision from each division and consists of two components — the first part focuses on leadership skills training and the second part, facilitated by general superintendents and Passenger Services superintendents on a rotating basis, covers Amtrak’s goals, policies and processes.

The purpose of the training is not only to improve the management skills of supervisors, but also to provide consistent information and guidelines associated with departmental and corporate standards. The classes are being held on a semi-weekly basis and all supervisors are expected to be trained by February 2005.

“There are many new supervisors who have never experienced this type of training. We are gathering all 175 Passenger Services supervisors in a forum to review the goals

set forth by the Transportation department to ensure that everyone is on the same page. This is an opportunity to do some fine-tuning on expectations as well as cover areas that may cause confusion or problems,” said John McCaffrey, senior analyst, Station Policy.

The training program pairs leadership skills curriculum from the Mid-Atlantic Transportation and Logistics Institute with senior management facilitators and knowledgeable speakers from each Amtrak department.

Amtrak chose James Brophy from the Transportation and Logistics Institute to lead the first component of the training because of the group’s impressive track record in the field of leadership skills training. Among the workshops is *Leading in a Collaborative Environment*, a session providing guidance on establishing and maintaining relationships of trust, respect and credibility. The workshop also teaches how leadership can improve productivity by inspiring, influencing and motivating others.

Another workshop, *Leadership Through Effective Communication and Feedback*, introduces basic principles of communication, illustrates how perception influences others, explains how listening is a supervisor’s most powerful tool and offers examples of consistent feedback to employees.

The *Teamwork* workshop defines what makes a team effective, what team-building can do for the organization, and closes with a hands-on exercise in which Amtrak supervisors demonstrate how to lead an effective team.

The second component of the Passenger Supervisor Training reinforces Amtrak goals, policies, and processes. “The key to this

McCaffrey added that as a result of the training, Amtrak should expect to see better compliance with on-board and station policies and procedures, “With the reorganizations over the last few years, there have been significant changes in staffing and in shifting of responsibilities. “This training helps to make sure that we’re doing in practice what we’ve put down on paper,” he noted.

“Our supervisors need to have the management tools to do their jobs to effectively share Amtrak’s vision with employees,”

Solomon Carey
Senior Analyst, National Standards and Operations

segment of the training is that senior members of management facilitate the entire class. It is important for front-line supervisors to have an opportunity to meet face-to-face with senior management and to hear why we have these goals in place and how we need them to accomplish them,” said Ed Walker, vice president, Transportation.

For example, during the first class held in October, the Transportation and Passenger Service departments’ FY ’05 goals and objectives were reviewed by Daryl Pesce, general superintendent, Mid-Atlantic Division, and Lenore Slimbock, general superintendent, New York Division.

“This was a very important session,” said Slimbock. “Discussing our goals and objectives with our front-line supervisors, who can then take these to the field and really communicate to employees face-to-face, is a great opportunity to answer questions and have positive dialogue about where we are as a team,” she added.

“Our supervisors need to have the management tools to do their jobs to effectively share Amtrak’s vision with employees,” said Solomon Carey, senior analyst, National Standards and Operations. “This training aims to make our managers better coaches. It is all about improving supervisors’ abilities to manage performance in both stations and on-board services. In the end, we strengthen the working relationship between our employees and their leaders and also improve service to our customers,” added Carey.

A pilot training class held this summer helped the Employee Development group make final decisions on the curriculum. On-board Services Manager Eliseo Nora, who attended the pilot, commented that one of the most educational aspects of the workshop was listening to the different challenges facing supervisors across the country. “Every location has its own set of circumstances that employees need to deal with, but I also learned that there is a set of tools that supervisors can use to

continued on page 16

The third passenger services supervisor training class in September was facilitated by General Superintendent Mike DeCataldo, New England Division, and District Superintendent Kurt Laird, Pacific Division. Attendees from left to right are: Paul Mallon, Gary Patterson, Barney Blair, Mike DeCataldo, Kermit Gerald, Ethel Stamper-Kato, Herb Johnson, Surinder Gupta, Charlie Davis, Lynda Pantalena, Kurt Laird, Keith Manning, Rich Mason, Roxana Young, Robert Gonzales, Mike Esposito, Sol Carey, Alex Jagiello (kneeling).

Rolling Stock Wheel Maintenance Measures Up

continued from page 12

acquired materials, disseminated documentation, established processes and record-keeping systems and ensured all aspects of the unique wheel truing operation were fully compliant with existing Amtrak and AAR standards. Their efforts paid off when the Seattle facility received AAR M-1003 certification following its very first audit and inspection.

Evolving Quality Assurance

Each Amtrak wheel shop maintains programs, manuals and documentation with regular oversight of the Equipment Standards and Compliance inspectors in the field. The AAR Wheel and Axle committee provides manuals, forms and work instructions for all wheel true operations. Recently, Chicago wheel shops developed a tracking

program using the Amtrak Work Management System (WMS) to document all of the wheels that have been processed through the 14th and 16th Street facilities. Using the equipment or unit number, wheel position, and traveler number (provided by Beech Grove) the wheel shop can track wheels entered in the WMS system to study trends and overall life cycle of the wheel.

The breadth of Mechanical’s Quality Assurance Program has also opened the door to outside income. Amtrak wheel truing locations are listed in the AAR quarterly letter distributed to all registered members and private car owners, which provides Amtrak opportunities to take in work from third parties.

Jim Morris and Gil Bruno
contributed to this story.

Amtrak Executes Emergency Drill at Flathead Tunnel

An Amtrak passenger train that encounters an emergency, such as an accident or fire, in western Montana's Flathead Tunnel can be devastating if local response agencies are unfamiliar with the tunnel territory, Amtrak equipment or rescue procedures. For that reason, Amtrak's Emergency Preparedness team conducted a mock emergency drill in September at the Flathead Tunnel with 138 responders representing 30 participating agencies to train local responders to manage passenger train-related emergencies at the tunnel.

Owned and maintained by the Burlington Northern Santa Fe Railway, Flathead Tunnel is the second longest tunnel — at 7.1 miles long — through which Amtrak travels. Lessons learned from this drill are not only relevant to the Flathead Tunnel but are also applicable to other extensive tunnels. The longest tunnel along an Amtrak route is Washington State's Cascade Tunnel at 7.8 miles, which also serves the *Empire Builder*, and the third longest tunnel used by Amtrak is Denver's 6.8 mile-long Moffat Tunnel, serving the *California Zephyr*.

The Scenario

The scenario: Amtrak's eastbound *Empire Builder* traveling from Seattle to Chicago enters the portal of the Flathead Tunnel on Saturday, Sept. 18, when a passing hunter notices the locomotive of the train protruding from the north end of the tunnel with heavy damage to the cab and tunnel doors and dust or smoke is rising in the air. Realizing the severity of the accident, the hunter breaks the window of the nearby tunnel control building and calls 911. It is determined that the train appears to have crashed through the tunnel door.

A number of response agencies are dispatched to the scene, including local, state and federal emergency management, fire and rescue, law enforcement and emergency medical personnel.

Staged inside the tunnel and train are approximately 40 local high school students, scouts and other volunteers, posing as victims. Responders gain entry to the train in almost total darkness while attempting to assess the number of victims and the nature of their injuries. Responders work by flashlight and other portable lights as they place the non-ambulatory victims on backboards to be trans-

ported off the train and to the staged triage area.

Lessons Learned

As Emergency Preparedness Manager Arthur Candenquist explained, "Simulated emergencies, such as this one, raise awareness of

During the simulated emergency drill, Lincoln and Flathead County's Fire and Rescue teams enter Flathead Tunnel to begin a search and rescue mission.

the potential hazards and strategies necessary that may not have been previously considered.

"One lesson learned from the exercise," Candenquist continued, "was that a victim on a backboard could be removed from the inside of the train on the lower level by means of the side exit door." This is not easily accomplished because of the limited amount of clearance between the side of the train and the tunnel wall. But Candenquist noted that it can be done, provided the rail cars or locomotive are not up against the sides of the tunnel.

After completion of the drill, various components, such as notification, communications and response were critiqued. "Evaluating the timeliness and accuracy of information transmitted during the drill is critical to identifying the reasons for any delays in the notification process," said Emergency Preparedness Director Larry Beard. One of the actions measured in the Flathead Tunnel drill was the timeliness of communication between the initial 911 call to fire and rescue teams, BNSF, Amtrak Police and Amtrak's Consolidated National Operations Center.

"By understanding that every situation, actual or simulated, presents different conditions and different circumstances and by analyzing and measuring the effectiveness of the drill, including passenger train ingress and evacuation procedures, the Emergency Preparedness team can identify key elements that require improvement," added

Emergency Preparedness Manager Dave Albert.

Pre-drill Preparations are Made

To ensure the effectiveness of the large-scale drill, preparations began early. In 2003, Emergency

Preparedness Manager Josie Harper developed the Flathead Tunnel Emergency Procedures manual, which is distributed to all local emergency response agencies. Like most manuals created for a drill, this one identifies equipment resources such school bus companies, potential facilities for shelter use, hospital and trauma units within a 100-mile radius, Amtrak equipment specifications, tunnel information and contact telephone numbers. The manual also outlines the Amtrak operating and on-board responsibilities and provides detailed information regarding the location of the on-board emergency equipment cabinet.

In March 2004, Harper, along with three BNSF officials and the Lincoln County Emergency Management director participated in a tour of the tunnel conducted by BNSF Emergency Preparedness Manager Jim Guseman.

Over the next several months, Harper conducted planning meetings with representatives from BNSF, Flathead and Lincoln counties to coordinate roles and responsibilities, policies, procedures, and administrative requirements to support the upcoming exercise.

Emergency Responder Training is Underway

To prepare local emergency response teams for the upcoming drill, in June 2004, Candenquist conducted a series of four-hour Passenger Train Emergency Response orientation classes

followed by two-hour hands-on training sessions in Libby, Troy and Frontline, MT.

During the classroom and equipment familiarization instruction, responders studied critical emergency procedures, including removing emergency exit windows. Using an Amtrak locomotive and a Superliner coach, Candenquist demonstrated how to turn seats in coach cars, which can open up available working space in front of an emergency exit window and making it easier to access victims.

To facilitate interaction with train and engine and on-board service crews during a train emergency, Candenquist also acquainted responders with the duties of these employees, who in the event of an emergency can assist emergency personnel in navigating through the car.

Responders were also taught the locations and operation of locomotive emergency fuel cutoff switches and the electrical and pneumatic hazards associated with passenger trains, in order to minimize the risk of coming in contact with dangerous electrical cables and air hoses. To familiarize responders with the scene of the drill, on the following day, Guseman took emergency responders on a two-hour tunnel tour.

Learning how to work within the tight confines of an Amtrak Coach car, Lincoln and Flathead County's Emergency Medical Technicians prepare a victim for evacuation.

"I sleep better at night knowing that the safety and welfare of our passengers and crews are enhanced because the emergency responders are better prepared to handle incidents on our trains more quickly and safely," said Candenquist.

"Participating in the Flathead Tunnel exercise gave responders an excellent opportunity to ensure maximum preparedness on behalf of their respective agencies. In addition to training and preparedness, team work is essential and the cooperation we saw between the various agencies made for a very successful drill," said Harper.

PROMOTIONS IN MOTION

Passengers Train with the San Diego Chargers

The popular San Diego Chargers rail and trolley package is available once again for the 2004 football season. Passengers boarding in Los Angeles and Solana Beach, CA, can take select *Pacific Surfliners* to San Diego's Old Town station where they will transfer to the San Diego Trolley, which will take them directly to the game at QUALCOMM Park. The offer provides a special round-trip fare that covers rail and trolley service.

Fans Take the Train to Seattle Seahawks Games

Football fans living outside of the Seattle area can avoid traffic jams by taking the Amtrak *Cascades* to Seattle's King street station, steps away from Seahawk Stadium, just in time for kickoff. Amtrak is promoting its low fares and ease of travel on the Amtrak *Cascades* to the Seattle Seahawk games, and working in conjunction with SportsWorld Tours Inc. to offer fans special rail and hotel week-end packages.

Amtrak and Radio City Offer Rockettes Holiday Package

Just in time for the holiday season, Amtrak and Radio City Entertainment have teamed up to offer a special holiday package to see the world-famous Rockettes perform in New York City.

This special promotion provides *Radio City Christmas Spectacular* customers roundtrip travel aboard Amtrak to New York City as well as orchestra seating at Radio City Music Hall for America's most beloved family show.

Amtrak employees can take advantage of two special discounts.

- Buy one ticket, get one free! Save 50 percent on show tickets to all non-peak performances in November.
- Save \$7 on all non-peak performances in December and January.

The Amtrak employee discount offer is valid for theselect shows for the *Radio City Christmas Spectacular* in New York. For tickets, Amtrak employees can call Ticketmaster Christmas Hotline

at 212-307-1000 or go to www.radiocity.com, the Radio City or Madison Square Garden Box office or visit any Ticketmaster outlet and use code 1AMTRAK to save 50 percent and use code 2AMTRAK to save \$7.

For Amtrak passengers, the regular package features roundtrip rail transportation, and *Radio City Christmas Spectacular* orchestra

seating, and complimentary soda and popcorn at the show. Holiday packages are available from Nov. 15-Jan. 2 and start as low as \$164 from Albany and \$226 from Washington, D.C. Hotel accommodations are also available. This special offer is available through Dec. 3117, 2004. Customers may make reservations for this package by calling Yankee Holidays at 1-877-579-9217 or a travel agent.

FRONT LINE FOCUS

Dear Amtrak:

I am a frequent Amtrak Passenger and show concern whenever the train is late. Therefore, I am compelled to write this letter of appreciation.

I took Amtrak two weeks prior to visit my daughter, son-in-law and only grandson. I had a reservation to return home that Saturday. However, I received a phone call Friday from Amtrak stating that services were suspended on a day-to-day basis due to the effects of Hurricane Frances. I was notified daily of train #91 status. September 8, Wednesday, Train #91 was rolling again, with me on it.

The entire Amtrak Staff: Customer Relations, especially those working in the coaches of train #91 for South Carolina and Florida, need to be commended on their professionalism/humor in answering questions by a few irate passengers. We were periodically informed of changes. Even though we were bused from Florence to Columbia, it was a smooth transition and we arrived in Columbia earlier than scheduled. The Florence and Columbia Station and baggage crew were fantastic!

Proud to choose Amtrak as my mode of travel.
Atta boy to Amtrak – thanks for a job well done!

Sincerely,
Betty E.
Columbia, SC

Dear Amtrak:

Once again, we recently traveled roundtrip New York/New Orleans/New York via Amtrak. As in the past, we were very pleased with the service and meals on the *Crescent*.

The car attendant on Train #19 from Pennsylvania Station, New York to New Orleans on August 27 was Darrell Bennett.

Just a couple accommodation problems on Train #19 . . . no sound on our video screen and more than usual rattling coming from upper bed area. Mr. Bennett did try to assist us and we appreciate his efforts.

Also, we are writing in particular to compliment our sleeping car attendant, Dorothea [Henry], on our return trip on September 5 on Train #20. If we had not known that it was her first time out, we would not have realized it. Her service was excellent.

In addition, we would like to thank the dining car service staff. Desiree [Jones] and Mr. [Hecker] Arias served our meals on the trip to New Orleans. Since we try to make frequent trips to New Orleans, some of the crew remembers us. We were happy to see Alex and Victor in the dining car on our return trip to New York. The maitre de on both trips, Prince Johnson, was always pleasant and helpful. We enjoyed many of the new and different selections on the menu. Neither one of us can say no to the beautifully presented desserts.

The Crescent crew deserves to be commended for their efforts. Thank you very much.

Sincerely,
Ruth and David M.
New York, NY

AT Showcases Technology Advances

During the Technology Showcase held in Chicago Union Station, Senior Vice President of Operations William Crosbie (right) and Manager of Networking Steven Lynn (next to Crosbie) talk with Amtrak’s Citrix Administrator Arthur Reyes and Citrix Server Administrator Brad Jeffery (far right) at the Citrix booth. Citrix provides high-speed connectivity to all Amtrak applications, such as Outlook and the Amtrak Information Management System. The showcase, held Oct. 6, was sponsored by Amtrak Technologies and enabled attendees to see product demonstrations and speak with participating vendors such as Microsoft, Nextel and Corporate Express.

Leadership Training

continued from page 13

help make decisions in these varying situations,” added Nora. At each training class, attendees receive the Supervisor’s Tool Box, a CD-Rom that each Passenger Services supervisor may share with employees about how to make use of the Intranet and the resources available online. “I’m excited about this important tool that these employees can take

back with them,” said Stephanie Pavlakis, senior director, Employee Development. “The CD will help those that are perhaps not so Internet savvy — or those who just don’t have access to or know about Amtrak’s Intranet — to navigate the site and find information to do their jobs better and easier,” she added.

Departments Merge; Safety Initiative Strengthened

The Environmental and Public Health department was merged with the Safety department into a single entity — the Environmental Health and Safety (EHS) department — at the start of FY '05 to improve the coordination of these important and interrelated railroad functions.

The goals of the department in 2005 are straightforward: a safety goal of having no more than 3.3 injuries per 200,000 hours worked; an environmental goal of having no more than 1.2 potential violations per audit; and a public health goal of having inspection scores that are a minimum of 87-percent satisfactory.

The new organization is led by Roy Deitchman, vice president of EHS, reporting to Crosbie. Deitchman brings considerable occupational health and safety experience to this new position. He is a certified industrial hygienist and spent more than 20 years prior to coming to Amtrak five years ago working in the Bell System's safety organization.

As previous head of Amtrak's Environmental department, Deitchman continues to be responsible for Amtrak's environmental and public health standards, policies, procedures and training, including routine inspection of all cars — particularly food service cars — watering points and commissaries, as well as compliance with state and federal environmental standards.

The department's safety, environmental and public health functions are led by three individuals: Robert Noonan as safety superintendent, Craig Caldwell as environmental superintendent and Vic Zare as senior director for public health standards.

With Amtrak's safety program added to his overall responsibilities, Deitchman is committed to keeping the railroad's employees and passengers safe, with an emphasis on operating safety programs and procedures and major incident investigation. Noonan, who has worked as the department's safety superintendent since Oct. 1, is focused on

prevention. "With a renewed focus on preventing injuries, we will reduce both the number and severity of injuries at Amtrak," said Noonan.

A third-party evaluation to review and assess the Amtrak safety

program will take place over the next few months with special emphasis on the safety issues in the Engineering, Mechanical and Transportation departments.

"Injury rates are not just statistics," said Deitchman. "They

represent Amtrak employees who are hurt or become ill. Amtrak seeks to provide a safe work environment, and employees and their supervisors have the obligation to follow work practices, report deficient conditions and immediately notify the Amtrak Central Reporting group of accidents and injuries.

"Since my first day at Amtrak in 1999, I've been impressed with the use of job safety briefings at the start of every work shift, and the priority given to safe work practices," said Deitchman.

continued on page 10

Amtrak Public Health Senior Director Victor Zare inspects the plumbing compartment under the sink area in a Superliner Bedroom to assess compliance with public health standards. Public health initiatives remain a focus for the new Environmental Health and Safety (EHS) department.

Ridership and Revenue Results Mixed Despite Record Thanksgiving

First quarter FY '05 trends find Amtrak ridership performing close to the budget projection, but revenues falling short, based on a combination of two-month results and other analysis through mid-December.

Through November, ridership hit the budget target of 4.3 million passengers, but ticket revenue, at \$210 million, trailed the projection by \$12 million. Both of these trends were continuing in December, at *Amtrak Ink's* press time.

One bright spot occurred during Thanksgiving, when a record 615,000 passengers chose Amtrak during this holiday week. The

previous record was 590,000 passengers. However, ticket revenue of \$32.6 million, was down about 1 percent from last year.

Amtrak estimates ridership and ticket revenue for each month of the year and then monitors that revenue to gauge performance. Ticket revenue accounts for only a portion of Amtrak's total annual revenue. Other sources include commuter contracts, back shop work done for other railroads, state payments for services and the federal operating and capital grant.

Overall, the travel industry continues to feel the affect of sectors of the economy that are

underperforming, including the Northeast job market. Amtrak's ticket revenue is also being affected by aggressive underpricing airlines and the railroad's 71 percent system-wide on-time performance. These factors are being offset, in part, by high gasoline prices, which continue to divert some car trips to rail trips.

"In response to all these factors, Amtrak needs to stay focused on our strengths. Passengers choose us for convenience, comfort and because it is a relaxing way to travel in contrast with the chaotic environment of airports and airlines," said Barbara Richardson,

Vice President of Marketing and Sales. "Dropping our fares to the levels of the low cost carriers will cause great revenue loss. So, we need to take advantage of our growing markets and where appropriate implement minor fare adjustments. In the markets struggling because of airline prices, we need to emphasize the train experience and why Amtrak is a good value."

After the first of the year, two advertising campaigns will be launched for *Acela* and the entire system. Amtrak will again feature the artwork of Michael Schwab, and the advantages of train travel.

continued on page 5

TRAIN OF THOUGHT

Usually December is a quiet month when it comes to discussion of our budget and federal appropriation. But last month was an exception.

As you know by now, last month our FY '05 federal grant was passed by Congress and signed into law by the president. While on paper the appropriation is \$1.2 billion, it is really closer to \$1.1 billion with partial repayment of our DOT loan and other hold-backs, plus our revenue shortfall.

With a federal grant that falls short of what we requested, plus the additional adjustments we're making, it's going to be a difficult year.

This is a serious situation. As it stands now (I'm writing this just before the holidays), even with the deferral of a number of capital projects, the budget for FY '05 will leave us with almost no operating cash at year-end. Our budget does not afford us much wiggle room, particularly if we encounter unforeseen circumstances, which we invariably do.

Because things are going to be tight, this year we are also going to have to rely upon the Federal Railroad Administration to provide our grant payments in a reliable and steady way. We can't afford to have funding "speed bumps."

Also last month, I responded to a recent U.S. Department of Transportation Inspector General's report on Amtrak. The Inspector General is a kind of independent watchdog at the DOT, and has responsibility for everything from rooting out fraud to recommending changes to national transportation policy.

The report stated that there is a mismatch between the resources

made available to fund intercity passenger rail and the cost of running the entire system — on that we agree.

The report said that our board of directors should direct our management to develop a budget consistent with its likely appropriation to run the railroad and to do this without adding to the already significant list of capital deferments — on this point we disagree. If our federal support continues at \$1.2 billion under the present circumstances, then capital deferments are unavoidable.

In my letter to Inspector General Ken Mead, I wrote that the lack of a comprehensive national rail transportation policy impedes meaningful long-term passenger rail reform — not Amtrak's management or its board. Our board has consistently supported our Five-year Strategic Plan and approved our last budget (including a contingency budget, in case we didn't get the funding we requested).

The report went on to state that Amtrak must find ways to reduce its need for operating subsidies and set better priorities for its capital dollars. We have stabilized the deficit and our detailed capital plan is just that — it's a catalog of our plant and equipment priorities based on need. It is unfortunately easier to defer maintenance than to restore plant and equipment, but we simply can't defer this work any longer.

I am proud of the progress we've made over the last two and a half years. We had to take steps to reach a point at which we can talk about "what to do with Amtrak." We're

David L. Gunn

not the crazy aunt in the basement anymore. While we've got a lot of challenges ahead of us, we've made great strides and we should all be proud of what we've accomplished. While everyone's impatient to find "the solution," we couldn't have begun to discuss long-term implications for Amtrak 24 months ago. There are no easy answers.

The Inspector General has spent a lot of time and effort looking at Amtrak, and has insight that will be helpful in moving forward with defining the role of intercity passenger rail service as part of our national transportation system. As I told Mr. Mead, I hope that we can work together on that front in the months ahead.

Amtrak Negotiates Performance Incentive Program with Norfolk Southern

Amtrak and Norfolk Southern have entered into a groundbreaking contractual agreement that initiates an incentive program aimed at improving the on-time performance of Amtrak trains. In the past, each freight railroad operated under essentially the same incentive program. However, this has changed with the inception of Delay Avoidance Incentive (DAI) — the new program that is currently being tested with Norfolk

Southern on Amtrak's *Crescent*, *Piedmont* and *Carolinian* routes. By quickly pinpointing the sources of delays and by quantifying the benefits of reducing those delays, this innovative program establishes a clear relationship between Norfolk Southern's actions and incentive earnings. Amtrak and each of its host railroad partners periodically renew their contractual agreements that

contain sections on performance incentives and penalties that the railroad can earn or pay. "Until we instituted DAI in April 2004, the incentive programs were essentially the same across all host railroads. But after working with the railroads to improve Amtrak performance, we've concluded that a one-size-fits-all program isn't going to give us the best results,"

Welcome to 2005!

Dear Co-workers:

A fresh new year presents us with the opportunity to reflect on the past and plan for the future. We faced many challenges in the past year — floods, fires, hurricanes, washouts, earthquakes and national security and safety issues — all in addition to the normal operational issues we experience. The employees of the Southwest Division, and throughout the country, excelled time and again, providing excellent customer service in the most adverse of situations. We are extremely proud of our employees and the accomplishments made in 2004, and we look forward to continued growth and support for Amtrak and its employees in 2005.

Ridership and revenue were up on all routes in the division except the Sunset Limited and Coast Starlight, where we saw slight decreases in ridership, which were largely attributed to poor on-time performance and the consist reduction on each train. Employees working the Sunset Limited route have been amazing, as they could assume upon departure that there would most likely be major delays en route, and despite those obstacles they continued to deliver excellent customer service.

We experienced record annual ridership of over 2.3 million on the Pacific Surfliners and have already passed last year's record of 2.1 million, despite reduced equipment availability. The Rail 2 Rail program between Amtrak, Metrolink and Caltrans continues to account for nearly 50 percent of this increase in ridership. And we've added a frequency to the city of San Luis Obispo. The train operates with low-level Horizon cars refurbished at Beech Grove. The additional frequency provides more flexibility for our passengers and we are sure this train will be a success.

We have worked with the TEMPO marketing and revenue management team to enhance ridership and revenue on the Texas Eagle; group sales have shown a significant increase as a result of this affiliation. Ridership increased 9.5 percent and revenues rose 5.3 percent in FY '04 over FY '03. The TEMPO group, consisting of mayors and committed citizens from the cities in which the Texas Eagle operates, meets quarterly with Amtrak and community leaders to promote the service and develop strategies for continued funding and growth. In December, several of us were fortunate to be invited to the annual Festival of Lights Parade with over 20,000 people in attendance in Marshall, TX.

In Oklahoma, the Heartland Flyer continues to soar in customer service, getting high marks as measured by the CSI scores. Over the past five years, the Heartland Flyer has shown consistent, high-quality customer service, especially in on-time performance and train cleanliness. Revenue and ridership increased 19 percent and nearly 17 percent in FY '04 over FY '03, which is attributed to excellent customer service and the Heartland Flyer's Coalition's marketing strategies in building ridership. We were honored to have as one of our special guests at the recent PSSA luncheon in Los Angeles the deputy director of the Oklahoma DOT, Mr. Paul Adams. Upon returning from his train trip back home, Mr. Adams suffered a fatal heart attack. Amtrak is grateful for

all of Mr. Adams' contributions toward the creation of the Heartland Flyer — without Paul, there likely would not have been a Flyer.

Safety and security are at the forefront of our operation. Employees initially thought of the two-limit baggage policy as impossible to enforce, but we've encountered few problems with implementing this policy and attribute the success to the outreach efforts by many departments within the company and to front-line employees who deal face-to-face with the passengers.

The SWD is also proud of our involvement in Operation Lifesaver and Operation RedBlock. We have active programs throughout the division, and I am proud to say that Locomotive Engineer Bob Wilbur in Albuquerque is the state coordinator for the New Mexico OL program. He serves as a volunteer, and we know that delivering the OL message to "Look, Listen, and Live" saves lives and prevents the train crews from the stress of being involved in a trespassing or vehicle/train incident.

I am also extremely proud of our field environmental manager and the staff at the mechanical facilities. We received excellent scores from audits of our facilities in Fort Worth, TX, and Goleta, CA, and look forward to similar results in other locations. The Fort Worth mechanical team even built a waste storage container for San Diego, saving \$8,700 a month in contractor costs for toilet dumping. Our Environmental department continues to lead the company in recycling efforts of both hazardous and non-hazardous waste.

After successfully operating Metrolink for the last 12 years, our contract will end on June 30, 2005. SCRRRA disqualified Amtrak as a bidder for the Metrolink Commuter Operation for risk management liabilities that Amtrak could not accept. We are very proud of all of our employees' accomplishments on this service. We helped make Metrolink the success it is today, and we will leave it with pride and help transition the new operator, Connex.

As you can see, the division has been very busy. We are faced with similar challenges this year, and I am confident that our team is ready. Our focus is on working safely and efficiently, reducing costs where feasible and implementing new programs to enhance service and on-time performance.

I would like to express appreciation for the men and women, some of them Amtrak employees, who are serving our country in time of war. Amtrak's challenges may seem insurmountable at times, but thinking of their sacrifices puts everything in perspective. Work safely and value what's most important — your family and friends. Let's have a great new year.

Sincerely,

Richard Phelps

Richard Phelps

Security is Your Responsibility

All employees are required to take the *Railroad Security Awareness* course, which begins this month.

Learn about simple steps you can make part of your routine to safely protect the railroad, its employees and passengers from terrorist threats. Find out what to look out for, how to identify a potential danger and how to report it.

The training course is available via the Intranet, on CD and through scheduled classes. If you don't already know when and how you are taking the course, ask your supervisor or

call your local Employee Development office at the following numbers:

Incentive Program with Norfolk Southern

continued from page 2

stated Paul Vilter, Amtrak’s assistant vice president, Host Railroads.

DAI was created by Senior Director Host Railroad, Contract Administration Gary Reinoehl and Amtrak Law Senior Associate General Counsel Fred Ohly. Reinoehl and Ohly, along with Vilter and Gary Csop, senior officer Host Railroad Policy, worked closely with NS in implementing the DAI program.

“One key advantage of DAI over previous incentive programs is that it entices the railroad to concentrate on delays within its own control, and rewards the host for reducing every minute of these delays that it can,” explained Reinoehl. “Under DAI, each minute of delay avoidance rewards the host, so even if a train will not arrive on time, there is still an incentive to keep trying to minimize the minutes of delay.”

The Development of Delay Avoidance Incentive

In developing DAI, both parties first agreed upon a set of causes of Amtrak train delays that the host railroad can control. The causes of delay were determined to be interference from other trains (freight, passenger and commuter), slow orders, communication and signal failures, maintenance-of-way work and delays from routing and other dispatching decisions.

Next, a threshold for allowable delay minutes was set for each train. On the *Crescent*, for example, the threshold is 88 minutes. If NS causes less than 88 minutes of delay as the *Crescent* operates over its railroad between Alexandria, VA, and New Orleans, LA, Amtrak will pay the railroad a specified amount for every minute

that NS delays are under that 88 minute threshold. Conversely, if Norfolk Southern exceeds the threshold, a penalty is assessed for every minute above 88. If the railroad is responsible for exactly 88 minutes of delay, no penalties are paid or incentives earned.

Even with 88 minutes of NS delays, the *Crescent* can still arrive at its endpoint on time because there are more than 88 minutes of recovery time built into the *Crescent’s* schedule. Recovery time, which is a key element in all Amtrak schedules, is time built into each train’s published schedule to compensate for potential delays from all causes, including Amtrak and third-party problems encountered en route.

The History of Incentive Programs

To truly appreciate the value of this new concept, it is necessary to understand how incentive programs have evolved. The first incentive program, developed in 1974, was based on on-time performance. Amtrak counted the number of trains that operated on time over the host railroad, divided that number by the total number of Amtrak trains that operated over the host railroad, and came to an on-time percentage. If 65 percent of the trains or more operated on time, Amtrak paid an incentive to the railroad.

While 65 percent may seem like a very low expectation for on-time performance, the railroads were not given relief for any delays — regardless of the cause. If an Amtrak locomotive failed, if a hurricane struck, if paramedics removed a sick passenger from the train, the railroad’s on-time percentage was affected.

1980s Bring Key Changes
Understandably, the railroads were dissatisfied with being penalized for delays outside their control. So, in the early 1980s key changes were made (that still exist today) to the agreements with most of Amtrak’s host railroad partners. The host railroads were given relief for delays outside of their control, but in return, the threshold for earning incentives was increased from 65 percent on-time to 80 percent.

Here’s an example of how that relief works. For a freight railroad to be paid for meeting the 80-percent performance measurement, the train would have to arrive at its incentive checkpoint by 4 p.m. The train, however,

railroad now looks at the root causes of its own delays and how to avoid them,” said Reinoehl. “An Amtrak locomotive failure, grade-crossing incident or other cause of delay that is outside of NS control does not enter into the DAI program calculation.”

“DAI also lends itself to good use of Amtrak management tracking tools,” stated Gary Csop. Csop is referring to Amtrak’s Conductor Delay Report, which Amtrak conductors complete during their trips to pinpoint the locations, causes and responsibilities for delays. These reports are inputted into a database at Amtrak’s Consolidated National Operations Center in Wilmington and used to prepare a

“ ... to improve Amtrak performance, we’ve concluded that a one-size-fits-all program isn’t going to give us the best results.”

Paul Vilter
Assistant Vice President, Host Railroads

arrives at 4:55 p.m. Along the route, there was a 30-minute delay for an Amtrak locomotive failure, a 15-minute weather-related delay, and a 15-minute delay for a heavy passenger load boarding at a station. After subtracting the 60 delay minutes that were caused by external sources, the host railroad would have met its obligation of enabling the train to arrive before 4 p.m. and therefore would receive credit for an on-time train.

Other changes to the original incentive program were also instituted in the 1980s. A significant addition was penalty charges for trains with on-time performance below 70 percent in any given month. On-time performance measures (which were previously calculated as a percentage of all trains) were changed to measure the performance of each train individually. Also, checkpoints at intermediate locations along the route were added. If the train was late at certain midpoints, but arrived at its destination on time, the railroad lost incentives or incurred a penalty on the midpoint delays.

A New Generation

Compared to on-time-performance-based incentive systems, DAI significantly changes the task that Amtrak rewards the host railroad for accomplishing.

“With the start of the Delay Avoidance Incentive program, the freight

monthly DAI statement, which Amtrak sends to NS each month. “The incentive statement is not only a bill, but also works as a diagnostic tool,” added Csop. The statement sorts the host railroad’s delays by train, by day and by delay category. “If a host railroad manager sees that he is repeatedly paying penalties because delays to an Amtrak train are exceeding the thresholds due to slow orders over a route, the manager will begin to look at ways to reduce slow orders, eliminate the penalties and — eventually — earn an incentive.”

Although the employees in Vilter’s group believe the program has great potential and are working to refine and implement it with other host railroad partners, they also recognize that with heavily congested host railroad lines, performance incentives alone are not enough to improve train performance.

“There needs to be more investment in the rail network either to add capacity to lines where freight traffic is exceeding the lines’ fluid capacity, or more investment in lesser-used lines to enable them to be overflow routes now or in the future,” stated Vilter. “We’re working on that next.”

The DAI program is expected to become effective for all Amtrak trains on NS early next year.

The Host Railroad Group meets at Washington Union Station before negotiating with Norfolk Southern about expanding the DAI program. (Seated, L. to R., s) Manager Contract Administration Marie Koerner; Senior Director Host Railroad, Contract Administration Gary Reinoehl; and Senior Officer Host Railroad Policy Gary Csop. Assistant Director Contract Operations Al Walton, Assistant Vice President Host Railroads Paul Vilter, Director Contract Management Rich Simonen and Law department’s Senior Associate General Counsel Fred Ohly.

Passenger Trains on Freight Railroads

The following excerpts are from a speech given by Norfolk Southern Chairman and Chief Executive Officer David R. Goode at a railroad conference in Washington, D.C. about the relationship between freight and passenger railroads.

... It has been said that politics makes for strange bedfellows. Uncommon people work together for common causes. In the process, adversaries become allies.

The same is true in transportation and commerce. Competition spurs cooperation for mutual benefits. ... Yet as all of us who deal with challenges of service and capacity and how to find investment dollars for transportation systems not noted for producing high investor returns know, times change.

Just as unexpected, some might say, is the freight rail industry’s attitude shift on passenger rail. It is real, however. It makes business sense, and it can work mutually for freight and passenger rail under the right circumstances. ...

Times and circumstances have changed. Greater awareness of each other’s operations is leading to better understanding of our mutual challenges and conflicts.

Some on-the-job sensitivity training, if you will, has made us more aware of the public benefits of working together. Instead of “Just say no,” we start with “Yes, if ...”

So why has this change in thinking occurred? The past decade tells the story. If we look back to the mid-’90s, Norfolk Southern was involved very little in passenger operations. The Amtrak *Crescent* operated on our lines, as well as a few trains in North Carolina. We

had the Virginia Railway Express and some Chicago commuter rail activity. That was about it. That changed quickly with Conrail in 1999. All of a sudden— overnight — we found ourselves in the middle of a host of passenger operations as the new rail tenant in the Northeast. In addition to the Northeast Corridor between Washington and New York, we became partners with New Jersey Transit, Metro-North west of New York City, and SEPTA in Philadelphia. About the same time, Congress made a big chunk of money available for passenger studies. At a time when freight railroads were having increasing difficulty meeting capital investment requirements, public infrastructure funding was being tied more and more to passenger programs. With amazing speed, some 150 study projects were generated for passenger rail in metro areas. More than 40 of these studies involved Norfolk Southern-served cities. Passenger rail’s double barrels were pointed right at us. We suddenly were knee-deep not just in passenger operations, but all this study activity indicated even more involvement for us in the future. ...

It was clear we had to set a new tone in our relationships with passenger and commuter rail. In years past, we generally had a quick and simple answer for passenger rail proposals. If pushed, we would just modify the word “no.”

From the other side, we perceived an entitlement attitude on the part of passenger entities and planners. The presumption

seemed to be that the public took priority over rail freight activity, with no concerns for growth or return for value.

In trying to learn from that history, we realized that to bring about a needed paradigm shift in how we do business, the nature of our relationships had to change. First comes communication. To move forward, both sides must have a win-win scenario so that both can leave the playing field and declare victory.

It began with a recognition that freight and passenger rails have lived in different worlds for the past three decades. We needed to understand each other’s experiences, fears, expectations and pressures. That sounds a lot like the process of becoming friends. ...

At Norfolk Southern, our first step was to stop saying no. Instead, we started saying yes — with conditions.

Next, we laid out four basic principles:

- 1. No reduction in freight capacity;
- 2. Fair value for use of our assets;
- 3. Full liability protection; and
- 4. No subsidy of passenger operations.

Moreover — and this is key — we opened discussions with the mutual understanding that in order to achieve a successful transaction, everyone had to win. ...

In managing expectations, both parties deal with internal and external audiences. All those audiences have perceptions of

what a winning outcome is, which makes managing expectations one of the most difficult parts of the process. ...

Throughout the process, it is important to remember that every transaction is different in terms of people, politics and economics. There is no cookie-cutter formula for success. That means all of us have to be creative and flexible in negotiating each deal. ...

From my perspective, I am fully convinced that freight and passenger rail can co-exist under the right circumstances. Not only that, but in the interest of building on the strength of our country’s rail transportation infrastructure, we should pursue such opportunities vigorously and cooperatively when they make business sense and serve the public’s interest. We should of course never forget that the public interest requires fluid and available freight service to protect jobs and the economy.

With the right attitude, however, and by committing to working together and making things happen, we will find win-win solutions for both the public and private sectors.

While we are both on the policy map, neither freight nor passenger rail is so strong that it doesn’t make sense to band together to increase our influence. In the spirit of mutual self-interest, I am optimistic about our ability to work together.

These excerpts are reprinted with permission from Norfolk Southern Corp.

Ridership and Revenue Results Mixed

continued from page 1

To further boost *Acela* ridership, the campaign will feature the popular Amtrak Guest Rewards offer for *Acela Express* passengers (“Buy 2, Get 1”), which will kick off this month, 30 days earlier than planned. To encourage *Regional* riders who diverted from *Acela* service to return, the fare difference between the two will be reduced by inching up *Regional* fares. And a special promotion will be sent to former *Acela* riders inviting them to “step back up” to the higher priced service.

Additional promotional ideas are also being looked at for our weak travel periods. As programs are finalized they will be reported in the *Employee Advisory*.

Research, including customer focus groups, is also continuing to examine passenger travel habits

and attitudes to better understand how to attract stronger long-term ridership and revenue growth.

If ticket revenue trends continue to fall short through the fiscal year that ends next September, it could have an adverse impact on Amtrak’s exceptionally tight

budget. However, it is not possible to draw conclusions from a single quarter of results, as economic conditions and other factors change regularly throughout the year. Amtrak will continue to closely monitor these trends and take measures to maximize its revenue.

Ridership and Ticket Revenue for November 2004			
Month of November	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	2,076,054	2,145,043	2,157,303
Ticket Revenue	\$107,097,954	\$112,663,836	\$106,787,792
Fiscal Year-to-date	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	4,197,524	4,268,124	4,271,409
Ticket Revenue	\$214,577,447	\$222,136,967	\$210,096,374

North Carolina: Advancing Passenger Rail Service

For three decades, Amtrak and the North Carolina Department of Transportation have worked together to improve the state’s passenger rail system. Promoting transportation and economic development for its 8.5 million residents, North Carolina stands out as a leader among other states in its commitment to making passenger rail a full partner in the mix of transportation options.

Armed with a detailed plan for passenger rail, North Carolina has invested almost \$200 million in rail-related projects over the past ten years. These projects include infrastructure development, right-of-way and equipment acquisition and station improvements.

The primary passenger rail corridor in North Carolina runs through its three most populous regions including the major cities of Charlotte, Greensboro and Raleigh. Amtrak’s *Carolinian* and the state-owned *Piedmont* both serve the Raleigh to Charlotte corridor and are state-supported services. Plans to improve the state-owned Raleigh to Charlotte corridor make it one of the most promising nationwide.

Amtrak Trains Serving North Carolina

The *Carolinian* travels daily between Charlotte and New York City, with stops in Raleigh, Richmond, Washington, D.C., and Philadelphia and has long been one of Amtrak’s most successful state-supported services and carried over 300,000 riders in FY ’04.

This past fall, the service experienced major improvements. As a result of Amtrak’s ceasing mail and express operations in the fall, the travel time between Charlotte and New York was cut by over 30 minutes in each direction. In addition, Amtrak and NCDOT partnered to re-equip the train with 70-seat Capstone coaches — recently refurbished Amfleet I cars — and added another coach to increase capacity.

The *Piedmont*, which operates with state-owned equipment, makes daily trips between Raleigh and Charlotte. After nearly ten years of service, the *Piedmont* equipment is showing its age. In response, NCDOT is currently renovating the five Heritage-style coaches and two lounge cars currently in service. In addition, a new combination coach/baggage car will be rebuilt to accommodate checked service. The first refurbished cars are expected to be in service in mid-2005. The state is

also planning to add third daily roundtrip between Raleigh and Charlotte in the near future. In addition to these two trains, four other long-distance trains — the *Silver Star*, *Silver Meteor*, *Palmetto* and *Crescent* — serve the state.

The Elm Interlocking in Greensboro was reconstructed to once again accommodate passenger trains at the historic Greensboro station. New crossovers were installed to enable trains to switch tracks at higher speeds.

Amtrak’s State-supported Trains

State-supported trains, like the *Carolinian* and the *Piedmont*, make up about half of all Amtrak trains and are operated in 13 states. In FY ’04 these states paid Amtrak more than \$135 million to operate these trains, from which Amtrak received an additional \$155 million in passenger ticket revenue. In FY ’04

crews to maintenance of equipment to marketing and promotions. Amtrak also works with the host railroad in the state that provides dispatching, signals and communications and maintenance-of-way services.

Amtrak’s Strategic Planning and Contract Administration department, led by Vice President Gil Mallery, works with state-supported passenger rail service around the country and is also responsible for the evaluation of current rail corridors. Working with its state partners, Amtrak unveiled an analysis of potential corridor development in a

The two North Carolina-supported passenger trains, *Piedmont* (left) and *Carolinian* (right), pass each other at High Point.

North Carolina paid Amtrak \$2.7 million to support the *Carolinian* and *Piedmont* services and those services generated nearly \$16.5 million in ticket revenue. For state-supported trains, Amtrak generally provides a number of services, ranging from operating

number of regions throughout the country. The study was included in the FY ’04 Strategic Five-year plan released last summer. North Carolina’s Raleigh-to-Charlotte corridor is one of eight that Amtrak has classified as Tier I; those

that are best positioned for potential federal funding and development. Tier I corridors meet a set of criteria that includes full support of state and local officials and the freight railroads, as well as detailed capital expense and operating plans. “Amtrak values its relationships with its state partners,” said Gil Mallery, vice president of Strategic Planning and Contract Administration. “With their financial support and our operational know-how, passenger rail helps spur economic development and meets the mobility needs of millions of people across the country,” added Mallery.

Improving Current Conditions

One of North Carolina’s greatest assets is the state-owned North Carolina Railroad, a 317-mile corridor that extends from Charlotte to the deep-water port of Morehead City. The NCCR operates as a state-owned entity with an independent board of directors and staff. The Norfolk Southern Railroad maintains and dispatches the NCCR. “What you see in North Carolina is rare — a state that owns its own railroad that is maintained by another railroad. But thanks to the partnership with Norfolk Southern and Amtrak, the state is making incremental changes that are yielding real and measurable improvements,” said Amtrak President David Gunn during a recent visit to North Carolina.

Working with NCCR, Norfolk Southern and Amtrak, NCDOT recently completed more than \$25 million in track and signal improvements to upgrade the Raleigh to Greensboro segment of the corridor. These improvements constitute Phase I of a multi-phase plan to enhance safety, efficiency and capacity for freight and passenger trains. “Already we’ve reduced travel time by 30 minutes, making the train an even more attractive travel option,” said North Carolina Deputy Transportation Secretary David King.

The track and signal improvements include lengthening three passing sidings, upgrading of two rail interchanges, banking some portions of track and installing a new centralized traffic control system. Phase II of the corridor improvement project will focus on the Greensboro to Charlotte segment, and includes new double track, curve elevation and faster turnouts. Work on phase II

will begin in 2005 and should be completed in two to three years.

The NCDOT is also working with communities across the state to improve safety at grade crossings by consolidating and closing crossings where possible, and installing conventional and enhanced traffic control devices at all remaining crossings.

The NCDOT Rail Division’s Engineering and Safety branch last month reached a milestone. Working with the Federal Railroad Administration, in late December the branch closed its one hundredth crossing since the effort began in 1993. Of these 100 closures, 40 crossed the Raleigh-to-Charlotte corridor.

Station Improvement Program

The NCDOT has undertaken an ambitious plan to restore or build new stations at every passenger stop, including developing multi-modal centers where practical. Millions of dollars in federal, state and local funds have been invested in the station program.

The renovated 1927 Greensboro Depot now serves as a transportation hub combining local and regional transit services, buses and taxi service. Passenger train service will return to the station in summer 2005 once all track work is completed and new tunnels and platforms are built.

Station restorations have been completed in Burlington, Greensboro, Hamlet, High Point, Rocky Mount, Salisbury, Selma, Southern Pines and Wilson. Construction of a new Kannapolis station was completed last month. Additionally, the department has purchased 27 acres of land in uptown Charlotte and is planning to build a world-class multi-modal station that will house intercity rail, commuter rail, and high-speed rail service, as well as local transit and taxi services.

Whether renovating historic stations or building new ones, North Carolina creates facilities that not only meet vital transportation needs, but also serve other community uses. The dual-purpose facilities promote train travel to various audiences and help establish the station as a central part of the community.

“We’ve found that every dollar invested in a station nearly doubles its return on investment with transportation and economic benefits. In many areas, station restorations have served as a catalyst for other nearby building renovations or development,” said NCDOT Assistant Director for Operations Allan Paul.

Planning For The Future

While running current operations, the NCDOT Rail Division continues to plan for the future, envisioning additional frequencies of state-sponsored passenger trains.

In addition to facilitating the buyout of the NCRR, NCDOT has purchased nearly 100 miles of railroad right of way in the hopes of restoring it to service. With encouragement and support from communities across the state, the Rail Division one day hopes to extend passenger service to Asheville as well as Wilmington and southeastern North Carolina.

The Big Picture

North Carolina has become a leader in advancing passenger rail service throughout the Southeast. The Charlotte-Raleigh corridor is part of the larger Washington to Charlotte corridor, linking the Southeast with the Northeast Corridor.

Partnering with the Commonwealth of Virginia, North Carolina is advancing plans to restore service to the abandoned route between Raleigh and Petersburg in the next several years. The former Seaboard Air Line mainline (known as the S Line), is more direct than the current routing via Selma, Wilson and Rocky Mount and will reduce travel time and provide more capacity to the overall Southeast rail network.

Not all trains will utilize the new route, keeping service along the existing corridor, including Selma and Wilson and Rocky Mount.

“We know that passenger rail service is a critical component of our transportation infrastructure and our economy, and we’re very optimistic about its future,” said NCDOT Rail Director Patrick Simmons.

The following are highlights of North Carolina’s station restoration program:

Burlington

In July 2003, the NCRR renovated its historic 1868 engine house, investing \$3 million to transform it into a passenger train station with additional leaseable office space. A North Carolina Railroad history museum recently opened in the building’s center atrium, showcasing artifacts and photographs of the 150-year-old railroad.

Greensboro

The largest station in the state, the 1927 Greensboro Depot has become the crown jewel of North Carolina stations. Phase 1 of the restoration began in 2001 and included the complete renovation of the station and nearby REA building. Nearby tracks have been realigned to once again accommodate passenger train stops along this busy section of railroad. Completed in August 2003, the depot now serves as a multi-modal center for the state’s third largest city. One of the two original first floor waiting rooms is used for civic and social functions, while the other will be used for Amtrak passengers. Phase 2 includes construction of pedestrian and baggage tunnels and a new platform. Track, tunnel and platform work should be completed in summer 2005, at which time Amtrak passengers will transfer back to the new Greensboro Depot from its current location. Total project cost is \$30 million.

High Point

Built in 1907 by the Southern Railway, High Point’s station is located at street level with the tracks and platform situated 30 feet below in an open cut. Renovation of the historic building began in fall 2001 and was completed late last year. The \$6.8 million restoration was paid for through a combination of federal, state and local funds.

Kannapolis

The newly completed 6,800 square-foot building provides an expanded and improved Amtrak passenger waiting room. The remaining space will be leased or used by the city. The new station is in the heart of downtown, across from the Dale Earnhardt memorial. State and local funds paid for the \$2.7 million project.

Raleigh

Southern Railway built the Raleigh Amtrak station in 1950, but service was discontinued at the station 14 years later. Passenger train service resumed in 1984 and the station was renovated in 2000. Since Raleigh is one of the busiest stations in North Carolina and in the South, Amtrak spent more than \$580,000 to expand the waiting room space and to add a First class passenger lounge and additional parking. State funds are programmed to add long-term parking.

Salisbury

The 1908 mission-style station represents the importance of Salisbury’s location on the railroad, located halfway between Washington and Atlanta and at the eastern terminus of the railroad to Asheville and Tennessee. The Historic Salisbury Foundation acquired the station in 1984, saving it from demolition, and then raised more than \$3 million in private donations to restore the station. The NCDOT contributed an additional \$1 million in Federal Enhancement funds to finish the restoration of the main building.

Charlotte

Since the current Amtrak station is located in Norfolk Southern’s freight yard two miles from the center of the Queen City, the state has been working tirelessly for the past several years on plans for a new multi-modal center. The NCDOT has purchased property for the center, investing nearly \$30 million in state funds to date. Development of the new Charlotte multi-modal station and related track improvements is estimated to cost between \$110-207 million, and construction is planned to begin in the next several years.

Southern Pines

The renovated Southern Pines station, originally built in 1899 by the Raleigh and Augusta Railroad, was re-opened to passengers in mid-December after an \$800,000 restoration. Located in the heart of downtown, half of the depot will continue to serve Amtrak passengers and the town will lease the remaining space for retail or office use. The restoration project was paid for with state funds. A grand opening will be held in early 2005.

MP-15 Switchers Undergo First Overhaul in 20 Years

Mechanics at the Wilmington maintenance facility have reached the midpoint of the MP-15 overhaul program, with the completion of their sixth locomotive in December 2004. At a cost of \$700,000 per switch engine, the overhaul extends the life of the equipment — which have not been overhauled since the 1980s — by nearly 20 years.

Every two months since this program began in February 2004, an overhauled MP-15 switch engine rolls out of the Wilmington backshop. The production schedule keeps mechanics on track to accomplish the goal of completing ten locomotives by the end of this fiscal year.

The first stage of an MP-15 overhaul takes about a week to complete and involves removing all the main components, such as the engine and the auxiliary generator/blower, which powers all the locomotive’s accessories and cools the traction motor. The main generator, which powers the traction motors and the air compressor that is used for braking, is also removed.

After these components are removed, machinists take the main frame of the locomotive from its trucks and attach it to a set of shop trucks to prepare it for sand blasting and painting. Once placed on the shop trucks, Gang 06 of the Diesel Shop, which includes machinists, pipe fitters, electricians, boilermakers and carpenters, begin the arduous task of repairing years of neglect.

Meanwhile, the carpenters rebuild the cab’s interior by installing new

flooring, new seats and window glazing. Boilermakers repair all the extensive weather-related water damage typically found in the cab interior, caused by leaking windows and poor weather stripping on the doors, and also found on the exterior due to rain water that seeps into the running boards. The electricians repair all of the wiring and update all of the electrical and electronic components. Pipe fitters renew and repair all of the major cooling and oil piping going to and from the main engine. They also re-pipe the air-driven windshield wipers and the air brake system.

Next, the locomotive trucks are sent to the rebuilding area where they are stripped of the old outdated air brake and suspension systems and rebuilt.

“Getting these locomotives overhauled is one of our main priorities,” said Superintendent John J. Wood. “Because of the outstanding cooperation and commitment of Wilmington Locomotive Shop mechanics and foremen, we’re on track to achieving our goal and improving the efficiency and reliability of Amtrak’s diesel locomotive fleet.”

After the repair and overhaul work is complete and the locomotive is painted, the refurbished MP-15 returns to service, primarily in the Northeast Corridor, for use in moving Amtrak rolling stock in the yards and to the stations.

Built in the 1970s, MP-15 Switcher 537 sits in Wilmington after undergoing an overhaul in early summer.

New Water Jet Machine Cuts Through Steel in Minutes

Beech Grove recently acquired a Calypso WaterJet HammerHead™ cutting system capable of quickly and efficiently cutting intricate designs on virtually any solid material up to six inches thick.

Installed in November, the heavy-duty machine is being used in Beech Grove’s remanufacture program to cut walls, flooring,

system is, once the design is done, it can be saved and used over and over again,” explained Lead Sheet Metal Technician Mike Milburn.

Once the design is loaded, the craftsperson places the material to be cut on a specialized 10-foot by 5-foot table. The water, which is pressurized to 60,000 pounds per square inch, is forced through a

Sheet Metal Worker Bill Railey operates the Calypso handheld remote control to adjust the height of the WaterJet nozzle as it cuts out the design of a Superliner ceiling.

ceilings and other heavy materials. In 90 seconds, the WaterJet can cut out a design for a Superliner bedroom wall that would normally take a craftsperson 90 minutes to accomplish.

To perform this task without the WaterJet, the sheet metal worker would first need to shear the metal to the proper size, scribe the design onto the material, use a saber saw to cut out the design, then sand or file the piece to remove the jagged edges. The new tool eliminates the manual layout, cutting and sanding process.

The \$136,000 machine is driven by a Computer Aided Design (CAD) software program, which operates in conjunction with the WaterJet computer system. Before cutting the material, Boilermaker Technician Dave Thompson draws the design in an Auto-CAD program to be accessed through the computer. “The beauty of the

small diamond-tip opening at the head of the nozzle. A course substance is added to the water to create an abrasive stream to facilitate the cutting.

Without touching the material, the nozzle moves across the table and the water and grit mixture shoots out of the nozzle at about one and a half times the speed of sound and cuts the programmed design. “When the cut is complete, all we have to do is rinse off the sandy residue and the install the piece in the car,” added Milburn.

Training is provided by the manufacturer and has been made available so that all crafts can utilize and operate the WaterJet.

Amtrak's "Julie" Scores Highest in Industry Survey

Amtrak's "Julie," the railroad's voice response system, scored highest in a survey recently conducted by *Speech Technology Magazine*. The survey on voice response systems in the transportation industry was completed by the magazine's readers and reported in the November/December 2004 issue.

Launched by the Marketing and Sales department's Customer Relationships and Revenue team in 2001, Julie has received numerous recognitions and awards, including the Odyssey Award from the Travel Industry Association of America, "Best Practices" awards by Speechworks and recognition from *The Wall Street Journal*, *The New York Times* and MIT's *Technology Review*.

Vince Zagorski, Amtrak's director of Call Center Telephony, and his four-person team are responsible for one of the most sophisticated reservations applications in the industry.

"Julie has set the standard for speech systems," said Zagorski. "And this recognition is another tribute to the efforts made by the many people who have worked hard to make it such a success. But as good as Julie is, there is still more

that needs to be done and we will continue to make improvements."

The survey rated the system according to five categories, navigation, content, usability, interactivity and credibility using the Sterling Audits Usability Index, a standard methodology for rating both Web sites and Voice Response Systems. Amtrak scored highest in four out of the five categories, confirming that Amtrak has a superior system.

Navigation

Using the system's persona, Julie, the system interacts with the caller using dialogue and automatic speech recognition. The dialogue includes a mix of standard and custom vocabularies, including city pairs and states and credit card transactional information. The Amtrak system was deemed among the best, and many other systems were found in need of redesign. Amtrak's score in the navigation category was 16.43 out of 20, while the median score was 12.28.

Content

The readers surveyed noted that the functions most commonly used, such as obtaining a schedule, booking a reservation and paying by credit card are fully automated. Additionally, they found that the

level of available information was detailed and complete and required no need for an explanation of words and their meanings. Amtrak's content score was 16.67 out of 20, while the median score was 13.08.

Usability

The report indicates that readers liked the fact that the system does not use "shoptalk," which hinders usability, and callers are able to override prompts so they are not forced to listen to information they don't need. Responders found the system designers were also smart enough to leave touch-tone compatibility for proficient users, who typically use this feature to speed through the process.

This is the only category where Amtrak received a lower score than the median. Other transportation companies scored higher than Amtrak in this category, but Amtrak's total score outpaced them. Amtrak rated a 13.75 on a scale of 20, while the median score was 14.65.

Interactivity

Amtrak's voice response system scored high in this area and responders noted that the system takes virtually every task to a

successful conclusion. It handles mistakes well, using a vigorous error recovery routine. Also, system response time on most entries was fairly quick — between one to two seconds. The system scored 14.07 out of 20 in this category, while the median score was 10.57.

Credibility

Most respondents characterized Amtrak's Julie as a "friendly-sounding machine," without being too forced. Julie uses "okay" and "got it" to indicate a successful communication. She also says: "Great, I'll be able to help you..." and "Let's get started." The confirming phrase: "I think you asked for... is that correct?" is used appropriately as well. Amtrak scored higher in credibility than any other category — a 17.93 out of 20, while the median score was 16.39.

Julie handled over 5 million calls in FY '04 (averaging 14,000 per day), which is approximately 25 percent of all calls made to 1-800-USA-RAIL. Julie also booked over \$74 million in revenue and processed 245,000 credit card transactions.

Engineering Employees Recognized for Excellence

Chief Engineer David Hughes presented the FY '04 Engineering Excellence Awards to those on-corridor and off-corridor Engineering divisions that achieved the greatest improvement in year-over-year performance and met FY '04 goals. Scores were given in the categories of safety, financial, customer service and absenteeism. The recipients were honored mid-December at an event in Newark, NJ.

For the second year in a row, the On-corridor Engineering Excellence Award went to the New York Division, which had the highest overall improvement for FY '04 over FY '03 and best FY '04 goal achievement in all three categories. Competing for the on-corridor awards were the New England Engineering Division, the Mid-Atlantic Engineering Division and the New York Engineering Division.

While the New England Engineering Division took the highest scores in the safety, customer service and absenteeism categories, New York's Engineering Division

had a huge lead in the financials, which resulted in their having the highest overall score.

The West Engineering Division was awarded the FY '04 Off-corridor Excellence Award, which represented improvement year-over-year and against FY '04 goals in three categories: safety, financials and absenteeism. Competing for the Off-corridor Division Engineering Excellence award were the Central Engineering Division and the West Engineering Division. The Central Division took the lead in financials — however, the West scored higher than the Central Division in both safety (24.1) and absenteeism (2.8).

The department's Partnership Award, which recognizes the coordination between departments necessary to carry out infrastructure improvements, was presented to the Transportation Division that managed the most 55-hour-plus track outages in FY '04. The Mid-Atlantic Transportation Division won this award, with 380 55-hour-

plus track outages associated with work performed using the Track-laying System (TLS), undercutter, Rail Change-out Machine (RCO) and bridge work gangs.

Also recognized at this year's awards event was the FY '04 "Corps of Near Engineers."

Inducted into the ranks were Walter Ernst, retired general superintendent New York Division in the category of Lifetime Achievement; Mike Rienzi, vice president of Procurement as Colonel; Bill Auve, assistant comptroller Finance department as Captain; and Bill Albritton, a contractor instructor for

Amtrak as Captain. These individuals are selected for their contributions to the overall effectiveness and improvement of Amtrak's Engineering department.

Division Engineer Steve Falkenstein (center) and Deputy Chief Engineer Bruce Willbrant (left) display the FY '04 Engineering Excellence Awards plaques presented to the New York Engineering Division by Chief Engineer David Hughes (right). The division was recognized for best on-corridor safety performance and for greatest performance improvement year-over-year and meeting FY '04 goals at a ceremony in Newark, NJ, in December.

Train Whistles, Romance and Wedding Bells

Every now and then, we learn about chance encounters on a train that lead to love and marriage.

“People sigh over the romance of the train,” says Sarah Ulis, customer relations advisor. “We see it in all the old movies, and some of the new ones, too, to say nothing of *“North by Northwest.”* But from the letters we receive, it’s clear that our customers are extolling romance on the train.”

The letters Amtrak receives from passengers about these matches tell stories about two passengers who started talking, and before they knew it, were making plans to meet again. And there is always a big thank you for Amtrak’s role in introducing them.

Alison Tolpin and Lyles McCormick wrote, “On Oct. 16, I will be married to the man I met en route from Boston to New York on an *Acela* ... It wasn’t until the end of the ride that the handsome gentleman across the aisle struck up conversation with me. Why recount this story to you? My fiancé and I are both so thankful that Amtrak facilitated our meeting ... we wanted a few of you to know that there are at least two people who sincerely appreciate

Amtrak every time we board the *Acela* to return home to our friends and family.”

“Romance is alive and well on the Amtrak *Acela* train,” Valerie J. Thompson and D. Duke Santos wrote. “ ... I met my fiancé on the train in November 2001. If it weren’t for Amtrak, we probably never would have met.”

Romance on the train came unexpectedly to widowers Mark Miller and Judy Greenberg who met while traveling on the train from Philadelphia to Florida. As they sat together on the ride south, “Something magical had happened in those traveled hours. There was a spark,” wrote Miller’s daughter, Andrea Miller Blum. She added, “I don’t know how many letters you get about this or even if you still consider the train a place where romance begins and marriages are proposed, but it happened to my father and Judy.”

Couples not only meet on the train, some take advantage of the romance of train travel and celebrate their marriage aboard the train. Linda Kirkdorffer wrote with pride about her son and his bride’s wedding reception at the Norman, OK, station and their

Frank Schneider and Paula Pantunes of Pennsylvania met aboard an Amtrak train, so it seemed appropriate to Frank to ask for her hand in marriage aboard Amtrak. Last April, Frank orchestrated his proposal with the help on the on-board crew of Regional train 183. The couple is currently making plans for the October wedding, which may include an Amtrak theme — invitations that resemble boarding passes and model trains on the tables. While the honeymoon plans are still being formed, they are likely to involve travel on Amtrak.

subsequent trip aboard Amtrak to Oklahoma City.

“Perhaps we should start marketing ourselves to singles, because trains have a special caché that a plane or bus couldn’t hope

to match,” added Ulis. “Not only is Amtrak providing people transportation, we are taking them down the road to happiness.”

Departments Merge; Safety Initiative Strengthened

continued from page 1

Key FY '05 Environmental Health and Safety Goals and Objectives

FRA Reportable Injuries:

Maximum of 3.3 per 200,000 Hours Worked

Environmental Audits:

Maximum of 1.2 Potential Violations per Audit

Public Health Inspections:

Minimum of 87 Percent Satisfactory

Noonan is trained in chemistry and has a long railroad work history in safety, environmental and public health issues including chemical product selection, safe work practices and exposure to toxic materials. His plans for FY '05 include working closely with management and craft personnel to evaluate safe work

practices and to integrate safety into every employee’s day-to-day work efforts. “Safety is not something extra. It is the way we do every job, every day,” said Noonan.

Noonan plans to develop short and concise safety lessons for daily safety briefings and recommends that Amtrak employees inform their immediate supervisor whenever they have safety concerns or observe potential workplace hazards to employees or passengers. Additionally, employees can also report their concerns on Amtrak’s Intranet by clicking on the Safety tab, and then “How to Report Safety Concerns.” This site is monitored by the EHS department, which responds to employees via e-mail. Employees may also call 215-349-2039 (ATS 728-2039) to report any concerns by telephone.

Holiday Shoppers

After arriving in Oakland on the *San Joaquin* Holiday Shopper Train, passengers board the Thruway bus to the San Francisco Union Square shopping areas. Amtrak partnered with the California Department of Transportation and the Capitol Corridor Joint Powers Authority to promote rail travel and offer passengers a relaxing, enjoyable, festive alternative to driving to shopping venues. The Holiday Shopper promotion began in 2003 with the *Capitol Corridor* service and was expanded in 2004 to include the *Pacific Surfliner* and the *San Joaquin* routes. Holiday Shopper participants received a gift bag that included an Amtrak California free companion coupon along with promotional items from various sponsors.

Amtrak Guest Rewards Members Earn Points for New Nextel Service

Amtrak Guest Rewards® has teamed up with Nextel to offer AGR points to its members who sign up for new cellular phone service. AGR will offer its members up to 7,000 points for each phone purchased and activated with a two-year agreement. Members taking advantage of this offer can enjoy Direct Connect®, Nextel’s coast-to-coast walkie-talkie feature that instantly connects Nextel users with the push of a button.

Capital Corridor Passengers Enjoy Heavenly Ski Packages

Amtrak and Heavenly Ski Resort have partnered to offer passengers the opportunity to purchase a ski package to the South Lake Tahoe, CA, resort. Packages starting at \$266 provide passengers with rail travel aboard Amtrak’s *Capital Corridor* to Sacramento and connecting Thruway service from Sacramento to South Lake Tahoe. The all-inclusive package also includes lift tickets and hotel stay for three days and two nights.

The offer is valid from Nov. 28, 2004 through Dec. 16, 2004, and from Jan. 2, 2005 through April 23, 2005.

Rail Cruise Program Reaches \$1 Million in Sales

Each year since Amtrak’s popular Rail Cruise Program was started in June 2002, revenue has climbed. By building partnerships with several top cruise lines, the Rail Cruise program’s sales exceeded one million dollars from the program’s inception through October 2004. “Since most of the cruise lines have ports on the East and West coasts as well as in the Gulf area, rail travel to these ports is a very viable alternative to air,” explained Marketing Director Hank Koppelman.

The program began with partnerships with Carnival Cruise Lines and Holland America Cruise Lines. During that year, the program generated \$120,328 from 1,843 passengers. The program experienced astounding growth in 2003 when ridership rose over 200 percent to 5,923 travelers and revenue soared nearly 300 percent reaching \$466,672. During that year, a third cruise line was added — Windjammer Barefoot Cruise. Last year, Norwegian Cruise Lines and American West Steamboat Company joined the Rail Cruise program, and for the third consecutive year, ridership and revenue grew.

From January through October 2004, the program generated

\$502,148 in sales for 6,738 passengers. Negotiations are currently taking place to add two major cruise lines in early 2005.

Rail Cruise packages, which offer a 25-percent discount off the coach rail fare (subject to seasonality and blackout dates) may only be booked through travel agents because most travelers prefer to book their cruises with a cruise specialist. Therefore, Amtrak’s field marketing staff works closely with the sales staff of the cruise lines to promote the program on a local and regional level.

“The program affords passengers the ability to avoid the hassles of airports and actually begin their Rail Cruise vacation the moment they step on the train,” stated Koppelman.

Passengers Enjoy Fun and Snow En Route to Reno

The winter season marks the return of the popular Reno Snow and Fun trains. Amtrak is once again partnering with tour operator Key Holidays to offer the seasonal tour package from Emeryville, CA, to Reno, NV. Snow and Fun trains, operated by Amtrak crews, provide an opportunity for Sacramento and Bay area residents to travel to Reno by rail without having to worry about driving in unpredictable winter weather conditions.

Both trains offer passengers strolling minstrels, wintertime sight-seeing and live entertainment in the special Piano Lounge Car. Fun Train travelers enjoy games and dancing en route, while Snow Train travelers are treated to a historical narrative as the train travels through the snowy mountains.

Fun and Snow train packages range from \$179 to \$339 and include round-trip travel on a chartered Amtrak train and two nights’ hotel accommodations. The Fun Train package includes a light dinner on the outbound trip and lunch on the return, and the Snow Train provides lunch on the return trip. Round-trip rail-only fares are also available and range from \$169 to \$189.

The train operates between Emeryville and Reno and makes stops along the way in Martinez, Suisun, Sacramento and Roseville. The Fun Train, which departs on Fridays and returns on Sundays, will operate Jan. 7, 14, 28, Feb. 11, 25 and March 4, 11, and 18. The Snow Train will operate every Tuesday beginning Jan. 25 through March 15.

Amtrak does not handle reservation for the Fun and Snow trains. Information is available by calling Key Holidays at 1-800-783-0783 or by visiting www.KeyHolidays.com.

FRONTLINE FOCUS

Dear Amtrak:

This is a letter of thanks for one of your red caps in the 30th Street Station in Philadelphia, PA.

My friend and I took the train to Philly with just the right amount of carry-on and had no problems. The return trip was another situation all in itself.

Upon arrival at the station, we found ourselves with more than we could handle alone ... and decided to seek the help of a Red Cap.

Mr. Abe [Pettit] took us under his capable wing and located the train we were scheduled to take and labeled our luggage and various bags and purchases that we had made in Philly.

He personally escorted us to the train and kept us up to date as to the train's arrival. When the train arrived he personally put our bags on board and made sure that we were well situated. He shared with us that he has been at his job for over thirty years, and it shows in the care he takes and the way he does his job. We found him to be knowledgeable and efficient in ever way, we will always be grateful for his help.

He must be commended for a job well done ... You can be justly proud to have such an employee as part of your organization.

Sincerely,

Frances Anne M.

Dear Amtrak/VRE:

My husband, our son and I would like to thank your company and the individuals responsible for bringing an agitated hour or two to a happy conclusion.

My husband and I went to L'Enfant station, for the Fredericksburg train (#305), where we found the platform packed with riders awaiting both the #305, the delayed #303 Fredericksburg train, as well as the #327 Manassas train.

When I discovered the arriving train (#303) was not our train, I told my husband hurriedly that I would validate our tickets at the platform center and return. When I returned, most of the passengers had boarded that train and my husband was nowhere in sight. I was not certain if he had boarded, or had followed me and become separated somewhere along the platform. By the time I had checked, the train was moving.

This all was inconvenient, but no great loss — except for the fact that my husband has a severe memory problem and there is no way that he could remember that Brooke station was his stop.

I boarded #305 and my son joined me on the train at Crystal City. At Alexandria he spoke to Bruce [Thompson], the [Amtrak VRE] conductor, which set in motion the “rescue” effort.

By Woodbridge, we had word from Bruce that my husband had been found on the #303 train, and we — and other passengers — were quite relieved.

Bruce had also alerted the sheriff so someone could meet my husband at Brooke station and tell him we would be along soon.

When we arrived at Brooke station, a VRE security man had heard about my husband over his railroad radio and had come to be

with him also. The sheriff was nearby and all was well. In the 10 years we have been visiting my son and his family in D.C., we have been VRE customers several times each visit. We have enjoyed your service over the years, but never more than yesterday. Please pass along our deep gratitude. Sincerely, Jean M.

VITAL STATS

for November 2004

	Month		Fiscal year-to-date	
	Budget	Actual	Budget	Actual
Safety				
Reportable Injury Ratio*	(goal) 3.3	2.6	(goal) 3.3	3.0

Toys for Tots

Amtrak Vice President of Operations Ed Walker and Vice President Marketing and Sales Barbara Richardson present Amtrak's Toys for Tots donations to Staff Sgt. Fair who accepts on behalf of the U. S. Marine Corps Reserve. More than \$4,700 in cash and over 1,000 toys were collected for the drive held at Washington Union Station. Sponsoring the event for the ninth year, Amtrak invited MARC commuters and employees to participate by bringing a new, unwrapped toy, or a cash/check donation.

Corridor Development in Motion

Cleanup and Infrastructure Improvement In Progress on Keystone Corridor

A massive effort to cleanup and begin major infrastructure improvements on the *Keystone* Corridor between Philadelphia and Harrisburg began in the fall of 2003, an undertaking that will result in revitalizing a route that has suffered due to years of deferred maintenance.

In the fall of 2006, Amtrak and the Commonwealth of Pennsylvania expect to restore the 105-mile route to an all-electric railroad that will yield faster, more reliable and more comfortable passenger rail travel. Speeds will increase to 110 mph between Paoli and Harrisburg, in the sections of track that will allow it.

The project serves as an illustration of what state partners can accomplish with federal backing. This past summer, Amtrak President David Gunn and Pennsylvania Gov. Ed Rendell announced that \$145.5 million would be dedicated to address the years of deferred main-

tenance and to revitalize the route, the cost of which is split equally between the two partners.

By the time the project is complete, trip times for local trains will be cut to 105 minutes from 120, and express trains will arrive in 90 minutes. Four additional weekday roundtrips between Philadelphia and Harrisburg will increase the frequencies from 9 to 13.

The infrastructure improvements began in the fall of 2003, and include installation of new Continuous Welded Rail (CWR), concrete ties, upgraded Communications and Signals and Electric Traction systems, as well as improvements to bridges and stations.

The jointed rail on the route is being replaced with CWR, which will

enable scheduled trains to operate at higher speeds, reduce maintenance requirements, and more importantly, improve ride quality.

“This level of commitment to the Harrisburg Line is unprecedented — our work teams have made incredible progress and we’re already seeing some tangible

results,” said Chief Engineer David Hughes.

Engineering forces completed a 13-month rail renewal project between Middletown and Lancaster, PA, in December 2004. Vintage 1940s and 1950s bolted rail on both main tracks between these points — a total of 48 track miles — was replaced with continuous welded rail.

Starting last month and continuing into 2006, the Engineering team will completely renew Roy and Cork interlockings, as well as 37 wayside turnouts. Wood ties, timbers and varying sections of rail will be upgraded using the latest technology in concrete turnouts.

The FY '05 program also includes the renewal of both main

Marketing Launches Pricing and Promotional Strategy to Boost Revenue

First-quarter Ridership Grows; Revenue Lags

Aiming to generate improved revenue in the new year, Amtrak implemented a series of marketing promotions, campaigns and pricing initiatives to help boost the bottom line. While ridership in the first quarter of the fiscal year (October-December) was ahead of where it was last year, ticket revenue dropped.

A total of 6.5 million passengers rode Amtrak in the first three months of the fiscal year, up 162,000 passengers over last year. Ticket revenue was \$320.2 million, or \$6 million less than a year ago and \$20 million less than budget.

The strong positive ridership trend is being led by continuing growth in the low-yield and low-fare markets. While the growth is welcomed by Amtrak, it doesn't translate to higher revenues for the railroad. Long-distance ridership fell 2 percent to 921,000 passengers in the first quarter and, on these long-distance trains, First class ridership fell 5 percent to 147,000.

Continuing analysis points to several factors suppressing passenger ridership; the overall travel economy, the impact of airline pricing on Amtrak's business, and the company's service delivery issues, including on-time performance.

Initiatives Underway to Increase Revenue

To improve ticket revenue, Amtrak launched several national and grassroots marketing campaigns and sports marketing initiatives, and, to tap into the higher-yield markets, a new offer in the Northeast Corridor.

Under the “Buy 2, Get 1” offer, Amtrak Guest Rewards members who purchase two *Acela Express* or *Metroliner* roundtrips (or four one-ways) between qualifying city pairs receive a free roundtrip in return. Members who pay for their tickets with a MasterCard also earn double points.

To boost revenues on the long-haul front, a system-wide advertising campaign will launch in February, which will offer added value to passengers who book long-distance tickets online. They will get \$25 off a two-night stay at qualifying hotels.com.

Many other targeted efforts also continue, including sponsorship of the Thomas the Tank Engine television series and videos, creation of the Amtrak Travel Scholarships in partnership with the United Negro College Fund to promote rail travel among young students, and sponsorship of the “Are We There Yet?” movie sweepstakes.

In sports marketing this winter, basketball is the main focus, with two sweepstakes underway, the Big East Tournament and the Celtics Fantasy Game. Additionally, leading up to the Super Bowl in

continued on page 12

TRAIN OF THOUGHT

As winter starts to turn a corner, construction on our infrastructure resumes. We've all been working hard, and I want to keep it that way. We all have a stake in our success — each and every one of us has a role to play in our accomplishments. That's why it's important that everyone understands our budget and why we have to make the most of it.

In FY '04, we invested \$678 million in capital work; the biggest piece — \$387 million — was dedicated to the Engineering department, the majority of which went into the Northeast Corridor and the Albany, Harrisburg and Springfield lines. To put it into more tangible terms, Engineering installed 121 track miles of new rail, laid 152,000 concrete ties and 59,000 wood ties, and undercut 40 miles of track, among a lot of other work. From another perspective, in FY '01 we installed only a handful of miles of new track.

The Mechanical department dedicated about \$114 million to its programs, which churned out 205 cars — that includes 61 remanufactures, 125 heavy overhauls, and 19 wreck repairs. The department also overhauled 52 locomotives and wreck-repaired another 10 locomotives.

What we spent in capital last year was about \$150 million less than what we had budgeted. This didn't happen because we didn't have enough to do — the main reason was that there is a long lead-time to get materials. As many of you know, in our business, we often need six to 12 months of lead time before you can expect to take delivery of materials (particularly for the Mechanical programs). This can sometimes throw a wrench in our plans. Because of the late arrival of the materials, we shifted some work originally planned for FY '04 to this year.

Keep in mind, we have been able to hold expenses essentially flat, even though we had to cover wage adjustments for new union agreements and a modest Cost of Living adjustment for management. What this means is that most of our increases in spending were for capital investment in plant and equipment. And this work isn't band-aids and patchwork — it will still be in service long after many of us leave Amtrak.

We had 25.1 million passengers (4.3 percent more than FY '03), but our ticket revenue fell short of what we'd projected by about \$27 million. There were a handful of reasons for this — a general slowdown in the travel market, severe weather in the first part of the year (the Florida hurricanes in the fall really impaired that long-distance service) and service disruptions due to host railroad track work.

Through the first quarter, ticket revenue was under-performing. If the trend continues, we won't make our revenue budget this year. The January storms in the East and the West further suppressed our ticket revenue. However, we're taking a number of steps to counteract the shortfall. For example, we've implemented some pricing changes that we expect to contribute to revenues and we have a number of promotions aimed at stimulating ridership on our high-yield trains.

As we enter the second quarter of FY '05, our outlook for this year is precarious. We asked Congress for \$1.798 billion, however, we were appropriated \$1.2 billion but with a number of holdbacks and stipulations, including the first \$22 million repayment of the \$100 million loan we got in FY '02. So, what's left from the federal government is really closer to \$1.18 billion — leaving \$570 million for operating expenses, \$378 million for capital investment and \$231 million for debt service.

When you add state and local funding and what we've carried over from last year, we expect to have about \$840 million for our capital programs. About \$418 million goes toward badly needed infrastructure work and another \$208 million goes to Mechanical.

We adjusted our capital plan by starting some programs later in the year, so that they would be carried into next year. For the most part, we haven't abandoned any of our capital programs, but we've had to slow the progress on some of the projects, in some cases dramatically so. For example, we planned on spending \$12 million in FY '05 on phase 2 of maintenance facility in Oakland, but we will be spending only \$500,000 this year and the rest (hopefully) in FY '06.

Other projects remain unaffected. For instance, we are continuing full steam ahead on the Harrisburg

David L. Gunn

Line and Shell Interlocking in New York. The car overhaul program remains essentially intact.

On Feb. 15, we must send Congress our Legislative and Grant Request for FY '06. The amount we'll need will be about \$1.8 billion, the same amount we asked for last year, if the Board approves it. It's a big request in a year when the administration has said it would slash funding for most domestic programs, but I think it's our duty to let Congress know what we really need and that the more we have to defer the tougher it will be to get this railroad in good shape. Deferred maintenance of our plant and equipment has and will continue to lead to slower trip times, especially in the Northeast, and more system failures.

It is real important to understand that we've achieved most of the major savings we can get without being destructive to the existing system and service we provide. Because of these savings, we've been able to supplement our federal appropriations with savings and carryover funds the last two years. But those days are over. There is very little opportunity to have carryover funds available for FY '06. We will live and die on that one line in the appropriations bill — and that keeps me awake at night.

I'll let you know more about what we have planned for FY '06 when the numbers are more firmed up. As I said before, we all have a horse in this race. The way you can contribute to the better health of the company is to keep focused on your job, let people see the best that you have to offer and be safe.

Block Training to Set New Standard for Transportation Department

More than 6,500 Transportation department craft employees will be scheduled to attend one three-day set of “Block Training” classes once every year, under a plan begun last month. The training adds a new dimension to the railroad’s strategy for all Train and Engine and service employees that makes available all of the required recurring training instruction in one session.

“The Block Training program is critical for the Transportation department. This key piece of our comprehensive training program builds on the training that we’ve recently established for new hires, transportation supervisors, and our chefs,” said Ed Walker, vice president, Transportation. “Our department is focused on improving the state of good repair of its greatest asset — its employees. Without a trained and knowledgeable workforce, this railroad operation will not succeed,” Walker added.

Delivered over three consecutive days, the Block Training program consists of approximately 12 training modules. The first day, which is attended by all participants, covers core training topics that include department goals; crew resource management; leadership skills; Security Awareness, which is part of the PREPARE (Passenger Railroad Emergency Preparedness and Response Education) program; ADA requirements; and personal safety.

The second and third days comprise job-specific instruction for Operating craft employees. For conductors, this means coursework in the following disciplines: AMT-3 (air brake and train handling instructions), hours-of-service regulations, operating rules, Service Standards Manual, revenue collection, FDA regulations, AMT-2 (electrical operating instructions), Conductor Delay Reporting, and railroad physical characteristics.

For engineers, the topics include locomotive troubleshooting and general road foreman notices, operating rules, railroad physical characteristics, and a skills and knowledge examination required for recertification. Dispatchers and block operators review topics such as manuals and instructions, AMT-4 (special instructions governing operation of signals and interlockings), and railroad physical characteristics.

The curriculum for service craft employees is currently in development, and will be implemented in FY ’06.

The goals of the program are to eliminate operating rule violations and employee injuries, meet certification requirements set by Amtrak and regulatory agencies such as the FRA, reduce training costs, and improve service delivery.

The new program also yields efficiencies because employees need only mark-off for one three-day period, rather than in the past, when employees would average three and half mark-offs per year, with each mark-off for multiple days. For this reason, the program significantly reduces the amount time employees are not on their regular assignment, resulting in \$2.5 to \$3 million in cost-savings for the company, even taking into consideration the additional travel requirements to centralized training locations.

Additionally, as a result of the new training approach, the company can better manage the recurring training and re-certification requirements.

Block Training addresses the schooling needs of dispatchers, train engineers, conductors, OBS employees, Station Services employees, block operators, yardmasters and their managers.

“The diversity of the crafts represented lends itself to an unusual classroom dynamic, as employees from all of these crafts participate in the same session — providing employees an opportunity to benefit from the experience and background of other classmates,” explained Walker.

The training program is being well received. “It’s about time — Block Training was long overdue, and getting all your needed classes in one week was refreshing,” said Todd Harding, vice president of the United Transportation Union Local 838, who attended the first session. “From my perspective as vice president of Local 838, the class was very well instructed, and being taught by people with hands-on experience was a blessing,” he added.

In November, Chief Transportation Officer Steve Strachan established the Operating Practices organization, which is headed by Senior Director Ron Robusto. The new

organization, in conjunction with Employee Development group, is responsible for supporting all training initiatives and developing and implementing new technologies. The group is designed to be adaptable and was created to support the division field managers and other departments.

“This has been an exciting and challenging assignment and I’ve loved every minute of it,” said Robusto. “We’ll look back at this someday and wonder why we didn’t do it years ago.”

Training will be implemented by the Operating Practices’ group of 14 trainers systemwide at 12 centralized locations, including Wilmington, Jacksonville, Chicago, Los Angeles, Portland, Oakland, Washington D.C., Philadelphia,

Block Training, a three-day series of classes, addresses leadership skills and craft-specific training and is required for Transportation department and service craft employees. The first Block Training class graduated Jan. 6 and included engineers, conductors, train dispatchers, block operators, a chief train dispatcher, a trainmaster, an assistant superintendent, a lead ticket clerk, an LSA, a station manager, and an OBS manager.

(L. to R.) Front row: Tom Schaffer, Jerry Gaines, Ronald Annone, Carrie Brooks, Dennis Healy, and Bill Costello. Second Row: Dennis Prophet, John Wickham, Bill Link, Tobin Shaw, and Mike Green. Photo credit: P. Manger

Albany, New York, New Haven and Boston.

Employees who are scheduled to attend Block Training will be sent a letter from Walker to their homes that advises them of their class schedule. Participants will receive a complete travel portfolio in the month prior to their training month. Attendance lists will be published and distributed via Department/Division notices, and employees will be held accountable for their attendance.

Reminder: Mechanical Training Underway to Meet FRA 238 Requirements

More than 1,200 employees completed the Mechanical department’s Federal Railroad Administration 238 re-qualification training that began in 2004. However, an additional 2,200 employees must still complete refresher training by the end of 2005. Employees and contractors who perform brake tests, train inspections or other similar work should note that if they don’t re-qualify, they will not be qualified to perform any of the safety inspections.

In 2002, the FRA added five credentials that are required of people who maintain qualifications as a “Qualified Person” (QP) or “Qualified Maintenance Person” (QMP), as stated in the *Passenger Equipment Safety Standards (49CFR 238)*. The Mechanical department is providing the required refresher training courses for each of these two qualifications. Employees who perform the above-mentioned work must maintain their qualifications and are encouraged to check their wallet card to see what qualifications are carried and the card’s date. If the card is dated from 2000 through 2002, all qualifications for this period will expire in December 2005 and refresher training is required to remain compliant with FRA regulations.

Mechanical department employees who need to attend either of the eight-hour refresher training courses should contact their supervisor or general foreman to enroll. Employees who carry more than one type of qualification will need to re-qualify for each type.

Train and Engine employees (who do not carry wallet cards) must also attend refresher training, which is part of the Transportation department’s Block Training program that began in January (see related story on this page).

Online Bookings and Sales Increase With New Web Site

Preliminary results from the September launch of the redesigned Amtrak.com Web site show significant gains in share, sales, and bookings for Amtrak’s online sales channel.

Since the new site was unveiled, the share of sales attributable to Amtrak.com rose nearly 21 percent, contributing to a share of total passenger sales of over 34 percent as of Dec. 31. The increase in the number of online transactions makes the site Amtrak’s leading sales channel.

Likewise, December ’04 sales and bookings increased just over 15 percent and 14 percent respectively, over the same period in the previous year. While sales of long-distance tickets were nearly 3 percent higher than the same period last year (Sept. 12 through Dec. 31), revenue from sleeper accommodations booked online was over 18 percent higher during this period compared to last year.

These figures indicate that the site offers the right balance of easy navigation and all the information a customer needs to make a decision about travel on Amtrak. In addition, an advertising campaign focused on the re-launch helped steer prospective passengers to the site.

Amtrak Senior Director of E-Commerce Kathleen Gordon attributes much of the success to improvements built into the redesigned Amtrak.com site. “Our new site offers our customers a wide range of the latest functionality and improved content, allowing them to get the information they need to book their reservations faster and more easily,” said Gordon. “We’re very pleased that the improvements are paying off, and we continue look forward to providing our online customers with the best service possible.”

“The improvements made to the editorial content of the site are

Since the launch, the Amtrak.com site broke the previous single-day booking record nine times, culminating on Nov. 22, 2004 with more than 15,000 customers booking reservations on the Web site. Likewise, a new Internet sales record was set on Nov. 15, when sales reached \$1,879,995 for that day — 2.2 percent higher than the previous one-day record.

The declining number of e-mail messages received from customers requesting assistance in booking online tells a similar success story. The site’s comprehensive editorial content, flexible navigation tools and automated help prompts seem

was first launched in 1997, and represents a big achievement in cost-savings and brand support for the railroad.

On the topic of e-mails, a European customer who had booked tickets online recently sent one to the Customer Relations group, sharing his online encounter with Amtrak.com.

“ ... I booked tickets online — this was easy and perfect. Unfortunately because of a case of death in my family I had to cancel my trip — it was so uncomplicated and I received all my money back. Compliments from Austria, I wished we had something like Amtrak here!”

Amtrak launched the newly designed Web site on Sept. 12, 2004. The site provides users with a fresh look and feel, dozens of new features, and improved, updated and reorganized content.

With the improved site, customers are able to better explore their options for trips, compare fares, upgrade seats and accommodations, and handle many cancellations and refunds.

John Slavney contributed to this story.

“The improvements made to the editorial content of the site are significant.”

Roger Seitzinger
Creative Director
Marketing

significant,” said Roger Seitzinger, creative director, Marketing. “We expanded the amount of relevant information offered online — from our services, to the amenities, to the policies — in anticipation of the vast range of questions from and needs of the traveling public,” he added.

to have mitigated the need for additional assistance. Prior to the launch, Amtrak received an average of 6.6 e-mail inquiries for every 100 bookings. Since then, the number of e-mail messages has decreased to just under 4 per 100 bookings (as of Dec. 31). This ratio is the lowest since Amtrak.com

Divisions Tasked with Implementing Security Measures

Amtrak further strengthened its grassroots security efforts last month when it formed divisional security committees led by each general superintendent that serve as channels for discussion and implementation of security initiatives, from the ground level to the company’s Executive Security Committee.

The role of the committees in advancing security issues is an important element of the railroad’s employee and passenger security program.

To ensure that every major department is represented, each new security committee includes representatives from the Engineering, Mechanical, Transportation, and Safety departments and the Amtrak Police.

“The Division Security Committees are a key component of our corporate security strategy. They facilitate the flow of information from the front lines to Executive level and vice-versa. The flow of information and decision-making process follows the existing chain

of command. I ask everyone to give the Division Security Committees their full cooperation. Just like safety, security at Amtrak is everyone’s responsibility,” noted Bill Crosbie, senior vice president of Operations.

Each Division Security Coordinating Committee is chaired by the division’s general superintendent and a selected co-chair and receives intelligence reports and direction from the Executive Security Committee, which comprises members of the Executive Staff. The committee also makes regular appearances and presentations and reports its activities to that group. The division committees meet at least once a month during a Yellow Alert period, at least once a week during an Orange Alert and daily during a Red Alert, while meeting more often at each of these alert levels if intelligence warrants.

“These division security committees, which provide a direct line from the executive level to the platform operation, facilitate more participation by employees. Each employee knows best his or her

own work area and is therefore best suited to be most vigilant within their own environment,” said Al Broadbent, vice president, Security. “Amtrak employees are the eyes and ears of the railroad and like safety, security is every employee’s responsibility.”

The division committees ensure that Amtrak is in compliance with Transportation Security Administration (TSA) security directives and Amtrak’s security policies and training initiatives, such as the security training program for all Amtrak employees. They are also responsible for reviewing and revising Amtrak’s Security Threat Level Response Plan, which includes the Homeland Security Threat Advisory color codes, and Amtrak’s Security Handbook. Additionally, they assist with the development of the Security Investment Plan (SIP), which identifies areas where security should be enhanced.

The first series of meetings held in January by each of the general superintendents included discussion of topics such as reviewing the

current status of security cameras, establishing a regular schedule for checking employee IDs at each location, and overall compliance with the security directives.

Underscoring the fact that security is a corporate-wide responsibility, the committees replaced the previous Security Coordinator program, which only included representatives from the Transportation department which coordinated security activities with the Amtrak Police Department.

The Division Security Coordinating Committees were created at the direction of Crosbie, and are a major component of the ever-growing employee and passenger security program. Other elements of the program include the new employee training course mentioned above, Railroad Security Awareness, the laminated security tip cards mailed to employees’ homes and the See Something, Say Something campaign for employees and passengers that is visible on trains and in stations.

Hiawatha Passengers Take the Train to the Plane

The opening of the new Milwaukee Airport Rail Station in January makes getting to the airport easier for travelers along Amtrak's *Hiawatha* route. The *Hiawatha* service now offers seven daily roundtrips to the Milwaukee's General Mitchell International Airport from

Chicago, Glenview, Sturtevant and (downtown) Milwaukee — along with the best on-time performance of any Amtrak route. A free five-minute shuttle bus is available to connect passengers to and from the station and the GMIA terminal, which serves 14 airlines that offer flights to 90 cities.

Amtrak's new Milwaukee Airport Rail Station offers *Hiawatha* passengers convenient rail service to and from Milwaukee's General Mitchell International Airport.

Wisconsin Gov. Jim Doyle, U.S. Sen. Herb Kohl, Amtrak Vice President of Marketing Barbara Richardson and other officials led a ribbon-cutting ceremony held at the 1,600 square-foot facility last month. Sen. Kohl, who secured federal grant money that was provided to the Wisconsin Department of Transporta-

**"Our successful experience in the East
with the BWI station demonstrates
the greatest potential
for the Milwaukee airport station."**

Barbara Richardson
Vice President, Marketing

tion for this project, made funding for the \$6.8 million fully accessible station possible.

The Milwaukee Airport Rail Station is now one of four Amtrak stations serving airports. Other stations are the Burbank Airport station in California, the Baltimore/Washington Airport Rail Station in Maryland and the Newark Liberty International Airport station in New Jersey.

"Amtrak looks forward to building upon its growing *Hiawatha* service

by introducing another rail-to-air connection," said Richardson. "Our successful experience in the East with the BWI station demonstrates the great potential for the Milwaukee airport station."

The fare for the 78-minute trip from Chicago is \$20 and from Milwaukee, the \$6 trip takes 11 minutes. It is expected that the new passenger rail service will draw airline customers from the traditionally congested O'Hare International Airport outside Chicago.

HHP-8 Overhaul Program is Underway

Mechanics at the Wilmington Locomotive Shop overhauled one HHP-8 locomotive in December and are on schedule to complete a second this month. Six HHP-8s are slated to be completed this fiscal year, at a cost of \$550,000 each. They are currently being cycled through the Wilmington backshop to undergo their first five-year heavy overhaul.

Powering Amfleet single level cars on the Northeast Corridor, Amtrak's 15 HHP-8 locomotives are the most powerful in Amtrak's fleet. Motorized by four 2,012 horsepower AC traction motors, the HHP-8 can haul a larger consist than those pulled by any of Amtrak's other locomotives.

Keeping the locomotives this powerful means making sure they

are in good operating condition and cycled through the heavy overhaul program. At the Wilmington Maintenance Facility, the locomotive is removed from the trucks and placed on work stands. The hatches are then lifted from the top of the locomotive so that Gang 11 employees, directed by Foreman Pat Gallo, can take out the central block, HVAC units, airbrake components and traction motor blowers. After these major electrical components are overhauled or replaced, the arduous task of rebuilding the suspension system begins. This work includes rebuilding the trucks, repairing or replacing the wheels, overhauling the foundation brake equipment, replacing all of the dampers and thoroughly inspecting the primary and secondary suspension springs.

"With the support of the Material Control department, which is responsible for ensuring that the parts and supplies are on hand, and our Electric, Truck and Locomotive Shops, Wilmington mechanics are able to rebuild every vital component of the HHP-8 locomotives," stated Superintendent John J. Wood.

Locomotive 654 sits at the Wilmington Locomotive Maintenance Facility, where it is undergoing its first five-year heavy overhaul.

Amtrak Opens St. Louis Station

Ticket Agent Ralph Devine watches as General Superintendent Don Saunders cuts the ribbon to commemorate the opening of St. Louis' new interim station on Dec. 20. Local and state officials, Amtrak employees and others attended the event to open the new facility that replaces the modular station, which had been in use since 1978.

This 4,000-square-foot structure is designed to serve as an interim passenger station until a permanent intermodal transit facility is built by the city of St. Louis. The interim station will be converted to a crew base for Amtrak's Operating and Mechanical employees once the intermodal facility is built.

The building, made of masonry and steel, was built entirely with Amtrak funds at an estimated cost of more than \$600,000. "This comfortable modern facility vastly improves Amtrak's presence in St. Louis, both for our passengers and employees," said Saunders. "Moving to this facility helps clear the way for the permanent station, slated to open in FY '06."

Long-distance Passengers Pay for Service, Amenities

Why a Bedroom in July Costs \$1,271

Long-distance rail travel offers passengers an excellent way to see the country, but also offers a range of choices and amenities to make the journey a pleasant and comfortable one. First class passengers, in particular, pay for and come to the station expecting a premium experience.

On most long-distance trains, passengers first choose whether to travel Coach or First class. First class travel includes sleeping accommodations and meals in the Dining car. If the decision to travel First class is made, passengers may choose between a Roomette, which sleeps up to two people; a Bedroom, which sleeps up to two people; and Accessible sleeping rooms, which sleep up to two people and have wheelchair access. In addition, lower berths in all Bedrooms (but not the Roomettes) can accommodate two small adults or children, allowing up to three to share a room.

On Amtrak routes using Superliner train equipment; a Family Bedroom is available, which sleeps up to four people. First class passengers all pay a per-person rail fare and a second charge for the sleeping accommodation.

How Are Prices Calculated?

When customers make train reservations, a number of factors affect the overall cost of the trip, such as travel destination and train route, number of people traveling, availability of seats or sleeping accommodations, and type of sleeping accommodations desired.

For example, a passenger calling Amtrak late last month to book travel on Feb. 15 on the *Empire Builder* from Chicago to Seattle would have paid as little as \$122 if traveling alone in coach or as much as \$637 traveling with three other family members in a Family Bedroom. However, because of the strong demand for summer travel on the train, if the passenger made reservations in January for travel on July 15, the family of four would pay \$1,192 for exactly the same Bedroom they'd be charged \$637 in February. Similarly, while two passengers traveling together in a Bedroom would pay \$579 in February, that fare would rise to \$1,271 in July — even though it had been booked six months in advance.

When the sleeper cost is calculated, the lowest available rail fare

is always used. Likewise, the accommodation charge is based on the lowest available of five price points, commonly called “buckets.” The higher price buckets are used when sleepers are expected to sell out; the lower price buckets are available when the train is expected to have low demand, and the train may leave with empty rooms and seats. On the *Empire Builder*, it is virtually certain that the train will sell out, so the highest buckets are used even half a year before departure.

However, two years ago Amtrak simplified pricing to make it easier for customers to make decisions. The changes ensured that the earlier a reservation is made, the better chance a passenger will get a less expensive ticket. That continues to be true on many trains, despite the heavy demand in the summer travel months.

Figuring Out the Buckets

Before price points are established, the Pricing department within Marketing and Sales studies historical pricing and demand data. The department considers customer response to Amtrak's current prices by answering the following questions: “Were the sleepers sold out, or were some left unsold? What prices were available? Was deep discounting needed? Does demand vary by day-of-week, or by different markets along the route?” The department also analyzes air fares and bus fares for major markets on each train route. If coach prices fall outside of a targeted range, due to price changes by the airlines or bus companies, the Pricing department will determine if changes are in order.

Yield and load factors are used to determine financial performance. Yield is the total ticket revenue divided by the total passenger miles. This statistic is commonly used to compare the prices paid in short-distance markets versus long-distance markets.

For example, on the *Empire Builder* in July, the yield for sleeper travel from Chicago to Seattle was 19 cents per passenger mile. For the same route and same month, the yield for sleeper travel from Seattle to Whitefish, MT, — a much shorter trip — was 26 cents per mile.

The peak load factor is the comparison of riders to seats at the point in the route where the train has the most riders. This assess-

Employees at the Riverside Call Center (from left) Ron Knutson, Gene Price, Mary Dickson, Jamie Sorensen and Cary Porter (seated) discuss the new online sleeper waitlist.

ment allows the company to determine if there was any room for more riders when the train was the most full. The average peak load factor for sleepers on the *Empire Builder* was 96 percent in July 2004, but 100 percent for coach seats during the same period.

Based on this analysis, the Sales Distribution and Customer Services department then sets prices based on supply (in this case, capacity) and expected demand. As the departure date approaches, adjustments are made.

In addition to supply and demand, prices can also be influenced by factors such as the availability of equipment, or the booking or cancellation of a large group.

“We compare the number of actual reservations with the number we expect to have at a given time. If demand is stronger than expected, we may ‘move’ some of the remaining rooms from a lower price point to a higher price point. If demand is weaker than expected, we may add more rooms to the lower price points,” said William Sheridan, senior director, Pricing. “Prices are adjusted as the relationship between supply and demand changes. Our ability to adjust increases revenue and the number of riders,” added Sheridan.

Pricing Wisely Adds Up

In FY '04, Amtrak carried over 65,000 passengers in *Empire Builder* sleepers who paid a total \$15.9 million in fares. While Sleeper passengers made up only 15 percent of the total ridership on the train, they accounted for 41 percent of the ticket revenue.

Despite the substantially higher fares in the summer, the First class ridership in July is usually double that of February. Last July, 7,805

sleeping car passengers paid a total of \$2.3 million or an average fare of \$291 per person. In February 2004, there were 4,159 sleeping car passengers who paid \$600,000, or \$159 per passenger.

Among recent innovations to increase revenue, Amtrak recently established an automated sleeper waitlist that records and tracks a customer's request for sleeping accommodations when sold out in regular inventory, and matches the request if it becomes available. Each day, waitlist requests are checked against sleeper openings for cancellations and hold-limit expirations.

“In the past, Amtrak reservation sales agents had to turn potential customers away when sleeping accommodations were sold out, and the burden was placed on the customer to call back to see if the room would open up,” said Jon-Roger Maranda, senior director of Sales Distribution and Customer Service.

On trains that were sold out at some point before departure during FY '04, there were over 9,500 unsold rooms when these trains departed — a potential \$3.6 million in unsold revenue. The waitlist is projected to fill at least 25 percent of unsold rooms, and add nearly \$1 million in revenue in FY '05.

If there are empty rooms the day of departure, the Reservation Sales Offices set aside a percentage of rooms on the train manifest a few hours before departure for conductor upgrades. Last year, on-board upgrades totaled \$325,112, with the *California Zephyr* claiming the highest revenue from upgrades.

Marketing Efforts Aimed at Boosting Revenue

This winter, Amtrak launched a variety of marketing promotions and campaigns designed to increase ridership and revenue from coast to coast.

Amtrak’s system-wide national advertising campaign publicizes Amtrak city pair destinations and fares, while it promotes the railroad’s partnership with hotels.com. Amtrak passengers who book reservations online for travel on most long-distance trains between Feb. 15, 2005 and May 31, 2005 will receive \$25 off a two-night stay at qualifying hotels.com properties.

In December, Amtrak Marketing began promoting its Campus Visit discount to students by offering juniors and seniors visiting a college an opportunity to take their parent or guardian along at no additional charge. Beginning this school year, students may book this discount online by logging on to campusvisit.com and filling out an online questionnaire. Once processed, the student receives an e-mail response with a Campus Visit discount code and can click on a link to Amtrak’s Web site to book his or her travel plans.

In the Midwest, another program aimed at increasing Amtrak’s visibility among students and families is the popular American Journeys: Learn About Illinois Scholastic program. For the second consecutive year, Amtrak is partnering with the Illinois Department of

Transportation to offer the popular program to Illinois fourth-graders by providing their teachers with curriculum in geography, language arts, science and mathematics that can be applied to train travel.

To further generate interest in train travel, each child receives a take-home packet of educational materials that includes a Kids Ride Free coupon. The coupon is good for up to two free children’s rail fare with the purchase of an adult full fare ticket and is valid for sale and travel through May 31, 2005.

In addition to the Kids Ride Free coupon, an essay contest is once again part of the program. Kids submitting an essay by March 14, 2005 have an opportunity to win a family train trip, a fun pack of travel games, or travel guidebooks.

Another program aimed at extending Amtrak’s reach among families is the joint Amtrak and Hersheypark promotion. During the 2005 calendar year, Amtrak is sponsoring the park’s popular Tiny Tracks Train ride that features a kid-sized train that loops around a track in the Founders Circle area of the amusement park.

“This grassroots marketing program enables Amtrak to reach many families at the park, promotes Pennsylvania’s state-supported *Keystone* service and builds awareness of Amtrak vaca-

tion opportunities,” stated Marketing Director Tom Sabo.

The ride sponsorship also includes Amtrak promotional signage placed at the children’s “Tiny Track Railroad” and an eight-foot *Acela Express* kiosk placed in the general refreshment area where Amtrak timetables and promotional materials are distributed.

On the Amtrak Guest Rewards® front, members traveling on *Acela Express* or *Metroliner* trains may earn double points and take advantage of great savings with the Buy Two, Get One Free and Double Points Rewards offer. AGR members who purchase two roundtrip tickets or four one-way trips to select city pairs in the Northeast Corridor, will receive a free *Acela Express* or *Metroliner* roundtrip Business class ticket.

In the Pacific Northwest, Amtrak *Cascades* is the sponsor of the second annual Portland Jazz Festival, held Feb. 18, 2005 through Feb. 20. Along with Seattle radio station KPLU, Amtrak is promoting a 10-percent discount aboard designated Amtrak *Cascades* trains for festival-bound passengers.

Also this month, Amtrak will get prime-time exposure in seven major Amtrak markets with the sponsorship of a month-long Black History Month trivia contest aired by top urban radio stations during morning and evening drive times.

The contest, which runs every weekday on radio stations in Chicago, New York, Philadelphia, Washington, D.C., Atlanta, Los Angeles and Detroit, will award one winner each day with a prize package that includes an African American trivia board game, tickets to a local African American museum and Amtrak merchandise.

From the pool of winners, one grand-prize winner in each market will walk away with four round-trip train tickets to a major Amtrak destination and hotel accommodations. “We expect that this exposure will translate to new customers who might not otherwise know that Amtrak can take them to specific destinations,” said Darlene Abubakar, Marketing director.

Amtrak is also teaming up with several professional and college sports organizations. For the third year in a row, Amtrak is partnering with the Miami Heat and the Miami Heat Radio Network to promote Amtrak to English- and Spanish-speaking basketball fans in the Miami coverage area. At four of the Miami Heat’s 41 sold-out home games, Amtrak will sponsor an on-court basketball shooting match, the winner of which will win round-trip train tickets.

Sports promotions continue throughout the basketball season with a partnership between

Long-distance Passengers Pay for Service, Amenities

continued from page 6

First Class Passengers Expect First Class Service

Sleeper passengers benefit from a range of amenities that are included in the ticket price. Generally, the features include seats that recline and convert to a bed, fresh towels and bed linens, electrical outlets, reading lights, individual climate control, bottled water, daily newspapers and large picture windows.

All First class passengers are entitled to complimentary meals in the dining car. Passengers also get personal service provided by the sleeping car attendant, which includes bed make-up and turn-down service, a wake-up call, and, if requested, in-room meals.

Some routes offer special services for First class passengers. For example, on the *Coast Starlight*, passengers who travel in sleepers have exclusive access to a Parlour car where they may use the library,

sample wine and cheese tastings, and watch movies in the specially designed movie theater.

“I took my first trip across country on Amtrak last December, and I’ll only travel in a Bedroom,” said a passenger about his trip from San Diego to Washington, D.C., on four different long-distance trains. “I loved every minute ... I had my own private space to read, listen to music and watch my DVDs and sleep if I wanted. Or, if I wanted to be social, I could go into the Diner and enjoy the company of other travelers and see our beautiful country out the windows.”

Price Comparison for Accommodations Aboard the Empire Builder

FEB 15	Coach	Roomette	Bedroom	Family Bedroom
1 passenger	\$122	\$274 (\$122+\$152)	\$457 (\$122 + \$335)	
2 passengers	\$244	\$518 (\$244+\$152)	\$579 (244+335)	
Family of 4	\$366			\$637 (366+271)
JULY 15	Coach	Roomette	Bedroom	Family Bedroom
1 passenger	\$158	\$574 (\$122+\$452)	\$1149 (\$122+\$1027)	
2 passengers	\$316	\$696 (\$244+\$452)	\$1271 (\$244+1027)	
Family of 4	\$474			\$1192 (\$366+\$826)

Moving the Pros and Others, Charter Services Adds Millions to the Bottom Line

Behind many of the big professional sports teams that travel across the country is a small team at Amtrak that helps them get to the game. But for the diminutive Charter Services team at Amtrak, the pros represent just a slice of an important group of special customers that adds revenue to Amtrak's bottom line.

The Charter and Group Services department, led by Director Bill Ladd, has grown revenue steadily over the past three years, from earning \$5.9 million in revenue in FY '02, to \$6.9 million in FY '03 and \$7.9 million last year. To achieve these results, Ladd, along with Charter and Group Services Coordinators Teresa Hughey and Robert Breslin, expands the team's customer base and works with Transportation and other departments to consistently deliver strong and reliable service.

Professional sports teams are one of the fastest growing markets the group has developed, nurtured and expanded over the past few years. "Five years ago, this business was almost nonexistent," stated Breslin. "Now we're fostering business relationships — and repeat business — with the National Basketball Association, National Hockey League and all the National Football League teams in the Northeast Corridor," added Breslin. "When the Philadelphia Eagles play football in Washington or the New York Giants play in Baltimore or the New England Patriots play in New York, they can enjoy the convenience and comfort of traveling to and from the game on an Amtrak charter train."

But it is more than just sports teams signing up with Charter Services. The department's other customers include schools, charter operators, rail-fan organizations, corporations, government agencies and public officials that have widely ranging needs.

On the basis of revenue, the privately owned American Orient Express is Amtrak's single largest charter customer. The company owns a fleet of luxury passenger rail cars staffed with its own attendants, and with the help of Amtrak's Train and Engine crews and two Amtrak locomotives, AOE offers its own customers memorable rail cruises throughout the country.

"This can be a very high-yield business," explains Ladd. "American

Orient Express accounted for approximately 26 percent (nearly \$2 million) of our business last fiscal year — without taking passenger car resources away from our regularly scheduled service."

"In most instances, Amtrak charter customers take day trips in coach cars. Sleeping and dining cars are rarely used due to their limited availability," said Hughey. "However, one exception to this rule is Amtrak's largest annual charter in terms of the number of passengers — the Palm Beach Florida Safety Patrol Train."

Each year the Palm Beach County Safety Patrol Association rewards thousands of grade school patrol boys and girls with a trip to Washington, D.C. Four times a year Amtrak operates one sleeping car and 18 passenger cars staffed with Amtrak T and E and On-board Service crews to transport about 1,000 students and chaperones. Recognized in the Guinness Book of World Records as the largest field trip in the world, the Safety Patrol group has traveled via Amtrak for 31 years.

After experiencing their first charter train ride, many groups continue to choose Amtrak time and time again. Every two years, Amtrak operates a train for the Library of Congress that hosts a retreat in Williamsburg for new members of the House of Repre-

"Even though it appears seamless to the customer, operating a successful charter train

takes tremendous effort by everyone involved

and our employees do a terrific job. "

Don Cushine
Systems Operations Senior Director

sentatives. Other charters include Turner Broadcasting Systems, Inc., which organizes an annual holiday rail excursion for its advertisers, and Toyota Motor Corporation, which hosts rail excursions on Amtrak for their suppliers. In FY '04, Amtrak operated 212 charter train excursions.

It's a Cross-departmental Effort

Operating a successful charter train involves the hard work and collaboration of multiple departments that are involved in planning and executing every excursion. The

A train chartered by the Palm Beach County Safety Patrol Association arrives at Washington Union's Station loaded with grade school patrol boys and girls. The organization has chosen Charter Services for its field trips for as long as Amtrak has been in existence.

Charter Services team works closely with each customer to determine their needs, then communicates the request with as much detail as possible to Amtrak's Systems Operations department.

The Charter and Group Services group, working with Systems Operations Senior Director Don Cushine, shepherds the request through various Amtrak departments, divisions and if necessary, host railroads. For a charter train request to be approved, each department involved must review the request, examine their resources and decide if they are able to deliver the services requested.

train can fit between regularly scheduled services.

When a request is made to travel over an Amtrak route that is owned by a host railroad, it must also be approved by the railroad. However, on occasion, requests are made to travel over non-Amtrak routes. "Our crews are not familiar with the physical characteristics of alternate routes. So, the host railroad must provide a "pilot" from their operating crew who is familiar with the territory to ride with our conductor and engineer," explained Cushine.

Because Amtrak operating crews, and often OBS crews, are required for the trip, the divisions work with the Crew Management Services department to coordinate staffing. Mechanical also plays the vital role of ensuring that the equipment is clean and in good operating condition.

Charter moves that involve high-ranking government officials, celebrities or other high-profile travelers have additional requirements. The Amtrak Police Department may work with local, state or federal authorities to ensure that necessary security measures are in place while station personnel help to provide privacy and keep operations working normally.

No Per-person Charge

Once the equipment, staffing, routing and other components are in place, the cost for the move is calculated based on all the expenses associated with the excursion. For example, the Mechanical department calculates a rate-per-day and a rate-per-mile that is passed on to the customer to cover the cost of wear and tear on the fleet. The host railroad also

Corridor Development in Motion

continued from page 1

tracks between Lancaster and Parkesburg, and No. 2 track between Paoli and Villanova by installing 150,000 new concrete ties as well as the installation of 24 track miles of new continuous welded rail.

All track improvements will be supported by a newly upgraded signal system capable of operating trains on both tracks in both directions. Rehabilitation of 30 under-grade bridges and structures, along with the rehabilitation of electric substations and the existing catenary system, are also scheduled through 2006.

Tree and brush cutting along the Harrisburg Line are additional long-overdue projects that will improve the functionality and efficiency of the Electric Traction and Communication and Signals operations. Since the early spring of 2004, Engineering has directed the clearing of overgrown brush on over 45 track miles and cutting a 250-foot radius around Frazer and Thorndale substations. This program has reduced the number of power outages and service failures by 20 percent since last spring.

All new track work is designated for required ballast renewal as well as complete resurfacing. In FY '06 the concrete tie and rail renewal work will continue on No. 2 track between Villanova and Overbrook, No. 3 track between Paoli and Overbrook and No. 4 track between Overbrook and the 36th Street Connection.

Another huge program undertaken by Amtrak in FY '04 and continuing through the summer of 2005 is the cleanup of nearly 30 years' worth of old track materials

that have accumulated along the railroad right-of-way. In addition to its unsightly appearance, the clutter causes drainage restrictions and makes use of the railroad's access roads difficult, which in many cases, limits response time to service delays.

Amtrak is currently using two Slot Machines to pick up and dispose of old ties and other debris, in addition to reestablishing and maintaining drainage requirements. As of the end of December 2004, over 110,000 scrap ties have been picked up along the right of way between Philadelphia and Harrisburg, with an estimated 20,000 remaining to be picked up for disposition by March 2005.

Approximately 27 miles of old rail and other track materials have been disposed of between Lancaster and Harrisburg, with an additional 25 miles remaining in the ongoing cleanup effort through this spring.

Years of discarded track materials, construction materials and other debris have contributed to thousands of tons of material requiring sorting and disposal. Sorting and disposal sites are set up at Thorn-dale, Downingtown, Atglen and Middletown and will remain in operation until all cleanup is complete in the summer of 2005. A massive sorting and cleanup program is near completion at Zoo Interlocking in Philadelphia, on the east end of the Harrisburg Line.

"For over 20 years this line fell victim to minimal maintenance as well as the lack of capital funding. There have been very few upgrades or improvements to this segment since the days prior to the bankrupt Penn Central railroad,"

said Program Director, Logistics Support John Lesh.

Noting that the project not only raised the condition of the line to a state of good repair, Gunn said it also "demonstrates how incremental improvements to existing rail corridors can go forward at reasonable cost and show real results in the near term."

The upgrading of the Keystone Corridor is a key part of the company's corridor development strategy and one of eight Tier I corridor routes in Amtrak's five-year plan unveiled last summer. The completion of the project relies on the availability of FRA grants for capital work.

Working with numerous state partners, Amtrak last spring unveiled its analysis of potential corridor development in a number of regions throughout the country. The study advances federal and state partnerships for passenger rail that the Bush administration has encouraged. However, any development will require federal matching dollars, and no program is yet in place to contribute capital funding to corridor improvements.

Overgrown trees and brush on the Harrisburg Line can cause power failures and service disruptions. The vegetation along the right of way in Conewago, PA, was one of the project's long-overdue targets.

The clearing of the brush in Conewago, PA, is one segment of the 45 track miles on the Harrisburg Line that have been cleared at the direction of the Engineering department. This program has reduced the number of power outages and service failures by 20 percent since the spring.

While states are at different stages of readiness for corridor development, those states that are best positioned for federal funding (Tier I states) have full support of state and local officials and the freight railroads, as well as detailed capital and operating plans.

John Lesh contributed this story.

Charter Services Adds Millions to the Bottom Line

continued from page 8

charges Amtrak a rate for operating over their railroad. There are additional costs associated with staffing the trains and providing food service that are also passed on to the customer.

Ladd also explained that Amtrak must track the cost of delivering the equipment to where it needs to be to meet the customer. "We don't have a pool of equipment in Seattle that is satisfactory for the Alki Tours group that operates an excursion the Pacific Northwest. The train set is generally sitting in Los Angeles, so we have to calculate the cost associated with

bringing the trains from Los Angeles to Seattle and returning it back to Los Angeles at the end of their trip," he added.

Insurance is another expense that has to be considered in the overall cost. While Amtrak's regularly scheduled service is self-insured, with some outside coverage for catastrophic events, Amtrak's Risk Management department must secure excursion liability insurance for passengers and equipment involved in charter trains.

And, of course, overhead and an incremental profit are included as well.

After all the costs are totaled the rate is presented to the customer. Sometimes the cost of the charter train is more than the customer can afford. "When a customer indicates that the charter is too expensive, we present the customer with options for travel on our regularly scheduled service, through our Group Sales department," said Hughey. "We may be able to add a car or two to the train consist and offer them the basic service at a more affordable cost."

"On the flip side, when a customer comes to our Group Desk representatives with special requests, we can add value to their experience

by incorporating services such as specialty catering," added Ladd.

"Even though it appears seamless to the customer, operating a successful charter train takes tremendous effort by everyone involved and our employees do a terrific job. Whether they're serving food on board, assisting with luggage or even decorating the trains — which we occasionally do — our employees deliver outstanding customer service," stated Cushine.

Amtrak Teams Up with Thomas & Friends™

To capture the imagination of children and adults and build a love of rail travel among our youngest passengers, Amtrak is joining the world of Thomas & Friends that includes books, videos and a television series featuring the popular children’s character Thomas the Tank Engine.

In January, Amtrak signed a comprehensive agreement with Connecticut Public Broadcasting, Inc. and Gullane Entertainment Inc. that includes the sponsorship of several Thomas & Friends products, including the childhood classic television series “The Thomas & Friends Show.”

“We are excited to have an opportunity to partner with a true leader in the children’s entertainment industry,” said Merchandising/Marketing Director Debbie Varnado. “This partnership will increase awareness of Amtrak and

“This partnership will increase awareness of Amtrak and build ridership among the millions of Thomas & Friends families across the country.”

Debbie Varnado
Merchandising/Marketing Director

build ridership among the millions of Thomas & Friends families across the country,” Varnado added.

Beginning in March, Amtrak will sponsor 13 new episodes of the half-hour “The Thomas & Friends Show” that will air on Public Broadcasting Service stations. Each episode follows the adventures of Thomas and his friends on the imaginary Island of Sodor. The program is based on books written by best-selling author and creator of the Thomas the Tank Engine character, Reverend W. Awdry.

The sponsorship includes two 15-second credits at the opening and close of each broadcast. With each episode, viewers will see scenic Amtrak footage while hearing the message: “*Because nothing inspires the imagination quite like the magic of train travel, Amtrak is proud to support Thomas & Friends on PBS Kids. You can never have too many friendly faces out on the rails.*”

The Thomas series will air on weekends on PBS affiliates, and many stations may also air reruns of the episodes, which will also feature Amtrak’s 15-second message.

Video Promotes Kids-Ride-Half Fare

In March, Amtrak will promote its low children’s fare with the release of the new Thomas & Friends video, “Thomas’ Sodor Celebration,” a collection of classic stories about Thomas and his friends riding the rails to exciting adventures. With the purchase of the video, customers will get a copy of Amtrak’s Kids-Ride-Half Fare advertisement in each video box.

The partnership continues through the fall, with the September release of the “Calling all Engines” video that will include an Amtrak sweepstakes offer.

Amtrak logos will also appear in Thomas & Friends print advertising that will run in Child, Parents, Scholastic Parent & Child, TV Guide and Nick Jr. magazines during the winter and spring.

Marketing Efforts to Boost Revenue

continued from page 7
Amtrak, Raleigh, NC, radio stations WFXC/WFXK and the newest NBA team — the Charlotte Bobcats — to publicize *Carolinian* and *Piedmont* service to the game.

In December and January the railroad also launched its “Amtrak Game-time at the Garden” Sweepstakes. AGR members in select East Coast states who participated in the sweepstakes were automatically entered in a drawing for a chance to win a VIP trip to New York City to see the Big East Men’s Basketball Championship semi-finals and finals in March.

Another collegiate basketball sponsorship has been initiated this season with the University of Maryland Women’s basketball team, as part of which half-time contest participants at three Atlantic Coast Conference games will vie for free travel on Amtrak.

Last month, Amtrak supported the 18th annual East-West Shrine game — the premier All-Star college football game — held at SBC Park in San Francisco.

“Amtrak’s continued sponsorship of the East-West Shrine game is important, because it not only

enhances the company’s visibility, but also helps people in need,” said Senior Marketing Officer Erin Francis. As part of the annual event, players as well as Shriners traveled aboard a *Capitol Corridor* train from the Bay Area to Sacramento in January to visit patients at the Sacramento Shriners Hospital for children. Amtrak provides transportation for patients as well as their parents or guardians for appointments throughout the year.

Proper Reporting is Key to Reducing Injuries

Because safety is Amtrak’s top priority, the reporting of on-duty injuries and illnesses by supervisors and managers in a timely, accurate and complete manner is crucial to meeting FRA regulatory requirements, as well as serving as effective tools for the prevention of future incidences.

What some employees may not know is that the content of the reports provides critical information regarding the causes of on-duty injuries and illnesses that is used to develop programs to foster employee and passenger safety.

One such course, *Accident and Incident Reporting Training (AIR)*, covers how to handle an injury or illness. The course is mandatory for managers and supervisors and is available on the Amtrak Intranet by clicking on the Safety tab.

It’s important that not only managers and supervisors, but all employees, be familiar with Amtrak’s Accurate Reporting of Injuries and Illnesses Policy. (It’s included in the Amtrak Procedures and Information Policy under the new 3.0 Operations section as policy number 3.11.0.) The policy details the procedures required of managers and supervisors for reporting on-duty injuries and illnesses incurred by employees and non-employees who may be injured on Amtrak property or on Amtrak equipment.

Injury Reporting Steps:

1. Assess the situation for the seriousness of the injury.
2. Notify the proper response agency (call 911 for emergencies or a local medical agency).
3. If necessary, assist in transporting the employee to a recommended medical facility. If you need assistance in locating a facility, contact the Amtrak Injury Care Hotline at 1-800-505-5549. The injury care coordinator will provide the name of a facility and call ahead to the facility to notify them of your arrival.
4. Report the injury to the Injury Hotline.
5. Complete the reporting forms, which can also be found on the Intranet under the Library tab and then select forms. (NRPC 260, NRPC 2265, NRPC 488, NRPC 2265, NRPC 3056, NRPC 405 and NRPC 3116)
6. Submit the completed forms to Central Reporting within 8 hours of the incident and mail the originals to the local Claims Office (Central Reporting Fax: 1-800-888-2185 or ATS 777-2595).

The policy also includes information about the proper use of injury reporting forms as well as the steps to be taken to ensure that all injured persons are cared for and receive proper medical attention whenever an injury or illness is reported.

An important component of the injury reporting process is that employees know that they will not be harassed or intimidated because of the injury or illness. It’s important that all employees be aware of the following, which is part of the 3.11.0 policy, concerning the

reporting of accidents, incidents, injuries, and occupational illnesses without harassment or intimidation:

Amtrak is committed to complying with the letter and spirit of the Federal Railroad Administration’s accident reporting regulations. Accordingly, Amtrak requires that any accident, incident, injury or illness, arising from the operation of the railroad be reported accurately and completely. Amtrak will, under no circumstances, tolerate harassing or intimidating conduct by any employee that is

calculated to discourage or prevent any individual from receiving proper medical treatment or from reporting an accident, incident, injury or illness.

Any employee who engages in such harassing or intimidating conduct will be subject to discipline, up to and including termination. In addition, civil monetary penalties can be assessed against any railroad employee, executive, manager or supervisor, who willfully causes a violation of non-compliance with any part of 49 CFR Part 225 of the Federal Railroad Administration. Any employee who has reasonable grounds to believe this policy statement has been violated should contact the Office of the Inspector General at 1-800-468-5469 or write to Amtrak, Office of the Inspector General, P.O. Box 76654, Washington, DC 20013. The Office of the Inspector General will conduct an inquiry immediately following the receipt of the complaint. If the Office of the Inspector General finds that sufficient evidence exists to support the complaint, a comprehensive investigation will be initiated. Should the inquiry determine that insufficient information existed to support the complaint, the employee will be notified and the case administratively closed.

Right Care Day One is a Win/Win for Everyone

Right Care Day One is a voluntary joint labor-management program implemented by the Labor Relations, Health Services, Claims and EHS departments along with labor unions to help employees unable to fulfill their regular job requirements due to an injury to be productive in a less physically demanding job while still under the care and guidance of a physician.

The program matches an employee recovering from an injury with tasks that suit the employee’s performance level, considering his or her injury.

For example, a Maintenance-of-Way employee recovering from a sprained ankle may be offered a doctor-approved desk job while the injury heals.

The following exchange between Charles McMahon, senior director Equipment, Engineering department to Patrick Clarke, Co-Chairman, Right Care Day One Program, illustrates how the program benefits the employee, the departments involved, and Amtrak as a whole.

Mr. Clarke:

I would like to thank you and Loretta Burton [Manager, Transitional Work] for your assistance in the Maintenance-of-Way parts salvage operation at Wilmington, DE. To date we have recovered over \$1 million in Maintenance-of-Way parts. These parts will be utilized in future repair programs and on production teams.

The employees that Ms. Burton has sent us are very eager to work despite various limitations. The common theme among this group is; "I do not want to sit at home."

These employees have aided our recovery and restocking efforts and are a pleasure to work with.

With regards,
Charles G. McMahon

Mr. McMahon:

Thanks so much for your help in developing the partnership between your team and Right Care Day One. This is a perfect example of one of the strong partnerships that has been forged by the RCD1 team and one of our Engineering groups that has created an incredible win/win for Amtrak and the injured worker. The injured worker heals, remains productive and Amtrak benefits.

We need to continue to be creative and develop win/win partnerships like this throughout the corporation. It is the creative thinking by managers like yourself that has made the RCD1 program one of the most successful and innovative programs in the country.

Best,
Patrick Clarke

Marketing Launches Pricing and Promotional Strategy to Boost Revenue

continued from page 1
early February, the Westwood One Football sponsorship continued. (For more details about these promotional campaigns, please see related stories on page 7.)

Amtrak is also currently reviewing the potential benefit of a small group discount fare to attract new riders to *Regional* service in the Northeast Corridor, while making certain that the action builds — and does not dilute — the revenue target. Under the new advance reservation fare, groups of three to six people traveling together would enjoy significant savings.

In addition to these efforts, several pricing changes were made in mid-January in markets that could support modest increases. Most increases were in the 3-percent range, including the fares on *Acela Express*, *Regionals* and long-distance coaches. However, on some long-distance trains, sleeper fares were increased between 3 percent and 15 percent.

Winter Storms Impact Operations and Ridership

While January ridership numbers were not available at press time, they were expected to reflect the impact of the devastating storms in the West last month. Mudslides and erosion damaged many

segments of Union Pacific Rail Road track and cancelled numerous *Pacific Surfliner* and *Coast Starlight* trains in California. In Colorado, the *California Zephyr* was not expected to restart operations until Jan. 28th at the earliest.

Airlines' Fare Simplification Mirrors Amtrak Action

During the first week in January, several of the major airlines introduced a series of simplified and reduced fares for its passengers. These actions follow fare simplification Amtrak had implemented two years ago. Amtrak simplified the way it charges passengers by reducing fares and restrictions and easing penalties.

Amtrak is monitoring the situation for any potential impact resulting from these reduced airline fares and when necessary, will adjust accordingly. However, it's important to keep in mind that passenger rail competes not just against the airlines, but also against passengers' perceptions about the comparative cost and convenience of driving, taking the bus or just not traveling. Amtrak's strategy continues to be: Make fares simple to understand, easy to purchase and flexible to change.

VITAL STATS

for December 2004

	Month		Fiscal year-to-date	
	Budget	Actual	Budget	Actual
Safety				
Reportable Injury Ratio	(goal) 3.3	2.5	(goal) 3.3	2.9

New Columbia Pictures Movie Promotes Amtrak

Amtrak, Columbia Pictures and Revolution Studios promoted the "Catch a Ride to Hollywood" sweepstakes last month to generate traffic and interest in Amtrak service and the Columbia Pictures movie, "Are We there Yet?" The film, released in January, is rated PG and features Ice Cube, Nia Long, Jay Mohr and Tracy Morgan and involves cross-country train travel.

The sweepstakes offered movie fans a chance to win the grand prize of a family trip for four to Los Angeles (via train or air transportation) to see an upcoming Columbia Pictures movie

premiere. The grand prize package also included a rental car and two nights' hotel accommodations. The first-prize winner won four round-trip coach tickets to any Amtrak destination. Five second-place winners received Amtrak model train sets and ten third-place winners were recipients of an Amtrak gift package.

The sweepstakes were held last month in 13 key markets: New York City, Los Angeles, Chicago, Washington, D.C., Oakland, Philadelphia, Dallas, Atlanta, Miami, Seattle, Boston, Portland and Detroit.

FRONT LINE FOCUS

Dear Amtrak:

I am writing to commend the performance last night of [Red Cap] Jaime Merino. My wife and I were seeing off some friends on the train to Lamy and had planned to have an early dinner beforehand ... we arrived in the middle of a torrential downpour, and handed the car to the valet parking attendant with our friends' luggage still inside.

We were not sure of the procedure for checking in, checking luggage, etc., but Jaime politely approached us and explained what needed to be done. He then took us in his cart to the basement garage, got the keys from the attendant, checked in the bags, brought the tags to the bar

where we were by now installed, and picked us up, again in his cart, punctually at 6:30 as we had suggested. He took us all to the train ... and then brought us back to the station hall. All the while, he was extremely friendly and pleasant, and also was able to answer questions for other passengers as we moved around the station.

All in all, I cannot think how Jaime could have performed his duties better. He clearly takes pride in his work, and is a credit to your organization.

Sincerely,

Ian W-T

Trained to Handle Service Delivery Challenges

No doubt about it — poor on-time performance (OTP) is by far the biggest driver of Amtrak customer dissatisfaction. Delays not only affect the contentment of passengers, but also seem to amplify any other shortcomings that may arise.

It's Amtrak's biggest service challenge. While the railroad continues to shorten its lengthy backlog of deferred maintenance on infrastructure and equipment, the progress is incremental. Failure-prone bridges on the Northeast Corridor could sever the route on any given day. Chronically poor OTP on some

routes doesn't seem to be getting any better. And the reality of the delay, faulty climate control or dirty equipment is shouldered by Amtrak's front line service employees aboard the trains.

The company continues to strive to make progress on some of these fronts; its five-year plan for restoring the fleet has yielded fewer equipment complaints, showing a 1-percent decline in the first quarter.

Meanwhile, it is also dedicating training resources to better equip

continued on page 6

Ridership and Ticket Revenue Numbers Bring January Surprise

After three months of weaker-than-expected ridership and ticket revenue, Amtrak's January results showed a surprising improvement, in light of bad weather that cancelled or truncated numerous trains across the country during the month.

Winter storms in California resulted in mudslides and other conditions that wreaked havoc on Amtrak operations in January. There were 35 frequencies cancelled or truncated for the *California Zephyr*, 48 for the

Coast Starlight and 270 for the *Pacific Surfliners*. At press time, the *Surfliners* and the *Coast Starlight* had not yet returned to full operation.

In the East, 162 trains were cancelled or truncated because of the snowstorms that hit the system; 78 of these trains were *Acela Express* and *Metroliner* frequencies.

Notwithstanding these major blows, ridership in January was essentially even with last January,

continued on page 5

West Coast Recovery Plan In Motion

Amtrak's Marketing and Sales department is working to rebuild ridership and revenue in the aftermath of severe winter storms in the West that caused mudslides, sink-holes and rockslides resulting in significant disruption to three train services during the months of January and February and a revenue loss that could reach \$3.5 million.

The recovery plan for the *Coast Starlight*, *Surfliners* and *California Zephyr* relies on a combination of advertising, a special fare promotion, alerts to the news media, support from convention and visitors bureaus, outreach at travel trade shows and added financial support from the state of California.

"Amtrak and Caltrans shared the approximately \$70,000 cost of the recovery advertising for the *Pacific Surfliner*," said Carol Shannon, director, West Marketing. "And because the railroad was shut down again in February, we were able to move some print ads and traffic advisories forward a month into March."

The extra funding boost made it possible to create new print and radio advertising for the *Pacific Surfliner* in markets north of

Los Angeles that trumpeted the return of the service with the headline "The *Pacific Surfliner* trains are once again running between L.A., Santa Barbara and Goleta. So sit back, relax and let us get you reacquainted with a more simple way of travel."

Similarly, the *California Zephyr*'s return was promoted with a special ad in newspapers and on travel Web sites, announcing:

"The *California Zephyr*, once again traveling through the majestic Rocky Mountain."

"Since the return of service of the *California Zephyr* at the end of January, we have recaptured much of the Emeryville to Reno business as displayed by the high-peak load factors (a measurement of ridership when the train has the most passengers) on the westbound *Zephyr* trains. However, the overall demand remains low, which is not uncommon for this time of year," said Revenue and Capacity Analyst Gene Rinear.

Since the *Coast Starlight* was out of service for nearly two months, an added incentive is being promoted on California Convention and Visitor's Bureau Web sites, on a

rack card distributed at trade shows, in newspapers insertions and at California Visitor's Centers. A 25-percent discount off the best available fare is being offered for travel through May 26.

In addition, convention and visitor's bureaus in affected markets are including Amtrak's return-to-service messages in e-mails to their memberships at no cost to Amtrak.

The resumption of the *Coast Starlight* on March 1, marked the end of the hundreds of departures that were cancelled for all three services during the last two months.

"This was the first time in our history that the San Diego to San Luis Obispo route had been shut down in both directions, and we recognize the hardship this had on

our traveling public as well as our employees," said Richard H. Phelps, general superintendent, Southwest Division. "We worked diligently with the Union Pacific, which had the task of restoring the railroad, but our primary focus was — and always is — on safety."

"The cancellations were long and arduous for our employees, especially after the holidays," said Lynn Berberian, superintendent of Passenger Services for the Southwest Division. "Most of the affected Train and Engine employees were rotated into block training. However, on-board service and station employees that were impacted by the emergency annulments went through a difficult time, and I applaud their commitment and patience while the restoration of the right-of-way was in progress," added Berberian.

The train bed along the Metrolink Ventura subdivision sinks into the newly formed river as torrential rains hit Southern California in late February.

Barely visible tracks are covered with debris and mud at Seacliff on the Santa Barbara subdivision. The entire subdivision was hit hard by the storms in Southern California, where Union Pacific crews worked to restore the tracks for Pacific Surfliner service.

TRAIN OF THOUGHT

I'm going to keep my message short this month, rather than share information about next year's budget that may be old by the time you get this issue of *Amtrak Ink*. I will make sure that I keep you informed about budget news through the *Employee Advisories* that are sent via e-mail and posted on bulletin boards in crew bases and facilities.

I do hope that you've taken a look at our report to Congress, which is available online (on the Intranet and Internet) and was issued last month with a cover letter from our Chairman, David Laney.

David L. Gunn

FY '04 On-duty Reportable Injury Rate Continues Improving Trend

Amtrak has dramatically improved its safety performance over the past several years, as the employee reportable injury ratio continuously dropped from 4.3 in FY '01 to 3.8 in FY '04. By continuing to focus on safety and operating rule compliance, conducting quality job briefings and identifying and addressing potential job hazards, Amtrak achieved its FY '04 safety ratio based on 763 reportable injuries, compared to a safety ratio of 3.9 in FY '03, which was based on 852 reportable injuries. Contributing to this improvement were the FY '04 President's Safety Contest Award recipients, which

achieved the lowest employee reportable injury ratio in each of the four following categories: Engineering, Mechanical, Transportation and Commuter Service. The groups recognized for their FY '04 outstanding safety records are the Engineering department's West Division with a 2.4 reportable injury ratio (one injury), the Mechanical department's Wilmington Shops with a 2.3 ratio (eight injuries), the Transportation department's New England Division with a 3.1 ratio (23 injuries) and the Commuter Service MARC operation with a 1.8 ratio (two injuries). The award presentations will be made at each of the

winners' respective President's Service and Safety Awards ceremonies this year. Amtrak also continued to reduce passenger injuries in FY '04. Since FY '01, on-board passenger injuries have dropped by 33 percent and station passenger injuries have dropped 11 percent. Over last year, passenger injuries on board trains decreased by 27 percent and in stations they declined by 7 percent. The reduction can be attributed to a system-wide effort by Amtrak's on-board and station personnel to identify "at-risk" passenger behavior and to intervene quickly and decisively to eliminate potentially hazardous situations. Amtrak's management and craft personnel continue to focus their attention on safety-sensitive activities including boarding and detraining, body posture and footing while trains are in motion, travel on escalators and stairs, and movement and placement of luggage.

"The Operating department's increased emphasis on safety awareness and revitalized training initiatives will help us reduce injuries with our overall goal of zero injuries," said Roy Deitchman, vice president of Environmental Health and Safety. "The reduction in employee and passenger injuries in FY '04 indicates that using our basic safety management tools can result in measurable injury reductions." Reportable injuries are those that require medical treatment exceeding first aid, or that result in lost time or restricted duty. To allow a comparison of reportable injuries among various departments and corporations, the number of reportable injuries are measured per every 200,000 hours worked.

It's Time to Submit Nominations for President's Service & Safety Awards

The nomination period is now open for the 2005 President's Service and Safety Awards program. Employees have an opportunity to nominate an outstanding employee, a valued Amtrak supporter, or themselves for making an outstanding contribution to Amtrak during calendar year 2004.

Employees can access the President's Service and Safety Awards nomination form (NRPC 3204) through the Amtrak Intranet by clicking on the "Library" tab and selecting "Forms". Department administrators can also use the Intranet to order a supply of forms from Western Folder, or they can fax a copy of a forms request to Western Folder. Forms are also available at all Human Resources offices and other locations within the divisions and at headquarters. Locations are encouraged to download a supply of forms or order them from Western Folder. All nominations must be received by March 31, 2005. This year, each category has a separate form, which includes the specific criteria associated with the category.

The awards program ceremonies will be held this fall at several locations around the country.

Dear Amtrak Co-workers:

As the winter months come to a close, the New England Division looks forward to the start of spring, while remaining prepared for a March snowfall!

Every day, all Transportation department employees — in conjunction with our Mechanical, Engineering, and High Speed Rail department employees — make every effort to ensure the safety of our passengers and co-workers, maintaining the highest quality of service delivery and on-time performance. Despite a very difficult January, the results of our efforts and teamwork are clearly evident, as our current overall on-time performance and minutes-of-delay are more closely aligning with the goals we set for ourselves.

At this time, the New England Division is providing support to the Planning and Contract Administration department as new contracts are being negotiated to continue to operate the Shore Line East commuter service for the state of Connecticut, and the Downeaster service for state of Maine and the Northern New England Passenger Rail Authority. Our relationship with both entities has been very good over the years, and I look forward to continuing those relationships. I am pleased with both services as the Portland-based Downeaster crews are consistently ranked at the top of the Customer Service Index and our on-time performance for the Shore Line East service is exceptional.

February marked a time for celebration. The New England Division Diversity Advisory Council proudly held its third annual Leroy Fergus, Jr. Diversity Award for Excellence ceremony. Leroy was an employee whose leadership and commitment in the areas of diversity, conflict resolution and mediation set a standard for excellence for the New England Division, as does the council. This annual event not only allows us to honor our employees in the area of diversity, but also commemorates the accomplishments of past and present Transportation officials, railroad workers and government representatives.

On another mark of distinction, it is that time of year to nominate your fellow co-workers for the President's Service and Safety Awards. It was such a pleasure to celebrate the career successes of the nine New England Division award recipients back in November, three of whom were Transportation employees. I encourage all employees to take part in the program by nominating a co-worker, an Amtrak supporter or yourself for this prestigious award.

With the advent of spring, and environmental awareness in mind, Amtrak is committed to preserving the nation's resources and the environment for our customers, our neighbors and our employees. Please take the time to participate in both at-work and community activities to help conserve and protect the environment. Another simple and productive approach is a major cleanup in all divisions.

In the New England Division, we will all take part in the annual Spring Cleanup to focus on improving our image. Our appearance is not limited to employee uniforms; it extends to our facilities, our offices and our desktops. Our appearance says a lot to our customers — our appearance reflects the professionalism and the pride we take in our jobs and the workplace.

In keeping safety, both personal and operating, in the forefront, the Transportation department strives for excellence. Although we have started FY '05 with room for improvement, I have every confidence that we will make the necessary efforts to achieve our goal. The devotion and commitment to safety by the New England Division's safety committees and employees is second to none as evidenced by the fact that we succeeded in meeting all of our major goals in FY '04, including an FRA safety reportable injury ratio of 3.1 — the best in the country for the Transportation department.

Operating and managing a division of the Transportation department that meets its goals is neither an accident nor luck, it is accomplished by knowing our jobs, constantly talking with our employees and each other, paying attention to details, and taking pride in not only what we do, but also how we do it.

From the behind-the-scenes employees to those on the front line, the New England Division's employees understand that our service is a 24-hour a day, 7-day a week operation. Thanks to each of you for your efforts, I look forward to a successful FY '05.

Sincerely,

Michael DeCataldo

Labor and Management Convene Engineering Safety Congress

Attended by more than 120 labor and management employees, the first Production Engineering Safety Congress was convened to determine root causes and contributing factors of injuries or close calls and to develop steps to prevent re-occurrences.

At the Jan. 20 meeting, participants were organized into discussion groups and tasked with addressing these issues.

With resolve to improve the safety of their fellow employees, the participants summarized and presented their group findings and recommendations to the congress. Several of the recommendations included the need for thorough job briefings, which includes a discussion of potential hazards and

necessary safeguards. The importance of adequate training and following safety rules was also stressed, adding that rule violations should not be overlooked. At a minimum, they said, any employee who violates a safety rule should be counseled by his or her foreman or supervisor.

Bruce Willbrant, NEC deputy chief Engineer Maintenance, summed up the meeting by saying, "We can all work together when it comes to the safety of our employees and I personally thank Jedd Dodd for his hard work in preparing and support of this Congress."

Dodd, who is the general chairman for the BMWE and who proposed the creation of the safety congress, said, "We may disagree on many

issues, but when it comes to safety we must work together for a safer work environment."

The program closed with a ceremony to recognize work groups

that completed the 2004 injury-free or met the FRA Frequency Rate Goal.

2004 Safety Congress Award Recipients

Buildings and Bridges Construction:

B&B Fabrication – 2,254 days injury-free

Maintenance of Way Equipment and Vehicles:

Equipment and Vehicles – 5,496 days injury-free

Rail Pick Up Unit – 2,612 days injury-free

High Speed Surfacing:

Unimat Surfacing – 658 days injury-free

HSS Mid-Atlantic – 1,735 days injury-free

Track:

Track Laying System – met FRA safety goal of 3.4

Presidential Inaugural Events Made for Unusual Day at Union Station

January often brings weather challenges to the Northeast, but in Washington, D.C., every four years, January’s presidential inaugural events bring additional challenges to the city. This year was no different as the city was overtaken by many events, including two at Amtrak’s Union Station, which were attended by the president and Mrs. Bush as well as the vice president and Mrs. Cheney.

The 55th presidential inauguration celebration included the swearing-in ceremony, special dinners, parades and balls that involved unprecedented levels of security implemented and enforced by a range of federal and local security and law enforcement entities. The dinner and ball that took place at Union Station presented an opportunity for Amtrak to work with the U.S. Secret Service and other agencies.

“Now, more than ever, law enforcement and security agencies must work with each other to provide safe and secure environment,” said Amtrak’s Chief of Police Sonya Proctor. “During this national special security event, Amtrak Police Department members partnered with local and federal agencies, bringing their expertise to the team.”

An operational Multi-Agency Command Center (MACC), located in a conference room in Union Station, included representatives from the APD, Secret Service, Amtrak Emergency Preparedness, the D.C. Metropolitan Police Department, the Maryland Transit Administration and the U.S. Capitol Police. All radio calls for service were relayed to the MACC by the National Communications Center (NCC) and the MACC then provided the NCC with the appropriate disposition.

The Amtrak Mobile Command Center (MCC-1) was located at the west end of Union station, providing a secondary command center, should any occasion arise that would require the MACC to

evacuate. The MCC-1 was staffed by an APD officer. Dedicated to cover the Candlelight Dinner and the Freedom Ball, the Washington APD staff was supplemented with an additional six APD members and a canine unit that were brought in from Baltimore, while another seven APD

“Every station employee working during the two-day event projected a professional image for Amtrak and provided help for scores of travelers.”

Tom Guerin
Assistant Superintendent of Stations

members and two canine units were brought in from Philadelphia and Wilmington.

In addition, there were two response teams, each with five APD officers and a canine unit, that were on stand-by until needed, as determined by the operations commander.

Amtrak passengers and employees, were restricted from using the main entry to the station, which was open only to the 1,500 ticketed guests attending the dinner held in the Main Hall of the station on Jan. 19. The Freedom Ball, held on Jan. 20, attended by more than 5,500 dignitaries and guests, was held in the East, Main and West halls of the station and also resulted in

to the West dock, with the dock shut down by the officer by 4:30 p.m. on both days.

While all this was taking place, the Passenger Services department worked closely with other Amtrak departments to keep the station operation running smoothly. Assistant Superintendent of Road Operations Moe Savoy and Director of Emergency Preparedness Larry Beard worked with the APD and were on hand at the command center. From there, they could communicate to Assistant Superintendent of Stations Tom Guerin necessary information to Amtrak front line employees in a timely way.

Adding another level of confusion to the day was the low-speed derailment of train 132 shortly after it departed the station about 9 a.m. on Jan. 20. While there were no injuries in the derailment, the train blocked several tracks, limiting rail traffic to and from the station for the day. Trains were being turned at New Carrollton and passengers were being directed to and from that station.

Ticket agents’ breaks and meal periods were adjusted to handle the exchange and reselling of tickets, which made up the bulk of their transactions on Jan. 20.

Agents, accounting clerks and line monitors were used as information personnel and to direct passengers to and from the Metro Rail Station to transfer to New Carrollton. Despite the ropes and stanchions being rearranged in front of the

purchase tickets and essentially resulting in a one-way in and one-way out ticket-selling process. Once Bush and Cheney arrived each day, the ticket counter was closed and everyone was required to vacate the area. During the ticket counter closings, passengers could obtain tickets from Quik-Trak machines and Club Acela.

Baggage was checked at the ticket counter until 6 p.m., at which time an alternative baggage check system was moved to the baggage claim area. Additionally, portable screening devices were set up in the lower-level baggage room. Amtrak employees and TSA representatives worked together to screen all inbound and outbound checked baggage and packages.

“Every station employee working during the two-day event projected a professional image for Amtrak and provided help for scores of travelers,” said Guerin. “It was a lot of work for everyone, but it was a nice break from the routine operation.”

Fortunately, as many local D.C. businesses and the government were closed for the inauguration, there were fewer commuters and government employees traveling that day and passenger traffic was not as heavy as usual.

“Now, more than ever, law enforcement and security agencies must work with each other to provide safe and secure environment.”

Sonya Proctor
Amtrak’s Chief of Police

closure of the front station to anyone without a ticket.

Access to other areas of the station, including the ticket counter and boarding gates, was limited to the doors on the west side of the building. APD also assisted with passengers who were confused about where they could and could not go during times that areas of the station were blocked off. An APD officer also verified and checked manifests on all deliveries

ticket counter, ticket agents worked diligently to keep the traffic flow moving.

On both days the ticket counter was swept by security personnel, which took about a half hour. Additionally, agents had to go through the security system prior to continuing their tour of duty. Eventually, access to the left side of the ticket counter was blocked, limiting passenger access to

Empire Builder To Serve As Model for Improving Long-distance Train Margin

Amtrak has embarked on planning a multi-faceted initiative to create a prototype for improving long-distance train margins (revenue minus the costs) by improving service, equipment and amenities that add value for passengers.

In August, Amtrak plans to launch enhanced *Empire Builder* service. The *Empire Builder*, which links travelers from Chicago to Seattle and Portland, was chosen as the model for this undertaking because it has one of the best on-time performance records and customer service index scores of Amtrak’s long-distance trains. It also offers spectacular scenery and a rich railroad legacy of over 75 years, coupled with a team of on-board and station employees who enjoy

an excellent track record of delivering excellent customer service.

“The goal is to place the company in a better position to increase our

ticket prices by offering passengers a premier travel experience with enhanced services that command a higher fare, at a nominal cost to the company,” explained Service Delivery Chief Kevin Scott.

To ensure the success of this project, numerous departments have put forth a cooperative effort to research and follow through on their respective areas of expertise. Employees at

Beech Grove, for instance, are remanufacturing equipment to be used for the service. Amtrak President David Gunn visited the Beech Grove facility last month to see first-hand the progress being made to ready the equipment for the upcoming launch date.

The Service Delivery, Marketing and Transportation departments are collaborating to establish standards for service in the Dining, Lounge, Coach and Sleeping cars. A comprehensive marketing and communications plan is also being developed to generate visibility and drive ridership and revenue.

Several on-board service improvements are being developed for Sleeping car and coach class

Ridership and Ticket Revenue Bring January Surprise

continued from page 1

with 1,839,617 passengers compared to 1,831,510; a modest .4 percent increase. Through the first four months of FY '05, 8.3 million passengers took Amtrak, up slightly over last year’s pace (8.2 million); about 2 percent over last year and on budget.

A few particularly strong performers contributed to the ridership and revenue numbers. *Acela Express* ridership and revenue did 10 percent better in January than it did last year and was on budget. Revenue on the north end, between New York and Boston, rose 15 percent, partly attributable to the fare increases put in place in January.

The good news for Amtrak was that ticket revenue performance in January nearly made the budget, in spite of the railroad’s operational difficulties. Ticket revenue was \$90,873,672 in January, or about \$1 million less than last year and about \$2 million less than the budget. Ticket revenue in the past four months was \$411 million, or about \$22 million below the \$433 million budget.

January long-distance ridership was 10 percent below last year and 11.5 percent below budget. The effects of the turbulent weather did spoil the numbers significantly; long-distance ridership would have landed 3-percent less than last year, had it not been for the weather-related disruptions.

The disruptions had an even more damaging effect on ticket revenue. Without the approximately \$2.6 million ticket revenue loss due to the weather-related events described earlier, ticket revenues would have closed the month on budget.

Working to reverse the impact of the winter weather and the slow travel economy, Amtrak introduced several strategic marketing initiatives last month (see related story on the West Coast recovery effort in this issue), including the rollout of its winter/spring long-distance train advertising campaign and *Share Fares*, a new small group discount program on seven East Coast services.

The current long-distance train promotional campaign consists of

participating hotels — an attractive discount off the already low prices offered by hotels.com.

Most major newspaper, magazine and radio advertising starts this month and continues through May. Advertising for Amtrak long-distance trains can also be found online at Travelocity, National Geographic, AOL and other sites.

The new *Share Fares* offers passengers traveling in groups of three to six people substantial savings for travel between Feb. 22 and Aug. 31. The fares are good on seven services: *Downeaster*, *Empire Service*, *Ethan Allen*, *Keystone* (between New York and Philadelphia only), *Maple Leaf*, *Regional* and *Vermont*. Under *Share Fares*,

reducing its own revenue, the *Share Fares* require a three-day advance purchase, is not available for peak travel periods (see the Amtrak timetable), is subject to black-out periods, and is non-refundable. Despite the restrictions, market research has indicated that *Share Fares* will be a new revenue generator. Amtrak will monitor the results carefully, however, to determine if the *Share Fares* could be extended to other services in the future.

The marketing efforts underway are expected to mitigate the setbacks that the railroad experienced in January. However, anticipated losses associated with the *Pacific Surfliners* and *Coast Starlight* are expected to continue

Ridership and Ticket Revenue for January 2005			
Month of January	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	1,831,510	1,832,801	1,839,617
Ticket Revenue	\$91,731,905	\$93,065,264	\$90,873,672
Fiscal Year-to-date	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	8,169,712	8,297,259	8,339,771
Ticket Revenue	\$418,686,951	\$433,236,997	\$411,090,314

print, radio and Internet advertising with new graphics by artist Michael Schwab and features low fares between select city pairs Amtrak serves. As an enticing added extra, the campaign will offer a \$25 hotels.com rebate for passengers who book two nights at

the first two passengers in the group pay the standard fare and each additional passenger, up to a total of six traveling together, pays 10 percent of the standard fare.

To make sure that Amtrak is not diverting existing passengers and

to affect ridership in February, and initial February indicators point to a continuing general weakness in the travel economy.

Service Delivery Challenges

continued from page 1

its front line employees with the skills to better problem solve, and to manage difficult situations without compromising customer service.

“Our front line employees bear the brunt of whatever goes wrong. Whether it’s a freight delay, broken refrigerator, or a dirty bathroom, they have to manage it, up close and personal, and are expected to do so with a smile on their face,” said Ed Walker, vice president, Transportation.

This winter, Amtrak invited current and former customers to participate in 15 focus groups across the country to better understand the key service issues that influence ridership and to single out ways to address problem areas.

The research revealed that customers in the groups said they enjoy long-distance travel because of the relaxing and social nature of their trip. Friendly employees who are courteous and helpful, and the comfort and privacy of sleeping car accommodations add to the pleasurable experience.

Short-distance customers prefer travel on Amtrak because the trains generally leave on time, it offers convenient city-to-city travel during which people can plug in their laptop and get work done. For those who choose not to work, the train offers a comfortable environment in which to relax or a peaceful ride in the Quiet Car.

But it is the bad news that puts ridership and revenue at risk. On-time performance (OTP) and the delivery of on-board service were popular subjects of discussion. According to the members of the groups, poor on-time performance, the lack of announcements and information, rude and uncaring service, an unsatisfactory on-board environment (including bathroom cleanliness), and inefficient food service are all factors that don’t make it worth the price of the ticket. Essentially, the bad experiences undermine the value of the trip.

“People make deliberate choices about how they’re going to travel, and base their opinions on past experience,” said Barbara

Richardson, vice president, Marketing and Sales. “We must offer an appealing product from start to finish, if we expect people to continue to ride our trains and build customer loyalty.”

Not surprisingly, on-time performance was identified by the focus group participants as the biggest factor that affects ridership. First-quarter customer comments about on-time performance rose 27 percent over the first quarter of last fiscal year (see related story on the facing page).

The average system on-time performance hovers around the 73 percent range, reflecting the fact that some trains enjoy a respectable performance record, while poor on-time performance continues to curse many trains.

In some cases, the unpredictability has caused passengers to expect delays, in other cases passengers simply don’t rely on Amtrak and choose another mode of transportation. *Acela Express* riders were the least forgiving because they expect premium service for a premium price.

As Amtrak continues to work toward minimizing minutes of delay over the road while making capital improvements to its infrastructure, it also strives to improve OTP when traveling over its freight partners’ territory. A modified incentive program piloted earlier this year and continued negotiations with the freights are aimed at reducing delays. However, these efforts have not yet led to OTP improvements.

While OTP may be the most aggravating factor, is it made worse when customers are not kept informed about the status of their train. The focus group participants said that during delays, no timely information or none at all only upset them more, and described a lack of honesty, compassion, and concern by on-board personnel during delays.

According to the group, this has an effect of rendering what should be — and is advertised as — a relaxing way to travel, a very stressful way to travel. Many long-distance customers understood that Amtrak often faces delays out of its control,

but noted that they became annoyed about not being informed of the nature of the delay.

“People simply want to know why they’re not moving and what to expect,” said Kevin Scott, chief, Service Delivery, whose group develops the On-board Service Standards Manual and updates that include on-board announcements. “Customers have told us that when we respond to their need to be kept in the loop about delays, they feel that they — and their money — are valued. This is a great example of a service issue we can address with better training and consistent follow-up that can make a big difference to customer satisfaction and the bottom line.”

Training

One of the focus groups’ recommendations is to provide more training. Correspondingly, the Transportation department’s main goal this fiscal year is to focus on the hiring, training and evaluating of its employees.

“We are really concentrating on our hiring and training strategy. Working with Human Resources, we’re taking a good hard look at how we bring people in, train them and measure their performance,” stated Walker.

Previously, hiring needs were not centralized, so staff planning took place on an ad-hoc basis. Working with the Human Resources, the department has developed a plan that helps the department better plan for vacancies and attrition and more productive allocation of work systemwide, in addition to better hiring and evaluation practices.

“Not just anybody can walk up and become an LSA, for instance,” explained Walker. “These are tough jobs that not only require technical training but training and skills associated with managing people and stressful situations.” Walker added that his department’s FY ’05 training objectives include more training for OBS and station employees.

“In the past, we’ve trained our employees in an inconsistent manner — and we’ve paid for it,” said Bill Crosbie, senior vice president, Operations. “We’re as good as

Effective March 30, a new version of the Service Standards Manual incorporates revisions to the current manual. The manual provides train service On-board Service employees detailed information about how to carryout policies and procedures.

how well we train our employees — good, consistent and continuous training is essential.”

The key components of the Transportation department’s training program are new-hire training, Block Training for recurrent training, and Passenger Services Supervisor Workshops. In addition, a chef certification program was launched in September. Block Training earned its name from the fact that employees attend a three-day block of instruction, which may have previously been spread out over the course of a year.

Once hired, front line employees enroll in new hire training, which takes place every month, across the system. This year, the company anticipates training 143 assistant conductors, 438 on-board services employees 50 station personnel, 66 chefs and 70 engineers.

Assistant conductors participate in a seven-week training program at the Wilmington training facility, on-board service employees undergo four weeks of training at their respective crew bases, and new ticket agents take three weeks of instruction at designated training locations where ticket office operations can be simulated. Curriculum for these classes is continually improved, based on participants’ feedback and observations in the field.

“Not just anybody can walk up and become an LSA, for instance.”

Ed Walker
Vice President, Transportation

Incumbent Transportation employees now take part in Block Training. Launched in January, these classes are designed to provide all Train and Engine and On-board Service craft employees all of the required recurring training in one session, once a year. Over 6,000 employees will participate in Block Training this spring.

The first of the three days involves all participants and covers core training subjects such as security awareness and personal safety. Starting this month, participants will watch a 20-minute video of the focus groups held in December. For Amtrak employees, it is considered “must-see TV.”

Last month, the one day class for service craft employees began.

The second and third days are reserved for separate, job-specific instruction for Train and Engine employees. The job specific instruction for service craft employees is currently under development.

Both the Train and Engine and the OBS and Station curriculums include a section on the principles of leadership. The purpose of this session is to hone employees’ communication, teambuilding, conflict resolution and similar leadership skills to empower employees to manage a range of situations. This is particularly important for conductors and other front line employees, to whom passengers look for assistance.

“In the past, this recurrent training was offered at different times and covered only regulatory requirements,” said Senior Director of Operating Practices Ron Robusto. “But today’s Block Training program involves a lot more than that — we’re taking the communications skills coursework as seriously as our other requirements.”

Also relatively new are the Transportation department supervisors’ workshops for both T and E and OBS managers, which concluded last month. The class was made up of two components; the first was leadership training and the second, facilitated by the general superintendents and superintendents of passenger services covered policies and processes. A follow-up three-day refresher to the weeklong class started last month in Wilmington.

While these managers have a lot on their plates, part of their duty is to ride the trains. “Part of what the supervisors learn in these classes is meant to be shared with the on-

board staff,” said Sol Carey, manager, National Standards and Operations. “The desired outcome of the training is better adherence to on-board policies, and that includes on-board announcements.”

“Training is no longer a one-time thing — we’re going to have these classes every year and keep following up to make sure that our employees have the guidance they need,” said Stephanie Pavlakis, senior director, Employee Development.

Evaluation

Training is only one-hundred percent effective if what’s been taught is carried out on the job and progress is measured. In November, the Transportation department implemented the Transportation Department Reporting System (TDRS), which among other functions, tracks employee performance.

The department’s TDRS enables it, for the first time in recent history, to put into action a consistent system-wide mechanism to follow employee performance, both good and bad, and to step in when an employee needs assistance. The system includes remittance reviews, probationary checklists, safety and service delivery observations, an employee evaluation system, and a management accountability roster. Managers who ride the trains, whether to observe their own crews or to attend a meeting, are responsible for recording their comments in the TDRS.

The Management Accountability Roster eliminates any reporting ambiguity and helps field managers manage the employees reporting to them. “We never had anything like this before,” said Prem Jain, manager, On-board Service, *California Zephyr*. “We needed a tool that we can all use to track what is going on aboard the trains and how well employees are sticking to what they’re supposed to be doing.”

Since its inception, the vast majority of the managers’ comments on performance in the TDRS have reflected good work.

The annual employee review process, which begins this fiscal year, will include all Transportation department employees and will be based on the documentation of skills relevant to each employee.

Agents of Change

The report based on the focus groups held in December is a valuable tool. Indeed, the department’s general superintendents, superintendents and senior directors, are

Customer Comments
Increase in First Quarter

Amtrak’s Customer Relations department receives and responds to customer feedback, both positive and negative. In the first quarter of fiscal year 2005, customer complaints were up, complaints about on-time performance were up significantly, the number of commendations increased, and the number of complaints about equipment declined slightly.

A total of 39,124 phone calls, e-mails and letters were received in the first quarter, much lower than the 49,922 in the previous quarter, which included the peak summer travel season during which Amtrak experienced severe freight congestion problems. This number represents the total number of contacts received by Amtrak, but not the number of items or issues raised. For example, a passenger may speak to a Customer Relations representative about an employee whose performance was commendable, while complaining about on-time performance. Out of the 39,124 contacts, 1,886 commendations were received, 5 percent more than the same period last year.

On average, Amtrak receives anywhere between 6,000 and 15,000 contacts each month; naturally, these numbers tend to be higher during the summer and holiday periods.

Passengers logged 52,537 complaints in the first quarter, nearly 12 percent more than they did in the first quarter of FY ‘04. Another way to look at this number is the complaint rate, which was 8.1 complaints per 1,000 passengers, almost nine percent more than the same period last year.

The biggest area of increase in customer comments was related to on-time performance, which historically is also the largest complaint category, comprising 43 percent of all feedback. On-time performance comments rose 27 percent over FY ‘04, an increase partly attributable to continued freight congestion as well as winter storms in the West.

A modest one percent decrease in equipment complaints over the same period suggests a correlation between the company’s fleet maintenance program and the comfort of Amtrak passengers. Additionally, the trend for equipment-related complaints per 1,000 passengers has remained relatively flat over the last eight quarters.

The second-largest comment category was related to train equipment. In this category, the top five grievances were associated with the condition of the restrooms, climate control, unsatisfactory or unavailable accommodations and unacceptable equipment substitutions.

About 60 percent of the complaints and commendations were concerning on-train employees, who often get the heat as a result of other shortcomings. Perceived rudeness, unhelpfulness and communication problems were the major complaints.

Most of the comments are received by Customer Relations via phone, with letters making up nine percent and e-mail messages 5 percent.

convening this month at the John F. Welch Leadership Development Center in Crotonville, NY, to review the findings of the report.

In addition to addressing the suggestions outlined in the report, this group will also learn more about the General Electric Change Acceleration Process, which helps businesses transition through significant changes. This program was chosen because of its success rate and its applicability to Amtrak.

“Our plan reflects a whole different paradigm for the way we’ve managed the company. It’s still too soon to tell how these steps are going to affect service. We can’t set the expectation that this will happen overnight, because this involves some culture change,” noted Walker. “But this is no flash in the pan — we’re very serious about these changes.”

Training Blitz Reinforces Procedures For Assisting Passengers With Disabilities

Amtrak rolled out a series of training initiatives in February and March designed to help front line employees better serve passengers with disabilities, just one piece of Amtrak's on-going efforts to support the Americans with Disabilities Act, the civil rights law enacted in 1990.

Toward that end, Amtrak's Transportation, Business Diversity and Human Resources' Employee Development departments have launched a training blitz, for Train and Engine, On-board Service and Station employees and their supervisors, aimed at reinforcing practices for assisting passengers with disabilities.

The implementation of recurrent ADA training, the launch of a new online ADA training program, the issuance of a series of Operations Service Advisories and the update of all related training materials and brochures are aspects of the campaign.

Starting in January, Transportation employees began attending a required one-hour refresher course, *Assisting Customers with Disabilities* (commonly referred to as ADA training), as part of the Block Training program.

Since the early 1990s, all new-hire front line employees complete a comprehensive ADA training course that outlines the Americans with Disabilities Act, Amtrak's requirements relating to the ADA and employees' roles in assisting passengers with disabilities.

A variety of activities incorporated into the course provides employees with hands-on training that demonstrates how to assist passengers with visual, mobility or other impairments. "By guiding a blind-folded employee, trainees gain an appreciation of how to use language skills more effectively and how to be more descriptive and more patient when leading a visually-impaired passenger," explained Stephanie Pavlakis, senior director, Employee Development.

The refresher training is an overview of key sections of the original course and includes topics such as defining a disability, assisting passengers who use wheelchairs and understanding and communicating.

Attendees also view the "Assisting Passengers with Disabilities" video produced several years ago with a grant Amtrak received from the

Paralyzed Veterans of America. The video reinforces two critical points; assisting passengers with disabilities is a vital part of customer service, and it's the law. It shows employees that patience, courtesy and compliance with the Americans with Disabilities Act make it possible for passengers with disabilities to have an enjoyable barrier-free journey. The video also reminds employees never to ask a passenger what his or her disability is because that is an invasion of privacy. Instead, employees should ask the passenger what assistance is needed.

"The passenger is the supreme authority on the type of assistance we can render. So, the best thing that we can teach our employees is to ask one question — 'How may I assist you,'" stated Pavlakis.

The video stresses that common courtesy is the most important tool in assisting customers with disabilities and can be demonstrated in simple ways. For example, employees should always ask permission to move or touch a person's wheelchair or mobility device. Additionally, employees should remember to be mindful of communicating on-board announcements to passengers with hearing disabilities by writing the message down, for example. In short, employees are taught to make the trip just as comfortable for passengers with disabilities as they would for all customers.

Renovated in the summer of 2004, the Jackson, MS, ticket office provides a handicap accessible low-level writing counter for mobility-impaired passengers.

"The program really emphasizes customer service," added Pavlakis. "Although the techniques used for dealing with a person with a disability might be slightly different, in your heart and in your head, the objective is still the same — delivering good customer service."

Online ADA Training Available

To support this system-wide training initiative, last month the Employee Development depart-

ment introduced a new online refresher course, *Assisting Passengers with Disabilities*. The course, which can be accessed through either the Education and Training or the Business Diversity sections of Amtrak's Intranet, was originally developed in partnership with the Paralyzed Veterans of America and is designed to ensure compliance with regulations under the Americans with Disabilities Act.

By navigating through the refresher course, employees can revisit the skills and techniques that should be used when assisting passengers with disabilities.

Customer Feedback Drives Curriculum Improvements

To ensure that the ADA training addresses the needs of passengers with disabilities and reflects the services that Amtrak offers, the Business Diversity staff routinely reviews the curriculum and makes recommendations for improvements. To better identify areas where improvements can be made, in 2004, the Business Diversity staff began tracking and following up on all comments from disabled passengers.

"The curriculum was revised based on these comments, to include a greater emphasis on topics such as passengers with service animals and the usage of wheelchair lifts and ramps," explained Dawn Marcelle, senior director, Dispute Resolution. "It's important for employees to understand that a service dog is not the only type of service animal they may come across."

Service animals may include other animals, depending on the assistance they provide. While people are most familiar with service dogs, other service animals such as a mini-horse, small monkey or a pig, also assist disabled persons with a number of daily activities. The assistance service animals provide can range from alerting persons with hearing impairments to pulling wheelchairs or carrying and picking up items.

"We also want employees to remember that service animals are allowed in all customer areas of Amtrak stations, Thruway motor-coaches and trains — including the Dining car," added Kevin Marshall, director Employment Diversity.

Additionally, the online course stresses the importance of using the wheelchair lifts, bridge plates or ramps, which should be readily available at selected stations and

on the trains, when assisting passengers with mobility impairment. "Carrying passengers is reserved for emergencies only. Amtrak personnel should never physically lift passengers who use wheelchairs when lifting equipment is available," Marshall said.

Service Advisories Reinforce ADA Message

These ADA topics were also covered in a series of service advisories issued by the Service Delivery department to OBS and T and E employees in February and March. The advisories also served as a reminder that just because a disability may not be readily apparent, it does not mean that special services are not warranted.

After the advisories are issued, Transportation managers make observations on a random basis to monitor how well employees are putting what they learned into action. These observations are recorded in the Transportation Department Review System to determine the frequency with which Amtrak is meeting its standards and complying with policies and procedures for assisting this group of passengers.

Special Request Process

There is a range of processes and systems within Amtrak to assist passengers with disabilities, starting with the initial call to the reservation office and continuing throughout their journey. "Most passengers with disabilities that require special assistance notify us in advance. And, one of our main objectives is to keep the company's promise to fulfill their requests," explained Marcelle.

Amtrak suggests — but does not require — that individuals with disabilities who require special assistance request it at least 24 hours in advance. By contacting Amtrak's reservations sales call center, passengers may request a number of special services to assist them throughout their travels such as wheelchair boarding, pre-boarding assistance, at-seat meals, special meals or lower-level seating.

"Our focus has been on improving RailRes (part of the ARROW reservation system) to minimize the chance for error," said Betty Powanda, manager Training Communications and Support. For example, when a passenger requests wheelchair assistance during a trip from Washington to

During a recent new-hire class, students Tom Karva (left) and David Fenko (blindfolded) practice guiding a sight-impaired passenger. Fenko explains that the ADA training has increased his awareness of how those with disabilities should be treated. "The training has taught me to understand how to provide the best service I can to all our passengers — including those with disabilities," stated Fenko.

Jacksonville, RailRes automatically accesses a station profile database and checks to see if the departure and arrival stations are staffed at train time and if the stations have the necessary facilities to provide the service. If the service is available, the information is put in the reservation and notification is immediately sent to the station for follow-up.

"Working together, the stations and call centers try to catch errors up front through automation. So, when a request is made, in many instances, the agent can immediately determine whether the request can be met," added Powanda.

RailRes forwards requests that cannot be automatically approved to Amtrak's Special Service Desk, which is located within the Mid-Atlantic Reservation Sales Call Center. The desk is staffed seven days a week with eight agents who carefully research each request, communicate with station and on-board personnel and determine whether Amtrak has the wherewithal to carry out the special service.

Call center Manager Bob Cook oversees the Special Service Desk that handled close to 500,000 special service requests last fiscal year. "Our Special Service Desk agents do an outstanding job handling all types of requests from passengers such as the need to transport oxygen or to keep medication refrigerated," said Cook. "In cases where the request is denied, the agent contacts the customer and, when possible, works with the passenger to make alternate arrangements."

Amtrak Volunteer Group Champions for Disabled Passengers

Amtrak also works closely with the Disabled and Senior Task force, a subgroup of the Amtrak Customer

Advisory Committee (ACAC) established in 1997 by Amtrak to improve the company's understanding of rail passengers' needs and concerns. The members of the Disabled and Senior Task-force were recognized last year by the corporation at the Presidents Service and Safety Awards ceremony for their contributions to improving Amtrak's understanding of the service needs of persons with disabilities and delivery of our services to them. The ACAC members make up a diverse group of Amtrak passengers who volunteer their time to provide advice and vision about customer service to Amtrak management. "We are working closely with the committee members to further improve our employee training in this important area as well as specific elements of our services," said Kevin Scott, chief of Service Delivery who acts as the corporate liaison with ACAC.

Through the efforts and recommendations of the task force, Amtrak's voice response system "Julie" has been enhanced to include information on special accommodations, reduced fares and special service requests for passengers with disabilities. The task force also conducts station outreaches to promote travel for senior and disabled passengers, reviews Amtrak's Web site to make sure that it provides accessibility information and conducts station and on-board observations about how Special Service Requests are handled.

Station Assistance and Accessibility

While Amtrak has made great strides in providing service and improving accessibility for passengers with disabilities, there is still more work to be done.

A team of employees from Business Diversity, Customer Relations

and Revenue and Transportation, led by Pat Willis, senior director OBS and Station Operations, is studying the assistance provided to passengers with disabilities who visit and use our stations.

"One of the bigger challenges is carrying out requests to meet and assist passengers at our smaller stations, often staffed with only one ticket agent. At these stations, it is often difficult for an agent to fulfill the responsibilities of selling tickets, checking baggage and also being available to meet and assist a customer in a timely manner," Willis explained.

"Conversely, at our large busy stations, when a person has requested a wheelchair, it is often difficult for the red cap to identify the person who made the request. Frequently, as the red cap goes down the platform, there are many more passengers requesting a wheelchair than shown on the manifest. Often, when some of our senior passengers see the length of a platform, they decide — at that moment — that a wheelchair or people mover would be helpful. This is one of the issues we are addressing. We are working to get better at managing this and other passenger expectations," added Willis.

Amtrak is also taking steps to meet the challenge of ensuring that its stations are readily accessible to passengers with disabilities by 2010, as mandated by federal regulations.

Preliminary work on this front accelerated in 2003, when Joseph Rago, director Station Programs, Engineering Structures began inspecting Amtrak's stations for ADA compliance. "It's all about making our stations accessible for passengers with disabilities. Everyone — including a person in a wheelchair — should be able to access the station," stated Rago. Once the inspections are complete, an engineering firm will be hired to design modifications such as slip-resistant tactile edge platforms, code-compliant signage, properly sloped ramps and ADA-compliant restroom facilities and ticket windows.

Over the past two years, approximately 130 stations have been surveyed and design work for ADA compliance has begun. "The preliminary part of Amtrak's Five-year Strategic Plan calls for the surveys and the Engineering work to be completed," explained Rago. "Toward the end of the plan, the construction is scheduled to begin." Between 2008 and 2010 the majority of the construction is scheduled to be completed, provided sufficient funding is available.

Empire Builder To Serve As Model for Improving Long-distance Train Margin

continued from page 4

passengers. For example, wine and beer tastings are being planned, board games will be available in the Lounge car and consistent narratives will be delivered on board about the geography, communities and historic landmarks along the route.

Superintendent of Passenger Services Brian Rosenwald, who is assisting in the development of the service component of the project, explained that coach tends to be the most difficult class of service to upgrade because passengers who choose coach seating are generally very price-sensitive. Consequently, there are few amenities that would entice coach customers to pay a noticeably higher fare. "Because of this, the primary focus in Coach class will be to deliver a more personal level of service from the coach attendant staff," added Rosenwald.

Additionally, during peak travel periods, a second lead service attendant will be added to the Sightseer Lounge car, providing upgraded service to all passengers and allowing food and beverages to be served continuously from 6:30 a.m. to midnight.

"Achieving a consistently great service level is most essential to any meaningful service upgrade," added Scott. "To accomplish this we are developing a comprehensive definition of the "Empire Builder service experience" and planning to support this with a dynamic training effort, quality assurance standards and timely performance level indicators."

As this article is being written, work is progressing on a number of fronts. This is the first in a monthly series about the *Empire Builder* service enhancement.

Active Black History Month Marked By System-wide Events

Last month, Amtrak’s Marketing department and the Office of Business Diversity and Strategic Initiatives sponsored several Black History Month events and promotions for employees and the public throughout the Amtrak system.

“Amtrak is committed to celebrating the diversity of our employees and passengers 365 days a year,” said Gerri Mason Hall, Amtrak’s vice president of the Office Business Diversity and Strategic Initiatives. “Black History Month provides us with yet another opportunity to recognize that black history is, in fact, American history and to celebrate both.”

Keys to the City was a national promotion that ran in seven major cities: New York, Washington, Philadelphia, Atlanta, Chicago, Detroit and Los Angeles. Select radio stations broadcast black history facts about various cities that Amtrak serves and prizes were awarded to weekday listeners who correctly answered the questions. At the end of the month, one grand prize winner in each market was awarded an Amtrak travel package for four people.

Celebrated author Larry Tye was the featured speaker at three employee events held in Washington, New York and Oakland. Tye’s most recent book, “Rising From the Rails,” tells the story of the Pullman Porters’ historic struggle for dignity and respect and their contributions to the civil rights movement.

Amtrak also partnered with local organizations to support events and promotions throughout the divisions that offered regional flavor and history.

Partnering with the Baltimore Convention and Visitors Bureau, Amtrak sponsored *The Black History Month Lecture Series*, which focused on the contributions of black patriots to freedom and independence. Amtrak also supported the Maryland Film Festival’s Black History Month film series held at Baltimore’s Walters Art Museum.

In Pennsylvania, Amtrak was a participating sponsor of Black History Month events at the West Philadelphia Community Center, which included a day of education, various contests and activities, and a day of worship. Amtrak was also a sponsoring

participant in Harrisburg’s annual *Black History Celebration*, which included National Civil War Museum black history programs and a *Black History Performing Arts Showcase*.

Amtrak partnered with a New York City radio station to honor African American athletes with ties to the area. A different athlete was honored during each of four 60-second vignettes that were aired each weekday.

Additionally, events and performances in New York Penn Station

“Amtrak is committed to celebrating the diversity of our employees and passengers 365 days a year.”

included musical and dance performances as well as vendor displays and opportunities for employees to participate in art, dance, poetry and music events. Children of employees participated in an art contest and their artwork was displayed in the station’s rotunda.

Amtrak was a sponsor of the Boston Celtics’ Black History Month promotion in Boston. Presenters such as Head Coach Doc Rivers, Hall of Famer Jo Jo White, and rookie Delonte West discussed the importance of celebrating black history.

Also presented by Amtrak and the Boston Celtics was Amtrak’s *Promote the Quote* program that celebrates the life of Dr. Martin Luther King Jr. Students from the Colonel Daniel Marr Boys and Girls Club discussed the relevance of King’s quotes to young people today. During halftime of the Celtics/Grizzlies game the following evening, Amtrak and the Celtics presented a \$2,500 check to the club.

Additionally, the New England Division’s Diversity Advisory Council hosted a Black History Month Celebration at South Station that honored Leroy R. Fergus, a former Amtrak employee who passed away in March 2000. In memory of Mr. Fergus’s dedication and commitment to diversity issues, the council presented the Third Annual Leroy R. Fergus Diversity Award for Excellence to

Amtrak employees Steve Winston (Mechanical department in Springfield, MA), and the New England Division Human Resources Group: Suzanne Allan, Alice Smith , Charles Fuller, Waundolyn Johnson-Melvin, and Cindy Lowe.

In Milwaukee, Amtrak sponsored a salute to African Americans who made significant contributions to music, movies and comedy. Local radio station listeners participated in Bailey Coleman’s *In at 10 Black History Moment* contest and a prize was awarded to the listener

historical facts and personalities. Another Amtrak Travel Scholarship Award was also presented at the Johnson C. Smith University.

Amtrak hosted a Black History Celebration at the Miami station that included guest speakers and local entertainment, which was broadcast live by a local radio station. The winners of the 2004 Amtrak President’s Award for Diversity were honored, and employees put together a program that honored black men who have made a difference in the community.

Gerri Mason Hall
Vice President, Office Business Diversity and Strategic Initiatives

who could recite two quotes from each week.

In Atlanta, Amtrak assisted the National Park Service with a Martin Luther King Jr. National Historic Site display at the Amtrak station that featured the life and efforts of Martin Luther King Jr. Additionally, Amtrak presented two Amtrak Travel Scholarship Awards, one at Morehouse College and one at Spelman College. In partnership with the United Negro College Fund, Amtrak established the *Amtrak Travel Scholars* program to provide up to five qualifying full-time students from each of 20 historically black colleges or universities with an opportunity to receive free train travel valued at up to \$1,000 per student for one year.

In Charlotte, NC, a Buffalo Soldiers exhibit was displayed in the station along with a “Celebrate Black History Month” bulletin board that featured

Amtrak also supported Sacramento’s 15th Annual Black Expo, which is the largest Black History Month showcase and celebration in Northern California. At the event, Amtrak hosted a booth in the Travel and Tourism pavilion. Amtrak also partnered with the San Francisco Black Chamber of Commerce to back a scholarship recognition event for deserving students in business and economics.

In addition to the numerous events sponsored by the company, many Amtrak employees set up displays and arranged events locally that conveyed educational messages about the diverse African American culture.

The Office of Business Diversity and Strategic Initiatives will continue, throughout the course of the year, to lead the celebration of cultural, ethnic, and gender diversity.

On-going Promotions
Aimed At Stimulating
Ridership, Revenue Growth

In addition to the *Acela Express Buy Two Get One Free* winter/spring offer, the long-distance campaign that includes a hotels.com discount, and the *Share Fares* program that encourages group travel aboard seven services, including *Regionals* and *Keystones*, there are also targeted marketing efforts designed to rebuild ridership and revenue on West Coast trains affected by the winter storms (for more information about these efforts, please see related stories in this issue).

Another promotion aimed at stimulating ridership and revenue on *Acelas* and boost Amtrak Guest Rewards membership was launched last month. A direct mail campaign offered approximately 30,000 customers the opportunity

to receive retroactive points for their travel on Amtrak over the past 12 months if they join AGR and travel at least one time on *Acela Express* between February and the end of April. The offer also includes a 25-percent *Acela Express* discount coupon.

The campaign targets passengers who previously traveled on *Acela Express* but have switched to *Regional* service, passengers who exclusively travel on the *Regionals* and passengers who previously traveled on *Acela Express* and no longer travel on Amtrak.

New AGR members are not the only ones reaping great rewards. Current members joined winners from the Amtrak's online sweepstakes on the Boston Celtics Web site to participate in *Play on the Parquet*, a fantasy basketball game held at the Fleet Center in January. Players were divided into two

teams to play a basketball game on the Boston Celtics parquet floor, coached by Celtics legends Jojo White and Cedric Maxwell.

Targeted efforts to inspire train travel in specific regions were also recently launched. Last month, the Amtrak *Cascades* rolled out a new advertising campaign — *Travel as You Wish*, which features engaging new photography and highlights the scenic and on-board benefits of train travel.

The advertising runs in regional editions of lifestyle magazines and newspapers in the top five markets and on travel Web sites and also

appears in rest stops along the busy Interstate 5 highway.

Also, the spring advertising campaign for California trains — *Travel Made Simple* — was

launched this month. The campaign, which highlights such features as food service and scenery, will run in newspapers and on radio stations in key markets throughout California as well as on travel and lifestyle Web sites.

Milestone
Error

The December 1999 issue of *Amtrak Ink* did not include the following retiree. *Amtrak Ink* regrets the error.

October 1999
RANSEL, JAMES

FRONT LINE FOCUS

Dear Amtrak:

I want to express our gratitude to the following sleeping-car attendants, each of whom rendered excellent service and treated us royally — with courtesy, kindness and unfailing good humor — on our cross-country trip last November.

The stellar cast [includes:]

Kenneth McDaniel, on the *Cardinal*, Philadelphia to Chicago

David Juhl, on the *California Zephyr*, Chicago to Emeryvill

Fred Adams, on the *Coast Starlight*, San Jose to Eugene

Gary White, on the *Coast Starlight*, Portland to Los Angeles

Elizabeth Kososki, on the *Sunset Limited*, Los Angeles to New Orleans

John Turk, on the *Crescent*, New Orleans to Philadelphia

Special thanks should go to Elizabeth Kososki on the *Sunset Limited*, which was delayed by some 22 hours between Los Angeles and New Orleans by repeated freight tie-ups on the Union Pacific. Ms. Kososki kept a car full of variously discontented passengers, including some children, as happy and well-informed and relaxed as was humanly possible — all accomplished with smiles, patience and untiring zeal. She is a gem.

We have been regular Amtrak travelers for over a quarter of a century, averaging two to three long-distance trips a year. We have had some excellent and many satisfactory sleeping-car attendants on these journeys, but never of such uniformly top quality as that described above. Amtrak is indeed fortunate to have so dedicated and competent a group of professionals on its payroll. We salute them all.

Sincerely,

William and Lynn C.
Lancaster, PA

PROMOTIONS IN MOTION

continued from page 11

In conjunction with the North Carolina Department of Transportation, Amtrak is offering discounts through multi-ride tickets for passengers who frequently travel within North Carolina. The new multi-ride ticket, which became available in January, is good for travel to cities between Rocky Mount and Charlotte on Amtrak's *Piedmont* and *Carolinian* routes. Passengers purchasing the 10-ride ticket save 15-percent off the lowest fare and

save 10 percent by purchasing a 6-ride ticket.

On a different note, Amtrak garnered nationwide exposure through its partnership with Westwood One radio, as a sponsor of the Super Bowl game held last month at the Alltel Stadium in Jacksonville, FL. During the halftime show, Amtrak's Chairman of the Board of Directors, David Laney, presented the fourth annual Westwood One CBS Radio Amtrak Player of the Year award to Donovan McNabb of the Philadelphia Eagles.

Light at the End of the Tunnel

NY Fire and Life Safety Program Advances

When the finishing touches are made to the new construction at the ventilation system for the North River tunnel in Weehawken, NJ, this month, Amtrak will have reached a significant milestone of the first phase of the multi-faceted \$442 million New York Tunnels Fire and Life Safety program.

The six Amtrak-owned tunnels that carry traffic to and from New York's Penn Station make up the centerpiece of the program, which is jointly funded by Amtrak, New Jersey Transit, Long Island Railroad, and the Federal Railroad Administration and aimed at upgrading the safety systems unique to the tunnels.

The installation of a new ventilation system for the North River tunnels in Weehawken was substantially complete on Jan. 31, four months ahead of schedule and under budget by approximately \$1 million (including a payment to the general contractor to accelerate the project).

The new system includes computer-controlled bi-directional fans and new stairways that provide safe access and egress, housed in a completely new seven-

story ventilation portal structure. The fans are fully operational, and are scheduled to be connected to the Supervisory Control and Data Acquisition (SCADA) system,

which enables the system to be monitored and operated via computer from Penn Station Control Center, in April.

A few final pieces will complete the project this month, including a retaining wall (for grade differential), paving and installing a large clock

on the outside of the structure.

Progress has also been made on four other major components of Phase I of the Fire and Life Safety program, which began in 2002 and spans seven years.

On the opposite side of Penn Station are Amtrak's four East River tunnels. There the Long Island City ventilation project is about 40-percent complete and in February 2007 will comprise new bi-directional fans, staircases, and substations to power the ventilation system, all within the walls of a new three-story ventilation structure.

The fan house and substation that were above ground have been knocked down and demolition of the 60-foot underground liners of the ventilation shafts has progressed to 40 feet below the surface. The pilings on which the foundation of the new structure will sit are being set. By the fall, the new concrete shaft liners will be completed, the new structure built, and the fans installed.

"The general contractor that carried out the ventilation project

Demolition of the shafts of the Long Island City ventilation system reaches 40 feet below the ground.

Marketing Efforts Counter Negative Trends in February

February ridership benefited from several targeted marketing efforts, including the West Coast recovery plan, introduction of the *Share Fares* promotion, and launch of the spring *Acela* and system-wide advertising campaigns. However, the month's results showed slight decreases in overall ridership and ticket revenues, primarily due to low-cost carrier competition affecting markets throughout the system, weather-related challenges on the West Coast and poor performance of many Amtrak trains, including Florida trains and *Acela Express*.

The launch of a slew of marketing programs and pricing changes implemented in January are designed to combat these chal-

lenges. Ridership trends for the latter part of February, after some of the campaigns were launched, showed a marked increase. For example, *Regional* ridership was 8 percent below last year in the second week of the month, but 24 percent ahead in the fourth week.

The *Share Fares* campaign, introduced on Feb. 15, promotes small group travel on most NEC trains. The promotion, which offers a 90-percent discount to the third through sixth passengers traveling as part of a small group, is designed to appeal to those in search of "low-cost" discounting, while helping Amtrak fill seats that would otherwise go empty.

"We are watching this closely," said

David Lim, chief, Marketing and Sales, "and we'll be able to decide whether to take this campaign nationwide in the next few months."

The system-wide winter/spring marketing campaign, also launched Feb. 15, includes print, radio and online advertising that promotes the Amtrak experience and its destinations, as well as a value-added online booking offer for a \$25 rebate on a two-night stay at a hotels.com property. Preliminary results of the campaign are encouraging — in the second week of February, long-distance ridership was down 16 percent compared to last year. However, two weeks after the advertising began, ridership was down by only 2 percent versus

the previous year.

The *Acela Express Buy Two Get One* campaign, which runs through May 31, is outpacing last year's similar promotion with participation that is 70-percent greater than 2004.

Marketing efforts aimed at reversing the impact of weather-related ridership and ticket revenue shortfalls include special advertising, outreach to travel agents, promotions at travel shows, cooperative promotions with convention and visitor bureaus and a 25-percent discount on the *Coast Starlight*.

In February, 1.79 million passengers rode Amtrak, 2.4 percent

continued on page 5

TRAIN OF THOUGHT

Next month, Amtrak will mark its 34th year in business and I will mark my third year here. As these milestones approach, I think it is a good idea to take stock of where we are today, what we have accomplished lately and where we are headed.

Of course, it is impossible these days to provide timely comments in a monthly publication about the subjects of reform, funding or the administration’s plan to force our bankruptcy, so I will continue to do that as events warrant through other, quicker means, like the weekly *Employee Advisories*.

When I came aboard three years ago, we faced a cash crisis that required emergency federal funding to keep us from insolvency and to begin to reduce the large deferred maintenance backlog that had amassed. Immediately, management instituted many internal reforms to control costs and establish an organizational structure with clear lines of authority and responsibility. We adopted GAAP accounting and transparent financial reporting, even making our monthly reports public for the first time.

We created a five-year strategic plan, defining in detail our critical capital programs. Despite the difficulties of starting this undertaking from just about zero, steady progress has been made. We update the plan annually; it’s a dynamic tool to help us reach our state-of-good-repair goals.

Since developing these state-of-good-repair goals three years ago,

the railroad has installed over a quarter of a million new concrete ties, laid 274 miles of new continuous-welded rail and replaced 253 turnouts. We have also renewed 75 miles of catenary, replaced 42 miles of signal cable and re-timbered 48 bridges. On the equipment side, we have overhauled 172 locomotives and remanufactured or overhauled another 229 cars. We also purchased 80 new much-needed racks for the Auto Train and 10 switch engines.

These results are impressive by themselves. But as we were doing this, we also managed to contain our operating costs despite the usual inflationary pressures and the responsibility for annual payment of \$250 million to cover previous borrowing.

Importantly, by doing all of this, we also began to restore credibility with taxpayers, stakeholders and our own passengers. They rewarded us for our efforts, too. Last year more people rode Amtrak than ever before — 25 million of them. As it stands today, another 800,000 weekday commuters also depend on Amtrak in one form or another to get them from home to work and back home again.

We have also begun to restore our credibility with Congress, which for the current fiscal year, has provided the railroad with \$1.2 billion for capital programs and operating support. By contrast, when I arrived here, we were trying to survive on a federal grant of

David L. Gunn

\$521 million, an amount that had led us to the brink of bankruptcy.

From my observation, given the right tools, training, structure, authority and responsibility, Amtrak employees will be highly motivated in their jobs and, in the end, for our passengers. This railroad is unique. There is no one else in North America doing what we are doing, and I think the great majority of employees take pride in that fact. I certainly do.

At the same time, management will continue to seek improvements and reforms in what we do. These improvements and reforms are clearly distinguishable from other ideas that are destructive and even dangerous. It is my hope that these other ideas are understood for what they are and that any reforms enacted with the agreement of policy makers in Congress, the DOT, the states and other stakeholders are built on our progress over the past three years, and do not destroy it. How can you help? Continue to do the best job you know how to run a safe railroad, be optimistic and give our passengers great service.

Perspectives on Block Training

Amtrak Red Cap Moises Ybarra recently attended the new “Block Training” for Transportation department employees held in Los Angeles where he believes he learned a lot of practical skills he can use on the job.

“I thought it was good that we had employees from different crafts in the class and that gave me some new perspectives on why my fellow employees do certain things. The section on assisting passengers with disabilities was especially good because how and what you say to disabled customers is really important in my job as a red cap.”

Coming August 2005 — A New Experience

Plans for Enhanced Empire Builder Service Progress

The launch of enhanced *Empire Builder* service is only four months away and mechanics at maintenance facilities from coast to coast are busy overhauling, remanufacturing, upgrading and converting equipment for use on what is to become Amtrak's premier western train service. Their work is a major piece of a multi-faceted effort to upgrade *Empire Builder* service, slated to launch in August, and aimed at improving long-distance train margins by offering refurbished equipment, first-rate service and amenities that add value for passengers.

Between December and mid-March, Amtrak's Los Angeles, Beech Grove, Brighton Park and Sanford maintenance facilities completed work on a combined total of 31 cars. "Our target date to finish 60 cars for this project is June 1 and because of the commitment and hard work of everyone involved, we're ahead of schedule," stated Ed Daly, director of Field and Manufacturing Engineering.

To accomplish this, Amtrak's Mechanical department is scheduled to remanufacture 17 sleeping cars, convert 11 smoking cars to coaches/baggage cars and upgrade the interior of 14 coaches, six lounge cars, six diners and six transdom cars (crew sleeping cars). These 60 cars will comprise

five dedicated *Empire Builder* trainsets that will serve passengers between Chicago, Seattle and Portland. While the Mechanical

department works diligently to reach its goals, progress continues in other areas as well.

Among the service upgrades being planned is to staff the Sightseer Lounge with a second lead service attendant between Chicago and Whitefish, MT, during peak travel times in order to offer food and beverages from 6:30 a.m. to midnight.

As of this writing, the Employee Development staff, working closely with Service Delivery and Transportation, is finalizing the

curriculum for training classes scheduled to begin May 2. To support the margin improvement initiative, all conductors and On-board Service crews who work on the *Empire Builder* will undergo two days of intensive training in either Chicago or Seattle.

One section of the training will focus on service delivery, including the critical details necessary to provide consistently high service levels, while another part will focus on meeting and exceeding customer expectations in the dining car. The two-day class will include a review of actual customer complaints resulting from incidents that took place on the *Empire Builder*, discussion about why these problems

occurred and development of approaches to prevent similar incidents in the future.

The course will include a section on the essential role of leadership — from the conductor to the LSA and every on-board employee. "The training will emphasize how important it is for everyone to work toward one common goal — providing all customers with a

memorable travel experience," explained Superintendent of Passenger Services Brian Rosenwald.

To create awareness and stimulate ridership and revenue, Amtrak's Marketing team is working with tour operators, convention and visitors bureaus and chambers of commerce in cities along the route to develop ski packages during the winter months and year-round leisure travel packages.

To promote travel to St. Paul, MN, Amtrak is partnering with the St. Paul Convention and Visitors Bureau to offer travelers a memorable weekend vacation package. The package, which becomes available this month, includes transportation on the *Empire Builder*, a two-night weekend stay at a St. Paul hotel, an entertainment package that includes passes to the Science Museum of Minnesota and the Minnesota History Center, discounts at the Mall of America and dinner for two. Over the next few months, other tour and ski packages will be finalized.

In early May, "Coming Soon" posters announcing the launch of this new service will be posted in all staffed stations along the route. Posters will also be displayed at other stations on routes that serve passengers who transfer to the *Empire Builder*, such as in Los Angeles, CA, Albany, NY, and Detroit, MI.

Wilmington Shop Recognized with Awards

Environmental Control Measures Reduce Release of Contaminants

Amtrak's successful efforts to meet new environmental regulations were recently recognized by the Water Resources Association of the Delaware River Basin Commission. The WRA board of directors nominated Amtrak to receive the Business and Industry Award for engineering sediment control as part of a pollutant minimization plan to reduce contaminants from entering the Delaware River from the Wilmington Maintenance Facility. Amtrak was honored at an event held April 6 in Philadelphia.

"Receiving this award is quite an honor for Amtrak, as the company was nominated by an outside entity," said Roy Deitchman, vice president Environmental, Health

and Safety. "We have worked to reduce contamination from prior railroad operations at Amtrak facilities and this public recognition indicates our actions are having demonstrable impacts in improving environmental protection."

The environmental commission, which consists of government agencies, environmental organizations and businesses, awarded Amtrak for improving surface drainage and sediment control at the Wilmington Maintenance Facility, where storm water is drained off of the property following rainfall. Although this drainage point had non-detectable levels of polychlorinated biphenyls (PCBs) over a 10-year monitoring period, a new PCB

sampling method, which uses lower detection limits, was implemented by the Delaware River Basin Commission in 2001. Results from using the new method indicated that the runoff water had an elevated concentration of PCBs right after storms.

To reduce the amount of sediment runoff during a rainstorm, thus reducing the amount of PCBs potentially released into the river, Amtrak developed and implemented a series of methods to control the runoff, including the installation of filter-fabric fencing, filter-fabric and stone covering over slopes, and stone gravel surfaces for vehicle traffic areas. Other techniques included the creation of stone and filter berms

and drainage swales as well as planting vegetation and reconfiguring the drainage end wall.

Charlie Lin, director Environmental Technical Services, with assistance from SECOR International completed the design, while an environmental sub-contractor performed the remedial work.

The major construction activities were completed in August 2003 and monitoring and minor adjustments to the sediment control measures have been performed since the completion of the construction phase of the project. According to samples taken before and after the measures were adopted, the PCB discharge concentration was reduced by more than 90 percent.

Spring 2005 Timetable Arrives

Like the swallows’ annual return to San Juan Capistrano, the arrival of Amtrak’s 2005 Spring/Summer System Timetable on April 25 may be of little suspense, but the new schedule does contain several changes that will interest employees and passengers across the country.

In the Northeast, the 14 remaining weekly *Metroliner* trips are replaced with *Acela Express* or *Regional* service, thereby dedicating all premium service between New York and Washington entirely to *Acela Express* on both weekdays and weekends.

Fifteen weekday *Acela Express* trips operate each way with easy-to-remember hourly departures between 6 a.m. and 8 p.m. from Washington and New York. On the north end, New York-Boston *Acela* weekday service is reduced to ten from 11 roundtrips.

This will mark the first time since its introduction in January 1969 that a *Metroliner* is not serving passengers between Washington and New York. The last *Metroliner* will be 224 on Sunday, April 24.

Regional service now becomes all-reserved on weekdays, extending the previously instituted all-reserved *Regional* weekend service. The change is designed to better manage load factors and thereby provide better service to customers who expect a seat. In addition, some *Regional* schedules are adjusted to fill slots formerly occupied by *Acela* trains.

Another noteworthy change in the timetable affects the *Sunset Limited*. The train, known for its OTP troubles, had its timetable adjusted last month to work better with freight schedules. A further

adjustment to the schedule has westbound train 1 operating on a later timetable to all cities between Beaumont, TX, and Los Angeles.

The train departs Beaumont at 6:43 p.m., ten minutes later than the current schedule, and arrives in Los Angeles at 10:10 a.m., three and a half hours later than before. The east-bound *Sunset Limited* operates on an earlier schedule to all cities between Los Angeles and New Orleans, departing Los Angeles at 2:30 p.m. (eight hours earlier than the previous schedule) and arriving in New Orleans four and a half hours earlier, at 4 p.m. The new schedule also better supports the connection with the *Texas Eagle* at San Antonio.

Smaller and more subtle changes to the timetable also exist. In the Northeast Corridor, for instance, the *Keystone* schedules are modified to create a window for track work between Parkesburg and Lancaster. The southbound *Vermont* operates approximately two hours later and the northbound operates approximately one hour later, thereby restoring Thruway

bus connection between Montreal and St. Alban’s.

The *Silver Meteor* leaves New York one hour later at 3:15 p.m., restoring connections from points in Upstate New York. In addition

to saving 25 minutes due to the elimination of the mail and express operation, the *Capitol Limited* leaves Washington 1 hour 25 minutes earlier at 3:55 p.m. In addition, a new stop in the city of Van Nuys has been added

along the *Coast Starlight* route.

Unlike the prior schedule change, there are few policy changes for passengers noted in this edition. One adjustment is the requirement of a 3-day advance reservation to take advantage of group discounts for American Automobile Association, National Association of Railroad Passengers, Student Advantage and Veterans Advantage members that went into effect on April 1.

The age of unaccompanied children is another policy modification. Children under eight years old must now be accompanied by a 15-year-old or older who has responsibility for him or her, as opposed to an 18-

year-old. Also, children ages eight through 14 (instead of 11) may travel unaccompanied only between the hours of 6 a.m. and 9 p.m.

The design of the timetable is mostly unchanged from the new format that was implemented in the fall of 2003. However, a new feature of the timetable is the California Coastal Services grid, which provides passengers an easy reference to the multiple frequencies offered between Roseville/Sacramento to San Diego using Amtrak’s integrated Thruway bus and rail network. Similarly, a change is made to the way Illinois, Missouri, Iowa and Nebraska services are presented, to provide customers with easier-to-understand information. Another small modification that serves as a quick-reference tool for Northeast Corridor passengers is the color-coding of *Regional* (gray shading) and *Acela Express* services (blue shading).

The schedule change is the last one to be managed by Network Schedules Senior Director Walt Peters, who has directed train scheduling for the past eight years and retires this summer. In a message accompanying the final timetable, Peters expressed his thanks to his staff, scores of other employees and those at the commuter agencies Amtrak works with and serves: “During the past eight years, it has been a challenge to manage competing interests. It has also been fun. And, with the help of those disparate interests — both within and outside Amtrak, we have always ended up with a schedule that works.”

New Flavors Accompany Timetable

As the 2005 spring timetable becomes effective, so do new menu choices for passengers traveling on long-distance trains, with the exception of the *Auto Train*. In rotation for the spring/summer schedule are menu Cycles 1, 2 and 5, featuring new selections and items that are popular sellers.

“The changes in the menus reflect the Service Delivery department’s commitment to continue to provide interesting menu choices based on what our long-distance passengers want,” said Pete Humphreys, director, Food and Beverage Standards and Operations.

Prices for dining car meals are an average of five percent higher than last year to help boost revenue.

Naturally, customer preference is not the only factor that determines what menu choices stay or go — cost and revenue are primary considerations in menu creation.

One example is the seared halibut that was previously available on the Cycle 5 menu. “The halibut was very costly and had a unique herb crust

that some passengers did not care for, so we offer seared salmon instead,” noted Humphreys.

Input from employees and passengers helped direct some of the changes; a lunchtime seafood salad topping that received mixed reviews was consequently replaced with a grilled chicken breast. Another favorite, the popular chicken-fried steak is now offered as a dinner special.

The bulk of the changes appear on the Cycle 2 menu. For instance, instead of breakfast pork sausage patties, passengers may choose a ham steak, a popular item on *Acela* service. For lunch, the hot entrée chili is replaced with a smaller version of prime rib. The dinner meat entrée is changed from the veal chop to a honey-lemon flavored lamb shank, the first night dinner special is turkey tenderloins, and the manicotti is swapped with cheese ravioli.

Dear Amtrak Co-workers:

It is a pleasure to have this opportunity to inform you of issues that affect us all on the Pacific Division and to update you on the significant progress being made on the division.

First, and most importantly, I want to sincerely thank all of the employees on the Pacific Division, craft and management, as well as the Central and Southwest Division employees who work through the division on Amtrak's long-distance trains. Your efforts and positive customer service during the past two months of challenging service disruptions has remained both attentive and courteous.

Like every division on the Amtrak system, we have had our fair share of weather problems. We experienced record snowfall in the Sierras and Cascades, rockslides, mudslides, washouts, sinkholes, high winds and a host of other weather-related issues that severely impacted our service. During this same time period, the BNSF scheduled a two-week maintenance-of-way blitz on our San Joaquins service. Additionally, the California Zephyr derailed as a result of a rockslide in Ruby Canyon, CO. We were extremely fortunate that none of these conditions resulted in any serious injuries to our passengers or employees. In reading the comments received from our passengers regarding the service disruptions we experienced, I found it clear that you performed remarkably well under these adverse circumstances.

I would like to extend my thanks and appreciation as well to Mr. Ed Walker, vice president, Transportation. Mr. Walker is grateful for the continual updates he received and he is aware of the many challenges you all faced. We both greatly appreciate the dedication, professionalism and customer focus you demonstrated during this time. Dealing with these situations can be exasperating and frustrating, but this is where we have the opportunity to shine and you have done that!

Secondly, the Pacific Division has a lot to be proud of:

We moved into the new Oakland Maintenance Facility on Nov. 1, 2004. The new facility has provided the opportunity to improve the day-to-day maintenance of our equipment on the California Zephyr, Capitols and San Joaquins.

Design for the Seattle Maintenance Facility is 30-percent complete and we are moving forward with this project.

Ridership and revenue continue to grow and each month we break ridership records for the Amtrak Cascades, Capitol and San Joaquin services.

Customer Service Index scores on services operated on the division are above the company average.

Safety status is at 3.3 percent for FRA-reportable injuries, which is at goal.

Operating Rules Compliance is 2.2 percent, which is ahead of the 2.8 percent system goal.

The biggest operation of special trains at Amtrak is on the division. We successfully operate the Reno Fun and Snow Trains and the Christmas Tree Lighting Specials on an annual basis.

By June, we will add one additional round trip between Seattle and Portland on the Amtrak Cascades service.

Three round-trip extensions of Capitol Corridor trains between Oakland and San Jose are planned for early 2006.

Our successes over the past year and in the coming months are a direct result of your commitment to Amtrak, our state and regional partners, and most importantly our passengers.

We are very fortunate in the Pacific Division to have strong state and regional partners who provide both political and financial support. Among these are the states of California, Washington and Oregon. Ask yourself, "How many trains were operating 10 years ago on the Capitol, San Joaquin and Cascades services compared to today?" We've come a long way. We also have strong contractual relationships with the Capitol Corridor Joint Powers Authority (Capitol Corridor service), the Peninsula Commute Joint Powers Board (Caltrain commute service), and Sound Transit (Sounder commuter service). The partnerships we have for operating and expanding passenger service in the West are critical to Amtrak's success.

This is not to say we lack challenges. The uncertainty regarding our funding has caused all of us a lot of anxiety and has obviously impacted morale. It has affected our relationship with the labor organizations and stakeholder partners. Then there is the continuing challenge we face in the critical area of on-time performance. This is far and away the most important factor in satisfying our customers and continues to be the most critical problem we have with the freight railroads where our trains operate.

Our passengers are wondering if we will remain a going concern. In spite of this distraction, as Mr. Gunn has said, the best thing we can do right now is continue to do our job. We should seize the opportunity to shine while the spotlight is on us. But rather than focus on what we cannot control we should focus on what we can. System delays and held delays are two areas that we can control. System delays are employee-related and have to do with late crews, re-crewing, sick or injured employees, restroom breaks, detours or alleged crew rules violations. Held delays are passenger delays such as checking baggage, smoke breaks, disabled passengers, EMS, and multiple spots. If we can reduce delays in these areas we can improve our on-time performance. With every challenge there is an opportunity.

In closing, while traveling around the division recently, many of you have expressed your concerns about whether we can and will survive as a company. Hard as it may be right now, our best course is to do all we can to make sure that the product we offer is so valuable that it simply has to continue. I'll repeat some advice I received in 1977 from Martin Dunleavy, stationmaster, Penn Station New York, who said, "Kid, be where you're supposed to be, when you're supposed to be there, and do what you're supposed to do!"

Regards,

Joe Deely

General Superintendent Pacific Division

Marketing Efforts

continued from page 1

below the same period last year and budget; ticket revenues were \$87.5 million, approximately 4 percent below last year and 5.5 percent below budget.

On the Northeast Corridor, Regional service experienced modest ridership growth. A moderate price adjustment put in place in January contributed to a nearly 4-percent rise in revenue over the same period last year (and about the same percentage better than budget) and ridership growth

of about 2.5 percent over last year, nearly 6 percent ahead of budget.

Despite a disappointing 78-percent on-time performance record, Acela Express ridership and revenue both finished better than last year, but below budget. Ridership was 2.5 percent ahead of last year, but 8 percent below budget. Revenue was almost 4 percent ahead of last year, but 7.5 percent below budget.

Other corridor trains that performed well, exceeding budget for ridership and ticket revenue,

included the Pere Marquette with ridership up 19 percent and ticket revenue up 11.5 percent over last year, and the Heartland Flyer with ridership up 14 percent and ticket revenue up 19 percent over last year.

Long-distance ridership continued to fall: 12 percent below last year, and 13 percent below budget. Similarly, ticket revenues dropped 14 percent below last year and 15 percent below budget. Three services accounted for most of the revenue losses — the Coast

Starlight, which lost \$1 million; the Florida Silver Service, which was unfavorable by approximately \$1 million; and Auto Train, which missed budget by \$700,000.

The California Zephyr made a good return from January when it was out of service for nearly the entire month as a result of snowfall and rock slides in the Sierras. In February, the service was 4 percent ahead of last year in ridership and ticket revenue, and 3 percent favorable to the budget for both.

APD Co-hosts International Security Conference

Officials from Madrid Share Lessons Learned

With the safety of passengers and employees a constant focus for Amtrak, the railroad co-sponsored an international rail security conference in mid-February. Amtrak joined the American Public Transportation Association (APTA) and the Association for American Railroads (AAR) to offer the International Security Conference attendees an opportunity to learn from the Madrid terrorist attacks.

With more than 200 people in attendance, the conference hosted representatives from such federal agencies as the Department of Homeland Security, the Federal Transit Administration, the Federal Railroad Administration, the FBI, the Secret Service, the National Transportation Safety Board, police departments and transit agencies.

With the attacks on the Madrid commuter rail system just a year ago in March, participants eagerly

listened to presentations given by four senior Spanish officials that emphasized the importance of coming together at a high-level forum to share information about preventive security measures and other safety initiatives. Noting that people use public transportation 32 million times a day, APTA President William W. Millar said, “Sponsoring this conference so we can learn from and share with our international partners is another way that the public transportation industry is working to make sure that America’s public transportation riders are safe.”

Amtrak Vice President for Security Al Broadbent re-emphasized the value of the discussion and sharing of experiences saying, “The safety and security of our passengers and employees continues to remain a priority at Amtrak. I am grateful to the rail and security officials from Madrid who shared their hard-lessons-learned with us, as well as to our partners at APTA

and AAR. This type of international forum is invaluable in the security business, where prevention and crisis management are key. It is most important that we remain diligent and committed to fighting the war on terrorism.”

Amtrak has taken significant measures over the past few years to improve its safety and security infrastructure, including the formation of the divisional security committees, the Amtrak’s Threat Level Response Plan and a number of other security initiatives that were shared at the meeting. The *See Something, Say Something* public education campaign that focuses on increasing passenger and employee awareness with the use of on-board and in-station signage and announcements, the on-board passenger ticket verification program, and the implementation of the security training program for all employees, were all of interest to the Spanish delegates. Additionally, much work has

been done to the railroad infrastructure, including significant improvements to the New York tunnels that enhance their fire and life safety aspects.

Since the attacks of 9/11, the public transportation industry has spent over \$2 billion on security, but current transit security needs for American mass transit agencies total in excess of \$6 billion, according to APTA President Bill Millar. A request has been made by APTA to Congress to fund \$2 billion for mass transit security in FY ’06.

Since 9/11, the federal government allocated \$115 million for transit security in FY ’03 and FY ’04. Congress appropriated \$150 million in FY ’05 for transportation security, but specific allocations for that money to freight railroads, transit and intercity passenger rail have not yet been determined by the Department of Homeland Security.

Amtrak Swings into Spring with Baseball Sponsorships

As the excitement of baseball’s opening day spreads across the country, Amtrak is teaming up with major and minor league teams to capitalize on a number of marketing opportunities to increase awareness about Amtrak services, and build ridership and revenue during the baseball season.

Many of Amtrak’s marketing efforts center around three key components: radio advertising, stadium signage and grassroots promotional activities. Amtrak’s Marketing and Sales Promotions Chief David Lim explains that radio advertising is one of the most effective vehicles for reaching the baseball fans because it has the potential to multiply the number of messages that actually reach the marketplace.

For instance, the New York Mets sponsorship includes two 30-second radio spots to be aired during each of the 175 New York Mets games this year over the Mets’ station, WFAN. “So, most people would presume that we are getting our message out with 350 spots — 175 multiplied by two. But actually, we attain a far greater benefit,” continued Lim. Eleven other stations throughout the Northeast also broadcast the game, so, in reality, the 350 spots per

season are also being aired on each of the eleven radio stations, which yields 3,859 more radio spots.

This multiplying effect of radio advertising is even more pronounced with Amtrak’s sponsorship of the Boston Red Sox. A component of this agreement is one radio spot during each of the team’s 177 games. Forty-seven stations broadcast the games — sending Amtrak’s message over the airwaves more than 8,000 times.

“It’s important to understand that the reason we partner with these teams is the overall media value we ultimately achieve as well as the benefit of leveraging promotional opportunities,” added Lim.

Stadium signage is another marketing tool that offers more than what initially meets the eye. Most people might presume that Amtrak’s signage along the walls of Fenway Park — home of the Boston Red Sox — is intended to increase the company’s exposure among spectators at the game. In fact, when stadium signage is purchased, fans are the secondary consideration — stadium signage is purchased strategically for television exposure.

As part of the Red Sox sponsorship, for example, Amtrak displays

signage behind home plate for half an inning. During that time, whenever a player is at bat, the television station broadcasting the game will display an Amtrak message, enabling Amtrak to benefit from national television exposure without actually purchasing it.

Grassroots marketing programs such as fantasy games, ticket giveaways, game day promotional activities and sweepstakes are another essential part of many baseball marketing packages because they offer fans access to sporting events that would not otherwise be available. “These type of promotions add value to Amtrak’s customer base and also help build relationships with our corporate accounts, travel agencies and communities,” explained Lim.

“The reason we partner with these teams is the overall media value we ultimately achieve as well as the benefit of leveraging promotional opportunities.”

David Lim
Chief, Marketing and Sales Promotions

Amtrak’s baseball activity extends across the system. With the start of the Seattle Mariners’ 2005 season, Amtrak and Sports World Tours launched a package that includes

field-level tickets, Amtrak travel to and from the game and the option to add a hotel accommodation. The one-day package for passengers boarding in Portland is \$135 per person or \$110 from Bellingham, WA.

Because the station is adjacent to the ballpark, fans from north and south take the Amtrak *Cascades* service to games. According to Assistant Superintendent Gay Banks Olson, “Depending upon the team playing the Mariners, almost everyone on *Cascades* trains 500 and 517 is going to the games. It is really a great way for families to travel to the ballpark.”

In the Southeast, for the seventh year, Amtrak is partnering with the Marlins to sponsor a full range of promotional activities including

exposure on the stadium Jumbo Tron scoreboard, public address announcements, a four-color ad in each edition of the official game day program, which is also mailed

Promotion of The History Channel Show Yields Prime Visibility

By partnering with The History Channel (THC) to promote “FDR: A Presidency Revealed,” which premiers as a two-part miniseries on April 17 and 18, Amtrak extends its reach to millions of viewers.

The special series focuses on life in the Franklin D. Roosevelt era (1930s -1940s) and FDR’s contribution to the development of the nation, including the expansion of railroad service.

During the promotional period, from March 21 through April 18, Amtrak will gain visibility with over 3 million national and inter-

national viewers; primarily families and individuals between the ages of 25 and 54. Amtrak’s partnership with THC includes 100 on-air promotional spots on The History Channel, The Biography Channel and The History Channel International. Additionally, Amtrak receives 20 to 30 mentions as a partner and prize provider in radio promotions in 10 major markets.

“The partnership with the History Channel is a great opportunity for Amtrak to gain significant media exposure both on television and radio. This allows us to reach a market segment with demographic

characteristics very similar to Amtrak’s,” stated Amtrak’s Brand Advertising and Sales Promotion Director Darlene Abubakar.

Amtrak’s visibility also includes logo and message placement on the History.com Web site and mention in the e-mail newsletter to 475,000 THC viewers. Further, THC is providing 20-percent off to Amtrak Guest Rewards® members on their purchase of over 700 DVD titles.

Additionally, “Explore FDR’s America Guide,” a THC-produced travel guide themed after the FDR miniseries is available at select

Amtrak stations, Club Acela Lounges and relevant trains, such as the *Auto Train*.

The guide promotes THC’s online sweepstakes, which offers a grand prize trip for two to “Explore FDR’s America,” which includes travel to New York via *Acela Express* and Empire service to visit FDR’s mansion in Hyde Park, New York. Amtrak will also provide hotel accommodations at Beekman Arms, the oldest operating Inn in America and where FDR made several speeches from the front porch.

Baseball Sponsorships

continued from page 6
to over 5,000 season ticket holders.

Amtrak has developed other marketing partnerships that include the San Francisco Giants and the Los Angeles Dodgers that include print and in-stadium advertising, radio spots on both English and Spanish broadcast stations and Amtrak information on the teams’ Web sites. Additionally, Amtrak will be featured during several

game day activities and community promotions.

Although a substantial number of baseball promotions center around the major leagues, Amtrak also sponsors several minor league teams including the

Savannah Sand Gnats, the minor league team of the new Washington Nationals; the Lowell Spinners, the minor league team of the Boston Red Sox; and the Trenton Thunder, a double-A affiliate of the New York Yankees.

These sponsorships cost much less, but “they get our name out in front of the community and build awareness,” stated Southeast Marketing Director Hank Koppelman.

Correction
The March issue contained a spelling error in the name of a January 2005 retiree. The full name should have appeared Forte, Joan L, not Forte, Joan M. *Amtrak Ink* regrets the error.

FRONT LINE FOCUS

Dear Amtrak:

On Feb. 17, I traveled on Amtrak from Chicago to New Orleans. During the layover in New Orleans waiting for the *Sunset Limited*, I became ill and had to cancel the rest of my trip and return home. In fact, I spent the night of Feb. 18 in the hospital. I returned to Chicago via the *City of New Orleans* on Feb. 19.

I would like to commend the station personnel on duty on Friday evening and Saturday morning in New Orleans. They were very helpful in calling the paramedics and seeing that my luggage was stored until I got out of the hospital. Also, they went out of their way to help me get the tickets I changed so I could return home. They occasionally checked on me in the lounge to see if I needed anything.

I would especially like to commend the car attendant on my trip home. Her name is Marci Dacus. She brought me crackers, water, ice, soda and other light foods that I could eat. She helped me with my luggage, and in my opinion, went above and beyond the call of duty.

I've heard negative comments about Amtrak personnel, but I found my experience to be much different. This was my first Amtrak trip in 16 years, but hopefully not my last.

Sincerely,
Claudia S.
Monroe, WI

Dear Amtrak:

My Mother and I left for Seattle WA from Columbus, WI. When we got to Minneapolis, MN we picked up my Aunt Anna who is 89 years old and was in a wheelchair. She can walk a little with the aid of a walker, but her walker would not fit in the aisle on the train. With the help of Damon Higman, our Sleeping Car Attendant from Seattle, WA and the man who brought my Aunt Anna to the train, they were able to get her to our upstairs compartments.

Damon was so much help to us and he did so much more than he really had to. Since my Aunt wasn't able to use her walker because it was too wide for the aisle Damon had to bring her meals to her. I know that this is one of the duties that is required, but when he brought her the meals he made sure we had a towel for a bib and that she had everything she needed. He would even check to make sure that we had enough water to drink during our trip. When my Mother and I went to eat our meals he would look in on Aunt Anna to make sure that she wouldn't try walking by herself. When we got back he would go and get her meal for her.

When we ran out of wipes for Aunt Anna, Damon even found us some. He always had a smile and made himself available to us whenever we needed extra help. Sometimes we'd have to wait while he did his regular duties, but he always let us know when he'd be back. It was a good thing that Damon looked at our tickets as they had us in A and Aunt Anna in C. We had to be in the rooms next to each other, as she wasn't able to travel by herself.

Sincerely,
Patricia R.
Janesville, WI

Fire and Life Safety

continued from page 1

in Weehawken submitted a bid that met our fiscal and technical expectations and was awarded the contract for the complex First Avenue Tunnel project," said Fire and Life Safety Program Director Steve Alleman, whose group of six project managers is responsible for the management of scope, schedule, budget and the reporting functions of the program.

The project is complicated because of its location in downtown Manhattan on New York University Hospital grounds. Alleman added that the new south side ventilation structure will sit only nine feet from the hospital and that noise, dust and vibration concerns will take priority.

The construction phase began in January with the closing of a lane on First Avenue, installation of temporary barricades, establishment of trailers, and other start-up tasks. Drawings are currently being reviewed and meetings with the community's advisory board are being held.

The tunnel shields that were so effective in enabling tunnel work without interfering with train operations on the Long Island City project are scheduled to be constructed this summer.

"The shields are one of a kind," said Stan Wiecek director, Design Support. "We used them to isolate the demolition of the existing vent shafts and construction of the new vent shafts from rail traffic. They worked out so well on the Long Island City vent project that we decided to employ the same concept for this project."

The end result in FY '09 will be a nine-story structure in which a new ventilation system with new stairways and bi-directional fans are housed.

Nearly complete is the Tunnel Fire Standpipe project, which in July will result in 16 miles of standpipe network in all six tunnels. "This is an enormous improvement that enables fire department personnel greater access to the fire suppression system throughout all tunnels," said program manager Abdul Rasheed.

In late FY '05 or early FY '06, a supervisory system that monitors the pipes for leaks or any irregularities will be installed, thereby completing the project.

The major elements of the conceptual scope of Phase II, which would run from 2008 – 2013, are currently under design.

Strategic Reform Initiatives Unveiled Last Month

A series of strategic reform initiatives advancing the long-term viability of intercity passenger rail and requesting FY '06 federal funding of \$1.82 billion for operations and capital programs was announced by Amtrak's Chairman David Laney as he testified before Congress last month.

The strategic reform plan is a combination of corporate initiatives and legislative proposals that would, over time, transform the way in which passenger rail development is financed and clearly define Amtrak's role as a national provider of passenger rail service. The proposal would also introduce elements of competition and other reforms to improve passenger rail.

"These are dynamic measures to strengthen passenger rail service at a time when our nation needs it most ... These initiatives will both continue fundamental reform at

Amtrak and help spur a rational and much-needed growth of the passenger rail network," said Board Chairman David Laney.

Specifically, the four main objectives of the initiatives are to establish an 80/20 federal/state matching grant program to help states move forward with corridor development; return the Northeast Corridor to a state of good repair; institute performance thresholds for long-distance trains; and create markets for competition.

The vision for the future of passenger rail includes an Amtrak that is a viable, competitive provider of rail services.

Using performance thresholds for long-distance trains, Amtrak would determine the viability of a service and what it would take to support it. In other words, if a train falls below the measurement set for that service, it would have to be

supported by states or other authorities, reconfigured or eliminated.

To have a clear view of what the financial picture is to help provide the data for

future decision-making, Amtrak in FY '06 will align financial accounting and accountability within five business lines. Those will be Amtrak-owned infrastructure management (mostly in the

Northeast Corridor); Northeast Corridor operations; national long-distance operations; and ancillary businesses, such as Real Estate.

These business lines are designed to show where expenses occur and revenues are generated, and not to create business units, like the Strategic Business Units, which were eliminated in 2002.

To proceed with some of these initiatives, Congressional action is required. For example, a law would be required to set up a federal/state matching program, such as those available for other modes of transportation, that would open up doors for corridor development, with states transitioning to full

FY '06 Procurement Plan Approved by Board

While Congress debates Amtrak's FY '06 funding level, the board of directors last month authorized the ordering of materials needed for capital projects next year.

Materials ordering is no simple task. Because of the nature of the railroad supply industry, the lead time required by vendors for capital project materials can be as much as 52 weeks and federal procurement regulations governing Amtrak can add an additional two to four months. As a result, much of the procurement process supporting the FY '06 capital plan must be executed this fiscal year in order to begin work in a timely manner at the start of the new fiscal year.

"To remain in synch with the company's state-of-good-repair schedule, materials for the FY '06 capital program must be on hand at the start of the fiscal year, on Oct. 1, 2006," said Mike Rienzi

Amtrak's vice president Procurement and Materials Management. Recognizing this need, Amtrak's

list, with each component and its cost corresponding to a specific program, with every dollar accounted for. What follows are

ability of the fleet in FY '06, the Mechanical department requires receipt of a range of materials.

Newly procured vehicles for the FY '06 capital plan parked at the Philadelphia Truck Shop facility include two Grapple Trucks, a Rotary Dump, and two hi-rail track inspection vehicles.

Board of Directors approved a \$223 million advance-order plan for the FY '06 infrastructure and fleet capital projects in April.

Amtrak's advance-order procurement plan comprises an itemized

some of the highlights of the materials that need to be ordered far ahead of the start of the fiscal year.

TRAIN OF THOUGHT

Editor's note: The message below was sent from President Gunn to employees in an Employee Advisory dated April 25, 2005.

Dear Amtrak Co-workers:

Last week, the Board of Directors and management unveiled a reform package for Amtrak and a Grant and Legislative request. The FY '06 funding request is \$1.820 billion, the amount necessary to operate the existing system and continue our state-of-good-repair capital program. The increase we are seeking in FY '06 compared with the current year is for working capital and capital. The operating budget will be tight, but achievable.

The reform package is a good proposal in my opinion and, if you take the time to read it (it is on our Web site), you will find that the Board has taken a strong position in support of intercity rail service. When you read it, keep in mind that it's important that you look at the totality of the package, some of which you may think is good, some bad. However, overall it is a decent plan and the best I've seen in Amtrak history. It was not done in haste, and not made just for the sake of change.

None of us should be under any illusion that business as usual will be acceptable in the current political and economic climate — there will be reform. Either we can attempt to shape it, or we can stand aside and let it happen without our input.

There are a number of very unwise reform proposals floating around that, I believe, would be extremely harmful to our company and the future of intercity passenger rail. Our proposal is thoughtful and practical, and will form the basis for the coming debate, albeit some portions of the proposal are controversial.

The proposal calls for:

1. Adequate funding for Amtrak in FY '06.
2. Establishment of a federal capital grant program for state investment in intercity passenger projects (80 percent federal, 20 percent local) placing rail on the same basis as highways and air. Once in place, states would be responsible for 100 percent of any operating deficit after four years.

3. The federal government through Amtrak would be responsible for bringing the Northeast Corridor up to a state of good repair.
4. Amtrak would remain a vertically integrated company, i.e., corridor maintenance would not be separated from operations.
5. Organizationally, Amtrak would remain as it is today; however, we would budget and report on five businesses — state corridors, long distance trains, NEC operations, infrastructure and ancillary businesses.
6. Performance targets would be set for long-distance trains. Trains requiring more subsidy than these standards would also require additional state or federal subsidy, or be discontinued. This would not happen overnight, but would put pressure on us to improve.
7. It is proposed that the Railway Labor Act be changed (for Amtrak only) to move us closer to a standard business. For example, negotiated agreements would terminate at the end of the term; management may impose new terms; unions may exercise self help; and presidential emergency boards and releases would be eliminated. The reason for this change is to allow us to deal with work rule issues that frankly are very difficult to deal with under the existing law.
8. It is proposed that new employees would be placed in Social Security. Current employees would be grandfathered in Railroad Retirement.
9. The plan envisions that there would be a growth in competition in the industry for both services and possibly operations. The states would become the purchaser and have the right to select the most efficient operator.
10. Lastly, our debt of some \$3.8 billion would be assumed by the federal government, thereby removing the need for nearly \$300 million in annual funding.

Under this plan it is important that we be in a competitive position, which is why the company is

David L. Gunn

seeking work rule changes and the change to Social Security. For example, we have already lost business to competitors who organize their maintenance activities based on industrial versus craft lines and are covered by Social Security. Further, we recently lost the opportunity to bring Acela overhaul work to the Bear, DE, shop because of our inability to organize our forces efficiently. The current rules are based on existing craft distinctions and scope rules, and it is now clear to me that this has to be changed if we are to survive and if our work force is to have a future in this industry. If management and labor were more creative, we could work our way through this problem.

In sum, while I believe this is a good plan, I know some portions of it are controversial. However, I would remind you that reform will happen and we can either shape that reform or be its victim. What it comes down to is unless we change, we will not survive.

Our Board has shifted the debate and I would urge all to understand what is proposed and to support responsible change. There is much in our proposal for all of us to support. We should limit our disagreements to the extent possible.

How some of these proposals actually pan out will be the subject of much discussion over the course of this year and maybe the next. No one really knows exactly what the outcome of all of this will be.

I will keep you posted as things develop.

Sincerely,

David L. Gunn

Plans To Announce Enhanced *Empire Builder* Service In Place

To prepare for the launch of the revitalized *Empire Builder* service this summer, the Marketing and Sales department is planning a comprehensive series of actions to highlight the newly refurbished equipment, improved amenities and redesigned service.

The *Empire Builder* has been selected as the prototype for Amtrak’s initiative to improve the financial performance of its long-distance trains, as stated in the recently announced Strategic Reform Initiatives unveiled last month. These changes are aimed at positioning the service as a premier leisure-travel train and increasing ridership and revenue, while keeping expenses low.

The planning of this endeavor takes months of careful preparation and coordination — as well as comprehensive efforts to build interest among customers, travel agents, convention and tourist bureaus and others about the changes in advance of the service’s kickoff. This job falls to Amtrak’s Marketing and Sales department and starts with an announcement this month of the official start date in August.

As a way to attract customer attention, the Marketing and Sales department is developing an online sweepstakes, offering a chance to win a trip on the *Empire Builder* and a vacation package in Seattle or Chicago. The sweepstakes will be featured on Amtrak’s Web site and in newspaper advertising. “Since over 30 percent of all bookings come through amtrak.com, this is an excellent channel to promote the *Empire Builder*,” explained International Sales Manager Craig White.

In addition, Amtrak is working with tour operators in the United States and Europe to feature the

route in their vacation packages. “The visitors coming from overseas have a natural tendency to travel by train. So, our overseas tour operators will be developing packages that highlight sites along the route,” White added.

Ski packages are being negotiated with major operators, such as Ski-Pak located in Seattle, WA, that will feature travel on the *Empire Builder* to the popular Big Mountain Ski Resort near the Whitefish station.

“Our principal message to potential passengers is that you are going to enjoy the changes we are making.”

Cliff Black
Media Relations Director, Corporate Communications

To further support this initiative, training classes began earlier this month in Chicago and Seattle for train service and OBS employees working on the route. A key component of the training is a Supplemental Service Standards manual recently developed by the Service Delivery, Transportation and Employee Development departments. The manual, which will accompany the current Service Standards Manual, provides the foundation for the training curriculum.

The supplement establishes guidelines unique to the *Empire Builder* service from the start of the trip to the finish. For instance, it specifies how coach attendants should introduce themselves to each passenger, provide at-seat meals, and offer complimentary pillows and blankets, which will be available for sale. The manual provides procedures for hosting the wine and cheese tasting events that will be held in the dining car for First class passengers.

But getting information to the public about the changes being made before the new service starts falls in large measure to a small, but highly experienced media relations team within the Marketing and Sales department. This month, the team will release the August date of the service start-up and unveil a new poster from award-winning artist Michael Schwab that will soon appear in stations and in major cities along the route advertising the enhanced service.

To gain as much attention as possible, Amtrak will invite

news stories about its product or service.

“Our objective is to promote the service as something new and exciting, but not oversell it in a way that over-promises,” said Amtrak media relations director Cliff Black. “Our principal message to potential passengers is that you are going to enjoy the changes we are making.”

Reporters that will cover the story of the *Empire Builder* will come from many different specialties. Some are exclusively travel writers who will want to focus on the travel experience of riding the train. Others may focus on the effort to refurbish the equipment. It is Black’s job and that of his team to determine the best approach with each and maximize the potential

for positive news coverage. For some that may mean taking a trip aboard the new equipment or visiting an employee training class. As part of these activities, reporters will receive a press kit that includes *Empire Builder* brochures and information on the route and services offered.

reporters to see the refurbished equipment and learn more about the service. Because much of Amtrak’s advertising dollars are being saved for the fall, Amtrak will rely heavily on “earned” media to promote the *Empire Builder* service. As opposed to the “paid”

This table setting is shown in the *Empire Builder* Supplemental Service Standards manual as an example of how to prepare tables for the wine and cheese tasting events that will be held in the dining car for First class passengers.

media an advertiser buys from television, radio and newspapers, “earned” media relies on the ability of a company to “earn”

for positive news coverage. For some that may mean taking a trip aboard the new equipment or visiting an employee training class. As part of these activities, reporters will receive a press kit that includes *Empire Builder* brochures and information on the route and services offered.

In August, when all systems are go, Amtrak will host a series of kick-off events in Chicago, Portland, Seattle and other communities along the route celebrating the improved service, much like those celebrating the train’s 75 years of service last summer.

The Marketing and Sales department is but one of many departments working to make the new *Empire Builder* a success. The success of their efforts depends on the ability of all departments to deliver the service that will be advertised.

Beech Grove’s Wreck-repair Program Moves Forward

Carmen welder Butch Vick stands in the vestibule of Viewliner Sleeping car 62013 as he rebuilds the car’s interior framework. The Sleeping car, scheduled for release in mid-summer, will be the seventh car returned to revenue service under Beech Grove’s FY ’05

wreck-repair program. The heavy-duty maintenance facility is slated to fix three more wreck-repaired cars by the end of the fiscal year.

The Sleeping car arrived at Beech Grove in May 2003 after a derailment in McIntosh County, GA.

The car sustained heavy damage and required repairs to the end of the car, undercarriage, collision posts, doors, trucks, trap doors and steps — at an estimated cost of \$620,000 and 4,200 labor hours.

Metroliners Return to Service in Northeast

March Results Among Strongest in Months

At press time, Amtrak was working through the challenges surrounding the suspension of *Acela Express* service. To meet the Northeast travel demand, an impressive equipment shuffle was orchestrated throughout the nation to restore *Metroliner* service.

Equipment was added to meet Northeast Corridor demand while keeping the disruption to other routes to a minimum. For example, West Coast

Horizon charter equipment, typically used to supplement the *Pacific Surfliner* fleet for special events, was transferred to the Empire

Corridor, as well as coaches used on Michigan service. The Empire Corridor Amfleet I coaches, along with *Clocker* equipment that was replaced with New Jersey Transit equipment, was in turn used to replace the coaches on trains such as the *Adirondack*, the *Downeaster* and the *Maple Leaf*. Equipment

on these trains returned to *Metroliner* service.

In addition, to help things run smoothly, mechanics at the shops were extra diligent about keeping the shop counts as low as possible.

By the first week in May, Amtrak had in place a well-advertised modified schedule that ran *Metroliners* in weekday hourly slots from 6 a.m. to 6 p.m. between Washington and New York, as well as 20

March was a strong month because of heavy travel during Easter holidays, high gas prices and marketing programs, such as the *Share Fares* promotions.

out of the 22 the regularly scheduled Regional trains. Also between Washington and New York on Saturdays, four *Metroliners* were in place going north and south, and on Sundays there were seven departures from Washington and eight from New York, in addition to the Regionals already on the schedule.

Between New York and Boston there were 10 *Regional* roundtrips and two *Metroliner* roundtrips on weekdays and four departures per day on Saturdays and Sundays.

The Marketing department also replaced *Acela* advertising with new *Metroliner* ads in newspapers, on the radio, and at well-covered venues, such as the billboards at sports stadiums. Meanwhile, the Marketing department also closely monitored sell-out conditions to readjust equipment as needed.

Passengers were also made aware of the new schedule through their travel agents, corporate accounts, and Amtrak Guest Rewards, and Amtrak.com.

It is too soon to look at the long-term impact on ridership and revenue losses due to the suspension. However, before the disruption, Amtrak recorded some of its strongest ridership and revenue numbers in several months.

March was a strong month because of heavy travel during the Easter

holidays, high gas prices and marketing programs, such as the *Share Fares* promotions.

Total March ridership (2.26 million trips) was up six percent compared to last year, and up three percent versus budget; while total ticket revenue (\$110.6 million) rose six percent over last year, and was in synch with the budget.

Overall, nearly all of the short-distance corridor services surpassed last March's ridership and revenue figures, with Midwest train ridership up 20 percent. Other notables included 12-percent ridership growth and 13-percent spike in ticket revenue on the *Pacific Surfliners*, and *Keystone* ridership growth of 14 percent and an increase of almost 23 percent in revenue over last year.

With 10-percent ridership growth and a nearly 13-percent rise in ticket revenue over last year, *Regional* service performed the best it has since the start of the fiscal year. The growth is partly attributed to *Share Fares*, a marketing promotion that benefits

continued on page 9

FY '06 Procurement Plan Approved by Board

continued from page 1

program accounts for over \$10 million in advance-order material costs; the most expensive of the parts are new ADA-complaint toilet modules at some \$30,000 each. In addition, about 30 Amfleet Is are also slated for overhaul.

Amfleet II equipment, generally used for the Eastern long-distance services such as the *Carolinian*, the Silver service and the *Lakeshore Limited*, will also benefit from the Mechanical capital program, as materials for the heavy overhaul of 28 coaches are on the procurement list.

There are also supplies ordered for Amfleet I café car conversions to coaches. In addition, 40 pieces of Maintenance-of-Way equipment, such as ballast hoppers and flat cars, will get new wheels, couplers and other components, according to the plan.

At Beech Grove in Indiana, 22 Horizon coaches and seven café cars, typically used in the Midwest, will be remanufactured with new parts on the list. Twenty-two Superliner I sleepers will be remanufactured as well as an additional 25 Superliner II sleepers.

“The remanufacturing process

involves rebuilding the entire car and having everything we need in place is critical to achieving our production goals,” said Chief Mechanical Officer Vince Nesci. “Waiting for certain parts can throw the whole program out of sequence and will cause the schedule to slip.”

Other Superliner equipment to be overhauled at Beech Grove include 16 lounges, 16 diners, and 11 trans dorms. Materials for the overhaul of 24 baggage cars will also be on order.

The list includes materials for Beech Grove mechanics to overhaul 42 P-42 locomotives, and for the second consecutive year, the facility will also be responsible for the overhaul of F-59 locomotives that are used in California; eight are slated for FY '06.

Materials for the overhaul of five HHP-8 locomotives and eight P-32 diesel switchers are also included in the list of work to be done at the Wilmington Locomotive Shop, as the lead time for certain parts can take as long as 50 weeks.

Engineering

Once on order, the materials necessary for the engineering's capital program will continue to

drive the Northeast Corridor infrastructure toward a state of good repair.

One of the biggest-ticket items on the Engineering department's docket in FY '06 is the replacement of the lift span on the Thames River Bridge in Groton, CT. The drawbridge span of the nearly 100-year-old bridge, which is a key link between New York and Boston, will be replaced with a vertical lift mechanism. The three-year plan will require \$29 million for the contract in FY '06 alone.

Track work scheduled to take place on the Northeast Corridor in FY '06 calls for \$11 million worth of

concrete ties. In addition, components for turnouts and crossovers, many of which take 52 weeks to be delivered, will also be on order.

“We've accomplished a lot in the last two years — the department's production is the highest it's been in a long time. But we still have a lot ahead of us and we need to stay on schedule and on target,” noted Chief Engineer David Hughes.

Also on the list are Electric Traction and Communications and Signals materials, parts for overhauling major Maintenance-of-Way equipment and new purchases, such as snow fighting equipment and rail heaters.

For the May issue: June 6, 2005
For the June issue: July 5, 2005

Dear Amtrak Co-workers:

I am very pleased to have this opportunity to share my thoughts about the work we are doing in the Transportation department in general, and in the New York Division in particular. Of course, as an informed Amtrak employee, you know our highest responsibilities are safety, security and service quality.

Let me address the issue of service first. To ensure that we provide consistent service to our passengers, the Transportation department has targeted three key concepts that drive the quality of the service we must provide. The first is that the conductor is in charge of the train; the second is that service is everyone's responsibility and each Transportation department employee — no matter what his or her function is accountable for the quality of our service; and the third is that our passengers are to be kept informed on a timely basis regarding service, delays and any disruptions while in our stations and on our trains. These concepts were discussed at a national Transportation department staff meeting held last month in Crotonville, NY, where system-wide action plans were developed and are now being put into action on the New York division.

The subject of security is serious and is, as you might imagine, taken very seriously here in New York and across the division. We have established a Division Security Committee that meets on a regular basis to discuss and implement grassroots security initiatives. An important emphasis is that our employees are the most familiar with their own work areas and they are the ones best suited to know when something is not right within their environment. Our committee has also engaged in actions with New Jersey Transit and the Long Island Rail Road related to Transportation Security Administration requirements, including infrastructure improvements and training and communications efforts. In the area of security communication, we also work closely with the Division Safety Committee, asking for their assistance during Safety Walkabouts with our security efforts, such as reporting unlocked gates and access doors and employees not wearing proper identification.

We will continue to focus on personal safety and operating rule compliance through the year. The New York team is highly motivated and qualified to meet and even exceed the goals of the Transportation department. Please continue to remember that safety is our top priority in everything we do, every moment we are on the job.

Continually honing our skills is crucial to our success. All management personnel are actively using the Transportation department review system to recognize and coach employees regarding their responsibilities on the job, so that we can collectively improve our safety job skills and service to our passengers.

The division management employees are attending the Transportation Supervisor's Workshops to improve skills in problem solving, use of management tools and service management. All Transportation department employees are attending Block Training to improve teamwork and leadership skills, service and regulatory-related skills.

Cooperation and communication are key to maintaining a successful relationship with each of the two commuter agencies we work with in New York Penn Station. Between New Jersey Transit, the Long Island Rail Road and Amtrak, our management team and employees handle over a half million passengers on more than 1,010 trains each day.

I also want to take this opportunity to thank everyone for all their dedication and hard work during this difficult time as we work to accommodate passengers on the Northeast Corridor due to the suspension of Acela Express service. From revising operating schedules, to finding alternate equipment, to helping our passengers with ticket exchanges, I want you to know how much I appreciate everything that you've done. This is the time when employees shine and I want you to know how appreciative I am to have such a dependable staff.

I am very pleased to have the opportunity to be part of the proud team of hard-working and dedicated employees that represent the New York Division. I look forward to our future challenges and successes as we work to improve and sustain our track record.

Sincerely,

Lenore Slimbock
General Superintendent
New York Division

Security Training Put Into Action

Amtrak station employee Monica Romero-Herrera (right) assists a passenger at Los Angeles' Union Station baggage room. Ms. Herrera, who recently attended the new Block Training for Transportation department employees, had an unexpected opportunity to practice some of the security awareness skills she learned in the class.

"The timing of the training was great because I went to the class on a Tuesday, learned about suspicious packages and evacuating passengers, and the very next Monday a co-worker discovered a suspicious package in the subway tunnel where we load the trains. We worked with the Los Angeles Police Department to evacuate the station and make sure the passengers were clear from the train platforms. Having gone to the class, I had a clear understanding of what we were doing. Luckily, it turned out to be a false alarm but I thought we did a good job responding."

Spring Activities Generate APD National, Local Distinction

While Amtrak's Police Department is always in action, this spring offered a number of notable highlights. In the month of March alone, the APD twice garnered national recognition, inaugurated a corps of sergeants, and extended its reach into local communities.

Of the two national recognitions, of major consequence to the department was its re-accreditation by the Commission on Accreditation for Law Enforcement Agencies (CALEA). Additionally, the National Heart Association recognized several Amtrak police officers for their lifesaving efforts in Providence, RI.

The department's fourth consecutive law enforcement accreditation was awarded in March. "It is an honor for Amtrak to meet the rigorous professional law enforcement standards set forth by CALEA and we are grateful to them for this recognition, which sets apart Amtrak's police force within the law enforcement community," said Chief Sonya Proctor.

The accreditation is valid for three years, during which time the Amtrak Police Department must submit annual reports attesting to compliance with CALEA standards in policy and procedures, administration, operations and

support services. As part of the accreditation process, Amtrak employees and the public were invited to offer comments with

At an awards ceremony sponsored by the American Heart Association in Providence, RI, six Amtrak Police officers received Heartsaver Awards in recognition for their quick response and lifesaving use of an Automated External Defibrillator on Russell Miller, a heart attack victim. (Front row, L. to R.) Officer Donald Gibson, Russell Miller and his wife Tressa Miller. (Back row) Sgt. William Bessette, Officer Wayne Manni, Officer David Neves, Officer Parbatee Westlake, Sgt. John St. Sauver.

regard to the re-accreditation via phone or written submission.

The Amtrak Police Department received its first accreditation in

with his wife Tressa, tearfully thanked the Amtrak Police officers and a Providence emergency medical team for their lifesaving

work during an incident at the Providence station.

During the ceremony, the AHA awarded six Amtrak Police officers with Heartsaver Awards for their role in saving Miller's life. The officers were recognized at the March 30 event for their team effort and using an Automated External Defibrillator (AED) to revive Miller, after he went into cardiac arrest while leaving the Amtrak garage at the Providence station in October 2004.

Amtrak Police Officers have participated in other lifesaving efforts using automated external defibrillators. Also in March, officers used an AED to resuscitate a

endeavor that requires officers to meet strict standards and successfully complete a series of written and verbal tests and exercises.

Senior Vice President of Operations Bill Crosbie shared his viewpoint about the efforts made by these men and women. "The corporation appreciates the work done by our officers and the sacrifices they have made to achieve the difficult task of promotion to sergeant. Amtrak places a great value on the continued safety and security of our employees and passengers, and it is reflected in the recognition today of these outstanding individuals."

Members of the department's Honor Guard and Pipe and Drum Unit opened the ceremony, and family members and friends of the officers participated in the badge-pinning portion of the event. "I enjoyed the protocol associated with the event and I am proud to have been recognized with my peers and commanders. This has re-invigorated my commitment to the Amtrak Police Department and as

a public servant," said newly promoted Sgt. Michele Page who is with APD's force in Chicago.

Bill Crosbie
Senior Vice President, Operations

On a local level, the department also sponsors two APD Explorer programs — one in New York City that is

managed by Officer Harry Barnes and another in Philadelphia, managed by Officer Doug Paige — that are aimed at helping teens to explore careers in law enforcement and increase their leadership abilities through community outreach and volunteer efforts.

In March, four Philadelphia APD Explorers accompanied Amtrak Police Chief Sonya Proctor and Officer Paige to Turner Middle School, where they helped the students celebrate Train Safety Day. Sixty pre-kindergarten students from the school demonstrated to Chief Proctor and the APD Explorers what they had learned about train safety from Paige, who regularly gives presentations on train safety.

The Philadelphia Division launched its Amtrak Police Explorers program, which is open to all young people ages 14-20, in October 2004. The group includes 20 Philadelphia public high school students who meet weekly.

Amtrak Police Sergeants Sworn In

Taking the oath of office administered by Amtrak Chief of Police Sonya Proctor are 15 newly promoted APD sergeants at a swearing-in ceremony held in Washington, D.C. on March 11. The officers being promoted are (front row, L. to R., including district location) Mark Matthews, Philadelphia; Glen Cosner, Washington; Marilyn Brookhart, Baltimore; Lawrence Jeffry, San Jose; Tony Epps, Washington; Larry Roberts, New Orleans; Maureen Powers, Philadelphia; and Michele Page, Chicago. (Second row, L. to R.) Kathryn Blondin, Chicago; Michael McNamara, Philadelphia; King Lee, Philadelphia; Thomas McKenna, Philadelphia; and William Ludwig, Philadelphia. Not pictured are Gilbert Wheelehan and Kevin Dauphin, Washington.

Transportation Department Employee Injuries Continue to Decline

The Transportation department’s safety performance for the first half of FY ’05 continues to improve. It has sustained through March 31 an employee reportable-injury ratio of 3.1, which is a 21-percent improvement over FY ’04, and is also 6 percent better than the Amtrak system goal of a 3.3 reportable injury ratio.

The improvement is even better in some segments of the Transportation department. The Service Delivery group’s injury ratio is down by 100 percent, while the Southwest Division’s ratio dropped 42 percent, the Southern Division is decreased 33 percent, the Central and Pacific divisions declined 30 percent, and the New York Division’s ratio fell 22 percent compared to the last fiscal year.

Two years ago, the Transportation department sustained a reportable injury ratio of 4.5 (exceeding the Amtrak system goal of 3.8). To address this shortcoming, in FY ’04, the Transportation department implemented a detailed plan to reduce injuries and improve safety performance. By the end of that fiscal year, the Transportation department had achieved its goal of a 3.8 injury ratio.

The department’s plan to reduce injuries centers on targeting the highest-profile injuries (falling, lifting) by first doing a thorough root-cause analysis of each injury, and determining the unsafe behaviors that place employees at risk. The focus then shifts to specific prevention techniques that change at-risk behaviors to safe behavior. By emphasizing MoveSmart® techniques, the Transportation

department provides focused safety messages to employees during briefings and observations. Additionally, the current Transportation Supervisor Training Workshop provides managers and supervisors with methods for providing constructive feedback as they work with employees to identify both proper and at-risk behavior.

First implemented in the summer of 2004, the plan consists of a campaign that focuses specifically on preventing slips, trips and falls. Included are employee education and briefing materials, supervisor guides and other collateral material aimed at correcting specific behavior that can contribute to those types of injuries. As a result of this campaign, the number of injuries resulting from slips, trips and falls during the summer of

2004 was reduced by 65 percent versus FY ’03.

The FY ’05 fall season program has targeted improper lifting techniques that could lead to injuries. This resulted in a 57-percent injury reduction compared to the same quarter in FY ’03. And, with winter weather often presenting slippery conditions, the 2005 winter season program also focused on slips, trips and falls. This resulted in a 26-percent reduction in injuries over the same period in FY ’04.

The Transportation department’s plan for the spring FY ’05 campaign is designed to address injuries that result from employees being “struck by” objects such as luggage, equipment, vehicles, or even passengers who may grab an employee for stability while boarding, or moving within a train.

Marketing Department Chosen for Recognition

Marketing Receives Susan G. Komen Breast Cancer Foundation Lumina Award

On behalf of the Marketing and Sales department, Tom Sabo, director, Mid-Atlantic Sales and Marketing, accepts the Susan G. Komen Breast Cancer Foundation Philadelphia Affiliate’s Lumina Award last month.

Through the efforts of the Marketing department’s Helena Funk, Amtrak has been a steadfast sponsor of the organization’s annual walk/race to raise money for breast cancer research for the past seven years. Thousands of supporters participate in the Philadelphia event every year, during which Amtrak’s presence is given high visibility.

Nine Campaigns Lauded

Amtrak’s marketing efforts have not only caught the public’s attention, but also accolades from the Transportation Marketing & Communications Association (TMCA). This year, Amtrak’s Marketing and Sales department was awarded nine of the association’s annual Tranny Awards for its work on several outstanding promotional campaigns and events.

The national organization recognizes transportation and transit industries’ best practices in marketing and communications programs that promote the goals of the organization.

Transportation Marketing & Communications Association Tranny Awards

Recycling Initiative Makes More Than Cents

Ever wonder what you really should do with your old printer cartridge? Let this be the last time you throw it in the trash.

As part of the Environmental, Health and Safety department's Recycling Business Plan, the company manages an initiative to recycle ink-jet and laser printer cartridges that has earned more than \$1,000 in rebates from recycling more than 1,400 printer cartridges since August.

"While the amount of money the program generates is relatively small, it's an easy contribution to our environmental mission and it helps keep waste out of landfills," said Craig Caldwell, Environmental department superintendent.

The program kicked off in August at Amtrak's Union Station in Washington, D.C., and by the end of FY '04, more than 50 additional sites, including Amtrak stations, mechanical shops, maintenance yards, crew bases and commuter services had joined the effort. The program is also made available to Amtrak customers who have also contributed nationwide to Amtrak's rebate program.

Amtrak works with a vendor, AAA Environmental, which provides Amtrak with a rebate for every recycled cartridge suitable for remanufacturing that it receives. To make recycling

easy for Amtrak employees and customers, AAA Environmental provides pre-addressed, pre-paid mailers that can be dropped in any mailbox or pre-paid collection box ready for FedEx Ground pickup.

Employees in a number of locations have volunteered to serve as recycling site contacts to help ensure that cartridges are sent to the vendor. Each time a printer, fax, or plotter cartridge is replaced, the used cartridge is placed in the appropriate mailer and sent to the recycling center.

All mailers are coded by Amtrak location and AAA provides Amtrak with reports of recycled cartridges by location that enable the railroad to track the program's progress.

Amtrak's Recycling Business Plan includes mandated and voluntary efforts that help prevent pollution and reduce disposal costs. Amtrak currently spends approximately \$6 million annually on waste management, of which about \$3 million is for trash disposal.

For more information about the program and a complete list of site coordinators and locations, employees can visit Amtrak's Intranet. From the home page, select "How We Work," then "Environmental," and then click on the Recycle Program link.

Each Amtrak site has a volunteer designee responsible for ordering and replenishing recycling supplies, but the department is looking for additional volunteers. Employees interested in acting as site coordinators should contact the printer cartridge recycling coordinator, Wanda Lofton at 202 906-3988 (ATS 777-3988).

Current Recycle Locations

- Mid-Atlantic Division** – Philadelphia, PA, Wilmington and Bear, DE, Washington, D.C., and Manassas, VA
- New York Division** – New York (PSCC Offices) and Sunnyside, NY
- Pacific Division** - Edmonds; Everett, Bellingham, Spokane and Seattle, WA, Whitefish, Shelby, and Havre, MT, and Oakland CA
- Southern Division** – New Orleans, LA, Charleston, SC, and Jacksonville, FL
- Southwest Division** – Camp Pendleton, CA, San Luis Obispo, and Los Angeles CA
- Central Division** – Beech Grove, IN, and Chicago, IL
- New England Division** – Boston, MA, New Haven, Groton, and Hamden, CT, and Providence, RI.

Protect Against Cyber Dangers

The use of home computers to access work-related items, such as e-mail and the Amtrak Intranet, is becoming commonplace for many employees. The availability of high-speed Internet connections from home increases the risks of unauthorized or malicious access to home computer equipment, disclosure of personal information and unauthorized access to Amtrak's computer systems.

Amtrak's Information Security team recommends that home computer users install anti-spyware software on their computer systems as a safeguard against malicious software, unauthorized access and disclosure of personal information. The Information Security pages on the Amtrak Intranet (under the "How We Work" tab, then "Amtrak Technologies") provide more information about safe computing practices.

The following Federal Trade Commission article provides some

helpful hints to avoid these potential problems:

Every time you buy stuff online, do your banking or pay bills over the Internet, check in with your office by e-mail or just surf the Web for fun, you open a gateway to the personal information on your computer — including credit card numbers, bank balances and more. You may also be in for costly

Director of Information Security Frank King (left) and Information Security Manager James Smith check the IBM monitoring system to detect intrusions.

computer repairs and lost data, due to damaging computer viruses that can invade your computer through e-mail connections.

Fortunately, there are steps you can take to protect your computer, your information and your peace of mind from computer creeps who try

to slow down a network operation, or worse yet, steal personal information to commit a crime. Here are some tips to help you, from the security experts at the Federal Trade Commission (FTC):

- *Make sure your passwords have both letters and numbers, and are at least eight characters long. Avoid common words: some hackers use programs that can try every word in the dictionary. Don't use your personal information, your login name or adjacent keys on the keyboard as passwords — and don't share your passwords online or over the phone.*
- *Protect yourself from viruses by installing anti-virus software and updating it regularly. You can download this software from software Web sites, or buy it in retail stores; the best programs recognize old and new viruses and update automatically.*
- *Prevent unauthorized access to your computer through firewall software or hardware, especially if you are a high-speed user. A properly configured firewall makes it tougher for hackers to locate your computer. Firewalls are also designed to prevent hackers from getting into your programs and files. Some*

recently released operating system software and some hardware devices come with a built-in firewall. Some firewalls, which block outgoing information as well as incoming files, stop hackers from planting programs, called "spyware," that cause your computer to send out your personal information without your approval.

- *Don't open a file attached to an e-mail unless you are expecting it or know what it contains. If you send an attachment, type a message explaining what it is. Never forward any e-mail warning about a new virus. It may be a hoax and could be used to spread a virus.*
- *When something bad happens — you think you've been hacked or infected by a virus-e-mail — report the incident to your Internet provider and the hacker's Internet provider, if you can tell what it is, as well as your software vendor.*

To learn more, visit the FTC Web site at www.ftc.gov/infosecurity or call toll free 1-877-FTC-HELP (1-877-382-4357).

P R O M O T I O N S I N M O T I O N

Spring and Summer Promotions Bloom

To help grow ridership and revenue, targeted marketing efforts have been launched to reach potential customers in a range of venues across the country this month.

On the national front, as part of the ongoing promotion of the Columbia Pictures movie “Are We There Yet?” Amtrak is partnering with Sony Pictures Home Entertainment to support the film’s DVD release. Customers purchasing the movie, scheduled for release on May 24, will receive a 20-percent discount offer inside each DVD package that is good for travel on select long-distance trains between Sept. 6 and Dec. 15, 2005. The offer may also be combined with the Student Advantage, Veterans Advantage, AAA, NARP, *Kids Ride Half Off* and Senior discounts.

Maryland Movie Goers

Amtrak also caught the eye of thousands of film enthusiasts at one of Maryland’s most prestigious festivals — the Maryland Film Festival — held earlier this month. Amtrak’s sponsorship of the film festival held at a variety of venues in the Baltimore area, included placement of Amtrak’s name and logo on the festival’s Web site, in the program book, on theater signage and on trailers displayed on the screen before each film.

Employee Offer on Grand Canyon Package

Amtrak employees and their guests may receive a 15-percent discount on one of Amtrak’s most popular tours — the Grand Canyon —

offered to the public by regional tour operator Key Holidays.

The year-round tour is designed for both individuals and groups arriving at Williams Junction, AZ, aboard the *Southwest Chief* from Los Angeles, Chicago and intermediate cities. The tour package includes hotel accommodations, meals, Grand Canyon Railway transportation to and from the Canyon and a tour of Canyon Rim.

The 15-percent employee discount applies to the tour portion of the package only. Rail reservations should be made separately in accordance with Amtrak’s Red, White and Blue Employee Pass Policy. More information is available by calling Key Holidays at 1-800-783-0783 or by visiting keyholidays.com.

Sacramento Cruise and Rail

Starting this month, Amtrak is partnering with Harbor Bay Maritime to promote a four-hour river cruise through the Sacramento Delta with the option to return via *Capitol Corridor* service. On Saturdays, the high-speed catamaran operates along the delta between San Francisco and Sacramento with a late afternoon *Capitol Corridor* return, making for a relaxing one-day excursion. On Sundays, the vessel boards a new group of passengers and travels from Sacramento to San Francisco with the *Capitol Corridor* again offered for the return. The river cruise is available on certain weekend dates in May, June, July and August.

March Results Among Strongest in Months

continued from page 4

groups of three to six passengers traveling together on certain trains

in the Northeast. In March, 72 percent of the ridership and 79 percent of the ticket revenue from

the *Share Fares* program came from *Regional* service.

At the end of March, *Acela* ridership was up nearly 10 percent over the same period last year.

Long-distance trains, which had been performing poorly so far this fiscal year, were up 4 percent in ridership and over 5 percent in revenue in March. This growth is in part associated with the system-wide campaign launched mid-February, which includes a \$25 online discount for two nights’ accommodations booked on hotels.com.

Ridership and Ticket Revenue for March 2005			
Month of March	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	2,831,455	2,193,184	2,257,766
Ticket Revenue	\$104,574,341	\$110,275,292	\$110,639,073
Fiscal Year-to-date	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	8,169,712	12,327,978	12,390,962
Ticket Revenue	\$614,493,136	\$636,106,443	\$609,271,602

Operation Lifesaver Needs Your Help

The warm weather brings kids outside to play and when school is over, they will be looking for things to do. One thing no one wants them to do is play around the trains or tracks.

Operation Lifesaver is a national, non-profit safety advocacy organization dedicated to ending injuries and fatalities on railroad rights of way and highway-rail grade crossings.

As a member of the OL Board of Directors, Amtrak is actively involved in helping OL recruit volunteers to give presentations to schools and other organizations about railroad safety.

If you are interested in learning more about Operation Lifesaver and donating some of your time to helping educate the public about railroad safety, contact Alvin Richardson, senior safety coordinator, in Washington, D.C., at richara@amtrak.com or 202 906-3434 (ATS 777-3434).

Strategic Reform Initiatives

continued from page 1

operating support for all corridors.

Under the plan, the federal government would dedicate funds through Amtrak to raise the condition of the Northeast Corridor to a state of good repair. Another measure that would need the support of Congress is a system by which all users of the Northeast Corridor pay their fair share of the costs.

Changes to the Railway Labor Act (for intercity passenger rail only) would allow labor agreements to terminate at the conclusion of the term of their agreement. Amtrak’s management wants to be able to negotiate work rule changes with labor representatives that it

believes today have outlived their era, but continue because contracts may continue beyond their term.

In a message to employees reprinted in this issue, Amtrak President David Gunn said, “While I believe this is a good plan, I know some portions of it are controversial. However, I would remind you that reform will happen and we can either shape that reform or be its victim.”

The entire Strategic Reform Initiatives document is available on Amtrak’s Internet and Intranet.

Announcing the Amtrak®
2006 Wall Calendar Photo Contest

FOCUS!
Will your photo of an Amtrak train be featured on the Amtrak 2006 wall calendar?

Enter the "Picture Our Train" 2006 Wall Calendar Photo Contest by submitting an original color photo of an Amtrak® train (sporting current logo and livery) and your image could appear on next year's wall calendar with photo credit. The First Prize winner will also receive an Amtrak travel voucher. Starting April 4th, go to www.amtrak.com/photocontest for more information and complete contest rules.

Amtrak is a registered service mark of the National Railroad Passenger Corporation.

Picture Our Train – 2006 Amtrak Wall Calendar Photo Contest Rules and Regulations

Enter the Amtrak Picture Our Train 2006 Wall Calendar Photo Contest and your photograph could adorn the walls of train lovers everywhere. Enter your photo of an Amtrak train (sporting the current logo) to have your image featured on the Amtrak 2006 wall calendar! The First Prize Winner will receive a \$1,000 Amtrak travel voucher and a photo credit on the calendar. The Second through Fifth Prize Winners will also receive Amtrak travel vouchers. Contest ends June 10, 2005.

SAFETY FIRST!!! As always, Amtrak reminds you to stay out of danger — stay away from tracks and the railroad right-of-way. Do not trespass on railroad property or on private property adjacent to the railroad. Do not climb or approach railroad structures, towers, or wires. Stay in public access areas, and away from railroad structures and moving equipment — in stations, on sidewalks, or in parking lots. All participants expressly release Amtrak from all liability for personal injury and loss or damage to personal property, and expressly assume the risk of harm. Remember, tracks, trestles, yards and equipment are private property — trespassers are subject to arrest and fines.

2006 Amtrak Wall Calendar Photo Contest Official Rules

Contest: Best original color photograph featuring an Amtrak train with the current Amtrak Logo (as seen above) and livery visible. Photographs of trains displaying current Amtrak

Cascades, Amtrak California, and Amtrak Pacific Surfliner train livery are also eligible.

How to Enter: Mail an 8 x 10 color photograph suitable to be enlarged to approximately 25 inches (horizontally) to: 2006 Calendar Contest, Amtrak, 60 Massachusetts Ave., N.E., Suite 4E-315, Washington, D.C. 20002. The photograph must be original and it, or any substantially similar one, may not have been published, nor have won, or be currently entered in any other contest. The entrant must own all rights to the photograph, including copyright. The photograph must be clearly labeled on the back with entrant's name, day and evening phone numbers, address, and email address (if available). The front of the photograph may not include names, signatures, or other identifying marks. Finalists will be contacted to submit their original transparency, slide, negative or digital image with a resolution of 300 dpi at approximately 25 inches across for use in producing the calendar with the winning photograph. Entries must be postmarked by June 10, 2005 and received by June 15, 2005. This contest ends June 10, 2005 at midnight EDT. No purchase necessary. Only one entry per person. Amtrak shall not be responsible for late, lost, incomplete, damaged, misdirected, illegible, or postage-due entries.

Eligibility: This contest is open to legal residents of the United States, 18 years of age or older at the time of entry. Amtrak employees and their families are eligible; except Calendar Contest Review Panel Judges, Amtrak Marketing employees (as listed on the company's organizational chart 10.2) and their families, and Amtrak Corporate Communications employees (organizational chart 10.3) and their families

are not eligible. Amtrak advertising agencies and their families are not eligible. Amtrak reserves the right to verify eligibility qualifications of any winner.

Conditions of Entry: By entering this contest, entrant agrees that if he or she is selected as a prizewinner, he or she will assign all rights to the photograph, including copyright, to Amtrak by executing an assignment agreement and Amtrak will own all rights to the photograph and may use it for any purpose. If a winning photograph includes a recognizable image of an individual, the winner must have that individual sign an Amtrak publicity release form. Entrant further agrees to these Official Rules.

Responsibility of Entrant and Liability Release: Entries will not be acknowledged or returned.

Entrant agrees to stay away from moving trains, tracks, structures, and railroad property. Entrant agrees to release Amtrak from all liability for injury, damage to or loss of personal property, and all other losses, and expressly agrees to bear all responsibility for and to assume the risk of all harm.

Prize: The First Prize is a \$1,000 travel voucher and the display of the winning photograph on the 2006 Amtrak Wall Calendar with photo credit. The Second Prize is a \$500 travel voucher, the Third Prize is a \$250 travel voucher, the Fourth Prize is a \$150 Travel Voucher, and the Fifth Prize is a \$100 Travel Voucher. Travel vouchers shall be valid for one year from date of issuance and all travel is subject to availability and to Amtrak's contract of carriage. All taxes are the sole responsibility of the winners and finalists. No prize substitution, cash substitution, or assignment or transfer of prizes is permitted, except by Amtrak for reason

of unavailability in which a prize of equal or greater value will be awarded. All prizes will be awarded.

Winner Selection: The finalists will be determined on or about June 20, and prizewinners will be determined on or about June 30, 2005. All entries will be reviewed by the Amtrak 2006 Wall Calendar Review Panel, and finalists will be reviewed by the Judges' Panel. The judges' decisions are final. The prizewinners will be notified by telephone, mail or email, if provided. All finalists will be required to sign an affidavit of eligibility, publicity release and copyright assignment, and return it properly executed within 7 days of attempted notification as a condition of awarding the prize. If prize notification is returned as undeliverable or the finalists fails to return the affidavit, release and license, as applicable, the winner will be disqualified and an alternate finalist will be selected. If, in Amtrak's opinion, there is any suspected or actual evidence of tampering with or alteration of any portion of the contest, Amtrak reserves the right to terminate the contest.

Winners List: For the names of the winners, after July 15, 2005, send a self-addressed stamped envelope to: 2006 Calendar Contest Winner List, Amtrak, 60 Massachusetts Ave., N.E., Suite 4E-315, Washington, D.C. 20002. Requests received more than sixty (60) days after the completion of the entry period will not be honored. Vermont residents need not send stamped envelope.

General: Amtrak and the Amtrak logo are registered service marks of the National Railroad Passenger Corporation. This contest is subject to all federal, state, and local laws. Void where prohibited by law. U.S. law governs this contest.

New Benefit Helps Employees Stay Healthy

Beginning May 1, 2005, Amtrak is offering a new health care benefit to employees to help eligible participants better manage certain chronic conditions.

The new program, called SmartCare, is an optional, supplemental benefit that is offered at no cost to agreement-covered employees and eligible family members who suffer from diabetes, asthma, coronary artery disease, or congestive heart failure and who participate in the Comprehensive or Network Medical Plans administered

through UnitedHealthcare.

The SmartCare program helps employees with chronic conditions avoid the complications of these diseases and provides a way for employees to take control of their health, rather than the other way around.

Participants who have been diagnosed with one of the conditions listed above will receive a letter in early May letting them know to expect a phone call from Matria Healthcare, the company that administers the totally voluntary

program for Amtrak, to discuss the plan.

If the participant requests additional support or would benefit from it, the participant will be referred to a Matria health care specialist (such as RN, LPN, registered dietitian, or certified diabetes educator), who will work with the individual to create a treatment plan that makes the most of his or her care.

SmartCare does not replace a participant's doctors or other health care providers. Instead, the

program is designed to support and work with the treatments prescribed by the participant's doctor.

The program is completely voluntary, however employees are encouraged to take advantage of the health care support it program provides. Additionally, because the SmartCare program may be entered at any time, employees who at first decided not to participate may change their minds and enter the program later.

FRONT LINE FOCUS

Dear Amtrak:

I rode on Amtrak’s *Maple Leaf* from Toronto to New York City. It was a very relaxing and enjoyable trip, and was very pleased with the level of comfort and service Amtrak provides on this run. You are doing well Amtrak, keep up the good work!

On a side note, I wish to personally extend a heartfelt thank you to the café attendant Harry Lutz. Mr. Lutz has to be one of the best café car attendants that I ever had. Besides being pleasant, friendly, great sense of humor, and very professional in his duties, Mr. Lutz has a spark inside of him ... you can really tell that he loves his job. It is employees like Mr. Lutz that go above and beyond the level of service they are supposed to provide to ensure that every passenger that he serves [is] having an enjoyable trip. One can only hope that Amtrak can find more people like Mr. Lutz to work on their trains. It is also people like Mr. Lutz that keep me taking the train over and over again.

... Thank you Mr. Lutz and Amtrak for a wonderful trip.

Sincerely,

Tom C.
Springfield, NJ

Dear Amtrak:

Thank you!

Since the service improvements during the last couple of weeks in the timeliness of the *San Joaquin*, I’ve really enjoyed taking the train to and from work on a daily basis. Simply, your train has been running on [time] for me lately, and I wish to personally thank you for that.

While we own two cars in our family, I elect to take the *San Joaquin*, as part of my daily commute, between Walnut Creek (Martinez) and Stockton.

A large part of the enjoyment of taking the train is directly related to two individuals who work for your organization — James Gamez and Marie Clugston.

It is true that the entire reputation of a company can come down to one or two employees — and those two employees are definitely James Gamez and Marie Clugston.

Once again, I personally want to extend my gratitude to James and Marie, who make my daily commute an enjoyable opportunity to relax and arrive in a good mood at work. These two individuals are truly assets to your corporation.

Sincerely,

Aaron W.

Business Lines To Support Planning, Financial Accounting

The Strategic Reform Initiatives unveiled in April comprise a design for the future of intercity passenger rail and outline Amtrak's role as a provider in the near and long term.

While some of the initiatives advance changes already in place, others are still conceptual. Similarly, some of the initiatives Amtrak is undertaking or plans to carry out on its own; others require leadership from the federal government, including legislative action.

The initiatives, outlined as structural, operating and legislative, would help transform the way in which passenger rail is financed and aim to reach four main objectives: establish an 80/20 federal/state matching grant program to help states move

forward with corridor development; return the Northeast Corridor to a state of good repair; institute performance thresholds for long-distance trains; and create markets for competition. The vision for the future of passenger rail includes an Amtrak that is a viable, competitive provider of rail services.

Two years ago, a number of structural changes were made to stabilize the company. Layers of management were cut and organizational charts developed to clearly show who reported to whom, regular reporting of financial and performance figures began, GAAP accounting was put in place and zero-based budgeting that more tightly controls spending instituted.

Building on those management controls, one of the near-term

structural changes that will begin to take shape this year involves organizing planning, financial accounting, and reporting and management according to five business lines: Infrastructure Management (Amtrak-owned); Northeast Corridor Operations; State Corridor Operations; National Long-distance Operations; and Ancillary Businesses (non-core businesses, such as real estate and commuter services).

Not to be confused with the Strategic Business Units that were eliminated in 2002, the five would serve as categories to account for revenue and expenses.

Doing so not only provides a sense as to what each business line costs to operate, but also defines each segment of the business more precisely. When that information is

available, it will better inform management decisions about policies and the market, as well the debate among policymakers.

At this stage, the accounting changes won't directly affect how each department plans and manages its budget — changing the current accounting and budget mechanisms on a dime would be disruptive. Instead, the five business lines will serve as an overlay to the current budget process.

The next version of the Five-year Strategic Plan, for FY '06 – 10, will be developed according to the business lines. This is but one component of the initiatives announced in April, upcoming issues of *Amtrak Ink* will explore other components of the package.

Credit Card Expenses Slashed as Company Tightens Controls

Amtrak expects to save over \$3 million this year by cracking down on credit card fraud, renegotiating credit card contracts and streamlining transactions and other credit card transactions, according to the railroad's Chief Financial Officer David Smith.

Every day, Amtrak processes more than 50,000 credit transactions through over 500 locations. This includes 230 ticket counters, two call centers in the U.S. and another in Canada (the Amtrak desk at VIA Rail Canada), two ticket-by-mail offices, the voice-response unit (or "Julie"), 175 Quik-Trak machines, and Amtrak.com. Also, conductors sell tickets and lead service attendants sell refreshments on board the trains, and these transactions are later entered into the credit card system by staff at stations and in offices systemwide. Additionally, travel agencies and tour operators sell

Amtrak tickets, and the Western Folder Distributing Company sells Amtrak merchandise, such as mugs, hats and posters.

In 2001, credit card sales topped \$1 billion, but fraud cost the company \$4.4 million. By 2004, the company had made changes that reduced fraud losses to \$1.3 million and with additional changes this year, fraud losses are expected to decline to \$900,000 for 2005.

The Finance group's Treasurers department began a major effort in 2002 to reduce credit card costs, with a focus on fraud. Working closely with the credit card companies, the group determined that the majority of the fraud was happening at distribution channels other than the ticket counters. Therefore, systems and procedural changes were made that require customers to enter a credit card verification code and zip code when making a purchase on the

Internet, at a call center and from Julie, and soon at Quik-Trak machines. These preventive measures, which began in 2002, have led to a \$3.5 million annual drop in fraud losses.

Last year, a detailed review of the entire credit card process at Amtrak identified many other ways to improve revenues, streamline the credit card process and reduce company costs with more effective monthly reports that capture, report and analyze credit card activity.

Negotiation of a five-year renewal contract with the company's credit card processor resulted in a 40-percent reduction in transaction fees and provides Amtrak with savings of more than \$1 million over five years.

A review of the company's payment-acceptance policies and contractual relationships resulted

Inside: Pacific Surfliner Marks Five Years of Successful Operations. SEE PAGE 3.

in changes that brought further cost-savings. Credit card authorization fees were cut by 40 percent when Amtrak upgraded from an obsolete Visa system to a more efficient system provided by a new vendor.

The company's account structure with the credit card organizations

TRAIN OF THOUGHT

While I make sure that I keep you informed about what’s going on with respect to our funding situation in the *Employee Advisories*, I thought I’d share with you a couple of the experiences I’ve recently had on the road.

In mid-May, I rode the *Empire Builder* from Seattle to Chicago, which was very full. From Whitefish to Cut Bank I was joined by two U.S. Senators — Conrad Burns (R-MT) and Kit Bond (R-MO) — both of whom are on the Senate Appropriations Committee. As we ate breakfast in the dining car, we talked about the importance of preserving passenger rail.

The remanufactured sleepers on the train looked good, and the new shower modules are really great — particularly the public one. I was also glad to see that some of the crew members I talked to shared my enthusiasm for the margin improvement project for the service that we’ll launch in August.

Not long ago, I was also in Lancaster County, PA, visiting one of the more exciting projects we have underway. As you may know, we’re working with the Commonwealth of Pennsylvania to restore the Keystone Corridor (between Philadelphia and Harrisburg) to an electric railroad with faster trip times, more frequencies, and a smoother ride.

Both the Commonwealth and we have dedicated a lot of resources to this project. Along with various local officials, members of the state legislature and others, I visited the TLS (Track Laying System) while it was laying track at Paradise, PA. Our Engineering gangs have achieved remarkable progress — by the end of the project, we will have

installed 83 track miles of concrete ties, 105 track miles of welded rail, renewed two interlockings and 74 miles of new signal system.

This is really exciting stuff for a number of reasons. For one thing, that stretch of railroad had been an orphan too long, was badly in need of repair and housekeeping was atrocious. Recognizing the value of having this corridor revitalized, Gov. Ed Rendell put his support behind developing it. Together, we have almost literally breathed new life into a dying railroad, and it is full of promise. Last year we carried 900,000 passengers between Harrisburg and Philadelphia and I will bet that once we get the work done and the speeds and frequencies up, we will double the ridership.

There are plans for renovating two beautiful stations along the route. We visited the Elizabethtown station — a real gem — that has been closed for decades (passengers wait on the platform). The Lancaster station, another beauty, is open, but in need some of renovations. With the state and local communities leading the way, these stations will not only be returned to their glory, but will help invigorate the area.

When it’s done in the fall of 2006, I really think the corridor will take off. This project and our partnership with PennDOT is a model for corridor development done right. Not only has the governor been extremely supportive, but we have — and appreciate — the support of all the communities along the route.

I had a chance to visit the C and S facility in Lancaster as well. It is a great shop — I was impressed with the work and the employees there.

David L. Gunn

All of the signal huts you see along our right of way begin their life right in the shop. Our folks are so good, that they are routinely visited by others in the business to see how they do things.

I was also in Vermont recently and I had a chance to visit our stations in that state. I was impressed with the cleanliness and the dedication of our employees. I also met with Dawn Terrell, the Vermont secretary of Transportation — the state of Vermont is very proud of its trains and the service we offer.

Speaking of impressive, I found the stations and our facilities clean and orderly. The Harrisburg Line used to be littered with debris and it’s been cleaned up and looks like a railroad again.

As we enter the summer season, remember that it’s always spring-cleaning season. At the risk of sounding like a broken record, keeping a neat working area is not just about appearances — it’s about safety, it’s about security (a disheveled environment is breeding ground for people up to no good), it’s about staying organized, and making the best use of our resources. So please tend to your desk, shop, or crew base. That goes for the trains, too.

Michigan Station Renovations Celebrated

Photo credit, with permission: J.R. Valderas, Holland Sentinel Photojournalist

Local officials and passengers greet the arrival of Amtrak’s Pere Marquette during a dedication ceremony for the newly renovated and expanded train station in Bangor, MI, last month.

Dear Co-workers,

To say the least, this spring has been a trying one — as you know, the discovery of cracks in brake rotors on April 15 led to the suspension of our premium Northeast Corridor Acela Express service and a subsequent scramble to get equipment to handle the demand. I'd like to take this opportunity to take a look back at what took place and how we responded.

While many of the cracks were not visible to the naked eye, full scrutiny of all Acela rotors revealed cracks affecting every trainset. We immediately made a decision, in the interest of the safety of our passengers and our employees, to suspend the service.

We announced on April 20 that the service would not likely return until summer, and then only gradually. We were left with a significant gap in our schedule, as on weekdays we had been running 15 roundtrips between Washington and New York and 11 between New York and Boston. It also left us with a reduction in revenue, as weekday Acela service brought in an average of about \$1 million a day in revenue.

By the week of April 25, we were offering nearly hourly Metroliner service from 6 a.m. to 6 p.m., north and southbound, between Washington and New York. Starting on May 2, we advertised an hourly schedule (extending it to 7 p.m.) and two roundtrips between New York and Boston.

To achieve this, we redeployed cars from throughout the country — not an easy task. We also reduced the shop count of out-of-service cars, and borrowed equipment from third parties.

So far, the Metroliners have performed very well. Since the trains were restored on April 25, on average they've been running on par with Acela's on-time performance, and the run time is about 10 minutes within that of Acela Express.

The suspension has hurt us financially; our estimate is that we will lose \$1 million per week. But considering what we had to work with, we rallied well.

From the Operations Planning group who choreographed equipment moves and a new schedule, to mechanics who kept shop counts down, to conductors who maintained professional attitude as they fielded

questions from passengers, we made our best effort toward recovering from the setback.

This leads me to an important message — it not only applies to this situation, but to a range of major operational obstacles that we overcome. How we come together during difficult times is compelling. While we have more than our share of tough situations, the manner in which we react, I think, is often exemplary.

While I and others may set the direction and goals, it is the Operations department employees who make it happen as a practical matter. From the mechanics to the conductors, I give you credit for giving it your all. If you're behind the scenes, you know that what you do is supporting the operation and our front-line employees. And if you're a front-line employee, you know that your dedication and professionalism goes a long way to making a customer feel comfortable.

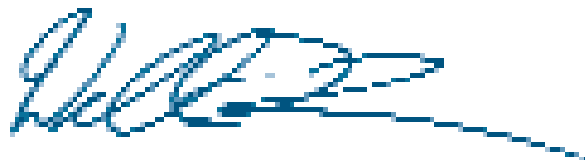

Everyone answers the call and everyone knows his or her role. We put aside our differences and rely on the talents that we each possess to address the problem in an orchestrated way. I want to thank everyone who has played a role in managing those situations.

The trouble is that sometimes we seem to manage those situations better than we do our everyday challenges. I wish I could bottle the energy, sense of duty, unity, or some combination thereof, that enables us to get past very tricky circumstances.

Instead, I ask all Operations department employees to focus on their ability to react well in difficult situations and apply those instincts and those skills every day. Sustaining that spirit is what will help us exceed our goals and what will turn heads as we rise above expectations.

Please continue to operate safely.

Sincerely,

William L. Crosbie
Senior Vice President
Operations

Pacific Surfliner Service Marks Five Years of Successful Partnerships

On June 1, Amtrak and Caltrans joined scores of passengers, employees and partners "Celebrating Five Years of Easy Going" at an event held at the Amtrak Anaheim station, where special guest speakers, including elected and federal officials, touted five years of *Pacific Surfliner* service on the busy Los Angeles to San Luis Obispo corridor.

Last year, Amtrak moved over 2.3 million people on the *Pacific Surfliner's* 12 roundtrip trains between Los Angeles and San Diego, with three trains that continue to Santa Barbara/Goleta, and an additional two that continue north to San Luis Obispo. "Now that is a successful partnership," said Caltrans acting Chief of Rail Bill Bronte.

Since its inception, *Pacific Surfliner* ridership has increased over 53 percent, and in June, the service will have served over ten million passengers between 2000 and 2005.

"This unprecedented milestone represents what is possible when our partners Caltrans, Southern California Regional Rail Authority, BNSF, North County Transit District, and other rail agencies, along with our employees, work together to provide a first-class service that has truly improved the quality of life for millions of Southern California residents," said General Superintendent for the Southwest Division Richard Phelps.

Amtrak started this service back in the 1973 with only three roundtrips between Los Angeles and San Diego and with ridership the first

year of 381,844. Known as the San Diegans, the state of California began supporting the service in 1976.

At the event, Phelps thanked all *Pacific Surfliner* employees and recognized the original team of Amtrak employees who mobilized the *Pacific Surfliner* service from the original San Diegan product line in the late 1990s. Each was presented with a certificate and a commemorative pin.

To celebrate the ten millionth passenger to ride the service, a sweepstakes runs the entire month of June and is open to all *Surfliner* passengers. Entry boxes are located at the 13 staffed stations along the route, and the first prize is a two-night vacation package in Santa Barbara.

"Amtrak's marketing partners have contributed to the success of the *Pacific Surfliner* with programs such as Rail 2 Rail with Metrolink and Coaster, sponsorships with the San Diego Chargers and Los Angeles Dodgers, advertising co-ops with the San Diego Convention and Visitors Bureau, and the *Car Free* campaign with Santa Barbara," said Carol Shannon, director West Marketing.

To commemorate the milestone, Amtrak Marketing is featuring a coupon for a free companion fare with the purchase of one regular adult fare, valid for sale after Labor Day and good for travel until June 15, 2006 on any *Pacific Surfliner* train.

System-wide Results in April Feel Effect of Acela Suspension

Overall April ridership and revenue numbers were marked by the mid-month suspension of *Acela Express* service and a drop in performance of many long-distance trains. While system-wide ridership was down 3 percent over the same month last year, the suspension of the high-yield *Acela* service helped bring revenues down 7 percent compared to last year.

After deploying equipment from throughout the country to fill the *Acela* vacancies, a consistent schedule was put in place the first week of May. Despite efforts in April to mitigate the situation, ridership dropped 8 percent and revenue fell 21 percent in the Northeast Corridor in the last two weeks of April compared to the same period last year.

When the *Acela Express* trainsets were pulled from service, many passengers moved to *Metroliner* or

Regional trains. As a result, the potential revenue loss, which could have been greater, was lessened to \$8 million.

promotion, which has generated \$550,000 year-to-date. In the other corridors, all the West and Midwest trains performed well

in March that was partly attributable to the Easter holiday and spring break did not continue in April. Long-distance train rider-

Ridership and Ticket Revenue for April 2005

Month of April	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	2,190,155	2,227,479	2,115,238
Ticket Revenue	\$107,322,796	\$111,747,565	\$99,533,396
Fiscal Year-to-date	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	14,330,335	14,555,457	14,506,200
Ticket Revenue	\$721,815,932	\$747,854,009	\$708,804,998

While *Regionals* had been uptrending in recent months, passengers' shift to the service also contributed to 7-percent ridership growth and 13 percent more revenue. Another contributing factor to revenue was the fare adjustment implemented in January and the *Share Fares*

in April. Track work affecting *San Joaquins* service, however, was factor in the 8- and 11.5-percent drops in ridership and revenue for that service. With the exception of four trains — the *Crescent*, *Cardinal*, *Silver Meteor* and *Empire Builder* — the boost to long-distance trains seen

ship and revenue were down 5 percent and 7 percent, respectively. Despite significant challenges on the Northeast Corridor, year-to-date ridership was in line with last year and revenues are down 2 percent.

Custom-designed Training for Enhanced Service in Progress

Empire Builder on-board service employees and conductors are undergoing in-depth training for the significant roles they will play in the success of the train's enhanced service, to be launched in August.

Training classes, which began last month in Chicago and Seattle, emphasize the importance of delivering exceptional customer service and teach employees how to deliver the on-board services and amenities that will be offered. By attending the two-day class, employees better understand that the purpose behind the term "margin-improvement" is to offer passengers a premier travel experience, while being compensated for the enhanced value of the service.

"You can always raise fares a little based on an analysis of what the market will bear, but you lose some passengers if the service is unchanged," said Marketing and Sales Vice President Barbara Richardson. "The key to this prototype is four-fold: increase the value of the service to the customer, in short time charge a little bit more for it, maintain or expand our ridership, and keep the added costs to their target levels."

Lead Service Attendants Jake Jacobs and Kathy Talkin, Train Attendants Thomas Murray and Tim Noel and Conductor Brad Swartzwelter were hired as temporary instructors charged with ensuring that nearly 300 employees are equipped with the knowledge and skills required to fulfill the objectives of this project and customers' expectations.

To prepare for this challenge, each instructor attended a comprehensive three-day train the trainer class in April, led by Employee Development Manager Curt Bormann, Employee Development Officer Jeff Kocar and Contract Food and Beverage Director Michael Dwyer, to learn the key roles and responsibilities of the conductors and on-board service employees. The group also fine-tuned the curriculum and addressed the questions and issues that may arise during the training classes.

After participating in the Seattle training, 30-year Conductor T.J. Staupe stated, "I've been working

on the railroad for a long time and this is one of the best classes that I've ever attended." During the program overview, presented on the first day of class, employees learned that the *Empire Builder* was chosen for this margin

Empire Builder margin improvement instructor Thomas Murray assists Service Attendant Doris Reed-Duncan during the wine presentation section of a recent class in Seattle.

improvement project because of its strong ridership and because it has the best on-time performance, coupled with the highest Customer

Service Index scores of all the long-distance trains. The trainees were also made aware of several elements of this initiative including advertising strategies, community events planned for the launch and other employee and customer communications vehicles, such as the "Coming Soon" posters displayed at the stations along the route.

The primary focus of the first day is to hone in on the practice of delivering exceptional service. Employees participate in role-playing activities and work together in groups to demonstrate the proper greeting techniques, such as setting a welcoming tone, acknowledging the customer's presence and thanking the customer for their business. "Good communications skills are an essential component to customer service. So, we also train employees to listen carefully to customers, ask questions for clarification and demonstrate empathy when customers are upset or frustrated," explained Swartzwelter.

The students also learn a variety of methods for effectively satisfying the customer's needs and resolving customer issues that may arise.

Passenger Feedback Trends Improve

Taking a look back at spring travel through the eyes of passengers who made comments about their trip via phone call, e-mail or letter, it is not surprising that most of the areas of concern are not new — the majority of complaints received include poor on-time performance and equipment complaints. However, there are some encouraging trends that the company hopes to sustain with more targeted training, employee reviews and coaching.

A total of 38,599 contacts were received during the second quarter of FY '05 (from January to March), a decrease from the 39,124 contacts in the first quarter, but an increase of 4.2 percent compared to the second quarter last year. Because one passenger contact may cover several topics, the 38,599 contacts included a total of 55,632 comments comprised of 1,844 commendations (an increase of 2 percent over the second quarter in FY '04), 53,788 complaints (down 11.3 percent over the same period last year), or 9.1 complaints per 1,000 passengers (down 13.5 percent over the same period last year).

While on-time performance continues to be the main driver of customer dissatisfaction, the results reflect a drop in the number of performance-related complaints. In the second quarter, complaints in this category decreased by 9.5 percent over the same period last year.

Top equipment complaints remain restroom issues, climate control, unsatisfactory or unavailable accommodations and unacceptable equipment substitutions. As Amtrak progresses its five-year repair and renewal program,

equipment-related complaints have remained flat since the first quarter over FY '04.

Addressing Employee Complaints

The majority of employee complaints and commendations — 60 percent — were directed at on-train employees, who spend the most time with passengers. Perceived rudeness, unhelpfulness, and communication problems are the major employee complaint categories.

Using a three-pronged approach that includes training, employee reviews, and coaching and counseling from management, the Transportation department aims to improve customer complaint numbers. This approach is bringing about results; during the second quarter, personnel complaints decreased by nearly 14 percent over the same period last year.

“We are analyzing the data on a train-by-train basis at the department level, and connecting what we learn to very specific goals for improvement,” said Kevin Scott, chief of Service Delivery. “We can improve our service with training and corrective action by linking what customers want directly to the front-line employees,” Scott added.

In the past, snapshots were taken from collected data such as customer comments and complaints and focus groups, and disseminated to product lines throughout the company. “Now, we will be watching trends over longer periods of time by tracking the performance of our employees and looking at customer satisfaction by train,” said Scott.

Sustaining the Trends

In March, the Transportation departments’ general superintendents, superintendents of operations and passenger services, department chiefs and their senior directors met to review research from focus groups that targeted key on-board service issues. Using the findings from the focus groups as a springboard, the group, led by Vice President of Transportation Ed Walker, discussed the department’s renewed focus on the fundamentals of service delivery.

The Transportation department is focusing on three main components:

1. The conductor is in charge of the train. While the concept of the conductor being in charge of the train operation is not new, the conductor being responsible for providing a welcoming environment that includes quality and consistent customer service delivery is new.

2. We will provide timely and accurate information to our customers, particularly during service disruptions. While this is also not a new concept, the tools (procedures) and training are being provided to ensure that personnel provide this critical service.

3. Every Transportation department employee is accountable for the service we deliver. Accountability begins with each employee — at every level.

Walker noted that the work at these meetings is a demonstration of the department’s commitment to return to solid service delivery fundamentals on the part of all employees and managers. “We’re focused on the basics,” stated Walker.

“New tools to measure performance are in place, but it’s more than just an annual review. Employees must place a value on their own performance and ask themselves if they are providing the service that our customers have paid for and deserve,” added Walker.

According to the focus group observations, unpleasant experiences can undermine the value of the trip. Those experiences may include poor on-time performance, the lack of information or inadequate announcements, rude and uncaring attitudes, an unsatisfactory on-board environment (including bathroom cleanliness), and inefficient food service.

“We must never forget that we are operating these trains for our passengers. Employees can make or break a trip for the customer. Giving accurate and timely information to our customers, being visible, providing good customer-focused service — these are things that should be ingrained in our culture,” said Richard Phelps, general superintendent, Southwest Division.

At press time, the company announced a new vice president, Passenger Services position that would be responsible for establishing and executing policies and procedures for all areas of customer service, including ticketing, baggage, on-board services, stations and food and beverage. The position reports directly to Senior Vice President, Operations Bill Crosbie. More details about the position and how it may affect the current organization will follow.

Food and Beverage Changes Aimed at Reaching Goals

The new national café car and lounge menus rolling out this month on all long-distance trains, the 300-series trains from Chicago and Northeast Corridor *Regional* trains feature some new items, as well as some price increases aimed at improving food and beverage margins.

One of the Service Delivery department’s goals this year is to improve overall food and beverage margins by 4 percent nationwide. The changes to the café car menus will bring an annual \$1.8 million increase in revenue, and improve margins by 2 percent.

Instead of having three menus offered on a rotating basis, the number of cycles has dropped to two, with fewer weeks in between. The cycle duration is changed to four weeks from eight.

New menu options include four new sandwiches — ham and cheese sub, turkey and cheese sub, sierra chicken on a kaiser roll, and Italian ciabatta — along with another addition, Mug Root Beer.

This change does not affect the menus aboard the *San Joaquins*, *Capitol Corridor*, *Pacific Surfliner*, and Amtrak *Cascades* trains.

On the Empire corridor, about half of the trains that solely operate between Albany and New York will no longer offer café car service, and the Albany commissary will be closed starting July 1.

Like other short-distance trains, such as the *Keystones* and *Clockers*, there’s generally low demand for food and beverage service on these trains, and the poor sales do not justify the costs of continuing this service.

“We continually analyze our food and beverage operations in an effort to meet our margin goal, and

the Albany service was far from reaching it,” said Tom Hall, senior director, Operations. Hall added that the move saves the company \$1million annually.

Trains that operate fully between Niagara Falls and New York City, and the *Adirondack*, *Maple Leaf*, *Ethan Allen Express* and *Lake Shore Limited* will continue to provide food service. Passengers will be informed of the change and advised that they may purchase snacks for their trips at the Albany station and Penn Station in New York City.

Responders Bring Order to Chaos

It's often in the wee hours of the night that a designated group of employees is awakened by the ring of the telephone and a caller asking them to respond to an Amtrak train derailment.

These individuals, representing a diverse group of departments, ranging from Engineering and Transportation to Mechanical and Environmental Health and Safety, make up the team of people who play distinct roles in the case of a major incident.

Naturally, derailments are never planned, but it's crucial to have such a team at the ready. As such, it is recommended that each team member have a bag packed at all times with clothes, toiletries and other necessities for a minimum of three days.

Who goes where and when depends upon the nature and severity of the derailment, but the roles and responsibilities of the responders are typically pretty specific. What follows is an in-depth look at how those roles play out in a serious derailment.

When a major derailment occurs, local emergency responders are initially in charge until all passengers and employees have been cared for and assisted off the train. After they complete their rescue efforts, the site is turned over to the National Transportation Safety Board, unless criminal activity played a role in the incident.

Whenever a derailment occurs, either Amtrak Police, the local authorities or both, respond to the scene to determine whether criminal activity is a factor. If criminal activity is definite or questionable, the NTSB and police take charge of the scene. If criminal intent is confirmed, the appropriate law

enforcement agency is determined. For example, if terrorism is involved, the FBI would be the lead agency.

Once criminal activity is ruled out, the accident site is turned over to the National Transportation Safety Board, and with the help of Amtrak and the governing railroad, an investigation is conducted to determine the cause of the derailment and subsequent injuries or fatalities.

Amtrak Responders — Always Prepared

Amtrak employees who respond to the scene are charged with accomplishing a number of tasks including, caring for the welfare of our passengers and crews, arranging travel and housing for their family, investigating the cause of the accident, addressing environmental hazards, ensuring that baggage and supplies are removed from the train and securing and moving the equipment from the site. While the NTSB is ultimately in charge, the senior Amtrak manager at the site oversees all Amtrak activities and works closely with the Federal Railroad Administration, host railroad and the local communities.

As the responders are en route to the derailment, employees at the Reservation Sales Call Center establish a 24-hour toll-free hotline, staffed by reservation agents, to handle calls from family members of passengers and employees involved in the incident.

Meanwhile, Corporate Communications dispatches a Media Relations

employee to the scene to respond to inquiries from local and national news networks. The employee prepares a news release to ensure that the media delivers current, factual information to the public.

Amtrak responders, local response agencies and the NTSB conduct an investigation in Crescent City, FL, during the Auto Train derailment in 2001.

Subsequent news releases are issued as more information becomes available.

First Responders Investigate For Causes

After all the passengers and employees at the site have been accommodated and cared for, the emergency personnel begin their jobs. Inside the train, Amtrak's Safety officer and Emergency Preparedness manager, along with the NTSB and FRA, walk — and when necessary, crawl — through each car to document the location of any item that is damaged, broken or out of place. They record and photograph the entire interior of the train consist, first aid kits opened and used, emergency treatment

supplies discarded and equipment not properly mounted.

The Safety and Emergency Preparedness team also interviews the local emergency responders to find out how and when they were

first notified of the incident to determine the timeliness of response and the usefulness of the training they received. Since local responders are offered emergency training from Amtrak's Office of Emergency Preparedness, it is important to establish their level of familiarity with Amtrak equipment. This information is later used to improve training programs for emergency responders across the country.

Employees are also interviewed for the valuable insight they can provide by explaining what they saw, heard and did at the time

of the incident.

Environmental Health and Safety personnel also address any blood-borne pathogen issues as well as any fuel cleanup or remediation that may be required.

Transportation, Engineering and Mechanical Investigate

Outside the train, the senior Transportation official at the site assumes the lead role among the Transportation, Mechanical and Engineering responders to establish the sequence of events that may have contributed to the incident.

“Our Transportation team reviews the training records and the past work performance of all parties involved. We obtain, review and

Standardization Improves Major Incident Investigations

Amtrak's Transportation department has established guidelines standardizing major incident investigations to ensure system-wide consistency, prevent duplicating interviews with employees and avoid conflicts with collective bargaining agreements.

Although the Transportation staff has been conducting incident investigations for a number of years, the process sometimes varied among those performing the task. These updated procedures are aimed at eliminating these variances and consequently improving the entire investigation process.

Employees often assume that a major incident involves an injury, derailment, grade-crossing incident, sideswipe or collision. While this is accurate, it is important to understand that a major incident can also include certain acts of workplace violence, ADA or Food and Drug Administration related incidents or any incident deemed major by the vice president of Transportation or the general superintendent.

When investigating a significant incident, a number of steps outlined in these guidelines are followed. First, the Transportation manager must interview all

employees with information relevant to the incident. Naturally, it is very important that the questions are carefully thought out and prepared in advance. In the past, employees had been asked to submit a written statement, but according to the guidelines, that is no longer necessary because the interviews are recorded to protect the rights of the employee and the company. Employees will always be provided a copy of the tape or a transcript upon request.

The guidelines also stipulate that managers are to make every effort to determine the root cause of the incident within 48 hours and to process the necessary paperwork in a timely manner. When the investigative work is done, a final narrative must be prepared that provides a detailed account of the incident and the suspected cause, a summary of employees' training and qualifications records, a summary of efficiency tests and Transportation Department Review System records on employees covering a one-year period.

These procedures are being incorporated into the Transportation department's FY '05 management training classes.

compile employee interviews to ensure that the actions of our employees coincide with the facts gathered by the Mechanical and Engineering teams,” explained Travis Hinton, superintendent Road Operations, of the Central Division.

Part of the Engineering investigation involves recording track measurements to determine whether variations from FRA standards exist. The Engineering team also examines the switches, ties, fasteners and anchors for defects. Recent track work in the area is also analyzed. Site sketches are made, metallurgical evidence collected and event recorder information obtained from wayside equipment and photos are taken of suspect track conditions.

“The cause of a derailment is rarely a singular item,” explained Division Engineer Dave Klouda. “Usually it is caused by a combination of unrelated events and deviations occurring at the same time or the same location in the track.”

The Mechanical team inspects the equipment to check for mechanical defects or failures. The Mechanical group also determines if the damaged equipment is roadworthy, and if not, coordinates the delivery of the equipment to one of Amtrak's maintenance facilities for repair.

Next, Amtrak's Environmental group oversees the decontamination of the train, while Amtrak Police remain at the site to secure the train and its supplies.

Go Team Coordinates 24-hour Response Center

At a nearby hotel, where family members of the injured are housed, a group of employees, known as the Go Team, establishes a passenger response center, coordinated by one or two team leaders who provide around-the-clock coverage.

Working alongside the team leader is an Amtrak manager who disburses petty cash as needed, maintains work schedules and manages relief assignments for the Amtrak responders.

By comparing the passenger manifest with tickets found in the conductor's pouch, a preliminary passenger count is obtained. A manifest specialist works with other Go Team members to confirm the number of passengers and employees on board and provide an updated status of the injured and the disposition of those who leave the site.

Other individuals at the response center answer phones and maintain, update and disseminate information. A transportation coordinator

handles all local transportation, makes arrangements to get passengers and crews to their final destinations and helps arrange for family members to travel to and from the incident location.

Others serve as customer liaisons, expediting the flow of information to the reservation agents staffing the call center hotline.

The Baggage Retrieval Process Begins

When the environmental work is finished, the baggage and personal property team begins the task of retrieving checked and carry-on baggage from the train. Supplies and equipment are also removed from the food service, sleeping and coach cars.

Having coordinated many baggage retrieval efforts, On-board Services Manager Gary Erford notes, “It is vital to keep the other Go Team members updated. They need to know when the baggage retrieval process is expected to be complete so that passengers and employees can be told when to expect their belongings,” explained Erford.

The baggage team also establishes and maintains a central location convenient for passengers to view and claim their property and assists passengers through the process of locating their items. “Many people don't want to return home without their personal belongings. So, the timely retrieval of their luggage and other personal items is important,” added Erford.

Amtrak Responders Provide Support

Managers from Amtrak's Employee Assistance Program report to the scene to help provide emotional support and mitigate the traumatic stress of those involved. They assist the families of the injured or deceased individuals, act as Amtrak's representatives at hospitals and work closely with agencies such as the American Red Cross.

The Claims department responds to the site to work on the accident investigation and to facilitate medical care for our passengers and employees. “We are there to make sure that our employees and passengers are given superior care,” stated Claims Director Susan Kirtadze. “And we do our best to assist them with any immediate, as well as long-term, needs.” Based on the severity of the accident, arrangements are made to hire catastrophic nurse case managers to report to the hospitals. Working with hospital staff, they assist in the coordination of medical care and services once the passengers and employees are discharged.

continued on page 9

New Mexico Detective Lauded for Contributions

For his outstanding performance, APD Detective John Clayborne, of Albuquerque, NM, is recognized as Amtrak's 2004 Officer of the Year. He is honored for the range of his exceptionally hard work last year.

Highlights of his performance include the intervention in January of a suspicious package addressed to President Bush at the White House that was about to be loaded onto a train. His investigative expertise helped avert a potentially dangerous incident.

In February, Detective Clayborne was commended by the Finney County, KS, Sheriff's Office for his role in locating a mother and her children aboard an Amtrak train. The mother, who had been deemed unfit, had removed her children from the state's custody. Clayborne took them into custody and placed the children with the appropriate childcare agency in New Mexico.

Clayborne's outstanding drug intervention work resulted in two of the largest seizures of U.S. currency in

APD's history — \$1.2 million in June and \$751,000 in November. Clayborne and his task force counterparts made 11 drug seizures that resulted in the arrests of 13 individuals.

“Detective Clayborne's stellar record speaks for itself. He has clearly dedicated his career to excellence in law enforcement. Detective Clayborne's daily commitment as a public officer benefits our society as a whole, and these benefits should never be underestimated,” said Amtrak Police Chief Sonya Proctor.

Detective Clayborne joined Amtrak in 1984 as a patrol officer in the Philadelphia field office. He was sworn in as a member of the U.S. Drug Enforcement Task Force in September 1996. He has been recognized as Officer of the Month three times, and is a recipient of the department's Exceptional Achievement Award and the President's Service and Safety Award for Sustained Excellence in 2002.

Amtrak On Track with OLI

Amtrak and Operation Lifesaver, Inc. have been involved in a number of recent activities aimed at improving awareness of the danger of grade-crossing and trespasser incidents.

At a spring meeting with OLI President Gerri Hall and Amtrak's Police, Security, and Environmental, Health and Safety departments, Chief of Police Sonya Proctor was appointed to the OLI Board of Directors.

With more than 20 years' experience with metropolitan policing, crime control and prevention, Chief Proctor's contribution is highly applicable to the board's newly developed plan to address trespasser problems through community involvement.

To support that plan, Amtrak's Senior Safety Coordinator Alvin Richardson was appointed to the OLI Program Development Council at the OLI State Coordinators Summit held in April in Omaha, NE.

To deliver the important message about railroad right-of-way and grade-crossing safety, OLI relies almost entirely on volunteers who

make community presentations on their own time. For example, a new community was constructed on property adjacent to Amtrak's right of way in Maryland last year. As residents began to move in to the development, Amtrak train engineers noticed children playing close to the tracks. Amtrak OLI volunteers, along with Amtrak Safety Committee representatives, visited the community, going door-to-door to distribute materials and to discuss railroad safety at a town meeting. As a result of these efforts, this community is now more aware of the potential dangers of trespassing on the railroad.

To help prepare volunteers to become OL presenters, Amtrak held an OLI presenters class in Washington, D.C., in May. While many Amtrak employees are volunteer presenters, there's still a need for more.

For information on how to become an Amtrak OLI Volunteer contact Alvin Richardson, senior safety coordinator, at 202-906-3434. To learn about Operation Lifesaver, check the OLI Web site at oli.org or call Operation Lifesaver, Inc. at 1-800-537-6224.

Advisory Committee, Managers Confer

If a train leaves the station at 9:30 in the morning and heads north at 79 mph with 230 passengers and a four-member crew, how many miles does the Amtrak Customer Advisory Committee travel a year? The answer is 178,000 miles.

According to ACAC's bi-annual report due out this month, the committee averages 178,000 miles traveled, 350 trip reports, and over 6,000 non-travel-related hours volunteered every year.

As a link between Amtrak and its passengers, ACAC helps support the service delivery and marketing and sales goals of the company. Not unlike the mystery shoppers that some companies pay for, the group's members experience travel as a passenger, from Amtrak.com, Julie and the Reservation Sales

Call Centers, to the station and the on-board experience. What they find, both good and bad, is then reported back to Amtrak managers in the form of detailed trip reports and twice a year during committee meetings. The 23-person committee, comprising volunteers from across the country, met with Amtrak officials in San Diego last month to review accomplishments, share findings and identify new projects. At the meeting, members learned more about the Transportation department goals to improve service, the amenities planned for the *Empire Builder* launch, the Quik-Trak machine replacement program and a host of other initia-

Spring 2005 ACAC Customer Service Award Recipients

Cindy Camara	District Manager of Stations	Hanford, CA
Richard Funk	ClubAcela Attendant	30th Street Station

tives that are ongoing or coming up. On the flip side, members shared feedback with Amtrak representatives about a range of issues, from food shortages aboard trains, to providing more information about how to make use of sleeper car amenities. "I think it would be helpful to share travel tips for how to pack

light," said committee member Andrea Taylor of New York City, when the topic the two-bag carry-on limit was raised. The committee also announced the winners of its Customer Service Award (see box above), which is made twice a year to employees who show extraordinary commitment to providing quality customer service.

Congratulations to the six Amtrak employees who were chosen by the Amtrak Customer Advisory Committee to receive Customer Service Awards for exemplary customer service this spring:

Reservation Sales Agent Charles Barton
Lead Service Attendant Cliff Brown
Conductor Gary Burke
Red Cap Tom Laing
Manager of Station Operations Kevin Nathaniel (former ClubAcela Lounge attendant)
Conductor George Wolf

There was no photo available for Northeast Corridor Conductor George Wolf.

Training Designed for Enhanced Service

continued from page 4

"We want our customers to receive exceptional service," explained Murray. "And, if there is some reason why that is not possible, we need to let the passengers know as soon as possible."

On the second day, the students are introduced to a number of services that are unique to the *Empire Builder* and reminded of other standard practices. For example, upon boarding the train, the attendant will greet each coach passenger by name. Also in coach, passengers will be offered travel brochures, at-seat meal service and blankets that are available for purchase.

"The dining car is the heart of the travel experience," stated Jacobs.

As such, special emphasis is placed on delivering exceptional service, necessitating the dining car staff to work as a team to provide good food that's promptly served and attractively presented in a pleasant environment. A highlight of the dining experience will be the addition of three new entrées unique to the route: braised salmon shank with a horseradish and cauliflower purée, Great Northern baked ham

with a sweet citrus sauce and English beefsteak pie with braised tomatoes and white mushrooms. "Each selection has been designed by our culinary team to closely match the original recipes of the Great Northern Railway that operated the *Empire Builder* before Amtrak," stated Food and Beverage Director Pete Humphreys.

On the second day of the three-day journey, on-board employees host a wine and cheese tasting event. As such, the class learns how to set the tables and prepare the cheese plates, as well as the proper way to present, uncork and pour the wine.

After the training concludes in early July, employees will be armed with the information and tools necessary to consistently deliver outstanding service. "The success of this initiative is largely dependent upon the employees doing their best to meet and exceed our customers' expectations," stated Talkin.

P R O M O T I O N S I N M O T I O N

Summer vacation is heating up with a number of promotions aimed at encouraging adults and children to step aboard Amtrak and find out how convenient and enjoyable train travel can be.

Amtrak and Thomas and Friends continue their ongoing partnership with a national online sweepstakes promotion, *Take the Train to the Train*. Thomas and Friends produces a variety of children's entertainment that includes books, videos and a television series featuring the popular children's character Thomas the Tank Engine.

Ending on June 15, the sweepstakes offers the grand-prize winner a trip for four on Amtrak to meet Thomas at "A Day Out with Thomas" celebration held at various railroad museums and railway facilities throughout the country.

There are other ways for kids to win with Amtrak this summer — a number of *Kids Ride Free* promotions offer big savings on train travel on the *Auto Train*, *Crescent*, *Carolinian*, *Piedmont* and

Hiawatha service through the end of August.

Also this summer, *Pacific Surfliner* and Metrolink monthly pass holders may travel free on the

weekends by taking advantage of the *Ride Free to Santa Barbara* promotion. This promotion offers passengers a chance to enjoy free travel aboard the *Surfliners* to any city north of Los Angeles on Fridays, Saturdays and Sundays through June 26.

Sales and Marketing Associate Brian Hart spearheaded this effort. "Many riders taking advantage of this

promotion are Metrolink pass holders. And, even though they get free weekend travel on Amtrak, often they bring along revenue passengers who otherwise may not have traveled," stated Hart.

To further promote Santa Barbara as a tourist destination, Amtrak is again partnering with Key Holidays to offer travelers, including

Amtrak employees, an Amtrak Santa Barbara Holiday package.

This package, which became available last month, is being promoted as a one- or two-night mini holiday and includes rail fare and overnight accommodations.

Amtrak employees (and one guest) may receive a 15-percent discount off the tour portion of the package. Rail reservations should be made separately in accordance with Amtrak's Red, White and Blue Employee Pass Policy. Prices and additional tour information are available by calling Key Holidays at 1-800-783-0783.

To increase visibility in the Bay area's African American community and to boost ridership on the *Capital Corridor* and *San Joaquins* routes, Amtrak is a sponsor of the Black Expo 2005 on July 16 and 17 at the Oakland Convention Center.

By traveling to the event aboard the *Capital Corridor* or *San Joaquins*, any one of the 20,000 attendees expected may take advantage of a 10-percent rail fare discount, which is being promoted in Black Expo literature and press releases.

In the Midwest, a package is being promoted to attract travelers to the Missouri State Fair, being held Aug. 11 through Aug. 21 in Sedalia, MO. The \$10 package,

which is available for sale this month, includes fair admission and bus shuttle between the station and the fair grounds and may be purchased through Amtrak. "Last year, the package generated 952 riders, and through Amtrak's radio advertising and our presence on the state fair Web site, we hope even more people will take Amtrak to the fair," stated Sales and Marketing Associate Anne McGinnis.

On the East Coast, Amtrak is teaming up with Loews Hotels and the National Constitution Center in Philadelphia to sponsor the "Ride Like Lincoln" contest, which celebrates the center's new traveling exhibit, "Lincoln: The Constitution and the Civil War."

Between June 1 and Aug. 31, participants may log on to constitutioncenter.org and try their hand at completing Lincoln's famous eight-state, 18-stop train ride of 1861 on a virtual map. Those who correctly complete Lincoln's journey from Springfield, IL, to Washington, D.C., will be entered into a sweepstakes.

The grand-prize winner will receive a free trip for four to any Amtrak destination between New York and Washington D.C., an overnight stay at a participating Lowes hotel and a one-year Freedom Family Membership to the National Constitution Center.

Pow Wow Connects Sellers and Buyers

Paul Nestor, Northeast Region director (L.), and Claudine Conaway, Travel Agency Service Center director (R. background) meet with buyers interested in promoting and selling Amtrak service to international travelers at Pow Wow at the Javits Center in New York City last month.

Sponsored by the Travel Industry Association of America, Pow Wow is the largest annual international travel trade show for overseas tour operators and attracts 1,300 buyers from 70 countries. Not your standard trade show, this business-to-business event aims to connect sellers and buyers via scheduled 20-minute appointments.

Responders

continued from page 7

Responding to a major incident can be a physically and emotionally exhausting experience. Senior Director of Systems Operations Don Cushine, who has been a Go Team member for many years explains, "Go Team members often eat on the run, work around the clock and perform physically demanding jobs in all types of weather conditions. Under these trying circumstances these individuals still manage to provide strength and support to passengers, employees and their families."

System Safety Officer Peter Hall added, "Although each Amtrak responder has a job to do, we take the time to help our crews and passengers work through what can be a very difficult situation."

Employee Honored With Hammond Certificate

Harry Seubert (center), a field environmental specialist at New York's Sunnyside Yard, is honored with a 2004 Harold F. Hammond Certificate of Commendation for railroad safety for his significant and consistent role in promoting safety.

Flanked by CMO Vince Nesci (left) and New York/New England Master Mechanic Don Knapik at the May 19 ceremony in Washington, D.C., he was recognized for his support of the New York Division's safety program that includes the yards and Penn Station, as well as his assistance with safety/environmental instruction for the Engineering department. Seubert is also a key member of the New York Division Safety Council.

It is noteworthy that in 2004, the Mechanical department at Sunnyside went 85 days without a reportable injury, surpassing the previous record of 72 days, while the Mechanical forces working at Penn Station also went a year injury free. Over 420 Mechanical employees work in these areas.

See Something, Say Something Put Into Action in Los Angeles

Recently, Los Angeles Union Station Ticket Agent Lucy Gonzalez-Bormann noticed a suspicious man in the baggage area, whom she approached. After getting inconsistent answers to her questions and his not producing proper identification, she contacted the Amtrak Police Department. APD's inquiry revealed that this person had an extensive and serious criminal history and the APD subsequently arrested and charged him with various offenses.

In another incident, Ticket Agent Darlene Tyler was approached by a passenger who requested to

check his duffle bag. When she noticed that his tickets and identification didn't match, Tyler asked the customer why there was a variance, to which he responded that the tickets belonged to a friend. Suspicious, Tyler contacted members of the Amtrak Police, who discovered that the tickets had been purchased with a stolen credit card. The man was arrested and later convicted of a felony.

Employees' security awareness and vigilance is crucial to maintaining a secure environment for our employees and passengers.

Submitted by Amtrak Police Department Sgt. Brenda Breeden

Credit Card Expenses

continued from page 1

was changed to better track sales and fraud losses by each Amtrak distribution channel, such as at Amtrak.com or the Quik-Trak machine. Additionally, as a result of recent thefts of consumer information from major retailers and other private databases, and the increased concern over identity theft, the credit card companies have taken an aggressive stance to require companies like Amtrak to certify that data is protected to the greatest extent possible.

As part of its Credit Card Security Project, Amtrak is working diligently to make all of the necessary changes — both procedurally and in its computer systems — to meet the card industry standards. This

includes the development of a new corporate policy, which is posted on the Intranet.

The Treasurers department will continue to focus on fraud-prevention projects through the balance of this year and into 2006. It also plans to reduce costs in processing credit card transactions and further assistance to the Marketing and Operations departments. Among other projects, this will include creating a new credit card sponsorship program and the piloting of electronic card acceptance on board Amtrak trains. "Bringing the railroad to a state of good repair should include smooth customer payments," Smith said, "not just smooth train travel."

The Children Have Arrived at Work

During Take Our Children to Work Day on April 28 in Washington, D.C., (L. to R.) Gabrielle Coleman (daughter of Lisa Coleman, senior officer Dispute Resolution, Business Diversity), India Travers and Kyra Carpenter (granddaughters of Pauline Nisbeth, executive assistant, Business Diversity) sample the product while touring train equipment.

The event was designed to inspire children to value education and stimulate interest in transportation careers. The Office of Business Diversity coordinated the program, while involving departments throughout the corporation. Over 90 children between the ages of seven and 14, most of them the children of Amtrak employees, were registered for the event, with over 20 students visiting from a nearby high school.

"That's My Boy"

As part of a training exercise, Amtrak Police Officer Michael Millsaps Jr. rewards his dog, Bak, with praise and a tug with a toy for finding a hidden gun under debris at the National Institute of Standards and Technology (NIST).

The site, located in Gaithersburg, MD, is used to train rescue animals and their handlers in urban search and rescue missions while using explosive ordnance disposal robots. Both Millsaps and Bak wear white transmitters that track and record their movements as they proceed through various search areas.

The test site provides pre- and post-disaster training with scenarios that simulate various stages of a collapsed building.

Money at Work in 401(k) Plan

Are you currently saving money for retirement? Do you know how much you will need? Will you have enough?

According to a recent Employee Benefit Research Institute survey, more than half of the responders say they are behind schedule in planning and saving for retirement and only 62 percent of the nation's workforce is currently saving for retirement.

Whether 20 or 50 years old, employees should consider that it's neither too soon, nor too late to begin saving. An easy and convenient way for Amtrak employees to do this is to enroll in the company's retirement savings 401(k) plan, which has several features that make it an effective and powerful way to save.

Amtrak employees, both full-time and part-time are eligible to participate in a retirement savings plan. Agreement-covered employees (after one year of service) are eligible to participate in the Amtrak Retirement Savings Plan for Agreement Employees, while management employees may join the Amtrak Retirement Savings Plan at any time.

What You Should Know

Funds are deposited tax-free (prior to federal withholding taxes, and in most cases, also prior to state and local taxes) to an employee's 401(k) account. Account earnings on those funds are also tax-free. Only funds that are withdrawn later are taxed, which likely would be at a much lower income tax rate. So, by waiting until retirement to make withdrawals, employees could pay a lot less in taxes on this money.

The plan is flexible and employees have the freedom to choose how much they save, how to invest their savings, when to use their savings and what to do with their savings when they leave Amtrak — even if they leave before they are ready to retire. Any funds contributed to a 401(k) belong to the employee and when the employee leaves Amtrak, he or she may take the money with him or her.

The earlier the contributions to the account begin, the longer money is in the account and the more money is made by compounding earnings.

FRONT LINE FOCUS

Dear Amtrak:

I was a passenger in the last car of Train 14 (*Coast Starlight*) traveling from Los Angeles to Portland. That was my fifth time on the same train. ...

The trip to Portland ... was unique and truly memorable, and this was all due to one of your employees, Joann Lindsey. Joann was the most courteous, most kind, most helpful, and the most professional employee that I have ever encountered on Amtrak and indeed on any public or private transportation system in the United States.

Joann gives true meaning to the words: coach attendant. She constantly cleaned the coach (car) and toilets. She made all passengers feel at home and welcome ... she gave pillows, route maps, magazines and newspapers, and personally asked each passenger if they were fine and if there was anything else she could do to make their ride more comfortable. I honestly missed her when I left the train at Portland. ...

I write this letter to appreciate the work of Joann. My prior experiences on the *Coast Starlight* had not been great. Our return trip on [another] trip from San Francisco ... last summer was the worst of all. Our female coach attendant turned out to be what I named (when talking to my wife) “our task master,” since she behaved more like a drill sergeant than an attendant. She placed my wife and me in a seat that was next to the end wall of the train, although the car was not full and there were several empty seats. The doors constantly opened and closed, and we could not relax. A bad smell kept coming from the toilet; indeed, the entire coach smelled. Our coach attendant (the task master) was very rude to passengers. Things became

so bad that one passenger and she had a quarrel, and the conductor had to be called. He ruled that the passenger was in the right. ... He was very tired and unhappy. He was pleading with the attendant to please let him sit by himself. I thought his request was reasonable since the car was only half full. The coach attendant refused ... and the gentleman refused to move when the attendant ORDERED him. The attendant then threatened to call the conductor to report what she described as “insubordination to Amtrak authority.” The male passenger told her to call the conductor. As I said, the conductor agreed with the passenger.

If coach attendants are unresponsive to reasonable requests from passengers, the perception soon emerges that it is because Amtrak is a government (public) corporation that employees do not respect passengers. Such perception will not improve Amtrak’s image.

Sincerely,
Augustine K.
Riverside, CA

Correction:

The May issue of *Amtrak Ink* incorrectly identified the Transportation Marketing & Communications Association Tranny Awards sponsor for the Empire Builder 75th Anniversary event. The sponsor was Sarah Swain. *Amtrak Ink* regrets the error.

Dear Amtrak:

I would like to thank Conductor Don Tucker (Philadelphia, PA) for his courteous actions. I lost my personal cell phone on a return trip from Washington, D.C. to Philadelphia last Thursday. Mr. Tucker found it, and contacted me to let me know that he had it. He also shipped it to my home via UPS.

As the CIO and director of IT for the FAA Air Traffic Organization, and an employee of the Department of Transportation, I must highly commend Mr. Tucker for his actions and his demonstration of

exemplary customer service. He represents Amtrak and what public transportation should be. Please pass on my commendation of Mr. Tucker and my personal appreciation for his concern for me. I truly appreciate the "extra mile" that he went for me as an Amtrak customer. I hope that all your Amtrak staff shares his concept of customer service.

Thank you,
Dennis F.
Washington, D.C.

401(k) Plan

continued from page 11
Knowing how much money will be needed for retirement, and making sure that amount is available at retirement time can be difficult. For those who are already contributing, consider increasing the amount contributed — the plan allows pre-tax contributions up to 40 percent of pay each year (up to certain IRS limits).

To begin participating in Amtrak’s 401(k) Plan, or to increase the current contribution percentage, or for questions about how the 401(k) Plan works, call Vanguard at 1-800-523-1188, or visit vanguard.com.

Susquehanna River Bridge Project Spans Summer Schedule

Major track work began this month on the Susquehanna River Bridge, located approximately halfway between Baltimore and Wilmington, DE, that involves the collaboration of a host of Amtrak departments and represents one of Amtrak's largest bridge-tie replacement endeavors in decades.

Carrying nearly 90 Amtrak trains across the Susquehanna River each weekday, this 4,164 foot-long two-track bridge is critical to Amtrak's Northeast Corridor operation.

Scheduled to take 42 days, the capital project upgrades No. 3 track, replacing cracked and worn ties and plates, which are approaching the end of their life cycle, and is in keeping with the company's goal to put the railroad in a state of good repair.

The nearly \$3 million project includes the installation of approxi-

mately 3,200 bridge ties, which were ordered in advance last year,

the replacement of a full-length center walkway and handrail on

the outside of No. 3 track and finally, installation of new continuous-welded rail.

An Amtrak southbound Regional train crosses the Northeast Corridor's Susquehanna River Bridge between Perryville and Havre de Grace, MD. One of two tracks is closed during July and August for the nearly \$3 million project to replace ties, rail, center walkway and handrail.

The project requires that No. 3 track of the two-track bridge be out of service entirely, while night outages are instated on No. 2 track to allow work trains to carry materials to the job site. The Electric Traction team has de-energized No. 3 track for the duration of the project and does the same with No. 2 track at night to accommodate the project.

Working north to south, the Engineering department's System Production Bridge Rehabilitation and System Production Track gangs remove existing guard and running rail and bridge ties,

continued on page 8

Beech Grove Locomotive Overhauls on Target

As part of the Five-year Strategic Plan aimed at returning Amtrak's rolling stock to a state of good repair, Beech Grove mechanics are overhauling 51 diesel locomotives, including Amtrak's largest locomotive fleet — the P-42. Forty of the 207 P-42s are slated for overhaul in FY '05, and with 29 completed through June, Beech Grove is right on target.

Also toward that end, Beech Grove employees have completed four of the eight F-59 overhauls on this year's production schedule and the three P-32 Dual Mode locomotives also slated for this year.

The P-32 Dual Mode Locomotive is a unique piece of equipment. This locomotive can be operated using the diesel engine to power the traction motors or it can operate utilizing electric current from the third rail collector system, allowing the diesel engine to be turned off.

Of Amtrak's 207 P-42 locomotives,

158 are needed to meet its daily operating requirements. To achieve this goal, the company must schedule 29 other units per day for overhaul, preventive maintenance or other repair work. "We must carefully manage our diesel locomotive resources and our modest out-of-service margin for preventive maintenance so that service is not negatively impacted," noted Director of Operations Michael Frazier. "After accounting for the nine P-

42s that are out of service this year due to wreck damage, we're left

services, including our contractual agreement with the American Orient Express," added Frazier.

Unfortunately, there is even less wiggle room with the F-59 and P-32DM availability. Of the 21 locomotives in the F-59 fleet, 13 locomotives are required every day, while six are scheduled out of service for maintenance — with only two to spare. There is only one spare P-32DM — out of the 18 engines in the fleet, 14 are in use and three scheduled for maintenance every day.

Beech Grove's locomotive programs are budgeted at approximately \$34 million this fiscal year to perform the extensive repairs

Beech Grove Machinists Bill Washington (left) and Dave Roberts rebuild the trucks for the GE P-42 locomotives.

with only 11 spare engines that allow Amtrak the flexibility to do things such as operate charter

TRAIN OF THOUGHT

This summer has been more than eventful.

On the funding front, we've been hard at work updating members of Congress about our funding requirements for next fiscal year. Late last month, the U.S. House of Representatives voted to fund Amtrak at \$1.176 billion in FY'06. That's progress — but we're not out of the woods yet.

As I've said many times, the legislative process is a long one marked by twists and turns. As some of you Amtrak veterans know, we expect the Senate to provide a funding number by mid-July, and then the House and the Senate will come together to reconcile the numbers. It's best for me to keep you updated on these developments, as I have been doing, via the *Employee Advisories*.

We're in a business that many people don't really understand. So I'm also talking to reporters and editorial boards to better inform them and their readers about the unique aspects of running intercity passenger rail service and the benefits we provide.

By the time you read this, the discussion about the food and beverage operation may be old news. I know I've already shared

with you my feelings about the House hearing at which we testified last month. In the last two years, we've made a lot of changes to the food operation, and we plan on doing more.

For example, we're reviewing our dining car staffing needs and food selection to better fit the demand during off-peak periods.

Former Amtrak employee Emmet Fremaux will be re-joining us as the vice president of Customer Services, and you can expect to hear more about continued efforts to improve our customer service, including food and beverage.

We've got a range of projects underway this summer. On the *Acela* front, we expect to have new brake rotors from the manufacturer that are approved by the FRA soon, making way for a gradual return of service starting this month.

Of course, we've got the upcoming launch of the *Empire Builder* margin improvement project in August. I think this service will really attract more riders and higher revenues.

On the Keystone Corridor, work continues to revive that stretch of railroad. Next year, we'll have an all-electric railroad that provides

David L. Gunn

more passengers faster service. I keep telling people that the Keystone line is the next high-speed rail corridor in North America and I expect that ridership should top two million once the work is completed. What a great accomplishment for Amtrak, the commonwealth of Pennsylvania and passenger rail service.

Speaking of accomplishments, I just visited the Penn Coach Yard to congratulate the employees there for getting rid of scrap and debris, recovering materials that can be reused and instituting a materials management system. The place looks great.

There's a lot going on to keep all of us busy and that's the way it should be. Keep focused on doing your part and be careful this summer.

Maintenance-of-way materials are neatly warehoused at Penn Coach Yard's Building K. The yard was re-dedicated last month in the company of employees and President David Gunn.

The year-long cleanup and maintenance-of-way materials recovery effort resulted in selling \$174,000 worth of scrap, relocating a range of supplies, such as surplus rail material and Communication and Signals construction cable, and four new warehousing buildings.

The effort was the result of collaboration among a number of departments and is considered a model for similar yard improvements projects.

Department of Homeland Security Provides \$7.1 Million in Funding for Security Initiatives

The Department of Homeland Security is making available to Amtrak a \$6.3 million grant as part of the Intercity Passenger Rail Security Grant Program that will enable the company to support a number of security enhancements in Amtrak’s Northeast Corridor and Chicago hub area.

As part of the program, a required preliminary risk assessment must be completed in these two regions so that the railroad can address its most critical security needs first. The risk assessment, costing \$750,000, brings the total monetary benefit to Amtrak to \$7.1 million. Currently underway, the analysis will be completed by the end of this fiscal year.

The preliminary risk assessment, conducted jointly by the DHS-retained contractor and Amtrak, parallels the existing Port/Mass Transit Technical Assistance Program prepared by the DHS Office of Domestic Preparedness and the results will be integrated into other assessment results already completed for the major transit agencies whose systems overlap with Amtrak’s.

Once the assessment is complete, the bulk of the grant dollars will be accessible over a 30-month period. The grant program provides Amtrak with financial assistance to implement security initiatives that will protect the railroad’s infrastructure, especially from explo-

sives and other terrorist action, and to support Security and Emergency Preparedness activities for passenger rail that are coordinated with other local transit security initiatives. In addition, an emergency preparedness exercise slated to take place in New York will identify and evaluate the response capabilities by private and city agencies.

Assuming the risk assessment reveals the anticipated results, a number of enhancements to current security initiatives are planned. Amtrak will participate in a 30-month research and development program to test a new generation of surveillance software will detect and respond to explosive device incidents and calls for service. Amtrak also plans to acquire explosive-resistant trash receptacles that will minimize the effect of an explosive device detonated within. While these receptacles are already in use at many locations, the grant funds will allow Amtrak to purchase additional receptacles for stations in the Northeast Corridor and Chicago. The grant will also fund the acquisition of

“This funding will make it possible to implement a number of specific technical programs that will enable the company to ‘work smart’ when it comes to protecting employees and passengers. ”

Al Broadbent
Vice President, Security

and equipment. Additionally, Amtrak will acquire portable radiation detection devices to be used in detecting Radiation Dispersal Devices in stations and on board trains. Several other projects will also enhance detection capabilities. PROTECT (Program for Response Options and Technology Enhancements for Chemical Terrorism) will provide an early-warning and crisis management system in the event of a chemical attack. In another effort, grant money will be used for 10 additional K-9 teams in the Northeast Corridor and Chicago area that

four portable explosive trace detectors for use at select stations. And four X-ray machines will be placed in stations throughout the Northeast Corridor and Chicago to screen packages, mail, carry-on items, luggage and other items. To leverage the watchfulness of employees and passengers, the funds will also go toward enhancing Amtrak’s current public awareness “See Something, Say Something” message, using a range of methods, such as publications, signage, station announcements and electronic communications.

Environmental Award Bestowed on Employee

Samuel A. Hill, director of procurement services for the Procurement and Materials Management department, was honored as a finalist at the John H. Chafee Environmental Excellence Award ceremony in May. Recognized for his role in streamlining the contracting processes for Amtrak's environmental services, such as environmental engineering, spill response, waste disposal and pest control, Hill was also responsible for developing national contracts for hazardous material disposal and environmental engineering services that provide corporate control and standardization to what previously had been handled through more than 40 local contracts. Hill also conceptualized the idea of using interdepartmental teams to

develop contract evaluation and to evaluate the various components of contract proposals. The prestigious Chafee award is given annually to a railroad industry employee for environmental achievement and this year it was awarded to a Union Pacific employee for his role in improving environmental conditions at his locomotive facility. Sponsored by the Association of American Railroads, the award honors the late Sen. John Chafee of Rhode Island who was a strong environmentalist and promoted the environmental advantages of rail transportation. The late senator’s son, Sen. Lincoln Chafee (R-RI), presented the award at a ceremony held at the U.S. Capitol in Washington, D.C. on May 25.

Employee, Passenger Vigilance in Action

As he approached Sunnyside Yard on early morning, New York Division Engineer Larry Bonaventura noticed several suspicious-looking canisters at the entrance of the yard. Remembering the Amtrak Police Department number (1-800-331-0008) that appears on the Daily Security Awareness Tips, he contacted the APD immediately. After APD and the New York Police Department arrived on the scene, it was determined that the canisters did not present a security threat. Nevertheless, Bonaventura reacted appropriately — this kind of employee vigilance is key to protecting against potential threats. Passengers are also on the lookout. Last month, a passenger advised Amtrak station personnel of a man who was viewing bomb techniques on his laptop computer. This activity was reported to APD and Fairfax (VA) Police, which subsequently deemed the activity legitimate, and the passenger in question was cleared.

Dear Amtrak Co-workers:

Amtrak's West Coast Mechanical department enters the summer peak-travel period having just celebrated with Caltrans the fifth anniversary of the Surfliner service last month. The Surfliner has modern cars and locomotives and now totals 24 weekday and 26 Friday through Sunday trips. It is but one example of the investments being made, with the help of our state and local partners, that are bringing continued service improvements to the West Coast. In the Bay Area, as well as in the Pacific Northwest, Mechanical employees are supporting growing services that enhance mobility for an increasing number of riders.

Amtrak celebrated the opening of the new maintenance facility in Oakland last year, and the transition went very well with very little disruption to the daily operations. The new facility enables Oakland to assume maintenance responsibility for 17 Caltrans locomotives, as well as perform work on Caltrain commuter equipment. It is no longer necessary to transport this equipment to the Amtrak LA facility or the Union Pacific Railroad shop in Roseville, CA, improving our state and agency partners' satisfaction. The opening of this facility has greatly improved equipment utilization on the California Corridor, which in turn has had a positive effect on the entire Amtrak fleet. Additional benefits for employees are expected in FY '06, when phase II of the construction commences, providing additional office space and a new commissary.

In a testament to the capabilities of Los Angeles area employees, extensive interior upgrades to five Superliner coaches and major interior repairs to three Superliner transition sleepers were made between February and June as a part of the Empire Builder upgrade program. The upgrade work is above and beyond routine periodic maintenance on the 219 cars assigned to the location. Los Angeles has also been assigned an additional trainset of refurbished Horizon equipment and two locomotives.

An important new component of delivering service quality in Oakland is the management train-riding program, which includes detailed trip reports. One day per month each general foreman spends his or her shift riding trains, talking with crews and learning more about how mechanical issues impact the customer and train crews. This has produced substantial positive feedback from train crews and the governing agency, the Capital Corridor Joint Powers Association.

In addition, for the thirteenth year, Amtrak Mechanical maintains the rolling stock in San Jose and San Francisco, CA, for the Caltrain Commuter contract. The Mechanical team working on this contract does an exceptional job without the benefit of modern facilities. The

JPB continues to award extra work, a reflection of their confidence in our skills. Last month, the Caltrain Baby Bullet Service was initiated with new Bombardier car equipment and new F-59 locomotives. Total service frequency will increase from 88 to 96 trains per day starting Aug. 1.

Further north, Seattle Mechanical maintains Sounder commuter equipment and Talgo-built Cascades trainsets in addition to servicing and repairing long-distance trains. Sounder equipment availability is 99.8 percent and on-time performance is 95 percent. Sounder service continues to expand, with a new roundtrip to Everett, WA, initiated last month, and a Tacoma roundtrip scheduled to begin Sept. 26. Investments are being made in fleet appearance with the painting of Talgo trainsets and F-40 cab cars. Preparations continue for the construction of a new Seattle maintenance facility, which is still several years to completion.

With safety and security at the forefront of everyone's mind, I am glad to acknowledge the Mechanical department West has completed the employee System Security Training.

Recognition is also in order regarding the severe weather widely reported in the media in January and February, which caused an extended service disruption to the Coast Starlight due to washouts and a large sinkhole. At the onset, LA Mechanical relocated forces north to service and operate the train from San Luis Obispo. When train service was suspended below Oakland, our Bay Area Mechanical employees rose to the occasion servicing and dispatching this train until the railroad was reopened. Seattle also performed additional Coast Starlight maintenance in lieu of Los Angeles to maintain service quality. The Mechanical West employees did an exceptional job under these adverse conditions and I must commend them for all their efforts.

I am very proud of what we have accomplished and want to thank all of the West Coast Mechanical employees for all of their efforts.

Sincerely,

*G. T. Mescall
Master Mechanic, West*

Hialeah to Get New Addition

A wheel truing machine is slated to begin operating in early August at the Hialeah, FL, Service and Inspection facility that will improve cost and operational efficiency.

Amtrak paid \$1.4 million for the machine and construction for the site, and in about two years it is expected to pay for itself. The new addition to the facility will save Amtrak up to \$750,000 per year.

“Standard maintenance that includes proper oil and hydraulic

fluid changes will lead to machine life between 20 and 30 years before replacement is considered,” said Amtrak Southern Division Master Mechanic Tommy Farr.

Along with the cost savings, the machine is projected to improve operations. The mechanism will enable Hialeah mechanics to true the wheels while they are still on the car, rather than the current process of taking each car to the drop table, disconnecting each bad wheel and replacing it with the

correct wheel and then moving the car; a job that averages about two hours.

Instead, the machine will reside in the pit with the car passing on top of the machine, reducing the time the process takes by approximately 50 percent. It will also cut the replacement numbers by two-thirds because Amtrak can refrain from taking out and replacing an average of 1,400 wheels per year.

Farr noted that all wheels will be profiled on cars during their peri-

odic maintenance cycle, enabling the facility to run from cycle to cycle with significantly fewer wheel defects.

The wheel true machine is expected to arrive in Hialeah the first week in July and installation and training will take 20 days.

The machine may open a market for the Hialeah facility to provide service to other railroads, added Farr.

Contributed by Christopher Wall

Acela Suspension Drives May Results

System-wide ridership was only 1 percent below last year, despite the loss of *Acela Express* service, because of strong performances by short-corridor and long-distance trains that started the summer strong, with ridership 7-percent over last year.

Ridership of 2.17 million in May was down 5 percent compared to budget. Year-to-date ridership of 16.7 million passengers crept up 1 percent versus last year, and down 1 percent compared to budget.

Ticket revenue figures for May were 6 percent lower than last year and short of budget by 11 percent, including a \$9.5 million loss due to the suspension of *Acela* service.

In the Northeast, May was the first full month with a consistent *Acela*

Express replacement schedule. About 60 percent of *Acela* passengers shifted to *Metroliners* and others took *Regionals* and *Keystones*. *Regional* ridership and revenue, which have been consis-

some of which was turned over to New Jersey Transit following the *Acela* replacement schedule.

Limited *Acela Express* service is slated to gradually resume this month, which should help boost

when results spiked upward due to holiday and spring-break travel.

In May, long-distance ridership rose 7 percent and revenue grew 5 percent compared to last year.

When comparing the April and

May results, the numbers are even more significant. In Coach class, there was a 12-percent rider-ship and a 17-percent revenue improvement from April to May. Sleeper

ridership jumped up 13 percent and revenue up 11 percent from April to May.

The numbers would have been better. However, the Florida trains continue to experience problems traveling over CSX territory. To help improve operations, a new Silver Service schedule is being worked on to be put in place in August.

Ridership and Ticket Revenue for May 2005			
Month of March	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	2,196,559	2,294,124	2,170,371
Ticket Revenue	\$108,426,009	\$114,873,602	\$101,982,264
Fiscal Year-to-date	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	16,526,894	16,849,581	16,676,571
Ticket Revenue	\$830,241,941	\$862,727,610	\$810,787,262

tently on the rise, jumped 13 percent and 16 percent over last May, respectively.

The *Share Fares* promotion has been extended through the end of the calendar year, and has contributed \$800,000 in incremental revenue from mid-February through the end of May. All of these May numbers reflect the impact of reduced *Clocker* service,

the results over the course of the summer.

The long-distance trains have started the summer strong. So far, reservations are ahead of last summer, and load factors in the sleepers are close to or more than 90 percent for most of the trains.

The trains have picked up from the positive trends seen in March,

Overhauls on Target

continued from page 1

and overhauls to the diesel fleet. “By investing money and manpower in overhauling this equipment, we are helping to ensure that our locomotive fleet will be in good operating condition for the duration of its life — estimated at 20 years,” explained Beech Grove Superintendent Lew Wood.

Under Beech Grove’s FY ’05 production plan, these units are scheduled for overhauls every five years, or preferably when the mileage reaches one million miles. Acquired in 1996, the 40 P-42s, as well as the P-32DMs purchased a year earlier, are both entering their second overhaul cycle.

Although the six-year-old F-59s are cycling though for the first time, these units are scheduled for overhaul based on the mileage accumulated and a review of the component failure analysis to determine

the component life cycle and the work scope required to keep these units performing and costs down.

When the locomotive first arrives at Beech Grove, it is inspected for physical damage and several functions are tested, such as the air brakes and the power supply, to determine if any mechanical failures exist. Next, the oil, water and fuel are drained from the unit and the oil is filtered and sold to local oil recyclers. The trucks are

The engine is removed from GE P-42 locomotive 167 at the Beech Grove facility.

removed and completely rebuilt in-house and other rotating equipment including the main engine, alternator and cooling fans are sent off-site for repair. The unit is then

washed and moved to the Trim Shop to paint the interior of the locomotive, including the machine room and engineers’ cab.

Afterward, several required modifications are made. For example, to save fuel costs, an Auto Engine Start/Stop System that enables the locomotive to automatically shut off when the engine idles about 30 minutes is installed. The engine automatically restarts itself if there is a need for power or if the air pressure drops too low.

To reduce the locomotives’ out-of-service time, another improvement involves replacing the metal fabricated nose welded on the head of the engine with a replaceable composite nose. In the past, when the nose was damaged due to an accident or a debris strike, it could only be replaced at the Beech Grove or New Orleans maintenance facilities and the repairs spanned a week or more. This

modification allows the nose to be replaced at any mechanical facility

After a complete overhaul, F-59 locomotive 469 sits at the Beech Grove’s Diesel Shop for final testing before it re-joins the Amtrak Cascades fleet.

by simply unbolting the damaged nose and bolting another that is a pre-painted composite, thereby significantly reducing the labor hours.

Next, the exterior is painted, the latest software is loaded and the seats, floor panels, doors and other equipment are installed. After final testing and inspection, the locomotives are returned to their respective regions for operation.

The P-32DMs primarily operate in the Northeast, the F-59s operate on the West Coast and the P-42s power passenger trains from coast to coast.

Overnight Recovery of Bridge Keeps Corridor Open

Quick response and a sophisticated recovery effort conducted by employees working for the New York division and the U.S. Coast Guard led to saving the Portal Bridge and restoring train operations as well as marine traffic on the Hackensack River following a fast-moving fire that struck the bridge on the evening of May 12.

According to Division Engineer Steven Falkenstein, “Our employees’ quick response to this crisis saved the track infrastructure, and temporarily restored signal service to the bridge in record time.” Falkenstein added that Amtrak received an unexpected call from the governor of New Jersey and from officials at New Jersey Transit praising how effectively the employees managed the event.

As fire crews battled the flames, quick thinking by Engineering department employees saved site-specific bridge timbers by requesting fire crews to focus their attention on wetting down specific timbers before they burned completely. Each bridge timber that supports the rail is manufactured individually to fit like a glove. “Because of the bridge specifications, you can’t just use any type of tie,” explained Staff Engineer Joseph Ciganik. “Letting certain parts of a fire burn is a strategic decision. Our forces directed the firemen to the areas that were a priority, thereby preventing further restoration delays.”

Because the effect of the fire

knocked out all power cabling on the bridge, engineering employees designed a temporary cabling system to restore power to the signal system and bridge. Meanwhile, New Jersey Transit worked

“Letting certain parts of a fire burn is a strategic decision. Our forces directed the firemen to areas that were a priority, thereby preventing further restoration delays.”

Joseph Ciganik
Staff Engineer

with Amtrak to reduce traffic crossing the bridge until more cable could be installed.

Working throughout the night, crews repaired damaged rail, walkways and the catenary system, and a temporary cabling system was pulled across the bridge. Reduced train service was restored by the next morning’s rush hour. Less than 48 hours later, full service was restored. However, river traffic still remained an issue.

Although train service across the bridge was restored, river traffic remained closed because the temporary cabling system draped across the bridge prohibited the swing portion of the bridge from opening.

In an effort to accelerate the

reopening of the bridge, Amtrak worked closely with the U.S. Coast Guard to restore river traffic.

Two days later, a barge was on site to maneuver a temporary underwater cabling system designed to

were out of the water, the barge was used to move across the channel and unroll the weighted cables that would sink to the bottom of the river.

The divers then checked the underwater cabling system to ensure proper placement. With a thumbs-up from the diving team, engineering employees attached each of the cable wires to signal boxes and swing bridge components.

Eleven days after the initial fire, the U.S. Coast guard notified all river traffic the bridge was operational.

Like the temporary cabling system that was installed on top of the bridge, the underwater cabling system is also a temporary fix. A permanent solution will require the

continue signal power while restoring the bridge’s function to swing open. Divers and submarine

The multi-faceted recovery effort to resume operations across the Portal Bridge was accomplished in less than 24 hours.

cable experts were called in to assess cable placement, determine existing damage and to map out any debris on the bottom of the river that would interfere with new cable placement. Once the divers

fender systems on the bridge to be replaced before the cabling system can be secured to the bottom of the river. Once the new fender systems are in place, the cables will be buried into the riverbed.

Powerful Accomplishment

This small group of employees has achieved a powerful safety track record — 20 years injury-free. This spring, employees at Amtrak’s Steam Power Plant Facility, also known as the “Power House,” were recognized for the noteworthy safety achievement of working without a single injury since 1985. These individuals are responsible for generating and distributing steam for heating and hot water use by external business customers, at Chicago Union Station and at the Chicago Yards. Pictured from left to right are Stationary Engineers Pedro Flores, Mike Brizic, Lagina Overton, Juan Cortez and Mike Schmidt. Not pictured is John Barrio.

Empire Builder Launch Draws Near

As the launch of enhanced *Empire Builder* service quickly approaches, work is being completed on a number of fronts to introduce travelers to the model for long-distance train travel.

Plans are being finalized to commemorate the launch with events in Seattle, Portland and Chicago on Aug. 21 and Whitefish and Havre, MT, and Minot, ND, on Aug. 22 that showcase the amenities and service provided on the train.

In the meantime, members of the media and convention and visitor's bureaus are being offered an opportunity to experience the service. In addition, the Marketing and Sales team continues to promote the benefits of this new service to consumers and Amtrak's travel agency community.

Beginning next month, passengers stepping aboard the *Empire Builder* will discover refurbished equipment, new amenities and improved service as part of

Amtrak's Long-distance Train Margin Improvement Project.

First-class passengers will be treated to a number of service enhancements including an on-

To carry out these service enhancements, 379 *Empire Builder* conductors and on-board employees, including managers and supervisors, will have attended

A major part of this initiative is the work that has been performed by a team of Mechanical employees at Beech Grove, Chicago, Brighton Park, Sanford

and Los Angeles to refurbish 63 cars that will comprise five dedicated *Empire Builder* trainsets. Over the last nine months, mechanics remanufactured 20 sleeping cars, converted 11 smoking cars to coach/baggage cars and upgraded 14 coaches, six lounge cars, six transdorms (crew sleeping cars) and six diners.

Inside the cars, the walls and surfaces have been updated with a frosty white and navy blue color

scheme, accented by cherry wood grain laminate and cushions, carpets and drapes in matching shades of blue.

The bedrooms have been upgraded with newly designed toilet and shower units and on the lower level, the public shower area has been expanded to include a vanity, larger changing area and a wider seat.

board wine and cheese tasting event in the lounge car featuring Minnesota cheeses and Washington state wines.

Among the improvements in coach will be offers for at-seat meal and beverage service and an invitation to visit the refurbished lounge car to enjoy the scenery or to play one of a wide variety of popular games including Monopoly®, Trivial Pursuit® and Chutes and Ladders®.

training classes in Chicago and Seattle that focused on the importance of delivering exceptional customer service.

“This initiative, aimed at improving the financial performance of long-distance trains, is being piloted on the *Empire Builder*, but we’re planning to extend it to other trains in the future,” added Service Delivery Chief Kevin Scott.

Product Samples Complement On-board Amenities

First class passengers will soon discover an added treat welcoming them aboard the train this summer. Starting with the relaunched *Empire Builder*, sleeping car passengers will be greeted in their bedrooms with a special gift package that includes a sample assortment of health and beauty, consumable and entertainment products.

Developed by the Marketing department in conjunction with a number of other departments including Service Delivery, Market Research, Public Health and Legal, the program offers vendors an opportunity to extend the reach of their products and brands and introduce new products by offering Amtrak's First class passengers a variety of samples during their journey.

The program is being tested beginning this month on the *Empire Builder* for approximately six

months. During the trial period, the program will be reviewed, evaluated and fine-tuned and subsequently rolled out on all sleeping car service with new product samples every six months.

“Amtrak provides a unique venue for companies seeking to conduct product sampling. These vendors have a chance to distribute their products to consumers in a relaxed atmosphere, who are often on vacation and are more amenable to trying and enjoying new items,” explained Marketing Operations Manager Linda Park-Verdi.

The program works like this: Once the vendors are selected, the products are shipped to Amtrak's distribution warehouse run by the Western Folder Distributing Company in Itasca, IL, where the sample packages are assembled, distributed to the appropriate commissaries and then delivered to the train. During the trial period,

the sample packs include Nivea® Restorative Night Hand Creme, Quaker® Oats Breakfast Squares, Eclipse™ Mints by Wrigley, Planters® NUT-rition™ Lightly Salted-Hearty Mix and a CD sampler, “Elvis by the Presleys,” released by Sony BMG Music Entertainment.

To monitor the program, evaluate the customers' overall travel experience and determine reaction to the samples, a comment card is enclosed in each sample pack. Passengers are asked to complete the questionnaire and drop it in the mail at the end of their trip. The response cards are sent to Western Folder, where the feedback is forwarded to the appropriate personnel for follow up.

“This program serves to complement the existing amenities that Amtrak offers its sleeping car passengers, such as complementary meals, newspaper and morning

beverages,” stated Senior Director of Industry Alliance Alan Orchison.

The program has also opened the door to other Marketing opportunities. Through the company's existing partnership with Sony, Amtrak promoted the new Broadway play “All Shook Up” by distributing 5,000 CDs that feature selections from the original Broadway cast recording. The CDs were passed out at ticket counters in Washington and Boston to passengers destined for New York last month.

“This initiative was a winner for everyone involved. Sony promoted their CD and the Broadway play while our passengers received a special gift — at no cost to Amtrak — that they can enjoy and listen to for years to come,” explained Marketing Manager Joe Wenclawiak.

New Contract Brings Cost Savings

Amtrak’s new pest control vendor, Ecolab, will save the company significant costs under a new three-year contract that provides services for stations, commissaries and train equipment.

Not only does the contract with the vendor yield cost-savings, but it also results in more effective means of addressing pest control issues. Instead of the previous practice of fumigating cars during different preventive maintenance cycles, Ecolab will conduct its work utilizing more environmentally friendly measures through Inten-

sive Mass Trapping, at regular intervals in accordance with Amtrak requirements. More commonly known as IMT, this process does not involve the use of pesticides.

This process is being standardized throughout the system as part of the 92-day preventative maintenance cycle for each car. A once-a-year fumigation of cars will also take place.

“The company-wide contract,” said Vic Zare, superintendent of Public Health Standards, “gives Amtrak more control because the new

company provides the entire service instead of using various partnership agreements. Additionally, we are instituting new pest control practices and oversight that has the potential for significant cost savings,” added Zare.

Mechanical is collaborating with the Environmental, Health and Safety; Operations; and Procurement departments and Ecolab to improve the business processes associated with maintaining pest-free equipment and facilities such as yards, stations and commissaries at a manageable cost.

For example, Amtrak is developing a real-time reporting and servicing mechanism for the entire system. Using electronic reporting methods will greatly improve the efficiency of the reporting and response to pest control issues. Under the prior contract, all reports were done on paper, or by fax and phone calls, often delaying the process. “If something happens on a car this morning, my crews want to know about it as it happens — we want accurate real-time reporting without delay,” said Steve Covell, manager, Mechanical Standards and Compliance.

Susquehanna River Bridge

continued from page 1

distribute and put in place new bridge ties and temporary jointed rail, and install the new continuous-welded rail.

Meanwhile, the Communications and Signals department provides around-the-clock coverage at Perryville to maintain signals once the rail line is “broken” and makes temporary modifications at Perryville to accommodate single-track movement and the dispatcher’s control at interlockings.

Considering the scope of the project, the train delays are minimal because the block being worked on comprises a short distance. The single-track operation does not affect northbound trains, while southbound trains are experiencing minimal delays that result from trains crossing over to No. 2 track before the bridge, then crossing over to No. 3 track and finally to No. 4 track south of the bridge. The Operations Planning department worked closely with the Mid-Atlantic Division and the Engineering department to develop a revised operating schedule that includes minimal delays at Baltimore, BWI, New Carrollton and Washington.

The U.S. Coast Guard approved Amtrak’s request to close the bridge’s draw span to river traffic for the duration of the project.

A project of this kind requires considerable preparatory work. Preliminary work to remove the

pre-existing center walkway, handrail and escape bays on the

equipped with fall protection in the form of full-body harnesses,

retractable and static lanyards and anchorage points, which are utilized wherever necessary.

As an additional safety precaution, an Amtrak Bridges and Buildings work boat and operator

is available for use during the tie removal and installation work to ensure worker safety and to gather and remove any floating debris

that may fall from the bridge and cause a hazard for boaters.

“These safety precautions are a critical part of this project — it’s like having someone work on a ten-story building,” said Tom Olechowski, Engineering’s program director.

At the conclusion of each shift, temporary wooden barricades are placed at the end of the completed walkway and handrail until the entire walkway and handrail installation is complete.

The project began in early July, and work is planned around the clock until Aug. 19, when track No. 3 will return to full service. Other bridge tie jobs for much smaller bridges have been completed over multiple 55-hour weekend outages, but a job

like Susquehanna would require 30 55-hour weekend outages to accomplish.

“Instead of bringing the gangs and equipment back and forth for 30 or more weekends, it was determined that a single-track outage over a 42-day period would have the least impact on resources, manpower and our customers,” stated Olechowski.

A similar capital project for No. 2 track is planned for FY ’06.

The Northeast Corridor’s Susquehanna River Bridge tie replacement program will take place over the course of 42 days.

outside of No. 3 track began approximately three months ago. Because of this, employees working in these areas are

Bundles of more than 3,000 bridge ties that are slated for use in the Susquehanna River Bridge project are checked by Bridges and Buildings Mechanic Dave Settlemyre. The ties vary in size and are numbered according to their specific placement on the bridge.

Expanded Program on *Crescent* Enhances Experience for Passengers

The Trails and Rails on-board guide program that is offered aboard the *Crescent* between Atlanta and New Orleans has been significantly expanded and is now offered seven days a week from May 27 through Sept. 4.

Previously presented Thursday through Sunday only, the Trails and Rails program generates high-satisfaction ratings and enhances the Amtrak experience with volunteer train riders who give on-board route-specific presentations about historic and cultural information.

The volunteers travel in teams of two, departing south-bound on train 19 from Atlanta for

New Orleans and return on the following day's train 20.

A member of the Mandan Tribe, Keith Bear, makes a Trails and Rails presentation aboard the Empire Builder. Trails and Rails programs are offered on board many long-distance trains, including the *Crescent*.

In preparation, more than 60 volunteers attended a two-day

training class delivered by Amtrak Sales and Marketing Director Hank Koppelman and the National

Park Service ranger assigned to the Atlanta-based project. The training included a review of the volunteers' presentation script specifically prepared for the route and information about Amtrak's rules and regulations with an emphasis on safety using a book specifically developed for the program. The volunteers also completed two

orientation trips on the train from Atlanta to Birmingham.

The presentation script, developed by Rich Klima, an interpretive park ranger at the Martin Luther King Jr. National Historic Site in Atlanta, was expanded from previous years' program to include more details about Dr. King's life and teachings, as well as more information on the history and culture of the area.

The Trails and Rails Program presented aboard the *Crescent* is but one of many similar programs currently offered systemwide. The National Park Service and Amtrak first partnered in 1995 with a Trails and Rails program aboard the *Sunset Limited*, and since then, the program has grown considerably and is now included on 13 long-distance trains with the help of approximately 400 volunteers.

Contest Stimulates Kids' Interest in Trains

Children who love Amtrak trains and yearn for a toy train set of their own are in luck this summer as the Amtrak-Lionel Kids Essay Contest heats up across the nation. After running for six successful years on the West Coast, the contest is being expanded systemwide and will be promoted along 43 routes this year — up from eleven in 2004.

The contest, which began on June 1 and ends on Aug. 31, is designed to stimulate interest in train travel among children and to provide a means to showcase Lionel toys. To enter, kids 12 and under must complete an entry form with a

short essay about why they like riding Amtrak.

Essays will be judged on the content and originality, and 28 winners will be chosen to win The Polar Express™ Train Set by Lionel, which is a replica of the original train

featured in the movie and best-selling book "The Polar Express."

Based on data gathered from past Lionel essay contests, the scenery and food rank as the top two reasons why kids like riding the train. "By partnering with Lionel, a leader

in the toy train industry, we have an excellent opportunity to extend Amtrak's exposure among kids and families," explained Marketing Officer Ric Ewing. "The contest also allows us to learn first-hand what attracts kids to trains while offering an exciting and entertaining contest to our young rail enthusiasts, who we hope will remain Amtrak passengers for a lifetime."

To promote the contest, posters are displayed at 47 stations throughout the Amtrak system and entry forms are available in coach seat-backs and sleeping car accommodations of participating trains.

ACAC Seeks New Members

Do you know a frequent Amtrak traveler who might have good customer service suggestions to offer? If so, tell them about the Amtrak Customer Advisory Committee.

The Amtrak Customer Advisory Committee is currently recruiting seven new committee members to fill vacancies of members whose terms expire at the end of August.

Chartered by Amtrak, the committee is comprised of volunteers who represent the diversity of passenger service needs and desires. Members serve as Amtrak's eyes

and ears, offering Amtrak management the passenger's perspective on customer service issues and policies.

The ACAC seeks candidates who are Amtrak passengers from all regions of the country. Candidates may be business travelers, vacation travelers, people with disabilities, seniors and students. The ACAC membership also reflects diverse educational and practical experience.

Members attend two national meetings per year within the Amtrak system, as well as regional meetings.

Applications for ACAC membership must include:

- (1) a letter of interest explaining how the candidate's travel, customer, educational, and work experiences can benefit Amtrak and the committee's work,
- (2) a resume,
- (3) a list of the short- and long-distance Amtrak trips that the candidate has taken during the past twelve months, and
- (4) planned trips for the next 12 months.

Completed application packages should be mailed by Aug. 31 to:

Ms. Kate Warr

Amtrak Customer Advisory Committee

900 Second Street, NE Suite 308
Washington, DC 20002

Fax: 202-408-8287

E-mail: acac@amtrak.com

All candidates will be given full and careful consideration based upon ACAC's need for regional and demographic representation. Thank you for your interest and support!

(Amtrak and NARP employees and their relatives may not serve.)

Chicago Makes Room for New Crew Base

Day-to-day operations at the Chicago crew base, known as the General Bulletin (GB) office, have become much more efficient since a new facility for Train and Engine crews was constructed at Chicago Union Station. Serving close to 300 employees a day that work for Amtrak, METRA (commuter service) and BNSF, the 3,002 square-foot facility is just a short walk from the previous GB office and provides a spacious comfortable work environment for conductors, assistant conductors, engineers and train directors.

The main room of the expanded facility, which opened May 15, is divided into four alcoves and provides a quiet environment where up to four crews may conduct quality briefings simultaneously. To help minimize distractions during briefings, an adjacent

room houses five new paperless timeticket machines and bulletin boards where notices and other

“The new facility is nearly seven times larger than the old office, which could barely accommodate

directors who communicate with dispatchers from various host railroads, ensure that the paperwork issued from the railroads is correct and disseminate hundreds of documents a day for the crews. Train Director Suvera Johnson noted, “With a separate room for our printers and fax machines it’s a lot quieter and with the additional space, I can accomplish much more,” explained Johnson.

Situational awareness, teamwork and communication are key elements of Crew Resource Management, which is a component of the Transportation department’s annual Block Training. “We continually remind our Train and Engine crews of the importance of utilizing the tools taught in CRM,” Trainmaster Harold Krewer commented. “But, given its small size, the constant in-and-out traffic and noise level, the previous GB office was an impediment to utilizing these key tools. The move has indeed eliminated these obstacles.”

Before attending their crew briefing, Blue Water Conductor Keith Winowski and California Zephyr Engineer Brian Tyler stop by the bulletin room pick up their train orders from Train Master Suvera Johnson.

operating documents that communicate changes in railroad operating rules or conditions are displayed.

one crew for a job briefing,” stated Trainmaster Tom Pape. The new facility also offers a better work environment for the train

Texas Kudos

During their annual agents’ meeting held on May 25 (L to R) Southwest Division General Superintendent Richard Phelps, Station Agent Griff Hubbard, Ticket Agent Patrick Calton, and Assistant Superintendent Joy Smith pose with the coveted Eagle trophy awarded to Longview station employees for outstanding performance in FY ’04.

The Eagle trophy is an award that is made on a rotating basis to the group of station employees with the highest increase in ridership and revenue, as well as perfect attendance and safety records. Also acknowledged at the meeting were a range of milestones, from ticket agents remaining injury-free for over five years, to perfect attendance.

The meeting was hosted by BNSF at its headquarters in Fort Worth. “Amtrak and BNSF have an outstanding relationship in the Southwest Division. Having BNSF interface with our station personnel at this meeting provided a great opportunity for the group to see first-hand how the BNSF Operations Center is run and meet some of the employees involved in dispatching Amtrak trains,” said Phelps.

New Stop at the Oakland Coliseum Makes It Easier to Get to the Game

Commemorating the newly built \$6.6 million rail platform at the Oakland Coliseum, employees, rail enthusiasts and government officials celebrate the completion of construction on the 450-foot platform at an event held on May 25.

The platform is an intermodal link for riders destined for the McAfee Coliseum and the Oakland Arena, the Bay Area Rapid Transit (BART) and the Oakland International Airport. The stop is also on Amtrak’s Capitol Corridor route, which links Sacramento, Oakland, and San Jose with other cities in Northern California and the Central Valley.

The city of Oakland built the station with funding from its Redevelopment Agency, the California Department of Transportation, the Capitol Corridor Joint Powers Authority and the Alameda County Congestion Management Agency.

Southwest Division Employees Recognized at Surfliner Five-year Celebration

Members of the original Pacific Surfliner team, shown here with Disney’s Mickey Mouse, celebrate the fifth anniversary of the service at the Anaheim, CA train station on June 1.

Joined by government officials, state partners and train enthusiasts, the team of employees was lauded by General Superintendent Richard Phelps who declared, “We are pleased to honor these dedicated employees who helped forge the vision of the Pacific Surfliners back in the 1990s. All Pacific Surfliner employees are dedicated to working closely with our partners to continue to provide quality service to our passengers — it’s truly a team effort.”

(L to R) Darrell Johnson, manager, Capital Programs, Orange County Transportation Authority, Manager of On-board Service Charles Roebuck, San Diego Station Agent Alice Pinkney, Conductor George Raney, Secretary Amy Lo, General Superintendent Richard Phelps, Director of Management Operations Sandy Thompson, District Manager Debby Dews-Wood. (Not pictured: Assistant Superintendent Jack Wilson, Lead Service Attendant Gifton Graham, Lead Service Attendant Robert Hobbs, Conductor Dalton Parker, and Assistant Station Manager Schezel Pough.)

FRONT LINE FOCUS

Dear Amtrak:

I wanted to single out one of your employees and express my gratitude for his great service. His name is Jeffrey (Anderson)... working on the *Empire Builder* from Chicago to Seattle.

Jeffrey's genuine concern and attention to the passengers was remarkable. I observed him attending to each of the passengers including myself, offering to make dinner reservations and adjusting chairs, etc. His pleasant attitude and warm smile welcomed all of us on board.

Also, sitting next to me was an elderly woman who appeared to have full-blown Alzheimer's. She was constantly lost and wandering from car to car. Jeffrey kept an eye on her and was seen most frequently escorting her to her seat ... Jeffrey represents customer service at its finest and Amtrak is fortunate to have him as an employee.

Sincerely,
Evelyn H.
Seattle, WA

Dear Amtrak:

In boarding the Amtrak train 188 from Washington to Philadelphia, a person with some significant handicap/difficulty was seated behind me. ... It was packed train.

Without any lapse in customer attention, train duties and for the general well being of all passengers, Conductor Anna Schell made the trip enjoyable but more importantly, provided prompt and very courteous care to this disabled individual.

Over the past year I have found every employee to be outstanding. Conductor Schell ... is just one huge example. I think your staff is competent and they reward you well.

Sincerely,
Jeffrey T. P.

Acela Express Gradually Returns to Service

Acela Express trains gradually returned to weekday and weekend service in July, ending a three-month suspension of service to re-fit the trains with brake rotors after cracks were discovered in the original design.

At press time, nine weekday roundtrips between Washington and New York and three between Washington and Boston had been added to the schedule.

Additional trains are expected to be added to the schedule in August and September.

“Ninety-five percent of our Northeast Corridor passengers stayed with Amtrak while *Acela* was out of service. We appreciate that loyalty and are pleased to return *Acela Express* to service,” said Senior Vice President Bill Crosbie. “We also appreciate the many employees who worked hard to identify the problem and teamed with the folks at Bombardier-Alstom consortium, the Knorr Brake Corporation and Faiveley

Conductor Jim Policastro assists a passenger aboard *Acela Express* 2107 as it stands ready to depart New York Penn Station for Washington, D.C., at 7 a.m. on July 11. This train and its northbound counterpart, train 2102 that left Washington at the same time, were the first two *Acela Express* trainsets to resume service since cracks in the brakes were discovered on April 15.

Transport for their diligent efforts to solve the problem.”

The Northeast Corridor *Acela* service was suspended April 15 when cracks on the spokes of the disc brakes were discovered. The Mechanical department identified the extent of the problem and as the trains were still under warranty, the train’s manufacturer, Bombardier-Alstom, produced an all-new design of the disc, which was cast and an assembly process for it was begun. The Federal Railroad Administration provided oversight for the effort and the new discs will continue to be inspected as a regular part of the trainset’s maintenance cycle.

During the period that the *Acela* equipment was pulled from service, train capacity on *Regionals*, *Clockers* and *Keystones* was adjusted to meet schedule needs and additional *Metroliner Service* replaced most *Acela* time slots.

Silver Service Changes Offer More Convenient Schedules

Silver Service schedules have undergone several changes this month that provide more convenient departure and arrival schedules, better connections for passengers traveling between Miami, FL, and New York and — ultimately — more reliable service.

“These changes will directly influence and increase Amtrak’s ridership and revenue on this important corridor because our passengers now have more choices that fit their vacation and travel needs,” said Chief Planning Officer Ralph von dem Hagen.

Based on a study undertaken with CSX Railroad, several train departures and arrivals are adjusted, connections restored, and running times changed to improve the operational reliability of the service along the entire route

between New York and Florida.

“Amtrak has worked closely with CSX to determine how to provide better service for our passengers,” said von dem Hagen. “By changing work schedules, our Mechanical forces in Florida are making this schedule adjustment possible.”

For many vacationers, especially families, changes to the *Silver Meteor* train schedule make a difference in planning a Florida getaway. Because the trains depart earlier from Miami, the schedule provides convenient early afternoon or evening departure times from popular travel destinations such as Orlando or Jacksonville, FL.

The northbound *Silver Meteor* train 98 departs Miami at 6:50 a.m.,

three hours and 45 minutes earlier than the old schedule. It then arrives in Orlando at 12:30 p.m., Washington at 6:07 a.m. the next day and in New York at 10:20 a.m. By arriving in New York approximately three hours earlier, passengers have more connection options from that city. For example, passengers may connect to more *Empire Service* departures to Syracuse, Rochester other cities west, and of course, more choices on the Northeast Corridor.

Under the new schedule, the northbound *Silver Star* departs Miami at 8:50 a.m., nearly three and a half hours earlier than the prior schedule. It then arrives in New York at 3:45 p.m. the next day. The train’s more convenient 11:53 a.m. arrival in Washington, D.C., enables passengers headed for

Chicago and the Midwest to make a scheduled connection to the *Capitol Limited* train 29.

For southbound passengers, the *Silver Star* train 91 will depart New York at 11:08 a.m., one hour later than the previous schedule, arriving in Washington at 2:40 p.m. Train 91 will arrive the next day in Miami at 5:59 p.m., an hour and a half later than the previous schedule.

In an unrelated change to Florida service, Silver Service trains will no longer stop in Sanford, because of hurricane damage to the CSX-owned station there. Instead, passengers will be directed to use the stations in nearby Winter Park and DeLand. The Sanford Auto Train station is not affected by this change.

TRAIN OF THOUGHT

As I write this column at the end of July, let me offer three reasons to be optimistic about the future.

The first is that *Acela Express* is gradually returning to service slightly ahead of the schedule we more or less predicted some weeks ago. Passengers in the Northeast stayed with Amtrak — on other trains — and I'm glad that *Acela* is back. We have established weekend and weekday schedules between Washington and New York, and we're gradually adding service to Boston. I expect that every week or two we'll be adding more roundtrips until all the trains are back in service in the late summer or early fall. As a result, the revenue will begin to improve, too.

Second, we've made a strong case to Congress for an adequate level of federal funding in FY '06 and members of the appropriating committees appear to agree with this need. The funding bills are now headed for negotiation between the House and Senate. The Senate appropriators seek to provide Amtrak with \$1.45 billion next year, the House stands at our current level of \$1.2 billion. We have a real opportunity to increase

our level of funding for FY '06. This is a sign of support for what we've accomplished to date and for the reforms and the improvements in passenger rail we continue to seek. In particular, we've held the line on our need for operating support, despite the rising costs of fuel, liability, labor and other inflationary pressures. Our need for capital project support continues to be a race against time, and many in Congress recognize this fact.

We've done a good job in managing our resources and delivering on what we have set out to do, but there's still much more to be done. Even at \$1.4 billion, funds will be tight in FY '06, but progress will continue.

All employees can continue to do their part by performing their jobs well and delivering the best customer service possible. As developments occur on our federal support, I will let you know.

Finally, the inauguration of the new *Empire Builder* service in August marks the start of a bold effort to refurbish cars, improve on-board services and add amenities for our passengers. The *Empire Builder* is already one of our most popular trains, with nearly a half million

David L. Gunn

passengers riding it annually. However, I think we can make it even more popular — especially in the non-peak months — and charge more in fares with the upgraded service. The result, I hope, will be a better performing train — both financially and for our passengers. If successful, it will be the model for other trains as well.

Reforms and improvements require focus and attention, and they won't come overnight and all at once. We continue to make steady progress in returning our infrastructure to a state of good repair, but as we all know, we have a long way to go in this and many other areas. Still, there's reason to be optimistic because we are on the right track. Thank you for your efforts.

Amtrak Celebrates the Start of Enhanced *Empire Builder* Service

After months of preparation that involved upgrading equipment, training employees, implementing communication plans and finalizing on-board services and amenities, enhanced service began this month on the *Empire Builder*, the prototype for the Long-distance Train Margin Improvement Project.

To kick off this service, employees, community residents, media representatives, local government officials and other stakeholders are participating in celebrations held in a number of locations along the route — Chicago, IL, Portland, OR, and Seattle, WA, on Aug. 21, and in Minot, ND, and Whitefish, MT, on Aug. 22.

Each city will provide its own unique program with special guest speakers and other activities to celebrate the event. In Chicago, Portland and Seattle, complimentary sparkling cider and freshly baked cookies will be served to

demonstrate a small preview of the new features available on board the train. Guests will also have a chance to view a three-minute video donated by the Travel Channel from its recent series, "Great Train Rides to the National Parks," which includes an alluring depiction of the *Empire Builder* route and the romance of rail travel.

The first event of the day will begin in Chicago at 11:30 a.m. with an *Empire Builder* equipment display, where visitors get a first-hand look at the refurbished sleeping cars and updated Sightseer lounge car, dining car and coaches. After the tours, Central Division officials will speak briefly in the newly redecorated Lounge G at Chicago Union Station, where a Trails and Rails exhibit and new poster series featuring long-distance trains will be on display.

In the Pacific Northwest, at

Seattle's King Street Station and in Portland, crowds will gather for festivities at 3 p.m. Guests at both stations will be greeted with remarks from Pacific Division representatives and other local officials, followed by ribbon-cutting ceremonies as each train prepares to depart the station.

During the events, attendees will visit with local vendors and stakeholders along the route who will display their goods and services at the stations. The Washington State Department of Transportation, National Association of Railroad Passengers, Nature Conservatory and AARP are among those who will be represented at the Seattle event. The Oregon State Department of Transportation and others will be represented at the Portland event.

As of this writing, events are still being finalized for Whitefish and Minot.

Wire Replacement Project to Yield Higher Speeds

Track speeds will increase from the maximum authorized speed of 80 mph to 125 mph on a 10-mile section of mainline track on the Perryville subdivision near the city of Havre de Grace, MD, as a result of the contact wire replacement project being undertaken by the engineering force of the Mid-Atlantic Division. The group is on target for completing this project at the end of this month.

“Our electric traction crews have been working on this project since April and have taken the tracks out of service without causing a single delay to the corridor. I am very proud of our crews and their efforts,” said Deputy Chief Engineer Bob Verhelle.

The contact wire, also called catenary trolley wire, transmits electricity to an electric engine via the pantograph located on top of the locomotive. The crew is installing the new 336-trolley wire, and removing the smaller worn out 4/0-trolley wire that is currently

supplying the electricity to the locomotives. The new contact wire is wider than that being replaced and has the capacity to carry more current to the locomotive, therefore facilitating higher speeds on the section of track.

During a daytime, five-hour window, the existing 30-year-old contact wire is being replaced because it has become worn to condemnable limits.

The replacement process requires track No. 3 to be taken out of service after the rush-hour schedule in the morning for the duration of the four-month project.

After the electric traction crews string out the new contact wire in one and/or two mile increments,

they string the wire while standing on the catenary maintenance vehicle’s hydraulic-lifted platform to reach the 16-foot-high wire.

The Perryville electric traction crews pull the slack from the catenary trolley wire as they stand on the catenary maintenance vehicle hydraulic-lifted platform.

Securing wire in pinson hangers (special intermediate support hangers), crews pull the initial tension (pulling the slack out of the

wire) to clear the path for trains to operate through the area later in the day.

This process takes place in three stages. First, the pinson hangers hold the new contact wires above the existing contact wire while the tension holds the new contact wire in the clear. The crews then come back the next day during the scheduled track outage to verify that the wire has not lost tension and pull the contact wire tight. The final stage involves transferring the new wire to the old wire’s position and putting the old wire in the pinson hangers, to be taken down in the next track outage. Following the removal of the old contact wire, the

crews start the entire process over again with a new section of track. The track is then restored to service every afternoon.

Newly Acquired Switchers Reduce Fuel Consumption

Amtrak has purchased 10 new fuel-efficient GP-15 switch engines costing \$11 million, to replace 40 year-old locomotives that no longer met environmental standards. This marks the first time in the railroad’s history that switchers equipped with the latest in “smart” technology have been purchased.

Among the “smart” technologies aboard the GP-15s is an auto-start system that automatically starts up the locomotive when adverse weather conditions occur that could cause systems to fall below critical parameters, such as freezing temperatures that could affect the engine block or cause the air brake pressure to decrease. Similarly, this feature automatically shuts down the locomotive after weather conditions become favorable. This automatic “cycling” means the switch locomotives do not have to be kept running constantly and the result will be a fuel savings that could be considerable. It is estimated that an idle switching locomotive could use three to four gallons of fuel per hour that will be saved during the shutdown.

The new GP-15 switcher’s cooling system uses anti-freeze, opposed to the older models that were kept running to prevent freezing when

supplied and built by Amtrak’s Wilmington truck and electric shops.

It was necessary to take delivery of the 10 GP-15 switchers by the end of 2004 to be compliant with U.S. Environmental Protection Agency (EPA) Tier I

define standards, with current requirements set as Tier 0, Tier 1 and Tier 2. “The new equipment will reduce the total air emissions count from Amtrak fleet operations. Amtrak will be both reducing fuel use, especially with the current price of diesel fuel, and limiting exhaust emissions with this acquisition,” said Roy Deitchman, vice president, Environmental, Health and Safety.

“Amtrak Purchasing placed the order in April 2004, and the locomotives were built and delivered to Wilmington in only eight months — almost unheard of in new equipment acquisition,” said William Broome, director of New Equipment Acquisition. The 40-plus-year-old equipment was well past its expected life, and will be sold as scrap.

In service since mid-March, seven switchers are being used in the Mid-Atlantic division where they are used for work train and yard service. At Sunnyside, three switchers are used in yard service making up trains and moving equipment within the yard.

“Amtrak will be both reducing fuel use, especially with the current price of dielsel fuel, and limiting exhaust emissions with this acqisition.”

Roy Deitchman
Vice President
Environmental, Health and Safety

outside temperatures reached 40 degrees or lower.

In addition to the auto-start feature, the new 1,500-horsepower equipment features a Caterpillar engine, as opposed to the older General Motors EMD engines and includes a new diagnostic electronic package that features a control system for both the engine and the traction system.

Each switch locomotive cost about \$1.1 million, not including the traction motor combos, which were

emission standards, which set limits for exhaust emissions (such as particulates and nitrogen oxides) that can be released from a diesel locomotive engine. Tier I is

the mid-point standard for the lowering of diesel locomotive exhaust emissions the EPA uses to

On the O track at the Wilmington shops, a new GP-15 switcher moves a cabin car, used by work train crews to store equipment.

Dear Co-workers:

As Amtrak's Southern Division Mechanical department moves toward FY '06, we've got a lot keeping us busy.

In the upcoming months, there will be some challenging and rewarding times. Changes to the schedule of the Silver Service will enhance the revenue possibilities for Amtrak, while challenging the Mechanical department with shorter turnaround times. At present, we are in the midst of a huge track construction project in Sanford, which will lead to better switching and storage track areas.

After a long FY '04/FY '05 season that brought trying times to everyone in the Florida and Gulf Coast regions, we look back over our accomplishments with pride.

We fondly remember meeting Charlie, Frances, Ivan, Jeanne, and most recently, Cindy and Dennis, head on in this region of the country, where our employees pulled together during a stressful and devastating time to ensure all of our equipment was protected and available. It has always amazed me how a group of employees can unite together during a time of crisis and make it seem as if it is just another day — and it makes me proud to be a part of that team. I want to personally thank each and every person for his or her outstanding job during the hurricane season of 2004 and 2005, and although this season has gotten off to a rocky start, we can only hope it is not as bad as last year.

We have come a long way in the Southern Division, with each of our locations showing great achievements in equipment repairs and facility maintenance.

In Hialeah, FL, where the entire fleet of low-level long-distance cars is maintained, the Preventive Maintenance production line produces clean, safe, quality equipment on a scheduled basis. This is based solely on giving the employees the time and tools they need to produce quality equipment. We have also made major changes to the facility through capital funding that have had a direct effect on productivity. One key addition to the facility is the newly installed wheel true machine that will reduce costs by allowing us to profile wheels while still on the car in the PM cycle, allowing the wheels to run from maintenance cycle to maintenance cycle without any defects. Other improvements such as security cameras throughout the facility, a car mover, an extended roof covering over the drop table and inspection pit area, and remodeled locker rooms and lunch room have created a better work environment and thus enhanced productivity.

In Sanford, we recently celebrated the delivery of new auto carriers that have replaced the antiquated auto racks on the Auto Train. The new carriers are all one size and make loading and unloading easier, as we no longer have to distinguish between car types. Our department has also worked on the new interior blue color scheme enhancements to the Auto Train equipment, and with the delivery of the new carriers, we are truly proud of the entire new look. Sanford is a small facility, but the employees take a lot of pride in the work they produce.

The mechanics at Sanford also played an integral part in providing the new Empire Builder service with three lounge cars and four coaches with the new interior enhancements that include dining and cocktail

tables, new upholstery and new carpeting. These enhancements were done over and above their normal workload and upon inspection just reaffirms that we have quality, professional mechanics in the Southern Division.

New Orleans, "Home of the Blues," houses the maintenance facility for Superliner I equipment for the City of New Orleans. With the lease of the eight P-40 locomotives to Metro-North that used to be maintained in Sanford, the New Orleans facility has become the primary maintenance facility for locomotives in the South. In addition, the Mechanical department plays an integral part in turning the Crescent train 19 for train 20 in New Orleans. During the recent 13-week track outage between New Orleans and Pensacola, FL, our crews provided the turnaround service for the Sunset Limited, which is normally serviced in Sanford for its scheduled Orlando, FL, departure.

Other improvements in New Orleans are the state-of-the-art car wash, security cameras throughout the facility, a roof over the inspection pit for the newly established PM line, an overhead crane in the diesel shop and, at present, we are redoing all the platforms in the diesel shop. As capital money continues to be available, further enhancements are planned for the facility.

We were the first Mechanical division to take over the turnaround servicing groups that originally belonged to the Transportation department. These locations are Lorton, VA, Charlotte, NC, Savannah, GA, and Jacksonville, FL. We have also accepted the responsibility for all the equipment disruptions en-route and work very closely with other departments to reduce and/or eliminate these failures.

In closing, I would like for each employee to understand how challenging our work is and how proud I am of being a part of something so good. Often times we don't take the opportunity to reflect on where we came from and enjoy the accomplishments that we have made. We in the Southern Division have a lot to be proud of. We have come a long way in a short period of time and with your help and dedication, we can continue that trip. Each employee in this division plays an integral part in the operation and our success relies solely on your performance.

As my father used to say, a manager is only as good as the people who work for him. I want to thank each of you for making me that manager.

Sincerely,

M.R. Farr, Jr.
Master Mechanic
Southern Division

New Car Carriers Replace Aged Equipment

The new bi-level auto carriers that were put in service on the popular *Auto Train* just before the summer season replaced 64 aged carriers that were old and in poor condition. Fifty new carriers were delivered and 30 more are to be delivered this summer.

Predominantly comprised of aluminum, the carriers are significantly lighter in weight than Amtrak's older carriers. Because of the lighter weight, the *Auto Train* consist will consume less fuel and put less wear and tear on the equipment, thereby providing overall cost savings.

Each newly configured vehicle carrier accommodates 10 standard

New auto carriers are ready for service at the Auto Train terminal in Lorton, VA.

automobiles or eight full-size sport utility vehicles or minivans. "The old carriers could only fit eight of any kind, and severely restricted

our reservation capacity. We could only take 29 SUVs or minivans on each train — but now we can now take up to 120, and up to 200 standard vehicles on a single train," said Southern Division District Superintendent Fred Nardelli.

Each new auto carrier is 90 feet long and 18 feet 9 inches in height with a gross rail load, or loaded capacity, of 163,500 pounds and can carry up to 10 vehicles.

The replaced 30- to 40-year-old equipment that was in dire need of replacement due to age and poor

condition was sold to various companies as scrap.

The *Auto Train* operates roundtrip once a day between Lorton, VA and Sanford, FL, and is primarily frequented by seasonal travelers and vacationers who travel with their vehicles. The new fleet of carriers will accommodate a wide range of vehicles more so than the old ones.

Amtrak acquired the auto carriers from Johnstown America Corporation (JAC) while the company was in production of a fleet of auto carriers for another railroad carrier. Amtrak had the advantage of piggybacking onto JAC's on-going production run, thereby expediting delivery.

Summer Travelers Boost Bottom Line

“Welcome back,” called a passenger as he passed Conductor Stephen Young on the platform while boarding a newly returned-to-service *Acela Express* in Washington. Echoing that sentiment, Young stated, “Passengers have told me they’re happy to see it return. They’ve actually said to me, ‘My *Acela* is finally back.’”

Resuming the service in phases, Amtrak returned the equipment to work in mid-July, replacing the *Metroliners* that had temporarily taken their place. By the end of the month, nine weekday roundtrips between Washington and New York and three between Washington and Boston were in service. The company expects full service to be restored by the fall.

While the service suspension has had a major impact in the Northeast Corridor, strong performance on other corridor services and long-distance trains have helped to counter the \$7 million ticket revenue loss in June resulting from the suspension of *Acela Express* service in mid-April due to brake disc problems. June ticket revenue was almost \$110 million — down from a year ago by 2 percent and down from budget by nearly 7 percent.

In the Northeast Corridor, *Regional* train ridership jumped 16 percent ahead of last year and 13 percent over budget with just under 644,000 trips, helping offset the loss in June of 75,000 trips from the *Clockers* service resulting from the partial shift of operations

to NJ Transit, which began in April. Boosted by a 5-percent fare increase put in place at the beginning of the month, *Regionals* revenue also rose significantly. With June sales of nearly \$33.6 million, the results were 22 percent better than a year ago and 18 percent ahead of budget.

Significant gains in ridership and ticket revenue were also seen in the Midwest and West versus last year and budget. The 5-percent fare increase implemented at the

numbers were shy by only \$200,000 thousand in ticket revenue and by just 3 percent in ridership. Ridership and or ticket revenue growth was evident on many routes with notable results for the *Auto Train*, *California Zephyr*, *Cardinal*, *Empire Builder*, *Lake Shore Limited* and *Sunset Limited*.

Several marketing initiatives boosted sales in June, including the *Metroliner* and long-distance service advertising that ran

by the E-commerce group in May contributed to June’s 10-percent *Auto Train* ridership improvement over a year ago and a 4.5-percent increase against budget, while ticket revenues in June were 4.5 percent above June 2004 and on budget.

On-time performance continues to hamper the long-distance routes, particularly during the summer months when track work being done by the freights is at its peak. Although June’s OTP was up 8

Ridership and Ticket Revenue for June 2005

Month of March	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	2,185,175	2,279,852	2,185,975
Ticket Revenue	\$112,368,433	\$118,156,114	\$109,948,895
Fiscal Year-to-date	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	18,712,069	19,129,433	18,862,546
Ticket Revenue	\$942,610,303	\$980,883,725	\$920,736,157

start of the month on some state-supported services helped boost revenue results. In the Midwest, the Chicago hub services showed strong performance with increases in ridership and ticket revenue against last year and budget. In the West, similar results were seen on the *Cascades*, *Capitols*, *San Joaquins* and *Pacific Surfliner*.

Long-distance train performance improvements that began in May continued through June. Overall, results for the month were improved against last year by 7 percent in ridership and 8 percent in ticket revenue, although budget

through mid-June, as did the *Thomas the Tank* promotion that ended with 92,000 sweepstakes entries. The “*Are We There Yet*” DVD promotion ended June 30 and the Lionel Kids Essay Contest, which began as a regional promotion in the West, was expanded systemwide in June. The Northeast Corridor’s popular *Share Fares* promotion for groups of three to six passengers traveling together that debuted in February was extended in May. The extended offer allows bookings through Sept. 30 for travel through Dec. 15.

An effort to boost *Auto Train* sales

percent from a year ago with a 34 percent on-time performance rating, the figure was 9 percent below May’s OTP number. Systemwide, the June OTP was 64.3 percent, just about equal to last year, though down from May’s 70-percent OTP figure.

The June fiscal year-to-date picture shows ridership nearly flat against last year and down just over 1 percent against budget. Ticket revenue numbers are down just over 2 percent, while down 6 percent against budget.

Management Program Prepares New Leaders

This summer, Amtrak is launching a Management Associate Program that will provide entry-level management candidates with the business and technical experience and leadership skills development to groom them for top management positions.

The program is designed for recent college graduates — including those who are Amtrak employees that have demonstrated outstanding performance — to orient them to the company, its goals, strategic plans and reform initiatives.

The program’s first group of candi-

dates is slated to begin in the fall, followed by a second group by the end of the calendar year.

While this is not the first time the

“It’s standard business practice for organizations like Amtrak to analyze where they will be in the next five years and to develop programs that will provide the comapny with its future leaders.”

Elisha Lewis

Human Resources Manager

company has offered this type of program, it has been decades since a program like this has been offered.

“In planning for future workforce needs, it’s standard business practice for organizations like Amtrak

to analyze where they will be in the next five years and to develop programs that will provide the company with its future leaders,” stated Elisha Lewis, the Human

Resources manager who designed the program in conjunction with the company’s core business groups.

Lewis added that HR records show

that approximately one-third of management-level employees will be eligible for the Amtrak retirement plan this year; noting that the company must prepare for a significant loss of institutional knowledge.

The program’s curriculum includes rotational assignments coupled with classroom project management, leadership training and mentoring. The revolving job assignments consist of a one-month corporate orientation and 12- to 18-month field assignments within various departments.

Human Resources will coordinate the rotation assignments with the business groups.

Currently, Amtrak is reviewing resumes from interested internal candidates and a recruiting strategy has been designed to draw outside interest.

For further information about the program, contact Elisha Lewis at (202) 906-2206 (ATS 777-2206) or via e-mail at lewise@amtrak.com.

Mechanical Department Launches 2005 Safety Training Camp at Sunnyside Yard

Based on the success of last year’s Safety Training Camp, the Sunnyside Yard Mechanical department launched its second training session this summer.

The joint labor and management program was developed utilizing the same strategy as last year’s training camp; targeting specific problem areas and delivering refresher safety courses on those topics. This year’s one-day program will include courses on blood-borne pathogens, spill prevention and control, safe driving, and draining and servicing cars and locomotives. Additionally, a safe-driving course will be offered that includes a drivers’ certification test for those drivers who qualify and forklift drivers will also undergo computer-based training and a qualifying test.

Following the first training camp, which was offered last year

between October 2004 and January 2005, the department went 121 days injury-free and 150 days without a lost-time injury from Jan. 17 through May 18. This surpassed the previous year’s figure of 88 injury-free days.

Last year’s program included five site-specific courses (lock-out/tag-out, blue signal protection, environmental awareness, hazardous materials communication and car cleaning) and was completed by approximately 430 Mechanical department employees, including clerks and administrators, at Sunnyside Yard.

A team of employees was key to the success of last year’s Safety Training Camp, including Employee Development’s Ken LeRose and Charles Angotti, who coordinated training schedules for over 400 employees and familiarized the Mechanical department

instructors with new training equipment. “Without their help and the help of Operations’ Senior

Safety Coordinator Carol Evans and Environmental’s Director Lisa Mozee who supplied the train-the-trainer for all our instructors, we could have never accomplished what we did,” said Harry Seubert,

environmental coordinator who facilitated the camp. Patrick Walsh, Sunnyside Yard superintendent

stated, “Management is totally committed to the training of the employees and with the support of Mr. Don Knapik our Master Mechanic, we expect even greater success this year.”

Volunteer training camp instructors Deborah Polk (left), carmen helper and lead instructor, and Robert Samuels, carman, prepare to demonstrate to class participants the correct use of hazmat suiting and gloves. The Sunnyside Yard training program started July 20 and the curriculum design is based on the success of last year’s safety training program. The class includes courses on blood-borne pathogens, spill prevention and control, safe driving and draining and servicing cars and locomotives.

Empire Builder Service

continued from page 2

To officially welcome passengers aboard the Aug. 21 train from Seattle, Amtrak President David Gunn is scheduled to ride the eastbound train and greet travelers boarding at stations along the route. Author and historian Joe Welsh and railroad artist J. Craig Thorpe are also scheduled to be on this train to discuss the train’s history.

Media representatives from cities along the route have had an opportunity to experience the enhancements that have been made. Prior to Aug. 21, the Media Relations team joined reporters and travel writers

as they rode the train and toured the equipment as a preview to the launch events.

The Reservation Sales Call Centers in Riverside, CA, and Philadelphia, PA, are also joining

the celebration by featuring the *Empire Builder* as the Train of the Month with a number of activities to help agents learn more about the services, amenities and highlights of the historical route.

Every week in August, call center employees have had a chance to win prizes by playing “*Empire Builder* Bingo,” a game developed to help increase book-

ings on the route. At the end of the month, the grand prizewinner at each call center will win a \$200 gift certificate for the Amtrak Store.

Earlier this month, members of the Marketing team were on-hand at the call centers to distribute literature, answer questions and promote the enhanced service to employees who are often the customers’ first contact with Amtrak.

To further promote the service, Marketing and Sales launched an online sweepstakes this month, offering a chance to win a trip on the *Empire Builder* and a vacation package in Chicago, Seattle or Portland.

Detective Earns Award for Performance

Honored for his outstanding performance last year, Amtrak Police Detective John Clayborne of Albuquerque, NM, was recognized as Amtrak’s 2004 Officer of the Year at a July 14 ceremony in Philadelphia, PA.

Highlights of his accomplishments include stopping a suspicious package from reaching The White House, its intended destination, and returning to state’s custody two children who were removed illegally by their mother. Other actions taken by Clayborne resulted in two of the largest U.S. currency seizures in APD’s history along with several drug seizures and resulting arrests.

Clayborne has been recognized as Officer of the Month three times, and is a recipient of the department’s Exceptional Achievement Award and the President’s Service and Safety Award for Sustained Excellence in 2002. (See *Amtrak Ink*, June 2005.)

Pictured at the ceremony are (L. to R.) Sr. Vice President of Operations Bill Crosbie, Inspector Larry Canty, Chief Inspector Felix Perez, Deputy Chief John O’Connor, Chief Sonya Proctor, Officer of the Year Detective John Clayborne, President David Gunn, Vice President of Security Al Broadbent, Deputy Chief Lonnie Bennett.

The 2005/2006 Amtrak America Travel Guide: Something New Inside

The 2005/2006 Amtrak America travel guide released last month has been redesigned with a new focus — the on-board experience. The user-friendly guide includes an Amtrak system map and a variety of topics to help travelers gain an in-depth look at train travel. As customers flip through the 62-page color brochure, they find out about the range of sales channels through which they may plan their trip, book a reservation and purchase tickets, as well as learn about fares, discounts and rail passes. Detailed diagrams of roomettes and bedrooms, as well as coaches, diners and café and lounge cars give customers a sense of the train’s layout. Sample dining car menus are also included. To find out about services, accommodations and points of interest, travelers can turn to the routes section,

which is categorized by region — East, Southeast, Midwest and West. The brochure is available at Amtrak stations and through Amtrak.com, Western Folder and by calling 1-800-USA-RAIL.

Kids Get End-of-Summer Savings and Mealtime Fun

Families that wait until the end of summer to travel may enjoy significant savings through Amtrak's AAA Kids Ride Free offer, which is good for travel from Aug. 4 through Dec. 15. Through a partnership with the American Automobile Association, each AAA member who purchases an adult fare ticket with the existing 10-percent AAA discount may travel with up to two kids for free.

Once on board, parents won’t have to wonder how to keep their kids entertained in the diner while waiting for the meal to arrive. As part of Amtrak’s partnership with Sony

selection of games — Connect the Dots, Word Find, Find the Way Home and Translate the Plates — will keep kids busy until their meal arrives.

Lucky Elvis Fans Get a Shot at Visiting Graceland

In a tribute to Elvis Presley, Amtrak is partnering with WTKL-FM to sponsor the Visit Graceland on Amtrak promotion. Between July 4 and Aug. 15, listeners may call in for their chance at winning First class roundtrip travel from New Orleans to Memphis, hotel accommodations at Elvis Presley’s Heartbreak Hotel, Platinum tour passes for two to visit the Graceland Mansion, Elvis’ custom jets, the Sincerely Elvis Museum and the Elvis Presley Auto Museum.

Pictures, the kid’s menu is displayed on special placemats that feature popular travel activities based on the motion picture “Are We There Yet,” released earlier this year. A

FRONT LINE FOCUS

Dear Amtrak:

I have ridden Amtrak several times in the last few years ... This year I rode four trains ... All service was good but the crew on [train] 58 from Hammond, LA, to Chicago leaving June 17 was great.

Right off, announcements were made explaining all about the trains and where everything was located. Then the Diner crew announced the procedures in the Diner and came through getting reservations. Basil [Davis], Michelle [Lott], Claude [Mitchell] and Torrey [Washington] were pleasant, professional and efficient. The entire crew was neat, friendly and helpful.

Sincerely,
Mary O.
Fort Scott, KS

Dear Amtrak:

I am writing to commend one of your employees. His name is Kenneth Raupp and he was on duty on the *Auto Train* during our recent vacation.

Mr. Raupp showed a great deal of caring and sensitivity in dealing with a pair of handicapped passengers who needed some extra attention. Always pleasant, discreet and extremely helpful, he made our trip enjoyable.

Because of our limited mobility we ran into some difficulty, but Mr. Raupp was up to the challenge and was able to assist us, and was always courteous and amiable.

We are both very grateful to have met Mr. Raupp and to have been the beneficiaries of his kindness. We congratulate your firm on such a superb employee.

Sincerely,
William and Anna K.

Senate Committee Introduces Amtrak Legislation

Legislation to provide Amtrak an average of \$1.89 billion per year from 2006-2011 was approved by the Senate Committee on Commerce, Science and Transportation just prior to the August congressional recess.

Calling on their colleagues to make Amtrak reform and improving passenger rail a priority this year, Senators Trent Lott (R-MS), Ted Stevens (R-AK), Daniel Inouye (D-HI) and Frank Lautenberg (D-NJ) said the legislation — The Passenger Rail Investment and Improvement Act of 2005 — is based on three themes: reform and accountability, cost cutting, and funding options for states.

“While it marks the start of a potentially long process, this authorization bill represents a bi-partisan approach to improving national passenger rail that will for the first time give shape to intercity passenger rail policy for the next decade,” noted Amtrak Government Affairs Vice President Joe McHugh.

An authorization bill provides

direction for a federal or federally-funded program over multiple years. The bill is different in a significant way from the annual appropriations bill that provides Amtrak its federal grant. It states the level at which Congress believes Amtrak should be funded, but it does not provide the money to Amtrak; the money to subsidize operations and fund capital projects comes in the annual appropriations bill.

Both bills are important, as the authorizing legislation essentially states what Amtrak should do and the appropriations legislation provides the money to do it.

In response to the introduction of the Senate bill, Amtrak President David Gunn said, “Amtrak has made considerable progress in the past three years to operate more efficiently and, with increased federal support, invest in maintenance and capital projects too long deferred. However, neither this progress nor the reforms we announced earlier this year can substitute for the clear direction of federal policy and resources to

Bill Forman, deputy division engineer for the New York Division, explains the inner workings of antiquated relays to U.S. Sen. Frank Lautenberg during a recent visit to Dock Interlocking in Newark, NJ. Sen. Lautenberg, along with Sens. Trent Lott, Ted Stevens and Daniel Inouye co-sponsored Amtrak legislation in July.

match it, and, as such, we commend the bi-partisan introduction of this legislation.”

The Numbers

With a focus on addressing the plant and equipment needs of the railroad, the bill dedicates an

average \$556 million per year for operating costs, starting with \$580 in FY '06 and \$455 million in FY '11, while the capital funds would increase from \$813 million in FY '06 to \$1.2 billion in FY '11. This would give Amtrak the resources with which to achieve a state of good repair and to implement accountability and cost-cutting measures.

An average of \$287.5 million would also be made available each year for the repayment of debt during the same period.

However, a provision in the legislation enables the secretary of the Treasury to restructure Amtrak's debt within one year. If this takes place, the amount appropriated for debt service would be reduced.

continued on page 10

Ridership Figures Into Successful Summer

The summer travel season continued strongly in July, with a particularly solid showing by corridor trains across the country.

Combined with double-digit growth on some long-distance trains, monthly ridership results were about even with last July's levels. This is good news, especially in light of the issues associated with *Acela Express* service, which is not yet at full strength. System-wide ridership numbers in July were even with last year, with 2.24 million riders, and 4 percent below budget. Year-to-date total ridership of 21.1 million trips was 1 percent higher than last year.

Additional *Acela Express* trains

resumed service in August, totaling nine weekday roundtrips between Washington and New York, and three weekday roundtrips between Boston, New York and Washington. As additional *Acela* equipment gradually returns to service during the coming months, *Acela* trainsets will replace *Metroliners* currently in service.

Northeast Corridor total ridership as measured against last year was down 8 percent and ticket revenues fell 5 percent. However, *Regional* ridership for July increased 13 percent and ticket revenues remained strong in both south- and north-of-New York markets (13 percent and 53

TRAIN OF THOUGHT

As this month marks the close of fiscal year 2005, it appears that we've done a good job maintaining revenue and continuing to keep our spending in check. While we took a hit with the suspension of *Acela Express* trainsets from the middle of April through the mid-summer, overall it looks like we'll end the year on budget and have about \$100 million in working capital to carry over into FY '06.

The carry-over is essential, as Congress may not pass a transportation funding bill with our federal grant until mid-October or later. The budget will be tight in FY '06 in any case. We can expect increases in labor and material costs and about \$50 million more in fuel costs than in '05. (Diesel fuel is costing us \$1.48 a gallon on average this year, compared to \$.98 for last year.) No doubt, higher fuel costs will pressure us to raise fares. But that's a pressure felt throughout the entire economy and not just on the railroads.

As we look to the start of the new fiscal year, I cannot over-emphasize the importance of good passenger

service. Every time an employee comes into contact with a passenger or customer, that employee is the face of the railroad. Our reputation for customer service is built upon these millions of interactions every year.

Last month I rode the *Empire Builder* from Seattle to Chicago, then went down to St. Louis and Kansas City, and returned to Washington back through Chicago and New York (on the *Lake Shore*). All along the way, I saw T and E and OBS crews going the extra mile for our passengers, and I was proud.

Unfortunately, I also saw two incidents where employees faced relatively simple problems yet they did nothing until ordered to take action. Our jobs often require taking the initiative in order to provide good service. Most of us do it — those who don't are hurting all of us.

Good passenger service happens away from the front lines, too. An unapproved AC filter spotted by a Mechanical employee in Seattle a couple weeks ago got his attention — and mine, too. It wasn't just one,

David L. Gunn

either. Catching things like this is critically important to our success. If it's not getting dealt with at the right level, push it up.

We have a lot to be proud of as we close out this fiscal year and as we begin a new one on Oct. 1. We still have plenty of challenges in the year ahead, but we are used to overcoming challenges. In the coming weeks and months, you'll be hearing from me about our budget and other issues that matter to our success. In the meantime, keep up the good work.

Decline in Customer Complaints Seen As Encouraging Trend

During the third quarter of FY '05 from April through June, customer comment numbers painted an improved picture of passengers' experiences aboard Amtrak. Double-digit percentage decreases in complaints in all areas, including on-time performance, personnel and equipment, along with an increase in commendations, indicate a significant improvement.

The third-quarter results mark the second consecutive quarter in which there were fewer complaints compared to the same period last year. While on the whole, the number of contacts was down 3.4 percent, the number of complaints was down 18 percent over last year.

The Customer Relations department received a total of 40,392 contacts in the third quarter. Because one passenger contact may cover several topics, that figure includes a total of 59,274 comments comprised of 2,428 commendations — an increase of

5.5 percent over the third quarter in FY '04 — and 56,846 complaints (or 8.8 complaints per 1,000 passengers, down 17 percent over the same period last year).

During the third quarter, complaints about personnel decreased almost 24 percent. This noteworthy decline may be attributable in part to the customer service training for Transportation department employees that is now an element of Block Training.

While on-time performance continues to be the main driver of customer dissatisfaction, complaints in this category in the third quarter decreased 14 percent over the same period last year. In June, host railroads were responsible for 73 percent of all delay minutes per 10,000 train miles, while Amtrak-responsible delays accounted for 20 percent and third-party delays 7 percent.

The top equipment complaints were associated with defective air conditioning and toilets.

However, as Amtrak makes progress in its five-year repair and renewal program, equipment-related complaints continued to decline, dropping nearly 26 percent in the third quarter.

Customers also wrote about their unsatisfactory or unavailable accommodations, and unacceptable equipment substitutions. One such customer described a last-minute bus substitution for a portion of a *Coast Starlight* ride as a result of Union Pacific track work, expressing dismay about being moved from a Deluxe to a Standard room after re-boarding the train due to an equipment substitution.

"Yes, we gripe when the train is hours late, but we do love Amtrak," wrote a customer complimenting a reservations sales agent on his attentive and helpful service. "That's the nicest guy and help we've had in a while," the writer continued. Comments like these are received on a regular

Smoker Lounge Turns Diner Light

To add flexibility to Amtrak’s food service fleet and operation, a first-of-its-kind project is underway at Bear Maintenance facility.

Mechanics are converting an Amfleet II smoker lounge car to a diner/lounge to help more efficiently manage the operational needs of some of Amtrak’s East Coast long-distance routes.

The prototype, nicknamed diner light, will save the railroad the higher expense of operating both a dining and lounge car in cases

Car Repairman Chuck Ballard positions the foam board mock-up condiment station against the wall of the diner/lounge car. Mock-up components are used to develop engineering drawings so that the actual components can be built and installed.

when the service doesn’t warrant the two cars. The prototype is scheduled to be completed by December, with seven more conversions slated for FY ’06 that

will operate primarily on long-distance routes in the East.

The availability of this diner/lounge combination will expand Amtrak’s food service options. For example, when passenger counts rise, the car may be added to the consist to accommodate the demand. Conversely, when only a lounge is needed, the diner/lounge may serve that purpose as well.

The configuration of the car before the conversion featured booth seating on one end of the car and a glass-partitioned smoking lounge on the other. This is being modified

to provide booth seating on both ends of the food service galley.

“We’ll set up one side as a diner and the other as a lounge car,” explained Food and Beverage Director Pete Humphreys.

Dining car meals such as chicken, salmon and pasta dishes will be prepared in the existing center galley, which is equipped with an

“This will allow us to offer all our passengers meal service when the passenger load and economics do not justify operating a full dining car,”

Pete Humphreys

Food and Beverage Director

oven and a microwave. Lounge car menu items such as hot sandwiches, pizza and spicy wings will also be prepared in the galley.

Ridership Figures Into Successful Summer

continued from page 1

percent, respectively), totaling over \$34 million.

In the Midwest, corridor trains continued to see significant gains in ridership and revenue in July. For example, the *Blue Water* service, which operates between

kept a strong positive trend over the three-month period of May, June and July. Ridership for July ended with an overall increase of 3 percent compared to last July. Ticket revenues for July also increased over last year’s numbers over 4 percent, with totals of \$38.4

Shore Limited, and the *Texas Eagle*.

In addition, *Empire Builder* results remained strong in July. Ridership on the train rose 9.5 percent and 14 percent over budget; ticket revenues went up almost 8 percent over last year and nearly 8 percent over budget.

On-time performance (OTP) continues to affect customer ratings (see related story on page 2), with overall July OTP at 64 percent, generally matching last year’s numbers. *Metro-liner* OTP in July was 85 percent, an improvement over June’s 68 percent. Track work being performed by freight railroads continues to hamper services across the country, particularly affecting long-distance services.

Marketing Initiatives

To let travelers know that *Acela Express* trains are returning to service, this month Amtrak launched a new Amtrak Guest Rewards® promotion that offers members a chance to earn double points toward free trips when they

travel on *Acela Express* trains anywhere in the Northeast Corridor.

The advertising focuses on the top six *Acela Express* markets — New York, Washington, Philadelphia, Baltimore, Boston and Providence — and features schedule and frequency information, *Acela Express* amenities and vibrant Michael Schwab illustrations.

The promotion is advertised through major daily newspapers, radio stations, regional editions of *The Wall Street Journal* and *USA Today* and online ads. “These media vehicles allow us to quickly update information in our advertising as necessary to provide consumers with up-to-date information on *Acela Express* schedules and frequency,” stated Marketing Director Darlene Abubakar. The promotion runs from Sept. 12 through Dec. 31.

The Northeast Corridor’s *Share Fares* promotion for groups of three to six passengers traveling together continues to be popular, accounting for nearly 68,000 new trips since the program began in mid-February.

Additionally, the fall long-distance advertising campaign launches Oct. 1 and runs through early December. The advertising will feature the Michael Schwab illustrations, which have been updated

continued on page 10

Chicago and Pontiac, MI, experienced a 14-percent increase in ridership over July a year ago, and nearly 22-percent revenue growth for the period.

In the West, *Pacific Surfliner* trains continued to break records with July ridership up 11 percent and ticket revenues up almost 13 percent over last year.

Long-distance train ridership has

million. Strong performers included the *California Zephyr* (ridership grew 13 percent and revenue rose close to 15 percent over last July) and the *Silver Meteor* (ridership went up 29 percent and 12 percent in revenue over last year). Ridership or ticket revenue growth was evident on many routes in July, with notable results for the *Cardinal*, *Lake*

Dear Amtrak Co-Workers:

I'd like to share with you the security picture at Amtrak as we observe National Preparedness Month in September and on the occasion of my one-year anniversary as vice president. The job that I started a year ago as a new hire has proved to be a multi-faceted challenge.

My initial impression, which continues to this day, of the Amtrak employees I have had the privilege of working with, is that you are some of the most dedicated and committed individuals I have come across in my career. I am most appreciative of all those who have shared their years of experience and knowledge to assist me in my endeavors to secure this nation's passenger rail system.

At the corporate level, the slogan "Security is Everyone's Responsibility" has really taken root. In February 2005, the Division Security Coordinating Committees were created at the direction of Bill Crosbie, senior vice president of Operations. These committees are led by each division's general superintendent and include representatives from Transportation, Mechanical, Safety and Amtrak Police. Their work includes the development of Amtrak's Security Threat Level Response Plan and a risk assessment that includes a listing of the company's critical assets.

Members of the committees also recommend revisions to the Employee Security Handbook and work to ensure employee compliance with our security awareness campaign. And, during periods of heightened alert levels, although no specific threats have been made against Amtrak as of this writing, the security committees play a critical role in enhancing the security of our passengers and fellow employees.

Another employee-related initiative gaining momentum is the integration of an "Amtrak Watch" program into Amtrak's Right Care Day One program. This initiative promotes security awareness at stations along the NEC by temporarily assigning employees who are recovering from injuries and unable to perform their regular duties to Amtrak Police.

At the department level, the past year has been filled with many challenging and exciting events and milestones for Amtrak Police and Security. Among them, the Police Department's role in maintaining security at the Republican National Convention in New York City, the Presidential Inaugural Ball, and co-hosting a team of delegates from Spain who shared lessons learned from the Madrid train bombings of March 2004. In March, the Amtrak Police Department was awarded its fourth law enforcement accreditation by the Commission on Accreditation for Law Enforcement Agencies (CALEA). And this past August, the department's National Communication Center in Philadelphia underwent its second accreditation process, also by CALEA.

Under the leadership of Chief Sonya Proctor, the Amtrak Police Department deploys enhanced forces of officers and canine teams at Amtrak stations, trains and facilities when a change in threat level occurs. Additionally, local, state and federal law enforcement partners contribute their efforts, increasing police presence for our employees and passengers across the Amtrak system. Efforts are also underway to expand the existing "See Something, Say Something!" program that urges passengers and patrons to report suspicious activity to Amtrak Police.

After completing the System Security Awareness for Railroad Employees training, many of you have expressed appreciation for this opportunity to become more knowledgeable and better equipped to be involved in workplace security matters. As of July 30, 13,827 employees completed this training.

In the realm of cyber security, you will soon hear about a course to be offered online in FY '06 that offers information security awareness training.

A critical component of the Police and Security department is our Emergency Preparedness unit. A series of tabletop training exercises, designed to test emergency management procedures and emergency communications during a critical incident, are currently being conducted at major stations in the NEC and Chicago. The exercises began in June in Washington, D.C., and in August a full-scale training exercise was held in New York City to test response to a train emergency inside a tunnel. A tabletop exercise was held last month in Chicago and others will be held later this year in Boston and Philadelphia.

In May '06, the Amtrak Police Department, along with all emergency response agencies and local rail in the Capitol region, will participate in a Weapons of Mass Destruction terrorism drill at Washington Union Station.

Also in the coming months, you can also look forward to a new employee identification card that is currently being developed by a team of employees representing various departments. The group has provided extensive input into the design, usage and upcoming policies related to the card. You will hear more about this as we get closer to the expected rollout during the second quarter of the upcoming fiscal year.

Also looking ahead, a \$6.3 million Intercity Passenger Rail Security Grant recently awarded to Amtrak by the Department of Homeland Security will fund several projects that will address our most critical security needs. As part of the grant program, we are undergoing a risk assessment in the Northeast Corridor and Chicago. Based on the anticipated results, a number of security enhancements are planned that include increasing the number of explosive detection canine teams and the purchase of additional explosive-resistant trash receptacles for stations.

Another forthcoming detection project includes the installation of an early warning and crisis management system in the event of a chemical attack and the acquisition of portable explosive trace detectors for use at select stations as well as four X-ray machines for placement in Northeast Corridor stations and Chicago that will screen packages, mail, carry-on items and luggage. These projects are coordinated under the direction of a newly organized Corporate Security unit of the Amtrak Police and Security department and are in addition to the operating and capital security budget for FY '06.

As we prepare for the future, we will maintain and expand the partnerships we have established with local, state and federal law enforcement, the Federal Railroad Administration, the Department of Homeland Security, the Transportation Security Administration and our partners in the freight railroad.

However, our most important assets are you — our co-workers — and of course, our passengers. You must remain vigilant and continue to educate yourselves about our security issues and how we should respond to suspicious activity or an actual terrorist threat. You are the eyes and ears of the railroad. If everyone does his or her part in securing the railroad, we will be successful.

Remember — security is everyone's responsibility.

Sincerely,

Alfred J. Broadbent, Sr.
Vice President
Police and Security

Employees Undergo Emergency Response Training

Program Kicks Off National Preparedness Month

National Preparedness Month was kicked off on Sept. 1 by the Department of Homeland Security, the American Red Cross and Amtrak at Union Station in Washington, D.C., where recent participants of the Community Emergency Response Team (CERT) training program were recognized.

Focusing on the importance of emergency preparedness, Amtrak and the District of Columbia's Citizen Corps joined forces to offer CERT training in August to Washington-area employees, including members of the corporate and Mid-Atlantic Division Safety Committee and the Division Security Coordinating Committee as well as employees from Union Station.

The program is the first in a series of CERT training courses that will be made available to employees at

stations and facilities across the country.

The CERT program educates people about disaster preparedness and trains them in basic disaster response skills such as fire safety, light search and rescue, and disaster medical operations. CERT is coordinated at the national level by Citizen Corps, the Department of Homeland Security's nationwide grassroots movement aimed at making communities and the nation better prepared for all hazards and threats.

The program is designed to train citizens in skills that may help save lives until emergency responders arrive. In 95 percent of all emergencies, the victim or bystander provides the first assistance at the scene.

"It is not unusual for a person to assume that when an emergency

first occurs responders immediately report to the scene," explained Amtrak Emergency Preparedness Senior Director Larry Beard. "However, this is not always the case, particularly during a major disaster."

According to Beard, damage caused by natural disasters such as earthquakes, hurricanes, flooding or by man-made catastrophe, such as terrorism, can severely restrict responders' access to the scene, leaving many individuals and neighborhoods cut off from outside support.

"During the period immediately following a disaster, individuals, households, workplaces and neighborhoods may need to rely on their own resources for food, water, shelter and first aid," explained Emergency Preparedness Manager Josie Harper.

Employees learn to identify potential fire hazards and how to work as a team to apply basic fire suppression strategies and safety measures. A section of the course also offers participants guidelines for setting up a triage area and applying basic treatment for wounds. Training also covers techniques for opening airways, controlling bleeding and treating shock.

Participation in CERT training is strictly voluntary. To learn more about CERT and other Citizen Corps activities, go to citizen-corps.gov and click on the homepage link to find the nearest Citizen Corps Council.

Diner Light

continued from page 3

"This new layout, designed by Amtrak's Bureau of Rolling Stock Engineering, will allow us to offer all our passengers meal service when the passenger load and economics do not justify operating a full dining car," Humphreys added.

At a cost of \$750,000 per conversion, the unit undergoes a complete overhaul and except for the galley, the car's entire interior is removed and upgraded.

"We're building more storage units for dry goods, installing a new

Working in the food preparation area, Car Repairman Cliff Bailey (left) and Sheet Metal Worker Jim Campbell determine the size and location for a mock-up shelf.

serving station and condiment stand and upgrading the four

existing refrigeration units that are built into the galley under the counter," explained Bear's Acting Superintendent Danny McFadden. A new free-standing refrigerator is also being installed in the galley area.

In addition to new tables and seating, the unit will be equipped

with a conductor workstation and an ADA-accessible restroom. The diner will also include new lighting, ceiling panels, flooring and 110-volt electrical outlets that will be conveniently located at each booth.

The trucks, airbrake system, couplers, draft gears and all other major components are being repaired or replaced and all new electrical wiring is being installed.

A group of 20 employees, including electricians, sheet metal workers, coach cleaners, car repairmen and foremen, is dedicated to this project.

Officer's Actions Recognized at White House Ceremony

Officer Rodney Chambers attended a ceremony at the White House last month to honor recipients of the 2003-2004 Public Safety Officer Medal of Valor awarded by the Department of Justice. The awards were presented by Vice President Dick Cheney and Attorney General Alberto R. Gonzales.

Chambers was recognized for his role in a June 2003 incident at Washington Union Station where he wrestled a hand grenade away from a suspect's control and, while moving away from bystanders, held it for 15-20 minutes waiting for the bomb disposal team to arrive. While it was later determined that there was no explosive charge in the grenade, Chambers had no way of knowing this at the time of the incident.

Chambers received one of five awards presented at the ceremony. The Medal of Valor is the highest national award for valor by a public safety officer, honoring outstanding heroic deeds performed above and beyond the call of duty by fire fighters, law enforcement and emergency medical service providers from across the United States.

The Eye Behind the Engine: A Locomotive Engineer's Perspective

"In many aspects it's like driving a car, but in other ways it's quite different," *Hiawatha* Engineer Craig Willett explained. "You have to watch for warning signals that let you know when to stop, slow down and go. And, you have to be alert to debris on the track and pedestrians and vehicles darting out in front of the train."

While Willett's boiled-down description of operating a locomotive explains only a small part of what it's like to perform an engineer's job, the training required is much more complex than driver's education and an engineer's tour of duty is a far cry from taking the family on a six-hour road trip.

Willett's 90-mile Chicago-to-Milwaukee run, which he makes three times a day, may not compare in distance to much longer trips, but, it requires the same knowledge, training and skills. The operation of the locomotive, the rules that govern each railroad and the physical characteristics of the route — all paired with a constant focus on safety — are the primary areas in which every engineer must be proficient. And, reaching this level of proficiency is no small task.

After meeting eligibility criteria based on federal regulations and Amtrak policies, individuals interested in becoming engineers are accepted into the Passenger Locomotive Engineer Training program.

For the next 12 to 18 months, trainees must successfully complete a combination of classroom and on-the-job training to become a qualified engineer.

Learning the Locomotive — Inside Out

All Amtrak locomotive engineer trainees attend a rigorous seven- to 10-week classroom training program in Wilmington, DE. "This was harder than any training I've ever had, but it was worth it," said engineer trainee Loretta Carr. "We attended class for eight hours a day and then I went back to the hotel and studied until I fell asleep." Carr was in a class of 10 students that were promoted to student engineers after

passing the classroom portion of the training program last month.

While in Wilmington, students study the operation of the locomotive, which includes the air brake system and every part of the engine. They learn how to diagnose problems and how to troubleshoot. "When I was working on the road as a conductor, I noticed an engineer inspecting a stopped engine and finding that there were leaves trapped in the traction motor air-intake area. In class, I learned that the leaves prevented air from flowing to the parts of the traction motor that need cooling," said Carr.

"Even if the engineer can't figure out the problem, by knowing the parts of the engine and how they work, he or she can save the mechanical team a lot of time by helping identify the cause," explained Senior Analyst Operating Practices Jay Gilfillan.

At the Wilmington Training Center, students get hands-on practice on the full-motion locomotive simulator, which can be configured to replicate most of Amtrak's locomotives. "The students can feel the in-train forces, such as the acceleration and braking efforts that are a direct result of their actions, while operating the controls of the locomotive," added Gilfillan. The simu-

The simulator also prepares students for numerous trips to mechanical facilities where they get an up-close look at the equipment, practice air

there is enough air pressure to brake and listening to the conductor's car count, which tells me how far to back up," explained trainee Carr.

Trainside at Chicago Union Station, Hiawatha Conductor Ray Kravis (left), Willett (center), and Road Foreman Bob Werth conduct a crew briefing before leaving for Milwaukee.

brake tests and learn to handle a train as cars are coupled or uncoupled.

During one of the simulated training scenarios, one of the trainees realized that the second to last car was experiencing mechanical failure and needed to be removed. After the

conductor notified the engineer that the car was uncoupled from the rest of the train, the trainee was required to pull forward then back the train downhill to a siding where the malfunctioning car was uncoupled and stored. The trainee then moved forward out

of the siding to back up the locomotive to couple the car that was left on the mainline. "During the entire process, I was watching the gauges, checking the speed, making sure

Students also spend about two weeks learning the signal and operating rules that dictate how to operate through specific territory and what each signal configuration means. When the students complete the classroom training they receive their student engineer cards and for the next 12 months or more, they undergo on-the-job training working side by side an engineer instructor.

They've Got to Know the Territory

To get an idea of what an engineer needs to know, imagine how difficult it would be to memorize the location of every traffic signal, warning sign, and pavement marking along a highway.

Try to commit to memory when the speed limit on the highway changes from 55 mph to 45mph — without the help of a warning sign. Or, try remembering the building, hill or tree near every traffic sign en route to work. Engineers must identify these types of landmarks throughout their territory to guide them in the absence of a signal or signage and under all types of adverse weather conditions.

If a signal is missing from its usual location or improperly displayed — first and foremost — the engineer must know that a signal is in fact

Trainee Don Hoyte gets experience operating a locomotive in the full-motion simulator at the Wilmington Training Center.

lator imitates various real-life scenarios to reinforce and sharpen the skills students need before advancing to on-the-job training.

missing. “We have to know that the signal should be right by the house with the swimming pool, for example,” Engineer Instructor Rich Kay explains. “And, if it’s not there, we need to know the rule that tells us what to do.”

Depending on the specific situation, the engineer may have to proceed at a slower speed or come to a complete stop and call the dispatcher to get permission to proceed. “Operating through the fog is the hardest for me,” added Engineer Velida Morgan, Southwest Division.

“When you’re operating through a lot of cities with many traffic lights, you really have to be aware of where you are and be careful not to confuse a traffic light with a signal — but that’s part of knowing the characteristics of the territory,” explained *Sunset Limited* Engineer Roland Napoles.

Understanding the physical characteristics of the route can also mean recognizing when the train is going uphill and when it’s heading down — and that’s not always obvious. “There are a lot of places where it feels like the train is going uphill but actually it’s going down. So, the engineer must really know the territory well, because the train handles differently under varying conditions,” added Kay.

The Rule Book Rules

Each railroad has a book that includes hundreds of rules that an engineer must follow when operating over its respective track. And on some routes, like between Chicago and St. Louis, the train operates over six different railroads. Consequently, the engineer must learn the rules for each of those railroads.

Operating rules provide instruction on how to operate the train from point to point. There are rules that define permanent speed restrictions enforced at curves or hills, for instance, and temporary slow orders that are sometimes imposed when operating over poor track conditions. To protect the maintenance-of-way employees working on the tracks, there are rules to let the engineer know when and at what speeds to operate through a work zone.

Kay, who has been conducting on-the-job training for engineers for several years, explains, “Every railroad has a different signal system and learning these differences can sometimes be confusing. When operating over one railroad a signal may mean approach at slow speeds and then as you continue over another railroad the same color

configuration may mean approach at a medium speed. So, you really have to know your signals and your territory.”

“To keep abreast of the new rules and the changes made to existing rules, engineers undergo recurrent training and are required to pass a rules and equipment test each year,” explained Senior Analyst Cornell Wallace who conducts the annual rules training.

Safety First

Even before the train leaves the station, an emphasis is placed on safety. During the crew briefing, the Train and Engine crew reviews the safety rule of the day and discusses any changes in railroad conditions and operating rules.

On board, there is a process in place to minimize the chance of miscommunication between the T and E crew and dispatchers. Whenever the dispatcher radios an order to the engineer, the engineer is required to repeat the

order exactly as given, first to the dispatcher and then to the conductor, who in turn repeats it back to the engineer. The engineer is also required to announce on the radio certain signals, speed and other restrictions encountered en route, which also must be repeated back by the conductor.

Additionally, the locomotive is equipped with a number of built-in safety features. A device known as an alertor requires the engineer to manually acknowledge visual and audible alarms or the locomotive will come to a stop. The engine will also stop automatically if the train exceeds the maximum speed for the type of territory it is operating over.

As every engineer knows from experience, the cliché — it’s hard to stop a moving train — rings true. While a car can stop suddenly when a traffic signal quickly changes, a train traveling at 79 mph may take a mile or more to stop after the emergency brakes are applied. Accordingly, some railroad signals are spaced at least two miles apart to allow at

least four miles for the engineer to bring the train to a complete stop.

Engineers also have to take steps to safeguard pedestrians and drivers near the railroad tracks. They are required to sound the bell and whistle when approaching railroad workers and grade crossings. But, there are some exceptions. For example, unlike most areas, the city of Chicago and some of its suburbs have noise regulations that prevent engineers from sounding the whistle, except when deemed necessary by the engineer.

Although advance warning signs, pavement markings and flashing red lights and gates advise drivers to

tion on the second track. I was three seconds from hitting that car.”

During rush hour, *Hiawatha* Engineer Willett and other engineers encounter this situation every day as he and dozens of commuter trains travel through the metropolitan Chicago area. But, in response to the many grade-crossing and pedestrian incidents, an operating rule was adopted in Chicago that requires a train in the station to wait until the oncoming train comes to a complete stop or clears the station platform before proceeding. “This protects pedestrians and drivers from the common misconception that once the train goes by, it’s okay to cross the tracks,” said Willett.

Another safety consideration is hours of service. Engineers and conductors are governed by federal regulations that stipulate that they cannot be on duty for more than 12 hours. Additionally, Amtrak’s collective bargaining agreement with engineers stipulates that two engineers are required for trips that are scheduled for more than six hours.

Sunset Limited Engineer Roland Napoles, who works from 5 p.m. until

about 1 a.m. with either Passenger Engineers Charlie Torres or Reuben Villareal, operates between El Paso, TX, and Maricopa, AZ. One engineer operates the train as the other sits next to him, repeating the signals and orders and restrictions. To stay alert during the long journey, they switch roles after every few station stops.

When the train is operating extremely late, Napoles recognizes the importance of staying alert and being flexible. “Last month when the train was 11 hours late due to sinkholes along the route, I had to be on duty at about 1 a.m. for the train expected in at 3 a.m., but as the train lost more time, we had to take a van about 50 miles away relieve the inbound crew whose hours of service had expired in Finley, TX.”

Despite the challenges, Napoles, who has worked for Amtrak since 1971, enjoys his job and the people he works with at the El Paso crew base. “I wouldn’t trade being an engineer for anything else in the world.”

Engineer Craig Willett is focused on the road as he operates the *Hiawatha* from Chicago to Milwaukee, WI.

slow down because a railroad crossing is nearby, approximately 3,000 grade-crossing collisions occurred last year in the United States — many of which were fatal. While this is of course traumatic for the person involved and their families, it may also have an effect on the engineer who encounters the incident.

“Everyone handles this type of incident differently,” said Willett. But experts say it is most important to try to remain calm, talk about the incident and, if necessary, take a couple days to mentally regroup.

“People try to beat the train all the time,” said Morgan. “Just last week, I was going about 79 mph approaching a grade crossing. The gates were down and as I approached the crossing blowing my whistle, a freight train was traveling in the opposite direction on the adjacent track. After the freight train went by, a car drove around the gates, without realizing that my train was traveling in the opposite direc-

Millionth Rail 2 Rail Passenger Marks Milestone

Program Earns National Recognition

Balloons, confetti, cameras and microphones met Darayus Mistry, Amtrak's millionth Rail 2 Rail passenger as he stepped off a Metrolink train pulling into Los Angeles Union Station on Aug. 3.

Officials from Amtrak, Caltrans and Metrolink, the sponsors of the Rail 2 Rail program, were also on hand to greet Mistry. A 10-year commuter from Irvine, Mistry was given a giant-sized Metrolink annual pass, a California Rail Pass, and a *Pacific Surfliner* Business class ticket for two.

Rail 2 Rail, first initiated in 2002, integrates schedules, fares and marketing between Amtrak and Metrolink. Through the program, Metrolink monthly pass-holders may ride any *Pacific Surfliner* train within the trip limits of their Metrolink monthly pass at no additional charge.

This flexibility provides Metrolink passengers with 39 additional weekday and 41 weekend departures. In turn, Amtrak ticket holders may choose from an additional 60 Metrolink trains at no extra charge.

Odyssey Award Winner

In recognition of its success, Rail 2 Rail was awarded the prestigious 2005 Odyssey Award from the Travel Industry Association of America (TIA) in the category of Travel Facilitation, crediting Amtrak, Caltrans and Metrolink for "jointly implementing a program that demonstrates a clear objective to ease travel." The Odyssey award will be formally presented on Oct. 27 in Seattle, WA.

Rail 2 Rail millionth passenger Darayus Mistry is flanked by Amtrak conductors Victor D'Agostino, Jr. (left) and Dennis DeVille (right) as he boards an Amtrak train to continue his daily commute to Van Nuys, CA.

With the goal of getting more Southern Californians onto trains, Amtrak, Caltrans and Metrolink jointly offer passengers a range of options from one train line to the other.

The Rail 2 Rail program exceeded expectations and increased overall ridership for both Amtrak and Metrolink. The *Pacific Surfliner* has enjoyed record ridership for nine of 12 months in 2004. In 2004, more than 343,000 customers took advantage of this ticket reciprocity program. On average each month in 2004, 28,000 Metrolink passengers rode on Amtrak trains and 3,400 Amtrak riders rode Metrolink.

Celebrations Mark the *Empire Builder* Re-launch

Events commemorating the launch of the enhanced *Empire Builder* service were held on Aug. 21 in Chicago, Portland and Seattle. The general public, local, state and federal officials and members of the media attended the events, wishing passengers boarding the trains a good journey.

Clockwise from top to bottom:

Gay Banks Olson, assistant superintendent Passenger Service and Dan Engstrom (center), operations supervisor, confer about the day's schedule with the master of ceremonies Lloyd Flem, executive director of the Washington Association of Rail Passengers, before the event at Seattle's King Street Station.

Following a successful event at the Portland station, the eastbound *Empire Builder* is underway with an on-time departure.

Amtrak's President David Gunn shares a laugh with Minnesota-bound passengers in the dome car as the *Empire Builder* heads east.

Train Attendant William Revilla (left) and Lead Service Attendant Rade Radovich pour wine during a wine and cheese tasting reception for First class passengers, one of the newly introduced amenities aboard the *Empire Builder*.

Passengers touring the *Empire Builder* equipment in Chicago are given an overview of the dining car by Assistant Superintendent Passenger Services Jim Brzezinski (right).

Systemwide Safety Accomplishments Recognized

This summer, a number of safety accomplishments throughout the system have contributed to progress in meeting this year's safety goals. The company is close to being on target this fiscal year, with a safety ratio through July of 3.5 against a goal of 3.3, which represents a big improvement over the same period last year, when the fiscal year-to-date safety ratio was 4.8.

The following examples highlight some of the accomplishments that help steer the course for meeting the company's safety goal.

New York High Speed Rail Safety Committee

The New York High Speed Rail (HSR) Safety Committee at Sunnyside Yard was recently recognized by the New York Divi-

Recognized for improving employee safety at Sunnyside Yard High Speed Rail Facility is the New York High Speed Rail Safety Committee. (L. to R.) Al Clark, safety manager; James Seehof; Phyllis Yancey; William Lovett; Richard Kitz; Robert Anderson; John Castronuova; Vincent Russo; Wayne Miller, superintendent, High Speed Rail; Peter Roohan, chairman of High Speed Rail Safety Committee; and Lenore Slimbock, general superintendent, New York Division.

sion's Employee Recognition Committee with a quarterly award for safety for their efforts in reducing employee injuries. As a result of its work, the High Speed Rail Mechanical group of 74 employees had more than 330 days without a reportable or lost-time injury through July 2005.

Unique among all the divisions, the New York Division's Employee Recognition Committee was created about 15 years ago and is designed to recognize employees on a quarterly basis for innovative ideas, safety accomplishments, performance and achievement,

valor, and honesty and integrity.

The HSR Safety Committee takes a proactive role in all safety areas while immediately addressing safety issues.

Chicago Bridges and Buildings Department

Through July 2005, the Chicago Union Station Engineering Group (CUSEG) has worked more than 1,300 days injury-free.

The CUSEG is comprised of two teams that work together to maintain the entire physical plant that is Chicago Union Station. This includes not only the station, plat-

forms and waiting area, but also a large area that covers six city blocks.

Foreman III Treadwell Smith leads his electricians, plumbers and machinists in performing a wide variety of

tasks, while carpenters, painters and general laborers work under the guidance of Foreman Wally Lesniak. Each of these jobs presents varying challenges when it comes to working safely and their supervisors have gone a long way in creating and maintaining a safety-conscious culture.

The teams maintain the lighting on platforms, monitor and regulate the facility's heating, air conditioning and plumbing, while painting and other carpentry repairs are performed in areas that need that attention. They are also responsible for maintaining the

fleet of mobile equipment that includes the people movers used by the red caps and baggage employees and station maintenance worker vehicles.

while the Engineering clerk (one employee) has been more than 3,000 days injury free, going back to 1997 for the last reportable injury. The track workers' (12

The Los Angeles 8th Street Yards Engineering group reached a major safety milestone, 20,500 days injury-free, in July. Front Row (L. to R.): Mark Dandridge, Sr., Dan Tran, Angelo Agagas, Amanda Lastra, Jesus Aceves and Heros Baghoumian. Second Row: Ruzvelt Hovsepyan, Louis Springer, Michael Davis, Vladimir Kogut, Jorge Munoz, Anthony Moro, Reginald Hawkins, Damaso Torres, David Parra and Kirk Topikian. Third Row: Ruben Polintan, Antonio Zamano, David Kinsey, Reggie Vargas, Andrew Davis, John Powers, Graham Goss, Everett Shirley, Al Aftoor, Mario Macias, Anthony Cooksey, and Abel Hayes, manager, Maintenance of Way. (Not shown: Ralph Torres, track foreman.)

Los Angeles 8th Street Yards Engineering

The Los Angeles 8th Street Yards Engineering department is comprised of five groups, including carpenters, electricians and radio technicians, clerks, track and sheet metal workers, totaling 29 employees, including Able Hayes, manager, Maintenance-of-Way, and Ralph Torres, track foreman.

employees) last reported injury was 2003 (652 days injury-free), while sheet metal workers' (five employees) last reported injury was in 2004 (491 days).

Decline In Customer Complaints

continued from page 2

basis in the form of letters, phone calls and e-mails to the office of Customer Relations, Amtrak President David Gunn and others throughout the company.

Addressing Comments

A new approach to improving customer service and service

recovery that involves reaching out to displeased customers and targeting problem areas and was introduced in May. Representatives from Customer Relations and the Call Centers located at CNOC meet daily to identify the most serious of the service failures, for instance, extreme delays combined

with lack of information from front-line employees. The passengers who experienced these service shortcomings are then called, offered an apology and provided any other necessary service recovery, such as a refund or travel voucher. During May and June, 2,655 passengers were called as a

result of the new outreach effort.

"Even though this a relatively new program, passengers seem to really appreciate that we're contacting them," said Senior Director Reservation Sales Jon Maranda

Authorization Legislation

continued from page 1

To put the figures in perspective, in FY '05 Amtrak will spend approximately \$570 million for operating costs not covered by revenues, invest \$516 million in capital projects, and spend \$273 million on debt service.

Some of the measures included in the multi-faceted Senate bill formalize the steps Amtrak has taken, or plans to take, to improve cost accounting and operations, as outlined in the Strategic Reform Initiatives unveiled in April.

Next Steps

The bill must next be considered by the full Senate, which could happen this fall or early next year. The House also needs to act on its own bill, such as the one (H.R. 1630) introduced in the spring, which essentially extends Amtrak's authorization, and funds Amtrak at \$2 billion for each of the fiscal years 2006 through 2008.

Other highlights of the bill include:

Management Improvements and Financial Accountability

The Amtrak Board of Directors is expanded from seven to nine members and the Amtrak CEO is made a full voting member of the board.

The bill calls for implementation of a financial accounting system enabling Amtrak to assign revenues and expenses to each of its business lines and major activities. Amtrak is required to separate the costs of infrastructure and rail operations and provide this data for review to the Secretary of Transportation. Amtrak has already begun to do this.

Amtrak is mandated to develop a five-year plan that outlines projected revenues, expenditures, ridership, capital funding needs

and other factors, much like the detailed five-year strategic plan that Amtrak has provided Congress and the FRA on an annual basis since 2003.

Performance Metrics

“While it marks the start of a potentially long process, this authorization bill represents a bi-partisan approach to improving national passenger rail,”

Joe McHugh
Vice President
Government Affairs

A range of measures in the bill is aimed at standardizing and establishing metrics for performance and decisions about service.

Working with the Surface Transportation Board, the FRA and freight partners, Amtrak will jointly develop standards for measuring performance and service quality, such as cost recovery, and on-board and station services. Compiling this information, the FRA will publish a quarterly report on train performance and service quality.

An independent auditor hired by the FRA will make objective recommendations on the methods for route and service decisions. Cost recovery, on-time performance of existing routes, the transportation needs of communities and other factors are to be taken into account. It would be left up to the Amtrak Board to adopt any of these recommendations.

To improve on-time performance of passenger trains, the Surface Transportation Board is empowered to investigate train delays where on-time performance falls below 80 percent over two consecutive quarters. If the source of the delay is the failure of a freight railroad to give passenger rail preference over freight trains, the STB may impose and collect financial

penalties.

Long-distance Service

Using the performance and service quality standards described above, Amtrak will evaluate and rank the performance of each of its long-distance routes on an annual basis.

This analysis will then be used to improve the trains' performance, which may include making changes to the route, improving on-

board service, changing sleeper car and food service options, and modifying the frequency of service. Monitoring this process, the FRA will have the authority to withhold funds for those routes that do not show progress.

Starting in 2007, the FRA will administer a bid program allowing another railroad over whose tracks Amtrak operates to compete to replace Amtrak as the passenger rail service provider on that route.

Rail Security

The bill also incorporates rail security and safety provisions proposed in previous legislation.

return the Northeast Corridor to a state of good repair by 2011.

The secretary of Transportation is required to form an Infrastructure and Operations Advisory Commission. The commission will construct a standardized formula for determining costs and compensation paid by commuter authorities for the use of Amtrak facilities or infrastructure.

The States

The legislation creates a federal funding mechanism for state corridor development, a concept included in Amtrak's FY 2005 - 2009 strategic plan.

The legislation sets up a capital grant program for a state or a group of states to pay for capital costs of facilities and equipment for new or improved passenger rail.

The grant program will take the form of an 80/20 federal/state match, which would be based on criteria such as economic feasibility and anticipated ridership, and awarded at the discretion of the secretary of Transportation. This is similar to the match programs currently in effect for other modes of transportation such as transit and highways.

This legislation would give Amtrak the resources with which to achieve a state of good repair and to implement accountability and cost-cutting measures.

For purposes of advancing security improvements, the legislation authorizes the appropriation of \$123 million over the course of fiscal years 2006 though 2008. In addition, the bill authorizes funding for Fire and Life Safety tunnel improvements in New York, Baltimore and Washington, D.C.

The Northeast Corridor

Within six months of enactment of the legislation, Amtrak will present the secretary of Transportation a detailed capital plan. The plan must be updated annually, and

The legislation requires Amtrak to work with the states and FRA to establish a standardized cost accounting and compensation methodology for states to fund operating losses and capital costs of all short distance routes. States' capital expenditures would be eligible for federal matching funds.

Another provision in the bill will make it possible for states and Amtrak to issue bonds for capital projects.

Ridership Figures Into Successful Summer

continued from page 3

with new vibrant background colors. The advertising will run in major daily newspapers in the top 21 Amtrak markets. Online advertising will run on Orbitz, Cheap Tickets and Travelocity travel Web sites, and Amtrak keywords will be placed on several search engine sites including Google and MSN.

Ridership and Ticket Revenue for July 2005

Month of April	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	2,246,398	2,314,368	2,241,267

Ridership	20,958,467	21,443,801	21,103,813
Ticket Revenue	\$1,057,733,915	\$1,100,168,190	\$1,035,183,395

2006 Wall Calendar Contest Winner Selected

This calendar year, the *Empire Builder* will travel across the country — as the featured photo on the 2006 Amtrak Wall Calendar.

Tom Cerwin, of Bartlett, IL, and his photo of the eastbound *Empire Builder* train near Bison, MT, was selected as the first place winner for Amtrak’s “Picture Our Train” 2006 Wall Calendar Contest. As the winning photographer, Cerwin will get photo credit on the 2006 calendar and an Amtrak travel voucher valued at \$1,000.

A retired partner of a Chicago accounting firm, Cerwin has been photographing trains for 15 years.

Since he retired last year, he’s taken advantage of the opportunity to dedicate himself to photography on a full-time basis.

The winning photo was taken in October of last year, when Cerwin attended an Alta-Mont (Alberta-Montana) weekend — an annual gathering of railroad photographers held at the Izaak Walton Inn in Essex, MT. Cerwin stayed for an

extra day to capture an early morning shot of train 8 as it traveled between Essex and East Glacier.

Shot with a wide-angle lens, the photo was the fourth in a series of five shots taken as the *Builder* sped by. “You get to a spot and intuitively sense there’s a great shot here, and then you wait for the sun to shed the right light,” explained Cerwin.

His first introduction to photographing trains began with steam trains in New Mexico and Colorado. Since then, Cerwin has incorporated all sorts of trains in his portfolio. Cerwin’s photos have appeared in magazines and he has sold some of his work.

Cerwin combined his two passions — photography and the love of trains — to produce the award-winning shot.

Additional award-winning photographers include: second place, Marty Petersen of Salt Lake City, UT; third place, Brian Sellers of Loveland, OH; fourth place David T. Hawkins of Plano, TX; and fifth place, James Springer of Effort, PA. The second through fifth prizewinners received travel vouchers.

This is the third year Amtrak has invited employees and the general public to submit an original color photograph featuring an Amtrak train. More than 100 photos were submitted for the contest, which began April 4 and ended June 10.

FRONT LINE FOCUS

Dear Amtrak:

I write to commend the services of your employee, Vanessa Scurry, Passenger Assistance in Baltimore Penn Station. She was more that accommodating to a senior grandmother, who was to pick her grandchild up at the station. The child is visiting this country from Italy and was riding the *Acela* to Baltimore with her aunt, who was traveling on to Washington, D.C.

I inquired at the information desk if I might go down to the track to be sure I did not miss this seven-year old child. I was advised to listen for the train announcement, but that I could not be on the platform when the train arrived.

I then sought the assistance of Ms. Scurry, who immediately took charge, and very pleasantly said she would assist me and would accompany me to meet the train to be certain I was able to get the child, her baggage, and her official foreign documents from her aunt. What a pleasure to deal with this charming lady.

I have used your services at least six times during the past year, finding some people pleasant and courteous and others officious. However, I have never had the service I received today.

My sincere appreciation to Ms. Scurry and my compliments to Amtrak for having such a fine representative to assist your patrons.

Sincerely,
Catherine T.
Towson, MD

Dear Amtrak:

I just returned from taking a group of 47 Girl Scouts from Indianapolis to Chicago via Amtrak train 317. We departed from Indianapolis at 5:50 a.m. and had the good fortune of having Alvin McCullough as our conductor. Due to a huge storm the night before, our train suffered delays en route of about an hour and 45 minutes, but because of our wonderful conductor, Alvin McCullough, the delay was only a small mishap and we had a wonderful first experience on Amtrak. Alvin McCullough was so very kind to our group and allowed the girls to view a sleeping car that was en route to Chicago, which they loved!

Please extend our most sincere appreciation to Mr. McCullough for his professionalism and kindness.

I want to compliment all Amtrak employees on how they handled our group. We received first class service both inbound and out and our Girl Scouts want to make this trip via Amtrak to Chicago an annual event.

Sincerely,
Dawn B.
Indianapolis, IN

Employees Apply Fuel Conservation Practices

This fiscal year, Amtrak will purchase over 65 million gallons of diesel fuel for its locomotives at an expected cost of over \$125 million — \$25 million more than last fiscal year — even before the recent price increases resulting from hurricanes Katrina and Rita.

In August, Amtrak paid \$1.95 per gallon, on average, for diesel fuel for its locomotives and last month, the cost rose to approximately \$2.25 per gallon. If the September price were to remain in effect throughout FY '06, the diesel fuel bill would increase by another \$20 million.

In response to the escalating cost of fuel, the Transportation, Mechanical and Environmental Health and Safety departments have updated a number of energy conservation policies and practices designed to reduce fuel consumption.

“While we have always recognized that efficient use of energy is necessary to help ensure the company’s financial viability, the recent upsurge in fuel costs has caused us to take a closer look at areas where we can do even more to conserve energy,” stated Transportation Vice President Ed Walker.

Technological advances in equipment design and operations have helped reduce fuel consumption in recent years, but according to

System General Road Foreman Don Savidge, “We realize that the greatest savings will be achieved by our employees’ efforts in the performance of their daily assignments.” To that end, employees put into practice new energy-efficient procedures last month.

Operating instructions issued in September directed employees to use wayside or ground power (when available) — rather than head-end power (HEP) — when trains are laying over for more than one hour at stations, yards or other facilities.

By plugging large electrical cables (that work like an extension cord) into the head-end power receptacle at either end of the train, electrical power is provided to the entire trainset, without the higher cost of HEP from the diesel locomotive. This practice saves about 33 gallons of fuel per hour, and, according to Environmental Health and Safety Vice President Roy Deitchman, “It also reduces emission of diesel exhaust and allows the company to maintain our already strong reputation as an environmentally friendly mode of transportation.”

Other policies have also been updated to help cut fuel consumption. When a train is operating with multiple locomotives, additional

Two trains were used to evacuate people from Houston to San Antonio in September in anticipation of Hurricane Rita.

Hurricane Rita followed Hurricane Katrina, which in August hit the Gulf Coast and caused damage of historic proportions. See story on page 6.

New Timetable Begins This Month

Amtrak’s Fall 2005 – Winter 2006 timetable that goes into effect on Oct. 31 formalizes many of the schedule changes that have been put into place over the last several months.

Acela Express service resumes a full schedule, with 14 weekday roundtrips between New York and Washington, D.C., and eight between Washington and Boston. One weekday *Metroliner* roundtrip continues to serve the Northeast Corridor.

Weekend service also expands. On Saturdays, four roundtrips between Washington and New York and two roundtrips between New York and Boston are offered, and on Sundays, the choices double with

eight Washington - New York roundtrips and four between New York and Boston.

Most trains in the Northeast Corridor require reservations. While reservations are required on *Keystone* service between New York and Philadelphia, the trains remain unreserved for local travel between Philadelphia and Harrisburg.

When the timetable went to press, plans for resuming service to New Orleans had not yet been finalized. Consequently, arrival or departure times at stations beyond Meridian, MS, on the *Crescent* schedule; after Hammond, LA, on the *City of New Orleans* schedule; and past San Antonio, TX, on the *Sunset Limited*

schedule were intentionally left blank.

With the start of *Crescent* and *City of New Orleans* service early this month, the full schedules for those trains will be printed on panel cards, which will be available in stations in early November.

Other changes across the system

are relatively minor. A number of timing changes and some additional stops, such as the resumption of service to Elyria and Sandusky, OH, on *Capitol Limited* train 29 and a Cary, NC, stop added to the schedule of the *Silver Star* are included.

TRAIN OF THOUGHT

As I travel throughout the system to attend President's Service and Safety Awards ceremonies, I've had the opportunity to meet many employees whose dedication and commitment to the railroad makes me proud to be a part of Amtrak. At these ceremonies I have offered my thoughts on where we are headed. I enjoy answering questions, too, even if I don't have all the answers. Let me address a number of current issues of interest, including our federal grant for FY '06, the budget for the year ahead, new fares, *Acela* and the recent hurricanes.

There's always a lot of interest among employees about our annual federal grant. I can tell you that as we kick off the new fiscal year this month, Congress has yet to pass the transportation spending bill, so once again we're operating under a Continuing Resolution. This provides us funding at last year's annual level (\$1.2 billion) until an appropriation is passed. It is both temporary and less than what we will need in the year ahead, but it will enable us to continue our operations and capital projects. I am hopeful that we will ultimately be funded at the level the Senate Appropriations Committee recommended, which was \$1.45 billion.

In the meantime, last month the board of directors approved a \$1.45 billion budget for FY '06 that includes \$540 million for operating

expenses. That's less than what we had last year, and with inflationary pressures and rising fuel, health care and other costs, this will be difficult, but doable. The budget also includes \$562 million for our capital projects, \$280 million for debt service and another \$70 million in working capital.

The budget the board approved is tight, but achievable. It requires us to improve our passenger service, operate efficiently, make the most of our resources and make adjustments when necessary.

One such adjustment took place late last month. We raised fares an average of \$3 on most trains excluding those on the Northeast Corridor. NEC fares went up \$4 on average. While no one likes to pay more, the increases are needed to help us keep up with rising costs. We've also modified the discount that the approximate 2,000 NEC SmartPass® passengers get, from about 70 percent to roughly 60 percent. Those customers will see a second adjustment in February 2006 to 50 percent. At both the 50- and 60-percent levels, it is the biggest discount that any railroad in the U.S. offers its passengers.

As you probably know by now, we began running a full *Acela Express* schedule this month. I know that many of you on the Northeast Corridor will be pleased to see a more regular schedule than the one

David L. Gunn

we've managed for the past several months.

Finally, let me acknowledge that the impact of Hurricane Katrina made for an extremely difficult August and September for many at Amtrak. On the operations side of things, we're aiming to get our stations and facilities in the area back to working order. As I write this, it appears that we will resume service this month of the *Crescent* and the *City of New Orleans*.

The employees personally affected by the hurricane surely have their hands full. I am very proud of the way in which co-workers have rallied to their aid with donations of money and goods. Many employees worked tirelessly on many different fronts, and I thank you all for your commitment to your fellow employees, our passengers and the railroad.

Susquehanna Bridge Project Completed

The six-week Susquehanna River Bridge project on the busy Northeast Corridor that began in early July was completed without incident or injury and on schedule, although the targeted completion date was reset mid-project.

The work took place during an extended heat wave, which made working with new creosote ties extremely

Track and structures production employees drill and install bridge tie spacing bars on the Susquehanna River Bridge, while the crane distributes materials to the site.

difficult. "There were days so hot and humid

that it was a challenge to just walk across the

bridge, let alone do work," said Bill Linaberry, senior engineer. The extreme heat slowed down the work and increased the need for more water breaks. The completion date had to be reset due to two nights' of storms and increased freight traffic, both of which decreased the amount of track time that was available during the night shift.

This phase of the multi-

year capital project resulted in an upgrade to No. 3 track with new ties and plates, a replacement of a full-length center walkway and handrail on the outside of No. 3 track and installation of new continuous welded rail. Minor repair work to the bridge continues, which includes cleanup.

Ridership and Revenue Grows Despite Significant Challenges

Amtrak closed out the summer with ridership and revenue growth in August that was stronger than last year, boosted by the solid performance of the *Regionals*, West Coast corridor trains and some long-distance services. System-wide ridership for August was 2.19 million trips, one percent above FY '04, and revenue for the month reached \$108 million, about 3 percent above FY '04.

The ridership and revenue results for the month are remarkable given that *Acela Express* service was still in the re-introduction phase.

During the last week of August, ticket revenue losses due to Hurricane Katrina's impact on the *Crescent*, *Sunset Limited*, and *City of New Orleans* services were estimated at \$400,000, while ridership numbers dropped by approximately 4,000. Since the storm took place during the last three days of the month, the revenue loss in subsequent months will be greater. Likewise, with Hurricane Rita

hitting the Gulf States in late September, there will be a further impact on ridership and revenue.

Express. Overall, *Regional* revenue was up 12 percent and revenues were up 22 percent on the corridor compared to last year,

Long-distance Trains

While August long-distance train ridership finished 5 percent higher than last year and revenue up 9.5 percent, both ridership and revenue fell short of budget by 7 percent and almost 4 percent, respectively. The budget shortfalls

are traceable to construction delays that affected the *Coast Starlight*, and the service affected by Hurricane Katrina. Track work being performed by freight railroads continues to hamper services across the country, particularly the long-distance services.

Some examples of excellent long-distance August performers include the *California Zephyr*, with increases in ridership of almost 5 percent and revenue of 9.5 percent and the *Texas Eagle* with an increase of almost 9 percent and revenue of 8 percent over the same period last year.

Ridership and Ticket Revenue for August 2005			
Month of August	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	2,176,331	2,288,178	2,193,906
Ticket Revenue	\$104,578,179	\$111,222,692	\$108,035,075
Fiscal Year-to-date	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	23,134,798	23,731,979	23,297,719
Ticket Revenue	\$1,162,312,094	\$1,211,390,882	\$1,143,218,469

In the Northeast, overall August ridership was up 1 percent and down 1 percent on the revenue side, against '04 totals. With a gradual return of the high-speed service, ridership numbers on those trains were down about 90,000 trips during the month of August versus last year. By the end of August, there were nine *Acela* roundtrips, four Saturday roundtrips and five on Sundays. Amtrak returned to a full *Acela Express* weekday and weekend schedule at the start of October.

The strength of the *Regional* service continued to make up for some of the lost business on *Acela*

partly attributable to two fare adjustments implemented since January.

Corridor Trains

Once again, nearly all of the West Coast and Midwest corridor trains met or exceeded last year's numbers for both ridership and revenue; some even experiencing double-digit growth. For example, *Hiawatha* trains that run between Chicago, IL, and Milwaukee, WI, experienced a 23-percent increase in ridership, and a nearly 24-percent increase in revenue over last year. Some of the success of the corridor service may be attributable to rising gasoline prices.

Long-distance Transdorm Sales Augment Revenue

Sales of Superliner transdorm sleeping rooms on long-distance trains have resulted in a significant revenue contribution and helped meet the demand for sleeping car accommodations during the busy season this summer. On most routes, there are often more rooms in the Superliner transdorm than crew members, and to take advantage of these unused rooms, the space is sold to passengers after all the sleepers have been sold out.

Because of the demand for sleeping car space on long-distance trains during peak travel times and on popular train routes, sleeping rooms in the transdorm on six trains were made available to the public this past summer: the *California Zephyr*, *Texas Eagle*, *Sunset Limited*, *Empire Builder*, *City of*

New Orleans and the *Capitol Limited*. Overall revenue generated from sleeping car sales from May through August was almost \$52.5 million. Of that number, over \$1.8 million came from sales of trans-

to the same month this year, the train exceeded \$1 million in transdorm sales. The *Texas Eagle*'s best month was July, when monthly total sales reached \$118,000 with an average room price of \$229 and 767 passengers accommodated.

10 percent of the total sleeper space sold on the service. Equipment shortages and demand for sleeping car space led Amtrak to seek alternatives to meet passengers' needs. While many of the standard rooms in the crew sleeping car were empty, passengers seeking sleeping car accommodations were being turned away because the space was sold out. In August '04, transdorm standard bedrooms

Transdorm Revenue	May 2005	June 2005	July 2005	August 2005	Summer Total
California Zephyr	\$13,343	\$166,368	\$192,406	\$169,551	\$541,668
Capitol Limited	—	\$61,715	\$72,363	\$50,492	\$184,570
City of New Orleans	\$39,451	\$56,364	\$77,225	\$61,341	\$234,381
Empire Builder	—	—	—	\$56,452	\$56,452
Sunset Limited	\$95,211	\$113,129	\$119,183	\$81,749	\$409,292
Texas Eagle	\$73,670	\$114,323	\$118,374	\$105,908	\$412,275
Totals	\$168,881	\$511,899	\$168,881	\$168,881	\$1,838,618

dorm sleeping rooms — over 3 percent of the entire summer's sales. The *Texas Eagle* was the first train on which transdorm space was sold in August of 2004 and consequently it has sold the most transdorm tickets. From August of 2004

Of the six trains on which transdorm space is available for sale, the *California Zephyr* posted the highest transdorm sales this summer with \$541,700 for May through August. In August, close to \$170,000 in transdorm revenue was sold on the *Zephyr* — almost

17 through 24 were first entered into inventory on some long-distance trains to be put to use in case of a sold-out train and crew members used the remainder of the car. Passengers traveling in these rooms receive the same level of service as those traveling in all other sleeping car rooms.

Dear Amtrak Co-workers:

As the High Speed Rail master mechanic, I've had a lot on my plate this summer to keep me busy. But, summer's over and I'm glad to see all the Acela Express HSR equipment back on the road, now better than ever.

As you know, Amtrak's Northeast Corridor HSR service was suspended April 15 when cracks were discovered on the Acela trainsets' disc brake rotor spokes. Working closely with the Bombardier Alstom Consortium and the FRA, Amtrak soon had an approved redesigned component that was put into production. As replacement parts became available, trainsets were upgraded and starting July 11, the equipment began to gradually return to service. By early October, all 20 trainsets were operational and service was fully restored, something that we couldn't have accomplished without the hard work and dedication of the whole HSR team.

While the consortium was working on the design and remanufacture of the new parts, the HSR mechanics went into high gear to maximize the equipment down time. With these trainsets in service now for nearly five years, it was a good opportunity to give the carpets, draperies and interiors a thorough cleaning while other HSR mechanics not on assignment were loaned out to work on Amfleet equipment, putting everyone's time to good use. HSR technicians and mechanics also performed functional testing of the various trainsets' systems and made necessary repairs to ensure a smooth return to service.

I'd like to share with you a bit of background about our HSR program. While the trainsets are about five years old, the project to introduce high-speed rail service started more than 10 years ago with the design specification stage. The design and construction of the equipment, however, was only part of the project — the equipment maintenance had also to be clearly defined along with building three HSR maintenance facilities and training mechanics to work on the highly technical equipment.

The HSR train equipment is not your average train. It's the most advanced passenger rail equipment in North America and it incorporates the "next generation" of FRA requirements, including crashworthiness, a state-of-the-art braking system and a sophisticated truck and suspension design. While the maximum design speed is 165 mph, Amtrak's current operating speed, approved in certain areas along the Northeast Corridor, maximizes at 150 mph.

Each trainset consists of two 6,000 hp power cars and six passenger cars and they operate as a complete, fully integrated trainset. The computer systems function throughout each trainset and continually monitor the status of the various systems for optimum safety and reliability and diagnose problems before trouble can begin.

These complex computer systems require a dedicated maintenance force and management services along with specialized facilities where the information networks and the system integration technology can be monitored.

The HSR Service and Inspection (S & I) mechanical facilities are set up to handle the performance of daily inspections and running repairs for all trainsets. They are located in Boston's Southampton Yard, where 92-day periodic inspections are performed, in New York's Sunnyside Yard, which handles both 92-day and annual inspections, and in Washington's Ivy City Yard, which also handles regular preventive maintenance as well as heavy repair beyond the capability of the other S & I facilities, as well as major component change-outs and other maintenance operations that are part of the scheduled program.

The Ivy City shop is also equipped with a high bay area for making rooftop repairs and a 30-ton crane. The facility also has two additional tracks, one with a full truck drop table that accommodates the removal of powered and non-powered trucks, as well as single-axle units and provides the ability to remove underfloor equipment and to perform large-system component disassembly and assembly. The other is equipped with a Simmons tandem wheel true machine capable of truing two axles at the same time.

The Washington shop also houses a wheel set diagnostic inspection machine that is set up in the car wash. The diagnostics include crack detection on the tread and flat spots and wear measurement profiles (for wheel and flange thickness) and as well as diameter measurements. Trainsets must make a successful pass over this diagnostic machine every seven days.

Because of the integrated and complex technology on this equipment, the HSR mechanical employees must be FRA Tier II qualified. Not only are they highly adept mechanically, but they must also be computer savvy. The HSR team consists of Tier II QMP employees (highly qualified technicians), as well as cleaners, laborers and secretaries who presently work for NEC MSC (Northeast Corridor Maintenance Service Corporation), the maintenance contractor that was established as part of the HSR contract with the Bombardier Alstom Consortium. Amtrak expects to take over maintenance services for the Acela equipment Oct. 1, 2006, and Amtrak will continue to spend this year ramping up for the transition and filling positions in the new High Speed Rail Division.

So, while this summer's work is behind us, this coming year will bring a new set of challenges as we move toward the Oct. 1 handover date and take full responsibility for the HSR mechanical operation. I'm looking forward to the transition and working closely with a fine group of dedicated employees.

Best to all,

David M. Schramm
Master Mechanic
High Speed Rail

Open Enrollment for 2006 Benefits Begins This Month

The Open Enrollment period for 2006 benefits runs from Oct. 24 through Nov. 11, 2005. During this period, employees and retirees may change benefit elections or enroll in a benefit for the first time. An enrollment package has been mailed to employees and retirees this month, containing a personalized enrollment worksheet that shows each employee what benefits he or she has now and what the choices are for 2006. Do not return

this worksheet — it is for informational purposes only. Personalized annual enrollment worksheets will not be accepted as enrollment forms. The enrollment package includes a booklet that explains more about the Amtrak employee benefit choices. **How To Enroll** There are two ways an employee can enroll for benefits. The most

convenient way is to use the Amtrak benefits Web site, amtrak-benefits.com. Employees can also call the Amtrak Benefits Service Center at 1-800-481-4887, where customer service representatives are available Monday through Friday (except holidays), 8 a.m. to 8 p.m. Eastern Time. Employees wishing to keep their benefits elections the same in 2006

do not need to enroll unless they want to participate in a Health Care Flexible Spending Account, Dependent Day Care Flexible Spending Account, or the Prepaid Legal Services Plan (for Management employees only). Enrollment is required each year for participation in these benefits.

New Department Directs Customer Service Efforts

Serves As Voice for Amtrak Customers

A reorganization of several operating functions within Amtrak earlier this year included the creation of a new post — vice president, Customer Services.

Former Amtrak executive Emmett Fremaux was appointed to the job in August, and he's taken up the charge of recommending and implementing policies and programs to deliver consistent, high-quality services to customers — including reservations and information, ticketing, baggage, on-board services, stations, and food and beverage.

Amtrak Ink asked Fremaux how he plans to move forward as he builds the new Customer Services department.

Amtrak Ink: Welcome back to Amtrak. What were you up to while you were gone?

Fremaux: Thanks, it feels great to be back. The energy and commitment of the people at Amtrak is truly something special. I left Amtrak in 2001 to lead a new election administration practice for the global consulting firm Accenture. The experience was a very positive one, and it expanded my customer services background into the private sector. While I was at Amtrak from 1996 to 2001, I headed up Customer Relationships and Revenue, which gave me direct insight into customers' experience both before and after their trips. In my new role, I have the broader opportunity to impact customer service from end to end. While there's a lot that never changes about the need for great customer service and what it encompasses, there's also a lot that's different at Amtrak now, as in the way the railroad has been restructured with a centralized organization that enables us to better focus its resources on achieving defined goals. I like that.

AI: What's the structure of your organization and what are your goals?

EF: The FY '06 organization has been developed in collaboration with the Transportation department vice president, Ed Walker, and has involved moving the Service Delivery organization from Transportation to Customer Services to form the initial core of

the new department, and then adding several new components to strengthen its impact in the field. We have established a new reporting structure that gives the division general superintendents a dotted-line reporting relationship to me, reflecting a cooperative effort by all to work toward the

roots of providing a great customer service experience. For instance, sales and distribution, call center resources, customer relations, division personnel, engineering, and mechanical departments — they have to be talking together about what matters to our customers and all speaking the same language.

AI: How does all of this tie in with the Strategic Reform Initiatives that were developed and published in April?

EF: The Customer Services department has been given a large role in helping to plan and implement strategic reforms in service-related areas that have been identified by the company as critical opportunities to improve our bottom line. For example, an

immediate priority is improving management practices and cost recovery in the Food and Beverage area. Toward this goal, I'm currently leading a senior management team in the effort to negotiate a new contract with our commissary provider, Gate Gourmet, under terms more favorable to Amtrak. We are set to explore additional outsourcing projects, including on-board food and beverage provisions as well as certain station services, to test new business models that are capable of delivering quality services at lower cost while sustaining or increasing revenue.

AI: What are your next steps?

EF: I've been finalizing the organization charts as well as defining the business goals and objectives. Once these elements are clearly defined, I'll be able to move quickly in the direction I want to take this department. I'm working with my fellow department heads to define other key strategic initiatives,

including Long Distance Service Redesign, Electronic Ticketing, and Station Operations Efficiency. I am also focusing on ways to optimize the First class services in the Northeast Corridor aboard *Acela Express*.

We plan to unveil a new Customer Services Web site this month, which employees can access via the Internet using their SAP number. When an employee logs on to the site, he or she can access electronic versions of all Service Standards manuals; review every Operations Standards Update and Operations Standards Advisory issued; see full-color representations of the current, authorized Amtrak uniforms by craft, gender and season; and participate in an Employee Forum where they can post comments, suggestions and questions pertaining to Amtrak customer service. Later this year, employees will go to the site to order their uniforms electronically and track the delivery.

AI: What do you think is the key to making all of this work?

EF: The keys to success are engaging our front-line employees and responding to feedback from our customers — hearing what our customers say and doing something about it. We will do this in a number of ways, both by using new tools and by leveraging existing capabilities toward better ends. More than anything else, I see my leadership role in helping forge the connections between efforts being made in many different quarters to improve our service, and in making sure that the focus stays on the real bottom line of our business: the customer.

I'm frankly thrilled to be back at Amtrak and I'm looking forward to working with a lot of familiar faces — which for some reason, I must say, look generally happier on the job than they did to me four years ago. I think that is because the company has been doing the right things and is heading in the right direction, and that's something that dedicated and talented employees always appreciate. Not much about what needs to be accomplished here looks easy to me, but challenges like the ones we face are rewarding when people are ready and willing to work together.

Amtrak's Customer Services' Service Standards and Operations Web site (<http://customerservice.amtrak.com>) provides front-line Customer Services and Transportation employees access to electronic versions of all Service Standards manuals, Operations Standards Updates and Operations Standards Advisories and other front-line resources. The site can be accessed by employees who have Internet access at home. Those without home access may connect to the site from a company computer at their crew base.

common goal of improved customer service.

My expectation is that we will create an enhanced and expanded front-line enroute supervisory role by redirecting existing resources. This position is aimed at providing employees with real-time coaching and feedback on their service delivery while increasing our focus on the customer experience at the train and station level. The objective is to improve overall performance, from the customer's standpoint, as well as management's accountability for service quality and increased cost recovery.

AI: How do you see the different service departments working together to achieve these goals?

EF: To do this right and best leverage our resources, we have to pull together the customer service efforts across the departments. By establishing the "lens" of the customer experience as the bottom-line gauge of system performance, we can get at the

Hurricane Katrina Tests Gulf Coast Resilience

At the time of this writing, numerous communities in Louisiana, Mississippi and Alabama have begun what promises to be an extensive road to recovery and restoration following the devastation brought on by Hurricane Katrina on Aug. 27.

The following account of Amtrak's initial response to Katrina is by no means a comprehensive record, rather a glimpse into the role every department and division played in reaching out to and supporting employees affected by the hurricane, protecting the railroad's employees and assets, offering assistance in the relief effort, managing the operation of the three services that travel through the region, and cleaning up and getting back to business there.

At press time, all of the 376 employees in the area were accounted for. About half of those employees were back at work, either in the area or in new locations across the system. A Hurricane Katrina Amtrak Employees' Relief Fund was established to enable all employees to make monetary donations to other employees through payroll deductions. Repairs to and cleanup of the New Orleans facility were well underway and plans for resuming *City of New Orleans* and *Crescent* service had just been finalized. And other plans for a new Baton Rouge -

Before Katrina's landfall, Amtrak's employees were working in Louisiana and Mississippi, most of whom were based in New Orleans, representing a range of crafts and disciplines: Mechanical, On-board Service, Station, Train and Engine, Maintenance of Way, Material

Heading north to Carrollton Junction, the tracks in the New Orleans Yard are washed out. Many of the signal components and switches were flooded as a result of Hurricane Katrina.

Control, Amtrak Police, Catering, and Claims.

In anticipation of the hurricane, an operating plan was put in place for the three trains — *City of New Orleans*, *Crescent* and *Sunset Limited* — that serve New Orleans. The timing of the plan was in part influenced by the city of New Orleans, which notified Amtrak that the levee gates through which the railroad travels would be closed, thereby making travel to and from New Orleans impossible. After offering to transport evacuees, Amtrak routed equipment — five locomotives and 20 cars — and some New Orleans crew members to McComb, MS, for safety.

In McComb, the equipment served as temporary shelter for over 20 employees and family members who had no place to go, in addition to some displaced Canadian National Railway

employees. Because security was a big concern, the APD watched over the temporary quarters, while Road Foreman Scottie Wright and Assis-

tant Superintendent of Passenger Service John Barry ensured that the employees' immediate needs were being met.

Submerged

Following Katrina's landfall, an email from General Superintendent J.D.

Wall shared his concern about the welfare of Southern Division employees, stating, "There are no phones, no water, no food, no fuel ... nothing in our lifetime compares to what has taken place ... [our] Amtrak employees are our most valued asset; without them, we have nothing ... many of them will

have lost everything."

Amtrak's first priority was to try to reach all of the employees in the area to ensure they and their families were safe. "Many of our employees were displaced, and logistical and communications obstacles made it very difficult for us to reach them and for them to reach us," added Sid Birckett, superintendent passenger services.

The toll-free Employee Assistance Program (EAP) number was utilized to connect hurricane victims to the support desk at the Mid-Atlantic Reservations Sales Call Center in Philadelphia between 5:30 a.m. and 12:30 a.m. and an EAP vendor during the overnight hours, providing 24-hour access for those employees.

The EAP coordinated with other departments to develop a document that provided information to answer employees' questions regarding benefits, job status, payroll, finding shelter, locating missing family members, and getting Federal Emergency Management Administration (FEMA) assistance, among many other issues. Callers who needed assistance with managing trauma were transferred directly to an EAP counselor for immediate intervention.

"We received calls from employees who were with 10 to 18 family members staying in a shelter, or in one room at a hotel, or in the one-bedroom apartment of a family member. We spoke to employees

who had seen corpses, who couldn't find missing family members, and who were trapped by water and airlifted to safety," said Maia Dalton-Theodore, Employee Assistance Program manager.

EAP stress debriefings were held for employees at locations, such as Meridian, MS, Lafayette and Hammond, LA. Sessions for groups and individuals at crew bases where employees had relocated took place when necessary.

In addition to the EAP hotline, there were other avenues established for employees' questions. "We set up a satellite office in Sanford with a dedicated line for our employees," explained Master Mechanic Tommy Farr.

Meanwhile, a master database maintained by the Southern Division was developed to account for all employees' whereabouts, regardless of whether they called the EAP number, the payroll office, or their supervisors.

By serving as intermediaries with health insurance companies, personnel in the Human Resources and Labor Relations departments worked to meet the immediate healthcare needs of some employees.

Among the questions asked by employees affected by Katrina was one about access to their paychecks. Thanks to the Federal Reserve's rerouting of money to banks not affected by the hurricane, most employees who had direct deposit had access to their funds within a couple of days.

The Payroll department held all of the checks of employees in Louisiana, Mississippi and Alabama in the Chicago office, where financial manager Darryl Carr handled the incoming calls. For the approximate one quarter of the employees who do not use direct deposit, the department worked tirelessly to find a way to get employees their checks, by rerouting to other banks, or express mail to family members (if service had resumed in the area).

The Treasury and Payroll departments plan to make available some value-added banking alternatives for employees who elect not to use direct deposit; details about this will be forthcoming in the next couple of months.

Putting People to Work

In an *Employee Advisory* updating employees about the circumstances in the region, Amtrak President David Gunn said, "Many [of our

This truck, among other random items, is left on the right of way in New Orleans following the landfall of Hurricane Katrina.

New Orleans service to support the rebuilding effort in that city were being discussed with the state of Louisiana.

employees] are facing very rough times right now. A number of them have lost all they have ... we want to do all we can so that if they are able to return to work, they may.”

In an effort to place the employees who were furloughed and prepared to go back to work as soon as possible, Amtrak provided information about job opportunities across the system on a first-come, first-served basis, releasing craft rules.

Amtrak also offered OBS and T & E employees 30 days’ stay at crew base hotels. Many employees bid on vacancies and applied for transfers across the system in locations such as Seattle, Chicago, Washington, D.C., and New York. Mechanical employees were offered positions in Meridian and Jackson, MS. The Labor Relations department facilitated communication between various departments, the unions and employees, as well as the advancement of unused vacation.

Operations

The operating plan that had been made in anticipation of the hurricane remained in effect following its land-fall. An updated plan followed about a week later, extending the *City of New Orleans*, which had first been terminated at Memphis and later Jackson to Hammond, LA.

The route of the *Crescent*, which had been terminated at Atlanta, was expanded south to Meridian, MS. The *Sunset Limited*’s schedule was limited to San Antonio, TX. Extensive damage to the track through Biloxi and Gulfport, MS, will make it unlikely that operations east of New Orleans will resume for many months.

Amtrak offered full refunds and waived all penalties for passengers who had made reservations for travel that was affected by Katrina. News advisories were issued and posted on Amtrak.com to make the media and the general public aware of the suspension of service.

Ticket agents and crews were advised that some passengers who were affected by Katrina may not have identification and would be allowed to purchase a ticket without it.

Initially, a special fare code for victims of Katrina was established and information about the handling of an American Red Cross and FEMA-issued debit card was issued to crews in the form of an Operations Service Advisory. Following that, a special discount fare for American Red Cross volunteers was initiated,

and FEMA handled evacuee arrangements.

On the home page of Amtrak.com, the Marketing department established a link directly to the American Red Cross Web site. From Sept. 1 through Sept. 20 alone, there were 3,379 visits to the Red Cross link.

Control and Response

Amtrak Police Department officers were among the last to leave and the first to return to New Orleans. Joined by members of the department from across the country, including the Special Operations Unit, field detectives, Emergency Preparedness personnel and the APD’s inspector InterCity/West Region, APD managed logistical and security operations at the yard and helped ensure the safety of passengers aboard a special train carrying evacuees from New Orleans.

APD also worked as a liaison between local law enforcement, FEMA and a number of Emergency Operations centers. The Emergency Preparedness staff helped manage

“They are part of our Amtrak family and the important thing is that we are here for them.”

the housing and feeding of the employees who were there to make damage assessments and repairs, the train crews who worked the rescue train, and mechanical employees.

Ready, Willing and Able

All four railroad lines going to New Orleans were hit hard. After it became apparent that the BNSF line would be the first to open, Amtrak President David Gunn contacted federal authorities to let them know that Amtrak could move a trainset from McComb, MS, across CN terri-

tory, across the UP to Baton Rouge and then to BNSF’s Avondale Yard in New Orleans to help evacuate people. As a result, the Department of Homeland Defense and FEMA asked Amtrak to prepare a train to shuttle evacuees out of New Orleans.

Led by FRA Administrator Joseph Boardman, a group made up of

This segment of track in the New Orleans Yard is cleared after a team of 22 employees spent four days removing extensive amounts of trash and debris.

BNSF, UP, CN and Amtrak collaborated to make a rescue train feasible. Late on the night of Sept. 2, a train carried nearly 100 evacuees from Avondale to Lafayette, where they boarded Houston Metro buses headed for Texas.

“This could never have happened without the cooperation of the freight carriers and other agencies, but employees like [Assistant Superintendent, Road Operations] Butch Williams made it happen on the

Kurt Laird
Pacific Division Superintendent

ground,” noted General Superintendent Wall. “Under extremely trying circumstances and with very few resources, Butch and a handful of other employees pulled this train together. [Superintendent of Operations] Jay McArthur, Tommy Farr and APD were also instrumental in making sure that things went smoothly,” he added.

Amtrak’s Mobile Command Center was in Lafayette, ready to facilitate what was anticipated to be ongoing rescue train operations. While the plan was to operate a twice-daily 600-person train from Avondale to

Lafayette, federal authorities suspended the relief train because Texas was no longer accepting evacuees.

“The commitment of the crews that left on the train to McComb is amazing. So many of our employees really stepped up to the plate in very difficult situations,” said Williams.

Assess and Rebuild

At the New Orleans facility, the station and commissary survived the hurricane relatively well, but there was significant damage to the maintenance facility, the diesel shop and various outbuildings. The track structure and bridges were not damaged, but littered with debris.

With APD escort, New Orleans Track and Structures Engineer Russell

Abbott, Manager Engineering Services Steve Haerter and a team of Engineering employees returned to the New Orleans facility the day following the hurricane to assess the damage. They found considerable debris on the tracks, such as several trucks, boats, mattresses and other random items that were left there by the floodwater.

Soon after, the New Orleans maintenance-of-way team was joined by six Engineering department employees from Michigan led by Foreman Terry Burgess with a newly purchased grapple truck, a refrigeration truck stocked with food from the Chicago commissary, boom trucks and other support vehicles including gasoline and diesel tankers and some basic necessities. Four RVs were outfitted to serve as temporary housing for the Engineering crew, as no hotel accommodations were available within 200 miles.

The acquisition of this equipment was accomplished in a single day, thanks to the assistance of Material Control Director Christine Gambriel of the Procurement department. The department also facilitated the quick purchase of 275-gallon potable water tanks, since there were none on the site.

“Our first focus was to clear the tracks and remove an incredible amount of trash that took a team of about 22 people and four days to

Fuel Conservation Practices

continued from page 1

procedures have been established that outline how many locomotives need to be powered up, or on-line, and how many need to be off-line, thereby minimizing fuel use. Based on established fuel usage data, a powered-down GE P-42 DC locomotive can save up to 50 gallons of fuel per hour.

Expanding the territory over which locomotives should be off-line, when conditions permit, also helps save fuel. The System Operations team worked closely with each division to assess the need for locomotive power along each route, and identified a number of routes where this is feasible. For instance, while the *Southwest Chief* departs Chicago with three locomotives, the train only needs two engines to operate between Chicago and La Junta, CO, and from Albuquerque, NM, and Barstow, CA. "So, to reduce fuel consumption, we take one unit off-line over that segment of the route," added Savidge. "But, to pull the train through the Rocky Mountains between La Junta and Albuquerque and again from Barstow to Los Angeles, we need power from all three units."

Updated guidelines on braking have also been developed. Dynamic braking involves the electric traction motors, which act as generators offering resistance to the rotating wheel axle, thereby slowing down the locomotive. This braking method is more fuel

efficient than braking with power applied. Although the application of dynamic braking is up to the discretion of the engineer and is based on the train consist, physical characteristics of the route and other factors, new guidelines for this have been established for certain conditions. For example, a train with one F-59 locomotive and eight cars can save up to 47 gallons of fuel per hour when using dynamic braking.

Amtrak has also revised its policy regarding the amount of time that a powered locomotive sits idling. While the previous policy required a locomotive to be shut off if the layover was expected to be more than two hours, that timeframe has been reduced to one hour. Doing this conserves three to four gallons of fuel per hour.

"While employees are doing their part to reduce energy costs, the railroad is taking advantage of new technology to lower fuel consumption," explained Chief Mechanical Office Vince Nesci. In February, Beech Grove mechanics began installing a new automatic shut-off system in the P-42 locomotives. This system cuts fuel use by automatically shutting down a diesel

engine that is not in use after performing a series of checks and balances. This innovation will have a significant impact on the amount of fuel consumed.

To conserve fuel and reduce emissions at Chicago Union Station, Electricians Frank Somodi and Milton Chaney attach 480-volt electrical cables into the State House's power receptacle to switch from head-end power to ground power.

In addition, technology improvements in new and rebuilt diesel locomotives for yard and work train service, such as those purchased last fiscal year, also cut fuel costs.

Over the past five years, the introduction of high speed trainsets, HHP-8 locomotives and remanufactured AEM-7 A/C locomotives has enabled Amtrak to reduce energy consumption on electric locomotives by 8 percent through the use of the Regenerative

Braking system, which returns electric energy to the catenary system and back to electric power substations, thereby replacing some of the electrical energy consumed.

The railroad has been replacing and remanufacturing aging locomotives with newer more fuel-efficient units since 1993. In late 1999, Amtrak began utilizing electric locomotives on the Northeast Corridor between New Haven to Boston following the completion of electrification of that route.

In addition, Amtrak has received a grant from the South Coast Air Quality Management District in Southern California to retrofit an SW-1200 switch engine with a RailPower Company patented diesel battery hybrid locomotive called the "Green Goat." This hybrid will be used in the Los Angeles Yard and is expected to reduce fuel consumption by over 75 percent and emissions by 80 percent. The engine is expected to be in service by September 2006.

The acquisition of new and remanufactured locomotives as well as new technology will continue to play a key role in energy conservation. But, most important, the skills and knowledge of Amtrak's Mechanical and Transportation department employees in applying the new policies and procedures will be the critical factor in saving energy.

New York Division Staff Breaks Safety Record

"It is an awesome feeling when you are able to make something happen that has never been done before," reflected Assistant Superintendent of Stations Mike Gallagher. "But it is especially gratifying when it means that all of our employees worked safely all year long."

For the first time in Amtrak's history, Sept. 1 marked more than a year with no reportable injuries for the New York Division's Station Services employees, a group that includes red caps, baggagemen, gate ushers, ticket agents and clerks, as well as managers and administrative staff. Comprising more than 230 employees, the group works throughout the New York Division,

including Newark, Stamford, Trenton, the Newark Airport Station, as well as New York Penn

they can deliver high-quality customer service safely.

A safety achievement of this magnitude is particularly satisfying given the FY '04 record of a reportable injury ratio of 4.1 against the division goal of no more than 3.8.

"This past year's results, against a goal of no more than a 3.3 reportable

injury ratio, demonstrates that the division put its collective nose to the grindstone and reversed the downward trend," stated Rich Rubel, station relations specialist for the division.

"It seems obvious to say that communication is the key, but that's the bottom line. Every manager within the department stressed safety and security at every turn, conducting job safety observations and discussing safety issues at job briefings, safety committee meetings and weekly conference calls. We also issue safety bulletins on the importance of performing our tasks properly and safely," added Rubel.

The station's staff also acted proactively to correct problems, such as trip hazards or broken escalators, eliminating reportable injuries stemming from slips, trips and falls — the major cause of injuries in the field.

New York Division Passenger Services employees are recognized for their safety accomplishment — one year with no reportable injuries. Pictured (back row, L to R.) are Sue Santini, Juanita Corners, Selwyn Mark, Karen Robinson, Cathy Ryan, John Roseen, Judith Tyson, Joe DeVito, Mike Gallagher and Keith Wiertz; Front Row: Rich Rubel, Howie Carter, Burt St. Lawrence, Joyce Davis, Claire Cuniff and Cathy Lewis.

Station, which sees 1,200-plus daily train movements. With more than a half-million daily customers in New York Penn Station alone, these seasoned employees are professionals who have shown that

Fall Promotions Bring Cool Savings

To boost ridership and revenue this fall, a number of marketing efforts have been launched across the country.

Students can save on most Amtrak trains though the International Student Identity Card (ISIC) program launched last month. The card earns students a 15-percent discount on train travel anywhere in the system.

The card is carried by five million students and also provides discounts on goods and services worldwide. It can be purchased for \$22 online at myISIC.com and is also available at more than 850 issuing locations, including universities, bookstores and travel agencies.

Free Companion Coupons Offered to Amtrak Cascades Riders

Amtrak *Cascades* travelers do not have to go back to school to take advantage of special savings this year. They may bring along a free companion or child using coupons from Amtrak's Chinook Book promotion. To help stimulate travel aboard Amtrak *Cascades* during off-peak travel times, two coupons — one for a free companion ticket and another for

one child to ride free — are included in the Portland and Seattle editions of the 2005-2006 Chinook Book.

The Chinook Book is a resource guide that contains coupons along with information and discounts on environmentally friendly products and services. The books are available through select distributors in the Seattle and Portland region and may also be purchased online at ChinookBook.net.

Midwest Offers Savings to Passengers

Amtrak is also partnering with Midwest Airlines to offer airline passengers savings on train travel. A free companion coupon was mailed to Midwest Airlines passengers for travel on many Midwest corridor and long-distance trains including the *Ann Rutledge*, *Blue Water*, *California Zephyr*, *Capitol Limited* and *Texas Eagle*. The offer is valid through Dec. 15.

Trains Stop at Local Attractions — To Bring More Riders Aboard

Amtrak makes it easy for football fans to get to the Oakland Raiders home games by taking the Raiders Trains. Starting with the first home game on Oct. 2, certain *San Joaquins* and *Capitol Corridor* trains will offer direct service to

and from most Raiders home games.

Various on-board promotional events will be featured enroute to the game and both trains will stop at the new Oakland Coliseum stop, which is a short walk from the stadium. Raiders Trains game dates are Oct. 2, 16, 23, Nov. 13, 27 and Dec. 18.

On the East Coast, the *Carolinian* will also make a special stop for travelers attending the North Carolina State Fair in Raleigh. Every day from Oct. 14 through Oct. 23, the train will stop at the Blue Ridge Road grade crossing across the street from the main entrance to the fair.

Employees Get Discount on Radio City Christmas Spectacular Tickets

Radio City is offering Amtrak employees special discounts for the 2005 edition of the *Radio City Christmas Spectacular*. Next month, the popular show —

featuring the world-famous Rockettes — is returning to Radio City Music Hall for its 73rd season.

On select non-peak November performances, employees may take advantage of a Buy One Ticket, Get One Free offer and from Dec. 1 through the Jan. 2, employees may save \$7 per ticket for select shows. Full ticket prices range from \$40 to \$70 each.

To obtain discounted tickets, employees may call the Ticketmaster Christmas Hotline at 212-307-1000 or logon to radiocity.com and when prompted, reference the code "1AMTRAK" for tickets to November performances or "2AMTRAK" for December and January shows. Employees may also bring a copy of this article to the Radio City or Madison Square Garden box office or to any Ticketmaster outlet. To receive the discount, employees must mention "1AMTRAK" OR "2AMTRAK" when purchasing tickets.

Bear Employees Host Family Day

Visitors gather to view a model trainset on display at Family Day held at Bear Maintenance Facility. More than 850 people, including employees, their families and friends attended the event at the Wilmington, DE, facility last month. Among the highlights were equipment displays of Amfleet coaches and cab cars, a GP-38 locomotive, the Amtrak Police Department Mobile Command Center and maintenance-of-way equipment.

Hurricane Katrina Tests Gulf Coast Resilience

continued from page 7

accomplish,” said Dave Klouda, division engineer.

The next challenge was getting the signal system up and running, for which Chicago-based Project Engineer Troy Mason provided the technical support. The electronic components in the switch machines were flooded and needed to be replaced, as well as some minor components in the signal cases. Standby batteries, which had also been flooded, needed changing. Repairs to the maintenance and coach yard buildings’ roofs were made.

Making certain not to put employees in harm’s way, Amtrak’s Environmental, Health and Safety department employees were also on hand to ensure the safety of employees and to check the water on the site. In addition, anyone on the site had to be properly immunized. When it was called for, the Engineering team was protected with gloves, Tyvek® suits (one-piece protective clothing) and respirators.

A locomotive was kept on site to power the station, which was being used by the Louisiana Department of Corrections to process and hold prisoners on a temporary basis. The station also served as administrative offices and the administrative building became sleeping quarters for Department of Corrections employees.

The commissary was also put to use by the Department of Corrections.

Much of the frozen food was used to feed law enforcement officials and over 300 inmates, with the help

Los Angeles Baggageman James Carver loads pallets of boxed items containing employee contributions for employees affected by Hurricane Katrina aboard an Express car headed for Texas.

of freezer trucks supplied by the Department of Corrections. This was done in an organized fashion, keeping track of the food count. Making the best of a difficult situation, New Orleans Food and Beverage Manager Alan Mnichowski took the opportunity to fully sanitize and clean all the refrigerators.

Groundswell of Support

The week following Katrina’s arrival, Amtrak organized a drive to transport donated essential items from employees all over the system for employees affected by the hurri-

was managed by each general superintendent in 12 different Amtrak locations where items were loaded: Baltimore, Boston, Chicago, Los Angeles, New Haven, New York, Oakland, Philadelphia, Portland, Sacramento, Seattle and Washington.

On the week of Sept. 12, a train carrying two Express cars — inside of which two tractor trailers can fit — loaded with personal hygiene and grooming items; school supplies; and mens’, womens’ and childrens’ clothing, as well as infants’ and toddlers’ clothing and supplies from employees on the West Coast made its way to the Houston station for distribution.

“There are no phones, no water, no food, no fuel...nothing in our lifetime compares to what has taken place...”

J.D. Wall

General Superintendent

The cars were put together to form a special train with the help of the UP to Houston.

There, the station served as a staging ground for employees, where a group of volunteers

unloaded the cars and managed the distribution of the items in Houston and to other locations.

At press time, two other baggage cars filled with items from East Coast locations were slated to leave Chicago on the route of the *City of New Orleans*, once the track is open.

“These cars went across the Amtrak

system, giving many employees an opportunity to donate to the

employees affected,” said Southwest Division Assistant Superintendent for Passenger Services Joy Smith, who previously managed the New Orleans area.

Local Efforts

All divisions and departments came together to support the victims of Katrina and surely will continue to do so in the coming weeks and months. From a two-day bake sale at Philadelphia’s 30th Street Station, to feeding passengers who were put on train 20 in Meridian, MS, by FEMA, to collections taken for employees transferring to new jobs across the system, the outpouring of generosity and compassion abounded.

Central Division employees helped co-workers who were in need of temporary housing and provided employees three new sets of

uniforms. Others volunteered to staff the Greater Chicagoland Chapter of the American Red Cross call center. And Chicago’s Brighton Park took on the maintenance of equipment that would normally be serviced in New Orleans.

In Seattle, all of the employees who had transferred there were being contacted to determine what their needs were and were provided donations of money, clothing, toys and other items. Pacific Division Superintendent Kurt Laird noted, “They are part of our Amtrak family and the important thing is that we are here for them.”

While each Amtrak division has its own set of challenges, the Southern Division faces annual battles with the hurricane season. Hurricane Katrina was obviously of epic and overwhelming proportions.

“We had employees whose homes were destroyed and who were worried about their families, doing their part to help others while working around the clock. We pulled it together, competently and safely, in extremely trying times and, for that, I am thankful and very proud of our employees,” said Southern Division General Superintendent Wall.

At the New Orleans Yard, North Wye Junction is overrun by floodwater and debris. The roof of the Superdome, half of which had been blown off, is visible in the background.

Safety Fairs Bring Resources to Employees

In an effort to promote health and safety awareness, the Engineering and Transportation departments hosted four health safety fairs over the summer.

The largest event was held at New York Penn Station in September, while Albany Station, Sunnyside Yard and the Adams Maintenance-of-Way Base each held their safety

fairs in June, July and August, respectively.

A vendor participating in New York's Penn Station safety fair answers an employee's questions.

On hand at these fairs was a variety of safety equipment vendors, healthcare professionals and employee benefits representatives who provided information, gave demonstrations and answered employees' questions.

Vendors represented at the some of the events included safety shoe and glasses manufacturers, while health care professionals at various locations provided blood pressure screenings and massages. Optometrists, chiropractors, podiatrists and dentists were also on hand to answer questions and

provide demonstrations. Additionally, employee benefits representatives participating in some of the events included the Railroad Retirement Board, Vanguard and Amtrak Benefits. In addition, the Alzheimer's Association and the American Cancer Society were represented at the New York Safety Fair.

Given the large number of attendees at each event and the positive feedback received by the coordinators, the safety fairs provided valuable resources for many employees.

Empire Builder Collage Correction:

The September issue of *Amtrak Ink* carried the wrong photograph of the *Empire Builder* launch with the caption below. The photo reprinted here corresponds to the published caption. *Amtrak Ink* regrets the error.

Gay Banks Olson, assistant superintendent Passenger Service and Dan Engstrom, operations supervisor(center), confer about the day's schedule with the master of ceremonies Lloyd Flem, executive director of the Washington Association of Rail Passengers, before the event at Seattle's King Street Station.

Diner Light Correction:

In the *Smoker Lounge Turns Diner Light* story published in last month's issue of *Amtrak Ink*, the caption incorrectly described the work being performed by Car Repairman Cliff Bailey and Sheet-metal Worker Jim Campbell. The mechanics were checking the size and location of the mock-up shelf, rather than determining the size and location of the shelf. The shelf was designed and built by Industrial Designers Chris Rowe and Nafie Nafie.

FRONT LINE FOCUS

Dear Amtrak:

We are writing this letter to apprise you of a very pleasant experience we have had on your Amtrak as a result of the friendly and cheerful assistance of your conductor, Barbara Aylward on our trip to and from BWI.

My companion, John, who is blind, and I, were intercepted upon arrival on board the train at Penn Station by Barbara, who searched for and found very comfortable seating for us. She assisted my friend in placing his luggage overhead, and in retrieving it upon arrival at BWI. She was also very instrumental in making John's exit from the train an easy one.

Upon our return from BWI, John was obliged to leave the train in Newark. Barbara escorted him to the elevator at the Newark station, and since she had called ahead for the services of a red cap, offered to wait with John for his arrival. Since this was not necessary, she then returned to the train.

We hope our commendation will help to make you aware of Barbara as an outstanding employee.

Sincerely,
Paula T. and John D.
Irvington, NY

Dear Amtrak:

Please acknowledge my written commendation of Dining Crew 7 [Gregory Rowe, lead service attendant and Ignacio Muniz, Michael Provost and Juan Sahagun service attendants] as a passenger traveling the Amtrak *Southwest Chief*, Chicago to Los Angeles.

I have enjoyed the long awaited trip immensely, however, it is the excellence of Mr. Rowe and his crew that has added to the remarkable impression Amtrak travel now has in my repertoire.

My many thanks and in order:
Congratulations Crew 7!

Please take time to recognize the achievement of these individuals who tirelessly, professionally, with courteous and amiable service, give Amtrak train travel a good name.

Thank you for receiving my commendation and continuing the American travel experience by train to be enjoyable and rewarding.

Sincerely,
Jennifer T.
Washington, D.C.

P.S. [Sleeping Car] Attendant Simon Gonzales has also been wonderful on this leg of track on my Amtrak journey. Thanks!

Keystone Corridor Improvements Yield Higher Speeds

The launch of faster, more reliable and comfortable service on the 105-mile route between Philadelphia and Harrisburg is on target for fall 2006, according to Amtrak Engineering department officials. All-electric service on the Keystone Line and speeds of up to 110 mph between Paoli and Harrisburg are expected to reduce trip times to 105 minutes for local trains and 90 minutes for express trains, from 120 minutes today.

Since first unveiled by Pennsylvania Gov. Ed Rendell and Amtrak President David Gunn in August 2004, the \$145-million project's list of accomplishments continues to grow. Infrastructure improvements completed earlier this year now support speeds of up to 110 mph on parts of the 50-mile segment of the track between Park Interlocking in Lancaster and Roy Interlocking in Royalton.

As a result of this work, on-time performance improved 8 to 10 percent over the nine-month period ending June 30, against the same period a year ago.

Over the past 16 months, the line has seen the installation of 128,000 concrete ties and 47,000 wood ties, replacement of rail and surfacing over 72 track miles, replacement of 28 turnouts and seven bridge

decks, upgrading of 12 bridges five culverts and three retaining walls, renewal of over 14 miles of catenary wire and installation of more than 20 miles of new signal cable.

The concrete ties loaded on the distribution gantry of the Track Laying Machine make up some of the 128,000 ties laid on the Keystone Corridor over the course of 16 months.

Ride quality has changed for the better due to the installation of welded rail over concrete ties and high quality ballasting and surfacing to achieve the best track geometry. Also, special attention was given to drainage systems to eliminate water problems and the

development of soft ground conditions.

As a major part of the infrastructure upgrade, extensive cleanup of the right-of-way yielded over 164

major interlockings, Roy and Lancaster; rebuilding of the track layout at the Lancaster station to provide more operational flexibility (separating freight and

passenger operations); and the installation of automatic block signals that enable bi-directional movement of trains.

Also this year, ongoing installation of a fiber optic system along the corridor will support high-speed communication between central control in Philadelphia, interlockings, power substations, the signal system, stations and railroad radio bases along the Keystone corridor. Amtrak has invested \$2.3 million to replace the 70-year-old communication

system, worn-out from age and weather. The system facilitates communication essential for improved trip time, reliability, centralized dispatching and other telecommunication needs.

Shorter trip times and a more

continued on page 9

FY '05 Closes Out Third Consecutive Year of Record Ridership

Marking the third straight year of ridership gains, Amtrak carried 25.4 million passengers in FY '05, despite service disruptions that included major hurricanes in the South and over five months without full *Acela Express* service in the Northeast.

Total ridership for last fiscal year exceeded FY '04's total of 25.1 million by 1 percent. Year-end ticket revenues totaled nearly

\$1.25 billion, 1 percent below FY '04.

The increase in ridership is attributable to a number of factors, including the growth of short-distance trains like the *Regionals*, *Keystones* and state-supported trains in the West and Midwest.

Ticket revenues, however, were slowed by the combined impact of the mid-year suspension of *Acela Express* service and the suspension

of service to and from the Gulf Coast due to Hurricane Katrina and the California mudslides in January and February. Additionally, CSX track work near Rocky Mount, N.C., earlier this year, a weak job market and the airlines' aggressive under-pricing also contributed to suppressing ridership and revenue.

Regional Service Drives NEC Increases

In FY '05, the combination of the major Northeast Corridor services — *Acela Express*, *Metroliners* and *Regionals* — carried 9,476,923 passengers, an increase of 1 percent over FY '04. Sept. 14 marked the first day of full *Acela Express* service, running 14 roundtrips between Washington and New

continued on page 3

TRAIN OF THOUGHT

I have just returned from what has become my annual President’s Service and Safety Awards trip across the country. I can tell you that I draw strength from these trips, which give me an opportunity to meet many of you and see our facilities.

Chicago Union Station really looks good. The new lounge is a big improvement, plus the ticket counter and office space has been redone since my last visit. Our people seemed happy with the improvements. The Chicago Yards are looking good with all the track work that has been done: new turnouts, rail and ties.

Beech Grove continues to impress me. The shops are quite busy as you know. FYI, any Superliner with the new logo has been to the shop for some work ranging from relatively minor repairs to a complete remanufacture.

The *Empire Builder* project has been successful. Ridership and revenue have been strong. Comparing September FY ’05 with September FY ’04, ridership is up 13.89 percent and revenue is up 22.4 percent. So far, the fall lull has hardly occurred. Our strategy appears to be working.

The next train to be upgraded will be the *Zephyr*, trains 5 and 6.

Being an old AT&SF man, I wanted trains 3 and 4 to be next, but I was outvoted. Trains 3 and 4 will be done in FY ’07.

On this trip train 11 was re-routed over the Tehachapi Loop as a result of track work on the coast route. I had not been on that line since I was in the Navy in 1959-62. The Union Pacific gave us a great ride and helped us reposition some equipment. Rail fans were everywhere and the train was well-patronized. We left Sacramento after 7 a.m. and arrived in Los Angeles at 5 p.m.

As most of you know, on these long trips, we take the Beech Grove. We slept in the Indianapolis Depot, Chicago Union Station, the Seattle Yards, and Los Angeles Union Station.

During much of the trip, we have six to eight people for meals. The table seats eight. As the chef, I was kept busy. We used commissary food for the most part and returned to Washington, D.C., with very little food left, i.e. no waste. The quality of our commissary food is quite good, I think.

My hat’s off to our dining car crews preparing food and doing dishes at 79 mph, especially on

David L. Gunn

rough track. Remember, don’t fill the sink too full or you will be wearing it (the dishwasher).

In closing, let me tell you how humbling it is to meet so many 30-year veterans. By a quirk of fate — having been here just over three years — I am the one thanking them for 30 years of service to this company.

Thirty years of service to one company is a rarity these days. It’s nice to see that sort of commitment. Railroading is different from many professions. It’s more demanding and more rewarding.

The people who achieve 30 years or more tend to exhibit a quiet confidence knowing that they have spent their careers doing something worthwhile. We are really quite fortunate.

Tampers Speed Track Work on Busy Corridor

The Engineering department is putting to work two new pieces of roadway maintenance machinery — DYNA-C.A.T. tampers — on the Keystone Corridor this winter. Because conventional tamping requires two machines that operate and move separately, the new equipment reduces the time it takes to do the job and the associated costs and returns track to service more quickly.

The DYNA-C.A.T. machine combines two technologies pioneered by Plasser American Corporation. The machine merges the technology of a Dynamic track stabilizer, a machine that uses vibration and downward pressure

to simulate the passage of trains over a section of track, with a Continuous Action Tamper, which is a computer-controlled 16-tool switch tamper that raises, lines and levels the track structure to precise standards.

The new tampers in service will make way for the retirement of older track machinery that will no longer cost the company money to repair.

Amtrak’s Plasser American DYNA-C.A.T. tamper sits in the south end yard at Wilmington Mechanical Facility, where it is stored during the day. It is currently used at night on the Keystone Corridor.

Third Consecutive Year of Record Ridership

continued from page 1

York and eight roundtrips between New York and Boston.

In FY '05, *Regional* ridership topped seven million passengers, 10 percent more than last year. Revenues of \$363 million grew 13 percent over last year. The New York to Harrisburg, Penn., *Keystones* topped one million passengers, up 19 percent over last year. Revenues increased 28 percent over last year, contributing \$25.5 million in FY '05.

The *Share Fares* program launched in February boosted ridership and ticket revenue. Available on the *Regional*, *Keystone* (between New York and Philadelphia), *Downeaster*, *Empire*, *Ethan Allen*, *Maple Leaf* and *Vermont* services, the promotion accounted for \$2.9 million and nearly 91,000

trips through the end of the fiscal year.

Fuel Prices Give a Boost

Driven in part by travelers' reactions to the rise in fuel costs later in the year, ridership and revenue showed marked increases on corridor trains, including those in the Midwest. The Chicago to Milwaukee *Hiawatha* trains

Wolverines was up 11 percent and 16 percent; the *Blue Water* rose 18 percent and 21 percent; and the *Pere Marquette* grew 10 percent and 11 percent.

West Coast Highlights

In California, the *Pacific Surfliner* service carried 2.5 million passengers, an increase of 7.5 percent over last year. Revenues totaling

Long-distance Growth

Ridership along the long-distance routes rose 1 percent in FY '05, while ticket revenues of \$336 million posted gains of 1 percent over last year.

Significant increases were seen on the *Empire Builder* route, which carried 9 percent more passengers than last year. Ticket revenues were up 8 percent over last year.

Of particular note were the September results for the *Empire Builder*. Following the August launch of refurbished service, ridership surpassed September 2004 by 14 percent. Ticket revenues in September

exceeded last year by 22 percent. At press time, future bookings on the *Empire Builder* were strong and ahead of last year through December.

Ridership and Ticket Revenue for Fiscal Year 2005			
Fiscal Year 2005	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	25,053,564	25,732,437	25,374,998
Ticket Revenue	\$1,256,424,267	\$1,314,825,909	\$1,248,751,435
Month of September	FY '04/Actual	FY '05/Budget	FY '05/Actual
Ridership	1,918,766	2,000,458	2,077,279
Ticket Revenue	\$94,112,173	\$103,435,026	\$105,532,965

exceeded the half-million mark with 525,000 passengers, 14 percent more than last year; ticket revenue rose 11 percent over last year.

All three Michigan routes showed notable increases over FY '04. Ridership and revenue aboard the

\$37 million exceeded last year by 7 percent.

Capitol Corridor service had more than 1.3 million riders, a gain of 8 percent over last year. Ticket revenues rose 17 percent above FY '04.

Track Speeds Increase in Michigan

Trains Exceed 90 mph Outside of Northeast – First Time In Recent History

Amtrak trains in Michigan began operating at speeds of up to 95 mph this fall under a project that — when completed next year — will inaugurate 110 mph service in the Wolverine state.

On Sept. 19, trains traveling over three sections of track totaling 37.5 miles between Niles and Kalamazoo, began operating at 95 miles per hour as part of the Incremental Train Control System (ITCS), marking the first time in over 20 years that Amtrak trains outside of the Northeast Corridor traveled at speeds over 90 mph.

As a result of the Michigan ITCS program — a partnership started five years ago between Amtrak, the state of Michigan, the Federal Railroad Administration, and General Electric Transportation Systems — speeds on the route are slated to increase up to 110 mph in 2006.

“In 2002, speeds were increased from 79 mph to 90 mph and in 2005, speeds reached 95 mph along this line. In 2006, we expect trains on this corridor to operate at speeds of up to 110 mph, but testing of alternative radio systems

and expansion of the system will continue for years to come,” explained Division Engineer Dave Klouda.

ITCS is a signal system that transmits data via radiowave from micro-processors along a route to processors inside the locomotives. This system continuously provides updated information to the locomotive engineer on the conditions ahead that impact the operation of the train.

In addition to enabling faster train speeds, the system enhances grade-crossing safety, provides train speed enforcement, on-track worker protection and prevents train-to-train collisions.

“In many respects, grade-crossing safety is one of the most critical components of the ITCS program. For trains to reach these high

speeds, fail-safe and advance warnings for motorists at grade crossings are required, and that’s what the ITCS system provides,” stated

“In 2006, we expect trains on this corridor to operate at speeds of up to 110 mph.”

Dave Klouda
Division Engineer

ITCS Communications and Signal Engineer Robert Lotsbaich.

ITCS enables each crossing to receive radio signals from the locomotive informing it that a high-speed train is approaching.

“The system tells the crossings how fast the train is traveling and at what point to activate the devices to allow at least 20 seconds of warning to oncoming traffic,” added Assistant Division Engineer Rodney Pena.

While the recent increase to 95 mph won’t reflect a change in the public timetable, passengers aboard the *Wolverines* and the *Blue Water* have been enjoying shorter trip times and better reliability since the program began.

“We hope to improve the timetable even more as we approach our goal of 110 mph in 2006,” noted Pena.

“Amtrak’s ITCS is the first of its kind in the

world,” stated Senior Director, Corridor Development Michael Franke. “Visitors from China, India and Iraq have come to Michigan to tour our high-speed operations.”

China recently purchased the technology for installation on a new rail route being constructed in Tibet.

Observations From New Orleans

Editor’s Note: The following column from Senior Vice President of Operations Bill Crosbie describes his visit to New Orleans following the hurricanes that hit the Gulf Coast.

As I write this, our Silver Service trains are not yet operating south of Orlando, Fla., — and may not for another few weeks — as a result of the damage that Hurricane Wilma caused. There’s still no power at Hialeah and the condition of the railroad in southern Florida is pretty bad.

Before Wilma, came Rita and before that, of course, was Hurricane Katrina. This hurricane season is one that will go down in history, and we will all be pleased to see it come to an end.

Last month, I visited New Orleans to get a first-hand account of the condition of our facilities and to talk to some of the employees who had returned to work there following the damage from Katrina. I want to share with you some thoughts from my experience.

First, I should say that I am inspired by the tenacity and the dedication of our employees. Some of them have lost everything and are juggling trying to find a place to live, rebuilding their homes, having kids in schools outside of New Orleans, dealing with insurance claims and other issues, along with work.

Naturally, there were some employees who had chosen to not return or to transfer to other Amtrak locations and others still who were making their way back to New Orleans. But all of the departments represented in New Orleans are on their way back up to speed.

While the degree to which people have suffered from the catastrophe varies, there seems to be a unified desire for getting things back to normal and, for some employees, work is the closest thing to that.

The closer we get back to regular operations to and from New Orleans, the more stability we can offer our employees there. As you know by now, we resumed Crescent and City of New Orleans service in early October and Sunset Limited service will start again on Nov. 4. And some of our on-board service crews have returned to service aboard the City of New Orleans, starting Nov. 1.

Right after the hurricane, there was a fair amount of work to do at our facility in New Orleans. The coach yard building’s roof had to be repaired.

The Louisiana Department of Corrections, which had used the station and other buildings for a range of purposes, vacated the premises mid-October. There are some repairs that need to be made to the station, but it’s looking better with every passing day.

Part of the diesel shop had been occupied by hundreds of people looking for dry ground. The pits had flooded and the drop table, which dates back to before the 1950s, had to be removed and repaired because the mechanism was damaged after having been submerged in water for days — this was no easy task. Today the drop table is functioning again.

Employees from the Engineering department, including from New Orleans and others from Michigan and Chicago did an exceptional job of clearing the debris (crews filled six dumpsters a day for a week), making repairs to C & S equipment, and making basic repairs to some of the buildings (a lot of the doors and locks had been damaged), among other things.

While the plant and equipment has rebounded, for many of our employees, this event is far from over. I met employees whose homes were totally destroyed. One employee who lived in Mississippi had 30-feet of water in his yard and the home he’s been slowly building for retirement is ruined. He and his family have been staying with friends and family across the region. “I just want normalcy,” he said.

Another employee told me that she worked out of Chicago for a couple of weeks until she could return to New Orleans. She had a hole in her roof — minor damage compared to what some others suffered — but she is far from her children, who are now enrolled in school in Chicago.

One employee who chose to ride out the storm shared his experiences guarding his home from looters and helping his elderly neighbors who had nowhere to go — he had no running water for two weeks and no electricity for 30 days.

An employee who told me, “My desk is the only thing in my life that has not changed,” lost her home and most of her possessions. After some time with family in Houston, she is back at work, while trying to rebuild her life. As she put it, “I miss my guys,” referring to the employees she works with.

While it may sound trite, the things most of us take for granted are not available or in limited supply in New Orleans. “Everything you do now — if it took 5 minutes before — takes an hour now,” another employee told me. Buying a hamburger at one of the few open fast food restaurants now takes almost two hours to get through the drive-thru.

Because of the shortage of places to eat, the Southern Division set up a dining car to feed employees. Two of the four cars loaded with items contributed by employees were brought to New Orleans (the other two were unloaded in Houston) and distributed to employees.

Many employees want to come back to work, but the biggest challenge is finding a place to stay. Not only is there a lack of apartments or temporary housing, but also rent and the prices of homes have escalated exponentially.

Along with these stories, there are countless others. I wanted to share them with you because they remind us all that we are part of a larger Amtrak family and these circumstances are extremely trying for our co-workers — it’s difficult to comprehend the depth and breadth of the obstacles they face.

I hope you’ll join me in supporting our co-workers by contributing to the Employee Relief Fund. We’re also looking into other ways that employees may be able to help other Amtrak employees. I’ll keep you up to date on anything that has been identified.

Give New Orleans Co-workers a Helping Hand

To make a contribution to the Amtrak Employee Relief Fund, please do so through payroll deduction or by sending a check by Dec. 31, 2005.

Donations may be made through payroll deduction by filling out form NRPC 3238, Amtrak Relief Fund Payroll Deduction Form, which is found on the Intranet home page under “Library,” then “Forms.” Forms are also available in HR offices. Employees may donate a one-time amount or chose an amount to be deducted from each paycheck until the designated amount is reached.

Checks should be made payable to the National Railroad Passenger Corporation (Amtrak) Employee Relief Fund and sent to P.O. Box 533126, Atlanta, GA, 30353-3126.

An Amtrak committee headed by Gerri Mason Hall, vice president, Business Diversity and Strategic Initiatives, will direct the distribution of funds to Amtrak employees who have been impacted by Hurricane Katrina. Details on how employees may apply for financial assistance from the fund will be announced.

Amtrak Police Department Detective Sam Bell debriefs Senior Vice President Operations Bill Crosbie on the state of the security of Amtrak facilities in New Orleans.

Successful Contract Operation Continues at Coaster Commuter Service

Amtrak achieved a 99.2 percent on-time performance in FY '05 for the more than 6,000 trains it operated under contract for the Oceanside - San Diego Coaster Commuter Service owned by San Diego's North County Transit District in California.

More than 1.5 million passengers rode Coaster in FY '05, an increase of 9 percent over FY '04. Of these, nearly 83,000 used the Amtrak/Coaster Rail 2 Rail pass permitting travel on either service.

Amtrak has operated the Coaster since its inception in February 1995, and is currently working under a five-year, \$7 million fixed-price contract that ends on June 30, 2006. Under contract, Amtrak provides Train and Engine crews, Engineering gangs and maintenance of the

"Maintaining this right-of-way is no small task," said Joe Yannuzzi, Amtrak's superintendent of

undertook a major project rehabilitating five large grade crossings along the SDNR.

Track and Signal crews remove the old turnout at CP Ponto in Oceanside, Calif. Six endloaders and one excavator were used to remove and replace pre-built panels, and new signal cables were installed throughout the turnout. As a result of the replacement, trains can change tracks at 60 mph instead of 40 mph.

Commuter Operations for the Coaster. "Our maintenance-of-way gangs readily and safely step up to perform tasks above and

"Our gangs removed five existing street crossings and replaced ties, rail, subgrade and ballast and replaced with new subgrade, ballast, ties and concrete panels to

Throughout the year, the maintenance-of-way gang has upgraded the SDNR while providing emergency repairs to bridges and restoring track and signal structures because of storm damage and freight derailments.

For example, the group rehabilitated a major wye complex involving the complete reconstruction of five switches, the changing one-quarter mile of new rail, and the replacement of 3,000 new wood and concrete ties. Two new turnouts were constructed at CP Ponto and CP Cumbres to ease congestion. A signage renewal program was completed along the right-of-way.

In addition, the gang supervised and assisted in the construction of six new pedestrian crossover installations. Also, three miles of concrete tie-pads, clips and insulators were replaced where needed. Again, the SDNR was always kept open during construction.

Currently, a 10-member crew from the maintenance-of-way gang is changing out 1,500 wood ties along a two-mile stretch of railroad on the Del Mar bluffs. The \$200,000 project is being done at night to keep the busy rail line open. The crew averages 100 ties per night in its four-hour work window and plans to complete the project by Nov. 7.

Amtrak Coaster employees can be proud of their work along the SDNR — Train and Engine employees have worked over five years without an operating rule violation.

"Amtrak Coaster gangs kept the SDNR open while working to repair damage from storms and improve the corridor for the four railroads operating over this busy track."

Joe Yannuzzi
Superintendent of Coaster Commuter Operations

entire right-of-way as well as material control and administration. Amtrak also manages a sub-contractor for equipment maintenance.

The Coaster route runs along 60.2 miles of some of the most scenic real estate in Southern California — the second busiest corridor in the nation. The San Diego Northern Railway (SDNR) main line single track supports a maximum authorized train speed of up to 90 mph through eight communities between Oceanside and San Diego. This segment contains an additional 26.9 miles of multiple main and passing tracks through one of the most highly sensitive environmental areas along the Southern Pacific Coast.

beyond regular maintenance and signal work. Especially with all of this year's weather conditions causing other railroads to close down, the Amtrak Coaster gangs kept the SDNR open while working to repair damage from storms and improve the corridor for the four railroads operating over this busy track." Coaster, Amtrak, Metrolink, and BNSF railroads use the single-track corridor on a daily basis.

Led by Track and Structures Senior Engineer Sy Morales, the Engineering group consists of 25 Amtrak employees who work around the clock to ensure the right-of-way is maintained to the highest standards. Most recently the maintenance-of-way gang

ensure a smooth approach for the train and a easy transition for cars," said Morales.

For the January issue: December 5, 2005

For the February issue: January 6, 2006

Dear Amtrak Co-workers,

As we enter into the second month of the fiscal year, I'd like to tell you a little about the plans for the Mid-Atlantic Mechanical department. But first, I want give you a glimpse of some of the strides we made and challenges we faced in FY '05.

Let me start by saying I cannot adequately express the pride I feel for the hard work and "can-do" attitude our Mechanical employees exhibit. Because of the nature of our work, rarely do our employees get a chance to talk to passengers and hear their comments. But believe me, we know the customers care! So, if I could speak for the millions of customers that have enjoyed the fruit of our labor, I'm sure they would say thank you to the employees who work behind the scenes to provide safe, clean and reliable service.

I also want to take this opportunity to recognize Mechanical's President's Service and Safety Awards recipients for a job well done! Lead Machinist Robert Lear was recognized for achieving Sustained Excellence over his career, and Clerk Typist Shirley Howard received the Achievement award for developing a database that allows the department to closely monitor employees' records — all at one glance. When information becomes available for next year's award program, I urge each and every Amtrak employee to support your department by nominating your co-workers or yourself.

I'd also like to briefly mention our employees' safety achievement. While performing their day-to-day tasks, the Mid-Atlantic Mechanical employees continue to maintain a constant focus on safety. A little over a year ago, we set an ambitious safety goal for FY '05 to reduce the number of injuries from 4.9 for every 200,000 man-hours (which we had in FY '04) to 4.2. Well, I am proud to say, not only did we reach our goal — we exceeded it with a ratio of 3.5. I want to thank our employees for this accomplishment and encourage them to keep up the good work in FY '06 and keep safety first.

Now to give you a little more insight into what's been happening in our shops located in Washington, D.C., at Ivy City and in Philadelphia, I'll share a few of the highlights. Over the summer, when Acela Express service was suspended, our Mechanical employees pulled together and displayed enormous flexibility and teamwork to get the equipment back in service. To ensure that there was adequate seating capacity during this time, we assumed maintenance for 12 extra train-sets that were pulled from storage and from our partnering divisions. We also relied on the work performed by the High Speed Rail employees who helped service the substitute equipment and maintain on-time performance.

Additionally, to maintain the reliability of our Amfleet equipment, our Philadelphia employees contributed to the effort by installing new HVAC controls and disaster lighting upgrades on much of our Amfleet equipment — they upgraded 18 cars in a two-month period.

And, because of the cooperative efforts of the Mechanical department, Transportation and CNOC, we managed to maintain the Acela schedules and also improve the condition of our fleet. Thanks to the efforts and ingenuity of our employees, our customers stayed with us. In business, there is no more important measure.

We also recognize the necessity of monitoring and maintaining quality assurance. Therefore, the Mid-Atlantic Division enhanced its riding program, which calls for highly skilled car and locomotive technicians to ride the train and provide accurate and timely information to correct any problems that occur over the road. This technical support helps collect the information necessary to maintain the fleet and to sustain the required level of service.

In addition to our core work, we have made positive steps in maintaining and modernizing our facility. Since we purchased a new wheel truing machine last year, we have had a reliable source for truing wheels on cars and locomotives that consistently provides passengers with improved ride quality. Since the machine has been in use, we are

averaging approximately 250 wheels cut per month. This machine provides quality finish cuts due to the new design of the cutter heads and it's equipped with convenient computer controls that give the operator the benefit of a faster set-up time to true wheels. Its automatic lube system is another enhancement over the replaced equipment. Overall, the wheel true machine reduces the maintenance time and returns the equipment back to service faster.

Additionally, due to the reliability of the new material lift tables on the preventive maintenance line, we are saving time and improving efficiency every day by ensuring materials and supplies are accessible for employees at their work locations.

I'm also pleased to report that we will soon utilize our Senova Press, installed last year, which helps ensure that the trucks are level and balanced. I expect this critical piece of equipment to pay dividends in the future by allowing us to more efficiently rebuild equipment and repair trucks for high-horse-powered locomotives, power cars and coaches and return the equipment to revenue service more expeditiously.

As you probably know, we are awaiting the approval of our FY '06 budget request. However, the Continuing Resolution allows us to keep working based on last year's funding levels. Therefore, we are moving forward on a number of projects.

First, we intend to replace our sand distribution system used to supply locomotives with sand that provides added traction in inclement weather. Additionally, our current turntable is inoperable; thus, we are comparing the cost effectiveness of overhauling it or replacing it new. This table is a vital part of our operation because it allows us to save time and manpower by turning locomotives around instead of sending them around the wye for outbound service. As this is being written, we are also replacing our worn and outdated lift tables that enable us to change individual wheel sets or trucks on cars in Washington.

In addition to the above, we hope to make security improvements to our facilities and employee tool lockers.

Another upcoming key initiative for the Mid-Atlantic Division is to install a waste dump station for electric locomotives at the Annex motor pit at the Ivy City maintenance facility, which will allow multiple units to dump waste materials without spillage. This enhancement will help us improve the cleanliness of the cab, which is an FRA requirement.

In closing, I can assure you our efforts to run the best mechanical facility in the country will be unrelenting. I expect this fiscal year, like the last, to be a challenge. However, with continued excellence from our Mechanical forces and tremendous support from the Mid-Atlantic team, I am confident FY '06 will also be a success.

Sincerely,

*Michael Kapela
Master Mechanic
Mid-Atlantic Division*

Environmental Review Essential Ingredient of Workplace Safety

During routine testing of materials last spring, air brake shop employees at the Bear Maintenance Facility detected elevated levels of cadmium — a naturally occurring element with potentially toxic effects — in sludge and wastewater samples taken from a machine used to wash air brake components. This quickly became a situation calling for sleuthing by environmental specialists and Bear employees.

Because some Amtrak jobs require that employees work with hazardous materials, the railroad relies on the know-how of environmental coordinators, adherence to federal and other regulations, and collaboration among departments to effectively manage the use of potentially toxic materials in the workplace.

Federal environmental regulations require that the sludge and resulting wastewater be tested for hazardous materials. If it is determined that the wastewater exceeds discharge standards, it must be disposed of according to environmental regulations.

Using the Environmental Review Process, which is similar to a Job Safety Analysis, environmental personnel at Bear immediately investigated the possible causes for the elevated cadmium concentration beginning with a comprehensive review of the chemicals used in the shop for parts lubrication.

Following the lead of local Environmental Coordinator Robert Brooks, members of the air brake shop, Car Repairmen Al Lewis and Steve Baker, examined the products being used in the

washing process that might have contributed to the cadmium readings. After identifying each product, they cross-referenced its material safety data sheet for the presence of cadmium and, finding none, they investigated other sources of contamination.

After discovering several painted valves that had been supplied by a vendor, samples of the paint were sent for chemical analysis. The results revealed that the paint contained 0.005 percent, or 50 parts per million, cadmium.

Amtrak's Procurement department contacted the valve vendor, which agreed to modify the painting process to remove the cadmium. As a result, the valves currently being received are no longer coated with paint that contains cadmium.

To test whether the cadmium could have become airborne, Superintendent Danny McFadden and Assistant Superintendent Ed Hill requested that the air be monitored for cadmium. The results of the testing indicated the working environment was below the permissible exposure limit for cadmium set by the U.S. Occupational Safety and Health Administration (OSHA) and there was no evidence of any potential hazardous material exposures.

“What took place at Bear is a great example not only of the importance of the routine testing we do, but also how vital training and collaboration is to ensure a safe workplace, particularly for health of those employees who must work are around a range of potentially harmful chemicals,” said Brooks.

Conference Focuses On Security

Amtrak's Security and Police department and other law enforcement professionals gathered recently to examine the state of the industry at the International Association of Chiefs of Police (IACP) 112th Annual Conference and Exposition in Miami.

Of special interest to Amtrak officials in attendance was the wide variety of workshops on issues ranging from suicide bombings and “commanding the scene,” to privacy issues and the use of surveillance cameras.

Amtrak officials joined more than 14,000 participants attending the in-depth seminars, forums and technical workshops that focused on critical issues and solutions. For the Amtrak representatives, the sessions were a unique opportunity to engage in dialogue with scores of other law enforcement professionals. In addition to participating in the workshops, Amtrak representatives attended committee meetings and discussed joint security initiatives, all with an eye toward continuing to improve upon Amtrak's security measures.

Other conference attendees included local, state and federal department heads, as well as railroad, transit and ground transportation law enforcement and security executives.

Passenger Train Service Returns to Downtown Greensboro

Train service returned to downtown Greensboro, N.C., in October following major renovation of the historic building by the North Carolina Department of Transportation (NCDOT). The *Carolinian*, *Piedmont* and the *Crescent* now stop at this station, rather than a much smaller station in the Norfolk Southern freight yard a few miles away.

Extensive track work, tunnels that needed rebuilding and significant building restoration made this one of the more extensive station restoration projects in the state. The two-part, \$30-million renovation transformed the 1927 Southern Railway train station into a multi-modal transportation center with provisions for Amtrak, intercity

buses and city and regional transit buses.

renovation undertaken by NCDOT. The department has partnered with communities across the state to renovate a dozen stations and build two new ones to improve passenger rail service and create multi-modal centers where possible.

The J. Douglas Galyon Depot in Greensboro offers the convenience of its downtown location as well as a hub linking other modes of transportation.

The opening of the Greensboro Depot marks the completion of the last — and largest — station

North Carolina Department of Transportation (NCDOT) Deputy Secretary for Transit David King (at podium) welcomes more than 250 people at the grand opening of the J. Douglas Galyon train depot on Oct. 21. On stage are (L to R) NCDOT Secretary Lyndo Tippet, Ticket Agent Jimmy Whitley, NCDOT Board Chairman Douglas Galyon, Federal Railroad Administration Associate Administrator Mark Yachmetz, Amtrak's Vice President Contract Administration Gil Mallery and U.S. Rep. Howard Coble.

The NCDOT has invested nearly \$200 million in station renovations, construction and track improvements. Historic stations have been renovated at current stops in Burlington, Hamlet, High Point, Rocky Mount, Salisbury, Selma, Southern Pines and Wilson, and new stations were built in Cary and Kannapolis.

On-board Signage Now Available for Crews

Amtrak recently unveiled a standardized on-board signage program that provides crews with a variety of signs to use aboard trains to fit a broad range of needs and situations. Available for ordering on eTrax, the signs are also being stocked at crew bases.

Ranging from “Restrooms Are Downstairs” to “Crew Members Only Beyond This Point,” the signs are designed to help crews manage the traffic and information flow aboard trains.

The 25 Amtrak-blue signs come in different shapes and sizes, depending on the purpose of the sign. Some come with adhesive backing, while others come in the form of a tent card, but they all share the same professional look.

“This signage program is a small but very important component of our customer service and its use should become second nature to our conductors and on-board service crews,” said Vice President Transportation Ed Walker.

An Operations Standards Update was issued to all on-train employees this month that detailed what the signs are and how and where they should be used aboard the trains. In

“Based on feedback we got from managers and crew members, we developed the top 25 signs needed aboard trains,” noted Pat Willis, senior director Station and On-

Board Service Operations in the new Customer Services department.

With the introduction of these signs, any other unofficial signage is prohibited. The signs may be ordered through Western Folder Distributing Company, via eTrax, which is accessed on Amtrak’s Intranet. Orders may also be placed by faxing a request directly to Western Folder.

The on-board signage program is one component of a broader effort to standardize signage on board trains and in stations and to make these tools available for ordering through a single source, eTrax.

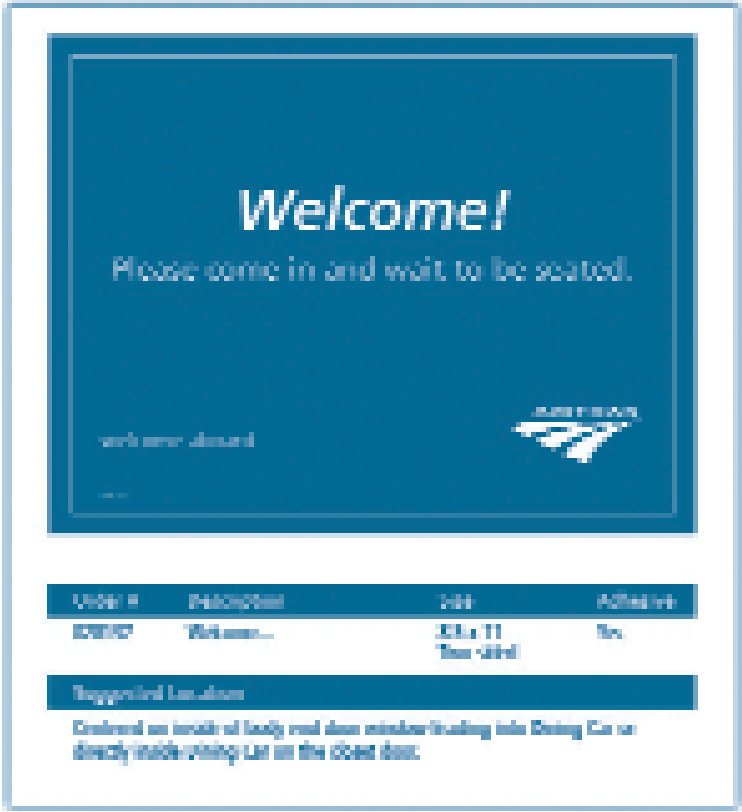

In addition, Marketing materials such as timetables and brochures,

which historically have been ordered for stations via ARROW, are also available in the eTrax system. As the use of ARROW for this purpose is being phased out, employees who are still ordering materials using ARROW (G/PSD/SPR and G/PSD/OBM) should familiarize themselves with the eTrax system. Starting January 2006, these items will be available on eTrax only.

Employees whose function involves ordering materials and who don’t have access to eTrax should talk to their supervisors about getting registered in eTrax.

Accessible via the Intranet, eTrax has become an Amtrak household term. The Web-based system serves as the company’s primary resource for payment requests, travel and expenses reports, procurement transactions, customer service requests and an assortment of other administrative processes.

The system has saved the company time and money by leveraging Amtrak’s buying power, maximizing efficiency, and controlling and managing spending.

Each of the 25 on-board signs is featured in the Standards Manual, with guidance about where and how they should be posted.

addition, guidelines for the use of the signs are being incorporated into the latest revision of the On-board Service Standards Manual, due out Nov. 30.

System Upgrade Lays Foundation for Future Improvements

Just as Amtrak aims to return its railroad infrastructure and its equipment to a state of good repair, it also focuses on the company’s business infrastructure. The upgrade of the mySAP HR/Payroll system is a key initiative that will enable the company to more efficiently manage all of its employee information needs.

Although the full system upgrade is more than a year and a half away — implementation is expected in early 2007 — once it’s in place, employees will have access to the

system from their office desktop, home PCs via the Intranet and at kiosks located throughout the company.

What does this mean to you? It means that employees will have the capability to maintain more of their own HR information, such as basic personnel data (name, address, telephone number, emergency contact information), enrollment of benefits, and life-event changes, like the birth of a child or a change in marital status. Employees will also benefit from

easier and standardized ways to enter time worked.

As part of the upgrade, managers will also be able to view employee and contractor data and process many personnel transactions, such as recording new work locations, job changes, promotions, terminations and retirements, now performed by Human Resources.

Currently in the design stage, the multi-phased project has begun with department representatives throughout the company participating in workshops to redesign

major HR, payroll, and time-keeping business processes, which will result in a more efficient and cost-effective new system.

The new system will provide the technical platform necessary for future business management systems to link with HR and payroll data, thereby providing managers with more complete information to guide decision making and management of Amtrak’s business.

Flexible Spending Account Rules Are Changed

Participants who have money left in their Flexible Spending Accounts (FSAs) on Dec. 31, 2005, may now continue to use this money for eligible out-of-pocket costs incurred through March 15, 2006, as a result of rules changes made by the Internal Revenue Service. This change

applies to both Health Care FSAs and Dependent Day Care FSAs.

All claims for eligible expenses incurred between Jan. 1, 2005, through March 15, 2006, must be submitted to SHPS, Amtrak's FSA administrator, no later than April 15, 2006. After April 15, 2006, money left in a participant's

2005 FSA account will be forfeited, as outlined by the IRS.

New claim forms, now available for the Health Care, Dependent Day Care and Commuter Reimbursement (Transit and Parking) Spending Accounts, provide more space for claim details and, when completed online, calculate totals

for the participant.

To complete forms online, go to mySHPS.com. Hard copies are also available through Amtrak-benefits.com. For additional information, contact the Amtrak Benefits Service Center at 1-800-481-4887 or access the Web site at Amtrakbenefits.com.

Portable Entertainment System Arrives on *Auto Train*

Amtrak *Auto Train* passengers this month are the first to be able to enjoy a revolutionary new personal and portable entertainment system that includes movies, television shows and music.

Called the digEplayer, the unit features a 7-inch screen with DVD-quality video and weighs only three pounds, yet holds dozens of movies, songs, sitcoms and children's cartoons. Because it is battery-powered, the digEplayer can be viewed wherever a passenger wishes — at a seat-back tray, in a private sleeping accommodation or anywhere on-board. The unit contains enough program variety to engage passengers' interests and is refreshed from month to month to ensure that the only "old" movies are classics.

The digEplayer is different from a conventional DVD player, as all the video is pre-programmed right into the unit. Passengers may rent the digEplayer for \$19 at both the Sanford, Fla., and Lorton, Va. *Auto*

gers simply return the unit at the station.

According to Amtrak Marketing and Sales Vice President Barbara Richardson, "On-demand entertainment is something our passengers have been asking for and we're pleased to offer the latest in the marketplace. Rather than carrying a several DVDs or multiple entertainment systems, Amtrak passengers will have all that they need in one pre-programmed convenient system via the digEplayer."

This new amenity is the product of a partnership between Amtrak and Railway Media, which is handling the day-

to-day operations of renting the equipment to passengers.

Said District Supt. of *Auto Train* Fred Nardelli, "For the last two years, we've been looking into other methods of entertaining our *Auto Train* passengers, in addition to the movies currently shown in the lounge car — and we believe digEplayer is the perfect choice."

Amtrak plans to expand the digEplayer service to other trains next year.

Annually, the *Auto Train* carries 200,000 passengers and their vehicles on the 855-mile overnight journey between the Washington D.C. suburb of Lorton, Va. and Sanford, Fla. The train is popular among snowbirds and family vacationers headed for Florida's tourist destinations.

Available for rent to *Auto Train* passengers, the lightweight digEplayer offers hours of entertainment.

Train stations prior to train departure. At the end of the trip, passen-

Redondo Junction Facility Reaches Remarkable Safety Record

Los Angeles Redondo Junction Locomotive Facility recently celebrated more than 870 days without a reportable injury — which goes back to June 1, 2003. This accomplishment is particularly remarkable, considering the kind of work that takes place at a full-production locomotive facility.

While he served as general foreman at the locomotive shop, Dave Cowan, currently Mechanical superintendent, made a point to participate in

daily Safety Briefings to deliver messages and updates, and to

coach and encourage employees as safety milestones approached. He

also discussed injuries that occurred in other areas of the company to educate and alert the work force about the similar potential hazards.

"I empowered employees to come up with solutions to problems in their work places and they have come up with many good ideas that we've put to use. We would not have reached this milestone without the buy-in of every employee working at the shop," said Cowan.

Safety Committee members Gary Howard and Margo Papadakis-Mullinix also played an active role, which had a dramatic impact on the safety record.

Pictured (L. to R.) in front of two F-59 PH1 locomotives are: Onping Yu, Frank Alvarez, Steve Clarke, Paul Maloumian, Jason Tanner, Nelson Veliz, Larry Stewart, Vic D'Agostino, Bob Rapp, Roger Mikkelsen, Roger Mullinix, Margo Mullinix, Mike Sinanian, Mike Alfaro, Pete Abrahamian, Robert Hoyo, Millford Leonard.

Keystone Corridor

continued from page 1

comfortable ride are expected to draw more passengers to what promises to become an even more popular route. Year over year, ridership on the New York to Harrisburg service has grown nearly 19 percent and revenue 28 percent. On the Keystone Line specifically (passengers traveling through Philadelphia and points west), ridership increased 14 percent and revenue 22 percent

this past year.

To meet the anticipated demand, plans are being made to boost the number of weekday roundtrips between Philadelphia and Harrisburg from 9 to 13. Amtrak's Transportation staff is working with the Pennsylvania Department of Transportation to finalize new schedules.

"This growth demonstrates a clear demand for Keystone corridor high

speed rail service and also supports the need for improvements along this line," said Project Management Director Vinay Mudholkar.

"The project certainly has proved to be a success, posting concrete results that benefit passenger as well as freight operations on corridor," stated Chief Engineer David Hughes.

The corridor serves 20 Amtrak trains, 118 SEPTA trains and 12

Norfolk Southern Railway freight trains. Norfolk Southern is also participating in the program to upgrade certain track and bridges to carry 286,000 lbs. loads. The railroad has been cooperative in approving layout schemes to separate freight and passenger traffic flows, where possible. "We appreciate their willingness in joining the team's efforts," added Mudholkar.

Vinay Mudholkar contributed to this story.

Seasonal Marketing Initiatives Generate Interest

To increase ridership and promote the upgraded *Empire Builder* service, Amtrak signed an agreement with Flathead Travel to provide vacation packages to popular destinations in northwest Montana. Customized packages offer rail transportation, accommodations, car rental and other attractions, such as national park tours, horseback riding, fishing, skiing, golfing, snowboarding and white-water rafting.

Empire Builder passengers destined for East Glacier Park or West Glacier may choose the Glacier National Park package, which offers more than 700 miles of hiking, panoramic views, waterfalls, alpine meadows and glacial lakes. Accommodations are available at several historic hotels and lodges in the park and in neighboring communities like the Izaak Walton Inn in Essex or Belton Chalet in West Glacier. Travelers may also take the train to Whitefish and head to Big Mountain Ski and Summer Resort, which offers beginners and experts with some of the best skiing in the world. For

travelers who want to spend their vacation touring a popular city in the Northwest, Flathead Travel will customize a package that features highlights and attractions in Sandpoint, Idaho and Essex, Belton and Whitefish, Mont.

Through December 2005, Amtrak reservation sales agents are referring interested callers to Flathead Travel and its rail/tour packages are also being promoted on Amtrak.com.

“We’re building relationships with some of the top tour operators in the Northwest like Flathead Travel in Montana, Ski-Pak in Seattle and Classic Holidays in Portland, to offer Amtrak passengers more vacation choices,” said Marketing Associate Doug Schwab.

Carolina Panther Football Fans Win a Trip to the Game

Amtrak is teaming up with a local sports radio station this winter to sponsor the Carolina Panthers Train Trip promotion. WRBZ Sports Radio in Raleigh, N.C., will

send two winners and their guests to Charlotte on the *Piedmont* to see the Panthers play at Bank of America Stadium on Dec. 12 and 24. WRBZ and Miller Lite will host two live remotes at local area restaurants to promote and give away the two trips.

Over 120 on air promotional announcements, 20 promotional e-mails sent to a listener database of over 100,000 and exposure on the station’s Web site is expected to drive fans to the events.

Contest Proves: Food and Scenery Move Kids Most

“It’s better than being stuck in the back seat of a car,” wrote seven-year-old Jessica Brown as she traveled aboard *Carolinian* over the summer. Brown was selected as one of 28 winners of the Amtrak-Lionel Kids’ Essay Contest to receive Lionel’s The Polar Express™ train set.

Over the summer — for the seventh consecutive year — Amtrak partnered with Lionel to

sponsor an essay contest for children 12 and under to describe why they like riding Amtrak. Again this year, out of all the responses, scenery and food were the top two reasons why kids like the train. Brown clearly agreed as her essay read, “The four best things about riding Amtrak are going fast, tunnels, looking out the window and exploring the Café car.”

After running for six years primarily on the West Coast, the contest was expanded to Amtrak systemwide. The contest concluded with 462 entries — up from 320 last year. The most entries (74) were received from children riding on Amtrak *Cascades* trains, followed by the *Coast Starlight* with 58 entries, and the *California Zephyr* with 43.

Another promotion that is sure to bring more kids on board is the *Hiawatha Schools on Trains*, which offers Wisconsin school groups a chance to ride the *Hiawatha* for \$5 per person from Milwaukee to Chicago. The promotion starts this month and will run through next year.

Visual Profiles of Contemporary Railroaders

Sacramento Exhibit Showcases Freight, Amtrak Employees

Amtrak employees from California are currently featured along with employees from other railroads at a photography exhibit brought to the California State Railroad Museum in Sacramento, Calif., by the Center for Railroad Photography & Art.

Continuing through Jan. 8, 2006,

“Still a World Apart” is a display of 31 black and white photographs that illustrates the unique environment of the railroad, a workplace unlike that of any other employer. Demanding work rules, irregular hours of service, and days away from family and friends set the railroad apart from other industries.

The workers themselves, on and sometimes off the job, are the focus of the photographs.

Spanning more than three decades of railroad experience, the exhibit highlights contemporary railroad workers, mostly from the western United States and from a range of companies, such as Union Pacific

and California Northern.

The public exhibit is presented by the Center for Railroad Photography & Art (www.railphoto-art.org), a non-profit arts organization that showcases remarkable rail photography in cooperation with the California State Railroad Museum.

Chart Correction:

In the October issue of *Amtrak Ink*, a chart illustrating revenue garnered from Transdorm sales included wrong totals. The correct figures appear below. *Amtrak Ink* regrets the error.

Transdorm Hardware	May 2005	June 2005	July 2005	August 2005	Summer Total
California Zephyr	\$18,844	\$166,040	\$190,486	\$169,700	\$444,970
Capital Limited		\$61,315	\$72,383	\$50,400	\$184,578
City of New Orleans	\$30,451	\$56,364	\$37,326	\$61,341	\$234,981

2006 Amtrak Calendar Coming Soon

The Amtrak 2006 Wall Calendar is on its way!

The full-color calendar, which is available for sale next month, features the eastbound *Empire Builder* as it travels near Bison, Mont., in a photo taken by Tom Cerwin, of Bartlett, Ill., winner of the “Picture Our Train” Wall Calendar Contest.

A small calendar will be distributed to each employee throughout the company before the start of the new year. Last year was the first year that Amtrak published the smaller, desktop-sized (11 inches by 17 inches) calendar, which proved to be a popular item among employees who used it in their workspace in offices and facilities. A large calendar (24 inches by 34 inches) will be sent to each station.

The large calendars will be for sale at the Amtrak Store on Amtrak.com for \$8 each. Reduced prices are available when ordering in bulk quantity. Additional copies of the small calendar may be purchased for \$5 each.

For personal orders of the large calendar or additional copies of the small calendar, visit Amtrak.com/store for details, or call 800-400-1229.

Congratulations to All of You!

FRONT LINE FOCUS

Dear Amtrak:

This is not a letter of complaint, but praise.

I had taken a train from Erie, Pa., to Buffalo, N.Y. ... when arriving at my motel found I had taken the wrong suitcase from [the] overhead luggage compartment.

I had not checked in and was [at] the front desk explaining my plight to [the]desk clerk when I was approached by one of your employees, Damien J. Albert, who had overheard my story.

The gentleman then proceeded to make numerous phone calls and coordinated the return of my luggage to Niagara Falls and the wrong suitcase to the rightful owner.

From Damien to Mike [Perry] at Niagara Falls, the people involved were terrific. The conductor on [the] train (I wish I had gotten his name) was so nice when he handed me my suitcase [that] I'm still amazed. In this day of frenzied travel, security, bad or indifferent employees, [it was] refreshing to have had the honor of meeting these employees who actually care.

Thank you.

Ron K.
Randolph, Mass.

Dear Amtrak:

We would like to let you know of a very special Amtrak person ... we rode the *Capitol Limited* from Chicago, IL, to Washington, D.C., in car number 3000, room D.

The car steward was Dwight [McClurkin]. He came in shortly after we left Chicago to introduce himself and ask if there was anything we needed. While we were at dinner, he made up the bed and was back in the morning while we were at breakfast to put the bed "away." He returned in time to take our bags down for detrainning. He was very courteous and friendly and certainly added to our enjoyment of our first train ride. He made us feel like royalty or VIPs.

We just wanted you to know that Dwight is certainly an asset to Amtrak.

Sincerely,

Laura and Roger G.
Avon, Minn.

Replacement of Thames River Bridge Underway

Three-Year Project Replaces Nearly 100-Year-Old Connecticut Bridge

Work to replace the Thames River Bridge, a key link for the railroad between New York and Boston, began last month. The \$76-million project is one of the biggest ticket items in the Engineering department's FY '06 budget and involves replacing the nearly 100-year-old Strauss Trunnion Bascule movable portion of the bridge span with a vertical-lift bridge span.

The contract for the three-year construction project, which was approved last May by Amtrak's Board of Directors, was awarded to Cianbro Corporation, based in Pittsfield, Maine.

The work on the bridge, which is located between New London and Groton, Conn., includes fabrication and erection of two lift towers and a lift span, relocation of the bridge

tender's control house, the installation of new machinery, electrical

A team from Amtrak and Cianbro, the contractor on the Thames River Bridge replacement project, studies the existing Thames River Bridge's bascule operation. The four million pound counterweight that enables the bridge to raise will be removed as part of the bridge replacement project.

system and underwater communications and signal cables. The project also calls for modification of the piers and a new marine fender system that protects the

piers from marine traffic, as well as removal of the old bascule span,

which includes a four-million-pound counterweight — all done while the railroad continues to operate with minimal interruptions during the course of the job.

The bridge's four approach spans, which are fixed, are in good structural condition and do not require replacement.

This monumental project also requires a

lot of preparatory work, including the construction of office trailers and electrical and signal work to move the bridge tender's control house.

"The bottom line is that the bridge, now an aged drawbridge prone to malfunction, will be replaced by a more efficient vertical lift bridge that rises between two towers," said Peter Finch, project engineer. "Once done, Amtrak will have a reliable lift span for the better part of this century."

The machinery currently operating the bridge and the bridge's parts have reached the end of their lifespans. An engineering study conducted in the early 1990s recommended then that the lift span be replaced. However, budget constraints prevented that project from moving forward. Consequently, the railroad has instead kept the bridge working through short-term fixes and many emergency repairs over the past 15 years.

If the bridge becomes inoperable, it could block rail traffic in the busy Northeast Corridor and possibly obstruct the channel's local commercial and private marine traffic. The channel is also used by the U.S. Naval Submarine

Board Names Hughes Acting CEO, Congress Approves Record Funding Level

On Nov. 9, Amtrak Board Chairman David Laney announced the elevation of Chief Engineer David Hughes to Acting President and CEO in the wake of President David Gunn's release.

"Together with your hard work, David Gunn made important operational improvements during his tenure," said Laney in a letter to employees announcing the leadership change. "Now, as we look to the future our priorities are changing and Amtrak requires a

different type of leader who will more aggressively tackle the company's significant financial, management and operational challenges."

The change at the top of Amtrak's management was followed a week later with the passage in Congress of the railroad's funding for FY '06. The legislation provides Amtrak with \$1.315 billion in federal funding, the highest single annual appropriation for the railroad. Congress designated \$495

million to subsidize train operations, \$500 million to support capital programs and no more than \$280 million to cover debt obligations. President Bush signed the bill into law on Nov. 30.

The appropriation should provide adequate funding to support the FY '06 budget approved by the Amtrak Board. Amtrak officials are also reviewing a number of mandates contained in the legislation, including provisions requiring

continued on page 16

The following statement was issued by Amtrak on Nov. 9:

Amtrak's Board of Directors today released its President, David Gunn, saying that the passenger rail service needed to intensify the pace and broaden the scope of its reforms. Amtrak said that David Hughes, Chief Engineer, has been named Acting President and CEO, and that its Board of Directors has launched a national search to

continued on page 16

H A P P Y H O L I D A Y S !

TRAIN OF THOUGHT

Last month, I was asked by the Board of Directors to serve as acting president and chief executive officer while the board searches for David Gunn’s successor.

As I said in my first message to employees last month, under David’s leadership and as a result of a lot of hard work from all of you, the last three years have seen a great improvement in our structure, our business systems and, very importantly, our reputation.

I’ve been in the railroad industry for over 30 years and before taking on the job of chief engineer here three years ago, I spent more than a decade in the consulting business working on railroad issues in the U.S., Europe, Africa, South America, Mexico and Asia. These experiences taught me the lessons of corporate poverty and redemption and have given me a perspective on the best (and worst) railroad practices around the world.

However, the past three years at Amtrak have been the most rewarding of my career. I’ve proposed and directed hundreds of millions of dollars in infrastructure improvements, and month after month, seeing crews make these projects a reality has been enormously satisfying. But the work is only just beginning — for all of us.

When David Gunn came on board in 2002, he straightened out an enormous financial mess, reorga-

nized and reinvigorated the railroad and gave us a second chance.

Our job must be to continue to build on our momentum. However long I’m in this position, I will not be an idle caretaker — I will aggressively push forward on the reforms and initiatives already underway.

We will certainly be tested in the next year or two. We will need to step up the pace on elements of the Strategic Reform Initiatives. Also, there is no question that new labor agreements will have to be reached. A renewed emphasis on customer service will be a high priority, as well as special emphasis on running a safe and secure railroad.

We will need to tighten our belt in some areas, but I believe that no company ever saved its way into success. Instead, success depends on giving customers more value — value they want and for which they will gladly pay.

I am optimistic about Amtrak’s future. The employees of this railroad are a fine group of talented people with unique skills. Given the right resources and clear direction, there’s nothing we can’t accomplish.

In closing, let me ask you to please continue to be safe out there and to take good care of our passengers, especially during the holidays this month.

David J. Hughes

Correction:

In the November issue of *Amtrak Ink*, the “Environmental Review Essential Ingredient of Workplace Safety” story incorrectly identified Tony Lewis, a pipefitter at the Bear maintenance facility. *Amtrak Ink* regrets the error.

Amtrak’s Vice President of Environmental Health and Safety Receives AAR Top Honor

Amtrak Environmental Health and Safety Vice President Roy Deitchman (left) receives the North American Environmental Employee Excellence Award from Association of American Railroads Assistant Vice President John Wetzel. Deitchman was presented with the award at the AAR’s seventh annual Railroad Environmental Conference on Oct. 26 at the University of Illinois in Champaign-Urbana, Ill.

Deitchman is a strong proponent of using technology to increase environmental awareness, such as through the computer-based training he developed for employees. This is just one part of Amtrak’s environmental management system that includes training, auditing, and policy and procedure development. Deitchman also led the development of Amtrak’s comprehensive Environmental Information System, a state-of-the-art Web-based database that contains compliance data, facility maps, photos, plans, permits, training, and audit and corrective action information. Additionally, Deitchman manages a \$20-million capital program for remediation and pollution prevention projects throughout the country.

Steady Ridership and Revenue Growth Continues Into FY '06

Amtrak ticket revenue and ridership in the first month of FY '06 remained strong, continuing the trend begun this summer. The \$109 million collected in ticket revenue exceeded October '04 totals by 7 percent and the ridership of 2,035,882 was 3 percent better than the same month a year ago.

The fare adjustments implemented in October and economic trends, such as the high price of gasoline, appear to be factors in the revenue growth. However, the absence of full service on the Gulf Coast as result of Hurricane Katrina, and in Florida as a result of Hurricane Wilma, depressed both ticket sales and passenger counts on trains in those regions.

In the Northeast Corridor, the *Regionals* performed well, with ridership 6-percent higher and ticket revenue 20-percent greater

than October one year ago. Of the \$7-million increase from \$102 million in October '04 to \$109

lenges during October, especially between New York and Boston. As a result of these factors among

others, *Acela Express* fell short of its ridership and revenue budget targets. To support the service,

advertising is underway in major markets, as well as a special Amtrak Guest Rewards® program.

Among short-distance trains off

the corridor, ridership improved most strongly against October '04 on the *Downeaster* (up 26 percent), *Keystone* (19 percent), *Hiawatha* (22 percent), and *Blue Water* (23 percent) routes.

Among the long-distance routes, the *Lake Shore Limited* (up 26 percent) and the *Capitol Limited* (28 percent) showed the greatest growth in ridership against October '04. To help spur fall and winter ridership, a national advertising campaign kicked-off in October via print, online and multicultural media outlets.

Empire Builder Continues Improvement

Following its successful re-launch in August, the *Empire Builder* has continued to attract more passengers and revenue, becoming the most popular train and largest revenue producer of all the long-distance service in October. Ridership was up 8 percent against October '04 on the *Empire Builder* and at \$3.6 million, ticket revenue rose 31 percent, slightly out-earning the *Auto Train* (\$3.4 million). The very popular online *Empire Builder* sweepstakes helped draw national attention to the route, with 187,000 entrants and winners from far away as Alaska.

Ridership and Ticket Revenue for October 2005

	October 2005	October 2004	Better
Ridership	2,035,882	1,973,259	+3
Ticket Revenue	\$109,395,920	\$102,307,159	+7

Top Five Routes	October 2005 (Ticket Revenue)	vs. October 2004
Regionals	\$34,050,574	+20%
Acela Express Metroliner	\$26,990,289	-8%
Empire Builder	\$3,605,962	+31%
Auto Train	\$3,410,847	-5%
Pacific Surfliner	\$3,095,501	+14%

million in October '05, \$5.5 million was attributable to the *Regionals*.

Acela Express was ramping back up from its service suspension earlier this year. It also experienced on-time performance chal-

Southern Division Employees Recognized for Reaching Safety Milestones

Employees in the Southern Division reached noteworthy achievements this fall for maintaining a high degree of safety.

On Nov. 21, the New Orleans Engineering team marked its fifth consecutive year without a reportable injury. The group of 17 employees is responsible for main-

members who watch out for each other and understand that we are our brothers' keepers. Without the focused effort on the part of every employee, achieving this milestone would not have been possible," said Klouda.

"I also know that Engineer Track and Structures Russell Abbott

Birmingham, under the direction of Passenger Services Superintendent Sid Birkett, also passed a commendable milestone. While

being committed to safe work practices in the performance of their duties, these employees worked through FY '04 and up to press time with no reportable injuries.

"These experienced employees realize the importance of doing the job correctly and understand that working efficiently and safely is not just luck. They also know that if it is not safe to do the work, they must make it safe and not take the risk," said Jim Drummond, the district manager of stations for the Atlanta District.

When asked how they reached this

milestone, employees repeatedly replied that support from upper management and communication are the driving forces. Throughout

The New Orleans Engineering team gathers to be recognized for their outstanding safety performance — five years with no reportable injuries. (First row L. to R.): Russell Abbott, Naah Sabree, Charleston George, Jr., Lew Schexnayder, Theran Smith, Thomas Bertucci, Farrell LeCompte, Sr., Chris Traylor, Lance Tacke, Anthony Laine, Sr., Lawrence Ursin. Second Row: Maury Hales, Melvin Castro, Glenn Clark, Joseph Locicero, Jr. Not pictured: Theodore Hines and Leroy Fortune.

taining the tracks, signals, and buildings and bridges in the New Orleans Union Passenger Terminal.

Division Engineer Dave Klouda credits each member of the team for this significant achievement. "This is an organization with

made safety a major part of every day's performance and without that key role, it wouldn't have happened," added Klouda.

Along with the New Orleans Engineering department group, the Passenger Services department in Atlanta, Columbia, Greenville and

Station employees working in the Atlanta District proudly display certificates recognizing their year-long safety record. From the Atlanta station are (first row, kneeling, L. to R.): Melvin Williams, Margaret Philips and David Tucker. (Second row:) Michael Ages, Carl Betterson, Gary Crowe, Lysa Ridley-Jones, Barbara Futrell, Frank E. Williams and Steve Tomecek. Not pictured is Frank M. Williams. Also missing are John Potter, Chris Boon and Karen Landy from Columbia, S.C.; Lee Elkins and Trent Denny from Greenville, S.C.; and Bob Hasty, Walt Miles, Don Brown and Jonathan Smith from Birmingham, Ala.

the year, communication played a critical role for employees, since many work around live tracks and maintain the facility. Prior to each shift, safety briefings were held that included discussions about real-life events and how injuries would have an impact on them as well as their families.

Dear Co-workers,

Since taking the position as master mechanic of the New York/New England Division in June of 2003, I have been faced with many challenges and have been rewarded with equal successes. The joining of New England and New York mechanical forces under one umbrella in FY '04 has streamlined both mechanical operations and has created better lines of communication in some of the busiest areas on the Northeast Corridor. Although many aspects of the New York and New England operation have been standardized, each area still has unique situations and accomplishments.

First I'd like to congratulate our mechanical employees who were recipients of this year's President's Service and Safety Awards. Network Instructor Deborah Polk received the Safety Achievement award and the 2005 Charles Luna Memorial Award and the New York Division employees received the Environmental Division of the Year award. I am proud of our employees and I encourage each of them to keep up the good work and continue to keep safety first.

I also want to mention that one of our employees, Field Environmental Specialist Harry Seubert, was recognized for his safety accomplishments by the Association of American Railroads. At a special ceremony held earlier this year, the AAR presented him with a certificate of commendation for his safety achievements in 2004.

Now, I'll give you a snapshot of the work that's being done at our facilities. In New England, there are three main facilities that service Amtrak equipment. Southampton Yard in Boston is the largest and busiest maintenance facility. It consists of a Service and Inspection (S & I) building, where major repair work is performed, as well as periodic maintenance to Amfleet equipment and service and repair of diesel and electric locomotives.

The New Haven, Conn., and Springfield Mass., facilities, although smaller in size than Boston's, perform much-needed inspection work to Regional trains, Springfield Shuttles and the Vermonter service.

New Haven Mechanical employees are responsible for maintaining the state-owned, Amtrak operated Connecticut Department of Transportation commuter service, known as Shore Line East. Inspection, repair and periodic maintenance of this equipment are performed at the ConnDOT Maintenance Facility, a state-of-the-art facility located adjacent to New Haven Union Station.

While performing these day-to-day tasks, our employees remain focused on safety. New England Mechanical employees have the distinct honor of not only drastically improving their safety performance but also ending the fiscal year as the only group in the Mechanical department with only one injury — resulting in a .3 injury ratio. This was an outstanding accomplishment and a tremendous improvement over FY '04, which closed with 19 injuries for a 5.6 injury ratio.

Additionally, I am proud of the productivity accomplishments our Boston and Sunnyside Mechanical team has made. Last fiscal year,

the Boston shop was 24 percent under goal and Sunnyside was under by 38 percent, which — ironically — is a good thing. Let me explain why. Each facility has been assigned a maximum shop car count. This means anything above that number can affect availability for service. The Sunnyside Yard goal is 19 or fewer per day of various car types and Boston's is six. Thus the under-goal numbers reflect improvement in the reliability of the fleet, which is a direct reflection on the quality of the work being performed in the backshops during periodic maintenance.

Now, I'll tell you a little about the New York Division, which encompasses an area that stretches from Niagara Falls, N.Y. to the metropolitan areas of New York and New Jersey. The busiest is New York Penn Station, which hosts more than one thousand trains per day, including Amtrak, New Jersey Transit and Long Island Rail Road. The mechanical facility located in Queens, commonly referred to as Sunnyside Yard, is the busiest passenger car yard in the country, servicing and dispatching more than 60 trains a day.

Along with the regular maintenance of Amtrak equipment, there is a group of Amtrak employees whose jobs are funded by New Jersey Transit. They inspect, clean and perform minor repairs on NJT commuter trains, which are also dispatched out of Sunnyside.

Further north, at the Albany, N.Y., maintenance facility, mechanics service the Empire trains, diesel locomotives that operate on the Lake Shore Limited and the work engines used in the yards.

Our Niagara Falls mechanical team is comprised of a small work force responsible for ensuring the smooth operation of equipment that travels as far north as Toronto, Canada, where the Maple Leaf runs on VIA Rail.

From Boston and Niagara Falls to New York City, our Mechanical employees are dedicated to ensuring the safe and reliable operation of our fleet. And, as we move into the new year, we are prepared to meet the challenges ahead by staying focused and working each day according to the motto that rings throughout the New York/New England Division: Safety is our passion. Productivity is our goal. On-time performance is our obligation.

Sincerely,

Don Knapik
Master Mechanic
New England/New York Divisions

Katrina Employee Relief Fund Closes This Month

During this holiday season, consider your co-workers who were affected by Hurricane Katrina. If you are thinking about making a contribution, please do so now, as the opportunity to contribute to the Amtrak Employee Relief Fund will be coming to a close at the end of the month.

As of Nov. 28, approximately 200 employees and supporters have donated a little over \$22,000 to the

fund. You can still make your contribution through payroll deduction or by sending a check postmarked by Dec. 31, 2005.

Donations may be made through payroll deduction by filling out form NRPC 3238, the Amtrak Relief Fund Payroll Deduction Form. All donation forms for payroll deduction must be received by the Corporate Human Resources office by Dec. 20. The form is available on the Intranet

home page under "Library," then "Forms." Forms are also available from HR offices. Employees may donate a one-time amount or chose an amount to be deducted from each paycheck until the designated amount is reached.

Checks should be made payable to the National Railroad Passenger Corporation (Amtrak) Employee Relief Fund and sent to P.O. Box 533126, Atlanta, Ga., 30353-3126.

An Amtrak committee headed by Gerri Mason Hall, vice president, Business Diversity and Strategic Initiatives, will direct the distribution of funds to Amtrak employees who have been impacted by Hurricane Katrina. Impacted employees who would like to request financial assistance through the fund may call 202-906-3991 or e-mail Amtrak Relief Fund@amtrak.com for further information.

Mechanics Prepare Horizon Fleet to Handle Freezing Winter Woes

This winter, Brighton Park mechanics don't expect the Horizon fleet to encounter the same problems it had in previous years, due to the work being performed at the Chicago maintenance facility to ready the equipment for the frigid winter weather.

Operating mostly on Midwest corridor routes, the Horizon cars are often plagued by snow and freezing temperatures that in the past have caused the equipment to malfunction during the winter months.

This year, mechanics have taken steps that will improve equipment reliability during the cold season. When Horizon coach, dinette and club/dinette cars cycle through Brighton Park to undergo their 92-day preventive maintenance visits, mechanics install a number of modifications to prevent the snow and freezing temperatures from affecting the equipment's operation.

"Through November, 57 of the 82 Horizon cars serviced at the Brighton Park facility have undergone these winterization procedures and we expect to complete the remaining cars this month," explained Master Mechanic Mike Heffner.

Heffner explained that the design of the Horizon fleet, which is similar to Amfleet equipment, makes the equipment extremely vulnerable to winter weather conditions.

"The major components are located in steel boxes underneath the car and are exposed to all types of inclement weather," Heffner said. "The doors on these cabinets do not seal shut, and as a result, we've had problems with snow, rain, wind and dirt entering the cabinets that house the electrical panels, air conditioning and water raising systems."

When this happens, the heating and air conditioning systems become inoperable and the water cannot be carried from the tank to

the restrooms and other areas where fresh water is used.

"To address these problems, we are installing new doors that lock shut and insulate the mechanisms in the cabinet from the elements,"

Sheet metal worker Paul Gundberg attaches a water line to a car to flush out the sanitation tank.

explained Assistant Superintendent Richard Navarro.

Another improvement to the Horizon equipment is a modification to the rinse line. The rinse line contains fresh water used to flush out the sanitation tank and runs from the exterior of the car to the equipment room in the car. In below-zero temperatures, the water

the sanitation process. Over the winter months, Amtrak's Public Health group monitors the system to evaluate sanitary conditions.

Sheet Metal Worker Paul Gundberg, who performs this task,

explains the process. "First the sanitation tank is drained, and then it's rinsed with water and a biochemical agent that destroys the waste. After the solution sits in the car for 24 hours it's drained out and the tank is rinsed with fresh water."

To further address cold winter temperatures, mechanics install

insulation in the equipment room to prevent the water pipes from freezing. Additionally, to keep the cold air out of the passenger

area of the cars, three of the four fresh air vents in the ceiling are covered.

Other measures are also taken as part of regular preventive maintenance to help keep the fleet in good operating condition during the winter.

For example, it is extremely important that the mechanics check, and repair if necessary, the temperature-sensitive Ogontz® valve that prevents water from freezing in the water lines and in the fresh water tank, which holds between 300 and 500 gallons of water.

"If the car is sitting without power and the temperature drops below 45 degrees, the Ogontz valve automatically triggers the release of water from the tank," explained General Foreman James Mitchell. If the valve is not functioning properly, it could split the water lines.

"We also walk through the car and check the heat that comes out of every vent," explained Electrician Ernesto Avendano. "We use thermal infrared guns to check the floor heat (and air conditioning) to make sure that proper temperature is consistent throughout the car. By shooting an infrared beam at the floor heater, the temperature is displayed on the thermal gun."

The guns, which were designed for food service use, are also used to measure the external temperature of the grills, freezers and refrigeration units.

"By taking these steps to winterize our Horizon fleet," stated Heffner, "our passengers should enjoy a more comfortable journey and more reliable service."

Base and the U.S. Coast Guard Academy, located a short distance up river.

The project is a concerted effort between the contractor, Cianbro, and Amtrak, with each taking on clearly defined roles of responsibility. While the vast majority of the work will rely on the resources and expertise of the Cianbro team, a variety of Amtrak Engineering crews will play a supporting role in the replacement of the bridge span. Below are some of the highlights of Amtrak's role.

Bridges and Buildings Work

To accommodate the installation of the new lift tower on Pier 2, Amtrak Bridges & Buildings crews will assist Cianbro with the relocation of the bridge tender's control house, which contains the electrical controls, machinery and back-up engine generator to operate the bridge. Located on Pier 2 and abutting the bridge, the house will be moved to the edge of the pier, which is about 25 feet from its current location. Amtrak will also assist Cianbro with moving the engine generator and fuel tank, used for back-up power for the bridge's openings, out of the control house. Amtrak will retrieve these units and, using the railroad's rail-mounted crane, move them to Midway Maintenance-of-Way Base for storage or later sale.

Amtrak crews will also assist Cianbro with modifications to the

two bridge piers that will support the new lift towers and to the new pier fender system, which protects the piers from marine traffic strikes.

Track Work

The new lift span, being provided by Cianbro, will have new track and walkways. Amtrak will assist Cianbro with the installation of

These graphic renderings of the new Thames River Bridge show the lift span lowered (left) for rail traffic and raised (right) to allow marine traffic to pass underneath. The work to replace the bascule span with the new lift span is expected to be complete the winter of 2007-2008.

new timber ties and tie spacers supplied by the contractor. Amtrak track crews will install the running rails, guard rails, joint bars and tie plates. Amtrak crews will also install the long-point miter rail and miter rail joints and expansion joints, all of which will be supplied by the railroad. Amtrak track gangs will also perform the final track alignment.

Amtrak will build trenches that run directly below the ties and house the conduit carrying the electric cables between a junction box and the new generator.

Electrical

To accommodate the relocation of the bridge tender's control house to the end of the bridge pier, Amtrak electrical crews will extend existing power and control cables, so that they reach the new control house and the electrification equipment. Amtrak will also monitor the installation of the new power

install the telephone service once the control house is moved and will maintain the radio communication devices during the relocation of the control house.

Electric Traction

So that work on the railroad is accomplished safely, much of it will be done at night when there is little or no traffic and the track can be taken out of service. Amtrak will coordinate the power outages needed by Cianbro crews by de-energizing, grounding, then re-energizing the individual catenary circuits, and test the catenary before the track is returned to service.

Amtrak ET crews will also de-energize the traction power underwater cables to permit the underwater cable support brackets, attached to the piers, to be relocated by Cianbro, until the original brackets can be remounted. Amtrak will also extend the existing static wire to the new termination points at piers two and three and will perform final alignment of the trolley breaks at those piers.

"We expect the impact of the work on rail service to be minimal, with no major outages during most of the construction, except when the bridge span is changed out," said Bruce Willbrant, deputy chief engineer for the Northeast Corridor. During the final phase — the channel and rail outage is currently planned to take place in late 2007 or early 2008 — a four-day shut-

control system and cutover to service, replace the navigation lights on the bridge and install lighting on the new pier fenders.

Communications and Signals

To continue passenger rail operations over the bridge during construction, Amtrak crews have repositioned and modified the underwater cable junction box connections and supports for the relocation of the control house. The crews will also install signal system cables and make all signal system connections to the local control panel in the new control house.

Amtrak C & S crews will also

Advisory Committee Recommendations Put Into Action

The new members of Amtrak's Customer Advisory Committee dove right into a slew of service delivery topics at the group's bi-annual meeting in Wilmington, Del., last month. The committee, made up of 23 volunteers, including seven new members, covered a range of customer service issues and offered suggestions about how to improve service delivery.

One of the main objectives of the ACAC group is to provide Amtrak with feedback and recommendations from a customer's perspective. Recent recommendations from the group have included ideas about signage and on-board announcements, food and beverage service, and student travel.

Following the recommendation of one ACAC member, Amtrak first instituted the Quiet Car® aboard some of its trains five years ago. Amtrak recently extended the availability of the popular designation to *Hiawatha* trains in addition to certain NEC and Capitol Corridor services.

Other suggestions have come from the committee's very active Disabled and Senior Task Force, whose mission it is to make train travel as barrier-free as possible. The task force won a President's Service and Safety Award in the Champion of the Rails category last year. As a result of discussions with Amtrak management about Special Service Requests, those requests are now given more prominent placement on the manifest for easy reference.

Another suggestion from the Task Force involved a mechanism to ensure that conductors and other on-board crew members were attentive and sensitive to the needs of anyone requiring special assistance throughout their trip. Passengers may require special assistance for a range of reasons, such as a particular disability or when a parent is traveling with young children. To make sure special requests are not overlooked, soon crews will use yellow seat checks as a reminder to check in with passengers who need special assistance.

In addition to offering recommendations, the new ACAC Chair David Block and Vice Chair Estelle Shiroma announced winners of the Customer Service Award, which is given to front-line

employees nominated by ACAC members for outstanding customer service contributions. *Coast Starlight* Parlour Car Attendant Richard Talmy and Sacramento Ticket Agent Douglas Wheeler were recognized by the committee for providing passengers with exceptional service, noting the winners' rapport with the passengers they encountered. Wheeler won the award for his service as a member of the *Southwest Chief* crew prior to becoming a ticket agent.

Last fiscal year, ACAC members submitted to management 300 trip reports based on committee members' travels in excess of 137,000 miles, and gave over 6,000 hours of their time to help Amtrak improve its service.

P R O M O T I O N S I N M O T I O N

When the Weather Outside is Frightful, the Rails are so Delightful

Sacramento and Bay Area residents planning a trip to Reno this winter may enjoy a fun and hassle-free travel experience without the worry of driving under cold snowy weather conditions. As part of an ongoing partnership, Amtrak and tour operator Key Holidays are once again promoting two popular services — the Reno Snow Train and the Reno Fun Train.

On both trains, passengers may enjoy spectacular wintertime scenery, strolling musicians and live entertainment provided by a pianist in a special Piano Lounge car. The Snow Train, which departs on select Tuesdays between Jan. 31 and March 21, also includes historical narration provided by a Key Holidays employee as the train departs Sacramento and passes through the Sierra Mountains. In addition to mingling in the Piano Lounge car, passengers aboard the Fun Train en route to Reno may join a party in another car set up for live music and dancing. The Fun Train departs on select Fridays starting Jan. 6 through March 24.

Both trains operate to Reno from Emeryville, Martinez, Suisun and Sacramento. The Snow Train also departs from Roseville. Round-trip rail fare is \$185 on the Snow Train and hotel packages range from \$199 to \$289. On the Fun Train, the rail fare is \$199 and hotel packages that range from \$229 to \$369 can be added. Special

discounts are available for children between two and 11 years old and seniors 62 and over.

Santa Chooses Rails over Reindeer

Santa is spreading holiday cheer to passengers as he travels by rail to several stations over the Christmas season.

Kids of all ages joined Santa on board the North Carolina Santa Trains on Dec. 3 and 10. Santa traveled roundtrip on the *Piedmont* between Raleigh and Greensboro and the *Carolinian* between Charlotte and Salisbury entertaining families, taking photos with travelers and passing out holiday candy treats. As part of a partnership with Radio Disney AM 1480, Santa’s activities aboard Amtrak garnered on-air exposure.

In the Midwest, Missouri residents had two opportunities to welcome Santa as he traveled to Washington, Mo. and Warrensburg, Mo. on the *Kansas City Mule*. On Dec. 3, Santa traveled from Kirkwood to Washington, where he was greeted by local residents and visitors at the station.

Last month, a Kansas City radio station ran a live broadcast of Santa’s journey from Sedalia to Warrensburg and offered listeners a chance to win a ride with Santa on the *Kansas City Mule*.

While in California last month, Santa officially opened the holiday season by boarding the *San Joaquins* in Fresno, traveling to

Hanford and greeting passengers on the platform.

Passengers Take the Train to the Big Apple Circus

For the fourth consecutive year, Amtrak is partnering with Ticketmaster® to promote travel by rail to New York from Delaware and Maryland. Through Dec. 21, Amtrak passengers may take advantage of special discounts for select performances of the 2006 Big Apple Circus production, “Grandma Goes to Hollywood.”

The circus is held under a large heated outdoor tent at Damrosch Park, adjacent to the Lincoln Center of Performing Arts in Manhattan, N.Y. — just a short subway or taxi ride from New York Penn Station.

“By teaming up with Ticketmaster on this promotion, we gain tremendous exposure — at no cost to Amtrak — and build ridership and revenue by encouraging more passengers to travel to New York by train,” said Marketing and Sales Associate Paul Siegel.

During the promotional period, passengers may receive \$7 off regular-price admission tickets that range from \$28 to \$64. The Amtrak discount is being promoted on Ticketmaster.com and Amtrak.com. Details were also included in a promotional e-mail to over 185,000 Amtrak Guest Rewards® members and in a mailing sent to 10,000 Ticketmaster customers.

New Members Earn Frequent Travel Rewards

Amtrak Guest Rewards launched its *High-Value New Member* campaign last month rewarding new members who travel frequently during the first three months of their membership.

The campaign targets new members whose travel frequency mirrors that of AGR’s top-earning members — identified as Select and Select Plus members — who spend over \$2,500 and \$5,000, respectively, on Amtrak travel during the calendar year.

These qualifying AGR members receive a package that includes coupons offering them a sample of the benefits generally reserved for Select and Select Plus members. “The primary goal of this campaign is to identify passengers who start out as frequent travelers, thank them for their business and encourage them to keep traveling on Amtrak and stay involved with the Amtrak Guest Rewards program,” explained Loyalty Marketing Senior Director Michael Blakey.

The campaign is intended to build customer loyalty and encourage these members to further increase their travel on Amtrak. “As enrollment in the AGR program now exceeds one million members, keeping our valued members riding the train is a top priority,” explained Loyalty Marketing Officer Vicky Radke.

2005 President's Service & Safety Awards Recipients

Amtrak paid tribute to its extraordinary and dedicated employees at nine regional President's Service and Safety Awards ceremonies this fall. Over 1,200 people, including co-workers and family members, attended the events to recognize the outstanding achievements of the award recipients in 2004. Employees celebrating their 30th anniversary were also honored at the events.

ACHIEVEMENT

Donna Carlson

Ticket Agent, Transportation, Lancaster, Pa.

Lancaster station Ticket Agent Donna Carlson is responsible for issuing tickets, mostly to *Keystone* and *Pennsylvanian* passengers. Donna is best known for taking the lead every Christmas holiday season and turning the historic Lancaster station into a festive wonderland. Working on her off-duty and vacation time, she shops and makes decorations to create this display. In 2004, Donna recruited performers for musical entertainment for Amtrak customers and she and a team of volunteers decorated a 27-foot Christmas tree.

Donna's supervisor, District Manager Stations Rich Esposito, said, "The achievement is enjoyed by thousands. You have to see our customer's faces when they approach the front of the station to board a train or pick someone up. It brings that smile and warm holiday spirit." Customers love Donna and employees appreciate what she does to make Amtrak a better place to work.

Shirley Howard

Clerk Typist, Mechanical, Washington, D.C.

Shirley Howard began her career at Amtrak in 1989. In 2001, she began working in the Mechanical department where she was responsible for creating a database to track disciplinary actions. In 2003, she was promoted to her current clerk-typist position.

Last year Shirley noticed a void in tracking discipline records, identifying rule violations and violations by craft, and monitoring time limits for rendering decisions. She designed a one-size fits all database that is highly useful in the production of on-demand reports for departmental use and for complying with requests from other departments such as Law, Claims and Labor Relations.

Shirley's database allows departments to closely monitor employee records, all at one glance. As the facts are readily available, discipline decisions are handled expeditiously and productivity has improved.

Shirley Howard has been described as "the glue that holds the place together." She is a perfectionist and, simply, someone who gets the job done.

Lawrence E. Light

Senior Director Advanced Technology, Engineering, Philadelphia, Pa.

Lawrence Light has been with Amtrak since 1983, working as senior engineer, C & S/Electric Traction, senior director C & S, and senior director C & S Maintenance and Design before moving to his current position.

Larry is being recognized for his achievements on Amtrak's two positive train control systems, Advanced Civil Speed Enforcement System (ACSES) and Incremental Train Control System (ITCS). Larry oversaw the continued ITCS validation and verification process that will enable the Federal Railroad Administration to permit increased Amtrak train speeds on the Michigan Line up to a maximum 110 mph. He addressed technical concerns, and, during the process, enabled the prime contractor on this project, GE Transportation Systems, to market this system worldwide. This gave Amtrak positive international exposure.

Larry also successfully tested and implemented the ACSES wayside radio system that enables the transmission of Track Speed Restriction Bulletins (TSRB) directly to a locomotive's on-board computer.

Andrew Pedro

Assistant Division Engineer Structures, Engineering, Groton, Conn.

Andrew Pedro, assistant division engineer, Structures, joined Amtrak in 1976. In the fall of 2004, Andy assisted the children of the Moriarty School in Norwich, Conn., with a very special request. The children had collected \$15,000 worth of medical and school supplies for victims of a terrorist attack on an elementary school in Beslan, Russia. They wanted to deliver the supplies to the Russian Embassy in Washington, D.C., but lacked transportation. Representatives of the school contacted Amtrak to inquire if a train could be used to transport the children, chaperones and supplies to Washington.

Because checked baggage service was not available between New London and Washington, Andrew secured a truck and driver to deliver the supplies to the embassy. The school children traveled by train. A first-time train ride for many among the group created some excitement and Andy's positive spirit helped make the event unforgettable.

Thomas Rae

Assistant Superintendent Road Operations, Transportation, Boston, Mass.

Tom Rae began his 30-year railroad career in 1974 as a passenger train engineer. Tom joined Amtrak in 1985 and became a road foreman, senior road foreman and eventually assistant superintendent of road operations in the New England Division.

Tom saw a need to improve the qualification process for the New England Division Operations employees. Using his photography and computer skills, Tom developed and implemented a program that streamlines the qualification process. Tom also created programs for high-speed train sets as well HHP and AEM-7 locomotives.

Tom's programs have resulted in employees' having a more extensive knowledge of their territory and the equipment they use in the performance of their duties. Moreover, the programs have yielded positive customer impact by creating a more knowledgeable work force, resulting in safe and efficient resolutions of technical issues that had the potential to cause severe service disruptions.

Travel Agency Sales Center

Marketing and Sales, Philadelphia, Pa.

The Travel Agency Sales Center (TASC), located in Philadelphia's 30th Street Station, comprises 10 Amtrak employees who provide quality customer service to Amtrak's travel agent community.

This group of employees earned the achievement award for their crisis management and teamwork in the wake of Private Label Travel's (PLT) demise in 2004. Due to its suspension of operations, PLT could not honor its Amtrak Vacations travel packages. With little warning, Amtrak was faced with 1,500 reservations comprising almost 5,000 passengers who needed to be accommodated.

To fulfill the vacation package obligations and maintain the integrity of the Amtrak Vacations' brand, the TASC team took over PLT's duties. The efforts of the team averted what could have been a customer service and public relations disaster for Amtrak. This extraordinary effort also brought Amtrak praise within the travel industry.

Travel Agency Sales Center (L. to R.):

Ben Walker, Chuck Sweet, Terry Rowley, Marilyn Matchette-Winfield, Scott Rebre, David Gunn, Claudine Conaway, Mike DeAngelo, Marilyn Greenspan, Steve Joyce, Patricia King.

BUSINESS DIVERSITY

Darlene Abubakar

Director Marketing, Sales and Marketing, Washington, D.C.

Hired in January 2000 as manager of Sales Promotions, Darlene Abubakar assumed her current position in December 2001. Early in 2004, Amtrak's diversity marketing agency and a third-party partner were working on a program to reach out to the African-American market through a student travel scholarship program. At the 11th hour, the negotiations fell through and Marketing was left without a program. Working with the Business Diversity department, Darlene immediately began exploring other avenues to accomplish the program's objectives.

Darlene identified the United Negro College Fund and the Historically Black Colleges and Universities (HBCU) as partners. A travel scholarship program was developed to award five \$1,000 travel stipends per student at 20 HBCUs. Darlene has also been the lead on most diversity efforts in the Marketing department, which allocates nearly 10 percent of its media budget to African-American and Hispanic publications and for diversity programs or promotions.

David Lim

Chief, Sales and Marketing, Washington, D.C.

David Lim joined Amtrak in February 2000 as assistant vice president, *Acela* Marketing and Sales. He was promoted to vice president, Marketing and Brand Management in January 2001 and since August 2002, David has been Amtrak's chief of Marketing and Sales Promotion.

In FY '04, David instituted a policy that Marketing would spend 5 percent of its overall budget and 9 percent of its media buys for diversity marketing. David was neither asked to do so, nor was he required to set this goal.

Carlson

Howard

Light

Pedro

Rae

Abubakar

Lim

BUSINESS DIVERSITY (CONT.)

David identifies opportunities for participation in business diversity initiatives, including employment, supplier and corporate diversity. David tracks and evaluates the performance relationship between goals and results, which helps Amtrak become more inclusive and supports Amtrak’s diversity initiatives. The results of these goals have a direct bottom-line impact on Amtrak’s Supplier Diversity program.

Prince Reid
Special Assistant to the General Superintendent,
Transportation, Boston, Mass.

Prince Reid is the personification of Amtrak’s Diversity Policy, says his supervisor, New England Division (NED) General Superintendent Michael DeCataldo. Prince has become an ambassador for Amtrak and the public face promoting diversity initiatives, both internally as the founder and chairman of the NED Diversity Advisory Council (DAC) and externally as the president of the Conference of Minority Transportation Officials (COMTO).

Prince authors the NED quarterly *Diversity Moves* newsletter that underscores upcoming cultural events as well as ethnic observances, and is put together by Prince and the members of the DAC. Another prestigious observance sponsored by Reid and the DAC is the Leroy Fergus Jr. Award ceremony, an event that is held annually during Black History Month. While Prince Reid does not establish policies or programs, he does implement awareness. He realizes that diversity is not about numbers; it’s about organizational behavior that demonstrates differences and similarities are valued.

CHAMPION OF THE RAILS

Elizabeth Burch
Creator of the Dr. Gary Burch Memorial Safety Award,
Bristow, Va.

Elizabeth “Bette” Burch is being recognized for her dedication to rail passenger safety and her creation and nurturing of the Dr. Gary Burch Memorial Safety Award, in honor of her late husband. The Burch Award annually provides a grant to a railroad worker who has done the most to improve the safety of railroad passengers. Dr. Gary Burch was chief of the Ear, Nose and Throat Clinic at Eisenhower Hospital at Fort Gordon, Ga. He was one of eight passengers who died July 31, 1991, at Lugoff, S.C., while traveling on Amtrak’s *Silver Star*.

Bette, was traveling with him and was injured. Later, she and her children, Michael Burch and Kathryn Burch Pettyjohn, decided to do what they could to promote passenger rail safety. Ten years ago, Bette established the Dr. Gary Burch Memorial Award, conferred annually in recognition of railroad employees’ outstanding performance in the area of passenger safety.

ENVIRONMENTAL ACHIEVEMENT

Kirt W. Flowers
Machinist, Procurement and Materials Management,
Philadelphia, Pa.

Kirt Flowers began his career with Amtrak in 1998 as a machinist in the Mechanical department. His position was transferred in September 2003 to the Automotive department in Philadelphia. Kirt has helped Amtrak make strides against diesel exhaust emissions and the growing problem of urban asthma, particularly in the Philadelphia area.

In 2003, Kirt developed a technical proposal to retrofit 14 heavy-duty vehicles with a device to reduce diesel emissions. A year later, Kirt coordinated with several departments and agencies to produce and complete his retrofit project, the Lubrizol control device, which reduces the concentration of carbon dioxide, nitrogen oxides and diesel particulate matter in post-ignition emissions. Kirt also coordinated the installation of fuel catalysts in 10 Amtrak trucks that reduced carbon dioxide, nitrogen oxide and total hydrocarbons. Kirt successfully demonstrated how Amtrak can take a proactive approach to controlling emissions by starting the retrofit on heavy-duty diesel trucks.

PROJECT EXCELLENCE

E-Commerce Team
Marketing and Sales, Washington, D.C.

The E-Commerce Team’s project goal was to completely redesign Amtrak’s Web site, Amtrak.com. The new Web site is among the most user-friendly in the travel industry, with improved functionality that has led to higher sales and lower costs.

Many new features were added to the site and since the unveiling, online bookings in 2004 rose nearly 21 percent, resulting in a 34 percent share of ticket sales through Dec. 31, 2004 — just three months after its launch. Ticket revenues for online bookings increased from 28.5 percent to 34 percent and e-mail messages were reduced to 4.81 per 100 bookings, down from 6.6 per 100 bookings prior to the launch. Amtrak’s Vice President of Marketing and Sales Barbara Richardson stated, “We are outpacing the industry in percentage use of Internet sales. No other carrier (except Internet-only carriers) has met this level of success.”

E-Commerce Team (L. to R.): Stephen Alexander (external), John Slavney, James I. Yarnall, Allen Sebrell, Roger Seitzinger, Carlene Hardie, Kathleen Gordon, and Stevan Lebo (Amtrak Technologies).

Girardi/Guzzi - Project Excellence Team

Andrew R. Girardi, Sr., Senior Coordinator Environmental,
Engineering, Philadelphia, Pa.

Joseph J. Guzzi, Jr., Division Engineer, Engineering,
Philadelphia, Pa.

After a member of Congress advised Amtrak of a serious environmental hazard located near the tracks in close proximity to the Philadelphia Zoo, Andrew Girardi and Joseph Guzzi got to work. The project meant coordinating the efforts of several contractors, loading and disposing of hundreds of scrap track ties, switch timbers, miscellaneous creosote-covered material and tons of debris.

Joe had budget responsibilities for the project, and Andy had the role of project manager working closely with contractors. The scope was increased to include additional locations at Ivy City, Odenton, Baltimore, Perryville, Chester, the Harrisburg Line, Royalton Yard and Penn Coach Yard. Unsightly piles of debris are no longer on the property or visible from trains.

The efforts of Joe and Andy resulted in 132,406 track, bridge or switch ties and 13,515 tons of debris being removed from the property and the creation of an ongoing process to keep the railroad clean.

Kenneth W. McIlvoy
Principal Business Liaison, Amtrak Technologies,
Washington, D.C.

Kenneth McIlvoy began his Amtrak career in 1971. As principal business liaison, Ken interfaces between Amtrak Technologies (AT) and the Transportation department.

Ken was nominated for Project Excellence for his technical development of the Transportation Department Review System (TDRS). In 2004, Transportation set a goal for better managing field employees. The department determined that, as part of this goal, it had to do a better job of recording observations of field employees’ performance in an immediate and objective manner. Ken led much of the development and implementation of the TDRS system. He worked with the Operations department to understand the needs of the managers and designed the system to meet those needs. Ken devoted many hours of work to ensure that the system was completed on time.

Today, the TDRS provides managers with a valuable tool to better evaluate employee performance and improve customer service, which will benefit passengers.

SAFETY ACHIEVEMENT

Steven C. Falkenstein
Division Engineer, Engineering, New York, N.Y.

The Engineering side of the busy Penn Station operation (Track, Electric Traction, Communications & Signals, and Bridges & Buildings) for which Steve Falkenstein is responsible includes 810 employees with 585 track miles through three states.

Steve accompanies tunnel inspections with the LIRR, NJT and Life Safety groups. As team leader, he champions and attends around-the-clock audits along with other managers and safety liaisons. He personally responds to all serious incidents and his off-duty e-mails are constant reminders for meetings and safety challenges. “Steve’s top priority is the safety of employees, passengers and overall operations,” says Safety Officer Pat Colliere.

His efforts led the entire Engineering department of the New York Division to an FY ’04 reportable rate of 3.61 and 100 percent participation for the 1872 Program. As a result, the New York Division won the FY ’04 Engineering Excellence Award.

Deborah A. Polk
Carman Helper/Network Instructor, Mechanical,
New York, N.Y.

Deborah Polk began her career with Amtrak in 1988 as a coach cleaner and currently works as a network instructor. Deb has been a key player in the success of Sunnyside Yard’s Safety Training Camp. Called the “heartbeat of the yard,” Deb ensured that all agreement-covered and management employees at Sunnyside were trained in all safety programs. Standards and Compliance Inspector Don Riley participated in Deb’s train-the-trainer class and said, “There was 100 percent participation, and the energy level in her classes reflects what I am seeing in results at Sunnyside.”

In addition to peer counseling, Deb has organized many events to educate employees on the dangers of drug and alcohol abuse.

As the top scorer in the Safety Achievement category, Deb is also the recipient of the 2005 Charles Luna Memorial Award.

SAFETY ACHIEVEMENT (CONT.)

Robert H. Wilbur
Locomotive Engineer, Transportation, Albuquerque, N.M.

Wilbur

Robert Wilbur began his railroad career in 1966 as a freight locomotive engineer. In 1987, he joined Amtrak as an engineer. For the past 11 years, Bob has worked extensively with Operation Lifesaver, Inc. As a member of OLI, Bob conducts quartely meetings for board members, church groups, community centers and schools. He organizes volunteers for the annual Albuquerque Children's Fair where he is solely responsible for preparing an information booth stocked with railroad safety materials.

In 2003, Bob became the executive director/state coordinator of New Mexico Operation Lifesaver, Inc. Bob spends hours of his own time setting up training classes for OLI volunteers and coordinating activities within the state of New Mexico concerning highway-rail safety. Bob also

implemented the New Mexico Operation Lifesaver Web site.

In addition to his duties with Operation Lifesaver, Bob helps fellow engineers who have been involved in grade-crossing accidents.

North Carolina Safety Improvement Team: Back row (L. to R.): David Gunn, Frank Sullivan, Elizabeth Hill, Jay McArthur, Ed Walker, Carlos Williams, Tom McCann. SAFETY COMMITTEE
OF THE YEAR

North Carolina Safety
Improvement Team, Raleigh, N.C.

Chartered five years ago, the North Carolina Safety Improvement Team is an employee-driven safety committee that includes employees from stations, Train & Engine and On-board Service crews in Raleigh, N.C.

In conjunction with the Raleigh Police Department and the Amtrak Police at the department's National Communication Center, the committee helped to coordinate an emergency evacuation bomb-threat drill. This committee also developed boarding plans for groups and evacuation plans for employees who travel overnight on Amtrak business. Working jointly with representatives of the freight railroads within the state, it also conducts Operation Lifesaver presentations throughout the district and conducts safety blitzes to increase safety awareness at grade crossings.

According to Superintendent of Operations Jay McArthur, "This team is the most structured and professional employee-driven safety team that I've seen in my career. I am proud of the committee as a whole and each member for delivering this outstanding performance in safety."

Abraham

Ahrens

SUSTAINED EXCELLENCE

Patsy L. Abraham
Manager Supplier Diversity, Business Diversity,
Washington, D.C.

Patsy Abraham understands and values the contributions of a diverse workforce and supplier base. Her 29-year Amtrak career has been dedicated to supporting Amtrak's corporate diversity initiatives and employees seeking assistance through the company's Employee Assistance Program.

In her current position as manager, Supplier Diversity, in the Business Diversity department and in her former positions as Business Service manager and administrator in the Minority Business Development department, Patsy has proven to be a true advocate for diversity. She has remained committed to the spirit of diversity by helping Amtrak become more inclusive in the supplier diversity arena.

In her positions as administrator and later project manager in the Minority Business Development Office, Patsy continued to ensure adherence to company policies and procedures. She was awarded the Outstanding Minority Business Enterprise Award by the U.S. Department of Transportation in 1992.

Bailey

Bannon

Baucom

Birckett

Bridgforth

Clifton C. Bailey
Car Repairman, Mechanical, Bear, Del.

Clifton Bailey began his career at Amtrak in 1980 and currently works at the Bear Car Shop in Delaware as a car repairman and welder.

While working on the Cab Car Overhaul Project, Cliff saved Amtrak thousands of dollars per car. He was key to the in-house designing and manufacturing of mounting brackets for the ACSES/Cab Signal System components, avoiding the need to outsource the work to a vendor.

Additionally, Cliff was instrumental in determining how best to fit the new Amfleet I ADA-compliant unisex toilet modules into cab cars, despite the cars' slightly different layouts.

Everyone knows of Cliff's love of the railroad. He is also a train buff and collector of model trains. But a co-worker stated it best: "Cliff has model trains and loves them, but to come to Bear and work on the real thing is what he really loves."

Shirley A. Bannon
Program Manager, Transportation, Wilmington, Del.

Shirley Bannon has sustained a level of commitment and dedication for more than 25 years at Amtrak. Shirley has earned a reputation for her work ethic, dedication and willingness to take on new projects with enthusiasm. Shirley frequently acts as mentor and helps others by serving as a source of information and wisdom. Shirley is the executive assistant to the chief of System Operations at the Consolidated National Operations Center (CNOC), a position that entails many duties. Shirley has also been assigned to work on budgets and to be the facility manager. She takes pride in the CNOC facility and is responsible for all aspects of its operation.

She acts as liaison between CNOC and the community, between management and agreement-covered employees and between Amtrak and its contractors. Those who know her agree that if they need to get something done, and done well, Shirley Bannon is the person to do it.

Inez Baucom
Specialist, Human Resources, Washington, D.C.

Inez Baucom's expeditious handling and knowledge of Amtrak travel is commendable. In a moment she can provide details about various trains, including on-time performance, and station amenities. She has the skill of a travel agent and the knowledge of a seasoned ticket agent.

It is not uncommon for Inez to handle complicated last-minute business travel requests from employees, executives, board members and others. Knowing that she is the interface between Amtrak and many outside vendors, supporters and general traveling community. She is also the travel liaison for Amtrak's Customer Advisory Committee.

Last year she assisted approximately 20 representatives from Amtrak's advertising agency in booking familiarization trips on Amtrak's long-distance trains. She also organized travel reservations for dignitaries attending the Republication National Convention in New York, balancing the security concerns inherent in such an undertaking with responsive customer service.

Sidney N. Birckett
Superintendent Passenger Services, Transportation,
Jacksonville, Fla.

Sidney Birckett began his Amtrak career in 1977. Through his work ethic, positive attitude and leadership skills, Sid has earned the admiration and respect of all who have had the privilege of working with him.

He is committed to providing the best possible service to his customers and has directed his management team to continuously look for ways to improve service in the stations and on board the trains. Sid's initiatives have had a positive impact on the passenger service that is delivered in the Southern Division.

Throughout his career, Sid has been an advocate of teamwork not only within his own department, but also with other departments. He believes in communicating his expectations and providing employees with the tools and training necessary to perform their jobs successfully.

Sidney Birckett continually works at improving relationships between management and employees to attain the highest level of service and productivity.

Jerry A. Bridgforth
Baggage Agent, Transportation, Savannah, Ga.

Jerry Bridgforth started his career in June of 1975 at the Savannah station. He was promoted to senior train controller in Jacksonville, Fla., and later promoted to superintendent of Operations. After working that position for three years he became station supervisor for the Georgia, South Carolina and North Carolina stations. Jerry returned to his roots at the Savannah station, where he presently works.

Always on the move, Jerry is often referred to as the "Energizer bunny." Jerry stays busy cleaning the stations, serving passengers and working on projects. Because of Jerry's knowledge and years of experience in all aspects of passenger service, combined with his dependability, his fellow employees and managers have designated him as a role model for superior customer service. He is also deeply committed to safety and serves as chairman of the Jacksonville Safety Team. Jerry Bridgforth is a prime example of an employee who consistently demonstrates outstanding performance.

SUSTAINED EXCELLENCE (CONT.)

Barbara Bruce
Senior Scheduling Officer, Transportation, Chicago, Ill.

Barbara Bruce has undertaken initiatives far beyond those functions in the description of a senior scheduling officer. She has earned an outstanding reputation for building internal support from co-workers and promoting change within the railroad to improve Amtrak service. Most importantly, she has been an effective communicator and negotiator with the freight railroads and commuter agencies to implement service improvements.

As a train scheduler, Barbara has the task of finding consistency in an environment of substantial variability. Her keen awareness of situations and her ability to work with people to find the best solution enable her to make the necessary trade-offs and adjustments. At the foundation of her success is Barbara's tremendous integrity and character, which show in her day-to-day relationships as she deals with a wide variety of internal and external interests.

Kathy J. Burks
Inspector Field Warranty, Mechanical, Beech Grove, Ind.

Kathy Burks works closely with General Electric negotiating parts failure claims. This is a job that requires tact and professionalism, qualities that Kathy possesses in large amounts. Cheryl Greenley of GE stated, "I've never questioned any of her data, she is such an asset to Amtrak."

Kathy developed the database for the GE warranty system. Previously all information was done on paper and faxed to GE. Today, everything is so fine-tuned that there is little room for errors. Kathy's work with GE allows Amtrak to get its locomotives into service more quickly. Kathy's character and integrity are above reproach. Her hard work, sense of fairness and many accomplishments have earned her admiration outside Amtrak. Robert Hall of General Electric neatly summed up Kathy Burks when he said, "I'd hire her in a heartbeat."

Cindy Camara
District Manager Stations, Transportation, Fresno, Calif.

Back in 1980 when Cindy Camara joined Amtrak, managers and supervisors quickly realized that they were working with someone special. As a clerk, Cindy was respected for her encyclopedic knowledge after only a few years on the job. As a station agent, her peers relied on her to be their motivator.

A former President's Service and Safety Award winner in 1997, Cindy knows what cost savings and revenue potential are all about. She has maintained a budget 10 to 12 percent below target for the last two years, and by controlling her extra-board costs and encouraging the use of Quik-Trak machines, she has kept her costs low. Cindy exemplifies a positive attitude, and her agents believe they can make a difference because she believes that they can. Cindy knows how to get the job done and she's been doing it at Amtrak for over 25 years.

James M. Coffey
Project Reporting Officer, Engineering, Philadelphia, Pa.

James Coffey is responsible for data maintenance, data reconciliation, project reporting, plus training associated with the Work Element Explorer (WEE) and Web WEE.

But Jim has done much more than that during his career. Back in the 1980s Jim worked in the Accounting department, where he was instrumental in getting the first desktop computers installed, even though this was not his primary responsibility.

Jim has the ability to understand end users' needs and teaches people how to use the system and the data to their best advantage. Jim has a history of working on weekends and during vacations to load data into the WEE system to ensure project managers have the most current data on Monday mornings. Al Shaw, director of project reporting, sums it up this way: James Coffey is the employee that all others should be measured against.

Louis M. Coiro
Criminal Investigator, Police and Security, New York, N.Y.

Louis Coiro started his career with Amtrak in 1988 as a police officer with the Amtrak Police Department. During his 17-year tenure with Amtrak, Louis has earned considerable recognition from the company. He has received the Life Saving Medal, 15 Police Officer of the Month awards, the Police Officer of the Year award, and Amtrak's Performance Excellence Award.

In addition to these honors, Louis has received letters of commendation from the FBI, the U.S. Secret Service, the Manhattan District Attorney's Office and the U.S Attorney's Office.

As an officer with the Amtrak Police Department, Louis has made more than 100 felony arrests for crimes ranging from grand larceny to armed robbery. In a letter commending him, one assistant district attorney recently wrote, "In my eight years as a prosecutor I have never seen such dedication to duty and drive like that Investigator Coiro showed in the case I just prosecuted."

Leigh Cole
Detective, Police and Security, Fort Worth, Texas

Leigh Cole joined the Amtrak Police Department in 1994 after retiring from a successful career with the New Orleans Police Department. Leigh has sole investigative responsibility for 11 states, the largest territory of any APD officer, and is a member of the DEA Task Force.

Leigh has worked with the DEA in the seizure of approximately 1,100 lbs. of illegal narcotics and over \$700,000 in drug money. He was specifically recognized by the governor of Texas for the seizure of 50 lbs. of methamphetamine and 9 kilos of cocaine.

In addition, Leigh has provided police protection to the *Heartland Flyer* and the Oktoberfest train in Missouri. He has also provided protection for Oklahoma and Texas legislators while they traveled on Amtrak trains. Leigh Cole has dedicated his life to law enforcement. Amtrak is thankful that after a full career In New Orleans, Leigh chose to join the railroading family.

Timothy Cooper
Assistant Superintendent Road Operations, Transportation, Dallas, Texas

Consistent, superior performance 365 days a year defines Assistant Superintendent for Road Operations Timothy Cooper. Although an operations man, Tim has a national reputation for excellent passenger service. His extraordinary organizational skills have prompted Assistant Superintendent Station Operations Joy Smith to call Tim's abilities, "A rare orchestration of the difficult balance between passenger satisfaction and operating realities."

Tim is described as one who consistently exceeds expectations by delivering smooth solutions.

A model veteran employee, Tim is both mentor and trainer to his team. Tim's peers describe him as quietly excellent. Tim also provides support to important organizations such as Operation Lifesaver, Operation RedBlock, the *Texas Eagle* Marketing and Performance Organization (TEMPO) and the *Heartland Flyer* Coalition.

Tim Cooper is prime example of a front-line operating manager dedicated to making Amtrak the very best it can be. Tim represents the highest levels of sustained honesty and integrity with a job performance beyond the call of duty.

Ronald A. DeShields
Manager, Marketing and Sales, Philadelphia, Pa.

Ronald DeShields began his career with Amtrak in April 1990 and is a consistent, hands-on manager with a positive attitude and an open-door policy regarding all concerns and all issues. Aiming to improve call quality, Ron found an area in the call center that would provide team leaders with a private consultation area to meet with agents and critique calls. Ron also assisted with the evolution of the Customer Relations Desk. He helped increase the telephone outreach calls to passengers concerning their travel to an average of one train each week.

Ron is a manager that leads by example and is well respected by his co-workers. His leadership qualities are unique, and when dealing with several different personalities and issues, Ron's demeanor never changes. Ronald DeShields has demonstrated sustained excellence over the entire course of his Amtrak career. He is a team player with high expectations of himself and others.

Carl DiGregorio
Storehouse Clerk, Procurement and Materials Management, Philadelphia, Pa.

Carl DiGregorio has continually excelled beyond his normal duties as material handler, chauffer and forklift operator. The Penn Coach Yard warehouse became much more efficient after Carl organized it, thus saving Mechanical employees time and energy when searching for parts. He also organized the outside car shop, making it more efficient. Because of Carl, it is now much safer and less of an eyesore to the community.

Carl created an easy-to-read safety manual, helping co-workers avoid injury. Carl also designed a carrier for the back of a forklift for transporting items, again making it much safer and more efficient for his fellow employees. Carl made several recommendations during the Penn Coach Yard Clean-up Project to store materials more efficiently until the new buildings were completed. Carl DiGregorio is a quiet, humble, hard-working man with high standards for himself and all of his co-workers.

Curtis J. Dilly
Machinist Technician, Mechanical, Washington, D.C.

Curtis J. Dilly is a highly dedicated employee, never having missed a day of work in over 20 years of service. Curtis conducts inspections, repairs, and periodic maintenance on high-speed rail locomotives. He identifies potential problems and frequently takes proactive measures to avoid component failures, thus averting potentially costly repairs.

Curtis assisted with the rewriting and issuing of a policy to protect employees working on the roofs of locomotives. He also helped to address a safety concern associated with mechanics' lifting and exposing the nose of a high-speed locomotive to couple the train for towing. Today, workers no longer struggle to open the nose of the train. Curtis Dilly is one of a handful of employees that the high speed rail foremen refer to as "go-to guys."

If you want to get it done right, give it to Curtis. He imparts a sense of pride to all Amtrak employees who see the results of his dedicated efforts.

SUSTAINED EXCELLENCE (CONT.)

J. Robert Duncan
Safety Officer, Mechanical, Wilmington, Del.

Robert Duncan is responsible for the safety of over 400 day-and night-shift Amtrak and contract employees at the Wilmington Shops. The safety record of the Wilmington Shops is a remarkable tribute to Amtrak’s safety commitment, and to the hard work and leadership of Robby Duncan. By reducing lost-time reportable injuries and increasing employee awareness, the facility has won the safety trophy for the best record of the heavy maintenance repair shops in 13 of the past 16 years.

Wilmington Superintendent John Wood said of Robby, “His high-quality job performance has always been part of his work ethic, and when it comes to safety and the environment there is no compromising with Robby.” Transportation Safety Officer Thomas McCann stated, “When you think of a safety person you think of Robby Duncan, not just at the shops but throughout the Amtrak corporate safety program.”

Isaac Gonzalez
Assistant Supervisor Track, Transportation, New York, N.Y.

“His respect for the traveling public is second to none,” said Assistant Division Engineer Gary Noto about Isaac Gonzalez. “Just as a track problem occurred on the highline that caused train delays, the workers had started opening their lunch. Gonzalez yelled, ‘Let’s go — we have a problem.’ Within seconds, Isaac and his workers were out the door, leaving lunch on the tables half-eaten. Within minutes they had trains moving with minimal delays.”

He supervises and mentors one of the most productive and safest track crews on the Northeast Corridor. This crew has participated in construction projects such as the JO Interlocking Realignment, Secaucus Project and major switch replacements in New York Penn Station. In 2004, Isaac received a safety recognition award for his construction gang working over 900 days injury free. “Isaac stands out because of his ability to motivate others,” said Senior Engineer Dane Wagner. “He is constantly vigilant about upgrading the track structure and has absolute passion for his job.”

Raymond A. Grainger, Jr.
Truck Driver, Engineering, Baltimore, Md.

Since Raymond Grainger began his career at Amtrak in 1976, he has taken great pride in his work. With Ray, every tool is accounted for, no matter how small, and material costs are reduced. The trackmen in Ray’s gang never worry about using a defective tool because he inspects them daily and separates the bad from the good.

Willie Powell, assistant division engineer in Baltimore said, “If you look at Ray’s vehicle you will see every tool in its place and all the safety equipment serviced and ready. He checks the job requirements and insures the necessary tools are on board. At the end of the day, when everyone else is kicking off their boots and washing up, Ray is servicing the vehicle, without ever asking for extra time. Whether he’s cleaning the vehicle, sweeping the floor or helping a supervisor, Raymond Grainger demonstrates superior performance.

John C. Higgins
Manager Budgets, Mechanical, Boston, Mass.

John Higgins is one of those employees who avoids the spotlight and works quietly and diligently behind the scenes to produce high-quality achievements. In recent years, much of John’s time has been devoted to the financial side of the commuter business. This included the mechanical, transportation and engineering services provided under contract to the MBTA. John’s knowledge and experience were critical to the complex transition of the contract to the MBTA in 2002.

Master Mechanic Don Knapik stated, “John was a key player during the transition and was personally invaluable to me in providing vital information to manage the business.” John brings the same attention to detail to his current position and “runs rings around anyone I’ve ever seen in the areas of financial reporting and analysis,” said Al Mareello, his current supervisor.

John’s integrity, dedication to teamwork and strong work ethic make him a credit to Amtrak.

Kathleen Isom
Analyst, Procurement and Materials Management, Washington, D.C.

Kathleen Isom is fondly and aptly referred to as the “Queen of Forms.” She earned this title as a result of her single-handedly taking control of a program in dire need of attention. She initially organized and streamlined the program, eliminating waste, backorders, obsolete forms, and excess inventory. In doing so, she reduced the cost of the forms, as well as inventory, storage and distribution needs. Kate has since taken the program to a whole new level through several transitions in technology, from hard copy forms to e-forms and more.

There are numerous productivity and service quality improvements that are a result of Kate’s superior job performance. The most visible were Kate’s initiation of the Forms Web site, the design and development of e-forms and the implementation of online ordering forms. This Web site is one of the five most popular “hit” sites on the Amtrak Intranet.

Juanita Johnson
Executive Assistant, Procurement and Materials Management, Philadelphia, Pa.

Juanita’s 28 years of service to Amtrak have consistently been rated by her supervisors and peers as exceptional. This assessment is based on her technical knowledge, expertise and conscientiousness. She spends many hours of her own time striving to achieve a level of administrative excellence that is the hallmark of her professionalism. Juanita (also known as the “Queen of eTrax”) personally authored and conducted classes for the Executive Committee support staff for the rollout and implementation of eTrax.

Her thirst for knowledge and her awareness of the inner workings of Amtrak, plus her problem-solving ability, have helped Juanita grow in her position.

Mike Rienzi, vice president of Procurement and Materials Management, said, “I have served as an executive for different companies in my lifetime, and no one I have known, in her capacity, comes close to Juanita’s outstanding, consistent performance.”

Richard Johnson
Train Attendant, Transportation, New York, N.Y.

Richard Johnson started his career as a train attendant 31 years ago. He has served in several On-board Services positions, including chief of On-board Services. Because of his superior performance and demonstrated leadership qualities, the Training department has tapped Richard to assist in the training of newly hired On-board Service employees for the past 18 years.

Richard goes the extra mile to ensure that his passengers are comfortable and informed, adding his own personal touch to service.

Richard is very mindful of train amenities and ensures proper accountability of unused amenities. He alerts management of adjustments to be made when ridership is low, saving the company a significant amount of money. He is a willing and dedicated team player who cares about his fellow employees. He shares his skills and assists co-workers in any way to ensure consistent and high-quality customer service. “Sustained Excellence” could very well be defined as the competent Richard Johnson.

Robert J. Jones
Director Automotive, Procurement and Materials Management, Bear, Del.

Robert Jones is responsible for managing Amtrak’s fleet of approximately 2,000 vehicles. He and his staff are also responsible for the administrative duties in the areas of commercial motor vehicles, licensing, titling, insuring and completing accident reports. With careful management in the areas of financial control, revised policies and procedures, and the implementation of consistent vehicle standards, Bob has been directly responsible for savings of approximately \$7 million since taking this position.

Amtrak’s corporate structure allows it to participate in the General Services Administration’s (GSA) program to acquire vehicles. When the company’s participation was in jeopardy, Bob worked tirelessly to improve the relationship between Amtrak and the GSA, and in a very short time, Amtrak was awarded the “Worst to First” award from GSA. As a result, Amtrak has been singled out as a program to emulate, as evidenced by a benchmarking request from the U.S. Marine Corps.

Pamela K. Keyes
Manager Material Control, Procurement and Materials Management, Seattle, Wash.

Pam Keyes is the manager of the Seattle material control facility and is also responsible for the material requirements supporting the Sound Transit Commuter Service. Pam continually receives praise from the Sound Transit Board for her excellent service. Pam’s performance has also been noticed by the California Corridor Joint Powers Board and Peninsula Joint Powers Board. Pam reduced the obsolete and excess inventory in Seattle by 30 percent, saving Amtrak over \$450,000. She also saved Amtrak approximately \$300,000 by relocating the entire warehouse without any outside assistance to facilitate construction requirements. This relocation was done without any disruption of service to the Mechanical department, and it helped improve Engineering’s productivity. The move was accomplished while continuing to maintain high material fill rates and the highest safety standards without any reportable injuries.

The Mechanical superintendent complimented Pam by stating, “Material is the least of my worries.”

David B. Klouda
Division Engineer, Engineering, Chicago, Ill.

Dave Klouda is well known for providing technical expertise for signal and communication systems to help improve on-time performance. In 1999, he was promoted to C & S director construction/maintenance and project development. During this period, he acted as the project manager for the Lake Shore Interlocking (LSI) Rehabilitation Project. “The LSI Project is a complex multi-year endeavor and with Dave’s expertise there will not be any service disruptions with existing train services,” said Robert Olson, deputy division engineer of Projects.

In 2000, Dave was promoted to division engineer of the Central and Southern divisions overseeing all Amtrak-owned or leased infrastructures in his area.

During his tenure as division engineer, Dave Klouda has led his groups to finish FY ’00 and FY ’01 with the lowest injury ratio of any Engineering division in the country. “I can depend consistently on things being done right with Dave,” said acting president and CEO David Hughes.

SUSTAINED EXCELLENCE (CONT.)

Robert J. Lear
Machinist Technician, Mechanical, Washington, D.C.

Robert Lear joined Amtrak in 1998 as a machinist journeyman. He is currently a machinist technician in the Mechanical department in Washington, D.C. As a machinist technician, Rob spends much of the time working on equipment that is out of service. His wealth of knowledge and experience has earned him the reputation as the “go-to” technician for troubleshooting and repairing problems. He is well known for quickly recognizing the most efficient way to perform tasks.

Rob is an innovator, particularly when it comes to fabrication and in-house modifications. For example, to fix recurring breaks in a heater vent, Rob designed a locking device that eliminated the problem. Rob is often dispatched to work on equipment that has broken down en route and also rides trains that have reported problems. He efficiently identifies problems, comes up with solutions, and returns equipment to revenue service promptly.

Gable LeBlanc
General Foreman, Mechanical, New Orleans, La.

A former Southern Pacific Railroad employee, Gable LeBlanc started with Amtrak as a carman in the locomotive shop at the New Orleans facility in 1997. As a facility foreman III, Gabe is responsible for monitoring diesel locomotive performance. He has substantially improved the operation of the New Orleans facility based on the GE service agreement for diesel locomotives.

Gabe sees to it that his foremen evaluate every locomotive failure, carefully reviewing whether the parts are covered by the service agreement. Since Gabe has taken on the task of monitoring the GE contract, the average number of claims per month has increased from 65 to 125. Over a six-month period, the average has risen from 393 to 751. Through his superior management of claims associated with the GE service agreement, Gable LeBlanc has demonstrated true dedication to his work and sets a shining example of on-the-job performance for other employees.

Charles C. Lin
Director, Environmental Health and Safety, Washington, D.C.

Charles Lin was the second environmental engineer and one of two environmental professionals at Amtrak from 1977-1992. His extensive knowledge of Amtrak has enhanced engineering technology and improved facilities and operations. Charles successfully reduced costs as director technical support and the environmental monitor for the three Mechanical shops.

“Mr. Lin is the most honest and dedicated Amtrak employee I know. He is a true asset to both the Environmental department and Amtrak. Field personnel have great respect for his leadership and appreciate his support of their compliance efforts,” said Bob Noonan, superintendent, Safety. Mechanical Superintendent Lew Wood said, “Charlie always shows the highest level of integrity and morale. He is motivational, upbeat and positive.”

Despite his job’s many challenges, Charles has consistently performed to make Amtrak a better place.

William C. Lowes, Jr.
Field Environmental Specialist, Mechanical
Beech Grove, Ind.

Working in the 109-acre Beech Grove maintenance facility, William Lowes has relentlessly guided the employees there to increasingly strong environmental standards.

Through his dedication, Bill has consistently demonstrated a desire for the Beech Grove facility to exceed all local, state and federal environmental laws. Corporate environmental audit results from the last four years show that his diligence has paid off with an increase in positive findings and a decrease in findings of potential violations.

Bill has worked closely with the city of Indianapolis to institute controls related to testing and sampling of industrial wastewater discharge. With these controls in place, the city cancelled the annual industrial wastewater permit that it originally required. Bill has also been instrumental in the extraordinary environmental cleanup at Beech Grove. He proposed and received approval for a new cooling tower that will eliminate health hazards and save the cost of maintaining the current antiquated water system.

Phillip McCaig
Technician, Mechanical, Chicago, Ill.

One of Phillip McCaig’s specialties is the design and installation of modifications. These modifications have resulted in reduced failures and increased safety. One such example is the ground relay tester he developed for the F-40 fleet in the 1990s. Most recently, Phil helped outside vendors with the adoption of new cab signal systems to the Amtrak Genesis locomotives, including the Michigan Incremental Train Control System (ITCS) and the Illinois Positive Train Control (PTC) project that allows Amtrak trains to travel at 90 mph. He has been involved in almost every technical project undertaken at the Chicago facility since 1979.

Phil distinguished himself by conscientiously training scores of apprentices and new hires throughout his career with Amtrak. Phil’s patient and thorough work habits are an excellent example for less-experienced employees, and Phil has always been known as a person who graciously shares his knowledge with anyone willing to learn.

Wayne B. Moore
Lieutenant, Police and Security, Boston, Mass.

Amtrak Police Department Lt. Wayne Moore supervises 43 people in six field offices and, in the inspector’s absence, he manages the entire New England Division and Empire District. Wayne oversees the four community resource officers, who meet quarterly. He attends monthly community meetings to address Amtrak’s neighbors and their concerns. He serves as liaison with federal agencies such as the Department of Homeland Security, the FBI, and the CIA and local law enforcement agencies to stay current on security and safety issues and ensure that our employees and passengers are safe.

In 2004, when the New England Division was tasked with providing security for both the Democratic and Republican National conventions, Wayne was responsible for developing a cohesive and strategic operations plan that would ensure the safety of all Amtrak passengers and employees. He worked with outside agencies on jurisdictional concerns and ensured that manpower was effectively deployed. He worked to guarantee that plans for both conventions were successful, safe and cost-effective.

Clifford Norton
Station Agent, Transportation, Austin, Texas

Clifford Norton demonstrates consistent, exemplary job performance, especially when it comes to customer service. His co-worker Bill Taylor said, “Cliff is always looking for better ways to help the passengers. During the many service disruptions between the *Sunset Limited* and the *Texas Eagle*, Cliff always does his best to help the customers. He never loses his cool, and always handles each situation with understanding and compassion.”

Cliff is both a team leader and a team player. His “can-do” attitude is an inspiration to all who know him. His supervisor, Assistant Superintendent Station Operations, Joy Smith says, “Cliff goes above and beyond his normal duties, is serious about his work and influences employees by example. He takes pride in what he does, and his station is always neat and clean for our passengers. He treats everyone as he would want to be treated. Clifford Norton truly lives the Golden Rule.”

Douglass V. Paige
Police Officer, Police and Security, Philadelphia, Pa.

It’s been said that Douglass Paige cast the mold for the community police officer position. Doug has established fruitful relationships with law enforcement agencies, schools, communities, government and private organizations throughout the metropolitan Philadelphia, New Jersey, Maryland and Delaware regions.

Doug has worked for years soliciting donations for children in need during the Christmas holiday season, and has been very active in his efforts to organize and support the Black History events at 30th Street Station. Doug has been recognized by Amtrak’s surrounding community for his dedication to area youth and was honored by Pennsylvania State Sen. Vincent Hughes for his community relations activities in Philadelphia. He was recognized by Morgan State University for his mentoring/transportation program with the youth in west Philadelphia. Doug was acknowledged with the Marion Anderson Community Award, and honored by the Boone School for Discipline for mentoring troubled youth.

Gwen Payton
Lead Ticket Clerk, Transportation, Hartford, Conn.

Gwen Payton became lead ticket clerk in Hartford, Conn., in 1998. Gwen manages the Hartford ticket office and is well known as a positive example for her co-workers, who admire and respect her. She sets the standard for productivity in the office known for its pleasant working environment. Gwen has developed an excellent rapport and level of trust with daily passengers. When she is not on duty, passengers often ask, “Where’s Gwen?” Passengers have written to the company commending her “pleasant demeanor,” how her “kindness turned a mistake into a positive experience” and how she “provided a level of service and results, which were second to none.”

Although Gwen often faces various multi-tasking duties, she maintains a self-reliant, good-natured attitude, even at the most overwhelming times. Her warm personality and outstanding work ethic influences her subordinates by example. Gwen’s loyalty and enthusiasm are evident in every aspect of her work.

Thomas A. Perkins
Conductor, Transportation, Seattle, Wash.

Thomas Perkins is universally respected and appreciated by his peers and managers on both coasts. He has received numerous commendation letters that attest to his customer service skills. In fact, his Boston supervisor remarked that he wished he had more employees with Tom’s dedication and pride in their work.

Colleagues agree that Tom’s penchant for going the extra mile comes to him naturally. The same can be said for Tom’s ability to make passengers feel like VIPs. From his impeccable appearance to his clean operating record, Tom inspires co-workers and spoils his passengers. From working with law enforcement officers to assisting passengers, Tom is exceptional at acting in best interest of passengers while providing a safe and enjoyable travel experience. Tom’s friendly and professional demeanor is truly an asset to Amtrak.

Phelan

SUSTAINED EXCELLENCE (CONT.)

Maureen Phelan
Officer, Human Resources, Philadelphia, Pa.

Since 1976, Maureen Phelan has made the Amtrak Human Resources department her career.

Maureen’s recruitment expertise results in quick turnaround when it comes to filling vacancies. Maureen has built strong relationships with the Department of Labor, Dover Air Force base and technical schools in the Wilmington area to assist in her recruiting efforts. These relationships are also important in fostering good community relations for Amtrak.

It’s not uncommon for Maureen’s customers to expect miracles. This was evident during a time of reorganization when the chief mechanical officer needed to staff his organization and decided to conduct interviews on weekends. Maureen never complained. She worked steadily until all jobs were filled. When the advertising dollars have dwindled and recruiting quality employees is top priority, Maureen has used her creativity to find new and innovative recruitment resources, whether it is attending a job fair, or networking with other Human Resource colleagues or the business community.

Marvin Plumley
Ticket Clerk, Transportation, Prince, W.Va.

Marvin Plumley is an outstanding employee with perfect attendance, never having taken a single sick day since 1975. Marvin has a positive attitude, always assisting passengers with tickets, baggage and boarding with a smile. He takes personal responsibility and uses his own funds for improvements, repairs and upgrades to the station. He supplies paper products, carryout trays, utensils and support items, should the train need them. With no vending machines in the station, Marvin purchases soda, water and snacks, which he distributes to customers waiting for trains at no charge.

Marvin recently restored the station floor to its original condition, which displays an embedded design of the C & O Railroad’s famous “Chessie Cat.”

Marvin’s supervisor said, “Marvin’s attitude is always positive and joyous and he clearly demonstrates his willingness and ability to work as a member of a team. Every Amtrak station should have an employee like Marvin Plumley.”

Jack E. Pulley
Carman Welder, Mechanical, Beech Grove, Ind.

Jack Pulley has long demonstrated his extensive air brake knowledge by successfully troubleshooting air brake problems. He has contributed several cost-saving initiatives to Amtrak. For example, Amtrak was using a costly and time-consuming manual test device for testing a specific brake system. To solve the problem, Jack assisted a vendor with making a computerized test device that would be compatible for this particular car’s brake system. This saved about two hours per test, an approximate savings of \$40,000 over two years. Jack was also instrumental in finding and repairing failures on the shut-off valves on Amtrak air brake systems. The pipes that supplied the air to the air brake systems were too short and were vibrating apart, causing a failure in the system.

Mr. Pulley has proven that he is a professional and dependable employee who has a positive attitude and is dedicated to his job. He is diligent and meticulous in his work and has innovative ideas.

Barry L. Schaffer
Supervisor, Sales and Marketing, Philadelphia, Pa.

As a reservations sales team leader, Barry Schaffer was instrumental in coaching and mentoring a team of 20 agents to high levels of performance in sales revenue and on-phone productivity. Barry coordinated with manpower planning and other supervisors to develop training and familiarization tours for agents to experience the stations and on-board service amenities.

Barry has improved call center efficiency, eliminated waste and developed qualification and performance standards for reservations sales agents. He initiated a program, now used in all call centers, for retraining agents returning from leaves of absence, which has saved Amtrak nearly \$500,000. In another effort to reduce costs, Barry has carefully utilized training assistants’ time and combined training sessions. Because of these efforts, Barry earned the prestigious title of Supervisor of the Year. Barry Schaffer is highly motivated toward making improvements in his department and the call centers.

Victor W. Salemme
Assistant Superintendent Maine Service, Transportation, Portland, Maine

Victor Salemme is well known for his loyalty, dedication, and leadership, having held positions in train operations, customer service and project management throughout his 30-plus year career in the railroad. In 1998, he was instrumental in the launch of the *Downeaster* service. He worked closely with Northern New England Passenger Rail Authority (NNEPRA) and built a strong partnership between Amtrak and the transportation agency.

Since the launch of the service, Victor has extended that partnership, creating highly regarded relationships with communities, external entities, passengers and employees. In 2002, he received the George J. Mitchell Award from NNEPRA, which is awarded to an individual who promotes excellence and stewardship for passenger rail service in Northern New England.

Plumley

Pulley

Schaffer

Salemme

Santini

Seubert

Smith

Spees

Trainmaster Paul Eastwood said, “I spent 24 years in the military and 13 years with Amtrak during which I have had a lot of bosses. Victor Salemme is the best mentor, teacher and supervisor I have ever had.”

Susan M. Santini
Chief Clerk, Environmental, Health and Safety New York, N.Y.

Susan Santini is chief clerk in the Environmental, Health and Safety department in New York, but her co-workers call her the “The Great Santini.” She makes things work — even difficult problems are solved almost like magic. Sue developed a Daily Injury Log, which has been adopted by other divisions. This report is the basis for the general superintendent’s daily safety briefing and is used by the system safety officer in the weekly report to the vice president of Transportation.

Sue is also the coordinator of quarterly health and safety fairs in the New York Division. At the fairs, many employees obtained health and safety information and screenings they would otherwise not have received. She is also co-facilitator of the New York Division Recognition Program. Sue has a positive attitude and infectious enthusiasm. She has the willingness to go the extra mile.

Harry S. Seubert
Field Environmental Specialist, Mechanical, New York, N.Y.

The challenges faced by Harry Seubert have been substantial, with constant local, state and federal oversight of his activities as field environmental specialist in New York. The improved condition of Sunnyside Yard and facility is in no small part attributable to Harry’s efforts in the areas of the environment, health, and safety. His diligence has reduced the potential for adverse findings that could compromise Amtrak’s credibility with EPA, FDA, and the many other departments.

Harry was awarded a President’s Service and Safety Award as a member of Sunnyside Yard Safety Committee in 1997. At that time he was employed as a car inspector and was also the local chairman for his craft. The following year he was assigned safety coordinator and he produced an awareness training video regarding the FDA consent decree imposed on Amtrak. Harry’s dedication and loyalty to his fellow employees have resulted in a safer environment.

Patrick Q. Sinesi
Electronic Technician, Engineering, Philadelphia, Pa.

Few people in the Northeast Corridor are more integral to ensuring smooth electric train operations than Patrick Q. Sinesi. According to Director of Policy and Standard Jerry Nangle, “Pat Sinesi is not just a cog in the mechanism, he is the reason it works at all.” Pat designed and built replacement pieces for the converter station and other areas of the ET system. Siemens Corporation used his evaluation of components of the electrification system as the basis for their own designs and improvements.

When the station was changed over from mechanical to solid state, a vendor from Europe was selected to head the project. When the vendor left the property, Pat kept the system functioning. “Pat Sinesi has directly affected the accomplishment of every major ET project for the last 10 years,” said Mario Basile, assistant division engineer of ET in the Mid-Atlantic Division.

Ralph L. Smith
Supervisor, Engineering, Philadelphia, Pa.

Ralph Smith started his second railroad career with Amtrak as a laborer with a very strong work ethic. He came to Amtrak from the freight railroad where he was a foreman.

Last summer, Ralph assisted in reorganizing a rail-laying project that was struggling to meet daily goals. With his help, the team met its goals and set new records. His aggressive approach to teamwork has increased overall production without compromising safety standards. Recently, several turnouts were scheduled for installation as part of the Rhode Island Freight Improvement Project. As the switch exchange system was occupied elsewhere, Ralph developed a way of constructing the turnouts near the final installation site — using two cranes, he walked in the 100-foot switch panels.

Ralph is not afraid to make unpopular decisions. He does not play favorites and, if necessary, he is willing to be the bearer of bad news. He will always tell the real story and knows the operation.

Tom W. Spees
Manager Crew Services, Transportation, Seattle, Wash.

While working in several craft positions, Tom Spees served as the district chairman for the Transportation Communications Union. A former manager jokes that Tom was hired into management because he was tired of fighting the best district chairman at Amtrak. General Superintendent Joe Deely says, “He’s not afraid to tell his peers when he feels something won’t fly.” This is a valuable asset for a manager who must keep his finger on the pulse of On-board Service as well as Train & Engine crews in five different crew bases.

For the last five years, Tom has been a key organizer of the *Empire Builder* transfer to Seattle. Tom also developed a mentoring program for new OBS employees, which pairs them with a seasoned employee who is available 24 hours a day during their initial training. As anyone in the Pacific Division will say, Tom Spees is the man to go to for workable solutions to tough problems.

SUSTAINED EXCELLENCE (CONT.)

Joseph R. Stokes
Sleeping Car Attendant, Transportation, Chicago, Ill.

As an Onboard Service employee, Joseph Stokes delivers consistent high-quality service and provides a world-class experience on each trip to every passenger. Many of Joseph's colleagues, customers and supervisors think he is a remarkable employee. New York Crew Base Manager Debbie Johnson said, "He is an employee who is a tough act to follow." Conductor Jesse Lewis states, "I wish I could clone Mr. Stokes." His co-worker Waqar Ahmed states, "He is a true gentleman, a person you are really glad to see."

One of his many commendation letters, reads, "Our trip was made more pleasant by the superb service we received from our train attendant J. R. Stokes. He always displayed a positive attitude and has a pleasant demeanor. It's apparent he enjoys his job." He is a true professional and creates that special experience that keeps our passengers coming back again and again.

Herminio Vargas
Sleeping Car Attendant, Transportation, Los Angeles, Calif.

Herminio Vargas' primary responsibility is to provide first-class service aboard the *Coast Starlight* — often under very difficult conditions such as late trains, inclement weather and minimal rest. In spite of these obstacles, Herminio consistently provides Amtrak's passengers with a great travel experience. Herminio's co-workers consider him an outstanding person and a team player. Selected as a training resource employee, Herminio also trains new hires, teaching them how to be true service professionals.

To increase revenue, Herminio actively encourages the sale of available rooms during the trip, and he delivers snacks and beverages to his passengers' rooms. Additionally, Herminio encourages passengers to purchase wines featured at the on-board wine tasting events. His assistance has made the lead service attendant on his crew one of the highest revenue producing Parlour car attendants in Los Angeles. Without a doubt, Herminio Vargas lives up to the *Coast Starlight* On-board Service motto: "Make a Difference!"

Linda C. Williams
Reservations Sales Agent/Acting Supervisor, Marketing and Sales, Riverside, Calif.

Linda Williams has spent many of her 12 years of Amtrak service as a trainer and an acting reservations sales supervisor at the Riverside Call Center. Her track record as a highly successful sales agent is a testament to her ability to be responsive to callers' needs. Linda has consistently exceeded revenue generation targets and averages. She was Agent of the Year for seven consecutive years before becoming an acting supervisor and was consistently an Agent of the Quarter generating higher-than-average revenue. In 2003, Linda generated the highest Advance Payment (AP) bookings at Riverside call center.

She had a 98.7 percent success rate for trainees and was under budget. Linda Williams is well liked, works hard and leads by example. She has a positive attitude, which affects everyone around her. She has been called a "Type A" person: intense, highly competitive, efficient, friendly, helpful and someone who "knows her stuff."

Stan Winkler, Jr.
Director Revenue Operations, Finance, Philadelphia, Pa.

Stan Winkler has demonstrated outstanding overall job performance and dedication to Amtrak, its customers and fellow employees for the past 22 years. To the hundreds of field associates in Station Sales and Train Operations, Stan is "the face of the Finance department." Due to his extensive knowledge, integrity and dedication, he is invited to participate on many committees and special projects. He is the consummate team player that adds immediate value to any initiative that is fortunate enough to include him as a partner.

Stan's excellent work ethic and professional demeanor are a positive influence on all who come in contact with him. Stan's reputation is widespread and many employees are the benefactors of his expert knowledge. No problem appears to be too big or small for Stan Winkler to solve. With that image, one may think things would become overwhelming. Not for Stan — he handles them with ease.

Donald K. Wong
Associate, Sales and Marketing, Los Angeles, Calif.

Donald Wong works with preferred tour operators in Southern California who reserve group moves and must maintain a minimum sales requirement. Don has been instrumental in the steady improvement of sales with these operators. He led the Marketing team with the highest revenue of group travel booked through Amtrak-preferred operators in the January to March quarter of 2004.

Don has created many innovative grassroots marketing campaigns. Some highlights of his ingenious creations include: a "Back to the Beach" sale, "Solvang Safari" and various cruise-rail packages. Together, these positively impact ridership and revenue on long-distance trains on the *Coast Starlight*, *Southwest Chief*, *Sunset Limited* and *Texas Eagle*. Don's modesty will not allow you to credit him. Frequently, he insists the accolades go to others. When suggestions for change or improvement are made, he agrees gracefully. Donald Wong is highly esteemed as an Amtrak employee for his leadership, integrity and dedication.

Harry A. Wray
Assistant Division Engineer, Engineering, Hamden, Conn.

With safety first in mind, Harry Wray understands that Amtrak is an around-the-clock operation. As a result, he is often in the field at any time of the day or night with employees to oversee work being performed. What makes Harry truly unique is his knowledge of electricity and communications. He is a rare employee, having expertise in all four disciplines: signals, electronics, communications and electricity.

As a part of the implementation of high speed train services it was necessary to install an Advanced Civil Speed Enforcement System. Harry voluntarily took on the responsibility as division representative for the project and was instrumental in its execution. Harry worked additional hours to make sure the system was installed and working properly. Pat Tuttle said, "He continually goes above and beyond." Harry Wray is an excellent role model for everyone with whom he comes in contact. Harry's attitude is positive and he puts his all into everything he does.

VALOR

Raymond Farris
Food Specialist, Transportation, New York, N.Y.

On the night of Oct. 18, 2004, Raymond "Mo" Farris and the other crew members on train 48 retired for the evening. As always, Mo did not close his door — he only pulled the curtain. This observance of an established safety rule may have saved many lives. At approximately 2:05 a.m., Mo was awakened by smoke. He looked down the hall and saw flames and crawled though the crew car banging on doors and yelling, "Wake up, the car's on fire!" Mo instructed the crew to head toward the baggage car, which was locked. He used his fist to bang on the lock until it finally opened. Even though he injured his hand doing it, he didn't stop until the crew could get safely inside.

The train came to a stop and Mo jumped off and alerted the conductor. The crew moved out of the baggage car and began the evacuate passengers. Thanks to Mo's quick thinking, no one was seriously injured and the train resumed its journey after a three-hour delay.

Robert Tripp, Jr.
Engineer Work Equipment, Engineering, Long Island, N.Y.

Robert Tripp, Jr. was instrumental in stopping a runaway crane from crashing into a previous accident site in the East River Tunnel. "The crane was operating free-wheel," said David Peveraro, Maintenance-of-Way repairman. "It was rolling backwards at 35 mph toward employees working on the track bed. Tripp shut the machine down to try to get the system back on line to restore braking power. Nothing electrical was working."

With the outriggers extended, Bobby stopped the crane by using the outriggers to hit the concrete wall and derail the crane. "The presence of mind used by Mr. Tripp was extraordinary," said Bill Hottenstein of Atlantic Crane Inspection Services. "The crane weighed over 50,000 lbs. The average person would have jumped. If the outriggers were not extended, the machine would have gone into the tunnel where two trucks were stalled. He saved lives."

POSTHUMOUS

In Memory of Robert S. Collins
November 28, 1970 – February 21, 2005
Electric Traction Lineman, Perryville, Md.

A seven-year veteran of Amtrak, 34-year-old Electric Traction Lineman Robert Collins was severely injured while working on an Amtrak project near Perryville, Md., the morning of Feb. 17, 2005. His crew members worked quickly and diligently to administer aid and transport him to awaiting emergency rescue personnel. Collins later succumbed to his injuries and passed away on Feb. 21.

Robert joined Amtrak in November 1997 and worked in three different work zones in the Mid-Atlantic Division. His most recent work site was the Perryville Maintenance-of-Way base. A resident of Baltimore, Robert came from an Amtrak family that includes two uncles who work in the Mid-Atlantic Division Engineering department. Robert Collins made many friends at Amtrak. His injuries and passing had a profound impact on those who worked with him, and he will be greatly missed. (Photo not available.)

In Memory of Thomas M. Ormiston
July 14, 1946 – January 26, 2005
Conductor, Los Angeles, Calif.

Conductor Thomas Ormiston passed away on Jan. 26, 2005 from injuries he sustained in the Metrolink derailment in Glendale, Calif. A railroad veteran of 35 years, Conductor Ormiston served with both the Santa Fe and the Southern Pacific railroads prior to joining Amtrak in 1992.

Many Amtrak and Metrolink colleagues and friends paid their respects at a memorial service in Glendale. Honoring Mr. Ormiston and the other victims of the derailment, Metrolink trains sounded their whistles at 12:01 p.m. on Wednesday, Feb 2. In addition, the Control Point on the Metrolink River subdivision was renamed CP Ormiston, as a tribute to the conductor.

Tom cared tremendously about his passengers and co-workers, who felt the same way about him. He was truly loved by the entire Amtrak and Metrolink families and his kind and generous spirit and his great sense of humor will be missed.

savings through operating efficiencies in such areas as food and beverage service and First class service, assessments of access fees by the Secretary of Transportation on commuter rail agencies for their use of the Northeast Corridor and limits on ticket discounting.

Amtrak Statement

continued from page 1
find the railroad's next leader.

Announcing the Board's decision, Amtrak Chairman David M. Laney said: "David Gunn has helped Amtrak make important operational improvements over the past three years. Amtrak's future now requires a different type of leader who will aggressively tackle the company's financial, management and operational challenges. The need to bring fundamental change to Amtrak is greater and more urgent than ever before. The Board approved a strategic plan in April that provides a blueprint for a stronger and more sustainable Amtrak. Now we need a leader with vision and experience to get the job done."

Gunn came out of retirement in May 2002 to lead Amtrak after a career that included running transit

systems in New York and Washington, D.C.

The strategic plan produced by Amtrak's Board and management calls for fundamental change with the goal of delivering better service for passengers and an improving financial performance. The plan calls for competition in U.S. rail passenger service, shared federal-state financial responsibility for passenger rail, as is the case with highways and aviation, and predictable multi-year federal funding.

A report released last week by the Government Accountability Office credited Amtrak's management with some positive changes in recent years, but also was uncharacteristically blunt in concluding that more far-reaching changes were needed along the lines of those proposed by Amtrak's Board.

FRONT LINE FOCUS

Dear Amtrak:

My wife and I had the pleasure of taking *Auto Train* from Sanford, Fla., to Lorton, Va.

The trip was especially nice and comfortable due to the outstanding service and efforts of our car porter, Dan Morgan. From the time our trip began until our arrival, he was extremely pleasant, courteous and helpful in every way. What a treat it is to meet someone who knows their job so well and goes out of their way to be so gracious and helpful, particularly to a couple of seniors like my wife and me.

We have taken your *Auto Train* before and will do it again on New Year's Day. But this trip was extra special and we wanted you to know it. Please extend our sincere thanks to Dan and see that this letter becomes a permanent part of his employment record. And our thanks to your management for hiring someone of such high caliber.

John T.
Edgewater, Md.

Dear Amtrak:

I recently had the pleasure of riding the number 43 and 44 trains to New York City and also to Pittsburgh in September.

A Mr. George Margaritis was the café car attendant on both trips.

What a joy he was!! Asking everyone if they were comfortable, needed anything, and genuinely concerned for the passengers.

He made both trips very enjoyable. Please thank him formally for me.

Adrienne A.

Thanksgiving Revenues Contribute to Strongest Month Ever

Boosted by heavy travel during the Thanksgiving holiday week, ticket revenues in November broke two records — the highest ticket-revenue-producing month and the highest ticket-revenue-producing Thanksgiving week.

Total ticket revenue for the month topped \$119.2 million, an increase of 13 percent over last November, proving that the recent fare actions in October are delivering the desired results. Ridership of more than 2.08 million passengers also topped last November's number by 3 percent.

What made this record revenue month possible? Three factors contributed to November's bottom

line. First, extra attention was paid to assign equipment to the expected peak holiday travel times. Next, the newly implemented revenue-management pricing strategy for *Regional* trains generated additional revenue. During peak Thanksgiving holiday travel days (Tuesday, Wednesday and Sunday), most *Regional* trains that were virtually sold out. And finally, the fare increases introduced in October produced results systemwide.

"These pricing initiatives, combined with right-sizing our trains, allowed us to maximize

revenue opportunities," said Barbara Richardson, vice president, Marketing and Sales.

Ticket revenues collected by the company for Thanksgiving week,

than last year. The results were particularly strong in the Northeast Corridor on *Regional* trains. Ridership nationally resulted in 591,000 trips, about even with last year.

For the month, overall ticket revenues collected on short-distance and corridor trains rose 14 percent over last November and ridership increased almost

7 percent. Notable increases in November included *Regional* trains that produced ticket revenue

Top Five Routes (Ticket Revenue)	November 2005	vs. November 2004
<i>Regionals</i>	\$37,189,725	+22%
<i>Acela Express / Metroliner</i>	\$29,449,311	+2%
<i>Auto Train</i>	\$4,012,966	+14%
<i>Pacific Surfliner</i>	\$3,455,242	+10%
<i>Empire Builder</i>	\$3,251,879	+27%

the period from Tuesday, Nov. 22 through Monday, Nov. 28, totaled \$37 million — 14-percent higher

Simplified Dining Service Begins on Four Trains

A change to Amtrak's long-distance food service aboard four trains is just the most visible part of a comprehensive plan that is underway to reduce Amtrak's operating loss. Earlier this year, it became clear to Amtrak that it could lose as much as \$120 million on its passenger food service in FY '06 unless it undertook substantial reforms.

As added emphasis that effective reforms needed to be adopted, an amendment to Amtrak's federal operating grant enacted into law at the end of November stated that the railroad must successfully reduce this loss or face the possible removal of food service from trains.

But the food service reform effort has been in full swing at Amtrak since this summer on three initial fronts.

First, to provide itself with better overall control and oversight of the food service operation, Amtrak negotiated a new contract with Gate Gourmet, the provider of most on-board food. The contract

puts in place new financial controls and performance measurements, as well as capping some costs and offering incentives for efficiency and cost reductions.

While the changes to the Gate Gourmet contract will reduce the operating loss across the network, a new simplified dining service was introduced in December and is now in place on four trains: the

Texas Eagle, *City of New Orleans*, *Capitol Limited* and *Sunset Limited*.

The new dining service features fully prepared meals that need

minimal on-board preparation. The meals are heated in an oven and are served on attractive, disposable dinnerware with linen napkins and stainless steel flatware. With no cooking and less preparation and dish washing, smaller crews are required.

"By modifying the food service this way, Amtrak continues to provide a high-quality meal without the more labor-intensive cooking preparation," said Tom Hall, senior director Commissary Operations. Instead of requiring a base crew of five in the dining car on these trains, this simplified dining service approach necessitates three employees in the diner.

In addition to in-person briefings, crews aboard the four trains have been provided a set of training materials that include a service guide and a video to ensure that the transition is successful.

As a third major initiative to better control food service costs, in FY '07 Amtrak plans to put into service new diner-lounge cars replacing current dining cars and lounge cars. These cars will make it

continued on page 5

While only serving as one of many preliminary conceptual designs, this rendering of a reconfigured Superliner food service car reflects some of the seating options envisioned.

TRAIN OF THOUGHT

Welcome to 2006 — this year is going to be a busy one for Amtrak and I want to share with you the reasons why. Over the course of the coming year, I plan on addressing the many steps we’re taking to accelerate the pace of reform within Amtrak.

Some of these measures were set forth in the Strategic Reform Initiatives published nine months ago. But as much as this document laid the foundation for reform, it is an organic, living document that will change as reforms are implemented and new avenues of reform are developed.

I don’t believe in making changes for the simple sake of reform itself, but because there’s a great deal of how we work today that is financially unsustainable in the long run. If we do not speed the pace of our reforms, others will step in and dictate those changes to us.

One area that will see considerable reform is food and beverage. As you know by now, we’ve begun modifying the way we provide food and beverage service on four long-distance trains. Our purpose is to reduce the loss we incur on those trains. While cost reduction is our goal, that doesn’t mean inferior service. Ultimately, the vision for a number of our long-distance trains

is to run one multi-purpose food service car that caters to passengers’ palates regardless of the time of day, maintaining our service standards, but utilizing smaller crews.

While we’re making changes to the way we provide food and beverage on some trains, we’re also going to look at other ways to improve customer experience. We can accomplish this in a number of ways; including making sure that the equipment we’re running is in good shape. For example, we’ll be ensuring that when there’s an equipment failure, we know how it happened, why it happened, get it fixed and make sure that it doesn’t happen again.

This year will also be a busy one because we are seeing more passengers than ever before. Through the first two months of the fiscal year, ridership was up 3 percent overall against last year. We had the highest revenue-generating month on record in November, evidence that the revenue management and fare changes are adding up the way we had hoped.

On a final note, I’ll be traveling to California this month with Bill Crosbie and Vince Nesci to take a close look at all of our West Coast

David J. Hughes

operations. I look forward to getting a firsthand look at the service as well as having the opportunity to meet the employees there.

In the meantime, keep operating safely and professionally.

Focus on Safety Results in Record-Low Injury Rate in FY ‘05

Amtrak closed out FY ‘05 with the fewest number of on-duty employee reportable injuries ever recorded by Amtrak in a fiscal year. Despite the record, the company finished the fiscal year with a 3.6 ratio against a 3.3 goal, based on the number of reportable injuries for every 200,000 hours worked.

Reportable injuries are those that require medical treatment exceeding first aid or that result in restricted duty or time away from work.

Of particular note is a 5-percent drop in the number of passenger injuries in FY ‘05, a year when the company achieved record ridership. Safety Superintendent Bob Noonan credits Amtrak’s operating departments for their leadership and the high level of personal

involvement and rule compliance manifested by the work force.

“Focus on safety-related behaviors, effective communication strategies and quality job briefings and planning sessions all contributed to help reduce injuries,” said Noonan. “This positive trend is evidence of our commitment to safety and the way we conduct business. Our on-board and station personnel are skilled at identifying at-risk behaviors and intervening quickly and effectively.”

Leading major operating departments with an overall lowest reportable-injury ratio

for FY ‘05 was the Engineering department, with a 2.5 ratio (versus a 3.7 goal). The Transportation department finished the year with a 3.1 ratio (versus a 3.3 goal), while the Mechanical department ended the year at their goal of 4.2.

President’s Safety Contest awards are given each year to recognize the best division performance within each of these Operating departments as well as the strongest commuter operation.

President’s Safety Contest Winners for FY ‘05		
Department	Division	Ratio
Engineering	West Division	0.0
Transportation	New York Division	2.6
Mechanical	New York/New England	1.8
Commuter	VRE (Mid-Atlantic Division)	0.9

Contract Yields Tighter Controls, More Amtrak Flexibility

Amtrak embarks on a new contract with Gate Gourmet this month that overhauls the way Amtrak conducts its food and beverage operations. Following months of lengthy discussions between senior management of both companies, the agreement replaces the previous contract, expands Gate Gourmet's scope of work and makes fundamental changes to the business and legal terms of the relationship.

The new agreement gives Amtrak better control and oversight of its food and beverage operations by implementing financial and performance measurement and accountability mechanisms, expanding and clearly defining Gate Gourmet responsibilities, capping costs, offering incentives for efficiency and cost reduction, and providing Amtrak the flexibility to pilot the outsourcing of food and beverage operations.

The new contract also addresses the requirement to meet food and beverage efficiencies, as mandated by Congress in the FY '06 appropriations legislation: "...The corporation is directed to achieve savings through operating efficiencies including, but not limited to, modifications to food and beverage and first class service." The legislation also states that if the U.S. DOT Inspector General cannot certify that Amtrak has achieved operational savings by the summer that "none of the funds in this Act may be used after July 1, 2006, to subsidize the net losses of food and beverage service and sleeper car service on any Amtrak route."

"By leveraging the provisions of the new contract, we intend to aggressively move forward in FY '06, making significant inroads in reducing this loss as directed in our federal appropriation," said Senior

Vice President Operations Bill Crosbie.

The previous contract with Gate Gourmet was set to expire on Sept. 30, 2006. The new agreement was approved by the board of directors in mid-November and approved by the Federal Railroad Administration later that month.

"This new contract puts Amtrak in a much better position to manage and reduce food and beverage operating costs, while paving the way for some of the strategic initiatives we want to explore in the food and beverage arena,"

"The new arrangement makes it a direct interest of the vendor to keep Amtrak's costs down."

Tom Hall, Senior Director of Commissaries and Contract Food and Beverage

explained Emmett Fremaux, vice president of Customer Service.

On its own, the contract is expected to yield some degree of cost savings by creating incentives for Gate Gourmet to reduce food stock and operating costs, although the bulk of the food and beverage operation's costs come from Amtrak's labor expenses. The agreement is expected to promote operating efficiency in commissary functions and to put Amtrak in a position to test service alternatives that could result in additional cost cutting.

The agreement provides a much shorter initial term than the previous seven-year contract (with a five-year extension option) and includes two, two-year extension options. The initial term of the contract coincides with the Customer Service department's plans for redefining overall

customer service priorities while improving the food and beverage bottom line.

The detailed agreement makes Gate Gourmet responsible for procuring all on-board stock and non-consumables and assigns the vendor accountability for inventory, significantly expanding the functions for which the vendor is responsible. Gate Gourmet manages the provisioning levels (known as PAR levels) that determine the amount of stock placed on trains, and assumes greater responsibility for condemnation.

In the past, Amtrak determined the PAR levels, and as a result was responsible for the monetary loss incurred on condemned products.

An incentive mechanism based on performance goals set by Amtrak is expected to drive more efficient operations. The incentives are self-funding, in that the budget for them comes directly from the savings achieved by Gate Gourmet as a result of its labor efficiencies, lower expenses in the procurement of stock and reduced condemnation.

"By expanding Gate Gourmet's responsibilities and tying those activities to financial incentives, the new arrangement makes it a direct interest of the vendor to keep Amtrak's costs down," said Tom Hall, senior director Commissaries and Contract Food and Beverage.

The new contract also opens the door for Amtrak to consider other food and beverage options on the

Northeast Corridor. The terms of the old agreement granted Gate Gourmet exclusive rights to support food and beverage operations on all trains, with the exception of state-supported trains; a constraint that may have precluded Amtrak from pursuing relationships with vendors who could provide on-board food and beverage service alternatives to the commissary operation.

Fremaux added that having the flexibility to test service models for outsourcing advances the opportunity for Amtrak to reduce its annual food and beverage service costs, while also exploring options for increasing on-board sales and improving service to customers using Amtrak employees.

In exchange for Gate Gourmet's providing Amtrak the right to experiment with vendor-provided food service on corridor trains, Amtrak will work with Gate Gourmet and a third-party hospitality partner, such as those that manage restaurants and food and beverage service at stadiums and hotels, to pilot outsourced food and beverage service on a long-distance train. The idea is to test new business models that may provide lower-cost, better customer service, and higher revenues than Amtrak's current long-distance food service — for which costs exceeded revenues by nearly \$100 million in FY '05.

Under the terms of the agreement, the fixed fee that Amtrak pays Gate Gourmet is locked in for the three-year life of the agreement. In contrast, the compensation model contained in the past agreement required Amtrak to reimburse Gate Gourmet for all of its costs, plus 5 percent of that cost and included no performance metrics or incentives for the vendor to drive Amtrak's costs down.

To keep tight control of the finances, all purchases and payments are authorized, tracked and audited by Amtrak using the eTrax procurement system. Using eTrax, Amtrak pays all food stock invoices directly, rather than advancing funds to Gate Gourmet to pay for commissary supplies. Past practice involved advancing large monthly payments to the vendor, resulting in weak oversight and leaving Amtrak vulnerable to significant financial exposure. In the new contract, payments to Gate Gourmet are advanced on a weekly, rather than monthly, basis.

Engineering Top Performers

"Safe, reliable, economical, smart," reads the Engineering Excellence Award held by Mid-Atlantic Division Engineer Joe Guzzi (center) for that division's accomplishments in FY '05. Guzzi and his division's employees were honored by Acting CEO David Hughes (then chief engineer) (left) and Acting Chief Engineer Bruce Willbrant (then deputy chief engineer) at an event in Philadelphia this fall.

The Mid-Atlantic Division's Engineering employees came first among other on-corridor Engineering teams for improving performance over FY '05 goals, based on four criteria: safety, financials, customer service and management. The West (encompassing the Pacific and Southwest divisions) beat out the Central Division for the same award for off-corridor goals.

The Engineering department's FY '05 Corps of Near Engineers prize went to Senior Vice President Operations Bill Crosbie, Human Resources Vice President Lorraine Green, Labor Relations Director Rick Palmer and Material Disposal Manager Betty Ann Hastings. The award is bestowed upon non-engineering employees who help support Engineering department goals.

Dear Amtrak Co-workers:

Since arriving in Chicago in August of last year as the master mechanic, I've found that the position has presented many challenges. As a long-time railroader who had never worked outside of the North-east Corridor, I learned early and often that things were a little different in Chicago.

First, Chicago maintains a wider variety of equipment than other parts of the system. We take care of everything from the appliance-laden bi-level dining cars on the long-hauls to the much simpler commuter-type Horizon equipment that carries our passengers between Chicago and Milwaukee every day.

The weather is another big difference. I noticed right away the extremes that have to be dealt with on a daily basis. From a record high in August of 107 degrees, to a day like today in December when it's 1 degree outside, dealing with such extremes in temperature puts a big demand on the equipment and plenty of pressure on the workforce to maintain its performance.

This brings me to the employees — far and away the most valuable asset in Chicago. Among them, I would like to cite and congratulate our President's Achievement Award winner Phil McCaig for his commitment to excellence and the improvement of Amtrak. He was recognized for working above and beyond all expectations. I also want to recognize and appreciate the exceptional job each and every Chicago employee performs daily. They meet the challenges of the operation and overcome Mother Nature's harsh realities all year.

Now, I'd like to tell you a little bit about what we do in Chicago and the facilities in which we work. There are four areas in Chicago with major roles. At the station, or what is commonly referred to as CUS, we receive 16 short-haul trains daily and eight long-hauls. Our Mechanical team will either service, clean, inspect and/or repair them at the station for one of the 16 daily departures. If needed though, we may send the equipment to the 14th Street shops for a more extensive inspection and servicing process.

Chicago Union Station is shared with METRA commuter services. Due to limited track space and crowded conditions, we are challenged daily to perform on-time departures and to move trains back and forth to the repair facilities.

The major operating functions working in CUS are mechanical, transportation, on-board services and the commissary. Together, we have been able to improve coordination of our responsibilities. This effort paid off in FY '05 with a terminal on-time performance improvement of 5 percent over last year.

The second area is the 14th Street Yard — a major hub of activity. It is a full-service maintenance facility; complete with a Service and Inspection facility, car repair shop and a departure yard. It is manned 24/7 and is responsible for train dispatchments, car repairs (both running and major) and program work such as the four-year (Clean, Oil, Test & Stencil) COT&S and backlog preventative maintenance (PM) work from our Brighton Park facility.

The Service and Inspection building is a full-service location with deep pits, 480-volt standby power, water, and toilet servicing equipment. The building is able to hold two long-haul trains that can be worked on simultaneously. All trains that come to the yard are serviced through this building, enabling the trucks to be fully de-iced and quality CFR 238 inspections to be performed. Being able to move an entire train

indoors and out of Mother Nature's clutches makes a big difference in January and February.

Brighton Park is our third facility. Originally built in the late 70s to house and maintain the turbo train, the facility was sitting idle and unmanned until recently.

As Amtrak increased its attention on the PM program, it was decided that Brighton Park would play a vital role in the revitalization of the work. Specifically, the program performs a 92-day cycle preventive maintenance on 166 bi-level Superliners, 82 low-level Horizon cars, and 10 Amfleet cars. Candidly, production was slow upon start-up, but under Assistant Superintendent Richard Navarro's direction and the very hard work and commitment of his staff and workforce, improvements were seen. In 2005 production improved by 20 percent over the same period last year, but best of all the fleet began demonstrating improved reliability, fewer failures between inspections and a reduced number of passenger complaints.

Brighton Park has also been a test facility for the use of vending machines for distributing small parts and consumable material. The results are still being measured, but all indications are that the effort is a success. The time spent by employees waiting for material deliveries has been reduced dramatically while costs are more easily identified and inventories better controlled.

My appreciation goes out to the employees and staff at Brighton Park. They have overcome start-up challenges and turned the facility into a cost-effective and productive maintenance facility.

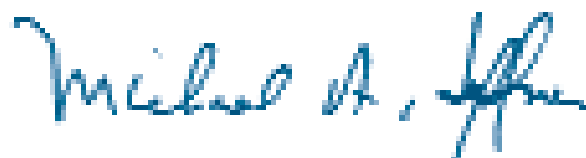

The last of our four facilities is the locomotive repair facility at 16th Street; the largest locomotive repair shop in the Amtrak system. The building is a full-service repair facility complete with overhead cranes and drop tables. The overhead cranes allow our forces to change all major components other than a main propulsion engine, while the drop tables give us the capacity to renew all running gear failures.

Present fleet assignments at 16th Street consist of 150 P-42 locomotives, five P-32s, two switchers and nine NPCU's (Non-Controlled Power Units). Under the direction of Mike Scaringe, who recently came over from Beech Grove as director of Equipment Maintenance, Locomotives, the shop is responsible for all required FRA maintenance as well as fleet modifications, running repairs and wreck repairs.

From Brighton Park to CUS and 14th Street to 16th Street maintenance facilities, the employees are dedicated and committed to our riding public. They perform day in and day out to improve the quality of our product and they do it because they care.

In closing, I want to extend my thanks and appreciation to all those who contributed to the successful year we experienced in FY '05, as well as my personal commitment to ensuring an even better year in 2006.

Sincerely,

Michael A. Heffner
Master Mechanic
Central Division

C & S Recognized for Outstanding Safety Record

The Communications & Signals team from the Midway facility in Groton, Conn., gathers to be congratulated for serving more than 15 years without an FRA-reportable injury. When the group was asked how this milestone was accomplished, the response was, "We stop and think before we act, which causes us to work safely and carefully."

Pictured are, front row (L. to R.): Wayne Winslow, Jean-Paul Dumont, Supervisor Sonny Sheltman, Walt Armstrong, Mike Rapuano and Safety Liaison Larry Smith. Back Row: Ron Chapman, Logan Kydd, George Funaro, Mike Steffey, Tom LaCroix, Rick Jakobson and Angel Berrios. Missing from the photo are: Bill Anderson, assistant division engineer, Tom Campion, Rick Perkins, Gary Lozowski, Derek Washington, Mickey Shelburn and Dennis Offen.

Mechanical Department Takes Action to Improve Leadership

This month, over 160 Mechanical department managers, including general foremen, assistant superintendents, superintendents and master mechanics will have participated in the *Leadership in Action* workshop, a new training program for the Mechanical department’s management staff aimed at improving the operation and reducing expenses.

Officially launched in early September 2005, the course was developed last spring under the guidance of Chief Mechanical Officer Vince Nesci. Discussing the need for the training, Nesci stressed areas for improvement. “We need to become better at what we do. We need to better plan, organize, communicate, follow through and measure our work,” he stated.

The four-day workshop supports the company’s and the department’s goals and targets four key Performance Fundamentals: Reliability/Availability, Productivity, Regulatory Compliance and Safety. The program aims to hone traditional leadership skills and formulate strategies necessary to improve these Performance

Fundamentals by focusing on root-cause analysis, problem solving and planning.

To ensure that the skills acquired during the program are quickly put to use, each participant develops a specific action plan for a project to implement at the worksite. The action plans are designed to lead to cost reductions and overall improvement of the Mechanical operation.

Some of the action plans developed during these training sessions include efforts in the areas of fuel conservation, productivity enhancement, resource allocation and foreman training, to name a few.

When addressing the participants of a recent workshop, Nesci emphasized the value of the program. “It is important that we communicate to employees a consistent management philosophy based on meaningful goals with measurable results. We can’t continue to do things the way we have been doing them — your challenge is to go back and become the catalyst for change,” Nesci said.

Taking on the task of developing

the program and laying the foundation for the new workshop was a project team that included Staff Officer Kathy Huss, Sunnyside Yard’s Master Mechanic Don Knapik and Senior Director of Employee Development Stephanie Pavlakis. The team provided direction to Shaw Organizational Solutions, the vendor that developed the program.

While staying focused on the company’s strategic plan, the project team, along with Shaw Organizational Solutions, studied the department’s operations and goals, and reviewed job descriptions for middle management. Program developers interviewed department staff and managers to learn as much as possible about the daily operations and gain insight about training needs.

The results of these efforts provided the developers with information needed to create the many interactive exercises, simulations and assessments that concentrate on improving the performance fundamentals and leadership skills. In addition, time is allotted for participants to engage in useful dialog with each other.

A pilot *Leadership in Action* session was conducted in August 2005 at the Amtrak Training Center in Wilmington, Del. Mechanical department managers and senior staff representing a cross section of the department from all parts of the country were brought together to participate and provide feedback to the course developers. Participants were ensured that the feedback they provided was critical to improving the program and the resulting workplace performance.

Designed to compliment the principals and objectives of the *Leadership in Action* class, another training program is currently being planned for foremen, while the development of training with other departments to address common objectives is also being explored. Master Mechanic Don Knapik commented, “Training and continuing education should be a lifelong effort with emphasis on developing new skills as well as reinforcing the old.”

Ken Rannels contributed to this story.

Simplified Dining Service

continued from page 1

possible to operate meal service continuously throughout the day on the four routes, similar to a restaurant environment.

Two Superliner equipment modification programs — one for diners and another for lounges — are expected to provide multi-purpose food service cars for each of the four trains. The newly designed food service cars will accommodate the various appetites and moods of passengers with continuous service throughout the day. Open from 6:30 a.m. to 11:30 p.m., the service will offer an integrated menu that ranges from snacks to full meals and seating options that vary from a bar to traditional table-service dining.

The revamped Superliner diners will offer integrated dining, lounge and bar service, depending on availability and passenger preference. The current pantry will be removed, and behind the new service bar will be a microwave, and a combo oven, coffee maker, a four-door refrigerator, a sink and overhead bins, among other appli-

ances. No major changes would be made to the lower-level galley, which will provide the bulk of food preparation for the upstairs using the dumbwaiters. This program is expected to deliver new cars for two routes over an 8- to 17-month period.

Meanwhile, more extensive Superliner lounge car modifications are expected to take 18 to 24 months. Preliminary designs for the reconfigured Superliner lounge cars include a completely new setup, with dining, lounge and full bar service on the upper level and reserved dining on the lower floor. Seating capacity will be expanded to about 90 seats, with 70 on the upper level and 20 on the lower level. Two food preparation areas — one on each floor — will be connected by food service elevators and outfitted with ovens, microwaves and a number of other appliances.

Running a single all-purpose food service car reduces annual maintenance and fuel costs on these trains by \$3.5 million, and further

reduces labor costs, as there will be no need for a separate lounge car. In addition, the design of the car increases food and beverage sales by being open throughout the day and catering to whatever passengers are in the mood for, early or late.

“The reality of the situation is we have to do things differently and we know one size will not fit in every case. We also know how important the dining experience is to our passengers. So this change will be carefully monitored and we hope it will bring greater flexibility to serve the variety of customer needs among both sleeper and coach passengers,” said Emmett Fremaux vice president Customer Service.

Fremaux added that because the restaurant-style approach to the food and beverage operation is in accordance with industry standards, “it will in the long run allow us the option to outsource the function to a vendor if we do not achieve the necessary efficiencies ourselves.”

With these four trains operating using the upgraded equipment, the overall program impact will be felt with a bottom line improvement of \$11.6 million. This represents a recovery of over 60 percent of the food and beverage loss currently occurring on these trains. This projected result provides a strong indication that Amtrak can realize the kind of bottom line improvement on the long-distance trains that will be necessary to justify continuation of the service.

Revamping the food and beverage service is essential to achieve meaningful cost savings aboard long-distance trains, which are responsible for over 75 percent of the projected \$120 million loss in the food and beverage service. For the first time ever, Amtrak has been mandated by law to reduce its food service losses. Progress is now being monitored by the Inspector General of the U.S. Department of Transportation and reported on a quarterly basis to the House and Senate Appropriations Committees.

Folk Singers Ride the Rails to Rebuild the Musical City

When Arlo Guthrie recorded the world-famous hit “City of New Orleans” in 1972, he had no idea the difference it would make to the very city that was heavily damaged 33 years later by Hurricane Katrina.

Written by Steve Goodman years before Amtrak was created, the song was the theme of a seven-city “Ridin’ on the *City of New Orleans* — Bringin’ the Music Back,” concert tour sponsored by Amtrak, Arlo Guthrie and Friends, Tipitina’s Foundation and a number of other companies last month to benefit musicians and musical venues that suffered from the aftermath of Hurricane Katrina.

Traveling aboard the *City of New Orleans* and performing along the route, the musicians said that the purpose of the 12-day December train tour was to help rebuild the small clubs and venues in the devastated areas. A brainchild of Arlo Guthrie, the undertaking was aimed at generating donations and securing contributions from musical equipment manufacturers to help restore the musical infrastructure of New Orleans and surrounding communities.

“When I think of New Orleans, I think of music,” said Guthrie. “When I wonder what the city

needs to get back on its feet, I think of the stuff that was ruined by the water such as the sound boards, cables, lighting, microphones and instruments. I’m determined to help restore all

At Chicago Union Station, Arlo Guthrie and his wife are captured by Chicago’s WGN-TV as they head to the *City of New Orleans* train on a people mover operated by Red Cap Paul Sokolowski.

those little places and bring the music back as soon as possible.”

Arlo and Friends started the tour on Dec. 5 at the Vic Theater in Chicago. The following day, Arlo, his son Abe with his band Xavier and daughter Sarah Lee Guthrie, along with Johnny Irion, traveled

on the southbound *City of New Orleans* performing on board and holding benefit concerts in Kankakee, Urbana/Champaign, Effingham and Carbondale, Ill., Memphis, Tenn., and New Orleans.

Twenty concert tickets were raffled off for employees to attend the performance on Dec. 17 at Tipitina’s, New Orleans’ historic Garden District music venue.

To support the cause, other entertainers boarded the train and performed with Arlo along the

way. Guy Davis, Cyril Neville, John Flynn, Ramsay Midwood, Kevin Kinney with Drivin’ n’ Cryin’, The Burns Sisters and Gordon Titcomb were among those who were part of the tour. Willie Nelson joined the group at Tipitina’s.

“Passenger trains have always carried the music and musicians to and from the Delta spreading the sound of the Crescent City to Memphis, Chicago and the world,” said Senior Vice President William Crosbie. “We are proud to have been a part of this important rebuilding effort.”

The tour attracted a large amount of news media coverage. Reporters interviewed Guthrie and his entourage at stations along the route, rode the train during segments of the tour, attended the concerts and made dozens of calls to Amtrak’s Media Relations team for details on the series of events. Local broadcast and print media turned out in each city along with national coverage by the *Wall Street Journal*, *Washington Post*, CBS Radio, and Country Music Television, among others.

Although the tour has come to an end, contributions may still be made via Arlo’s Web site, www.GuthrieFoundation.com.

Pacific Northwest Promotions Offer Something for All Ages

Question: What do basketball, kids and the Amtrak *Cascades* have in common? Answer: Coach Mendezona’s Quick Handle™ basketball program. Amtrak is partnering with Quick Handle to serve as the primary transportation provider for children participating in the popular basketball camps and clinics held in cities along the Amtrak *Cascades* route.

Over the next eight months, several thousand children will participate in Quick Handle basketball programs conducted by Coach “Mendo” Mendezona in the Seattle and Portland area. Mendezona, who played professional basketball in Europe, approached Amtrak to partner with his organization because he recognized the important role that passenger trains play in moving people

throughout the Pacific Northwest. “For Quick Handle to be a success, kids and their families need a reliable, economical means of traveling to and from our program sites — and traveling by Amtrak makes good sense,” he said.

Through this partnership, Amtrak is being promoted via direct mail and e-mail messages that Quick Handle is sending sent to its database of approximately 15,000 families. Additionally, Amtrak will benefit from exposure on Quick-Handle.com, t-shirts, brochures and with signage at the camps and clinics. Amtrak will in turn provide Quick Handle Amtrak *Cascades* or *Coast Starlight* tickets to be used for travel or promotions throughout the year.

According to Amtrak Marketing Associate Doug Schwab, Coach Mendo’s commitment to kids is unsurpassed. “Not only does he teach the key points of basketball, but he also focuses on helping the

kids excel socially, emotionally and spiritually. With 21 years of coaching under his belt, he is simply the best at what he does. I’m pleased that we have an opportunity to partner with an organization of this caliber.”

While the Quick Handle promotion is aimed at bringing more children and their families aboard trains, other marketing efforts prove that reaching the age of 55 also has its benefits aboard the Amtrak *Cascades*.

Amtrak *Cascades*’ Mature Travelers program, which promotes travel on the service during off-

Passengers detrain Amtrak *Cascades* train 500 at Seattle’s busy King Street station.

peak travel days, offers passengers age 55 and older traveling in groups of 20 or more an opportunity to travel Mondays through Thursdays between any two cities from Portland, Ore., to Vancouver, B.C. for \$10 one way or \$15 roundtrip. This promotion runs through June 2006.

Thanksgiving Revenues

continued from page 1

of \$37.2 million — more than 22 percent ahead of last November. Ridership was at more than 610,000 passengers during the month, which is 2.5-percent higher than year ago. The combined ticket revenue for *Acela* and *Metroliner* service during November, at nearly \$29.5 million, was higher than last November by nearly 2 percent, and exceeded its budget target.

In the West, among the strong performers during November were the *San Joaquins* and *Cascades*, both of which show double-digit increases in ticket revenue and ridership against a year ago. The *Pacific Surfliners* and *Capitols* also gained in ticket revenue and ridership over last November. In the Midwest, the *Hiawathas* and *Wolverines* outpaced last November.

Buoyed by the national fall advertising campaign that ran through Nov. 30, long-distance train ridership did exceedingly well in November with several top performers leading last year’s results by double digits. With the support of national travel accounts and regional tour operators, the *Empire Builder* once again demon-

strated the success of its re-launch, with November ticket revenues of \$3.3 million, an increase of 27 percent over last year. Ridership on the *Empire Builder* was ahead of last year by close to 9 percent.

East Coast long-distance services showing strong gains included the *Auto Train*, with ticket revenues at more than \$4 million, reflecting an increase of nearly 14 percent. The New York-Savannah *Palmetto*, while producing just under \$1 million in ticket revenues, topped last year’s figure by more than 33 percent. Ridership jumped by nearly 28 percent over last year. Another strong performing Eastern train was the *Lake Shore Limited*, which jumped in ridership by 22 percent over a year ago, while ticket revenue increased by 26 percent against last year.

In the first two months of the fiscal year, ticket revenue of more than \$228.6 million outpaced the same period a year ago by 10 percent. Ridership during this period, at more than 4.1 million passengers, topped last year’s figure by 3 percent.

APD’s NCC Re-Accredited

Amtrak Police Department’s National Communications Center (NCC) received its second Public Safety Communications Accreditation Award on Nov. 19 in Nashville, Tenn. To achieve accreditation status, Amtrak must comply with applicable public safety standards of excellence set by the Commission on Accreditation of Law Enforcement Agencies (CALEA).

Amtrak’s NCC was also selected as a “Flagship Agency” by the commission signifying that it met

stringent criteria, including being reaccredited for the first time (having undergone two assessments) and that it also must have received unconditional accreditation awards.

The Flagship Agency program was introduced at the winter 2004 Conference to acknowledge the achievement and expertise of some of the most successful CALEA-accredited public safety agencies, and also to provide “flagship examples” as models for other agencies.

Contract

continued from page 3

“We’ve succeeded in making substantial changes without having to start over with a new contractor,” noted Michael Rienzi, vice president of Procurement and Materials Management.

Rather than exercising the option to extend the existing contract for another five years — an option that was not acceptable to Amtrak management — the railroad began negotiating with Gate Gourmet months ago to determine if a more suitable agreement could be reached.

Amtrak’s decision to negotiate with Gate Gourmet was based on the vendor’s strengths in the industry, its track record at Amtrak and the considerable transition time, expenses and uncertainty that would have been incurred during the long bidding process. Gate Gourmet has the advantage of significant purchasing power of food and beverage stock, and has demonstrated excellent Food and Drug Administration and Amtrak Public Health department records. On the other side of the equation, Amtrak has the benefit of knowing first-hand the vendor’s capability to deliver service reliably.

Congratulations to All of You!

FRONT LINE FOCUS

Dear Amtrak:

After my recent Amtrak experience, I felt compelled to contact you and let you know what a pleasure it was. I hadn't ridden on a train since the 60s, when I would take my four little boys from Kansas City, Mo., to Denver to visit my family.

...Times have changed, but it is still a thrill to ride on a train. I would like to commend your [Assistant] Conductor [Chris Copley] for his helpfulness and courtesy. Back in the 50s and 60s, the conductors were not always friendly. They seemed to try to go out of their way to be officious and unpleasant to the passengers. In other words, they were King of the Railroads. I believe the present-day conductors have had much better training, and I appreciate it very much.

... I would like to see more people riding Amtrak and getting away from the unpleasantness of air travel. That is why I wrote to our local newspaper, the *Times Record*. After reading the paper, my neighbor across the street said she would love to go on one up to Indiana.

Please let your conductors know what a great job they are doing; likewise, the very nice and courteous people with whom I spoke on the phone.

Sincerely,

Claire F.
Ft. Smith, Ark.

Dear Amtrak:

This is to commend you for your employee, Elaine Meister, in your Customer Service.

Two weeks ago, my girlfriend and I ... decided to take our first Amtrak trip from Portland, Ore., to Salinas, Calif. Needless to say, the trip being our first, we had some adjustment challenges. We were pretty green.

All of your staff was simply wonderful and attentive to our needs. But one of the biggest challenges we had was that our train was four hours late, making the trip to Monterey-Carmel impossible due to the time limit. We actually took our Amtrak trip to go to Monterey-Carmel, so we were terribly disappointed.

We called Elaine Meister, Customer Service, for direction as we were simply lost as to what to do. She spent extensive time and adjusted our trip so that we were comfortable and satisfied.

Thank you for Elaine Meister and her kindness. We look forward to another trip with Amtrak.

Sincerely,

Beverly P.
Woodburn, Ore.

Amtrak Participates in Security Expo

Amtrak Police Officer Jerry Arntz talks to a young visitor about the training he and his K9 Aster undergo to detect bombs during the Community Security and Emergency Preparedness Expo at 30th Street Station.

The Amtrak Police and Security department, along with national and local law enforcement and emergency response agencies, provided a wide variety of safety and security information to Philadelphia's traveling public. At the day-long Nov. 30 event, agencies displayed their products and services, and introduced the public to their special enforcement units. Amtrak's Mobile Command Center and K9 demonstrations were available for public viewing.

Al Broadbent, vice president Amtrak Security, stated that "The purpose of this expo is two-fold. We are building partnerships with external law enforcement and security agencies while also providing the public with information that addresses their security concerns." Noting the number of agencies that turned out for the event, Amtrak's Chief of Police Sonya Proctor added, "It is evident from all the agencies represented here that there is a widely shared mission to assist the public with being prepared for an emergency."

Similar Expos are scheduled to take place over the next year at New York Penn Station, Chicago Union Station and Washington Union Station.

December Ticket Revenue Growth Attributable to Fall Fare Increases

Continuing a positive trend primarily attributable to the general fare increase on most services in October and higher gasoline prices, December ticket revenues beat last December's results by 5 percent.

Boosted by the performance of Northeast Corridor and other short-distance trains, ticket revenues in December reached \$114.8 million, compared to \$109.1 million last December. Ridership of more than 2 million passengers was down against a year ago by nearly 4 percent.

Also playing a factor in increased sales was the Amtrak Guest Rewards® fall double-points offer, which yielded 32,000 registrations.

AGR members generated \$19 million in revenue during December, most of it coming from *Regional* and *Acela* riders. Online and sports marketing promotions continued through December, with

York City transit strike that suppressed ticket revenue by an estimated \$1 million. However, ridership for December of more than 757,000 was lower than a year ago by nearly 8 percent.

Other strong performers in the East included the *Downeaster*, which brought a double-digit increase for the month in ticket revenue and ridership against a year ago, and the

Keystones, which also improved in both areas against last December.

In the Southeast, the *Carolinian* generated significant ticket revenue growth (19 percent) south of Washington. The *Piedmont* earned a 42-percent increase in ticket revenue and 10-percent more riders.

All other short-distance services, which include major corridors in the Midwest, Pacific Northwest and California, brought in a total of \$25 million in ticket revenue for the month, which is a jump of nearly 9 percent over a year ago. Ridership for December on these trains was 921,000, nearly even with a year ago.

In the Midwest, December ticket revenue increased on all routes, with the *Hiawathas* jumping more than 19 percent in ticket revenue over last December and realizing a 9-percent increase in ridership, due in part to the success of the Milwaukee Airport Rail station, which opened January 2005. Ridership increased on all but the *Wolverine* and *Illinois Zephyr* over last year.

In the Pacific Northwest, ticket revenues in December increased by 12 percent on the *Cascades*, supported by a 4-percent ridership

Engineering Advances State of Good Repair

Completion of the Keystone Corridor Improvement Project, start-up of the Thames River Bridge span replacement and continuing fire and life safety improvements on the New York tunnels are among the major projects the Engineering department is undertaking as part of its \$450 million infrastructure investment program for this fiscal year.

"The purpose of the Engineering capital program is twofold: make significant progress to meet the customer service needs and to invest in technology that will deliver safety, performance and reliability goals while reducing the cost of maintenance," said acting Chief Engineer Bruce Willbrant. "We have worked hard toward

bringing the railroad to a state of good repair and it shows in the progress we have made on key projects such as rail renewal, interlocking upgrades and the Keystone Corridor."

The largest single construction project in the FY '06 capital program is the replacement of the 87-year-old moveable bridge over the Thames River in Connecticut. The total cost of the bridge project is \$76 million over three years with \$23 million set for this year's budget.

In the end, a more efficient vertical lift bridge that rises between two towers will replace the aged draw-bridge.

In the most dramatic phase of the

One of Amtrak's most complex interlockings, Dock is on the books this year to be replaced with new electric switches, signal system and signal control houses. A key choke point for all Amtrak and New Jersey Transit traffic to and from New York, Dock Interlocking includes the operation of three movable bridges (background).

construction project to occur over 12 days during the fall of 2007, the bascule lift or movable center portion of the bridge will be removed, and a 188-foot long, 35-foot-wide, and 1,250-ton vertical lift will be floated into place on

barges from Long Island Sound and then connected to the bridge.

Lasting until early 2008, the Thames River Bridge project involves a range of activities, from the fabrication of the lift towers to

TRAIN OF THOUGHT

I just returned from an outstanding trip to meet with our California state partners and take a look at our West Coast operations.

With California, we have a forward-looking partner that has a vision for passenger rail. From stations, to infrastructure, to equipment and maintenance facilities down to marketing the service, the state has done an excellent job of executing its vision, building an integrated system and growing passenger rail incrementally. What the state of California has done over the past 10 years to build corridor service is a remarkable model for others looking to rail as a viable transportation option for their regions. In fact, in 2005, our California trains carried 4.6 million passengers. This is a record-high number and the most passengers carried in any region outside the Northeast Corridor.

I met with the organizations associated with our three California corridor services — the Capitol Corridor, the Pacific Surfliner and the San Joaquins. We also operate two commuter services, Caltrain and Metrolink. Regrettably, our contract with Metrolink expires in June of this year.

I was very impressed with the Caltrain operation, which serves

about 30,000 passengers a day on 96 weekday trains on the San Francisco Peninsula. On-time performance is extremely high — it hovered around 98 percent during the month of January and ridership is growing rapidly.

I also toured the Oakland Maintenance Facility, which has the potential to become one of the best of its kind. The safety numbers are not what they should be and I discussed this with both management and craft employees in the facility. It's clear to me that we need to work harder to make sure that the communication goes both ways and the team committed to progress on this front. I'll know that the communication has improved when the injury numbers go down.

After visiting with Doras Briggs — also known as the “Empress of Emeryville” — (Doras is, among many other things, volunteer coordinator extraordinaire on this corridor), I took the Capitol Corridor service to Sacramento. There, I met with the Capitol Corridor Riders (also known as the CC Riders), which is a group of commuters that has evolved into a powerhouse of an advocate for passenger rail service.

David J. Hughes

I also met with a number of state legislators in Sacramento. Based on what I heard, there is obviously a great deal of support for passenger rail in California and there's a sound vision for its growth. The corridor system there is thriving, driven in large part by the spirit of achievement and competition. It is a model we can all learn from.

We possess a unique set of expertise and have much to offer partners like California — but it is up to us to continue to earn their business. I believe that I sent a clear message that we intend to do just that and keep California's business.

With that in mind, continue to be safe and take pride in the work you do.

Traditional Uniforms To Return to NEC

Amtrak will begin transitioning to an “all-blue” railroad on March 1 when Northeast Corridor employees — from ticket agents to conductors — will be outfitted in traditional railroad blue uniforms.

The new uniforms will replace the *Acela Express* gray uniforms, which were introduced in 2000.

“As the phase-out of the gray uniforms was coming to a close, it was time to move toward a more consistent uniform systemwide and our employees in the East are excited about the move back to blue,” said Vice President of Customer Service Emmett Fremaux. He added that it is important for Amtrak passengers traveling across the system to experience consistent service “and that includes seeing our employees in a single style of uniform reflecting the Amtrak brand.”

Northeast Corridor employees will be receiving their new uniforms through the month of March, and

by April 1 will don the navy blue. According to Amtrak Uniform Programs Manager Dianne Ross, employees are thrilled with the change. “I have received an overwhelmingly positive response to the new uniforms,” said Ross. “A good uniform makes employees proud to be part of a team, and now we will be wearing blue across the board.”

One exciting update to the blue uniform for the entire system is the introduction of the Amtrak epaulet slides, which are color-coded to reflect the job function of the employee,” said Ross. An epaulet is a small ornamental

strip of fabric that is worn on the shoulder, used primarily on military uniforms. An epaulet with a gold background and a blue Amtrak logo will signify a conductor and a navy blue background with a blue Amtrak logo will denote an assistant conductor. On-board service and station employees will wear epaulets with a navy blue background with a white Amtrak logo and red caps' epaulets will feature a red background with a blue Amtrak logo.

The uniform's blue gabardine-blend fabric holds its shape, is durable and can be worn year-round. Jackets and vests have custom pewter buttons, and metal hat emblems will change from gold to pewter.

In addition, all train, on-board service and station employees, excluding red cap and baggage employees, will be issued five short-sleeved shirts with the appropriate epaulets in time for summer uniform requirements.

Acela First Class Service Improvements Launched

Several improvements to *Acela Express* First class service were added last month, including a menu of hot entrées, better wine selection and the addition of a second attendant when warranted by high load factors. The changes, in addition to refresher service training, were made to ensure that the service met passenger expectations aboard Amtrak's premier service.

Meeting the expectations of First class passengers aboard *Acela Express* is crucial, as the ticket revenue is sizeable. If First class were a service by itself, it would out-earn all 15 long-distance trains and 26 corridor services —trailing only the *Regionals* and *Acela Express* Business class — in ticket revenue.

Last fall, Amtrak instituted a different service model for First class service as part of its focus on reducing food and beverage and First class service costs. For *Acela*, this included the elimination of hot entrées and downsizing of the crew to one from a maximum of three.

But, according to Customer Service Vice President Emmett Fremaux,

"We analyzed the numbers and solicited feedback from our passengers and crews that confirmed that we were losing customers because of the change in service."

Based on what Amtrak was seeing, it estimated that the losses might add up to \$1.6 million or more on an annual basis if the trend was allowed to continue.

Part of the solution was a new menu that costs only a little more to deliver, but delivers on passengers' expectations. In the mornings, passengers may pick a continental breakfast or hot entrée, such as a Southwest omelet. Lunch includes hot soup and a choice of a fresh

Acela Express Lead Service Attendant Lelia Holmes prepares lunch for the First class passengers aboard 2110.

sandwich or entrée-sized salad. The dinner menu offers a choice between two hot entrées or lighter fare option. The lighter fare includes bite-sized hors d'oeuvres-type items such as cheeses, salami and crackers that have become very popular with evening travelers.

For the cost of a First class ticket, which is 50-percent higher than the Business class fare, passengers anticipate exceptional service.

"Passengers should feel that they are getting the value they expect from our premium service both in the quality of the food and from those who are delivering it," said Fremaux. "So, we also initiated targeted training sessions for First class attendants to provide them the tools to enhance the service."

The new training for lead service attendants began on Jan. 3. The training puts special emphasis on food preparation and customer interaction.

What's at stake may be large and complex, but what it takes is small and simple: greeting the passengers at the door, assisting with luggage, addressing the passenger by name, keeping areas neat and clean, and providing hot towel service.

Is it paying off? Time — plus passenger ridership and revenue — will tell, but initial feedback has been very positive.

Partnerships with Agencies Worldwide Bolster Security

Because today's security environment is unlike that of any other era, Amtrak's Police and Security department continually extends its reach to forge and maintain relationships with a range of law enforcement entities. While the benefits of doing so are many, its value was particularly evident during a recent meeting of Amtrak representatives with British Transport Police (BTP) and London's Metropolitan Police Department in London, England.

"One of the keys to maintaining security in this day and age involves broadening the reach of our organization. That means that by bolstering our capabilities with the help of our relationships with local and international law enforcement agencies, we cover a lot more ground and have greater access to information," said Vice President of Security Al Broadbent who participated in the mid-December meeting.

Broadbent noted that APD's participation in sessions with international rail partners who have suffered terrorist attacks allows Amtrak to integrate their "lessons learned" into its security plans. In February, Amtrak officials participated in a discussion in Washington, D.C., with Spanish transit

officials following terrorist attacks on their transit system in March 2004.

Both London and Madrid rail officials emphasized the value of employees' and passengers' vigilance as a cornerstone of their security plans. Much like Amtrak's "See Something, Say Something" security awareness campaign, post-bombing plans in London and Madrid include enhanced passenger awareness campaigns.

Because the London suicide bombers made every attempt to fit in and not raise suspicion, an individual's instinct becomes even more valuable. Amtrak's System Security Awareness training course, completed by all employees last year, provides information about best practices for preventing, reporting and responding to security threats in a railroad environment. "The training program instructs employees to trust their instincts — if something just doesn't seem right, it's likely not," said Broadbent. A second level of follow-up training is being developed to continue to ensure that everyone at Amtrak knows his or her role in security and is as best prepared to handle issues as possible.

In their "Lessons Learned" session, London officials also stressed the significance of relationship building and information

who also attended the conference.

Amtrak has worked closely with the Transportation Security Administration on a number of initiatives including a recent pilot program designed to enhance security in non-aviation modes of transportation.

During a three-day pilot program in December, TSA VIPER (Visible Intermodal Protection and Response) teams were dispatched to rail stations in Baltimore, Los Angeles, Philadelphia and Washington, as well as to other transportation modes. The teams, made up of uniformed and non-uniformed agents and K9 teams, tested the agency's ability to quickly respond to a specific threat in varying environments.

K9 Officer Phillip Clark and his partner, Benny, address a group of On-Board Service new-hires at the Los Angeles Training Center in a session presented last spring.

sharing with partnering law enforcement agencies.

"We have gone to great lengths to build partnerships with law enforcement agencies and emergency responders to strengthen our defenses throughout the system," said APD Chief Sonya Proctor,

In partnership with national and local agencies Amtrak sponsored its first Community Emergency Preparedness and Security Expo at Philadelphia's 30th Street Station in November. Amtrak participated with 18 law enforcement and

continued on page 9

Materials Management Facilities Aim to Deliver Efficiency and Cost Savings

The opening of a new warehouse in Delaware is the latest project completed by the Procurement and Materials Management department to streamline the distribution of supplies to its Mechanical and Engineering partners.

The new 119,000-square-foot warehouse for materials used in the Northeast Corridor opened its doors for business to address capacity issues brought on by the significant increase in the quantity of supplies needed to support the company's fleet and infrastructure state-of-good-repair goals. The facility also reduces costs and improves the material distribution process.

Located in the Boulden Industrial Park in New Castle, Del., the facility is used to distribute materials to the Wilmington Locomotive Facility, Bear Car Shops and maintenance-of-way projects along the Northeast Corridor. It houses some of the materials that were being stored in the jam-packed warehouse in Wilmington, Del., and in trailers at other locations.

"Since the warehouse opened a few months ago, we've moved quite a lot of materials out of the Wilmington warehouse and completely cleaned out approximately 50 tractor-trailers filled with materials at Bear Car Shop and the Wilmington Locomotive Facility," explained NEC Material Control Director Harry Bailey.

By moving to Boulden, the department eliminated an annual cost of approximately \$120,000 associated with leasing storage space and the overall cost of the operation has been substantially reduced.

The primary items stored at the warehouse are long-lead-time materials, capital spare items and maintenance-of-way materials. Items such as large components for electric locomotives that sometimes take in excess of 120 days for delivery comprise the first category of supplies warehoused at Boulden. "While these items are not typically used on a day-to-day basis, if a locomotive fails and a part is needed, it is critical that you have it on hand," explained Bailey.

Parts purchased in conjunction with rolling stock, known as capital spare items, are also kept at Boulden. For example, when a locomotive is purchased, an extra nose cone is bought at the same time to ensure there's one in stock in case the nose on a locomotive becomes damaged. Other materials stored at the facility include various maintenance-of-way items, such as signal batteries, large concrete battery boxes and large wooden reels of signal cable and wire.

"We expect even greater cost savings and efficiencies to be realized over time at Boulden as we look at expanding the number of stocked items, increase the number of Northeast Corridor material control locations that we support and upgrade the technology for the operation, much like our Indianapolis Distribution Center (IDC) in Indiana," stated Vice President of Procurement and Materials Management Michael Rienzi.

The opening of the Boulden facility follows the 2003 opening of the Indianapolis Distribution Center, which is the company's central storing and shipping facility for most of the materials for Mechanical projects throughout

the work that is done at the Beech Grove Maintenance Facility. Before the IDC opened, these materials were stored in larger quantities at local material control facilities.

"The IDC plays an important role in the service we provide to our internal customers — predominately Mechanical — as well as the passengers who reap the benefits of these efforts through greater equipment reliability. By consolidating and centralizing inventory, we have significantly reduced the warehousing, shipping and transportation costs previously incurred by the local material control facilities," explained Material Control Director West Michael Golden.

Additionally, the time it takes to handle and process orders at the IDC compared to ordering directly

from vendors is noticeably shorter because vendors' lead times often fluctuate. An order may take three weeks to be delivered, while the following order for the same item may take nine weeks. "By housing materials at one central location, we can stabilize availability," added Golden.

By developing a good distribution network, the amount and cost of stock is more tightly managed and therefore reduced considerably. "For example, instead of storing five door operators at 10 different material control locations, each facility can have two on hand while the distribution center maintains a stock of 20," explained Senior Material Control Manager John Brawley. "Rather than investing \$150,000 in 50 door operators we can reduce that to around \$120,000 by lowering the quantity to 40." According to

Store Attendant Clamp Wilson operates a propane forklift to move a compressor unit at the Boulden Warehouse.

Golden, "The efficient operation at IDC can be attributed to the hard work and dedication of Brawley and his staff who have been instrumental in designing and overseeing the entire project."

At the 200,000-square-foot Indianapolis facility, approximately 700 orders of items from vendors are received every week and 1,500 are shipped out utilizing Exacta™, a software application for inventory control. The Exacta system has enabled the IDC Material Control staff to produce bar coded labels that can be scanned and affixed to every item in stock. Using handheld devices, employees scan every item that enters and exits the facility, which provides real-time information on the availability and quantity of materials in stock. The bar code system has also led to fewer errors during transactions by eliminating many handwritten documents.

This radio frequency technology also provides Material Control clerks with item location information, thereby reducing the amount of time it takes to look up stock locations. It also provides automated packaging slips for outgoing packages and an activity log that tracks materials with detailed information.

"With the IDC up and running, we have a unique model for what the Boulden warehouse may become," stated Rienzi. "But right now, as the full scope of Boulden's operation is being developed, we are looking at a number of options in technology and distribution systems that will augment the progress we've made so far."

At the Indianapolis Distribution Center, materials used by Engineering and Mechanical forces are shipped to Material Control facilities throughout the country.

the country. At this time, the Boulden warehouse supplements the IDC in the Northeast Corridor because the Indianapolis facility does not support Amfleet equipment and electric locomotives.

The IDC maintains \$41 million worth of inventory with 14,000 items of all sizes and types to supply the Mechanical shops systemwide, including the \$74 million FY '06 material plan for

Engineering Advances State of Good Repair

continued from page 1

the installation of underwater communications systems and signal cable.

“A malfunction could either stop the operation of trains on the Northeast Corridor or restrict vessel access to and from the Navy base at Groton and Coast Guard base at New London, Conn.,” said Amtrak Project Manager Peter Finch.

Catenary and Electrical Upgrades

Major elements of the capital program designed to upgrade catenary and electrical systems are the replacement of the aged 138 kV oilistatic (oil insulated) cable in

and Washington and along the Harrisburg Line.

The most critical interlocking project is the replacement of signal cables and equipment at Dock Interlocking in Newark, N.J., to be completed over a five-year period ending in FY '09 at a cost of \$26 million.

Dock Interlocking, a large multi-track interlocking including three movable bridge spans over the Passaic River, is one of Amtrak’s busiest interlockings handling all Amtrak trains operating between New York and Washington and all NJT trains operating over the Northeast Corridor through Newark.

“Once the work is done, Dock will be a more reliable interlocking and that will help improve on-time performance for the Northeast Corridor.”

Keith Holt
Deputy Chief Engineer, Communications and Signals

Baltimore, and phase one of a three-year catenary project between New York’s Hellgate Bridge and the junction with Metro North at New Rochelle, N.Y.

Installed in the B&P Tunnel in Baltimore over 80 years ago, the oilistatic cable is the principal distribution source of electric power for trains operating between Washington and Baltimore.

“The failure of this cable would seriously reduce the capacity required to run trains between these points, which would cause havoc on train schedules throughout the Washington to New York corridor,” said Bob Verhelle, deputy chief engineer, Electric Traction. The total cable replacement program will cost \$20 million, with \$9 million budgeted this year, and will virtually eliminate the operational risks associated with the oil-insulated cable.

The new catenary on the Hellgate line replaces the old “floating beam” catenary installed during the 1920s, and is designed to minimize the impact of a failure to adjacent tracks. Part of a multi-year \$35 million project, the upgrade is budgeted at \$11 million this fiscal year.

Communications & Signals

Much of the \$30 million Communications & Signals investment program is dedicated to interlocking replacements, the bulk of which occur between New York

It is controlled by a mechanical interlocking machine, installed in 1929, that uses interlocking bars and levers to mechanically lock routes cleared for trains. Dock is one of two remaining manually operated interlocking towers on the Northeast Corridor.

The signal equipment at Dock has far exceeded its life expectancy and fails frequently. “The most persistent problem at Dock is the deterioration of the insulation on the old wiring installed in the 1950s and old cables from 1929,” said Keith Holt, deputy chief engineer, Communications & Signals. Consequently, ground currents often exceed FRA limits, requiring switches to be blocked and spiked to prevent the unintentional movement of switch points. “When this occurs, it has a huge impact on the on-time performance of both Amtrak and NJT trains operating to and from New York,” said Holt.

In addition to replacing miles of wire and cable, new signals will be installed, less dependable air switches will be replaced with new electric switch machines, electric switch heaters (snow melters) will replace natural gas heaters and fail-safe microprocessor controllers will replace the old interlocking machine. Also included in the project is a re-design of the signal detection equipment associated with the three movable bridge spans. The new equipment will be installed in new signal houses and

cases located throughout Dock.

“Once the work is done, Dock will be a more reliable interlocking and that will help improve on-time performance for the Northeast Corridor. It will be remote-controlled from the dispatching center in New York (Penn Station Central Control), providing greater operational flexibility and efficiency, and eliminating the need for the on-site block operators that are now required 24 hours a day, seven days a week,” added Holt.

Fire and Life Safety

Approximately \$85 million in fire and life safety improvements are being made this year as part of the first phase of the five-year \$400 million New York Tunnels program. The majority of the work, which is funded in part by the Long Island Rail Road, will occur on the vent and evacuation shafts at Long Island City and on First Avenue in Manhattan. Phase one is scheduled for completion in 2008.

“When we’re finished, all 13 miles of the six New York tunnels will have been brought up to 21st century fire and safety standards,” said Frank Vacca, deputy chief engineer, Construction.

A second major undertaking in this budget category is the installation of security fencing and lighting throughout the Northeast Corridor. Two critical areas of improvement are the south end of the First Street Tunnel in Washington, D.C., and the Bergen Portal to the Hudson River tubes.

Track Upgrades and Investment

With a \$46.6 million investment in new rail and ties this fiscal year, Engineering will complete the three-year Keystone Corridor Improvement Project this fall, leading to trip-time reductions of 15 to 30 minutes, top train speeds

of 110 mph and as many as four additional weekday roundtrips between Philadelphia and Harrisburg.

“Amtrak and the Pennsylvania DOT partnered on this multi-year, jointly funded program of infrastructure improvements that will result in a number of service improvements, including reliability and ride quality,” said Willbrant.

In total, the project price tag is \$145.5 million, including the replacement of concrete ties, installation of continuous welded rail, and bridge, signal system, and catenary upgrades, among other improvements.

Overall, track investment this year includes approximately 117,000 concrete ties, 37 track miles of rail, 7.6 miles of track undercutting, 51,500 wood ties and 96 new turnouts.

Investments in the rehabilitation and replacement of interlockings include the Cork and Roy interlockings on the Harrisburg Line, the County, Manor and Merck interlockings in the New York Division, and construction of a new interlocking at Crescent in New England. These projects are major milestones toward improving the condition of the more than 140 interlockings owned and maintained by Amtrak on the Northeast Corridor.

“Four hundred fifty-million dollars is a significant amount,” said Willbrant referring to his department’s total capital budget. “But in order for us to catch up with the years of deferred maintenance, the level of funding that we are investing now needs to continue and ultimately increase over the next five to 10 years to guarantee we meet our state-of-good-repair infrastructure goals and provide more reliable train service to our customers.”

Highlights of FY '06 Engineering Capital Plan

Discipline	Production Goals
Track	
Concrete Ties	116, 688 concrete ties installed
Rail Replacement	37 track miles replaced with new rail
Wood Ties	51,500 wood ties installed
Structures	
Bridge Ties	1,398 ties installed on 14 bridges
Bridge Undergrades	23 Bridge undergrades improved
Communications and Signals	
Automatic Block Signaling System (ABS)	60 track miles of ABS improved
Interlockings	4 Interlockings upgraded/improved
Electric Traction	
Catenary Hardware Renewal	51 track miles catenary hardware renewed

Special Train Move Carries Precious Cargo

A tightly held military secret concerning Amtrak and several other co-conspirators was disclosed in a December column by Ronnie Polanecsky of the Philadelphia Daily News, and quickly spread like an August wildfire, forwarded via e-mail across the globe from the Czech Republic to Afghanistan and Iraq, posted on Web sites and chat rooms and generating e-mail messages from soldiers, veterans, Amtrak employees and hundreds of other people.

But it wasn't the outing of your typical military secret — if there is such a thing. It was a heartwarming story about a long-held railroad and military tradition that had slumbered for some years, awakened with a benevolent act in appreciation of the men and women of the U.S. military. More importantly, it was about the spirit of collaboration that led to a grand gesture of respect and gratitude for the people who have served their country.

With its vintage private coaches and locomotives, the Liberty Limited carried scores of recovering wounded soldiers from two medical facilities to the Army-Navy game in December.

Photo Credit: Randy Barton

Wanting to attract no attention from military brass and politicians in search of a game-day photo op, Philadelphia native Bennett Levin, an Army War College Foundation trustee, and his wife Vivian, secretly organized a day to remember for veterans of the wars in Iraq and Afghanistan who were recovering at Walter Reed Medical Center in Washington, D.C., and Bethesda Naval Hospital in Maryland.

With the approval of the two medical facilities and the collaboration of Amtrak, Conrail, the Association of American Railroads, private railroad car owners and many others, the Levins put together a first-class special train to transport wounded personnel to the Army-Navy football game in December. They called the under-the-radar train from Washington to Philadelphia “The Liberty Limited.”

As Bennett Levin put it, “We wanted them to have a nice day away and not be forced to have conversations with outsiders or strangers unless they wanted to.” There were no television cameras, no speeches from politicians, no big wigs.

Steeped in Tradition

Trains to the Army-Navy games have held a special place in the annals of railroad history. The Pennsylvania Railroad inaugurated the first train in 1936, an annual ritual that carried thousands of passengers to the games through the years until 1975.

Since then, Amtrak has run special trains to the Army-Navy games, often for senior military and government officials. However, no such trains have been commissioned since the start of the war in Iraq and none have gone directly to the stadium in recent history.

In the 1950s, dozens of Pennsy and Baltimore & Ohio trains transported thousands to the games. Back then, so many trains headed to the (now gone) Municipal Stadium in Philadelphia that it took as many as nine weeks to plan

the movements. In 1955, over 20,000 people arrived at the stadium on the PRR alone.

“This was designed to be a very positive statement by the entire railroad industry,” said Levin. When approached by the Levins, Amtrak’s then-CEO David Gunn immediately agreed to help. So did Conrail. With the enthusiastic support of private railroad car owners across the country, the Levins had commitments for 15 cars for the train. In fact, they had to turn down some of the offers because they had more than they needed. Train enthusiasts themselves, the Levins added three of their own cars and two 1950s General Motors E8 locomotives.

The Systems Operations Support group at CNOC and Mid-Atlantic Transportation department helped plan the move including transporting the 18 private cars from all over the country and putting them into position at Washington’s Union Station. There, the Washington Terminal Services group built the train consist and serviced it.

A good-sized private train, the Liberty Limited was too long for the platform so the train was staged on tracks 11 and 12. Dispatched by Amtrak personnel, the maximum speed of the train was 90 mph roundtrip.

“The group effort from the Mid-Atlantic team, Mechanical and the folks here at CNOC was really spectacular,” said Senior Director, Systems Operations Don Cushine. “Everybody at Amtrak really came together to make it a flawless day for these men and women.”

One e-mail message summed it up this way: “... [this effort] made some of us aware of the generosity of not only the Levins but of Southeastern Pennsylvania Transportation Authority (SEPTA), Amtrak, Wal-Mart, Woolrich and GEAR as well as the other members of the private railroad fraternity across the country. As the parent of an American Soldier it is reassuring to learn of the genuine compassion these individuals have for our service men and women.”

Liberty Limited on the Move

On Dec. 3, the Levins revived the tradition that is well known in railroad and Army-Navy game memoirs. That morning, all of the special guests knew they were in the right place when they saw — couldn’t help but see — an enormous welcome sign. “Amtrak Welcomes America’s Heroes” read a huge banner that hung in the concourse above gate C at Washington’s Union Station.

Liberty Limited gate signs pointed the veterans to the tracks and the platform was lined with vintage WWII Pennsylvania Railroad ads. The cars, mostly from the 1920s and 1950s, were beautifully restored to their original lavish glory. In fact, one of the cars had carried President John F. Kennedy to the game on two occasions. The train, spotless, sparkling and spectacular was ready for boarding.

“The cooperation from Amtrak, including many people whose names I will never know, was just terrific.”

Bennett Levin

Liberty Limited Organizer

Army War College Foundation Trustee

Promptly at 9:30 a.m., the Liberty Limited departed with its 18 private cars and about 80 service personnel from all branches of the military. On board, the honorees were treated to a first-rate breakfast served by the private cars’ staff. On the return trip, a gourmet dinner was served in the dining rooms of the office cars that were in the consist.

To ensure that the medical concerns of the special passengers were well taken care of, two medical staff were on-hand in every car, and every car provided a bedroom for the comfort of anyone who needed some rest. Accommodations were made for those in wheelchairs who dined in the lounge cars.

The train followed a special route to the stadium. Rather than heading to 30th Street Station, the Liberty Limited was dispatched across a stretch of Conrail to get as close to the doorstep of the stadium as possible. As the train left Amtrak's Northeast Corridor, it pulled to the right, entering Conrail's territory toward the Delaware River Waterfront. After passing the old Municipal Stadium, the former site of many Army-Navy games, the train arrived at Conrail's yard in Philadelphia right on time.

Photo Credit: American War College Foundation

Stations Assistant Superintendent Tom Guerin joins trip organizers Bennett and Vivian Levin at Washington's Union Station.

At the Conrail yard, which is about 200 yards outside the Lincoln Financial Field, buses donated by SEPTA were waiting. With police escort, the veterans were transported to the Link, as it's known to many. At the game, the wounded soldiers representing all branches of the military sat in a special section at the 50-yard line and were treated to a hot lunch in the Army VIP lounge.

"From a logistics point of view the thing was 100 percent," said Levin with unbridled excitement. "The cooperation from Amtrak, including many people whose names I will never even know, was just terrific."

While pointing out that many people worked with enthusiasm to pull off the move seamlessly, Levin named names: "Don Cushine in Wilmington, Frank

Bower (assistant superintendent, Train Movement) in Philly, and Tom Guerin (assistant superintendent, Stations) in Washington — they really put the shoulder to the wheel. They and their associates really made our guests feel comfortable."

"And the dispatching was impeccable. The way they weaved us in and gave us the railroad, it was very apparent they had everything lined up. They really recognized the importance of this trip," he noted. "From the Train and Engine crew, the dispatchers to the guys on the ground at Ivy City, everyone was fantastic and participated with gusto."

A Day to Remember

The trip included a comprehensive route guide to commemorate the day. It included detailed information about the route, making reference to old and current military facilities and railroad landmarks along the way. The guide was a fitting tribute to the historic and important relationship between the railroad and the military, featuring a collection of classic Pennsylvania RR WW II advertisements. Photographs from the 1950s depicted dozens of trains loaded with football fans and military personnel headed for the game.

Guests were invited to take their guides home to remember the day. A small footnote brought anyone lost in the nostalgia of the 1950s back to 2006 with a note that the guide was not for sale, parenthetically adding "don't even think about eBay."

"These soldiers just had a terrific day. Two sergeants who were on the medical staff told me that of all the things that have been done on behalf of

Photo Credit: Jim Kleeman

Cars deadhead to Philadelphia the day following the Liberty Limited move.

the wounded soldiers, this was the best because there were no strings attached," added Levin.

As one e-mailer noted, "The Levins could have easily made out a hefty donation and crossed the soldiers off their holiday list; instead they gave of their time and their hearts in a thoughtful way that will not soon be forgotten. What a wonderful story."

Even the Pennsylvania legislature took note. Next month, Bennett and Vivian Levin will attend the Speaker's Ball, a black-tie event at which they will be recognized by the Speaker of the Pennsylvania House of Representatives John Perzel. Later that same week, the Levins will be honored by the Freedoms Foundation at Valley Forge with its highest commendation — the George Washington Medal.

But Levin isn't looking for praise. He hopes the publicity the Liberty Limited has garnered will spur others to get involved, regardless of their position on political issues, to support the people who have made sacrifices on behalf of this country.

Local Marketing Efforts Heat Up Winter Travel

Legendary Sounds of Jazz Showcased on Amtrak Cascades

Amtrak *Cascades* passengers will be treated to the smooth sounds of jazz by taking advantage of the *Portland Jazz Festival Escape Package* being promoted by Amtrak and KPLU Jazz radio in Seattle, Wash. The Portland Jazz Festival, which is expected to attract more than 30,000 people, is being held Feb. 17 through Feb. 26.

The package includes two nights' accommodations at the Paramount Hotel in downtown Portland, breakfast each morning and tickets to six festival concerts. It also includes round-trip travel to Portland from cities along the Amtrak *Cascades* route as far away as

Seattle and Bellingham, Wash., on Amtrak *Cascades* trains 507 and 506, which are designated as the Portland Jazz Trains. En route, passengers may enjoy music, prizes and activities provided by one of KPLU's on-air personalities.

The Jazz Train is being promoted by KPLU via the airwaves, the station's Web site and in the January and February editions of its eNewsletter. Information on the Jazz Train is also posted on AmtrakCascades.com, PDXJazz.com and Travelportland.com.

To gain visibility at the Jazz Festival, Amtrak *Cascades* will serve as the exclusive Official Concert Sponsor of Grammy-Award-winning jazz artist Bill

Frisell, who will be performing at the festival's finale performance. All billings for the concert and other associated events will be displayed as "Amtrak *Cascades* presents Bill Frisell Unspeakable Orchestra at the Portland Jazz Festival."

Mardi Gras Celebration Drives Train Travel to St. Louis

For the third consecutive year, Amtrak is a sponsor of Mardi Gras 2006, being held this month in St. Louis, Mo. Every weekend in February, events that include Cajun Cook-Offs, a Pet Parade, the Mayor's Ball and Fat Tuesday festivities attract visitors from throughout the Midwest.

To promote train travel to the popular event, Amtrak is offering passengers a 10-percent discount off travel to the celebration aboard the *Kansas City Mule*, *St. Louis Mule*, *Ann Rutledge*, *State House* and *Texas Eagle* trains.

To further boost travel to the event, radio promotions in the Chicago-land area offer listeners a chance to win a package that includes hotel accommodations, event tickets and rail transportation to the event. Additionally, Amtrak gains exposure via 2,000 event posters, 100,000 event inserts in St. Louis newspapers, 300,000 inserts in the *St. Louis Dispatch* *Get Out* Magazine. Amtrak travel information is also available on the Mardi Gras Web site.

Amtrak Celebrates Black History Month with Events Systemwide

Amtrak's celebration of Black History Month kicks off Feb. 1 with a wide range of in-station events, contests, promotions and advertising.

"We celebrate diversity 365 days a year at Amtrak," said Gerri Mason Hall, vice president of Business Diversity. "Coming as it does in February, Black History Month presents the first opportunity of the calendar year to demonstrate that commitment."

Amtrak is sponsoring the New Jersey Nets basketball team's Black History Month program in conjunction with the Boys and Girls Club of Newark, N.J. The club participants will create art that is relevant to passenger rail and African-American history. Nets players, local celebrities and Amtrak representatives will judge the artwork. The winning art will be displayed at a Nets pre-game reception and the artist will be recognized at an on-court ceremony at halftime. The team is also devoting a page on its Web site to daily quotes, player vignettes and the winning artwork.

On the print media front, Amtrak is also supporting Jet Magazine's Black History Trivia Challenge. Trivia challenge questions are based on information found within the "This Week in Black History"

feature in the weekly issues of the publication and on its Web site.

The railroad is also involved with the airing of several radio broadcasts that include Black History Month vignettes. For example, WKKV Radio in Wisconsin is hosting a special feature on A. Philip Randolph, founder of the Brotherhood of Sleeping Car Porters, the first African-American labor union. ESPN Radio is broadcasting Amtrak-sponsored profiles of African-American athletes.

Along with these corporate initiatives, some stations and groups of employees are sponsoring their own Black History Month events and exhibits.

In New York's Penn Station, for example, there are weekly live performances by various artists, as well as vendors of African-American memorabilia in the station's concourse. Employees have an opportunity to participate in contests and win prizes at these performances.

In the Charlotte, N.C., station, an exhibit of the Buffalo Soldiers is on display for the entire month. According to scholars, the term Buffalo Soldiers was first applied by Native Americans to the first all-black 9th and 10th Cavalry units of the United States Army in the 1860s.

Washington Union Station's 10th annual Black History celebration takes place on Feb. 25 in the Starlight Room and features music, displays, dancers and special guest speakers. In Philadelphia, a collection of Black History Month art, including works by Amtrak's own Principal Graphics Designer Marlon Sharpe, is on display in the station. And AM Radio 1340 is broadcasting the following message on the role that railroads played in the lives of African-Americans:

"Railroads held the promise of employment and opportunity for thousands, and enabled many African-Americans to lead long, fulfilling careers at a time when working opportunities for persons of color were limited. A job on the railroad represented a position of social status within the black community. Companies like the Pennsylvania Railroad, the

Philadelphia & Reading and others in the northern states often gainfully employed blacks. At the same time, they segregated their families and friends who used these systems to travel. These stories merit our attention."

In Florida, the Miami station celebration themed "Past, Present and Future" includes special speakers, food, games, church choirs, dancing, and a vast Black History Month display.

"What is perhaps most exciting and gratifying about these celebrations is the extent to which numerous employee committees work hard to develop and execute these programs," said Hall. "We encourage employees to work with our Cultural Celebration Committee to develop programs recognizing other cultural observances, as well as ensure a nexus to our core business."

To join a committee celebrating Black History Month or other observances, contact Rodney Ruffin at ATIS 777-3929, or Bell (202) 906-3929 or via e-mail at diverss@amtrak.com. Other observances include:

- Women's History Month (March)
- Asian/Pacific American Heritage Month (May)
- Hispanic Heritage Month (mid-September to mid-October)
- National Disability Employment Awareness Month (October)
- National American Indian Heritage Month (November)

Incidents of Workplace Violence Decline in 2005

For the third consecutive year, the number of workplace violence incidents reported dropped in calendar year 2005, with a 40-percent decrease in reported occurrences over 2004. Seventy incidents stemming from a workforce of more than 19,000 employees were put on record last year, while in 2004 there were 132 reported and in 2003 there were 199.

While the number of events reported in 2005 is relatively small, it is nevertheless far more than is acceptable, as made clear by the company's policy: **Amtrak has zero tolerance for threats and violence.**

Amtrak's corporate policy covers any employee who exhibits threatening behavior, who threatens or actually commits a violent act. The policy also covers any act of retaliation by one employee against another for reporting, handling or witnessing a workplace violence incident, or perceived incident. Anyone violating Amtrak's policy may be removed from company property and disciplined, up to and including dismissal.

To support Amtrak's zero tolerance policy for threats and violence, employees must report any incident of workplace violence as soon as possible to their supervisors or any local management, the local Threat Assessment and Response Team members, or the Amtrak Police and Security Department.

In case there's any confusion about the definition of threats and

violence, every employee must be thoroughly familiar with Amtrak's policy on workplace violence. The policy is found on the Intranet under "Library" and "Policies" in the drop-down box. From there, select the Amtrak Policy and Instruction Manual (APIM), click on the APIM icon, select 3.0 Operations and then 3.12.0 Workplace Violence.

Another resource available to employees for information regarding the policy and reporting incidents of workplace violence are the Threat Assessment and Response Teams that review reports of such incidents. These teams are in place systemwide and consist of representatives from Human Resources, Labor Relations, Health Services and Law departments, while the local commander of the Amtrak Police and Security Department serves as the team leader of each regional team. A list of team leaders can be found on the Intranet by selecting the "Security" tab on the home page and then choosing "Police and Security Contacts" in the drop-down box.

Employees may also find information on this subject in "A Guide to Protecting Yourself on the Job," (NRPC 3072). The guidebook includes topics such as how to recognize situations and handle confrontations, along with personal security tips and other helpful information. Copies of the guidebook are available for ordering via the Intranet, under "Library" and "Forms."

ness unit has held numerous drills different locations working with local emergency responder teams. A multi-agency major drill, funded as a part of a Department of Homeland Security (DHS) Intercity Passenger Rail Security Grant Program for FY '05, is slated to take place in Washington, D.C., later this year.

Also attending the mid-December meeting in London on behalf of Amtrak were APD Inspector Lawrence Canty, Central Division General Superintendent Don Saunders, New York Division General Superintendent Lenore Slimbock and Program Director, Fire and Life Safety Steve Alleman.

Security

continued from page 3

emergency response agencies to provide employees and the traveling public with information about safety and security. Additional expos are planned for Chicago, New York and Washington this fiscal year.

British officials also noted that frequent drills played a significant role in the response to the attacks. The British authorities had conducted a drill just days prior to the first bombing and attributed that to the fact that there was a relatively low fatality rate.

Amtrak has been conducting tabletop drills to test emergency management procedures for some time and the Emergency Prepared-

How to Report Threatening Behavior

All acts of workplace violence, whether actual or perceived, should be reported, regardless of the relationship between the individuals involved. All reports are confidential to the extent possible, so when making a report, employees should be discreet and respectful so that privacy and dignity are protected.

Employees should report any threat or act of violence to his or her appropriate supervisor, to any manager, or to the Amtrak Police Department. After receiving a report of workplace violence, the supervisor or manager is required to notify the Amtrak Police Department as soon as possible.

The 24-hour phone number is 800-331-0008. Additionally, NRPC form 3073, *Workplace Violence Report Form*, must be completed by the employee, supervisor or manager. The form is available on the Intranet home page by clicking on the "Library" tab and then selecting "Forms" from the drop-down menu.

For complete information about workplace violence and how to report it, review the Workplace Violence policy (3.12.0) found in the Amtrak Policy and Information Manual available on the Intranet under the "Library" tab and selecting "Policies." Or, contact the local Threat Assess Response Team representative or the Amtrak Police Department.

What is Workplace Violence?

Amtrak is committed to providing employees with a workplace free from acts or threats of violence. Examples of workplace violence include, but are not limited to, the following:

- Physically or verbally threatening another individual
- Harassing or threatening phone calls, letters, e-mails, or other communication
- Stalking
- Threatening physical harm or similar intimidation either directly or indirectly
- Advocating the illegal use of firearms, bombs or weapons
- Threatening to commit suicide
- Instigating, goading or encouraging violent behavior

Any person who retaliates against any employee, supervisor or manager for taking action in relation to a workplace violence incident shall be disciplined up to and including dismissal.

Employees Achieve Major Safety Accomplishments

The Central Division’s station employees achieved major safety accomplishments recently. Since Oct. 1, 2004, station employees at outlying stations throughout the division have not suffered an FRA-reportable injury. Chicago Union Station employees have improved their safety performance over the same period by 62 percent.

The outlying stations, which include approximately 175 employees, are spread over a wide geographic region that includes more than 7,000 route miles and 50 staffed stations. These employees provide a high degree of quality customer service. They don’t just sell tickets behind a counter, they also handle checked baggage and express shipments and perform typical housekeeping chores, such as cleaning windows, mopping floors and emptying trash.

“A number of things have contributed to this remarkable record,” said Steve Felder, Western District manager of stations for the Central Division. “An increased number of safety walkabouts, safety briefings — including a focus on the MoveSmart® techniques — and annual employee reviews, along with the distribution of the monthly Safety Messenger newsletter have all made a difference.”

Being particularly careful when handling heavy baggage has also helped.

St. Louis Ticket Agent Stephanie McClinton-Gaitor prepares to take checked baggage trainside using the station’s tractor and baggage cart. McClinton-Gaitor, as well as Ralph Devine, Mark Hatch, Londi Ingram, Dennis Doiron, Joyce Coker, Jeanine Boggs and Mike Evans cover all of the station’s shifts.

General Superintendent Don Saunders also noted, “Our Safety Improvement team’s actions, combined with our annual Block Training efforts regarding safety awareness and accountability are aiding in reaching our safety objectives.”

Peter Hall, the Central Division’s regional safety officer added, “The division’s station employees are also becoming more comfortable with the process of observation and feedback. They have been helping each other to replace at-risk behaviors with safe ones.”

From the Midwest, we move to the New York region, where another noteworthy record was attained. New York’s Penn Station Mechanical department has gone more than three years without a personal injury of any kind. Under the direction of General Foreman Tom

Murphy, when this injury-free streak started in December 2002, there were approximately 75 employees. The group now numbers 31 employees and covers the area from Trenton, N.J., to New Rochelle and Yonkers, N.Y.

The busiest train terminal in the country, New York Penn Station dispatches more than 130 trains daily. Working in this demanding environment, this group consists of electricians, car inspectors, machinists, coach cleaners and foremen working shifts that cover 24 hours a day, 365 days a year.

Commenting on how this accomplishment was achieved, Murphy noted that these employees are not afraid to intervene and explain to someone taking a shortcut why that behavior could be unsafe.

When a safety situation is discussed during safety briefings, rather than complain or point fingers, the employees band together to rectify the problem.

“They truly walk the walk and don’t just talk the talk,” said Murphy. Murphy added that had it

not been for the support of Master Mechanic Don Knapik, Mechanical Superintendent Patrick Walsh and Assistant Mechanical Superintendent Joseph Sanchez, this goal would not have been accomplished.

Being recognized for an outstanding safety record since December 2002 is the New York Penn Station Mechanical department. Top photo (L. to R.): William Parker, Robert Samuels. Ticket Revenue Growth

continued from page 1
increase over last year. Duplicating the Midwest results, all routes on the West Coast showed ticket revenue growth over last December, while ridership gains were seen on all but two routes. In

Long-distance services experienced a gain in ticket revenue for most trains, including the *Empire Builder* with a 15-percent improvement over December a year ago, (although ridership stayed about

ticket revenue against last December and a 3-percent increase in ridership.

Silver Service trains — the *Silver Star*, *Silver Meteor* and *Palmetto* — improved in December with a 10-percent jump in ticket revenue and 5-percent ridership growth. However, an ice storm in mid-December in the Southeast and a freight derailment in late December near Savannah resulted in multiple cancellations of the *Crescent* and *Auto Train*, cost the company approximately \$1 million in ticket revenue and contributed to the 4-percent downturn in ridership.

For the first quarter of FY ’06, ticket revenue was \$343.3 million, 8 percent better than first quarter FY ’05. Ridership of 6.1 million for the first quarter of FY ’06 was about even, with a gain of 1 percent.

Northeast Corridor ticket revenue improved by 7 percent over the first quarter in FY ’05, earning \$186.3 million. Ticket revenue for short-distance trains climbed 11 percent, totaling \$72.4 million. Long-distance trains brought in \$84.6 million in ticket revenue, which is an 8-percent rise over the same period last year.

Top Five Routes (Ticket Revenue)	December 2005	vs. December 2004
Regionals	\$33,497,375	+14%
Acela Express / Metroliner	\$24,894,678	-6%
Empire Builder	\$4,157,021	+15%
Auto Train	\$4,119,367	-0.2%
Pacific Surfliner	\$3,237,768	+12%

California ridership on the *Pacific Surfliner* and *Capitols* was down from a year ago.

even, with 1 percent fewer riders). The *Cardinal* continued its strong pace with a 21-percent rise in

Corrections:
In the Employee Milestones feature of the January issue, the December 2005 30-year anniversary header was incorrectly labeled as March 2005.

In the January issue of *Amtrak Ink*, Red Cap Paul Sokoloski’s name was misspelled.

Amtrak Ink regrets the errors.

FRONT LINE FOCUS

Dear Amtrak:

We recently took our first train trip from Jackson, Mich., to Wenatchee, Wash. It was a very relaxing way to travel and made even more pleasant by certain of your employees.

On our trip out to Wenatchee, we left Dec. 7 on the *Empire Builder*. Our sleeping car attendant was Cynthia [Vaculin-Wise] from Seattle. She greeted us, helped with luggage, gave us a thorough review of where the restrooms were located, shower location, dining car and observation car locations and reservations for dinner instructions. She provided us with bottled water and a small snack bag. She checked on our comfort several times during the trip and was always very visible as she chatted up and down the car with fellow travelers.

I don't know if you have any outstanding employee recognition, but we would like to offer Cynthia as someone deserving of a special thank you from her boss.

Sincerely,

Ray and Shari P.
Parma, Mich.

Dear Amtrak:

I would like to commend one of your employees for her kindness to me on a recent roundtrip to Joliet, Ill., and back to Mineola, Tex. Ms. Phyllis McBride Goodman, the Sleeper Attendant in Car 2120 of *Texas Eagle*, kept us all comfortable and cheerful during two difficult trips.

... Due to a freight train problem ... the train arrived in Mineola at 3 a.m. and my family and I were exhausted. Phyllis was waiting for me as I stepped up to the train. She helped me to my room, gave me a cup of coffee (I was chilled) and was very sweet to me.

On the way home, she greeted me like a family member, and helped me up the stairs with my case to my compartment. She then made a dinner reservation for me ... She did whatever she could to make the trip comfortable and was pleasant to be around. Early the next morning we were delayed again by the accident in Texarkana. She kept us informed as to what was going on.

Too often people are rude and this young lady was very nice. Thank you for having people like her as employees on Amtrak.

Sincerely,

Jacqueline W.
Bonham, Tex.

Basketball Fans Train Their Way to the CIAA Tournament

To promote travel to Charlotte aboard three trains, Amtrak is partnering with the Central Intercollegiate Athletic Association to promote Amtrak Your Way to the CIAA.

College basketball fans planning to attend the 61st annual CIAA Men's and Women's Basketball tournaments this month may take advantage of a 20-percent discount when traveling aboard the *Carolinian*, *Piedmont* and *Crescent*.

More than 100,000 fans, students and alumni are expected to attend the event scheduled Feb. 27 through March 4 at the Bobcat Arena in Charlotte, N.C., The

tournament is the oldest Historically Black College athletic conference and is comprised of 12 Historically Black College and Universities located along the Eastern Seaboard.

"By partnering with the CIAA, Amtrak will gain significant exposure," stated Marketing Associate Sharon Gilbert. The sponsorship includes radio promotions in the Raleigh/Durham markets, an exhibit and signage in the arena, public address announcements during the game and an advertisement in the tournament program.

The Amtrak promotion will also be included in e-mail messages from the CIAA to its student organizations and alumni and included on both the North Carolina Department of Transportation and CIAA Web sites.

Dining Changes Planned for Most Long-Distance Trains

Aiming to reduce its net loss on food service while maintaining quality and passenger satisfaction, Amtrak plans to broaden the scope of its “Simplified Dining Service” program to most long-distance trains by this summer.

The new dining service model represents a fundamental change in the way food service is managed aboard long-distance trains — its objective is to alter the economics of dining car service by reducing labor costs, increasing on-board sales, and improving both convenience and service quality for passengers.

Central to the initiative is a combination of a different method of food preparation and reduced wait staff through the continuous, “staggered” seating of passengers. By offering more flexible seating options, customers may choose the meal time they prefer, thereby extending the operation of the dining car and potentially accommodating more coach passengers and generating incremental sales.

The rollout of the new service in mid-February encompassed four long-distance trains — the *Texas*

Eagle, the *City of New Orleans*, the *Sunset Limited*, and the *Capitol Limited*. To support the implementation, extensive training classes for on-board managers to supervise the introduction of the new service began last month, and in-depth sessions for on-board service employees are slated before the launch of the service on each train.

The new service model features fully prepared meals that require minimal on-board cooking. Known as “center-of-the-plate” items in food and beverage parlance, the main components of the meal come already cooked and only need to be heated in an oven. Starches and vegetables are prepared fresh by the chef.

“The menu options are essentially the same meals we’ve been serving in dining cars for the past couple of years, with some new additions. These are all high-quality items that are used throughout the restaurant industry and have been well received by our passengers,” said Senior Director of Food and Beverage Tom Hall.

By reducing labor requirements in the galley with the elimination of

Director Contract Food and Beverage Mike Dwyer (center, standing) demonstrates one of the elements of the new dining service model to the on-board service crew of the *Sunset Limited* during a training session in Los Angeles. (L. to R.) Chef Steve Randall, Train Attendant Kirk Kensler, Lead Service Attendant Vincent Burgio, Mike Dwyer, Traveling Chef Paulette Starwood, Service Attendant Henry Ford and Chef Christian Natoli.

most griddle, scullery and dish-washing work (utilizing attractive disposable dinnerware), smaller crews are needed. On most trains, the base dining car crew of five will be reduced to three, for meal counts of up to 96. At higher meal counts additional staff will be added.

An essential element of Simplified Dining Service that allows smaller crews to effectively manage the flow of patrons to the dining car is

a standardized and staggered reservations system. Reservations are required for all meals and are made in 15-minute increments, so that no more than eight passengers (two tables) are seated at one time. The leadership of the lead service attendants (LSAs) and the assistance of the train attendants is critical to ensure a smooth operation, by inviting both sleeping car and coach passengers to make their

continued on page 3

Spanish-Language Site Targets Market

In its continuing effort to provide high-quality service to an ethnically diverse passenger base, the company launched a Spanish-language version of its Web site last month. Amtrak.com has long served as a valuable tool for passengers’ rail travel needs, and the new site extends its reach to the more than 400 million Spanish-speaking people worldwide.

By clicking the “En Español” button from the home page, or by visiting Español.amtrak.com, Spanish-speaking customers may access schedules and routes, make reservations and obtain a host of information.

“Spanish-speaking consumers living both in the U.S. and outside represent an important and growing part of our nation’s economy and our customer base,” said Matt Hardison, acting vice

president Marketing and Sales. Nearly half (48 percent) of the Hispanic population in the U.S. today resides in six cities — Los Angeles, New York, Miami, Houston, Chicago and San

Antonio — all Amtrak-served locations.

Amtrak hopes that its new Web site will not only attract the Spanish-speaking public within the U.S., but also the Hispanic population from around the globe. “Worldwide, Spanish is second only to English

among Western languages used on the Internet today, so we want to make Amtrak’s information accessible for Spanish-speaking people all over the world,” added Hardison.

Amtrak is one of the few transportation carriers to provide a complete translated version of its Web site.

“Several carriers provide minimally translated versions of their Web sites but ours contains every feature available on its English-language counterpart,” said Craig White, principal marketing officer, E-Commerce. “The two sites mirror each other virtually word for word and the new version has

continued on page 8

TRAIN OF THOUGHT

Every year around this time, Amtrak presents to Congress and the U.S. DOT a proposal for its federal funding in support of operations and capital expenditures for our services. The foundation for our proposal — to come later this month — is clearly spelled out in our Strategic Reform Initiatives.

These initiatives are the guiding vision for Amtrak’s future; raising standards for our passengers as well as for ourselves and transforming the company into an indispensable provider of passenger rail service.

Some of these initiatives are not visible to most employees, such as an accounting change that attributes costs to one of our five business lines.

Others are visible to some employees, such as the Simplified Dining Service that we’re gradually implementing on long-distance trains (see the story about Simplified Dining in this issue). The new dining service has been a success, and especially so because it has been embraced with an improved and more personalized level of service from our on-board staff.

But whether visible or transparent, implemented by a handful or by many, the success of all of these

initiatives is critically important to Amtrak’s long-term future and the support we have from federal taxpayers.

Later this month, I expect that our chairman, David Laney, and I will be testifying publicly before Congress about our funding request and the progress of our reforms. In this space and through the *Employee Advisories*, I will continue to update you on developments.

In closing, I want to emphasize that the single measure of success that our passengers will judge us on is the service they receive — not on how well they think we’ve implemented our reforms. So, please continue to put our customers first and take pride in the job you do.

David J. Hughes

Celebrating Black History Month

A number of events were held across the country last month as part of Amtrak’s observance of Black History Month. One such event took place at the Jacksonville station on Feb. 18, in the company of U.S. Rep. Corrine Brown, local elected officials, employees and members of the community. (L. to R.): Manager On-Board Service Darrell Macon; Jacksonville City Councilor Mia Jones; General Superintendent Joe Wall; U.S. Rep. Corrine Brown; Marketing Manager Dennis Lyons; Superintendent of Passenger Services Sidney Birckett; and Manager Southern Division Marian Fordham.

Hosted by the Jacksonville Black History Committee, the event theme was “Honoring Leaders of the Past and Their Lasting Legacy.”

Ticket Revenue and Ridership Continues Strongly

Amtrak ticket revenue for the first four months of FY '06 totaled \$437.6 million on ridership of 7.8 million passengers, an 8-percent increase over the same period one year ago and 2 percent ahead of budget. January ticket revenue

Regionals, the railroad's largest revenue producer. However, unsatisfactory on-time performance on most routes translated into dissatisfied passengers, suppressing repeat ridership and encroaching on the bottom line.

long-distance OTP dropping to 37 percent, or 13 points lower than January a year ago.

On the NEC spine, ticket revenue through January reflected a 6-percent gain, while ridership fell by 4 percent. However, corridors outside the Northeast remained strong through the first four months of FY '06 with more than \$92 million in ticket revenue, a jump of nearly 12 percent over last year. Ridership, at 3.5 million, was 6 percent better than the same period a year ago. Long-distance service year-to-date was 7 percent ahead of last year's ticket revenue at nearly \$108 million. Ridership of 1.2 million was even with the same period a year ago.

January ticket revenues of \$94.3 million reflected an increase of 5 percent over a year ago, due mostly to the strength of the

Northeast Corridor *Regionals* and other short-distance and state-supported services, but was nevertheless lower than budget by 3 percent. Ridership was 1 percent ahead of last January with 1.72 million trips, with the slight increase attributed mostly to short-distance trains outside the Northeast spine.

On the Northeast Corridor spine, ticket revenue for *Regionals* of \$27.7 million was a 10-percent increase over a year ago, while ridership dropped by 3 percent, to 486,000 trips. Although *Regional* ticket revenues remained strong between Washington and Boston, ridership was affected by somewhat higher fares and lower gasoline prices than earlier in the year.

The January *Acela Express* and *Metroliner* combined ticket revenue of \$23.5 million dropped 5 percent and ridership was down 12

Ridership and Ticket Revenue		
Fiscal Year-to-Date	FY '06/Actual	FY '05/Actual
Ridership	7,835,844	7,770,295
Ticket Revenue	\$437,599,650	\$407,041,338
Month of January	FY '06/Actual	FY '05/Actual
Ridership	1,718,844	1,698,916
Ticket Revenue	\$94,267,991	\$89,873,287

was 5 percent ahead of a year ago, but fell short of budget by nearly 3 percent. The increase was due in part to fare changes made in the fall and revenue management on

While *Acela* delivered in January an overall 86 percent OTP, with a solid 90 percent on the south end and an improving 84 percent on the north end, systemwide OTP was 69 percent for the month, with

Dining Changes Planned

continued from page 1

reservations in advance and filling in the available slots to maximize sales.

“By controlling the flow of customers as we deliver meal service, we can ensure that the food is prepared and plated to order and that passengers are provided professional and personalized service,” said Director of Food and Beverage Standards Pete Humphreys.

The modification of dining car practices is just one ingredient in the company's overall strategy to shrink its food and beverage loss, originally projected at \$120 million this fiscal year. On an annualized basis, the Simplified Dining Service component is expected to reduce this loss by about \$10 million, once fully implemented.

Other related initiatives include Amtrak's recent renegotiation of its commissary contract with Gate Gourmet, a move that results in tighter financial controls and also provides strong incentives to the commissary provider to reduce Amtrak's food stock and operating costs. In addition, plans are in place for capital program modifications to the food service equipment that will improve sales capability and increase labor productivity by enhancing the service delivery platform — a rolling restaurant — that supports the total operation.

Recently passed legislation requires Amtrak to achieve operational savings by July 1, 2006, or be restricted from using appropriated funds to subsidize the net losses from food, beverage and sleeper car service on any Amtrak route. Progress toward achieving these savings will be monitored by the U. S. Department of Transportation and reported to Congress on a quarterly basis.

Commenting on the change to the long-distance dining service, acting President David Hughes said, “This is not an optional exercise. While cutting personnel is never easy, we need to realize operational efficiencies and improve customer participation or face the prospect of losing the food and beverage service altogether.”

Simplified Dining Service will be expanded next month to the *Silver Star*, *Lake Shore Limited* and *Southwest Chief* and in May will roll out on the *Crescent*, *Coast Starlight*, *California Zephyr* and *Silver Meteor*. At this time, there are no plans to implement the new model on the *Auto Train* or the *Empire Builder*.

To prepare for this launch schedule, 64 managers specifically chosen for this assignment participated in training sessions held last month in Wilmington and Los Angeles. The coursework for the managers included orientation of the kitchen and dining room oper-

ations. Coming from locations across the system, each of the managers is responsible for riding trains with the crews at the onset of implementation. The role of the manager is to offer guidance, hands-on training and support during the trip, and to provide a detailed evaluation of the implementation.

Instruction for on-board service employees encompasses three components: orientation, training and on-board support. The orientation briefing takes place the trip before the new model is implemented and consists of a briefing with a detailed overview of the program rationale and objectives. Before the trip on which the service begins, a two-hour training session is held that makes use of two training videos — one customized for chefs and another for lead service attendants — as well as new service guides. The training support continues on board, with hands-on assistance and coaching from one of the 64 qualified managers.

The progress of the crews will be assessed by the managers, who are responsible for filing detailed electronic evaluations in the Transportation Department Review System that will provide specific data and results for each crew. Managers will ride and support the implementation during at least the first few weeks of implementation

to insure results are being achieved.

Support from other departments is also critical. For instance, better coordination with the Mechanical department to improve the response to food service equipment issues that impact service delivery is an important part of the program.

Back in December, when some of the components of the new dining service were being tested aboard the *Texas Eagle* and the *City of New Orleans*, feedback from the crews proved crucial to refining and developing the program to reach its current state — with a number of improvements made as a result of employee input.

Afterward, a group of chefs and LSAs met for several days in Wilmington in January with Customer Services department staff to finalize the program elements.

“Our on-board service crews have been extremely helpful in providing constructive ideas to help make this program work,” said Customer Services Field Operations Senior Director Brian Rosenwald. “And the fine-tuning will continue until we have a smooth and successful operation that improves our bottom line and works for our customers.”

Overhauled Cab Cars Destined for Renewed Keystone Line

Under the Mechanical department's FY '06 capital program, the Cab Car Remanufacture Project is an important element of the Keystone Corridor Improvement Project aimed at providing all-electric service and a faster, more reliable and comfortable trip on the 105-mile Keystone Line.

Originally built in 1968 as *Metro-liners* and then converted to push-pull cab cars at Wilmington Shops between 1989 and 1991, the units afford the railroad operating flexibility by enabling the train to easily reverse directions at the end of the route. Cab cars save valuable time that would otherwise be taken to wye a train or circle a locomotive around it.

"The cab car is equipped with control devices that, when coupled

with other passenger cars and a locomotive, enables the engineer in the cab to remotely control the functions of the locomotive," explained Bear Car Shop Superintendent Danny McFadden. "To operate in the opposite direction, the engineer simply climbs down from the cab car and goes to the locomotive."

In a typical train consist, the cab car is positioned at the front of the train, followed by additional passenger cars and a push-pull electric locomotive at the rear.

The improvements most apparent to passengers are new fiberglass

bathroom modules that contain new toilets, sinks, fixtures, vinyl flooring and easy-to-clean fiberglass walls.

The 68-seat coach section is equipped

Car Repairman/Welder J. Bruce Carlton installs a grab iron on cab car 9646 at Bear Car Shop. The grab iron is a safety feature used by the crews to hold on to when pulling cables or coupling the train.

with new lighting, carpet and seat cushions.

Other upgrades that are not quite as obvious include reconditioned public address systems and overhauled trucks, brake systems, air conditioning systems, electrical panels and 480-volt electric cable.

The cars are also outfitted with updated safety features such as new nine-aspect cab signal systems and ACSES civil speed enforcement systems that work together to prevent collisions and derailments by automatically stopping or slowing the train when necessary.

Federal Railroad Administration-compliant event recorders, similar to airline black boxes, are also installed in the cars to record the actions of the locomotive engineer regarding the movement of the

train. The cab car is equipped with a safety device, known as an alertor, that applies the brakes if the locomotive engineer fails to manually acknowledge an alarm that periodically sounds and flashes while the train is moving.

At press time, Human Resources' Employee Development team is developing a cab car maintenance class to re-train Mechanical employees on updated methods of repairing and servicing these units.

The training is expected to take place late this spring in New York, Harrisburg, Philadelphia, Washington and New Haven.

Work on the project, budgeted at approximately \$1 million per unit, began in FY '04 and the first six units were finished in FY '05.

Electrician Anthony Testa installs wiring in the disaster lighting system of cab car 9646.

Performance Results

continued from page 3

percent against last January, for a total of 192,000 trips. *Acela* ridership and ticket revenue between New York and Boston slowed due to higher prices, reduced frequencies and, potentially, airline competition.

To help promote *Acela Express* ridership, Amtrak's Marketing department launched a new Guest Rewards® "Double Points" *Acela* offer in January, promoted through direct mail, e-mail and all NEC Quik-Trak screens. Several direct mail offers were also sent to a target audience of AGR members based on their past travel histories. Additionally, from March 13 to June 17, AGR members may take advantage of Amtrak's "Buy 2,

Get 1 Free" offer. After signing up for the promotion, AGR members who complete two roundtrips or four one-ways on *Acela* between select city pairs get a free roundtrip. This promotion is featured in a new television ad debuting this month.

In the Midwest and on the West Coast, short-distance trains continued to attract strong ridership and post solid revenue numbers in January. In the Chicago area, ridership and ticket revenue increased on all routes, with the largest gains on the Chicago-Milwaukee *Hiawathas*. This service ended the month with a 14-percent increase in ridership and a 21-percent jump in ticket revenue over January a year ago.

The year-old Milwaukee Airport rail station, a popular stop, generated \$95,000 in January ticket revenue based on 5,000 passenger departures.

On the West Coast, *Pacific Surfliner* January ridership rose nearly 30 percent over last year and ticket revenue soared more than 52 percent ahead of last year, while the *San Joaquins* also returned a "double-double" — a 17-percent ridership increase and a nearly 23-percent spike in ticket revenue.

Overall, long-distance trains did well despite some operational troubles, such as the service suspension of the *Sunset Limited* east of New Orleans (due to Hurricane Katrina), the *Crescent*

(freight derailments and reduced sleeper inventory) and the *Cascades* and *Coast Starlight* (mudslides).

Together, these complications accounted for a loss of nearly \$1 million in ticket revenue. Total long-distance ticket revenue was nearly \$23 million, an increase of more than 5 percent over last January. Ridership was 2 percent ahead of a year ago, with more than 254,000 trips. The *Empire Builder* service produced \$2.5 million in ticket revenue, an increase of 11 percent over last January, boosted by the sleeper bookings. *Empire Builder* ridership was even with January one year ago.

Equipment Washing Facility a Welcome Addition

Supports Tighter Environmental Controls, Yields Greater Efficiency

A new vehicle and equipment spray wash facility at the Providence R.I., Maintenance-of-Way base, designed to minimize impacts to the environment is also more efficient at washing the roughly 40 oversized work vehicles and another 40 pieces of track maintenance equipment used by the Engineering department in New England.

Equipped to handle large track equipment, the new facility opened in December after more than two years of planning, engineering design, and construction. The \$700,000 facility was financed by the Environmental Health and Safety department's capital program.

Replacing a much-smaller spray wash facility that had been constructed in the 1980s, the new facility incorporates more stringent pollution controls. The key design features include a 40-foot-by-60-foot concrete pad with integrated track, a roofed structure with two side walls, and a 2,000-gallon underground holding tank.

To prevent the wash water from potentially polluting the storm water, an environmentally sound drainage system conveys it to the underground holding tank.

When the holding tank becomes full, the spent water is hauled off site to a treatment facility for proper disposal. The tank was less expensive to construct and is more cost-effective to operate than a complex wastewater treatment system.

"Use of the spray wash facility is expected to result in long-term cost savings for Amtrak because of improved storm water pollution controls, which minimizes the potential for fines from regulatory agencies," said Senior Environmental Coordinator Rob Graham.

While keeping potential contaminants from impacting the environment is essential, keeping the vehicles and track equipment clean also makes good sense as oil leaks are more easily discovered and fixed and proper main-

tenance and care of the track equipment extends its lifespan.

The preliminary engineering design for the spray wash facility was developed by Jim Mann of the Amtrak Engineering Design group in Philadelphia. Cardi Corporation of Warwick, R.I., was selected

through a competitive bid process to develop the final design and to construct the facility. Construction oversight was provided by Anthony Scorpio, New England Division area construction engineer.

A track stabilizer is cleaned at the new spray wash facility located at the Providence Maintenance-of-Way base. Opened in December to handle large pieces of track equipment and oversized work vehicles used by the Engineering department, the facility enforces stringent pollution controls and is more efficient than its predecessor.

First-Quarter Safety Results Reflect Positive Trend

Demonstrating that Amtrak is continuing to make safety its top priority, the number of Federal Railroad Administration-reportable injuries in the first quarter of FY '06 dropped significantly over the same period last year and FY '04. Comparing quarter to quarter, this favorable trend has continued over the past two years.

Systemwide, the injury ratio, which represents the number of FRA-reportable injuries per 200,000 work hours, reflects major improvement in safety performance over the past two-year period. In FY '06, the first-quarter ratio dropped to 2.7, and first-quarter ratios in FY '05 and FY '04 were 3.8 and 4.5, respectively.

Overall, Amtrak employees sustained 124 injuries during the first quarter, down from 183 injuries recorded in first quarter of FY '05, and much lower than the 217 reported in the first quarter of FY '04.

The progress is also reflected in year-over-year comparisons, with a 3.7 ratio for FY '05 and 4.5 ratio for FY '04. Year-end totals for

those years were 712 and 891, respectively.

Amtrak safety experts attribute the two-year trend in large part to increased attention to injury prevention, personal accountability and implementation of targeted safety programs, such as increased safety walk-about and safety briefings, by the three major operating departments: Engineering, Mechanical and Transportation.

During safety training courses held this past quarter in Mechanical facilities at Los Angeles, Chicago, Washington and Bear, cross-functional teams of craft and management employees pinpointed safety risks and fixes in specific work environments.

Last fiscal year, the Engineering department held a joint labor-management safety congress during which groups addressed safety issues, presented findings and made recommendations on how to resolve and or improve these issues.

The Transportation department also focused on reducing injuries by targeting high-profile injuries, such as slips, trips and falls, analyzing the root cause of each

injury and then focusing on specific prevention, including MoveSmart® techniques. Transportation also targeted weather-related causes of injuries, such as extreme heat in the summer and icy conditions in the winter.

Transportation supervisors attended workshops that covered methods for providing constructive feedback to employees. Additionally, the department distributed pamphlets about specific injury risks and how to correct the behavior that could lead to bodily harm. Jointly, Engineering and Transportation hosted four safety fairs last summer to promote safety awareness and good health.

The Mechanical department contributed to the effort by holding joint labor-management Safety Training Camps at Sunny-side Yard aimed at tackling problem areas and providing refresher training to reinforce safe behavior.

Proper reporting is also a key to reducing injuries. A message was sent to employees by the Safety department about the importance of accurate and timely reporting —

an effective tool to help prevent similar incidents from occurring.

"Working safely means watching out for each other and not hesitating to correct unsafe behavior, and we're dedicated to providing employees the tools to do just that," said Safety Superintendent Bob Noonan.

Noonan added that employees say they feel that local supervision plays a critical role in creating a safety-conscious culture. By coaching employees about safe behavior and recognizing outstanding performance, managers foster a safe work environment. Employees also remarked on the value of local safety committees and the responsibility the members take in promoting safety.

Based on this progress, the safety performance bar has been raised. The injury ratio goal has been lowered from 3.4 in FY'04 to 3.3 in FY'05 and, most recently, to 3.0 for the current fiscal year.

P R O M O T I O N S I N M O T I O N

Acela Television Campaign Highlights On-board Flexibility

The *Acela Express* winter/spring marketing campaign includes a combination of print, radio and, starting March 15, television advertising featuring a new 30-second commercial titled “Destinations.”

Opening with an engaging original soundtrack, a series of vignettes portrays the range of “destinations,” or experiences, a passenger may choose from aboard *Acela Express*.

For instance, one destination depicts Business class travelers seated around a conference table aboard the train. “Destination: Restaurant”

shows a passenger enjoying at-seat meal service in the First class car.

“Given television’s power of sight, sound and motion, this campaign will further extend *Acela’s* position as a premium means of travel by showcasing its features and benefits, particularly for the business

traveler,” explained Marketing Director Darlene Abubakar.

The ad closes with a call to action for Amtrak Guest Rewards® members to sign up for a limited-time Buy 2, Get 1 Free offer designed to increase *Acela Express* ridership and AGR enrollment. By completing two roundtrips or four one-way trips between select city pairs on *Acela Express* or *Metroliner* between March 13 and June 17, 2006, passengers get a free roundtrip. In addition to its reference on the television advertising campaign, the offer is promoted in

newspapers and through AGR-member direct mail and e-mail.

Train Travelers Save at Six Flags Marine World

Amtrak and Six Flags Marine World are currently offering passengers and Amtrak employees a sightseer package that includes train travel and significant discounts on admission to the popular amusement park. The package, available only through Amtrak, includes admission to the park, travel on *San Joaquins* or *Capitol Corridor* trains to Martinez and direct Thruway bus connection to Vallejo-Marine World Six Flags.

By purchasing a sightseer package through Amtrak, adults and seniors may save 50 percent and children save 16-percent off the regular admission price through October 2006.

The new Acela Express television commercial portrays business travelers making good use of travel time by conducting a meeting on board the train.

The header for retirees in the Employee Milestones feature of the February issue was misprinted. It read January 2006, but should have read December 2006. *Amtrak Ink* regrets the error.

FRONT LINE FOCUS

Dear Amtrak:

I am writing to recognize the exemplary service provided by Amtrak ticket agents Angie Patterson and Adriane Strange. Both agents exceeded my expectations, ensuring I was able to arrive at my destination in a timely fashion.

... due to problems north of Wilmington, train 141 was delayed one hour and 30 minutes. This presented a big problem for me as I had a scheduled court appearance in Baltimore at 1:30 p.m. Ms. Patterson and Ms. Strong took personal interest in my problem and presented me with several options. In essence, they made my problem "go away" which I sincerely appreciate and feel warrants special recognition.

I have been a daily commuter between Wilmington and Baltimore for the past two years and rarely has there been an opportunity for me to praise the customer service I've received from an Amtrak employee. Ms. Strong and Ms. Patterson are the exceptions. Ms. Patterson listened to understand my situation and conferred with Ms. Strange to offer a viable solution to my travel arrangements. Not only did they provide me with exemplary customer service, they took ownership of my problem and did so with a bright smile.

... they represent excellent examples of how to treat a customer.

Kudos to Ms. Patterson and Ms. Strong!

Charles M.
Wilmington, Del.

Dear Amtrak:

Amtrak service and cleanliness has vastly improved over the last decade. I have spent almost \$2,000 on Amtrak over the last 6 months, enjoying Western U.S. travel. I have also contacted my senators, congressmen, and state Governor's office to voice my support in Amtrak's future funding by our U.S. Gov't.

The main purpose of this letter to is to recognize exceptional courtesy, efficiency, and work effort by some Amtrak associates:

- 1. Mrs. Dolores Benton / Car Attendant Train 14
- 2. Mr. Thomas Lafferty [River side Reservation sales agent]
- 3. Mr. Nate Strothers [sleeping car attendant, Los Angeles]

... Appreciated by your Amtrak customers. Thanks!

Rudolph R.
Warsaw, Mo.

Spanish-Language Site

continued from page 1

all of the functionality of the English-language site," White added.

As part of its strategy, the Marketing department is amplifying its advertising in Hispanic communities via Spanish-language radio and newspapers in the U.S. and Mexico. In addition, online advertising will appear on Hispanic Web sites and search engines will drive those seeking information in Spanish to the new site. Amtrak Guest Rewards® members will receive an e-mail update promoting the Web site.

The company deployed TransMotion® technology created by

MotionPoint Corporation, which will maintain the site, while Amtrak will continue to update its English-language site.

According to Roger Seitzinger, creative director, E-Commerce, "The beauty of this technology is that any changes we make on the English site will automatically be changed within 24 hours and reflected on the new site. It saves us time and money in that we do not need to maintain two sites."

Based upon the success of the Spanish-language site, Amtrak.com may be represented in other languages in the future.

FY '07 Budget Request Submitted to Congress

Proposal for Next Year Driven by Reform Initiatives

Board Chairman David Laney and acting President David Hughes told Senate Appropriations Subcommittee members what it would take to effectively operate and continue pursuing reforms at the railroad next fiscal year at a Congressional hearing on March 16.

Amtrak's request to Congress for FY '07 funding is largely driven by the Strategic Reform Initiatives first introduced last spring. Assuming key reforms are successfully implemented, the SRIs are estimated to reduce the level of federal support required over the next three to five years by \$500 million or more, Laney told the panel.

In FY '07, Amtrak expects to decrease its dependency on federal operating support by over \$40 million as a result of the reforms, from \$540 million this year to \$498 million.

Capital projects are projected at \$730 million next fiscal year, \$235

million more than this year. Contributing to the difference are major one-time projects such as the replacement of the Thames River Bridge in Connecticut, upgrading of the Northeast Corridor dispatching system and other investments aimed at supporting the Strategic Reform Initiatives.

The railroad's request for federal support totals \$1.598 billion, which is in line with what Amtrak received this fiscal year, when the one-time capital investments are excluded.

In addition to the proposal, Amtrak laid out investment options that would further advance some of the initiatives. Adding up to an additional \$275 million, the recommendations include supplemental funds for freight OTP incentives and federal matching grants for state corridor development.

Underscoring the direct link between the implementation of

Strategic Reform Initiatives and federal support, Hughes told employees in a March advisory, "We will be unable to effectively make the case for [federal] support unless we demonstrate improvements in operating efficiency, financial performance and customer service."

Amtrak is examining all of its operating units from every angle, with an eye toward reducing losses and subsequently lessening its dependence on federal operating support. In addition, certain initiatives are designed to implement customer service improvements that will drive ridership and revenue growth.

At the hearing, Chairman Laney reported on reforms the company is currently pursuing, such as measures to reduce the cost of food and beverage service. The railroad is rolling out a new model for delivering food service on most of its long-distance trains. By summer, those trains will offer

reserved-seating meal service delivered by smaller crews. Based on initial feedback from passengers, the staggered seating has led to a higher degree of personalized service. Because dining car service is available for longer periods under this new model, sales are up. The company is also considering the less-costly option of outsourcing some food and beverage service.

A number of departments are involved in improving financial management and reporting systems, and the company is studying other efficiencies in mechanical, stations and call center operations.

The company is also currently undertaking a comprehensive review of the financial performance of long-distance services, Laney reported.

The Grant and Legislative Request is available on the Intranet and on Amtrak.com.

February Shows Strong Revenue, Ridership Gains

Thanks to double-digit ticket revenue growth on the part of 17 short-distance and state-supported trains and nine long-distance services, February was a robust month for Amtrak.

Revenue of nearly \$92.8 million for the month topped last year by 7 percent, and through February of this fiscal year, total ticket revenues of over \$530 million jumped more than 7 percent ahead of the same period last year.

February ridership of nearly 1.7 million was slightly higher than last year (1 percent) due in part to the continuing strength of short-distance trains. Ridership of more than 9.5 million through February of this fiscal year was about even compared to last year.

On the Northeast Corridor spine, February's *Acela/Metroliner* combined ridership of approximately 195,000 passengers was 12

\$24 million in February were also lower than last year by more than 5 percent, but are expected to improve in March due to the

improvement in its on-time performance. In February, the service delivered an end point on-time performance of more than 88 percent — with 90 percent on the south end between New York and Washington, and 86 percent on the north end between New York and Boston.

February OTP was 24 percentage points higher than February a year ago and January OTP, at 86 percent, was better than a year ago by 31 percentage points.

These gains are the result of targeted efforts by the Engineering, Transportation and Mechanical departments to improve the performance of Amtrak's premium service. The FY '05 OTP percentages stated above use the current,

Ridership and Ticket Revenue		
Year-to-Date Through February	FY '06 Y-T-D	FY '05 Y-D-T
Ridership	9,525,454	9,436,287
Ticket Revenue	\$530,363,884	\$493,677,504
Month of February	FY '06	FY '05
Ridership	1,689,610	1,665,992
Ticket Revenue	\$92,764,235	\$86,636,166

percent behind last year. Due to the combined effects of north-end service frequency reductions, higher fares and low-cost air competition. *Acela/Metroliner* ticket revenues of

February implementation of revenue management.

Despite the disappointing numbers, *Acela* service has shown remarkable

TRAIN OF THOUGHT

Last month, Amtrak submitted its FY '07 Grant and Legislative Request to Congress. In a nutshell, we're asking for about \$40 million less next year to support operations and about \$235 million more in capital project funding to continue our state-of-good-repair goals.

When you exclude several of the one-time big ticket items such as the replacement of the Thames River Bridge in Connecticut and the updating of our Northeast Corridor dispatching system, we've asked for about as much capital funding as we're working with this year.

The proposal, including debt service and working capital, adds up to \$1.598 billion.

Our funding proposal is primarily driven by the Strategic Reform Initiatives we first announced last spring. These initiatives are designed to help us examine every angle of our business to determine how we can do better to improve service while relying on less federal support.

Collectively, these reform initiatives form a roadmap that will lead us to a much stronger Amtrak — a more modern business that effectively measures and delivers superior customer service.

We currently have a range of tools to measure what we're doing, but not enough that tell us how we're doing. Consequently, we are developing better metrics to measure how we're doing and to guide us to where we should be headed.

One particular area in which we've made progress this year has been in reducing the cost of delivering food and beverage service.

In addition, we're evaluating our current fleet management practices, to see how we can better utilize equipment and will soon upgrade our maintenance practices so that they have a more direct effect on equipment availability and reliability. And we're aiming to modernize our ticketing processes. Across business lines, we're looking at what functions cost, what value they bring to the customer, and how we can do them better.

The level of funding Amtrak gets for next year will be a matter for debate on Capitol Hill, but our Strategic Reform Initiatives are not. It's important for all of us to embrace these changes, because they will result in a more resilient Amtrak that better serves its customers — and that's the key to success.

David J. Hughes

Dining Service Delivers

Chef Patrick Bull consults with Lead Service Attendant Ray Quezada in the kitchen of the *Sunset Limited* about some of the changes to the long-distance dining service.

Based on input from chefs, freshly made omelets are returned to the menu, along with hash brown potatoes. Also brought back to the menu are the Angus burger, Gardenburger, and chicken breast sandwiches, all of which are assembled by the chef on board the train.

Photo credit: Curt Bormann

Quezada noted that customers seem to appreciate the personalized service the new staggered reservation system has brought to the diner. Quezada added that most passengers are completely unaware of the changes in the food service process, which are aimed at reducing labor costs and improving the service delivered.

Contributed by Curt Bormann.

Long-Awaited East Side Access Agreement Signed by Amtrak, MTA and LIRR

The \$7.7 billion East Side Access rail project in New York City will provide Amtrak with substantial facility and other infrastructure improvements under an agreement announced in January between Amtrak, the Long Island Rail Road and the New York Metropolitan Transit Authority (MTA).

East Side Access is the largest railroad capital investment project in New York's recent history, but one based on a simple principle: provide Long Island commuters with a terminus on the East side of Manhattan.

For nearly a century, rail commuters from Queens, Nassau and Suffolk counties who work on the East side have had to take the Long Island Rail Road to Penn Station between Seventh and Eighth Avenues, then backtrack by bus, cab or on foot. The project creates a new station beneath Grand Central Terminal, nearly a mile north and east of Penn Station, thereby lessening the commuting woes of Long Islanders.

For Amtrak, the East Side Access project will result in many improvements in and around Sunnyside Yard in Queens. Among the most significant is the creation of two independent grade-separated routes through Harold Interlocking adjacent to the yard. This is the busiest railroad interlocking in

North America and one of the busiest in the world, handling more than 600 Amtrak and LIRR trains per day. Also included is the renewal and/or upgrade of much of the existing infrastructure though Harold and the nearby "F" interlockings.

To provide access to tunneling equipment under the yard, the plans call for the removal of 100-year-old support buildings. These will be replaced with modern-design structures providing a much-improved working environment for employees.

A material shed with track access will be constructed, as well as a project office building for Engineering-related activities and material storage for the project. Additionally, the area in which the REA building was located will be used by the MTA for fabrication of switches and panels, then turned over to Amtrak's Engineering department for use as a maintenance site. A new rail car wash will also be constructed at Sunnyside for long-term use by Amtrak and NJ Transit.

With preliminary site work such as surveying and collection of soil

samples currently on schedule, construction is expected to begin on Amtrak property this summer, and the project is expected to be complete in 2012.

"We're very pleased with the benefits that East Side Access is providing to Amtrak, to rail commuters and to the New York region," said Amtrak's Drew Galloway, chief of Corridor Development Project Planning. "Amtrak is getting \$200 million in much-needed infrastructure improvements from the project, commuters are getting better service and the region is getting the equivalent of

about two lanes of traffic on the East River bridges and tunnels during peak hours in passenger rail capacity. That's a very big environmental plus — when this project is completed, we'll have helped decrease auto travel in the region by more than 500,000 miles per day."

Drew Galloway and Vinay Mudholkar contributed to this story.

At New York's Sunnyside Yard, new catenary pole foundations are being drilled as work begins to accommodate additional tracks for the East Side Access project. The long-term project between Amtrak, the MTA, Long Island Rail Road and Metro-North will benefit commuter agencies and Amtrak by providing direct access to Grand Central Terminal for LIRR commuters and reduce congestion in the busiest railroad interchange in the country.

New Schedules Reach Stations This Month

Amtrak releases its 2006 Spring Summer Timetable this month, featuring new elements designed to make the 132-page national booklet a more complete travel resource for Amtrak customers. The new timetable is effective April 24.

The timetable contains several color-coding changes for easier at-a-glance reference. For Northeast Corridor services, *Acela Express* and *Metroliner* services are in blue, reserved *Regional* and *Keystone* trains in orange, long-distance in white, connecting Shuttle Service in green and Thruway and connecting local services in grey.

Outside the corridor, long-distance trains are marked in blue, reserved *Regional* trains in orange, and connecting Thruway motor-coach service in grey. White is designated for the few remaining

unreserved trains Amtrak operates. Timetable collectors may notice the introduction of a new color — green — that indicates connecting trains.

To make traveling easier for those who plan to extend their trips by connecting to local transit or airports, the timetable features intermodal connectivity that is

available at many Amtrak locations. A box next to the schedule of the *Heartland Flyer*, for example, explains local transit options that include Dallas Area Rapid Transit (DART), "the T" bus service operated by the Fort Worth Transportation Authority, and Trinity Railway Express. Transportation service from New York Penn Station to John F. Kennedy and LaGuardia airports or from Los Angeles Union Station to Los Angeles International Airport, for instance, helps customers with their travel

plans. Other rail/air connections at airport locations such as Milwaukee, Burbank and Oakland, Baltimore/Washington and Newark are also referenced.

Departure and arrival times remain mostly unchanged from the Fall-Winter schedule, but there are several specific train changes included.

In the Northeast Corridor, *Acela Express* Train 2290 will run Saturday mornings on the north end (New York to Boston). On the Empire Corridor, two trains that traveled from New York to Albany (one weekend and one weekday) are now consolidated into one train that departs New York on daily basis just before noon.

On the Keystone Corridor, an early morning train that had low load factors from Harrisburg to

Mechanical Goals Advance Toward a State of Good Repair

Reliability and Availability Improves in FY '06

With half the fiscal year under its belt, the Mechanical department has made steady progress on its goal to increase the reliability and availability of Amtrak's equipment.

As a result of the department's efforts over the past several years to upgrade, rebuild and maintain the rolling stock, Amtrak estimates that 53 percent of passenger cars and 91 percent of the locomotive fleet will be in a state of good repair by the end of this fiscal year.

With the successful re-launch of the *Empire Builder* service last year with a "captured fleet" of remanufactured cars, work is continuing on equipment to expand this initiative to one or more other services. Accordingly, Superliner remanufacture and overhaul projects aimed at refurbishing a total of 134 Superliner I and II cars are underway at the Beech Grove Maintenance Facility.

Budgeted at approximately \$46.7 million, the project involves the overhaul of 68 Superliner I cars and remanufacture of 66 Superliner II cars. To cycle this number of cars through the backshop, Beech Grove employees are minimizing the shop time by improving processes and increasing efficiencies.

A remanufacture differs from an overhaul in that all of the car's components are removed and new and rebuilt parts are installed,

often according to a new or updated design. Remanufactured Superliner cars are equipped with new bathroom modules, toilet systems, lighting, carpet and interior walls, along with overhauled bunks and other amenities.

The FY '06 fleet program also includes the remanufacture of 20 Horizon coaches and the overhaul of 21 Heritage cars (four diners, two crew dorms and 15 coaches).

Another part of the capital plan calls for Bear Car Shop mechanics to remanufacture 60 Amfleet I coaches, 24 Amfleet II coaches and to convert eight Amfleet II smoker lounge cars to diner/lounges.

Not to be confused with the Superliner diner and lounge cars that are being redesigned to support the Simplified Dining Service that will ultimately offer continual meal service on many long-distance trains, the converted Amfleet cars are designed to add flexibility to the food and beverage operation by offering a combination of lounge and/or dining car seating in instances when two cars are not necessary. The diner/lounge prototype was released to revenue service in March.

Also at Bear, mechanics are remanufacturing eight cab cars that will operate along the Keystone Corridor. This is just one element of the Keystone Corridor Improvement Project aimed at providing all-electric service and a faster,

Pipefitter Jon Gedek installs water piping in Superliner I Sleeper Car 32056, scheduled to be released next month.

more reliable and comfortable trip on the 105-mile line starting this fall.

Ironically, part of the plan for '06 includes not doing some things. For example, Amtrak is storing 60 Amfleet coaches (in part due to the transfer of Clocker service to New Jersey Transit). By storing these cars instead of cycling them into the fleet, Amtrak will save about \$33 million in remanufacturing costs it otherwise would have had to perform this year.

"This doesn't include the cost of preventive maintenance, layover servicing and periodic bad order repairs either," said Mechanical

Director of Master Scheduling Tom Butler.

This year's locomotive program targets the overhaul of 35 P-42s, four P-32s, eight F-59s, two F-40 cab cars and the renovation of five locomotive wrecks.

On the electric locomotive side, overhauls are being performed on 21 locomotives at Wilmington

Maintenance Facility this year. Mechanics are overhauling five AEM-7 ACs, eight AEM-7 DCs and eight HHP-8s. Four AEM-7s owned by MARC, whose fleet is operated and maintained by Amtrak, are on tap for overhaul.

Car Repairman Vanessa Thomas replaces the weather stripping on the collision post door on Amfleet I Coach Car 44943.

For the July issue: June 7, 2006

Progress Seen in 2005 National Railroad Safety Numbers

Amtrak Sees Improvement In Most Areas

The number of U. S. train-related incidents dropped in 2005, based on a Federal Railroad Administration comparison of overall incidents in 2005 and 2004.

According to the FRA, preliminary data shows a nearly 8-percent decrease in train accidents, including an 8-percent drop in the number of derailments.

Highway-rail grade crossing fatalities across the country went down 3.5 percent and the total grade-crossing collision rate reached a historic low of 3.81 incidents per million train-miles. Trespassing, the biggest single cause of rail-related fatalities, accounted for almost 54 percent of the total.

The on-duty injury rate for employees in the railroad industry dropped almost 13 percent, while railroads' train-to-train collisions rose over 8 percent.

On the Amtrak front, the company's focus on safety resulted in a drop in all categories but one from 2004 to 2005. Amtrak's workforce achieved a 23-percent decrease in its injury rate; a signifi-

cant accomplishment largely attributed to a focus on personal involvement by craft and management personnel alike.

"When you make safeguarding the welfare of your co-workers a priority for each individual, the group collectively takes ownership and makes a commitment toward its safety goals," explained Safety Superintendent Bob Noonan last month.

Targeted efforts by the Transportation department to reduce operating rules violations contributed to a decline in train incidents. Derailments dropped 19 percent and train-to-train collisions in which Amtrak was involved sunk 57 percent in 2005. Amtrak's total grade-crossing collision rate dropped from a ratio of 3.72 in 2004 to 3.38 a year later, and trespassers comprised 63 percent of Amtrak fatalities last year.

Despite this encouraging trend, a rise in the number of equipment-related fires and damage to pantographs in 2005 resulted in a 1-percent increase of the total number of Amtrak incidents.

New Schedules

continued from page 3

Philadelphia but was well patronized between Philadelphia and New York is replaced with Train 110 from Washington to New York.

To compensate for the change, Train 610 has been added to the schedule from Harrisburg to Philadelphia later in the morning. This move not only makes better use of the equipment but also gives Engineering forces working on the Keystone Corridor more time before they return the track to service in the morning.

Keystone schedules now reflect faster speeds along the route as a result of the Keystone Corridor Improvement Project (KCIP), with trains traveling over a 35-mile segment of track just east and west of Lancaster operate at 110 mph. Westbound schedules between Philadelphia and Harrisburg have been adjusted to allow for the

work being performed by the Track Laying Machine between 30th Street and Paoli as part of KCIP.

Other changes in the East include Trenton added as a stop on the Chicago-New York *Cardinal* trains. The northbound *Silver Meteor* departs Miami 25 minutes later than the previous schedule's 6:50 a.m. departure, giving passengers a few more minutes to sleep in. Trains 91 and 92 add a new stop at Cary, N.C., at the same station served by the *Piedmont* and the *Carolinian*. *Lake Shore Limited* Train 49 operates 30 minutes earlier, and Train 449 reverts to a daily operation, departing Boston 60 minutes earlier.

On the West Coast, some *San Joaquins* will run five minutes faster, thanks to a new section of double track funded by the state of California that eliminates train-

Lorton Team: Putting Safety First is Auto-matic

Being recognized for their four-year injury-free record is the Lorton Auto Train Mechanical group (L. to R.): Dennis Overvold, Ron Roscoe, Ha Roop, Clarence Carr, Carlos Vaquerano, Nguyen Huu Bach, Richard Lee, Nadine Hurtt, Thomas Greene, Sharonda Marrow, Christopher Fiske, Lance Kendall, Andrew McColl, Frances Shartel, Edward Brown, Mariany Patrick, James Williams, William McCorkle, Mervyn Carter, John Carpenter, Perry McNeil, Annette Davis, and Karcell Craig.

Watching out for each other and never hesitating to coach a co-worker on safety issues has helped the Mechanical department at the Lorton, Va., Auto Train facility remain injury free for more than four years, since February 2002.

The group of 47 people, comprising car cleaners, car repairmen, electricians, utility workers, a pipefitter, a statistical clerk and a manager, is highly motivated to prevent injuries before they occur by eliminating the potential cause. There's no doubt that the Lorton Safety Committee, honored in 2002 with a President's Service & Safety Award for Safety Committee of the Year, played a significant role

in helping the facility attain its four-year record.

Gary Esposito, Auto Train's assistant superintendent at the Sanford, Fla., facility has made it very clear that every job, even during crucial times when they're servicing late trains for quick turnarounds, must be done safely. The Southern Division's Master Mechanic Tommy Farr stated that the Lorton Mechanical team "has taken that directive and ensured that safe work practices and a safe work environment are the norm."

Ed Brown, manager of Terminal Services in Lorton, added that the credit for a job well done belongs to all of the Mechanical department employees at Lorton.

meet delays. Westbound *Capitol Corridor* trains are two minutes faster between Richmond, Calif., and Oakland Jack London Square, as a result of signal modifications paid for by the Capitol Corridor Joint Powers Authority.

"Our goal was to offer realistic schedules to mitigate the adverse effect of track work on passengers," said Senior Director Network Scheduling Ben Cornelius.

In the West, the schedules of the *Southwest Chief*, *California Zephyr* and *Empire Builder* incorporate minor adjustments for seasonal maintenance-of-way work along the BNSF routes.

More noticeable changes that have been made to schedules as a result of track work are referenced in a box. For example, the *Empire Service* schedule includes a note that reads, "Empire Service sched-

ules have been adjusted to accommodate track maintenance being performed by CSX to keep the route in a good state of repair. Normal schedules will be restored in the fall timetable." The time allowances for this work are most evident on the schedules of trains that run to and from Niagara Falls.

While it's difficult to anticipate all of the track work planned across the country, the developers of the timetable made every effort to alert passengers to significant projects of which they were made aware at the time, even if dates, times and other specific were not readily available. In this case, orange boxes include text that generally describe operational changes that may affect those schedules. More up-to-date information about schedules and track work will be available on Amtrak.com.

Emergency Plans and Practice Lead to Better Preparedness

At approximately 7:26 p.m. on Sept. 8, 2005, Amtrak and Metropolitan Transit Authority personnel evacuated three-quarters of New York Penn Station after a two-alarm fire erupted under platform 4. The fire formed a thick cloud of smoke throughout the station and caused minor injuries to railroad and fire department employees, heavy damage to an elevator and major disruption to rail operations. All service on the 21 normally busy tracks was shut down for nearly four hours, while the New York Fire Department and other emergency personnel worked to extinguish the fire and expedite the return of normal station operations.

This is just a glimpse into the complexity of one of the incidents that Fire and Life Safety Officer Gary Hearn responded to last year. Hearn is a member of the Amtrak's Emergency Preparedness group, which helps the railroad prepare to manage disasters and other emergencies on trains and at stations and facilities systemwide, including the Amtrak-owned New York Tunnel system. By planning and orchestrating training programs and drills, the group works to minimize safety risks and maximizes efficient responses during an emergency or disaster.

Hearn, Washington-based managers Arthur Candenquist and Jeff Wiegel, Josie Harper in Chicago and Dave Albert in Los Angeles comprise the Amtrak's Office of Emergency Preparedness, led by Senior Director Larry Beard in Washington.

"We are responsible for developing a joint response plan with every major freight railroad that Amtrak operates over and an emergency action plan with the commuter railroads and the New York City response agencies," explained Beard.

In addition to managing passenger train emergencies, the group tests, directs and audits emergency evacuation plans for Amtrak's corporate headquarters, 20 major maintenance facilities and over 200 staffed stations.

Training: Key to Effective Response

"Conducting training drills places Amtrak and its safety partners in the best position to handle a broad range of emergencies," noted Environmental Health and Safety Vice President Roy Deitchman. The training covers responses to train collisions, derailments, fires and natural disasters as well as bomb threats and terrorist attacks on Amtrak property.

To better prepare a range of agencies for a variety of incidents on the railroad, the Emergency Preparedness team provides first-responder training. "Depending on the magnitude of the emergency, multiple response agencies report to the scene," explains Josie Harper. This includes local, state and federal emergency management, law enforcement and emergency medical personnel, as well as volunteer agencies such as the American Red Cross and the Salvation Army. There are an estimated 22,000 local responding agencies along the Amtrak rail network. Last fiscal year, approximately 5,000 emergency personnel were trained and certified in Passenger Train Emergency Response.

Depending on the size of the agency and its role in the emergency, training may range from four hours of classroom instruction combined with hands-on equipment familiarization, to a full-scale Mass Casualty Incident drill.

During the classroom and equipment familiarization instruction, responders study emergency procedures, such as how to properly remove emergency exit windows. Participants are taught how to turn seats in coach cars, which increases available working space in front of an emergency exit window. "Responders also learn how to raise and lower the sleeping car berths so the task is not foreign to them when searching for victims during an emergency," explained Wiegel.

To facilitate interaction with train and engine and on-board service crews during an emergency, the Emergency Preparedness managers also acquaint responders with these employees' job duties. For example, in the event of a derailment, first responders should know which on-board personnel can best assist with navigating a particular wrecked car.

Responders are also taught the locations and operation of locomotive emergency fuel cutoff switches and the electrical and pneumatic hazards to mini-

During the hands-on section of a three-day emergency response class conducted by Manager Dave Albert, members of the Santa Maria Calif., Fire Department practice removing a victim through the window of a coach.

mize the risk of coming in contact with potentially dangerous electrical cables and hoses.

"The training proved to be quite beneficial during the April 2004 derailment in Flora, Miss.," explained Candenquist. Several members of the Ridgeland, Miss., fire department had attended a training program that Candenquist conducted at the Meridian Public Safety Training Academy in Meridian, Miss., just three months earlier. "They arrived at the scene armed with the knowledge and experience with which to conduct an expedient search and rescue mission." Consequently, the academy and agencies in neighboring communities have scheduled more classes.

During training, the Emergency Preparedness team also informs responders about Operation Lifesaver, a national program dedicated to eliminating highway-rail grade-crossing accidents and trespasser incidents. The group, along with representatives from Operation Lifesaver, freight railroads and local law enforcement agencies also coordinate Officer on the Train programs, such as an annual Rainbow Train that Dave Albert is involved with in Southern California. Designated as the Rainbow Train, the consist is comprised of a variety of equipment from participating railroads, including BNSF Railway, Metrolink, Amtrak and Union Pacific.

Aboard the Rainbow Train, local police officers and media representatives travel in the locomotive to witness trespassers, while other officers stationed at grade crossings issue warnings or citations. "They are always amazed at the large number of close calls — it's not uncommon for the officers to issue between 60 and 100 citations in a day," explained Albert.

Disaster Drill: A Well-Designed Training Event

Amtrak conducts at least one Mass Casualty Incident (MCI) drill per year. An MCI drill, which sometimes includes volunteers playing the part of injured victims, is a planned event that involves local fire and rescue, emergency medical service, law enforcement and emergency management personnel as well as Amtrak's Consolidated National Operations Center (CNOC) and the Amtrak Police Department.

Albert, along with the BNSF and local response agencies, conducted an MCI drill in November in California that simulated a terrorist attack involving the release of a dangerous chemical nerve agent on board the train. "Generally, the benefit of simulated emergencies is that they reveal potential vulnerabilities that might not have been previously considered. The goal of this particular drill was to measure how well the agencies communicated with each other. One of the benefits from this exercise was that we found that one of the participant's radio systems was not linked to other agencies," said Albert. "These drills help us find out these kinds of things and fix them before a real emergency happens."

Analyzing and measuring the effectiveness of the drill enables the Emergency Preparedness team to identify areas that call for corrective action. After the drill, various elements of the exercise are critiqued, such as the

timeliness and accuracy of the notification of the event, what communications channels were used and the subsequent response. The time it takes for information to travel from a conductor, engineer, dispatcher, CNOC, Amtrak Police and host railroad is of vital importance. “In an emergency, effective plans and good communication are necessary elements to help response teams be better prepared and to mitigate risks to our employees and operations,” explained Police and Security Vice President Alfred Broadbent.

Investigating an Incident

During an actual train disaster that involves injuries or fatalities, the Emergency Preparedness managers, along with representatives from Environmental Health and Safety, the National Transportation Safety Board (NTSB) and host railroad, form a “Survival Factors” committee. The purpose of this committee is to establish the probable cause of injuries and fatalities, to find out how well evacuation procedures were executed, and to examine how well the train equipment performed.

To obtain this information, each of these groups thoroughly inspects the cars and locomotives make note of any evidence that would help determine if and how the equipment contributed to the cause of injuries or casualties. To gain even more insight, Emergency Preparedness managers assist the NTSB in conducting interviews with passengers and crew members.

During the on-site investigations, which sometimes last for several days, the committee meets daily to discuss its findings. After a thorough review, the NTSB submits a list of recommendations to several emergency response and public safety agencies, including the Federal Railroad Administration, which may then require the railroads involved to adopt recommendations to improve railroad safety standards.

A Response Plan Unlike Most Others

While this department focuses on trains and facilities across the system, New York’s Penn Station presents a unique set of emergency preparedness circumstances due to the high number of commuters and trains that pass through the station and the 15-mile tunnel system every day.

Whenever an emergency occurs at the station or in the New York Tunnel System, Fire and Life Safety Officer Gary Hearn is the point person to coordinate the response efforts. And this is no small undertaking — Penn Station is a massive 28-acre facility that sits under Madison Square Garden and serves a half million people and 1,400 Amtrak, Long Island Rail Road and New Jersey Transit trains a day. Hearn also oversees the New York Tunnel system, which consists of seven tunnels that feed into the station.

According to Hearn, “The more familiar the responders are with the station and tunnels, the faster they will be able to handle an emergency with the least amount of disruption to Amtrak operations.” To that end, Hearn conducts weekly emergency response training and disaster drills for a number of agencies including fire and police departments, emergency medical services, Long Island Rail Road, New Jersey Transit and the New York City Office of Emergency Management.

During training, Hearn familiarizes responders with the physical characteristics of the tunnels that lead into the station. The six North and East River tunnels are two-and-a-half miles long each and the Empire Tunnel is 1,600 feet long. Hearn also covers the electrical hazards associated with the 12,000-volt catenary power that runs through the ceiling of the tunnel and 750-volt third rail power on the tracks.

“To help them understand first-hand what the conditions are like inside the tunnels, I also have them climb up the 98-foot spiral staircase that leads to the street,” said Hearn. The spiral staircase, which will soon be replaced by a four-foot wide scissor-style staircase, is used by responders for quick access in emergencies. He also points out the location of safety equipment such as fire extinguishers, track access ladders and wayside telephones as well as cross-passageways, which are doorways that provide alternate access to adjacent tunnels.

“Until they undergo the training, most responders don’t realize how large Penn Station actually is,” explains Hearn. So he walks them through the five-level complex, takes them to the platform areas and provides them with an overview of Penn Station Central Control, where train dispatchers direct the

movement of all trains to and from the station and the tunnel system. He also familiarizes them with the command post, which is where emergency responders and railroad personnel meet during an emergency. This area is equipped with portable radios, cell phones, hard-line phones and wayside communication units used to maintain the lines of communications during an emergency. It also contains control panels that operate the track level emergency exhaust fans used when fire or smoke is present.

In addition to training, Hearn collaborates with other agencies and responders to conduct emergency drills at Penn Station and in the tunnel system. Last year, Hearn lead an exercise during which fire department personnel rescued other firefighters posing as passengers trapped inside a (simulated) train ablaze in the East River Tunnel. In this case, by acting as victims, the firefighters gained a better understanding of what passengers experience in that kind of situation.

While it is important for the responders to gain familiarity with Penn Station operations, it is equally important for employees working there to know what to expect and how to respond in an emergency. Because of the extraordinary scale of New York Penn operations and its infrastructure, these employees attend special training sessions.

All station employees participate in a three-hour emergency response class that includes evacuation procedures, the roles and responsibilities of responding agencies and employees during an emergency. The Emergency Action Plan is also covered, which includes steps to be taken if a fire erupts in a train or tunnel, particularly noting how quickly smoke can travel through tunnels.

Emergency responders put on their hazardous materials suits during a drill at Holgate Yards in Seattle, Wash. Amtrak, BNSF Railway and Sounder Commuter Rail participated in the scenario that involved the release of an unknown chemical on board an Amtrak train.

Of the 72 incidents that required emergency response at Penn Station last year, only two resulted in a major disruption of service. Hearn attributes that to the training programs and the solid working relationship between Amtrak employees and responding agencies.

Employees also play a key role in preventing emergencies at Penn Station. Hearn, along with employees of various departments, conducts fire and safety inspections of the station and the tunnel every month. At the station and track areas, they look for everything from a build-up of rubbish to exposed wiring and inoperable fire extinguishers. The group also performs tunnel inspections that involve ensuring that the telephones are working properly, the doors to the cross-passageways close properly and the lighting is adequate.

“Because we do so much training to improve awareness, our employees are better prepared and more confident in dealing with emergencies and responders. Employees realize that they are an important part of the response team,” explained Assistant Superintendent of Stations Mike Gallagher.

Long-Time Partner Yankee Holidays Becomes National Tour Operator

Yankee Holidays takes over Amtrak’s national tour program, Amtrak Vacations®, starting this month. The Beverly, Mass.-based tour operator began accepting tour package reservations from consumers and travel agents on April 3, the same date that the Amtrakvacations.com Web site was launched.

Yankee Holidays and Amtrak have developed a full Amtrak Vacations menu of tour packages that promote more than 20 appealing destinations, such as New York City, Washington, D.C., Chicago, San Francisco, Seattle and Montreal.

Packages may include any combination of rail and air reservations, car rentals, hotel accommodations, attraction admissions, theater

tickets and other sightseeing options. In addition to the Web site, an Amtrak Vacations brochure, which will also provide details of all the packages, will be available in the spring.

“Amtrak is looking forward to working with Yankee Holidays, a well-established company who has earned respect within the travel industry and with vacation travelers,” said David Lim, Amtrak’s chief of Marketing and Sales Promotions.

Amtrak will continue to work with regional tour operators, such as

Key Holidays in California, Flat-head Travel in Montana and RMA Travel and Tours in Colorado, to market regional tour packages.

Yankee Holidays has been providing travel packages to worldwide destinations for 34 years and has long demonstrated its ability to professionally manage major travel industry partnerships.

Moreover, Amtrak has worked directly with Yankee Holidays for more than 20 years booking regional tour packages in the

Northeast, including the more-recent promotions Radio City Christmas Spectacular promotions in 2004 and 2005.

“The Amtrak Vacations brand is a welcome opportunity as we continue to diversify our product and approach within the industry,” said John Tavano, President of Yankee Holidays. “The Amtrak Vacations brand is a great addition to our other business segments and revenue streams and Amtrak will benefit from the many strategic business alliances and synergies that Yankee has to offer within the travel industry,” Tavano added.

To book Amtrak Vacations packages, consumers, travel agents and tour operators may contact Yankee Holidays at 800-AMTRAK-2, or visit Amtrakvacations.com.

Hearing Health Hazards

Noise exposure can occur both on and off the job. The potential for exposure to noise is one of the most common occupational health issues encountered in the U.S. workplace. To address this issue, Amtrak’s Noise Exposure and Hearing Conservation Program, administered by the Environmental Health and Safety department, describes the protocol for evaluating high-noise areas and procedures for providing protection of employee hearing.

Amtrak is covered under federal regulations that set acceptable workplace noise levels. For example, the U.S. Occupational Safety and Health Administration (OSHA) has established an eight-hour time-weighted average noise exposure level of 85 decibels (dB) as a level that requires action to protect employee hearing. Heavy traffic on a highway is an example of noise in the 85 dB range, for instance.

noise levels exist are identified by reviewing noise monitoring records and conducting noise surveys. Some employees may be asked to wear a noise dosimeter, a small instrument that measures personal noise exposure. After evaluating noise exposure measurements, Amtrak can identify and notify employees who should be included in the program. Some tasks or positions that may be included in the Hearing Conservation Program are locomotive engineer (mandated by the Federal Railroad Administration), yard conductor, watchman, track worker, mechanic and welder.

Employees who are placed in the hearing conservation program are provided with training about the effects of noise and how to protect their hearing. Additionally, they

are issued earplugs or earmuffs that are to be worn at all times in high-noise areas, an important step in preventing

hearing loss.

Participants in the program are also included in Amtrak’s annual audiometric testing program to evaluate whether hearing loss has occurred. Early detection of hearing loss provides an opportu-

When it is determined that employee noise exposures are above an acceptable level, a Hearing Conservation Plan is developed to outline how noise levels will be monitored and controlled and how employees will be protected. Areas where high

Noise Levels: What’s Loud?

- Normal Conversation: 60 decibels (dB)
- Vacuum Cleaner: 70 dB
- Noisy Office: 80 dB
- Heavy Traffic: 85 dB
- Rock and Roll Band: 110 dB
- Jet Engine: 140 dB

Questions and Answers Regarding Noise Exposure and Hearing Protection

Q: Do you get used to high levels of noise?

A: No, you don’t get used to noise. However, repeated exposure to high noise levels can cause hearing loss.

Q: Is hearing loss an unavoidable result of working at a specific job?

A: No. Steps can be taken to reduce or eliminate noise on the job and provide hearing protection. Employees can also take steps to reduce hearing loss by using control measures and wearing hearing protection when needed.

Q: Can earplugs damage your eardrums?

A: This is unlikely to occur. The ear canal is about one-and-a-quarter-inches long, and most earplugs are one-half to three-quarters-of-an-inch long. Also, the path from the opening into the ear canal to the eardrum is not straight.

Q: Can using earplugs cause ear infections?

A: Earplugs themselves do not cause ear infections. Make sure that your hands are clean if you have to roll an earplug to shape it before insertion. If keeping your hands reasonably clean is a problem, you can use earmuffs and pre-molded earplugs that do not require you to touch the portion that enters the ear.

Q: How long does it take to get used to hearing protection?

A: This varies by individual. However, if a hearing protector type is still uncomfortable after a reasonable amount of time, then try another model.

Q: Can hearing protection interfere with my ability to communicate?

A: Generally speaking, no. Most people can still understand speech. In many cases it is background noise that interferes with the ability to understand speech, not hearing protection. In some cases a person can still hear the conversation, but the speech may seem muffled. If this is a problem, report this to your supervisor, foreman, or safety officer so that it can be determined if a different model of hearing protection is needed. In some cases a communication headset may be required.

Q: Are warning sounds audible when wearing hearing protection?

A: Using hearing protectors will reduce the noise and the warning sound equally. If the warning sound is audible without the hearing protection, it will usually be audible when wearing hearing protection. If a particular hearing protector model causes a problem, a different one may be substituted.

Q: Will hearing protection help if I already have hearing loss?

A: Yes. If you already have hearing loss, it is still important to protect your hearing capacity.

February Revenue, Ridership

continued from page 1

more stringent on-time performance measurement standards of 10 minutes' tolerance that have been in place since April 2005. Sustained strong OTP, coupled with new revenue-managed pricing should result in improved revenue and ridership on *Acela Express*.

Also on the Northeast Corridor and largely affecting slower *Acela* performance, *Regional* trains produced solid ticket revenue results in February bringing in over \$28 million — nearly 12-percent better than last year.

Low rail fares and high gasoline costs boosted ticket revenue and ridership on several Midwest and West Coast short-distance trains.

In California, the *San Joaquins* February ridership of over 89,000 and revenues of over \$1.5 million surpassed last year by more than 26 percent and 27 percent, respectively.

Posting February ticket revenues of close to \$996,000, Michigan's *Wolverine* service showed exceptional increases of more than 28 percent over last year. Ridership

was up strongly as well, at almost 17 percent over the same period.

Through February, the Chicago-to-Milwaukee *Hiawatha* service posted double-digit increases in revenue for 12 consecutive months and equal growth in ridership for 12 of the past 13 months. February revenue of more than \$672,000 was over 20-percent higher than last year, while ridership climbed to 40,500, an 11.5-percent increase over last year.

The *Downeaster* has also performed well through February with double-digit ridership increases for nine

over 37-percent more riders than a year ago while the revenue jumped 42.5 percent over the same time period.

In the Pacific Northwest, service cancellations on the *Cascades* resulting from mudslides, track work and equipment issues contributed to a 13-percent decrease in ridership.

For the most part, long-distance services did quite well despite the

Sunset Limited's truncated service and track work or equipment problems that affected the *Palmetto*, *Crescent* and *Silver Meteor*.

reflected a gain of 9.5 percent over last year.

The long-distance revenue growth includes a 13-percent improvement on the enhanced *Empire Builder* service, with ticket revenues totaling more than \$2 million. *Empire Builder* ridership of almost 31,000 was up by 4 percent over February a year ago.

On the West Coast, *Coast Starlight* ticket revenue soared nearly 92 percent over last year with \$1.3 million, while ridership rose nearly 45 percent thanks to more than 19,400 passengers. The growth is due in part to the addition of a second sleeping car, which was not available in February 2005.

Top Five Routes February 2006 (vs. February 2005)
(Ticket Revenue)

Regionals	\$28,037,705	+12%
Acela Express / Metroliner	\$24,339,587	-5%
Auto Train	\$3,537,967	+2%
Pacific Surfliner	\$2,802,983	+44%
Empire Service	\$2,592,676	+3%

consecutive months and revenue gains for the previous eight months. In February, the *Downeaster* carried

Picture Our Train – 2007 Amtrak Wall Calendar Photo Contest Official Rules and Regulations

Enter the Amtrak® Picture Our Train 2007 Wall Calendar Photo Contest and your photograph could adorn the walls of train lovers everywhere. Enter your photo of an Amtrak train (sporting the current logo) to have your image featured on the Amtrak 2007 wall calendar! The First Prize Winner will receive a \$1,000 Amtrak travel voucher and a photo credit on the calendar. The Second through Fifth Prize Winners will also receive Amtrak travel vouchers. Contest ends June 9, 2006.

SAFETY FIRST!!! As always, Amtrak reminds you to stay out of danger — stay away from tracks and the railroad right-of-way. Do not trespass on railroad property or on private property adjacent to the railroad. Do not climb or approach railroad structures, towers, or wires. Stay in public access areas, and away from railroad structures and moving equipment — in stations, on sidewalks, or in parking lots. All participants expressly release Amtrak from all liability for personal injury and loss or damage to personal property, and expressly assume the risk of harm. Remember, tracks, trestles, yards and equipment are private property — trespassers are subject to arrest and fines.

2007 Amtrak® Wall Calendar Photo Contest Official Rules

Contest: Best original color photograph featuring an Amtrak train with the current Amtrak Logo (as seen above) and livery visible. Photographs of trains displaying Amtrak *Cascades*®, Amtrak California and Amtrak *Pacific Surfliner*® livery are also eligible.

How to Enter: Mail an 8 x 10 color photograph suitable to be enlarged to approximately 25 inches (horizontally) to: 2007 Calendar Contest, Amtrak, 60 Massachusetts Ave, N.E., Suite 4E-315, Washington, D.C., 20002. The photograph must be original and it, or any substantially similar one, may not have been published, nor have won, or be currently entered in any other contest. The entrant must own all rights to the photograph, including copyright. The photograph must be clearly labeled on the back with entrant's name, day and evening phone numbers, address, and e-mail address (if available). The front

of the photograph may not include names, signatures, or other identifying marks. Finalists will be contacted to submit their original transparency, slide, negative or digital image with a resolution of 300 dpi at approximately 25 inches across for use in producing the calendar with the winning photograph. Entries must be postmarked by June 9, 2006, and received by June 16, 2006. This contest ends June 9, 2006, at midnight EDT. No purchase necessary. Amtrak shall not be responsible for late, lost, incomplete, damaged, misdirected, illegible, or postage-due entries.

Eligibility: This contest is open to legal residents of the United States, 18 years of age or older at the time of entry. Amtrak employees and their families are eligible; except Calendar Contest Review Panel Judges, Amtrak Marketing employees (as listed on the company's organizational chart 10.2) and their families, and Amtrak Corporate Communications employees (organizational chart 10.3) and their families are not eligible. Amtrak advertising agencies and their families are not eligible. Amtrak reserves the right to verify eligibility qualifications of any winner.

Conditions of Entry: By entering this contest, entrant agrees that if he or she is selected as a prizewinner, he or she will assign all rights to the photograph, including copyright, to Amtrak by executing an assignment agreement and Amtrak will own all rights to the photograph and may use it for any purpose. If a winning photograph includes a recognizable image of an individual, the winner must have that individual sign an Amtrak publicity release form. By entering this contest, entrant further agrees to these Official Rules.

Responsibility of Entrant and Liability Release:

Entries will not be acknowledged or returned. Entrant agrees to stay away from moving trains, tracks, structures, and railroad property. Entrant agrees to release Amtrak from all liability for injury, damage to or loss of personal property, and all other losses, and expressly agrees to bear all responsibility for and to assume the risk of

all harm.

Prize: The First Prize is a \$1,000 travel voucher and the display of the winning photograph on the 2007 Amtrak Wall Calendar with photo credit. The Second Prize is a \$500 travel voucher, the Third Prize is a \$250 travel voucher, the Fourth Prize is a \$150 travel voucher, and the Fifth Prize is a \$100 travel voucher. Travel vouchers shall be valid for one year from date of issuance and all travel is subject to availability and to Amtrak's contract of carriage. All taxes are the sole responsibility of the winners and finalists. No prize substitution, cash substitution, or assignment or transfer of prizes is permitted, except by Amtrak for reason of unavailability in which a prize of equal or greater value will be awarded. All prizes will be awarded.

Winner Selection: The finalists will be determined on or about June 19, 2006 and prizewinners will be determined on or about July 3, 2006. All entries will be reviewed by the Amtrak 2007 Wall Calendar Review Panel, and finalists will be reviewed by the Judges' Panel. The judges' decisions are final. The prizewinners will be notified by telephone, mail and email, if provided. All finalists will be required to sign an affidavit of eligibility, publicity release and copyright assignment, and return it properly executed within 7 days of attempted notification as a condition of awarding the prize. If prize notification is returned as undeliverable or the finalist fails to return the affidavit, release and license, as applicable, the winner will be disqualified and an alternate finalist will be selected. If, in Amtrak's opinion, there is any suspected or actual evidence of tampering with or alteration of any portion of the contest, Amtrak reserves the right to terminate the contest.

Winners List: For the names of the winners, after July 10, 2006, send a self-addressed stamped envelope to: 2007 Calendar Contest Winner List, Amtrak, 60 Massachusetts Ave, N.E., Suite 4E-315, Washington, D.C., 20002. Requests received more than sixty (60) days after the completion of the entry period will not be honored. Vermont residents need not send stamped envelope.

General: This contest is subject to all federal, state, and local laws. Void where prohibited by law. U.S. law governs this contest.

Enter the "Picture Our Train" 2007 Wall Calendar Photo Contest by submitting an original color photo of an Amtrak® train (sporting current logo and livery) and your image could appear on next year's wall calendar with photo credit. The First Prize winner will also receive an Amtrak travel voucher. Starting April 3, go to www.amtrak.com/photoscontest for more information and complete contest rules.

FRONT LINE FOCUS

Dear Amtrak:

I am writing this letter as a happy frequent passenger on the North-east *Acela Express* train.

... Through my Amtrak Rewards program, I was ... upgraded to First class where I met one of your employees, Emma Carr. She made my trip so comfortable and pleasant that now I only go by train and I choose to ride First Class.

I am the vice president of a large ... company ... I am responsible to assure our customers are happy and continue to do business with us. I wish all my staff had the qualities I have seen in Ms. Carr. She has a friendly professional manner, quickly establishes rapport, greets the passengers by name and effectively handles very difficult situations and passengers.

Good customer service is what makes the difference when the customer has choices. She makes me look forward to the 3.5 hour trip I take each way and I notice the difference when she is not there. It is because of her that I continue to choose the *Acela Express* First Class Service.

Amtrak should be very proud to have an employee representative like Ms. Carr. I encourage you to hire and retrain staff who will bring the kind of service she provides to train travel. The train ... becomes a great trip when you are treated as a special passenger by Ms. Carr.

Sincerely,

Frances M.

West Chester, Pa.

Dear Amtrak:

I am a frequent Amtrak traveler, and I am writing to let you know what a terrific employee you have in Kwame Howard.

I have had the pleasure of traveling on trains with him as my dining car waiter, and I cannot say enough good things about him. He is efficient, has great humor, intelligence and is in every way a top notch employee...

I believe the two trips I took in which Kwame was on board were both *Lake Shore Limited* ...

Alise M.

Hearing Health

continued from page 8

nity to take additional steps, such as providing earplugs with a higher protection factor.

Besides affecting hearing, high levels of noise are annoying and inconvenient when trying to communicate. Two indications that you may be in a high-noise area and may need hearing protection are:

- To carry on a conversation with someone standing arm’s length away, do you have to raise your voice significantly to be heard above background noise?
- When you leave a noisy environment do your ears feel plugged or is there a minor ringing or whooshing sound that goes away after an hour or two?

If you answer yes to either of these questions, or you think you need

hearing protection, please discuss your concern with your foreman, supervisor, or local safety officer.

Activities away from work can also affect your hearing. Some sources of high off-the-job noise exposure that could contribute to hearing loss include high-volume iPods or Walkmans, high-volume amplified music, power tools, chain saws, lawn mowers, vacuum cleaners, motorcycles, trucks, or outboard engines, attendance at concerts and sporting events such as car racing or sport shooting.

For questions concerning Amtrak’s Occupational Noise Exposure and Hearing Conservation Program talk to your Safety Officer or call the Industrial Hygiene Office at ATS 777-3126 or 202-906-3126.

Key Indicators Point to Progress

Strategic Reform Initiatives Contribute to Improvements

Amtrak is on the right track, acting President and CEO David Hughes said in remarks to the National Association of Railroad Passengers board of directors during its annual meeting in April.

Hughes reported on the progress achieved by the company in key areas as a result of measures put in place over the last couple of years. Following its brush with bankruptcy in 2002, Hughes said that state-of-good-repair goals were aimed at stabilizing the company through 2003 and 2004. The financial reporting was more tightly controlled according to Generally Accepted Accounting Principles and zero-based budgeting, and the focus was on managing day-to-day operations and investment in equipment and infrastructure.

As the state-of-good-repair goals

began to bear fruit, attention was turned in 2005 to the Strategic Reform Initiatives, which seek to expand passenger rail corridors, return the Northeast Corridor to a state of good repair, establish performance thresholds for long-distance trains and foster competition and commercial participation in an expanded passenger rail service.

Hughes noted that in more specific terms, the initiatives are designed to improve all segments of the company, ranging from the call centers to mechanical operations to labor agreements. So far, the initiatives have resulted in better on-time performance on the Northeast Corridor, tighter fiscal responsibility, higher revenues, more cost-efficient changes to food and beverage service, and a new

fleet planning process that is under development.

Examining key indicators of the company's progress, Hughes outlined a remarkable list of achievements to date, starting with safety. The first six months of the fiscal year have seen a 26 percent drop in employee FRA-reportable injuries over the same period in FY '04.

Annual ridership has shown steady growth with 22 million passengers in FY '02 to 24 million in FY '05 (excluding the Clocker service). By implementing certain pricing actions, the company has improved its revenue per passenger mile, with a 10 percent improvement over the same period last year. Ticket revenue through March is \$8 million better than budget. Barring any major setbacks, ticket

revenue this year is expected to hit an all-time high of \$1.3 billion, with NEC ticket revenues projected at \$717 million.

Hughes made a point to add that the company is reaching these benchmarks cost-effectively. A leaner workforce, from nearly 25,000 to under 19,000 today, has managed to keep total operating expenses and depreciation flat for the past five years, including paying down \$400 million in debt since FY '02 and not incurring any new debt since that year.

Amtrak's need for federal support for operations actually decreased from FY '02 to FY '06. Conversely, financial contributions from states have grown in the form of operating and capital support has shot up 82 percent from FY '00 to '05.

continued on page 12

Ticket Revenues Up in First Six Months of the Year

March Results Hampered by Easter in April

Midway through FY '06, Amtrak has recorded \$642 million in national ticket revenue, an increase of 6 percent against the same period last year, based largely on the strength of the October 2005 fare increases. Meanwhile, total passenger ridership of 11.6 million was even with last year's performance to date.

State-supported and short-distance trains boosted the overall numbers in the first half of the year, carrying 5 percent more passengers and bringing in ticket revenues that were 11 percent higher than the first six months of last year. All but one of those services (the *Pennsylvanian*) saw an increase in ticket revenue. Similarly, all of the long-distance trains experienced revenue growth, but for those affected by the aftermath of the hurricanes in the South: the *City of New Orleans*, *Sunset Limited* and *Crescent*.

As anticipated, March ridership was down from a year ago due in part to the busy Easter holiday taking place in April this

year, versus in March last year. Despite the absence of holiday travelers, ridership, which dipped more than 3 percent below last year, was ahead of budget by more than 2 percent. This means that while the company expected lower numbers due to the holiday shift, ridership was actually better than expected.

On the Northeast Corridor spine, March ridership of more than 800,000 travelers fell almost 7 percent behind last year, due to the holiday shift, frequency reductions on the north end between New York and Boston, and higher fares, particularly for multi-ride tickets. Ticket revenues rose almost 3 percent, despite an *Acela/Metroliner* revenue drop of 4.5 percent. On the south end between New York and Washington, March ridership was 5 percent under last year, while north end ridership between New York and Boston dropped 23 percent. In addition to the factors described above, *Acela* north end ridership and revenue were affected by low-cost air competition.

continued on page 3

Capitol Corridor Service Reaches Ridership Milestone

Amtrak officials join California's Capitol Corridor Joint Powers Authority (CCJPA) in recognizing Kirk Swenson, Capitol Corridor's 10 millionth passenger to ride the service. Halfway through the fiscal year, the Capitol Corridor service collected more than \$7 million, up more than 4 percent compared to the same period last year.

Pictured at the March event are (L. to R.): Swenson's wife, Ramona, and their two young sons; Brody Heilman, assistant superintendent Road Operations; Kirk Swenson, Patsy Hall, assistant superintendent Passenger Services; Forrest Williams, vice-chair of the Capitol Corridor Board; Eugene K. Skoropowski managing director CCJPA; and Steve Shelton, district superintendent, Bay District.

TRAIN OF THOUGHT

As this month marks the 35th anniversary of Amtrak service, I wanted to share with you some thoughts about how we’re doing — there’s much to take pride in right now.

The work that we have put into bettering our business, from improving our financial performance, to addressing operational issues over which we have control, to striving toward a state of good repair the last several years, is making a difference.

We’re operating the railroad more safely, thanks to the focus that’s being demonstrated by all employees. Our FRA index for reportable injuries for the first six months of FY ’06 is at 2.9, or 26 percent lower than two years ago.

The financial indicators are all pointing in the right direction. We’re on target to earn \$1.3 billion in ticket revenue — the most in Amtrak’s history. Our per-passenger-mile yield is up 10 percent over last year. We’ve kept our reliance on federal operating assistance in check the past four years, and we actually reduced it nearly \$20 million from FY ’02 to FY ’05. We’ve also reduced our debt by \$400 million since FY ’02 — with no new borrowing.

Our service is more popular than ever, with record ridership expected to exceed last year’s totals. States’ support of passenger rail service is growing as well. State contributions have grown 82 percent since FY ’00,

to more than \$260 million annually for operations and capital projects.

Our performance indicators are headed in the right direction, too. On-time performance in the Northeast Corridor, which carries about two-thirds of our ridership, has been above 90 percent for the past two months, on a steady climb that began earlier this year.

However, on the long-distance front the OTP news isn’t good. On-time performance over the host railroads has deteriorated unacceptably and we are going to work hard to turn that around in the coming months. Most of the problem lies with the freights; it is not, for example, due to equipment issues.

In fact, our equipment is in better shape than in recent memory, thanks to the focus and hard work of our Mechanical employees. The number of equipment overhauls and remanufactures has grown nearly five-fold recently, with 86 done in FY ’03 to 416 we plan to complete just this fiscal year. Consider this: In FY ’05 we completed 113 Amfleet remanufactures and heavy overhauls; much better than the 20 we did in FY ’03.

The minutes of delay on the Northeast corridor are the lowest they’ve been in over 2 years and that progress is mostly attributable to the capital we’ve invested in the infrastructure, and the productivity of our Engineering gangs. Delays due to infrastructure problems have dropped 25 percent from FY ’03 to what we expect this year. And the

David J. Hughes

same goes for the C & S crews — the average minutes of delay due to communications and signal failures and malfunctions are reduced by 55 percent since FY ’03. This work has resulted in a more reliable railroad, and that in turn gives us a railroad that costs less to maintain.

I’m a big believer in meaningful metrics — tangible measurable goals — that serve as the measures of health of a company and are used to not only sustain good health but to improve its vitality. Without your commitment, we would not have realized these numbers. It proves the point that every employee plays a role in the success of the business. I want to thank those of you who have worked hard to make it happen.

Without metrics, you don’t know what progress you’ve made and you don’t have a plan to follow. While we still have a long way to go, we’re on the right track. Please continue to keep up the good work and do it safely.

emergency preparedness and central reporting activities.

While at Georgia Pacific Corporation, Williams developed and promoted policies and procedures for continuous safety improvement with participation in the OSHA Voluntary Protection Program. He has also worked for the Texaco and Mobil Oil corporations. He has a Master’s Degree in Environmental Health Engineering/Industrial Hygiene from the Johns Hopkins Bloomberg School of Public Health, and is a Certified Industrial Hygienist by the American Board of Industrial Hygiene.

taking this improvement even further so that we are on par with other Class I railroads,” said Safety Superintendent Chris Williams.

Williams joined the Environmental, Health and Safety department last month as safety superintendent, bringing with him 32 years of experience in safety program management, emergency response, accident and loss prevention and field industrial hygiene/occupational health services.

Based in Washington, D.C., Williams is responsible for directing field safety, safety and health auditing, safety policies and procedures, industrial hygiene,

Correction:

The “FY ’07 Budget Request Submitted to Congress” story that appeared in the April issue incorrectly reported FY ’06 federal operating support at \$540 million. While that number represents Amtrak’s FY ’06 request, the allocation for operations this year is \$490 million.

Mid-Year Safety Record Shows Outstanding Results

Through March, the FY ’06 year-to-date number of FRA-reportable injuries was 274, compared to the same period a year ago, when the number of injuries stood at 330.

The FY ’06 figure represents a year-to-date safety ratio of 2.9, much lower than the safety ratio of 3.4 for the same period last year. The company’s goal is to have a safety ratio no higher than 3.0. The safety ratio represents the number of injuries per 200,000 hours worked.

“So far this year, the FRA-reportable injury rate is the best the company has had in recent history, and I look forward to

Ticket Revenues Up in First Six Months of the Year

continued from page 1

Thanks to double-digit ticket revenue increases south of New York, March was a strong month for the *Regionals*, which rose more than 10 percent over last March. However, ridership of more than 571,000 passengers was nearly 5 percent behind last year.

Among the off-corridor short-distance trains, improvements were strongest compared to last March on the *Downeaster*, with ticket revenues soaring almost 37 percent over last year and ridership rising more than 29 percent. The *Keystone* service was also a top performer, carrying almost 74,000 riders in March — an increase of more than 11 percent — and bringing in 14 percent more in ticket revenues over last March.

Several short-distance trains in the Midwest and on the West Coast continued to perform well compared to last year. The state-

supported *Wolverine* service boasted more than \$1 million in ticket revenue, a 12.5 percent increase in March over last year — while carrying 4 percent more riders than a year ago. The Chicago-to-St. Louis corridor was also ahead of last year, collecting more than \$511,000 in ticket revenue, up 10.5 percent from last March with ridership up 4.5 percent. The *Hiawathas* also topped last March's ticket revenue by more than 11 percent and ridership by almost 3 percent.

On the West Coast, *Pacific Surfliner* ticket revenue of more than \$3 million shot more than 9

percent higher than last year, while ridership was just above last year's number. The *San Joaquins* collected close to \$1.8 million in

even with last March. While long-distance trains overall showed a drop in ridership and revenues due in part to the Easter holiday shift, there were some highlights. For instance, the *Lake Shore Limited* showed strong ridership gains in March, carrying over 16 percent more passen-

gers than last year and earning more than \$1.5 million in ticket revenues, which was 14 percent higher than a year ago. The upgraded *Empire Builder* service collected more than \$3 million in ticket revenues, up almost 11 percent from last year with ridership up almost 5 percent.

Ridership and Ticket Revenue		
Year-to-Date Through March	FY '06 Y-T-D	FY '05 Y-T-D
Ridership	11,559,330	11,539,792
Ticket Revenue	\$641,875,016	\$603,219,780
Month of March	FY '06	FY '05
Ridership	2,033,876	2,103,505
Ticket Revenue	\$111,511,132	\$109,542,276

ticket revenues for the month, an increase of almost 6 percent from last year.

In the Pacific Northwest, March ticket revenues of almost \$1.2 million on the *Cascades* were more than 7 percent better than last year, although ridership was about

Auto Carriers Return the Investment

Savings of more than a quarter of a million dollars a year in damage claims is just one way that Amtrak is yielding big benefits from last summer's introduction of new bi-level auto carriers on the *Auto Train*. Lower fuel costs, reduced maintenance costs and an easier and quicker vehicle loading process also distinguish the new auto racks.

The *Auto Train* operates daily between Lorton, Va., and Sanford, Fla., and utilizes special auto carriers that enable passengers to take their vehicles aboard the train.

After 30-40 years of service, the train's 64 antiquated auto carriers that ranged in size were replaced with 80 new, one-size carriers. The standardized sizing means that the equipment accommodates a wider variety of vehicles. Consequently, the loading and unloading process is simpler and faster because vehicles no longer need to wait to be loaded on carriers that can accommodate only a certain size car.

Made of aluminum, the 90-foot-long carriers also weigh considerably less than the old equipment. Larry Beddis, senior director Procurement campaigned for the use of aluminum equipment, which was previously viewed as an unacceptable option because of fire safety concerns. However, Amtrak consulted a metallurgist who

provided a written opinion that the concern was unfounded. As a result of the lighter weight, aluminum equipment yields significant fuel savings per month, translating to a monthly cost savings.

In addition, the lighter weight of the auto carriers results in less wear and tear on the equipment. A tear-down and inspection of one of the auto carriers after approximately seven months of operation and over 192,000 miles of service revealed minimum wear to the trucks and wheels, because the lighter-weight of the new auto carriers makes them less vulnerable to stress.

While the new carriers come with a warranty contract that covers the cost of maintenance, the old equipment was plagued by frequent maintenance needs that cost the company approximately \$33,000 per month. In addition to the maintenance costs, spare equipment and parts, such as additional truck assemblies and components, were included in the overall purchase price.

"These new carriers have been a real help in keeping costs down for us," said Southern Division Master Mechanic Tommy Farr. "And the time saved not having to perform defect maintenance on these new car carriers is being put to good use and helping us stay ahead in other areas."

The reduced weight also has a direct impact on the ride quality of the unit. Less stress to the suspension system, combined with a new wheel chocking system, results in an environment less jarring to passengers' automobiles. This and better protection inside the equipment, results in less damage to the automobiles and fewer claims filed by passengers. Claims for the first six months of the fiscal year was \$136,819 less than budgeted — 64 percent better than expected.

"The success of this procurement is the result of a considerable amount of coordination and effort among a number of departments and the cooperation of Johnstown America Corporation," stated Dan Boogay, senior contract manager responsible for the procurement and contract administration of the auto carrier project.

The Mechanical department's Engineering group played a significant role in redesigning a standard freight car auto carrier and retro-

A vehicle is loaded on one of Auto Train's new auto carriers at the Lorton, Va., terminal. Use of the new, lighter-weight carriers, in service since last summer, has resulted in significant savings for the company.

fitting it to meet the strict compliance of passenger car regulatory requirements.

Amtrak acquired the car carriers from Johnstown America Corporation in February 2005, and delivery was completed last June.

Dan Boogay contributed to this story.

Chicago Centralizes Train Movement Operations

With just a few clicks of a mouse, train directors at the Chicago Control Center (CHCC) can move a train through 13 switches and four signals — a task that previously took 17 separate operations because the train director had to align each switch and signal and then check to make sure the path was correct.

This improvement is a result of a new Digital Traffic Control™ system manufactured by Digital Concepts, Inc. (DigiCon) and recently installed at the Chicago Control Center to more efficiently control the movement of trains.

The installation of the system is a key component of a long-term project completed in February to consolidate all Central Division train movement operation to the Chicago Control Center, established in 2004 and located within the 14th Street Mechanical and Transportation facility at the Chicago Yards.

As a result, the Chicago Control Center is responsible for train movements on all Amtrak-owned track outside of the Northeast Corridor, including approximately 115 miles of track between Porter, Ind., and Kalamazoo, Mich., almost 14 miles of track extending from the north and south ends of Chicago Union Station, and the tracks at New Orleans Union Passenger Terminal.

The consolidation process began eight years ago with the closing of Chicago's Lumber and Harrison Street Towers, followed by the 2003 closing of the New Orleans Tower. The process continued in 2004 with the closing of the Trail Creek Drawbridge Tower in Michigan City, Ind., and the 2005 shutting of Chicago's 21st Street Tower.

The DigiCon system, installed in conjunction with the transfer of operations to 14th Street, automatically sets all the switches and signals in the proper positions along the route and eliminates the potential for human error associated with manipulating each switch and signal manually.

"The digital traffic control system is much better than the previous one because it allows me to preview the route that I lined up

and make sure that it is acceptable before executing it," explained Train Director Cesaria Welch.

Additionally, the DigiCon system has complete archive and playback capability that allows past events to be reviewed through the use of two data servers that support the system's operation and record all

At the Chicago Control Center, Train Directors Tim Armon (left) and Edward Stolzenbach control the movement of trains on the south end of Chicago Union Station. Working as a team, Armon operates the DigiCon system while Stolzenbach fields all communication.

activity on the system. "If one server fails, the other immediately picks up with no loss of functionality," explained Trainmaster Harold Krewer.

The system keeps a record of all trains that enter Amtrak property and the time at which they pass every checkpoint along the route. "We can fast-forward the video, play it slow, freeze a frame or print out the screen display. It allows us

the Engineering department's reconstruction of the busy Lake Street Interlocking, a mile-long stretch of track at the Chicago Terminal that handles approximately 350 train movements on a typical weekday. The project, which is in its final stages, involves completely rebuilding the track,

subgrade (the track foundation), drainage system and the power and signal systems.

To help ensure the seamless transition from the previous system to DigiCon, the Engineering team installed new signals, switches and programmable processors called Vital Harmon Logic Controllers at the Lake Street Interlocking.

"These processors communicate with the DigiCon system and control the operation of the switches and signals," explained Communications and Signal Engineer Troy Mason.

Communications lines that were used with the previous system were already in place, so the only item needed to connect the new traffic control system with the New

Orleans terminal and the Michigan Line was new computers.

Remote cameras that display nine images of the South Branch Bridge in Chicago and the Trail Creek Bridge in Michigan City were also set up at the center to allow train directors to open and close these movable bridges for marine traffic.

"While we have finally accomplished our goal to centralize, it doesn't mean the job's done. We intend to continually improve the capabilities of our operation and the skill of our train directors," explained General Superintendent Don Saunders.

As an example, the DigiCon system is currently being upgraded to include a train schedule database that will enable train directors to identify late trains at a glance. The system is also being enhanced to automatically present the train director with a route to the train's scheduled arrival track.

To support the expanded operation, the Chicago Control Center is open 24

hours a day, seven days a week. A digital communication system equipped with a monitor and stand-up desk microphone replaced handheld radios and manages the numerous radio base stations and intercom lines the train directors use to communicate with the locomotive engineers and freight railroads, among others.

To insure uninterrupted operations, the office is equipped with a backup generator and heating and air conditioning systems that are separate from the rest of the building. Each computer terminal is supported by an uninterrupted power supply to protect against a power outage. And, if a fire or other emergency should require the building to be

evacuated, there is a complete alternate office with duplicate computer equipment located in another area within the Chicago Terminal.

"We intend to continually improve the capabilities of our operation and the skill of our train directors."

Don Saunders
General Superintendent

Adjustments Fine-Tune Dining Service

With the last of the long-distance trains starting the new dining service model this month, Amtrak Ink sat down with Senior Director, Customer Service Field Operations Brian Rosenwald to learn more about how it's going so far and what adjustments have been made since it was first put into service.

AI: By now, most employees know what simplified dining service is, but can you tell us what its goal is?

Rosenwald: Simplified dining is one part of the company's strategy to reduce our food and beverage costs. We've also renegotiated our contract with Gate Gourmet and are examining other ways to improve how we manage that aspect of the business.

The new dining car service model for most long-distance trains (except for the *Empire Builder* and *Auto Train*) modifies the way we prepare food and serve our customers. The meals require minimal on-board cooking; we're seating passengers according to reserved, 15-minute increments; and we've eliminated all dishwashing and most scullery work. As a result, we have a base staffing level of crews of three rather than five.

As a result of the change, chefs are not overwhelmed because orders are coming to the kitchen on a more manageable basis and the wait staff isn't stressed because they're seating no more than eight passengers at a time.

Contrary to what some may say, it's not a change of menu — the vast majority of the items are the same ones we've been serving for years. However, we have taken off a couple of items that are time-consuming to prepare, like the steak entrée.

Ultimately, the goal is to reduce costs while improving customer service and increasing on-board sales. By keeping the dining car open for longer periods of time, we aim to attract more coach passengers and therefore boost revenues. Congress has told us that we need to cut our costs or risk losing food and beverage and sleeping car service altogether.

AI: What is the status of the rollout of the new long-distance dining car service model?

Rosenwald: By the end of this month, all long-distance dining car service — but for the *Builder* and *Auto Train* — will have simplified dining in place. We started in February with four trains and we've learned a lot since then.

AI: So does that mean that you've changed some things since you first implemented this new service?

Rosenwald: Absolutely. We've relied on our crews and our customers for feedback, and the input we've gotten from them has made a big difference — after all, they know what works best from their point of view. Plus, we have specially trained managers that are working with the crews in the first few weeks of implementation and they're providing a lot of input as well.

We've made a number of changes — probably about 40-some modifications — to fine-tune what we started with. We first tested the casserole-style high-heat pre-plates but they were not well received, so we switched to disposable dinnerware that looks like china. Crews have told us that they like the disposable dinnerware because it's not as heavy as the china and easier to handle with a full plate of food. It also looks much better than the high-heat dish.

I'll give you a couple of other examples — because we've cut out the griddle work, the omelets were initially not made fresh. Based on feedback from passengers and chefs, it was not a good change. It just didn't look as appetizing as a freshly made omelet. As a result, several chefs told us that making omelets from fresh eggs on the griddle would not add to the time spent on the order. Food Specialists Allen Karz and Christian Natoli, supported by the other chefs on the *Sunset Limited*, convinced our team to add it back and so we made the change.

On the *Capitol Limited*, Service Attendant Nancy Bonnanno and Lead Service Attendant Suzanne Russell came up with ways to be more efficient by recommending that we serve the rolls — they're heated and in a basket — just before the customers are seated. So rather than seating customers and then making another trip to get them, the rolls are served up front. Suzanne and Nancy found that doing this saved them time and it's a nice customer service touch.

Here's one more: Taking reservations for breakfast from sleeping car passengers as well as coach passengers wasn't working very smoothly, chiefly because people would change their minds and want to sleep in, or sometimes it was difficult to track down people as they boarded overnight. We're now testing how breakfast works without reservations, but still seating people with the staggered seating approach, and we'll see how that goes.

AI: What else have you learned from implementing this dining service model?

Rosenwald: We've learned that most employees have come to understand

Amtrak.com Innovation Leads Travel Industry

Leading the transportation industry with a first-of-its-kind, Amtrak now offers its customers an opportunity to make and change a reservation using a BlackBerry®, Treo™, Pocket PC and most cell phones — one of two customer service improvements made recently through Amtrak.com.

Launched mid-May, Amtrak Mobile puts Amtrak.com in the hands of PDA users, providing them with instant, up-to-date rail travel information and wireless access to key functions currently used online, without having to call anyone or needing to get to a desktop computer.

A mouse-less navigation feature provides PDA users access to the same information and services that are available on the Web site.

“We are continually identifying ways to make Amtrak an easy

option for travelers and extending our reach to more customers. Amtrak Mobile does both, while putting us ahead of the curve,” noted Barbara Richardson, vice president of Marketing and Sales. Amtrak is the first in the travel industry to offer this type of booking capability.

“Users don't need to be registered for this service — they simply access the Web from their PDA the same way they normally do, and go to the Amtrak.com site,” said Craig White, E-Commerce principal marketing officer.

Another innovation, the Route Atlas, is a function added to Amtrak.com in mid-April that allows users to explore train routes and access more detailed travel-planning information. The new function serves to not only inform passengers of the route options between two points, but to also

Custom Route tab and learn about optional train routes offered between cities. When selecting a station listing, viewers see a pop-up page showing information, such as the address and operating hours.

inform those less familiar with the network about destinations for future travel.

By clicking the icon on the home page, customers are taken to the system route map where they may search for information on routes or stations alphabetically, by state or by region. Or, they may select the

“Amtrak prides itself on having an award-winning, customer-friendly Web site,” said Kathleen Gordon, senior director of E-commerce. “Illustrating how our routes are structured takes the mystery out of planning long-distance vacation travel for our customers.”

Gearing Up for Summer Travel Season

As the summer season approaches, departments throughout the railroad are implementing plans developed months ago in anticipation of the busy travel period. The increase in ridership, the effects of warmer weather and the rise in the number of track work projects will have a major impact on railroad operations over the next few months.

Before passengers walk through the station and step on board the train, often their first contact with Amtrak is through the Western and the Mid-Atlantic Reservation Sales Call Centers located in Riverside, Calif., and Philadelphia. Although the majority of bookings are made through automated channels such as Amtrak.com, Julie (Amtrak's automated voice response system), and Quik-Trak machines, reservation sales agents handle approximately 45,000 calls a day during the summer months, compared with about 35,000 calls a day during off-peak seasons.

To prepare for the increase in call volume and to minimize the amount of time that callers are on hold, forecasting is done nearly a year in advance, and then periodically throughout the year, to determine how many employees are needed to manage the phone lines. "Our goal is to respond to every call within 51 seconds and during the summer we make staffing adjustments to help accomplish this. For example, out of the pool of 200 part-time employees, we are offering between 50 and 70 agents an opportunity to convert to full-time positions from the middle of June through mid-August," states Ed Madden, manager of Manpower, Planning and Controls department.

When speaking with customers, reservation agents advise passengers who aren't ready to book a summer trip to call back as soon as they are prepared to do so, because space sells out quickly. Agents also recommend that passengers allow ample time at the station, particularly if they need to pick up their ticket before boarding. At major stations, including New York, Los Angeles and Chicago, passengers should arrive at least an hour before their train's scheduled departure.

Station Operations Heat Up

When passengers arrive at the stations, every effort is made to move them through the ticketing process as swiftly as possible. And,

At Los Angeles Union Station, Baggage/Express Handlers Ellen Barnett (left) and Joe Schamet remove a surfboard and other baggage from a Pacific Surfliner train.

because the ticket office lines are longer during this time of the year, passengers are directed to use the Quik-Trak machines, where they are available. "We see a sharp increase in ticket revenue during the summer months — approximately 62 percent of the total ticket revenue generated at Penn Station comes from Quik-Trak," explains Assistant Superintendent Stations Mike Gallagher.

Efforts are made at other stations as well to reduce the amount of time passengers wait in ticket lines. "To move passengers through the lines as quickly as possible and to help prevent passengers running late from missing their trains, we often offer an express window for credit cards, checked-baggage-only windows and, when necessary, we dedicate certain ticket windows to passengers boarding trains that are departing soon," explains Central Division Passenger Services Superintendent Jeff Snowden about Chicago Union Station's ticket office.

At this busy time of the year, baggage is also an area of special focus. "Because the amount of baggage increases dramatically, we get heavily into briefings on proper baggage handling to help eliminate the potential for injuries," describes Southwest Division Superintendent of Passenger Services Lynn Berberian. During briefings, managers discuss with employees proper lifting techniques and emphasize the importance of enforcing the checked and carry-on baggage policies. "We make sure extra boxes are available in case passengers have to re-pack their belongings due to their luggage exceeding the 50 pound limit. We also order additional bike boxes to have on hand because biking is so popular in California during the summer months," adds Berberian.

At New York Penn Station, which sees over a half-a-million travelers and commuters most days, every effort is made to help ensure that all the station equipment, including its 25 elevators and 22 escalators are in good working condition by the start of the summer. "We also scheduled station upgrade projects so they're completed in time for our summer travelers," notes

Gallagher. These improvements include installing new public address systems, purchasing new wheelchairs and hand trucks and repairing the yellow ADA-required tactile edge that lines the platforms.

More Passengers, More Equipment

Long before the train leaves the station, decisions are made about how many on-board employees are needed during this heavily traveled time. Crew Management Services works closely with System Operations, Customer Services and Crew Base supervisors, to help ensure the trains are sufficiently staffed.

A major consideration in determining how many employees are needed is the number of cars used on each train. To ascertain the equipment needs for each route, System Operations examines several important factors. "It's a delicate balancing act where we must make decisions by carefully analyzing ridership, equipment availability and potential revenue," explained Senior Director, System Operations Chris Jagodzinski.

First, historical data is reviewed to determine when ridership is expected to be high enough to warrant additional equipment. But ridership data alone is not enough to justify adding cars to a route; revenue must also be considered. Therefore, System Operations works closely with Sales and Marketing to compare routes to figure out which will generate the most revenue from adding a car.

Additionally, System Operations must work with the Mechanical department to determine if the needed equipment will be available. "To help make this decision we must take into considerations the number of trainsets used on each route. For instance, if we plan to add a car to

the *Empire Builder*, which utilizes five train sets, we'll need five extra cars. So, if we don't have that many available, we may instead choose to add a car to the *Capitol Limited*, which uses only three trainsets," continued Jagodzinski.

Once the equipment counts are established, Crew Management Services can begin staffing the trains. And when ridership is at its peak, particularly among long-distance trains during the summer, adding another sleeping car to a train means adding another attendant to staff that car as well.

Train and Engine crews may also get an additional member, based on equipment levels. "For instance, when a corridor train has more than six revenue cars, we may add another assistant conductor," explained Senior Director Crew Management Thom Chawluk, Sr.

The Customer Service team works with Crew Management to set the required staffing level in the dining car based on the number of meals expected to be served. When the anticipated meal count exceeds 96, an additional service attendant is usually added. Coach car attendant staffing is also predetermined, but in a different way — if a train operates for more than four hours during daylight with more than 150 passengers, additional coach attendants may be added.

Mechanical Team Provides a Cool Ride

Temperature control during the heat of the summer season is key to providing passengers with a comfortable and relaxing ride. When cars come to the Beech Grove Maintenance Facility in Indiana for overhauls, remanufactures, or wreck repairs, mechanics perform season-specific work to ready the equipment for the summer. Air conditioning units are rebuilt and tested for hours in a heated room that simulates conditions in a passenger car. After air leaks in the car are sealed to ensure that the cool air stays inside the car, a test is performed to ensure that the interior temperature is maintained and the thermostats are calibrated.

"Sometimes we have to replace individual room thermostats or equalize the air flow to eliminate hot spots. In some cases we may need to lower the thermostat temperatures to overcome the heat load. For example, the Sightseer Lounge car, where glass windows encase much of the car, creates a much greater heat load because of the constant sun exposure," explained Beech Grove

Assistant Superintendent Roger Rigen. Additionally, the duct work throughout the cars is thoroughly cleaned and all filters are replaced. Mechanics must also ensure the doors work properly and the seals are in place to prevent air and humidity from entering the car.

“The refrigeration units work harder in the summer than other times of the year, so we also test the refrigeration using electronic thermometers, record the stats and download the data on a computer that enables us to see when the freezers go into a defrost cycle and how long it takes to recover the required temperatures,” added Rigen.

The Heat Effect

Amtrak's Engineering department also plays an important role in providing safe working conditions for employees, a comfortable ride for passengers and a safe, reliable infrastructure for train operations. And during the summer months, the hot temperatures add an extra component to consider when accomplishing these goals.

In preparation for the summer, Engineering conducts “spring training” with employees to review practices and prepare for the work ahead. “On hot summer days, working outdoors on the railroad can be tough and the safety of our employees is a key concern,” said Engineering Production Superintendent Thomas Denio.

When the temperatures rise, employees working under hot weather conditions are encouraged to drink plenty of water. “During briefings, we talk to employees about recognizing the signs of heat exhaustion and fatigue, especially when we have several days in a row when temperatures rise above 90 degrees.”

The heat affects not only the track, but also the catenary, signals and structures. In the Northeast, the overhead catenary wires are affected by the heat and may sag due to expansion of the wire. While the New England Division installed new catenary wires that don't sag because they're under constant tension, the heat can cause distress to other components of the system. To minimize the malfunction of the catenary and its components, the system is regularly monitored during hot weather conditions.

When it is hot outside, the continuous welded rail can reach a temperature of up to 130 degrees, expanding the rail and generating high-compressive forces that must be restrained by ties, fasteners and ballast to prevent the track from buckling. These stresses make it critically important that the rail is adjusted properly to withstand the summer heat.

Under extreme temperatures above 95 degrees, speed restrictions are placed on the track and special inspections are made to monitor the conditions. “Train operations can be severely affected by heat restrictions, therefore, Engineering works closely with Transportation to limit these restrictions whenever possible,” explained Deputy Chief Engineer Track, Walter Heide.

Working on the Railroad

To the railroad industry, warmer weather also means better working conditions for the freight railroads' Engineering forces. And, when summer arrives, their heavy track work season, which began in March, is well underway. Work being performed from coast to coast has a

Red Cap Neil McPhatter uses one of New York Penn Station's new hand trucks to carry luggage to the train.

In Missouri, a project being performed by Union Pacific Railroad has a major impact on service between St. Louis and Kansas City on the *Ann Rutledge*, *St. Louis Mule* and the *Kansas City Mule* through Oct. 1. During this period, UP's tie gangs are installing about 1,200 ties per work day. Consequently, Amtrak trains are required to operate through the work zones at slower speeds and delays may result from congestion on the tracks. Also while this work is underway, motorcoach service may be substituted for train service.

Initially, UP notified Amtrak that it would not permit any passenger service over this corridor for an extended period of time while it was conducting track maintenance. After Amtrak's Law department intervened, a neutral arbitration panel determined that the UP could not bar Amtrak from operating if it planned on running its own freight trains over the railroad during the work period. The Law department's success before the panel paved the way to an agreement between Amtrak and the UP allowing continued service during the track work.

On the West Coast, service on the southbound *Coast Starlight* is affected through the end of the year due to UP track work along the route and a Metrolink tunnel upgrade project near Chatsworth, Calif. The combined effect of these two projects results in potentially significant delays along the route and motorcoach service being provided between Simi Valley and Santa Barbara.

Passengers traveling on the *Lake Shore Limited*, *Maple Leaf* and certain *Empire Service* trains may also experience delays this summer

between Albany-Rensselaer and Niagara Falls, N.Y., due to track work being carried out by CSX Railroad.

While the freight railroads are conducting their improvement projects, likewise, Amtrak's Engineering employees are also out in full force repairing, rebuilding and renewing Amtrak-owned track.

As part of the ongoing Keystone Corridor Improvement Project (KCIP), a 24-hour-a-day track laying machine project is underway between Philadelphia and Paoli on the Harrisburg Line, where Amtrak and SEPTA trains operate. Because of the track laying machine's many functions and the complexity of the operation, the majority of the TLM work performed is done during daylight hours.

“Whenever we work on the tracks, we affect train performance, and the KCIP is no exception,” explained Denio. “To minimize the delays on this line while keeping the safety of our gangs at the forefront, we have worked closely with the Transportation department to prepare a schedule to accommodate the train operations and the requirements of the track work project.” During certain parts of this project, the gangs may work on Sundays or during very early morning hours when traffic is not as heavy. By making adjustments like this, the Engineering team is able to perform improvements on the line while helping to alleviate passenger inconvenience that results from late trains.

“In spite of the inconvenience, in the long term, these improvements to the infrastructure will provide our passengers with a more reliable service and comfortable ride,” added Schmidt.

The departments that contribute to making the summer season a good one are certainly not limited to those mentioned in this story. Meeting and exceeding passengers' expectations during this busy season requires a collaborative effort from employees of all crafts and departments. “It takes a tremendous amount of work to prepare for the millions of summer travelers who choose to ride Amtrak,” said Vice President of Customer Service Emmett Fremaux. “While every customer should feel like they're the most important customer on any given day, the summer season is our time to shine and to show America professional, first-rate service and how special Amtrak travel is.”

Purchasing tickets from Quik-Trak machines is a popular option for customers at the busy New York Penn Station.

Advisory Committee Announces Award Recipients

“Recommendation: Make frequent announcements advising passengers (1) what the problem is (2) how it affects them, and (3) what Amtrak is doing about it.”

This was just one of many recommendations made by Amtrak’s Customer Advisory Committee as part of a comprehensive “Late Train Protocol” presentation at its bi-annual meeting in Jacksonville, Fla., last month.

The late train presentation considered how delays are handled from the passengers’ perspective before they leave home, while aboard late trains, while waiting in stations and after late arrivals. Recognizing that some delays are nearly impossible to beat, the committee’s proposal was designed to offer some ideas about how to improve difficult situations.

Some of the recommendations are already in the standards manuals, but are not implemented on a consistent basis. “One of the things we’re trying to nail down is the consistency of the service, and ACAC is one of the key resources we use to get that kind of in-depth feedback,” said Vice President Customer Service Emmett Fremaux.

The committee, made up of 23 volunteers from across the country that serve as customer service ambassadors, gathered with Amtrak managers to discuss a range of issues, including the dining car service model, deployment of new Quik-Trak machines, on-time performance and ADA accessibility.

The value ACAC brings to the company may be subtle, but powerful. “Our relationship with ACAC is truly a two-way street,” said Service Delivery Chief Kevin Scott. “They learn from us how we want service to be provided and what we’re trying to do to improve it, and we learn from them because they provide a unique perspective — that of savvy passengers who know what should be done.”

Another function ACAC serves is to recognize exceptional customer

for sale and even carrying items back to passengers’ seats.

“... He acted as though he truly enjoyed serving passengers and putting smiles on their faces,” said the committee member who nominated him.

Two *Lakeshore Limited* sleeping car attendants were also saluted by the committee. Tom Finnegan consistently addresses passengers by name, checks frequently to make sure passengers are comfort-

able, advises them of the train’s time status, and asks how passengers want their coffee served in the morning. While Finnegan does everything he is supposed to do, he does it all, time and again, with a level of graciousness and professionalism that distinguishes him from most other employees. “I have never received this level of service excellence,” noted an ACAC member.

Another *Lakeshore Limited* sleeping car attendant, Richard Johnson, caught the eye of not one, but two ACAC members who nominated him for his flair for personalized customer service. On one occasion, Johnson took it upon himself to wake a diabetic passenger who had fallen asleep at lunchtime to make sure she ate. “He has so much to offer and share with his fellow employees,” said one of his nominators.

“Ms. Martin ... is the ideal person to represent Amtrak in the Acela Clubs,” said the nominating ACAC member. As a 30th Street Acela

Lounge attendant, Jacqueline Martin, time and again juggles the needs of her regular customers — often remembering their names and their beverage preferences — as well newcomers during busy travel seasons with a high degree of professionalism.

Texas Eagle Conductor John Joe (J.J.) Quesada was recognized for treating every passenger like a family member. Indeed, J.J. took it upon himself to make sure that a man who often visited the San Antonio station was given a formal veteran’s burial when it seemed that no resources were available for a proper funeral. “He is always so kind to people who do not ride Amtrak often and have many questions,” wrote an ACAC member about Quesada’s attitude.

According to another committee member, Trenton Ticket Agent Eileen Breen routinely makes passengers feel as though they are the most important passengers traveling that day. She is knowledgeable not only about Amtrak services, but also about special service requests made by people who require special attention. “I always sigh with great relief because I know everything that needs to happen will,” noted the member.

In addition to honoring great employees, the committee also thanked the six members whose terms on the committee expire this fall for their service to the committee and Amtrak. They are: Eleanor Cunningham, Glenn Reynolds, Alma Goodwyn, George Bradford, Steve King and Matt Losee.

ACAC members Eleanor Cunningham and Alma Goodwyn, two of the six members whose terms expire in the fall, contributed to improving customer service in the areas of special needs requests and implementing the Quiet Car on some services.

service provided by employees on the front lines. Accordingly, the committee announced the Customer Service Award winners, which are identified twice a year for exemplary front-line customer service, at the meeting in Jacksonville.

Lead Service Attendant Ed Muhs was praised for outstanding service on the *Wolverine*. In addition to providing friendly and efficient service, Muhs enthusiastically sells customers on items, including making recommendations, promoting merchandise available

Employee Earns Environmental Accolades

In his previous position as a fleet maintenance technician for the Philadelphia motor pool, Equipment Engineer Kirt Flowers' job description didn't include any specific environmental responsibilities. Even though it wasn't part of his job, he nevertheless took it upon himself to reduce diesel exhaust emissions of Amtrak vehicles in the Philadelphia area. His dedication to environmental improvement won him recognition by the Association of American Railroads (AAR) as a Finalist for the John H. Chafee Environmental Excellence Awards ceremony at the U.S. Capitol on April 26.

With assistance from the Environmental Health and Safety department, Flowers conducted a study to test two emission control devices on heavy-duty engineering vehicles to reduce exhaust emissions.

Fuel catalysts that re-format the fuel molecular structure for a cleaner burn before it enters the engine

Flanked by Wick Moorman president, chairman and CEO of Norfolk Southern Corp. (left) and U.S. Sen. Lincoln Chafee, Equipment Engineer Kirt Flowers (center) is distinguished among others in the railroad industry by the Association of American Railroads for his environmental stewardship. Flowers was chosen as a finalist at a ceremony at the U.S. Capitol last month.

were installed in 14 trucks, along with another device that decreased the carbon dioxide, nitrogen oxides and diesel particulate matter in emissions in the exhaust stream before leaving the tailpipe.

"Kirt is an exemplary environmental steward and we're pleased that he is being recognized for taking such a proactive approach to

controlling heavy-truck diesel emissions," said Environmental Health and Safety Vice President Roy Deitchman.

Flowers' work has contributed to the company's efforts to reduce air emissions and maintain its reputation as an environmentally responsible mode of transportation. In addition, Flowers has educated others at Amtrak about diesel exhaust emission control

measures, including informing the Automotive group about air pollution concerns.

His initiative also earned him a President's Service and Safety Award in 2005.

Flowers also participates in Amtrak's environmental engineering internship program with Temple University and serves as

Amtrak's representative on Philadelphia's Diesel Difference Board, an organization of public health and environmental regulatory agencies, environmental groups and private sector companies. The Board has recognized him for his work in developing its air pollution program.

The AAR Award, given every year, is named in honor of former Sen. John Chafee (R-RI) who was a leader in the passage of federal environmental laws.

Flowers was one of six railroad industry employees recognized for their contributions to the environment.

This is the second AAR award received by Amtrak for its accomplishments in the environmental arena this fiscal year. AAR bestowed Environmental Health and Safety Vice President Roy Deitchman with its North American Environmental Employee Excellence Award in October.

Dining Service

continued from page 5

that the reality is that we're doing this to save the service while trying to improve it for our customers. We're asking more of the employees across the board — to be more flexible, to act more as a team.

It's critical that we work hard to increase revenue and the participation of coach passengers by extending the hours of the dining car, adding lower-priced items to the menu that would be appealing to price-sensitive coach passengers, and having our crews market the service. Coach attendants contribute to the effort by announcing that reservations can be made for lunch or dinner and walking through the car making the reservations.

And some employees are doing this really well. For instance, rather than just telling passengers that reservations could be made for dinner, a train attendant on the *Capitol Limited* really markets the service, which we applaud. So while he's making announcements about the dining car, he describes the menu and even makes recommendations about the selections. The collaboration of employees like these will make the difference in how successful we are.

AI: Speaking of selections, there seems to be the perception that the quality of the food has been downgraded, is this really true?

Rosenwald: No, it isn't. Ninety-plus percent of the entrées are the same as those we served before. If the meals are being prepared according to the training, they should be as good as they were before. I bet if we did a taste test and didn't reveal how the meals were prepared, the tasters wouldn't notice a difference. And if there is a difference, they may notice that the meals prepared this new way may actually taste better as they aren't being heated in advance and held for an extended period of time.

And we've added several items to the dinner menu. As I mentioned earlier, we need to increase revenues to entice coach passengers to join us, so we've added the pizza that's on the lunch menu to the dinner menu. It's an appealing choice for our budget-conscious passengers riding in coach. In fact, on the Florida service, it's the most popular item served to our coach passengers at dinner — it outsells every item on the menu.

AI: How does cutting crew size translate into good customer service?

Rosenwald: I'm glad you asked that question. Because our labor costs are very high, we had to see how we could do more with less. And we had to fight the perception that it would mean a downgrade in service because we were — and are — committed to maintaining good service. By requiring reservations and staggering the seating according to 15-minute increments,

we've found that passengers are getting more personalized service. Think about it — if you walk into a restaurant that isn't overcrowded, you're more likely to get personalized and friendly service.

And we've had employees tell us as much — *Texas Eagle* LSA Tim McGinnis told us that he likes the staggered reservations, because "it's easier to handle the customers." Aboard the same service, Chef Ken Lahr says that the method helps him get the food up in a more orderly fashion and provide a better quality meal for the customer.

AI: While the model is not yet fully implemented, how are you measuring its progress and its effectiveness?

Rosenwald: By the start of the summer, we'll have new on-board customer service managers that will spend most of their time on the trains. Their job will be to help resolve problems that the crews encounter, as well as to coach our crews so that they have the tools and information they need to deliver consistently great service. Another key responsibility of these managers will be measuring customer service. We will be actively collecting feedback from passengers in ways that we've never done before — we're currently finalizing some of the methodology, and should be ready to start this effort in June.

In addition, our team meets weekly about how things are going and where we need to make changes to improve the situation for our crews or for the customers, depending on the nature of the problem.

We also held focus groups with passengers at the end of April in Washington, Chicago and Seattle to learn about what's working and what's not from the passengers' perspective. We also monitor the comments we get from our passengers and receive feedback on a regular basis from the Amtrak Customer Advisory Committee.

We're also monitoring on-board condemnation trends, which have dropped significantly, because we're not making a lot of meals at once, resulting in too many at the end of the meal period — that has also reduced our costs.

AI: Is there anything else you'd like employees to know?

Rosenwald: I'd like to add that most employees have done a commendable job of working to make this a success — they've used their skills, knowledge and talents to make this work. We need to make sure that we recognize great work and the new customer service managers starting this summer will help identify those employees. The truth of the matter is that we have to do this, and do it right. Our message to employees is join in the effort or get left behind.

P R O M O T I O N S I N M O T I O N

Summer Travel Brings Fun in the Sun

Whether it's the theme parks at Orlando and Kissimmee, the sunny beaches of Miami and Jacksonville or the exciting nightlife of Tampa Bay, Florida destinations are closer now, thanks to a promotion offering passengers savings on travel to Florida. Through partnerships with several Florida convention and visitors bureaus, Amtrak is offering passengers 20 percent off the lowest available rail fare when traveling to these cities on the *Silver Star* through March 15, 2007.

Disney Hosts Family Adventures on California Corridor

Amtrak, in partnership with Radio Disney, is hosting two "Family

Adventures" aboard *Pacific Surfliner* and *San Joaquins* trains this month. The on-board events, which involve games and giveaways hosted by Radio Disney's Family Fun Zone personalities, are the focal points of a four-month campaign launched last month to encourage family travel on these routes.

To help generate awareness about the Family Adventures, Radio Disney flyers were distributed at local community events. Additionally, on-air personalities encouraged kids to log on to Radiodisney.com to download a free companion coupon that allows children to treat their parents (or other family members) to a free train ticket with the purchase of a regular-priced ticket.

In addition, all participating Radio

Disney stations will air Amtrak advertising throughout the campaign and radio stations will also offer trip giveaways on the *Pacific Surfliner* and *San Joaquins*. After participating in the Family Adventure, travelers will offer on-air testimonials describing their experiences and encouraging listeners to book a trip on Amtrak.

Dine-In, Carry-Out and Save on Train Travel

After winding down from all the Radio Disney festivities, California travelers may take advantage of special savings on train travel while enjoying an appetizing meal through an offer promoted by Amtrak and Applebee's restaurant franchises in Northern and Southern California. Through this promotion, Applebee's customers

may request from their server a free Amtrak companion coupon that is good for travel through June 15, 2006, on the *Pacific Surfliner* and *San Joaquins*.

"We are excited about the opportunity to partner with one of the largest casual dining restaurant chains in the country and expand our brand awareness to thousands of Applebee's patrons throughout California," said Director Marketing West Carol Shannon. The offer is being promoted via radio in 11 markets in the San Joaquin Valley and Southern California with additional exposure via radio stations' Web sites. It is also being promoted through tabletop and point-of-sale displays at participating Applebee's.

Campaign Lands Excellence Award

Amtrak, in partnership with Caltrans, won a first place Award of Excellence in the television category from the California Travel & Tourism Commission for its "Travel Made Simple" commercials that are being aired in six major California markets. The spots highlight the ease of travel on the *Pacific Surfliner* and *San Joaquins* and feature passengers dining on board, gazing at scenery and taking a nap.

The award was presented to Director Marketing West Carol Shannon, Regional Marketing Director Karen Myers and other Amtrak attendees at the California Conference on Tourism held in Anaheim, Calif., in late March. Amtrak also won a second place Award of Merit in the newspaper category for its "Magic" ad promoting the *Pacific Surfliner* in the Disney 50th anniversary advertising section that ran in the *USA Today* in select markets.

Santa Barbara Welcomes Red Hat Group

After stepping off the *Pacific Surfliner*, more than 500 members of the Red Hat Society donning their trademark purple attire and red hats, gathered at the Santa Barbara station in March. There, Mayor Marty Blum, members of the media, station employees and local residents welcomed the group as part of an event hosted by Amtrak, the Santa Barbara Conference and Visitors Bureau and Santa Barbara Car Free, an organization sponsored by the Santa Barbara County Air Pollution Control District.

"We collaborate with the CVB and Santa Barbara Car Free to encourage people to visit Santa Barbara and leave their cars at home, and Amtrak offers an excellent travel alternative. Not only

was it an economic boost to the community, but because these ladies traveled by train, more than 200 cars were off the road," explained Sales and Marketing Associate Brian Hart.

Hart has worked with the National Red Hat Society's 'Hat Quarters', located just a few blocks from the Fullerton station, since 2002. "These women dressed in red and purple can be seen taking Amtrak trains from almost every station in the nation," added Hart. The group that traveled to Santa Barbara in March represented the largest single Red Hat Society group the railroad has ever carried. Last year, over 3,800 Red Hat Society members traveled on Amtrak, generating almost \$121,000 in revenue.

Lights, Camera, Acela

Amtrak employees take a break while filming an Acela Express television commercial at Boston South Station (L. to R.): David Lim, chief, Marketing and Sales Promotions; Gail Reisman, senior director Marketing East; Charlie Lavina, general foreman, High-Speed Rail; Darlene Abubakar, director Marketing East; Paul O'Mara, superintendent Passenger Services New England Division; Dennis Graham, director Marketing New England; and (back left) the film director, David Cornell of Form Production Company.

Appearing in the ad as the café attendant is Lead Service Attendant Yvonne Battle, who also served as the on-site consultant for the service delivery aspect of the commercial, which runs through mid-May.

"The Operations department employees were critical to the success of this project by helping ensure that the filming went smoothly," stated Lim. They include: Charlie Lavina, general foreman, High-Speed Rail; Paul O'Mara, superintendent Passenger Services New England Division; John Rockett, assistant supervisor ET Electrical Maintenance; and Lieutenant Wayne Moore, Amtrak Police Department.

K9 Undergoes Cutting-Edge Training

This isn't your average K9 unit. Amtrak Police Department Officer Kevin McMullen and his canine partner, Maximus, possess special

Amtrak Police Officer Kevin McMullen and his K9 partner Maximus exit a train at Washington Union Station. Maximus recently attended an extensive four-month bomb detection training course, making him one of the few K9 units in the country qualified at his level.

skills that few other K9 units in the country have.

In an effort to stay at the forefront of law enforcement practices, APD

sent the team to an intensive, four-month Washington Metropolitan Police Department training session. On the cutting-edge of K9 training, the course was developed by the Washington MPD in conjunction with the University of Rhode Island. While the specifics of the program cannot be shared due to security reasons, it is so advanced that it's the only one of its kind in the country.

"We are extremely pleased to be one of the first law enforcement agencies to participate in this progressive training program," said Amtrak Chief of Police Sonya Proctor. "This supports our goal of leading best practices in passenger protection."

Dogs trained in detection of illegal drugs or explosives are known to be far more reliable than any other detection devices currently in use. They can be trained to perform dual functions, such as patrol and bomb detection,

thereby allowing a K9 officer to support daily patrol functions and to investigate suspect items on trains or in facilities.

Amtrak has K9 units deployed throughout the system that are trained in detection, including those trained to detect illegal drugs or explosives.

Construction Begins on St. Louis Multimodal Station

Acting CEO David Hughes (third from right) joins St. Louis Mayor Francis G. Slay (fifth from left) and other Missouri state partners at a groundbreaking ceremony for the new St. Louis multimodal station, which will house Amtrak, Greyhound bus operations, a food court and a concourse linking Amtrak and Greyhound to Metrolink bus and rail service. The project, scheduled to be completed by the summer of 2007, is funded by federal, state and local government agencies with participation from Amtrak, Greyhound and Metrolink.

FRONT LINE FOCUS

Dear Amtrak:

This letter is being written to express my appreciation for the efforts that four of your conductors put into their jobs on a regular basis. I am a monthly commuter on the Keystone Line between Downingtown and Harrisburg. Wednesday evening ... my new cell phone slipped out of my coat pocket, falling between the seats without [my] realizing it. I did not notice it was missing until I had disembarked from the train. As a result of the coordinated efforts of John Garvey, Felix Diaz, Tom Foley and Curtis Hodge, my phone was returned to me within twenty-four hours.

... There have been many other examples of extraordinary service from these men that demonstrate pride in their performance and respect for passengers from all walks of life. Whether speaking Spanish to passengers with a limited command of English or simply providing scheduling information, these conductors have always been courteous and helpful. Their integrity and honesty have been above reproach [and they] deserve to be recognized for the outstanding service they provide to all Amtrak passengers.

Sincerely,
Eugene F.
Downington, Pa.

Dear Amtrak:

My wife and I rode #59 ... and encountered two of the most delightful dining car attendants we've ever experienced. Patriciana Mitchell-Bowman and Patricia Gaudreau were friendly, extremely thoughtful and portrayed a "can do" spirit during the three meals we enjoyed while riding down to the Crescent City ... They both made us feel welcome and contributed to our enjoyment of the ride. This pair could easily serve as role models for every Amtrak dining car crew.

I thought you would appreciate a complimentary letter as opposed to a complaint. Keep up the good work.

Sincerely,
Ernest K.
Riverside, Il.

Key Indicators

continued from page 1

The number of equipment overhauls and remanufactures grew nearly five-fold with 86 done in FY '03 compared to 416 planned for this fiscal year. In FY '05, 113 Amfleet remanufactures and heavy overhauls were completed, versus the 17 done in FY '02.

Hughes told the group that on-time performance in the Northeast Corridor, where Amtrak has control of most of the railroad, is currently the best its been in years. The company's premium service, *Acela Express*, operated over 90 percent on time in March and April.

While there's significant progress in on-time performance on the Northeast Corridor, the opposite is true when it comes to the trains traveling over host railroads. Amtrak has experienced a steady and steep drop in performance

over freight railroads, as evidenced by a 50 percent drop in FY '05 from FY '00 levels.

Capital investments have led to a more reliable railroad and a drop in maintenance costs. From FY '02 to FY '06 capital investments soared 150 percent, while man-hours decreased 20 percent. The minutes of delay on the corridor are the lowest they've been in over two years. Since FY '03, delays due to (unplanned) infrastructure problems have dropped 25 percent and the average minutes of delay due to communications and signal failures and malfunctions have dropped 55 percent.

Hughes added that the company would continue to push ahead with the Strategic Reform Initiatives to transform Amtrak into one that offers customers a successful value proposition.

Action Plans Guide Mechanical Progress

The Mechanical department is currently focused on making improvements in four key performance areas: reliability and availability of equipment, productivity, regulatory compliance and safety.

Behind these objectives are action plans developed during the Leadership Workshop classes attended during the past year by Mechanical department managers. As part of the classroom curriculum, the participants were asked to develop action plans that put to use the problem-solving, planning and organizational skills reviewed and practiced during class to target particular problem areas, both large and small.

While Superintendent Danny McFadden's Bear Car Shop was not initially designated as the sole shop in the system to produce and repair passenger car seats, his team now meets the entire system-wide demand for seats as a result of an action plan it adopted. The Seat Shop Team identified areas for improvement to the work space that included adding shelving that made materials readily available at each of the work stations in the shop, along with pneumatic lifts that replaced the antiquated

manual hydraulic lifts on all of the strip-down-and-build tables. As a result, the team has not only met the demand for seat production, but has also eliminated many of the flaws in the original seat design by adding reinforcements and improving the frame suspension; resulting in a safer, more durable and comfortable seat.

In Chicago, the Central Division's second-shift coach cleaner operation, under the direction of General Foreman Efrain Diaz, Jr., improved its efficiency and productivity, and created a safer work environment with its action plan. Instead of spending time getting resources from various locations at the start of their shift, coach cleaners now collect cleaning tools and supplies from centralized storage boxes. They also removed debris and cleaned, painted and installed new flooring, thereby providing employees with a safer working environment.

These are two examples of changes that resulted from action plans developed during the four-day classes completed in January by more than 160 participants, including general foremen, assistant superintendents, superinten-

Frank Armstrong, car repairman at the Bear Car Shop, welds a steel reinforcement to a seat frame. Through new efficiencies and better tools, the Seat Shop Team produces seats for the entire system.

dents and master mechanics. The class focused on improving operations and reducing expenses by using analysis, problem-solving and planning techniques to make improvements in the four major performance areas.

On-Board Appliance Reliability Improves

The Equipment Standards and Compliance team, headed by Superintendent Mark Murphy, has increased the reliability and avail-

ability of food service appliances, such as microwave and convection ovens, coffee makers, refrigerators, freezers and dishwashers, and improved its regulatory compliance. This effort has also led to a decrease in customer complaints about on-board services.

To accomplish this, the group posted online testing procedures for each appliance and incorporated the processes into each

continued on page 3

Customer Comments Reflect On-Board Improvements

Customers offered more commendations and made fewer complaints during the second quarter of FY '06 compared to the same period a year ago, an indication that the company's efforts to improve the quality of the service are on the right track.

The total number of customer contacts made from January through March, which includes both commendations and complaints, increased over the same period last year by 11 percent. The 1,949 commendations received during the three-month period, or an average 0.36 per 1,000 passengers, translates to a 4 percent increase over the same period in FY '05.

Accompanying the rise in the number of commendations was a 3 percent drop in the overall number of complaints, at 52,238, which is an average of 9.6 per 1,000 passengers.

A 13 percent decline in complaints about employees is in part attributed to the Block Training customer service module for Transportation department employees. Credit is also due to managers' riding trains and offering on-the-spot coaching and encouragement. As part of the implementation of the new long-distance dining service, managers from within the company were temporarily assigned to trains to provide guidance and support to employees

during the first few weeks of implementation, and their presence had a positive effect on customer service.

The majority of employee complaints and commendations are associated with on-board staff, as they spend the most time with passengers.

On-time performance remains the greatest cause of customer dissatisfaction accounting for more than half of the complaints received during the second quarter. During this period, OTP complaints increased by almost 16 percent compared to last year. Most OTP delays were caused by host railroads, which were responsible for

77 percent of delay minutes per 10,000 miles. This is one of the company's biggest challenges and an issue over which senior management continually negotiates.

Amtrak-responsible delays accounted for 17 percent and third-party delays, related to factors such as police activity, bridge openings and weather conditions, were 6 percent of the total. While *Acela Express* and *Metroliners* experienced reduced OTP ratings during the past year, improvements seen since January should turn into compliments. "... I stopped using your service for a period of time as a result of a couple of 'nightmare trips' that severely inconvenienced

continued on page 8

TRAIN OF THOUGHT

As we roll into summer, I am optimistic that we will have a great travel season. With ridership up on many routes, improved on-time performance on the Northeast Corridor and high gas prices leading people to travel by rail, we are poised to make the most of the summer.

Other factors are in our favor, too. The investments we've made over the past several years are putting us in a position to do well. In many ways, we are on a mission. Specifically, that mission is to provide America with safe, reliable, inter-city rail passenger service in an economically sound manner that exceeds customer expectations.

To accomplish our mission, we've got to aim high and pursue a handful of clear goals to guide progress in five key areas: Customer Service, Safety, Employee Commitment, Business Partner Satisfaction and Fiscal Responsibility.

In the area of Customer Service, our goal is to have 90 percent of surveyed passengers rate our service as "good" and that they would recommend it to others. The same percentage of people should say that they were treated professionally and that the trains are clean.

Another element of customer satisfaction is the reliability of the service. We're aiming to maintain *Acela* on-time performance at 90-plus percent and/or better than competing airlines. A cross-departmental collaborative effort has produced *Acela* OTP at 90-plus

percent over the last couple months, so we know it can be done.

On other corridors, we're going to strive for on-time performance of 85 percent (or as otherwise agreed with our state partners). To measure our customer service progress on long-distance trains, our goal is to have 80 percent of our passengers tell us that their on-time performance expectations were met and that they were well informed of any deviations or delays during their trip. I know that on-time performance on the long-distance trains is underperforming, and we're taking steps to change that.

On the Safety front, we're aiming to exceed the record of all other passenger railroads in the Northeast Corridor next year and to win the industry's safety gold standard, an E.H. Harriman Memorial Award — and we are well on the way to doing that.

With states supporting nearly half of our trains, they are extremely important partners. To that end, our goal is to have 90 percent of our partners say that they would like to maintain or expand the business relationship with us.

While our financial performance over the years has improved, we still have a long way to go. Our goal in this area is to consistently reduce the level of, and improve the return on federal operating support.

One of our most important goals is Employee Commitment. We want to have at least 75 percent of our

David J. Hughes

employees personally and regularly engaged in improving safety and business processes.

Employee Commitment means that regardless of your function, every employee participates in meeting these goals. Among other things, it means using good safety practices throughout the railroad, maintaining zero operating rule violations, making on-board and in-station announcements about a delay, meeting the needs of state partners, making the most of our resources and materials in the backshops, being sensitive to a passenger's special needs request, serving a meal as though your customer was a VIP, checking the cleanliness of bathrooms en route and representing the company with the utmost professionalism.

You'll be hearing more in the coming months about specifically what you and your department are doing and can do to make it happen. In the meantime, keep up the good work, continue to be safe out there and look out for each other.

Rountrip Added to Amtrak Cascades

On July 1, representatives from Amtrak and Washington State Department of Transportation (WSDOT), along with local officials and residents will gather at Seattle's King Street station to launch Amtrak *Cascades*' fourth roundtrip between Seattle and Portland.

Festivities will also be held in Bellingham and Centralia, Wash., and Portland, Ore., to commemorate the additional service. "The new frequency along with adjustments in current schedules will offer passengers more travel options and shorter trip times on certain routes," stated WSDOT

Rail Communications official Theresa Gren.

Funded by WSDOT and operated by Amtrak, Amtrak *Cascades* service between Vancouver, B.C. and Portland has experienced 11 consecutive years of ridership and ticket revenue growth since service began in 1994. "This growth is largely attributable to a strong economy, rising fuel prices and good service delivery. In response to this strong demand for rail service, we are launching this additional frequency and expect it to benefit everyone involved — our passengers, Amtrak and WSDOT," added Gren.

From the start of this fiscal year through April, ticket revenues of more than \$8 million are nearly 7 percent higher than the same period in FY '05. And, despite a number of service cancellations earlier this year due to mudslides, equipment issues and track work projects, ridership of more than 330,000 passengers is about even with last year.

The new Seattle-to-Portland service will be an extension of trains 513 and 516, which currently operate between Bellingham and Seattle. Beginning July 1, service on these trains will continue south

April Ridership Fueled by Gas Price Increases

Boosted by Easter holiday travel and the rising cost of gas, April ridership was 4 percent higher than last year and ticket revenues rose 18 percent over the same month last year.

While the Easter holiday shift — from March last year to April this year — contributed to the growth, so did high gas prices. The average price of regular gas rose to \$2.79 per gallon, 22 percent higher than the national average in April of 2005, prompting more people to travel by rail.

Short-distance services brought in \$24 million in ticket revenue (22 percent better than last April), while ridership on those trains rose 7 percent. The only train in this classification with a ticket revenue

deficit compared to last April was the *Heartland Flyer*. Long-distance trains collected nearly 15 percent more revenue and 3 percent more riders than the same month last year.

On the Northeast Corridor, April results brought to mind the suspension of *Acela Express* service that took place in mid-April of last year due to cracks found in disc brakes. For this reason, starting with April 2006, year-over-year comparisons do not accurately reflect *Acela* performance. However, measuring the premium service's results according to budget, *Acela* ridership was about even with what was expected. Ridership on *Acela* service between Boston and New York has waned for a number of

months due to reduced frequencies, low-cost air competition and higher fares.

On the ticket revenue side, *Acela* service fell short of budget by 10 percent. The disappointing results may be attributed to a couple potential factors — revenue-managed fares were dropped to stimulate demand and the budget may have been overestimated. These factors are being closely monitored to more conclusively determine the causes of the shortfall.

Since many *Acela* customers were diverted to *Regional* trains as a result of the service suspension last year, year-over-year analysis of actual results is also skewed. However, against budget, *Regional*

service earned 6 percent higher revenues than expected, but attracted 2 percent fewer passengers in April.

With the start of the baseball season in April, special trains on the Northeast Corridor made a small, but meaningful, contribution. What's important about it is that revenue exceeded budget by 54 percent. Since the move of the Montreal Expos to Washington last year, a series of new baseball-related opportunities have opened up this season. Building on the success of providing travel for National Football League and other professional sports organizations, baseball moves are growing in number; from six trips for two customers in FY '04, to 26 trips for

continued on page 6

Mechanical Progress

continued from page 1

preventive maintenance inspection for every food service car. The team also developed a list of all the components as part of a master technical manual, including layout drawings of each food service area. This list was then distributed to all mechanical facilities.

To complete the action plan, Steve Covell, manager Mechanical Standards and Compliance in Los Angeles and Kevin Koppel, manager of the 24-hour CNOC Mechanical Desk in Wilmington, briefed Customer Service managers on the importance of accurate and timely defect reporting and the availability of the 24-hour hotline (800-424-0217 ext. 2082) for en-route train reporting problems.

Chiller Unit Re-Engineered for Better Performance
Thanks to Master Mechanic Gerry Mescall and his team's focus on improving the reliability, availability and regulatory compliance of refrigerator chiller units, retrofitted units are slated to be loaded on the California food service cars by November. Superintendent Rick Tripoli and Luerean Van De Streek, maintenance analyst, worked with Dick Bruss from Equipment Engineering who re-engineered the unreliable chiller units. They also put in place a comprehensive maintenance and repair program that clearly defines the required tests, inspections, maintenance and repairs for the units. The maintenance phase of the program will begin once a suffi-

cient number of units have been placed in service. Once the program is fully implemented, fewer chiller unit failures will help Amtrak more consistently meet its obligation to increase cost savings and improve service quality.

Conserving Fuel Saves Money, Helps Environment
With rising fuel prices, fuel conservation is extremely important. To that end, then master mechanic for the New York and New England divisions, Don Knapik, and Assistant Superintendent Paul Carver,

"The Leadership Workshop class was a catalyst for change"

Vince Nesci
Chief Mechanical Officer

sought the use of ground power that led to a 15 to 20 percent reduction in fuel consumption at all four of the mechanical facilities — Boston's Southampton Yards, Springfield, Mass., New Haven, Conn., and New York's Sunnyside Yards — in the divisions.
Because each facility is different when it comes to layout of ground power stations and storage tracks, Carver assigned a team to assess yard operations and found ways to effectively stack trains so they have access to ground power.
Fuel conservation bore additional benefits. Employees at the facilities also found that because the engines were running fewer hours, diesel exhaust emissions were reduced, leading to a better environment and longer-lasting engine components.

Clean Sites Are Picture Perfect
A creative communication strategy yielded productivity, safety and security improvements for Southern Division Master Mechanic Tommy Farr. As a result of Farr's efforts, the division's mechanical employees have focused on cleaning and organizing targeted areas of their facilities, making their work sites neater, safer and more secure. To encourage employees to better manage their work areas, Farr used the old phrase, "a picture is worth a thousand words." Farr encouraged his assistant superintendents to install bulletin boards in their facilities throughout the division and post photos of work areas that needed cleaning. The photos became daily reminders, spurring managers and employees to keep their areas clean. In one example, a sheet metal workers' area was filled with trash, old parts and other junk. Once the photo of the area was posted, the employees were quick to do a great job of cleaning up the area.

Rotating Responsibilities Fosters Better Understanding
Mid-Atlantic Division Master Mechanic Mike Kapela's "Walk in My Shoes" action plan, which was geared toward improving all four performance areas, led his managers to better understand each sub-group's responsibilities and limitations.
Working with Kapela, Ron Truitt, superintendent at the Ivy City Maintenance Facility in Washington, put together a plan that

eliminated production barriers by rotating the responsibilities and work locations of the assistant superintendents for approximately three days. The interaction between management and labor forces at the shops, combined with experiencing the physical and environmental realities of each location, helps employees better appreciate the restrictions under which each operates. By anticipating the needs of others, the communication between teams flows more smoothly.
"Walk in My Shoes" has reduced over-the-road failures, increased locomotive reliability and improved the performance of the preventative maintenance line and turnaround servicing. The program has been expanded to New York and will soon be introduced in Boston.
Overall, these action plans have helped Amtrak become more efficient and have improved face-to-face communication between employees and managers. As Southern Division Master Mechanic Tommy Farr put it, "During our team-building exercises, we were able to communicate with each other and better understand what role we play in the overall plan and the adverse effects of not performing as expected." Added Chief Mechanical Officer Vince Nesci, "The Leadership Workshop class was a catalyst for change, big and small, throughout the system and I think participants learned a lot from each other."

Marketing Team Builds International Market

With Amtrak international ticket sales at nearly \$10 million through the first seven months of the fiscal year, up 34 percent over the same period last year, officials from the Marketing and Sales department had reason to celebrate as they met again with international tour operators at Pow Wow 2006, held last month in Orlando, Fla.

For nearly four decades, the Travel Industry Association of America has sponsored Pow Wow, the travel industry's premier international conference and the single largest generator of U. S. travel from abroad. At this year's event, approximately 5,500 people participated, including domestic and international buyers and journalists from over 70 countries.

"By attending the Pow Wow, we had an opportunity to build on our success of the past year, reaffirm agreements with several tour operators and make new contacts in countries such as China and Russia," explained International Sales Manager Christine Suchy. "Over the course of the three days, we held a series of intensive 20-minute appointments with 162 overseas tour company owners, buyers, or executives who were interested in selling Amtrak tickets in their countries."

At the conference, Amtrak representatives distributed CDs that included the USA Rail PassSM in four languages — English, German, Spanish and Japanese — and featured a virtual tour of sleeping accommodations, a variety of photographs and a system map.

Because the International Sales department primarily targets leisure travelers, Suchy works closely with general sales agents who market and sell Amtrak to travel agents within their respective countries and promote Amtrak via a number of vehicles including trade shows, publications and Web sites.

During FY '05, international sales accounted for almost \$17 million, up 22 percent over fiscal year 2004. The majority of these sales can be attributed to travelers booking their reservations through Amtrak.com, which resulted in more than \$10 million in ticket revenue that fiscal year.

David Lim, chief of Marketing and Sales Promotions noted, "The demand for information about Amtrak and our services was very strong this year, and we are looking forward to seeing more overseas travelers on our trains than ever before."

'A Prairie Home Companion' and Amtrak Join Forces

When the motion picture "A Prairie Home Companion" is released this month, Amtrak will have a role to play with the promotion of the film, which boasts an all-star cast including famed radio show host Garrison Keillor, Meryl Streep and Woody Harrelson.

Based on Keillor's popular radio show that is broadcast by public radio stations across the country, the film is a comedy about the backstage antics during the last broadcast of a long-running fictitious radio show.

"Our partnership with 'A Prairie Home Companion' is very exciting because it gives us an opportunity to not only be part of this celebration of legendary family entertainment, but also to entice the show's many devotees to take a ride on Amtrak," said Principal Marketing Officer Deborah Varnado.

A promotion is underway that pairs with the "A Prairie Home Companion" movie. Building on the theme of the movie, Amtrak customers may enter a sweep-

stakes offer to win a trip for two to attend a taping of Garrison Keillor's legendary radio show, "A Prairie Home Companion," followed by dinner with the radio show's cast and crew. The grand prize also includes round-trip train travel and two nights' hotel accommodations.

The first prize winner will receive a private screening of the movie in or near his or her hometown for up to 50 guests, 50 second place winners will receive Amtrak picnic baskets and movie soundtrack CDs, while 25 third prize winners will get soundtrack CDs. The sweepstakes, which runs through July 31, 2006, is being promoted on Amtrak.com and counter cards displayed at over 80 stations nationwide.

In addition to the sweepstakes, Amtrak is currently working with Picturehouse, the film's distributor, to explore other promotional opportunities associated with the film that will provide even broader exposure.

Amtrak Cascades

continued from page 2
to Portland and serve six intermediate communities.

As a result of schedule adjustments, Amtrak Cascades northbound trip times between Portland and Bellingham will be reduced by 70 minutes while southbound travel times will be almost 30 minutes shorter. Additionally, the round-trip schedules will be more convenient for travelers planning to spend a day in Seattle.

"Amtrak Cascades passengers taking day trips from the north will gain three more hours in Seattle and will have nearly eight hours to shop, visit or conduct business in the area," explained Assistant Superintendent Passenger Services Gay Banks Olson.

The July event in Seattle will also serve as the finale in a series of events held to commemorate a historical milestone in Seattle — King Street Station's 100th anniversary. Centennial celebrations that began in May and continue through July 1 are being

held at venues throughout Seattle and at the King Street Station, which serves the Amtrak Cascades, Coast Starlight and local Sounder commuter service.

At a ceremony held at the station on May 10, an original painting by rail artist and passenger advocate J. Craig Thorpe was presented to Ticket Agent Marlene Koob, who is the third generation in her family to work at the King Street Station. Koob accepted the painting on behalf of Amtrak and was joined by other employees and guests at a reception in honor of those who have worked at the station since 1906.

The King Street Station has evolved to become a vital transportation hub serving 26 trains a day operated by Amtrak and Sound Transit and serving 1.7 million passengers annually.

Paving the Way to China

Amtrak's first USA Rail Pass customers from China, Yang Yimin (center) and his wife Wu Shuxian (right), pose for a photo with International Sales Manager Christine Suchy last month upon their arrival in Washington.

Increasingly, citizens of the People's Republic of China are visiting the U.S. as tourists. According to the International Trade Administration's Office of Travel and Tourism Industries, China was ranked 13th among to the top overseas travel markets to the U.S. in 2004, with an estimated 326,000 travelers; that number is projected to grow by 50 percent in 2008. The Travel Industry Association of America is exploring new opportunities in China, hoping to attract even more travelers to the U.S.

Amtrak just began offering USA Rail Passes for sale to overseas customers via Rail Europe, and Yang Yimin was the first to purchase a pass. Using the Rail Europe office in Shanghai, he helped pave the way to selling USA Rail Passes in his country. "I will tell Chinese people that Amtrak is a great choice to travel America ...," wrote Yang in an e-mail about his Amtrak experience.

Today, international travelers may purchase point-to-point tickets through Amtrak.com, and this summer they will also be able to purchase passes through the Web site.

"Because rail travel is so popular in China, as it is in many other countries, we expect that making rail passes available for sale online, as well as through agencies like Rail Europe, will be well received overseas," said Barbara Richardson, vice president of Marketing and Sales. "Amtrak has an advantage, as many international travelers are already avid rail travelers and understand that trains are an ideal way to see America."

Web Site Gets Nod

Just weeks following its debut on Amtrak.com, the Route Atlas feature that enables customers to explore train routes and destinations was distinguished with an award highly regarded by Web design professionals.

Selected as the “Macromedia Site of the Day” on May 10, the Route Atlas feature was showcased on the Adobe (Macromedia’s parent company) Web site.

A winner’s badge posted on the Route Atlas page identified it as an award-winning site, which was chosen for its use of strong visual designs, superior functionalities, and innovative use of Adobe products.

“This is a big deal in the world of interactive design,” said Roger Seitzinger, director Web Design and Production. “Macromedia is the company that developed Flash, so it is quite an honor to be the ‘Site of the Day.’”

Chicago Union Station Showcases Michigan and Illinois Destinations

While eight-year-old Taskeem Khan enjoys a Michigan apple, her parents Farhat Khan (left) and his wife Naazish (right) speak with Benzie Area Convention and Visitors Bureau representative Mari Heffelfinger about tourist attractions in Northern Michigan.

Amtrak teamed up with two of its Midwestern state partners — Illinois and Michigan — to promote the convenience of train travel to their residents. Commuters, employees and visitors at Chicago Union Station had an opportunity to see what Michigan and Illinois has to offer during two separate events, Downstate Illinois Day and Michigan Day, both held last month.

At each event, over 20 participants representing convention and visitors’ bureaus and various communities along Amtrak routes were on hand to provide information about local tourist attractions. Visitors attending the Downstate event had a chance to win free train tickets on the Illini, State House or the Illinois Zephyr, while Michigan Day attendees entered a drawing to win a trip to destinations along the Blue Water, Pere Marquette and the Wolverine routes.

“This is the fifth Downstate Illinois Day and the second Michigan Day, and both events continue to provide excellent opportunities to boost ridership and tourism to communities served by Amtrak,” said Marketing Director Tracy Robinson.

During the first seven months of this fiscal year, each of the Illinois and Michigan service trains carried more passengers and showed double-digit increases in revenue compared to the same period last year. So far this fiscal year, Wolverine revenues jumped more than 22 percent above the same period last year, while ridership of more than 200,000 passengers was up almost 7 percent. During this same period, the Illini generated nearly 23 percent more in revenue compared to last year, while the number of passengers rose more than 7 percent.

P R O M O T I O N S I N F O R M A T I O N

Essay Contest Inspires Kids to Write about Trains

Kids across the country will have an opportunity to showcase their writing skills while providing Amtrak with valuable feedback about why they like trains when they enter the Amtrak-Lionel Kids Essay Contest. For the second consecutive year, Amtrak is partnering with Lionel to sponsor the contest on all but two routes, after running for five successful years aboard various routes in the West.

The contest, which began June 1 and ends Aug. 31, is designed to stimulate children’s interest in train travel and to provide a means to showcase Lionel toys. To enter, kids 12 and under must complete an entry form along with a short essay about why they enjoy riding Amtrak.

Essays will be judged on content and originality, and the grand prize winner will receive Lionel’s Santa Fe El Capitan Train Set. Additionally, 14 first place winners will be chosen to win The Polar Express™ Train Set by Lionel, which is a replica of the original train featured in the movie and best-selling book “The Polar Express.”

“Our ongoing partnership with a worldwide leader in toy train manufacturing has been key to

broadening our visibility among children and families across the country, and has provided us with firsthand information about what attracts kids to trains,” explained Senior Marketing Officer Ric Ewing. Based on data gathered from past Lionel Essay Contests, scenery and food service continue to rank as the top two reasons why kids are partial to riding the train.

To promote the contest, posters are displayed at 47 stations systemwide and entry forms are available in coach seatbacks and sleeping car accommodations of participating trains. The contest will not run on the Keystones and the Hoosier State.

Families Save with Kids Ride Free Offers

The Lionel contest is not the only way to for kids and families to win

this summer. Kids Ride Free promotions on the Crescent, Auto Train and Hiawatha services are expected to encourage families planning vacations to forego paying high gas prices and take the train to their destinations. The offers allow up to two children to ride free with each paying adult.

In the Midwest, families traveling between Chicago and Milwaukee may take advantage of the Hiawatha Kids Ride Free offer that is good for travel through Aug. 26 on Fridays, Saturdays and Sundays only.

To stimulate family travel on the East Coast, Amtrak is also promoting a Kids Ride Free promotion on the Crescent and Auto Train. The Crescent offer is good for travel between New Orleans and Greensboro, N.C., and intermediate points, and runs through the end of August. The Auto Train offer is valid through Sept. 30.

Northeast Events Expect to Draw Riders

Families in the Northeast looking for entertainment, family fun and an economical way to travel are in luck this summer. Amtrak is partnering with Sunoco, Inc. to promote travel to Philadelphia’s “Sunoco Welcome America”

festival being held June 27 through July 4. The festival is free to the public and offers eight days of family-oriented entertainment including a spectacular July 4 Sunoco Sweet Sounds of Liberty Concert, featuring five-time Grammy award winner Lionel Richie.

Passengers traveling to the event may receive a 50 percent discount off the lowest available rail fare for one companion when traveling with a passenger purchasing a regular fare ticket. The discount is valid for travel in the Northeast Corridor on Regional and Keystone Service trains only. Approximately 350,000 festival brochures that promote the special fare are being distributed throughout the Northeast Corridor.

During the summer break, Amtrak employees and passengers may also reap savings on a day at the Baltimore & Ohio Railroad Museum through a partnership aimed at increasing ridership to Baltimore. Through March 2007, employees and passengers may receive a \$2 weekday museum admission discount by presenting their Amtrak ticket stub or valid Amtrak employee identification when purchasing tickets at the museum entrance.

Environmental Exchange Promotes Best Practices

As a result of a two-day workshop held in Wilmington Del., a group of specialized Environmental Health and Safety (EHS) department employees are standardizing practices and making certain wastewater treatment systems run more efficiently. In April, the EHS department brought together employees from across the country that are responsible for managing and supporting the most widely used technology for wastewater treatment at Amtrak mechanical shops and maintenance facilities.

While the benefits of the workshop included technical training, what made the April meeting particularly important to the EHS department was the opportunity to share information and develop consistent best practices for the 12 Dissolved Air Flotation (DAF) wastewater treatment systems the company owns or operates across the system.

The DAF system is no ordinary wastewater treatment system. Specially designed to collect and pre-treat water that contains emulsified oil, the system removes the oil so that the wastewater released into waterways or transferred to municipal water treatment plants meets environmental discharge standards. When petroleum, oil and lubricants used in maintenance facilities come in contact with non-petroleum-based chemicals such as detergents, cleaners and degreasers from car wash operations, the oil-based elements break down, or emulsify, and become more difficult to remove from wastewater.

The group of 30 employees at the meeting included wastewater treatment operators for the DAF systems, EHS personnel who provide technical support, and

environmental coordinators from the Engineering and Mechanical departments who directly support DAF operations and environmental compliance in the field.

“The operators are critical to helping Amtrak maintain compliance with Clean Water Act regulations at our large maintenance facilities,” explained Director of Field Operations Rich Mohlenhoff. The operators’ primary responsibilities are to operate and maintain meters and gauges to make sure equipment and treatment processes are working properly and efficiently. They also perform wastewater analysis and calculate the proper amount of chemical additions, so that the wastewater is processed at its optimum condition.

While these employees all work toward the same objectives, the workshop provided a venue for sharing information about their respective facilities. “It was important to provide our employees with updated training and the latest technical information in this very specialized field,” said Environmental Health and Safety Vice President Roy Deitchman. “But what proved equally valuable was what the participants learned from one another with respect to best practices.” As a result, certain procedures are being modified or standardized to make not just one or two facilities, but all of the operations, even more efficient.

Employees at the workshop listened to presentations by EHS personnel and environmental consultants on design challenges for wastewater treatment systems, operations and maintenance, system upgrades, wastewater

As a wastewater treatment operator, Christopher Lento (currently a Mechanical foreman III) monitors the mixing tank where chemical additions and pH adjustments are made to the wastewater prior to its transfer to the DAF system’s primary treatment tank.

sampling and data collection, wastewater and storm water audit protocols and applicable EPA and state regulations. Attendees also toured the Wilmington Maintenance Facility, including its modern DAF water treatment system, and participated in hands-on field demonstrations and system troubleshooting scenarios.

To continue the dialogue and team building that began at the workshop, a quarterly teleconference call for all wastewater treatment operators has been instituted. As Director of Environmental Technical Support Charles Lin put it, “These quarterly calls enable the operators to network, develop strategies and share information to improve and optimize system operations.”

Based on employee feedback, the workshop was well received. According to Los Angeles DAF Operator David Parra, it was one of the best workshops he has ever

attended. “Seeing how other wastewater facilities operate was a great learning experience. I enjoyed sharing my ideas and experiences and gained a lot of knowledge that I was able to put to good use.”

The workshop supports Amtrak’s Environmental Management System, a program established in 2000 to facilitate environmental compliance through various means, such as implementing employee training, broadening employee awareness, developing policies and procedures and conducting environmental audits.

Amtrak owns and/or operates DAF systems in Seattle, Los Angeles and Oakland, Calif., Chicago, New Orleans, Rensselaer and New York, N.Y., Boston, Wilmington, Del., and Washington.

April Ridership Fueled by Gas Price Increases

continued from page 3

11 customers this year. Director of Charter and Group Services Bill Ladd noted that in addition to the Washington Nationals, Amtrak now carries teams like the Pittsburgh Pirates, New York Mets and the Florida Marlins, adding that, “Once teams travel on Amtrak, they tend to stick with us and tell other teams about the benefits of traveling by rail. Plus, this generates valuable media coverage.”

Off the Northeast Corridor, much of the revenue growth in April was tied to the popularity of state-supported short-distance trains

like Michigan’s *Blue Water* and *Wolverine* services (30 and 39 percent, respectively), the *Illini* and *Hiawathas* (41 and 13 percent) in Illinois and the *San Joaquins* (32 percent) in California. These corridor trains benefited greatly from the rise of gas prices.

For the first time since November, long-distance ticket revenue exceeded the budget. This performance occurred despite losses not accounted for in the budget, including the lack of travel demand to and from the New Orleans area, the truncation of the *Sunset Limited* and the CSX East

Bridge outage, which by itself caused a \$500,000 loss.

The *Empire Builder*, for which enhanced service was inaugurated last August, was one of the bigger long-distance revenue generators, with \$2.9 million in ticket revenue — 23.5 percent more revenue than a year earlier.

Amtrak’s on-time performance average for April was 72 percent, supported by big improvements on the Northeast Corridor. Long-distance trains experienced a dismal 29 percent on-time performance in April. The on-time

performance of long-distance trains was the subject of discussion at a recent meeting between key congressional staff and representatives of the freight railroads and Amtrak, as this continues to be a challenge for passenger rail. Conversely, *Acela* on-time performance was over 90 percent — at 92 percent — for the second consecutive month.

Fiscal-year-to-date ridership numbers were about even with the same period last year, while ticket revenues were 8 percent ahead.

me ... However, beginning in January this year, I decided to start traveling on your service again ... I have been very impressed with the service, the trains have run perfectly to time ... ,” read a letter penned by an Amtrak Guest Rewards® member.

During the second quarter FY ‘06, the number of equipment-related complaints declined by approximately 18 percent compared to a

year ago, thanks to the company’s state-of-good-repair focus.

Complaints about restrooms and climate control, both of which increased by double digits over the same period last year, headed the list.

Other areas of dissatisfaction included unsatisfactory accommodations, unavailable accommodations and unacceptable substitution of equipment.

FRONT LINE FOCUS

Dear Amtrak:

I am writing to express my sincere gratitude to an exceptional employee: Mr. Harry Knapton, who was a conductor on ... train service from New Haven, Conn., to Montpelier, Vt.

I was traveling with a group of 12 school students who had never been on a train before ... Mr. Knapton made certain that our students were all able to sit in the same general area and he made it his business to make certain that each one of them had the experience of a life time. He offered them explanations of various procedures whenever he had the opportunity to enlighten their

minds ... He helped us with connecting information when it became available and he even tried to notify the connecting train that there would be a group of students who would benefit from group seating.

I cannot tell you how much Mr. Knapton’s services were appreciated and how much he helped to make our trip successful and enjoyable for everyone ... including the chaperone.

He is indeed a credit to your company ...

Sincerely,
Roberta C.
Hudson, Mass.

Power Outages in Northeast Under Investigation

Amtrak is currently taking steps to prevent power outages on the Northeast Corridor and developing response procedures in case an interruption occurs, following outages experienced in May and June.

Utility suppliers are providing data from their systems and the equipment manufacturers are reviewing the control sequence of the solid state electric converters. An investigation lead by the North American Electric Reliability Council (NERC) is underway that will shed light on past incidents and provide valuable information on how to avert subsequent problems.

In the event of future outages in the New York tunnels, the New York Division Superintendent of

Operations is formulating a detailed set of policy, procedural and physical changes that will enable a rapid response. For instance, a dual-mode locomotive is being moved from Sunnyside Yard to Penn Station to more easily perform rescue operations when an electric locomotive is disabled. In addition, trains will be prohibited from entering tunnels if there is a low voltage condition, minimizing the possibility of trains getting stuck in a tunnel during a power outage. Lastly, the Richmond frequency converter in Philadelphia is being staffed 24 hours a day to monitor the facility's operations, and the other two Amtrak owned converter stations are staffed during the morning and evening rush hours.

The utility owned converter stations are normally manned stations.

These actions are being taken in response to power interruptions that occurred on May 25, June 2, 3, 10 and 21, 2006. On May 25, the problems experienced with the electrical system resulted in a total system shutdown of the Northeast Corridor, affecting 91 trains, including 27 Amtrak trains, 26 New Jersey TRANSIT trains, 35 SEPTA trains and three MARC trains. In testimony given before the New Jersey State Senate Transportation Committee, on June 22 Senior Vice President of Operations William Crosbie described the problem as "a load sharing failure" of power stations between Chester, Pa., and Philadelphia. This caused signifi-

cant delays on the Northeast Corridor and 12 trains were stranded in tunnels during the outage. There were no injuries and trains reached their destinations when power was restored three hours later.

The power interruptions in June were all attributed to separate, unrelated causes.

In his testimony Crosbie also apologized to passengers affected by the outages and vowed that Amtrak "will take all action to rectify any problems we find and do our utmost to ensure that this does not happen again."

Ridership, Revenue Up Slightly in May

Amtrak ticket revenues reached \$119.3 million in May, the eighth consecutive month of growth in FY

overall increase of 11 percent over last year. Ridership in May was up 3 percent.

One of the exceptions to the revenue growth was the Kansas City-St. Louis service, which saw

declined 6 percent against May one year ago, ticket revenue rose 8 percent. Trains that contributed to the revenue gain included the *Auto Train* (19 percent), the *Cardinal* (17 percent) and the *Empire Builder* (14 percent). Unfortunately, May on-time performance for long-distance trains was down 10 percentage points from May 2005, to 32 percent.

Fiscal-year-to-date, revenue increased 9 percent while ridership rose 1 percent over the same period last year. Short-distance trains saw a 5 percent increase in passengers and brought in a 12 percent increase in revenue. Long-distance ridership dropped 2 percent, while ticket revenue rose 7 percent.

On the Northeast Corridor, results against last year were difficult to compare, as *Acela Express* service was suspended throughout May 2005 for brake rotor cracks. Additionally, the May 25, 2006 power outage resulted in an estimated loss of \$800,000 in revenue.

Ridership and Ticket Revenue for May 2006			
Month of May	May '05/Actual	May '06/Budget	May '06/Actual
Ridership	2,095,254	2,082,724	2,115,474
Ticket Revenue	\$101,448,182	\$117,795,355	\$119,282,321
Fiscal Year-to-Date	FY '05/Actual	FY '06/Budget	FY '06/Actual
Ridership	15,633,522	15,303,805	15,746,434
Ticket Revenue	\$803,371,181	\$866,675,700	\$877,301,957

'06. This trend was sustained in large part by the popularity of short-distance corridor trains and increasingly high gas prices. With 2.12 million passengers, ridership for the month saw a slight increase (1 percent) over last year.

As gasoline hovered at a near-record \$2.95 per gallon, passengers took to the rails — particularly aboard short-distance trains. Most short-distance and state-supported routes generated considerable ticket revenue growth, with an

The bigger revenue increases over May '05 were seen on *Downeaster* (26 percent), *Illini* (26 percent) and *Pere Marquette* (25 percent) trains.

revenue decline \$100,000 in May, largely due to Union Pacific track work.

While long-distance ridership

Top Five Routes (Ticket Revenue)	May 2006 (vs. May 2005)	
Regionals	\$34,321,113	+1%
Acela Express / Metroliner	\$29,895,065	+75%
Auto Train	\$ 5,022,786	+19%
Pacific Surfliner	\$ 3,676,054	+11%
Empire Service	\$ 2,971,425	+7%

TRAIN OF THOUGHT

With the busy summer travel season in progress, I'd like to take this opportunity to thank you for your hard work and to take stock of why we're here in the first place — the comfort and safety of our customers.

Millions of people will walk through our stations and travel aboard our trains this summer. For some, the trip aboard Amtrak is the vacation, for others it's the preferred mode of transportation to their destination. They've made these plans in advance and, like you, look forward to their time off.

Our goal is to treat people as we'd like to be treated on our vacations, so being busy shouldn't become an obstacle to delivering quality customer service. Whether you're a ticket agent managing a long line or a conductor loading a full train, remember to act in a professional and courteous manner, regardless of how busy things get.

I know that at times we feel like we have little control over some of the obstacles we face, like overcoming poor host railroad on-time performance, for example. But I want to thank those employees who do their best in those situations to make passengers' on-board experience a positive one. Informing passengers about delays and keeping a professional and upbeat attitude makes a big difference in passengers' trips — I know, because I read their letters.

We've maintained a respectable safety record so far this year, and as you know, accidents don't take holidays. Being busy is never an excuse for a lapse in safety. Each season has its safety hazards, but with all of the activity on the right-of-way and in the stations and on trains, please watch out for your fellow co-workers and our passengers this summer.

I hope you have an enjoyable and safe summer.

David J. Hughes

Rebuilt Corridor Clipper Back in Service

The 10002 Track Geometry Car that operates with Northeast Corridor *Regional* trains is back in service, following a complete remanufacture performed by Bear Car Shop and Engineering Track employees last month.

Known as the Corridor Clipper, the 10002 assesses track conditions. It generates data used to monitor the rate of track degradation and evaluates the quality of maintenance work by using gyroscopes and accelerometers similar to an airplane navigation system to measure how the car runs across the track.

It also includes a second system of optical sensors and distance transducers that locate the rail. These systems work together to measure the track while the car operates as part of revenue trains that travel at speeds of up to 125 miles per hour.

To perform these and other functions, the rebuilt car is equipped with 17 new computers that collect,

Inside the Track Geometry Car, Engineer of Rail Stress Management Marty Perkins sets parameters on the computer rack to display track measurement data for Maintenance-of-Way personnel. The computer rack contains the processing system that records track geometry measurements collected as the car operates on the system.

interpret and display track and catenary measurements.

New wiring was installed throughout the car that connects these computer systems to a Global Positioning System and an

instrumentation beam, which is equipped with a laser and digital camera sensors to survey and measure the track.

Awards Acknowledge Safety Efforts

Two prestigious awards announced in May brought the company industry recognition for its safety consciousness. The E.H. Harriman Memorial Awards Institute recently recognized Paul Servansky, Jr., a track inspector assigned to the Lancaster, Penn., subdivision, with a Harold F. Hammond Certificate of Commendation for his contributions to employee safety in FY '05. In addition, in May, the Coaster commuter rail operation received a nod for its role in the San Diego Northern Railway's (SDNR) 2005 JAKE Award for excellence in railroad safety.

The Harriman Institute each year

honors individual railroad employees who have demonstrated outstanding safety achievement. It is Amtrak's goal to win a safety award from the Harriman Institute for its system-wide safety record.

Servansky, one of nine railroad employees to be honored with a certificate for promoting safety, helped the Lancaster Track department go injury-free during FY '05.

A 30-year railroad veteran, Servansky's extensive knowledge of track standards has proven to be invaluable. He actively mentors and instructs foreman and workers on the important safety aspects of track geometry, tie conditions and

track buckling countermeasures.

As for the West Coast honors, the JAKE is the highest safety recognition bestowed by the American Short Line and Regional Railroad Association on a non-Class I railroad.

Wayne Penn, Rail System Safety and Compliance officer for North County Transit District (NCTD) stated, "While the efforts of many people contributed to this honor, this award is largely the product of Amtrak/Coaster General Manager Joe Yannuzzi's leadership and the dedication of his staff." To

Attending the ceremony hosted by the Association of American Railroads (AAR) in Washington are Senior Vice President of Operations Bill Crosbie (L. to R.), acting President David Hughes, Track Inspector Paul Servansky Jr. and acting Chief Engineer Bruce Willbrandt.

which Yannuzzi added, "The recognition is the result of the positive

Popular Group Promotion Extended Through Winter

Based on the success of the *Share Fares* promotion that was first launched in February 2005 for the Northeast Corridor's *Regional* and *Empire Service* trains, the program has been extended through Dec. 11, 2006. That means that Northeast Corridor passengers traveling in groups of three or more have several more months to save on travel and avoid high gas prices.

"We've extended the program because it's proven to be so successful," stated Marketing Director Darlene Abubakar. Since the *Share Fares* program was launched, nearly 133,000 passengers — generating \$4.1 million — have taken advantage of the program through May.

Share Fares is aimed at filling seats during slow travel periods. Because the program is revenue managed, it makes use of seats that might

otherwise go empty.

Through revenue management, passengers may only book reservations with the *Share Fares* discount when the lowest available fare is offered; when demand is up and sales are occurring at higher fare levels, the discount becomes unavailable.

The promotion is valid on select Northeast Corridor trains and allows groups of three to six passengers to save 25 to 50 percent on travel when two passengers in the group pay either the full adult fare or certain discount fares.

"By enabling small groups to take advantage of low fares, the program gives people who might not otherwise use our service the opportunity to ride the train, experience the convenience of train

travel and perhaps become repeat travelers," added Abubakar.

The offer is primarily being promoted through television advertising in the Albany, N.Y., market and print and radio advertising in key markets. The offer is

also posted on various Web sites including Amtrak.com, select convention and visitors bureaus, Student Advantage, International Student Identity Card and Veterans Advantage.

Schmidt On The Road

Tom Schmidt, assistant vice president of Transportation, talks with Assistant Conductor Eileen Scherer before Metroliner 2300 departs Washington.

A 35-year railroad veteran, Schmidt joined the company in April, reporting to Vice President Customer Service Emmett Fremaux. This represents a shift in the reporting structure and philosophy, better aligning customer service goals with the day-to-day operation of the railroad.

"It better integrates what the operational priorities are with the needs of our biggest priority — the passenger. Tom and I work very closely and he is very attuned to how interconnected operations and service delivery really are," said Fremaux.

Schmidt retired from CSX Transportation as vice president of Engineering after having held numerous other senior positions there in network operations, train control technology and service design. He also served as president of the CSX subsidiary Richmond, Fredericksburg & Potomac Railroad. He most recently was a vice president of Transystems Corporation, a national consulting firm.

Customer Service Managers to Foster Service Excellence

Editor’s Note: This is the second in a series of periodic question and answer sessions with the Customer Service department. This month, Customer Service Vice President Emmett Fremaux describes the role of the Field Operations team and its Customer Service Managers.

Amtrak Ink: You’ve established a Customer Service Field Operations group in your department — can you tell us more about the team?

Fremaux: Amtrak is devoting a great deal of attention to the delivery of quality customer service. That’s reflected in a number of ways, for example, the recent integration of the Transportation department with Customer Service to better align customer service objectives with our day-to-day operations.

A key new component of the department, the Customer Service Field Operations group, is dedicated to ensuring that the customer service standards we set are being consistently delivered on trains and in stations. This team, led by Senior Director Customer Service Field Operations Brian Rosenwald, is there to support all of the Transportation divisions in carrying out our customer service objectives. Jim Brzezinski, based in Chicago, is the Director, Field Operations for the East and Dee Mason, based in Los Angeles, is his counterpart for the West. Together, they oversee the more than 20 newly hired Customer Service Managers that are being deployed this month.

We were extremely selective in filling these positions — we had nearly 500 applicants for the 24 openings — because these managers need to be effective leaders, coaches, and advocates for the passengers, among other things.

AI: What is the role of the Customer Service Managers?

Creating the Customer Service Manager position was a key component of our Strategic Initiative aimed at measuring and improving customer service. The primary goal of these managers, who spend the majority of their time on the road aboard long-distance trains, is to improve the overall experience of the customer. Specifically, that means making sure that the service is delivered in a coordinated and consistent manner by assessing front line employees’ customer service performance, recognizing outstanding work, intervening and coaching where we have weaknesses and addressing problem areas.

Working hand-in-hand with divisional managers, their objective is to optimize the performance of employees as individuals and the crew as a team by coordinating the overall effort to deliver consistent, high-quality customer service, reinforcing good performance and by taking corrective action if necessary. These managers are instrumental in measuring not only how an individual employee is performing, but also how each employee’s role contributes to the overall service in the eyes of the customer.

While riding a train, the manager examines all aspects of customer service, ranging from food service preparation to the friendliness and quality of

service delivery of the conductors and OBS employees, to the revenue generated aboard a train. The manager also surveys passengers in coaches and sleeping cars, taking note of what they say about their experience during the trip and taking action to improve service as needed.

Before leaving the train, the manager reviews each employee’s customer service performance, offering positive feedback and/or immediately addressing problem areas when it’s required. For instance, the manager may coach an employee to help him or her make on-board announcements that are more consistent and professional. This assessment then goes to the division managers as well as the Field Operations group.

The customer service managers will be dispatched to trains or stations that aren’t making the grade, will be utilized to introduce and help manage change when we are launching something new, or to intervene where we have detected a trend that requires attention. Let’s say for example, that a certain train continually undersells items in the lounge car — that’s something that a manager would review with the division supervisors and the crew to determine how to improve sales.

If a train is chronically underperforming, managers will be dispatched to address the problem area by providing employees coaching, re-direction and/or counseling until it improves.

AI: Why do we need these managers?

Our goal is to elevate the level of customer service across the board and what we’re missing is this group of managers whose sole purpose is to work with train crews and station employees to raise the customer service bar — in a more effective way than we have done in the past.

The key is to change inconsistent service to dependable, professional service and we can’t achieve that without this kind of focus on observation, coaching, assessment and performance measurement.

As part of the company’s mission, we have very specific customer satisfaction goals that the managers and our crews must achieve. We want 90 percent of the passengers we survey to rate our service as “good,” indicate that they would recommend it to others, and feel that they were treated helpfully, courteously and professionally. We also want the same high percentage to rate our trains as being clean.

To measure our progress toward these goals, we’ve got to have reliable, up-to-date data. One of the first things the managers are going to do is contribute to the design of a new customer satisfaction data collection process. We want to make sure that we capture the data from customers using a variety of methods, so we’re considering surveys that can be completed online, by recorded message and on comment cards. The information will be train specific, and we’ll use it to gauge our progress, target problem areas (to which these managers would be dispatched) and work with division management to improve employee performance. We’re

Mineola Station Gets New Look

A rededication ceremony was held last month at the Mineola station to celebrate the completion of its \$800,000 restoration.

The station, which served more than 4,000 *Texas Eagle* passengers last fiscal year, was restored to resemble its original 1906 exterior design. As part of the project, a new railroad artifacts museum was established. Improvements were also made to the parking area, station signage, landscaping, ticket office and waiting area.

Utilizing grants from the Texas Department of Transportation, Mineola Development Inc., and a private foundation, among others, the city brought the station back to its early 1900s splendor.

currently finalizing the initial phase of this performance assessment process, in which we will collect detailed data from this management team on an ongoing basis, and we expect to have that up and running next month.

The information we gather will be in addition to the customer feedback from passengers that is captured by the company each month as the Customer Service Index (CSI scores, which report at the route level, but are not train or crew specific) and the feedback we get from the Amtrak Customer Advisory Committee.

AI: Will these managers be solely focused on long-distance trains?

Because customer complaints about train travel far exceed the complaints we get about stations and because this is where we see the greatest number of inconsistencies, our primary focus is the on-board experience, with a secondary — but no less aggressive — concentration on stations.

Our initial focus is long-distance service, but that doesn't mean that we won't dispatch managers to other trains as needed.

AI: Are these managers like the on-board chiefs that were in place a number of years ago?

No, the functions and responsibilities of these managers are significantly different. They manage key functions that the chiefs didn't: responsibility for budgeting, involvement in the implementation of the discipline process, establishment of performance metrics and corrective action that addresses conduct and service delivery.

These employees should also not be confused with the supervisors that had stepped in to help with the first few weeks of implementation of the new long-distance dining service, all of whom are now back to focusing on their other job responsibilities.

AI: How often will crews see these managers?

How frequently crews get a visit from the managers depends on how well the train is performing, based on a variety of customer service criteria. At the very least, every long-distance train crew member will be assessed by a manager, in person, twice a year.

AI: Does this change the reporting structure on trains and in stations?

No, it doesn't. The customer service managers are not members of the crew or these employees' direct supervisors, so the conductor is still in charge and he or she still reports to the current supervisor. That said, the customer

Customer service managers participate in a classroom discussion during the two-week training class held in Chicago in June (L. to R.): James Burns; Mary Ann Schaar; William Rawlings; Meg Collins; Stephanie Pavlakis, senior director Human Resources; Dee Mason, director Field Operations; Megumi Nozaki; and Dee Fritch, director Human Resources.

service managers absolutely have supervisory authority over conductors, OBS crews and station employees while working with them on the trains and in the stations. They will work closely with divisional management on any necessary corrective action and on ensuring that service excellence is appropriately recognized.

AI: Do you have anything else to add about the managers?

Our ultimate goal here is to deliver safe, consistent and professional service to all passengers on every train and in all stations. All employees who are part of the customer service team — OBS, stations and conductors — the faces of Amtrak who greet our passengers every day and deliver service in a friendly and professional manner are the keys to reaching this goal. Providing our front line employees with effective management support, oversight, direction, and understanding of the challenges they face and how to overcome them is the mission of this new group. Making a positive impact on service quality that registers strongly with our customers is one of the keys to our survival.

Amtrak Police Department Leads the Way

The Amtrak Police Department supported community efforts by taking the lead on a couple of events in June.

Detective John Mumford (photo, left) bears the torch for the Special Olympics Law Enforcement Torch Run in San Francisco last month. The 13-mile, four-hour run was a fundraising event held to support the children and adults who participate in the Northern California Special Olympics Programs.

This is the third time that Mumford has participated in the run and the first time APD has been given the honor of bearing the torch.

In another demonstration of its community support, APD held a Security and Emergency Preparedness Expo at New York Penn Station in partnership with 37 area law enforcement and emergency response agencies to provide crime prevention and emergency response materials to the public. On display at the June 22 event were special units that included command center vehicles and illustrations, and live demonstrations were held throughout the day.

More Stations Offer Entertainment Rentals

The digEplayer™ portable entertainment unit, first enjoyed exclusively by *Auto Train* passengers, is now available to passengers departing from five more stations. The player, which comes loaded with 12 of the latest movies, 10 popular TV shows, music and music videos, is being offered for a nominal rental charge to passengers traveling from Chicago, Los Angeles, Emeryville, Portland and Seattle.

Travelers may rent digEplayers at station kiosks staffed by Railway Media employees before departing for a trip and return the unit to the kiosk when they reach their destination — the players should not be returned to Amtrak employees. Passengers traveling to stations without a Railway Media kiosk pay an additional shipping charge and return the unit in a pre-paid FedEx package provided at the time of rental.

The hand-held unit is about the size of a portable DVD player, contains a 40 gigabyte hard drive,

A Railway Media employee introduces Amtrak customers to the digEplayer, a personal entertainment unit that is available to passengers traveling on select long-distance trains departing from Sanford, Lorton, Chicago, Los Angeles, Emeryville, Portland and Seattle.

and utilizes the latest digital technology. Movies are rated G, PG or edited to be PG in compliance with Amtrak's current standards for on-board movies. All entertainment options are updated every 30 days.

The cost for travelers to rent the player from Chicago to Los Angeles is about \$22, while passengers taking a five-hour trip from Chicago to St. Louis will pay approximately \$13 for the rental, plus an \$8 shipping charge.

Plans are in place to equip Superliner lounge cars with a special drop box to allow passengers to return the units before leaving the train.

Local Festivities To Boost Summer Ridership

Thousands of athletes and spectators from more than 70 countries are expected to travel to Chicago this month to attend the Gay Games. Amtrak has a special promotion in place to attract travelers going to the week-long series of events, which will feature competitions in 30 sports, along with band and choral performances from July 15 to 22 at several venues including Wrigley and Soldier fields.

According to the Travel Industry Association of America, the gay and lesbian community represents a \$65 billion market in the United States.

Passengers traveling to the games will receive a 15 percent discount off the lowest available rail fare. The offer is being jointly promoted by Amtrak and the Gay Games organization.

Similar programs are also being offered in other parts of the

country to take advantage of other large summer gatherings or festivals.

To promote travel on the *Pacific Surfliners*, Amtrak is the Official Transportation Sponsor of the 13th Annual Oxnard Salsa Festival being held July 29 and 30, which is expected to attract 75,000 attendees. Amtrak is being featured on the festival's Web site and 10,000 rack cards are being distributed at consumer shows, in stations and at hotels.

The company is also a sponsor of Fort Worth's largest multi-day Hispanic/Latino festival — Gran Fiesta de Fort Worth — being held July 28, 29 and 30. The free event, expected to attract 75,000 people, is a colorful outdoor celebration of Latin music, art and cuisine. Amtrak's involvement includes a booth at the event and train ticket giveaways on five local Tejano radio stations a week prior to the event.

Three Marketing Programs Recognized for Innovation

The Transportation Marketing & Communications Association (TMCA) awarded the Marketing department with three TMCA 2006 Compass Awards for outstanding marketing communications initiatives: two Awards of Excellence and an Award of Merit.

An Award for Excellence in the New Media category was earned for the creation of the Amtrak Guest Rewards® member Web site, promotional e-mails and e-statements.

A second Award of Excellence was received in the Publications category for the company's redesigned 2005-2006 Amtrak America brochure that includes a system map, train routes, information about riding trains, a glossary of train terms, descriptions about accommodations and dining services, and tips for planning a trip.

Amtrak Guest Rewards was recognized a second time with an Award of Merit in the Communications Collateral category for its "Someone Like Me" message, which was created to attract new members and thank existing members for their business. Using images and more personalized copy that highlight the diverse range of AGR members, the message is designed to broaden the appeal of the program.

The Compass Awards, known previously as Tranny Awards, were presented on May 23 at TMCA's Annual Conference and Expo in Keystone, Colo. The nearly 170 attendees included marketing professionals, creative agencies, suppliers and media, representing railroads, motor carriers, airlines, ocean carriers, port authorities, technology innovators and passenger transit organizations.

Positive Response Extends On-Board Product Program

An overwhelmingly positive response to the pilot product sampling program launched last summer has given the green light to extending a brand new gift package to sleeping car passengers this summer.

Originally developed and coordinated by the Marketing department, the program enhances the travel experience by improving customer satisfaction and the quality of the service. New products in this season's special box include Celestial Seasonings® tea, Gold Bond® body powder, Dove® chocolate, Wrigley's candy and St. Ives® hand lotion.

As a result of this product sampling program, the companies

with which Amtrak partners benefit from additional customer exposure to their products, which are distributed in 60,000 boxes — six months' supply — through Western Folder and commissaries. The boxes also complement other sleeping car amenities, such as the morning newspaper and coffee.

Passenger product surveys, a high-return ratio on the mail-in response form and favorable on-board employee feedback resulted in the program's continuation. "This program creates a great opportunity for Amtrak to grow future partnerships," noted Joe Wenclawiak, manager, Marketing Operations Support department.

APTA Opens Doors

At the American Public Transportation Association's (APTA) 2006 national conference held in New York, (L. to R.) acting President David Hughes, Caltrans' (California DOT) Chief Division of Rail Bill Bronte, Amtrak Board Chairman David Laney and Vice President of Planning and Analysis Paul Nissenbaum gather for a photo at Amtrak's rail products and services showcase booth.

The June conference provided the company with an opportunity to present itself to state representatives and commuter partners as the industry leader in providing passenger rail and contractual services.

New York Division Group Recognized for Safety Accomplishment

The New York Division Electric Traction Substation Gang at New York Penn Station has worked over 1,000 days without an FRA-reportable injury. The gang inspects and maintains substations 43 and 44, the transmission line and signal line power through East and North River tunnels as well as installs new equipment and protects contractors on the job. The accomplishment was officially recognized in March when the team reached the 1,000 day mark.

These employees have demonstrated their dedication to working

with a focus on both safety and quality workmanship. Their consistent safety awareness and attention to the tasks at hand have enabled the team to achieve this goal.

Front row (L. to R.): Stanley Sidlowski, Rominie Hinds, Michael Wood, Timothy Fedroff. Second row: Richard Sullivan, Luciano Martinho, Richard Charles, Arthur Barnes, Michael Siwiec, Antonio Walker, Jenny Martinez. Back row: Robert Joannou, Ruthven Gray, Dwayne McDowell, Curtis Allen and William Marsh. Not pictured are Joseph Charles and Kimberly Carulli.

Computer System Monitored for Proper Use

The use of Amtrak computer systems, software applications and computer facilities is to be done in a manner that is consistent with the company’s standards of business conduct. The use of Amtrak computer facilities or equipment in any manner that may be considered abusive, unethical or inappropriate, including accessing, transmitting, or receiving discriminatory, harassing, sexually oriented, offensive, illegal or improper messages, materials or Web sites is not permitted.

Many of the “jokes” that circulate on the Internet are inappropriate in the workplace and should not be forwarded using company equipment or systems.

Inappropriate use of an Amtrak computer is subject to disciplinary action (including dismissal). Computer systems, including the Internet, e-mail and stored files are not private and are routinely monitored to ensure their proper use. Using Amtrak computers to retrieve inappropriate material from personal e-mail accounts is also a violation of company policy. Additionally, deleted e-mail messages are archived and can be recalled.

Amtrak has a legal responsibility to ensure that its resources are being used for legal purposes and to report evidence of illegal activity to the appropriate authorities. Moreover, the company may refer to law enforcement authorities any

FRONT LINE FOCUS

Dear Amtrak:

My wife and I recently traveled via Amtrak. This was our first opportunity to travel by train in the U.S. and it was a very favorable event. ... Our trip from Chicago to San Antonio could not have been any better. Not only was the service very enjoyable but the persons who attended to our every need were very professional. Our conductor on our sleeper car was Dan Small. He not only kept us informed but also treated the passengers with the utmost customer service. We appreciated his attitude and him very much.

... Our attendant in the dining car, Chris Worley, attended to all of our needs in a professional manner. He made attending ... dinners seem like an event in itself. I appreciated his attention to detail and to customer service.

Both individuals made a point of knowing the passengers' names and treating everyone as valued customers. ... I will certainly travel on Amtrak whenever the opportunity presents itself due to individuals such as Dan and Chris.

Sincerely,

Jim K.
San Antonio, Texas

Dear Amtrak:

This letter is to inform [you] of the excellent services that Vincent Dorest and Cheryl Rainey provided to our family while traveling in May. ...Both work in the Dining Car on the *City of New Orleans*, trains 58 & 59.

We were greeted with a smile, as we were welcomed into the Dining Car. Both employees were extremely pleasant, courteous and displayed the appropriate personalities that are so important when working with the public.

The riders who chose to dine did not have to wait long to place orders or receive their food. Vincent and Cheryl returned to the tables several times, making sure that everyone was completely satisfied with their meals. After dining, both thanked us for dining with them and riding on Amtrak.

Sincerely,

Mr. & Mrs. Louis J.
Chicago, Ill.

Initiatives Yield Improvements in Key Areas

While the company has achieved some operational savings, Amtrak must continue to seek out and implement cost-reduction measures, according to a U.S. Department of Transportation Inspector General report on the progress to date of some Strategic Reform Initiatives.

The U.S. DOT Inspector General was required by law to certify that Amtrak has achieved operational savings by July 1, 2006. Without this certification, Amtrak would be prohibited from using federal funds to subsidize food and beverage and sleeping car service.

First unveiled in the spring of 2005, the series of initiatives is designed to increase the efficiency of the company, optimize assets, reinforce quality customer service, reduce costs and ultimately trim the company's reliance on federal subsidies.

To that end, the company continues to examine every angle of the business to identify areas for improvement — an endeavor that is multi-faceted and that doesn't happen overnight. Just as various proposals are being developed for consideration down the road, others are already taking shape and beginning to show quantitative results. As reported by the DOT Inspector General in its report, the company has achieved \$46.3 million in operational reforms through May. The company expects to meet its strategic reform initiatives goal of \$44.7 million in additional reduced costs and new revenue next fiscal year.

Among the initiatives currently underway are those associated with food and beverage service. The negotiation of the Gate Gourmet contract that became effective Jan. 1, 2006, is expected to

yield \$900,000 in savings this fiscal year. In FY '07, the first full year of the contract, the company is projecting \$1.5 million in savings.

As for the new long-distance train dining service model that was fully implemented across the system in June (excluding the *Empire Builder* and *Auto Train*), preliminary results show that the company will reduce costs by \$3.9 million in the second half of this fiscal year. The company estimates that it will reach \$15 million in cost reduction next fiscal year as a result of the new dining service. Federal law directs Amtrak to reduce the loss associated with food and beverage and first class (sleeping car) service or face the loss of funding.

Following two weeks of intensive training in June, Customer Service managers are being deployed on selected long-distance trains to

optimize the crews' customer service delivery. In addition to the on-the-road duty, the managers are contributing to the development this summer of a new Customer Service Quality Measurement system that will aggregate passenger comments and track customer service metrics. Initial data collected this month from the *Capitol Limited* will begin the service quality measurement process.

Sustaining a reputation for quality customer service also puts the company in a strong position to compete for state and commuter agency contracts, which are important revenue generators. State operating support for passenger rail has grown significantly — from \$8 million in 1989 to \$150 million this year, and experts point to corridor development as the most

MOW Crews Complete Harrisburg Line's Cork Interlocking

As an integral part of the six-year \$145 million Keystone Corridor Improvement Project, the rehabilitation and electrification work being done at Cork Interlocking in Lancaster, Pa., is near completion, thanks to a force of 70 Maintenance-of-Way employees that is getting the route ready in time for the launch of improved *Keystone* service in October.

In partnership with the Commonwealth of Pennsylvania, the Keystone Corridor Improvement Project will increase the number of frequencies to 14 daily roundtrips between Harrisburg and Philadelphia, as well as provide smoother rides and shorter travel times. The electrification of the railroad will cut the standard trip time between Harrisburg and Philadelphia from 120 minutes to 105 minutes, with several daily express trains making the run in just 90 minutes.

Maintenance-of-way disciplines involved in the project include Track, Electric Traction, Communi-

cations and Signals, and Bridges and Buildings. While the trains that travel the rails today, are operated with diesel engines, at the opening of the new service trains will be all-electric.

MOW crews participating in the rebirth of the Harrisburg Line at Cork Interlocking are installing turnouts and switches during available work windows over the course of the 11-month project. To reduce the impact to the traveling public, crews are frequently scheduled during planned 55-hour electric outages on the track beginning on Friday nights and running through Monday mornings.

Tom Denio, superintendent, Engineering Production, credited the Engineering and Transportation departments in particular for their work to fully optimize the available work windows. "They have really done an outstanding job of keeping the project on track as we work toward the launch of the new service."

Denio noted that the completion of the interlocking will also have other advantages.

"Cork will streamline the operation between the freight railroad [Norfolk Southern] and Amtrak. It will make the railroad more efficient and reliable to dispatch trains through the area," explained Denio. The interlocking spans four miles and when completed, will consist of three interlockings; Lititz, Cork and Conestoga.

Mid-Atlantic Division Engineer Joe Guzzi noted that while Cork is an important part of phase I of the overall Harrisburg Line rehabilitation, a second phase of the project will begin following the launch of the new service at the beginning of FY 2007. "While the work that is being done in time for the inaugural launch is important, it doesn't

Track department crews operate front-end loaders to shift the number 2 track to the platform at Lancaster station.

mark the completion of the job. Additional projects including extensive track, the bridge and communication and signal work will begin near the start of the next fiscal year," said Guzzi.

Other planned infrastructure improvements to occur during the first quarter of 2007 include wood and concrete tie installation; surfacing of track; substation improvements (for electrical reliability); signal, bridge and building improvements.

TRAIN OF THOUGHT

As I write this, record-high temperatures beat down on many areas of the country. The extreme heat and poor air quality can do a number on the human body, so I caution everyone working outside to stay properly hydrated and listen to your internal warning systems. Don't push yourself to the extent that you put yourself, your co-workers or passengers at risk.

But as the heat abates (hopefully) and summer winds down, so does our fiscal year. While we still have a bit of time before the start of the new fiscal year on Oct. 1, it looks as though we'll close out the current year on financially sound ground.

Overall, we made our dollars go a long way to finish the capital work we had planned for the year — and we should feel good about this accomplishment. And, at this point, it looks as though we will exceed both our ticket revenue and ridership targets.

As you know by now, the Senate Appropriations Committee last month voted to provide us \$1.4 billion in funding for next fiscal year, which is higher than the \$1.1 billion approved by its House counterpart. The full Senate still must consider the bill and then the two chambers have to iron out their differences, so a few steps remain.

As Congress considers the appropriate level of funding for Amtrak for 2007 it might be useful for us to review what we owe them for their money.

Among the highest priorities is consistent, good customer service. Part of our mission is to have 90 percent of our customers rate our service as "good." Currently, that figure is running in the 70s. Clearly, we need to do better.

I know that our front-line employees sometimes face a number of challenges, some of which they have little control over, like poor on-time performance or unreliable equipment. However, managing around those obstacles is part of the job; it's what separates the pros from the rest. Our pros have the unique qualities that make them true customer service professionals. We all need to be pros when it comes to handling customers...even the ones that are momentarily in bad humor.

Amtrak must support these key employees with the right tools, comprehensive training, coaching, reliable equipment and schedules, and the support needed to get things fixed when they are broken. And we are putting more money and attention into doing just that. But, it doesn't end there — employees in other departments

David J. Hughes

must know that they are there to support our collective goal of providing consistently good customer service.

All roads lead to customer service, no matter what your job is. To those of you who are aboard a train today, thanks for delivering good Amtrak service. For those who are in a shop, on the track or in an office, thanks for supporting Amtrak in providing good service. That is the least we can do to earn our keep.

We've still got a long row to hoe, but we're making progress. I'll keep you up to date on our budget and the outlook for next year — in the meantime, stay focused, properly hydrated and look out for one another.

Expanded Amtrak Capitol Corridor Service Begins this Month

Beginning Aug. 28, Amtrak's Capitol Corridor service will offer passengers more travel options

The busy Richmond station contributed to the Capitol Corridor's ridership growth by serving more than 200,000 travelers during FY '05.

with new schedules and added train service — four new roundtrips between Sacramento and Oakland and three between Oakland and San Jose replace Thruway motorcoach service.

"While the schedule changes will be minor, passengers will experience slightly shorter trip times between Oakland and San Jose and see new numbers for some trains," explained Assistant Superintendent Road Operations Brody Heilman.

Funded and managed by the Capitol Corridor Joint Powers Authority and operated and maintained by Amtrak, the service has seen seven consecutive years of ridership growth

through FY '05 and nine straight years of ticket revenue increases. From the start of this fiscal year through June, ticket revenue of almost \$11 million rose nearly 11 percent over last year and 7 percent over budget, while ridership during the same period was slightly higher.

"Through savings realized from our operational efficiencies, we're funding a 33 percent expansion without an increase in state funds," said CCJPA Managing Director Eugene K. Skoropowski. "Along with growth comes a need for an increase in service, and based on the growing popularity of the service, most would agree that this investment has proven to be very worthwhile."

Events will be held in Sacramento and San Jose later this month to celebrate the service expansion.

Newly Adopted Maintenance Practice To Improve Reliability, Reduce Costs

High Speed Rail Division Begins RCM

The High Speed Rail Division recently began implementing Reliability Centered Maintenance (RCM), a highly effective maintenance practice used by the likes of the U.S. Navy and NASA, among others.

Based on the basic principle that maintenance should both benefit the hardware and be worth doing, RCM seeks to validate current maintenance procedures to preserve and extend equipment reliability. In other words, RCM analyzes maintenance procedures to make sure that the right tasks are being done at the right time on the right equipment and for the right reason.

By determining the most effective approach to maintenance, costs are reduced, reliability goes up and a standardized set of more efficient maintenance procedures becomes part of the daily work routine for the High Speed Rail Division.

This summer, High Speed Rail Mechanical, Operations and Customer Service employees completed five week-long RCM

analysis sessions. Each week-long session, known as a Maintenance Effectiveness Review (MER), comprises one day of training on the In-Service RCM process followed by four days of hands-on RCM analysis. Each MER examines maintenance tasks for a specific set of equipment or systems — the first MER, for example, scrutinized the daily, quarterly and annual scheduled maintenance requirements performed on car bodies, couplers, doors and internal systems.

The In-Service RCM evaluation process considers the function of the system being reviewed, the failure modes affecting that function, as well as the applicability and effectiveness of a certain maintenance requirement. The analysis is facilitated by professional RCM practitioners and includes participation of design engineers, along with Operations and Mechanical employees. Those employees represent a range of crafts including trainmen, loco-

High Speed Rail Maintenance Effectiveness Review participants come from all three facilities and a range of crafts. Taking a break from the fourth MER in July are: (First Row, L to R:) Pipefitter Alex McAslan (New York), Electrician Tech Mike Santagata (Boston), Locomotive Engineer Carlyle Smith (Washington), Electrician Stacey Deffenbaugh (Washington), General Foreman Gary Jackson (Washington), Senior Engineer Chris Startemeyer (New York). (Second Row, L. to R. :) Locomotive Engineer Randy Halsey (Washington), General Foreman “Jaq” Jaqmohan (New York), Air Brake Engineer Chuck Florian (Wilmington), Machnist Daivd Patterson (Washington). (Back Row, L. to R. :) T-Solutions RCM Facilitator Chris Wenz (Washington), Carman Pat Flannery (New York), Supervising Tech Foreman II David Smith (Washington), Senior Director High Speed Engineer Rudy Vazquez (Washington), Carman John Federici (Boston), Machinist Mike Morrissey (Boston), General Foreman Gordon Palmer (Boston), Pipefitter Bill Counts (Boston), Deputy RCM Ken Jacobs (Washington).

motive engineers, rolling stock engineering, and Engineering department employees. On occasion, on-board service employees are consulted as well.

As a result of the five MERs conducted this summer, more than 90 percent of all maintenance tasks analyzed were modified in some way; whether combined for effi-

continued on page 4

June Closes With Better-Than-Expected Results

High gas prices in June drove more travelers to the rails — particularly to short-distance corridor trains — and helped boost ticket revenue of \$130 million and ridership of 2.2 million to 4 percent above budget.

While short-distance and state-supported services posted 10 percent ticket revenue growth over budget, the *Wolverine* service, up 25 percent; *Downeaster*, up 21 percent; *Blue Water* up 27 percent and *Keystones* at 15 percent, were among the corridor leaders.

On the Northeast Corridor, *Regionals*’ contribution to the results were better than expected, with ticket revenue of \$35 million (14 percent over budget) and ridership up 4 percent.

Acela Express continues to show improvement, posting steady ridership and ticket revenue increases in all but one month between January and June. Delivering an 83 percent on-time performance (87 percent on the south end and 78 percent on the north end) in June, *Acela* service carried 256,000 passengers, beating budget by 7 percent, and generated \$32 million in ticket revenue, dropping 3 percent under budget.

Even though June results were favorable to budget, growth was hampered by nearly a week of flooding on the East Coast that forced the railroad to offer alternate motor coach service on some routes and shut down or

significantly reduce service on others, causing ridership and ticket revenue losses of 18,000 trips and approximately \$1.2 million.

In general, long-distance services fell short of budget during June in both ridership and revenue, primarily due to poor on-time performance — under 10 percent — of *Silver Star*, *Sunset Limited* and *California Zephyr* trains. Systemwide, the average for on-time performance in June was 64 percent, with long-distance trains at 25 percent OTP. Furthermore, an estimated \$300,000 in ticket revenues was lost due to the *Sunset Limited*’s continued service elimination east of New Orleans.

Among long-distance trains showing increases over budget in both ridership and revenue were the *Empire Builder* and *Coast Starlight*, up slightly

in each category; and *Auto Train*, which experienced a 4 percent increase in ridership and was just above budget in ticket revenue.

Due to a technological anomaly, June results included

revenue from one day of ticket sales that occurred in May but that was not included in the May results. As such, the \$2.6 million generated on that day in May contributed to the June results.

For the fiscal year through June, ticket revenues of \$1 billion were favorable to budget (2 percent), while ridership during the same period was up 3 percent.

Ridership and Ticket Revenue for June 2006			
Month of June	June '05/Actual	June '06/Budget	June '06/Actual
Ridership	2,108,877	2,104,693	2,191,445
Ticket Revenue	\$109,400,728	\$124,690,860	\$129,776,631
Fiscal Year-to-Date	FY '05/Actual	FY '06/Budget	FY '06/Actual
Ridership	17,742,399	17,408,498	17,937,879
Ticket Revenue	\$912,771,909	\$991,366,559	\$1,007,078,587

Automotive Group Drives Down Vehicle Costs

Since centralizing control of its automotive functions, Amtrak’s vehicle-related costs have steadily dropped by more than \$8 million over the past six years, according to the Procurement and Materials Management’s Automotive group.

“Everything from fleet spending and procurement to vehicle disposal, which previously was handled independently by each department, now comes out of Bear, Del., giving the company better control of the operation and progress on each vehicle from start to finish,” explained Senior Director Utilities Management Bob Jones, who worked for several years as Automotive director.

Consolidating operations provides the company with better oversight, resulting in reduced costs associated with vehicle replacement, leases and maintenance. It also enables the Automotive group to achieve considerable savings by

strengthening its relationship with U.S. General Service Administration (GSA), which leases over 200,000 vehicles worldwide and provides Amtrak with over 75 percent of its fleet.

Because GSA leases are available at about half the cost of those on the open market, Amtrak over the past few years has moved away from commercial leases whenever possible and increased the percentage of vehicles acquired through GSA. Systemwide fleet management has placed the company in a better position to negotiate improved lease, fuel and replacement costs with the GSA.

The railroad’s fleet of nearly 2,000 vehicles ranges from minivans that support employees’ day-to-day transportation needs, to trucks used to install track, maintain switches and repair the catenary system. Of this total, Amtrak leases approximately 1,350 vehicles from

GSA, 30 from other vendors and owns about 600.

Through working closely with employees who operate these vehicles and determining their needs, the Automotive group eliminated variations by assigning a specific vehicle for every job function. By reducing the variety, the company takes advantage of savings associated with purchasing multiple vehicles of the same type.

“We have made a remarkable difference in the bottom line by making a number of significant changes,” Automotive Director Donald Lubinsky explained. For

example, by advising employees to switch from premium to regular

At the Philadelphia Truck Repair Shop, Machinist Joseph Eichenger performs a pre-trip inspection. This rotary dump truck, which is not available for lease through GSA, is one of 13 vehicles of this type owned by Amtrak.

gasoline, fuel costs have decreased significantly. In other instances, costs were reduced by switching from four-wheel-drive to two-wheel-drive vehicles and from SUVs to minivans.

continued on page 7

Outside Support Sought for Call-Handling Function

Action Won’t Result in Full-Time Job Loss

Amtrak announced last month that it would seek bids from vendors to handle some portion of the calls to its toll-free reservation line. However, the railroad said it would do so only to address call center agent attrition, and that there will be no layoffs of full-time call center agents. Additionally, because Amtrak is discontinuing the part-time labor agreement, it will offer all part-time employees full-time employment in early 2007.

This action is consistent with the company’s efforts to reduce costs and become more competitive. By shifting more reservation and ticketing transactions to interactive channels such as Amtrak.com, Quik-Trak machines and voice response technology over the past five years, Amtrak has successfully reduced reservation and ticket distribution costs. Today, nearly half of ticketed reservations are completed via these channels.

Having achieved these savings, Amtrak faces a situation in which 89 percent of call center cost is labor, and this labor cost is among the highest in the industry.

Consequently, the RFP (Request for Proposals) issued by the company seeks bids from vendors to replace agent attrition at its call centers in Riverside, Calif., and Philadelphia. Amtrak asked vendors to submit proposals for call-handling services for a portion of the public gate function, and not special services such as Spanish-language, international sales and emergency calls.

The RFP process will take about six months to complete, with a vendor beginning to handle some calls in early 2007.

This RFP does not affect continuing operation of the call centers in Riverside or Philadelphia. All part-time agents were offered full-time positions to begin in early 2007, consistent with the TCU labor agreement covering call center agents.

“It is important that agents know that their commitment to Amtrak for providing our customers with quality service remains highly valued. But it is imperative that we improve our financial performance, which this initiative will do,” said Marketing and Sales Vice President Barbara Richardson.

Maintenance Practice To Improve Reliability, Reduce Costs

continued from page 3
ciency, reduced or increased in frequency, eliminated, or technically improved.

The end result was a vastly superior set of maintenance procedures for High Speed Rail. For example, one task reviewed at a MER was the quarterly inspection of the *Acela* inter-car drawbar (similar to the coupler that connects two cars on conventional equipment).

The MER analysis revealed that out of 500 inspections conducted over the course of five years, there was never a single defect found during this inspection. On the other hand, what was occurring while performing this inspection was damage to the bellows and the bridge plates that cover the drawbar. Consequently, inspection of the drawbar will now take place on a semi-annual basis.

“Once we determine that a task benefits the hardware, the next step is to question whether the task is effective — is worth doing and how often, based on safety, regulatory, operational and economic factors,” said Ken Jacobs, deputy for Reliability Centered Maintenance.

Additional RCM familiarization is planned for the week of August 21 at Sunnyside Yard, South Hampton and Ivy City for all shop employees.

RCM better matches resources with operational needs, to improve reliability and reduce maintenance costs. “Our operational needs are always subject to change, so this is a continuous improvement project. It doesn’t end here — we’ll be looking at all this again in three years,” noted Chief Mechanical Officer Vince Nesci.

Amtrak owns 20 *Acela* trainsets, 14 of which are currently in service. With the start of the new schedule in the fall, 15 trainsets will operate on the Northeast Corridor thanks, in part, to the implementation of RCM.

APD Accomplishments Honored at Ceremonies

In a series of recent ceremonies, APD recognized the exemplary performance of a number of its staff and associates with an event to honor its 2005 Officer of the Year, another to mark the promotion of 18 officers and a third to celebrate the accomplishments of members of the Philadelphia Law Enforcement Explorer Post while kicking-off the Washington Explorer Post.

APD Officer of the Year

For his role in leading over 50 criminal investigations including larceny, acts of vandalism, credit card fraud, employee threats and robbery, Amtrak Police Department Sgt. Kenneth Metz was recognized by APD Chief Sonya Proctor and Vice President Security Al Broadbent as Amtrak's 2005 Officer of the Year at a July 20 ceremony in Iselin, N.J. Letters of commendation from local politicians were presented to Sgt. Metz at the ceremony.

Based in New York Penn Station, Sgt. Metz was involved in making over 15 arrests, seven of which were directly connected to his investigations in 2005.

Highlights of his crime-fighting activity in 2005 include the arrest of an individual who threatened an employee in messages left on voicemail. In another instance, Sgt. Metz quickly responded to a robbery in progress in New York

Penn Station that led to the identification and capture of a suspect who pleaded guilty to felony charges and was sentenced to prison. Metz was also involved in an investigation that resulted in a street gang member being charged with misdemeanor reckless endangerment, criminal mischief and disorderly conduct in New York Penn Station.

In addition to being active on the beat, Metz is also a founding member of the Amtrak Police Pipe and Drum Corps, for which he is the senior piper. The Amtrak Police Pipe and Drum Corps performs at functions such as the National Law Enforcement Officers Memorial held in May in Washington, as well as functions and ceremonies for the Amtrak community, and funerals or memorials for fellow law enforcement officers around the country.

Metz began his law enforcement career with the Amtrak Police Department in October 1990 and has served in the capacity of police officer, criminal sergeant, and investigator, receiving his criminal investigator training in 1998 through the FBI in Valhalla, N.Y. He has also served as a field training officer and has trained dozens of recruits. Metz was awarded "Officer of the Month" eight times, the "Lifesaving Award," and "Distinguished Unit Citation" in 2003, and an "Excep-

tional Achievement Award" in 2004.

APD Promotional Ceremony

In another ceremony, 18 APD members from locations throughout the system were recognized for their recent promotions to the ranks of sergeant, captain and inspector. To attain these promotions, the candidates must successfully complete a battery of tests and exercises. The June 2 event, which included acting President David Hughes and Senior Vice President of Operations Bill Crosbie, was held in Washington and included a performance by the Pipe and Drum Corps.

Law Enforcement Explorers Recognized

A Washington chapter has been added to APD's Law Enforcement Explorers program, which helps teens explore careers in law enforcement while developing their leadership abilities through community outreach and volunteer efforts. The eight-member Washington/Baltimore Explorer Post 5050 falls under the guidance of Baltimore Officer Art Lawson and Washington Officer Dorothy Franklin. Chief Sonya T. Proctor recognized the new group at a June 29 ceremony held in Washington that also paid tribute to the accomplishments of the 25-member Philadelphia Explorer Post 0651.

Law Enforcement Explorers is a work-site based program for young people ages 14-20 who have an interest in careers in law enforcement. Law Enforcement Explorer posts provide instruction on search and arrest procedures, crime scene and accident investigation, vice and narcotics.

Baggage Screening Pilot Conducted in Philadelphia

At Amtrak Police Department's request, the Transportation Security Administration conducted a baggage screening project at Philadelphia's 30th Street Station for three days in July that targeted carry-on baggage for randomly selected trains. Local Philadelphia police provided support, as needed.

The multi-agency effort was designed to determine the ability to quickly send TSA security teams to a rail environment to screen for explosives. Building on inter-agency relationships, the pilot also helped establish command, control and coordination aspects of passenger screening operations.

Initiatives Yield Improvements

continued from page 1

promising segment of the passenger rail industry.

In another effort to reduce costs, the company announced last month that it would seek bids from vendors to address employee attrition at its call centers in Riverside, Calif., and Philadelphia, starting in early 2007. While the company's shift to interactive sales channels like Amtrak.com has lead to overall cost reductions, call center labor expenses are still high, making up 89 percent of call center costs.

Vice President of Marketing and Sales Barbara Richardson told employees in July that no current full-time call center agents would lose their jobs and all part-time agents would be offered full-time positions as a result of this action (see story on page 4).

On the sales front, strategies are being developed for deploying modern e-ticketing capabilities within the next couple of years. Because of the nature of the current reservations system, significant technological improvements are required to make this a reality. One of the near-term benefits of this effort is the station automated refund and exchange project, which enables ticket agents to process refund and exchange transactions for most tickets automatically and in real-time, thereby decreasing the number of requests that are sent to the Refund department for manual processing.

Initiatives in the Mechanical department include the Superliner equipment modification tied to the long-distance dining service model. A small group of management and on-board service employees were consulted recently for input on

work flow and other issues that affect the design of the dining cars. At press time, a Mechanical Engineering team was in the process of finalizing design specification, and plans for the first prototype were about 90 percent complete. The car is expected to be completed in the first quarter of FY '07.

The High Speed Rail Division has begun implementing Reliability Centered Maintenance (RCM), a maintenance practice that involves the examination of current maintenance procedures to preserve and extend equipment reliability, availability and safety. By determining the most effective approach to maintenance, costs are reduced. The result is a standardized set of more efficient maintenance procedures (see story on page 3).

RCM is just one of the measures aimed at improving the reliability

and availability of the fleet. The development of a fleet utilization plan that looks beyond the typical yearly forecast for equipment needs, to an orchestrated five-year plan, is currently in its early stages. Among the benefits of looking at equipment requirements with a long-term lens is improved reliability and availability of locomotives and equipment. In addition, there are the obvious cost savings from not rebuilding equipment that is not slated to be in service a couple years in the future.

The company provides the board of directors, the U.S. Department of Transportation, members of Congress and staff with regular updates on the status of these and other initiatives.

P R O M O T I O N S I N M O T I O N

Marketing Efforts to Attract International, Domestic Audiences

The Marketing department is currently engaged in activities to attract distinct travel audiences both domestically and in several foreign countries.

With a growing number of leisure and business travelers booking online, a marketing campaign was launched recently to promote the USA Rail Pass®, which became available for purchase online on July 17 by the international market. The advertising campaign is geared to attract two primary audiences that typically visit the U.S. from the U.K., Mexico, Australia and New Zealand — students ages 18-24 and retired seniors over 60.

Banner ads promoting the passes appear through the end of September on popular Web sites, including Travelocity, Trip Advisor and Yahoo. Additionally, the ads tout the Spanish-language Amtrak.com site to travelers from Mexico.

Online travel agency consolidation, new search engine start-ups

and growing travel rates in Europe and Asia make this an optimal time to pursue an international campaign aimed at attracting the online travel market.

“It’s an interactive way to educate travelers planning to come to the U.S. and encourage them to travel on Amtrak,” said Alan Orchison, senior director, Industry Alliances.

The Amtrak USA Rail Pass is available for travel within three geographic regions — Western, Northeast, or Eastern — as well as the entire United States. Depending on the region, the passes are good for a 5-day, 15-day or 30-day period.

Focusing on audiences at home, Amtrak is participating in a number of community events this summer and fall to reach out to the increasingly important Hispanic and African-American travel market. According to the latest Travel Industry Association Minority Traveler Report (2003), leisure travel increased by 20 percent and 4 percent, respectively,

among Hispanics and African-Americans, while it grew by only 2 percent for all audiences during the period between 2000 and 2002.

With this in mind, Amtrak is participating in several community events this summer to build brand identity and attract new passengers from these diverse markets. The sports, literary and cultural events will take place in three cities — Chicago, Los Angeles and Washington — through mid-November, and will provide an opportunity to spotlight the importance the company places on diversity, as well as make Amtrak’s routes known to a targeted market.

“This is a great opportunity to connect with the diverse communities that support us,” said Darlene Abubakar, director, Advertising and Sales Promotion. “Our participation in these events allows us to get the Amtrak message directly to them.”

AAA Kids Ride Free

Community and family celebrations are the hallmark of the season. As the summer draws to a close, a great way for travelers to relax and enjoy as well as save money is a special family-friendly deal for AAA members available now through Sept. 30.

The promotion permits AAA members to have two children (ages 2 – 15) travel for free with each fare paying adult for most long distance trains. The promotion is valid for travel from Aug. 21 through Dec. 14.

New York Terminal Operations Over One Year Injury-Free

Engineer Jed Curtis, Conductor Brian Krilloff and Assistant Conductor Jerry Popp (clockwise from top), members of Sunnyside Yard Crew 53A, secure a switch engine.

New York Division’s Terminal Operations covering New York’s Penn Station and Sunnyside Yard have worked since June 2005 without an FRA-reportable injury.

“This is a remarkable accomplishment by a group of employees that includes yardmasters, engineers, conductors and assistant conductors who are responsible for the daily movement of Amtrak and NJ TRANSIT train equipment between Sunnyside Yard and New York Penn Station,” said New York Division General Superintendent Lenore Slimbock.

Their work, performed at Amtrak’s busiest facility, includes climbing on the equipment, pulling high-voltage electrical cables, coupling hoses, adjusting knuckles, applying and removing chocks, and throwing hand switches. The employees perform their work surrounded by other moving equipment, third rail and high-voltage catenary wires.

How did they do it? Assistant Superintendent of Terminal Operations Tom Connolly and his team have raised safety awareness by educating employees on how to safely perform yard operations, including training on FRA’s five Switching Operations Fatality Analysis (SOFA) Lifesavers, three-point protection, radio rules and shoving procedures.

Additionally, the division hands out safety alerts that are discussed at daily job briefings, and they also conduct internal audits to assure adherence to policies and procedures. Employees who have had multiple injuries in their careers were brought in for formal safety reviews during which each incident was carefully examined to see how it could have been avoided.

Group Drives Down Vehicle Costs

continued from page 4

Better financial controls that help keep maintenance costs down are also in place. “Just two years ago, it was up to the drivers of the vehicles to make decisions about repairs. Consequently, it was difficult to retain good maintenance records for each vehicle,” explained Lubinsky. “Now, if a truck needs a new engine, we have the capability to check the vehicle’s maintenance history and if we find the truck is scheduled for

replacement in a couple months, we won’t invest thousands of dollars for repairs.” Furthermore, this improvement gives field employees more time to focus on their jobs without the added responsibility of managing vehicle maintenance issues.

The Automotive team’s success has not gone unnoticed by the federal government, among others. Jones was asked to speak at the U.S. General Services Administration’s

annual convention last month to share how Amtrak attained its savings through its partnership with the agency. The cost-saving practices have also caught the attention of the U.S. Marine Corps, which recently approached Amtrak about using this program to make improvements in its fleet management. And, the vehicle program was profiled in *Fleet Owner* magazine last fall.

“These results could only be

achieved by setting lofty goals that could not have been attained without changing the way we do business. And, without the cooperation and feedback from departments across the system, this could not have been accomplished,” explained Senior Director Procurement Larry Beddis. “The Automotive team understands that vehicles are tools to help employees do their jobs efficiently, and as a support organization, we try our best to put the right truck in the hands of the person fixing the track.”

FRONT LINE FOCUS

Dear Amtrak:

Last fall my husband and I had the pleasure to ride the Amtrak Train #6 in the handicapped accessible in car 632. We boarded in Emeryville, CA...and got off the rain in Osceola IA...

Our introduction to Carl Cisek, the attendant for that sleeping car, was as he helped me up the steps into the car, handed up my walker and assisted my husband with getting our luggage on board.

Throughout the trip Carl was caring, thoughtful and went out of his way to help make our journey pleasant and relaxing. He volunteered to bring me meals when he sensed that I was not feeling up to struggling up the stairs...to the dining car.

...You have a very good employee whose efforts are a genuine credit to Amtrak.

Sincerely,
Dobbie R.
Sunnyvale, Calif.

Dear Amtrak:

I just wanted to say how pleased I am with the excellent service provided by Amtrak employee Derek Marsala at the Washington, DC Union Station... My husband and I are senior citizens and needed assistance getting through the station. We had made arrangements for red cap service prior to our arrival from New York on Friday and had no problems and assumed this would be the case on our return trip. However, we could not locate a tram and when we asked several employees, they said none were available. As we walked through the station, we stopped Derek and he offered to help us. He located a tram and drove us to the train platform. He went aboard to get us settled in our seats and even put away our luggage. Without his help, I do not think we would have made our train...

Derek was wonderful and went out of his way for us ; his kindness was much appreciated.
Sincerely,
Ms. Annette A.
Yonkers, N.Y.

Alexander Kummant Appointed President and CEO

Veteran railroad and industrial executive Alexander Kummant was appointed President and CEO by the Amtrak Board of Directors at a board meeting on Aug. 29 and is scheduled to assume duties Sept. 12.

Kummant, 46, previously served as regional vice president of the Union Pacific Railroad where he directed 6,000 employees working in transportation, engineering, construction, mechanical and other positions. He also served as vice president and general manager of the UP's Industrial Products division, a \$2 billion revenue business.

In these positions, Kummant was responsible for substantially improved customer service, on-time delivery of client products and significant gains in financial and operational performance. Additionally, while at the UP, Kummant held the role of vice president of Premium Operations, which was responsible for inter-modal and automotive network performance.

Most recently, Kummant served in executive positions at Chicago-

based Invensys Corp. and at Komatsu America Corporation, a division of the second largest supplier of construction equipment worldwide.

Kummant fills the position that had been held by David J. Hughes on an interim basis since November 2005. Formerly chief engineer of Amtrak, Hughes will continue with Amtrak in a yet-to-be-specified capacity.

"For the past nine months, David Hughes has stepped in and performed exceptionally in leading our strategic reforms and operational improvements," said Chairman David M. Laney. "On behalf of the Amtrak Board of Directors, he has our deepest admiration and respect, and we are delighted that he will continue to play an important role in Amtrak's future."

Kummant wasted little time in getting down to business before his first official day on the job. On Wednesday, Aug. 30, he was introduced to the executive staff at a one-hour meeting in Washington by acting President and CEO

Alex Kummant (L.) prepares to roll up his sleeves and take the reins as Amtrak President and CEO effective Sept. 12. Touring Washington Union Station in August, Kummant discusses customer service issues with Mid-Atlantic Division General Superintendent Daryl Pesce.

Hughes. The following day, Kummant met with numerous front-line employees while touring Washington's Ivy City conventional and high-speed operations and Union Station's ticketing, crew base and baggage facilities. Friday afternoon, he wrapped up the week in Chicago, meeting ticketing and customer service employees at

Union Station, as well as employees at the car and locomotive shops. He also held a brief get-acquainted session with senior Central Division staffers at the Congress Center Building.

Kummant's first job working on a railroad came 28 years ago. When

Cross-Functional Teams Devise Solutions to Safety Risks

The Environmental Health and Safety department has worked with the company's major operating departments to establish six teams to analyze and address targeted safety risks across the system.

The Engineering, Mechanical and Transportation departments each created two teams comprising six to 12 employees that represent local management and various crafts within their respective departments. The teams are tasked with generating and analyzing lists of specific potential safety hazards or concerns in a particular discipline and recommending corrective actions to local management. Amtrak was assisted by Liberty Mutual, the nation's largest

workers' compensation insurer, in developing this team approach.

Over the past several months, Engineering team members assigned to review the Track Laying Machine operation recommended mechanical modifications to minimize the need for employees to manually reposition heavy and cumbersome wooden ties on their way from the pick-up wheel to the conveyor belt. By repositioning the conveyor belt approximately three inches, the old ties require much less manipulation.

A Mechanical department team examined the practices of jacking up cars from wheel trucks, connecting 480-volt cables and procedures for installing and

removing couplers, while a Transportation department team evaluated practices for baggage handling and safely getting on and off equipment.

"The benefit of the team is that it brings to bear multiple perspectives, lending insight about potential safety hazards and that our employees are willing and able to identify practical corrective action," said Safety Superintendent Chris Williams. "In an effort to

expand the current number of cross-functional teams, last month we conducted a two-day training program for 17 employees to prepare them to provide the leadership, environment and structure necessary for additional teams to be successful."

Each risk reviewed is rated based on the frequency of the activity, the

To read news and feature stories, and get information about the company, please visit Amtrak.com/Ink.

TRAIN OF THOUGHT

It has been a real honor to lead Amtrak as acting president and CEO for the past 10 months. This month completes my fourth year at Amtrak. I was pleased to have the chance to join Amtrak in 2002, at such a critical time. Back then, my only concern was that legislative action might cut short our chance to build up Amtrak as a valuable and respected transportation institution.

I could fill a book with the statistics that show improvement over the last four years, much of it dramatic.

The best barometer of how well a railroad is running is personal injuries. So far this year (through the end of July), Amtrak's injury rate is 26 percent lower than 2002. One goal in the Mission Statement adopted this spring was to be the safest of the seven passenger railroads operating in the Northeast Corridor.

In fact, for the first six months of 2006, Amtrak is the safest railroad operating in the NEC. That is a tribute to each of you individually and the people in the field that watch out for safety minute by minute.

It isn't just safety that is better. The numbers say Amtrak is functioning better by virtually every measure. On-time performance on the NEC is running close to 90 percent. *Acela* has broken the 90 percent

mark for the first time since the service started. Those are OTP numbers the air carriers in the Northeast can only dream about.

The long-term demand for Amtrak service will depend largely on the company's ability to demonstrate that it is an efficient and effective provider of intercity rail service, whatever the scope of that service may be. Our efficiency and effectiveness numbers show great progress, but we have just started. Being "good enough" isn't good enough. Amtrak has everything it needs to be a great operator. We just have to want it bad enough.

Finally, I know many of you are struggling to deliver good service while the on-time performance of our long-distance trains is at an all-time low. Thank you for that extra effort. The board and management of Amtrak are giving this problem their full attention and we expect improvement in coming months.

Stay safe, look out for the person next to you and be great at whatever you do.

David J. Hughes

Welcome New Board Members

Amtrak's newest members of the board of directors, Donna McLean and R. Hunter Biden, were confirmed by the Senate on July 26. McLean participated in the July 27 board meeting and both have had a series of private

sessions with senior managers in recent weeks to be briefed on key corporate issues.

Biden is a founding partner of Oldaker, Biden & Belair, a Washington, D.C.-based law and government relations firm that specializes in financial services, international business and information technology, consumer privacy and telecommunications work. Biden is of course a familiar name among T&E and OBS crews in the NEC. Both he and his father, Delaware Sen. Joseph Biden, are regular passen-

gers in the New York-Washington corridor.

Also based in Washington, D.C., McLean is owner of Donna McLean Associates, LLC, a transportation policy consulting firm. McLean has held a variety of senior federal government positions, including assistant secretary for Budget and Programs and most recently as Chief Financial Officer at the U.S. Department of Transportation.

Both McLean and Biden were confirmed by the U.S. Senate in July to serve five-year terms on the Amtrak board. In her statement for the Senate Committee on Commerce, Science and Transportation confirmation hearing, McLean said, "I look forward to helping Amtrak better position itself to play an improved role in our transportation network."

R. Hunter Biden (R.), who recently joined Amtrak's Board of Directors, is briefed on issues by Senior Vice President of Operations Bill Crosbie. Donna McLean (inset) and Biden were confirmed by the Senate in July to serve five-year terms.

Media Campaigns, Community Outreach Publicize New Keystone Service

With the much-anticipated Keystone Corridor Improvement Project near completion and the new service set to debut on Oct. 30, plans are underway for a number of promotional activities to increase community awareness, and to ultimately, generate ridership.

Amtrak and the commonwealth of Pennsylvania partnered to bring about the new *Keystone* trains that will travel along revitalized track allowing for faster, smoother rides. In addition, as weekday roundtrips increase from 11 to 14, with 10 trains traveling through New York City, passengers may find the service more convenient than ever.

To publicize the new service to travelers in the area, a brochure detailing the scope of the

corridor’s improvements was distributed on trains this month. In addition, a series of drops to promote the upcoming service are being distributed starting this month and running through November.

Further, advertising in local newspapers, such as the Lancaster *Intelligencer Journal* and Harrisburg *Patriot-News*, is slated to appear in late October and will continue through mid-November. Because the service is popular with business travelers, ads will also run in the *Central Penn Business Journal*. Radio ads will hit the airways on Oct. 30 at local stations in Harrisburg and Lancaster.

When the new service launches on Oct. 30, all-electric locomotives and cab control coaches will be

used on each train. The *Metroliner* I cars, originally built in the late 1960s and used into the early 80s, are being remanufactured for the service, including the installation of 110-volt outlets at each seat, as well as an overhaul of the trucks, air conditioning units, door operators, seats, carpet and upholstery.

The work involved in restoring the cars varied according to the condition of each car. However, all new fiberglass unisex and handicap-accessible lavatories along with full interior upgrades are being added to each car. In preparation for the service launch, Amtrak has already begun to operate several existing diesel trains with cab control coaches to familiarize train crews and mechanics with this type of equipment.

Commenting on the popularity of the service as well as outreach efforts to promote new trains, Director Mid-Atlantic Marketing and Sales Tom Sabo said, “The launch of the new service is a monumental achievement and a true testament to the strength of the partnership between the commonwealth of Pennsylvania and Amtrak. Our outreach efforts to businesses, colleges and universities as well as to the community, will inform even more people of the shorter trip times, smoother rides and more frequencies that will help make their travel even better.”

July Results Beat Company Budget Despite Major Obstacles

Fiscal Year Results Remain Ahead of Annual Target

Despite some major operational challenges in July, Amtrak closed the month beating its ridership and ticket revenue budget targets with 2.2 million passengers and \$127 million. While East Coast flooding and poor long-distance train on-time performance affected service, strong ridership on a number of short-distance services helped sustain positive results.

Northeast Corridor ridership was in line with the budget, but ticket revenue fell slightly below (1 percent) in July. Despite increased ridership on *Acela Express* (better than forecast by 3 percent), ticket revenues didn’t do as well (off by 9 percent). This may have been in part a reaction to higher fares and the timing of this year’s Fourth of July holiday, which resulted in many business travelers taking four-day weekends with the holiday falling on a Tuesday.

Regional service ridership was 1 percent below the budget, but ticket revenue surpassed the target by 6 percent.

Like previous months, sustained high gas prices helped drive passengers to rail travel in July. Short-distance train ridership and ticket revenue were both favorable to forecast by 6 percent, reflecting gains across the system. In the Pacific Northwest, Amtrak *Cascades* service gained 7 percent more riders and 11 percent more revenue than expected. In the Midwest, the *Wolverine* and *Illini* services earned double-digit gains against the budget.

However, flooding in upstate New York, freight railroad track work and congestion across the system resulted in some losses. For example, that flooding and the ongoing Union Pacific track work on the Kansas City/St. Louis

Photo: Bill Tarvin

Flooding on the Mohawk Subdivision of CSX track in Upstate New York in July resulted in the temporary suspension of service between Albany and Niagara Falls. The flooding was the worst in memory and also resulted in temporarily closing the New York Thruway.

corridor cost the railroad an estimated \$500,000 in lost ticket revenue.

Poor on-time performance over many freight railroads affected a number of long-distance trains in the height of the summer travel season. The *Silver Star*, *Sunset Limited*, *Lake Shore Limited*, *Coast Starlight* and *California Zephyr*, each of which suffered extremely low OTP, contributed to long-distance train results’ falling short of the budget for both ridership and ticket

revenues. Overall, long-distance ridership and revenue were unfavorable by 4 percent and 1 percent, respectively. On the whole, long-distance on-time performance was 23 percent in July; 4 percentage points worse than last July.

Year to date, with the help of the July results, Amtrak ridership was 3 percent ahead of the budget with more than 20 million trips recorded. With \$1.1 billion collected, Amtrak was 1.5 percent ahead of its ticket revenue budget.

Ridership and Ticket Revenue		
Year-to-Date Through July	FY '06 Y-T-D	FY '05 Y-T-D
Ridership	20,156,889	19,916,112
Ticket Revenue	\$1,134,219,826	\$1,026,738,837
Month of July	FY '06	FY '05
Ridership	2,219,010	2,173,713
Ticket Revenue	\$127,141,238	\$113,966,928

Plans Underway to Meet Future Workforce Needs

The magic number is 30/60, and it's very familiar to most Amtrak employees of any length of service. Employees who have 30 years of railroad service and reached 60 years of age qualify to retire with full Railroad Retirement benefits. With nearly 1,800 employees, including approximately one-third of management, celebrating 30-or-more-year anniversaries in 2006 alone, Amtrak faces the prospect of a large and sudden turnover of employees in the coming years. However, measures are being put in place to address this issue.

To ensure the company has the leadership, continuity and talent it needs, Human Resources' strategy includes workforce planning, succession planning and training programs, with a goal to provide the right people at the right time in the right position.

On behalf of Amtrak, Human Resources Officer Carlos Hernandez (R.) accepts the Employer of the Year Award from the California Employer Advisory Council at a ceremony held in Los Angeles in May. Amtrak's employment outreach efforts include working with state and local agencies, and military offices.

While there are a number of routine hiring initiatives underway, the company has taken steps to get ahead of the game and boost the hiring of qualified job candidates to combat the brain trust drain that Amtrak faces in the near term. For instance, Director of Workforce Planning Sheila Davidson was recently assigned the

responsibility of planning to meet short- and long-term hiring needs. Davidson works with department managers to define their workforce needs and build corresponding plans that use various recruitment strategies to quickly fill crucial vacancies at all levels — from top management to administrative and agreement-covered positions.

To cultivate potential future managers, the company last fall reinstated its Management Associate Program. The program is designed for recent college graduates (including Amtrak employees) who have demonstrated outstanding performance, and orients them to the company and its strategic plans and reform initiatives, while also providing them with the skills and experience required in business and technical management. Qualified candidates are offered entry-level assignments in Transportation, Engineering and Mechanical departments and are groomed for leadership roles within the organization.

Currently, five associates, Lauren Anderson, Harris Cohen, Matt Donnelly, Chris Maziarz and Nafie Nafie, are participating in the program's first session and recruiting will begin soon for the second session, which is slated to begin in fall 2007. Reflecting on the program, Cohen noted that the rotating assignments provide valuable exposure to a variety of jobs, and Donnelly appreciates learning about the unique characteristics of each division.

Each session's curriculum includes rotational assignments along with leadership training and mentoring. The rotations consist of 12- to 18-month field assignments within various departments, including a six- to eight-week corporate rotation.

While not a new approach, another example of the company's workforce planning efforts is an internship program that provides full-time undergraduate or graduate college students an opportunity to gain experience in the trans-

Employees Helped Build the Railroad — 35 Years Ago

When Lelani Wingler answered the first Amtrak customer call that came into the Chicago Reservations Sales Office (RSO) on Oct. 1, 1971, she had no idea that she would still be working for Amtrak 35 years later — and she is not alone. The former reservation agent and current ticket agent is among 10 active employees who joined Amtrak at its inception and continue to contribute to the railroad in a variety of positions across the country.

After the freight railroads turned their passenger service operations over to the National Passenger Railroad Corporation in 1971, a number of their employees accepted jobs with Amtrak. Among them were Manager Payroll Operations Candy Bucyk, who came from Burlington Northern Railroad and Ticket Agent Martha Goble from Santa Fe Railroad. Goble recalled what the Chicago RSO was like in 1971. "There were paper diagrams for each train every day that showed how many seats were available." And, if the agents didn't know certain information about a route, Bucyk added, "We would ask someone who came from that railroad for assistance."

Other 35-year employees who started at the Chicago RSO are Accounting Clerk Wally Kozij and Amtrak Technologies Principal Business Liaison Ken McIlvoy.

When the Chicago call center first opened, reservation agents could only make one-way reservations. If a person needed a round-trip ticket, the agents used a teletype machine and wired the request for a return reservation to Amtrak's other reservation offices at the endpoints of every train route or from one of the freight carriers that hadn't yet terminated passenger operations. "Even though there were no computers, and reservations and tickets were prepared manually, Amtrak was our 'baby' and we just wanted to nurture it and see it become great," recalled Train Director Diane D'Andrea.

Computers in the railroad passenger business were unheard of until 1971, when Amtrak got its first computerized reservation system. "And the capability to make round-trip reservations for all trains didn't transpire until 1974," McIlvoy added.

When asked about the most unforgettable moment over the years, the events of Sept. 11, 2001, stand out for some including, Ed Courtemanch, senior principal with the Planning and Analysis department, and Route Accounting Manager William Kotraba.

"I had the opportunity to see thousands of Amtrak employees rise to the occasion," Courtemanch recalled. "Nationwide, the railroad was shut down in a matter of minutes. Tracks, bridges, tunnels and equipment were systematically inspected, and personnel were posted to guard critical bridges and tunnels. Subsequently and carefully, Amtrak became the first intercity passenger carrier to resume service within hours, not days, after those horrible events."

Passenger Information Display System Clerk Jera Slaughter, who has worked in several front-line positions at Chicago Union Station, describes why she has remained with the railroad. "Delivering customer service has been my whole life and the gratification I get from doing a good job has been my reward for 35 years of service."

Many agree with Marketing Director Karen Myers who said, "Without a doubt — the employees have meant the most to me over the years. Their dedication to the Amtrak product and their desire to make Amtrak succeed is one of the reasons I stayed with the company so long."

Scholarship Established in Memory of John Cunningham

The American Railway Engineering Maintenance of Way Association (AREMA) Educational Foundation has established a memorial scholarship in the name of John J. Cunningham, who served Amtrak for 32 years in the Engineering department and passed away last November. The AREMA Educational Foundation awards scholarships to college sophomores, juniors and seniors with an interest in the railroad industry.

The first John J. Cunningham scholarship recipient will be recognized at the AREMA Technical Conference to be held in Louisville this month. A senior at Clarkson University, Jarad Roach is majoring in mechanical engineering and completed an internship with GE Transportation's Locomotive Repair Services department last summer.

John Cunningham was the point person for introducing modern European track maintenance machines and work practices to North American railroads. Amtrak's need for innovative procedures that could rebuild Northeast Corridor track quickly resulted in technology development that has been adopted by many of North America's railroads. John will perhaps best be remembered for his quiet manner that encouraged other employees to grow and learn, and the scholarship is a lasting legacy to him.

Information on scholarship applications or contributions can be obtained from www.arema.org.

Fall Advertising Campaigns To Spotlight Rail Travel Benefits

As summer winds down, schools open up and travelers across the country get back to their daily routines, Marketing efforts are in place to boost sales this fall by teaming up with MasterCard® to launch Amtrak's first system-wide national advertising campaign in four years.

Starting this month, MasterCard customers across the country will

customer makes an Amtrak purchase such as on-board food and beverages, train tickets, Amtrak Vacations or merchandise using a credit or debit card displaying the MasterCard logo, he or she will be entered in the sweepstakes.

Other prizes include an Amtrak Vacation package, free train tickets, Amtrak Guest Rewards points and

will earn an added bonus — double points for all trips taken (except during blackout dates), regardless of the form of payment used," added Senior Director of Loyalty Marketing Michael Blakey.

"With more than one billion MasterCards issued in over 210 countries, MasterCard is a world leader in payment cards and we're especially pleased to partner with such an outstanding global brand," explained Marketing Senior Director Gail Reisman. "We want to communicate to our customers that there has never been a better time to travel with Amtrak and to pay with a MasterCard because they have a chance to win wonderful prizes with every purchase."

The fall advertising campaign will also target both *Acela* and long-distance leisure travelers by promoting popular destinations, competitive fares, convenient schedules and on-board experiences. The campaign will be promoted nationally, including direct marketing efforts to AGR members and on Amtrak.com, as well as through local and grassroots efforts, such as trade shows and corporate account activities and events.

Acela advertising is aimed at attracting business travel and emphasizes the frequency, convenience and amenities of the premium service. With the one remaining Washington-to-New

York *Metroliner* roundtrip being replaced with *Acela* service on Oct. 30, the campaign will also promote on-the-hour *Acela* schedules along with additional north-end frequencies between New York and Boston.

Print advertising that utilizes the colorful and nostalgic Michael Schwab illustrations will be featured in online advertising and in many print publications such as business journals and daily newspapers. Television advertising plays a key role in the campaign with ads appearing during early morning and evening news programs, late night shows and select prime time programming this fall.

The campaign is also promoted via special broadcast vehicles such as elevator ads and CNN Airport advertising. Other advertisements are planned for various sports and media venues along the Northeast Corridor.

Advertising for the long-distance service, in contrast to the *Acela* campaign, is geared toward the general traveling public and touts the affordability, comfort and convenience of the service. The long-distance leisure brand will be promoted through print ads in daily newspapers, on radio, The Weather Channel, CNN Airport ads and through online advertising.

"In addition to promoting the ease and comfort of train travel, we also hope to raise brand awareness and spur repeat purchases," added Marketing Director Darlene Abubakar.

have an opportunity to enter a sweepstakes to win the grand prize — a \$15,000 MasterCard gift card and 15,000 Amtrak Guest Rewards® points. Each time a

additional MasterCard gift cards. "And, during the promotional period, which runs from Sept. 18 through Dec. 16, AGR members who register for this promotion

Outreach Efforts to Disabled Expanded

According to the U.S. Census Bureau, one in five Americans has at least one disability and 21.2 million people have a physical disability that could limit their mobility. Because persons with disabilities may find some travel modes to be particularly difficult, Amtrak is actively promoting the unique benefits of rail travel to this important segment of the travel market.

Working with various consumer organizations that support the disabled, the company has begun a special outreach effort to promote its services to disabled travelers and boost awareness of the advantages of train travel — accessibility, ease of use, special accommodations and economical fares.

At this fall's World Congress & Expo on Disabilities at Philadelphia's Convention Center Nov. 17-19, Amtrak will participate by

distributing information on its services. A 10 percent discount off the lowest available fare to Philadelphia for travel to the event between Nov. 14 and 22 is available to disabled passengers, in addition to the standard 15 percent discount for disabled passengers and their traveling companion. Plans are also being made to partner with Guide Dogs for the Blind on a special promotion later this year.

The major accommodations for disabled passengers traveling on Amtrak include assistance with wheelchairs, help with navigating stations, and in-room or at-seat meal service on trains. In addition, with advanced notice, disabled passengers may arrange for special services such as oxygen equipment transport. Trained service animals are allowed to accompany passengers with disabilities in all customer areas, including in stations and on board trains.

Now Available at a Station Near You!

The new Amtrak Vacations® brochure features information on 30 popular vacation destinations in the East, Midwest and West regions of the country. With one phone call, passengers can make their travel reservations, including train, air transportation, hotel accommodations, car rental and optional tours.

Meeting Future Workforce Needs

continued from page 4

portation industry during semester breaks. The company also offers a college-sponsored cooperative education program that integrates classroom instruction with work experience. While recruiting at colleges, universities and vocational technology schools is currently underway, a plan has been drafted that increases the focus on these institutions to expand the company's pool of qualified job candidates.

Succession planning, which is designed to help fill vacancies with current employees, will be fully implemented with the launch of the new mySAP HR/Payroll database system scheduled for next spring. The new system will have the capacity to record employee skill sets and match them with specific job profiles.

In another effort to target qualified candidates for specific positions, the Human Resources department works closely each summer with the Transportation department to identify trends and create a hiring plan to meet anticipated needs throughout the coming fiscal year.

Other standard Human Resources initiatives include working with state and local agencies and nearby military offices and their outreach programs. For example, HR contacts veterans' representatives throughout the state of California whenever there are job openings, which has resulted in the successful job placement of several veterans in primarily agreement-covered positions. In recognition of the success of this initiative, Amtrak was honored in May by the California Employer Advisory Council as Employer

of the Year for providing ongoing and outstanding employment services to the veterans in that state.

Like other organizations, Amtrak posts job openings online, now using target-specific sites, such as those representing trade associations, that are more suited to the position's requirements. The Railroad Retirement Board Web site also links to Amtrak's job postings through a link to Amtrak.com.

And finally, the Employee Referral Program rewards employees for referring job applicants who are successfully hired for posted, non-agreement positions with bonus points that may be used toward the purchase of Amtrak merchandise. Referral forms are available on the Intranet (Employees/Job Ops and Referrals/Amtrak Jobs) or on Amtrak.com.

"All these programs work together to produce a cohesive employee and organizational development plan to meet strategic reforms and the Amtrak of the future," explained Paula Porter, assistant vice president of Human Resources.

Amtrak's challenge is not unique in the railroad industry. For example, the Union Pacific Railroad is aggressively recruiting new employees as nearly 40 percent of its workforce will reach retirement age over the next five years. The UP expects to hire about 2,000 employees just this year and BNSF and NS are faced with similar situations. Additionally, the freight lines are growing their business to meet an all-time-high demand, exerting more pressure on workforce issues and requiring Amtrak to vigorously compete for qualified employees.

Preparedness Drill Assesses Responder Performance

During an emergency responder drill in Washington, a District of Columbia Fire and Emergency Medical Services crew plans its strategy to rescue victims aboard a train while others on the platform are evaluated before being sent to triage.

The full scale training exercise held in August at Washington Union Station provided Amtrak and a wide range of federal and local emergency response agencies the opportunity to test established policies, procedures, equipment and the effectiveness of communications as a coordinated multi-agency response effort.

"This was one of the most well orchestrated events I have ever seen," said Emergency Preparedness Officer Larry Beard. "A lot of people put a great deal of work into this drill and now the real work begins — evaluating the results and determining what we should change."

Evaluators will compile their comments on the exercise and provide recommendations for improvements to response procedures and for future training endeavors.

Safety Solutions

continued from page 1

likelihood of injury and the severity of injury or illness that might result. Procedures associated with the tasks are also evaluated to ascertain how current hazard-mitigating methods impact the work environment, and the capabilities and motivation of employees.

Once a corrective plan is devised by the team, a statistical comparison for injury risk is done between the new plan or revised procedure and previous practice to ensure that the change is indeed worth making. An action plan summarizes these findings and outlines a timetable for executing the plan and the persons responsible for doing so.

A year ago, the Environmental Health and Safety department began working closely with a group from Liberty Mutual and Amtrak employees to review existing safety programs and employees' involvement in their development. The assessment began with a comprehensive review of past safety performance data followed by field visits with employees to discuss their experiences, observe their work practices and solicit their ideas.

Another result of the assessment was the January launch of a Safety Executive Oversight Committee, which is designed to provide senior management with vision and direction for health and safety, remove potential institutional barriers that can hinder progress, and review and endorse major safety activities and programs. The committee is chaired by the president and CEO and includes members of the Executive Committee.

APD Aims to Reduce Local Crime

Providence APD Officer Ted Oliver offers crime prevention tips to a customer during National Night Out, an event sponsored by APD as part of the department's ongoing effort to build strong community relations and help deter neighborhood crime.

Held in August at stations in Baltimore, Boston, Chicago, New York, Philadelphia, Providence and Washington, National Night Out provided an opportunity for APD officers to talk about crime prevention and offer employees and passengers handouts that provide helpful safety tips and other crime-fighting information.

Ceremony Unveils New Sturtevant Station

A new Sturtevant station draws local and state officials, community residents and Amtrak employees for a dedication and ribbon cutting ceremony on Aug. 12.

The new structure, built with funding from Wisconsin Department of Transportation and the village of Sturtevant, includes a pedestrian bridge that runs across the two main tracks.

Through July of this fiscal year, 48,000 passengers (10 percent more than the same period last year) visited the Sturtevant station at its previous location.

Photo: T. J. Van Haag

Kissimmee Station Employees Keep Safety First

Local officials, residents and past and present station employees gather to celebrate a safety milestone at the Kissimmee station — no FRA-reportable injuries since 1990.

Kissimmee Mayor Linda Goodwin-Nichols presented station employees with an award in July for their safety record. “This achievement can be attributed, in part, to the efforts of the Central Florida Safety Team, a proactive committee of dedicated individuals who interact with employees in this area to promote a safe working environment on the job and at home,” explained District Manager Gessner Canadiate.

(Pictured L. to R.): Kissimmee Baggageman Cary Stepherson, Safety Committee member and Guaranteed Extra Board David Anderson, Winter Park Ticket Agent Glen Norman, Lakeland Safety Committee members Ticket Agent William Craig and Ticket Clerk Danny Gregg, Secretary Barbara Vozel, Relief Agent Astrid Schettini-Rodriquez, Safety Committee member and Orlando Ticket Clerk Donnie D’Orto, Central Florida Lead Ticket Agent Marcia Kostival, Relief Ticket Agent Marvin Scott, Mayor Linda Goodwin-Nichols, District Manager Stations Gessner Canadiate, Safety Committee member and Orlando Ticket Clerk Sharon Lane and Sales and Marketing Associate Dennis Lyons.

FRONT LINE FOCUS

Dear Amtrak:

We want to commend the entire crew aboard Train 4, the eastbound *Southwest Chief* ... and Train 3 westbound *Southwest Chief* with particular appreciation for sleeping car attendant Lori Scott.

When the eastbound train was significantly delayed due to a freight derailment ... the crew did a remarkable job of providing service, maintaining a positive, upbeat attitude, and managing what could have been a very challenging situation.

... After spending an entire night in the Barstow station we awoke to learn of the incident ... Lori kept us as informed as possible, and went out of her way to keep everyone comfortable and well cared for...

While we understand that the derailment and its impact on rail travel were not the fault of Amtrak; we do recognize Amtrak's response in caring for its passengers and especially appreciate the extra efforts of Lori and the Train 4/Train 3 crew. Please pass along our thanks and appreciation to those involved.

Sincerely,

Amtrak Passenger
Santa Maria, Calif.

Dear Amtrak:

I recently took Amtrak from Michigan to Chicago ... While waiting at the Battle Creek station for the train to arrive the passengers all learned that the train had encountered a shopping cart somewhere around the Ann Arbor area and would be delayed.

I was so impressed with ... Tod Virgil, at his continual professionalism, patience, and conduct during the ensuing hours. He made numerous announcements keeping the passengers up-to-date and answered countless questions and concerns from the waiting passengers with courtesy and kindness regardless of how many times the same questions were asked.

Sincerely,

Amtrak Passenger
Bourbonnais, Ill.

Kummant

continued from page 1
as a teenager in Lorain, Ohio, he worked on Lake Terminal Railroad track crew at the U.S. Steel Lorain Works. From there, he went on to earn a B.S. degree in mechanical engineering from Case Western Reserve University, a Master's degree in manufacturing engineering from Carnegie Mellon University and an M.B.A. from Stanford University.

"Alex Kummant has the outstanding credentials and experience to lead a changing Amtrak that is more customer-focused and fiscally responsible," said Laney on Aug. 29. "His appointment fulfills the board's commitment to select an extraordinarily strong and capable leader for Amtrak's future, building on the growing national desire for more and improved passenger rail service."

VITAL STATS

for July 2006

	Month		Fiscal Year-to-Date	
	Budget	Actual	Budget	Actual
Safety				
Reportable Injury Ratio*	(goal) 3.0	3.5	(goal) 3.0	3.1
Ridership	2,181,514	2,219,010	19,590,011	20,156,889
Total Expenses	\$253,234,000	\$255,916,000	\$2,546,405,000	\$2,541,130,000
Total Operating Revenue	\$171,082,000	\$175,551,000	\$1,591,863,000	\$1,648,507,000
On-time Performance	(system goal) 85.0%	62.1%	(system goal) 85.0%	67.7%

* Number of reportable injuries per 200,000 worked hours.

Photo Contest Winners Announced

For the first time since the "Picture Our Train" Wall Calendar contest was launched in 2003, Amtrak will be featuring a photograph taken by one of its own employees when it releases the 2007 wall calendar later this fall.

This photograph of a Pacific Surfliner train arriving at San Diego station will appear on Amtrak's 2007 wall calendar. The contest-winning photograph was taken by Amtrak ticket agent Jared Forcier.

Ticket Agent Jared Forcier's shot of the *Pacific Surfliner* was chosen as the grand prize winner of the 2007 "Picture Our Train" Wall Calendar contest and will be featured photograph on the popular wall calendar. A native of San Diego, Forcier is a ticket agent and baggage clerk at the San Diego, Solana Beach and Ocean-side stations.

Just a week after purchasing a new camera, Forcier was taking pictures of a rainstorm that had hit the San Diego station while passengers were awaiting the *Surfliner's* arrival from Los Angeles. The winning photograph, one of three he took that day, "quite literally knocked the socks off everyone who saw it," he said. He submitted his photographs to the wall calendar contest at the urging of co-workers and family.

- Congratulations to the second through fifth prize winners:
- Second Place: Joe Osciak of Hammonton, N.J.
- Third Place: Jim Thompson of Santa Fe, N.M.
- Fourth Place: Amtrak Engineer Phil Gosney of Castro Valley, Calif.
- Fifth Place: Amtrak Director of Station Programs Joe Rago of Yardley, Pa.

This year's contest launched on April 3 and ended on June 9 and received a record 151 entries.. The grand prize winner receives photo credit on the calendar and a \$1,000 travel voucher; the second through fifth place winners received travel vouchers.
